THE INVESTOR'S MONTHLY MANUAL. The INVESTOR'S MONTHLY MANUAL for May gives the Highest, Lowest, and Latest Prices of Stocks, Shares, and other Securities during the Month, the mode in which the Dividend in each case is payable, the last four Dividends, &c. It also contains

A FINANCIAL RECORD OF THE MONTH; New Capital Created and Called; Table of Railway Traffic Receipts; Notices and Reports of Stocks, Failures, Railway, Banking, Finance, Insurance, and Miscellaneous Companies New Companies and New Capital. Prices made up to May 29.

Advertisements for the next Number, to be published on June 28, must be sent, to insure insertion, on or before June 26.

#### WILL 7 PER CENT. BE ADEQUATE ?

On Wednesday last the Bank of England raised their rate of discount to 7 per cent. And this was no doubt extremely wise. The Directors of the Bank would have been much to blame if they had not so acted. The change from 5 to 6 per cent. had failed in its effect.

Then another great sum is locked up in the stores of the German Government, which is now coining at an accelerated rate, having coined 10,750,000l since the beginning of the year. And then the Alabama payment of 3,200,000l will have to be made between this and September. Bills, we believe it is arranged, will be drawn from America on certain firms in England, which will be met out of the public deposits in the Bank of England; and this will reduce the amount of those deposits, and so far the means of the Bank of England. It is true that the American Secretary of the Treasury is to announce the redemption by an equal amount of the bonds of 1862, which are mainly held in Europe. So that though 3,200,000l is paid to America by England, a somewhat similar sum will contemporaneously be paid by America to Europe. But though this may be an equation as respects Europe, it is not one as against England. All the Alabama payments must be paid by England, but all the bonds of 1862 are not held in this country. Accordingly, the English money market will probably be tightened by the operation even if the European money market is not. And the European money market will probably also be so, since a movement of money always makes it dearer, even though payments on one side are equal to payments on the other side. Indeed, it is only plain good sense that the payment of so large a sum as 3,200,000l from England to America should tend, temporarily at least, to make money dearer in England.

market therefore which is thus to arise must be postponed

Then another movement is in progress on the Continent, in consequence of the payment of the last instalment of the indemnity to the German Government. Looking to past experience the effect of these payments always has been to cause dearer money. The mere movement has caused momentary dearness, and money has been less efficient for the moment. The German Government has called in from the open money markets of Europe more than it has repaid

to those markets, and this has caused more lasting dearness. There have also been instalments of three loansthe American funding loan, the Ohilian, and the Hungarian becoming due here during the last week. These loans may not becoming due here during the last week. have been entirely taken by the public here. But the committee of the parties who have agreed with the respective Governments to find the money-the syndicates as the market vocabulary calls them-are under a stipulation to find the money necessary for the instalments, and must so find it. The effect, therefore, is the same on our market as if the instalments of the loan had been taken by the public. And England has become so completely the centre of the world's money matters that such payments are constantly becoming due here, and we must almost weekly find the money to make them. The number of little drains on our market has seldom been so great as at present, and we are not at all well able to cope with them.

For these reasons we doubt whether 7 per cent. will be enough to fill the Bank till. It is, indeed, asked whether any rate will be enough or, at least, how do we know that it will be enough # and the only answer is an appeal to experience. We have always before found that when the Bank raised its rate as high as a certain point, money seemed to come rapidly and almost by magic. No doubt on former occasions there were not all the difficulties which there now are. There was not then the great "lock-up" in the coffers of the Bank of France or in the hands of the German Government. But then on those occasions we got money not from the Bank of France or from other large stores only, but from so great a number of quarters that it was difficult to specify them. When the necessary rate of interest was reached, money from the most miscellaneous sources and in the most detached portions immediately came. And there is no reason why this should not be the case now, but every reason why it should.

#### FRANCE AND THE NEW MINISTRY.

WE were right in anticipating last week that the first result of the change of Ministry in France would be that the party which has succeeded would attempt to convert the apathetic majority of the French people to its own mind; that instead of doing what English parties do in such cases-appealing to the people to discover whether there is not a real sympathy between the constituencies and the party in power-they would begin by telling the people what to think first, and then, after a sufficient inculcation of sound views, would ask them if they had thought it. The French statesman's conception of appeals to the people is indeed very like a governess's con-ception of the nature of her duties to the small children under her charge when she first teaches them their lesson, and then asks them to say it to her to prove that they have learnt it correctly. The French Minister of the Interior inculcated the lesson he wishes the French people to learn in his circular to the prefects on Monday last. As soon as the dissolution comes, he will hope to find that they have learnt it well and that they echo it by their votes. It is true that at present he and his colleagues represent what looked a few days ago like only a small minority of the French people; and, as we said last week, no doubt a few days ago it was a very small minority. But then the question in France is too apt to be, not what the majority of the French people think on a political subject, but to which of the various small minorities they are willing, for the time being, to give their proxies; and it is possible enough that the change of government may have rendered them quite willing to transfer their proxies from M. Thiers to Marshal MacMahon. That is clearly what the new French Minister of the Interior hopes. That is what the demand made last November for "a government of combat," by those who have now got what they demanded, meant. And they are very naturally using their victory in the way in which they intended to use it. They are telling the people, in strenuous and authoritative terms, that good Frenchmen will vote for them and their candidates-not for the Left Centre candidates, and still less for the candidates of the Left; and they quite hope to be believed. "Instructions from me," says the new Minister, in his circular to his prefects, "shall not be "wanting. Do not hesitate to conform to them, and my "responsibility will cover yours. That which the National "Assembly expects before everything from the Government "which it has instituted is a personal administration, inspired

[June 7, 1873.

"by one thought, directed with precision, and placing itself openly at the head of the Conservatives. The administration " ought, in all its grades, to be the faithful representative of "the restorative policy which alone can re-establish the country "that has been no cruelly tried. Do not hesitate to state " boldly on which side are your sympathies. Invite all good " citizens to unite that they may strengthen themselves by " the strict practice of the duties of public life. It is only by "this firm conduct, and by the energetic maintenance of all " Conservative principles, that we shall be enabled to consti-"tute in France a true Governmental majority. From the " present time enter into communication with those who are " placed under your administration. The frankness of your " attitude will suffice to elevate their moral position, to dis-" courage anarchical tendencies, and to ensure everywhere " respect for the National Assembly and for the law. Let all " those who desire to reorganise the country under the Pre-" sidency of the illustrious Marshal whom the depositories of " National sovereignty have elected, know for certain that "they will be resolutely supported and defended." There is not even any pretence here of consulting or deferring to the wishes of the people of France; "there is not the slightest affectation of a wish to see the liberty of the electors guaranteed. On the contrary, the authority of the State is to be used, and used "frankly," to secure the triumph of a particular party. All who are on the side of that party are to be told authori-tatively that "they will be resolutely supported and de-"fended." Of course it follows that those who are on the other side will be as resolutely disowned, and, if necessary, attacked. The party in office intends to make office the path to power. For this purpose they must have "a true Govern-"mental majority," and that can only be obtained by preaching Conservatism as the official creed which is to bring with it favour and help. Such a proclamation by a British Home Secretary, of whatever party, would set all the United King-dom in a storm of indignation. The party that put it forward would be simply "nowhere" at the next elec-tion, no matter which party that was. We should all ask what sort of Parliament that would be which would be elected at the dictation of a Government; how a Parliamentary constitution, where Parliament was elected at the discretion of the Home Office would differ from a despotic constitution in which the farce of election was simply ignored. In a word, no more studied insult could be hurled at the British people than such a circular as this.

But it is not so in the least in France. Probably enough M. Beule's circular will excite no attention at all in the National Assembly. Most people will assume that it was just what was to be expected, that Governments must put on the screw if they are to succeed at all, and that the notion of asking the people what they wish, without first telling them what they ought to wish, is purely chimerical. Yet this is what we understand very imperfectly in England. We should be so indignant against an attempt on the part of any Government to dictate to the people how they ought to vote, that no such Government would long survive the attempt. And we can hardly realise how large a proportion of the electors of France look to the Government as the eyes of servants look unto the hands of their master " and the eyes of a maiden unto the hand of her mistress." In England the ordinary conception of France is of a nation of rebels who are always turning against the Government. But the truth is that these very revolutions are due to the tameness with which the majority accept the opinions of any dominant minority that happens to gain the upper hand. It is the political pliancy of the majority of the French people to which the great instability of the political balance is due. Not only has it contributed to great changes, by making it easy for an accidental minority to impose its will on the French people, but it has contributed also to that too patient endurance of real misgovernment which has supplied the fuel for revolutionary passion so soon as any such minority happened to be in the ascendant.

We would not be understood to say that there has been no progress in France in this respect. We are disposed to think there has been a real, though slow, progress towards Liberalism, and that the Republican party will find much more popular support even in resisting the orders of this "government of combat" than could have been counted upon a few years ago. The French are an ignorant and cautious people, but they are not a stupid people, and it would have been difficult indeed not to learn something from the overthrow of the Empire in 1870 and the events which followed it. It is quite conceivable therefore that the present dominant minority will find much more difficulty in possessing itself of the votes of the French people than similar dominant minorities have found in former days. It is even possible that it may fail. Still it is quite certain that the party of the Right took advantage of the only chance of ultimate success they had, in possessing themselves of the Government and of the vast administrative influence which office confers for the guidance of the political judgment of the French people.

THE IRISH DEEP-SEA FISHERIES. THE Inspectors of Irish Fisheries have opened their annual campaign against the Imperial Exchequer, and have laid before Parliament a rhetorical rather than statistical protest against Mr Lowe's refusal to sanction a grant of public money for the support of the fishing industry in Ireland. It is certain that the numbers of the craft and the men employed in the Irish deep-sea fisheries is diminishing from year to year, though by no means so raridly as the figures given in We the Report of the Inspectors would lead us to believe. are told, indeed, that in the year before the Irish famine the vessels employed in fishing numbered no less than 19,883 and the men 113,073; while in 1871 they had declined to 9,099 boats and 38,650 men, and in 1872 still further to 7,914 boats and 31,311 men. It appears, however, that in former years the system of registration was extremely loose and unsatisfactory, and that almost all the boats in use on the Irish coasts were registered as fishing craft. Now a more discriminating system is adopted, though, as is allowed by the Inspectors themselves it falls very far short of perfection. The result is that a great number of vessels employed in the local carrying trade, or the collection of seaweed, gravel, and sand, are excluded, very properly, from the Fisheries' Register. This swells the apparent decrease very largely, and enables the Inspectors to urge a more pitiful prayer for pecuniary help. The decrease however is real, but so is the diminution of the population of Ireland; nor is there the least reason for hoping that the progress of the decline could be arrested by any expenditure of public money. The original character of the Irish fisheries must be borre

in mind. They were never a highly organised industry, they never employed a large capital. A very small minority of the so-called fishermen had taken up that business as a regular trade, still fewer had invested any money in the provision of seaworthy craft or good nets. It is asserted that the heavy seas and dangerous winds which prevail upon the southern, western, and northern coasts of Ireland, prevent Irishmen from following fishing as a constant occupation, and whe-ther for this or some other reason very few of them rely upon it as the sole means of bread-winning. But during the summer months the abundant harvest of the sea used to tempt the cottier or the labourer who lived along the coast to do a little fishing. The boats that were generally used for carrying manure, or gathering seaweed, were requisitioned for the more lucrative industry whenever a shoal of herrings or mackerel appeared. Such was the state of the fisheries before 1846. In the past quarter of a century a great change was wrought. The cottiers have disappeared, the wages of agricultural labour have risen, and with the prospect of emigration and a comfortable home in the new world before him, the Irish peasant no longer cares to live in the old happy-go-lucky way. If he does not get regular employment and good wages he leaves the country, and when he gets these he has no time to waste in fishing. The latter no doubt is a very lucrative occupation, but it requires some training and more capital. The Irish peasant has neither, and with leaky old boats and rotting nets the unskilled boatman of the Claddagh or Kinsale is no match for the Manxmen or Cornishmen, who follow the herring or the pilchard to the shores of Ireland with the most modern and improved appliances, and all the advantages of hereditary training. The competition is un-equal, and the Inspectors of Irish fisheries feel this, but they imagine that a handful of public money will suffice to redress the balance in favour of Ireland. Such a hope is futile and misleading. If every Irish fisherman were to be provided with a new boat and new nets at the charge of the Imperial Exchequer, he could not live by his business unless the Inspectors of fisheries were able to come to an amicable

arrangement with the ground-swell of the Atlantic and the sou'-westers that blow so fiercely and so constantly on the rugged shores of Munster and Connaught during eight months out of the twelve. Of course no Irishman would refuse a loan which he would regard as a gift, and individually he might be rather better off with his new boat and nets than with his old ones. But the loans would never be repaid; and if the Government were to ask for repayment, the meanness of England would be passionately denounced. There is no likelihood of any permanent national advantage from such a proceeding, and without a clear probability of such advantage no English minister could come before Parliament to ask for a grant in aid. The anti-free-trade notion of encouraging industry by bounties is exploded, and, in this country, it may be safely prophesied it will never be revived. But the Irish still hanker after it, and probably the first act of a Home Rule Parliament in College green would be to subsidise not only the fisheries of Ireland but half a dozen other industries as

well. It is almost hopeless to preach orthodox economical doctrine to a people like the Irish, who look at every question through a coloured mist of passion; but it is a pity that public officials, which the Inspectors of Fisheries are, should, year after year, propagate prejudice and illusion on a subject of so much importance.

The supreme grievance which the Inspectors insist upon is that Ireland has been deprived of the grants in aid of her fisheries while Scotland has been allowed to fatten upon them. There is just a particle of ground for this charge, and the jealousy between Ireland and Scotland being already too great it is to be hoped that the Government will take measures to remove even the appearance of inequality. The Scotch fishery board has an establishment that costs a considerable annual sum, and it expends some 3,000*l* per annum besides on works connected with the fisheries. Against this outlay must be set the branding fees charged for affixing the Government brand to the cured herrings, leaving a balance on the account between Scotland and the Imperial Exchequer of some 7,500*l* a year against the former. In addition to this the Scotch members occasionally secure grants in aid of fishery works from Parliament; and the Irish in-spectors particularly instance a sum of 7,000*l* given two years ago for the repair of the eastern fishing pier of Anstruther. But it is not so much of any present disproportion between the public assistance granted to the Scotch and Irish fisheries that the Inspectors complain, as of the fact that Scotland has got more in the aggregate than Ireland. "Scotland," they say, has received since the Union upwards of a million sterling " for the promotion of her fisheries more than Ireland. Long before bounties and loans were extended to the latter the "Scotch fishermen were in the enjoyment of them ; and when the Irish Fishery Board was practically abolished for years, ' and the fishermen left at a most critical time to shift for them-" selves, the Scotch Board continued in full operation, having, ' amongst other things, a grant for repairs of poor fishermen's " boats." To this we can only reply that, regarding bounties to industry essentially mischievous things, we cannot continue giving them to the Irish fisheries now that we perceive their evils because a former generation gave them to the Scotch fisheries. We do not, however, find any evidence in the Irish Inspectors' Report that Scotland has ever enjoyed the dangerous luxury of bounties in the peculiarly objectionable form now advocated for Ireland. Did the Government ever give loans to fishermen in Scotland on their personal security? We are quite sure that no such loans have ever been given to the Cornish and Manx fishermen, who are more successful and enterprising than either Scotch or Irish.

At the same time we can see no reason in the world why the Government should not set up a Fishery Board in Ireland to undertake the branding of cured fish, on the same footing as the Scotch Board. There is much force in the argument of the Irish inspectors on this point :--

" to be branded, insured the requisite care in the process, and "the brand secured a ready sale and a price for the fish in " foreign, English, and even Irish markets; while a country " like Ireland, denied the benefit of the branding system, was "placed at so enormous a disadvantage that it was "useless to attempt competition, and after a few efforts "the curing trade was abandoned. Although the Fishery "Board of Scotland has fully accomplished the object "for which it was established, and there are some "now who contend that the Scotch fisheries could get " on without it, still, if the branding system, which is its " principal function, were discontinued, it would deal a very "severe blow on the smaller curers who may not have yet " established a sufficient reputation for their own brand to "enable them to compete with the large curers, to whom "many of them would, if the Government brand was " abolished, be compelled to sell at lower prices than they can " obtain now that the brand puts on an equal footing all who " cure up to the required standard of excellence." But the expenditure of the Board should be kept strictly within the limits of the income derived from the branding fees, and in Scotland we are of opinion that they should be cut down so as to put the establishment on a self-supporting level. So far, we should have no objection to see Government assisting the development of Irish industry and the utilisation of the vast stores of food with which the Irish seas teem. But this is a very different thing from making loans out of the Exchequer to the Irish peasantry, which, it is quite certain, would never be repaid, even in thanks.

#### THE REJECTION OF THE LONDON AND NORTH-WESTERN AND LANCASHIRE AND YORKSHIRE AMALGAMATION BILL.

THE final rejection of the leading Bailway Amalgamation Bill, which was the occasion of the appointment of the Joint Committee of last Session, is an event which ought not to be passed over without some comment. Unfortunately the Committee, which has found the preamble of the Bill not proved, gives no reasons. We are aware it is the custom not to do so, but when questions of principle are mixed up so much as in the present case, that custom certainly has its disadvantages. Those interested are without guidance for the future, even if they had to come before the same Committee ; while a different Committee, not having any authority or precedent before them, might act on reasons which have now been rejected. For the present we can only discuss the matter by the light of the evidence given before the Joint Committee of last Section, and the report of that body, which has been the foundation of the Railway Bill of the present year.

Our opinion is very decided that the rejection of this Bill is a great mistake in point of policy. The Joint Com-mittee of last Session gave no distinct voice as to when amalgamation should be permitted, merely saying that amalgama-tions on a great scale should not be allowed without manifest advantages to the public being stipulated for, and that minor amalgamations should be encouraged, but without defining what is a large or small amalgamation. The present scheme, however, if viewed as a large amalgamation, did promise many advantages to the public, while it had some of the charac-teristics of what the committee appear to have understood by a small amalgamation. The amalgamation of the Welsh railways, for instance, is spoken of as one which the Committee would have been disposed to approve of, and to all intents and purposes Lancashire is a separate district like Wales, served by one group of purely local lines, now amalgamated as the Lancashire and Yorkshire, and by another group belonging to the North-Western Company, which has also more extensive connections. The circumstance of one of the companies having such connections can surely be no reason against putting all the district lines under one management, which will be as advantageous an arrangement for Lancashire as for Wales.

But, apart from the hesitating views of the Committee of last Session, we think it is clear that if the present scheme was properly rejected it is hardly possible to conceive a case for any amalgamation. Mr Cawkwell's evidence before the Joint Committee of last Session showed very clearly the inconveniences of the separate working of the two companies, both for themselves and the public. The two systems are inseparably tied together in Lancashire. They have each [June 7, 1873.

lines running East and West between all the large towns; they have junctions and connections at numerous points, the traffic interchanged being about 1,000,000l annually; they have running powers over large parts of each other's systems; and they have a joint ownership or occupation of several stations. So intertwisted are the two systems that the companies have had no choice but to work together as one as far as possible. Competition is quite out of the question, and is not even attempted. The separation of interests among the owners of the railways of Lancashire is thus of no benefit to the public, and there are several specific injuries which it inflicts. Principally, as there is always a possibility of quarrel between the two concerns, the trains between different points are arranged by the companies, so as to give each a command of traffic at the best hours of the day, whereas if there was a complete amalgama-tion, competing trains could be dispensed with, and additional trains put on at different hours, so that the public would be better served with fewer trains. The companies, in fact, although friends at present, must act without complete. amalgamation as if they might one day become enemies, and the result is to diminish the accommodation which might otherwise be safely given. In other ways, too, the public are injured, of which a typical illustration is given by the story of Preston station. Mr Cawkwell says :--

story of Preston station. Mr Cawkwell says :--This is a plan of the two companies' property at Preston (produsing the same). The property is held jointly, to some extent, and in separate patches in other instances; and the difficulty has been to arrive at anything like an arrangement for a joint station. We have tried to do the best that we could, but the result of it all is, that it leaves the property in this way, that the London and North-Western Company will be sole owners of a piece at the South-West; then there comes in the joint property in the centre of the station; then the Lancashire and Yorkshire separate property; on the East side adjeining that, the London and North-Western Company bave another piece of their own separate property, and a quantity of land further North, that came into their hands at the purchase of the Lancaster Canal. As we stand at present, the London and North-Western Company cannot occupy that piece of land because they cannot get to it without going over the canal land to proper advantage, because we cannot approach it except through their separate property; and the consequence is, that what we are going to do now is a very imperfect matter; but if the amalgamation takes place, the whole of the land coloured blue, pink, and green, will become the property of one concern, and we should provide one part for passengers and another for goods for both companies, and make a passage under Fishergate, to the ceal yard, clear of the passenger station altogether, but which we cannot do without the property being made joint.

There could not be a better proof of the confusion and friction which the companies must submit to in their working so long as they are separate, and from which the public obviously suffers. When it is remembered that the two companies have eight joint committees for the management of joint lines or properties in one way or another, it will be understood how great the friction is, and how widely diffused must be the general loss over Lancashire. The whole case for amalgamation is in fact substantially this : that the public are already exposed to all the disadvantages of a monopoly, and because the companies are not legally amalgamated, do not get all the benefits which they would otherwise receive.

And there are other points which could be urged if necessary. For instance, the amalgamated company was willing to concede a reduction of the Lancashire and Yorkshire maximum fares and rates to the scale of the London and North-Western, which has now the lowest maximum of any company. Railways are, no doubt, commonly much under the maximum, but the advance of goods' rates within the last year is quite enough to show that the utility of a limit in the public interest may be very great indeed. What the companies promised, therefore, was a real concession; and other concessions were promised in the shape of through rates and the like to neighbouring companies. It must also be considered on the whole that anything which enriches the railway companies, that accommodate a particular district is, as a rule, beneficial for that district. Other things being equal, the service of companies which pay good and increasing dividends, and which are in a sound financial condition, is likely to be much better than the service of struggling companies. The amalgamation, by economising rolling stock and dispensing with a double staff at stations and the like, would have saved a great deal of money to the North-Western and Lancashire and Yorkshire shareholders, and the temptation would have been irresistible to devote some of the saving to the development of traffic, which means the increased accommodation of the public. The community, we may be

needless expenditure.

We can see no reason, then, why the present amalgamation was refused, except a sort of vague belief that the community gets something by competition; and we must express our regret at such a belief being acted upon. Nothing can be more insignificant than the possible benefit which may be derived from the "choice of shops" which the public now possess, where the only differences suffered to exist are in minor points of service. The Committee by its decision simply commits the country for a little while longer to an extravagant system, without really doing anything to check the disadvantages of amalgamation monopoly. It would have been much better, we think, to accept frankly the principle of amalgamation wherever any companies wanted it, and only stipulate for fresh concessions to the public.

A somewhat curious question for the shareholders of the two companies arises upon the rejection of the Bill. One of the terms was that the Lancashire and Yorkshire ordinary shareholders were to receive 12s 6d per cent. per annum more dividend than the North-Western shareholders, commencing from the 1st of January, 1872. And pending the passage of the Amalgamation Bill the directors of the two companies have contrived that this arrangement should be virtually carried into effect. This was effected, as the North-Western accounts show, by a credit of gross traffic to the one company or the other for the purpose of adjusting the dividend. But what will be the legal position of all parties now that the Bill is thrown out, and any flaw in the practice of last year remains uncured? Will a new adjustment of accounts, and the repayment of any balance owing by the one company to the other be necessary ? That the point may be of some interest is shown by the curious wording of the certificate of the auditors of the North-Western railway appended to the last half-yearly accounts. They only certify these accounts "subject to the correctness of the balance of inter-"changed traffic credited to the Lancashire and Yorkshire "Railway, for which we have to rely upon the audited "accounts of that company." This is equivalent to no certificate at all as regards a sum of 81,000/, which was the balance credited to the Lancashire and Yorkshire railway in the accounts to which the certificate refers. It would be singular if an agreement which was to produce a fusion of the two companies should have for result a serious complication of the accounts, and perhaps some protracted litigation.

#### THE PRINCIPLES WHICH SHOULD REGULATE THE AMOUNT OF THE BANKING RESERVE TO BE KEPT BY THE BANK OF ENGLAND.

WE extract the following from a book on "Lombard Street," just published, by Mr Walter Bagehot,\* as it contains in a connected form what, less systematically, has often been laid before our readers :-

"There is a very common notion that the amount of the reserve which the Bank of England ought to keep can be determined at once from the face of their weekly balancesheet. It is imagined that you have only to take the liabilities of the Banking department, and that a third or some other fixed proportion will in all cases be the amount of reserve which the Bank should keep against those liabilities. But to this there are several objections, some arising from the general nature of the banking trade, and others from the special position of the Bank of England.

"That the amount of the liabilities of a bank is a principal element in determining the proper amount of its reserve is plainly true; but that it is the only element by which that amount is determined is plainly false. The intrinsic nature of these liabilities must be considered, as well as their numerical quantity. For example, no one would say that the same amount of reserve ought to be kept against acceptances which cannot be paid except at a certain day, and against deposits at call, which may be demanded at any moment. If a bank groups these liabilities together in the balance-sheet, you cannot tell the amount of reserve it ought to keep. The necessary information is not given you.

" Nor can you certainly determine the amount of reserve necessary to be kept against deposits unless you know something as to the nature of these deposits. If out of 3,000,000l

\* Lombard Street; a Description of the Money Market. By Walter Bagehot. London: H. S. King and Co.

sure, gains nothing by forcing on its railway proprietors a | of money, one depositor has 1,000,000l to his credit, and may draw it out when he pleases, a much larger reserve will be necessary against that liability of 1,000,000l than against the remaining 2,000,000l. The intensity of the liability, so to say, is much greater; and therefore the provision in store must be much greater also. On the other hand, supposing that this single depositor is one of calculable habits-suppose that it is a public body, the time of whose demands is known, and the time of whose receipts is known also-this single liability requires a less reserve than that of an equal amount of ordinary liabilities. The danger that it will be called for is much less; and therefore the security taken against it may be much less too. Unless the quality of the liabilities is considered as well as their quantity, the due provision for their payment cannot be determined.

"These are general truths as to all banks, and they have a very particular application to the Bank of England. The first application is favourable to the Bank; for it shows the danger of one of the principal liabilities to be much smaller than it seems. The largest account at the Bank of England is that of the English Government; and probably there has never been any account of which it was so easy in time of peace to calculate the course. All the material facts relative to the English revenue, and the English expenditure, are exceedingly well known; and the amount of the coming payments to and from this account are always, except in war times, to be calculated with wonderful accuracy. In war, no doubt, this is all reversed ; the account of a government at war is probably the most uncertain of all accounts, especially of a government of a scattered empire like the English, whose places of outlay in time of war are so many and so distant, and the amount of whose payments is therefore so incalculable. Ordinarily, however, there is no account of which the course can be so easily predicted ; and therefore no account which needs in ordinary times solittle reserve. The principal payments, when they are made, are also of the most satisfactory kind to a banker; they are, to a great extent, made to another account at his bank. These largest ordinary payments of the Government are the dividends on the debt, and these are mostly made to bankers who act as agents for the creditors of the nation. The payment of the dividends for the Government is, therefore, in great part a transfer from the account of the Government to the accounts of the various bankers. A certain amount no doubt goesalmost at once to the non-banking classes ; to those who keep coin and notes in house, and have no account at any bank. But even this amount is calculable, for it is always nearly the same. And the entire operation is, to those who can watch it, singularly invariable time after time.

"But it is important to observe, that the published accounts of the Bank give no such information to the public as will enable them to make their own calculations. The account of which we have been speaking is the yearly account of the English Government—what we may call the Budget account, that of revenue and expenditure. And the laws of this are, as we have shown, already known. But under the head • Public Deposits' in the accounts of the Bank, are contained also other accounts, and particularly that of the Secretary for India in Council, the laws of which must be different and are quite unknown. The Secretary for India is a large lender on its account. If any one proposed to give such power to the Chancellor of the Exchequer, there would be great fear and outcry. But so much depends on habit and tradition, that the India Office on one side of Downing Street can do without remark, and with universal assent, what it would be thought 'unsound' and extravagant to proposethat the other side should do. The present India Office inherits this independence from the old Board of the Company, which, being mercantile and business-like, used to lend its own money on the Stock Exchange as it pleased; the Council of India, its successor, retains the power. Nothing can be better than that it should be allowed to do as it likes; but the mixing up the account of a body which has such a power, and which draws money from India, with that of the Home government clearly prevents the general public from-being able to draw inferences as to the course of the combined account from its knowledge of home finance only. The account of 'public deposits' in the Bank return includes other accounts too, as the Savings' Bank balance, the Chancery Funds account, and others ; and in consequence, till lately the public had but little knowledge of the real changes of theaccount of our Government, properly so called. But Mr.

Lowe has lately given us a weekly account, and from this, and not from the Bank account, we are able to form a judgment. This account and the return of the Bank of England, it is true, unhappily appear on different days; but except for that accident our knowledge would be perfect; and as it is, for almost all purposes what we know is reasonably sufficient. We can now calculate the course of the Government account nearly as well as it is possible to calculate it.

"So far, as we have said, an analysis of the return of the Bank of England is very favourable to the Bank. So great a reserve need not usually be kept against the Government account as if it were a common account. We know the laws of its changes peculiarly well: we can tell when its principal changes will happen with great accuracy; and we know that at such changes most of what is paid away by the Government is only paid to other depositors at the Bank, and that it will really stay at the Bank, though under another name. If we look to the private deposits of the Bank of England, at first sight we may think that the result is the same. By far the most important of these are the 'Bankers' deposits'; and, for the most part, these deposits as a whole are likely to vary very little. Each banker, we will suppose, keeps as little as he can, but in all domestic transactions payment from one is really payment to the other. All the most important transactions in the country are settled by cheques; these cheques are paid in to the 'clearing-house,' and the balances resulting from them are settled by transfers from the account of one banker to another at the Bank of England. Payments out of the Bankers' balances, therefore, correspond with payments in. As a whole, the deposit of the bankers' balances at the Bank of England would at first sight seem to be a deposit singularly stable.

"Indeed, they would seem, so to say, to be better than stable. They augment when everything else tends to diminish. At a panic, when all other deposits are likely to be taken away, the bankers' deposits augment; in fact they did so in 1866, though we do not know the particulars; and it is natural that they should so increase. At such moments all bankers are extremely anxious, and they try to strengthen themselves by every means in their power; they try to have as much money as it is possible at command; they augment their reserve as much as they can, and they place that reserve at the Bank of England. A deposit which is not likely to vary in ordinary times, and which is likely to augment in times of danger, seems, in some sort, the model of a deposit. It might seem not only that a large proportion of it might be lent, but that the whole of it might be so. But a further analysis will, as I believe, show that this conclusion is entirely false; that the bankers' deposits are a singularly treacherous form of liability; that the utmost caution ought to be used in dealing with them; that, as a rule, a less proportion of them ought to be lent than of ordinary deposits.

"The easiest mode of explaining anything is, usually, to exemplify it by a single actual case. And in this subject fortunately, there is a most conspicuous case near at hand. The German Government has lately taken large sums in bullion from this country, in part from the Bank of England, and in part not, according as it chose. It was in the main well advised, and considerate in its action ; and did not take nearly as much from the Bank as it might, or as would have been dangerous. "Still it took large sums from the Bank ; and it might easily have taken more. How then did the German Government obtain this vast power over the Bank? The answer is, that it obtained it by means of the bankers' balances, and that it did so in two ways.

"First, the German Government had a large balance of its own lying at a particular Joint Stock Bank. That bank lent this balance at its own discretion, to bill-brokers or others, and it formed a single item in the general funds of the London market. There was nothing special about it, except that it belonged to a foreign government, and that its owner was always likely to call it in, and sometimes did so. As long as it stayed unlent in the London Joint Stock Bank, it increased the balances of that bank at the Bank of England; but so soon as it was lent, say, to a bill-broker, it increased the bill-broker's balance; and as soon as it was employed by the bill-broker in the discount of bills, the owners of those bills paid it to their credit at their separate banks, and it augmented the balances of those bankers at the Bank of England. Of course if it were employed in the discount of bills belonging to foreigners, the money might be taken abroad, and by similar operations it

might also be transferred to the English provinces or to Scot-land. But, as a rule, such money when deposited in London, for a considerable time remains in London; and so long as it does so, it swells the aggregate balances of the body of bankers at the Bank of England. It is now in the balance of one bank, now of another, but it is always dispersed about those balances somewhere. The evident consequence is that this part of the bankers' balances is at the mercy of the German Government when it chooses to apply for it. Supposing, then, the sum to be three or four millions-and I believe that on more than one occasion in the last year or two it has been quite as much, if not more-that sum might at once be withlrawn from the Bank of England. In this case the Bank of England is in the position of a banker who is liable for a large amount to a single customer, but with this addition, that it is liable for an unknown amount. The German Government, as is well known, keeps its account (and a very valuable one it must be) at the London Joint Stock Bank ; but the Bank of England has no access to the account of the German Government at that bank; they cannot tell how much German money is lying to the credit there. Nor can the Bank of England infer much from the balance of the London Joint Stock Bank in their Bank, for the German money was probably paid in various sums to that bank, and lent out again in other various sums. It might to some extent augment that bank's balance at the Bank of England, or it might not, but it certainly would not be so much added to that balance; an inspection of that bank's balance would not enable the Bank of England to determine even in the vaguest manner what the entire sum was for which it might be asked at any moment. Nor would the inspection of the bankers' balances as a whole lead to any certain and sure conclusions. Something might be inferred from them, but not anything certain. Those balances are no doubt in a state of constant fluctuation ; and very possibly during the time that the German money was coming in some other might be going out. Any sudden increase in the bankers' balances would be a probable indication of new foreign money, but new foreign money might come in without causing an increase, since some other and contemporaneous

cause might effect a counteracting decrease. "This is the first, and the plainest way in which the German Government could take, and did take, money from this country; and in which it might have broken the Bank of England if it had liked. The German Government had money here and took it away, which is very easy to understand. But the Government also possessed a far greater power, of a somewhat more complex kind. It was the owner of many debts from England. A large part of the 'indemnity' was paid by France to Germany in bills on England, and the German Government, as those bills became due, acquired an unprecedented command over the market. As each bill arrived at maturity, the German Government could, if it chose, take the proceeds abroad ; and it could do so in bullion, as for This would at first coinage purposes it wanted bullion. naturally cause a reduction in the bankers' balances; at least that would be its tendency. Supposing the German Government to hold bill A, a good bill, the banker at whose bank bill A was payable would have to pay it; and that would reduce his balance; and as the sum so paid would go to Ger-many, it would not appear to the credit of any other banker: the aggregate of the bankers' balances would thus be reduced. But this reduction would not be permanent. A banker who has to pay 100,000l cannot afford to reduce his balance at the Bank of England 100,0001; suppose that his liabilities are 2,000,000l., and that as a rule he finds it necessary to keep at the Bank one-tenth of these liabilities, or 200,000%, the payment of 100,000l would reduce his reserve to 100,000l; but his liabilities would be still 1,900,000l, and therefore to keep up his tenth he would have 90,000l to find. His process for finding it is this : he calls in, say, a loan to the billbrokers; and if no equal additional money is contemporaneously carried to these brokers (which in the case of a large withdrawal of foreign money is not probable), they must reduce their business and discount less. But the effect of this is to throw additional business on the Bank of England. They hold the ultimate reserve of the country, and they must discount out of it if no one else will : if they declined to do so there would be panic and collapse. As soon, therefore, as the withdrawal of the German money reduces the bankers' balances there is a new demand on the Bank for fresh dis-counts to make up those balances. The drain on the Bank is

[June 7, 1873.

## THE ECONOMIST.

two-fold: first, the banking reserve is reduced by exportation of the German money, which reduces the means of the Bank of England; and then out of those reduced means the Bank of England has to make greater advances.

"The same result may be arrived at more easily. Supposing any foreign Government or person to have any sort of securities which he can pledge in the market, that operation gives it, or him, a credit on some banker, and enables it, or him, to take money from the banking reserve at the Bank of England, and from the bankers' balances; and to replace the bankers' balances at their inevitable minimum, the Bank of England must lend. Every sudden demand on the country causes, in proportion to its magnitude, this peculiar effect. And this is the reason why the Bank of England ought, I think, to deal most cautiously and delicately with their banking deposits. They are the symbol of an indefinite liability : by means of them, as we see, an amount of money so great that it is impossible to assign a limit to it, might be abstracted from the Bank of England. As the Bank of England lends money to keep up the bankers' balances at their usual amount, and as by means of that usual amount whatever sum foreigners can get credit for may be taken from us, it is not possible to assign a superior limit (to use the scientific word) to the demands which by means of the bankers' balances may be made upon the Bank of England.

"The result comes round to the simple point, on which this book is a commentary : the Bank of England, by the effect of a long history, holds the ultimate cash reserve of the country ; whatever cash the country has to pay comes out of that reserve, and therefore the Bank of England has to pay it. And it is as the Bankers' Bank that the Bank of England has to pay it, for it is by being so that it becomes the keeper of the final cash reserve.

"Some persons have been so much impressed with such considerations as these, that they have contended that the Bank of England ought never to lend the 'bankers' balances' at all, that they ought to keep them intact, and as an unused deposit. I am not sure, indeed, that I have seen that extreme form of the opinion in print, but I have often heard it in Lombard Street, from persons very influential and very qualified to judge ; even in print I have seen close approximations to it. But I am satisfied that the laying down such a 'hard and fast' rule would be very dangerous; in very important and very changeable business rigid rules are apt to be often dangerous. In a panic, as has been said, the bankers' balances greatly augment. It is true the Bank of England has to lend the money by which they are filled. The banker calls in his money from the bill-broker, ceases to re-discount for that broker, or borrows on securities, or sells securities ; and in one or other of these ways he causes a new demand for money which can only at such times be met from the Bank of England. Every one else is in want too. But without inquiring into the origin of the increase at panics, the amount of the bankers' deposits in fact increases very rapidly; an immense amount of unused money is at such moments often poured by them into the Bank of England. And nothing can more surely aggravate the panic than to forbid the Bank of England to lend that money. Just when money is most scarce you happen to have an unusually large fund of this particular species of money, and you should lend it as fast as you can at such moments, for it is ready lending which cures panics, and non-lending or niggardly lending which aggravates them.

"At other times, particularly at the quarterly payment of the dividends, an absolute rule which laid down that the bankers' balances were never to be lent, would be productive of great inconvenience. A large sum is just then paid from the Government balance to the bankers' balances, and if you permitted the Bank to lend it while it was still in the hands of the Government, but forbad them to lend it when it came into the hands of the bankers, a great tilt upwards in the value of money would be the consequence, for a most important amount of it would suddenly have become ineffective.

"But the idea that the bankers' balances ought never to be lent is only a natural aggravation of the truth that these balances ought to be used with extreme caution; that as they entail a liability peculiarly great and singularly difficult to foresee, they ought never to be used like a common deposit.

"It follows from what has been said that there are always possible and very heavy demands on the Bank of England which are not shown in the account of the Banking department at all: these demands may be greatest when the liabilities

shown by that account are smallest, and lowest when those liabilities are largest. If, for example, the German Government brings bills or other good securities to this market. obtains money with them, and removes that money from the market in bullion, that money may, if the German Government choose, be taken wholly from the Bank of England. If the wants of the German Government be urgent, and if the amount of gold 'arrivals,' that is, the gold coming here from the mining countries, be but small, that gold will be taken from the Bank of England, for there is no other large store in the country. The German Government is only a conspicuous ex-ample of a foreign power which happens lately to have had an unusual command of good securities, and an unusually continuous wish to use them in England. Any foreign state hereafter which wants cash will be likely to come here for it ; so long as the Bank of France should continue not to pay in specie, a foreign state which wants it must of necessity come to London for it. And no indication of the likelihood or unlikelihood of that want can be found in the books of the Bank of England.

"What is almost a revolution in the policy of the Bank of England necessarily follows: no certain or fixed proportion of its liabilities can in the present times be laid down as that which the Bank ought to keep in reserve. The old notion that one-third, or any other such fraction, is in all cases enough, must be abandoned. The probable demands upon the Bank are so various in amount, and so little disclosed by the figures of the account, that no simple and easy calculation is a sufficient guide. A definite proportion of the liabilities might often be too small for the reserve, and sometimes too great. The forces of the enemy being variable, those of the defence cannot always be the same.

"I admit that this conclusion is very inconvenient. In past times it has been a great aid to the Bank and to the public to be able to decide on the proper policy of the Bank from a mere inspection of its account. In that way the Bank knew easily what to do, and the public knew easily what to foresee. But, unhappily, the rule which is most simple is not always the rule which is most to be relied upon. The practical difficulties of life often cannot be met by very simple rules; those dangers being complex and many, the rules for encountering them cannot well be single or simple. A uniform remedy for many diseases often ends by killing the patient. "Another simple rule often laid down for the management

of the Bank of England must now be abandoned also. It has been said that the Bank of England should look to the market rate, and make its own rate conform to that. This rule was, indeed, always erroneous. The first duty of the Bank of England was to protect the ultimate cash of the country, and to raise the rate of interest so as to protect it. But this rule was never so erroneous as now, because the number of sudden demands upon that reserve was never formerly so great. The market rate of Lombard Street is not influenced by those demands. That rate is determined by the amount of deposits in the hands of bill-brokers and bankers, and the amount of good bills and acceptable securities offered at the moment. The probable efflux of bullion from the Bank scarcely affects it at all ; even the real efflux affects it but little ; if the open market did not believe that the Bank rate would be altered in consequence of such effluxes the market rate would not rise. If the Bank choose to let its bullion go unheeded, and is seen to be going so to chose, the value of money in Lombard Street will remain unaltered. The more numerous the demands on the Bank for bullion, and the more variable their magnitude, the more dangerous is the rule that the Bank rate of discount should conform to the market rate. In former quiet times, the influence, or the partial influence, of that rule has often produced grave disasters. In the present difficult times, an adherence to it is a recipe for making a large number of panics.

"A more distinct view of abstract principle must be taken before we can fix on the amount of the reserve which the Bank of England ought to keep. Why should a bank keep any reserve? Because it may be called on to pay certain liabilities at once and in a moment. Why does any bank publish an account? In order to satisfy the public that it possesses cash—or available securities—enough to meet its liabilities. The object of publishing the account of the banking department of the Bank of England is to let the nation see how the national reserve of cash stands, to assure the public that there is enough and more than enough to meet not only all probable calls, but all calls of which there can be a chance of reasonable

#### apprehension. And there is no doubt that the publication of the Bank account gives more stability to the money market than any other kind of precaution would give. Some persons, indeed, feared that the opposite result would happen; they feared that the constant publication of the incessant changes in the reserve would terrify and harass the public mind. An old banker once told me: 'Sir, I was on Lord Althorp's committee which decided on the publication of the Bank account, and I voted against it. I thought it would frighten people. But I am bound to own that the committee was right and I was wrong, for that publication has given the money market a greater sense of security than anything else which has happened in my time.' The diffusion of confidence through Lombard Street and the world is the object of the publication of the Bank accounts and of the Bank reserve.

" But that object is not attained if the amount of the reserve when so published is not enough to tranquillise people. A panic is sure to be caused if that reserve is, from whatever cause, exceedingly low. At every moment there is a certain minimum which I will call the 'apprehension minimum,' below which the reserve cannot fall without great risk of diffused fear ; and by this I do not mean absolute panic, but only a vague fright and timorousness which spreads itself instantly, and as if by magic, over the public mind. Such seasons of incipient alarm are exceedingly dangerous, because they beget the calamities they dread. What is most feared at such the calamities they dread. What is most feared at such moments of susceptibility is the destruction of credit; and if any grave failure or bad event happens at such moments, the public fancy seizes on it, there is a general run, and credit is suspended. The Bank reserve, then, never ought to be diminished below the 'apprehension point.' And this is as much as to say, that it never ought very closely to approach that point; since, if it gets very near, some accident may easily bring it down to that point and cause the evil that is feared. "There is no 'royal road' to the amount of the 'apprehen-

"There is no 'royal road' to the amount of the 'apprehension minimum': no abstract argument, and no mathematical computation will teach it to us. And we cannot expect that they should. Credit is an opinion generated by circumstances and varying with those circumstances. The state of credit at any particular time is a matter of fact only to be ascertained like other matters of fact; it can only be known by trial and inquiry. And in the same way, nothing but experience can tell us what amount of 'reserve' will create a diffused confidence; on such a subject there is no way of arriving at a just conclusion except by incessantly watching the public mind, and seeing at each juncture how it is affected.

"Of course in such a matter the cardinal rule to be observed is, that errors of excess are innocuous, but errors of defect are destructive. Too much reserve only means a small loss of profit, but too small a reserve may mean 'ruin.' Credit may be at once shaken, and if some terrifying accident happen to supervene, there may be a run on the Banking department that may be too much for it, as in 1857 and 1866, and may make it unable to pay its way without assistance—as it was in those years.

"And the observance of this maxim is the more necessary because the 'apprehension minimum' is not always the same. On the contrary, in times when the public has recently seen the Bank of England exposed to remarkable demands, it is likely to expect that such demands may come again. Conspicuous and recent events educate it, so to speak; it expects that much will be demanded, when much has of late often been demanded, and that little will be so, when in general but little has been so. A bank like the Bank of England must always, therefore, be on the watch for a rise, if I may so express it, in the apprehension minimum; it must provide an adequate fund not only to allay the misgivings of to-day, but also to allay what may be the still greater misgivings of to-morrow. And the only practical mode of obtaining this object is to keep the actual reserve always in advance of the minimum 'apprehension' reserve.

"And this involves something much more. As the actual reserve is never to be less, and is always, if possible, to exceed by a reasonable amount the 'minimum' apprehension reserve, it must when the Bank is quiet and taking no precautions very considerably exceed that minimum. All the precautions of the Bank take time to operate. The principal precaution is a rise in the rate of discount, and such a rise certainly does attract money from the Continent and from all the world much faster than could have been anticipated. But it does not act instantaneously; even the right rate, the ultimately at-

tractive rate, requires an interval for its action, and before the money can come here. And the right rate is often not discovered for some time. It requires several 'moves,' as the phrase goes, several augmentations of the rate of discount by the Bank, before the really effectual rate is reached, and in the meantime bullion is ebbing away and the 'reserve' is diminishing. Unless, therefore, in times without precaution the actual reserve exceed the 'apprehension minimum' by at least the amount which may be taken away in the inevitable interval, and before the available precautions begin to operate, the rule prescribed will be infringed, and the actual reserve will be less than the 'apprehension' minimum. In time the precautions taken may attract gold and raise the reserve to the needful amount, but in the interim the evils may happen against which the rule was devised, diffused apprehension may arise, and then any unlucky accident may cause many calamities.

"I may be asked, 'What does all this reasoning in practice come to ? At the present moment how much reserve do you say the Bank of England should keep ? state your recommendation clearly (I know it will be said) if you wish to have it attended to.' And I will answer the question plainly, though in so doing there is a great risk that the principles I advocate may be in some degree injured through some mistake I may make in applying them.

"I should say that at the present time the mind of the monetary world would become feverish and fearful if the reserve in the Banking department of the Bank of England went below 10,000,000/. Estimated by the idea of old times, by the idea even of ten years ago, that sum, I know, sounds extremely large. My own nerves were educated to smaller figures, because I was trained in times when the demands on us were less, when neither was so much reserve wanted nor did the public expect so much. But I judge from such observations as I can make of the present state of men's minds, that in fact, and whether justifiably or not, the important and intelligent part of the public which watches the Bank reserve becomes anxious and dissatisfied if that reserve falls below 10,000,000/. That sum, therefore, I call the 'appre-hension minimum' for the present times. Circumstances may change and may make it less or more, but according to the most careful estimate I can make, that is what I should call it now.

"It will be said that this estimate is arbitrary and these figures are conjectures. I reply that I only submit them for the judgment of others. The main question is one of fact— Does not the public mind begin to be anxious and timorous just where I have placed the apprehension point? and the deductions from that are comparatively simple questions of mixed fact and reasoning. The final appeal in such cases necessarily is to those who are conversant with and who closely watch the facts.

"I shall perhaps be told also that a body like the Court of the Directors of the Bank of England cannot act on estimates like these : that such a body must have a plain rule and keep to it. I say in reply, that if the correct framing of such estimates is necessary for the good guidance of the Bank, we must make a governing body which can correctly frame such estimates. We must not suffer from a dangerous policy because we have inherited an imperfect form of administration. I have before explained in what manner the government of the Bank of England should, I consider, be strengthened, and that government so strengthened would, I believe, be altogether competent to a wise policy.

"Then I should say, putting the foregoing reasoning into figures, that the Bank ought never to keep less than 11,000,000/ or 11,500,000/, since experience shows that a million, or a million and a half, may be taken from us at any time. should regard this as the practical minimum at which, roughly of course, the Bank should aim, and which it should try never to be below. And, in order not to be below 11,500,000l, the Bank must begin to take precautions when the reserve is between 14,000,000l and 15,000,000l; for experience shows that between 2,000,000l and 3,000,000l may, probably enough, be withdrawn from the Bank store before the right rate of interest is found which will attract money from abroad, and before that rate has had time to attract it. When the reserve is between 14,000,000l and 15,000,000l, and when it begins to be diminished by foreign demand, the Bank of England should, I think, begin to act, and to raise the rate of interest."

THE ECONOMIST.

## BUSINESS NOTES.

THE APPROACHING SPANISH REPUDIATION .- It seems now to be generally understood that the next coupon on the Spanish 3 per cents. will not be paid. The Government at Madrid is in the greatest financial straits, and the information that the Budget is to be brought into equilibrium by "taxing" the foreign creditor is perfectly unambiguous. Of course, as has been pointed out, the Spanish Government could, perhaps, obtain a surplus by the same process, and it certainly is rather a matter for surprise that any of the changing parties at Madrid, anxious for money to carry on with, should ever think of the foreign creditors at all. The lesson to the think of the foreign creditors at all. The lesson to the numerous English investors in "Spanish" is a very severe one, though we may well despair of their ever thoroughly understanding the importance of character in the national debtors whom they trust. There is no doubt that a firmer treatment of Spain by her creditors would have been beneficial not only to themselves but to their debtor. A less degree of facility among lenders would have compelled the Spanish rulers to get on as best they could without foreign money ; the burden of debt would have been less than it now is; and the temptation not to pay the interest of what was actually incurred would not have been so strong. It was really a friendly act towards Spain, therefore, to point out, as we did six months ago, the folly of the partial repudiation which was then ratified by Spanish creditors. But for that re-pudiation, and earlier acts of the same kind, much of the present financial embarrassment of the Spanish Government need not have arisen. The plain conclusion is, that ordinary investors should have nothing to do with governments which have no stable character, and are insensible to the repreach of dishonesty towards their creditors-characteristics from which several intending borrowers now talked of are notoriously not free. If Spain has collapsed financially, there is every certainty that countries like Turkey and Egypt must reach the same end, as soon as the process of paying old interest by new loans comes to an end, or the inevitable political convulsion to which these countries are exposed occurs. After the experience of foreign loans during the last two years, investors who lend to such countries must make up their minds to an almost certain loss of their money.

TURKISH TREASURY BILLS AND THE 5 PER CENT. DEBT .- The present state of the quotations for Turkish securities is very curious. The most important fact is the quota-tion for the issue of Treasury Bills last year. The price at which they were brought out was  $98\frac{1}{2}$ , but there has been a manifest difficulty in placing them, although the interest is 9 per cent. The quotation, a few days ago, was only about 88, with a dividend to fall due in about six weeks, and the fall since the date of issue we are inclined to consider a proof of the decline of Turkish credit from the comparatively high elevation which it reached a year ago. And not only has the difficulty of floating the Treasury Bills brought down other Turkish securities with which they compete, one of the conditions of the issue of these Bills was such as to bring them into direct relation with the older Turkish debt. The Bills The Bills were issued in three series, with the privilege of conversion, after certain dates, into the 5 per cent. debt, at the rate of 100l of the 5 per cents. for every 551 nominal of the Treasury Bills. The privilege of converting series A accrues during the present month, equivalent to a creation, if exercised, of about 6,000,00015 per cent. stock, and the privilege of converting series B and C, of equal amounts, will accrue in June, 1874 and 1875 respectively. The Treasury Bills are thus intimately connected with the 5 per cent. debt, and as the relative prices leave a handsome margin of profit on conversion, the Stock Exchange has been discounting the process with its usual keerness, so that at last account a great scarcity of the 5 per cents. was found to exist, which the speculators anticipate will speedily be changed into abundance when the option of conversion is generally exercised. In what shape Turkey can bring out a new loan with its older stocks being steadily increased by this process of conversion, becomes a very curious problem.

ADULTERATION.—The decision just given by the Judges of { paid, and are not to be liable in the liquidation as shareholders. the Court of Queen's Bench with reference to the Adulteration Act of last session must be considered a matter for general congratulation. The Act subjected the sellers of "articles of and rights, and shareholders especially should be careful of

"food as unadulterated which are adulterated" to certain penalties, but the stipendiary magistrate of Liverpool, in the case of Fitzpatrick v. Kelly, just brought before the Queen's Bench, had decided that to bring a seller within the Statute there must be an express representation that the articles were pure. The weakness imparted to the Act by such an interpretation is obvious, as it throws on the purchaser the onus of calling for an express representation, about the terms of which there would always be a difficulty in obtaining evidence, while the natural inertness of the public before a body of keen traders would also tend to prevent any demand for express representations. But the Judges of the Court of Queen's Bench have, fortunately, decided that no express representation The article in question in the case was butter, is needed. which had been adulterated "with lard, dripping, tallow, "palm oil, and the fat from certain seeds;" and Mr Justice Quain said that "when, on being asked for butter, a tradesman handed an article across the counter, he thereby repre-" sented that the article was butter, and not a mixture of the " horrible ingredients mentioned in the case." This is only common sense, as it would clearly be the simplest possible arrangement for tradesmen who do not sell a pure article to describe exactly to their customers what variety of the spurious article they deal in. As it is not necessary to prove a guilty know-ledge on the part of the seller to establish a case under the Act, the whole effect of the present ruling will be to throw the onus of ascertaining the genuineness of the articles they deal in upon tradesmen, at the risk of their being subjected in penalties by every customer who discovers adulteration. The health of the community, it may be hoped, will be promoted, when they have so effective an instrument put into their hands for detecting and punishing adulteration.

A NOVEL INSURANCE PERL .- An insurance case-Rodocanachi v. Elliot-arising out of a peril caused by the siege of Paris, has just been decided by the Court of Common Pleas. The action arose on two policies of insurance on silk shipped from Shanghai to London, via Suez Canal. The assured had the option of sending the silk by different routes and lines of steamers, and he contended that his choice of the Messageries line, who sent their London goods overland by Marseilles to Boulogne, was within the option, the custom of so forwarding goods overland being well known to un-derwriters. This was found to be the fact in the case submitted to the Court; and the goods having been shut up in Paris by the siege and notice of abandonment given, the question arose whether the policy covered a land risk, and whether the siege of Paris was not a restraint of Princes within the meaning of the policy. On both points the Court decided for the assured, and against the underwriter. The words in the policy, "steamer or "steamers per overland or via Suez Canal," were held to show that land carriage was contemplated, and the Paris siege was treated as of the nature of a blockade or embargo, which latter, it had been held, justified the assured in giving notice of abandonment. The case is certainly one of the singular results of the siege of Paris, but the point once granted that the overland transit through France was assured, we do not think there could be much difficulty as to the risk caused by the siege of Paris being a peril within the meaning of the policy. Goods passing through France in the autumn of 1870 were really exposed to war risks of every sort, and underwriters should either have protected themselves by a sufficient premium if the insurances were effected after the outbreak of the war, or should have submitted quietly to the loss entailed by the suddenness of its outbreak.

THE EFFECT OF AMALGAMATIONS.—The cases just decided by Vice-Chancellor Wickens—*re* the Bank of Hindustan, China, and Japan, Limited—cannot fail to be of interest to those who promote the amalgamation of joint stock companies, and to the shareholders in such companies. The effect is that the shareholders of one of the companies in the above case, who had paid in respect of shares in the amalgamated undertaking, given them in exchange for their shares in the original company, are held entitled, on the amalgamation being declared null and void, to rank as creditors for what they so paid, and are *not* to be liable in the liquidation as shareholders. The result is, that in all cases of amalgamation, those interested must examine carefully what are their legal powers and rights, and shareholders especially should be careful of

#### 686

## THE ECONOMIST.

#### doing any acts by which their rights may be weakened. A shareholder, for instance, who had sold and then bought back shares in the amalgamated company, was held debarred from any remedy. The questions are of less interest where the shares amalgamated are fully paid-up, but doubt may arise upon the latter point, perhaps, where the nominal share in the amalgamated company represents a greater sum than what had been paid on the original share, and even a greater sum than the market value at the time of the amalgamation. If trouble afterwards comes, liquidators are very apt to put down the shareholders as contributories for the difference between the real and nominal value of such shares at the time of the amalgamation.

THE GRAND TRUNK OF CANADA RAILWAY.-The directors of this line, by the new issue, have committed themselves to a very grave responsibility. They have distinctly affirmed their belief that the expenditure of the new capital which has now been subscribed is all that is required to make the line dividend-paying, both as regards the preferences and the ordinary capital, and they have based the restriction of the present issue to 7,500,000/, instead of 10,000,000/, on the express ground that they hope to issue the balance in about eighteen months at a much higher price. The shareholders and the public have thus been invited to put more money into the undertaking on what amounts almost to an assurance that the property will rise in value, and considering on what authority this assurance is made-the Grand Trunk direction, as every one knows, comprising some of the best City names-there is, perhaps, little cause for wonder at the money having been obtained. We have before expressed the opinion that the new scheme of reorganisation was a fairly promising one; that there ought to be some possibility of effecting large savings of working expenses when obvious causes of wasteful expenditure were removed; that in past years at least there had been a progressive increase of traffic, which might still, to all appearance, be relied on ; that there was

probably some new traffic waiting to come on the line, which the improvement of its working arrangements would secure. So much can safely be said, and perhaps the Grand Trunk directors are no more sanguine than people ought to be about undertakings in which they are interested; but the public will cert inly be entitled to think that the directors have very strictly pledged themselves in the present case, and there will be much disappointment, indeed, should they not take care to fulfil their pledges. The increase of traffic is, to some extent, not in their power, but they are responsible for the statement that certain working expenses can be saved; and having got the capital by which the saving is to be made, they will stand in a very awkward light if there should, in fact, prove to be no such saving.

THE SHEFFIELD STATEMENT OF TRAFFIC AND EXPENSES. -Some disappointment has been caused by the last monthly statement of the Sheffield Railway to May 25, showing an increase of 61,000/ in traffic and of 83,000/ in expenses. The statement, however, only illustrates the inconvenience and misleading character of all such estimates. No proper account can be made up for a short period on any railway, the distribution of expenditure equally over periods of time being difficalt to the point of impossibility, and a new difficulty arising in bringing it to account. In the present case misconception is caused in a different way, viz., by the accident that the monthly statement terminates at a date which included last year the Whitsun traffic not included in the present statement. The increase of traffic is therefore accidentally less in proportion than it would have been if the statement had only been made up a fortnight later. When such variations are possible the only sensible course is to wait for the end of a long period—half-a-year is not too long— and then bring everything to account. The weekly estimates of traffic published are by no means so generally exact as to encourage the publication of monthly statements, which include a new source of error or mistaken estimate,

Trade discounts	41,245,499

This return does not show traces of any assistance to the Government in the payment being made at this moment of the first 250 millions on the last milliard, although a sum of 14 millions in gold is said to have been sent from Paris to Germany this week. The large increase in the trade discounts at a moment the chapter should have shown a reduction from the payments at the end of the month is a consequence of the scarcity of money for the settlement, the high rates paid for accommodation having induced bankers to obtain capital for this profitable business by carrying the bills held by them to the Bank. The increase in Government and private deposits, with other entries, has permitted the Bank to augment its discounts by 41 millions, while at the same time advancing an additional five millions on Credit Foncier bonds, and increasing its stock of specie by  $2\frac{3}{4}$  millions. The month of May closed favourably on the Bourse on

bonds, and increasing its stock of specie by 24 millions. The month of May closed favourably on the Bourse on Saturday, the Government stocks closing at from a quarter to a half per cent. higher than the Thursday's rates given in my last letter, and in spite of the efforts made by the sellers of options to keep down the rates for the moment at which buyers had to declare whether they took up the stock or abandoned their primes, that is at two o'clock on the last market day of the month. The close of the day was, however, marked by weakness, purchasers of options who had taken up immediately effecting sales for realisation. The cours de

compensation were fixed at 56f 95c for the Threes, 89f 85c for the Fives, and 91f for the loan, against 53f 95c, 86f 30c, and 88f 60c for the three classes of stock on the 1st May, making an improvement of from 2½ to 3½ per cent. in the month. This was the turning point of a reaction due in the first place to the high charges for carrying over. Contangoes, which had ruled 31 centimes for the loan and 45 for the fully paid up, rose to 40 centimes and 55, and as the charges for accention dation increased prices retrograded, the loss being 25 centimes on the Loan and 35 centimes on the Threes. The closing rates were: Threes, for the settlement, 56f 65c; end of June, 57f; Fives, 89f 55c and 90f 10c; and the Loan, 90f 85e and 91f 25c. The decline was attributed to the large speculation for the rise in the preceding week and the scarried over while less capital was disposable, and the situation was aggravated by heavy sales on English and German account. The second day of the settlement, devoted to miscellaneous stocks and shares, was even more difficult than the first, Contangoes rising to an exorbitant rate, and reaching from 18 to 20 per cent. for first-class securities. Bank of France shares paid as high as 50f and 55f, railways from 6f to 8f, and other shares in proportion, while

railways from 6f to 8f, and other shares in proportion, while Rentes declined again from a  $\frac{1}{4}$  to  $\frac{1}{2}$  per cent. The Wednesday's market opened at 90f 85c for the Loan, rose to 91f 42 $\frac{1}{2}$ c, and then on receipt of news of the rise in the Bank rate at London, reacted to 90f 77 $\frac{1}{2}$ c, and closed at 91f 12 $\frac{1}{2}$ c, of a rise of 32 $\frac{1}{2}$  centimes for the day. Italian recovered  $\frac{1}{2}$  per cent. The firmness has continued to day, and the closing rates are the highest of the week. Subjoined are the latest quotations

Nothing is yet known relative to the financial plans of M. Magne, but he is said to intend to bring forward again the proposed tax of one per cent. on gross business returns, which met with considerable support when presented last summer, and which was then estimated to produce 70 millions of france. It was only rejected by a majority of 355 to 299, and would have no doubt been adopted but for the opposition of M. Thiers, who preferred the tax on raw materials.

The statement that the Bank of France had agreed to advance a sum of 200 millions to the Government to complete the payment of the indemnity to Prussia, is now confirmed. The whole of the sum will not, however, be lent in specie, nor is it to be employed for the payment of the present month, as at first said, but the Bank will hold the sum at the disposal of the Government, which will draw it as required, the Bank being reimbursed the amount by the instalments of the loan as they come in. The Government would have had no difficulty in purchasing bills, as the monthly payments on the loan were made, but as Prussia will not give up her material guarantee until the whole of the drafts have fallen due and been acquitted, it has been found more convenient to complete the payment in money.

Some of the journals which support the new Government had boasted of this advance from the Bank as a success of M. Magne, pretending that the arrangement had encountered difficulties which a word from the new Minister of Finance had removed as if by a miracle. A note in M. Leon Say's journal, the *Debats*, to-day, contradicts that pretension and claims the credit of the operation for the last Government; the treaty, it says, was drawn up and agreed to on the 23rd May, the day before the resignation of M. Thiers; it then goes on to say that this advance was not necessary for the fulfil-

ment of the engagements with Prussia; the Treasury had more than 600 millions in bills or specie, and was certain of receiving by the loan the remaining 350 millions before the month of September; it had also a right to demand 45 millions which had remained unemployed on the advance of 1,530 millions the Bank engaged in 1871 to make to the Government; this was all that was required to assure the liberation of the territory; the 200 millions were offered by the Bank, which derived as much benefit from the operation as the Treasury, and for that reason the offer was eagerly accepted; the only point that remained to be settled was the proportion of paper and metal to be furnished by the Bank, which offered more metal than paper.

A discrepancy will be remarked in this note, relative to the sum in the hands of the Treasury at the moment when the Government of M. Thiers resigned. M. Leon Say stated re-cently in one of the committees of the Assembly, that the amount was 800 millions, as I mentioned last week; according to the same arthority, as it may be inferred that the note in the Debats emanates from the director-proprietor of the journal, the sum was only 600; this difference will perhaps be ex-plained when we get M. Magne's report on the situation of the Treasury at the moment of his taking office.

The Assembly adjourned last week, until to-day, without coming to a decision on the indemnity to be paid to the Eastern Railway Company, in order to permit the new cabi-net to examine the subject and give its opinion. The proposal M. Pouyer-Quertier to reimburse the capital in payments of of 100 millions a year, by reducing the amortization to the Bank from 200 millions to 100 for three years, will be, at the same time, considered. M. Leon Say, however, before the adjournment, protested against a reduction for such a purpose, as he had already done against the suggestions that the duty on raw materials might be dispensed with, and the budget balanced by the same means. Such a measure, he repeated, would be destructive of the credit of the Bank and of the State, and would maintain indefinitely the forced circulation. The public have, however, become so fami-liarised with the paper money, and the system has so far presented so little inconvenience that the inconvertible currency has lost all its terrors, and although the Assembly desires in principle a return to specie payments, it would pro-bably hesitate to make a great sacrifice to attain that end. Plans were at one time presented by M. Wolowski and by M. Bartholoni for raising loans to pay off the Bank debt, but met with little support, the Assembly considering that an amortization of 200 millions a year, by which the entire debt would be liquidated in eight years, was sufficiently rapid, and failing to see the advantage of borrowing money at six per cent. to pay off a debt charged with interest at one per cent. only. Such a proposal would now have a still less chance of being adopted; the idea of reducing the amortization by one-half has already made its way, and if such a measure forms part of the financial plan of M. Magne, it will not meet with any opposition from the Chamber, whatever may be the manner in which the 100 millions thus obtained is to be employed.

Among the measures advanced a stage before the adjournment two deserve mention, one as concerning the families of British subjects residing in France. This is a proposal by M. des Rotours, to declare to be French citizens, and subject to military service, persons of foreign origin born in France. The proposition had been referred to a committee, which concluded in favour of it being taken into consideration, and those conclusions were presented and adopted. The next step will be to embody the idea in a Bill. It is, however, scarcely probable that foreign Governments will submit to having the sons of their subjects, compelled by business to reside in France, forcibly naturalised in such a summary manner without a protest, or without taking reprisals, which would be difficult in England where compulsory military service does not exist. The other measure refers to the salt duty, which is the cause of as much animosity between the manufacturers of the east and west of France as the treaties of commerce between the agricultural and manufacturing interests. The present duty is 100f per ton, but an allowance of 5 per cent. for waste is allowed to the production of the Western Departments, and of 3 per cent. to that of the Eastern. Marufacturers in the West are not satisfied with that advantage, and demand a further protection on the ground that the salt of the East contains a larger proportion of saline properties, and in consequence commands a preferof saline properties, and in consequence commands a prefer-ence on the market, and that protection they propose to obtain by imposing a differential tax of 12f per ton on salt made in the East. It is incontestable that the salt trade in the West is not so prosperous as formerly, but the reason is that the monopoly the manufacturers there formerly pos-sessed has been destroyed since the construction of canals and railways in the East has enabled the manufacturers there to send their produce to distant markets once here at their to send their produce to distant markets once beyond their reach, but within the network of rivers which water the West of France. The production in the East between 1828 and

1853 only increased from 25,000 to 29,000 tons, while the augmentation between the latter year and 1868 was to 150,000 The Assembly now gave leave to introduce a Bill on tons. the subject

The French Government has now issued the regulations for carrying out the decree of December last, ordering the adoption of the English or Moorson system of measurement for merchant shipping. The law comes into operation from the lat of June for new vessels, but for others a period of from two to six years is granted for their remeasurement, according to their size—the longest period being allowed to the smallest vessels—unless they should have to undergo thorough repairs, in which case the new measurement must be then effected The unity of tonnage is 2 metres 83 hundredths cube, equal to 100 English cubic feet. The deductions allowed by the English Act of the 18th August, 1854, for the engines will be admitted so long as that Act shall remain in force, but with the restriction that they shall not exceed 40 per cent, or, with the space for fuel, 50 per cent. of the total tonnage. The deduction will be allowed according to the following scale:— If the space occupied by the engines in paddle-wheel steamers does not exceed 20 per cent. of the total tonnage, or 13 per cent. in screw vessels, the deduction will be the effective space thus occupied, increased by one-half for the former and by three-fourths for the latter; when the space filled by the engines in paddle-wheel steamers is from 20 to 30 per cent., the deduction will be 37 hundredths of the total, or when 30 per cent. or above, 40 hundredths will be allowed; in screw vessels 32 hundredths will be allowed for those in which the machinery occupies between 13 and 20 per cent. of the total, and 40 hundredths uniformly when above 30 per cent.

The Société Générale has invited subscriptions for the third company, one series of which has been issued in England and the other in the United States. The present series (C) is for five millions of dollars, at 490f per 100 dollars, reimbursable by

drawings in fifty years, interest and amortization to be paid in gold, at the exchange of 5f 20c per dollar. The North of Charleroi (Belgium) Colliery Company an-nounces a dividend of 70f for 1872, against 40f paid for 1871.

The report read at the meeting of the company of the coal mines of Montrambert and La Bérandiére shows a similar state of prosperity. The profits, which had been 1,852,392f in 1871, amounted to 2,936,930f in 1872, or an increase of 60 per cent., with an augmentation of only 18 per cent. on the output.

The operations in the Paris bankers' clearing - house amounted to 139 millions of francs in the month of May.

The Messageries Company have held their annual meeting. The report read showed that the receipts in 1872 amounted to 49 millions, or 10 millions more than in 1871, and the expen-diture to 42,318,586f, including a sum of eight millions car-ried to the amortization account; a dividend of 9 per cent., or 45f, was declared, which is an increase of 7f 50c on that for 1871.

The following are the latest quotations of the Havre pro-

the United States, against 196,520 and 44,060 at the same date last vear.

#### GERMANY.

#### (FROM OUR OWN CORRESPONDENT.)

BERLIN, June 4. The Christian holidays of Whitsuntide are this year notable for the visit of a Mahommetan Monarch to the Prussian capital. If he compares his own country with the Russian Empire, and the Russian with the German and English civilisations, the Shah will be enabled to arrive at certain con-clusions as to the relative strength and power of various European countries. He will have to estimate the possibility of forming a more intimate connection with the Christian world, and of bridging the gap as yet lying between his own subjects and the people of the Occident. To a stranger, pro-ceeding from the shores of the Caspian sea and looking in succession at the distinctive features of national and social life in different countries, nothing, it must be presumed, should excite so much interest as the economical diversity existing

#### June 7, 1873.

## THE ECONOMIST.

between stationary Persia on the one side and the progressive world of Western Europe on the other. Still it is very doubtful whether, on their journey through European countries, world of Western Europe on the other. Still it is very doubtful whether, on their journey through European countries, Oriental Monarchs are sufficiently prepared to discover the working principle of modern society. To secure any under-standing of our social structure they ought to travel under a disguise like the Caliph Haroun al Raschid when he wandered about amongst his own subjects. In his Royal dignity, the Shah cannot possibly receive a very strong impression of what constitutes the main source of prosperity and welfare amongst Christian people. At the Courts of St Petersburg and Berlin the Shah might be easily induced to believe that it is solely to the strength of a military monarchy that the rise into power of European countries must be attributed. Perinto power of European countries must be attributed. haps the Shah himself is fully aware that, in his quality of a political student, he may be contributing more to the knowledge of critical observers than accumulating in his own knowledge of critical observers than accumulating in his own behalf such information as he possibly could employ to the advantage of his subjects. The curiosity of the Berlin public has been successful in finding out that the Shah appears to show particular interest in three prominent institutions of their capital viz., in the splendid and at the same time numerous carries in the culturation of the Zo their capital viz., in the spiendid and at the same time numerous garrison, in the quadruped collection of the Zo-ological Gardens, and last, not least, in the corps de ballet of the Royal Opera House. It is for a negative reason, therefore, that I have ventured to offer a few remarks on the Shah's presence. At Berlin there is no one, to my own knowing, who has been trying to attach any political purpose to Nassr-Eddin's journey through Ger-many. many. It cannot be denied that the Shah may have been led to consult the relative strength of personal influence and poli-tical tendencies, which he presumes to meet at the Court of St. Petersburg or in Downing street. As to Berlin, public opinion, whether in political or in commercial circles, is too little informed about Oriental politics to consider any future possibility of active participation in them on the part of Ger-many. The ignorance of Persian affairs among the Berlin public may perhaps be as great as that among the Persians of the statistics of the German Empire recently published by the Board of Imperial Statistics.

According to the last census, taken on the 1st December, 1871, the total population of the Empire amounts to 41,009,999 souls, Alsace and Lorraine contributing 1,549,587.

As the soldiery of the German occupation army stationed on the French soil is not included in the above figures, their number is to be added to the German population at large. would be highly interesting to ascertain the number of Ger-mans residing abroad, either in Europe or in transoceanic countries. It is certain that their collective number must be presumed to be very great. Unfortunately there are no statis-tics to this effect, but some reliable inference may be drawn from the tables published in other countries, and more espe-cially in the United States of America. Considering that Considering that cially in the United States of America. Considering that Englishmen living in the colonies and residing in English dependencies cannot be said to have separated from the national body of their native country, it is quite just to ac-knowledge that there is no other country where the spirit of economical enterprise appears to be so little counterbalanced by any considerations of national predilection attaching people to their original soil. On the other hand, the number of foreigners residing in Garmany is commaratively insignificant, the residing in Germany is comparatively insignificant, the total number not exceeding 206,918. The percentage of resident foreigners being on the average about 0.51 throughout Germany, and exceeds one per cent. only in the Hanse Towns, because of their eminently commercial population. It is about 2 per cent. in Hamburgh and Lubeck, and is some insignificant fractions under 11 per cent. in Bremen. Although the number of Germans emigrating to foreign countries is the number of Germans emigrating to foreign countries is considerable, yet the German population remains rather sta-tionary, in a local point of view, within the boundaries of the particular States, their international emigration being evi-dently not compensated for by any corresponding number of interfederal circulation. It is comparatively of rare occurrence for a Prussian citizen to transfer his residence to any other German State. If there be some tendency towards a change from one State to another, it is in the smallest duchies and principalities, where a certain fraction of the poorer popu-lation is annually thrown out into larger fields of occupation. The two largest States of Germany—Prussia and Bavaria— have populations 24,566,149 and 4,813,160 respectively; the two smallest States-Lubeck, 51,032, and Schaumburg-Lippe, 32.018.

COMMERCIAL AND MISCELLANEOUS NEWS.

Mr R. Meade, of the Mining Record office, makes the following statement of the average price per ton in London of five sorts of Northumberland and Durham seaborne coal-viz., Newcastle Wallsend, Holywell main, Hartley, Sunderland Wallsend, and Hartleypool Walls-end. The mean price averaged 15s 9d in the first quarter of the year 1871, 16s 2d in the second, 17s in the third, and 19s 9d in the fourth quarter; 19s 9d also in the first quarter of 1872, 21s 7d in the second,

27s 6d in the third, and 26s 5d in the fourth quarter; 33s 1d in the first quarter of 1873. From the first date to the last it has been all ascent, and in the two years the price has more than doubled. The ascent, and in the two years the price has more than doubled. The sums here stated are the average prices at which the coals were put in barge from the collier in the Thames, after paying freight, City dues, and other incidental charges; whatever was added to these prices in the charge to the consumer represents the cost of distribution and coal merchant's profit.

The Property and Income Tax Annually Paid on each of the Schedules A, B, C, D, and E, of the Property and Income Tax, from 1869 to 1871 inclusive, is as follows :-

Schedule.	1868-69. £		1869-70. £		1870-71. £	
Α	. 175,376,356	***	181,153,107	******	189,885,823

					1 1 1 1 1	

Some interesting statistics have recently been laid before the Egyptian Chamber of Representatives, showing the progress of the country during the reign of the present Sovereign. The exports during the last ten years, under the Government of the Khedive, compare as follows with the exports of the previous ten years under the preceding Government :-

EXPORTS OF TEN YEARS Preceding Governm		EXPORTS OF TEN YEAR Present Governm	
9	Amount.		Amount.
Year.	Purses.	Year.	Purses.
1852	382,955	1862	1,730,302
1853	373.651	1863	2,808,815
1854	549,576	1864	2,634,457
1855	660,039	1865	2,104,314
1856	514,590	1866	2,005,371
1857	415.054	1867	2.117.736
1858	430,249	1868	3.246,176
1859	423.672	1869	2,056,576
1860	582,232	1870	2,401,747
1861	1,011,541	1871	2,943,239
Total	5,343,565	Total	24,049,717
- £3	26.700.000	- £	120,240,000

It would appear from these figures that while the exports of the ten years ending 1861 were valued at no more than 26,700,000/, the ex-ports of the succeeding ten years were valued at 120,240,000/, an amount in the second decade more than four times the amount in the 

Government.		Present Government.		
	Amount.		Amount.	
Year.	Purses.	Year.	Purses.	
1852	418,177	1862	723,327	
1853	427,760	1863	1,189,159	
1854	429,204	1864	1,360,409	
1855	405,349	1865	1,045,017	
1856	482,770	1866	987,064	
1857	432,088	1867	805,666	
1858	395,178	1868	977,859	
1859	413,885	1869	1,025,489	
1860	420,311	1870	1,051,615	
1861	420,318	1871	1,114,471	
Total	4,245,046	Total	10,280,081	
- £:	21,769,467	=	£52,718,367	

Thus the imports in the second decade, amounting to 52,718,3677, are two-and-a-half times the amount of the imports in the first decade, also showing, as well as the exports, a most remarkable development of trade and industry, which Egypt owes, in a large part, to the con-struction of railways, canals, and other industrial works, and the ex-tensive importation of machinery, which the present Government has fostered. According to the last budget statement, which has been submitted to Parliament by the Egypt now amounts to 1,392,463 purses, or about 7,000,000/, and the expenditure to 1,262,732 purses, or about 6,300,000/, showing a surplus of 129,731 purses, or between 600,000/ Thus the imports in the second decade, amounting to 52,718,367/, are and 700.000/.

The latest official returns of the commerce of the United States bring the movement of imports and exports up to the close of December, 1872, and present the following comparison of last year with 1871:--

Merchandise	trs (GOLD V. 1872. dols. 656,000,000 21,200,000		1871. dols.	***	Increase. dols. 82,900,000 4,400,000

and securities.

According to a return just issued by the Local Government Board, a considerable diminution in the paperism of the country has recently occurred. At the close of the last parochial year there were 852,915

#### 690

### THE ECONOMIST.

### [June 7, 1873.

paupers in receipt of relief in the several Unions of England, and at the corresponding period of the previous year there were 907,047, showing a decrease in 1873 of 54,132, or 6 per cent.; but compared with the last week of March, 1871, there was a decrease of 146,170, or 146 per cent, the number in receipt of relief at the last-mentioned period being 999,085. Taking the North Midland, North-Western, and York divisions, where the principal manufactures are carried on, there was a decrease of 16g per cent. or 36,652 less paupers in March, 1873, compared with 1871; there were above 222,000 paur ers in the manufacturing districts at Lady-day, 1872, but these numbers had been reduced to 185,492 at Lady-day last. It is worthy of notice that the decrease of pauperism in England shown by this return is confined to the out-door paupers, there being 58,000 less at Lady-day, 1873, than in 1872; but about 4,000 more persons were relieved in the workhouse. This fact would make it appear that the guardians have of late been more stringent in their administration of out-door relief, and at the same time applied the workhouse test more rigorously. It is remarkable that in the metropolis about 2 paupers are relieved out-door to 1 in-door, whereas in the South-Western counties the proportion of out-door is about 8 to 1. In the North-Western counties there are about 3 out-door paupers to 1 in-door, but in Wales 14 to 1. The average ratio of England is about 5 out-door to 1 relieved in the workhouse.

Clearing-house return		64,751,000	86,586,000	139,434,000	126,621,000

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1863, a deficiency of 7,244,199*l*; in 1870, a deficiency of 2,946,698*l*; in 1871, an excess of 1,206,287*l*; and in 1872, a deficiency of 3,881,542*l*. In 1873, there is a deficiency of 8,432,072*l*.

In 1863, some extra pressure in the open market brought rates up to the Bank charge; a demand for short money in the foreign stock markets more immediately helped the effect of reviving trade in making money scarcer.

In 1870, the resources of the bank were increasing. A Peruvian loan of 10,000,000*l* had been brought out, and was chiefly subscribed for in Paris.

In 1871, the money market was dull, but the expected issue of the French loan prevented any downward movement in the Bank rate.

In 1872, the recent active demand for accommodation had not quite died away on home account, but rates were tending to fall. The strongest feature in the market was the continuous influx of bullion from America and elsewhere. In the stock market, speculation for the rise further extended itself, but was not strengthened by much confidence as to future ease in the money market.

The account of the Bank of France for the week ending June 5 shows the following changes :---

Asset5.	June 5.		May 29.		Increase.	Decrease

DISCOUNT AND MONEY MARKET .- The good demand for money of which we spoke last week continuing, and the alterations in the weekly account being very unfavourable, the Bank directors on Wednesday adopted the course which has for some time been a probable contingency-that of raising the rate to 7 per cent. The scarcity of money which preceded this change appears to have been partly occasioned by the large instalments due on some recent issues of foreign loans; but the expectation that ease would follow the payments which were due early in the week has not been fulfilled. There has been a good demand for money since the rise to 7 per cent. both in the open market and at the Bank; and although the outside market is a little unsettled, especially as regards long bills, for which very wide rates are quoted, the Bank rate is very closely approached for two and three months' Bank bills, and short money is also rather scarce, the rate from day to day on English Government Securities being 61 to 7 per cent. The bullion movements are now very carefully watched, and as the demand for gold for export for other quarters besides Germany continues, the apprehension is very common that another advance of the rate may be necessary. The continental exchanges have risen since the advance of the Bank to 7 per cent., but it is too early yet to pronounce posi-tively that the tide has turned. There has been a good deal of talk this week as to the prospect of the French Government taking 8,000,000l of gold out of the Bank of France with which to pay the Germans, but a good deal of doubt continues to be entertained in well-informed quarters as to whether such a payment will actually be made. Gold has certainly not been taken from the Bank of France for the June instalment.

The changes in the Bank return, which had no doubt much to do with the promptitude of the Bank's action on Wednes-day, are very serious indeed. The private securities increased by the large amount of 1,653,000l, showing that the demand at the Bank had been very strong. Such a demand is most unusual at this period when the private securities tend to run off, and the fact that the total of these s curities is now 25,613,000l is an undoubted proof of an unusual scarcity in the open market. The reduction in the reserve, 709,0001, was also very large, and although it may be accounted for by temporary causes, such as the despatch of sovereigns to Scotland and the increase of the circulation, the circumstance that the total reserve is brought under 10,000,000l with a foreign drain of bullion continuing, is altogether unsatisfactory. The private deposits, it should be noticed, have only increased 181,000l, so that very little of the increase of private securities can have been precautionary. The Government deposits have, however, increased 694,000l.

We subjoin our usual quotations for mercantile paper, having various periods to run, subject to the observation already made, however, that rates are very wide, and that, especially for long bills, there is no settled market.

THE STOCK MARKETS .- The Whitsuntide holidays, and the sudden advance in the Bank rate of discount have together had the effect of greatly restricting business this week, and of producing heaviness in some departments. Although Foreign Stocks have not been noticeably affected, both English Government Securities and Home Railways have declined; and the American Market has exhibited depression. United States Government Stocks have not suffered to any extent, but the Railroad Securities, in which any business has been reported, have mostly relapsed to a moderate extent. In Canadian Railways, the success of the Grand Trunk new issue of ordinary stock has caused a rise in the Third (hitherto Fourth) Preference Stock, as was only to be expected; but the ordinary stock has raled dull. Turning to Foreign Railway Shares and Obligations, there is little to report, beyond a rise in those of the Ottoman (Smyrna to Aidin) Company, which has made an arrangement with its debenture holders. There is really very little further to report as to the fluctuations of the week. The more Miscellaneous descriptions of investments have been much neglected, Banks, Finance, and Discount Companies showing unimportant changes, with the exception of this afternoon's fall in General Credit Shares, while in Atlantic Telegraphs alone has any buoyancy been apparent. Mining Shares have remained almost entirely out of favour. Canadian Land Shares have at times been inquired for; but Scottish Australian Investment Stock has given way. Such have been the only noteworthy variations of the week; and it will readily be understood that they have been of less than average importance. Indeed, the contrast of the Clearing-house returns on the last Stock Exchange settling-day with those on the corresponding settling-day of last year show pretty clearly that the reduction in business operations has been considerable. To-day, business has continued altogether to wear a languid appearance, and in the various departments quotations have generally receded. Grand Trunk Stocks and Telegraph Securities have declined.

ENGLISH GOVERNMENT SECURITIES.—The sudden advance in the Bank rate caused an immediate relapse in the British Funds, Consols on Wednesday falling  $\frac{1}{4}$ . New and Reduced have continued to be purchased by the Government broker, and have suffered slightly less than Consols. Exchequer Bills have receded; but Bank Stock has met with more inquiry, as the demand for money at that establishment is likely to increase the profits of the half-year. Indian Government Securities have ruled very quiet. To-day's closing quotations were unchanged.

961 1 xd COLONIAL GOVERNMENT SECURITIES .-- In these, one Cape of Good Hope Stock, the Six per Cent. 1873 has gone up 1; Mauritius 1895-96 has advanced 2; and the other loans of the same colony 1 each. There are no other changes either up or down for these on the week.

FOREIGN GOVERNMENT SECURITIES .- Not much influence has been exercised by the money market upon the course of prices in Foreign Stocks. The from day-to-day variations have for the most part been small, and fresh business limited. Thus, it will be found upon reference to the contrast of prices below, that French, Italian, Turkish, Russian, and some other descriptions of Securities have but slightly varied from the closing quotations last Friday; and that in hardly any instances have the differences proved to be of an exceptional Venezuela bonds have, it is true, advanced owing to kind. a notification that a commissioner has arrived from President Blanco to arrange for the recognition of the foreign debt ; and Bolivian, San Domingo, and Paraguayan Stocks have exhibited some recovery. But, on the other hand, Egyptian and Peruvian Securities have not been so firmly held; and Spanish have receded after the advance of last week. It remains to be seen how the Spanish Government will provide for the coupon falling due at the end of this month. Portuguese Stock, on the other hand, has fractionally improved, a new railway issue having been eagerly absorbed in the country itself. Such, in short, are the principal changes in Foreign Stocks during the week. To-day, prices have receded, the principal fall being  $\frac{5}{8}$  in Spanish 3 per Cents., owing to a rumour that the next coupon had not yet been provided for. French Rentes were likewise lower.

The following are the changes for the week, taking the latest unofficial quotations :-

Home Railway Stocks this week in response to the higher value of money; but business has not been at all of an active description. Weakness was exhibited on Tuesday, owing to the publication of the Manchester and Sheffield Company's statement of working expenses for the first twenty-one weeks of the current half-year, showing that the increase therein had swallowed up the whole of the traffic improvement of 62,017*l*, and some 20,915*l* besides. On Wednesday afternoon, both the Caledonian and North British advanced, large buying

orders being sent from the North, as it appeared the Committees of the respective companies had provisionally agreed to the division of the competitive traffic between certain places, and the withdrawal of new competing schemes. It will be seen below that these two companies have fairly well maintained their position during the week, but that the English Companies are for the most part fractionally lower. Great Northern "A" and South-Eastern Deferred Stocks have been the most to suffer. Taff Vale Stock has risen. The traffic returns, including the first part of the Whitsuntide receipts, have generally been satisfactory. To-day, the Railway Market opened dull, and during the day stocks were offered to a moderate extent, and, finding no buyers, quotations generally declined and closed weak. Great Northern A fell 1; South-Eastern, Ditto Deferred, and Lancashire and Yorkshire,  $\frac{1}{2}$ ; Norih British and Metropolitan,  $\frac{1}{3}$ ; and some other stocks,  $\frac{1}{5}$  to  $\frac{1}{4}$ . The following shows the principal changes for the week

in the quotations of ordinary stocks, comparing the latest unofficial prices :---

JOINT STOCK BANKS .- The changes in these shares this week are not very numerous nor of much importance. The following have advanced :- British North American, 1; London and County, London and South-Western, London and Westminster, and Union of Australia, each 1. And the following are down :- Provincial of Ireland, 1; Commercial of River Plate, 1; Bank of Australia, 1; and Agra, 1.

TELEGRAPHS .- The alteration in the appearance of this department is principally due to a rise during the week in Atlantic shares, and a fall in those of some of the Asiatic lines. The following have advanced :- Anglo-American, 3; Newfoundland,  $\frac{1}{2}$ ; French Atlantic,  $\frac{1}{2}$ ; do. Debentures, 1; Brazilian Submarine,  $\frac{1}{4}$ ; Cuba,  $\frac{1}{4}$ ; West India and Panana,  $\frac{1}{4}$ . On the other side, Submarine have fallen 5; do. Scrip,  $\frac{1}{8}$ ; Eastern,  $\frac{1}{8}$ ; do. New,  $\frac{1}{2}$ ; Great Northern,  $\frac{1}{4}$ ; Reuter's,  $\frac{1}{4}$ . India Rubber Works have advanced 2; Submarine Cables' Trust have fallen 1.

MINES .- In the British market there is further depression, South Caradon having fallen 40 during the week, besides the following cases of decline :- East Lovell, 2 ; Great Wheal Vor, 1; Tin Croft, 1; Devon Great Consols,  $\frac{1}{2}$ ; West Chiverton,  $\frac{1}{2}$ ; South Condurrow,  $\frac{1}{4}$ . In foreign mining shares, Eberhardt have advanced  $\frac{1}{2}$ ; Fortuna,  $\frac{1}{4}$ ; Sweetland Creek Gold,  $\frac{1}{4}$ ; United Mexican,  $\frac{1}{4}$ ; Vancouver Coal,  $\frac{1}{8}$ . The following have declined :- St John del Rey, 5; Richmond Consolidated, 1; Last Chance,  $\frac{1}{2}$ ; New Quebrada,  $\frac{1}{4}$ ; Port Phi'lip, 1/8; Scottish Australian, 1/8.

MISCELLANEOUS .- There are two noteworthy falls in these this week : Scottish Australian Investment, 10; and Nantyglo and Blaina Iron, 5; the former consequent on the declaration of dividend, its preference stock having advanced 1, and the latter in sympathy with the general depression in mining shares. Besides these there are no remarkable features in the market. Quebec City have advanced 3; Canada Company, 2; Crystal Palace 6 per Cent. Debentures, Assam Tea, Share Investment Deferred, and Foreign and Colonial Government Trust, 1872, each 1; Rio City,  $\frac{1}{2}$ ; and Merry and Cuning-hame,  $\frac{1}{4}$ . The depressions are more numerous, but, those abovementioned excepted, of small account. Liebig's Extract Company are down 2; London Omnibus, 1; Peninsular and Oriental Steam, 1. In tramways, North Metropolitan and Lisbon Steam are down each  $\frac{1}{2}$ ; Glasgow and British and Foreign, each  $\frac{1}{4}$ . Native Guano and Phosphate Sewage have fallen each  $\frac{1}{4}$ ; Natal Land,  $\frac{1}{2}$ ; General Credit and Discount,  $\frac{1}{8}$ ; Fore Street Warehouse,  $\frac{1}{2}$ ; English and Australian Copper,  $\frac{1}{8}$ ; and Ebbw Vale Steel,  $\frac{1}{2}$ . The sum of 50,000*l* in sovereigns has been withdrawn

from the Bank for Rio de Janeiro.

#### NOTICES AND REPORTS.

#### STOCKS.

Venezuela Bonds.-The following from the Venezuelan Con-sulate was posted in the Stock Exchange :-- "I am authorised to state, for the information of Venezuelan Bondholders, that a gentleman from Caracas, high in the confidence of the President, General Guzman Blanco, and empowered by him to effect a satisfactory arrangement with the foreign creditors of Venezuela, has arrived in Paris on his way to London, where he may be expected in a few days for that purpose.

RAILWAY COMPANIES. Caledonian North British.—It is stated that a meeting of committees of the respective Boards, held on the 4th inst., at which the heads of an agreement for the division of a certain coaching traffic and the withdrawal of competing new lines were initiated.

East and West Junction Railway 5 per Cent, Debenture Stock; The issue has been announced of 62,500l (the balance of 400,000l) perpetual 5 per Cent. Debenture Stock. The price of issue is  $97\frac{1}{2}$  per cent., and one year's interest is secured by a deposit in consols. The line is completed, and partly in operation.

operation. Great Indian Peninsula.—The gross receipts for the second half of 1872 amounted to 650,119l, as against 765,271l, a falling off due entirely to merchandise traffic, while the work-ing expenses were 495,197l, as against 562,628l. The net receipts were 154,922l. The falling off in the receipts from cotton were 44,833l; from grain, 67,347l; and from salt, 11,870l. The capital account showed 23,478,582l received, and 22,965,246l expended 22,965,246l expended.

Ottoman.—At a meeting of the debenture holders, it was resolved to receive the arrears of interest up to the 1st May last, one-third in cash, to be paid within three months, and two-thirds in reserved debentures, at 60/ per 100/ bond. This Settlement will, it is anticipated, meet with the final sanction of the Board, when it will again be submitted for approval. Perkiomen Railroad—Gold 6 per Cent. Consolidated Mortgage.— Messrs M.Caimont Brothers and Co. invite subscriptions for

240,000/ (\$1,200,000) of these consolidated mortgage bonds, forming part of a total of 500,000/, of the Perkiomen Railroad Company, the principal and interest guaranteed by the Phila-delphia and Reading Railroad Company. The main line, thirty-eight miles in length, and partly in operation, extends [CONTINUED ON PAGE 696.]

#### [CONTINUED FROM PAGE 693.]

from the Philadelphia and Reading railroad to the East Penn-sylvania railroad, and opens up a district containing iron ore. The bonds are redeemable on 1st June, 1913, unless previously paid off at par by means of an annual sinking fund of  $\frac{24}{2}$  per cent., applicable in half-yearly drawings commencing in July, 1875. The price of issue is 90 per cent., reduced to 89 per cent. by discounts on pre-payments and accrued interest. Principal and interest are payable in sterling in London. BANKS.

Hibernian .- A dividend at the rate of 12 per cent., free of income tax, has been declared.

London and River Plate .- Half-year's interim dividend 5 per cent.

National Provincial of England.—The directors announce the payment, on the 11th July, of a half-yearly dividend at the rate of 8 per cent. per annum, and a half-yearly bonus of 8 per cent.

FINANCE, CREDIT, AND DISCOUNT COMPANIES

Société Générale de L'Émpire Ottoman.—The annual dividend declared is £T.1 per share, which, added to the statutory interest of 6 per cent., makes a total distribution of  $17\frac{3}{4}$  per cent.

ASSURANCE COMPANIES. Accidental Death Insurance.—Mr E. Hart, the liquidator, has declared a third dividend of 4s 6d in the pound, payable on and after the 10th instant.

Guardian Fire and Life .- At the annual meeting a dividend ras declared similar to that of last year, viz., 2/10s on each share, together with a bonus of 10s per share, being at the rate of 6 per cent. per annum. London and Provincial Marine.—The directors have decided

on the payment of the usual interest at the rate of 10 per cent. per annum, free of income tax, for the half-year ending cent. per annur the 30th June.

#### MISCELLANEOUS COMPANIES.

British and Foreign Tramways .- A call of 1l per share is payable on the 2nd July. Coal Consumers' Association.—After examination of a number

of collieries the directors say they have succeeded in making arrangements for the supply of excellent house, cannel, and steam coal, and they will be in a position to deliver to the

shareholders as soon as the necessary stock is in each depot. Eastern Extension Telegraph.—It is announced that at a meeting of the directors an interim dividend of 3s per share for the quarter ended March 31st was declared payable on the 15th July. German Union Telegraph.—Dividend 5s 6d per share. Grand Junction Canal.—Half-year's net receipts 29,140l.

A dividend of 2l per share, free of income-tax, is notified, leaving 3,5681.

Italian Irrigation .--- Notice has been given that the coupons of the bonds due the 1st July next, will be received at the London

office up to the 14th of June. Limehouse Works, Limited.—Creditors must send details of their claims to the official liquidator, Mr W. D. Harding, by the 30th inst., the 7th July being appointed for adjudicating upon them.

Peninsula and Oriental Steam Navigation .- The very high price of fuel, labour, and other necessaries has formed a serious drawback to the profits of the company. The financial results for the six months ended the 31st of March last enables the directors, after making the customary provisions for depre-ciation and insurance, to recommend the declaration of an interim dividend for the half-year at the rate of 6 per cent. per annum, free of income-tax. Various additions have been

made to the company's fleet. Wallasey Tranways, Limited.—Creditors are required to send details of claims to the official liquidator, Mr W. Mayor, by the 1st of July, the 14th of July being appointed for the adjudication.

Waterloo Bridge.- A dividend of 4s 2d in the pound was declared at the half-yearly meeting. MINING COMPANIES.

Cape Copper .- A dividend of 20s per share has been declared.

Pontgibaud Silver Lead Mining and Smelting .- Interim dividend 25f, or 19s 6d per share. Rossa Grande Gold.—The Board expect that only one more

call of 1s per share will be necessary, and that profits will soon be forthcoming.

## June 7, 1873.

### THE ECONOMIST

AVERAGES OF GRAIN.

The following is a statement showing the quantities sold and the average price of British Corn (Imperial measure). as received from the Inspectors and Officers of Excise, conformably to the Act of the 27th and 28th Victoria, cap. 87, in the week ended May 31, 1873:-

The amount of business done this week on the corn exchanges of the country has not been great, it being a holiday week, but the tone of the market remains substantially the same as before. The weather has been warm but of an unsettled character, and in the North the warmth has been too much tempered with East winds, so that all over the crops are estimated to be about three weeks late. They are, however, looking well, and continue to give, on the whole, improving prospects, and even if, from the small area sown, our home yield proves short, the accounts from abroad are so good that there appears to be no ground for apprehension. Stocks are reported to be low in the millers' hands, and while the market is so sensitive they are hardly likely to be increased, but the supply continues good from abroad. The rise in price (amounting to from 2s to 3s per quarter on the month) is therefore probably due to the unexpected continental demand, which appears likely to continue and to compete with us for our American and Australian supply. The new Chili crop is reported excellent in yield and quality. The cargoes afloat for this country are 141, against 134 at this date last year. Oats and barley are both scarce, particularly the finer qualities, and the Scotch crops of the former are said to be severely injured in many parts by the grub. These grains are consequently rather dearer. Flour continues firm at about late rates.

Business in the Liverpool cotton market, though interrupted by the holidays and curtailed by the high rates now required for loanable money, has been fairly steady, and the speculative branch being naturally most affected, contracts for future delivery have chiefly shown a want of support. In London small sales at steady prices have been the order of the business week. Advices from abroad have led to the expectation of a better trade in Manchester products, and in yarns particularly some improved demand is apparently necessary to keep down the stocks, which have tended to accumulate in the absence of adequate consumption. Some shipping demand has made itself felt, but the home trade is still inactive, and the holidays have stopped business of late. Quotations from New York have shown no alteration during the week. According to Messrs Neil, the continued heavy arrivals of new cotton at American ports have been principally owing to the stocks kept back in the interior by external causes; that surplus being nearly exhausted no unusual quantity can be now forthcoming.

There is little to report from the wool manufacturing districts this week. Several things have combined to interfere with business—the holidays, the nearness of the new clip, and latterly, the rise in the Bank rate. The latter two influences have tended to lower prices for almost all kinds of wool. Spinners' prices are irregular, according as they are well or ill engaged with orders, and but few new orders are being placed. Makers of all wool goods speak of a fair demand, but the home trade being less, this department also has been dull this week, and would have been more so but that foreign buyers are coming in rather more freely.

The iron trade is at present once in which holidays would be observed on all sides with a great deal of willingness, both on account of the prosperous condition of the workers and the dulness of demand, which causes a cessation of production to be rather welcome to the masters in the present blank state of their order books. At Birmingham, business has not revived and does not appear to be tending in that direction, since concessions are limited by the still firm price of coal. At Wolverhampton, energetic attempts are made to bring down the cost of fuel, both by importing that of other districts and by reducing the consumption alike on the part of pig and finished ironmakers. In the North of England the settlement of the ironstone difficulty has prevented a great rise in quotations for iron, but the business there doing is small, production is not brisk, the prospects the summer trade are poor, and in the meanwhile prices are unaltered.

duction is not brisk, the prospects the summer trade are poor, and in the meanwhile prices are unaltered. In the produce markets, the more speculative branches have felt the influence of the lighter money market of late. For certain descriptions of sugar there has been a sustained demand, and the extra activity has lent firmness to prices. Coffee has been and continues to be a declining market. No recovery is as yet reported in the tea trade, a quiet business being the general characteristic. The metal markets close generally weak, though there was some activity at the commencement of the week. Tallow is steady, at a slight reduction. 697

EXTRACTS FROM TRADE CIRCULARS. (From Messrs J. and C. Sturge's Corn Circular, dated Birmingham, June 5.)—The price of English wheat has gradually advanced 2s to 3s per quarter during the past month, but last week again receded a little. The weather has been very favourable to the growing crops, the fall of rain being sufficient but not too great, so that the wheat plant on the stiff soils would now do until harvest without more moisture; it is, however, still rather backward. The greater part looks promising, particularly the spring-sown, theugh from some of the clay lands we still hear complaints, and the area planted must be smaller than usual, in consequence of the unfavourable weather at the usual time for wheat sowing. We believe the stocks of grain in the hands of millers, dealers, and merchants, are reduced very low, but with fine weather present prices will bring the whole to market, as well as what remains in farmers' hands, respecting which the common remark is that they have plenty of ricks but with very little in them. Should the weather continue favourable it is evidently a question between consumption and supply, and unless the demand for the continent, which is now considerable, should increase, we think the latter will be in excess. French prices continue quit as high as our own, in fact some cargoes of Californian on the coast have been bought for the North of that country and anticipated fall, and foreign wheat, particularly Ghirka, is become relatively dearer than Englisb. There are 10 cargoes of wheat waiting orders on the coast, about 60 on passage from ports East of Gibraltar, against 64 a month since, and 100 at this time last year, and now about 180 on the way from the Pacific, also about 25 from Australia. The imports of wheat and flour for the past month were 879,430 quarters, against 637,414 quarters in April, and 582,164 quarters in May, 1872.

(From Sir Charles Forbes and Co.'s Cotton Circular, dated Bombay, May 12.)—The demand has run principally on Dhollerah descriptions, which, being at the moment in only moderate supply, have maintained their values better than they would otherwise have done. A large number of native craft are, however, on the way from the Gulf of Cambay with considerable supplies, which may after arrival weaken prices. Dealers generally evince a disposition to meet the market, and in the face of continued adverse advices, it is anticipated that the prices must still recede here. The general impression as to coming prospects may be gathered from the fact that purchases for future delivery can be made at considerably easier rates than for spot cotton. The transactions for the past fortnight aggregate about 22,500 candies, of which 17,500 candies were for immediate, and 5,000 candies future, delivery, of which about 75 per cent. were Dhollerah descriptions. Cotton is now coming forward freely, the arrivals by latest returns, from January 1 last, being about 40,000 bales of 3½ cwts in excess of those to a corresponding period last year. It is generally estimated that about 300,000 bales will remain to be shipped after the fair season is over.

(From Messrs Heugh, Balfour, and Co.'s Manchester Prices Current, dated June 2.)—The month of May has been quite as quiet in this market as was the month of April; possibly taking it altogether there has been rather less business done. At the same time there is very little difference in prices. Our quotations are about 1½d lower on some kinds of shirtings, the same on jacconets and madapollams, and on the narrow widths of printers. Other classes of goods are unchanged. In yarns we quote about ½d lower, but in reality there is very little alteration. Cotton has been dull all through the month and has had a good deal to do with the tone of our market, although, taking together the stock in Liverpool and the quantity at sea, the supply is only 21,500 bales in excess of what it was a year ago, while the price is 2¼d per 1b less; still, in these circumstances, strong as they are, the prices in Liverpool are barely maintained, and though the consumption is large every demand is freely met by importers.

the supply is only 21,300 bales in excess of what it was a year ago, while the price is 24d per lb less; still, in these circumstances, strong as they are, the prices in Liverpool are barely maintained, and though the consumption is large every demand is freely met by importers. (From Messrs Charles Balme and Co.'s Wool Report, dated May 31.)—It is estimated that the proportion purchased at the recent sales for export amounts to nearly one-half of the entire shipments sold, almost the whole of which has been taken on French account. The earlier sales were characterised by considerable hesitation, the recent more or less unsatisfactory condition of manufacturing industry having induced some doubt whether a further reduction in value would not prove an indispensable condition of the consumption of the large supplies of raw material on hand. The progress of the series, however, developed far more intrinsic strength in the market than has been generally expected, and the flatness at first noticeable gave place to a decidedly firmer tone in competition in all classes, except half-breds, lambs' wool, and Capes, as the extent of consumers' requirements became more clearly evidenced. The receipt of the news of the change of government in France at the close of the sales gave increased confidence to French buyers, producing during the last week a still stronger tendency in quotations, partially also influencing those descriptions which had been previously exceptionally depressed. The reports from the manufacturing centres, home and foreign, by no means show that the condition of any branch of the industry is either very remunerative or satisfactory; the demand for goods, however, appears to keep manufacturers, for the most part, fairly employed, and the increase of machinery since the close of the French war has been so important as to render the actual supply of the raw material not in excess of the present rate of consumption.

(From Messrs Kilburn, Kershaw, and Co.'s Silk Circular, dated June 4.)—The silk market has decidedly improved, and its general position is, in every sense, better than when we last reported. There has been an active inquiry during the past fortnight, resulting in considerable business, chiefly in North China and Japan silks. Japans have been in much request of late, and Mybash has advanced fully 1s to 1s 6d, this silk having been favourably affected by the continued bad accounts of the European crops. Deliveries have been very good, showing generally satisfactory figures, more especially as regards China silk.

as regards China sikk. (From Messrs Durant and Co.'s Silk Circular, dated June 3.)—We have had another trying and perplexing month in silk. All sorts of difficulties, political and financial, added to bad trade, large stocks, and the usual uncertainty as to European crops. Still fair business has been done, and we finish generally at the improved prices ruling at the commencement, speaking generally, about 1s above the lowest moment of April. The continental reports are more than usually puzzling, high prices are reported for Coccons and advanced quotations for various classes of European silk, but all this has induced only the small improvement of 1s in Asiatic silk. The deliveries, although better than for any month since July, are after all only moderate. In Japan silk only do we find our stock within moderate compass, and this silk is in good demand.

silk is in good demand. (From Messrs R. J. Rouse and Co.'s Sugar Price Current, dated June 2.)—The reduced duties which have come into operation during the past month have had little influence on the market, the supplies having been fully adequate to the demand; the values, in bond, are about the same as prior to the publication of the Budget, with the exception of crystallised and foreign refined, which are 1s dearer. The imports into Great Britain during the past month have been 60,300 tons, against 51,700; deliveries 53,400, against 57,500; and the stock shows a surplus of nearly 70,000 tons as compared with that of twelve months since. The stock in the four principal ports of the United States on the 1st ulto. was 77,400 tons, against 74,800 last year. The shipments from Havana and Matanzas, in the four months ending April 30, amounted to 680,000 boxes, against 631,000, including 123,000 boxes to Great Britain, against 119,000 in 1872. The exports from Mauritus between the 1st August and the 3rd April reached 118,000 tons, against 108,000, of which 40,400 tons were to Great Britain, against 39,000 in 1871-72; at the latest date the growing crop was estimated at about 125,000 tons. The quantity afloat for Great Britain from Mauritus is 5,200 tons, against 9,500; from British India 5,500, against 7,000; and from Manilla 6,600 tons, against 830,000 twelve months since. Her: Licht's latest estimate of the European beet crop of 1872-3 is 1,125,000 tons, against 873,000 in 1871-2; and an increased breadth of land, estimated at 5 to 10 per cent., is under cultivation this year.

(From Messrs Arthur Capel and Co.'s Tea Circular, dated June 4.)—Business during the past month has been on a very limited scale, the trade buying only for immediate wants, whilst the export demand continues much below the usual average. Prices of good to fine black-leaf kinds of congou have been firm, but those of the common kinds and fair to good medium have given way. Red-leaf kinds have been better supported, but latterly sales of good to fine Kaisow have been made at lower rates. The stock in the United Kingdom on 31st ult. was estimated at 84,288,000 lbs, against 90,064,000 lbs last year; and the quantity afloat, advices by letter, at 711,850 lbs, against 1,951,000 lbs of China tea, and 159,709 lbs, against 354,049 lbs of Indian tea. (From Messrs Van Houten and Ebeling's Monthly Tin Circular, dated Rotterdam, May 31.)—Throughout the month a feeling of almost uninterrupted dulness and depression has ruled in the tin market, resulting in a decline of about 4fl.

(From Messrs Van Houten and Ebeling's Monthly Tin Circular, dated Rotterdam, May 31.)—Throughout the month a feeling of almost uninterrupted dulness and depression has ruled in the tin market, resulting in a decline of about 4fl. Banca has been in moderate demand, and being pressed for sale the price gave way from 84fl to 80fl. Contracts for autumn delivery changed hands from 83fl to 80fl; at the close there are buyers at 80<sup>1</sup>/<sub>2</sub>fl. Billiton has been in limited request, causing a decline from 83<sup>1</sup>/<sub>2</sub>fl to 80fl. A considerable quantity of the recent heavy arrivals is withdrawn from the market. To-day the directors of the Dutch Trading Company have given notice that they intend to hold two autumn sales this year, and that each sale will comprise about 30,000 slabs. In consequence of this announcement the market closes much stronger. The following statement shows the position of Banca tin in Holland on 31st May, from the official returns published by the Dutch Trading Company:—Total stock,

148,660 slabs in 1873; 70.721 slabs in 1872; and 131,680 slabs in 1871. Afloat:—15,600 peculs in 1873; 8,500 peculs in 1872; and 17,300 peculs in 1871. The combined returns of Banca and Billiton for 1873, compared with those for 1872, exhibit an increase of the import for May of 564 tons; an increase of the import for the 5 months of 2,319 tons; an increase of the deliveries for May of 513 tons; an increase of the deliveries for the 5 months of 1,162 tons; an increase of the stock second hand of 231 tons; an increase of the unsold stock of 2,381 tons; an increase of the total stock of 2,612 tons; a decline of the quotation of Banca of 26.13*l* per ton.

(From Messrs Mohr Brothers Rice Circular, dated Akyab, May 5.)—Notwithstanding the higher prices mentioned in our last report, supplies on our rice market have, we regret to say, remained insignificant, which, at the advanced state of our season, has compelled shippers to send into the interior to secure their requirements. From Rangoon, a steadily-rising market being reported, the competition which ensued was strong, and holders being very reluctant to sell, a rapid advance in prices has been established. The squally weather which we have had during the last ten days, has rendered the getting in of the grain most difficult, and the small stocks on the spot, which still remained in native speculators' hands, found eager buyers. Our exports to date reach 98,000 tons, against 82,000 tons last year, and 86,000 tons in 1871. Tonnage in port aggregates 13,000 tons, against 12,000 tons, and 14,000 tons in 1871.

(From Messrs F. W. Cosens' Monthly Circular, dated June 4.)—The excitement caused by the unfavourable reports from the wine growing districts of France, received here early in May, has resulted in a maintained rise in the value of brandy and French wines. Of late buyers act with caution, and transactions are again reported to be limited. It is estimated that about two-thirds of the coming crop of French wines has been seriously damaged. Rum maintains its value, and the stock of Demerara remains limited. Common clarets have brought higher rates. Port, Spanish red, sherry, and other wines, are less pressed for sale than at the opening of the year and realise improved prices.

and the stock of Demerara remains limited. Common clarets have brought higher rates. Port, Spanish red, sherry, and other wines, are less pressed for sale than at the opening of the year and realise improved prices. (From Messrs William Moran and Co.'s Indigo Report, dated Calcutta, May 8.)—Our advices of the new crop during the past week have been on the whole satisfactory. The rain which fell over the districts of Lower Bengal has in most cases proved sufficient to enable planters to complete their sowings; but in parts of Jessore and Kishnaghur, as also in Midnapore, more rain is still required. In Eastern Bengal more rain has lately fallen, and manufacturing is now about commencing. Tirhoot and Chumparun have been favoured with some fine showers, which will have done much good. Chuprah has been less fortunate, the rain having been only partial in that district.

(From Messrs F. W. Heilger and Co.'s Jute Circular, dated Calcutta, May 9.)—There is very little change to report in this market. The demand has been chiefly for common and medium qualities, values for which show a rise of about 2 annas per maund on our last quotations. There is no really fine jute to be had in the bazaar, and though our quoted rate for this description is under that last given, no actual decline has taken place, as the quality is proportionately lower. The Greek firms are not operating so actively now as they were last week, and at the close our market looks rather weaker. The daily imports and exports have fallen off, the former to a larger extent than the latter, and our local stocks have been reduced to about 65,000 maunds. New Crop : Reports received from the interior have been much more favourable; rain has fallen in nearly all the growing districts, and the ryots are carrying on their sowing with vigour. (From Messrs Noble and Co.'s Esparto Circular, dated May 31.)—At the beginning of this month the market showed

(From Messrs Noble and Co.'s Esparto Circular, dated May 31.)—At the beginning of this month, the market showed every indication of a severe scarcity, and buyers who were depending on time contracts for supplies were hardly less anxious than the importers who had sold on such terms; but, in the second week, all fears of exhaustion were set at rest by the unexpected and simultaneous arrival of ships, bringing more than half of the entire floating stocks; many mills, almost run out, had now their storehouses filled to repletion, and holders of arrived parcels were obliged to abate their pretensions somewhat in order to sell direct from ship's side, and thus avoid the otherwise inevitable expense and risks of storage. During the latter half of the month little business has been done, importers finding it impossible to make any concessions for forward delivery, while papermakers are unwilling to contract further until the season advances, when the extent of the new crop may be more certainly determined. In Spain the stagnation last fortnight has been still greater than here; but any attempt on the part of shippers to reduce prices has been promptly and effectually answered by an immediate cessation of supplies from the interior. Shippers; however, are acting with more caution, as the question of price will soon be settled when the new crop comes down from the nearest lands, and the trade will not be entirely dependent upon the warehoused lots.

## THE ECONOMIST.

#### 699

bales

#### The above figures show :-

(From Messrs T. J. and T. Powell's Leather Circular, dated June 4.)—The leather market has not presented any improvement during the past month. The increased value of money has added to the hesitancy of buyers. The supplies have been fully an average for the time of year, and the stocks of heavy foreign butts and I ght English butts show a decided increase, and there is a disposition to make some concession in prices to effect large sales. The consumption, however, goes on to an extent probably as large as at any previous time.

and there is a disposition mater some concession in prices to effect large sales. The consumption, however, goes on to an extent probably as large as at any previous time. (From Messrs J. Berger Spence and Co.'s Weekly Chemical Beport, dated Manchester, May 31.)—The state of the chemical market is still very similar to what it has been for some time past, but if anything the tendency is towards an improvement, and engagements for forward are accepted with considerable caution, since prices for present delivery have declined. During the ensuing Whitsuntide holidays a much greater number of the works will be stopped than last year, and some of the largest manufacturers consider that by keeping closed for a longer period a greater benefit will be derived than by maintaining the present rate of production uninterruptedly; and in favour of this belief many are now engaged in important alterations and repairs, sufficient to engage their attention for several weeks. At a meeting of the Alkali Association, held in London this week, the probable legislation of next Session on matters affecting the chemical trade, was the main subject of discussion.

## THE COTTON TRADE.

#### LIVERPOOL .- JUNE 5.

The cotton market was steady at the close of last week, and opened after the Whitsuntide holidays with firmness, but upon the advance of the Bank rate became quiet, and quotations of some descriptions are slightly reduced. The Bank rate was raised on Wednesday from 6 to 7 per cent. For Sea Island the inquiry has again been active, the market showing a hardening tendency. American continues in good demand, and the better grades maintain full prices; the middle and lower are slightly easier. New York advices to the 5th inst. quote middling U pland 194 cents, costing to sell in Liverpool 9 gd per lb, by steamer. Brazil is still offered freely, and is difficult of sale at last week's quotations. In Egyptian the demand has been chiefly for the better grades, which are firmly held; but qualities below good fair are neglected, and are fully  $\frac{1}{3}$ d lower. West Indian descriptions have been in very limited request, and quotations are unaltered, with the exception of Haytien, which is reduced  $\frac{1}{3}$ d per lb. East Indian has been comparatively neglected, except the medium grades of Oomrawuttee and Dhollerah, which are in fair demand. The higher qualities are very freely offered, and, owing to the abundant supply of American, have been in limited request; prices show little quotable alteration. In cotton "to arrive" and for future delivery the transactions continue moderate, and the week closes with rather lower rates. The latest quotations are—American, basis of middling, from any port, delivery, not below good ordinary, June, 8<sup>3</sup>d; not below low middling. June, 8<sup>1</sup>/<sub>1</sub><sup>4</sup>d; July, 8<sup>1</sup>/<sub>1</sub><sup>4</sup>d; July, 8<sup>1</sup>/<sub>1</sub><sup>4</sup>d; July-August, 8<sup>1</sup>/<sub>1</sub><sup>4</sup>d; shipment, not below good ordinary, new crop, October-November, 8<sup>1</sup>/<sub>1</sub><sup>4</sup>d per lb.

The sales of the week (four days), including forwarded, amount to 43,720 bal s, of which 3,340 are on speculation, and 4,540 declared for export, leaving 35,840 bales to the trade.

JUNE 6.—The sales to-day will probably amount to about 10,000 bales; the market without change.

#### NEW YORK.

The annexed is from Messrs Neill Brothers and Co.'s Cotton Circular, dated Friday, May 30:—There has been a good general demand at all markets this week without any great variation in prices, which on the whole are rather dearer. At New Orleans the market drooped a little at the beginning of the week, but closed without change at last week's rates. Mobile and Savannah closed at  $\frac{1}{16}$ d advance. There has been more activity at Galveston and Charleston, and both markets are additional to be the been more bet determined with the been more bet here. activity at Galveston and Charleston, and both markets are  $\frac{1}{3}$ d dearer. The New York market has remained entirely without change during the past few weeks, the daily cent prices for middling upland never having varied from 194c. Futures at New York after declining  $\frac{1}{3}$ c recovered again to the closing prices of last week. Receipts continue in the aggregate to bear about the same proportion as cf late to those of previous seasons. It is, however, somewhat remark-able the the the Atlantic posts have received an garage of able that the Atlantic ports have received an average of able that the Atlantic ports have received an average of 19,000 bales for the past two weeks against an average of 19,000 bales per week for April, whereas the Gulf has only got 14,000 bales this week against an April average of 30,000. These comparatively large receipts at the Atlantic ports are, however, mainly accounted for by deliveries out of stocks at the interior towns. These stocks were reduced by 12,000 bales last week, and we have no doubt will show a further considerable reduction by the figures due to-morrow morning. On 21st March we published a statement shewing, to use our then words, that a great deal of cotton had been kept back and was still overdue from the Red, Ouachita, Arkansas, and Yazoo rivers. Yazoo rivers, cotton which must ultimately come in and greatly increase and prolong the volume of receipts. We estimated the quantity overdue from these rivers on the 1st March at 116,000 bales. Of this we find that 60,000 had been received till 1st May. Since then we have not details, but as we find the total access at the Call water during May but as we find the total excess at the Gulf ports during May but as we had the total excess at the Guil ports during May has been 51,000 bales, we assume that 30,000 of this has come from the rivers referred to, making 90,000 of the arrears already received, and leaving only 26,000 still due, that is, from these special rivers. Exports are still to a fair extent considering the late period of the season at which we have arrived. Our despatches, however, inform us of extreme scarcity of freight room at the Gulf, no vessels being now available at New Orleans for the continent, and no doubt exports will shortly be comparatively light.

From Messrs Neill Brothers and Co.'s cable despatch, dated Thursday, June 5 :--

#### MARKETS IN THE MANUFACTURING DISTRICTS

MANCHESTER, June 5.—There is almost no change in this market since Friday. The amount of business effected has been very limited, the week generally partaking, more or less, of a holiday character. Both shipping and home trade yarns or a nonday character. Both shipping and home trade yarns have continued fairly steady. In goods, no transactions of importance have been reported. The advance in the Bank rate has had a weakening influence, though, owing to most of the leading establishments being closed, it is difficult to say to what extent this market is affected. Tw-day prices have hardly been tested, but the rates current on Friday last nominally are quoted.

BRADFORD.—The advance in the Bank-rate has a somewhat unfavourable influence, although, without regard to this cirunfavourable influence, although, without regard to this cir-cumstance, consumers of wool seem disposed to wait the result of some pending wool fairs. Wool cannot, as a rule, be bought any cheaper. The yarn market is also inactive. Export merchants are still holding back. The orders coming from the other side are still very few, and in most instances the limits are so inadequate that business is prevented. Spinners holding stocks seem desirous to realise, but merchants, as a rule, show little disposition to approach them. Manufacturers of alpaca, lustre, and all-wool goods continue well employed, but the new orders for plain and fancy goods are very meagre. Home merchants continue busy, but export and American merchants are quite inactive.

#### CORN.

AMERICAN GRAIN AND FLOUR MARKETS. NEW YORK—May 23. Flour has shown less buoyancy of tone the past week. Receipts have been more liberal, and receivers have been in-clined to meet buyers readily, yet the decline in the low grades does not exceed 10c to 15c per barrel. Shippers have taken several thousand barrels of extra Western and State from Spring wheat at \$7.30, \$7.35, and \$7.40. The demand for flour for shipment to the West Indies, in the range of \$7.75 to \$8.25, has also been good, and No. 2 and superfine have been saleable for the British provinces. The medium and better grades continue scarce, and although the demand has been saleable for the British provinces. The medium and better grades continue scarce, and although the demand has materially fallen off, prices have remained firm. Wheat has been inactive and depressed, especially for Spring growths; Winter wheats, whether red, amber, or white, have continued so scarce as to afford little basis for a market report. Re-ceipts of Spring wheat have been moderate; but the ship-ments eastward for the three weeks ending last Saturday were nearly four million bushels, against about a million bushels in the corresponding period of last year; in the meantime the receipts at the Western markets show a considerable increase, and the visible supply is well maintained. Ocean freights have also advanced, and the foreign advices have been barely steady, so that there has been nothing but the confidence of steady, so that there has been nothing but the confidence of steady, so that there has been nothing but the connence or holders to check the downward tendency of prices. Indian corn declined on Tuesday. Since then the market has slightly gained strength, and yesterday "steamer" mixed sold at 62½c to 63c, with prime new yellow at 65c. White corn is firmer. The receipts of corn at the Western markets, as well as the eastward movement since the resumption of inland navigation, have been much smaller than last year. Rye has recorded a little a error selling at 98c and small parcels at navigation, have been much smaller than last year. Hye has receded a little, a cargo selling at 98c, and small parcels at 95c to 97c. Barley is entirely nominal. Oats have been doing better, but at the advance the offerings have increased. Yesterday new No. 2 Chicago sold at 51c afloat, and old ditto 55c in store. White oats scarce, and brought 56½c to 58c on spot, and 55c for the last half of June. To-day the market was very firm but quiet. The movement in breadstuffs at this market has been as follows —

follows :-

#### LONDON MARKETS.

## STATE OF THE CORN TRADE FOR THE WEEK. MARK LANE, FRIDAY EVENING. The weather during the week has been changeable, with

occasional heavy rain, but not on the whole unfavourable for the growing crops. From abroad the reports still, as a rule, quote prices too high to indicate any immediate probability of active shipments; but from America quotations come slightly easier, with rather more doing for export. The port of St easier, with rather more doing for export. The port of St Petersburg is at length open, and the first parcels of wheat and oats have arrived by steamer. The extent of sup-plies to be expected from that quarter cannot be ascertained with certainty, but from data at pre-sent available they are not considered likely to be at all heavy. Foreign imports have, however, sensibly increased, and the deliveries of home-grown grain, according to official returns, are now of fair extent for the time of year. The holidays have caused some interruption of business, but The holidays have caused some interruption of business, but apart from this, the weather and the enhanced value of money have tended to keep demand in check. The trade, nevertheless, continues to show much internal strength, and in the face of these rather adverse influences, prices have been well maintained throughout the principal markets of the kingdom, excepting only Glasgow and Liverpool, where wheat and flour have slightly declined. At Mark lane the receipts of home-grown wheat have been

very moderate, and although dull of sale, have supported rates for both white and red descriptions. With foreign late the market has been fairly supplied. The first cargo of St Petersburg has arrived by steamer, quality rather variable. Sales opened at 62s for fine, but the current rates have since been 60s to 61s, ex ship, according to quality, and showing a small reduction in the market value. Australian wheats have sold at about 1s decline, also ex ship. Other imports remain unchanged, and granary parcels firm. Flour has sold slowly, but there is nothing pressing on sale to affect quotations. Malting barley is scarce, and tends against buyers. Grinding sorts are in moderate request and steady in value. With stocks short, and but small imports expected for some time, beans are held for higher prices, but are sparingly bought. Peas firmly uphold their value. Two steamers have come in from St Petersburg, bringing together 14,000 qrs of oats—the first parcels this year. The trade has opened firmly but without a very eager demand, as several other vessels are near at hand. The selling prices have been 20s to 21s per qr, weight 304 lbs. Generally the consumption of oats appears to keep well up with supplies, and the currency is firmer. Riga sorts move off at 19s to 19s 6d per qr. Stout oats are very scarce, and some ranging up to 26s 6d per qr. weight 320 lbs. Maize has been dull of sale, and easier prices from Liverpool rather increased the business to-day. The annexed statement shows the imports of grain into and are referent. been 60s to 61s, ex ship, according to quality, and showing

The annexed statement shows the imports of grain into and exports from the United Kingdom, during the week ended May 31, and since the beginning of the season (Sept. 1) :--

Jaggery.—1,340 bags low quality were bought in at 16s 6d. Foreign —500 boxes Havana ex late sale have sold at 25s 3d.

Floating Cargoes. — The following of foreign have sold at 258 30. Floating Cargoes. — The following of foreign have sold: three Havana, 12½ to 13, at 27s 6d; part of one cargo, No. 14, at 28s; three Cuba, centrifugal, at 26s 9d to 27s 3d; Muscovado at 22s 9d to 23s 6d; one low Bahia at 14s 6d (3,200 bags); one Porto Rico at 23s 9d; one Porto Rico concrete (400 casks) at 20s 3d, all for the United Kingdom. A floating cargo of 305 cases 3,865 bags Bahia also sold at 20s 6d for a near port.

Refined .- A steady demand prevails by the home trade, which Refined.—A steady demand prevails by the home trade, which includes dry goeds. Duty payments upon refined last week were about 3,500 tons, at the new rate of 3s per cwt. 8,000 French loaves, by auction, were taken in at 39s. 7,073 Dutch withdrawn. The latter sorts sold by private contract at 36s 6d. Foreign loaves of fine quality have sold, to arrive, at 32s 6d to 32s 9d per cwt, f. o. f. Clyde crushed and London made pieces meet a fair inquiry. MOLASSES.—120 puncheons Trinidad have sold at 11s 6d per cwt.

D

THE ECONOMIST.

## [June 7, 1873.

RUM.—The market is steady, and prices unaltered since last Friday. A few sales have been effected: Demerara, Is 10d to Is 11d; Berbice, Is 10d per proof gallon. Jamaica has obtained full rates. COFFEE.—The importers have accepted lower rates, and the decline during the week amounts to 2s to 4s, fine East India showing the greatest fall. Further arrivals have occurred also of Cey'on, and the market is still unsettled. Deliveries by the Netherlands Trading Company in May were large, but the quantity of coffee afloat is far in excess of the previous season. 100 tons plantation East India have sold to arrive at 96s 6d, and 1,000 bags Manila at or about 89s. The public s.les this week have included 601 casks 36 barrels 229 bags plantation Ceylon, which sold as follows: bold pale, 97s 6d to 102s 6d; middling, 95s 6d to 98s 6d; small, 91s to 95s, as in quality. 236 cases 4,546 bags East India three fourths sold; Coorg and Wynaad, rather bold palish to colory, 96s to 99s; middling, 93s to 96s; Mysore bold, 97s to 100s 6d; medium, 97s to 99s 6d; small, 33s to 96s 6d. 292 packages Mocha part sold at 97s 6d to 98s 6d for mixed small berry; 3,184 bags Costa Rice a part found buyers at 90s 6d to 98s 6d, and a portion of 1,174 bags Guatimala, at 90s 6d to 96s. 1,833 bags other foreign were chiefly taken in. A few lots Laguayra sold at 91s. 1,151 bags Rio were bought in. Interests and DELIVERIES of COFFEE to May 31, with Stores on hand. 1873 1872 1871 1870

overland. One of the steamers which had saned for England (The Drummond Castle) with new season's tea has been wrecked. About 3,000 tons of tea were in this steamer. 2,087 packages China went irregularly for green tea, Ping Suey being in some cases rather cheaper. Moyune easier for young Hyson. 2,000 packages Indian realised former quotations for strong descriptions, common being dull. Stock in the United Kingdom 83,000,000lbs, against 90,000,000lbs last year.

year. RICE.—Transactions on the spot have been chiefly in Bengal, for which however the demand continues rather slow. Sales of good white Bengal reported at 12s to 12s 14d; Askoolie, 10s; low Dacca, 9s. These are about previous rates. A floating cargo of Bassein sold for the Continent. 1600 tons, April shipment, at 8s 9d per cwt. introna and DELIVEREE of Rick to May 31. with Spocks on hand.

SHELLAC .- The large delivery of last month has brought the stock down to a much lower point than usual, and the market is very firm, with a good demand. Fine orange has sold at 10/ to 10/ 5s. 400 chests orange and garnet to arrive; fine orange 10/ 2s 6d, A C garnet at orange 9/ 3s 9d.

DRYSALTERY GOODS-Gambier is quiet, with sellers to arrive upon easier terms, there being very large quantities afloat. The last sale was 100 tons at 24s, ex ship. 300 bales pressed cubes by auction part sold at 31s. Cutch inactive. Business reported in China galls at 54s per cwt.

at 31s. Cutch inactive. Business reported in China galls at 54s per cwt. METALS.—The market showed an improving tendency until the Bank rate was raised on Wednesday, when the prices of several descrip-tions became weaker. Straits tin at one time sold at 135*l* to 136*l* upon the announcement of the small quantity to be offered in the ensuing Dutch sales, Latest transactions were at 133*l* 10s to 134*l* cash. Deli-veries are large, viz., 533 tons at this port last month. The stock of Banca in Holland by the Company's latest return was, in first and second hands, 148,660 slabs, against 70,720 last year, and 131,680 in 1871. Prices of copper have been irregular; Chili at one time sold at 85*l* to 87*l*; Walaroo at 91*l* 10s to 94*l*. Yesterday 82*l* 10s to 85*l* 10s, and

891 to 911 10s respectively were the latest sales according to conditions, Stocks are still large. Lead is in steady demand. Quotations of Scotch Stocks are stin large. Lead is in steady demand. Quotations of Scotch pig iron have been uneven, ranging from 115s 6d to 112s 6d cash, the highest paid yesterday, when the market closed dull. The prices of manufactured iron have occasionally ruled in favour of the kuyers. Spelter is quict, and prices analtered. Stock in the kingdom 1,560 tons, against 5,058 tons last year, and 5,060 tons in 1871 at the same data. date

JUTE.—The market is still devoid of animation. A few parcels have sold for arrival chiefly at 13/ 5s to 15/ 10s per ton. The reports of a deficient production at present fail to induce speculation owing to the very large stock on hand. Jute goods and yarns in the Dundee market

Very large stock on hand. Jute goods and yarns in the Dundee marker have met with a better demand. The London stock at the end of May was 141,850 bales, against 163,350 bales last year and 17,800 bales in 1871 at the same date. Deliveries have been remarkably large. HEMP,—there have not been any public sales, and by private con-tract the business consists of 2,500 bales at 39*l* to 42*l* 10s during the mark fortuint.

past fortnight.

LINSEED .- Moderate transactions are reported. Calcutta, 64s 6d; to

LINSEED.—Moderate transactions are reported. Calcutta, 64s 6d; to arrive, 62s to 62s 6d, per steamer. OILS.—Olive has been dull. Further arrivals of sperm, chiefly to the trade, and there are sellers at 95*l* per tun. Pale seal, 33*l* per tun. No change in other fish oils. Fine palm remains firm. Lagos at 39*l*. Cocoanut is still inactive, owing to the heavy stock. Ceylon offers at 34*l*. Cochin 36*l* to 38*l*; fine scarce up to 40*l* 10s. Linseed oil firm, at 33*l* to 33*l* 5s on the spot, and 33*l* the value for the last six months' delivery. English brown rape steady, at 37*l* 5s on the spot, 37*l* 10s next two months, and the same for the last four months' delivery. TURPENTINE quiet. American spirits, 36s; last four months, 34s per evt.

PETROLEUM.—A large business in American refined at 1s  $1\frac{1}{2}d$  to 1s  $1\frac{3}{4}d$ : now, 1s 2d asked. For the last four months, sellers at 1s  $3\frac{3}{4}d$ per gallon. Stock here, 32,000 barrels, against 42,600 barrels last

-Foreign at one time rather firmer has become quiet, prices TALLOW .being a shade lower. A fair supply of Australian announced for public sale to-day. The total stock of imported tallow keeps relatively low. This morning's prices of Petersburg are as follows: on the spot, 43s 6d; October to December, 45s 9d; December, 46s per owt.

SAFFLOWER.-121 bales Bengal were bought in. METALS.-60 tons Straits tin sold at 134/ cash. Copper lower. Chili sold at 81/ 10s to 84/.

Sold at 817 108 to 844. OILS.—268 casks palm oil by anction sold at 33*l* to 36*l* 15s. 366 casks cocoa-nut were chiefly withdrawn, a few lots Ceylon selling at 34l per ton. 33 tons Southern whale and 26 tons other fish oil part sold at 4*l l* to 4*ll* 10s per tun for cod. 200 casks East India fish taken

sold at fit to per tun. in at 37/ 15s per tun. TALLOW.--1,554 casks 129 cases Australian by auction, barely two-thirds sold at previous rates. Mutton, 42s to 42s 9d; beef, 40s 6d to thirds sold at previous rates. Mutton, 42s to 4 41s 3d per cwt, and low qualities in proportion.

ADDITIONAL NOTICES. GREEN FRUIT.-The report of Messrs Keeling and Hunt states that the market for oranges is much improved, owing to smallness of sup-plies. Lemons also have again advanced. Barcelona and new Brazil nuts meet with good demand at high rates. A few West India pine apples arrived, majority being inferior realised in accordance. Malta and Lisbon new potatoes higher in value. Coker nuts much sought for. Dry Frurr.—A very dull market without business.

ENGLISH WOOL. - Trade continues very quiet, and where sales are pushed lower prices are taken. COLONIAL WOOL.-Since close of sales there has been a fair inquiry. FLAX.-Market quiet. HEMP.-Market quiet for Russian, but there is an improved demand for Munilla this work, and we goate an advance of 100 per ter for

for Manilla this week, and we quote an advance of 10s per ton for fair current.

fair current. TOBACCO.—There has been but a trifling amount of business done in the tobacco market during the past week, the domand for American growths having been limited to the more immediate wants of buyers. Holders show no inclination to make concessions in current rates. In substitutes and segar tobacco there has been but a moderate inquiry, and prices generally are without alteration.

Lewis Rober fact Edway George Willia

## THE ECONOMIST.

METALS.—A flat market, consequent upon the high rate of discount, is the principal feature. Copper has receded from the improvement noted last week, and the transactions have been limited. Tin showed recovery at the beginning of the week, but has lost it again at the close. Spelter and lead are steady at quotations. Tin plates are quiet.

PROVISIONS. Bacon market as last; prime sizeable Waterford still very scarce. Butter all cleared at a slight advance. Trade improving with the warm weather.

#### METROPOLITAN CATTLE MARKET.

MONDAY, June 2.—The total imports of foreign stock into London last week amounted to 16,147 head. In the corresponding week last year wereceived 11,759; in 1871, 17,195; in 1870, 17,868; in 1869,

last week amounted to 16,147 head. In the corresponding week last year we received 11,759; in 1871, 17,195; in 1870, 17,868; in 1869, 16,637; and in 1868, 5,907 head. There was a moderately extensive supply of foreign stock on sale here to-day, and some very excellent beasts from Spain and Denmark were on effer. Two Oporto beasts attracted much attention from their great size, and they realised, we understand, 500 each. The total number of Oporto beasts on sale was 223. There were also 241 Danish, and 324 Gothenburg beasts on offer. The supply of English beasts on offer was but moderate, and there was no arrival from Scotland, the season being over. Owing to the high prices at which the stock had been purchased in the country, sales progressed somewhat slowly, but the supply regularly consigned was disposed of at an early hour at very satisfactory prices. In fact, choice breeds commanded as much money as 65 Gd to 68 8d per 81bs. About an average supply of sheep was on sale; without being at all active, a steady demand prevailed, and full prices were realised. Prime Downs and half-breds sold at 6s to 6s 4d per 81bs. Lambs were in moderate supply, and the demand for them was quict at 8s to 8s 6d per 81bs. Very few English calves were on offer, but there was a fair show of Dutch. The best qualities made 6s 4d to 6s 6d per 81bs. Prime male pigs sold at high prices, but large hogs were difficult of sale. Supremest State. June 3.1872. June 2.1873.

POTATO-STARCH, FLOUR-SYRUP, AND GRAPE-SUGAR.

# HUBBUCK'S PATENT WHITE ZINC PAINT

Is the most durable and beautiful paint known, does not stain or discolour with the atmo-sphere of large towns, and by their process, which is patented, is cheaper than White Lead. It is especially adapted for painting iron, as, by virtue of a semi-galvanic action, it enters the pores and forms an analgam of the two metals, which protects the Iron from decay or incrustation. It should be used instead of Red Lead, which is proved to be deskructive to Iron exposed to Salt Water. exposed to Salt Water.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes, in proportions varying from ten to thirty per cent. No workman can produce good work with such material. Those who have obtained the Patent White Zine Paint from Grinders who have not adulterated it, will never willingly use any other Paint for their best work.

#### Each Cask of Pure White Zinc is stamped-

"HUBBUCK'S, LONDON, PATENT."

"HUBBUCKS, LONDON, PATENT." THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT, and VARNISH WORKS, 24 LIME STREET. "For public schools, and all rooms occupied by children there will now be no excuse for using poisonous safford in heath. The reason is evident—the breath extracts the insidious poison from paint, and the lurge draw in the deadly vapour."—John BurL, September 14, 1850.

KINAHAN'S LL WHISKY. spirit is the very CREAM OF IRISH WHISKIES,

in quality unrivalled, perfectly pure, and more whole-

some than the finest Cognac Brandy.

D I N N E F O R D 'S FLUID MAGNESIA.—The medical profession for thirty years have approved of this pure solution of Magnesia as the best remedy for Acidity of the Stomach, Heartourn, Headache. Gout and Indiges-tion; and as the best mild aperient for delicate constitutions, especially adapted for ladies, children, and infants. D I N E F O RED and C O., Chemists, 172 New Bond street, London, and of all other chemists through out the world.

HOLLOWAY'S OINTMENT AND FILLS.—Chest and Stomach Complaints yield with celerity and certainty to the curative powers of these medicaments. The source and centre of almost every ailment is in purity of blood. Thence dislodge the poison, and disease duparts. Pure blood is the in-failible remedy for weak lungs. Holloway's pills exercise the inestimable power of thoroughly cleansing each component part of the blood, and rendering the fluid fit to perform its important functions. They cope most successfully with chest diseases, stomach com-plaints, liver disorders, and many other maladies which were once the besetting dangers of mankind at certain seasons, in town and country. The directions for use enable everyone to regulate the operations of these pills with the greatest nicety.
