FIELD TRIP REPORT

R.G. STRADLEY

30 January 1950

1. Purpose:

Inspection of Ujina Shipbuilding Company.

2. Background:

Inspection required by O.D. 51, 27 Sept. 1949.

3. Discussion:

a. The shipyard is not building any new ships.

b. Present repair works consist of one (1) 300 ton guard-ship of the maritime Safety Board and four (4) speed boats of BCOF, 20 tons each.

c. The shipyard is also repairing and converting No. 10 and No.11 Daifuku Maru, 350 tons and 450 tons respectively. These ships were originally used by the Japanese Navy to transport liquid items on both sides of the ship and earth in the middle.
The Company is constructing the bottom floor in the middle part in order to transport molasses from Formasa to Moji Port where the molasses will be unloaded and put in another vessel to be taken to a sugar refinery.
These ships will carry either bulk oil or molasses, in latter case, in the middle part and nothing on both sides.
The owner of the ships is Morita Steamship Co., Osaka City.
This Company desires to install 400 HP steam engines to make them motor driven ships for which an application has been submitted to G.H.Q., SCAP through the Central Maritime Bureau in TOKYO. Indications are the Company will receive a reply for the above application by Feb. 15, 1950. In case no permission is granted the company will use them as oil-tanker-type barges to be towed by steamboat. As for the engine to be installed, the Company has not yet decided whether they will send them from Osaka or use the two 400 HP steam-engines installed on two (2) 200 ton ex-navy steel ships that are now in the yard after release from the former Japanese Navy. A cabin is being constructed on the No. 10 Daifuku-Maru. As for the No. 11 Daifuku-Maru, the Company is working on the repair of hull and stern and partitions in the middle part. Pumps are to be installed on the decks of ships.
However, if the installation of engine is not permitted the company will have to use the steam of a tug boat in order to pump up and unload the bulk oil or molasses they are carrying.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 77801

d. The rated capacity of the company is repair 1,300 G/T and Build, nil. Mr. Tatsuta, President of the company stated that actual monthly capacity on an average is repairing of four (4) ships or a total tonnage of 600 tons which is about one half of its rated capacity.
The chief reasons for the above under capacity operation lie in the size of the dock yard and a small volume of orders which usually come from local shipowners for repair and from faraway shipowners for conversion. No difficulties exist in the acqusition of raw materials.

e. The company employs 190 workers, and 80 staffs and clerks, a total of 270 employees and use slips instead of dry dock.

4. Conclusion:

Conversion of the No. 10 and No. 11 Daifuku Marry, 350 tons and 450 tons respectively with installation of engines making them into motor driven oil-tanker type barges should not be executed pending a conversion permit from GHQ SCAP, Company president was so instructed.

5. Recommendation:

This shipyard should be inspected again in the latter part of February 1950 to check on conversion activity.
