REPORT

OF THE

DEPUTY MINISTER OF MARINE AND FISHERIES

To the Honourable J. D. HAZEN,
Minister of Marine and Fisheries.

SIR,—I have the honour to report on the transactions and service of the Marine Branch of the Department of Marine and Fisheries for the fiscal year ending March 31, 1912.

This report contains not only the reports of the officials of the Marine Branch but the reports of harbour commissioners, pilotage authorities, port wardens and report of wrecks and casualties. The reports of harbour commissioners, &c., are for the calendar year, and were formerly published as Supplement No. 1 of the Annual report. Since the transfer of the hydrographic survey service, tidal and current surveys, wireless telegraphy and naval militia, the reports of officers of these branches have been published in the report of the Naval Service. Space is, therefore, available in this publication for the reports formerly comprising the Supplement mentioned above. The supplement has always contained valuable information, especially in the reports of the harbour commissioners, which show the trade of the ports under commission.

The season of navigation of 1911 opened earlier and closed later than usual, giving the department fair opportunities to carry on the work of construction of lighthouses, fog-alarms and foundation piers. The maintenance of aids to navigation extended over a longer period than usual. The Quebec agent in his report states that navigation closed later in the St. Lawrence river than in any year recorded. Successful efforts were made to keep open important lake ports in Ontario and Georgian bay. The work in the eastern provinces also continued to a later period.

The expenditure of the department for the fiscal year was \$5,594,997.95; the appropriations of parliament totalled \$7,294,444.50; leaving the unexpended balances amounting to \$1,700,090.61; overdrawn, \$644.06. Of the total expenditure of the Department of Marine and Fisheries, the sum of \$683,857.28 was spent for fisheries from the appropriation of parliament, and the additional sum of \$159,999.70 in connection with the fishing bounty, which is not an appropriation of parliament.

The ocean and river service included expenditure on Dominion steamers for construction and maintenance. The three principal items under this head of expenditure were for Dominion steamers, investigation into wrecks, and patrolling and exploring northern waters by the steamer *Arctic*. The total expenditure for ocean and river service was \$1,128,907.73. The total for public works chargeable to capital

account was \$1,167,462.56. This expenditure included the outlay for dredging plant and work in the St. Lawrence river ship channel.

Lighthouse and coast service included the cost of lighthouses, fog-alarms and buoys and buoy steamers, but other large expenditures were made from this appropriation also. The total amount expended for lighthouse and coast service was \$2,128,242.36. The maintenance of the scientific institutions of the Marine Branch, consisting of the meteorological and magnetic service, cost \$148,144.06. The expenditure for marine hospitals, shipwrecked and distressed seamen, was \$57,016.11. In connection with relief to shipwrecked and distressed seamen, it may here be noted, that different amounts were paid to the British Board of Trade to reimburse that department for expenses incurred on behalf of Canadian crews of vessels in distress. Steamboat inspection expenditure amounted to \$45,353.11, which covered the salaries of inspectors and their expenses of travelling.

All the expenditure under the above headings, with subdivisions of accounts of the service, will be found in a carefully prepared statement which forms an appendix to this report.

The subdivisions and branches of service under which the whole work of the Marine Branch was carried out are as follows:—

The construction of lighthouses and fog-alarms by the Engineer's branch.

The maintenance of lights, gas buoys and other buoys by the Commissioner of Lights branch.

The Lighthouse Board, which decides the necessity for aids to navigation.

Dominion steamers.

The ship channel St. Lawrence river, and Sorel works.

Meteorological and magnetic service.

Investigations into wrecks.

Board of steamboat inspection.

Cattle shipments inspection.

Marine hospitals.

Submarine signals.

Shipping under the Merchants Shipping Act.

Legislation and administration of laws relating to the Department of Marine and Fisheries.

Humane service in connection with seamen.

Wrecking plant subsidized.

Winter communication.

Removal of obstructions to navigation.

Examination of masters and mates and issuing certificates.

Pilotage.

Government of ports and proclaiming of harbours in the Dominion.

Control of harbours and government wharfs.

Dominion steamers, Marine Branch.

Hudson bay and navigation of northern waters.

Port wardens.

Wreck receivers.

Harbour commissioners.

SESSIONAL PAPER No. 21

In addition to these subdivisions it is appropriate to mention that agents of the department at Halifax, St. John, N.B., Charlottetown, Quebec, Montreal, and Victoria, B.C., have as usual performed the duties connected with navigation and marine service in their districts under instructions from Ottawa. The work relating to the officers of the Marine Branch of the department in Ontario and Manitoba has been performed under instructions direct from headquarters.

The agents have reported in detail upon the various branches of service within their districts in the outside service. Some important and special items of information regarding lighthouse and fog-alarm construction and maintenance, movements of Dominion steamers, buoy service, submarine warnings, improvements in navigation and various subjects have been summarized for this report.

The reports of heads of branches have been summarized in examination for brevity of description in reporting upon the transactions of the department, but the comprehensive reports of the officials in charge, contain the year's work in detail.

LIGHTHOUSE CONSTRUCTION AND REPAIRS.

The construction of towers, other buildings, protection work and repairs was performed under the engineer's branch of the department. Plans and specifications of the various kinds of buildings and class of work were first prepared, and the work carried out in accordance with them under inspection.

In the province of Nova Scotia, seven wooden towers were built, one fog-alarm building, one skeleton steel tower, four pole lights, six dwelling houses, two storehouses, five oil sheds, five boathouses, one breakwater, five day beacons and one beacon for Port Churchill; three diaphones were installed, and protection work was done at seven stations; extensive repairs were made at seven stations.

In the province of New Brunswick, one reinforced concrete tower was built, four wooden towers, one foundation to a tower, one skeleton steel tower, one breakwater, two iron spindles placed in rock for buoys, one diaphone and one boiler were installed, and extensive repairs made at six stations.

In Prince Edward Island, three pole lights were erected, minor repairs to light-houses and at stations were made, and a workshop and test shed begun at Charlottetown for use of the agency.

In Quebec, three reinforced concrete towers were erected, also seven wooden towers, one fog-alarm building, four dwellings for lightkeepers, nine pole lights, three oil sheds, two boathouses, one storehouse, three sheds, three sets of movable range lights, one duplicate diaphone plant installed and five altered and repaired, one roadway constructed, one cistern and extensive repairs made at eleven stations.

Experiments were also made at Flower ledge in connection with fog signals, and minor repairs at others.

In the Montreal agency, two range lights were completed, protection work at one station built, work at one station begun last year was completed, tower and building at St. Helen island moved and concrete pier constructed and repairs made at six stations.

The work in Ontario consisted of building one combined light tower and dwelling, two steel skeleton towers, five wooden towers, three reinforced concrete towers,

two pole lights, two dwellings, one fog-alarm building, three oil stores, two boat-houses, two diaphones installed, two beacons built, one telephone line and repairs made at eleven stations.

In British Columbia the work this year was extensive, owing to the construction of a Dominion depot for storing and repairing buoys and material for lighthouses, beacons and for aids to navigation generally in the northern part of British Columbia. The station cost \$177,706 under contract. One unwatched light on concrete base was built, two echo boards erected, first order single flashing light tower, one dwelling, two boathouses, re-erection of the lighthouse shelter huts for containing provisions for shipwrecked mariners on the west coast of Vancouver island, nine miles of trail from the life-saving station to Carmanah, two diaphone plants installed, material for erection of two more and for two acetylene beacons provided. Materials and machinery to replace fog-alarm plant at one station were supplied: extensive repairs to two stations were made.

The total number of light stations throughout the Dominion at the end of the fiscal year was 980, counting those range lights with separate keepers, consisting of first, second, third, fourth, fifth and sixth order, pressed bulb lights and catoptric lights. Lightships, lightboats and gas buoys are not included in the number of lights, but form a separate list of aids to navigation.

Notices to Mariners were issued, relating to the establishment of aids to navigation, changes in established aids and improvements to lighthouse buildings, fog-alarms, beacons and buoys. These notices contain valuable information and have been sent to various ports where masters of vessels can procure them for their guidance in entering ports and navigating waters in which the improvements have been made. Known obstructions to navigation, caused by wrecks and accidents to vessels, were made subjects of notices. In addition, notices were also issued for the benefit of Canadian mariners, respecting aids in waters contiguous to Canadian waters around the coast of Newfoundland, Labrador and part of the United States. Some important notices were sent out relating to changes and improvements in British and foreign waters, but these notices did not embrace all British and foreign notices received by the department. Selections only of special concern to Canadian seamen were made and included in the departmental 'Notices to Mariners.' All hydrographic notes which reached the department, however, were embodied in Canadian notices.

Work was done for the meteorological service, the life-saving service, and in wharf construction at several places.

The Dominion depot at Prescott where lanterns, lamps and illuminating apparatus are made and repaired, is now under the Chief Engineer's branch for control and management. An inventory of the plant and material, including lamps, lanterns and their parts, was made, previous to the change of control.

Lanterns and other illuminating apparatus were tested, where necessary, and shipped from the depot to the new lighthouses in the province of Ontario and eastern provinces.

The list of lights published annually in one volume will in future be published in three volumes, entitled: Atlantic Coast, including the St. Lawrence river to head of ocean navigation; Inland Waters, comprising the great lakes and minor waters in Ontario and Manitoba; Pacific Coast and inland aids in British Columbia.

SESSIONAL PAPER No. 21

The details of all work performed in the Engineer's branch will be found in the report of the Chief Engineer, Appendix No. 1.

OBSTRUCTIONS TO NAVIGATION.

Obstructions to navigation are removed either by the owners of vessels wrecked, or sunk, or by the department when the owners neglect to do so, and the amount paid for removal recovered from the owners where possible. The work of removal is controlled by the Engineer's branch and tenders are generally invited, but if unreasonably high the work may be done by the available plant of the department.

The remaining part of the hull of the *Tecumseh*, which vessel was burned in Goderich, was removed by contract at a cost of \$2,350.

The steamer *Lycoming*, which sunk in Rondeau harbour, Lake Erie, was removed by contract at a cost of \$4,900.

The schooner *Palestine* sunk in the Ste. Croix river, N.B., and the hull was removed by daily work under the St. John agency at a cost of \$500.

ICEBREAKING.

Two contracts for icebreaking in Thunder bay were made: one to keep the harbours of Port Arthur and Fort William and West Fort William open for navigation until December 17, 1911, and to open these harbours in the spring of 1912, when the Sault Ste. Marie canal opened for navigation. The contract price was \$19,250, and included an agreement to remove all lightkeepers from their stations when the lights were extinguished. Another contract was entered into to keep the St. Joseph's channel clear of ice until the extreme cold weather made ice sufficiently strong to carry teams from the mainland to St. Joseph's island, and to open the channel before the ice became dangerous for travelling in 1912; cost, \$500.

LIGHTHOUSE SERVICE.

Under this head is included the maintenance of lighthouses by the delivery of supplies during the year. The Superintendents of Lights in the different agencies elected as usual for each lighthouse and fog-alarm the articles necessary to keep the lights in operation, and under their supervision these supplies were delivered to the lightkeepers. The superintendents received their instructions from the agents, with the exception of the lighthouse district of Ontario. The officer for this province has his headquarters in Ottawa, and performed the work on the great lakes successfully by means of the Dominion steamer *Simcoe*. This vessel was also employed to carry building material for repairs to lighthouses, and at the same time carried out the gas buoy service in several districts.

The work performed in the several agencies by Superintendents of Lights in connection with lighthouse maintenance has been reported by the agents.

ILLUMINANTS.

The kinds of illuminants used in the lighthouses were not changed from the previous year. They are acetylene, kerosene oil and petroleum vapour. The kerosene

oil is refined to the requirements of a specification prepared in the department, and must stand a high flash test at 60 degrees Fah. Acetylene is used in a number of unwatched lights and in the lighted buoys throughout the Dominion.

BUOYS, LIGHT-STATIONS AND SUBMARINE BELLS.

The Commissioner of Lights and Buoys has reported upon the lights in operation in the Dominion, lightkeepers and submarine warning bells and stations. His report consists of statements of the number of lights exhibited and other aids to navigation along the coasts and on the lakes and rivers, and the number of lightkeepers attending them. Gas and other buoys are under the control of this branch. Statements have been prepared showing the details of the service mentioned here.

Submarine warnings received the attention of the Commissioner of Lights. During the past year experiments have been made in the way of securing submarine bells to gas buoys by an improved attachment. In carrying out these experiments some length of time must elapse before a decision can be arrived at in relation to the durability of the connections of the bell to the buoy.

The report of the Commissioner of Lights and Buoys forms Appendix No. 2 of this report.

ST. LAWRENCE SHIP CHANNEL.

The ship channel of the River St. Lawrence between Montreal and Father Point has a total length of 340 statute miles.

The contracted part of the river, which may properly be called the 'Ship Channel,' commences at the Traverse, 220 miles distant from Montreal.

The project for the channel between Montreal and Quebec had in view a channel of 30 feet depth, at the extreme low water of 1897, from Montreal to tidal water at Batiscan, and from Batiscan to Quebec at extreme low tide. The width contemplated was a minimum of 450 feet in the straight portions, and from 550 to 750 feet at the bends. An anchorage was to be provided at White Buoy Curve, Lake St. Peter, of 800 feet in width.

The 30 foot channel is now completed to the upper end of Cap à la Roche channel, a distance of 107½ miles from Montreal. The anchorage basin in Lake St. Peter was completed and opened for navigation.

During the summer of 1911 most of the Cap Charles channel widening was completed to 450 feet in width.

The total length of channel requiring dredging is 70 miles; length dredged in 1911, one and a fifth of a mile; total length of 30 foot channel dredged is 65.25 miles; length yet to be dredged, 4.75 miles.

A good start was made on the North channel below Quebec with two dredges. It has been decided to deepen this channel to 35 feet at extreme low tide with a width of 1,000 feet. Good progress has also been made on the channel approach to floating dock basin in Montreal harbour. Owing to the nature of the material to be removed it will take one more season to complete the approach. The total cost of the ship channel from 1851 to the end of the fiscal year 1911 has been \$14,524,555.51, divided into: dredging, \$8,947,029.83; plant, shops, surveys, &c., \$5,577,525.68.

SESSIONAL PAPER No. 21

The number of cubic yards removed amounted to 78,231,531. In 1911-12, 4,509,904 yards were dredged.

In the report of the Superintendent of the Ship Channel work, are several comparative tables showing the number of cubic yards dredged in each year, in connection with the 27½ foot and 30 foot channels, and the nature of the material moved in the several divisions of the channel.

In the same report is shown the length of the channel at 35 feet depth to be dredged and work done. Requiring to be dredged, 90.38 miles; length of dredging done, 7.36 miles; to be dredged, 83.02 miles; cubic yards dredged, 5,648,994 in the 35 foot channel. The cost per cubic yard in different kinds of material and work by different dredges is contained in the same report. The total number of cubic yards dredged between Montreal and Quebec was 3,336,354, at an average cost of 14²/₁₀₀ cents per cubic yard; the total number of cubic yards moved by the whole dredging fleet during the year was 4,509,904, at a total cost of \$588,697.60, or at the average rate of 13⁷/₁₀₀ cents per cubic foot.

The dredging fleet consisted of eleven dredges with tugs and scows.

The report of the Superintendent of the Ship Channel contains also the report of Captain N. B. McLean regarding the icebreaking work of the icebreakers *Montcalm* and *Lady Grey*. The last vessel to leave Montreal was the *Bray Head* on December 4. The buoys had been left in position for this vessel to pass down the river. The *Lady Grey* was employed in lifting the buoys after the river became full of floating ice.

The icebreakers began their work of icebreaking at Cap Rouge on January 12. The winter during January, February and March was very cold, and ice made rapidly from Quebec to Montreal, causing the usual jam at Cap Rouge. The steamers were unable to work advantageously during the winter. The *Montcalm* was not able without the assistance of the *Lady Grey* to clear the ice at Cap Rouge, and was sent several times to Seven Islands during the winter.

The marine signal telephone stations were kept in operation on the St. Lawrence river between Montreal and Crane island during the season of 1911, and the semaphores at St. Jean des Chaillons, St. Nicholas and St. Augustine.

The report of the Superintendent of the ship channel in detail, forms an appendix to this report. Accompanying this report is a profile map showing the progress made up to the end of 1911 in the ship channel.

SOREL SHIPYARD.

The work done at Sorel shipyard consisted principally of extensive and ordinary repairs to dredges, tugs and scows of the St. Lawrence river ship channel fleet and machinery; vessels connected with the construction and maintenance of lights, and vessels of the Public Works Department.

The building of three dredges, three twin screw tugs, one coal barge, seven dumping scows, one testing scow and one rock cutter progressed during the year. The engines and machinery for the tugs were made at St. John, N.B., and the machinery for the rock cutter was imported from Scotland.

The extensive repairs to government vessels consisted of hauling out of the water, caulking, painting and rebuilding parts of the hulls of vessels of the different classes. The other repairs were the usual overhauling and ordinary repairs made to all the departmental vessels wintering at Sorel and requiring repairs during the year.

The statement of expenditure at the shipyard shows a total of \$1,216,820.03, but this sum includes the cost of operating the dredging plant in the ship channel.

The report of the Superintendent of the shipyard, with the statement of expenditure in detail, forms an appendix to this report.

Necessary repairs of a somewhat minor nature were made to a number of buildings of the shipyard, and several roofs painted. The construction of a pier for a 130 ton crane was begun and some progress made; wharfs and ways were kept in good condition.

DOMINION STEAMERS.

The tonnage, dimensions, horse-power, etc., of the different steamers of the Marine Branch are given under the heading of Dominion steamers for reference. The movements of each steamer during the season of navigation are here recorded in order to show the subdivision of the service in which she is employed. Several of the steamers are employed most of the year round, doing special service during the winter.

An account is given of the periods in which they were employed and the time in which they were laid up for overhauling and repairs.

The inspectors of hulls and machinery of Dominion steamers performed the work of inspection of those vessels and made estimates of the amount of work to be done and upon their recommendations the repairs were put in hand. Mr. T. R. Ferguson is Chief Inspector of Machinery for Dominion steamers in eastern waters, Mr. J. D. Stevens is Assistant Machinery Inspector for the maritime provinces, and Mr. T. McConkey, Ships-husband and Inspector of Hulls.

In British Columbia, the inspection was done by the general steamboat inspectors of hulls and machinery. The usual overhauling of vessels and repairs are made during winter to vessels at their winter quarters, but to vessels kept in commission the most suitable or available time is chosen.

QUEBEC DISTRICT.

'*Champlain*.'

The *Champlain* is a screw steel vessel, built in Paisley, Scotland, in 1904. She is 120 feet long, 30.3 feet wide and 17.6 feet deep; 225 net, 522 gross tonnage, and 87 nominal horse-power.

The *Champlain*, as on the previous year, was in the ferry service between Rivière Ouelle wharf on the south shore, Murray bay, St. Irénée and Cap à l'Aigle on the north shore of the River St. Lawrence. On this route she made two trips daily except Sundays from June 5 until September 21.

The ferry, which is 11 miles wide, was unusually difficult to keep open owing to the severity of the winter and the consequent heavy ice.

She was laid up for repairs from May 26 until June 24 and again from October 27 until November 24, and was replaced by the *Rouville*.

SESSIONAL PAPER No. 21

She transported 13,210 passengers, a large quantity of freight, served 1,854 meals to passengers, and earned \$11,518.82.

'Montcalm.'

The *Montcalm* is a powerful icebreaker, specially designed for the St. Lawrence river service. She was built at Yokers, G.B., in 1904, is a twin screw steel vessel, 245 feet long, 40.6 feet wide and 15.7 feet deep; 526 net, 1,432 gross tonnage, 406 nominal and 4,250 indicated horse-power at a steam pressure of 220 pounds.

She is in command of Captain Pelletier, carries a crew of 63 men, and is engaged, in summer, in the lighthouse and buoy service in the Gulf and River St. Lawrence and Strait of Belle Isle. In winter, she is used as an icebreaker on the St. Lawrence and in continuing communication between Quebec and Seven Islands, Anticosti and other places.

The *Montcalm* sailed for the Gulf of St. Lawrence on April 19. While in the gulf she cruised from the north of Cape Race to St. Paul's island to ascertain ice conditions, and reported the information gained to the wireless station at Cape Race, Newfoundland, for the benefit of inbound vessels.

Arriving at Quebec on May 10, she was laid up. She was placed in dry dock on the last of May, had repairs made to her hull, boilers and machinery, and left the dock on July 18. Leaving Quebec on July 27 with supplies for lights in the Strait of Belle Isle, she completed a thorough inspection of lights, fog-alarms and buoys, and returned to Quebec on August 15, completing a cruise of 2,201 miles. She left on an inspection cruise on August 31 for Anticosti island and Baie des Chaleurs, returned on December 16, sailed for north shore St. Lawrence, Anticosti, Strait of Belle Isle, Gaspé, and returned on November 5, after which she assisted the *Druid* in the buoy service until the close of navigation.

She made three trips to Seven Islands: the first on December 8, the second on February 8, calling at Anticosti; and the third on March 16, again calling at Anticosti.

The balance of her time was devoted to icebreaking operations at Cap Rouge, until March 31 which closes the report for the fiscal year.

'Druid.'

The *Druid* is a single screw steel vessel, built in Paisley, Scotland, in 1902. She is 160 feet long, 30.1 feet wide, 12.5 feet deep; 149 net, 503 gross tonnage, and 59 horse-power.

This vessel is commanded by Captain Michael Gagnon, carries a crew of 31 men, is employed in the lighthouse and buoy service of the Quebec agency from Platon to Father point, a distance of 185 miles.

She is always ready for service; sailed 14,067 miles and consumed 2,403 tons coal from April 1 to November 20, 1911.

'Eureka.'

The *Eureka* is a single screw steel vessel, built in Glasgow, G.B., in 1893, for the Department of Public Works; is now in the pilot service of this department, and is

94.7 feet long, 22 feet wide, 11.9 feet deep; 170 gross, 91 net tonnage, and 40 horse-power.

She is commanded by Captain Bélanger, carries a crew of 19 men; rendered satisfactory service to the pilotage branch during the season; left her station on December 8 and wintered in the Louise basin, where she was thoroughly overhauled and put in good state of repair for the next season's work.

The number of vessels boarded by pilots from the *Eureka* during the year was 1,227 steamers, 15 yachts, 14 barques—a total of 1,256.

‘*Rouville.*’

The *Rouville* is a screw steamer, built in the government shipyard, Sorel, in 1906; is 125 feet long, 26 feet broad, 14.2 feet deep; 301 gross, 144 net tonnage, and 54 horse-power. She is commanded by Captain Aristide Belanger, carries a crew of 20 men, and is under the control of the construction of lighthouses and fog-alarms branch of this department.

At the beginning of the fiscal year she was undergoing repairs; sailed for different stations in the gulf on April 27; returned on May 16, left for Anticosti on May 19, replaced the *Champlain* while undergoing repairs; then continued her regular work until the close of navigation, when she wintered in the Louise basin, where she was repaired and fitted out for next season's work.

‘*Arctic.*’

The *Arctic* is a single screw wooden vessel, built in Kiel, Germany, in 1901, and bought by the Department of Marine and Fisheries in 1904. She is 161.4 feet long, 37.2 feet wide, 20.2 feet deep; 762 gross, 518 net tonnage, and 44 horse-power.

She sailed for the Arctic seas on July 7, 1910, to attempt making the Northwest passage, but was unsuccessful and returned to Quebec on September 25, 1911. The crew was paid off except the captain and steward, the latter being engaged in checking materials on board the ship. She was cleaned and placed in winter quarters in Louise dock, where necessary repairs were made.

PRINCE EDWARD ISLAND DISTRICT.

‘*Earl Grey.*’

The *Earl Grey* is a steel icebreaking passenger and freight steamer, designed for navigating the Strait of Northumberland in winter, to keep up steam communication between Prince Edward Island and the mainland.

She was built in 1909, at Barrow-in-Furness, G.B., by Vickers Sons & Maxim, designed by Mr. Charles Duguid, marine architect of the Department of Marine and Fisheries, and is 250 feet long, 47.7 feet wide and 24.1 feet deep. Her tonnage is 2,357 gross and 930 tons net, with a displacement of 3,340 tons.

She has two double-ended and two single-ended boilers, each allowed a pressure of 180 pounds to the square inch; triple-expansion engine of 800 nominal or 6,500 indicated horse-power. The steamer is fitted with wireless telegraphy apparatus and is classed 100A 1 at Lloyds.

SESSIONAL PAPER No. 21

The *Earl Grey* left Georgetown on April 1, 1911, for Charlottetown, but was unsuccessful, and was compelled to return to Georgetown on the 5th; continued on the Charlottetown-Pictou route until May 1. She sailed for Halifax on the 10th, was docked at Dartmouth on May 18, had her bottom scraped and painted and other defects remedied, and sailed for Pictou on the 9th for coal; proceeded to Charlottetown, where she remained until June 24, when she sailed to Montreal to fit out for His Excellency the Governor General, who was preparing to leave Canada.

The *Earl Grey* was ordered to Charlottetown from Quebec on the 16th, and arrived on October 21, where she was thoroughly cleaned, repaired and fitted for winter service.

She began the winter service on December 31, 1911, making round trips daily, on the Charlottetown-Pictou route until January 9, 1912.

The vessel went on the Georgetown route on January 10, having failed to enter Charlottetown harbour. Regular trips on this route were made until January 29, when she became fast in ice four miles east of Pictou.

She reached Pictou on February 1, and continued to make regular trips until the 22nd. The 23rd was lost owing to a snowstorm.

She made regular trips until again delayed at Georgetown by snowstorm on February 28.

She left Pictou on March 11; but ice conditions being unfavourable, returned to Pictou, and returned next day to Georgetown through very heavy ice. She made regular trips until the last of the fiscal year, when she was sailing for Charlottetown but failed to enter on account of heavy ice.

The *Earl Grey* made 52 round trips on the winter routes, carried 109,084 packages of freight, weighing in all 11,820,010 pounds, or 5,410 tons 10 pounds, earning therefrom, \$7,957.48; carried 2,185 first class, 1,111 second class passengers, earning \$4,249. Served 1,554 meals, provided by the steward but from which the ship derives 10 cents per meal, or \$155.40; 1,147 berths to passengers at \$1 each, or \$1,147. The total earnings, therefore, were \$13,508.88.

'Minto.'

The *Minto* is a single screw steel vessel, built specially for winter navigation in the Strait of Northumberland between the mainland and Prince Edward Island. She was built in Dundee, G.B., in 1899, is 225 feet long, 32.7 feet wide, 18.3 feet deep; 372 net, 1,090 gross tonnage, and 216 nominal horse-power and 2,900 indicated.

The *Minto* was plying on the Georgetown-Pictou route from April 1 to 11, when she made her first trip to Charlottetown for the season, and remained on that route until the 22nd. On account of unfavourable ice conditions, she was compelled to go to Georgetown on April 22, and sailed for Pictou and remained on the Georgetown-Pictou route until April 31, when she sailed to Charlottetown. She returned to Pictou the same day, returned to Georgetown, left there for Pictou, left Pictou for Souris on May 2; and on the 3rd sailed for the Magdalen islands. She left Magdalen islands for Pictou on the 5th with passengers and mail, and left Pictou for Charlottetown on the 6th, when she entered the service of the Steam Navigation Company, in which she remained until May 17.

This vessel then sailed for Halifax on the 19th in command of Captain McPherson, arrived there on the 20th, was docked, had her bottom scraped and painted, her engines overhauled, water tanks repaired and decks and holds cleaned in preparation for a voyage to Hudson bay under the direction of the Naval Service.

She completed this service, arriving in Halifax on October 18; then went to Charlottetown on November 4, fitted out there for the winter service which she began on December 30. On that date she made a round trip, in command of Captain Murchieson, between Summerside and Cape Tormentine but owing to heavy ice the captain would not risk the vessel's safety, and she was put on the Charlottetown-Pictou route on January 8, 1912. She abandoned this route on the 10th owing to heavy ice, and sailed for Georgetown and remained on this route until the close of the fiscal year.

She was stuck in the ice from the 5th to the 7th, from the 12th to the 14th and on the 27th February. On attempting to enter Charlottetown on March 15 she was caught in thick ice, where she remained until the 17th, when she returned to Georgetown.

The *Minto* made 48 round trips on the winter route, carried 67,535 packages freight weighing in all 3,184¹⁷³⁵/₂₀₀₀ tons; carried 1,572 first and 542 second class passengers; furnished 663 berths, and her steward provided 1,292 meals.

' Brant.'

The *Brant* is a wooden vessel, built in Charlottetown, Prince Edward Island, in 1899. She is 100.4 feet long, 19.1 feet wide, 8.5 feet deep; 58 net, 142 gross tonnage, and 33 horse-power.

The *Brant* was continually employed in the lighthouse and buoy service of the Prince Edward Island agency of this department from April 1 to December 31, 1911.

BRITISH COLUMBIA DISTRICT.

' Quadra.'

The *Quadra* is a screw steel vessel, built in Paisley, Scotland, in 1891. She is 174.5 feet long, 31.1 feet wide, 13.6 feet deep; 265 net, 573 gross tonnage, and 120 horse-power.

She is employed in the lighthouse and buoy service in British Columbia waters, and was operating in the northern waters of the province on April 1. She was laid up for general repairs from April 30 to June 15, and from the latter date until September 1 was employed in the Gulf of Georgia, and from that date until November

SESSIONAL PAPER No. 21

1 was delivering supplies to lighthouses and construction materials for wireless stations.

She continued to supply light-stations, wireless telegraph stations and attend buoys until March 31, 1912.

‘*Newington.*’

The *Newington* is an iron screw vessel built in Hull, G.B., in 1889, and purchased by the department in 1908. She is 115.3 feet long, 21 feet wide, 11.5 feet deep; 61 net, 93 gross tonnage, and 58 horse-power.

She was constantly employed in British Columbia waters in the lighthouse and buoy service during the fiscal year.

This vessel was in dry dock undergoing repairs and painting from August 10 to September 21.

‘*Leebro.*’

The *Leebro* is a steam vessel, 123.5 feet long, 28.8 feet wide, 11.1 feet deep; 323 gross, 198 net tonnage, and 22 horse-power. She was chartered by the department from May 19 to August 15. On December 4 she was again chartered for the lighthouse and buoy service in British Columbia waters until the close of the fiscal year.

MONTREAL DISTRICT.

‘*Maisonneuve.*’

The *Maisonneuve* is a wooden steamer, built in Smith's Falls, Ontario, in 1894; was first called the *Gladys*; is 75.7 feet long, 9.7 feet wide, 7.3 feet deep; 18 net, 26 gross tonnage, and 9 horse-power.

She is employed in the lighthouse and buoy service under the control of the Montreal agency of this department.

‘*Vercheres.*’

The tug *Vercheres* was employed in the lighthouse and buoy service of Montreal agency during the year. She had repairs made on her, amounting to \$1,637.61.

‘*Acetylene.*’

This vessel is principally employed in the gas buoy service in the Montreal agency.

‘*Shamrock.*’

The *Shamrock* is a single screw wooden vessel, built in Quebec in 1898. She is 117.3 feet long, 25 feet wide, 9.7 feet deep; 237 gross, 161 net tonnage, 61 horse-power.

She is employed in the buoy service under the control of Montreal agency.

NOVA SCOTIA DISTRICT.

‘*Lady Laurier.*’

The *Lady Laurier* is a twin screw steel vessel, 214.9 feet long, 34.2 feet wide, 17.2 feet deep; 413 net, 1,051 gross tonnage, and 186 nominal horse-power. She was

built in Paisley, Scotland, in 1902, and is employed in the lighthouse and buoy service in the Halifax agency of this department.

At the beginning of the fiscal year she left for St. John, N.B., for buoys and moorings, and continued in the buoy work until July 30, when she was ordered to proceed to the assistance of H.M.C.S. *Niobe*, ashore at Southwest Ledge. In conjunction with other vessels succeeded in towing the warship to Halifax.

On October 20, while on her way back from Sable island where she landed supplies and shipped a number of ponies, she lost two blades of port propeller.

She arrived in Halifax on the 22nd, where she was scraped, cleaned and painted; and on November 4 was towed to the Marine railway, Dartmouth, where she remained until the 9th, when she was towed to dockyard, where she remained until December 22. She again began the buoy and lighthouse service. When anchored near Barrington lightship in January 17, in very stormy weather, she took ground, began to take water and had consequently to be beached at Negro harbour.

The government steamers, *Montmagny* and *Aberdeen*, came to her relief, pumped her and she was towed from the bank on January 20, 1912; landed pumps and was put on the slip. Her bottom was examined, damage done to her keel repaired, and extensive repairs to electric apparatus, decks, engines and boilers were made.

She was taken off the dock on February 20, coaled, and during the remainder of the fiscal year was employed in her ordinary service.

‘*Aberdeen.*’

The *Aberdeen* was laid up on the Marine slip, Dartmouth, to have old boilers taken out and new ones put in. She was taken to Halifax dockyard, June 17, to be thoroughly overhauled.

She was put in commission on July 27, and conveyed machinery for dogfish plant to Canso. Went to assistance of *Niobe* on July 30, took machinery on board for service in relieving that vessel. She was employed during the season in laying cable, in buoy service and delivering lighthouse supplies and machinery, to different stations. This steamer was also employed during the winter months in buoy service on the coast of Nova Scotia and Bay of Fundy. In the fall she lifted the coast buoys around the coast of Prince Edward Island.

NEW BRUNSWICK DISTRICT.

‘*Lansdowne.*’

The *Lansdowne* is a wooden steamer, built at Maccan, N.S., in 1884. She is 188.6 feet long, 32.1 feet wide, 15.8 feet deep; 463 net, 680 gross tonnage, and 80 nominal horse-power.

She is employed in the lighthouse and buoy service under the control of the New Brunswick agency of this department, and was constantly employed from the first of the fiscal year until July 5, when she was placed on Hilyard's blocks, St. John, for annual overhaul and repair. She was taken off the blocks on July 30 and resumed her regular service.

When entering Beaver harbour, N.S., on September 5, in a thick fog, the ship struck bottom, causing her to leak. She sailed for St. John on the 6th and was placed

SESSIONAL PAPER No. 21

on Hilyord's blocks for repairs, under the supervision of Mr. McConkey, Shipshusband. She was taken off the blocks on the 21st and continued her work until October 6, when she was hauled on Kennedy's slip to have her propeller examined. She remained on the slip until the 14th, after which she was continually employed in the buoy service until March 28, 1912 when she was laid up at Ballast wharf for engine repairs.

'Stanley.'

The *Stanley* is a single screw steel vessel, built in Govan, G.B., in 1888, especially for winter navigation in the Strait of Northumberland. She is 207.8 feet long, 32.0 feet wide, 17.9 feet deep; 394 net, 914 gross tonnage, 300 nominal horse-power and 2,100 indicated.

The *Stanley* was in Halifax at the beginning of the fiscal year, and on April 13 went to Dartmouth. She had her bottom scraped and painted, tanks cleaned, decks and davits scraped and painted and other minor repairs made. She sailed from Halifax on May 18 and entered Prince Edward Island buoy service.

Having completed the placing of Prince Edward Island coast buoys, she sailed for Halifax on June 6 and was constantly employed in the lighthouse and buoy service until January 14, when she went to the rescue of the barque *Calburga*, which was caught in ice off Digby, N.S., and after some trouble and delay succeeded in relieving her.

The *Stanley* sailed from Digby to North Sydney on January 16, 1912, to break ice in the harbour, struck bottom but did not sustain any injury. She sailed for Amherst and Grindstone islands on the 21st, got mails, landed at the former place, anchored off Grindstone island. On the 22nd sailed for North Sydney with mail. She was taken to St. John on February 10, had boilers cleaned and sailed on the 19th.

She returned to North Sydney on March 7, coaled and proceeded to Sydney harbour to break ice; and having finished icebreaking there and at North Sydney, she sailed for Magdalen islands with 69 bags mail on March 12. While in heavy ice on the 14th the chain of the steering gear broke and she was compelled to return to North Sydney to have it repaired. She left for Magdalen islands and reached Grindstone island on the 21st, landed and received mails, again encountered heavy ice and returned to North Sydney on the 26th and to Halifax on the 29th, where she remained to the end of the fiscal year.

ONTARIO DISTRICT.

'Reserve.'

The *Reserve* is a screw wooden steamer, built in Buffalo, N.Y., in 1884, is 61.8 feet long, 15.3 feet wide, 4.8 feet deep; 36 net, 49 gross tonnage, and 30 horse-power, and is employed in sweeping the channel, towing and attending the buoys under the control of the Dominion Lighthouse depot, Prescott.

'Lambton.'

The *Lambton* is a single screw steel vessel of 89 horse-power, built in Sorel, P.Q., in 1909, is 108 feet long, 25.1 feet wide, 12.7 feet deep; 323 gross and 182 net tonnage.

She is employed in lighthouse construction and superintendence.

'*Simcoe.*'

The *Simcoe* is a steel, twin screw vessel of 217 nominal horse-power, that was built by Swan, Hunter and Wigham, Richardson Limited, Wallsend-on-Tyne, G.B., in 1909. She is 180 feet long, 30.2 feet wide, 15.2 feet deep; 193.8 net and 437.63 gross tonnage.

She is employed in the lighthouse and buoy service in the great lakes and Georgian bay.

'*Scout.*'

The *Scout* is a wooden, single screw vessel of 27 horse-power, built in Cardinal, Ontario, in 1900. She is 103.6 feet long, 25.6 feet wide, 9.2 feet deep; 70 net, 176 gross tonnage. She is employed in the lighthouse and buoy service under the control of the Dominion Lighthouse depot, Prescott.

Her boilers and machinery were inspected by Inspector Ferguson in February, 1911, and repairs suggested by him made. Her hull, also, was inspected by Thomas McConkey, Ships-husband, on January 30, 1911, and temporary repairs ordered pending a more thorough examination in dry dock. She was docked at Kingston, Ontario, for this purpose in June and thoroughly examined by Mr. McConkey, who reported that she was unseaworthy, unfit for the carrying of heavy loads in rough weather and not worth extensive and costly repairs; but he ordered temporary repairs made to enable her to do light work in fair weather.

NEW STEAMERS.

A new steamer, to be named the *Estevan*, is under construction for the British Columbia light house and buoy service. This vessel is being built by the Collingwood Shipbuilding Company, and building is progressing under the supervision of Mr. Duguid, the marine architect of the department.

Another steamer, to be named the *Dollard*, is being built for buoy service in the St. Lawrence river between Montreal and Quebec. This vessel is being built by the Kingston Shipbuilding Company, who are also building a steamer, to be named the *Bellechasse*, for service in the ship channel of the St. Lawrence river.

REPORT OF ICE-BOATS AT CAPE TRAVERSE, P.E.I., AND CAPE TORMENTINE, N.B.

The ice-boats were in commission from January 31 to March 26, 1912.

Thirteen ice-boats were repaired, 12 tinned, 3 new boats built and 6 old boats condemned.

METEOROLOGICAL SERVICE AND MAGNETIC OBSERVATIONS.

Two hundred and eighty persons received pay for various duties performed during the fiscal year—an increase of 29 over the preceding year. Of this number, 30 were employed in the central office—an increase of 5. 41 were paid salaries as observers at telegraph reporting stations, 100 for displaying storm signals and 109 for observations at outlying stations. Only those at the head office and principal outside stations

SESSIONAL PAPER No. 21

devote their whole time to the service; the others devote but a portion, and receive generally but small remuneration.

Forty-seven new stations have been established during the year: 6 in British Columbia, 7 in Alberta, 10 in Saskatchewan, 1 in Manitoba, 7 in Ontario, 7 in Quebec and 9 in Nova Scotia.

There are now 518 meteorological stations under the control of the central office at Toronto; and, as there are only 250 outside officers in the pay of this service, 268 persons throughout the Dominion gratuitously conducted regular and valuable observations.

Much importance is attached at headquarters to the development of the synchronous weather-chart and the establishment of a physics laboratory for atmospheric research.

Weather forecasts were issued twice a day from the central office at Toronto and (for British Columbia) from Victoria. Verification percentage of 86.1 were reached in the one and 84.7 in the other. There were 110 storm-signal stations in operation at the close of the calendar year, from which 2,610 warnings were issued, 92 per cent of those predictions were verified, and their value continues to be more appreciated by mariners, pilots, fishermen and shippers.

MAGNETIC OBSERVATORY.

The Magnetic Observatory at Agincourt, Ontario, made uninterrupted records of declension, horizontal force and inclination. A Toepfer earth inductor was installed in February, 1912, and used as the standard of inclination. Magnetic disturbances were recorded, the constants of magnetometer 146 of the Hydrographic survey branch determined, 90 theodolites with magnets compared, and Dominion Observatory instruments compared with those of Agincourt.

The magnetic survey of Hudson bay, started by Mr. W. E. W. Jackson in the summer of 1911, was unsuccessful owing to a leak in his vessel.

The seismographs recorded many disturbances during the year: the one at Toronto recorded 85, that at Victoria, 73. Much interest is being taken in earthquakes. Thirteen additional seismographs have been installed throughout the world, and the British Association is studying results of data obtained.

Eighty-eight determinations of time have been made. Time has been transmitted by telegraph and telephone lines, chronometers and watches compared and regulated. The time exchanges between Toronto and Quebec, Montreal and St. John, were regularly made and errors of clocks computed.

Solar observations were made on 108 days during the year ending March 31, 1912. Forty-seven of those observations showed spots on the sun, maps of which have been made; and the remaining 61 showed the sun clear of spots.

The work at the St. John, N.B., observatory is growing in volume and usefulness. Reports are telegraphed twice each day to Toronto at 9 a.m. and 9 p.m., Atlantic time. The wind station at Point Lepreaux sends reports weekly to St. John, where they are carefully analysed. Observations are made on clear nights to determine clock errors. Daily time-signals are sent over telegraph wires to all parts of the maritime provinces by automatic clock arrangements. Wireless time-signals are

sent from Camperdown, N.S., by a contrivance which automatically repeats the time-signals from land lines to wireless instruments by which they are sent to ships fitted to receive them and have their chronometers checked.

The electric clock at Halifax was installed in the Western Union's new office, and electrical connections with time-ball improved. When dismantled the clock was overhauled and repaired, and in its new position gives good satisfaction.

The Quebec Observatory conducted the usual meteorological and astronomical observations.

The correct time was given, chronometers rated and a new meteorological station established at Cap Rouge experimental farm.

The central office officials made their customary inspections, had instruments tested, repairs made and observers instructed.

The Director's annual report forms an appendix to this report.

MONTREAL HARBOUR COMMISSION.

The Harbour Commission of the port of Montreal is comprised of Major George W. Stephens, president; L. E. Geoffrion, Esq., and C. C. Ballantyne, Esq., commissioners.

The secretary-treasurer of the commissioners is David Seath, Esq.

The jurisdiction of the commission extends from Bout de l'Isle to above Victoria bridge, a distance of 17 miles.

Twelve thousand acres of water and 200 acres of improved land are under the control of the commission.

The harbour was opened for navigation on April 23, which was 22 days later than on the previous year; and closed on December 29, 22 days later than in 1910, which left the open season the same.

The revenue of the port of Montreal for the year 1911 was as follows: Wharfage dues on imports, \$256,373.33; wharfage dues on exports, \$103,549.29; switching of cars, \$147,291.74; wharfages local traffic, \$105,146.11; Grain Elevator No. 1, elevating charges, \$112,573.18; rental of harbour sheds, \$100,499.97; floating grain elevators, \$45,111.25; rental of harbour tracks and properties, \$33,949.42; floating crane, \$7,128.60; interest Laporte bridge, \$632.34; making a total on revenue account of \$912,255.23. Amount of Dominion Government loan, \$2,315,000; balance from 1910, \$393,263.61—which makes the total receipts \$3,656,930.44.

The expenditure on revenue account was \$884,070.29. Of this amount, \$503,979.58 was for interest, and \$57,360.47 for property purchased for a new harbour yard and buildings.

The expenditure on capital account was \$2,334,119.03:—

SESSIONAL PAPER No. 21

Loans on public account of \$2,315,000 was received from the Dominion Government.

The debenture debt of the corporation on December 31, 1911, was \$16,607,000, of which \$1,872,000 is to the public and \$14,735,000 to the Dominion Government upon which the average rate of 3.31 per cent is paid.

Four hundred and one transatlantic vessels, having a total tonnage of 1,695,613 tons, arrived in the harbour during the season.

This shows an increase of 40,199 tons register over the previous season.

Three hundred and sixty-one vessels, with a total tonnage of 642,639 tons register, arrived from the lower St. Lawrence and maritime provinces, an increase of 35 vessels and 67,831 register tons. The foregoing, in addition to 11,670 vessels plying on inland waters, make a total of 12,432, having a total of 6,613,271 tons register, arrived at the port of Montreal during the season of 1911, showing an increase of 52,250 tons over the previous season and the greatest tonnage for ten years; but a decrease of 2,951 vessels from those entered in 1910.

Harbour extension work has been done; a new quay 393½ feet long was built in front of Elevator No. 2, and a foundation for a new marine tower jetty. The Victoria and Berri street subway were completed; a double track was laid on the high level railway; Victoria quay wall was completed, also a high level retaining wall between Victoria pier and market basin, and a new quay wall 935 feet long was built at the market basin.

The most important work begun was the preparing a site for the new floating dock being built in England for the Canadian Vickers Limited Company.

The harbour commission is supplying the protected basin and 30 acres of land for a shipyard.

QUEBEC HARBOUR COMMISSION.

Quebec harbour was open all winter, and the *Montcalm* and *Lady Grey* plied between Quebec and cap Rouge. The tidal basin ice broke up on April 9, and navigation for all classes of vessels was general on April 11.

Besides a large number of steam barges, schooners and other smaller vessels, 640 ocean-going steamers docked in Louise docks and Point à Carcy wharfs. 392 vessels of 1,723,630 tons register and 348,486 tons cargo entered at the St. Charles docks, which included 218,306 tons bituminous and 48,817 tons of anthracite coal.

Ninety-one vessels of 360,054 tons register, with cargoes of 44,801 tons; 579 head of cattle, 26,511 P.S. lumber and timber left the same docks during the year, while 7,463 tons of general cargo, 1,568,168 bushels of grain, 26,377 railway ties, 14,832 cords of pulpwood, were shipped from the Lower ports.

The revenue for the year 1911 was \$122,425.81—an increase of \$1,388.97 over that of the previous year. A surplus of \$15,498.32 was shown.

The expenditure on capital account was \$149,656.82, as compared with \$110,392.40 the previous year, but \$51,315.20 was spent in the purchase of a vacant lot of 10,000 square feet adjoining East Indian wharf.

THREE RIVERS HARBOUR COMMISSION.

The Harbour Commissioners of Three Rivers are: P. A. Drolet, Esq., chairman; Joseph L. Fortin, Esq., L. P. Normand, Esq., L. E. Dufresne, Esq., J. A. Peltier, Esq.; George Balcer, Esq., secretary-treasurer.

The wharf accommodation extends from the west bank of the St Maurice river to the icebreaker, a distance of about 5,500 feet.

The total revenue, including balance from the previous year, &c., was \$35,956.56, and the total expenditure, \$17,763.14; leaving a balance on hand of \$18,193.42.

TORONTO HARBOUR COMMISSION.

The harbour opened on March 31 and closed on December 8.

The harbour buoys were put out on April 3 and taken up on December 7.

Three thousand one hundred and ninety-two vessels, with a registered tonnage of 1,649,887 tons, entered during the year 1911.

Seventy-five vessels, besides scows and other smaller vessels wintered at the port; in all about 21,827 register tons.

Eighty-three thousand two hundred and seventy-nine tons general merchandise, 126,229 tons coal, 1,037,000 B.M. of lumber, 1,500 bushels grain, 2,560,000 brick, 368,000 scoria blocks, 7,898 tons ice, 184 barrels fruit, 9,680 crates fruit, 493,471 baskets fruit, 12,038 toise stone, and 101,898 barrels oil arrived at the port during the year ending December 31, 1911.

Thirty-eight thousand and sixty-two cubic yards of dredging was done at different sections of the harbour. A channel has been dredged through the bar, 200 feet wide on top and 600 feet in length, at the entrance of the eastern channel to a depth of 20 feet below zero, and 650 feet of concrete superstructure has been placed on the north end of East pier of eastern channel.

A channel 400 feet wide and 18 feet deep has been cut through the land bar at the western entrance; and the North pier, 2,200 feet long and 20 feet wide, has been completed.

The receipts for the year were \$11,526.38, and the expenditure, \$12,950.66.

BELLEVILLE, ONT., HARBOUR COMMISSION.

The receipts for the year ending December 31, 1911, were \$2,023.78. The expenditure, \$1,885.06, and the balance on hand, \$138.72.

The amount deposited to the credit of the sinking fund is \$3,389.26.

PICTOU HARBOUR COMMISSION.

The commission remains unchanged since last year. being J. R. Brown, Esq., chairman; W. A. McIntosh, Esq., J. C. Reid, Esq.; Henry G. Ives, Esq., secretary. Their report will be found in this report.

NORTH SYDNEY HARBOUR COMMISSION.

A new Harbour Commission composed of Messrs. James Bissett, Arthur McDermaid and Kenneth McLeod, was appointed on May 13 last. and Mr. McLeod, who

SESSIONAL PAPER No. 21

also acts as secretary, acknowledges receipts of all books, papers and funds from the late commission.

The receipts for the calendar year ending December 31, 1911, are \$7,201.28, the expenditure \$5,624.24, and the balance on hand \$1,577.04.

The total number of vessels of all kinds which arrived at the port during 1911 was 2,220, having a tonnage of 1,811,223 tons register, and carrying a crew of 38,181 men.

The coal shipped amounted to 2,391,905 tons, and the steel rails to 73,085 tons.

The Dominion Iron and Steel Company, Limited, imported 73,085 tons iron ore, limestone and other materials.

The report of the North Sydney Harbour Commission forms an appendix to this report.

WRECKING PLANT.

The yearly subsidies were paid to contractors when they became due and proof shown of the maintenance of the plant in readiness to render assistance in cases of casualties to vessels. The amount of the subsidy to each contractor is \$10,000 per annum, paid semi-annually.

The contracts were made for a period of five years with each contractor. For the lower St. Lawrence, the contract was made with Messrs. Geo. T. Davie & Sons, Levis, P.Q., headquarters of the salvage plant at Quebec; for the maritime provinces, with the Dominion Coal Company, headquarters of the salvage plant, North Sydney, C.B.; for British Columbia, the British Columbia Salvage Company, headquarters for the salvage plant, Victoria.

The following is a list of vessels assisted or salvaged by the plant of the Dominion Coal Company, Limited, during 1911-12:—

DOMINION COAL COMPANY, LIMITED.

Work done in connection with wrecking plant from April 1, 1911, to January 1, 1912:—

May 1, 1911.—American fishing schooner *Arkona* went ashore on Battery shoal, Louisburg harbour, and was pulled off by tug *Douglas H. Thomas*.

May 9.—Schooner *Elva M.* went ashore on Barrachois shoal, Sydney harbour; pulled off by tug *Douglas H. Thomas*.

June 27.—Tug *Douglas H. Thomas* pumped out schooner *Walkyrien* at Port Hawkesbury and uprighted her.

June 29.—Steamer *Heathcote* went ashore near the entrance of Big Bras d'Or lake. Tug *Douglas H. Thomas* went to her assistance and succeeded in floating steamer on July 1.

June 16.—Steamer *Ben Earn* with cargo of coal went ashore at cape Negro, Shelburne. Tugs *Douglas H. Thomas* and *Springhill* and steamer *Cabot* were despatched to her assistance immediately. Steamer was in such an exposed position that she broke up in the heavy seas and became a total loss. Steamer *Cabot* salvaged about 1,000 tons of her cargo.

July 30.—Received telephonic request from Department of Marine and Fisheries at Halifax for assistance to stranded H.M.C.S. *Niobe*, reported ashore on southwest ledge of cape Sable. Despatched before arrival of *Cacouna* at cape Sable. Had two tug boats and four steamers in readiness to proceed should their services be required.

August 2.—Tug *Douglas H. Thomas* was despatched to Lawn, Newfoundland, to tow disabled tug *Progress* from there to North Sydney. After *D. H. Thomas* had sailed, received word disabled tug had made temporary repairs and proceeded to St. John's.

August 3.—Despatched SS. *Cacouna* to assistance of stranded steamer *Cambodia*, ashore at Flag island, Canso, but steamer floated before arrival of *Cacouna*.

September 19.—Barque *Record* went ashore on Main à Dieu bar. Tug *Douglas H. Thomas* went to her assistance, and after great difficulty managed to take crew off. Tug stood by for long period but on account of high sea running nothing could be done to assist barque.

September 30.—Heavy gale drove schooners *Grand Master*, *Coronation*, *James A. Gray*, *Swift Current*, *Colonel Otter* and tug *Alert* ashore in Sydney harbour. Tug *Douglas H. Thomas* pulled them all off and towed them to places of safety as required by their different masters.

Yacht *Bras d'Or* broke away from her mooring in Sydney harbour and sank during same gale. Tug *Douglas H. Thomas* with assistance of divers raised her from the bottom, pumped her out, and towed her to place of safety.

October 13.—Despatched tug *Douglas H. Thomas* to assistance of schooner *Erick*, ashore in Aspy bay. After tug had worked at her for considerable time, she was forced to abandon her on account of vessel's difficult position.

October 23.—Steamer *Halvden* with cargo nitrate of soda went ashore on Four-fathom patch, thirty miles west of Louisburg. Despatched tug *Douglas H. Thomas* immediately to scene, but on tug's arrival steamer broke up in heavy sea. Her captain and crew were taken off by tug.

October 26.—Schooner *J. C. Dakin* went ashore at Barrack point, and was pulled off by tug *Douglas H. Thomas*.

The services rendered by the plant of Messrs. Geo. T. Davie & Sons:—

Assistance to M. P. & J. T. Davis' *Caisson* from graving dock to Quebec bridge.

Assistance SS. *Lake Champlain* from Montreal to Quebec. These services were performed by steamer *Lord Strathcona*.

Salvage services rendered during the year 1911 by the British Columbia Salvage Company.

January 26 and 27.—SS. *Tees* ashore near Wreck bay, west coast Vancouver island.

February 3.—SS. *Titania* ashore near Turn point, Stuart island.

January 26.—SS. *Cottage City* sunk near cape Mudge.

April 12 to 25.—SS. *Vadso* in Rivers inlet, B.C.

June 30 to August 1.—SS. *Spokane* sunk in Plumpers bay.

October 15 to 22.—SS. *Princess Beatrice* ashore on Noble island.

October 23.—SS. *Dirigo* ashore in Victoria harbour.

November 29 to December 4.—SS. *Tees* in trouble off the west coast Vancouver island.

SESSIONAL PAPER No. 21

WRECKS AND CASUALTIES.

Two hundred and twenty-five sea-going vessels were reported as wrecked, partially wrecked, suffered serious or slight damages to ship, rigging or cargoes.

The tonnage in this way affected was \$3,366, the total damage reported was 461.180, and the number of lives lost 7. Of the total number of vessels, 70 were total wrecks with a loss of \$280,059, while 42 vessels were very slightly, or not damaged, having in most instances been stranded in storms and escaped without any material harm. One hundred and thirteen vessels were partially wrecked with a loss of \$181,121. Seventeen vessels were reported as totally wrecked in inland waters, with a loss of \$227,700; 91 were partially wrecked with a loss of \$105,400 and 12 vessels slightly damaged, or in some instances incurring no loss. The number of vessels affected was, therefore 38 vessels of 52,021 tons, loss \$333,100, and no ilves lost.

The report of wrecks and casualties for the year ending December 31, 1911, will be found in an appendix to this report.

MONTREAL PORT WARDEN.

Navigation opened on April 26, when the *Lady of Gaspé* arrived from Quebec.

The first ocean steamer arrived in the port on April 29.

The first vessel passed through the Strait of Belle Isle on April 29.

The last ocean-going ship sailed from Montreal on December 3.

No ocean-going sailing vessel left port during the year.

Three hundred and ninety-eight transatlantic vessels reported at the Port Warden's office during the year, with a tonnage of 1,714,354 tons.

Three hundred and fifty-two vessels of all classes, with a total tonnage of 637,431 tons, entered from the lower ports—an increase of 19 vessels and 66,726 tons.

One hundred and eight vessels cleared for the lower ports, having a tonnage of 85,708 tons—an increase of 9 vessels and 12,027 tons over last year.

There was a total increase of 2,575,985 bushels of grain shipped at Montreal.

PILOTAGE.

Annual returns have been received from thirty pilotage authorities. They are published in appendices to this report, and show the names of the pilotage commissioners, pilots, number and tonnage of vessels piloted, the receipts and expenditures for the calendar year 1911. The total number of pilots employed, according to those returns, was 313; and the total receipts, \$446,423.37.

A table showing the name of each pilotage district, its secretary, number of pilots and receipts is attached to the report on pilotage in this report.

MASTERS AND MATES.

The report of Captain H. St. G. Lindsay, Chief Examiner of Masters and Mates, forms an appendix to this report, and shows that 208 applicants for masters', 179 for

mates' certificates of competency and 26 for masters' temporary certificates were examined.

The receipts from fees were \$3,970; the expenditure on the service, \$7,226.54.

SHIPPING AND DISCHARGING OF SEAMEN.

Fewer returns have been received than for the previous year. The returns from the provinces are as follows:--

	Seamen Shipped.	Seamen Discharged.	Fees Collected.
			\$ cts.
Quebec.....	2,631	1,970	1,916 50
New Brunswick.....	1,807	783	1,138 40
Nova Scotia.....	4,914	5,634	4,864 20
British Columbia.....	4,164	2,796	3,434 70
Prince Edward Island.....	192	107	127 60
Total.....	13,708	11,290	11,481 40

A full statement of the seamen shipped and discharged as sent in returns by shipping masters will be found in an appendix to this report.

MARINE SCHOOLS.

Marine schools were in operation two months in the winter at Halifax, N.S., North Sydney, N.S., Yarmouth, N.S., Collingwood, Ont., Victoria and Vancouver in British Columbia and in the city of Quebec.

Lectures bearing on navigation, seamanship and routine work on sea-going and coasting vessels were delivered at the first six schools; and men were taught subjects requisite to qualify for masters' and mates' certificates, at the school held in the city of Quebec. 156 lectures were delivered, and the total attendance was 1,733; but Vancouver school, alone, furnished 707 of this total attendance, and is the only one that shows a continued and fitting appreciation of the department's efforts to teach the theory and practice of navigation.

The report of Captain Lindsay, superintendent, forms an appendix to this report.

SICK AND DISTRESSED MARINERS.

Under the provisions of the Canada Shipping Act, chapter 113, Part V, s. 384, R.S., dues of 1½ cents per ton, registered tonnage, are levied on every vessel entering any port of the provinces of Quebec, Nova Scotia, New Brunswick, Prince Edward Island and British Columbia. The money thus collected forms the 'Sick Mariners Fund.' Vessels of the burden of 100 tons and less pay duty once in each calendar year, and vessels of more than 100 tons, registered tonnage, three times in each year.

SESSIONAL PAPER No. 21

The officers and seamen of all fishing vessels not registered in Canada do not pay sick mariners dues nor participate in the benefits accruing therefrom, but such vessels registered in Canada may pay dues and participate in the benefits, and if of more than 100 tons only for the voyage at the beginning of which payment has been made, but such vessels shall enjoy the same rights and benefits as are enjoyed by vessels which pay dues and are not engaged in fishing.

The Sick Mariners Act does not apply to the province of Ontario, so no dues are collected from vessels in that province.

At the port of Quebec sick mariners are cared for at the Jeffery Hale and the Hotel Dieu hospitals at a per diem allowance of \$1.50 per seaman, including medical attendance and board.

At the port of Montreal sick seamen are cared for at the General hospital and at the Notre Dame hospital—the charge per diem at each institution being \$1.50 per seaman, including board and medical attendance, and infectious cases are attended at the Alexandra hospital.

At the port of Three Rivers, sick mariners are cared for at the St. Joseph's hospital, at a per diem rate of 90 cents for each seaman. The medical officer receives \$300 per annum for his services.

At the port of Chicoutimi, P.Q., sick seamen are cared for at the hospital of St. Valier, at a per diem charge of \$1.20 per seaman, including board and medical attendance.

At the port of St. Johns, P.Q., sick seamen are attended at the St. John hospital, at a cost of 90 cents a day. The medical officer receives a salary of \$600 a year.

Marine hospitals are maintained at Louisburg, Yarmouth, Pictou, Sydney and Lunenburg in the province of Nova Scotia; and sick seamen at Halifax, N.S., are cared for in Victoria General hospital at \$1.50 a man per day, including board and medical attendance.

At North Sydney, sick seamen are attended at the Hamilton hospital at \$1 per day each. The medical officer receives \$750 per annum for drugs and medical attendance.

At Windsor, N.S., sick mariners receive treatment at the Payzant Memorial hospital at \$5 per week for each man. The medical officer receives a salary of \$120 a year.

At Amherst, N.S., sick mariners are cared for at the Highland View hospital for \$4.50 a week each.

Sick seamen of Parrsborough, N.S., are cared for at the Cottage hospital, Springhill, N.S., for 90 cents each per day.

At Victoria, B.C., sick seamen are treated at the St. Joseph hospital for \$1.40 each per day. The medical officer receives a salary of \$600 per annum.

At Vancouver, B.C., sick seamen are attended at St. Paul hospital for \$1.50 per day each.

At Nanaimo, B.C., sick seamen are treated at the Nanaimo hospital for \$1 per day, board, lodging and nursing. The medical officer receives \$600 per annum.

At New Westminster, sick seamen are attended at the Royal Columbian hospital for \$1 a day, including board and medical attendance.

At Chemainus, B.C., sick seamen are attended at the General hospital for \$1 a day, the medical officer receiving \$400 per annum.

At St. John, N.B., sick seamen are treated at the General Public Commissioners' hospital for \$1.50 per day.

At Campbellton, N.B., sick seamen are treated at the Hotel Dieu hospital for \$5 a week each, the medical officer receiving a salary of \$350 per annum.

At Moncton, N.B., sick seamen are treated at the Moncton hospital for \$4 a week, the medical officer receiving a salary of \$200 per annum.

A marine hospital is operated and maintained by the department at Douglstown, N.B., the medical officer receiving a salary of \$400 and the keeper \$250 per annum.

Where no hospital is maintained in any part of the Maritime Provinces, Quebec or British Columbia, the collectors of customs are authorized to care for sick seamen entitled to receive the benefits of the fund.

Statement of receipts and expenditure on account of 'Sick and Distressed Seamen' from the fiscal year 1900 to 1911, both inclusive:—

Year.	Receipts.	Expenditure.
1900..	\$59,971 84	\$32,743 30
1901..	59,783 34	34,944 93
1902..	65,853 83	51,827 12
1903..	64,851 55	48,151 48
1904..	61,778 29	50,801 78
1905..	58,372 34	51,000 18
1906..	60,183 90	50,120 42
1907..	44,704 59	34,362 11
1908..	69,364 45	59,957 92
1909..	53,732 31	66,349 26
1910..	55,567 41	54,859 50
1911..	60,637 11	54,779 27

The total amount of salaries paid to medical officers during the year 1911 was \$14,660.75. The number of seamen treated was 3,012, being 222 less than the number treated in 1910 and 617 less than treated in 1909, while the number of days treatment was 26,095. The total amount spent for services of physicians, not including salaries, travelling expenses, drugs and board, was \$34,621.23.

The report of Dr. C. H. Godin, Medical Superintendent of Marine Hospitals, forms an appendix to this report.

SABLE ISLAND HUMANE INSTITUTION.

The report of R. Boutilier, Superintendent of Sable Island Humane Institution, contains information respecting wrecks, patrol, staff, repairs, farming, stock on hand and killed; stock and produce shipped or ready to ship, and an inventory of sailors' clothing and bedding.

No wreck is reported, and only two steamers stranded during the year ending December 31, 1911.

A new 'Beebe-McLellan' self-bailing lifeboat was received at No. 1 station at the beginning of the year, and the old 'Beebe' surfboat transferred to station No. 4.

SESSIONAL PAPER No. 21

The island was patrolled 63 times in the morning and 28 times in the evening.

Two lifeboats were painted, warehouse and barn repaired, seven miles of telegraph wires stretched, one mile of new poles erected and the buildings at each station inspected, and repaired where necessary.

Two hundred and seventy-two bushels of vegetables, of which total 150 were mangel wurtzels and 75 bushels potatoes; 120 tons of hay were stored.

The stock killed consisted of 8 beeves, 5,583 pounds; 7 calves, 420, and 6 hogs, 900 pounds; and the stock on hand, 68 cattle, 30 horses, 2 imported mares, 2 imported stallions, 6 colts from imported stock, 200 wild ponies and 5 hogs.

The exports were 72½ barrels cranberries, 31 ponies, 1 working horse, and 5 barrels salted hides.

The total staff consists of 46 persons.

The report of the superintendent forms an appendix to this report.

INSPECTION OF LIVE STOCK SHIPMENTS.

The reports of inspectors of live stock shipments for Montreal, P.Q., and St. John, N.B., show that 3,725 sheep, 45,966 cattle and 138 horses were shipped from Montreal; and 1,798 sheep, 2,001 cattle and 14 horses from St. John—a total of 5,523 sheep, 47,967 cattle and 152 horses. 320 U.S. mules were shipped from Montreal, 424 from St. John—a total of 744; and 15,691 U.S. cattle shipped from Montreal, 1,881 from St. John—a total of 17,572.

CORRESPONDENCE AND RECORD BRANCH.

The records branch of the department embraces the receiving and despatching of letters. The letters and telegrams received are registered, numbered, stamped with date received, indexed, placed on files, and the files charged and distributed to the officers who take action upon the letters and telegrams. Copies of letters are placed upon the files, and the files examined to ascertain if all letters have been answered or acknowledged, and then they are discharged and placed in receptacles.

The registering of letters consists of entering the number of the file and a brief synopsis of the subject of the letter; the indexing includes pages of personal names in a book, and the card system, locality names, subjects and vessel names. The number of communications received during the year 1911 was 49,064.

The letters and telegrams despatched are copied in letter press books and indexed. The number of letters despatched during the year was 38,000. The increase in the numbers of letters received and despatched during the last ten years shows the growth of the work of the department and consequent increase of staff, as a whole, including the records branch. An establishment book is maintained in this branch in which the names of all employees of the department are recorded.

The letters received in 1901 numbered 18,741 and despatched 13,000, while in the past year 49,064 were received and 38,000 despatched.

SIGNAL SERVICE.

The signal service of Canada as it is now established was carried on in 1911 as usual. The superintendent of the signal service at Québec has under his supervision a

number of stations in the Gulf and River St. Lawrence and Strait of Belle Isle. From these stations daily reports are received concerning the weather and movements of vessels. Ice conditions are also noted and reported in the season when moving ice forms a danger to navigation. Bulletins were issued at Quebec to vessel owners, agents and others interested in shipping, and telephoned to the Board of Trade, Montreal Shipping Federation and others. The quarantine station at Grosse Isle and the pilot station at Father point were daily informed of the movements of inward bound vessels.

The telephone service in connection with signal service extends from Montreal to Quebec, over a rented line and from Quebec to Crane island over the public service line. It has proven of great value to the dredging fleet and to pilots, who are kept informed of movements of vessels, doing away with the former uncertainty of the whereabouts of vessels and preventing delays to both vessels and pilots.

WORKSHOPS.

Workshops are maintained by the department at Sorel, Halifax, Quebec, Prescott, and Parry Sound. The workshops at Sorel are of course the most important as construction of vessels is carried on at the shipyard as well as the making of repairs to vessels. Several separate buildings have from time to time been erected for the proper division and performance of the work. The buildings consist mainly of the office, draughting room and general store, boiler shop, machine shop and power house for electric plant, blacksmith shop, joiner shop, boat building and general woodwork shop; sawmill, including planing machine and moulding machinery, pattern shop and vessel moulds and sail loft, tinsmith shop, building for storing vessel's equipment and stables. In addition, there is a fire equipment, a narrow gauge railway with sheds, also a railway track from the Sorel railway station for freight cars.

At the Dominion lighthouse depot, Prescott, the shops are mostly within the main building. It contains the main office, draughting room, photometric room where tests are made of lighthouse apparatus, carpenter shop, pattern shop, blacksmith shop, vapour lamp and erecting department, paint shop, shipping department and general store. The machine shop and acetylene department is each in separate buildings. The number of workshops at Quebec is seven, viz., the boiler shop and forge, machine shop, tinsmith and plumber shop, carpenter and boat shop, joiner shop, paint shop and sail loft.

At Halifax, the workshops are connected with the dockyard and are mainly a blacksmith shop, carpenter and boat shop, machine shop, paint shop and tinsmith shop. Extensive repairs are made to buoys and moorings and repairs to the machinery of the Dominion steamers.

At Parry Sound, the depot is mainly used for storing acetylene, gas buoys and lighthouse tanks and charging them with acetylene. The buoys and tanks are painted and prepared for placing in the spring; a few mechanics are consequently employed at this depot.

STEAMBOAT INSPECTION.

All passenger steamboats over five tons gross tonnage are subject to inspection yearly of boilers, machinery, hulls and equipment according to the rules of steamboat inspection.

SESSIONAL PAPER No. 21

Every freight steamer of more than one hundred and fifty tons gross is subject to inspection yearly, according to the rules of steamboat inspection for boilers, machinery and hulls.

Freight steamers, tug boats and steamers used for fishing purposes, under one hundred and fifty tons and more than five tons gross tonnage, are subject to inspection of boilers and machinery, according to the rules of steamboat inspection.

At present there is no fee charged for inspection except upon steamers registered elsewhere than in Canada when engaged in carrying passengers between Canadian ports and not holding a British Board of Trade certificate. The fee is then, in Canada, eight cents on the gross tonnage of such foreign steamer.

Canadian registered vessels inspected during the fiscal year numbered 1,833 gross tonnage, 509,129. Vessels inspected, but not registered in the Dominion, numbered 159; gross tonnage, 213,796 tons. The amount of fees collected for inspection was \$400,231.

The total expenditure in connection with inspection amounted to \$45,353.11, but part of this expenditure was for inspection of Dominion steamers and fog-alarms. The report of the chairman of steamboat inspection forms an appendix to this report.

LIFE-SAVING SERVICE.

The life-saving service of the department, in the past, has included a number of stations supplied with life-saving apparatus, considered sufficient to render ordinary assistance to vessels ashore or needing help, when in distress, along our shores. The boats are principally Beebe-McClellan self-bailing surf boats, and in a few instances Dobbins self-righting and self-bailing boats. But the latter were found to be too heavy for the number of men generally available for volunteer crews, who are only paid for annual drills and when assistance is rendered. The Beebe-McClellan surf boats have in late years been supplied the stations.

Total number of stations maintained is	37
Total number of boats is	35
Total number of crews is	225

LEGISLATION.

The following Acts were passed and assented to during the First Session, Twelfth Parliament, 1-2 George V., viz. :—

An Act respecting the Harbour Commissioners of Montreal.

An Act to provide for further advances to the Harbour Commissioners of Montreal.

An Act to amend the Quebec Harbour Commissioners Act, 1899.

An Act to amend the Canada Shipping Act.

An Act to incorporate the Winnipeg and St. Boniface Harbour Commissioners.

Deputy Minister of Marine and Fisheries.

SESSIONAL PAPER No. 21

APPENDIX No. 1.

ANNUAL REPORT OF THE CHIEF ENGINEER OF THE DEPARTMENT
OF MARINE AND FISHERIES.

The Deputy Minister of Marine and Fisheries,
Ottawa.

SIR,—I have the honour to submit the following report of the work done in the several services under the supervision of this office during the twelve months ended March 31, 1912.

This embraces work done at departmental headquarters on the construction of lighthouses, lightships and fog-alarms, the supervision of construction and repairs of lifeboats; the administration of the vote for the removal of wrecks and obstructions in navigable waters; and the publication, examination and correction of hydraulic charts; construction of and repairs to fish hatcheries and refrigerators; engineering points in connection with the construction and maintenance of fish-passes; supervision of surveys of oyster beds; examination of applications for foreshore, wharf and other water lots as they affect the interests of navigation; preparation and publication of notices to mariners and hydrographic notes, &c.

STAFF.

The following changes have been made during the year in the staff of my office:—

Mr. F. P. Jennings was sent from the office in February, 1911, to superintend the construction of the new departmental depot on Digby island, near Prince Rupert, and was still there at the end of the financial year.

Mr. J. L. O'Brien was temporarily employed as a draughtsman from July 12, 1911, to August 22, 1911, and Mr. L. A. Stewart from June 29, 1911, to September 30, 1911, in consequence of pressure of work.

Miss E. M. McCullough has been employed as typewriter since July 14, 1911, Miss L. M. Gay since July 17, 1911, and Mr. J. A. Breen since December 2, 1911.

Mr. E. J. Wight, draughtsman, resigned from the service on September 30, 1911.

Mr. W. H. Carson, engineer-draughtsman, was absent at Ile Parisienne, acting as inspector of work, from September 1, to November 21, 1911.

OFFICE WORK.

The largest part of the work done by the general staff of the branch consists in the construction, repair, or improvement of light buildings, fog-alarms, beacons and other aids to navigation, the supply of new or improved illuminating apparatus, &c., the payment of expenditures for these services being made out of the vote of \$1,000,000 for construction of aids to navigation. Full details of the work done in this connection during the past year are contained in a separate report in tabular form attached hereto, which gives a complete statement of all expenditure charged to the vote in question. (Inclosure A.)

In addition to the work of this branch done under the above vote, the staff have been called upon to perform work of varied description for other branches of the department, and which may be summed up as follows:—

For the Meteorological Service Branch.

- Erection of 12 storm signal masts in Nova Scotia.
- Erection of 1 storm signal mast at Shippigan, New Brunswick, cost \$129.47.
- Erection of 1 storm signal mast at Cobourg, Ontario, cost \$75.
- Erection of 1 storm signal mast at Paspébiac, Quebec.
- Repairs to 1 storm signal mast at North Sydney, Nova Scotia.
- Repairs to 1 storm signal mast at Port Arthur, Ontario.
- Removal of 1 storm signal mast at Glace Bay, Nova Scotia.

For the Maintenance of Wharfs Branch.

- Repairs to wharf at Freeport, N.S.
- Repairs to breakwater at Cape Tormentine, P.E.I., at a cost of \$130.76.
- Repairs to wharf warehouse at St. John, N.B.
- Repairs to wharf at Paspébiac, Que.
- Repairs to wharf at Tadoussac, Que., at a cost of \$36.54.

For the Life Saving Branch.

- Construction of a breakwater at Port Mouton, N.S.
- Construction of a slipway at life saving station, Esequinac, N.B.
- Construction of a dwelling, boathouse, slipway and roadway at Little Wood island, N.B.
- Construction of a bungalow at station, Richibucto, N.B.

For the Maintenance of Lights Branch.

- Repairs to dwelling at Quaker island, N.S.
- Building buffers at corners of government wharf, Parry Sound, Ont., at a cost of \$31.64.
- Repairs to station, Discovery island, B.C.
- Repairs to station, Lennard island, B.C.
- Repairs to station, Race rocks, B.C.

A clerk has been detailed to look after the completion of the titles to all properties owned by this department, and as this includes over one thousand lighthouse sites, besides other properties scattered throughout the Dominion, and even in Newfoundland and the United States, the work has proved very heavy. The destruction by fire in 1897 of all the department's records has also complicated and retarded the work. My aim is ultimately to have on record a deed of every piece of property owned or leased to the department, or leased by the department, with registration in the local registry office as well as in the office of the Registrar General at Ottawa. In the case of all new properties acquired, expropriation plans and descriptions are filed in addition to the usual notarial deed, as an extra precaution.

The work in connection with applications for water lots also continues to be very heavy as will be seen by reference to the draughting room statistics. Every application has to be examined, entered on an index plan, plans and descriptions checked, and the proposition reported upon and valued. This involves a great deal of detail, and takes the full time of one draughtsman.

Plans and specifications for all important new buildings and repairs, new vessels, &c., are made or approved in this office.

The following table indicates the work done in the draughting office during the twelve months ended March 31, 1912:—

PUBLICATIONS.

The work of preparing and issuing notices to mariners continues to be heavy and urgent; during the past twelve months 115 notices, covering 340 subjects, have been published. Amongst important notices, involving considerable labour in compilation, and representing useful work done in the department, are:—

Hydrographic information as to anchorages in the vicinity of Bic.

Lists of buoys and descriptions of buoyage in Goderich harbour; in the Bay of Quinte; in Presqu'île bay, involving a revision of system; in Portland canal, B.C.; in Byng inlet; in the Magdalen islands; in Victoria harbour and Port McNicoll; in the St. Lawrence ship channel between Cap Charles and Cap à la Roche, and in Repentigny channel, including re-numbering, with a description of this new alternative channel.

Tidal information respecting the north shore of the Gulf of St. Lawrence; and later the result of tidal observations and advice as to the best routes in making the entrance to the St. Lawrence river.

A description of the North Atlantic trade routes adopted by the leading transatlantic lines.

A complete list of wireless telegraph, telephone, and telegraph signal stations operated by the Government of Canada on the eastern coasts, as far west as Montreal, with particulars respecting the mode of operation.

The adoption of true azimuth bearings instead of magnetic bearings in future publications of the department, including notice to mariners and lists of lights and fog signals.

During the past twelve months notices relating to waters outside of Canada were issued, covering twenty items relating to Newfoundland and Labrador, six items relating to the inland, and three to the Pacific waters of the United States, as well as eight notices referring to transatlantic subjects. No attempt is made to issue a complete synopsis of British or foreign notices, but merely to publish items likely to be of immediate interest to Canadian vessels, or to vessels leaving Canadian ports for the more important or frequented foreign ports.

PERSONAL INSPECTIONS.

During the past year a large number of personal inspections were made by myself and by my principal assistant, Mr. B. H. Fraser. I consider that the more closely construction work is watched and the more personal supervision is given to the general investigation into requirements on the ground by principal officials of the department, the more efficiently can the work of the department be carried out.

The following are the more important of the inspections made by me during the past year:—

In May, 1911, an inspection of aids to navigation at the foot of Lake Ontario.

In June, an inspection of the River St. Lawrence from Montreal to Bergeronnes.

In June and July, an inspection of the upper lake lights, finishing with an inspection of the completed portion of the Trent canal.

In August and September, a very thorough inspection of Nova Scotia stations east of Halifax.

In January, 1912, an inspection in the Maritime Provinces, including investigation of the site of a Departmental depot in St. John.

In February, an inspection of aids to navigation on the Red river and Lake Winnipeg.

In March, an inspection of conditions at the mouth of Muskoka river, resulting in the establishment of a system of lighting.

I am instructed to include in this report copies of my general reports on the inspection of the Trent canal system, and on the inspection of Nova Scotia lights, resulting from two of the above mentioned trips:—

REPORT OF INSPECTION OF TRENT CANAL SYSTEM.

July 28, 1911.

To the Deputy Minister of Marine and Fisheries,
Ottawa.

SIR,—I have the honour to report that, in accordance with instructions, I joined Mr. J. H. McClellan, superintendent of the Trent canal, at Orillia on the morning of the 3rd instant, and in his company, on the canal steamer *Bessie Butler*, inspected the Trent canal system from Orillia to Peterborough on the 3rd, 4th and 5th, and I must confess to a feeling of surprise at the large extent of the system as already developed, and at the great amount of work that has been done in providing aids to navigation.

Length of System.

From the head of Lake Couchiching to Healey Fall there is uninterrupted navigation for 160 miles, for vessels of 6 feet draught, and if the lake navigation not included in the direct line is reckoned its extent would probably exceed 100 miles more. Lakes Simcoe and Couchiching have, of course, always been navigable, the direct route through them from Washago to Gamebridge being 25 miles long. Between Lake Simcoe and Balsam lake a canal has been excavated for a distance of 19 miles, following in a general way the course of the Talbot river. On this stretch occurs the Kirkfield pneumatic lock, with a direct lift of 50 feet. From Balsam lake there is a succession of lakes linked by short stretches of river, covering a distance of 62 miles to Lakefield. Thence to Rice lake the course of the Otonabee river is followed for 31 miles passing Peterborough, with its fine lock with a lift of 65 feet. Rice lake is followed for 18 miles and the Trent river for 14 miles to Healey Fall.

Limiting Sizes.

The canal was originally designed for 5-foot navigation, and from Lindsay to Port Perry on the Seugog river, a branch merely of the direct route, only 5 feet are yet available. The 5-foot scheme was at an early date relinquished in favour of 6-foot navigation, and a large portion of the canal is built with locks having a mini-

SESSIONAL PAPER No. 21

mum length of 134 feet, a width of 33 feet, and a depth on the sill of 6 feet. Work lately undertaken is designed for 8-feet-4-inch navigation, and the lock at Rosedale has been built 175 feet long, 33 feet wide, with that depth on the sill. The contracts now under way between Healey Fall and Trenton contemplate locks of the same dimensions with a 9-foot channel between the locks.

Character of Work.

All the work upon the canal has been done in a very substantial way. Locks are of concrete (the earlier ones of cut stone); the Kirkfield and Peterborough lift locks are so well known as to require no description; a fine bascule bridge at Lindsay and a concrete arch bridge in the township of Eldon are worth noting; most, if not all, of the other bridges are of steel.

Traffic.

The route has heretofore been handicapped by the fact that it has no outlet at either end so that steamers on the system cannot enter the St. Lawrence or the Great Lakes and *vice versa*. Within about three years from this date the Trenton end of the canal will be opened into the Bay of Quinte, and I have not the slightest doubt that the opening will admit a swarm of small steamers into the interior waters of the system, principally pleasure yachts during the summer season. Rice lake, Stoney lake, Sturgeon lake and other parts of the system are already thickly sprinkled with summer cottages, and a large number of ferry steamers and gasoline launches ply on the waters. The quantity of freight traffic at the present time is infinitesimal and I doubt if the canal will ever compete largely with the railways that now tap the district. However, the passenger traffic is large and will undoubtedly be larger in the future, at least for the summer months.

Power Development.

Besides the work done on the canal proper a great deal of work has been done in developing water power, which of course does not come within the scope of this report.

Reservoir System.

A large area of northern lakes has been put under control by damming, to form reservoirs for the regulation of the levels in the canal reaches and of the supply of water for power.

Wharfs.

There is a large number of wharfs on the route, some of which were built by the Department of Public Works, the others by the canal. Many of the wharfs were built by the canal authorities and paid for by the Public Works Department, and all are maintained by the canal in very neat condition.

Some of the more recently built are very fine concrete structures, notably the wharf at Lakefield. I understand that there is some system of lease or toll whereby a limited income is derived from them.

Aids to Navigation.

Mr. McClellan has met the needs of navigation by establishing no less than 317 buoys and 26 lighthouses. The buoys are spars, nicely dressed and painted, moored with concrete sinkers; the port hand buoys are all painted white instead of black, and I think this is a great improvement, as they can be seen in the dark when dark objects are absolutely invisible; they can also be picked up very much more readily with search-lights than dark coloured objects. Their superiority in visibility over the red buoys was so marked that I think the desirability of changing all our black

buoys to white worthy of consideration. The lighthouses are small buildings with clapboarded sides painted white; they taper to a very small square at the top surmounted by a lantern one to two feet square; 14 of them on the Scugog river are built on cedar floats at the bends in the channel. A few of them are lit with acetylene; the others have very inferior oil lights, but are probably good enough for the purpose required.

Recommendations.

Mr. McClellan is very anxious that the system of buoys and lights should be extended, and drew my attention to the necessity for having an extended system in operation by the time the canal is opened to Lake Ontario. It appears to me desirable that reasonable facilities for navigation should be provided, and I presume that it should be a function of this department to maintain existing buoys and lights. An objection to be urged is the fact that the canal authorities have the only facilities for establishing and maintaining these aids. Possibly some arrangement might be devised similar to the understanding reached with the Public Works Department about wharfs whereby the control would remain as it is in the canal authorities, this department contributing the cost or a portion of the cost of maintenance. In any event it appears to me that the 26 lighthouses should be included in our List of Lights. I recommend:—

(1) That a sum be paid to the Department of Railways and Canals out of the vote for construction, to recoup that department for the expenditure already incurred in providing lighthouses and buoys, the amount to be settled by the Minister.

(2) That a small allowance be made to the Department of Railways and Canals out of the construction vote, annually, for the next five years, for increasing in number the aids to navigation, especially on the Trenton division, so that they will be ready for the opening of navigation to Lake Ontario.

(3) That a small allowance out of the maintenance vote be paid over, annually, to the Department of Railways and Canals, for maintenance of lights and buoys, with the understanding that they will maintain these as heretofore, utilizing their own steamers and their own staff for doing the work, as in this way the work can be more easily and economically done.

Enclosures.

I append a memorandum of buoys and lighthouses together with estimated cost thereof submitted by Mr. McClellan. With regard to the cost I consider Mr. McClellan's estimate too high, and think it might be divided by two.

I took full notes regarding details of the route, which would be out of place in a general report but which I have filed so as to be available for reference if required, and I can give at any time called upon information as to details from my very close examination of the canal as far as Peterborough.

I append hereto for examination:—

(1) A reference guide book to the canal, just published, which contains very good plans of the lakes on the system, to which I have added notes;

(2) A set of photographs, supplied by one of the canal officials, of a cement gun which might be profitably adapted for our own concrete repairs;

(3) Some photographs taken by myself along the route, annotated.

Respectfully submitted,

WM. P. ANDERSON,

Chief Engineer.

SESSIONAL PAPER No. 21

GENERAL REPORT OF INSPECTION OF NOVA SCOTIA LIGHTS EAST OF HALIFAX.

October 27, 1911.

To The Deputy Minister of Marine and Fisheries,
Ottawa.

SIR,—I have the honour to submit the following general report on the result of my late inspection of lights on the Nova Scotia coast east of Halifax, with deductions which I drew therefrom:

Condition of Stations.

On the whole the stations in this district are not kept as tidy as they are in other parts of the Dominion. The outside premises are usually littered with firewood, fishing equipment and miscellaneous odds and ends, and there is little effort made to have things trim and shipshape as they should be around a government establishment. I found the buildings in good order, and very few repairs required. The painting in most cases is very bad; this I shall refer to lower down when discussing supplies.

Keepers.

The untidiness referred to is due to the fact that the keepers are generally chosen from amongst the fishermen, and all fishing establishments along the coast are notoriously dirty and untidy. It would be a very great advantage if men destined to be keepers of our more important light-stations received some preliminary training at a depot or at a few selected lighthouses under competent supervision, where the necessity for cleanliness and for perfect adjustment of the illuminating apparatus could be impressed upon them as part of their duties. In this connection, I would remark that we always find the best kept lighthouses where the keepers are married men with their wives and families living at the stations. At some stations I found dwelling houses provided but not occupied. Occasionally keepers did their work by substitute, a practice that is absolutely contrary to the rules of the department and that should be strictly forbidden, not only because old cheap men are hired for the work but also because it is a scandal that a lightkeeper should draw a good salary, pocket the greater part of it and furnish no service for the money thus secured.

Illuminating Apparatus.

I think I am within bounds in saying that the illuminating apparatus in this district is in worse condition and includes more out-of-date equipments than any other district in the Dominion. I have made separate reports on many stations which require immediate change of apparatus, and these will be dealt with separately. We very often found lamps out of focus, reflectors out of plumb, or lenses out of level. The lanterns as a rule were good, much better than the illuminating apparatus, and in most cases quite good enough to be used with new apparatus.

Inspection.

I must pay a tribute to the very great energy and intelligence displayed by Captain Johnson in connection with his duties as inspector. On the trip he was a very hard worked man, and had his files, books and supplies in first rate order. It is, however, impossible for any inspector, no matter how good a man he may be, to keep stations in order by one hurried visit in a year. His time during this visit is so occupied in delivering supplies, checking the keeper's books, and attending to the multifarious questions arising out of supply, that he cannot give the time necessary to instruct the keeper in his duties or in putting the illuminating apparatus in proper order. Very often such overhauling of apparatus would mean delay for a day

or more, and there are more economical ways of doing this work than holding a large supply steamer while it is being undertaken. I think that our apparatus erectors should spend their whole time in patrolling the coast and making sure that the keepers understand the importance of *clean apparatus in proper adjustment*, and of obtaining the best possible flames out of the lamps with which they are provided. This would mean a stay at each station over at least one night.

Supplies.

The distributing of supplies is a matter of some difficulty in consequence of the illiteracy of many of the keepers. They are provided with forms on which they should show what supplies they have on hand and what supplies they will require for the next year. Sometimes these are not filled out at all; often they are improperly filled out, so that frequently the storekeeper in Halifax has to guess at what is required at a station. The consequence is that, as no risk can be taken of omitting supplies that would be required, many articles are unnecessarily duplicated. Captain Johnson is endeavouring to overcome this by filling forms of his own, but it is slow work, and at some stations we found that certain classes of supplies had accumulated so that quantities sufficient for two or three years were on hand. This is especially the case at small stations where the lightkeeper is not in residence. At two or three places we found that the keeper lived at a long distance from the light, and he could not be got to the station during our visit. At such places, of course, it was impossible to check the supplies, and the nearer lightkeepers are forced to reside to their lights the better service we naturally obtain.

The paint supplied in past seasons, as evidenced by the results on the buildings, has been just as bad as I have previously reported in other districts. The red paint especially is very bad. Within a few weeks after being put on it turns to any colour but red, and specimens of building might be selected, originally red, of any colour through white and purple to black, but not red. These buildings were painted with Sherwin-Williams' red paint, and I cannot account for the fact of it turning different colours, but certainly no more of that quality of paint should be purchased. A great deal of the painting is very badly done by the lightkeepers; they do not appear to have any judgment as to the thickness with which it should be put on, or of the proper way to lay a flat coat. At some stations, especially in interior work, I found thick streaks of paint laid on over accumulations of dirt; the old paint had neither been scraped nor had the keeper taken the trouble to sweep the room before painting. I think it would be well to prepare special printed instructions convenient for reference by the lightkeepers, and punish them in some way for bad work in painting.

Oil.

The oil in this district is all supplied in cases and these cases were so badly nailed and the cans in them were of such thin tin that I venture to say there was a loss of ten per cent of the oil. The cases were thick enough but were made of soft wood. The bottoms were nailed on with too small nails; the consequence was that with the rough handling of the cases, many of the bottoms were forced off, the cans would then fall on to the point of a nail and holes resulted, which would speedily empty the cans. The remedy for this would appear to be better wood or better nailing. The tops are screwed on, but I think this is a useless expense for two reasons. In the first place the contractors hammer the screws in instead of screwing them in; in the second place the keepers never take the trouble to unscrew the tops but break them off and frequently punch holes in the tops of the cans for vents. Some inspection of both cans and cases seems desirable by the purchasing branch.

The question of the return of empties is a serious one. I doubt very much if it pays to take these cases away from the stations. We landed at Sydney six hundred

SESSIONAL PAPER No. 21

cases. For these, if in good order, I believe the department received 10 cents apiece. Probably 20 per cent of them were not in good order. The tins when empty, rust very quickly and if we get any of these rusted tins back again another element of leakage is introduced. The \$60 which we got for the cases meant certainly over a day's delay for the ship and involved a good deal of handling by the crew which they did not relish. I think the whole question of the handling of oil should be taken up by the purchasing branch. In the United States Lighthouse Service I believe the oil is delivered in very heavy cans surrounded singly by cylindrical wooden cases. These cans are emptied at the station and brought back immediately and are refilled from bulk at the depot. At our important stations it would be well to build in large plate iron tanks strong enough to guarantee freedom from leakage through corrosion and have these tanks filled immediately upon the receipt of the supply, and if possible, have the oil conducted to the lantern by an air pressure system. This would eliminate many sources of dirt and waste.

One word in conclusion respecting the handling of the steamer *Lady Laurier*. I was pleased with the efficiency and promptness with which the supplies were handled. Before we reached a station the supplies for that station were collected on deck and the boats were ready for lowering before the anchor was dropped. The officers and men worked willingly, sometimes under very disagreeable conditions, and I consider it a remarkable achievement to have supplied over one hundred lighthouses in three weeks, especially as the long runs to Sable island and Cape Race were included, that some time was lost through bad weather, and that work could generally only be done by daylight. The landings on the Atlantic are more or less exposed and rough. The surf boats when loaded draw a good deal of water. It was usually necessary for the crew to jump out into the water and the two boat crews were practically wet through every day from daylight to dark or later. I think this should not be expected of the sailors, and I suggest that ten suits of waders be supplied to this crew and similar suits to all other crews engaged in similar work for their protection. These waders cost about \$5 a pair and are put on under ordinary boots. Especially during the fall trips of the steamers it is no more than humane to protect the men by such equipment.

Respectfully submitted.

WEST COAST TRAILS.

The work on the West Coast Trail was continued during the season of 1911, and the trail completed as far as Nitinat river. During the fiscal year the amount spent on this work was \$20,988.88.

It is proposed to continue the work during the coming season, but as a footpath only, as far as Carmanah lighthouse, which ought to furnish all the communication required at present on the west coast.

PRINCE RUPERT DEPOT.

The most considerable and important work undertaken by my branch during the past year has been the construction of a departmental depot on Digby island, near Prince Rupert. This included the erection of a buoy shed, machine shop and engine house, with the installation of the necessary power plant and machinery, the provision of dwellings for the agent, the several foremen, and the labourers, these being required in consequence of the absence of any living accommodation on the island, and finally the construction of a fine wharf, built of reinforced concrete piles, with a wooden deck.

The work was done under contract by the Pacific Coast Construction Company, their contract price being \$159,445. During the past fiscal year the sum of \$156,813.31 has been spent on the work. The station is now practically completed, and it will be necessary to instal a sub-agent and staff during the next fiscal year.

From this depot it is hoped that all aids to navigation in northern waters can be maintained with much less expense and with greater efficiency than when it was necessary to send all steamers and supplies from our Victoria agency.

ST. JOHN (N.B.) DEPOT.

For some years past the department has been endeavouring to secure a site for a departmental wharf and depot at St. John for the service of the Bay of Fundy aids to navigation. Several sites have been examined with that end in view. In February last a desirable site was found on the Carleton shore, just above Navy island, in an eddy where the spring freshets should not interfere with the use of the wharves.

A large extent of property was purchased with valuable water frontage on which wharves will be constructed during the coming year.

REMOVAL OF OBSTRUCTIONS.

During the past twelve months the following work has been done, under the annual appropriation for the removal of wrecks and obstructions:—

(1) The steam barge *Tecumseh* which sank in Goderich harbour, Lake Huron, was removed by W. L. Horton, the contract price being \$2,350.

(2) The steamer *Lycoming* which sank in Rondeau Harbour, Lake Erie, was removed by the Hacket Towing and Wrecking Company of Amherstburg. The contract price was \$4,900.

(3) The schooner *Palestine* which sank in St. Croix river, N.B., was removed by day labour under the direction of the department's agency at Halifax, at a cost of \$500.

(4) Removal of logs from Letch harbour, N.B., at a cost of \$4.

(5) Removal of a snag from the river at St. John, N.B.

HYDROGRAPHIC WORK.

The hydrographic surveys previously under the control of this department, are now administered by the Naval Department. As, however, most of the information contained in the Canadian notices to mariners relates to work done in this department it has not been thought desirable to transfer their preparation. Therefore any hydrographic notes reaching the department are prepared for publication in this office, and embodied in notices to mariners.

In preparing these, special attention has been paid to publishing all information obtainable respecting the hydrography of Canada, and the fullest possible sailing directions have been appended to all descriptions of aids to navigation so as to increase the value of the notices. On January 1, 1912, they were changed in form, to make them more easily available in correcting charts and other documents, as well as to conform to British Board of Trade usage. At the same time astronomic bearings, stated as azimuths, were substituted for the magnetic bearings previously given, which will ensure greater accuracy.

The usual annual edition of the list of lights and fog-alarms in the Dominion, corrected up to April 1, 1910, was issued during the summer, the reprints of the portions relating to the Great Lakes and British Columbia bound separately for the use of mariners in those waters.

ICE-BREAKING.

Two contracts were entered into, during the present season, for ice-breaking in Thunder bay and vicinity:—

(1) The Canadian Towing and Wrecking Company, Limited, of Port Arthur, contracted with the department to keep the harbours of Port Arthur, Fort William and West Fort William open for navigation until December 17, 1911, and to open those harbours in the spring of 1912 in time to admit upward bound vessels to enter the harbours as soon as the Sault Ste. Marie canal should be open for navigation. The contract price was \$19,250, which included an agreement to remove all light-keepers in the vicinity from their stations at the close of navigation in 1911.

SESSIONAL PAPER No. 21

(2) A contract was entered into with S. Shipman, of Sault Ste. Marie, Ont., to keep free from ice the channel between Kensington Point, on the north shore of St. Joseph channel, and a convenient landing on St. Joseph island, or Campement d'Ours island, the work beginning in the autumn of 1911, and continuing until the ice had formed to sufficient thickness to permit teams of horses to cross in safety. The work also included the breaking of a channel in the spring before the ice becomes dangerous, and keeping the channel free until general navigation was resumed. The contract price was \$500.

In both of the above cases the work was satisfactorily done, under the supervision of the harbour masters of the respective ports.

Respectfully submitted,

APPENDIX No. 2.

ANNUAL REPORT OF THE COMMISSIONER OF LIGHTS.

To the Deputy Minister of Marine and Fisheries,
Ottawa.

SIR,—I have the honour to submit the ninth annual report of this branch. The principal work performed has been an extension of the gas buoy and beacon service throughout the various provinces, together with the maintenance of lights and other aids to navigation throughout the Dominion. The operations of the branch are reduced to tabular form in the following four enclosures, namely:—

Enclosure No. 1.—Statement by provinces showing the number of lights of the several orders, lightships, lightboats, lightkeepers, fog alarm stations, warning buoys and submarine bells.

Enclosure No. 2.—Statement showing the names of light-stations and light-keepers.

Enclosure No. 3.—Statement giving a complete list of stations at which gas buoys were in operation throughout the Dominion during the fiscal year, 1911-12.

Enclosure No. 4.—Statement giving a complete list of stations at which un-lighted buoys were in operation throughout the Dominion during the fiscal year 1911-12.

In conclusion I desire to express and record my appreciation of the able assistance rendered by my staff, and the untiring application to duty exhibited by each member. It would not have been possible to carry out the large and increasing amount of work which is devolving upon this branch without the co-operation of all the officers connected with it.

I have the honour to be, sir,

Your obedient servant,

J. G. MACPHAIL,

Commissioner.

Office of the Commissioner of Lights,
Department of Marine and Fisheries,
Ottawa, April 1, 1912.

APPENDIX No. 3.

RIVER ST. LAWRENCE SHIP CHANNEL.

OTTAWA, ONT., August 12, 1912.

The Deputy Minister of Marine and Fisheries,
Ottawa, Ont.

SIR,—I have the honour to present the following annual report on the operations for the improvements of the River St. Lawrence Ship Channel during the fiscal year ending March 31, 1912.

Accompanying this report is a map showing the progress made up to date, on the ship channel between Montreal and Quebec, to 30 and 35 feet at extreme low water of 1897.

I have the honour to be, sir,

Yours obediently,

VICTOR F. W. FORNERET, B.A.Sc.,
Superintending Engineer.

THE HISTORY OF DREDGES AND DREDGING.

Dredging is an old industry, but it is only within the last fifty years in Europe, and during the past twenty-five years in America that rapid advances have been made in designs and types of machines, so that the cost of dredging has been materially reduced. It is impossible to give an accurate history of the industry of dredging, but a few facts can be given that may be of interest.

No doubt the ancients used some primitive forms of dredges, but if any such work was done by them it was generally near the shore and was in most cases done by hand. The boats used by the ancients were built to go in shallow water, so that there was not much need for the dredges.

The first forms of dredges were long-handled scoops operated by hand from floating platforms. Then a windlass or drum was used to aid in the work, and then scows were substituted for the platforms or rafts. The development was no doubt gradual, although it is a great step from these primitive scoops to the immense buckets and dippers of to-day.

In operating the early scoop dredges it was found that the work done stirred up much material which floated away when there was a strong current. This brought into use methods of stirring.

The first mention of a rude dredging machine is by a writer named Veranteus in the year 1591. The first power dredge was invented by a Dutch engineer, one Cornelius Meyer, in 1685. It was operated by horse power, and was used in constructing some of the canals and dykes of Holland.

On the continent of Europe the first elevator or ladder dredge was designed and patented by Savery in 1718. The first dredge of this type in England in 1747. Three years later in France iron buckets were first used on a ladder dredge. In 1781 a ladder dredge was built in England and operated by horse power.

SESSIONAL PAPER No. 21

The first steam dredge was built in England in the year 1796, the engine being designed by the inventor James Watt. This was followed in 1804 by a machine of the same design, only heavier.

Little progress was made in dredge design, and building during the first half of the 19th century. During this time there was built in England a dredge of rather unusual design. A barge or scow had two movable wings at the stern that reached if desired to the two banks and to the bottom of the stream. At the back was a scraper that loosened the dirt, and the two wings, with the aid of the current, swept the loosened material ahead and finally deposited it at the mouth of the stream. The wings formed a temporary dam, which gave enough head to force the scow downstream. Some noteworthy work was done by such dredges.

The first hydraulic suction dredge was suggested in France in 1867, which was really the beginning of the construction of modern dredges. In 1872 the first dredge of this type was built in America. Cutters were first placed on hydraulic dredges in 1878. The credit of building the first hopper dredge in 1861 is given to England.

The dipper type of dredge was not originated in America, but it has been developed in the United States and is considered distinctly an American dredge.

In the last few decades wonderful strides in these machines have been made. From small buckets operating slowly, buckets of more than 14 cu. yds. are used with a pull of about 180,000 lbs. being exerted on the dipper, and three or four dips made per minute. Likewise the depth to which they will excavate has been greatly increased.

The grapple dredge has been an evolution of the dipper machine, and as its distinguishing feature is the clamshell or orange-peel bucket, it is evident that it is a modern machine.

Since 1890 both in Europe and America wonderful advances have been made in all types of dredges. One country has introduced a design while another has developed it and improved upon it.

HISTORY OF THE SHIP CHANNEL.

The St. Lawrence, owing to its situation, is the natural route from the Atlantic to the northern and northwestern half of the North American continent.

The opening of the Lachine canal, connecting Montreal with the Great Lakes, in 1825, established the route commercially.

The light-draught sailing vessels could then reach Montreal without trouble, except during a few weeks in the autumn, when they resorted to lightering.

In 1844, it was in an effort to give navigation up to Montreal for vessels of 500 tons, that the first work of dredging was undertaken.

The first proposals for improvements were discussed in 1825, the national character of the work being then recognized. Surveys were made and reported upon in 1831 and again in 1838.

In 1841, during an investigation, the committee proposed a tonnage duty sufficient to provide for the cost of the improved channel, which was considered would be less than that of lighterage. It was, however, agreed that 'in order to draw the produce of the west down the St. Lawrence, it was expedient to make the transit charges as light as possible.'

Operations were commenced by the 'Board of Works' in 1844 and continued until 1847, owing to opposition as to the location of the channel, the work was abandoned.

After 60 years it is now considered that the straight channel as commenced would have been preferable in many ways.

In 1850, the harbour commissioners of Montreal proposed that they could do the work economically and expeditiously. They asked for authority to undertake the work and to charge a tonnage duty to pay for the 8 per cent interest and 2 per cent sinking fund.

This plan was adopted in August, 1850, and the commissioners were authorized to proceed in such a manner as they should deem best, the government plan being transferred to them.

The harbour commissioners after examination and the best advice obtainable, adopted the location of the deepest natural channel in Lake St. Peter. This results in the present channel with five tangents, instead of two long straight courses as at first commenced.

The original depth through Lake St. Peter was 10 feet 6 inches.

From 1850 the channel was deepened from stage to stage until 1888, when the debt amounted to somewhat over three million dollars, the government decided to complete the channel as a national work, and to assume the debt, and from that day the channel has been open free to the commerce of the world.

At that date the channel had been deepened to 27½ feet at ordinary low water from Montreal to Cap a la Roche, and from there to Quebec the tide was available.

The work was then conducted by the Department of Public Works of Canada from 1889 until 1904, when the management and control of the river, together with the shops and dredges, were handed over to the Department of Marine and Fisheries, which had general charge of navigation.

At the present time a splendid channel of 30 feet at extreme low water exists from Montreal to Cap a la Roche, and to Quebec by taking advantage of the tide.

The success of the work is in a great measure due to the geographical situation of the route, the physical features of the river favourable for improvement, the determination and public spirit of the business men and industrial corporations of Montreal, and to the recognition by the government of Canada of the national character of the project.

ACCIDENTS IN THE ST. LAWRENCE RIVER.

Between Montreal and Father Point.

It speaks well for the safety of the ship channel, when considering the record low water stage which existed during the season of navigation of 1911 that no serious accident occurred in the ship channel proper.

There were only two serious accidents which occurred in the River St. Lawrence during the season of 1911, neither of which could be attributed to some fault in the channel.

One of these occurred below Quebec off Murray Bay on June 28, the steamer *Aranmore* collided with the steamer *General Wolfe*, causing the latter to sink and become a total loss, no lives, fortunately, were lost. The other serious accident was a collision above Quebec near St. Antoine between steamer *Hero* and side-wheel tow-boat *Chieftain III*, on August 20, the latter vessel being sunk with a loss of four lives. The channel where the accident occurred is over half a mile wide and very deep.

The minor accidents were as follows:—

Between Montreal and Quebec.

SS. *Stormount*, grounded near Longue Pte. Re-floated, no damage, May 6, 1911.

SS. *Isleworth*, grounded near Longue Pte. Re-floated, no damage, September 20, 1911.

SS. *Lake Champlain*, Montreal harbour, October 27, 1911. When leaving Montreal harbour at daylight, the steamer encountered a snow flurry. The pilot decided to anchor in the wide portion of the channel opposite the Laurier pier. In swinging round after dropping the anchor, she dragged with the current against the mud bank on the south side of the channel.

SESSIONAL PAPER No. 21

After lightening part of her cargo, the steamer was pulled off with the aid of several powerful tugs. Slight damage was done to the rudder and propeller.

SS. *Bengore Head*, grounded in Lake St. Peter during snow storm. Re-floated, no damage, December 2, 1911.

Quebec to Father Point.

SS. *Manchester Spinner*, grounded on White Island. Re-floated, bottom damaged, docked for repairs, June 2, 1911.

MARINE SIGNAL SERVICE.

River St. Lawrence Ship Channel.

There are twelve stations established at the following places:—

Name of place.	Locality.	Nautical miles below Montreal.	In operation.
Montreal.....	In the Agency office, Boyer bld.....	00	Day and night.
Longue Pointe.....	On the extreme point.....	5	"
Vercheres.....	In the windmill near the wharf.....	19	During daylight.
Sorel.....	On the Government wharf.....	39	Day and night.
Three Rivers.....	On the upper end of Bureau wharf.....	71	"
Batiscan.....	At the wharf.....	87	During daylight.
St. Jean des Chaillons	On the hill at the semaphore.....	93	Day and night.
Portneuf.....	In the front range lighthouse.....	108	During daylight.
St. Nicholas.....	At semaphore station on summit of Point Nicholas.....	127	Day and night.
Bridge.....	On point above Quebec bridge.....	133	During daylight.
Quebec.....	In Marine & Fisheries Dept. bld.....	139	Day and night.
Crane island.....	On the wharf.....	171	"

The above stations are connected by a private through telephone system, terminating at Quebec and Montreal, with the exception of Crane Island, which communicates with Quebec via the Bell Telephone Company's system.

Each station has a mast 60 feet in height with a cross spar 20 feet long about 20 feet from the top of the mast.

When the station is in operation a 'Jack' is hoisted to the mast head during daylight, and a white light at night.

Signals displayed at west end of cross spar indicate river or points above station.

Signals displayed at east end of cross spar indicate river or points below station.

For other communications between vessels and stations or *vice versa*, the International Code of Signals is used.

The telephone service was started September 1, 1907, and the system of signals on November 5, 1908.

The combined service of telephone and signals has proved to be very useful, weather conditions being reported from the different stations along the river. The whereabouts of vessels can also be obtained.

Owing to its promptness, the service has been of great value in connection with the dredging operations, as in the event of breakages, &c., communication can immediately be obtained with the shops at Sorel, and orders can then be given for repairs, thereby saving a great deal of valuable time.

The stations were kept in good repair during the past season and some minor improvements were made to some of them.

Arrangements have been made with the Department of Public Works to acquire the top floor or 'dome' of the Custom House at Quebec, which is now being rebuilt.

3 GEORGE V., A. 1913

This will be used as a signal service station instead of the present quarters in the Marine Department buildings. In addition to being more commodious, it is better situated to observe and report the movements of vessels in the harbour.

It is also the intention of the Department of Marine and Fisheries to start a new signal station at Grondines Point next season. The old windmill situated on the point has been purchased by the department and is now being restored and converted into a telephonic and reporting station. It is expected that it will be in operation during the early part of next summer.

SOREL, May 1, 1912.

SIR,—I have the honour to submit the following report on the work of the ice-breakers *Lady Grey* and *Montcalm*, during the winter of 1911-12.

The season of navigation of 1911 closed with very cold weather. Between December 1 and December 10, the thermometer registered near or below the zero mark at nights. After December 10 the temperature was extremely mild until December 30, when it again turned cold and the months of January, February and March were exceptionally severe.

The *Bray Head*, the last ship to leave Montreal, sailed on December 4. To enable this steamer to clear the river in safety all the buoys had been left in position.

The *Lady Grey* was detailed to aid the *Shamrock* in lifting these buoys, and rendered invaluable service. Without the assistance of an ice-breaker it is certain that very many of the buoys would have been lost, and that the *Shamrock*, Acetylene scow and tugs would have been forced to winter at Three Rivers. On December 4, when the *Bray Head* went down the river was practically full of running ice, and the next day Lake St. Peter was frozen over solid. The breaking up of the Lake St. Peter ice, which would have been an impossible task for the *Shamrock*, was light work for the *Lady Grey*, and all the vessels employed in the buoy service were enabled to get back to Sorel to winter quarters.

Owing to the mild weather in December, it was not necessary to do any patrol work at Cap Rouge, and no trouble was experienced until January 8, about a week after the severe weather had set in.

On Monday, January 8, the Signal Service at Quebec reported that the ice had blocked in the vicinity of Batiscan for several miles.

The same thing occurred at this point during the winter of 1911, followed a few days later by jams at Grondines and Portneuf, and in a very short time the river was covered with ice from Portneuf to Three Rivers. The ice-breakers began cutting through this ice on February 15, and were exactly one month working up to Three Rivers. Apart from additional running expenses, the wear and tear on the ships was heavy, and extensive repairs had to be made to both vessels in the spring.

To avoid a repetition of this condition of affairs, that is, having the river blocked from Portneuf to Montreal, with many miles of heavy ice-breaking to be done, it was decided to send the *Lady Grey* to attempt to break up the ice at Batiscan while it was still light, leaving the *Montcalm* in Quebec to guard Cap Rouge.

The *Lady Grey* left Quebec January 10, and by January 12, had reached Three Rivers, having cut her way through 16 miles of ice, leaving a channel behind her no where less than three quarters of a mile wide.

Late in the afternoon of January 12, the report came from Quebec, that the ice had jammed at Cap Rouge, and that the *Montcalm* had not been able to cut her way through.

For several days after the arrival of the *Lady Grey* at Three Rivers it was impossible for her to return, owing to the fact that the weather was extremely cold and the river was covered with vapour, so that shore marks could not be seen.

The non-success of the *Montcalm* in breaking up the jam at Cap Rouge was entirely due to the fact that the summer equipment of propellor blades was still in

SESSIONAL PAPER No. 21

use, and therefore the ship lacked power, when going astern; the working ahead into the ice faster than half speed the ship was invariably stuck and the greatest difficulty experienced in backing out; as a direct consequence, the jam piled up faster than it could be cut out.

Five days after the jam occurred at Cap Rouge the river was covered with ice as far up as St. Croix, and two weeks after it was solid to Montreal, with the *Lady Grey* frozen in and out of business at Three Rivers.

The *Montcalm* worked at the Cap Rouge jam whenever possible, but was not able to cut through. This vessel made several trips to Seven Islands during the winter, which interfered with operations at Cap Rouge, but had she been able to work steadily without interruption, in all probability the result would have been the same.

The weather continued cold right up until the end of March, and it was only on April 16, that the first shoving of the ice was reported, and it was not until April 29 that the river was finally clear. The *Lady Grey* was not able to do anything to hasten matters, as all the serious jamming occurred below Three Rivers, principally between Grondines and Cap Rouge. It is not possible for an ice-breaker to work down stream through an ice jam.

In 1909-10-11 the ice was broken up by the ice-breakers, passing out quietly and there was no floods. This year the ice-breaking service broke down, and there was considerable flooding, the water reaching a point 18 feet 4 inches above extreme low water mark at Three Rivers. All the parishes from Ste. Anne de la Parade to Sorel suffered from the high water, and a great deal of damage was done by ice at different points. The Canadian Northern Railway was compelled to stop running for several days owing to floods and ice near Portneuf.

The main object of the ice-breaking has always been considered to be the preventing of floods, and coupled with this as a secondary consideration, earlier navigation to Montreal, and a longer season for dredging operations.

It has been demonstrated that floods can be prevented sometimes, but from the experience of last winter it has not been shown that they can be prevented without fail. It has been proved that the two ships now employed are not enough to keep the channel open from Quebec to Three Rivers. The only way to obtain this result is by increasing the plant. I am very strongly of the opinion, that if this were done, an open channel could be maintained every winter between these points.

At the latter end of April, a request was received from the Department of Railways and Canals, asking that the *Lady Grey* be sent up to the Soulanges Canal to break up an accumulation of ice and frazil that had formed at the lower entrance. This vessel had performed the same work, most successfully, the previous year.

Instructions were immediately given to the captain of the *Lady Grey* to proceed to the Soulanges canal. She left Montreal on the morning of April 29, and by noon of May 1, after two days work, had cleared the channel as requested, allowing vessels to pass up and down freely.

Had the *Lady Grey* not been available to break up this jam, navigation in the canals would have been delayed for at least several days.

The expeditious manner in which this important work was performed gives additional proof of the usefulness of this vessel.

I have the honour to be, sir,

Your obedient servant,

N. B. McLEAN.

River St. Lawrence Ship Channel,
Dept. of Marine and Fisheries,
Sorel, Que.

GENERAL INFORMATION.

The ship channel of the River St. Lawrence, between Montreal and Father Point, has a total length of 340 statute miles.

The contracted part of the river, which may properly be called 'ship channel,' commences at Traverse, to which point from Montreal, the distance is 220 miles.

The project for a 30 foot channel between Montreal and Quebec was adopted in 1889, while the improvements below Quebec were decided upon in 1906.

The project for the channel between Montreal and Quebec had in view a channel of 30 feet depth, at the extreme low water of 1897, from Montreal to tidal water at Batiscan, and from Batiscan to Quebec at extreme low tide. The width contemplated was a minimum of 450 feet in the straight portions, and from 550 to 750 feet at the bends. An anchorage was to be provided at White Buoy curve, Lake St. Peter, of 800 feet in width.

The 30-foot channel is now completed to the upper end of Cap à la Roche channel, a distance of 107½ miles from Montreal. The anchorage basin in Lake St. Peter has also been completed.

As a portion of the channel is finished it is thoroughly swept with the testing-scow, and if it proves clear, it is immediately opened for navigation.

During the summer of 1911, most of the Cap Charles channel widening was completed to 450 feet. The red buoys were moved 150 feet north to give the increased width.

The length of the 30 foot channel actually completed at the close of navigation, season 1911, equals 60.60 statute miles. Total length requiring dredging being 63.35 miles, there remaining 2.75 miles yet to be done.

Cap à la Roche will probably take about two more years to complete, while the remainder to Quebec should be completed in about one year longer.

The project of the work below Quebec, had in view a 30-foot channel at low tide at St. Thomas Flats and at Beaujeau Bank. The Beaujeau Bank channel was completed in 1910 to a depth of 30 feet at extreme low tide, and to 1,000 feet in width. The St. Thomas channel was completed to a depth of 30 feet at extreme low tide, and to a width of 1,000 feet, at the end of the season of 1911. This channel will be opened for navigation early next season.

Some progress was made on the 35-foot channel between Montreal and Quebec, as will be seen in the table found in another part of this report. A distance of 6.97 miles has been completed up to the end of season of navigation of 1911.

With the additional plant which is expected to be in readiness soon, better progress will be made.

During the season the usual sweeping of the channel was done and no obstruction of any serious nature was found.

The St. Jean des Chaillons semaphore which indicates the depth of water in the dredged channel at Cap à la Roche was put in operation on May 10, and the other at St. Nicholas showing the depth over the undredged St. Augustin bar on May 14.

A good start was made on the north channel below Quebec, with the two dredges, *Galveston* and *Beaujeu*. It has been decided to deepen this channel to 35 feet at extreme low tide, with a width of 1,000 feet.

Good progress has also been made on the channel approach to the Floating Dock basin, Montreal harbour, but owing to the material being found more difficult to remove than was anticipated, it will take all of another season to complete it.

The total cost from 1851 to the close of the fiscal year, of the ship channel, including plant, shops, surveys, &c., is as follows:—

Dredging.	\$ 8,947,029 83
Plant, shops, surveys, &c.	5,577,525 68

Total \$14,524,555 51

The number of cubic yards dredged amounted to 78,231,531, the material varying from very hard shale rock to soft blue-clay.

DREDGES.

Elevator Dredge Laval (No. 1).—This is the oldest dredge in the ship channel fleet. The hull is of wood, constructed in Ottawa in 1894. The buckets are made of cast steel for work in rock and other hard material.

During the winter of 1911, some of the buckets were repaired, and a new lower tumbler put in. The dredge was thoroughly overhauled and put into good condition for the next season's work.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911, were as follows:—

Dredge No. 1 left Sorel on May 1, and was taken up to Montreal and laid out on the channel approach to the floating dock, Maisonneuve, where she worked till August 29. The material dredged being hard-pan and stones.

From August 30 to September 10, inclusive, this dredge was undergoing repairs. A new tumbler, new buckets and a new bow wire were put in.

SESSIONAL PAPER No. 21

The repairs having been completed, *No. 1* was laid out in the ship channel abreast of St. Helen's island on September 11. She continued working there, widening and deepening the channel to 30 feet E.L.W. until November 25, when she was brought to Sorel to go into winter quarters.

The material being sand and clay with some boulders.

No. 1 was at work for a total of 177 days, and her machinery was in active operation 66 per cent of the full working time.

The total number of cubic yards excavated amounted to 242,800, at a total cost of \$52,904.31, or 21⁷/₁₀₀ cents per cubic yard.

Elevator Dredge Laurier (No. 2.)—The hull of this dredge is of wood having been constructed at the government shipyard at Sorel, in 1897. *No. 2* is equipped with a set of cast steel buckets, especially designed for rock and other hard material.

During the winter of 1911, the buckets and step of the 'A' frame were repaired and a new 1½-inch cable was issued to this dredge. A general overhauling was given to the machinery and boilers, &c.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911, were as follows:—

Dredge No. 2 left Sorel on May 1, and was taken up to Varennes curve, where she was laid out to deepen the channel to 35 feet at low water of 1897, and also to it, the material being clay. She continued working till May 26, when she was taken to Sorel, and remained there till May 29 undergoing repairs. The conditions at Cap à la Roche being now such that this dredge could be worked to advantage, she was taken down from Sorel on May 29 and set to work at Cap à la Roche curve, where she remained until November 14. The material dredged being shale rock.

On November 14, she was moved up to Varennes curve and worked there widening and deepening the channel to 35 feet at E.L.W. of 1897, till November 25, when she returned to Sorel to go into winter quarters.

In a total of 177 days during which *No. 2* was at work, her machinery was in actual operation 65 per cent of the full working time.

The total number of cubic yards dredged amounted to 199,400 at a cost of \$51,137.36 or 25⁶/₁₀₀ cents per cubic yard.

Elevator Dredge Aberdeen (No. 3.)—The hull of this dredge is of steel, the complete vessel having been constructed at the Sorel shipyard in 1900. The buckets are of cast steel for work in hard material.

During the winter of 1911, repairs were made to her buckets, shoot, the wood work generally, search light rheostat, to main engines and stern and bow winches, as well as having the boilers repaired. A new upper tumbler was installed during the winter.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911, were as follows:—

Dredge No. 3 left Sorel on May 1, and was taken up to Varennes curve, where she was laid out to deepen the channel to 35 feet at low water of 1897, and also to widen it, the material being clay.

The dredge continued working at this place till the water was sufficiently low to allow of her working to advantage at Cap Charles, and on June 2, she was taken down and laid out on June 3 at Cap Charles curve, where she left off the previous season. Work was carried on here until July 21, the material excavated being shale rock.

On this date, July 21, dredge *No. 3* was moved to Grande Pointe shoal, and worked there dredging sand and stones, and finished the cut on August 10.

She was then moved to Grondines and worked there till September 1, *No. 3* was moved back to Cap Charles where she remained till November 8, dredging shale rock which had to be broken up by rock cutter.

From November 8 till November 25 she was again working at Varennes curve, and on the later date returned to Sorel to go into winter quarters.

The possible working time for dredge No. 3 was 177 days, and she was in actual operation 62 per cent of that time.

The total number of cubic yards removed amounted to 229,500 at a cost of \$48,784.43, or 21²⁵/₁₀₀ cents per cubic yard.

Elevator Dredge Minto (No. 4).—This dredge is of the same type and design as No. 3, and was constructed at the Sorel shipyard in 1900. No. 4 is also provided with cast steel buckets for dredging in rock, and other hard material.

During the winter of 1911, dredge No. 4 was given a good general overhauling and the machinery put into good condition for the next season.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911 were as follows:—

Dredge No. 4 began the season earlier than the other dredges as she was put to work on April 24 dredging out a berth in front of the wharf at the Sorel shipyard.

On May 4 this work was completed and she was moved up to Varennes curve, where she remained until May 31 dredging the channel to 35 feet at L.W. of 1897 and also widening it, the material removed being clay.

By May 31 the water in the tidal reaches of the river being low enough to allow operating this dredge to advantage, she was moved down and laid out at Cap à la Roche curve where she worked excavating shale rock and hard-pan until November 16.

A serious accident occurred to this dredge on July 17, when the buckets came completely off the frame in the middle of the channel. The operation of lifting them was very slow and tedious, as they had to be lifted in short lengths with a stone lifter. Six days were required to do the work, from July 17 to July 22, inclusive.

Dredge No. 4 was moved up to Ste. Anne Traverse on November 16, and worked there till November 27, deepening the channel to 35 feet at E.L.W., the dredged material being clay. She was then brought to Sorel to go into winter quarters.

The number of days which this dredge was in operation was 184, and the percentage of time of actual work, 58.

The total number of cubic yards removed amounted to 238,050, at a cost of \$50,677.07, or 21³⁸/₁₀₀ cents per cubic yard.

Elevator Dredge Lafontaine (No. 5).—This dredge was also constructed at the Sorel shipyard, and was completed in 1901. The hull is of wood. She is fitted out with cast steel buckets for rock.

During the winter of 1911, the sides of the well of the dredge were strengthened by putting in a steel truss on each side. She was also given a thorough overhauling and all necessary repairs were made to put her in good condition for the next season's work.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911 were as follows:—

Dredge No. 5 left Sorel on May 1, was taken up to Varennes curve to deepen the channel to 35 feet and widen it, the material being clay.

On May 22, the buckets of this dredge came off the frame and it was not until May 25 that they were replaced and properly repaired. Work was carried on at Varennes curve until June 10, when this dredge was removed to Cap à la Roche curve, the water being low enough to allow of her being worked advantageously.

From June 10 to October 12 she was in operation at Cap à la Roche curve, the material dredged being shale rock,

On October 12 she was moved down to Cap Charles channel and remained there, excavating hard-pan and stones until November 13, when she was once more moved up to Varennes curve, where she worked till November 25, when she was brought down to Sorel to go into winter quarters.

SESSIONAL PAPER No. 21

The working time of dredge *No. 5* was 177 days. She was in actual operation 63 per cent of the full working time.

The total number of cubic yards removed amounted to 249,600, at a total cost of \$57,537.34, or 23 $\frac{3}{100}$ cents per cubic yard.

Elevator Dredge Baldwin (No. 6).—This dredge was constructed at the Sorel shipyard in 1902, the hull being of wood. *No. 6* is provided with large built up buckets for working in soft material, but with sufficient teeth to enable the dredge to work in hard clay, &c.

During the winter of 1911 this dredge was thoroughly overhauled and put in good condition for the next season's work. Ten buckets were replaced by new ones and the others repaired.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911, were as follows:—

Dredge No. 6 left Sorel on May 1, and was taken up and laid out at the approach to the floating dock, Montreal, where she worked till June 30, the material dredged being hard-pan and stones.

On June 30 she was removed to the White Buoy curve, Lake St. Peter, to clean up several lumps that had been found by the testing scow. These lumps were removed and at the same time the channel was dredged to 35 feet at low water of 1897, the material being clay.

When the work at White Buoy curve was finished on July 19, *No. 6* was taken down to Champlain to clean up sand bars that had been formed in the channel. She worked there steadily till October 12, when an accident occurred to her upper tumbler. The dredge had to be taken to Sorel to have this repaired and it was not till October 20 that the repairs were completed; the dredge then returned to Champlain channel. Operations were continued where they had been left off until the sand bars had been cleaned up on November 6.

On this date, the dredge was taken up to Ste Anne Traverse, where she worked till November 27 deepening the channel to 35 feet at E.L.W. of 1897, the material being clay. She was then brought to Sorel for the winter.

In a total of 178 days during which this dredge was at work her machinery was in active operation 66 per cent of the full working time.

The total number of cubic yards removed amounted to 419,180, at a cost of \$53,694.60, or 12 $\frac{9}{100}$ cents per cubic yard.

Hydraulic Dredge, J. Israel Tarte (No. 7).—The hull of this dredge is of steel of the same type and general design as the steel hulls of the elevator dredges. She was constructed in 1902 by the Polson Iron Works Company of Toronto, Canada.

During the winter and spring of 1911, many changes, repairs and improvements were made to this dredge.

The centrifugal sand suction pump was relined with cast steel. Important improvements were also made to the set of four boilers. Eleven new corrugated furnaces were put in. Howden's system of forced draught was installed, and the machinery was given a general overhauling. It was not till June 11 that all these repairs and alterations were completed and the dredge was ready to begin the season's operations.

Much time was lost by this dredge owing to want of steam, this was partly due to inferior quality of coal, but principally on account of poor class of firemen whose services were very unsatisfactory. Owing to the great number of large works under construction throughout the country, the best class of men preferred to work on land as they could obtain very high wages.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911, were as follows:—

On June 12, dredge *No. 7* left Sorel for Lake St. Peter and was laid out near the upper end of curve No. 2 to deepen the channel to 35 feet at L.W., 1897. This dredge

worked up stream from this point until November 20, when the head of her cut was a short distance above the lower end of curve No. 7. All the channel between these two points being completed to 35 feet, the material dredged was stiff clay and some sand.

In a total number of 135 days, during which this dredge was at work, her machinery was in operation for 42 per cent of the time.

The number of cubic yards removed amounted to 1,328,324, at a total cost of \$99,295.72, or $7\frac{4}{100}$ cents per cubic yard.

Dipper Dredge (No. 10.)—This dredge was constructed at the Sorel shipyard and completed in 1910. The hull is of steel. A general overhauling was given to her machinery in Montreal where she wintered.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911, were as follows:—

Dredge No. 10 began work on the channel approach to the floating dock basin at Montreal on May 5, and worked there all season till November 27, when she went into winter quarters, the material dredged being hard-pan and stones.

On June 29 the dipper of this dredge was broken. A new dipper had to be brought up from Sorel, and on July 5 the new one was fitted and the dredge was able to commence work again.

During the season of 1911, out of a possible number of 174 days, the dredge was in actual operation 69 per cent of that time.

The total quantity of cubic yards removed, amounted to 347,600, at a cost of \$38,215.47, or $10\frac{99}{100}$ cents per cubic yard.

Dipper Dredge (No. 11.)—Steel hull. This dredge was constructed at the Sorel shipyard and completed in 1911. She was designed by Mr. John Kennedy, consulting engineer for the Montreal harbour commissioners.

The following are her dimensions:—

	Feet.
Length moulded..	132.5
Breadth moulded..	42
Depth at bow..	11.8
Depth at stern..	13.5
Length of spuds..	74

Main engines, 2 compound, 16 and 30 x 22 inches.

Swinging engines, 14 x 14 inches.

Capstan engines, 10 x 14 inches.

The capacity of her bucket for rock is 9 cubic yards, and for soft material, 11 cubic yards.

The pull on the bucket hoisting rope = 180,000 lbs.

The dredge is able to work to a depth of 50 feet. She is equipped with electric light. The steam for the machinery is provided by one marine boiler 12 feet in diameter by 10 feet in length, with two Morrison furnaces, the boiler having a working pressure of 160 lbs. per square inch.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911, were as follows:—

Dredge No. 11 was first set to work at Sorel excavating foundation seat for the new shipyard crane. She was employed there from August 25 until September 5. On September 6 she was taken to Montreal and laid out on the channel approach to the floating dock basin where she worked till October 10, when a serious accident occurred to the boiler which made it necessary that the dredge should be taken to Sorel.

The repairs were finished and the boiler in good order by October 30, and on the following day, October 31, she was taken back to Montreal, where she worked on the channel approach until November 15, *No. 11* broke her dipper. This being repaired,

SESSIONAL PAPER No. 21

the dredge began work again on November 20, and worked until November 23, when another accident occurred. The shackle connecting the hoisting wire to the bucket broke and the dipper arm went to the bottom. In lifting it, the chain broke and the dipper arm in falling smashed one end of a dumping scow which filled and sank. The dredge was engaged for the balance of the season helping to raise the sunken scow. She returned to Sorel to go into winter quarters on December 1.

During the season of 1911, out of a possible number of 60 days, the dredge was in actual operation 49 per cent of that time. The total number of cubic yards removed amounted to 81,900, at a cost of \$22,088.14, or 26⁹/₁₀₀ cents per cubic yard.

The total number of cubic yards removed by the dredging fleet in the ship channel between Montreal and Quebec, during the fiscal year ending March 31, 1912, amounted to 3,336,354, at a total cost of \$474,334.44, or 14²/₁₀₀ cents per cubic yard.

Hopper Hydraulic Dredge Beaujeu (No. 8).—Steel hull, twin screw. This dredge was built at Sorel shipyard in 1906.

During the winter of 1911, this dredge received a thorough overhauling and slight alterations and improvements were made.

The details of the operations of this dredge for the fiscal year beginning April 1, 1911, were as follows:—

Dredge No. 8 left Sorel on May 8 for Quebec, and on May 11 went into dry dock, where she remained till May 17, being scraped, painted and having the stern bearings repaired.

She left Quebec on May 18, arriving at St. Thomas bank the same day, and began working where she had left off the previous season. Work was carried on steadily, and on October 21, the cut through St. Thomas bank was completed to 30 feet at low tide. The material dredged was clay and stones. A few lumps still remain to be cleaned up near the head of Crane island. These will be taken out as early as possible next season.

On October 23 the *Beaujeu* crossed to the north channel and began work in the north channel traverse, west sand, the material to be dredged there consists of sand and gravel which can be handled very advantageously by this dredge. Her average for an 1,800 yard load of this material was about 50 minutes actual pumping.

She stopped work in the north channel on November 23, and proceeded to Sorel to go into winter quarters.

The working time of *No. 8* was from daylight to dark and the dredge was kept in operation 71 per cent of the time.

During the season, the *Beaujeu* worked 163 days, and made 331 loads, which amounted to 665,250 cubic yards, at a total cost of \$59,364.97, or 8⁹/₁₀₀ cents per cubic yard.

Suction Hopper Dredge Galveston (No. 9).—Steel hull, twin screw. This dredge was constructed in Germany in 1904.

During the winter of 1911, a new dynamo was installed on the *Galveston*, 130 plain and stay boiler tubes were renewed, and she was generally overhauled.

The details of the operations of this dredge for the fiscal year beginning April 12, 1911, were as follows:—

No. 9 left Sorel for St. Michel-de-Bellechasse on May 11, arriving there the next day. She went aground alongside the wharf and made repairs to the turbines.

On May 15 the repairs to the turbines having been completed, she proceeded to Beaujeu channel and worked there till May 18, clearing up lumps. On May 18 she crossed to the north channel and was set to work at the east narrows, the material being sand and gravel.

She was sent to Levis on May 19 to go into dry dock to be scraped, painted and to have repairs made to the doors. This work being completed on May 28, the dredge returned to the east narrows and continued working there until July 31. It was found that the material was very hard, and that the current was very strong and

variable. This combination of circumstances occasioned several serious breakages so it was thought advisable to try *No. 9* in a different place where the conditions were more favourable.

She was moved up to the west sand and worked there with much better results until November 10. On this date she was sent to St. Michel-de-Bellechasse to be beached and prepared to go into winter quarters. She left St. Michel on November 14 and arrived at Sorel November 15 where she was laid up.

No. 9 lost a great deal of time owing to the fact that the suction pipe was twice broken away from the forward hoisting and stay wires, and also because the boiler gave a great deal of trouble and a great many tubes had to be renewed.

During the season, this dredge worked 130½ days. Her hours of operation were from daylight to dark. She was in actual operation 49 per cent of the full working time, and made 362½ loads, amounting to 508,300 cubic yards. The total cost amounted to \$54,998.19, or 108½/100 cents per cubic yard.

The total number of cubic yards removed by the *Beaujeu* (*No. 8*) and the *Galveston* (*No. 9*) below Quebec during the fiscal year ending March 31, 1912, amounted to 1,173,550 at a total cost of \$114,363.16, or 97¼/100 cents per cubic yard.

The total number of cubic yards removed by the whole of the dredging fleet during the season amounted to 4,509,904, at a total cost of \$588,697.60, or 13¾/100 cents per cubic yard.

DREDGING PLANT.

The following is a description of the dredging plant at the end of the season of 1911 owned and operated by the Department of Marine and Fisheries in connection with the River St. Lawrence ship channel between Montreal and Father Point:—

DREDGES.

The Elevator Dredge 'Laval' (No. 1), wooden hull—

Length over all, 150 feet.
 Breadth of beam, 30 feet.
 Depth of hold, 14 feet.
 Average draught, 11 feet.
 Greatest working depth, 42 feet.
 Hull built in Ottawa in 1894.
 Steel buckets.
 Working capacity per day in hard material, 1,000 to 2,000 cubic yards.

The Elevator Dredge 'Laurier' (No. 2), wooden hull—

Length over all, 163 feet.
 Breadth of beam, 32 feet.
 Depth of hold, 14 feet.
 Average draught, 10 feet.
 Greatest working depth, 45 feet.
 Built at Sorel shipyard in 1897.
 Steel buckets.
 Working capacity per day in hard material, 1,000 to 2,000 cubic yards.

The Elevator Dredge 'Lady Aberdeen' (No. 3), steel hull—

Length over all, 148 feet.
 Breadth of beam, 32 feet.
 Depth of hold, 13 feet.
 Average draught, 8.5 feet.
 Greatest working depth, 42.5 feet.
 Built at Sorel shipyard in 1900.
 Steel buckets.
 Working capacity per day in hard material, 1,000 to 2,000 cubic yards.

The Elevator Dredge 'Lady Minto' (No. 4), steel hull—

Length over all, 148 feet.
 Breadth of beam, 32 feet.
 Depth of hold, 13 feet.
 Average draught, 8.5 feet.
 Greatest working depth, 42.5 feet.
 Built at Sorel shipyard in 1900.
 Steel buckets.
 Working capacity per day in hard material, 1,000 to 2,000 cubic yards.

SESSIONAL PAPER No. 21

The Elevator Dredge 'Lafontaine' (No. 5), wooden hull—

Length over all, 168 feet.
 Breadth of beam, 32 feet.
 Depth of hold, 14 feet.
 Average draught, 9 feet.
 Greatest working depth, 45 feet.
 Built at Sorel shipyard in 1901.
 Steel buckets.
 Working capacity per day in hard material, 1,000 to 2,000 cubic yards.

The Elevator Dredge 'Baldwin' (No. 6), wooden hull—

Length over all, 165 feet.
 Breadth of beam, 34 feet.
 Depth of hold, 14 feet.
 Average draught, 8 feet.
 Greatest working depth, 42 feet.
 Built at Sorel shipyard in 1902.
 One cubic yard buckets strengthened for fairly hard material.
 Working capacity per day in medium material, 2,500 to 3,500 cubic yards.

The Hydraulic Dredge 'J. Israel Tarte' (No. 7), steel hull—

Length over all, 160 feet.
 Breadth of beam, 42 feet.
 Depth of hold, 12.5 feet.
 Average draught, 6 feet.
 Length of suction pipe, 80 feet.
 Greatest working depth, 47 feet.
 Built at Polson Iron Works, Toronto, 1902.
 Working capacity per day in soft material, 12,000 to 20,000 cubic yards.

Discharge Pipe and pontoons of Dredge 'J. Israel Tarte' (No. 7)—

Twenty-seven lengths of pipe 36 inches diameter by 100 feet long.
 One length of pipe 36 inches diameter by 35 feet long.
 Twenty-seven pairs of pontoons for floating pipes, 42 ins. diameter by 90 feet long.

Scow No. 24, Pontoon Anchor Scow for Dredge 'No. 7,' wooden hull—

Length over all, 63 feet.
 Breadth of beam, 27 feet.
 Depth of hold, 8 feet.
 Built at Sorel shipyard in 1909.

Scow No. 27, for Dredge 'J. Israel Tarte' (No. 7), wooden hull—

Length over all, 60 feet.
 Breadth of beam, 18 feet.
 Depth of hold, 6 feet.
 Built at Sorel shipyard in 1902.

Suction Hopper Dredge 'Galveston' (No. 9), steel hull, twin screw—

Length over all, 233 feet.
 Breadth of beam, 39 feet.

Depth of hold, 15.5 feet.

Draught when loaded with 1,800 tons, 14 feet 9 inches aft, and 13 feet 1 inch forward.

Greatest working depth, 55 feet.

Built in Germany, 1904.

Two suction pumps, Dutch type, 8.5 feet outside diameter.

Working capacity, 1,350 cubic yards in 45 minutes.

Hopper capacity, 1,500 cubic yards.

The Sea-going, Suction, Hopper Dredge 'Beaujeu' (No. 8), steel hull, twin-screw

Length between perpendiculars, 264 feet.

Breadth of beam, 45 feet.

Depth of hold, 20 feet.

Capacity of hoppers, 2,000 cubic yards in 45 minutes.

Greatest working depth, 65 feet.

Draught when loaded, 15 feet.

Ordinary speed, 9 statute miles.

Built in Sorel shipyard in 1907.

The Dipper Dredge 'No. 10,' steel hull—

Length moulded, 132.5 feet.

Breadth moulded, 42 feet.

Depth at bow, 11.5 feet.

Depth at stern, 9.7 feet.

Length of spuds, 74 feet.

Bucket capacity, one 11 yd. for soft material, one 9 yd. for hard material.

Capable of dredging to 50 feet.

Built at Sorel shipyard in 1910.

The Dipper Dredge 'No. 11,' steel hull—

Length moulded, 132.5 feet.

Breadth moulded, 42 feet.

Depth at bow, 11.8 feet.

Depth at stern, 13.5 feet.

Length of spuds, 74 feet.

Bucket capacity, one 11 yard for soft material, one 9 yard for hard material.

Capable of dredging to 50 feet.

Built at Sorel shipyard in 1911.

TUGS.

The Ice-breaking and Emergency Tug 'Lady Grey,' (steel hull, twin screw)—

Length between perpendiculars, 172 feet.

Length over all, 183 feet 6 inches.

Breadth moulded, 32 feet.

Breadth extreme, 32 feet 3 inches.

Depth moulded, 18 feet.

Draught mean to bottom of flat plate keel (normal) 12 feet.

Draught when ice-breaking, about 13 feet.

Displacement in tons at 12 feet, draught, 1,070.

Mean speed, at 12 feet draught, on 6 runs over measured mile base, 14 knots.

Built by Vickers Sons & Maxim, Ltd., Barrow-in-Furness, England, 1906.

SESSIONAL PAPER No. 21

The Tug 'Frontenac,' (composite hull, twin screw)—

Length over all, 113 feet.
Breadth of beam, 23 feet.
Depth of hold, 10 feet.
Average draught, 9 feet.
Built at Sorel shipyard in 1902.

The Tug 'De Levis' (wooden hull), twin screw—

Length over all, 104 feet.
Breadth of beam, 20 feet.
Depth of hold, 10 feet.
Average draught, 8 feet.
Built at Sorel shipyard in 1902.

The Tug 'James Howden' (wooden hull), twin screw—

Length over all, 100 feet.
Breadth of beam, 21 feet.
Depth of hold, 10 feet.
Average draught, 7.5 feet.
Built at Sorel shipyard in 1903.

The Tug 'Iberville' (steel hull, single)—

Length over all, 90 feet.
Breadth of beam, 18 feet.
Depth of hold, 12 feet.
Average draught, 10 feet.
Built at Sorel shipyard in 1897.

The Tug 'Lac St. Pierre' (wooden hull), twin screw—

Length over all, 100 feet.
Breadth of beam, 21 feet.
Depth of hold, 10 feet.
Average draught, 7.6 feet.
Built at Sorel shipyard in 1901.

The Tug 'Portneuf' (wooden hull, single screw)—

Length over all, 85 feet.
Breadth of beam, 17.3 feet.
Depth of hold, 9.8 feet.
Average draught, 8 feet.
Built at Sorel shipyard, 1905.

The Tug 'Cartier' (wooden hull, single screw)—

Length over all, 84 feet.
Breadth of beam, 18 feet.
Depth of hold, 9.5 feet.
Average draught, 9 feet.
Built at Sorel shipyard, 1893.

The Tug 'Emilia' (wooden hull, single screw)—

Length over all, 84 feet.
Breadth of beam, 17 feet.
Depth of hold, 9 feet.
Average draught, 8 feet.
Built at Sorel shipyard, 1898.

The Tug 'Lanoraie' (wooden hull, single screw)—

Length over all, 84 feet.
Breadth of beam, 17 feet.
Depth of hold, 9 feet.
Average draught, 8 feet.
Built at Sorel shipyard, 1901.

The Tug 'Jessie Hume' (wooden hull, single screw)—

Length over all, 72 feet.
Breadth of beam, 17.2 feet.
Depth of hold, 10 feet.
Average draught, 8.5 feet.
Built at Buffalo, 1878.

The Tug 'Lotbiniere' (wooden hull, twin screw)—

Length over all, 80 feet.
Breadth of beam, 23 feet.
Depth of hold, 8 feet.
Average draught, 7 feet.
Built at Sorel shipyard, 1903.

The Tug 'Carmelia' (wooden hull, single screw)—

Length over all, 84 feet.
Breadth of beam, 17 feet.
Depth of hold, 9 feet.
Average draught, 8 feet.
Purchased in 1903.

The Tug 'Contrecoeur' (wooden hull, twin screw)—

Length over all, 90 feet.
Breadth of beam, 22.7 feet.
Depth of hold, 9 feet.
Average draught, 7 feet.
Built at Sorel shipyard, 1910.

The Tug 'Varenes' (wooden hull, twin screw)—

Length over all, 96 feet.
Breadth of beam, 22 feet.
Depth of hold, 9 feet.
Average draught, 7 feet.
Built at Sorel shipyard, 1911.

COAL BARGES.

Coal Barge 'No. 1' (wooden hull)—

Length over all, 120 feet.
Breadth of beam, 24 feet.
Depth of hold, 10 feet.
Built in Sorel shipyard, 1898.

Coal Barge 'No. 2' (wooden hull)—

Length over all, 125 feet.
Breadth of beam, 25 feet.
Depth of hold, 11 feet.
Built at Sorel shipyard, 1900.

Coal Barge 'No. 3' (wooden hull)—

Length over all, 98 feet.
Breadth of beam, 28 feet.
Depth of hold, 12 feet.
Built at Sorel shipyard, 1902.

Coal Barge 'No. 4' (wooden hull)—

Length over all, 98 feet.
Breadth of beam, 28 feet.
Depth of hold, 12 feet.
Built at Sorel shipyard, 1903.

Coal Barge 'No. 5' (steel hull)—

Length over all, 127 feet.
Breadth of beam, 32 feet.
Depth of hold, 10 feet.
Built at Sorel shipyard, 1911.

Stone Lifter 'No. 2' (wooden hull)—

Length over all, 80 feet.
Breadth of beam, 25 feet.
Depth of hold, 9.8 feet.
Re-built at Sorel shipyard, 1897.

Stone Lifter 'No. 3' (wooden hull)—

Length over all, 108 feet.
Breadth of beam, 34 feet.
Depth of hold, 14 feet.
Built at Sorel shipyard, 1903.

Stone Lifter 'No. 4' (steel hull), used as a rock-breaker—

Length over all, 100 feet.
Breadth of beam, 32 feet.
Depth of hold, 12 feet.
Weight of ram, 20 tons.
Hoisting winch and ram built by Lobnitz & Co., Renfrew, Scotland.
Hull built at Sorel shipyard, 1910.

Sounding Scow 'No. 1' (wooden hull)—

Length over all, 60 feet.
 Breadth of beam, 25 feet.
 Depth of hold, 6 feet.
 Built at Sorel shipyard, 1898.

Sounding Scow 'No. 2' (wooden hull)—

Length over all, 75 feet.
 Breadth of beam, 38 feet.
 Depth of hold, 5 feet.
 Transferred from Prescott Agency in 1909, re-modelled and improved at Sorel shipyard.

Lodging Scow, (wooden hull)—

Length over all, 60 feet.
 Breadth of beam, 18 feet.
 Depth of hold, 7 feet.
 Built at Sorel shipyard, 1908.

Floating Shop (wooden hull)—

Length over all, 90.3 feet.
 Breadth of beam, 25 feet.
 Depth of hull, 9 feet.
 One forge, 1 scraper, 1 emery wheel, 1 drill, 1 lathe, 1 6 h.p. Foss gasoline engine.
 Living quarters for 4.
 Built at Sorel shipyard, 1908.

Scow 'No. 28' (winch scow used for fleet in general)—

Length over all, 60 feet.
 Breadth of beam, 18 feet.
 Depth of hold, 7 feet.
 Built at Sorel shipyard, 1908.

Scow 'No. 21' (winch scow used for fleet in general)—

Length over all, 40 feet.
 Breadth of beam, 20 feet.
 Depth of hold, 6 feet.
 Built in Sorel shipyard, 1908.

HOPPER DUMPING SCOWS WITH HYDRAULIC POWER FOR CLOSING GATES.

'No. 1' and 'No. 2' (wooden hulls) with hydraulic power for closing gates—

Length over all, 97 feet.
 Breadth of beam, 24.5 feet.
 Depth of hold, 9 feet.
 Capacity, 200 cubic yards.
 Built at Sorel shipyard, 1897.

SESSIONAL PAPER No. 21

'No. 3' and 'No. 4' (wooden hulls), with hydraulic power for closing gates—

Length over all, 90 feet.
Breadth of beam, 18 feet.
Depth of hold, 7 feet.
Capacity, 150 cubic yards.
Built at Sorel shipyard, 1898.

'No. 5,' 'No. 6,' 'No. 7,' and 'No. 8' (wooden hulls) with hydraulic power for closing gates—

Length over all, 97 feet.
Breadth of beam, 24 feet.
Depth of hold, 9 feet.
Capacity, 200 cubic yards.
Built at Sorel shipyard, 1899 and 1901.

'No. 9,' 'No. 10,' 'No. 11,' 'No. 12,' and 'No. 13' (wooden hulls), with hydraulic power for closing gates—

Length over all, 98 feet.
Breadth of beam, 24 feet.
Depth of hold, 9.5 feet.
Capacity, 300 cubic yards.
Built at Sorel shipyard, 2 in 1901, and 3 in 1902.

'No. 14' and 'No. 15' (wooden hulls) with hydraulic power for closing gates—

Length over all, 97 feet.
Breadth of beam, 24.5 feet.
Depth of hold, 9 feet.
Capacity, 300 cubic yards.
Built at Sorel shipyard, 1904-5.

'No. 16' and 'No. 17' (wooden hulls) with hydraulic power for closing gates—

Length over all, 93 feet.
Breadth of beam, 24.5 feet.
Depth of hold, 8 feet.
Capacity, 250 cubic yards.
Built at Sorel shipyard, 1909.

'No. 18' and 'No. 19' (wooden hulls) with hydraulic power for closing gates—

Length over all, 93 feet.
Breadth of beam, 24.5 feet.
Depth of hold, 8 feet.
Capacity, 250 cubic yards.
Built at Sorel shipyard, 1911.

DERRICK SCOW.

Used at Sorel shipyard in connection with construction and repairs to Dredging Fleet—

Length over all, 40 feet.
Breadth of beam, 20 feet.
Depth of hold, 5 feet.
Equipped with a derrick of 5 tons lifting capacity.

APPENDIX No. 4.

SOREL SHIPYARD.

SOREL, August 19, 1912.

A. JOHNSTON, Esq.,
Deputy Minister, Marine and Fisheries,
Ottawa.

SIR,—I have the honour to report on the work done at the Sorel shipyard during the fiscal year ending March 31, 1912, as follows:—

Repairs to vessels of ship channel, construction and maintenance of lights, and Public Works Department, during the fiscal year 1911-12.

DEPARTMENT OF MARINE AND FISHERIES.

Dredges Nos. 1, 2, 3, 5 and 6.—Had the ordinary maintenance repairs to machinery and hull.

Dredge No. 4.—Was hauled out on July 13, 1911, for cleaning, scraping hull under water line, and fitting sea cock screen. Her scow was also put on the ways on July 29, for overhauling and caulking.

All the above dredges had their chain of buckets overhauled and pins and bushes renewed.

Dredge No. 7.—This vessel had ordinary repairs to hull and machinery, also to her hull and deck houses. Howden's forced draft system was installed on her boilers. All of her 100 foot discharge pontoons were hauled out and repaired; at least 60 per cent of their inside wearing plates had to be renewed.

Dredge No. 8.—The usual repairs were made to this dredge, also new arrangements for discharging material dredged, consisting in the installation of two main pipes distributing material to three chutes discharging overboard, and also work had to be done in connection with a steam hopper barge which is being built for this dredge.

This new system will fit the dredge to discharge material inside her own hoppers or in a scow.

Dredge No. 9.—This dredge, besides the ordinary repairs to her hull and machinery, &c., had a new 4-inch ash ejector installed on board.

Dredge No. 10.—During the year, repairs were very light on account of the vessel wintering in Montreal. The captain of this vessel reports that this dredge should take her winter quarters in Sorel, as it would be handier and easier to make repairs with the full equipment of the different departments of the shipyard.

Dredge No. 11.—This vessel had ordinary repairs to her hull and machinery.

All the above dredges were put in good working condition and had a coat of paint to hull and deck houses, before starting operations in the spring.

REPAIRS TO TUGS.

Carmelia (tug).—This vessel had ordinary repairs for operating during the season. She was hauled out on May 27, 1911, and had a new propeller installed.

Chambly (tug) Old 'Cartier'.—Had ordinary repairs to hull and machinery. The hull and deck houses were painted.

SESSIONAL PAPER No. 21

Contrecœur (tug).—This tug had very light repairs to her machinery. The deck was caulked and a coat of paint was given to the hull and deck house. She was hauled on the ways on June 14, 1911, to put on a new propeller.

De Levis (steamer).—Unimportant repairs to equipment and machinery were made to this vessel during the summer. She was hauled out on April 1, 1911, to repair stern tube and shaft. During winter, heavy alterations to bottom of boiler were made and the water pan had to be removed.

Emilia (tug).—Ordinary winter and summer repairs were made to this vessel. She had to be hauled out on May 27, 1911, to take up slack of propeller on shaft and renewing *lignum vitæ* bush.

Earl Grey (steamer), ice-breaker.—Had her hull painted.

Frontenac (government steamer).—This boat wintered in Quebec and had ordinary repairs made by the Quebec agency. A new steering gear was bought for her by the Sorel shipyard and was installed on board at Quebec.

Iberville (tug).—The machinery and hull had ordinary repairs during the season. The vessel was hauled out in May, 1911, for repairs to her rudder. She was again put on the ways on October 5, 1911 to receive a new blade to her propeller.

During winter her deck houses were lengthened so as to put the galley on main deck and rooms were built underneath to accommodate the night crew and do away with the lodging scow.

James Howden (tug).—Practically, this vessel had no repairs during the summer, as she worked below Quebec with *Dredge No. 8*. She was hauled on the ways on December 15, 1911, to repair her tail shaft, brackets and rudder.

Jessie Hume (tug).—Had maintenance repairs to hull and machinery. The boiler of this vessel being very old, was condemned by the inspector. Repairs had to be made to this boiler pretty often so as to keep the boat running during the construction of a new boiler.

This tug was hauled out on July 11, 1911, to repair her rudder and propeller key.

Lac St. Pierre (tug).—Had ordinary repairs during winter and summer.

Lanoraie (tug).—Maintenance repairs were made during the season on this boat. She was hauled out on May 11, 1911, for a new propeller, and was put again on the ways on June 12, to install a new propeller. The vessel was hauled out on October 17 for repairing her key and key seats of tail shaft and propeller.

Lady Grey (steamer).—Light repairs were made on this vessel at Three Rivers, where she wintered.

Lambton (steamer).—Drawings were prepared for installation of new ash ejector and one set of furnace doors for the boilers of this vessel.

Lotbiniere (tug).—This tug had ordinary repairs made to her hull and machinery. A larger steering gear 6 inch diameter by 6 inch stroke was also placed on board. She was put on the ways on November 20, 1911, to replace bushes of propeller shaft. One new pair of davits was also installed on board for life saving boat.

Portneuf (tug).—Had ordinary repairs to hull and machinery and was painted during the season. She was hauled out in July, 1911 for repairs to propeller. Was put again on the ways on August 24, to receive a new propeller and bush for rudder. The vessel had to be put on the ways on September 22 to have her rudder repaired.

Varennes (tug).—Had ordinary repairs to hull and machinery. She was hauled out on November 17, 1911, to install a new propeller. She was hauled out again on May 13, 1912, for another propeller.

Vercheres (tug).—This vessel received the ordinary repairs to her hull and machinery. One speaking tube and sound tube from the wheel house to the engine room were also installed on board. Repairs had to be made to her steering gear.

COAL BARGES.

Coal Barges Nos. 1, 2, 3 and 4.—General repairs were made on these vessels, also slight repairs to winches and derricks.

Coal Barge No. 5.—Practically there were no repairs made on this vessel during the season.

DUMPING SCOWS.

Dumping Scow No. 1.—This vessel had ordinary repairs to her hull and hydraulic machinery. She was hauled out on May 12, 1911, for caulking to her hull, and repairs to hopper doors.

Dumping Scow No. 2.—Had similar repairs to those on *No. 1*. This vessel was hauled on the ways on July 24, 1911, for repairs to hull and to her chain of hopper doors. On the 29th was put again on the ways for repairs to hull and caulking.

Dumping Scows Nos. 3, 4 and 5 received light repairs during the season. *No. 5* was hauled on the ways on June 31, 1911, for caulking her hull.

Dumping Scows Nos. 6, 7 and 8 had only general repairs. *No. 8* was put on the ways on November 7, to repair her hull.

These vessels have a very heavy duty to perform night and day, as all dredged material and stones are dumped from a height of about 8 feet into the hoppers of scows and on account of that they have often to be repaired.

Dumping Scow No. 9.—Ordinary repairs were made on this vessel, which had also to be hauled out on July 10, 1911.

Scow No. 10.—Alterations had to be made to this boat so as to turn it over from a dump scow to a flat scow to work in connection with spoon dredge *No. 10* or *11*. Had to be hauled on the ways on August 31 for caulking of her hull. She was put on the ways on November 30 for wintering, so as to take out her machinery which is to be used on another dumping scow.

Scows Nos. 11, 12, 13 and 14.—Ordinary repairs were made to hull and machinery

Scow No. 15.—Had repairs to hydraulic machinery and hull. This vessel was hauled out on July 31, 1911, to repair her hopper doors.

Scow No. 16.—Was put on the ways June 15, 1911, to have her hoppers repaired. She was hauled out again on September 1 for repairs to hull.

Scows Nos. 17, 18 and 19 had ordinary repairs to hull and hydraulic machinery. *No. 17* was hauled on 26th, 1911, for caulking.

Scow No. 22 (derrick).—Had repairs to hoisting machinery and hull.

Scow No. 24 (pontoon anchor scow).—This scow is used in connection with *Dredge No. 7*. The winches and boilers were overhauled and the ordinary repairs made to her hull.

Winch Scows Nos. 27 and 28.—These scows had ordinary repairs.

STONE LIFTERS.

Stone Lifter No. 2.—No repairs were made on this vessel which is to be discarded, being condemned by the inspector.

Stone Lifter No. 3.—This vessel had ordinary repairs to hull and machinery. She was hauled out on May 19, 1911, for repairs to her well and outside planking to lower water line.

Stone Lifter No. 4.—Had ordinary repairs. During winter, the rock cutting machinery installed on board was changed for a stone-lifting winch, this being the purpose for which the boat was built, the stone cutter arrangement being only temporary, as a trial.

FLOATING MACHINE SHIP.

This scow is used in connection with repairs to the different vessels of the dredging fleet while operating during the season.

SESSIONAL PAPER No. 21

This scow has no steam, the forge machinery being run by gasoline engine. Light repairs were made to the machinery and engine, and practically nothing to the hull, during the winter, when she had a general overhauling and a coat of paint to hull and deck houses.

REPAIRS TO VESSELS OF THE CONSTRUCTION AND MAINTENANCE OF LIGHTS BRANCH, MARINE AND FISHERIES.

Acetylene (barge).—Had very light repairs to machinery and hull.

Adelard (barge).—Maintenance of Light Department. Was hauled on the ways on August 2, 1911, to have her hull caulked and painted.

Alpha (steamer).—Had light repairs to hull and deck. Was hauled on ways for wintering on November 22, 1911. Before launching, her hull was caulked under the water line.

Hosanna (steamer).—Had ordinary repairs to hull and machinery. She was hauled on the ways on September 19, 1911, to renew the foundation bolts of main engine and repair her rudder.

Maisonneuve (steamer).—Was hauled on the ways for wintering on November 30, 1911. During the winter her hull was caulked below the water line.

Lenore (scow).—Was hauled on December 5 for wintering. Iron sheathing was placed on bow and sides, the hull and deck houses were painted during the winter.

Shamrock (barge), buoy service.—Ordinary repairs were made on this vessel. In connection with this service, buoys, chains and anchors were also repaired.

Repairs to the hull of the *Shamrock* were made during summer, also overhauling of machinery. She had to be hauled out on December 5 to renew her stern. The hull and deck houses were painted and some repairs had to be done to her woodwork.

Davis (barge).—Was put on the ways on April 28, 1911, and had repairs to her hull which was also caulked.

Besides the work performed on these various vessels of the Construction and Maintenance of Lights Department, by the shipyard staff, tools and materials were also supplied to these branches of the Department of Marine and Fisheries.

REPAIRS TO VESSELS OF THE DEPARTMENT OF PUBLIC WORKS—TUGS.

Daisy (tug).—Had light repairs to main engine.

Delisle (tug).—Was hauled on the ways on July 18, 1911, for repairing rudder and shaft.

Fast (launch).—Was hauled out June 17, 1911, for renewing key in propeller shaft, and put again on the ways on August 22.

Mina G (tug).—This vessel was put on the ways, June 13, 1911, to repair her propeller shoe. She was hauled out again on September 20, 1911, for a new propeller. Another propeller was installed on board this boat on October 7, 1911.

Montmorency (tug).—Minor repairs were made to this vessel. A new gangway was supplied. Tin sheathing to refrigerator and repairs to rigging.

Ottawa (tug).—This vessel was hauled on the ways, May 20, 1911, to change her high pressure engine for a compound one, the work being done by the department, under the direction of J. W. Weir, the maker. There were also repairs made to the rudder, stern tube and shaft. She had one new deck house and thrust shaft and steam piping installed. The hull and deck houses were painted.

Speedy (steamer).—This steamer had repairs to her dynamo and to the electric bells and her wiring.

DREDGES.

W. S. Fielding (dredge).—Had new wearing plates supplied for her upper tumbler.

St. Louis (dredge).—Minor repairs were made to her machinery and dipper arm.

International (dredge).—Had two steel sheaves supplied for her boom.

NEW CONSTRUCTIONS.

Work was continued on *Construction No. 26* (steel dredge). The hull was completed and the main frame. A frame and bucket ladder frame were installed on board.

Work was begun on engine room and deck houses.

The following machinery was also installed on this dredge: Main hoisting, bow cable and breasting winches. Work on steam pipe was only started at end of fiscal year.

Construction No. 32 (coal barge).—This barge is of steel throughout; will be of 500 tons capacity. During the year the hull was completed and deck houses were erected. Mast and derrick were installed on board, also the hoisting winches.

This vessel was launched early in spring.

Construction No. 33.—This is a steel dumping scow of 200 yards capacity. The wells will be fitted with conical valves worked by hydraulic cylinders.

Work on the hull of this vessel was stopped for a couple of months on account of the pressing work on repairs to vessels of dredging fleet. Since work was started again, the outside plating was completed, the hydraulic cylinders were prepared here, also the valve seats and valves, which only remain to be installed on board.

Constructions No. 34.—Constructions No. 34 are two wooden dumping scows of 250 yards capacity. These vessels were completed and fitted with hydraulic arrangement.

Construction No. 35.—This is a wooden tug 92 ft. long, 22 ft. beam, 6 ft. draft; she was begun in 1910.

The propelling machinery, which was supplied by the St. John Iron Works, was installed on board with all auxiliary machinery, as well as the piping and heating systems. This boat will be completed and put in commission in a month, under the name of *Varenes*.

Construction 36 and 38.—These constructions are two steel tugs 92 ft. long, 22 ft. beam, 6 ft. draft. They were begun at the same time during winter. Work had to be stopped on *No. 36* so as to push the repairs on vessels of dredging fleet. Work was continued on *No. 38*, and this vessel was completed at the opening of navigation.

The engines for these two boats, which are also furnished by the St. John Iron Works, will be exact counterparts of the engines for *Tug No. 35*.

Construction No. 37.—This is a steel dredge 180 ft. long, 40 ft. wide, 14 ft. deep.

The engines to be compound, direct acting, condensing, designed for a working pressure at engines of 120 lbs. per square inch, and to be capable of developing 450 indicated horse-power with an equivalent speed of buckets from 16 to 17 per minute. To have a chain of 50 dredging buckets of 13 cub. ft. capacity each.

The construction of this vessel was begun early in the year, the hull was completed and launched on May 31, 1912. The A frame, main frame and ladder frame are now ready to be assembled, and the castings for machinery are just beginning to be supplied.

Construction No. 39 (sounding scow).—The hull of this steel vessel was completed and deck houses erected. The machinery was prepared here, but work had to be stopped during winter to keep staff on repairs dredging fleet vessels.

Construction No. 40 (Rock cutter No. 1).—The material for the hull and machinery of this vessel was purchased from Lobnitz & Co., England. During winter the hull was mounted and the machinery erected. Main deck houses were built, railings placed, and other superstructures completed. Between deck quarters were prepared for crews. This vessel will be put in commission at the beginning of June.

MAINTENANCE AND IMPROVEMENTS TO BUILDINGS AND PLANT OF THE SHIPYARD.

The whole of the buildings were maintained and repaired, and kept in good order, so were the waterworks system, the narrow gauge railway, compressed air distribution, electric power lines and internal telephone lines.

SESSIONAL PAPER No. 21

All the following buildings were painted and kept in good order.

REPAIRS TO SHIPYARD BUILDINGS.

Building No. 2 (new boiler shop).—This building was whitewashed inside and the glass was renewed in the windows. The roof had a new coat of paint.

Buildings No. 3.—Old boiler shop *No. 4*, office *No. 5*, machine shop, and *No. 6*, blacksmith shop, all had light ordinary repairs to woodwork.

Building No. 7 (waste shed).—The roof of this building was painted.

Building No. 8 (stables).—Had repairs to floors and roof painted.

Building No. 9 (carpenter shop), *No. 10* (ice house), *No. 11* (manilla rope shed), *No. 12*, (rivet and bolt shed), *No. 13* (steel wire shed), *No. 14* (oil shed), *No. 15* (storage and fleet). All these buildings had their roofs painted.

Building No. 16 (power house).—Light repairs were made to the cement floor.

Building No. 17 (saw mill).—Had repairs to roof and was painted.

Building No. 18.—Asbestos, paint shop and moulding loft. This building had ordinary repairs and roof painted.

Buildings 19, 20 and 21.—The roofs of these buildings were painted.

Building No. 22 (shed for castings).—Had roof painted, repairs to floor and a fence was made around the building.

Buildings Nos. 23, 24 and 25.—Had roof painted only.

Building No. 26.—Main gate house at the entrance of the shipyard, was built during the season for the watchman.

GENERAL.

New fences were also built around the shipyard, where required.

130-Ton Crane.—The construction of a pier for the installation of 130-ton crane was begun. All the piles being driven in place and a thickness of 2 feet of concrete made over them,

Wharfs.—Wharfs and ways have had the ordinary repairs and been kept in good condition.

All the buildings of the shipyard and all machinery were maintained in a good state of efficiency.

A plan of the river front, opposite the shipyard, shows the position of the several vessels for wintering.

The winter roads were made and kept, both in the yard and on the river, along the fleet wintering on the Richelieu. The ice was cut around the vessels, as needed.

The force employed during the fiscal year varied from 741 in November, 1911, to 987 men in March, 1912, and averaged to 826 daily.

The financial statement shows the total amount expended at the Sorel shipyard and ship channel to have been \$1,216,820.03.

I have the honour to be, sir,

Your obedient servant,

W. S. JACKSON.

Superintendent of Shipyard.

APPENDIX No. 8.

METEOROLOGICAL OFFICE.

TORONTO, May , 1912.

SIR,—I have the honour to submit the forty-first annual report of the Meteorological Service, this report being for the fiscal year ended March 31, 1912, with appendices A and B, reports of the observatories at St. John, N.B. and Quebec.

The number of persons in receipt of pay from the Meteorological Service for various duties in connection therewith has been 280. Of this number 30 were employed in the central office; 41 were paid salaries as observers at telegraph reporting stations and 100 as agents for the display of storm signals, while 109 received some small remuneration for observations taken with regularity at points in outlying districts.

The following observing stations have been opened since my last report:

There are now in the Dominion 518 meteorological stations, including all classes, and at the majority of these the observing is performed voluntarily by men who are interested in the subject of weather and weather changes. They are doing valuable work in the interests of the country and their untiring zeal is duly appreciated by the Meteorological Service.

The matters of chiefest interest in the central office during the past year have been a marked development of the synchronous weather chart, and the completion of the establishment of a physics laboratory for the pursuance of research in atmospheric physics.

The reports of observations used in the preparation of the daily weather chart are now supplemented by numerous reports from Europe and Asia, together with reports from Iceland, the Faroe Islands, the Shetland Islands, the Azores, and various places in the West Indies, also from Honolulu and Manila, and from stations in Alaska and the Aleutian islands. The eastern hemisphere observations are taken at 7 o'clock, Greenwich mean time, or six hours earlier than those in America, but with the broad gap of the Atlantic lying between Europe and America this is seemingly of no importance, as due allowance can be made for changes occurring in the interval.

This new field of observation promises to yield a harvest of information and usefulness, such as was unrecognized until the scheme became an accomplished fact. With a knowledge of the meteorological conditions prevailing north of the British Isles and in Iceland, and also with a knowledge of the conditions in Alaska, it is found possible to deduce with surprising accuracy the conditions prevailing in the far northern portions of the Dominion, whence comes the cold waves which in winter with varying frequency spread over the continent.

The work of the physics branch proceeds satisfactorily. In connection with the exploration of the upper atmosphere, balloons carrying the Dines Meteorograph have been despatched and of these 12 have been returned to the central office with good results. The heights reached varied between 6.3 and 12.6 miles, and the isothermal layer was found at heights varying between 5.8 and 9.9 miles, and with temperatures between 71° and 94° Fahrenheit.

The following table gives the chief data obtained in the various ascents.

The kite station at Agincourt for observations in free air has been in operation throughout the year. The equipment is similar to that employed by Dines at Pyrtton Hill and the Dines kites and meteorographs are used. These kites are very easily constructed and the meteorographs are not expensive; for these reasons it was considered advisable to use them at first until the station was in good working order, after which other kinds and types will be tried. Records of pressure, temperature, humidity and wind direction have been obtained. Ascents began on February 28, 1911, and the highest flight was 7,900 feet above sea level obtained on June 28, 1911.

The movement towards the utilization of water-falls for the production of electrical power has made a knowledge of the rainfall in the various watersheds, a matter of great importance, and during the past year numerous rainfall stations have been established in districts where hitherto reports have been either scant or altogether wanting.

Forecasts have been issued from Toronto twice daily for the succeeding 36 hours for all the provinces, exclusive of British Columbia, and for these a per cent of 86.1 was attained. For the Pacific province the forecasts are issued from Victoria, and a per cent of 84.7 was attained. The forecast and storm signal service for Newfoundland, begun in 1909, has been continued with satisfactory results. Storm signal display stations now number 110, and of 2,610 warnings issued during the year 92 per cent were verified.

As indicated by the percentage of verification the forecasts of the Canadian service are distinctly good and compare most favourably with forecasts issued in other countries. But a still more certain proof of their value is shown by the close attention paid to storm warnings by mariners and fishermen, and by the fact that shippers of perishable goods consult the forecasts before shipping. Another clear indication that the forecasts are highly valued by those deeply interested in weather changes is found in the confidence with which the pilots of unseaworthy craft, such as dredges and barges at all times of the year, and of all vessels during the late autumn, allow themselves to be guided from port to port by the meteorological official.

SESSIONAL PAPER No. 21

INSPECTION OF STATIONS.

The various officials of the Central Office carried out the customary inspection of stations during the fiscal year, having equipment brought into a thorough state of repair, instruments adjusted, and observers instructed. A new telegraph reporting station was established at Harrington, Quebec. The Cochrane station was re-established after destruction by fire.

The following stations were visited during the fiscal year:—

Cape Madgalene, Heath Point, Anticosti, Point Armour, Belle Isle, Point Riche, Harrington, St. Andrews, Grand Manan, Point LePreaux, Souris, Summerside, Charlottetown, Sydney, Halifax, Yarmouth, St. John, Wolfville, Chatham, Father Point, Quebec, Amherstburg, Pelee Island, Cochrane, Lindsay, Kingston, Stonecliffe, Parry Sound, Oakville, Port Credit, Cooksville, Winnipeg, Minnedosa, Qu'Appelle, Moose Jaw, Calgary, Banff, Vancouver, White Horse, Carcross, Atlin, Prince Rupert, Victoria, Hay River, Fort Simpson, Fort Norman, Fort Good Hope, Fort Chipewyan, Fort McMurray, Fort Smith, Westport.

Frequent inspection of stations is desirable in order that reliable results may be obtained, and proposed sites for signal stations should be inspected by an official of this service before the establishment be authorized.

MAGNETIC OBSERVATORY.

There have been no breaks in the magnetic records at the Agincourt observatory during the year. The zeros of the photographic recording instruments were determined by absolute observations, taken weekly for declination and bi-monthly for horizontal force. Weekly observations were also made for the determination of the inclination. A Toepfer earth inductor was added to the equipment of the observatory in February, 1912, and this is now being used as the standard for inclination. Corrections to be applied to results from instruments formerly used are now being determined.

The westerly declination has changed from $6^{\circ} 7.4'$ in March, 1911 to $6^{\circ} 12.5'$ in March, 1912, an increase of $2.2'$. The horizontal force has decreased from 0.16204 C.G.S. units to 0.16181, and the inclination has increased from $74^{\circ} 39.2'$ to $74^{\circ} 39.9'$.

Magnetic disturbances have been of unfrequent occurrence. In declination the greatest variation was recorded on the 8th and 9th of April, 1911, amounting to $1^{\circ} 18.4'$, the horizontal force at the same time passing beyond the range of the photographic instrument. The mean diurnal range of declination varied from a maximum of $13'.2$ in August, 1911 to a minimum of $4'.3$ in January, 1912, whilst that of horizontal force varied from a maximum of .00049 dyne in August, 1911 to a minimum of .00011 in January, 1912.

A re-determination of the constants of the magnetometer used for absolute horizontal force measurements was completed in March, 1911. The results are .00028 lower than formerly obtained with this instrument.

The constants of magnetometer 146 of the Hydrographic Survey department were determined in November and December, and were found to agree with the constants furnished by Kew. Its correction to Toronto standard was then determined and found to be -0.00109 part of H.

During the year, 90 theodolites with magnets attached were compared with the Agincourt Standard Declinometer and index corrections for the magnets were determined and supplied to the surveyor general.

Assistance was given to Mr. C. A. French of the Dominion Observatory, in comparing his instruments with Agincourt standards, both before and after his field work.

An officer of the Meteorological Service, Mr. W. E. W. Jackson, M.A., was assigned to the Hydrographic Surveys Branch for the summer of 1911, to carry on a

magnetic survey of Hudson's bay and strait. Owing to the unfortunate occurrence of a leak in the vessel, the survey had to be abandoned.

The following results were however, obtained:—

SEISMOLOGY.

The Milne seismograph at Toronto and Victoria have given continuous records throughout the year, the former registering 85 disturbances and the latter 73.

The more important shakes were two of Mexican origin on June 7 and December 16; two of West Indian origin, on October 6 and 10; an Alaskan quake on January 31, and one on March 11, probably of submarine origin west of Vancouver Island, and which caused a sharp and large movement of the Victoria recorder and a lesser movement of that in Toronto.

The network of stations equipped with these instruments has been augmented during the past year by the addition of 13 new stations in various portions of the world, and the committee of the British Association which has undertaken the discussion of results obtained, has now a wide field of observation and much valuable data is being obtained. It is intended within the ensuing year to supplement the Victoria equipment by the addition of several seismological instruments, which will enable Mr. F. N. Demison to continue his investigations under more favourable conditions.

TIME SERVICE.

During the year 88 determinations for time have been made by transits of stars in the meridian with the 3-inch Troughton and Simms transit instrument.

As in former years the positions of the stars given in the 'Berliner Jahrbuch' have been used.

The collimation error of the transit instrument has been chiefly determined by reversal of Polaris and occasionally in conjunction with that of the instrumental azimuth by star transits in reverse position of the axis using the methods of least squares in their computation.

Time has been given very generally and often to inquirers over the telephone and telegraph lines and a number of chronometers and watches both mean and sidereal, have been compared and regulated.

The 11.55 a.m. signal on the bells of the fire alarm system has been continued throughout the year.

Time has also been given to the Canadian Northern railway running out of Toronto, and weekly to the Magnetical Observatory at Agincourt.

The time exchanges between Toronto and Quebec, Montreal and St. John, N.B., have been made as usual, being recorded on the chronographs at Toronto, Montreal and St. John. The errors of the clocks have been computed from the latest observations.

SESSIONAL PAPER No. 21

SUN SPOT OBSERVATIONS.

During the year April 1, 1911, to April 1, 1912, the sun's surface was examined with the 6-inch equatorial telescope on 108 days and maps made showing the position of spots on 47 of those days, while on the remaining 61 days the sun was free of spots. The only group of importance during the year appeared as a rather large elliptical mass of small spots with a tendency to condense into two spots of moderate size at the extremities of the ellipse. This group was first noticed on March 31, 1911, and without doubt existed before that date, but owing to cloudiness no observations were previously obtained. The group was near the sun's equator just west of its axis and finally disappeared over the western limb much reduced in size.

An apparent return of this group was about central on the sun on April 27, 1911; the smaller central spots had entirely disappeared and the two ends of the group condensed into well defined spots with nuclei and penumbra. A remnant of this group persisted for a third appearance, but faded away before reaching the central meridian.

With the exception of a few small spots appearing at intervals, the sun now remained remarkably clear until March 7, 1912, when a small group with faculae came over the eastern limb, disappearing over the western limb on the 18th. Photographs were obtained of this group on March 9, 11 and 13. After this date, the sun remained free of spots until the end of the month.

The following are the dates of observations taken:—

Sun with spots: April, 1911, 1st, 3rd, 6th, 7th, 8th, 10th, 11th, 21st, 24th, 25th, 26th, 28th, 29th; May 1st, 4th, 5th, 6th, 8th, 9th, 22nd, 25th, 26th, 27th, 29th, 30th; June 5th, 30th; July 11th, 13th; September 7th, 8th; October 2nd, 4th, 5th; November 1st, 2nd, 9th, 26th, 22nd, 25th, 29th; December 29th; March, 1912, 7th, 9th, 11th, 13th, 18th.

Sun with no spots: April, 1911, 18th, 20th; May 12th, 19th, 19th; June 8th, 13th, 14th, 15th, 19th, 20th, 28th; July, 6th, 18th, 20th, 21st, 26th, 29th; August 22nd, 25th.

29th, 30th; September 11th, 12th, 15th 16th, 18th, 22nd, 28th; October 9th, 12th, 14th, 16th, 18th; 22nd, 25th, 28th; November 13th, 16th; December 2nd, 5th, 6th, 7th, 8th, 13th, 19th, 26th, 27th; January, 1912, 3rd, 10th, 15th, 19th; February 3rd, 8th, 13th, 19th, 24th; March 19th, 25th, 28th 29th.

Photographs taken: November, 1911, 22nd, 25th, 29th; March, 1912, 9th, 11th, 13th.

A very great amount of cloudiness during the fall prevented many observations being taken and also the opportunity for photographic work was small.

Respectfully submitted,

R. F. STUPART.

Director.

SESSIONAL PAPER No. 21

APPENDIX 'A.'

METEOROLOGICAL SERVICE,

ST. JOHN OBSERVATORY,

ST. JOHN, N.B., April, 1912.

R. F. STUPART, F.R.S.C.,
Director, Meteorological Service,
Toronto, Ont.

SIR,—I have the honour to present the annual report on the Observatory at St. John for the fiscal year ending March 31, 1912.

Meteorological Service.—The routine observations of the various meteorological elements have been made and recorded without interruption throughout the year as heretofore reported. The bi-daily observations forming part of the Canadian Series upon which the forecasts are based, have been telegraphed to Toronto daily at 9 a.m. and 9 p.m., Atlantic Standard time. No change has been made in the equipment or exposure of the eye-reading or electrical and other self-recording instruments, all are in most satisfactory condition.

Owing to the growing demand for copies of the daily weather bulletin, I was instructed to have them printed in place of manifolding on type-writer which restricted the issue and did not always give most legible copies, a much greater number are printed in the time required for our former limited issue, they now present a greatly improved and readable appearance. Copy is prepared and sent to the printer immediately after receipt by telegraph from the central office of the reports from selected coast and inland stations, forecasts and synopsis of prevailing conditions.

After printing, the bulletin is publicly posted and distributed through the mail. Copies are supplied to and fully published by the evening papers with the addition of a brief summary of the local meteorological conditions. The morning forecasts are daily telephoned to St. Martins and posted in the telephone exchange there.

Upon receipt of storm signals messages from Toronto, they are immediately repeated by telephone from the observatory office here to the display stations at St. Martins and Point Lepreaux.

The wind station at Point Lepreaux has an excellent exposure and the records from this part of the Bay of Fundy most valuable. The automatic records are weekly sent here where they are tabulated and analysis made.

Requests for information from the office records by mail, telephone and personal calls are annually increasing and at times entail considerable extra work, signed copies of this data being frequently asked for by shippers, transportation companies, contractors and others, in many cases adjustment of claims depend upon the information furnished.

As in the past the press obtain information for publication during periods of stormy or extreme weather conditions.

The New Brunswick telephone company continue the courtesy of telephoning the Toronto forecast to all their offices at 6 o'clock each morning where they are displayed on forms supplied by the Meteorological Service. This wide and valuable dissemination of the forecast is done gratuitously by the telephone company and is greatly appreciated by residents of the various localities where the forecast would in no other way be available.

Time Service of the Maritime Provinces.—Determination of clock errors and rates have been made nearly every clear night by observation with the transit telescope.

The transit micrometer method of observing was used entirely, the observations and clock comparisons being recorded on the chronograph in the usual manner.

A pessler chambered level vial was fitted to the axis level of transit telescope to replace the vial supplied with the instrument by Troughton & Sims, which was not chambered, in consequence of this the bubble overlapped the scale when observing on extremely cold nights.

Time Signals.—The daily time signal has been sent over the Western Union wires throughout the Maritime Provinces for the two minute interval ending at 10 a.m. This signal is sent automatically by the transmitting clock which at the proper instant opens the line, gives the signal of arranged dots and pauses and then closes the circuit. Before sending this signal comparison with the Riefler standard sidereal clock is made on the chronograph and when necessary the transmitter is brought exactly to time by two small weights which are suspended by a thread from levers fixed to the armatures of electric magnets, under normal conditions one of the weights rests in front of the rod on a pan fixed to the rod about fifteen inches from the suspension of the pendulum, while the other weight is suspended slightly above the pan back of the rod, a switch outside of the clock case either drops the back weight on or lifts the front weight free of the pendulum, thus the time of the transmitting clock may either be accelerated or retarded at the rate of one and a half seconds per hour. As the deviation is always small but a few minutes is required to bring the clock to exact time.

At other times than 10 a.m. time signals upon request of mariners and others from various parts of the Maritime provinces, are frequently sent by telegraph or telephone from this clock, the beats from the relay being audible through long distance telephone.

Wireless Time Signals.—The apparatus at Camperdown, N.S., which automatically repeats the time signal from land line to wireless has proved satisfactory. Navigators equipped with the wireless pick up the signal, state that it is distinctly received and is most practical for checking the ship's chronometers.

Clocks.—The mean-time transmitting clocks and chronograph in office and their various electrical connections as well as the Kullberg and Riefler sidereal clocks in basement clock room are in excellent condition. The Riefler run under constant pressure and temperature continues to give most accurate results.

The electric clock in Halifax has been daily sent the synchronizing signal at 10 a.m., in case of wire trouble the signal was hourly repeated until satisfactorily received.

Owing to the removal of the Western Union's Halifax office, it was necessary to dismount this clock. A cement pier was built in their new premises and the arrangement of electrical connections with time ball considerably improved.

When dismounted the movement of this complicated clock was sent to the makers for a thorough overhauling and repair. Return signals are received from this clock, compared on chronograph with our standard mean-time and rarely show an appreciable difference.

While the clock was dismounted an attempt was made to daily drop the Halifax time ball from St. John, but owing to interference on busy wire, was not always successful, several failures resulting.

Watch and chronometer adjusters and others in Halifax have sounders on their premises connected by wire with the telegraph office and receive the 10 a.m. time signal.

Several additions have been made to the number of clocks which are hourly synchronized from the master clock in St. John., at a few outside places clocks are synchronized once a day.

I have the honour to be, sir,

Your obedient servant,

D. L. HUTCHINSON.

Director, St. John Observatory.

APPENDIX 'B.'

QUEBEC OBSERVATORY,
QUEBEC, April 27, 1912.The Director, Meteorological Service,
Toronto, Ont.

SIR,—I have the honour to submit my annual report for the fiscal year ending March 31, 1912.

The usual meteorological and astronomical observations were taken daily.

The correct time was given as heretofore, by means of the noon gun, the time-ball and by telephone.

Chronometers were also rated at the observatory.

In compliance with your request, I paid a visit to the experimental farm at Cap Rouge in June last, to set up meteorological instruments and give the necessary instructions to the superintendent; also in September to place and instruct him in putting up and adjusting a sunshine recorder.

As stated in a previous report, the time-gun which is fired from the citadel towards Levis, could not be heard in the city. I have now been informed by the Department of Militia that upon my suggestion, the gun will soon be placed on top of the wall facing the main entrance to the citadel, where there is a large open space, and from which place it will be easily heard in every ward in the city when fired.

The time-ball has been dropped in a satisfactory manner until the end of navigation season, when the old chain broke.

It was also found that certain repairs were necessary and a report was sent accordingly.

The time-ball is situated near the old observatory on the citadel, and is seen from ships anchored in the stream in front of the city, but not from the 'Louise' basin where all the steamers moor.

There is on the citadel, near the King's bastion, a tower or building formerly used as a powder magazine, which commands the city and harbour.

If the time-ball was placed on top of that building and the gun as above mentioned, this part of the time service would then be nearly perfect.

I am informed that the military authorities also approve this change.

The whole respectfully submitted.

ARTHUR SMITH,
Director.

APPENDIX No. 11.

MARINE SCHOOLS.

OTTAWA, June 10, 1912.

A. JOHNSTON, Esq.,
Deputy Minister of Marine and Fisheries,
Ottawa, Ontario.

SIR,—I have the honour to submit the annual report of attendance at lectures, &c., given at the marine schools established at the various ports of the Dominion, under the supervision of the Marine and Fisheries Department.

There have been seven schools, at six of which lectures on Navigation and Seamanship were delivered during the winter, and one at Quebec where candidates were prepared for examinations for masters' and mates' certificates. The latter school was opened for two months, and twenty-two names appear on the attendance list, seven of this number being the only ones qualified as to the service required, passing their examinations. The total attendance at the lectures was 1,733.

There seems to be a gradual falling off in the number of attendance at the lectures as the subjects, although taken from the ordinary work which is pursued in the everyday routine on ships, both coasting and foreign, do not seem to appeal to the young seamen at present, as the lack of education prevents their understanding any of the subjects lectured on, and this probably accounts for the lack of interest in the work shown by the small attendance, and the fact that the lectures were not commenced as early as usual, owing to the possible changes in the personnel of the staff by the proposed re-organization of the examiners.

The result, I am sorry to say, is disappointing, and it will be noted that Vancouver seems to be the only place where the work of the department is appreciated.

The attached statement will show the number of lectures given, and the minimum and maximum, as well as average and total attendance.

I have the honour to be, sir,

Your obedient servant,

H. ST. LINDSAY,
Superintendent.

APPENDIX No. 14.

LIFE SAVING REPORT FOR 1912.

SIR,—I have the honour to submit the following report on the Life Saving Service for the season 1911-12.

NOVA SCOTIA.

Duncan's Cove.—Inspected September 22. Drilled crew in boat and with Lyle Gun, everything satisfactory.

On November 27, 1911, life boat went to the assistance of a disabled fishing boat. March 13, 1912, the schooner *Isleworth* was reported ashore at Chebucto Head, and the boat immediately put out to her assistance. A heavy sea was running with thick fog. On reaching the wreck it was found that the crew were preparing to land in their own boat. Lifeboat stood by until all were safely landed.

St. Paul's Island.—Crew constantly at practice.

Westport.—Boat went to assistance of German schooner *Mina* on February 8. The boat is unsatisfactory and notice has been given that the agreement will terminate on April 15, 1912.

Whitehead.—Inspected station on December 21st. Hugh Munro, the coxwain, is rather advanced in years, but still strong and active and capable of filling the position.

Seal island.—In July the slipway was damaged and repaired at a cost of \$85.

Scatarie island.—On September 19, at 3 p.m., a vessel was seen to be ashore at Main-a-Dieu, which proved to be the Norwegian barque *Tredesstrand*. The lifeboat was immediately launched and went to the scene of the wreck, arriving there about 7 p.m., but the fog was so thick that the wreck was not seen until 3 a.m. on the 20th. The lifeboat went alongside and took in five of the crew when a sea struck and capsized her. All hands managed to get hold of the boat and after drifting almost a mile were picked up by the tug *D. H. Thomas*. Then having righted their boat they went back to the wreck and rescued the remainder of the crew.

The boat was of the Beebe-McLellan self-bailing type, but I am of the opinion that they are not much good, as they are extremely difficult to right again when they once capsize. A new boat built after a design by the late S. C. Campbell was immediately sent off to Scatarie to replace the other one and it seems to be giving satisfaction.

Devil's Island.—Inspected station on September 22. Everything satisfactory.

Herring Cove.—Inspected station on September 22. Satisfactory. On March 13, the boat was called out to go to the schooner *Isleworth* ashore at Chebucto Head, but after pulling for some hours against a head sea, was forced to return.

Port Mouton.—Usual drills, &c., carried on during season.

Cheticamp, N.S.—I visited this place on September, 1911, with a view of seeing if I considered it necessary to establish a station. On my return I recommended that a station be established, equipped with a power lifeboat and a lookout house on a point about two miles from the town. This was approved and steps taken to establish a station early the following year as soon as the weather conditions would permit of building.

Richibucto, N.B.—A dwelling house was built at this station and the crew engaged permanently for the season of navigation, the crew consisting of a coxswain and eight men.

Canso, N.S.—Went to the assistance of the schooner *Rodora* on June 23, and took on crew.

Again on Aug. 16, 1911, they went to the assistance of the barque *Matilda* which was stranded.

I inspected this station and found everything in very good order.

Clark's Harbour.—Thos. Nickerson, coxswain, retired from the service, and Wm. D. Attwood appointed in his place.

Baker's Cove.—Various repairs were carried out at this station and on November 15 the schooner *Reliance* went ashore in a gale of wind. The crew and their effects were landed by the life-boat.

Little Wood Island.—This is a permanent station equipped with a twin-screw Beebe-McLellan self-bailing boat, and during the year has rendered assistance to numerous fishing boats in distress. An auxiliary sloop was hired for the winter months, and it is intended to place a schooner of about 70 tons at the station.

On February 27, a new captain and crew were appointed. I inspected the station two or three times during the year and each time found everything in good order.

Pictou Island.—\$230 was expended building new launchways.

Blanche.—During the evening of June 16, 1911, the steamer *Ben Urn* ran ashore on Half Moon rocks in a dense fog. The crew was saved by the life-boat in conjunction with the ship's boats.

On July 3, during a thick fog, signals of distress were heard. The life-boat's crew went out and found the SS. *Bridgewater* lost her bearings, and were piloted into safety by the life-boat.

Telephone communication is in the course of erection at this station.

Consecon, Ont.—John McLean, coxswain, resigned, and Everett P. Cox appointed in his place.

Priest Pond, P.E.I.—The rocket brigade increased from 7 to 12 men to make a complete crew. In August, 1911, silver watches were awarded to J. McDonald and Jos. McEachern, two of the rocket brigade, for heroic conduct in rescuing a fisherman in a very heavy sea. These watches were presented to the men in October by Mr. Lord, inspector of life saving stations in Prince Edward Island.

On November 15 the brigade received a call from Souris 12 miles distant where a schooner was ashore and breaking up. The distance of 12 miles the brigade covered in about 3 hours which was good work owing to the roads being very heavy. On arrival they found the crew of the schooner had been rescued by the lifeboat and their assistance was not required.

Charlottetown, P.E.I.—In May the boat went out to the assistance of a schooner on a shoal. The schooner was got off.

On October 19 a schooner was reported in distress and the crew went to assist but their services were not required.

Cascumpeque, P.E.I.—A new coxswain was appointed at this station in place of John Champion who took charge of the Alberton rocket apparatus.

Souris, P.E.I.—On November 15, 1911, the schooner *North America* went ashore in a heavy gale, and the crew was rescued by the lifeboat.

Collingwood, Ont.—The usual drills were performed. Nothing of importance occurred at this station.

Long Point, Ont.—Station commissioned on April 1 and a telephone line was constructed from the station into the Big Creek Shooting Co's buildings, the work being done by the crew.

SESSIONAL PAPER No. 21

On November 21 two steam barges went ashore on Long Point, and the crew of the lifeboat went to their assistance and eventually both were floated off without much damage.

Port Stanley, Ont.—The usual drills were performed.

Goderich, Ont.—The usual drills were performed.

Point Pelee, Ont.—Station commissioned with a permanent crew for the season of navigation on April 1. Station inspected twice by Captain Robinson of *Vigilant*.

Toronto, Ont.—The usual drills were carried out. Mr. William Ward, the coxswain, died after nearly thirty years in the life-saving service. Frank Ward, his son, was appointed in his place. The question of establishing a permanent and more effective station was discussed.

Southampton, Ont.—Usual drills carried out. Improvement of station contemplated.

Kincardine, Ont.—Usual drills.

Cobourg, Ont.—Usual drills were carried out.

Port Hope, Ont.—The usual drills were carried out.

Escuminac, N.B.—Slip way was built at a cost of \$15. Usual drills carried out.

Banfield Creek, B.C.—This station is in commission all the year round; until March with a full crew, when it is reduced for the summer season.

A new Standard motor engine has been placed in the boat and the boat given a thorough overhaul.

Clayoquot, B.C.—Station in commission from November to March. In October slipway was repaired at a cost of \$100. The station was inspected by Mr. Gordon Halkett, who reported well on the crew.

Ucluelet, B.C.—This station was commissioned in November with a new crew and Wm. L. Thompson as coxswain.

On October 13, a gasoline launch was reported in distress. A volunteer crew assembled and went to her assistance, saving the crew and boat.

In February, 1912, while taking stores to some starving settlers the lifeboat capsized with the result that one of the crew, Toralf Wingen, lost his life in spite of heroic attempts of the coxswain to save him. The coxswain, Mr. Thompson, was awarded a gold watch in recognition of his bravery in endeavouring to save Mr. Wingen.

SABLE ISLAND.

SABLE ISLAND, December 16, 1911.

CHAS. H. HARVEY, Esq.,
Agent Marine and Fisheries,
Halifax, N.S.

SIR,—I beg to submit the following report for the current year on repairs, equipment, patrol and other information relating to the year's work.

WRECKS.

No known wrecks have occurred during the year. The stranded steamers *S. Kidley* and *Heimdal* are in not much worse condition than when last reported on.

BOATS AND APPARATUS.

A new Beebe McLellan self-bailing lifeboat was received at the first of the year. This boat was painted and fitted on the boat carriage at No. 1 station. The Beebe surf boat which it replaced was placed in the No. 4 boathouse north side.

No change was made in the rest of the life saving equipment and it is all in good condition.

PATROL.

The island was patrolled 63 times in the morning and 28 times in the evening.

STAFF CHANGES.

Gustaf Soderburg, keeper of No. 4 station for ten years and a member of the staff almost continuously for twenty-five years, owing to ill health resigned and was succeeded by James A. Ritcey, April 5.

Wm. Byrne, the carpenter for seven years, resigned in September, his place is not filled at this date.

REPAIRS, ETC.

The new 'Beebe-McLellan' lifeboat and two surf boats were painted two coats.

Repair of shingles and new door in warehouse at No. 1, and new floor in barn now.

Seven miles of new telephone wire stretched and one mile new poles were erected and various repairs to line.

NO. 3 STATION.

Dwelling general repair. Raised and concrete blocking placed under it.

Concrete cellar wall and a water tank of 1,400 gallons capacity built under it.

FARMING.

At No. 1 about the usual quantity of vegetables were raised, although the season was very warm and dry. 150 bushels mangels, 16 bushels carrots and 6 bushels of parsnips, 15 bushels beets, 75 bushels potatoes, 10 bushels turnips.

3 GEORGE V., A. 1913

English hay was below the average about 12 tons. Wild hay was not equal to a good year, but about 120 tons were made and stored over the whole island.

Stock killed—

8 beeves weighing 5,583 lbs.
7 calves weighing 420 lbs.
6 hogs weighing 900 lbs.

Stock on hand—

68 head horned cattle.
30 working horses.
2 imported mares.
2 imported stallions.

BOARD OF STEAMBOAT INSPECTION, CHAIRMAN'S REPORT.

OTTAWA, October 10, 1912.

To the Deputy Minister of Marine and Fisheries,
Ottawa.

SIR,—I have the honour to submit the annual report of the Steamboat Inspection Service of the fiscal year ending March 31, 1912.

It contains the work of the service during the time stated, giving the names and number of steamboats inspected in the several divisions and their gross tonnage, with the amount of dues collected from steamers employed in the carriage of passengers between Canadian ports but registered elsewhere than in Canada, and the amount of fees received for engineers' examinations, with the names of the candidates and their grade of certificate, &c.

INSPECTION STAFF.

Owing to the increased work in this branch, it was found necessary during the past year, to increase the inspection staff, Mr. G. M. Arnold being appointed steamboat inspector for the Toronto district, and Mr. J. M. Martin receiving the position of clerical assistant and ships tackle inspector at St. John, N.B.

In the month of January of the fiscal year ending March 31, 1912, the department lost the services of Hull Inspector, Mr. C. Seeley, of Halifax, N.S., and of Mr. L. Arpin, steamboat inspector, Montreal, the former dying on January 29, and the latter resigning on the 31st. Arrangements have been made towards filling the positions vacated.

BOARD MEETINGS.

In order to meet the steady growth of the steamboat inspection work in the Toronto Division, it was found necessary to appoint a new inspector. A board meeting was held for this purpose at Toronto from March 18 to 23, to examine Mr. George Medland Arnold, for the position of steamboat inspector. This gentleman having successfully passed the examination, was appointed.

The Shipping Federation of Canada having requested that certain changes be made in the rules governing steamboat inspection, a board meeting was convened on January 30, in the office of the chairman at Ottawa, and sat till February 1.

The first request to be considered was that discrimination at present existing against Canadian registered foreign trade cargo vessels be removed. The decision of the board was that the question was covered by Act of Parliament and that the board had no jurisdiction in the matter.

The second matter brought forward by the Shipping Federation was that provision be made for reciprocal inspection in so far as Canadian and British registered vessels are concerned. The board was of the opinion that to have such reciprocal inspection, it would be necessary to adopt the Board of Trade regulations, which led to a discussion as to the advisability or otherwise of subjecting marine boilers to an annual hydrostatic test of 50 per cent in excess of the working pressure. The board found that where boilers were large enough to be entered and efficiently examined, a hydrostatic test of fifteen pounds per square inch above the working pressure may be permitted at the annual inspection, if considered by the inspector sufficient in the interests of safety. No decision was arrived at regarding the reciprocal inspection.

Whilst the board was sitting, the question was brought up of service required to permit of engineers receiving marine certificates. It was decided not to recommend any changes in the qualifications as at present required.

Collingwood Division.

On May 17, 1911, the SS. *Emperor*, of Midland, broke the main engine crankshaft, bed plate and thrust bearing braces on Lake Huron, the steamer was loaded with coal and with the assistance of a tug continued the trip to Fort William, unloaded and returned to Collingwood for repairs. Cause of accident was defective material in centre of shaft.

On June 23, 1911, the SS. *Turret Chief*, of Newcastle, G.B., while under way upward bound on Lake Superior, had a tube in starboard boiler burst. Casualties, one man killed and another badly scalded.

On November 17, 1911, the SS. *Turret Chief*, of Newcastle, G.B., upward bound on Lake Huron went ashore on Cove island, in a gale, was got off and repaired at Collingwood. No casualties.

On November 22, 1911, tug *Ahtek*, of Sault Ste. Marie, burnt and sank in the vicinity of Richards Landing whilst proceeding from John Island to Sault Ste. Marie. Cause of fire unknown. No casualties.

On November 25, 1911, the SS. *Maud D*, of Toronto, was burnt at the dock at Midland. Cause of fire unknown. No casualties.

On December 4, 1911, the SS. *Wanita*, of Toronto, was burnt at the dock, Burks Falls, total loss, cause of fire unknown. No casualties.

Kingston Division.

April 20, 1911, SS. *Senator Derbyshire*, proceeding from Oswego to Brockville, broke mainshaft at the thrust ring, new one fitted and the vessel proceeded.

May 2, 1911, SS. *Aletha*, of Kingston, when leaving Kingston for Picton, main stop valve broke, vessel drifted ashore opposite Kingston. No fatalities. Vessel was got off and repaired.

July 12, 1911, the SS. *Caspian*, of Kingston, bound up the Bay of Quinte went ashore above Northport, vessel was got off and repaired. No casualties.

August 6, 1911, the SS. *Rosalind C*, of Toronto, destroyed by fire whilst lying at the wharf at Callander, Lake Nipissing. No person aboard at time. Cause of fire unknown.

Montreal Division.

May 30, 1911, the SS. *Filgate*, of Montreal, while lying at the wharf at Valleyfield was totally destroyed by fire. Cause of fire unknown. No casualties.

Quebec Division.

May 31, 1911, SS. *Quebec*, proceeding from Montreal to Quebec, while turning in the Richelieu river at Sorel went ashore, causing the loss of her rudder. She was towed to Quebec and new rudder fitted.

June 28, 1911, the SS. *General Wolfe*, of Hull, G.B., foundered and became a total loss off Murray Bay after being in collision with the SS. *Arranmore*.

July 22, 1911, SS. *Amethyst* went ashore on Hutton Head, Newfoundland, total loss. No casualties.

August 20, 1911, tug *Chieftain III*, proceeding from Quebec to Montreal, was in collision with the SS. *Hero* and sank. Four of the crew drowned.

September 15, 1911, SS. *Natashquan*, proceeding from Natashquan to Quebec, propeller shaft broke loosing propeller. The vessel was towed to Quebec and a new shaft and propeller fitted.

Nova Scotia Division.

April 7, 1911, SS. *Harlow* sunk in collision with ice, off St. Pauls island, returning from sealing trip. Vessel total loss. No casualties.

July 25, 1911, SS. *John Irwin* foundered off Isaacs harbour, vessel total loss, twelve lives lost.

November 15, 1911, SS. *Electra* ashore at Etang, total loss, no lives lost.

December 27, 1911, SS. *Kenwick* sunk after collision with SS. *St. Pierre Miquelon* two miles west of Country harbour. Vessel total loss. Three lives lost.

March 16, 1912, SS. *Bona Vista*, during heavy gale was driven ashore on Brier island. Vessel total loss. No lives lost.

New Brunswick and Prince Edward Island Division.

August 20, 1911, tug *Joseph*, while at work in St. John harbour fractured crank-shaft, new shaft fitted.

September 7, 1911, SS. *Sincennes*, whilst lying at the wharf at Coles island, caught fire, wood upper works totally destroyed. Cause of fire unknown. Two lives lost.

January 14, 1912, SS. *Hamton*, whilst laid up at the wharf, North End, sprang a leak and sank. The vessel was afterwards raised, it is presumed leakage caused by ice.

On January 18, 1912, SS. *Majestic*, whilst laid up for the winter, caught fire between decks, a considerable amount of damage resulting. Cause of fire unknown. No lives lost.

Manitoba and Northwest Provinces.

October 9, 1911, the tug *Gordon Gauthier*, proceeding from Blind river to Port Arthur, caught fire, and was totally destroyed. Cause of fire unknown.

British Columbia and Yukon Division.

April 1, 1911, Dominion Government dredge *King Edward* and stern keel tug *Firefly* in collision, when attempting to pass through the draw span of the North Arm bridge, Fraser river, suction pipe, and 'A' frame of dredge lost. Aboard the *Firefly* the boiler shifted breaking steam pipe. No casualties.

May 3, 1911, the SS. *Hazel Dollar*, proceeding from Everett, Wash., to Hankow, China, stranded on possession Point, Puget Sound. Extensive damage done, vessel repaired and overhauled in Seattle. Resumed voyage August 3.

August 27, 1911, leaving Mororan, Japan, stranded on Pomoshiri shoal near Diakoku island. Vessel floated and finished voyage to Hankow, discharged and proceeded to Shanghai to dry dock where extensive repairs were again made.

May 21, 1911, SS. *La France*, bound down the Yukon river, went aground on Twelve Mile rock, Thirty Mile river. During the following night took fire and burnt to water line. Total loss. No lives lost.

May 30, 1911, SS. *Amur*, proceeding from Victoria to Skagway struck a rock in Wrangel Narrows, serious damage to starboard bilge and tank top. Temporary repairs were made to Wrangel, proceeded to Skagway and discharged. Returned to Victoria and laid up, owners not intending to repair.

SESSIONAL PAPER No. 21

July 9, 1911, the SS. *Belfast*, of Vancouver, burnt to the water line at False Narrows, near Nanaimo, B.C., vessel laden with lime became a total loss, boiler and machinery salvaged. Cause of fire supposed to be spontaneous combustion. No lives lost.

September 17, 1911, *T. S. Venture* proceeding from Victoria to northern B.C. ports, struck heavily on a reef off Pender island, Johnston straits. Proceeded on voyage and on return to Victoria was repaired and returned to service.

October 12, 1911, tug *Hopkins* whilst attending fish traps off Sooke, Vancouver island, struck a rock, in fog off Simpson point and remained. Came off at flow of tide, returned to Victoria, was repaired and returned to service.

October 14, 1911, SS. *Princess Beatrice*, proceeding from northern ports to Victoria, stranded on Noble island, Christy passage, and remained. Was floated October 17, towed to Esquimalt. Extensive repairs made and returned to service.

October 22, 1911, tug *Noname*, during dense fog was in collision with SS. *Iroquois* of Seattle, U.S.A., off Sand Heads, Fraser river. Tug total loss. No lives lost.

November 14, 1911, tug *Chemainus*, lying at coal bunkers, Vancouver harbour, caught fire. Was scuttled to save hull and machinery, afterwards raised and towed to Chemainus where she was overhauled. Returned to service March, 1912.

November 17, 1911, *T. S. Henriette*, proceeding from Ketchikna, Alaska, to Vancouver, struck a reef off Whitley point, Dundas island, proceeded to Victoria, was repaired and returned to service.

November 26, 1911, SS. *Tees*, proceeding to ports on west coast of Vancouver island, struck a rock at Koksuttle arm, Kyuquot sound, damaging propellor and twisting rudder stock. Was towed back to Victoria, new propellor and tail shaft fitted, also new rudder and stock. Returned to service.

January 19, 1912, tug *Storm King* struck a rock on Joyce point, Lewis channel, and settled aft in thirty feet of water. The boiler shifted, fracturing main steam pipe. The vessel was afterwards re-floated and repaired. No casualties.

I am sir,

Your obedient servant,

FRANK McL DNNELL,
For Chairman Board of Steamboat Inspection.

Hon. J. D. HAZEN,
Minister of Marine and Fisheries.

SIR,—It is with continued satisfaction that the commissioners submit their report for the year ending December 31, 1911, for your approval. Notwithstanding the fact that the business for the previous years was the largest in the port's history, that done in 1911 was still greater.

This is not alone true in the sense of actual ship tonnage and trade volume, but also true in a constructional sense as the growth of the port in facilities and equipment during the past year has also exceeded in extent the same work done in any single previous year.

The commissioners, however, realize that Canada's growth is proceeding at a faster rate than the facilities to take care of her business are being created.

This fact alone accounts in a large measure for the serious problem of congested business which is met with at certain periods of the season. In this connection it must not be forgotten that converging at the port of Montreal are all the railways of Canada, the entire inland water-borne traffic, the ocean and maritime tonnage, the whole of which must be taken care of simultaneously with the construction and creation of much needed new facilities.

NEW STEAMSHIP LINES AND STEAMSHIPS.

During the past year the official inauguration of the new Cunard line service between London and Montreal, calling at Southampton, took place on June 3, with the arrival of the SS. *Ascania*. It is a matter of no little pride to record the fact that the oldest transportation company on the north Atlantic has been added to the shipping facilities of the port. A new service of steamships between the port of Montreal, New Zealand and Australia was also established by the New Zealand Steamship line.

The SS. *Toiler*, the first oil freighter in American trade, was also added, while the new Allan liner *Scotian* and White Star liner *Teutonic* were in service throughout the season.

MARINE INSURANCE RATES.

This object has been repeatedly brought to the attention of the commissioners with a view of obtaining some relief in a lower tariff on hulls and cargoes.

The president proceeded to Europe in May on the invitation of the minister to discuss this question with Lloyds in London. A carefully prepared statement showing the improvements to the channel, the modern aids to navigation installed and the constant reduction in number of accidents had already been presented to a special conference of underwriters held on March 8, at the 'Royal Exchange.'

The attitude of the underwriters was fair and generous with a hesitancy to declare anything definite until the experience of the route would justify the consideration of a re-adjustment of rates.

RETIREMENT OF MR. AIME GEOFFRION, K.C.

Mr. Aime Geoffrion, K.C., retired as counsel of the board, and was replaced by the Hon. A. R. Angers, K.C.

TRIP TO QUEBEC.

On the invitation of the Quebec harbour commissioners, the three members of the board, accompanied by the Deputy Minister of Marine and Fisheries, proceeded to Quebec on the tug *Sir Hugh Allan*, and were royally entertained by their Quebec confrères. An enjoyable day was spent in inspecting the different works in progress, including the Quebec bridge site.

Luncheon was served on board the government steamer *Druid* and dinner was offered the Montreal commissioners at Kent House in the evening.

UNVEILING MONUMENT TO HON. JOHN YOUNG.

October 4 His Excellency Lord Grey, the Governor General of Canada, unveiled the monument erected on Custom House Square by patriotic fellow citizens.

ST. HELEN'S ISLAND WHARF.

An agreement was entered into between the commissioners and the city of Montreal, whereby was constructed at the island a permanent ferry wharf. This new wharf is leased to the city for a term of years at a moderate annual rental.

NEW OFFICE BUILDING.

The growth of the grain business and traffic departments necessitated greater office accommodation, centrally located on the harbour front.

A site was consequently selected and a suitable office building erected for the accommodation of the different outside staffs connected with these departments. The size of the building is too great for the present needs of these staffs, so half the building has been leased to the Grand Trunk Railway Co. for its wharf traffic offices, and also to the Great Northern Quebec Railway Co.

TAXATION BY THE CITY.

During the year the civic authorities included in the civic assessment role the harbour property, upon which a value of \$18,612,150 was put. The annual tax on a basis of this valuation would mean an annual assessment on the harbour revenue of \$270,668.50.

As the harbour commissioners are only trustees for the Dominion government and the property taxed by the city belongs to the Dominion government, there seems to be little justice in the movement to tax Canada's national port. As the harbour revenue raised on the port's business now barely covers the interest charges on the money borrowed from the government an assessment by the city amounting to an annual sum of \$270,668.50 if found to be legal, would have to be met by doubling the present wharfage traffic, which would efficiently diminish the port's power as a competitor for North American trade.

DRY DOCK SITE.

Constant work on this important piece of construction was carried on throughout the season. Sixteen and a half acres of reclaimed land out of a total of thirty acres were completed; foundations for the permanent basin walls on one side were laid, and the basin itself and approach channel almost completed to the required depth.

Unless unforeseen conditions arise the commissioners look forward to the arrival of the floating dock during the summer of 1912. This will give to the St. Lawrence

SESSIONAL PAPER No. 21

a dock capable of lifting a ship of 25,000 tons, or simultaneously repairing three smaller ships, virtually making three dry docks out of one. On the site adjoining the floating dock a complete ship repairing plant is to be erected, and an ultimate industrial development employing 2,000 men will be established.

ELGIN BASIN SEWER.

This nuisance caused by the emptying of one of the city's sewers into the Elgin basin, was, after repeated conferences with the city controllers, removed by an agreement with the city to close the sewer and divert the flow of sewage back into the Craig street tunnel at an estimated cost of \$150,000, the harbour commissioners and the city to pay half the cost of the construction and the city to take legal action to settle the question of responsibility.

In the mean time the work will be done, the nuisance removed and the court will decide the question of payment on the merits of the case presented. The time is fast approaching when the health of Montreal's citizens will demand a more modern treatment of the whole sewage question. Navigable rivers and harbours are not the proper places to discharge the sewage of great cities.

LIFE SAVING.

The usual distribution of life saving appliances, life buoys, poles, hooks and ladders at convenient places along the quays, and the weekly inspection of same, was carried out with care and regularity.

ROAD CLEANING AND SCAVENGING.

This department was kept unusually busy owing to the large amount of construction going on and performed its duties with credit.

PURCHASING DEPARTMENT.

This department takes care of the daily and immediate wants of all the other departments in the way of purchasing supplies and has had a satisfactory and successful year.

TRAFFIC DEPARTMENT.

Another very successful year has gone to the credit of this department which handles all the rail traffic within the harbour, except certain movements carried out by the railroad companies on their own allotments. With the completion of the high level railway as far east as the locomotive works, the rail terminals of the Harbour Commission now afford an all the year round rail connection for the transfer and handling of freight between the different railroads. Furthermore, to all industrial establishments choosing the east end for their development the exceptional opportunity is afforded whereby the cars of all railways have access on equal terms to and from their workshops, affording a 12 months' continuous freight service. This will make possible the creation of a large winter freight terminal, whereby all the harbour sheds may be turned into a collecting centre for the distribution of freight during the winter months. The central position of these sheds, in the heart of the city, accessible to all railways, and shortening the cartage, should develop into one of the most economic distributing points in Canada.

HARBOUR YARD AND LOCOMOTIVE HOUSE.

The present location of the harbour yard on Papineau ave., where large quantities of stores are kept, has always been inconvenient from its isolation and distance from the work as a distributing point.

3 GEORGE V., A. 1913

With the railway extension along the harbour front, the commissioners were able to select a new site adjoining harbour property and connected by rail with all parts of the river front. The purchase of 76,000 square feet of land was deemed advisable and the selection was made of a lot having a frontage on Notre Dame street of 385 feet and a frontage on the harbour of 399 feet.

Here are being erected the new reinforced concrete carpenter and blacksmiths' shops, machine shops, storehouses and offices. It is expected that considerable economy in time, handling and distribution will be affected by this change.

Here also is being erected a reinforced concrete locomotive house and repairing plant for the Traffic department, with coal towers and water supply for its use.

A large area of land is still available from this lot for development and extension.

NEW PLANT.

A new tug, the *John Young*, built at Sorel; and the *Beaver*, purchased from the Gilbert Company, were added to the towing fleet, as were also the dredge *Premier* and a 'drill scow.'

A new elevator hoist, capacity 15 tons, was erected at sheds Nos. 7 and 9 for the convenience of loaded teams to and from the upper stories of the sheds.

The ice-breaking tug *Sir Hugh Allan*, built at Barrow-in-Furness, by Vickers, Limited, arrived in June, having crossed the ocean under her own steam. This boat is the most powerfully engined now on the St. Lawrence, and is especially designed for clearing the basin and river of ice in the early spring and affording assistance to ships when necessary.

FLOATING CRANE.

This powerful lifting apparatus had the busiest year in its history and was constantly employed handling heavy freight which otherwise would have been shipped via a different port.

APPLICATION FOR NEW PERMANENT SHEDS.

The demand for increased first class accommodation greatly exceeds the present capacity of the harbour. To meet this as far as possible, the construction of an additional shed on the Victoria pier was commenced, and the erection of two permanent concrete sheds on the Tarte pier was undertaken, all of which have either been leased or spoken for by different shipping interests.

NIGHT NAVIGATION.

During the entire season the efficient buoys and lighting of the ship channel was much appreciated and contributed greatly to facilitate the arrival of incoming steamers and relieving congestion.

CHANNEL DEPTHS.

An unusually dry season—the dryest in fifty years—caused no little anxiety to ship-owners, but fortunately the low water depths of the channel, though causing much inconvenience, resulted in no casualty.

CHANNEL SWEEPING.

As usual, the ship channel within the harbour and the several basins were thoroughly swept in the spring and again in the fall, showing the depths to be well maintained.

FIRST VESSEL TO ARRIVE.

The SS. *Royal George*, Captain Harrison, arrived from sea on April 29, 1911.

GRAIN TRADE.

Work on harbour commissioners' grain elevator No. 2, capacity of 1,750,000 bushels, was vigorously proceeded with during the season. The capacity of this elevator has been increased to 2,600,000 bushels.

FLOATING ELEVATORS.

It will be remembered that at the earnest solicitation of the Montreal Corn Exchange Association, these elevators were acquired by the harbour commissioners two years ago, and have done good service in assisting in handling grain from barge and lake carrier to steamship.

PAYMASTERS' DEPARTMENT.

The business of this department has naturally grown with the busy constructional programme under way. Periodical inspection by the commissioners' auditors has revealed a satisfactory and efficient system administered.

FIRE PROTECTION.

Throughout the season special care has been taken to maintain the efficiency of all reel stations and equipment, the fire tug *St. Peter* being in commission night and day.

Through the equipment of the Canadian Pacific railway tug *Cruiser* with fire and salvage pumps, and the addition to the Sincennes-McNaughton fleet of fire-fighting apparatus, the port now has better fire protection than ever before.

WIDENED PORTION OF COMMON AND COMMISSIONERS STREETS.

During the year judgment was rendered declaring that the widened portions of Common and Commissioners streets from McGill streets to Berri street was harbour property, and 200,000 square feet are available for further development and expansion which will soon be needed.

An agreement is being come to giving the use of this portion of the street to the city on an annual lease till required by the harbour commissioners, subject to six months' notice to cancel by either party.

HIGH LEVEL RAILWAY.

From the Victoria pier to the Racine pier, a distance of $4\frac{1}{2}$ miles, there now exists a high level railway giving a 12 months' service. All approaches to the wharfs east of the Victoria pier are now by subways, thus separating as far as possible the rail and the wheel traffic.

STRIKES.

In June a protracted strike movement was prevalent in British ports, the effect of which was felt to a considerable extent by St. Lawrence shipping, sailings being altered and business congested and passengers much inconvenienced.

In November, just at the close of the season, a strike broke out among longshoremen in the port, but was settled by friendly negotiation in two days.

WINTER USE OF STEEL SHEDS.

The commissioners have always hoped that the railways would be able to make the harbour front in the centre of the city with its fine wharf and warehousing sheds the assembling point for the distribution of winter freight. These sheds are now accessible to all railways throughout the winter continually by means of the completed high level tracks, which will afford the merchants a very much more central freight depot during the winter months than heretofore.

A start was made by the Canadian Pacific and Grand Trunk Railway Companies, who used sheds Nos. 7, 8, 9 and 11.

BOUNDARIES OF HARBOUR.

In the spring of 1909, Messrs. Joseph Rielle and J. P. B. Casgrain were instructed to survey, define and map the boundaries of the harbour of Montreal as constituted by Act of Parliament.

This very important work extending over two years has been completed in a very satisfactory and creditable manner, so that the port authority now has in its possession a complete set of accurate plans, covering sixteen miles of river front on either side of the river, in accordance with the amended Act extending the harbour limits.

GENERAL.

In creating the high level railways the problem of supplying adequate storage space for cars is one which makes the designing of an industrial harbour difficult and complex. Nevertheless, several sites will be available for the erection of large storage warehouses accessible to all railways, teams and vehicles, and fitted out in the most modern way, for the conservation of perishable products, and the assembling in Montreal of reserve cargoes for the ships.

The commissioners have again to acknowledge their appreciation of the loyal, effective work done by the different departments and their staffs that during the busiest year in the port's history have loyally worked together in an effort to achieve for Canada the prestige of possessing one of the best equipped sea-ports in the world.

To all the public bodies whose advice has been frequently sought and cheerfully given, the commissioners desire to express their grateful thanks.

Respectfully submitted.

REPORT OF THE SUPERINTENDENT OF RAILWAY TERMINALS FOR
THE YEAR 1911.

DAVID SEATH, Esq.,
Secretary.

DEAR SIR,—I beg to submit for the information of the commissioners a report of the operations of the Traffic Department during the year 1911.

WINTER OPERATIONS.

The quick-acting gate installed in the flood wall at the McGill street opening gave a continuous service to and from the wharf during the winter. This gate can be opened or closed in less than three minutes and during the high water period it was found of great advantage. The winter's business consisted of the steamship freight from West St. John for the Canadian Pacific railway, local freight for loading and unloading on the wharf and transfer business from both the Grand Trunk and Canadian Northern Quebec Railway companies.

As compared with last year this business shows an increase of over 45 per cent.

CAR HANDLING.

On April 29 we received the first cars of export freight of the season. The car receipts during the year were the greatest in the history of the department, giving an increase of 16 per cent over last year.

The traffic was exceptionally heavy the whole year round, no midsummer slackness being noticed, and every month of the season of navigation showed an increase over the previous year. The increase in shed car handling is not so noticeable, presumably, owing to the shifting to the east end of the harbour of two of the steamship lines operating from the sheds at the west end last year.

The interchange of cars between the railway terminals at the east and west ends of the city, via the harbour tracks, is constantly making gains; this year's business more than doubled that of 1910.

CARE OF PLANT.

The commissioners' five locomotives were sent to the Montreal Locomotive Works at Longue Pointe for general overhauling during the closed season and worked throughout the season of navigation, the minor repairs being effected as required by the commissioners' staff under rather trying conditions, being constantly exposed to the vagaries of the weather, which made work of this kind exceedingly difficult at times. The completion of the locomotive house will be of great help to this branch of the work.

IMPROVEMENTS AFFECTING THE TRAFFIC DEPARTMENT.

The harbour improvements affecting the operation of the railway traffic which were begun last year were proceeded with during this season. During the winter months steel bridges were erected at all ramps on the wharf from sections 19 to 47, replacing the temporary wooden structures.

The double track on the railway embankment was extended from section 47 to 55 (Molson's Creek) and the high level embankment, which last year had been built as far as section 55, was continued to Racine Pier, section 62, upon which a single track was laid down but was not put into service this year owing to the lateness of the season when it was completed.

This extension will enable us to give a railway service to the industries located near the river front at the east end of the city and, without a doubt the business that will be derived therefrom will, within a short time, considerably increase the revenue of this department. This also supplies a connection with the dry-dock site for the

SESSIONAL PAPER No. 21

railway traffic. The Canadian Northern Quebec railway erected an overhead bridge, crossing Notre-Dame street at section 55, and the harbour tracks were elevated to connect with their tracks, thereby doing away with the level crossing.

A spur siding was put in at section 48 connecting the high level tracks with the low level wharf and was found very useful for the winter's business.

GENERAL REMARKS.

The railway business has attained such proportions as would warrant serious consideration being given to its interest, and from present indications we may look forward to a larger increase in the volume of business during the coming season of navigation than at any other time since the organization of this department. It would therefore be a matter of expediency to consider, in the future schemes of harbour improvements, the immediate relief of traffic congestion. To this end it would be necessary to object firmly to any proposition that will tend to eliminate existing facilities or prevent future development of accommodation for the operating of railway business.

We look with pride to our record in handling the traffic in the past, and to keep up the standard of efficiency we must be given track facilities compatible with the augmented car handling.

Yours very truly,

J. VAUGHAN,

Superintendent of Railway Terminals.

REPORT OF THE HARBOUR MASTER OF THE PORT OF MONTRÉAL FOR THE YEAR 1911

OFFICE OF THE HARBOUR MASTER,

MONTREAL, January 31, 1912.

DAVID SEATH, Esq.,
Secretary Harbour Commissioners
of Montreal.

SIR,—I beg to submit, for the information of the harbour commissioners of Montreal, the following as my annual report for the year 1911.

Appended hereto will be found five comparative statements for the past ten years:—

1. Table showing the number and tonnage of all vessels that arrived in port.
2. Table classification of transatlantic vessels that arrived in port.
3. Table classification of vessels from the lower St. Lawrence and Maritime Provinces that arrived in port.
4. Table showing the number and tonnage of sea-going vessels belonging to the different nationalities that arrived in port.
5. Table showing the opening and closing of navigation, the first arrival and last departure of vessels, and the greatest number in port at one time.

It will be seen that 401 transatlantic vessels arrived in port during the past season, with a tonnage of 1,695,613 tons, an increase of 40,199 tons, from the previous year.

The arrivals from the Lower St. Lawrence and Maritime Provinces were 361 vessels, with a tonnage of 642,639 tons, an increase of 35 vessels and 67,831 tons from the previous year.

3 GEORGE V., A. 1913

Of inland vessels there arrived during the season 11,670 vessels, with a tonnage of 4,275,019 tons.

The combined Transatlantic, Lower St. Lawrence and inland tonnage, therefore, for the season, amounts to 12,432 vessels, with a tonnage of 6,613,271 tons, an increase of 52,250 tons, from the past season of 1910.

A great many vessels took advantage of the still water basin, sections 12 to 19, to lie over during the winter of 1911-12. In addition to the commissioners fleet, 58 vessels were so wintered. No charge was made for this privilege.

The whole respectfully submitted,

JAMES McSHANE,
Harbour Master.

SESSIONAL PAPER No. 21

REPORT ON THE WORKS FOR THE IMPROVEMENT AND MAINTENANCE
OF THE HARBOUR OF MONTREAL FOR THE YEAR 1911.

F. W. COWIE, M. INST. C. E., CHIEF ENGINEER.

MONTREAL, February 1, 1912.

DAVID SEATH, Esq.,
Secretary, Harbour Commissioners of Montreal.

DEAR SIR,—I have the honour, by direction, to present the following annual report on the operations for the improvement and maintenance of Montreal harbour during the year ended December 31, 1911.

The assemblage at Philadelphia, Pa., in May, 1912, of the 12th International Congress of Navigation will mark a distinctive point in the advance of navigation interests in North America.

The attention of those most celebrated and skilful, throughout the world, engaged on the great questions of navigation and commerce, will be focussed at that international gathering on all important interests affecting the progress of inland and maritime navigation in North America.

The port of Montreal and the ship channel to the sea may furnish to that congress a unique picture of the effect of improving navigation and its resultant bearing on one of the most important routes of maritime commerce in the New World.

It would appear fitting, therefore, that to the members of the International Congress of Navigation a special report of the Montreal Harbour Commissioners should be presented, giving an outline of the history of the development of the port and its progress up to the present time.

Illustrations are also given showing Montreal Harbour in its undeveloped stage in 1830 and again in its present condition in 1912 showing the extensions in progress.

THE DEVELOPMENT OF THE PORT OF MONTREAL.

THE PAST.

The Harbour in 1824.—The results of determination, skill and public spirit, in connection with the development of Montreal harbour, may be given in a summing up of the physical conditions and steady growth, from 1830 up to the present time.

It will be eighteen years yet before the harbour may celebrate its centennial. In 1930 it may be expected that a memorial may be proposed to commemorate the development of 100 years, and it would appear fitting that it should be placed on the height of St. Helen's Island, 130 feet above the river, where overlooking the full extent of the port, it would, from the city, crown a vista of that beautiful city park.

It would be hard to imagine a more hopeless outlook than existed in the Harbour of Montreal, as indicated on Bouchette's plan of 1824.

The first Lachine canal was only completed in 1825, having a depth over the sills of 4½ feet, and is not shown on that plan.

Two stone windmills marked the progress of industrial development to the westward of what is now McGill street. They were situated on the top of the open beach. The Grand Trunk Railway Company's elevator now stands on the site of the water front of 1824.

A small wharf 200 feet long existed, providing a depth of water of 9 feet, in the position of the flood wall opposite the present harbour commissioners' office. Another irregular wharf known as Berthelette's wharf existed between the harbour commissioners' office and the Custom House.

From the Little River, now the Custom House, downward, the beach was unimproved except by the construction of sloping roadways down to the water.

The soundings shown on the early plan of Bouchette show interesting features in connection with the flow of the St. Lawrence. Shallow water, even points of exposed rocks, are indicated two-thirds of the distance across to St. Helen's Island. A much larger proportion of the flow of the river must have passed down the channel to the south of St. Helen's Island, in the early days before the Moffatt's Island wharf was built.

The size and type of the vessels trading to Montreal may be imagined from the fact that Lake St. Peter limited the draft to 11 feet, and even that depth was not available at any of the wharves in the harbour. The shipping trade of a whole season, 80 years ago, could have been carried in one or two of the modern ships which now frequent the port.

At that time inland navigation commenced at Lachine. Goods for Upper Canada were carted to Lachine and from there taken up the Haldimand canals in bateaux about 35 feet long and 5½ feet beam, built of the type of a modern raft boat with pointed bow and stern.

The improvement of the harbour was, in 1824, one of the important questions in Canada, as it is to-day.

The First Improvements.—On May 8, 1830, George Moffat, Jules Quesnel and Captain Robert S. Piper, R.E., were appointed commissioners under the Great Seal of the province of Lower Canada and signed by His Excellency the Governor at the Castle of St. Louis, for the purpose of carrying into effect an Act of the Provincial Legislature, 10 and 11 Geo. IV., Cap. 28: 'An Act to provide for the improvement and enlargement of the harbour of Montreal.'

The first works undertaken were for the construction of wharves, ramps, slips for Durham boats, a revetment wall and a bridge to Oyster Island, which was to be the principal wharf.

In their first annual report the commissioners stated that they confidently anticipated that the wharves undertaken, when completed, would be superior to any works of the kind in the province, and would enable the city of Montreal to be advantageously contrasted with any other in North America for beauty, solidity and convenience of approach by water.

The appropriation for the first three years amounted to 81,000 pounds sterling.

The annual report for 1833 was very brief. There was no appropriation for further improvements, the revenue was disappointing, and the dues were evaded. The staff was discharged, 'commencing with the engineer,' the secretary alone being retained, but at a reduced salary of 50 pounds per annum.

This was the first attempt made to improve the harbour of Montreal by a commission. The commissioners had the same faith in the future of the harbour and the courage of undertaking works which has characterized the administration from 1830 to the present time. The present harbour of Montreal rather justifies the modest boast of the commissioners of 80 years ago.

Schemes for harbour improvement.—The first plan of improvement was prepared by Robert S. Piper, R.E., in 1829. It was improved by Peter Fleming, C.E., in 1830, and carried out by the first commissioners.

Since 1830 some of the best engineers in Canada, the United States and Great Britain have from time to time been called upon to investigate and submit plans for improvements.

Messrs. Gzowsky, Keefer, Forsythe, Trautwine, Legge, Nish and Sippell all submitted schemes up to 1873. In 1875 Mr. Robert Bruce Bell, Major General Newton and Mr. Sandford Fleming were called upon to draw up a report and plan for the improvement of the harbour. The advice of the prominent business men of Montreal as to the needs and characteristics of the required improvements was taken, and it is interesting to note such evidence as that given by Mr. D. A. P. Watt, representing the shipping and grain trade, in the engineers' report of 1877:—

SESSIONAL PAPER No. 21

'Montreal' is the forwarding factor of producers and consumers of the continent.'

'The accommodation provided has always been poor and deficient, and in cases of a press of business the break down has been most lamentable.'

'Any scheme would be inadequate which did not provide the means of regular and continuous increase.'

'The water should be free from currents, and should, as far as possible, be of uniform height.'

'I deem it to be the duty of the harbour commission to go on, to keep not merely abreast of, but steadily in advance of all possible requirements, and to anticipate an increase of revenue by providing a liberal increase of accommodation.'

'If we could get space to discharge twice the number of vessels it would be ample accommodation for ten years to come.'

In 1880, James Shearer's scheme, designed by Bateman, was submitted, but turned down after a vigorous argument.

Mr. John Kennedy, for so many years chief engineer of the harbour commissioners, has not only designed but carried out many of the improvements now existing.

In addition to the above-mentioned and many other schemes proposed for the improvement of the port, the Montreal Flood Commission made extensive investigations and a valuable report on questions of great importance to the harbour.

The recommendations of this commission, consisting of Messrs. Perley, Kennedy, St. George and Keefer, included many propositions which have since been carried out to advantage.

St. Lawrence canals.—The Haldimand canals were the beginning of the St. Lawrence canal system. They were built by the Royal Engineers between 1779 and 1783, particularly for the transportation of military stores. These connected Lake St. Louis with Lake St. Francis and provided for 3-foot navigation. The depth was increased to 4 feet in 1804, by the enlargement of the locks.

The Lachine canal, projected as early as 1701, was finally undertaken by the Government of Lower Canada in 1821, and the first canal completed in 1825. It was at this time that the necessity of improving the harbour of Montreal first became pressing.

Between 1841 and 1848 all the canals were completed, providing for a 9-foot waterway from Montreal to the head of the Great Lakes. Sixty years ago, therefore, a vessel drawing 9 feet, almost the full depth available from Montreal to Quebec, could carry a cargo of 500 tons from the lakes to Montreal. Since that time the railways, the canals, the River St. Lawrence ship channel and the harbour of Montreal have had a race to keep pace with the growing commerce.

THE PRESENT.

Harbour authority.—The harbour authority is the harbour commissioners of Montreal.

Major George W. Stephens, president; L. E. Geoffrion, Esq., and C. C. Ballantyne, Esq., commissioners.

The commissioners hold in trust all harbour lands and areas from the Government of Canada and develop and administer according to authority received from His Excellency the Governor General of Canada in Council.

The jurisdiction of the harbour commissioners extends over the whole of the River St. Lawrence, with the exception of the ship channel, from Bout de l'Isle to above Victoria bridge, a distance of 17 miles. This area comprises all the land under water and the beaches up to high water mark, including the whole of Ile Ronde. Thus the whole of the water front on both sides of the river is under the jurisdiction of the commissioners, who hold it in trust and administer it for the Government of Canada.

The total water area is 12,000 acres.

The total land area, improved, is 200 acres.

The present harbour represents a development of 80 years.

The Type of Port.—The port type is a combination of a protected tidal basin, riverside quays and pier jetties. There is no rise and fall of tide, but the river level fluctuates to an extent of about 12 feet from high water in the spring to low water in the autumn. During the winter, due to ice shoves, the water occasionally rises to an extreme of 28 feet above the low water level.

An artificial embankment, parallel to the shore, about one and one-third miles long, protects the whole of the upper part of the harbour, including the entrance to the Lachine canal, from not only the currents of the river but from ice shoves. This constitutes the protected tidal basin in which the water rises and falls with the river level.

It has not been necessary to purchase any land above the high water mark on the beach, as all piers and wharves have been made artificially by building out into the shallow water and the berths formed by dredging.

From the entrance to the protected basin for about two and one-half miles downstream, to Hochelaga, the river channel is too much contracted to permit of the construction of piers or jetties, and this part of the harbour is developed as riverside quays, sufficient width for harbour purposes being obtained by building the quay-walls in deep water and filling in the area behind to give a width of from 100 to 250 feet.

Below Hochelaga, where the river section is larger, piers have been built out into the river, inclined so as to give an easy angle of approach from the ship channel.

Features of success.—The success of the port is due primarily to its early development, before any of the water front had been alienated from the Crown, and to its geographical, physical and trade situation. No rights or franchises stand in the way of further extensions, and the sentiment of the country is in favour of a continuance of the policy of retaining the whole harbour area in the public interests.

The facility of approach both by ocean vessels, inland vessels and railways to a convenient point of transfer makes Montreal almost unique, there being nothing in the way of close connection for the traffic from all points, and almost in the heart of a large and growing city.

Approach channel.—Almost every port has the problem of obtaining the necessary depth of approach and economically maintaining it. Montreal has the magnificent St. Lawrence with water free from sediment, where the channel can be made at almost any required depth with a reasonable expenditure and without the usual expense for maintaining it.

Ship Channel.—The construction and maintenance of the River St. Lawrence ship channel, which is a remarkable engineering feat, is now under the care of the Department of Marine and Fisheries of Canada. It was, however, from 1850 to 1888, the project and work of the harbour commissioners of Montreal.

There is at present a navigable channel from the sea to Montreal of 30 feet at extreme low water, although advantage has to be taken of the tide at Cap a la Roche, St. Augustin and the St. Thomas Flats below Quebec. The splendidly organized government dredging plant is, however, rapidly completing the work, so that the 30 feet draft will be available at all stages of the tide.

The Hon. L. P. Brodeur, Minister of Marine and Fisheries, announced to the Shipping Federation of Canada during the inspection trip of October, 1909, that the department had commenced the project of deepening the channel to 35 feet.

During the last few years the range lights, buoys and other aids to navigation of the St. Lawrence, as placed by the Department of Marine and Fisheries of Canada, have earned for the route the title of being the best lighted and safest river channel in the world.

Geographical situation.—Montreal harbour is also the terminus of the St. Lawrence Canal system. This canal system affords navigation between Montreal and

SESSIONAL PAPER No. 21

Lake Erie, a distance of 300 miles, for vessels of 14 feet draft and a carrying capacity of 2,500 tons. From Lake Erie to the head of Lake Superior vessels are able to navigate with a draft of 20 feet and a carrying capacity of 10,000 tons. The inland navigation centering in Montreal therefore commences either by the all-lake route of 1,600 miles and vessels of 14 feet draft, or by the lake-and-rail routes, using the 10,000-ton boats to Georgian Bay ports or Port Colborne, and connecting with Montreal either by short-haul rail route or the St. Lawrence canals.

Montreal is the natural seaport for seven months in the year of the Canadian provinces of Ontario, Manitoba, Saskatchewan and Alberta, and also of a large portion of the northwestern states extending from Chicago to St. Louis and Denver.

Physical features.—The season of navigation opens each year during the last week of April and closes during the last week of November. With the improved aids to navigation, and assured by the ice breakers of the Canadian government, navigation may be stated to commence on April 24 and close on December 1.

In 1907, after most of the buoys in the river had been removed, SS. *Dunelm*, of over 2,000 tons, navigated up the St. Lawrence to Montreal, arriving in port on December 13. The courses for navigation were only marked by the splendid system of permanent range-lighthouses and were quite sufficient for this vessel, navigating only during the day.

The clear, fine weather at Montreal and vicinity during the season is very favourable for navigation. Fogs are unusual and ships are enabled to pass between Montreal and Quebec without much delay. Smoke is occasionally experienced, but rarely causes delay.

In midwinter and early spring snow storms are very severe, but followed by clear, fine weather.

The prevailing winds are westerly, and as a rule blow almost straight down the river. Easterly winds with high barometer are usually of short duration, and more severe and frequently accompanied by rain.

The currents of the St. Lawrence between Quebec and Montreal vary from an extreme of 6 knots to a minimum of 1 knot, on Lake St. Peter. They are uniform, and in the design of the channel great care has been exercised not to produce cross currents, and for 100 miles below Montreal the stream is always downwards, even though there may be a slight tide.

The water level of the St. Lawrence, during the season of navigation, is highest in April and May, and gradually falls to its lowest level in October and November.

The following table gives a comparison of the monthly averages of the depth of water on the old No. 1 Lachine canal lock sill, with the corresponding depth in the harbour and ship channel.

Month.	Average 1899 to 1908.	Average 1909.	Depth in Harbour Channel.

The spring floods, due to the ice conditions, are occasionally extreme, and in former times damage was done in the city and harbour by these floods with their accompanying ice shoves. Since the construction of the guard pier the high level wharfs and the flood wall, the city and harbour have been practically free from such damage.

Construction conditions.—Construction operations are limited to the open season and average about seven months in the year. The weather is usually very favourable for construction, and delays are not frequent.

Labour conditions are of the best. Men are always available of a good steady type, ready to do a good day's work. The rates of pay vary, averaging \$2 per day of ten hours for labourers, \$3 for carpenters, \$3 for mechanics and \$4 for foremen.

Materials are also available at the lowest market prices. Timber of all kinds naturally reaches Montreal at the lowest rates. Stone is available on the ground. Sand of good quality may be obtained from the Ottawa river or from the St. Lawrence at Three Rivers and Sorel.

Water is taken direct from the river.

Two of the largest and best cement factories in Canada are situated on the harbour front, and cement of the best quality may be had at the lowest market price.

Manufactured articles of almost any description may be obtained in Montreal.

Types of construction.—The types of construction in a newly developed country cannot be expected to be on the lines of the superb and massive docks in Great Britain and Europe. Cheapness and speed in construction have governed all harbour construction up to within the last few years.

The fresh water insures the duration of wooden structures under water, and timber being abundant in Canada almost all wharf construction consists of wood.

Timber cribwork is still the type of quay-wall construction and within the last few years concrete has been adopted instead of wood for the part above water.

Grain elevators of the most modern fireproof types are now the standard, and fire-proof harbour sheds have lately been constructed on up-to-date designs.

All works, except the construction of buildings, are carried on departmentally, the harbour commissioners owning and operating a very efficient plant and organization for this work.

Dry dock accommodation.—In the Lachine canal at Montreal there are two small private dry docks capable of taking in river vessels up to a draft of 11 feet. The large new floating dock being constructed for Canadian Vickers, Limited, is expected to be installed ready for work in midsummer.

PORT FACILITIES.

Grain elevators.—There are three modern grain elevators in the harbour of Montreal, and three of the older type.

The harbour commissioners own and operate two elevators in the centre of the port, capable of taking grain either from inland vessels or from railway cars and delivering by direct conveyors to any of the fourteen of the regular line berths at the new double story harbour sheds.

The storage capacity of these elevators is 3,750,000 bushels. The handling capacity 1,350,000 bushels per day.

In the allotment of the berths at these sheds it is provided that when a berth is not in use other ships may take grain from the conveyors by arrangement with the harbour master.

The Grand Trunk Railway Company's elevator is also a large modern structure capable of receiving marine grain and is especially well equipped for car business. Its storage capacity is 1,000,000 bushels, and its handling capacity 350,000 bushels per day.

Conveyors extend to two special grain berths to which either regular liners or tramps must go to obtain their grain cargoes.

The other elevators are available for storage or export business in a smaller way as required.

A number of floating elevators are owned and operated by harbour commissioners, for the purpose of elevating grain from the inland vessels into the ocean steamers. This was the method generally in vogue until the construction of modern elevators, but now that a larger amount of grain is carried by steamers, the delays incident to waiting for and loading vessels by floating elevators have caused a rapid decrease of the work of these floating elevators.

Cattle shipments.—Cattle are almost exclusively lightered to the ship side from local stock yards on the wharfs convenient to the railways.

Dock sheds.—The harbour commissioners have lately constructed 14 steel double story fireproof transit sheds. These are all allotted to the regular lines. For vessels not having berths at the permanent sheds temporary structures are erected, but require to be removed in the winter to prevent their being damaged from floor and ice.

Lighting on wharfs.—The whole of the wharfs, piers and sheds are lighted by electricity, which enables business to be carried on night and day.

Floating crane.—The commissioners have equipped the port with a modern 75-ton floating crane, which is capable of unloading from the largest steamships and delivering on the wharfs or on cars any heavy packages up to its capacity.

Fire tugs.—There are no fire tugs maintained exclusively for the purpose. The commissioners' tug *St. Peter* is equipped with powerful fire pumps, and is available, when not on other service, for fire fighting. Two of the Sincennes-McNaughton tugs are equipped with fire-fighting appliances, and one of them is usually in port.

Tug service.—Harbour towing is done entirely by the Sincennes-McNaughton line of tugs. These tugs are powerful and handy and the tariff for towing and moving vessels is very moderate, and the tugs are always available day or night.

Railway traffic.—The commissioners operate the railway freight service on the wharves, and cars are handled at all times to and from the principal railways to direct connection with the sheds and the ships.

Pilotage.—The Department of Marine and Fisheries of Canada is the pilotage authority. Ships coming to Montreal take pilots at Father Point for Quebec and

change pilots at Quebec for Montreal. The pilotage service is efficient, and during the last few years, especially, has reached a high standard. The tariff is established by regulation.

Anchorage.—Ships may safely come to anchor opposite Longueuil, immediately below Montreal, but as a rule vessels proceed direct to the wharfs, as all vessels may moor free of port dues, charges for wharfage being made only on freight landed or taken.

Vessels and tonnage.—The number and tonnage of vessels in the port is as follows, according to the last report:—

		Reg. Tonnage.

Fresh water.—Excellent fresh water may be taken direct from the river at several points between Quebec and Montreal. Ships coming to Montreal take fresh water on their way up, and again on their way outwards at points indicated by the pilots, some distance below Montreal.

Provisions.—Provisions of all kinds may be obtained in Montreal at very reasonable prices.

Landing of passengers.—At Montreal the landing of passengers is very satisfactory. The regular liners dock at their own sheds and the Government Custom Service is most efficient. Passengers are landed with their baggage direct into the shed, whence with very little delay they may drive to their destination. The docks being in the centre of the city, the distances to hotels or to railway stations are short.

Ocean freighters.—Nothing could be better for the careful and speedy handling of ocean freights than the high level wharfs and modern sheds. Freights for the city are removed by carts, and goods for distant points are loaded direct to cars and start for their destination with great despatch. Freights for Toronto frequently reach their destination within 24 hours after the docking of the Atlantic steamships.

Stevedoring.—As a rule stevedoring is carried on directly under the agents of the regular lines. Some of the lines prefer to contract with regular stevedores for their whole business, and an excellent stevedore service may be obtained for any class of business coming to the port.

Types of ships.—The pace as regards high class vessels has progressed in an extraordinary manner during the last few years.

The Royal Mail turbines of the well-known Allan Line have been followed by even larger vessels flying the White Star Dominion flag, and by large fast vessels of the Canadian Northern Line. New and improved vessels are put on the service with great regularity, and there are few ports of the world which can boast of a better service than that of the St. Lawrence to Montreal.

Warehouses.—Montreal is the great warehousing centre of Canada. Goods and products of all descriptions are handled directly to and from the city warehouses.

Owing to the splendid railway service to all parts of Canada, the excellent transit sheds and the careful stevedoring in the port, the direct importation and exportation of goods to and from all points of the country is increasing more and more every season. In the harbour sheds packages of goods may be seen addressed to merchants in every large centre of Canada.

SESSIONAL PAPER No. 21

Dues.—The only dues which vessels coming to the port of Montreal have to pay are as follows:—

Pilotage.	Per foot of Draught.	
	Upwards.	Downwards.
Father Point to Quebec	\$3 87	\$3 40
Quebec to Montreal	2 50	2 50
<hr/>	<hr/>	<hr/>
Total Father Point to Montreal	\$6 37	\$5 90

Port Warden's Fees—

On outward cargo only.

General merchandise 1 cent to 2 cents per ton.
 Grain, ores and minerals Free.

Hospital dues—

On register tonnage (3 times per year) 2 cents per ton reg.

There are no light dues and no port dues on vessels.

The charges in connection with the harbour business are as follows:—

1. Wharfage on all goods landed and shipped in the harbour—

	Per ton.
Grain	3 cents.
Coal, flour, meats, &c.	6 “
Apples, hay, cattle, steel, rails, &c.	12 “
Sugar, &c.	16 “
General merchandise	20 “

2. Grain elevator charges—

Elevating into elevator and weighing, per bushel $\frac{3}{10}$ cents.
 Storage for 20 days and delivery to vessel, per bushel $\frac{3}{10}$ “

3. Railway charges—

Shunting cars from railway to any part of wharf, per car . . . \$2 50
 Transfer between railways 5 00

4. Shed rentals—

Double story sheds, average per shed, per annum \$7,200,00

Capital expenditure.—The harbour, as at present, including wharfs, dredging plant, grain elevator and dock sheds, represents an expenditure of about seventeen million dollars. On the bonds for this amount the harbour commissioners pay interest at an average rate of three and one-third per cent.

The improvement and facilities provided for this expenditure have been economically made, and the actual value is greatly in excess of the cost. The value of the improved land areas at current prices is, in addition, estimated to amount to about eleven million dollars.

THE FUTURE.

Future problems.—The harbour improvements upon which the harbour commissioners were engaged for the past few years are now completed. Every berth in the new constructions was taken up before completed, and already there are applications for accommodation which cannot be granted.

It is well known that it takes several years of work before harbour facilities can become available, and the problems of the future have had seriously to be faced.

Governing factors up to the present.—It is only necessary to compare the existing port accommodation at Montreal, and its cost, with that of other ports, to be convinced that the results so far accomplished have been most economically obtained.

A port which in seven months takes care of an ocean tonnage, inward and outward, of 4,000,000 tons, as well as a very large inland tonnage, all at a capital cost of not more than seventeen million dollars, would be remarkable in other countries.

Although the construction of some features, such as the elevator and new dock sheds, is of a substantial and permanent character, it could not be expected that the wharfs, embankments or the general character of the harbour would be on the finished, symmetrical and comprehensive scale of similar works in other countries. Up to the present, cheapness of construction, and accommodation for the present with completion in a hurry, have been the governing factors in design and construction.

Factors of future designs.—The harbour commissioners have now given orders that for the future all works shall be designed having regard to permanence, symmetry and with a view to the future on a very much enlarged scale. Inter-communication between all parts of the harbour, even though not required immediately, is to be kept in view and necessary space and connections provided for.

Plans for the future.—Before undertaking the design of a scheme of extensions, the commissioners have made a thorough study of the following features:—

1. Types of modern ports and features of their success.
2. The trade conditions of Canada.
3. The position of Montreal as regards future Canadian transportation.
4. What is being done or proposed in connection with the rail and water routes between eastern and western Canada.
5. The accommodation required to meet the estimated business of the future, and the special facilities for its different features.

A classification and study of the present harbour facilities show that, taking into consideration the different units of cost, the modern first-class accommodation pays its way, while outlying works not equally equipped are not so successful, even though completed at less cost.

The harbour commissioners have, therefore, given their engineers a task which, though not easy, is considered clearly capable of solution, the principles involved being as follows:—

1. All extensions to be first class as regard permanence, equipment, protection, safety and convenience of access.
2. To provide for the traffic already in sight, which means that double the present accommodation will be needed at the end of twelve years.
3. To provide wharfs and facilities, on the required scale for the very much larger ships which will come with the completion of the 35-foot channel from the sea, already commenced by the government.
4. To improve the valuable railway situation in the harbour, to make available connections from all points and to take advantage of the non-productive harbour areas, almost in the centre of the business section.
5. To take advantage of the complete ownership of the water-front and provide a terminal belt-line connecting all points, and so increase the value of manufacturing sites and generally increase harbour business and revenue.

The care which the harbour commissioners are taking in connection with the study of the necessities and in the preparation of the designs, may be briefly summed up in their instructions, requiring that the scheme of extensions shall be 'necessary, feasible and financially justifiable.'

The scheme, worked out on the lines as above, and as far as unanimously approved after careful consideration by a Consultative Board of Engineers, was adopted by the commissioners in 1910.

The scheme:—

1. 'Will double the capacity of the port.'
2. 'Will lessen St. Mary's current so that water portorage from one end of the harbour to the other may be possible, thus making the river frontage in the east end of the city as valuable as the centre now is, and reducing the long cartage charges over the whole area.'

SESSIONAL PAPER No. 21

3. 'Will give an all-year-round railway service from Point St. Charles to Bout de l'Île, open on equal terms to every railway doing business in Montreal.'
4. Will create manufacturing and warehousing sites possessing:—
 - (a) 'Direct rail connection over all lines with every part of the continent.'
 - (b) 'Deep water wharfage available to all ocean lines coming to port.'
 - (c) 'Water access by way of the canal system to Western Canada and the United States.'
5. 'Will create low-priced power for the movement of harbour equipment, grain elevators, &c.'
6. 'Will reduce the handling charges on every ton of freight coming to the port.'

ANNUAL REPORT, 1911, ENGINEERING DEPARTMENT.

The Engineering Department of the Harbour Commissioners of Montreal is organized so as to have charge of the varied and important branches, as follows:—

Harbour extensions.	Part I.
Maintenance.	" II.
Operation.	" III.

The staff organization requires a responsible officer, always ready when required or in an emergency, to take charge of the many questions in connection with the general maintenance of the harbour, its channels, navigation and the varying physical conditions, also the wharfs, sheds, railways, roads, lighting, terminal and freight handling facilities, reports, information and records. The operation of grain elevators, floating elevators and cranes; the keeping of the wharfs in order and traffic going; the information, advice and consultation as to the best ways and means of carrying on St. Lawrence traffic are also matters of every day work. Besides this, as is sometimes overlooked, there is the actual planning and direction of the construction work which, in Montreal harbour, is done almost altogether departmentally and not by contract.

The physical conditions of the mighty St. Lawrence and the problems in connection with its care are responsibilities not easily passed over. Mr. Kennedy, for many years the chief engineer of the harbour and still its veteran honoured authority, once remarked that it was easy to coax the St. Lawrence but not so safe to try to force it. The harbour extensions must necessarily upset nature to some extent, and the difficulties to be encountered constructing works in the mighty river to withstand currents, ice, changes in temperature of some one hundred and fifty degrees, as well as floods are such as to require in the staff engineers having above all things fearlessness of responsibility.

The construction work is almost universally carried on departmentally. The steady growth of the harbour and the constant yearly effort to keep pace with the commerce, has resulted in the commissioners having a splendid plant for the peculiar constructions required. Dredging plant, tugs, derrieks and a shop for repairs, are all kept up-to-date and the organization for construction is capable of dredging and placing in the works some two or three million cubic yards of excavated material, of building half a mile of cribwork and concrete quay walls of a height from the foundations to the cope of 60 feet, of building fifty thousand cubic yards of concrete, constructing railways, walls, sheds, culverts and, in fact almost every phase of port construction.

Weekly, monthly and annual reports are furnished to the commissioners, giving full explanation of all details and of costs, quantities and comparative figures.

The staff organized to design, supervise and carry on the works of such large magnitude and to account, record and take care of the details of expenditure is one the success of which is its best recommendation.

Mr. A. D. Swan, resident engineer, had charge, under the chief engineer, of the direction of the construction work on the ground, ably assisted by a corps of skilled assistant engineers.

Capt. George Yale, mechanical superintendent, with his assistant, Mr. Wm. Robitaille, had charge of the extensive dredging plant, shipyard and shops.

The commissioners' sawmill, under the supervision of Mr. W. R. Lunan, timber inspector, worked over hours all summer in efforts to supply the large demand for timber.

Mr. Ernest Salter, chief electrician, in connection with the harbour elevators, skillfully looked after and kept in order the large and increasing electrical equipment.

Mr. P. McMullin, general foreman, ably assisted by skilled foreman in every branch, carried on the work as vigorously and efficiently as any contractor's organization in the country.

Mr. J. P. Garnon, superintendent of wharf works, looked after the many details of maintenance and repairs.

The accounting for this undertaking, all carried out departmentally, was ably supervised by Mr. Geo. Smart, secretary and accountant for the engineering branch.

Throughout the whole of the construction work, Mr. Vaughan, superintendent of terminals, gave valuable assistance in connection with the important matters connected with railway construction and the handling of material, all of which had to be carried out without interfering with a heavy season's railway traffic.

The operation of the commissioners' elevator was superintended by Mr. Jere Nehin, and the floating elevators supervised by Jos. Huneault. The engineers, office staff, assistants, superintendents, foremen, timekeepers, together with the large number of skilled workers required, and the officers and men of the dredging fleet, all entered into the work with enthusiasm.

Every effort was made throughout the whole of the works of construction and operations, by order of the commissioners, to spare no expense or trouble for the safety and care of the public and to interrupt the traffic to the least possible extent.

Frequently jobs had to be delayed or put off, much to the disadvantage of progress in order to convenience traffic conditions. This would not have been possible under contract conditions, and was to the advantage of the public.

The shipping interests and the public generally, were very patient under construction conditions and this contributed very largely to the success of the season's work.

PART I.—HARBOUR EXTENSIONS.

Elevator No. 2.

Montreal harbour being the furthest inland ocean port on the northern continent and also the terminus of the inland Canadian canal and railway routes, is an important factor in the grain-carrying trade of the northern part of the continent.

A few years ago the bulk of the western grain came to Montreal in barges. These vessels, without machinery and with small crews, could afford to hold grain in storage until the ocean ship was ready for it, and the grain was then transferred from the barges to the ships for floating elevators.

With the enlargement of the canals, much of the grain now comes to Montreal in steamers capable of carrying about 2,500 tons on the present 14-foot draft of the Welland and St. Lawrence canals. These vessels cannot afford to wait, but must unload their cargo at once, otherwise they will not choose this port.

Grain coming from Georgian bay ports by rail must also be unloaded quickly, as even now, during the grain rush, there is a constant railway car shortage.

In the last few years, therefore, the storage and handling of grain has become a new problem in harbour economy. In order to solve it, the harbour commissioners in 1903 erected a modern storage elevator, having a capacity of 1,000,000 bushels. The

SESSIONAL PAPER No. 21

Grand Trunk railway leased a site from the harbour commissioners and also erected an elevator, in 1904, having a capacity of 1,000,000 bushels. Other elevators, having a capacity of 2,100,000 bushels, have been principally occupied with local business.

In 1910, the congestion at the harbour commissioners' elevator became so great that for weeks steamers were delayed for days at a time waiting for room in the elevator.

Additional storage capacity being urgently required, the construction of elevator No. 2 was commenced in 1910. The site chosen was on the bulkhead wharf, opposite Jacques Cartier Square, between Jacques Cartier and Victoria piers. Although planned in 1909 to have a capacity of 1,000,000 bushels, the designs were made in 1910, by order of the commissioners, for a capacity of 1,750,000 bushels, and the elevator was commenced. The grain congestion in 1911 being even more acute than in 1910, the commissioners decided, in July, 1911, to enlarge the storage capacity of the elevator under construction to the total of 2,600,000 bushels.

The unique feature with regard to the handling of grain in Montreal harbour is the placing of the elevators in such positions that by a system of conveyors the grain can be carried direct to the ships at their different berths and delivered without interfering with their ordinary loading and unloading.

This system proved so satisfactory when completed for Elevator No. 1 that Elevator No. 2 was designed to connect up its conveyor system so that either elevator would be able to deliver grain to all the different berths in the centre of the harbour.

The policy adopted in Canada for the storage and handling of grain has received special endorsement in the report of Sir Thomas Price, commissioner, Railways and Harbours, Union of South Africa, who visited the continent of Europe, United States and Canada and finally reported to the Minister of Railways and Harbours on April 14, 1911, on the storage and handling of grain.

Sir Thomas Price declared that his inquiries and observations constrained him to come to the same conclusion as Canadians with regard to the methods of handling and of transporting grain.

Description of Elevator No. 2.—The new Elevator No. 2 is being constructed of reinforced concrete throughout. It is a structure 456 feet long by 100 feet wide, the receiving elevator being 314 feet long and the extension 142 feet.

The storage capacity of the working elevator is 1,772,000 bushels and of the storage addition 848,000, making a total of 2,620,000 bushels.

The grain handling capacity of this elevator will be very large. Four railroad tracks extend through the entire length of the building and there are 12 receiving lofter legs set in double hoppers, each having an elevating capacity of 12,000 bushels per hour. There are 24 unloading places at which cars may be set. The track hoppers are of sufficient size so that when the leg is busy elevating grain received from a car on one side of it, unloading the car on the opposite side may be proceeding; the valve arrangement being designed so that grain may be fed to the leg from either hopper as desired. Twenty-four pairs of grain power shovels are installed so that if desired 24 cars can be unloaded simultaneously. The receiving capacity from cars will be 250 cars in ten hours and with an extra force of men this can be largely increased when desired by working at night.

On a special jetty built in the slip opposite the elevator, a double marine tower for unloading vessels is being erected. This is a steel structure with reinforced concrete floors and roofs. It is designed for unloading the inland vessels now reaching Montreal, or which may be expected to reach it when the Georgian bay canal is completed. Two marine legs each with a capacity of 20,000 bushels per hour are provided, one on each side of the tower, so that two vessels may be unloaded at the same time. Grain from these legs is weighed on automatic scales and conveyed by belt conveyors, running through a steel gallery, to the main elevator. At the elevator it is carried by lofter legs to the cupola and distributed to the bins.

The present extensive conveyor system for shipping to vessels from Elevator No. 1 is being connected with Elevator No. 2, and it will be continued to the new Victoria pier. Grain from either elevator will, therefore, be conveyed to any of 19 steamships at regular berths. The total length of conveyor galleries will be about $2\frac{1}{3}$ miles, using some $10\frac{1}{2}$ miles of rubber belting.

Construction work.

The construction of the marine tower jetty, the new quay wall in front of the elevator, the excavation for the site and the railway tracks as Part I were undertaken directly by the harbour commissioners' Engineering Department.

The elevator designs and construction Part II were given to the John S. Metcalf Company, Ltd., as designing and constructing engineers for the commissioners.

Part I.

The jetty is being constructed of cribwork foundations and concrete superstructure.

Vigorous work was commenced and carried on throughout the season of 1911, and resulted in the completion of the cribs for the 400-foot marine tower jetty. Before the close of the season one-half of the concrete quay walls of the jetty had been finished.

The foundations were prepared for the marine tower, which is being constructed during the winter, and early in the spring it is the intention to complete the balance of the wall so that the conveyors may be connected up between the marine tower and the elevator.

The concrete superstructure of the shore wharf had also been completed for a length of 400 feet of the total of 600 feet. The whole of this quay wall could have been completed, as proposed, if the site could have been cleared of construction plant.

PART II.—REPORT OF THE ST. JOHN S. METCALF CO., LTD.

February 26, 1912.

F. W. COWIE, Esq.,

Chief Engineer, Harbour Commissioners of Montreal.

DEAR SIR,—As requested, we are enclosing you herewith our report covering the work under our supervision during the past year.

Yours very truly,

(Signed) H. ROLPH,
Secretary.

PROGRESS REPORT OF WORK UNDER SUPERVISION OF J. S. METCALF CO., HARBOUR ELEVATOR 2.

On January 1, 1911, the foundations for harbour commissioners' elevator No. 2 had been completed. These foundations consisted of 7,781 wooden piles driven to a penetration ranging up to 51 feet, cut off at elevation 97, and concrete foundations to elevation 119.75; total amount of concrete, 9,786 cubic yards.

During the winter of 1910-11, false work for carrying bin bottoms, girders and sliding forms was built.

During March and the first part of April, 1911, reinforcing steel was placed for columns, bin bottoms and girders; the first concrete being placed on April 12. The columns were filled in one week, approximately 2,000 cubic yards. The bin girders followed consisting of 3,300 cubic yards and early in May sliding forms for bin walls

SESSIONAL PAPER No. 21

were assembled for the south half of the building. The first concrete for bin walls, south half, was poured May 18, and the top of the bins was reached on June 13, consisting of 5,850 cubic yards. The north half was built in fourteen days; started June 15, and the top of the bins reached on June 29; consisting of 6,752 cubic yards. Therefore the bin walls, amounting to 12,602 cubic yards of concrete, were erected in 42 days.

During July, August and September the sliding forms were taken down and false-work for the distributing and spouting floors, columns, girders, &c., was erected; concrete for these floors was put in early in October. During these three months the curtain walls of first floor were built, drier, boiler and transformer houses were also erected, and the structural steel side shipping gallery was assembled.

During October and the early part of November, forming for columns and girders in cupola was proceeded with, and by November 14 the concrete was in place up to the scale floor, except the walls.

During the balance of November and December, erection of forming continued in cupola up to the top floor and by the end of the year concrete was in up to the weighing floor level.

During the construction of the cupola, in the months of November and December, a considerable part of the equipment of the first floor transformer, boiler and drier houses was erected.

By the end of February, 1912, the concrete structure up to the top floor, with the exception of the walls, was built, and the forming for the top floor columns, roof, &c., was ready.

The electrical installation, power, light and signals was started in January and by the end of February was 50 per cent in.

By the end of February about one-third of the machinery was installed.

The marine tower foundations were put in during December, 1911; and the contract was let for the erection of the steel structures to be completed by April 1, 1912.

Contracts have been let for erection of steelwork for the steel structures connecting elevator with Tower 'L' and with the marine tower.

Unfortunately, during the summer of 1911 the work was seriously delayed by labour troubles.

In September, 1911, the excavation for south extension to elevator was made. In October the contract was let for the driving of concrete piles, but the contractor was unable to drive according to specifications and asked to be released from his contract. This the commission permitted and another contract was entered into with another firm, who by the end of February, 1912, had driven approximately 75 per cent of the piles required.

Every effort is being put forward to have the elevator ready to receive grain from cars and ship to steamers in May, 1912.

Item 3.—The improvement and extension of the harbour railway tracks.

The harbour front of Montreal which had been developed in the past with a view to usefulness only during the season of open navigation, is, owing to its situation, too valuable to be closed during the five months of winter season.

For the carrying out of the instructions of the commissioners, to make the port of Montreal the best possible terminal connection between the Transcontinental railway systems of Canada and the North Atlantic steamships, the shore area of the harbour has been designed as a convenient railway terminal. The railway tracks being operated directly by the harbour commissioners, such supervision can be made of traffic as to permit of extensive shunting and to give convenient access for railway freight to all points on the wharfs at all hours day or night.

The Grand Trunk and the Intercolonial railways connect with the harbour front at its extreme upper or westerly end. The Canadian Pacific and Canadian Northern railways reach the harbour towards the lower or eastern end.

The large harbour transit sheds, otherwise idle during the winter, are very well adapted for the handling and delivering of steamship freight by rail from winter ports.

The harbour extension plan of 1909 called, therefore, for such improvements as would make this valuable water front available for use during the winter. So far advanced is the work that both the Canadian Pacific Railway Company and the Grand Trunk are now handling a large share of their winter steamship and local freight from the harbour sheds.

The success of the traffic already justifies the expenditure and the harbour front is now a busy point during the winter for the transfer of railway cars between railways and for the delivery and receipt of city local freight.

From the Victoria pier eastward there are now no dangerous level crossings. Along this distance the tracks have been raised from the low water level, always flooded during the winter to high level, access being given between the wharfs and the city by eleven subways at the principal points. With the increase of the shunting and railway traffic these subways are of inestimable advantage both with regard to the safety of life and property and also for the convenience of traffic.

In view of the success of these high level tracks and the increase of traffic, large additions have already been required, and instead of two single lines between Victoria pier and Molsons creek, there are now additional lines with three ramps leading to the low level, and instead of eight subways, as originally designed, eleven have been constructed.

In 1911, in addition to improvements to the tracks hurriedly constructed in 1910, the railway was extended from Molson's creek to the Racine pier, a distance of .606 mile. The details of construction are given in the report of Mr. A. D. Swan, resident engineer.

Item 4.—New Victoria Pier and Market Basin

In the scheme of harbour extension of 1909, every consideration was given not only to the enlargement of steamship accommodation but also to give additional and convenient accommodation to the important fleet of river and ferry steamers.

It was recognized that the river steamers which do a tremendous passenger and market traffic should have a location in the harbour convenient to the centre of the city and to the Bonsecours market.

The plan accompanying this report will give a general idea of the situation and importance of this item of harbour extensions, as approved by the Board of Consultative Engineers of 1909, and as now under construction.

The construction of this large pier in the very centre of the congested harbour district is one of the most serious matters occupying the attention of the engineering department. Every effort is made to advance the work without undue cost, and also not to interrupt the immense traffic which is carried on during the seven months of the navigation season.

The pier has been designed so that the upper and outer portions are to be devoted to steamship traffic and with a view to steamer trains for the immediate transfer of passengers between the steamships and railways. Permanence of construction and the ample dimensions of the berths having a depth of 35 feet at low water, are the features of design for the steamship portion of the work.

The market basin is designed for the safety and convenience of the large passenger and vehicle traffic between the city and the river vessels. Three large and easy ramps lead from the city direct to the low level wharfs, giving roadways and sidewalks which pass underneath and free from railway traffic. The new wharfs being built for river craft are built for convenience of the steamer low gangways, at low water level, and they are built of the same general character for permanence as those of the high level. Slips, numerous and wide, have been designed to meet the requirements of the local steamers.

In the construction of these quay walls several new features have been employed. The cribwork substructure is built with double face timbers and very great additional strength.

NOTE The plan accompanies the separate report published by the commissioners.

SESSIONAL PAPER No. 21

The concrete wall of the superstructure is also built of additional strength with new design for the mooring of vessels.

For the first time a new arrangement has been designed and successfully carried out in connection with the construction of the lower part of these concrete quay walls. Mass concrete deposited in water has always proved difficult of perfect construction, and when the face is imperfect in the vicinity of the low water, where the November frosts attack it, the wall, in a few years, becomes eaten away and undermined. Footing blocks of concrete moulded in air have been used for some years. They are quite successful as regards giving a permanent concrete face in the vicinity of low water which is not attacked by frost. The blocks, however, do not fit themselves to the top of the wooden Canadian cribs in such a way as to give the degree of stability or such uniform bearing surface as considered necessary where the heavy concrete retaining wall is founded on timber substructure.

Reinforced concrete shells of an absolutely new design were tried in 1911, and proved very successful. These shells are 6 inches thick, fully reinforced with steel rods and the surface glazed and hardened, are made to fit the top of the cribwork. They are in sections about 20 feet long and the full width of the bottom of the concrete wall.

A derrick lifts them from a scow and places them accurately in position and when the interior is filled with concrete from the mixer it forms 4 feet of solid wall above the top timbers and gives a perfectly stable foundation for the wall with even bearing surface so as not to unduly fatigue any parts of the timber.

When the top of the shell is reached the wall is above water and the wall is built as a direct wall in air with a perfect face.

It has been found that vertical quay walls are much more convenient for present day ships than walls having an angle, and the quay walls are now designed vertical. This requires careful design for stability but when completed it obviates much of the danger of either the ship or the crib being damaged under water as is the case in walls having a batter.

Shed No. 16.—The quay wall for the first berth having been completed, the first shed on Victoria Pier No. 16, was commenced on September 16. This shed is 484 feet long and 100 feet wide.

The concrete pier foundations rests on reinforced concrete piles, of the simplex moulded system. A steel shell was driven to a penetration of 40 ft. and the reinforced moulded pile was lowered on to the iron cap driven by the core and left at the bottom. The interior was filled with grout and kept full as the shell was withdrawn. This gave a moulded reinforced concrete pile having a penetration of 38 ft. and well grouted all around for additional friction bearing power. The average length of these piles for shed 16 was 35 ft.

One of the concrete piles after being driven was selected at random and loaded to the following test, giving eminently satisfactory results.

TEST OF SIMPLEX PILING AND CONSTRUCTION CO.'S PILE, HARBOUR SHED NO. 16.

Total length of pile, 31 ft. 0 ins.

Length of pile in ground, 28 ft. 0 ins.

Two blows of a 3,000 lb. hammer with a drop of 15 ft. gave final penetration of 1 inch.

Up to and at 50 tons no change was observed, and at 60 tons there was an apparent settlement of $\frac{1}{8}$ inch.

The foundations were completed and the piers and wall built ready for the steel at the close of the year.

The shed is of the structural steel skeleton type with reinforced concrete floors and roof, and corrugated iron covering. The columns have been spaced so as to give the maximum area of storage capacity, having bays at 27 feet 9 inches, 42 feet and 27 feet 9 inches. The longitudinal panels on the lower floors are 22 feet long and on the upper floor 44 feet long. Both sides of the shed are fitted with galvanized iron rolling

doors, and on the roadway side rolling doors of the maximum height of the shed will be provided for the handling of very large package freight.

The lower floor is to be fitted up with the necessary offices for wharfinger, marine superintendent and staff, and on the upper floor with first and second class waiting rooms, restaurant and baggage room, having lavatories and all conveniences.

A conveyor gallery is to run the whole length of the shed and will be connected with Elevators Nos. 2 and 1.

Item 16.—Dry Dock Site.

One of the most important items of construction work in connection with the progress of the harbour improvements is the important work of providing a site for a floating dock in the eastern division, below St. Mary's current.

A glance at the chart will show, at the boundary line between the town of Maison-neuve and the parish of Longue Pointe, near the outlet of Molson's creek, a natural bay. This bay, where the water is very shallow and which is of large extent, appears to have been admirably adapted by nature for the purposes of a dry dock or shipyard. There is ample room between the ship channel and the shore. No streets or railways intersect the site. The river is wide and the current very gentle.

The site is connected with the harbour commissioners' independent railway tracks, which themselves connect with all Montreal railways. The important main lines of the street railway service pass close to the site. The new and extensive works of the Montreal Steel Works or Canadian Steel Foundries, Ltd., which will be one of the most up-to-date plants on the continent, are rapidly nearing completion; just across Notre Dame street, the extensive Locomotive Works, Structural Steel Works, National Bridge Company, and the Canada Cement Company, besides a host of other manufacturing industries attracted to this locality are branching out and flourishing in this immediate neighbourhood.

Considering, therefore, labour conditions, access by railways and steamships, and the physical suitability of the site, the construction of the Dry Docks Works is meeting with unanimous approval.

The harbour commissioners are supplying the protected basin, wharfs and deep water, as well as an area of 30 acres of made land for shipyard and subsidiary plant.

Messrs. Vickers, Ltd., the celebrated shipbuilding firm of England, through the newly-organized firm of Canadian Vickers, Ltd., under contract with the government and the harbour commissioners, are to construct and maintain the floating dock and a magnificent shipyard and repair plant.

The works undertaken by the harbour commissioners entail the dredging of the basin and placing of all the material in the dump to form the reclaimed land area of 30 acres.

Besides the dredging, the outer slope of the embankment, which, in future, will be a continuation of the line of wharfs in that division of the harbour, is to be rip-rapped sufficiently for its protection.

The quay walls on the three inner faces of the protected basin are being built by the harbour commissioners construction organization of standard strengthened crib substructure, founded 32 feet below extreme low water and improved concrete quay walls up to 28 feet above low water.

The plant engaged on this work during the summer consisted of four and frequently five of the largest and most powerful spoon dredges in the world. In addition to this work in connection with the filling and grading of the reclaimed land, three to four floating derricks and three land derricks were at work most of the summer, working day and night.

The total amount of dredging in connection with the dry dock during the season amounted to 1,246,442 cubic yards.

At the end of the season 60 per cent of the full amount of dredging in connection with the dry dock site was completed.

SESSIONAL PAPER No. 21

Of the 30 acres area of reclaimed land, about 4.56 acres was completed to grade and 12.11 acres filled to above water line, but not to full height, making the total area of reclaimed land 16.67 acres.

One line of railway tracks was completed and extended to the outside limit of the shipyard area and the main line parallel to the river shore was constructed for the full length of the site.

One of the main sewers of the town of Maisonneuve, which formerly discharged into what is now the still water protected basin for the dock, was, by judgment of the courts of Canada, obliged to be diverted to a point outside of the dry dock basin into running water.

The town of Maisonneuve awarded the contract for this work to a firm of contractors, and this job has been occupying most of the season and is now at an advanced stage of completion, but not yet connected up.

In connection with the improvements at this division of the harbour, and following the raising of the harbour commissioners' high level railway, the Canadian Northern railway decided to cross Notre Dame street by an overhead bridge. This work was completed and the commissioners' railway specially graded to meet the new level. The first train was carried over this bridge on October 16, 1911, and another step in advance may be recorded for the safety of the public by the abolition of this level crossing at Notre Dame street.

Of the 2,500 feet of Dock quay wall required to be built, the substructure for 800 feet, consisting of 953,600 cubic feet of crib work, was constructed and sunk in place and ballasted before the close of the season. In addition to this, another 100 ft. crib was completed and ready to be sunk when the work had to be stopped on December 4, owing to the winter setting in.

The concrete quay wall was commenced and before the close of the season 780 feet completed up to summer level, in which it will be left to settle during the winter and finished to cope level early next spring.

4,338 cubic yards of concrete was placed in this work, and at the close of the season the basin presented an interesting appearance, having the greater part of the southern dock wall in an advanced stage of completion, including anchorage blocks and the special mooring attachments for the floating dock.

The protected site is now in a sufficiently advanced state for the floating dock, for the deep basin and approach channel are so far completed that docking may take place as soon as the arrival of the floating dock, which is now under construction and which is expected at Montreal in midsummer of 1912.

The Canadian Vickers, Ltd., have had representatives and engineers on the ground throughout the summer, and tenders have been called for the construction of shops of an extensive character, as well as the steel shipbuilding plant in connection with their launching slip. With an eye to the future, this company are designing all their plant suitable for undertaking all kinds of repairs to all classes of vessels, and their construction launching slip is designed to take in at one time either a full-sized merchant vessel on one cruiser and one destroyer, or one full-sized battleship, every requirement for the repairing or building of ships in Canada.

Item 14.—Dredging generally.

1. *Diversion of guard pier.*—A large dredge and a derrick worked practically the whole season at this work; the dredge excavating the old bank and the derrick depositing the material in the new location.

Owing to the diversion of the end of the guard pier, the lighthouse erected by the government some years ago has to be removed. This work is being attended to by the Marine and Fisheries Department, and the pier for the new location was nearly completed on the shore of St. Helen's island, before the winter set in.

2. *Deepening the south channel.*—Elevator dredge *Premier*, as soon as ready for operation, was laid out at this work and continued for the balance of the season. At

times, when it could be spared, a large spoon dredge aided in the carrying on of this urgently required channel enlargement.

3. *Widening and deepening the harbour inside the guard pier.*—For many years, as the ships became larger, the widening and deepening of the channels between the berths at the piers and the guard pier has been continued. The material requires to be blasted, but when dredged it makes excellent crib filling material.

CONSTRUCTION PLANT.

The following plant has been acquired by the harbour commissioners in 1911. The cost of this plant is principally covered by an amount of 5 per cent set apart for this purpose in the appropriations for new works.

1. Elevator dredge *Premier* and tug *Beaver*, bought from the Frank Gilbert estate.
2. The powerful twin-screw tug *Sir Hugh Allan*, built for the purpose of towing heavy dredges and breaking ice when necessary.
3. One 40-ft. boom Browning locomotive crane, fitted with a 1-yard drag scraper bucket and a clam shell.
4. A scow has been fitted with blasting equipment.

Besides, the harbour commissioners have now under construction at their own shops the following:—

The new powerful dredge *No. 6* of the same type as dredges *Nos. 2, 4 and 5*, improved in design and strength and fitted with a longer boom. This dredge will be ready to start work at the opening of navigation.

A floating derrick designed on the same lines as the five floating derricks owned by the harbour commissioners, but improved and strengthened.

Two strongly designed flat scows.

Dredge *No. 5*, the machinery of which was constructed at the harbour commissioner's shops in the winter 1910-11, has been in operation the whole season, also the three flat scows built at the same time at the harbour commissioners' shipyard.

Automobile.—The harbour commissioners' automobile was in commission from the opening of navigation to the end of the year.

It proved most useful for prompt inspection by the engineers and visitors of the works, spread over five miles of wharf.

GENERAL IMPROVEMENTS.

Electric Hoist on King Edward Pier.—A new electric hoist of different design but equipped to do work similar to that of the hoist erected in 1910 at shed No. 11, was built on the King Edward pier in 1911 to carry teams to and from the overhead bridge connecting the upper floors of sheds 7, 8, 9 and 10.

This hoist was put in operation at the beginning of September and has proved entirely satisfactory both as to working and number of teams elevated and lowered.

Engine House and Harbour Yard.—In 1910 the harbour commissioners planned to build an engine house for storing their five locomotives alongside the high level railway below the Hochelaga cotton factory. A small amount of work had been done on this construction when the Rafferty property adjoining the site of the proposed building was advertised for sale.

As the harbour yard on Papineau Avenue had become unable to cope with the requirements, the harbour commissioners changed their plans with regard to the new engine house and decided to acquire the Rafferty property upon which to erect a new yard together with an engine house, all in one building.

Plans were prepared and tenders called for the new building and the contract let to Mr. C. E. Deaken who commenced immediate construction.

The building has now progressed to an advanced stage of completion and is promised for delivery in the early part of the summer.

SESSIONAL PAPER No. 21

It is built entirely of concrete and will be equipped with offices, carpenter shop, blacksmith shop, storage rooms, coal pockets, ash pit, stand pipe and a travelling crane for transporting parts of the locomotives under repairs.

It will be connected by sidings to the high level railway.

Sheds on the Tarte Pier.—At the request of the McLean-Kennedy Co., and the Elder-Dempster line, the commissioners decided in the spring of 1911 to build two one-story freight sheds on the Tarte pier. Tenders were called for in the usual way and the contract awarded to Mr. E. G. M. Cape who commenced erection at the beginning of July. The buildings are now progressing in such a way that they will be entirely completed at the beginning of June, 1912.

The walls and floors are built of concrete and the roof covered with gravel. All side doors are of the sliding type, made of steel and the end doors are of the rolling up system, of steel also. The two sheds are separated by a distance of 100 feet. The frames and roofs of these sheds have been so designed that a further story can be added later if required. They have each a floor area of 32,000 sq. feet.

Dominion Coal Wharf, Hochelaga.—Filling behind the concrete quay wall, constructed in 1910 for the Dominion Coal Co., was continued and 2,850 cu. yds. of material deposited during the year. New tracks of a total length of 1,680 ft., connected with the harbour railway were put in for the use of the coal company.

Racine and King Edward Park Wharfs.—In order to accommodate the ferry passenger traffic to the King Edward Park, a wharf made of timber piles was constructed near Racine pier, and another of the same type of construction at the King Edward Park, this latter rendered necessary by the foundering of the old wharf there.

St. Helen's Island Ferry Wharf.—By agreement with the city authorities the commissioners decided in the spring of 1911 to construct for and at the expense of the city, a wharf at St. Helen's Island to accommodate the ferry traffic between the city and that playground.

The wharf is of the standard crib substructure and concrete superstructure, 265 feet long, low level, and was entirely completed during the summer, with the exception of a small amount of back filling. As early as the beginning of August the St. Helen's Island ferry boats commenced using this wharf although barely completed.

PART II.—MAINTENANCE.

Wharf Repairs and Maintenance.—The cleaning and repairs to the roadways and wharfs and maintenance generally, have been kept up as usual.

No extensive repairs were made to the low level wooden wharf; in view of the proposed permanent works only absolutely necessary repairs were done.

The two principal items of this work during the season have been repairs to the concrete wharf at section 25 and at the Bickerdike pier.

Steel Freight Sheds.—The maintenance of the fourteen steel freight sheds has been carefully attended to, the steel work scraped and painted and the concrete floors repaired where damaged by heavy traffic.

The chutes outside and inside the sheds were also kept repaired and in good working order.

Mail boxes.—For the convenience of the travelling public in the harbour, the commissioners, in 1910, applied to the post office authorities for mail boxes to be placed at the entrance of the steel transit sheds.

This was agreed to by the Post Office Department and at the opening of navigation mail boxes had been placed at the following sheds:—

- One at shed No. 2.
- “ “ “ 4.
- “ at sheds Nos. 7 and 8.
- “ “ 10 “ 12.

This new convenience has been greatly appreciated from the first day of its installation.

Chutes for Sheds.—At the request of the steamship companies the commissioners erected the following new chutes for the handling of freight from and to the upper floors of the steel sheds:—

At shed No. 6, two double chutes.
 " 11, one " "

Railway Maintenance.—The railway tracks on the water front operated by the harbour commissioners, were kept in excellent order during the year.

In the spring the recently built embankment of the high level railway softened somewhat under the action of the water, and shimming up of the tracks had to be resorted to to keep the traffic going until dry conditions prevailed.

No more low level tracks remain to be diverted to high level.

Electric Lighting and Power.—The contract of 1910 between the harbour commissioners and the Montreal Light, Heat and Power Company provides for an unlimited supply of electric power on the harbour. It was drawn in view of the proposed extensions, especially the grain handling equipment, which is exclusively run by electricity and requires a great deal of power.

From Bickerdike pier to Pius IX avenue, the lighting of the harbour was kept up to standard during the year. The maximum number of lamps in operation during the summer was 185. During winter several lamps were kept as usual burning on the high level piers where winter business was being carried on.

Life Saving Equipment.—The life saving equipment of the harbour was closely inspected throughout the season and any life buoys or life poles missing, for one reason or the other, were immediately replaced.

Altogether 130 life poles and buoys were scattered over the water front; during the season six lives were saved by their use at the following places: Sections 23, 28, 30, 33, 40 and 46.

Testing of the Basin and Channel in 1911.—The testing was carried out with the harbour commissioners' testing boat and tug *Alphonse Racine*. The whole space of the channel and wharfs below Montreal was gone over, and overlapping was done on the different runs so that nothing would be missed. The lines were run by shore beacons, cross marks and channel buoys, and the results carefully recorded from indications on the automatic dials of the testing machine.

The results were carefully plotted in the drawing office from the records thus made.

All the testing was reduced to low water of 13 ft. 7 in. depth on the lower lock sill of the Old Lachine canal, the low water record of 1897, the extreme low water level adopted by the Department of Marine and Fisheries.

In the channel and alongside the wharfs, from Tarte pier to Victoria pier, the testing was for a depth of 30 ft. at low water; from Victoria pier to section 12 and above on the south lower half of the Windmill Point basin to 29 ft. depth, and the balance of the Windmill Point to 25 ft. depth.

The sweeping of the channel was commenced on May 6, and was continued at various times during the season of navigation.

The results of the tests between May 6 and June 20 showed that the channel below the Victoria pier was clear to standard depth, with the exception of a small area which was found to be only 29 ft. 6 ins. in depth about 60 feet south of centre opposite sections 23-24, and part of the shoal just at the lower end of the Guard pier, where it was found that a small amount of dredging was required to widen the channel opposite the new Victoria pier to full depth of 30 ft. at low water, and the necessary dredging was done.

On July 26 and 27 the channel and basin from Jacques Cartier pier to section 12 were tested and found clear to 29 ft. at low water. The northern half of the

SESSIONAL PAPER No. 21

Windmill Point basin and the upper southern half from section 8 were also tested and found clear to 25 ft. depth, with the exception of a few small spots showing 3 inches less, and a few small areas from section 7 N up along the wharf, that it would be dangerous to dredge on account of the cribs. None of these spots will cause interruption to navigation.

From November 21 to 25, inclusive, the channel was re-tested from St. Ann's Cotton Mills to Tarte pier and found clear except at some spots close to the old 25-foot wharfs which showed 6 inches to 3 feet less than 30 feet at low water. During the same parts of the channel from the Ste. Ann's Cotton Mills to Victoria pier, and the basin in front of the new wharfs section 24 to 20 were tested to 30 feet and found clear except a strip alongside parts of the new wharfs which had been filled with rock for temporary protection during construction. These spots are all of insignificant proportions and will not interfere with navigation by vessels which use these wharfs.

On December 6 the channel and basins from sec. 19 to 12 were swept and found clear to 29 feet, with the exception of a small spot in the Allan basin which showed 3 to 6 inches less than channel depth and which causes no interruption to vessels. This spot will be dredged off next spring before vessels arrive.

The Windmill Point basin on the north side and the upper half of the south side was re-swept for 25 feet depth at low water and found clear except the insignificant spots, 3 inches less than standard depth, as above mentioned.

The lower south half of the basin was tested for the first time this year on December 7 and found clear to 29 feet at low water except a few small spots close to the wharf which showed 3 inches at the outer edge and 2 feet 9 inches close against the wharf less than standard depth. These spots do not interfere with the berthing of vessels but they will be dredged off next spring if practicable.

No testing has been done this year in the basins between Laurier pier and Sutherland pier, and the records only show the results of former years' testing. These basins are clear throughout for navigation of 27½ feet draught.

Elgin Basin Sewer Dredging.—As customary, just before the taking of the ice, the sewage matter deposited in the Elgin basin by the sewer having its outlet there, was dredged out. There yet remains some of the accumulation which will be cleaned out at the opening of navigation.

PART III.—OPERATION.

Grain Elevator No. 1.—The following table gives the records of the operations of the grain elevator since the house has been in commission:—

Year.	Bushels elevated.
1904.	565,355
1905.	4,356,568
1906.	944,321
1907.	1,078,289
1908.	8,661,350
1909.	11,691,071
1910.	14,906,569
1911.	13,849,475

The falling off in the amount of receipts as compared with 1910 cannot be attributed to less business offering, as many grain boats had to be turned away, the house being loaded to almost full capacity with grain due for late delivery.

Other reasons for the decrease in receipts were the low water in the canals and the dock strike in England which delayed many ships bound for Montreal.

One of the features of the year's business is the increase over 1910 of 1,200,000 bushels in the receipts of American grain.

3 GEORGE V., A. 1913

The maximum quantity of grain in store at one time was 1,007,953 bushels while the normal storage capacity of the house is 1,000,000 bushels.

The following report of Mr. Jere Nehin, superintendent, gives the details of the operations for the year:

F. W. COWIE, Esq.,
Chief Engineer.

DEAR SIR,—I beg to submit for your information and that of the harbour commissioners the following report of grain elevator No. 1 for the season of 1911.

The amount of work done during the season is somewhat less than that of 1910. This is explained by the following causes:—

Shortly after opening of navigation the storage capacity was fully taken up and this condition continued for the greatest part of the season. We could only receive therefore grain into store as room was made by export shipments and consequently had to refuse considerable grain.

Again on account of the strike of dock laborers in England, whereby steamers' scheduled time was disarranged, causing delays, some Montreal steamers only coming as far as Quebec.

The low water also that prevailed in the river and canals this season resulted in many boats from the upper lakes being tied up waiting for the water to rise.

The lateness of the harvest in the west also contributed, being about a month behind.

The above causes resulted in a shortage of fully 800,000 bushels in our receipts compared with 1910. Taking these reasons into consideration I think we did well on the whole, and consider we had a successful season.

I beg to call attention that on August 9 we shipped to Buffalo 16,937 bushels Canadian barley, which was first shipped from Duluth to Montreal and remained in store for two years and eight months. I also beg to say that we received from Buffalo on November 21, 39,876 bushels wheat. This was Canadian wheat shipped from Fort William; it was stored in the Electric elevator in Buffalo and transhipped to Montreal for export.

During the season of 1911, 169 steamers and 205 barges were unloaded, making a total of 374 vessels, against 357 in 1910, a decrease of 13 vessels.

I would like to draw attention to the manner in which the staff has to come out at night to deliver grain to steamers. Sometimes they have to come at 7 p.m. for ships said to be ready to receive grain, but often they are not ready until 8.00, 8.30 and 9.00 p.m.

We had an instance last season when we were asked to come at 7 p.m. on Sunday. Men were here in time, as ordered, but were told the ship would not be ready before morning. She was not ready then nor that day. We were asked to come again on Monday night to deliver same lot of grain. Again the men were sent home, the ship not being ready and did not get ready until 7 p.m. Tuesday evening 48 hours later than time they first said they would be ready.

We are always prepared to deliver grain at night, but it seems to me that if a ship is not ready to receive grain at 7 p.m. she should be put off until next morning at 7 o'clock, except on special occasions.

The present winter repairs are such as are required after an active season, consisting of overhauling of the legs and machinery. As you are aware, we are now repairing the pits of our lofter legs. Outside of these repairs all the work can be done by our regular winter staff, except blocks and tackle for the pneumatic shovels which will have to be sent to the shop for repairs.

In the conveyor system there will be three belts to repair which will require 125 feet new conveyor belting. One clutch will have to go to the shop to be repaired and 18 goose neck spouts are now under repair by the sheds staff, and quite a lot of other repairs which can be done by our staff.

SESSIONAL PAPER No. 21

We may require before next season expires a new marine leg belt and buckets. No serious delays or mishaps have occurred during the season to interfere with the working of the elevator.

You will find statement hereto attached of the season's work.
The whole respectfully submitted.

Yours obediently,

(Signed) JERE NEHIN,
Superintendent.

Floating Grain Elevators.

The floating grain elevators purchased by the commissioners in 1910 were, at the close of that season turned over to the machine shop and shipyard for repairs and general overhauling.

In 1911 the commissioners operated six of these floating elevators transferring grain from lake vessels directly to steamships.

FLOATING CRANE NO. 1.

The floating crane was in commission during the whole season of navigation, opening same at the end of April with three days' work on a dredge at the Marine and Fisheries shipyard at Sorel.

In August the crane reached the highest record since the beginning of its operation, by making 112 lifts of an average weight of 11½ tons.

The need of this equipment in the Port of Montreal and the new trade in heavy machinery, principally resulting from having it, can be judged from the fact that in 1911 the number of lifts and their total weight has quadrupled over the business of 1910.

In November and December the Marine and Fisheries Department again used the crane at Sorel to lift dredge spuds weighing 60 tons each. Besides it has proved most useful on the harbour work for lifting locomotive cranes, concrete mixers and in making heavy lifts for the dredging fleet.

During the season the total number of lifts by the crane has been 633 and the total weight 5,310 tons.

Hoist No. 1, Sheds Nos. 11 and 12.—This hoist was in commission from April 20 to December 9. On several occasions it was run overtime at night and on Sundays during rush periods.

The following table gives the record of the hoist during the season:—

Number of days in operation, 205.

Total number of teams carried, 11,997.

Cost of power, operation, repairs, &c., \$1,191.09.

Average cost per team, 10 cents.

Hoist No. 2, King Edward Pier.—This hoist was put in commission on September 7, after many tests had proved it to be equal to specification, and it continued working until December 12.

The following table gives the record of its operation during that time:—

Number of days in operation, 84.

Total number of teams carried, 4,705.

Cost of power, operation, repairs, &c., \$625.65.

Average cost per team, 13½ cents.

GENERAL NOTES.

Elgin Basin Sewer Commission.—All the old plans of Montreal, or Ville Marie, show St. Peter's river, or Petite Rivière St. Pierre, which flowed into the St. Lawrence opposite the market gate, in the exact position of the present Elgin Basin sewer.

In 1832 the Royal Engineers constructed a deep stone tunnel for the Little river from McGill street to the point where it discharged into the river, near the present Custom House. As the city built up, sewers were laid into the tunnel. The sewage area now drained by the Elgin Basin system is 375 acres.

The basin is now enclosed between two piers, each extending out about 1,000 feet and situated in a protected harbour. The harbour has been designed with inlets sufficient to change the water every 14 hours, but not with sufficient current to carry away sewage matter which is left to precipitate near the outlet and to form gases which bubble up, all of which has caused the protests of the sanitary authorities.

The deposit of sewage in the basin of the harbour is not only a pollution of the water and a danger to health, but it is an impediment to navigation. It has been reported that frequently the ships berthed near the outlet are put to the serious trouble of having the intakes for their condensers and fire pumps blocked.

At a conference held on July 13, 1910, between the city controllers and the harbour commissioners, it was decided that means should be adopted to abate the nuisance caused by the deposit of sewage in the Elgin basin.

SESSIONAL PAPER No. 21

A commission was appointed, consisting of Mr. Stuart Howard, C.E., and Mr. F. W. Cowie, C.E., who, as instructed, nominated Mr. Henry Holgate as their third engineer.

On July 19 an appropriation of \$2,500 for carrying on the investigation was approved by the city, and the harbour commissioners passed a resolution approving of a similar amount to be expended on their part, the total amount of the appropriation in no case to be exceeded.

The expenditure on the part of the city was voted by the city council on November 9, 1910, and the agreement between the two boards of commissioners was signed on January 9, 1911.

On January 12 a meeting of the Elgin Basin sewer commission was held and discussed the various schemes to be considered, one of them being purification of the sewage and the other six alternative routes where the sewer could be diverted to find an outlet further below in the swift current. The latter schemes all involve the erection of a pumping plant at Place Royale.

After a series of conferences had been held and survey work accomplished, on March 31 the commission presented to the city authorities and the harbour commissioners a report which recommended the diversion of the sewage, at present running into the Elgin basin, to what was named route No. 5. The scheme is as follows:—

A pumping station at Place Royale raising the water into a new sewer which will follow St. Sulphice street and Place d'Armes Hill to the Craig street sewer.

The sewer to be for the most part built in a tunnel, the construction of which would not seriously interfere with traffic. The distance from the pumping station to the end of the work is shorter than any other proposed route.

The estimated cost of this work is \$120,000 for brick sewer, or \$150,000 for cast iron tile lined sewer.

Wharf Accommodation.—The extent of the wharfs at the end of the season is as follows:—

For 30 feet draught and over.	21,182 lin. feet, or 4.011 miles.		
25 to 27½ feet.	14,890	“	2.821 “

Depth of Water.—The depth of water in the ship channel was abnormally low during the season, due to the falling off in the level of the Great Lakes.

The following table gives a comparison of the monthly averages of the depth of water on the old No. 1 Lachine canal lock sill, with the corresponding depth in the harbour ship channel:—

Accidents to Vessels in the Harbour.

The only accident which occurred in the harbour was the grounding of the SS. *Lake Champlain* at the foot of the St. Mary's current on October 27.

When leaving the harbour at daylight the *Lake Champlain* met a snow flurry and the pilot decided to anchor in the wide portion of the channel opposite the Laurier pier. In swinging round, although the ship dropped anchor, she dragged with the current against the mud bank on the south side of the channel.

Tugs were immediately sent to pull the steamship off, but without success. The following day it was decided to lighten the ship and after some of that work had been carried out another attempt was made with tugs and again proved futile.

One day was lost on account of the high wind prevailing.

SESSIONAL PAPER No. 21

On October 31, however, after 1,500 tons of cargo had been removed and some dredging done, the *Lake Champlain* was pulled out with the help of ten tugs and her own steam.

Slight damage only resulted to the rudder and propellor.

FIRES AND FIRE SERVICE.

For some time at the end of January and the beginning of February, the St. Lawrence sugar refinery had a fire burning in their coal piles at Pius IX ave. This fire was extinguished by keeping a hose playing water over the coal day and night. No damage was done to harbour property, except a small flooding of the low level tracks.

On April 14 (Good Friday) a fire occurred on the Mackay pier in a line of G.T.R. box cars. Help was promptly despatched over by the commissioners and the fire was checked after having destroyed 7 or 8 cars. No damage was done to harbour property.

On May 3, fire broke out in a wooden shanty belonging to a steamship company on the upper floor of shed No. 14. Overheating of the stove in the shanty is said to have been the cause of the fire. It was promptly put out by the fire brigade and no damage was done to harbour property.

A small fire occurred on barge *Ernest of Montreal*, moored at shed No. 14 on June 3, and was put out by the commissioners' hose before the arrival of the city fire brigade. Only insignificant damage was done.

On June 28 a small fire occurred in a Canadian Pacific railway car loaded with sweepings, near shed No. 10. It was extinguished by the hose on the pier before the arrival of the fire brigade.

Fire was discovered on June 30 in SS. *Manchester Corporation*, moored at Jacques Cartier pier, and was put out by the commissioners' hose before the arrival of the fire brigade.

Damage to harbour property amounting to about \$10 was done on July 20, owing to a fire in two railway cars, loaded with rubbish, standing near shed No. 9. The fire was extinguished by the city fire brigade and the commissioners' hose.

On October 1 a second fire occurred in a string of Grand trunk railway cars standing on the guard pier. As the fire brigade could not reach there the commissioners despatched a gang of their own men and the fire tug *St. Peter*. With this organization the fire was got under control in two hours.

The commissioners' hose on Bickerdike pier was used at intervals throughout the year to extinguish fire in the coal piles.

During the year five new fire alarm boxes were installed on the harbour at the following places:—

- 2 on Bickerdike pier.
- 1 at Longueuil ferry.
- 1 on Tarte pier,
- 1 at the coal towers, Hochelaga.

All these boxes are of the latest non-interference type.

The working day in general is 10 hours, but the hours were lengthened to 11 and 11½ hours during the busy season, and part of the work of construction and the dredging operations were carried on by both day and night shifts.

The report of Mr. A. D. Swan, resident engineer, with table of details of construction work, and tables of quantities and costs prepared by Mr. George Smart, accountant, are hereto annexed.

I am, sir,

Yours obediently,

FREDERICK W. COWIE,

Chief Engineer.

MONTREAL HARBOUR EXTENSIONS.

MONTREAL, December 31, 1911.

F. W. COWIE, Esq., B.A. Sc., M. Inst. C.E.,
Chief Engineer,

Harbour Commissioners of Montreal.

SIR,—I have the honour to present the following report showing the progress made during 1911 with the construction of new works, authorized under the 'Scheme for Montreal Harbour Extensions, 1909.'

The detailed drawings for the works to be constructed during 1911 were prepared during the winter season.

The floating derricks were taken from their winter quarters in the harbour on the 26th April, and owing to an enormous quantity of ice having piled on the old Victoria pier and low level wharfs, were employed clearing same until May 1st.

Dredging operations commenced on May 3rd.

Owing to the urgent necessity of carrying out the construction as rapidly as possible the dredges and derricks worked continuously during the night as well as by day from May 9th to December 4th. The work on shore, with the exception of the steam cranes, was for the most part carried on only by day.

The following is a summary of the principal works executed:—

1. The old wharf in front of new elevator No. 2 was removed to extreme low water level and a new concrete quay wall constructed in its place for a length of 393½ feet.
2. The whole of the foundation work for a new marine tower jetty in front of elevator No. 2 has been constructed, and the concrete quay walls for half its length and the foundations for the marine tower entirely completed.
3. The High Level Railway has been double tracked from Victoria pier to Molson's creek and a single track constructed from Molson's creek to Racine pier.
4. The Victor and Berri street subways have been completed.
5. The new high level Victoria pier quay wall has been entirely completed for a length of 601 feet and a further length of 139 feet has been nearly completed.

SESSIONAL PAPER No. 21

6. A high level retaining wall has been constructed for 596 feet between the new Victoria pier and Market basin, and a ramp made connecting these wharfs.

7. A new concrete quay wall 935 feet in length has been constructed at the Market basin.

8. A high level concrete retaining wall has been constructed at the Market basin, between Victor street subway and Berri street subway.

9. An area of 6,443 square yards of granite paving has been laid at the Market basin. The concrete foundations for shed 16 on Victoria pier have been nearly completed and water service and sewers laid.

10. Dredging to the amount of 1,453,492 cubic yards has been done for the new dry dock basin, and eleven acres of land reclaimed from the river by depositing of the dredged material.

11. A considerable part of a new quay wall has been constructed at the dry dock basin; 800 lineal feet of foundation and about half the concrete superstructure on same has been completed.

12. A new concrete ferry pier landing stage 265 feet long has been constructed at St. Helen's island.

13. A new ferry pier for passengers has been almost entirely completed at the Racine wharf.

DESCRIPTION OF WORKS.

ELEVATOR NO. B—PART 1.

Item No. 1—Marine Tower Jetty.

The foundations for the marine tower jetty were dredged down to a depth of 38 feet below low water level. The outer end of the jetty consists of cribwork foundation, 200 feet long by 50 feet wide, filled with rock up to low water level, with concrete superstructure and reinforced concrete tower foundations, all of which have been practically completed.

The cribwork for the inner end of the jetty for a length of 167 feet has been completed, sunk and filled with rock.

The concrete of this jetty was prepared by an ordinary land mixer secured on a scow, and was lifted into place by No. 3 land crane also moored on the scow, the crushed stone being brought alongside on contractors' scows straight from the quarry.

A deep trench has been excavated from Commissioners street to elevator No. 2, in which has been laid a sewer, water pipes and electric cables.

Item No. 2—New Quay Wall in front of Elevator.

The work of removing the old sloping cribwork along the front of elevator No. 2 and replacing same, from low water level, with a concrete superstructure, was commenced on August 25, and 393 feet 6 inches out of the total of 600 feet has been entirely completed.

Owing to the material storage bins in connection with the elevator being erected on the site of this wall, the work was carried out in three separate lengths of about 130 feet each.

The material was excavated by hand and removed by scows. In order to strengthen the old cribwork and permit of deepening the harbour along the front of the new elevator No. 2 heavy timber sheet piling had been previously driven down to the rock, a depth of about 50 feet, along the whole length of this quay. The waling was then fixed along the front of the piles at low water level, and anchor bolts about 6 feet long were placed in position so as to secure the piles to the concrete superstructure

The base of the concrete wall was reinforced with old permanent way rails and the wall was further anchored with 2½-inch tie rods partly embedded into the foundations of the elevator and part into concrete blocks.

The concrete material was stored in bins in front of the elevator whence it was measured out and mixed in an electrically driven machine close to the work, and the wall was completed November 27.

ITEM NO. 3—HIGH LEVEL RAILWAY TRACKS.

Lifting Track, &c.—Work was recommenced on the high level track system on May 10, the first work consisting of lifting the old low level tracks between the old jail ramp and the Dominion Coal Company's wharf, to permit of the high level embankment being widened to take two main tracks. A rubble stone temporary retaining wall for the embankment was also constructed from the jail ramp subway to the Longueuil ferry subway, to form a protection for the railway embankment.

Embankment.—On June 5, the Canadian Pacific Railway Company, under their agreement, recommenced dumping material from the Place Viger terminals to increase the width of the embankment between the jail ramp and the Longueuil ferry subway. This work was completed by June 22.

Permanent Way.—New additional permanent way has been laid for two tracks from Elevator No. 2 to Berri street subway and for an additional track from Berri to Beaudry streets; also for double tracking from the jail subway to Longueuil ferry subway, as well as from Richelieu street subway to Desery street and from Nicolet street to Molson's creek. At the latter point a very considerable amount of work has been done in connection with the track system by diverting the old low level track, on which the Canadian Northern railway line crossed Notre Dame street, to a new high level bridge constructed by them, which was opened for traffic on October 16.

In addition, a railway embankment has been constructed from Molson's creek along the foreshore to Racine pier and a single track laid thereon and connected with the track at Racine pier leading to the locomotive works. This embankment was formed by trimming up the old foreshore with No. 2 scraper bucket excavator. Where the track crossed the old drainage outlet at section 60 reinforced concrete pipes 39 inches in diameter have been laid.

Victor St. Subway.—The Victor street subway, having a span of 50 feet, had been constructed during 1910 of a sufficient length to carry four lines of way overhead, and the extension of this subway to carry six lines and a roadway was commenced on May 8 and was entirely completed, with the exception of the steel bridges, by the end of June.

Berri St. Subway.—The Berri street subway, having a span of 36 feet, had been constructed during 1910 of a sufficient length to carry three lines of way overhead, and the extension of this subway to carry six tracks and a roadway was commenced on June 2 and entirely completed, with the exception of the steel bridges, by the end of July.

The concrete in both subways was mixed by machine in close proximity to the work and deposited in place by travelling cranes.

The old Lacroix street sewer which passed through the Berri street subway and discharged into the harbour, was opened up and filled with muck, as owing to the alterations at the Place Viger terminals it was not further required.

ITEM NO. 4—NEW VICTORIA PIER AND MARKET BASIN.

New Victoria Pier.

Dredging.—During May a considerable amount of dredging was done at the outer end of the new Victoria pier, to permit of No. 4 crib being sunk. The material dredged had been placed there at the end of last season to protect the extreme outer end of the pier from ice shoves. It proved quite effective as no damage whatever was done to the pier during the winter.

SESSIONAL PAPER No. 21

Cribs.—No. 4 crib, 160 feet long and having double face timbers, was completed to a height of 38 feet by the beginning of July, and before the end of the same month had been sunk and filled.

No. 5 crib specially constructed for the extreme end of the pier, has been practically completed but not sunk in position.

Concrete.—The concrete superstructure of the pier for a length of nearly 600 feet had been constructed during 1910 up to the height of the low level wharfs, and the concreting for raising the pier to high level was commenced on May 12 and completed by the end of June.

During July the concrete superstructure and shed buttresses were constructed on top of crib No. 4 up to the height of the low level wharfs.

Reinforced Concrete Blocks.—In order to ensure a good face on the concrete quay walls for a height of 4 feet from low water level, and at the same time decrease the cost by doing away with a lot of diver's work, preparing the forms under water, and further to admit of much greater rapidity of construction, a new type of reinforced concrete block, or shell, was designed and has been used throughout the season.

The blocks are moulded in lengths of 20 feet by 4 feet high and 15 feet in width for the high level walls, and 12 feet in width for the low level, and are so shaped that a concrete dowel is formed between each block when set in position.

The blocks were formed inside moulds in a small yard on the old Victoria pier specially reserved for this purpose. The concrete was allowed to set for not less than three weeks before the blocks were lifted. Altogether 91 blocks varying in weight from 10 to 12 tons were made, all of which were lifted and finally set in position in the various quay walls by No. 1 floating derrick. After the blocks were placed in position they were filled with ordinary mass concrete which was bonded to the reinforced blocks with strap irons embedded in the blocks.

Filling.—The New Victoria pier for a length of about 730 feet and an average width of about 160 feet has been filled up to a level of about 4 feet below cope. Most of this material with the exception of that at the extreme outer end has been deposited by city contractors, free of charge.

Shed Foundations.—Concrete buttresses had been constructed at 22-foot centres along the back of the new Victoria pier quay wall in order to form a base for the shed foundations. At either side of these buttresses two reinforced concrete piles were driven, and on the top, with a base spread over the buttresses and the piles, large rectangular concrete blocks were constructed to a level of 4 feet 6 inches below cope.

MARKET BASIN.

Dredging.—Dredging for the extension of the shore wharf of the Market basin was commenced on the 6th May and 935 lineal feet has been completed, joining up to the old concrete wharf at section 23.

Owing to the old wharf being in close proximity and founded at much higher level, the greater part of it collapsed from time to time as the dredging proceeded. This, however, was anticipated.

Cribwork.—The cribwork was founded at depths varying from 35 to 38 feet below low water level. Each of the cribs sunk was 45 feet wide at the base and 200 feet in length, with the exception of the last crib, which was 130 feet long.

Very great difficulty was encountered in sinking crib No. 9 owing to the swift currents in the river, and five tugs, two dredges and fifteen steel hawsers ashore were necessary to keep it in position while it was being sunk.

Junction with old Concrete Wharf.—In the narrow space between crib No. 10 of the Market basin and the old concrete wharf a cluster of piles was driven and bags of concrete rammed down to make same secure below low water, and a number of old permanent way rails were cantilevered over the top of the crib towards the old wall,

3 GEORGE V., A. 1913

but not connected to it so as to form a straight joint. Above this the ordinary mass concrete construction was carried out.

Concrete.—The superstructure of the quay wall was constructed of concrete from low water to cope level and was entirely completed, along with nine slipways, for a length of 935 feet.

Reinforced Concrete Blocks.—The new system of reinforced concrete blockwork, as already described for the Victoria pier, was used for the construction of the Market basin quay wall, and proved very effective in the rapid current.

Filling.—The filling at the back of the new quay wall for its whole length has been completed. This material was mostly deposited by city contractors, free of charge.

Planking Wharf and Slipways.—The first part of the Market basin wharf for a length of 800 feet, which was constructed last season, was planked for a width of about 30 feet from the back of the wall in front of the Richelieu & Ontario Navigation Company's sheds.

Retaining Wall from Victor to Berri Streets.—A heavy mass concrete retaining wall, 670 feet in length and 19 feet high, has been constructed between Victor street subway and Berri street subway. The work was commenced on May 12 and entirely completed by the middle of July.

The trench for this wall was excavated by No. 2 crane scraper bucket which worked very expeditiously. The concrete material was brought in on the high level tracks and shot down into the concrete mixer on low level, whence it was deposited into the wall by steam travelling cranes.

The wall is surmounted by an iron handrailing.

Retaining Walls and Ramp between Market Basin and Victoria Pier.—A new concrete retaining wall has been constructed from the Victoria street subway towards the outer end of the new Victoria pier for a total length of 596 feet. The excavation for this wall was done by manual labour. The concrete was mixed in close proximity to the work and deposited in place by a steam travelling crane.

At several places along this wall, where the foundation was somewhat soft, the base of the wall was reinforced with old permanent way rails.

A new ramp and roadway, 20 feet wide, has been constructed at this place to form an easy access between the high and the low level wharfs.

Iron handrailings have been erected along the top of the walls.

Paving.—The whole of the low level Market basin wharf extending from in front of the Victor subway to the Berri street subway has been graded, concrete foundations laid and paved with granite blocks for a total area of 6,443 square yards.

ITEM NO. C 5.—DOMINION COAL TOWERS, HOCHELAGA.

Filling.—A considerable quantity of additional filling was deposited between the new quay wall constructed last season and the old shore wharf. This filling was graded and 560 lineal yards of permanent tracks laid for sidings.

ITEM NO. 16—DRY DOCK BASIN.

Excavation and Dredging.—Dredging on the site of the entrance channel of the dry dock and the basin itself, was commenced on May 3. Night work with the Harbour Commissioners dredges and derricks was commenced on the 9th May and work proceeded continuously night and day until the 4th December. During this period the total amount of material dredged was 1,453,492 cubic yards, completing about 60 per cent of the whole amount of dredging in connection with the dry dock.

Nearly five acres of land has been reclaimed from the river and completed to grade at cope level, while fully 12 acres has been reclaimed to above water line, making the total area of reclaimed land nearly 17 acres.

SESSIONAL PAPER No. 21

Quay Wall of Dry Dock Cribwork.—Four timber cribs having double face timbers and each 200 feet long by 45 feet wide at the base have been completed, sunk and filled to a level of 33 feet below low water, and the fifth crib 100 feet long has been nearly completed.

Reinforced Concrete Blocks.—Reinforced concrete blocks have been placed and secured on top of the cribwork for a length of 760 feet, all as already described.

Concrete Superstructure.—The concrete superstructure of the quay wall was commenced on October 17 and stopped for the season on November 3. 280 feet 6 inches of the wall has been constructed to a height of 13 feet above low water, 161 feet to 8 feet 6 inches above low water, 80 feet to 5 feet 9 inches above low water and 240 feet to 4 feet above low water.

The concrete for this work was made for the most part with the large floating rock crushing and concrete mixing machine, and a small part with the mixing plant erected on a scow, as already described, and used for the marine tower jetty.

Manoeuvring Attachments.—Special manoeuvring attachments for the floating dock have been manufactured and placed in position in the wall, with long anchor tie-rods embedded in large concrete blocks, 50 feet from the face of the wall.

Dredging Plant.—The dredging plant at the dry dock consisted of dredges Nos. 1, 10 and 11 of the Marine and Fisheries Department, the dredge *International* hired from the Public Works Department, and for the most of the season two H.C.M. dredges.

The material was conveyed in dump and flat scows to three floating derricks and two land cranes by which it was deposited to form the reclaimed land on which the machine shops and shipbuilding plant are to be erected.

Railway Siding.—A railway siding 400 yards in length has been laid from the main line track at section 52 over the newly graded embankment in an easterly direction towards the new quay wall.

DREDGING AND FILLING IN GENERAL.

ITEM NO. 14.

Diversion of Guard Pier.—Dredging for diversion of the guard pier was recommenced on May 15 and the material deposited further out into the river along the line of the centre of the new pier, so as to divert the current and extend the area of still water in the upper harbour. The material up to low water level was for the most part deposited by dump scows, while the embankment above water level was formed by a floating derrick. The length of pier diversion, partially constructed during the season, is 1,500 feet.

Dredging Channel South of St. Helen's Island.—The dredge *Premier* commenced work dredging the channel between the south shore and St. Helen's island on July 5 and continued working during the day until November 11.

The material dredged, for the most part was, rough gravel and small boulders and was conveyed in dump scows to the diversion of guard pier.

On August 31, one H.C.M. spoon dredge also started work on the south shore channel and continued there working day and night until November 30.

Altogether 157,145 cubic yards were dredged for the formation of this channel.

Dredging the Upper Harbour and Rock Drilling and Blasting.—A considerable quantity of rock was drilled, blasted and dredged in the upper harbour for the combined purpose of obtaining rock filling for the new wharf work and at the same time deepening the upper harbour. The part operated on was at sections 14, 15 and 16 and the material consisted of hard shale and trap rock. The blasting was done from the drill boat which commenced work on May 18 and continued until November 14.

The number of holes drilled and blasted was 2,556, the average depth of the holes being about 10.96 feet. The total quantity of rock drilled and blasted to a depth of 36.06 feet below low water was 44,868 cubic yards measured in situ. The quantity of dynamite used was 17,678 lbs.

ITEM A1.

St. Helen's Island Ferry Wharf.—A new ferry wharf has been constructed at St. Helen's island for the ferry boat traffic between Victoria pier and the island.

Work was commenced on May 15 and the wharf, although barely completed, was taken into use by the ferry company for traffic on August 5.

The wharf, which has a depth in front of 10 feet at low water, is 265 feet in length and 75 feet wide. It is connected with the shore by a roadway also 75 feet wide. The substructure consists of timber cribwork of the standard design with a concrete superstructure with four slipways. The upstream corner of the pier has been specially constructed and heavily reinforced with old permanent way rails to withstand the ice shoves.

The concrete was mixed and deposited in place by the floating rock crushing and concrete mixing plant while the filling was deposited by a floating derrick.

Owing to the extreme low water in the river during the latter part of the summer, there was not sufficient depth to permit of the H.C.M. tugs crossing to the island and the filling was therefore barely completed, but a few days in the spring when water is high will be sufficient to complete the small quantity of filling still required.

ITEM NO. A6.

New Ferry Wharf at Racine Pier.—A new wharf has been constructed immediately below Racine pier for ferry-boat traffic to King Edward park. This wharf is 400 feet long and consists of timber piling provided with the necessary slipways for the convenience of passengers and vehicles and backed by an earthwork embankment 170 feet wide.

The piling has been entirely completed and braced. About $\frac{2}{3}$ of the filling has been deposited and the whole work practically completed with the exception of the timberdecking of the wharf.

Widening the Channel in St. Mary's Current.—On September 11 Marine and Fisheries dredge No. 1 was taken from the dry dock site and started work in the St. Mary's current where she continued at work until November 22.

The area dredged extends for a length of 1,800 feet by about 300 feet, or a total of 57,401 cubic yards scow measurement.

Removal of Wrecks in the Channel.—On October 12, 1910, a sand barge was wrecked in the St. Mary's current and ice formed in the river before it could be removed.

During winter it was decided to blast the wreck, which was successfully done during the last week of February. In the spring the channel was swept and the blasted pieces of the barge removed.

The old No. 1 H. C. M. dredge which was wrecked on September 29, 1905, and which has been lying on the bottom of the river at section 41, was also blasted during the winter and broken up; a considerable part, however, remained, which, after examination by a diver who at the same time made fast to the wreckage with chains, was ultimately lifted by a dredge.

Removal of City Sewage from Elgin Basin.—On November 26, the harbour plant commenced dredging the sewage deposited from the mouth of the Elgin Basin sewer at section 15. The material dredged was towed outside the guard pier and dumped into the swift current.

The Taking of the Ice.—Winter 1910-1911.—On December 5, with a temperature of 12 above zero, the plant was laid up as ice had begun forming on the river and the water was gradually rising.

On December 7, the Longueuil ferry boat left for winter quarters. By December 16 the ice was forming up and on the 17th it had filled up in the river as far as the back of the machine shop. On the 18th a small ice shove occurred and on the 19th the river was open again down to near the Tarte pier. By the 21st the ice had filled up to the

SESSIONAL PAPER No. 21

Dominion coal wharf, and by the 24th it had again filled up as far as the back of the machine shop, and by the 31st it had settled and on that date foot passengers were crossing the river from Longueuil, and by January 3, 1911, the road over the ice to Longueuil was commenced.

A large hole remained open the whole winter from about opposite the back of the machine shop down to the Longueuil ferry wharf.

Breaking up of the Ice.—The first ice shove of the season occurred on April 11, starting from about the 9th and 10th piers of the Victoria bridge, city side. Little change occurred, however, until the night of the 13th when a movement took place above the bridge.

On the morning of the 15th the ice below the bridge on the St. Lambert side had moved down to St. Helen's island, but no other movement had taken place below and foot passengers were continuing to cross to Longueuil. About midday, however, the ice commenced to move from the bridge and piled to a height of about 30 or 40 feet on Moffatt's island. Later in the day the road to Longueuil was broken and the ice shoved down to Laurier pier.

On April 17 the M. and F. tug *Champlain*, which had been moored at the Alexandra pier was put under steam and moved up to Windmill point.

On the 20th a shove occurred below Longue Pointe, but there was still practically no movement at Maisonneuve.

On the night of the 21st there was quite a shove in the upper harbour, and the river was open in the channel down as far as the Tarte pier.

On the 23rd the Longueuil and Boucherville ferry boats left their winter quarters and came up by the south shore to the Tarte pier.

The ice breaker *Lady Grey* arrived in the harbour from Quebec on the 25th and the channel was reported practically clear.

The M. and F. tug *Shamrock* placing the buoys reached the upper harbour on the 27th and the first steamer arrived on April 29.

A schedule of the measurement of work done during 1911 is appended hereto.

A. D. SWAN,

Resident Engineer.

SIR,—I have the honour to submit the following with reference to the harbour for the year 1911:—

Navigation was open in the harbour all winter.

C.G.S. *Montcalm* and *Lady Grey* were running to Cap Rouge all winter.

The ice bridge at Cap Rouge did not form as the C.G.S. *Lady Grey* and *Montcalm* were passing up and down during the winter.

C.G.S. *Montcalm*, Capt. Pelletier, left the harbour with passengers and freight at 5 a.m. on February 5 for Seven Islands and the Gulf of St. Lawrence, and returned on the 12th at 2.45 p.m.

C.G.S. *Lady Grey*, Capt. Mercier, left the harbour for Grosse Isle at 11 a.m., and returned at 4 p.m. on April 13.

The ice broke up in the tidal basin on April 9.

Schooner *Valeda*, Capt. Louis Dufour, under sail, arrived from lower St. Lawrence at 3 a.m. on April 9.

SS. *Aranmore*, Capt. John Hearn, left with passengers and freight for the lower St. Lawrence on April 9.

Navigation was general for schooners and other small craft from the lower St. Lawrence on April 11.

SS. *Savoy*, Capt. Pelletier, left the harbour with passengers and freight for the Island of Anticosti on April 15.

The ice bridge connecting the Island of Orleans with the mainland broke up on April 15.

The SS. *Aranmore*, Capt. John Hearn, arrived from the lower St. Lawrence with passengers and freight on April 17.

C.G.S. *Druid*, placing the buoys in the river on April 19.

The ice in the wet dock broke up on April 17.

C.G.S. *Montcalm*, Capt. Pelletier, left the harbour for the Gulf of St. Lawrence to meet incoming steamers on April 19.

The SS. *Savoy*, Capt. Pelletier, arrived from the Island of Anticosti with passengers and freight on April 22.

The ice in the St. Charles river broke up on April 22.

The C.G.S. *Alice*, Capt. Lavalle, left the harbour for Grosse Isle Quarantine Station on April 22.

The river ice between Quebec and Montreal passed down on April 26, at 8 a.m.

Steamers *Cascapedia*, *Amethyst* and *Lady of Gaspé* left for Montreal on April 26.

SS. *Royal George*, Capt. James Harrison, our first steamer from Europe with passengers and mails, arrived in the harbour on April 27.

Pontoons were placed in the harbour on April 27.

No ballast was discharged into the harbour during the past season.

The Richelieu & Ontario Navigation Company steamer *Murray Bay* arrived from Sorel on April 30.

The Richelieu & Ontario Navigation Company steamer *Murray Bay* arrived from Montreal on May 1, and returned to Montreal on May 2.

The Richelieu & Ontario Navigation Company steamer *Murray Bay* left the harbour with passengers and freight for the Saguenay on May 2.

In addition to the routine work of the harbour and office, 640 ocean going steamers were berthed in the Louise docks breakwater, and Point à Carey wharfs alone; this does not include a large number of steam barges, schooners, &c.

SESSIONAL PAPER No. 21

H.M.C.S. *Niobe*, Commander Macdonald, arrived and anchored in the harbour on June 1.

H.M.C.S. *Niobe*, Commander Macdonald, arrived and anchored in the harbour on her second trip on July 13 and left on the 18th.

The German cruiser *Bremen*, arrived in the harbour on July 17, and proceeded to Montreal.

The Richelieu & Ontario Navigation Company steamer *Murray Bay*, made her last trip to the Saguenay with passengers and freight on November 29.

The Royal Mail Steamer SS. *Virginian*, Capt. Gambell, of the Allan Line, left the harbour with passengers and mails on November 25, for sea.

The last passenger and freight steamer, C.P.R. SS. *Montrose*, arrived in the harbour on November 20.

The last coal laden steamer from sea arrived in the Louise basin on November 28.

The steam barge *Carleton*, Capt. Ed. Proulx, entered the wet dock grain laden from the west on December 4.

SS. *Aranmore*, Capt. John Hearn, arrived from sea with passengers and freight on December 5.

SS. *Brayhead* left the Louise basin timber laden on December 8 for sea.

The pilot tender SS. *Eureka* arrived in the harbour from the Lower St. Lawrence on December 11.

Steam barge *Carleton*, Capt. Ed. Proulx, left the harbour with passengers and freight for the island of Anticosti on December 13.

SS. *Sinbad* arrived from Anticosti and Seven islands pulp laden on December 16.

Steam barge *Carleton*, Capt. Proulx, arrived in the harbour from Anticosti with passengers on December 22.

The ice in the wet dock formed on December 1 and after a spell of mild weather with rain broke up and formed again on December 23.

Owing to the long spell of mild weather the ice bridge between the island of Orleans had not formed up to January 2, 1912.

Notices have been placed in suitable localities warning parties from discharging rubbish of any kind in the river, and every precaution is being taken to prevent any violation of the regulations of the harbour commission in that respect.

I have the honour to be, sir,
Your obedient servant,

(Signed) JAS. C. SULLIVAN,
Harbour Master.

ENGINEER'S OFFICE,
HARBOUR COMMISSION,
QUEBEC, January 2, 1912.

RAOUL RENAULT, Esq.,
Secretary Treasurer, Harbour Commission,
Quebec.

SIR,—I have the honour to submit herewith the following, with reference to the various works in connection with the maintenance and improvement of the harbour accommodation, carried out by this department during the past year.

The contract for the construction of the Strauss Bascule railway bridge, referred to in the annual report for 1910, was awarded last January to the Dominion Bridge Company. The work of erection was begun on August 31, and is now completed with the exception of a small amount of rivetting; the laying down of the railway track, and the wiring for the light and operating electric current, still remain to be done, in order to complete the bridge ready for testing. The railway approaches to the bridge on both sides of the cross wall, have been laid down ready for connection with the

bridge tracks, and a contract has been awarded to the Railway Signal Company of Canada, for the installing of semaphores and derails, interlocked with the bridge operating mechanism, for the protection of the bridge crossing. Some slight alterations had to be made to the landing sheds Nos. 13 and 9, to allow of the passage of the railway lines to bridge.

The filling of the Pier No. 1 having sufficiently advanced to allow its being done, a planked roadway was laid down along the centre of the pier, from the main roadway to the northern end of the pier, thus giving access to shed No. 25 and the coal platform at the northern end of the pier, for vehicles, independent of that through Shed No. 26.

Owing to the increase in the quantity of immigration baggage handled on the embankment, it was found necessary to increase the platform accommodation; this has been done by the erection of a second baggage platform, situated on the southern side of the baggage track.

The spaces on the shore side of the landing shed No. 24 and around the overhead corridor entrance, have been planked, and the berth thus provided in the tidal harbour, at the northern end of the breakwater, has been made use of by the Grand Trunk Railway ferry for the embarkation of immigrants.

Five floating fenders six feet in diameter, and one seven feet in diameter, were constructed during the past season, five of these fenders were placed along the river face of the breakwater, making altogether thirteen floating fenders in use during last season, on the river face of the breakwater and extension.

An additional hydrant has been placed on the breakwater, between the sheds Nos. 24 and 26, principally for the accommodation of vessels at this berth requiring city water.

The sixty pound rails, on the curves leading to Pier No. 1, have been replaced by ones of eighty pounds.

The car ferry landing on the breakwater has been removed, as it was found to be no longer required.

A coal storage space fronting on the wet dock, has been allotted to Messrs. Desjardins & Co., and an additional space made up of the ground formerly leased as a wood yard and that occupied by the coal oil shed, has been granted under lease to Messrs. Madden & Son.

To meet the requirements of vessels engaged in the coasting trade a pontoon 200 feet long by 40 feet wide has been constructed, and placed in the custom house pond, a berth on the west side of the pond having been prepared for its reception; two freight shelter sheds, fitted with electric lights have been erected on the pontoon; this berth was ready for use on September 1 last.

In preparation for the laying down of railway lines in connection with the car ferry berth, which it was contemplated to install at Atkinson's wharf, a portion of the slips at the east ends of St. Paul and St. James streets have been filled in; for retaining the filling in the St. Paul street slip, a cribwork wall has been placed across the slip.

Interlocking gates and semaphores have been installed at the railway crossing between the landing sheds Nos. 25 and 26.

The St. Lawrence Stevedoring Company have added 201 feet to the tracks for carrying the coal handling towers, making a total length of 981 feet of tracks along which the towers can operate.

One additional street arc lamp has been placed on the Point à Carey wharf, at the slip leading down to the custom house pontoon.

The minor repairs required to maintain the East India, Wellington, Atkinson and Reynar wharfs, and buildings thereon, in serviceable condition, have been effected.

During the past season, forty-seven vessels have taken their drinking water supply from the Commissioners water main.

SESSIONAL PAPER No. 21

The Cross-Wall draw bridge was operated for the first time the past season, on the 10th of April, and for the last time on December 7, on which day the S.S. *Carleton* left the basin.

The water was retained in the wet dock for the first time on May 4, and for the last time on December 3.

The entrance gates to the wet dock were not opened at the midday tide on September 2, the tide not having risen sufficiently for the purpose.

I have the honour to be, sir,

Your obedient servant,

(Signed) ST. GEO. BOSWELL,
Chief Engineer.

QUEBEC, January 19, 1912.

To the Chairman and Commissioners,
Quebec Harbour Commissioners,
Quebec.

DEAR SIRS,—We beg to report that we have examined the books and vouchers of the Commission and find them correct and in accordance with balance sheet presented, which is a true position of the corporation as at December 31, 1911.

We have to thank Mr. Renault, Secretary-treasurer, for assisting us in our work in every manner in his power.

We have the honour to be, sirs,
Your obedient servant,

J. G. LAPOINTE,

Auditors.

APPENDIX No. 21.

THREE RIVERS HARBOUR COMMISSIONER'S REPORT.

Commissioners:

P. A. DROLET, Esq., Chairman.

JOS. L. FORTIN, Esq.,

L. E. DUFRESNE, Esq.,

L. P. NORMAND, Esq.,

J. F. BOULAIS, Esq.

GEORGES BALCER, Secretary-Treasurer.

Notwithstanding the political excitement of last summer, which absorbed to the utmost, and this for months and months the attention of the entire community and affected more or less some of our larger industries—the season 1911 ended with a highly satisfactory result. Not that under prevailing circumstances several of our enterprises and projects had not suffered a momentary drawback, or an interruption—as for instance the construction of the Wayagamack Pulp and Paper plant, which, for lack of sufficient labour, particularly during election time, could not proceed with the desired rapidity; and the forced postponement of the erection of an additional cotton plant in our city for the same reason. But the crisis resulting from the abnormal condition recently imposed by the exclusive absorption of, so to say, *the Entire Export Trade* of the Dominion by the port of Montreal, reducing our ocean traffic not only to a minimum, but continued forcing most of the products of our own industries, our agricultural and dairy products to be still transported by rail to that city for transhipment to foreign markets—this crisis, fortunately, has lost part of its violence, in so far at least as the development of our local traffic, the steadily increasing forward movement in every branch of manufacture of the various industrial establishments in and around Three Rivers, to some extent, for the loss inflicted by the rather too partial dealing of our governing powers in favour of *but one single port on the St. Lawrence*.

Under actual conditions of transportation, the export of most of our manufacture for countries, other than the United States, are generally shipped in fractional quantities, following each other in rapid succession. They may, consequently, not always offers an inducement for steamers taking them from over our wharfs. Could, once, the different firms, joining their interests agree to ship at regular fixed dates, a change for the better would, undoubtedly, follow. The same drawback existed in the imports of raw material and products for manufacturing purpose:—sulphur, clay, chemicals, &c., each firm requiring but a limited quantity. With an increasing number of establishments in this section of the province, the supply is now centered in Three Rivers and sent from here to various destinations. The demand for coal is constantly on the increase. Notwithstanding the number of plants now running by electricity, the 120,000 tons of coal imported last season are not nearly sufficient to meet all requirements. The new coal dock under construction at the Windmill point, calculated to offer the required space for handling larger quantities, is badly needed by the Dominion Coal Company as well as by other firms. The first named, alone, could easily double their import, particularly, in prevision of the not far-distant entrance into our city of the Canadian Great Northern railroad and the prospect of having a branch of the Grand Trunk Pacific railroad soon joining our deep water wharfs. Not one single ton of the coal now received is yet delivered on the south shore.

SESSIONAL PAPER No. 21

In looking over our report for 1910, we have nothing to withdraw from our statement regarding the wonderful progress and the yet more brilliant prospects in view for the city and for this section of the country. Relying on the promise of the present honourable the Minister of Marine to not only supply all and every want of the great national port of Montreal, but also to render equal justice to every other port.—the welfare of our harbour will be secured.

Trusting that his colleague the Honourable Minister of Railways will also consider the necessity of linking together the main line of the Grand Trunk Pacific—distant only some 35 miles—with the harbour of Three Rivers, from which place by a simple car ferry to Doucet's Landing, direct connection by the Grand Trunk system can be established between the north of this province and the eastern portion of the United States, at a relatively small cost, by a route considerably shorter than via Quebec or Montreal—and the future of our city and traffic would be well cared for.

In support of our views let us again allude to the surprising development of the Laurentide Paper Company's interest:—within the last twelve months the shareholders, without disbursing one cent, doubled their capital and the new stock is still far above par. Then the gigantic undertaking of the Shawinigan Water and Power Company; and above all, the astonishing increase in the development of our forest. Until now the cutting of five million logs in the St. Maurice territory was regarded as a maximum, not easily surpassed. To-day the record is broken, for the present winter's cut will reach about eight million logs. Further addition to the Grand Mère plant, larger consumption by the Belgo-Canadian Co., and more particularly the entering into the field of action of the new Wayagamack Pulp and Paper Co.—are the principal factors of the present phenomenal extension.

Of the fifty million feet of merchantable lumber produced by our local sawmills, about fourteen million were shipped to Great Britain, ten million to United States and the rest for local consumption and the more important Montreal market. The same establishments also turned out 70,000 cords of pulpwood, of which about 50,000 left for the United States by canal boats or steamboats. The Wayagamack Co. kept their portion, some 10,000 cords for the manufacture of paper as soon as their plant commences operation (end of February or March). Some 20,000 tons of pulp, half of which from the Seven Islands, below Quebec, the balance from the Grès Falls Pulp Mill at the Cap de la Madeleine, were shipped to United States paper mills.

In spite of the great demand and enormous consumption by our own paper mills, in spite of the law of Quebec, the export to the United States of pulpwood from the district of Three Rivers alone could thus not have fallen short of one hundred thousand cords, during the season 1911.

According to annexed statements, ocean vessels registered during the season 1911 to the number of 59 steamships with 124,583 tons, 6 steamships and 11,273 tons more than in 1910, and 29 steamships and 68,000 tons more than in 1907, the year of the unfortunate crisis mentioned.

The traffic with the United States required 924 canal boats with 106,040 tons, an increase of 152 vessels over 1910.

Along with the local traffic, the total arrivals numbered thus 1,494 vessels and 328,203 tons, quite a satisfactory result.

GEORGES BALCER,
Secretary-Treasurer

APPENDIX No. 22

SIXTY-FIRST ANNUAL REPORT OF TORONTO HARBOUR COMMISSIONERS, BEING FOR THE YEAR ENDING DECEMBER 31, 1911.

To the Commissioners of the Harbour of Toronto:—

GENTLEMEN,—I have the honour to submit my report for the year 1911.

The harbour was clear of ice on March 31, having been frozen over for 111 days, a longer period than usual.

The first vessel to arrive was *The Macassa*, Captain Henderson, on March 30. The last arrival was *The Seguin*, on December 8, she came in light to winter here.

The number of vessels to arrive this year is 3,192. A slight falling off from last year, but the tonnage is a little in advance, showing that larger vessels are being employed than formerly.

Below is a comparative statement of arrivals and tonnage:—

REGISTERED TONNAGE.

	1910	1911	Decrease.	REGISTERED TONNAGE	
				1910	1911

Coal receipts for the year are as follows:—

	Tons.
Hard coal..	110,306
Bituminous coal..	15,923

Total..	126,229

Being 1,695 less than for last year.

Coal imported by rail as per returns from Ottawa are as follows:—

	Tons.
Hard coal..	632,974
Bituminous coal..	734,978

Total..	1,367,952

SESSIONAL PAPER No. 21

It will be noticed that the quantity of coal brought into the city by vessel is but a tenth of that conveyed by rail, and, as stated in my report for last year, this reduction must be more and more noticeable year by year, for as the city extends towards the north and west the railways can deliver coal almost at the consumers' doors, while the vessel trade is handicapped by the long haul from the water front.

The lake level has been very low this year, involving a considerable increase of dredging. The highest water was 7 inches above zero on June 8; the lowest water was 13 inches below zero on November 12. The average for the year is two inches and one-third below zero, or about ten inches below last year.

The harbour buoys were placed out on April 3, and then taken up on December 7.

The lamps at the Queen's wharf were first lighted on March 30, and discontinued on December 8.

There are 75 vessels wintering here, besides several dredges, scows, viz.: 10 passenger steamers, 9 steam barges, 3 schooners, 4 tow barges, 11 ferry steamers, 2 house boats, and about 26 sailing yachts, in all about 21,827 tons register.

An Act entitled an Act to Amend and Consolidate the Acts Relating to the Harbour of Toronto, was passed by the Senate on March 31, 1911, and amended and passed by committee of the House of Commons and assented to on May 19, same year. By this Act the commissioners of the trust are elected and appointed for three years, instead of for one year, as formerly; the area of their jurisdiction is considerably enlarged and their powers increased.

In June the twenty-one year lease to the Canadian Pacific Railway company expired. Application by the company for a renewal of the lease was made, but pending alterations in the arrangement, the new lease has not yet been granted. This is for what is known as Queen's wharf property.

Dredging has been done at the following docks and slips, viz.:—

	Cub. Yds.
At Princess street..	11,583
At Church street..	6,665
At Parliament street..	279
At Elias Rogers' dock..	4,045

The contractor for the dredging was Mr. John E. Russell, who gave every satisfaction, doing the work smartly and cleanly.

Mr. J. G. Sing, engineer-in-charge, Public Works Department, reports as follows:—

During the past year a channel has been dredged through the bar, 200 feet in width on top by about 600 feet in length at the entrance to the eastern channel, to the depth of 20 feet below zero on gauge. Concrete superstructure has been placed on the north end of the east pier of the eastern channel for a length of 650 feet, and a small boat-landing was constructed near the centre thereof.

The work of construction of the western entrance to the harbour has been practically completed, and consists of a channel through the sand bar to a depth of 18 feet below zero of gauge and a width of 400 feet between the piers. The north pier is 2,200 feet in length by 20 feet in width composed of crib work substructure and concrete superstructure. The magnetic bearing of the new western channel is north 61°-45' east, and the magnetic bearing of the eastern channel is north 34°-45'.

Mr. R. F. Stupart, director of the Toronto Observatory, reports as follows:—

The first warning of the season was issued for the Port of Toronto on May 31, and the last on December 3. Warnings were issued for Lake Ontario ports on sixteen occasions, there being no less than five sent out in October and six in November. On each occasion when the signals were displayed a storm occurred. October was fairly stormy; November especially so, but the remaining months during the season of navigation were marked by an absence of any very stormy conditions.

During the year the self-recording wind gauge placed at the Eastern Gap, in charge of Mr. McKelvie, gave a total mileage of 109,719 miles in the twelve months; the months giving the greater being February, 11,507 miles; November, 11,991 miles, and December, 11,247 miles. The months with the smallest mileage were July, 6,545 miles, and August, 6,515 miles.

The precipitation for the year was: Rain, 23.91 inches; snow reduced to water, 5.26 inches; total, 29.17 inches, or four and one-half less than last year.

I am, gentlemen,

Your obedient servant,

COLIN W. POSTLEWAITH,

Harbour Master.

APPENDIX No. 26.

REPORT OF THE PORT WARDEN OF THE PORT OF ANNAPOLIS ROYAL,
N.S., FOR THE YEAR ENDING DECEMBER 31, 1911.

ANNAPOLIS ROYAL, December 20, 1911.

ALEX. JOHNSTON, Esq.,
Deputy Minister of Marine and Fisheries.

SIR,—I beg to submit my annual report as port warden for the year ending December 31, 1911.

On April 4, I held a survey on the SS. *Granville* while lying at Whitman's wharf, in consequence of damage caused by fire. I received a fee of \$8.

On September 22, I held a survey and inspection of the SS. *Hispania*, loading at the Acadian pier, and pronounced her seaworthy. I received the fee of \$10 for this inspection.

I have no expenses to report.

I am, sir,

Your obedient servant,

(Signed) JOSEPH MALENSON,
Port Warden.

APPENDIX No. 27.

REPORT OF THE LATE PORT WARDEN OF THE PORT OF CHATHAM,
N.B., FOR THE YEAR ENDING DECEMBER 31, 1911.

CHATHAM, N.B., December 29, 1911.

ALEX. JOHNSTON, Esq.,
Deputy Minister of Marine and Fisheries.

SIR,—I beg to enclose a report compiled from records of the late George T. Tait, port warden, who died on the morning of December 25, 1911.

Yours truly,

MAGGIE TAIT.

P.S.—The present port warden is M. M. E. Goggin, appointed March 25, 1912.

PORT OF CHATHAM.

Having examined the schooner *Mary Hendry*, of the burden of two hundred and forty-nine tons or thereabouts of Bridgetown, Barbadoes, now lying in this port with reference to the damage caused to her in this port on the twenty-ninth day of August last by being collided with by the steamship *Appenine*, we recommended that temporary repairs be made on said schooner to enable her to load and proceed on her intended voyage, and at the request of Captain Edgar Godfrey, master of the said schooner, *Mary Hendry*, we the undersigned George T. Tait, port warden of the port of Chatham, Robert J. Walls, harbour master of the port of Chatham, and Robert Murray, Lloyds' agent at Chatham aforesaid, proceeded on board the said schooner this day and made a thorough examination of the condition of the said vessel.

We found that temporary repairs had been made as instructed and that calkers had gone over all the hull above water line, calking all seams or bad butts in hull. We also found the main deck newly calked.

From such examination we are quite satisfied with such repairs and hereby certify that the vessel is seaworthy to carry a cargo of lumber from this port to New York and return with cargo to Nova Scotia for permanent repairs at Liverpool, N.S.

Fees collected, \$15.

Dated at Chatham, N.B., this eighth day of September, A.D. 1911.

We, the undersigned George T. Tait, port warden of the port of Chatham, Robert J. Walls, harbour master of the port of Chatham, and Captain Ernest Wells, master of the steamship *Amherst*, now lying in the port of Chatham, do hereby certify that at the request of Mr. Robert Murray, Lloyds' agent at Chatham, N.B., we proceeded on board the schooner *Mary Hendry*, of Liverpool, N.S., of the burden of two hundred and forty-nine tons or thereabouts, and held a survey on the said schooner as she now lies at Snowball's wharf in the said port of Chatham.

Captain Godfrey informed us that on the twenty-ninth day of August instant, the steamship *Appenine*, while docking came in collision with his vessel while lying at the J. B. Snowball Company wharf.

On examination, we found the said schooner badly strained, rail broken, water ways strained for twenty feet along starboard side and butts opened in hull and deck, also the ceiling broken from deck down to bilge strake, bilge strake also broken,

SESSIONAL PAPER No. 21

break deck also broken, channels on port side broken, copper torn off and planking damaged on starboard side. So far as we can see in the condition in which said vessel now is and to the best of our knowledge and belief we estimated it will cost eight hundred dollars (\$800) to repair the damages.

Fees paid, \$15.

Dated at Chatham, N.B., this thirtieth day of August, A.D. 1911.

PORT OF CHATHAM, August 19, 1911.

At the request of Captain Olaf Schervig, of the Norwegian steamer *Starkad*, of Christiana, 1,492 tons register, and by order of the Norwegian consul, we the undersigned George T. Tait, port warden, Robert J. Walls, harbour master, and Captain Martin Handeland, master of the Norwegian steamship *Lovstakken*, of Bergen, proceeded to Nordin, to hold a survey of said steamer.

The captain informed us that the steamer had been aground several times in the Richibucto river, then he got a gasoline boat to steady steamer along and got clear (for further particulars see ship's logbook).

We found the steamer not making any water, and in good seaworthy condition. We recommend that the steamer be dry-docked at a favourable opportunity. The fees for this survey, including transportation to and from steamer are twenty dollars each, receipt of which is hereby acknowledged.

CHATHAM, August 14, 1911.

At the request of Captain Conrad Jacobsen, of the Norwegian barque *Silas*, of Grimstad, lumber laden, bound to Maryport, England, we the undersigned George T. Tait, port warden, R. J. Walls, harbour master, and Captain James Willis, master Br. SS. *Longscar*, being appointed by the Norwegian vice-consul to hold a survey on the said barque, proceeded on board the said barque, the captain informed us that in moving the ship from loading berth to stream on the ninth inst., the ship grounded on the flats on the north side of the river, where she lay aground for ten hours, after that time he got her afloat with the assistance of two tugboats. In getting the ship off several lines were broken (for particulars refer to ship's log). As the bed of the river is quite soft where she grounded, she cannot have sustained serious damage in our opinion, we sounded pumps and found ship not making any water.

We consider in our opinion that the ship is in every way seaworthy to proceed to her destination, but we would recommend that she be dry-docked at the first opportunity following completion of the voyage.

Fees for this survey are fifteen dollars each, receipt of which is hereby acknowledged.

Port Warden.

Harbour Master.

Master SS. 'Longscar.'

PORT OF CHATHAM, N.B.

We, George T. Tait, port warden of the port of Chatham, Robert J. Walls, harbour master of the said port, and Alex. J. Loggie, of Chatham aforesaid, general merchant, do hereby certify that at the request of Robert Murray, Lloyds' agent at Chatham aforesaid, we held a survey on the damaged cargo of molasses and sugar now lying on the government wharf and adjacent warehouse at Chatham in the province of New Brunswick, salvaged and landed from the schooner *Minnie F. Crosby*, stranded on Escuminac reef at the entrance to the River Miramichi. We found:—

197 puncheons partly filled with molasses, but containing more or less sea water.

9 empty molasses puncheons.

32 tierces partly filled with molasses, but all containing more or less sea water.

3 empty molasses tierces.

124 barrels molasses all damaged with sea water.

21 empty molasses barrels.

184 barrels sugar all damaged by sea water.

1 empty sugar barrel.

After an examination of the above as it now lies, we condemn the same as damaged goods and recommend that it be sold for the benefit of all concerned.

Fees collected, \$15.

Dated at Chatham, N.B.. June 29, 1911.

APPENDIX No. 28.

REPORT OF THE PORT WARDEN OF THE PORT OF HALIFAX, N.S., FOR THE YEAR ENDED DECEMBER 31, 1911.

PORT WARDEN'S OFFICE,
HALIFAX, N.S., January 4, 1912.

SIR,—I have the honour to report that during the year ended December 31, 1911, there has been shipped from the port of Halifax to the port of Liverpool, Great Britain, 181,645 bushels wheat.

No live stock has been shipped from Halifax during the year 1911.

Surveys have been held on eighteen steamers and eleven sailing vessels, which arrived at this port in a damaged condition during the year. The necessary repairs were made to the vessels, and those of them bound to other ports proceeded to their destination, where they have arrived safely.

The Bkt. 'C. R. C.' mentioned in my report of January 2, 1911, has been sold at this port and will be converted into a coal barge.

SIR,—I beg to submit the following report as port warden for the port of Louis-
burg, N.S., for year ending December 31, 1911:—

April 26.—Held survey on steamship *Rosalind*, of Liverpool, Eng., 1,634 tons regis-
ter, J. R. Williams, master. Found ship had suffered damage to frames 8, 9 and 10,
on port side; damage caused by being in ice floes in Gulf St. Lawrence, damage well
above water line. Ordered ship proceed on her voyage to Montreal, there to effect
repairs.

November 29.—Held survey on schooner *Pearl Evelyn*, of Lunenburg, N.S., 99 tons
register, Wm. McKay, master. Found ship with part bulwarks gone, boat carried
away, tarpaulins washed from hatches and other damage to superstructure. Ordered
necessary repairs made here and boat supplied. On repairs being made in a satisfac-
tory manner, gave order for ship to proceed on voyage to Halifax, N.S.

December 12.—Held survey on schooner *Limelight*, of Charlottetown, P.E.I.,
126 tons register. Captain A. Bushby. Vessel had grounded on eastern and Battery
island; found part of fore foot started off, vessel otherwise tight and in seaworthy con-
dition. Ordered vessel to proceed to nearest marine railway for repairs.

December 18.—Held survey on steamer *Anticosti*, 1121 tons register, of Liverpool,
N.S., found steamer had tail shaft broken, otherwise good and seaworthy, ordered ship
be sent to her destination (Halifax, N.S.) for repairs, by a capable ocean going tug-
boat.

I have the honour to be, sir,
Yours very respectfully,

DONALD J. MATHESON,
Port Warden.

APPENDIX No. 41.

REPORT OF THE PORT WARDEN OF THE PORT OF MONTREAL FOR
THE YEAR ENDING DECEMBER 31, 1911.

MONTREAL, January 5, 1912.

Honourable J. D. HAZEN,
Minister of Marine and Fisheries,
Ottawa.

SIR,—I have the honour by direction of the council of this board and in compliance with section 31 of the Act governing the Port Warden Office, 45 Vic., Chap. 45, to transmit herewith documents as follows:—

1. Port Warden's annual report for the year 1911.
2. Audited statement of receipts and expenditures of the port warden office for the year ending December 31, 1911.
3. Statement of investments of port warden surplus funds.

I have the honour to be, sir,
Your obedient servant,

GEO. HADRILL,
Secretary.

OFFICE OF THE PORT WARDEN,
MONTREAL, December 27, 1911.

To the President and Council
of the Montreal Board of Trade.

GENTLEMEN,—I have the honour to submit the annual report of the business of the Port Warden's Office with the statements of exports, receipts and expenditure for the season of navigation, 1911.

Owing to the services rendered by the government ice-breaking steamers, the harbour and river were open, clear of ice and buoys, all laid before the ocean steamships were due to arrive.

Navigation opened by the arrival from Quebec of the steamers *Lady of Gaspe* on April 26, and the *Amethyst* and *Cascapedia* on April 27.

The first ocean steamship to arrive was the SS. *Royal George* from Avonmouth, at 7.30 a.m., April 29.

Early in the season the Straits of Belle Isle were open and clear of ice from the westward but were badly obstructed and blocked with field ice and bergs to the eastward. The SS. *Lake Manitoba* passed through the strait at 6.30 a.m., May 29, but was detained by heavy field ice and bergs on the outside of the strait for 42 hours before getting clear.

Navigation continued to be impeded more or less by ice on the Belle Isle route till the middle of June.

The only disaster of a serious nature we have to record this season between Quebec and this port, was the stranding of the SS. *Lake Champlain* off Laurier pier, on October 27, in a snow storm.

After being lighted and floated she was taken to dry dock at Quebec for repairs.

This season for the first time in history of the port, the house flag of the Cunard Steamship Company, Limited, was seen flying in the harbour, they having inaugurated a passenger service from Montreal to London, calling at Southampton, which appears to be successful.

3 GEORGE V., A. 1913

The last ocean steamship to sail hence this season was the SS. *Bray Head*, for Belfast. She left this port at 1.30 p.m. on Sunday, December 3, and sailed from Quebec at 6.30 a.m. on December 8.

No ocean or foreign-going sailing ship visited our port this season, they are, I fear a thing of the past.

Three hundred and ninety-eight transatlantic or foreign-going vessels reported at this office this season with a tonnage of 1,714,354 tons, against 399 vessels and 1,638,581 tons last season, a decrease of 1 vessel and an increase of 75,773 tons.

The business to the lower ports this season consisted of: Entered, 352 vessels of all classes with a tonnage of 637,431 tons, against 333 vessels and 570,705 tons, an increase of 19 vessels and 66,726 tons over last season.

Clearances of vessels loaded for the lower ports this season, 108 vessels of all classes with a tonnage of 85,708 tons, against 99 vessels of 73,681 tons, an increase of 9 vessels and 12,027 tons over last season.

The shipments of various kinds for the past season manifested and reported at this office are as per attached statement.

All of which is respectfully submitted.

ARCHIBALD REID,

Port Warden.

W. F. NAPIER,

Chairman Restigouche Pilotage Authority.

December 31, 1911.

The rates of pilotage dues for the time being in force in this district including the amounts and description of all charges upon shipping made in the respect of pilotage:—

The rates on pilotage, including the properly securing and mooring all ships or vessels, pilotage for the several ports within the pilotage district of Restigouche shall be as follows:—

For every foot of water any ship or vessel shall draw at the time inward or outward bound in the port of Dalhousie, Benjamin, Beaver point, Nash creek, Jacquet's river, or any loading station east of Dalhousie on the Bay of Chaleur, \$1.50; Port of Campbellton, \$2; Oak bay or any loading station east of same, west of Dalhousie, \$2, when ships proceed direct from sea.

Ships bound for Dalhousie, Benjamin, Beaver point, Nash's creek, Jacquet river, or any loading station east of Dalhousie, calling at any of the said harbours for orders, or to discharge ballast, cargo, or otherwise on ship's account, \$1.50; and thence to the said port or loading stations on the Bay of Chaleur, 75 cents per foot draught of such ship at the time.

Ships bound for Campbellton, Oak bay or any loading station east of Oak bay and west of Dalhousie, waiting at Dalhousie or any of the outer or bay ports to discharge ballast, cargo or otherwise on ship's account, \$1.50, and thence to the said port of Campbellton, 75 cents; Oak bay or any loading station east of Oak bay, and west of Dalhousie, 75 cents per foot draught of such ship at the time and vice versa.

For the removal of any ship, including the properly securing and mooring such ship, the following rates, viz.: The sum of one dollar and fifty cents for ships not exceeding one hundred and twenty tons; the sum of two dollars for ships over one hundred and twenty tons and not exceeding three hundred tons; the sum of four dollars for ships over three hundred tons and not exceeding six hundred tons; and the sum of five dollars for all ships over six hundred tons; and when the distance of removal extends four miles, fifty per cent additional to above rates. In addition to above rates all vessels propelled wholly or in part by steam shall pay one cent inwards and one cent outwards per net registered tonnage.

The rates of pilotage dues for the time being in force in this district including the amounts and description of all charges upon shipping made in respect of pilotage:—

Pilotage charges are: 5 cents per register ton, inward; 3 cents per register ton, outward.

There are no other pilotage charges and the pilots often arrange with masters of ships to accept half the above fees if when the master can obtain a towboat, he has his vessel towed instead of sailing the vessel in and outward—it is often that towboats cannot be obtained when required.

refusing to, or not taking such pilot, shall pay half pilotage inwards; and upon being offered the services of a licensed pilot before being ready for sea and refusing the services of such pilot, shall be liable to half pilotage outward. Should the services of a pilot so offering be accepted by the master and afterwards declined, then the vessel shall be liable for full pilotage rates; and any pilot placed in charge of a vessel by the master shall be entitled to receive, in addition to full pilotage rates, the sum of two dollars per diem for each day the vessel may be detained while he is waiting on her, through stress of weather or otherwise. And in case a pilot is taken to sea the ship shall be responsible for his expenses unless returned to the port of Sydney. Vessels spoken by a pilot outside of her harbour limits or changing ports between Sydney and the ports of Lingan, Glace Bay and Cow Bay, shall only be liable for inward pilotage at the loading port, unless a pilot be employed in changing ports, in which case full tariff rates will be charged. Pilots delivering orders outside of port limits to vessels to proceed elsewhere shall be entitled to receive full inward pilotage only for such vessels, and pilots prevented from delivering orders after being received by them, by reason of the orders being signalled from light stations shall be entitled to receive full inward pilotage; and if, in any case, another regular pilot belonging to the same port be found in charge and the pilot delivering orders. Vessels arriving from sea without being spoken inwards by a pilot shall be subject to half pilotage outward unless a pilot be employed, in which case full outward pilotage will be charged, the half pilotage in this case to be paid into the pilotage fund. Vessels calling for orders and remaining outside of harbour limits shall be exempt from outward pilotage unless a pilot be employed.

SESSIONAL PAPER No. 21

Pilotage Rates.

Vessels bound to other ports and coming to anchor in Royal Roads, the pilotage shall be free, except the services of a pilot are employed, when pilotage according to the following graduated scale shall be payable:—

From inside or north of Race Rock to Royal Bay, or *vice versa*, 50 per cent of the prescribed rates under clause (b), section 18. From Beechy Head to Royal Roads, or *vice versa*, \$1 per foot.

From Pillar Point to Royal Roal or *vice versa*, \$3 per foot.

From Cape Flattery to Royal Roads or *vice versa*, \$6 per foot draught of water.

For vessels entering into or clearing from the ports of Victoria and Esquimalt, the rates of pilotage shall be as follows:—

(1) For regular ocean steamers, 50 cents per foot draught of water and $\frac{1}{2}$ cent per net registered ton up to a maximum of 3,500 tons, on the inward voyage, and 50 per cent of the above on the outward voyage subject to a discount of 20 per cent.

(2) For irregular ocean steamers, \$1 per foot draught of water, and $\frac{3}{4}$ cent per net registered ton.

(3) For regular steamers in the coasting trade between San Francisco and Lynn Canal, inclusive, the rates shall be the same as for regular ocean steamers as rated in clause 1.

(4) For vessels under sail, \$2 per foot draught of water and 1 cent per net registered ton.

(5) For sailing vessels in tow, \$1.50 per foot draught of water and 1 cent per net registered ton.

(6) For all vessels entering into or clearing from William's Head Quarantine Station, the rates shall be 50 per cent of the prescribed rates of any class of vessel for Victoria and Esquimalt, subject to exemption in section 17, clause 7; provided, however, that all coasters between San Francisco and Lynn canal inclusive, when compelled by special instructions from the Dominion Government to call at William's Head Quarantine Station, shall be exempt from pilotage dues unless the services of a pilot are requested.

(7) For all vessels of 500 tons and under, 75 cents per foot draught of water.

Gulf Pilotage.

For all vessels from the limits of the ports of Victoria and Esquimalt to the limits of all ports on Puget Sound and Gulf of Georgia, shall be \$1 per foot draught of water.

CRUISE OF THE *ARCTIC* IN NORTHERN WATERS, 1910-11.

The *Arctic*, in command of Captain J. E. Bernier, left Quebec on July 7, 1910, to patrol the northern waters in which the vessel had sailed in 1908-9. The Commander in receiving his commission was instructed to issue whaling licenses to vessels sailing in the waters contiguous to the territory now called Franklin. Sealed instructions were given to attempt the Northwest passage from Baffin bay by Lancaster sound, Barrow strait, McClure strait, and visit the stations and depots established in 1908-9, during the former cruise of the *Arctic*.

The vessel was provisioned for a two years' voyage, and it was intended that if the Northwest passage was successfully made that the vessel should call at Herschel island. From there the voyage was to be continued through Behring sea and Behring strait and to end at Victoria, Vancouver island.

The *Arctic* called at Albert harbour, Bylot island, on August 8, 1910, and the Commander visited the depot established there in previous voyages. The voyage was continued from Albert harbour and Lancaster sound was entered on the 15th following. Large quantities of heavy ice were met in the sound on the way to Erebus bay, where Franklin's monument is erected. After a most difficult passage, Griffith point on Melville island was reached on August 30. On the day following the steamer anchored in Winter harbour, Melville island, where she had wintered in the preceding cruise. An attempt was made to cross McClure strait, but the extremely heavy ice, from 50 to 60 feet in thickness, with elevations as high as icebergs, prevented the progress of the vessel. An effort was made to reach Prince of Wales strait, but this was found impossible. From Winter harbour, the vessel sailed west as far as 112° 50' west longitude, and, with no appearance of water, was obliged to return eastward to Admiralty inlet and anchored in Arctic harbour, situated well in the inlet, latitude 73.08 N., longitude 85.03 W.

During October and November, 1910, a survey party under Surveyor Lavoie was sent to survey the east coast of Admiralty inlet. The country was crossed by this party from the inlet to Fury and Hecla strait, where surveys were made. The party then returned to the ship. In December, tidal and barometric observations were kept up and the thickness of the ice measured during its formation in Arctic harbour around the vessel. From March to May, 1911, the survey party continued surveys, proceeding from Arctic bay to Prince Regent strait and traced the whole coast southwards to Fury and Hecla strait and mapped a long island composed of sand in Boothia gulf. Meteorological observations were made during this whole trip. On returning from this journey across the country, surveys were made on the east coast of Baffin land in a number of bays along the coast from North Baffin and at Salmon river, continuing to Milne harbour. This work was done on the return voyage of the ship from Arctic harbour.

Prospecting parties, for minerals, were directed to search the country in the vicinity of Arctic harbour, and a number of specimens of economic minerals, shale and coal obtained, together with a botanical collection of plants and flowers.

The work of patrolling during the movements of the ship was kept up with a view of ascertaining the number of vessels engaged in whale fishing and licenses were issued to a small number.

The *Arctic* returned to Quebec on September 25, 1911; the officers and crew were discharged with the exception of two who were retained to complete their reports.

The detailed report of Captain Bernier and officers of the ship is being prepared for publication.

ORDER IN COUNCIL.
THE CANADA GAZETTE.

OTTAWA, Saturday, June 25, 1898.

[8824]

AT THE GOVERNMENT HOUSE AT OTTAWA.

SATURDAY, DECEMBER 18, 1897.

PRESENT:

HIS EXCELLENCY THE GOVERNOR GENERAL IN COUNCIL.

His Excellency, by and with the advice of the Queen's Privy Council of Canada is pleased to create a 'Geographic Board' to consist of one member for each of the Departments of the Geological Survey, Railways and Canals, Post Office, and Marine and Fisheries, such member, being appointed by the Minister of the department; of the Surveyor General of Dominion Lands, of such other members as may from time to time be appointed by Order in Council, and of an officer of the Department of the Interior, designated by the Minister of the Interior, who shall act as secretary of the Board; and to authorize the Board to elect its chairman and to make such rules and regulations for the transaction of its business as may be requisite.

His Excellency is further pleased to order and direct, that all questions concerning geographic names in the Dominion which arise in the departments of the public service shall be referred to the Board, and that all departments shall accept and use in their publications the names and orthography adopted by the Board.

JOHN J. MCGEE,
Clerk of the Privy Council.

Extract from O. in C. dated Dec. 14, 1899.

'That the Order in Council constituting the Board be amended by giving to the government of the Northwest Territories and to each Province the right to nominate one of their officials as a member of the Board who shall advise the Board with reference to names in his Province, provided that the several governments undertake to be guided by the decisions of the Board.

GEOGRAPHIC BOARD OF CANADA

BY-LAWS.

I—OFFICERS OF THE BOARD.

The officers shall consist of a chairman (who shall be elected by ballot), of an executive committee of three to be nominated by the chair and approved by the Board, all of whom shall serve for one year or until their successors shall be chosen, and of the secretary.

II—DUTIES OF OFFICERS.

(a.) The chairman shall preside at the meetings and shall certify to the decisions of the Board. He shall appoint all committees not specially named by the Board. In his absence the Board shall have power to elect a temporary chairman.

(b.) The secretary shall keep minutes of the proceedings of the Board and shall record the decisions rendered, or other action of the Board upon cases submitted to it, with reference to the papers filed in each case. He shall maintain files of the original papers, or copies of them, that may be presented in each case, conveniently arranged for reference. He shall, under the instructions of the Board, conduct the general correspondence and shall receive communications presented for the consideration of the Board.

(c.) The executive committee shall receive through the secretary all communications requiring decision by the Board, shall investigate the questions presented, and after securing information from all available sources, shall report to the Board with recommendations regarding them.

(d.) Before dealing with any name within a province represented upon the Board, such name shall be submitted to the representative of said province for examination and report.

(e.) Upon the receipt of a communication submitting place-names for the consideration of the Board, it shall be the duty of the secretary, after preliminary submission to the executive committee, to transmit at once a copy of such communication, together with any papers relating thereto, to the member of the Board for the province affected, and also, in the case of coast names appearing on admiralty charts, to the hydrographer of the admiralty.

(f.) So soon as the report of the provincial representative, and in the case of chart names, the report of the hydrographer, are received, the secretary shall immediately submit the whole correspondence to the executive committee who shall promptly prepare the names for submission to the Board.

(g.) The secretary shall enter upon every record submitted for the consideration of the Board, the recommendation of the provincial representative, and, if any, the recommendation of the hydrographer.

III—MEETINGS.

The Board shall hold regular meetings on the first Tuesday in each month. Special meetings may be called by the chairman or by the executive committee. Five members of the Board shall constitute a quorum, but on the written request of any member, filed with the secretary of the Board within a month from the date of a meeting, any decision adopted at such meeting shall be reserved for approval by a

3 GEORGE V., A. 1913

majority of the full Board. The affirmative vote of a majority of all the members of the full Board shall be required for the final decision in any case. All motions presented for the consideration of the Board shall be submitted in writing.

IV—REPORTS.

The Board shall publish its decisions on geographic names, after each meeting, in the *Canada Gazette* and in bulletins, the same to be consolidated in a general report of the Board's work, to be issued after the 30th of June in each year.

V—AMENDMENT.

These by-laws may be amended at any regular or special meeting, by a majority vote of all the members of the Board, provided that copies of the proposed amendment have been sent by the secretary to the members of the board at least twenty days previous to the time the vote is taken.

RULES OF NOMENCLATURE.

1. When the priority of a name has been established by publication, particularly when such publication has occurred in any standard or authoritative work or works, that name should, if possible, be retained.

2. When names have been changed or corrected, if not too firmly established by local usage or otherwise, the original forms should be restored.

3. In cases where what was evidently originally the same word, appears with various spellings sanctioned by local usage or otherwise, these various spellings when applied to different features should be regarded as in effect different names, and as a rule it is inadvisable to attempt to produce uniformity.

4. As a rule the first published name should be retained, but where a choice is offered between two or more names for the same place or locality, all sanctioned by local usage, that which is most appropriate and euphonious should be adopted.

5. The possessive form should be avoided whenever it can be done without destroying the euphony of the name or changing its descriptive application. Where the possessive form is retained, the apostrophe should be dropped.

6. It is desirable to avoid the use of hyphens to connect parts of Indian names.

7. Names consisting of more than one word may be connected by hyphens or combined in one word as may be advisable.

8. It is desirable to avoid the use of the words city and town as parts of names.

9. The form 'canyon' may be used instead of 'cañon,' but the latter is preferable.

10. The term 'brook' is considered preferable to 'creek' for designating small streams, and will be adopted in cases where the latter has not become too firmly fixed.

11. The Board suggests that the initial letters of generic or descriptive parts of geographical names, when used in reports or other documents, should not be capitals.

12. The use of alternative names should be discontinued where possible or not inconvenient.

13. Geographical names in a foreign country should be rendered in the form adopted by that country, except where there are English equivalents already fixed by usage.

14. French names in Canada are to be spelt, accented, hyphenated, &c., according to the rules of the French language.

15. In cases where names already exist, and have been published in both English and French form and have been sanctioned by long usage, no attempt shall be made to abolish either form, but both may be recognized and published in the Board's lists or decisions and it shall be deemed correct to use either form in official documents in either language. In all other cases any duplication of form shall be discouraged and preference shall be given to the form which has priority of origin, whether this be English or French.

16. In English text and map printing, the use of hyphens for composite French names, though it is recommended, shall not be considered obligatory.

17. The spelling of native geographical names should represent, approximately, the true sounds of the words as pronounced in the native tongue. In the orthography of names of Indian origin in the province of Quebec, the rules of the Board, based on those of the Royal Geographical Society, are preferable to French practice as being simpler and in accordance with international usage, and shall be followed in the case of new names.

18. Where a generic descriptive term, such as Cape, Bay, River, &c., is added to a name, it is permissible to translate such term into French for use in French

publications, or into English for use in English publications, if it can be done without producing a mixture of English and French.

19. The Board adopts the rules of the Royal Geographical Society for the orthography of geographical names, of which the broad features are as follows:—

- (a) The vowels are to be pronounced as in Italian and the consonants as in English.
- (b) Every letter is pronounced, and no redundant letters are introduced. When two vowels come together each one is sounded, though the result, when spoken quickly, is sometimes scarcely to be distinguished from a single sound, as in *ai, au, ei*.
- (c) One accent only is used, the acute, to denote the syllable on which stress is laid. This is very important, as the sounds of many names are entirely altered by the misplacement of this 'stress.'

The following amplification of the foregoing rules explains their application:—

SESSIONAL PAPER No. 21a

Letters.	Pronunciation and Remarks.	Examples.
a	<i>ah</i> , <i>a</i> as in <i>father</i>	Java, Banana, Somali, Bari.
e	<i>eh</i> , <i>a</i> as in <i>faté</i>	Tel el Kebir, Oleleh, Yezo, Medina, Levuka, Peru.
i	English <i>e</i> ; <i>i</i> as in <i>ravine</i> ; the sound of <i>ee</i> in <i>beet</i> . Thus, not <i>Feejee</i> , but	Fiji, Hindi.
o	<i>o</i> as in <i>note</i>	Tokyo.
u	long <i>u</i> as in <i>flute</i> ; the sound of <i>oo</i> in <i>boot</i> . <i>oo</i> or <i>ou</i> should never be employed for this sound..... Thus, not <i>Zooloo</i> , but <i>All vowels are shortened in sound by doubling the following consonant</i> Doubling a vowel is only necessary when there is a distinct repetition of the single sound.	Zulu, Sumatra. Yarra, Tanna, Mecca, Jidda
ai	as in <i>aiste</i> , or English <i>i</i> as in <i>ice</i>	Nuulua, Oosima.
au	<i>ow</i> as in <i>how</i> Thus, not <i>Foochow</i> , but	Shanghai.
ao	is slightly different from above.....	Fuchau.
aw	when followed by a consonant or at the end of a word, as in <i>law</i>	Macao.
ei	is the sound of the two Italian vowels, but is frequently slurred over, when it is scarcely to be distinguished from <i>ei</i> in the English <i>eight</i> or <i>ey</i> in the English <i>they</i> .	Cawnpore.
b	English <i>b</i> .	Beirut, Beihul.
c	is always soft, but is so nearly the sound of <i>s</i> that it should be seldom used. If <i>Celebes</i> were not already recognized it would be written <i>Selebes</i> .	Celebes.
ch	is always soft as in <i>church</i>	Chingchin.
d	English <i>d</i> .	
f	English <i>f</i> . <i>ph</i> should not be used for the sound of <i>f</i> . Thus, not <i>Haiphong</i> , but	Haifong, Nafa.
g	is always hard. (Soft <i>g</i> is given by <i>j</i>).....	Galapagos.
h	is always pronounced when inserted.	
hw	as in <i>what</i> ; better rendered by <i>hw</i> than by <i>wh</i> , or <i>h</i> followed by a vowel, thus <i>Hwang ho</i> , not <i>Whang ho</i> , or <i>Hoang ho</i> .	Hwang ho, Ngan hwei.
j	English <i>j</i> . <i>Dj</i> should never be put for this sound.....	Japan, Jinchuen.
k	English <i>k</i> . It should always be put for the hard <i>c</i> . Thus, not <i>Corea</i> , but	Korea.
kh	The Oriental guttural.....	Khan.
gh	is another guttural, as in the Turkish.....	Dagh, Ghazi.
l	} As in English.	
m		
n	} As in English.	
ng		has two separate sounds, the one hard as in the English word <i>finger</i> , the other as in <i>singer</i> . As these two sounds are rarely employed in the same locality, no attempt is made to distinguish between them.
p	As in English.	
ph	As in <i>loophole</i> .	Chemulpho, Mokpho.
th	stands both for its sound in <i>thing</i> , and as in <i>this</i> . The former is most common.	Bethlehem.
q	should never be employed; <i>qu</i> (in <i>quiver</i>) is given as <i>kw</i> When <i>qu</i> has the sound of <i>k</i> as in <i>quoit</i> , it should be given by <i>k</i> .	Kwangtung.
r	} As in English.	
s		
sh	} As in English.	
t		
v	} As in English.	
w		Sawakin.
x	} As in English.	
y		is always a consonant, as in <i>yard</i> , and therefore should never be used as a terminal, <i>i</i> or <i>e</i> being substituted as the sound may require. Thus, not <i>Mikindany</i> , but not <i>Kwaly</i> , but
z	English <i>z</i>	Kwale.
zh	The French <i>j</i> , or as <i>s</i> in <i>treasure</i> Accents should not generally be used, but where there is a very decided emphatic syllable or stress, which affects the sound of the word, it should be marked by an <i>acute</i> accent.	Zulu. Muzhdaha. Tongatábu, Paíawon, Saráwak.

DECISIONS

In the following list of names, those approved by the Board are printed in black type. Names, and different forms of the same name, which have been discarded are also given; the former being printed in *italics* and alphabetically arranged with the adopted names, but the latter, when nearly like the adopted forms, are not repeated.
