# INTRODUCTION.

## INTRODUCTORY LETTER FROM THE SECRETARY OF STATE.

*To the Senate and House of Representatives:*

By a note of April 6, 1887, the Republic of France, through its minister plenipotentiary at this capital, invited the Government of the United States to take part in an exposition of works of art and the products of manufactures and agriculture of all nations, to be held at Paris, commencing May 5, and closing October 31, 1889.

Congress, by joint resolution approved May 10, 1888, authorized the acceptance by this Government of the invitation so courteously extended. It also appropriated the sum of \$250,000 to defray the necessary expenses of the participation of this Government in the exposition, including the proper installation of the exhibition, and the expenditures of the Commissioner-General, made under the direction of the Secretary of State. Section 2 of the joint resolution provided for the appointment by the President, by and with the advice and consent of the Senate, of a Commissioner-General and subordinate officers to represent the United States in the proposed exposition, and fixed the allowance accorded to each.

Section 4 made it the duty of the Secretary of State to transmit to Congress a detailed statement of the expenditures which may have been incurred under the provisions of this resolution, together with all reports called for under section 2 of the same, which reports shall be prepared and arranged with a view to concise statement and convenient reference.

I now transmit a copy of a letter from the Commissioner-General, dated Hartford, Conn., the 2d instant, forwarding his official report and the data to complete Volume I. General Franklin also incloses a memorandum showing the contents of four other volumes which will soon be ready for transmission to Congress. The detailed statement of expenditures, called for by Section 4, will be transmitted to Congress at the earliest practicable date.

Respectfully submitted.

JAMES G. BLAINE.

DEPARTMENT OF STATE,  
*Washington, June 9, 1890.*

# JOINT RESOLUTION OF CONGRESS.

[PUBLIC RESOLUTION—No. 11.]

JOINT RESOLUTION accepting the invitation of the French Republic to take part in an International Exposition to be held in Paris in eighteen hundred and eighty-nine.

Whereas, the United States have been invited by the Republic of France to take part in an exposition of works of art and the products of manufactures and agriculture of all nations, to be held in Paris, commencing the fifth day of May and closing the thirty-first day of October, eighteen hundred and eighty-nine: Therefore,

*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That said invitation is accepted, and that the governors of the several States and Territories be and are hereby requested to invite the people of their respective States and Territories to assist in the proper representation of the productions of our industry and of the natural resources of the country, and to take such further measures as may be necessary in order to secure to their respective States and Territories the advantages to be derived from this beneficent undertaking.

SEC. 2. That the President, by and with the advice and consent of the Senate, shall appoint a Commissioner-General to represent the United States in the proposed Exposition, and under the general direction of the Secretary of State, to make all needful rules and regulations in reference to the contributions from this country, and to control the expenditures incident to the proper installation and exhibit thereof; the pay of jurors, and the preparation of the reports on the Exposition and the general results thereof; and an Assistant Commissioner-General to act under the direction of the Commissioner-General, who shall perform the duties of Commissioner-General, in case of his death or disability; and that the President may also appoint as assistants to the Commissioner-General nine scientific experts, corresponding to and specifically assigned to the nine groups into which the Exposition will, under the official regulations, be divided; that the allowance to said Commissioner-General for salary and personal expenses shall not exceed ten thousand dollars for his whole term of office; that the allowance of said Assistant Commissioner-General for salary and personal expenses shall not exceed five thousand dollars for his term of office; and the allowance of the nine scientific experts for salary and personal expenses shall not exceed fifteen hundred dollars each, not including such clerical service as may be allowed by the Commissioner-General, which shall not exceed fifteen thousand dollars.

SEC. 3. That in order to defray the necessary expenses above authorized, and for the proper installation of the Exhibition, and the expenditures of the Commissioner-General made under the direction of the Secretary of State, and with his approval, and not otherwise, there be and hereby is appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of two hundred and fifty thousand dollars, or so much thereof as may be necessary for the purposes herein specified, which sum shall be expended under the direction of the Secretary of State. The Commissioner of Agriculture is hereby authorized to collect and pre-

pare suitable specimens of the agricultural productions of the several States and Territories of the Union for exhibition at the Paris Exposition, and to accompany the same with a report respecting such productions, to be printed in the English, French, and German languages, the expense of the same to be paid out of said appropriation.

SEC. 4. That it shall be the duty of the Secretary of State to transmit to Congress a detailed statement of the expenditures which may have been incurred under the provisions of this resolution, together with all reports called for under section of this resolution, which reports shall be prepared and arranged with a view to concise statement and convenient reference.

Approved May 10, 1888.

# OFFICIAL INSTRUCTIONS OF THE SECRETARY OF STATE TO THE COMMISSIONER-GENERAL.

DEPARTMENT OF STATE,

*Washington, July 6, 1888.*

SIR: By a joint resolution of Congress, approved May 10, 1888, the United States accepted the invitation of the Republic of France to take part in an exposition of works of art and the products of manufactures and agriculture of all nations, to be held in Paris, commencing the 5th day of May and closing the 31st day of October, 1889.

The resolution further provided that the President, by and with the advice and consent of the Senate, should appoint a Commissioner-General to represent the United States at the proposed Exposition; and, under the general direction of the Secretary of State, to make all needful rules and regulations in reference to the contributions from this country, and to control the expenditures incident to the proper installation and exhibit thereof, the pay of jurors, and the preparation of the reports on the Exposition and the general results thereof.

Under the authority thus conferred, the President, by and with the advice and consent of the Senate, has now appointed you Commissioner-General. Your commission as such, bearing date June 21, 1888, has already been delivered to you.

The resolution further provides that the allowance to the Commissioner-General for salary and personal expenses "shall not exceed \$10,000 for his whole term of office."

In view of the fact that your duties will commence forthwith, and will continue until at least October 31, 1889, and for some time after that, you will receive the sum of \$600 in each month, and at the close of your service and settlement of your accounts any balance remaining of the \$10,000 so appropriated may be allowed you.

The joint resolution further provides for the appointment of an Assistant Commissioner-General, whose duty it will be to act under your direction and to perform your duties in case of death or disability. The President, by and with the advice and consent of the Senate, has appointed Mr. Somerville Pinkney Tuck to this office; and his commission, bearing the same date as your own, has been per-

sonally delivered to him. For the reasons already set forth in reference to the allowance to be made to you, I have decided to allow Mr. Tuck the sum of \$300 a month, and at the close of his service he may be paid any balance remaining of the \$5,000 appropriated.

With regard to the term "personal expenses," as used in this resolution, I am of opinion that it is intended to cover the ordinary expense of a residence abroad during such period as may be necessary in the discharge of your duties, and also the expense of journey from the United States to Paris and back again. It may be, however, in the discharge of your duties, that either you or the Assistant Commissioner-General will find it necessary to make a special visit to Paris in order to prepare for the exhibition, or to receive information to enable you to make such preparation. The expense of such a journey, in my opinion, would not be regarded as a "personal expense" of your own, or of the Assistant Commissioner-General, and might properly be charged among the other incidental expenses of your service.

The joint resolution further provides that "the President may also appoint as assistants to the Commissioner-General nine scientific experts, corresponding to and specifically assigned to the nine groups into which the Exposition will, under the official regulations, be divided; \* \* \* and the allowance of the nine scientific experts for salary and personal expenses shall not exceed \$1,500 each."

The duties of the scientific experts here referred to will not probably begin actually until at or near the time of the opening of the Exposition, so that the questions whether the President should appoint such experts, and if so, who may wisely be appointed to these positions, may, for the present at least, be deferred. It will be well for you to give your attention to these questions, and after you have become familiar with the demands of your office and the duties which will devolve upon such scientific experts, to report whether in your judgment such experts may usefully be appointed; and also to submit, for the consideration of the President, the names of any persons whom you think qualified for the places. You may also report what allowance in your judgment should be made to them for salary and personal expenses, not to exceed \$1,500 each.

The joint resolution further provides that the "salary and personal expenses" of the several officers named therein shall not include the expense of clerical service, but it limits such expense to \$15,000. You are therefore authorized to employ a secretary or chief clerk and such other clerical assistance as may seem to you to be needful; and you may allow to the Assistant Commissioner-General and the scientific experts the services of such of these clerks as may be required from time to time. But the total expenditure of the Commission for clerical service must not in any event exceed \$15,000.

The appropriation for the representation of the United States at the Paris Exposition is \$250,000. Out of this amount there is provision made in the joint resolution for certain specific expenses not to exceed the following sums, viz :

Commissioner-General .....	\$10,000
Assistant Commissioner-General.....	5,000
Nine scientific experts at \$1,500.....	13,500
Clerical service.....	15,000
	<hr/>
	43,500
	<hr/>
Leaving.....	\$206,500

In addition to these items for which definite appropriation was made in the resolution, the Commissioner of Agriculture is authorized "to collect and prepare suitable specimens of the agricultural productions of the several States and Territories of the Union for exhibition at the Paris Exposition and to accompany the same with a report respecting such productions \* \* \* the expense of the same to be paid out of said appropriation."

The Department interprets this clause as meaning that the expense of the collection and preparation of such an exhibit as the Commissioner of Agriculture may see fit to prepare, together with the expense of making and printing a report in regard thereto, is to be paid out of the general appropriation of \$250,000 ; and it is further understood that inasmuch as the expenditure of the money is to be under the direction of the Secretary of State and made "with his approval and not otherwise," the expenditures so to be made by the Commissioner of Agriculture shall be under my direction and subject to my approval. It will therefore be proper to determine in advance what amount should be allotted to this purpose, with due regard to the interests of other exhibitors, and you will at an early day consider and report the proper amount for this purpose, and any other suggestions which you may think proper to submit, touching the agricultural exhibit.

It will be well to specify distinctly what class of expenses should be borne out of the sum to be so set apart for the collection and preparation of the exhibit in question and whether such sum should include the cost of freight and installation in the Exposition, care and supervision while there, and the like.

The main object of the joint resolution was to authorize the participation by citizens of the United States as exhibitors and competitors for the prizes and the ulterior advantages of an extended market, as well as to obtain trustworthy information of the progress of the industrial arts as shown by the exhibits, and especially an intelligent survey of the present commercial needs of European countries and the direction in which the industrial productions of the United States may obtain access thereto.

It will therefore be your duty, as soon as possible, to take steps for making known the details and plans of the Exposition and for instructing intending exhibitors with regard to the opportunities for forwarding their goods.

It will also be your duty to receive and place the exhibits at Paris and to supervise the compilation of the catalogues wherein the character and merits of the exhibits should be properly set forth, to secure to the exhibitors a fair opportunity for competition for the prizes which it is understood will be awarded; and to enforce such rules, with the consent of the local authorities and general commission of the Exposition, as will insure good order in the American department. When the Exposition is ended, your assistance should be rendered to the American exhibitors for the removal and the re-delivery to them of their several exhibits.

You will also, under the terms of the resolution, prepare a report upon the Exposition and the general results thereof; and this should be accompanied by special reports of each of the scientific experts on the matters coming specially within their observation, as well as by such other papers as you may be able to secure relating to all matters of interest; of new inventions, of valuable productions, and the means whereby commercial exchanges between the United States and France or neighboring European countries may be extended. All such reports by competent persons will be proper for submission.

The joint resolution provides that all reports submitted by you "shall be prepared and arranged with a view to concise statement and convenient reference."

The incidental expenses of your service may properly include freight upon exhibits from the United States to Paris and back at the close of the Exposition, cartage and portorage upon exhibits, rent of offices, stationery, and all printing, postage, telegrams, etc.; the expense of the installation and removal of the exhibits from the Exposition building and their proper arrangement and display, including the services of architect, engineers, and such other technical assistance as may be needed. Messengers, watchmen, and laborers may also be employed and paid.

These incidental expenses will be borne by you so far as reasonable and necessary, having constant reference to the amount appropriated by Congress.

For domestic letters posted by you in the United States you are hereby authorized to make use of penalty envelopes, thus avoiding the expense of postage.

An itemized account, with vouchers, must be submitted by you.

In order to enable you to make payments promptly for the various objects for which you will have occasion to disburse money, it may prove convenient for you to receive from time to time an advance to be subsequently accounted for; and for this purpose, if you desire

it, a reasonable sum will be placed subject to your control for the purposes and objects indicated; and upon your leaving the country to proceed to Paris, a letter of credit on a banking-house in London will also be handed to you.

In order, however, to comply with the requirements of law, and secure the Government against loss, it will be necessary, in case you desire an advance of money, that you, or one of your assistants or subordinates, should be designated to act as a disbursing officer of the United States, in whose hands funds may be placed, and who will be required to give bond to the United States in double the amount advanced.

In disbursing these amounts, and such other sums within the appropriation made as may be authorized by this Department, an itemized statement will be duly prepared under your direction, and submitted to this Department for its approval and for allowance. It must carefully be borne in mind by all persons connected with the representation of the United States in the Paris Exposition, that in no event must the expenses of the United States in this connection exceed the sum appropriated by Congress. You are especially notified that no obligations are authorized which shall involve other or greater liabilities than those within the intent and meaning of your instructions; and all proper expenses should be met by cash payments.

This Department will address to the governor of each State and Territory an official notification in the language of the resolution of Congress; and the heads of the several Departments will be consulted as to the possibility of official co-operation.

All replies received to these communications will be transmitted to you.

You will make monthly reports to the Department of your expenses, and from time to time you will report any official acts in connection with the Exposition which will serve to keep the Department advised of your operations.

Your communications should be numbered consecutively for convenience of reference and for the files.

In conclusion I have pleasure in expressing my confidence that you will spare no effort to make the exhibit of the United States in the Paris Exposition creditable and productive of useful results to both countries.

I am, sir, your obedient servant,

T. F. BAYARD.

General WILLIAM B. FRANKLIN,

*Washington, D. C.*

CIRCULAR LETTER OF THE SECRETARY OF STATE TO GOVERNORS OF STATES AND TERRITORIES.

---

DEPARTMENT OF STATE,  
*Washington, July 3, 1888.*

SIR: By a joint resolution of Congress, approved May 10, 1888, the Government of the United States accepted the invitation of the Republic of France to take part in an exposition of works of art and the products of the manufactures and agriculture of all nations, to be held in Paris, commencing the 5th day of May and closing the 31st day of October, 1889.

I have the honor to inclose herewith copies of the joint resolution referred to, and in accordance with its terms I would request you, by such methods as you may deem most suitable, to notify the people of your State to assist in the proper representation of the productions of our industry and of the national resources of our country. I would also suggest that you take such further measures as may be necessary in order to secure to your State the advantages to be derived from this beneficent undertaking.

The President, by and with the advice and consent of the Senate, has appointed General William B. Franklin as Commissioner-General to the Paris Exposition, and the office of the commission is now established at No. 35 Wall street, New York City.

I have the honor to be, sir, your obedient servant,

T. F. BAYARD.

THE GOVERNOR OF ———.

(Inclosure: Public Resolution No. 11, approved May 10, 1888.)

A copy of this circular, with the necessary copy of inclosure, was sent to each of the States and Territories.

LETTER OF COMMISSIONER-GENERAL WITH ESTIMATE OF  
EXPENDITURE OF APPROPRIATION FOR EXPOSITION.

OFFICE OF THE UNITED STATES COMMISSION  
TO THE PARIS EXPOSITION OF 1889,  
*No. 1 Broadway, New York City, N. Y., December 27, 1888.*

SIR: I acknowledge the receipt of your letter of the 19th inst., relating to Mr. McLane's dispatch of the same date recommending a largely increased appropriation for the French Exposition of 1889, and asking for a general estimate of the amounts to be devoted to the objects of the Exposition authorized by my instructions of July 6, 1888.

I inclose the general estimate required. I have felt from the beginning that one of the most important of my duties, if not the most important, is to keep the expenditures of the commission within the appropriation. I have therefore taken little interest in attempts to get additional appropriation, although I think that had authority been given us to spend the balance remaining over from the appropriations for the Cincinnati Exposition, as recommended by the State Department upon my suggestion, the American department of the Exposition would have been more interesting on account of the presence of the Government exhibits. But I have no expectation that the money will be given.

I shall spare no efforts to keep the expenditures under the appropriation for the Paris Exposition of 1889 within the amount appropriated.

Respectfully yours,

W. B. FRANKLIN,  
*Commissioner-General.*

Hon. T. F. BAYARD,  
*Secretary of State, Washington, D. C.*

*Estimate of expenditure of the \$250,000 appropriated for the Paris Exposition of 1889.*

Salaries and clerk hire mentioned in the act.....	\$43,500
To be expended in the United States for the agricultural exhibit.....	38,000
Expenses of New York office .....	7,500
Expenses of Paris office .....	5,500
Postage, express, telegrams, etc.....	1,000

For the preparation of space in the various buildings, installation of exhibits, and general expenses of each group, as follows:

Art group, including boxing and partial insurance.....	7,500
Education, Group 2.....	7,500
Industrial, Groups 3, 4, and 5.....	9,000
Machinery, Group 6.....	8,000
Agricultural, horticultural, and food products, Groups 7, 8, and 9.....	5,000
Government exhibit.....	5,000
Freight.....	45,000

	250,000

## LETTER FROM THE COMMISSIONER-GENERAL.

---

OFFICE OF THE UNITED STATES COMMISSIONER-GENERAL,  
PARIS EXPOSITION OF 1889,  
*Hartford, Conn., June 2, 1890.*

SIR: I forward herewith my official report as United States Commissioner-General to the Paris Exposition of 1889, which is accompanied by supplementary reports and various appendices enumerated in the inclosed table of contents, the whole forming Volume I.

I submit herewith a memorandum statement as to the four other volumes, showing the number of articles, their titles and authors, and the estimated extent of each volume. Nearly the whole of the experts' reports are in, and those still in preparation will be in my possession by the end of the current month. While all of these reports are of interest, those still incomplete are of special interest, and the delay has been unavoidable. The estimate of number of pages, etc., is as nearly correct as it can be made.

I respectfully suggest that the information furnished in the accompanying schedule, compared and considered with the matter for Volume I as to character, scope, etc., will enable the Public Printer to form an intelligent and early estimate as to the cost of printing, etc., to aid the action of the Committee on Printing.

Respectfully yours,

W. B. FRANKLIN,  
*Commissioner-General.*

HON. JAMES G. BLAINE,  
*Secretary of State.*

REPORT  
OF  
THE COMMISSIONER-GENERAL.

---

OFFICE OF THE UNITED STATES COMMISSIONER-GENERAL,  
*Hartford, Conn., June 2, 1890.*

SIR: I respectfully make the following report upon the Paris Exposition of 1889, and the results thereof, as required by the joint resolution of Congress approved May 10, 1888, and more distinctly specified in the instructions of the Secretary of State, dated July 6, 1888.

The Paris Exposition of 1889 was instituted by the French Republic on November 8, 1884. The decrees authorizing it fixed the days of opening and closing as May 5 and October 31, 1889, so that the duration of the Exposition was to be the same as that of the Paris Exposition of 1878. The dates of opening and closing were afterwards made May 6 and November 6, 1889. Preliminary work was at once started, and a commission was organized under the presidency of Mr. A. Proust, Minister of Instruction and Fine Arts. On March 14, 1885, this commission reported that the approaching Exposition will give a résumé of the progress of enfranchised labor from 1789, an economic as well as political starting-point, through the century that has elapsed. All nations are invited to an examination of the present economic situation.

The work of the Exposition really began, however, in the early months of 1886. In March, 1886, it was determined that the whole cost should not exceed \$8,600,000, and that of this sum the French Government should contribute \$3,400,000, the city of Paris \$1,600,000, and the remainder should be raised by a guaranty association to which the proceeds of the sale of

tickets at 1 franc (20 cents) each were hypothecated for the sum of \$3,600,000. In July, 1886, the Minister of Commerce was made Commissioner-General of the Exposition, Messrs. Alphand, Berger, and Grison were made Directors-General, respectively, of Works, Management, and Finance, thus placing it under the fostering care of a department of the Government, and securing the best technical, administrative, and financial abilities in France for the Exposition. From this time its success was assured, and until the opening of the Exposition nothing interrupted the distinguished ability and energy with which every detail of the work was done.

#### ORGANIZATION.

In August and September, 1886, committees were formed by direction of the Commissioner-General in all of the departments of France, assisted by sub-committees in the various cities and towns. The prefects and sub-prefects were the presiding officers of the committees, and the members were the principal manufacturers of the districts and other noted persons, presidents of scientific and social societies, etc. These committees were required to do everything in their power to make the Exposition known to persons likely to exhibit, and to induce manufacturers, museums, art galleries, and scientific and social societies to apply for space. Blanks for application and all printed instructions to facilitate the preliminary work of exhibitors were furnished.

The applications for space were referred to committees appointed by the Commissioner-General, whose duties were to allot the space for exhibits and prepare the plans for installation, subject to the approval of the Exposition administration. There was one committee for each class, and the members were selected from men known to be well versed in everything connected with the class to which they were appointed. There were also nine group committees and a committee of revision. These committees were selected from men eminent in every department of the fine arts and industrial arts, and the revision committee retained its position until the end of the Exposition, its members being *ex officio* members of the superior jury of

recompenses. These last two committees acted as courts of appeal from the decisions of the class committees. The result of all this organization was that all questions that could arise among exhibitors were finally settled before the opening of the Exposition, and the work of installation was made comparatively easy to the administration, avoiding all friction and undue haste.

On April 6, 1887, Mr. Th. Roustan, minister to the United States from the French Republic, informed the Secretary of State of the United States that the Exposition would be held, and that he was instructed by his Government to invite the co-operation of the United States. It may be noticed that this letter is dated about one month after the adjournment of Congress, so that nothing could be done to accept the invitation thus conveyed until after the meeting of the next Congress in December, 1887, and much valuable time was thus lost.

On April 13, 1887, Mr. Bayard, Secretary of State, acknowledged the receipt of Mr. Roustan's letter, and informed him that the matter would be brought to the attention of Congress at its next session, and on January 12, 1888, the President of the United States referred the matter to the attention of Congress, transmitting Mr. Bayard's report and recommendations. On May 12, 1888, the act accepting the invitation of the French Republic was approved, more than one year after it was given. This act, after accepting the invitation, requested the governors of the States and Territories to invite their people to assist in the proper representation of the products of our industry, and other national resources, and to take other necessary measures to secure to them the advantages to be derived from "this beneficent undertaking."

It directed the President to appoint a Commissioner-General and an assistant, and defined their duties. It authorized him to appoint nine scientific experts as assistants to the Commissioner-General, who should be assigned to the nine groups into which the Exposition was officially divided, and should make reports thereon, and fixed the compensation of all these officials. It appropriated \$250,000 to defray all expenses connected with the Exposition, to be expended under the Secre-

tary of State. It also authorized the Commissioner of Agriculture to collect and prepare an exhibit of the agricultural products of the United States for the Exposition, with a report to be printed in English, French, and German, and finally directed that all reports of the Exposition, and a detailed statement of the expenditures, should be transmitted to Congress.

Under this act, on June 21, 1888, the undersigned was appointed Commissioner-General, and Mr. S. P. Tuck, Assistant Commissioner-General. Detailed instructions for the guidance of the Commissioner-General were made, dated July 6, 1889, and immediately afterwards the duties of preparing the exhibit for the Exposition were begun.

A circular letter to the governors of the States and Territories, calling their attention to the law and to the invitation extended to their peoples, was written by the Secretary of State. The result, however, was discouraging. Few responses were made to this letter, and with one or two small exceptions no State or Territory made any exhibits; but many of them appointed commissioners from their States to the Exposition. Under the authority for appointing such clerical assistance as might be required, a secretary, Mr. A. Bailly-Blanchard, of New Orleans, was appointed at once. He was at this time resident in Paris, and immediately placed himself in communication there with the Exposition authorities, applied for and obtained space for the exhibit of the United States, and the documents, such as regulations, drawings, etc., necessary to guide us in making ready for the Exposition, by designating the places and the areas that were to be occupied by the United States exhibit, thus enabling us to assign the proper spaces to the various exhibits. Mr. W. C. Gunnell, civil engineer of New York, was appointed the chief engineer of the United States exhibit, and he had charge of the distribution of the spaces to be allotted to the various exhibitors, of the correspondence with them, of the determination of the amount of steam-power required to work the various machines in the exhibits, and, in general, of all the details connected with the setting up and care of the exhibits during the Exposition. He filled a similar position in the French Exposition of 1867, and his

experience and industry were of the greatest value to the United States exhibit.

An office was at once opened in the city of New York, and the work of advertising, collecting, and distributing information, answering inquiries, printing and distributing blanks, sending persons to induce manufacturers to make exhibits, and, in some cases, to procure exhibits by purchase when they could be obtained in no other way, was commenced, and was kept up without intermission in New York until the exhibits were collected and shipped to Havre.

There was also a brisk correspondence held with the secretary in Paris, who was our only means of communication with the Exposition authorities. Through him, with the powerful aid of Mr. McLane, the minister of the United States, we obtained an important addition to our space in the Palace of Machines, and were authorized to use engines made in the United States to give the motive power to our machines of all kinds exhibited in the Palace of Machines. The French Exposition authorities had made a contract with English and French houses, not only to deliver all steam that would be required for engines to run the various machines exhibited which required power, but also for the engines themselves, thus throwing out all engines manufactured in the United States from opportunity of working their own exhibit. This contract was modified by the French authorities after a long correspondence, so that the United States exhibit was worked entirely by engines built in the United States.

All regulations necessary for the full understanding of the duties and rights of the United States as an invited guest at the Exposition, the drawings and other information to enable the employés of the United States to place and set up the exhibits, the arrangements made with transportation companies, in fact, everything that was required to make our work easy, were transmitted as early as was possible under the circumstances.

#### COLLECTION AND SHIPMENT OF EXHIBITS.

During the summer of 1888, a large Centennial Exposition was held in Cincinnati. It was well endowed by the United

States, and many persons and firms who would have been likely to make exhibits in Paris in 1889 exhibited there, and considered it extravagant to make another exhibit less than one year thereafter. An International Exposition was also in progress in Brussels at the same time. The citizens of the United States who exhibited there were, in general, adverse to the longer stay abroad required by the Exposition of 1889.

The presidential campaign went on during the same period, and the interest taken in it absorbed the attention of business men to the exclusion of nearly everything else. Then, too, there was a suspicion—unfounded, it is true—that there was a certain instability in the existing state of politics in the French Republic, which might cause great excitement in Paris before the close of the Exposition, and embarrass foreign exhibitors. Midsummer is a bad time of the year to begin the collection of an exhibit for an Exposition. The heads of firms and companies are, in general, taking vacations, and prefer to postpone business questions until fall.

For these reasons the work of collecting exhibits during the summer was slow and unsatisfactory, and few applications were made before October and November. But immediately after the presidential election, applications for space came in vigorously, and by the end of November they covered more than all of the space which the United States could possibly obtain in the Exposition, and the work of apportioning the space to the satisfaction of exhibitors and arranging for the proper and timely shipment of the exhibits was begun, and continued without hinderance to the end. The 30th of November was the latest date at which applications for space could be received, as the interval between that date and that when the exhibits would be received at the Exposition, was necessary for the proper allotment of the space, and the reception and transmittal of the exhibits to Paris.

Arrangements were made with the French General Trans-Atlantic Company for the shipment of the exhibits to Paris via Havre, this company giving to them the benefit of the special rates, not only of its own line, but of the railroad lines from Havre to the Exposition grounds in Paris.

The collection of the Art Exhibit from the United States (Group I) was under the direction of General Rush C. Hawkins, of New York, known as a connoisseur in art, the assistant commissioner expert assigned to Group I. He, with my authority formed a committee of seventeen artists nominated by the leading art societies of the United States, and with their assistance selected those paintings and other works of art which complied with the requirements of the French authorities and were considered worthy of exhibition as specimens of the arts in the United States. This collection was supplemented by another made from paintings and sculpture of artists, citizens of the United States, residing abroad, and exercising their art there. The leading artists among these had formed a committee of artists in Paris, the duty of which was to look after the interests of the United States art exhibitors at the Exposition, residing in Europe, and to do what was in its power to make the exhibit creditable to the United States. General Hawkins arrived in Paris to organize the exhibit in March, 1889, and immediately obtained the assistance of the committee. With its advice the collection of the United States works of art executed abroad was made, thus completing the exhibit.

The exhibits in Groups II to VII, inclusive, were collected and organized in the office in New York under Mr. Tuck, assistant commissioner-general, and Mr. Gunnell, chief engineer, assisted by Prof. W. C. Blake, Prof. C. Wellman Parks, Rensselaer Polytechnic Institute of Troy, N. Y., and Mr. T. R. Pickering. The assistant commissioner experts of these groups were all engaged in their own private work until just before the opening of the Exposition. All of them were professors in universities, except Mr. A. Howard Clark, of Boston, who was a technical assistant of the Smithsonian Institution. All were technically well informed on the groups to which they were assigned by the law.

The collection of the exhibit of Group VIII was by the law assigned to the Department of Agriculture, Hon. Norman J. Coleman, secretary. He assigned one of the experts of that department, Prof. C. V. Riley, to the work. Professor Riley

was appointed assistant commissioner expert for that group. He conducted the collection and organization with great skill, and was ably assisted by other experts attached to the Department of Agriculture. The result was an agricultural exhibit second to none at the Exposition in variety and interest. Its size was small for obvious reasons.

The reports required by the law on the agriculture of the United States were prepared by experts belonging to the Department of Agriculture. They were translated into French at Paris, and thousands were distributed from the exhibit, and the greatest interest was shown in them. It was impossible to have them translated and printed in German in Paris, and none could have been circulated there had they been printed in German. A number of copies of the French translation were sent to the minister of the United States at Berlin, and were distributed by him to the German agricultural officials.

In Group IX the United States had a very small exhibit. The principal work, therefore, of the expert assistant commissioner of this group was the preparation of the report on the state of the art of horticulture, as shown by the Exposition.

#### EXPOSITION GROUNDS AND BUILDINGS.

The grounds of the Exposition were the Champ de Mars, containing 128 acres; the Trocadéro garden, on the other side of the Seine, containing 42 acres; the Esplanade des Invalides, containing 38 acres; and the Quai d'Orsay, from the Champ de Mars to the Ministry of Foreign Affairs, containing about 20 acres—in all 228 acres. In the Champ de Mars, which was the controlling feature of the Exposition, were placed the exhibits of the fine arts, the liberal arts, the divers industrial exhibits, and the machines; in the Trocadéro, horticulture; on the Quai d'Orsay, agriculture and agricultural machines and alimentary products; in the Esplanade des Invalides, exhibitions of the War Department and schools and of the colonies and countries under the protection of France.

The plan of the Exposition buildings on the Champ de Mars resembles the Roman capital E. The broad vertical member represents the Palace of Machines and the building for

French industrial products close to it. The length of these buildings takes up the whole breadth of the Champ de Mars. The upper horizontal member contains the foreign exhibits and the French Exhibit of the Liberal Arts. The lowest horizontal member also contains foreign exhibits, and the exhibit of the Fine Arts. The short middle member is the nave of the industrial building, and at its extremity is its main dome. The details can only be properly shown in the plans and in expert reports.

#### OPENING OF THE EXPOSITION.

By Monday, May 6, the date of the formal opening of the Exposition, the whole of the United States Exhibit, with some insignificant exceptions, was in place. Much, however, remained to be done in the other sections, French as well as foreign.

At the ceremony of the opening, the grand central dome was filled with seats occupied by the senators and members of the Chamber of Deputies of France, by its judges, high officers of the army and navy, the members of the diplomatic corps, and the commissioners-general of the exhibiting nations, and their assistants. In the upper galleries, the ladies who were invited to the ceremony were seated.

The President of the Republic, Mr. Carnot, arrived at the designated hour, two o'clock. He was escorted by troops, saluted with twenty-one guns, and on his entrance to the tribune in the dome was greeted with the Marseillaise, sung by men's voices and accompanied by a military band. Mr. Tirard, prime minister, and Commissioner-General of the Exposition, received him, and read an address. In it he recited the difficulties that had been overcome in bringing the Exposition to so triumphant a beginning. He continued:

Although this munificent result exceeds all hopes, there is nothing in it that should astonish us; progress never goes slow; new generations constantly replace forces which are exhausted or have disappeared; science—sovereign power of our century—does not stop the course of its contests, every day it penetrates farther into the secrets of nature; steam and electricity have already revolutionized the economic order of the universe,—who can tell the prodigies and surprises

they still hold for us and our descendants? Inventions, discoveries, improvements succeed each other with stunning rapidity; nothing can resist this enormous push forward; mills, work-shops, factories, stimulated by competition, encouraged by success, undergo constant transformations, upon which we can congratulate ourselves, since the result is an abundance of things necessary for life, the lessening of their prices, and consequently the increase of the general welfare.

After reciting the obligations of agriculture to science, congratulating the French artists on their progress, thanking the foreign commissioners and the representatives of the French colonies, he ended by saying:

Let us receive and joyfully entertain the foreigners who are already crowding here; let us prove to them that Republican France is hospitable and generous; that she loves and honors the workmen of all nations, and sees in them, not rivals of whom she is jealous, but fellow-workmen who labor with her for the happiness of humanity and the peace of the world.

The answer of the President of the Republic was able and dignified. In the course of his speech he said:

To-day France glorifies the dawn of a great century which has opened a new era in the history of mankind. To-day we contemplate, in its brilliancy and in its splendor, the work born of this century of labor and of progress. We salute the workmen of the whole world, who have brought here the fruits of their labors and the productions of their genius. We tender a friendly hand to all those who are our fellow-laborers in the work of peace and concord, to which we have invited the nations. We welcome the visitors who, from all points of the compass, within and outside of our frontiers, are already flocking, without regard to distance, to take part in our fêtes. They will find here a hospitable land, a city happy to receive them, and they will learn the value of calumnies dictated by blind passions upon which even respect for the country could not impose silence. Our dear France is worthy of attracting to her the chosen of the peoples. She has the right to be proud of herself and to celebrate with head erect the economic centenary, as also the political centenary, of 1889.

After speaking of the enormous strength of France, her inexhaustible riches, the benefits of liberty, he said that he wished

- in time to see the fruit of human labor devoted exclusively to the arts of peace, and after congratulating and thanking the engineers, architects, builders, and their fellow-workmen for

the faithfulness and science that they had shown in their work, he ended :

And now, gentlemen, we are going to visit together the treasures which the world has accumulated in these palaces and these gardens, giving to our country so splendid a testimony of confidence and sympathy. After having again wished a cordial welcome to the guests of France, I declare the Exposition of 1889 open.

During these ceremonies an enormous and very enthusiastic crowd had gathered, rendering progress slow and difficult, but the President, accompanied by a brilliant following, went over all important parts of the Exposition. When he arrived at any foreign exhibit he was received by its commissioner-general and his staff, and in the case of the United States Exhibit—in which he spent more time than he did in any foreign exhibit—he was also received by the detachment of Marines, which formed an efficient barrier to the crowd. In the evening the grand dome of the Exposition, the Eiffel Tower, and the buildings of the Trocadéro were illuminated with thousands of gas-lights, giving a magnificent specimen of an art in which the French are unequalled. The illumination lasted until about 11 p. m., when it was extinguished, and the crowd dispersed. Thus ended a day which by its great success alone would have assured the future triumph of the Exposition, had such assurance been necessary.

#### OFFICIAL CATALOGUE.

During the month of May the Exposition was finally completed. The Official Catalogue of the United States was finished and printed during the month. This work had been commenced in New York by Mr. Tuck, Assistant Commissioner-General, assisted by Professor Blake. It was completed in Paris, with the able assistance of Mr. A. Howard Clark, who devoted much intelligent labor and time to it. The "Information for the Jury" was collected and translated for the exhibitors and made ready for the juries. This work was in no respect one of the duties of the Commission and should have been done by the exhibitors, but in a great many instances the

mere fact that the article was exhibited and its name placed in the catalogue was considered sufficient.

This was a serious omission, and had it not been made good by the Commission would have been the cause of vital damage to the United States Exhibit in the matter of awards. Without this information the juries would have been unable to make any serious examination of the exhibits, and the articles would have been considered out of competition. With all important French and foreign exhibits, except those of the United States, the exhibitors had at their own cost prepared printed or lithographed accounts of their exhibits and of the works at which they were made, translated into French and accompanied by blue prints or engraved illustrations, giving, too, the names of the principal workmen who had been engaged in getting up the exhibit. This list of names was important, as the juries awarded medals in many instances to the persons named, showing their appreciation of the skill and industry exercised by these workmen.

In any international exposition hereafter, no exhibit should be received, or in any event be considered complete, unless it be accompanied by a detailed description of the articles exhibited, with an account of the works, their size, number of persons employed, etc., and a list of persons who, in the opinion of the exhibitors, are worthy of commendation for their work in the manufacture or display of the exhibits. Blanks had been prepared and furnished to the exhibitors for the easy transmission of such information, but in many cases no notice was taken of them. The whole force of the office was engaged for a full month in supplying this information and translating it for the use of the juries. Many exhibitors, after seeing their exhibits installed, considered their work over, and left them in the hands of subordinates, who, in general, took little interest in them. It was, therefore, the more necessary that this "information" should be in the possession of the juries. The Official Catalogue, which is appended to this report, gives an accurate list of the persons and corporations, and departments and bureaus of the United States Government that made exhibits. Its examination will demonstrate

that the exhibit in general was very creditable, and that in particular the machinery and agricultural exhibits did honor to the country. As for the electrical exhibits, including the telephone, phonograph, and graphophone, they far excelled anything similar at the Exposition; in fact, they may be said to have been unique. The United States Section received high praise from the President of the French Republic, the ministers who visited the Exposition officially, and from the jurors. The general appreciation of it is shown by the long list of prizes, a large proportion of which were high ones, awarded by the juries. This list is appended to this report.

#### JURIES.

The most important duty of the Commissioner-General in Paris was that connected with the selection of the jurors allotted to the United States, and the proper submission of the objects exhibited to the juries for their investigation. The total number of the titular class jurors, French and foreign, was fixed at one thousand, and that of the supplemental jurors at three hundred and thirty-three. These numbers were slightly increased afterwards. The titular jurors had votes, but the supplemental jurors were not allowed to vote except where the titular jurors were absent, when the supplemental jurors took their places. The number of titular jurors assigned to any nation, and to each branch of art or industry, was dependent upon the number of exhibitors and the importance of the exhibits. The number of supplemental jurors allowed was about one-third of the number of titular jurors.

The exhibit of the United States was allowed sixty jurors, forty-four of whom were titular and sixteen supplemental. The French jurors of both kinds were nominated by presidential decree on the proposition of the Commissioner-General, Mr. Tirard. They were selected from the citizens of France most distinguished in the specialties which they were to examine, and from those who had obtained high recompenses in the international expositions which had been held previously.

The foreign jurors were designated by the commission of the country represented. In the case of the United States, it

was impossible to select the jurors in the United States. It was not known until after the opening of the Exposition how many United States jurors would be allowed, and until the number was known it was impossible to determine to what classes they should be assigned, the number of titular jurors allowed being about one-half the number of classes to be investigated. It was necessary, therefore, to utilize all members and employés of the United States Commission who had any technical knowledge, and who could be spared from their ordinary duties. Some State commissioners served, also a very few persons of technical knowledge came from the United States to serve, and the remainder were selected from citizens of the United States resident in Paris, whose occupations were likely to have given them the required technical knowledge. The Commissioner-General was authorized by the law to determine the pay of the jurors; but to have paid anything commensurate with the labor and time required by a juror who did his duty would have absorbed at least one-fourth of the appropriation for the whole United States Section. It was impossible, therefore, to hold out the inducements necessary to take able men from their work at home to come to Paris to undertake a long and tedious work among strangers, the deliberations and business being carried on in a language with which people in the United States are not generally conversant.

Each jury was allowed to call experts to its assistance, with the consent of the Commissioner-General.

No exhibitor could serve on a jury unless his exhibit was considered out of competition.

The recompenses to be awarded by the juries were the following:

- Diploma of grand prize.
- Diploma of gold medal.
- Diploma of silver medal.
- Diploma of bronze medal.
- Diploma of honorable mention.

The class juries were organized on the 12th of June in a meeting held at the Trocadéro under the presidency of the

Commissioner General, and explanations were then made and instructions given by Mr. Berger, the Director-General of Management. Each jury at its first meeting chose a president, vice-president, a reporter and a secretary. The president and vice-president were to be, one French, the other foreign, and eight vice-presidents were chosen from the jurors of the United States. The office of reporter is not used with us. His duties seem to be to keep such a record of what is being done that no time shall be lost in determining the next business, and his record will always give to the members of the jury information of the state of the work. He is the journalist of the jury, and to that degree performs the work that is done by a secretary with us.

The juries began work at once. They worked steadily at all available hours, until everything exhibited for competition was examined. I have never seen such honest, conscientious, hard work as was done by this large number of distinguished men, who served without pay. Their reward was the appreciation by their countrymen and foreign exhibitors of their disinterested labors, and the consciousness—which they have a right to hold—that no body of men ever performed a delicate and laborious task with more industry, with greater ability, and with a better sense of justice to all. Their work was finished by the 25th of July. At this date the group juries met. These juries were composed of the presidents, vice-presidents, and reporters of the class jurors. Each group jury had a president, vice-president, and reporter, who were named by presidential decree on the nomination of the Commissioner-General, except in Group I, whose officers were nominated by the Minister of Public Instruction and Fine Arts. Three vice-presidents of group juries were taken from citizens of the United States. It was the duty of these juries to go over the awards made by the class juries, and make such changes in the number and grades of awards as they thought proper. When the result of the work of any class jury was before the group jury, the members of the class jury had a right to be present and to be heard.

The deliberations of the group juries were finished in the

early part of August. The superior jury met on August 26. Its honorary president was the Commissioner-General, and the honorary vice-presidents were the Minister of Public Instruction and Fine Arts and the Minister of Agriculture. It was composed of eighty members, forty French and forty foreign. The French members were the principal officers of the Exposition, the members of the superior committee of revision, the presidents and vice-presidents of the group juries, the president of the special jury on social economy, the chiefs of cabinets of the Commissioner-General, and of the Ministers of Instruction and Fine Arts and of Agriculture. The foreign members were the commissioners-general of countries which had more than five hundred exhibitors. The United States, therefore, had four members of this jury, but only three were present, the fourth having been obliged to return to the United States after the first meeting of the jury. It was the duty of this jury to examine the findings of the group juries, and finally, and as a court of last resort, to determine the lists in each class in the order of merit of the recompenses which should be awarded to exhibitors. The first meeting of the jury was opened with a speech from the Commissioner-General, supplemented by a report from Mr. Berger, Director-General of Management. The jury was too large to act as a unit, and a sub-commission (committee) of twenty-five members of the jury, composed of the best artistic, economic, agricultural, and technical talent of France, with some foreigners, was formed, to which the whole subject was referred, and the jury adjourned to await their action. Two citizens of the United States were members of this committee. It was understood that the report of this committee would be acted upon by the superior jury as a unit, and such was its action.

The foreign commissioners-general had the right to be present at any meeting of this committee when the interests of their exhibitors were involved in the discussions. Each group from I to IX was taken up in numerical order, and reports were made by the presidents, or other officers of the group juries, giving the lists of recompenses recommended, and reciting the complaints of exhibitors which had been made in

writing. Then any foreign commissioner-general, or some one appointed by him, could state complaints verbally, and after the investigation considered necessary by the committee, the decision was made. In cases in which the group and class juries agreed upon a particular award, the question was considered closed. These reports embodied the final action of the group juries as to awards to be made, and were discussed fully by the committee. The discussions were able, as may be inferred from the composition of the committee. As was stated by Mr. Berger, Director-General of Management:

Had it been possible to place in permanent form the elevated sentiments that were exchanged, to describe the great industrial, economic, and artistic questions that were treated in the course of the discussion, with wonderful breadth, the Exposition would leave after it one document more to attest the value of the men who have figured in its juries.

The report of this committee was made to the jury on September 11. After a short discussion it was unanimously adopted by the superior jury. A report from Mr. Berger gives a succinct account of the work of the committee. A translation of it is appended.

#### PUBLICATION OF AWARDS.

The number of recompenses of all degrees awarded was 33,138. This enormous list was immediately classified and printed, and was ready by September 29, the date of the formal publication of the awards. This ceremony, which was attended with great dignity, took place in the Palais de l'Industrie, in the large apartment that takes up the whole ground floor. The magnificent room was highly ornamented with tapestries and banners arranged with exquisite skill, and was filled by fifteen thousand persons, men and women, seated, well dressed, and in general connected in some way with the Exposition. The south end of the room was taken up by an ascending stage, upon which were displayed the standards of France and her colonies, supported by natives in their national dress, and to these were afterwards added the standards of the foreign nations that took part in the Exposition, supported by their

guardians. This arrangement formed a magnificent tableau vivant, and the best artistic and architectural skill at the command of the Exposition contributed to its success. On the right of the stage was a large tribune, in which were seated the President and cabinet, and near them were Madame Carnot and other ladies. In front of the President were seats for senators, deputies, judges, members of the Institute, and other officials, all of which were well filled by persons in official dress. From the end of the room opposite the stage, a grand stairway descended to the floor, and from the top of the stairway the procession appeared, moving towards the President. This was made up, first of the commissioners-general and their staffs and assistants of the foreign nations, in alphabetical order, escorted by their guardians, all in full dress. They made a brilliant show, and the fine appearance of the marine detachment caused the United States procession to be received with a great burst of enthusiasm. Second were specimens of French soldiers, of marines and sailors, representing the war and navy departments. Third came the representatives of the nine groups into which the Exposition was divided, with characteristic banners representing artistic and industrial France. Then came the representatives of the colonies, and last of all, the members of the Institute of Fine Arts.

As each commission came in front of the President, its standards were lowered and its members saluted him. The guardians with the standards moved on to the stage and took positions previously designated by the architect, thus helping to make up the brilliant display of all nations shown on the stage. The members of the commissions took seats that had been assigned to them. During the passage of the procession, brilliant music was played by a band, and the air seemed filled with banners and standards and flags lighted up with gold and brilliant colors. The procession was a grand artistic success.

As soon as the procession had passed, the President arose and made a short and excellent speech. He called attention to the fact that, five months before, he had opened the Exposition, and had welcomed the guests of France, exhibitors and visitors, to her hospitality. He now thanked them for their

valuable help, which had in so great a degree contributed to the success of the Exposition. He continued:

The splendors of modern art and industry have not only gratified the eyes of visitors: they lead to study, they solicit comparisons, they excite ideas, they disseminate germs of progress in the world of labor, they engender fruitful efforts for improving the means of production. Thus the Exposition of 1889 will perpetuate itself. It will bear other fruits no less precious, by popularizing the latest conquests of industrial mechanics, the fittest processes for guaranteeing the safety of the workmen and the healthfulness of the shop, by calling attention to the methods of instruction in all countries, above all to the methods of technical instruction, inseparable from the liberty of labor.

The Exposition has not been merely an exhibition of things: it has been an exhibition of ideas. The international congresses, to which eminent men of all countries have contributed their ideas upon science, art, letters, economic and social questions, will leave the most precious documents. An entire group of the Exposition, specially devoted to social economy, has collected priceless treasures of information upon production and the methods of making it easier. Here has been shown the glorification of the work of 1789, the emancipation of industry, and a complete picture of one of the greatest economic and social revolutions of humanity. Such richness, gentlemen, will form a mine precious to explore at this time, when more than ever the study of all questions relating to work, to production, to credit, to association, and to savings is upon us; now, when the examination and defense of our commercial interests require, equally, vigilance and coolness, at the very moment when patriotism, with peace within and without, with agreement among our citizens, demands a practical and productive policy. If the Exposition of 1889 opens to our country this era of pacification and work, it will have borne the fruits that patriots expect of it. Its benefits will not stop at our frontiers. The guests whom France has welcomed with joy, and from whom she will not part without regret, will have learned to know her. The enlightened opinions that they will have, the feelings with which they will return to their own countries, cannot be without effect upon the relations between the peoples. The policy to which France is faithful will have found new defenders, and the Exposition of 1889 will have again served the great cause of peace and humanity.

The President was followed by Mr. Tirard, president of the Council, Minister of Commerce and of Industry, Commissioner-General of the Exposition. He referred to the pride which all Frenchmen justly felt on account of the signal success of the

Exposition, to the badly founded fears of failure to which superficial political agitation had given rise, to the appropriateness of the date of the opening of the Exposition—

Placing in relief the enormous and constant progress realized in all branches of human activity since that memorable epoch which saw ancient privileges, the oppression and abasement of the people, disappear, to give place to the emancipation of labor, to free property in the soil, to the right of all citizens to hold public office, to civil equality, and to the obligations of all to the law. This coincidence of the celebration of the centennial of the Revolution of 1789 with a great international exposition is not then, as seems to have been believed, a sterile political manifestation, but is really the demonstration of the power and vitality of a free nation, which, faithful to the traditions of its race, is constantly laboring to ameliorate the lot of the citizens who compose it. In fact, the expositions of the present day are not what they were at their origin, enormous markets, having no other object than a trade in merchandise: these expositions—and that which now occupies us, abundantly proves it—have a more extended and higher range. They show, not only new or improved products, new inventions or discoveries, but also efforts, attempted or successful, which have for their object the increase of general well-being.

He then gave a general sketch of the various exhibits of all kinds, laying particular stress upon the great improvement in technical or professional education of young men and young women who wish to learn trades. “To properly appreciate the advantages of public and private technical schools (which are often in truth but preparations for apprenticeships) it must be remembered what apprenticeships really were formerly, and we must gratefully admire the founders and instructors of these schools, who devote their time and their money to works now justly considered as indispensable to the prosperity of industry.” He thanked the juries for their faithful, zealous, and able work. He stated that the number of exhibitors exceeded 60,000; that the group juries granted 32,468 recompenses, and that the superior jury raised the number to 32,949, distributed thus:

Diplomas of grand prizes .....	903
Diplomas of gold medals .....	5,153
Diplomas of silver medals .....	9,600
Diplomas of bronze medals .....	9,323
Diplomas of honorable mention .....	8,070

Besides, 5,500 medals of various kinds were awarded to "collaborators," workmen who were noted for skill and ability and faithfulness in the work-shops in which the exhibits were prepared. He also stated that, as every exhibit had merit, it was proposed to present to all exhibitors not mentioned in the above lists commemorative medals. Hethencordially thanked all persons connected with the Exposition, whether as officers, or exhibitors, or foreign commissioners, for their valuable assistance in making a success of the Exposition. He ended as follows :

We shall wisely and resolutely continue the work of 1889 without permitting the constantly recurring exactions of new ideals to weary and discourage us. We will remember that the social reforms dimly seen by our fathers, and whose outcome we realize, are obtained neither by surprise nor by violence, and that to produce sure and durable results, they must be patiently and progressively attained. Thus, gentlemen, will France continue its ascending march in the direction of progress and civilization, with the worship of liberty, with the love of labor, which is to-day the master of the world.

After Mr. Tirard had finished, Mr. Berger, the Director-General of Management, read the names of those who had received grand prizes, and the printed copies of the lists of awards were presented to the representatives of the nine groups. Then, after music, the assembly dispersed.

It was the design of the Exposition authorities to show that the republic of to-day, without aid from royalty, could make as impressive a final display as any that had been made previously at any other exposition. Its success was signal, and all who were present at the distribution of awards—which may be considered the closing ceremony of the Exposition—came away convinced that they had never witnessed a more dignified, more impressive, or more beautiful spectacle.

#### PACKING OF EXHIBITS.

After the publication of the awards the official connection between the French administration and foreign commissions virtually ceased. The Exposition went on as usual during October and up to the 6th of November, when it was quietly closed without any ceremony. The work of demolition and

of taking down and packing exhibits began on the next day, and in an incredibly short time the beautiful halls of the Exposition buildings became scenes of, apparently, dire confusion. But as the goods were gradually packed and removed order soon sprang up again, and by November 30 everything was ready for shipment. But the shipment was a tedious and difficult work. The French custom-house authorities insisted upon placing leaden seals on each package to avoid danger of fraud, and exacted formal declarations covering each exhibit. The time required to comply with these regulations caused our shipments to extend over a space of three weeks longer than would have been necessary had our official labels been considered sufficient guaranty of good faith.

#### CONGRESSES.

No less than seventy international congresses sat at Paris between the 12th of June and the close of the Exposition. The list which is herewith given shows the great variety of subjects which were discussed. Although the honorable Secretary of State and myself were asked to designate persons from the United States to sit in these congresses, we had little success in getting them. A few came from the United States to attend them, but they were not detailed officially, and there was no official record of them at the office of the United States Commission. Several persons connected with the Commission were, however, designated and did attend. The sessions only lasted for three or four days, and the proceedings were in general laid out beforehand, and there was not much original discussion. But nearly all subjects interesting to scientific men and students of economic, hygienic, and social science were touched upon, and the journals of the congresses, which will be published hereafter, will doubtless be of great value to all interested in the subjects.

#### GENERAL DEPARTMENTS OF THE EXPOSITION.

An international exposition of the present day may be naturally separated into three departments:

- (1) The industrial department, which may be considered

an enormous collection of advertisements. The goods are there displayed to show their merits, their advantages over the same classes of goods in their own and foreign countries, and the exhibit is arranged to catch the eye of the visitor, as the show windows of shops are ornamented to attract those passing in the street.

There would be little inducement for manufacturers to make exhibits unless they expected to increase their sales by them. The fact that the exhibits were in general so fine in the Exposition of 1889 is good evidence that manufacturers have reaped benefits from former expositions. Nevertheless, there is a certain sameness, almost amounting to monotony, in industrial exhibits of ordinary fabrics and machines in all expositions.

(2) The instructive department. The exhibits in the Exposition of 1889 which were intended to throw light upon subjects for study, like those of the history of work, the history of human habitations, social science, the exhibits from the various official departments, that of the city of Paris, and many others too numerous to mention, exceeded in their variety, the skill of their arrangement, the scientific, technical, and historic knowledge shown in the descriptive catalogues, anything of a similar kind that has ever been shown in any exposition. A visitor interested in any of the subjects treated, who would make a thorough examination of the exhibit of his subject, would obtain a fund of information that would amply reward him for the time taken, and which he could get nowhere else in as compact a shape.

A short résumé of the history of work has been prepared by Col. Wickham Hoffman. It is appended to this report. The same gentleman has also translated information on the Social Science Exhibit, which may almost be considered a newly discovered group. It was arranged in fifteen classes, under the direction of Mr. Léon Say, the president of the jury of the new group, whose distinguished reputation as a social scientist is well borne out by the great success of the exhibit. This translation is also appended to this report.

One of the most interesting exhibits in the history of labor is contained in the war department building on the Esplanade

des Invalides. It is a collection of armor and arms belonging to Mr. William H. Riggs, a citizen of the United States resident in Paris, and is one of the most complete, if not the most complete, private collection of the kind in existence. It brings the history of armor down from the first use of metallic armor until it was discarded, and of arms from bows and cross-bows to modern fire-arms. Mr. Riggs has spent many years and an enormous amount of money in bringing the collection to its present state of perfection. There are many objects in it, too, of great historic interest, all, however, belonging to the subject of armor and arms. It is very large, and although the room in which it was contained was at least sixty by forty feet, and was well filled, only about two-thirds of the collection could be exhibited for want of space. Unfortunately, Mr. Riggs was unable to catalogue the collection on account of serious illness, so that it is only mentioned in the French official catalogue without any description.

The subject is mentioned here because it is the intention of Mr. Riggs to present the whole collection, without exception, to the National Museum at Washington, provided the United States will furnish a fireproof building for it, with means for its care and preservation, and call it the Elisha W. Riggs Collection; this was the name of his father, who was a citizen of the District of Columbia. He was too ill to attend to the business of making the conditional transfer to the authorities of the National Museum, who were in Paris during the summer ready to do all that could legally be done in the matter. It has been estimated by experts in such matters that the collection could not be duplicated at a cost of less than one million dollars, and some of the historical pieces could not be replaced at any price. If, therefore, Congress would authorize some one connected with the National Museum to negotiate with Mr. Riggs, committing the United States to comply with his modest requests upon proper presentation to the United States, these extremely valuable and artistic relics would soon be transferred to the city of Washington, and would, I am sure, be one of the most attractive features in the National Museum. I append a letter from Mr. John Durand, a citizen

of the United States resident in Paris, and a correspondent of the Smithsonian Institution and the National Museum, which gives a general statement of the contents of the collection.

(3) The amusement department. No exposition has ever contained within itself so much to interest and amuse every class of visitors as that of 1889.

During the day the Eiffel Tower, about one thousand feet high—which was ascended by elevators, a combination of French and United States inventions—had at its foot a line of thousands awaiting their turn at the cage of the elevator. Those who came as late as ten o'clock in the morning were obliged to wait for hours, but if the day was clear they were amply repaid by the view from the top for the time lost. At the height of about three hundred and twenty feet from the ground there was a platform, on which were built restaurants which were much frequented, and this platform was a favorite stopping place.

The grounds of the Trocadéro were devoted to the display of flowers, trees, and fruits. They were an endless source of amusement to visitors. The grounds, lawns, and flower-beds on the Champ de Mars were kept in beautiful order, constantly renewed, and with the numerous fountains on the grounds, which were of great beauty and were in full view from the large restaurants which skirted the sides of the buildings, the visitor was constantly interested. During the whole time of the Exposition there was music by excellent military bands in the grounds of the Champ de Mars every afternoon. Various theaters on the Champ de Mars, where light pieces were performed for a small price of admission, were in action day and night, and several eastern theatrical dancing exhibitions could be seen at any time in the Rue du Caire, on the Champ de Mars, or on the Esplanade des Invalides.

The grand dome of the Exposition and the Palace of the Trocadéro, at opposite ends of the great inclosure, were illuminated, and the colored fountains of the Champ de Mars played every evening; on Sunday evenings and on the evenings of fête-days, and other grand occasions, like that of the visit of the Shah of Persia, the Eiffel Tower was also illuminated,

and the illumination of the Trocadéro Palace was made more general. At least two tickets were required for admission after six o'clock of the afternoon, except on Sundays, when but one ticket was required. On great occasions the price was raised to five tickets, and on the occasion of the Shah's visit to ten tickets. It is a well-known fact that the French excel all other people in the art of ornamental illumination. Every detail connected with the illumination of the Exposition buildings, fountains, and grounds was elaborately worked out, so that it may easily be imagined what a source of interest and pleasure these nightly illuminations were to the hundreds of thousands of visitors, who waited long hours and bore every inconvenience of crowding and of weather to see them. On many occasions the crowd was enormous, but it was always good-natured, and the simultaneous expressions of surprise, admiration, and delight that came from thousands of voices when the fountains were suddenly lighted up was an amusing and impressive feature of the scene.

#### GENERAL REMARKS.

One of the results of the Exposition is that the relations between France and all nations which exhibited are made closer and more friendly through it.

The French were wise enough to give timely notice to all distant nations in Asia, Africa, and America which were likely to exhibit, that the Exposition was to be held, and to induce many to send exhibits who had never before appeared in an exposition. These nations, therefore, not only exhibited their productions, but in many cases sent enough of their people, some of high positions, to show their peculiar customs and manner of living, forming a kind of colony which was interesting and instructive. These people were very kindly treated, and were shown whatever was to be seen in the Exposition and in Paris. They were in general intelligent and observing, and the result is that their nations will learn more from them, as to the greatness of France as a nation, as a producer, and as a generous host, than they would have learned in fifty years without the Exposition. They will look upon

the French as the greatest people of modern times as organizers, producers, and artists, and the French will reap enormous benefits as the first civilized people who developed themselves to these nations.

The perfection of the administration of the Exposition, the magnificent show of industrial and agricultural products, the exhibits of the fine arts, which have never been equaled, the splendid works of engineering and agriculture which are shown in all parts of the grounds, the intelligent exhibits of the history of work, the colonial exhibits, in fact, everything connected with the Exposition, convinces an intelligent observer that the nation which could thoroughly organize so grand a work must at least be abreast of all modern nations in works of industry and art, and in the ability to organize and utilize the brains and muscles of its people.

Whatever may have been the reputation of France before the Exposition in these respects, it must be acknowledged that no other nation in the world could at this time have equaled France in its exposition of modern fine arts or could have exceeded it in any other department of the Exposition; and it is certain that no such great result, due to ability of administration and energy of purpose and to the enormous wealth of objects—the results of industry and art—has ever been attained by any other nation or can be surpassed in the near future. The fact that the Exposition was held in Paris was one great cause of its brilliant success. Within three miles of the Champ de Mars three millions of people lived. Although the cab or fiacre system was imperfect, it was perhaps as good as it would have been anywhere else, and it was well supplemented by the steamboats on the Seine, and by street-railways and omnibuses, regular and improvised. The most painful spectacle in all Paris, however, was the unchecked brutality and recklessness of cab and fiacre drivers, and the sufferings of the fiacre horses. Much of the pleasure of driving in the streets of Paris was destroyed by the constant sight of this cruelty and by the insolence of the drivers.

The main entrance of the Exposition was on the Quai d'Orsay, near the Ministry of Foreign Affairs, not more than ten

minutes' walk from the Place de la Concorde. The principal feeders were, however, the entrances from the Place du Trocadéro and on the Avenue Rapp. There were, however, wickets for entrances well distributed, so that in general there was not much crowding at them. The places for exit were not so numerous, and late at night, at the close, they were very crowded, and there was great difficulty in getting away on account of the scarcity of cabs.

Another result of the Exposition was a great increase of prosperity from the enormous amount of money brought into France, and more especially into Paris, by its means. The figures are given in another part of this report. Nearly the whole working population of Paris reaped some moneyed benefit from the large expenditure, and thousands of the inhabitants, who would have been in misery through the whole season, were in comparative comfort in consequence of it.

It is not the province of this report to give an opinion as to the effect of this state of things on the election of September 22 for deputies; but it cannot be improper to state that in no city was there ever a quieter or more orderly election than it was, whether the improved condition of the voters had or had not any effect on their conduct at the polls.

One result of this Exposition, which, however, has been common to all international expositions, is that the nations which exhibit get closer to each other in the style of their manufactures, more particularly in that of their steam and other machinery. The technical men, who make a study of the exhibits, examine carefully everything in their own lines of work, and if they see anything in any exhibit which is superior to their own articles in that line, they have it adopted in their work. As this is true of the technical men of all exhibiting nations who are present at an Exposition, the result has been that the machines to do the same work in different nations of Europe and in the United States resemble each other more closely in all respects than they did twenty years ago. The same remarks apply in a less degree to all fabrics. They are more nearly alike now in taste and material and work than they were when international expositions began. Should this

approximation continue in international expositions that are to follow, the people of the various exhibiting nations must be forced to think more nearly alike, and will, therefore, be brought nearer each other. Such a result must conduce to the benefit of the human race, and will be one of the most important due to such expositions.

Another of the results of the Exposition of 1889 will be the more general use of iron hereafter in architecture, not only as ornament, but as a building material nearly as necessary and important as stone or brick.

All of the beautiful outlines of the buildings in the Champ de Mars were due to iron construction. The principal supports of the buildings were iron. The frames of the domes were iron. The filling between the forms was, in general, a cheap brick or stucco material, and the covers of the domes were encaustic tile. The roofs were generally of glass in iron frames. For constructions for an exposition, this cheapness is doubtless necessary, but the glass roofs were always a source of trouble from leakage.

Architects are agreed that iron is not a proper material for artistic constructive work in important buildings, but, in spite of the principles of art, it is coming more generally into use, and the example of the buildings on the Champ de Mars will have influence in extending the style of buildings there employed.

Terra cotta and plaster of Paris were used for the carved work and statuary of the buildings generally, and, as all of it was done with great artistic skill, the effect was very fine.

The shortness of the time for collecting the exhibit of the United States and delivering it in Paris was a source of embarrassment in many ways.

Our acceptance of the invitation to participate in the Exposition was only delivered in July, 1888, less than ten months before the date of the opening of the Exposition. We were the last large industrial nation which applied for an assignment of space, so that our choice was necessarily the last. It is probable that the spaces so assigned in Machinery Hall and in the Industrial Section were large enough for our exhibits, but

their location would have been in more prominent places had we been among the first to apply. The location of our exhibit in Group II was very bad, being off the ordinary lines of communication, and on an upper floor, so that this very creditable exhibit was somewhat neglected by visitors, although well appreciated by the juries. Other foreign exhibits in the same group—inferior to ours—had prominent positions, and we could doubtless have had one of these, if we had been earlier in the field.

Our Agricultural Exhibit, which was inferior to none in the Exposition, was more than a mile from the United States exhibits of machinery and industrial products, and nearly the whole distance was taken up with agricultural exhibits of France and other nations, crowded with visitors, rendering access to it a long and tedious work to any one whose object was to view all of the United States exhibits in one visit to the Exposition. As all of the agricultural exhibits were thrown upon the Quai d'Orsay—outside of the Champ de Mars—it is doubtful whether, on account of the enormous size of the exhibits, any better arrangement could have been made. Still, the very mention of the distance gives an idea of the magnitude of the Exposition. But if all the United States exhibits could have been placed together, the display would have been finer, and their effect, as a whole, would have been more striking.

The same remarks as to distance apply to the Art Exhibit of the United States. It was a long distance from Machinery Hall and from our Industrial Exhibit, and was on a second floor at the extreme end of the Palais des Beaux Arts. To reach it, the visitor's most natural course was to go through the whole French Exhibit and several foreign art exhibits. These were always crowded, and by the time the United States Exhibit was reached, the eye had been already satisfied and the visitor fatigued.

The republics of Mexico and those of Central and South America, whose exhibits contained no machines, and were mainly composed of agricultural products, obtained prominent places for them by erecting special buildings on the Champ de Mars, which were very creditable in size and architecture,

and some of them very costly. The name of the country to which the building belonged was displayed on the façade. As many of these republics were exhibiting for the first time in an international exposition, they thus had the means of making their exhibits known and noticeable. In the case of the United States, its exhibit was too large and too varied to be placed in a special building, and besides it had been known as an exhibitor in every international exposition, so that no advertisement was necessary, and the appropriation would not have justified the necessary expenditure; neither could a proper site for the erection of such a building have been obtained at the late date of the acceptance of the invitation to participate in the Exposition.

The law authorizing the acceptance of the invitation to the Exposition was defective in the omission to authorize or require the various departments, bureaus, and museums of the General Government to send exhibits, with one exception—the Department of Agriculture. When application was made to the officials in charge for the loan of exhibits, the answer given was in nearly all cases that the property of the United States could not be allowed to go out of their control without the special authority of law. To this there was no answer. There were a few exceptions, but in general there was no moneyed responsibility involved. An attempt was made to get a law passed giving the necessary authority, but it was not successful. The general interest in the United States Exhibit would have been greater, and its appearance much improved, if the departments and museums had exhibited. Although our space was filled, the governmental exhibits would have taken the place of some small and insignificant exhibits which were not creditable to the United States. Besides, when the invitation was accepted, it ought to have been with the understanding that everything that the Government could do, in the time and with the means available, should be done to add to the value and interest of the exhibits.

Another defect was, the amount of the pay of jurors was left to the discretion of the Commissioner-General. Jurors ought to play a more important part in international exposi-

tions than they have hitherto. If they do their duty, they get perfect information on the classes to which they are assigned, and should be able to make valuable reports. In the Exposition of 1889, sixty jurors were allowed the United States. Some came from the United States purposely to serve on juries; others were travelers who consented to stay awhile at Paris for the same purpose; others were Frenchmen or citizens of the United States resident in Paris; and the remainder were the commissioners expert, and other officials of the Commission. The pay of those who came from the United States to serve should be enough to cover all expenses of travel and living abroad for six weeks at least, with a reasonable per diem allowance in addition. Those who stop at the place of the Exposition to sit as jurors should have their expenses paid while at the place, as should those who reside at the place of the Exposition. Those detailed from experts and other officials should not be paid. All should be required to make reports to the commissioners expert, and should receive a small compensation for them. But in any event, the amounts should be fixed by the law, and should not be contingent upon the amounts available from the appropriation for the cost of the Exposition after that cost is paid.

#### UNITED STATES AWARDS TO EXHIBITORS.

The United States fared better than any other foreign nation in the number and nature of the awards granted to its exhibitors. A list, giving the names of those recompensed and the kind of award given, is appended. From this it appears that the whole number of awards to the exhibit of the United States is 1,044, distributed as follows:

Diplomas of grand prizes .....	55
Diplomas of gold medals .....	214
Diplomas of silver medals .....	300
Diplomas of bronze medals .....	246
Diplomas of honorable mention .....	229
Total.....	1,044

This number is greater than at any preceding international exposition, and the United States has good grounds

for pride in this result. It is to be feared that there will be a good deal of delay in the distribution of the diplomas, as the delivery of the plate, which was to have been finished by January 1, was postponed until March 1, and an official statement has been made that the diplomas will not, in consequence, be ready until August 31. The date has been since postponed to November 15, 1890.

#### FINANCES.

It has already been stated that the whole cost of the Exposition was not to exceed \$8,600,000, of which amount the state contributed \$2,400,000, the city of Paris \$1,600,000, and the remainder, \$3,600,000, was to be furnished by a guaranty association, which was to receive as payment whatever amount accrued from the sale of tickets at 1 franc (20 cents) each. This arrangement prohibited all gratuitous admissions, and would have embarrassed the management. As late as March 20, 1889, a new contract was made with an association of banks and bankers, which relieved the guaranty association, and undertook to furnish, besides the \$3,600,000, an additional amount of \$700,000. To reimburse this association, it was authorized to issue bonds to the value of \$6,000,000, each bond promising to pay \$5, and having attached to it twenty-five ticket coupons, detachable at will, and each good for one entrance to the Exposition. Each bond was also a lottery ticket. There are to be eighty-one drawings of the lottery, six of which took place during the Exposition. The remainder are distributed over a period of seventy-five years, when \$5 are to be paid to the holder of each bond on presentation, without reference to what may have been drawn in the lottery. This arrangement was a success, and the bonds sold easily, so that the whole amount available for the Exposition was increased to \$9,300,000. This increase was a great boon to the Exposition authorities, as it enabled them, without drawing upon the amounts set aside for the whole cost of the Exposition, to meet the payment of \$360,000 guaranteed to the Society of Electricians for lighting the Exposition at night. This society consisted of French and foreign electrical light companies which were exhibitors. They were to be paid the

receipts of the evenings at the entrances, but they were in any event guaranteed the sum of \$360,000.

A sum estimated at \$60,000 or \$80,000 was also set aside from the increased amount available, for the cost of the medals and diplomas of awards to exhibitors. The state and the city of Paris each contributed nearly \$200,000 to the various fêtes, balls at the Palace of Industry, fêtes of the opening of the Exposition, the distribution of awards, etc. Sums were also appropriated for the cost of the dinners, receptions, and fêtes of all kinds given by the President of the Republic and the ministers, as accompaniments of the Exposition. If to the appropriations indicated above be added the cost of the exhibitions of the history of labor, which must have been nearly \$1,000,000, and that of the colonial exhibits, all of which it is understood were undertaken by the state, and that of the exhibition by the city of Paris, it is estimated that the whole cost of the Exposition must have amounted to about \$12,000,000.

To offset this large amount, the state and the city of Paris both received large accessions of revenue due to the Exposition. Thus the increase in revenue receipts for the first nine months of 1889 over the corresponding period of 1888 (not including the duties or taxes on sugar and salt) was \$5,000,000. Of this amount \$2,701,000 was from customs (salt and sugar not included), and \$2,202,000 from the taxes on matches, tobacco, post, and telegraphs. Some of the details are the following:

Excess of duties on wines and liquors of all kinds.....	\$1,954,000
Excess of duties on tobacco .....	861,400
Excess of tax on posts more than.....	1,200,000
Excess of tax on telegraphs .....	307,200
Excess of tax on express-train passengers .....	600,000

The city of Paris contributed \$1,600,000 to the Exposition.

The octroi (tax laid by the city on provisions, wines, etc., which were brought into it for consumption) from January 1, 1889, to October 28, 1889, exceeded that for the corresponding period of 1888 by about \$1,800,000. Of this amount \$450,720 was from provisions, and \$1,000,000 from wines, etc. In addition to the contributions by the state and the city above mentioned, each appropriated \$200,000 for public fêtes, banquets,

ceremonies of the opening of the Exposition, formal distribution of awards, receptions of foreign sovereigns, etc. The city also spent large sums for street improvements, repairs of ways, etc.

It is estimated that the amount saved from the computed cost of the Exposition, which was considerable, added to the amounts realized from the concessions to restaurants, theaters, and other places of amusement within the Exposition grounds, and to the sum realized from the sale of old material, lumber, etc., will be about \$1,600,000. Of this amount, about \$1,100,000 goes back to the state, and the remainder, about \$500,000, to the city. To recapitulate:

The state contributed in the first instance . . . . .	\$3,400,000
Afterwards it contributed for fêtes, etc. . . . .	200,000
And for personal fêtes, receptions, etc., say . . . . .	200,000
	<hr/>
Whole amount contributed by the state . . . . .	3,800,000
	<hr/> <hr/>
The state received from increase of customs, taxes, etc., due to the Exposition . . . . .	5,000,000
From amount realized from saving on first cost, concessions, etc., in Exposition, and sale of old material. . . . .	1,100,000
	<hr/>
Whole amount realized by the state . . . . .	6,100,000
	<hr/> <hr/>
The city contributed in the first instance. . . . .	1,600,000
For fêtes, etc., for the city generally . . . . .	200,000
Improvements of streets, repairs of ways, etc. . . . .	100,000
For entertainments and fêtes at Hôtel de Ville, say . . . . .	100,000
	<hr/>
Whole amount contributed by the city . . . . .	2,000,000
	<hr/> <hr/>
The city received from increase of octroi. . . . .	1,800,000
Proportion of amount realized from saving on first cost, concessions, etc., in Exposition, and sale of old materials. . . . .	500,000
	<hr/>
Whole amount realized by the city of Paris. . . . .	2,300,000

For the twenty-six weeks from May 7 to November 4, 1889, the receipts of the six great railroads which do the main passenger traffic to and from Paris, viz., the Lyons, Northern, Western, Orleans, Eastern, and Southern, exceeded the receipts for the same period in 1888 by \$11,941,329, and it must be admitted that more than \$9,000,000 of that sum should be credited to the result of the Exposition.

There were more than 60,000 exhibitors; and it is estimated that each spent in round numbers \$600 on his exhibit. This makes the enormous sum of \$36,000,000 to be added to the cost of the Exposition, but nearly all of this sum was spent in France.

It is a difficult matter to determine the number of visitors who came to Paris in the summer of 1889 who were brought there merely by the Exposition. Several estimates have been made by independent statisticians which produce nearly the same result. They give as the increase of the permanent population of Paris, during the whole one hundred and eighty days of the Exposition, 200,000 persons, and their average daily necessary expenses, five or six dollars. Taking the latter figure, the amount of money which these persons spent, merely for board and lodging and cab hire, was the enormous sum of \$216,000,000. If to this be added the cost of amusements, operas, theaters, etc., meals at restaurants, excursions in the vicinity of Paris, small and large purchases of every kind which were made by every visitor who came to Paris at this time, the estimate increases the figures above given one-half, making the enormous sum of \$324,000,000 as the amount spent in Paris by visitors on account of the Exposition. The figures given are those of Mr. Berger, the Director-General of Management, Mr. Eiffel, and the London Engineering.

Before the Exposition was decreed, an estimate of the probable increase of revenue due to it was made by M. de Foville, of the Ministry of Finance. This estimate nearly coincided with the actual figures, and this fact is a striking instance of the painstaking skill which characterizes all French statistical work in the official departments.

The figures given above are in general taken from an exhaustive article on the Exposition from the *Figaro* of November 30, 1889, by Mr. Charles Yriarte. The expenditures by the various foreign commissions are not included in the above figures. The appropriations by the foreign governments that exhibited are given in Appendix H, and the list is taken in part from the able pamphlet of Mr. E. T. Jeffery, who visited Paris by direction of the Citizens' Executive Committee of Chicago, presided over by Hon. D. C. Cregier, Mayor.

The balance-sheet of the Exposition, as given in the Official Bulletin of the Universal Exposition, November 23, 1889, is the following:

Amount realized from the association of banks and bankers.....	\$4,300,000
Concessions and various receipts, including the amount received from 11,609 tickets issued by the state .....	400,000
Sale of old materials (estimated) .....	200,000
Amount appropriated by the state and the city of Paris .....	5,000,000
	<hr/>
Total amount received .....	9,900,000
	<hr/> <hr/>
The estimated cost of the Exposition was. ....	8,600,000
The actual cost as nearly as could be ascertained at the date given above was .....	8,300,000
Hence the excess of receipts (\$9,900,000) over expenditures (\$8,300,000) is	\$1,600,000

It is officially announced that this result will be increased by the official figures.

In 1878 the receipts from the Exposition were.....	\$4,737,040
The expenses of the Exposition were.....	11,078,000
	<hr/>
Excess of expenditures over receipts.....	6,340,960
	<hr/> <hr/>
In the Exposition of 1867 the receipts were.....	5,428,920
The expenses were.....	4,596,764
	<hr/>
Excess of receipts over expenses was.....	832,156

The French estimate of the number of people from the United States that visited Paris during the Exposition is 90,000.

#### DECORATIONS.

At the verbal request of Mr. Berger, Director-General of Management, I gave him a list of exhibitors and persons officially connected with the United States Commission, who were in my opinion worthy to receive decorations, from the French Government from the excellence of their exhibits, from their high positions in industrial and educational pursuits or in the arts, and from faithful work at the Exposition. The list was in general closely followed, but there were a few additions and omissions.

The number and kinds of the decorations are as follows, and a list of the names is appended to this report (Appendix H).

The grades of the decorations were assigned by the French authorities without any action by me:

Legion of Honor:	
Grand Officer.....	1
Commander (promotion).....	1
Officer.....	5
Chevalier.....	22
Merit in Agriculture:	
Officer.....	1
Chevalier.....	4
Officers of the Order of Public Instruction.....	12
Officers of the Academy.....	6

Two of the decorations, viz., that of promotion to Commander of Legion of Honor and an appointment of Chevalier of the Legion of Honor, were delivered to the appointees before the formal presentation of recompenses, but both were counted as having been conferred on account of the Exposition.

The French authorities have been very generous in this matter, and the number of decorations presented to the United States citizens at the Exposition exceeds that presented to the citizens of any other foreign nation. This fact shows not only kindly feeling towards the United States, but is an evidence of the high appreciation of the French Government of the exhibit of the United States and of the persons connected with it.

Several persons to whom these decorations have been offered cannot accept them without authority from Congress, as they are in the military, naval, or civil service of the United States. As their presentation was a friendly act on the part of a sister republic, and was intended as a compliment to the United States rather than to the individual, I respectfully recommend that the necessary authority for their acceptance be asked for from Congress.

#### UNITED STATES MARINE DETACHMENT.

A detachment of United States Marines, consisting of Capt. H. C. Cochrane and First Lieutenant P. St. C. Murphy, United States Marine Corps, and twenty-eight enlisted men, was detailed for service with the United States Commission at the Exposition, by Hon. B. F. Tracy, Secretary of the Navy. The

detachment arrived at Paris shortly before the opening of the Exposition and stayed until its close. I have already reported the efficiency, good conduct, and soldierly bearing of the detachment in its duties, and my opinion of its value as a part of the United States Commission at the Exposition.

I desire now to thank the honorable Secretary through you for the good feeling towards the Exposition which prompted his cordial consent to the request for the detail. I believe that when the interests of the service will permit, the presence of a detachment of as good troops as are the United States Marines will always add dignity to a United States Commission at a foreign exposition, and will give the exhibit a more distinctive national character than it could attain by any other means.

#### FRENCH EXPOSITION AUTHORITIES.

The relations between the French administration and the officials of the United States Commission were most cordial. Overwhelmed with business as the French Exposition officers were, they could always be seen on official business, and always complied with reasonable requests. There was some friction with the financial department at first, due to changes and delays in the issues of free tickets to exhibitors' assistants. This was, however, soon settled, and is hardly worth mentioning except for the fact that the exhibitors considered that the delay was always due to the shortcomings of the United States Commission, and no explanation was satisfactory to them.

An attempt was made by the Exposition authorities to require the opening and operating of the United States Exhibit on Sundays. It was not pushed, however, after proper representations from the Commission were made.

The nomination for a vice-president of a group, made by the Commissioner-General, was withdrawn on representation made by the proper authority.

The business of the United States Commission was almost exclusively with Mr. Berger, Deputy Director-General of Management, and Mr. Marc Millas, consul of France, in charge of the foreign sections. My feeling towards them and their as-

sistants is extreme gratitude for their courtesy and kind attentions during the whole course of the Exposition.

The United States Commission and the exhibitors received their full share of invitations to fêtes and other official entertainments; still, there were never enough for all who thought it their right to have them, and many persons were disappointed. One of the most unpleasant duties of the Commissioner-General was to listen to the importunities of people to get invitations when all that were due to the Commission had already been distributed.

#### ASSISTANTS.

I was well assisted by my subordinates in conducting the business of the Commission. As a rule, persons connected with a United States Commission to a foreign exposition have no experience in international expositions, and the business is entirely new to them and requires a certain apprenticeship. By the time the business is learned, the exposition is over, and the employés scatter, usually declaring that they will never belong in any capacity to another exposition. The United States Commission was no exception to this rule. The business was new to all connected with it, except two or three persons, but it went on as well as that of the other foreign commissions, and I think creditably to the United States. Mr. S. P. Tuck, the Assistant Commissioner-General, took charge of the office in New York under my direction, and attended faithfully to the preliminary business there. In Paris he served as a juror on the social science group, and as vice-president of the jury in Group II, and attended to such other business as came to him as Assistant Commissioner-General. His work was done with ability and efficiency.

Mr. William C. Gunnell, the Chief Engineer, had served in the same capacity in the International Exposition of 1867. This service gave him an experience which alone would have rendered him of the greatest value to the Commission in his work with it during the time of preparation in New York, and through the duration of the Exposition, and after its close. But in addition to this recommendation, his energy and in-

dustry were untiring throughout the whole of his work. His business was to allot space to the exhibitors, to see that they complied with the regulations of the French authorities and those of the Commission, to settle all engineering problems in the distribution of power, and to be the channel of communication between the French directors of works and management and the United States Commission. The task was a delicate and difficult one, and could not be performed without friction, but he completed it with much skill and faithfulness. After the close of the Exposition he superintended the return shipments successfully, and the goods have arrived at their destinations.

Mr. A. Bailly-Blanchard, secretary of the Commission, served in this capacity from the early part of July, 1888, to the present time. He had entire charge of the correspondence between the French authorities and the Commission until April 15, 1889, and during that interval he displayed great skill in his treatment of various questions that came up on the subjects of space granted, steam power, use of engines constructed in the United States to drive its own exhibit of machines, and a multitude of other questions which constantly sprang up unexpectedly and required to be treated with diplomatic skill. During the Exposition, he also served as a member of one of the juries. In his whole service with the Commission he has shown the greatest industry, ability, and faithfulness.

Capt. D. A. Lyle, Ordnance Corps, U. S. Army, was detailed as a military commissioner to the Exposition, and my personal aide-de-camp. He also served as the vice-president of the jury of Class 74, vice-president of the jury of Group VIII, and member of the Superior Jury of Revision. He is also to prepare an article on the Military Exhibit at the Exposition. His behavior on the Commission, in the various duties to which he has been assigned, has been entirely satisfactory to me and justifies the high reputation that he bears in the army.

Lieut. B. H. Buckingham, U. S. Navy, was also detailed as military attaché to the Exposition, and was appointed my personal aide-de-camp. He made the contracts for ornamenting and fitting up the space allotted to the United States, and did

all other financial business that was required before the opening of the Exposition, to my entire satisfaction. He was, to my great regret, detached from this service to act as secretary of the Samoan Commission at Berlin, and only returned towards the close of the Exposition.

Dr. John A. Tonner, of Paris, very kindly volunteered his services to the Commission during the Exposition, and his attention and valuable professional skill were frequently given to members of the staff, the Marine Corps, and others, for which my best thanks are due.

Mr. W. Irving Adams, financial clerk, performed his duties with great skill and industry, and acted as cashier of the Commission from the beginning of the business in New York. The daily disbursements were made in two currencies, and the vouchers were presented in French and English, making some complication, but no difficulty has arisen in consequence.

The superintendents of divisions, Messrs. Thieriot, C. Wellman Parks, Aytoun, Pickering, Bickford, Hering, and Kunz, were efficient in the discharge of their duties, and Professor Parks did excellent work in the collection of the exhibit in Group II.

Prof. B. Abdank, the assistant engineer, had charge of the fitting up of the Electrical Exhibit, assisted by Mr. Hering. The success of this exhibit is the best commentary on Mr. Abdank's efficiency and ability.

Mr. J. Frederic Aytoun, as clerk to the chief engineer and afterwards superintendent of the Industrial Group, did all kinds of work connected with the Exposition, some of it very difficult. His services were of great value.

The arrangement covering the transport abroad of the exhibits was confided to Mr. Haughwout Howe, United States despatch agent at New York, and the fact that but one out of thousands of cases consigned to the Exposition was lost, is sufficient testimony to the manner in which this duty was discharged.

The other employés of the Commission did their duties well, and they, as well as those mentioned by name, have my sincere thanks for their faithfulness and industry.

## COURTESIES RENDERED.

Mr. A. Caubert, citizen of France, magistrate, connected with the Exposition in its preliminary work, was noted for his constant kindness and attention to the members of the Commission. He was untiring in his official and unofficial efforts to make their residence in Paris pleasant during the whole duration of the Exposition.

I have already mentioned the kindness of Hon. R. M. McLane, minister of the United States to France. He took the trouble to bring me into friendly relations with the French Government authorities as well as those of the Exposition. His successor, Hon. Whitelaw Reid, was always courteous and kind, and ready to do anything in his power to help the business of the Commission.

Mr. Vignaud, first secretary of legation, did the Commission many favors, as did Col. Rathbone, consul-general of the United States. Lieut. Aaron Ward, U. S. Navy, naval attaché to the United States legation, served ably as a class juror.

My thanks are hereby extended to all of these gentlemen.

## REPORTS.

There has been some delay in the receipts of the reports of the nine scientific expert assistant commissioners. They will all, however, be received soon, and the delay will not affect the date of publication of the reports, if the publication be authorized now.

Respectfully submitted.

W. B. FRANKLIN,  
*Commissioner-General.*

HON. JAMES G. BLAINE,  
*Secretary of State.*

## MEASURES AND VALUES.

In the present system of French measures, the metre is the unit of length and is equal to the ten-millionth part of a quadrant of a meridian of the earth; its multiples and divisions are decimal.

1 metre=10 decimetres=100 centimetres=1,000 millimetres.

1 metre=1.094 yard=3.28 feet=39.37 inches.

1 kilometre=10 hectometres=100 decametres=1,000 metres=0.621 mile.

1 mile=5,280 feet=1,610 metres=1.61 kilometre.

1 square metre=10.764 square feet=1.196 square yard.

1 are=100 square metres=119.6 square yards=1,076.4 square feet.

1 hectare=100 ares=10,000 square metres=2.47 acres.

1 acre=43,560 square feet=4,047 square metres=0.4047 hectare.

1 cubic metre=1 stère=35.32 cubic feet=1.308 cubic yard.

1 litre=1 cubic decimetre=1.057 quart=61.027 cubic inches.

1 hectolitre=10 decalitres=100 litres=26.42 gallons.

1 kilogramme=weight of one litre, or one cubic decimetre, of water=1,000 grammes=2.2046 pounds avoirdupois.

1 gramme=10 decigrammes=100 centigrammes=1,000 milligrammes.

1 gramme=weight of one cubic centimetre of water=15.433 grains Troy=0.0353 ounce avoirdupois.

1 franc=3 grammes of silver at a standard of nine-tenths fineness.

1 franc=100 centimes=\$0.193.

1 pound sterling=\$4.8665.

1 horse power=33,000 foot pounds per minute.

1 cheval de vapeur=4,500 kilogramme metres per minute.

For general approximations it is usual to consider the franc as equal to twenty cents, the metre as equal to three and one-fourth feet, the kilometre as equal to five-eighths of a mile, the square metre as equal to eleven square feet, and the hectare as equal to two and a half acres.

# REPORT OF THE ENGINEER OF THE UNITED STATES COMMISSION.

NEW YORK, *May* 31, 1890.

SIR: I submit herewith, for the illustration and explanation of your report on the Paris Exposition of 1889, as follows:

*First.* List of plates for Volume I.

*Second.* List of measures and values used in the reports of the United States Commission.

*Third.* Statement of the areas covered by the principal buildings erected by the French administration on the Champ de Mars and the Quai d'Orsay, as follows:

Building.	Square feet.	Acres.
Machinery Hall.....	654,550	15.00
Railroad Section.....	131,412	3.02
Industrial Courts.....	1,179,068	27.07
Palace of Liberal Arts.....	202,826	4.65
Palace of Fine Arts.....	202,826	4.65
Galleries Rapp and Desaix.....	77,224	1.80
Agricultural Buildings on the Quai d'Orsay:		
French Department.....	172,051	3.95
Foreign Departments.....	103,086	2.36
Total.....	2,723,043	62.50

*Fourth.* Statement of the spaces occupied by the United States in the different departments of the Exposition, as follows:

Department.	Square feet.
A. Fine Arts, upper floor.....	7,800
B. Liberal Arts, upper floor.....	6,600
C. Industrial Courts, ground floor.....	37,000
D. Machinery Hall:	
Ground floor.....	34,900
Gallery.....	5,325
E. Railway Section, ground floor.....	3,250
F. Agricultural Galleries.....	17,350
G. W. A. Wood, Agricultural Machines.....	1,075
Total.....	113,300

The letters refer to the points indicated on the general plan.

While it is not my province to write a description of the grounds, buildings, and other features of the Exposition, it may be useful to furnish certain data as to the extent and dimensions of the principal buildings erected by the French administration, sufficient to afford, with the aid of the accompanying drawings, a correct general idea of the disposition of space occupied by the exhibits, especially those of the United States, within those buildings.

The principal structures located in the Champ de Mars were all connected in some way, and together formed three sides of a vast rectangle, almost touching the limits of this grand Paris parade ground on the three sides, and covering nearly one-half of its entire area.

Referring to the general plan of the Exposition, it will be seen that near the southeast end of the Champ de Mars, opposite the École Militaire, was located the Grand Machinery Hall or Palace, the greatest engineering exhibit of the Exposition, a wonderful structure covering 15 acres (over 650,000 square feet) of ground, and extending nearly the entire length of that end of the Champ de Mars which borders on the Avenue de la Motte Piquet. The plan of this building is rectangular, the length being 1,378 feet, the width 475 feet. The height to the apex of the bold arched roof is 148 feet. The general form of the building, with its roof and galleries, is shown on the transverse section and perspective herewith. By referring to these it will be seen that the central portion forms one great nave, 377 feet wide between the bases of the roof frames, the widest space ever covered by a single span of roof, and that the width of the building is further extended on either side of the nave by galleries 49 feet wide, having upper floors about 26 feet above the level of the ground. These upper galleries or balconies are continuous all round the sides and ends of the grand hall, being about 66 feet wide on the ends, and were occupied by exhibits of light machinery. A wide passage was left next to the railing, from which fine views were obtained of the machinery in motion below. The ground floor was divided by one longitudinal central passage 26 feet wide and by one central transverse passage 30 feet wide, and by other passages parallel with these, as indicated on plan, which afforded convenient access to all the exhibits, and ample room for the free circulation of the crowds of visitors.

The interior effect of this magnificent hall was extremely imposing. A better idea of it may be obtained from the view accompanying the report of the expert commissioner on Group VI, to which the reader is also referred for a full technical description of the construction of the building, with many illustrations.

The space between the Machinery Hall and the French Industrial Courts, on the side toward the Avenue de Suffren, was roofed over specially for the exhibition of railroad materials and rolling stock.

The location of the United States Exhibit in the Machinery Hall and Railroad Section is indicated on the general map, and plans are given showing the spaces allotted to the exhibitors, the numbers in the blocks referring to the general catalogue.

The Machinery Hall, the adjoining railroad extension, the thirty-meter passage, and the Galerie Rapp, were kept open until 11 p. m., and were brilliantly lighted in the evening by electric lamps.

A stairway surmounted by a dome, with vestibule beneath, connected Machinery Hall with the handsome passage called by the French the Thirty-Meter Gallery. The interior of this gallery presented a remarkable vista of objects of rare merit, selected for this position as the finest exhibits of the most eminent French exhibitors, this being the place of honor of the French Industrial Groups. This fine passage, an interior view of which is shown, extended to the grand Dome Central, the most admired architectural feature of the Exposition, which fronted on the garden of the Champ de Mars. The Central Dome was regarded as the *entrée d'honneur*, the principal point of the Exposition, and it was within its artistically decorated interior that the President of the French Republic made his address on the occasion of the inaugural ceremonies, on the 6th day of May, 1889. A view of the exterior of this magnificent structure is shown, and it is also to be seen above the fountains in the frontispiece of this volume.

On the right and left of the thirty-meter passage was located a series of galleries or courts, constructed of rows of wrought-iron columns 26 feet high, surmounted by glazed iron roofs 36 feet high at apex, the width of the galleries between the lines of columns being 82 feet. These galleries contained principally the French exhibits in the Industrial Groups III, IV, and V. A view is shown of the interior of one of these galleries occupied by the French exhibits in Classes 28 and 29.

Adjoining these galleries and extending near and parallel with the Avenue de Suffren on one side of the Champ de Mars, and the Avenue de la Bourdonnais on the other, were other series of galleries of similar construction, which were occupied by the industrial exhibits of the visiting nations. The United States Industrial Section was located in the central court of the series near the Avenue de Suffren. It was 82 feet wide, 443 feet long, and extended from the Vestibule des Nations to the Galerie Desaix. Passages 16 feet wide ran longitudinally and transversely through the center of it, and narrower walks parallel with these subdivided the space and furnished suitable approaches to all exhibits.

A view of the façade of the United States Industrial Section is shown. This was considered the principal point of the United States exhibition, and it was at this entrance that President Carnot was received by the Commission, on the occasion of his official visit to

our section. Views of the interior of the United States Industrial Section are also shown, and a plan giving the location of the spaces occupied by the exhibitors.

Next to the Industrial Courts came the two-story galleries, Desaix and Rapp, abutting on the Avenue de Suffren and the Avenue de la Bourdonnais respectively. These formed the dividing line between the Industrial Groups and the Palaces of Liberal Arts on the one side and of Fine Arts on the other. The United States Section in the Exposition of Liberal Arts, Group II, was located principally on the upper floor of the Galerie Desaix; one of the plates shows a small part of the United States Exhibit and a general view of the Galerie Desaix. No better or more extensive view could be obtained of the United States Section, the light from the windows rendering it impossible to get a proper photograph. A plan is given of the United States Section in Group II.

Adjoining the Galeries Desaix and Rapp, and near and parallel with Avenue de Suffren and Avenue de la Bourdonnais respectively, were located the Palaces of Liberal Arts and of Fine Arts, each of which was 754 feet long by 269 feet wide, and covered a ground area of over 200,000 square feet. The main center parts of the buildings were 175 feet wide with extensions of 49 feet on each side, these extensions having upper floors 23 feet above the ground floor. In the Palace of Liberal Arts a balcony at the height of the upper floor projected into the nave, and was connected by bridges to the upper floor of the installations in the central part of that building. This projecting balcony did not exist in the Palace of Fine Arts.

Illustrations of these buildings are given as follows: A perspective of the interior of the Palace of Liberal Arts, and an exterior view of the Palace of Fine Arts, the exterior of the Palace of Liberal Arts being similar to it. Other illustrations of the Palace of Fine Arts and of the United States Exhibit in that section will be found in the report of the expert commissioner on Group I.

In all these buildings except the Palace of Fine Arts the space allotted by the French administration was devoid of finish of any kind. All of the inside constructions, the flooring, the decoration, and the installations for exhibits had to be provided by the various commissions or the exhibitors. All of the buildings were well lighted by roof lights, and also by side lights where practicable.

Those parts of the ground floors of the Industrial Courts and of the Palaces of Liberal Arts and of Fine Arts which bordered on the garden of the Champ de Mars were used as restaurants, lunch rooms, beer halls, etc., and are so indicated on the plan. One view is shown to give an idea of the veranda or covered promenade, over which the roofs of the buildings extended. Under that part of this covered way adjoining the restaurants were placed seats and

tables for the accommodation of the hungry crowds in pleasant weather.

The principal fronts of all these buildings were located on the inclosed garden of the Champ de Mars, and the principal ornamentation and architectural effect were given to the parts of the buildings seen from the garden. Those portions of the Champ de Mars and Trocadéro not covered by buildings and walks were tastefully ornamented with trees, shrubbery, parterres of flowers, cascades, and beautiful fountains, and the best artistic talent had been employed to make the interior views of the Exposition attractive and fascinating. At night the gardens and exteriors of the principal buildings were brilliantly lighted by lines, festoons, and other ornamental forms composed of electric lamps and gas jets, and the beautiful luminous fountains with their ever-changing colors completed a radiant spectacle of marvelous beauty.

Throughout the grounds were numerous special buildings, characteristic in design and ornamental in appearance, which were erected by various commissions and exhibitors.

It is not possible to speak of this great Exposition without mentioning the colossal "tower of three hundred meters" (984 feet), as it is termed on the French plans, generally called the Eiffel Tower, from the name of its constructor; the reader is therefore informed that a full description, with many illustrations, of this great engineering work is embodied in the report of the expert commissioner of Group VI, in one of the subsequent volumes.

Two views of the garden of the Champ de Mars and the buildings bordering on it are shown, one giving the luminous fountains and the central dome beyond, the other being a panorama from a photograph taken on the first landing of the Eiffel Tower.

In the panorama of the garden of the Champ de Mars are seen at a glance all the principal buildings of the Exposition. On the right and left, in the immediate foreground, are the Palaces of Liberal Arts and Fine Arts respectively. These are nearly identical in every particular, and are located symmetrically with regard to each other. The centers of both buildings are surmounted with domes nearly two hundred feet high, glazed at the top, and covered externally lower down with enameled tiles in various harmonious colors and designs. The ends of Galleries Desaix and Rapp next appear, projecting beyond these palaces, about the center of the garden, and farther along come into view the Industrial Courts, stretching away to the grand roof of the Machinery Hall in the middle distance. In the center of the garden is the monumental fountain, representing France steering the Ship of Progress, and beyond this the principal entrance of the Exposition, crowned by the magnificent central dome, supporting a colossal statue of France distributing laurels. On either

side of the center of the garden are seen parallel lines of walks, covered by light frames roofed with colored canvas, to protect the public from the weather. Similar transverse covered walks connected with these and led to the Galeries Desaix and Rapp.

The United States had no exhibit on the Trocadéro, which was devoted principally to the Horticultural Exhibition, and which has not been essentially changed since the Exposition of 1878.

The Agricultural Galleries were located on the Quai d'Orsay. The space allotted to the United States in these galleries is shown on the plans. An interior view of the United States Section gives also an idea of the construction of these galleries. They were formed of rows of wrought-iron columns about forty-eight feet apart covered with iron roof-frames glazed. The sides of the galleries nearest the street and river were bricked up to a height of about ten or twelve feet above the floor, and were glazed from that level to the eaves of the roof. The opposite sides of the galleries were left without solid construction by the French administration, to be closed only by canvas curtains. The United States Commission, however, inclosed its section by solid wood and glass partitions on the sides originally left open.

Upon the Esplanade des Invalides were located various agricultural exhibits, including the Special Pavilion of Walter A. Wood; also the exhibits of the French War Department, of the French Colonies, of Hygiene, of Social Economy, etc.

A branch of the railroad which makes a circuit of Paris and connects with all the railway lines entering the city terminated near the western corner of the Champ de Mars. From the station, shown on the plans, tracks of standard gauge were laid into the grounds and buildings, which were used for the delivery of freight before the opening and for its removal after the close. During the term of the Exposition the tracks in the buildings were covered by movable wooden platforms, constructed so as to form parts of the flooring.

A double-track narrow-gauge railway was established and operated by the Decauville Company, for the transportation of visitors between distant points within the Exposition grounds. It was also used for the transfer of freight before the date of opening. The track was about 23½-inch gauge and about two miles long. It started from a station at the principal entrance of the Esplanade des Invalides, facing the Ministry of Foreign Affairs, followed the Quai d'Orsay, crossing the end of the Champ de Mars, to the Avenue de Suffren, and passed alongside that avenue to the terminal station near the southern corner of Machinery Hall. There were three or four intermediate stations. As a means of passenger conveyance this railway was of little use to the persons connected with the United States Commission, the stations not being convenient either to the headquarters of the Commission or to the localities occupied

by the United States exhibits. The Decauville Company furnished, however, a portable railway of smaller gauge, an improvement on the system introduced by Peteler in the United States more than twenty years ago, which was found very useful and convenient in transferring freight between the United States departments, in connection with the standard gauge railroad, and for moving cases within the sections. For this reason and because the Decauville railway system was one of the features of the Exposition, it may not be inappropriate to give a brief description of it here. One of the plates contains four cuts, illustrating parts of the system.

The Decauville improvement in the track consists in permanently framing together light steel rails with flat steel cross-pieces or sleepers, thus composing a series of portable sections or bays having the appearance of ladders, and varying in length from four to sixteen feet, one length of sixteen feet weighing about one hundred and twelve pounds. With very little labor the sections of track are put down anywhere on the ground or floor, and they can be taken up and relaid in any desired direction. Each rail has at one end a base-plate and at the other end two fish-plates, and the junction of two contiguous sections is made in a moment by simply fitting the ends of the rails of one bay between the fish-plates on the ends of the next one. If the track is only to be used temporarily, no other fastening of the bays is required, but the fish-plates at the end of the rails are drilled, and corresponding holes are made in the rails at the other ends, so that the sections of track can be readily bolted together if the track is intended to remain in place and to carry locomotives, passenger-cars, or heavy freight-trucks. Curves framed in the same manner are supplied in lengths from four to eight feet with different radii from six to ninety-eight feet. Turn-tables, movable switches, crossings, etc., are also provided, all being formed in sections that can be carried and put down by one man. By these means either a temporary track can be quickly made ready for use, or a complete railway line may be established and equipped for permanent service. Various styles of trucks are provided, from the little wagons of thin iron, which were found so handy for delivering small cases in the sections, to strong heavy trucks with three or four axles, constructed for special uses. By combining two or more of these trucks on the same track or on parallel tracks great weights can be readily distributed and large objects easily handled. The  $23\frac{1}{2}$ -inch gauge Decauville Railway has been adopted by the French Government for the transportation of ordnance weighing 16 tons upon two trucks with three axles, and even 48 tons upon four trucks with four axles. For moving long objects, like timber or heavy ordnance, swiveling-forks are placed on the trucks, by means of which curves as sharp as 18 feet radius can be rounded. The Decauville system has been much used for mining and agricultural pur-

poses. A type of locomotive was employed on the railway line of the Exposition which was specially designed by Mr. Mallet, to be used for military transportation purposes on Decauville railroads.

The organization of the United States Commission having been made in New York, and the preliminary work performed there under your personal supervision, it only devolves upon me to give a brief account of the operations at Paris from the commencement of the preparation of our sections until the end of the Exposition, and of the subsequent return of the exhibits to the United States, and the closing up of the business of the Commission in Europe.

Upon my arrival at the Exposition on the 11th day of March, 1889, I found the flooring already laid in our section in the Industrial Courts, and the partitions erected that separated the United States from the adjoining countries in the same groups. Nearly all the constructions and decorations required to put the Industrial and Educational Sections into a presentable condition for the installation of exhibits, had already been ordered by Lieut. B. H. Buckingham, U. S. Navy, and the contractor was progressing with the work, under the instructions of that accomplished and experienced officer. These constructions and decorations consisted chiefly of an ornamental façade fronting on the Vestibule des Nations, and designed to be the principal entrance of our department; the partitions separating the United States sections from the neighboring countries; the flooring in some of the sections; the hanging of *velums* or tinted muslin shades, and of ornamental cords and pendants under the roof lights, and of painted canvas in various places on partitions and walls; the painting and general embellishment, including that of the constructive features of the buildings.

The decorations throughout were of a modest and simple character, appropriate to our exposition, and consistent with the small amount of the appropriation at the disposal of the Commission. The names and coats of arms of the different States of the Union were displayed in panels and on shields in conspicuous places in the Industrial Section. The United States flag was lavishly used for beautifying our departments, and proved to be an invaluable auxiliary in giving a respectable appearance to many of our poorly adorned sections and exhibits. The Commission was indebted to Messrs. Cheney Brothers, of Manchester, Conn., for furnishing gratuitously a large number of their beautiful silk flags, which were used for decorative purposes. The French tricolor was also brought into requisition and combined in trophies with our own stars and stripes.

The floors put down by the Commission in the Industrial, Educational, and Machinery Sections consisted of ordinary flooring boards  $1\frac{1}{4}$  inch thick. These were laid on the floor joists in the Liberal Art Gallery, our space there being on the upper floor, and in other places on sleepers bedded in the earth. In the Machinery Hall  $1\frac{1}{4}$  inch floor-

ing was laid in the passages only by the French administration; that in the space occupied by the exhibits being furnished by the United States Commission, except in cases of special floors put in by exhibitors.

Asphalt floors were put down by the Commission in the Agricultural Galleries.

Wooden partitions were erected in the Industrial, the Educational, and the Agricultural Sections on the lines dividing our spaces from those of the adjoining countries. These partitions were constructed according to the requirements of the French regulations, and the expense was shared equally by the commissions whose spaces they limited.

At the time of my arrival the first lots of goods shipped from the United States had reached the Exposition, and the following lots continued to arrive promptly. Some trouble and delay were caused by the delivery of cases where they did not belong. The railroad company loaded cars at Havre to suit their own convenience, without assorting the exhibits for the several groups, and many cases were on this account sent to the Machinery Hall that should have gone to the Industrial and other sections, and *vice versa*. These cases were transferred to their proper places later, mostly by the Decauville Company, who furnished the Commission with the necessary labor and with their portable railway, which, employed in connection with the established railroad tracks, proved to be a useful device for this purpose, and also for moving cases from place to place within the sections.

The space allotted to the United States in the Machinery Hall being inadequate to meet the demands of all persons who had made application to exhibit products belonging to the sixth group, while the space granted in the Industrial Sections was greater than was required, as a measure of relief permission had been obtained from the French administration to locate some of the machinery exhibits in these last-named sections. A considerable portion of the electrical apparatus was therefore assigned to the Industrial Court, as were also apparatus and appliances for civil engineering, including building hardware, mechanics' tools, etc.; also the carriage-work and some other classes.

Plans for the allotment of space in the different sections had been made in New York previous to my departure, placing the various kinds of products together, in accordance with the system of the French classification. Great difficulty had been experienced in providing places for all applicants. Formal permits for space had been given by the Commission, which had been as formally accepted by the applicants, and according to the best information then at the disposal of the Commission, the United States sections were likely to be filled to overflowing. A few days after my arrival at

Paris, however, notices of the withdrawal of applications commenced to arrive, and they continued to pour in from time to time by cable and mail until the opening day. The dereliction of many important applicants in failing to occupy the spaces allotted to them in New York caused continual changes of the plans, and entirely defeated all efforts at placing the products according to the proper classification. Many of the spaces allotted were never filled at all. Especially did much of the machinery promised fail to arrive, and great voids were thus left in Machinery Hall, giving our exhibit a meager appearance in comparison with the crowded sections of all other countries, and causing unfavorable comments in consequence. These vacancies might have been creditably filled if the Commission had known of it in time to obtain the products of other manufacturers. Many late applicants, to whom space could not be awarded originally, would have been glad to send their products, to the great advantage of our display, if they had not been kept away by those who had obtained space and then failed to occupy it.

As exhibitors and their agents arrived and took possession of the special places assigned them and commenced or completed their installations, it was often impossible to move them to other parts of the sections, and the most of those who were present were unwilling to change the location of their exhibits in order to accommodate others, or to keep together the products belonging to the same classes. Some of the exhibitors and their goods arrived late in Paris. There were instances in which it was supposed that they would not be present at all; and as the time of the opening approached, persons who were present were allowed to move their exhibits into positions originally intended for others who had not arrived, in order that the front spaces at least in all sections might be creditably filled before the opening day. Some of these tardy persons who arrived later were much dissatisfied that the spaces had not been kept for them until they found it convenient to come, although due notice had been given that the exhibits were required to be in place earlier.

Some vacancies left by withdrawals were filled by exhibits that were offered later in Paris, but as it was not always possible to obtain products belonging to the same class as those for which the space had originally been awarded, articles belonging to other classes had to be substituted, and thus was prevented the systematic arrangement in the order of the French classification originally intended.

It is by no means easy to suggest the proper means by which this could be prevented, but it may be well to recommend that in the case of future foreign exhibitions applicants for space should be obliged to deposit a suitable sum to be forfeited if they break their agreements with the Commission, or else that they should be required to pay for the spaces allotted to them. In this latter case

they would not be inclined to engage more space than they actually need, nor would they be likely to pay for any space unless they really intended to occupy it. Money received for space thus disposed of could be properly and advantageously used for the decoration of the sections or for proper installations for the exhibits themselves, and by this means also a more suitable disposition of the installations could be effected.

In comparison with the symmetrical arrangement and elegant installations of the French departments our sections suffered greatly. The United States Commission had very little money to use even for the necessary constructions and the general decorations in its sections, and no funds at all to apply to the installation and proper adornment of the individual exhibits. To the decision of each exhibitor therefore had to be left, under certain restrictions, the arrangement, installation, and adornment of his particular space, which necessarily affected the general aspect of the section. The little time at our disposal rendered it impossible to obtain any concert of action between the exhibitors, and we had no power to compel them to construct their installations in any particular style or manner. Some exhibitors seemed rather inclined to have their exhibits as unlike as possible to those of their neighbors, in order perhaps to make them more conspicuous. In this way exhibits widely dissimilar in size and appearance were located in close proximity to each other. Many of the exhibitors, indeed, expended considerable sums on fine show-cases and other installations for their products; but even where several of these were located together, the styles of their cases and other constructions were so dissimilar that the general appearance of the section gained little from the best of them.

The resulting fortuitous assemblage of incongruous objects, located in an extensive gallery devoid of interior architectural features and of ornamental installations arranged according to a matured plan, produced anything but an imposing general effect. It can be easily understood how those who judge by the impressions received from the first view of an exhibition, without looking beneath the surface for the merits of the products, may have formed an erroneous estimate of the importance of the United States Exhibit. Let me remark here, however, that the juries, disregarding the surroundings and devoting their attention solely to the products exhibited, did them ample justice, and proved by the number and importance of the recompenses awarded that the United States Exhibit was second to none in this unequalled Exposition.

In the French divisions much time and money had been spent and great pains had been taken to render all their constructions, installations, and decorations appropriate in character and harmonious and captivating in appearance. Committees composed of officers of the French administration conjointly with the exhibitors themselves

had been engaged for months, if not for years, on the preliminary work. Architects had been employed for each class, and had given protracted study to the designing of the interior constructions in combination with the installations for the exhibits; and the art of the best decorators, cabinet-makers, and upholsterers had been called into requisition to perfect the charming displays and to produce the admirable general effects found everywhere in these groups. All of the show-cases and other particular installations were required to be subservient to the general design, and many of them were as attractive as the exhibits they were created to display. The fees of the architects and the cost of the entire work were paid by the exhibitors in proportion to the amount of space occupied. Views of the interior of one of the French Industrial Courts and of the Thirty-Meter Gallery are given to illustrate the above remarks and to show the construction of the buildings. The interior of the court is from a photograph taken after the close of the Exposition, when the hangings and exhibits had been removed and the railroad tracks uncovered; but even in this dismantled condition, it retained its elegant appearance.

Part of the exhibit of the Yale and Towne Manufacturing Company consisted of a model post-office, which was erected in the Industrial Section and was used by the Commission for the posting and distribution of mail matter for the exhibitors and persons connected with the United States department. This model post-office was completely equipped with letter-windows, letter-drops, lock-boxes, etc., and was of great service and convenience to the Commission and the exhibitors. It attracted general attention and was highly praised by visitors.

The United States Exhibit in Class 61, railroad supplies and appliances, left much to be desired. After space in this department had first been obtained, the United States Commission made earnest efforts with railroad people to get a proper representation in this important class, but the same answer came from nearly all persons to whom the subject was presented, viz, that it was useless for them to exhibit because our railroad system was different from those of Europe, and because American railroad companies and manufacturers could gain no business advantage from the trouble and expense of sending exhibits to Paris. This seemed so certain, and it appeared so unlikely that any individuals or companies would, from motives of patriotism solely, furnish exhibits sufficient to illustrate our railroad system, that it was determined to cable to Paris that the space allowed in this class would be relinquished. This was accordingly done, but through some misconception of the order cabled, the French authorities were not informed that the space was not required. When this fact became known at the New York office of the Commission some time later, a fresh effort was made to get a

proper exhibit for the class; but the time was then very short, and manufacturers of such materials were generally unwilling to send over goods. Some few things were obtained, and an earnest appeal was made to certain companies to send exhibits. We were obliged to fill up the space with various material and appliances, made for the use of railroads, which actually belonged to other classes; such as railroad paints, which belonged as paints in Class 45; electric motors used on railroads, which belonged as electrical apparatus in Class 62; and some road-making and repairing machines, which, although used on railroads, belonged properly in Class 63.

The Pennsylvania Railroad Company alone responded to the call of the Commission, and sent a collection of its materials and constructions, which, with the Porter locomotive and the Wickes refrigerator car, saved the railroad department from actual ridicule. Part of the exhibit of the Pennsylvania Railroad Company consisted of sections of cars, which showed the constructions better than the entire cars, took up much less space, and cost less to make and send. This entire exhibit was presented at the close of the Exposition to the French School of Arts and Manufactures and a French railway company; none of it came back to the United States. The appearance of the railroad section was the occasion of much comment among the American visitors and others, believing, as they did, that the United States is pre-eminent in this class, and gave rise, among other witticisms to the remark that the section looked like the scene of a "railroad accident." This referred probably to the parts of cars, trucks, etc., shown, but never was anything less of an accident. On the contrary, the fine exhibit of the Pennsylvania Company was prepared by them, at the request of the Commission, with the patriotic design of making a display of parts of their apparatus, and the jury in this class, composed of the most eminent railroad engineers in Europe, were able to recognize its merit, which they acknowledged by awarding it a grand prize, the highest recompense in their gift. In spite of all efforts, however, the space in this class was not filled until the month of September, near the close of the Exposition, when a late comer appeared with the tubular iron car and closed up the void. If any discredit existed for the incompleteness of the railroad exhibit, it should rest, not upon those who participated in it, but upon the wealthy railroad corporations and the manufacturers, who refused to come to the aid of the Commission in its efforts to make a proper showing of our progress in this department, and who declined to send their improved apparatus and appliances, because there was "no business in it."

As may be seen by reference to the general plan, the United States sections were widely separated. A table is given below, showing the distance between the various points occupied.

*Approximate distances in feet between different points occupied by the United States, following the roads.*

	A.	B.	C.	D.	E.	F.	G.	H.
A.	0							
B.	1,600	0						
C.	1,550	50	0					
D.	2,100	2,050	1,250	0				
E.	2,300	1,300	750	350	0			
F.	3,470	4,200	4,150	4,700	4,900	0		
G.	4,770	5,500	5,450	6,000	6,200	1,150	0	
H.	670	1,860	1,620	1,900	2,400	2,800	4,100	0

Between the United States sections in Machinery Hall and the Agricultural Galleries, by way of Decauville Railroad, about two and one-third miles.

The great distances between the sections made necessary an increase of force to superintend and guard them. The average force employed during the continuance of the Exposition was about as follows:

Five superintendents of sections, one each to the Palace of Liberal Arts, Industrial Courts, Machinery Hall, and Agricultural Galleries.

Assistant superintendents were also necessary in the Palaces of Liberal Arts and of Machines, and in the Agricultural departments.

Other assistants were necessary to go between these sections for various duties.

The force of guardians, who were also employed during the early hours to clean the sections, averaged about as follows:

Department.	Guardians.
Educational .....	2
Industrial .....	7
Electrical .....	2
Machinery.....	6
Railroad.....	1
Agricultural.....	4

Much time of employés was lost in sending men between the sections. Sometimes, in going between the Machinery Hall and Agricultural Gallery, the Decauville Railway was used, but even then a considerable distance had to be walked to reach the station, and no time was gained; the total distance between these two points by this route being over two miles, and the time required being about half an hour by either route.

The United States Marines, whose fine appearance contributed much to the good effect of our departments, were of great use to the Commission in preserving order and discipline in the sections,

and their services were especially valuable during the closing days in guarding property when most exposed while being packed up for removal. The presence of the Marines enabled the Commission to save the employment of one guardian in the railroad section and one in the Machinery Hall Gallery. Elsewhere the number of guardians could not be reduced, as all those employed were necessary to clean the sections in the morning and to keep them in order during the day. I do not consider it proper for me to do more than mention the marines in this way here. You will doubtless give them full credit in your report for the advantage that the Commission derived from their presence at Paris.

The exhibitors and their representatives commenced to arrive in the early part of April, and to unpack their goods and get them into position, and from this time until late into the month of May our sections were alive with busy workmen arranging exhibits in their installations. In many cases where exhibitors neither came to Paris nor employed agents, the packages were opened and the goods were put into place by the employés of the Commission. Except in the section of Liberal Arts, where the building itself was not completed, the most of the exhibitors to whom space had been allotted in New York had their exhibits in place by the opening day. Later comers who got space (some indeed came over with their goods without having secured space) were not ready until some time after.

Our steam-engines arrived and were on their foundations in ample time, but they were not used until the latter part of May, as the French administration had not run the steam-pipes into our section, and the steam supply could not be obtained. The Brown engine commenced running on the 23d of May, and the Straight Line engines two or three days later.

The boilers which supplied the steam used in the Machinery Hall were located around the edifice in separate buildings, erected by exhibitors and contractors for that purpose, as may be seen by reference to the plans.

Steam, water, and gas were gratuitously furnished by the French administration. The French authorities contracted with an English firm for the steam supply in our section in the Machinery Hall. The supply was uncertain, and the service of the steam was unsatisfactory. For a considerable time after the opening of the Exposition it was hardly to be depended on at all, and during the continuation of the Exposition the quantity of steam required was often not available, and dissatisfaction was expressed by some of our exhibitors on this account.

The main piping for the steam, cold water, and gas supply, and for the removal of the hot water from condensation, was laid by the French administration, in tunnels of masonry located under the passages.

All branch piping in our section was provided by the Commission or by the exhibitors. The Commission was also required to put in an exhaust-pipe for its engines, which had to be carried under the floor to the outside of Machinery Hall, and then above the roof of that building. This pipe was connected outside of the building with an iron tank for collecting the water of condensation, from which ran another pipe for carrying the water to the main hot-water pipe above referred to.

Four main lines of shafting, two on each side of the central passage, extended longitudinally throughout the entire length of the grand nave of Machinery Hall, and were supported by double iron columns secured upon solid masonry foundations. They were furnished and put up by the French authorities, and received their movement from the engines of exhibitors of various nationalities. Two of these shafts passed through the United States section.

Motive power was supplied to our section in the Machinery Hall by the following named American steam-engines exhibited:

One hundred horse-power engine of C. H. Brown & Co.

One hundred horse-power high-speed engine of the Straight Line Engine Company.

Thirty-five horse-power high-speed engine of the Straight Line Engine Company.

Seventy-five horse-power high-speed engine of Armington & Sims.

Six horse-power Baxter engine of the Colt Manufacturing Company.

The two main lines of shafting passing through the first and second bands of our space were each driven at a speed of one hundred and fifty revolutions per minute by the larger straight-line engine and the Brown engine, respectively. The small straight-line engine furnished motive power to the special exhibit of wood-working machinery of J. A. Fay & Co., by means of a line of shafting placed under the floor of that exhibit in the third band of our section. The Colt Company Baxter engine was utilized for furnishing the power for printing machines and other light machinery, in the fourth band of our space under the balcony. The Armington & Sims engine was employed for driving dynamos in the electrical exhibit of the Thomson-Houston Company. These steam-engines were all operated by American mechanics, and the service was performed in the most satisfactory manner.

Electric motors obtaining their power from dynamos driven from the shafting, run by the steam-engines above mentioned, were also used for transmitting small amounts of power to various light machinery, as will be mentioned later on.

The great progress in the practical application of electricity in the United States made it advisable that a considerable portion of our space should be devoted to the exhibition of the products of

American inventors in this class, and as the space allotted in the Machinery Hall was not adequate, a large part of the electrical apparatus was exhibited in the Industrial and Railroad sections. The dynamo machines were placed in the Machinery Hall, where motive power could be obtained. The electrical apparatus, properly so called, were placed in the Industrial Court. The electrical tram-ways were placed in the Railroad Section; motive power was carried to the Agricultural Section for the purpose of operating the machines of certain exhibitors. The Thomson-Houston Company established the transmission of the electric current from Machinery Hall to the Agricultural Galleries, a distance of about three-quarters of a mile. This current transmitted fifty horse-power in a satisfactory manner. Its operation, however, was delayed by difficulties in passing the overhead wires across the streets of Paris, but permission was finally obtained from the Ministry of Commerce and the Prefecture of the Seine, and the machines in the Agricultural Galleries were put into operation on the 15th day of July. Besides this electrical transmission, two others were established between the Machinery Hall and the Railroad Section; one of them operated the Sprague system of electric railway, the other that of Thomson-Houston. For this purpose cables of the Cobb Company were used. The Edison Company supplied the current for the Sprague motor. Within the Machinery Hall the Commission established, for the accommodation of exhibitors far removed from the main lines of shafting, a transmission of electric force from a generator of fifteen horse-power and six small motors, which operated three exhibits of sewing-machines and some other light machinery.

The Bell Telephone Company established a system of telephones from the central office in their space in the Industrial Court to the headquarters of the United States Commission, the post-office in the Industrial Section, and the office of the superintendents in the Palace of Liberal Arts and Machinery Hall. The apparatus for this system of telephones was furnished and put up by the Bell Telephone Company and by the Western Electric Company of Chicago. Some two and one-half miles of wire for the overhead lines was furnished by the Okonite Company. This telephone system was of great service to the Commission, and it was kept in operation during the hours when the Exposition was open by the assistants of the Bell Telephone Company without any expense to the Commission.

I am happy to be able to state that no very serious accidents occurred in any of the United States departments during the Exposition, the most important being the breaking of the fly-wheel of the straight-line engine, by which, fortunately, no one was hurt. As this caused considerable comment at the time and deprived us of the use of one of our motive machines during the last few weeks of the

Exposition, it may be proper to give a short account of it here. On the 9th of October, about half-past 5 p. m., while the large straight-line engine was driving one of the main shafts in our machinery section, its fly-wheel suddenly broke, and the fragments were thrown violently against one of the large cast-iron columns that supported the shafting. The column was broken by the force of the blow, but remained in place, and the damage to it was easily repaired by wrought-iron bands. This accident prevented the running of the machinery in the front band of the section and of the overhead electric traveling bridge for one or two days, but did no other damage. An investigation showed that the breakage of the fly-wheel was due to defects in the casting. It was not possible to repair the damage to the engine in time for it to resume work before the close of the Exposition, and the shafting in that part of the section subsequently received its movement from the motive machine in the adjoining English section. Professor Sweet, the inventor of this admirable high-speed engine, has taken means to prevent the recurrence of such breaks in fly-wheels in future by providing them with strong wrought-iron rims or tires. The machine was one of the finest of our exhibits and was awarded a gold medal.

Before quitting the machinery department I desire to make one suggestion for the consideration of commissions to future exhibitions. You will remember that in the very outset of our work upon this Exposition I informed you of the dissatisfaction of American exhibitors and visitors at the Paris Exposition of 1867, arising from the presence of the clumsy French motor, placed in the most conspicuous position, and used for supplying the power in the United States Section, while the fine engine exhibited by Mr. George H. Corliss, of Providence, was standing idle beside it, and that I urged you to insist upon having the motive power in our section supplied by American engines operated by American mechanics. I shall now go a step further and strongly advise the commissioners-general of foreign exhibitions not only to have the motive power furnished by American machines, but also to provide for having the steam supplied by American boilers operated by American mechanics. In the case of the Exposition of 1889, there were no applicants who desired to exhibit boilers; but even if this should be so in the future, I consider it necessary for the successful and satisfactory operation of the machinery section to make contracts with some responsible American engineering firm or firms to supply the requisite boilers, engines, and mechanics, and to furnish the steam and motive power for the department. With American boilers, steam-engines, and electrical motors, the commission would have everything completely under control, and in this way only can the work be performed to the satisfaction of the commission, the exhibitors, and all others concerned. It is difficult to obtain trustworthy mechanics for tem-

porary work of this kind, which is another good reason for contracting with companies giving permanent employment to such men as are needed.

One view is shown of the interior of our section in the Agricultural Machinery Gallery. With the exception of the remarks above made concerning the force employed and the electrical transmission in this department, I do not consider it necessary for me to say anything, as the entire agricultural section and exhibit will be fully reported upon by the expert commissioner on Group VIII.

The principal troubles in our sections arose from the dissatisfaction of some exhibitors' agents and a few unimportant exhibitors of cheap jewelry and gimcracks, who should never have been allowed space, and whom it seemed impossible to get rid of without causing scandal. These men were a chronic nuisance; they were clamorous for the best places in the section, and even endeavored in some cases to obstruct the main passages and vestibules in order to dispose of their wares. Sales of articles of any kind for delivery before the end of the Exposition were prohibited by the French regulations. All applicants were informed of this before space was allotted to them. In spite of this, however, some persons, mostly agents, endeavored to make sales and immediate deliveries of their goods, and brought down upon the Commission by such means the complaints of the French administration. These refractory parties were greatly dissatisfied at not being allowed to sell their goods in the sections, and continued to do so clandestinely when they were not observed by the guardians, and were loud in abuse of the Commission for interfering with their business. I cannot now remember that any exhibitor of importance expressed dissatisfaction at the treatment which he received from the Commission or its officers.

It may be advisable for future commissions to exact guaranties for the respectability and good conduct of all persons allowed to act as representatives of exhibitors, and also to require indorsements of some official sort of all applicants from distant points about whose reputation the commission is not informed.

I will make a final suggestion which may be of benefit to those charged with the preparation of future international expositions, viz:

In making agreements for labor, materials, etc., with contractors, clauses should invariably be inserted stating the time when the work is to be delivered and completed, and naming a penalty to be imposed in case of failure to comply with the terms of the contract within the time specified. Contractors are apt on such occasions to undertake more work than they can perform, and there is nothing like a penalty clause for keeping them up to time. Delays in the completion of one part of the preparations will often seriously retard other operations.

Very few of the packages sent from the United States to the Exposition were lost; of these I will mention one case containing a wheel-testing machine, which is supposed to have been removed by mistake by the French authorities the night before the opening of the Exposition, according to an official regulation which had been fully announced beforehand, that they should remove all unpacked cases at that time; and one other case, a very small one, containing some light articles of wood carving, which is supposed to have been stolen from the section at the time the goods were being opened. I cannot recall at present any other cases that were lost.

It was originally intended to close the Exposition on the 31st of October, but the French administration decided later to continue it a few days longer, and it was finally closed on the 6th of November. On the morning of the 7th of November every one started to work with a will to remove property, and the Exposition was a scene of busy movement from that time until near the end of the year. Our exhibitors, or their agents, who were present, had little trouble in performing their part of the labor, which consisted in the repacking of their goods and the marking of their cases. Special labels were furnished by the Commission. In cases where exhibitors were not present or represented, their goods were repacked by the Commission for return to them. All the formalities concerning the return of freight and all the shipping business were attended to by the Commission.

The first goods for the Exposition were shipped from New York to Paris February 1, 1889, by the French Transatlantic Company. The last packages of goods left our section of the Exposition on the 24th day of December, 1889. Some small exhibits and parts of exhibits had been before that time removed to the headquarters of the Commission, and were distributed from there later.

Four thousand five hundred and thirty-three packages in all were shipped by the Commission from the United States to the Exposition, at the cost of \$26,026.38. The number of packages returned by the Commission from the Exposition to the United States was 2,072, at a cost of less than \$11,000, the exact figures not being yet ascertained. The difference is accounted for by sales and donations of exhibits at Paris. Of the 2,072 packages returned to the United States, 185 cases, containing pictures, jewelry, silverware, and other valuable goods, were shipped by the French Transatlantic Company via Havre to New York, and arrived promptly. Eighteen hundred and eighty-seven cases, containing ordinary freight, such as machinery, industrial and agricultural products, etc., were shipped by the Inman International Steamship Company by way of Liverpool to New York, this company having offered the lowest rates for the return of the ordinary freight. The goods shipped by the Inman Company were

carted from the sections to the river. They were taken by boats down the river Seine to Havre. From Havre they were transferred to Liverpool by steamers of the Cunard Company. They were shipped from Liverpool to New York by the steamers of the Inman line. The last package of goods returned by this company reached New York City on the 20th day of April, 1890. The delay in the arrival of this freight in the United States seems to have been due to two causes. First, the Cunard Company did not hurry forward the freight immediately on its arrival from Havre to Liverpool, probably giving preference to other freight of their own when their boats were crowded. Second, the dock strikes at Liverpool prevented the Inman Company from obtaining men for loading vessels, and created, as is well known, great delay and trouble in all shipping business at that place in the early part of this year.

Some additional expense was caused by the shipment of the goods that were returned by way of Liverpool. As these goods were removed from the Exposition on wagons, the French custom-house authorities required that each case containing dutiable articles should be bound by cords fastened with lead seals before leaving the grounds, and that the seals should be removed by their officers at Havre before the departure of the goods from France. This necessitated the employment of additional clerical and laboring force, and was the cause, at times, of some delay.

The customs officials were always obliging and ready to aid us, and we were especially indebted to Mr. Charles Mulot, Comptroller of that service, for much friendly advice and kind assistance.

The French police and detective forces assigned to the care of our sections were composed of intelligent and reliable men, selected for this special service. They performed their duties in the most careful, efficient, and polite manner, and our relations with the officers and "agents" were always cordial and harmonious.

The house occupied as headquarters of the United States Commission, at 27 Avenue de la Bourdonnais, Paris, from the month of October, 1888, was vacated on the 31st day of January, 1890, after most of the books, papers, records, etc., had been shipped to the United States.

My duties, especially before the opening of the Exposition, threw me into contact with many of the officers of the French administration, principally with the Director-General, Mr. Georges Berger; the Chief of the Foreign Sections, Mr. Marc Millas; the Engineers of the Mechanical and Electrical Service, Messrs. Vigreux and Bourdon; the Architects of Installation, Messrs. Sédille and Hermant, and others. From all these gentlemen I received prompt and cordial assistance in the settlement of all matters referred to them, and the most polite and courteous attention. All of their business was per-

formed in a precise and thorough manner, but I have never seen less desire manifested to annoy people with unnecessary formalities or ceremonious behavior.

After your departure at the close of the Exposition, my duties brought me more frequently into relation with the United States Minister, Hon. Whitelaw Reid, and the officers of the United States Legation. I am indebted to all of these gentlemen for many civilities, and for hearty co-operation in all matters referred to them. Thanks are due, also, to United States Consul-General Rathbone, for prompt and polite aid in the formalities attending the return of the goods to the United States.

As you are personally familiar with the operations of the Exposition from its commencement to its close, and are well acquainted with all persons employed under you in the performance of the work, it is not incumbent upon me to name here any of those who have assisted me in carrying on my part of the management. It only remains, therefore, for me to thank you for the uniform kindness and consideration with which you have treated my efforts to make a success of the American Department of the Paris Exposition of 1889.

Respectfully submitted.

## REPORT OF THE SUPERINTENDENT OF LIBERAL ARTS.

---

TROY, N. Y., *March 29, 1890.*

SIR: In reporting to you upon the work done by me at the Paris Exposition of 1889, I will confine myself to a description of that which occupied my attention as Superintendent of Group 2. I will say, however, that from the time of my appointment as class juror until the time of meeting of the group jury, I devoted such time as my other duties would permit to committee work. Thus most of my mornings were devoted to a very interesting and instructive work, that opened up before me many surprises, and induced me to believe that we, as a nation, should now copy from Europe in elementary educational matters, just as France copied from us after studying the report made by its very able Commissioner Buisson, who made a very careful study of the American exhibits that were shown at the Philadelphia Exhibition of 1876.

The principal advance made by European countries seems to be in the matter of providing new and improved tools in educational institutions, just as we have done in our factories and mercantile establishments. There may be a demand for cheap material, but we also notice a demand for an economical form of everything that can aid or in any way benefit either teacher or pupils, and not only the demand exists, but also the authority and funds with which to purchase.

Great attention is being paid to the sanitary condition of the rooms and buildings, and to the form of furniture best suited to the needs of growing children. The schools are becoming supplied with museums and models at a rate that surprises us who live in a land of local governments. These museums and models are prepared at small cost per school, but they are so well arranged that they represent an incalculable value to teachers and pupils alike.

For the amount of money that three vessels like the *Texas* would cost, every school in the United States could be supplied with such museums, and it appears to me that no better use could be made of such a sum than this, which would place it in the way of serving millions of people.

In the jury there were many able educators who were well acquainted with our systems, and inclined to treat us in a friendly manner.

During the fall of 1888 I had become interested in the Exposition to be held in Paris the next summer, and gladly accepted the position of Superintendent of Group 2, which you kindly offered me December 27, 1888.

A circular letter, dated October 28, 1888, had already been sent by this Commission to the educational institutions, soliciting exhibits, and, unfortunately for the success of our work, the impression seemed to exist in the office of the Commission that the Commissioner of Education would assist us by issuing the next circular. January 15 I became aware of the impossibility of receiving such assistance on account of press of work in the bureau, and prepared two circular letters, which I submitted for approval January 17. After approval, these circular letters were numbered 8 and 9 and put in the printer's hands, but some unknown cause delayed their issuance until the 25th of January. Within the next few days No. 9 had been mailed to most of the important libraries, and No. 8 to most of the other educational institutions.

As I had been informed at the office that the last shipment must be ready for the steamer that sailed March 16, it will be seen that there was a very short time after receiving our circular before the exhibit must have been sent, and consequently many did nothing who would have been able and willing to send attractive exhibits if they could have had more time. Early in March I was informed that shipments would be made later than the 18th, but I considered the information too late to be of much value in soliciting exhibits, and made no material change in my plans. If this extra time could have been counted upon when circular letters Nos. 8 and 9 were issued, it would have been of very great value to us.

It is no doubt evident that I do not attribute the success of my group to the circular letters, but rather to the personal visits made and the personal letters written, with the aid of Mr. E. F. Chillman, of Troy, N. Y., who gave me valuable assistance in America both before and after my departure for Paris.

I divided the educational institutions into forty classes and made sure of a good representative exhibit for each class, and then tried to get as many more good ones as possible. The list of exhibitors transmitted through the Chief Engineer, and the list of awards, will show that the effort was not wholly without effect.

Many letters were sent to dealers in supplies, but our limited space furnished most of them with an excuse for not contributing. I was both sorry and glad that we had no exhibit of school furniture,—sorry, because we make the best school furniture in the world, and glad because I do not know what we could have done with such a bulky exhibit. I visited twenty-five cities and talked with the people who controlled the important educational institutions, both public and private, and succeeded in securing an exhibit in nearly every

case. These exhibits were nearly all sent to me in Troy by mail, in franked packages, and were there prepared for shipment to Paris.

March 16, 1889, having prepared and shipped all exhibits received up to that time, I sailed from New York on *La Gascogne*, and landed in Havre on the morning of the 25th of that month. By the middle of that afternoon I had reported for duty at 27 Avenue de la Bourdonnais.

The design according to which the buildings allotted to my group had been constructed was probably at fault; for the finished buildings, not being satisfactory to the administration, had just been torn down, and were about to be replaced by more artistic work. I watched the work, and with ever-increasing anxiety, as it became more and more evident that the buildings would not be completed by the time of the opening of the Exposition, several times causing the French administration to be informed that we were ready to enter upon the work of installation, and advising that anything that might be done to hurry the work would be much appreciated.

The building was of rough stone masonry, plastered on the inside, and as the month of April was very wet, the walls could not progress very satisfactorily. They were plastered the last of April, and the 4th of May found the floor laid and roof boarded, but it was the middle of May before the roof was made fairly tight, and the last of May before the walls were thought dry enough to paint.

In future exhibitions I advise the use of double flooring wherever it becomes necessary for the United States to use gallery space over that occupied by another nation, as it may prevent unpleasantness due to the carelessness of exhibitors and attendants.

As our space was in a narrow gallery and up one flight, it did not receive the attention which was given to the ground floor galleries, and was left until the last to be finished.

As soon as the walls were painted, I proceeded to cover them with exhibits up to the four-meter limit, and when the jury met on the 12th of June, we were ready for them. Long before the main part of the space had been prepared for installation, a corner had been inclosed, and all the small exhibits unpacked and stored in the place, so that we had very little trouble, after the walls and benches were prepared, in putting up exhibits.

As may be seen by reference to the Engineer's plan, there were some five thousand square feet of floor space devoted to Group II and Class 19 of Group III. The way in which the space was allotted to the various classes is also shown.

In 1878, as I understand, about two thousand square feet of the very best ground floor space were devoted to the educational classes, while we were obliged to be as contented as possible with one thousand square feet of very poor space. But we were informed that the Exposition was primarily commercial, and that the earlier commer-

cial applicants for space would be considered before the school exhibits. It became necessary therefore to condense the educational work. The exhibits were piled up on shelves and in closets, so that only a small part could be seen at any one time.

We decided on the arrangement of partitions and shelves giving a maximum amount of wall and shelf space, and at the same time straight aisles, which I consider of much importance where many people are passing. The alcove plan is objectionable on that account, even when it is not essential that a maximum of exhibition space be secured.

By the plan adopted I obtained, for Classes 6, 7, and 8, 1800 square feet of wall space, 500 of bench room, and 500 of aisles, on the thousand square feet of floor devoted to them. We were crowded in every class of the group, with the possible exception of Class 10 (inks, pens, etc.), and could easily have used five times as much space.

We had no more room for a wall display of drawings than was absolutely necessary to show that in America there are detached movements in the same direction as those which are most prominent in Europe to-day. These are the introduction of drawing and tool work into the curricula as intellectual aids, and not for the purpose of teaching trades.

The work shown by schools of this kind, both superior and secondary, compared most favorably with that shown by similar schools in France, Switzerland, and other European countries. In the superior class were the Massachusetts Institute of Technology, the University of Illinois, the Alabama Polytechnic and the Rensselaer Polytechnic Institute; and in the secondary class were the Manual Training School of St. Louis, and the Philadelphia Manual Training School. Boston, on account of its very large and excellent exhibit, was given a room by itself. The other exhibits were arranged, as nearly as possible, in the order of the age of pupils, beginning with the kindergartens, and closing with the universities and professional schools.

For school exhibits there were four class juries, and we did our best to have the jury of only one class in our section at any one time, removing for the time everything not belonging to that class, and filling the shelves with the exhibits of that class, arranged as nearly as possible in the order of the catalogue. In this way, but at some trouble to ourselves and perhaps to some of the jurors, we caused every exhibit to be placed before the proper jury in a way that required a minimum of time for proper inspection.

Classes 6 and 7 were especially complete in the matter of reports and monographs, and I think it will be granted that this kind of matter is of more importance than scholars' work. This should not be taken to mean that there was no such work, for there was a large amount of it piled upon our benches. Class 8 was quite good, on account of the reports from the Government scientific bureaus and

scientific associations. It also contained a considerable number of reports and circulars from universities and colleges.

The work shown by Johns Hopkins University was considered of first merit, as any one must consider it, if it is recalled that it consisted of optical gratings and spectrum photographs by Prof. Henry A. Rowland, and the publications of the university.

The Rensselaer Polytechnic Institute made a rather large and very interesting exhibit of works written by members of the faculty and alumni, and of photographs of works erected by alumni. This institution also claims some share in Professor Rowland's work, as he is an alumnus, and taught physics in the institute before he became a member of the faculty of Johns Hopkins University.

The exhibit made by the Massachusetts Institute of Technology was very complete and compact, as an exhibit from an engineering school should be.

Just at this point I would like to make a comparison of the number of awards given to the Educational Group in 1878, with the number given to these classes in 1889:

Class.	1878, 2000 square feet of floor space.				1889, 1000 square feet of floor space.				
	Gold medals.	Silver medals.	Bronze medals.	Honorable mention.	Grand prix.	Gold medals.	Silver medals.	Bronze medals.	Honorable mention.
Class 6.....	16	25	17	11	1	25	28	15	9
Class 7.....	7	13	3	12	1	8	6	3	3
Class 8.....	4	4	3	.....	9	5	11	3	18
Classes 6,7,8.....	.....	.....	.....	.....	.....	4	4	2	.....
Total.....	27	42	23	23	11	42	49	23	30
Grand total.....	115				155				

If we evaluate the awards according to the following scale—

- Grand prix = 5
- Gold medal = 4
- Silver medal = 3
- Bronze medal = 2
- Honorable mention = 1

we find 2.63 for the average value of award in 1878, and 2.88 as the average value in 1889. This is the highest average value for any nation, France included.

Besides the educational exhibits, we had two other collections, one of books arranged by Mr. E. Turquem, and another of periodicals arranged principally by Mr. Albert F. Parks. These, together with a few individual exhibits, constituted Class 9. Mr. Turquem arranged the book collection in a very prominent place, just opposite the entrance from the main stairway, and made a very fine display of the

work of our principal publishing houses. The collection of trade, educational, and literary journals occupied an alcove between the Turquem collection and the space occupied by Portugal, and in front of the office of the superintendent of the section.

The larger individual exhibits of Classes 10 to 15 inclusive were arranged as shown on the plan. There were very few exhibitors in these classes, on account of our inability to give them as large spaces as they asked for.

In making application for space, nearly everybody asked for enough for desk-room and a broad aisle around the show-cases, disregarding the fact that the Commission had made proper arrangement for aisles, and expected the exhibitors to use the whole space granted for exhibition of objects. Another difficulty in arranging the plan of installation was the lack of information regarding the styles and sizes of exhibitors' show-cases. The heterogeneous collection of show-cases in the American section should be considered as the thing most responsible for any little dissatisfaction that may have been felt on account of the appearance of the section.

Class 16 occupied a small amount of floor space, and would have required about ten thousand square feet of wall space for as complete a display as was made by France in the same class. With us the exhibits were piled one above another, until everything had been placed upon the tables, where they could be examined by such interested people as were willing to handle hundreds of large maps and charts. Our window space was used for Class 19 of Group III, and contained an exceptionally fine window by John Lafarge, and similar work by other American artists and glass manufacturers.

Sofar as I know, every exhibit, at one time or another, was brought before the jury, and that there were some good things in the group is shown by the following list of awards :

Group II.	Grand prizes.	Gold medals.	Silver medals.	Bronze medals.	Honorable mention.
Class 6.....	1	25	31	16	9
Class 7.....	1	8	6	3	3
Class 8.....	9	5	11	3	17
Class 6, 7, 8.....		4	4	2	
Class 9.....	1	5	12	8	12
Class 10.....	1	2	2	3	6
Class 11.....		2	3		1
Class 12.....	1	4	7	5	7
Class 13.....			2		
Class 14.....			2	1	
Class 15.....	3	2	1		
Class 16.....	4	1	7		3
Total.....	31	58	88	41	58
Grand total.....			266		
Average value.....			2.75		

So far as I have been able to find out, no nation has a higher average for its Group II, and we may say that we received more awards in Group II than any other foreign nation, and that our average award was higher than that of any nation, France included. I think, moreover, that the awards were secured at less cost to our Government than those in most other groups, and less even than the awards in the same group in 1878. At that time the separate expense account for the Educational Group covered Classes 6, 7, and 8, which occupied about two thousand square feet, while the group expenses in 1889 covered Classes 6 to 16 inclusive, and Class 19, which occupied five thousand square feet of floor space.

During the time of unpacking and placing exhibits I was aided by James B. Collins, who served as my assistant during the greater part of the Exposition period, and by Carl Ohlsen, who acted as chief guardian of the group. He was assisted by from one to three other guardians, as the circumstances seemed to require, and that they did their duty is shown by the facts that the section was well cleaned, and that the only things stolen during the daytime were eight small photographs. During the earlier months of the Exposition a private of the Marine Corps was stationed in the group to act as a guardian. During the night we left the section in the hands of the French guardians, and I believe that they did their duty, as only one claim of loss was made by an exhibitor. As this exhibitor had left his drawer unlocked, and as he had filed no invoice with the commission showing the goods claimed to have been stolen, I choose to believe that he made a mistake in counting, and that the property of American exhibitors was efficiently guarded both day and night.

During the summer more people passed through our group than I had expected, although there were few Americans among the visitors. The crowds very rarely began to come before noon, and not often before 2 o'clock, but the section was generally well filled from that time to the closing hour. The visitors were quiet and orderly, and many of them were quite appreciative, although the interested ones rarely came in the afternoon. I estimated the largest number that passed through in any one day at 12,000, while the smallest number in any one day was perhaps 200.

As the day for closing the Exposition approached, I began to arrange exhibits so that they could be easily and quickly packed, and had new boxes made to replace special ones that could not be found in the storage yards. Early on the morning of November 7 the cases for Group II were delivered at the most convenient door, and before noon all had been taken into the gallery and were being filled. November 7 and 8 I gave my personal attention to the distribution of exhibits that had been donated to various institutions, and also to the packing of cases. At sunset of the 8th, there were only

three cases of the collective exhibit to be packed, and agents had packed many of the individual exhibits. That evening I went to Havre, and sailed the next morning for New York on the steamer *La Gascogne*.

After having been in America for some time, I received the collective educational exhibit, which had been forwarded from Paris by way of Liverpool, and proceeded to distribute the parts to their respective owners, or to such places as had been designated. These packages were mostly sent by mail, but a few large ones were forwarded by the National Express Company.

After the close of the Exposition, I arranged a collection of reports, etc., to be used by the reporter of the jury for Class 6 in making his report, and gave explicit directions for forwarding the collection to him. By a letter recently received, it appears that the documents never reached him, so I collected another but smaller set, and sent them by registered mail the first of this month.

I believe I can now report that all of the exhibits of the educational collection are returned or accounted for.

Personally, I would thank you for your continual kindness, which made the past summer one of the pleasantest of my life.

Respectfully submitted.

## INTERNATIONAL JURY OF PRIZES—SUPERIOR JURY.

---

REPORT TO THE PRESIDENT OF THE COUNCIL, MINISTER OF COMMERCE, OF INDUSTRY AND OF THE COLONIES, COMMISSIONER-GENERAL.

Mr. PRESIDENT : In its first general session, held August 26, the Superior Jury on Prizes decided to confide to a sub-committee of twenty-five members, consisting principally of the presidents of the committees and group juries, the duty of examining certain disputed questions brought forward at that session, of making out the list of persons proposed for prizes which in its opinion should be ratified, and of examining the reclamations received. This sub-committee was composed as follows :

Mr. Teisserenc de Bort, President ; Messrs. Dietz-Monnin and Poirrier, Vice Presidents. Members : Messrs. Alphand, Dauphinot, Foucher de Careil, Frémy, Gréard, Hardy Larroumet, Leigh, Lyle, Lemoine, Meissonier, Navarro-Reverter, Picard, Poubelle, Prevet, Léon Say, Sabatier, Sir Colville Barclay, Commander Frescot, and Colonel Perret. Secretaries : Messrs. Hetzel and Trélat.

Mr. Gréard substituted Mr. Somerville Pinkney Tuck in his place, and Mr. Foucher de Careil, Mr. Grandeau.

The Director-General of Management, assisted by Mr. Monthiers, Chief of Service of the French Sections, was present at all the sessions.

The sub-committee met fifteen times, and generally held two sessions a day. The importance and multiplicity of the work which it had to accomplish are shown by the fact that it required a bureau of numerous clerks, under the direction of Messrs. Monthiers and Hetzel, more than two days to open the proceedings and classify the decisions.

Exhibitors are inevitably led to believe that a Superior Jury possesses all the powers necessary to set itself up as a redresser of wrongs, and that it is therefore its mission to revise and verify, name by name, all the decisions of the class and group juries. The sub-committee did not so understand its mission. It adopted first, as a general principle, that it would modify only in very exceptional cases the decisions of the class juries ratified by the group juries. It decided, however, to take into consideration all the reclamations presented by the exhibitors, or in their names, though it well knew that

most of them would be only the cries and complaints of wounded vanity. In order to assure promptitude and regularity in its work, it sent to the representative of each group jury the reclamations affecting the exhibitors in the different classes of that group.

The next proceedings were the reading by the representatives of each group of the names proposed for the first-class prizes, such as diplomas of grand prizes and diplomas of gold medals, and after this the presentation of written reclamations. Once the discussion ended and the decisions taken, the commissioners-general of the different foreign countries were permitted to present all the observations which they wished to present on the part of their countrymen, and which it had been impossible to transmit in writing. This method was the only one under which the sub-committee could escape the reproach of partiality and neglect of the interests of some one or other.

A great number of the reclamations referred to the omission to examine certain articles, or to their examination by juries of a class in which they should not have been included. The sub-committee, whenever it found that these reclamations were well founded, delegated those of its members whom their special competency pointed out, to examine and pass upon such articles, assisted by certain members of the class and group juries, or foreign commissioners-general. The reports of these delegates led to the award of the supplementary prizes, which are mentioned on the memoranda annexed to this report, alongside of those definitely awarded, after certain changes decided on in consequence of reclamations recognized as well founded. It is proper to add that these changes, consisting in elevating or reducing the grade of the diplomas proposed by the class and group juries, were, as a rule, decided on after the sub-committee, in order to get all the light possible, had heard the presidents, secretaries, or reporters of these juries, convoked for this purpose.

The reports were presented for Group I (Fine Arts) by Mr. Meissonier; for Group II (Education and Instruction, Material and Processes of the Liberal Arts) by Mr. Poubelle; for Group III (Furniture and Accessories) by Colonel David Perret; for Group IV (Fabrics, Clothing, and Accessories) by Mr. Leigh, assisted by Mr. Roy, Secretary of the group; for Group V (Mining Arts, Raw and Manufactured Products) by Mr. Sabatier; for Group VI (Tools and Processes of the Mechanical Arts, Electricity) by Mr. Picard; for Group VII (Alimentary Products) by Mr. Prevet; for Group VIII (Agriculture, Viticulture, and Pisciculture) by Mr. Grandeau; for Group IX (Horticulture) by Sir Colville Barclay; and for the Section of Social Economy, by Mr. Léon Say.

The masterly manner in which these reports were developed, and the discussions to which their conclusions gave rise, were greatly to

the honor of the eminent men who composed the sub-committee. If it had been possible to record the elevated ideas which were exchanged, to picture the important industrial, economical, and artistic questions, which were treated in the course of the discussion with most attractive fullness, the Exposition would have left behind it one document more to attest the value of the men who figured on its juries.

It would take long to extract from the record of the proceedings, drawn up with remarkable exactness, and a faithfulness that the complication of the discussions might have made impossible, even a résumé of the arguments and considerations on which were based the decisions in the matters submitted to the jury, and presented to it under aspects as different as unexpected, although belonging to similar questions.

It must suffice me to say that the sub-committee never intended to appear to substitute its opinion for that of the class and group juries, whose investigations it was bound to respect, made, as they were, with a competency which the sub-committee could not pretend wholly to possess. It enunciated no decisions: it simply passed upon the form and spirit in which the decisions had been made, whenever it was necessary. The testimony which it has had to record amply proves, besides, the care and equity which presided over the deliberations of the juries.

The sub-committee, taking as its text the words pronounced by you, Mr. President, in the opening session of the International Jury on Prizes, has desired to furnish to our foreign guests proof of the cordial hospitality of France, and of her gratitude to the nations who responded to her call. It was not sufficient for the sub-committee that these foreign nations were represented in its body by seven members; it gave free access to its deliberations to the representatives of the different national sections, whether they were members of the Superior Jury or not. All could be heard at its bar.

The Exposition of 1889 will make its mark in the history of the American nations. By their admirable aid in certain classes of Group II, especially, and by their incomparable exhibitions of raw material and natural products in Groups V and VII, the nations have affirmed, and the Superior Jury has confirmed, their irrefutable right to enter into the concert of the most powerful nations. The Old World must decidedly account with the progress of the New.

One of the novelties of the Exposition was the Section of Social Economy. Mr. Léon Say, amid the applause of the sub-committee, developed an interesting and moving report on this section, in which it has been found necessary to inform economists and heads of provident institutions over and over again how they could become exhibitors. It is now settled that there exists in the questions of social economy a new element of classification for future exposition.

In the course of their fifteen sessions the sub-committee examined about seven hundred and four questions, as follows:

*First.* Thirty-five questions submitted to its judgment relating, under different aspects, to the principle of non-competition; to the distinctions to be drawn between diplomas of prizes and commemorative diplomas referred to in Article 23 of the Regulations of the Jury; and to the classification to be made of the collaborators recommended for prizes.

*Second.* Six hundred and sixty-nine questions relating to exhibitors properly so called, and having for their object the elevation or the reduction of certain prizes; the award of diplomas to products overlooked or insufficiently examined; the confirmation of decisions made by class juries and amended by group juries, etc.

A certain number of these last questions were decided after the reports drawn up by the representatives of the groups, or furnished by the delegates nominated by the sub-commission, had been heard. These six hundred and sixty-nine reclamations are divided by group as follows:

Group I.....	9	Group VII.....	18
Group II.....	153	Group VIII.....	33
Group III.....	74	Group IX.....	1
Group IV.....	90	Social Economy.....	7
Group V.....	125		
Group VI.....	159	Total ...	669

Finally the presidents of the groups were authorized by the sub-committee, after having come to an understanding with the presidents and reporters of the class juries, or with the secretaries of the group juries, to decide directly upon ninety-one simple questions, the list of which has been annexed to the proceedings; which brings to seven hundred and ninety-five the total number of questions or reclamations which it has settled.

I join to the present report a numerical table, giving the number of the prizes of each class, amended in each group by the group juries on the one side, and by the sub-committee on the other. The increase of the number of prizes which results is as follows:

Diplomas of grand prizes.....	23
Diplomas of gold medals.....	108
Diplomas of silver medals.....	190
Diplomas of bronze medals.....	177
Diplomas of honorable mention.....	172
Total.....	670

There is nothing excessive in these figures if we consider the large number of articles and products overlooked by the juries, which the sub-committee was obliged to have examined and judged by its delegates.

I have the honor to ask you to propose to the Superior Jury to accept this number. If it needs to be enlightened on the details of the operations of the sub-committee, the tables, drawn up class by class, and the reports of the proceedings are at its disposition. The members of the sub-committee are also ready to give all necessary explanations, each in what concerns him.

I need not add that the Commission decided, conformably to the sentiments which appeared to prevail in the first session of the Superior Jury, certain questions of principle submitted to it. Thus it maintained firmly the rules adopted on the subject of non-competitive exhibits, ratifying the decision of the juries to consider that when directors general, delegate managers, and presidents of the councils of administration of manufacturing associations or companies, act as members of the jury, they thereby put out of competition the exhibits of such associations and companies. It has admitted no exception to this rule, and has even declared out of competition an exhibit in Group III exhibited in the name of a firm which contained the name of an exhibitor in Group I. It refused, on the other hand, to admit that the directors of special departments of such associations and companies could, by their presence on the jury, involve the non-competition of these associations, companies, etc.

Thus, too, it concluded, conformably to the terms of my last report, that a producer exhibiting dissimilar articles in different classes might receive as many distinct prizes as there were dissimilar exhibits; but the same person could not claim two or more prizes for the same article examined by juries of different classes, even if these classes had nothing to do with each other.

The Commission also thought, contrary to the conclusions of the same report, that certain exhibitors of Group IX, having taken part in the temporary competitions in horticulture, might be considered as permanent exhibitors, and competent therefore to receive prizes of the character of those referred to in Article 7 of the Regulations of the Jury for the exhibitors in the groups of Fine Arts, of Industry, and of Agriculture. A special delegation will be added to the Jury of Group IX to decide upon such propositions as it may make for this purpose.

The last question brought before the sub-committee was that of the prizes of the collaborators. A very thorough discussion took place on this subject. Every one recognized, as I had said in my report, that the spirit of Article 16 of the Regulations had been badly or too liberally interpreted. Recognizing that it was impossible to make in season a complete and equitable revision of the work of the class juries, the sub-committee discussed the question whether it was necessary, in order to diminish the number of recommendations to the extent required by the administration, to proceed to the suppression of all the high prizes of the collaborators, as far as the

silver medal, for example. This plan might be defended upon the ground that the directors, chief engineers, and superior functionaries of the establishments awarded prizes had morally, from the nature of their positions, their share in the prize awarded. But this view was considered too subtle.

On the other hand, it would have been deplorable to attain the desired end by striking out a comparatively large number of prizes of the lower grades. Such a proceeding would have been anti-democratic, and would have deprived of their prizes those workmen and overseers whom the regulations had especially in view in speaking of collaborators.

The sub-committee decided, therefore, to propose that the number of collaborators prizes should be limited to 5,500, and that, no matter to whom they were awarded, they should consist in each case of a diploma only.

The sub-committee suggests to the Superior Jury to have the kindness to adopt this solution.

GEORGES BERGER.

# REGULATIONS OF THE INTERNATIONAL JURY.

## INTERNATIONAL JURY ON PRIZES.—REGULATIONS.

### TITLE I.—*General Dispositions.*

ARTICLE 1. The appreciation of and the verdict on works of art, as well as on the industrial and agricultural products exhibited, are intrusted to an international jury comprised of titular and supplemental members, divided into the eighty-five classes of the general classification, as settled by the ministerial decrees of August 26, 1886, March 11 and May 1, 1887.

ART. 2. In each of the Class Juries the number of titular members for each nationality and for each branch of art or industry represented shall be, as far as possible, proportioned to the number of exhibitors and the importance of the exhibits.

The total number of titular members, however, French and foreign, of the International Jury on Prizes, shall not exceed nine hundred.

ART. 3. The total number of supplemental jurors, French and foreign, of the International Jury on Prizes, shall not exceed one-third of the titular members.

ART. 4. The French titular and supplemental members of the International Jury on Prizes shall be chosen from the great departments of the Government, the academies, the principal boards and incorporated bodies, and for the most part among persons who, as exhibitors or as jurors appointed by the French Government, have received important prizes at the Universal International Expositions of Paris, London, Vienna, Philadelphia, Sidney, Melbourne, Amsterdam, Antwerp, Barcelona, or Brussels.

ART. 5. Supplemental jurors shall have votes only when they occupy the places of absent titular jurors.

ART. 6. The French titular and supplemental members of the International Jury on Prizes shall be named by presidential decree, on the nomination of the President of the Council, etc. Commissioner-General for the Class Juries of Group II to IX, and of the Minister of Public Instruction, etc., for the Class Juries of Group I.

The foreign titular and supplemental members of the International Jury on Prizes shall be selected for each nationality by the foreign national committees.

All nominations must be made before May 5, 1889.

ART. 7. Each Class Jury of Groups II to IX can add to its members as associates one or more persons of competency on the subjects submitted to its examination. These associates or experts may be selected from among the titular or supplemental members of any class, or among specialists in the subject under consideration, outside of the members of the jury. The persons thus added shall not take part in the labors of the Class Jury to which they have been attached, except for the special object for which they were added, and they shall have only a consultation voice.

The choice of these associates or experts must be approved by the President of the Council, etc., Commissioner-General.

ART. 8. Exhibitors who have accepted the office of jurymen, whether as titular or supplemental members, shall, *ipso facto*, be disqualified to receive a prize.

Exhibitors attached as associates or experts shall also be disqualified, but only in the class in which they may take part.

ART. 9. The prizes to be awarded under the form of diplomas placed at the disposition of the International Jury, are divided as follows:

Grand Prizes,	Diplomas of Silver Medals,
Diplomas of Gold Medals,	Diplomas of Bronze Medals,
Diplomas of Honorable Mention.	

ART. 10. The International Jury on Prizes must finish its labors between June 1 and September 1, 1889. But as regards the classes of Groups VII, VIII, and IX, intended for temporary competitive exhibition, the labors of the jury may be continued during the whole of the Exposition, as is laid down in Title III of the Regulations in force.

ART. 11. The formal distribution of prizes shall take place in the course of the month of September.

ART. 12. A general report of the labors of the International Jury on Prizes and an official list of the names of the successful exhibitors shall be published.

ART. 13. In accordance with Article 3 of the Decree of July 28, 1886, it shall be the duty of the Director General of Management, aided by his principal assistants, to prepare and direct the labors of the International Jury on Prizes, to receive and forward the results of the labors of the said Jury, to assure himself that the exhibit of no exhibitor has escaped examination, to listen to the observations and reclamations of exhibitors, and to see that the rules are observed.

The Director-General of Management shall have the right to be present at any meeting of the International Jury on Prizes, or to be represented, but he cannot intervene in the deliberations, except to state facts, recall the regulations, and submit the reclamations of the exhibitors.

## TITLE II.

### *Award of prizes.—Dispositions applicable only to the permanent exhibitions in Groups I to IX.*

ART. 14. The award of prizes instituted by Article 9 shall be decided by the successive labors of Class Juries, of which mention has been made in Title I, Group Juries, and the Superior Jury, of which we shall speak below.

ART. 15. The Class Juries shall meet June 1, 1889. At their first meeting they shall elect their bureaux, consisting of a president, a vice-president, a reporter, and a secretary.

The president and the vice-president should be of different nationalities, one French and the other foreign.

ART. 16. Each Class Jury shall proceed to the examination of the articles exhibited, and shall decide without distinction of nationality, and according to merit, upon the classification of the contributors who shall appear to be deserving of prizes.

It shall make a separate list of those exhibitors who, under Article 8, cannot compete.

It shall classify, without distinction of nationality, the assistants, master-workmen, and workmen whom it thinks should be mentioned for their participation in the production of remarkable articles figuring in the exhibition.

These lists, signed by the members of the Class Jury who took part in the work, shall be transmitted to the Director-General of Management by July 15 at the latest.

If a Class Jury shall not have prepared its lists at the date above mentioned, they shall be supplied, *ex-officio*, by the Group Jury.

ART. 17. The presidents, vice-presidents, and reporters of the Class Juries shall compose the Group Juries, which shall meet July 20, 1889.

Each Group Jury shall name a president, two vice-presidents, and a secretary, who may be chosen outside of the members.

A decree will determine the number of Frenchmen and foreigners who may be called to these functions.

The nominations shall be made by decree on the suggestion of the President of the Council, etc., Commissioner-General, for Groups II to IX, and on that of the Minister of Public Instruction, etc., for Group I.

ART. 18. Each group shall revise and decide upon the classified lists submitted by the Class Juries.

It shall consult successively each Class Jury on the decisions which concern it, and agree upon the suggestions to be made to the Superior Jury as regards the number and division of prizes of each kind to be assigned to each class.

The results of the labors of the Group Juries must be transmitted to the Director-General of Management August 15, 1889; if the report of any group should not be ready on this date the Superior Jury shall supply it *ex officio*.

ART. 19. The Superior Jury shall have for honorary president the President of the Council, etc.; it shall have for honorary vice-presidents, the Minister of Public Instruction, etc., and the Minister of Agriculture.

It shall have for president and vice-presidents the president and vice-presidents of the Superior Commission of Revision, as constituted by the ministerial decrees of March 11 and May 4, 1887.

It shall be composed of—

The vice-presidents of the Commission of Control and of the Finances; the presidents and vice-presidents of the Group Juries; the members of the Superior Commission of Revision; the commissioners-general or the presidents of the National Commissions, whose country numbers more than five hundred exhibitors inscribed on the catalogue.

The president of the special jury of the Exhibition of Social Economy, instituted by Article 21; the Director-General of the Works; the Director-General of Management; the Director-General of Finances; the Chief of the Mechanical and Electrical Services; the Chief of Service of the French Section; the Chief of Cabinet of the Ministry of Commerce and of the General Administrator of the Exposition; the Director of Fine Arts; the Special Commissioner of Fine Arts, and the Director of Agriculture.

ART. 20. The following are named secretaries of the Superior Jury:

The secretaries of the directors-general of the Exposition; the chief of cabinet of the Minister of Public Instruction, etc.; the chief of cabinet of the Minister of Agriculture; the sub-chief of the General Administrator of the Exposition, and the secretaries of the group committees.

ART. 21. The Superior Jury shall meet August 20, 1889. It shall examine the recommendations of the Group Juries, and shall decide, without recourse and according to merit, on the lists of exhibitors in each class entitled to prizes and on the number and distribution of the prizes of the different kinds to be conferred on the successful exhibitors.

ART. 22. A special jury of thirty-two members shall be created for the Exhibition of Social Economy. The nominations shall be made by decree on the proposition of the President of the Council, etc., Commissioner-General.

One-half the members shall be chosen among the members of the sectional committees of the Exhibition of Social Economy; the other half shall be taken from outside.

The special jury of the Exhibition of Social Economy shall meet June 1, 1889. At its first meeting it shall elect its bureau, composed of a president, a vice-president, a reporter, and a secretary.

The special jury of the Exhibition of Social Economy shall prepare, in order of merit, the list of exhibitors who can receive prizes, and shall make its recommendations relative to the number and distribution of the prizes of the different kinds.

The results of the labors of the special jury on the Exhibition of Social Economy must be submitted to the Director-General of Management August 15, 1889, to be transmitted directly to the Superior Jury.

ART. 23. Special diplomas may be awarded to persons who have taken part in the Retrospective Exposition of Labor and of the Anthropological Sciences, and in the Retrospective Exposition of the Fine Arts, by loaning articles to members of the different committees, commissions, and juries, as well as to functionaries of the administrative services.

### TITLE III.

*Award of prizes—Special dispositions as regards the temporary competitive exhibitions of Groups VII, VIII, and IX.*

ART. 24. During the whole duration of the Exposition the Class Juries interested shall submit to the President of the Council, etc., Commissioner-General, the names of the associates they may desire to add to their number for the examination of the products comprised in the temporary competitive exhibitions which may take place in certain classes of Groups VII, VIII, and IX.

The presentation of the names of these temporary associates shall be made eight days at least before the day fixed for the opening of each of such temporary competitive exhibitions.

As soon as these temporary competitive exhibitions shall be ended, each temporary committee, composed of members of the jury of the corresponding class and of their temporary associates, shall prepare, in order of merit, a list of the exhibitors, collaborators, and workmen whom it shall judge worthy of prizes, and shall arrange them in four lists under the titles of "first prizes," "second prizes," "third prizes," and "honorable mentions."

This classification may be published immediately.

ART. 26. As soon as the temporary competitive exhibitions shall have ended, the Group Juries of Groups VII, VIII, and IX shall prepare a list, by name, of the exhibitors, collaborators, and workmen to whom the temporary committee may have awarded prizes in conformity to the preceding article; they shall then award to each prize-winner a diploma which shall mention the prizes and honorable mentions obtained by him in the temporary competitive exhibitions during the whole Exposition.

ART. 27. Rules for the prizes to be awarded to the prize-winners of the competitive exhibition of reproductive animals shall be made separately and according to special regulations.

Examined and submitted.

GEORGES BERGER,  
*Director-General of Management.*

Examined and approved.

TIRARD,

*President of the Council, etc., Commissioner-General.*

## REVIEW OF SOCIAL ECONOMY

### SOCIAL ECONOMY.

Social economy is the question of the day. The energetic and fearless young Emperor of Germany has summoned a congress to consider this grave and important question. France and England have agreed to take part in it, and there can be no doubt that Germany's allies, Austria, Hungary, and Italy, will also be represented. When an imperial government acts on the great question of the relations between capital and labor, it is time that the republican government of a manufacturing country should act too. The United States would therefore do well to take advantage of the Exposition of 1892 to hold a *practical* congress on this subject. A Government exhibit at Chicago of facts and figures, illustrated with drawings and models, like that at the Exposition of the Champ de Mars, could not fail to be of public utility. Our Government has great facilities for this work through its army of postmasters, but especially at this time when its census-takers are busy collecting statistics. A report on the results of such an exhibit, published in due time, and distributed by members of Congress among their constituents, would give masters and workmen valuable information, and probably benefit both.

With this view it is proposed to give in this report a condensed account of the constitution of the Exhibition of Social Economy in the great Exposition of 1889. We are compelled to condense, and therefore omit whatever appears to be applicable to France alone, or at least not applicable to the United States. We trust that the information thus given may serve at least as a basis of action, either on the part of the Government, or of the organizers of the Exposition of 1892.

We begin with the orders of the Minister of Commerce and Industry, who was the Commissioner-General of the Exposition.

*The Minister of Commerce, etc., Commissioner-General, orders:*

\* \* \* \* \*

ARTICLE 1. An Exhibition of Social Economy is organized at the Universal Exposition of 1889. This Exhibition applies to manufactures and to agriculture. It is divided into fifteen sections, comprising the objects enumerated in the annexed memorandum. (A sixteenth section was added later.)

\* \* \* \* \*

1. The Exhibition of Social Economy comprises first, institutions of private initiative, created by the employers, or by the employed, or by a union between the two, to alleviate the moral and material condition of the latter. Second, institutions and establishments created and kept up with the same object, by the state, cities, arrondissements, or other competent authority, as well as by associations or individuals.

2. A methodical series of questions shall be prepared by the commissioners on organization, in such a form as to guide the witnesses and the examiners, and to facilitate the examination and the classification of the answers.

\* \* \* \* \*

3. Exhibitors are particularly requested to join to the documents, statutes, reports, books, and memoirs which they may exhibit, articles calculated to attract attention, such as models, drawings, plans in relief, photographs under glass, in albums, or on pasteboard, pictures, etc.

4. A library shall be collected for each category of subjects comprised in this exhibition, containing the most important books and documents relating to the category; laws, regulations, official reports, reports of scientific congresses, newspapers, and special publications on social questions and provident institutions.

\* \* \* \* \*

8. The administration may place in one or several of the workmen's dwellings exhibited in Section II, collections or specimens of furniture, costume, clothing, and articles of household use.

9. The administration may set up before the eyes of the visitors small workshops of the domestic industries, indicated in the programme of Section XV.

10. Conferences on social economy will form part of this exhibition.

That eminent author and statesman, M. Léon Say, was then appointed president of the Exhibition of Social Economy, and was assisted by a large number of senators, deputies, professors, and experts. The exhibition was thereupon divided into fifteen sections, each section having its committee, consisting of a president, vice-president, and secretary, and four members. These gentlemen prepared a series of questions, each committee in its own section, and the orders of the minister and the questions were distributed freely throughout France, to the prefects, to the proprietors of mills, to the officers of mutual-aid societies, and to experts generally. Accompanying these questions was an "Exposé des Motifs" (Objects of the Exposition), from which we extract liberally:

Interest in the lot of the people is certainly one of the traits which characterize and honor the nineteenth century, and particularly these later years. It should therefore be reflected in the Exposition of 1889. By the side of the product it is important to show the present condition of the producer; what has been done to better his lot, and what remains to be done.

It is not sufficient, on the occasion of the centenary of 1789, to adopt the ordinary programme of universal expositions.

To collect under the eyes of the public the marvels of human labor, the discoveries of science, the chefs-d'œuvre of art, and the instruction which transmits to future generations the lessons of the past, is to accomplish only a part of the task imposed upon our country by such a national solemnity.

The secular anniversary of 1789 being at the same time political and social, it is proper to celebrate it in this double point of view, by bringing together all the happy

changes, all the memorable examples, all the successful benevolent institutions, which, thanks to the judicious observance of the laws of social and industrial economy, have provided for the people new elements of moral and material prosperity in the present, and security for the future. It would be well, too, to show by facts and in a striking manner that, under the empire of modern laws and of the liberty of industry, immense progress—too often overlooked—has been made during three-quarters of a century, and continues to be made to-day, without violence and even without noise, by the natural improvement of ways of life, the irresistible pressure of public opinion, and the peaceful triumph of just ideas. We should recall, too, the condition of the workman when delivered to the abuses of the tax-gatherers: his labor was oftener abused than protected by the rule of corporations.

We cannot to-day better glorify the work of 1789, and the liberation of industry by the French Revolution, than by showing the admirable results produced in the entire world by the impulse of individual independence, combined with the principle of association. This should be a complete picture of one of the greatest economical and social evolutions of humanity.

We shall attain this end by creating in the Exposition a new group, exclusively consecrated to social economy, which shall comprise in a sufficient number of classes the ensemble of the sources of prosperity, and a complete tableau of provident institutions, of dwellings, and of co-operation under all its forms.

We shall thus place in relief all the institutions created by employers in favor of their workmen, by the workmen themselves, or by the state or cities, to ameliorate the physical and moral condition of workmen, accustom them to economy, teach them the advantage of co-operation, stimulate their initiative, and, while providing them healthy habitations, facilitate their becoming owners of them. We shall call public attention to useful examples, and by an effective propaganda, based on experience and well-ascertained facts, contribute to develop harmony among all those engaged in the same work.

To prepare this Exhibition of Social Economy, we must first have recourse to preliminary inquiries.

In connection with the above "Exposé des Motifs" Mr. Georges Berger, the intelligent Director-General of the Management of the Exposition, issued a circular, part of which we translate :

We must repeat that in preparing this new exhibition, it is important to speak to the eye as well as to the mind, and that subjects which are treated in documents and statistics should be illustrated by maps and plans in relief, and by illustrations, so as to put under the eyes of visitors facts which might otherwise remain buried under a mass of figures.

In this point of view collective exhibits should be encouraged.

We must give this exhibition an agreeable and lively aspect, and make palpable and impressive, by all the material means we can command the economic facts which are to be shown. The administration will, no doubt, do all in its power to give this enterprise the decorative and picturesque character which ought specially to stamp it, but the committees and exhibitors must be moved by the same motives in order to give it body and life.

#### MANAGEMENT—GENERAL PLAN.

Mural maps and illustrated tables should play an important part in making figures and essential facts appreciable by all visitors. We might place in the sections of trade corporations and mutual aid societies, ancient and modern banners, insignia, and medals symbolic of the history of these corporations: and alongside of doc-

uments relating to apprenticeship, the work of the apprentices themselves,—flowers, feathers, painting, jewelry, drawing, etc.

The section of workmen's dwellings ought to contribute their special physiogomy to this exhibition. It would be well to construct specimens of natural size, which the exhibitors will no doubt construct themselves, and in which might be placed furniture best adapted, as regards both health and economy, to the wants of a workman's family.

If it were possible to construct in the center of this Exposition a workmen's club, with all its dependencies, including a lecture-room, we might place in it, in a pleasing form, many articles having reference to social economy, busts and portraits of deceased persons distinguished for their devotion to the working classes and for their self-sacrifice; and specimens, models, and drawings of the tools, clothing, and dwellings of workmen and peasants at different periods, so that the visitor could see at a glance the changes made in a century in their manner of living and of work.

Around this club might be grouped popular establishments, such as cheap restaurants or refectories, dispensaries, temperance coffee-houses, models of bath-houses and laundries, etc., the whole arranged with taste. We might erect, too, workmen's dwellings on the lawns and in the shrubberies, which will ornament the many thousand square meters assigned to the Exhibition of Social Economies.

Besides these separate buildings, there should be a main building in the rear of the grounds, to accommodate the fifteen sections with their documents, their tables, their designs, etc.

\* \* \* \* \*

Finally, the object is to show by preliminary inquiry and by exhibition a complete and impartial inventory of the economic and social question at the end of the nineteenth century—its successive changes, its actual condition, and what is to be desired for it.

We should all, from love of country, and with a noble aim in view, study closely and with ever-increasing zeal the questions relating to manufacturing and agricultural labor, encourage legitimate hopes, bring prominently forward institutions which have succeeded, solutions reached by the free action of individuals or of associations; place in full view efforts heretofore unrecognized, assist badly informed good intentions—in a word, point out to employers and employés, who so far have done nothing, the instructive examples of those who have known how to act, and to act successfully.

The fifteen sections were divided as follows:

- |   |  |
|---|--|
| 1. Remuneration of Labor.                           | 10. Credit Co-operative Associations.  |
| 2. Participation in profits—Co-operative Societies. | 11. Workmen's Dwellings.   |
| 3. Trades Unions.                                   | 12. Workmen's Club—Recreations and Sports.   |
| 4. Apprenticeship.                                  | 13. Social Hygiene.  |
| 5. Mutual Aid Societies.                            | 14. Diverse Institutions established by employers for the benefit of their employés. |
| 6. Superannuation Fund—Annuities.                   | 15. Factory and Workshop Labor—Large and Small Farms.                                |
| 7. Insurance against Accident. Life Insurance.      |  |
| 8. Savings.   |  |
| 9. Food Co-operative Associations.                  |  |

Questions having been prepared in each of the above sections, and addressed as we have said to parties competent to give information, blanks for the answers were also prepared and sent out in duplicate; for the Commission very wisely resolved to facilitate the answers in

every way. The different paragraphs were numbered in order, and without regard to the section to which they belonged, so that in answering the writer had simply to place a number without further heading on his sheet, and proceed with his answer.

It may be well to give these questions in one of the sections in order to illustrate the method of proceeding. In the other sections we shall give the heads alone. We select the first section, as perhaps the most important.

## SECTION I.—REMUNERATION OF LABOR.

### I. *Miscellaneous, concerning the factory and its management.*

1. *Describe the establishment.*—State what is manufactured (arrangement and division of the workshops—amount of business done—hands, how many—distinguish between the sexes, and give the ages of children). Recruitment (local or foreign, details by nationalities)—stability or instability (meaning are the workmen often changed).

Conduct of the work. Periods of activity and of stoppage. Are they regular or intermittent?

Yearly amount of wages. Its relation to the amount of business.

If the question has reference to agriculture, name the total area and the division of the land for different crops; rotation of crops; mode of working; laborers; annual crops.

Other details characterizing the workshop or its management.

### II. *Factory wages.*

2. *Method of fixing wages.*—Are wages paid by the day, the hour, the job, or by a percentage? Are they fixed by a combination of these methods? Are there different methods applied according to the character of the work? What are these kinds of work? Do the wages depend upon the price of the goods?

3. *Supply and demand for labor.*—Mode of recruitment; hiring; guaranties required (references, diplomas, inquiries); intelligence offices; labor exchanges (origin, organization, results).

4. *Rates of wages.*—Rate by classes in the mill: men, women, children. (Give the highest, the lowest, and the mean rate).

Compare the rates of wages according to the different methods of fixing them (day, percentage, etc.); state if several of these methods are adopted at the same time.

Fluctuation of wages for a quarter of a century (go further back if it can be done with accuracy), both in the mill itself and in the neighborhood.

Give annual remuneration of a good, ordinary workman (taking into consideration stoppages in the dead season and at other times).

Compare earnings of families who work also outside of the workshop; in the fields, for instance.

5. *Bounties, or additional wages.*—Are there in the factory, besides wages, bounties calculated on one or several of the following principles:

- (a) Quantity of work done in a day, fortnight, or month, beyond a fixed mean.
- (b) Quality of the work.
- (c) Economy realized in the use of raw material or fuel.
- (d) Longevity.

Indicate the plan of these different combinations, and the basis of application. At the end of what period are the results known? Are these bounties offset by a reduction of wages if the quantity and quality of the work fall below a certain standard, or if the consumption of raw material is excessive? Does the calculation of these bounties give rise to disputes?

In the absence of or in addition to these bounties mathematically fixed, are there others given by the employers at their discretion? Total amount of such bounties for all the employés, and for each of them.

6. *Allowances in kind.*—In addition to wages and bounties do the workmen receive subventions proportioned less to the work than to the needs of the family? In what do they consist?

(a) Dwellings at lower rents, or free; gardens, fields.

(b) Warming.

(c) Medicines and medical attendance.

(d) Schools.

(e) Provisions and service, gratuitous or cheaper. (Transportation and clothing of railroad employés.)

(f) Prescriptive rights of custom on the property of the proprietor.

The annual amount of these allowances, total, average per head. Their relation to the amount of work done in the factory, and to the amount of the dividends.

7. *Rules of labor.*—The mean length of work (by day, by week, by month, by year, Sundays, fête days); stoppages.

Does the workman add field labor to factory labor to fill up the time of stoppages?

Number of years of labor before superannuation; incapacity arising from the character of the work; mortality; condition of the workman in old age.

8. *Encouragements to labor and to longevity.*—Special advantages accorded to workmen to favor permanence of engagement (longevity bounties; sick bounties; light labor reserved for infirm or old men; preferences enjoyed in the selection of vacant houses; pensions). Money value of those advantages.

Medals and prizes to reward the quality and faithfulness of the work, and reciting the condition of old and meritorious workmen.

9. *Payment of wages.*—Division of pay-days (by month, fortnight, or week); influence of this division on savings, and on the condition of the workman's family; measures taken to avoid the temptations of pay-day. (Payment on one day in the week; by alphabetical order; by a pay-ticket given to the housekeeper.)

When are the payments made? Is part of the payment made in kind (clothing or goods furnished by stores or a canteen)? Proportion of wages paid in kind and in money.

Wages withheld (for the sick fund, superannuation, insurance, and for different supplies): monthly amounts, etc., withheld, and their proportion to the wages paid in money. In these amounts is there one relating to supplies furnished by food co-operative stores not connected with the factory?

Reclamations and incidents arising from payments in kind and retention of wages.

Are wages attached by local shopkeepers? Number and amount of such claims; expulsion of workmen, or distraining for non-payment of rent, etc.

10. *Disputes about the amount or the modes of payment of wages.*—Strikes (history, causes, results).

Do the workmen have recourse to the courts to settle their differences with their employers? On what occasions? Results.

Does there exist an institution of conciliation or arbitration to settle conflicts amicably, and avoid strikes? Organization of this tribunal; circumstances under which it has worked; results.

11. *Relations between wages and the expenses of living.*—Comparative condition of the workman as regards resources and expenses to-day and at different periods, going back as far as possible, in the same neighborhood.

Has the increase of wages advanced more or less rapidly than the expenses of living? Has this increase been partly set aside as savings?

General condition of the workmen employed in the factory and in the neighborhood.

III. *Agricultural wages.*

\* \* \* \* \*

Sufficient has been given to show the form and character of the questions. We proceed now to give the heads under which questions were prepared in the other sections.

SECTION III.—PARTICIPATION IN PROFITS—CO-OPERATIVE SOCIETIES.

I. *Share of profits.*

- 22. Nature of the industry and general information.
- 23. Percentage which the wages bear in the manufactured article to the other expenses of production.
- 24. Proportion and bases of the payment to employés and workmen of a share of the amount of net profits.
- 25. Powers of the employer.
- 26. Mode of employment of the workman's share of the profits.
- 27. Material and moral results of the share system, for the workman and for the masters.

II. *Industrial co-operative societies.*

- 28. Nature of the industry and general information.
- 29. Modes of raising the capital.
- 30. Formation of the management.
- 31. Number and condition of the associates.
- 32. Method of dividing the net profits.
- 33. Rights of apprentice candidates for admission.
- 34. Fruit growers' associations; cheese factories.

III. *Farming on shares.*

- 35. Nature of the work and general information.
- 36. Proportion and conditions of the division between the proprietor and the farmer
- 37. Special clauses.
- 38. Material and moral results of farming on shares.

SECTION III.—TRADES UNIONS.

I. *Trade associations.*

- 39. Miscellaneous, applicable to all syndicates.
- 40. Syndical association of employers.
- 41. Syndical association of employés (Trades Unions, Knights of Labor, etc.).
- 42. Mixed syndicates of masters and workmen, or of employers and employés.
- 43. Relations between syndicates of employers and of workmen.
- 44. Agricultural syndicates.
- 45. Trade associations abroad, corporations, open or close.

II. *Councils of conciliation—tribunals of arbitration—councils of arbitrators.*

- 46. Councils of conciliation ; tribunals of arbitration.
- 47. Council of arbitrators ; trade tribunals.

III. *Learned and business societies for the study of social questions.*

- 48. Societies of social economy ; industrial societies and others.

## SECTION IV.—APPRENTICESHIP.

I. *Apprenticeship in the workshop.*

- 49. Miscellaneous, in regard to the workshop.
- 50. Relations between the employer and the apprentice.
- 51. Methods of apprenticeship.
- 52. Results of the apprenticeship.

II. *Technical instruction.*

- 53. Schools of apprenticeship peculiar to the workshop.
- 54. Study outside of the workshop.
- 55. Technical schools.
- 56. Housekeeping schools, to teach young girls housekeeping.
- 57. Orphan asylums ; manufacturing or agricultural workshops.

III. *Employers' associations.*

- 58. Nature, object, and advantages of employers' associations.

## SECTION V.—MUTUAL AID SOCIETIES.

I. *Miscellaneous.*

- 59. Description of the society.
- 60. Elements which compose it.
- 61. History of the society.
- 62. Members.
- 63. Organization ; administration.
- 64. Relations with other societies.
- 65. Sundry particulars.

II. *Objects of the society.*

- 66. Aid in case of sickness.
- 67. Aid in case of stoppages.
- 68. Aid in case of old age.
- 69. Aid in case of death.
- 70. Different kinds of insurance.

III. *Financial organization.*

- 71. Receipts of the society in 1887.
- 72. Expenses of the society in 1887.
- 73. Financial situation at the end of 1887.

## SECTION VI.—SUPERANNUATION SOCIETIES AND ANNUITIES.

I. *Official institutions.*

- 74. Description of the institution.
- 75. Management and administration of the funds.
- 76. Rules relating to the pensions paid by the State.
- 77. Members and pensioners.
- 78. Financial results.
- 79. Pensions on the retirement of State functionaries.

II. *Institutions founded on the initiative of the parties interested.*

(See Sections III, V, IX, and X.)

III. *Institutions founded on the initiative of the employer.*

- 80. Organization and working of these institutions.
- 81. Funds of provident societies.
- 82. Financial results.

## SECTION VII.—INSURANCE AGAINST ACCIDENT.—LIFE INSURANCE.

I. *Insurance against accident.*

- 83. Basis of insurance, and general information.
- 84. Methods of insurance.
- 85. Civil responsibility of the employer.
- 86. Working of the insurance.
- 87. Premiums or assessments.
- 88. Rules in case of accident.
- 89. Funds in case of accident.
- 90. Results of the insurance.
- 91. Diverse peculiarities.

II. *Life insurance.*

- 92. Employés insured.
- 93. Conditions of the insurance.

III. *Diverse kinds of insurance.*

- 94. General information.

IV. *Insurance companies.*

- 95. Documents to be collected.

## SECTION VIII.—SAVINGS.

I. *Official institutions.*

- 96. Description of the institutions.
- 97. Legal organization.
- 98. Conditions of deposit.
- 99. Depositors.
- 100. Financial results.
- 101. Peculiarities.

II. *Institutions of a purely private character.*

- 102. Miscellaneous, about the institution.
- 103. Working of the association.
- 104. Depositors.
- 105. Employment of funds.
- 106. Financial results.
- 107. Peculiarities in diverse special types of savings societies.

III. *Institutions founded by employers.*

- 108. Different systems of incentive to economy.

## SECTION IX.—FOOD CO-OPERATIVE SOCIETIES.

I. *General remarks applicable to all food co-operative societies.*

- 109. Origin and formation of the society.
- 110. Object and form of the society.
- 111. Capital.
- 112. Number and condition of shareholders.
- 113. Management of the society.
- 114. Operations of the society—purchases.
- 115. Sales.
- 116. Domicile of the society.
- 117. Service of the stores.
- 118. Books—balance sheets.
- 119. Division of net profits—financial situation.
- 120. Noteworthy facts connected with the history of the society.
- 121. Material and moral results of the institution.

II. *Prepared food co-operative societies.—Co-operative restaurants.*

- 122. Management of the society.
- 123. Co-operative restaurants.
- 124. Material and moral results of the institution.

III. *Co-operative bakeries.*

- 125. Bread making.
- 126. Sale.
- 127. Results.

IV. *Stores.*

- 128. Organization.
- 129. Magazines and management.
- 130. Moral and financial results.

## SECTION X.—CO-OPERATIVE ASSOCIATIONS OF CREDIT.

I. *General remarks applicable to all co-operative associations of credit.*

- 131. Origin, formation, and history of the society.
- 132. Object and attributes of the society (loan society, etc.)
- 133. Capital.
- 134. Number and condition of the shareholders.
- 135. Management of the society.
- 136. Operations of the society.

- 137. Offices of the society.
- 138. Books, balance sheets.
- 139. Division of net profits.
- 140. Financial situation.
- 141. Relations of the society to other institutions.
- 142. Material and moral results

*Peculiarities relating to certain institutions of co-operative credit.*

- 143. Central banks.
- 144. Societies of a special type.
- 145. Loans on unindorsed paper.
- 146. Intervention of the State.

SECTION XI.—WORKMEN'S DWELLINGS.

*I. Character and origin of efforts to improve workmen's dwellings.*

- 147. Societies formed by workmen exclusively.
- 148. Employers erecting dwellings near the center of labor.
- 149. Societies for the erection of healthy and economical lodgings.
- 150. Private enterprise.
- 151. Public administration.

*II. Types of construction and rent.*

- 152. Detached dwellings.
- 153. Apartment houses.
- 154. Rates of lodgings (rent, other charges).
- 155. Modes of payment.

*III. Results.*

- 156. Material results of the improvement of dwellings.
- 157. Moral results.

SECTION XII.—WORKMEN'S CLUBS, RECREATIONS, AND SPORTS.

- 158. Description of the club or society.
- 159. Members.
- 160. Organization and management.
- 161. Financial organization.
- 162. Refreshments and games.
- 163. Occasional admission of the families of members and strangers.
- 164. Diverse clubs and associations for study and mutual instruction.
- 165. Musical societies, sport, or others, established either by workmen's clubs, by workmen, or by employers.
- 166. Local museums.
- 167. Diverse peculiarities.

SECTION XIII.—SOCIAL HYGIENE.

A—QUESTIONS RELATING TO THE NEIGHBORHOOD.

*I. General hygiene.*

- 168. Hygiene and protection of infants.
- 169. Hygiene of food.
- 170. Alcoholism.
- 171. Hygiene of the dwelling

II. *Hygiene of the employment.*

- 172. Protection of children.
- 173. Protection of workwomen.
- 174. Protection of workmen.
- 175. Hygiene of the workshop and of the trade.

## B.—QUESTIONS RELATING TO INDIVIDUALS; MEASURES TAKEN ON PRIVATE INITIATIVE FOR THE HYGIENE AND PROTECTION OF THE WORKMAN.

- 176. Hygiene and protection of children.
- 177. Hygiene and protection of workwomen.
- 178. Hygiene and protection of workmen.
- 179. Alcoholism.

## SECTION XIV.—DIVERS INSTITUTIONS CREATED BY OWNERS FOR THE BENEFIT OF THEIR WORKMEN.

I. *Miscellaneous about the business.*

- 180. Nature of the business.
- 181. Extent of the business.

II. *Employers' institutions.*

- 182. Institutions to increase remuneration.
- 183. Institutions of common schools and of trade schools.
- 184. Institutions to aid the family in its normal condition of labor and health.
- 185. Institutions to aid the family in crises.
- 186. Institutions for the benefit of women and children.
- 187. Institutions of recreation for the workman.
- 188. Special institutions.

III. *Results of employers' institutions.*

- 189. Amount of working expenses and of employers' institutions.
- 190. Character and habits of the population.
- 191. Relations between capital and labor.

## SECTION XV.—FACTORY AND WORKSHOP TRADES.—LARGE AND SMALL FARMS.

## A.—QUESTIONS RELATING TO THE NEIGHBORHOOD.

I. *Miscellaneous about factory and workshop labor.*

- 192. Concentration of labor.
- 193. Workshop labor.

II. *Large and small farms.*

- 194. General condition of property and of agriculture in the neighborhood.
- 195. Division of the land.
- 196. Transfer of title.
- 197. Intervention of the law in the distribution, the disposition, and the transfer of land.
- 198. Peculiarities incident to the tenure of the property or its cultivation.
- 199. Agricultural history of the neighborhood.
- 200. Condition of the laborers on a large farm.

- 201. Condition of the laborers on a medium farm.
- 202. Condition of the laborers on a small farm.
- 203. Condition of the laborers on a farm worked on shares
- 204. Condition of the agricultural laborer.
- 205. Union of mechanical and agricultural labor.

### III. *Emigration and immigration.*

- 206. Emigration from the country to the city and abroad.
- 207. Immigration to cities and factories.

#### B.—QUESTIONS RELATING TO THE WORKSHOP.

##### I. *Large factories.*

- 208. Miscellaneous about the factory.
- 209. Hands.

##### II. *Small workshops.*

- 210. Miscellaneous about the workshop.
- 211. Hands.
- 212. Organization.
- 213. Dead seasons, stoppages.
- 214. Agricultural and domestic labor.

#### C.—DOMESTIC QUESTIONS.

##### I. *Miscellaneous about workmen's families.*

- 215. Description of the family.
- 216. Its means of support.
- 217. Its manner of living.

##### II. *Expense<sup>s</sup> of the family.*

- 218. Receipts in money.
- 219. Receipts in kind.
- 220. Expenses in money.
- 221. Savings and liabilities.
- 222. Condition of the family.

We continue this article with extracts from an able and interesting speech of Mr. Léon Say upon Social Economy, delivered at a dinner of the presidents of the many mutual aid societies in Paris.

If I am glad to find myself among you to-day, I must not forget what has procured me this honor. I am here, as you have said, sir, in my quality as President of the Committee on Organization and of the Jury of the Exhibition of Social Economy. I am proud to have had a share in the great work of the Exposition of 1889, and I am grateful to the Head of the State, and to the President of the Council, Mr. Tirard, for having done me this honor.

We have all visited the galleries of the Esplanade des Invalides, and I can say, without deceiving myself, that we, who for many years have perseveringly studied the questions of social economy, have learned there many things we did not know, or knew imperfectly. We can now understand much better than we did before, the importance of the questions which press upon the attention of the nation. We know

better the methods to be employed, I will not say to solve the social question, for this will last as long as the world, but to clear up a number of difficult problems, the solution of which ought to bring us near to a state, not of perfect happiness—humanity will never know this—but which will enable us to ameliorate from day to day the condition of the poor.

In passing through the galleries of the Exhibition of Social Economy, in seeking to digest as well as possible the many ideas born of a close examination of the different objects exhibited, I understand better than ever the rôle which the nineteenth century will play in the history of the human race, and I have found myself better able to characterize it as it probably will be characterized by future generations.

The nineteenth century will have been the century of great industries, the century in which man will have learned to avail himself more and more of the forces of nature, to make use of them, and to create instruments destined to augment the mass of social riches.

We have learned in this century, thanks to the men of genius who have made it famous, that we can imprison the forces of nature, shut them up in machines and in tools, and give to these machines and tools movement and, so to speak, life. These forces, whose nature we do not know, we know in their effects. It is weight latent in the wind, in the water-fall; it is the expansion of gas and steam; it is heat; it is electricity. We have learned that these natural forces can act on instruments, and we have discovered the possibility of forcing these instruments to work to their own exhaustion, even to their own destruction, that they may serve us more completely. Connected with this, philosophers have asked themselves if among these agents should be counted a force, equally a force of nature, which is also incorporated in organs. I mean man's own force, his vital principle, his intelligence: in a word, his soul. The pessimists are alarmed at the thought that this force, imprisoned like the others in organs, not of steel, but of flesh and muscle, may be exhausted to its own destruction in order to give to the human race greater riches; to create more occupations. When we see that the progress of industry consists in destroying the machine, we ask what will become of the human machine, what we will do with it if we do not destroy it, too, in the fly-wheel of modern labor. Do we not hear great engineers say every day that we do not use our machines enough? In the railroad congresses held during the last few years in Europe, have we not heard the Americans tell us that we do not exact service enough from our locomotives, that we should force them to run hundreds and thousands of miles further, make them run without intermission, change only the engineer and the fireman at each stopping place, as if it were a horse going on a gallop round the world, mounted every league by fresh jockeys? Machines, they tell us, must be forced to yield their maximum of service; use them up, because by using them up quickly and letting nothing escape of the value they contain, we can replace them by perfected machines with all the latest improvements.

Is the human machine like this? And the noble force of which I spoke a moment ago, the intelligence, the soul of man, is it a natural force like the others? Should we not tremble to see this century engage heart and soul in creating industries by the destruction of all which serves to engender them?

We must establish before the eyes of the whole world, the practical man as well as the philosopher, the difference between man and machines, so clearly that none can deny it. The natural forces employed in our machines, what purpose do they serve unless to drive tools? And these tools, what are they except means for the creation of new industries and wealth? But the force which is in man, and the tools which this force sets in motion, are not means. Man is the object. His intelligence, his soul, act on himself, and his intellectual force must develop in itself and by itself. His object is to grow, to reach the height of his power; that is to say, to realize in himself the highest idea of dignity, of morality, and of knowledge.

We have been able to observe practically the difference which thinkers had pointed out, by means of the different institutions of which we have seen models in our galleries of the Esplanade des Invalides. These institutions may be divided into three grand classes. The largest, which I shall call the "Central Class," is that of provident institutions, with their different branches, in which the mutual principle is the most conspicuous. This forethought is the human soul itself; it is individual initiative; it is man thinking of his family and of his own future, seeking to issue from the embarrassments amid which he was born, and to issue from them worthily by a moral effort.

This is the point of departure of all the progress to be made. In the first rank of our social studies we must place that which pays homage to forethought, to economy, to the moral effort which produces dignity, and which with this dignity generally brings the commencement of prosperity.

Around these provident institutions, and supporting them, or making use of them, you see on one side employers' institutions, and on the other the institutions of the great, the too great employer—the state.

Employers' institutions were conceived a long time ago in a very different spirit from that of to-day. Formerly help was extended to the workman from without; it was a kind of charity. It was the same with the state institutions. The state took the money of the tax-payers to employ it in giving help to the poor. This was the "Assistance Publique," a necessary assistance which cannot be too highly praised, or organized with too much care. To-day the state tries another method. It seeks not only to help the individual from without by assistance: it seeks to put him in a position to help himself.

What have we seen in the exhibition? We have noticed a happy transformation, singular at first sight, but very real and very salutary. The employers' institutions have developed and produced their best effects when they have aroused the initiative of the workman. They have best succeeded precisely where, so to speak, they kept themselves most out of sight, the employers allowing their employés simply to use their strong organization, and so enabling them to improve the institutions themselves. We have examined a number of examples, and if this fine exhibition is to be preserved, as we hope, and as we have requested, the public, which knows little of them yet, can study them closely, and understand how employers' institutions do not suffocate individual initiative, but, on the contrary, develop it more and more. Those institutions, which unfortunately still run on in the old ruts, are entitled to our consideration. They were philanthropic works, which we should admire in admiring the devotion and charity of those who established them. But we may be sure that they will do much less good than the others, and a good much less durable.

There are many proofs of what I now advance in the Exhibition of Social Economy. Mr. Charles Robert, who is seated by my side, understands these questions thoroughly; he can give you the history of some of these employers' institutions. Our absent colleague, Mr. Cheysson, can do so also, and I am sure that he will; and you will see, when your attention has been called to the subject, what I have seen myself, the considerable progress obtained by the new methods.

I hope that the history of employers' institutions will be illustrated in the Museum of Social Economy, whenever we can bring together the documents which the exhibitors will leave us. The President of the Council is trying to create this Museum. He has told me that he shares our views, and is waiting to carry the project out only until he can be sure that he can place at our disposal sufficient space in the Exposition buildings which are to be preserved.

We see the state also sometimes takes the initiative, which in some countries I find to be deplorable. We have seen in these late years the state try to play the rôle of the benevolent master of old times, an honorable rôle in the eyes of those

who wish the state to play it, but which, in curing individual ills, does not permit the ills of humanity to be cured.

There are states which desire to become the Providence of the poor. A great empire adjoining us has developed this idea, and has realized it by state socialism. For my part, I do not envy their state socialism, and I earnestly hope that we shall not be seduced by the example. It would be fatal to our country. I know, however, from having studied the question in detail with my colleagues, that there are excellent things in the efforts made in Germany. We ought to profit by the methods they have devised for ascertaining facts, and by the important researches they have made, thanks to their well-organized and active statistical bureau.

But once more, leaving aside the great economical and statistical works to which I have alluded, I should not consider it a happy result to transform men into soldiers, to enlist them, in order to force them to apply themselves to all the needs of industry. This pantheism of the State is not what I dream of for my country.

We have also noted the efforts made in other countries which have sought to make reforms analogous to the German reforms, without leaving all to the state. Thus in Italy, efforts have been made to employ the influence of the state in arousing individual initiative. If we must imitate the foreigner, we would do better to turn our eyes to this side.

We have in our own country a state institution which has aided and will continue to aid provident institutions to make great advances. It is the National Bank of Superannuation. The directors of this bank have accomplished a work which none of us could have undertaken with success, which all your societies together, numerous and devoted as they are, could never have realized. I speak of the remarkable tables of mortality which have lately been published.

Here is an example of the service which the state can render, doing what individuals or associations cannot attempt, and so giving them an instrument of progress.

I do not say that the rôle of state ought to be confined to these narrow limits. I know well that the attributes of the state have a tendency to increase. It is in fact impossible to trace an immovable frontier between the attributes of the state and those of private initiative, because, according to the age, according to different modes of government, we shall be forced to advance or to withdraw this imaginary frontier. France is a democracy, a republican democracy, and history tells us that in great democracies the attributes of the state can, and ought to, extend far beyond those suitable to a country where the democracy does not rule. But whenever we ask a service from the state, we should be sure that private individuals can not render this service to themselves.

\*            \*            \*            \*            \*            \*            \*

Mutual aid societies are especially fraternal societies; this is their most attractive side; none of us would wish to take this away. But these societies have another character: they are business societies, and become more and more so every day. We do not give ourselves alone when we become members of these societies: we give our money too. Why do we give this money? We give it as we would give it to a savings-bank, in provision for sickness.

Looked at in this point of view, a mutual aid society becomes an insurance company against the losses caused by sickness. This insurance company, which, as I have said, is one with the mutual aid society, is called upon to handle considerable sums. Difficulties have sometimes arisen between the managers and the members who expected that the capital of the society would be more productive; dishonesty, too, may lead to dissensions, and even to dissolution.

If mutual aid societies were only insurance companies against sickness, that is to say, an insurance for one year, without any reserves for the future, we could devise more simple methods of almost absolute precision to guide the presidents and agents of these societies; but they insure for much more than one year when they

grant annuities and pensions. You know that in certain countries—once even in this—the union of superannuation banks and mutual aid societies is forbidden. We have now adopted in France a different rule: we unite life insurance and insurance against sickness.

This juxtaposition of these different functions leads to much confusion in the management of certain societies. Has our legislation solved this difficulty? I am not sure, for we have seen strange things, and we have had to ask ourselves how we are to distinguish between rich societies and poor societies. We have met with societies that were rich because they were in a bad condition. This seems to be a paradox, but it is only apparently so. In fact, if a great number of Frenchmen were to die to-day, leaving their property to their children, these children would be enriched, but France would have lost a part of its strength. Well, we have seen mutual aid societies which have grown rich under these circumstances. The number of their members have diminished, and their reserve funds are called upon to meet reduced demands. But a time will come when these societies will disappear for want of members, and all the efforts once made to create them will have been made in vain. This is a very disquieting symptom.

It was our duty to call the attention of the presidents of the mutual aid societies to this matter. We consulted them; we asked them if it would not be prudent to establish the funds of these societies on a basis which has been called "scientific." They answered that this was their wish, but they added that you cannot treat a mutual aid society as a simple insurance company, for an insurance company should have its funds so invested that at any moment it can turn over its business to another company, which must meet all the engagements of its predecessor. We were told that mutual aid societies ought to trust, to some extent, to the sentiment of fraternity which unites their members. I do not deny that there is a great truth, a consoling truth, in this manner of looking at the question. I do not say that mutual aid societies should not count on the aid of those who are, or will be later, members of it; but still I remain convinced of the necessity of greater precision in establishing the reserve fund of mutual aid societies.

\* \* \* \* \*

Mutual aid societies are societies which do business: they are also brotherly associations, and as such should be allowed to develop very freely. But I repeat, they do business, and when a society does business, it must be subject to the laws governing business societies. It is the duty of the law to intervene. This is for the general interest.

Before ending, I want to speak to you of another question pending before the Parliament—mill accidents, and insurance against them. I have studied all that was exhibited on this subject in our Gallery of Social Economy. I have admired the excellent tables exhibited by Mr. F. E. Gros, of the Society of Mulhouse, and I have noted all that has been done to organize insurance against accident in different countries. We were able to examine the excellent organization of insurance against mill accidents in Italy, and to consult documents of the highest interest. I hope that you will be able to study them at your leisure in our museum.

We did not have at the exhibition the laws made in Germany on this subject, but we have secured them since for purposes of comparison. Considerable difficulties exist in legislating on insurance against accidents, and those persons who want questions settled without difficulty, would refer the whole question to the State. But I do not like such simple solutions, for I believe that this simplicity does not exist in the nature of the subject, and we ought to see if we cannot find among ourselves solutions which correspond better with the spirit of initiative of the French nation. There are solutions, I do not doubt, much nearer what I should call "social truth," which we are always aiming at without ever touching, and these solutions are infinitely better than those which have been proposed thus far.

\* \* \* \* \*

What we aim at is to improve the relations between man and man, and to make them conform better to the laws of justice and morality.

\* \* \* \* \*

We have learned from the Exhibition of Social Economy how difficult is the solution of social problems. I trust that my compatriots will dwell upon this truth. I know young men who are all ready to settle these problems with a stroke of the pen; their hair will be white before they arrive at their practical solution. Finally, what is the duty of our generation? To strengthen in France the government of the democracy by itself. It is a difficult problem, but not beyond our strength. The Republic for twenty years past has learned what are storms and hurricanes; she has shown that she knows how to defend herself. The dangers which she has run, far from weakening, have strengthened her.

#### PRIMARY SCHOOLS WITH MANUAL LABOR.

We propose to add a few lines upon the primary schools of Paris, intended more particularly for the children of workmen, and giving gratuitous primary instruction in the simplest mechanical arts. This is a very important element of social economy.

During the time of the Empire, France was gradually losing her pre-eminence in the tasteful and artistic work which produced the articles generally known as "articles de Paris." Germany, and especially Vienna, was taking this valuable trade from her. The Government of the Republic felt that something must be done. They thought it was not to be tolerated that a people pre-eminent for its taste, and for lightness and delicacy of touch, should be gradually falling behind other nations in workmanship requiring eminently those qualities, and especially when these other nations were Germans. The Government naturally came to the conclusion that this superiority of their neighbors across the Rhine could arise only from technical education, and they proceeded at once to establish new technical schools and to enlarge and improve the old ones. In 1869, the last year of the Empire, Paris spent but 6,192,000 francs (about \$1,200,000) on education; in 1887 she spent 17,633,000 (about \$3,526,000). This, it will be observed, was in Paris alone.

It is not our intention to touch here upon the superior schools of Paris, or upon those great schools of the arts and sciences which do France so much honor. A very full account of some of them will be found in the report on "Group I, Fine Arts," published in these volumes. We confine ourselves to the primary schools of Paris, and to those in which manual labor is taught. It is impossible to overrate the good, moral, mental, and physical, done by these schools. We are sure that our primary schools might take many a valuable hint from them. We are indebted to an admirable consular report by Mr. J. Schoenhof, lately United States consul at Tunstall, for most of the information contained in the following pages. We have quoted liberally from his report to the State Department.

Paris has now about 280 primary schools for boys and 275 primary schools for girls. Some 125,000 children receive free instruction

there; books, stationery, etc., are also furnished gratis. The school age is six to twelve years. Altogether over 200,000 children are educated in Paris in the public schools. The annual expense for primary schools is 13,500,000 francs (about \$2,700,000).

The public school system commences with the kindergarten schools, of which about 126 are now in existence, with 30,000 children, ranging in age from two to six years. The expense of their maintenance is about 67 francs (about \$13) for each, or a total of 2,051,000 francs (about \$410,200).

And first, let us begin at the beginning, and say a word on the

#### KINDERGARTEN SCHOOLS.

They are certainly more than a benefit to the working class—they are a blessing to them. The parents are freed from care and anxiety during the working hours of the day. Their little ones, under the charge of trained kindergarten teachers, are well looked after, and have instilled into them, in early life, notions of work, order, and neatness, besides much useful knowledge—benefits of no small advantage for the time being, but also destined to bear good fruit beyond the period in which they are received. The attendance averages from 150 to 200 a school, and in some of the largest as many as 400 children. The hours are from 8 o'clock in the morning to 6 o'clock in the evening in winter, and from 7 o'clock in the morning to 7 o'clock in the evening in summer. The children get soup at 11 o'clock, and bring with them whatever else they may want to eat during the day.

The first article of the law of the 28th of March, 1882, makes manual labor instruction obligatory in the public schools. The decree providing for kindergarten instruction prescribes that the manual exercises shall consist of plaiting, twining, folding, and knitting. Sewing and all other work which might fatigue the children is prohibited.

Everything is done to keep the children interested in what they do. All instruction, ciphering, writing, etc., is carried on so as to leave them always under the impression that they are playing and not doing anything of a serious nature. It would be useless to go into details on this subject; we only refer to it as part of the public school system of France, where everything now tends to bring the minds of the growing generation as much as possible into relationship with the active, living world; to train them in handicraft work, and to emancipate them as much as possible from the dullness of the school routine of the good old times. It must be seen from this that the tendency is to conduct education, from the first beginnings up to the highest training, so as to educate the mind through the senses, and to lead the pupil well prepared into the great open field of industrial life.

We come next to

## BOYS' PRIMARY SCHOOLS WITH MANUAL LABOR.

Of the 285 boys' primary schools in Paris, there are now 90 which have more or less spacious and well-fitted workshops for working in iron and wood. The system of instruction is much the same in all, operating on the same basis, and in nearly the same shapes and forms, though in some it is more highly developed and better organized than in others.

The younger classes begin by making paper objects, card-board boxes, and the like, covered with colored paper, and work them up into fancy paper articles.

Some schools have only recently begun with these classes, and have not yet a full equipment; others are older, and show generally very good results. One of the less advanced schools was only doing wood work, and in the lower class paper work. Great dissatisfaction existed among the boys, because they could not get more time to spend in the workshops. They were employed in planing, sawing, and turning. The school was promised additional room for iron-work and for the opening of a modeling class.

The workmen instructors superintending the manual training classes are paid at the rate of  $1\frac{1}{2}$  francs per hour.

(1) *The wood-work shop* is the largest. For primary school purposes, wood-working is perhaps most conducive to the elementary training of the hand.

There are twelve carpenters' benches, in two rows in the middle of the room, each bench for two boys, working at the same time; and along the wall, near the windows, four turning lathes are placed. Each of these lathes is worked by three boys. One is employed a quarter of an hour at turning, while the other two boys look on; then the second boy takes up the work, and after him the third in rotation.

This is done because the space and means are not sufficient to provide each boy with a lathe. It suffices to give them all practice, and while their hands are at rest their eyes are employed.

The tools employed for the work of the carpenters' benches are the different kinds of planes, saws, chisels, etc. Each boy has a shelf assigned him to put his work on when taken from the bench.

If they have finished ten satisfactory pieces, they have the privilege of making a piece of work for themselves, and taking it home to their families. They are not a little elated when they turn out a piece of work which they can take home, to show their skill to their parents.

They make boxes, little chairs, and similar things at the carpenters' benches. They commence with the simplest pieces, and are taught to make the different joints, dovetailing, etc. Some turn out very creditable work.

At the lathe they commence on a plain stick of a certain height, which is turned into as many as seventy-six different ornamental pieces, made either to stand separately, or to fit into others, and by combining produce a finished object.

(2) *The workshop for iron* contains twelve vises, four at each side wall, and four at one end of the room, leaving the middle part of the room open for the instructors to go round and examine the work while the boys are busy filing. In addition, the fully equipped schools are provided with a boring machine, anvil, and forge.

In the use of iron they also start from a plain piece, and work this into various simple geometrical shapes and other forms, by the application of the file.

For forging and hammering lead is used, as it demands less muscular strength than iron.

The following is the programme arranged by the school authorities for workshop practice in primary schools :

MANUAL EXERCISES INTENDED TO DEVELOP THE CHILDREN'S SKILL OF HAND.

*Elementary class.*

(Seven and eight years old. One hour per day.)

Elementary exercises in free-hand drawing, symmetrical arrangement of forms, cutting out pieces of colored paper and applying them upon geometrical forms, exercises in coloring, cutting out geometrical forms in card-board, representations of geometrical solids. All these exercises to be done first on paper ruled in squares, and subsequently on plain paper.

Small basket work. Arrangement of strips of colored paper : (1) In interwoven forms. (2) In plaited patterns.

Modeling : Reproductions of geometric solids and simple objects.

*Intermediate class.*

(Nine and ten years old. One hour per day.)

Cutting out card-board patterns, construction of regular geometric solids, construction by the pupils of card-board models, covered with colored drawings or colored paper.

Small basket work ; combination of plaits ; basket making. Objects made of wire ; trellis or netting ; wire chain making.

Combination of wood and iron ; cages.

Modeling simple architectural ornaments.

Object lessons : Principal characteristics of wood and the common metals.

*Upper class.*

(Eleven and twelve years old. Two hours per day.)

Drawing and modeling ; continuation of the exercises in the preceding class ; repetition of the ornaments, previously executed, in

the form of sketches, with dimensions attached to them ; drawing the requisite sections for this purpose ; reproducing the sections as measured sketches ; study of the various tools used in working wood, hammer, mallet, chisel, gimlet, center-bit, brace, screw-driver, compasses, square, marking-gauge, saws of different kinds, jack-plane, trying-plane, smoothing-plane, files and rasps, level.

Theoretical and practical lessons in the above.

Planing and sawing wood ; construction of simple joints.

Boxes nailed together, or jointed without tacks.

Wood lathe ; tools used in turning ; turning simple geometrical forms.

Study of the tools used in working iron, hammer, chisel, cutting tool, cold-chisel, squares, compass, files, etc.

Theoretical and practical lessons concerning them.

Exercises in filing, smoothing, and finishing rough forgings or castings (cubes, polygonal nuts).

The practical work in the shops in primary schools is to be followed by gymnastic exercises, in accordance with a special programme.

It is expected that this workshop practice will soon be extended to cover all the primary schools of Paris handiwork, like that described above, in the boys' schools, and work serviceable for girls' occupations in after life, in the girls' schools.

The children in these boys' schools get all their meals during the day in the school, if their parents so choose.

This provision of wholesome, warm meals for the children in the middle of the day cannot be too highly commended.

All schools are provided with kitchens and refectories, *i. e.*, dining rooms.

In the boys' schools the children get their warm dinner for 10 centimes, *i. e.*, 2 cents a dish. Those who cannot pay get it gratis. As a rule, they bring their bread from home. As it might wound the sensibilities of the poorer children to ask for charity, or to be known as recipients of charity, every child has to get from the director of the school a check for each dish it may wish to have. Those who pay and those who do not pay, receive the same checks, and consequently, to all appearance, all are on the same footing.

A meal costs the school about 3 cents, or 15 centimes, where a very full meal is given.

The same help is extended in the matter of clothing, to children whose parents are not able to buy clothing for them. The children get an order from the director to a contractor, who furnishes the clothes they need. The city pays at certain contract prices.

Thus opportunity is given and care taken that the very poorest even may send their children to school. And the school becomes not only an instructor to lead to a happier state in after-life, but a benefactor, a distributor of immediate comforts to the young, which

they perhaps would not have at home, and would certainly be utterly deprived of if thrust into the streets to grow up in ignorance and vice. The poorest child is thus made to love the school, which, besides giving it instruction, also supplies it with that which is certainly nearest to its heart—food and raiment and shelter against cold and inclement weather.

The work of these primary schools is largely devoted to making toys for the children in the kindergartens. Thus the boys have an object for their labor, the younger children are amused, and the expense of toys is saved to the school fund.

One of the most pleasing features in this institution of manual labor is the pleasure it gives the boys. They go at their work with a will, and look upon it more as a reward than a task. The teachers speak highly of the system in its beneficial effects upon the theoretical studies. They regret that it is not practised in all the primary schools, but expect that in a few years it will become universal.

Thirdly, we come to primary schools for girls.

The girls' primary schools give instruction in sewing and in the higher classes in housekeeping.

Needle-work practice in the primary schools is aided by oral instruction given by the teacher, with illustrations on the blackboard. The pupils have to bring their own materials. For this course one hour and a quarter per week is given.

The first course consists of marking and making all the different stitches employed in canvas embroidery; the second in sewing running-stitch, back-stitch, and overcast-stitch; and the third in applying these to hems and seams, making plain and felled seams.

The middle classes have one hour and three-quarters per week:

First, embroidery, and marking Roman and other plain embroidery letters on coarse linen and open fabrics.

Second, sewing different stitches and button-hole stitch, quilting, and button-hole making, applying the same to actual work executed. Drawing, mending, and patching, etc.

There is a third course where the same classification of work is kept up, conducted in a finer and more elaborate manner and on finer materials.

We are tempted by the importance of the subject to give a few lines to the "Superior Primary Schools for Girls."

Girls are not admitted into these schools until twelve years of age. The Ministry of Public Instruction has laid down the following programme for them:

- (1) Housekeeping.
- (2) Gardening.
- (3) Farm work and dairy farming.
- (4) Sewing.
- (5) Designing, painting, and art education.

(1) *Housekeeping*.—The general prospectus laid down for their guidance prescribes instruction in the following subjects: Managing of an ordinary dwelling house, heating and lighting, care of furniture, care of household goods and linen, washing and ironing, baking, and ovens and ranges; pastry making; managing house-keeping materials, such as coal and wood; purity of water, purity of wine, vinegar, cider, beer, coffee, oil, grease, sugar, preservation and cooking of meat; qualities and choice of meats. Elementary principles of the kitchen; boiling, stewing, and roasting of different dishes, meats and vegetables; preserving of fruits, packing and transportation of fruits. Manufacture of candies, liquors, fruit brandies, and sirups; domestic book-keeping.

The pupils of these schools are required to spend some time in the kitchen attached to the school, going through the routine work of a kitchen.

(2) *Gardening*.—General notions of agriculture: Soil, manure, improvements, and different kinds of cultivation. Garden: General disposition of a garden, garden walks and divisions, hedges, wall fruits, tools employed in gardening, fruit gardening. General principles of arboriculture. Fruit-tree culture, with application to varieties indigenous to and most planted in the country; diseases of fruit-trees and destruction of insects. Kitchen gardening: Varieties, culture and harvesting of vegetables. Forced culture: Hot-beds, greenhouses, etc. Instruction in floral culture: Partly for ornament and partly for the manufacture of perfumery.

(3) *Farm-work*.—Dairy farming; making butter and cheese; general notions of keeping sheep and cattle; raising and feeding poultry, pigeons, rabbits, bees, and silk-worms.

(4) *Sewing and dressmaking*.—Different kinds of sewing; different kinds of seams and stitches; darning, knitting, taking up of meshes, and patching; sewing and making up household linen, men's shirts, drawers, and undershirts, and children's and women's underwear; cutting and making of women's dresses; measuring and pattern cutting; making of princess robes, robes, basques, and children's dresses.

It is provided that the programme may be changed according to the needs of the localities in which the schools are situated, so that in rural districts greater attention may be given to parts 2 and 3; in cities and towns to 4 and 5.

The whole subject of school education in France is interesting and the exhibits were remarkable. They belong, however, rather to Group II than to the group of Social Economy.

WICKHAM HOFFMAN.

# HISTORY OF LABOR.

## SECTION I.

### ANTHROPOLOGICAL AND ETHNOGRAPHICAL SCIENCES.

One of the most interesting, if not the most interesting, exhibit in this marvelous Exposition was the Retrospective History of Labor. Since the fall of the Empire, the Government of the Republic has taken under its special charge manual labor and manual laborers. The science and intelligence of France are too striking and conspicuous to be ignored, but it is the workingman who has received most from the fostering hand of the Government.

In the Exhibitions of 1867 and of 1878 the history of labor was made a feature, but not a conspicuous one. At both these dates this department was exclusively French, or nearly so, beginning with the early history of Gaul, and ending with the Revolution of 1789. In 1878 private individuals loaned to the Government valuable and interesting collections, but they attached to the loan the condition that the articles should be kept together, without regard to the section to which they properly belonged. It was reserved for Mr. G. Berger, the able and indefatigable Director-General of the arrangement and management (*exploitation*) of the Exposition, to group the articles belonging to the state and those loaned by museums and by individuals, ethnographically and chronologically.

Mr. Berger divided the History of Labor into five sections:

- (1) Anthropological and Ethnographical Sciences.
- (2) Liberal Arts.
- (3) Arts and Trades.
- (4) Transportation.
- (5) Military Arts.

It was his intention that each of these sections should be thoroughly subdivided by the committee in charge of it. In most instances this subdivision was completely and accurately made, but in others it was by no means complete. That distinguished statesman and orator, Mr. Jules Simon, was named president of this department, supported by such specialists as Admiral de la Gravière, Member of the Academy of Sciences; Quatrefages de Breau, Professor of the Museum of Natural History; Bouché, Graduate of the

Polytechnic School; and Faucon, Sublibrarian of the Library and Historical Collections of the City of Paris. Whatever such men did must necessarily have been well done.

In his letter calling the attention of the public and of amateurs to this important department of the Exposition, Mr. Simon says:

This Exposition has especially a historical and technical character, but it by no means excludes objects of art; for at several epochs, tools, and especially those used in the liberal arts, were veritable gems, from their elegance of form, the richness of the materials, or the charm of the details. We find chefs d'œuvre on a map, on the handle of a chisel, or on the barrel of a gun. Our ancestors had not the same passion for speed and cheapness as we have. In this, trade lost, but the arts gained.

Anthropology, or the history of the human body, began this exhibit. Skeletons, skulls, and the casts of them, were first in order. The subject is not attractive except to the medical man, and we will confine ourselves therefore to observing that several of the skulls of prehistoric man exhibited marks of having been trepanned, and, of course, with a flint knife. Early surgery this! And to come to a later date, our attention was called to some of our own noble redmen—casts, happily—Little Medicine, Big Nose, White Bear, and other Cheyenne and Arapahoe warriors, who should have been hung for murder, but were only imprisoned. The Smithsonian furnished these interesting objects, and would no doubt furnish duplicates to our Exposition of 1892, should anybody want them. Italy, too, furnished a morbid collection of the skulls of criminals.

To leave this part of the first section, and come to Ethnography.

And here we observe some confusion in the terms archæology and ethnography, as used in France and in Denmark. The Danes use the first of these terms as embracing both anthropology and ethnography. Their museums, their old books, their researches and publications of all kinds, are “archæological.” They appear to have been the first, too, to divide antiquity into three ages, a division now generally recognized, except in France, where the love of subdivision has led them to sacrifice simplicity. These ages are, the Age of Stone, the Age of Bronze, and the Age of Iron. The French have their “*période paléolithique*,” and their “*période néolithique*,” or a first and second Age of Stone. Not content with this, they divide their “*période paléolithique*” into two parts. In the first, the climate of Europe was warm and rainy. The elephant and rhinoceros, and other huge quadrupeds of Asia and Africa of our day, were found in abundance. Vegetation was rank enough to furnish them with food. This the French call the Age of the Mammoth. In the second period the climate changed. It became cold and dry. The elephant and the rhinoceros disappeared, and the deer and the chamois, and the fox and the hare came down from the north. The glaciers, which in the warm periods had often

descended into the valleys and plains, now remained fixed on the mountain sides. By convulsions of nature Europe was separated from Africa, and Great Britain from the continent. The work in stone improved. The stone was detached; and both faces were chiseled. Men lived in caves, and under overhanging rocks, and on the banks of streams rich in fish. Grain was unknown. This was the Age of the Reindeer. In the "période néolithique" the climate became more like that of to-day; though this winter of 1889-1890 seems rather to belong to the Age of the Mammoth. Man built dwellings upon the water. His flint was better finished, polished and carved, but still he used flint; and we prefer, therefore, the simplicity of the Danish nomenclature, the Age of Flint.

The Royal Archæological Museum at Copenhagen is, without question, the finest in the world. The Danes have been fortunate in the able and learned men who have devoted themselves to the study of the past, while the people generally stimulate the efforts of their experts by the intelligent zeal they take in the subject. The writer of this article was fortunate enough to know Mr. J. A. Worsaae, the late learned and intelligent Director-General of the Archæological Museums of Denmark. Mr. Worsaae's history is a romantic one. A fearful storm raged on the coast of Jutland, one of the most dangerous in the world—the Hatteras of Europe. Many vessels were wrecked; among others one believed to be a Portuguese coming from Brazil. The fishermen on the beach observed a plank tossed by the waves, drifting ashore. They drew it to land, and found a young child lashed to it. This child in time became a cabinet minister, and the learned Director-General of the Archæological Museums of Denmark. He was named from the little Jutland vilage near which he was rescued.

The Danes contributed liberally from their great archæological wealth to this section. More specimens were offered than could be received, and the choicest only were selected. These were sent from the museums of Copenhagen, Viborg, Randers, Odense, and Aarhus. They were arranged chronologically, beginning, of course, with the Age of Stone.

Flint hatchets, arrow-heads, horn hatchets, scraping knives, awls, etc., were in the first exhibit.

Then followed hammers, the hard points of antlers, knives and stones to polish flint, and as the workman became more skillful, poniards, lance-heads, etc.

With these were exhibited ornaments of amber, which was at that period found in abundance on the coast of Jutland and in swamps near the coast. It is now found rather on the coasts of the German Baltic provinces. Amber is supposed to be the gum of pine trees, buried centuries ago by the ocean. It is washed up from time to time upon the shores, and is also found by digging in the swamps.

It is in Denmark that we find the best specimens of work in the Age of Stone. This is partly due to the quality of the flint, but principally to the fact that eastern civilization penetrated into southern Europe long before it reached the north. This gave the Scandinavians a longer period to improve their work in stone. The Age of Stone may be said to have lasted in northern Europe until about one thousand five hundred years before our Saviour.

The Age of Bronze followed the Age of Stone. Bronze being composed of copper and tin—as brass is of copper and zinc—mines of these simple metals must have been worked very early. The museums of Copenhagen are rich in ancient bronze ornaments, but, singular to say, these ornaments are supposed to have come first from other countries, brought by eastern and southern merchants, especially by the Phœnicians, and exchanged for amber. Indeed, the bronze bracelets, necklaces, etc., of the museums, reproduced at the present day in gold and silver in Copenhagen, and in Helsingfors in Finland, bear a striking resemblance to the work of the East Indian goldsmiths. The spiral bronze finger-ring, which is supposed to have been used as money, was undoubtedly copied from the golden serpent of India, and the massive gold Indian bracelet is to be seen in all the principal goldsmiths' shops of Copenhagen, copied from bronze models in the museum. These bronze ornaments were composed in those days (and when copied in bronze they are composed now) of nine parts of copper and one of tin. The Age of Bronze may be roughly said to have lasted from one thousand five hundred to one thousand years before Christ.

Following the arrangement in this section, we now come to the Age of Iron. This may be said to have lasted in northern Europe from about one thousand years before Christ until the tenth century of our era. For the reasons already given in reference to the Age of Stone, this period lasted longer in northern than in southern Europe. Under this head were exhibited iron hammers, chisels, knives, rakes, etc., while swords, lances, bucklers, and bracelets, all highly ornamented, mark a later period. Pottery appeared at this period in the north and had a distinct Roman type, while the gold ornaments are Roman and Eastern. This was the period, the sixth to the eighth century, of the invasion of the Roman Empire by the barbarians. The immense treasures in gold, silver, and jewelry found by them in Rome and other Italian cities gradually made their way to the north and modified the northern taste. As the visitor passed through this section, his eye was arrested by a number of wax figures of natural size, men and women, more or less clothed according to the exigencies of the climate. The first group represented "The Age of the Mammoth." At the foot of a hollow tree, in which they doubtless lived, a man and a woman are chopping flint into tools and arms. This and the others are no fancy group.

The skillful and painstaking scientists who prepared them took unwearied pains to make their work perfect in all its details. They found among the aborigines of Australia men and women living in precisely the same way and engaged in precisely the same work; from them they took the general arrangement. But the bodies were reproduced from skulls and skeletons and bones found in France and Belgium; and the dress from wild tribes of our own day.

The second group was called "The Age of the Reindeer." A woman and a young man, sheltered by an overhanging rock, are carving reindeer horn, while the father of the family enters, bearing a quarter of venison. The bodies, the dress, the hair, every detail, were carefully reproduced, so as to give an exact idea of the horn carvers.

The third group, "The Age of Polished Stone," represented three men working on a funeral monument. The heads were copied from skulls found in the mounds of the Druids. Every part of the dress and of the tools was carefully reproduced from the originals or from reliable descriptions.

The fourth group, "The Age of Bronze," represented a founder and his apprentice molding in bronze. They stand near a rock and are protected from the wind by a screen of dead-wood. They wear leather aprons only, the apron of the blacksmith of to-day. A prominent object is the bellows, copied from an ancient Indian model, and intended to recall the Eastern origin of works in bronze. The crucible, the pincers, and the molds are copied from originals in the Museum of St. Germain.

The fifth group represented a negro iron-founder of Soudan. It is a curious fact that the French experts were unable to reconstruct the primitive forge of Europe. They could find no models. They were compelled to have recourse to Africa. From the earliest ages iron-forging was known among the North Africans, and the group here represented was taken from the Black Continent. The French experts, with their usual careful study, made this group a perfect representation of the inhabitants of western Soudan.

The sixth group brings us to our own continent. The Mexicans are said to have invented paper. In this group two Aztecs are engaged in its manufacture from the aloe, century plant, or agave, from which the Mexicans make their pulque. The Aztecs were copied from types furnished by the Smithsonian. The workmen were copied from original models in the Museum of Ethnography of Paris.

The committee saw fit to show in this group a picture of the present Reindeer Age as seen in Lapland; to compare it, no doubt, with the ancient. A conical tent like a Sioux lodge, with a hole in the top for the escape of smoke, a crane for smoking meat, a woman and a baby, the father returning from fishing, the son driving a reindeer sleigh and carrying a seal, all clothed in reindeer skins—these

made up the group. It was taken from a well-known family of Lapps who come from Archangel every winter, and pitch their tent on the frozen Neva at St. Petersburg. They sell reindeer skins, antlers, and carved horn, and drive the Russian children in their reindeer sleighs at twenty copecks—ten cents—a drive. The writer has often seen them on the ice, though never tempted to mount alongside of the strong-smelling Lapp. The catalogue tells us that the tent was made of canvas. We would not rashly contradict the expert who prepared it, but it was generally understood at St. Petersburg that it was made of reindeer skins, and we cannot understand how canvas could keep out the intense cold of those latitudes, ranging from 0° to -30° Fahrenheit. These Lapps had the reputation of being wonderfully weatherwise, and when they disappeared in the early dawn from the Neva, the Petersburger looked for immediate spring. They had five hundred miles of sleighing to do before they reached their homes, and it was said that they always accomplished their journey before the snow disappeared.

Passing from exhibit to exhibit in this interesting section, we come to Eastern Antiquity, to the Chaldean, Assyrian, and Persian epochs.

Recent researches, and especially those of Mr. de Sarzec, and other French explorers, have led to the general opinion that the Chaldeans preceded the Egyptians in the essential elements of civilization. These researches show that Chaldean manuscripts existed five thousand years before Christ, while other and more recent researches by other explorers show them to have existed three thousand seven hundred and fifty years before Christ. Inscriptions recently discovered, prove that at those periods civilization and the arts were highly developed. Statues, pillars, arms, tools, and instruments of many kinds, scepters, vases of simple taste but excellent workmanship, show the great progress of the Chaldeans at that early date. From the Chaldean we pass to the Assyrian exhibit, showing less simplicity but greater richness and splendor. Furniture and dress were the striking characteristics of this period. Accordingly we find representations of thrones of cedar encrusted with gold and ivory, beds, tables, vases, etc.

After the destruction of the Assyrian monarchy, Persia succeeded to the first place in those products in which the Assyrian excelled. The Persian workman was soon joined by the Greek, and his artistic conceptions gained by the contact. Madame Dieulafoy, a French explorer, has been most happy in her discoveries in the ruins of Susa, the favorite capital of Archimedes. The results of her labors are shown in this section. Enamelled brick seems to have been a salient feature of this epoch in the East. Brilliant architectural effects were produced by it, with rapidity and economy. This art, if not lost, has fallen into disuse.

From Persia we were carried to the far East. Curious specimens of tattooing were exhibited, mostly from Siam. This practice, coming originally from Birmah, was carried to perfection in Siam, and soon became an art. We are accustomed in the West to see tattoos on the bodies of sailors, Malays, etc., all people of the lower classes. In Siam the figures are punctured in groups on the thighs, the chests, and the backs of the upper classes. The subjects are drawn from popular legends and superstitions. They tell of the exploits of Ramah and Vichnou. They are never obscene, which in the East is remarkable. The principal figure is Hanuman, the king of the monkeys, whom certain Siam tribes look upon as their ancestor. Darwin was, therefore, a plagiarist.

The Siam artists, too, tattoo flowers and fruits and garters below the knee; and as fear plays so important a part in pagan worship, they tattoo evil spirits also, to propitiate them, as in the Eastern countries victims were sacrificed to devils. "They offered their sons and their daughters unto devils, and their land was defiled with blood." Proud are those Eastern nobles of their tattoos; they are their heraldic devices, their orders, and their decorations. They have, at all events, one great merit over European decorations of our day: they cannot be lost and they cannot be stolen.

Then followed the history of writing, beginning with picture-writing found on rocks and stones, representing animals, and lines and dots, and other geometrical figures. Then came ideagraphic writing, conveying ideas. This is better known to us as hieroglyphics, for it was almost confined to the priesthood (*hieros*, a priest). We were shown specimens of Chinese, Egyptian, Assyrian, and Hittite hieroglyphics, the last recently discovered in Syria. There were specimens of Mexican hieroglyphics, too. When Cortez landed in Mexico, the natives sent to Montezuma a painted cloth, representing the Spaniards, and their arms and ships. Written language in the earliest days appears to have been very limited. The same word represented several ideas. When spoken it was explained by the gesture accompanying it, like the Chinook of our day in use on the plains. In choice Chinook, the same word means heaven or hell, according as you point up or down.

In Egypt and in Syria, picture and idea writing soon developed into the alphabet (from *Alpha* and *Beta*, the first two letters of the Greek alphabet) somewhere about the time of Moses, one thousand five hundred years before Christ. There can be little doubt that the Hebrews knew it, and that the Ten Commandments were written in letters. In this, as in so many instances, it was the necessities of trade which led to the development of the alphabet, for we first find it in general use among the Phœnician merchants. That eminent French author, Mr. Renan, calls this transformation of picture-writing into the alphabet, "one of the greatest discoveries of human genius."

In its early stages, the alphabet consisted principally of consonants; vowels were scarcely known, and language must have been as guttural as the German of the present day. But the Greeks, with their artistic taste, introduced vowels, and as thus modified it was carried to western Europe. The Greeks too, changed the mode of writing from right to left, to left to right. In most Asiatic nations, it still remains from right to left. The Chinese write in columns.

From the history of writing, the exhibits led us somewhat suddenly to Japan.

The famous Japanese artistic work in bronze, in lacquer, and in ivory, does not date from a very early day. It began in the thirteenth century, but was not fully developed until the sixteenth and seventeenth. In this exhibit were shown many specimens of the armor of the princes and rich Daimans, iron inlaid with gold, silver, or copper, and engraved generally with dragons, but often with butterflies or flowers or fruit. The butterfly appears to have been a favorite insect with the Japanese. We all remember that pretty trick of the Japanese juggler,—keeping two butterflies in motion with his fan alone.

Japan contributed very largely to the Exposition, the Japanese Government entering very heartily into the plans of the French. In the section we are describing, there were exhibited a very large number of boxes and cabinets of lacquer incrustated with gold and ivory, and silver and bronze. But in addition to this, a considerable space in the Exposition was set apart for Japan, and was filled with a rich display of bronzes, and porcelains, silks, etc.

It is rather curious that lacquer work, of which we see such abundant specimens everywhere, should be confined almost exclusively to Japan. The reason is said to be, that the gum drawn from the *Rhus vernicifera*, or lacquer tree, is far superior to that of China. A branch of the tree is punctured by a fly, which lays its eggs in the hole. The gum forms about them and protects them, and generally incloses and retains the mother fly. In due time the eggs are hatched, whereupon the first act of the young parricides is to eat up their mother.

Japanese porcelain is of the very best quality. It dates, in its perfection, from comparatively modern times, about the sixteenth century. Silk, equally interesting and remarkable, dates from a very early period.

The Chinese contribution to the History of Labor did not strike us as either interesting or instructive. Chinese art is clumsy, too much mixture of the Tartar, perhaps. They produced much the same articles as the Japanese, but not in the same perfection. Their porcelain is valuable; and we have seen in our own country immense prices paid for a single rose or green colored plate; but age and rarity, rather than beauty, dictated the price. These plates are at least eight hundred years old, having been manufactured during the Ming dynasty.

## SECTION II.

## LIBERAL ARTS.

We come now to the second of the five grand divisions—the liberal arts.

This section began with the sciences, astronomy being the first.

## ASTRONOMY.

The origin of astronomy is in astrology, which was not the vulgar empiricism it is generally supposed to have been.

The committee in charge of this subdivision had intended to have exhibited models of an ancient Chinese observatory, the oldest known to have existed; of the observatory at Alexandria, with copies of the principal instruments used by Hipparchus and Ptolemy, of the observatory of Tycho Brahe, and of that of Paris under Louis XIV. But as it too often happened, space and money failed, and the Exposition remained without these interesting monuments. It struck us that this exhibit was by no means complete, consisting principally of photographs, fragments, and some original instruments of no particular interest.

## PHYSICS.

Next to astronomy came physics. The interesting history of physics, with its marvelous developments through the genius of the great men of the seventeenth century, Galileo, Descartes, Pascal, and Newton, followed by those of the eighteenth, Réaumur, Franklin, and Volta, was very poorly illustrated. The first voltaic battery, and a magnet of the Abbé Nollet, were the most striking objects.

## CHEMISTRY.

The alchemists were the founders of chemistry. They labored under fearful disadvantages. They experimented with their lives in their hands. Objects of the bitter hatred of the ignorant and superstitious populace of the middle ages, and persecuted by the Church, they did their work in concealment and in danger. Persecuted in one city, they fled to another, to be driven from that in turn in a few weeks or months. The world owes more to these martyrs of science than it has any idea.

Working thus in secret, they could not make their discoveries known. They were transmitted from father to son, and from master to pupil; but they have furnished to modern chemistry materials of great value. We owe to them sulphuric acid, phosphorus, alcohol, antimony, mercury, etc. Many of these men were charlatans, living

upon the passions or the credulity of the rich; but many were philanthropists, laboring for the good of mankind.

In this exhibit there was shown the model of an alchemist's laboratory of the seventeenth century. At this date they could venture to show themselves. The experts who constructed this laboratory have carefully avoided filling it with the bats and owls, and snakes and toads, which old engravings show to have been the popular idea of the contents of a laboratory of that day.

In modern chemistry there was a very satisfactory exhibit, interesting to the chemist, but not particularly so to the layman. Furnaces, vases, glasses, porcelain, thermometers, etc., were among the objects exhibited; all proving that the experimental methods of chemistry are much the same now as in the days of the alchemists, and that the improvement has been in the apparatus alone. This has wonderfully improved, and especially in the last ten years.

#### GEOGRAPHY.

Ancient geography, as might have been expected, made but a poor show. The discoveries of the ancients, very remarkable for their time, were completely lost in the night of the Middle Ages. Some rough Italian and Portuguese maps, mostly of the shores of the Mediterranean, and a few later French maps, were exhibited. The Italians and Portuguese were evidently the principal navigators of those days. The English had not yet come to the front.

#### WRITING AND ILLUMINATION.

We come now to one of the most interesting and complete exhibits in the History of Labor.

This exhibit was prepared with great care and skill. It commenced with early paper, parchment and vellum, including a copy of the Pentateuch written on sheep-skin. Then followed chronologically pamphlets for temporary circulation, and no less carefully prepared; then manuscripts showing the progress of illumination, with the best specimens of the Italian, Flemish, and French schools. Here were to be seen a manuscript of the four evangelists written in 751 A. D., with portraits of our Saviour and of the four evangelists; a roll of the thirteenth century, showing our Saviour's genealogical tree, with pictures of God the Father, Adam and Eve, the Deluge, the Nativity, the Crucifixion, and the Resurrection; curious manuscripts of the sixth, seventh, and eighth centuries; a psalter of Charlemagne, 795 A. D., and a Bible of the Bishop of Orleans, 788 A. D. In the ninth to the fifteenth centuries, the works of St. Augustine, ninth century; commentaries of the Venerable Bede on the Books of Kings, ninth century; and so on through the successive centuries till the revolution of 1789. Prince Poniatowski, descended from the

Kings of Poland, exhibited a diploma of the election of his ancestor, Stanislas Augustus, to the throne of Poland, a work of art, though of comparatively modern times. Then there was no end of letters of the early popes, and of the kings of France from the twelfth century to a late date. The exhibit ended with oriental manuscripts from Persia, Japan, China, and Arabia, and was very charming and interesting to the layman, as well as to the bookworm. How Dominic Sampson would have reveled in it!

#### PRINTING.

The importance of printing cannot be overrated. It is undoubtedly the most powerful instrument of civilization ever discovered. Modern society is built upon it. As many cities dispute the birth of printing as disputed that of Homer. The French give the preference to Gutenberg, and tell us that the Mazarin Bible printed in Gutenberg immediately after the discovery of printing remains to this day the most perfect specimen of the printer's art. It has never been equaled. It contains 1,300 pages in double column, folio. It stands by itself for the clearness of the type, the quality and beauty of the impression, and the elegance of the volumes. It is not known how many copies were printed, but probably a considerable number, for twenty exist at the present day.

In the cases in this section were exhibited, first, some of the tools used in early printing, an old press called "Gutenberg," an ink table, a press for copper-plates, a German almanac of 1618, etc. Then followed some early specimens of printing, letters of indulgence, etc., of the fifteenth century. The cases were so arranged as to show the progress of printing in the different countries of Europe, Italy, Germany, France, and England, for in these four countries were published the best specimens of the printer's art.

#### BINDING.

From printing we naturally pass to binding. Binding is the sister art of printing, for without binding many of the most valuable manuscripts we possess would have been lost. The exhibit enabled us to follow step by step the different changes, not always improvements, in this art.

The Greeks and Romans have furnished us with bindings in the shape of screens, "libriplacatiles" the Romans called them, and Martial has described them in his Book XIV. We find this binding reproduced, strange to say, in Japan in the sixteenth century. One of the specimens exhibited was remarkable, a manuscript protected by board sides covered with a figured stuff ornamented with orchids, and at the corners dragon-flies in metal. From Constantinople came a manuscript bound in wood with an enameled plate

representing St. Andrew, while round the portrait were plates of metal with uncut stones and jewels of value and a Justinus of the fifteenth century, also in wood covered with red velvet, ornamented with carved ivory. This manuscript is protected by bands of metal repoussé, and is framed in by plates of enamel, in which are set precious stones with exquisite carving. These Byzantine bindings were made between the tenth and the fifteenth centuries, at the expense of sovereigns and prelates. They show with what art and with what splendor the artists of that day enriched their work. Carved ivory, filagree, precious stones and cameos abounded, while repoussé and chiseled silver contributed their riches to adorn valuable books.

In the thirteenth and to the sixteenth century binding was almost confined to the monasteries. Books were bound with calf and buck and pig skin, stamped with subjects drawn from the New Testament. This style was called the "monastic." When the book was of little value, the monks economized the skin. They bound only the back, and perhaps the corners. Specimens of these bindings of the fifteenth and sixteenth centuries were exhibited.

It is difficult to discover the names of the distinguished binders of the early Middle Ages. Librarians and printers looked upon binding as an inferior art, and refused to allow the name of the binder to be imprinted upon the binding. But in the sixteenth and even in the fifteenth century, many successful binders left the monasteries and wandered from city to city, pursuing their calling. Some of their names were preserved in this exhibit, but they offer very little interest except to the binder. The Elzevirs perhaps form an exception, from their connection with Molière in 1675. Two volumes were exhibited bound by them, and stamped with their trademark, an owl.

Among the bindings which attracted attention was one of Dante, bound by the binder of Henry IV; the portfolio of Madame de Pompadour; a collection of dances, bound by the binder of Louis XVI, one P. Vente, who appears to have devoted more time to politics than to his art, for his head was cut off in the Terror; also a book of a Masonic lodge, and (very curious) a bottle, the back bound in morocco, and entitled the "Spirit of Franklin." It would be interesting to learn the history of this bottle.

Boyot was a celebrated binder in the time of Louis XIV. He was succeeded by Pasedeloup. Many charming specimens of the work of these masters were exhibited by Mr. Louis Gonse, Mr. Morgand, and other intelligent and painstaking collectors.

Of the Italian school there were several exhibits. A Petrarch, in quarto, bound in 1536; another, in octavo, in 1590, which had belonged to the famous collection of Dr. Canesius, first physician to Pope Urban VII.

That distinguished French expert and collector, Mr. Léon Gruel,

speaks, with something approaching rapture, of a "delicious specimen of binding in mosaic, coming from the hands of the great Pasdeloup, composed of a border and a vase of flowers, and finished with the greatest perfection."

Many other exquisite specimens of printing, illuminating, and binding were exhibited, but we have mentioned enough to give an idea of this interesting section of the History of Labor. A few ancient binders' tools closed the exhibit.

#### AFFICHES.

Some words on the history of bill-posting, "affiches," will not be out of place in this connection. "Affiches" date from a very early period, the authorities having taken this method of communicating laws, notices, etc., to the public. Very few of the ancient "affiches" survive. The inferior quality of the paper, and the exposure to which it was subjected, would account for this. The first "affiche" we know of is now in the Jewish Museum of the Louvre. It was posted in the Temple in the reign of Herod the Great, about the time of the birth of our Saviour, and forbade all Gentiles to enter into the interior of the Temple, under pain of death. The Egyptians, too, who have taught us so much of antiquity, have given us but one ancient "affiche," a papyrus dated 146 B. C. It notifies the disappearance of two slaves, and offers a reward to whoever will give information of their whereabouts. It is not many years since such "affiches" were abundant enough in our own country. Their artistic merit was to be found in the wool-cut at the top, representing a running negro with a stick upon his shoulder, supporting his bundle.

The Greek "affiches" are well known to us. They were painted on white walls, or on tablets prepared for this purpose. Athens was burned after the battle of Salamis, and the official copy of the laws of Solon perished in the flames. The Athenians rewrote them on white planks. These planks were so arranged that by means of a simple mechanism they passed slowly before the eyes of the reader, giving him ample time to read them. Our show-shop windows have often much the same arrangement.

The Romans engraved their laws on tablets of brass. They then exposed them for a long time where the public could read them, and then preserved them in the treasury. Legal notices were painted in red or black on a white wall. They were called "albums." Any one who altered, or in any way interfered with, an "album" was severely punished. Theater bills were an important feature in Roman life. In the development we have lately given in this country to these nuisances, we are but following the Roman example, for their theater bills, too, gave the names and portraits of the principal

actors, with colored pictures representing their great parts and the most striking scenes in which they appeared. Pliny says that Callades was the most distinguished artist of his day in this line. We wonder who is our Callades! Judging from the dead-walls and board fences in Washington, we should say that he lived in that city.

In the Middle Ages the "affiche" disappeared. The crier, with his trumpet or his bell, succeeded. This was so lucrative an office that in the thirteenth century it was sold by the King to the Chamber of Commerce of Paris for a large sum. But, after three centuries, "affiches" re-appeared by an enactment of Francis I in 1539. His proclamation is still extant.

From this day, we are told, "affiches" took possession of the city of Paris, and they hold it still. At the time of the religious quarrels of the sixteenth century they drew great crowds and led to the disturbance of the public peace. Substitute "political" for "religious," and you have a picture of Paris to-day. Laws and proclamations and speeches are often posted on the dead-walls, and at a general election the most beautiful public buildings are desecrated with colored bills giving the candidates' names and their addresses to their "chers concitoyens." It is not quite so bad as our "affiches" on our picturesque mountain and river sides, but it is bad enough.

In 1771 illustrated "affiches" made their first appearance. They were not exactly works of art, and required text to explain their meaning. It was "This is a horse," "This is a cow," style of art.

Then came the revolution, when the people were too interested and too excited to give their attention to this mode of advertising. The Government, however, covered the walls with announcements of the victories or defeats of the French arms.

In 1825, with the invention of lithography, there came a revival of "affiches," and many of the most distinguished of the French artists have, since that date, turned aside from their more enduring and important labors to lend their talents to the improvement of the "affiche." Very curious specimens were published during the Commune.

From these remarks it will be seen that the collection exposed could not have been complete. It was principally intended to show the different methods employed to produce these bills. Lithography, typography, steel, copper, colored paper, and other methods were exhibited chronologically, in order that the progress of the art might be satisfactorily followed.

#### MUSIC.

Next in order came Music. Scarcely any instrument in use is the invention of modern times. Improvements are constantly made, but the invention is lost in the night of time. The primitive flute is substantially the flute of to-day, without its ivory mouthpiece and its

silver stops. To the musician and the musical amateur this exhibit was singularly interesting. It was one of the most complete in the History of Labor, both in the variety of the types exhibited and in its chronological completeness. A rebec of the twelfth century, lutes of the fourteenth, harps, violins, clarionets, of the seventeenth and eighteenth centuries; fifes, flageolets, hautboys, horns, trumpets, post-horns, drums, guitars, etc., and the tools used in their manufacture, were all exhibited; then harpsichords and pianos, with a curious collection of Middle Age and modern music, with letters of Beethoven, Mozart, etc., all accompanied by engravings of musical instruments and of musical fêtes, forming altogether a complete and admirable exhibit of the history of music.

The harpsichord played a very important part in the musical history of our ancestors. We often see old engravings of the ladies of their families seated at that instrument. The harpsichord was by no means the piano, though generally it is looked upon as the ancient form of this instrument. On touching the harpsichord, a hammer does not rise as in the piano, but a vertical piece of wood called the jack, to which is attached a tuft of crow-feathers, is set in motion. The jack does not strike, but runs along the chord, catching it, and making it vibrate. This is the principle of the spinet as well. These instruments were almost as much in demand in old times as pianos are now. The best were made by Ruckers, of Antwerp, in the seventeenth century. A virginal (a sort of harpsichord), by the same maker, was also among the exhibits. It was dated 1598. It was repaired by Chapelle in 1780. It was so good an instrument, therefore, that the owner had it fully repaired after nearly two centuries of service. We doubt if our Webers and Chickering's will stand this test.

These old harpsichords were of graceful form, and were often highly ornamented. They seemed appropriate to the florid style of music which our ancestors drew from their keys. The decorations were very varied. One made in Milan, in 1702, was covered with charming paintings of flowers and fruit. There is a great demand at present for old harpsichords. They are coming into fashion again, with other old furniture. It is thought, too, by amateurs, that the harpsichord gives to the music of the old masters a charm which the modern piano cannot give. This may well be, as the music was often written for it.

The piano was invented in Italy by one Christofori in the eighteenth century. He conceived the idea of making the chords vibrate by means of hammers, put in motion by the keys. At first his invention made little progress; but it was soon found that a greater volume of sound was produced by the piano than by the harpsichord; whence the old name of "piano-forte."

The Conservatory of Paris had a complete set of models on exhibition, showing the different changes in the mechanism of the piano. It was made for it by Pleyel.

The invention of Christoferi, so far as manufactures and commerce are concerned, is the most important invention in the history of music. Who could have foreseen the enormous commercial transactions to which a slight change in the mechanism of the harpsichord has given rise? Two of the early pianos of Christoferi still exist in Italy, one made in 1720, the other in 1726. The oldest piano in our exhibit was made in Paris in 1770, the next in London in 1775. The English adopted the new invention much more readily than the French.

It was long before grand pianos were made in France. Sebastian Erard was the first to manufacture them. The instrument which he made for Marie Antoinette, and which was among the exhibits, is a gem of workmanship and taste.

Erard manufactured harps too, and made great improvements in them. The harp, from the time of King David and before him, until the end of the eighteenth century, remained substantially unaltered. Among the exhibits was a facsimile of an Egyptian harp, now in the Louvre, and believed to be five thousand years old. This, with a harp of the thirteenth century, shows that until the introduction of the chromatic scale by Erard, the harp remained substantially what it always had been.

#### THEATERS.

Although many of the plays of the great Greek and Latin dramatists have come down to us, and the ruins of their theaters have enabled us to understand their construction, we remain in ignorance of their decorations and interior arrangements. A careful study of the theater in the extreme East, Japan, for example, might fill this gap, for changes in the East come slowly. Indeed, in a late number of the *Century Magazine* we find a description by the artist Lafarge, of a visit to a Japanese theater, which confirms us in this impression. But when we come to the sixteenth century, we find descriptions and designs giving a very good idea of the scenery of that day, and showing that it is all very little changed in the present. There seems to have been less scene-shifting in those days. The center of the stage represented, perhaps, a palace door; to the right a vessel at sea; then a bedroom; on the other side of the palace a forest. The actor simply moved from one part of the stage to the other, according to the exigencies of the play. There was a charming simplicity in this arrangement; but notwithstanding this simplicity, the French artists of the last century contrived to produce effects in spectacular pieces, fairy scenes, etc., which have never been surpassed. One of the machinists of the Grand Opera constructed for the Exposition

an exact model of the theatrical machinery of the last century. A windlass below the stage made all the necessary changes. It is not long since the windlass disappeared, to be succeeded by the present complicated system of scene-shifting. The only absolute novelty in scenery and decoration, says a distinguished authority, is electricity.

The expert who prepared this exhibit thought it well to show us models of the oldest theaters of Paris. They are—

(1) L'Académie Royale de Musique, established in 1781, near the Porte St. Martin, and still there.

(2) La Comédie Française, established in 1782, and then occupying the Odéon.

(3) La Comédie Italienne, occupying the building in the rue Favart, recently burned.

(4) Les Variétés Amusantes, now simply Les Variétés, established in 1775, and occupying the building in the Palais Royal now occupied by the Comédie Française.

(5) L'Ambigu Comique, built in 1769, on the Boulevard du Temple.

Among the exhibits in this subsection were a number of play-bills of the last century, theater tickets, engravings of masks, and many portraits of distinguished actors and actresses. The Japanese contributed interesting colored engravings and photographs.

The Greeks and Romans attributed the invention of the theater to Bacchus. Theaters were often used for public assemblies, as we read in the New Testament, and as they are often used in our day.

#### ARCHITECTURE.

Architecture was necessarily very incomplete. Of course buildings could not be transported, and it was found that models cost too much money and would occupy too much space, while photographs were rejected as giving incomplete and frequently erroneous ideas. One valuable model, however, the committee was able to exhibit, and was indebted for it to the Metropolitan Museum of New York. This was a model of the Parthenon, prepared by Mr. Jolly, of Paris, on a large scale, 1 to 20. It gives the most minute details, and shows all the grandeur and harmony of proportion of this masterpiece of Greek architecture. With this exception, the models were confined to a few fragments. These were shown with a view to give a general idea of the best known styles of architecture.

#### PAINTING.

Two thousand years ago artists in Europe painted with brush and colors, and they paint with brush and colors now. No doubt, too, many thousand years ago, in the extreme East, they painted with the same instruments. It is true that the colors in our days are dissolved

in various ways, in wax, in lime-water, in glue, in egg, and in oil, but the result is pretty much the same, and the amateur, and even the artist, is often puzzled to know which process has been employed.

The committee had intended to give much prominence to the question of the material upon which paintings are made, such as walls, wood, canvas, etc. But upon reflection they considered this matter as of little consequence, for paintings are transferred from one substance to another, and without the least injury to the painting. They determined, therefore, to confine themselves to an exhibition of the different kinds of painting, and this they made very thorough.

They began with encaustic painting. This was practised by the ancients, but is lost to us. The colors were mixed in wax, and applied to the wall with heat. It is said to have been invented by Aristides three hundred and forty years before Christ.

#### FRESCO PAINTING.

The word "fresco" is often improperly applied. A painting on a wall is not necessarily a fresco. Fresco is a painting on a wall or other surface which has been previously prepared with a coat of lime and fine sand, and the painting been made while this coat is fresh. If it has had time to dry, the painting is called distemper.

Distemper is made with colors mixed with glue.

Tempera is made with colors dissolved in water, glue, and the white of an egg.

Aquarelles are made with colors dissolved in pure water. If gum is mixed with the water, the aquarelle becomes a gouache.

The exhibit contained specimens of all these paintings, as well as of those in oil, in mosaic, in tapestry, on earthenware, on porcelain, in enamel, and on glass.

#### MONEY.

Who invented money? The authorities differ, and no one knows. Pollux, in the second century, says that it was either Phidon, a king of Argos, or the Lydians. Herodotus says that, to the best of his knowledge and belief, it was the Lydians who first struck coins of gold and silver. Xenophon agrees with the father of history. But, on the other hand, many authors of repute give the credit to Phidon. Plutarch says that it was Theseus, twelve hundred years before Christ, and that Lycurgus proscribed gold and silver in Sparta, and issued iron money alone. Other writers name Janus and Numa. Let us give the Lydians the credit of the invention.

Pliny wrote a whole chapter on inventions, but he says nothing of coins. He gives Phidon, however, the credit for inventing measures, and probably weights, though he says that Gellius prefers to give

the credit of it to Palamedes, one of the Greek heroes before Troy, and grandson of Neptune. Pliny ascribed to him, too, the invention of chess, which Herodotus gives to the Lydians. But Pliny was a devout pagan, and liked to ascribe everything that was noble and clever to the intervention of the gods, direct or indirect.

Money was minted about seven hundred years before Christ. Before its invention the daily transactions of life, as well as the great operations of commerce, were carried on by the exchange of commodities. We read of this in the sacred books, in Homer, and on the Egyptian papyrus; while in uncivilized countries articles taking the place of money have been used to a late day—cowrie shells on the coast of Africa, salt in Abyssinia, and wampum among the North American Indians.

Next came an important step towards money. Ingots of metal were exchanged for land and goods. We are told that Abraham weighed four hundred shekels of silver, and gave them for a piece of land he bought of the children of Heth. They were probably ingots, not yet marked, but “were current money with the merchant.” The ingots took different shapes, as of rings in gold or silver, or of sleeping lions in bronze. Both texts and paintings attest this custom. The rings resemble the Chinese rings, which that people used for money, made of copper, and hung round the neck. The Assyrians used the bronze lion. Specimens of this money are to be seen in the Louvre.

The next ingot was round like a ball. The Siamese, till very lately, used this round money. Siamese money is now flat, but on fête days coins are inclosed in wooden balls, and thrown to the people, in memory, very likely, of the round money of their ancestors.

Finally ingots were made in the form of bars as now, and of brooches (*oboliskoi*), whence the word *obole*, the tenth part of a drachm. But the decisive step was taken when these bars, etc., were marked with their weights by the proper authorities, and so reweighing on every transfer became unnecessary.

As soon as ingots were marked in this way, there was but a step to striking coin. Its Greek name, *nomisma*, is derived from *nomus*, meaning law; in other words, it became a legal tender. From *nomisma* come *nummus* and numismatics.

The word money is derived from *moneta*, meaning something that notifies, as the stamp and the legend on the coin notify the public of its value. It is also claimed that it was so called from the first Roman mint established in the temple of Juno Moneta.

The first coins known to have been struck by the Lydians were of electrum, the “white gold” of Herodotus, composed of three parts of gold and one of silver. The Lydians obtained it from the bed of the Pactolus and from the mines of Tmolus. The early coins of

the Ægeans showed a tortoise on the face, those of the Athenians showed an owl, whence the common designation of those coins as a "tortoise" and an "owl." It is a curious coincidence that the early coins of China were called "precious tortoise," though it must not from this be supposed that the Lydians and the Ægeans copied from the Chinese. Venus had a temple on the Ægean Sea, and the tortoise was sacred to her.

It was long before the coiners gave any attention to the reverse of the coin. It was left hollow, that it might be better secured in its place by a projection on the anvil. But as the arts became perfected, coining shared the general progress. In the time of Cæsar, one Carisius struck silver denarii with both sides in relief; on the face is the head of Juno and the word "Moneta"; on the reverse are shown the different tools of coinage, anvil, pincers, and hammer, the whole surrounded by a crown of laurel.

As long as these tools alone were used in coining, the beauty of the piece depended upon the skill of the workman, for if the piece on the anvil became in the slightest degree displaced, the impression and the legend were displaced also. But in the progress of time came machinery and steam, and now very little skill is required.

The exhibit of coins ("medals" the numismatics call them) prepared by Mr. Fenardent shows chronologically, century by century, admirable specimens of this art, commencing seven centuries before Christ and coming nearly to the present day. The modern coins exposed were exclusively French.

The Romans at first had very little use for gold and silver, for their commercial transactions were not large. They used ingots of rough bronze. As the art improved, these ingots were stamped with animals, generally cattle (*pecus*, whence *pecunia*). Servius Tullius was the first to stamp these ingots. This rough bronze money reminds one of the iron money of the Spartans. It was of course molded, being too massive for the hammer and the chisel.

In the sixteenth century in Germany, machinery was introduced. Henry II of France, who was a great friend of the arts, sent one of his valets-de-chambre into Germany to examine the German machines and bring him models. This man was accompanied by Antoine Chiviser, an expert, who was subsequently appointed master workman and engineer in the new mint of Paris. But vested interests proved too strong, and after a few years the mint was closed, the machines were abandoned, and the hammer resumed its sway. Some of the most skillful artificers went to England, where they were well received by Charles I. A few years later, however, Jean Warin succeeded in getting the Paris mint reopened, and the machinery was once more set in motion.

## MEDALS.

It is only since the fifteenth century that medals, properly so called, have been struck. As we have already stated, the earliest coins were called medals, and perhaps properly so, for, having no legal circulation, they were artistic and numismatic monuments rather than money. Medals do not appeal to the popular taste. It is difficult to say why. We shall confine ourselves, therefore, to saying that Camelio in Italy in 1484 gave the first impulse to the improvement of medals, and that the art continued to flourish in Italy until the seventeenth century, when it suddenly dropped dead, and has remained dead ever since. France is now, *par excellence*, the land of medals.

## ENGRAVED STONES.

Popular taste has elevated this art to a much higher plane than that of medals, perhaps from the greater difficulty of the work. We are told that it is the most difficult and fatiguing of arts. It is monotonous to a degree. Years are necessary to engrave a large stone cameo, and it is always the same work, always the knife dipped in a mixture of oil and diamond dust, diamond dust being the essential element in this art, and applied with the lathe to give the necessary velocity and heat.

Exquisitely engraved cameos of precious stones have come to us from antiquity. The Chinese and Egyptian scarabees are probably the most ancient specimens of this art. It does not appear to have been carried very far in the extreme East. The Greeks and the Romans were passionately fond of engraved stones, both in relief and in intaglio. More are found engraved in the latter than in the former manner. Many reasons are given for this. No doubt they were less liable to injury, but fashion appears to have been the principal reason, for Augustus and other emperors, and their great nobles, preferred a seal in stone to one in silver or gold.

No cameos were exhibited, except a charming little Narcissus; but plaster casts of the principal cameos in the National Library abounded, and with them a very full exhibit of the few tools used in this art and which we have named above. Cameos were generally cut in agate or onyx, these stones being better adapted to that purpose; but they were also cut in opals and emeralds.

## ENGRAVING.

An admirable collection of engravings showed the progress of this art. Rembrandt alone would have ennobled the art of engraving, but by his side were Claude de Lorraine, Ruysdael, Paul Potter, and other great names. The art of engraving has been more studied in England than elsewhere. A portrait of Pius VII, engraved by Cousins,

after Sir Thomas Lawrence, is a superb specimen of the engraver's art.

In Japan engraving was practised at a very early period, perhaps in the eighth century. But it appears for a long time to have been confined to sacred subjects and principally to illustrate Buddhist books and representing Buddhist personages. As a popular art it was little known until the sixteenth century. In the seventeenth it had made great progress. It was at this date that the Japanese began to engrave in colors.

The figures in Japanese engravings are cut in cherry wood, and the colors are slightly gummed. All the mechanical part of this art in Japan is wonderful. They imitate aquarelles to perfection, and it is often difficult to distinguish between the aquarelle and the engraving.

We are indebted to Mr. Louis Gonse, the distinguished collector and expert, for the above information on Japanese engraving, and the articles exhibited fully justified his eulogium. But when in a fit of enthusiasm he comes to speak of Hokousai, the great engraver of Japan, he becomes so eloquent that we consider it advisable to confine ourselves to a literal translation:

The eighteenth century ends, and Hokousai appears. It seemed that the masters we have already named could not be surpassed, but Hokousai, the most celebrated of the Japanese artists, added to the traditions of his predecessors all the brilliancy of his fancy, of his originality, of his humor, of his profound study of life and manners, and of the universality of his genius. He crowns with fireworks the change in Japanese art. He has all the gifts. He is a rare colorist, original, admirable; his drawing is free, striking, natural—it is that of a born illustrator. He created a school of engravers first at Nagoza, afterwards at Jeddo. He filled Japan with his name and his works. The number of volumes illustrated by the hand of Hokousai is more than five hundred and that of his engraved compositions more than thirty thousand.

With this tribute to the genius of the illustrious Hokousai we pass to another exhibit.

#### SPECTACLES.

A very small but interesting exhibit showed the progress of spectacle making.

Spectacles were probably invented in the thirteenth century. A French surgical writer, in 1303, says: "If this does not answer, the purpose recourse must be had to spectacles."

They were invented by a Florentine. On his tomb, dated 1317, we read the epitaph, "Here lies Salvino Amato d'Armati, inventor of spectacles. May God pardon his sins."

The first spectacles resembled our "pince-nez." In their present shape they are not seen in portraits older than the fifteenth century. In this and in the next century they appear upon our ancestors' noses in very much the same shape as that of to-day. They were held in

place in different ways. Sometimes the hoops were stiff; sometimes strings passed behind the head and were tied there; sometimes a hook or bar fastened them to the cap. This explains a disputed passage in Rabelais, who, in speaking of the marriage of Panurge, says: "He put on a robe of fustian, with spectacles hanging to his cap."

### SECTION III.

#### ARTS AND TRADES.

Our third Grand Division treats of Arts and Trades (*Arts et M<sup>é</sup>tiers*); "crafts" would perhaps be a better translation. This is a vast subject. It was divided into four principal heads and subdivided indefinitely.

First, man with his tools; second, animals with wheels and sleighs; third, sails, windmills, pumps, etc.; fourth, water, with water-wheels and other applications of water power.

(1) The search for and the collection of raw material; (2) hunting and fishing, with snares, traps, and arms; sponge fishing, coral fishing; (3) mining, the extraction of minerals; (4) the cultivation of the earth, horticulture, arboriculture, viticulture, the gatherings of the fruits of the earth, forestry, agricultural implements, etc.

#### PREPARATION OF RAW MATERIAL.

*Wood.*—(1) Building wood with the necessary tools; (2) wood for furniture, natural and artificial, tools, carving, musical instruments, etc.

*Stones, natural and artificial.*—(1) Natural: The material, the tools, cutting, carving, stone for building. (2) Artificial: Material, tools, concrete, cement, etc. Burned stone: Material, tools, lime, cements, processes for hardening stone, stucco, etc. Mosaic, baked clay, pottery and glass. Material, tools, processes for the manufacture of brick, tiles, pipes, etc., pottery of all kinds. (3) Glass and crystal: Material, tools, goblets, wine-glasses, imitation pearls, mirrors, chandeliers, etc. (4) Enamel: Material and tools, engraved, enameled lava and metal. (5) Mosaics in glass and in enamel: Material and tools.

*Metals.*—(1) Material and tools for the many primary processes to which metals are subjected. (2) Final finish: Material and tools, gold and silverware, hardware, etc., machines and tools for watch-making, etc. (3) The working and engraving of metals, gilding, silvering, nickeling, and tinning.

*Textiles.*—Wool, silk, cotton, hemp, flax materials and tools, spinning, rope-making, washing, dyeing, printing, etc.

*Paper.*—Material and tools for making coarse paper, for making fine paper, decorated, printed and colored.

*Skins, etc.*—Material and tools for the preparation of skins, furs, hair, feathers, horn, whalebone, ivory, tortoise-shell, cat-gut, etc.

#### ARTS AND CRAFTS NECESSARY TO MAN'S LIFE, WHETHER LIVING ALONE OR WITH OTHERS.

*Clothing.*—Material and tools, artistic garments, shoes, gloves, and hats, with infinite subdivisions. Preservation of clothing, washing, ironing, cleaning. Adorning the person, hygiene, toilet, coiffure, etc.

*Building.*—Material and tools, grading, masonry, carpentry, etc.; houses, temporary, portable, permanent.

*Warming.*—Material and tools, etc.

*Lighting.*—Different methods, individual (lamp), or collective (gas, etc.).

*Cooking.*—Kitchen apparatus, furnaces, kitchen utensils, etc.

And for man living in communities—ventilation, reservoirs, aqueducts, sewers, hygiene, posts, and telegraph.

With a Grand Division so vast, we must select the most important subjects only, and say but a word upon each of them; remarking generally that the exhibits were most full and satisfactory, thoroughly illustrating the subjects under consideration.

#### AGRICULTURE.

Agriculture was represented by pictures, and by ancient and modern implements. Among the exhibits was a reaping-machine used by the Gauls, and described by the elder Pliny, with modern machines by the side of it; a Carthaginian threshing-machine; millstones of the Gallo-Roman period; churns; horseshoes, with tools for making them, and models referring to the history of horseshoeing.

#### HUNTING AND FISHING.

Hunting and fishing are always an interesting study, and it was here very thoroughly illustrated. The first hunters used the bow for small animals, and the javelin and spear for the larger kind, and later the cross-bow, which was lighter than that used in war. The cross-bow was of two kinds. The first threw a bolt, either dull, to stun the game only, or pointed, to kill it. As it was impossible with this cross-bow to kill birds on the wing, the custom grew up of using dogs to find and point the game, that it might be killed sitting. What will our sportsmen say to this! To what base uses did our ancestors put their pointers and their setters! This cross-bow threw its bolt about one hundred and fifty paces. The second kind of cross-bow threw a stone or leaden pellet. It was employed generally for small game, especially birds.

In 1480 the arquebus was invented. It was touched off by hand. The matchlock was invented at the beginning of the sixteenth century, and an ordinance of Francis I, in 1515, mentions hackbuts also as instruments of the chase. At the end of the sixteenth century, when the arquebus had been so much improved that it could be used for wing shooting, the cross-bow disappeared.

The wheel-lock was invented at Nuremberg in 1520, and flint-locks about a hundred years later.

At the beginning of the present century a fulminate was invented to ignite the powder, and get rid of the flint and the flashing of the powder in the pan. It was about the size and the shape of a homeopathic pill, and was composed of wax and chlorate of potassa. In 1810 the cap was invented, made of copper and filled with fulminate of mercury. In 1812 Pawly invented a breech-loader, the commencement of the many systems now in use. Among the exhibits was a breech-loader signed de Dupont, and dated 1771.

Hunting in the beginning was undoubtedly for food and clothing alone; but in the progress of time men began to hunt for amusement. It was then that the heads and skins and horns of the game were carefully preserved, and hung upon the walls of castles and chateaux. Some magnificent specimens of the trophies of the chase, mounted by Deyrolle, were exhibited.

#### HAWKING.

Many spirited engravings of hawking parties are extant, for it was a sport beloved of our ancestresses.

There is a general impression that this sport has fallen into total disuse, but this is an error. In Africa, in the East, and especially in Japan, it still holds a prominent place among the sports of the field. In France and in Ireland, but especially in England and near Leeds, it is still practised. The hosts of the chateaux think, with truth, that it adds attraction to a country life. The exhibits were interesting, consisting principally of hoods, jets, gloves, horns, and engravings, among them some well-known ones. The Japan exhibit was curious, among other things pigeon whistles, which were fastened to the tail of the pigeon to keep off birds of prey as he flew. An excellent exhibit was made by the English. One by Gerard Lascelles, master of "The Old Hawking Club of Leeds," gave a photograph of a picture by Howe showing a group of hawkers, and among them the well-known John Anderson, chief falconer to the club. Another photograph showed the same Anderson in the livery of the Duke of Athol. It appears that on the coronation of George IV in 1821, Anderson presented two falcons to the king, such being the tenure upon which the Dukes of Athol held the Isle of Man as tenants of the Crown.

## FISHING.

The subject of fishing was very lightly touched upon. The processes, nets and hooks, were formerly as now. The difference is in their manufacture. Hooks, originally of bone, of shell, or of wood, have given place to those of the finest steel. Rods are now made by machines, and not by hand. They are made of split bamboo, and even of steel. The committee who arranged this section were not well posted on whale fishing. They seemed to think that whale fishing is now confined to the Norwegians. They were not aware, apparently, that New Bedford and San Francisco still send out whaling ships, and that Dundee and a few towns in the north of Scotland send out more tons of whalers than the whole Kingdom of Norway. These gentlemen also refer to a canoe in the exhibit as "un canot en cuir de la tribu de la Protowance, usité sur la rivière de la Fièvre près de Mary Fall dans le Mississippi," which probably means "a leather canoe of the Pottawatomies, used on Fever River, near St. Mary's Falls, on the Mississippi." The "Protowances," as our committee calls them, are nearly extinct. They were a part of the Algonquins, and are now cared for by Quakers in Kansas. The "Friends" have done much for the welfare of the red men.

Under the head of Food many pieces of old "batteries de cuisine," especially of the eighteenth century, were exhibited. Under the head of Lighting, all sorts of lamps, ancient and modern, with machines for making candles.

Under the head of *wood* were exhibited specimens of the finest woods, and of the tools with which they were wrought. The wedge was the very earliest instrument used for working in wood; then came the hatchet, retaining the form of the wedge; then the knife and the saw. The first hatchets had transverse handles. The saws were of flint, and therefore very small. In the Age of Iron, saws improved. The Gallo-Romans used the common saw in very much the same form as we have it now. The hydraulic saw (saw-mill) was in use in the sixteenth century, and the circular saw was invented about the same time. Lastly the ribbon saw was invented at the end of the last century. The South Sea Islanders used sharks' teeth set in frames as saws, so Captain Cook tells us.

Under the heads of *wood* and of *stone* there were many curious exhibits. Under the former came furniture and under the latter mosaics. The ancients made great use of mosaics, as we see at Pompeii, at Trèves, and elsewhere. But we are indebted to the Church for the great increase in the use of mosaics in the Middle Ages. In 1798 the French Government erected a manufactory of mosaics in Paris, but it did not last long. In 1846 Emperor Nicholas established one in St. Petersburg, which is still extant; while that of the Vatican has been in existence and actively at work for many

years. In 1876 another attempt was made to establish a factory in Paris. In addition to these, the Venetians have for a long time been at work on mosaics. This exhibit was not large, as it is difficult and destructive to remove mosaics. The tools used in the different processes have scarcely varied since the earliest days.

#### CERAMICS.

Very little information was given us in this important section, but the exhibits were abundant and curious, including the crudest of pottery and the finest of Sèvres. The products of Japan, too, played an important part. Our friend Mr. Gonse is almost as enthusiastic about Japanese pottery as he is about Japanese engraving. He says:

Remark the originality of the shapes, their robust, elegant, and supple grace. Remark the logic of the ornamentation, drawn from the character and purpose of the vessel. No ceramic in the world offers a finer and more lasting paste, more fit to receive those florid, rich, and translucent colors, which overflow on the sides of the vessels in sheets, in brooklets, in drops, like a generous sap, and rival stone in brilliancy.

Mr. Gonse exhibited a valuable collection of Japanese pottery and porcelain.

#### GLASS.

Glass is of much more modern date than porcelain, though glass beads have been found in Egyptian tombs. Glass was probably accidentally discovered in the process of making porcelain. The Romans used it for domestic purposes to hold perfumes, and in their religious ceremonies too. It was used in very limited quantities for windows in the mild climate of Italy. The East was very successful in the manufacture of glass. Later Venice entered the lists, and Venetian glass is famous to-day. Bohemia, too, produces beautiful glass. French glass attained its present perfection in the eighteenth century.

The exhibit showed a number of specimens of Swiss glass, which were divided into two classes. (1) White, painted or enameled, and (2) colored or opal. The latter, which is highly valued, owes its origin to Venice, Italian workmen having introduced it into Switzerland. The French call it "verre de lait," and the Germans "milchglas." One of the pieces exhibited was ornamented with a bird, with the inscription "When this bird sings, my love will cease." Making love in glass strikes us as something new in that line. It is curious what a demand there is for milk color in glass, in silver, in pewter, and in stones.

#### STUFFS.

Stuffs, silks, etc., were exposed in the adjoining cases; some of the time of the First Empire were very rich and beautiful. And

here our friend Mr. Gonse comes to the fore again and goes into raptures over Japanese silks and velvets, of which some few were exhibited.

In the seventeenth century costume attained its apotheosis of dignity and splendor; the processes of weaving had made all their progress. This is the epoch of thick figured silks, brilliant and masculine, and of those Terry (ribbed) velvets, which have the softness and harmony of old tapestry. Then the eighteenth century sowed upon this soil its feminine graces. Taste, richness, refinement, are carried to their acme, and [here come the fireworks again] it is a blinding *feu d'artifice*.

#### RIBBONS, TAPESTRY, PRINTED PAPER.

We did not find these exhibits very interesting. As curiosities, there was a sewing-machine constructed in 1830, and several specimens of old Flemish tapestry of the sixteenth century, when this industry appears to have attained great perfection in Flanders. One of these tapestries represents two subjects, "David and Saul," with the javelin in Saul's hand, and "Tobit before his Father." It seems to have been a practice of the Flemish artist to represent these two subjects together. It would be interesting to learn the reason. The writer has in his possession a pair of old Flemish silver plates, representing the same subjects.

We were disappointed not to find in this exhibit some of those beautiful carpets and rugs which were shown in the Exposition of 1878, and especially in the Indian Court. The decision of the British Government to take no official part in the Exposition of 1889 was, no doubt, the cause of the poor display made in the Indian building and in the History of Labor.

Carpets, we are told, originated as embroidery, and were first used as hangings. They are noticed in this connection in the Pentateuch, in the description of the furnishing of the Tabernacle, and elsewhere. Carpets, as we know them, undoubtedly came from Persia. They were introduced into India and into Europe by the Saracens—hence called "sarracinois"—who brought them from Persia, as is shown by the patterns upon them. In the paintings of old masters we see these carpets on the floors, and hung from the windows. These patterns were afterwards imitated in the carpets known as "Brussels." Homer mentions carpets in the Iliad, and under the Greek name of carpet, *tapeta*.

With that the chiefs beneath his roof he led,  
And placed in seats with purple carpets spread.

And again in the Odyssey,

. . . on splendid carpets lay.

Pliny says:

The thick flocky wool has been esteemed for the manufacture of carpets from the earliest times; it is quite clear from what we read in Homer, they were in use in his time.

Carpet manufacture was early introduced into France, and carried thence by the St. Bartholomew refugees to Switzerland and elsewhere. We noticed in this exhibit only one carpet, a "sarracinois," and two or three of gilt leather. In the Persian section there was a display of rugs and carpets, but it was shrewdly suspected that they were mostly manufactured at Kidderminster.

#### MECHANICS.

The object of this exhibit was a modest one, and well it might be, for the subject is too vast. The committee wished simply to show by the exhibits the different progressive steps of this great science, which has so modified the conditions of life in modern society. Levers, pulleys, water-wheels, sails, etc., were invented at a very early date, but the theoretic study of these engines, with a view to their improvement and development, has begun but lately.

Among the most interesting exhibits were those connected with the raising of water, one of the first needs of civilized man—wind-mills, pumps, chain-pumps invented by the Arabs, Archimedes screw, and the ram. After these earlier inventions came hydraulic machines to utilize the power of running water, water-wheels, including turbines, etc.

As wood became scarce, it became necessary to use coal, and the ingenuity of inventors was turned to the means of keeping mines free from water. Water columns and steam-pumps came into use. The French engineer who had charge of this department seemed to think that with these inventions the problem had been solved; he did not seem to be aware that at great depths and with the water very hot, the steam-pump is not enough. In California and Utah our miners have been compelled to tunnel the sides of the mountains, striking the mine at a very great depth, and so drawing off the water. The Sutro tunnel is a notable example of this.

This exhibit was interesting, but was necessarily very imperfect. Nothing was shown of electricity, the most wonderful discovery perhaps of any day.

#### MINES AND METALLURGY.

These offered interest, no doubt, to miners and metallurgists, but very little to the general reader. The exhibit, too, was very imperfect.

#### CUTLERY.

This art appears to have reached its apogee in France in the eighteenth century. Since that date the necessity for cheapness, and the use of machinery, have led to a falling off in workmanship. The cutler of the eighteenth century made the whole instrument himself. If the handle was to be ornamented with precious metals, he prepared and

chiseled them. The forge and the file were in that day the only tools of the cutler.

The exhibit was exceedingly interesting, consisting principally of knives and forks, scissors, razors, and surgical instruments. A small knife was exhibited which had belonged to Marie Antoinette; the blade and handle are both encrusted with gold and mother-of-pearl. The knife was without spring. Happily it was under repair when the Queen was arrested. A number of treatises on cutlery, ancient and modern, were also exhibited.

Tin at one time played an important part in the history of art. In the sixteenth century articles of considerable beauty were made in tin, especially in Nuremberg. A tin basin was exhibited made in France, elaborate and in very good taste. The tin plates made in Nuremberg in the seventeenth century, and generally stamped with religious subjects, were much coarser. Tin, for art purposes, if it can be so called, is now used principally for children's toys.

#### GOLDSMITH, JEWELER, WATCHMAKER.

The exhibits under these heads were full and admirable. Workshops of these different arts were reproduced, all of the eighteenth century, when these trades were carried to their highest excellence in France. Our attention was called to the fact that, while the tools generally remain the same, the use of gas furnaces, and the introduction of the lathe in place of the hammer, have revolutionized the manufacture.

#### TELEGRAPHY.

France, of course, claims the telegraph. An aerial telegraph invented in 1794 is the foundation of this claim; but so entirely different is it from the telegraph of to-day that it can scarcely be called "its source." It could not work at night, or during storms or fogs. In our day it may be seen on a small scale at any railway station. Wires or cords worked a wooden bar on a pole, placing it in many different positions. Powerful telescopes enabled the observer to distinguish these positions at a distance, and his book gave him their meaning. He then transmitted them to the next observer. Not much of the electric wire about this.

It was not until electricity was applied to telegraphing that it became of serious value. In Scotland in 1753 Marshall, and in Geneva in 1774 Lesage, experimented with electricity in connection with the telegraph. But an insurmountable difficulty was always found in the weakness of the electric current. In 1800 Volta with his battery came to the assistance of the inventors, while the discoveries of Faraday, Arago, and others prepared the way for the inventions of our day. Later, in 1832 to 1843, the different systems, and above all that of Morse, were invented, and still later printed and facsimile telegrams.

## TELEPHONE.

In 1876 the telephone was invented in the United States by Bell. Every year sees improvements in this instrument. Our countrymen can now converse between Portland and Buffalo, 750 miles. Edison is reported to have said that the telephone cannot be carried for any distance under water, and that we must therefore give up all idea of conversing with our friends in Europe. But on land the development is enormous. There are 170,000 miles of telephone wire in the United States, and 1,055,000 conversations are carried on over them daily. There are more than 300,000 telephones in use.

Telephones are much used in Switzerland. People talk with ease between Geneva and Vevey, Basle and Zurich, etc. You engage your room now at your hotel by telephone and not by letter, thus settling all the details at once without the trouble of a long correspondence.

## SECTION IV.

## TRANSPORTATION.

One of the causes of the great success of the Exposition of 1889 was undoubtedly to be found in the knowledge and skill of the experts in charge of it. Take, for instance, the section now under consideration. Its bureau consisted of Mr. Alfred Picard, inspector-general of roads and buildings: Mr. Maurice Bixio, president of the council of administration of the "Compagnie Générale des Voitures, à Paris," and Mr. Henry Perèire, superintendent of the railroads of the south. To these and others were added many eminent English engineers, representing the railroads, steamships, ship canals, etc., of Great Britain. With such a board, it may well be supposed that this grand division of "Means of Transportation" was thoroughly illustrated.

Transportation is one of the first needs of man. Without it we could not collect raw material, exchange products, or provide means of subsistence.

We begin with the individual animal. He transports himself, the food he needs, or the articles he wishes to barter. A type of the first means of transportation is to be found even in our day in the heart of Africa, where the naked negro marches day after day carrying one or two tusks of ivory on his head.

The subject naturally divides itself into two heads, the road and the carrier. Both of these were amply illustrated, from the scarcely traced path through the forest to the modern railroad, from man to the improved locomotive and the magnificent transatlantic steamer.

The history of road transportation was divided into four parts, land roads, river and sea roads, railroads, and air roads. On the land it commenced with the natural path, and then passed to the path transformed into the road. It included the methods of crossing hills

and water-courses, and led to the history of embankments, drains, bridges, and tunnels.

On the water it included the methods employed to improve river navigation by dikes and locks, canals, too, with towage. On the sea it included the compass, charts, buoys, lighthouses, and natural and artificial roadsteads, ports, etc.

The history of the railroad included the study of the different forms of substructure and superstructure, signals and telegraphic apparatus. The first carrier being man, with him in this capacity were exhibited shoes, staffs, poles, cords, rollers, the animals he pressed into his service, and rolling or sliding vehicles.

The history of water transportation began with a tree trunk, the raft, the canoe, the sail-boat, and finally reached the steamer. To supply the power needed for transportation the exhibit began with man, then oars, sails, animals for towing, steam, compressed air, and electricity.

The history of sea roads included all kinds of ships, and the changes in their construction from the earliest dates.

The history of railroads was shown on the one hand by stationary engines contrasted with modern locomotives, and on the other by open passenger cars contrasted with the vestibule train.

Ballooning was shown in the hot-air balloon and in the gas balloon, directed by steam or dynamo-electro machines.

The reader can easily judge how large, complete, and interesting this exhibit must have been.

A rapid mention of some of the principal objects is permissible.

The locomotives constructed by Stevenson, one in 1825 and the other, called the "Rocket," in 1829, very small and rough-looking as compared with the present American locomotive, much like a young calf alongside of a bull. A carriage built for the Duke of Wellington in 1833, and the carriage of Queen Adelaide, high and hung on C springs, and richly painted. Lighthouses, beginning with the simple bonfire on the shore, and ending with the latest electric light.

Boats, beginning with the tree trunk hollowed into a canoe, and ending with the superb modern steamer. Locomotives and cars, from their origin to the present date. Models of the ancient Roman roads—and rough enough those roads must have been, too, judging from the specimens which survive. A model of the Frith of Forth Bridge, just opened, the largest bridge in the world, and perhaps the ugliest. A Japanese litter in lacquer and gold, and the palanquin of an elephant. A series of photographs grouped by centuries, beginning three thousand years before Christ, and showing all the means of transport which could be learned from ancient monuments and manuscripts. A model of the Pont Pentiffrey at Metz, built in 1340, a beautiful ancient bridge. A *chaise-à-porteur*, the panels painted by Boucher; Josephine's sleigh; a mosaic of Pompeii, showing a noble Roman's stable; the Lord Mayor's carriages; a model of

the *Great Britain*, which ran between Liverpool and New York in 1841; photographs of remarkable bridges, viaducts, etc., in France, England, and the United States; and among others that of the Brooklyn Bridge, of the Poughkeepsie Bridge, St. Louis Bridge, and several others; and an old English railway ticket in bronze, 1832. As regards canals, and everything connected with them, and railways, including the road, the locomotives, and the cars, the English exhibit was the most perfect, including specimens of the toothed rail and wheel, made at a time when their engineers assumed, without experiment, that the adhesion of the wheels to the rail, through the weight of the locomotive, would not be sufficient to move the train.

#### SECTION V.

#### MILITARY ARTS.

The last Grand Division of the History of Labor is the Military Arts. Captain Lyle, U. S. Army, of the Ordnance Department and aid-de-camp to the Commissioner-General, will make a report upon this subject. We confine ourselves, therefore, to a few words upon its history.

There has existed for some time at the Louvre a most complete exhibit of the navies of the world from the most remote times to the present, the best probably in Europe. It was not thought worth while to transfer this collection to the Champ de Mars, and one exhibit showed, therefore, the history of land forces only. It was divided into twelve chapters. In the first were portraits and pictures, commencing with the Gaul fighting in his chariot, and coming to the present day; arms, uniforms, etc., belonging to the distinguished generals of France, were exhibited. Then followed the history of arms and of uniforms. Chapter II showed the arms of the Middle Ages. Chapters III and IV were devoted to the history of infantry and cavalry, with a display of old battle-flags, dear to the patriotic Frenchman. Chapters V and VI were devoted to the scientific branches of the service, artillery, engineering, etc. Chapter VII to the geographical service. Chapter VIII to military histories and treatises. Chapter IX to the Belgian Army. Chapter X to the armies of the East and the Far East. Chapter XI to the history of farriery, and Chapter XII to that of fencing. These subjects will be fully and completely treated by Captain Lyle. We propose, however, to say a few words upon farriery, as a subject of general interest, and not exclusively military.

#### FARRIERY.

The domestication of the horse antedates our era some five or six thousand years. He came from Central Asia, and entered Europe in the successive invasions of the barbarians. As long as he re-

mained in Central Asia, he needed no protection to his foot; but as soon as he began his long journeys to the westward, whether it was owing to longer marches, or to the change in the climate and soil, his hoofs began to give out. The ancient historians tell us of long delays in the march of armies, needed to allow the horses' hoofs to grow out, and Xenophon, Cato, Varro, and other commanding officers, were compelled to issue general orders for the proper care of the horses' hoofs.

The first horseshoe was of leather, and was intended for the cure rather than for the preservation of the hoof—a sort of boot-leg and shoe plaited in straw, and still in use in Japan. They were used by the Romans, and called hippo-sandals. As regards the iron horseshoe fastened by nails, of the present day, some authors think that, though not known to the ancient Romans, it was known to the Germans and Gauls; but the better authority puts this invention four or five centuries after the birth of our Saviour. These shoes certainly existed as early as that date, for the writer has seen them in the Museum of Hombourg-les-Bains. They were dug up in the old Roman camp in the neighborhood of that town. This camp was taken and destroyed by the Germans about the date mentioned. It remained undisturbed for centuries, and it is not long since the antiquarians of Frankfort and the neighborhood began their researches in the ruins. They have been amply repaid by the discovery of articles of bronze, of wood, and of iron, showing not only the Roman domestic life of that day, but also the entire arrangement of a large Roman camp intended to hold a garrison of half a legion, or five thousand men. Horseshoe nails, bits, and stirrups, all of our present forms, were also found there; the nails were shaped like a T.

In the Middle Ages, when the mail-clad knight was wholly dependent upon his horse, he was expected to know how to shoe him, and so highly considered was the art in those days that blacksmiths were dignitaries of the court. Solleysel says in 1664:

We have seen kings who knew how to make a horseshoe, and there are few people of quality who cannot make nails, to use in case of necessity.

In this exhibit were seen a number of "ice-shoes," calks. To a French inventor is due the idea of a socket which, without weakening the shoe, permits a calk to be screwed into it.

Among the exhibits were an American patent shoe, a number of hippo-sandals, and Gallo-Roman shoes; also a shoe without nails, sewed on to the hoof with wire.

We are indebted to the well-arranged and exhaustive catalogues of the "Histoire Rétrospective du Travail" for most of the information contained in this article.

WICKHAM HOFFMAN.

# RETROSPECTIVE EXPOSITION OF LABOR AND ANTHROPOLOGY.

## GENERAL REGULATIONS.

ARTICLE 1. The Retrospective Exposition of Labor and of the Anthropological Sciences shall be international. The general regulations agreed upon by the Superior Commission on Organization appointed by Article 3 of the ministerial decree of October 12, 1887, and approved by the Minister of Commerce and Industry, shall be sent to all the departmental committees of France and to all the foreign national committees.

ART. 2. This Exposition shall be held in the grand nave of the Palace of Liberal Arts on the Champ de Mars.

The administration undertakes the expense of the construction and decoration of the premises necessary for this Exposition.

The administration may also undertake the expense of the installation and transportation of certain articles loaned to the Exposition.

ART. 3. The administration shall take all proper precautions to guard the articles exhibited against theft and accidents of all kinds; but it cannot be held responsible under any circumstances.

ART. 4. The contractor for the General Catalogue shall be required, in accordance with Article 3 of the Schedule of Charges, to publish a special descriptive catalogue of the Retrospective History of Labor and of the Anthropological Sciences.

ART. 5. The articles composing the Retrospective Exposition of Labor and of the Anthropological Sciences shall be divided into distinct groups corresponding to the five sections indicated by Article 1 of the ministerial decree of October 12, 1887, *i. e.*:

Section I. Anthropological and Ethnographical Sciences.

Section II. Liberal Arts.

Section III. Arts and Trades.

Section IV. Transportation.

Section V. Military Arts.

ART. 6. Each committee appointed conformably to Article 2 of the ministerial decree of October 12, 1887, shall be charged with the organization of the section for which it was appointed conjointly with the Director-General of Management.

ART. 7. The Retrospective Exposition of Labor and of the Anthropological Sciences, especially in so far as Sections II, III, and IV are concerned, shall include the processes of intellectual labor at different eras of the world; ancient apparatus of scientific research and of practical industry; professional or common apparatus, machines and means of transportations; old mechanical instruments and old tools of trades, represented by the originals, by restored models, by plastic representations, sketched or photographed by designs taken from monuments, by sigillography, by numismatics, etc.

Raw material and manufactured products, artistic or commercial, can be exhibited only as samples or as characteristic types, conjointly with the apparatus, machines, or tools which have been used for the collection, extraction, or preparation of the raw material, or for the technical execution of the manufactured article.

ART. 8. The Retrospective Exposition of Labor should, as a general rule, contain only the apparatus, the machines, and the tools no longer in use, or which are only used in an improved form.

ART. 9. No article exhibited shall be copied, drawn, or reproduced under any form whatever, without the permission of the proprietor or of the exhibitor, approved by the Director-General of Management.

ART. 10. The general programme of the Retrospective Exposition of Labor and of the Anthropological Sciences is briefly as follows:

## SECTION I.—ANTHROPOLOGY, ETHNOGRAPHY.

### 1. *Anthropology.*

Specimens of comparative and embryogenic anatomy relative to man. Models of the brain, typical skulls and skeletons, or in place of them, casts.

Prehistoric skulls, trepanned skulls, and prehistoric pathology.

Casts of busts and typical faces (living). Instruments of physical and physiological research. Instruments for the measurement of skulls and of man.

Maps of the distribution of races, or of the types of races. Photographs of skulls and of ethnical types. Composite photography.

### 2. *Ethnography.*

Raw material and specimens representing the different phases of the manufacture of primitive instruments.

Cutting, polishing, boring, etc., of stone. Work in bone, in horn, etc. Articles relating to the origin of the practice of the arts, of drawing, etc. Primitive ceramics.

Views, plans, or reduced models of habitations, of funereal monuments of ancient times, etc.

Casting and working of metals, copper, bronze, iron. Specimens of molds and of articles in melted or wrought metal. Founders' stamps, etc.

Derivation of glass, enamel, etc. Specimens for comparison borrowed from living savage tribes; means of obtaining fire, of working in stone, in bone, in wood, in clay, etc. Metallurgy compared.

### 3. *Archæology.*

Articles relating to the history of labor in antiquity; Egypt, Assyria, Phœnicia, Greece, the Roman Empire (especially Gaul), the Far East, the New World.

Reduced models, plans, etc., of typical constructions—sculptures and paintings (originals or copies), reproducing the manual occupations; scientific apparatus and material of the industrial arts (as far as the reign of Charlemagne); specimens representing different phases of manufacture; collections of typical manufactured products.

## SECTION II.—LIBERAL ARTS

### 1. *Sciences.*

Astronomy, instruments, zodiacs, sun-dials, gnomons, water-clocks, astrolobes, armillaries, celestial globes, telescopes, quadrants, astronomical literature. Reconstruction of models of observatories, Chinese, Hindoo, Egyptian, of Ulugh-beg, of Uranenbourg, first observatory of Paris, second observatory of Paris.

*Geodasy.*—Instruments and apparatus of geodesic stations.

*Meteorology.*—Instruments and apparatus of meteorological stations.

*Physics.*—Instruments.

*Chemistry.*—Instruments. Reconstruction of models. Alchemist's laboratory. Chemist's laboratory. Cabinet of physics, surgery, and physiology. Instruments.

### 2. *Manuscripts*

Printing, books, newspapers, manuscripts. Tools employed, material employed, specimens of tablets, of papyrus, of parchments, etc.

*Printing.*—Letters, presses.

*Books.*—Specimens of paper, binding tools, specimens of books (printing, binding, and size and shape).

*Newspapers and hand-bills.*—Specimens of newspapers and hand-bills, plain or illustrated; special presses for newspapers, reconstruction of models, a printing office, a book-store of the sixteenth century.

### 3. *Instruction.*

Specimens of articles and furniture used in teaching, according to the age and country; reconstruction of models; classes and libraries.

4. *Music and theatre.*

*Music.*—Instruments of music; musical works in relation to their execution; manuscripts; types of scores; partitions and orchestral parts.

*Theatre.*—The salle, views and plans; decoration, designs, machines, lighting, costume, masks; theatre bills, journals, programmes, tickets, collection of models.

5. *Arts of design.*

*Architecture.*—Illustrated documents and models representing the different styles of building. Typical reproductions of architecture, according to styles and periods since Charlemagne.

*Painting.*—Illustrated documents representing a painter's studio; types of the different models of painting; antique painting; mosaic; illumination of manuscripts; frescoes; painting in oil, in wax; artistic painting on glass and on metals, etc.

*Sculpture.*—Illustrated documents representing workshops; specimens of artistic sculpture in stone, in marble, in parti-colored marble, in bronze, in other metals, wood, clay, etc.; use of clay, wax, and plaster; specimens of artistic castings in sand and in wax.

*Artistic medals and precious stones.*—A series of special tools for the different processes of stamping and of engraving; specimens of the results obtained with these tools.

*Engraving.*—A series of plates and tools. Specimens of the results obtained by the different processes.

*Lithography and chromo-lithography.*—Plates, tools, presses, specimens of the results obtained by the different processes.

## SECTION III.—ARTS AND TRADES.

1. *Arts and trades for the application of forces.*

## NATURAL FORCES DIRECTLY APPLICABLE.

- (1) *Man.*—Primitive dynamic apparatus; hand tools.
- (2) *Animals.*—Machines for hoisting; horse-power, wheels.
- (3) *Air.*—Sails, windmills, tubes, bellows, pumps.
- (4) *Water.*—Reservoirs, water-scales, various hydraulic wheels, turbines, water columns.

## DIFFERENT TRANSFORMATIONS OF ENERGY.

Apparatus to use directly or indirectly one of its forms.

- (1) *Heat.*—Different machines; fire, hot air, steam.
- (2) *Lights.*—Mirrors, lenses, daguerreotyping, photographing.
- (3) *Electricity.*—Piles, electric machines; ancient electrical apparatus.

2. *Arts and trades for the collection and extraction of raw material.*

## SEARCH FOR RAW MATERIAL.

(1) *Hunting and fishing.*—Material and tools; snares, traps, arms; auxiliary animals; methods of hunting and of fishing, both river and sea; preserves, fish-ponds, etc. Sponge fishing. Coral fishing.

## EXTRACTION AND PREPARATION OF MINERALS.

(1) *Search for minerals.*—The magic ring, the compass, boring.  
 (2) *Extraction of minerals and of mineral matter other than metals.*—Gaseous, solid, and liquid products; metals; mineral matter (salt, sulphur, petroleum); chemical products; ores used, material, tools, processes.

## COLLECTION AND PREPARATION OF RAW MATERIAL NOT MINERAL.

Processes for the cultivation of the soil; horticulture, arboriculture, viticulture; picking and gathering the products of the soil; forestry; tools and agricultural implements for the preparation of raw material.

3. *Arts and trades for the working and transportation of raw material.*

## ALIMENTARY MATERIALS.

Preservation of food, milk, meat, fish; processes for the preparation of agricultural products; manufacture of alimentary matter, of vegetable or animal origin.

## WOOD.

(1) *Building woods.*—(a) Natural wood: Material and tools for the preparatory work in wood. (b) Painted wood: Coloring matter employed; material and tools.

(2) *Wood for furniture.*—Natural woods, prepared woods: Material, tools, processes for artistic carpentry, sculpture in wood, cabinet making, veneering, toy-making, basket-making; manufacture of musical instruments.

## NATURAL AND ARTIFICIAL STONE.

(1) *Natural stone.*—Material, tools, processes for sawing, cutting, and carving selected stones; stone for ornament and for building.

(2) *Artificial stone.*—(a) Unbaked stone: Material, tools, process for the manufacture of concrete, plaster and cements. (b) Burned stone: Material, tools, and processes for the manufacture of lime and cements. (c) Stone variously prepared: Processes for hardening stone, stucco, etc. (d) Grouped stones; mosaics.

## BAKED CLAYS, CERAMICS, AND GLASS.

(1) *Baked clays for trade.*—Material, tools, processes for the manufacture of brick, paving brick, tiles, pipes.

(2) *Ceramics of different clays, stoneware, crockery, porcelain.*—Material, tools, brick, paving brick and tile decorated or enameled; pottery of all kinds; table and toilette services, decorative pieces.

(3) *Glass and crystal.*—Material and tools for manufacturing, decorating, cutting, and engraving; goblets, wine-glasses, spun-glass, pearls, imitations of precious stones, mirrors, chandeliers, window-panes.

(4) *Enamel and enameling.*—Material and tools for the manufacture of enamels engraved and cloisonnés; enameled lava; enameled castings.

(5) *Mosaics in glass and enamel.*—Material and tools for the manufacture of mosaics in glass and enamel.

## METALS.

(1) *Preliminary work.*—Material and tools for raising, preparing, cleaning, drawing, piercing, and stamping.

(2) *Finishing.*—Material and tools; (a) for work in fine metals; goldsmith's work in all metals; jewelry, real or imitation; (b) work in cast metals; cast-iron decorative or industrial, locks, sporting arms, brass work, tin, hardware, ornaments, cast or stamped for the decoration of buildings, bronzes for furniture. Machinery and tools for the manufacture of clocks and instruments of precision; clocks and watches.

(3) *Arts and trades akin to work in metals.*—Trade moldings; plain castings, in wax, hollow; electro-plating; decoration of metals, engraving, flat, or repoussé, chiseling; enameling, damascening, gilding, silvering, nickeling, tinning.

## TEXTILE MATERIALS.

Wool, hemp, silk, cotton, jute, ramie, material and tools for combing, stripping, etc., spinning, milling, twisting, weaving, bleaching and dressing, dyeing, printing, ropemaking.

## PAPER.

Material and tools for the manufacture of coarse paper, fine paper, decorated paper, illustrated paper, painted paper.

## ANIMAL SPOILS.

Material and tools for the manufacture and utilization of skins, furs, horsehair, hair, feathers, horns, whalebone, bone, ivory, tortoise-shell, catgut.

4. *Arts and trades necessary to individual life and to life in communities.*

CLOTHING.

Material and tools for the manufacture of costumes; linen garments, shoes, gloves, hats; civil costume, military, ecclesiastical. Care of clothes; washing, scouring, ironing, blacking. Care and ornamentation of the person; hygiene, toilette, hair-dressing, etc.

BUILDING.

Tools and material; grading, masonry, scaffolding, roofing, carpentry, locks, painting, and glazing; temporary, portable, and permanent habitations.

HEATING.

Tools and materials, heating, buildings.

LIGHTING.

Lighting by independent or by distributing apparatus.

PREPARATIONS OF FOOD.

Apparatus employed in the kitchen, furnaces, turn-spits, cooking utensils.

INTERVENTION OF THE ART OF THE ENGINEER FOR THE SATISFACTION OF THE WANTS OF MAN LIVING IN COMMUNITIES.

Ventilation of workshops, of habitations; feeding cities, reservoirs, aqueducts; removal of refuse; canalization, sewers; hygiene; posts and telegraphs.

SECTION IV.—TRANSPORTATION.

1. *Transportation by land.*

*The road.*—All that represents the transformation of the way serving for transportation, from the natural path to the perfected road, comprising consequently every species of road, as well as bridges, viaducts, tunnels, etc., from the beginning of the world.

*The carrier.*—All that represents transportation by man, with or without machines; transportation by hand, or on the backs of man or of animals; transportation by vehicles drawn by man or animals.

2. *Transportation by river or sea.*

Means employed to utilize navigable water courses; canals; maritime ports. Lighting and buoys on the coasts; boats employed on water-courses and at sea.

3. *Transportation by railway.*

The road; signals and safety apparatus. Motors, rolling stock, accessory plant.

4. *Transportation in the air.*

Balloons, cars, and rigging; processes of ballooning; special instruments.

## SECTION V.—MILITARY ARTS.

1. *Miscellaneous.*

Historical articles; articles having belonged to warriors or to historic personages; divers arms, historical, artistic, or curious, prior to the eighteenth century; standards and flags prior to the eighteenth century; portraits of distinguished warriors.

2. *Artillery.*

Articles of ornament and of equipment; reproduction of paintings, engravings, and designs of costumes, and of scenes relating to arms; reduced models of machines of war, of guns and carriages; models of bridges, of boats, and of trestles; pictures and portraits.

3. *Engineering.*

Models of the attack and defense of fortified places. Plans in relief; models of sapping and mining works; series of tools, pictures, and portraits; illustrated history of the uniform of this army.

4. *Infantry.*

Illustrated history of the regiment, pictures representing the exploits of this corps; history of uniforms by regiments; history of flags and colors; history of models of portable arms; history of articles of arms and equipment; history of instruments of music; fencing, military school.

5. *Cavalry.*

Illustrated history of this corps; pictures of feats of arms; equipment, trappings, iron work, arms, sabres, lances, cuirasses; history of standards, carrousels, tournaments, equitation; school of cavalry; gendarmery.

6. *Administrative services of health, and of powder and saltpeter.*

Instruments for the manufacture of powder; commissary wagons and ambulances; series of uniforms of the commissariat and of the hospitals; surgery; portraits.

7. *Staff.*

Portraits ; series of uniforms of general officers and of the staff ; series of apparatus of the military sciences : castrametation, topography, plans, maps, works of strategy and of tactics ; general bibliography (the bibliography relating to each arm will be found in the section to which the arm belongs).

The present regulations were adopted by the Superior Commission on the organization of the Retrospective Exposition of Labor and of the Anthropological Sciences, March 29, 1888.

G. BERGER,

*Director-General of Management.*

*Paris, March 30, 1888.*

## THE RIGGS COLLECTION OF ANCIENT ARMOR.

---

PARIS, 164 BOULEVARD MONT-PARNASSE.

*January 13, 1890.*

MY DEAR GENERAL: I take pleasure in acknowledging the receipt of your letter of the 31st ultimo, and in sending you a brief synopsis of the Riggs collection of arms and armor, with two collateral publications that will enable you to convey some idea of its character and worth to the country, in your report on the late French Grand Exposition.

This collection numbers between four thousand and five thousand pieces, consisting of complete suits of armor, and parts of armor of every kind, employed for the protection of man and horse in warfare and in other combats, from the beginning of the mediæval period down to the end of the seventeenth century; also specimens of all sorts of weapons and of implements connected with military service during the same period. Its contents may be classified as follows:

One hundred complete suits and half-suits of armor used in war, tournaments, carrousels, tiltings, and official parades, exhibiting every phase of elegant ornamentation peculiar to these objects in time and place.

Fifty specimens of chain-mail, worn before the adoption of plate armor.

Two complete panoplies for man and horse, one of which is displayed on models duly caparisoned.

Four brigandines, very rare.

Sixty bucklers, many of them richly embossed and decorated in the highest style of mediæval and renaissance art.

Two hundred helmets or casques, in every form, and of every style of ornamentation, from the Norman period down.

Five hundred swords, of great variety of hilt and blade, serving every purpose, and of different epochs and countries.

Twenty two-handed swords.

A series of daggers.

Seven series of gauntlets.

Six hundred halberds and lances, belonging to every country and of every shape.

A series of maces, hammers, and battle-axes.

A complete series of bits, stirrups, and spears.

Two hundred specimens of fire-arms, including pistols, arquebuses, and other instruments for projectiles, from the fifteenth to the end of the seventeenth century, richly decorated and of various styles and designs.

Banners, flags, and pennons.

A large series of detached pieces of armor, embracing gauntlets, lancerondals, spauldrons or shoulder-pieces, leg armor, and other parts.

This brief synopsis suggests the archæological and technical importance of the collection; its artistic importance can be estimated only by actual examination of it. Apart from the value of the collection from this point of view, it contains several unique historical pieces of special interest, of which the following are the principal:

A suit of armor, embossed and damascened, belonging to the famous Duke of Alva, conspicuous in the history of the Netherlands and of Spain, and which has been estimated by good authority as worth 100,000 francs.

A suit of armor, said to have belonged to Henry IV of France, ornamented in large niello style, bearing the marks of manufacture for royalty, and portrayed in one of the well-known portraits of this monarch.

A suit of armor, bearing the arms of Lorenzo de Medici, elaborately engraved and gilt.

An equestrian figure in full panoply, representing the Grand Duke Colonna, Duc de Polliano et Jagliacozzo, grand constable of the kingdom of Naples in the sixteenth century.

A Venetian suit of armor, belonging to Admiral Minella; others belonging respectively to Baron Preussing, Count de Freyberg, and to nobles of the time of Maximilian, in Germany, all remarkable for their decoration, and of corresponding value.

Of the swords, one is said, through family tradition, to have been presented to the Constable Montmorency by Francis I. It is a model of elegant renaissance art and is the work of Petit, a pupil of Benvenuto Cellini. It has been valued at 50,000 francs. Another sword belongs to Leo X, and bears his name and title engraved on the blade. Another indicates its ownership by a member of the Ximenes family, and another as belonging to Malatesta, Lord of Rimini. Several other swords are known to have belonged to Henry II, Henry IV, and Louis XIII of France, and many more to kings of the Spanish dynasty. The collection contains a series of the swords of justice, used at executions, some of them bearing German inscriptions engraved on their blades, as for instance "Watch and be wary of one who will do you injury." A series of rare Toledo rapiers must not be omitted, many of these having been made for kings of Spain, and illustrative of the tempering of these famous instruments.

Of the bucklers, several are of finest workmanship and design, including an example of the genius of the brothers Negrolì, worked out in high relief, exquisite in artistic treatment, admirable in composition, enriched with damascenery and gilding, which may be considered priceless.

One of the brigandines, a species of armor formed of steel scales attached to green velvet, with an inner lining of chain armor, belonged to Amadeus VI, Count of Savoy, ancestor of Victor Emmanuel. The present King of Italy lately bought, it is said, a similar relic of the time for 14,000 francs, much inferior to this in condition.

Among the gauntlets are pairs belonging respectively to Henry VIII of England and Philip II of Spain.

In pistols and arms of this category there are pairs once belonging to Henry II of France; also arquebuses serving as models of ivory incrustation, of priceless value. Among the stirrups one pair bears the monogram of Diana de Poitiers. Other pieces of nearly equal importance are too numerous to mention. The catalogue of this collection still remains unfinished. Judging by what I have seen of it, projected on a large scale, it will take time to complete it, and when done it will form a volume of considerable size.

I have to add that Mr. Riggs intends to present, along with his collection of arms and armor, a fine collection of stained glass containing many rare specimens. The value of the Riggs collection may be stated in round numbers at \$1,000,000.

\* \* \* \* \*

Very truly,

J. DURAND.

General WM. B. FRANKLIN,  
*Commissioner-General.*

---

OFFICIAL JOURNAL OF THE FRENCH REPUBLIC, DECEMBER 11, 1889.

[The room devoted to the collection of Mr. Riggs.]

ARMOR FOR MAN AND HORSE.—ARMOR OF THE DUKE OF ALVA.—LEG ARMOR OF THE FOURTEENTH CENTURY.—CASQUE OF THE VISCONTIS.—CASQUE (BOURGUIGNOTTE) OF DUKE FERDINAND OF TYROL.—BUCKLER AND CASQUE OF THE ROSMINIS OF UDINA.—SWORD SAID TO HAVE BELONGED TO FRANCIS I.—RAPIER OF THE XIMENES.—PROBABLE DEPARTURE OF THE COLLECTION FOR THE UNITED STATES.

The second room, devoted to ancient arms and arms of luxury, is that which contains the valuable collection of Mr. Riggs. This amateur had already exhibited a collection of arms at the Palace of the Trocadéro in 1878, which specially attracted the attention of visitors. A whole room, and one of the largest of the Palace of the Ministry of War, does not suffice to hold all the riches of this large collection. In fact, we have under our eyes only about three-fifths of the collection of Mr. Riggs. We shall not speak of the continued efforts it has cost this amateur to collect so great a number of rare arms and suits of armor, nor of the immense money value it represents; all the world understands this. But what one realizes less is

the trouble, the labor, which an exhibition of this kind involves, to have it properly prepared by skilled workmen, to classify it, label it, etc. Hundreds of pieces require unintermitted work for many months. Mr. Riggs is entitled, then, to the thanks of all who have visited his exhibit, and they are numerous. Among the many tasks which the installation of this room imposed, we have intentionally omitted to speak of the preparation of a catalogue. This is because, unfortunately, from circumstances beyond his control, Mr. Riggs was unable to realize this desideratum. Therefore, in calling attention to some of the most interesting articles, we shall give a little more detailed description than we have done in the preceding room. We begin our list with the armor, and we shall continue it with the casques, bucklers, etc. We shall call attention only to three or four of the rarer types of these series.

In the middle of the room was a beautiful suit of armor, both of parade and service, for man and horse. This suit belonged to the Grand Duke Marie-Antoine de Colonna, Duke of Polliano and Jagliacozzo, Grand Constable of the Kingdom of Naples in the sixteenth century. It is engraved in arabesques of flowers and cartouches of Roman emperors, and bears on every piece the arms of the Colonnas, as well as the Grand Constable's truncheon. The horse's armor consists of a hog-backed crupper, of a jointed breast-plate, of flank pieces, of a service saddle with ornaments in colors of the Colonnas, stirrups of iron plated with copper and covered with a lining of sole-leather, and a spiked chanfrin (head-piece) with its barbe of horsehair, and lastly of a bridle with a bit with long branches and reins covered with plates of chased steel. This valuable historic suit of armor is completed by an emblazoned shield. It was found by Prince Soltikoff in the town hall of Botzen, in the Tyrol, and was formerly a part of the Ambras collection.

In one of the central glass cases were placed the two following suits of half-armor: (1) A suit of half-armor repoussé, chased and damascened in gold and silver, having belonged to Alvarez de Toledo, Duke of Alva, Governor of the Low Countries. This suit of armor, the work of the celebrated artist Giulio Piccimino, and given to the Duke of Alva by Philip II of Spain, was saved from the fire of the Chateau of Lemos. (2) An Italian suit of half-armor of the first half of the sixteenth century, chased and gilt all over in imitation of stuffs of that period. A portrait of Lorenzo de Medici in the Pitti Palace represents him wearing this armor.

A large glass case contained other suits of half-armor: one which is said to have belonged to Henry IV; another repoussé in white and black ground, ornamented with flowers and leaves (an engraving in the "Cabinet of Prints" represents Henry IV wearing this armor); two German suits of armor (called Gothic) of the fifteenth century, in polished iron, ornamented with heavy flutings, partly open work (the helmet, with long neck-pieces, is forged in a single piece, and the gauntlets are furnished with points); a German service-suit of armor of the first half of the sixteenth century, of polished steel set in black, with two blazoned chanfrins, came from the Chateau of Hohenaschan in Bavaria, and belonged to the Count of Freiberg, commanding the Bavarian forces; two suits of fluted half-armor of the time of Maximilian I, bearing the stamp of the Nuremburg manufactory. A piece very interesting in an archæological point of view, for it shows the transition from chain to plate armor, is a greave (leg-piece), probably French, of the last years of the fourteenth century. The plates of the cuisses (thigh-pieces) are fastened together by heavy mailles (iron rings). The poulaine (shoe) is fastened to the greave by a turning rivet, and its end can be raised by a chain fastened to the knee-piece.

Two large wall glass cases of more than six metres in length (about six yards and a half) contained, on the shelves, one above the other, a whole series of casques arranged in chronological order. Other casques, and the most beautiful, were placed in the central glass cases. A spur casque (morion), gilt on both sides, with

the same subject richly repoussé, gilt and damascened. An Italian casque of the sixteenth century, of heroic shape, with indented crest; the sides are ornamented with fleurs-de-lis, from which spring boughs with branches in leaf, and in front the serpents of the Visconti. An Italian casque (*bourguignotte*) with high crest, of the sixteenth century; the comb (*peigne*) is ornamented with medallions of warriors resting, and sea-horses repoussés, cut and embossed on a gilt ground; the umbril (modern visor) and neck-guard are decorated with chased fillets and gilt masks of the period, fine Milanese work. A German casque (*bourguignotte*) of the Grand Duke Ferdinand of Tyrol, afterwards Emperor of Germany, entirely covered with fillets chased in relief and gilt, bearing the initials of the Duke, and the crown and eagles of the Tyrol. The rest of this suit of armor is preserved at Vienna.

In the celebrated Ambras collection, an Italian full-dress casque (*bourguignotte*) of the sixteenth century, ornamented with gilt chasings in imitation of the brocade of that period, and bearing a crest in form of gilt and repou sé foliage; this piece formed part of a suit of armor belonging to the Medicis, who own the collection. A Spanish service casque (*armet*) of the sixteenth century, which belonged to the Duke of Alva, chased and gilt, and bearing crowns under which is a monogram spelling "Alvares de Toledo;" it was found, in excavating, in one of the chateaux of the Duke of Alva. A knight's casque (*armet*) of the sixteenth century, French, with double visor, chased and gilt in fillets of trophies of arms, interspersed with dolphins.

Here is a buckler called "rotella," in repoussé iron, chased and embossed. The principal subject, in bas-relief of the purest style, represents St. George mounted, piercing the dragon with his lance; in the distance, on one side, the figure of a queen kneeling, and on the other, two warriors dressed in oriental costume; a landscape and a view of a city in the background. All the figures, in bold relief and chiseled with the greatest care, are enriched with gilding, and are finely embossed, particularly in the draperies and accessories: the landscape and the buildings are enriched with gold and silver, and are in part damascened. The outer edge, of great beauty, incloses in graceful curves trophies of arms and four medallions with allegorical figures. This superb buckler of Italian workmanship, by the brothers Negrolì, armorers of the manufactory of Milan in the sixteenth century, comes from the family of Rosmini of Udine, whose arms it bears (0.60 cent. in diameter, about two feet). A casque called "Spur Morion," in repoussé iron, chiseled and embossed in the same style as the buckler above described, and from which it ought not to be separated, as it forms part of the same suit of armor, and resembles the buckler, not only in ornamentation, but in design, in subject, in workmanship, and in origin. The two subjects which decorate them are the same; that is to say, St. George in different attitudes slaying the dragon, a subject repeated again in the charming plume-holder. Below we find the stamp of the brothers Negrolì, a skull and two cross-bones.

A German round buckler of the sixteenth century, ornamented in the center with the head of a lion repoussé, chased and gilt, on a dark dotted background. The outer edge is also chased and gilt in arabesques. An Italian buckler of the sixteenth century in repoussé iron, chased and bearing traces of gilding and damascening. The principal subject is Mucius Scævola before Porsenna, surrounded by numerous persons of importance. The outer edge is repoussé with a frieze of scrolls, showing dragons and allegorical figures. An Italian buckler called "rotella" of the sixteenth century, in polished iron, and entirely repoussé in bold relief, divided into sections, ornamented with chimeras, trophies of arms, and crowns. The umbo [centre], having a spike chased with leaves, is surrounded by branches and masks, with emblazoned escutcheon—a masterpiece of repoussé work. An Italian buckler of the sixteenth century called "rotella," all repoussé, divided into sections, framed by leafy scrolls, joined together by gilt ribbons. In the centre the figure of Min-

erva seated and holding Victory is surrounded by trophies of arms, the whole finely embossed. Four medallions of warriors and busts of women, also embossed, complete the ornamentation in the most perfect taste.

Let us pass to the swords. The specimens of the sixteenth and seventeenth centuries, in all the collections that we have seen, are so well conceived and so elegant that they charm the eye and make one wish to wield them. The specimens which follow are of the first rank. Dress sword said to have belonged to Francis I. Its pommel pear-shaped, flattened, incloses in a chased frame a pomegranate with gilt seeds, with side pendants of fruit in open work. The upper part is cut in medallions of warriors, after the antique, on a ground plated with gold, and the neck of the pommel is ornamented with horned masks chiseled in bas-relief on a gilt ground. The handle, joined to the pommel by acanthus leaves, falls on the sheath in lobes, with pendants of silver tears. The bars astride, chased in acanthus leaves, and in lobated grooves, sprinkled with gold beads and silver flowerets, have only one *pas d'âne* (guard), terminating in a fool's head, with bolts on the chin, and capped with a gilt circle and a diadem; the cross-bar of the guard is terminated by armless busts of warriors, after the antique, wearing heroic casques. The parade cross-bar terminates in a woman's body, wearing a diadem, and bearing in her arms two chased and gilt bucklers. The guard is connected with the shoulder by masks in bas-relief, cut in the solid, and terminated by fleurs-de-lis in gold. The large two-edged blade, with short shoulder, bears the inscription "Petit fecit" [Petit manufactured]. A tradition of the Montmorencys, from whom comes this splendid weapon, relates that it was given by Francis I to Anne of Montmorency, Grand Constable of France. An armorer of the name of Petit, attached to the royal saddlery of the King, and a pupil of Benvenuto Cellini, afterwards became armorer of Charles V and of Philip II of Spain. The masterly composition of this weapon is essentially French, and the masks alone seem to indicate the Italian influence of the school of Cellini.

A German sword of the end of the fifteenth century, the blade slightly grooved, and bearing the following inscriptions, engraved on a black ground in old German text; they may be translated as follows: "Look well and watch: look out for him who would injure you. Want of faith is in fashion. Take care, avoid me: if I strike you I cut you in pieces." We see on the shoulder, finely chiseled, the face of the Virgin and that of Saint Theresa. The guard, twisted into an S, bears the inscription, "A new saint called 'Brigand,' to whom all the world pays homage." The handle, of smooth wood, is terminated by a pommel in chiseled iron.

Long sword, beginning of the sixteenth century, of Pope Leo X, all of blued iron. The flat blade, slightly grooved, bears, chased on a gold ground, the inscription: "Leo X, Pont. Max, III," and the arms of the Medici, surmounted by a tiara; then on the shoulder, on one side, St. Peter, and on the other St. Paul. The ends of the cross-bars, the ring of the guard, and the top of the pommel of a quadrangular shape, are also chased and gilt. An historic sword of great value.

A Spanish basket-hilt rapier of the sixteenth century. This beautiful blade, 35 metres long (about four feet, five inches) grooved in its whole length and open-worked, bears the name of the famous armorer of Toledo, Francisco Ruiz; the basket-hilt of reversed carving, and the roundel (interior plate) are in fine open work, and chased with flowers and foliage interlaced; the guard, the handle, and the pommel are also in chased steel, the whole having preserved its original polish. This beautiful sword is accompanied by its dagger, called "Left Hand," of similar workmanship, and having a blade cut in projecting ribs and in open-work grooves. All the parts of these two pieces bear a heraldic animal, which appears to be a wolf, the arms of the Ximenes, whose archives state that these admirable weapons were a gift of the King of Spain.

An Italian two-handed sword, called "Espadon," beginning of the fifteenth century, with a long blade, grooved on the shoulder, and bearing the emblem of the

wolf; the guard of long, straight cross-bars, with bossed ends, is completed by two sub-guards supported on the ridge of the blade; the pommel is in flattened pear shape; the handle of hardened leather, stamped in flowers and foliage, bears the three coats-of-arms of the Malatesta, Lords of Rimini. A sword remarkably well preserved, and procured from the descendants of the family.

A very large two-handed German sword of the sixteenth century; the guard bent back, and terminated by eagles' heads, is chiseled and gilt on a blue ground, as well as the pommel. The handle, covered with velvet and leather, has preserved its yellow and black trimmings. The blade, the shoulder of which is trimmed with leather, bears, chased and gilt on a black background, the eagle and imperial crown of Austria.

We close here our visit to the collection of Mr. Riggs. Many other objects of art might be cited,—superb wheel-pistols of the sixteenth century; arquebuses, with stocks all inlaid with ivory; powder-flasks, halberds, partisans, etc.

We have not wished to, and we could not, give more than an idea of this admirable collection. Why must all these beautiful arms, borne by so many valiant soldiers, leave us forever? Mr. Riggs, who is of American nationality, intends to present this beautiful collection to his fatherland. Negotiations are in progress for preparing for these arms a home worthy of them at Washington. This is, therefore, one of the last, perhaps the last time, that our amateurs will have the opportunity to admire at Paris all these souvenirs of a glorious past.

## APPENDIX A.

---

### DECREE OF THE PRESIDENT OF THE FRENCH REPUBLIC.

---

#### DECREE OPENING THE UNIVERSAL EXPOSITION OF 1889 AT PARIS.

The President of the Republic, on the report of the Minister of Commerce, decrees:

ARTICLE 1. A Universal Exposition of the Products of Industry shall be opened in Paris May 5, 1889, and closed October 31 following.

ART. 2. A later decree will determine the conditions under which the Universal Exposition shall be held, the rules to which the articles admitted shall be subjected, and the different kinds of products which may be admitted.

ART. 3. The Minister of Commerce is charged with the execution of this decree.

JULES GRÉVY,  
*President of the Republic.*

Done at Paris, November 8, 1884.

MAURICE ROUVIER,  
*Minister of Commerce.*

#### AGREEMENT WITH THE SOCIETY OF GUARANTEE.

Between the undersigned,—

1. The Minister of Commerce, etc., for and on account of the State, of the first part; 2. The Prefect of the Seine, in the name of the city of Paris, of the second part; 3. M. Albert Christophle, for and on account of the Society of Guarantee to be formed for the Universal Exposition of 1889, of the third part.—

The following has been agreed upon:

ARTICLE 1. The expenses of all kinds on account of the Universal Exposition, etc., are limited to the sum of forty million francs.

A further sum of three million francs shall be set apart to be used for unforeseen works, or for modifications of plans in course of execution.

ART. 2. To meet these expenses,

(a) The Minister of Commerce, in the name of the State, agrees to contribute seventeen million francs.

(b) The Prefect of the Seine, in the name of the city of Paris, agrees to contribute eight million francs.

(c) To provide the amount constituting the difference between the contributions of the State and the city of Paris, *i. e.*, twenty-five million francs, and the forty-three million required for the works and expenses of the Exposition, the founders of the Society of Guarantee agree to provide under the conditions hereinafter set forth a sum which can, under no circumstances, and whatever may be the final total of expenses, exceed eighteen million francs.

ART. 3. The contributions of the State and city of Paris shall be first employed to meet the expenses of the Exposition, and no call shall be made upon the Society of Guarantee until these contributions are exhausted.

\* \* \* \* \*

ART. 5. In case the receipts of the Exposition, added to the subvention of twenty-five million to be furnished by the State and city of Paris, should exceed the amount of expenses of all kinds of the said Exposition, this excess shall be considered as profits, and divided between the State, the city of Paris, and the Society of Guarantee, in the proportion of their respective contributions.

ART. 6. In case, in consequence of extraordinary circumstances, the expenses of all kinds which the Exposition of 1889 may entail, shall exceed forty-three million francs, the excess shall be paid by the State, which, to compensate itself, shall have the benefit of all receipts exceeding eighteen million francs, before any payments<sup>+</sup> can be made to the city of Paris or to the Society of Guarantee, and this until the<sup>3</sup> said excess of expense has been paid.

ART. 7. The direction and superintendence of the Universal Exposition of 1889 belongs to the State.

A Commission of Control and Finance, composed of members representing the State, the city of Paris, and the Society of Guarantee, in proportion to their respective contributions, shall be appointed.

The members of this Commission shall be named by decrees of the President of the Republic, inserted in the Official Journal. The Minister of Commerce, etc., shall preside.

This Commission shall administer and control the Society of Guarantee. It shall be consulted by the Minister of Commerce, etc., on all questions bearing on the financial management of the Exposition. Nothing shall be done without its assent in any matter relating to revenue of any kind to be collected on account of the Exposition.

ART. 8. No free tickets shall be issued, except those strictly personal, distributed among the exhibitors and employés.

In case during the Exposition free tickets should be issued, these tickets shall, as regards the Society of Guarantee, be considered as paying tickets, and be credited to the Society as such.

The Government expressly reserves to itself the right to decide if rent shall or shall not be paid by exhibitors for the space allotted to them.

The price of entrance must not exceed that of the expositions of 1867 and 1878.

ART. 9. This agreement shall not be considered in force as regards the State or the city of Paris, until it has received legislative sanction, nor as regards the Society of Guarantee until the capital of eighteen millions has been fully subscribed.

Done in triplicate at Paris, March 27, 1886.

The above text examined and approved March 29, 1886.

EDOUARD LOCKROY.

POUBELLE.

ALBERT CHRISTOPHLE.

#### LAW OF JULY 6, 1886.

ARTICLE 1. The agreement made between the Minister of Commerce and Industry representing the State, the prefect of the Seine representing the city of Paris, authorized by a vote of the municipal council March 31, 1886, and the governor of the Credit Foncier acting for account of the Society of Guarantee to be formed for the Universal Exposition of 1889, is approved.

No expense can be incurred beyond the sum of forty-three millions (francs) as provided by Article 1 of the said agreement, unless it has been previously authorized by special law.

The rent which may be charged to exhibitors on account of space allotted them must not enter into the calculation of the receipts referred to in Article 5 of the agreement, except so far as may be necessary to make up a total of eighteen million francs.

ART. 2. The State shall contribute to the expenses of the Exposition of 1889 by a grant of seventeen million francs.

\* \* \* \* \*

In case the expenses shall not reach the sum of forty-three millions referred to in Article 1 of the Agreement, the amount saved shall be credited to the State alone.

\* \* \* \* \*

ART. 5. The receipts and expenses of the Exposition shall be managed by agents of the Treasury, and submitted to the control of the Board of Audit (Cour des Comptes.)

The subvention granted by the City of Paris, as well as the receipts coming from the management of the Exposition, shall be turned into the Treasury. \* \* \*

ART. 6. Proposals of every kind in reference to the construction, the fitting up, and the working of the Exposition, shall, before their execution, be submitted for the approval of the Minister of Commerce, etc.

ART. 7. A detailed account of the receipts and expenditures of the Exposition shall be presented to the President of the Republic in a report, which shall be published, and distributed to the Senate and Chamber of Deputies.

Every year a report, published under the same conditions, shall make known the progress of the works, and the expenses incurred and paid.

## APPENDIX B.

### FRENCH LAWS AND REGULATIONS.

#### PARIS INTERNATIONAL EXHIBITION, 1889.

ARTICLE 1. The convention concluded by the Minister of Commerce and Industry representing the state, the prefect of the Seine, representing the city of Paris, authorized by the decision of the municipal council of March 31, 1886, and the governor of the Credit Foncier, acting for the Guarantee Association, which is to be established for the World's Exhibition of 1889, is hereby approved.

No expense shall be incurred beyond the amount of 43,000,000 francs, for which provision is made by Article 1 of this convention, unless provision shall previously have been made therefor by a special law.

Such proceeds as may accrue from payments required of exhibitors for the space assigned to them shall not enter into the computation of the receipts provided for by Article 5 of the convention, beyond the amount necessary to make the total receipts 18,000,000 francs.

ART. 2. The state shall contribute to the expenses of the Exhibition of 1889 by an appropriation of 17,000,000 francs.

The appropriation shall be charged (to the amount of 12,693,635 francs) to the loan of 80,000,000 francs made to the state by the Bank of France, in pursuance of the convention of March 29, 1878, approved by act of the 30th of June following.

In case the expenses shall amount to less than the sum of 43,000,000 francs, which is provided for by Article 1 of the convention, the saving effected shall inure to the benefit of the state alone.

ART. 3. The sum of 12,693,635 francs shall be allowed by way of an extraordinary appropriation, to the Minister of Commerce and Manufactures, on the fiscal year 1886, over and above the allowances made by the financial act of August 8, 1885. This allowance shall form a special chapter entitled "No. 43. Amount contributed by the State to the Expenses of the Exhibition of 1889."

This extraordinary appropriation shall be paid from the source mentioned in the foregoing article.

ART. 4. The appropriations necessary for the expenses of the years 1887, 1888, 1889, and the following, shall be made, within the limits of the allowance above fixed, by the annual appropriation laws.

Nevertheless, during the recess of the chambers, in pursuance of Article 5 of the act of December 14, 1879, such appropriations may be made by decrees approved by the council of ministers. These decrees shall be submitted to the chambers for their sanction within the first fortnight after their next meeting.

ART. 5. All moneys for the Exhibition shall be received and expended by the officers of the treasury, and shall be submitted to the court of accounts for inspection.

The subsidy allowed by the city of Paris, together with all receipts accruing from the World's Exhibition of 1889, shall be paid into the treasury as funds for public expenses, according to Article 13 of the act of June 6, 1843.

ART. 6. Plans of all kinds relative to the construction, arrangement, and management of the Exhibition of 1889 shall, before being put into execution, be submitted to the Minister of Commerce and Manufactures for his approval.

ART. 7. A detailed statement of the receipts and expenditures of the World's Exhibition of 1889 shall be presented to the President of the Republic in a report which shall be published and distributed among the senators and members of the Chamber of Deputies.

A report published in the same way shall annually make known the state of advancement of the work, and shall furnish a statement of the expenses incurred.

ART. 8. The instruments designated in Article 1, paragraph 9, of the act of February 28, 1873, and approved by the Minister of Commerce and Manufactures, in pursuance of this act, shall be subjected to a fixed duty of 3 francs. This act having been adopted by the Senate and Chamber of Deputies, shall be executed as a law of the state.

---

#### MINISTERIAL ORDER OF AUGUST 26, 1886.

##### *General Regulations.*

ARTICLE 1. In pursuance of the decrees issued by the President of the French Republic, at the suggestion of the Minister of Commerce and Manufactures, and of the Minister of Public Instruction, Fine Arts, and Worship, an International World's Exhibition shall be opened at Paris on the 5th day of May, 1889, and shall be closed on the 31st of October following.

No production shall, however, be admitted in the Exhibition after April 1, 1889.

ART. 2. This Exhibition shall receive works of art and productions of the industry and agriculture of all nations.

It shall be held principally in the Champ de Mars, in the unoccupied space between Lamotte-Piquet avenue and the square situated near the quay. It may extend—

(1) On the left bank of the Seine, over the causeway and the steep slopes of the quay, in the parts comprised between the Champ de Mars and the Esplanade des Invalides, and over the Esplanade des Invalides.

(2) On the right bank of the Seine, in the Trocadéro Park and the available parts of the Trocadéro Palace, in the Palace of Industry, and on the grounds situated between that palace and the Seine.

ART. 3. *General Organization.* An advisory commission, consisting of 300 members, and styled the "Grand Council of the World's Exhibition of 1889," shall be appointed under the presidency of the Minister of Commerce and Manufactures, who shall likewise be the Commissioner-General of the Exhibition.

ART. 4. The grand council shall be convoked and presided over by the minister, who shall fix the order of its daily proceedings.

ART. 5. It shall be subdivided into twenty-two advisory committees, to wit: The committee on superintendence and finance, on contested claims, buildings, festivals and ceremonies, transportation, the fine arts, agriculture, colonies and countries under protectorate, military and maritime exhibitions, education, the liberal arts, hygiene, the third group (furniture, etc.), the fourth group (textile fabrics, wearing-apparel, etc.), the fifth group (extractive, raw, and manufactured productions), the sixth group (mechanical instruments and processes in mechanical industry), the seventh group (articles of food), electricity, the press, musical and theatrical pieces, congresses and conferences, the retrospective exhibition of work.

ART. 6. The Advisory Committee on Superintendence and Finance, which is to be appointed by a decree of the President of the Republic, shall be presided over by the Minister, or, in his absence, by one of the three vice-presidents, each in his turn.

It shall be convoked by the Minister, who shall fix the order of its daily proceedings.

ART. 7. This commission shall be consulted by the Minister on all questions having reference to the financial management of the Exhibition. Its advice shall be acted upon in all cases in which questions are concerned relating to receipts of all kinds to be collected on the occasion of the Exhibition.

ART. 8. The other committees may subsequently be completed by the addition of new members, to be appointed by ministerial orders.

Their chairmen shall be appointed by the Minister.

Their vice-chairmen and secretaries shall be designated by the committees themselves, subject to the approval of the Minister.

They may be subdivided into sub-committees, with the approval of the Minister, who shall designate the new chairmen.

ART. 9. The Minister shall lay suitable matters directly before the committee and sub-committees.

ART. 10. The Directors-General, who are to be appointed in the manner provided by the decree of July 28, 1886, shall be charged, each in that which concerns him, with the preparation and submission to the Minister, Commissioner-General, of the plans relative to the construction, arrangement, and management of the Exhibition. They shall be admitted to all sessions of the Committee on Superintendence and Finance, and to the sessions of committees having charge of matters connected with their respective branches. They shall at these sessions have the right of discussion, but not that of voting.

#### *Admission and Classification of Productions.*

ART. 11. A departmental committee, appointed by the Minister of Commerce and Manufactures, shall be instituted in each department of the French Republic. The duties of this commission shall be—

(1) To make known throughout the department the regulations concerning the organization of the Exhibition, and to distribute the blank forms of applications for admission, together with all other documents relating to the Exhibition.

(2) To furnish, with as little delay as possible, the names of the principal artists, agriculturists, and manufacturers whose admission to the World's Exhibition shall seem particularly calculated to promote the success of that enterprise.

(3) To promote the exhibitions of industrial, agricultural, and horticultural productions of the department.

(4) To promote and organize, if deemed desirable, the collective grouping of similar productions of the department, and to accredit a delegate, whose duty it shall be to represent each collective exhibition.

(5) To prepare, if this shall be thought desirable, by way of subscription or otherwise, the establishment of a special fund, designed to facilitate the examination and study of the World's Exhibition by a certain number of master-workmen, workmen, and cultivators of the department.

ART. 12. Foreign commissions appointed at the request of the French Government are urged to send their delegates with as little delay as possible.

The duty of each delegate shall be to discuss such questions as may interest his countrymen, and especially such as relate to the distribution of the entire space among the different countries, and to the method of installation of each national section. Consequently, the Minister, Commissioner-General, will not correspond

directly with foreign exhibitors, and all productions presented by foreign producers shall be admitted only through the agency of their respective commissioners.

ART. 13. The departmental committees appointed by the Minister and the foreign commissioners regularly accredited to him shall enter into direct relations with the Director-General of management.

The foreign commissioners shall receive from him all suggestions and plans with regard to the most advantageous installation of the productions of their nations, together with all information concerning the conditions of general circulation and of public order to which they shall be obliged to conform.

They shall have recourse to him for all changes of space from country to country.

ART. 14. In each section devoted to the productions of the same nation, the articles exhibited shall be divided among the nine groups following:

First Group: Works of Art (Class 1 to 5).

Second Group: Education, Instruction, Materials and Processes used in the Liberal Arts (Class 6 to 16).

Third Group: Furniture, etc. (Class 17 to 29).

Fourth Group: Textile Fabrics, Wearing Apparel, etc. (Class 30 to 40).

Fifth Group: Extractive Arts, Raw and Manufactured Products (Class 41 to 47).

Sixth Group: Apparatus and Processes used in Mechanical Industry—Electricity (Class 48 to 66).

Seventh Group: Food Products (Class 67 to 73).

Eighth Group: Agriculture, Vine Culture, and Pisciculture (Class 74 to 77).

Ninth Group: Horticulture (Class 78 to 83).

Each of these groups shall be divided into classes, according to the system of general classification appended to these regulations (Annex No. 1).

That document shall comprise for each class a compendious enumeration of the articles which it is to include.

ART. 15. A methodical and complete catalogue of the productions of all nations shall be prepared in the French language. This catalogue shall state the places to be occupied by said productions in the halls, the parks, or the gardens, together with the names of the exhibitors.

Each nation shall, moreover, have the right to prepare, at its own expense, but only in its own language, a special catalogue of the productions exhibited in its section.

ART. 16. Neither French nor foreign exhibitors shall be obliged to pay any rent for the space occupied by them in the Exhibition.

They shall defray all the expenses of installation and decoration in the halls, parks, or gardens. These expenses shall in the main comprise the furnishing and putting in place of the floors, and the canvas coverings or ceilings in the halls, and also of the special earth-works and trees or plants set out in the parks or gardens in the vicinity of and within the limits of the special buildings authorized by the Minister, Commissioner-General.

The floors shall be constructed in good condition for use in all the interior passages through which the public is to pass.

ART. 17. No work of art and no article exhibited in the halls, parks, or gardens shall be drawn, copied, or reproduced in any manner whatever, without an authorization from the exhibitor, bearing the visa of the Director-General of management.

The Director-General of management may, however, authorize the reproduction of views of sundry articles together.

ART. 18. No work of art and no article exhibited can be withdrawn before the close of the Exhibition, without special authorization.

ART. 19. Within the time allowed, and on the terms provided by the act of May 23, 1868, relative to the guaranty of inventions susceptible of being patented, and

of designs for manufactured articles, exhibitors shall enjoy the rights and immunities granted by the aforesaid act. (Annex No. 2.)

ART. 20. In pursuance of the decree issued on the 25th of August, 1886 (Annex No. 3), the Exhibition is to be, in fact, a bonded warehouse; consequently articles exhibited are to be exempted from the payment of city dues and from search by the municipal authorities of Paris, and also from the payment of duties at the French custom-house and from search there.

ART. 21. Subsequent regulations shall in due time determine the methods of shipment, of reception, and of installation of the productions, the method of admission to the premises of the Exhibition, and the formation of the international jury on premiums, whose duties shall begin as soon as the Exhibition is opened.

*Special Provisions Relative to Works of Art.*

ART. 22. The works of French and foreign artists executed since May 1, 1878, shall be admitted to the Exhibition.

ART. 23. Such works shall comprise the seven kinds below mentioned:

- (1) Paintings.
- (2) Drawings: Water-colors, pastels, miniatures, enamel, porcelain, and cartoons, not including those which represent subjects of ornamentation only.
- (3) Sculpture.
- (4) Engravings on metals and precious stones.
- (5) Architecture.
- (6) Engraving.
- (7) Lithography.

ART. 24. The following shall be excluded:

- (1) Copies, even such as reproduce a work in a style different from that of the original.
- (2) Unframed paintings or drawings.
- (3) Sculptures in unbaked clay.

ART. 25. It shall be the duty of a special jury to decide concerning the admission of works of art.

ART. 26. The requirements to be fulfilled for applications for admission shall be fixed by subsequent regulations. Another regulation shall also indicate the method of shipment and of reception of works of art.

ART. 27. Decision shall be given hereafter with regard to the number and nature of the premiums to be awarded, and also concerning the appointment of an international jury for the award of premiums.

*Special Provisions Relating to Industrial and Agricultural Products.*

ART. 28. All manufactured and agricultural productions shall be admissible to the Exhibition, with the exceptions and reservations mentioned in the following article:

ART. 29. Detonating and fulminating articles and, in general, all matters regarded as dangerous, shall be excluded.

Spirits or alcohols, oils and essences, corrosive substances, and in general any articles that may injure other productions with which they may come in contact, or that may incommode the public, shall not be received otherwise than in solid vessels suitable for containing them, and of small dimensions.

Percussion caps, fireworks, chemical matches, and other similar objects shall not be received. Imitations thereof may, however, be received, provided that they contain no inflammable matter.

ART. 30. Exhibitors of injurious productions or those calculated to impair the health of human beings must, at all times, conform to such precautionary measures as may be prescribed.

ART. 31. The Director-General of management may at all times cause the removal of all articles, no matter what may be their origin, which, owing to their nature and their appearance, may appear to be objectionable or incompatible with the object or the decorum of the Exhibition.

ART. 32. French applications for admission must be drawn up according to the form appended to these regulations. (Annex No. 4.)

Applications from Paris and the department of the Seine are to be sent directly to the Minister of Commerce and Manufactures, Commissioner-General, No. 35 Quai d'Orsay, Paris, or to the Director-General of management, No. 80 Rue de Varenne.

Those from the departments are to be received by the departmental committees, who will forward them to the same addresses.

All applications of French citizens, thus centralized, shall be submitted by classes to the examination of committees on admission, appointed by the Minister, and from whose decisions there shall be no appeal. It is essential that all applications be handed in as speedily as possible.

The printed blank forms of applications for admission shall be furnished to the public gratuitously, at the following places:

(1) At Paris: At the Ministry of Commerce and Manufactures, No. 25 Quai d'Orsay and No. 244 Boulevard Saint Germaine; at the buildings of the Management of the Exhibition (Avenue de la Bourdonnais and Rue de Varenne, No. 80); at the Tribunal, and at the Chamber of Commerce.

(2) In the departments: At the prefectures, subprefectures, chambers of commerce, tribunals of commerce, advisory chambers of arts and manufactures, and at the locations of the departmental committees, as well as at such places of distribution as may be designated by the said committees.

ART. 33. Constructors of apparatus requiring the use of water, gas, or steam must state, either at the time of making their application for admission or through the foreign delegates, the quantity of water, gas, or steam that they require.

Those desiring to set machinery in motion shall state the exact velocity of such machinery and the motive power which it will require.

ART. 34. Water, gas, steam, and motive power for the machinery galleries shall be furnished gratuitously.

The power shall be taken from the vehicle of general transmission.

The establishment of all intermediate transmissions shall be at the cost of exhibitors.

#### *Provisions Relative to Management.*

ART. 35. Articles shall be exhibited in the name of the signer of the application for admission. From this requirement there shall be no deviation.

ART. 36. Exhibitors are authorized to enter, after their own names or the names of their firms, the names of such co-operators of all kinds and all grades as have contributed to the utility of the articles exhibited.

ART. 37. Exhibitors are expressly requested to state the market price of the articles exhibited, both for the purpose of facilitating the labor of the jury and of edifying visitors.

ART. 38. Articles sold shall not be removed before the close of the Exhibition, unless by special authorization.

ART. 39. The state shall take measures to protect articles exhibited from all injury, but it will in nowise be responsible for any accidents, or for fire, or for any damage that they may suffer, be the cause thereof what it may. Exhibitors shall be at liberty to insure their goods directly, at their own expense, if they shall think proper to do so.

ART. 40. A general surveillance shall be established in order to protect goods from theft and embezzlement.

Foreign commissions shall have full control as regards the custody of their respective sections. The officers designated by them for the performance of this duty shall be commissioned by the Commissioner-General. They shall wear a uniform or a distinctive badge; they may, under all circumstances, apply for assistance to the French officers and policemen who shall walk through the passages open to the public, or who shall be stationed there.

In the French section, the exhibitors of each class shall make arrangements for the organization of a collective system of guardianship, independent of the general surveillance. The special officers of this class shall be commissioned by the Minister, Commissioner-General: they shall wear badges indicating the number of the class whose rooms they are to watch.

ART. 41. It is expressly understood that the state disclaims all responsibility for any thefts and embezzlements that may be committed.

ART. 42. No article shall be advertised by means of hand-bills, prospectuses, etc., within the Exhibition, by exhibitors, holders of concessions, or any other person, without regular authorization and prepayment of such fees as may be required.

ART. 43. All communications relative to the Exhibition must be addressed to the Minister of Commerce and Manufactures, Commissioner-General, No. 25 Quai d'Orsay, Paris, and must bear on the envelope the words "World's Exhibition of 1889." (Exposition Universelle de 1889.)

ART. 44. Both French citizens and foreigners, by becoming exhibitors, declare by that very fact that they adhere to the provisions contained in Articles 11-42 of these regulations.

EDOUARD LOCKROY,

*Minister of Commerce and Manufactures, Commissioner-General.*

PARIS, August 26, 1886.

#### PROTECTION OF INVENTIONS.

*Law of May 23, 1868, relating to the guaranty of inventions capable of being patented and of industrial designs, which shall be admitted to public expositions authorized by the Government throughout the whole Empire.*

ART. 1. Every Frenchman or foreigner, author of a discovery or invention capable of being patented under the provisions of the law of July 5, 1844, or of an industrial design which may be registered conformably with the law of March 18, 1806, or his representatives may, if admitted to a public exposition authorized by the Government, cause the delivery to them, by the prefect or the sub-prefect of the department or arrondissement in which the Exposition is opened, of a certificate describing the object exhibited.

ART. 2. This certificate assures to its receiver the same rights which a patent of invention or a legal registration of an industrial design would grant, dating from the day of admission and extending to the end of the third month following the closing of the Exposition, without prejudice to the patent which the exhibitor may receive or to the registration he may effect before the expiration of this period.

ART. 3. The request for this certificate is to be made within the first month, at very latest, from the opening of the Exposition.

It is to be addressed to the prefecture, or sub-prefecture, and to be accompanied by an accurate description of the thing to be guaranteed, and, if there be occasion, by a plan or drawing of the said article.

The requests as well as the decisions made by the prefect or sub-prefect are to be recorded in a special register, which shall be afterwards transmitted to the department of agriculture, commerce, and public works, and communication of its contents shall be made, without charge, on every request.

The delivery of the certificate shall be free of costs.

## SYSTEM OF GENERAL CLASSIFICATION.

## FIRST GROUP—WORKS OF ART.

## CLASS 1.—OIL PAINTINGS.

Paintings on canvas, panels, and various grounds.

## CLASS 2.—PAINTINGS OF DIFFERENT KINDS AND DRAWINGS.

Miniatures; paintings, in water-colors; pastel and drawings of all kinds; paintings on enamel, earthenware, and porcelain; cartoons for stained glass windows and frescoes.

## CLASS 3.—SCULPTURE AND ENGRAVINGS ON MEDALS.

Statuary, bas-relief, repoussé work and chiseled work. Medals, cameos, engraved stones. Inlaid enamel work.

## CLASS 4.—ARCHITECTURAL DRAWINGS AND MODELS.

Studies and fragments. Representations and plans of buildings. Restorations from ruins or documents.

## CLASS 5.—ENGRAVINGS AND LITHOGRAPHS.

Engravings in black; polychromatic engravings. Lithographs in black, in chalk and with brush; chromo-lithography.

## SECOND GROUP—EDUCATION AND INSTRUCTION—APPARATUS AND PROCESSES USED IN THE LIBERAL ARTS.

## CLASS 6.—EDUCATION OF YOUNG CHILDREN—PRIMARY INSTRUCTION—INSTRUCTION OF ADULTS.

Plans and models of infant asylums, infant schools, orphan asylums, rooms for the care of children and kindergartens; arrangement and furniture of such establishments; appliances for instruction, adapted to promote the physical, moral and intellectual development of the child until the age when he enters school.

Plans and models of city and country school-houses; arrangement and furniture of such establishments. School articles, books, maps, apparatus, models, etc.

Plans and models of schools for adults and for industrial training; arrangement and furniture in such establishments. Articles used in the instruction of adults and in industrial training.

Articles used in elementary instruction in its various branches.

Articles for elementary instruction in geometrical and free-hand drawing.

Articles for the instruction of the blind and of deaf mutes.

Articles made by pupils of both sexes.

Libraries and publications.

## CLASS 7.—ORGANIZATION AND APPLIANCES FOR SECONDARY INSTRUCTION.

Plans and models of establishments for secondary instruction; lyceums for boys and girls, gymnasiums, colleges, industrial and commercial schools. Arrangement and furniture of such establishments.

Collections, classical books, maps, and globes. Articles used in technological and scientific instruction, for instruction in the arts, in drawing, music and singing.

Apparatus and methods used in teaching gymnastics, fencing, and military exercises.

CLASS 8.—ORGANIZATION, METHODS AND APPLIANCES FOR HIGHER INSTRUCTION.

Plans and models of academies, universities, medical schools, practical schools, technical and industrial schools, agricultural schools, observatories, scientific museums, amphitheatres, laboratories for teaching and experimenting.

Furniture and arrangements of such establishments.

Apparatus, collections, and appliances used in higher instruction and in scientific research.

Special exhibitions of learned, technical, agricultural, commercial, and industrial institutions and societies.

Scientific expeditions.

CLASS 9.—PRINTING AND BOOKS.

Specimens of typography: autographic proofs: lithographic proofs, black or colored; proofs of engravings.

New books and new editions of books already known; collections of works forming special libraries: periodical publications,

Drawings, atlases, and albums.

Musical publications.

CLASS 10.—STATIONERY, BOOKBINDING, AND ARTICLES USED IN PAINTING AND DRAWING.

Paper, cards and pasteboards: inks, chalks, pencils, pastels, office furniture and supplies, inkstands, letter-scales, etc., and copying-presses.

Articles made of paper, such as shades, lanterns, flower-pot covers, etc.

Record books, copy-books, albums, and note-books; bindings, movable bindings, cases, etc.

Various articles for washes and water-colors: paints in cakes, pastilles, bladders, tubes, and shells. Instruments and apparatus for use of painters, draughtsmen, and modelers.

CLASS 11.—ORDINARY APPLICATION OF THE ARTS OF DRAWING AND MODELING.

Industrial designs; designs obtained, reproduced, or reduced by mechanical processes. Decorative paintings, lithographs, chromo-lithographs, or engravings to be used in industries. Patterns and models for figures, ornaments, etc.

Molded, stamped, chiseled and carved articles. Cameos, seals, and various articles decorated by means of engraving. Industrial decorative plastic goods made by mechanical process; reductions, etc.

Coins and medals.

CLASS 12.—PHOTOGRAPHIC PROOFS AND APPARATUS.

Photographs on paper, glass, wood, textile fabrics, enamel, etc. Heliographic engravings, lithographic proofs, photo-lithographic proofs, photographic negatives, stereoscopic proofs, and stereoscopes. Enlarged proofs. Photochromy.

Instruments, apparatus, and raw material used in photography. Articles used in photographers' studios.

CLASS 13.—MUSICAL INSTRUMENTS.

Non-metallic wind instruments with simple mouthpieces, with reeds or pipes, with or without air-reservoirs.

Metallic wind instruments, simple, with extensions, with slides, with pistons, with keys and with reeds.

Wind instruments with keyboards; organs, accordions, etc.  
 String instruments, played with the fingers or with a bow, without keyboards.  
 Stringed instruments with keyboards; pianos, etc.  
 Instruments played by means of beating or friction.  
 Automatic instruments: hand organs and bird organs.  
 Separate parts of musical instruments and orchestral appliances.  
 Strings for musical instruments.

CLASS 14.—MEDICINE AND SURGERY.—VETERINARY AND COMPARATIVE MEDICINE.

Appliances, instruments, and apparatus used in anatomical, histological, and bacteriological work.

Normal and pathological anatomical specimens; histological and bacterioscopic preparations.

Instruments for medical examinations, both general and special.

Apparatus and instruments used in general, local, and special surgery.

Apparatus used in dressing wounds.

Apparatus used in plastic and mechanical prosthesis; orthopedic apparatus; apparatus used in hernial surgery; bath and hydrotherapeutic apparatus; apparatus for medical gymnastics; appliances, instruments, and apparatus used in special therapeutics.

Instruments used in the practice of dental surgery.

Miscellaneous apparatus for the use of the infirm, sick, and insane.

Accessory articles used in the medical, surgical, and pharmaceutical service of hospitals and infirmaries.

Cases and chests of instruments and medicines for the use of army and navy surgeons. Articles for use in succoring the wounded on battle-fields.

Apparatus for the relief of the drowned and the asphyxiated.

Special appliances, instruments, and apparatus used by veterinary surgeons.

CLASS 15.—INSTRUMENTS OF PRECISION.

Philosophical apparatus and instruments.

Apparatus and instruments used in practical geometry, surveying, topography, and geodesy; drawing compasses; calculating machines; levels; compasses; barometers, etc.

Measuring apparatus and instruments; verniers, micrometer screws, dividing machines, etc.; scales for scientific uses.

Ordinary optical instruments. Astronomical instruments. Physical and meteorological instruments, etc. Instruments and apparatus used in laboratories and observatories.

Measures and weights of different countries.

CLASS 16.—GEOGRAPHICAL AND COSMOGRAPHICAL MAPS AND APPARATUS.—  
 TOPOGRAPHY.

Geographical, geological, hydrographic, and astronomical maps and atlases.

Physical maps of all kinds. Plain or raised topographical maps.

Terrestrial and celestial globes and spheres. Statistical works and tables. Tables and ephemerides for the use of astronomers and navigators.

THIRD GROUP.—FURNITURE AND ACCESSORIES.

CLASS 17.—CHEAP AND FINE FURNITURE.

Sideboards, book-cases, tables, toilet-tables, bedsteads, sofas, chairs, billiard-tables, etc.

CLASS 18.—UPHOLSTERERS' AND DECORATORS' WORK.

Bed furniture, upholstered chairs, canopies, curtains, tapestry, and other hangings.

Articles for decorating and furnishing. Molded pulp, and decorative articles of plaster, statuary, pasteboard, papier-mâché, etc. Frames. Paintings and decorations for churches.

Ornamental mantel-pieces.

CLASS 19.—CRYSTAL, GLASS, AND STAINED GLASS.

Crystal glass vases and goblets; cut, double and mounted crystal glass, etc. Ordinary vases and goblets. Common glassware and bottles.

Glass for windows and mirrors. Highly finished, enameled, cracked, filigreed, and tempered glass, etc.

Glasses and crystals for optical purposes; articles for ornament, etc.

Stained glass for windows. Mirrors, looking-glasses, etc.

CLASS 20.—CERAMICS.

Biscuit ware, hard and soft paste porcelain.

Fine earthenware with colored glazing, etc. Earthenware biscuit. Terra cotta. Enameled lava. Bricks and tiles. Ceramic stoneware.

Industrial mosaics and enamels.

CLASS 21.—CARPETS, TAPESTRY, AND OTHER FABRICS USED IN HOUSE-FURNISHING.

Carpets, moquettes, and tapestry, of rough or velvety surface. Carpets of felt, mats, etc. India rubber floor cloths, etc.

Fabrics used in furnishing, such as cotton, wool, or silk, plain or figured. Fabrics of horsehair, vegetable, leathers, moleskin, etc. Leather used for hangings and furniture. Oil-cloths and linoleums.

CLASS 22.—DECORATED PAPERS.

Printed papers. Paper with velvety surface, marbled, veined, etc. Paper for covers, for binding, etc. Artistic papers. Enameled and varnished papers. Imitations of wood and leather. Painted or printed shades.

CLASS 23.—CUTLERY.

Knives, penknives, scissors, razors, etc. Various articles of cutlery.

CLASS 24.—GOLDSMITHS' AND SILVERSMITHS' WORK.

Church plate; decorative and table plate; articles of gold and silver for the toilet, for office use, etc.

CLASS 25.—ART BRONZES AND CASTINGS.—ARTISTIC IRON-WORK AND REPOUSSÉ METAL-WORK.

Statues and bas-reliefs in bronze, cast-iron, zinc, etc. Castings with metallic coatings.

Repoussé work in copper, lead, zinc, etc.

CLASS 26.—WATCHES AND CLOCKS.

Separate parts, large or small, of clocks and watches.

Watches, chronometers, pedometers, various reckoners, etc. Mantel and other clocks; regulators and metronomes.

Astronomical clocks, marine chronometers; traveling clocks, alarm clocks, etc. Water clocks and hour-glasses.

CLASS 27.—APPARATUS AND PROCESSES FOR HEATING.—APPARATUS AND PROCESSES FOR LIGHTING OTHERWISE THAN BY ELECTRICITY.

Fire-grates, fire-places, stoves, and furnaces. Accessory appliances in heating houses. Kitchen ranges and apparatus for heating and cooking with gas.

Apparatus for heating by the circulation of hot water, steam, and heated air.

Lamps for lighting by means of various oils and essences.

Accessory articles for lighting. Matches.

Apparatus and accessory appliances for lighting by gas.

Apparatus for lighting by means of magnesium, etc.

CLASS 28.—PERFUMERY.

Cosmetics and pomatums. Perfumed oils; extracts and scented waters; aromatic vinegars; almond pastes; powders, pastilles, and scent-bags; perfumes for burning; toilet soaps.

Raw materials for perfumery.

CLASS 29.—LEATHER WORK—FANCY WOODEN ARTICLES—BASKETS AND BRUSHES.

Dressing-cases and small fancy articles of furniture; liqueur-cases and glove-boxes. Caskets. Cases and bags, jewel-boxes. Purses, pocket-books, note-books, and cigar-cases.

Turned, lathe-worked, carved and engraved articles of wood, ivory, shell, etc.; tobacco boxes; pipes.

Fine combs; fine toilet brushes.

Miscellaneous lacquer articles.

Baskets and fancy baskets; wicker-work articles and fine straw goods.

Coarse brushes; feather dusters.

Paint brushes.

FOURTH GROUP.—TEXTILE FABRICS, WEARING APPAREL, AND ACCESSORIES.

CLASS 30.—COTTON THREAD AND FABRICS.

Prepared and spun cotton.

Pure cotton fabrics, plain or figured.

Fabrics of mixed cotton.

Cotton velvet.

Cotton ribbons.

Bedclothes.

## CLASS 31.—THREAD AND FABRICS OF HEMP, FLAX, ETC.

Flax, hemp, and other spun vegetable fibers.

Linen and drills. Cambric. Linen fabrics, mixed with cotton or silk.

Fabrics of vegetable fibers, other than those of cotton, flax, and hemp.

## CLASS 32.—THREADS AND FABRICS OF COMBED WOOL—THREADS AND FABRICS OF CARDED WOOL.

Combed wool; woolen yarn.

Muslins, Scotch cassimeres, merinos, serges, etc.

Woolen ribbons and laces mixed with cotton, thread, with silk or floss silk.

Fabrics of hair, pure or mixed.

Woolen shawls, pure or mixed.

Cashmere shawls.

Carded wool: worsted yarn.

Cloths and other fabrics of carded wool.

Blankets. Felt of wool or hair, for carpets and hats.

Woolen foot-wear.

Fabrics of carded wool, unfulled or slightly fulled; such as flannels, tartans, wansdown, etc.

## CLASS 33.—SILKS AND SILK FABRICS.

Raw and thrown silks; floss silk yarn.

Fabrics of pure silk, plain, figured, and embossed.

Fabrics of silk mixed with gold, silver, cotton, wool, thread, etc.

Fabrics of floss silk, pure or mixed.

Velvets and plushes.

Ribbons of pure or mixed silk.

Shawls of pure or mixed silk.

## CLASS 34.—LACES, NET, EMBROIDERY AND TRIMMINGS.

Laces of thread and cotton, made with the spindle, needle, or loom.

Laces of silk, wool, or mohair.

Silver and gold lace.

Silk and cotton net, plain or figured.

Embroidering in tambour work, crocheting, etc. Embroidery in gold, silver, and silk. Sacerdotal vestments. Embroidery, tapestry, and other work done by hand.

Trimmings of silk, floss silk, wool, mohair, sundry kinds of hair, horsehair, thread and cotton; braids, etc.

Fine and imitation lace work and trimmings. Special lace work and trimmings for military equipments.

## CLASS 35.—ARTICLES OF HOSIERY AND UNDERCLOTHING—ACCESSORIES OF WEARING APPAREL.

Hosiery of cotton, thread, wool, and silk cashmere, or of floss silk, pure or mixed. Elastic fabrics; knit goods. Made garments for men, women, and children; baby linen. Flannel goods and other woolen garments.

Corsets, cravats, gloves, gaiters, garters, suspenders, buttons, fans, screens, umbrellas, sunshades, canes, etc.

## CLASS 36.—WEARING APPAREL FOR BOTH SEXES.

Men's clothes; women's clothes.  
 Hats and head-wear for both sexes; artificial flowers and feathers.  
 Wigs and hair-work.  
 Boots, shoes, etc.  
 Children's garments.  
 Special garments for different occupations.  
 Native costumes of different countries.

## CLASS 37.—JEWELRY AND PRECIOUS STONES.

Jewelry in precious metals, carved, filigreed, adorned with precious stones, etc.  
 Plated and imitation jewelry.  
 Ornaments of jet, amber, coral, mother-of-pearl, steel, etc.  
 Diamonds, precious stones, pearls and imitations.

## CLASS 38.—PORTABLE WEAPONS—HUNTING.

Defensive armor: cuirasses, helmets.  
 Blunt weapons: clubs, bludgeons, etc.  
 Side-arms: swords, sabers, bayonets, lances, axes and hunting knives.  
 Missile weapons: bows, cross-bows, etc.  
 Fire-arms: guns, rifles, pistols, revolvers.  
 Gunsmiths' accessory articles.  
 Solid or hollow projectiles, explosives. Percussion caps, primers, cartridges.  
 Hunting equipments; articles used in training dogs.  
 Articles used in fencing halls.

## CLASS 39.—ARTICLES FOR TRAVELING AND CAMP EQUIPAGE.

Trunks, valises, saddle-bags, etc. Dressing and traveling cases, miscellaneous articles. Traveling rugs; cushions; headwear; waterproof garments; shod staffs; grapnel hooks; umbrellas.

Portable articles specially designed for travelers and scientific expeditions; implements and equipments for geologists, mineralogists, naturalists, settlers, pioneers, etc.

Tents and camp equipage. Beds, hammocks, seats, folding-chairs, etc.

## CLASS 40.—TOYS.

Dolls and toys; wax and other figures.  
 Games for the amusement of children or adults.  
 Instructive and scientific toys.

## FIFTH GROUP.—MINING INDUSTRIES—RAW AND MANUFACTURED PRODUCTS.

## CLASS 41.—PRODUCTS OF MINING AND METALLURGY.

Collections and specimens of rocks, minerals and ores. Ornamental rocks. Hard rocks. Refractory substances. Earths and clays. Various mineral products. Raw sulphur. Rock salt, salt from salt springs.

Mineral fuels: various kinds of coal: residua and agglomerates. Asphalts and asphaltic rocks. Bitumen. Mineral tar. Crude petroleum, etc.

Crude metals: cast-iron, wrought-iron, steel, iron having the nature of steel, copper, lead, silver, zinc, etc. Metallic alloys.

Products of the art of washing ashes, refining precious metals, gold-beating, etc.  
 Products of the working of crude metals; castings, bells, commercial iron; special kinds of iron; sheet-iron and tin; plates for sheeting and constructions, etc.

Sheet-iron coated with zinc or lead, etc.; copper, lead and zinc sheets, etc.

Wrought metals: forge-work and other iron-work; wheels and tires; unwelded pipes, chains, etc.

Products of wire-drawing. Needles, pins; wire cables; lattices; wire gauzes; perforated iron.

Hardware, edge-tools, ironmongery, copper sheets, sheet-iron work, scrap iron and tinware.

Various wrought metals.

#### CLASS 42.—PRODUCTS OF FOREST GROWTH AND FOREST INDUSTRIES.

Specimens of forest species.

Wood for working, fuel and building purposes. Timber for ship-building; staves; split woods.

Cork; textile barks. Tanning, dyeing, scenting and resinous substances, etc.

Products of forest industries: dried wood and charcoal; potash in the raw state; articles manufactured by the cooper, the basket-maker, the maker of fine straw goods, wooden shoes, etc.

#### CLASS 43.—PRODUCTS OF HUNTING.—PRODUCTS OF FISHERIES, APPARATUS AND INSTRUMENTS FOR FISHING, AND FOR GATHERING FRUITS OF NATURAL GROWTH.

Collections and drawings of land and amphibious animals, birds, eggs, fishes, cetacea, mollusks and crustacea.

Products of hunting: furs and skins, hair, bristles, feathers, down, horns, teeth, ivory, bones, shells, musks, castoreum, and simi ar products.

Products of fisheries: whale-oil, spermaceti, etc.; whalebone, ambergris, mollusk-shells, pearls, mother-of-pearl, sepia, purple, corals sponges, etc.

Products of fruit growth or of crops obtained without cultivation: mushrooms, truffles, wild fruits, lichens used in dyeing; food and fodder; fermented saps; Peruvian bark; useful barks and filaments, wax, resinous gums, raw India rubber, gutta-percha, etc.

Traps and snares: fishing lines and hooks, harpoons, nets, apparatus and bait for fishing.

Apparatus and instruments for gathering products obtained without cultivation.

#### CLASS 44.—AGRICULTURAL PRODUCTS NOT USED FOR FOOD.

Textile materials: raw cotton, flax and hemp, scutched and unscutched; textile vegetable fibers of every kind; raw wool, washed and unwashed; silk-worm cocoons.

Various agricultural products employed in industry, pharmacy, and for domestic purposes; oleaginous plants, oils, wax, resins.

Leaf or manufactured tobacco. Touchwood. Tanning and dyeing substances.

Preserved fodder and substances specially intended for feeding animals.

#### CLASS 45.—CHEMICAL AND PHARMACEUTICAL PRODUCTS.

Acids, alkalies, salts of all kinds, sea salts and products resulting from the treatment of mother-waters.

Various products of the chemical industries: wax and fatty substances; soaps and candles; rosins, tars and derivative substances; essences and varnishes; glues and gelatines; printing inks; different coatings, blackings and waxings.

Raw materials used in pharmacy: simple and compound medicines.

Products of the India-rubber and gutta-percha industries; dyeing substances and colors.

Products derived from the treatment of mineral matters utilized for lighting. Refined petroleum.

CLASS 46.—CHEMICAL METHODS OF BLEACHING, DYEING, PRINTING AND FINISHING.

Specimens of threads and stuffs, bleached and dyed. Samples of dyeing preparations.

Specimens of printed or dyed linen and cotton prints, pure or mixed. Specimens of woolen prints, pure or mixed, combed or carded.

Specimens of silk prints, pure or mixed.

Specimens of printed felt or cloth carpet and of oil-cloths.

CLASS 47.—LEATHERS AND SKINS.

Raw materials used in the preparation of skins and leather.

Raw hides; salted hides. Tanned, curried, dressed or dyed leather. Varnished leather.

Morocco and sheepskins; skins grained, chamoied, tawed, dressed or dyed. Skins prepared for gloves. Parchments.

Articles of gut-work; gold-beaters' skins; bulls' sinews, etc.

SIXTH GROUP.—APPARATUS AND PROCESSES OF MECHANICAL INDUSTRIES—ELECTRICITY.

CLASS 48.—APPARATUS AND METHODS OF WORKING MINES AND OF METALLURGY.

Apparatus for exploration by borings, for artesian wells and for wells of large sections.

Models, plans and views of the works of mines and quarries. Works for obtaining the flow of mineral waters.

Machines and apparatus used for extracting ores, and for lowering and hoisting workmen in the mine.

Machines for drainage; pumps.

Ventilating apparatus; ventilators.

Safety lamps; safety apparatus; parachutes; signals.

Apparatus for the mechanical preparation of ores and mineral fuel.

Apparatus for compressing fuel.

Apparatus for carbonizing fuel; metallurgic hearths and furnaces; smoke-consuming apparatus.

Appliances of metallurgic works.

Special appliances for forges and foundries.

Appliances for shops for working metals of all kinds.

CLASS 49.—APPARATUS AND METHODS OF FARMING AND FORESTRY.

Plans for the cultivation, distribution, and management of crops.

Appliances and works for agricultural engineering; drainage; sub-soil drainage; irrigation. Plans and models of rural buildings.

Tools, implements, machines, and apparatus used for plowing and other workings of the ground in sowing and planting, harvesting, preparing, and preserving the products of cultivation.

Various agricultural machines moved by teams or steam.

Appliances for carts and agricultural conveyances.

Movable steam-engines for special purposes and horse-gins.  
 Fertilizers of organic or mineral origin.  
 Apparatus for the physical and the chemical study of soils.  
 Plans of methods of replanting, managing, and cultivating forests.  
 Apparatus used in forest work and forest industries.

CLASS 50.—APPARATUS AND METHODS USED IN AGRICULTURAL WORK AND FOOD INDUSTRIES.

Appliances for agricultural work; manufactories of artificial fertilizers, of drainage pipes, flour-mills, farina-mills, starch-mills, oil-mills, breweries, distilleries, sugar works, refineries, workshops for the preparation of textile materials, silk-worm nurseries, etc.

Appliances for the manufacture of alimentary products; kneading-machines and mechanical ovens for bakers; pastry and confectionery utensils.

Apparatus for the manufacture of doughs for food, sea-biscuit, etc. Machines for making chocolate. Apparatus for roasting coffee.

Preparation of ices and sherbets; manufacture and preservation of ice.

CLASS 51.—APPARATUS USED IN CHEMISTRY, PHARMACY, AND TANNING.

Laboratory utensils and apparatus; enameling lamps; blow-pipes.

Apparatus and instruments for industrial and commercial experiments.

Appliances and apparatus of the manufactories of chemical products: soaps and candles.

Appliances and methods of the manufacture of essences, varnishes, articles of india-rubber and gutta-percha.

Appliances of factories treating mineral substances used in lighting.

Appliances and methods of bleaching works.

Appliances for the preparation of pharmaceutical products.

Appliances of factories for tanning and dressing leather.

Appliances and methods of glass works, and manufactories of ceramic products.

CLASS 52.—MACHINES AND APPARATUS OF GENERAL MECHANICS.

Separate pieces of machinery. Bearings, rollers, slide-bars, eccentrics, gearings, connecting-rods, parallel motions and joints, pulleys, belts, transmissions by ropes, etc. Couplings, clutches, etc. Regulators and governors. Apparatus for greasing and oiling.

Counters and registers. Dynamometers, pressure-gauges, weighing-machines. Apparatus for measuring liquids and gases.

Machines used for moving heavy weights.

Hydraulic lifting machines: norias, pumps, tympan, hydraulic rams, etc.

Hydraulic motors: wheels, turbines, water-pressure engines.

Hydraulic presses.

Engines moved by steam: stationary engines, partially stationary engines, movable engines. Boilers, steam-generators, and accessory apparatus.

Apparatus for condensing vapors.

Engines run by other vapors than steam; by combined vapors.

Gas, hot-air, and compressed-air engines.

Apparatus for the transmission of power by water and by air.

Wind-mills and wind-vanes.

Balloons.

Cements and non-conducting preparations.

## CLASS 53.—MACHINE TOOLS.

Turning lathes and machines for boring and planing, mortise-cutting machines, drilling-machines, cutting-presses, shaping-machines, tenoning-machines, punching-machines, tapping-machines, screw-cutting machines, riveting-machines, etc. Perforators. Various tools used in machine-shops.

Stones for sharpening, scraping, polishing, etc.

Tools, machines, and apparatus used for pressing, crushing, working up, stamping, and beating out, etc.

Machines for sawing and polishing hard stones, marbles, etc.

Special machine tools used in various industries.

## CLASS 54.—APPLIANCES AND METHODS OF SPINNING AND ROPE-MAKING

Appliances for hand-spinning. Separate pieces pertaining to the appliances of spinning-mills. Machines and apparatus used in the preparation and spinning of textile substances. Apparatus and methods used in the operations complementary to these: drawing, winding, twisting, and throwing; mechanical finishing. Apparatus for drying and determining the thickness and numbering the threads.

Appliances of rope-walks. Round cables, flat cables, tapering cables, ropes, twine, wire cables, cables with metal core, fuses, quick matches, etc.

## CLASS 55.—APPARATUS AND METHODS OF WEAVING.

Appliances used in preparatory operations for weaving: machines for warping, winding. *Lisages*.

Hand and mechanical looms for the manufacture of plain fabrics. Looms for the manufacture of figured and embroidered stuffs. Damask looms.

Looms for manufacturing carpets and tapestries.

Looms and machines for the manufacture of hoisery and net.

Appliances for lace-making. Appliances for making trimmings.

Upright looms and methods of spooling. Accessory apparatus: machines for fulling, calendering, embossing, watering, measuring, folding, etc.

## CLASS 56.—APPLIANCES AND METHODS OF SEWING AND MAKING ARTICLES OF CLOTHING.

Ordinary tools of shops for sewing and making garments. Machines for sewing, stitching, hemming, and embroidering.

Cutters for stuffs and leathers for the manufacture of articles of clothing and shoes.

Machines for making, nailing, and screwing shoes.

Machines for utilizing India-rubber.

## CLASS 57.—APPLIANCES AND METHODS OF MANUFACTURE OF ARTICLES FOR FURNITURE AND DWELLINGS.

Machine tools for the preparation and working of wood; planing-machines, shaping-machines, saws of all kinds, mortising-machines, etc. Machines for making barrels. Machines for cutting cork, etc.

Machines for cutting veneers. Saws for scrolls, profiles, etc.

Machines for cutting moldings, borders for frames, floor squares, furniture, etc. Turning lathes and different apparatus of joiners and cabinet-makers; machines for sharpening saws.

Machines and apparatus for working in stucco, papier maché, ivory, bone, horn, etc.

Machines for pointing, sculpturing, reducing statues, engraving and engine-turning, etc.

Brick machines, tile machines; machines for making artificial stones, drawing out, compressing ceramic products. Kneaders, grinders, and other machines for making bricks, pipes, and pottery for buildings.

CLASS 58.—APPLIANCES AND METHODS OF PAPER MANUFACTURE, COLORING AND PRINTING.

Appliances and products of the manufacture of paper pulp of wood, straw, alfa, etc.

Methods and products of the bleaching of wood fibres.

Appliances for the manufacture of paper by vat and by machine.

Apparatus for pressing, glazing, watering, embossing, water-marking, and ruling paper. Machines for cutting, paring, and stamping paper, etc.

Appliances for bleaching, coloring, and finishing paper and tissues.

Appliances for printing paper-hangings and tissues. Machines for engraving printing rollers.

Appliances, apparatus and products for type foundries, stereotype plates, etc.

Machines and apparatus employed in printing, stereotyping, copper-plate printing, autography, lithography, engraving on copper, engraving on zinc, chromolithography, etc. Machines for setting up and distributing type. Printing of bank-notes, postage-stamps, etc.

CLASS 59.—MACHINES, INSTRUMENTS, AND METHODS USED IN VARIOUS OCCUPATIONS.

Coining-presses.

Machines used in the manufacture of buttons, pens, pins, letter-envelopes; machines for packing, making brushes and cards; manufacturing capsules; for fixing lead seals to merchandise; corking bottles, etc.

Tools and methods of manufacture of articles of clock-work, toys, inlaid work, basket-work, etc.

Machines for book-binding. Writing machines.

Appliances, instruments, and machines for the manufacture of tobacco.

CLASS 60.—CARRIAGE-MAKING, WHEELWRIGHTS' WORK, HARNESS-MAKING AND SADDLERY.

Separate parts of carriage-makers' and wheelwrights' work; wheels, tires, axles, hubs, iron-work, etc. Springs and various systems of hanging carriages.

Methods of harnessing. Brakes.

Products of the wheelwrights' work; wagons, carts, drays, vehicles for special purposes.

Products of carriage-building, carriages for hire, state carriages, private carriages, sedan chairs, litters, sleighs, etc., velocipedes.

Articles of harness and saddlery; pack-saddles, saddles, stretchers for conveying the wounded; bridles and harness for riding animals, beasts of burden and draught horses; stirrups, spurs, driving and riding whips.

CLASS 61.—RAILROAD APPLIANCES.

Separate parts: springs, buffers, brakes, etc.

Permanent way: rails, chairs, fish-plates, crossings, switches, turn-tables; buffers; water-cranes and water-tanks; optical and acoustic signals. Various kinds of safety apparatus, block system.

Fixed appliances for tramways.

Rolling-stock: passenger-cars, construction-cars, freight-cars, cattle-cars, locomotives, tenders.

Self-moving carriages and road engines.

Special machines and tools for shops of maintenance, repair, and the construction of appliances.

Appliances and machines for inclined planes and self-acting planes; models of engines, systems of traction and apparatus relating to railways.

Rolling-stock for tramways of various kinds.

Models, plans and drawings for depots, stations, car-houses, and other buildings necessary for the working of railroads.

#### CLASS 62.—ELECTRICITY.

Production of electricity: static electricity, piles and accessories, magneto-electrical and dynamo-electrical machines, accumulators.

Transmission of electricity: cables, wires, and accessories; lightning-rods.

Electrometry: apparatus for electrical measurements. Registers of electricity.

Applications of electricity: telegraphy, signals, telephony, microphony, photophony, electric light, electric motors, electrical locomotion, conveyance and distribution of force, transformers. Medical electricity, electro-chemistry. Electro-magnets and magnets, compasses. Electrical clock-work.

Various kinds of apparatus.

#### CLASS 63.—APPLIANCES AND METHODS OF CIVIL ENGINEERING, OF PUBLIC WORKS AND ARCHITECTURE.

Building materials, rocks, woods, metals, ornamental stones; limes, mortars, cements, artificial stones and concretes: roofing tiles, bricks, paving-tiles; slates, roofing-paper and felts for roofs.

Appliances and products of methods employed for the preservation of wool. Apparatus and instruments for testing building materials.

Appliances for earth-work; excavators. Apparatus used in work-yards. Tools and methods used by stone dressers and cutters, masons, carpenters, roofers, locksmiths, joiners, glaziers, plumbers, house-painters, etc.

Fine locksmiths' work: safes, locks, padlocks, railings, balconies, bannisters.

Appliances and machines for foundation work: pile-drivers and pile work, screw piles, pumps, pneumatic apparatus, dredges, etc. Appliances for hydraulic works in seaports, canals, rivers.

Appliances and apparatus used in the supply of water and gas. Appliances used in the maintenance of roads, plantations, walks.

Lighthouses.

Special appliances for telegraphing by compressed air.

Models, plans, and drawings of public works; bridges, viaducts, aqueducts, sewers, canal-bridges, locks, dams.

Models, plans, and drawings of public buildings for special purposes; buildings for civil purposes; large and small houses for letting; settlements and dwellings for workmen.

#### CLASS 64.—HYGIENE AND PUBLIC CHARITIES.

Appliances, instruments, and apparatus used in hygienic investigations.

Sanitary appliances and methods for dwelling-houses, buildings, and cities; direct renewal of air, heating, ventilating, lighting, in their relation to health; conduits for water and sewerage, drains and sewers; flushing tanks, hydraulic syphons, water-closets, public and private urinals, sinks, close-stools, night-soil apparatus, sanitary plumbing, walls, bricks, roofs, flooring, etc.

Apparatus for carrying off, receiving and treating sewerage.

Apparatus and methods for filtering water.

Apparatus intended for the prevention of infectious diseases ; methods, materials and instruments for purifying, destroying germs, and disinfecting.

Apparatus and instruments for interring and destroying dead bodies in cemeteries and on battle-fields ; cremation.

Plans, models, and documents of health offices, national, departmental, and municipal.

Appliances and methods of industrial and professional hygiene.

Plans, models, arrangement and furniture of hospitals, various asylums, houses of refuge, of retreat, insane asylums, infant asylums, etc.

Plans, models, specimens of civil and military ambulances.

Mineral waters and waters charged with natural or artificial gases.

#### CLASS 65.—NAVIGATION AND LIFE-SAVING.

Drawings and models of stocks, graving docks, floating docks, etc.

Drawings and models of vessels of all kinds used for river and sea navigation. Plans and models of systems of construction adopted in the merchant-service and in the navy. Torpedo-boats.

Ships' boats and small craft.

Appliances for rigging ships ; cranes, capstans. Steam capstans. Steering gear.

Equipment.

Flags and signals. Apparatus intended to prevent collision at sea. Buoys, beacons, etc.

Apparatus for swimming, diving and life-saving, practically exhibited ; life-preservers, swimming-belts, etc. ; diving-bells, nautilus, diving-armor, etc. Submarine boats, appliances of maritime life-saving service ; mortars for casting lines ; life-boats, etc. Apparatus for life-saving in case of fire and other accidents.

Pleasure boats.

#### CLASS 66.—APPARATUS AND METHODS OF THE ART OF WAR.

Works of military engineering ; fortifications.

Artillery, arms, gun-carriages, and projectiles of all kinds.

Equipment, clothing, and camp material.

Appliances for military transports.

Military topography and geography.

#### SEVENTH GROUP.—FOOD PRODUCTS.

##### CLASS 67.—CEREALS.—FARINACEOUS PRODUCTS WITH THEIR DERIVATIVES.

Wheat, rye, barley, rice, maize, millet, and other cereals in the grain, and when ground.

Hulled grain and oatmeal and grits.

Starch from potatoes, rice, lentils, etc., gluten.

Tapioca, sago, arrow-root, various starches, mixed farinaceous products.

Italian paste, semolino, vermicelli, maccaroni.

Alimentary preparations as substitutes for bread, nouilles, pap, pastry of domestic make.

##### CLASS 68.—PRODUCTS OF THE BAKERY AND PASTRY SHOP.

Various kinds of bread, with or without yeast ; fancy bread and bread in shapes ; compressed bread for traveling, military campaigns, etc. ; sea biscuit.

Various kinds of pastry peculiar to each country. Gingerbread and dry cakes fit for preservation.

## CLASS 69.—FAT SUBSTANCES USED FOR FOOD, MILK PRODUCTS AND EGGS.

Eatable fats and oils.

Fresh milk, preserved milk; salt and fresh butter; cheeses.

Eggs of all kinds.

## CLASS 70.—MEATS AND FISHES.

Salt meats of every kind. Meats preserved by various processes. Meat and soup cakes. Hams and prepared meats.

Poultry and game.

Salt fish, packed fish, codfish, herrings, etc.; fish preserved in oil; sardines, pickled tunny-fish, etc.

Crustacea and shell-fish: Lobsters, shrimps, oysters; preserved oysters, anchovies, etc.

## CLASS 71.—VEGETABLES AND FRUITS.

Tubers, potatoes, etc.

Dry farinaceous vegetables: beans, lentils, etc.

Green vegetables for cooking: cabbages, etc.

Vegetable roots: carrots, turnips, etc.

Vegetables used for seasoning: onions, garlic, etc.

Salads, gourds, pumpkins, melons, etc.

Vegetables preserved by various processes.

Fresh fruits; fruits dried and prepared; prunes, figs, raisins, etc.

Fruits preserved without sugar.

## CLASS 72.—CONDIMENTS AND STIMULANTS; SUGAR AND PRODUCTS OF CONFECTIONERY.

Spices. Pepper, cinnamon, allspice, etc.

Table salt.

Vinegars.

Condiments and compound stimulants: mustards, karis, sauces, etc.

Teas, coffees and aromatic drinks; coffees of chicory and sweet acorns.

Chocolates.

Sugars, for domestic and other uses.

Various products of confectionery: sugar-plums, sugar bon-bons, soft bon-bons, nougat, angelica, aniseed, preserves, and jellies.

Conserves.

Fruits preserved in brandy.

Syrups and sugared liquors.

## CLASS 73.—FERMENTED DRINKS.

Ordinary wines, white and red.

Cordials and sweet wines.

Sparkling wines.

Ciders, perry and other beverages made from cereals.

Fermented beverages of every kind.

Brandies and alcohols.

Spirituos liquors, gin, rum, tafia, kirsch, etc.

## EIGHTH GROUP—AGRICULTURE, CULTIVATION OF THE VINE, AND FISH CULTURE.

CLASS 73 *bis*.—AGRONOMY.—AGRICULTURAL STATISTICS.

Studies concerning the waters, the soils, the climates, and rural populations.  
Divisions of lands and cultivations.

Agricultural statistics; agrological, hydrographical, climacteric maps, agronomical maps. Tables, plans, models.

Agronomical stations; agricultural laboratories.

Agricultural syndicates, societies, and meetings.

Institutions of credit, charity, of protection for rural population; mortgage companies, agricultural banks, people's banks, co-operative insurance, savings banks, etc.  
Legislative measures; rural code, special laws.

Official agricultural administration; works and publications. Agricultural missions.

CLASS 73 *ter*.—ORGANIZATION, METHODS, AND APPLIANCES OF AGRICULTURAL INSTRUCTION.

Plans, models, and programmes of the agricultural primary schools, agricultural orphan asylums, farming schools or apprentices' schools.

Methods and apparatus of instruction, fields for experimenting, etc.

Work done by pupils.

Plans and models of practical agricultural schools, of special schools of vine culture, horticulture, and forestry, etc.

Method and apparatus of instruction.

Work done by masters; specimens of work done by pupils.

Plans and models of national schools of agriculture, of agricultural academies. Veterinary schools. Schools of forestry. Agricultural high schools, agronomical institutes.

Methods and apparatus of instruction.

Work of professors, specimens of pupils' work.

## CLASS 74.—SPECIMENS OF FARM IMPROVEMENTS AND AGRICULTURAL WORKS.

Models of farm buildings of various countries.

Designs of stables, cattle-houses, sheep-sheds and folds, pig-sties, and buildings for raising and fattening animals.

Appliances for stables, cattle-houses, kennels, etc.

Apparatus for preparing food for animals.

Agricultural machines in operation: steam plows, reapers, mowers, hay-makers, threshers, etc.

Designs of agricultural works: distilleries, sugar-mills, refineries, breweries, flour-mills, fecula and starch factories, silk-worm nurseries, cheese factories, dairies.

Presses for cider and oil.

Models of poultry-houses, pigeon-houses, pheasant-houses.

Apparatus for artificial hatching.

Models of kennels.

## CLASS 75.—VINE CULTIVATION.

Models of buildings used in vine cultivation.

Apparatus used in the cultivation of the vine.

Appliances of wine vaults, cellars, and vats. Presses.

Processes and methods employed in fighting diseases of the vine.

Collections of vines.

## CLASS 76.—USEFUL AND INJURIOUS INSECTS.

Bees, silk-worms, and other varieties of the bombyx.

Cochineal insects.

Apparatus used in the culture and keeping of bees and silk-worms.

Apparatus and methods used in the destruction of injurious insects.

## CLASS 77.—FISH, CRUSTACEA, AND MOLLUSKS.

Useful aquatic animals in the live state.

Aquariums, methods of pisciculture.

Apparatus for rearing fish, mollusks, and leeches.

## NINTH GROUP.—HORTICULTURE.

## CLASS 78.—CONSERVATORIES AND HORTICULTURAL APPARATUS.

Gardeners', nurserymen's, and horticulturists' tools.

Apparatus for watering and keeping turf.

Large conservatories and their appurtenances. Room and window conservatories.

Aquariums for aquatic plants.

Fountains and apparatus for the ornamentation of gardens.

## CLASS 79.—FLOWERS AND ORNAMENTAL PLANTS.

Species of plants and specimens of cultivation, exhibiting the characteristic types of the gardens of the natives of every country.

## CLASS 80.—VEGETABLES.

Species of plants and specimens of cultivation, indicating the characteristic types of the kitchen-gardens of every country.

## CLASS 81.—FRUITS AND FRUIT TREES.

Specimens of plants and specimens of the products of cultivation, exhibiting the characteristic types of the orchards of each country.

## CLASS 82.—SEEDS AND SAPLINGS OF FOREST SPECIES.

Species of plants and specimens of the products of cultivation, exhibiting the methods of forest planting in use in each country.

## CLASS 83.—HOTHOUSE PLANTS.

Specimens of the methods of cultivation in use in various countries for pleasure or utility.

## SOCIAL ECONOMY.

SECTION I.—*Remuneration of labor.*

Forms and conditions, expressed or implied, of the hiring of labor, or contract for labor, dates and modes of payment of wages.

Bounties or additional wages allotted to the quantity produced, to the quality of the product, or to the economy exercised in the use of the raw material or of fuel.

Farming contracts, remuneration of agricultural laborers in kind.

Labor of women and children in factories. Incentives to labor, medals and prizes; skill of the industrial or agricultural laborer, and pay according to length of service.

SECTION II.—*Share in profits, productive co-operative associations.*

Share in the profits; different systems adopted; mode of employment of the product of this participation; regulations and by-laws; forms of accounts; farming on shares.

Workmen's productive co-operating societies; different systems adopted for constituting the board of managers, interest on the capital, and remuneration of the assistant workmen.

SECTION III.—*Trade syndicates.*

Trade syndicates; masters' syndicate societies; workmens' syndicate societies; trades unions; diverse co-operative institutions.

Agricultural syndicates.

Stoppages; strikes; obligatory and voluntary arbitration.

Boards of arbitration: labor exchanges; hiring of workmen and employés.

Learned societies, trade or other, founded for the study of questions of social economy in industrial centres; by-laws and reports of these societies.

SECTION IV.—*Apprenticeship.*

Contract of apprenticeship; technical instruction given in the workshops or in schools and classes founded by the factory, by a committee of employers, or by the workmen themselves. Housekeeping schools; mill and agricultural orphan asylums.

Establishments intended for children morally abandoned.

Employers' societies for apprentices.

Instruction to intended workmen and intended employés on economical, social, and manufacturing subjects, and on the practical working of provident institutions.

SECTION V.—*Mutual aid societies.*

Mutual aid societies; medical attendance; medicines; indemnities for stoppages; home relief; dispensaries; hospital treatment; care in convalescence; stay at watering places; funeral expenses.

Retiring pensions paid by mutual aid societies; privileges granted to incorporated mutual aid societies in permitting them to contract life insurance on their members collectively.

Admission of women; relief in cases of childbirth; statistical tables of sickness.

SECTION VI.—*Superannuation funds and annuities.*

National banks of superannuation.

Pensions or annuities, immediate or deferred, established by the state, by life insurance companies, or by private individuals.

SECTION VII.—*Accident insurance—Life insurance.*

Individual or collective insurance against accident for the benefit of the workman in case of incapacity for labor, temporary or permanent, from wounds or maiming, or in case of death. Stoppages agreed upon for this purpose from the wages of the workman; charges made for the same object on the general expenses or on the profits.

Diverse systems to insure the workman against accident by the state, by private

stock or mutual companies, by factory syndicates incorporated for this purpose, and according to the terms of the law.

Insurance by companies for the benefit of the employer against his civil responsibility in case of accident. Life insurance in case of death, mixed, for a fixed term, deferred, with various combinations, by the state, by insurance syndicates, or companies. Premiums and half premiums of insurance paid by the workmen, by the employers, or by societies created for this purpose.

Tables of mortality.

Statistics of accidents of every kind.

Diverse insurances: Fire; hail; diseases among domestic animals.

#### SECTION VIII.—*Savings.*

Savings banks, national and postal.

School savings banks.

Savings banks supervised by the state.

Savings societies for the purchase of goods in common, wholesale.

Different systems of incentives to economy: Rates of interest; allowances; adoption of a higher rate of interest for small deposits. Different systems of temporary deposit: A definitive investment of individual or collective savings of workmen and employés (deposit or running account in the safe of the factory, deposit in a public bank, obligatory or voluntary investment of the workman's savings in interest-bearing bonds, or in shares of the factory). Ascertainment of the capital of the workman during his stay in the factory, by means of the capitalization at compound interest, as ascertained by his hand-book, of his share in the profits; of the dividends of a food co-operative association; of the allowances of the employer, with or without retention of wages.

#### SECTION IX.—*Food co-operative associations.*

Systems of sale at current price or at cost, price of food, of clothing, and of articles of housekeeping.

Kitchens and refectories. Canteens.

Economic bakeries.

Regulations, by-laws, accounts, and budgets.

Specimens of articles sold, with double marks of price current and of cost price.

#### SECTION X.—*Credit co-operative associations.*

Credit co-operative associations. Different systems adopted. Limited or unlimited responsibilities. Loan societies. Agricultural banks. Raffeisen. Agricultural credit.

Advances made by the state or by financial institutions to workmen's productive associations, or to workmen.

Loans on unindorsed notes. Loan society in aid of marriage.

#### SECTION XI.—*Workmen's dwellings.*

Systems of workmen's detached dwellings, with or without yard or garden, and of which the workmen may become owners on yearly payments, including the rent and the purchase installment.

Systems of apartment houses, containing several contiguous lodgings.

Furnished lodgings for unmarried workmen.

Plans of dwellings, healthy and cheap.

Workmen's co-operative associations for the erection, occupation, selling, or renting of workmen's houses. Building associations.

Renting to the tenant workman at current rates, with credit to him, on his savings or superannuation book, of the difference between the current rent and the actual cost.

Incentives to build workmen's houses by loans at reduced rates made by the state or city, or by reduction of taxes, or other advantages.

SECTION XII.—*Workmen's clubs; recreations, sports.*

Workmen's clubs. *Workingmen's clubs.* Construction, organization. Libraries. Works of art, classes, lectures, games, recreations, drills, singing-schools, bands, shooting, and gymnastics.

SECTION XIII.—*Social hygiene.*

Laws, regulations, and by-laws relating to social hygiene.

Alcoholism. Means employed to counteract it. Statistics and documents. Temperance societies and establishments depending upon them. Gothenburg system. Refreshment rooms. Protection of young children, of apprentices, and of women in childbirth.

Baths and laundries; reservoirs.

Health and safety of workshops.

Precautions against mill accidents. Regulations of the mill.

SECTION XIV.—*Various institutions created by employers for the benefit of their employes.*

Presents: interest-bearing shares: participation in profits.

Allowances in the general expenses, or charges on the profits in any way, for relief and provident institutions, and for institutions for savings, for education and instruction.

Technical instruction given in the factory. Aid associations of mines and factories, with or without retention of wages. Infirmaries: Relief to the sick, the wounded, to women in childbirth, to widows, to orphans.

Factory workshops.

Marriage portions for young workwomen.

Superannuation funds and asylums for old or maimed men. Accident and life insurance charged to general expenses, with or without retention of wages.

Special savings banks of mills and factories. Co-operative stores and canteens. Co-operative restaurants.

Advances to workmen without interest.

Free lodgings, or at reduced rates.

Free warming. Cheap renting or sale by the employer to the workman of land for building or cultivating. Advances made specially for this purpose.

Institutions specially applicable to rural labor. Rights of custom. Medical and hospital relief to agricultural laborers.

Establishments which in general may have made the greatest and most successful efforts both to ameliorate the material and moral condition of their workmen, and to establish on a better footing the community of interest among the different agents of production.

SECTION XV.—*Large and small factories.—Large and small farms.*

Statistics and documents relating to the concentration of industry in large establishments. Small workshops; efforts to increase them. Domestic industries and mode of applying power to them. Woman's work in the household.

Union of factory and agricultural labor.

Large and small farms.

Emigration and return. Hospital stations. Receipts and expenses of a workman's family.

#### SECTION XVI.

Economic intervention of the state.

---

### GENERAL DIRECTION OF THE MANAGEMENT.—FOREIGN SECTIONS.

#### MISCELLANEOUS INFORMATION.

##### I.

The Exposition of 1889 at Paris will be universal and international; that is to say, it will receive the agricultural, industrial, and artistic products of all countries.

It will occupy, in one enclosure, and according to the plan annexed to the present memorandum:

(1) On the left bank of the Seine, the Champ de Mars, and the shores of the Seine, the Esplanade des Invalides, and the part of the Quai d'Orsay included between the Esplanade and the Champ de Mars.

(2) On the right bank of the Seine, the Park and certain disposable parts of the Palace of the Trocadéro.

The Bridge of Jena, which connects the grounds of the Trocadéro with the Champ de Mars, will be included in the enclosure of the Exposition.

The plan of the Exposition comprises four fundamental divisions:

#### I. CHAMP DE MARS.

##### I. PALACE OF FINE ARTS (A).

###### GROUP I.—*Works of art.*

In this two-storied building the allotment will be made by rooms, or by suites of rooms, corresponding to the different national exhibitions.

##### 2. PALACE OF LIBERAL ARTS (B).

GROUP II.—*Education and instruction.—Materials and processes of the liberal arts.*

In this building, comprising a grand central nave and a gallery (second story) round it, the space will be divided into two sections, and each allotted by classes; one for French and the other for foreign products.

##### 3. PALACE OF SUNDRY INDUSTRIAL PRODUCTS (C).

###### GROUP III.—*Furniture and accessories.*

###### GROUP IV.—*Tissues, clothing, and accessories.*

###### GROUP V.—*Mining industries, raw and manufactured materials.*

(The space of 90,000 square metres (about 105,000 square yards) covered by these buildings, will be divided between France and the different foreign countries, in such a manner that each nation may have a compartment for the exhibition of its products belonging to these groups.)

## 4. PALACE OF MACHINES (D).

GROUP VI.—*Tools and processes of the mechanical arts, electricity.*

(The space reserved for the United States is shown on the plan of the Palace of Machines.)

## II. QUAI D'ORSAY.

## 1. PALACE OF FOOD PRODUCTS (E).

GROUP VII.—*Food products.*

This building, with stories, will contain food products divided by nationalities and by classes.

## 2. GALLERIES OF AGRICULTURE (G).

GROUP VIII.—*Agriculture, viticulture, and pisciculture.*

These galleries will be divided into national compartments.

## III. ESPLANADE DES INVALIDS.

(1). Open spaces planted with trees, reserved for agriculture, supplementarily (Group VIII).

(2) Diverse exhibitions—French colonies and protected countries—Special exhibitions of the French ministries—Social Economy—Hygiene.

## IV. TROCADERO.

## INTERNATIONAL EXHIBITION OF HORTICULTURE AND ARBORICULTURE.

A. GROUP IX.—*Horticulture.*

The space available for the different groups, for foreigners and for Frenchmen, has been calculated according to the statistics of preceding expositions.

The expositions of 1867 and 1878 at Paris had both admitted the construction on the Champ de Mars of a central building, the galleries of which, arranged either circularly or in a straight line, allowed the installation of foreign and French products in such a manner that the visitor could, at his pleasure, examine all the products of the same group from different countries, or all the products of the different groups from the same country.

This organization required the allotment of a special, well-defined compartment to each country. It was successful in 1867, although the banishment of the French and foreign agricultural products to a distant hall was an infraction of the rule adopted. In 1878 they tried to repeat the system of 1867, but the abundance of the products admitted made the disposable covered space in the central building of the Champ de Mars insufficient. It became necessary, therefore, to adopt a scheme without any method and construct a number of annexes.

The plans for 1889 have in the arrangement adopted substituted a species of order methodically directed for the former compact order of the arrangement of products.

## II.

## FREE SPACE.

In conformity with the traditional hospitality of the International Expositions of 1855, 1867, 1878, and 1881, which have been held in Paris, the foreign and the French exhibitors will have no rent to pay for the sites of their exhibits.

## EXPENSES AT THE CHARGE OF THE EXHIBITORS.

The French administration will furnish covered sites for all articles in the groups of Fine Arts, Liberal Arts, Industrial, Mechanical, and Agricultural, which will not bear exposure to the weather. The exhibitors are to pay, either individually or collectively, the whole of the expenses of the subdivision, installation, and decoration of these sites, including furnishing, arranging, fitting-up, and decorating the separate compartments, awnings or false ceilings, glass cases and furniture for holding the exhibits, all according to [plans adopted by the administration. They are also to pay for constructing the floor of the exhibition rooms, the administration paying only for that of the passages, in accordance with Article 16 of the General Regulations. As regards the floor especially, the administration is at liberty, with a view to a more economical and uniform work, to construct all the floors, and look to the exhibitors to pay the amounts due from them. They will also be peculiarly responsible for all damage done by themselves or by their workmen.

## KEEPERS.

Exhibitors must include in their general expenses of installation the wages and uniform of the men charged with cleaning and watching (private) the rooms.

## SECTION OF MACHINES.

Foreign and French boiler-makers and machine-builders will be permitted to send in proposals for supplying the motive power which the administration is bound to furnish to put the machines exhibited in motion, according to Articles 34 of the General Regulations. The general conditions for supplying this power by steam are already settled.

## EXHIBITION OF HORTICULTURE.

A special regulation informs the public how the permanent and temporary exhibits of the group of horticulture are organized, and under what conditions certain exhibitors can have the use of greenhouses, either hot or cold.

## EXHIBITION OF LIVING ANIMALS.

If there should be an exhibition of living animals, a special regulation will be published on the subject.

## TRANSPORTATION AND HANDLING.

Arrangements have been made with the French railroad companies that all articles intended for the Exposition, except objects of art and of special value, shall benefit by a reduction of 50 per cent. on the usual prices.

The same reduction of 50 per cent. on the usual prices has been agreed to by the *Compagnie Générale Transatlantique*, and by the *Compagnie des Messageries Maritimes*.

As regards handling the articles inside, all of which is at the expense of the exhibitors, the administration, while leaving them the greatest freedom of action, will endeavor to place at their disposal, in the most practical and economical manner, the tools and workmen necessary to enable them to discharge and unpack their exhibits, and to repack and forward them.

## DUTIES AND OCTROI (CITY DUTIES).

By a decree of the President, dated August 25, 1886, the localities assigned to the Universal Exposition of 1889 are declared to be public warehouses. In addition, the prefect of the Seine by a letter dated October 28, 1886, has informed the Ministry of Commerce and of Industry that the same regulation will be applied to the enclosures of the Exposition as far as the octroi of Paris is concerned.

PATENTED INVENTIONS.

The superior administration will take all necessary measures to assure, under the same conditions as in preceding expositions, the protection of patented inventions.

CATALOGUE.

There will be prepared in French a methodical and complete catalogue of the products of all nations, indicating the positions they occupy in the buildings, the parks, and the gardens, as well as the names of the exhibitors.

Each nation will have the right, in addition, to make at its own expense, but in its own language only, a special catalogue of the articles exhibited in its sections, conformably to the list of prices which will be prepared by the administration.

Examined and forwarded.

GEORGES BERGER,  
*Director-General of Management,*

Examined and approved,  
The *Minister of Commerce and of Industry,*  
*Commissioner-General.*

By LUCIEN DAUTRESME.

## APPENDIX C:

### THE FRENCH GENERAL COMMISSION.

#### FRENCH ADMINISTRATION.

<b>Mr. Tirard</b> , President of the Council, Minister of Industry and Commerce, and for the Colonies.....	Commissioner-General.
<b>Messrs. Alphand</b> .....	Director-General of Works.
<b>Ch. Garnier</b> .....	Consulting Architect.
<b>Contamin</b> .....	Chief Engineer.
<b>Dutert</b> .....	Architect Machinery Hall.
<b>Bouvard</b> .....	Architect Industrial Sections and Central Dome.
<b>Formige</b> .....	Architect Fine Arts and Liberal Arts.
<b>Bechmann</b> .....	Chief Engineer of Water Service.
<b>Laforcade</b> .....	Chief of Gardens.
<b>De Mallevoue</b> .....	Secretary to the Direction.
<b>Déliens</b> .....	Chief Secretary of Technical Service.
<b>Georges Berger</b> .....	Director-General of Management.
<b>Thurneyssea</b> .....	Secretary to the Direction.
<b>Vigreux</b> .....	Chief of Mechanical and Electrical Service.
<b>Sédille</b> .....	Chief of Installation.
<b>Monthiers</b> .....	Chief of French Sections.
<b>De Lacretelle</b> .....	} Secretaries of Foreign Sections.
<b>Marc Millas</b> .....	
<b>Buffetand</b> .....	Chief Manager.
<b>Maindron</b> .....	In Charge of the Catalogue.
<b>Grison</b> .....	Director-General of Finance.
<b>Savoie</b> .....	Chief Secretary to the Direction.
<b>Chastenet</b> .....	Chief of Disputed Claims.
<b>Deputy Antonin Proust</b> .....	Special Commissioner of Fine Arts.
<b>Doctor Moizard</b> .....	Chief of Medical Service.

## APPENDIX D.

### ESTIMATED AND ACTUAL COST OF BUILDINGS, OPERATIONS, ETC.

*Comparative statement of the estimated and actual cost of buildings, etc.,  
Paris Exposition, 1889.*

Construction or Operation.	Estimated cost.	Actual cost.	Excess.	Reduction.
Fine Arts and Liberal Arts Buildings . . . . .	\$1,274,497	\$1,352,951	\$78,454	
Machinery Hall—Construction only . . . . .	1,446,677	1,502,779	56,102	
Industrial Sections . . . . .	1,157,281	1,177,127	19,846	
Drainage . . . . .	104,969	104,969		
Reserved Fund for Construction . . . . .	16,565	19,182	2,617	
Horticultural Grounds . . . . .	60,000	60,000		
Agricultural Galleries . . . . .	120,000	120,000		
Parks and Gardens . . . . .	616,531	406,531		\$210,000
Offices, Police Bureaus, etc. . . . .	91,750	91,750		
Inclosures . . . . .	90,000	90,000		
Improvements, etc., left bank of Seine . . . . .	16,000	5,134		10,866
Foot Bridges . . . . .	40,000	40,000		
Water and Gas . . . . .	120,000	120,000		
Roads and Restoration of Grounds . . . . .	72,652	72,652		
Water-Closets . . . . .	35,000			35,000
Expenditures in Machinery Hall . . . . .	963,044	616,413		346,631
General Reserve Fund . . . . .	200,975			200,975
Mechanical Service . . . . .	18,690	18,600		
Horticultural Exposition . . . . .	13,200	13,200		
Social Economy Section . . . . .	15,120	15,120		
	6,472,861	5,826,408	157,019	803,472

The actual expenditure, therefore, was \$646,453 less than the estimated cost.

## APPENDIX E.

### STATISTICS OF ADMISSION.

PARIS EXPOSITION OF 1889.

*Receipts from tickets of admission in 1867-1878-1889.*

Month.	Gross receipts.				
	1867.	1878.	Increase of 1878 over 1867.	1889.	Increase of 1889 over 1878.
May .....	1,224,184	1,278,860	54,676	2,610,813	1,331,953
June.....	1,357,937	1,954,103	596,166	4,338,869	2,384,766
July.....	1,264,358	1,823,176	558,818	4,544,196	2,721,020
August.....	1,276,019	1,959,334	683,315	4,977,092	3,017,758
September.....	1,328,196	2,720,595	1,392,399	5,246,704	2,526,109
October.....	1,729,226	2,303,403	574,177	4,820,869	2,517,466
November.....	227,289	584,376	357,087	1,610,810	1,026,434
Total .....	8,407,209	12,623,847	4,216,638	28,149,353	15,525,506

or, number of tickets received in 1889 above that of 1878, 15,525,506 ; but in 1878, 3,535,872 tickets were issued, for which little was paid. They are not included in the above list. Two tickets were required for entrance in the evening and in the morning before 11 o'clock; and on some fete days five tickets were required in the evenings. The whole number of persons admitted in 1889 with the number of tickets given above, was 25,398,609, an excess of 12,881,614 over 1878. The mean daily number of tickets received in 1889 was 152,158, and the mean daily number of visitors with these tickets was 137,289. On May 10 the entries were the smallest, viz: 36,922. On October 3 they were the largest, viz: 387,877. On the closing day there were 370,354 visitors on 511,297 tickets.

At the Exposition of 1855 there were 24,000 exhibitors ; 1867, 50,226 ; 1878, 53,100 ; and 1889, 60,000.

## APPENDIX F.

---

### RESTAURANTS, CONCESSIONS, AND REGULATIONS.

---

#### *MEMORANDUM ON THE SPECIAL CLAUSES AND CONDITIONS RELATING TO RESTAURANTS, CAFÉS, BEER-HALLS, BUFFETS, ETC.*

##### ARTICLE 1.—OBJECT OF THE ENTERPRISE.

The enterprise of which these presents regulate the conditions, has for object the construction and management (“exploitation”), during the whole Exposition, of \* \* \*

##### FIRST PART.

##### ART. 2.—CONSTRUCTION AND INSTALLATION—LOCALITY.

The locality leased for the establishment of —— is indicated on the annexed plan. It has a total area of ——

##### ART. 3.—CONSTRUCTION.

The construction of the building and the arrangement of the dependencies shall be executed at the expense of the lessee, who shall comply with all the conditions imposed upon builders in the Exposition. The plans must be submitted for the approval of the Director General of Works.

The building may be constructed either in wood or masonry, at the choice of the lessee; but its appearance must be appropriate and elegant.

##### ART. 4.—FURNACES AND KITCHENS.

The furnaces, kitchens, and dependencies shall be so arranged as not to offend either sight or smell, or incommode exhibitors or visitors.

##### ART. 5.—ESTABLISHMENT OF FREE WATER-CLOSETS IN THE INTERIOR OF THE BUILDINGS.

The lessee shall have the right to establish free water-closets in the interior of his establishment. But he cannot do so without making special request of the Director General of Works, and conforming in their construction to all the conditions which may be prescribed upon this subject.

##### ART. 6.—USE OF THE CONCEDED SPACE.

The lessee may place chairs and tables within the circumference of his concession. But this permission may be limited or even withdrawn by the administration if abuses or inconvenience to visitors should result.

## ART. 7.—FURNITURE, CHAIRS, BENCHES.

All the furniture belonging to the lessee, and especially that placed outside of his building, must be marked with his initials in clear and legible letters.

The lessee can under no pretext whatever employ for his own use the material (benches, chairs, etc.) belonging or loaned to the administration.

## SECOND PART.

## ART. 8.—USE—CHARACTER OF THE USE.

The lessee can make use of his concession only during the daily hours while the Exposition remains open, and within the space conceded. This rule is absolute.

## ART. 9.—TARIFF OF PRICES.

He must submit for the approval of the Director General of Management the tariff of the principal articles of consumption, and also hang up in his establishment, in a conspicuous place, this tariff approved.

## ART. 10.—ADMISSION OF EMPLOYÉS.

The lessee shall have the right of gratuitous admission for the employés necessary to the service of his establishment, but he must prepare a list of names, and submit it to the Director-General of Management. This list shall be deposited in the general office of the management, and be always visible.

The entrance of the employés shall be by the gates, and at fixed hours. It shall be by tickets, which shall be given up at the indicated turnstile. As soon as they shall have been counted and examined, they shall be returned the same day to the lessee, to be employed anew.

The lessee shall be responsible for frauds which may be committed in the employment of these tickets, but without prejudice to such measures as may be taken in regard to the authors of the fraud.

## ART. 11.—POLICE.

The lessee must see that good order is maintained in the interior and the dependencies of his establishment, keep it perfectly clean, see that the refuse is carried off, and the provisions brought in at the hours and under the conditions fixed by the regulations, and conform to all the requirements of the special police of the Exposition.

## ART. 12.—OVERSIGHT.

The administration shall exercise through its agents, whom it shall appoint for this purpose, an active watch over the establishment of the lessee, and take all measures necessary to prevent, or to put a stop to, all acts contrary to decency and good order.

## ART. 13.—OBLIGATION TO KEEP OPEN.

The lessee cannot, under any circumstances, close, event temporarily, his establishment during the Exposition.

Any violation of this clause, as soon as it shall have been duly proved, shall lead necessarily to the revocation of his concession.

## THIRD PART.

## ART. 14.—ADDITIONAL DISPOSITIONS—RENT.

The rent to be paid shall depend upon the number of paying visitors admitted to all parts of the Exposition. This number shall be ascertained from the accounts of the General Direction of Finance. It shall not include the visitors admitted by season tickets.

The rent is placed at —— per 1,000 visitors.

In the monthly account of rent, fractions of the number of visitors below 1,000 shall not be counted.

Such fractions shall be carried forward to the next month.

In stating the final account for settlement, all fractions of 1,000 shall be counted as 1,000.

## ART. 15.—TIMES OF PAYMENT.

The lessee must pay into the treasury on the 15th of each month the amount of his rent for the preceding month.

He must at the same date also pay his rent for water, gas, electricity, care of parks, and, in a word, for all the expenses properly chargeable to him.

## ART. 16.—CONSEQUENCES OF THE WITHDRAWAL OF THE LICENSE.

Whenever in consequence of a gross violation of the clauses of the present agreement, or of the memorandum of charges hereto annexed, the withdrawal of the license shall have been ordered, the administration may dispose of the leased premises, and even proceed to the demolition of the buildings.

## ART. 17.—SECURITY.

To guaranty the proper execution of his agreement, Mr. —— is bound to deposit in the Caisse des Depots et Consignations, a security of —— . This security shall be in money, or in French bonds; if in bonds, the owner shall be entitled to the interest; if in money, he shall be entitled to interest at 3 per cent. after sixty days.

The guaranty must be paid in within eight days after signing the present agreement.

The guaranty shall be returned within six months after the closing of the Exposition on the statement of the Directors-General of Works and of Management that the lessee has complied with all his obligations to the administration.

## ART. 18.—COMPETITION—NUMBER OF ESTABLISHMENTS.

The Minister of Commerce and of Industry, Commissioner-General, reserves the absolute right to license as many beer-halls, restaurants, cafés, or other establishments as shall appear to him to be desirable.

Consequently the lessee cannot under any circumstances, or on any pretext, reclaim an indemnity either from the administration or from other contractors or lessees on account of competition.

## ART. 19.—MEMORANDUM OF SPECIAL CHARGES IMPOSED UPON LESSEES IN THE PARKS AND GARDENS.

The lessee is also liable to the clauses and conditions imposed upon exhibitors and lessees permitted to build in the parks and gardens and in the galleries of the palace which were approved by the Minister of Commerce and Industry at the date of —— .

## APPENDIX G.

### FOREIGN COUNTRIES, APPROPRIATIONS, SPACE, ETC.

*Statement of countries represented at Paris Exposition, 1889, showing amount of Appropriation, Space, etc.*

[Taken from report on Paris Exposition of 1889, by E. T. Jeffery, of Chicago, Ill.]

Good Hope, Cape of .....	.....	Siam .....	.....
Greece .....	22,000	South Africa .....	.....
Guatemala .....	50,000	Spain .....	1,128,000
Hayti .....	75,000	Switzerland .....	115,000
Hawaii .....	5,000	Tasmania .....	48,000
Holland .....	71,000	Uruguay .....	150,000
Japan .....	.....	Venezuela .....	46,000
Italy .....	60,000	Victoria .....	65,315

<sup>1</sup>Including pavilion.

<sup>2</sup>Of this amount \$21,821 was refunded by exhibitors for space.

<sup>3</sup>Approximate.

<sup>4</sup>Private enterprise only.

<sup>5</sup>Chiefly expended on the Rue du Caire.

<sup>6</sup>Nearly refunded by exhibitors.

<sup>7</sup>Private enterprise of one firm.

Roumania expended \$76,000 in Paris, including the traveling expenses and sojourn for fifteen days of thirty-two students selected from the technical and professional schools of that country. The available funds, namely, \$40,000 Government appropriation and \$50,000 realized by lottery, being in excess of the expenditures, the remaining \$14,000 will be applied to some public work.

# APPENDIX I.

## CIRCULARS, FORMS, AND REGULATIONS.

### (A) ANTERIOR TO EXPOSITION.

#### CIRCULAR NO. I.

PARIS UNIVERSAL EXPOSITION OF 1889.

OFFICE OF THE UNITED STATES COMMISSION, WASHINGTON BUILDING,  
NO. 1 BROADWAY, NEW YORK, N. Y.

{WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant Commissioner-General.}

JULY 25, 1888.

1. The Universal Exposition of 1889, at Paris, will open the 5th of May, and close the 31st of October, 1889.
2. An official regulation of the French management provides that exhibits will be received from January 1, 1889, up to March 31 following.
3. There will be no charge for space occupied by exhibitors.
4. As it is the intention of the United States Government, in participating in this Exposition, to demonstrate the merit and comparative excellence of our products and manufactures, the United States Commission will forward, *free of freight between New York and the Exposition, going and returning*, all articles received for exhibit.
5. In general no more than one specimen of an article of manufacture will be exhibited, but the Commission reserves the right to admit others; the cost of additional freight to be borne by the exhibitor at the discretion of the Commission.
6. Show-cases, counters, shelving, and platforms must be paid for by exhibitors, as well as the cost of unpacking and repacking their goods, and storage of empty cases.
7. Exhibitors who are unable to go to Paris or to send representatives will have their goods installed and cared for free of cost, except as previously specified.
8. Due notice will be given of the warehouses or steamship lines in New York to which goods must be consigned.
9. There will be no duties to pay except on those goods sold or consumed.
10. The United States Commission will take precautions for the preservation of all objects exhibited, but will not be liable for loss or damage of any kind, either in transportation, storage or while on exhibition. Insurance is at the option of the exhibitors and at their cost.
11. Detonating matters, fulminates, and all articles considered dangerous are excluded.

12. Spirits or alcohols, oils, essences, corrosive materials, and all articles of any kind that would damage other exhibits or incommode the public, will only be received if contained in vessels of moderate dimensions and of sufficient strength to secure them against accident.

13. Primers, percussion caps, chemical matches, and other similar articles will only be received in the shape of "dummies," without inflammable material.

14. The United States Commission reserves the right to order the removal of any article which, in its nature or appearance, is hurtful to or incompatible with the purposes of the Exposition.

15. The French Regulations state that all objects exhibited will be *protected against piracy of invention or design*.

16. A limited amount of steam, gas, and motive power will be supplied free of cost; pulleys and belting must be furnished by exhibitors, who must also bear the cost of all special fittings and work.

17. Exhibitors of apparatus requiring the use of water, gas, or steam must state in their applications for space the quantity of each required.

18. Applicants for space desiring to erect show-cases, counters, or partitions must furnish a scale-drawing showing clearly the elevations and ground-plans; especially indicating the sides of the cases intended to be open for inspection.

19. No article may be withdrawn before the close of the Exposition, without the special consent of this Commission.

20. All articles will be exhibited in the name of the person who signed the application for space.

21. Exhibitors are permitted to mention, with their own names, those of their assistants of all kinds and grades who have contributed to the merits of the exhibits.

22. Exhibitors are expressly requested to indicate the selling prices of the articles exhibited by them, so as to facilitate the work of the juries and inform visitors.

23. The official statement of the nine Groups of the Exposition and the classes thereunder will be furnished upon request.

24. *Blank applications for space will be furnished on application. When the allotment of space is definitely made, each exhibitor will be notified and furnished with a permit for the space assigned.*

25. All communications must be addressed to the United States Commission; the French Commission will not correspond with foreign exhibitors.

WILLIAM B. FRANKLIN,

*United States Commissioner-General.*

SOMERVILLE P. TUCK,

*United States Assistant Commissioner-General.*

---

CIRCULAR No. 2.

UNITED STATES COMMISSION TO THE PARIS EXPOSITION OF 1889,

WASHINGTON BUILDING, No. 1 BROADWAY,

*New York City, N. Y., ——— —, 188—.*

Your application for space has been received and placed on file. You will be duly notified of the allotment of space, and time and manner of shipping goods.

W. P. FRANKLIN,

*Commissioner-General.*

SOMERVILLE P. TUCK,

*Assistant Commissioner-General.*

## CIRCULAR No. 3.

PARIS UNIVERSAL EXPOSITION OF 1889.

OFFICE OF THE UNITED STATES COMMISSION, WASHINGTON BUILDING,  
No. 1 BROADWAY, NEW YORK, N. Y.

[WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant Commissioner-General.]

## GROUP I.—WORKS OF ART.

OCTOBER 25, 1888.

1. This Group consists of the following classes:

CLASS I.—*Oil paintings*: Paintings on canvas, panels, and various grounds.CLASS II.—*Paintings of different kinds and Drawings*: Miniatures; paintings in water-colors; pastel and drawings of all kinds; paintings on enamel, earthenware, and porcelain; cartoons for stained-glass windows and frescoes.CLASS III.—*Sculpture and Engravings on Medals*: Statuary, bas-relief, repoussé work and chiselled work, medals, cameos, engraved stones, inlaid enamel work.CLASS IV.—*Architectural Drawings and Models*: Studies and fragments; representations and plans of buildings; restorations from ruins or documents.CLASS V.—*Engravings and Lithographs*: Engraving in black; polychromatic engravings. Lithographs in black, in chalk, and with brush; chromo-lithography.

2. The only persons entitled to exhibit are American citizens, whether residing in the United States or abroad.

3. *Applicants for space desiring to make exhibits in any one of the above classes are requested to fill out the inclosed blank and return it without delay to this Commission at the above address.*

4. Artists residing in the United States must have their exhibits in New York by February 15, 1889, at the very latest. Exhibitors residing in Europe must have their exhibits at Paris by March 20, 1889. There will be absolutely no extension of time, and no exhibits will be received after the specified dates. If it be found necessary to fix earlier dates than those named, due notice thereof will be given.

5. A jury of artists will be formed for the purpose of examining all works submitted for exhibition. No article will be admitted for exhibit unless favorably passed upon by this special jury—representing so far as possible the five classes of this Group—which will exclude all works that would not reflect credit on the United States Exhibit.

6. Due notice will be given of the names of the members of this jury, one section of which will sit in New York, and the other in Paris; their decisions will be subject to revision by this Commission.

7. All pictures, whether round or oval, should be placed in square frames. Excessive breadth in frames or projecting moldings should be avoided.

8. There shall be pasted upon the back of each picture-frame, and upon the bottom of other articles, a label, plainly written, giving the title and the name and address of the exhibitor. A duplicate of this label must be pasted upon the case containing the picture or other article.

9. Exhibitors are assured that the utmost care will be observed in handling their works, that they may suffer no damage.

10. The names and addresses of the agents appointed to receive exhibits in New York and Paris will be made known hereafter, together with the location of the depot in each city to which all articles must be sent for examination by the jury.

11. Intending exhibitors must prepay the cost of transportation from place of residence to the depot. Proposed exhibits rejected by the jury will be returned to owners at their expense. Upon those accepted for exhibit this Commission will

pay all expenses, including boxing, cataloguing, transportation from depot to Exposition Building, and return to residence of owner. Insurance to a reasonable amount will also be paid; the owners of exhibits may effect additional insurance at their own cost, if they desire.

THE ATTENTION OF INTENDING EXHIBITORS IS CALLED TO THE FOLLOWING:

[I.—Extracts from the French official regulations as to this Group.]

12. Only works of art executed since 1878 can be exhibited.

13. Copies, even those which reproduce a work in a style differing from the original, are not admitted. Unframed pictures and drawing and statuary in unbaked clay are also inadmissible, as well as *engravings produced by industrial processes*.

14. The Ministre des Beaux Arts and the French Administration will not correspond directly with artists, whose works will only be admitted through the Commission of the country of their citizenship, which alone can receive and return exhibits.

15. A methodical and complete catalogue in the French language will be made by the Exposition authorities. Three lines at most will be given each exhibitor, for the mention of his full name, place of birth, names of his masters, and the recompenses which he has received. Two additional lines at most will be given him for the name and summary description of each picture that he exhibits.

16. The Commission of each nation has the right to make, at its own expense, but only in its own language, a special catalogue of the works exhibited in its section.

17. Artists exhibiting will have the right to a permanent and gratuitous ticket of entrance during the whole period of the Exposition.

18. No exhibits may be drawn, copied, or reproduced in any form whatever without the authorization of the exhibitor, approved by the Director of this Group.

19. Regulations will hereafter be made as to the number and nature of the prizes to be awarded, also as to the constitution of the international jury charged with the distribution of these prizes. Artists who become members of this jury are excluded from competition for awards.

20. No exhibit may be withdrawn before the close of the Exposition without the special authorization of the Director of this Group and the Director-General of the Exposition.

21. Every artist who becomes an exhibitor declares by that fact that he agrees to comply with the regulations governing the Exposition.

[II.—Extracts from the general regulations of this Commission.]

22. The Universal Exposition of 1889, at Paris, will open the 5th of May, and close the 31st of October, 1889.

23. An official regulation of the French management provides that exhibits will be received from January 1, 1889, up to March 31 following.

24. There will be no charge for space occupied by exhibitors.

25. This commission will forward, *free of freight between New York and the Exposition, going and returning*, all articles received for exhibit.

26. Exhibitors who are unable to go to Paris or to send representatives will have their goods installed and cared for free of cost.

27. There will be no duties to pay except on articles sold.

28. This Commission will take precautions for the preservation of all objects exhibited.

29. This Commission reserves the right to order the removal of any articles which, in their nature or appearance, are hurtful to or incompatible with the purposes of the Exposition.

30. The French regulations state that all objects exhibited will be *protected against piracy of invention or design*.

31. No article may be withdrawn before the close of the Exposition without the special consent of this Commission.

32. All articles will be exhibited in the name of the person who signed the application for space.

33. Exhibitors are expressly requested to indicate the selling prices of the articles exhibited by them, so as to facilitate the work of the juries and inform visitors.

34. Blank applications for space will be furnished on demand. When the allotment of space is definitely made, each exhibitor will be notified and furnished with a permit for the space assigned.

35. All communications must be addressed to the United States Commission; the French Administration will not correspond with foreign exhibitors.

WILLIAM B. FRANKLIN,  
*Commissioner-General.*  
SOMERVILLE P. TUCK,  
*Assistant Commissioner-General.*

CIRCULAR NO. 4.

UNITED STATES COMMISSION TO THE PARIS EXPOSITION OF 1889.

[WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant-Commissioner-General.]

*Washington Building, No. 1 Broadway, New York, N. Y.*

[Paris Offices, 27 Avenue de la Bourdonnais. Cable addresses, New York, "Universal"; Paris, "Uscom."]

NEW YORK, *October 28, 1888.*

SIR: Please find inclosed herewith:

(1) Copy of the joint resolution of Congress accepting the invitation of the French Republic to take part in an International Exposition to be held in Paris in 1889.

(2) Newspaper cutting, giving some details of the project and a summary description of the Exposition buildings and various preliminary arrangements.

(3) Circular No. 1, containing an abstract of the official regulations of the French management, together with those established by the United States Commission.

(4) Blank application form for space to exhibit.

(5) Translation of the general classification, comprising the Nine Groups and their subdivisions.

Your attention is particularly called to Group II of the latter, devoted to all exhibits that come under the classification of Education and Instruction, and Apparatus and Processes used in the Liberal Arts.

At the Paris Exposition of 1878 the international jury made one hundred and fifteen awards to educational exhibitors in the United States section. This placed us at the head of foreign exhibits, and second only to France in the number of awards received by each country.

As it is the desire of this Commission to make the educational exhibit of 1889 equally creditable, and with your co-operation to surpass the satisfactory showing of all former expositions, we ask you to do everything in your power to advance the interests of this group, either by making application to exhibit in your own behalf, or by placing these circulars in the hands of others who are likely to apply for exhibition space in this department.

Awaiting your early reply, we are, sir, your obedient servants,

WILLIAM B. FRANKLIN,  
*United States Commissioner-General.*  
SOMERVILLE P. TUCK,  
*Assistant United States Commissioner-General.*

[Form 38.]

## CIRCULAR NO. 5.

UNITED STATES COMMISSION TO THE PARIS EXHIBITION OF 1889.

[WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant-Commissioner-General.]

*Washington Building, No. 1 Broadway, New York, N. Y.*

[Paris Offices, 27 Avenue de la Bourdonnais. Cable addresses, New York, "Universal"; Paris, "Uscom."]

NEW YORK, *December, 1888.*

SIR: In order that a statistical chart of the higher educational institutions in the United States may be prepared for the Paris Universal Exposition of 1889, and with the hope that you will assist in perfecting the exhibit in the Educational Group, you are respectfully requested to fill out the inclosed blank and return it to the above address at your earliest convenience.

I am, sir, your obedient servant,

\_\_\_\_\_  
*Assistant Commissioner-General.*

[Form 45.]

## CIRCULAR NO. 6.

PARIS UNIVERSAL EXPOSITION OF 1889.

OFFICE OF THE UNITED STATES COMMISSION, WASHINGTON BUILDING,  
NO. 1 BROADWAY, NEW YORK, N. Y.

JANUARY 14, 1889.

## GROUP 1.—FINE ARTS.

1. Proposed exhibits for this Group will be called for in New York, Brooklyn, and Jersey City at the expense of this Commission.
2. Notice of the number of articles and where located must be sent to W. S. Budworth, the agent appointed to receive exhibits, No. 1 West Fourteenth street, New York City, before February 10.
3. All proposed exhibits to be presented for approval of the jury by the owners or artists outside of these cities, must be forwarded to the same address in time to arrive by February 12.
4. This Commission will pay freight charges upon works accepted, but all expenses upon those not accepted and coming from outside the cities named must be borne by the sender.
5. All articles must be accompanied by a descriptive note, giving title, name, and address of artist and owner; where to be returned; if for sale, the price; and, as near as possible, the market or insurable value.
6. Upon the back of each picture-frame, and upon the bottom of other articles, shall be pasted a label of strong paper, plainly written, giving the title, and the name and address of the artist and owner. A duplicate of this label must be pasted upon the case containing the picture or other article.
7. *There will be absolutely no extension of time, and no exhibit will be received after the specified date, February 12, 1889.*

WILLIAM B. FRANKLIN,  
*Commissioner-General.*SOMERVILLE P. TUCK,  
*Assistant Commissioner-General.*

[Form 46.]

## CIRCULAR NO. 7.

UNITED STATES COMMISSION TO THE PARIS EXPOSITION OF 1889.

[WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant Commissioner-General.]

*Washington Building, No. 1 Broadway, New York, N. Y.*

[Paris Offices, 27 Avenue de la Bourdonnais. Cable addresses, New York, "Universal," Paris, "Uscom."]

JANUARY 19, 1889.

The attention of exhibitors is called to the fact that show-cases, counters, shelving and platforms, the unpacking and arranging of exhibits, the care thereof during the Exposition, the storage of packing-cases and repacking at the close, must be paid for by the exhibitors.

When an agent is to be employed to represent you, it is necessary to fill out and return inclosed blank to this Commission without delay.

SOMERVILLE P. TUCK,  
*Assistant Commissioner-General.*

[Form 50.]

## CIRCULAR NO. 8.

UNITED STATES COMMISSION TO THE PARIS EXPOSITION OF 1889.

[WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant Commissioner-General.]

*Washington Building, No. 1 Broadway, New York, N. Y.*

JANUARY 24, 1889.

DEAR SIR: This Commission wishes to call your attention to the short time left to collect an educational exhibit, worthy of the United States, for the Paris Exposition of 1889. This exhibit can only be made what it ought to be by the prompt and hearty action of all who can lend their assistance. The present circular letter has, accordingly, been issued with the hope that all who receive it will contribute their mite in the interest of a representative collection. It will cost almost nothing to the individual, and, with the co-operation of others, will greatly add to the value of the Educational Group.

The matter desired is mentioned below, and it is hoped that all will contribute item No. 1, at least, and as many more of the items as possible.

1. A chart showing the hours devoted to each subject and each class during the course.

2. Photographic views and plans of buildings designed and erected since 1878. Also town map, showing location of school buildings, with primary school in one color, high school in another, etc.

3. Photographs of a group of ten students from each class, showing features and carriage.

4. Statistics of above groups, giving the age, weight, height, waist and breast measure of each student.

5. A few specimens of free-hand drawing, giving the number of hours of instruction and practice before the given drawing was undertaken, and the time required to complete the given specimen.

6. A few mechanical drawings with similar information to that called for in No. 5.

7. A few architectural drawings with similar information to that called for in No. 5.

8. Specimens of writing-books.

9. Specimens of other manual productions.

10. Latest circulars, catalogues and reports.

11. As many blank forms, etc., as convenient.

12. Volumes of writings by members of the faculty.

You will kindly arrange the above matter in bound volumes and portfolios, and forward\* the same to Prof. C. Wellman Parks (Superintendent of Group II of this Exposition), 1825 Fifth Avenue, Troy, N. Y., at your earliest convenience, in order that he may arrange the matter for early shipment to Paris.

Yours respectfully,

WILLIAM B. FRANKLIN,

*United States Commissioner-General.*

SOMERVILLE P. TUCK,

*United States Assistant Commissioner-General.*

---

[Form 51.]

CIRCULAR No. 9.

UNITED STATES COMMISSION TO THE PARIS EXPOSITION OF 1889.

[WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant Commissioner-General.]

*Washington Building, No. 1 Broadway, New York, N. Y.*

JANUARY 25, 1889.

DEAR SIR: This Commission desires the United States Educational Exhibit at the Paris Exposition of 1889 to be as valuable to the student as possible; and while due attention will be paid to the artistic effect of the exhibit, no pains will be spared to secure and classify all statistical information and other educational matter that might induce the student to remain and investigate.

Your co-operation, therefore, in furtherance of this object, would be greatly appreciated. Believing the library to be one of our most important educational institutions, the Commission has prepared this circular, asking you to contribute as much of the matter mentioned below as your records will permit:

1. Latest reports and classified catalogue.
2. A copy of charter of incorporation.
3. Photographic views and architects' drawings of library, reading-room, museum, and working-room.
4. Large printed cards showing the number of people in the city, town, or society; the number of persons who have taken out books during the year of 1888; the number of volumes of each class of literature taken out of the library; the number of volumes of each class given out for reference in the library; the papers and magazines kept in reading-room during the year, and the number of readers.
5. Specimen blank forms, cards, etc., mounted on cards.

---

\* Send by mail, free of postage, by securely fastening to each package one of the penalty tags inclosed herewith.

Please correct and arrange this matter in a portfolio, and forward\* to Prof. C. Wellman Parks (Superintendent of Group II of this Exposition), 1825 Fifth Avenue, Troy, N. Y., at your earliest convenience, so that he may arrange it for early shipment to Paris.

Yours respectfully,

WILLIAM B. FRANKLIN,  
*United States Commissioner-General.*  
SOMERVILLE P. TUCK,  
*United States Assistant Commissioner-General.*

## CIRCULAR No. 10.

UNITED STATES COMMISSION TO THE PARIS EXPOSITION OF 1889.

[WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant Commissioner-General.]

*Washington Building, No. 1 Broadway, New York, N. Y.*

[Paris offices, 27 Avenue de la Bourdonnais. Cable addresses: New York, "Universal," Paris, "Uscom."]

JANUARY 29, 1889.

*Directions for selecting and forwarding specimens to illustrate the mineral resources of the United States at the Paris Universal Exposition of 1889.*

Specimens should show the general nature of the ore, and have freshly broken, clean faces. The size, so far as possible, should be about 5 inches square, or 5 to 6 inches, and from 2 to 3 inches thick.

Such specimens, accompanied by descriptive labels, may be sent by mail, free of postage, under penalty tags which will be forwarded for that purpose. The sample should be first wrapped thoroughly in paper, and then sewed up in cloth or placed in a small sack. An invoice should be sent at the same time, and the name of the sender should be written upon the back of the tag.

The label written in pencil, stating the nature of the ore, the name of the claim or mine, and the locality, with the name of the collector or donor, should be folded and placed next to the specimen inside of the wrapper.

Statistics of production and printed reports concerning the property are desired.

WILLIAM B. FRANKLIN,

*United States Commissioner-General.*

SOMERVILLE P. TUCK,

*United States Assistant Commissioner-General.*

[Form 58.]

## CIRCULAR No. 11.

PARIS UNIVERSAL EXPOSITION OF 1889.

OFFICE OF THE UNITED STATES COMMISSION, WASHINGTON BUILDING,  
NO. 1 BROADWAY, NEW YORK, N. Y.*SHIPPING INSTRUCTIONS.*

Special attention is called to the following shipping instructions. Compliance therewith in every detail is necessary to insure the proper delivery of exhibits at the grounds of the Paris Universal Exposition of 1889.

## SHIPPING MARK AND LABELS.

1. Mark on each case or package in 6-inch letters within a circle **(E.U.)**
2. Paste one of the inclosed labels on each end, and one on top of each case or package, making three in all. As an additional precaution tack each corner.
3. Enter in space provided on each label the exhibitor's name and address, the total number of cases making up consignment, and the consecutive number in each case.
4. *The weight in pounds and the number of cubic feet, outside measurement, of each case must be specified in blank space provided on each label.*

## INVOICES.

5. The exhibitor must make five copies of the invoice, for which purpose blank invoices are inclosed.
6. Send three by mail, when shipping goods, with bill of lading, inclosed in the accompanying envelope. Securely fasten one on the inside of the lid of the box, in the package, or to the article to which it refers. Should there be more than one box or package, the invoice must accompany No. 1. Retain one.
7. Your consignment must be sent by fast freight, when possible, and charges paid to New York.
8. The forwarding of your exhibit to New York is requested at the earliest date. If impracticable to forward as a whole, ship such portion of it weekly as possible, commencing January 28. It will facilitate shipment from New York if you can arrange to have your goods arrive on Wednesday or Thursday of each week.
9. Consign your goods on bill of lading to General William B. Franklin, New York, and forward bill of lading and invoices by mail direct to the Commission, No. 1 Broadway, New York City.
10. Upon arrival of your exhibit at New York, this Commission will cause the same to be transferred from rail or boat terminus to steamer at your expense, and will send you bill for cartage, accompanied by the Commission's receipt.

WILLIAM B. FRANKLIN,  
*Commissioner-General.*

SOMERVILLE P. TUCK,  
*Assistant Commissioner-General.*

## CIRCULAR.

## REIMPORTATION OF ARTICLES SENT TO THE PARIS EXHIBITION OF 1889.

[1889. Department No. 31, Division of Customs ]

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,  
*Washington, D. C., March 22, 1889.*

TO OFFICERS OF THE CUSTOMS AND OTHERS :

Manufactures, articles, or wares produced or manufactured in the United States, which may be sent to the Paris Exhibition of 1889 for exhibition, will, upon their return to the United States, be admitted to free entry, upon compliance with the following requirements—that is to say, shippers, at the time and port of exportation, shall file at the custom-house a manifest showing the marks and numbers of the packages, together with an invoice or statement specifying the contents of such packages (which documents may, if the shippers so desire, be filed by Mr. Somerville P. Tuck, Assistant Commissioner-General of such Exhibition, whose office is at No. 1 Broadway, New York, and who will act as their agent for such purpose), and shall, upon return of the packages, produce certificates either from the Director or other proper officers of the said Paris Exhibition, duly authenticated by a United States minister or consular officer, or by a statement of the consignees at the foreign port from which the reimportations may be made, certified by a proper officer of the customs at that port, as required by Department's circular of March 31, 1886, which documents shall fully identify the goods.

Paintings and other works of art, the production of foreign schools of art, which may be now owned in this country by residents of the United States, and which may be loaned to the French Department of Fine Arts of said Paris Exhibition of 1889 for exhibition, will also, upon their return to the United States, be exempted from the payment of duty upon their identity being established in the manner hereinbefore prescribed, that is, by the records of the custom-house at the port of exportation and the production of statements or certificates from the director or other officer in charge of the Fine Arts Department of said Exhibition, duly authenticated by a United States minister or consular officer, showing that they are the same articles which were loaned by residents of the United States for such Exhibition.

W. WINDOM,  
*Secretary.*

[Form 65.]

## CIRCULAR No. 13.

## UNITED STATES COMMISSION TO THE PARIS EXPOSITION OF 1889.

[WILLIAM B. FRANKLIN, Commissioner-General; SOMERVILLE P. TUCK, Assistant Commissioner-General.]

*Washington Building, No. 1 Broadway, New York, N. Y.*

[Paris Offices, 27 Avenue de la Bourdonnais. Cable addresses: New York, "Universal;" Paris, "Uscom."]

FEBRUARY 12, 1889.

GENTLEMEN: This Commission desires to collect a complete list of the catalogues and prospectuses of the electrical industries and allied interests of the United States, for the purpose of making an exhibit at the Paris Exposition of 1889 that will thoroughly represent the various enterprises engaged in these industries in this country.

You are respectfully requested to send to this Commission *at once, in duplicate*, such catalogues and general literature as have been issued by your company.

*Send by mail, free of postage, by pasting to your package the inclosed label containing the printed address of the Commissioner-General.*

Yours respectfully,

WILLIAM B. FRANKLIN,  
*United States Commissioner-General.*

SOMERVILLE P. TUCK,  
*United States Assistant Commissioner-General.*

N. B.—This Commission is collecting for the Electrical Department of the Exposition an album of photographs and drawings representing electric plants, installations, factories, machines, and instruments constructed in the United States. The Commission would be glad to have you likewise contribute to the completion of this exhibit.

---

[Form 66.]

CIRCULAR No. 14.

UNITED STATES COMMISSION TO THE PARIS EXPOSITION OF 1889.

*Washington Building, No. 1 Broadway, New York, N. Y.*

MARCH 1, 1889.

It will prevent delay in the issue of admission tickets to the Exposition if exhibitors will send by mail, prepaid, two copies of their photographs (*carte de visite* size, 4 by 2 inches), to the United States Commission, 27 Avenue de la Bourdonnais, Paris, France. The full name and address of the person to whom the ticket is to be issued should be inclosed therewith, together with the exhibitor's number. An application for extra tickets, when such are desired, should also be inclosed, according to paragraph 2 of the following extract from the French Official Regulations.

*For the information of exhibitors the following translation has been made from the official regulations relating to admissions:*

1. A single gratuitous admission ticket will be issued to each exhibitor, or to his agent duly authorized, which will be delivered only to the exhibitor or his agent, and to the latter on the written request of the exhibitor.

2. If, in consequence of the size or importance of the exhibit, the services of one or more attendants are required, the exhibitor must apply for tickets for the number desired, which application will be passed upon by the French Administration and a special certificate issued for the admission of such employés as are considered necessary.

3. The price of admission to the Exposition is as follows: *Day Admission*—ONE FRANC per person during the hours of general admission; TWO FRANCS per person during the hours devoted to students. *Evening Admission*—TWO FRANCS per person during the week; ONE FRANC per person on Sunday. The price of tickets for evening entertainments will be regulated hereafter.

4. *Subscription Tickets*—ONE HUNDRED FRANCS per person for the entire period of the Exposition. These will bear the name of the person to whom they are issued, must be signed by him, and he must reproduce his signature on a special register at the request of the ticket collectors. Any ticket that is transferred will

be confiscated, and the person so transferring his ticket and the person making use of a ticket not belonging to him will be prosecuted according to law.

5. There will be no free admission except by the non-transferable personal tickets issued to exhibitors, their agents and employé, and officials; and referred to in section 1 above.

WILLIAM B. FRANKLIN,

*United States Commissioner-General.*

SOMERVILLE P. TUCK,

*United States Assistant Commissioner-General.*

---

[Special circular to the press.]

OFFICE OF THE UNITED STATES COMMISSION

TO THE PARIS EXPOSITION OF 1889.

No. 1 Broadway, New York City, N. Y., December 7, 1888.

To the EDITOR:

DEAR SIR: I send you herewith a synopsis of the Social Economy Exhibit to be held in connection with the Paris Universal Exposition of 1889, thinking that the particulars concerning American contributions may interest the readers of your valuable paper.

If you are of this opinion, the Commission will be glad to have you publish the article, in whole or in part.

Yours respectfully,

SOMERVILLE P. TUCK,

*Assistant Commissioner-General.*

Mr. Georges Berger, the Director-General of the Paris Universal Exposition of 1889, has issued a *brochure* of 150 pages, on the "Exposition d'Economie Sociale," which is to be held in connection with the main Exposition. The Exposition of Social Economy is divided into fifteen sections, the second of which is devoted to profit-sharing and productive co-operation. Mr. Charles Robert, No. 15 Rue de la Banque, Paris, is president of this section, and several noted profit-sharing employers are members of the Commission. The other sections embrace wages, apprenticeship, union aid societies, retiring and life pensions, accident and life insurance, savings, co-operative distribution, workmen's homes and recreations, banks, hygiene, and large and small industries.

The commissioners in charge embrace the leading economists and experts of France. A large part of the pamphlet is devoted to a series of questions to provide for a preliminary inquiry under each head. An important feature of this exhibit will be the reports, documents, books, etc., relating to social economy, with particular attention paid to the making of charts and plans.

The United States Commission to the Exposition will contribute the complete works of the twenty-two state bureaus of labor statistics in this country, making a collection of seventy-five volumes, and the presentation therewith of the literature, so far as America is concerned, relating to profit-sharing and co-operation. A thorough and comprehensive work on profit-sharing between employer and employés, by Rev. Nicholas P. Gilman, is now in press, and will also be placed on exhibition. Mr. Gilman has furnished Mr. Charles Robert, through the U. S. Assistant Commissioner-General, Somerville P. Tuck, with a list of the principal profit-sharing firms in this country, as Mr. Robert desired to stimulate them through personal correspondence to make certain forms of exhibits which would greatly add to the interest of the Exposition. The manufactures by profit-sharing firms will be found in their appropriate places in the main Exposition. A full programme of

lectures and discussions on all the subject-matters of the fifteen sections will be held, and reports made from various countries. M. Berger states that the principal object of the exhibit is to make uninformed employers and workmen familiar with the methods of those who have proved successful in the same line of work, and to present to the world an impartial survey of social economy at the close of the nineteenth century, with its gradual development, actual condition, and probable outcome.

---

PARIS UNIVERSAL EXPOSITION OF 1889.

OFFICE OF THE UNITED STATES COMMISSION,  
27, Avenue de la Bourdonnais, Paris (France), April 10, 1889.

SIR: This is to inform you that as an exhibitor you are entitled to free admission to the grounds and buildings of the Universal Exposition.

In order to avail yourself of this privilege, you must send, immediately, to the above address, two photographs, carte de visite size 0<sup>m</sup>, 107 by 0<sup>m</sup>, 065, with your full name, nationality, and present address plainly written upon the back of each.

Messrs. Van Bosch & Co., 10, Boulevard Montmartre, have notified the United States Commission that they will take the photographs required free of charge.

WILLIAM B. FRANKLIN,  
*Commissioner-General.*

INFORMATION FOR THE JURY.

To Exhibitors:

Exhibitors are requested to fill out the accompanying blank and forward it at once in the inclosed franked envelope to General William B. Franklin, United States Commissioner-General, Washington Building, No. 1 Broadway, New York, N. Y.

If the spaces opposite each question are not adequate, the answers can be written on the opposite page, or on separate sheets of paper, attached and numbered to correspond.

Catalogues, price-lists, and all other information published by exhibitors should also be forwarded as above.

Immediate attention must be given to this request.

WILLIAM B. FRANKLIN,  
*United States Commissioner-General.*  
SOMERVILLE P. TUCK,  
*United States Assistant Commissioner-General.*

## INFORMATION FOR JURY TO ACCOMPANY EACH EXHIBIT.

Exhibitors must immediately answer the following questions, so far as possible, and forward this blank, properly filled out, in the inclosed franked envelope, to General William B. Franklin, United States Commissioner-General, Washington Building, No. 1 Broadway, New York, N. Y.

Questions.	Answer.
1. Nature of the exhibit.	
2. Number of application.	
3. Where produced or manufactured.	
4. Extent and capacity of works.	
5. Kind and quantity of power used.	
6. Number of persons employed. { Men. } Women. } Children.	
7. Extent and value of the annual production.	
8. Business—when commenced.	
9. Markets and place of consumption.	
10. Sources of materials used.	
11. Peculiarities of the object shown, or of the manufacture. State all considerations relating to invention, discovery, utility, quality, skill, workmanship, fitness for purpose intended, adaptation to public wants, economy and cost.	
12. Special or particular claim of merit to which the exhibitor desires to call the attention of the jury.	
13. What prizes have been awarded to the exhibitors at previous International Exhibitions?	
14. State what special provision has been made, if any, for the promotion of health, morals, and education of the workmen.	
15. Give signature in full of the applicant for space, with place of business and date; state also agent's name and address.

## (B) DURING THE EXHIBITION.

[Circular.]

OFFICE OF THE UNITED STATES COMMISSIONER-GENERAL,

*Paris, June 25, 1889.*

The following is a translation of a communication received from the French administration:

“The Director-General reminds the engineers and architects of the French classes and of the foreign sections that the general regulations absolutely forbid the sale of manufactured articles in the halls of the Exposition. He requests them, therefore, to see that this order is rigorously observed, and to communicate this circular to their exhibitors.

“Those exhibitors who do not conform to the above will be prosecuted.”

Exhibitors are respectfully requested to comply with the above-mentioned regulations, and are informed that in case this is not done by them, the Commission will take steps to prevent the sale of articles in the United States section.

By order of the Commissioner-General.

WM. C. GUNNELL,

*Engineer United States Commission.*

[Ministère du Commerce, de l'Industrie et des Colonies. Exposition Universelle de 1889. Direction Générale de l'Exploitation.]

[Translation.]

RÉPUBLIQUE FRANÇAISE.

PARIS, 16 *Avenue de la Bourdonnais*, 18 July, 1889.

SIR: I have the honor to call your attention to the provisions of Article 38 of the General Regulations, which states that objects sold cannot be removed before the end of the Exposition without a special authorization.

The enforcement of this article is more than ever necessary for the reason that it is the common interest of all to resist the tendency on the part of many exhibitors to empty their show-cases as soon as the operations of the jury are finished.

Strict orders have been given to those in charge of all exits to prohibit the carrying out of any article which is not accompanied by a permit signed by me and countersigned by the proper officers of the Douane and Octroi.

Special permits should be requested, by those interested, at my offices.

Receive, sir, the assurance of my distinguished consideration.

G. BERGER,

*Director-General.**Commissioner-General Franklin.*

[Ministère du Commerce, de l'Industrie et des Colonies. Exposition Universelle de 1889. Cabinet du Directeur Général de l'Exploitation.]

[Translation.]

RÉPUBLIQUE FRANÇAISE.

PARIS, 16 *Avenue de la Bourdonnais*, 23 July, 1889.

SIR: I have the honor to call your attention to certain abuses which, if they do not cease immediately, will cause the greatest embarrassment. The general regulation formally prohibits the sale of manufactured articles of exhibitors. I have consented, however, not to enforce this regulation rigorously, but it is indispensable

that the objects sold shall be only those made in sight of visitors and by exhibited machines. This measure, which I think you will approve, can only be carried out if you will order the guardians of your section to keep a strict watch in this matter, which in any event it is their duty to do.

Every day the number of sellers increases, and in each class articles are sold quite different from those which are made there. This comes from the fact that certain exhibitors give up a part of their space to persons who are only sellers, and the Expositions will soon be encumbered by them.

I request that you will charge the engineer of your section to see that these abuses cease immediately, and that no place shall be occupied by any person who is not an exhibitor regularly admitted.

Accept, sir, the assurance of my high consideration.

G. BERGER,  
*Director-General.*

*General Franklin,*  
*Commissioner-General of the United States.*

---

(C.) INCIDENT TO THE CLOSE.

[United States Commission, Paris Exposition of 1889, 27 Avenue de la Bourdonnais.]

PARIS, FRANCE, *September 15, 1889.*

NOTICE TO EXHIBITORS IN THE UNITED STATES SECTIONS.

The exposition will close on the 31st of October next.

I request to be informed at once what disposition you wish to have made of your exhibit.

You will oblige me, therefore, if you will as soon as possible inform me whether you will have the goods returned to the place from which they came, it being understood that the United States will deliver them in New York free of all charges for freight from here to the steamer wharf in New York. Any other charges which may accrue will follow the goods.

Should you wish to make other disposition of them, please inform me of the fact, on the accompanying blank form, mailed in the inclosed envelope with 5 cents postage prepaid.

Should I receive no answer to this circular from you, I shall consider that you desire to have the goods returned to the United States on the conditions given above.

Exhibitors are requested to employ competent agents to repack their goods.

If no agent be so employed, the Commission is willing to repack the exhibit, employing such labor as can be obtained at the close of the Exposition and charging the cost to the exhibitors.

All delicate or fragile articles or apparatus should, however, be packed by competent persons employed by the exhibitors. While all proper care will be taken by the Commission, it will assume no responsibility for damage on account of unskillful packing.

W. B. FRANKLIN,  
*United States Commissioner-General.*

UNITED STATES COMMISSION, PARIS EXPOSITION OF 1889,  
27 AVENUE DE LA BOURDONNAIS,  
*Paris, October 31, 1889.*

NOTICE TO EXHIBITORS IN THE UNITED STATES SECTIONS.

All goods which were exported from the United States and have formed part of its exhibit will, if not otherwise disposed of, be taken at the Exposition, when the prescribed regulations are complied with, and transported to New York free of expense to the exhibitors.

Exhibitors and their agents are cautioned against any infraction of customs regulations. No uncommon privileges will be allowed, and the customary examination will in all probability be carried out in New York and the legal penalties imposed.

To prevent confusion, loss, delay, and customs difficulties the following regulations should be strictly complied with, without which no packages will be accepted for shipment:

1. Only goods exported from the United States and having formed part of its exhibit will be received.

2. The contents of each box must be invoiced on blanks. The exhibitor must make five copies of the invoice on forms issued by the Commission. One of these invoices is to be put into the box, one is to be retained by the exhibitor, and the other three handed to the superintendent of the section for the use of the Commission and shippers. These invoices will be sworn to by the exhibitor or his agent before some person deputed by the United States Commissioner-General for the purpose, and will be used in connection with the invoices furnished at the time of exportation to identify the goods by the custom-house authorities in New York. Any article not invoiced found in the cases will subject the exhibitor to fines and confiscation, in accordance with the laws of the United States.

3. When the cases are ready for shipment they will be legibly marked with the owner's name and address, the original application number, the total number of cases making up the shipment, and the consecutive number of each case, upon labels furnished by the Commission. The weight in pounds and the number of cubic feet, outside measurement of each case, must also be specified in the blank space provided on each label. Three labels will be supplied for each case. Paste one of the labels on each end and one on top of each case or package; and as an additional precaution tack each corner of the label.

By authority of the United States Commissioner-General.

W. C. GUNNELL,  
*Engineer United States Commission.*

\_\_\_\_\_ U. S.,

INSTRUCTIONS.

1. All cases must be labeled with the accompanying labels, and in accordance with the instructions thereon.
2. Should there be more than one article in a case, describe each one in the fourth column, and state its value in the fifth column.
3. All crates, boxes, etc., should be securely nailed or screwed; the Commission will take every precaution to insure the careful handling and transportation of goods, but they do not insure, nor will they in any way be responsible for damage or loss.
4. Exhibitors will make five copies of this Invoice—Retain one (1); fasten one in case No. 1— and deliver three (3) to the United States Commission, at \_\_\_\_\_, 27 Avenue de la Bourdonnais, Paris.

UNIVERSAL EXPOSITION, PARIS, 1889.

## DECLARATION OF INVOICE.

I, the undersigned, declare that I am \_\_\_\_\_ of \_\_\_\_\_, exhibitor, the shipper of wares, goods, and merchandise belonging to the said exhibitor, which were exported from the United States and exhibited in the United States section at the Universal Exposition at Paris, 1889.

I also declare that the invoice annexed is a true, full, and faithful description of the goods, wares, and merchandises contained in the cases noted on the said invoice, and that the said cases contain nothing but articles shipped from the United States and exhibited in the United States section.

Signature: \_\_\_\_\_

OFFICE OF THE UNITED STATES COMMISSION, PARIS EXPOSITION, 1889.

Paris, \_\_\_\_\_ 188—.

I hereby certify that the annexed invoice, numbered \_\_\_\_\_ in which are mentioned and described certain goods, wares, and merchandises, was produced to me by the subscriber of the foregoing, who thereupon declared that all the goods, wares, and merchandises therein mentioned and described have formed a part of the United States Exhibit at the Universal Exposition at Paris, 1889, and were exported from the United States for that purpose, and that it was intended to re-enter the said goods, wares, and merchandises into the United States.

I do further certify that the person making the above declaration is the person he represents himself to be, and that so far as I have the means of knowing, the statements made in the said declaration are true.

Witness my hand and seal of the United States Commission, this \_\_\_\_\_ day of \_\_\_\_\_, 1889.

W. B. FRANKLIN,  
*Commissioner-General.*

By \_\_\_\_\_,  
*His Deputy.*

 Murphy, Fred. W., gold ores.  
 New Jersey Zinc and Iron Mining Co., zinc ores.  
 Newhall & Co., agents, borax, ores, etc.  
 New York and Georgia Manganese and Iron Co., manganese.  
 North Star Mining Co., gold.  
 Ontario Silver Mining Co., silver.  
 Oregon Iron and Steel Co., iron ores.  
 Oregon Nickel Mines Co., nickel ore.  
 Original Empire Mills and Mining Co., gold.  
 Oro Bella Mining Co., gold.  
 Plymouth Mine, gold.  
 Price, Prof. Thomas, ores and minerals.  
 Puget Sound Iron Co., charcoal iron.  
 Quijoatoas Mines, minerals.  
 Randol, J. B., president, quicksilver.  
 Reed, Simeon G., silver lead ores.  
 Rueger Charles C., superintendent, silver.  
 Senator Mine, auriferous pyrites.  
 Silver King Mining Co., silver.  
 Tuttle town Claim, gold.  
 Walker, J. R., uinitahite.  
 West Virginia Central Railway Co., bituminous coal.  
 Williams, copper ores.  
 COMET MINING CO., Frisco, Beaver County, Utah. (8471.)  
 Copper and silver ores.

## Catalogue of exhibitors—Class 41.

- COMFORT CONSOLIDATED MINING CO.,  
T. H. Wheeler, president, New York.  
Gold and silver ore from Rocky Bar,  
Idaho.
- CONGRESS MINING CO., Frederick W. Mur-  
phy, superintendent, Prescott, Ariz.  
Gold-bearing pyrites ore.
- CONROY, C. C., & COMFORT, S., Van Bu-  
ren, Ohio.  
Photograph, taken at night, of the  
burning gas from the Conroy & John-  
son well.  
Photograph of the burning gas issuing  
from the Karg gas-well, Findlay,  
Ohio.
- COOSAW MINES, Coosaw River, South  
Carolina.  
River phosphate rock.
- COPPER BASIN MINING CO., Copper Bas-  
sin, Prescott, Yavapai County, Ariz.  
Specimens of copper ores, malachite,  
and blue carbonate of copper in sand-  
stone and conglomerate.
- CORBIN, P. & F., New Britain, Conn.  
(845.)  
Locks and builders' hardware. Post-  
office system.
- COWLES ELECTRIC SMELTING AND ALU-  
MINUM CO., Lockport, N. Y., Dr.  
Leonard Walde, manager.  
Series of specimens of corundum and  
of aluminum alloys. silicon bronze,  
aluminum bronze, etc.
- DALY MINING CO., R. C. Chambers,  
superintendent, Park City, Sum-  
mit County, Utah.  
Silver, lead, and gold ores from various  
parts of the mine.
- DAVIS, H. J., Franklin County, Mass.  
Massive iron pyrites used for the man-  
ufacture of sulphuric acid.
- DAY, FREDERICK W., Murray, Idaho.  
Antimony sulphide, tungstate of lime,  
and gold-bearing quartz.
- DEAD HORSE CLAIM, A. Hayward, con-  
tributor, California.  
Gold-bearing quartz.
- DELAWARE AND HUDSON CANAL CO.  
Coal and Iron Exchange, New York,  
N. Y. (759.)  
Anthracite coal; a series of cut and  
polished specimens showing the frac-  
ture, color, luster, and density of an-  
thracite.
- DELHI MINE, A. Hayward, contributor,  
Nevada County, Cal.  
Gold-bearing quartz.
- DICKERSON SUCKASUNNY MINING CO.  
Frederick A. Canfield, Dover, N. J.  
Magnetic iron ore, Dickerson Mine,  
Terro Monte, Morris County, N. J.
- DRAKE CO., James H. Drake, president,  
Sioux Falls, S. Dak.  
Building and ornamental stone, includ-  
ing a quartzite known as Sioux Falls  
"jasper granite."
- DRUM LUMMON MINE, J. E. Clayton, col-  
lector, Marysville, Mont.  
Gold and silver ores.
- EIGHTY-SIX MINE, Lynx Creek, Ariz.  
Silver ore, assay value \$100.
- ENTERPRISE MANUFACTURING CO., OF  
PENNSYLVANIA, Philadelphia, Pa.  
(308.)  
Hardware specialties.
- FRANK, F. A., & Co., 316 East Eighty-  
second street, New York. (308.)  
Hardware.
- FOOTE, A. E., 1223 Belmont avenue,  
Philadelphia, Pa. (195.)  
Minerals of the United States; educa-  
tional collections illustrating the  
science of mineralogy.
- HALL, W. E.  
Silver ores.
- HAMLIN, Dr. A. C., Bangor, Me. (697.)  
Minerals from Mt. Mica, Paris, Me.
- HARNEY PEAK TIN MINING CO. (887.)  
Tin ore from Harney Peak, Black Hills,  
Dakota.
- HARTMANN MANUFACTURING CO., 102  
Chambers street, New York, N. Y.  
(284.)  
Steel picket fences, steel picket gate,  
steel wire mats, and brass wire mats.
- HARTSHORN, STEWART, East Newark,  
N. J. (176.)  
Hartshorn's self-acting shade rollers.
- IMPERIAL MINE, White Pine County,  
Nev., Hon. Thomas Wren and Jo-  
seph Grandelmyer.  
Lead, copper, silver, and gold ore.
- HATCH, DANIEL, Prescott, Ariz.  
Gold and copper ore from the Buena  
Vista Mine, near Prescott, Ariz.
- HOMESTAKE MINING CO.  
Gold ore.

- IDAHO QUARTZ MINING Co., Grass Valley County, Cal.  
Gold-bearing quartz.
- INTERNATIONAL SPECIALTY Co., Buffalo, N. Y. (632.)  
Perfected automatic twine-holder.
- JEWETT, THE JOHN C., MANUFACTURING Co., North Division street, Buffalo, N. Y. (395.)  
Labrador refrigerator and New Era water cooler.
- KNAPP, J. D. C., Minneapolis, Minn. (468.)  
Vaporizers for vaporization and inhalation of medicines.
- KNOWD, JOHN J., Twenty-fifth and South streets, Philadelphia, Pa. (724.)  
Steel shoes for horses.
- KUNZ, GEORGE F., Hoboken, N. J. (740.)  
Large crystals of fluor spar from St. Lawrence County, N. Y. Gadolinite. 11-pound crystal, from near Bluffton, Llano County, Tex.
- LAWRENCE, R. F., & Co., 196 Pearl street, Buffalo, N. Y. (485.)  
Bouquet-holders.
- LINCOLN BESSEMER Co., Thomas P. Marshall, secretary, Trenton, N. J.  
Magnetic iron ore from Oxford Township, Warren County, N. J.
- MAINE RED GRANITE Co., Red Beach, Calais, Me. (172.)  
Polished red granite urn, red granite base with rough sides, top and molding fine cut.
- MARIS MACHINE Co., 146 Broad street, Philadelphia, Pa. (467.)  
Portable hoists.
- MARSH & Co., H. German, superintendent, Gypsum, Ottawa County, Ohio.  
Gypsum, first, second, and third qualities.
- MARSHALL, T. P., Trenton, N. J.  
Magnetite iron ore, Bessemer ore, Warren County, N. J.
- MAGNOLIA ANTI-FRICTION METAL Co., 74 Courtland street, New York. (856.)  
Metallic alloys, anti-friction metal, etc.
- MAGNOLIA MINES, Ashley River, South Carolina, C. C. Pinckney.  
Land phosphate rock.
- MERRILL, M. J., Nashua, N. H.  
Graphite from Nelson, N. H.
- Catalogue of exhibitors—Class 41.
- MILLER LOCK Co., M. Jackson, managing director, Frankford, Philadelphia, Pa. (394.)  
Samples of boxes, keyless locks, and padlocks.
- MITCHELL, LAZAR & Co., Philadelphia, Pa. (627.)  
Samples of Columbia semi-bituminous coals.
- MOORE'S, JOHN, SON, 193 Front street, New York, N. Y. (217.)  
Hay and manure forks, steel hoes and rakes.
- MT. MICA Co., AND A. C. HAMLIN, president, Bangor, Me.  
Tourmaline gems; a series of cut stones illustrating the various colors of the tourmalines of Mt. Mica, Maine.
- STATE OF NEVADA. (888.)  
Collective exhibit, ores and minerals.
- NEW ENGLAND BROWN STONE Co., Cromwell, Conn.  
Connecticut brown sandstone.
- NEWHALL, H. M., & Co., San Francisco, Cal.  
Cinnabar—"Float ore," cinnabar in silicious gangue, Bradford Mine, Napa County, Cal., specimens of borax.
- NEW JERSEY ZINC AND IRON Co., Benjamin G. Clarke, president, 52 Wall street, New York.  
Ores of zinc and zinc oxide from the company mines, Sussex County, N. J.
- NEW YORK AND GEORGIA MANGANESE AND IRON Co., 37 Broad street, New York, N. Y.  
New Almaden manganese ore, called "kidney manganese," from near Cartersville, Ga.
- NORTH STAR GOLD MINING Co., James D. Hague, president, Grass Valley, Nevada County, Cal.  
Free gold and auriferous pyrites in quartz.
- NUTRIZIO, HENRY, Beekman and William streets, New York, N. Y. (93.)  
Coffee pots.
- OH JOE MINE, White Pine County, Nev., Hon. Thomas Wren and Jos. Grandelmyer.  
Lead, copper, silver and gold ore.

## Catalogue of exhibitors—Class 41.

- ONTARIO MINING Co., R. C. Chambers, superintendent, Park City, Summit County, Utah.  
Silver, gold, and lead ores from the different levels of the Ontario Mine.
- OREGON IRON AND STEEL Co., S. G. Reed, president, Oswego, Oregon.  
Samples of hot blast charcoal pig iron, iron ores, fuel and flux.
- ORIGINAL EMPIRE MILL AND MINING Co., James D. Hague, president, Grass Valley, Nevada County, Cal.  
Auriferous quartz from the Empire Mine.
- ORO BELLA MINING Co., Bayard, Yavapai County, Ariz.  
Gold-bearing quartz and sulphurets.
- PECK, A. G., & Co., Cohoes, N. Y. (484.)  
Samples of axes and edge tools.
- PHILADELPHIA NOVELTY MANUFACTURING Co., Philadelphia, Pa. (328.)  
Gas burners and gas fixtures.
- PLYMOUTH MINE, A. Hayward, contributor, Amador County, Cal.  
Gold-bearing quartz.
- PRICE, Prof. THOMAS, San Francisco, Cal.  
Gold ore from the Great Blue Lode, and other minerals.
- PUGET SOUND IRON Co., A. Halsey, Secretary.  
Charcoal pig iron made at Port Townsend, in Puget Sound, Washington Territory, from ores, magnetite in limestone, mined at Texada Island, British Columbia.
- RANDOL, J. B., San Francisco, Cal.  
Quicksilver ores from the New Almaden Quicksilver Mine, California, with photos of mines.
- REID, A. H., corner Thirtieth and Market streets, Philadelphia, Pa. (388.)  
Samples of lightning braces.
- SENATOR MINE, F. W. MacGowan, superintendent, Prescott, Ariz.  
Specimens of gold-bearing sulphuret ore.
- SHALER AND HALL QUARRY Co., Portland, Conn. (504.)  
Connecticut brown sandstone.
- SHEPARD, SIDNEY, & Co., 145 to 149 Seneca street, Buffalo, N. Y. (309.)  
Stove-pipe damper, flour sifter, steam egg poacher, mincing knife.
- SILVER KING MINING Co., Pinal County, Ariz.  
Silver ores and concentrates.
- SIRRET SCALE Co., Cuyahoga Falls, Ohio. (531.)  
The Sirret scale.
- SMITH, JOHN E., & SONS, 50 Broadway, Buffalo, N. Y. (438.)  
Meat cutters, chopper, and sausage-stuffing machine.
- SOCIÉTÉ ANONYME DES MINES DE LEXINGTON, Butte, Mont., Charles C. Rueger, superintendent.  
Silver ore, Lexington Mine.
- STANDARD TARGET Co., 121 Superior street, Cleveland, Ohio. (303.)  
Set of target traps and cases of targets.
- STANLEY RULE AND LEVEL Co., New Britain, Conn. (151.)  
Iron and wood bench-planes and other tools.
- STONEWALL CLAIM, Lindley Abel, owner, Bayard, Ariz.  
Gold ore, small vein.
- TIFFANY & Co., Union square, New York, N. Y. (879.)  
Precious and ornamental stones of North America, consisting of stones cut in the United States, illustrating the various forms of cutting, crystals, cleavages, fractured pieces in their natural state and polished specimens, and a series of archæological interest.
- TUTTLETOWN CLAIM, A. Hayward, contributor, Tuttletown, Cal.  
Gold-bearing quartz.
- UNITED STATES WAR DEPARTMENT, Washington, D. C.  
Diagram and report of General M. C. Meigs, showing the results of a series of experimental trials to determine the relative value of the fuels used in the Army of the United States.
- WALKER, J. R., Salt Lake City, Utah.  
Uintahite, an asphalt, from Gilsoris Mine, near Fort Duchesne, Uintah County, Utah.
- WATERBURY RUBBER Co., 49 Warren street, New York, N. Y. (235.)  
Sphincter grip steel armored hose.

WEST VIRGINIA CENTRAL RAILWAY CO.,  
G. W. Harrison, general traffic agent,  
Piedmont, W. Va.

Bituminous coal from the Eck Garden  
Mines (14-foot vein) and from the  
Davis Mine (11-foot vein).

WHITE, L. & I. J., 310 Exchange street,  
Buffalo, N. Y. (439.)

Edge tools and machine knives.

YALE AND TOWNE MANUFACTURING CO.,  
Schuyler Merritt, general manager,  
Stamford, Conn. (397.)

Specimens of hardware and locks; the  
Yale and Towne post-office system.

CLASS 42.—PRODUCTS OF FOREST GROWTH  
AND FOREST INDUSTRIES.

ACME MANUFACTURING CO., Wilmington,  
N. C.

Specimens illustrating the preparation  
and manufacture of pine bagging,  
etc., from the needles of *Pinus aus-*  
*tralis*.

BROOKS, HENRY, Boston, Mass.  
Photographs of forest trees.

CALIFORNIA REDWOOD LUMBER ASSOCI-  
ATION, T. Korbel, agent, San Fran-  
cisco, Cal.

Redwood lumber. (*See* Korbel.)

CORDLEY & HAYES, 37 Barclay street,  
New York, N. Y. (7.)

Indurated fiber ware, kitchen utensils,  
etc.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C.

Specimens of peculiarities of forest  
trees: slabs of wood of special di-  
mensions: panels of curly and figured  
woods: panels of furniture woods.

FAIRWEATHER & LADOW, New York, N. Y.  
Slab of hemlock bark, 8 by 12 feet,  
framed.

FERNOW, B. E., Chief of Forestry Di-  
vision, Department of Agriculture,  
Washington, D. C.

Maps showing the genera, species, and  
distribution of forest growth in  
North America; wood sections and  
herbarium specimens, representing  
the economically important timber  
trees of the United States: wall map  
of woodland area in the United  
States: tree seeds: model of tree-  
planting machine.

Catalogue of exhibitors—Class 42.

HASKIN, SAMUEL E., New York, N. Y.  
Vulcanized wood and lumber.

HOUGH, ROMEYN B., Lowville, N. Y.

Veneer sections, radial, tangential, and  
transverse, showing the anatomy  
and structure of trees; veneer sec-  
tions for ornamental purposes.

HURLBURT BROTHERS, 539 Brannan  
street, San Francisco, Cal.

California redwood.

JACKSON, A. C., Sanford, Fla. (456.)

Florida woods.

KING, MISS JULIET, Washington, D. C.

Autumn leaves. Design showing  
tints of autumn foliage in North  
American forests.

KORBEL, F., & BROTHERS, 27 Bryant  
street, San Francisco, Cal. (820.)

California redwood lumber and doors.

LE LONG, B. F., California.

Trunk (section) of oldest tree in Cali-  
fornia.

LINCOLN MILL CO., Eureka, Cal.

California wood.

MASSACHUSETTS SOCIETY FOR THE PRO-  
MOTION OF AGRICULTURE, Boston,  
Mass.

“Michaux’ Sylva;” being 240 colored  
plates representing the forest flora  
of the United States, as described by  
André F. Michaux, father and son.

NORTHERN PACIFIC RAILROAD CO., 35  
Wall street, New York, N. Y.

Sections of the trunks of forest trees.

RICHMOND CEDAR WORKS, 100 Reade  
street, New York, N. Y. (112.)

Wooden ware: white and red cedar  
ware.

ROTHROCK, J. P., professor of biology,  
University of Pennsylvania, Phila-  
delphia, Pa.

Bromide enlargements of photographs  
of characteristic forest trees from  
the Atlantic region,

SARGENT, CHARLES S., director of the  
Arnold Arboretum, Jamaica Plain,  
Mass.

Sections of trees.

SEATCO MANUFACTURING CO., Seatco.  
Washington. (444.)

Samples, useful and ornamental, of  
Pacific Coast woods: samples of ex-  
terior and interior house finishing in  
woods.

Catalogue of exhibitors—Class 43.

SMILLIE, THOMAS W., National Museum,  
Washington, D. C.

Photomicrographs of woods, in radial,  
transverse, and tangential sections.

SPURR, CHAS. W., Co., Boston, Mass.

Veneer sections showing the anatomy  
and structure of woods—radial, tan-  
gential, and transverse cuts.

TABER, J. W., San Francisco, Cal.

Photographs, framed (20 and 24 inch),  
of characteristic California trees.

TIFFANY CHEMICAL CO., New York, N. Y.  
(378).

Samples of tan bark and tan extracts.

ZABRISKIE, Z. L., Hattrish, N. Y.

Sections of wood for the microscope.

CLASS 43.—PRODUCTS OF HUNTING, PRO-  
DUCTS OF FISHERIES, APPARATUS AND  
INSTRUMENTS FOR FISHING AND FOR  
GATHERING FRUITS OF NATURAL  
GROWTH.

DAVIDSON, H. E., 45 boulevard de Latour-  
Maubourg, Paris. (874.)

Fishes from British Channel mounted  
according to the method devised by  
Dr. Davidson, of Boston, and pat-  
ented under the title, "Davidson's  
Ichthytaxidermy."

MILLS, WILLIAM, & SON, New York City.  
Fishing-rod for tarpon.

NEWLAND, HENRY A., & Co., Detroit,  
Mich. (872.)  
Furs.

OSGOOD, N. A., Battle Creek, Mich. (597.)  
Portable folding canvas boat, complete  
with oars, seats, and bottom board.

THE PLANT AND JACKSONVILLE AND KEY  
WEST SYSTEM OF RAILWAY, STEAM-  
BOAT AND STEAMSHIP LINES, Florida.  
Jackson, Arthur C., Sanford, Fla.,  
agent.

Collective exhibit of raw and manu-  
factured products to illustrate the  
resources and attractiveness of the  
State of Florida.

TIFFANY & Co., Union square, New York,  
N. Y. (879.)

Pearls, with the various species of  
shells in which they are found in the  
brooks, rivers, and on the coasts of  
North America.

UNITED STATES GOVERNMENT.

Collective exhibit of the animal and  
vegetable fibers of the United States,  
illustrating the agricultural, com-  
mercial, and manufacturing aspects  
of the textile industry; prepared by  
Charles Richards Dodge, special  
agent, Department of Agriculture.

CLASS 44.—AGRICULTURAL PRODUCTS  
NOT USED FOR FOOD.

ALEXANDER DRUG AND SEED CO., Au-  
gusta, Ga.

Samples of cotton seed.

ALLEN & GINTER, Richmond, Va. (117.)  
Cigarettes, smoking tobacco, and speci-  
mens of leaf-tobacco.

ARMISTEAD, L. L., Lynchburgh, Va.

Smoking tobacco, "Occidental" and  
"Highlander." Tobacco leaves from  
Virginia.

BINFORD, JAMES R., Duck Hill, Miss.

Samples of cotton seed, oil meal, and  
oil cake.

BOYCE, S. S., 280 Broadway, New York.

Hemp and flax, illustrating the manu-  
facture from dry fiber.

BOYCE FIBER CO., 280 Broadway, New  
York.

Flax and hemp treated without chemi-  
cals and without rolling.

BROWN'S, WALTER, SON & Co., 29 High  
street, Boston, Mass.

Series of commercially graded wools.

BRUCE, WILLIAM, Quincy, Fla.

Tobaccos.

CLARK, WASHINGTON A., Columbia, S. C.

Bale of sea island cotton, Constellation  
superfine.

COLLECTIVE EXHIBITION, showing the  
varieties of leaf-tobacco, prepared  
under the direction of the U. S. De-  
partment of Agriculture by Alex-  
ander McDonald, agent, Lynchburgh,  
Va.

Contributors:

Bowman, N. R., Lynchburgh, Va.

Shelborn, Silas, Richmond, Va.

Winston, Frank, Tennessee.

Neal, T. D., Richmond, Va.

Griffin, S. M., & Co., Richmond, Va.

Wilson, J. J., Son & Co., Richmond,  
Va.

Harthill, Alex., Louisville, Ky.

COLLECTIVE EXHIBITION, ETC.—*Cont'd.*

Thornton, Noble & Davis, Richmond, Va.  
 Vaughn & Sarvay, Richmond, Va.  
 Edmondson, H. A., South Boston, Va.  
 Ferrill, P. W., Danville, Va.  
 Haas, L. B., Hartford, Conn.  
 Bailey, S. M., Amherst County, Va.  
 Noblin & Hudson, South Boston, Va.  
 Florida Tobacco Producing Company.  
 Crawford, E. M., & Son.  
 Hall, Thomas, New York.  
 Maryland Leaf Tobacco Association.  
 Risque, J., Campbell County, Va.  
 Scott, A. W., Bedford County, Va.

COLLECTIVE EXHIBITION of hay and grasses, prepared under the direction of the U. S. Department of Agriculture by Dr. George Vasey, botanist.

## COLLECTIVE EXHIBIT OF THE STATE OF FLORIDA.

Raw cotton and various agricultural products.

COTTON-SEED OIL PRODUCT Co., 80 Beaver street, New York.

Cotton-seed oil lard, goldene, toilet and laundry soaps. (*See also* Class 45.)

## DEPARTMENT OF AGRICULTURE, Washington, D. C.

Series of samples of lint cotton, cotton-seed, and vegetable fibers; ninety specimens of American wool in glass jars. (*See also* Collective Exhibition.)

## Catalogue of exhibitors—Class 44.

DUTTON, H. F., & Co., Gainesville, Fla.  
 Sea island cotton in bale, and samples and seed.

FREMERY, FELIX, Yorktown, Tex.  
 Samples of native-grown jute, ramie, and ramie seed.

HAWKINS, W. B., Lexington, Ky.  
 Hemp seed, bundle hemp stalks, hemp "shive" or waste.

HINSON, W. Q., James Island, S. C.  
 Bale of improved sea island cotton.

JONES, J. T., Hogansville, Troup County Ga.  
 Small upright glass case showing cotton plants as ready for pickers.

JACKSON, ARTHUR C., Sanford, Fla. (456.)  
 Long-staple sea island cotton, etc.

JUSTICE, BATEMAN & Co., 122 South Front street, Philadelphia, Pa.

Series of commercially graded wools.  
 KELLOGG & MACDOUGALL, Buffalo, N. Y.  
 Brooms and linseed-oil cake.

KIMBALL, WILLIAM S., & Co., Rochester, N. Y. (317.)

Cigars and fine smoking tobaccos.  
 LEITNER, H. D., Richmond, Va.  
 Yucca fiber and dried leaves from which it is prepared.

LOUGHBRIDGE, Prof. R. H., University of South Carolina.

Forty-four varieties of cotton grown on the experiment farm, showing proportion of seed to lint.

LYNCH, JAMES, 194 Church street, New York, N. Y.

Series of commercially graded wools.  
 MACNAUGHTAN'S, W., SONS., 170 South Fifth avenue, New York.

Series of commercially graded wools.  
 MARTINEZ, YBOR & Co., Ybor City, Fla.  
 Cigars.

NEW ORLEANS COTTON EXCHANGE, New Orleans, La.

Official grades of American cotton.  
 NYE, WM., New Bedford, Mass. (870.)  
 Oils.

PEAVEY & Co., Minneapolis, Minn.  
 Miscellaneous specimens of flax.

PORTER & MACRAE, Memphis, Tenn.  
 Bale of cotton.

ROBERTS, Dr. R. R., 433 Third street, Washington, D. C.

American flax and hemp prepared by the Roberts bleaching process.

## Catalogue of exhibitors—Class 45.

- SIoux CITY LINSEED OIL WORKS, Sioux City, Iowa.  
Linseed oil, meal, and cake.
- SMITH, J. T., Heron Lake, Minn.  
One bale of tow.
- SOUTHERN COTTON OIL Co., 80 Broad street, New York.  
Samples of refined cotton-seed oil. (*See* Class 69.)
- SPARKS, E. R., HEMP Co., Lexington, Ky.  
Cleaned, dressed, and double-dressed hemp and tow.
- STATISTICAL DIVISION, DEPARTMENT OF AGRICULTURE, Washington, D. C.  
Series of samples of cotton in seed, grown and contributed by statistical correspondents.
- STRAITON & STORM, 206 East Twenty-seventh street, New York, N. Y. (3.)  
Cigars and tobacco.
- STUBBS, Prof. W. C., State Experiment Station, Baton Rouge, La.  
Series of small samples of cotton in seed.
- TUCKER, CARTER & Co., New York City.  
Kentucky hemp and cordage made from it.
- WINFREE ADAMS & LLOYD, Lynchburgh, Va.  
Tobacco: "Arkansas Traveller," "Mississippi Jawger," and "Adams' Fancy."
- CLASS 45.—CHEMICAL AND PHARMACEUTICAL PRODUCTS.
- ARMOUR & Co., Chicago, Ill. (840.)  
Glue bone meal (hoof meal).
- BELL, R. W., MANUFACTURING Co., 77 Washington street, Buffalo, N. Y. (312.)  
Laundry soaps and soap powder.
- BORNE, SCRYMSER & Co., New York.  
Mineral and lard oils.
- BOSTON RUBBER SHOE Co., Boston, Mass. (530.)  
Rubber boots and shoes.
- BROOKHAVEN RUBBER Co., George R. Allen, treasurer, Setauket, Long Island, N. Y. (206.)  
Rubber plants, crude rubbers, and the American manufactured products therefrom.
- BROWN, B. F., & Co., 154 Commercial street, Boston, Mass. (82.)  
Blackings and dressings for leather.
- BURNHAM, Dr. E. S., 390 Main street, Buffalo, N. Y. (451.)  
Medicated and electric batteries.
- BURROUGHS, WELLCOME & Co., 82 Fulton street, New York, N. Y.  
Hazeline, a preparation of Witch Hazel.
- CAHIL, M. S., & Co., 94 Lincoln street, Boston, Mass. (589.)  
Alma polish. Liquid shoe dressing.
- CHESEBROUGH MANUFACTURING Co., 21 State street, New York, N. Y. (54.)  
Vaseline and its preparations.
- CLARK AND WISE Co., 39 River street, Chicago, Ill. (428.)  
Wise axle grease.
- COLLINS, S., SON & Co., 32 Frankfort street, New York, N. Y. (194.)  
Printing inks.
- COTTON-SEED OIL PRODUCT Co., 80 Beaver street, New York.  
Copco toilet soap, copco laundry and bath soap. (*See also* Class 69.)
- CRANE, THE FREDERICK, CHEMICAL Co., Short Hills, N. J. (547.)  
Varnishes, lacquers, etc.
- DEVOE, F. W., & Co., 101 Fulton street, New York, N. Y. (207.)  
Railway varnishes, paints, brushes, etc.
- FAIRCHILD BROTHERS & FOSTER, 82 Fulton street, New York, N. Y. (594.)  
Digestive ferments, pepsine, extractum pancreatis, peptonizing tubes, peptigenic milk powders.
- JOHNSTON, HENRY M., 25 John street, Brooklyn, N. Y. (301.)  
Prepared dry distemper paints, known as "dry kalsomine and fresco paints."  
Prepared dry distemper paints, known as "home wall colors."
- LE PAGE Co., Boston, Mass. (463.)  
Liquid fish glues and cement.
- LUGANO, CHRISTINE, Kingston, N. Y. (51.)  
American liquid glues.
- LARKIN, J. D., & Co., 663 Seneca street, Buffalo, N. Y. (174.)  
Laundry and general household soap.
- MCLEISH & Co., Buffalo, N. Y. (435.)  
Glass case of gelatine; products of animal ligaments.
- PEASE, F. S., 65 Main street, Buffalo, N. Y. (160.)  
Lubricating and illuminating oils.

REVERE RUBBER Co., Henry C. Morse, treasurer, Boston, Mass. (163.)

Rubber goods for mechanical purposes.

RUSSIA CEMENT Co., R. Brooks, president, Gloucester, Mass. (296.)

Liquid fish glues. Articles of manufacture representing the special industrial applications of fish glues and fish tankage.

SEABURY & JOHNSON, New York and London. (329.)

Hydonaphтол, etc.

SPHINCTER GRIP ARMORED HOSE Co., 25 Murray street, New York, N. Y. (867.)

Armored hose.

SOLWAY PROCESS, Syracuse, N. Y. (767.)

Samples of soda.

UPTON, GEORGE, 239 Franklin street, Boston, Mass. (613.)

Gelatine, glue, liquid fish glue, flint paper, and brewers' isinglass.

VALENTINE & Co., George F. Swain, treasurer, 245 Broadway, New York, N. Y. (47.)

Varnishes and paints for carriage work.

WARD, EVERETT, 6 Harrison street, New York, N. Y. (652.)

White and yellow soaps (borax) and soap powder.

WARNER, WILLIAM R., & Co., Philadelphia, Pa. (20.)

Soluble coated pills, granules, and parvules.

Granular effervescent salts and pharmaceutical preparations.

WATERBURY RUBBER Co., George A. Howe, treasurer, 49 Warren street, New York, N. Y. (235.)

Elastic tubes, hose, with steel fittings.

CLASS 46.—CHEMICAL METHODS OF BLEACHING, DYEING, PRINTING, AND FINISHING.

BANCROFT, JOHN, & BLOEDE, VICTOR G., Rockford, near Wilmington, Del. (237.)

Cotton window Hollands and fringes.

BAXTER, RICHARD, Hotel Bellevue, 39 Avenue de l'Opéra, Paris, France. (203.)

Mothaline cloth and mothaline cloth pockets.

Catalogue of exhibitors—Class 48.

BURROUGHS, WELLCOME & Co., 82 Fulton street, New York. (829.)

Hazeline: a preparation of witch hazel.

GARNER & Co., 2 Worth street, New York, N. Y. (318.)

Printed cotton fabrics.

WIGGINS', H. B., SONS, 124 Clinton place, New York, N. Y. (747.)

Fabric for window shades, book covers, etc.

CLASS 47.—LEATHER AND SKINS.

BURK BROTHERS, Philadelphia, Pa. (863.)

Kid skins.

BARNET, J. S., & BROTHER, 27 Spruce street, New York, N. Y. (2.)

Finished wax calf-skins.

BENZ, DIETSCH & BETZ, Newark, N. J. (814.)

Domestic glazed kid, kangaroo, and goat leathers.

BLANCHARD BROTHERS & LANE, Newark, N. J. (848.)

Patent leather for carriages.

RUSSEL, GEORGE H., Newburgh, Pa. (491.)

Samples of leather by a new and quick process of tanning with bark or extracts.

SALOMON, R. G., Newark, N. J. (447.)

Tanned and finished leathers.

SHARPE, CLARKE & Co., 195 Lake street, Chicago, Ill. (546.)

Sample sides of finished leather.

TIFFANY CHEMICAL Co., New York, N. Y. (378.)

Preparations for cleansing and tanning skins and hides.

WALLIN LEATHER Co., Grand Rapids, Mich. (695.)

Sole leather.

GROUP 6.—APPARATUS AND PROCESSES OF MECHANICAL INDUSTRIES, ELECTRICITY.

CLASS 48.—APPARATUS AND METHODS OF WORKING MINES AND OF METALLURGY.

BLAKE, THEODORE A., New Haven, Conn. (745.)

The Blake multiple jaw-crusher, for fine crushing.

## Catalogue of exhibitors—Class 49.

COXE, ECKLEY B., Drifton, Luzerne County, Pa. (899.)

Double gyrating screen.

CYCLONE PULVERIZER CO., 115 Broadway, New York, N. Y. (833.)

Cyclone pulverizer.

INGERSOLL ROCK DRILL CO., W. L. Saunders, secretary, 10 Park Place, New York, N. Y. (402.)

Bar channeler, air compressor, rock drill, coal-cutting machine, and air receiver.

PARKER, FRANCIS W., Opera House Block, Chicago. (826.)

Mining machinery.

SPERRY, ELMER A., & Co., Chicago, Ill. Mining machinery.

## CLASS 49.—APPARATUS AND METHODS OF FARMING AND FORESTRY.

ALLEN, S. L., & Co., 127 Catharine street, Philadelphia, Pa. (80.)

Agricultural implements, seed drills, wheel hoes, cultivators, and plows.

ARMOUR & Co., Chicago, Ill. (840.)

Fertilizers: Ammoniate, dried blood, cattle tankage, hog tankage.

BATCHELLER & SONS' Co., Wallingsford, Vt. (529.)

Hay and manure forks.

BENSON, EGBERT, Raritan, N. J. (458.)

Hudson riding cultivator.

BRADLEY & Co., Syracuse, N. Y. (39.)

Bradley mowers and Bradley reaper.

CHADBORN & COLDWELL MANUFACTURING Co., Thomas Coldwell, president, Newburgh, N. Y. (114.)

Lawn mowers.

COOSAW MINES, Coosaw River, South Carolina.

River phosphate rock.

DEPARTMENT OF AGRICULTURE, Washington, D. C., D. E. Salmon, Chief of Bureau of Animal Industry.

Photographs illustrating types of animals in the United States and methods of raising, shipping, and slaughtering animals.

DEPARTMENT OF AGRICULTURE, Washington, D. C., Dr. George Vasey, botanist. (83.)

Photographs of farming implements, samples of ensilage.

DOUGLAS, W. & B., Middletown, Conn. (83.)

Pumps, garden engines, and hydraulic rams for garden, farm, and general agricultural and horticultural use. (See also Class 52.)

FERNOW, E. B., Washington, D. C.

Tree-planting machine.

GLOVER & CHANDLER, Chicago, Ill.

Model of steam-logger. A machine making its own ice-road in the woods and hauling a train of sleighs loaded with logs at the same time.

GOULD'S MANUFACTURING CO., C. L. Zacharie, manager, Seneca Falls, N. Y. (618.)

Pumps, engines, rams, and hydraulic machines adapted for manual, animal, wind, water, steam, oil, gas, and electric power.

HIGGANUM MANUFACTURING CORPORATION, Higganum, Conn. (258.)

Agricultural machinery.

HUMBOLDT LUMBER MANUFACTURERS' ASSOCIATION, Eureka, Cal.

Portfolio containing 25 photographic views illustrating methods of lumbering and forest scenes in the California redwoods.

HURTUBISE, ALEXANDER, East Saginaw, Mich.

Model of a logging sleigh.

JOHNSTON SAMUEL, & Co., Brockfort, N. Y. (100.)

Platform binder, combined mower and reaper, self-raking reaper and mower.

JOHNSTON HARVESTER Co., Batavia, N. Y. (52.)

Harvesting machinery: mower and reapers.

LLOYD & SUPPLEE HARDWARE Co., 503 Market street, Philadelphia, Pa. (70.)

Pennsylvania lawn mowers.

LUTCHER AND MOORE, Orange, Tex. Yellow pine frame, with photographic views, illustrating methods of lumbering in the Southern pineries.

MAGNOLIA MINES, Ashley River, South Carolina, C. C. Pinckney.

Land phosphate rock.

**MAST, FOOS & Co.**, 21st street, Springfield, Ohio. (719.)

Buckeye lawn mowers.

**MCCORMICK HARVESTING MACHINE Co.**, Chicago, Ill. (58.)

Combined steel grain harvester and self twine binding machine with bundle carrier attached, and transportation truck for same. Self rake reaping machine and two steel mowing machines.

**MEXICAN PHOSPHATE AND SULPHUR Co.**, A. Halsey, secretary, 328 Montgomery street, San Francisco, Cal.

Superphosphate fertilizers from genuine guano or phosphates.

**MOHR, CHARLES**, Mobile, Ala.

Tools used in turpentine orcharding in the South.

**MORLEY BROS.**, East Saginaw, Mich.

Tools used in logging.

**OSBORNE, D. M., & Co.**, Auburn, N. Y. (53.)

Harvesting machinery: binder reaper and mowers.

**PLANO MANUFACTURING Co.**, 81 West Monroe street, Chicago, Ill. (90.)

Harvester binder and mower.

**THAYER, J. E.**, San Francisco, Cal.

One redwood frame, containing 32 photographic views, illustrating methods of lumbering in California redwoods.

**WARD, HENRY**, Allen's Station, Ga.

Home-made horse-collar from corn husks.

**WHITMAN AGRICULTURAL Co.**, St. Louis, Mo. (542.)

Horse lever hay straw and wool press.

**WOOD, WALTER A.**, Hoosick Falls, N. Y. (103.)

Self-binding harvester, mowing machines, light inclosed gear reaper, hay rake.

**CLASS 50.—APPARATUS AND METHODS USED IN AGRICULTURAL WORK AND FOOD INDUSTRIES.**

**ARMINGER, R., & SON**, 7 East Lombard street, Baltimore, Md. (183.)

Refrigerators.

**BLOOD BROTHERS**, Lynn, Mass. (544.)

Nutmeg graters.

Catalogue of exhibitors—Class 52.

**DEPARTMENT OF AGRICULTURE**, Washington, D. C., D. E. Salmon, Chief of Bureau of Animal Industry.

Models showing construction and operation of a creamery, a silo, and a cold storage refrigerator.

**ENTERPRISE MANUFACTURING Co.**, Columbiana, Ohio. (476.)

Feed cutters.

**HEINE, AUGUST**, Silver Creek, N. Y. (277.)

Milling machinery.

**HOWES, SIMEON**, Silver Creek, N. Y. (250.)

Milling machinery.

**MAILLARD, HENRY**, 114 and 118 West Twenty-fifth street, New York, N. Y. (15.)

Machines for making clear candies, bonbons, etc.

**PHILLIPS, C. C.**, 20 South Broad street, Philadelphia, Pa. (591.)

Portable grinding burr mills.

**SMITH, GEO. T., MIDLINGS PURIFIER Co.**, Jackson, Mich. (105.)

Flour dressers, middlings purifier, dust collector attached to purifier.

**CLASS 51.—APPARATUS USED IN CHEMISTRY, PHARMACY, AND TANNING.**

**BAILEY WRINGING MACHINE Co.**, Woonsocket, R. I. (425.)

Clothes wringers.

**BENTZEN, CHARLES A.**, 240 West Twelfth street, New York, N. Y. (204.)

Washing machines.

**DOLPH, THE A. M., Co.**, 40 Cortlandt street, New York, N. Y. (520.)

Laundry machines.

**FRANK, F. A., & Co.**, 316 East Eighty-second street, New York. (308.)

Machine for the preparation of powders, pomades, and extracts.

**VIZET, V.**, New Rochelle, N. Y. (399.)

Washing machine attached to tub.

**CLASS 52.—MACHINES AND APPARATUS OF GENERAL MECHANICS.**

**AMERICAN ELEVATOR Co.**, New York and Paris. (623.)

Hydraulic lift, used in the "Terrestrial Globe," Champ de Mars.

Catalogue of exhibitors—Class 52.

- AMERICAN LEATHER LINK BELT CO.**, 72 Cliff street, New York, N. Y. (281.)  
Leather link belting.
- ARMINGTON & SIMS**, Providence, R. I.  
One 75 horse-power, high-speed steam-engine operating dynamos in Thomson-Houston exhibit.
- BINGHAMTON HYDRAULIC POWER CO.**, A. Ward Ford, secretary, Binghamton, N. Y. (825.)  
Hydraulic motor: Water motor.
- BLAKE, JOHN HENRY**, 29 Liberty street, Batavia, N. Y. (115.)  
Marine rotary engine for launch service.
- BROWN, C. H., & Co.**, Fitchburg, Mass.  
Steam-engine, 100 horse-power.
- CHICAGO RAWHIDE MANUFACTURING CO.**, Chicago, Ill. (908.)  
Belting.
- COLT'S PATENT FIRE-ARMS MANUFACTURING CO.**, Hartford, Conn. (157.)  
Baxter engine and boiler. Disk engine.
- CROSBY STEAM GAUGE AND VALVE CO.**, Boston, Mass. (605.)  
Steam gauges, valves, and indicators.
- DODGE MANUFACTURING CO.**, Mishawaka, Ind. (707.)  
Wooden belt and rope pulleys.
- DOUGLAS, W. & B.**, Middletown, Conn. (83.)  
Pumps, hydraulic rams, and other hydraulic machines for general use.  
(See also Class 49.)
- EMERSON & MIDGLEY**, Beaver Falls, Pa. (699.)  
Steel wire belting and hose.
- GOULD'S MANUFACTURING CO.**, Seneca Falls, N. Y. (618.)  
Pumps, engines, rams, and hydraulic machinery, adapted for manual, animal, wind, water, steam, oil, gas, and electric power.
- HORTON, E., & SON CO.**, Windsor Locks, Conn. (280.)  
Lathe chucks, car-wheel chucks, milling-machine chucks, brass finishers' chucks, drill-press chucks.
- MASON, VOLNEY W., & Co.**, Providence, R. I. (340.)  
Elevator and hoisting machinery, friction pulleys, and clutches for coupling, shafting, and gears.
- MAST, FOOS & Co.**, Springfield, Ohio. (719.)  
Iron turbine wind engine, Buckeye force-pump.
- NORTHROP MANUFACTURING CO.**, 117 North Front street, Camden, N. J. (549.)  
Boiler for steam tricycles.
- OTIS BROTHERS & Co.**, W. Frank Hall, vice-president, 38 Park Row, New York, N. Y. (622.)  
Gas and pumping engines, hydraulic lifts in the Eiffel Tower.
- PICKERING GOVERNOR CO.**, Portland, Conn. (782.)  
Pickering improved spring governor for steam-engines.
- REED, J. VAN D.**, 13 Barclay street, New York, N. Y. (506.)  
Circular looms, hydraulic circular woven hose, machine belting.
- RIFES HYDRAULIC ENGINE MANUFACTURING CO.**, R. H. Woodrum, attorney, Roanoke City, Va.  
Hydraulic engine: "Ram."
- SCHIEREN, CHARLES A., & Co.**, 47 Ferry street, New York, N. Y. (282.)  
Electric and perforated leather belting.
- SLATER, FRANK**, Fitchburg, Mass.  
The Slater pantograph attached to the Brown engine.
- SILVER & DEMING MANUFACTURING CO.**, Salem, Ohio. (175.)  
Pumps and pumping machinery, hydraulic rams.
- STRAIGHT LINE ENGINE CO.**, Syracuse, N. Y. (446.)  
One 100 horse power and one 35 horse-power automatic high-speed steam-engine.
- THOMSON, JOHN**, 143 Nassau street, New York, N. Y. (91.)  
Water meters and special model to demonstrate operation.
- UNDERWOOD MANUFACTURING CO.**, Tolland, Conn. (794.)  
Patent cotton leather belting.
- UNITED STATES METALLIC PACKING CO.**, Philadelphia, Pa. (122.)  
Metallic packings, oil cups, and other patented inventions applicable to locomotive, marine, stationary, hydraulic, and other engines, stationary engine with metallic packings.

WALSH, JAMES, JR., 327 North Eighth street, Philadelphia, Pa. (780.)  
 Two steam-valves, one hydrant cock, and drawings of brake and grip.

WESTINGHOUSE MACHINE Co., Pittsburgh, Pa. (784.)  
 Westinghouse automatic engine, 25 horse-power, "Standard," furnishing power to dynamo.

WHELOCK, JEROME, Worcester, Mass. (894.)  
 Wheelock engine system.

WILSON & ROAKE, 261 Front street, New York, N. Y. (319.)  
 Automatic gravity purifying trap and skimmer for steam-boilers.

WORTHINGTON PUMPING ENGINE Co., New York, N. Y., J. H. Harris, general manager. (479.)  
 Worthington high-duty pumping engine, capacity 6,000,000 gallons, at work on the Quai d'Orsay for the water supply of Exposition.

Worthington compound pressure pumps, with independent condensers, at work at foot of the Eiffel Tower of 300 meters lifting water to the top platform.

Worthington boiler feed pumps are used with the boilers of the Collet Company in the tower of 300 meters and in the section of the Argentine Republic, with boilers of the Babcock and Wilcox Company in the pumping station of the Quai d'Orsay and in the palace of machines, and also in the various installations of the electric syndicate.

CLASS 53.—MACHINE TOOLS.

AMERICAN SCREW Co., Providence, R. I. (71.)  
 Machines for making rolled and swaged wood screws.

AMERICAN TOOL AND MACHINE Co., Boston, Mass. (855.)  
 Fox screw-cutting lathe for brass finishers' use.

BLISS, E. W., & Co., Brooklyn, N. Y. (876.)  
 Drop hammers, presses, dies, and machinery for working sheet metals.

Catalogue of exhibitors—Class 53.

BROWN & SHARPE MANUFACTURING Co., Providence, R. I. (155.)  
 Universal milling machines, vertical chucking machines, grinding machines, cutter and reamer grinders, automatic gear cutters, screw machines, milling attachments, sample castings, etc.

CURTIS & CURTIS, Bridgeport, Conn. (236.)  
 Forbes patent die-stock, cutting and threading machines.

HIGLEY SAWING AND DRILLING MACHINE Co., 45 Broadway, New York, N. Y. (300.)  
 Machines for sawing and drilling iron and steel of all descriptions.

HOGGSON & PETTIS MANUFACTURING Co., 64 Court street, New Haven, Conn. (647.)  
 Sweetland lathe chuck.

HORTON & SON Co., THE E., Windsor Locks, Conn. (280.)  
 Chucks.

JACKSON, T., 2 John street, New York, N. Y.  
 Model of diamond stone-cutting saw.

MORSE TWIST DRILL AND MACHINE Co., New Bedford, Mass. (593.)  
 Twist drills for machinists, machine bits, solid shell and taper reamers, milling cutters, lathe chucks, etc.

SELLERS, WILLIAM, & Co. (incorporated), 1600 Hamilton street, Philadelphia, Pa. (148.)  
 Iron planing machines, tool grinding and shaping machines, drill grinding and pointing machine, self-adjusting injector of 1876, and the self-acting injector of 1887.

SILVER & DEMING MANUFACTURING Co., Salem, Ohio. (175.)  
 Hub boring machines for carriage-makers, spoke tenoning machines.

SIMONDS, GEORGE FREDERIC, Fitchburg, Mass. (629.)  
 Metal rolling machine.

STARRETT, L. S., Athol, Mass. (500.)  
 Mechanics' tools.

STERNBERGH, J. H., & SON, Third street and Buttonwood street, Reading, Pa. (398.)  
 Bolt-milling and screw-threading machine and screw-drivers.

Catalogue of exhibitors—Class 54.

STILES & PARKER PRESS CO., Middletown, Conn. (85.)

Drop hammers, presses, dies, and machinery for working sheet metal.

TANITE CO., Stroudsburg, Pa.

Tanite emery wheels and Tanite emery machines.

TOWER & LYON, 95 Chambers street, New York, N. Y. (631.)

Stephens' patent vises and attachments.

TRUMP BROTHERS MACHINE CO., Wilmington, Del. (77.)

Scroll saws, lathe center grinders, and chucks.

UPTON, GEORGE, Boston, Mass. (613.)

Flint paper.

WARNER & SWASEY, Cleveland, Ohio. (320.)

Brass-working machinery: Turret lathes, spindle valve milling machines, etc.

WHITON, THE D. E., MACHINE CO., New London, Conn. (77.)

Lathe chucks, gear-cutting machine, centering machine, expanding reamers.

CLASS 54.—APPLIANCES AND METHODS OF SPINNING AND ROPE-MAKING.

INTERNATIONAL WOOL IMPROVING CO., Boston, Mass. (488.)

Hodgson flush: Flume system for scouring and dyeing wool; also model of same.

NATIONAL CORDAGE CO., THE, 113 Wall street, New York, N. Y. (244.)

Cordage and rope.

TUCKER & CARTER CORDAGE CO., 98 Pine street, New York.

Double-dressed Kentucky hemp and four samples of rope.

WALKER, M. PHILIP, Department of Agriculture, Washington, D. C.

Modification of Serrell's system of automatic spinning for silk.

CLASS 55.—APPARATUS AND METHODS OF WEAVING.

EUREKA FIRE HOSE CO., J. Van D. Reed, president, 13 Barclay street, New York City.

Circular looms, hydraulic circular woven hose, machine belting.

FRIEDENWALD BROTHERS, Baltimore, Md. (810.)

Embroidering and lace-cutting machine.

INTERNATIONAL WOOL IMPROVING CO., Boston, Mass. (488.)

Hodgson flush: Flume system of scouring and dyeing wool; also model of same.

CLASS 56.—APPLIANCES AND METHODS OF SEWING AND MAKING ARTICLES OF CLOTHING.

BAILEY, R. S., Silver Creek, N. Y. (477.)

Apparatus for cutting out clothing.

CAMPBELL SEWING-MACHINE CO., Pawtucket, R. I.

Campbell lock-stitch sewing-machines. Lock.

DAVIS SEWING-MACHINE CO., Watertown, N. Y. (31.)

Sewing-machines for family and manufacturing use.

Attachments and samples of sewing-machine work.

EATON, J. H., Monroe, Wis. (78.)

The new Victoria plaiter, an appliance for making dress trimming.

INTERNATIONAL BUTTON-HOLE SEWING MACHINE CO., 458 Harrison avenue, Boston, Mass. (427.)

Reece machines for making clothing, boots and shoes.

JOHNSON, ALFRED, 60 rue de l'Aqueduc, Paris.

Collective exhibit of machines for making shoes and clothing.

MACKAY & COPELAND LASTING-MACHINE CO., Société Anonyme pour l'Exploitation des Brevets, agents.

Mackay lasting-machine, magnetic lasting-machine, channel opening machine, sole-tacking machine, toe-forming machine.

NEW HOME SEWING-MACHINE CO., Allen Schenck, president, 28 Union square, New York, N. Y. (139.)

Sewing-machines and samples of work.

PAINÉ SHOE-LASTING MACHINE CO., 109 North avenue, Rochester, N. Y. (124.)

Machine for lasting boots and shoes.

SINGER SEWING-MACHINE Co., 34 Union square, New York, N. Y. (286.)

Sewing-machines and samples of work.

STANDARD SEWING-MACHINE Co., Atlantic avenue, Boston, Mass.

A standard button sewing-machine.

TAPLEY MACHINE Co., 234 Devonshire street, Boston, Mass. (868.)

Tapley heel burnisher.

TILLINGHAST SUPPLY Co., Providence, R. I. (831.)

Sewing-machines.

UNION BUTTON-SEWING MACHINE Co., Boston, Mass.

Union button-sewing machine for use in clothing and underwear.

WHEELER & WILSON MANUFACTURING Co., N. W. Wheeler, president, Bridgeport, Conn. (46.)

Sewing-machines for general and special purposes, including button-hole sewing-machine, with attachments and appliances.

WHITE SEWING-MACHINE Co., Thomas N. White, president, Cleveland, Ohio. (48.)

Sewing-machines.

WINGATE, JULIA. (807.)

Measurement system for dress-making.

CLASS 57.—APPLIANCES AND METHODS OF MANUFACTURE OF ARTICLES FOR FURNITURE AND DWELLINGS.

CASEY MACHINE SUPPLY Co, 113 Lewis street, New York, N. Y. (495.)

Nailing machine for making cigar-boxes and packing-boxes (self-feeding.)

CHAPMAN, LEWIS M., 82 West Eightieth street, New York, N. Y. (142.)

Process of manufacture in glass spinning, modeling and engraving.

FAY, J. A., & Co., W. H. Doane, president, Cincinnati, Ohio. (34.)

Machinery for the economic conversion of lumber for Government navy-yards and arsenals, railroad-car and locomotive shops, ships, bridge, house, carriage, and furniture construction, and every other purpose for which lumber may be fabricated; a collection of 30 machines for plan-

Catalogue of exhibitors—Class 58.

ing, tongueing, grooving, surfacing, thicknessing, sawing, resplitting, molding, mortising, boring, tenoning, dovetailing, and polishing.

GAYLORD, E. E., Bridgeport, Conn. (316.) Miter cutter, miter saw, and miter plane.

GREGG, WILLIAM L., 423 Walnut street, Philadelphia, Pa. (640.)

Small working model of brick-making machine and apparatus for brick-making. Front and ornamental brick.

MACCOY, JAMES S., 431 Eleventh avenue, New York, N. Y. (143.)

A pneumatic tool in its various applications.

REID, A. H., Thirtieth and Market streets, Philadelphia, Pa. (388.)

“Lightning” braces for boring holes, driving screws, etc.

SCHWAB, ERNEST, 89 West Harrison street, Chicago, Ill. (180.)

Wood-working machinery.

SILVER & DEMING MANUFACTURING Co., Salem, Ohio. (175.)

Hub boring machines for carriage-makers, spoke tenoning machines.

CLASS 58.—APPLIANCES AND METHODS OF PAPER MANUFACTURE, COLORING AND PRINTING.

BORIE MAILING-MACHINE Co., 520 Washington street, San Francisco, Cal. (765.)

Mailing machine (hand power) for affixing postage stamps and addressing slips.

CAMPBELL PRINTING PRESS MANUFACTURING Co., John T. Hawkins, president, 160 William street, New York, N. Y. (184.)

Cylinder printing machines.

CASEY MACHINE AND SUPPLY Co., J. Casey, president, 183 Lewis street, New York, N. Y. (495.)

Double job press, belt shifter and brake.

DOUGLAS & WILSON, Cincinnati, Ohio. Merchants' roll-paper printer and cutter.

ELECTRINE Co., St. Paul, Minn.

Inkoleum, for reducing and refining ink to prevent offset, etc.

Catalogue of exhibitors—Class 59.

GOLDING & Co., 177 Fort Hill square,  
Boston, Mass. (68.)

Printing presses.

HUTCHINS, STILSON, for the Mergenthaler  
Printing Company and the Amer-  
ican Press Company, Washington,  
D. C. (545.)

The graphophone and phonograph, in  
connection with the Mergenthaler  
linotype matrix setting and type-  
casting machine and the Henkle-  
Fowler press.

KLAUDER & BROTHERS, American street  
and Lehigh avenue, Philadelphia,  
Pa. (292.)

Skein yarn dyeing machine.

LIBERTY MACHINE WORKS, 54 Frankfort  
street, New York, N. Y. (248.)

Liberty printing presses.

MACKELLAR, SMITHS & JORDAN Co.,  
Philadelphia, Pa. (653.)

Printing type and combination bor-  
ders.

MCCOY, M. P., 7 Water Lane, Ludgate  
Circus, London, England. (61.)

Model American printing office, show-  
ing American type, cases, tools,  
stands, cabinets, paper-cutting ma-  
chines, milling machines, and six  
American platen printing machines.

MILLER, EDWARD L., Philadelphia, Pa.  
(650.)

Paragon paper and card cutting ma-  
chine.

REILLY, D. J., & Co., 324 Pearl street,  
New York, N. Y. (125.)

Printers' rollers.

THOMSON, JOHN, 143 Nassau street, New  
York, N. Y. (91.)

Job printing presses, embossing press,  
and paper-box cutting and creasing  
press.

THORNE TYPE-SETTING MACHINE Co.,  
R. W. Nelson, president, Hartford,  
Conn. (679.)

Type-setting and distributing machine.

CLASS 59.—MACHINES, INSTRUMENTS, AND  
METHODS USED IN VARIOUS OCCU-  
PATIONS.

AMERICAN WRITING MACHINE Co., Hart-  
ford, Conn. (37.)

The calligraph writing machine and  
accessories.

AUTOMATIC MACHINE Co., 45 Broadway,  
New York, N. Y. (665.)

Automatic machines.

CLEGG, CHARLES A., 127 Broadway, New  
York, N. Y. (779.)

The Thompson duplicating and copy-  
ing machine, for making duplicate  
copies of manuscript or the writing  
on hard or tissue paper.

CLOUGH & MACCONNEL, 132 Nassau  
street, New York, N. Y. (24.)

Wire corkscrew machine and full line  
of Clough's proprietary corkscrews.

COLUMBIA TYPE-WRITER MANUFACTUR-  
ING Co., 129 Crosby street, New  
York, N. Y. (32.)

Bar-lock type-writer and Columbia  
type-writer.

HALL TYPE-WRITER Co.

Type-writers.

HAMMOND TYPE-WRITER Co., 77 Nassau  
street, New York, N. Y. (74.)

Hammond type-writers and drop cabi-  
nets for type-writers.

HOGGSON & PETTIS MANUFACTURING  
Co., 64 Court street, New Haven,  
Conn. (647.)

Morris type-writer; Lowdon bank  
punch.

LAMSON CONSOLIDATED STORE SERVICE  
Co., Boston, Mass.

Kruse key-cash registering machine,  
with cash drawer attached; check  
and adding machines, of three dif-  
ferent styles, for controlling cash  
receipts.

LEINBACH, FELIX W., Bethlehem, Pa.  
(306.)

Paper-bag machines.

MYERS, FREDERICK, New York, N. Y.  
(44.)

Type-writing machines.

NATIONAL CASH REGISTER Co., Dayton,  
Ohio. (375.)

National cash-register tills.

WILLIAMS, THE JOHN R., Co., 102 Cham-  
bers street, New York, N. Y. (225.)

Cigar-bunching machine, suction roll-  
ing table, and stripping machine.

WORLD TYPE-WRITER Co., New York,  
N. Y. (36.)

World type-writer.

Catalogue of exhibitors—Class 61.

WYCKOFF, SEAMANS & BENEDICT, 327 Broadway, New York, N. Y. (38.)  
Remington Standard type-writer and accessories.

CLASS 60.—CARRIAGE-MAKING, WHEEL-  
WRIGHT'S WORK, HARNESS-MAKING  
AND SADDLERY.

CHAPMAN MANUFACTURING Co., Meriden, Conn. (678.)

Plumes and bells for sleighs.

DANN BROTHERS & Co., 80 Franklin street, New Haven, Conn. (382.)

Bent wood and carriage wood-work.

HEALEY & Co., Broadway, near Forty-second street, New York, N. Y. (265.)

Fine carriages.

KIMBALL, C. P., & Co., Wabash avenue and Harrison street, Chicago, Ill. (610.)

Brougham, mail phaeton, speeding wagon, and trotting sleigh.

MARTIN & MARTIN, 574 Fifth avenue, New York, N. Y.

Saddles and harness.

SHEPARD, H. G., & SONS, New Haven, Conn. (147.)

Bent carriage wood-work.

SECO, HENRI, 31 Nassau street, New York. (801.)

Improved jacks.

CLASS 61.—RAILROAD APPLIANCES.

BISHOP, MAJOR D. E., 822 Broadway, New York, N. Y. (191.)

Combination railroad joint.

BOYDEN POWER-BRAKE Co., Baltimore, Md. (746.)

Model railroad track and train equipped with Boyden power-brake.

FISHER, CLARK, Trenton, N. J.

The Fisher rail-joint mounted, as in practice, on oak ties.

FLEMING MANUFACTURING Co., Fort Wayne, Ind. (101.)

The Leader road machine.

HALSEY, JAMES T., Paterson, N. J. (901.)

Railroad machine-shop drill.

HOFFMIER, A. K., Lancaster, Pa. (769.)

Drawings showing an improved system of railway-track laying.

IRON CAR Co., 120 Broadway, New York. (900.)

Tubular iron frame freight-car, Good-fellow & Cushman's patent.

INLOES, WILLIAM H., Asheville, N. C. (27.)

Model of patent railway turn-table lock.

LAIRD, B. F., Covington, Ky. (119.)

Two cars upon trestles showing the working of his automatic car coupling.

MERCHANTS' DISPATCH TRANSPORTATION Co., John C. Noyes, general manager, 335 Broadway, New York, N. Y. (534.)

Wickes patent refrigerator car.

NEW YORK COMMERCIAL Co. (Limited), 140 Pearl street, New York, N. Y. (411.)

Equipments and supplies for the building and operating of railroads.

NEW YORK CAR-WHEEL WORKS, Buffalo, N. Y. (219.)

Samples of car-wheels and chilled test pieces and sample pig-iron.

PECKHAM STREET-CAR WHEEL AND AXLE Co., George L. Fowler, secretary, 239 Broadway, New York, N. Y. (259.)

Street-car wheels, steel tired paper car-wheels, steel tired car-wheels, and car-axles.

PENNSYLVANIA RAILROAD Co., Altoona, Pa. (662.)

Passenger-car truck, freight-car truck, section of passenger car, section of box car, section of gondola car, cast-iron wheels on axle, worn-out wheel (cast iron), cast-iron wheel spoiled in casting, broken wheel showing chill, etc., and other small articles; section of standard rail and rail joint; album of specifications for materials, etc.; album of photographs of cars, locomotives, etc.

PORTER, H. K., & Co., Pittsburgh, Pa. (415.)

Light back-truck locomotive.

RAILWAY NEWS Co., 32 Cortlandt street, New York, N. Y. (787.)

Railroad appliances and models, including models of new engines, bridges, viaducts, and railroad engineering works.

Catalogue of exhibitors—Class 62.

SPRAGUE ELECTRIC RAILWAY AND MOTOR CO., 16 Broad street, New York, N. Y. (677.)

Electric railway truck mounted with two 15 horse-power motors. (*See also* Class 62.)

THOMSON-HOUSTON INTERNATIONAL ELECTRIC Co., Boston, Mass. (608.)

Electric railway appliances, motors, trucks, car complete.

WARREN, ANDREW, St. Louis, Mo. (764.)

Lever lifting and lowering jacks for railroad work.

CLASS 62.—ELECTRICITY.

AMERICAN BELL TELEPHONE Co., Boston, Mass. (501.)

Telephones and telephone appliances.

AMERICAN GRAPHOPHONE Co., Washington, D. C.

Graphophones.

“C. AND C.” ELECTRIC MOTOR Co., 402 Greenwich street, New York, N. Y., Arthur Shippey, agent. (859.)

Electric motor and ventilating pans.

COBB VULCANITE WIRE Co., Wilmington, Del. (405.)

Flexible vulcanized rubber, insulated wires for electric light, telegraph, and all electrical purposes, especially underground wires.

COMMERCIAL CABLE Co., Ave. de l'Opéra, Paris. (675.)

System of telegraph apparatus.

CONSOLIDATED TELEGRAPH AND ELECTRICAL SUBWAY Co., Leonard F. Beckwith, chief engineer, 18 Cortlandt street, New York, N. Y. (700.)

Maps, drawings, plans, and samples of construction and materials illustrative of the construction and operating of the electrical subways.

DION, CHARLES, 7 rue de l'Arcade, Paris, France. (212.)

A syphon to empty at one time several cups of a battery or electric pile.

EDISON, THOMAS A., Llewellyn, N. J. (144.)

General electrical and other exhibits of the inventions of Thomas A. Edison.

ELECTRICAL COLLECTIVE EXHIBITION BY U. S. COMMISSION. (713.)

Publications and models pertaining to electricity.

ELECTRICAL SUPPLY Co., 171 Randolph street, Chicago, Ill. (709.)

Special electrical appliances.

ELECTRON MANUFACTURING Co., THE, Brooklyn, N. Y. (878.)

Electro motors.

GRAY, ELISHA, Highland Park, Ill. (710.)

Telephones, harmonic telegraph, teleautograph, speaking telephones, historical apparatus.

HANSON, VAN WINKLE & Co., Newark, N. J. (750.)

Photographs illustrating apparatus and methods of electro-metallurgy of nickel.

HEISLER ELECTRIC LIGHT Co., A. Graner, secretary, 809 South Seventh street, St. Louis, Mo. (367.)

Heisler electric-light dynamo, with automatic regulator with requisite lamps.

JEFFORDS, J. E., & Co. (903.)

Photographs of porous cells for electrical purposes.

JOHNSTON, W. J., Co. (Limited), 168 Potter Building, New York, N. Y. (716.)

Books concerning electricity published in the United States.

MUNSON LIGHTNING CONDUCTOR Co., Indianapolis, Ind. (453.)

Lightning conductors.

OKONITE Co., W. L. Candee, treasurer, New York, N. Y. (499.)

Specimens of insulated wires and cables.

SILLIMAN, ROBERT, Troy, N. Y.

Specimens of insulated cable for street and house use.

SOLAR CARBON AND MANUFACTURING Co., 69 Fifth avenue, Pittsburgh, Pa. (685.)

Battery carbons and electric-light carbons.

SPERRY ELECTRIC Co., Chicago, Ill.

Electric-light plant, one dynamo, regulator, line, wires, switches, lamps, etc.

SPRAGUE ELECTRIC RAILWAY AND MOTOR, 16 Broad street, New York. (677.)

Complete electric-railway track and two 15 horse-power motors. (*See also* Class 61.)

- THOMSON, ELIHU. Lynn, Mass. (607.)  
Various inventions pertaining to electricity.
- THOMSON ELECTRIC WELDING Co., 70  
Kilby street, Boston, Mass. (525.)  
Electric welding apparatus.
- THOMSON-HOUSTON INTERNATIONAL  
ELECTRIC Co., 620 Atlantic avenue,  
Boston, Mass. (608.) (*See also* Class  
61.)  
Electric generators, electric motors,  
and electric appliances.
- UNITED STATES COMMISSIONER OF PAT-  
ENTS, Washington, D. C.  
Volumes of patents relating to elec-  
tricity.
- UNITED STATES NAVAL OBSERVATORY,  
Capt. R. L. Phythian, Superintend-  
ent, Washington, D. C. (824.)  
Electrical distribution of time; Gard-  
ner's system by correcting and con-  
trolling clocks, dropping balls, and  
other signals. (*See also* Class 15.)
- VOLTA GRAPHOPHONE Co., Washington,  
D. C. (434.)  
Graphophones.
- WESTERN ELECTRIC Co., M. Barton, pres-  
ident, Chicago, Ill. (526.)  
Electrical apparatus.
- WHARTON, JOSEPH, American Nickel  
Works, Camden, N. J. (902.)  
Magnetic alloy of nickel with tungsten.
- CLASS 63.—APPLIANCES AND METHODS  
OF CIVIL ENGINEERING, OF PUBLIC  
WORKS AND ARCHITECTURE.
- AMERICAN ROAD-MACHINE Co., Ken-  
nett Square, Pa. (510.)  
American road machine.
- BUFFALO INTERNATIONAL FAIR ASSOCIA-  
TION, 47 Chapin Block, Buffalo,  
N. Y. (452.)  
Plans of exposition building.
- CORBIN, P. & F., New Britain, Conn. (845.)  
Locks and builders' hardware, post-  
office system.
- EMPIRE GRANITE Co., 625 East Fifteenth  
street, New York, N. Y. (294.)  
Artificial granite laundry tubs.
- FLEMING MANUFACTURING Co., Fort  
Wayne, Ind. (101.)  
The Leader road machine.
- GESNER, JOHN F., 15 State street, New  
York, N. Y. (145.)  
Specimens of artificial stone and wood.
- Catalogue of exhibitors—Class 63.
- HAYES, GEORGE, 71 Eighth avenue, New  
York, N. Y. (127.)  
Metallic fireproof lathing, furring, etc.,  
with machinery.
- HERRING & Co., 251 Broadway, New  
York, N. Y. (644.)  
Burglar and fireproof safes.
- INTERNATIONAL GAS AND FUEL Co., Chi-  
cago, Ill. (726.)  
System of fluid fuel distribution, as  
applied to furnaces, dry kilns, etc.
- KENSSETT, JAMES W., 272 Federal street,  
Boston, Mass. (324.)  
Metallic lathing and foundation there-  
for, for the prevention of the spread  
of fire.
- KOCH, A. B., Co., Peoria, Ill. (682.)  
Brackets for shelves in cast iron,  
fancy patterns.
- LEHIGH VALLEY CREOSOTING Co., Perth  
Amboy, N. J., Walter G. Berg,  
superintendent.  
Photograph of creosoting works.  
Catalogue of small photographs of  
works with description of same; also  
photograph of tests with description.
- LINDENTHAL, GUSTAV, 36 Lewis Block,  
Pittsburgh, Pa. (819.)  
Perspective drawing of the proposed  
North River bridge at New York  
City, with middle span 2,850 feet  
long, for six railroad tracks.
- MILLER LOCK Co., M. Jackson, managing  
director, Frankford, Philadelphia,  
Pa. (394.)  
Samples of boxes, keyless locks, and  
padlocks.
- SECO, HENRI, 31 Nassau street, New  
York, N. Y. (801.)  
Patent improved lifting jacks for  
vehicles.
- STANDARD PAINT Co., 59 Maiden Lane  
New York, N. Y. (73.)  
"P and B" electrical compounds and  
paints, sheathing and water-proof  
lining papers; roofing and covering.
- TUBULAR BARROW MACHINE Co., 169 to  
175 Fourteenth street, Jersey City,  
N. J. (658.)  
Tubular steel wheelbarrows for dirt  
coal, ore, and mills; steel dumping  
tub for coal or ore.

Catalogue of exhibitors—Class 64.

TURNER, I. JACKSON, Princeton College, Princeton, N. J. (604.)

Aspirating ventilator or chimney cap.  
UNITED STATES PATENT CEMENT CONDUIT Co., 48 Dey street, New York, N. Y. (800.)

Sections of continuous conduit for wires under ground.

UNITED STATES CORPS OF ENGINEERS. (909.)

Methods of civil engineering; reports on public works.

WHITEHOUSE, FREDERIC COPE, New York. (335.)

A relief map of the Raiyan and Fayoum depressions in Middle Egypt, from original surveys—with complete details of the ancient canal—the Bahr Jusut or River of Joseph, and the new Raiyan canal and reservoir.

WILSON, JAMES GODFREY, 907 Broadway, New York, N. Y. (64.)

Rolling blinds, Venetian blinds, and rolling steel shutters.

WITTE, JOHN G., & BROTHER, 75 Chambers street, New York, N. Y. (67.)

Door spring and check.

WORTHINGTON PUMPING-ENGINE Co., 145 Broadway, New York. (479.)

One Worthington compound condensing, high-duty, water-works engine, with boilers, buildings, and accessories for the supply of water to the Exposition.

(See Class 52.)

YALE & TOWNE MANUFACTURING Co., Schuyler Merritt, general manager, Stamford, Conn. (397.)

Specimens of hardware and locks, the Yale & Towne post-office system.

CLASS 64.—HYGIENE AND PUBLIC CHARITIES.

NATIONAL SOLDIERS' HOME OF THE UNITED STATES, General W. B. Franklin, president, Hartford, Conn. (886.)

Plan of hospital building at Soldiers' Home, near Hampton, Va.

WING, LEVI J., 50 Cliff street, New York, N. Y. (326.)

Disk fans and high-speed engines, used for heating, ventilating, cooling, drying, removing steam, dust, smoke, gases, vapors, etc.

CLASS 65.—NAVIGATION AND LIFE-SAVING.

ALLEN, FREDERICK S., Cuttyhunk Island, Mass. (19.)

Model of reversible life-boat.

BADIA & DUBOIS, 332 South Fourth street, Philadelphia, Pa. (238.)

Automatic life-preserver belts and model of automatic life-raft; drawing showing automatic system of inflating bags to render a vessel unsinkable.

COMMERCIAL CABLE Co., New York, N. Y. (675.)

Model of the cable-repairing steamer *The Mackay-Bennett*.

DASHIELL, BENJAMIN J., JR., 6 South street, Baltimore, Md. (788.)

Drawings of tow-boat.

DOLLIVER, JAMES W., 5 Broad street, Boston, Mass. (541.)

Swan bicycle life-guard boat.

HOLMES, EBEN, Marion, Mass. (146.)

Model of cat-boat.

NORTON. (910.)

Yacht *Never sink*.

RAILWAY NEWS Co., 32 Cortlandt street, New York, N. Y. (787.)

Models of Long Island Sound steamer, Hudson River steamboats, ferry-boats, and transfer boats; pictures of other boats.

TEMPLE, LEWIS, 92 Union street, New Bedford, Mass. (134.)

Yacht model, half-inch scale, for a sixty-foot center-board boat.

WRIGHT, PETER, & SONS, 6 Bowling Green, New York, N. Y. (616.)

Models of passenger steamships *Friesland* and *City of Paris*.

#### GROUP 7.—FOOD PRODUCTS.

CLASS 67.—CEREALS: FARINACEOUS PRODUCTS WITH THEIR DERIVATIVES.

BOARD OF TRADE, Chicago, Ill.

Grain in sacks and in cases representing the various grades officially established by the State Inspection of Illinois, together with a chart illustrating the extent of the grain business of Chicago.

BOARD OF TRADE, Minneapolis, Minn.  
Grain, showing the different grades of quality established officially by the State.

BUTLER, A. P., Commissioner of Agriculture for South Carolina.

Rice, the raw finished product, including sixteen specimens representing the various processes of the milling.

COLLECTIVE EXHIBIT of cereals prepared under the direction of the Secretary of Agriculture, Washington, D. C.

Contributors:

Morrow, G. E., professor of agriculture, Illinois University, Champaign, Ill.

Thorne, Charles E., director agriculture experiment station, Columbus, Ohio.

Ingersoll, C. L., president State Agricultural College, Fort Collins, Col.

Foster, Luther, professor of agriculture, Brookings, Dak.

Furnas, R. W., ex-governor, Lincoln, Neb.

Whitney, C. C., Marshall, Minn.

Whitney, F. I., general passenger agent, St. Paul, M. & M. R. R., St. Paul, Minn.

Black, General J. C., Washington, D. C.

Silver, J. P., Glenville, Md.

The A. B. Cleveland Co., New York.

Bretz, J. H., Oakdale, Neb.

Gwynn, J. R., Clinton, Mo.

Henry, Professor, director agricultural experiment station, Madison, Wis.

Vanderhoof, R. H., Newton, Ill.

Haase, A. F., Dakota City, Neb.

Bessey, Prof. C. E., Lincoln, Neb.

Nelson, J. F., Olney, Ill.

Higgins, J. P., Calhoun, Ill.

Dowd, M. Fairchilds, Kansas City, Mo.

Gabilson, C. L., New Hampton, Iowa.

Nimo Bros., Emerson, Iowa.

Upton, E. M., Cummings, Dak.

GLEN COVE MANUFACTURING CO., New York, N. Y.

Samples of maizena, grape sugar and glucose.

Catalogue of exhibitors—Class 69.

INGERSOLL, Prof. C. L., president Agricultural College, Fort Collins, Colo.

Eight large plaques with designs formed of the various grains and grasses grown in Colorado.

JACKSON, ARTHUR C., Sanford, Fla.

Cereal products of Florida; general collection of agricultural products.

MANSFIELD, J. E., Washington, D. C.

Samples of pop-corn.

NORTHERN PACIFIC RAILROAD CO., 35

Wall street, New York, N. Y.

Various products.

PILLSBURY, C. A., & Co., Minneapolis, Minn.

Wheat in sacks representing the grades officially established; flour in its various stages of manufacture.

SCHUMACHER, T., & Co., Akron, Ohio.

Various finished cereal products.

STREET, S. H., & Co., New Haven, Conn.

Cereal products: "Johnny-cake," flour, etc.

TOWNSHEND, CHARLES HERVEY, New Haven, Conn.

"Wheatine," "whahaha," "johnny-cake," and other derivatives of wheat, corn, and buckwheat.

VOGT, AUGUST, Will's Point, Tex.

One bushel of white corn.

WILEY, Dr. H. W., Washington, D. C.

Illustrations of experiments with sorghum sugar cane.

CLASS 68.—YEASTS, ETC.

QUEEN CITY CHEMICAL CO., 77 Main street, Buffalo, N. Y.

Specimens of baking powder.

CLASS 69.—FAT SUBSTANCES USED FOR FOOD, MILK PRODUCTS, AND EGGS.

ARMOUR & Co., Chicago, Ill.

Lard.

BAGNOLI, LUIDI, San Francisco, Cal.

Olive oil.

CASSARD, G., & SON., Baltimore, Md.

Lard.

DEPARTMENT OF AGRICULTURE, Washington, D. C., D. E. Salmon, Chief of Bureau of Animal Industry.

Butter and cheese made in the United States, suitable for export.

## Catalogue of exhibitors—Class 70.

DEPARTMENT OF AGRICULTURE, Washington, D. C., Dr. Thomas Taylor, microscopist.

Two hundred and seventy-three microphotographs of the crystalline structure of animal and vegetable fats.

EAGLE CONDENSED-MILK Co., 79 Murray street, New York City.

Condensed milk.

ELGIN CONDENSED-MILK Co., Elgin, Ill. Condensed milk.

GOODRICH, E. E., Santa Clara, Cal. Olive oil, grades of crop of 1889.

GREEN MOUNTAIN STOCK FARM, West Randolph, Vt.

Butter.

HELVETIA MILK-CONDENSED Co., Highland, Ill.

Condensed milk.

HOOPER, GEORGE F., Sonoma, Cal. Olive oil.

KLAUBER, J. C., Philadelphia, Pa.

Samples of oil made from the germ of the maize.

MICHENER, J. H., & Co., Philadelphia, Pa.

Lard.

MORRELL & Co., Chicago, Ill.

Butter.

RIXFORD, G. P., San Francisco, Cal. Olive oil.

SIMPSON, McINTIRE & Co., Boston, Mass. Diamond creamery butter.

SOUTHERN COTTON-SEED OIL Co., New York, N. Y.

Refined cotton-seed oil. (*See* Class 44.)

STRICKLER BROTHERS & Co., Sterling, Ill.

Liquid coloring for butter.

SWIFT & Co., Chicago, Ill.

Lard.

WETMORE, CHARLES A., Livermore, Cal. Olive oil of California.

## CLASS 70.—MEATS AND FISHES.

ARMOUR & Co., Chicago, Ill.

Canned meats, salted and packed meats, canned soups, extracts of meat.

BROUGHAM, GEORGE, 68 W. Jackson street, Chicago, Ill.

Extracts of meat, canned soups.

CASSARD, G., & SON, Baltimore, Md.

Dried, salted, and smoked meats.

COWDREY, E. I., & Co., Boston, Mass. Canned meats.

CURTICE BROS., Rochester, N. Y.

Canned meats.

FERRIS, F. A., & Co., 274 Mott street, New York, N. Y.

Dried, salted, and smoked meats.

FRANCO-AMERICAN SOUP Co., Warren street, New York, N. Y.

Canned soups.

HUCKINS, J. H. W., & Co., 18 Waterford street, Boston, Mass.

Canned soups.

HUMBERT, HENRY, & Co., 814 Fulton street, New York, N. Y.

Extracts of meat.

LIBBY & Co., Chicago, Ill.

Canned meats.

MICHENER, J. H., & Co., Philadelphia, Pa.

Dried, salted, and smoked meats.

MORRIS & Co., Chicago, Ill. (Fairbanks' Canning Co.).

Canned meats.

RICHARDSON & ROBBINS, Dover, Del.

Canned meats.

ROGERS, W. H., 419 California street, San Francisco, Cal.

Canned fresh salmon from Columbia River and Alaska.

SWIFT & Co., Chicago, Ill.

Salted and packed, dried, salted, and smoked meats.

## CLASS 71.—VEGETABLES AND FRUITS.

BROWN, ARTHUR, Bagdad, Santa Rosa County, Fla.

Pecan nuts.

CALIFORNIA DRIED-FRUIT ASSOCIATION, San Francisco, Cal.

Series of samples of dried grapes.

CLAGETT, F., Upper Marlboro', Md.

Canned sweet corn and lima beans.

CLEVELAND, A. B., & Co., New York.

Twenty-nine varieties of peas and of beans, sweet corn, peas and corn.

COLLECTIVE EXHIBIT of vegetables and fruits prepared under the direction of the Secretary of Agriculture, Washington, D. C.

DIVISION OF POMOLOGY, U. S. Department of Agriculture, Washington, D. C.

Series of models of citrus fruits and of orchard fruits; collection of dried fruits.

ERIE PRESERVING Co., Buffalo, N. Y.

Canned succotash, sweet corn, and tomatoes, fruits, and berries.

FLORIDA STATE HORTICULTURAL SOCIETY.

Citrus fruits.

GRIFFIN CANNING Co., Griffin, Ga.

Canned tomatoes.

HARRIS, JOSEPH, SEED Co., Rochester, N. Y.

Varieties of beans, peas, and beets.

HOOPER, GEORGE F., Sonoma, Cal.

Walnuts, English, grown in California; dried prunes, pickled olives.

KENNON, GRAY & Co., Sublett Taverne, Pa.

Canned tomatoes and sweet corn.

KIMBALL, FRANK A., National City, Cal.

Citrus fruits.

MALLORY, E. B., & Co., Baltimore, Md.

Canned tomatoes, corn and peas, peaches.

MARTIN, WAGNER & Co., Baltimore, Md.

Canned tomatoes, corn and peas, pineapples, peaches, apples.

MEADE, GEORGE W., & Co., San Francisco, Cal.

Dried fruits of California.

MYER, THOMAS J., & Co., Baltimore, Md.

Canned vegetables, fruits, and berries.

NUMSEN, WILLIAM, & SONS, Baltimore, Md.

Pineapples, peaches, plums, and berries, canned vegetables.

ORESTOTT, HENRY, Placer County, Cal.

One box muscatel raisins.

PACIFIC ORCHARD CANNERY, San José, Cal.

Canned fruits and fruits in brandy.

PERRY, F. H., Providence, R. I.

Canned tomatoes, asparagus, beans and corn, fruits and berries.

PLANT SYSTEM, Florida.

Preserved fruits.

RIXFORD, G. P., San Francisco, Cal.

Jujube berries, pistachio nuts.

Catalogue of exhibitors—Class 72.

ROGERS, W. H., 419 California street, San Francisco, Cal.

Canned fresh fruits: Apricots, peaches, etc.

ROSA, JOHN J., Milford, Del.

Dried peaches, etc.

SEARS & NICHOLS, Chillicothe, Ohio.

Twelve cans of corn, canned peaches.

SEED DIVISION, U. S. Department of Agriculture, Washington, D. C.

Miscellaneous varieties of garden seeds.

STEINER, SAMUEL, San Francisco, Cal.

Dried fruits.

VAN DIEMEN, M. H., Washington, D. C.

Collection of fruits.

VAN NOSTRAND & Co., New York City.

Evaporated apples and dried fruits.

WINTERPORT PACKING C., Winterport, Me.

Canned sweet corn.

CLASS 72.—CONDIMENTS AND STIMULANTS: SUGAR AND PRODUCTS OF CONFECTIONERY.

ADAMS & SONS, 156 Sands street, Brooklyn, N. Y.

Adams' tutti frutti chewing-gum.

BACON, Mrs. C. A., Ormond, Fla.

Guava jelly and preserves.

COLLECTIVE EXHIBIT prepared under the direction of the Secretary of Agriculture, Washington, D. C., Dr. H. W. Wiley, chemist.

Sorghum syrup, sorghum heads of different varieties showing the development of the plant; sorghum sugar refined, etc.

CONVENT OF ST. AUGUSTINE, St. Augustine, Fla.

Fruit preserves.

CONWAY SPRINGS Co., Conway Springs, Kan.

Sorghum sugar refined.

DADANT, CHARLES, & SON, Hamilton, Ill. (See also Class 76.)

DOUGLAS SUGAR Co., Douglas, Kan.

Sorghum syrup, sorghum sugar refined.

ERIE PRESERVING Co., Buffalo, N. Y.

Conserves.

FAWCETT, ALICE K., Ormond, Fla.

Guava jelly.

HEINZ, H. J. Co., Pittsburgh, Pa.

Apple butter, raspberry jam.

Catalogue of exhibitors—Class 73.

KINNEY, S. H., Morristown, Minn.

Sorghum syrup, sorghum heads of the "Early Amber" variety cultivated at the forty-third degree of latitude; sorghum sugar refined.

LUTTED, JAMES, 27 and 29 Ellicott street, Buffalo, N. Y.

Specimens of candies and confectionery made by hand and steam power.

MAILLARD, HENRY, West Twenty-fourth, West Twenty-fifth streets and Broadway, New York, N. Y.

About 3,000 different styles of bonbons and fancy chocolates; two chocolate vases, height, 1.45<sup>m</sup>m; weight, 450 kilograms. (*See also* Class 11.)

MILLER, GEORGE, & SON, 610 Market street, Philadelphia, Pa.

Confectionery, American candies.

NEWCOMB, T.

Candies.

PALISADE MANUFACTURING CO., West Hoboken, N. J.

Tournade's kitchen bouquet, concentrated essence for flavoring soups, gravies, etc.

PRESERVING AND CANNING CO., THE, St. Augustine, Fla.

Preserved guava, guava jelly, marmalade, and preserved figs.

ROSS, MARY E., 104 Pearl street, New York, N. Y.

Excelsior sauce.

WILBUR, H. O., & SON, 237 North Third street, Philadelphia, Pa.

Cocoa and chocolates.

#### CLASS 73.—FERMENTED DRINKS.

ADAMSON, RUTHERFORD, Napa County, Cal.

Wines, assorted, from his vineyard at Napa.

AMERICAN WINE CO., St. Louis, Mo.

Wines of the islands of Lake Erie, in Ohio.

BEADLESTON & WOERZ, 291 West Tenth street, New York, N. Y.

Lager beer, ale, and porter.

BECK, ADOLPHE, San Francisco, Cal.

Wines: Sauvignon, Cabernet, Port, and Burgundy.

BEN LOMOND WINE CO., Mr. Wilkens, agent, Santa Cruz County, Cal.

White wine, vintage of 1886.

BERGNER & ENGEL BREWING CO., Philadelphia, Pa.

Malt liquors.

BERINGER BROTHERS, St. Helena, Napa County, Cal.

Wines and brandies.

BOLEN & BYRNE, 416 to 423 East Fifty-fourth street, New York.

Golden Russet champagne cider, mineral waters, ginger ale, and other aerated beverages.

BRUN, A., & Co., Nouveau Medoc, Oakville, Napa County, Cal.

Wines: Riesling, Catawba, Carignane, Zinfandel.

CALIFORNIA STATE VITICULTURAL COMMISSION "EXPERIMENTAL CELLAR," San Francisco, Cal.

Five cases assorted wines of California, various brands and vintages.

CHAUCHÉ, A. G., Mont Rouge Vineyards, Livermore, Alameda County, Cal.

Wine from a blend of Sauvignon Blanc, Semillon and Muscatel de Bordelais.

CRABB, H. W., Tokalon Vineyard, Oakville, Napa County, Cal.

Three cases wine, assorted, Sauterne, Tokay, Gutedel, Muscatel, Chamberlain, etc.

CRAFT, N. W., Shore, N. C.

Wine.

CRAIG, W. O., Sonoma, Cal.

Wine: a blend of Riesling and Chasselas, vintage of 1885.

DADANT, CHAS., & SON, Hamilton, Ill.

Wine and vinegar from honey.

DE TURK, J., Santa Rosa, Sonoma County, Cal.

Four cases of assorted wines: Riesling, Zinfandel, sherry, brandy.

EDGE HILL WINE CO., St. Helena, Cal.

Wines: Cabinet Riesling, Golden Chasselas, Zinfandel, Burgundy, and brandy.

EWER & ATKINSON, Rutherford, Napa County, Cal.

Wines: Sauvignon vert, Reisling, Zinfandel, Burgundy, Benoir.

FIBLE & CRABB, Eminence, Ky., and Boston, Mass.

Bottled whisky.

FLORIDA WINE CO., Clay Springs, Fla.

Orange wine.

Catalogue of exhibitors—Class 73.

- GAST WINE CO.**, St. Louis, Mo.  
Wines: Norton, Taylor, Iowa, Riesling, etc.
- GREENBAUM, ALFRED**, San Francisco, Cal.  
Three cases wine, assorted, from vineyards in a mountainous region.
- GUNDLACH, J., & Co.**, San Francisco, Cal.  
Ten cases assorted wines from their Rhinefarm, Sonoma, vineyards.
- GROSSMAN, H.**, Napa, Cal.  
Wines and brandies.
- HAGEN, HENRY**, Cedar Knoll vineyards, Napa County, Cal.  
Wines and brandy: Reising, Zinfandel, Port Angelica, Malaga, etc.
- HARASZTHY, ARPAD & Co.**, San Francisco, Cal.  
Eclipse extra dry, Eclipse brut, Reising, Gutedel, Zinfandel, etc., mostly from Orleans vineyards, Yolo County.
- HILGARD, Prof. W. E.**, University of California, Berkeley, contributor.  
Condensed must samples.
- HOOPER, GEORGE F.**, Sobre Vista vineyard, Sonoma, Cal.  
Wines: Reising, Zinfandel, Muscatel, and brandy.
- HUME & Co.**, 807 Market Space, Pennsylvania avenue, Washington, D. C.  
Old Stag whiskey and old apple brandy.
- HUSMAN, Prof. GEORGE**, Napa City, Cal.  
Wines of California.
- KRUG, CHARLES**, St. Helena, Napa County, Cal.  
Case of wines, assorted, including Mondense, Sweet Muscatel, and brandy.
- KOHLER & FROHLING**, San Francisco, Cal.  
Eight cases wine and brandy, assorted, from their Glen Ellen vineyards.
- KUNZ, JOSEPH**, New York City.  
Beer.
- MATTHEWS, J.**, Lisbon Winery, Napa, Cal.  
Case of selected wines: Riesling, Zinfandel, sherry,
- MEGLIAVALLA, G.**, Napa, Cal.  
Claret wine made in Napa Valley.
- MONTGOMERY BREWING Co.**, Montgomery, Ala.  
Beer.
- MONTICELLO WINE Co.**, Charlottesville, Va.  
Wines: Cythiana, Norton, Clinton, Ives, etc.
- MOTT, S. R. & T. C.**, 118 Warren street, New York, N. Y.  
Sweet and Golden Russet carbonated cider.
- MUNSON, J. V.**, Denison, Tex.  
Collection of native vines.
- NAPA VALLEY WINE Co.**, cellars at Napa, commercial business at San Francisco, Cal.

Wines from his mountain vineyards: Hock, Riesling, and Burgundy.
- SONOMA WINE AND BRANDY Co.**, 1 Front street, New York City.  
Specimens from cellars of Geo. West, Stockton, Cal.

Catalogue of exhibitors—Class 73 bis.

STONE HILL WINE CO., Hermann, Mo.  
Catawba, Riesling, Rulander, Concord,  
Norton, etc.

TOKALON VINEYARDS, H. W. Crabb,  
proprietor, Oakland, Cal.

Claret, Zinfandel, Chambertin, Bur-  
gundy, Riesling, etc.

VOGT, AUGUST, Willow Point, Tex.

Twelve bottles of native wine of Texas.

UNIVERSITY OF CALIFORNIA, experi-  
mental cellar, Berkeley County, Cal.  
Wines assorted, vintage of 1888.

WETMORE, CHARLES A., Livermore, Ala-  
meda County, Cal.

A selection of table wines: Medoc, Sau-  
terne, etc., from the Cresta Blanca  
vineyard.

WINEBERGER, Mrs. J. C., St. Helena, Cal.  
Wines, sherries, and brandies, assorted.

**GROUP 8.—AGRICULTURE, CULTIVATION OF  
THE VINE, AND FISH CULTURE.**

CLASS 73 bis.—AGRONOMY; AGRICULT-  
URAL STATISTICS.

AGRICULTURAL COLLEGE, State of Cali-  
fornia.

Books and reports.

CALIFORNIA STATE BOARD OF HORTI-  
CULTURE.

Volumes of reports.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C., J. R. Dodge, Statisti-  
cian.

Series of maps and charts, with graphic  
illustrations of the statistics of agri-  
culture of the United States.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C., E. H. Merriam.

Maps showing geographical distribu-  
tion of mammals and birds of eco-  
nomic importance.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C., B. T. Galloway, Di-  
vision of Vegetable Pathology.

Maps and drawings illustrating the  
fungus diseases of plants, their dis-  
tribution and treatment.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C., E. B. Fernow, Chief  
of Forestry Division.

Map of forest area of North America.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C., D. E. Salmon, Bureau  
of Animal Industry.

Charts showing the production of ani-  
mal food and prices in the United  
States, also the distribution of cattle  
and hogs, and the comparative com-  
position of American and European  
beef.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C., William Saunders,  
horticulturist.

Plan of garden and grounds of the  
Department of Agriculture.

KANSAS, STATE OF.

Report of the Commissioner of Agri-  
culture; official pamphlets descrip-  
tive of the resources of the State.  
(See also Class 82.)

CLASS 73 ter.—ORGANIZATION, METHODS,  
AND APPLIANCES OF AGRICULTURAL  
INSTRUCTION.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C., Prof. W. O. Atwater,  
Chief of Division of Experimental  
Stations.

Charts, plans, and photographs illus-  
trating report on agricultural col-  
leges and experiment stations.

RILEY, C. V., Washington, D. C.

Series of reports by himself on eco-  
nomic entomology; charts, plates,  
and wood engravings.

TAYLOR, Dr. THOMAS, Washington, D. C.

Micrographic illustrations of animal  
and vegetable fats.

WARD, Dr. R. H., Troy, N. Y.

Text book entitled "Plant Organiza-  
tion," on the structure and mor-  
phology of plants.

CLASS 74.—SPECIMENS OF FARM IMPROVE-  
MENTS AND AGRICULTURAL WORKS.

DEPARTMENT OF AGRICULTURE, Wash-  
ington, D. C., D. E. Salmon, Chief of  
Bureau of Animal Industry.

Model of creamery, model of silo—  
Cooley system; Wickes cold storage  
refrigerator; agricultural products.

ENTERPRISE MANUFACTURING CO., Co-  
lumbiana, Ohio.

Feed grinders and cutters.

HOWE, LEROY.

Improved mat for horse stalls.

JACKSON, A. C.

Florida products.

LIVE-STOCK EXPRESS CO., Chicago, Ill.

Model of car for transporting dressed beef. (*See also* Class 61.)

MARVIN DRENCHING BIT CO., H. Oateman, president, 97 Chambers street, New York City.

Patent horse drenching bit, with detachable reservoir and graduated medicine glass.

REID, A. H., Philadelphia, Pa.

Dairy appliances: Churn, butter workers, butter shipping box, butter printers.

RICHMOND CEDAR WORKS, 100 Reade street, New York.

"Electric" barrel churn.

WICKES REFRIGERATOR CO.

System of cold storage.

CLASS 75.—VINE CULTIVATION.

CALIFORNIA STATE BOARD OF VITICULTURE.

Volumes of reports.

DEPARTMENT OF AGRICULTURE, Washington, D. C., B. F. Clayton, agent.

A series of views, photographic, illustrative of the industry of the vine.

RILEY, C. V., Washington, D. C.

Specimens and illustrations of phylloxera work.

CLASS 76.—USEFUL AND INJURIOUS INSECTS.

APICULTURE: Collective exhibition under the direction of the Secretary of Agriculture, Washington, D. C.

### MINERAL RESOURCES OF THE UNITED STATES WITH STATISTICAL TABLES AND CATALOGUE OF THE ORES EXHIBITED TO ILLUSTRATE THEIR MINERAL INDUSTRY.

#### CONTENTS.

	Page.
LETTER TRANSMITTING REPORT.....	366
ANNUAL VALUE OF THE MINERAL PRODUCTION OF THE UNITED STATES....	367
GEOGRAPHIC DISTRIBUTION OF THE PRINCIPAL MINERAL PRODUCTS.....	371
COAL:	
Production in 1888 and 1889.—Anthracite, production and composition of.—Anthracite coal trade of the United States since 1820.—List of exhibitors of coal .....	372
IRON:	
Statistics of production and shipment for 1886, 1887, and 1888.—Production of pig iron, steel, rails, nails, etc.—Production by States.—Alphabetical list of exhibitors .....	378
GOLD:	
Value annually of production from 1870 to 1888.—Estimate of amount in the United States.—List of exhibitors, with notes of production, cost, and yield per ton.....	380
SILVER:	
Value annually of production from 1870 to 1888.—Amount in the country.—Use of industrially.—Cost of producing silver.—Operations on the Comstock Lode.—Product of gold and silver in Nevada for 1887.—Dividend on the Comstock.—Total production of the Comstock Lode from the commencement of operations.—Relative value of the gold and silver in the ores from the Comstock Lode.—Assessments and dividends.—Geographic distribution of the silver production.—Table in the appendix.—Annotated list of the exhibitors.....	384
COPPER:	
Statistics of production and of prices.—Exports.—List of exhibitors.....	390
LEAD:	
Production generally in the United States.—Lead and precious metals product of Leadville.—Imports and exports of lead.—Average monthly prices of lead.—List of exhibitors with notes .....	396

ZINC:	
Production and importation.—New Jersey Zinc and Iron Company . . . . .	399
QUICKSILVER:	
Statistics of production in the United States.—Statistics of New Almaden mines and of all mines in California.—The New Almaden mine exhibition of ores and products.—Production for thirty-five years.—Bradford mine. . . . .	399
MANGANESE:	
Production of the United States.—Exhibit of ore from Georgia. . . . .	404
TIN:	
Black tin, cassiterite, in the Black Hill of Dakota.—Exhibits from Nigger Hill, Dakota, and from Maine . . . . .	404
ANTIMONY:	
Statistics and list of exhibitors. . . . .	405
NICKEL:	
Nickel made by Wharton, 1876 and 1878.—Oregon nickel ores. . . . .	405
PYRITES:	
Statistics of production in the United States and exhibit from the Davis mine, Massachusetts . . . . .	405
ALUMINA:	
Production and exhibition of alloys of alumina and silicon made by the Cowles electric smelting process . . . . .	406
GRAPHITE:	
Statistics of production.—One example from the Merrill mine, Massachusetts. . . . .	406
SALT:	
Quantity of product and distribution.—Discoveries of rock-salt in the State of New York and in Kansas . . . . .	407
PETROLEUM AND NATURAL GAS:	
Statistics of production of petroleum.—Wells drilled and their production monthly and average product.—Value and exports.—Production and valuation of natural combustible gas.—Photographs of burning wells. . . . .	407
FERTILIZERS:	
Amount of phosphate rock in South Carolina . . . . .	410
GYPSUM, LIME, AND MICA:	
Distribution and production of gypsum.—Exhibit from Ohio.—Production of lime.—Exhibit from Connecticut.—Kilns fired by petroleum.—Mica: its uses, production, and examples. . . . .	410
BUILDING STONES, MARBLE, SLATES, ETC.:	
Value of building stones produced yearly.—Brown and red sandstones of Connecticut.—Granite.—Slates of various colors.—Production and value.—Blanchard (Maine) slate.—Exhibition by the Drake Company of quartzite, granite, and silicified wood. . . . .	411
PRECIOUS STONES AND GEMS:	
Increasing interest in American gems.—Value of the production in the United States.—Display by Tiffany & Co.—Tourmalines of Mount Mica, Maine.—Silicified wood of Arizona. . . . .	412
MISCELLANEOUS MINERALS:	
Amblygonite.—Spodumene.—Columbite.—Pectolite.—Vanadinite, Stromeayerite, Fluorspar.—Gadolinite, Lepidolite.—Wulfenite, Descloizite, and Dechinite.—Ulexite, borax, etc.—Arragonite.—Red Tourmalines.—Uintahite.—Vanadinite . . . . .	415

STATISTICAL TABLES :

I. Approximate distribution in round numbers of the product of gold and silver in the United States during the calendar year 1887.....	416
II. Production of gold and silver in the United States from the organization of the mint in 1792 to 1844 and annually since.....	417
III. Gold and silver coinage at the mints of the United States for the calendar year 1888.....	418
IV. Dividend paid by some American mines in the year 1888, and the total to date for the mines named.....	418
V. Dividends by States, 1884 to 1888.....	420
VI. Assessments levied or calls upon the shareholders by mining companies in 1888.....	420
VII. Statistics of the production of gold, silver, lead, and copper in the States and Territories west of the Missouri River during the year 1888, with statistics of Mexican production.—Annual statement of W. J. Valentine, of Wells, Fargo & Co.....	420
ALPHABETICAL LIST OF THE EXHIBITORS, CONTRIBUTORS, AND COLLECTORS.—COLLECTIVE EXHIBITION TO ILLUSTRATE THE MINERAL RESOURCES OF THE UNITED STATES.....	424

## LETTER TRANSMITTING REPORT.

MILL ROCK, NEW HAVEN, CONN., *May 1, 1889.*

SIR: I have the honor to submit herewith my report upon the collection of ores and of statistical information to illustrate, at the Paris Exposition, the variety and extent of the mineral resources of the United States.

Considering the wide geographical distribution of our mineral products and the limited time, and the space in the Exposition at command, it was deemed expedient to rely chiefly upon the presentation of statistical information, and to confine the objective representation to ore samples of moderate size, and to secure them generally from some of the leading producing properties of the country. A general invitation to send specimens was, however, extended to mine owners and mining companies throughout the United States.

In order to arouse attention to this opportunity, and to give information regarding the Exposition, and to secure important exhibits in all of the groups, I visited, at your request, some of the chief mining centers of the Western States and Territories, going to the Pacific coast over the Northern Pacific Railroad through Dakota, Montana, Idaho, Washington Territory, and Oregon, thence through California to San Francisco, and returning by way of Arizona and New Mexico. Invitations to exhibit samples of our mineral products were extended to the public in the name of the Commission through the local journals. There were, however, but few responses and most of the specimens secured are the result of direct personal application and solicitation. The very great expense of the transmission of heavy specimens, or collections of samples, from remote points was a serious bar to the accumulation of a quantity of specimens. In respect of quantity, the collection may be considered as meager in comparison with the extent and variety of our mineral products, but it may serve to exemplify, in part, the statistics of our mineral production, the value of which production last year, in 1888, was the largest in our history and reached the sum of over five hundred and ninety millions of dollars.

Acknowledgments for co-operation in securing specimens for the collection and for statistical information are due specially to Mr. R. C. Chambers, Salt Lake City; Joseph R. Walker and W. F. Hall, Walkerville, Mont.; S. G. Reed, Portland, Oregon; J. B. Haggin, Alvinza Hayward, I. B. Randol, General J. F. Houghton, Sidney M. Smith, and Prof. Thomas Price, San Francisco, Cal.; Robert M. Olyphant, president Delaware and Hudson Canal Company, New York; Charles A. Ashburner, Pittsburgh, Pa.; James M. Swank, manager Iron and Steel Association, Philadelphia, Pa.; Prof. J. P. Kimball, Director U. S. Mint, Washington; and to Dr. A. C. Hamlin, of Bangor, Me.

Very respectfully, your obedient servant,

WM. P. BLAKE,

*Special Agent for Mineral Collection.*

General W. B. FRANKLIN,

*United States Commissioner-General, etc., Paris Exposition, 1889.*

# MINERAL PRODUCTS OF THE UNITED STATES.

## GENERAL STATEMENT OF AGGREGATE VALUE ANNUALLY.

The total value of the mineral products of the United States in the year 1887 reached the large sum of \$542,284,225. In the year 1888 the value exceeded \$590,000,000, as shown in the following table:

*Value of the mineral products of the United States for the year 1888.*

### I.—METALLIC PRODUCTS.

	Quantity.	Value.
Pig iron, spot value .....	6, 489, 738	\$107, 000, 000
Silver, coining value.....	45, 783, 632	59, 195, 000
Gold, coining value .....	1, 604, 927	33, 175, 000
Copper, value at New York .....	231, 270, 622	33, 833, 954
Lead, value at New York .....	180, 555	15, 924, 951
Zinc, value at New York .....	55, 903	5, 500, 855
Quicksilver, at San Francisco.....	33, 250	1, 413, 125
Nickel, at Philadelphia .....	195, 182	115, 518
Aluminum, at Philadelphia .....	19, 000	65, 000
Antimony, at San Francisco.....	100	20, 000
Platinum, at New York .....	500	2, 000
Total value .....		256, 245, 403

### II.—NON-METALLIC PRODUCTS.

Bituminous coal .....	91, 106, 998	\$122, 497, 341
Anthracite coal .....	41, 624, 610	89, 020, 483
Other mineral products. ....		117, 306, 704
Total value .....		328, 914, 528

### RÉSUMÉ.

Metals.....	\$256, 245, 403
Non-metallic mineral products .....	328, 914, 528
Mineral products unspecified (estimated) .....	6, 500, 000
Total value of all mineral products.....	591, 659, 931

Some of the details of production upon which these figures are based will be found in the following pages under the appropriate heads. Free use has been made of the official statistics published annually by the United States,\* to which numerous specialists in various parts of the United States are the chief contributors, but the volume for the year 1888 has not yet been printed.

\* Issued from the Department of the Interior, "Division of Mining Statistics and Technology," of the United States Geological Survey. Five volumes, commencing in 1883, have been published, the last being for the year 1887.

<sup>14</sup> Of 300 pounds for natural cement, and 400 pounds for artificial Portland.

<sup>15</sup> Of 280 pounds net.

<sup>16</sup> Including cobalt oxide in ore and matte.

<sup>17</sup> Including, except where an amount is specified in the table, fire-clay, kaolin, potter's clay, common brick clay, terra cotta, building sand, glass sand, limestone used as flux in lead smelting, limestone in glass making, iron ore used as flux in lead smelting, marls (other than New Jersey), gypsum, tin ore, irid- osmine, mill buhrstone and stone for making grind- stones, novaculite, lithographic stone, talc and soap- stone, quartz, nitrate of soda, carbonate of soda, sulphate of soda, native alum, ozocerite, mineral soap, strontia, infusorial earth and tripoli, pumice-stone, sienna, umber, zinc-white, and mineral wasters.

<sup>12</sup> Of 200 pounds.

<sup>13</sup> Of 42 gallons.

## GEOGRAPHIC DISTRIBUTION OF THE MINERAL PRODUCTS OF THE UNITED STATES.

---

The general geographic distribution of the useful ores and metals of the United States may be said to be coincident with the mountain regions. The meridional extension of the mountain system of America and the many parallel ranges of elevation, each with differences in the rocks and geologic conditions, determine to a great degree a meridional distribution of the ores and metals and a difference in the nature of the ores in the different mountain ranges. In the comparatively modern rocks of the coast ranges of California we find some of the more volatile and soluble minerals—for example, quicksilver, antimony, sulphur, borax, salt, and other chlorides. We have also petroleum and bitumen and a variety of mineral waters.

In the Triassic beds of the Piedmont region of the Sierra Nevada copper sulphides are abundant, and are bordered by the great belt of gold-bearing veins, in which free metallic gold is the characteristic form of occurrence, while the pyrites in association rarely exceeds 2 per cent. Covering the divide of the Sierra Nevada and descending the eastern side silver-bearing veins appear, carrying gold also, but generally alloyed with silver, as in the Comstock lode.

In the region of the Great Basin—the elevated mountainous plateau of the interior—traversed by the ranges of the Humboldt and the Wasatch systems, silver-bearing veins with the usual silver minerals are characteristic, while lead appears in quantity, generally in association with the mountain limestones. In the Rocky Mountain system proper, gold, silver, and lead occur together with the highly pyritic and sulphuretted ores, all better adapted to smelting than to milling.

In the Black Hills of Dakota, where all the geologic formations crop in concentric outcrops around an insular nucleus of ancient Montalban and Huronian schists, nearly all known metals and ores occur, while tin has been found in promising quantities in the ancient rocks.

A new silver lead region has been developed in the northwest along the slopes of the Cœur d'Alenes and beyond the copper and silver region of Montana, now one of the foremost producers of the precious metals. The area of productive mining country is rapidly extending to the northwest, and new smelting establishments are erecting on the Upper Missouri and at Puget Sound.

Alaska is adding to the influx of gold, and large deposits of lead ore and of copper are reported.

At the extreme south the gold and silver lodes of Arizona are receiving increased attention, and many of the silver mines of Mexico are being worked by American capital. Thus gold, silver, copper, and lead are found throughout the western United States from Mexico to the northern boundary and even to the Arctic circle.

Iron ores are also widely distributed, but are not yet utilized to a great extent in the West. A region of enormous beds of magnetite surrounded by a coal region is found in southern Utah, but is not yet worked. The iron ores of the Puget Sound country and of Oregon are beginning to be developed. Michigan, Wisconsin, Mis-

souri, and Minnesota continue to send out enormous quantities of iron ore, and the iron region of Alabama has been rapidly developed.

But the mineral wealth of the country is not confined to the mountain regions. The valleys and the great intermediate plains generally are vast store-houses of coal, petroleum, fuel gas, and salt. Coal abounds in the cretaceous formation of the Rocky Mountains upon both slopes, and affords a superior coke, which is extensively used in the smelting furnaces of the West. In the great Puget Sound country coal is very abundant and of excellent quality.

The construction of transcontinental railways has opened up enormous regions before comparatively inaccessible, and has made it possible to work many mineral districts which, without steam transportation, would lie dormant.

Amongst the more notable metallurgical advances in the United States since the Exposition of 1878, the utilization of natural combustible gas should be especially mentioned. It marks a new era in the history of Pittsburgh and the region to which the gas can be carried in pipes.

The vast system of transportation of petroleum in pipes, even to the sea-board, is extremely interesting and of the utmost industrial importance. The cheaper oils are now used to a considerable extent as fuel. A new oil region has been opened in Colorado, and the oil regions of California are producing.

The extraction of silver by lixiviation has received increased attention, and the process devised by Russell has been introduced at some of the silver mines with marked economy and success.

The American stamp mill has been further improved, and is justly regarded as superior to those of other countries. Such mills are now being introduced in some of the oldest mining centers of Europe, and are being erected under the supervision of American mining engineers. Rock drills, channeling machines for marble quarries, and some forms of automatic concentrating machines have been carried to great perfection and the multiple jaw-breaker for fine crushing worthily supplements the single jaw-crusher of world-wide celebrity for its economy of energy and material.

Great advance has also been made in the transmission of electrical energy to great distances and in the application of this energy to mining work. On the Comstock lode a mill at the surface is successfully run by the power derived from electric currents generated by dynamos 1,600 feet or more below, moved by a small stream of water under great pressure and discharging into the Sutro tunnel. It is reported that a saving is effected of one-half the usual cost of steam power.

## COAL.

By the courtesy of Mr. Charles A. Ashburner\* of Pittsburgh, Pa., I am able to present the following from advanced sheets, upon the production of coal in the United States in 1888:

“The following statistics have been compiled principally from incomplete returns received from State officials, from the operators of individual coal mines, and from railroad agents. They are presented in this brief preliminary report as provisional estimates in advance of the full and complete returns which will appear in the final report, ‘Mineral Resources of the United States, 1888.’

“The total production of all kinds of commercial coal in 1888 was 138,515,744 short tons (increase over 1887, 14,500,489 tons), valued at the mines at \$200,534,306 (increase, \$26,938,310). This may be divided into Pennsylvania anthracite, 43,578,000 short tons (increase, 4,071,745 short tons), or 38,909,000 long tons, including 38,145,718 long tons shipped by the railroads and canals, and reported by their sta-

\* Assistant in charge of Coal Statistics, U. S. Geological Survey, Division of Mining Statistics and Technology.

tistician, Mr. John H. Jones : and 763,282 long tons sold to the local trade at the mines (increase, 3,635,558 long tons), valued at \$84,977,100 (increase, \$5,611,856): all other coals, including bituminous, brown coal, lignite, small lots of anthracite produced in Colorado and Arkansas, and 6,500 tons of graphitic coal mined in Rhode Island, amounting in the aggregate to 94,937,744 short tons (increase, 10,428,744 tons), valued at \$115,557,206 (increase, \$21,326,454).

“ The colliery consumption at the individual mines varies from nothing to 8 per cent. of the total output of the mines, being greatest at special Pennsylvania anthracite mines, and lowest at those bituminous mines where the coal bed lies nearly horizontal, and where no steam power or ventilating furnaces are used. The averages for the different States vary from 2 to 6<sup>4</sup>/<sub>10</sub> per cent., the minimum average being in the Pennsylvania bituminous, and the maximum average being in the Pennsylvania anthracite region.

“ The total output of the mines, including colliery consumption, was: Pennsylvania anthracite, 41,579,000 long tons (increase over 1887, 4,000,253 long tons), or 46,568,000 short tons (increase, 4,479,803 short tons); all other coals, 98,795,744 short tons (increase, 10,938,384 tons), making the total output of all coals from mines in the United States, exclusive of slack coal thrown on the dumps, 145,363,744 short tons (increase, 15,388,187 tons), valued as follows: Anthracite, \$88,714,600 (increase, \$4,162,419); bituminous, \$119,415,206 (increase, \$21,410,550); total value, \$208,129,806 (increase, \$25,572,969). The above figures show a notable increase in 1888 over 1887 in the aggregate output and value of both anthracite and bituminous coal, although not as great an increase as occurred in 1887 over 1886 in the value of the anthracite, or in the total tonnage of the bituminous coal.”

The total production and the spot value in each State and Territory are shown in the following table :

*Production of coal in the United States in 1888 and 1887.*

The chief anthracite coal-fields of the United States are in the State of Pennsylvania, and have an area in the aggregate of less than 500 square miles. The production for the year 1888, shipped by railway and canal, was 38,145,718 long tons, the largest output in the history of the anthracite industry. It has grown to these proportions since the year 1820, when only 365 tons were mined. The production for each year since that time and the aggregate production of the different regions shipped by rail and canal is shown by the table annexed, supplied by the courtesy of the Delaware and Hudson Canal Company, the contributor to the collection of the interesting suite of specimens showing the physical characters of anthracite.

The chemical composition of anthracite from some of the principal beds in each of the chief coal-fields has been determined by Charles A. Ashburner, of the Geological Survey of Pennsylvania, as follows:

*Analyses of anthracite coals.*

No. of spec.	Name of coal-bed.	Name of coal-field.	Water.	Volatile matter.	Fixed carbon.	Sulphur.	Ash.	Total.	Spec. gravity.

<sup>1</sup>Seranton, in tons of 2,000 pounds, from 1856 to 1876, inclusive.

<sup>2</sup>Decrease.

<sup>3</sup>Seranton, in tons of 2,240 pounds.

<sup>4</sup>Includes Central Railroad of New Jersey.  
<sup>5</sup>Included in Philadelphia and Reading.

The following is a list of contributors and exhibitors:

**Delaware and Hudson Canal Company**, R. M. OLYPHANT, president Coal and Iron Exchange, New York.

A SERIES OF SAMPLES OF COAL CUT AND POLISHED to illustrate the fracture, color, and density of anthracite:

- 1 six-inch block, polished on five sides.
- 1 five-inch block, polished on one side.
- 1 four-inch block, polished on one side, for paper-weight.
- 1 five-inch block, polished on top and two sides.
- 1 double inkstand, turned and polished.
- 3 single inkstands, turned and polished.
- 1 turned paper-weight.

The total amount of anthracite coal produced at the mines of this company during the year 1888 was 4,442,638 tons.

**West Virginia Central Railway Company**, G. W. HARRISON, general traffic agent, Piedmont, West Va

BITUMINOUS COAL from the Elk Garden Mines (14-foot vein).  
BITUMINOUS COAL from the Davis Mine (11-foot vein).

**Mitchell Vance & Co.**, Philadelphia, Pa.

COLUMBIA SEMI-BITUMINOUS COAL.

## IRON.

The Secretary of the American Iron and Steel Association\* estimates the consumption of iron ore in the United States in 1888 in the blast furnaces and Catalan forges and for fettling purposes at 12,650,000 gross tons, against 12,500,000 tons in 1887 and a little over 11,000,000 tons in 1886. (The imports of iron ore in 1888 amounted to 587,470 gross tons. This amount subtracted from the amount consumed would leave 12,062,530 tons as the production of domestic mines in the year 1888, against 11,300,000 in 1887, and 10,000,000 tons in 1886.) The following table shows the amount of ore shipped in 1888 from the principal iron-ore producing districts of the country:

Shipments of iron ore from leading districts.	Gross tons.		
	1886.	1887.	1888.

The same authority reports the production of the leading iron and steel products in 1888 in comparison with the figures for the three preceding years, as follows:

Net tons of 2,000 pounds (except nails).	1885.	1886.	1887.	1888.
Pig-iron .....	4,529,869	6,365,328	7,187,206	7,268,507
Bessemer steel ingots.....	1,701,762	2,541,493	3,288,357	2,812,500
Bessemer steel rails.....	1,074,607	1,763,667	2,354,132	1,552,631
Open-hearth steel ingots .....	149,381	245,250	360,717	352,036
Open-hearth steel rails.....	4,793	5,255	19,203	5,261
Crucible steel ingots.....	64,511	83,609	84,421	78,713
Rolled iron, except rails.....	1,789,711	2,259,943	2,565,438	2,397,492
Iron rails.....	14,815	23,679	23,062	14,252
Kegs of cut nails (100 pounds).....	6,696,815	8,160,973	6,908,870	6,493,591
Pig, scrap, and ore blooms .....	41,700	41,909	43,306	39,875

The total production of pig-iron was 7,268,507 net tons, or 6,489,738 gross tons (of 2,240 pounds), the largest yearly production ever attained in the United States. The geographical distribution of the sources of this pig-iron is shown as follows:

States.	Net tons.	States.	Net tons.
Pennsylvania.....	3,589,186	Georgia .....	39,397
Ohio.....	1,103,818	Connecticut .....	21,644
Illinois.....	579,307	Colorado.....	20,877

Missouri.....	91,783	Total.....	7,268,507
Kentucky.....	56,790		

In the eight years since 1880 the Southern States have nearly trebled their production. The number of furnaces in blast at the close of the year 1888 was 332. The total number of furnaces, including those not in blast and erecting, was 589.

The collection is without examples of the important iron-ore producing regions of Michigan, of Missouri, and Wisconsin, or of Alabama and other Southern States.

**Chateaugay Ore and Iron Company**, Lyon Mountain, New York, EDWARD HALL, assistant general manager.

MAGNETIC IRON ORE and samples of concentrates from the company's mines.

The production of separated ore is about 50,000 tons per annum. The leaner ores,

carrying about 35 per cent. of iron, yield about one ton of 63 to 65 per cent. ore from each 3 tons treated. It is first crushed small in Blake's multiple jaw crushers and then jigged.

**Barnum Richardson Company, Lime Rock, Conn.**

LIMONITE IRON ORE, from the "Old Bed," Salisbury, Conn.

This is the ore famous for its production of iron of superior quality in colonial times and to the present time, especially for the manufacture of cast car-wheels.

**Dickerson Suckasunny Mining Company.**

MAGNETITE IRON ORE, Dickerson Mine, Ferromonte, Morris County, N. J., contributed by Mr. FREDERICK A. CANFIELD.

The Dickerson Mine has been worked since the year 1715. It is now 800 feet deep, and produces 3,000 tons of iron ore a month. The ore is used in the furnaces at Stanhope, N. J., and in many of those on the Lehigh River.

**Lincoln Bessemer Company, THOMAS P. MARSHALL, secretary, Trenton, N. J.**

MAGNETIC IRON ORE from Oxford Township, Warren County, N. J.

**Magnetite-Crystalline, Essex County, N. Y., contributed by W. P. BLAKE.**

Interesting by reason of its extreme purity and its highly crystalline formation.

**Oregon Iron and Steel Company, Oswego near Portland, Oregon, SIMEON G. REED, president; MARTIN WINCH, secretary; E. C. DARLEY, superintendent.**

1. Iron ores, fuel, and flux from the company's mines.
2. Hot-blast charcoal pig-iron.

**Puget Sound Iron Company.—JOHN A. PAXTON, president; A. HALSEY, secretary, San Francisco, Cal.**

CHARCOAL PIG IRON, made at Port Townsend, Puget Sound, Washington Territory, from magnetite ore in limestone, mined at Texada Island, British Columbia, contributed to the collection by A. HALSEY.

**GOLD.**

The production of gold for the year 1888, according to the estimate of the Director of the United States Mint, was 1,604,927 fine ounces. Mr. Valentine, of the banking house of Wells, Fargo & Co., estimates the value of the product for the States and Territories west of the Missouri River, exclusive of British Columbia, at \$29,987,702, and the annual production from the same region since 1870 as follows:

*Value of the production of gold, annually, since 1870.*

Year.	Value.	Year.	Value.
1870.....	\$33,750,000	1880.....	\$32,559,067
1871.....	34,398,000	1881.....	30,653,959
1872.....	38,177,395	1882.....	29,011,318
1873.....	39,206,558	1883.....	27,816,640
1874.....	38,466,488	1884.....	25,183,567
1875.....	39,968,194	1885.....	26,393,756
1876.....	42,886,935	1886.....	29,561,424
1877.....	44,880,223	1887.....	32,500,067
1878.....	37,576,030	1888.....	29,987,702
1879.....	31,470,262		

The total potential amount of gold in the United States June 1, 1888, is estimated by the Director of the Mint as worth \$706,840,519. The amount used industrially during the period of one year was over \$4,103,886, this being the value of the bars manufactured and sold by twenty-six firms.

**Big Blue Lode**, Sumner Mines, Kern County, Cal.

GOLD ORE, from the Big Blue Lode, contributed by Prof. THOMAS PRICE, San Francisco, Cal.

**Boaz Mining Company**, Minnehaha, Yavapai County, Ariz., contributor.

GOLD-BEARING ORE, sulphurets and quartz.

**Carlisle Gold Mining Company (Limited)**, Carlisle, Grant County, N. Mex.

GOLD ORE, GALENITE and YELLOW-COPPER PYRITES, in quartz concentrates from the ore. Value per ton: Gold, \$32; silver, 13 ounces. Contributed by J. HENRY LONGMAID, general manager.

The Carlisle ore is stated to average a value of \$10 in gold and 2½ ounces in silver as stamped. Sixty-eight per cent. of the gold and 6 per cent. of the silver are saved on the copper plates, and also on the Frue vanners in the concentrates 21 per cent. more of the gold and 40 per cent. of the silver. The concentrations contain gold in value \$32; silver, 13 ounces; lead, 20 per cent.; copper, 3½ per cent.; zinc, 22 per cent.; and quartz 12 per cent.

**Congress Mine**, Martinez, Yavapai County, Ariz. Contributed by F. W. MURPHY, superintendent.

GOLD-BEARING PYRITES ORE.

This mine is now shipping this ore to the Prescott sampler. It averages over \$100 per ton in value.

**Deadhorse Claim**, Tuolumne County, Cal.

GOLD-BEARING QUARTZ. Contributed by ALVINZA HAYWARD, Esq.

**Deadwood Terra Mining Company**.—T. J. GRIER, superintendent, Lead City, Dak.

GOLD ORE. Production in 1888, value, \$661,376.97.

**Delhi Mine**, Nevada County, Cal.

GOLD-BEARING QUARTZ. Contributed by ALVINZA HAYWARD, Esq.

**Empire Mill and Mining Company**. (See Original Empire Mill and Mining Company.)

**Grey Eagle Mine**, Bayard, Yavapai County, Ariz.

1. GOLD-BEARING ORE—SULPHURETS.
2. GOLD-BEARING ORE—OXIDIZED.

**Hart's Mine**, Shasta County, Cal.

GOLD-BEARING QUARTZ WITH COPPER PYRITES. Contributed by Prof. THOMAS PRICE, San Francisco, Cal.

**Highland Mining Company**.—T. J. GRIER, general superintendent, Lead City, Dak.

GOLD ORE from the Highland Mine. Value of the production in 1888, \$450,895.94.

**Homestake Mining Company.**—T. J. GRIER, general superintendent, Lead City, Dak.

GOLD ORE AND PHOTOGRAPHS of the mines and mills.

PHOTOGRAPHIC VIEWS: (1) Lead City, Dak.; (2) Homestake works at Lead City; (3) Deadwood Terra mine; (4) Deadwood Terra open cut; (5) Homestake mine; (6) Train of wood and timber coming into Lead City.

The Homestake has been a large producer of gold for many years and has paid a large amount in dividends. The gold-bearing quartz veins traverse ancient pre-silurian schists and are accompanied by porphyritic dikes and overflows. The bullion product from June 1, 1887, to June 1, 1888, was 52,731.11 ounces, valued as follows: Gold, \$895,822.37; silver, \$7,584.83; from 243,355 tons milled.

**Idaho Quartz Mining Company,** Grass Valley, Nevada County, Cal.

GOLD-BEARING QUARTZ, showing numerous grains of free gold, from the 1600-foot level of the Idaho mine.

This mine has been a very prosperous one, having been in operation for the past twenty years and produced a total of over \$10,000,000 in value of gold, nearly one-half of which has been paid to the shareholders in dividends. The total depth of the incline shaft is 2,696 feet; average width of vein, 36 inches: cost of mining and milling, \$8.44 per ton; quantity of ore crushed in 1887, 26,686 tons: quantity of water pumped out per day, 21,600 cubic feet. Mill of thirty-five stamps, 850 pounds each, run by water-power. The ore averages about \$20 per ton. The dividends in 1888 were over \$300,000.

**Lindley, Abel,** prospector, Bayard, Yavapai County, Ariz.

GOLD-BEARING COPPER PYRITES from a small undeveloped vein in mica slates.

GOLD-BEARING ORE from the Cleveland lode. (Undeveloped.)

GOLD-BEARING ORE from the Stonewall claim. (Undeveloped.)

Collected at the locality and contributed to the collection.

**Montana Company (Limited)** (Drum Lummon Mines).—R. T. BAYLISS, superintendent, Ottawa Mining District, Montana.

SPECIMENS ILLUSTRATING THE NATURE OF THE ORES WORKED BY THE COMPANY.

The production of the mines of this company in the year 1887 was valued as follows: Gold, \$1,204,296; silver, \$834,511; total valuation, \$2,038,807. For the year 1888 the valuation as locally reported was \$1,094,500. The company has paid \$2,200,000 in dividends, besides equipping the mine and mills. Number of men employed, 300. The cost of mining is said to be \$3.27 per ton, and total cost of mining and milling, \$7.53 per ton.

Prof. J. E. Clayton reports the total length of the lode in which pay ore has been found as 1,700 feet. About one-third of this length is hard, unproductive quartz, leaving about 1,100 feet as the total length measured along the levels of the available paying ore. The average width of the pay chutes is about 20 feet.

**North Star Gold Mining Company.**—JAMES D. HAGUE, president; EMILE R. ABADIE, superintendent; Grass Valley, California.

GOLD-BEARING QUARTZ from the North Star Mine.

1. Quartz with free gold, galena, and iron pyrites.
2. Auriferous iron pyrites and gold in quartz.
3. Free gold and auriferous iron pyrites.

This mine has been worked since 1851 except some intervals of suspended operations. It has produced over \$4,000,000 in gold. The ore averages about \$20 per

ton. The property covers 3,000 feet of lode, of which about 2,000 feet is more or less opened and developed. The main shaft is 1,900 feet deep on an incline of about 21 degrees from the horizon. The mill now contains forty stamps, having lately been enlarged. The product in the year 1888 was \$334,000 from 17,400 tons of ore. The dividends for the same year aggregated \$140,925. The costs are from \$10 to \$11 per ton. The incorporation has 100,000 shares of a par value of \$10.

**Original Empire Mill and Mining Company.**—JAMES D. HAGUE, president, Grass Valley, Nevada County, Cal.

AURIFEROUS QUARTZ from the Empire Mine.

The Empire Mine, belonging to the Original Empire Mill and Mining Company, one of the oldest mines in the neighborhood of Grass Valley, has produced over \$5,000,000 in gold from auriferous quartz, averaging in value about \$20 per ton. The mine is 1,800 feet deep on an incline of about 20 to 25 degrees. The vein occurs near the contact of a slate foot-wall and overlying granite. The mill contains forty stamps.

**Oto Bella Mining Company,** Bayard, Yavapai County, Ariz.: collected at locality by W. P. Blake and presented to the collection by Mr. Long, superintendent.

GOLD-BEARING SULPHURETS in quartz.

GOLD-BEARING OXIDIZED SULPHURETS "free milling."

**Plymouth Mine,** Amador County, Cal.

GOLD-BEARING QUARTZ (ordinary ore), contributed by A. HAYWOOD, San Francisco, Cal.

The mines of the Plymouth Company are situated in Amador County, Cal., and have been worked to a depth of 1,600 feet. The principal mine consists of an immense chimney of ribbon quartz from 30 to 50 feet wide and 315 to 400 feet long. The quartz mills freely and contains 1 to 2 per cent. of sulphurets. The principal shaft is vertical, with three compartments, and is equipped with superior hoisting machinery. The self-dumping automatic skips have a capacity of 3,000 pounds of rock each. The derrick frame is 76 feet in height, and flat-wire cables are used.

There are two eighty-stamp mills, making one hundred and sixty stamps with a crushing capacity of 400 tons of quartz daily. The average yield per ton of ore in 1886 was \$6.18, and in 1887 \$7.59. The costs per ton were: Mining, \$2.34; milling, 39 cents; saving and reducing sulphurets, 17 cents; general expenses—offices, taxes, and prospecting—17 cents; total average cost per ton, \$3.07. The machinery is all run by water-power. The sulphurets are treated by the chlorination process. Total production of the mines to June, 1883, about \$2,500,000; since then, \$3,804,499. From June, 1883, to January, 1888, over two millions were paid in dividends. The mines were closed in 1888 by reason of fire.

**Senator Mine,** near Prescott, Ariz.—F. W. MCGOWAN, superintendent, contributor.

1. GOLD-BEARING SULPHURET ORE.

2. GOLD-BEARING SULPHURET ORE.

This ore is now shipped to smelting works.

**Tuttletown Claim,** Tuolumne County, Cal.

GOLD-BEARING QUARTZ, contributed by ALVINZA HAYWARD, esq.

## SILVER.

The production of silver in the United States for the year 1888 is valued at \$53,152,747. This is for the region west of the Missouri River, exclusive of British Columbia and the west coast of Mexico. The value of the product for each year for the same region since 1870 is reported as follows:\*

*Annual product of silver, by value, calculated at 1.2929 per ounce.*

Years.	Product.	Years.	Product.
1870.....	\$17,320,000	1880.....	\$38,033,055
1871.....	19,286,000	1881.....	42,987,613
1872.....	19,924,429	1882.....	48,133,039
1873.....	27,483,302	1883.....	42,975,101
1874.....	29,699,122	1884.....	43,529,925
1875.....	31,635,239	1885.....	44,516,599
1876.....	39,292,924	1886.....	52,136,851
1877.....	45,846,109	1887.....	50,833,884
1878.....	37,248,137	1888.....	53,152,747
1879.....	37,032,857		

The Director of the United States Mint estimates the production of silver for 1888 at 45,783,632 fine ounces, and the total potential amount of silver in the country on the 1st of June as \$383,655,537 in value. Over \$1,207,467, at its coining value, was used industrially during the year ending June 1, 1888.

The working cost of producing silver in the United States, exclusive of the cost of development of the mines, interest on capital, and amortisation, has been ascertained with great care as nearly as possible by Prof. J. R. Kimball, Director of the United States Mint, who gives the following summarized table † deduced in terms of the relative quantity and market value of the other associated products of the ore-gold and lead.

*Cost of producing silver.*

State or Territory.	Number of silver mines selected.	Product of silver.	Average working cost of producing one ounce of refined silver.	Total working cost of producing silver.	Mean working cost per ounce.
		<i>Fine ounces.</i>			
Arizona.....	5	1,119,562	\$0.832	\$981,475	.....

\* From the statistics of "Precious Metals Product, United States of America, and of Mexico." John J. Valentine, v. pres. Wells, Fargo & Co.

† Report of the Director of the Mint upon the production of the precious metals in the United States during the calendar year 1887 (page 115).

There are no examples of ores from the Comstock lode in the collection. Specimens are now difficult to obtain, and there are already fine specimens from the Bonanza mines in Paris, the ores that were exhibited in 1878 through the liberality of Mr. Mackay. Although not now in bonanza, some of the mines have been yielding well.

There were thirty-five mines or companies in operation on the Comstock lode in 1888, twelve of them producing bullion. The total yield of the lode was over \$5,500,000, and the total bullion production of the State of Nevada was, in round numbers, \$9,500,000, a considerable increase above the production in 1887, which was as follows:

*Product of gold and silver in Nevada for 1887.*

Counties.	Gold.	Silver.	Total.
Churchill ..	\$125.00	\$19,875.00	\$20,000.00
Douglas.....	6,000.00	500.00	6,500.00
Elko .....	8,000.00	366,910.00	374,910.00
Esmeralda.....	100,000.00	562,500.00	662,500.00
Eureka .....	500,000.00	943,386.61	1,443,386.61
Humboldt.....	34,000.00	125,848.75	159,848.75
Lander .....		358,615.17	358,615.17
Lincoln.....	3,983.60	34,856.55	38,840.15
Lyon .....	53,000.00	125,649.50	178,649.50
Nye.....	3,500.00	334,448.13	337,948.13
Ormsby.....		1,750.00	1,750.00
Storey .....	1,719,053.94	2,626,332.41	4,345,386.35
White Pine.....	110,189.02	206,604.42	316,793.44
Total .....	2,537,851.56	5,707,276.54	8,245,128.10

The dividends paid for the year amounted to \$2,750,000. The Consolidated California and Virginia alone produced over \$3,500,000, gross value. The details from the S. F. Report for the last month of the year 1888 will show the general average of the ore and the composition of the bullion:

There were worked at the Morgan mill 4,825 tons of ore, yielding bullion of the assay value of \$110,497.97, of which \$55,502.53 was gold and \$55,994.44 was silver. The average yield of the ore per ton in bullion was \$22.90, and the average assay value of the battery samples was \$28.27 per ton. There were worked at the Eureka mill 6,370 tons of ore, yielding bullion of the assay value of \$149,822.59, of which \$77,204.20 was gold and \$72,618.39 was silver. The average yield of the ore in bullion per ton, at this mill, was \$23.52, and the average assay value of the battery samples was \$30.48 per ton. There were worked at both mills a total of 11,195 tons of ore, yielding bullion of the gross assay value of \$260,320.56, of which \$132,706.73 was gold and \$127,613.83 was silver. In addition there was produced from the assay clean-up for 1888 from granulations bullion valued at \$1,389.34, and from ashes, sweepings, and slag bullion valued at \$5,921.37, making a grand total of \$267,631.27 produced and shipped for the fiscal month just ended. The average yield of the ore in bullion per ton was \$23.25, of which \$11.85 was gold and \$11.39 was silver. The average assay value of the battery samples was \$29.53 per ton. It is worthy of note that the proportion of gold contained in the Consolidated California and Virginia bullion produced last month exceeded that of the silver.

The total production of silver and gold of the Comstock lode has been made the subject of careful study by Alfred Doten, of Virginia City, Nev.,\* who gives

\* *Vide* Report on the Production of Gold and Silver by the Director of the United States Mint, 1887. Washington, 1888.

the following tabular statement. The sources of the figures given are the records of some of the leading representative companies; also the assayers' percentages, and information and data furnished by observant witnesses and competent authorities.

*Gold and silver production of the Comstock lode from commencement of operations.*

a From Corey, Paul, and Harris, three of the first quartz-mill men on Gold Cañon.

b From J. D. Hague's Report on Mining Industry of the Fortieth Parallel, 1870, competently corroborated.

c From the records of Wells, Fargo & Co.'s Express.

d From official mining data, corroborated and added to by trustworthy information.

e From sworn quarterly statements of mining companies to the assessor for bullion tax purposes.

f From the official records of mining companies, furnished by secretaries.

It is claimed to be more complete and accurate than the figures based on the returns to assessors as the basis of taxation. The records for the first two or three years after the discovery were not carefully kept, and those given are partly from estimates. It will be noted that they differ somewhat from those given by the writer in 1869 as the product to January, 1868, namely, \$81,500,000.\*

The relative value of the silver and the gold in the Comstock ores is now generally regarded as 60 to 40; 60 per cent. in value of silver and 40 per cent. in value of gold. The general average assay value of tailings shows a ratio of 66½ to 33½. In 1867 and previously, the ratio was 65.3 to 34.8.†

By adding to the total gross yield, as shown in the table (\$316,680,435.97), the sum of \$11,170,203.62 (the gross valuation of the yield of the tailings), the sum of the yield of the lode is carried to \$327,850,639. It is believed that if all the product had been carefully and accurately reported and recorded, the gross total would exceed \$400,000,000 in value.

This statement should be accompanied by a reference to the enormous amount expended in opening and working the mines upon the lode, and a tabular statement of assessments and dividends to January 1, 1888, is appended.

\* Report on the Production of the Precious Metals, by Wm. P. Blake, p. 128 (Paris Universal Exposition, 1867).

† Ibid. p. 128.

*Assessments and dividends on the Comstock lode to January 1, 1888.*

Consolidated Imperial.	1,775,000	500,000			
Challenge .....	30,000	.....			

This shows at a glance how unequally the paying ore was distributed along the course of the great lode. The Bullion mine, for example, in the center of the lode, made no return for the sum of nearly four millions of dollars expended in a vain search for ore. So also the Sierra Nevada mine returned only \$102,500 in dividends for the six millions and over expended there.

The sources of the silver and gold product of the United States during the fiscal year 1887, ending June 1, 1888, stated geographically by States and Territories, were approximately as shown by the table in the Appendix.

**Alice Gold and Silver Mining Company**, Walkerville, Mont.—JOSEPH R. WALKER, president; WILLIAM E. HALL, superintendent.

SPECIMENS OF SILVER ORE from various parts of the lode.

These specimens show the nature of the ore and veinstone of a group of lodes traversing the granite formation of Butte, Mont. (For a description in detail, see *Trans. Amer. Inst. Mining Engrs.*, vol. xvi, p. 65.) The ore consists largely of iron pyrite, blende, and galena. In 1887 the average value of the ore per ton, as determined by working, was: Gold, \$1.34; silver, \$28.23; total value, \$29.57. The ore is first roasted and chloridized and is then amalgamated in pans. The mine is worked to a depth of 1,000 feet. The costs in 1886 were for mining, \$7.44 per ton, for milling, \$7.57, making a total of \$15.01 for mining and milling, irrespective of dead-work and improvements to plant and general expenses. During the period of fifteen months to January 1, 1889, 14,529 tons of ore were worked, producing bullion valued at \$461,127.92. The average per ton saved in gold was \$1.97+, and of silver \$29.48+; total per ton, \$31.46+. The average percentage of loss in tailings was 3.38 ounces.

The weight of each pan charge is 3,800 pounds. The chlorination averaged 88.29 per cent.; the amalgamation, 87.66 per cent.; loss of quicksilver per ton of ore reduced, 0.95 of a pound. Cost of salt, \$11.26 per ton.

**Cactus Mining Company**.—WILLIAM L. LAY, agent, Frisco, Beaver County, Utah. SILVER AND COPPER ORES from the company's mines.

**Comfort Consolidated Mining Company**.—T. H. WHEELER, president; S. COMFORT, treasurer.

GOLD AND SILVER ORE from Rocky Bar, Idaho.

**Daly Mining Company.**—R. C. CHAMBERS, superintendent, Park City, Summit County, Utah.

SERIES OF SPECIMENS OF THE ORES of the mine from all the principal levels. Silver, gold, and lead.

This mine is opened upon the western extension of the Ontario Silver Mining Company's ground,  $2\frac{1}{4}$  miles south of Park City. The shaft is 800 feet deep, and the mine is drained to that depth by the Ontario drain tunnel. The top of the Daly shaft is 200 feet higher than the Ontario shaft. The best or highest grade of ore carrying lead and other metals is selected out and sold to smelting works. The lower grades of ore are treated by the mill processes at the mine. The expenses per ton, 1886-1887, are officially reported as follows :

	Net tons.	Per ton.	Total expense.
Extraction .....	22,088	\$5.03	\$111,055.01
Hauling .....	14,325	.88	12,670.50
Reduction .....	12,858	11.55	148,530.57
Sundries .....	22,088	4.66	103,009.81
Prospecting .....	22,088	4.50	99,429.37
Operating expenses .....		26.62	474,695.26

The ore sold to smelters (7,704 tons) averaged \$81.30 per ton, the ore milled (12,858 tons) averaged \$44.15, and the tailings \$4.41.

In the year 1888 the production was as follows :

	Tons.	Net value.
Ore crushed .....	21,000	\$803,000
Ore shipped .....	2,500	197,000
Total .....	23,500	1,000,000

Dividends of \$37,500 were paid each month, aggregating \$450,000 for the year and \$832,500 in all.

Men employed at mine..... 240  
Men employed at mill..... 65

Total ..... 305

The mill has been modified and added to for the introduction of the Russell leaching process, intended to treat 120 tons of ore each day.

**Lexington Mine**—"Société Anonyme des Mines de Lexington."—CHARLES C. RUEGER, superintendent, Walkerville, Mont.

SPECIMEN OF SILVER ORE, from the vein worked by the company.

The veins worked by the Lexington Company are nearly parallel and just east of the Rainbow lode, worked by the Alice Company, and traverse the same granite formation.

They comprise a group, located as the Lexington, Atlantic, Wild Pat, Alice Brown, Millsite, and Waterloo, all worked through one shaft. A French company purchased the property in 1881 and incorporated as the *Société Anonyme des Mines de Lexington*. The surface improvements are complete, and all underground machinery is run by compressed air. The mill is one of the best in the district, and is a short distance from shaft, connected by a tramway. It has sixty stamps, with

a capacity of about 65 tons per day; 160 men are employed in and about the mine and mill. The production of the mine for the year 1888 was 749,883 ounces of silver and 7,224 ounces of gold from 24,594 tons of ore.

**Ontario Silver-Mining Company.**—R. C. CHAMBERS, superintendent, Park City, Summit County, Utah.

SERIES OF SAMPLES OF ORE containing silver, gold, and lead, from the different levels of the mine from the 200-foot level to the 1,000-foot level.

This mine has been worked to a depth of 1,000 feet, and for a distance on the vein of over 4,000 feet. The main chute of ore opened by the principal workings measures over 2,600 feet horizontally. The mine is drained by an adit to a depth of 600 feet. A new drainage tunnel is in progress from the east side of the mountains, intended to drain the lode to a depth of 1,400 feet. This will be about 14,000 feet long, and will require several years for its completion.

The production of the mine in 1887 was 1,728 bars of silver bullion, weighing 1,068,983.50 ounces fine silver, valued at \$1,018,706.57, besides ore and concentrate sold, netting \$1,794,192.08. The average silver content of the ore raised was 47.4 ounces. The tailings contained 4.26 per cent. Extraction by amalgamation, 91 per cent. The total cost of the production per ton was \$24.97, distributed as follows:

	Net tons.	Total cost.	Cost per ton.
Extraction.....	34,000	\$245,960.99	\$7.24
Sundries.....	34,000	79,498.07	2.33
Prospecting.....	34,000	149,058.62	4.38
Reduction.....	24,427	228,847.76	9.37
Bullion expense.....	24,427	25,837.78	1.06
Hauling to mill.....	23,325	13,743.24	.59
Total.....		742,946.46	24.97

According to the Salt Lake Tribune, the product of the mine for 1888 was:

	Tons.	Value.
Ore crushed.....	25,000	\$980,000
Ore shipped.....	7,700	750,000
Total.....	32,700	1,730,000

The number of the men employed at the mine was 350, and at the mill 75. No. 3 shaft was sunk to a depth of 1,200 feet. This company has paid over \$10,000,000 in dividends to the shareholders.

**Silver King Mining Company,** Mines at Silver King, Pinal County, Ariz.—JOSEPH NASH, secretary, San Francisco, Cal. Contributor by request.

SILVER ORE from the company's mine. Four samples.

SILVER ORE, concentrates sample as shipped. Assay value \$815 per ton of 2,000 pounds.

Lent by W. P. BLAKE.

STROMEYERITE—(Silver-copper glance.) MASSIVE SPECIMEN associated with HEAVY SPAR.

Contains about 51 per cent. of silver and 30 per cent. of copper. Specific gravity 6.22. For notice of composition and association see "Description of the Silver King Mine of Arizona," by W. P. Blake, page 29.

The Silver King Mine, in Arizona Territory, about 1,000 miles from San Francisco, is remarkable for its yield of silver ores without gold. Native silver, argentite, stromeyerite, argentiferous blende, and argentiferous galena are the principal species. The veinstone is quartz and barite. The property affords also one of the few examples of mechanical concentration of silver ore preparatory to its reduction. In this instance the ore as it is raised from the mine is first broken in a Blake crusher, then stamped and passed over Frue tables. The concentrate, as shown, is shipped in sacks to San Francisco. The vein formation is peculiar and variable. The production has been large, and nearly \$2,000,000 have been paid in dividends, but at present the ore supply is insufficient to keep the mill running, and prospecting is in progress. Depth of workings 900 to 1,000 feet.

### COPPER.

The following tabular summary\* shows the production and sources of copper in the country from 1882 to 1887 inclusive.

#### *Copper production of the United States.*

From returns specially procured and published by the Engineering and Mining Journal it appears that the three principal copper producing regions, Lake Superior, Montana, and Arizona, produced in 1888 an aggregate of 218,500,000 pounds; and various other sources 12,500,000 pounds, making in all a total production from domestic ores of 231,000,000 pounds, and including copper from foreign ores, a grand total production of 236,000,000 pounds, or 105,357 gross tons. This exceeds the production of 1887 by about 51,000,000 pounds, or 27½ per cent.

			78,000,000

The quantity of electrolytic copper produced was about 17,000,000 pounds.

In regard to the imports and exports of copper the Engineering and Mining Journal says :

“ From official data we get the exports of copper for eleven months from all parts of the United States, and we have added the exports for December from the port of New York. We have carefully estimated the copper in ore, matte, etc., exported, and thus estimate the total exports as about 78,000,000 pounds. The imports were mostly in ore, which produced, as already stated, 5,000,000 pounds of copper.”

**Anaconda Mining Company**, Butte City, Mont.—J. B. HAGGIN, president; MARCUS DALY, superintendent.

COPPER ORE AND PRODUCTS from the company's mine at Butte City and the smelter at Anaconda.

COPPER ORE—First-class smelting ore.

COPPER ORE—Second-class concentrating ore.

COPPER ORE—Crushed and concentrated.

A series of ten samples of the crushed ore and products in glass bottles.

1. CRUSHED ORE as fed to the jigs.
2. JIG CONCENTRATER, coarse.
3. JIG CONCENTRATER, fine.
4. JIG TAILINGS.
5. CONCENTRATES from round table.
6. CALCINED ORE.
7. COPPER MATTE, coarse.
8. COPPER MATTE, fine.
9. GRANULATED SLAG.
10. FREE-MILLING SILVER ORE ; crushed by steam-stamp.

This property is described by the Financial and Mining Record, January, 1889, as follows :

“ This property is located northeast of Butte, and is a part of the great copper belt that half circles the city. Adjoining it on the east is the St. Lawrence, a companion mine, which is quite rich in metal, but has not been so extensively worked. The Anaconda was purchased in 1878 by Marcus Daly for \$30,000, representing J. B. Haggin; it was then only a prospect. The St. Lawrence was also bought later. Work was at once begun and from first blast became a paying investment. Mr.

Daly has always been the manager. Both mines have a three-compartment shaft the former 1,000 feet and the latter 680 feet deep. On all levels between third and eighth the two mines are connected, and some stoping has been done, but nothing to be compared with the vast field yet to be worked. There are miles of drifts and cross-cuts tapping ore bodies which vary in size, but which have an average of 50 feet in width for a distance of 3,000 feet. The double hoisting engines are 20-inch cylinder and 60-inch stroke. Each roll carries 1,500 feet of steel-wire cable and has carrying capacity of 2,000 feet. Two No. 10 Burleigh air-compressors furnish air and drive the forty-two 3-inch and 17½-inch drills. They have ten pumps in use for draining mine. Fifty thousand feet of timber are used a day for timbering mine. The average width of vein is 50 feet, and as depth is reached there has been an increase. There are on dump of mine 100,000 tons. During year 600,000 tons have been shipped. The matte shipped from smelters during year has been 120,000,000 pounds. Eight hundred men are employed in and about the mine."

It is reported also that the smelter, mills, and mines represent an investment of \$20,000,000. With the new plant at Anaconda, recently partly destroyed by fire, it was expected to be able to crush and concentrate 2,500 tons of ore a day.

**Bristol Copper and Silver Mining Company.**—E. G. HUBBEL, manager, Bristol, Conn.

VARIEGATED COPPER ORE.

YELLOW COPPER ORE.

YELLOW COPPER ORE AND QUARTZ.

PURPLE COPPER ORE AND GANGUE.

**Cactus Mining Company,** WILLIAM L. LAY, agent, Frisco, Beaver County, Utah.  
COPPER AND SILVER ORES from the mines of the company.

**Copper Basin Mining Company,** Copper Basin, near Prescott, Ariz. Collected at the locality by W. P. BLAKE, and presented to the collection by Mr. WILLIAMS, superintendent.

COPPER ORE, MALACHITE IN SANDSTONE.

COPPER ORE, MALACHITE IN CONGLOMERATE.

COPPER ORE, MALACHITE, AND AZURITE deposited in boulders.

GRANITE, containing YELLOW COPPER ORE.

These ores are especially interesting for the manner of their origin. They are evidently the result of the infiltration from above of cupriferous solutions derived from decomposing copper pyrites disseminated in the subjacent granite. The copper carbonate appears as a superficial coating upon the grains and pebbles which constitute 80 per cent. and over of the weight. The deposit throws light upon the origin of other and somewhat similar deposits of copper in sandstone and conglomerate. (See Notice of the Origin of the Copper Ores of Copper Basin, Ariz., by William P. Blake.—*Trans. Amer. Inst. Min. Engrs.*, 1889.)

**Copper Queen Mine,** Bisbee, Ariz.

COPPER ORE. Presented by THOMAS PRICE, San Francisco, Cal.

The product for the year 1888, as we are officially informed, was 9,380,000 pounds of copper 96 per cent. fine. At the same time the Holbrook & Cave properties, adjacent to the Copper Queen, whose ores were smelted at the works of the Copper Queen, aggregated 3,060,000 pounds, making the product of the district 12,440,000 pounds copper 96 per cent. fine.

**Copper Claim,** Sierra County, Cal.

PEACOCK COPPER ORE, contributed by THOMAS PRICE, San Francisco, Cal.

## LEAD.

According to the Engineering and Mining Journal, the production of lead in the United States in the year 1888 amounted to 189,000 net tons, coming approximately from the sources following: Colorado, 65,000 net tons; Utah, 22,000; Idaho and Montana (being chiefly from Idaho), 39,000 tons. The production for the past fifteen years has been as follows:

*Production of lead in the United States—net tons.*

1888.....		65,000	39,000	33,000		22,000	30,000	189,000

Mr. J. J. Valentine, of Wells, Fargo & Co., reports the total value of the lead produced in 1888 in the States and Territories west of the Missouri River at \$11,263,630.

The total product of Leadville for 1888, as reported in the several tables of the Herald-Democrat of that place, was thus distributed:

	Value.	Lead.	Silver.	Gold.
		<i>Pounds.</i>	<i>Ounces.</i>	<i>Ounces.</i>
Arkansas Valley Smelting Company.....	\$2,598,282.97	15,882,540	1,712,788	2,762.07
American Mining and Smelting Company.....	2,014,141.01	14,658,436	1,414,059	1,566.00
Harrison Reduction Works.....	1,280,658.14	8,366,546	859,655	4,727.13
Manville Smelting Company.....	829,525.11	6,073,306	487,633	5,116.37
Omaha-Grant Smelting and Refining Company...	2,064,903.96	14,091,679	1,517,602	1,185.44
Holden Smelting Company.....	720,539.69	7,807,871	389,974	220.60
Boston-Colo Smelting Company.....	581,255.00		584,855	1,665.00
Franklin Ballou.....	1,086,913.41	16,010,310	379,014	
Philadelphia Smelting and Refining Company...	558,381.89			
New York and San Juan Smelting Company.....	25,993.00			
Gold mines and placers.....	69,611.30			
Total production.....	11,830,205.48	82,890,688	7,345,575	17,242.61

[Gold has been calculated at the rate of \$20.67 per ounce, with silver at .93.]

The total production, by value, of the lead and silver of Leadville from 1860 to December 31, 1888, has been about as follows:

Years.		Production.	Years.		Production.
1860 to 1879 .....		\$10,700,000	1885.....		\$12,357,662
1879 .....		10,333,700	1886.....		13,750,832
1880.....		15,025,135	1887.....		12,072,967
1881.....		13,147,257	1888.....		11,830,205
1882.....		17,127,402			
1883.....		15,538,446	Grand total.....		144,721,144
1884.....		12,837,497			

The following statement of the quantity and value of the lead imports and exports is chiefly from the article on "Lead" by C. Kirchoff, jr.\*

*United States imports and exports of lead.*

Fiscal years ending June 30—	Imports.						Total imports.	Total exports.

Since the publication of the figures for 1888 by the Engineering and Mining Journal Mr. C. Kirchoff, jr., has given a preliminary estimate of the productions which is somewhat lower; being, in short tons of 2,000 pounds, 151,465 for desilverized lead, and 29,090 of non-argentiferous lead, a total of 180,555 tons.

\*Mineral Resources of the United States for 1887. The figures for 1888 are from the Engineering and Mining Journal, January 12, 1889.

*Average monthly prices of lead in New York, in cents per pound.\**

**Bunker Hill and Sullivan Mining Company.**—S. G. REED, president; V. M. CLEMENT, manager, Portland, Oregon.

ARGENTIFEROUS GALENA from the company's mines in the Coeur d'Alene Mountains, Wardner, Idaho.

CONCENTRATES from the Bunker Hill and Sullivan ores. A series of samples: Coarse and fine and tailings.

1. Product from 15<sup>mm</sup> jigs: Lead, 75 per cent.; silver, 33 ounces.
2. Product from 12<sup>mm</sup> jigs: Lead, 76 per cent.; silver, 33 ounces.
3. Product from 10<sup>mm</sup> jigs: Lead, 74 per cent.; silver, 33 ounces.
4. Product from 7<sup>mm</sup> jigs: Lead, 74 per cent.; silver, 33 ounces.
5. Product from 5<sup>mm</sup> jigs: Lead, 72 per cent.; silver, 32 ounces.
6. Product from 3<sup>mm</sup> jigs: Lead, 70 per cent.; silver, 31 ounces.
7. Product from Evans tables: Lead, 63 per cent.; silver, 30 ounces.
8. Tailings.

These mines were opened about three years ago, and up to 1889 had produced 23,000 tons of ore concentrates, assaying about 30 ounces of silver and 67 per cent. of lead, representing a gross value of \$2,160,000. The vein is described as a fissure vein between quartzite and a magnesium-slate foot-wall. It varies in width from 20 to 100 feet. Ore is galenite, cerusite, and gray copper; the gangue chiefly iron spar. Large bodies of clean galenite are found; there is no arsenic or antimony. The clean tetrahedrite assays from 1,000 to 2,000 ounces of silver.

**Galenite Argentiferous Lead Ore.**—From Alaska; latitude 65° N.; contains about 100 ounces of silver to the ton. Contributed to the collection by Prof. THOMAS PRICE, San Francisco.

## ZINC.

In 1887-1888 there were nineteen zinc-producing establishments in active operation in the United States, and the production of the metal, grouped by States, was as follows:

*Production of spelter in the United States, 1882 to 1887, inclusive, by States.*

States.	1882.	1883.	1884.	1885.	1886.	1887.
	<i>Short tons.</i>	<i>Short tons.</i>	<i>Short tons.</i>	<i>Short tons.</i>	<i>Short tons.</i>	<i>Short tons.</i>
Illinois .....	18,201	16,792	17,594	19,427	21,077	22,279
Kansas .....	7,366	9,010	7,859	8,502	8,932	11,955
Missouri .....	2,500	5,730	5,230	4,677	5,870	8,660
Eastern and Southern States .....	5,698	5,340	7,861	8,082	6,762	7,446
Total .....	33,765	36,872	38,544	40,688	42,641	50,340

The preliminary reports of the production for 1888 place the amount at 57,000 short tons, of which 10,400 tons were produced in the Eastern and Southern States, about 22,500 in Illinois, and the balance in Kansas and Missouri.

The imports of the metal in blocks or pigs in 1887 were 7,432,490 pounds, valued at \$240,535, and in sheets 757,245 pounds, valued at \$26,638. The average price for the year, in cents, per pound was 4.91. The importation of zinc oxide for 1887 was, for dry, 2,763,642 pounds, and in oil 82,486 pounds.

**New Jersey Zinc and Iron Company**, B. G. CLARKE, president, 52 Wall street, New York.

ZINC AND IRON ORES from the mines of the company, Sussex County, N. J.

## QUICKSILVER.

The total production of quicksilver in the United States for the calendar year 1887 was 33,825 flasks, of 76½ avoirdupois pounds, net; valued at \$1,429,000. With the exception of 65 flasks from Oregon all of this was the product of California mines, distributed as follows:

New Almaden, 20,000 flasks; New Idria, 1,800; Redington, 673; Sulphur Bank, 1,490; Great Western, 1,446; Napa Consolidated, 5,574; Great Eastern, 689; various mines, including the 65 flasks from Oregon, 2,063 flasks. For the year 1888 the production was 33,250 flasks, value at the average price for the year (\$42.50) \$1,415,000.

The production of quicksilver in California is practically the total production for the whole United States. The amount produced by the principal mines for a series of years past, together with the value of the product, are shown by the annexed tabular statement prepared and presented by J. B. Randol:

*Production of quicksilver in California.*

**New Almaden Quicksilver Mine**, New Almaden, Santa Clara County, Cal.—  
J. B. RANDOL, president.

QUICKSILVER AND CINNABAR.—Series of specimens and photographs illustrating the production of quicksilver at the company's mines. Contributed by Mr. Randol.

1. Foot-wall rock, serpentine, Randol shaft.
2. Hanging-wall rock, slate.
3. Outcroppings of the lode, Mine Hill.
4. Cinnabar, massive clean ore from the 1,600-foot level, Randol shaft.
5. Cinnabar in sandstone from the 1,200-foot level, St. George shaft.
6. Cinnabar and veinstone with veinlets of cinnabar from the 1,400-foot level, Randol shaft.
7. Cinnabar and white calcite veinstone, the *hilos* of the Spanish miners. These veinlets of calcite cut across and divide the veinlets of cinnabar. From the 1,100-foot level.

8. White calcite and arragonite veinstone (crystallized) with cinnabar, bitumen, and green-colored incrustations from the 1,100-foot level, Randol shaft.
9. Bitumen in black masses associated with the white calcite and cinnabar.
10. Cinnabar, crystallized, from the 1,700-foot level, Randol shaft.
11. Quicksilver (native mercury) in bitumen, abundant in globules. From the 1,800-foot level, Randol shaft.
12. Quicksilver (native) from the bituman and veinstone at the 1,800-foot level (in a small vial).
13. Hard veinstone, or rock walls, with cinnabar and bitumen, from the 1,800-foot level, Randol shaft.
14. Granza, roasted, light color.
15. Granza, roasted. The skeleton left after driving off the quicksilver ore.
16. Granzita (slag).
17. Tierras, roasted (slag).
18. Quicksilver ore roasted.
19. Quicksilver, as produced commercially, in bottles.
20. Book of photographs, illustrating the New Almaden Mine and its surroundings.

[The collection of which the foregoing is a list is to be presented at the close of the Exposition to the École des Mines, Paris, in the name of J. B. Randol, of San Francisco.—W. P. B.]

The Quicksilver Mines and Reduction Works of New Almaden are fifteen miles south of the city of San José, Santa Clara County, Cal., in the Santa Cruz Mountains, at an elevation of 1,700 feet above the sea.

These mines were first worked for quicksilver in 1845, but the operations were on a small scale, and no record exists earlier than 1850. They have been and now are the most productive quicksilver mines in the world, excepting only the mine of Almaden in Spain. They are developed to a depth of 2,300 feet, and the workings extend horizontally over a piece of ground a mile square.

About 500 men find steady employment, the work being actively prosecuted throughout the year. From the 1st of January, 1864, to the 31st of December, 1887, the number of feet of drifting and sinking in the mines of the company, as shown by the records, amounted to 224,922 feet, or 42.60 miles, at a cost of \$1,918,457.29. This does not include the excavations made in extracting ore during the period named, nor any expenses for the same, while for the ground opened up during the previous period (from 1850 to 1864) fifteen more miles of drifting and sinking can be added.

The reduction works consist of eight furnaces, and include the most improved methods for working quicksilver ores, and may be considered as the most complete and perfect in every respect in the world.

An interesting paper upon the occurrence of the ores of quicksilver in California has been published by G. Rolland.\*

Product of Enriqueta from 1860 to 1863, 10,571 flasks.  
 Total product of all the mines on the company's property, 873,359 flasks of 76 $\frac{1}{4}$  pounds each, or 66,811,963 $\frac{1}{4}$  pounds.

**Bradford Mine, Napa County, Cal.**

CINNABAR, "FLOAT ORE."

CINNABAR in siliceous gangue.

Contributed by H. M. NEWHALL &amp; Co., San Francisco, Cal.

**MANGANESE.**

The total production of ore of manganese in the United States in 1887 was 34,524 tons of 2,240 pounds each, valued at \$333,844. It is obtained chiefly from Virginia, Georgia, and Arkansas, and finds its chief market at Pittsburgh, Pa., for the production of manganese in the blast furnace.

**New York and Georgia Manganese and Iron Company, 37 Broad street, New York.**

MANGANESE ORE, variety called "KIDNEY MANGANESE," from near Cartersville, Ga. Contributed by J. C. CHEW, New York.

**TIN.**

The ore in the form of cassiterite or black tin occurs in the central and northern portions of the Black Hills of Dakota in granitic veins or dikes traversing pre-silurian slates, and also in quartz veins and as stream tin. These veins and deposits give promise of an important tin industry in the United States when they are developed. At present only prospecting operations are carried on, and there is no regular production of ore or of metal except in sample lots of a few hundred-weight or tons each.

**Bangor, Me.—HAMLIN, A. C., M. D.**

CASSITERITE, TIN ORE, in a small vein from Winslow, Me.

**Cleveland Tin Mining Company, Nigger Hill, near Spearfish and Deadwood, Black Hills, Dak.**

SAMPLES OF TIN ORES AND TIN from the company's mines.

CASSITERITE, TIN ORE, in granitic veinstone.

CASSITERITE, TIN ORE, "black tin," coarse concentrates from the ore.

CASSITERITE, TIN ORE, black tin, stream tin from the bed of the creek.

TIN, BLOCK TIN. A bar smelted from the Nigger Hill tin ores.

The properties of the Cleveland Tin Mining Company are located in the north-western portion of the Black Hills, about fifteen miles distant from Deadwood and fourteen miles from Spearfish, in Dakota. They consist of the Cleveland and Isabella mines, with adjacent interests, a total of seven claims, covering an area of about seventy acres. The mines are accessible by good roads at all seasons of the year. The mill site, with ample water-power for a large concentrating plant, is situated near the located line of the Chicago and Northwestern Railway, which is already completed within twenty-eight miles of the company's mines.

The Cleveland mine is situated upon the summit of Nigger Hill, on the main or west belt of Greisen, and shows the tin stone in many places on the surface crop-pings. At this point the company has hoisting works, consisting of a 24-horse power engine and boiler, with suitable pumps and buildings, including the necessary appurtenances for hoisting and pumping, the building over the shaft containing the same being 50 by 30 feet and 30 feet high. There is also a laboratory, assaying and superintendent's quarters, boarding-houses for the use of the miners and employés belonging to the company, and a foreman's house adjacent to its prop-erties.

## ANTIMONY.

There are several localities of stibnite or sulphide of antimony in the Pacific States, notably in California, Utah, Nevada, and Montana, but none are at present largely worked. In 1887 the total production in California was reported as 75 tons, valued at \$50,500, an increase of 40 tons above the production in 1886. The production for 1888 is believed to have been less than in 1886.

**Carmel, Me.**—STIBNITE, Antimony Sulphide. From Dr. AUG. C. HAMLIN, Bangor, Me.

**Lady of the Hills Claim**, Black Hills, Dakota.

STIBNITE, Sulphide of antimony. Contributed by RICHARD C. LAKE, president First National Bank, Rapid City, Dak.

**Murray, Idaho.**—DAY, FRED W.

STIBNITE, Sulphide of antimony.

## NICKEL.

Since the Paris Exposition of 1878 very little advance has been made in the nickel industry of the United States. At that exhibition remarkable specimens of pure wrought nickel were shown by Mr. Joseph Wharton, of Philadelphia, and were made from the sulphuret ores of Lancaster Gap. The total value of the product of metal, of the nickel in its salts, in matte, and in ore, produced in the country in 1887, is reported at \$133,200. The low price of the metal from abroad has left little inducement to domestic producers to develop the mines, and most of the localities have remained unworked. The discovery, however, of ores in Oregon bearing some resemblance to the free smelting ores of New Caledonia has stimulated efforts to utilize them, and prospecting work is now carried on there. Specimens will be found in the collection.

**Oregon Nickel Mines.**—WILL Q. BROWN, superintendent, Riddle, Douglas County, Oregon.

NICKEL ORES, genthite and chrysoptase.

This locality is about three miles west of Riddle Station, on the California and Oregon Railway. The ores occur in beds covering areas of from one to twenty acres.

## PYRITES.

The principal sources, commercially, of pyrites now utilized are the Davis Mines, Franklin County, Mass., and several mines in Louisa County, Va. The quantity and spot value of pyrites mined in the United States from 1883 to 1887 were approximately as follows:

Years.	Quantity.	Average value per ton.	Total value.
1882.....	12,000	\$6.00	\$72,000
1883.....	25,000	5.50	137,500
1884.....	35,000	5.00	175,000
1885.....	49,000	4.50	220,500
1886.....	55,000	4.00	220,000
1887.....	52,500	4.00	210,000

**Davis Company.**—H. J. DAVIS, president, Davis, Franklin County, Mass.

MASSIVE IRON PYRITES, used for the manufacture of sulphuric acid.

COPPER PYRITES associated with the iron pyrites.

This deposit or bed or lode is opened to a depth of 400 feet, and is from 10 to 40 feet in width. Output is about 4,000 tons per month, or according to demand. About 49 per cent. of sulphur.

### ALUMINA.

Alumina in the form of corundum of Beauxite and of clay is rapidly taking its place amongst the ores as the source of its metallic base—the metal aluminum. In the Cowles direct elective process pure, washed, crystallized corundum is preferred for the extraction of the metal. The silica in ordinary clay and the oxide of iron in Beauxite are reduced, together with the oxide of aluminum, and contaminate the aluminum alloys. The specimens contributed to the collection by the Cowles Company contain an example of partly fused and reduced corundum.

**Cowles Elective Smelting and Aluminum Company.**—Dr. L. WALDO, manager, Lockport, N. Y.

1. CORUNDUM, Georgia. As broken and washed for treatment, direct in the Cowles Furnace.
2. CORUNDUM. Partly fused and reduced in the furnace.
3. ALUMINUM BRONZE (17 per cent. aluminum; 83 per cent. copper). An addition of other meta's to this product gives other alloys as shown.
4. SILICON BRONZE (19.15 per cent. silicon; 80.85 copper). Obtained by the reduction of silica. For manufacture of silicon bronze conducting wire.
5. COWLES FERRO-ALUMINUM (80.91 iron; 9.88 aluminum; 4.88 silicon). For the improvement of iron and steel castings.
6. SERIES OF COPPER AND ALUMINUM ALLOYS. Seven sample bars: Aluminum bronze, aluminum brass, aluminum hercules, aluminum silver, etc.

### GRAPHITE.

This mineral occurs at many places in the United States, but at the present is mined chiefly at Ticonderoga, on Lake Champlain, where it occurs in veins traversing the oldest rocks, and at the Heron mine in North Carolina. The Nelson mine, in New Hampshire, has yielded considerable graphite, but is not now worked. The total production in the country does not exceed 350,000 pounds annually, besides a much larger quantity of an impure graphite used for foundry and metallurgical purposes. The importation of the unmanufactured material in 1887 was 168,841 cwts.

**Merrill Mine,** Nelson, N. H.

SAMPLE OF GRAPHITE.

SALT.

The production of salt in the United States in the year 1887 was 7,831,962 barrels, valued at \$4,093,846. The distribution of the production and the quantity obtained at the principal sources is shown by the annexed table:\*

*Salt product of the United States from 1883 to 1887 inclusive.*

States.	1883.	1884.	1885.	1886.	1887.

Total ... ..	6,192,231	6,514,937	7,038,653	7,707,081	7,831,962

The Utah Central Railroad, in 1888, carried salt from its stations—Salt Lake, 5,749,646 pounds; Syracuse, 22,572,000; Nephi, 668,795; and Juab, 157,599; total, 29,158,040 pounds of salt. The first two were lake salt and the last two rock salt.

An important discovery of rock salt has been made in the State of New York, about seventeen miles south of Syracuse. At a depth of 1,218 feet the drill passed through 47 feet of salt. In the central and western counties of the State in sixty-three deep borings only seven failed to show the presence of rock salt or brine. Near Ithaca a layer of salt was found at a depth of 2,244 feet, and in the next 470 feet of depth layers of salt having an aggregate thickness of 248 feet were passed through. The thickest bed was 54 feet.

Salt has also been found by boring in Central Kansas.

PETROLEUM AND NATURAL GAS.

The principal localities yielding petroleum in commercial quantities are in western New York, western Pennsylvania, and in Ohio and West Virginia. California has also become a considerable producer of oil, and small quantities are obtained in Wyoming, in Tennessee, and Kentucky. The extent and distribution of the production is best shown by the annexed table from a report by Jos. D. Weeks.

\* From the article on Salt, by William A. Rabourg, Mineral Resources of the United States for 1887, p. 611.

*Production of crude petroleum in the United States and Canada from 1859 to 1887 inclusive.*

a. There are no reliable statistics of production for Canada. Those given are the estimates of parties intimately connected with the industry.

b. All barrels in this table are of 42 gallons.

c. In addition to the above it is estimated that for want of a market some 10,000,000 barrels ran to waste in and prior to 1862 from the Pennsylvania and Canada fields; also a large amount from West Virginia and Tennessee.

d. Including all production prior to 1876.

e. This includes the 175,000 barrels produced in Kentucky and Tennessee prior to 1886.

Petroleum has also been found in Colorado and has been developed at Florence, near Pueblo, where the production has been about 1,000 barrels a day.

According to the official circular of the Consolidated Stock and Petroleum Exchange of New York, the amount of petroleum delivered by the pipe-line in the year 1888 was 16,300,000 barrels of 42 gallons each. The following figures show the number of wells completed, the new production of petroleum, and the average per well for the year 1888 compared with 1887:

Months.	Wells completed.		New production.		Average production per well.		Wells drilling.		Rigs up and building.		Dry holes.	
	1888.	1887.	1888.	1887.	1888.	1887.	1888.	1887.	1888.	1887.	1888.	1887.

\* Average per year.

The value of this mineral oil, based on the value of petroleum in Pennsylvania since the year 1860, ranged from \$19.25 in January, 1860, to 10 cents per barrel at the end of the year 1861. It is believed that \$1 per barrel would not exceed the average price of the oil for the period, which would make the total value of petroleum produced in the United States from the first general utilization of it until the end of 1887, \$345,573,177.

California oil is estimated at \$2 per barrel, while the crude Lima oil of Ohio sold as low as 15 cents per barrel (42 gallons) in 1887. The average value of pipe-line certificates in Pennsylvania during the year 1887 was 66½ cents per barrel. The average for 1888 was 87¼ cents.

The Chief of the Bureau of Statistics reports the total values of the exports of mineral oils from the United States during the month of December, 1888, and during the twelve months ended December 31, 1888, as compared with similar exports during the corresponding periods of the preceding year, as follows: December, 1888, \$3,419,508; December, 1887, \$3,935,702; twelve months ended December 31, 1888, \$45,969,000; twelve months ended December 31, 1887, \$45,231,988. The exports from the above-named ports comprise about 99 per cent. of the total exports of mineral oils. It is stated on good authority that the distillation of 100 gallons of crude petroleum will yield 76 gallons of illuminating oil, 12 gallons of gasoline, benzine, or naphtha, 3 gallons of lubricating oil, and 9 gallons of residuum. In the first week of January, 1889, the price ranged from 86 to 87½.

The vast supplies of natural combustible gas, which have become such an important factor in the industries of western Pennsylvania and the adjacent regions, are obtained chiefly from the Trenton limestones of Ohio and the Upper Coal Measures of Pennsylvania. It is not possible to state the exact amount of consumption of this fuel in cubic feet. The best basis of calculation is the amount of coal which is displaced by the gas. From the tables given by Joseph D. Weeks (Min. Res. U. S., p. 466), it appears that the total consumption in 1887 was equivalent to coal displacement 9,867,000 tons, valued at \$15,838,500. This important mineral product is represented in the collection by two small photographs of the burning gas from two wells in Ohio.

**Karg Gas Well**, Findlay, Ohio. Compliments of C. C. CONROY and S. COMFORT, New York.

PHOTOGRAPH OF BURNING GAS illustrating the force and volume. Depth of the well 1,144 feet. Flows over 40,000,000 cubic feet per day.

**Conroy & Johnson Gas Well**, Van Buren, Ohio. Compliments of C. C. CONROY and S. COMFORT.

PHOTOGRAPH, taken at night, of the burning gas, illustrating the force of discharge and the volume of the gas.

### FERTILIZERS.

The amount of phosphate rock shipped from and consumed in South Carolina in the year 1887 was 480,558 long tons; 90 per cent. of the shipments from Charleston is land rock, and from Beaufort and vicinage is all river and marsh rock.

There were also 8,226 long tons of guano, valued at \$55,671, brought from island rocks and keys appertaining to the United States. The importations for 1887 reached a total value of \$1,337,350. In the year 1888 the production of river rock was 190,274 gross tons and of land rock 259,330 long tons, of which 3,650 tons were sent abroad and 60,000 tons were used in South Carolina, and the remainder was manufactured elsewhere. This makes a total of nearly 450,000 tons mined in 1888.

**Mexican Phosphate and Sulphur Company**.—H. DUTARD, president, A. HALSEY, secretary, H. M. NEWHALL & Co., agents, San Francisco, Cal.

SUPERPHOSPHATE FERTILIZER COMPOUND, made in San Francisco, from genuine guano phosphate, mined in the Gulf of California, 85 to 93 per cent. of phosphate of lime. Price \$30 per ton.

Over \$600,000 worth of this product has been sold, and is mostly shipped to Europe.

### GYPSUM, LIME, AND MICA.

Gypsum is an abundant mineral in the United States, but at present is obtained commercially chiefly from Ohio and Michigan. It is abundant in the Black Hills of Dakota, in central Kansas, and throughout the Triassic region of the West. A supply for San Francisco, Cal., is procured from Santa Barbara County. In the year 1887 the total domestic production was estimated at 95,000 tons, valued at \$425,000. The importations were 4,814.23 long tons of ground and calcined, and 146,703 tons of unground, chiefly from Nova Scotia. The only examples in the collection are from the Ohio locality, ten miles west of Sandusky, where beds occur in the Ohio Lower Helderberg limestones, or water-lime formation.

**Marsh & Co.**, H. GERMAN, superintendent.

GYPSUM, Ottawa County, Ohio.

GYPSUM, No. 1 quality for calcining.

GYPSUM, No. 2 quality, slightly veined.

GYPSUM, No. 3 quality, gray mottled.

This gypsum lies under about thirteen feet of clay and gravel. The gray mottled variety, called "Ohio gray," lies in detached masses of all sizes. Nos. 1 and 2 come from separate beds, the first being eight feet thick and the second five feet. The annual production is 10,000 tons.

Lime is produced in nearly all the States and Territories. The production during the year 1887 is estimated at 46,750,000 barrels of 200 pounds each, valued at \$23,375,000, an average value at the kiln of 50 cents.

**Limestone, magnesian.** From the quarry of J. S. Adam & Co., lime manufacturers, Canaan, Conn. Contributed by J. S. ADAM, Canaan.

The industry of lime burning was established in Canaan as early as 1820. Lime was shipped to Hartford, to the towns along the Hudson River, and some as far as Newark, N. J. There are now four companies engaged in the business. Three of these use wood as fuel, and J. S. Adam & Co. use crude petroleum from Lima, Ohio. In the wood-burning kilns 432 to 576 cubic feet of wood are consumed each twenty-four hours, with a production of 18,000 pounds of lime. In the oil-burning kiln 450 gallons of oil are consumed in twenty-four hours, with a production of 21,000 pounds of lime. There are altogether ten kilns in Canaan, with a total daily capacity of 180,000 pounds of lime. The market for this product is found in Connecticut, Massachusetts, Rhode Island, and New York.

Mica is used extensively in the United States for small lights, openings, or windows for stoves, permitting the fire to be seen. It is mined chiefly in North Carolina, New Hampshire, and Virginia. The production in 1887 was 70,500 pounds, valued at \$142,250. The importations for the same period were valued at \$63,480.

**Maricopa Mica,** Maricopa Mountains, Arizona. Contributed from the collection of WILLIAM P. BLAKE.

This variety has little commercial value, being marked internally by inclusions or bands of other minerals or oxides.

**Muscovite Mica,** Black Hills of Dakota. Lent from the collection of WILLIAM P. BLAKE.

### BUILDING STONE, MARBLE, SLATES, ETC.

The value of building stone quarried in the United States is estimated at \$25,000,000 for the year 1887. The use of granite, both rough and polished, is extending rapidly for building purposes and for monuments. The value of this material at the quarries in 1887 is estimated at \$7,440,000. The marble industry is increasing in importance yearly. The production in 1887 was valued at \$3,100,000. Sandstone is also an important material: its value in 1887 is estimated at \$6,500,000.

There are several exhibits of the brown and red sandstone of the Connecticut River quarries, and a special exhibition of the red granite of Maine and of the quartzite and granite of Minnesota.

Slate of various colors is produced abundantly in the United States in Maine, Vermont, and Pennsylvania. The purple, green, and red slates come chiefly from Vermont. This material is used not only for roofing, but largely in construction, especially for mantels, for tiling, and for tables. It is also now employed for burial cases and linings of graves.

The extent of the production and the chief localities are shown as follows:

*Production of roofing slate in all sections during the years 1884, 1885, 1886, and 1887.*

[Squares of 100 square feet each.]

Sections.	1884.	1885.	1886.	1887.
Bangor and Pen Argyl region, Pennsylvania .....	195,505	196,832	215,341	230,000
Slatington section, Pennsylvania.....	104,000	108,000	109,000	112,000
Vermont .....	85,000	130,000	111,385	120,000
Maine .....	41,000	34,000	36,000	37,000
Chapman's .....	29,499	26,328	24,664	28,439
Peach Bottom.....	10,000	14,500	12,000	20,000
Virginia .....	9,000	17,300	16,600	19,000
Michigan .....	7,000	10,000	12,000	7,200
Total .....	481,004	5 6,960	536,790	573,639

The average value of slate at the quarries, loaded on cars, in 1887 was \$3 per square. The exports of slate reached a value of \$62,052 in 1887.

**Blanchard Slate Quarry Company.**—A. C. HAMLIN, president, Blanchard and Bangor, Me.

SAMPLES OF SLATE from the Blanchard quarry.

This quarry is now being worked and is producing slate of superior quality, being remarkable for perfection of rift, tenacity, and elasticity. The stratum extends from one to two miles. (See also a special display by the company.)

**Drake Company,** Sioux Falls, Dak. JAMES H. DRAKE, president.

COMPACT QUARTZITE OR JASPER, Sioux Falls. Granite from the Drake quarries; Minnesota silicified wood, Arizona.

The compact quartzite is extensively quarried and used for building and for paving. The shipments last year (1888) from Minnehaha County and the Territory of Dakota (in which the deposit lies) were over 4,000 car-loads. Number of men employed, 800.

The red granite quarries are also extensively worked for building-stone, monuments, and paving-blocks. It is used for polished columns, and is sent to California, Texas, and New England.

The silicified wood is from the celebrated petrified forest of Arizona, and is cut and polished at the works of the Drake Company. (See under heading of Precious Stones and Gems.)

## PRECIOUS STONES AND GEMS.

Increased attention has been given for a few years past to the occurrence and production of American gems. They have been made the subject of special articles by George F. Kunz, of New York, who, in the volume for 1887 of the Mineral Resources of the United States, gives the following tabular statement of the production of precious stones in the United States from 1883 to 1887. Reference is also made to the special display of American gems by the firm of Tiffany & Co., of New York, and the beautiful series of tourmalines sent by Dr. Hamlin, of Maine.

**Tourmalines of Mount Mica, Maine.** MOUNT MICA TIN AND MICA COMPANY and A. C. HAMLIN, M. D., Bangor, Me.

TEN CUT GEMS, illustrating the gradations and varieties of color of the transparent tourmalines found at Mount Mica, Maine.

1. Square cut, nearly colorless; faint shade of green, transparent.
2. Square cut rubellite, rose-pink, transparent.
3. Green, blue-green,  $6\frac{1}{4}$  carats weight.
4. Chrysoberyl green,  $6\frac{1}{2}$  carats; perfect stone and a very rare gem for color and brilliance.
5. Emerald green, oblong cut;  $11\frac{1}{4}$  carats. One of the finest gems found in the United States.
6. Deep blue Indicolite,  $11\frac{1}{4}$  carats. The largest blue stone found at Mount Mica; perfect gem.
7. Light green, blue tint;  $7\frac{1}{2}\frac{1}{6}$  carats; rare.
8. Pale rose tint, nearly colorless.
9. Deep garnet red.
10. Pale grass green.

**Drake Company, J. H. DRAKE, president, Sioux Falls, Dak.**

SILICIFIED AGATIZED WOOD, from Chalcedony Park, Apache County, Ariz.

A single specimen is here shown, and reference is made to the special display made by the company for objects of great size and variety. The silicified wood from this locality was first brought to notice by the United States Pacific Railroad survey of the thirty-fifth parallel of latitude under Lieutenant Whipple (*vide* Vol. III, Pacific R. R. Explor. and Surveys).

The material occurs in large quantity, and appears to be the remains of an entombed forest of Auracians silicified, it is supposed, by infiltrated or hot geyser water after the process by which such material is produced in the National Park in Montana, and in Wyoming, California, and elsewhere; but, unlike any other specimens heretofore found, this material is in many cases perfect in its preservation, showing the bark of the trees, with the heart lines perfect, and under a microscope revealing the cell structures of the wood unimpaired. It is a scientific wonder because of its remarkable preservation and solidity, and it appeals to the connoisseur of high art and the beautiful because of the exquisite interblending of every color of the rainbow, arising from the intermixture of various oxides in solution. After several years of experiment a process has been found for sawing and polishing this material, which is very hard and cannot be easily marred by steel or stained by acids. Sections of these trees, several feet in diameter, have been sawed and polished and mounted in metal as table-tops, and have been found in demand at the highest prices ever paid for decorative material. It is intended to further utilize the material in clock cases, mantel decorations, and other ornamental work. It is the testimony alike of experts and explorers that for perfection of structure and the wondrous varieties of its colorings this material, commonly known as petrified wood, is beyond comparison in beauty with that heretofore displayed from other localities.

## MISCELLANEOUS MINERALS.

**Amblygonite**, Paris, Me., from Dr. A. C. HAMLIN, Bangor, Me.

**Blake, William P.**, Mining Engineer, Mill Rock, New Haven, Conn.

MINERALS sent from his mineralogical cabinet.

CALAMINE, Sussex County, N. J.

COLUMBITE, Etta Mine, Black Hills, Dakota.

MICA (Muscovite), Maricopa, Ariz.

MICA (Muscovite), Black Hills, Dakota.

PECTOLITE, massive, polished, Tehama County, Cal.

SPODUMENE, large crystalline mass, Etta Mine, Black Hills, Dakota.

VANADINITE (crystallized), Prescott, Ariz.

STROMEYERITE (large mass), Silver King Mine, Pinal County, Ariz.

**Calamine**, Sussex County, N. J. Lent by W. P. BLAKE.

**Columbite**, Large crystalline mass. From the Etta Mine, Black Hills, Dakota.  
Lent by W. P. BLAKE.

**Fluor Spar**, Group of crystals fourteen inches square. Macomb, St. Lawrence County, N. Y. From GEORGE F. KUNZ, New York City.

**Gadolinite**, Large mass. Bluffton, near Llano County, Tex. Lent by GEORGE F. KUNZ, New York City.

**Hamlin, Dr. A. C.**, Bangor, Me.

MINERAL FROM MAINE LOCALITIES: Amblygonite cassiterite; antimony sulphide; lepidolite; clevelandite; tourmalines, etc.

**Kunz, George F.**, New York City.

MINERALS LENT FROM HIS CABINET.

GREEN FLUOR SPAR, Macomb, N. Y.

• GADOLINITE. Eleven pound crystal: near Bluffton, Burnett County, Tex.

**Lepidolite, Clevelandite, Green Tourmalines, etc.** Mount Mica, Maine. From Dr. A. C. HAMLIN, Bangor, Me.

**Mammoth Mine**, Pima County, Ariz.

WULFENITE, DESCLOIZITE, AND DECHENITE. From Prof. THOMAS PRICE, San Francisco, Cal.

**Newhall, H. M. & Co.**, San Francisco, Cal.

CRUDE AND MANUFACTURED BORAX, from Teel's Marsh, Esmeralda County, Nev.

MEXITE, borate of lime, Teel's Marsh.

TINCAL, Teel's Marsh.

BORAX, manufactured from the borates of Teel's Marsh.

**Pectolite**, Massive, cut and polished. From Tehama County, Cal. Lent by W. P. BLAKE.

**Price, Prof. Thomas**, San Francisco, Cal.

MINERALS: From the Quijoatoas Mines, and Mammoth Mine, Pima County, Ariz.

**Quijoatoas Mines**, Arizona.

ARRAGONITE.

DOGTOOTH SPAR in crystals on plumose manganese oxyd. Contributed by Prof. THOMAS PRICE, San Francisco, Cal.

**Red Tourmalines in Lepidolite.** Andover, Me. From Dr. A. C. HAMLIN, Bangor, Me.

For cut tourmaline, as gems, see under the head of "Precious Stones and Gems."

**Slate—Roofing Slate,** rifted out, from Blanchard, Me. From Dr. AUG. C. HAMLIN.

This slate quarry is now being worked. Length of beds from one to two miles; width undetermined. Remarkable for perfection of rift, tenacity, and elasticity. (See Special Exhibition.)

**Spodumene.** Crystalline mass.

Etta Mine, Black Hills, Dak. Lent by WILLIAM P. BLAKE.

**Uintahite.** Gilson's Mine, Uintah Mountains, Uintah County, Utah. Contributed by JOSEPH R. WALKER, Salt Lake City.

An asphalt resembling Albertite. For description see Transactions Amer. Inst. Mining Engineers, Vol. XVI, p. 162; also, Eng. and Min. Jour., Dec., 1885.

**Vanadinite—Vanadate of Lead.** Yuma County, Ariz. Contributed by Prof. THOMAS PRICE, San Francisco, Cal.

**Vanadinite—Vanadate of Lead.** From near Prescott, Ariz. Lent by WILLIAM P. BLAKE.

#### STATISTICAL TABLES.

The approximate distribution, in round numbers, by States and Territories, of the product of the precious metals in the United States substantially as estimated for 1887 is exhibited in the following table showing the weight of the metal in fine ounces, and the coining value of the same:\*

#### I.—Distribution of the product of gold and silver in the United States during the calendar year 1887 by States and Territories.

State or Territory.	Gold.		Silver.		Total value.
	Fine ounces.	Value.	Fine ounces.	Value.	
Alaska.....	32,656	\$675,000	232	\$300	\$675,300
Arizona.....	40,155	830,000	2,939,129	3,800,000	4,630,000
California.....	648,283	13,400,000	1,160,183	1,500,000	14,900,000
Colorado.....	193,517	4,000,000	11,601,825	15,000,000	19,000,000
Dakota.....	116,110	2,400,000	417,690	540,000	2,940,000
Georgia.....	5,322	110,000	387	500	110,500
Idaho.....	91,921	1,900,000	2,320,365	3,000,000	4,900,000
Michigan.....	1,258	26,000	27,080	35,000	61,000
Montana.....	252,976	5,230,000	11,988,553	15,500,000	20,730,000
Nevada.....	120,948	2,500,000	3,789,930	4,900,000	7,400,000
New Mexico.....	24,190	500,000	1,778,947	2,300,000	2,800,000
North Carolina.....	10,886	225,000	3,867	5,000	230,000
Oregon.....	43,541	900,000	7,735	10,000	910,000
South Carolina.....	2,419	50,000	387	500	50,500
Utah.....	10,643	220,000	5,414,185	7,000,000	7,220,000
Washington.....	7,257	150,000	77,316	100,000	250,000
Texas.....			193,364	250,000	250,000
Alabama, Tennessee, Virginia, Vermont, and Wyoming.....	967	20,000	387	500	20,500
Total.....	1,603,049	33,136,000	41,721,592	53,941,800	87,077,800

\* Report of the Director of the United States Mint.

II.—*Production of gold and silver in the United States from the organization of the Mint, in 1792, to 1844, and annually since.*

[The estimate from 1792 to 1873, inclusive, is by R. W. Raymond, Commissioner, and since by the Director of the Mint.]

Years.	Gold.	Silver.	Total.
Apr. 2, 1792—July 31, 1834.....	\$14,000,000	Insignificant.	\$14,000,000
July 31, 1834—December 31, 1844.....	7,500,000	\$250,000	7,750,000
1845.....	1,008,327	50,000	1,058,327
1846.....	1,189,357	50,000	1,189,357
1847.....	889,085	50,000	989,085
1848.....	10,000,000	50,000	10,050,000
1849.....	40,000,000	50,000	40,050,000
1850.....	50,000,000	50,000	50,050,000
1851.....	55,000,000	50,000	55,050,000

\* Stocks not quoted on any exchange.

The above table includes dividends paid in cash only from mines located in the United States, and the figures given are almost all from official sources. There are also a large number of dividend paying properties worked and owned by private individuals or "close corporations," of which it is impossible to secure an accurate record.

VII.—*Statistics of the production of gold, silver, lead, and copper in the States and Territories west of the Missouri River during the year 1888 (to January 1, 1889).*

[Copy of the annual statement issued by John J. Valentine, vice-president and general manager, Wells, Fargo & Co.]

*San Francisco, December 31, 1888.*

WILLIAM P. BLAKE,

*Special Agent, U. S. Mineral Collection, New York :*

DEAR SIR: The following is a copy of our annual statement of precious metals produced in the States and Territories west of the Missouri River (including British Columbia, and receipts by express from the West Coast States of Mexico) during 1888, which shows aggregate products as follows: Gold, \$30,468,052; silver, \$54,348,420; copper, \$18,261,490; lead, \$11,263,630. Total gross result, \$114,341,592.

As stated repeatedly, the facilities afforded for the transportation of bullion, ores, and base metals by the extension of railroads into mining districts increase the difficulty of verifying the reports of the products from several important localities; especially is this the case in the reports from Colorado and Montana. And the general tendency is to exaggeration when the actual values are not obtainable from authentic sources; but the aggregate result, as shown herein, we think may be relied on with reasonable confidence as approximately correct.

States and Territories.	Gold dust and bullion by express.	Gold dust and bullion by other conveyances.	Silver bullion by express.	Ores and base bullion by freight.	Total.
California .....	\$9,160,083	\$916,008	\$652,652	\$1,334,725	\$12,063,468

<b>Total</b> .....	<b>8,386,069</b>	<b>350,594,608</b>	<b>203,296</b>

SUMMARY.

Gold.....	\$8,386,069
Silver.....	350,594,608
Copper.....	203,296
<b>Grand total</b> .....	<b>359,183,973</b>

*Exhibit of the coinage of Mexico from the establishment of the mints in 1537 to the end of the fiscal year of 1888.*

Epoch.	Gold.	Silver.	Copper.	Total.
<i>Colonial.</i>				
Unmilled coin from 1537 to 1731.....	\$8,497,950	\$752,067,456	\$200,000	\$760,765,406
Pillar coin, 1732 to 1771.....	19,889,014	441,629,211	.....	461,518,225
Bust coin, 1772 to 1821.....	40,391,447	888,563,989	342,893	929,298,329
	68,778,411	2,082,260,656	542,893	2,151,581,960
<i>Independence.</i>				
Iturbide's Imperial Bust, from 1822 to 1823.....	557,392	18,575,569	.....	19,132,961
Republic Eagle—1824 to June 30, 1873.....	45,040,628	740,246,485	5,235,177	790,522,290
	45,598,020	758,822,054	5,235,177	809,655,251
<i>Republic.</i>				
Eagle coin from July 1, 1873, to June 30, 1888..	8,386,069	350,594,608	203,296	359,183,973

Colonial epoch, from 1537 to 1821, \$2,151,581,960; Independence, from 1822 to 1873, \$809,655,251; Republic, from 1873 to 1888, \$359,183,973. Total, \$3,320,421,184.

The exhibits of production and mintage indicate a steady development of the mining interests of the United States of America, and also of Mexico, and, with the increasing facilities of railway communication fostering every department of industry, the outlook for a continued growth in the product of precious metals is flattering.

## APPENDIX N.

### LIST OF AWARDS TO UNITED STATES EXHIBITORS AND COLLABORATORS.

#### GRAND PRIZES.

Class.	Exhibitor.	Address.	Exhibit.
62	American Bell Telephone Co. ....	Boston, Mass. ....	Telephones and appliances.
73	Bergner and Engel Brewing Co. ....	Philadelphia, Pa. ....	Lager beer.
53	Brown and Sharp Manufacturing Co.	Providence, R. I. ....	Machine tools.
S. E.*	Bureau of Labor .....	Washington, D. C. ....	National and State reports.
S. E.*	Bureau of Education .....	do .....	Reports on technical education.
7	do .....	do .....	Reports and monographs.
8	Bureau of Ethnology .....	do .....	Reports.
8	Bureau of Education .....	do .....	Reports.
6	Boston Public Schools .....	Boston, Mass. ....	Text-books and students' work.
9	Century Company .....	New York City .....	Books and magazines.
43	Department of State .....	Washington, D. C. ....	Illustration of textile industries.
44	Department of Agriculture .....	do .....	Tobaccoes.
67	do .....	do .....	Cereals.
73 <i>vis</i>	do .....	do .....	Native wines.
76	do .....	do .....	Useful and injurious insects.
62	Edison, Thomas A. ....	Llewellyn Park, N. J. ....	Electric appliances, telephone, and phonograph.
57	Fay, A. J., & Co. ....	Cincinnati, Ohio .....	Wood-working machines.
10	Fairchild, Leroy W., & Co. ....	New York City .....	Gold pens, pen and pencil cases.
62	Gray, Elisha .....	Highland Park, Ill. ....	Electrical appliances.
19	Hawkes, T. C. ....	Corning, N. Y. ....	Glass.
60	Healey & Co. ....	New York City .....	Carriages.
56	International Button-Hole Sewing Machine Co.	Boston, Mass. ....	Sewing-machines.
8	Johns Hopkins University .....	Baltimore, Md. ....	Publications and photographs.
49	McCormick Harvesting Machine Co.	Chicago, Ill. ....	Reapers and mowers.
1	Melchers, J. Gari .....	Paris .....	Oil-painting.
61	Pennsylvania R. R. Co. ....	Philadelphia, Pa. ....	Car wheels, rails, and rolling stock.
8	Rensselaer Polytechnic Institute. ....	Troy, N. Y. ....	Text-books and school work.
15	Rowland, H. A. ....	Baltimore, Md. ....	Optical gratings.
76	Riley, C. V. ....	Washington, D. C. ....	Economic entomology.
47	Salomon, R. A. ....	Newark, N. J. ....	Leather.
1	Sargent, John S. ....	Chelsea, London, England.	Oil-painting.
8	Secretary of War .....	Washington, D. C. ....	Reports of scientific expeditions.
36	Stetson & Co. ....	Philadelphia, Pa. ....	Hats.
53	Sellers, William, & Co. ....	do .....	Tool-grinding, pointing, and shaping machines.

\*Social Economy.

List of awards—Grand prizes.

Class.	Exhibitor.	Address.	Exhibit.
8	Smithsonian Institution .....	Washington, D. C. ....	Reports, etc.
62	Thomson, Elihu .....	Lynn, Mass .....	Inventions pertaining to electricity.
24	Tiffany & Co .....	New York City .....	Silverware.
63	United States Corps of Engineers.	Washington, D. C. ....	Methods of civil engineering.
16	..do .....	..do .....	Charts and reports.
12	United States Geological Survey ..	..do .....	Photographic transparencies.
16	..do .....	..do .....	Reports and charts.
8	..do .....	..do .....	Do.
41	..do .....	..do .....	Collection of ores and minerals of the United States.
8	United States Signal Service .....	..do .....	Charts, monographs, and instruments.
15	..do .....	..do .....	Meteorological instruments.

- St. Stanislaus Commercial College, Bay St. Louis, Miss.
- United States Naval Academy, Annapolis, Md.
- Washington and Lee University, Lexington, Va.

The following exhibits and parts were given to the Musée Pédagogique, Berne, Switzerland:

- Public Schools of Buffalo, N. Y.
- Public Schools of Oskaloosa, Iowa.
- Public Schools of Pittsburgh, Pa.
- St. Louis Manual Training School, St. Louis, Mo.
- Sockanosset School for Boys, Howard, R. I.

The following exhibits and parts were given to the Pedagogic Museum, Albany, N. Y.:

- Alabama Polytechnic Institute, Auburn, Ala.
- Public Schools of Buffalo, N. Y.
- Public Schools of Elizabeth, N. J.
- Public Schools of Fort Worth, Tex.
- Public Schools of Galveston, Tex.
- Public Schools of Pittsburgh, Pa.

Exhibits and parts given to the Pedagogic Museum, Albany, N. Y.—*Continued.*  
Public Schools of Sandusky, Ohio.

Rowland Hall School, Salt Lake City, Utah.

St. Louis Manual Training School, St. Louis, Mo.

St. Stanislaus Commercial College, Bay St. Louis, Miss.

School Department, House of Refuge, Randall's Island, New York.

State Department of Public Instruction, Austin, Tex.

The following exhibits were given to the National College of Medicine, Paris:

Massachusetts College of Pharmacy, Boston, Mass.

Philadelphia College of Pharmacy, Philadelphia, Pa.

The following exhibits were given to the Conservatoire des Arts et Metiers, Paris,

Benjamin J. Dashiell, jr., Baltimore, Md.

Herman Hollerith, Washington, D. C.

The following exhibits were given to the Commercial and Industrial Museum of France, Paris:

School desks from Boston School Exhibit.

Seats and chairs from Harwood & Co., Boston, Mass.

Slates and crayons from D. C. Pratt & Co., New York.

The following exhibits were given to the Association of National History, Paris:

New Haven Historical Society, New Haven, Conn.

Southern Historical Society, Richmond, Va.

Virginia Historical Society, Richmond, Va.

The exhibit of the American Antiquarian Society of Worcester, Mass., was given to the American Society of France.

That of James Hall, LL.D., was given to the Société d'Histoire Naturelle.

That of J. H. Ryder to C. H. Gravier, lecturer in the College of France.

That of the University of California to the Paris Observatory.

That of the Rensselaer Polytechnic Institute to l'École Centrale, Paris.

That of the State Public Schools of Michigan, Coldwater, Mich., to the Société Générale des Prisons, Paris.

That of the Massachusetts Institute of Technology to the Imperial and Royal Polytechnic School of Austria, Lemberg, Austria.

The following exhibits and parts were given to the National Library, Paris:

American Baptist Missionary Union, Boston, Mass.

American Institute of Electrical Engineers, New York.

American Museum of Natural History, New York.

Board of Education of Wisconsin, Madison, Wis.

Baltimore Public Schools, Baltimore, Md.

Bangor Library, Bangor, Me.

Bureau of Education, Washington, D. C.

Chicago Public Library, Chicago, Ill.

Colorado Institution for the Deaf and Blind, Colorado Springs, Col.

Dayton Public Library, Dayton, Ohio.

Department of Public Instruction of Iowa, Des Moines, Iowa.

Department of Public Instruction of Arkansas, Little Rock, Ark.

Department of Public Instruction of California, Sacramento, Cal.

Dartmouth College, Hanover, N. H.

General Society of Mechanics and Tradesmen of the city of New York.

Federal Government Reports—

Department of Agriculture.

Department of State.

Interior Department.

Navy Department.

Treasury Department.

War Department.

Exhibits and parts given to the National Library, Paris—*Continued.*

- H. V. and H. W. Poor, New York City.  
 Hiwassee College, Hiwassee, Tenn.  
 Horace B. Miller, New York City.  
 Indiana University, Bloomington, Ind.  
 Insurance Department of Connecticut, Hartford, Conn.  
 Insurance Department of Indiana, Indianapolis, Ind.  
 Insurance Department of Kansas, Topeka, Kans.  
 Insurance Department of Michigan, Lansing, Mich.  
 Insurance Department of Nebraska, Lincoln, Neb.  
 Insurance Department of New Jersey, Trenton, N. J.  
 Insurance Department of Pennsylvania, Harrisburg, Pa.  
 Insurance Department of Wisconsin, Madison, Wis.  
 Lafayette College, Easton, Pa.  
 Massachusetts Institute of Technology, Boston, Mass.  
 Massachusetts Insurance Commission, Boston, Mass.  
 Minnesota School for the Deaf, Faribault, Minn.  
 New York Mercantile Library Association, New York City.  
 Norman Williams Library, Woodstock, Vt.  
 Ohio Institution for Feeble-Minded Children, Columbus, Ohio.  
 Public Library, Fitchburg, Mass.  
 Public Library, Toledo, Ohio.  
 Railroad Commission of Iowa, Des Moines, Iowa.  
 Railroad Commissioner of Connecticut, Hartford, Conn.  
 Railroad Commissioners of Alabama, Montgomery, Ala.  
 Railroad Commissioners of Virginia, Richmond, Va.  
 Railroad Commissioners of Wisconsin, Madison, Wis.  
 Railway Commission of Ohio, Columbus, Ohio.  
 St. Stephen's College, Annandale, N. Y.  
 Secretary of Internal Affairs, Harrisburg, Pa.  
 State Board of Health, Lansing, Mich.  
 State Board of Registration, Lansing, Mich.  
 State Department of Education, Harrisburg, Pa.  
 State Industrial University of Illinois, Urbana, Ill.  
 Stevens Institute of Technology, Hoboken, N. J.  
 The Forum Publishing Company, New York City.  
 The Manufacturer and Builder, New York City.  
 Tuft's Library, Weymouth, Mass.  
 Times Publishing Company, New York City.  
 Virginia Historical Society, Richmond, Va.  
 Waltham Public Library, Waltham, Mass.  
 Westown School, Westown, Pa.

In addition to the above special exhibits, the large quantities of wine, preserved fruit, jellies, canned meats, etc., which formed the extensive collective exhibits prepared under the direction of the Department of Agriculture, were donated to the charitable organizations of Paris without regard to denomination, but chiefly to the "Little Sisters of the Poor," in all cases receipts being exacted and filed.

## APPENDIX S.

---

The expenditures have been classified as follows:

Services of Commissioner-General .....	\$10,000.00
Services of Assistant Commissioner-General.....	5,000.00
Services of nine scientific experts.....	13,500.00
Clerks to experts.....	11,016.93
Engineers, superintendents of sections, and skilled labor.....	17,597.90
Jurors.....	7,200.00
Watchmen and guardians.....	7,008.44
Clerk hire in New York, Paris, and Hartford .....	18,295.31
Expenses of New York and Hartford offices.....	2,475.72
Expenses of Paris office .....	7,633.95
Postage, expressage, and telegrams .....	1,925.24
Stationery and printing .....	4,806.05
Advertising .....	1,349.95
Outward freight and terminal expenses.....	32,146.51
Inward freight and terminal expenses .....	16,005.44
United States Government exhibits .....	5,413.69
Fine arts section .....	3,420.31
Educational section .....	2,665.44
Industrial section .....	16,923.89
Machinery section.....	9,526.91
Agricultural section.....	35,969.69
Preparation of report .....	12,646.10
Miscellaneous expenditures.....	7,472.53
Total .....	250,000.00

# I N D E X.

---

	Page.
Alphabetical catalogue of exhibitors (Appendix L).....	344
Alumina (Appendix M).....	406
Processes of production, 406; exhibitors of, 406.	
American delegates to international congresses (Appendix Q).....	451
American mines (Appendix M).....	418
Dividends paid by, in 1888, 418; total amount of dividends paid to 1888, 418; market value of the property, 418; dividends declared by States, 1884-'88, 420; assessments levied in 1888, 420.	
Amount of quicksilver produced in the United States in 1887-'88 (Appendix M).....	399
Amount of silver in the United States (Appendix M).....	384
Amount of silver used industrially in the United States (Appendix M).....	384
Amount of zinc produced in the United States, 1882 to 1887, inclusive, by States (Appendix M).....	399
Annual amount of copper exported from the United States from 1867 (Appendix M).....	392
Annual amount of copper imported into the United States from 1867 (Appendix M).....	392
Annual amount of copper produced in the United States from 1882 to 1887, inclusive (Appendix M).....	390
Annual amount of crude petroleum produced in the United States from 1859 (Appendix M).....	408
Annual amount of graphite produced in the United States (Appendix M)....	406
Annual amount of lead produced in the United States from 1873 (Appendix M).....	396
Annual amount of lead and silver produced in Leadville from 1860 (Appendix M).....	397
Annual amount of quicksilver produced at New Almaden, Cal., from 1850 (Appendix M).....	402
Annual amount of quicksilver produced in California from 1879 (Appendix M).....	400
Annual value of gold product of the United States from 1870 (Appendix M).....	380
Annual value of gold and silver product of the United States from 1792 to 1844 (Appendix M).....	417
Annual value of gold, silver, lead, and copper produced west of the Missouri River from 1870 (Appendix M).....	422
Annual value of mineral products of the United States (Appendix M).....	367
Annual value of silver product of the United States from 1870 (Appendix M).....	384
Anthracite coal, production of, since 1820.....	375
Composition of, 374.	
Antimony (Appendix M).....	405
Where found in the United States, 404; production in the United States for 1886, 1887, and 1888, 404; exhibitors of, 404.	

## Appendices:

A. Decree of the President of the French Republic opening the Universal Exposition of 1889 at Paris, 179.	
B. French laws and regulations governing the Exposition, 183.	
C. The French general commission, 214.	
D. Estimated and actual cost of buildings, operations, etc., 215.	
E. Statistics of admission, 216.	
F. Restaurants, concessions, and regulations, 217.	
G. Foreign countries represented, appropriations, space occupied, etc., 220.	
H. Expenditures in Paris of foreign commissions, 222.	
I. Circulars, forms, and regulations, 223; (a) anterior to exposition; (b) during the exposition; (c) incident to the close.	
J. Synopsis of classification, 258; group 1, works of art; group 2, education and instruction; group 3, furniture and accessories; group 4, textile fabrics; group 5, extractive arts; group 6, apparatus and processes of mechanical industries; group 7, food products; group 8, agriculture, cultivation of the vine, and fish culture; group 9, horticulture, social economy.	
K. Classified catalogue of United States exhibitors, 261; number of exhibitors by classes and groups.	
L. Alphabetical catalogue of exhibitors, 344.	
M. Mineral resources of the United States, 363; letter transmitting report of William P. Blake, special agent; annual value of production; geographic distribution of principal mineral products; statistical tables, etc.	
N. Awards to United States exhibitors and collaborators, 424; grand prizes, special prizes for field trials, for reproductive animals, for permanent collection, gold medals, silver medals, bronze medals, honorable mention, recapitulation.	
O. Decorations bestowed on account of the United States at the Paris Exposition, 1889, 447; Legion of Honor, officers of public instruction, officers of the academy, agricultural merit.	
P. List of International Congresses, 449.	
Q. American delegates to the International Congresses appointed by the Commissioner-General, 451.	
R. Donations of exhibits by United States exhibitors, 452.	
Armor: the Riggs collection .....	169
Assessments levied by mining companies in 1888 (Appendix M) .....	420
Assessments and dividends on Comstock Lode (Appendix M) .....	387
Average monthly prices of lead at New York in cents per pound from 1870 (Appendix M).....	398
Average price of lake copper per pound in cents at New York from 1860 (Appendix M).....	393
Awards to United States exhibitors and collaborators (Appendix N).....	424
Grand prizes; special prizes for field trials, for reproductive animals, for permanent collection; gold medals; silver medals; bronze medals; honorable mention; recapitulation.	
Bayard, T. F., Secretary of State .....	
Circular replies to governors of States and Territories, XVII; letter of instruction to Commissioner General, XI.	
Berger, Georges, Commissioner-General of the Exposition, report to President of Council on Superior Jury .....	85
Blaine, J. G., Secretary of State, introductory letter from .....	VII
Blake, W. P. ....	
Letter to W. B. Franklin, Commissioner-General, transmitting report on mineral resources of the United States (Appendix M), 366; report on mineral resources of the United States to Commissioner-General (Appendix M), 363.	
Building stone, marble, slate, etc. (Appendix M).....	411
Value of the product in the United States, in 1887, 411; chief localities and production of slate, 412; exhibitors of slate and granite, 412.	
Circulars, forms, and regulations (Appendix I).....	223
(a) anterior to Exposition, (b) during the Exposition, (c) incident to the close.	
Classification, synopsis of (Appendix I).....	258
Classified catalogue of United States exhibitors (Appendix K).....	261

	Page.
Coal (Appendix M).....	372
Production of, in United States in 1888 and 1889, 373; anthracite and composition, 374; production of, since 1820, 375; exhibitors of, 378.	
Coinage of gold and silver at United States mints in 1888 (Appendix M).....	418
Coinage of gold, silver, and copper in Mexico, 1873 to 1888 (Appendix M).....	423
Coinage of Mexico from establishment of mints, 1534 (Appendix M).....	423
Comstock Lode (Appendix M).....	385
Operations on, in 1888, 385; total production of silver of, 386; relative value of gold and silver of, 386; assessments and dividends, 387.	
Congress, joint resolution of, authorizing printing of report.....	IX
Consumption of natural gas (Appendix M).....	409
Copper (Appendix M).....	390
Production and sources from 1882 to 1887, inclusive, 390; imports of, into the United States from 1867, 392; exports of from the United States from 1867, 392; average price of lake copper per pound in cents at New York from 1860, 393; exhibitors of (with notes of production), 394.	
Cost of production of silver in the United States (Appendix M).....	384
Decorations bestowed on account of the United States (Appendix O).....	447
Legion of Honor, officers of public instruction, officers of the academy, agricultural merit.	
Decree of the President of the French Republic, opening the Universal Exposition of 1889 at Paris (Appendix A).....	179
Discovery of nickel ores in Oregon (Appendix M).....	405
Discoveries of salt in New York and Kansas (Appendix M).....	407
Distribution of foreign members of superior (International) jury, by countries and by classes.....	95
Dividends declared by States, 1884-'88 (Appendix M).....	420
Dividends paid by certain American mines in 1888 (Appendix M).....	418
Donations of exhibits made by United States exhibitors (Appendix R).....	452
Durand, J., report by, on Riggs collection of armor.....	169
Estimated and actual cost of building, operations, etc. (Appendix D).....	215
Expenditures of foreign commissions (Appendix H).....	222
Exports of copper from the United States from 1867 (Appendix M).....	392
Exports of lead from the United States from 1867 (Appendix M).....	397
Exports of mineral oil, 1887-'88 (Appendix M).....	409
Exports of roofing slate, 1887 (Appendix M).....	412
Exports of silver to China, Japan, The Straits, etc., 1887-'88 (Appendix M).....	422
Fertilizers (Appendix M).....	410
Production of phosphate rock in South Carolina, 1887-'88, 410; importations of guano, 1887-'88, 410; exhibitors of, 410.	
Foreign commissions, general list of.....	77
Foreign commissions, expenditures of in Paris (Appendix H).....	222
Foreign countries represented, appropriations, space occupied, etc. (Appendix G).....	220
Franklin, W. B., commissioner-general:	
Delegates to International Congresses appointed by (Appendix Q), 451; letter of instructions to, XI; letter to Secretary of State, estimate of appropriation, XIX; letter to Secretary of State, transmitting official report, XXI; official report, 1; staff of, 75.	
French general commission, organization of (Appendix C).....	214
French laws and regulations governing the exposition (Appendix B).....	183
General contents of the report.....	XXI
Geographic distribution of principal mineral products of United States (Appendix M).....	371
Gold (Appendix M).....	380
Value of annual product from 1870, 380; exhibitors of (with notes of production, yield, and cost per ton), 381.	

	Page.
Gold and silver (Appendix M) . . . . .	416
Approximate distribution of product of 1887, and value, 416; value of annual production from 1792 to 1844, 417; coinage at United States mints in 1888, 418.	
Gold and silver, product of Mexico from 1877 to 1888 (Appendix M) . . . . .	422
Gold, silver, and copper, coinage in Mexico from 1873 to 1888 (Appendix M). . . . .	423
Gold, silver, lead, and copper, production of, west of Missouri River, 1888 (Appendix M) . . . . .	421
Production from 1870 . . . . .	422
Graphite (Appendix M) . . . . .	406
Where found, 406; annual production in the United States, 406; importation of manufactured material, 406; exhibitors of, 406.	
Guano, importations of, into the United States in 1887 (Appendix M) . . . . .	410
Gunnell, W. C., Engineer United States Commission, official report . . . . .	45
Gypsum, lime, and mica (Appendix M) . . . . .	410
Where gypsum is found in the United States, 410; production of gypsum in 1887, 410; importation of gypsum in 1887, 410; exhibitors of gypsum, 410; where lime is found, 411; production in 1887, 411; exhibitors of, 411; uses of mica and where mined, 401; production and importations in 1887, 411; exhibitors of, 411.	
History of Labor, report by Wickham Hoffman . . . . .	125
Hoffman, Wickham:	
Report on history of labor, 125; review of the exhibition of social economy, 101.	
Honorary Commissioners, appointed by governors of States . . . . .	79
Illustrations, list of . . . . .	v
Imports of copper into the United States from 1867 (Appendix M) . . . . .	392
Imports of gypsum into the United States in 1887 (Appendix M) . . . . .	410
Imports of lead into the United States from 1867 (Appendix M) . . . . .	397
Imports of zinc and zinc oxides into the United States, 1887 (Appendix M) . . . . .	399
Importation of manufactured graphite (Appendix M) . . . . .	406
International Congresses:	
List of (Appendix P), 449; list of American delegates to (Appendix Q), 451.	
Iron (Appendix M) . . . . .	378
Production and shipment of, and ore in 1886, '87, '88, 378; production of pig iron, steel rails, nails, etc, 379; production of pig iron by States, 379; exhibitors of, 379.	
Kansas, discovery of salt in (Appendix M) . . . . .	407
Labor and Anthropology, general regulations governing retrospective exposition of . . . . .	159
Lake copper, average price per pound in cents at New York from 1860 (Appendix M) . . . . .	393
Lead (Appendix M) . . . . .	396
Production of, in United States from 1873, 396; production of, and precious metals in Leadville, 1888, 396; production of, and silver in Leadville from 1860, 397; United States exports and imports of, from 1867, 397; average monthly prices of, in New York, in cents per pound from 1870, 398; exhibitors of (with notes of production, etc.), 398.	
Letters:	
Secretary Bayard to Commissioner-General Franklin, of instructions, XI; Secretary Blaine, from, introduction, VII; circular to governors of States and Territories by Secretary of State, XVII; Franklin, W. B., Commissioner-General to Secretary of State, estimate of appropriation, XIX; Franklin, W. B., Commissioner-General, to Secretary of State, transmitting official report, XXI; transmitting report of W. P. Blake on mineral resources of United States to Commissioner-General of (Appendix M), 366.	
Manganese (Appendix M) . . . . .	404
Total production of ore in the United States in 1887, 404; exhibitors of, 404.	
Market value of certain American mines, 1888 (Appendix M) . . . . .	418
Measures and values, table of . . . . .	44
Mexico (Appendix M) . . . . .	422
Product of gold and silver from 1877 to 1888, 422; coinage of gold, silver, and copper, 1873 to 1888, 423; exhibit of coinage from establishment of mints in 1534, 423.	
Mineral products of United States, annual value of (Appendix M) . . . . .	367

## Mineral resources of the United States :

Report by W. P. Blake to Commissioner-General (Appendix M), 363; with statistical tables, etc. (Appendix M), 363.	
Miscellaneous minerals (Appendix M) . . . . .	415
Exhibitors of, 415.	
Nevada's production of silver, 1887 (Appendix M) . . . . .	385
New York, discovery of salt in (Appendix M) . . . . .	407
Nickel (Appendix M) . . . . .	405
Value of the metal produced in the United States in 1887, 401; discovery of ores in Oregon, 404; exhibitors of, 404.	
Number of wells completed, new production of petroleum, and average per well in 1887-'88 (Appendix M) . . . . .	409
Official Instructions to Commissioner-General by Secretary of State . . . . .	XI
Operations on Comstock Lode in 1888 (Appendix M) . . . . .	385
Parks, C. Wellman, superintendent of liberal arts, official report . . . . .	67
Petroleum and natural gas (Appendix M) . . . . .	407
Principal localities where found, 407; production of crude petroleum in the United States from 1859, 408; pipe line deliveries in 1888, 408; number of wells completed, new production of petroleum, and average per well, 1887 and 1888, 409; value of oil produced since 1860, 409; exports of mineral oils, 1887-'88, 409; consumption of natural gas, 407; exhibitors of, 410.	
Phosphate rock, production of, in 1887-'88, in South Carolina (Appendix M) . . . . .	410
Pipe-line deliveries of crude petroleum, 1888 (Appendix M) . . . . .	408
Precious stones and gems (Appendix M) . . . . .	412
Estimated production, in detail, 1883-1887, including gold quartz, 413; exhibitors of (with notes), 414.	
Processes of production of alumina (Appendix M) . . . . .	406
Production of antimony in the United States in 1886-'87-'88 (Appendix M) . . . . .	405
Production of building stone, marble, slate, etc., in the United States in 1887, and value (Appendix M) . . . . .	411
Production of coal in United States in 1887 and 1888 (Appendix M) . . . . .	373
Production of copper in United States from 1882 to 1887, inclusive (Appendix M) . . . . .	390
Production of crude petroleum in United States from 1859 (Appendix M) . . . . .	408
Production of gold in United States from 1870 (Appendix M) . . . . .	380
Production of gold and silver, 1887 (Appendix M) . . . . .	416
Production of gold and silver from 1792 to 1844 (Appendix M) . . . . .	417
Production of gold and silver in Mexico from 1877 to 1888 (Appendix M) . . . . .	422
Production of gold, silver, lead, and copper west of Missouri River, 1888, (Appendix M) . . . . .	421
From 1870 . . . . .	420
Production of gypsum in the United States in 1887 (Appendix M) . . . . .	410
Production of lead in the United States from 1873 (Appendix M) . . . . .	396
Production of lead and precious metals in Leadville in 1888 (Appendix M) . . . . .	396
Production of lead and silver in Leadville from 1860 (Appendix M) . . . . .	397
Production of lime in the United States in 1887, and value (Appendix M) . . . . .	411
Production of manganese ore in the United States in 1887 (Appendix M) . . . . .	404
Production of mica in 1887, and value (Appendix M) . . . . .	411
Production of nickel in the United States in 1887 (Appendix M) . . . . .	405
Production of phosphate rock in South Carolina, 1887-'88, (Appendix M) . . . . .	410
Production of pyrites in the United States, 1882 to 1887, (Appendix M) . . . . .	405
Production of quicksilver at New Almaden, Cal., from 1850 (Appendix M) . . . . .	402
Production of quicksilver in California from 1879 (Appendix M) . . . . .	400
Production of quicksilver in the United States, 1887-'88, (Appendix M) . . . . .	399
Production of roofing slate, 1884-'87, and value (Appendix M) . . . . .	412
Production of salt in the United States from 1883 to 1887, by localities (Appendix M) . . . . .	407

	Page.
Production of silver in the United States from 1870 (Appendix M) . . . . .	384
Production of zinc (spelter) in the United States, 1882 to 1887, inclusive, by States (Appendix M) . . . . .	399
Production (estimated) of precious stones and gems, 1883-'87, including gold quartz (Appendix M) . . . . .	412
Production and shipment of iron, iron ore, and products of, for 1886-'87-'88 (Appendix M) . . . . .	378
Principal localities in the United States where gypsum is found (Appendix M)	410
Principal localities in the United States where lime is found (Appendix M) . .	411
Principal localities in the United States where mica is found (Appendix M) . .	411
Principal localities in the United States where petroleum and natural gas are found (Appendix M) . . . . .	407
Principal localities in the United States where slate is found (Appendix M) . .	411
Principal mineral products of the United States, geographical distribution of, (Appendix M) . . . . .	371
Principal sources of graphite (Appendix M) . . . . .	406
Principal sources of pyrites in the United States (Appendix M) . . . . .	405
Pyrites (Appendix M) . . . . .	405
Principal sources, 405; production of, in United States 1882 to 1887, 405; exhibitors of, 406.	
Quicksilver (Appendix M.) . . . . .	399
Production of, in United States 1887-'88, 399; production of, in California from 1879, 400; exhibitors of, (with notes of, production, etc.) 400, 404; production of, at New Almaden, Cal., from 1850, 402.	
Regulations governing retrospective exposition of labor and anthropology . .	159
Regulations of the superior (international) jury . . . . .	91
Relative value of gold and silver of Comstock Lode (Appendix M) . . . . .	386
Reports . . . . .	
Berger, Georges, Commissioner General of Exposition, on superior jury, 85; Durand, J., on Riggs collection of armor, 169; Franklin, W. B., Commissioner General, 1; Gunnell, W. C., Engineer United States Commission, 45; Hoffman, Wickham, History of Labor, 125; Hoffman, Wickham, on exhibition of social economy, 101; Blake, W. P., on mineral resources of the United States, 363; Parks, C. Wellman, Superintendent of Liberal Arts, 67.	
Resolution, Congress, joint, of . . . . .	IX
Restaurants, concessions and regulations of (Appendix F) . . . . .	217
Riggs, collection of armor by . . . . .	169
Salt (Appendix M) . . . . .	407
Production of, in the United States from 1883 to 1887, by localities, 407; discoveries in New York and Kansas, 407.	
Secretaries of superior jury, list of . . . . .	84
Silver (Appendix M) . . . . .	384
Value of annual product from 1870, 384; amount in country, 384; amount used industrially, 384; cost of production, 384; operations on Comstock Lode 1888, 385; Nevada's product 1887, 385; total production from Comstock Lode, 386; relative value of gold and silver from Comstock Lode, 386; assessments and dividends, 387; exhibitors of (with notes of production, yield and cost per ton), 387; exports of, to Japan, China, the Straits, etc., 1887-'88, 422.	
Social economy, review of Exhibition . . . . .	101
Staff of Commissioner General . . . . .	75
Statistics of admission (Appendix E) . . . . .	216
Superior jury:	
Distribution of foreign members by countries and by classes, 95; list of, 83; regulations of, 91; report on, by Georges Berger, Commissioner General of Exposition, 85.	
Synopsis of classification (Appendix J) . . . . .	258
Tin (Appendix M) . . . . .	404
Where found in United States, 404; exhibitions of (with notes), 404.	

	Page.
Total amount dividends paid by certain American mines to 1888 (Appendix M)	418
Total production of silver of Comstock Lode (Appendix M).....	386
United States exhibitors:	
Alphabetical catalogue of (Appendix L), 344; classified catalogue of (Appendix K), 261; list of awards to, and collaborators (Appendix N), 424; list of donations made by (Appendix R), 452; of alumina (Appendix M), 406; of antimony (Appendix M), 405; of coal, 378; of copper (with notes of production, etc.) (Appendix M), 394; of fertilizers (Appendix M), 410; of gold (with notes of production, yield, and cost per ton) (Appendix M), 380; of graphite (Appendix M), 406; of gypsum (Appendix M), 410; of iron, iron ore, and products of (Appendix M), 379; of lead (with notes of production, etc.) (Appendix M), 398; of lime (Appendix M), 411; of manganese ore (Appendix M), 404; of miscellaneous minerals (Appendix M), 415; of mica (Appendix M), 411; of natural gas (photographs) (Appendix M), 410; of nickel (Appendix M), 405; of precious stones and gems (Appendix M), 413; of pyrites (Appendix M), 406; of quicksilver (with notes of production, etc.) (Appendix M), 400, 404; of silver (with notes of production, yield and cost per ton) (Appendix M), 387; of slate and granite (Appendix M), 412; of tin (with notes) (Appendix M), 404; of zinc (Appendix M), 399.	
United States jurors, list of.....	99
Valentine, John J., annual statement of production of gold, silver, lead, and copper west of the Missouri River in 1888, and production and coinage of Mexico (Appendix M).....	421
Zinc (Appendix M).....	399
Production of spelter in United States 1882 to 1887 inclusive, by States, 399; imports of, and zinc oxide for 1887, 399; exhibitors of, 399.	

# PARIS EXPOSITION.

## GENERAL INDEX.

[The volume in which the article sought is to be found is indicated by the Roman numeral following the title. The figure or figures given are the pages of the volume named, on reference to which the article may be found.]

### A.

	Page.
Abbe's, Prof., apochromatic microscope, II . . . . .	227
Abel full-fashioned legger knitting machine, III . . . . .	383
<i>Abelmoschus esculentus</i> , grown for fiber, v. . . . .	718
Aboilard arc lamp, IV . . . . .	58
Abt system for steep-inclined railway, III. . . . .	522
<i>Abutilon avicennae</i> , experiments with fiber of, v . . . . .	719
Academy of Magyar-Ovar, v. . . . .	154, 199
Accessories to electrical plants, IV . . . . .	78
telegraphy, IV. . . . .	116
telephony, IV. . . . .	126
Accumulator system of transmitting electricity, IV . . . . .	70
<i>Acer dasycarpum</i> , sugar made from, v . . . . .	691
<i>rubrum</i> , sugar made from, v . . . . .	691
<i>saccharinum</i> , sugar made from, v . . . . .	691
<i>Acipenser huso</i> , air sac of, used for fining, v . . . . .	399
Acknowledgements, v . . . . .	31, 33, 487, 496
Acoustic signals in connection with electric light houses, III. . . . .	881
Act of 1862, establishing department of agriculture, v. . . . .	825
Acaguayaco (bread of heaven), in Bolivia, v. . . . .	133
Ader long-distance telephone, IV . . . . .	125
telephone receiver, IV . . . . .	122
Administrative arms of service in the French army, IV. . . . .	285
Africa, French Possessions in, agricultural exhibits of, v. . . . .	99
African countries, agricultural exhibits of, v . . . . .	98, 126
<i>Agaricus campestris</i> ( <i>Edulis</i> ), cultivation of, v. . . . .	38
<i>Agave americana</i> , fiber from, v . . . . .	720
<i>rigida</i> (var. <i>sisalana</i> ), introduced into Florida, v . . . . .	720
Agents, instructions to (Appendix II), v. . . . .	852
Agricultural clubs (comices), v . . . . .	145
colleges, v . . . . .	169
national legislation on, v . . . . .	815
number of teachers and students at, v. . . . .	817
total value of plant, v . . . . .	816

	Page.
Agricultural Congress, International, v.....	496, 500, 505
credit, v.....	142
credit, in France, v.....	506
various countries, v.....	508
resolution of International Congress on, v.....	509
department, establishment of, v.....	817
distilling, v.....	425, 523
education (Appendix III), v.....	853
list of exhibits in, v.....	879
exhibit of the United States, amount expended on, v.....	493
classification of, v.....	492
Experiment Stations, v.....	26
expert opinion of, v.....	887
group, faulty classification of, v..	25
law in reference to, v.....	491, 495
list of (Appendix IV), v.....	853
plan of, v.....	23
press reviews of (Appendix IV), v.	887
instruction, in France, v.....	171
resolutions of International Congress on, v.....	518
laboratories, v.....	145
machinery, implements, v.....	229
organizations in United States, failure of national, v.....	26
products not used as food, report of Prof. Spencer B. Newbury, II.....	648
proportion exported, v.....	806
resources of the United States, reports on, v.....	494, 537
schools and colleges, list of, v.....	842
science at Harvard and Yale, v.....	817
and education in the United States, report of A. C. True, v.....	809
societies, v.....	142, 205
history of, v.....	810
in Algeria, v.....	88
statistics, v.....	141
first appropriation for, v.....	814
list of exhibits in, v.....	878
of United States, report of J. R. Dodge, v.....	797
syndicates, professional, v.....	142
work and food industries, relative value of exhibits, III.....	27
review of, C. B. Richard, M. A., III.....	27
United States exhibitors, awards to, III.....	27
Agriculture—	
American, value of products, v.....	806
Appropriations for Department of (1890), v.....	842
Colleges of, v.....	206
Courses of instruction in, v.....	849
Crisis in, v.....	499
Depreciation of wages in, v.....	503
products of, v.....	501
Duties of Secretary of, v.....	828
History of Department of, v.....	822

	Page.
Agriculture—Continued.	
Instruction in, v . . . . .	161, 171, 188
International Congress of, v . . . . .	499
Methods and appliances for instruction in, v . . . . .	188
Per cent of population engaged in, v . . . . .	798
Societies for promoting, v . . . . .	810
Statistics of, in United States, v . . . . .	797
Agronomy (agricultural statistics), report of C. V. Riley, v . . . . .	141
exhibit in, v . . . . .	141
<i>Agrotis vulgaris</i> , cultivated in United States, v . . . . .	737
Aiken full-fashioned footer (Abel Machine Company exhibitor), III . . . . .	384
Aimé Witz, Dr., of Lille, test by, of gas consumption for gas engines, III . . . . .	142
Alauzet & Tiquet, exhibit of printing presses, III . . . . .	50
<i>Aletia xyleria</i> , estimate of loss occasioned by, v . . . . .	604
Alfalfa ( <i>Medicago sativa</i> ), grown in United States, v . . . . .	739
Alfilaria ( <i>Erodium cicutarium</i> ), in California, v . . . . .	739
Algeria—	
Agricultural societies of, v . . . . .	88
Exhibits :	
Agriculture, v . . . . .	83, 312
Drawing and modeling, II . . . . .	164
Maps and apparatus, II . . . . .	189
Plan of Constantine; plan for remodeling Algiers; Sahara.	
Medicine and surgery, II . . . . .	177
Musical instruments, II . . . . .	171
Printing and books, II . . . . .	154
Schools, II . . . . .	129
Academy of Algiers; Oran Professional Primary School.	
Scientific instruments, II . . . . .	182
Secondary instruction, II . . . . .	136
National School of Industry, Dellys; Ligue de l'Enseignement, Algiers; Algiers College and Lyceum; Ben-Aknown Lyceum, E. P. Guerin, Lestrade.	
Sericulture, v . . . . .	430
Stationery, etc., II . . . . .	158
Superior education, II . . . . .	144
Algiers school of art, II . . . . .	31
Alimentary products—	
Cereals and farinaceous products, IV . . . . .	469
Countries exhibiting—United States, West Indies, Mexico, Central America, South America, Great Britain, France, Sweden and Norway, Netherlands, Belgium, Spain, Portugal, Switzerland, Austria-Hungary, Roumania, Servia, Greece, Italy, San Marino, Russia, Algeria, Egypt, Tunis, Senegal, Republic of South Africa, Cape Verde Islands, Réunion, Cape Colony, Persia, Japan, Siam, British India, French India and Cochin China, Australasia, Tahiti, New Caledonia, Hawaiian Islands; the cereals—wheat, rye, barley, oats, corn, buckwheat, millet and sorghum, rice, teff, eleusine, bamboo, etc.; farinaceous products and derivatives—semolina, alimentary pastes, starches, arrow-root, tapioca, etc.; dextrine and glucose; flour milling.	
Commercial statistics, IV . . . . .	456
Dairy products: Oils and fats, IV . . . . .	567
Awards; milk and koumiss, butter and oleomargarine, cheese, eggs of birds, reptiles, etc.; animal and vegetable oils and fats; exhibits by countries—United States, West Indies, Central America, South America, Austria-Hungary, Belgium, Denmark, France, Great Britain, Greece, Italy, Netherlands, Sweden, Norway, Portugal, Roumania, Russia, San Marino, Spain, Switzerland, Africa, Asia, Australasia; Report by Mr. James Cheesman.	

	Page.
Alimentary products—Continued.	
Fermented drinks, IV . . . . .	721
Review of exhibits by countries; awards; wines—Bordeaux, Burgundy, champagne, Mâcon and Rhone, German, Hungarian, Italian, Spanish, Madeira, American; spirits—statistics, process of distillation; beer, cider.	
Preserved meats and fish, IV . . . . .	623
General view; statistics, exhibits by countries—United States, France; methods of preservation, artificial ice.	
Products of the bakery and pastry shop, IV . . . . .	541
Awards, history of baking, methods of the bakery.	
Report by A. Howard Clark, expert commissioner, IV . . . . .	455
Sugar, coffee, tea, cocoa, spices and condiments, liquors, preserves, IV . . . . .	661
Awards; exhibits by the United States, sugar industry; review by countries—United States, Cuba, Martinique and Guadeloupe, Central America, Brazil, Argentine Republic, Peru, Paraguay, Ecuador and Chile, Hawaiian Islands, France, Russia, Denmark, Belgium, Germany, Egypt, Madagascar, Algeria, Réunion, Mayotte and Comores, New Caledonia, Japan, India, Cochin China, Anam-Tonkin, China, Java, Philippine Islands; manufacture of beet sugar, treatment of molasses, manufacture of cane sugar, sugar-refining, honey; coffee industry—production and consumption, history and kinds, preparation for market, preparation for the table, chicory; tea industry—trade statistics, kinds of tea and preparation; cocoa industry; spices and condiments; liqueurs.	
Alioth ampere and volt meters, IV . . . . .	209
hour meters, IV . . . . .	223
arc lamps, IV . . . . .	62
Alkali manufacture, report of Prof. Spencer B. Newbury, II . . . . .	557
Change in ammonia-soda process; Le Blanc process; Hargreave's process; condensation of hydrochloric acid; black-ash process; recovery of sulphur from tank waste; Chance sulphur recovery process; other alkali processes; chlorine and bleaching powder; Weldon process; Deacon process; Weldon-Pechiney process; other methods of producing chlorine in connection with ammonia-soda; Solvay process.	
<i>Allium ascalonium</i> , cultivation of, V . . . . .	83
<i>cepa</i> , cultivation of, V . . . . .	82
varieties of, V . . . . .	82
<i>porrum</i> , common about Paris, V . . . . .	83
<i>sativum</i> , common in France, V . . . . .	83
cultivation of, V . . . . .	83
<i>Allorhina nitida</i> , kerosine used to destroy, V . . . . .	607
Allotment of space in machinery hall, III . . . . .	15
Alloys of nickel and steel, paper by James Riley, before Glasgow Iron and Steel Institute, II . . . . .	455
patents for manufacture of, II . . . . .	458
Almond in South Australia, V . . . . .	110
the Tell, V . . . . .	87
Aloe, American, fiber from leaves utilized, V . . . . .	720
Alphabetical catalogue of United States exhibitors, I . . . . .	344
Alsatian society's large tools, III . . . . .	325
Alternating current transformers, IV . . . . .	50
Alumina, exhibitors of, I . . . . .	406
processes of production of, I . . . . .	406
Aluminium—	
Analyses of commercial samples, by J. W. Richards, II . . . . .	480
Cowles Electric Smelting and Aluminium Company, statement of, II . . . . .	484
Deville-Casteur process for producing, II . . . . .	463

	Page.
Aluminium—Continued.	
Exhibitors of, II . . . . .	463
Aluminum Company (Limited); Alliance Aluminium Company (Limited), England; Bernard Brothets; Société Anonyme Electro-Métallurgique Française, France; Cowles Electric Smelting and Aluminium Company; Pittsburg Reduction Company, United States; Société Anonyme pour l'Industrie de l'Aluminium, Switzerland.	
Lecture on, by Sir Henry Roscoe, before Royal Institution, London, II . .	466
Properties and uses, II . . . . .	457
Report of W. H. Chandler, PH. D., II . . . . .	480
Suggestions regarding the casting of bronze, II . . . . .	479
<i>Amelanchier oblongifolia</i> , character of, V . . . . .	381
American architecture, III . . . . .	6
delegates to International Congresses, list of, I . . . . .	451
dietaries, V . . . . .	808
American mines—	
Assessments levied in, I . . . . .	420
Dividends declared by States, 1884-1888, I . . . . .	420
paid by, in 1888, I . . . . .	418
Market value of the property, I . . . . .	418
Total amount of dividends paid to 1888, I . . . . .	418
American nations, agricultural exhibits of, V . . . . .	130
patents for preserving wood, II . . . . .	740
prize winners in textile fabrics, wearing apparel and accessories, II .	335
Screw Company's exhibit, III . . . . .	29
wood screw machines, III . . . . .	345
Amherst Coöperative Creamery, V . . . . .	566
Amiens School of Art, II . . . . .	28
Ammunition for rapid-firing guns, IV . . . . .	326
Amount of quicksilver produced in the United States in 1887-'88, I . . . . .	399
silver in the United States, I . . . . .	384
used industrially in the United States, I . . . . .	384
zinc produced in the United States, 1882 to 1887, inclusive, by States, I . . . . .	399
Anam-Tonquin (Cochin-China) exhibits—	
Agriculture, V . . . . .	102
Drawing and modeling, I . . . . .	164
Maps and apparatus, I . . . . .	191
Exhibit of musical instruments, I . . . . .	171
Printing and books, I . . . . .	154
Scientific instruments, I . . . . .	182
Stationery, etc., I . . . . .	158
Angelica, cultivation and use of, V . . . . .	83
"Angelus," sale of, II . . . . .	19
Anglo-Arabs, agricultural exhibit of, V . . . . .	474
Angola, agricultural exhibit of, V . . . . .	118
Animal products, list of exhibits of, V . . . . .	853
and vegetable oils and fats, IV . . . . .	594
Annual amount of copper exported from the United States from 1867, I . . . .	392
imported into the United States from 1867, I . . . . .	392
produced in the United States from 1882 to 1887, inclusive, I . . . . .	390
crude petroleum produced in the United States from 1859, I . . . . .	408
graphite produced in the United States, I . . . . .	406
lead produced in the United States from 1873, I . . . . .	396
and silver produced in Leadville from 1860, I . . . . .	397

	Page.
Annual amount of quicksilver produced at New Almaden, Cal., from 1850, I.	402
in California from 1879, I. ....	400
value of gold product of the United States from 1870, I. ....	380
and silver product of the United States from 1792 to 1844, I. ....	417
silver, lead, and copper produced west of the Missouri River from 1870, I. ....	422
mineral product of the United States, I. ....	367
silver product of the United States from 1870, I. ....	384
Annunciators, alarms, bells, clocks, gas lighting, etc., and miscellaneous applications of electricity—	
Annunciators, IV. ....	132
Fire, burglar alarms, railroad signals.	
Bells, IV. ....	134
Domestic apparatus, IV. ....	137
Electric clocks and time distribution, IV. ....	135
Gas lighting, IV. ....	136
Miscellaneous applications of electricity, IV. ....	137
Gas engines with electrical ignition, mine blasting, organ, melograph and melotrope, automatic weighing machine, loom arrester, tricycle, voting machine, lock, recording and indicating apparatus.	
Anthracnose of the bean, V. ....	790
raspberry, V. ....	791
Anthracite coal—	
Composition of, I. ....	374
Exhibition of, I. ....	378
Production of, in 1887-'88, I. ....	375
since 1820, I. ....	375
Antimony, exhibitors of, I. ....	404
production of, in United States, 1886-1888, I. ....	404
where found in United States, I. ....	404
Antoinette bridge, III. ....	782
Antwerp (Belgium) city hospital, II. ....	771
<i>Aphis gossypii</i> , attacking cotton, V. ....	708
Apicultural societies, Swiss, V. ....	216
Apiculture—	
Foreign exhibits, V. ....	436
French exhibits, V. ....	434
Improvements in, V. ....	616
In United States, V. ....	616
Nomadic instruction in, V. ....	216
Statistics on, V. ....	616
<i>Apium graveolens</i> , exhibits of, V. ....	82
<i>Apocynum Cannabinum</i> , fiber used by Indians, V. ....	722
Apparatus—	
For cheese making, V. ....	254
cooling milk, V. ....	248
studying motion of a projectile in the gun, IV. ....	282
turning eggs, V. ....	258
Fungicide, V. ....	355
Gretillat, V. ....	367
Heating, V. ....	248
Insecticide, V. ....	29, 267, 274

Apparatus—Continued.	Page.
Miscellaneous, v. ....	255
Pinsard, v. ....	358
Spraying, v. ....	311
Vermorel, v. ....	366
Apparatus and method of mining and metallurgy, report of Henry M. Howe, III	249
processes for heating; apparatus and processes for lighting	
otherwise than by electricity, report of David Urquhart,	
jr., II. ....	323
Appendices to Volume I—	
A. Decree of the President of the French Republic opening the Universal Exposition of 1889 at Paris. ....	179
B. French laws and regulations governing the Exposition. ....	183
C. The French general commission. ....	214
D. Estimated and actual cost of buildings, operations, etc. ....	215
E. Statistics of admission. ....	216
F. Restaurants, concessions, and regulations. ....	217
G. Foreign countries represented, appropriations, space occupied, etc. ...	220
H. Expenditures in Paris of foreign commissions. ....	222
I. Circulars, forms, and regulations: (a) anterior to exposition; (b) during the exposition; (c) incident to the close. ....	223
J. Synopsis of classification: Group 1, works of art; group 2, education and instruction; group 3, furniture and accessories; group 4, textile fabrics; group 5, extractive arts; group 6, apparatus and processes of mechanical industries; group 7, food products; group 8, agriculture, cultivation of the vine, and fish culture; group 9, horticulture, social economy. ....	258
K. Classified catalogue of United States exhibitors; number of exhibitors by classes and groups. ....	261
L. Alphabetical catalogue of exhibitors. ....	344
M. Mineral resources of the United States; letters transmitting report of William P. Blake, special agent; annual value of production; geographic distribution of principal mineral products; statistical table, etc. ....	363
N. Awards to United States exhibitors and collaborators; grand prizes, special prizes for field trials, for reproductive animals, for permanent collection, gold medals, silver medals, bronze medals, honorable mention, recapitulation. ....	424
O. Decorations bestowed on account of the United States at the Paris Exposition, 1889; Legion of Honor, officers of public instruction, officers of the academy, agricultural merit. ....	447
P. List of International Congresses. ....	449
Q. American delegates to the International Congresses appointed by the Commissioner-General. ....	451
R. Donations of exhibits by United States exhibitors. ....	452
S. Expenditures of the U. S. Commission. ....	455
Appendices to Volume V—	
I. Circular showing scope of work in preparing agricultural exhibit. ...	851
II. Instructions to agents. ....	852
III. Circulars in reference to agricultural education. ....	853
IV. Detailed list of the agricultural exhibit from the United States. ....	853
V. List of awards made in the United States agricultural exhibit. ....	883
VI. Reviews of the exhibit from leading French and English sources. ...	887
Appert, M., originator of canning foods, v. ....	668
Apple scab ( <i>fusicladium dendriticum</i> ), v. ....	789

	Page.
Apples—	
Canning of, v . . . . .	671
Regions suited to, v . . . . .	676
Roestelia, v . . . . .	790
Varieties most grown, v . . . . .	677
Appliances and products of methods employed for the preservation of woods, II.	715
Experiments in "Burnettizing," copper preservatives, creosoting, "kyanizing," and miscellaneous processes for preservation of wood; historical sketch by M. D. Sihon, A. C.; history of the preservation of wood; American patents for preserving wood; Lehigh Valley creosoting works; wood treatment tests (Engineering News); references.	
Applications of electric power, IV. . . . .	93
electricity in medicine and surgery, IV . . . . .	243
Apricots, canning and sun-drying, v . . . . .	679
cultivation limited, v . . . . .	679
<i>Arachis hypogæa</i> , culture in Senegal, v . . . . .	98
Arc lamps, IV. . . . .	52
Architectural drawings, exhibit of, II. . . . .	97
Arcy-en-Brie, M. Joulié's explanation of system of, v. . . . .	530
visit to the farm of, v . . . . .	529
Argentine Republic—	
Exhibits :	
Agriculture, v. . . . .	130
Drawing and modeling, II. . . . .	162
Insects, v. . . . .	441
Schools, II. . . . .	127
Maps and apparatus, II. . . . .	189
Entre Rios, plan of the province of Cordoba.	
Printing and books, II . . . . .	153
Scientific instruments, II. . . . .	182
Stationery, etc., II . . . . .	157
Superior education, II. . . . .	143
Probable increase in wheat produced, v. . . . .	627
Arid region, so called, v . . . . .	798
Armington & Sons' engines, III. . . . .	124
Armor, the Riggs collection of, I . . . . .	169
Arnould arc lamp, IV . . . . .	62
Aron Watt-hour meter, IV. . . . .	220
Arrault's couplings for rods, III. . . . .	254
light sinking outfit, III . . . . .	253
solid trepans, III. . . . .	254
Art, French, II. . . . .	10
retrospective exhibit of, II. . . . .	97
in the United States, II. . . . .	4
Art bronzes and castings, artistic iron work, and repoussé metal work, Japanese method of, II. . . . .	317
Art bronzes and castings, artistic ironwork and repoussé metal work, report of David Urquhart, jr., II. . . . .	315
Art dealers, influence of, II. . . . .	17
Art department—	
Awards given in, alphabetically arranged by countries, II. . . . .	108
Classified table of exhibits and awards, II. . . . .	105
Juries in classes 1 and 2, paintings and drawings, II. . . . .	106
class 3, sculpture and engraving on medals, II . . . . .	107

	Page.
Art department—Continued.	
Juries in class 4, Drawings and models in architecture, II.....	107
class 5, Engravings and lithography, II.....	107
Proust M. Antonin, head of, II.....	104
Art of enameling, revival of, II.....	384
knitting by machinery, III.....	369
lens-making, II.....	213
<i>Artemisia dracunculus</i> , use and propagation of, v.....	83
Artichokes—	
Confusion of name, v.....	77
For stock and table use, v.....	649
French exhibit of, v.....	68
Jerusalem, v.....	75
Artificial ice, systems of manufacturing, IV.....	651
silk, process of Count de Chardounet in the manufacture of, report on the manufacture of, by Charles Richards Dodge, II.....	526
report of Prof. Spencer B. Newbury, II.....	607
Artistic instinct of the Latin races, II.....	21
<i>Arum esculentum</i> , cultivation in Oceania, v.....	129

Exhibits :	
Agriculture, v . . . . .	106
Apiculture, v . . . . .	436
Army, IV . . . . .	297
Art department, II . . . . .	54
Painters: Emile Claus, Franz Courtens, Émile Delpérée, Jean Pierre Lamorinière, Robert Mols, Alfred Stevens, Alexandre Struys, Jan van Beers, Jan Verhas, Theodore Varstraete, Alfred Verwee, Emile Wauters, Artan, Asselberghs, Mlle. Beernaert, Bouvir, Broerman, Mme. Collart, D'Anethan, Dedans, De la Hoese, Den Duyts, De Smeth, Mlle. De Vign, Dierick, Ronner (Alice), Simons, Smits, Stallaert, Stobbaerts, Zytgadt, Van Biesbroeck, Vanderecht, Van Haveermaet, Van Hove, Verhaert, and Vanhayden.	
Sculptors: Guillaume Charlier, Paul de Vigne, Constantin Meunier, Pierre Charles Vanderstoppen, Braecke, Mignon, and Namur.	
Ceramics, II . . . . .	301
Boch Frères, of Louvière, Escoyez, "la Société Anonyme, etc., de Seilles-lez-Andenne."	
Cereals, fruits, and vegetables, v . . . . .	106
Chemical and pharmaceutical products, II . . . . .	543
David & De Bouch; Werotte, Solvay & Co.; Alfred Lambotte; Usines des Moulins, Compagnie Générale des Explosives Faver; Fortis Explosive Association.	
Drawing and modeling, II . . . . .	161
Society of Graphic Art, Goffart, Falk, Bass, Bandewyns, Bock Brothers, De Munter, Heins, Jaulet, Meunier, Launeau, Fine Arts Institute, Guelton, Logelain, De la Montagne, Van Cauwelaert, Desaucourt.	
Furniture and accessories, II . . . . .	293
Manteau, Briot, Neuville, Toulet, Denis, Errard, Devilliers, De Waele of Molenbeck, Damman & Washer, of Brussels.	
Maps and apparatus, II . . . . .	188
Van Scherpenzeel-Thim, Malherbe Dewalque, Brussels Cercle de la Librairie, Vander Wee, Falk, Capt. Henry, Lebegue, Zboinski, Adrien.	
Medicine and surgery, II . . . . .	174
Van Ermengen, Henrijean, Firket, Francotto, Plettnick-Bauchau, Felix Soupart, Vanden Corput, Thréiar, Spehl, Kuborn, Dumoulin, Delaunois, De Keersmacker, Debaisieux, Crocq, Medico-Surgical Society of Liege, Hovent, Wasseige, Davies-Gilbert, Delottre.	
Musical instruments, II . . . . .	169
Camps & Co., Hainant & Son, Heinemann, Renson & Son, Van Aerschodt, Manganot, Pierrard Mahillon, Van Cauwelaert, the Alberts, Dietz.	
Printing and books, II . . . . .	151
Circle of books and printing and of the kindred professions, Bourlard, Bouwens, Claessen, Decq, De Seyn-Verhougstraete, Hovremans, Hoste, Larcier, Lebégue & Co., Mertens, Ramlot, Van Campenhouts, Vander Anvers, Vanderpoorten Weissenbruch, Zech & Son, Universal Review of Mines and Metallurgy, Vaillant-Carmanne, Vanderghinste & Co., Bertrand, Bergerhoff Van Sassem.	
Scientific instruments, II . . . . .	180
Gerard & Co., Cal Hannot, Wery, Rosso, Jasper Beaupied.	
Schools, II . . . . .	120
National school museum exhibits.	
Secondary instruction, II . . . . .	131
Morlanwez Industrial School, Louvain Normal School, Miss Marie de Pierpont.	
Sericulture, v . . . . .	431
Stationery, etc., II . . . . .	157

## Belgium—Continued.

## Exhibits—Continued.

	Page.
Superior education, II. ....	138
Universities of Louvain and Brussels, Brussels Polytechnic School, Ghent School of Civil Engineering and School of Arts and Manufactures, Liege School of Mines, School of Arts and Manufactures and Institute of Electricity, Louvain School of Arts and Manufactures, School of Civil Engineers and Mines, State Veterinary School at Cureghemlez-Bruxelles, State Institution of Agriculture at Gembloux, higher commercial school at Antwerp.	
Technical instruction, II. ....	198
Vine culture in, v. ....	313
Belleville boiler, III. ....	87
Bellows—	
Albrand, v. ....	357
Granal Malbec, v. ....	355
Lagleyse, v. ....	357
Malbec, v. ....	356
Malbec-Gilloux, v. ....	356
Pinsard, v. ....	358
Berger, Georges, Commissioner-General of Exposition, report on superior jury, I. ....	85
Berger, M. Aristides, installation of water wheels under great heads, III. ....	170
Berlin, general city hospital of, report of W. H. Chandler, PH. D., II. ....	779
Bermuda grass ( <i>Cynodon dactylon</i> ), v. ....	739
islands, vegetable products of, v. ....	658
Berries, canning of, v. ....	670
Best way of spending the Treasury surplus, II. ....	15
<i>Beta vulgaris</i> , v. ....	69
Bibby & Boron, exhibit of paper bag machine, III. ....	60
Bichromate of potash cells (for electricity), IV. ....	157
Binders—	
Continental light steel, v. ....	288, 294
Hornsby, v. ....	287
Howard, v. ....	287
McCormick, v. ....	283, 285, 292
Osborne, v. ....	295
Plano twine, v. ....	295
Toronto, v. ....	293
Wood, v. ....	284, 286, 287
Binding posts for electric wires, IV. ....	87
reapers, competition in, v. ....	282
Binford, James R., report on cotton industry, v. ....	706
Bisulphide of carbon used against phylloxera, v. ....	448
Blackberry, native to North America, v. ....	680
Black rot of grape ( <i>Leotardia bidwellii</i> ), distribution of, v. ....	793
spot of the peach ( <i>Cladosporium carpophilum</i> ), v. ....	791
rose ( <i>Actinonema rosea</i> ), v. ....	791
Blaine, James G., Secretary of State, introductory letter from, I. ....	VII
Blake multiple jaw crusher, III. ....	301
Blake, W. P., letter to Commissioner-General Franklin transmitting report, I. report on mineral resources of United States, I. ....	366 363
Blight on pear, v. ....	678
<i>Blissus leucopterus</i> , estimated loss from, v. ....	604
Blondlot watt-hour meter, IV. ....	219

	Page
Blondlot & Curie's electro meters, IV .....	203
Blower, Japy fan, v .....	360
<i>Behmeria nicea</i> , long under cultivation in the Orient, v .....	715
Boiron & Cozette watt-hour meter, IV .....	221
Boletus, edible species of, v .....	40
Bolivia exhibits—	
Alimentary, v .....	132
Drawing and modeling, II .....	162
Insects, v .....	441
Maps and apparatus, II .....	189
Plan of Lake Titicaca .....	
Medicine and surgery, II .....	176
Musical instruments, II .....	171
Printing and books, II .....	153
Superior education, II .....	143
Boll worm, attacking cotton, v .....	708
Bollée, M. Ernest, exhibit of giant hydraulic ram, III .....	192
ram pump, III .....	198
Boney & Sons, heavy tools, III .....	319
Bonjour's engines, III .....	110
Bordeaux school of art, II .....	29
Borecole, cultivation of, v .....	656
Borel ampère-hour meter, IV .....	224
Borner & Co.'s brick machine, III .....	428
cutting table for brick machine, III .....	428
Boulet & Co.'s automatic brick press, III .....	423
tile press, III .....	421
clay mixing mill, III .....	415
hand-screw press for tiles, III .....	416
"revolver" forcing machine for chimney flues, III .....	429
two forcing-screw brick machine, III .....	426
vertical flue-tile machine, III .....	430
Boulogne outer harbor works, III .....	687
Bourdon, M. Eugene, exhibit of pressure gauges, III .....	224
Bourges school of art, II .....	29
Brake attachment for hoisting engines, III .....	277
Brandies made from marc, v .....	423
Brasseur's compound engines, III .....	107
Brault, Tisset & Gillet, exhibit of turbines, III .....	169
Braye-en-Laonnois tunnel, III .....	642
Brazil—	
Agricultural institutions of, v .....	158
instruction in, v .....	217
Exhibits:	
Agriculture, v .....	134
Drawing and modeling, II .....	162
M <sup>me</sup> de Freitas, viscountess of Cavalcanti, Texeira .....	
Insects, v .....	441
Maps and apparatus, II .....	189
Series showing the development of Brazil, Levasseur .....	
Medicine and surgery, II .....	176
Musical instruments, II .....	171

## Brazil—Continued,

Exhibits—Continued.	Page.
Printing and books, II. . . . .	150
Alves & Co., Louzinger & Son, Lambaerto & Co., "Galeria Ilustrada," Imperial Observatory bulletins.	
Schools, II. . . . .	127
Collegiabilio, Ferreira, Rio Janeiro, Commission of Rio Janeiro, Commission of Pernambuco, M <sup>me</sup> Aube, Nex de Castro	
Scientific instruments, II. . . . .	182
Secondary instruction, II. . . . .	134
Rio Janeiro Lyceum of Arts and Trades, Baron de Macahubas, A. M. Pinto, H. Ribeiro, Viera.	
Stationery, etc., II. . . . .	157
Superior education, II. . . . .	143
School of mines, Geographical Society, National Museum.	
Technical instruction, II. . . . .	189
Rio Janeiro Institution of Arts and Trades, Orphanages of Santa Isabel at Pernambuco and Notre Señora de Esperança at Bahia.	
Bread of Heaven ( <i>Acuquayaco</i> ) in Bolivia, V. . . . .	133
Brequet arc lamp, IV. . . . .	58
dynamo, IV. . . . .	41
Brewing schools in Austria, V. . . . .	198
Brick and tiles, pottery and porcelain—	
Chimney "wagons" or flues, III. . . . .	413
Duprat's interlocking flues.	
Machinery, exhibit of (Richard's review), III. . . . .	46
Machines exhibited . . . . .	414
Pinette's, Boulet & Co.'s, Joly & Foucat's, Ollagnier's, Schmerber Brothers', J. Chambrette-Bellon's, Borner & Co.'s.	
Processes of and progress in manufacture, III. . . . .	411
Report of H. D. Woods, C. E., III. . . . .	411
Brill watt-hour meter, IV. . . . .	219
British Colonies, exhibits of maps and apparatus, II. . . . .	188
India, probable increased production of wheat, V. . . . .	627
Broom rape as a parasite of forage plants, V. . . . .	56
Brown arc lamp, IV. . . . .	58
Brown, C. H. & Co.'s steam engine, III. . . . .	123
Brown & Sharpe's tool exhibit, III. . . . .	345
Brussels sprouts, little grown, V. . . . .	656
Buckwheat, acreage and value of crop, V. . . . .	630
cultivation in France, V. . . . .	54
new Japanese, recommended by bee-keepers, V. . . . .	630
Building stone, marble, slate, etc., chief localities and production of slate, I. . . . .	412
exhibitors of slate and granite, I. . . . .	412
produced in United States in 1887, and value, I. . . . .	411
Building and constructive ceramics, II. . . . .	395
Bur clover ( <i>Medicago denticulata</i> ), V. . . . .	739
Burden, Kinsey, sr., improvement of Sea Island cotton, V. . . . .	703
Burglar alarms, IV. . . . .	133
Burgundy, hop-raising encouraged in, V. . . . .	237
Burnettizing wood. American experiments in, II. . . . .	750
Buss's speed indicators and recorders, III. . . . .	230

	Page.
Bussey Institution, foundation of, v .....	817
<i>Buteo borealis</i> , v .....	781
Butter, adulterations of, v .....	783
and oleomargarine, IV .....	571
Butter-making, v .....	586
Butterine, manufacture of, v .....	549
Buttermilk appliances, v .....	254

## C.

Cabbages—	
Cultivation of as garden crop, v .....	655
Extensively raised near Chicago, v .....	655
French exhibit of, v .....	68
Prices during season, v .....	659
Varieties grown in garden, v .....	655
Cable towage for boats on canals and rivers, III .....	625
Cacao, exhibits and cultivation of, v .....	133
Cadegal fan brake and gravity road at the Bilboa iron mines, III .....	292
Cail (the) works, exhibit of guns, IV .....	395
Calais harbor works, III .....	670
school of art, II .....	29
California, great grape region, v .....	679
peanut raising discontinued in, v .....	674
<i>Caloptenus spretus</i> , estimated loss by, v .....	604
Cambodia exhibits—	
Drawing and modeling, II .....	164
Musical instruments, II .....	171
Stationery, etc., II .....	158
Vegetables, v .....	102
Campani's methods in making telescopes, II .....	217
Canada, probable increase in wheat produced, v .....	627
yield of wheat per acre, v .....	627
Canagua, v .....	133
Canary seed, cultivation in France, v .....	55
in Argentine, v .....	131
Cance are lamp, IV .....	55
Cane fields, replanting of, v .....	693
Cane sugar—	
Annual production of, v .....	693
Diffusion applied to production of, v .....	693
Production confined to South, v .....	692
Vacuum boiling employed in production of, v .....	693
Canned fruits, centers of industry in, v .....	676
goods, average price of, v .....	671
Canneries, number given by States, v .....	670
Canning industry causes increase in prices of fruits and vegetables, v .....	668
history of, v .....	668
its development, v .....	669
Cantaloupes, cultivated in France, v .....	79
largely grown in Middle States, v .....	653
Cantharides, exhibits of, v .....	438
Caoutchouc, principal export of Angola, v .....	118
production of, v .....	99, 118, 136

	Page.
Cape Antifer light-house apparatus, III.....	870
Cod, a cranberry plantation, v.....	681
of Good Hope, agricultural exhibit of, v.....	112
Verde, agricultural exhibit of, v.....	117
Caper, grown in southern France, v.....	83
Cardew volt meter, IV.....	208
Carels Bros.' compound engine, III.....	122
Carob, uses of, v.....	116
Carpentier's electrometer, IV.....	202
modification of Thompson's galvanometer, IV.....	191
Carriages, wagons, harness work, and saddlery—	
Exhibit of cycles and awards for, III.....	62
Humber & Co., Rudge Cycle Co., gold medal; Serpolet Bros.	
Healy & Co.'s exhibit, III.....	61
Carrots, cultivation and use in France, v.....	74, 79
varieties grown in garden, v.....	654
most grown for table, v.....	649
Carthage, exhibit in superior education, II.....	145
Cassava, grown in New Caledonia, v.....	103
Cast-iron projectiles, IV.....	273
Castolet bridge, III.....	782
Castor bean, best brands, v.....	664
cultivation of, v.....	662
oil of, used for medicine, etc, v.....	663
used in manufactures and for lubricating, v.....	664
Cattle—	
Algerian, v.....	96, 122, 234, 467
Angeln, v.....	463
Aryshire, v.....	583
Belgium and Holland, exhibit of, v.....	463
Breeds kept for beef, v.....	556
Breton, v.....	465
Care of, v.....	583
Dairy, kind, care, and management of, v.....	580
Devon, v.....	583
English races of, v.....	462
Flemish races of, v.....	465
French races of, v.....	465
Garonnaise, v.....	466
Guelma or Cheurfa race of, v.....	467
Guernsey, v.....	583
Hereford, v.....	462
Holstein-Friesian, v.....	582
Improved breeds of, v.....	582
Increase of, v.....	803
In Hawaii, v.....	129
Jersey, v.....	582
Number and value in United States, v.....	554
On western ranches, v.....	560
Parthenaise, v.....	466
Raising and feeding, v.....	539, 553
Rearing and feeding, v.....	123, 129, 234
Salt-roll for, v.....	261

	Page.
Cattle—Continued.	
Shorthorn, v . . . . .	461, 588
Slaughtering at Chicago houses, v . . . . .	543
Transportation of, v . . . . .	540
Cattle and swine rearing and feeding in the United States, report of Geo. E. Morrow, v . . . . .	553
Cauderay-Fregar watt-hour meter, IV . . . . .	217
Cauliflower, localities suited to growth of, v . . . . .	655
prices always high, v . . . . .	659
Cedar apples ( <i>Gymnosporangium macropus</i> ), v . . . . .	790
Cedrat, or grape-fruit, v . . . . .	683
Celery, amount grown near Kalamazoo, Mich, v . . . . .	656
exhibition of, v . . . . .	82
varieties grown, v . . . . .	656
Cellars, for wine making, v . . . . .	376
Cells for large output of electricity, IV . . . . .	167
small electric currents, IV . . . . .	173
of the Leclanche type, IV . . . . .	170
Centrifugal pumps, III . . . . .	180
Century plant, fiber from leaves utilized, v . . . . .	720
Cépe, edible mushroom, v . . . . .	40
Ceramics—	
Building and constructive ceramics, II . . . . .	395
Customs duties on porcelain and faiences, II . . . . .	296
Enamels, II . . . . .	304
Exhibits of Austria-Hungary, II . . . . .	301
Belgium, II . . . . .	301
China, II . . . . .	302
Denmark, II . . . . .	301
France, II . . . . .	299
Great Britain, II . . . . .	300
Holland, II . . . . .	301
Italy, II . . . . .	301
Japan, II . . . . .	302
Monaco, II . . . . .	301
the national manufactory of Sevres, II . . . . .	297
United States, II . . . . .	302
Grosse porcelain, II . . . . .	299
Industrial porcelain, II . . . . .	302
Mosaics, II . . . . .	304
“Nouvelle Porcelain,” II . . . . .	297
Number of exhibitors, II . . . . .	296
Report of David Urquhart, jr., II . . . . .	296
<i>Cercospora gossypina</i> , v . . . . .	789
Cereal production, progress, v . . . . .	803
products, crops comprising largest proportion of, v . . . . .	680
of United States, report of Geo. Wm. Hill, v . . . . .	619
Cereals—	
Average production of, v . . . . .	803
Cost of production in North Dakota, v . . . . .	630
Diseases threatening, v . . . . .	632
Exhibits and cultivation, v . . . . .	35, 44, 45, 87, 93, 94, 106, 109, 111, 116
List of, v . . . . .	861
Per capita, produce of, v . . . . .	803
Statistics of, v . . . . .	57, 87, 125

	Page.
Cereals and farinaceous products, IV.....	469
Ceret bridge, III.....	789
Chalk battery (Edison) thermogenerator, IV.....	230
Chambrette-Ballon, J., automatic tile press, III.....	421
hub-pipe piston machine, III.....	431
small drain pipe machine, III.....	432
Champagne—	
Combining.....	414

gas lighting, IV.....	136
lock, IV.....	149
loom arrester, IV.....	148
maclaine for voting, IV.....	149
organ, IV.....	142
production of sulphate of copper, IV.....	154
recording and indicating apparatus, IV.....	149
reproduction of engravings, IV.....	153
treatment of liquors, IV.....	155
tricycle, IV.....	149
welding, IV.....	90
Electrical measuring instruments and scientific apparatus—	
Amperemeters and voltmeters, IV.....	207
Deprez-Carpentier, Desruelles, Ayrton, Perry, Cardew, Alioth, Woodhouse & Rawson, Edison, De Lalande, Thomson-Houston, Thomson (Elihu) electrometer form, Thomson (Sir William) converter, compound, Lippmann, recording.	
Electrometers, IV.....	202
Carpentier, Mascart, Blondlet & Curie, Lippmann.	
Electro-dynamometers, IV.....	201
Galvanometers, IV.....	190
Thomson, Carpentier, Deprez-d'Arsonval, Weidmann, heat, pocket, accessories.	
Meters, IV.....	216
Watt-hour—Cauderay-Fr-gar, Blondlot, Brille, Aron, Boiron & Cozette; ampere hour—Hookham, Jacquemier, Edison, Alioth, Heinrich & Mulberger, Thomson, Borel; time—Aubert.	

Electrical measuring instruments and scientific apparatus—Continued.	Page.
Miscellaneous measuring instruments and apparatus, IV.....	224
Standard cell, pyrometer, photometer, magnetic and fluid bridges, tasimeter, Thomson (Elihu) apparatus, influence machine, Geissler & Crook's tubes, speed register.	
Resistance boxes, IV.....	204
Electricity, report of Carl Hering, IV.....	9
Electrometer form of amperemeter, IV.....	210
Electroplating and galvanoplastic exhibits, IV.....	150
Electro-chemistry—	
Accumulators, IV.....	175
Electro-metallurgy, IV.....	156
Electroplating and galvanoplastics, IV.....	150
Exhibits—Iron oxide plating, plated zinc, accessories, coloring electrically, reproduc- tion of engravings, production of sulphate of copper, bleaching, treatment of liquors.	
Primary batteries, IV.....	156
Bichromate of potash cells, other cells for large output, cells of the Leclanche type, cells for small currents, miscellaneous.	
Electro-dynamics—	
Accessories, IV.....	78
Automatic regulators, lightning arresters, automatic safety cut-offs and fuses, switches, couplings for wires, binding posts, miscellaneous.	
Arc lamps, IV.....	52
Series system, multiple lamps, feeding of the carbons, Cance, Bardon, Pieper, Mar- quaire, Breguet, Aboilard, Brown, Henrion, Crompton, Thomson-Houston, Thomson, Jablochkoff, Sautter, Lemonnier & Company, Meritens, Le Blon, Puvillard, Arnould, Dulait, Alioth.	
Dynamos, IV.....	21
High and low tension, direction of development, field magnets, armatures, brushes, bearings and oilings, exhibits by countries, kilowatt, comparative data, watts per pound, price per kilowatt, jury tests; continuous current machines—Oerlikon, Rech- niewski, Desrozier, Thury, Edison, French Edison Company, Crompton, Belfort, Thomson-Houston, Miot, Deprez, Gramme, Sautter-Lemonnier, Breguet, Pieper, Zurich, Jaspas, Dulait, Henrion, Sperry, Perret, Postel-Vinay, Gerard, Contades; alternating current machines—Thomson-Houston, Ferranti, Heissler, Maiche; acces- sories.	
Incandescent lamps, IV.....	62
Development, Edison, French Edison Company, Sevan, Gabriel, Lodyguine, Cruto, Gérard, Khotinsky, Sunbeam, Pieper.	
Installations, IV.....	74
Lighting of the Exposition, lighting of Paris, statistics.	
Miscellaneous applications of electrical energy, IV.....	90
Welding, Thomson's process, Bernado's process, magnetic separators or sorters, illuminated fountains.	
Systems of transmission and distribution, IV.....	67
Incandescent lamp, arc lamp, power transmission and motor distribution, railroad, Edison, Thomson, Heissler, multiple series, accumulator, transformer, Thomson com- pensating, long distance, Oerlikon, electrical railway systems.	
Transformers, IV.....	49
Alternating current, constant alternating current, Jablochkoff candle, continuous current.	
Electro-dynamometers, IV.....	201
Electro-metallurgy, IV.....	156
Elevator rake, description of, V.....	290
Ellington's hydraulic balance elevator, III.....	209
Ellsworth, Henry L., interest in agriculture, V.....	822
Embankment works for the improvement of the tidal Seine, III.....	651
Embroidering machines, exhibits of, III.....	38
Enamels, II.....	304
Endive, cultivation of, V.....	81

	Page.
Endive, for fall and winter use, v.....	657
English railway rolling-stock exhibits—	
London, Brighton and South Coast Company, III.....	474
London and Northwestern Company, III.....	477

staff of, in United States Department of Agriculture, v.....	612
National Museum, v.....	612
Entomology, economic—	
American literature on, v.....	604
List of exhibits, v.....	854
State and experiment stations, v.....	612
Present status in United States, v.....	611
<i>Entomosporium maculatum</i> , v.....	790
<i>Epidendron vanilla</i> , cultivation in Réunion, v.....	97
Erinose ( <i>Phytoptus vitis</i> ), v.....	792
<i>Ervum lens</i> , French exhibit of, v.....	67
Escher, Wyss & Co.'s engines, III.....	120
exhibit of Girard turbines in use at Chaux de Fonds.	156
Jonval turbines in use at Genoa, III.....	156
Estienne telegraph system, IV.....	101
Estimated and actual cost of exposition buildings, operations, etc, I.....	215
<i>Eucalyptus globulus</i> at Monaco, v.....	116
<i>Euchlena luxurians</i> as a forage plant, v.....	56
European dietaries, v.....	808
Euston, Alex., statistics of castor bean industry, v.....	663
Evrard, Alfred, process for tempering steel plates, with tests, IV.....	264
Exhibitors, circular of announcement to, (Appendix I), v.....	851
in retrospective exhibit of French art, II.....	98
Painters in oil: David, Manet; Daubigny, C. F.; Courbet, Fromentin, Cabanel, Brassat, Baudry, Drolling, Mme. Lebrun, Vernet, Watteau, Prud'hon, Girodet, Gérard, Gros, Guerin, Ingres, Coignet, Géricault, Corot, Delaroche, Delacroix, Isabey, Diaz, Troyon, Rousseau, T.; Millet, Muller, Couture, De Neuville, Regnault, Bastien Lepage, Déchamps, Dupré, Bonheur, Bonnat, Bouguereau, Breton, Carolus-Duran, Cazin, Chaplin, Collin, F. Cormon, Dagnan-Bouveret, Detaille, Duez, Français, Gérôme, Gervex, Harpignies, Herbert, Henner, Humbert, Laurens, Lefebvre, Lhermitte, Luminais, Maignan, Meissonier, Morot, Pelous, Pointelin, Puvion de Chavannes, Roll, Tattegrain, Weber, Ziem, Zuber, Barrias, Bloch, Bordes, Boutigny, Bramtot, Brouillet, Carrière, Chartran, Chigot, Clairin, Dawant, Delahaye, Dubois, Ferrier, Friant, Geoffroy, Giacomotti, Gilbert, Girardot, Humbert, Jean-Nicot, Krug, Lagarde, Le Blant, Le Poittevin, Lesur, Maillard, Merson, Montenard, Moreau de Tours, Perrandau, Perret, Rochegosse, Roy, Saintpierre, Tissot, and Weerts.	

Exhibitors, etc.—Continued.	Page.
Painters in water colors and drawings: Barye, Baudry, Boilly, Coignet, Courbet, Courture, Doumier, David, Decamps, Delacroix, Dutertre, Fragonard, Garvarni, Gérard, Géricault, Grandville, Ingres, Isabey, Johannot, Millet, de Neuville, Prud'hon, Regnault, A. Vernet, Watteau.	
Sculptor: Houdon.	
Architectural draftsmen: Brougniart, Cassas, Fontaine, Baltard, Percier.	
Engravers, lithographers, and etchers: Bonnat, Flameng, Achille and Jules Jacquet, Meissonier, Bouvin, Corot, Daubigny, Decamps, Delacroix, Jacquemart, Manet, Proud'hon, T. Rosseau.	
Exhibitions of live stock, report of C. V. Riley and Amory Austin, v. . . . .	461
Exhibits of the city of Paris in hygiene and public charities, report of W. H. Chandler, PH. D., II. . . . .	757
General hospitals, special hospitals, school of midwifery, asylums and houses of refuge, establishments of general service.	
Expenditures of Foreign Commissions at Paris, I. . . . .	222
United States Commission, I. . . . .	455
Experiment stations—	
Act of 1887, v. . . . .	820
Bill establishing, v. . . . .	817
Chronology of organization, v. . . . .	846
Establishment by various States, v. . . . .	819
Financial condition of, v. . . . .	821
Great value of, v. . . . .	821
National aid for, v. . . . .	819
Number of workers and revenues of, v. . . . .	847
Officers of, v. . . . .	821
Experimental farms, stations, etc. v. . . . .	154
Explosives, report of Prof. Spencer B. Newbury, II. . . . .	604
Gunpowder, gun cotton, explosives containing nitroglycerine, explosives containing other organic nitro compounds, dynamite.	
Export and product of cotton, v. . . . .	805
corn, v. . . . .	802
hog products, v. . . . .	805
wheat, v. . . . .	803
Exports from the United States of—	
Copper from 1867, I. . . . .	392
Domestic merchandise, 1887-'88, v. . . . .	807
Fresh beef, v. . . . .	804
Lead, from 1867, I. . . . .	397
Mineral oils in 1887-'88, I. . . . .	409
Roofing slate in 1887-'88, I. . . . .	412
Silver in 1887-'88 to China, Japan, The Straits, etc., I. . . . .	422
Extent of art influence in France, II. . . . .	10

contents of the report, I .....	XXI
General electrical supplies—	
Carbons, IV .....	247
Fixtures, IV .....	250
Hard rubber, IV .....	249
Porcelain and earthenware, IV .....	249
General mechanics—	
Circular of information for the jury furnished by exhibitors, III .....	74
Classification of exhibits, III .....	73
Displays in United States section and awards, III .....	71
Worthington Pumping Engine Company, grand prize; American Elevator Company, Armington & Sims, C. H. Brown & Co., Crosby Steam Gauge and Valve Company, Otis Bros. & Co., Straight Line Engine Company, Jerome Wheelock, gold medals.	
Distribution and value of awards, III .....	72
Gas-engine exhibitors, III .....	131
Otto, Lenoir, Delamare Deboutteville & Malandi's simplex, tests of gas consumption, Louis Charon's, Ravel, Ragot (petroleum), Taylor, Griffin. Crossley Bros., Baldwin.	
Hydraulic machinery, III .....	154
Jonval or Fontaine turbines, Girard turbines in use at Chaux-de-Fonds, J. J. Reiter's exhibit, Brault, Tissot & Gillet's exhibit, Berge's installation of wheels under great heads.	
Instruments for measuring pressure, speed, etc., III .....	224
Pressure gauges (Bourdon's), Buss's speed indicators and recorders, steam-engine indicators, water meters (Schönheyder, Thompson).	
Pneumatic postal dispatch, III .....	219
Pumps and pumping engines, III .....	173
Hand and power pumps (Montrichard's), direct-acting steam pumps, pumping engines (Worthington's, Wheelock's), centrifugal pumps, Forcot's, Décour's, Nezeraux's), hydraulic rams, (Bollee's, Durozof's ram pump, W. B. Douglass's, Gould's Manufacturing Company's Silver & Deming Manufacturing Company's), hydraulic elevators (Roux, Combaluzier & Lepape's Otis, Edoux, Ellington).	
Report of C. B. Richards, M. A., III .....	71
Space allotted to exhibitors of, III .....	71

	Page.
General mechanics—Continued.	
Steam boilers, III. ....	76
Sectional, Babcock & Wilcox, Root, De Nayer, Roser, Belleville, shell, Galloway, Dulac with Field tubes, Serpolet's steam generator.	
Steam engines, III. ....	98
Exhibit in general, Weyher & Richemond, Farcot, Brasseur, Le Couteux & Garnier, Corliss cut-off gear, Bonjour, Fricart's releasing valve gear, De-Ville-Chatel & Co. with Fricart's gear, Sulzer, Escher, Wyss & Co., Carels Bros. compound, in United States section, in British section, Parson's compound turbine.	
Transmission of power by compressed and rarefied air, III. ....	211
Popp system, Petit & Boudenot's system.	
General review of the sixth group—	
Allotment of space in machinery hall, III. ....	15
Class 48. Mining and metallurgy, III. ....	24
50 and 51. Agricultural work, food industries, and chemical manufactures, III. ....	27
53. Machine tools, III. ....	28
54 and 55. Machinery and processes for the textile industries, III. ....	32
56. Machines for sewing and the manufacture of clothing, III. ....	33
57. Manufacture of articles for furniture and dwellings, III. ....	43
58. Paper manufacture and printing, III. ....	47

Character of, etc.—Continued.	
Ores of mercury from Servia.	
Ozocerite from Galatia.	
Nephrite, graphite, jade: M. Alibert, Russia.	
Malachite, lapis lazuli, etc.: M. Wœrfel, Russia.	
Topaz crystals from Ural Mountains.	
Pyrogranit: Paul de Kristoffowitch.	
Ores of mercury: Russian Mercury Mining Society.	
Silver from the Königsberg mine, Norway.	
Rare earths from Norway.	
Opals from Hungary.	
Amber from Roumania.	
Calamine from Laurium mines, Greece.	
Lapis lazuli from Persia.	
Marbles, etc., from Algeria.	
Sapphire, zircon, and tourmaline from Madagascar.	
Topaz from Japan.	
Nickel ores, etc., from New Caledonia.	
Jade from New Zealand.	
Gold from South Africa.	
Silver, onyx, crystals from Mexico.	
Silver ores from the Argentine Republic.	
Precious stones and Indian ornaments from Brazil.	
Silver ore from Potosi and Pulacayo mines, native copper from Corocoro, bismuth from Tupiza, lapis lazuli, arsenic, and proussite, Bolivia.	
Proussite (ruby silver) and soda from Chile.	
Marbles and salt from Paraguay.	
Anaconda copper ore, Black Hills columbite, Copper Basin ozurite and malachite, Black Hills cassiterite (tin), New Almaden quicksilver, agatized tree trunks, Maine tourmalines, United States.

Production of—Continued.	
Lead and silver in Leadville from 1860, I. . . . .	397
Lime in 1887, and value, I. . . . .	411
Manganese ore in 1887, I. . . . .	404
Mica in 1887, and value, I. . . . .	411
Nickel in 1887, I. . . . .	405
Phosphate rock in South Carolina, 1887-'88, I. . . . .	410
Precious stones and gems, including gold quartz, 1883-'87 (est.), I. . . . .	412
Pyrites, 1882 to 1887, I. . . . .	405
Quicksilver at New Almaden, Cal., from 1850, I. . . . .	402
in California, from 1879, I. . . . .	400
the United States, 1887-'88, I. . . . .	399
Roofing slate, 1884 to 1887, and value, I. . . . .	412
Salt from 1883 to 1887, by localities, I. . . . .	407
Silver from 1870, I. . . . .	384
Zinc (spelter), 1882 to 1887, inclusive, by States, I. . . . .	399
Report of W. P. Blake, I. . . . .	363
Shipment of iron, iron ore, and products of, 1886, 1887, and 1888, I. . . . .	378
Statistical tables, etc., I. . . . .	363
Mining and metallurgy—	
Awards to United States exhibitors, III. . . . .	24
Cyclone Pulverizer Company, Ingersoll Rock Drill Company, Theodore Blake, Elmer Sperry & Co. . . . .	
Blowing machinery for metallurgical works, III. . . . .	304
Cockerill engine. . . . .	
Boring and shaft-sinking, III. . . . .	249
Lippman's patent filtering column, lifting ram, reamer, pipe cutter and nippers for shaft-sinking; light sinking outfit, solid trepans, couplings for rods, bell and cone joints, Kind-Chaudron process for sinking shafts, and Lippman's modification. . . . .	
Classified table of exhibits and awards, II. . . . .	402
Crushing machinery, III. . . . .	301
Blake multiple-jaw crusher. . . . .	
Gyrating screen for coal, exhibited by E. B. Coxé, III. . . . .	24
Hoisting machinery, III. . . . .	270
Tail rope counterweight at the Lyons shaft of the Montrambert de la Bérandière Coal Mining Company, Rossigneux's pump-rod balance, brake attachment for hoisting engines, Champigny's V-grooved pulley for wire ropes. . . . .	
Mining tools and appliances, III. . . . .	278
Safety lamps (Gray's, Fumat's, Davy's, Clanny's, Marsaut's, Mueseler's); fastenings for safety lamps (Cuvelier's, magnetic, lead-rivet); steel mine cars, Hardy's patent picks, and multiple wedge. . . . .	
Mining transportation, etc., III. . . . .	289
Transportation by hanging chains, at Aïn-Sedma, Algeria; Cadegal fan-brake and gravity road at Balboa; Malissard-Toza's automatic "Basculeur," or dumping plant; Fougerat's "Basculeur" coal-transferring plant at Eleu. . . . .	
Production of coal, iron ore, pig iron, steel, zinc, and copper, by countries, II. . . . .	402
lead and minor metals in the United States, II. . . . .	403
Products of Class 41, II. . . . .	401
Review by C. B. Richards, M. A., III. . . . .	24
Rock drills and air compressors for mines, III. . . . .	263
Bosseyeuse drill, Dubois & Francois air compressor, cost of compressing air, ventilation by the Korting jet blower, heating air for compressed-air motors. . . . .	

Mining and metallurgy—Continued.	Page.
Rolling mills and iron-working appliances, etc., III .....	305
Universal reversing-plate mill of Chatillon et Commentry, reversing 26-inch blooming and rail train at Valenciennes, Fox's patent corrugated boiler flues and furnaces, Lafitte's patent flux plates, self-skimming foundry ladle.	
Minneapolis mills, product of, V .....	627

Trials of, v. . . . .	282, 296, 299
Wood, inclosed gear, v. . . . .	300
Moyotte, exhibits of drawing and modeling, II. . . . .	165
scientific instruments, II. . . . .	182
Mozambique, agricultural exhibit of, v. . . . .	118
Mueseler's safety lamp, III. . . . .	283
Multiple series system of transmitting electricity, IV. . . . .	70
Museum of Natural History at Paris, v. . . . .	189
U. S. National, entomological work of, v. . . . .	611
Mushrooms—	
Common meadow, v. . . . .	38
Edible, v. . . . .	38
Exhibit of, and truffles, v. . . . .	38, 106
French exhibit of, v. . . . .	38
Musical instruments—	
Exhibits of Belgium, II. . . . .	169
France, II. . . . .	167
Great Britain, II. . . . .	170
Italy, II. . . . .	169
Switzerland, II. . . . .	169
the United States, II. . . . .	170
various countries, II. . . . .	170
Report of Arthur J. Stace, commissioner, II. . . . .	165
Muskmelons, abundant in all markets, v. . . . .	653
Must scale, the Baumé, v. . . . .	372
Gay-Lussac, v. . . . .	372
Guyot, v. . . . .	373
Mustard, cultivation in France, v. . . . .	83

	Page.
Mustard for greens and salad, v . . . . .	657
Myrick, Herbert, report on associated dairying in New England, v . . . . .	565
silo and ensilage, v . . . . .	743
<b>N.</b>	
Nails, production of, I . . . . .	379
Nancy School of Art, II . . . . .	30
National automatic knitter for seamless hosiery (Walter P. McClure, exhibitor), III . . . . .	401
manufactory at Sevres, exhibit of, II . . . . .	297
need of art culture, II . . . . .	7
Navigation of the Seine from Paris to the sea, III . . . . .	649
Netherlands, exhibit of cattle, v . . . . .	463
Nevada's production of silver in 1887, I . . . . .	385
New Caledonia—	
Agricultural products of, v . . . . .	103
Exhibits :	
Agriculture, v . . . . .	102
Drawing and modeling, II . . . . .	165
Printing and books, II . . . . .	154
Scientific instruments, II . . . . .	182
New York, discovery of salt in, I . . . . .	407
hop-raising district of, v . . . . .	667
State Agricultural College, foundation of, v . . . . .	815
New Zealand—	
Agricultural exhibit of, v . . . . .	102
products of, v . . . . .	103
Producing peanuts, v . . . . .	674
Seed and cereal exhibit of, v . . . . .	111
Newbury, Prof. Spencer B., Cornell University, report on photographic proofs and apparatus, II . . . . .	201
chemical and pharmaceutical products, II . . . . .	529
Newton, Isaac, first Commissioner of Agriculture, v . . . . .	825
Newton's invention of the pitch-tool for polishing, II . . . . .	218
Nezeraux's centrifugal jet pumps, III . . . . .	190
Nicaragua, agricultural exhibit of, v . . . . .	138
Nice School of Art, II . . . . .	30
Nickel—	
Alloys of, with steel; paper by James Riley, before Glasgow Iron and Steel Institute, II . . . . .	455
Discovery of ores of, in Oregon, I . . . . .	405
Exhibitors of, I . . . . .	404
ore, II . . . . .	448
"Le Nickel" Mining and Smelting Company, Christophe & Co., L'Epène & Co., Fonderie de Nickel et Métaux blancs, France; Ringerie Nickel Mines and Works, Norway; Oregon Nickel Company.	
Produced in the United States in 1887 . . . . .	405
Value of metal produced in the United States in 1887 . . . . .	404
<i>Nicotiana persica</i> , furnishes Tumbeki, v . . . . .	727
<i>rustica</i> , originated in Brazil, v . . . . .	727
<i>tabacum</i> , first found in Virginia, v . . . . .	727

	Page.
Nixon nozzle, use of, v . . . . .	611
Non-magnetic watch movements, IV . . . . .	246
Norfolk, center of peanut trade, v . . . . .	673
mills for preparation of peanuts, v . . . . .	674
Norway and Sweden exhibits—	
Agriculture, v . . . . .	116
Art department, II . . . . .	85
Mlle. Harriet Baeker, Jacob Bratland, Jacob Gloersen, Hans Heyerdahl, Mlle. Kitty Kielland, Christian Krohg, Gerhard Munthe, Ellip Peterson, Christian Skredevig, Fritz Thaulow, Erik Werenskiold.	
Chemical and pharmaceutical products, II . . . . .	642
Drawing and modeling, II . . . . .	163
Maps and apparatus, II . . . . .	189
Journalists' Association, Dietrichson.	
Medicine and surgery, II . . . . .	176
Stoerner.	
Musical instruments, II . . . . .	171
Printing and books, II . . . . .	154
Scientific instruments, II . . . . .	182
Schools, II . . . . .	128
Marie Rosing's girls' school at Christiania.	
Secondary instruction, II . . . . .	135
Stationery, etc., II . . . . .	158
Superior education, II . . . . .	144
Nossi Bé, exhibit of, v . . . . .	100
"Nouvelle porcelain," discovery of, and composition, II . . . . .	297
Nozzles—	
Nixon or climax, v . . . . .	611
Riley or Cyclone, description of, v . . . . .	610
Spray, consideration of, v . . . . .	610
Universal spray tip, v . . . . .	610
Number of exhibitors of machinery by nations and classes, III . . . . .	12
farmers and farm laborers, v . . . . .	798
Nurseries of Tunis, v . . . . .	94
Nury's machine for punching rails, etc., III . . . . .	327
Nut-chamfering machine, III . . . . .	326
Nye & Fredick automatic circular rib-knitting machine, III . . . . .	376
circular rib-cuff machine, III . . . . .	394

## O.

Oatmeal, increase in use of, v . . . . .	629
Oats—	
Distribution in United States, v . . . . .	800
Exhibits and cultivation of, v . . . . .	50, 86, 114, 120
Increase in acreage of, v . . . . .	629
crop of, v . . . . .	800
Statistics of, v . . . . .	59
Varieties of, v . . . . .	629
Weight of, per bushel, v . . . . .	629
Oca, cultivation of, in Bolivia, v . . . . .	135
Oerlikon bevel gear planer, III . . . . .	357
dynamo, IV . . . . .	28
system of transmitting electricity, IV . . . . .	72

	Page.
Official instructions to Commissioner-General Franklin by Secretary of State Bayard, I. ....	XI
Oidium, or powdery mildew, v .....	352
Oil, cotton-seed, v .....	705
olive, production of, v .....	44, 110, 117, 125
vegetable, production of, v .....	99, 101, 118
Okra, grown for its fiber, v .....	718
in market gardens, v .....	654
Oleo oil, manufacture of, v .....	549
Oleomargarine, manufacture of, v .....	549
under the microscope, v .....	783
Olives—	
Cultivation of, v .....	110
Exhibit of, v .....	44
Mill for crushing, v .....	247
Mode of preserving, v .....	44
Presses for, v .....	245
Stone roller for crushing, v .....	247
Successfully grown in California, v .....	684
Olive-oil press, v .....	246
Ollagnier's lever press for tiles, III .....	417
Oloron railway bridge, III .....	796
Onions—	
Average price of, v .....	648
Prices for earliest, v .....	659
Varieties cultivated in France, v .....	82
grown, v .....	648
Where most extensively grown, v .....	647
Operations on the Comstock lode in 1888, I. ....	385
Optical instruments and optical material—	
Exhibit of industrial optics, II. ....	232
Flat glasses and mirrors, by E. J. Radiguet.	
Spectacle lenses of colored glass, by the Société des Lunetiers.	
Achromatic spectacles and eyeglasses.	
Opera and field glasses, by Baille-Lemaire, Bardon, Bourdon, Colmont, Frêchet, Levy, and others.	
Apparatus for light-houses and other marine signals, by the Palais des Arts Libéraux.	
Exhibit of miscellaneous apparatus, II. ....	228
Heliostats, Becquerel phorphroscope, reading telescope, filar micrometer, aids to photometric determinations, by Ph. Pellin.	
Lantern with vertical attachment and silemium cell, by Albert Duboscq.	
Saccharimeters and tools, by Léon Laurent.	
Projection and polarization apparatus, by Victor Lefébvre.	
Lecture demonstration apparatus, by E. Lutz.	
Goniometers, by A. Picart.	
Lenses, mirrors, and crystal, by Benoit & Berthoit.	
"Aplanatic" mirror, by Th. Simon.	
Glass and crystals, by Ivan Werlien.	
Instrument for determining the foci and axial optical constants of small optical systems, by Mr. Margier.	
Exhibit of microscopes by Austria-Hungarian makers, II. ....	227
British makers, II .....	227
French makers, II .....	228
telescopes by British makers, II .....	224
French makers, II .....	222
History of the invention of optical glasses by Guinand, II. ....	235

	Page.
Optical instruments and optical material—Continued.	
Improvements in illuminating apparatus for light-houses, Fresnel's invention, II. . . . .	233
Professor Abbe's apochromatic microscopes, II. . . . .	227
Report of Prof. Chas. S. Hastings, Sheffield Scientific School, Yale University, II. . . . .	213
Search-light apparatus, II. . . . .	235
Orange, cultivation in Monaco, v. . . . .	116
increasing proportions of, industry, v. . . . .	682
leaf scab ( <i>Cladosporium sp.</i> ), v. . . . .	790
Orange-growing in California, v. . . . .	682
Florida, v. . . . .	682
Orchard grass ( <i>Dactylis glomerata</i> ) v. . . . .	737
Ordinary applications of the arts of drawing and modeling, II. . . . .	158
Organization, methods, and appliances of agricultural instruction, report of	
C. V. Riley, v. . . . .	161
and material for secondary instruction, II. . . . .	130
of the French general commission, I. . . . .	214
Ornithology, economic, v. . . . .	779
<i>Orobranche minor</i> , as a forage plant parasite, v. . . . .	56
Osage orange, as silkworm food, v. . . . .	614
Oscillating bridge over the Dames canal lock, III. . . . .	638
Otis elevators, III. . . . .	202
railway joint, III. . . . .	511
Otto gas engine, III. . . . .	134
Oury process for producing iron, II. . . . .	432
<i>Oxalis crenata</i> , v. . . . .	133
<i>Oxycoocus macrocarpus</i> , large areas suited to, v. . . . .	681

## P.

Paget warp knitting machine, III. . . . .	388
Paine, S. White, shoe-lasting machine, III. . . . .	43
Palm, date, cultivation of, v. . . . .	89
varieties of, v. . . . .	90
Panhard & Lavassor's band saws for metal, III. . . . .	328
<i>Panicetum tryphoideum</i> in Algeria, v. . . . .	86
<i>Panicum</i> , cultivation and use of, v. . . . .	54
<i>sanguinale</i> , crab grass, v. . . . .	739
<i>texanum</i> , v. . . . .	738
Paper and printing—	
Debie mill-board machine, III. . . . .	49
Delcambre composing machine, III. . . . .	52
Exhibit of paper-bag machine, III. . . . .	59
paper-making machines, III. . . . .	47
Darblay, D'Nayer & Co., Dautreband & Thiry, Escher Wyss & Co.	
Printing presses, III. . . . .	49
Campbell Printing Press Company, Casey Machine and Supply Company, Golding & Company, Liberty Machine Works, John Thompson, Vve. Alauzet & Tiquet, Kientzy Bros.	
Thorne type setting and distributing machine, III. . . . .	53
Type and type-printing material, III. . . . .	51
Setting and distributing machines, III. . . . .	51
Lagerman, Delcambre, Thorne.	
Paper-bag machines, III. . . . .	59

	Page.
Paper-making machines, III	47
Paraguay, agricultural exhibit of, v	139
maps and apparatus, exhibit of, II	190
tea, v	139
Parceling of soil, v	512
resolutions of international congress on, v	515
Paris, exhibit of in hygiene and public charities, II	757
Paris, Lyons and Mediterranean Railway Company, exhibit, III	450
Parks, C. Wellman, superintendent of liberal arts, report, I	67
on technical in-	
struction, II	193
Parrot Silver and Copper Co., Butte, Mont., description of works, II	442
Parsley, most frequent seasoning herb, v	657
Parsnips, much defective seed of, v	655
raised for winter use, v	655
Parson's compound steam turbine, III	126
Particulars of boilers supplying steam in machinery hall, III	21
steam engines used in machinery hall, III	19
Pasteurizing. (See <i>Chauffage</i> , under <i>Wines</i> .)	
Patents for manufacture of alloys of nickel and steel, II	458
Pathology, vegetable, exhibit of section of, v	789
Paulet's metal railway tie, III	516
Pearn's lightning tapper, III	357
Pea-fowls, v	472
Pea-sheller, the Dondey, v	306
Peach, black spot of ( <i>Cladosporium carpophilum</i> ), v	791
Peaches, canning of, v	670
varieties grown, v	677
where grown, v	677
and peach yellows. distribution of, v	794
Peach yellows, v	677
photographs of, v	794
Peanuts—	
Argentine export of, v	132
Crop and values for 1866, v	673
Cultivation of, v	98, 101, 132
and commerce in, v	673
Culture in the Rivières du Sud, v	99
Development of industry in United States, v	673
Their cultivation and commence in the United States, report of Alex. McDonald, v	673
Total crop of United States, v	674
Used in making oil, v	673
Pear, the, grown in nearly all parts of United States, v	678
varieties grown, v	678
blight, distribution of, v	794
Pear-leaf blight ( <i>Entomosporium maculatum</i> ), v	790
Pears, canning of, v	670
Pease—	
As a field crop, v	640
early garden crop, v	653
Mode of cultivation of, v	66
Varieties of, v	66, 653
Yield of principal States, v	641

	Page.
Peen-to, peach from China, v. ....	677
Pennsylvania Railroad Company exhibit, III. ....	495
Pepper grass, for salad, v. ....	657
Peppers, French exhibit of, v. ....	83
grown for pickling and seasoning, v. ....	654
varieties grown, v. ....	654
Perfumery, soaps, etc., II. ....	330
Permanent charge telegraph system, IV. ....	101
<i>Peronospora viticola</i> , distribution of, v. ....	793
Perret dynamo, IV. ....	44
Perry volt meter, IV. ....	208
Persia, agricultural exhibit of, v. ....	127
Peru, agricultural exhibit of, v. ....	139
Petit & Boudinot's system of distribution of power by rarified air, III. ....	218
Petroleum and natural gas—	
Compounds of petroleum used as insect-destroyers, v. ....	607
Consumption of natural gas, I. ....	407
Exhibitors of, I. ....	410
Exports of mineral oils, 1887-'88, I. ....	409
Number of wells completed, new production of crude petroleum, and average per well, 1887-'88, I. ....	409
Pipe line deliveries of crude petroleum, 1888, I. ....	408
Principal localities, where found, I. ....	407
Production of crude petroleum in United States from 1859, I. ....	408
distilled petroleum, II. ....	643
Value of oil produced since 1860, I. ....	409
<i>Phalaris canariensis</i> , cultivation of, in France, v. ....	55
Pharmaceutical products, II. ....	630
<i>Phaseolus radiatus</i> , cultivation in Japan, v. ....	127
<i>vulgaris</i> , cultivation in France, v. ....	65
<i>Phleum pratense</i> , v. ....	737
<i>Phoenix dactylifera</i> , cultivation of, v. ....	87
Phonopore telegraphy, IV. ....	111
Phorodon, hop, difficulties in controlling, v. ....	606
Phosphate rock, produced in South Carolina in 1887-'88, I. ....	410
"Photograph without an objective"—the "pinhole" camera, by R. Colson, II.	207
Photographic cameras, II. ....	203
Watson & Sons, of London, Shaw & Co., of London, Eastman Dry Plate and Film Company, of Rochester, the "Kodak."	
Photographic lenses—	
Change in types of, II. ....	201
Exhibit of France, II. ....	202
C. Berthiot, J. Zion, E. Français, Fleury-Hermagis.	
Exhibit of Great Britain, II. ....	202
J. H. Dallmyer & Co., Ross & Co.	
Photographic proofs, display of, II. ....	205
and apparatus, report of Prof. Spencer C. Newbury, Cornell University. ....	201
Photographic proofs and processes—	
Displays of, II. ....	208
Instantaneous views, by H. de Perpigna, Grassia, G. West & Sons.	
Portrait work, by Walery of London, Lafayette of Dublin, Burnside of Guernsey, Thompson & Vander Weyde of London, Sarony of New York, Scholten & Guerin of St. Louis, Bloch of Brooklyn, Falk of New York, Decker of Cleveland, Clark of Chicago.	

Photographic proofs and processes—Continued.

Diplays of—Continued.	Page.
The platinotype.	
Flexible tissues as support for film, by the Eastman Company, Rochester, New York.	
Gelatin-bromide paper, by the Eastman Company, Morgan & Co. of London, Nadar of Paris.	
The Carbon process, by Braun of Paris.	
Cyanotype or blue print process.	
Landscape photography, by Fleury of Pontresnia, Nille Hinnen of Zurich, Geo. F. Baker, Niagara Falls, the United States Geological Survey.	
Lantern slides of albumen, by J. Levy & Co. and Lachenal & Co. of Paris.	
Photogravure and phototypogravure, by the Goupil Co.	
Heliotype or phototype process, by Dujardin, Berthaud, and others.	
Heliotype printing, Ducos de Hauron process, by Quisac & Bacquié of Paris.	
Photographs of peach yellows, v. . . . .	794
Photomechanical processes in photography, II. . . . .	210
Photogravure and phototypogravure, heliotype or phototype process, heliotype printing, Ducos de Hauron process.	
Photometer, IV. . . . .	226
<i>Phragmidium mucronatum</i> , v. . . . .	791
<i>Phyllosticta acericola</i> , v. . . . .	791
Phylloxera—	
Bureau on, v. . . . .	162
Commission on, v. . . . .	163
Destruction of winter egg, v. . . . .	456
Grape, not yet fully investigated, v. . . . .	605
Grapevine, v. . . . .	443
History of, v. . . . .	443
In California, v. . . . .	689
Means of dispersion, v. . . . .	447
Method of controlling, v. . . . .	447
Present status of, v. . . . .	30
Remedies against, v. . . . .	30, 447
Service in France, v. . . . .	164
Station in Hungary, v. . . . .	154
Submersion as a remedy, v. . . . .	456
Physical resources of United States, v. . . . .	797
<i>Phytophthora infestans</i> , v. . . . .	792
<i>Phytophus</i> spp., sulphur and kerosene used to destroy, v. . . . .	608
<i>vitis</i> , v. . . . .	792
Pickles, exhibit of, v. . . . .	137
Piedmont section, rice grown in, v. . . . .	636
Pieper arc lamp, IV. . . . .	57
dynamo, IV. . . . .	41
incandescent lamp, IV. . . . .	66
Pig iron, production of, by countries, II. . . . .	402
States, I. . . . .	379
Pigments, paints, and varnishes, II. . . . .	624
Pilter, Th., exhibit of domain of, v. . . . .	93
Pimento, exhibit of, v. . . . .	83
Pine, long-leaved, needles of, used as fiber, v. . . . .	721
Pineapples, canning of, v. . . . .	670
grown in southern Florida, v. . . . .	683
Pinetti's automatic tile press, III. . . . .	420
cylinder mill for mixing clay, III. . . . .	415
forcing presses, piston and roll, III. . . . .	424

	Page.
<i>Pinus australis</i> , needles of, used as fiber, v . . . . .	721
process of manufacturing needles of, into fiber, v . . . . .	721
Pipe-line deliveries of crude petroleum in 1888, I . . . . .	408
Piquettes, how made, v . . . . .	423
Pistache in Algeria, v . . . . .	87
<i>Pisum sativum</i> , cultivation in France, v . . . . .	66
Pita, fiber of century plant, v . . . . .	720
Plainer light-house, III . . . . .	864
Plains, grasses on the, v . . . . .	737
Plan of agricultural exhibit, v . . . . .	23
Planer for chamfering plates, III . . . . .	319
Plant louse, hop, difficulties in dealing with, v . . . . .	605
Plants, fungous diseases of, v . . . . .	789
Plated zinc, IV . . . . .	152
Plow, Fondeur's vineyard, v . . . . .	316
Plum, the, where most successful, v . . . . .	678
<i>Poa arachnifera</i> , v . . . . .	738
<i>pratensis</i> , v . . . . .	738
<i>serotina</i> , v . . . . .	737
Pocket galvanometer, IV . . . . .	199
Poi, national diet of Hawaii, v . . . . .	129
Polarized diaphragms telephone receiver, IV . . . . .	123
Polariscope, Taylor's pocket, v . . . . .	786
Polder, explanation of term, v . . . . .	113
crops grown on, v . . . . .	114
<i>Polygonum fagopyrum</i> , use and cultivation of, v . . . . .	54
Pomelo, introduced from West Indies, v . . . . .	683
Popcorn, in the United States, v . . . . .	624
Popp system of transmitting power by compressed air and electricity (The Parisian Co., exhibitor), III . . . . .	212
Population, per cent of, engaged in agriculture, v . . . . .	798
Pork products, removal of restriction on, v . . . . .	495
Portable railways, III . . . . .	520
Portable weapons—	
Exhibitors of, II . . . . .	373
Winchester Arms Company, Smith & Wesson, Colt Arms Company, Leopold Bernard, Eley Bros., Richard & Co., Fauré-Lepage, Gaucher-Bergards, Heuse Lemoine, Pieper, La Société française de munitions, Lochet & Debertrand.	
Review by A. Van Bergen, II . . . . .	373
Superior exhibit by the United States, II . . . . .	373
Porter, H. K., & Co., locomotive, III . . . . .	499
Portrait painters of France, II . . . . .	35
Bonnat Gervex, Roll, Raffaelli Besnard, Carolus-Durand, Meissonnier.	
Portugal—	
Agricultural instruction in, v . . . . .	208
Exhibits:	
Drawing and modeling, II . . . . .	163
Insects, v . . . . .	442
Maps and apparatus, II . . . . .	190
Working sections of a railroad in Angola.	
Musical instruments, II . . . . .	170
Printing and books, II . . . . .	154
Scientific instruments, II . . . . .	182

Portugal—Continued.
