ALPHABETIC LIST OF MANUFACTURED PRODUCTS— 1963 CENSUS OF MANUFACTURES

INTRODUCTION

This alphabetic list of manufactured products is designed for use as an index to manufactured products coded to the 7-digit level in the 1963 Census of Manufactures. Each product listed in this alphabetic manual is coded in accordance with the Standard Industrial Classification (SIC). The first four digits of each 5-digit code represent the SIC industry in which that product is classified as primary. The fifth digit represents the product class in which the product is further classified.

While this alphabetic booklet should prove helpful to outside organizations and individuals working with the Standard Industrial Classification, its primary purpose is for use within the Bureau of the Census in product coding respondents' reports in the 1963 Census of Manufactures. The numerical lists of manufactured products, to which this alphabetic list is an index, contain the full 7-digit product codes. Where required for Bureau of the Census processing of the 1963 Census, two additional digits (6th and 7th) will be secured from the numerical lists and appended to the 5-digit code taken from this alphabetic listing. The numerical lists also contain 8th and 9th digits added to the product code, these representing key-punch verification check digits to be used in computer processing of product data reported by respondents on 1963 Census report forms.

The numerical lists referred to above, and included in this series of manuals for the 1963 Census of Manufactures, are:
