

Plum Brook Station Space Power Facility

- Plum Brook is the home of world-class test facilities for large-scale space flight hardware testing.
- Operated by highly-experienced staff, Plum Brook's facilities are capable of simulating environmental conditions found on Earth, in low Earth orbit, on planetary surfaces, and in deep space.
- Test facilities are used by NASA, other government agencies, international and private sector customers to safely and effectively develop, test, and prove advanced Earth and space hardware and technologies.
- The Space Power Facility is the world's largest space environment simulation chamber.
- The 6400-acre Plum Brook Station is approximately 50 miles west of Glenn Research Center near Sandusky, Ohio.
