fun'dus. The bottom of a hollow structure; that portion of its interior which is farthest from the point of observation or access. **f. oculi.** Syn.: *eye-ground*. The bottom or background of the eye as seen with the ophthalmoscope. **f. of a gland.** The bottom or that portion of the cavity of a gland most distant from its excretory duct. **f. of the bladder.** The base of the bladder. **f. of the eye.** See *f. oculi*. **f. of the gall-bladder.** The body of the gall-bladder. **f. of the stomach.** The greater curvature of the stomach. **f. of the urinary bladder.** See *basis vesicae urinariae*, under *basis*. **f. of the vagina.** See *vault of the vagina*, under *vault*. **f. of the womb.** See *f. uteri*. **f. sacci lacrimalis.** The upper end of the lacrimal sac. **f. uteri.** That portion of the organ situated above the uterine orifices of the oviducts. **f. ventriculi.** See *f. of the stomach*. **f. vesicae felleae.** See *f. of the gall-bladder*. **f. vesicae of Vesalius.** See *superior f. of the urinary bladder*. **f. vesicae seminalis.** The bottom of the upper portion of a vesicula seminalis. **superior f. of the urinary bladder.** The superior ovoid portion of the bladder. [Lat., *fundus*, bottom.]

fungicide (fun'ge-sid). An agent that destroys fungi. [Lat., *fungus*, + *caedere*, to kill.]

fungiform (fun'ge-form). Fungus-shaped; having the form of a mushroom. **f. papillae.** See under *papilla*. [Lat., *fungus*, a mushroom, + *forma*, form.]

fungin (fun'gin). The solid tissue which forms the basis of *fungi*; now known to be a variety of cellulose. [Lat., *fungus*, a mushroom.]

fungoid (fun'goyd). Resembling a fungus or its qualities. [Lat., *fungus*, + Gr., *eidos*, resemblance.]

fungos'ity. 1. The state of being fungous. 2. An exuberant outgrowth. **urethral f.** See *urethral papilloma*, under *papilloma*. [Lat., *fungus*, a mushroom.]

fun'gous. Like a fungus; soft, spongy, exuberant.

fun'gus. Pl. *fungi*. 1. A member of the subkingdom of the vegetable kingdom without stems, leaves, or roots, including some forty thousand species. They are without chlorophyll, do not assimilate CO₂, are usually parasitic, and are composed either of single cells, or filaments, called hyphae. 2. A mushroom or a plant of similar nature. 3. An exuberant, soft, spongy outgrowth. **cleft fungi.** The *Schizomycetes* or fission *fungi*; so called because they increase by fission. The term is also applicable to the earth stars (*Geaster*), the peridium of which splits ultimately into several divisions. **filamentous fungi.** A term reserved by some for the *Hyphomycetes*, but in the sense of *fungi* in which the vegetative body or thallus consists of filiform elements (*hyphae*) it includes all the larger groups of *fungi* except the *Myxomycetes* (placed by De Bary among amoeboid animal organisms) and certain degenerate higher forms, such as the yeast plant. **fission fungi.** The *Schizomycetes*. **f. articularis.** See *fungous arthritis*, under *arthritis*. **F. bovista.** See *Lycoperdon*. **f. cancrusus hematodes.** See *f. hematodes*. **f. cancrusus medullaris.** See *medullary sarcoma*. **f. cerebri.** See *medullary sarcoma*. **f. cerebralis.** See *medullary sarcoma*. **f. chirochorum.** 1. See *amadou*. 2. *Lycoperdon bovista*. **f. cranii.** A fungous growth of the cranial bones. **f. hematodes.** Syn.: *carcinoma hematomoides*, *telangiectatic carcinoma*. See *medullary sarcoma*, under *sarcoma*. **f. mammae.** Cancer of the breast. **f. medullaris.** See *medullary sarcoma*, under *sarcoma*. **f. meullaris oculi.** See *glioma retinae*. **f. melanodes.** See *melanotic cancer*, under *cancer*. **f. of the dura mater.** A tumor, especially medullary sarcoma, springing from the dura mater. **F. typhoides.** See *Cynomorium coccineum*, under *Cynomorium*. **f. umbilicalis.** A fungous state of the stump of the umbilical cord in newborn infants. **f. vasculorum.** See *nevus vasularis*. **germ fungi.** See *Blastomycetes*. **split fungi.** The *Schizomycetes*. **yeast fungi, yeast plant fungi.** The *Saccharomycetes*. [Lat., *fungus*, mushroom.]

fun'gus foot. Another name for mycetoma. See *mycetoma*.

funiculitis (fu-nik-u-li'tis). Inflammation of the spermatic cord. [Lat., *funiculus*, + Gr., *itis*, inflammation.]

funiculus (fu-nik'u-lus). A cord or fasciculus. 1. A variable number of nerve fibers united into a bundle and surrounded by a tubular connective tissue sheath called the perineurium. A nerve usually consists of several such funiculi. 2. A column of the spinal cord. 3. The umbilical cord. **anterior funiculi.** See *anterior columns of the spinal cord*, under *column*. **anterior lateral f.** See *anterolateral col-*

umn, under *column*. **Burdach's f. cuneatus**. See *cuneate f. cuneate f.* The wedge-shaped expansion of a dorsal lateral column of the spinal cord at its termination in the medulla oblongata. **funiculi arciformes olivae**. See *arciform fibers*, under *fiber*. **f. centralis**. A central column composed of cellular tissue prolonged into the stripes of the tunica exterior in masses. **funiculi cerebrales**. See *anterior columnns of the spinal cord*, under *column*. **f. cuneatus**. See *cuneate f. f. dorsalis*. See *spinal cord*, under *cord*. **funiculi graciles cerebelli**. The prolongations of the dorsal columnns of the spinal cord, which diverge to form the lateral boundaries of the fourth ventricle. **f. griseus anterior**. See *anterior gray cornu*, under *cornu*. **f. griseus posterior**. See *posterior cornu of the spinal cord*, under *cornu*. **funiculi innominati**. See *fasciculi teretes*, under *fasciculus*. **f. lateralis**. See *lateral column*. **funiculi lateralis cerebelli**. The lateral fibers of the restiform body. **f. lateralis medullae oblongatae**. The continuation of the lateral columnns of the spinal cord into the oblongata. **f. lateralis medullae spinalis**. See *lateral column*. **f. nuclei olivae**. A tract of nerve fibers in the oblongata which enters into the hilum of the corpus dentatum olivae. **f. of Rolando**. A prominence which forms the continuation of the dorsal lateral column of the spinal cord and terminates in the tubercle of Rolando. **f. olivae**, **f. olivaris**, **f. ovalis**. See *lateral column*. **f. pontis inferior**. The more ventral transverse fibers of the pons Varolii. **f. pontis superior**. The more dorsal transverse fibers of the pons Varolii. **funiculi posteriores medullae spinalis**. The posterior columnns of the spinal cord. **f. pyramidalis**. See *pyramidal tract*, under *tract*. **f. pyramidis**. A column or tract of fibers in one of the pyramids of the oblongata. **f. restiformis**. See *restiform body*, under *body*. **f. sacralis**. The pelvic portion of the sympathetic nerve. **f. solitarius**. See *respiratory fasciculus*, under *fasciculus*. **f. spermaticus**. See *spermatic cord*, under *cord*. **f. spinalis**. See *spinal cord*, under *cord*. **f. thoracicus nervi sympathetici**. The thoracic portion of the sympathetic nerve. **f. transversus**. See *anterior cerebral commissure*, under *commissure*. **f. tuberies**. See *infundibulum*. **f. tympani**. See *chorda tympani*. **f. umbilicalis**, **f. umbilicaris**. See *umbilical cord*, under *cord*. **f. uteri**. The round ligament of the uterus. [Lat., dim. of *funis*, a rope.]

fu'nis. 1. A rope, line, or cord. 2. See *umbilical cord*, under *cord*. **f. furcalis**. A form of marginal insertion of the umbilical cord in which the vessels diverge and enter the placenta at different points. See also *velamentous insertion*, under *insertion*, of which this condition is a lesser degree. **f. umbilicalis**. See *umbilical cord*, under *cord*. [Lat., *funis*, rope.]

fun'nel. 1. See *infundibulum*. 2. A tube

flaring at the upper end and narrow at the lower for pouring liquids into bottles, for filtering solutions, etc. **f.-shaped**. See *infundibulum*. **pial f's**. The loose f.-shaped adventitia extending from the pia into the cerebral substance with the blood vessels and forming a part of the cerebral lymphatic system. [Lat., *infundibulum*, a funnel, from *fundere*, to pour.]

fur. A coating on the tongue.

furfuraceous (fur-fur-a'shus). Made of bran, branny; of eruptions, attended with a branlike desquamation. [Lat., *furfuraceus*, from *furfur*, bran.]

fur'furan. A five-numbered heterocyclic compound, containing oxygen, $\text{CH} = \text{CH}$

A liquid found in the distillation product of tar of pine wood.

furfurool (fur'fur-öl). Syn.: *furol*. Pyromucic aldehyd, an oily liquid, $\text{C}_8\text{H}_8\text{O} \cdot \text{CHO}$, one of the heterocyclic compounds, prepared by the distillation of bran, flour, sawdust, sugar, etc. **f. reaction**. The red color reaction given by f. when it is brought together with anilin.

furor (fu'ror). Excessive excitement with motor activity; rage, fury.

furred. Coated with a furry deposit; said of the tongue.

fur'row. See *groove* and *sulcus*. **dorsal f.** 1. The hollow in the middle line of the back at the bottom of which is a number of slight elevations caused by the spinous processes of the vertebrae. 2. In embryology, the primitive groove after it has become clearly defined. **equatorial f.** In the segmentation of the ovum, a f. through, or parallel to, the equator of the ovum. **genital f.** An anteroposterior groove formed on the lower aspect of the genital tubercle of the embryo. In the male it closes, forming the spongy portion of the urethra; in the female it remains open, except that it unites with the perineum posteriorly, and its lips are converted into the labia minora. **inguinal f.** The fold of the groin. **intervertebricular f's**, **longitudinal f's of the heart**. Two longitudinal f's, one on the anterior, the other on the posterior surface of the heart, extending from base to apex of the latter, and marking the separation of the right from the left ventricle. **mentolabial f.** The transverse depression between the chin and the lower lip [B. N. A., *sulcus mentolabialis*]. **oculomotor f.** A slight groove on the inner edge of the crus cerebri which lodges the third nerve. [Ang.-Sax., *furh*.]

fur'rowed tongue. A condition of unusual furrowing of the dorsum of the tongue. The central furrow is deepened, and radiating from it there are numerous parallel deep furrows which may resemble roughly the branches of a tree. The tongue looks as though too large for its mucous covering. The appearance is most often compared to that of the skin of the scrotum when contracted by cold.

furuncle (fu'run-kle). Syn.: *boil*. An acute inflammatory process around a follicle of

the skin, produced by infection through the follicle and resulting, usually, in necrosis and suppuration of the central mass. [Lat., *furunculus*, a burning sore, a boil, dim. of *fur*, a thief.]

Fusaria (fu-sa're-ah). A genus of the *Ascaridae*, being a nematode worm inhabiting the intestine. **F. mystax**. A species found in man and in cats. It rarely causes symptoms. **F. vermicularis**. The *Oxyuris vermicularis*. [Lat., *fusus*, a spindle.]

fuscin (fus'sin). A dark pigment of the epithelial cells of the retina.

fu'sel oil. A mixture of several alcohols, especially propyl-, hexyl- and amyl-alcohols, formed in the fermentation of grain, and obtained from it by distillation. It is probably derived from the action of the yeast cells upon the proteins present in grain.

fusibility (fu-si-bil'it-e). The quality of being fusible.

fu'siform. Spindle-shaped; tapering toward both ends, but often more abruptly toward one end. [Lat., *fusus*, a spindle, + *forma*, form.]

fusion (fu'shun). 1. The act or process of melting or fusing; the passage from a solid to a liquid state through the agency of heat. 2. An intimate blending of separate structures, a growing together.

igneous f. *F.* properly speaking; the transformation of the matter of a solid body into liquid under the influence of heat. **fustigation** (fus-tig-a'shun). Syn.: *flagellation*. A process formerly used to stimulate nutrition. **electric f.** Of Duchenne, the application of the faradic current by interruptedly tapping the locality affected. [Lat., *fustigare*, to cudgel.]

G

G. An abbreviation for gram.

Ga. The chemical symbol for the element gallium.

Gabbett's solution. A solution consisting of methylene blue 2 gms., sulphuric acid C. P. 25 c.c., and water 75 c.c. It is used for decolorizing all bacteria and cells in tuberculous sputum except the tubercle bacillus which retains the red stain from the carbolfuchsin solution.

gad'inin. A ptomain, $C_7H_{17}NO_2$, found in putrefying haddock.

ga'dus. The codfish. [Gr., *gados*, the whiting.]

gag. 1. An instrument for holding the jaws apart. 2. To apply a gag. 3. To cause retching. 4. To retch. [Early Mod. Eng., *gagge*, to choke.]

gagc, gauge (gāj). A standard of measure; an instrument for determining the dimensions, capacity, or force of anything, as a gauge for the thickness of wire. [Old Fr., *gauge*, *jauge*, a gage, gaging rod.]

gaille. The French name for scabies. See *scabies*.

gait (gāt). Any distinctive manner of walking or running. **ataxic g.** The typical g. of tabes, in which steps are taken slowly and deliberately but there are irregular movements of the legs, the feet are jerked outward, making a swinging circular movement, and the heels are brought to the ground with a stamp, the toes following with a peculiar flapping sound. **cerebellar g.** A staggering and unsteady g. which is the result of cerebellar disease. **g. of paralysis agitans**. A g. in which there is hesitation before beginning to walk; a few steps are made slowly, and then the g. becomes rapid on account of the tendency to fall forward (propulsion). **hemiplegic g.** Peculiar mowing swing of the affected

leg. **swaying g.** See *cerebellar g.* [Ang.-Sax., *geat*, *gat*, gate, door.]

galactagogue (ga-lak'ta-gog). Promoting the secretion of milk; as a g. drug or remedy. [Gr., *gala*, milk, + *agogos*, leading.]

galactase (gal-ak'tās). A milk enzyme which aids in the ripening of cheese.

galacto-, galact-. Combining form of Gr., *gala*, *galakt*, milk; used as a prefix.

galactoblasts (gal-ak'to-blasts). Bodies containing fat globules found in the mammary acini; supposed to be exuded leukocytes undergoing fatty metamorphosis. [Gr., *gala*, milk, + *blastos*, a sprout.]

galactoceles (gal-ak'to-sel). 1. A cystic tumor of the female breast containing milk and produced by closure of its milk duct. 2. A chylocele. [Gr., *gala*, milk, + *kele*, tumor.]

galac'tochlo'ral. A compound, $C_8H_4Cl_2O_6$, obtained by heating galactose and chloral with hydrochloric acid.

galactogenous (gal-ak-toj'en-us). Favoring the production of milk. [Gr., *gala*, milk, + *gennan*, to produce.]

galactometer (gal-ak-tom'et-er). An instrument for measuring the amount of cream in milk by ascertaining its specific gravity or the degree of its opacity. **centesimal g.** Of Dinscourt, the hydrometer with two graduated scales, one for skimmed milk, the other for pure milk. [Gr., *gala*, milk, + *metron*, measure.]

galactop'athy. Galactotherapy.

galactop'hagous. Feeding upon milk. [Gr., *gala*, milk, + *phagein*, to eat.]

galactophlebitis (gal-ak'to-fle-be'tis). Syn.: *phlegmasia alba dolens*, *milk leg*. Phlebitis, i. e., inflammation of a vein, produced by a pyogenic organism, commonly about the beginning of lactation. [Gr., *gala*, milk, + *phleps*, vein, + *itis*, inflammation.]

galactophorous (gal-ak-tof'or-us). 1. Giving milk. 2. Milk conveying (said of the ducts of the mammary gland). 3. See *galactagogue*. [Gr., *gala*, milk, + *phorein*, to bear.]

galactopoeitic (gal-ak'to-poy-et'ik). Having to do with the production of milk. [Gr., *gala*, milk, + *poiein*, to make.]

galactorrhœa (gal-ak-tor-re'ah). A persistent and debilitating secretion of milk after weaning. *g. erronea*. Excretion of milk from an unusual locality. *g. saccharata*. The secretion of milk unusually rich in sugar. [Gr., *gala*, milk, + *rein*, to flow.]

galac'tosac'charum. See *lactose*.

galactoscope (gal-ak'to-sköp). An instrument for estimating the quality of milk by the degree of its opacity. [Gr., *gala*, milk, + *skopein*, to examine.]

galactose (gal-ak'tös). A carbohydrate, $C_6H_{12}O_6$, derived from milk sugar (lactose) by the action of enzymes or by boiling with a mineral acid. In chemical constitution it is a pentahydric alcohol and an aldehyd containing six carbon atoms. [Gr., *gala*, milk.]

galactosid (gal-ak'to-sid). A substance related to galactose as glucosid is to glucose.

galactosis (gal-ak-to'sis). The process of secretion of milk. [Gr., *gala*, milk.]

galactosuria (gal-ak-to-su're-ah). Galactose in the urine.

galactotherapy (gal-ak-to-ther'ap-e). The treatment of disease in the nursing infant by means of drugs administered to the mother to be excreted in her milk. [Gr., *gala*, milk, + *therapeia*, a waiting upon.]

galactotoxin (gal-ak'to-tox'in). The ptomain found in milk and produced by bacteria.

galactotox'ism. Milk poisoning, usually produced by the products of bacteria.

galactotrophy (gal-ak-tot'ro-fe). Alimentation with milk alone. [Gr., *gala*, milk, + *trophe*, nourishment.]

Galbanum (gal'ban-um). Syn.: *gummi-resina g.* 1. An undetermined genus of umbelliferous plants. 2. Of the Br. Ph., 1898, a gum resin, obtained from *Ferula galbaniflua* and probably from allied species. It occurs in commerce in masses of compact drops or tears, having a peculiar aromatic odor and an unpleasant, alliaceous taste. It is employed as a stimulating expectorant and antispasmodic, and externally as a plaster to indolent swellings. The plaster, compound plaster, and the pills of galbanum have been official. **pilulæ galbanæ compositæ**. Syn.: *pilula asafetidae composita*. Pills containing 1 part each of *g.*, myrrh, and asafetida beaten together with syrup of glucose [Br. Ph., 1898]. **unguentum galbani compositum**. A preparation known commonly under the name of breast plaster, made by melting together 2 parts each of yellow wax and *g.* and 3 parts each of olive and linseed oils. [Probably from the Hebr., *khelbenah*, lit., white milk or gum.]

galea (ga'le-ah). The epicranial aponeuro-

sis, connecting the bellies of the occipito-frontalis muscle.

galeanthropy (ga-le-an'thro-pe). A maniacal affection in which the patient believes himself to have been transformed into a cat. [Gr., *galee*, the polecat, + *anthropos*, a man.]

Galega (gal-e'gah). 1. A genus of perennial herbaceous leguminous plants. 2. The leaves of *G. officinalis*. **G. officinalis**. Goat's rue; formerly used as a febrifuge, antispasmodic, and diuretic. It was said to be galactagogue. [Sp., *galega*.]

galenica (ga-len'ik-ah). Pl. Galenical remedies; remedies made according to the formulas of Galen and the Galenists.

gal'enism. Galen's doctrine of the part played by his four humors in the production of disease.

galeropia (gal-er-o'pe-ah). Unusual visual clearness. [Gr., *galeros*, cheerful, + *opsis*, vision.]

Gallium. A genus of rubiaceous plants. **G. verum**. Yellow bedstraw, a species found in Europe, where the flowering parts of the plant were formerly employed. [Gr., *galion*, bedstraw.]

gall (gaw'l). Syn.: *bile, fel*. 1. The secretion of the liver. 2. A swelling such as that produced in plants by the stings of insects. See *nutgall*. **acid of g.** See *gallic acid*, under *acid*. **g.-bladder**. The pear-shaped reservoir for the bile, on the under surface of the liver. **g.-stone**. Syn.: *bile concrement*. A calculus in the gall-bladder, or in the cystic or hepatic ducts. **insipissated ox-g.** See *fel bovis inspissatum* [U. S. Ph., 1880.] **nutg.** See *nutgall*, under *separate heading*. **ox-g.** See *fel bovis*. [Old Sax., *galla*.]

gal'la. See *nutgall* [U. S. Ph., Br. Ph.]. **acidum gallæ**. Gallic wine [U. S. Ph.]. **tinctura gallæ**. A 20 per cent. tincture of nutgall [U. S. Ph.]. **unguentum gallæ**. An ointment representing 20 per cent of nutgall [U. S. Ph., Br. Ph.]. **unguentum gallæ cum opio**. A preparation consisting of gall ointment.

galactophenone (gal-as-et-o-fe'nön). An acetyl substitution derivative of pyrogallol.

gal'lal. Aluminum gallate; used as an antiseptic dusting powder.

gal'lanol, gal'linol. A powder prepared by heating tannin with anilin; used topically in psoriasis and chronic eczema. See in *appendix*, *page*.

gal'lic. Of or pertaining to galls. **g. acid**. See under *acid*.

gal'licin. A methyl ether of gallic acid $(OH)_3C_6H_2COOCH_3 < \begin{matrix} (OH)_3 \\ COOCH_3 \end{matrix}$; used as an antiseptic and dusting powder.

gal'lipot. A small glazed earthen pot for holding ointments.

gal'lium. A rare metallic element with a very low melting point. Atomic weight, 70. Symbol, Ga.

gallobro'mol. Dibromogallic acid, $C_6Br_2(OH)_3COOH$; used instead of the alkaline bromids, also, by irrigation, in gonorrhœa, cystitis, and epididymitis.

gallofor'min. A compound of formic aldehyd and gallic acid; used as an antiseptic.

gal'logen. Ellagic acid, $C_{14}H_6O_8$. It is an astringent, used in diarrhea.

gal'lon. A measure of liquids, holding 8 pints. In the United States, the g. measures 231 cubic inches; the imperial wine gallon of Great Britain contains 8 imperial pints or 70,000 grams of water. See *table of weights and measures, in appendix.*

gal'loping. Pursuing a rapid course; said of acute miliary tuberculosis.

galvanic (gal-van'ik). Pertaining to galvanism. [*Luigi Galvani*, a physician of Bologna.]

galvanism (gal'van-izm). Syn.: *electro-galvanism*. Electricity produced by chemical action. [*Luigi Galvani*, Ital. anatomist, 1737-1798.]

galvaniza'tion. The employment of a galvanic current, especially in diagnosis or therapeutics. **central g.** G. in which the brain, the sympathetic system and the spinal cord are successively stimulated. **general g.** 1. General electrization by means of a galvanic current. 2. See *general galvanofaradization.* **labile g.** G. in which one or both electrodes are moved from place to place. **localized g.** G. limited in its application to a circumscribed part of the body. **neuromuscular g.** Ordinary g. **polar g.** G. in which one electrode is placed over the part to be affected, while the other electrode is applied to an indifferent part. **stable g.** G. in which both electrodes are kept on the same place during the séance. **uni-polar g.** See *polar g.*

gal'vanized. Subjected to the effects of galvanism.

galvano- Combining form of galvanism.

gal'vanocaust'ic. Syn.: *electrocaustic*. 1. (Adj.) Acting as a galvanic cautery. 2. (N.) See *galvanic cautery*, under *cautery*.

gal'vanocau'tery. A cautery consisting of a wire heated by the galvanic current of electricity.

galvanodesmus (gal-van-o-des'mus). A galvanic battery. [*Galvani* + Gr., *desmos*, a chain.]

gal'vano-em'esis. Emesis produced by applying one pole of a battery to the pharynx and to the epigastrium.

gal'vanofarad'ic. Pertaining to both galvanism and faradism.

gal'vanofaradiza'tion. Syn.: *combined current*. The simultaneous employment of the galvanic and faradic currents conveyed through a single set of conductors. **general g.** The combined application of galvanic and faradic currents to the whole surface of the body.

gal'vanohyp'notism. A hypnotic condition produced by the passage of a galvanic current through the brain.

gal'vanomag'netism. See *electromagnetism*.

galvanometer (gal-van-om'et-er). An instrument for measuring the quantity of an electric current, consisting usually of a magnetic needle, which is caused to deviate by the action of the current passing

round it in a coil of wire. **absolute g.** A variety of mirror g. in which the current strength is measured by the amount of torsion required to bring two electromagnets, which are mutually repelled by the action of the current, back to within a certain distance of each other.

astatic g. A g. in which, instead of a single needle, two needles are used, placed parallel to each other and in the same vertical plane with their poles in opposite directions. **d'Arsonval's g.** See under *d'Arsonval*.

dead beat g. A g. in which the vibrations of the needle come to rest quickly. **differential g.** A g. in which there is a double coil of wire surrounding the needle, so that two separate currents can be sent through the coils, in either the same or a contrary direction. **intensity g.** See *tension g.*

mirror g. See *reflecting g.* **reflecting g.** Of Sir William Thomson, a g. in which several short magnetic needles are fastened to a silvered glass mirror, suspended by a silk thread in the midst of a coil of wire. A current passing through the wire causes deflection of the needles and hence of the mirror which casts a luminous reflection on a graduated arc. This form of g. gives a very delicate measure of the strength of the current. **sine g.** Of Pouillet, a g. consisting of a vertical circle, which can be placed in any meridian, and bears a coil of wire. A horizontal graduated circle causes a deflection of the needle through a certain arc, the sine of which is proportional to the strength of the current. **string g.** A very delicate form of g. in which a minute thread of platinum or silvered quartz is attached between the poles of a strong electromagnet. When a current passes through the thread the latter suffers a lateral movement, the thread is strongly illuminated and its movements are photographed on a roll of sensitive paper. **tangent g.** A g. consisting of a very short and thick magnetic needle suspended by a thread so as to occupy the center of a vertical ribbon of wire placed in the magnetic meridian. A current passing through the latter causes a deflection of the needle through a certain arc (measured on a horizontal circle), the tangent of which is proportional to the strength of the current. **tension g.** A g. in which there is a long wire coil; used to measure currents passing through circuits of great resistance. **Thomson's g.** See *mirror g.* [*Galvani* + Gr., *metron*, a measure.]

gal'vanoplas'ty. The art of electroplating and electrolyting.

gal'vanopunc'ture. The introduction of needles to complete a galvanic current.

galvanoscope (gal-van'os-köp). A simpler form of galvanometer indicating the occurrence and direction of a galvanic current. [*Galvani* + Gr., *skopein*, to examine.]

galvanoscopic (gal-van-os-köp'ik). 1. Pertaining to the galvanoscope or to galvanoscopy. 2. Serving as a galvanoscope. See *physiological rheoscope*, under *rheoscope*.

galvanoscopy (gal-van-os'ko-pe). 1. The use of the galvanoscope. 2. Physiological or clinical examination by the application of galvanism.

gal'vanosur'gery. The application of galvanism for surgical purposes.

gal'vanosusceptibil'ity. Susceptibility to the galvanic current.

gal'vanotherapeu'tics. See *electrotherapeutics*.

galvanot'onus. 1. See *electrotonus*. 2. The condition of tetanic contraction in which a muscle remains for some time after a galvanic current applied to its motor nerve is closed.

galvanotropism (gal-van-ot'ro-pizm). Attraction and repulsion action of electrical currents on living matter. [*galvanism* + Gr., *tropos*, turn.]

gambir (gam'bēr). An astringent extract prepared from *Ouroparia gambier* [U. S. Ph., 1890.]

gamboge (gam'bōj). A gum resin consisting of the hardened juice of *Garcinia Hanburii*. It is a hydragogue cathartic and has also been used as a diuretic.

American g. The product of *Vismia guianensis*. [Lat., *cambodia*.]

gam'ete. One of the two reproductive cells, which by their fusion produce a new organism. **female g.**, **macrog'**. See *ovule*. **male g.**, **microg'**. See *spermatozoid*. [Gr., *gametes*, spouse, from *gamos*, marriage.]

gametocyte (gam-et'o-sit). The sexual cell which forms the gamete.

gam'ic. Sexual, as opposed to parthenogenic. [Gr., *gamos*, a wedding.]

gamo-. Combining form of the Gr., *gamos*, marriage.

gamogenesis (gam-o-jen'es-is). The process of sexual reproduction; sexual generation. [Gr., *gamos*, a wedding, + *genesis*, an origin.]

gamomania (gam-o-ma'ne-ah). A morbid desire to marry. [Gr., *gamos*, a wedding, + *mania*, frenzy.]

gamomorphism (gam-o-mor'fizm). Sexual maturity; puberty. [Gr., *gamos*, a wedding, + *morphe*, form.]

ganglii'tis. Inflammation of a nervous or a lymphatic gland.

gangliolum (gang-le'o-lum). A little ganglion. **g. coccygeum**. See *coccygeal gland*, under *gland. gangliola plexuum vesicularum seminalium*. Swellings, possibly ganglionic, in the plexuses of the seminal vesicles. **g. tympanicum**. See *tympanic gland*. [Lat., dim. of *ganglion*.]

ganglioma (gang-le-o'mah). A tumor of a lymphatic gland.

ganglion (gang'le-on). Pl. *ganglia*. 1. An indolent, cystlike enlargement of the sheath of a tendon, most commonly observed at the wrist. 2. A mass of nervous tissue which receives, records, sends out, or originates nervous impulses, or gives rise to psychical activity, or combines all these functions. **abdominal ganglia**. All the ganglia contained in the abdominal cavity. **anterior cerebral g.** 1. The corpus striatum. 2. The corpus striatum and the corpus lenticulare regarded as a whole.

anterior g. of the optic thalamus. The anterior tubercle of the optic thalamus. **Arnold's auricular g.** See *otic g. auditory g.* See *tuberculum acousticum*, under *tuberculum*. **Auerbach's ganglia**. See *Auerbach. auricular g.* See *otic g. azygous g.* 1. A g. which exists singly, not as one of a pair. 2. The g. opposite the coccyx, in which the two portions of the sympathetic nerve are united. **basal g.** See *great basal ganglia of the brain*. **basal optic g.** A collection of gray matter below the third ventricle, which begins above the optic commissure and extends over the optic tract to the posterior border of the tuber cinereum. **Bidder's ganglia**. See *Bidder. Bochdalek's g.* See *supramaxillary plexus. cardiac g.* A small g. to which the fibers of the superficial cardiac plexus converge. It is sometimes absent and often is represented by two or more smaller ganglia. See *inferior and superior cardiac ganglia. carotid g.* A small ganglioid swelling beneath the carotid artery, in the lower part of the cavernous sinus; formed by filaments from the carotid plexus. **cephalic ganglia**. A small g. found on the anterior communicating artery of the brain. **cephalic ganglia of the sympathetic**. The ophthalmic, the otic, the sphenopalatine, and submaxillary ganglia. **cerebral ganglia**. The great cerebral centers. **cervical ganglia**. See *inferior cervical g., middle cervical g., and superior cervical g.* **cervical g. of the pneumogastric nerve**. See *inferior g. of the pneumogastric nerve. cervical g. of the uterus*. A large plexus of nerves formed by filaments from the hypogastric plexus, the three upper sacral ganglia, and the first, second, and third sacral nerves. It sends branches to the whole uterus, but especially to the cervix. **cervico-uterine g.** The cervical g. of the uterus. **ciliary g.** See *ophthalmic g. diaphragmatic g.* A small g. connected with the semilunar g. at the point where the latter joins the phrenic nerve. It occurs on the right side only, and on the lower surface of the diaphragm. **ganglia aberrantia**. Small nodules or ganglia found occasionally on the dorsal roots of the spinal nerves. **g. Meckelii**. See *Meckel. ganglia mesenterica*. See *mesenteric ganglia. g. mesentericum inferius*. An almost microscopic g. connected with the inferior mesenteric plexus and lying adjacent to the inferior mesenteric artery. **g. mesentericum laterale**. A g. of the superior mesenteric plexus situated on the left side. **g. mesentericum superius**. A g. connected with the solar plexus immediately beneath the origin of the superior mesenteric artery. **ganglia meseraica**. See *mesenteric ganglia. g. nervi optici*. The ganglionic layer of the retina. **g. nervi splanchnici**. See *semilunar g. g. nervi splanchnici minus*. A small g. on the smaller splanchnic nerve, close to its union with the celiac plexus. **g. of the circumflex nerve**. A gangliiform en-

largement upon the branch of the circumflex nerve to the teres minor muscle. **g. of the interosseous nerve.** An enlargement of the posterior interosseous nerve of the arm on the back of the carpus, from which branches to the adjoining structures are given off. **g. of the posterior interosseous nerve.** A ganglioid enlargement of the posterior interosseous nerve on the back of the carpus, whence filaments are distributed to the ligaments and articulations of the carpus. **g. of the sinus of the vena cava.** A small g. of the cardiac plexus at the mouth of the vena cava. **g. of the superior corpus bigeminum.** The central gray matter of the anterior corpora quadrigemina. **ganglia of the sympathetic nerve.** A series of ganglia on each side of the vertebral column which are connected together and form, together with the intervening cords, the sympathetic nerve. **g. renale aorticum sinistrum.** A flat, oblong, or triangular g. of the renal plexus at the origin of the renal artery. **g. renale commune anterius.** A g. of the renal plexus situated on the anterior aspect of the nasal artery. **g. renale commune posterius.** An oblong or semilunar g. belonging to the renal plexus, found on the posterior aspect of the renal artery. **g. spermaticorenale.** A small round or oblong g. found at the commencement of a small plexus formed by the inferior branches of the renal plexus. **g. spermaticum inferius.** The inferior and smaller of the ganglionic enlargements in the inferior spermatic plexus. **g. spermaticum primum.** The superior and larger of the two ganglionic enlargements in the inferior spermatic plexus. **g. tympanicum.** A small ganglioid swelling in the tympanic branch of the glossopharyngeal nerve. **g. unciforme.** The uncinat fasciculus. **g. uterina.** G. contained in the uterine plexus, by the side of the cervical portion of the uterus. **g. vestibulare.** A small g. connected with the vestibular nerve which receives small fibers from the geniculate g. **gasserian g.** A large crescent-shaped g. lodged in a shallow depression on the anterior (superior) surface, and near the apex, of the petrous portion of the temporal bone. From its anterior convex border are given off the ophthalmic, superior maxillary, and inferior maxillary nerves. **geniculate g.** A ganglioid enlargement of the facial nerve in the aqueduct of Fallopius. **great basal ganglia of the brain.** Of Spitzka, the striata and thalmi. **inferior cardiac g.** The lower of the two ganglia which sometimes take the place of the cardiac g. **inferior cervical g.** A g. of irregular shape situated between the transverse process of the last cervical vertebra and the neck of the first rib. **inferior g. of the pneumogastric nerve.** A reddish, somewhat cylindroid enlargement of the pneumogastric nerve, placed at a short distance from its exit from the jugular foramen. **intercrural g.** A

small mass of gray matter between the crura cerebri. **interoptic g.** The gray matter of the interoptic lobes. **interpeduncular g.** See *intercrural g.* **intervertebral g.** The enlargement upon the posterior root of a spinal nerve near the intervertebral foramen. **jugular g.** The g. of the glossopharyngeal nerve in the upper part of the jugular foramen. **lenticular g.** See *ophthalmic g.* **lesser cardiac g.** See *superior cardiac g.* **Ludwig's g.** See under *Ludwig.* **lumbar ganglia.** The ganglia of the sympathetic system in the lumbar region. **marginal g.** A g. of the great sympathetic chain in the trunk of the head. **Meckel's g.** See under *Meckel.* **Meckel's lesser g.** See *submaxillary g.* **Meissner's ganglia.** See under *Meissner.* **mesenteric ganglia.** Sympathetic ganglia near the foot of the superior mesenteric artery, formed by filaments from the superior mesenteric plexus. **middle cervical g.** The smaller of the three cervical ganglia, situated close to the inferior thyroid artery. **Müller's g.** See *jugular g.* **nasal g.** See *Meckel's g.*, under *Meckel.* **olfactory g.** See *olfactory bulb*, under *bulb.* **ophthalmic g.**, **optic g.** A small g. situated at the back part of the orbit. Its branches of distribution are the short ciliary nerves, which are distributed to the choroid, the ciliary body, and the iris. **orbital g.** See *ophthalmic g.* **otic g.** A small g. situated immediately below the foramen ovale. Its branches of distribution are a filament to the tensor tympani and one to the tensor palati. **petrosal g.**, **petrous g.** A g. situated in a small groove on the lower border of the petrous portion of the temporal bone. **pharyngeal g.** A g., often multiple, connected with the pharyngeal branches of the glossopharyngeal nerve. **phrenic ganglia.** A number of small ganglia connected with the phrenic plexus. **plexiform g.** 1. The gasserian g. 2. The g. inferius of the vagus nerve. **pneumogastric ganglia.** See *inferior and superior g. of the pneumogastric nerve.* **renal ganglia.** Numerous small ganglia connected with the renal plexus. **respiratory ganglia.** The respiratory centers. **reticular g.** The scattered gray matter of the oblongata. **sacral ganglia.** Sympathetic ganglia, four or five in number, on the ventral surface of the sacrum. **semilunar ganglia.** Two ganglionic masses in the solar plexus. They are situated, one on each side, at the upper part of the plexus, close to the suprarenal bodies, and receive the great splanchnic nerves. **sensory ganglia.** Ganglia, such as the thalami, connected with sensory nerves, especially the nerves of special sense. **spermatic ganglia.** Small ganglia connected with the internal spermatic plexuses. **sphenoidal g.**, **sphenopalatine g.** See *Meckel's g.* **spinal ganglia.** The roundish, gray enlargements of the dorsal roots of the spinal nerves. **sublingual g.**, **submaxillary g.** A g. situ-

- ated above the deep portion of the submaxillary gland. **superior cardiac g.** Syn.: *g. of Wrisberg*. The uppermost of the two ganglia, when two exist, connected with the superficial cardiac plexus.
- superior cervical g.** The largest of the three cervical ganglia. **superior g. of the pneumogastric nerve.** A g. situated in the jugular foramen which receives fibers from the superior cervical g. of the sympathetic system, from the spinal accessory nerve, and from the petrous g. of the glossopharyngeal nerve. **supramaxillary g.** A small g. on the anterior superior dental nerve, above the root of the canine tooth. **suprarenal ganglia.** Ganglia in the suprarenal plexus. **temporal g.** A small g. connected with the anterior branches of the superior cervical g. **thoracic ganglia.** The ganglia, twelve in number, of the thoracic portion of the sympathetic nerve. [Gr., *gagghion*, swelling, tumor, node.]
- gan'glio'neuro'ma.** A tumor of the adrenal gland developing from cell nests of the sympathetic constituents and containing rudimentary ganglion nerve cells and non-medullated fibers.
- gangosa** (gan-go'sah). A disease found in the Ladrone and Caroline Islands, characterized by destructive ulceration, usually beginning in the soft palate, pillars, or uvula and extending by continuity to the hard palate and nasal cavity and even to the face. Constitutional symptoms are slight or absent. [Span., *gangosa*, snuffling.]
- gangrene** (gan'grēn). Complete death of a considerable portion of the living body. It is due to pressure, constriction, invagination, or torsion; to embolism, thrombosis, or disease of the wall of a blood vessel; to certain diseases of the blood vessel; to exposure to great heat or cold; to the application of certain drugs; and to poisoning of the system with ergot taken internally. When the cause is unknown, it is said to be idiopathic. G. is classed as *dry* or *moist*, according as the tissues are dry, shrunken, hard, and black, or soft, wet, rotten, and foul-smelling. **symmetrical g.** Syn.: *asphyxia localis cum gangrena symmetrica*. See *Raynaud's disease* under *Raynaud*. [Gr., *gaggraina*, an eating sore, from *gran*, to gnaw.]
- gan'ja.** A narcotic mixture, containing Indian cannabis and other ingredients, used in Persia.
- Gant's line of section.** A section of the femur through an imaginary line below the trochanter major. **G's osteot'omy.** A subcutaneous osteotomy performed just below the trochanter major for deformity of the hip. [Samuel Goodwin Gant, New York rectal surgeon.]
- garantose** (gar'an-tōs). See *benzozulphimid*.
- gar'bled.** Freed from worthless material, selected for the market; said of crude drugs. [Old Fr., *grabeler*, to examine closely.]
- Garcin'ia Hanbur'ii.** The species (according to some, *G. morella*, var. *pedicelata*) recognized by the pharmacopeias as the source of the official gamboge. It is a tree growing in Cambodia, Siam, and in the southern parts of Cochinchina.
- gar'denin.** A compound, $C_{23}H_{30}O_{16}$, or $C_{14}H_{22}O_8$, obtained by dissolving in alcohol the resin of *Gardenia lucida*.
- garget** (gar'jet). Purulent inflammation of the lactiferous ducts in the mammary gland of the cow. [Old Fr., *gargate*, throat.]
- gar'gle.** 1. A liquid for washing the back part of the mouth and the throat by throwing the head back and expiring through the liquid. 2. To wash (the throat) with a g. [Fr., *gargouiller*, to dabble, to paddle.]
- gar'lic.** The bulb of *Allium sativum*. [Ang.-Sax., *gārleac*, from *gar*, a spear, + *leak*, the leek.]
- Garrod's test.** A test for uric acid in the blood. One or two drams of blood serum are put into a flat dish and six minims of strong acetic acid are added to each dram of serum; a fine thread is then introduced into the fluid and the uric acid crystallizes on it within forty-eight hours. [Alfred Baring Garrod, London physician, 1819-1907.]
- garrulitas** (gar-ru'lit-as). Loquacity. **g. vaginae, g. vulvae.** An audible discharge of gas from the vagina. [Fr., *garrive*, to prattle.]
- Garrya** (gar're-ah). A genus of corneaceous plants. **G. Fremontii.** Skunk- (or quinin-) bush, found in California, where the leaves are used as a tonic in malarial disease. [Michael Garry, of the Hudson Bay Co.]
- garryin** (gar're-in). A bitter, astringent principle, found by Ross in the leaves of *Garrya Fremontii*, and by him considered an alkaloid.
- Gartner's cell.** In the female, a relic of the main, or middle, portion of the wolfian duct of the embryo, a tube running down from the broad ligament of the uterus to be incorporated with the wall of the uterus and vagina and to be lost on the latter. **G's duct, G's canal.** In the female, a straight canal running down from the broad ligament of the uterus and incorporated in the uterine wall and vagina. It is a relic of the middle portion of the wolfian duct of the embryo. [Karl F. Gartner, Danish anatomist, 1785-1827.]
- gas.** That form of matter in which particles tend continually to diverge from each other, so that the body itself tends constantly to increase in volume in all directions and fills the whole of the vessel in which it is contained. The term, without qualification, denotes, in common parlance, illuminating gas. **ammoniacal g.** Ammonia. **aqueous g.** The vapor of water. **coal g.** See under *coal*. **g. chamber.** A large gas container. **g. interchange.** The exchange, by diffusion through a respiratory membrane, of carbon dioxide for oxygen. The oxygen may be taken from the atmospheric

air, as in aërial respiration, or from the air dissolved in water, as in aquatic respiration. **g. of the blood.** The gas extracted from the blood in an air pump. It consists of oxygen and carbon dioxid, with a very small quantity of nitrogen. **g. of the intestines.** See *intestinal g. g. pump.* An apparatus for extracting the gases from the blood or other liquids of the body. Many different forms are described, but the principle used in general is to produce a torricellian vacuum by mercury to which the blood is exposed at a temperature of 40° C. **g. tar.** See *coal tar* under *tar.* **illuminating g.** See *coal g.*, under *coal* and *water g.*, and *oil g.*, under *gas.* **intestinal g.** The g's present in the alimentary canal. They are in part due to swallowed air, in part to carbon dioxid, liberated in the stomach and intestines, and in part to putrefaction due to microorganisms. The amount and character of the g. varies with the food and the health of the individual. The chief constituents are oxygen, hydrogen, nitrogen, and carbon dioxid; methane and hydrogen sulphid are frequently present in varying quantities. **intoxicating g.** See *laughing g.* **laughing g.** Nitrogen monoxid; so called on account of its exhilarating effects when inhaled. **liquefiable g.** A g. capable of reduction to the liquid state. **marsh g.** Methane. **natural g.** Illuminating g. occurring naturally in coal strata and emitted from wells, etc.; occurring especially in western Pennsylvania and other regions rich in coal and petroleum. **oil g.** 1. The mixture of g's obtained by distilling oil; used for illuminating on a small scale. 2. See *water g.* **olefiant g.** See *ethylene.* **peat g.** A g. obtained by the dry distillation of peat. **petroleum g.** G. obtained by distillation of petroleum. **sewer g.** A mixture of g's consisting chiefly of methane and carbon dioxid, and of oxygen, hydrogen, nitrogen, ammonia, acetic, lactic, and butyric acids, hydrogen sulphid, and various mercaptans and sulphur ethers in small quantities. It may contain pathogenic microorganisms. **water g.** An illuminating g., consisting chiefly of hydrogen, methane, carbon monoxid, and carbon dioxid, made by blowing steam through glowing coal or coke and afterward adding a hydrocarbon and again subjecting the mixture to heat to render it more stable.

gas'eous. In the form of gas.

gasifica'tion. The process of transforming into a gas.

gas'iform. See *gaseous.*

gas'oline. A commercial name for a light grade of benzine (*q. v.*, 2d def.), or petroleum ether.

gasometer (gas-om'et'er). A gas container or an instrument for measuring the quantity of gas present. [Gas, + Gr., *metron*, a measure.]

gasometric (gas-o-met'rik). Syn.: *eudiometric.* Relating to the measurement of gases.

gasometry (gas-om'et-re). The estimation

of the amount of gases present in a mixture.

gasp. A convulsive inspiration, especially through the mouth.

gasp'ing. Convulsive inspiration, mostly through the mouth, accompanied by drawing of the face and dilatation of the nostrils. [Mid. Eng., *gaspen*, *gaispen*, to yawn, to gasp.]

gasserian ganglion (gas-se're-an gang'le-on). See under *ganglion*. [Discovered by or named for *A. P. Gasser*, a German physician, 1505-1577.]

gastralgia (gas-tra'l'ge-ah). See *gastrodynia* and *cardialgia*. [Gr., *gaster*, the stomach, + *algos*, pain.]

gastraneuria (gas-tran-u're-ah). Defecative action of the nerves of the stomach. [Gr., *gaster*, the stomach, + *a*, priv., + *neuron*, a nerve.]

gastræctasis, gastræctasia (gas-trek'ta'-sis, gas-trek-ta'se-ah). Dilatation of the stomach. [Gr., *gaster*, stomach, + *ektasis*, distension.]

gastroctomy (gas-trek'to-me). The operation of excising the whole or a portion of the stomach. [Gr., *gaster*, the stomach, + *ek*, out, + *temnein*, to cut.]

gas'tric. Pertaining to, or occurring in, the stomach. **g. juice.** The digestive fluid secreted by the glands of the stomach. [Lat., *gastricus*, from Gr., *gaster*, stomach.]

gastrit'is. Inflammation of the stomach. **acute g., acute catarrhal g.** G. running a short, sharp course; usually, unless caused by mechanical or chemical injury, limited to the mucosa. **atrophic g.** Where atrophy of the secreting mucous membrane develops. **catarrhal g.** Catarrhal inflammation of the mucous membrane of the stomach. **chronic g.** Any long standing dyspepsia; a descriptive term is usually added. **gangrenous g.** See *phlegmonous g.* **phlegmonous g.** Acute g. with submucous suppuration. **secondary g.** G. caused by some general physical disorder. **suppurative g.** See *phlegmonous g.* **toxic g.** G. produced by the ingestion of corrosive or irritant poisons into the stomach. [Gr., *gaster*, the stomach, + *itis*, inflammation.]

gastro-. A prefix from the Gr., *gaster*, stomach, used in compound words to signify pertaining to the stomach.

gastrocele (gas'tro-sel). A hernia of the stomach. [Gr., *gaster*, stomach, + *kele*, a tumor.]

gastrocnemius (gas-trok-ne'me-us). The most superficial of the muscles forming the calf of the leg. See *table of muscles*, under *muscle*. [Gr., *gaster*, belly, + *kneme*, leg.]

gastrocol'ic. Pertaining to the stomach and the colon.

gastrocolitis (gas'tro-ko-li'tis). Inflammation of the stomach and the colon.

gastrocolostomy (gas-tro-ko-os'to-me). The operation of establishing a permanent communication between the stomach and the colon. [Gr., *gaster*, stomach, + *kolon*, colon, + *stoma*, an opening.]

gastrocolpotomy (gas'tro-ko-pot'o-me). Incision of the vagina through an opening

- in the abdominal wall. [Gr., *gaster*, stomach, + *kolpos*, vagina, + *temnein*, to cut.]
- gastrodiaphane** (gas-tro-dí'af-än). A device for rendering the wall of the stomach translucent for diagnostic purposes by means of an electric light introduced into the organ, with the rheophores insulated by a soft rubber tube. [Gr., *gaster*, the stomach, + *diaphanes*, diaphanous.]
- gastrodidymus** (gas-tro-did'im-us). A double monster fetus with one abdomen. [Gr., *gaster*, belly, + *didymos*, twin.]
- gas''troduode'nal**. Pertaining to the stomach and the duodenum.
- gas''troduode'ní'tis**. Inflammation of the stomach and the duodenum.
- gastroduodenostomy** (gas''tro-du-o-denos'to-me). The formation of an artificial opening between the stomach and duodenum. [Gr., *gaster*, stomach, + Lat., *duodenum*, + Gr., *stoma*, mouth.]
- gastrodynia** (gas-tro-din'e-ah). Paroxysmal attacks of pain in the stomach occurring independently of anatomical changes in that organ. [Gr., *gaster*, the stomach, + *odyne*, pain.]
- gas''tro-enteral'gia**. Neuralgia of the stomach and intestines.
- gas''tro-enter'ic**. Pertaining to the stomach and the intestines or to a condition involving both.
- gas''tro-enterit'ic**. Of or pertaining to gastro-enteritis.
- gas''tro-enterit'is**. Simultaneous inflammation of the stomach and intestine.
- gas''tro-enterolog'ical**. Pertaining to the stomach and intestines.
- gas''tro-enterolog'y**. The pathology, etc., of the stomach and intestines.
- gas''tro-enteros'tomy**. The formation of an artificial opening between the stomach and the intestine. [Gr., *gaster*, stomach, + *enteron*, intestine, + *stoma*, mouth.]
- gas''tro-epiplo'ic**. Of or pertaining to the stomach and omentum. [Gr., *gaster*, stomach, + *epiploon*, omentum.]
- gas''trofaradiza'tion**. Faradization of the stomach.
- gas''trogalvaniza'tion**. Galvanization of the stomach.
- gastrograph** (gas'tro-graf). An apparatus for recording the motions of the stomach. [Gr., *gaster*, stomach, + *graphein*, to write.]
- gastrohelicosis** (gas'tro-hel-ko'sis). An ulcer of the stomach. [Gr., *gaster*, stomach, + *elkos*, ulcer.]
- gas''trohepat'ic**. Of, pertaining to, or under the influence of the stomach and the liver.
- gastrohysteropexy** (gas'tro - his'ter - o - pex-e). The fastening of the uterus to the wall of the abdomen. [Gr., *gaster*, stomach, + *ystera*, uterus, + *pexis*, a fixing.]
- gas''tro-intes'tinal**. Pertaining to the stomach and intestines.
- gastrojejunostomy** (gas'tro-jej-u-nos'to-me). The formation of an artificial opening between the stomach and the jejunum. [Gr., *gaster*, stomach, + Lat., *jejunum*, + Gr. *stoma*, an aperture.]
- gastrolith** (gas'tro-lith). A concretion found in the stomach. [Gr., *gaster*, stomach, + *lithos*, a stone.]
- gas''trollithi'asis**. The formation of gastric calculi and the accompanying morbid changes.
- gastrology** (gas-trol'o-je). The study of diseases of the stomach. [Gr., *gaster*, stomach, + *logos*, science.]
- gastromalacia** (gas''tro-mal-a'she-ah). An abnormal softening of the stomach wall. [Gr., *gaster*, stomach, + *malakia*, a softening.]
- gastromenia** (gas-tro-me'ne-ah). Vicarious menstruation from the gastric mucous membrane. [Gr., *gaster*, the stomach, + *men*, month.]
- gastrophathy** (gas-trop'ath-e). Any disease of the stomach. [Gr., *gaster*, the stomach, + *pathos*, a disease.]
- Gastrophilus** (gas-trof'il-us). See *Estrus*. **G. equi**. The gadfly; a species causing the "bots."
- gastroplegia** (gas-tro-ple'je-ah). Motor neurosis of the stomach, producing atony. [Gr., *gaster*, the stomach, + *plege*, a blow.]
- gastroplication** (gas''tro-pli-ka'shun). The operation of folding the wall of the stomach and securing the fold with sutures, to diminish the capacity of the organ in cases of dilatation. [Gr., *gaster*, stomach, + Lat., *plicare*, to fold.]
- gastroptosis** (gas-trop-to'sis). Downward displacement of the stomach. [Gr., *gaster*, stomach, + *ptosis*, a falling.]
- gastrorrhagia** (gas-tror-ra'je-ah). Hemorrhage from the stomach. [Gr., *gaster*, the stomach, + *regnumai*, to break out.]
- gastrorrhaphy** (gas-tror'raf-e). The suture of a wound of the stomach. [Gr., *gaster*, stomach, + *raphe*, a seam.]
- gastrorrhea** (gas-tror-re'ah). An excessive secretion of gastric juice. [Gr., *gaster*, the stomach, + *rein*, to flow.]
- gastroschisis** (gas-tros'kis-is). A congenital malformation in which the abdomen remains open in the median line. [Gr., *gaster*, stomach, + *schisis*, cleft.]
- gastroscope** (gas'tro-sköp). An apparatus for illuminating and inspecting the interior of the stomach in the living subject. [Gr., *gaster*, stomach, + *skopein*, to examine.]
- gastros'copy**. Visual examination of the interior of the stomach.
- gas''trosplen'ic**. Of or pertaining to the stomach and to the spleen. **g. ligament**. See under *ligament*.
- gastrostenosis** (gas-tro-sten-o'sis). A pathological contracted state of the stomach. **g. cardiaca**. Stenosis of the cardiac orifice of the stomach. **g. pylorica**. Stenosis of the pylorus. [Gr., *gaster*, the stomach, + *stenosis*, constriction.]
- gastrostomy** (gas-tros'to-me). The operation of making a fistulous opening into the stomach through the abdominal wall. [Gr., *gaster*, stomach, + *stoma*, an aperture.]
- gastrotomy** (gas-trot'o-me). Incision of the stomach or abdomen. [Gr., *gaster*, belly, or stomach, + *temnein*, to cut.]
- gastrotoxin** (gas-tro-toks'in). A cytolytic

produced in the blood of animals by injecting them with the epithelial cells of the gastric mucous membrane.

gastroxia (gas-trox'e-ah). Hyperacidity of nervous origin. [Gr., *gaster*, the stomach, + *oxys*, acid.]

gastrula (gas'tru-lah). Syn.: *germ cup*. The blastoderm at the period of its development when it consists of a double-walled bag formed by its invagination, so that its cavity is the primitive alimentary canal. **bell g.** See *archigastrula*. **bladder g.** See *perigastrula*. **disk g.** See *discogastrula*. **hood g.** See *amphigastrula*. [Gr., *gaster*, belly.]

gastrulation. The process of development of the gastrula.

gat'loo. Another name for *yaws*. See *yaws*.

gauge (gāj). An instrument for measuring the volume of a material or the intensity or rapidity of a process. **catheter g.** A plate pierced with numerous circular apertures of graduated diameters to indicate the size of a catheter. [Old Fr., *gauge*, a gage, a measuring rod.]

Gaultheria (gawl-the're-ah). Syn.: *check-erberr*. 1. A genus of ericaceous plants. 2. Of the U. S. Ph., the leaves of *G. procumbens*. **G. procumbens**. Wintergreen, partridge berry, checkerberry; found in woods and pastures from Canada to Kentucky. It was formerly a source of oil of wintergreen. The leaves [U. S. Ph.] are official. **oleum gaultheriae**. A volatile oil, consisting largely of methyl salicylate, obtained from *Gaultheria* [U. S. Ph.] **spirit of g., spiritus gaultheriae**. A solution of five parts of oil of wintergreen in alcohol [U. S. Ph.]. [*M. Gaulthier*, Canadian botanist and physician.]

gaultherilene (gawl-ther'il-ēn). A constituent, $C_{10}H_{16}$, of oil of wintergreen.

gaultherin (gawl'ther-in). A resinous substance obtained from the bark of *Betula lenta*; treated with an alkali, it yields a volatile oil said to be identical with oil of wintergreen.

gauze (gawz). A very thin, transparent fabric of cotton, linen, or silk, generally cotton. **absorbent g.** G. made absorbent by removing all oily matter and sizing. **antiseptic g.** A g. containing antiseptic material and used in surgical dressings. [Adapted from the Fr., *gaze*, gauze.]

gavage (ga-vahzh'). Forced feeding. Feeding with a stomach pump. [Fr., *gaver*, to gorge fowls.]

gayle (ga'le). A grave form of puerperal fever which occurs in sheep.

Gay-Lussac's law. 1. The l. that the tension of a gas varies directly with the temperature if the volume remains the same. 2. The l. that when gases or vapors react on each other the volumes both of the factors and of the products of the reaction always bear to each other some very simple numerical ratio. 3. The l. regulating the expansion of gases by heat, which asserts that air and all of the less liquefiable gases have a coefficient of ex-

pansion of $\frac{1}{273}$; in other words, their volume at any temperature receives an increment equal to $\frac{1}{273}$ of their volume at 0° C. for every increase of 1° C. in the temperature, and suffers a corresponding decrement for diminution in the temperature. The l. is not rigorously exact, although very nearly so for the permanent gases. Moreover, the l. as enunciated by Gay-Lussac gave a different coefficient from the true one here laid down. [*Louis Joseph Gay-Lussac*, Parisian chemist, 1778-1850.]

Geissler's tube. An apparatus by means of which the various striae are shown which are produced by an electric discharge through highly rarefied gases. [*Heinrich Geissler*, Ger. mechanician, 1814-1879.]

gelatin (jel'at-in). Syn.: *colla taurina*. 1. A substance obtained from white connective tissue fibrils by prolonged boiling or by the action of very dilute acids upon collagen. G. is used for the preparation of capsules, pearls, etc., for which purified g. is used. G. is also used in microscopy as a culture medium for microorganisms. 2. Any jellylike structure. See *g. of Wharton*. **animal g.** See *g. bone g.* G. obtained from bones. **Chinese g.** See *vegetable g.* (1st def.). **chromatized g.** A mixture of 1 part of potassium bichromate and 5 parts of a 10 per cent. solution of *g. Cooper's g.* See under *Cooper*. **Cox's g.** See under *Cox*. **culture g.** G. used as a culture medium for microorganisms. It consists either of ordinary g., glycerin g., or the gelatinous principle of agar-agar. **Deane's g.** See under *Deane*. **elastic g.** A preparation made by dissolving g. in a water bath, evaporating till it becomes quite thick, and then adding the same weight of thick glycerin as of the dry g. used. **Flemish g.** Bright yellow, translucent g. **g. of Wharton**. See *Wharton's jelly*. **Japanese g.** See *vegetable g.* (1st def.). **medicated g.** A form of internal medication made by adding the drug to a solution of g. and glycerin, drying in a thin layer, and dividing into small tablets. An elastic dressing is made by dissolving the tablets in warm water, and applying with a brush. **nutrient g.** See *culture g.* **purified g.** G. so purified as to be almost colorless and odorless, occurring in thin, nearly transparent sheets. **salicylated g.** A preparation made by dissolving g. and glycerin in water and adding salicylic acid; recommended by Schwimmer in vesicular eczema. **silk g.** Sericin. **vegetable g.** Syn.: *Chinese g., Japanese g., phycocoll, gliadin* (2d def.). Any gelatinous substance obtained from vegetable tissues especially: 1. A substance resembling g. obtained from the agar-agar of the Celebes. 2. A tenacious mass, insoluble in water, left on evaporation of the strong alcoholic mother liquor of gluten. [U. S. Ph., *gelatinum*.] [Lat., *gelare*, to congeal.]

gelati'na. Jelly; a gelatinous pharmaceutical preparation resembling a mucilage, and

- containing gelatin, ichthyocolla, pectin, or starch.
- gelatin'iform.** Resembling or having the form of gelatin. [Lat., *gelatina*, jelly, + *forma*, form.]
- gelatiniza'tion.** Transformation into a gelatinous mass.
- gelat'inized.** Converted into a gelatinous mass.
- gelatinoid** (jel-at'in-oyd). Resembling gelatin; colloid; as a n., one of a class of nitrogenous substances, comprising gelatin, collagen, chondrin, elastin, keratin, and mucin. [Lat., *gelatina*, jelly, + Gr., *eidōs*, resemblance.]
- gelat'inous.** Containing gelatin or of the consistence of jelly.
- gelat'inum.** Gelatin [U. S. Ph., Br. Ph.] g.
- glycerat'um.** Equal parts of gelatin and glycerin [U. S. Ph.].
- gelatol** (jel-at-ol). A mixture of oil, glycerin, gelatin, and water; a vehicle for medicinal applications.
- geld'ing.** 1. Castration (of the domestic animals). 2. A castrated animal, especially a castrated horse. [Old Norse, *geld-ingr*.]
- gelone** (jel'on). A mixture of glycerin and glue; used as a basis for plasters.
- gels.** A termination used to indicate colloid substances, occurring in a solid state.
- gelsemin** (jel'sem-in). An alkaloid from gelsemium, yielding crystalline salts. It has a strychninlike action on frogs, little or none on mammals when pure, but the commercial article is usually contaminated with the very active gelsemin. Gelsemin is frequently called gelseminin without reason. The alkaloid should not be confused with a resinoid also called gelsemin, obtained from gelsemium.
- gelseminin** (jel-sem'in-in). An amorphous alkaloid, $C_{22}H_{26}N_2O_8$, the salts of which are also amorphous, obtained from gelsemium. The actions resemble those of coniin closely. It is a very active poison. Used in some forms of neuralgia.
- gelsemium** (jel-se'me-um). Of the U. S. Ph., the root of *Gelsemium sempervirens*; it contains a fragrant volatile oil and owes its medicinal virtues mainly to gelseminin. **tincture of g.** (10 per cent.) and the fluidextract are official.
- gemellus** (jem-el'us). 1. (Adj.), born as a twin. 2. (N.), a twin; in anatomy, one of a pair of similar muscles. See *table of muscles*, under *muscle*. **gemelli co-alti.** The individuals constituting a double monster. [Lat., *gemellus*, dim., of *geminus*, a twin.]
- geminat'e.** 1. (V.), to be united, duplicated. 2. (Adj.), combined in pairs, twin, binate. [Lat., *geminatus*, from *geminare*, to double.]
- gemmat'ion** (jem-a'shun). Syn.: *budding*. 1. A variety of generation in which only a small part of the parent organism is detached and becomes developed into a similar organism. 2. In botany, the production and development of buds; also cell division in cryptogams. [Lat., *gemmare*, to bud.]
- genea** (je'ne-ah). 1. Generation. 2. Birth. 3. Descent. [Gr., *genea*.]
- generaliza'tion.** 1. The process of rendering, or becoming, or the state of being general or diffused; the spread of a local morbid process through the system or over the general surface. 2. The deduction or promulgation of broad principles from the observation of concrete phenomena. [Lat., *genus*, an origin.]
- generate** (jen'er-ät). To beget, procreate, engender; to produce, evolve; to bring about, give rise to. [Lat., *generare*, to beget.]
- generation** (jen-er-a'shun). 1. Reproduction; the act or function of begetting or forming a new organism. 2. The assemblage of individuals constituting the entire immediate progeny of given parents. **alternate g.**, **alternation of g's.** Syn.: *digenesis*. An alternation of agamogenesis with gamogenesis; in the same type, one or several sexless g's intervening between the sexual g's. **asexual g.** See *agamogenesis*. **endogenous g.** In botany, reproduction by the multiplication of the nucleus in the formation of pollen in the embryo sac, etc. **non-sexual g.** See *agamogenesis*. **oviparous g.** A mode of g. in which the new animal is hatched from an egg. **ovoviviparous g.** G. in which the young of an animal are hatched from the egg before it has left the body of the mother. See *oviparous g.* **sexual g.** See *gamogenesis*. **spontaneous g.** Syn.: *abiogenesis*, *archebiosis*. The formation of a living organism from inanimate matter, such organism having no parent. The theory has been held, but has never been proved to be true. **univocal g.** The production of an organism by parents of the g. next preceding. **viviparous g.** The ordinary mode of g. among the higher animals, in which the young are brought forth free and alive. [Lat., *generatio*, from *generare*, to beget.]
- gen'erative.** Concerned in or affecting generation.
- generic** (jen-er'ik). 1. Pertaining to a genus. 2. See *hereditary*. [Lat., *genericus*, from *genus*, an origin.]
- genesiac, genesial** (jen-e'se-ak, jen-e'se-al). Pertaining to or concerned in procreation.
- genesiology** (jen-ese-ol'o-je). The science of generation. [Gr., *genesis*, generation, + *logos*, understanding.]
- genesis, -genetic.** A suffix used in words denoting mode of generation.
- genesis** (jen'es-is). 1. The act, mode, or condition of reproduction; generation. 2. A mode or process of production. **cell g.** See under *cell*. [Gr., *genesis*, from *gennan*, to engender.]
- genetic, genetical** (jen-et'ik, jen-et'ik-al). 1. Pertaining to reproduction or to the reproductive organs. 2. Causative, formative. [Gr., *gignesthai*, to come into being.]
- genet'ics.** The study of the laws governing heredity and their application to all living creatures.
- geniculate** (jen-ik'u-lät). Bent like a knee.

- [Lat., *geniculatus*, from *geniculum*, dim. of *genu*, the knee.]
- genioglossus** (je-ne-o-glos'sus). See *table of muscles*, under *muscle*.
- geniohyoideus** (je-ne-o-hi-oi'de-us). See *table of muscles*, under *muscle*.
- Genista** (je-nis'tah). Dyer's-broom, woad-waxen; a genus of leguminous plants. **G. tinctoria**. Base (or green) broom, dyer's broom, dye weed, Kendal green, woad-waxen; a species found in central and southern Europe, but naturalized in America and elsewhere.
- genital** (jen'ital). Used in the plural, the external organs of generation. As an adjective, in the singular, having to do with generation or birth. **external g's**. Those organs of generation that are visible on external inspection. According to some writers, they include, in the female, the mammary glands. [Lat., *genitalis*, from *gignere*, to beget.]
- genitalia** (jen-it-al'e-ah). The organs of generation, both external and internal. [Pl. of Lat., *genitalis*, pertaining to generation.]
- genitocrural**. Pertaining to the genitals and to the thigh. **g. nerve**. See *table of nerves*, under *nerve*.
- genitor** (jen'it-or). A parent, father; in the lower animals, a male selected for breeding purposes. [Lat., *gignere*, to beget.]
- genitourinary**. Pertaining to the genitals and to the urinary organs. **g.-u. center**. See under *center*.
- genius** (je'ne-us). Some distinctive dominant quality, as of a disease, of the atmosphere, etc. **g. morbi**. Any special feature characteristic of a disease, especially as occurring in a particular epidemic. [Lat., *gignere*, to beget.]
- gentian** (jen'shun). Of the U. S. Ph. and Br. Ph., the root of *Gentiana lutea*; it is a stomachic bitter, and is used in diseases associated with atonic dyspepsia. *Erythraea centaurium*.
- Gentiana** (jen-she-ah'nah). Gentian, felwort. **extractum gentianae**. A thick extract made by exhausting powdered gentian root with water and evaporating. Much used as a pill excipient. [U. S. Ph., Br. Ph.] **extractum gentianae fluidum**. A fluidextract of gentian root. **G. Catesbei**. 1. Samson's snakeroot, blue gentian. Of Walter, see *G. saponaria*. 2. Of Elliott, see *G. Elliotti*. **G. Elliotti**. A species found in Florida, related to *G. saponaria*. **G. lutea**. A species found in the Alpine and mountainous regions of middle and southern Europe. Its root is the official gentian of the pharmacopeias. **G. major**. *G. lutea*. **G. minor**. *G. cruciata*. **G. ochroleuca**. The Sampson snakeroot; a species found in the United States from Pennsylvania to Florida; used as a tonic. **G. pannonica**. A species found in the Pyrenees, Austrian Bohemia, and Hungary. The root has the bitter and tonic properties of *G. lutea*, with which it is often found mixed in the shops. **G. quinqueflora**. Gall of the earth; a species growing in woods and pastures in the United States and Canada. The root is employed like that of *G. lutea*.
- gentianae radix**. Gentian root [Br. Ph.]. **G. saponaria**. The soapwort (or barrel-flowered) gentian. It is used as a bitter tonic. **infusum gentianae compositum**. An infusion of gentian root, orange peel, lemon peel, and boiling water [Br. Ph.]. **tinctura gentianae composita**. Syn.: *tinctura amara*, *elixir stomachicum*. A preparation made by exhausting coarsely powdered gentian root, bitter orange peel, and cardamom with diluted alcohol [Br. Ph.]. [From *Gentius*, an Illyrian king.]
- gentianin** (jen'shan-in). A name given to various substances extracted from gentian root, either identical with gentianic acid or consisting of a mixture of the latter and gentiopicrin.
- gentianite, gentianose** (jen'shan-it, jen'shan-ös). A crystalline substance, $C_{10}H_{10}O_{13}$, found in the roots of different species of gentian (*Gentiana lutea*, etc.).
- gentiogenin** (jen-she-o'jen-in). A decomposition product, $C_{14}H_{16}O_5$, of gentiopicrin.
- gentiopicrin** (jen-she-o-pik'rin). A crystalline glucosid, $C_{20}H_{30}O_{12}$, constituting the bitter principle of gentian root.
- gentiotannin** (jen-she-o-tan'nin). A tannin said to exist in gentian root, constituting either in whole or in part gentianic acid.
- genu** (je'nu). See *knee*. **g. aqueductus Fallopii**. The abrupt bend in the aqueduct of Fallopius close to the hiatus Fallopii. **g. capsulae internae**. A bend in the course of the fibers forming the internal capsule of the brain by which the latter is divided into two portions, the anterior of which is included between the caudate and lenticular nuclei, the posterior between the thalamus and the lenticular nucleus. **g. nervi facialis**. 1. A bend in the root of the facial nerve as it turns around the abducens nucleus and passes cephalad and laterad to the caudal margin of the pons. 2. The curvature of the facial nerve at the g. aqueductus Fallopii. **g. of the corpus callosum**. Syn.: *anterior flexure of the c.c.* The rounded cephalic margin of the corpus callosum. **g. recurvatum**. An over-extension of the knee-joint. It may be congenital, the child being born breech first with the thighs flexed upon the abdomen and the knees hyperextended, so that the feet are next to the face; or it may be acquired, due to stretching of the posterior ligament of the knee-joint, as in locomotor ataxia and in coxitis. The head of the tibia is displaced forward on the condyles of the femur. **g. valgum**. See *knock-knee*, under *knee*. **g. varum**. See *bow-legs*. [Gr., *gonu*, knee.]
- genupectoral** (je-nu-pek'tor-al). Pertaining to the knees and to the anterior part of the chest and abdomen. **g. posture**. Syn.: *knee-chest posture*. A kneeling posture in which the patient rests on the knees and the chest. The thighs are nearly vertical and the chest is supported upon a folded pillow, the head being

- turned to one side. [Lat., *genu*, knee, + *pectus*, breast.]
- genus** (je'nus). An assemblage of species, or a single species, having in common important characteristics distinct from those of other species. [Gr., *genos*.]
- geoform** (je'o-form). A compound formed by the interaction of guaiaacol and formic aldehyd; said to be odorless, tasteless, un-irritating, and non-poisonous.
- geographical tongue**. Numerous, spreading, scaly patches appearing on the dorsal surface of the tongue and coalescing into gyrate figures.
- geosote** (je'o-söt). Guaiaacol valerate, the guaiaacol ester of valeric acid; used in tuberculous diseases.
- geotropism** (je-of-ro-pizm). Attraction reaction of the earth on living substances or matter, particularly noted in roots. [Gr., *ge*, earth, + *trope*, turning.]
- geranene** (jer'an-ën). A liquid, $C_{10}H_{16}$, obtained by distilling geraniol with zinc chlorid or phosphoric anhydrid.
- geraniin** (je-ra'ne-in). A bitter, astringent substance, extracted from the rhizome of various species of *Geranium*.
- geranin** (jer'an-in). A substance (apparently different from *geraniin*) obtained from various species of *Geranium* and of *Cinchona*.
- geraniol** (je-ra'ne-ol). A liquid, $C_{10}H_{17}O$, obtained from Indian geranium oil; isomeric with borneol.
- Geranium** (je-ra'ne-um). 1. An extensive genus of geraniaceous plants, the species of which grow chiefly in the temperate regions of both hemispheres. 2. Of the U. S. Ph., the rhizome of *G. maculatum*.
- extractum geranii fluidum**. A fluid extract of the rhizome of *G. maculatum* [U. S. Ph.]. **G. maculatum**. Spotted crane's bill; growing throughout the United States. Its rhizome is astringent, used internally in diarrhea, and externally as an application to indolent ulcers.
- G. robertianum**. Herb Robert, fox g., wild g.; growing wild in Europe and the United States. It has been employed medicinally in domestic practice. [Lat., from Gr., *geranion*, from *geranos*, crane.]
- geranyl** (jer'an-il). The radicle, $C_{10}H_{17}$, found in geraniol.
- Gerardia** (je-rar'de-ah). False foxglove. [John Gerard, 1545-1612, English herbalist.]
- geratic** (je-rat'ik). Of or pertaining to senility. The *geratici* are an order of diseases of the aged. [Gr., *geras*, old age.]
- geratology** (je-rat-ol'o-je). The pathology, hygiene, etc., of old age. [Gr., *geras*, old age, + *logos*, understanding.]
- Gerhardt's reaction for aceto-acetic acid**. The urine is heated with ferric chlorid until it fails to give a precipitate, then filtered and more of the reagent is added. In the presence of aceto-acetic acid a wine red precipitate is obtained, which becomes paler on boiling. [Charles Frédéric Gerhardt, Parisian chemist, 1816-1856.]
- geriatrics** (jer-e-at'riks). The diseases of old age; their systematic study and treatment. [Gr., *geras*, old age, + *iatrikos*, of the physician.]
- Gerlach's network**. Syn.: *nerve fiber n.* The n. of fibers in the gray substance of the spinal cord. **G's valve**. A fold in the mucous membrane at the origin of the appendix vermiformis. [Joseph von Gerlach, Ger. anatomist, 1820-1896.]
- germ** (jerm). 1. The primitive rudiment of an animal or vegetable organism, of a particular part of such organism, or of anything (material or of the nature of a process) that may be developed. 2. In botany, the ovary, the embryo, or the bud. 3. A microbe, a bacterium.
- dental g.** An embryonic tooth. **disease g's.** Microorganisms to which, or to certain products of their processes of growth, various infectious diseases are attributed.
- enamel g.** Of Kölliker (1863), the invagination or downward growth of the malpighian layer of the oral epithelium along the line of the jaws. By special growth at various points it appears to become divided into segments, each of which becomes the enamel of a tooth. [Lat., *germen*, a microbe, or bacterium.]
- germanium** (jer-ma'ne-um). A rare metallic element. Atomic weight 72.5. Symbol, Ge.
- germicidal** (jer-mis-i'dal). Destructive of germs.
- germicide** (jer'mis-id). An agent that kills germs. [Lat., *germen*, germ, + *cedere*, to kill.]
- germiculture** (jer'me-kul-tür). The cultivation of germs. [Lat., *germen*, a germ, + *cultura*, culture.]
- germiduct** (jer'mid-uct). The efferent canal of the germigene. [Lat., *germen*, germ, + *ducere*, to lead.]
- germifuge** (jer'mif-üj). Having the power of expelling germs; as a n., an agent having that power. [Lat., *germen*, a germ, + *fugare*, to banish.]
- germigene** (jer'mij-ën). In tapeworms, that portion of the female genital apparatus which is considered formative of the germinal vesicles. [Lat., *germen*, germ, + *generare*, to engender.]
- germinal** (jer'min-al). Pertaining to germination or to a germ; capable of germinating. [Lat., *germinalis*, from *germen*, a germ.]
- germination** (jer-min-a'shun). The process of sprouting of a seed or spore. [Lat., *germinare*, to sprout forth.]
- germ'ol**. A certain proprietary antiseptic used like cresol.
- gerontology** (je-ron-tol'o-je). Study of phenomena of old age. [Gr., *geron*, old man, + *logos*, treatise.]
- gesta** (jes'tah). The various states of the body, such as waking, sleeping, etc. [Lat., *gerere*, to accomplish.]
- gestation** (jes-ta'shun). Syn.: *fetation*. 1. A carrying; that form of passive exercise in which the person is carried, as on horseback, in a vehicle, etc. 2. The action or process of carrying young; the condition of being carried in the womb during the period between conception

and birth. **abdominal g.** That form of ectopic g. in which the product of conception is lodged in the peritoneal cavity. **cervical g.** The temporary retention of the ovum within the canal of the cervix uteri after its expulsion from the body of the uterus in a case of abortion. See *incomplete abortion*. **cornual g.** G. in an ill-developed cornu of a bicornate uterus. **double g.** 1. The coexistence of uterine and extra-uterine g. 2. See *twin g.* **ectopic g.** G. (2d def.) in which the product of conception is carried elsewhere than within the cavity of the body of the uterus. **extra-uterine g.** Pregnancy at some place outside the uterus. **interstitial g., intramural g.** A variety of tubal g., in which the ovum is developed in that portion of the oviduct that traverses the wall of the uterus. **intra-peritoneal g.** See *abdominal g.* **multiple g.** See *plural g.* **mural g.** See *interstitial g.* **ovarian g.** That form of ectopic g. in which the product of conception is lodged in the ovary. **plural g.** G. with more than one embryo. **prolonged g., protracted g.** G. prolonged beyond the usual period. **quadruple g.** G. with four embryos. **quintuple g.** G. with five embryos. **secondary abdominal g.** That variety of extra-uterine g. in which the fetus, originally situated in the oviduct or elsewhere, has become lodged in the abdominal cavity in consequence of the rupture of the fetal sac. **secondary g.** G. in which the ovum has become dislodged from its original seat of implantation, and continues to develop in a new situation. **triple g.** G. (2d def.) with three embryos. **tubal g., tubarian g.** That form of ectopic g. in which the product of conception is lodged in the oviduct. **tubo-abdominal g.** That form of extra-uterine g. in which the fetal sac is formed partly of the abdominal extremity of the oviduct and partly of plastic exudation in the neighborhood. **tubo-ovarian g.** That form of extra-uterine g. in which the fetal sac is made up of the ovary and the abdominal end of the oviduct. **tubo-uterine g.** See *interstitial g.* **twin g.** G. with two embryos. **uterotubal g.** G. in which the ovum is developed partly in the uterine portion of the oviduct and partly within the cavity of the uterus. [Lat., *gestatio*, from *gestare*, to carry.] **Geum** (je'um). 1. The avens; a genus of the *Rosaceae*, tribe *Potentilleae*. 2. The genus *Saxifraga*. **G. rivale.** The water avens; found in Europe and in the northern and middle United States. The rhizome, formerly official in the U. S. Ph., is tonic and astringent. **G. urbanum.** Common avens; found in Europe. Its rhizome yields a volatile oil, lignin, and tannin. It has been used in Europe as an astringent.

ghatti. A sort of gum derived from India, furnishing a very adhesive, odorless, and tasteless mucilage and having marked emulsive power.

giant (ji'ant). An individual notably larger

than the usual size in individuals of the same species and the same stage of growth. The minimum height in this condition is six feet, six inches and it is usually associated with an enlarged pituitary body. **g. cell.** Syn.: *colossal cell, g. capsule*. 1. See under *cell*. 2. A large cell containing many nuclei in a single mass of cytoplasm, present in infectious granulomata and some tumors and caused by the fusion of smaller cells. [Mid. Eng., *giant, geant, geaunt*.]

gibbous (jib'bus). Convex, rounded, protuberant. [Lat., *gibbus*, humped.]

gid. A disease of sheep caused by *coenurus cerebrialis* in the brain. Vertigo is a prominent symptom.

gidda (gid'dah). A commercial name for gum arabic shipped from G., Arabia.

gid'diness. See *vertigo*.

gid'dy. Having a confused sensation of swimming or whirling in the head. [Old Eng., *gidi*, foolish.]

gigantism (ji-gan'tizm). Abnormal overgrowth of the whole body. [Gr., *gigas*, giant.]

gigantoblast (ji-gan'to-blast). See *giant blood cell*, under *cell*. [Gr., *gigas*, a giant, + *blastos*, a sprout.]

gigantology (ji-gan-tol'o-je). The teratology of giants. [Gr., *gigas*, a giant, + *logos*, understanding.]

Gigantorhynchus gigas (ji-gan-to-rhin'-kus ji'gas). One of the *Nemathelminthes* of the order *Acanthocephala*, being a flat, ringed worm which infects human beings in Russia. **G. moniliformis.** A species found in man. It occurs in Africa, Europe, and Brazil.

Gigartina (jig-ar-te'nah). A genus of *Algae*. **G. mamillosa.** A species found on the shores of the Atlantic; collected with *Chondrus crispus* and having the same properties. **G. sphaerococcus.** A species frequently used to adulterate Corsican moss. [Gr., *gigarton*, grapestone.]

gigger (jig'ger). See *chigoe*.

Gilbacher glue. In British Guiana, the ichthyocolla obtained from *Silurus Parkerii*.

Gillenia (jil-le'ne-ah). A genus of rosaceous plants allied to *Spiraea*. **G. trifoliata.** A species growing in Canada and in the United States from New York to Florida; sometimes used as a substitute for ipecacuanha. [Dr. Arnold Gill, German botanist.]

gillenin (jil'len-in). The active principle of *Gillenia*.

Gimbernat's ligament. A flat triangular expansion of the aponeurosis of the external oblique muscle of the abdomen.

gin. An alcoholic beverage formed by distilling whisky with juniper berries. **g. drinker's liver.** Cirrhosis of the liver.

ginger (jin'jer). Of the U. S. Ph. and Br. Ph., the dried rhizome of *Zingiber officinalis*; it is carminative and used for flavoring.

gingerol (jin'jer-ol). A very pungent non-volatile substance found in ginger.

gingiva (jin-ji'vah). The gum surrounding a tooth. [Lat., *gingiva*, gum.]

gingival (jin'ji-val). Of, or pertaining to, the gums. [Lat., *gingiva*, the gum.]

gingivitis (jin-ji-vi'tis). Inflammation of the gums. **interstitial g.** G. affecting the interstices of the connective tissue supporting the gums. [Lat., *gingiva*, the gum, + Gr., *itis*, inflammation.]

ginglymoid (jin'glim-oyd). Pertaining to, or resembling, a ginglymus. [Gr., *giglymos*, hinge, + *eidōs*, resemblance.]

ginglymus (jin'glim-us). The variety of diarthrosis in which the motion is to and fro only, like that of a hinge; e. g., the knee-joint and the elbow-joint. **double g. of the knee-joint.** A congenital malformation of the knee-joint, attended by absence of the patella, in which the leg can be folded forward upon the thigh till the toes touch the groin. [Gr., *giglymos*, hinge.]

ginseng (jin'seng). The root of *Aralia* (*Panax*) *g.* and *Aralia quinquefolia*. The Chinese attribute wonderful virtues to it in maintaining health and prolonging life, and consider it a remedy for almost all diseases, though actually it is nothing more than a demulcent. [Chin., *jen*, + *shen*, a panacea.]

gir'dle. A belt or any beltlike structure.

limb g's. See *pectoral arch* and *pelvic arch*, under *arch*. **pelvic g.** See *pelvic arch*, under *arch*. **shoulder g.** See *pectoral arch*, under *arch*. [Ang.-Sax., *gyrdel*.]

glabella (glah-bel'lah). The smooth surface between the two superciliary ridges. **g. coccygea.** See *foveola coccygea*, under *foveola*. [Lat., *glabellus*, dim. of *glabes*, smooth, bald.]

glacial (glā'shal). 1. Icy cold. 2. Icelike, crystalline, vitreous. 3. Of plants, growing near the snow line. [Lat., *glacies*, ice.]

glacialin (glā-se-a'lin). An antiseptic preparation consisting chiefly of a mixture of borax, boric acid, and sugar.

glairy. Viscid or slimy. [Fr., *glaire*, bright, clear.]

gland. 1. An organ, developed out of epithelial cells, specialized for the manufacture of a definite substance, either an excretion or a secretion. This substance may be discharged through a duct (external secretion) or absorbed directly into the blood stream (internal secretion). Both kinds of secretion may be produced by the same gland. 2. A lymph node. In this sense the word *gland* is erroneous and should be discarded. **abdominal salivary g.** See *pancreas*. **accessory g's.** G's having functions accessory to those of other g's. **accessory g's of the pancreas.** See *Brunner's g's*. **accessory lacrimal g.** See *Krause's glands*, under *Krause*. **accessory parotid g.** A small collection of glandular tissue close to the anterior margin of the masseter muscle, opening into the parotid duct and secreting saliva. **accessory suprarenal g's.** Small bodies occasionally found connected with the suprarenal bodies and resembling them in structure. **accessory thyroid g's.** Small collections of glandular tis-

sue similar to the thyroid gland and situated near to it. **acinotubular g.** A g. intermediate in structure between a racemose and a tubular g. **acinous g.** See *racemose g.* **anal g's.** The odoriferous g's of the anal region. **anterior lingual g's.** Acinous g's situated on each side of the apex of the tongue. **auricular g's.** The lymph nodes of the region of the external ear. **axillary g's.** The lymph nodes of the axilla. **Bartholin's g's.** See *Méry's g's*, *sublingual g's*, and *vulvovaginal g's*. **brachial g's.** The lymph nodes of the forearm and arm. **bronchial g's.** Lymph nodes situated on the bronchi and the lower part of the trachea. See also *pulmonary g's*. **Brunner's g's.** See under *Brunner*. **buccal g's.** Racemose g's in the tissue of the cheeks. **bulbocavernous g's.** See *Méry's g's*, under *Méry*. **cardiac g's.** Acinous g's in the mucous membrane at the lower end of the esophagus. **cecal g's.** The lymph nodes of the cecum. **celiac g's.** Lymph nodes situated in front of the abdominal aorta above the superior mesenteric artery. They connect with the lymph vessels from the stomach, spleen, pancreas, and liver, and empty into the thoracic duct. **ceruminous g's.** Tubular convoluted g's in the auditory canal, which excrete cerumen. **cervical g's.** The lymph nodes of the neck. **coccygeal g.** Syn.: *gangleolum coccygeum*, *Luschka's g.* A gland, about as large as a pea, discovered by Luschka; situated on the ventral aspect of the tip of the coccyx. **compound g.** A g. in which the extent of secreting surface is increased by recession of mucous membrane into pouches and subdivision of its walls into smaller pouches. **compound tubular g.** A g. made up of a multitude of small tubules ending in a single duct. **conglomerate g.** See *racemose g.* **convoluted g.** A tubular g. the blind end of which is highly convoluted. **Cowper's g's.** See *Méry's g's* and *vulvovaginal g.* **cutaneous g's.** G's of skin. See *hair*, *sudoriparous*, and *sebaceous g's*. **decidual g's.** Uterine g's forming part of decidua. **dorsal g's.** See *scapular g's*. **ductless g's.** G's having no duct for discharging their secretion. **duodenal g's.** 1. See *Brunner's g's*. 2. Lymph nodes of the mesentery of duodenum. **endocrinous g.** One producing internal secretion. **epiglottic g's.** Acinous g's of the posterior surface of the apex of the epiglottis. **excretory g's.** G's which secrete the excrementitious fluids of the organism. **facial g's.** The lymph nodes of the face. **femoral g's.** See *inguinal g's*. **follicular g.** See *follicle*. **follicular g's of the tongue.** The lymphoid masses at the base of the tongue. **gastric g's.** Syn.: *gastric follicles* or *tubules*, *pepsin g's*, *peptic tubes*. Tubular depressions extending through the entire thickness of the gastric mucous membrane and lined with a continuation of the gastric mucous membrane. **genital g's.** See *sexual g's*. **g's of the biliary ducts.**

Small acinous g's in the walls of the cystic and hepatic ducts and of the gall-bladder. **g's of the colon.** 1. The crypts of Lieberkühn. 2. Lymphoid nodules of the colon, resembling the solitary nodes of the small intestine. **hair g's.** One or two sebaceous g's that open into each hair follicle near its mouth. **hematopoietic g's.** Certain structures supposed to affect the constitution of the blood in its passage through the large vessels usually contained in them. The thyroid and thymus g's and the pituitary body are examples of them. **hemolymph g's.** Certain modified lymphatic g's having blood sinuses as well as lymph sinuses, supposed to be partly hematopoietic and partly hemolytic in function. **hepatic g's.** Lymph nodes in the hepatoduodenal ligament in front of the portal vein. **inframaxillary g's.** See *submaxillary g's.* **infundibular g.** The infundibulum of the brain. **inguinal g's.** The deep and superficial lymph nodes of the groin. **intercarotid g.** A small body, of unknown function, lying close to the bifurcation of the common carotid artery. **intercostal g's.** Lymph nodes situated in the posterior portions of the intercostal spaces. **internal iliac g's.** Lymph nodes situated on the internal lateral walls of the pelvis. **intestinal g's.** The glandular structures in the intestines. **jugular g's.** See *cervical g's.* **Krause's g's.** See under *Krause.* **labial g's.** Numerous racemose g's situated between the labial mucous membrane and the orbicularis muscle, and opening on the inner surface of the lip. **lacrimal g.** A compound racemose g., secreting the tears, situated in the upper and outer part of the orbit, close to its anterior margin. **lactiferous g's.** See *mammary g's* and *Montgomery's g's.* **laryngeal g's.** The lymphatic g's situated about the larynx. **lateral lingual g's.** Acinous g's imbedded along margins of the tongue. **lenticular g's.** The conglobate g's of the mucous membrane of the stomach. **Lieberkühn's g's.** See *crypts of Lieberkühn,* under *Lieberkühn.* **lingual g's.** See *anterior lingual g's,* *lateral lingual g's,* and *posterior lingual g's.* **Littre's g's.** See under *Littre.* **lobulated g.** See *racemose g.* **lumbar g's.** Lymph nodes situated behind the peritoneum and the lower portion of the posterior part of the diaphragm. **Luschka's g.** See *coccygeal g.* **lymphatic g., lymph g.** A lymph node, a term incorrectly used to signify a collection of specially arranged lymphoid tissue in the course of a blood vessel. **mammary g's.** G's accessory to the generative organs, which secrete milk and are characteristic of the class of vertebrates known as *Mammalia* [B. N. A., *mammal*]. **marginal g.** A g. of the great sympathetic chain in the trunk of the head. **mastoid g's.** See *subauricular g's.* **mediastinal g's.** The lymph nodes of the mediastinum. **meibomian g's.** A series of g's imbedded in the tarsus of the

eyelid that secrete a sebaceous material which prevents adhesion of the lids. **Méry's g's.** See under *Méry.* **mesenteric g's, meseraic g's.** Lymph nodes situated between the layers of the mesentery. **mesocolic g's.** The lymph nodes in the mesentery of the colon. **molar g's.** Two or three large buccal glands between the masseter and buccinator muscles, opening by separate ducts near the molar teeth. **Moll's g's.** See under *Moll.* **Montgomery's g's.** See under *Montgomery.* **mucous g's.** G's which secrete mucus. **Naboth's g's.** See *nabothian follicles,* under *nabothian.* **occipital g's.** One or two lymph nodes situated over the insertion of the trapezius muscle. **odoriferous g's.** G's secreting odoriferous substances, e. g., the cutaneous g's surrounding the anus and the preputial g's. **oxyntic g's.** Gastric g's lined with two kinds of cells, found in greatest abundance in the cardiac region of the stomach. **pacchionian g's.** See *pacchionian bodies,* under *body.* **palatine g's.** Acinous mucous g's in the submucous tissue covering the hard palate. **pancreaticosplenic g's.** Lymph nodes in the folds of the gastrosplenic ligament. **parotid g.** The largest of the salivary g's, situated in front of the ear. **pectoral g's.** A few lymph nodes on the lower part of the ectal surface of the pectoralis major muscle. **Peyer's g's.** See under *Peyer.* **pharyngeal g's.** Acinous g's in the mucous membrane of the pharynx. **phrenic g's.** A few lymph nodes in the anterior mediastinal space, resting upon the diaphragm. **pilous g's.** See *hair g's.* **pineal g.** Syn.: *conarium, epiphysis cerebri.* A subspherical body about the size of a pea, a dorsal outgrowth of the diencephalon, the cavity of which extends slightly into it. **pituitary g.** See *hypophysis cerebri.* **popliteal g's.** Four or five lymph nodes situated around the popliteal vessels, which receive the lymphatics of the leg and send efferent vessels to the groin. **posterior lingual g's.** Acinous g's on the posterior part of the dorsum of the tongue. **preputial g's.** Syn.: *Tyson's g's.* Sebaceous g's found upon the corona and cervix of the glans penis and also upon the penis. **prostate g.** See *prostate.* **pulmonary g's.** Lymph nodes in the substance of the lungs, along the larger bronchi. **pyloric g's.** Gastric g's lined with one kind of cell which secretes pepsin, found in the pyloric region of the stomach. **racemose g.** A compound g. which contains numerous acini opening into a common tube or duct. **reticulate g.** A g. containing reticular or adenoid tissue. **Rivini's g's.** See *sublingual g's.* **saccular g.** A g. formed by a saccular recession of a mucous or serous membrane lined with glandular epithelium. **sacral g's.** Lymph nodes situated on the anterior surface of the sacrum. **salivary g's.** G's which secrete saliva, e. g., the parotid, submaxillary, and sublingual g's; or a juice having properties somewhat

similar to saliva, e. g., the pancreas. **scapular g's.** Three or four lymphatic g's situated beneath the scapula and close to the posterior border of the axilla. **sebaceous g's.** Pyriform acinous g's secreting sebum, situated in the corium of the skin. **secreting g's, secretory g's.** Those g's which furnish the secretions of the body. **seminal g's.** The testicles. **serous g's.** Syn.: *albuminous g's.* A g. secreting a characteristic albuminous substance, such as the parotid of man and most animals. **sexual g's.** 1. A collective term for the testicles and the ovaries. 2. In the embryo, the rudimentary structures that subsequently become either testicles or ovaries. **simple g.** A g. consisting of a single tube or recess lined with a secreting membrane. **Skene's g's.** See under *Skene*. **solitary intestinal g's.** Soft white bodies, as large as a millet seed, forming slight prominences in the mucosa of the small intestine. **solitary lymphatic g's.** The small nodules of dense adenoid tissue situated in various parts of the body. **subauricular g's.** Three or four small lymphatic g's situated below and behind the ear. **sublingual g's.** The smallest of the salivary g's, situated one on each side, between the tongue and the inferior maxilla. **submaxillary g's.** Salivary g's about half the size of the parotid, situated one on each side in the submaxillary triangles. **sudoriparous g's, or sudoriferous g's.** G's situated in the subcutaneous connective tissue, that secrete the perspiration. **suprarenal g's.** See *suprarenal capsules*, under *capsule*. **sweat g's.** See *sudoriparous g's*. **thymus g.** See *thymus* (2nd def.). **thyroid g.** Syn.: *thyroid body*. A ductless g. situated in the front of the neck. It consists of a transverse portion, the isthmus, and two lateral lobes which are connected by it. It is covered by a layer of connective tissue from which partitions pass inward dividing it into lobules. The parenchyma consists of small closed vesicles containing a colloid substance in which there are found white corpuscles and more or less decolorized red blood corpuscles. It is larger in early life and in fetal life than later. **tracheal g's.** The acinous g's of the mucous membrane of the trachea. **tubular g.** A g. in which the secreting surface consists of a long tube. **tympanic g.** A small spindle-shaped enlargement on the tympanic nerve just outside of or within the tympanic canal. **Tyson's g's.** See *preputial g's*. **unicellular g.** See *fat cell*, under *cell*. **urethral g's of Skene.** See *Skene's g's*. **uterine g's, utricular g's of the uterus.** Sinuous, branching, tubular g's situated in the endometrium and opening upon its surface. **vaginal g's.** Acinous g's in the mucous membrane of the lower part of the vagina. **vascular g's.** See *hematopoietic g's*. **vulvovaginal g's.** Mucous g's situated one on either side of the ostium vaginae and opening in front of the hymen. **Zeiss's g's.** See

under *Zeiss*. [Lat., *glans, glandis*, kernel, acorn.]

glan'ders. Syn.: *equinia*. A contagious disease of horses and also of man caused by the *Bacillus mallei*. It is characterized by the formation of nodules of granulation tissue, especially in the mucous membrane of the nose, in the skin, and in the subcutaneous lymphatics, that tend to break down and form destructive ulcers. In horses, the chief symptoms are swelling beneath the jaws and discharge of mucus from the nostrils. When the involvement of the lymphatic glands is the chief feature it is known as *farcy*. [Probably so called from the swelling of the glands.]

glandula (glan'du-lah). Pl. *glandulae*. See *gland* and *glandule*. **glandulae acinosae aggregatae.** Glands formed of many flask-shaped acini. **glandulae arytenoides laterales.** Acinous glands situated in the posterior portion of the aryteno-epiglottic folds. **glandulae compositae agminatae.** Groups of racemose tubular glands. **g. epigastrica.** A lymph node situated over the rectus abdominis muscle, about on a level with the second inscriptio tendinae. **glandulae linguales Ebneri.** Acinous glands of the tongue. **glandulae mucosae simplices vestibuli.** The simple muciparous glands of the vulva, principally about the orifice of the vagina. **glandulae suprarenales siccae.** The desiccated suprarenal gland of the sheep or ox, of which one part represents about 6 parts of the fresh gland. The active principle, epinephrin, has received a number of names [U. S. Ph.]. **g. thyroidea accessoria suprahyoides.** An accessory thyroid gland situated in front of or above the body of the hyoid bone. **glandulae thyroideae siccae.** Desiccated thyroid glands of the sheep, of which one part represents about five parts of the fresh gland. For action see *thyroid preparation*, under *thyroid*. **glandulae vestibulares.** Mucous glands of the vulva. The smaller ones are situated about the meatus urinarius; the larger ones are the vulvovaginal glands. [Lat., dim. of *glans*, acorn.]

glan'dule. A small gland.

glan'dulene. An extract of the bronchial glands of the sheep. It has been used in tuberculous disease.

glans. 1. An acorn or any similar fruit, also any fruit having a kernel; a dry, indehiscent fruit with a hardened pericarp containing only one seed. 2. Any object bearing a fancied resemblance to a nut, such as the head of the penis or of the clitoris, a suppository, a globular pessary, or a goiter. **g. clitoridis.** The head of the clitoris; its free rounded extremity. **g. penis, g. phalli.** The bulbous end of the penis. It is slightly compressed above and below, and has a vertical fissure at its extremity for the external orifice of the urethra. [Lat., *glans*, acorn, nut.]

glass. 1. A hard, brittle, homogeneous, transparent substance, made by melting sand and consisting essentially of a

metallic silicate with silicic acid, with soda or potash, etc. 2. A lens, mirror, or other implement having its essential parts made of that material. 3. In the pl., *glasses*, spectacles; lenses, prisms, or plane, usually oval sheets of *g.* mounted to be worn before the eyes for the correction of visual defects or for purposes of protection. **binocular g.** An optical instrument for use with both eyes simultaneously. **burning g.** A large convex lens used to produce an intense heat by converging the sun's rays to a focus. **cover g.** A thin sheet of *g.* for mounting or covering microscopical specimen on a slide. **crown g.** A *g.* containing the metals potassium and calcium, used in the manufacture of lenses. **eye g'es.** *G'es* (2nd def.) so mounted as to rest on the nose without other support, but usually grasping it by a spring. **flint g.** A *g.* containing varying amounts of lead. It has a high index of refraction and is used in the manufacture of lenses, etc. **focusing g.** A simple microscope for determining when the image in a photographic camera is sharply focused on the ground glass. **Franklin g.** See under *Franklin*. **g. wool.** *G.* obtained in the form of elastic fibers by reeling off molten *g.* It is used in filtering, and has been employed as a drainage material for wounds. **magnifying g.** A convex *g.* used for magnifying objects; a simple microscope. **periscopic g'es.** Positive or negative menisci or lenses having one concave and one convex surface of different curvature so as to diminish spherical aberration. **soluble g.** See *water g.* **spun g.** See *g. wool.* **water g.** An aqueous solution of sodium silicate. [Mid. Eng., *glas, gles*, from Ang.-Sax., *glæs*.]

Glauber's salts. Purified normal sodium sulphate.

glauain (glaw'sin). An alkaloid found in the sap of *Glauium luteum*. [Lat., *glauina*, from Gr., *glaukos*, sea-green.]

Glauicum (glaw'se-um). The horn poppy; a genus of papaveraceous plants. **G. glaucum, G. luteum.** The yellow horn poppy; a poisonous species. The herb has properties similar to *Chelidonium majus*; it is a diuretic and the root is often substituted for it as a mild laxative.

glaucoma (glaw-ko'mah). A disease of the eye characterized by increased intraocular tension or hardness of the eyeball, associated in varying degree with dilatation and irregularity of the pupil, sluggish or immovable iris, haziness and anesthesia of the cornea, pressure on the anterior chamber, cupping of the optic disk, pulsation of the vessels and contraction of the visual field on the nasal side. If untreated the disease ends in blindness. **absolute g.** That condition of the eyeball in which all vision is lost from the effects of glaucomatous disease and in which it cannot be restored by any operative procedures. **acute g., acute inflammatory g.** *G.* characterized by marked inflammatory symptoms, excessive

pain in the head and eyes, fever, and vomiting, in addition to the usual symptoms of the disease. **inflammatory g.** See *acute inflammatory g.* **mechanical g.** *G.* dependent upon mechanical causes. **primary g.** *G.* that appears in an eye which is apparently healthy or is subject to disease that has no influence in producing *g.* [Gr., *glaukoma*, from *glaukos*, sea-green.]

Glechoma (gle-ko'mah). A section of the genus *Nepeta*. [Gr., *glechon*, the *Mentha pulegium*.]

Gleditsia (gle-dit'se-ah). A genus of leguminous plants. **G. spinosa, G. triacanthos.** The three-thorned acacia, or common honey locust tree. The pods are used in catarrhal affections, and a sweet beverage is prepared from their pulp. [J. G. Gleditsch, 1714-1786, a German botanist.]

gleet. A transparent mucous discharge from the lining membrane of urethra. [Old Fr., *glette*, slime, purulent matter.]

gleet'y. Pertaining to or like gleet.

Glénard's disease. Another name for *splanchnoptosis*. [Frantz Glénard, Fr. physician, 1819-1894.]

glenoid (glen'oyd). Pertaining to a shallow articular cavity. See *g. cavity*, under *cavity*, and *g. fossa*, under *fossa*. [Gr., *glene*, a shallow joint, + *oidos*, resemblance.]

glia (gli'ah). The neuroglia. [Gr., *glia*, glue.]

gladin (gli'ad-in). See *vegetable gelatin*, under *gelatin*. [Gr., *glia*, glue.]

glioma (gli-o'mah). Of Virchow, a colloid neoplasm of the central nervous system, formed by the proliferation of neuroglia cells or the ependyma. It may be single or double, hard or soft, and contain many fibers having special staining affinities for neurological stains. **g. retinae.** Syn.: *fungus medullaris oculi*. A tumor of the retina closely resembling cerebral *g.* histologically identical with the small round-celled sarcoma. **g. telangiectaticum.** A *g.* in which the blood vessels are numerous and dilated. [Gr., *glia*, glue.]

gliomatosis (gli-o-mat-o'sis). The formation of a glioma. **medullary g.** See *syringomyelia*. [Gr., *glia*, glue.]

gliomatous (gli-o'ma-tus). Affected with, or of the nature of, a glioma.

gliomyxoma (gli-o-mix-o'mah). A glioma in which mucoid matter surrounds the small round cells. [Gr., *glia*, glue, + *myxa*, mucus.]

glioneuroma (gli-o-nu-ro'mah). A tumor of gliomatous and neuromatous tissue.

gliosarcoma (gli-o-sar-ko'mah). A malignant tumor partaking of the qualities of a glioma and of a sarcoma. **g. retinae.** See *glioma retinae*, under *glioma*. [Gr., *glia*, glue, + *sarx*, flesh, + *oma*, tumor.]

glio'sis. A cerebral condition characterized by the formation of gliomata or neuroglia tissue. **central g.** A gliomatous new formation or transformation in the central parts of the cord starting in the cells about the cord. Cavity formation results, but without enlargement of the cord.

Glisson's cell. A strong sheath of connective tissue which loosely envelops the hepatic vessels, and accompanies their distribution in the substance of the liver, becoming an exceedingly delicate investment to their smaller branches.

glissonian cirrhosis. See *perihepatitis*.

globe. A spherical object. See *ball*. **g. of segmentation.** See *segmentation cell*, under *cell*. **g. of the eye.** See *eyeball*. **ocular g.** See *eyeball*, under *eye*. **organic g.** See *segmentation cell*, under *cell*. [Lat., *globus*, sphere.]

glo'bin. The protein constituent of the oxyhemoglobin of the blood. By hydrolytic cleavage it yields a large amount of histidin.

glo'bon. A certain food preparation said to be obtained "by the decomposition of phosphorus-containing paraneuroproteids."

glo'bose. A term used in descriptive bacteriology, meaning spherical, shaped like a globe. [Lat., *globus*, sphere, ball.]

globularetin (glob''u-lar-e'tin). A product, C_6H_6O , or $C_{12}H_{14}O_3$, of the decomposition of globularin, said to be chologogue.

globularin (glo-bu-la'rin). A glucosid, $C_{20}H_{44}O_{14}$, or $C_{15}H_{22}O_8$, found in the leaves of different species of *Globularia*. It is said to resemble caffein in physiological action.

glob'ule. 1. A small spherical body. 2. In pharmacy, a small pill; also a globular gelatin capsule for the administration of volatile liquids, sometimes called a pearl. **blood g's.** See *red blood corpuscle*, under *blood corpuscle*. **chyle g's.** See *lymphatic corpuscle*, under *corpuscle*. **cleavage g.** See *segmentation cell*, under *cell*. **colloid g's.** See *amylaceous corpuscles*, under *corpuscle*. **colostrum g's.** See *colostrum corpuscles*, under *corpuscle*. **cytoid g's.** See *leukocyte*. **dentin g's.** Small globular masses of dentin between the interglobular spaces of the peripheral dentin. **directing g., directive g., extrusion g.** Syn.: *areal corpuscle*, *polar body*, *polar g.* A minute globular or rounded, transparent mass, consisting of a part of the germinal vesicle and a small amount of vitellus that is extruded or expelled from a maturing ovum into the lacuna (in nearly every case before impregnation), and lying within the zona pellucida, near the segmentation spheres, in the early stage of the process of total segmentation of the vitellus. This body is of the morphological value of a cell, and may subdivide after extrusion. **lymph g.** See *lymphatic corpuscle*, under *corpuscle*. **polar g.** See *extrusion g.* **transparent g.** See *extrusion g.* [Lat., *globulus*, dim. of *globus*, ball.]

globulicidal (glob''u-lis-i'dal). Destructive of red blood corpuscles. [Lat., *globulus*, a globule, + *caedere*, to kill.]

globulicide (glob'u-lis-id). An agent destroying blood corpuscles.

globuliferous (glob-u-lif'er-us). Taking up and destroying blood vessels.

globulimeter (glob-u-lim'et-er). An instrument for measuring the number of

globules suspended in a liquid (e. g., the corpuscles of blood, or the fat globules of milk). [Lat., *globulus*, a globule, + Gr., *metron*, a measure.]

globulins (glob'u-lins). One of the classes of protein substances differing from albumins in their insolubility in water, although they are soluble in dilute acid or dilute salt solutions. **crystalline globulin, crystallized globulin.** Syn.: *crystalline vitellin*. A crystallized protein obtained from various seeds, such as those of the squash or pumpkin. **fibrin globulin.** A globulin of the blood. **serum globulin.** A globulin present in the blood serum. **vegetable globulin.** A globulin obtained from vegetables.

globulinuria. The excretion of globulin in the urine. [*Globulin* + Gr., *ouron*, urine.]

globulolysis (glob-u-lol'is-is). See *hematolysis*.

globulolytic (glob-u-lol-it'ik). See *hematolytic*.

globulose (glob'u-lös). The variety of albumose or proteid, produced by digesting a globulin with pepsin hydrochloric acid.

glo'bus. 1. See *globe*. 2. One of the forms of epileptic aura. **g. hystericus.** Syn.: *bolus hystericus*. A "rising," "winding arrow"; an obscure sensation as of a globular body rising from the lower part of the trunk to the throat, where it appears to be arrested, causing a sense of constriction and suffocation; a symptom of the onset of an hysterical paroxysm. **g. major of the epididymis.** The upper and larger extremity of the epididymis. **g. minor of the epididymis.** Syn.: *cauda epididymus*. The lower enlargement of the epididymis.

glomerulitis (glom-er-u-li'tis). Inflammation of the glomeruli of the kidney. [Lat., *glomerulus*, a small ball, + Gr., *itis*, inflammation.]

glomer'nlonephri'tis. A form of interstitial nephritis in which the epithelial cells proliferate, forming crescentic masses which cause an atrophy of the glomerular loops.

glomerulus, glomerule (glo-mer'u-lus, glom'er-ül). A balllike coil of blood vessels or nerve fibers. **capsule of the g.** See *Bowman's capsule*. **g. choroides.** A thickening of cystic degeneration of the choroid plexus. **g. of Malpighi.** See *malpighian corpuscles*, under *corpuscle*. **g. olfactorius.** A knot or ball formed by a coil of an olfactory nerve fiber, the coil usually containing many celllike bodies. **glomeruli renales.** See *malpighian corpuscles*, under *corpuscle*. **peritoneal g.** A g. formed in a wolfian body by the growth of a coil of blood vessels, which finally extend through the peritoneal funnels into the body and are absorbed. [Lat., dim. of *glomus*, a ball of yarn.]

glonoin (glo-no'in). Nitroglycerin; so called from the letters constituting a formula of the body; GI represents the radicle glyceryl.

glossalgia (glos-sal'je-ah). Pain, especially neuralgic pain in the tongue. See *glossodynia*. [Gr., *glossa*, tongue, + *algos*, pain.]

Glossi'na. A genus of flies, belonging to the order *Diptera* and the family *Muscidae*. They are known as the tsetse flies of tropical Africa and Arabia and they transmit various species of *Trypanosomata* to animals and man. **G. morsitans**. A species that transmits *Trypanosoma Brucei* to horses, donkeys, rats, dogs, and other animals, producing the disease known as "nagana" in Africa. It also transmits *Trypanosoma rhodesiense*, one of the causes of the African sleeping sickness in man. This organism forms a group, including *G. Austeni*, *G. longpalpis*, *G. morsitans*, and *G. pallidipes*. **G. pallidipes**. A species in which *Trypanosomata* have been observed. **G. palpalis**. The species that transmits the *Trypanosoma gambiense* to human beings, producing the sleeping sickness of West Africa. This organism forms a group including *G. caliginea*, *G. pallicera*, *G. palpalis*, and *G. tachinoides*. [Gr., *glossa*, tongue.]

glossitis (glos-si'tis). Inflammation of the tongue. **acute hemorrhagic g.** An acute g. with hemorrhagic extravasation into the connective tissue of the superior and inferior surfaces of the tongue; probably due to alcoholic arteriofibrocappillary sclerosis. **mercurial g.** An acute form of g. with ulitis caused by ingestion of mercury. [Gr., *glossa*, the tongue, + *itis*, inflammation.]

glosso-. A prefix from the Gr., *glossa*, tongue; used in compound words to signify pertaining to the tongue.

glossocoele (glos'so-sel). Protrusion of the tongue, due to disease or malformation. [Gr., *glossa*, tongue, + *kele*, a tumor.]

glossodynia (glos-so-din'e-ah). Rheumatic or neuralgic pain in the tongue. **g. exfoliativa**. Of Kaposi, g. associated with nervous irritability and caused by swelling of the papillae foliatae. [Gr., *glossa*, the tongue, + *odyne*, pain.]

glossograph (glos'so-graf). An instrument for recording the movements of the tongue in speech. [Gr., *glossa*, tongue, + *graphein*, to write.]

glossopalatinus (glos'so-pal-a-ti'nus). See *table of muscles*, under *muscle*.

glossopathy (glos-sop'ath-e). Any disease of the tongue. [Gr., *glossa*, tongue, + *pathos*, a disease.]

glos'sopharynge'us. That portion of the superior constrictor of the pharynx which arises from the side of the tongue. See *table of muscles*, under *muscle*. **g. nerve**. See *table of nerves*, under *nerve*.

glossophyte (glos'so-fit). A parasitic organism, growing on the tongue. [Gr., *glossa*, tongue, + *phyton*, a plant.]

glossoplegia (glos-so-ple'je-ah). Paralysis of the tongue, usually unilateral and resulting from cerebral hemorrhage or other pathological conditions involving the hypoglossal nerve roots. [Gr., *glossa*, tongue, + *plege*, a stroke.]

glossotomy (glos-ot'o-me). Partial or

complete excision of the tongue or incision into it. [Gr., *glossa*, tongue, + *temnein*, to cut.]

glossy skin. Syn.: *atrophoderma neuriticum*. An atrophy of the skin following injury or disease of the nerve supplying the affected state.

glot'tic. 1. Of or pertaining to the tongue. 2. Of or pertaining to the glottis. [Gr., *glottikos*, from *glossa*, tongue.]

glot'tis. The aperture of the larynx bounded by the vocal bands and the arytenoid cartilages. **false g.** The space above the g. between the superior thyroarytenoid ligaments. **respiratory g.** The posterior quadrilateral portion of the g., bounded laterally by the bases of the arytenoid cartilages. **true g.** The space between the true vocal bands. **vocal g.** The triangular portion of the g. anterior to the bases of the arytenoid cartilages. [Gr., *glottis*, from *glossa*, tongue.]

glover's suture. A continuous s. in which the needle is, after each stitch, passed through the loop of the preceding stitch.

glucid, glucosimid (glu'sid, glu-kus'im-id). Benzozulphimidum.

glucin (glu'sin). A sweetening agent about one hundred times sweeter than cane sugar.

glucinum (glu-si'num). See *beryllium*.

glucolysis (glu-kol'is-is). See *glycolysis*.

glucolytic (glu-ko-lit'ik). See *glycolytic*.

glucophenetidin (glu'ko-fen-et'id-in). A condensation product of paraphenetidin and glucose.

glu'copro'tein. A compound protein containing glucose.

glucosamin (glu-ko-sam'in). Syn.: *chitosamin*. $\text{CH}_2\text{OH}(\text{CHOH})_3(\text{CHNH}_2)\text{CHO}$, a basic substance formed in the hydrolytic cleavage of some proteins. It is a derivative of glucose.

glucosazone (glu-ko-sa'zon). The yellow compound formed in the phenylhydrazin method of testing urine for sugar. It is a derivative of glucose.

glucose (glu'kös). Syn.: *grape sugar*, *dextrose*, *dextroglucose*. A white crystalline substance, $\text{CH}_2\text{OH}(\text{CHOH})_4\text{CHO}$, easily soluble in water, belonging to the class of simple carbohydrates, occurring in the juices of most sweet fruits, in honey, and, in minute proportions, in the healthy animal organism. In certain pathological conditions, e. g., diabetes mellitus, it is found in considerable quantity by methods of estimating g. in the urine: the *reduction*, the *fermentation*, the *polarimetric*, and the *glucosazone tests*. The fermentation test is the most conclusive. G. is used in solution in bouillon for testing the gas formation produced by various bacteria. **syrup of g.** A syrup made by mixing 1 oz. of liquid g. of commerce and 2 oz. of syrup with the aid of gentle heat. [Gr., *glukus*, sweet.]

glucos'ic. Of or pertaining to glucose.

glucosid (glu'kos-id). A non-nitrogenous vegetable principle which is readily decomposable by the action of ferments or dilute acids into glucose and another sub-

stance capable of still further decomposition.

gluco'sis. See *glycosuria*.

glucosuria (glu-ko-su're-ah). See *glycosuria*.

glue. Syn.: *colla animalis*. An impure variety of gelatin, obtained from the offal of slaughter houses and from tanneries.

bone g. Artificial isinglass. **cartilage g.** See *chondrin*. **chin-chin g.** A Chinese g., said to be composed chiefly of the birds' nests made from the fronds of the glue plant, *Plocaria tenax*. **fish g.** See *ichthyocolla*. **Gilbacher g.** See under *Gilbacher*. **liquid g.** A solution of gelatin in acetic acid or in a dilute mineral acid. **marine g.** A waterproof g. made by mixing caoutchouc, tar oil, and lac, or by adding a solution of 3 parts of shellac in pure ether to a solution of 1 part of caoutchouc in naphthalene or ether. [Lat., *glus*, akin to *gluten*, glue.]

Gluge's corpuscles. Granular cells containing fat droplets and occurring in fatty degeneration and softening of the nerve elements. [Gottlieb *Gluge*, Ger. pathologist, 1812-1898.]

glusidum (glu'sid-um). See *benzoesulphindum*.

glu'ten. 1. A gelatinous, nitrogenous material obtained from grain. 2. A glutinous material. **g. biscuit, g. bread.** A bread made from flour that is in large measure deprived of starch (as by washing with water); used in diabetes as a substitute for ordinary bread. **g. fabrile.** Common glue. **g. soap.** A commercial term applied to a mixture of pure, bland, vegetable oils with white wheat g. saponified by a peculiar process. **purified g.** A commercial term for the crude g. of wheat deprived of the sacs of cellulose.

glu'tens. Substances of the nature of gelatin prepared from cartilage.

gluteus (glu-te'us). See *table of muscles*, under *muscle*.

glu'tin. See *gelatin*.

glu'tinant. See *agglutinant*.

glutina'tion. See *agglutination*.

glutinos'ity. The state of being glutinous.

glutoid (glu'toyd). Made of gelatin hardened with formic aldehyd.

glu'tol. Syn.: *formalin gelatin*. Glutiform; an antiseptic dusting powder made of gelatin and formic aldehyd.

glu'ton. A food preparation made by the prolonged boiling of gelatin.

glyceric (glis'er'ik). Belonging to or derived from glycerin or glyceryl. **g. acid.** See under *acid*.

glycerid (glis'er-id). An ester of glycerin with some acid, generally a fatty acid, formed by the substitution of an acid radicle for one or more of the hydrogen atoms of the hydroxyl radicle in glycerin. The animal and vegetable fats are mainly g's of the fatty acids.

glyceril (glis'er-il). See *glyceryl*.

glycerin (glis'er-in). Syn.: *glycerol*. The trihydrated alcohol containing three carbon atoms, $\text{CH}_2\text{OH}.\text{CHOH}.\text{CH}_2\text{OH}$. A sweetish, viscous, colorless, odorless liquid, easily soluble in water and alcohol. Spe-

cific gravity 1.267, and boiling point 240°C . It is obtained in the saponification of fats. It has considerable solvent power and forms a series of compounds, the glycerids. Pure g. has a great affinity for water which determines many of its uses in chemistry and in medicine. Undiluted it is a mild irritant; properly diluted it is a cleansing and emollient application. Taken by the stomach it is laxative. G. is official in all the pharmacopeias. It always contains a little water. **absolute g.** G. absolutely free from water. **creosoted g.** A preparation composed of 125 grams of g. and 12 drops of creosote. **g. aldehyd.** $\text{CH}_2\text{OH}.\text{CHOH}$, a substance formed by the oxidation of g. with bromin water. It is one of the two constituents of glycerose. **g. gelatin.** A clear gelatinous substance which solidifies on standing, but melts on exposure to heat. It consists of g. mixed with a solution of gelatin. It is much used as a preservative material for microscopical preparations and also as a material for the preparation of bougies and other gelatinous vehicles for drugs employed externally. A cosmetic sold as g. jelly consists of soap dissolved in glycerin and water. **g. lymph.** A mixture of vaccine lymph and g. **g. tampon.** A tampon made of wads of absorbent cotton or similar material saturated with g. **iodized g.** Hebra's iodine caustic. **suppositoria glycerini.** Suppositories, each of which contains 45 grains of g. gelatinized by sodium stearate [U. S. Ph.] or 70 per cent. of glycerin [Br. Ph.]. [Gr., *glykeros*, *glukus*, sweet.]

glycerinum (glis'er-e'num). Syn.: *glycerina*. Chemically pure glycerin, having the specific gravity of 1.222 to 1.235 [Ger. Ph.], united with a small amount of water [U. S. Ph., Br. Ph.].

glycerite (glis'er-it). A combination of a medicinal substance with glycerin.

glycerol, glycerole (glis'er-ol, glis'er-ol). See *glycerin*.

glyc'erophosphate. A salt of glycerin-phosphoric acid.

glyceryl (glis'er-il). The triatomic radicle (C_3H_5) of glycerin. **g. alcohol.** See *glycerin*. **g. borate.** A glycerid of boric acid. **g. hydroxid.** See *glycerin*. **g. nitrate.** See *nitroglycerin*. **g. phosphoric acid.** See *glycerin-phosphoric acid*, under *acid*. **spiritus glycerylis nitratis.** Syn.: *spirit of glyceryl trinitrate*. Spirit of nitroglycerin [*liquor trinitrum*, Br. Ph.]. An alcoholic solution, containing 1 per cent. of glyceryl trinitrate, commonly called spirit of nitroglycerin. It is used as a vasodilator, but it induces severe headache [U. S. Ph.]. [Gr., *glykus*, sweet, + *yle*, material.]

glycin (glis'in). Syn.: *glycocoll*. Amino-acetic acid, $\text{CH}_2\text{NH}_2.\text{COOH}$. An amino-acid found in many proteins, especially in gelatin and in silk.

glyco- Irregularly used as a combining form of the Gr., *glykus*, sweet, and in chemical compounds to indicate the presence of glycerol or similar substance.

glycocholate (gli-ko-kol'ät). A salt of glycolic acid.

glycocin (gli'ko-sin). See *glycocoll*.

glycocoll (gli'ko-kol). Syn.: *glycocin*, *glycin*. Amino-acetic acid, $\text{CH}_2\text{NH}_2\text{-COOH}$, a colorless, sweetish, crystalline substance, so called because derived from gelatin, and also from many proteins, by boiling with acids or alkalis. [Gr., *glykeros*, *glykus*, sweet, + *kolla*, glue.]

glycoformal (gli-ko-for'mal). A mixture of glycerin and an aqueous solution of formic aldehyd; used as a disinfectant.

glycogelatin (gli-ko-jel'at-in). An ointment basis made of glycerin and gelatin.

glycogen (gli'ko-jen). A compound carbohydrate discovered by Claude Bernard, having the same percentage composition as starch ($\text{nC}_6\text{H}_{10}\text{O}_5$), occurring in the liver, in muscular tissue, in the placenta, and in great abundance in the embryonic tissues, especially in the early stages of development, before the liver is formed, also in new cartilage cells, and in leukocytes. Present in very small quantities in all animal tissues. It is converted by dilute acids and by amylolytic ferments into glucose. **g. dextrin**. Dextrin produced in the body by post mortem transformation of **g. hepatic**. **g. G.** formed in the liver, as distinguished from that found in the hepatic vein. **muscle g.** The variety of **g.** found in muscle. [Gr., *glykeros*, *glykus*, sweet, + *gennan*, to engender.]

glycogenesis. (gli-ko-jen'es-is). The formation of sugar or of glycogen in the organism, especially of glycogen in the liver.

glycogen'ic. Pertaining to glycogen or to the formation of it. **g. center**. See *diabetic center*, under *center*.

glycogenolysis (gli'ko-jen-ol'is-is). The process of conversion of glycogen to sugar (dextrose). It takes place in the liver under the influence of an enzyme in the liver cells.

glycol (gli'kol). 1. See *ethylene alcohol*, under *ethylene*. 2. As a generic term, any diatomic alcohol, derived from hydrocarbons of the fatty series.

glycoline (gli'ko-lën). "A purified petroleum oil, for use in atomizers."

glycolate. A salt of glycolic acid.

glycol'ic. Of or derived from glycol. **g. acid**. See under *acid*.

glycolysis (gly-kol'is-is). The destruction of the sugar contained in the blood, caused by the presence of some enzyme.

glycolytic (gli-ko-lit'ik). Digesting or hydrolyzing sugar. **g. enzyme**. The enzyme present in the blood or tissues which has the property of destroying the sugar. [Gr., *glykus*, sweet, + *lysis*, loosening.]

glycone (gli'kôn). A trade name for suppositories of glycerin.

glyconin (gli'ko-nin). An emulsion of yolk of eggs and glycerin; used as a cosmetic.

glycosuria (gli-ko-su're-ah). Syn.: *dextrosuria*. A pathological condition in

which there is glucose in the urine. **alimentary g.** Of Bernard, **g.** produced by the excessive consumption of starchy or saccharin food. **g. mellitura**. See *diabetes mellitus*. **temporary g.**, **transitory g.** **G.** existing for only a short time; it may be produced by certain foods, alcoholic beverages, or drugs, or occur during the course of certain diseases. [Gr., *glykus*, sweet, + *ouron*, urine.]

glycozone (gli'ko-zôn). A proprietary remedy asserted to act both internally and locally as a germicide and remedy in bacterial diseases; a clear, colorless liquid which is said to owe its efficacy to ozone which is developed.

glycychymus (gli-si-ki'mus). Insipid or oversweet chyme (i. e., when not properly mixed with bile). [Gr., *glykus*, sweet, + *chymos*, chyme.]

glycyl (glis'il). A dipeptid, $\text{NH}_2\text{CH}_2\text{CO-NH.CH(CH}_3\text{).COOH}$, one of the products formed by two amino-acids.

glycyl-d. alanin. A dipeptid, $\text{NH}_2\text{CH}_2\text{CO.NH.CH(CH}_3\text{).COOH}$, one of the products formed by the partial hydrolysis of milk with sulphuric acid.

glycylglycin (glis-il-glis'in). The simplest of the polypeptids, $\text{CH}_2\text{NH}_2\text{CONH.CH}_2\text{COOH}$. It belongs to the class of dipeptids, and by boiling with acids and by the action of certain enzymes it is converted into glycocoll (glycin).

glycyl-l. leucin. A dipeptid, $\text{NH}_2\text{CH}_2\text{CO.NH.CH(C}_6\text{H}_5\text{).COOH}$, formed by the partial hydrolysis of elastin.

glycyl-l. tyrosin. A dipeptid, $\text{NH}_2\text{CH}_2\text{CO-NH.CH(OH.P}_6\text{H}_4\text{CH}_2\text{).COOH}$, formed in the partial hydrolysis of milk with sulphuric acid. Trypsin and erepsin have the property of hydrolyzing it to glycocoll and tyrosin.

glycyltryptophan (glis'il-trip'tof-an). A dipeptid of glycyl and tryptophan. It does not give the color reaction with bromin water which is characteristic of tryptophan in the diagnosis of cancer of the stomach.

glycyrrhamarin (glis-ir-ram'ar-in). A bitter substance, $\text{C}_8\text{H}_{15}\text{NO}_{13}$, obtained in the purification of ammoniated glycyrrhizin. [Lat., *glycyrrhiza*, + *amarus*, bitter.]

glycyrrhëtin (glis-ir-rhe'tin). A bitter, resinous substance, $\text{C}_{18}\text{H}_{28}\text{O}_4$, produced by the decomposition of glycyrrhizic acid by means of diluted acids. [Gr., *glykus*, sweet, + *retine*, resin.]

Glycyrrhiza (glis-ir-rhi'sah). 1. A genus of papilionaceous plants, two species of which yield licorice root. 2. Of the U. S. Ph. and Br. Ph., the root of *G. glabra*, used as a demulcent and as a flavoring ingredient. **extractum glycyrrhizae**. Of the U. S. Ph., the commercial extract of the root of *G. glabra*, or licorice. **extractum glycyrrhizae fluidum** (seu *liquidum* [Br. Ph.]). A fluid extract of the root of *G. glabra* [U. S. Ph.]. **extractum glycyrrhizae purum**. Syn.: *extractum glycyrrhizae* [Br. Ph.]. A solid extract of the root of *G. glabra* [U. S. Ph.]. **G. aspera**, **G. asperima**. A species

found in southern Siberia, where the root is used like that of *G. glabra*. **G. glabra**. The chief source of licorice; a species growing in the warmer regions of Europe and central Asia. It is a demulcent, and is used in catarrhal enteritis. It is much employed to mask the taste of bitter or acrid drugs and to sweeten tobacco. **glycyrrhizae radix**. See *G.* (2d. def.) [Br. Ph.]. **mistura glycyrrhizae composita**. A mixture, also called brown mixture, containing extract of glycyrrhiza purum, sugar, powdered acacia, camphorated tincture of opium, wine of antimony, and spirit of nitrous ether [U. S. Ph.]. **pulvis glycyrrhizae compositus**. A preparation made by mixing washed sulphur, senna, licorice, sugar, and oil of fennel [U. S. Ph.], fennel fruit [Br. Ph.]. **trochisci glycyrrhizae et opii**. Of the U. S. Ph., troches containing extract of licorice and extract of opium. [Gr., *glykus*, sweet, + *riza*, a root.]

glycyrrhizin (glis-er-rhi'zin). Acid ammonium glycyrrhizate. **ammoniated g.** See *glycyrrhizinum ammoniatum* [U. S. Ph.].

glycyrrhizinum (glis-er-rhi-zin'um). See *glycyrrhizin*. **g. ammoniacale**, **g. ammoniatum**. A precipitate obtained from an ammoniacal percolate of licorice. **glymol** (gli'mol). A proprietary liquid petroleum.

glyoxylate (gli-ox'il-ät). A salt of glyoxylic acid.

Gmelin's reaction. A r. shown by biliary matter when 3 or 4 parts of urine are put into a conical glass vessel and 1 part of a mixture of equal parts of 25 per cent. nitric acid and red fuming nitric acid is poured slowly down the side of the vessel. Green, blue, violet, and yellow colors form where the acid collects at the bottom. **G's test for bile in urine**, see in *appendix*, page 894. **G's test for bile pigments**. By stratifying a solution of nitric acid containing some nitrous acid under an alkaline solution of bile, a series of colors is obtained at the junction of the two liquids in order from above downward, green, blue, violet, red, and reddish yellow. The reaction is due to the presence of the bilirubin in the bile. [*Leopold Gmelin*, Ger. physiologist, 1788-1853.]

Gnaphalium (naf-a'le-um). 1. Cudweed, petty cotton, everlasting; a genus of composite herbs. 2. *Antennaria dioica*. [Gr., *gnaphalion*.]

gnathic (na'thik). Of, or pertaining to, the cheek or jaw. [Gr., *gnathos*, jaw.]

gnathitis (na-thi'tis). Inflammation of the jaw, or of the adjacent soft parts. [Gr., *gnathos*, the jaw, + *itis*, inflammation.]

gnathostichis (na-thos'ki-sis). Cleft jaw. [Gr., *gnathos*, the jaw, + *schizein*, to split.]

Gnathostoma spinigerum (na-thos'to-mah spi-nij'er-um). Syn.: *G. robustum* and *G. siamense*. A species of the *Nematelminthes*, being a short worm with

bristles around the head, which produces hard nodules beneath the skin.

gnomaden (nom'a-den). The brain considered as an organ for "secreting" thought, imagination, etc. [Gr., *gnome*, reason, intellect, + *aden*, a gland.]

gnoscopin (nos'ko-pin). An opium alkaloid, $C_{22}H_{23}NO_7$, found in the purification of narcein.

Goa powder. See *chrysarobin*.

Godélier's law. The l. that tuberculous disease of the peritoneum is always accompanied by similar disease of the pleura. [*Charles Pierre Godélier*, Fr. physician, 1813-1877.]

goiter, **goitre** (goy'ter). An abnormal enlargement of the thyroid gland in the front of the neck; bronchocele; a disease endemic in Switzerland. **exophthalmic g.** Syn.: *Basedow's disease*, *Graves' disease*. A chronic glandular neurosis, occurring often in women, and characterized by enlargement of the thyroid gland, rapid heart beat, protrusion of the eyeballs, tremor, and various neurosthenic and vasomotor symptoms. [Fr., *goitre*, from the Lat., *guttur*, throat.]

gold. A metallic element known from the earliest times. It is a soft, bright yellow, lustrous substance, and is exceedingly tenacious, malleable, and ductile. It is not oxidized at any temperature by contact with water or oxygen, and is not attacked by any acids except selenic acid and a mixture which, like nitrohydrochloric acid, contains nascent chlorine. It is also attacked by alkalis. Symbol, Au (from *aurum*); atomic weight, 196.2. None of the salts of gold are of great therapeutic importance. **Figuiet's g. salt**. See *gold* and *sodium chlorid*. **fulminating g.** A compound of g. and ammonium, $Au_2O_3(NH_3)_4$. It was formerly employed as a diaphoretic. It is a greenish or brownish powder, exploding readily and with great violence on either heating or percussion. **g. and sodium chlorid**. Christien's (or Figuiet's) g. salt, $NaAuCl_4 \cdot 2H_2O$, forming bright yellow prismatic crystals, of saline taste, readily soluble in water. Its use has been suggested in tertiary syphilis. **g. bromid**. A compound of g. and bromin. See *g. tribromid*. **g. chlorid**. A compound of g. and chlorin. See *g. trichlorid*, which is the g. chlorid of the pharmacopeias. **g.-foil**. See *g. leaf*. **g. iodid**. A compound of g. and iodin. See *g. tri-iodid*, which is the g. iodid used in medicine. **g.-leaf**. Metallic g. in the form of very thin laminae. **g. monobromid**. Aurous bromid, AuBr, a greenish yellow, micaceous powder, insoluble in water. **g. monochlorid**. Aurous chlorid, AuCl, an unstable yellowish powder. **g. mono-iodid**. Aurous iodid. AuI, a lemon yellow crystalline body, which turns green on exposure to the air, at the same time decomposing with the deposition of metallic gold. **g. perchlorid**. See *g. trichlorid*. **g. sponge**. A porous and spongy form of metallic g. used by dentists; obtained by adding oxalic acid to a solution of g. chlorid, heating,

washing the deposit with hot water, drying on filtering paper, and then heating below redness till the particles cohere slightly. **g. terchlorid.** See *g. trichlorid.* **g. thread.** See *Coptis*. **g. tribromid.** Auric bromid; a black crystalline mass, AuBr₃, soluble in water. It forms with the bromin compounds of other metals double bromids called *bromaurates*, used like the monobromid. **g. trichlorid.** Auric chlorid, AuCl₃; formed by dissolving *g.* in nitrohydrochloric acid, or by the action of chlorin on *g.-leaf*. The anhydrous salts form reddish crystals. When combined with two molecules of water, AuCl₃+2H₂O, it forms deliquescent and efflorescent, dark yellowish red crystals, the *chlorure d'or* of the Fr. Cod. *G. trichlorid* occurs in combination with other chlorids, forming the *chloraurates*. **g. tricyanid.** Auric cyanid, Au(CN)₃; an unstable substance, forming large crystalline tablets readily soluble in water and alcohol. According to some writers, it occurs only in combination with hydrocyanic acid and other cyanids. **g. tri-iodid.** Auric oxid (or anhydrid), Au₂O₃, sometimes improperly called auric acid; a blackish brown powder occasionally used in medicine.

Golgi's corpuscles. Special tactile corpuscles, situated at the insertion of tendons and supposed to convey to the brain an estimate of the force with which the muscles contract. [*Canalio Golgi*, Ital. anatomist, born 1844.]

Goll's tract. Syn.: *fasciculus gracilis*. A tract in the posterior white column of the spinal cord, corresponding with the posterior median column. It can be traced only as far as the middle of the dorsal region. [*Friedrich Goll*, Swiss anatomist, 1829-1903.]

Goltz's statistical theory. A t. with reference to the function of the semicircular canals according to which, in every position of the head, pressure is exerted by the endolymph on some portion of the canals, the ampullar nerve terminations being thus excited and sensations of position transmitted to the cerebrum. [*Friedrich Leopold Goltz*, Ger. physician, born 1834.]

gom-enol. A volatile oil obtained from *Melaleuca viridifolia*.

gomphosis (gom-fo'sis). The variety of synarthrosis in which one of the articular elements is set firmly in a socket in the other, like a nail driven into a board. The only example is the articulation of the teeth with the maxillae. [Gr., *gomphos*, peg.]

gonarthrititis (gon-ar-thri'tis). Inflammation of the kneejoint; white swelling. [Gr., *gonu*, the knee, + *arthrititis*, arthritis.]

gonocystitis (gon-e-sis-ti'tis). Inflammation of the seminal vesicles. [Gr., *gone*, semen, + *kystis*, a bag, + *itis*, inflammation.]

gonocystolith (gon-e-sis'to-lith). A concretion in a seminal vesicle. [Gr., *gone*, semen, + *kystis*, bag, + *lithos*, a stone.]

gonopoiesis (gon-e-poy-e'sis). The production of the semen. [Gr., *gone*, semen, + *poiein*, to make.]

gonopoietic (gon-e-poy-et'ik). Of, or pertaining to, gonopoiesis.

goniometer (go-ne-om'tet-er). An apparatus for measuring angles, especially the angles of crystals. [Gr., *gonia*, angle, + *metron*, measure.]

goni'tis. Inflammation of the knee. [Gr., *gonu*, knee, + *itis*, inflammation.]

gono-, gon-. A prefix representing the Gr., *gone*, the combining form of *gonos*, *gone*, generation, offspring, semen.

gonoccele (gon'o-sel). A retention cyst of the testicle or the spermatic cord. [Gr., *gone*, semen, + *kele*, tumor.]

gonochorisis, gonochorismus (gon-okor'is-is, gon-okor-is'mus). Lit., separation of the sexes; in botany, the production or existence of that state in which the individual plant is unisexual; in biology, the process by which an hermaphroditic type develops into the sexual; in embryology, the conversion of the early and apparently hermaphroditic sexual organs into those proper to one sex. [Gr., *gonos*, progeny, + *chorisis*, or *chorismos*, separation.]

gonococcide (gon-o-kok'sid). Destructive to gonococci or an agent destructive to gonococci. [*Gonococcus*, + Lat., *caedere*, to kill.]

gonococci in vaginal smears, how to recognize, see in *appendix*, page 911.

gonococcus (gon-o-kok'kus). A biscuit-shaped diplococcus occurring within the cytoplasm of the pus cell and decolorizing by Gram's method. The organism is the cause of gonorrhoeal inflammation. [Gr., *gone*, semen, + *kokkus*, kernel, berry.]

gonorrhoea (gon-or-re'ah). Syn.: *clap*. A contagious inflammation of the mucous membrane of the urethra and surrounding structures caused by the gonococcus. The disease is generally transmitted by coitus, and is characterized by a mucopurulent discharge and by painful and difficult micturition. Complications in the male are chordee, prostatitis, epididymitis, salpingitis, orchitis, and cystitis. In the female, vaginitis, inflammation of the glands of Skene and of Bartholin, endocervicitis, cystitis, mastitis, and salpingitis. Arthritis and endocarditis may occur as complications in either sex. [Gr., *gonorrhoeia*, from *gonos*, semen, + *rein*, to flow, because it was formerly supposed that the discharge characteristic of the disease was semen.]

gonotoxin (gon-o-toks'in). The endotoxin of the gonococcus.

gout. A trade name for calcium peroxid (CaO₂).

gonyocèle (gon'e-o-sel). A tumor of the knee. [Gr., *gony*, the knee, + *kele*, a tumor.]

goose flesh. Syn.: *cutis anserina*. A puckering of the skin following exposure to cold, due to the contraction of the involuntary muscles of the skin.

Gordius (gor'de-us). The (horse) hair worms; a genus of threadlike nematoid

worms of the order *Gordiacea*, found in running water and so named from the knots into which their bodies are twisted. **G. aquaticus**. Syn.: *Filaria locustae*. A species found at first parasitic in insects and their larvae and subsequently free in water. When ingested, it causes inflammation of the parotid gland with abdominal symptoms. **G. equinus**. Syn.: *Filaria equi*. **G. marinus**. See *Spiroptera hominis*. **G. medinensis**. Syn.: *Filaria medinensis*. **G. pulmonis**. A species found in the bronchial tubes of pigs and occasionally infecting man. [*Gordius*, king of Phrygia, whose name is associated with the Gordian knot.]

gorget (gor'jet). A steel instrument having the form of a channel used in perineal lithotomy. [Fr., *gorgette*, from *gorge*, throat, because of the tubular shape of the instrument.]

gos'sum. See *goiter*.

gorgo'nin. The iodized albuminoid obtained from the *Gorgonia Cavalinii*.

Gossypium (gos-sip'e-um). 1. A genus of malvaceous plants. 2. Of the Br. Ph., absorbent cotton. **g. absorbens**. See *absorbent cotton*, under *cotton*. **gossypii cortex**. Cotton root bark. The fluidextract of cotton root bark is official in the U. S. Ph. **g. depuratum**. See *absorbent cotton*, under *cotton*. **g. fulminans**. See *pyroxylin*. **G. herbaceum**. Indian or American cotton plant; a species indigenous to Asia, where it has been known from the earliest ages. It is cultivated also in the southern United States. The leaves furnish cottonseed oil and, after the expression of the latter, are sold as oil cake (used for fattening cattle and as manure). **gossypii lana**. See *cotton*. **g. purificatum**. Absorbent cotton [U. S. Ph.]. **g. salicylatum**. See *salicylated cotton*. **lana gossypii, lanugo gossypii**. See *cotton*. **oleum gossypii**. A fixed oil expressed from cottonseed [U. S. Ph.]. **pili gossypii**. See *cotton*.

Göttinger's line. A line following the general direction of the upper margin of the zygoma.

Gouania (goo-an'e-ah). A genus of the *Rhamnaceae*. **G. domingensis, G. glabra**. Chaw stick; a climbing species found in the West Indies, where the juice is used as a tonic, and the wood, which is thought to be antiseptic, for tooth brushes, the end of a short piece of a twig being frayed out for the purpose. [*Gowan*, a French botanist.]

gouge (gowj). A surgical chisel, having a concave blade.

goundou (goon'doo). See *anakhre*.

gout (gowt). An acute or chronic diathetic disease manifested by the excessive formation of uric acid. Clinically, there are repeated attacks of acute arthritis most frequently localized in the joints of the toes. After a number of attacks, urate of sodium is deposited about the affected joints forming the so-called "tophi." **ab-articular g.** **G.** affecting other organs

than the joints. **acute g.** A specific febrile disorder characterized by non-suppurative inflammation of certain joints, chiefly of the hands and feet, and tending to culminate in a paroxysm at longer or shorter intervals, when various joints or parts of the body are apt to be affected. **chronic g.** A persistent constitutional affection, characterized by stiffness and swelling of various joints, with deposit of sodium urate. **guanin g.** See under *guanin*. **saturnine g.** Gouty symptoms induced by the defective elimination of uric acid in some cases of lead poisoning. [Old Fr., *goutte*, from the Lat., *gutta*, a drop, from the old humoral pathology, suggesting a dropping of morbid fluid into a joint.]

gout'y. Of, pertaining to, or affected with, gout.

Gowers' tract. Syn.: *fasciculus anterolateralis superficialis*. A tract formed of fibers derived from the posterior roots that, having crossed in the posterior commissure and been interrupted in nerve cells, collect in the lateral column to pursue a course to the cerebellum by way of the superior peduncle. [Sir William R. Gowers, Eng. neurologist, 1845-1914.]

gr. Abbreviation for the Lat., *granum*, a grain. Care should be used to avoid confusion with *gm.*, the abbreviation for *gram*, when written carelessly.

graafian. Described by *Reijnier de Graaf, g. vesicle*. See under *vesicle*.

gracilis (gras'il-is). See *table of muscles*, under *muscle*.

gradatim (gra-da'tim). Gradually.

grad'uate. In pharmacy, a graduated glass vessel.

graduated (grad'u-a-ted). Divided into degrees; of a vessel, marked with a scale showing the amount of liquid it holds when the surface of the liquid is at a certain point. **g. for delivery**. Of a vessel, g. so as to indicate directly the amount of liquid discharged from it, when its contents are allowed to run out, as with pipets. **g. for the contents**. Of a vessel, g. so as to indicate the volume of the contents when it is filled up to the level of any given one of the lines on its circumference, as with flasks. [Lat., *gradatus*.]

gradua'tion. The process of marking a vessel or tube with a graduated scale. **g. of salt waters**. The concentration of brines by freezing, boiling, or by evaporating without the aid of heat.

Græfe's knife (gra'feh). A narrow-bladed knife, used in making a section of the cornea. **G's sign**. See *G's symptom*. **G's symptom**. In exophthalmic goiter the upper eyelid does not follow promptly and evenly the movement of the eyeball downward but halts or moves jerkily. [*Albrecht von Græfe*, German ophthalmologist, 1828-1870.]

graft. In surgery, a portion of living tissue transplanted from one place to another on the same or on another organism with a view to its adhesion and growth. [A modification of *graff*, from the Old Fr., *grafe*, stylus, pencil.]

grafting. The operation of inserting a graft. See *skin grafting*, under *skin*.

Graham's law. The l. that the rate at which a gas diffuses through a porous membrane is inversely proportional to the square root of the density of the gas. [Thomas Graham, Eng. chemist, 1805-1869.]

Grahe's test. A t. for distinguishing genuine from false cinchona barks, the vapor of the former being carmin and that of the latter brown when heated in a t. tube.

grain. 1. A seed; a fruit, especially of the cereals. 2. A weight; 0.065 gram. See *table of weights and measures*, in appendix. 3. The direction of the fibers or layers of a solid substance. [Lat., *granum*.]

gram, gramme. The unit of weight of the metric system, representing the weight of 1 c. c. of water at 4° C. One gram equals 15.43 grains. See *table of weights and measures*, in appendix. [Gr., *gramma*, a small weight.]

graminivorous (gram-in-iv'or-us). Grass-eating. [Lat., *gramen*, grass, + *vorare*, to devour.]

gram-ion (gram-i'on). The gram weight of an ion numerically equal to the atomic weight of the ion.

gram-molecule (gram-mol'ek-ül). The gram quantity of a substance equal to its molecular weight.

Gram's stain for sputum, see in *appendix*, page 903.

grana'tim. By grains (said of medicines given in doses of one or more grains).

gran'atin. 1. A sweetish crystalline substance, similar to mannite, found in the root bark of *Punica granatum*. 2. A crystalline substance found in the rind of the unripe fruit of the pomegranate.

Grana'tum. 1. A genus of plants now referred to *Punica*, especially *Punica g.* 2. Of the U. S. Ph. the bark of the root of *Punica g.* **cortex fructus granati.** Syn.: *g. cortex fructum*. The rind of the fruit of *Punica g.* **granati cortis.** See *Granatum* (2d def.) [U. S. Ph.]. [Lat., *granum*, a grain.]

Gran'cher's sign. A raised pitch of the expiratory murmur, indicating pulmonary consolidation. [Jacques Joseph Grancher, Parisian physician, born 1843.]

Gran'deau's test. A t. by which the presence of digitalin is shown by the rose color produced by introducing bromin into their solution in concentrated sulphuric acid.

grand mal (grahnd mahl). Major epileptic attacks.

gran'ular, gran'ulated. Containing, bearing, or composed of granules; roughened by small prominences.

granula'tion. 1. The process of reducing a substance to a granular state or of forming it into granules, also the formation of g's (2d def.). 2. In the pl., g's, the mass of vascular, luxuriant embryonic connective tissue that forms in the process of healing of an open wound or an ulcer; so called from its granular surface. 3. In the pl., g's, pathological granular masses.

catarrhal g's. G's in which there are hypertrophy of the papillae and serous infiltration of the submucous tissue. **cerebral g's.** See *pacchionian bodies*. **conjunctival g's.** Bodies resembling g's occurring in the conjunctiva, as in trachoma. **croupous g's.** G's covered with a grayish yellow film composed of indifferent cells held together by fibrinous material. The condition is probably a purely local one, having no analogy with croup except in the appearance. **erethistic g's, erethitic g's.** G's (2d def.) in which hemorrhage and great pain are caused by slight irritation. **exuberant g's.** See *fungous g's*. **fatty g's.** G's that have undergone fatty degeneration. **fibroid g.** See *milk spot*, under *spot*. **fungous g's.** Large, pale, gelatinous, exuberant g's (2d def.) secreting a thin mucopurulent matter. **g. tissue.** A form of tissue made up of young connective tissue cells and freshly formed capillaries whose coils give it a granular appearance. **melanic g.** The proliferation of melanosis between the connective tissue fibers and cells. **meningeal g's.** See *pacchionian bodies*. **miliary g's.** Miliary tubercles. **pacchionian g's.** See *pacchionian bodies*, under *pacchionian*. **spongy g's.** A form of fungous growth presenting macroscopically a spongy appearance. **trachoma g's.** 1. A name given to the papillary growths in trachoma, which are really hypertrophies of the conjunctiva, from their resemblance to g's (2d def.). 2. The accumulation of lymphoid cells found in the conjunctiva in trachoma. **vitelline g's.** See *vitelline granules*, under *granule*. [Lat., *granulatio*, from *granulum*, a small grain.]

gran'ule. A small grain. 1. In histology, (a) a minute mass in a cell, or in ground substance, which has a determinate outline, but no apparent structure; (b) any minute mass (e. g., the small celllike bodies in the so-called granular layer of the cerebellar cortex, the acini of the thymus gland, lymph corpuscles, etc.); (c) the nodal or crossing points of a nuclear or intracellular reticulum or the fibrils of such a reticulum seen endwise. 2. In pharmacy, a small globule, generally composed of sugar and gum tragacanth, combined with a medicinal substance. **agminated g's.** Small round or angular protoplasm particles found in the blood; supposed to be disintegrated red blood corpuscles. **Bütschli's g's.** See under *Bütschli*. **carbohydrate g's.** Particles of carbohydrate substance in the cells or fluids of the body in course of assimilation or disassimilation. **central g.** See *centrosome*. **chromatic g's.** Chromatin g's within cells or nuclei or free in some liquid. **elastin g's.** G's of elastic substance, sometimes fused so as to form fibers or membranes. **fatty g's.** Particles of a fatty nature, present in a cell in course of assimilation or in a cell undergoing fatty degeneration, or produced by a cell in process of forming a

fat cell. **gustatory g's.** Minute nuclear masses found in the gustatory papillae. **lymph g's.** See *lymph corpuscles*, under *corpuscle*. **osseous g's.** The minute g's of inorganic matter deposited in the animal matrix of the bones. **pigment g's.** Particles of coloring matter found especially in pigment cells. **proteid g's.** Minute particles of proteid substance in the liquids or cells of the body, on the way to either assimilation or disassimilation. **seminal g's.** Minute particles found in semen, supposed to be derived from the disintegrated nuclei of the nutritive cells of the seminiferous tubules. **starch g's.** The separate g's of which starch is composed, consisting of a series of more or less concentric layers disposed about a nucleus or a hilum. **vitelline g's, yolk g's.** Albuminous g's or spherules found in the vitellus and collectively forming the nutritive yolk. Also called *vitelline corpuscles*. **zymogen g's.** G's in the cells of the pancreas which are supposed to give rise to the pancreatic ferments. [Lat., *granulum*, dim. of *granum*, kernel.]

gran'ulo-ad'i'pose, gran'ulofat'ty. Containing or composed of fat granules in tissues undergoing fatty degeneration; the cells that contain more or less numerous fat granules are called g.

granulo'ma. A productive granular growth, produced by such organisms as *Bacillus tuberculosis*, *Treponema pallida* of syphilis, *Bacillus lepra*, *Bacillus mallei* of glanders, and the *Actinomyces bovis* of actinomycosis. They are usually formed of lymphoid and epitheloid cells, and often contain giant cells. The class is called the infectious granulomata. **g. fungoides.** Syn.: *fibroma fungoides*. See *mycosis fungoides*. **g. iridis.** A small non-malignant tumor of the iris, composed of a highly vascular small-celled, fibrillar (sarcomalike) tissue. **g. of the umbilicus.** See *fungous excrescence of the umbilicus*, under *excrescence*. [Lat., *granulum*, a little grain, + Gr., *oma*, tumor.]

granulose (gran'u-lôs). A carbohydrate forming that portion of the starch granule which is soluble in water.

granulos'ity. A mass of granular tubercles. [Lat., *granulum*, a small grain.]

gr'num. A grain, seed, or berry. **grana fina.** See *coccionella*. **grana paradisi.** The unripe seeds of *Amomum granum Paradisi* and of *Amomum Melegueta*. They are feebly aromatic, and very pungent in taste. They contain resin and a faintly yellowish aromatic essential oil, not acrid. They are used chiefly in veterinary medicine and to give pungency to liquors. **imperial g.** A proprietary food in which a large part of the starch of wheat flour is converted into dextrin. [Lat., *granum*, a grain.]

grape-cure. See *ampelotherapy*.

-graph, -grapher. A suffix from the Gr., *graphein*, to write.]

graphic (graf'ik). 1. Of, or pertaining to, writing or recording, especially to the art

or process of making automatic tracings or other marks showing the degree, rhythm, etc., of phenomena (e. g., a sphygmogram). 2. Having the quality of presenting a thing to the perception with great clearness. [Gr., *graphein*, to write.]

graphite (graf'it). Black lead; an allotropic form of carbon occurring in nature in the form of nodules, or of large compact masses. **g. bath.** A substitute for the sand bath in pharmaceutical operations, in which g. takes the place of sand, recommended by Kristalta as being a better conductor of heat than sand. [Lat., *graphites*, from Gr., *graphein*, to write.]

graph'ites. See *graphite*. **g. depuratus.** Graphite purified by being reduced to a very fine powder, then boiled with water and digested with nitrohydrochloric acid, and lastly washed with water and dried [Ger. Ph.].

-graphy. A suffix from the Gr., *graphia*, denoting processes or styles of writing.

graphology (graf-o'lo-je). The science of diagnosing diseases, such as aphasia, locomotor ataxia, etc., by the person's handwriting. [Gr., *graphe*, handwriting, + *logos*, understanding.]

grat'ing. 1. (Adj.) of sounds, harsh, as when two hard, rough objects are moved upon each other. 2. (N.) a sound of that sort. 3. (N.) a latticework; in optics, a glass minutely furrowed with fine parallel rulings, acting to produce dispersion of light rays.

Gratiolet's fasciculus (grah-ti-o-lâz' fak-ik'u-lus). A tract of nerve fibers extending between the cerebellum and the occipital lobe. [Louis Pierre Gratiolet, Fr. anatomist, 1815-1865.]

gratiolin (gra-te'o-lin). A glucosid, C₁₂H₂₂O₁₁ or C₁₀H₁₈O₁₄, discovered in *Gratiola officinalis*.

grattage (grat-ahzh'). Removal of granulations by a stiff brush. [Fr.]

gravedo (gra-ve'do). Nasal catarrh.

grav'el. Urinary crystals and urinary salts which can be recognized by the naked eye. Distinguished from stone or calculus only by the small size. Also the condition of which gravel is characteristic. [Old Fr., *gravelle*, or *gravelle*, coarse sand.]

Graves' disease. See *exophthalmic goiter*. [Robert James Graves, Dublin physician, 1797-1853.]

Graves' speculum. A form of bivalve vaginal speculum that can be changed into a Sims' speculum.

grave-wax. See *adipocere*.

grav'id. Pregnant; heavy with young. [Lat., *gravidus*, from *gravis*, heavy.]

grav'id'ity. Pregnancy. [Lat., *graviditas*, pregnancy.]

gravimeter (grav-im'et-er). An instrument for determining specific gravities; particularly a modification of Nicholson's hydrometer, devised by Guyton-Morveau. [Lat., *gravis*, heavy, + *metron*, a measure.]

gravimet'ric. Pertaining to the measurement of specific gravities or weights. See *g. analysis*, under *analysis*.

gravim'etry. The measurement of weights or specific gravities.

- gravita'tion.** 1. The force by virtue of which every particle of matter attracts every other particle of matter with an intensity directly proportionate to the mass of the attracting particles and inversely proportional to the square of the distance of the body attracted. 2. Movement in accordance with gravity (e. g., the sinking downward of a collection of pus). **terrestrial g.** The force of g, as limited to the action of the earth; the force by virtue of which all bodies tend to fall toward the earth. **universal g.** See g. [Lat., *gravitas*, weight.]
- grav'ity.** 1. The state of being heavy. 2. The state of being grave. 3. See *gravitation*. **specific g.** The ratio of the weight of any body to the weight of the same volume of some other body taken as a unit or standard. [Lat., *gravitas*, from *gravis*, heavy.]
- gray.** Having the color of black or brown mixed with white. **g. matter.** Nerve tissue containing many neuron cell bodies, and therefore presenting a grayish hue. In the brain, the gray matter is disposed on the outer surface of the convolutions and in the basal ganglia and nuclei; in the spinal cord it is arranged in the interior in a form like the letter H on cross-section. [Ang.-Sax., *græy*.]
- green.** 1. Having a color intermediate in the spectrum between blue and yellow, afforded by rays of wave length between .000491 and .000535 mm. 2. Unripe. 3. As a n., a g. color or pigment, also anything of a g. color. **visual g.** A greenish pigment found in rods in the retinae of frogs and other reptiles. [Mid. Eng., *grene*, from Ang.-Sax., *grēne*.]
- Green's operation.** 1. An operation for ectropion. 2. An operation for readjustment of levator palpebrae. [John Orne Green, Boston ologist, living.]
- green stain.** In dentistry, fungoid deposits upon the enamel surface of teeth, most commonly at their cervicolabial portions.
- Green's test objects.** A series of t. diagrams for the determination of astigmatism. The one probably most frequently used consists of a circle traversed by a set of twelve triple lines, like the spokes of a wheel, the figures being placed at the extremity of the sets of lines. Each line is designed to be distinctly seen at a distance of about 20 feet. The circle is 12½ inches in diameter.
- green stick fracture.** Syn.: *incomplete fracture*. A crack involving only a portion of the thickness of a bone.
- greffotome** (grɛf'fo-tōm). A lance-shaped knife, concave on one face, with cutting edges for removing grafts. [Fr., *greffe*, a graft, + Gr., *temnein*, to cut.]
- Gregarina** (greg-ar-i'nah). A genus of parasitic protozoa, belonging to the phylum *Telesporidia* and the order *Gregarinida*. They have no motile organs and are reproduced by simple or multiple spore formation, being parasitic in many insects. [Lat., *grex*, a herd.]
- Gregory's powder.** The official compound powder of rhubarb composed of 5 parts of rhubarb root and 2 of ginger, each in No. 60 powder, and 13 of calcined magnesia. [James Gregory, Scotch physician, 1753-1822.]
- Griffith's mixture.** See *mistura ferri composita*, under *ferrum*. **G's pills.** See *pilulae ferri carbonatis*, under *ferrum*. [Robert Eglesfeld Griffith, Amer. physician, 1798-1850.]
- Grindelia** (grin-de'le-ah). A genus of *Compositae* of which *G. robusta* has been used as a stimulating expectorant.
- grinding** (grind'ing). 1. The process of reducing a substance to powder by attrition. 2. The act of rubbing two surfaces (e. g., those of the opposing teeth) together.
- grip, grippe.** 1. Abbreviation of French name for influenza. 2. A seizure, a hold upon a subject.
- gripe.** An intermittent spasmodic pain in the bowels. Generally used in the plural. [Old Northumb., *griþpa*, to grasp.]
- Groc'co's sign.** The triangle of dullness often observed in cases of pleural exudate on the opposite side of the spinal column from the side of the chest in which the effusion has occurred. [Pietro Grocco, Italian physician.]
- groin.** The lowest segment of the abdominal wall at junction with thigh. [Ice., *grein*, branch.]
- groove.** A linear depression or excavation; a long superficial furrow or narrow channel. **anal g.** A g-like depression in the embryo at the point where the anus is afterwards situated. **anterolateral g.** A longitudinal furrow on the side of the spinal cord. **auriculoventricular g.** A transverse groove upon the surface of the heart, which indicates the separation into auricular and ventricular portions. **bicipital g.** A g. in the superior part of the anterior aspect of the humerus, which lodges the long tendon of the biceps muscle and part of the tendon of insertion of the latissimus dorsi. **carotid g., cavernous g.** A broad, shallow depression upon the lateral surface of the body of the sphenoid bone, which lodges the internal carotid artery and the cavernous sinus. **dental g.** A minute g. along the middle line of the free surfaces of the jaw, which gives rise to the common enamel organ. **dorsal g.** See *medullary g.* **g's for the lateral sinuses.** Deep transverse g's on the inner surface of the skull which lodge the lateral sinuses. **intestinal g.** A g. or furrow in the median plane of the embryo, formed by the approximation of the two lateral folds of the splanchnopleure. **medullary g.** Syn.: *dorsal g.* A deep longitudinal g. on the dorsal surface of the embryo, which is subsequently converted into the medullary tube. **musculospiral g.** A shallow, oblique depression on the shaft of the humerus, which lodges the musculospiral nerve and the superior profunda vessels. **nasal g's.** In the embryo, g's leading from the mouth to the nasal bones. Also a g. upon the inner surface of the nasal bone which lodges

a branch of the nasal nerve. **olfactory g.** A deep depression on the cribriform plate of the ethmoid bone which lodges the olfactory bulb. **optic g.** The shallow g. upon the upper surface of the sphenoid bone, in which the optic chiasma rests. **posterolateral g.** A furrow on each side of the spinal cord corresponding with the line of attachment of the posterior roots of the spinal nerves. **primary g.** See *dental g.* **primitive g.** A g. that forms in the primitive streak of the blastoderm and is the precursor of the medullary g. **subclavian g.'s.** Two shallow depressions on the superior surface of the shaft of the first rib to which the scalenus anticus muscle is attached. One of them lodges the subclavian vein and the other the subclavian artery. [Ang.-Sax., *grof*, pit, from *grafan*, to dig.]

grooved tongue. See *furrowed tongue*, under *separate heading*.

ground itch. Dermatitis due to the invasion of the skin by the larvae of *Uncinaria duodenale*. See *uncinariasis*.

growth. 1. The process of increase in size and development. 2. An adventitious structure (e. g., a tumor). **pearly g's on the membrana tympani.** Certain rare epithelial formations, either single or multiple, on the membrana tympani. **warty g's in the choroid.** Circumscribed, isolated spots of thickening on the lamina vitrea of the choroid, which project toward the retina. They usually occur in old age. [Icel., *grohr*, *groa*.]

Grüening's magnet. A m. for removing particles of steel or iron from the eye. It consists of a number of magnetized steel rods, separated from each other, but in close proximity, and fitted at their ends with iron caps. One of these caps is provided with a delicate point of malleable iron, 32 mm. long, 1 mm. wide, and 0.3 mm. thick, which sustains with ease a weight of 225 grains.

gruff. That portion of a mass which, after trituration in a mortar, remains unground. **gruffs.** The coarse part of a drug.

gru'mose. Formed of coarse clustered granules; a term used in bacteriology to describe the appearance of certain colonies under the microscope.

grumous (gru'mus). Lumpy.

gru'tum. Another name for *milium*. See *milium*.

gryochrome (gri'o-krôm). A term used by Nissl to distinguish a nerve cell with fine granular staining matter in the cell body.

gryopsis (grip-o'sis). Abnormal curvature. [Gr., *grypsis*, a crooking.]

gtt. An abbreviation for the Lat., *guttae*, drops.

guachamacin (gwah-cham/as-in). An alkaloid obtained from guachamacá, possibly identical with curarin.

Guaiaac (gwi'ak). The genus *Guaiaecum*, especially *Guaiaecum officinale*; also g. resin. **g. resin** [U. S. Ph.]. **guaiaeci resinae** [Br. Ph.]. The resin of the wood of *G. officinale*. It is reputed to be diaphoretic

and alterative. In large doses it is purgative and is said to promote the action of the kidneys, if the patient is kept cool during its administration. **g. wood.** The heart wood of *G. officinalis* and *G. sanctum*. Its medical properties depend upon the resin which it contains. [Lat., *guaiaecum*.]

guaiaecodein (gwi'ah-ko-de'in). Codein-ortho-guaiaecol-sulphonate, $C_{22}H_{20}O_6NS$. Its actions and uses are those of codein, the amount of guaiaecol being too small to induce its effects.

guaiaecol (gwi'ak-ol). Methyl catecol, $OH_5H_4O.CH_3$. An ether present in the distillation product of beechwood. **g. benzoate.** Syn.: *benzosol*. The g. ester of benzoic acid. It has been used in tuberculosis. **g. biniodid.** A reddish brown powder, $C_7H_5I_2O_2$; used in tuberculosis. Dose, 5-10 gr. **g. cacodylate.** A reddish, crystalline compound; used hypodermically in phthisis. **g. carbonate.** Syn.: *duotal*. *Guaiaecolis carbonas* [U. S. Ph.], $(C_8H_7OCH_3)_2CO_3$. A white powder, which, when taken internally, has practically the same action as guaiaecol. **g. cinnamate.** See *styracol*. **g. methyl gly'colate.** See *monotal*. **g. salicylate.** The g. ester of salicylic acid. It is a white powder, used as an intestinal antiseptic. **g. sa'lol.** Guaiaecol or guaiaecyl salicylate, $C_{14}H_{12}O_4$. It has the actions and uses of its constituents. **g. valerate.** Syn.: *geosate*. The g. ester of valeric acid. Used in tuberculosis.

Guaiaecum (gwi'ak-um). 1. A genus of resinous trees or shrubs. 2. Of the U. S. Ph., *G. officinale*; also *guaiaec resin*. **g. blood test.** See *separate heading*. **guaiaeci lignum.** See *guaiaec wood*, under *Guaiaec*. **G. officinale.** A tree growing in the West Indies and on the northern coast of South America. It is one of the sources of guaiaec wood, and the chief, if not the sole, source of guaiaec resin. **G. sanctum.** A species much resembling *G. officinale*, found in southern Florida and the West Indies. It yields the excellent guaiaec wood imported from the Bahamas, and also some of the official guaiaec resin. **mistura guaiaeci.** A mixture containing guaiaec resin suspended in cinnamon water [Br. Ph.]. **tinctura guaiaeci.** Of the U. S. Ph., a solution of guaiaec resin in alcohol. **tinctura guaiaeci ammoniata.** A preparation made by dissolving 1 part [U. S. Ph.] (or 4 oz. [av.] [Br. Ph.]) of guaiaec resin in sufficient aromatic spirit of ammonia to make 5 parts [U. S. Ph.] or 20 fl. oz. [Br. Ph.]; or by adding aqua ammonia to an extemporaneously made tincture of guaiaec resin. **trochiscus guaiaeci resinae.** Lozenges made with 3 grains of g. resin [Br. Ph.].

guaiaecum blood test. A colorless mixture of ozonized turpentine and tincture of guaiaecum, which, when treated with blood pigments is changed to a bluish green or blue color at the surface where the two liquids meet.

guaiaecyl (gwi'as-il). A calcium compound

of guaiacol-sulphonic acid; a local anesthetic.

guaiamar (gwi'am-ar). Guaiacol-glyceryl-ester, $C_{20}H_{34}O_4$; it liberates guaiacol in the gastro-intestinal tract. It is also used externally in the form of an ointment.

guaiaperol (gwi-ap'er-ol). A synonym for piperidin guaiacolate; used in tuberculosi.

guaiaquin (gwi'ah-kwin). Quinin guaiacol-bisulphonate, an odorless substitute for guaiacol.

guaiethol (gwi-eth'ol). An ethyl substitution product of guaiacol.

guanase (gwan'as). An enzyme present in a number of glands that has the property of converting guanin into xanthin with the formation of ammonia.

guanidin (gwan'id-in). Imido-urea, $NH_2 \cdot C : NH \cdot NH_2$, a basic and hygroscopic substance, present in beet sugar molasses.

guanin (gwan'in). $C_5H_5N_5O$, a leukoain present in the various viscera and pathologically in the muscles, ligaments, and joints of swine suffering from g. gout. It is one of the purin bodies derived from the nucleus of the various tissue cells and may accumulate in the blood from diminished oxidation as one of the causes of gout. g. **gout**. A pathological condition in pigs, in which g. is deposited in the tissues of the body.

guano (gwah'no). A substance found on the islands off the western coast of South America, consisting chiefly of the excrement of birds mixed with feathers, bones, and various other organic remains. It is one of the sources of nitric acid. [Sp., from the old Peruvian, *huano*, dung.]

guanosin (gwan'o-sin). $C_5H_9O_4 \cdot C_6H_7N_5O$, a nucleosid which contains one proteose group (d-silose) in combination with one guanin group.

guarana (gwah-rah'nah). Syn.: *pasta g.* Brazilian cocoa, g. bread; a dried paste made from the crushed or ground seeds of *Paullinia sorbilis*. The Guarani of South America mix the seeds with cassava root (manihot) meal and water, forming the paste into small cones, which are dried and preserved for use. It has been employed in various diseases, but is now chiefly used in migraine. **elixir of g.** A mixture of 20 parts of fluidextract of guarana with aromatic elixir and compound elixir of taraxacum. **extractum guaranae fluidum**. Fluidextract of guarana [U. S. Ph.]. [*Tupi guarani*, the name of the plant.]

guard (gard). A protective appliance (e. g., for limiting the depth to which a cutting instrument can penetrate).

guavacin (gwav'as-in). A crystalline principle, $C_8H_8NO_2$; an anthelmintic.

gubernaculum (gu-ber-nak'u-lum). A common saclike membrane surrounding the generative buds. g. **dentis**. A bundle of strong fibrous tissue, extending from the apex of a permanent tooth to the gum. g. **Hunteri**. See *g. testis*. g. **testis**. A general term for those structures which are supposed to guide the testicle from the abdomen into the scro-

tum. [Lat., *gubernaculum*, helm, from Gr., *kubernan*, to steer.]

Gubler's reaction. The production of a brown color by gradually adding nitrosotric acid to urine; said to be characteristic of hemapheic jaundice. **G's tumor**. A tumor at the back of the carpus, sometimes observed in plumbism. [*Adolphe Gubler*, Fr. physician, 1821-1870.]

Gudden's law. The l. that lesions of the cerebral cortex do not produce lesions of the peripheral nerves. [*Bernhardus von Gudden*, Ger. neurologist, 1824-1886.]

guillotine (gil'lo-ten). A surgical instrument like a decapitating machine cutting off protuberant parts, chiefly enlarged tonsils. [Fr.]

guinea worm. See *Dracunculus* and *Filaria medinensis*.

gujasanol (gu-jan'an-ol). The hydrochlorid of diethylglycocoll guaiacol, $C_{12}H_{18}HO_2$. Guaiacol is split off in the organism and it is antiseptic and anesthetic.

gul'let. The esophagus; the throat, the neck. [Old Fr., *goulet*, mod. Fr., *gueule*, mouth, jaws, chops.]

gum. 1. A thick, viscid, tenacious plant exudation which hardens on exposure to the air into a transparent amorphous vitreous mass, distinguished from a resin by being insoluble in alcohol, soluble in water and forming a muclage with it, or at least being softened by it. See *g. resin*. 2. Caoutchouc; used in this sense especially in composition. 3. The fibrous and mucous structure overlying the alveolar processes of the maxillary bones; often used in the plural. **acaroid g.** See *acaroid resin*. **African g.** See *Kordofan g.*, *Senegal g.*, and *Cape g.* **amrad g.** A substitute for g. arabic introduced into England from the East Indies in three qualities—common red, glassy, and pale. **artificial g.** See *dextrin*. **Australian g.** 1. A variety of g. arabic derived from *Acacia decurrens*, *Acacia homalophylla*, and *Acacia pycnantha*. It forms rough globular or oblong fragments of light or dark yellowish color. It is entirely soluble in water, and makes a very strong muclage. 2. Acaroid resin. **Barbary g.** A variety of g. arabic produced by *Acacia nilotica* and *Acacia gummifera*. **British g.** See *dextrin*. **Cape g.** A variety of g. arabic derived from the Cape of Good Hope; the spontaneous exudation of *Acacia horrida*. **East Indian g.** 1. The g. of *Feronia elephantum*. It contains much bassorin, and occurs in commerce mixed with g. arabic. 2. A variety of g. arabic imported from East India. **eucalyptus g.** See *red g.* **Gedda g.** An inferior variety of g. arabic brought from Jidda, Arabia, but originally from the Somali coast of eastern Africa. **g. arabic**. The concrete juice of *Acacia vereh*, and other species of *Acacia*; usually limited to that variety imported from Arabia or neighboring portions of Africa (true *g. arabic*). It is used as a demulcent and a vehicle. **g. resin**. A mixture of a solid vegetable principle consisting of a g.

and a resin (often united with a volatile oil) contained in the milky juice of plants. The g. resins are medicinally important, comprising various antispasmodics, cathartics, etc., such as galbanum, asafetida, myrrh, gamboge, etc. See *balsam. g. tragacanth. See tragacanth. hog g.* The g. of *Moronebea coccinea*, employed in Jamaica, mixed with lard, wax, and rosin, for the same purposes as Burgundy pitch. **India g.** A commercial name for a variety of g. arabic exported from India. **Jidda g., Jiddah g.** See *Gedda g.* **Kordofan g.** The best sort of g. arabic, collected west of the White Nile in Kordofan, Africa, and imported by way of Cairo and Trieste. **mesquite g.** The product of *Prosopis juliflora*, found in New Mexico, Texas, and other neighboring regions. **mineral g.** A solution of aluminum phosphate in sulphuric or phosphoric acid; used as a substitute for acacia. **Mogador g., Morocco g.** See *Barbary g. red g.* 1. A variety of Australian kino, derived probably from *Eucalyptus corymbosa*. 2. See *Gedda g.* **Savikim g.** See *Suakim g.* **Senegal g.** A generic name for the different g's resembling true g. arabic, derived from *Acacia verek* and *Acacia Adamsonii*, and exported from Senegambia. **Sennaar g., Sennari g.** An excellent variety of g. arabic obtained from places between Sennaar and the Red Sea. **spruce g.** The g. of the spruce tree. **starch g.** See *dextrin.* **Suakim g., Suakin g.** A variety of g. arabic exported from Alexandria, derived from *Acacia stenocarpa* and *Acacia Seyal.* **sweet g.** The resin of *Liquidambar styraciflua.* **Turkey g.** Arabian g. arabic imported by way of Turkey or other Mediterranean countries. **wattle g.** See *Australian g.* (1st def.). [Mid. Eng., *gomme, gumme.*]

gum'boil. An obsolete term for alveolodental abscess.

gum'ma, pl., gummata. An infectious granuloma present in the tissues and the viscera in the tertiary stage of syphilis. [Lat., *gummi, gum.*]

gum'matous. Of the nature of a gumma. [Lat., *gummatous.*]

gum'mi. Gum, especially gum arabic, and, in German writings, also caoutchouc. African gum.

gum'mous. 1. Containing, abounding in, or of the nature of gum. 2. See *gummy.*

gum'my. Of the nature of gum, sticky; also swollen, puffy.

gun-cotton. See *pyroxylin.*

gune. Another name for *tinea imbricata.* See *tinea.*

Gunning-Lieben's acetone reaction. Performed by gently heating an alcoholic solution of ammonia containing iodine with the solution to be tested. If acetone is present, iodoform is deposited on standing.

gun'shot. Produced by the discharge of a gun; said of injuries.

Günzberg's test for free HCl in examinations of stomach contents, see in *appendix, page 904.* **G's test for free**

hydrochloric acid. This test consists of evaporating a few drops of the gastric juice with a few drops of Günzberg's reagent, namely, 1 gr. vanillin, 2 grs. phloroglucin, 100 c.c. of alcohol, on a water-bath. If free hydrochloric acid is present a brilliant purple color is obtained.

gusta'tion. The sense of taste. [Lat., *gustatio, from gustare, to taste.*]

gus'tatory. Pertaining to the sense of taste. **g. center.** See *taste center*, under *center.*

gut. See *intestine. blind g.* See *cecum. foreg.* See *proso-gaster. hindg.* That portion of the embryonic alimentary canal from which the colon, vermiform appendix, rectum, and anus are developed. **midg.** See *mesogaster. postanal g.* In embryology, the prolongation of the alimentary canal into the tail posterior to the anus. **subcecal g.** See *post-anal g.*

gut'ta (gut'tah). 1. See *drop* (1st def.). 2. See *gamboge.* 3. Of Baumhaur, pure g.-percha as it issues from the tree; a body, C₁₀H₁₆, by the oxidation of which the different bodies constituting g. percha are produced.

gut'ta-percha (gut'tah-pur'chah). The concrete juice of the *Sapotaceae*, especially that of *Islandra gutta.* It is used as a waterproof covering and insulating material. **g.-p. paper, g.-p. tissue.** G.-p. rolled into thin, transparent, very flexible sheets; used as a protective covering against evaporation and a waterproof covering in surgical dressings. **liquor gut'ta-perchae.** Syn.: *traumaticum.* A solution of g. p., chloroform (commercial chloroform) [U. S. Ph., 1880]. [Malay, *gatah, gum, + perchah, the tree from which it is produced.*]

gut'tate. Having rounded, drop-shaped spots. [Lat., *guttatus, from gutta, a drop.*]

gutter. A water-course, natural or artificial. In surgery, an angular trough, made of galvanized wire or tin, to fix the fragments of a fractured humerus. [Old Fr., *gutierte, mod. Fr., gouttiere, drip, eaves, roof, gutter.*]

gut'tural. 1. Pertaining to the throat; formed in the throat. 2. As a n., a letter denoting a sound formed in the throat. [Lat., *gutturialis.*]

gymnasium (jim-na'se-um). 1. A place furnished with apparatus for systematic muscular exercise. 2. Also, of the ancients, gymnastics. [Gr., *gymnasion.*]

gymnastics (jim-nas'tiks). The science or art of systematic bodily exercise. **active g.** Gymnastic exercise by the patient himself without an assistant. **antagonistic g.** G. consisting of movements by two persons, one of whom resists the other. **medical g.** The treatment of disease by g. **ocular g.** G. applied to the ocular muscles, e. g., by means of prisms. **passive g.** Passive exercise by the patient's submission to the manipulations of a gymnast or masseur. **Swedish g.** A system of g. devised by

Ling, of Sweden, in which there is an effort to aid the recovery of paretic parts by bringing the muscles into methodical exercise. **voluntary g.** See *active g.* [Gr., *gymnastike*, gymnasia.]

Gymnema (jim-ne'mah). 1. A genus of twining asclepiadaceous shrubs or undershrubs. 2. The genus *Pluchea*. **G. silvestre**. A species found in Ceylon and the Indian Peninsula. The leaves are bitterish, astringent, and acidulous, contain gymnemic acid, and, when chewed, temporarily destroy the power of tasting sweet or bitter substances. [Gr., *gymnos*, naked, + *nema*, a thread.]

Gymnocladus canadensis, **G. dioica**. The Kentucky coffee tree (in Canada, the *chicot*). The seeds have been used as a substitute for coffee, and, in aqueous extract, according to Bartholow, possess toxic properties like those of *Physostigma*.

gymnospor (jim'no-spör). A spore without a protective outer coat.

gynandromorphous (jin'an-dro-mor'fus). Having both male and female characteristics; hermaphrodite. [Gr., *gyne*, a woman, + *aner*, a man, + *morphe*, form.]

gynatresia (jin-at-re'se-ah). Atresia of the vagina. [Gr., *gyne*, woman, + *atresia*, atresia.]

gyneco-, gyno-. A prefix from the Gr., *gynaiko-*, combining form of *gyne*, woman, female.

gynecology (jin-ë-köl'ö-jë). That branch of medicine which treats of the genital, urinary or rectal diseases peculiar to women. [Gr., *gyne*, woman, + *logos*, understanding.]

gynecophore (jin'e-ko-för). The gynephoric canal of the male *Bilharzia*. [Gr., *gyne*, woman, + *phorein*, to carry.]

gynecophoric (jin-e-ko-for'ik). Containing a female; said of a canal in the male *Bilharzia* which contains the female during copulation.

Gynecophorus (jin-e-kof'o-rus). The genus *Schistosoma*. Syn.: *Bilharzia* and *Distoma*. **G. haematobius**, **G. magnus**. See *Bilharzia haematobia* and *Schistosomum haematobium*.

gyniatrics (jin-e-at'riks). Treatment of diseases of women. [Gr., *gyne*, woman, + *iatrikos*, medical.]

Gynocardia odora'ta. An East Indian species of plant, the seeds of which yield chaulmoogra oil. **g. oil**. See *chaulmoogra oil*, under *chaulmoogra*.

gynocyanauridzarin (jin''o-si'an-aw-rid'za-rin). A crystalline principle found in *Gynocardia lancifoliata*; used in leprosy.

gypsum (jip'sum). Hydrous calcium sulphate, the mineral from which plaster of Paris is made. [Lat., *gypsum*, from Gr., *gypos*, chalk, gypsum.]

gyration (ji-ra'shun). Rotary movement. [Lat., *gyrare*, to wheel round.]

gyro-. Combining form of Gr., *gyros*, ring, circle, spiral.

gyroma (ji-ro'mah). An ovarian tumor consisting of a convoluted mass. [Gr., *gyros*, turn.]

gyrose (ji'rös). A term used in descriptive bacteriology meaning marked with wavy lines.

gyrotrope (ji'ro-tröp). See *rheotropé*. [Gr., *gyros*, a circle, + *trepein*, to turn.]

gyrus (ji'rüs), pl., *gyri*. Lit., a ring or circle. 1. The scala tympani and scala vestibuli. 2. See *convolution* (2d def.). 3. One turn in a spiral structure. **angular g.** The g. about the dorsal end of the supertemporal fissure. **annectant gyri**. Any one of the four gyri which act as a connection between the occipital and parietotemporal lobes of the brain. **basirrhinal g.** Of Wilder, the g. at or near the tip of the temporal lobe, between the hippocampal and amygdaline fissures. **callosal g.** See *g. fornaticus*. **gyri cerebelli**. The laminae of the cerebellum. **gyrus cerebri**. A cerebral convolution. **gyrus chorioides**. Syn.: *anterior choroid convolution*. In the embryo the convexity of the parietes of the lateral recess of the fourth ventricle. **gyri cochleae**. The gyri of the cochlea of the internal ear. **g. descendens**. The narrow area at the extremity of the occipital lobe, just below the postcalcarine fissure. **g. fornicatus**. Syn.: *callosal convolution*. The g. which borders the corpus callosum. **g. hippocampi**. See *uncinate g.* **gyri posteriores inferiores**. Syn.: *Arnold's convolution*. Of Arnold, gyri on the ventral or tentorial aspect of the occipitotemporal lobe. **g. rectus**. Syn.: *entorhynnal fold*. The narrow gyrus on the orbital aspect of the frontal lobe, between the mesal margin and the olfactory fissure. **hippocampal g.** The g. between the hippocampal and collateral fissures, extending from the splenium to the uncinatè g. **mediofrontal g.** The g. between the superfrontal and subfrontal fissures, sometimes subdivided by a mediofrontal fissure. **mediotemporal g.** The g. between the supertemporal and mediotemporal fissures. **orbital gyri**. The divisions of the orbital or ventral surface of the frontal lobe. **paracentral g.** The oval or quadrilateral area on the mesal aspect of the cerebrum, just cephalad of the precuneus. **postcentral g.** Syn.: *medial fold*. The g. between the central and postcentral fissures. **posteroparietal g.** See *ascending parietal convolution*, under *convolution*. **precentral g.** The g. between the central fissure and the precentral and supercentral fissures. **primary gyri**. Areas of the fetal cerebrum demarcated by the primary fissures. **straight g.** See *rectus g.* **supramarginal g.** See *marginal convolution*, under *convolution*. **uncinate g.** The continuation forward of the hippocampal g. [Gr., *gyros*, ring, circle.]

H

H. Symbol for the element *hydrogen*. Abbreviation of haustus, a draft; in ophthalmology, abbreviation for hypermetropia.

habē'na. Lit., a thong. One of the peduncles of the pineal gland. See also *frenum* and *retinaculum*. [Lat., from *habere*, to hold.]

habenula (hab-ēn'u-lah). 1. A name for various portions of the membrana basilaris of the cochlea. 2. Any reinlike structure. 3. The fibrous cord above the testis, representing the fused surfaces of the processus funiculovaginalis. [Lat., dim. of *habena*.]

hab'it. Bodily apparel or attire. Outward form or appearance. The sum of the mental and moral qualities, disposition, character. A settled practice, custom, usage. [Old Fr., *habitus*; Lat., *habitus*, from *habere*, to have.]

habitat (hab'it-at). The natural location of an animal or plant. Used especially in describing the most usual seat of bacteria. [Lat., *habitare*, to dwell.]

habitus (hab'it-us). Latin for habit, formation.

hachement (ahsh-maw'). A chopping stroke used in massage.

hae. For words beginning *hae*, see *he*.

Haemadip'sa ceylo'nica. A land leech, found in tropical jungles, which may prove very annoying to man, causing ulcers which at times prove fatal.

Haffkine's virus. Antibubonic virus.

Hagedorn's needle. A flat needle curved on the edge, the eye perforating the side and the cutting edge on the convex side.

hahnemann'ian. Relating to homeopathy or to its founder. [*Christian Friedrich Samuel Hahnemann*, German physician, 1755-1843.]

hair. A corneous outgrowth from the epidermis, consisting of a long, fine, tubular, elastic body, growing from a follicle of the skin and containing a medullary substance (the h. pith), filling a narrow, irregular cavity in the center of the h. Its shaft and a portion of its root are covered by an epidermis consisting of a thin lamella of flattened horny cells, overlapping each other distally. **auditory h's.** The fine fibrillae forming prolongations of the spindle-shaped nerve cells connected with the termination of the vestibular nerve. **body of a h.** See *h. shaft*. **downy h.** See *lanugo*. **extraneous h.** H. growing in unusual places. **falling of the h.** See *alopecia*. **h. bulb.** The bulbous end of a h. root lodged within the h. follicle and containing the h. papilla. **h. cell.** See under *cell*. **h. follicle.** A cavity of the skin which contains the root or implanted part of a h. **h. root.** That portion of the h. which is concealed in the follicle lying below the orifice of the

sebaceous gland. **h. scales.** The spindlelike or platelike cells forming the cortical or principal part of a h. **h. shaft.** The free part of a h., as opposed to the root. **h. sheath.** The h. root sheath. **horse h.** The bristly appendages (mane and tail) of the horse; used for suture material. **hypertrophy of the h.** See *hypertrichosis*. **matted h.** See *plica polonica*. **olfactory h's.** The cilialike projections from the olfactory cells in *Amphibia*. [Ang.-Sax., *haer*.]

hal'akone. A small conic plug of stiffened gauze used for introducing medicaments into the nostril.

halimetry (hal-im'te-re). The process of determining the amount of salts in a mixture. [Gr., *als*, salt, + *metron*, to measure.]

hal'ism. The formation of a salt. [Gr., *als*, salt.]

halisteresis (hal'is-ter-e'sis). The loss in bones of from $\frac{1}{3}$ to $\frac{1}{2}$ of their lime salts, producing abnormalities such as osteomalacia. [Gr., *als*, salt, + *steresis*, privation.]

halitus (hal'it-us). Breath, exhalation, steam, vapor. **h. sanguinis.** The odor of the blood. **h. vitalis.** The vital spirit. [Lat.]

Haller's network. See *rete testis*.

Hall's solution. Strychnin acetate, 2.1 gm.; diluted acetic acid, 35 c.c.; alcohol, 250 c.c.; compound tincture of cardamom, 10 c.c.; water, sufficient to make 1,000 c.c.

hallucination (hal-lu-sin-a'shon). An erroneous mental or sensory perception without any external object actually existing to give rise to the perception. **psychotic h.** An h. that cannot be logically explained. [Lat., *alucinari*, to wander in mind.]

hallucinosis (hal-u-sin-o'sis). Having hallucinations. **alcoholic h.** A type of psychosis occurring in chronic alcoholic poisoning with marked auditory hallucinations.

hal'lux. The great toe. **h. rigidus.** Limitation of motion at the metatarsophalangeal joint of the great toe, due to repeated injury or disease of the joint. **h. valgus.** A deviation of the great toe outward with enlargement about the metatarsophalangeal joint. **h. varus.** Inward deviation of the great toe, an occasional congenital deformity in the civilized races, but common among savage people. [Lat.]

ha'lo. 1. See *areola*. 2. Of Pander, the appearance of concentric zones or circles in the fowl's blastoderm. **glaucomatous h.** The peculiar iridescent ring seen about a flame by a patient suffering from incipient glaucoma. [Gr., *alos*.]

halogen (hal'o-jen). One of a group of non-metallic elements so called from the fact that their saline combinations with the alkaline metals resemble in appearance and chemical structure ordinary sea salt. They are fluorin, chlorin, bromin, and iodine. [Gr., *als*, salt, + *gennan*, to engender.]

halogenium (hal-o-jen'e-um). Chlorin.

halogenized (hal-oj'en-ized). Combined with one of the halogen elements.

haloid (hal'oyd). Belonging to or derived from the halogens. [Gr., *als*, a salt, + *eidos*, appearance.]

halometer (hal-om'et-er). 1. An instrument for measuring the external form, angles, etc., of salts. 2. See *halymeter*. [Gr., *als*, salt, + *metrein*, to measure.]

halymeter (hal-im'et-er). Of Fuchs, an instrument consisting of a closed tube the lower portion of which is of a smaller diameter than the upper. The lower portion is graduated; finely pulverized salt of known weight is placed in the lower part, a weighed quantity of milk and a known quantity of salt are mixed and poured into the apparatus, and the amount of undissolved salt read off. As 100 parts of water dissolve 36 of salt, the amount undissolved by the milk will give the quantity of water. [Gr., *als*, salt, + *metron*, a measure.]

halys (hal'is). Of Graham, the acid-forming radicles. [Gr., *als*, salt, + *yle*, material.]

ham. The posterior aspect of the lower limb at the knee. **h'strings**. The prominent tendons of the muscles of the posterior aspect of the thigh. [Ang.-Sax., *haum*, haunch.]

hamamel'idin, **hamamel'in**. An extract or concentration made from the bark of *Hamamelis virginica*.

Hamame'lis. 1. The witch hazel; a genus of plants. 2. Of the U. S. Ph., 1890, the fresh leaves of *H. virginica*. **agua hamamelidis**. Witch hazel water; prepared by macerating the fresh young twigs and shoots of *H. virginica* with alcohol and water, and distilling. **H. virginiana**, **H. virginica**. A species indigenous to the United States. The bark is used as a vulnerary, astringent, and tonic, also as an application in hemorrhoids. **h. water**. See *agua hamamelidis*. **liquor hamamelidis**. A weakly alcoholic distillate from h. leaves [Br. Ph.]. [Gr., *amamelis*.]

Hammersten's test for bile pigments. This consists of heating a few drops of the urine to be tested with about 2 c.c.'s of the reagent, namely, a mixture of 1 volume of 25 per cent. nitric acid and 19 volumes of 25 per cent. hydrochloric acid, which has been standing for about one year and then mixed with about 4 times its volume of alcohol. If bile pigments are present, the mixture turns green or bluish green. [Olof Hammersten, Swedish physiologist, born 1841.]

hammer toe. A deformity resulting from the wearing of short shoes. Usually only one toe is affected. The toe is flexed

sharply at the first phalangeal joint, while the third phalanx may, or may not be, overextended.

hamstring. See under *ham*.

ham'ular. Hook-shaped. **h. process**. See under *process*. [Lat., *hamularis*, from *hamus*, hook.]

ham'ulus. A small hook or hook-shaped structure. **h. frontalis**, **h. frontalis ossis ethmoidalis**. The ala of the ethmoid bone. **h. lacrimalis**. A small hooklike process at the lower end of the crest of the lacrimal bone. **h. laminae spiralis**. A hook-shaped process at the upper end of the lamina spiralis of the cochlea, which forms a part of the boundary of the helicotrema. **h. of the cochlea**, **h. osseus cochleae**. See *h. laminae spiralis*. [Lat., dim. of *hamus*, hook.]

hand. The terminal part of the forelimb in quadrupeds, especially when prehensile. The carpus, metacarpus, and phalanges with the accompanying ligaments, tendons, nerves, muscles, connective tissue, fat, skin, and nails [B. N. A., *manus*]. [Teutonic, and Old Eng., *hand*, *hond*; pl. *handa* or *honda*.]

hang'nail. A splitting of the epidermis at the side of a finger nail.

Hanot's disease (han'ô). Hypertrophic cirrhosis of the liver, with chronic jaundice. [Victor Charles Hanot, Fr. physician, 1844-1896.]

hapalonychia (hap'al-o-nik'e-ah). A softened nail.

haphophobia (haf-e-fô'be-ah). A phobia of being touched. [Gr., *aphe*, touch, + *phobos*, fear.]

haplo-. A prefix from the Gr., *aploos*, single, simple.

haplo'pia (hap-lo'pe-ah). Single vision. [Gr., *aploos*, simple, + *ops*, eye.]

hap'tin. Any receptor capable of being cast off from a cell. [Gr., *aptein*, to seize.]

haptophil (hap'to-fil). The receptor having an affinity for the haptophore group. [Gr., *aptein*, to bind, + *philein*, to love.]

haptophore (hap'to-fôr). The fixed, non-toxic elements of a toxin, by which it unites with an antitoxin and becomes neutralized. **h. group**. The group of atoms of a complement, toxin, agglutinin, opsonin, or precipitin, which anchors or binds it to amboceptors, body cells, bacteria or proteids in solution. [Gr., *aptein*, to seize, + *phorein*, to carry.]

haptophoric, **haptophorous** (hap-to-for'ik, hap-to'for-us). Pertaining to haptophores. **h. group**. The group of atoms in a toxin precipitin, amboceptor, etc., that combines with the receptor. [Gr., *aptein*, to touch, + *phorein*, to bring.]

haptot'ica (hap-to'tik-ah). Of Zenneck, the science of the phenomena of touch. [Gr., *apsis*, touch.]

hare'lip. A fissure or cleft in the lip, occurring normally in the hare and various fishes, and as a congenital deformity in children, due in the latter case to an imperfect local development of the tissues. It usually occurs in the upper lip, and is generally dependent on a defective or delayed union of the superior maxilla,

or a deficient development of the premaxillary bones. **double h.** H. with two fissures. **median h.** A form in which the fissure is in the median line. **simple h.** A form in which there is a single fissure without complication. **single h.** H. with a single fissure.

harlequin fetus. See *ichthyosis congenita*, under *ichthyosis*.

harmon'ic. From harmony, an agreement of sounds. Pertaining to harmony.

harpoon'. An instrument to be thrust into a part for the purpose of removing a bit of tissue for microscopical examination. [Gr., *arpe*, a hook.]

harts'horn. See *cornu cervi*; also *aqua ammoniac*, under *ammonia*. **spirit of h.** A misnomer for ammonia water.

harvest bug. Another name for *Leptus autumnalis*, the larva of a species of *Trombidium* that bores more or less completely into the skin, producing inflammatory wheals or papules with violent itching. It is oval in shape, brick-red in color, $\frac{1}{3}$ to $\frac{1}{2}$ mm. in length, and just visible to the naked eye.

haschisch (hash-ësh). Syns.: *hasheesh*, *hashish*, *hasash*. 1. *Cannabis indica*, of the U. S. Ph. 2. An alcoholic extract of *Cannabis indica*. 3. A mixture used in Persia, of which hemp is probably an ingredient of minor importance. See also *ganja* and *bhanga*. [Ar., *herb*.]

Hassall's corpuscle. A body, having the appearance of concentric striation, found in the medullary part of the thymus. It may be simple or it may be composed of an epitheloid envelope and a central mass of one or more granular cells, [Arthur Hill Hassall, Eng. physician and chemist, 1817-1894.]

Hau'kin's theory. This theory attributes the production of the bactericidal substances in the blood to the eosinophils.

haupt-agglutinin (hawpt-ag-glū'tin-in). Syn.: *chief agglutinin*, *major agglutinin*. The specific immune agglutinin present in an agglutinative serum, which acts upon the organism used for producing the serum and in a higher dilution than the metagglutinin in the same serum. [Ger., *haupt*, chief, + *agglutinin*.]

haustra coli. See *cellulae coli*, under *cellula*.

haversian (ha-ver'se-an). Relating to the vascular canals in bone tissue. [Clopton Havers, English anatomist, 1650-1702.]

hay-fever. Syn.: *Bostock's catarrh*. A recurring nasal catarrh with conjunctivitis, probably due to toxic action of various pollens.

Haygarth's nodes. Swellings at the joints in arthritis deformans.

ha'zelin. An English proprietary preparation of witch hazel (*Hamamelis virginica*.)

He. Chemical symbol for the element helium.

head. 1. Of an animal, the upper or anterior portion, consisting of the cranium and the face. 2. A similar extremity of any organ, part, or thing; of a muscle, the portion springing immediately from

the point of origin; of a bone, a knob-like extremity. [B. N. A., *caput*.] **articular h.** A h. of a bone by which it is articulated with another bone. **swell h.** See *actinomycosis*. [Ang.-Sax., *heafod*.]

headache (hed'äk). Pain in the head.

frontal h. H. localized in the forehead.

neuralgic h. Pain in the course of a nerve of the scalp, generally the superior branch of the fifth nerve. It is often associated with other neuralgias.

occipital h. H. localized in the occipital portion of the head. **ocular h.** A sympathetic h. caused by some ocular defect.

rheumatic h. Rheumatic pain in the muscles of the head. **sick h.** See *migraine*.

head-louse. See *Pediculus capitis*.

head (hêl). To make whole or sound in bodily condition. [Old Eng., *hælan*; old Fris., *hêla*; old Sax., *hêlian*.]

healing (hê'ing). Making or becoming sound; as a n., the process of cure.

h. by adhesive inflammation, h. by first intention. See *first intention*, under *intention*. **h. by granulation.** See *granulation*. **h. by immediate union, h. by primary adhesion.** See *first intention*, under *intention*. **h. by secondary adhesion, h. by second intention.** See *second intention*, under *intention*.

hearing (hê'ing). See *audition*. **colored h., color h.** A condition in which a sensation as of color is perceived when a certain sound strikes the ear. **indirect h.** H. in which sound waves reach the ear only after one or more reflections. **mixed h.** H. in which the sound waves reach the ear both with and without reflection. **monaural h.** See *unaural h.* **morbid h., perverse h., perverted h.** See *paracusis*. **unaural h.** H. in which the sound waves are recognized by one ear only.

heart (hart). 1. The organ which propels the blood through the vascular system of all vertebrates and of the higher invertebrates. In its simplest form it consists of a specialized pulsating portion of the vascular system, and in its most complex form of an organ with four distinct chambers, each provided with a set of valves. 2. The central (figuratively, the essential) part of anything. **fatty h.** 1. A condition (also called fatty infiltration of the h.) in which the subpericardial and intermuscular connective tissue is converted into fat. 2. Fatty degeneration of the muscular tissue of the h. **fetal h.** The h. as it exists in the fetus. **h. block.** The condition in which conduction between auricles and ventricles is interfered with (partial block) or interrupted altogether (complete block), with the result that the normal sequence of auricular and ventricular beat is disturbed. It is usually attributed to an injury to or lesion of the auriculoventricular bundle and supposed to be the condition present in Stokes-Adam's disease. **h.-burn.** See *cardialgia*. **h.-shaped.** See *cordate*. **irritable h.** A functional dis-

- order of the h. from muscular exhaustion. It is especially common among soldiers; and with them may be attributed to forced marches, fever, and camp diarrhea. **left h.** The left cavities of the h. **pulmonary h., right h.** The right cavities of the h. **smoker's h., tobacco h.** A condition of the h. characterized by very irritable and forcible action, due to the excessive use of tobacco. Also seen as result of excessive use of narcotics and in various neurotic conditions. [Ang.-Sax., *heorte*.]
- heat** (hēt). 1. A form of energy due probably to the vibratory movements of the molecules within the body. This form of energy stimulates the heart nerves and gives a sensation of heat or warmth. 2. The rut of animals; the period of sexual excitement. **animal h.** H. developed by the presence of a living organism. **atomic h.** Theoretically, the quantity of h. required to raise the temperature of an atom 1° C. The atomic h. of any element compared with that of hydrogen is the product of its specific gravity by its atomic weight. **h. of combination.** H. produced by chemical combination. **h. of combustion.** H. produced by chemical combination sufficiently energetic to be associated with combustion. **h. puncture.** Puncture of the brain by a probe, particularly in the region of the corpus striatum, which results in a rise of body temperature due to increased production of heat. **h. regulation.** See under *separate heading*. **h. rigor.** See *chill and rigidity*. **h. stroke.** See *insolation*. **molecular h.** H. attributed to the movement or friction of different spherical particles or molecules upon each other. This theory was first presented by Democritus, in opposition to the idea that h. was an original element, but in the last century was elaborated by John Dalton and confirmed by Rumford and Davy, and is now generally accepted. **radiant h., radiated h.** H. emitted by radiation from a warm body (as distinguished from h. transmitted by conduction or convection). **sensible h.** H. which can be appreciated by the senses or the thermometer. **solar h.** The heat of the sun. **specific h.** Syn.: *calorific capacity, thermal capacity*. The quantity of h. consumed in raising the temperature of a substance 1° C., the amount of h. required to raise the same weight of water 1° C. being assumed as unity. **vital h.** See *animal h.* [Ang.-Sax., *haetu*, Icel., *hita*.]
- Heaton's operation.** The injection of irritating and astringent fluids over the crural or inguinal canal and the neck of the sac for the radical cure of hernia. [George Heaton, Boston surgeon, 1808-1879.]
- heat regulation.** The sum of the processes in the animal body which serve to maintain a constant body temperature by controlling either the heat produced or the heat dissipated. **chemical h. r.** The regulation by means of which a fall in the outside temperature causes reflexly
- an increase in the oxidations in the body, especially in the muscles. **physical h. r.** The regulation controlling the heat loss of the body by variations in the physical processes of evaporation of sweat and heat radiation from the skin.
- heaving** (he'ving). Accompanied by pronounced swelling movements of the chest (said of the breathing); as a n., the occurrence of such movements; colloquially, vomiting.
- heavy** (hev'e). Possessed of notable weight as compared with other bodies. [Ang.-Sax., *hefig*, *häfig*.]
- hebe-**. A prefix from the Gr., *ebe*, youth, puberty.
- hebephrenia** (heb'e-fre'ne-ah). Hecker's term for a psychosis, later merged by Kraepelin into a group called by him dementia precox. [Gr., *ebe*, puberty, + *phren*, the mind.]
- Heberden's rheumatism.** Rheumatism of the small joints with nodosities; hypertrophic arthritis. [William Heberden, Eng. physician, 1710-1801.]
- hebetude** (heb'et-üd). Dullness or impairment of the mental faculties. It may be either congenital or the result of disease. [Lat., *hebetare*, to make blunt.]
- heboidophrenia** (he-boy-do-fren'e-ah). A simple form of dementia precox. [Gr., *ebe*, puberty, + *idos*, form, + *phren*, mind.]
- hebotomy** (he-bos'te-o'tom-e). See *hebotomy*. [Gr., *ebe*, pubes, + *osteon*, bone, + *tome*, a cutting.]
- hebotomy** (he-bo'tom-e). Same as *pubiotomy*. [Gr., *ebe*, pubes, + *tome*, a cutting.]
- hecatomeric** (hek'tat-o-mer'ik). Denoting neurons which bifurcate to each side of the spinal cord.
- hec'tic.** Pertaining to or affected with h. fever; as a n., h. fever. The manifestations of h. fever are flushed face, bright eyes, rapid respiration and pulse, most frequently seen in tuberculosis and chronic suppurative conditions. [Gr., *ektikos*, from *exis*, a habit of body.]
- hecto-**. A prefix from the contracted form of Gr., *ekaton*, hundred.
- hectogram** (hek'to-gram). One hundred grams.
- hectoliter** (hek'to-le-ter). One hundred liters.
- hectometer** (hek'to-me-ter). One hundred meters.
- Hedeoma** (hed-e-o'mah). 1. American pennyroyal. 2. Of the U. S. Ph., the herb of *H. pulegioides*. **H. pulegioides.** An annual herb growing throughout Canada and the eastern part of the United States. **oil of h., oleum hedeomae.** Oil of pennyroyal [U. S. Ph.]. [Gr., *edys*, sweet, + *osme*, an odor.]
- hed'onal.** Methyl-propyl-carbinol urethane, (CH₃.CH₂.CH₂.CH(CH₃)O.CO.NH₂), a derivative of urethane, differing from the official ethyl carbamate in that the radicle ethyl has been replaced by that of methyl-propyl-carbinol. It appears to be a more active hypnotic than ethyl carbamate.

- hedonic** (he-don'ic). Relating to pleasure seeking. [Gr., *edone*, delight.]
- hedonism** (he'do-nizm). Marked pleasure seeking. [Gr., *edone*, delight.]
- hedratresia** (hed-rat-re'se-ah). Imperforation of the anus.
- hedrocele** (hed'ro-sel). Hernia or prolapse of the intestine through the anus. [Gr., *edra*, the fundament, + *kele*, a tumor.]
- heel**. The posterior angular projection of the foot. [B. N. A., *calx*.] [Ang.-Sax., *huela*.]
- Hegar's operation**. Oöphorectomy for restraining the growth of uterine fibroids. [Alfred Hegar, German gynecologist, living.]
- hegemony** (heg'em-on-e). The condition of being chief (said of functions). [Gr., *egemon*, a leader.]
- heg'onon**. A proprietary preparation, silver nitrate ammonia albumose, containing approximately 7 per cent. of organically combined silver. It is used in the treatment of gonorrhoea.
- Heim and Krey'sig's sign**. Systolic depression of the intercostal spaces at the apex of the heart, observed in cardiac symphysis.
- Hei'ne-Me'din's disease**. A name proposed for epidemic poliomyelitis, but not generally accepted.
- helcoid** (hel'koyd). Ulcerous. [Gr., *elkos*, an ulcer, + *eidos*, resemblance.]
- helcology** (hel-ko'l'o-je). The scientific study of ulcers and ulceration. [Gr., *elkos*, an ulcer, + *logos*, understanding.]
- helcoma** (hel-ko'mah). An ulcer. [Gr., *elkoma*, ulcer.]
- helcoplasty** (hel'ko-plas-te). The transplantation of skin upon an ulcer. [Gr., *elkos*, an ulcer, + *plassein*, to mold.]
- helcosis** (hel-ko'sis). Ulceration.
- helcosol** (hel'ko-sol). Bismuth pyrogallate.
- Helcoso'ma tro'picum**. The name of the microorganism found by Wright in the endothelial cells in Delhi boil and greatly resembling *Leishmania tropica*.
- helcostaphyloma** (hel'ko-staf-il-o'mah). Ulcerative staphyloma.
- hel'enen**. A liquid, C₁₀H₂₀, obtained by distilling crude helenin with phosphoric acid.
- hel'enin**. A principle obtained from the root of *Inula helenium*. What was formerly known as h., crude h., C₂₁H₃₀O₁₁, is now known to consist of alantanic anhydrid, alantol, alantcamphor, and true h. The latter is a yellow, crystalline, bitter, and odorless body, C₆H₈O. It has powerful antiseptic and germicidal properties and some action as a stomachic.
- Hele'nium**. American sneezewort. Various species of *H.* are used in domestic practice. **H. autumnale**. False sunflower; found in North America. The leaves, flowers, and fruit are used as a substitute for arnica. [Gr., *elenion*.]
- Helian'themum**. 1. Rock rose; a genus of cistineous plants. 2. Of the U. S. Ph., 1870, the herb of *H. canadense*.
- H. canadense**. Frostwort; used as a diuretic. [Gr., *elios*, the sun, + *anthos*, a flower.]
- helianthin** (hel-e-an'thin). Methyl orange; used as an indicator in titration.
- Helian'thus**. A genus of composite plants.
- H. annuus**. The common sunflower. The plant has been cultivated as a supposed protective against marsh miasm. [Gr., *elios*, the sun, + *anthos*, a flower.]
- H. orgyalis**. The Kansas sunflower.
- helicin** (hel'is-in). Salicylaldehyd glucosid; produced by the oxidation of salicin with nitric acid.
- helicis** (hel'is-is). See *table of muscles*, under *muscle*.
- helicoid** (hel'ik-oyd). Resembling a helix or a spiral. [Gr., *elix*, coil, + *eidos*, resemblance.]
- helicotrema** (hel-ik-o-tre'mah). A canal or aperture at the apex of the cochlea by which the scala tympani communicates with the scala vestibuli. [Gr., *elix*, spiral, + *trema*, a hole.]
- helio-**. Combining form of the Gr., *elios*, sun.
- heliophobia** (he'lle-o-fo'be-ah). Phobia of sunlight.
- heliosis** (he-le-o'sis). 1. A sun bath. 2. Insolation. [Gr., *eliosis*.]
- heliostat** (he'le-o-stat). An instrument provided with clockwork by which sunbeams may be steadily directed to one spot during the whole day. [Gr., *elios*, the sun, + *statos*, standing.]
- heliotherapy** (he'lle-o-ther'ap-e). The therapeutic use of the light and heat of the sun. [Gr., *elios*, the sun, + *therapeia*, medical treatment.]
- heliotropin** (he-le-o'tro-pin). 1. A crystalline substance, (C₈H₆O₃), obtained from *Heliotropium peruvianum* and *Heliotropium grandiflorum* and also synthetically. 2. A poisonous alkaloid obtained from *Heliotropium europaeum*.
- helium** (he'le-um). A chemically inactive elementary gas, found in very small quantities in the atmosphere. Atomic weight 4.0. Chemical symbol, He. [Gr., *elios*, the sun.]
- he'lix**. The external border or rim of the external ear. [Gr., *elix*, spiral.]
- hellebore** (hel'le-bör). See *Helleborus*. List of poisons and their antidotes, see in appendix, page 940. **American h. Veratrum viride**. See also *Helleborus viridis*, under *Helleborus*. **black h. Helleborus niger**. Black h. is not related pharmacologically to the green or the white h., both of which belong to the veratrin group, while black h., containing helleborin, belongs to the digitalis group. **false h.** The genus *Veratrum*. **green h.** See *Veratrum viride*. **swamp h. Veratrum viride**. **white h. Veratrum album**.
- helleborein** (hel-le-bo're-in). A crystalline glucosid, (C₃₇H₅₆O₈), obtained from *Helleborus niger*. Its action on the heart resembles that of digitalis. [Gr., *elleboros*, hellebore.]
- helleborein** (hel-le-bor-es'in). A decomposition product of helleborin. [Lat., *helleborus*, hellebore, + *resina*, resin.]
- helleborin** (hel-leb'o-rin). A glucosid, C₃₀H₄₈O₁₀.

- $H_2O_2 + 4H_2O$, obtained from *Helleborus viridis*; very poisonous.
- helleborretin** (hel-le-bor-re'tin). A decomposition product, $C_{14}H_{20}O_8$, of helleborin. [Gr., *elleboros*, hellebore, + *retine*, resin.]
- Helleborus** (hel-leb'or-us). A genus of ranunculaceous plants. **H. albus**. *Veratrum album*. **H. viridis**. A species of *H.* found in central and western Europe. The root is used like digitalis. [Gr., *elleboros*.]
- Heller's albumin test**. A test made by introducing concentrated nitric acid into urine, and thus producing a white ring at the point of contact if the urine contains albumin. **H's blood test**. See *H's test for hematuria*. **H's nitric acid test**, see in *appendix*, page 893. **H's sugar test**. A test by which the presence of glucose or sugar in the urine is shown by the yellow or red-brown color produced by heating with caustic potash solution. **H's test for hematuria**. A test in which a portion of urine is made decidedly alkaline with caustic potash and boiled in a reagent glass. The phosphates are precipitated as very delicate floccules that look like mucus, and are colored brown or red-yellow by the blood pigment. [*Arnold Ludwig Gotthelf Heller*, Ger. pathologist, 1840-1913.]
- hel'minth**. A worm, especially an intestinal worm. [Gr., *elmis*, worm.]
- helminthagogue** (hel-min'tha-gog). See *antihelminthic*. [Gr., *elmis*, *elmin-*, worm, + *agoge*, a leading.]
- helminthiasis** (hel-min-thi'as-is). 1. The state of being infested with intestinal worms. 2. The condition of the system which favors the development of entoparasitic worms. **h. Wucheri**. The symptoms produced by *Bilharzia haematobia* in the organism; first described by Wucherer. [Gr., *elmis*, worm.]
- helminth'ic**. See *antihelminthic*.
- helminthoid** (hel-min'tho'yd). Worm-shaped, vermiform. [Gr., *elmis*, worm, + *eidos*, resemblance.]
- helminthology** (hel-min-thol'o-je). The science of intestinal worms and their effects. [Gr., *elmis*, worm, + *logos*, understanding.]
- helmintho'ma elas'tica**. The varicose veins in the groin and axilla present in filariasis.
- helmitol** (hel'mit-ol). A name applied to hexamethylenamin methylene citrate.
- Heloderma** (he-lo-der'mah). A genus of lizards. **H. horridum**. The Gila monster.
- Helo'nias**. A genus of liliaceous plants. **H. bullata**. A species found from New Jersey to Virginia. A decoction of the root is used in constipation. [Gr., *elos*, a marsh.]
- helvel'ic acid**. An acid, $C_{12}H_{20}O_7$, obtained from fresh belladonna.
- hemabrometer** (hem-ah-bar-om'et-er). An apparatus for determining the specific gravity of blood. [Gr., *aima*, blood, + *barys*, heavy, + *metron*, a measure.]
- hemaboloids** (hem-ab'o-loidz). A propri-
- etary liquid preparation containing iron in combination with proteins.
- hemachrome** (hem'ak-róm). See *hematin*. [Gr., *aima*, blood, + *chroma*, color.]
- hemacytometer** (hem-ah-si-tom'et-er). See *hematocytometer*.
- hemadrometer** (hem-ah-drom'et-er). A U-shaped tube, devised by Volkmann for measuring the rapidity of the circulation. [Gr., *aima*, blood, + *dromos*, a course, + *metron*, a measure.]
- hemadromograph** (hem-ah-dro'mo-graf). An instrument devised by Chauveau and perfected by Lortet for determining the velocity and fluctuations in velocity of the blood current. [Gr., *aima*, blood, + *dromos*, a course, + *graphein*, to write.]
- hemadyna'mics**. The dynamics of the circulation of the blood. [Gr., *aima*, blood, + *dynamis*, power.]
- hemadynamometer** (hem'ah-di-nam-om'et-er). An instrument for measuring the force of the blood current. [Gr., *aima*, blood, + *dynamis*, power, + *metron*, a measure.]
- hemagglutination** (hem'ag-glu-tin-a'-shun). The agglutination of red blood corpuscles.
- hemagglutinin** (hem-ag-glu'tin-in). An agglutinin having the power to clump red blood corpuscles. [Gr., *aima*, blood, + *agglutinm*.]
- hem'agogue**. 1. Promoting a discharge of blood. 2. An agent which promotes a discharge of blood, the menstrual flow. [Gr., *aima*, blood, + *agoge*, a carrying away.]
- he'mal**. Of, or pertaining to, the blood. [Gr., *aima*, blood.]
- hemameba** (hem-am-e'bah). A synonym for *Plasmodium malariae*. [Gr., *aima*, blood, + *ameba*.]
- hemangio-endothelioma** (hem-an'je-o-endo-the-le-o'mah). A tumor consisting of whorls of endothelial cells originating from a blood vessel and separated by a cellular stroma. [Gr., *aima*, blood, + *aggeion*, a vessel, + *endothelioma*.]
- hemangioma** (hem'an-je-o'mah). An angioma composed of blood vessels, as distinguished from the lymphatics of a lymphangioma. [Gr., *aima*, blood, + *aggeion*, a vessel.]
- hemangiosarcoma** (hem-an''je-o-sar-ko'mah). A vascular sarcoma. [Gr., *aima*, blood, + *angiosarcoma*.]
- hemanthin** (he-man'thin). An alkaloid resembling atropin, obtained from *Haemanthus toxicarius*.
- hemaphein** (hem-af-e'in). A brown coloring matter discovered by Simon in the blood, especially in the alcoholic extract; probably a decomposition product of hematin. [Gr., *aima*, blood, + *phaios*, dusky.]
- hemapheism** (hem-af-e'izm). A condition characterized by a reddish amber color of the urine, associated with certain hepatic disorders in which the red blood corpuscles are destroyed and the bile is altered in composition. [Gr., *aima*, blood, + *phaios*, dusky.]
- hemapoietic** (hem''ah-poy-et'ik). Pertain-

- ing to the production of blood corpuscles, especially the red corpuscles. Hemapoietic tissue occurs in the bone marrow. [Gr., *aima*, blood, + *poiein*, to make.]
- hemarthrosis** (hem-ar-thro'sis). An effusion of blood into a joint. [Gr., *aima*, blood, + *arthron*, joint.]
- hemase** (he'mās). The name given to an enzyme of the blood.
- hemasthenosis** (hem-as-then-o'sis). 1. Deterioration of the blood. 2. An interruption to the circulation of the blood. [Gr., *aima*, blood, + *astheneia*, weakness.]
- hematalloscopy** (hem''at-al-los'ko-pe). Of Taddei, examination of the blood for medicolegal purposes. [Gr., *aima*, blood, + *allos*, other, + *skopein*, to examine.]
- hematopostasis** (hem''at-ap-os'tas-is). An irregular or unequal distribution of the blood; a congestion or effusion of blood. [Gr., *aima*, blood, + *apostasis*, a standing away.]
- hematemesis** (hem-at-em'es-is). Lit., a vomiting of blood. Hemorrhage from the stomach. **vicarious h.** H. occurring in place of a hemorrhagic discharge from another part (as in amenorrhea). [Gr., *aima*, blood, + *emein*, to vomit.]
- hemat'ic**. Pertaining to, consisting of, or present in the blood; of medicines, acting upon or through the blood. [Lat., *hematicus*, from Gr., *aima*, blood.]
- hematidrosis** (hem-a-tid-ro'sis). Syn.: *bloody sweat*. The excretion of blood or blood pigment through the sweat glands. [Gr., *aima*, blood, + *idrosis*, sweating.]
- hematimeter** (hem-at-im'et-er). Of Hayem and Nacet, a glass slide with a cell of known depth, used with an ocular micrometer ruled in squares, for determining the number of blood corpuscles in a cubic millimeter of blood. [Gr., *aima*, blood, + *metron*, a measure.]
- hematin** (hem'at-in). Syn.: *oxyhematin*. 1. A dark brown amorphous substance (formula, probably, $C_{34}H_{34}N_4FeO_5$) obtained by treating a solution of hemoglobin with acetic acid. Found in the feces after hemorrhage of the intestinal tract. Compounded with the protein of the blood, it constitutes the oxyhemoglobin, and with chlorin, iodine, and bromine it forms hemin crystals. Upon oxidation it yields the imide of hematinic acid. 2. Of Chevreul, see *hematoxylin*. **acid h.** The product formed by dissolving h. in an acid. **actinic h.** Of MacMunn, the intrinsic coloring matter of the tissues of the *Actinae*. **alkaline h.** A solution of h. in an alkali. **h. bromid, h. chlorid, h. hydriodid, h. hydrobromid, h. hydrochlorate, h. hydrochlorid, h. iodid. See *hemin*. **iron-free h.** See *hematoporphyrin*. **reduced h.** See *hemochromogen*. **uroh.** A bright red, non-crystallizable organic compound, highly soluble in chloroform, alcohol, ether, and alkalis; insoluble in acids. It is obtained from fresh urine. [Gr., *aima*, blood.]**
- hematinic** (hem-at-in'ik). 1. Pertaining to hematin. 2. Increasing the coloring matter of the blood (formerly said of various agents).
- hematinogen** (hem-at-in'o-jen). A pigment of the blood containing iron, isolated by Freund.
- hematinometer** (hem''at-in-om'et-er). An apparatus, consisting of a vessel with parallel glass faces 1 cm. apart, for estimating the amount of the hemoglobin in the blood by comparing a specimen with a test solution of known strength contained in a vessel (the h.). [*Hematin*, + Gr., *metron*, a measure.]
- hematuria** (hem''at-in-u're-ah). That diseased condition in which there is a direct passage of coloring matters from the blood into the urine. **intermittent h., paroxysmal h.** H. occurring at intervals. It is sometimes confounded with hemorrhagic malarial fever. [*Hematin*, + Gr., *ouron*, urine.]
- hemat'os, hemat'mus.** Any gas contained in the blood, especially oxygen. [Gr., *aima*, blood, + *atmos*, vapor.]
- hemato-**. A prefix from the Gr., *aima*, blood, or *aimatoein*, to make blood; used in compound words to signify having to do with blood.
- hematobium** (hem-at-o'be-um). A living organism in the blood. See *Filaria*. [Gr., *aima*, blood, + *bios*, life.]
- hematoblast** (hem'at-o-blast). An immature nucleated red blood corpuscle; one of the minute protoplasmic masses in the marrow of bones, in adenoid tissue, and in hemopoietic, vasofactive, or hematoblastic tissue in any part of the body, which are faintly colored with hemoglobin, and are destined to become red blood corpuscles. [Gr., *aima*, blood, + *blastos*, sprout.]
- hematocausis** (hem-at-o-kaw'sis). The oxidation of the blood in the organism. [Gr., *aima*, blood, + *kaiain*, to burn.]
- hematocele** (hem'at-o-sēl). An effusion of blood into a cavity of the body. **pelvic h.** Syn.: *recto-uterine h.* A collection of blood in the cavity of the true pelvis, generally in the space between the uterus and the rectum. **scrotal h.** An extravasation of blood into the tunica vaginalis. Effusion of blood into the tissues is a hematoma. [Gr., *aima*, blood, + *kele*, a tumor.]
- hematocephalon** (hem''at-o-sef'al-on). A hemorrhage within the brain; cerebral apoplexy. [Gr., *aima*, blood, + *kephale*, head.]
- hematocephalus** (hem''at-o-sef'al-us). A fetal monster in which a cephalic hematocele has produced a marked deformity. [Gr., *aima*, blood, + *kephale*, the head.]
- hematochezia** (hem''at-o-ke'ze-ah). Passage of bloody stools.
- hematochlorin** (hem-at-o-klo'rin). Of H. Meckel, a certain green coloring matter seen on the free borders of the placenta in some of the lower animals. [Gr., *aima*, blood, + *chloros*, green.]
- hem'atochromat'osis.** A condition showing blood-stained tissues.
- hematochromogen.** See *hemochromogen*.
- hematochyluria** (hem''at-o-ki-lu're-ah).

- Bloody chylous urine found in *Filaria* infections.
- hematocolpos** (hem''at-o-kol''pos). A collection of blood in the vagina. [Gr., *aima*, blood, + *kolpos*, the vagina.]
- hematocrit** (hem''at-o-krit). Of Hedin, an instrument for measuring, by centrifugalization, the volume of blood corpuscles present in a given sample of blood. [Gr., *aima*, blood, + *krites*, a judge.]
- hematocrystalin** (hem''at-o-kris''tal-in). See *hemoglobin*. [Gr., *aima*, blood, + *krystallos*, crystal.]
- hematocyanin** (hem''at-o-si''an-in). See *hemocyanin*.
- hematocyst** (hem''at-o-sist). A cyst containing blood. [Gr., *aima*, blood, + *kystis*, a bladder.]
- hematocytolysis** (hem''at-o-si-to-lis''is). Breaking up or disintegration of the red blood corpuscles. [Gr., *aima*, blood, + *kytos*, a cell, + *lysis*, solution.]
- hematocytometer** (hem''at-o-si-tom''et-er). An instrument for measuring the number of corpuscles present in the blood. [Gr., *aima*, blood, + *kytos*, a cell, + *metron*, a measure.]
- hematogen** (he-ma''to-jen). 1. Of Bunge, a yellow amorphous substance, containing iron, sulphur, and phosphorus, obtained from the yolk of eggs. 2. Of Marfori, a powder made by adding iron citrate and acetic acid to an alkaline solution of albumin. 3. Of Hommel, a proprietary preparation made from defibrinated blood.
- hematogenesis** (hem''at-o-jen''es-is). The development of the blood corpuscles, especially the red blood corpuscles. [Gr., *aima*, blood, + *genesis*, a production.]
- hematogenetics** (hem''at-o-jen-et''iks). Of Liebig, substances containing albumin; so called because they contribute to hematogenesis. [Gr., *aima*, blood, + *genetes*, a parent.]
- hematogenic, hematogenous** (hem-ä-to-jen''ik, hem-ä-to-jen''us). 1. Produced in or derived from the blood. 2. Producing blood.
- hematoidin** (hem-at-oyd''in). An amorphous substance (sometimes occurring in rhombic crystals) found in old blood clots, and identical in composition with bilirubin, perhaps with the lutein of Thudichum and, according to Jaffe, with bilifulvin.
- he''matokrit**. See *hematocrit*.
- hematology** (hem-at-ol''o-je). The chemistry, physiology, etc., of the blood.
- pathological h.** The pathology of the blood. [Gr., *aima*, blood, + *logos*, understanding.]
- hematolymphangioma** (hem''at-o-lim''fan-je-o''mah). A tumor arising from both lymph and blood vessels. [Gr., *aima*, blood, + *lymphangioma*.]
- hematolysis** (hem-at-ol''is-is). 1. Decomposition of the blood or destruction of its corpuscular elements. 2. Undue fluidity or non-coagulability of the blood. [Gr., *aima*, blood, + *lysis*, dissolution.]
- hematolytic** (hem-at-o-lit''ik). Pertaining to or producing hematolysis.
- hematoma** (hem-at-o''mah). A tumor consisting of blood. **h. auris**. "Insane ear"; a h. caused by contusion in the upper part of the concha auriculæ, between the cartilage and its perichondrium. [Gr., *aima*, blood, + *oma*, tumor.]
- hematometer**. See *hemadynamometer*.
- hematometra** (hem''at-o-me''trah). A collection of blood or of menstrual fluid in the uterus. [Gr., *aima*, blood, + *metra*, uterus.]
- hematometry** (hem-at-om''et-re). The art or process of measuring blood. [Gr., *aima*, blood, + *metron*, a measure.]
- Hematomonas** (hem-at-om''on-as). Synonym for *Trypanosoma*. [Gr., *aima*, blood, + *monas*, a unit.]
- hematomyces** (hem-at-om''i-ses). See *medullary sarcoma*, under *sarcoma*. [Gr., *aima*, blood, + *mykes*, a fungus.]
- hematomyelia** (hem''at-o-mi-e''le-ah). Syn.: *spinal apoplexy*. Hemorrhage into the substance of the spinal cord. [Gr., *aima*, blood, + *myelos*, marrow.]
- hematomyelitis** (hem''at-o-mi-el-í''tis). Myelitis causing or caused by hemorrhage into the spinal cord. [Gr., *aima*, blood, + *myelitis*.]
- hematomegaly** (hem''at-o-mi''el-o-pōr). Cavity formation in the spinal cord, following degeneration. [Gr., *aima*, blood, + *myelos*, marrow, + *poros*, opening.]
- hematoncus** (hem-at-on''kus). A name for several varieties of angioma (e. g., nevi, varicose tumors, etc.)
- hematopericardium** (hem''at-o-per-ik-ar''de-um). An effusion of blood into the pericardium, usually from rupture or perforation of the walls of the heart. [Gr., *aima*, blood, + *pericardium*.]
- hematophagous** (hem-at-af''ag-us). Blood-eating, such as that of mosquitoes who suck the blood. [Gr., *aima*, blood, + *phagein*, to eat.]
- hematophobia** (hem''at-o-fo''be-ah). Dread of the sight of blood. [Gr., *aima*, blood, + *phobos*, fear.]
- hematophorous** (hem-at-of''or-us). Of a vessel containing blood.
- hematophyte** (hem''at-o-fit). Any microscopic plant organism or species existing in the blood. [Gr., *aima*, blood, + *phyton*, a plant.]
- hematoplanesis** (hem-at-o-plan''e-sis). A deviation of the blood from its normal course. [Gr., *aima*, blood, + *planesis*, a wandering.]
- hematoplastic** (hem''at-o-plas''tik). Forming blood (said of certain cells in the embryo). [Gr., *aima*, blood, + *plassein*, to mold.]
- hematopoiesis** (hem''atopoi''e-sis). The development of the blood corpuscles. [Gr., *aima*, blood, + *poiein*, to make.]
- hematopoietic** (hem''at-o-poi-et''ik). See *hemapoietic*.
- h. glands**. See under *gland*.
- hematoporphyrin** (hem''at-o-por''fi-rin). A pigment which may be formed from oxyhemoglobin and hematin by heating with hydrochloric acid. It contains no iron. It is present in the urine, especially after the use of sulphonal. It has a very

- characteristic absorption spectrum. [Gr., *aima*, blood, + *porphyros*, purple.]
- hematorachis** (hem-á-tor-á-kis). Hemorrhage into the vertebral canal. [Gr., *aima*, blood, + *rachis*, spine.]
- hematorrhaphesis** (hem''at-or-rof-e'sis). Absorption of blood. [Gr., *aima*, blood, + *rophesis*, a supping up.]
- hematorrhosis** (hem-at-or-ro'sis). Separation of the blood serum as in cholera. [Gr., *aima*, blood, + *orros*, serum.]
- hematosalpinx** (hem''at-o-sal'pinx). A collection of blood in the fallopian tube. [Gr., *aima*, blood, + *salpinx*, tube.]
- hematoscope** (hem''at-o-sköp). An instrument for observing the spectroscopic properties of the blood. [Gr., *aima*, blood, + *skopein*, to examine.]
- hematotomy** (hem-at-os'kop-e). Examination of the blood with the hematoscope.
- hematosepsis** (hem''at-o-sep'sis). See *septicemia*.
- hemat'osin**. A term commonly used for hematin; but, according to Tabourin, h. is an independent body. It is said to contain 10 per cent. of iron, and has been proposed as a hematopoietic remedy.
- hematosis** (hem-at-o'sis). 1. See *arterialization*. 2. See *sanguinification*. 3. See *hematogenesis*. [Gr., *aima*, blood.]
- hematospectroscope** (hem''at-o-spek'tro-sköp). An instrument for ascertaining the spectroscopic bands of hemaglobin. [Gr., *aima*, blood, + Lat., *spectrum*, image, + Gr., *skopein*, to examine.]
- hematostenosis** (hem''at-o-sten-o'sis). Stricture or narrowing of a blood vessel. [Gr., *aima*, blood, + *stenosis*, narrowing.]
- hematother'mal**. Warm blooded.
- hematothorax** (hem''at-o-tho'raks). Hemorrhage into the pleural cavity. [Gr., *aima*, blood, + *thorax*.]
- hematotic** (hem-at-ot'ik). Pertaining to hematosis and hemogenesis. [Lat., *hematoticus*.]
- hematotoxic** (hem''at-o-tox'ik). Causing, or depending on poisoning of the blood. [Gr., *aima*, blood, + *toxikon*, poison.]
- hematotoxic** (hem-ah-tox'ik). See *hematotoxic*.
- hematoxylin** (hem-at-ox'il-in). A coloring principle, $C_{16}H_{14}O_6$, obtained from the wood of *Haematoxylin campechianum*, forming yellow crystals. It is used extensively as a staining agent in microscopy and as a reagent for alkalis, by which it is turned blue, and for ammonia, by which it is turned red. [Lat., *hematoxylinum*.]
- Hematoxylon** **Haematoxylon** (hem-at-ok'si-lon). 1. A genus of trees of the *Caesalpineae*. 2. Logwood, Campeachy wood; of the U. S. Ph. and Br. Ph., the wood of *H. campechianum* cut into chips or rasped into a powder. **decoctum hematoxyli**. A decoction made by boiling h. in water with the addition of cinnamon [Br. Ph.]. **extractum hematoxyli**. A dry extract of h. [U. S. Ph.]. **H. campechianum**. A tree indigenous to Campeachy and other parts of tropical America, and naturalized in Jamaica. The heart wood (h. [U. S.
- Ph.], or logwood) is used as a mild astringent in intestinal disorders. [Gr., *aima*, blood, + *xylon*, wood.]
- hematozoön** (hem''at-o-zo'on). Any animal parasite of the blood. [Gr., *aima*, blood, + *zoön*, animal.]
- hematozymosis** (hem''at-o-zi-mo'sis). Fermentation of the blood. [Gr., *aima*, blood, + *zymosis*, fermentation.]
- hematuria** (hem-at-u're-ah). A discharge of bloody urine. **Heller's test for h.** See under *Heller*. [Gr., *aima*, blood, + *ouron*, urine.]
- hemendothelioma** (hem''en-do-the-le-o'mah). An endothelioma composed of cells from the endothelium of blood vessels.
- hemeralopia** (hem''er-al-o'pe-ah). Night-blindness; failure of visual acuity in dim light; supposed to be connected with a deficiency in the development of visual purple in the rods. [Gr., *emera*, a day, + *ops*, sight.]
- hemi-**. A prefix from the Gr., *emi*, the same as the Lat., *semi*, half.
- hemi-al'bumose**. Of Kühne, a crystalline product of the pancreatic peptonization of albumin. It appears in the urine in osteomalacia, fevers, diphtheria, and phosphorus poisoning.
- hemi-amaurosis** (hem-e-am-aw-ro'sis). A form of temporary blindness in which hemiopia is associated with amblyopia in the other half of the field. 2. See *hemiopia*. [Gr., *emi*, half, + *amaurosis*, amaurosis.]
- hemi-analgesia** (hem''e-an-al-je'se-ah). Analgesia of one lateral half of the body. [Gr., *emi*, half, + *analgesia*, analgesia.]
- hemi-anesthesia** (hem''e-an-es-the'se-ah). Anesthesia of greater or less extent on one side of the body. **alternate h.** H. of one side of the face and of the opposite side of the body. **crossed h.** H. associated with motor paralysis of the opposite side of the body. **hysterical h.** H. both tactile and thermal, and sometimes of some or all of the special senses on the affected side. The left side is usually affected. [Gr., *emi*, half, + *anesthesia*, anesthesia.]
- hemi-anopia, hemi-anopsia** (hem''e-an-o'pe-ah, hem''e-an-ops'e-ah). Absence of vision in one half the field of one or both eyes. [Gr., *emi*, half, + *an*, priv., + *opsis*, vision.]
- hemi-ataxy** (hem-e-at-ax'e). Loss of co-ordination in one half of the body. [Gr., *emi*, half, + *ataxia*, a lack of discipline.]
- hemi-athetosis** (hem''e-ath-e-to'sis). Athetosis of one side of the body. [Gr., *emi*, half, + *athetos*, without fixed position.]
- hemi-atrophy** (hem-e-at-ro-fe). Atrophy of more or less of the tissues on one side of the body. **progressive h. of the face**. See *progressive facial atrophy*. [Gr., *emi*, half, + *atrophia*, atrophy.]
- hemic** (hem'ik). Pertaining to, or due to state of, blood. [Gr., *aima*, blood.]
- hemicellulose** (hem-e-sel'u-lös). A constituent of the cell wall, closely related to cellulose, but dissolved by boiling with strongly diluted mineral acids, yielding

arabinose, xylose, galactose, and mannose instead of glucose.

hemicephalia (hem'e-sef-al'e-ah). Syn.: *hypacephalia*, *acephalia spuria*. A monstrosity in which portions of the encephalon are contained in a shapeless tumor representing the head. [Gr., *emi*, half, + *kephale*, the head.]

hemocerebrum (hem-e-ser'e-brum). A cerebral hemisphere.

hemichorea (hem'e-ko-re'ah). Chorea affecting one side of the body only. [Gr., *emi*, half, + *choreia*, a dancing.]

hemicrania (hem'e-kra'ne-ah). 1. Unilateral headache. See *migraine*. 2. A form of monstrosity in which one half of the brain is absent or imperfectly developed. [Gr., *emi*, half, + *kranion*, the cranium.]

Hemidesmus (hem-e-des'mus). The typical genus of the *Hemidesmeae*, which are a tribe of periploceous plants. **H. indicus**. A species growing in Hindustan. The root, also called Indian sarsaparilla (with which it was once confounded), is used as a tonic, alternative, diuretic, diaphoretic. **hemidesmi radix**. Syn.: *radix nannari* (seu *sarsaparillae indicae*). The dried root of *H. indicus* [Br. Ph., 1898]. [Gr., *emi*, half, + *desmos*, a bond.]

hemidiaphoresis (hem'e-di-af-o-re'sis). A sweating of one side of the body. [Gr., *emi*, half, + *diaphoresis*, perspiration.]

hemidrosis (hem-e-dro'sis). Hyperidrosis affecting one half of the body only. [Gr., *emi*, half, + *idrosis*, perspiration.]

hemi-encephalus (hem'e-en-sef'al-us). Having but half a brain; as a n., a half-developed brain; of Geoffroy St.-Hilaire, a genus of monsters having a nearly normal cranium and brain, but merely rudimentary organs of sense. [Gr., *emi*, half, + *egkephalos*, the brain.]

hemi-epilepsy (hem-e-ep'il-ep-se). Epilepsy in which the convulsions are limited to one half of the body. [Gr., *emi*, half, + *epilepsy*.]

hemimelus (hem-im'e-lus). A monster in which some or all of the extremities are curved and stunted. [Gr., *emi*, half, + *melos*, a limb.]

hem'in. Syn.: *Teichmann's crystals*, *hem-in crystals*. The hydrochloric acid ester of hematin. Under the microscope the crystals are dark brown, long, rhombic, or spoollike; often grouped as crosses or rosettes. Slightly soluble in warm glacial acetic acid.

hemioptia (hem-e-o'pe-ah). Syn.: *hemioptiasis*, *hemioptia*, *hemioptis*. A condition in which there is vision in only one-half the visual field (*hemianoptia*). The defect, when confined to one eye, is seldom quite regular; it is usually binocular. [Gr., *emi*, half, + *opsis*, sight.]

hemipagus (hem-ip'ag-us). A monster having a double head and extremities joined to a single trunk.

hemiparaplegia (hem'e-par-ap-l'e-ah). Paraplegia confined to one of the lower extremities. [Gr., *emi*, half, + *paraplegia*, paraplegia.]

hemiparesis (hem-e-par'e-sis). 1. Paresis

confined to one lateral half of the body. 2. A condition of muscular exhaustion verging on paresis. [Gr., *emi*, half, + *paresis*, paralysis.]

hemipeptone (hem-e-pep'ton). According to Kühne's classification, the peptone arising from the hemi-portion of the protein molecule. This variety of peptone is easily hydrolyzed farther by strong proteolytic enzymes (trypsin) with the simpler split products, such as the amino acids, differing in this respect from the more resistant antipeptone. [Gr., *emi*, half, + *peptone*.]

hemiplegia (hem-e-ple'je-ah). Motor paralysis of one lateral half of the body. It is usually limited to the muscles of the arm, leg, and face. Some of the muscles may not be affected at all, or may be only temporarily weakened. **centric** (or **cerebral**) **facial h.** Unilateral facial paralysis due to a cerebral or central lesion. **cerebral h.** Motor paralysis of one lateral half of the body produced by a cerebral lesion on the opposite side of the body, and above the decussation of the pyramids. **cortical h.** H. produced by a lesion of the cerebral cortical centers. **crossed h.** Motor paralysis of the facial muscles on one side (together with trigeminal anesthesia), and of the hypoglossal nerve and the extremities on the opposite side. **embolic h.** H. produced by embolism of a cerebral artery. **hemorrhagic h.** H. caused by cerebral or spinal hemorrhage. **hysterical h.** The simulation of h. by an hysterical patient. [Gr., *emi*, half, + *plege*, blow.]

hem'isin. A trade name for epinephrin.

hemispasm. See *cortical epilepsy*, under *epilepsy*.

hemisphere (hem'is-fēr). Half of a sphere, also any object so shaped. **cerebellar h's**. The two lateral masses of the cerebellum. **cerebral h's**. The two lateral masses of the cerebrum. **h's of the brain**. See *cerebral h's*. **h's of the bulb (of the urethra)**. The lateral halves of the posterior portion of the bulb of the urethra. [Gr., *emisphaira*, from *emi*, half, + *sphaira*, sphere.]

hemisystole (hem-e-sis'to-le). Systole of one lateral half of the heart supposed to occur independently of systole of the other half. [Gr., *emi*, half, + *systole*, systole.]

hemiterata (hem-e-ter'ah-tah). Abnormalities of development not sufficiently grave to be classed as true monstrosities, such as aberrant blood vessels, clubfoot, or supernumerary digits. [Gr., *emi*, half, + *teras*, monster.]

hemiteria (hem-e-te're-ah). See *hemiterata*.

hemitomas (hem-e-to'me-as). A person deprived of one testicle. [Gr., *emi*, half, + *tonias*, eunuch.]

hem'lock. 1. *Conium maculatum*. 2. A name for several species of *Cicuta*, *Oenanthe*, etc. 3. A name for various species of fir, especially the *Abies* (*Tsuga canadensis*). **American water h.** *Cicuta maculata*. **common h.** *Conium maculatum*. **ground h.** *Tax-*

- us canadensis*. **mountain h.** *Levisticum officinale*. **poison h.** 1. See *Conium*. 2. *Oenanthe crocata* and some other species of *Oenanthe*. **spotted h.** See *Conium maculatum*. **water h.** 1. *Cicuta virosa* and *Cicuta maculata*. 2. *Oenanthe crocata* and *Oenanthe phellandrium*. [Ang.-Sax., *hemléac*, *hemlyc*, *hymlice*.]
- hemo-**. A prefix from the Gr., *aima*, blood. A shortened form of *hemato-*, used in compound words to signify having to do with blood.
- hemo-alkalimeter** (hem''o-al-kal-im'et-er). An apparatus for ascertaining the degree of alkalinity of the blood.
- hemochromatosis** (hem''o-kro-mat-o'sis). A disease characterized by pigmentation of the skin and the viscera, generally occurring in males, between the ages of thirty and sixty. It is sometimes associated with diabetes and has thus been called *bronzed diabetes*. [Gr., *aima*, blood, + *chroma*, color.]
- hemochromogen** (hem-o-kro'mo-jen). A pigment produced, according to Hoppe-Seyler, by decomposing hemoglobin with acids or alkalis in the absence of oxygen. It is converted into hemato porphyrin by the action of acids, losing its iron in the process. It is identical with the reduced hematin of Stokes, obtained by the action of ammonium sulphid upon an alkaline solution of hematin. It bears the same relation to hematin that hemoglobin bears to oxyhemoglobin. By oxidation it is converted into hematin. [Gr., *aima*, blood, + *chroma*, color, + *gennan*, to produce.]
- hemochromometer** (hem''o-kro-mom'et-er). An instrument for determining the exact tint of the blood, and hence for inferring its richness in hemoglobin. [Gr., *aima*, blood, + *chroma*, color, + *metron*, a measure.]
- hemoclastic** (hem-o-klas'tik). See *hematolytic*.
- hemocyanin** (hem-o-si'an-in). A substance present in the liquor sanguinis of the octopus, and consisting of a proteid in combustion with a pigment. It is supposed to be analogous to the hemoglobin of the blood. [Gr., *aima*, blood, + *kyaneos*, blue.]
- hemocytolysis** (hem-o-si-to'l'is-is). The dissolving of red blood corpuscles. [Gr., *aima*, blood, + *kytos*, cell, + *lysis*, dissolving.]
- hemocytozoön** (hem''o-si-to-zo'on). Any animal microparasite living upon the cells of the blood. [Gr., *aima*, blood, + *kytos*, a cell, + *zoon*, an animal.]
- hemodiapedesis** (hem''o-di-ap-ed-e'sis). See *diapedesis*. [Gr., *aima*, blood, + *diapedesis*, an oozing.]
- hemodrometer** (hem-o-drom'et-er). See *hemadromometer*.
- hemodromograph** (hem-o-drom'o-graf). See *dromograph*.
- hemodynamics** (hem''o-di-nam'iks). See *hemadynamics*.
- hemodynamometer** (hem''o-di-nam-om'et-er). See *hemadynameter*.
- hemoferrum** (he-mo-fer'rum). A proprietary hematonic preparation in pill form prepared from beef blood.
- hemoflagellates** (hem-o-flaj'el-äts). A protozoan organism of the class *Flagellata*, occurring as a parasite in the blood of vertebrates.
- hemofuscin** (hem-o-fus'in). A pathological blood pigment, generally associated with cirrhosis of the liver. [Gr., *aima*, blood, + *fuscus*, brown.]
- hemogall'ol**. An organic iron compound obtained by the reduction of hemoglobin by pyrogallol. It is used like iron.
- hemogenesis** (hem-o-jen'es-is). See *hematogenesis*.
- hemoglo'bic**. Containing or producing hemoglobin; said of cells.
- hemoglo'bin**. Syn.: *oxyhemoglobin*. A crystalline compound of hematin and globin, forming the principal part of the solid constituents of the red blood corpuscles. In man it forms prismatic or rhombic crystals of a reddish purple color, readily soluble in water. Under ordinary conditions, it may occur loosely combined with oxygen as *oxyhemoglobin*. It is the agent by which the respiratory processes are effected, as it takes up the oxygen from the inspired air and carries it in the blood to the tissues to which it gives up the oxygen, being thus transformed to h. The oxygen is supposed to combine with the hematin portion of the molecule. It has also the property of combining with carbon dioxide, but in this case the gas combines with the protein (globin) portion of the molecule. H. has a very characteristic absorption spectrum, which is used in its detection and differentiation from some of its derivatives. It forms a very stable combination with carbon monoxide. See also *oxyhemoglobin*.
- carbonic monoxid h.**, **carbonic oxid h.** See *carboxyhemoglobin*. **h., how to take**; see in *appendix*, page 899. **nitric oxid h.** A stable bluish violet compound formed by adding nitric oxide to h. Its spectrum gives two absorption bands. **oxygenated h.** *Oxyhemoglobin*.
- hemoglobinemia** (hem''o-glo-bin-e'me-ah). The presence of hemoglobin in the blood in a state of solution. [*Hemoglobin* + Gr., *aima*, blood.]
- hemoglobinometer** (hem''o-glo-bin-om'et-er). An apparatus devised by Gowers for estimating the amount of hemoglobin in the blood.
- hemoglobinuria** (hem''o-glo-bin-u're-ah). A disease characterized by the presence in the urine of dissolved hemoglobin, the result, it is believed, of hemorrhage from vessels larger than the capillaries. **intermittent h.**, **paroxysmal h.**, **periodic h.** H. which recurs at regular or irregular intervals. Especially a peculiar disease occurring in periodically recurring paroxysms which are said to be excited by exposure to cold and which are characterized by mild febrile symptoms and by the discharge of reddish or blackish urine, containing free hemoglobin, but no uninjured blood corpuscles. [*Hemoglobin* + Gr., *ouron*, urine.]

- Hemogregarinae, Haemogregarinae** (hem''o-greg-ar-e'ni). See *Hemosporidia*.
- hemokonia, hemoconia** (hem-o-ko'ne-ah). Syn.: *Miller's blood dust*. The free, highly refractive granules which have been liberated by the neutrophilic and eosinophilic leukocytes. They are frequently found in blood and are numerous in pus. They are known collectively as blood dust. [Gr., *aima*, blood, + *konis*, dust.]
- he'mol.** Reduced hemoglobin, an organic iron compound obtained from blood by reduction. **h. cuprate.** H. containing about 2 per cent. of copper. H. is also present in combination with arsenic, bromin, and other substances.
- hemolipase** (hem-o-lip'ās). A fat saponifying ferment in the blood.
- hemolith** (hem'o-lith). A concretion in the wall of a blood vessel.
- hemolysins** (he-mol'is-ins). Organic substances which cause the discharge of hemoglobin from red corpuscles and therefore lake the blood. H's may occur naturally in animals or plants or in a given animal, they may be produced by the process of immunization, that is, by repeated injection of foreign red corpuscles. Each such hemolysin consists of two parts, the *immune body* or *amboceptor*, produced as an antibody to the substance injected, and the *complement*, a substance found normally in red blood. [Gr., *aima*, blood, + *lyein*, to loose.]
- hemolysis** (hem-ol'is-is). The dissolving of red blood corpuscles with the setting free of hemoglobin in the fluid medium. This can be accomplished by distilled water, by freezing, by a temperature of 55° C., by acids, by alkalis, by certain glycerids such as saponin, by bacterial cultures such as the tetanus bacillus, by animal venoms, and by the serum of foreign or immunized animals. [Gr., *aima*, blood, + *lysin*, to loose.]
- hemolytic.** See *hematolytic*.
- hemomanometer** (hem''o-man-om'et-er). A manometer used for determining blood pressure.
- hemometer** (he-mom'et-er). 1. See *hemodynamometer*. 2. Of Fleischl, an instrument for measuring the amount of hemoglobin in the blood. [Gr., *aima*, blood, + *metron*, a measure.]
- hemopathology** (hem-o-path-ol'o-je). The pathology of the blood. [Gr., *aima*, blood, + *pathology*.]
- hemopericardium.** See *hematopericardium*.
- hemopexis** (hem-o-peks'is). Coagulation time of the blood. [Gr., *aima*, blood, + *pexis*, congelation.]
- hemophagocytes** (hem-o-fag'o-sits). Of Metchnikoff, the white blood corpuscles; the phagocytes of the blood, in contradistinction to those of connective tissue. [Gr., *aima*, blood, + *phagein*, to eat, + *kytos*, a cell.]
- hemophilia** (hem-o-fil'e-ah). A congenital condition characterized by defective coagulability of the blood, so that hemorrhage, even from trivial injuries, is severe and difficult to check. Females rarely exhibit the defect, but they beget male bleeders.
- h. neonatorum.** Purpura in newborn children. **hereditary h.** H. that is inherited from one or both parents. **sporadic h.** Spontaneous hemorrhage from different organs in a person having no hemophilic ancestry. [Gr., *aima*, blood, + *philein*, to love.]
- hemophobia** (hem-o-fo'be-ah). Fear or horror at the sight of blood. [Gr., *aima*, blood, + *phobos*, fear.]
- hemoplastic** (hem-o-plas'tik). See *hematoplastic*.
- hemopneumothorax** (hem''o-nu-mo-tho'rax). A collection of blood and gas in the pleural cavity. [Gr., *aima*, blood, + *pneuma*, air, + *thorax*, thorax.]
- hemopoiesis** (hem-o-poy-e'sis). See *hematopoiesis*.
- hemopsonin** (hem-op'so-nin). An opsonin the action of which is directed toward red blood corpuscles. [Gr., *aima*, blood, + *opsonin*.]
- hemoptysis** (hem-op'te-sis). Lit., a spitting of blood; hemorrhage from the mucous membrane of the lungs, discharged upward through the trachea and mouth. The blood usually is bright red and frothy. **cardiac h.** H. produced by disturbances of arterial tension in patients having heart disease. **vicarious h.** H. immediately preceding a scanty menstruation or occurring at regular intervals instead of menstruation. [Gr., *aima*, blood, + *ptysis*, a spitting.]
- hemopyrrol** (hem-o-pir'rol). 3 methyl-4 propyl-pyrrol. Formed by the reduction of hematin. On exposure to the air it is gradually converted into urobilin.
- hemoquinin** (he''mo-kwin'in). A proprietary preparation, said to contain peptonate of quinin and other so-called peptonates in an aromatized hydro-alcoholic solution.
- hemorrhage** (hem'or-rej). An escape of blood from the heart or the blood vessels, either externally or into or between the tissues. **cerebral h.** An escape of blood upon the surface or into the substance of the brain. See *apoplexy*. **concealed (accidental) h.** That form of accidental uterine h. in which the blood does not flow out from the uterus, but collects between the wall of that organ and the ovum. **idiopathic h.** H. not produced by any appreciable disease or injury. **intermediary h.** A h. occurring subsequent to the arrest of primary traumatic h. and before the establishment of supuration. **petechial h.** H. occurring in minute spots in the skin. **post partum h.** A h. occurring soon after labor or childbirth. **puerperal h.** 1. Any h. from the genital tract connected with the process of parturition. 2. Any uterine h. occurring between the time of conception and that of the first menstruation after delivery. 3. As more commonly employed, uterine h. occurring after the first day following labor. **pulmonary h.** H. from the lungs. **punctiform h.** Small circumscribed hemor-

- rhagic foci, produced by rupture of capillary vessels. **secondary h.** 1. H. occurring after a considerable interval from the cessation of the primary h. from a wound. 2. In obstetrics, uterine h. "some days after delivery." **vicarious h.** 1. A h. from some other part of the body than the uterus in lieu of menstruation. 2. A critical h. **white h.** See *hemorrhagic infarction*, under *infarction*. [Gr., *aima*, blood, + *regnynai*, to break through.]
- hemorrhagin** (hem-o-ra'jin). A cytolyisin present in snake venom and other toxins, which is destructive to the endothelial cells of blood vessels.
- hemorrhoid** (hem'or-royd). A vascular tumor of the mucous membrane of the rectum. A pile. [Gr., *aimorros*, veins liable to discharge blood.]
- hemorrhoidin** (hem-or-roy'din). A pigment obtained by Lehmann from meat and meat products.
- hemorubin** (hem-o-ru'bin). Of Letort, a constituent of the blood containing iron, sulphur, carbon, a little arsenic, and a great deal of oxygen; used as a nutritive and tonic. [Gr., *aima*, blood, + Lat., *ruber*, red.]
- hemosalpinx** (hem-o-sal'pinks). An oviduct dilated with blood.
- hemosensitizen** (hem-o-sen'sit-i-zen). The sensitizing substance for red blood corpuscles.
- hemosiderin** (hem-o-sid'er-in). A pigment containing iron, formed on the outside of extravasated blood by the decomposition of hemoglobin under the action of the living tissues, while hematoidin is formed in the interior of the mass of blood. [Gr., *aima*, blood, + *sideros*, iron.]
- hemosiderosis** (hem-o-sid'er-o'sis). The presence of the iron-containing blood pigment as hemosiderin in the liver, the lungs, or other viscera, being caused by the blood destruction in sepsis, pernicious anemia, and hemoglobinemia.
- hemozotic** (hem-o-so'zik). Antihemolytic.
- hemozo'zin**. An antiserum which prevents hemolysis. [Gr., *aima*, blood, + *sozein*, to preserve.]
- hemosporidia** (hem-o-spo-rid'e-ah). Sporidia that live as parasites in the red blood corpuscles of vertebrates. They are now incorporated in the order *Bimucleata*.
- hemostasis** (hem-os'ta-sis). Stagnation of blood. [Gr., *aimostasis*, a means of stopping blood.]
- hem'ostat**. A forceps used for controlling bleeding; an artery forceps.
- hemosterol** (hem-os'ter-ol). A certain compound said to be obtained from fresh blood.
- hemotachrometer** (hem''o-tak-rom'et-er). Of Vierordt, an instrument for measuring the velocity of the blood current. [Gr., *aima*, blood, + *tachys*, fast, + *metron*, a measure.]
- hemotachrometry** (hem''o-tak-rom'et-re). Measurement of the rapidity of the circulation of the blood.
- hemotexis** (hem-o-teks'is). The dissolution of putrid or corrupted blood. [Gr., *aima*, blood, + *texis*, a melting.]
- hemotoxin** (hem-o-toks'in). A cytotoxin able to destroy red blood corpuscles.
- hemoverdin** (hem-o-ver'din). A pigment isolated from the blood of animals poisoned with phenylhydrazin.
- hemozo'ön**. See *hematozoön*.
- hemp**. 1. A plant of the genus *Cannabis*. 2. The bast fibers or fibrous bundles, used for textile purposes, from various plants, such as those of the genera *Crotolaria*, *Hibiscus*, *Corchorus*, *Musa*, and *Agave*, and especially from *Cannabis sativa*.
- American h.** The American variety of *Cannabis sativa*. **Canada h.**, **Canadian h.** *Apocynum cannabinum*. **Indian h.** *Cannabis sativa*, the flowering tops of which constitute the cannabis indica of the U. S. Ph.
- hen'bane**. See *Hyoscyamus*.
- Henle's layer**. Syn.: *Sheath of Henle*. An incomplete layer of oblong, flattened, non-nucleated cells forming the outer part of the inner root sheath of a hair. **H's loop tube**. The part of a uriniferous tubule extending from the renal cortex a short distance into the papillary portion of the kidney and then forming a U-shaped loop and returning to the cortical portion. [Friedrich Gustav Jakob Henle, Ger. anatomist, 1809-1885.]
- hen'na**. The leaves of *Lawsonia alba* powdered and made into a paste. It is the *camphère* (camphor) of the Scriptures. It contains tannic acid, and has been used internally and locally in skin diseases. [Copt., *khenma*.]
- henogenesis** (hen-o-jen'es-is). The production of the individual. See *ontogeny* and *phylogeny*. [Gr., *en*, one, + *genesis*, production.]
- henpuye** (hen-poo'ye). See *goundou*. [West African.]
- Henry's law, Henry and Dalton's law**. The l. that the amount by weight of gas absorbed by a liquid is directly proportional to the pressure at which absorption takes place.
- Henry's magnesia**. A very fine and compact form of magnesia, prepared by Henry of Manchester, Eng., and much used medicinally.
- he'par**. 1. The liver. 2. An old term for an alkaline sulphid. **h. accessorium**. A small nodule of hepatic tissue distinct from the liver; occasionally found upon its surface. **h. adiposum**. See *fatty liver*. **h. induratum**. An affection occurring after long continued intermittent fevers, frequently in connection with melanemic, pigmentary deposits in and near the capillaries; consisting in hyperplasia of the interacinous connective tissue of the liver. **h. migrans**, **h. mobile**. See *floating liver*, under *liver*. **h. siccatum**. The dried and powdered liver of the pig; used in cirrhosis of the liver. **h. sinistrum**. See *spleen*. **h. succenturiatum**. An accessory liver; a supernumerary hepatic lobe separate from the general mass of the organ. **h. sulphuris**. Potassium sul-

- phid (so called on account of its liver color); also, generically, a sulphid of any alkali or alkaline earth. **h. uterinum**. See *placenta*. **h. variegatum**. See *nutmeg liver*, under *liver*. [Gr., *epar*.]
- heparaden** (he-par'ad-en). A mixture of fresh liver and sugar of milk; used in jaundice.
- hepatalgia** (hep-at-al'je-ah). 1. Pain in the liver. 2. See *biliary colic*, under *colic*. [Gr., *epar*, liver, + *algos*, pain.]
- hepatargy** (hep'at-ar-je). Hepatic auto-intoxication. [Gr., *epar*, liver, + *argia*, inactivity.]
- hepaticus** (he-pat'ik-us). Hepatic; as a n., in the f., *Hepatica*; a section of the genus *Anemone* (of the U. S. Ph., 1870, *Anemone hepatica*), also a genus of the *Hepaticae*; as a n., in the n., *hepaticum*, a remedy supposed to act on the liver.
- hep'atin**. See *glycogen*.
- hepatitis** (hep-at-i'tis). Inflammation of the tissues of the liver. **acute h.** An acute inflammation of the liver, usually with pus formation. **biliary h.** Inflammation of the liver which begins in the bile ducts. **gummatous h.** A variety of syphilitic inflammation of the liver. It may be either miliary or nodose. **interstitial h.** Syn.: *cirrhosis of the liver*. Inflammation of the connective tissue framework of the liver; if circumscribed, leading to the formation of abscesses; if diffuse, leading to softening and atrophy or induration and cirrhosis. **suppurative h.** Abscess of the liver. [Gr., *epatitis*.]
- hepatization** (hep-at-iz-a'shun). 1. That condition (especially of the lung) in which the tissue is consolidated and resembles liver tissue. **gray h.** The condition of the lung tissue in the third stage of pneumonia or the stage of disintegration. **red h.** The condition of the lung tissue in the second stage of pneumonia. It is soft and reddish and contains no air, but is gorged with blood and serum. [Gr., *epatizein*, to be like liver.]
- hep'atized**. In a state of hepatization; changed so as to resemble liver in color or texture.
- hepato-**. A prefix representing the Gr., *epato*, from *epar*, liver.
- hepatocoele** (he-pat'o-sel). Hernia of a part of the liver. [Gr., *epar*, the liver, + *kele*, a tumor.]
- hepatodynia** (hep'at-o-din'e-ah). Chronic pain in the liver. [Gr., *epar*, liver, + *odyne*, pain.]
- hepatogenic**, **hepatogenous** (hep-at-o-jen'ik, hep-at-o-j'en-us). Originating in the liver. [Gr., *epar*, the liver, + *gennan*, to produce.]
- hepatolith** (hep'at-o-lith). A gall-stone situated within the liver. [Gr., *epar*, the liver, + *lithos*, a stone.]
- hepatolithiasis** (hep'at-o-lith-i'as-is). The diseased condition produced by gall-stones in the liver. [Gr., *epar*, the liver, + *lithiasis*.]
- hepatolytic** (hep'at-o-lit'ik). Destructive of liver tissue. [Gr., *epar*, liver, + *lysis*, dissolution.]
- hepatomelanosis** (hep'at-o-mel-an-o'sis). Melanosis of the liver.
- hepatoptosis** (hep'at-op-to'sis). Dislocation of the liver. [Gr., *epar*, the liver, + *ptosis*, a falling.]
- hepatorrhagia** (hep'at-or-ra'je-ah). Hemorrhage from the liver. [Gr., *epar*, the liver, + *regnunai*, to break forth.]
- hepatorrhaphy** (hep-at-or'raf-e). Suture of the liver to an adjacent structure; suture of a wound of the liver.
- hepatorrhexis** (hep'at-or-rex'is). Rupture of the liver. [Gr., *epar*, the liver, + *rexis*, a rending.]
- hepatostomy** (hep-at-os'to-me). The making of an opening into the liver for the removal of gall-stones. [Gr., *epar*, the liver, + *stoma*, mouth.]
- hepatotomy** (he-pat-o'f'o-me). Surgical incision of the liver. [Gr., *epar*, the liver, + *tome*, a cutting.]
- hepatotoxemia** (hep'at-o-tox-e'me-ah). Toxemia originating from the liver. [Gr., *epar*, the liver, + *toxemia*.]
- hepatotoxin** (hep'at-o-toks'in). A cytotoxin for liver cells. [Gr., *epar*, the liver, + *toxin*.]
- hepta-**. A prefix from the Gr., *epta*, seven.
- hep'tad**. Septivalent; as a septivalent element or radicle; an element with seven valences. [Gr., *epta*, seven.]
- hep'tane**. A saturate hydrocarbon, C_7H_{16} , of which several isomers are known. The normal h. is present in crude petroleum.
- heptatomic** (hep-tat-om'ik). 1. Containing 7 atoms of replaceable hydrogen. 2. Having a combining capacity that is saturated by union with 7 atoms of hydrogen. [Gr., *epta*, seven, + *atomos*, an atom.]
- heptyl** (hep'til). The univalent radicle, $C_7H_{15}OH$, of which several isomers are known. [Gr., *epta*, seven, + *yle*, material.]
- hep'tyl al'cohol**. Heptyl hydrate, $C_7H_{15}OH$, of which several isomeric varieties are known.
- Heracleum** (her-ak-le'um). Cow parsnip, a genus of umbelliferous herbs of the *Peucedaneae*. **H. lanatum**. Masterwort, American cow parsnip; a species indigenous to North America, growing in meadows and along fences and hedges from Canada to Pennsylvania. The root, as well as the leaves and seeds, is mildly stimulant and carminative. [Gr., *erakleios*, pertaining to Hercules.]
- herapathite** (her'ap-ath-it). A compound of quinin sulphate and iodine, formerly used in scrofula. [*W. B. Herapath*, an English physician, 1820-1868.]
- herb**. In botany, a plant having a succulent stem which dies down to the ground at the close of the season. In pharmacy, the tops, including flowers (if gathered in the flowering season), of an herbaceous plant. [Lat., *herba*, grass.]
- her'balist**. One who collects or deals in plants and herbs; also a practitioner who uses herbs only.
- herba'rium**. A collection of dried plants systematically arranged.

herbivorous (her-biv'o-rus). Subsisting on herbs or grass. [Lat., *herba*, herb, + *vorare*, to devour.]

hereditary. Transmitted from parent to child. [Lat., *heres*, an heir.]

heredity (he-red'it-e). The inheritance of certain qualities or tendencies. **collateral h.** The appearance of physical or moral characteristics of an uncle, grand-uncle, aunt, or grandaunt in a nephew or a niece. **direct h.** The transmission of paternal or maternal physical or moral characteristics to the children. **h. through influence.** See *indirect atavism*. **normal h.** The transmission of ordinary moral or physical characteristics from an ancestor to a descendant. [Lat., *hereditas*, from *heres*, an heir.]

heredo- (her''ed-o-). Relating to heredity.

Hering's theory of color vision. The theory advanced by Hering, which supposes that there are three fundamental color substances, each of which gives one color sensation when undergoing dissimulation and the opposite or complementary color sensation when undergoing assimilation. According to the sensations thus produced, these color substances are designated *white-black*, *red-green*, and *yellow-blue*.

hermaphroditism (her-maf'ro-dism). See *hermaphroditism*.

hermaphrodite (her-maf'ro-dit). Bisexual; as a n., a bisexual animal or plant, or one that appears to be bisexual.

hermaphroditism (her-maf'rod-it-ism). The bisexual development of one individual. **abnormal h.** H. in a species in which the sexes are normally differentiated in the individuals. **absolute h., adequate h.** See *normal h.* **alternate h.** Of Perls, lateral h. **apparent h.** See *spurious h.* **bilateral h.** H. in which both male and female sexual glandular organs are present. **bisexual h.** See *true h.* **complex h.** That variety of true h. in which either (1) ovaries and an imperfect uterus coexist with seminal vesicles and rudiments of the vasa deferentia, or (2) testicles, vasa deferentia, and seminal vesicles coexist with an imperfect uterus and its appendages, or (3) ovaries and testicles coexist on one or both sides. **crossed h.** A rare form of h. in which the deep organs of one side and the superficial organs of the opposite side belong to the same sex, while the other organs belong to the opposite sex. **double h.** See *complex h.* **false h.** See *spurious h.* **female h.** H. in which the ensemble of the reproductive apparatus is essentially female. **h. with excess.** H. in which the sexual apparatus is essentially that of one sex, but presents in some portion the characteristics of the male and in another those of the female. **h. without excess.** H. in which the ensemble of the genitalia is essentially either male or female. **imperfect bisexual h.** A form of h. with excess in which there are incomplete male and female genitalia, or

in which only one variety of genitalia is incomplete. **insufficient h.** See under *normal h.* **lateral h.** That variety of true h. in which there is a testicle on one side and an ovary on the other. **male h.** H. in which the ensemble of the reproductive apparatus is essentially masculine. **neuter h.** H. in which the genitals present the appearance neither of those of the male nor of those of the female. **normal h.** H. in certain plants and lower forms of animal life, in which the individual possesses both male and female organs. It is said to be *sufficient* when an individual can fecundate itself, and *insufficient* when the organs are so disposed that a sort of reciprocal conjunction of two individuals is necessary for fecundation. **perfect h.** A possible form of h. in which the genitalia of each sex are perfect in one individual. **semi-lateral h.** H. in which the genitalia on one side are all proper to one sex, and those on the other side either proper to the opposite sex or mixed. **spurious h.** That variety in which the genital organs of an individual appear more or less like those of the other sex. **sterile h.** See *neuter h.* **sufficient h.** See under *normal h.* **transverse h.** That variety of true h. in which the external genital organs are those of one sex and the internal those of the other. **true h.** That variety in which more or fewer of both the male and female organs of generation coexist in a single individual. **unilateral h.** Of Klebs, h. in which there are a testicle and an ovary on one side, and on the other side a single genital gland (testicle or ovary). **vertical h.** See *complex h.* [Gr., *Ermes*, *Hermes*, + *Aphrodite*, *Venus*.]

hermaphroditism (her-maf''ro-dit-is-mus). See *hermaphroditism*. **h. androgynous bisexual.** That form of h. in which both ovary and testicle occur on each side.

hermetic. 1. Pertaining to chemistry or alchemy. 2. Air tight. [Gr., *Ermes*, *Hermes*.]

hermetically. After the manner of chemists, impenetrably; said of methods of sealing.

hermodactyl (her-mo-dak'til). The surinjan of the Indian bazaars; the root or bulb of an uncertain plant, probably *Colchicum variegatum*. [Gr., *Ermes*, *Hermes*, + *daktylos*, a finger.]

hermodactylos, hermodactylus (her-mo-dak'til-os, her-mo-dak'til-us). See *hermodactyl*. **h. officinalis, h. officinarum.** The hermodactyl of the ancients; the bulb of a species of *Colchicum*, probably *Colchicum variegatum*.

hermophenyl (her-mo-fen'il). Mercuric sodium phenylsulphonate; antiseptic.

hernia (her'ne-ah). A protrusion of a part, especially of the whole or a portion of an internal organ, through a potential opening or "weak point" in one or more of the layers forming the wall of the cavity in which it is normally contained (usually the abdomen). **abdom-**

inal h. An intestinal h. through the separated fibers of an aponeurosis, e. g., the linea alba, or through a distended natural opening (e. g., the canal of Nuck, or the inguinal canal in the abdominal wall). **acquired h.** A h. that originates after the birth of the individual. **anterior femoral h.** A femoral h. that lies in front of the femoral vessels. **ascending h.** An interstitial h. **bladder h.** Protrusion of a portion of the bladder through any normal or abnormal opening. **bursal h.** A synovial h. **cecal h.** A h. containing the whole or a part of the cecum. **cerebral h.** Protrusion of a portion of brain substance through the skull. **chronic h.** A h. that has existed for years, producing changes in the anatomical relations of its site as well as in the component tissues. **complete h.** A h. in which the sac and contents have passed beyond the aperture by which they escaped from the abdominal cavity. **congenital h.** A h. that has existed since birth. **crural h.** See *femoral h.* **diaphragmatic h.** A h. through the diaphragm. **direct inguinal h.** A h. making its way directly through the external abdominal ring without having passed through the inguinal canal. **displaced h.** A h. that has been forced out of the scrotum into the subperitoneal connective tissue of the abdomen, often while strangulated, e. g., a h. reduced *en masse*. **diverticular h.** 1. A h. containing an intestinal diverticulum. 2. Prolapse of a portion of the abdominal contents through an opening bounded partly by such a diverticulum. **encysted h.** Scrotal or oblique inguinal h. in which the bowel, enveloped in its own sac, passes into the tunica vaginalis in such a way that the bowel has thick coverings of peritoneum. **enterovaginal h.** H. of the bowel into the vagina. **epigastric h.** An abdominal h. situated just below the xiphoid cartilage. **external crural h., external femoral h.** A femoral h. in which the mouth of the sac is on the outer side of the epigastric artery. **external h.** A h. that protrudes through an aperture in the wall of a cavity. **external inguinal h.** An inguinal h. in which the neck of the hernial sac lies external to the epigastric artery and to the spermatic cord or the round ligament of the uterus. **femoral h.** A h. descending beneath Poupart's ligament, through the femoral ring and canal, lying in the sheath of the femoral vessels, and emerging beneath the margin of the saphenous opening in the fascia lata. The coverings of the tumor are skin, superficial fascia, cribriform fascia, the funnel-shaped process of the transverse fascia, the fascia propria, and the peritoneum. **funicular h.** A h. into the umbilical cord or into its sheath. To be distinguished from umbilical h. **gastric h.** See *gastrocele*. **gastrodiaphragmatic h.** A h. of the stomach through the diaphragm. **h. cerebri.** A protrusion of brain matter, alone or mixed with in-

flammatory products, the result of a wound or slough of the dura secondary to the removal of a portion of the skull. **h. femoralis.** See *femoral h.* **h. flatulenta.** See *pneumatocoele*. **h. foraminis Winslowii.** A protrusion of intestines through the foramen of Winslow. **h. into the funicular portion of the vaginal process of the peritoneum.** A h. like congenital h. except that the portion of the vaginal process which forms the sac is separated from that covering the testicle. **h. into the vaginal process of the peritoneum.** Syn.: *Birkett's h.* A h. anatomically the same as congenital h., but occurring later in life. **h. iridis.** Prolapse of the iris through a wound or perforating ulcer in the cornea or ciliary region. **h. labialis posterior.** A h. which descends in front of the broad ligament of the uterus, through the pelvic fascia, and into the posterior part of the labium pudendi majus. **h. of the heart.** A displacement of the heart of such a form as to encroach on the diaphragm or the mediastinal wall. **h. of the iris.** Prolapse of the iris through a wound or perforating ulcer of the cornea or ciliary region. **hyogastric h.** An infra-umbilical h. **incarcerated h.** A h. constricted sufficiently to prevent the return of the contents of the protruded viscera. The term is used indefinitely for both strangulated and irreducible h. **incomplete h., incomplete inguinal h.** An inguinal h. in which the sac does not protrude beyond the external abdominal ring. **infantile inguinal h.** H. caused by the upper or abdominal portion of the vaginal process remaining open while the lower portion, near the external ring, is closed. **inflamed h.** A h. (generally irreducible, but not strangulated) which has become inflamed as the result of injury. **infrapubic h.** An obturator h. **infra-umbilical h.** A h. in the linea alba below the umbilicus. **inguinal h.** A h. through the inguinal canal. **inguino-interstitial h.** An inguinal h. which has not passed beyond the external abdominal ring. **inguinolabial h.** An inguinal h. that has descended into the labium pudendi. **inguino-ovarian h.** An inguinal h. containing the ovary. **inguinoproperitoneal h.** A h. having two sacs—one peritoneal, the other inguinal. **inguinoscrotal h.** An inguinal h. that has descended into the scrotum. **intercostal h.** A h. produced by an intercostal wound permitting of a protrusion through the last costal interspaces. **internal h.** A protrusion of the viscera through an aperture in the interior of the body. **internal inguinal h.** An inguinal h. that passes to the inner side of the epigastric artery. **interstitial h.** A variety of displaced h. in which the sac has formed a place for itself between the layers of the abdominal wall. **intestinal h.** See *enterocoele*. **intra-iliac h.** A h. by the iliac fascia in the internal

iliac fossa. The sac begins about the internal inguinal ring and makes its way upward along the iliopsoas muscle. **irreducible h.** A h. which cannot be returned out of its sac. **ischialic h.** See *ischiocele*. **ischiorectal h.** See *perineal h.* **labial h.** A variety of perineal h. in which the h. descends outside the vagina along the ramus of the ischium and into the labium. **lacrimal h.** Prolapse or protrusion of the mucous membrane lining the lacrimal sac through a fistulous opening in its anterior wall. Formerly this term was incorrectly applied to a prolapse or protrusion of the lacrimal gland. **lumbar h.** A h. emerging from the back of the abdomen between the pelvis and the last rib. **median ventral h.** A ventral h. in the median line. **mesocolic h.** A h. held between the two layers of the descending mesocolon. **middle crural (or femoral) h.** A femoral h. in which the mouth of the sac is at the inner side of the epigastric artery. **oblique inguinal h.** A h. which enters the internal abdominal ring and passes through the inguinal canal and out of the external abdominal ring. **obstructed h.** A h. in which there is an obstruction to the passage of the contents of the bowel, not necessarily a strangulated h. **obturator h.** A h. that passes from the interior of the pelvis through the opening in the thyroid membrane for the obturator artery, vein, and nerve. The contents of the sac may be intestine or peritoneum. The coverings consist of skin, connective tissue, fascia, and the pectineus and adductor longus muscles. **omental h.** See *epiplocele*. **pectineal crural femoral h.** A h. that, as soon as it traverses the femoral ring, passes to the inner side of and behind the femoral vessels, resting on the pectineus muscle. **perineal h.** An intestinal or omental h. that has descended so as to rest upon or distend the floor of the pelvis. It may pass in front of the rectum or between the levator ani muscle and the adjacent bone. **pharyngeal h.** See *pharyngocele*. **pleural h.** See *pleurocele*. **preinguinal h.** An interstitial h. in which the sac protrudes externally to the inguinal canal, the mouth being situated near the internal abdominal ring. **pubdental h.** See *labial h.* **rectal h.** 1. A protrusion of a portion of the abdominal or pelvic contents through the anus, included in a pouch formed by eversion and prolapse of the rectum, the innermost covering of the h. being the peritoneal coat of the rectum. 2. See *proctocele*. **rectocecal h.** A protrusion of bowel occupying a fossa which is occasionally found behind the cecum. **rectovaginal h.** See *vaginal proctocele*, under *proctocele*. **reducible h.** A h. capable of being returned from its sac by manipulation. **retroperitoneal h.** A h. into a peritoneal sac that extends into the iliac fossa behind the peritoneum. **sacrorectal h.** Posterior proctocele due to defective ossi-

fication of the sacrum. It may be distinguished from spina bifida by its ductibility and by the gurgling sound as it is restored into the pelvis. **sciatric h.** An ischiadic h. **scrotal h.** An inguinal h. that has descended into the scrotum. **splenic h.** See *splenocele*. **strangulated h.** A h. that is so constricted at its neck that its reduction is difficult, and its circulation is so interfered with as to cause pain, nausea, and ultimately gangrene unless relief is afforded from the constriction. **subpubic femoral h.** An obturator h. **suprapubic h.** An inguinal h. **synovial h.** A protrusion of the synovial membrane through a rupture in the capsular ligament of a joint. **thoracic h.** See *diaphragmatic h.* and *intercostal h.* **tracheal h.** A diverticulum of the trachea. **traumatic h.** A h. due to an opening made by traumatism. It may be recent or in consequence of the yielding of a cicatrix. **umbilical h.** A h. protruding through the umbilical ring. **umbilicovesical h.** A h. of the bladder through the umbilicus. **uterine h.** See *hysterocele*. **vaginal h.** A h. that has forced its way down the side of the vagina and encroaches upon that canal. **vaginolabial h.** A h. which has descended by the side of the vagina into the substance of the labium majus. **vaginoperitoneal h.** A congenital or infantile h. **ventral h.** Any h. through the abdominal wall at any point other than either abdominal ring or umbilicus. **vesical h.** See *cystocele*. **vesicovaginal h.** A protrusion of the bladder into the vagina; cystocele. **visceral h.** The dislocation of a viscus from its usual site into the cavity of a sac or a pouch, e. g., a splenic or hepatic h. **vulvar h.** See *inguinolabial h.* [Lat., *hernia*, a rupture, from the Gr., *ernos*, a young shoot.]

her'nial. Pertaining to, constituting, or resembling, a hernia. [Lat., *hernia*, a rupture.]

Hernia'ria. A genus of illecebraceous plants. **H. alpestris.** A species found in Europe. The herb was formerly used medicinally and is even now employed occasionally. [Lat., *hernia*, a rupture.]

herniotome (her'-ne-o-tôm). A hernia knife.

herniotomy (her-ne-ot'-o-me). Kelotomy; a cutting operation for the treatment of hernia.

heroic (he-ro'ik). Said of remedial measures unusually severe or risky. [Gr., *eros*, a hero.]

her'oin. See *diacetyl morphin*, under *morphin*.

heromal (her'o-mal). A proprietary preparation containing heroin and sodium hypophosphate in malt extract.

heroterpin (her-o-ter'pin). A proprietary preparation of heroin and terpin hydrate in a hydro-alcoholic aromatized liquid.

her'pes. A general term to signify grouped lesions of the skin, usually vesicular, on an erythematous base. Probably due to a trophic disturbance of terminal nerve filaments. **h. facialis.** Syn.: *cold*

- sores, fever blisters, h. labialis.* An affection most common among children consisting of groups of vesicles in the neighborhood of the mouth. After childhood the disease is more frequent in females than in males. **h. perisceelis.** Eczema of that portion of the leg which is covered by the garter. **h. pro genitalis.** Syn.: *h. preputialis, h. genitalis.* An affection most frequent in male adults, occurring in the form of groups of follicles on a reddened base on the glans penis and prepuce in the male and on the vulva in the female. The appearance of the vesicles may be accompanied by enlargement of the neighboring lymphatic glands. The disease runs a rapid course and the vesicles rupture and dry up in the course of five to eight days. **h. simplex.** An affection characterized by the spontaneous development of grouped vesicles upon an inflammatory base around a mucocutaneous juncture. The two varieties are: *h. facialis* and *h. pro genitalis.* [Gr., *herpes, herpes, shingles, from erpein, to creep.*]
- her'pes zos'ter.** Syn.: *shingles,* from the Lat., *cingulum,* a girdle. A disease characterized by the development of groups of herpetic vesicles in the areas of skin that are supplied by nerve fibers from one or two posterior root ganglia. It occurs most frequently in the course of the intercostal nerves. The eruption begins with the appearance of a group of acuminate inflammatory papules which ordinarily develop soon into tense vesicles. They may be discrete and as large as a pea or even larger or they may coalesce to form bullae. On the other hand they may not develop beyond the papule stage. Pain accompanies the cutaneous lesion in direct proportion to the age of the patient, being very severe in old age. The disease seldom recurs and is generally not accompanied by fever. It is most common in spring and fall and statistics show that seventy-five per cent. of the cases are under twenty-five years of age. [Gr., *erpein, to creep, + zoster, a girdle.*]
- herpet'ic.** Resembling or of the nature of herpes. [Gr., *erpein, to creep.*]
- herpet'iform.** Resembling herpes. [Gr., *herpes, herpes, + Lat., forma, form.*]
- Herpetomonas** (her-pet-om'on-as). A genus of the phylum *Mastigophora,* and family *Herpetomonadæ.* They are unicellular organisms with a flagellum, and divide by schizogony and sporogony. **H. muscae domesticae.** The type species of *H.* found in the house fly. [Gr., *erpeton, creeper, + monas, monad.*]
- hesitation** (hes-it-a'shun). 1. Mental uncertainty, indecision. 2. Delay in the performance of a function (e. g., speaking and urination). [Lat., *hesitatio.*]
- Hes'selbach's tri'angle.** The space on the posterior surface of the anterior wall of the abdomen bounded by Poupart's ligament, the deep epigastric artery, and the outer margin of the rectus abdominis.
- heteradenia** (het'er-ad-e-ne-ah). A heterologous formation of glandular tissue. [Gr., *eteros, the other, + aden, a gland.*]
- heteradenoma** (het'er-ad-e-no'mah). A tumor formed by heteradenia. [Gr., *eteros, the other, + aden, a gland, + oma, a tumor.*]
- heterocious** (het-er-e'se-us). Living on one host in one stage of development and on another host during the next stage, as the malarial organism in the mosquito and in man. [Gr., *eteros, other, + oikos, house.*]
- hetero-.** A prefix from the Gr., *eteros,* the other of two; used in compound words to denote dissimilarity or unlikeness.
- hetero-agglutinin** (het'er-o-ag-lu'tin-in). Agglutinin present in the blood of an animal after the blood of another species has been injected into it.
- hetero-albumose** (het'er-o-al'bu-mōs). Syn.: *hemi-albumose.* Albumose obtained by Kühne in the peptic digestion of fibrin, which is insoluble in water, but soluble in dilute salt solutions.
- heteroblastic** (het'er-o-blas'tik). Of a tissue, derived from a tissue which usually gives rise to another form of tissue (said of cartilage developed from periosteal cells). [Gr., *eteros, other, + blastos, sprout.*]
- heterocephalous** (het'er-o - o-sef'al-us). Having two dissimilar heads (said of a double monster). [Gr., *eteros, the other, + kephale, the head.*]
- heterochromia** (het'er-o-kro'me-ah). The state of being different in color (said of paired organs). **h. iridium.** 1. A difference in the color of the irides of the two eyes. 2. A condition in which part of the iris is of one color and part of another [Berry]. [Gr., *eteros, other, + chroma, a color.*]
- het'ero-cyc'lic compounds.** That class of organic chemical compounds which contain the atoms united together to form a ring or nucleus, which nucleus contains, beside carbon atoms, one or more atoms of some other element, as nitrogen.
- heterodermic skin grafting.** Skin grafting in which the grafts are taken from other persons.
- heterodont** (het'er-o-dont). Having teeth of different sorts, incisors, bicuspid, molars. [Gr., *eteros, other, + odont, tooth.*]
- het'erofid'd divis'ion of ovum.** The first cell division in the fertilized ovum, resulting in the formation of the first polar body. It differs from the typical cell division in that the number of chromosomes is halved.
- heterogamy** (het-er-og'am-e). 1. A variety of generation in which differently organized sexual forms alternate with parthenogenic forms. 2. The state of being heterogamous. **incomplete h.** An alternation of sexual and parthenogenic generations. [Gr., *eteros, other, + gamos, marriage.*]
- heterogeneous** (het'er-o-je'ne-us). Differing in nature or origin, of a mixed or a miscellaneous character; of a growth (e. g., a dermoid tumor), containing elements derived from different blastodermic layers; of plants, not uniform in kind,

- abnormal. [Gr., *eteros*, different, + *genos*, race.]
- heterogenesis** (het'er-o-jen'es-is). 1. Abnormal or irregular organic development. 2. Sexual reproduction from two different germs, male and female. 3. The birth or origin of a living being otherwise than from a parent of the same kind. [Gr., *eteros*, other, + *genesis*, generation.]
- heterogenetic** (het'er-o-jen-et'ik). 1. Pertaining to heterogenesis. 2. Of infectious diseases, due to infection from without the organism.
- heterognathous** (het'er-og'na-thus). Having the jaws dissimilar or unequal. [Gr., *eteros*, different, + *gnathos*, the jaw.]
- hetero-infection** het'er-o-in-fek'shun). Infection transmitted through a person not infected. Infection from an organism from without as opposed to auto-infection.
- hetero-inoculable** (het'er-o-in-ok'u-lab-l). Capable of being inoculated with infectious material from another organism.
- hetero-inoculation** (het'er-o-in-ok-u-la'shun). Inoculation by means of a virus obtained from another animal.
- heterologous** (het'er-ol'o-gus). Different from or opposed to some standard which has been set up; of a tissue, without an analogue in the other tissues; of a tumor, composed of elements that differ from the normal elements. [Gr., *eteros*, different, + *logos*, understanding.]
- heterology** (het'er-ol'o-je). 1. The science of heterologous formations. 2. The state of being heterologous. [Gr., *eteros*, different, + *logos*, understanding.]
- heterolysin** (het'er-ol'is-in). A lysin produced by injecting the blood of one animal into the tissues of another species. [Gr., *eteros*, other, + *lysis*, dissolution.]
- heterolysis** (het'er-ol'is-is). A solution or destruction of an organ by enzymes not belonging therein, but introduced from without.
- heterolytic** (het'er-o-lit'ik). Pertaining to or caused by heterolysis.
- heterometropia** (het'er-o-me-tro'pe-ah). The condition in which the error of refraction is of a different kind in each eye. [Gr., *eteros*, other, + *metron*, measure, + *ops*, eye.]
- heterometry** (het'er-om'et-re). A variation from the normal condition of a part with respect to the quantity of material that it contains. [Gr., *eteros*, different, + *metron*, a measure.]
- heteromorphism** (het'er-o-mor'fism). Diversity of form as compared with the normal type. [Gr., *eteros*, different, + *morphe*, form.]
- heteromorphosis** (het'er-o-mor-fo'sis). Regeneration in which the new part is different from the part removed. [Gr., *eteros*, different, + *morphosis*, a forming.]
- heteromorphous** (het'er-o-mor'fus). 1. Differing in form or shape. 2. See *heterologous*. 3. See *polymorphous*. [Gr., *eteros*, different, + *morphe*, form.]
- heteronomous** (het'er-on'o-mus). 1. Characterized by heteronomy. 2. Formed upon the same original type, but differentiated in form. [Gr., *eteros*, other, + *nomos*, law.]
- heteronomy** (het'er-on'o-my). The state of being dependent on laws proper to other organisms. [Gr., *eteros*, different, + *nomos*, law.]
- heteropagus** (het'er-op'ag-us). A double monster in which the accessory individual has a distinct but imperfect head and lower extremities, and is implanted in the anterior aspect of the principal individual. [Gr., *eteros*, different, + *pegnunai*, to make fast.]
- heterophoria** (het'er-o-fo're-ah). Disturbance of muscular equilibrium or of muscular coordination. [Gr., *eteros*, other, + *phoros*, bearing.]
- heterophthalmia** (het'er-ot-thal'me-ah). A difference either of color, position, or size, between the two eyes. [Gr., *eteros*, other, + *ophthalmos*, eye.]
- heterophthalmos** (het'er-ot-thal'mos). Differing color or axes of the two eyes.
- Heterophyes** (het'er-ot'i-ēz). A species of fluke or hematode worm found in the intestines of dogs, cats, and man in Egypt and Japan.
- heteroplasia** (het'er-o-plas'e-ah). 1. A persistence of cell character and relationship peculiar to an earlier period of growth, found in isolated areas of cells of another type, as islands of cylindrical cells in the squamous epithelium of the esophagus. 2. An irregular or abnormal organic development. [Gr., *eteros*, different, + *plasis*, a molding.]
- heteroplasm** (het'er-o-plasm). Heteroplastic material. **archiblastic h.** A tumor having its origin in the tegumentary or glandular epithelium. [Gr., *eteros*, different, + *plasma*, anything formed.]
- heteroplastid** (het'er-o-plas'tid). An organ in which a part of the cells are devoted to the life of the organ and a part to that of a foreign organ.
- heteroplasty** (het'er-o-plas-te). Plastic surgery by the transplantation of portions from another organism, especially one of a different species. [Gr., *eteros*, other, + *plassein*, to mould.]
- heteroproteose** (het'er-o-pro'te-ōs). See *hetero-albumose*.
- heterosarcoses** (het'er-o-sar-ko'ses). That class of diseases in which there is the formation of heterologous tissues. [Gr., *eteros*, other, + *sarx*, flesh.]
- heteroscopy** (het'er-os'ko-pe). 1. Any visual defect. 2. See *deuteroscopy*. [Gr., *eteros*, different, + *skopein*, to examine.]
- heterosexual** (het'er-o-seks'u-al). Having relation to the opposite sex.
- heterosporous** (het'er-os'ko-pe). Having asexually produced spores of more than one kind.
- heterotaxis** (het'er-o-tak'sis). An anomalous position or transposition of the viscera, called *situs morbus viscerum*, and usually affecting the internal organs. [Gr., *eteros*, different, + *taxis*, arrangement.]
- heterotopia** (het'er-o-to'pe-ah). An

- anomaly of situation; misplacement of an organ or tissue, the occurrence of a particular tissue in an abnormal situation, as, the cell rests of Cohnheim are aberrant adrenals or accessory spleens, etc.; of Haeckel, in evolution, the appearance of an organ in an abnormal position or its development from a part different from that in which it develops in members of the same division. [Gr., *eteros*, different, + *topos*, a place.]
- heterotoxin** (het''er-o-tok'sin). A toxin produced in the body by an outside agency or different organism. [Gr., *eteros*, different, + *toxin*.]
- heterotrophia, heterotrophy** (het''er-o-tro'fe-ah, het''er-ot'ro-fe). A condition of faulty nutrition. [Gr., *eteros*, different, + *trophe*, nourishment.]
- heterotropia, heterotropy** (het''er-o-tro'pe-ah, het''er-ot'ro-pe). See *strabismus*. [Gr., *eteros*, different, + *tropos*, turn.]
- heterotypus** (het''er-o-ti'pus). A double monster with the parasitic individual suspended from the anterior aspect of the principal individual. [Gr., *eteros*, different, + *typos*, a type.]
- heteroxanthin** (het''er-ox-an'thin). Methylxanthin, $C_8H_8N_4O_2$, a leukomian isolated from urine which may be one of the causes of gout. [*Hetero* + *xanthin*.]
- heteroxeny** (het''er-ox'en-e). Of parasites, the capacity to live in or upon different hosts. [Gr., *eteros*, different, + *xenos*, a guest.]
- heterozygote** (het''er-o-zi'göt). A mendelian term to designate a zygote with both dominant and recessive strains.
- hetoëresol** (he-to-kres'ol). A metacresol ester of cinnamic acid; used in tuberculous disease.
- he'toform**. Bismuth cinnamate.
- he'tol**. Sodium cinnamate; used in tuberculous disease.
- Heu'chera**. A genus of saxifrageous plants. **H. americana**. Alum root. The root is styptic, containing from 18 to 20 per cent. of tannin. [*Heucher*, a German botanist.]
- hexa-**. Combining form of the Gr., *ex*, six.
- hexabasic** (hex-ah-ba'sik). 1. Of acids or alcohols, containing six atoms of hydrogen replaceable by bases. 2. Of salts, formed from a h. acid by the replacement of all six atoms of hydrogen. [Gr., *ex*, six, + *basis*, a base.]
- hexabrombenzene** (hex''ah - brom - ben'zën). A 6-atom bromin substitution derivative, C_6Br_6 , of benzene.
- hexabrommethane** (hex''ah-brom-meth'än). The compound C_6Br_6 .
- hex'ad**. Sexvalent; as a sexvalent metal. [Gr., *ex*, six.]
- hexadactylous** (hex-ah-dak'til-us). Having six fingers or toes. [Lat., *hexadactylus*, from Gr., *ex*, six, + *daktylos*, a digit.]
- hexadecane** (hex-ah-dek'än). A paraffin, $C_{16}H_{34}$.
- hexaedron** (hex-ah-ed'ron). A solid figure having six equal sides; a cube. [Gr., *ex*, six, + *edra*, a base.]
- hexagon** (hex'ah-gon). A plane figure having six sides and six angles. [Gr., *ex*, six, + *gonia*, an angle.]
- hexahydric** (hex-ah-hi'drik). Containing six hydrogen atoms replaceable by a metal; said of the alcohols. [Gr., *ex*, six, + *hydrogen*.]
- hexamethylenamin** (hex-ah-meth''il-ën-am'in). Colorless crystals, $(CH_2)_6N_4$, having a sweetish taste. Introduced under the name *urotropin*, as an intestinal and urinary antiseptic, it is now found under a great variety of names which are not suggestive of its identity. Among the trade names for h., or very closely related products, are: urotropin (name under which it was introduced), aminoform, formin, cystamin, cystogen, helmitol, metramin, mitone, etc. [U. S. Ph.].
- hexamethylencitrate**. Helmitol, $C_{12}H_{20}O_7N_4$. It is used like h.
- hexamethylen diamin** (hex-ah-meth''il-en-di'am-in). $NH_2(CH_2)_6NH_2$. A poisonous base.
- hexamethylente'tramin**. Hexamethylenamin.
- hex'ane**. A paraffin, C_6H_{14} . Several isomers are known. [Gr., *ex*, six.]
- hexatomic** (hex-ah-tom'ik). 1. Containing six atoms of replaceable hydrogen. 2. Of a radicle, capable of combining with six atoms of hydrogen or of another univalent radicle; sexvalent. 4. Containing six atoms to the molecule; said of an element.
- hexavalent** (hex-av'al-ent). Syn.: *sexvalent*. Capable of uniting with six atoms of hydroxyl or its equivalent, said of an element or radicle.
- hexhydric** (hex-hi'drik). 1. Containing six atoms of replaceable hydrogen. 2. Containing six molecules of water.
- hexiodid** (hex-i'o-did). A compound consisting of an element or radicle united directly with iodine in the proportion of six atoms of the latter to a certain definite quantity of the former, assumed as the unit of comparison.
- hex'one bases**. A term applied to the basic bodies, lysin, arginin, and histidin, formed in the complete hydrolysis of many proteins. So called because each contains six carbon atoms.
- hex'ose**. The class of simple carbohydrates containing six carbon atoms and five hydroxyl radicals. The four important hexoses are glucose (or dextrose), fructose (or levulose), galactose, and mannose.
- hex'yl al'cohol**. A monatomic alcohol, $C_6H_{13}O$, having various possible isomeric modifications.
- hexylene** (heks'il-ën). A bivalent radicle, C_6H_{12} .
- hexylic** (heks'il'ik). Of, or pertaining to, hexyl. **h. alcohol**. See *hexyl alcohol*, under *separate heading*.
- Hey's ligament**. The falciform process of the fascia lata.
- Hg**. Chemical symbol for the element mercury [*hydrargyrum*].
- hiatus** (hi-a'tus). An opening, aperture, cleft, gap. **h. canalis sacralis**. The opening at the lower end of the sacral canal on the posterior surface of the

- sacrum [B. N. A., *hiatus sacralis*]. **h. Fallopii**. A small groove on the upper surface of the petrous portion of the temporal bone into which the aqueduct of Fallopius opens. [Lat., *hiare*, to gape.]
- hibernation** (hi-ber-na'shun). The winter sleep of certain animals.
- Hibiscus** (hi-bis'kus). The rose mallows; a genus of herbs, shrubs, or trees indigenous to the warm and temperate regions of both hemispheres. [Gr., *ibiskos*.]
- hiccough, hiccup** (hik'of, hik'up). An interrupted inspiration produced by the sudden and spasmodic contraction of the diaphragm and the closure of the glottis in the midst of the inspiration.
- Hicks' method of version**. See *combined version*, under *version*.
- hibebound disease**. See *scleroderma*.
- hidradenitis des'truens suppurati'va**. See *folliculitis*.
- hidrocystoma** (hi'dro-sis-to'mah). An affection characterized by eruption of deep-seated vesicles which are cysts of the sweat ducts, occurring especially in persons who perspire freely. [Gr., *idros*, sweat, + *kystis*, cyst, + *oma*, tumor.]
- hidroid** (hi'droyd). Resembling or pertaining to sweat. [Gr., *idros*, sweat, + *eidos*, resemblance.]
- hidropedesis** (hi-dro-ped-e'sis). Profuse perspiration. [Gr., *idros*, sweat, + *pedesis*, a leaping.]
- hidropoietic** (hi-dro-poy-et'ik). See *sudoriparous*. [Gr., *idros*, sweat, + *poietikos*, productive.]
- hidrorrhea** (hi-dror-re'ah). Profuse sweating. [Gr., *idros*, sweat, + *rein*, to flow.]
- hidroschesis** (hid-ros'kes-is). Suppression of the perspiration. [Gr., *idros*, sweat, + *schesis*, holding.]
- hidrosis** (hid-ro'sis). 1. A disease involving the sweat glands. 2. Profuse sweating. 3. The secretion and excretion of sweat.
- hiera** (hi'er-ah). A name for many ancient medicines. **h. picra**. A preparation of aloes and canella. [Gr., *ierva*.]
- hieromania** (hi'er-o-ma'ne-ah). Religious coloring in any psychotic picture.
- high protein diet**. See in *appendix*, page 913.
- Hilliard's lupus**. See *lupus marginatus*.
- Hill's styptic collodion**. See *collodium stypticum*, under *collodium*.
- hilum**. A depression or pit at the point of attachment of a seed or at the point of entrance to an organ of its vessels, ducts, and nerves. **h. of the spleen**. A vertical fissure on the internal surface of the spleen, which divides the organ unequally into an anterior and posterior portion. [Lat., the root of *ni-hilum*, a trifle.]
- hind'brain**. See *epencephalon*.
- hind'gut**. See under *gut*.
- hip**. The region of the junction of the trunk with the lower limb, especially the projection of the femoral trochanter above the h. joint. [B. N. A., *coxa*.] [Ang.-Sax., *hype*.]
- hippo-**. A prefix from the Gr., *ippos*, horse; used in compound words to signify relating to the horse.
- hippocampus major** (hip-po-kam'pus). Syn.: *cornu Ammonis*, *cornu arietes*. A curved projection of white matter occupying nearly the entire floor of the middle horn of the lateral ventricle. At its ventral end there is a peculiar enlargement (the pes hippocampi). [Gr., *ippokampos*, from *ippos*, horse, + *kampos*, a sea-monster.]
- hippocampus minor**. The calcar, a projection at the mesal side of the posterior cornu of the lateral ventricle.
- hippocrat'ic**. Described or inculcated by Hippocrates.
- hippocratism** (hip-pok'rat-ism). The doctrine that was taught by Hippocrates of imitating nature in the treatment of disease by studying the spontaneous efforts toward recovery and the crises that occur in the course of many diseases.
- hippokoprosterin** (hip'po-kop-ros'ter-in). A cholesterol isolated from horses' feces.
- hippomelanin** (hip-po-mel'an-in). A black pigment from the tumors and the viscera of horses with melanosis. [Gr., *ippos*, horse, + *melas*, black.]
- hippophagy** (hip-pof'aj-e). The use of horseflesh as food. [Gr., *ippos*, a horse, + *phagein*, to devour.]
- hippurate** (hip'pu-rat). A salt of hippuric acid.
- hippuria** (hip-pu're-ah). An excess of hippuric acid in the urine, as after the ingestion of benzoic acid. [Gr., *ippos*, a horse, + *ouron*, urine.]
- hippus** (hip'us). Rapidly changing pupillary contractions and dilatations.
- hircismus** (hir-siz'mus). Strong odor of the axillae. [Lat., *hircus*, goat.]
- hirsute** (her'sut). Having long, shaggy hair.
- hirsuties** (hir-su'she-ēs). Excessive hairiness. [Lat., *hirsutus*, hairy.]
- hirudin** (hi-ru'din). Name given to the active substance in the extract of the leech's salivary gland that prevents the coagulation of blood; isolated by Franz.
- hirudiculture** (hir-u'din-e-cul'tūr). The art of breeding and maintaining leeches. [Lat., *hirudo*, a leech, + *cultura*, cultivation.]
- hirudo** (hi-ru'do). Pl. *hiru'dines*. A member of the phylum *Annulata*, the class *Hirudinea*, the family *Gnathobdellidae*, and the genus *Hirudo*. The common leech. The salivary secretion prevents the coagulation of the blood. Their bite may cause infection by introducing bacteria or trypanosomes. They are numerous in tropical countries. **H. chinensis**. A small species used by the Chinese. **H. decora**. A species found in North America, usually from 2 to 3 inches long, of a bluish or greenish color, and having about 22 reddish points on both the dorsum and sides; used like *H. medicinalis*. **H. granulosa**. A species having a brownish green body and 98 granular rings, interspersed with tubercles or slight elevations; used in India, and in the Isle of Bourbon and the Mauritius.

H. grisea. *H. medicinalis*. **H. medicinalis**. The speckled leech; an aquatic species found throughout Europe, but especially in the northern parts. It has an olive-green back, with 6 dorsal stripes interrupted with black spots, and a belly yellowish green or spotted with black, and 86 teeth. [Perhaps from Lat., *herere*, to cling.]

His' bundle. The auriculoventricular bundle.

histidin (his'te-din). An amido- β -imidazol propionic. An amido acid found widely distributed among the proteins, especially in the oxyhemoglobin of the blood. A strong basic substance, easily soluble in water.

his'tin. See *fibrin*.

histioma (his-te-o'mah). A tumor containing distinct tissues, but not arranged in the form of an organ. [Gr., *istos*, a web, + *oma*, a tumor.]

histo-. Combining form of the Gr., *istos*, web, tissue.

his'toblast. A cell taking part in tissue formation. [Gr., *istos*, tissue, + *blastos*, sprout.]

histochem'istry. The chemistry of tissues. [Gr., *istos*, a tissue, + *chemeia*, chemistry.]

histodialysis (his'to-di-al'is-is). In pathology, a dissolution or melting away of tissue. [Gr., *istos*, a tissue, + *dialysis*, a loosening.]

histogenesis (his-to-jen'es-is). The origin and development of the tissues. [Gr., *istos*, tissue, + *genesis*, production.]

histohematin (his-to-hem'at-in). Pigments found in the tissues of vertebrates and invertebrates. They are allied to hemoglobin and appear to be capable of oxidation and reduction. It is presumed that they are respiratory in function and are concerned in tissue respiration. [Gr., *istos*, the tissue, + *aima*, blood.]

histoid (his'toyd). Of tumors, composed of tissues like those normally present in the body. [Gr., *istos*, a tissue, + *eidos*, resemblance.]

histology (his-tol'o-je). Syn.: *histologic anatomy*, *microscopic anatomy*. The science of the tissues and anatomical or structural elements which form organized beings, together with the origin, development, and growth of the elements and tissues. Also the microscopic study of tissues, their structure, cells, and component elements and units. [Lat., *histologia*, from Gr., *istos*, tissue, + *logos*, understanding.]

histolysis (his-tol'is-is). Lit., a dissolving of tissue, or the process of dissolution and decay of tissues; the retrograde metamorphosis or atrophy of tissues in the living body. [Gr., *istos*, a tissue, + *lysis*, a loosening.]

his'tons. One of the classes of proteins characterized by its high percentage of nitrogen, 16.5 to 20 per cent. Upon hydrolysis cleavage, large amounts of the hexone bases are formed.

histopathology (his'to-path-ol'o-je). The study of the microscopic changes observed

in sections of diseased tissues or organs. [Gr., *istos*, tissue, + pathology.]

histophysiology (his'to-fiz-e-ol'o-je). Histology as applied to the physiological processes taking place in the tissues. [Gr., *istos*, tissue, + *physiology*.]

Histoplasma capsulatum. A pathogenic organism of the subkingdom *Protozoa*, the phylum *Mastigophora*, the order *Binucleata*, and the family *Herpetomonidae*. The organism is present in the necrotic areas of the spleen, the liver, the lungs, and the bone marrow. It produces a disease characterized by splenomegaly, emaciation, and elevation of temperature. The organism consists of a small mass of protoplasm surrounded by a capsule and containing a small chromatin granule. It is found within the epithelial cells of the necrotic granulomata in the various tissues. The disease has been observed in the Panama Canal Zone, by Darling only.

histoplasmosis (his'to-plaz-mo'sis). Infection with *Histoplasma capsulatum*.

his'tory. A narrative or record of events. **clinical h.** The h. of a particular case of disease; in a wider sense, the h. usually to be elicited in cases of a particular disease. **family h.** The h. of a patient's parents and other relatives as bearing upon questions of morbid heredity. [Gr., *istoria*.]

histosan (his'to-san). The trade name for a combination of guaiaacol and albumin, used in bronchitis, pneumonia, etc.

histotrophic (his-to-trof'ik). That which encourages the growth of cells. [Gr., *istos*, tissue, + *trophein*, to nourish.]

histozoic (his-to-zo'ik). Said of parasites which live within or upon the tissues. [Gr., *istos*, tissue, + *zoe*, life.]

histozyme (his'to-zim). Of Schmiiedeberg, an enzyme present in the kidneys of the dog and pig which hydrolyzes hippuric acid with the formation of benzoic acid and of glycol (or glycin). [Gr., *istos*, a tissue, + *zyme*, a leaven.]

histrionic (his-tre-on'ik). Pertaining to, or affecting, the muscles concerned in the expression of the countenance. [Lat., *histrion*, an actor.]

hives (hivs). A popular name for urticaria.

hoang-nan (ho-ang-nan'). In Cambodia, the bark of *Strychnos gauthieriana*; said by Planchon to be identical with false angustura bark. It contains strychnin and brucin. [Chin.]

hobnail-liver. See *atrophic nutmeg liver*, under *liver*.

Hodg'kin's disease. Multiple lymph node enlargement, especially marked in the neck, without anemic changes in the blood. The process is probably one of inflammatory overgrowth of lymphoid tissue, caused by a diphtheroid bacillus. [Thomas Hodgkin, Eng. physician, 1797-1866.]

hodograph (ho'do-graf). Of Marey, an instrument devised to register the motion of men or animals, and of vehicles of all sorts, especially railway cars. [Gr., *odos*, a path, + *graphein*, to write.]

Hoffmann's anodyne. See *spiritus etheris compositus*, under *ether*. **H's sign.** Spasmodic action produced by percussion of the nerves corresponding to the areas of paresthesia in tetany. [*Friedrich Hoffmann*, Ger. physician, 1660-1742.]

holadin (hol'ad-in). Extract of the pancreas, containing all the pancreatic enzymes. Used to aid the digestion of starch, proteids, and fats. [Gr., *olos*, whole, + *aden*, gland.]

Holarrhena (hol-ar-re'nah). A genus of tropical apocynaceous trees or shrubs. **H. antidyserterica.** An East Indian species, formerly known as *Wrightia antidyserterica*. It contains an alkaloid. Its bark is tonic and astringent, and was formerly used in dysentery and as an antiperiodic. [Gr., *olos*, whole, + *arren*, male.]

Holm'gren's test for color blindness. A test in which skeins of colored worsted are used to find out the patient's ability to recognize and match colors. **H's wool.** Small skeins of w., of all colors, for testing the color sense. [*A. C. Holmgren*, Swedish physiologist, 1831-1897.]

holo-, hol-. Combining form of the Gr., *olos*, whole; used mainly in zoölogical terms.

holoacardius (hol-o-ah-kar'de-us). A fetal monster without a heart.

holoca'in hydrochlo'rid. The hydrochlorid of the basic condensation product of parphenetidin and phenacetin. It is a local anesthetic. Aqueous solutions should be prepared in porcelain vessels.

holocrine (hol'o-krin). Applied to exclusively secretory glands. [Gr., *olos*, whole, + *krinein*, to separate.]

holophytic (hol-o-fit'ik). Said of certain plantlike protozoa.

holotet'anus. General tetanus. [Gr., *olos*, whole, + *tetanus*.]

Holothyrus (hol-o-thi'rus). A genus of parasites. **H. coccinella.** A variety found in Mauritius, which is poisonous to human beings, causing a painful swelling of the throat and tongue. It also attacks poultry.

holotonia (hol-o-to'ne-ah). Muscular spasms afflicting the entire body.

homalocephalous (hom'al-o-sef'al-us). Flat-headed.

Homalomy'ia canicular'is. A European fly, resembling the horse fly. Its larvae cause intestinal myiasis.

homatropin (ho-mat'ro-pin). An alkaloid, $C_{16}H_{21}NO_3$, obtained from atropin. As a mydriatic, it is usually employed in the form of the hydrobromid. It paralyzes the accommodation as well as dilates the pupil, the effect on both being of shorter duration than that of atropin. By some it is preferred to atropin for both these purposes preparatory to determining the refraction. **h. hydrobromate**, **h. hydrobromid**, **homatropinae hydrobromidum.** A substance having the formula, $C_{16}H_{21}NO_3HBr$. The salt dissolves in ten parts of water. [U. S. Ph., Br. Ph.]. [Lat., *homatropin*.]

homaxial, homaxonic (ho-mak'se-al, ho-

mak-son'ik). Having the axes all equal. [Gr., *omos*, like, + *axon*, an axis.]

homedrous (hom-ed'rus). Of diseases, affecting the same part of the organism. **homeo-**, also written **homoco-**. A prefix from the Gr., *omoios*, like; used in compound words to signify similarity.

homeogenesis, homeogenesis (ho-me-o-je-n'e-se-ah, ho-me-o-je-n'es-is). The faculty that two germs of opposite sexes possess in different individuals of becoming reciprocally prolific, however great their zoölogical difference may be. [Gr., *omoios*, like, + *genesis*, production.]

homeopathy (ho-me-op'ath-e). The therapeutical doctrine that certain morbid conditions may be corrected by the use of drugs that, in health, produce similar conditions; of Hahnemann, a system of medical practice based on the dogma that such a doctrine is the only one to be followed in therapeutics. [Gr., *omoios*, like, + *pathos*, suffering.]

homeothermic (ho-me-o-ther'mik). Having a constant temperature independent of surroundings. [Gr., *omoios*, like, + *therme*, heat.]

homeothermous (ho-me-o-ther'mus). Having a constant temperature. Applied to the so-called warm-blooded animals in contradistinction to the cold-blooded (poikilothermous) animals whose temperature changes with their environment. [Gr., *omoios*, like, + *therme*, heat.]

home/sickness. See *nostalgia*.

homo-, hom-. Combining form of Gr., *omos*, same, a formative of many terms, often in opposition to *hetero-*, other, different.

homocerebrin (ho-mo-ser'e-brin). See *kerasin*.

homeogenesis (ho-mo-je-n'es-is). See *univocal generation*, under *generation*. [Gr., *omos*, same, + *genesis*, generation.]

ho'molat'eral conduc'tion. The passage of nerve impulses up or down the spinal cord on the same side as that at which they enter, that is, conduction without crossing the spinal cord.

Homolle's digitalin (hō-mōls' di-gi-tal'in). See *amorphous digitalin*, under *digitalin*.

homological. 1. Pertaining to homology.

2. See *homologous*.

homologous (ho-mol'o-gus). 1. Of a similar structure or function, as a tumor composed of the same tissue as the part affected. Produced by the same species, as a h. serum from the typhoid bacillus produced by this organism. 2. In chemistry, arranged in a series, each member of which bears to the preceding member a constant, definite relation as regards either atomic composition, molecular weight, or some other well-marked chemical property. Such a series is called an h. series, and is to be found especially among the hydrocarbons and their derivatives, each member in this case differing from the preceding member by the constant increment CH_2 . 3. Of neoplasms, composed of tissue resembling some normal tissue of the body, or, in a narrower sense, the normal tissue of the part af-

- fect. [Gr., *omos*, same, + *logos*, relation.]
- homomorphosis** (ho'mo-mor-fo'sis). Regeneration in which the new part is like the part removed. [Gr., *omos*, same, + *morphosis*, a forming.]
- homonomous** (ho-mo'no-mus). Subject to the same law. [Gr., *omos*, same, + *nomos*, law.]
- homonymous** (ho-mon'im-us). Having a correlation of parts or places.
- homophylly** (ho-mo'fil-e). Identity of origin, as distinguished from identity in structure and function. [Gr., *omos*, like, + *phyle*, a race.]
- homorenon hydrochlorid.** The hydrochlorid ethyl-amino-aceto-pyrocatechin, $C_{10}NO_8HCl$; used in solution in the same way as epinephrin.
- homosexual** (ho-mo-seks'u-al). Having relation to the same sex.
- homothermal** (ho-mo-ther'mal). In physics, having the same temperature. [Gr., *omos*, same, + *therme*, heat.]
- homotrophic** (ho-mo-trof'ik). Standing in nutritional relation to each other. [Gr., *omos*, same, + *trophein*, to nourish.]
- homotrophy** (ho-mot-ro-fe). Correlation of nutrition and growth.
- homotropism** (ho-mo'tro-pizm). Like attraction of cells of same type.
- ho'motypical division of o'vum.** The second cell division of the fertilized ovum, resulting in the formation of the second polar body. It conforms to the usual type of cell division.
- hon'ey.** A saccharine secretion obtained especially by the bee from flowers. See *mel.* [Ang.-Sax., *hunig*.]
- hood.** See *caul.* **caudal h.** The caudal or tail fold of the embryo. **cephalic h.** The cephalic or head fold of the embryo. [Ang.-Sax., *hōd*.]
- hook.** A length of metal bent back or fashioned with a sharp angle for catching hold of something. See *tenaculum*, and *volsella*. **blunt h.** See *decapitator*. **Malgaigne's h.** See under *Malgaigne*. [Mid. low Ger., *hōk*, corner, angle, root.]
- Hooke's law.** The l. that if a body is distorted within the limits of perfect elasticity, the force with which it reacts is simply proportional to the amount of distortion. As a consequence of this l., the oscillations set up on the constraint being removed suddenly are isochronous.
- hookworm.** See *Uncinaria* or *Ankylostoma*. **h. disease.** See under *disease*.
- hoop'ing-cough.** See *whooping-cough*.
- hop.** See *Humulus lupulus*, under *Humulus*.
- Hope's mixture.** A m. of 8 drops of nitric acid, 40 drops of tincture of opium, and 8 fl. oz. of aqua camphorae; used in dysentery.
- Hopkins and Cole reagent.** A solution of glyoxilic acid (reduced oxalic acid) used in the Adamkiewicz, Hopkins and Cole reaction.
- hoplo-.** Combining form of the Gr., *oplon*, weapon, or *ople*, hoof; zoölogical.
- ho'pogan.** Magnesium peroxid.
- hordein** (hor'de-in). An insoluble powder remaining when barley starch is heated with acidulated water; a mixture of starch, cellular tissue, and a nitrogenous principle. [Lat., *hordeum*, barley.]
- hordeolum** (hor-de'o-lum). Syn.: *a styx*. A small boil at the root of an eyelash involving a meibomian gland. [Lat., dim. of *hordeum*, barley.]
- hordeum** (hor'de-um). 1. Barley. 2. A germ. 3. The seed of *H. vulgare* and *H. distichum*. 4. Of the U. S. Ph., 1870, pearled barley. **decoctum hordei.** Barley water; a preparation made by washing 2 parts of pearl barley in cold water, then boiling in 30 parts of water and straining [Br. Ph.]. **h. decorticatum, h. denudatum.** 1. Of the Br. Ph., 1898, pearled barley. 2. Hulled barley. **h. excorticatum.** Pearled barley. [Lat.]
- hormonal** (hor'mo-nal). A proprietary preparation, consisting of a liquid extract made from the spleen of an animal during the height of digestion. It is used intravenously or intramuscularly to increase intestinal peristalsis. [Gr., *orman*, to excite.]
- hormones** (hor'mōns). Substances which are formed in one tissue of the body but are carried by the blood to some other tissue, upon which they act as chemical stimuli. They form, therefore, chemical messengers by means of which coordination in activity is effected between distant or separate tissues. [Gr., *orman*, to excite or arouse.]
- horn.** 1. One of the hard, pointed bodies which grow on the heads of some gaminivorous quadrupeds and serve them for weapons. 2. Any h-shaped structure. **anterior h. of the lateral ventricle.** The short cephalad prolongation of the lateral ventricle, extending into the frontal lobe. **anterior h. of the spinal cord.** See *anterior gray cornu*, under *cornu*. **h's of the uterus.** See *cornua of the uterus*, under *cornu*. **posterior h. of the lateral ventricle.** A portion of the lateral ventricle directed caudad, laterad, and then mesad into the occipital lobe. **posterior h. of the spinal cord.** See *posterior gray cornu*, under *cornu*. [B. N. A., *cornu*.] [Ang.-Sax., *horn*.]
- horopter** (hor-op'ter). A term used to designate the sum of the points which, in any fixed position of the two eyes, fall upon corresponding points in the two retinas, and hence are seen single. [Gr., *oros*, a boundary, + *opter*, one who sees.]
- horripilation** (hor'rip-il-a'shun). The erection of the hairs on the body produced by fear, pain, or chilliness; also the sensation of such an occurrence. [Lat., *horripilatio*.]
- hor'ror.** A shivering. **h. ciborum.** A distaste for food. [Lat., *horrere*, to shiver.]
- hor'ror autotox'icus.** The inability of the body to form autocytotoxins capable of injuring its own body cells.
- horse-radish.** The fresh root of *Cochlearia armoracia*. It yields a pungent, volatile oil, through the decomposition of a glucosid. It is used as a local irritant.

Horsley's putty. A preparation of white and yellow wax, vaselin and carbolic acid; used to arrest bleeding from the cut surface of the bone. **H's test for sugar.** A test by which the presence of glucose or sugar in urine is shown by the green color produced by boiling with a mixture of caustic potash and potassium chromate. [Sir Victor Alexander Haden Horsley, London surgeon, born 1857.]

hos'pital. A place designed for the shelter and treatment of the sick and wounded. **cottage h.** A small detached building containing a few rooms holding a few beds each, with rooms for offices, etc., to afford better results from the quiet and seclusion afforded. **field h.** A temporary h. station with an army in the field. **lock h.** In Great Britain, a h. for the treatment of venereal diseases. [Lat., *hospitium*, from *hospes*, a guest.]

hos'pitalism. A "rundown" condition observed in those who live constantly in a hospital.

host. An organism on or in which another lives as a parasite. [Lat., *hospes*.]

hour-glass contraction of the uterus. Excessive contraction of the parturient uterus upon the placenta during the third stage of labor, together with flabby distension of lower uterine segment, giving form of an hour-glass to uterus.

house-staff. The resident physicians and surgeons of a hospital.

Houston's valves. In the rectum, oblique folds of the mucous membrane, situated one at about the level of the prostate gland, another a little higher, and a third still higher. [John Houston, Dublin physician, 1802-1845.]

Hüfner's method to determine amount of urea in urine, see in *appendix*, page 895.

hum. A soft monotonous sound. **venous h.** A h. heard on auscultation over a vein.

humanization (hu-man-iz-a'shun). Of a virus (e. g., vaccine), a supposed modification of its properties by transmission through a series of human beings.

humeral (hu'mer-al). Of or pertaining to the humerus.

humerus (hu'mer-us). Syn.: *os brachii*, *os humeri*. The bone of the upper arm, articulating with the scapula above and the ulna and radius below. Its upper part comprises the surgical neck, the anatomical neck, the greater and lesser tuberosities, and the head of the bone; below, it terminates in the lateral and medial condyles, and the trochlea and the capitulum. [Lat., more properly written *umerus*.]

Hume's test for arsenic. A test made by adding, drop by drop, a weak solution of ammonia to a solution of silver nitrate until the brown precipitate first produced is nearly dissolved, decanting the clear liquid, and adding it to the suspected liquid. If arsenic is present, a bright yellow precipitate of silver arsenite is produced, that must be collected and heated with a reducing agent so as to form a sublimate of metallic arsenic.

humidity (hu-mid'it-e). The state of being moist. **absolute h.** As applied to the atmosphere, the actual weight of vapor of water in a given bulk; usually reckoned in grains to the cubic foot. **relative h.** As applied to the atmosphere, the proportion of its actual amount of moisture to what it would contain if saturated; saturation being 100, the relative h. is expressed in hundredths. [Lat., *humidus*, moist.]

hu'mor. 1. Any fluid of the body. 2. Of the old writers, a fluid supposed to be present in the body which, by its excess, gave the type to a certain disease. 3. In popular language, a chronic skin disease attributed to disorder of the blood. **aqueous h.** Syn.: *aqueous fluid*. The fluid which fills the anterior chamber, between the cornea anteriorly and the lens and suspensory ligament posteriorly; in weight, 5 or 6 grains; specific gravity, 1.0003; coefficient of refraction, 1.3366. **h. crystallinus.** See *crystalline lens*.

hu'moralism. See *humoral pathology*, under *pathology*.

humorovitalism (hu'morovi'tal-ism). The doctrine that the seat of life is in the humors. [Lat., *humor*, fluid, + *vita*, life.]

hump'back. See *kyphosis*.

hump-foot. Flexion of the foot at the first metatarso-cuneiform joint with enlargement of bones of dorsal surface.

hu'milin. See *lupulin*. [Lat., *humulus*, the hop.]

hu'mulus. 1. The hop plant, a genus of urticaceous plants. 2. Of the U. S. Ph., the dried strobiles of *H. lupulus*. **H. lupulus.** *Lupulus*. The common hop, indigenous to North America (where it grows wild) and to Europe. The calyx and scales in the fruit are covered with reddish particles (see *lupulin*) containing the active principle of the plant. Hops are tonic and slightly hypnotic. The fluid extract was formerly official in the U. S. Ph. **tinctura humuli.** A tincture of hop strobiles [U. S. Ph., 1890]. [Lat., *humulus*, from *humus*, the earth.]

hu'mus. The brown or black substances found in vegetable mold, peat, and decayed wood; produced by the action of mineral acids or of alkali upon carbohydrates. [Lat., *humus*.]

hunch'back. See *kyphosis*.

hun'ger. The desire for food. [Ang.-Sax., *hungar*, *hungor*.]

hunte'rian. Described by John Hunter. See *h. chancre*, under *chancre*. [John Hunter, English anatomist, 1728-1793.]

Hunter's cell. A triangular c. running through the adductor magnus muscle of the thigh, giving passage to the femoral artery and vein and the internal saphenous nerve. **H's ligament.** See *round ligament of the uterus*, under *ligament*.

Huntington's chorea. A form of ordinary chorea which is directly hereditary. [George Huntington, Amer. physician, born 1850.]

Hunyadi János water (hoon'yah-de yah'nosh). A mineral water obtained in Budapest, Hungary, containing free car-

bonic acid and sodium sulphate and magnesium sulphate, with sodium chlorid, calcium carbonate, a little potassium sulphate and strontium carbonate, and a very little iron and alumina.

Huppert's reaction for bile pigments.

Consists of precipitating the bilirubin with lime water or calcium chlorid. The washed precipitate is dissolved in alcohol, acidified with hydrochloric acid and heated to boiling for a time. If bile pigments are present an emerald green or bluish green color is obtained.

Hürt'hle's manometer. A m. consisting essentially of a very small tambour covered with rubber dam. The m. and the tube connecting it with the artery or the heart are filled with liquid. This m. is valuable for measuring accurately very rapid changes of pressure, as in the interior of the ventricles during systole.

Hutchinson's teeth. A malformation of the teeth, especially the upper central incisors, supposed to be peculiar to children having hereditary syphilis, in which the teeth are short, narrow from side to side at their edges, very thin, and displaying a central cleft on their free edge. **H's triad.** The conjunction of notched teeth, interstitial keratitis, and otitis; observed in hereditary syphilis. [Sir Jonathan Hutchinson, Eng. physician, 1828-1913.]

Huxham's tincture. Compound tincture of cinchona. [John Huxham, Eng. physician, 1692-1768.]

Huxley's layer. A layer two or three cells deep, of flattened, polygonal, nucleated cells, forming the inner part of the inner root sheath of the hair, and lying between the cuticula of the inner root sheath of Henle's layer. [Thomas Henry Huxley, Eng. physiologist and biologist, 1825-1895.]

Huygens' ocular. A negative ocular designed by Huygens for the telescope, now very largely used for the compound microscope. [Christian Huygens, Dutch physicist, 1629-1695.]

hyaline (hi'al-in). Glassy, crystalline, transparent. **h. degeneration.** The deposit of a clear, transparent homogeneous material between the connective tissue of the thyroid gland, of the kidney in chronic interstitial nephritis, and of the corpus luteum, and as well as in tubercles, in gummata, in malignant tumors. It is also found in the adventitia of small arteries and the walls of capillaries. The deposit is probably of glycoprotein nature. **h. fibroid.** Of Gull and Sutton, h. and fibroid (said of a substance observed in chronic Bright's disease, with contracted kidney, found between the tubules and around the malpighian bodies and the walls of minute arteries). [Gr., *yalos*, glass.]

hyalinosis (hi-al-in-o'sis). Waxy or hyaline degeneration. [Gr., *yalinos*, of crystal or glass.]

hyalitis (hi-al-i'tis). Inflammation of the entire vitreous humor. [Gr., *yalos*, glass, and *itis*, inflammation.]

hyalo-. Combining form of the Gr., *yalos*, glass.

hyalogen (hi-al'o-jens). A name given by Krunkenberg to a class of compound proteins which contain a carbohydrate. [*Hyalin*, + Gr., *gennan*, to produce.]

hyaloid. Smooth, glassy. **h. fossa.** See *lenticular fossa*, under *fossa*. **h. membrane.** See under *membrane*. [Gr., *yalos*, glass, + *eidos*, resemblance.]

hyalomucoid (hi'al-o-mu'koyd). The mucoid of the vitreous humor. Isolated by Morner.

hyaloplasm (hi'al-o-plasm). 1. The fundamental hyaline substance of cells. 2. The more homogeneous and fluid part of the protoplasm of the formative cell.

hyaloserousitis (hi'al-o-se-ro-si'tis). Chronic inflammation of the serous membranes; a dense fibrohyaline investment of the tissues. [Gr., *yalos*, glass, + *serum*, + *itis*, inflammation.]

hybrid (hi'brid). 1. Of mixed origin, cross-bred, mongrel (said of animals and plants). 2. Of a disease, due to more than one kind of poison. [Lat., *hibrida*, or *hybrida*, a mongrel, probably from the Gr., *ybris*, wanton violence.]

hybridism (hi'brid-izm). The act of making or becoming hybrid.

hybridization (hi-brid-i-za'shun). The process, or the fact, of the formation of a hybrid (disease, animal, or plant).

hydantoin (hi-dan'toin). Glycolyl urea.

hydatid (hi-dat'id). 1. An echinococcus or the vesicle containing it. 2. A name for certain bulbous cystlike remnants of atrophied embryonic structures, one of which, the h. of Morgagni, hangs by a pedicle from the fimbriated extremity of the oviduct and another from the epoöphoron. **alveolar h's.** The nerve sacs at the roots of the teeth. **barren h.** A h. in which there are no echinococcus heads developed upon the endocyst, but fluid alone is contained within it. **fertile h.** A h. the endocyst of which is supplied with minute buds or gemmae, which eventually form secondary and tertiary cysts. **h. disease.** A condition produced by the cysts in various portions of the body. **h. mole.** A tumor of the uterus consisting of multiple cysts containing fluid and formed from the chorionic villi. **h. of Morgagni.** Syn.: *morgagnian cyst*. The only true variety is the cystic dilatation of the longest of the fimbriae of the fallopian tube. **sessile h.** See *cyst of the müllerian duct*, under *cyst*. **stalked h.** Cystic dilatation at the upper pole of the testis or globus major of the epididymis. [Gr., *ydatis*, a drop of water.]

hydatidiform (hi-dat-id'e-form). Having the form or appearance of an hydatid. **h. mole.** A cystic disease of the chorion characterized by the formation of many grapelike formations.

hydatidocoele (hi-dat-id'o-sēl). An oscheocoele containing hydatids. [Gr., *ydatis*, a hydatid, + *kele*, a tumor.]

hydatogenesis (hi-dat-o-jen'es-is). The formation of water, or of a watery fluid,

in the body. [Gr., *ydatis*, a drop of water, + *genesis*, a production.]

hydatoid (hi'dat-oid). 1. Waterlike. 2. Resembling a hydatid. 3. As a n., the aqueous humor and its supposititious investment. [Gr., *ydatis*, a drop of water, + *eidōs*, resemblance.]

Hydra (hi'drah). A genus of tapeworms in the larval state. **H. hydatula**. See *Cysticercus tenuicollis*. [Gr., *ydra*.]

hydracetin (hi-dras'e-tin). Of Guttman, pure acetphenylhydrazid, $C_6H_5NH-NH-C_2H_5O$, formerly used in an impure state under the name of pyrodim. It is decidedly antipyretic and antirheumatic. It has been used in the form of an ointment in psoriasis. [Gr., *ydra*, a water serpent.]

hydracid. Hydrogen acid.

hydragogue (hi'dra-gog). Causing copious watery evacuations, especially by the bowels. [Gr., *ydor*, water, + *agein*, to conduct.]

hydralcool (hi-dral'ko-hol). Of Beral, brandy or spirit containing 22 per cent. of alcohol. [Gr., *ydor*, water, + *alcohol*.]

hydralogen (hi-dral'o-jen). Hydrochloric acid. [Gr., *ydor*, water, + *als*, salt, + *gennan*, to engender.]

hydramnion, hydramnios (hi-dram'ne-on, hi-dram'ne-os). Dropsy of the amnion; excess of amniotic fluid. [Gr., *ydor*, water, + *amnion*, the amnion.]

hydramyl (hi'dram-il). Amyl hydrid; used as an antiseptic. **h. ether**. A local anesthetic made by mixing equal parts of h. and ether.

Hydrangea arborescens (hi-dran'je-ah-ar-bor-es'ens). Seven-barks, the common h. of South America. The root contains *hydrangin* and is diuretic.

hydrangin (hi-dran'jin). A crystalline glucosid obtained from the root of *Hydrangea arborescens*.

hydrargicus (hi-drar'ji-kus). Mercurial.

hydrar'gochlorid. A compound of mercury bichlorid with another chlorid.

hydrargotin (hi-drar'go-tin). Mercuric tannate.

hydrargyrate (hi-drar'ji-rät). Of, pertaining to, or containing mercury. [Gr., *ydrargyros*, quicksilver.]

hydrargyria (hi-drar-jir'e-ah). 1. See *eczema mercuriale*. 2. Chronic mercurial poisoning. **h. febrilis**. A variety of h. accompanied by fever. **h. maligna**. A very severe form of h. or mercurial eczema. **h. mitis**. See *eczema mercuriale*, under *eczema*. [Gr., *ydrargyros*, quicksilver, artificially prepared from cinnabar ore.]

hydrargyric (hi-drar'jir-ik). Mercuric, pertaining to mercury.

hydrargyris (hi-drar-ji-ris). 1. Of Bonnsdorf, an amalgam. 2. In the pl., *hydrargyrides*, of Beudant, a family of ponderable bodies having mercury as their type. [Gr., *ydrargyros*, quicksilver.]

hydrargyrokaliūm (hi-drar'ji-ro-ka'le-um). A compound of mercury and potassium.

hydrargyrol (hi-drar'ji-rol). Mercury

paraphenylthionate; a brown substance used as an antiseptic.

hydrar'gyropneumat'ic. Pertaining to mercury and to a gas. [Gr., *ydrargyros*, quicksilver, + *pneuma*, air.]

hydrargyroseptol (hi-drar'jir-o-sep'tol). The compound $C_6H_5N.O.SO_3Hg + 2NaCl$, used in syphilis.

hydrargyrosis (hi-drar-ji-ro'sis). 1. Mercurial poisoning. 2. The use of mercurial frictions or fumigations. [Gr., *ydrargyros*, quicksilver.]

hydrargyrum (hi-drar'ji-rum). 1. Elementary mercury or quicksilver. See *mercury*. 2. Mercury purified by distillation for medicinal use. **emplastrum**

hydrargyri. A preparation consisting of metallic mercury triturated with some fatty matter till the separate globules of the metal cease to be visible, and incorporated with lead plaster. The amount of mercury in the different preparations is 30 per cent. [U. S. Ph.], 33 per cent. [Br. Ph.]. **h. ammoniatum**. Ammoniated mercury, white precipitated ammoniochlorid of mercury. A white powder, representing about 80 per cent. of metallic mercury. It is obtained by precipitating a solution of mercuric chlorid with ammonia water [U. S. Ph., Br. Ph.].

h. auratum. A homeopathic trituration of gold amalgam. **h. cum creta**. Mercury with chalk; gray powder. The U. S. preparation is made by triturating 38 parts of mercury with 10 of clarified honey and 57 parts of prepared chalk reduced by evaporation to 100 parts. The British preparation is made by triturating together 1 part of mercury and 2 parts of prepared chalk until the mercury is extinguished and the mixture has a uniform gray color [U. S. Ph., Br. Ph.].

hydrargyri - paraphenol - sulphonas. Occurs in brownish scales obtained by dissolving yellow mercuric oxid in paraphenol-sulphuric acid and evaporating. Used as a germicide. **h. peptonatum**. A preparation made by dissolving 3 parts of dry peptone in 10 parts of water and stirring into this mixture a solution of 1 part of corrosive sublimate and 20 parts of water, then filtering the resulting precipitate and dissolving in 3 parts of common salt and 50 parts of water. The final solution is diluted so that 1 c.c. shall contain 1 centigram of corrosive sublimate, and is used for hypodermic injection. **h. sulpho-ichthyolicum**. Of Unna, a mixture of 10 parts of sodium sulphichthyolate and 3 of corrosive sublimate. **linimentum hydrargyri**. Liniment of mercury, made by mixing 5 parts of mercurial ointment with 8 parts of camphor liniment and 4 parts of solution of ammonia [Br. Ph.]. **liquor hydrargyri nitratis**. A preparation containing 60 per cent. of mercuric nitrate in solution [U. S. Ph.]. **liquor hydrargyri nitratis acidus**. A colorless, very strong acid and caustic preparation of mercuric nitrate, $Hg(NO_3)_2$, dissolved in water with nitric acid in excess. It contains about 33 per cent. of mercury [Br.

Ph.]. **liquor hydrargyri perchloridi**. Syn.: *liquor mercurialis Van Swieten*. A solution of 1 part of corrosive sublimate in 1,000 parts of water [Br. Ph.]. **lotio hydrargyri flava**. Syn.: *aqua phagedaenica*. Yellow lotion of mercury; yellow wash. Made by adding 4.6 parts of corrosive sublimate to 1,000 parts of lime water [Br. Ph.]. **lotio hydrargyri nigra**. Black lotion of mercury; black wash. Made by triturating calomel with glycerin and lime water. [Br. Ph.]. **massa hydrargyri**. Syn.: *pilulae hydrargyri* [Br. Ph., U. S. Ph., 1870]. Mass of mercury, blue mass, blue pill, a preparation consisting of mercury incorporated into a pilular mass in a state of such fine subdivision that no metallic globules can be discovered with a glass of low magnifying power. The U. S. preparation contains 33 per cent. of mercury with glycerin, althaea, glycerin, and honey of rose. The Br. Ph. directs an essentially similar preparation [U. S. Ph.]. **pilulae hydrargyri**. See *massa hydrargyri*. [Br. Ph.]. **pilulae hydrargyri subchloridi compositae**. Compound pill of mercurous chlorid; Plummer's pill. It contains mercurous chlorid, sulphurated antimony and guaiacum resin [Br. Ph.]. **unguentum hydrargyri**. Mercurial (or blue) ointment; consisting of 50 per cent. [U. S. Ph.] or 30 per cent. [Br. Ph.] of metallic mercury intimately mixed with fatty matter. **unguentum hydrargyri ammonii**. White precipitate ointment. An ointment containing 10 per cent. of ammoniated mercury with hydrous wool-fat and petrolatum [U. S. Ph.] or benzoated lard [Br. Ph.]. **unguentum hydrargyri cinereum**. See *unguentum hydrargyri*. **unguentum hydrargyri compositum**. An ointment made by diluting mercurial ointment with yellow wax, camphor, and olive oil [Br. Ph.]. **unguentum hydrargyri dilutum**. Mercurial ointment so diluted with petrolatum that it contains 33 per cent. of metallic mercury [U. S. Ph.]. **unguentum hydrargyri iodidi rubri**. A preparation consisting of 1 part of mercuric iodid and 24 parts of benzoated lard [Br. Ph.]. **unguentum hydrargyri nitratis**. A preparation consisting of mercury dissolved in nitric acid, and mixed with some fatty matter. The U. S. Ph. preparation is made by adding nitric acid to melted lard and mixing with a solution of mercury in nitric acid; the Br. Ph. preparation is essentially similar [U. S. Ph., Br. Ph.]. **unguentum hydrargyri nitratis dilutum**. An ointment made by mixing 1 part of unguentum nitratis with 4 parts of soft paraffin or petrolatum [Br. Ph.]. **unguentum hydrargyri oleatis**. An ointment consisting of 1 part of oleated mercury and 3 parts of benzoated lard [Br. Ph.]. **unguentum hydrargyri oxidi flavi**. A preparation consisting of yellow mercuric oxid mixed with water, hydrous wool-fat and petrolatum [U. S. Ph.] or with soft paraffin [Br. Ph.]. The U. S. Ph. preparation

contains 10 per cent., that of the Br. Ph. 2 per cent., of yellow mercuric oxid. **unguentum hydrargyri oxidi rubri**. An ointment containing 10 per cent. of red mercuric oxid mixed with water, hydrous wool-fat and petrolatum [U. S. Ph.] or with petrolatum [Br. Ph.]. **unguentum hydrargyri subchloridi**. Ointment of calomel; consisting of 1 part of calomel mixed with 4 parts of benzoated lard [Br. Ph.]. [Gr., *ydor*, water, + *argyros*, silver.]

hydrargyrus (hi-dra'r'ji-rus). See *hydrargyrum*. [Gr., *ydor*, water, + *argyros*, silver.]

hydrarthrosis. Syn.: *articular dropsy*, *dropsy of the joints*. Dropsy of an articular cavity. [Gr., *ydor*, water, + *arthron*, joint.]

hydrastin (hi-dras'tin). 1. An alkaloid, $C_{21}H_{33}NO_6$, contained in the rhizome of *Hydrastis canadensis*. It acts on the central nervous system, somewhat like strychnin. Numerous preparations purporting to be salts of hydrastin are mixtures consisting largely of berberin, in which case they are of a yellow color, hydrastin and its salts being white. [U. S. Ph., *hydrastina*.] 2. A resinoid, consisting partly of berberin, from hydrastis.

hydrastinin (hi-dras'tin-in). An alkaloid, $C_{21}H_{33}NO_6$, obtained by oxidizing hydrastin with nitric acid. It exerts a vasoconstrictor action, causing increase in blood pressure when used systematically or blanching of the tissues when applied locally to mucous membranes. **h. hydrochlorid**. $C_{21}H_{33}NO_2 \cdot HCl$. A compound of h. and hydrochloric acid; readily soluble in water, preferred to uncombined base for medicinal use. [Lat., *hydrastinnæ hydrochloridum*.] [U. S. Ph.]

Hydrastis (hi-dras'tis). 1. Indian turmeric; a genus of the *Ranunculaceae*. 2. Of the U. S. Ph., the rhizome and rootlets of *H. canadensis*. **extractum h. fluidum**. A fluid extract of the rhizome of *H. canadensis* [U. S. Ph.]. **H. canadensis**. Golden seal; a small herb found in bog meadows from Canada to Carolina and Kentucky. Its rhizome contains berberin and hydrastin. **tinctura h.** A tincture of the rhizome of *H. canadensis* [U. S. Ph.]. [Gr., *ydor*, water.]

hydrastol (hi-dras'tol). A certain proprietary preparation of hydrastis.

hy'dratable. Capable of being hydrated or converted into a hydrate.

hydrate (hi'drat). 1. Originally, a compound of an element or radicle with water. The term is still used in this sense in speaking of crystalline substances in which water (water of crystallization) forms a part of the chemical or physical organization. 2. In the usual sense of the term, a compound of a metal or radicle with hydroxyl (OH). [Gr., *ydor*, water.]

hydrated (hi'dra-ted). 1. Compounded with or containing water, either simply admixed or as an essential part (e. g., a h. crystal is one containing water of

- crystallization). 2. Containing hydroxyl (OH); forming a hydrate (hydroxid), or combined with a hydrate (e. g., h. iron oxid).
- hydratic** (hi-drat'ik). Having the character of a hydrate.
- hydration** (hi-dra'shun). The act or process of mixing or combining with water; conversion into a hydrate; also the state of being thus mixed, combined, or converted. [Gr., *ydor*, water.]
- hydrazin** (hi'dra-zin). Syn.: *diamid*. 1. NH_2-NH_2 , a liquid with strong basic properties. It has strong reducing properties. 2. A derivative of this compound, formed by substituting an alcohol radicle for 1 or 2 atoms of hydrogen (primary and secondary h's).
- hydrazone** (hi'dra-zōn). A compound formed by allowing an aldehyd to react chemically with hydrazins.
- hydremla** (hi-dre'me-ah). A condition in which the watery constituent of the blood is abnormally increased. [Gr., *ydor*, water, + *aima*, blood.]
- hydrecephalocoele** (hi-dren-sef'al-o-sēl). An encephalocoele which, in addition to brain substance, contains a portion of one or both ventricles filled with fluid. [Gr., *ydor*, water, + *egkephalos*, the brain, + *kele*, a tumor.]
- hydrecephalus** (hi-dren-sef'el-us). See *hydrecephalus*.
- hydriatric** (hid-re-at'rik). Relating to hydrotherapy.
- hydric** (hi'drik). 1. Containing water. 2. Combined with hydrogen; a term applied especially to names of the hydrogen acids considered as salts of hydrogen (e. g., h. chlorid = hydrochloric acid); also applied especially to acid salts, because all the hydrogen of the acid characteristic is not replaced by the basic element. See *dihydric*, *monohydric*, and *trihydric*. [Lat., *hydricus*, from Gr., *ydor*, water.]
- hydrid** (hi'drid). A compound consisting of an element or a radicle united directly with water. [Lat., *hydridum*, from Gr., *ydor*, water.]
- hydriodas** (hi-dri'od-as). See *hydriodate*.
- h. kalicus**. Potassium iodid.
- hydriodate** (hid-ri-o-dat). A compound of an element or radicle with hydriodic acid. The term is sometimes used in the same sense as iodid, but usually signifies an addition compound of hydriodic acid with ammonia, an ammonia derivative, or a radicle acting in the same manner. [Lat., *hydriodas*.]
- hydriodic** (hid-ri-od'ik). Compounded of hydrogen and iodine. **h. acid**. See under *acid*. **h. ether**. Ethyl iodid.
- hydriodid** (hid-ri'od-id). A compound of hydrogen and iodine with an element or radicle. The term is now applied only to compounds of bases (e. g., alkaloids) with hydriodic acid, in which the former are (apparently) combined directly with the latter. See *hydriodate*.
- hydro-**. A prefix from the Gr., *ydor*, water; used to denote relationship to water or to hydrogen.
- hydroa** (hi-dro'ah). A name formerly given to many skin diseases characterized by a bulbous eruption. The only one surviving is *h. vaccini-forme*. **h. vaccini-forme**. Syn.: *h. aestivale*, *h. puerorum*, *recurrent summer eruption*. This is a recurrent inflammatory affection of the skin excited by extremes of temperature and characterized by the appearance upon the exposed parts of a vesicular eruption which upon disappearing leaves scars. It is a rare disease. [Gr., *ydor*, water.]
- hydrobilirubin** (hi'dro-bil-e-ru'bin). A reddish brown, amorphous pigment, $\text{C}_{32}\text{H}_{40}\text{N}_4\text{O}_7$, found in the feces and also, especially in fevers, in the urine. It is formed by reducing bilirubin with nascent hydrogen; probably identical with acrobilin.
- hydroblepharon** (hi'dro-blef'ar-on). Edema of the eyelids. [Gr., *ydor*, water, + *blepharon*, eyelid.]
- hydrobromate** (hi-dro-bro'mät). A salt of hydrobromic acid. The term is occasionally used in the same sense as bromid, but generally denotes an addition compound of hydrobromic acid with a radicle of the ammonia type; e. g., an alkalioid. Such compounds are more appropriately called hydrobromids. [Lat., *hydrobromas*.]
- hydrobromic** (hi-dro-bro'mik). Compounded of or containing hydrogen and bromine. **h. acid**. See under *acid*. **h. ether**. Ethyl bromid.
- hydrobromid** (hi-dro-bro'mid). A compound of an element or a radicle with hydrogen and bromine. A compound consisting of some base in combination with hydrobromic acid.
- hydrobromidid** (hi'dro-brom-i'o-did). A compound of hydrogen, bromine, and iodine with the same base.
- hydrocarbon** (hi-dro-kar'bon). A compound of carbon and hydrogen. The h's constitute a number of homologous series, each member of each series being formed from the preceding member by the addition of the common difference CH_2 . Consequently, in each series, the relation between the number of hydrogen and the number of carbon atoms in each member is the same; and this relation may accordingly be expressed by a general formula which will represent every member of that particular series. There are several classes of h's, namely, the saturated (paraffins, fatty h's), the unsaturated, the polymethylene, and the aromatic. **normal h.** A h. which has its carbon atoms united to form an unbranched chain. [Gr., *ydor*, water, + Lat., *carbo*, coal.]
- hydrocarbonate** (hi-dro-kar'bon-ät). 1. A hydrated carbonate. 2. A compound of a carbonate and a hydrate. 3. An acid carbonate. [Lat., *hydrocarbonas*.]
- hydrocarbon'ic**. Containing both hydrogen and carbon.
- hydrocardia** (hi-dro-kar'de-ah). Serous effusion into the pericardium. [Gr., *ydor*, water, + *kardia*, the heart.]
- hydrocele** (hi'dro-sēl). A collection of clear watery fluid especially in the tunica vaginalis testis, the vaginal process of the spermatic cord or the canal of Nuck.

- It may be idiopathic or symptomatic, acute or chronic. Its varieties are: **congenital h.**, **encysted h. of the cord**, **h. of an old hernial sac**, **h. of the processus funicularis**, **infantile h.**, **inguinal h.**, **multilocular h. of the cord**. [Gr., *ydor*, water, + *kele*, a tumor.]
- hydrocephalic** (hi-dro-sef'al'ik). Pertaining to, affected with, or of the nature of hydrocephalus. [Gr., *ydor*, water, + *kephale*, head.]
- hydrocephalus** (hi-dro-sef'al-us). Syn.: *cerebral dropsy*. Dropsy of the brain. An accumulation of serous fluid in undue amount within the cavity of the cranium. The head, especially the forehead and upper portion of the head, is enlarged. The brain is atrophied, the intellect is weakened, and convulsions are common. **acute internal** (or **tuberculous**) **h.** As ordinarily understood, tuberculous meningitis. **anencephalous h.** H. in which there is little or no development of the brain, the space it should occupy in the calvaria being filled by hydrocephalic fluid. **internal h.** Syn.: *dropsy of the ventricles*. H. in which there is a serous effusion into the ventricle of the brain. [Gr., *ydor*, water, + *kephale*, head.]
- hydrocerin** (hi-dro-se'rin). A waxy paste, containing vaselin, water, and wax, used like lanolin. [Gr., *ydor*, water, + *keros*, wax.]
- hydrochemistry** (hi''dro-kem'is-tre). The chemistry of water and other liquids. [Gr., *ydor*, water, + *chemeia*, chemistry.]
- hydrochinon** (hi-dro-kin'on). See *hydroquinon*.
- hydrochlorate** (hi-dro-klo'rät). A compound of hydrochloric acid. It is occasionally used in the sense of chlorid, but generally denotes an addition compound of hydrochloric acid with a radicle of the ammonia type, an alkaloid, for instance.
- hydrochloratus** (hi-dro-klo-ra'tus). Containing hydrochloric acid; muriated; with the name of a base the hydrochlorid or the chlorid of that base.
- hydrochloric** (hi-dro-klo'rik). 1. Composed of chlorin and hydrogen; muriatic. 2. Prepared with h. acid, e. g., h. solution of arsenic. **chlorinated h. ether**. Ethylidene dichlorid. **h. acid**. See *acid*. **h. ether**. Ethyl chlorid.
- hydrochlorid** (hi-dro-klo'rid). A compound of an element or a base with hydrochloric acid. It is used instead of hydrochlorate, as being less ambiguous.
- hydrochlori'nas**. See *hydrochlorid* and *chlorid*.
- hydrocollidin** (hi-dro-kol'lid-in). A poisonous ptomain, $C_8H_{15}N$, found among the products of putrefaction of albumin.
- hydrocolpos** (hi-dro-kol'pos). A vaginal retention cyst containing a watery fluid. [Gr., *ydor*, water, + *kolpos*, vagina.]
- hydrocoridin** (hi-dro-kor'id-in). The ptomain with the formula, $C_{10}H_{17}N$.
- hydrocotarinin** (hi''dro-ko-tar'nin). An alkaloid, $C_{12}H_{15}NO_3$, existing in opium in very small amounts. It is quite toxic.
- hydrocotoin** (hi-dro-ko'to-in). Syn.: *cotoin*. A substance, $C_{15}H_{14}O_4$, obtained from coto bark.
- Hydrocotyle** (hi-dro-ko'til-e). Pennywort; a genus of umbelliferous plants. **H. asiatica**. Asiatic water pennywort. The leaves are toasted and given in infusion in the bowel complaints of children. [Gr., *ydor*, water, + *kotyle*, a cup.]
- hydrocyanate** (hi-dro-si'an-ät). A salt of hydrocyanic acid.
- hydrocyanic acid** (hi-dro-si-an'ik as'id). See under *acid*.
- hy'drocyst**. A cyst containing water. [Gr., *ydor*, water, + *kystis*, a cyst.]
- hy''drocystoma**. An eruption of deeply seated vesicles, due to retention of fluid in the sweat-follicles.
- hydrodiffusion** (hi''dro-dif-fu'shun). The physical mingling of two miscible fluids having no chemical affinity, occurring without difference of pressure and in consequence of the migratory movements of the molecules.
- hydrodynamics** (hi''dro-di-nam'iks). The mechanics of fluids (especially liquids) in a state of motion. [Gr., *ydor*, water, + *dynamis*, power.]
- hydro-electric** (hi''dro-e-lek'trik). Of or pertaining to electricity evolved by the action of water or steam.
- hydro-electricity** (hi''dro-e-lek-tris'it-e). Electricity generated by water and steam. [Gr., *ydor*, water, + *elektron*, amber.]
- hy'dro-ergot'inin**. Of Kraft. See *ergotoxin*.
- hy'dro-et'ron**. See *ascites*.
- hydroferrocyanid** (hi''dro-fer-ro-si'an-id). Also written *hydroferrocyanate* and *ferrocyanhydrate*. A salt of hydroferrocyanic acid.
- hydrofluosilicate** (hi''dro-flu-o-sil'ik-ät). A salt of hydrofluosilic acid.
- hydrogalvanic** (hi''dro-gal-van'ik). Of or pertaining to galvanism generated by the action of fluids.
- hydrogel** (hi''dro-jel). The name given to the gelatinous mass obtained upon cooling a warm solution of certain colloids such as gelatin, agar-agar, etc.
- hydrogen** (hi''dro-jen). A non-metallic gaseous element. It is one of the components of water and of many other inorganic substances and is a constant constituent of organic compounds. It is a colorless, tasteless, odorless, inflammable gas, and is the lightest substance known, its sp. gr. (air = 1) being 0.0695 and to water as 1 to 11.160. Its density is, accordingly, selected as the unity of density for gases. Under a very low temperature, combined with the application of very great pressure, it is liquefied, forming a bluish, opaque liquid. In composition, it forms the essential element in the class of compounds called acids, which are hence denominated salts of h., and, united with carbon, it forms the important class of organic compounds called hydrocarbons. In compounds it never replaces more than one atom of another

element, and hence its combining power is regarded as a unit, to which that of other elements is referred, and their quantivalence is measured by the number of atoms of h. which they can replace. Atomic weight 1.008 (O = 16.0). Chemical symbol H. carburetted h. See *ethylene* and *methane*. gaseous h. **phosphid.** See *phosphoret h.* h. acetate. See *acetic acid*, under *acid*. h. ammonium and sodium phosphate. See *sodium ammonium* and *h. phosphate*, under *sodium*. h. antimonid. Antimonureted h.; a colorless, odorless, combustible gas, SbH₃, produced by the action of nascent h. on the reducible compounds of antimony. h. arsenid. Syn.: *arsenamin*, *arsine*. Arseniureted or arseneted h.; a compound of arsenic and h. A colorless, very poisonous gas, AsH₃, having a garliclike odor and a neutral reaction, burning with a greenish flame and soluble in water free from air. h. binoxid. See *h. peroxid.* h. bromid. See *hydrobromic acid*, under *acid*. h. chlorid. See *hydrochloric acid*, under *acid*. h. cyanid. See *hydrocyanic acid*, under *acid*. h. dioxid. See *h. peroxid.* h. fluorid. See *hydrofluoric acid*, under *acid*. h. iodid. See *hydroiodic acid*, under *acid*. h. monosulphid. See *sulphureted h.* h. monoxid. Water. h. nitrate. See *nitric acid*, under *acid*. h. oxid. See *h. monoxid* and *h. peroxid.* h. peroxid. H. dioxid, oxygenized water; a colorless, oily liquid, H₂O₂, devoid of odor, and having an astringent and bitter taste. It is soluble in water and in ether. H. peroxid is readily decomposed, and, owing to the facility with which it gives up one of its atoms of oxygen, it acts as a strong oxidizing, bleaching, and disinfectant agent. It is used as an antiseptic. h. phosphid. Syn.: *phosphin*. 1. Gaseous h. phosphid, or phosphureted h. 2. Liquid h. phosphid. 3. Solid h. phosphid. h. sulphate. Sulphuric acid. h. sulphid. H. monosulphid or sulphureted h., a gas of disagreeable odor, slightly soluble in water. Used in quantitative and qualitative analysis. occluded h. H. absorbed by palladium or other metals. By some, h. is held under these circumstances to act as a metal, and to form an alloy with the palladium. phosphoret h. Phosphin, gaseous h., phosphid; a colorless gas, PH₃, having an odor like that of rotten fish. It is very inflammable and acts as a powerful poison when inhaled. solution of h. peroxid. A slightly acid aqueous solution of h. dioxid, (H₂O₂), which contains 3 per cent. by weight of absolute H₂O₂. This official solution of h. peroxid is popularly termed "peroxid" or "peroxid of hydrogen." [Lat., *aqua hydrogenii dioxidi*] [U. S. Ph.]. Liqueur hydrogenii peroxid [Br. Ph.]. sulphureted h. H. monosulphid, sulphur hydrid. A colorless gas, H₂S, having a strong, disagreeable odor of rotten eggs and a sweetish taste, condensing under pressure into a colorless liquid. It has

been used by rectal injection as a remedy for pulmonary tuberculosis. [Gr., *ydor*, water, + *gennan*, to engender.]

hydrogenated (hi'dro-jen-a-ted). Containing hydrogen in combination.

hydrogenation (hi-dro-jen-a'shun). The act or process of causing to combine with hydrogen.

hydrogenesis (hi-dro-jen'es-is). Formation or collection of a watery fluid. [Gr., *ydor*, water, + *gennan*, to engender.]

hydrogen exponent. Symbol pH, term introduced to express the acidity, hydrogen ion concentration in blood, urine, etc. It is the logarithm (negative mantissa and characteristic) of the number expressing the grams of hydrogen ions in a liter of the solution, but is written without the minus sign. Thus pH of urine is 4.82 to 7.45 (concentration 0.00016n to 0.000008n).

hydrogenous (hi-droj'en-us). Pertaining to hydrogen. [Gr., *ydor*, water, + *gennan*, to engender.]

hydrogol (hi'dro-gol). A watery solution of colloid silver.

hydrohemostat (hi'dro-hem'o-stat). An instrument for arresting hemorrhage by hydrostatic pressure. [Gr., *ydor*, water, + *aima*, blood, + *istanai*, to make to stand.]

hydrohemothorax (hi'dro-hem-o-tho'raks). A condition in which hydrothorax and hematothorax are associated. [Gr., *ydor*, water, + *aima*, blood, + *thorax*, the chest.]

hydroid (hi'droyd). Resembling water. [Gr., *ydor*, water, + *eidos*, resemblance.]

hydrokall (hi-drok'al-i). A supposititious compound of hydrogen and potassium.

h. carbonicum. Acid potassium carbonate. **h. tartaricum.** Acid potassium tartrate.

hydrokinetics (hi'dro-kin-et'iks). The science of the motions of fluids and the forces acting upon fluids. [Gr., *ydor*, water, + *kinetikos*, for putting in motion.]

hydroki'non. See *hydroquinon*.

hydro lactometer (hi'dro-lak-tom'et-er). An instrument for measuring the amount of water present in milk. [Gr., *ydor*, water, + Lat., *lac*, milk, + Gr., *metron*, measure.]

hydrolein (hi-dro'le-in). A proprietary emulsion of cod-liver oil, borax, and pancreatin. [Gr., *ydor*, water, + Lat., *oleum*, oil.]

hydrology (hi-drol'o-je). That department or division of medical science which treats of the use of waters, especially mineral waters, for therapeutic purposes. See *hydrotherapy*. [Lat., *hydrologia*, from Gr., *ydor*, water, + *logos*, understanding.]

hydrolysis (hi-drol'is-is). Syn.: *hydrolytic disassociation*. Decomposition due to the absorption of water; chemic decomposition in which the compound breaks up after absorbing one or more water molecules. [Gr., *ydor*, water, + *lysis*, loosening.]

hydrolytic (hi-dro-lit'ik). 1. Causing

- elimination of water. 2. Pertaining to or causing hydrolysis. **h. cleavage.** A breaking up of a chemical compound by hydrolysis. **h. disassociation.** See *hydrolysis*.
- hydrolyze.** To change by hydrolysis.
- hydroma** (hi-dro'mah). A morbid growth containing a watery fluid. [Gr., *ydroma*, from *ydor*, water, + *oma*, tumor.]
- hydromel** (hi'dro-mel). Any medicinal liquid mixture containing honey. [Gr., *ydor*, water, + *meli*, honey.]
- hydromeningocele** (hi''dro-men-in'go-sel'). A cystic tumor of the meninges projecting through the skull. [Gr., *ydor*, water, + *menix*, membrane, + *kele*, hernia.]
- hydrometer** (hi-drom'et-er). An instrument for measuring the density, etc., of fluids. **Baumé's h.** See under *Baumé*. **h. of constant volume.** A h. in which, like Nicholson's h. and Fahrenheit's h., the stem is always immersed to the same extent, while the load which the h. carries varies in each case and by the amount of its variation indicates the specific gravity. **h. of constant weight.** A h., such as Baumé's, in which the load remains constant and the amount to which the stem is immersed varies, the amount of the variation indicating the specific gravity sought. **h. of variable volume.** See *h. of constant weight*. **h. of variable weight.** See *h. of constant volume*. **Nicholson's h.** See under *Nicholson*. [Gr., *ydor*, water, + *metron*, a measure.]
- hydrometra** (hi-dro-me'trah). A collection of watery fluid in the uterus. [Gr., *ydor*, water, + *metra*, uterus.]
- hydrometric** (hi-dro-me'trik). Of or pertaining to the hydrometer or to its employment.
- hydrometry** (hi-drom'et-re). The measurement of specific gravities by means of the hydrometer. [Gr., *ydor*, water, + *metron*, a measure.]
- hydromphalus** (hi-drom'fa-lus). A tumor at the umbilicus containing fluid. [Gr., *ydor*, water, + *omphalos*, the navel.]
- hydromyelia** (hi''dro-mi-e'le-ah). Dilatation of the central canal of the spinal cord by fluid. [Gr., *ydor*, water, + *myelia*.]
- hydromyelus** (hi-dro-mi'e-lus). Dilatation of the central spinal canal. [Gr., *ydor*, water, + *myelos*, marrow.]
- hydromyoma** (hi-dro-mi-o'mah). A cystic myoma with serous fluid. [Gr., *ydor*, water, + *myoma*.]
- hydronaphthol** (hi-dro-naf'thol). A derivative of naphthol used as a disinfectant.
- hydronephrosis** (hi-dro-ne-fro'sis). An abnormal collection of urine in the pelvis of the kidney with distention of the pelvis and calices and pressure atrophy of the secreting substance of the organ. [Gr., *ydor*, water, + *nephros*, a kidney.]
- hy''dro-oligocythe'mia.** A certain form of secondary anemia in which the proportion of the serum to the corpuscular elements in the blood is much increased. It is commonly found after mineral poisoning, especially with lead or mercury. [Gr., *ydor*, water, + *oligos*, few, + *kytos*, a cell, + *aima*, blood.]
- hydropathy** (hi-drop'ath-e). Syn.: *water cure*. Originally a disease caused by water; dropsy. [Gr., *ydor*, water, + *pathos*, disease.]
- hydropericardium** (hi''dro-per-e-kar'de-um). A non-inflammatory accumulation of serous fluid in the pericardium. [Gr., *ydor*, water, + *pericardium*.]
- hydroperion** (hi-dro-per'e-on). Of Breschet, a liquid described as contained between the decidua vera and the decidua reflexa; designed, he thought, to nourish the embryo at an early period of gestation. [Gr., *ydor*, water, + *peri*, around, + *oon*, egg.]
- hydroperitoneum** (hi''dro-per-e-ton-e'-um). Accumulation of watery fluid in the peritoneal cavity. [Gr., *ydor*, water, + *peritonion*, peritoneum.]
- hydrophilous** (hi-drof'il-us). 1. Aquatic. 2. Bibulous, absorbent, hygroscopic.
- hy''drophimo'sis.** Phimosis with edema. [Gr., *ydor*, water, + *phimosi*, phimosis.]
- hydrophlogosis** (hi-dro-flo-go'sis). An inflammatory process associated with an accumulation of watery fluid. **h. ventriculorum cerebri.** Acute internal hydrocephalus. [Gr., *ydor*, water, + *phlogosis*, a burning.]
- hydrophobia** (hi-dro-fo'be-ah). Syn.: *rabies*, *lyssa*. An acute infectious disease of man; primary in dogs, wolves, and other animals and transmitted to man by biting and perforation of the skin and underlying tissues, so that there is inoculation with the saliva. It is characterized by spasms of the muscles of deglutition and respiration. The specific organism is believed to be a protozoön, the so-called *Negri bodies*, present in the substance of the nerve cells. The name is due to the dread of the spasms caused by the attempt to drink water or any other fluid during the disease. **h. simplex.** H. without rage or disposition to bite. **hysterical h., nervous h.** A transitory form of h., not dependent on rabies; generally associated with other nervous phenomena. [Gr., *ydor*, water, + *phobos*, fear.]
- hydropho'bin.** The virus of hydrophobia.
- hydrophthalmia** (hi-drof-thal'me-ah). Syn.: *buthalmia*, *dropsy of the vitreous*. See *buthalmia*. A disease characterized by a uniform, spherical bulging of the anterior part of the eye. Congenital glaucoma. [Gr., *ydor*, water, + *ophthalmia*.]
- hydroplasma** (hi-dro-plaz'mah). A watery condition of the tissues or of the plasma of the blood. [Gr., *ydor*, water, + *plasma*, something formed.]
- hydropneumatic** (hi-dro-nu-mat'ik). Pertaining to water and to gas. Employed in the collection of gases. Said of a vessel of water or other fluid used in chemical experiments for the collection of gases. [Gr., *ydor*, water, + *pneuma*, air.]
- hydropneumatosis** (hi''dro-nu-mat-o'sis). 1. Any morbid collection of water and gas. 2. Pulmonary edema. [Gr., *ydor*, water, + *pneumatosis*, inflation.]
- hydropneumothorax** (hi''dro-nu-mo-tho'-

- raks). A collection of air and fluid in the pleural cavity. **closed h.** A condition in which there is a combination of serous effusion and air in the pleural cavity without any opening into it, either external or internal. [Gr., *ydor*, water, + *pneuma*, air, + *thorax*, the chest.]
- hydrops** (hi'drops). **Dropsy.** **h. articuli.** Dropsy of a joint. **h. folliculi.** Dropsy of a graafian follicle. **h. tubae.** Salpingitis with accumulation of fluid in the tube. [Gr., *ydrops*, dropsy.]
- hydroponephrosis** (hi''dro-pi''o-ne-fro'-sis). Distention of the pelvis of the kidney with urine containing pus. [Gr., *ydor*, water, + *pyon*, pus, + *nephros*, kidney.]
- hydroponemothorax** (hi''dro-pi''o-nu-mo-tho'raks). A condition in which there is both air and purulent fluid in the cavity of the thorax. [Gr., *ydor*, water, + *pyon*, pus, + *pneuma*, air, + *thorax*, the chest.]
- hydroquinon** (hi-dro-kwin'on). Syn.: *hydrochinon*, *hydrokinon*. An antiseptic, artificial alkaloid, having the composition of quinon with hydrogen added, $C_6H_4O_2H_2$. It is isomeric with resorcin and pyrocatechin and is used as a developer in photography.
- hydrorrhachis** (hi-dro'ra-kis). An edematous effusion within the spinal cord. [Gr., *ydor*, water, + *rachis*, vertebral column.]
- hydrorrhoea** (hi-dror-re'ah). A copious watery discharge. **h. gravidum.** A profuse discharge of serous fluid from the gravid uterus. [Gr., *ydor*, water, + *roia*, a discharge.]
- hydrosalpinx** (hi-dro-sal'pinks). A collection of watery fluid in the fallopian tube, causing distention. [Gr., *ydor*, water, + *salpinx*, a trumpet.]
- hydroscopic** (hi-dros-kop'ik). Pertaining to hydroscopy.
- hydroscopy** (hi-dros'kop-e). Inspection of water or hydrometry. [Gr., *ydor*, water, + *skopia*, a lookout.]
- hydrosepsis** (hi-dro-sep'sis). A foul or turbid condition of water. [Gr., *ydor*, water, + *sepsis*, decay.]
- hydrosol** (hi'dro-sol). A solution of some colloid, as gelatin, agar-agar, etc., in water.
- hydrophygmograph** (hi-dro-sfig'mo-graf). Of François-Franck and Mosso, an instrument for inclosing an entire organ or part of an entire limb. It is then filled with water, and by means of a registering apparatus the fluctuation in the volume of the inclosed organ due to the arterial pulse is registered. [Gr., *ydor*, water, + *sphygmus*, pulse, + *graphein*, to record.]
- hydrospirometer** (hi''dro-spi-rom'et-er). An instrument devised to take the place of the more expensive compressed air spirometers. It consists of a small jar fitted with three tubes through one of which air is admitted and through another water, and through the third the patient breathes. The resistance to expiration is produced by the lifting of the column of water into a vessel on a higher level. [Gr., *ydor*, water, + Lat., *spirare*, to breathe, + Gr., *metron*, a measure.]
- hydrostatic** (hi-dro-stat'ik). Pertaining to hydrostatics or to liquid in a condition of equilibrium. **h. factor in circulation.** The changes in blood pressure produced by the effect of gravity as distinguished from those due to the heart-beat and variations in the size or properties of the blood vessels. [Gr., *ydor*, water, + *statike*, statics.]
- hydrostatics** (hi-dro-stat'iks). The physics of liquids in a state of equilibrium. [Gr., *ydor*, water, + *statike*, statics.]
- hydrosulphate** (hi-dro-sul'fat). A hydrated sulphate.
- hydrosulphid** (hi-dro-sul'fid). A compound of an element or a radicle with hydrogen and sulphur.
- hydrosulphureted.** Combined with hydrogen and sulphur.
- hydroxyringomyelia** (hi''dro-si-ring''go-mi-e'le-ah). Dilatation of the central canal of the spinal cord by watery effusion, with the formation of cavities due to degeneration. [Gr., *ydor*, water, + *syrinx*, tube, + *myelos*, marrow.]
- hydrotherapy** (hi-dro-ther'ap-e). The systematic use of water as a curative agent. [Lat., *hydrotherapia*, from Gr., *ydor*, water, + *therapeia*, medical treatment.]
- hydrothionuria** (hi''dro-thi-o-nu're-ah). The presence of sulphureted hydrogen in the urine. [Gr., *ydor*, water, + *theion*, sulphur, + *ouron*, urine.]
- hydrothorax** (hi-dro-tho'raks). Dropsy of one or both pleural cavities; to be distinguished from pleuritic exudate. [Gr., *ydor*, water, + *thorax*, the chest.]
- hydrotimetry** (hi-dro-tim'et-re). The determination, by means of soap, of the proportion of calcareous salts contained in water. [Gr., *ydor*, water, + *metrein*, to measure.]
- hydrous.** Containing water. [Gr., *ydor*, water.]
- hydroxid.** A compound of hydroxyl with a metal or an alcohol radicle. This word replaces hydrate except for compounds supposed to contain water of crystallization.
- hydroxybenzene** (hi-drox-e-ben'zen). See *carbolic acid*, under *acid*.
- hydroxycompound** (hi -drox - e - com'pound). A chemical substance formed by the substitution of hydroxyl for hydrogen.
- hydroxyl** (hi-drox'il). A univalent radicle, —O.H. It enters into the composition of all hydroxids, including the alcohols, phenols, and oxygen acids. Occurring in the free state as a double molecule, HO—OH, it constitutes a peroxid.
- hydroxylamin** (hi''drox-il-am'in). A hydroxyl substitution compound, NH_2OH , of ammonia. Its hydrochlorid is used as a remedy in skin diseases. **h. hydrochlorid.** A compound of h. and hydrochloric acid; recommended as a substitute for pyrogallic acid and chrysarobin in skin diseases, having the advantage of not staining the skin or linen.

- hydroxylic** (hi-drox-il'ik). Containing hydroxyl; also of, pertaining to, or contained in hydroxyl.
- hydramenitis** (hi-dri-men-i'tis). Inflammation of a serous membrane. [Gr., *ydor*, water, + *ymen*, membrane, + *itis*, inflammation.]
- hyenanchin** (hi-e-nang'kin). A neutral principle obtained from the seeds of *Hyenanche globosa*, resembling strychnin in its action. [Gr., *yaina*, the hyena, + *agchein*, to strangle.]
- hygieia** (hi'je-ah). 1. Health. 2. A medicine. 3. The ancient goddess of health. [Gr., *ygieia*.]
- hygiene** (hi-jen'). The science and art of the preservation of health. [Gr., *ygieinos*, good for the health.]
- hygienic** (hi-je-en'ik). 1. Pertaining to health or to hygiene. 2. In a wholesome state, calculated to preserve the health.
- hygro-**. A prefix from the Gr., *ygros*, wet, moist, fluid.
- hygrograph** (hi'gro-graf). An instrument for recording automatically the variations of atmospheric humidity. [Gr., *ydor*, water, + *graphein*, to write.]
- hygrol** (hi'grol). Colloidal mercury.
- hygrolgy** (hi-gro'l'o-je). The science of the fluids of the body. [Gr., *ygros*, wet, + *logos*, understanding.]
- hygroma** (hi-gro'mah). Syn.: *hygromatous cyst*. A term applied to dropsy of a bursa or to a tumor of the brain containing fluid, and sometimes to cysts of congenital origin, which contain a clear, thin fluid. **h. colli**. A serous congenital cyst most common in the neck. [Gr., *ygros*, moist, + *oma*, a tumor.]
- hygrometer** (hi-grom'et-er). An instrument for measuring the amount of moisture in the air or in a gas, or the ratio of the amount of moisture actually present in it to that required for saturation. [Gr., *ygros*, moist, + *metron*, measure.]
- hygrometry** (hi-grom'et-re). The measurement of the proportion of watery vapor in the air. [Gr., *ygros*, wet, + *metron*, a measure.]
- hygrophilous** (hi-grof'il-us). Absorbing moisture with avidity. [Gr., *ygros*, moisture, + *philein*, to love.]
- hygroscope** (hi'gro-skop). An instrument which indicates (without actually measuring) the degree of humidity of the air. [Gr., *ygros*, moist, + *skopos*, an observer.]
- hygroscopic** (hi-gro-skop'ik). Fit or adapted for giving evidence of moisture; hence, capable of readily absorbing moisture. [Gr., *ygros*, wet, + *skopein*, to examine.]
- hyle** (hi'le). The primal matter, mass, or body in nature. **h. iatrice**. Any medicinal substance. [Gr., *yle*, matter.]
- hylie** (hi'lik). A term used to denote tissues, resembling pulp, in which the cells are separated by a matrix of intercellular substance, either homogeneous or fibrillated, with lymph spaces and blood capillaries running between the individual cells. The term is used to describe tumors arising from such tissues which comprise nerve cells, fibrous tissue, cartilage, bone, fat, and muscle. [Gr., *yle*, crude, undifferentiated tissue.]
- hylo-**. Combining form of the Gr., *yle*, wood, material, matter.
- hylogenesis** (hi-lo-jen'es-is). The origin or formation of matter. [Gr., *yle*, matter, + *gennan*, to produce.]
- hytology** (hi-lol'o-je). The science of elementary bodies or crude material. [Gr., *yle*, matter, + *logos*, understanding.]
- hyloma** (hi-lo'mah). A tumor arising in the primary pulp and including such tumors as fibroma, chondroma, osteoma, lipoma, and sarcoma. [Gr., *yle*, matter, + *oma*, tumor.]
- hylopathism** (hi-lol'ath-ism). 1. The theory of the sentience of matter. 2. The doctrine that disease is caused by changes in the constitution of matter. [Gr., *yle*, matter, + *pathos*, illness.]
- hylozoism** (hi-lo-zo'ism). A theory attributing to matter both primal existence and life. [Gr., *yle*, matter, + *zoe*, life.]
- hymen** (hi'men). A thin fold of mucous membrane, of varying shape, but usually crescentic, which, in the virgin, closes the ostium vaginae more or less completely. **annular h.** That form which is attached to the whole circumference of the ostium vaginae, with an opening in the central portion. **bifenestrate h.** A h. which presents two openings. **cribriform h.** A h. with a number of small openings in it. **h. denticulatus**. That form of h. in which the free border is serrated. **h. fimbriatus**. That variety of h. in which the free border and often the two surfaces are shaggy with delicate papillary outgrowths. **h. multiplex**. Syn.: *double h.* The condition in which there is a membranous constriction of the vagina, resembling the h., above the latter. **h. semilunaris**. That form of h. annularis in which the preponderance of the posterior portion is shown to an unusual degree. **h. septus**. A form in which the opening is divided by a vertical median vaginal partition consisting of an extension of the posterior columns. **h. subseptus**. A variety of h. septus in which two median partitionlike structures, from the anterior and posterior columns, respectively, approach each other, but do not unite. **imperfectorate h.** That form in which there is no opening, so that the ostium vaginae is wholly occluded. [Gr., *ymen*, membrane.]
- hymenitis** (hi-men-it'is). Inflammation of a membrane, especially of the hymen. [Gr., *ymen*, a membrane, + *itis*, inflammation.]
- hymeno-**. Combining form of the Gr., *ymen*, *ymenos*, membrane, hymen.
- hymenogeny** (hi-men-oj'en-e). The production of a pellicle by the simple contact of two liquids, as when a drop of liquid albumin falls into a liquid fat. [Gr., *ymen*, a membrane, + *gennan*, to produce.]
- Hymenolepis** (hi-men-ol'ep-is). A cestode worm of the order *Cyclophyllidae*, the family *Hymenolepidae*, and the genus *Hymenolepis*. The family includes

several genera, such as *H. diminuta*, occasionally infesting children, and *H. nana*, or the dwarf tapeworm of children. *H. flavopuncta*. See *Taenia flavopuncta*, under *tenia*.

hymenomalacia (hi-men-o-mal-a'se-ah). Softening of a membrane. [Gr., *ymen*, membrane, + *malacia*, soften.]

hyo-. A prefix from the Greek letter upsilon, U or Y; shaped like the letter U.

hyoglossal (hi-o-glos'sal). Pertaining to, or connected with, the hyoid bone and the tongue. [Gr., U, upsilon, + *glossa*, tongue.]

hyoglossus (hi-o-glos'sus). See *table of muscles*, under *muscle*.

hyoglycolate (hi'o-gli-ko-kol'at). A salt of hyoglycolic acid.

hyoid (hi'oyd). Shaped like the Greek letter U; pertaining or adjacent to the hyoid bone or to the tissues adjoining it; as a n., the h. bone. [Gr., U, upsilon, + *eidōs*, resemblance.]

hyo- and ibular (hi'o-man-dib'u-lar). Pertaining to or connected with the hyoid bone and the inferior maxilla.

hyopharyngeus (hi-o-fa-rin'je-us). See *table of muscles*, under *muscle*.

hyoscine (hi'o-sin). See *scopolamin*. **h. hydrobromate**, **h. hydrobromid**. See *scopolamin hydrobromid* [U. S. Ph., Br. Ph.].

hyosci'na. See *hyoscine*.

hyoscyamin (hi-o-si-am'in). 1. A crystalline alkaloid, (C₁₇H₂₃NO₃), a levorotary stereo-isomere of atropin, obtained from various solanaceous plants and in various degrees of purity as found in the shops, or sometimes in the amorphous form. Pure levorotary hyoscyamin acts twice as strongly as atropin on nerve endings, but with the same strength on the central nervous system of mammals. In addition to the difficulty of obtaining pure hyoscyamin, it has the disadvantage of being converted very readily into atropin. Dextrorotary h. is also known. 2. Of the eclectics, a concentration obtained from *Hyoscyamus niger*. **h. hydrobromid**. A soluble salt, having the actions and uses of hyoscyamin. **h. sulphate**. The neutral sulphate, (C₁₇H₂₃NO₃)₂.H₂SO₄. This salt of h. is found in several degrees of purity. That recognized by the U. S. Ph. is in indistinct crystals or powder, suggesting some degree of impurity. It is also obtainable in a high degree of purity, though distinctly crystalline and in an amorphous state. The amorphous and the crystalline appear to differ in degree of activity. [U. S. Ph., Br. Ph.] [Lat., *hyoscyamina*.]

Hyoscyamus (hi-o-si'a-mus). 1. Henbane; U. S. Ph., the leaves of *H. niger*. List of poisons and their antidotes, see in *appendix*, page 940. **extractum hyoscyami**. An extract of H. containing 0.3 per cent. of alkaloids. **extractum hyoscyami fluidum**. A fluid extract of the leaves of *H. niger* [U. S. Ph.]. **extractum hyoscyami viride**. An extract prepared from the bruised fresh leaves and tops of *H. hyoscyami folia*. The leaves, flowers, and

branches of *H. niger* [Br. Ph.]. **H. niger**. A coarse, erect herb. It grows wild in waste places through the United States and is widely distributed elsewhere. Its active properties are dependent on two alkaloids, hyoscyamin and scopolamin. **infusum hyoscyami oleosum**. Syn.: *oleum hyoscyami*. A preparation made by macerating or digesting for some hours fresh or freshly dried leaves of *H.*, generally with alcohol, adding olive oil, then freeing from the spirit or from all the moisture and filtering. **oleum hyoscyami**. See *infusum hyoscyami oleosum*. **succus hyoscyami**. A preparation made by crushing in a mortar the fresh leaves, flower tops, and young branches of *H. niger*, expressing the juice, adding alcohol and, after a week, filtering [Br. Ph. 1898]. **tinctura hyoscyami**. A 10 per cent. tincture of h. [U. S. Ph., Br. Ph.]. [Gr., *ys*, a pig, + *kyamos*, a bean.]

hyp-, hypo-. Prefix used to signify under or deficiency. From the Gr., *ypo*, under. In chemistry, in contrast to *hyper*, it denotes a smaller quantity of oxygen than is found in the compounds to which it is not prefixed. Thus sulphurous acid, (H₂SO₃), hypsulphurous acid (H₂SO₂).

hypacephalia. See *henicephalia*.

hypalgesia (hi-pal-je'ze-ah). Of Eulenburg, diminished sensitiveness to painful impressions. [Gr., *ypo*, in slight degree, + *algesis*, sensibility to pain.]

hypasthenia (hi-pas-the'ne-ah). Weakness, loss of strength. [Gr., *ypo*, in a slight degree, + *astheneia*, weakness.]

hypam'nios. Deficiency of the amniotic fluid.

hyper-. A prefix from the Gr., *yper*, above; used in compound words to denote above or beyond. In chemistry, it is applied to compounds which are richest in oxygen. The word now more often gives place to *per*.

hyperabduction (hi'per-ab-duk'shun). See *superabduction*. [Gr., *yper*, above measure, + Lat., *abducere*, to abduct.]

hyperacidity (hi-per-as-id'it-e). Excessive acidity, especially of the gastric juice. [Gr., *yper*, above, + Lat., *aciditas*, acidity.]

hyperaction (hi-per-ak'shun). Excessive activity of a part or organ, which may or may not be pathological. [Gr., *yper*, above measure, + Lat., *actio*, action.]

hyperacu'sis. Excessive sensibility of the organ of hearing. **h. willisiana**. Abnormally acute hearing. [Gr., *yper*, above, + *akousis*, hearing.]

hyperacute (hi-per-a-küte'). Excessively acute. [Gr., *yper*, above measure, + Lat., *acutus*, sharp.]

hyperadenoma (hi'per-ad-e-no'mah). An enlarged lymph gland. [Gr., *yper*, over, + *aden*, gland, + *oma*, tumor.]

hyperalbuminosis (hi'per-al-bu-min-o'-sis). The presence of an excess of albumin in the blood. [Gr., *yper*, in an excessive degree, + *albuminosis*.]

hyperalgesia, **hyperalgia** (hi'per-al-je'ze-ah, hi-per-al'je-ah). Excessive sen-

- sibility to painful impressions. [Gr., *yper*, over, + *algos*, pain.]
- hyperamnios** (hi'per-am'ne-os). The presence of an excessive amount of amniotic fluid. [Gr., *yper*, above, + *amnion*.]
- hyperasthe'nia**. Extreme debility. [Gr., *yper*, over, + *astheneia*, weakness.]
- hyperba'ria**. Abnormal high specific gravity. [Gr., *yper*, to excess, + *barus*, heavy.]
- hyperblas'toid**. Pertaining to overgrowth resembling hyperblastosis.
- hyperblastosis** (hi-per-blas-to'sis). An overgrowth of tissue, having conditions characteristic both of hypertrophy and tumors, such as fibroma moluscum.
- hypercapnia** (hi-per-kap'ne-ah). Increased amount of CO₂ in the blood.
- hypercardia** (hi''per-kar'de-ah). Cardiac hypertrophy. [Gr., *yper*, over, + *kardia*, heart.]
- hypercementosis** (hi''per-sem-en-to'sis). Excessive formation of the cementum of the teeth.
- hyperchlorhydria** (hi''per-klor-hid're-ah). The presence of an excessive amount of hydrochloric acid in the secretions of the stomach. [Gr., *yper*, over, + *chloros*, green (chlorin), + *ydor*, water (hydrogen).]
- hyperchondroma** (hi-per-kon-dro'mah). A cartilaginous tumor of hypertrophic growth. [Gr., *yper*, over, + *chondros*, cartilage, + *oma*, tumor.]
- hyperchromasia** (hi''per-kro-maz'e-ah). An excessive deposit of pigment. [Gr., *yper*, over, + *chroma*, color.]
- hyperchromatic** (hi''per-kro-mat'ik). Containing an abnormally large number of chromosomes.
- hyperchromatism, hyperchromatosis** (hi''per-kro'mat-izm, hi''per-kro-mah-to'sis). Excessive pigmentation; being generally caused by degeneration of the cell nucleus producing scattered particles of nuclear pigment or chromosomes. This condition is often called nuclear fragmentation. [Gr., *yper*, over, + *chroma*, color.]
- hyperchromatopsia** (hi''per-kro-mat-op'-se-ah). A defect of vision in which faulty ideas of color are attached to objects. [Gr., *yper*, over, + *chroma*, color, + *opsis*, vision.]
- hyperchromia** (hi-per-kro'me-ah). See *hyperchromatism*.
- hypercinesia, hypercinesis** (hi''per-sin'e-se-ah, hi''per-sin'e-sis). 1. Excessive muscular motion or contraction; hence spasm. 2. An abnormal mobility of any part of the body. [Gr., *yper*, over, + *kinesis*, motion.]
- hyper'crisis**. A crisis of extraordinary severity. [Gr., *yper*, to excess, + *krisis*, a crisis.]
- hyperdactylia** (hi''per-dak-til'e-ah). Polydactylism or an excessive number of fingers. [Gr., *yper*, over, *daktylos*, finger.]
- hyperdermatoma** (hi-per-der-mat-o'mah). A growth consisting of hypertrophied skin. [Gr., *yper*, over, + *derma*, skin, + *oma*, tumor.]
- hyperdesmosis** (hi-per-des-mo'sis). Hy-
- per trophy of connective tissue. [Gr., *yper*, over, + *desmos*, a bond.]
- hyperemesis** (hi-per-em'e-sis). Excessive or incessant vomiting. [Gr., *yper*, over, + *emesis*, vomiting.]
- hyperemia** (hi-per'e-me-ah). A superabundance of blood in any part of the body. **active h.** A rapidly developed h. of a tissue or organ due to irritation. **active local h.** An increased and accelerated flow of blood into the arteries of a part, because either the blood pressure of that part is increased, or the resistance of the part in proportion to the force of the blood is diminished. **acute passive h.** An abnormal distention of the venous capillaries of a part rapidly appearing and due to obstruction of the return flow of blood from the part. **arterial h.** See *active h.* **capillary h.** The active h. of the capillaries during inflammation. **cerebral h.** The first stage in active cerebral congestion. **chronic passive h.** A distention of the capillaries of a part by venous blood coming on gradually and without inclination to disappear; due to an increased blood pressure from the backward pressure in valvular disease of the heart, arteriosclerosis, and failure of cardiac compensation from various other causes. Also known as *chronic passive congestion*. **collateral h.** Active h. due to contraction of other arteries pouring blood into arteries supplying the part. **direct h.** Active h., from dilatation of the arteries supplying a part. **functional h.** H. due to or occasioning functional activity. **mechanical h.** That form of h. in which the chief cause is the increase of resistances, as by the local pressure of tumors or the occlusion of veins by thrombi. **neuroparalytic h.** H. due to paralysis of the vasoconstrictors. **neurotonic h.** H. due to stimulation of the vasodilators. **venous h.** The form of h. produced by pressure on the veins above. [Gr., *yper*, above measure, + *aima*, blood.]
- hyperencephalus** (hi''per-en-sef'al-us). 1. A monstrosity in which a portion of the brain lies outside the skull, forming a pedunculated tumor. 2. The development of a hyperencephalic monster. [Gr., *yper*, over, + *egkephalos*, the brain.]
- hypererythrocythemia** (hi''per-er'ith-ro-se-the-me-ah). An excessive number of red blood corpuscles in the blood. [Gr., *yper*, over, + *erythrocyte*, + *aima*, blood.]
- hyperesophoria** (hi''per-es-o-fo're-ah). A tending of the right or left visual line in a direction upward and inward, or downward and inward, but not sufficient to produce strabismus. [Gr., *yper*, over, + *eso*, into, + *phoros*, bearing.]
- hyperesthesia** (hi''per-es-the'se-ah). Morbidly acute sensitiveness to external impressions. [Gr., *yper*, over, + *aisthesis*, perception by the senses.]
- hyperexophoria** (hi''per-ex-of-o're-ah). A tending of the right or left visual line in a direction upward and outward, or downward and outward, but not to the ex-

- tent of strabismus. [Gr., *yper*, over, + *exo*, outward, + *phoros*, bearing.]
- hyperextension** (hi''per-ex-ten'sion). Extreme extension.
- hypergenesis** (hi-per-jen'es-is). Excessive development of parts or tissue, either normal, as in hypertrophy of a muscle, or abnormal, as in monstrosities. [Gr., *yper*, over, + *genesis*, generation.]
- hyperglobulia** (hi''per-glo-bu'le-ah). An excessive number of red globules in the blood. [Gr., *yper*, over, + Lat., *globulus*, a globule.]
- hyperglucemia, hyperglycemia** (hi''per-glu-se'me-ah, hi''per-gli-se'me-ah). An excessive amount of sugar in the blood. [Gr., *yper*, over, + *glukos*, sugar, + *aina*, blood.]
- hypericum** (hi-per'ik-um). St. John's wort. **H. perforatum**. St. John's wort. The leaves are balsamic in odor and bitter and astringent in taste. The plant yields a resin and an oil resembling turpentine, and was formerly used in domestic practice. [Gr., *ypo*, beneath, + *ereike*, heath.]
- hyperidrosis** (hi-per-i-dro'sis). Syn.: *idrosis*, *ephidrosis*, *ludatoria*, *polydrosis*. Excessive sweating independent of the usual physiological causes. **h. oleosa**, **h. seborrhea**. See *seborrhea*. [Gr., *yper*, to excess, + *idros*, sweat.]
- hyperinosis** (hi-per-in-o'sis). 1. Excessive muscular development or activity. 2. An abnormal abundance of fibrin in the blood. [Gr., *yper*, over, + *is*, a muscle or fiber.]
- hyperinvolution** (hi''per-in-vo-lu'shun). Too complete involution or atrophy following hypertrophy. [Gr., *yper*, to excess, + Lat., *involvere*, to roll in.]
- hyperisotonic** (hi''per-is-o-ton'ik). Pertaining to a serum containing more salt than is necessary to preserve the red corpuscles.
- hyperkeratomycosis** (hi''per-ker''at-o-mi-ko'sis). Hypertrophy affecting corneous tissue, and due to a microphyte. [*Hyperkeratosis*, + Gr., *mykes*, fungus.]
- hyperkeratosis** (hi''per-ker-a-to'sis). Increased thickness of the horny layer of the skin with complete cornification of the cells. **h. eccentrica**. Another name for *porokeratosis*. **h. linguae**. See *black tongue*, under *tongue*. [Gr., *yper*, to excess, + *keras*, a horn.]
- hyperleukocytosis** (hi''per-lu''ko-si-to'sis). An excessive number of leukocytes. [Gr., *yper*, over, + *leukocytosis*.]
- hyperlymphia** (hi-per-lim'fe-ah). An increase in the normal amount of lymph. [Gr., *yper*, over, + Lat., *lymphā*, lymph.]
- hypermastia** (hi-per-mas'te-ah). Hypertrophy of the breast. [Gr., *yper*, to excess, + *mastos*, the breast.]
- hypermegalia** (hi''per-me-gal'e-ah). 1. Excessive increase in the size of a part. 2. Pseudohypertrophic muscular paralysis. [Gr., *yper*, over, + *megas*, large.]
- hypermetropia** (hi''per-me-tro'pe-ah). Far-sightedness. A condition in which the focus of parallel rays falls back of the retina, owing either to the fact that the eyeball is too short (axial hypermetropia) or that the refraction surfaces are too flat (curvature hypermetropia). It is remedied by the use of appropriate convex glasses. [Gr., *yper*, over, + *metron*, measure, + *ops*, eye.]
- hypermyotrophia** (hi''per-mi-o-tro'fe-ah). Hypertrophy of muscular tissue. [Gr., *yper*, over, + *mys*, muscle, + *trophē*, nourishment.]
- hypernephroma** (hi''per-nef-ro'mah). A tumor developing from the adrenal gland or from adrenal nests within the substance of the kidney, consisting of columns of cells lying in close apposition to the endothelium of the numerous capillaries and possessing an adenomatous or tubular arrangement of the polygonal cells. These tumors may also be of pure renal origin. [Gr., *yper*, over, + *nephros*, kidney, + *oma*, tumor.]
- hyperneuroma** (hi''per-nu-ro'mah). An exuberant or fungous growth of nervous tissue. [Gr., *yper*, over, + *neuron*, a nerve, + *oma*, tumor.]
- hypernoia** (hi-per-noy'ah). Of Leupoldt, excessive and abnormal mental activity. [Gr., *yper*, over, + *noein*, to perceive.]
- hyperonychia** (hi-per-o-nik'e-ah). Hypertrophy of the nails, usually associated with more or less deformity. [Gr., *yper*, excess, + *onyx*, the nail.]
- hyperopia** (hi-per-o'pe-ah). A condition in which the length of the eyeball does not correspond with the focal length of the dioptric system of the eye and the principal focus is, therefore, behind the retina. Now used instead of *hypermetropia*. **absolute h.** Where the eye is unable to accommodate. **facultative h.** Where an extra effort of accommodation may conceal the error without causing a squint. **latent h.** Where the refraction error is overcome and disguised by the action of the ciliary muscle. **manifest h.** Where the refraction defect is uncorrected by accommodation. **relative h.** Where undue convergence with the extra accommodation effect is required to overcome it and internal strabismus and squint follows. [Gr., *yper*, over, + *ops*, eye.]
- hyperostosis** (hi''per-os-to'sis). 1. An abnormal growth, hyperplasia, or general swelling of a bone. 2. An exostosis (1st def.), especially on the sheath of a tendon. [Gr., *yper*, over, + *osteon*, a bone.]
- hyperphoria** (hi-per-fo're-ah). An upward tendency of the visual axis of one eye, but not to the extent of strabismus. [Gr., *yper*, over, + *phoros*, bearing.]
- hyperpiesis** (hi''per-pi-e'sis). Periods of high arterial pressure. [Gr., *yper*, over, + *piesis*, pressure.]
- hyperpituitarism** (hi''per-pit-u'it-ar-ism). A condition of increased activity (internal secretion) of the pituitary body, particularly of the anterior lobe. It is supposed to exist in acromegaly and gigantism. [Gr., *yper*, over, + *pituitarism*.]
- hyperplasia** (hi-per-pla'ze-ah). An increase in the number of cells in an organ or tissue. **areolar h. of the uterus**. Of T. G. Thomas, excessive growth of the

- connective tissue of the uterus with congestion and resulting hypertrophy.
- fibrous h.** An increase in the connective tissue cells during regeneration following inflammation or in chronic fibrosis of the viscera, as in cirrhosis of the liver.
- irritative h.** H. due to fibrosis, or of the mucous membrane on the edge of a gastric ulcer. [Gr., *yper*, over, + *plasis*, formation.]
- hyperplastic** (hî-pêr-plas'tik). Pertaining to or characterized by hyperplasia.
- hyperpnea** (hi-per-ne'ah). A condition in which the breathing movements are increased in frequency beyond their normal rate. [Gr., *yper*, over, + *pnoe*, breath.]
- hyperpyretic** (hi''per-pi-ret'ic). Of or pertaining to hyperpyrexia.
- hyperpyrexia** (hi''per-pi-regs'e-ah). Excessively high fever. **tropical h.** Sunstroke associated with insensibility, high temperature, and convulsions. [Gr., *yper*, over, + *pyrexia*, feverishness.]
- hyperresonance** (hi''per-res'o-nantz). Abnormal resonance over a part. [Gr., *yper*, exceeding, + Lat., *resonare*, to resound.]
- hypersarcosis** (hi-per-sar-kô'sis). 1. An excessive growth of vascular granulations in wounds or ulcers. 2. Muscular hypertrophy. [Gr., *yper*, over, + *sarx*, flesh.]
- hypersecretion** (hi''per-res'o-nantz). Abnormal secretion of a gland. [Gr., *yper*, to excess, + *secernere*, to secrete.]
- hypersensitiveness** (hi''per-sen'sit-iv-nes). See *anaphylaxis*.
- hypersthenia** (hi-per-sthen'e-ah). Excessive strength or tonicity. [Gr., *yper*, to excess, + *sthenos*, strength.]
- hypersusceptibility** (hi''per-sus-sep'ti-bil'it-e). See *anaphylaxis*.
- hypersystole** (hi''per-sis'to-le). An overstrong systole. [Gr., *yper*, to excess, + *systole*.]
- hypertension** (hi-per-ten'shun). Excessive tension. [Gr., *yper*, in excess, + *tension*.]
- hyperthermia**. Unusually high fever.
- hyperthymization** (hi''per-thi-miz-a'shun). Excessive activity in the function of the thymus gland, causing a chronic form of poisoning. [Gr., *yper*, over, + *thymus*.]
- hyperthyrosis**, **hyperthyroidism** (hi''per-thi-re-o'sis, hi''per-thi-royd-a'shun). Overactivity of the enlarged thyroid gland, as in exophthalmic goiter. [Gr., *yper*, over, + *thyroid*.]
- hyperthyroidism** (hi-per-thi'royd-izm). The group of symptoms supposed to be due to excess of the internal secretion of the thyroid gland, i. e., enlargement of the thyroid, tachycardia, tremors, nervousness, exophthalmus. [Gr., *yper*, over, + *thyroid*.]
- hypertonia** (hi-per-to'ne-ah). Excessive tonicity; irritability. [Gr., *yper*, in excess, + *tonos*, a stretching.]
- hypertonic** (hi-per-ton'ik). Characterized by abnormally high tension. **h. solutions.** In physiology, solutions whose osmotic pressure is greater than that of the blood and lymph.
- hyperto'nus**. That condition of the eye in which intra-ocular tension is increased. [Gr., *yper*, to excess, + *tonos*, a straining.]
- hypertrichosis, hypertrichiasis** (hi''per-trik-o'sis, hi''per-trik-i'as-is). An excessive growth of hair, general or local. [Gr., *yper*, to excess, + *thrix*, a hair.]
- hypertrophied** (hi-per'tro-fed). In a state of hypertrophy.
- hypertrophy** (hi-per'tro-fe). Increase in the size of individual cells; to be distinguished from hyperplasia. In a broader sense, increase in the size of an organ or tissue due to an increase in the size or number of its cells, or both, without any of its elements losing their relationship or function. **acquired h.** H. induced by overexertion or overaction of a part or organ. **adaptive h.** H. due to an obstruction to the expulsion of fluids from a hollow viscus. **compensatory h.** H. of an organ or part whereby it is enabled to do more work than before, so as to compensate for a defect. **eccentric h.** H. of the walls of a hollow organ accompanied by dilatation. **false h.** Enlargement with degeneration of one element and its replacement by another. **functional h.** H. due to increased stimulation, nutrition, and functional activity of a cell. **numerical h.** See *hyperplasia*. **nutritional h.** H. due to an increased absorption of nutrition, usually instituted by some stimulus. **physiological h.** H. due to normal physiological functions, such as the enlargement of the liver after a full meal. **simulated h.** H. due to a ceasing of attrition in a part, as the enormous outgrowth of a rat's tooth when attrition ceases from loss of its opponent. **sympathetic h.** H. due to stimulation by the nervous system. **vicarious h.** H. of one organ when another of allied function is injured or destroyed. [Gr., *yper*, over, + *trophe*, nutrition.]
- hypertropia** (hi-per'tro'pe-ah). Deviation of one eye upward and the other eye downward. [Gr., *yper*, over, + *trepein*, to turn.]
- hypesthesia** (hi-pes-the'ze-ah). Diminished sensibility. [Gr., *hypo*, under, + *aisthesis*, sensation.]
- hypha** (hi'fah). A filament or thread of a fungus. The collective hyphae form an interwoven fluffy mass, known as mycelium, as in the moulds. [Gr., *yphē*, a web.]
- hyphomycetes** (hi-fô-mi-se'tes). A synonym for the *Eumycetes* or *molds*. [Gr., *yphē*, a web, + *mykes*, fungus.]
- hypinosis** (hip-in-o'sis). A deficiency in the fibrin elements of the blood. [Gr., *ypo*, under, + *is*, *inos*, fiber.]
- hypisotonic** (hip'is-o-ton'ik). Referring to a solution which has an osmotic pressure smaller than that of a physiological salt solution.
- hypnacetyl** (hip-nas'et-in). Acetophenone-acetyl-paramido-phenol ether; CH₃-CO.NH.C₆H₄.O.CH₂.CO.C₆H₅. Antiseptic and hypnotic.
- hypnagogic** (hip-na-goj'ik). Inducing sleep or pertaining to the induction of sleep. [Gr., *ygnos*, sleep, + *agogos*, leading.]
- hyp'nal**. See *antipyrin chloralhydrate*. Monochloralantipyrin. A colorless crystalline substance, easily soluble in water.

- Hypnotic and analgetic. [Gr., *ypnos*, sleep.]
- hypnic** (hip'nik). 1. Pertaining to sleep. 2. Inducing sleep.
- hypnology** (hip-nol'o-je). 1. The doctrine or science of sleep. 2. The science and art of hypnotism. [Gr., *ypnos*, sleep, + *logos*, understanding.]
- hypnone** (hip'nōn). Phenylmethylketone, $C_6H_5.CO.CH_3$, a crystalline substance, used as a hypnotic. [Gr., *ypnos*, sleep.]
- hypnopyrin** (hip-no-pi'rin). A preparation said to be hypnotic, analgetic, and feebly antipyretic.
- ypnos** (hip'nos). Sleep. [Gr., *ypnos*.]
- hypnosis** (hip-no'sis). See *hypnotism*.
- hypnotic** (hip-not'ik). 1. Pertaining to sleep or to hypnotism. 2. Tending to induce sleep. [Gr., *ypnos*, sleep.]
- hypnotism** (hip'no-tizm). An abnormal state into which some persons may be thrown, either by a voluntary act of their own, such as gazing continuously and with fixed attention on some small bright object held close to the eyes, or by the exercise of another person's will; characterized by suspension of the will and consequent obedience to the promptings of "suggestions" from without. Perfect insensibility to pain may be induced by h., and it has been used as an anesthetic. [Lat., *hypnotismus*, from Gr., *ypnos*, sleep.]
- hypnotiza'tion**. The induction of hypnotism.
- hypo-albuminosis** (hi'po-al-bu-min-o'sis). A deficiency of albuminous constituents of the blood. [Gr., *ypo*, under, + Lat., *albumen*, albumin.]
- hypoblast** (hi'po-blast). Of Balfour, the epithelioglandular or mucous layer of the blastoderm; the entoderm; the innermost of the three layers into which the blastoderm divides at the area germinativa. **digestive h.**, **gut h.**, **intestinal h.** The hypoblastic or entodermal cells giving rise to the lining of the alimentary canal in the embryo. **yolk h.** That portion of the mesoblast which surrounds the yolk. [Gr., *ypo*, under, + *blastos*, sprout.]
- hypobromite** (hi-po-bro'mit). A salt of hypobromous acid.
- hypocardia** (hi-po-kar'de-ah). A downward displacement of the heart. [Gr., *ypo*, under, + *kardia*, heart.]
- hypochlorhydria** (hi'po-klor-hid're-ah). Deficiency of hydrochloric acid in the gastric juice. [Gr., *ypo*, under, + *chlorin*, + *ydor*, water.]
- hypochlorite** (hi-po-klo'rit). A salt of hypochlorous acid. The h's are readily decomposed by acids, forming hypochlorous acid and acting as bleaching agents. [Gr., *ypo*, under, + *chloros*, green.]
- hypochondriac** (hi-po-kon'dre-ak). 1. Situated beneath the ribs. 2. Pertaining to hypochondriasis; as a n., a person affected with hypochondriasis.
- hypochondriasis** (hi'po-kon-dri'as-is). Persistent anxiety about health with exaggeration of small bodily symptoms. The mental condition takes its name from the
- hypochondriac region, to which feelings of distress and uneasiness were previously referred. [Gr., *ypo*, under, + *chondros*, cartilage.]
- hypochondrium** (hi-po-kon'dre-um). The upper lateral region of the abdomen on either side of the epigastrium, under the costal border. [Gr., *ypo*, under, + *chondros*, cartilage.]
- hypochromatic** (hi-po-kro-mat'ik). Containing chromatosomes in abnormally small amount.
- hypochromatism** (hi-po-kro'mat-ism). Deficiency of chromatin in the nucleus of a cell. [Gr., *ypo*, under, + *chromatin*.]
- hypochromatosis** (hi'po-kro-mat-o'sis). Gradual disappearance of the cell nucleus.
- hypochromia** (hi-po-kro'me-ah). Deficiency of coloring. [Gr., *ypo*, under, + *chroma*, color.]
- hypochrosis** (hi-po-kro'sis). Anemia in which the amount of hemoglobin in the blood is abnormally small. [Gr., *ypo*, under, + *chrosis*, color.]
- hypocinesia, hypocinesis** (hi'po-sin-e'se-ah, hi'po-sin-e'sis). Of Eulenburg, diminution of motor reaction to excitation. [Gr., *ypo*, less, + *kinesis*, motion.]
- hypodermic** (hi-po-der'mik). 1. Subcutaneous; pertaining to subcutaneous parts or tissues. 2. Administered by subcutaneous injection; designed for such injections. [Gr., *ypo*, under, + *derma*, the skin.]
- hypodermoclysis** (hi'po-der-mok'lis-is). The injection of large quantities of fluids under the skin. [Gr., *ypo*, under, + *derma*, skin, + *klysis*, injection.]
- hypogastric** (hi-po-gas'trik). Of, pertaining to, or situated in the hypogastrium. **h. belt.** A b. to encircle the pelvis; designed to exert pressure upon the hypogastrium. [Gr., *ypo*, under, + *gaster*, stomach.]
- hypogastrium** (hi-po-gas'tre-um). The lower median portion of the abdomen. [Gr., *ypo*, under, + *gaster*, stomach.]
- hypogenesis** (hi'po-jen-e'se-ah). Malformation by defect. [Gr., *ypo*, short of, + *genesis*, production.]
- hypoglobulia** (hi'po-glo-bu'le-ah). A deficient amount of blood corpuscles. [Gr., *ypo*, short of, + *globule*.]
- hypoglossal** (hi-po-glos'sal). Situated in, on, or adjacent to the lower part of the tongue or beneath the tongue. [Gr., *ypo*, under, + *glossa*, tongue.]
- hypognathous**. Having the lower jaw prominent. [Gr., *ypo*, under, + *gnathos*, jaw.]
- hypognathus** (hi-pog'na-thus). A rare form of double monster in which a rudimentary head is attached to the inferior maxilla of the principal head. It occurs mostly in calves. [Gr., *ypo*, under, + *gnathos*, the jaw.]
- hypoleukocythemia** (hi'po-lu'ko-si-the'me-ah). Deficiency of white corpuscles in the blood. [Gr., *ypo*, under, + *leukocythemia*.]
- hypoleukocytosis** (hi'po-lu'ko-si-to'sis). Diminution of the formation of leukocytes. [Gr., *ypo*, under, + *leukocytosis*.]
- hypoliposis** (hi-po-lip-o'sis). A condition

- in which the liposin is deficient in the blood.
- hypomania** (hi-po-ma'ne-ah). Mild excitements in a manic-depressive psychosis. Cyclothymia. Often found under many disguises.
- hypomastia** (hi-po-mas'te-ah). Abnormal smallness of the breasts. [Gr., *ypo*, under, + *mastos*, breast.]
- hypometropia** (hi''po-me-tro'pe-ah). Myopia. [Gr., *ypo*, under, + *metron*, a measure, + *ops*, eye.]
- hyponitrite** (hi-po-ni'trit). A salt of hyponitrous acid.
- hyponitrous**. Containing nitrogen combined with less oxygen than in the case of the nitrous compounds. **h. acid.** See under *acid*.
- hyponomoderma** (hi''pon-o-mod-er'mah). A name given by Kaposi to a *creeping eruption*.
- hyponychium** (hi-pon-ik'e-um). The junction of the nail-bed and the horny epidermis of the tip of the finger or toe. [Gr., *ypo*, under, + *onyx*, nail.]
- hypoparathyreosis** (hi''po-par''ah-thi-reo'sis). The condition of tetany induced by defective action of the parathyroid glands or by their removal.
- hypophosphis** (hi-po-fos'fis). See *hypophosphite*. **syrupus hypophosphitum**. A preparation containing the hypophosphites of calcium, potassium, and sodium dissolved in a flavored syrup [U. S. Ph.]. **syrupus hypophosphitum compositus**. A complex preparation containing hypophosphites of alkalis with quinin and strychnin dissolved in syrup [U. S. Ph.].
- hypophosphite** (hi-po-fos'fit). A salt of hypophosphorous acid.
- hypophosphorous** (hi-po-fos'for-us). Containing phosphorus combined with less oxygen than occurs in the phosphorous compounds. **h. acid.** See under *acid*.
- hypophysin** (hi-pof'is-in). The name given to the hormone supposed to be formed in the anterior lobe of the pituitary gland. It is assumed to influence mainly the growth of the skeleton and perhaps to play a part in the metabolism of the body in other ways.
- hypophysis** (hi-pof'is-is). Lit., an undergrowth. **h. cerebrialis**, **h. cerebri**. The pituitary body. [Gr., *ypo*, under, + *physis*, growth.]
- hypopilesis**. Subnormal arterial tension.
- hypopinealism** (hi-po-pi'ne-al-izm). A syndrome of diminished pineal secretion.
- hypopituitarism** (hi''po-pit-u't-ar-izm). A condition of diminished activity (internal secretion) of the pituitary body, particularly of the posterior lobe. [Gr., *ypo*, under, + *pituitarism*.]
- hypoplasia** (hi-po-pla'se-ah). 1. A deficiency of tissue due to a diminution in the number of cells of a part as contrasted with atrophy. 2. Incomplete (arrested) development of a part in respect to size and weight. [Gr., *ypo*, under, + *plasis*, formation.]
- hypopyon** (hi-po'pe-on). A collection of pus in the anterior chamber of the eye. [Gr., *ypo*, under, + *pyon*, pus.]
- hypospadias** (hi-po-spad'e-as). A congenital deformity of the urethra characterized by its external opening being situated on the lower surface of the penis or on the scrotum or perineum or in the vagina. [Gr., *ypo*, under, + *span*, to draw.]
- hypostasis** (hi-pos'tas-is). 1. Of Hippocrates, a suppression of morbid humors (from escape at the surface); an abscess. 2. A sediment. 3. A morbid deposit in any part of the body. 4. Venous hyperemia due chiefly to the action of gravity. **h. urinae**. See *h.* (2d def.). **pulmonary h.** Hypostatic congestion of the lungs. [Gr., *ypo*, under, + *stasis*, a placing.]
- hypostypsis** (hi-po-stip'sis). Mild astringency. [Gr., *ypo*, short of, + *stypsis*, a contracting.]
- hyposulphate** (hi-po-sul'fat). An incorrect name for thiosulphate.
- hyposulphite** (hi-po-sul'fit). A salt of hyposulphurous acid. H's have been found in the urine. They occur constantly in cats' urine.
- hyposulphurous** (hi''po-sul'fu-rus). Containing sulphur combined with a smaller relative amount of oxygen than is found in the sulphurous compounds. **h. acid.** See under *acid*.
- hyposystole** (hi-po-sis'to-le). Weakness of the cardiac systole. [Gr., *ypo*, under, + *systole*.]
- hypothernar** (hi-poth'en-ar). The eminence at the ulnar border of the palm of the hand. [Gr., *ypo*, under, + *thenaar*, the palm of the hand.]
- hypothyroidea** (hi''po-thi-roy'de-ah). Defective development or deficient activity of the thyroid gland.
- hypothyroidism** (hi-po-thi'royd-izm). The group of symptoms produced by the deficiency or absence of the internal secretion of the thyroid. Myxedema. [Gr., *ypo*, under, + *thyroid*.]
- hypotonia**, **hypotonus** (hi-po-to'ne-ah, hi-pot'on-us). Diminished tone.
- hypotonic** (hi-po-ton'ik). Marked by abnormally low tension. **h. solutions**. In physiology, solutions whose osmotic pressure is less than that of the blood and lymph.
- hypotoxicity** (hi''po-toks-is'it-e). A reduced toxic or poisonous quality. [Gr., *ypo*, under, + *toxikon*, poison.]
- hypotrichosis** (hi-po-trik-o'sis). Partial or complete lack of hair or baldness. [Gr., *ypo*, under, + *thrix*, hair.]
- hypovenosity** (hi''po-ve-nos'it-e). Of Gay, a condition in which there is a diminution in the size and number of the veins in a given area, and in which atrophy and fatty degeneration of the muscles are developed. [Gr., *ypo*, under, + Lat., *venosus*, venous.]
- hypoxanthin** (hi-po-zan'thin). Oxyypurin, C₈H₄N₄O. A basic substance present in muscle and other tissues, also in normal urine. [Gr., *ypo*, under, + *xanthos*, yellow.]
- hyrgolum** (hir'go-lum). A form of mercury, nearly black and highly fluorescent,

- It has been thought to be superior to ordinary mercurials as a remedy.
- Hyssopus** (his'o-pus). A genus of labiate plants. **H. officinalis**. Hyssop; a native of southern Europe and middle Asia, formerly official and still used domestically as a gentle aromatic stimulant, in elderly subjects, as an expectorant, sudorific, etc. [Gr., *yssopos*.]
- hysterectomy** (his-ter-ek'to-me). Removal of the uterus by a cutting operation. **abdominal h.** H. through the abdominal wall. **supravaginal h.** Amputation of the uterus at the cervix. **vaginal h.** H. through the vagina. [Gr., *ystera*, the womb, + *ek*, out, + *temnein*, to cut.]
- hysteria** (his-te're-ah). An affection of the nervous system long supposed to proceed from some disturbance of the uterus (hence the name). It is a psychoneurosis in which psychical symbols are converted into physical symptoms. **anxiety h.** A severe type of h. with marked anxiety often mistaken for melancholia. **epidemic h.** H. or hystericalike disturbances apparently acquired by association with hysterical patients. **epileptiform h.**, **epileptoid h.** Hystero-epilepsy. **h. major**. See *hystero-epilepsy*. [Gr., *ystera*, womb.]
- hysterical** (his-ter'ik-al). Pertaining to, affected with, of the nature of, or due to hysteria.
- hystero-, hyst-**. Combining form of the Gr., *ystera*, womb.
- hysterocele** (his'ter-o-sel). Syn.: *uterine hernia*. A hernia containing the uterus. [Gr., *ystera*, uterus, + *kele*, a hernia.]
- hysteroceclisis** (his'ter-o-kli'sis). Surgical closure of the os uteri. [Gr., *ystera*, uterus, + *kleisis*, a closure.]
- hystero-epilepsy** (his'ter-o-ep'il-ep-se). Major hysterical attacks with severe epileptiform convulsions apparently associated with loss of consciousness. [Gr., *ystera*, womb, + *epilepsy*.]
- hystero-genous** (his-ter-oj'en-us). Giving rise to hysterical symptoms. **h. zones**. Areas of the body which, when excited, for example, by pressure, call forth hysterical phenomena. [Gr., *ystera*, womb, + *gennan*, to beget.]
- hysterolith** (his'ter-o-lith). A womb stone. [Gr., *ystera*, the uterus, + *lithos*, a stone.]
- hystero-metry** (his-ter-om'et-re). Measurement of the uterus or its canal. [Gr., *ystera*, uterus, + *metron*, a measure.]
- hystero-myoma** (his'ter-o-mi-o-mah). A myoma of the womb. [Gr., *ystera*, uterus, + *mys*, a muscle, + *oma*, a tumor.]
- hystero-myomectomy** (his'ter-o-mi-omek'to-me). The removal of one or more fibroid tumors from the substance of the uterus without removing that organ. [Gr., *ystera*, uterus, + *mys*, a muscle, + *ektome*, a cutting out.]
- hystero-myotomy** (his'ter-o-mi-ot'o-me). Incision into the body of the womb for the removal of a tumor. [Gr., *ystera*, uterus, + *mys*, a muscle, + *tome*, a cutting.]
- hystero-neurosis** (his'ter-o-nu-ro'sis). A neurosis due to uterine disease. [Gr., *ystera*, uterus, + *neurosis*.]
- hystero-oophorectomy** (his'ter-o-o'of-orek'to-me). The operation of removing the uterus and ovaries. [Gr., *ystera*, uterus, + *oophoros*, egg-bearing, + *ektome*, a cutting out.]
- hystero-pathy** (his-ter-op'ath-e). Any disease of the womb. [Gr., *ystera*, uterus, + *pathos*, a disease.]
- hystero-pexy** (his'ter-o-pex-e). Fixation of the uterus by means of a surgical operation, either to the abdominal wall or to the vagina. **abdominal h.** Attachment of the uterus to the anterior abdominal wall. [Gr., *ystera*, uterus, + *pexis*, a fixing.]
- hystero-phore** (his'ter-o-för). An apparatus for sustaining the uterus in its normal position; used in uterine version and prolapse. A pessary. [Gr., *ystera*, uterus, + *phoros*, bearing.]
- hystero-rrhaphy** (his-ter-or'ra-fe). The operation of closing a uterine incision with sutures. [Gr., *ystera*, uterus, + *raphe*, a seam.]
- hystero-rrhexis** (his'ter-or-r'ex'is). Rupture of the uterus. [Gr., *ystera*, uterus, + *rexis*, a breaking.]
- hysteroscope** (his'ter-o-sköp). An instrument for inspecting the interior of the uterus. [Gr., *ystera*, uterus, + *skopos*, inspection.]
- hystero-tomy** (his-ter-ot'o-me). An incision into the uterus. [Gr., *ystera*, uterus, + *tome*, a cutting.]
- hystero-trachelorrhaphy** (his'ter-o-trakel-or'ra-fe). Syn.: *trachelorrhaphy*. Of P. F. Mundé, Emmet's operation for the repair of laceration of the cervix uteri. [Gr., *ystera*, uterus, + *trachelos*, the neck, + *raphe*, a seam.]
- hy'ther**. Combined effect of the humidity and temperature of the atmosphere upon the body. [Gr., *hydor*, water, + *therme*, heat.]

I

I. Chemical symbol for iodine.

i. Abbreviation for inactive.

-iasis. A suffix from the Greek having the same value as *-osis* and used to express a condition or state, as *psoriasis*, from *psoriaein*, to have the itch.

iatic (i-at'rik). Of or pertaining to medicine or medical men. [Gr., *iatros*, a physician.]

i'atrochem'ical school of medicine. The school of physiologists in the 17th century, who laid especial emphasis upon

- facts of chemistry as explaining physiological phenomena. *Sylvius* (1614-1672) may be considered the leader in this movement.
- iatrol** (i'at-rol). An antiseptic powder obtained by the action of iodine on an anilin derivative; intended as a substitute for iodoform.
- iatromathematics** (i'at-ro-math-em-at'-iks). The theory that physiology and medicine are based on mathematical principles. [Gr., *iatros*, a physician, + *mathematike*, mathematics.]
- iatromechanists** (i'at-ro-mek'an-ists). A school of physicians or physiologists of the 17th century which proposed to explain all phenomena by an application of the laws of physics and chemistry.
- iatrophysical** (i'at-ro-fiz'ik-al). An old name for the explanation of vital phenomena by the principles of physics.
- i'atrophysical school of medicine**. The school of physiologists in the 17th century who followed *Bovelli* (1608-1679) in attempting to explain physiological phenomena by the known facts of physics and mechanics.
- iatrophysics** (i'at-ro-fis'iks). Physics applied to medicine. [Gr., *iatros*, a physician, + *physike*, physics.]
- icaja** (i-ka'jah). An African ordeal poison resembling akazaga and containing icajin.
- icajin** (i-ka'jin). A toxic alkaloid obtained from icaja. It differs materially from strychnin, and more nearly resembles brucin.
- ice**. Frozen water. **i. bag**, **i. cap**, **i. compress**, **i. poultice**. A rubber bag partially filled with broken ice.
- Iceland moss**. A lichen of the genus *Cetraria*, abundant in polar regions.
- ichor** (i'kor). A thin, fetid, colorless discharge issuing from wounds. [Gr., *ichor*, the watery part of the animal juices.]
- ichorrhoea** (i-kor-re'ah). A copious discharge of ichorous fluids. [Gr., *ichor*, ichor, + *roia*, flow.]
- ichorrhemia** (i-kor-e'me-ah). Toxemia due to ichor in the blood. [Gr., *ichor*, ichor, + *aima*, blood.]
- ichthalbin** (ik-thal'bin). Ichthyl albuminate, a compound of ichthyolsulphonic acid and albumin, analogous to tannalbumin. Its actions and uses are the same as those of ichthyl.
- ichthargan** (ik-thar'gan). A compound said to contain 15 per cent. of ichthyl and 30 per cent. of silver; a substitute for mercury bichlorid.
- ichthermol** (ik-ther'mol). Mercury ichthyolate, a compound of ichthyosulphonic acid and mercury, containing 24 per cent. of mercury.
- ichthin**, **ichthidin**, **ichthulin** (ik'thin, ik'thid-in, ik'thu-lin). Names given to crystalline proteins isolated from eggs of various fishes.
- ichthiotoxin** (ik'the-o-toks'in). A ptomain produced in fish poisoning by the action of bacteria.
- ichthoform**, **ichthyoform** (ik'tho-form, ik'the-o-form). Ichthyl formaldehyd, an antiseptic compound of ichthyl and formaldehyd.
- ichthyanat** (ik-thi'an-at). A trade name for ammonium *ichthyolsulphonate* or *ichthylol*.
- ichthyo-**. Combining form of Gr., *ichthys*, fish.
- ichthyocolla** (ik'the-o-kol'lah). Syn.: *colla poscium*. Isinglass, fish glue, a gelatinous substance prepared from the swimming bladder of the sturgeon; used to clarify liquors, as a basis for jellies, and for court plaster. [Gr., *ichthys*, a fish, + *kolla*, glue.]
- ichthylol** (ik'the-ol). Syn.: *ammonium ichthyolsulphonate*. A transparent, yellow-brown oil, of sea-green fluorescence, prepared by distillation from a bituminous shale found in the Tyrol, containing semi-fossilized remains of fishes; introduced into dermatological practice by *Unna* in 1882. It penetrates the unbroken skin and has been used externally as well as internally in rheumatism. Various compounds of **i.** are used therapeutically. [Gr., *ichthys*, a fish, + Lat., *oleum*, oil.]
- ichthyophagy** (ik-the-of'aj-e). The habit of subsisting largely on fish. [Gr., *ichthys*, fish, + *phagein*, to eat.]
- ichthyosis** (ik-the-o'sis). Syn.: *fishskin disease*. A congenital defect of the skin characterized by increase of the horny layer and of deficiency of the secretions of the skin. Slight degrees are: **i. hystrix**, **i. hystrix linearis** or **linear i.**, in which the disease occurs in streaks and bands, which follow the course of the cutaneous nerves; **i. simplex**, the variety generally meant by the term **i.** In this form the entire integument is generally affected. It varies in intensity from a slight roughening to the presence of thick plates like those of the amphibians. It is most marked in those situations where the epidermis is normally roughest, i. e., on the extensor surfaces of the elbows and knees as well as the thighs and arms. The disease usually becomes manifest after the second or third year and persists all through life. **i. congenita**. Syn.: *harlequin fetus*. Congenital **i.**; a diffuse keratosis of the skin in newborn infants, due to malformation of the epidermis during intra-uterine life. [Gr., *ichthyosis*, from *ichthys*, a fish.]
- ichthyotoxicon** (ik'the-o-toks'ik-on). A general term for any poison present in certain fishes, as the hemolytic poison of eel serum. [Gr., *ichthys*, fish, + *toxikon*, poison.]
- ichthyotoxism**, **ichthyotoxismus** (ik'the-o-toks'ism, ik'the-o-toks'is-mus). The condition produced by fish poisoning. [Gr., *ichthys*, fish, + *toxikon*, poison.]
- icteric** (ik-ter'ik). Jaundiced.
- icteroid** (ik'ter-oid). Resembling icterus. [Gr., *ikteros*, jaundice, + *eidos*, resemblance.]
- icterus** (ik'ter-us). Syn.: *jaundice*. A yellow coloration of the skin, the mucous membranes, and the sclerotics due to the retention of bile pigment. **catarrhal i.** Jaundice due to catarrhal inflammation of

- the gall-bladder and gall-ducts. [Gr., *ikteros*.]
- ictus** (ik'tus). 1. A blow, a stroke. 2. A pulsation, especially the pulse beat. **i. arteriae**. An arterial pulsation. **i. cordis**. The cardiac impulse. [Lat., *icere*, to strike.]
- id.** One of the hereditary units in the idants of Weissmann.
- idant** (i'dant). According to Weissmann, a chromosome or nuclear rod considered as a factor in heredity.
- ide'a**. A reproduction with a more or less complete image of an object not actually present to the senses.
- ident'ical points of retina**. Those points in the two retinas which, when stimulated simultaneously by the same object, give single vision.
- ideo-**. A prefix to designate something related to mental images.
- ideography** (id-e-og'ra-fe). The direct representation of ideas by graphic signs as distinguished from phonetic symbols. [Gr., *idea*, idea, + *graphein*, to write.]
- ideomotor** (i'de-o-mo'tor). Of movements of the body, semi-automatic and resulting from concentration of the mind on one idea. [Gr., *idea*, an idea, + Lat., *movere*, to move.]
- id'io-**. Prefix used in compound words to signify individual, distinct. [Gr., *idios*, own, personal, peculiar.]
- idio-agglutinin** (id'e-o-ag-glu'tin-in). An agglutinin that originates in the blood without artificial or outside agencies. [Gr., *idios*, own, + *agglutinin*.]
- idiotcy** (id'e-o-se). Congenital weak-mindedness; a condition in which mental weakness exists from birth or the earliest years, the psychical development is arrested, and the intelligence is below the average commonly developed at a given age. [Gr., *idioteia*, uncouthness, from *idios*, one's own.]
- idio-electric** (id'e-o-el-ek'trik). Electric by virtue of its own peculiar properties (said especially of substances that acquire electricity by friction). [Gr., *idios*, one's own, + *elektron*, amber.]
- idio-iso-agglutinin** (id'e-o-i'so-ag-glu'tin-in). An iso-agglutinin normally present in the blood and not produced by artificial means.
- idioglossia** (id'e-o-glos'e-ah). Extreme cases of defective articulation in which the sounds made are unlike those of any known language, but the same sound is always used to express the same word. [Gr., *idios*, one's own, + *glossa*, tongue.]
- idiohetero-agglutinin** (id'e-o-het'er-o-ag-glu'tin-in). An agglutinin in normal blood which will agglutinate the foreign cells and blood corpuscles of other species. [Gr., *idios*, own, + *eteros*, other, + *agglutinin*.]
- idioheterolysin** (id'e-o-het-er-o'lis-in). A lysin in normal blood which will dissolve foreign cells and blood corpuscles of other species. [Gr., *idios*, own, + *eteros*, other, + *agglutinin*.]
- idio-isolysin** (id'e-o-i-sol'is-in). An idiolysin which destroys the cells of an animal of a similar species.
- idiolysin** (id-e-ol'is-in). A lysin normally present in the blood and not produced by artificial means. [Gr., *idios*, own, + *lysin*.]
- idiomuscular** (id'e-o-mus'ku-lar). Of Schiff, a local contraction, caused in a nearly exhausted muscle by a sharp blow. [Gr., *idios*, one's own, + Lat., *musculus*, a muscle.]
- idiopathic** (id-e-o-path'ik). Syn.: *auto-pathic*. Occurring independently; said of disease. [Gr., *idios*, one's own, + *pathos*, suffering.]
- idiopasmus** (id-e-o-spas'mus). A convulsion occurring in only one part of the body. [Gr., *idios*, one's own, + *spasmos*, spasm.]
- idiosthenia** (id'e-o-sthen'e-ah). A force having an innate existence, without regard to its origin, such as electricity, nerve force, etc. [Gr., *idios*, one's own, + *sthenos*, strength.]
- idiosthenic** (id'e-o-sthen'ik). Pertaining to or having the quality of idiosthenia.
- idiosyncrasy** (id'e-o-sin'kra-se). An individual peculiarity which renders one susceptible to certain effects not produced in others. [Gr., *idios*, one's own, + *syngkrisis*, a blending, temperament.]
- idiot** (id'e-ot). A person afflicted with idiocy. **cretinoid i.** A cretin. [Gr., *idiotes*, an ignorant person.]
- idrosis** (id-ro'sis). See *hidrosis*.
- igasurin** (ig-as-u'rin). An alkaloid, according to Desnoix, in nux vomica, but probably a mixture of strychnin and brucin. [Lat., *igasurina*.]
- ignatia** (ig-na'she-ah). Of the U. S. Ph., 1880, St. Ignatius bean, the dried ripe seed of *Strychnos Ignatii*. The constituents are very nearly the same as those of nux vomica. [Lat., *Ignatius*, the founder of the Society of Jesus.]
- ignipuncture** (ig'ne-punk-tur). A method of treatment that consists in making punctures with a hot needle. [Lat., *ignis*, fire, + *punctura*, a puncture.]
- ileac** (il'e-ak). Pertaining to the ileum.
- ileitis** (il-e-i'tis). Inflammation of the ileum.
- il'eo-**. A prefix used in compound words to signify pertaining to the ileum.
- ileocolitis** (il'e-o-ko-li'tis). Inflammation involving both the ileum and the colon.
- ileocolostomy** (il'e-o-col-os'to-me). The operation of making an artificial communication between the ileum and the colon. [Lat., *ileum*, + Gr., *kolon*, colon, + *stoma*, mouth.]
- ileostomy** (il-e-os'to-me). The operation of making a communication between the lumen of the small intestine and that of another hollow organ or the external surface. [Lat., *ileum* + Gr., *stoma*, an aperture.]
- ileotyphus** (il'e-o-ti'fus). Typhoid fever. [Lat., *ileum* + Gr., *typhos*, typhus.]
- il'ium**. The lower three-fifths of the small intestine, between the jejunum and the ileocecal valve. [Lat., *ileum*, from Gr., *eilein*, to twist.]
- il'eus**. The condition of severe colic, with

or without vomiting, incident to intestinal obstruction. [Lat., from Gr., *eileos*, colic, from *eilein*, to twist.]

I'lex. The holly. **I. aquifolia**, **I. aquifolium**. Common holly. The leaves contain illexanthin, and were formerly used as a diaphoretic. **I. cassena**, **I. cassine**. 1. Cassena tea, the *yaupon* of the American Indians; found along the Atlantic coast of the southern United States. The leaves contain a volatile oil and some caffeine. A decoction of them constituted the *black drink* of the American Indians, used as a medicine and as a drink of etiquette in their councils. 2. **I. dahoon**. **I. dahoon**. Dahoon holly, found in Virginia and Florida. The leaves are said to be used, together with those of *I. cassena*, by the Indians in making their *black drink*. **I. opaca**. The American holly, having properties like those of *I. aquifolium*. The leaves contain a glucosid not yet fully investigated. **I. paraguayensis**, **I. paraguayensis**. Paraguayan tea; a small plant cultivated for its leaves, which are used (entire or in powder) in infusion as tea. They contain a volatile oil, tannin, and caffeine. **I. verticillata**. Black alder; a North American species. Its bark, the *pinos* of the U. S. Ph. 1880, is tonic and astringent.

il'ia. [Pl. of *ilium*.] The two iliac bones.

il'iac. Pertaining to the ilium or to the surrounding region.

iliacus (il-i'a-kus). See *table of muscles*, under *muscle*.

ilicin (il'is-in). A principle obtained from holly leaves.

il'io-. A prefix used in compound words to signify, pertaining to the ilium.

iliocostalis (il-e-o-cos-ta'lis). See *table of muscles*, under *muscle*.

il'ium. Syn.: *os ilii*. Originally the flank or haunch; hence the haunch bone or superior expanded portion of the innominate bone. [Lat., *ilium*, flank.]

illaqueation (il'lak-we-a'shun). The cure of an ingrowing eyelash by drawing it out with a loop. [Lat., *illaqueare*, to insnare.]

Illicium (il-lis'se-um). Star anise; a genus of magnoliaceous plants. 2. Of the U. S. Ph., 1890, the fruit of *I. anisatum*. **I. anisatum**. 1. A yellow flowered aniseed tree, star anise, a highly aromatic species, indigenous to Cochinchina. **I. religiosum**. A species found in Japan, where it is called *shikimi* or *skinmi*. [Lat., *illicere*, to entice.]

illusion (il-lu'shun). The misapprehension or false interpretation of external objects which really exist.

im'age. An artificial imitation or representation of the external form of any object; an optical appearance or counterpart of an object. A collection of heat-rays concentrated on a particular point; a counterpart; a copy; a symbol; a mental picture. [Lat., *imago*, copy, likeness, picture.]

imago (im-a'go). The adult reproductive stage of an insect, as the imago of

the mosquito. Also used in psycho-analytic literature as representing an image in the unconscious, father imago, mother imago, etc. [Lat., *imago*, an image.]

imbecile (im'be-sil). Of feeble mind; having only rudimentary intelligence remaining; nearly idiotic; as a n., a person so affected (usually congenitally or as a result of age or cerebral or other disease). [Lat., *imbecillus*, weak, silly.]

imbecility (im-be-sil'ite). The state of being imbecile. [Lat., *imbecillitas*.]

imbed'. See *embed*.

imbibition (im-bib-ish'un). The absorption of liquids or gases by solid bodies. [Lat., *imbibere*, to drink.]

imbricated (im'brik-a-ted). Composed of parts overlapping like tiles. [Lat., *imbricare*, to cover with rain tiles.]

im'id. A compound which contains the NH. or imid group.

immanence (im'man-ens). The state of being inherent. According to the theory of i., the vital properties are inherent in organized matter, and the manner and intensity of their manifestations are correlative, but act independently of the intervention of extraneous forces. [Lat., *immanere*, to remain in.]

immersion (im-er'shun). 1. The act of immersing, or the state of being immersed. 2. In microscopy, the act of immersing the objective (then called an i. lens) in water, oil, etc., which prevents the total reflection of the rays falling obliquely upon the peripheral portions of the objective. **homogeneous i.** In microscopy, a system of i. in which the stratum of air between the objective and the cover glass is replaced by a medium which deflects as little as possible the rays of light passing through the cover glass.

oil i. lens. A special lens used with cedar oil and producing a high magnification, especially useful in studying bacteria. [Lat., *in*, into, + *mergere*, to sink.]

immobilization (im-mo-bil-i-za'shun). The action or process of making immovable, fixed, stable. [Lat., *immobilis*, immovable.]

immob'ilize. Incapable of being moved.

immune (im-mun'). Protected by natural forces, previous attacks of disease, or artificial injections of bacteria or other organisms or their products against infection. **i. body.** See *amboceptor*. **i. serum.** A serum containing any of the elements producing immunity, such as an antitoxin, an amboceptor, or an opsonin. [Lat., *immunis*, safe.]

immunity (im-mu'n'ite). The condition of being immune. **acquired i.** An i. obtained by injections of bacteria or their products or by a previous attack of a disease. **active i.** I. produced by bacteria or their products, producing a local and general reaction, but not becoming thoroughly established for about two weeks. **antitoxic i.** I. against toxins. **artificial i.** Immunity which is produced by human intervention. **local i.** A production of antibodies directly by cells with which the antigen comes into

contact in the most concentrated and direct manner. [Zenner.] **natural i.** The i. possessed as a natural function by the tissues of the body. **passive i.** 1. produced by the serum of immunized animals. **racial i.** The i. of a race towards a certain disease, as the relative i. towards yellow fever of the negro. **relative i.** 1. of a given animal to certain quantities of bacteria or toxins, which in larger doses will produce disease in the animal. [Lat., *immunitas*.]

immuniza'tion. The process of rendering a subject immune or of becoming immune. **active i.** 1. by means of previous attacks of disease or produced artificially by bacteria or their products. **passive i.** 1. by means of the serum of animals immunized by active i. **immunology** (im-nūn-ōl'ō-jē). The science of immunity.

impact'ed. Driven in and held tight. **impaction** (im-pak'shun). The state of being impacted or of containing impacted material. **fecal i.** An accumulation of feces in the bowels. [Lat., *impactio*.]

impalpable (im-pal'pa-bl). That which is very fine, or felt with difficulty.

impar (im'par). Not paired; azgyous.

Imperatoria (im-per-ah-to're-ah). A genus of umbelliferous plants. **I. ostruthium.** False pellitory of Spain. The root proper and the rhizome were once used in a great variety of diseases. The plant is rarely used in American medicine. [Lat., *imperare*, to command.]

imperato'rin. An alkaloid found in *Imperatoria ostruthium*.

imperforate (im-per'fo-rāt). Closed abnormally. [Lat., *imperforatus*, not open.]

impetiginous (im-pet-i-j'e-nus). Relating to or resembling impetigo. [Lat., *impetere*, to attack.]

impetigo (im-pet-i'go). The pustular and vesicular lesions produced in the skin by infection with the common pus organism. **bathhouse i.**, **football i.** The disease occurring in football-players or among the users of public bathhouses, from the use of infected towels. **Bockhart's i.** A variety of i. in which the lesions occur around hairs, producing primarily tense, globular, yellowish pustules, varying in size from minute pustules up to those as large as a pea. **i. bullosa.** A variety of i. in which the lesions consist mostly of bullae. Other varieties are: **i. circinata**, **i. contagiosa**, **i. figurata**, **i. simplex**, **i. staphylococcus**, **i. streptococcus**, **i. vulgaris**, **porrigo contagiosa**. [Lat., *impetere*, to attack.]

implantation (im-plan-ta'shun). 1. The insertion or engrafting of an organ, a muscle, a tendon, a nerve, or the skin. 2. The engrafting of a malignant growth. 3. A form of double monstrosity in which one of the individuals is parasitic. 4. In dentistry, the formation of an artificial alveolus and the insertion in it of a natural tooth. **hypodermic i.** The introduction of solid medicinal substances into the subcutaneous connective tissue through an incision in the skin. **in-**

ternal i. The form of i. (3rd def.) in which one individual is wholly included within the other. **unequal external i.** A form of i. (3rd def.) in which two persons are united at dissimilar points. [Fr., *implanter*, to engraft.]

imponderability (im-pon-der-ab-il'i'te-e). The quality of being imponderable. [Lat., *in*, neg., + *pondus*, a weight.]

imponderable (im-pon'der-ab-l). Incapable of being weighed; without weight. The i's (Lat., *imponderabilia*) of the old authors included heat, light, electricity, magnetism, etc. [Lat., *in*, neg., + *pondus*, a weight.]

impotence, impotency (im'po-tens, im'po-ten-se). Want of strength or power to perform anything; helplessness. Complete absence of sexual power; inability to copulate; generally applied to the male. [Lat., *impotentia*, want of power, want of self-restraint.]

impregnated (im-preg'na-ted). 1. Having been treated with some chemical substance to make more stable toward the action of bacteria or fire. 2. Rendered fertile.

impregnation (im-preg-na'shun). The process by which the female is made to conceive. **artificial i.** See *artificial fecundation*, under *fecundation*. **ovarian i.** See *indirect atavism*, under *atavism*. [Lat., *impregnare*, to impregnate.]

impresso (im-pres'se-o). See *impression*. **i. coli**, **i. colica**. A depression in the lower surface of the right lobe of the liver, receiving the hepatic flexure of the colon. **i. duodenalis**. A slight depression in the lower surface of the right lobe of the liver, in relation below with the descending portion of the duodenum. **i. gastrica**. 1. The concavity in the lower surface of the left lobe of the liver which receives the stomach. 2. The depression the anterior surface of the right kidney corresponding to the fundus of the stomach. **i. hepatica**. The depression in the anterior surface of the right kidney where it is in relation with the right lobe of the liver. **i. renalis**. A depression in the lower surface of the right lobe of the liver in relation with the right kidney. **i. suprarenalis**. Depression in posterior border of right lobe of liver, which receives the suprarenal capsule.

impression (im-pres'shun). 1. A slight depression or hollow in a surface, such as might result from the impact of a finger upon a soft body. 2. The effect produced by external force or influences upon the senses or the mind. 3. In dentistry, an imprint of the jaw and teeth in a plastic substance, such as wax or plaster, from which a model is to be made by filling in with mixed plaster of Paris. **deltoid i. of the humerus**. A large, triangular, uneven i. on the external surface of the shaft of the humerus, near its middle, receiving the insertion of the deltoid muscle. [Lat., *impressio*, from *in*, into, + *primere*, to press.]

impress'ion tray. In dentistry, a suitably shaped piece of metal designed to

contain the plastic material while an impression is being taken. Preferable to the term *impression cup*.

impulse (im'puls). Lit., a being driven in a particular direction. 1. Momentum or force, especially suddenly accelerated; a quick thrust. 2. A sudden access of volition. **cardiac i.** See *apex beat*, under *beat*. **homicidal i.** An insane i. to kill a fellow being. **morbid i.** A form of i. in which the patient is moved to commit acts from which he would shrink if normal. **nerve i.** The excitation transmitted along a nerve when stimulated; the nerve principle or force. **suicidal i.** An insane i. to take one's own life. [Lat., *impulsus*, from *impellere*, to push.]

imputability (im-pū-ta-bil'it-e). The soundness of mind which renders a person legally chargeable with crime. [Lat., *imputare*, to charge against.]

in-. 1. Prefix taken from the Lat. preposition *in*, into, and used, chiefly with verbs and their derivatives, to signify *into*, *in*, *within*, *on*, *upon*, *toward*, *against*. 2. Prefix taken from the Lat., *in*, not, and used in a negative or privative sense.

inactivation (in-ac-tiv-a'shun). The act of rendering a serum inactive by heating it at 56° C. for 30 minutes and destroying its complement.

inactive (in-ak'tiv). In a passive state. **optically i.** In chemistry, having no action on polarized light. [Lat., *inactivus*.]

inadequacy (in-ad'ek-was-e). Insufficiency. **renal i.** A condition of the kidney in which it is unable to produce the normal amount of urine containing the proper proportion of solids and of a specific gravity greater than 1.014. [Lat., *in*, neg., + *adaequare*, to make equal to.]

inanimation (in-an-ish'un). The condition of being inane; emptiness; starvation. [Lat., *inanis*, empty.]

inarticulate (in-ar-tik'u-lât). 1. Not jointed to another part or organ; without articulations in the bodily structure. 2. Of vocal sounds, or of speech, not formed into distinct syllables, confused, unintelligible. [Lat., *in*, neg., + *articulatus*, joined.]

inassimilable (in-as-sim'il-ah-bl). Insusceptible of assimilation. [Lat., *in*, neg., + *assimilis*, similar.]

inbreeding (in'breed-ing). Breeding from animals of the same parentage or closely related.

incarcerated (in-kar-ser-a-ted). Confined, imprisoned, or of an organ, abnormally inclosed or shut off from return to its normal position in the body, or from escape through a passage which should be open. [Lat., *incarceratus*, from *incarcerare*, to imprison.]

incarceration (in'kar-ser-a'shun). The act of incarcerating; the state or process of being incarcerated. [Lat., *incarceratio*, from *in*, into, + *carcer*, a prison.]

incarnant (in-kar'nant). Forming or pro-

ducing flesh; promoting granulation. [Lat., *incarnare*, to make flesh.]

incarnation (in-kar-na'shun). 1. A formation of, or (more properly) a conversion into, flesh. 2. The production of the germ or embryo within the ovum. [Lat., *incarnare*, to make flesh.]

inception (in-sep'shun). 1. The beginning of anything. 2. Ingestion. 3. Intussusception. [Lat., *inceptio*.]

inch. See *table of weights and measures*, in *appendix*.

incidentia (in-sid-en'te-ah). Medicines formerly supposed to consist of sharp particles. [Lat., *incidere*, to cut into.]

incineration (in-sin-er-a'shun). 1. A process employed in analysis to obtain the organic constituents of organic matters by heating in red-hot vessels open to the air, so as to burn off all the organic particles. 2. Cremation. [Lat., *in*, into, + *cinis*, *cineris*, ash.]

incinerator (in-sin'er-a-tor). An apparatus for effecting incineration.

incisal (in-si'sal). A term used in dentistry to signify the cutting edge of the incisor and bicuspid teeth. **i. angle**. In dentistry, the angles of the various lateral surfaces of the tooth crowns, where they join the cutting edge.

incision (in-sis'yun). A division of parts with a cutting instrument. **crucial i.** An i. consisting of two simple i.'s crossing each other at right angles. **explorative i.**, **exploratory i.** An i. into a cavity for the purpose of examining the contents of the cavity. [Lat., *incisio*, from *in*, into, + *caedere*, to cut.]

incisive (in-si'siv). Having the power or quality of cutting. Pertaining to the incisor teeth. [Lat., *incisivus*, cutting into.]

incisor (in-siz'or). 1. A tooth adapted to cutting; the front teeth in either jaw, having a sharp edge and one fang, and situated between the canine teeth in man. 2. A cutting instrument or organ. 3. Serving to incise; pertaining to, or in relation to the i. teeth. [Lat., *incisor*, cutter, from *incidere*, to cut into.]

incisura (in-si-su'rah). An incisure, a notch, a depression, or fissure. **i. cerebelli anterior**. A notch which separates the hemispheres of the cerebellum anteriorly. **i. cerebelli marsupialis** (seu **marsupiiiformis**, seu **posterior**). A cleft which intervenes between the two hemispheres of the cerebellum posteriorly. **i. intertragica**. A notch in the cartilage of the auricle which separates the tragus from the antitragus. **i. obturatoria**. A notch in the upper lateral edge of the obturator foramen. **i. sacro-ischiadica**. The space between the margins of the ilium and sacrum which is crossed by the great sacrosclatic foramen. **i. santoriniana major**. The larger of the two fissures in the cartilaginous portion of the external auditory meatus. **i. santoriniana minor**. The smaller of the two fissures in the cartilaginous portion of the external auditory meatus. **i. tentorii cerebelli**. The oval opening in the tentorium,

in which the pons and lower portions of the corpora quadrigemina lie. [Lat., *in*, into, + *caedere*, to cut.]

inclination (in-kli-na'shun). A leaning or inclining; a propensity. In dentistry, the deviation of the long axis of a tooth from the vertical. **backward i. of the pelvis**. A pathological diminution of the normal forward i. of the pelvis. **forward i. of the pelvis**. A pathological exaggeration of the normal forward i. of the pelvis. **i. of the brim of the pelvis**. The angle formed by the highest anteroposterior diameter of the pelvis with the horizon, the subject standing. **i. of the outlet of the pelvis**. The angle formed by the lowest anteroposterior diameter of the pelvis with the horizon, the subject standing. **i. of the pelvis**. The deviation of any particular plane of the pelvis (generally the plane of the outlet) from the horizon. **i. of the uterus**. **lateral i. of the pelvis**. A lateral obliquity of the pelvis. **lateral i. of the uterus**. Lateral obliquity of the uterus. [Lat., *inclinatio*.]

inclusio (in-kl'u'se-o). See *inclusion*. **i. abdominalis**. A teratoma of the abdomen, the sac of which may or may not be intimately connected with the tissues of the abdominal organs. **i. cerebrialis**. A monstrosity of the brain by inclusion. **i. fetalis**. See *fetal inclusion*. **i. mediastinalis**. A teratoma of the mediastinum. **i. ovarii**. A teratoma of the ovary prior to the age of conception. **i. subcutanea**. A teratoma situated just beneath the skin. **i. testiculi**. A teratoma encysted in the parenchyma of the testicle or between it and the tunica vaginalis propria.

inclusion (in-klu'shun). A shutting of one thing within another, also the state of being so shut in. **fetal i.** The i. of a more or less rudimentary fetus within another fetus (*fetus in fetu*) or within a more developed individual. [Lat., *includere*, to shut up.]

incompatibility (in''kom-pat-ib-il'it-e). In prescriptions incompatibilities are of three kinds: chemical, whereby a new compound is formed; pharmaceutical, whereby an unsightly mixture results; and therapeutic, in which opposing actions are exerted. [Lat., *in*, neg., + *compati*, to suffer in company with.]

incompatible (in-kom-pat'i-bl). Of drugs, having qualities which do not admit of mixture with certain other drugs without rendering the compound inert, injurious, or otherwise objectionable.

incompetence, incompetency (in-kom'pet-ens, in-kom'pet-en-se). Structural or functional inadequacy. **aortic i.** Regurgitation of blood through the aortic valves. **mental i.** In law, such mental unsoundness as would disqualify a man for making a testament or managing affairs. **mitral i.** See *nitral insufficiency*, under *insufficiency*. [Lat., *incompetentia*.]

incontinence (in-kon'tin-ens). 1. Inability to control a natural discharge. 2. Lack of self-control, especially with regard to

sexual indulgence. [Lat., *incontinentia*, from *in*, neg., + *continere*, to hold together.]

incoördinate (in-ko-or'din-ät). Not coördinate; wanting in the power of coördination. [Lat., *in*, neg., + *cum*, with, + *ordinare*, to arrange.]

incoördination (in-ko-or-di-na'shun). Want of harmony between the action of the mind and will on the one hand, and that of the muscular system on the other; irregularity of muscular action, so that movements designated by the will are made awkwardly and without precision. **locomotor i.** 1. manifested in the muscles of locomotion, as in drunkenness or locomotor ataxia. [Lat., *in*, neg., + *cum*, with, + *ordinare*, to arrange.]

incorporation (in-kor-por-a'shun). In pharmacy, the process of blending different ingredients into a uniform mass. [Lat., *in*, into, + *corpus*, body.]

incrustation (in-krus-ta'shun). 1. The act of incrusting; also the state of being incrustated. 2. The material forming a crust. [Lat., *incrustatio*, from *in*, on, + *crusta*, crust.]

incubation (in-ku-ba'shun). 1. The process of development of a fecundated ovum; usually the process by which birds hatch their eggs by applying to them the heat of their own body. 2. The time from the moment of infection to the outbreak of the first symptoms of an infectious disease. 3. The period of growth of bacteria under artificial cultivation. [Lat., *in*, on, + *cubare*, to lie.]

incubator (in'ku-ba-tor). An apparatus for maintaining objects at a uniform temperature, as in the artificial hatching of eggs. **i. for bacteria**. An i. for bacterial culture. [Lat., *incubare*, to hatch.]

incubus (in'ku-bus). 1. A thing that weighs upon one. 2. A nightmare. [Lat., *incubare*, to lie upon.]

incus (in'kus). Lit., an anvil. The second bone in the chain of ossicles of the middle ear. [Lat., from *incudere*, to forge, from *in*, on, + *cadere*, to strike.]

indagation (in-dag-a'shun). An investigation; the act of searching out. [Lat., *indagatio*, from *indagare*, to trace out.]

index. That which points out or indicates.

alveolar i. See *gnathic i.* **breadth-breadth i.** The ratio between the greatest breadth of the skull and the least distance between two corresponding points in the temporal fossae measured with calipers. **breadth-height i.** The ratio between the maximum breadth and the maximum height of a skull determined by the formula $\frac{100 \times \text{height}}{\text{breadth}}$. **cephalic i.** An i.

of the cranium, especially the length-breadth i. **cerebral i.** The ratio between the greatest transverse and anteroposterior diameters of the brain. **facial i.** The ratio between the greatest breadth and the greatest length of the face. **gnathic i.** The ratio between the basi-alveolar length and the basinasal length (= 100) of a skull. **i. of opsonic extinction**. The highest dilution of

the blood serum at which the opsonin is demonstrable. **length-breadth i.** The ratio between the maximum length and the maximum breadth of a skull determined by the formula $\frac{\text{length}}{100 \times \text{breadth}}$.

length-height i. The ratio between the maximum length and the maximum height of a skull determined by the formula $\frac{\text{length}}{100 \times \text{height}}$.

opsonic i. The power of leukocytes, under various conditions, to incorporate bacteria by phagocytosis as compared to the normal. **pelvic i.** The ratio between the anteroposterior and the transverse diameter of the pelvis. **refractive i.** The ratio (constant for the same two media) between the sines of the angle of incidence and of the angle of refraction, when a ray of light passing from one medium to another undergoes deviation. **thoracic i.** The ratio between the anteroposterior diameter of the thorax measured at the level of the lower extremity of the sternum and the greatest transverse diameter at the same level. [Lat., *indicare*, to show.]

Indian hemp. See *Cannabis indica*, also *hemp*.

indican (in'di-kan). Indoxylsulphuric acid, $C_8H_6N_2O_5SO_3H$. Its alkali salt is present in urine. Its source is the indol produced in the intestine during putrefaction, especially in intestinal obstruction. Horse urine contains about seventy-five times as much i. as human urine. It is present in the urine in excess when there is putrefaction of proteins in other organs. See *Jaffé* and *Obermayer's indican test*. **indican in urine, test for;** see in *appendix*, pages 894, 895.

indicanuria (in'dik-an-u're-ah). An excess of indican in the urine.

indicated (in'dik-a-ted). Shown by the signs and symptoms to be proper or necessary to employ (said of therapeutical measures). [Lat., *indicatus*, from *indicare*, to point out.]

indication (in-dik-a'shun). 1. A sign or symptom. 2. An inference from a patient's condition, or the grounds for such an inference, as to what is to be done to prevent, cure, or mitigate the disease. [Lat., *indicare*, to point out.]

indicator (in'di-ka-tor). 1. That which points out. 2. In chemistry, a substance, like litmus, which shows when a chemical change or reaction has been effected. [Lat., *indicare*, to point out.]

indifferent (in-dif'er-ent). 1. Neutral; having no definite tendencies towards one side or the other. 2. In chemistry, little or not at all affected by reagents; also reacting equally and in a similar manner to reagents of opposite character. [Lat., *indiferens*, in which there is no difference.]

indigenous (in-dij'en-us). Native, natural to the country where found; not foreign. [Lat., *indigenus*, from *indu*, in, + *gignere*, to beget.]

indigestion (in-dij-est'shun). Difficulty in

the process of digestion; dyspepsia. [Lat., *in*, neg., + *digerere*, to separate.]

indigitation (in-dij-it-a'shun). Intussusception; so called from the resemblance to intussusception of the finger of a glove. [Lat., *in*, into, + *digitus*, finger.]

indiglucin (in-di-glu'sin). A decomposition product, $C_6H_{10}O_6$, of indican.

indigo (in'dig-o). 1. A blue dyestuff obtained from the leaves or green stalks of plants of several genera, including *Indigofera*; also prepared artificially. Internally, it is nauseant and cathartic. It has been used, to some extent, in medicine. 2. *Indigofera tinctoria* and other indigo-bearing plants. **Bengal i.** A commercial name for i. from Bengal, where the most highly esteemed kinds are prepared. **false i.** The genera *Amorpha* and *Baptisia*, also *Galega officinalis*. **i. carmin.** Potassium sulphur digotate. **wild i.** *Baptisia tinctoria*, an herbaceous plant widely distributed in the United States. [Sp., *indico*, from Lat., *indicum*, Indian.]

indigo blue. Same as *indigo*.

Indigofera (in-dig-of'er-ah). The indigo plant. [*Indigo* + Lat., *ferre*, to bear.]

indigogen (in'dig-o-jen). Reduced or white indigo, C_8H_6NO . See *indoxyl*.

indigopurpurin (in'dig-o-pur'pu-rin). A dyestuff from the *Indigofera*, isomeric with indigo.

indigotic (in-dig-of'ik). 1. Pertaining to or derived from indigo. 2. Of the deepest blue.

indigo white. The reduction product of indigo, $C_{16}H_{14}N_2O_2$, a white crystalline substance.

indirect (in-dir-ekt'). 1. Not straight. 2. Acting through another person. **i. calorimetry.** See *calorimetry*. **i. field of vision.** See *peripheral line of vision*, under *vision*. **i. vision.** That performed by the retina outside the macula lutea.

indirubin (in-di-ru'bin). A red pigment sometimes found in the urine.

indisin (in'di-sin). See *fuchsin*.

indium (in'de-um). A rare metallic element, discovered through its spectrum; a blue line. Atomic weight, 115. Symbol, In. [Gr., *indikon*, indigo.]

individual chemistry. Chemistry as applied to the practical preparation of substances for industrial purposes, such as the preparation of iron, steel, cement, pharmaceutical preparations, etc.

indol. A heterocyclic compound derived from tryptophane by putrefaction in the intestines. It is a combination of the benzene and the pyrrol rings, C_8H_7

It is excreted partly in the feces to which it gives odor and, after absorption, partly in the urine as indican.

indolent (in'do-lent). 1. Sluggish. 2. Painless. 3. Lazy. [Lat., *indolens*, from *in*, neg., + *dolere*, to feel pain.]

indoxyl (in-doks'il). Syn.: *oxyindol*.

Present in the *Indigofera* as a glucosid from which the

natural indigo is prepared. Sometimes present in the urine, its source being indican.

indoxylsulphates (in-doks'il-sul'fâts). Compounds found in the urine during increased intestinal putrefaction.

induction (in-duk'shun). The act or process of inducing, of causing to occur (as of abortion or premature labor). [Lat., *inductio*, from *inducere*, to lead into.]

inductorium (in-duk-to're-um). 1. A covering. 2. An apparatus for producing induced currents for purposes of stimulation. [Lat., *inducere*, to spread over.]

indurated (in'du-ra-ted). Hardened; of a lesion, accompanied with induration. [Lat., *indurare*, to make hard.]

induration (in-du-ra'shun). 1. The state of being, or the process of becoming, hardened. 2. An abnormally hard spot or place. **brown i. of the lungs.** See *pigment i. of the lung*. **cyanotic i.** An i. resulting from long continued venous hyperemia, the pressure on the vessels causing transudation of blood and serum and the formation of a dark, hard mass. In the liver, spleen, etc., it leads to the absorption of more or less of the parenchyma and to the formation of new connective tissue. **fibrous i. of the lung.** See *interstitial pneumonia*. **i. of chancre.** See *hunterian chancre*, under *chancre*. **i. of the lung.** See *interstitial pneumonia*. **pigment i. of the lung.** A form of interstitial pneumonia in which, after long continued passive congestion, associated with obstruction at the mitral orifice, pigment from the blood is lodged in the lung tissue, forming red points that can be seen on section of the lung. **specific i.** The i. of the initial lesion of syphilis. See *syphilitic chancre*, under *chancre*. [Lat., *induratio*.]

inebriant (in-e'bre-ant). Causing drunkenness; as a n., an agent having that property. [Lat., *inebriare*, to inebriate.]

inebriation (in-e-bri-a'shun). Drunkenness, [Lat., *inebriare*, to inebriate.]

inebriety (in-e-bri'et-e). 1. The state of being drunk. 2. Habitual drunkenness. [Lat., *inebriare*, to make drunk.]

ine'in. A crystalline alkaloid obtained by Hardy and Gallois from the tufts of hairs removed from the seeds of *Strophanthus hispidus*. Its existence has been denied by later investigators.

inertia (in-er'she-ah). 1. The tendency of a body to maintain its condition of repose unless acted upon by disturbing forces. 2. Sluggishness, lack of activity. [Lat., *inertia*, want of skill, idleness, inactivity.]

infancy (in'fan-se). 1. Early childhood, before the child can talk and walk. 2. In English law, the age of one's minority. [Lat., *infantia*, from *infans*, speechless.]

in'fant. 1. A child not yet old enough to talk and walk. 2. In English law, a person under twenty-one years of age. **infant, care of; feeding; weight of normal, etc.,** see in *appendix*, pages 917, 918, 919. [Lat., *infans*, from *in*, neg., + *fant-*, ppr. stem of *fari*, to speak.]

infanticide (in-fan'tis-id). 1. Child murderer. 2. One who kills an infant. [Lat., *infans*, an infant, + *caedere*, to kill.]

in'fantile. Pertaining to an infant or infancy. [Lat., *infantilis*.]

infantilism (in-fan'til-izm). The persistence of infantile characteristics, physical or mental, in youth or adult age.

infarct (in'farkt). 1. The lesion infarction, consisting of a wedge-shaped area of anemic necrosis produced by the occlusion of a terminal artery by an embolus or a thrombus. 2. An infiltration with solid foreign particles, such as crystals or pigment granules. **anemic i.** An i. consisting of a mass of coagulative necrosis without hemorrhagic infiltration.

bilirubin i. The deposit of rhombic bilirubin in the kidney in icterus neonatorum or jaundice of the new-born. **calcareous i.** An i. in which the plug consists of calcareous matter. **fibrous i.** A form of i. in which fibrous organization has followed the necrotic process.

hemoglobin i. The infiltration of the kidney with hemosiderin or hematoidin following hemoglobinemia and hemoglobinuria from various chemical poisons or the infectious diseases. **hemorrhagic i.** The infiltration of an anemic infarction with red blood corpuscles imparting a red color to the lesion. **mixed i.** An i. partly organic and pale, partly hemorrhagic and red. **pyemic i.** An i. due to obstruction of the blood vessels supplying an area by a pyemic embolus. **red i.** See *hemorrhagic i.* **renal i.** See *uric acid i.* **uric acid i.** The infiltration of the kidney of the new-born. [Lat., *infarcire*, to stuff into.]

infarction (in-fark'shun). 1. The formation of an infarct. 2. The state of being affected with infarcts. 3. An infarct. **hemorrhagic i.** A large effusion of blood connected with great separation of the tissues and with little destruction of them. [Lat., *infarcire*, to stuff in.]

infect'ing. Causing infection.

infection (in-fek'shun). 1. The act or process by which disease is set up in a vegetable, animal, or human organism by the implantation of animal or vegetable parasites. The successful invasion and growth of microorganisms in the tissues of the body (Kolmer). 2. The material by which communicable diseases are propagated. **aërial i.** Infection through the air by means of dust particles or other infected minute substances. **atrium of i.** The point of entrance of an infection. **auto-i.** See *self-i.* **cryptogenetic i.** Bacterial infection without a discoverable wound for the entrance of the infectious agent. **cryptogenic i.** Isolated focal infection, formerly thought of as idiopathic, as in tuberculous, cervical adenitis. **droplet i.** I. by means of small droplets of sputum. **intra-uterine i.** I. of the child in *utero*. **mixed i.** I. with two or more bacteria. **purulent i.** See *pyemia*. **secondary i.** I. by a bacterium, following a primary i. by another organism. **self-i.** I. of the

- organism at large or of a fresh portion of it from a preëxisting source within itself. **septic i.** The invasion of a wound by septic germs such as interfere with the normal progress of healing, or induce suppuration. It may or may not be followed by septicemia. **septic i. of the blood.** See *septicemia*. **spermatic i.** The supposed infection of the child with syphilis through the semen of the father. **systemic i.** I. of the organism at large with a disease previously only local. **terminal i.** An acute infection producing death, in the course of a chronic disease. **water-borne i.** I. transmitted by means of drinking water. [Lat., *infectio*, from *ficere*, to dye.]
- infectiosity** (in-fek-she-os'it-e). The degree of infectiousness of an organism or microbe.
- infectious.** 1. Pertaining to or of the nature of infection. Capable of transmitting disease or disease-producing germs. **i. disease.** A d. set up in the organism by the implantation of morbid germs from without.
- infectivity** (in-fek-tiv'it-e). The power of a microorganism to live and multiply in a living host.
- infectivity** (in-fe-kun'dit-e). See *sterility*. [Lat., *infectunditas*.]
- inferior.** Situated below. [Lat., *inferus*, below.]
- infero-**. Combining form of the Lat., *inferus*, low.
- infection, infest'ment.** The presence of comparatively large organisms or macroparasites on the surface of the skin or the intestinal tract, as i. with pediculi or intestinal worms.
- infiltrate** (in-fil'trät). Material diffused by infiltration.
- infiltrated.** 1. Diffused by infiltration. 2. Affected with infiltration.
- infiltration** (in-fil-tra'shun). 1. A process or condition by virtue of which fluid or solid foreign substances are deposited in and diffused through a tissue, organ, or cell, as the i. of a tissue or organ with red or white blood corpuscles or of a cell by fatty particles. Strictly speaking, i. should be clearly separated from degeneration, as in the latter condition the foreign substances are from changes within the cell, but practical usage often makes the terms synonymous. 2. See *infiltrate*. **albuminous i.** See *albuminous degeneration*. **amyloid i.** An i. of the tissues or viscera, with a glycoprotein containing chondroitin-sulphuric acid. **black i. of the lungs.** See *anthracosis*. **calcareous i.** See *calcareous degeneration*, under *degeneration*. **cellular i.** The effusion of white blood cells into the parenchyma of a tissue about to inflame. **cholesterin i.** See *cholesterin degeneration*, under *degeneration*. **chondroid i.** See *amyloid i.* **colloid i.** See *colloid degeneration*, under *degeneration*. **dropsical i.** See *edema*. **edematous i.** See *edema*. **fatty i.** The i. of tissue cells with fatty matter brought to them in the blood. **fatty i. of the heart.** Excessive development of the subpericardial fat with which may be associated fatty degeneration of the heart. **fibrinous i.** The effusion of the fibrinous elements of the blood into the parenchyma of an inflaming tissue. **fibroid i.** I. of an infarct with fibroid tissue. **glycogenous i.** I. of the tissues or viscera with glycogen. **hemorrhagic i.** I. with blood. **inflammatory i.** The i. of a part with inflammatory products. **mucous i.** Mucoid softening. **myeloid i.** The i. of bone by the peculiar nucleated cells which go to make up medullary tumors. It is generally but not always benign. **pigmentary i.** See *pigmentary degeneration*, under *degeneration*. **purulent i.** I. with pus; diffuse suppuration. **saline i.** See *calcareous degeneration*, under *degeneration*. **sanguineous i.** I. with blood. **serous i.** See *edema*. **tuberculous i.** I. with tubercle. **uratic i.** See *uratic degeneration*, under *degeneration*. **urinary i.** I. with extravasated urine. **waxy i.** See *amyloid degeneration*, under *degeneration*. [Lat., *infiltratio*.]
- infinitivist** (in-fin-it'ov-ist). The follower of a doctrine according to which generation is caused by the evolution of germs contained infinitely one within another.
- infirmary** (in-fir'ma-re). A hospital or dispensary. [Lat., *infirmarium*.]
- infirmitly** (in-fir'mit-e). A general weakness or disease, especially if it produces disability. [Lat., *infirmitas*.]
- inflammable** (in-flam'ma-ble). Capable of being easily ignited.
- inflammation** (in-flam-a'shun). "The local adaptive changes in tissues resulting from actual or referred injury" (Adami). The injury may be bacterial, chemical, thermal, actinic, electric, mechanical, or suggested, and the irritated and damaged tissues still retain their vitality. **acute i.** The changes which begin by a temporary contraction and later a permanent dilatation of the arterioles, accompanied by an emigration of the neutrophilic leukocytes, and occasionally of the eosinophilic leukocytes and the lymphocytes, from the capillaries and small veins into the tissues. The plasma and red blood corpuscles may also infiltrate the tissues by diapedesis. These changes are accompanied by heat, redness, swelling, pain, and impaired function of the inflamed area. **adhesive i.** A form of i. accompanied by plastic exudation and tending to cause adhesion of adjacent surfaces. **articular i.** See *arthritis*. **asthenic i.** An i. which affects parts that are poorly nourished and disposed to degenerations. The asthenic i's arise from slight irritations, and include most forms of chronic i. **capsular i.** The formation of a capsule of connective tissue around an inert foreign body. **catarrhal i.** An inflammation of a mucous membrane accompanied with increased secretion by mucous cells and a proliferation of epithelial cells as well

as exudation of a few pus cells. **cellulocutaneous i.** Syn.: *phlegmonous i.*, *cellulitis*. A spreading, suppurating i. of the subcutaneous tissues, most frequently caused by the *Streptococcus pyogenes*. **chronic diffuse i.** Protracted i. throughout the tissues of a part. **chronic i.** "A long continued process without the cardinal symptoms, in which the proliferative changes and formation of cicatricial fibrous tissue are more prominent than the vascular disturbances" [Adami]. **chronic interstitial i.** See *chronic diffuse i.* **congestive i.** An i. chiefly due to congestive hyperemia, characterized by redness and swelling, the latter being increased by the accompanying serous, mucous, or seropurulent exudation. **croupous i.** I. of a mucous membrane accompanied by the formation of a fibrinous exudate. **desquamative i.** An i. of the skin, and sometimes of the mucous membrane, characterized by excessive desquamation of the epithelial cells. **diffused i.** An i. in which the inflammatory process and exudations are more or less diffused throughout the tissues of a part. **diphtheritic i.** I. due to the diphtheria bacillus. **edematous i.** I. in which there is such an amount of serum exuded into the tissue that it pits upon pressure. **embolic i.** 1. An i. due to the presence of a septic embolus. 2. An i. produced by the presence of an embolus in the artery supplying an area. **erysipelatosus i.** See *erysipelas*. **exudative i.** An i. characterized by an exudation of serous, mucous, fibrinous, or purulent material. **fibrinous i.** I. of epithelial or serous surfaces characterized by a large proportion of fibrin in the exudation. **follicular i.** A catarrhal or exudative inflammation, involving the follicles. **gangrenous i.** I. accompanied by gangrenous changes. **gonorrhoeal i.** See *gonorrhoea*. **hemorrhagic i.** An i. in which the exudation is infiltrated with blood, as in the malignant pustule of anthrax infection. **herpetic i.** See *vesicular i.* **hyperplastic i.** An i. chiefly characterized by the formation of new connective tissue. **interstitial i.** I. of the connective tissue of an organ. **membranous i.** See *croupous i.* **metastatic i.** An i. transferred from an inflamed part to a part more or less distant through the agency of emboli and collateral hyperemia at the obstructed part, or of an irritant in the blood. **mucous i.** A catarrh accompanied by a copious production of mucus. **necrotic i.** I. accompanied by necrotic changes. **obliterative i.** I. causing the obliteration of a canal or cavity, as *obliterative appendicitis*. **old i.** The fibrous scars or adhesions in serous cavities resulting from former acute i. This variety of i. must be distinguished from chronic i. in which the irritation is still present. **parenchymatous i.** I. of the parenchyma of a viscus. **pellicular intestinal i.** See *membranous enteritis*, under *enteritis*. **phagedenic i.** See *phagedena*. **phlegmonous i.** Cel-

lulitis. See *cellulocutaneous i.* **plastic i.** A form of i. in which the material produced tends to solidify as fibrin. **productive i.** I. in which new cells or tissue are formed. See *exudative i.* **proliferous i.** See *hyperplastic i.* **pseudomembranous i.** An i. attended by new formation of a false membrane, as in diphtheria. **purulent i.** See *suppurative i.* **putrid i.** A septic i. in which the exudation is foul, putrid, or sanious. **resolving i.** I. in which the inflamed part returns gradually and without suppuration to the normal state. **rheumatic i.** See *inflammatory rheumatism*. **serous i.** I. associated with profuse serous exudation, as in serous pleurisy. **suppurative i.** I. resulting in the formation of pus. **toxic i.** An i. due to poisoning of the blood or tissues or to the contact of corrosive substances. **traumatic i.** I. due to an injury. **ulcerative i.**, **ulcerous i.** A form of i. which, eventually approaching a cutaneous or mucous surface, induces a breaking up of the surface and the formation of an ulcer. **vesicular i.** I. characterized by the formation of small vesicles. [Lat., *inflammatio*, from *inflammare*, to inflame.] **inflamm'atory**. 1. Pertaining to or of the nature of inflammation. 2. In chemistry, capable of producing combustion. **inflation** (in-fla'shun). 1. The act or process of distending with gas. 2. The state of being inflated. [Lat., *inflatio*, from *inflare*, to blow into.] **inflexion** (in-fleks'yun). A bending, especially a bending inward. [Lat., *inflexere*, to bend.] **inflexioscope** (in-fleks'e-o-sköp). An instrument for demonstrating diffraction. [Lat., *inflexio*, a bending, + Gr., *skopein*, to examine.] **influenza** (in-flu-en'zah). Syn.: *la grippe*, *Russian catarrh*. 1. An infectious disease characterized by great depression, with or without specific catarrhal inflammation of the air passages, and frequently occurring in epidemics. It is caused by the *Bacillus influenzae*. 2. In the horse, a disease resembling typhoid fever. [An Italianized form of *influentia*, because the disease was ascribed to some mysterious influence.] **in'fra-**. In composition, signifying below. [Lat.] **infracostalis** (in-fra-cos-ta'lis). See *table of muscles*, under *muscle*. **infracrion** (in-fra'k'shun). The act of fracturing or breaking. A breakage or fracture. [Lat., *infractio*, from *infringere*, to break to pieces.] **infraspinatus** (in'fra-spi-na'tus). See *table of muscles*, under *muscle*. **infriction** (in-frik'shun). A rubbing in, as of ointment. [Lat., *infricare*, to rub in.] **infundibular gland**. See under *gland*. **infundibuliform** (in-fun-dib'u-lif-orm). Funnel-shaped. [Lat., *infundibulum*, funnel, + *forma*, form.] **infundibulum** (in-fun-dib'u-lum). Syn.: *funiculus tubercis*. A tubular passage more or less resembling a funnel. i.

- cerebri.** A hollow process that forms the continuation of the tuber cinereum and terminates in the pituitary body. **i. cochleae.** An imperfect funnel around which the gyri of the cochlea pass. **i. of the ethmoid bone.** A long, flexuous cellular canal, which passes from the frontal sinus through the anterior ethmoidal cells to the front part of the middle meatus of the nose. **infundibula of the kidney.** The three prolongations of the pelvis of the kidney, the subdivisions of which constitute the calices. **infundibula of the lungs.** The extreme enlarged ends of the bronchioles. **i. tubae Fallopii.** The funnel-shaped cavity formed by the fimbriae of the oviduct. [Lat., *infundibulum*, funnel, from *in*, into, + *fundere*, to pour.]
- infuse.** 1. To pour into. 2. To steep.
- infusion.** 1. A solution (generally aqueous) of those portions of a crude drug that are soluble in the menstruum, used without the aid of boiling. 2. The process of making such an **i. cold i.** An **i.** made with cold water. **hot i.** An **i.** made with hot water. [Lat., *infusio*, from *in*, into, + *fundere*, to pour.]
- infusodecoctum** (in-fu'so-de-kok'tum). A mixture of an infusion with a decoction of the same. This method of using drugs is now obsolete. [Lat., *infundere*, to infuse, + *decoquere*, to boil away.]
- Infusoria** (in-fu-so're-ah). A phylum of unicellular animals belonging to the subkingdom *Protozoa*, which are ciliated either while young or throughout life. [Lat., *infusio*, an infusion.]
- infusorial earth.** A kind of light powder prepared from infusoria from which the organic matter has been removed. It has the property of absorbing several times its weight of a liquid and still retaining the consistency of powder. Dynamite is such a mixture of **i. e.** and nitroglycerin.
- infusum.** See *infusion*.
- ingenium** (in-ge'ne-um). 1. A congenital quality; a primordial characteristic. 2. Natural intelligence, mentality, or genius. [Lat., *in*, in, + *gignere*, to beget.]
- ingest** (in-jest'). To eat, to take up, to perform ingestion (*q. v.*). [Lat., *in*, into, + *gerere*, to carry.]
- ingesta** (in-jes'tah). Things taken into the stomach. [Lat., *ingerere*, to carry into.]
- ingestion** (in-jest'shun). 1. The introduction of anything into the alimentary canal by the mouth. 2. The act by which a cell takes into its substance particles of foreign matter. [Lat., *ingerere*, to carry into.]
- ingluvin** (in-glu'vin). A proprietary digestive preparation, made from the crops of chickens. [Lat., *ingluvies*, gizzard.]
- in'got.** A mold in which metal is cast; a mass of cast metal usually oblong or brick-shaped.
- ingravescent** (in-grav-es'ent). Increasing gradually in severity. [Lat., *in*, upon, + *gravesci*, to grow heavy.]
- ingredient** (in-gre'de-ent). A constituent of a mixture. [Lat., *ingrediens*.]
- ingrowing** (in'gro-ing). Growing in an inward direction, as an **i. nail**.
- inguinal** (in'gwin-al). Situated in the groin. **i. glands.** See under *gland*. [Lat., *inguinalis*, from *inguen*, groin.]
- inhalant** (in-ha'lant). A remedy used by inhalation.
- inhalation** (in-hal-a'shun). 1. The inspiration of air, of a gas, or of vapor, especially when impregnated with a medication or of itself physiologically active. 2. Absorption, especially by the lungs. 3. A medicinal preparation the vapor or spray of which is to be inhaled. [Lat., *inhalatio*.]
- inhaler** (in-ha'ler). An apparatus for use in inhalation. [Lat., *inhalare*, to inhale.]
- inherent** (in-he'rent). Belonging to anything naturally, originally, and not as the result of circumstances; of cauterization, deep. [Lat., *inherens*, sticking fast.]
- inheritance** (in-her'it-ans). 1. The reception of characteristics transmitted from one's ancestors. 2. That which is so derived. **abridged i.** Of Haeckel, the fusion or omission of certain characteristics in an offspring which were present in the ancestors. **amphigenous i.** Of Haeckel, in sexual generation, the **i.** of characteristics from both father and mother. **homochronous i.** Of Haeckel, **i.** of a characteristic in an offspring at an age corresponding to that in which the characteristic appeared in parent. **homotopic i.** Of Haeckel, **i.** of acquired characteristics. **mendelian i.** **i.** according to the mendelian law. See under *law*.
- inhibition** (in-hib-ish'un). A preventive or restraining action. **cardiac i.** The **i.** of the heart through the action of the vagus nerve. **psychic i.** In psychoanalysis the arrest of any mental activity by an opposing unconscious complex. **reflex i.** An **i.** of a nerve center or of a peripheral organ, through stimulation of afferent nerve fibers. **vasomotor i.** An **i.** of the tonic activity of the vasomotor centers in the medulla, causing vascular dilatation. **voluntary i.** The voluntary restraint of reflex actions, such as the arrest of winking when the eyeball is touched. [Lat., *inhibere*, to restrain.]
- inhibitory** (in-hib'it-or-e). Exercising inhibition. [Lat., *inhibere*, to restrain.]
- inhibitrope** (in-hib'it-röp). Something to arrest function. [Lat., *inhibere*, to check.]
- inhumation** (in-hu-ma'shun). The process of burial. [Lat., *inhumare*, to bury in the ground.]
- iniencephalus** (in'e-en-sef'al-us). Having the skull fissured posteriorly and inferiorly; as a **n.**, an exencephalic monster in which the cranial anomaly is complicated by a spinal fissure. [Gr., *inion*, nape of neck, + *egkephalus*, brain.]
- inion** (in'e-on). 1. Occiput. 2. Back part of the neck. 3. External occipital protuberance; used in craniometry as a point from which measurements are made. [Gr.]
- initial** (in-ish'al). First degree or beginning. [Lat., *initialis*.]
- initis** (in-i'tis). 1. Inflammation of muscular tissue. 2. Inflammation of a tendon.

- [Gr., *is*, *inos*, a fiber, + *itis*, inflammation.]
- initium** (in-e'te-um). A beginning or entrance; the first portion of anything. **i. asperae arteriae.** See *larynx*. **i. exuberans coli.** The cecum.
- in'ium.** See *inion*.
- injaculatio** (in-jak-u-lah'te-o). 1. The propulsion of semen into the vagina. 2. Of Van Helmont, a sudden and violent spasmodic pain in the stomach. [Lat., *in*, into, + *jaculari*, to throw.]
- inject'ed.** Filled or distended with fluid; engorged with blood.
- injection** (in-jek'shun). 1. The act of injecting. 2. The state of being injected. 3. A substance which is thrown in (i. e., into a cavity, vessel, or tissue of the body) by the use of a syringe or injector. 4. See *enema*. **anatomical i.** An i. of some suitable substance, usually a liquid capable of solidifying on cooling, into the vessels of a cadaver to facilitate dissection. **coarse i.** An anatomical i. of some colored material that fills the larger vessels, but which does not traverse the capillaries. **fine i.** The i. of the blood vessels or lymphatic vessels or gland ducts with some substance like colored melted gelatin which will penetrate to the finest ramifications. **forced i.** An i. used for the purpose of distending a sac or cavity. **gelatin i.** An i. in which the body of the mass is gelatin or glue. It may be coarse or fine, opaque or transparent, according to the coloring matter. **hypodermic i.** An i. of a medicinal or other agent under the skin. **intravenous i.** An i. into a vein. **muscular i.** The i. of medical agents into the muscular tissue. **natural i.** An engorgement of the capillaries and smaller blood vessels with blood, thus simulating a fine i. **nutrient i.** 1. See *nutrient enema*. 2. The i. of a nutrient fluid. **opaque i.** An i., either coarse or fine, in which the mass is opaque. **plaster i.** A coarse anatomical i. in which the mass is plaster of Paris mixed with about an equal volume of water. **preservative i.** The i. of a solution of some antiseptic substance like zinc or mercuric chlorid, arsenic, carbolic acid, alcohol, etc., into the blood vessels or body cavities, or both, to prevent decomposition. **rectal i.** See *enema*. **subcutaneous i.** See *hypodermic i.* **urethral i.** An i. into the urethra. **vaginal i.** An i. into the vagina. [Lat., *injectio*, from *in*, into, + *jacere*, to throw.]
- injury** (in'ju-re). A hurt or loss; damage. [Lat., *injuria*, wrong, hurt, detriment.]
- in-knee.** See *knock-knee*, under *knee*.
- in'lay.** A dental term applied to fillings first made and then inserted into a cavity with cement.
- in'let.** An opening or entrance. **i. of the pelvis, pelvic i.** The superior strait of the pelvis.
- in'nate.** 1. Congenital. 2. Indigenous. [Lat., *innatus*.]
- innervation** (in-ner-va'shun). The special action of the nervous system on a given organ or the character or origin of the nerves supplying an organ. **collateral i.** The supply of nervous influence, through an adjacent or surrounding nerve tract, to a part the original nerve supply of which has been injured or destroyed. [Lat., *in*, into, + *nervus*, nerve.]
- innominate** (in-nom'in-ät). Without a name. **i. artery.** See *table of arteries*, under *artery*. **i. bone** [B. N. A., *os coxae*]. The hip bone, composed of the ilium, the ischium, and the os pubis, forming the pelvic girdle. **i. vein.** See *table of veins*, under *vein*. [Lat., *innominatus*, from *in*, neg., + *nominare*, to name.]
- inoblast** (i'no-blast). A general name for a connective tissue corpuscle or a cell giving rise to connective tissue. [Gr., *is*, fiber, + *blastos*, sprout.]
- inoculabil'ity.** Susceptibility of transmission of infection by inoculation.
- inoc'ulable.** Capable of being inoculated. Transmissible by inoculation.
- inoc'ulate.** To introduce into a living organism matter capable of giving rise to a specific disease.
- inoculation** (in-ok-u-la'shun). 1. The introduction of the parasitic animal or vegetable organisms capable of producing disease into the circulation or the tissues. 2. The operation of ingrafting a bud. 3. The process of inoculating, especially (as formerly used) that of inoculating with the virus of smallpox. **animal i.** I. of an animal for experiment purposes. **anti-typhoid i.** I. with a sterilized suspension of typhoid bacilli in salt solution from an agar slant culture of carefully measured amounts. **auto-i.** See *self-i.* **cowpox i.** See *vaccination*. **curative i.** The injection of an antiserum or vaccine for curative purposes. **jennerian i.** See *vaccination*. **Pasteur's system of i.** See under *Pasteur*. **preventive i.** The injection of an antiserum or vaccine to protect against a disease. **preventive i. of rabies.** The i. with a mitigated virus of rabies to induce susceptibility to the disease or with the view of limiting its intensity when it is already established. **self-i.** The i. of the organism at large from a diseased part of the same organism. [Lat., *inoculatio*, from *inoculare*, to ingraft.]
- inocyst** (in'o-sist). A fibrous capsule. [Gr., *is*, fiber, + *kystis*, a bladder.]
- inocystis** (in-o-sis'tis). See *inocyst*.
- inoleiomyoma** (in'o-le-o-mi-o'mah). A tumor composed of unstripped muscular tissue. [Gr., *is*, fiber, + *leios*, smooth, + *mys*, muscle, + *oma*, tumor.]
- inolith** (in'o-lith). A fibrous concretion. [Lat., *inolithus*, from Gr., *is*, a fiber, + *lithos*, a stone.]
- inoma** (in-o'mah). See *fibroma*. [Gr., *is*, a fiber, + *oma*, a tumor.]
- inomyoma** (in'o-mi-o'mah). See *myoma*.
- inoperable** (in-op'er-a-bl). Unsuitable for treatment by operation. [Fr., *inopérable*.]
- inope'xia** (in-o-peks'e-ah). A condition of the blood, observed especially in lying-in

women, in which it is prone to coagulate spontaneously. [Gr., *is*, a fiber, + *pexis*, a coagulation.]

inophlogisma (in-of-lo-gis'mah). Inflammation of fibrous tissue. [Gr., *is*, a fiber, + *phlogisma*, the blister of a burn.]

inopolyus (in-o-pol'e-pus). A fibrous polypus. [Gr., *is*, a fiber, + *polypous*, a polypus.]

inorganic (in-or-gan'ik). 1. Without organs; not proceeding from organic origin. 2. Of disease, functional; of morbid phenomena, not dependent on organic disease.

i. chemistry. The chemistry of minerals and mineral constituents. It has various subdivisions, namely, elementary i. c., qualitative and quantitative analysis, and the various industrial branches of i. c. [Lat., *inorganicus*, from *in*, neg., + Gr., *organon*, an organ.]

inosate. A salt of inosinic acid.

inoscleroma (in-o-skle-ro'mah). Induration of fibrous tissue. [Gr., *is*, a fiber, + *skleroma*, induration.]

inoscopy (in-os'kop-e). The diagnosis of certain diseases by means of the artificial digestion of the clots of serous fluids, and the microscopic examination of the centrifugized sediment. The method is especially recommended for the detection of tubercle bacilli. [Gr., *is*, fiber, + *skopein*, to view.]

inosculate (in-os'ku-lat). To unite, to anastomose. [Lat., *in*, into, + *osculum*, little mouth.]

inosemia (in-o-se'me-ah). An excess of fibrin in the blood. [Gr., *is*, fiber, + *aima*, blood.]

inosin (in'o-sin). $C_8H_{10}O_4.C_6H_5N_4O$. A nucleide containing a-ribose and hypoxanthin.

inosite. Hexahydroxybenzene, $C_6H_6(OH)_6$. Present in muscle and many other tissues of the body; also widely distributed in plant life.

inosteatoma (in-os-te-at-o'mah). A tumor composed of fibrous tissue and steatomatous matter. [Gr., *is*, a fiber, + *stear*, fat, + *oma*, tumor.]

introp'ic nerves. Those fibers of the cardiac nerves which affect the force of the combustion in a positive or negative manner.

inoxidizable (in'oks-id-i'za-bl). Insusceptible of oxidation.

inquest. The inquiry by a jury or commission into the facts of a case, civil or criminal, or into an individual's mental condition or the cause of his death. [Lat., *inquirere*, to inquire into.]

insalivation (in'sal-iv-a'shun). The process by which the saliva is intimately mixed with the food. [Lat., *in*, into, + *saliva*, spittle.]

insane'. Popularly used as having a mental disease, a psychosis; or, in legal parlance, as irresponsible; of unsound mind. [Lat., *insanus*, from *in*, neg., + *sanus*, sound.]

insanity (in-san'it-e). In medicine an obsolete term, belonging to the period of psychiatric science when all mental diseases were considered as one. Now preferably replaced by the word psy-

choses, and by the concept of definite and separable mental diseases. In law a loose and badly defined word meaning either lack of responsibility in the commitment of antisocial acts, inability to make contracts, inability to manage one's person or property, or inability to make a will, all by reason of some definite mental disease or psychosis. These several states of social adaptation are defined differently in different states and countries and are very ununiform. All the various forms of insanity have been discarded from psychiatry. See *psychosis*. The various terms affective, acquired, arthritic, compound, compulsive, confusional, consecutive, degenerative, doubting, hereditary, homicidal, etc., etc., are survivals of old usage and relics of a non-analytical stage of psychiatry. They are all abandoned in modern usage.

alcoholic i. Chronic i. due to an alcoholic neurosis; especially characterized by hallucinations, delusions, and delirious exacerbations. **traumatic i.** I. referable to traumatism or analogous causes; characterized by perversity of character, with violent impulses, and a tendency to alcoholism. It finally results in dementia.

inscription (in-scrip'shun). That part of a prescription which directs the drugs or preparations, together with the quantity or weight of each, to be used by the pharmacist in filling the prescription. [Lat., *inscriptio*, from *inscribere*, to write upon.]

insect. The common name for any of the class *Insecta*, of the phylum *Arthropoda*, such as flies, mosquitoes, and ticks. [Lat., *insectum*.]

insecticide (in-sek'tis-id). Destructive to insects; as a n., a substance having that quality. [Lat., *insectum*, insect, + *caedere*, to kill.]

insectifuge (in-sek'ti-fuj). A substance having the property of repelling insects. [Lat., *insectum*, insect, + *fugare*, to put to flight.]

insect powder. The flowers of different species of *Pyrethrum*, often adulterated with the leaves and stem of the plant; used to destroy insects. **Caucasian i. p.** The flowers of *Pyrethrum carneum* and *Pyrethrum roseum*. **Dalmatian i. p.** The flowers of *Pyrethrum cinerariaefolium*.

insemination (in-sem-in-a'shun). The deposit of the semen in copulation. [Lat., *in*, into, + *semen*, seed.]

insensibility (in-sen-si-bil'it-e). The quality or condition of being insensible; without feeling or sensation. [Lat., *insensibilitas*.]

insertion (in-ser'shun). 1. The act of inserting. 2. The particular way in which anything is inserted; the manner or place of attachment of a body. 3. Of a muscle, the site of its attachment to the part that its action tends to move. **marginal i. of the umbilical cord.** The form of i. of the cord in which the character of the latter as a whole is maintained up to its i. at the margin of the placenta,

giving rise to the formation termed battle-dore placenta. **vaginal i.** The line of junction of the upper end of the vagina with the neck of the uterus. **velamentous i.** Syn.: *i. marginalis bifida*. That form of insertion of the umbilical cord into the placenta in which the vessels of the cord diverge from each other before entering the placenta, and the cord as a whole is inserted into the chorion, near the margin of the placenta. [Lat., *insertio*, from *in*, into, + *serere*, to plant.]

insheathed (in-shēthd'). Same as *encysted*.

insolation (in-so-la'shun). Syn.: *heat exhaustion, heat fever, heat stroke, solar exhaustion, thermic fever*. Properly, that form of heat fever known as sunstroke; as generally employed, any form of prostration by extreme heat. [Lat., *insolare*, to expose to the sun.]

insomnia (in-som'ne-ah). Sleeplessness. **congestive i.** A persistent form of *i.* due to congestion of the brain. **febrile i.** The *i.* which attends the evolution of the various specific fevers. **i. of exhaustion.** *I.* produced by overwork, debilitating discharges, mental strain, parturition, or any cause capable of causing mental and physical exhaustion. [Lat., *in*, neg., + *somnus*, sleep.]

inspection (in-spek'shun). Examination by means of sight. [Lat., *inspicere*, to examine.]

inspiration (in-spi-ra'shun). The act of drawing in the breath. **crowling i.** The peculiar, noisy *i.* made in laryngismus stridulus or spasmodic croup. **forced i., forcible i., difficult i.** Syn.: *labored i.* *I.* in which the ordinary muscles of *i.* are assisted by the so-called inspiratory auxiliaries (*i. e.*, the muscles attached to the chest which by their contraction can increase the thoracic cavity directly or indirectly by furnishing fixed support whereby other muscles may act more advantageously). If the movements become excessively labored, there is brought into coordinate action every muscle in the body which can either directly or indirectly increase the cavity of the thorax. **full i.** *I.* in which the lungs are filled as completely as possible (voluntarily, as in determining the amount of complementary air, or involuntarily, as in cardiac dyspnea). **labored i.** See *forced i.* [Lat., *inspirare*, to blow into.]

inspiratory (in'spir-a-to-re). Pertaining to, associated with, or subserving inspiration.

inspissated (in-spis'sa-ted). Made thicker; partially evaporated or dehydrated.

inspissation (in-spis-sa'shun). The act or process of becoming or of making thicker in consistence. [Lat., *inspissatio*.]

instauration (in-staw-ra'shun). The establishment of a function (*e. g.*, menstruation). [Lat., *instauratio*.]

in'step. The arch of the foot near its junction with the leg.

instillation (in-stil-la'shun). The act of pouring in a liquid drop by drop. [Lat., *instillatio*, from *instillare*, to drop in.]

instinct (in'stink). Internal organic trends or tendencies laid down in the course of evolution. [Lat., *instinctus*, from *instinguere*, to instigate.]

instrument (in'stru-ment). A material thing designed or used for the accomplishment of some mechanical or other physical effect; a tool. [Lat., *instrumentum*, provision, apparatus, tool, implement.]

insuccation (in-suk-ka'shun). A method pursued in making an extract from very hard bodies, like wood or hard fruit rinds, consisting of steeping them for 2 or 3 days in cold water before extracting them with hot water. [Lat., *in*, into, + *succus*, juice.]

insufficiency (in-suf-fish'en-se). The state of being insufficient for its purpose. **absolute i.** *I.* due to thickening, induration, or other change in the cardiac valves themselves. **aortic i.** An imperfect closure of the aortic orifice by the aortic valves. See also *Corrigan's disease*, under *Corrigan*. **functional mitral i.** Mitral *i.* due to deficient muscular contractility in the heart itself. **i. of the ocular muscles.** An absence of dynamical equilibrium of the ocular muscles, due either to an inherent weakness of one set of muscles or to an elastic preponderance of another set of muscles. **mitral i.** That pathological condition in which the mitral valve inefficiently closes its orifice with the rhythmic action of the heart. **muscular i.** 1. A condition in which a muscle (especially one of the ocular muscles) is relatively weak compared with its antagonist, so that an effort on the part of this muscle is required in order to maintain equilibrium. **passive i. of a muscle.** The disabled condition of a muscle in the neighborhood of a joint when so stretched by the action of other muscles that it can not contract perfectly. **relative i.** The dilatation of a valvular orifice of the heart due to general stretching, as from hypertrophy due to arteriosclerosis. [Lat., *insufficiencia*.]

insufflation (in-suf-fla'shun). The act of blowing a gas, a vapor, air (often charged with a finely divided medicament), or a powder into a cavity. **pulmonary i.** 1. The act of injecting the lung with air by blowing it into the mouth or nose, or by the use of a bellows inserted into an opening in the trachea, the air being artificially warmed and charged with the proper moisture; used in the asphyxia of new-born children, and in that due to opium, coal gas, submersion, etc. 2. The *i.* into the trachea and bronchi, and even the ultimate air passages, of air (sometimes compressed or rarefied) charged with medicinal vapors or impalpable powders. [Lat., *insufflare*, to blow into or upon.]

insufflator (in'suf-fla-tor). An instrument for producing insufflation.

insula (in'su-lah). Syn.: *island of Reil, entosylvian fold*. Lit., an island. A group of convolutions, situated within the beginning of the fissure of Sylvius.

- insulated** (in'su-la-ted). 1. Isolated. 2. In electrophysics, protected by a non-conductor.
- insulation** (in-su-la'shun). Protection of an electrical conductor with some non-conducting medium so as to prevent the escape of electricity. [Lat., *insulare*, to make into an island.]
- insulator** (in'su-la-tor). The medium used to prevent an escape of electricity in insulation.
- insusceptibility** (in-sus-sep-tib-il'it-e). Same as *immunity*.
- insusceptible** (in-sus-sep'tib-l). Incapable of developing a germ disease from natural or artificial infection, e. g., the frog is insusceptible to anthrax infection.
- integration** (in-te-gra'shun). A fusion of parts previously separate in the embryo. [Lat., *integrare*, to make whole.]
- integument** (in-teg-um-ent). 1. A covering; an envelope. 2. The covering investing the body or any part of it, especially the skin. [Lat., *integumentum*, skin, from *in*, on, + *tegere*, to cover.]
- intellect** (in'tel-ekt). The capacity for knowing. The cognitive or conscious activity of brain function. The comparing, measuring quality of mental activity.
- intensive** (in-ten'siv). 1. Causing or accompanied by intensification. 2. In Pasteur's prophylactic treatment of rabies, characterized by inoculations more frequent and powerful than usual. [Lat., *intendere*, to stretch out, to extend.]
- intention** (in-ten'shun). The process by which the lips of a wound unite in the healing. **first i.** An immediate union in which the surfaces of the wound become glued together by an albuminous fluid and the wound heals without further redness or swelling; also known as *healing by immediate union*, *healing by adhesive inflammation*, and *healing by primary adhesion*. **second i., secondary i.** Union by the adhesion of opposed granulating surfaces. **third i.** Of the older writers, the union of wounds by the growing together of the granulations of their sides. *Union of granulations* is the more recent term. [Lat., *intentio*, from *intendere*, to stretch forth.]
- inter-**. Prefix from the Latin, signifying in the midst, in between; used in compound words to denote between two points.
- interarticular** (in'ter-ar-tik'u-lar). 1. Situated between the joints. 2. Situated in a joint between two articulating bones. [Lat., *interarticularis*.]
- interbody**. See *amboceptor*.
- interbrain** (in'ter-brān). See *thalamencephalon*.
- intercadence** (in-ter-ka'dens). A state of the pulse in which a supernumerary pulsation occurs between two regular pulsations. [Lat., *inter*, between, + *cadere*, to fall.]
- intercalary** (in-ter'kal-ar-e). Inserted as something additional, extraneous, or out of the ordinary course between the ordinary members of any series or the successive parts of a whole. [Lat., *inter-*
- calare*, from *inter*, between, + *calare*, to proclaim solemnly.]
- intercarotid gland**. See under *gland*.
- intercellular** (in'ter-sel'lu-lar). 1. Situated between cells, as i. cement, i. spaces. 2. See *intracellular*. [Lat., *intercellularis*.]
- intercolumnar** (in'ter-col-um'nar). Situated between two columns.
- intercondylar, intercondyloid** (in'ter-kon'dil-ar, in'ter-kon'dil-oyd). Situated between the condyles of a bone.
- intercostal** (in-ter-kos'tal). Situated between the ribs. **i. glands**. See under *gland*. [Lat., *inter*, between, + *costa*, a rib.]
- intercostalis** (in-ter-cos-ta'lis). See *table of muscles*, under *muscle*.
- intercurrent** (in-ter-kur'rent). Of diseases, attacking the patient during the course of another disease. [Lat., *intercurrentis*, from *inter*, between, + *currere*, to run.]
- interdental** (in'ter-den'tal). Placed or situated between the teeth. [Lat., *inter*, between, + *dens*, tooth.]
- interdiction** (in-ter-dik'shun). A judicial decree depriving an insane person of the control of his own or others' affairs, wholly or in part. [Lat., *interdictio*, from *inter*, between, + *dicere*, to speak.]
- interdigitation** (in'ter-dij'it-ät). Of two adjacent structures, connecting with each other by intervening alternating tongue-like prolongations and corresponding recesses, after the manner of the fingers of the two hands when those of each are received into the spaces between those of the other. [Lat., *inter*, between, + *digitus*, finger.]
- interference** (in-ter-fe'rens). In physics, the destruction of sound waves or light waves by other sound or light waves.
- interlobar** (in-ter-lo'bar). Between the lobes.
- interlobular** (in-ter-lob'u-lar). Between the lobules.
- intermarriage** (in-ter-mar'ij). 1. Marrying blood relations. 2. Marriage between different tribes or races.
- intermediary** (in-ter-me'di-a-re). 1. Situated centrally or in the middle; situated between two bodies. 2. Occurring between two specified periods of time. **i. body**. See *amboceptor*. **i. metabolism**. The term used in physiology to cover the series of intermediate compounds formed between the foodstuffs as received into the body and the final excretion products or oxidation products eliminated from the body. [Lat., *inter*, between, + *mediare*, to divide.]
- intermediate body**. See *amboceptor*.
- intermedium** (in-ter-me'de-um). Anything having an intermediate situation. In pharmacy, an emulsifying or suspending ingredient.
- intermenstrual** (in-ter-men'stru-al). Occurring between menstrual periods.
- internal** (in-ter'nal). Situated on the inside or taking place inside. **i. secretion**. See *secretion*. [Lat., *internus*.]
- international list of causes of death**. See in *appendix*, page 920.

intern', interne (in-tern'). A physician resident in and attached to the medical staff of a hospital. [Fr.]

internist (in-ter-nist). A physician specializing in diseases of internal organs.

internode (in-ter-nod). See *phalanx*. **i. of Ranvier**. The part of a medullated nerve fiber situated between two nodes of Ranvier. [Lat., *internodus*, from *inter*, between, + *nodus*, a node.]

internuclear (in-ter-nu'kle-ar). Occupying the space between nuclei.

interoceptor (in-ter-o-sep'tor). A hypothetical receptor for various stimuli within the digestive tube; chiefly chemical, thermal or physical.

interosseous (in-ter-os'se-us). Pertaining to two contiguous bones; situated between two bones. See *table of muscles*, under *muscle*. [Lat., *inter*, between, + *os*, *ossis*, bone.]

interrenal system, interrenal tis'sue. Name applied to the tissue composing the cortex of the adrenal glands. This tissue is found in the so-called accessory adrenals, and in the fishes forms separate bodies known as the interrenal bodies, whence the name.

interrupted (in-ter-rup'ted). Broken, not continuous, broken or discontinued at short intervals. [Lat., *interruptus*.]

interspace (in-ter-spās). A space between two or more things. **haversian i's**. The more or less prismatic masses of bone that fill the gaps between adjacent haversian systems. [Lat., *inter*, between, + *spatium*, space.]

interspinalis (in-ter-spi-na'lis). See *table of muscles*, under *muscle*.

interstitial (in-ter-stish'al). **i.** Disseminated through the substance of an organ or part; of an inflammation, affecting the connective tissue of an organ. **2.** Of pathological processes, occupying the space between the essential parts of an organ which constitute its proper tissue; opposed to parenchymatous. [Lat., *interstitialis*.]

interstitium (in-ter-stish'e-um). A space or gap; an interposed part or body. **i. interosseum antibrachii**. The space between the radius and ulna. **i. interosseum cruris**. The space between the tibia and fibula. **interstitia interossea metacarpi**. The spaces between the metacarpal bones. **interstitia interossea metatarsi**. The spaces between the metatarsal bones. **i. thyrohyo-epiglotticum**. The space between the hyo-epiglottic and the thyro-epiglottic and middle thyrohyoid ligaments. [Lat., *inter*, between, + *stare*, to stand.]

intertransversarius (in-ter-trans-ver-sa're-us). See *table of muscles*, under *muscle*.

intertrigo (in-ter-tri'go). A superficial dermatitis, which occurs in the folds of the skin. [Lat., *inter*, between, + *terere*, to rub.]

interval (in-ter-val). **1.** A space between places, an interstice. **2.** A remission of a disease. [Lat., *inter*, between, + *valium*, a breastwork.]

intestinal (in-tes'tin-al). Of or belonging

to the intestines. **i. glands**. See under *gland*. [Lat., *intestinum*, from *intus*, within.]

intestinal gas'es. The gases present in the intestine consist of those swallowed with the food as well as small quantities of carbon dioxid, hydrogen, methane, methylmercaptan and sulphureted hydrogen.

intestinal putrefaction. The chemical changes brought on in the intestine by the bacteria present there. In *i. p.* there are formed: *indol*, *skatol*, *paracresol*, *phenol*, *phenylpropionic acid*, *phenylacetic acid*, *paraoxyphenylacetic acid*, *hydroparacumaric acid*, *fatty acids*, *carbon dioxid*, *hydrogen*, *methane*, *methylmercaptan*, and *sulphureted hydrogen*.

intestine (in-tes'tin). Syn.: *bowel*, *gut*. The musculomembranous canal (or any definite portion of it) extending from the stomach to the anus, situated inside the abdominal cavity. **large i.** That part of the intestinal canal which extends from the end of the ileum to the anus. It is divided into the cecum, colon, and rectum. **primitive i.** See *foregut*. **small i.** That part of the *i.* which extends from the pyloric orifice to the large *i.* [Lat., *intestinum*, from *intus*, within.]

in'tima. Syn.: *internal coat*. The innermost tunic of any structure. **i. pia**. The innermost layer of the pia. **i. unguis**. The root of the nail. **i. vasorum**. The lining membrane of blood vessels. [Lat., *intus*, within.]

intolerance (in-to'l'er-ans). Inability to endure effects of an agent, e. g., a drug. [Lat., *in*, neg., + *tolerare*, to bear.]

inton (in-ton'). See *radium emanation*, under *emanation*.

intonation (in-to-na'shun). **1.** The production of a tone. **2.** The quality of a tone. **intestinal i.** See *borborygmus*. [Lat., *intonare*, to thunder.]

intoxication (in-tok-sik-a'shun). **1.** A condition of systemic poisoning due to the absorption into the blood of any agent which overwhelms the mental or bodily functions. **2. I.** produced by alcohol. [Lat., *in*, into, + Gr., *toxikon*, poison.]

in'tra-. Prefix signifying within from Lat., *intra*, within.

intracel'lular. Contained within a cell. **intrad** (in'trad). Internal; within.

intrafation (in'trah-fe-ta'shun). See *fetal inclusion*, under *inclusion*. [Lat., *intra*, within, + *fetus*.]

intra-ocular (in-trah-ök'ü-lahr). Situated within the eye. [Lat., *intra*, within, + *oculus*, eye.]

intraspinous (in-trah-spin'us). Within the spine; or into the spinal canal.

intrastial (in-trah-stish'al). Within the organ cells.

intra-uterine (in-trah-u'ter-in). **1.** Situated within or penetrating into the cavity of the body of the uterus. **2.** Occurring before birth.

intravasation (in-trah-vas-a'shun). The entrance of pus, bacteria, or other foreign matter into the blood vessels through pathological or traumatic openings in

their walls. [Lat., *intra*, within, + *vas*, a vessel.]

intravenous (in-trah-ve'nus). Into, within, or from within a vein or veins.

intravital (in-trah-vi'tal). During life. [Lat., *intra*, during, + *vita*, life.]

introitus (in-tro'it-us). Entrance or mouth of a canal or cavity. **i. canalis sacralis**. Opening at termination of spinal canal at lower end of sacrum. **i. laryngis**. Upper opening of larynx. **i. vaginae**. External orifice of vagina. [Lat., *intro*, into, + *ire*, to go.]

introjection (in-tro-jek'shun). In psycho-analysis the process of drawing all objects and persons within the egoist circle of interest; characteristic of all psychoneuroses.

intromission (in-tro-mis'shun). An act of insertion, especially of the penis into the vagina. [Lat., *intromittere*, to send in.]

introspection (in-tro-spek'shun). The action of looking into or under the surface of things, especially the mind. [Lat., *introspicere*, to look into.]

introversion (in-tro-ver'shun). 1. Turning inside out of an organ. 2. In psycho-analysis turning in of libido upon self.

in'tubate. To treat by inserting a tube into an opening.

intubation (in-tu-ba'shun). Insertion of a tube, especially in glottis, to keep it open. [Lat., *in*, into, + *tuba*, a tube.]

intumescence (in-tu-mes'ens). Swelling, tumefaction. [Lat., *in*, into, + *tumere*, to swell.]

intumescencia (in-tu-mes-sen'she-ah). Intumescence. **i. cervicalis**. See *cervical enlargement*. **i. gangliiformis nervi facialis Scarpae**. Small grayish red swelling, containing ganglion cells, at point of connection between facial nerve and vestibular branch of auditory nerve. **i. lumbalis**. See *lumbar enlargement*, under *enlargement*. [Lat., *intumescencia*, under *enlargement*.]

intussusception (in'tus-sus-sep'shun). 1. See *inception*, *inhibition*, and *absorption*. 2. The growth of cells or of the cell wall by the deposition of particles between those already existing. 3. The invagination of one portion of an organ, especially the intestine, into a contiguous portion, usually below it. **progressive i.** An *i.* in which the upper portion of the intestine is invaginated in the lower part. **regressive i.**, **retrograde i.** The form of *i.* in which the lower portion of the intestine is invaginated in the upper portion. [Lat., *intus*, within, + *suscipere*, to catch up.]

intussuscep'tum. Segment of intestine which is invaginated in intussusception.

intussuscip'iens. The invaginating portion of the bowel in intussusception.

Inula (in'u-lah). 1. A genus of composite plants. 2. Of the U. S. Ph., 1890, elecampane root **I. helenium**. The root contains a volatile oil that is powerfully expectorant; also inulin and helenin.

inulase (in'u-läs). An enzyme present in several fungi, that converts inulin into fructose.

in'ulin. A compound carbohydrate resem-

bling starch. It consists entirely of levulose (fructose) molecules. Present in the roots of the *Inula helenium* and varieties of the *Helianthus*.

inunction (in-un'k'shun). The act of rubbing in ointment; friction with the hand to facilitate the cutaneous absorption of liniments, salves, etc. [Lat., *inunctio*, from *in*, into, + *ungere*, to anoint.]

invagination (in-vaj-in-a'shun). A folding in of anything upon itself (see *intussusception*); in embryology, that stage of a (mammalian) blastoderm in which it is so folded in upon itself as to form two layers. [Lat., *in*, into, + *vagina*, a sheath.]

invalid (in'val-id). 1. Weak; sickly. 2. An infirm or sick person, but not totally disabled. [Lat., *invalidus*, not strong, infirm, weak.]

invasion (in-va'zhun). 1. The onset of a disease. 2. The process by which a particular organ or part becomes affected with disease or parasites existing elsewhere in the organism. [Lat., *invasio*, from *in*, into, + *vadere*, to go.]

inversion (in-ver'shun). 1. A reversal of the natural order of things; a turning upside down. 2. In digestion, conversion of disaccharids, such as cane sugar and maltose, into monosaccharids, such as dextrose and levulose. 3. In chemistry, a changing of the volume of polarized light from one direction to the other, as is brought about in hydrolysis of cane sugar by means of an acid or an enzyme. Often specifically applied to hydrolysis of cane sugar to glucose and fructose. 4. In optics, transformation of a body having a specific rotary action on the plane of polarization into a body or bodies which have a directly opposite rotary action. 5. In medicine, partial or complete turning inside out of a hollow organ. 6. In psycho-analysis a lack of harmony between the physical and psychical sex. [Lat., *in*, into, + *vertere*, to turn.]

invertase (in-ver'täs). Syn.: *invertive ferment*. An enzyme present in yeast cells as well as in many plant and animal cells, which has the property of hydrolyzing cane sugar to glucose and fructose.

invertin (in-ver'tin). See *invertase*.

in'vert-su'gar. The mixture of glucose and fructose obtained upon the hydrolysis of cane sugar. It consists of molecular quantities of these two sugars.

in vitro (in've'tro). Within glass; within a test tube.

involverum (in-vo-lu'krum). Outer covering, envelope. Covering of newly formed bone that envelops sequestrum in bone infection. [Lat., *involvere*, to envelop.]

involution (in-vol-u'shun). 1. A condition or process in which nutrition is incomplete, and in which the original form and function are more or less lost. 2. In embryology, a folding in of a membranous structure, as of the epiblast, as a step in the process of the development of the embryo. 3. The process of retrograde development, especially of the uterus in the puerperium or of the organs

in general in old age. **buccal i.** In the embryo, the folding in of the epiblast at the angle formed by the cranial flexure which forms the cavity of the mouth. **i. of the uterus.** The gradual return of the uterus to its normal size after delivery, by a process of absorption. **pituitary i.** In the embryo, the ingrowth from the epiblast of the mouth cavity which forms the pituitary body. **senile i.** The shriveling of an organ from old age. [Lat., *involutio*, from *in*, into, + *volvere*, to turn.]

i'od-, i'odo-. A prefix indicating the presence of iodine.

iodacetanilid (i'o-das-et-an'il-id). A compound of iodine and acetanilid.

i'odal. Hydride of tri-iodoacetyl, $C_2I_3O.H$.

iodalbacid (i-o-dal-bas'id). A proprietary derivative of iodalbumin; said to act like the thyroid preparations.

iodalbin (i-od-al'bin). A compound of blood albumin with iodine, containing approximately 21.5 per cent. of iodine, which is liberated in the intestines to form absorbable iodids.

iodalbumin (i-od-al-bu'min). A compound of iodine and albumin.

iodamylum (i-o-dam'il-um). Iodized starch.

iodanisol (i-o-dan'is-ol). The compound, $C_6H_4(OCH_3)I$, said to be antiseptic.

iodantipyrin (i'o-dan-tip-i'rin). Iodophenyl-dimethyl-pyrazolone; a compound of iodine and antipyrin.

i'odate. A salt of iodic acid.

ioda'tus. 1. Iodized; combined with iodine, when qualifying the name of an element or radicle, the iodid of that element or radicle. 2. Due to the action of iodine.

iod'ic. 1. Due to the use of iodine. 2. Derived from or containing iodine, more particularly, containing iodine in combination with oxygen in greater relative amount than is the case with the iodous compounds. The *iodica* were the old pharmaceutical preparations of iodine, considered as a class. **i. acid.** See under *acid*. [Lat., *iodicus*.]

iodim'etry. See *iodometry*.

Iodin (i'o-din). A dark gray element with metallic luster. Atomic weight, 127. Chemical symbol, I. In the form of a vapor or a solution it has a purple color. It has an irritating odor and, if exposed, volatilizes rapidly. Reacts chemically as bromine and chlorine. With starch, it forms an intensely blue colored compound, a property utilized as a test for either i. or starch. It is used medicinally in the form of an ointment and tincture in local inflammations, the enlargement of glands, certain skin diseases, and for injecting into cystic and suppurating cavities. It is an excellent disinfectant. List of poisons and their antidotes, see in *appendix*, page 939. [Gr., *iodes*, violet-like.]

iodipin (i-o-dip'in). Iodized sesame oil. A proprietary preparation, containing 25 per cent. of iodine for hypodermic use; or containing 10 per cent. for oral administration. Employed as a substitute for

the iodids in syphilis and glandular tuberculosis.

iodism (i'o-dizm). The train of symptoms, such as malaise, frontal headache, coryza, lacrimation, pharyngitis, acne, hydroa, etc., which follow the prolonged excessive use of iodine alone or in the form of iodids. **constitutional i.** The third form of i., according to Rilliet, produced by the absorption of iodine or iodids in very minute quantities. It is characterized by nervous palpitations, excessive emaciations (sometimes preceded by increase of flesh), and progressive wasting of the mammae and testes.

iodival (i-o-di'val). Mono-iodo-iso-valerianyl urea (47 per cent. iodine); used as a substitute for the alkaline iodids.

iodocaffein (i'o-o-do-ka'fe-in). A product of the action of hydrogen sulphide on potassium iodide and caffeine; used in cardiac troubles.

iodocamphor (i'o-o-do-kam'for). A crystalline substance, $C_{10}H_{16}IO$, obtained by treating sodium camphor with cyanogen iodide.

iodocasein (i'o-o-do-ka'se-in). A product formed by the action of iodine upon casein.

iodocin (i-od'o-sin). A certain proprietary antiseptic, styptic, and analgetic.

iodocodein (i'o'o-do-ko'de-in). A crystallizable opium alkaloid, $C_{18}H_{21}NO_2I_3$, obtained by treating an alcoholic solution of codein with a solution of iodine.

iodocol (i-od'o-kol). A combination of iodine and guaiacol.

iodocrol (i-od'ok-rol). Carvacrol iodide.

iodoform (i-o'do-form). The compound, CHI_3 , discovered by Sérullas in 1822. It is used as an antiseptic, disinfectant, and sedative application to wounds, as an application in catarrhs of mucous membranes; in the form of inunctions in meningitis. It is sometimes used internally. [*Iodoformum*, U. S. Ph., Br. Ph.] **iodoformum aromatisatum** [N. F.]. So-called deodorized i., that is, to which 4 per cent. of cumarin is added.

iodoformal (i'o'o-do-for'mal). A complex proprietary mixture containing iodoform.

iodoformin (i'o'o-do-for'min). The compound $C_2H_5N_2I_2$; used as a substitute for iodoform.

iodoformism (i-o'do-form-izm). Intoxication with iodoform.

iodoformogen (i'o'o-do-for'mo-jen). A compound of iodoform and albumin; used instead of iodoform.

iodoformosalol (i'o'o-do-for'mo-sa'lol). An antiseptic mixture of iodoform and salol.

iodoformum (i'o'o-do-for'mum). See *iodoform* [U. S. Ph., Br. Ph.]. **suppositoria iodoformi.** Suppositories each containing 3 grains of iodoform [Br. Ph.]. **unguentum iodoformi.** An ointment containing 1 part of iodoform to 9 parts of lard [U. S. Ph.], or prepared lard [Br. Ph.].

iodogenol (i-o-do'jen-ol). A compound of iodine and peptonized albumin; used like the iodids.

iodoglidin (i''o-do-gli'din). An iodized plant protein used as a substitute for potassium oxid.

iodoglobulin (i''o-do-glob'u-lin). Same as *iodothyreoglobulin*.

iodohydrargyrate (i''o-do-hi-drar'ji-rät). A compound of mercuric iodid with the iodid of another radicle.

iodohydrate (i''o-do-hi'drät). See *hydriodid*.

iodol (i'o-dol). Tetra-iodopyrrol, C_4I_4NH , obtained by treating pyrrol with iodin in a solution of neutral reaction. As an antiseptic and deodorant it is said to have all the value of iodoform without its occasionally toxic effects. It contains 89 per cent. of iodin. [U. S. Ph.] [Lat., *iodolum*.]

iodolen (i-od'o-len). A substitute for iodoform, said to contain 36 per cent. of iodol.

iodomethane (i''o-do-meth'an). Methyl iodid.

iodomethe (i-o-dom'eth). Of Lugol, the feeling of drunkenness caused by the ingestion of large doses of iodin. [Gr., *iodes*, violet, + *methe*, drunkenness.]

iodometry (i-o-dom'et-re). The volumetric determination of the quantity of iodin. [Gr., *iodes*, violetlike, + *metrein*, to measure.]

iodomuth (i-od'o-muth). A preparation of bismuth said to contain 25 per cent. of iodin; used as a substitute for iodoform.

iodonaphthan (i''o-do-naf'tan). A compound of iodin with a naphtha product, said to be antiseptic and a local anodyne.

iodone (i'od-ön). A proprietary preparation consisting of periodid of phthalic anhydrid, $(C_6H_4C_2O_2)KI.4$. Its actions are like those of iodin, being used externally in preparations (ointments, etc.), the strength of which is regulated on the basis of their iodin content.

iodophenacetin (i''o-do-fe-nas'et-in). An iodized derivative of phenacetin; an antiseptic.

iodophenin (i''o-do-fe'nin). An iodin substitution compound of phenacetin; an antiseptic.

iodophenol (i''o-do-fen'ol). An iodin substitution compound of phenol.

iodoprotein (i''o-do-pro'te-in). A protein which contains iodin in the combined form.

iodopyrin (i''o-do-pi'rin). An iodin substitution compound of antipyrin; used as an antipyretic.

iod'osin. A certain compound of iodin and albumin.

iodospongin (i''o-do-spon'jin). An albuminoid obtained from sponges, which contains iodin in the combined form.

iodotannin (i''od-o-tan'nin). A solution of iodin and tannic acid.

iodoterpin (i''o-do-ter'pin). A compound of iodin and terpin; a substitute for iodoform.

iodotheobromin (i''o-do-the-o-bro'min). A compound of theobromin, sodium iodid, and sodium salicylate; used in aortic insufficiency.

iodotherapy (i''o-do-ther'ap-e). The treatment of disease with iodia. [Gr., *iodes*, violetlike, + *therapeia*, medical treatment.]

iodothymoform (i''o-do-thi'mo-form). An antiseptic compound of iodin, thymol, and formic aldehyd.

iodothymol (i''o-do-thi'mol). See *aristol*.
iodothyroglobulin (i''o-do-thi're-o-glob'u-lin). An iodized globulin which has been isolated from the thyroid gland.

iodothyryn (i''o-do-thi'rin). Thyro-iodin; a milk sugar trituration of the active principle of the thyroid gland in which one gram represents 0.3 milligram of iodin. The action and uses are similar to those of the *glandulae thyroïdæ siccae* [U. S. Ph.]. See also *thyroid preparations*, under *thyroid*.

iodovasal (i''o-do-va'sol). A compound of iodin and vasol.

iodozone (i''o-do-zön'). An antiseptic said to be a compound of iodin and ozone.

iodum (i-o'dum). See *iodin* [U. S. Ph., Br. Ph.]. **linimentum iodi**. Contains 2.5 per cent. of iodin and 5 per cent. of potassium iodid in glycerin and water [N. F.].

liquor iodi causticus. Contains 14 per cent. [N. F.] and 10 per cent. [Br. Ph. 1898] of iodin. Also called *Churchill's iodin caustic*.

liquor iodi compositus [U. S. Ph.]. Lugol's solution; contains 5 per cent. of iodin and 10 per cent. of potassium iodid in water.

tinctura iodi [U. S. Ph., Br. Ph.]. Syn.: *tinctura iodinii* [U. S. Ph., 1870]. A solution of iodin in alcohol. The official tincture contains, in 1,000 parts, 70 parts of iodin [U. S. Ph.].

tinctura iodi Churchill [N. F.]. Contains 16.5 per cent. of iodin and 3.3 per cent. of potassium iodid dissolved in alcohol and water.

tinctura iodi decolorata [N. F.]. Contains 8.3 per cent. each of iodin and sodium thiosulphate in water and stronger ammonia water.

unguentum iodi [U. S. Ph., Br. Ph.]. Syn.: *unguentum iodinii compositum* [U. S. Ph., 1870]. Contains in every 1,000 parts, 40 parts each of iodin and potassium iodid incorporated with benzoated lard or lard.

vapor iodi [Br. Ph., 1885]. Inhalation of iodin; a preparation consisting of a fluidram of tincture of iodin mixed with a fluidounce of water.

iohydric (i-o-hi'drik). See *hydriodic*.
i. acid. See *hydriodic acid*, under *acid*.

ion. A constituent of any salt, acid, or base formed when dissolved in water which is charged with electricity. When the charge is negative, the i. is an *anion*; when it is positive, the i. is a *cation*.

When sodium chlorid dissolves in water it dissociates into its positive i. (cation) Na and its negative i. (anion) Cl.

ion'ic. Pertaining to an ion.

ionization (i-o-ni-za'shun). The dissociation of salts, acids, and bases in solution; the process by which a chemical compound, in becoming dissolved, is resolved into anions and cations.

iothion (i-o-thi'on). Diiodohydroxypro-

pane, $C_6H_6O_2$. It acts like iodine and the iodids, being applied as an ointment.

ipecac, ipecacuanha (ip'e-kak, ip'e-kak-u-an'ah). 1. Of the U. S. Ph., the root of *Cephaelis i.* or *Cephaelis acuminata*. It contains cephalin and emetin upon which its properties depend. In small doses it is often given as an expectorant and diaphoretic, and has been used with great benefit in tropical dysentery. 2. A genus of rubiaceous plants now referred to *Cephaelis*. The principal preparations of it are: *extractum ipecacuanhae fluidum* [U. S. Ph.], *pilula ipecacuanhae cum scilla* [Br. Ph.], *pulvis ipecacuanhae et opii* (*Dover's powder*) [U. S. Ph.], *symplicium ipecacuanhae* [U. S. Ph.], *tinctura ipecacuanhae et opii* [U. S. Ph., 1890], *vinum ipecacuanhae* [U. S. Ph., Br. Ph.].

ipoh, ipoo (e'po). Syn.: *hippo*. An arrow poison probably depending upon a digitalislike body for its toxicity.

Ipomoea (i-po-me'ah). Syn.: *Batatis*. False bindweed; a genus of the *Convolvulaceae*. Several species of *I.* are used medicinally. [Gr., *ips*, a worm that eats vine buds, + *omoios*, like.]

ip'solat'eral conduction. See *homolateral conduction upon separate head*.

Ir. Chemical symbol for iridium.

iridalgia (ir-id-al'je-ah). The pain and annoyance caused by the presence of isolated synechiae in the iris. [Gr., *iris*, the iris, + *algos*, pain.]

iridectomy (ir-id-ek'to-me). Excision of a piece of the iris involving its entire breadth, from sphincter margin to peripheral attachment, thus forming an artificial pupil. [Lat., *irectomia*, from Gr., *iris*, iris, + *ektome*, a cutting out.]

iridemia (ir'id-e-me-ah). Hemorrhage from the iris. [Gr., *iris*, iris, + *aima*, blood.]

iridencleisis (ir'id-en-kl'is'is). The strangulation of a strip of the iris in a corneal incision. [Gr., *iris*, the iris, + *egklein*, to shut in.]

irideremia (ir'id-er-e-me-ah). Absence or loss of the iris, either partial or entire, acquired or congenital; sometimes intentionally produced by an operation. [Gr., *iris*, the iris, + *eremia*, a want of.]

iridescence (ir-id-es'ens). 1. The property of decomposing light into the colors of the spectrum. 2. The condition or state of being iridescent. [Lat., *iridescere*, to shine with the colors of the rainbow.]

iridescent (ir-id-es'ent). Glittering with many colors which change in different lights; possessing iridescence.

iridesis (ir-id'es'is). An operation for artificial pupil which consists in tying off a portion of the iris. [Gr., *iris*, the iris, + *desis*, a binding together.]

iridin (ir'id-in). Syn.: *irisin*, *extract of Iris versicolor*. A resinoid obtained from *Iris versicolor*. Used by eclectic physicians.

iridium (i-rid'e-um). A metallic element, very resistant to chemical reagents. Often fused with platinum, to make the latter

more resistant for chemical apparatus. The soluble salts of *i.* are actively purgative and emetic. Symbol, *Ir*; atomic weight, 192.7. [Gr., *iris*, the rainbow.]

ir'ido-. Combining form of Gr., *irido*, from Gr., *iris*, employed as a prefix in the formation of words to signify of, or pertaining to, the iris.

iridocele (ir-id'o-sel). Prolapse of the iris through a perforating wound or ulcer in the cornea. [Gr., *iris*, the iris, + *kele*, a tumor.]

iridochoroiditis (ir'id-o-ko-royd-i'tis). Inflammation of the uveal tract, i. e., of the iris and the choroid.

iridocinesis (ir'id-o-sin-e'sis). The movement of the iris (contraction and expansion). [Gr., *iris*, the iris, + *kinesis*, movement.]

iridocoloboma (ir'id-o-ko-lo-bo'mah). Congenital fissure of the iris. [Gr., *iris*, the iris, + *koloboma*, a part taken away in mutilation.]

iridocyclitis (ir'id-o-si-kl'i'tis). Inflammation of the iris and the ciliary body. [Gr., *iris*, the iris, + *cyclitis*.]

iridocyte (ir-id'o-sit). A cell which produces color by reflection or interference of rays of light; due either to its physical structure or to the presence of granules. [Gr., *iris*, the iris, + *kytos*, a cell.]

iridodialysis (ir'id-o-di-al'is'is). Rupture of the iris at its ciliary attachment, characterized by the formation of an artificial pupil. [Gr., *iris*, the iris, + *dia*, through, + *lyein*, to loosen.]

iridomotor (ir'id-o-mo'tor). Subversing motion in the iris. [Gr., *iris*, the iris, + Lat., *movere*, to move.]

iridoncus (ir-id-on'kus). A tumor of the iris. [Gr., *iris*, iris, + *ogkos*, a tumor.]

iridoplegia (ir'id-o-ple'je-ah). Paralysis of the sphincter of the iris. [Gr., *iris*, iris, + *plege*, stroke.]

iridorrhxis (ir'id-o-reks'is). Rupture or tearing away of the iris. [Gr., *iris*, the iris, + *rexis*, a breaking.]

iridosteresis (ir'id-o-ster-e'sis). The removal of the iris or a part of it. [Gr., *iris*, the iris, + *steresis*, a deprivation.]

iridotomy (ir-id-ot'o-me). An incision into the iris. [Gr., *iris*, the iris, + *tome*, a cutting.]

iris. 1. A thin, circular, contractile membrane, hanging vertically like a curtain in the anterior chamber of the eye. Its posterior surface is covered with pigment. It contains a set of circular muscular fibers, the sphincter, which contracts the pupil; and radiating fibers of elastic tissue which dilate the pupil. 2. A genus of iridaceous herbs. 3. Of the U. S. Ph., blue flag, the rhizome and rootlets of *I. versicolor*. **I. florentina**. In the U. S. Secondary List, 1870, orris root, obtained from *I. germanica*, *I. pallida*, and *I. florentina*, cathartic, and in large doses emetic; once used as a diuretic in dropsy, but now chiefly employed, on account of its delicate violet odor, as an ingredient in tooth powders and perfumes. **I. verna**, **I. vernata**. Vernal *i.*; a species growing in the southern United

States. The root is purgative. **I. versicolor.** The larger blue flag of North America, the root of which has cathartic, emetic, and diuretic properties. [Gr., *iris*, a rainbow.]

Irish moss. Seaweeds, mostly of the genus *Chondrus*, widely used as food.

irisin (i'ris-in). See *iridin*.

iritic (i-rit'ik). Pertaining to iritis.

iritis (i-ri'tis). Inflammation of the iris from whatever cause, as syphilis, gonorrhea, rheumatism, diabetes, tuberculosis, or trauma. **gonorrhoeal i.** A mixed form of i., partly plastic, partly serous, occurring in patients suffering from gonorrhoea and usually immediately preceded by an arthritic inflammation. [Gr., *iris*, the rainbow, + *itis*, inflammation.]

iron (i'ern). A metallic element. It occurs in nature both in the uncombined state (chiefly in the form of meteoric masses) and combined with oxygen and other elements, constituting a variety of elements. Atomic weight, 56. Chemical symbol, Fe. When pure, it is a silvery white metal which can be magnetized only temporarily; its properties when mixed with small amounts of other elements vary greatly. It is present in the hemoglobin of the blood. Its salts have styptic properties. The official and unofficial salts and the pharmaceutical preparations of i. are unnecessarily numerous. The inorganic salts of i. are *ferrous*, in which i. acts with the equivalence of 2, or *ferric*, in which its equivalence is 3. The ferrous salts have the advantage of being less astringent, but the disadvantage of being prone to oxidation and so becoming ferric. The object in many pharmaceutical preparations of ferrous salts is to preserve them against oxidation. *Inorganic i.* refers, not to the remainder of the molecule to which the i. is attached, but to the mode of attachment, the acetate and albuminate being considered inorganic, because they are readily dissociated and give the ordinary iron reactions. *Organic i.* is combined in such a way that dissociation does not take place readily, and the compound does not give ordinary iron reactions until the molecule has been split up. The term *masked* has been suggested as more appropriate for the organic forms just mentioned. List of poisons and their antidotes, see in *appendix*, page 939. **alcoholized i.** Pulverized i. resembles reduced i., for which it should not be mistaken. **dialyzed i.** See *liquor ferri dialysatum*, under *ferrum*. **i. acetate.** $\text{Fe}_2(\text{CH}_2\text{COO})_6$. A substance only in solution. When such a solution is boiled, the i. is precipitated as a basic iron acetate. **i. and ammonium citrate.** A mixture containing ammonium citrate and basic iron citrate. It is found in dark red scales soluble in water. **i. and ammonium sulphate.** A double sulphate of i. and ammonia. 1. Ammonioferrous sulphate, $\text{FeSO}_4(\text{NH}_4)_2\text{SO}_4 + 6\text{H}_2\text{O}$. Green crystals. 2. Ammonioferric sulphate. $\text{Fe}_2(\text{SO}_4)_3(\text{NH}_4)_2\text{SO}_4 + 24\text{H}_2\text{O}$.

Pale violet crystals. **i. and potassium sulphate.** Potassioferric alum (or sulphate), ordinary iron alum. **i. and quinin citrate.** A salt forming dark golden scales of a greenish or reddish tinge, having a bitter taste, and completely soluble in water, almost insoluble in alcohol. **i. bromid.** A compound of i. and bromin. **i. carbonate.** Ferrous carbonate, FeCO_3 , a substance occurring in the crystalline state in nature and obtained artificially by precipitation as a greenish flocculent substance, oxidizing rapidly when exposed to the air. Oxidation is prevented by mixing the precipitate with sugar, as in the official *massa ferri carbonatis* and *mistura ferri composita*, or *ferri carbonas saccharatus*. **i. chlorid.** 1. Ferrous chlorid, FeCl_2 , a green salt. 2. Ferric chlorid, $\text{FeCl}_3 + 4\text{H}_2\text{O}$, a red brown salt. Soluble in water with acid reaction. A valuable styptic. **i. citrate.** A salt of i. and citric acid. Occurs in transparent garnet crystals, readily soluble in water. **i. filings.** See *ferrum*. **i. hydroxid.** Hydrated oxid of i. **i. hypophosphite.** A salt of i. and hypophosphorous acid. **i. iodid.** Ferrous iodid. It is preserved against oxidation by sugar. **i. lactate.** Ferrous lactate, $\text{Fe}(\text{C}_2\text{H}_3\text{O}_2)_2 + 5\text{H}_2\text{O}$, a body occurring in minute greenish white crystals. **i. nucleo-albuminate.** A preparation of casein and iron. **i. oxid.** 1. Ferrous oxid, Fe_2O , a black powder. 2. Ferric oxid, Fe_2O_3 , the oxid formed when i. is burned in the fire. Used as a pigment. **i. peptonate.** A salt of i. with peptones. **i. phosphate.** 1. Ferrous phosphate $\text{Fe}_2(\text{PO}_4)_2 + 8\text{H}_2\text{O}$, a colorless substance. 2. Ferric phosphate, $\text{Fe}_2(\text{PO}_4)_3$, a yellowish substance. **i. pyrophosphate.** Ferric pyrophosphate. Made by adding sodium pyrophosphate to a solution of ferric citrate and evaporating. The product occurs in light green transparent scales. **i. sulphate.** 1. Ferrous sulphate, $\text{FeSO}_4 + 7\text{H}_2\text{O}$, a green substance soluble in water. 2. Ferric sulphate, $\text{Fe}_2(\text{SO}_4)_3$, a red substance soluble in water. **i. valerianate.** $\text{Fe}_2(\text{C}_8\text{H}_7\text{O}_2)_6$; occurring as a dark red amorphous powder. **magnetic i. oxid.** Occurs in nature as magnetite or loadstone. Natural magnets are formed from it. **Quevenne's i., reduced i.** See under *Quevenne*. [Ang.-Sax., *iren*.]

irradiation (ir'ra-de-a'shun). 1. A passing outward in lines that spread in all directions, as in the case of rays of light, or fractures of a stellate form, etc. 2. In physiological optics, a series of phenomena in which a limited field, much more brightly illuminated than the background on which it is projected, appears much larger than it really is; and reciprocally a dark limited field, projected on a bright background, appears much smaller than it is in reality. [Lat., *irradiare*, to illumine.]

irrespirable (ir-res'pir-ab-l). Of a gas, incapable of supporting life when inspired.

irrigation (ir-ri-ga'shun). 1. The act of watering or moistening. 2. The act of letting water or other fluids fall drop by drop on anything; also of cleansing by means of a stream. [Lat., *irrigatio*, from *irrigare*, to water.]

irrigator. An apparatus for irrigation.

irritability (ir'rit-ab-il'it-e). 1. Susceptibility to stimulation. 2. A condition of mind which manifests itself by fretfulness, faultfinding, complaining about trifles, or of things which are imaginary; impatience. 3. Susceptibility of the whole or a part of the body to irritating influences. 4. Of Brown, the activity or excitability of the muscular system. 5. In pathology, a morbid state of a part characterized by irritation; also the capability which tissue elements possess of undergoing nutritive and formative changes on the application of a physical or chemical stimulus. **faradic i.** The property of a tissue (e. g., muscle) by which it responds by a characteristic action to the stimulus of a faradic current. **formative i.** Of Virchow, the capacity of a cell to produce new protoplasm when excited by a nutritive irritant. **galvanic i.** The property of a tissue or part by which it responds by a characteristic action to the stimulus of a galvanic current. **hallerian i.** The property of muscular substance by which it responds by a contraction to some stimulus applied directly to itself, and quite independent of the nervous system. This is most strikingly seen in parts where nerves have not been found or where the nerve endings have been paralyzed by curare. **muscular i.** The property of muscular tissue by which it responds to some stimulus by a contraction. The stimulus may be the result of nervous action or a mechanical, thermal, or electrical action directly on the muscular substance itself. Sometimes, but incorrectly, this term is made synonymous with contractility. **nervous i.** The property of the nervous system by which it wholly or in part responds by some nervous action to a stimulus. **nutritive i., plastic i.** 1. The property of the tissues by which, under the influence of various stimuli, more or less nutritive material is taken up and transformed. 2. A stimulation or irritation leading to a special assimilation of nutritive material. [Lat., *irritabilitas*, from *irritare*, to tease.]

irritant (ir'rit-ant). Causing irritation; as a n., an agent having that effect.

irritation (ir-ri-ta'shun). 1. The act of stirring up or provoking to activity. Excitement of a bodily part or organ to excessive sensitiveness or unhealthy action. 2. The state of being irritated. **spinal i.** An affection in which pain in the back and breast are the chief symptoms. According to Brown it is caused by compression of the spinal nerves by change in the position of the vertebra through spasm of one or more spinal muscles. [Lat., *irritatio*, from *irritare*, to excite.]

isapiol (is-a'pe-ol). A substance, $C_{12}H_{14}O_4$, isomeric with apiol. Its physiological

properties differ little from those of apiol. **isatophan** (i-sat'o-fan). Methoxy-atophan. Its actions are the same as those of atophan, but it has the advantage of being tasteless.

isch-. Combining form of the Gr., *ischein*, to check; used in compound words to signify paucity or scantiness of.

ischemia (is-ke'me-ah). Temporary and local anemia due to contracting blood vessels. [Gr., *ischein*, to check, + *aima*, blood.]

ischem'ic. Adj. form of ischemia.

ischialgia (is-ke-al'je-ah). See *sciatica*. [Gr., *ischion*, the hip-joint, + *algos*, pain.]

ischidrosis (is-ki-dro'sis). Suppression of perspiration. [Gr., *ischein*, to check, + *idros*, perspiration.]

ischio-. Combining form of the Gr., *ischio-*, *ischion*, ischium; used in compound words as a prefix to signify of, or concerning, the ischium.

ischiocavernosus (is'ki-o-kav-er-no'sus). See *table of muscles*, under *muscle*.

ischiocele (is'ke-o-sel). Syn.: *ischiodic hernia*. Hernia through the great sciatic notch. [Gr., *ischion*, the hip-joint, + *kele*, a tumor.]

ischiococcygeus (is'ki-o-kok-si'je-us). See *table of muscles*, under *muscle*.

ischion. See *ischium*.

ischiopagus (is-ke-op'ag-us). A double monster in which the bodies are almost completely developed, the pelvis merge together in front, and there is but one navel. **i. tetrapus**. An i. with four lower extremities. **i. tripus**. An i. with three lower extremities. [Gr., *ischios*, the hip-joint, + *pagos*, that which has become solid.]

ischium (is'ke-um). The posterior and inferior part of the os innominatum which forms about two-fifths of the acetabulum. [Gr., *ischion*.]

ischuria (is-ku're-ah). Suppression or retention of urine. [Gr., *ischein*, to check, + *ouron*, urine.]

i'singlass. Ichthyocolla.

island (i'land). In anatomy, a structure more or less detached from a main mass and surrounded by structures of a different sort. **i's of Langerhans**. Special cells in the pancreas supposed to form an internal secretion concerned in carbohydrate metabolism. **i. of Reil**. See *insula*. [Ang.-Sax., *igland*.]

iso-. Combining form of the Gr., *isos*, equal.

iso-agglutination (i'so-ag-glu-ti-na'shun). The action of an agglutinin capable of agglutinating the red corpuscles of other individuals of the same species.

iso-agglutinin (i'so-ag-glu'tin-in). The material in the blood serum of one animal that will produce agglutination when mixed with the red blood corpuscles of the same species.

iso-amylamin (i'so-am-il-am'in). $((CH_3)_2CHCH_2CH_2NH_2)$, a constituent of ergot, in which it occurs in small amount. It is also found in putrid meat.

isobody (i'so-bod-e). An antibody active

- for the tissues of other animals belonging to the same species.
- isobutyrate** (i''so-bu'ti-rät). A salt of isobutyric acid.
- isobutyric** (i''so-bu-tir'ik). Isomeric with a butyric compound. **i. acid.** See under *acid*.
- isocasein** (i-so-ka'se-in). A substance which has been prepared from casein by drying it at 100°.
- ischolesterin** (i-so-ko-les'ter-in). A cholesterolin which Schultze has prepared from wool-fat.
- isochronism** (i-sok'ro-nizm). The property of being isochronous. [Gr., *isos*, equal, + *chronos*, time.]
- isochronous** (i-sok'ro-nus). 1. Occupying equal periods of time. 2. Recurring at regular intervals. [Gr., *isos*, equal, + *chronos*, time.]
- isococain** (i''so-ko'ka-in). A synthetical alkaloid resembling cocain; more powerfully anesthetic, but irritating.
- isocompounds**. Any chemical compounds which have the same number of atoms, with a different arrangement of the atoms in the molecule.
- isocreatinin** (i''so-kre-at'in-in). A ptomain, C₁₂H₇NaO, derived from decaying fish. [Gr., *isos*, equal, + *creatinin*.]
- isocyanate** (i-so-si'an-ät). A salt of isocyanic acid.
- isocyanid** (i-so-si'an-id). Syn.: *carbylamin*. Compounds isomeric with the cyanites (salts of prussic acid), e. g., CH₃C:N, methyl cyanid, CH₃N:C, methyl-esocyanid. The i's have a characteristic disagreeable odor.
- isocytolysin** (i-so-si-to'l'is-in). A cytolyisin which acts on the cells of animals of the same species as that from which it is derived. [Gr., *isos*, equal, + *cytolysin*.]
- isodulcite** (i-so-dul'sit). Same as *rhamnose*.
- isodynamic** (i''so-di-nam'ik). Exerting (of foods, giving rise to) an equal amount of force, measured usually in the amount of heat produced on combustion. **i. equivalent.** The amount of the various food-stuffs which are equivalent from the standpoint of heat production in the body; thus 1 part of fat by weight is equivalent to 2.3 parts of sugar or starch. [Gr., *isos*, equal, + *dynamis*, power.]
- isogamous** (i-sog'am-us). Having equal conjugating parts.
- isohematoporphyrin** (i''so-hem''at-o-por'fi-rin). Of C. A. Nobel, a reduction product of hematin, formed from hematoporphroidin; the urohematin of MacMunn.
- isohemolysin** (is'o-hem-ol'is-in). A hemolysin capable of acting against the blood of other animals of the same species as the animal producing the serum. [Gr., *isos*, equal, + *aima*, blood, + *lysin*.]
- isohemolysis** (i''so-hem-ol'is-is). Hemolysis of the blood corpuscles on injection of serum from another individual of the same species. This substance is called *isohemolysin*.
- isolactose** (i-so-lak'tös). A compound carbohydrate (hexobiose), which has been formed from galactose and glucose by the action of the enzyme from kefir kernels.
- isoleucin** (i-so-lu'sin). Methyl-ethyl-amino-propionic acid, CH₃-CH(C₂H₅)-CHNH₂.COOH. An amino-acid resembling leucin in its physical properties, which has been found widely distributed among the proteins.
- isolysin** (is-ol'is-in). A lysin which acts in dissolving cells from the same species as that in which the lysin producing cells were injected. A lysin may be thus produced by injecting red blood corpuscles of a goat into another goat and such serum will dissolve goat's red blood corpuscles. [Gr., *isos*, equal, + *lysin*.]
- isolysis** (is-ol'is-is). The hemolytic action of blood serum of one animal against another of the same species. [Gr., *isos*, equal, + *lysis*, solution.]
- isolytic** (i-so-lit'ik). Pertaining to an isolysin.
- isomaltose** (i-so-mal'tös). A compound carbohydrate (hexobiose) containing two glucose groups, which has been prepared synthetically by the action of concentrated hydrochloric acid and also by the action of an enzyme from yeast cells.
- isomer.** See *isomerid*.
- isomeric** (i-so-mer'ik). Of chemical bodies, possessing the same number of atoms, but differing as regards the arrangement of the atoms in the molecule. [Gr., *isos*, equal, + *meros*, a part.]
- isomerid** (i-som'er-id). Syn.: *isomer*. A substance which bears to another the relation of isomerism.
- isomerism** (i-som'er-ism). The property of being isomeric. At present there are three kinds of isomerism in chemical compounds: *chain*-, *nucleo*-, and *stereo*-isomerism. In the first two of these the *i.* is caused by varying the position of atoms and groups of atoms in the chain or nucleus of chemical compounds. In stereo-*i.* the *i.* is caused by changing the position of an atom or group of atoms around the same carbon atoms. [Gr., *isos*, equal, + *meros*, a part.]
- isometric** (i-so-met'rik). Having the same dimensions; said of crystals. [Gr., *isos*, equal, + *metrein*, to measure.]
- isomorphism** (i-so-mor'fism). The state of being isomorphous. [Gr., *isos*, equal, + *morphe*, form.]
- isomorphous** (i-so-mor'fus). Of the same form (said of bodies which resemble one another in chemical composition and crystallize in forms either identical or similar). [Gr., *isos*, equal, + *morphe*, form.]
- isonitroso-antipyrin** (i''so-ni-tro''so-an-te-pi'rin). A compound of nitrous acid and antipyrin; diaphoretic, diuretic, and antipyretic.
- isopepsin** (i-so-pep'sin). Of Finkler, parapeptone. [Gr., *isos*, equal, + *pepsis*, digestion.]
- isophoria** (i-so-fo're-ah). A condition in which the tension of the vertical muscles of each eye is equal, so that the visual

- lines lie in the same horizontal plane. [Gr., *isos*, equal, + *phoros*, bearing.]
- isopral** (i'so-pral). Trichlorisopropyl alcohol (CCl₃.CHOH.CH₃). A hypnotic of the chloral group.
- isoprecipitin** (i'so-pre-sip'it-in). A precipitin which is active against the serum of the same species as that from which it is produced.
- isoprene** (is'op-ren). A hydrocarbon, methyl divinyl, CH₂:C(CH₃).C:CH₂. Formed in the dry distillation of rubber. By the action of certain chemicals, it has been converted into a mass resembling rubber.
- isopropyl** (i-so-pro'pil). A univalent chemical radical (CH₃)₂CH.
- isosaccharin** (i'so-sak'ar-in). A carbohydrate of unknown constitution.
- isoscope** (i'so-sköp). An instrument devised by Helmholtz for determining the position of the vertical and horizontal lines of division in various movements of the eye. [Gr., *isos*, equal, + *skopein*, to examine.]
- isoserin** (i-so-se'rin). A hydroxy-β-amino-propionic acid, CH₂NH₂.COOH, isomeric with serin.
- Iso'spora bigeminum**. A protozoön of the order *Coccidiidea*, occasionally occurring in the intestine of man.
- isothermal** (i-so-ther'mal). Of an equal degree of heat. [Gr., *isos*, equal, + *therme*, heat.]
- isotonic** (i-so-ton'ik). Having the same tone or tension; of a muscle, a condition of constant tension in which stimulation leads to the shortening of the muscle, as opposed to the isometric condition, where there can be no change in the length of the muscle, and stimulation produces only a change in tension. **i. solutions**. Solutions which have the same osmotic pressure. [Gr., *isos*, equal, + *tonos*, a tone.]
- isotoxin** (is-o-toks'in). A toxin produced in one animal capable of affecting other animals of the same species. [Gr., *isos*, equal, + *toxin*.]
- isotropic** (i-so-trop'ik). 1. Equally endowed with a certain quality (e. g., elasticity, radiating power, conductivity of light and heat) in all parts or directions, especially of muscular tissue refracting equally in all directions, and hence singly refractive. See also *anisotropic*. 2. Of Pflüger, so constituted that any organ might develop from any part of it (said of an ovum). [Gr., *isos*, equal, + *tropé*, a turning.]
- isotropy** (i-sot'ro-pe). The state or quality of being isotropic. **i. of the ovum**. A supposed fusion of the nuclei of the two sexual elements in the process of fecundation.
- isouretin** (i-so-u'ret-in). Formanidoxin, NH₂.CH:NOH. Isomeric with urea.
- is'sue**. 1. The action of going, passing, or flowing out; termination, end, close; offspring, progeny, descendants. 2. A chronic discharging ulcer, especially one purposely kept open to act as a counter-irritant. [Mid. Eng., from old Fr.]
- isthmus** (isth'mus). 1. Any narrow passage, like that of the fauces. 2. The narrow portion of the brain between the cerebrum and the cerebellum and medulla oblongata. **gyral i.** Syn.: *cuneate convolution*. The union between the precentral and postcentral gyri occasioned in some brains by the complete interruption of the central fissure on each side. **i. faucium**. The constriction separating the cavity of the mouth from that of the pharynx. **i. of the meatus auditorius**. The narrowest portion of the meatus auditorius, at the margin of the inner third of the osseous portion. **i. of the oviduct**. The comparatively narrow and straight mesal half of the oviduct. **i. of the thyroid body (or gland)**. A transverse portion of the gland which connects the two lateral lobes near the bottom. **i. of the uterus**. That moderately constricted part which marks the junction of the body with the neck of the organ. **i. prostaticae**. Of Huschke, the median lobe of the prostate. **i. tubae Eustachii**. The narrowest part of the eustachian tube. **i. urethrae**. 1. The membranous portion of the male urethra. 2. In the female, the least dilatable portion of the urethra, situated somewhat above the middle of its course. [Gr., *isthmos*, a neck, a narrow passage.]
- Italian juice**. Liquorice extract made in Calabria.
- itch**. Syn.: *pruritus*. An uneasy sensation of irritation in the skin, which is relieved by scratching. Applied also to the disease, *scabies*. Varieties of it are: **dhobie i.**; **ground i.**; **laundryman's i.**; **Malabar i.**; **toe i.** [Old Eng., *siccan*, to itch.]
- ite**. A suffix corresponding to the Fr., *-ite*, the Lat., *-ita*, and the Gr., *-ites*, used to form adjectives and nouns with the significance of *connected with or belonging to*.
- i'ter**. A road, way, passage. **i. ad infundibulum**. A small opening in the floor of the third ventricle of the brain, communicating with the infundibulum. **i. a tertio ad quartum ventriculum**. See *aqueduct of Sylvius*. **i. chordae anterioris**. The anterior canal in the outer wall of the tympanic cavity for the exit of the chorda tympani; the canal of Huguier. **i. chordae posterioris**. The posterior canal in the outer wall of the tympanic cavity, which gives entrance to the chorda tympani. **i. dentium**. The passage by which a permanent tooth passes out to the surface of the gum. [Lat., *iter*, from *ire*, to go.]
- itis**. A suffix from the Gr., *ites*, *itis*, later used to qualify *nosos*, disease expressed or understood, and in modern English medicine used to signify inflammation.
- it'rol**. Silver citrate; used as an antiseptic.
- i'vain**. A bitter substance obtained from the alcoholic extract of *Achillea moschata*.
- i'vaol**. A liquid obtained by distilling oil of *Achillea moschata*.
- ivory** (i'vo-re). The dense, white, elastic substance of the tusks of the elephant,

etc. Its chemical composition resembles that of bone and of the teeth. **decalcified i.** I. which has been deprived of its inorganic constituents by the action of an acid. It shrinks when dried and expands when wet. Used to dilate the cervix uteri. **i. black.** See *carbo animalis*, under *carbo*. [Lat., *ebur*.]

Ixodes (ix-o'dés). A genus of the class *Arachnida* and the order *Acarina*, being ticks without eyes but with long palpi and six ventral shields. **I. annulus.** See *I. bovis*. **I. autumnalis.** See *I. hexagonus*. **I. bovis.** Syn.: *Margaropus annulatus*, *Boöphilus bovis*. The cattle tick of North and South America, Africa, Europe, and Japan. The female sucks the blood of cattle and infects them with *Babesia bigemina*, the parasite of Texas cattle fever. **I. camelinus.** Syn.: *Hyalomma aegyptium*. A tick of Egypt and India attacking sheep, goats, cattle, and man. **I. hexagonus.** The European dog

tick, said to transmit *Babesia canis*. **I. leachi.** Syn.: *Haemaphysalis*. A species of dog tick transmitting *Babesia canis*. **I. marmoratus.** See *I. reticulatus*. **I. reticulatus.** Syn.: *Dermacentor reticulatus*. A tick of Europe and Asia, erroneously thought to convey Rocky Mountain fever. **I. ricinus.** The castor oil tick of man, sheep, goats, horses, dogs, cats, bats, and birds of America, Europe, and Africa. It acquires *Babesia bigemina* in the adult stage and transfers it to cattle in the larval stage. **I. rufus.** The common dog tick. **I. sanguineus.** Syn.: *Eurhipicephalus sanguineus*. See *I. rufus*. **I. unipunctus.** A species of tick found in the United States which attaches itself to the human skin, spreading *Babesia canis*. [Gr., *ixodes*, from *ixos*, the mistletoe, + *eidōs*, resemblance.]

iz'al. A proprietary disinfectant formed in the dry distillation of coal.

J

jaborandi (jab-o-ran'de). 1. A name for numerous plants possessing sialagogue and sudorific properties. Recently, the *Pilocarpus pinnatifolius*. 2. The leaves of several species of *Pilocarpus* (*q. v.*). [Brazilian.] **j. leaves.** The leaves of *Pilocarpus jaborandi*. [Lat., *Jaborandi Folia*, Br. Ph., *Pilocarpus*, U. S. Ph.] **tinctura j.** A 20 per cent. tincture of jaborandi [Br. Ph. 1898.]

jaborandin (jab-o-ran'din). See *pilocarpin*. [Lat., *jaborandina*.]

jaboridin (jab-o'rid-in). An amorphous base, probably $C_{10}H_{12}N_2O_3 = C_{10}H_{14}N_2O_2 - H_2 + O$, an oxidation product of pilocarpidin, having an action like atropin.

jaborin (jab'o-rin). An alkaloid, $C_{11}H_{16}N_2O_5$, prepared by heating a concentrated acid solution of pilocarpin; having properties much like those of atropin.

Jacaranda (jak-ah-ran'dah). A genus of the *Bignoniaceae*. **J. caroba.** A Brazilian species the leaves of which are used as a diaphoretic and diuretic. Other species of *J.* are sometimes mentioned, but none of them is of much importance.

Jaccoud's sign (ghah-kooz'). A precordial systolic creeping movement, observed in cardiac symphysis. [Sigismund Jaccoud, Fr. physician, 1830-1912.]

jack'et. A fixed bandage made of plaster of Paris or leather applied to the trunk to immobilize the spine in Pott's disease, scoliosis, and sacro-iliac disease. **strait-j.** See *camisole*.

jackso'nian. Described by *J. Hughlings Jackson*. **j. epilepsy.** See *cortical epilepsy*, under *epilepsy*. [*J. Hughlings Jackson*, English physician, 1834-1911.]

Jacobson's organ. The canal a few mm. in length, which extends along the septum

of Stenson's duct to end in a blind extremity. It is the homologue of a more extensively developed organ, in some animals having a more acute sense of smell. In man it is only rudimentary. [Ludwig Levin Jacobson, Dutch anatomist, 1783-1843.]

Jacob's ulcer. See *rodent ulcer*, under *ulcer*. [Arthur Jacob, Irish ophthalmologist, 1790-1847.]

jactation (jak-ta'shun). Tossing about from restlessness. [Lat., *jactatio*, from *jactare*, to throw.]

Jaffe's creatinin test. Consists of treating an aqueous solution of creatinin with a solution of picric acid and a small amount of sodium hydroxid. A red solution is formed which becomes yellow on addition of acid. **J's indican test.** A test for urinary indican. The indican is first hydrolyzed by the action of concentrated hydrochloric acid, then the indoxyl formed is converted into indigo blue by the action of chlorid of lime. See also *Obermayer's indican test*. **J's test for indican in urine**, see in appendix, pages 894, 895. [Max Jaffe, Ger. chemist, 1841-1911.]

jal'ap. The purgative root of several species of the *Convolvulaceae*, especially of *Ipomoea purga* (see *jalapa* [1st def.]). **Tampico j.** The root of *Ipomoea simulans*. [Lat., *jalapa*, from *Jalapa*, a city of Mexico.]

jala'pa. Syn.: *radix jalapae*, or *jalapi*. 1. Of the U. S. Ph., true jalap, the tuberous roots of *Exogonium purga*; of the Br. Ph., of *Ipomoea purga*. Used as an active hydrogogue cathartic, especially combined with other drugs. 2. The genus *Mirabilis*. **extractum jalapae.** An extract pro-

duced by macerating jalap in alcohol and subsequently in water and mixing the evaporated extracts [Br. Ph., 1898]. **pilulæ jalapæ**. A preparation of 3 parts of jalap soap and 1 part of powdered jalap; convert this into $\frac{1}{10}$ gram pills, sprinkle with lycopodium, and dry well. **pulvis jalapæ compositus** [U. S. Ph., Br. Ph.]. A preparation consisting of 35 parts of j. and 65 parts of cream of tartar [U. S. Ph.]; or 3 of j., 6 of cream of tartar, and 1 part of rhizome of ginger [Br. Ph.]. **resina jalapæ** [U. S. Ph., *jalapæ resina*, Br. Ph.]. A resin obtained by exhausting jalap with alcohol, forming yellowish brown, brittle masses with sweetish odor and somewhat acid taste, readily soluble in alcohol, only partially soluble in ether, the insoluble portion being *convolvulin*. **tinctura jalapæ** [N. F., Br. Ph.]. A preparation representing 20 per cent. of jalap.

jal'apin. The term has been applied to the active resin, properly called *convolvulin*, as well to the inactive resin obtained from jalap, to which alone it should be given. See *convolvulin*. [Lat., *jalapina*, *jalapium*.]

jam'bul. The bark of the root of *Eugenia jambolana*, rose apple, a tree of the West Indies, possessing astringent properties.

James's powder. Antimonial powder. A mixture of 33 parts of antimony oxid with 67 [U. S. Ph.] (or 66 [Br. Ph.]) parts of calcium phosphate. [Robert James, Eng. physician, 1705-1776.]

japaconin (jap-ak'on-in). An alkaloid, $C_{20}H_{41}N_2O_2$, closely resembling aconin.

japanonin (jap-ak-on'it-in). Aconitin obtained from Japanese aconite root. It acts like crystalline aconitin, but is said to be more toxic.

Japanese gelatin. See *vegetable gelatin*, under *gelatin*.

jar. A vessel with a wide mouth.

jargonaphasia (jar'go-naf-a-ze-ah). A type of aphasia in which there is great speech mixture.

Jasminum (jas'min-um). Jasmin or jessamin; an extensive group of plants constituting the principal genus of the jasminworts. **J. officinale**. The common white or white-flowered jasmin; a native of India, but acclimatized in central and southern Europe. The flowers, once used in European medicine as a neurotic and emollient remedy, are now valued only for the jasmin oil which is used in perfumery. [Pers., *yasmin*.]

Jatropha (jat'ro-fah). A genus of euphorbiaceous plants. **J. curcas**. The angular-leaved physic nut; a native of tropical America and domesticated in the East Indies. The seeds, the so-called Barbados nuts, are emetic and cathartic, though it is said they may be safely eaten, if deprived of their outer coverings. They were once largely used in European medicine. They contain an oil which is a drastic purgative. [Gr., *iatro*, a surgeon, + *trephein*, to nourish.]

jaundice (jawn'dis). See *icterus*. **car-**

diac j. J. due to insufficiency of the tricuspid valves. **catarrhal j.** See *catarrhal icterus*, under *icterus*. **false j.** See *hematogenous j. febrile j.* See *Weil's disease*. **hematogenous j.** Syn.: *hematogenous cholemia*. J. due to a disorganization of the blood in which the coloring matter is set free. **hepatogenous j.** Syn.: *hepatogenous cholemia*. J. produced by the absorption of bile into the blood after it has been formed in the liver, owing to some obstacle to its escape through the proper channels. **mechanical j.** J. dependent upon mechanical obstruction of the bile ducts by calculus or inflammatory deposits within, or by pressure of tumors, etc., from without. [Old Eng., *jaunes*, *jaunis*, *jaxnes*.]

jaw. A bone or a bony structure forming a portion, fixed or movable, of the apparatus by which the teeth are brought together; also, in the lower animals, any structure serving a similar purpose; of an instrument, either one of the opposing parts by which it is made to grasp an object. **big j.** A common term in Montana for actinomycosis. **locked j.**, **lock-j.** See *trismus*. **lumpy j.** A popular term for actinomycosis. [Mid. Eng., *jawe*, from *cheooven*, Ang.-Sax., to chew.]

jecorin (jek'or-in). A substance obtained from horse's liver and also from the liver and spleen of other animals. It is soluble in ether and is assumed to be a compound of lecithin and carbohydrate. [Lat., *jecur*, the liver.]

jecorol (jek'or-ol). A proprietary preparation, claimed to be a substitute for cod-liver oil.

Jeffersonia (jef-fer-so'ne-ah). Twin leaf; a genus of the *Berberidaceæ*. **J. bartonisi**, **J. binata**, **J. diphylla**. Ground squirrel pea; a species sometimes substituted for senega. It is emetic in large doses. It contains an acrid principle like polygalic acid. [Named for T. Jefferson, president of the U. S., 1743-1826.]

jejunitis (jej-u-ni'tis). Inflammation of the jejunum. [Lat., *jejunum*, empty, + *itis*, inflammation.]

jejuno-. Combining form of Lat., *jejunum*, empty, referring to the jejunum.

jejunocolostomy (jej'u-no-ko-los'to-me). The formation of an artificial communication between the jejunum and the colon. [Lat., *jejunum*, empty, + Gr., *kolon*, colon, + *stoma*, an aperture.]

jejuno-ileostomy (je''ju-no-i-le-os'to-me). The formation of an artificial communication between the jejunum and the ileum. [Lat., *jejunum*, empty, + *ileum*, ileum, + Gr., *stoma*, an aperture.]

jejunostomy (je''ju-nos'to-me). The operation of making a more or less permanent opening into the jejunum. [Lat., *jejunum*, empty, + Gr., *stoma*, an aperture.]

jejunotomy (jej-u-not'o-me). Incision into the jejunum. [Lat., *jejunum*, empty, + Gr., *temnein*, to cut.]

jejunum (je-ju'num). The upper two-fifths of that part of the small intestine below the duodenum; so called because

it was formerly supposed to be empty after death. [Lat., *jejunum*, from *jejunus*, fasting.]

jelly. See *gelatina*. **glycerin j.** An emollient preparation of glycerin and soap with enough water to form a jelly. **Wharton's j.** See *gelatin* of Wharton, under *gelatin*. [Lat., *gelatina*.]

Jendrassik's test (yen-drah'siks). The pulling of the clenched hands apart while taking the patella reflex; reinforcement.

jenne'rian. Described by Edward Jenner. **j. inoculation**. See *vaccination*.

jemmerization (jen-er-iz-a'shun). Production of immunity to a disease by one or more inoculations with organisms or their products which produce the disease. *Vaccination*.

jequirity (je-kwir'it-e). See *Abrus precatorius*.

jerk. A sudden muscular movement. **jaw-**

j. A phenomenon consisting in a contraction of the muscles of mastication upon an extensile impulse similar to that in patellar tendon reflex. It is produced by a stroke downward on the lower teeth or chin when the mouth is well opened.

j. finger. See *trigger finger*, under *finger*. **knee j.** A phenomenon described by Erb as "patellar tendon reflex." It consists in the spasmodic contraction of the quadriceps femoris produced by a quick stroke upon the patellar tendon when the leg is slightly flexed. Normally it is rarely absent. It is of great diagnostic importance in diseases of the spinal cord.

jer'vin. An alkaloid, $C_{30}H_{46}N_2O_3 + 2H_2O$ (or $C_{27}H_{42}N_2O_3$), obtained from *Veratrum album* and other species of *Veratrum*. [Lat., *jervina*.]

jessamin (jes'sam-in). See *Jasminum*.

Jes'uits' bark. An old name, still used occasionally, for cinchona.

jug'ger. See *dermatophilus*.

Johann Hoff's malt extract. A dark, reddish brown proprietary extract, having a flat, faintly sweet taste.

joint. See *articulation*. [B. N. A., *articulatio*.]

ball-and-socket j. See *enarthrosis*. **condyloid j.** A j. allowing of all varieties of angular movements and circumduction (e. g., the wrist and metacarpophalangeal articulations). **dovetail j.** See *suture*. **false j.** See *falsely articulation*. **flail j.** An extremely relaxed j., the distal part of the limb being practically beyond the control of the will. **ginglymoid j.** See *ginglymus*. **gliding j.** See *arthrodia*. **hinge j.** See *ginglymus*. **pivot j.** See *trochoid articulation*, under *articulation*. **screw-hinged j.** A form of *ginglymus* in which the movement takes place in a slightly spiral direction, as at the humero-ulnar articulation, as at the humero-ulnar articulation.

synovial j. A j. where there is motion and the interior of the j. is lubricated with synovia. **wheel-and-axle j.** See *trochoid articulation*, under *articulation*. [Lat., *junctura*, from *jungere*, to join.]

Jolles' test for bile pigment. Urine which has been shaken with chloroform and barium chlorid is then centrifugalized.

The chloroform barium sediment is suspended in alcohol and treated with an acidified solution of iodine and mercuric chlorid in alcohol. A bluish green or green color indicates the presence of bile pigments. [Adolph Jolles, Austrian chemist, living.]

joss-sticks. A Chinese preparation of punk combined with perfume and made into slender sticks. They are burned to deodorize sickrooms or to drive off mosquitoes.

Ju'glans. 1. The walnut; a genus of the *Juglandaceae*. 2. The butternut root bark, formerly official. It is a mild cathartic.

J. cathartica, **J. cineres**. Butternut, oil nut, white walnut, a species found in North America. The inner root bark is a mild cathartic used in chronic constipation. **J. nigra**. Black walnut; found in the United States, having properties like those of *J. regia*. **J. regia**. The common European walnut tree. The unripe fruit and the external layers of the nut have been used as a vermifuge. [A contraction of *Jovis glans*, i. e., nut of Jupiter.]

ju'glone. A substance obtained from *Juglans regia*; an active sternutatory.

jugular (jug'u-lar). Pertaining to the throat or the neck. **j. fossa**. See under *fossa*. **j. glands**. See *cervical glands*, under *gland*. [Lat., *jugularis*, from *jugulum*, the throat.]

ju'gum, pl., *juga*. A connecting structure like a yoke. **juga alveolaria** (*mandibular*). The alveolar eminences. **juga cerebrialia**. The elevations on the inner surface of the skull which separate the *impressiones digitatae*. **juga cervicis uteri**. See *arbor vitae uterina*. **j. petrosium**. See *arcuate eminence*, under *eminence*. [Lat., from *jungere*, to join.]

juice (jüs). The liquid that exudes or may be expressed from any portion of an organism. **alimentary j's**. See *digestive j's*. **artificial gastric j.** A digestive fluid prepared by adding pepsin or an extract of the gastric mucous membrane to water containing 0.3 per cent. of hydrochloric acid. **cancer j.** The milky fluid exuding from cancerous tissue. **digestive j's**. Fluids secreted by specialized glands and poured into the digestive apparatus of animals or on to the surfaces of the leaves of insectivorous plants. These j's contain digestive ferments. See *saliva*, *bile*, *gastric j.*, *intestinal j.*, and *pancreatic j.* **enteric j.** See *intestinal j.* **gastric j.** Syn.: *ferment of stomach*. A fluid poured into the stomach by the gastric glands during the process of digestion. It consists of water and salts, pepsin, rennin, and a little free hydrochloric acid. Its principal action is the dissolution of proteids which it changes into the diffusible peptones and proteoses. **intestinal j.** Syn.: *intestinal fluid*. A clear, yellowish, viscid fluid, having a specific gravity of 1.010 and a strongly alkaline reaction. It is the secretion of Lieberkühn's crypts and the total amount ob-

tained from the intestine after one meal was estimated by Bidder and Schmidt at 10½ fl. oz. It may contain inverting enzymes, which change the disaccharids to the monosaccharids, and also proteolytic enzymes, especially erepsin. **Italian j.** Licorice extract made in Calabria. **joint j.** See *synovia*. **muscle j.** See *muscle plasm*, under *plasm*. **nutrient j.** The blood plasma, from its conveying nourishment to the tissues. **pancreatic j.** The clear, viscid, alkaline, digestive j. produced by the pancreas. It contains albumin, a small amount of fats and soaps, a large amount of sodium carbonate, and three different enzymes: *proteolytic (trypsin)*, *amylolytic (amylase)*, and *lipolytic (lipase or steapsin)*. Pancreatic j. is a universal digester. **preserved vegetable j's.** A name sometimes applied in England to tinctures made by adding alcohol to the expressed j's of plants. **Spanish j.** Licorice extract made in Catalonia. **testicle j.**, **testicular j.** The extract made from the testes. **tissue j.** The extract made from the tissues, usually by submitting them to great pressure. [Lat., *jus*, broth.]

Ju'juba. 1. The genus *Zizyphus*. 2. See *jujube*.

ju'jube. The fruit of several species of *Zizyphus*, especially *Zizyphus vulgaris*. J's have been used in the form of decoction in pectoral complaints, and a paste—*j. paste*—made with gum arabic and sugar dissolved in a decoction of the fruit, is used as a demulcent. [Lat., *jujuba*.]

ju'lep. A drink composed of sweetened liquor. A beverage composed of brandy or whiskey, with sugar, pounded ice and mint; called also *mint-julep*. [Fr., *julep*.]

juniperin (ju-nip'er-in). A resinlike substance obtained from juniper berries.

Juniperus (ju-nip'er-us). Syn.: *fructus juniperi*, *baccae juniperi*. 1. The junipers. 2. Of the U. S. Ph., juniper or juniper berries (fruit of *J. communis*).

They have when crushed an aromatic odor and a spicy, sweetish, terebinthinous taste. They are mildly stimulant and diuretic.

jun'ket. A delicate preparation for the sick, made by warming milk, adding rennet, sugar, and nutmeg, and allowing it to stand until it becomes stiff.

jurisprudence (ju-ris-pru'dens). The science or system of law. **medical j.** The application of medical knowledge to the discussion and settlement of legal questions. **microscopical j.** Of *R. H. Ward*, the use of the microscope in j. **pharmaceutical j.** That branch of j. which has to do with the legal responsibilities connected with the commercial handling of drugs. [Lat., *jurisprudentia*, from *jus*, law, + *prudencia*, a forecasting.]

jury-mast. An upright bar used in supporting the head in cases of Pott's disease.

jus. See *broth*. **j. bovinum.** See *beef-tea*, under *beef*.

jusculum (jus'ku-lum). See *broth*. [Lat., *jus*, broth.]

justo major (jus'to ma'jor). Abnormally large in all directions.

justo minor (jus'to mi'nor). Abnormally small in all directions. See *pelvis equaliter*, under *pelvis*.

Justus' test for syphilis. The falling of the hemoglobin percentage in the blood from ten to twenty points in from three to twenty-four hours following the administration of a large dose of mercury in a person who has syphilis.

jute. The fiber of *Corchorus capsularis*, *Corchorus olitorius*, and other species of *Corchorus*; used as a substitute for both lint and sponges in surgical dressings.

juvenile (ju'ven-il). Young; relating to a child; characteristic of youth. [Lat., *juvenis*, young.]

juxtaposition (juks'tah-po-zish'un). An adjacent situation. [Lat., *juxta*, near, + *positio*, place.]

K

K. The chemical symbol for the element *potassium* (kalium).

Ka. Abbreviation for cathode.

kairin (ki'rin). An artificial alkaloid derived from quinolin; formerly used as an antipyretic.

kairocoll (ki'ro-kol). An artificial alkaloid, C₂₁H₁₁NO₂, obtained from quinolin.

kairolin (ki'ro-lin). Methylquinolin hydrid, C₁₀H₁₅N, or kairin less an atom of oxygen; an antipyretic.

kakke (kahk'ka). Beriberi (Japanese).

kakodyl. See *cacodyl*.

kala-azar (kah-la-az'ar). Syn.: *Dumdum fever*. A very fatal epidemic febrile disease observed in Assam. It is due to a

parasite called *Leishmania Donovanii*; probably transmitted by the bite of a species of the *Conorhinus*, *Conorhinus rubrofasciatus*.

ka'li. Potassium. [Lat.]

kaligenous (ka-lij'en-us). Producing potash. [Lat., *kali*, potash, + Gr., *gennan*, to engender.]

ka'lium. See *potassium*. Used in combination with chemical terms. [*Kali*, potash.]

Kalmia (kal'me-ah). American laurel; a genus of heathworts. [From *Peter Kalm*, a Finnish traveler.]

kamala (kam'al-ah). Syn.: *glandulae k.* or *rottlerae*. 1. Of the U. S. Ph., 1890,

- a powder consisting of the glands and hairs from the fruits of *Mallotus philippinensis*. It is actively cathartic and a very efficient teniafuge. 2. The tree furnishing this powder.
- kam'al-in.** See *rottlerin*.
- Kandahar' sore.** A sore similar to the Delhi boil, affecting inhabitants of Kandahar.
- ka'olin.** China clay. A native silicate of aluminum, the product of a decomposition of feldspar and quartz. It has been used as a coating for pills and for clarifying wines. **cataplasma kaolini** [U. S. Ph.]. Clay poultice; this was introduced into the pharmacopeia to serve as a substitute for numerous proprietary preparations at present on the market. The type of preparation is very old. [Lat., *kaolinum*, U. S. Ph., Br. Ph.]
- kar'akin.** An intensely bitter, white crystalline substance, apparently a glucosid; obtained from the nuts of the karaka (*Corynocarpus laevigata*).
- Karell's treatment for "anasarca."** [Philip Karell, Russ. physician.] See in appendix, page 916.
- karyokinesis** (kar''e-o-kin-e'sis). Syn.: *direct cell division, nuclear cell division*. The series of changes taking place in a nucleus during indirect or mitotic cell division. [Gr., *karyon*, nut, kernel, nucleus, + *kinesis*, movement (*kinein*, to move).]
- karyokinetic** (ka're-o-ki-net'ik). 1. Pertaining to karyokinesis. 2. Ameboid.
- karyoklasis** (kar-e-ok'las-is). See *karyorrhexis*.
- karyolysis** (kar-e-ol'is-is). Nuclear destruction by a solution of the chromatic material, as in parenchymatous nephritis. [Gr., *karyon*, nucleus, + *lysis*, loosening.]
- karyolytic** (ka're-o-lit'ik). Concerned in or resulting from the breaking up of nuclei. **k. figure of Auerbach.** See *Auerbach's vacuole, under vacuole*.
- karyomitome** (ka-re-o-mi-töm). See *nuclear fibril, under fibril*. [Gr., *karyon*, a nucleus, + *mitos*, a thread.]
- karyomitosis** (kar''e-o-mi-to'sis). See *karyocinesis*. [Gr., *karyon*, nucleus, + *mitos*, thread.]
- karyoplasm** (kar'e-o-plazm). The substance or material composing a nucleus, as distinguished from that of a cell body (protoplasm or cytoplasm). [Gr., *karyon*, nucleus, + *plasma*, matter, from *plassein*, to form.]
- karyoplas'mic.** Pertaining to karyoplasm.
- karyorrhesis** (kar''e-or-rek'sis). Nuclear disintegration by fragmentation of the chromatin, as in nuclear fragmentation in tubercles. [Gr., *karyon*, nut, + *rexsis*, split.]
- karyosoma** (kar''e-o-so'mah). One of the nucleolarlike bodies of irregular form, developed from the remnant of the germinal vesicle (female pronucleus). They at first stain equally throughout. Afterward they become spherical, and there appears a central pale spherule not stain-
- ing, and two deeply staining chromatin spherules attached to its poles. The term applies to the body when in this latter stage. [Gr., *karyon*, a nucleus, + *soma*, the body.]
- katabolic** (kat-ah-bol'ik). See *catabolic*.
- katabolism** (kat-ab'ol-ism). See *catabolism*.
- kataplasia** (kat-ap-la'se-ah). A reversionary metamorphosis causing a reversion of a cell undergoing atrophy or degeneration to a type representing an embryonic or developing cell. [Gr., *kata*, down, + *plassein*, to form.]
- katastal'sis.** The movement, as of a nerve impulse, from above downward. [Gr., *katastellein*, to check, or send downward.]
- katatonía** (kat-a-to'ne-ah). Originally used by Kahlbaum as defining a psychosis with marked muscular tensions; by Kraepelin used for a subgroup of dementia precox patients.
- kath'arol.** A name applied to a solution of hydrogen peroxid.
- Kauri.** *Dammara australis*. **K. copal, K. gum, K. resin.** A kind of copal derived from various species of *Dammara* and coming chiefly from Polynesia.
- kava, kava-kava** (kah'vah). Written also *kaua*. See *Piper methysticum*. Kava rhizome is official in the Br. Ph. **alpha k. resin.** A resin obtained from k. by extracting successively with alcohol and petroleum ether. It contains the active principle of the plant. [*Polynesian*.]
- kavain** (kav'ah-in). A neutral principle extracted from the root of *Piper methysticum*.
- Keeley cure.** See *gold cure, under cure*.
- keep'er.** See *armature*.
- kefir, kefy'r** (kef'er). A Caucasian alcoholic drink made by fermenting milk and buttermilk; used as a stimulant and nutrient. **k. fungi.** A mixture of bacteria and yeast, capable of causing lactic acid fermentation of milk. Used in the preparation of k. kumyss.
- ke'lene.** A name applied to the ethyl chlorid of the U. S. Ph.
- kel'lin.** A principle obtained from *Ammi visnaga*; said to act on, the heart and spinal cord.
- Kelling's test in examination of stomach contents,** see in appendix, page 904.
- keloid** (ke'loyd). A connective tissue new formation in the skin and often occurring after traumatism most commonly of the lobe of the ear, the breast, and the face. It is of unknown origin. It occurs most frequently in the negro race. The only difference between a keloid and a scar is that the former extends beyond the limits of the latter and tends to grow. **acne k.** This is a mass of hypertrophic scars which occurs on the nape of the neck at the border of the scalp as a result of a suppurative folliculitis. **k. en plaque.** A circumscribed hard plate, embedded in the skin and elevated very little or not at all above the surface. [Gr., *kelis*, a scar, + *eidós*, resemblance; also written

cheloid, as if derived from the Gr., *chele*, claw.]

kelotomy (ke-lot'o-me). An operation for the relief of strangulated hernia by incision through some of its coverings, and section of the tissues that constrict its neck. [Gr., *kele*, a hernia, + *temnein*, to cut.]

kelp. 1. Burnt seaweed, British barilla, incinerated sea wrack; an impure alkaline mass, consisting of impure sodium carbonate, sulphate, chlorid, and iodid, and potassium sulphate and chlorid; a source of iodine, though displaced to a great extent by barilla. 2. Any large dark colored seaweed, particularly the *Laminaria*.

kenotoxin (ken-o-toks'in). Hypothetical toxin (Weichardt) produced in muscular exertion, which causes symptoms of fatigue. [Gr., *kenos*, empty, + *toxin*.]

kephalin (kef'al-in). See *cephalin*.

keracele (ker'as-el). Of the veterinarians, a horny tumor upon the external surface of the hoof in horses. [Gr., *keras*, a horn, + *kele*, a tumor.]

ker'asin. A substance occurring in the gum of cherry, apricot, peach, and plum trees.

keratectasia (ker''at-ek-ta'zhe-ah). Bulging of the cornea that has become soft and pliant from *keratitis pannosa*. [Gr., *keras*, a horn, + *ektasis*, a stretching.]

keratectomy (ker-at-ek'to-me). Properly, excision of a portion of the cornea; as commonly used, the operation of extracting a cataract, also an incision into the anterior chamber for letting out pus or blood. [Gr., *keras*, a horn, + *ektome*, cutting out.]

keratin (ker'at-in). One of the classes of protein substances, present abundantly in the horny structure of the epidermis, the hair, the hoofs, feathers, shells of tortoises, horns, etc. The k's contain an unusual amount of sulphur and yield up on hydrolytic cleavage an abundance of cystine. Used in the preparation of pills and capsules which are intended to pass through the stomach unchanged. The keratin of commerce is extremely impure, and worthless for coating pills. [Gr., *keras*, a horn.]

keratitis (ker-at-i'tis). Inflammation of the cornea. It may be superficial or deep, acute or chronic. The symptoms are pain, photophobia, lachrimation, more or less opacity of the cornea, ciliary injection, vascularity of the cornea (rarely extending beyond the periphery except in pannus), and diminution of vision.

aspergillar k. Due to infection of the cornea with a mold. **bullous k.** K. with blebs on the surface of the cornea.

cretaceous k. A calcareous degeneration of the corneal epithelium which is idiopathic and develops slowly. **dendritic k.** A branching ulcer on the cornea.

granular k. See *pannus*. **herpetic k.** A rare form of k. attacking only the epithelial layers of the cornea. Small spots of denuded epithelium give the appearance of herpes. True

herpes of the cornea also occurs. **hypopyon k.** K. ulcerosa complicated with the presence of pus in the anterior chamber. **interstitial k.** K. in which the substantia propria is the part of the cornea primarily involved. **k. a frigore.** K. due to exposure to cold. **k. bullosa.** See *bullous k.*

k. disciformis. Disk-like or annular k., characterized by the formation of a gray disk in the middle layers of the cornea. **k. maculosa.** K. characterized by numerous grayish round spots in the cornea, with ill-defined borders, in the superficial or subepithelial layers. **k. mycotic.** A form of k. due to the *Aspergillus fumigatus*. **k. neuroparalytica.** A chronic k. which comes on after paralysis of the ophthalmic division of the fifth nerve. The eye loses its sensibility, becomes rough and dry, and later on infected. **k. punctata.**

A form of k. with deposits of opaque material in spots on the membrane of Descemet. It is always secondary to disease of the iris, the choroid, or the vitreous. **lagophthalmic k.** A form of k. due to imperfect covering of the cornea by the lid, with consequent drying of the corneal surface. **reaper's k.**

Traumatic k. induced by contact of the beards of grain with the cornea. **ribbon-shaped k.** K. due to a trophic degeneration of the anterior layer of the cornea. [Gr., *keras*, a horn, + *itis*, inflammation.]

ker'ato-, ker'at-. Combining form of Gr., *keras*, horn; used to signify relating to horny substances or to the cornea of the eye.

kerato-angioma (ker''at-o-an-je-o'mah). Another name for *angiokeratoma*.

keratocele (ker'at-o-sel). Protrusion from the cornea of that part of the membrane of Descemet that has formed the floor of a previous ulcer. See *desemetoecele*. [Gr., *keras*, a horn, + *kele*, hernia.]

keratocentesis (ker''at-o-sen-te'sis). The operation of puncturing the cornea. [Gr., *keras*, a horn, + *kentesis*, perforation.]

keratochromatosis (ker''at-o-kro-mat-o'sis). A diffuse discoloration of the superficial layers of the cornea. [Gr., *keras*, a horn, + *chroma*, color.]

keratoconjunctivitis (ker''at-o-kon-junk-tiv-i'tis). Associated inflammation of the cornea and conjunctiva. [Gr., *keras*, a horn, + *conjunctivitis*.]

keratoconus (ker-at-o-ko'nus). See *conical cornea*, under *cornea*. [Gr., *keras*, a horn, + *konos*, a cone.]

keratocricoid (ke''ra-to-kri'koid). See *table of muscles*, under *muscle*.

keratoderma (ker''at-o-der'mah). See *cornea*.

keratoder'mia. Hypertrophy of the horny layer of the skin. [Gr., *keras*, horn, + *derma*, the skin.]

keratogenous (ker-at-oj'en-us). Producing horny material. [Gr., *keras*, a horn, + *gennan*, to engender.]

keratoglobus (ker''at-o-glo'bus). A disease characterized by a uniform spherical

bulging of the whole cornea, which generally extends to the neighboring portion of the sclerotic. The term has been used synonymously with hydrophthalmia and buphthalmia. [Gr., *keras*, horn, + Lat., *globus*, a globe.]

keratoid (ker'at-oyd). Resembling horn. [From Gr., *keras*, a horn, + *eidōs*, resemblance.]

kerato-iritis (ker''at-o-i-ri'tis). Inflammation of the cornea and the iris. [Gr., *keras*, a horn, + *iritis*.]

keratoleukoma (ker''at-o-lu-ko'mah). See *leukoma*. [Gr., *keras*, a horn, + *leukoma*.]

keratolysis (ker-at-ol'is-is). A loosening or separation of the cuticle of the skin. A rare disease, in which the individual sheds his skin, at more or less definite intervals, like a snake. It is analogous to *erythema scarlatiniforme*. [Gr., *keras*, a horn, + *lysis*, a loosening.]

keratolytic (ker-at-o-lit'ik). Pertaining to keratolysis.

keratoma (ker-at-o'mah). An excessive growth of corneous tissue. See also *callositas*. **k. diffusum**. Another name for *ichthyosis congenita*. [Gr., *keras*, a horn, + *oma*, tumor.]

keratomalacia (ker''at-o-mal-a'se-ah). Xerotic keratitis. [Gr., *keras*, a horn, + *malakia*, a softening.]

keratometer (ker-at-om'et-er). An instrument for measuring corneal astigmatism. [Gr., *keras*, a horn, + *metron*, a measure.]

keratomycosis (ker''at-o-mi-ko'sis). A fungoid infection of the cornea due to an *Aspergillus*. [Gr., *keras*, cornea, + *mykes*, fungus.]

keratonosis (ker''at-o-no'sis). See *keratosis*.

keratonyxis (ker''at-o-nix'is). Puncture of the cornea. [Gr., *keras*, a horn, + *nyxis*, a pricking.]

keratopharyngeus (ker''ra-to-fa-rin'je-us). See *table of muscles*, under *muscle*.

keratoplastic (ker''at-o-plas'tik). Said of an agent that tends to hasten the conversion of soft epidermal cells into horny cells; relating to an operation having to do with the transplantation of corneal tissue. [Gr., *keras*, a horn, + *plassein*, to mold.]

keratotomy. A method of determining the refraction of an eye by inspecting the reflex from the pupil; also called *skiascopy* and *retinoscopy*. [Gr., *keras*, cornea, + *skopein*, to observe.]

keratosis (ker-at-o'sis). 1. A physiological transformation into horny tissue. 2. Excessive development of corneous tissue. 3. Disease or anomalous development of the corneous tissue, especially of the epidermis. The *keratoses* are diseases characterized by anomalous growth of the *stratum corneum*. The varieties are: *k. contagiosa*, *k. follicularis*, *k. follicularis contagiosa*, *k. nigrans*, *k. palmaris et plantaris*, *k. pilaris*, *k. seborrheica*, *k. senilis*, *k. suprafollicularis*, *k. vegetans*. [Gr., *keras*, a horn.]

keratotomy (ker-at-ot'o-me). Any inci-

sion of the cornea, especially for the extraction of cataract. [Gr., *keras*, the cornea, + *temnein*, to cut.]

kerion (ke're-on). A single patch of ringworm containing an area of hypertrophic conglomerate follicularis. [Gr., *kerion*, a honeycomb.]

kermes (ker'méz). 1. The dried females of *Coccus ilicis*; used as a dyestuff in the East, and said to be the scarlet of the Scriptures. 2. The *Quercus coccifera*. **k. mineral**. Lat., *k. minerale*. A substance consisting chiefly of the trisulphid and trioxid of antimony, in varying proportions, together with a small proportion of water and of various adventitious ingredients. It occurs under two forms. **vegetable k.** See *k.* (2nd def.). [Arabic, Persian.]

ker'nel. A seed. A morbid formation of rounded form in any part of the body, as an enlarged gland; the nucleus or core. [Old Eng., *cyrnel*, dim. of corn seed, grain.]

Ker'nig's sign. Contracture of the flexor muscles of the legs with inability to straighten the lower limbs completely when in a sitting posture, said to be constant in meningitis. [Waldemar Kernig, Petrograd physician, born 1840.]

keresene (ker'o-sèn). An oil produced from that portion of petroleum which distills above 183° C.

ke'tone. A chemical compound which contains the CO group (ketone group) in combination with two atoms of carbon, e. g., CH₃CO.CH₃, dimethyl ketone. An oxidation product of a secondary alcohol, thus bearing the same relation to the latter that an aldehyd does to a primary alcohol.

ke'tose. A simple carbohydrate which contains a keto group (the CO: group; e. g., *fructose*).

key. 1. An appliance for locking or unlocking an apparatus (e. g., an extension splint). 2. An apparatus for making and breaking an electrical circuit. 3. A methodical and precise table of the principal divisions comprising a system of classification.

Kg. Abbreviation for kilogram.

kidinga pepo. A disease met with in Zanzibar, probably of the same nature as dengue.

kid'ney. A gland for the secretion of urine, situated one in each loin, at the side of the vertebral column at the back part of the abdominal cavity behind the peritoneum. They are opposite the last thoracic and first two or three lumbar vertebrae, each being in contact with the 12th rib. They are supported by their vessels and surrounding connective tissue. In man they are about 4 inches long, 2½ inches broad, and 1½ inch thick. The right is a little lower than the left, the latter being longer and thinner. **amyloid k.** See *lardaceous k.* **arteriosclerotic contracted k.** That form of contracted k. in which sclerosis of the renal arteries and their branches, with resulting thickening of the intima of the

vessels and obliteration of their lumen, produces compression of the glomeruli and chronic interstitial fibrosis. **cirrhotic k.** See *granular k.* **contracted k.** The small k. seen in chronic interstitial or diffuse nephritis. **cystic k.** A k. that has undergone cystic degeneration; it may be congenital. **embolic contracted k.** That form of contracted k. in which embolic infarction of the renal arterioles produces degeneration of the renal tissue, and hyperplasia of the fibrous tissues results in irregular contraction. **fatty k.** A k. affected with fatty infiltration or degeneration of the tubular, glomerular, or capsular epithelium, and sometimes of the vascular connective tissue. **floating k.** One which is loosened and displaced. **gouty k.** A k. in which there is necrosis of the renal connective tissue in consequence of uratic deposit. **granular k.** A slow form of chronic nephritis, often associated with an arthritic diathesis, in which the k. diminishes in size, and is of a red color, hard, fibrous, and granular in texture. **hobnail k.** See *granular k.* **hog-back k.** The bulky kidney of chronic parenchymatous nephritis. **horseshoe k.** A congenital malformation in which the superior or inferior extremities of the k's are joined by an isthmus of renal or fibrous tissue, thus forming a horseshoe shape. **k-shaped.** See *reniform.* **k'wort.** 1. *Cotyledon umbilicus*. 2. *Saxifraga stellaris*. **lardaceous k.** Syn.: *amyloid disease*, *waxy k.* A form of chronic nephritis, often secondary to syphilis and characterized by infiltration with lardaceous or amyloid matter, of the malpighian bodies and arteries, and the tubes, epithelium, and intertubular textures. The disease is consecutive to, or coexistent with, similar disease in the spleen and liver. The organ affected is distinguishable from the large white k. by being harder, tougher, and firmer. It has a waxy appearance, and responds to the iodine test. **large mottled k.** One of the types of chronic parenchymatous nephritis. **large red k.** A k. of the appearance seen in acute parenchymatous nephritis. **large white k.** A form of chronic parenchymatous nephritis, at times preceded by and resulting from an acute inflammation. The organ may exceed twelve ounces in weight. See also *chronic nephritis*, under *nephritis*. **primordial k.** See *mesonephros*. **sacculated k.** A condition of the k. due to hydronephrosis, in which the substance of the organ has been largely absorbed and only the irregularly distended capsule remains. **senile k.** A k. in which there is atrophy of the glomeruli and tubules due to old age. **small red granular k.** See *granular k.* **surgical k.** Suppurative pyelonephritis following an operation upon a urinary organ. **syphilitic k.** A k. so altered by syphilitic disease as to contain fibrous bands running across it, also caseating gummata. **waxy k.** See *lardaceous k.*

ki'lo-. An arbitrary derivative of the Gr., *chilioi*, a thousand.

kil'ogram. One thousand grams. See *table of weights and measures*, in appendix.

kiloliter (kil'o-le-ter). One thousand liters. See *table of weights and measures*, in appendix.

kilometer (kil'o-me-ter). One thousand meters. See *table of weights and measures*, in appendix.

kin. Family, race, blood relation. [Old Eng., *cyn*, old Fris., *kin*, *ken*, *kon*.]

kinase (kin'ās). Name given to organized substances (possibly enzymes) which activate enzymes, e. g., the entokinase of the duodenum which activates trypsin.

kinematic (kin-e-mat'ik). Relating to pure motion. [Gr., *kinema*, motion.]

kinematics (kin-e-mat'iks). That division of mechanics which treats of the movements of bodies without reference to the forces which produce the movements. [Gr., *kinema*, motion.]

kinematograph (kin-em-at'o-graf). A contrivance by which a series of instantaneous photographs taken in rapid succession are projected on a screen with similar rapidity, so as to give a lifelike reproduction of the original moving scene. [Gr., *kinema*, motion, + *graphein*, to write.]

kinesia (ki-ne'se-ah). The employment of systematic movements of the body, active or passive, for hygienic or therapeutical purposes.

kinesiatrics (kin-e-se-at'riks). Gymnastic therapeutics. [Gr., *kinein*, to move, + *iatreuein*, to treat medically.]

kinetic (kin-e'sik). See *kinetic*.

kinesimeter, kinesiometer (kin-es-im'et-er, kin-es-e-om'et-er). An apparatus for measuring movements. [Gr., *kinein*, to move, + *metron*, a measure.]

kinesiology (kin-e-se-o-l'o-je). The science of artificial or natural movements of the body as educational, therapeutical, or hygienic agents. [Gr., *kinesis*, movement, + *logos*, understanding.]

kinesiometric (kin-e-se-o-met'rik). Pertaining to the measurement of movements. [Gr., *kinesis*, movement, + *metron*, a measure.]

kinesimetry (kin-e-se-om'et-re). The measurement of movements.

kinesioneurosis (kin-e'l'se-o-nu-ro'sis). Any nervous disease characterized by abnormality of muscular action. **external k.** A k. of the muscles of external relational life. **vascular k.** A k. of the vasomotor system. **visceral k.** A k. affecting the muscles of the internal organs. [Gr., *kinesis*, movement, + *neuron*, a nerve.]

kinesis (kin-e'sis). Motion. [Gr., *kinein*, to move.]

kinesodic (kin-e-sod'ik). Conveying motor impulses. [Gr., *kinesis*, motion, + *odos*, a way.]

kinesthesia, kinesthesis (kin-es-the'ze-ah, kin-es-the'sis). See *muscular sense*, under *sense*. [Gr., *kinein*, to move, + *aisthesis*, perception.]

kinesthesiometer (kin-es-the-se-om'e-ter).

An apparatus for testing the muscular sensibility. [Gr., *kinēin*, to move, + *aisthēsis*, perception, + *metron*, a measure.]

kinesthetic (kin-es-thet'ik). Pertaining to the muscular sense.

kinetic (kin-et'ik). Pertaining to motion. See also *karyokinetic*.

kinetics (kin-et'ics). See *kinematics*.

kineto-. Combining form of Gr., *kinetos*, movable, used as a prefix in compound words to signify movable.

kinetus (kin-e'tus). Movable; see *kinetic*. *K. musculus*, an old name for the diaphragm. [Gr., *kinetos*.]

king's evil. See *scrofula*.

kink cough. See *chin cough*, under *cough*.

ki'no. Of the U. S. Ph., Br. Ph., the inspissated juice of *Pterocarpus marsupium*, known also as gum k., East Indian k., and Malabar k. In the form of tincture or powder, it is used as an astringent.

Australian k. A species of k. derived from *Eucalyptus resinifera* and other Australian species. See *red gum*.

Bengal k. The gum of *Butea frondosa*, *Butea superba*, and *Butea parviflora*. Used in India as a substitute for k.

pulvis k. compositus [Br. Ph.]. A preparation consisting of powdered k., powdered opium, and powdered cinnamon bark.

tinctura k. [U. S. Ph., Br. Ph.]. A preparation representing 10 per cent. [U. S. Ph.] [Br. Ph.] of k. Glycerin is added to lessen a tendency to gelatinize.

Kirchoff's law. The l. that when a beam of light is passed through a transparent body the latter absorbs just those luminous rays which it is capable of emitting when heated to incandescence. **K's theory**. The t., now generally accepted, that the black lines of the spectrum are caused by the passage of light through the vapors of bodies which by themselves would give bright lines in the same position when incandescent.

Kjeldahl's (kyel'dal). Syn.: *nitrogen determination*. This author's method for estimating quantitatively the nitrogen product chemical compounds. [J. Kjeldahl, Danish chemist.]

klatsch-preparation (klatsch). A cover glass specimen made by pressing the slide upon a culture.

kleptomania (klep-to-ma'ne-ah). An irresistible tendency to theft. [Gr., *klepto*, combining form of *kleptes*, thief, + *mania*, madness.]

Knapp's operation. 1. An operation for cleft lobule of the ear. 2. A combination of simple union and blepharoplasty for coloboma palpebrae. **K's liquid**. A solution of mercury cyanide, used for the estimation of glucose. **K's test**. A test for glucose depending on the fact that the latter when heated with mercuric cyanid and caustic soda reduces the former and precipitates metallic mercury.

knee. 1. The angle made by the bend of the leg; the femorotibial articulation, together with the surrounding structures.

2. A sharp bend in a structure. **housemaid's k.** Inflammation anterior to the

bursa patellae followed by effusion. **hysterical k.** The simulation of inflammation of the k. joint, but pain and often contracture are the only symptoms present.

in-k. See *knock-knee*. **k.-cap**. See *patella*.

k.-jerk. See *patellar reflex*, under *reflex*. **k.-pan**. See *patella*.

k. of the corpus callosum. See *genu of the corpus callosum*.

k. phenomenon. See *patellar reflex*, under *reflex*.

knock-k. Syn.: *in-k.*, *genu valgum*. A deformity in which the leg is deflected outward, so that the feet cannot be brought together side by side, with both legs extended.

lawn tennis k. A sprain of the internal semilunar cartilage of the k. joint caused by a violent motion of rotation of the body while the foot is fixed. The symptoms are those usually caused by a sprain, and the affection is liable to recur on slight provocation.

out-k. Syn.: *genu varum*. A deformity in which one or both knees is carried outward, owing to the bending of the tibia, or the fibula, or both. [Teut., old Eng., old Fris., *cneo*, *cne*, *kne*.]

knee-chest posture or position. See *genupectoral posture*, under *genupectoral*.

knee-elbow posture or position. The same as the knee-chest position, except that the weight of the trunk is borne on the elbows instead of the chest.

Kneipp's water cure. Treatment by causing the patient to walk barefooted in the grass wet with morning dew. [Sebastian Kneipp, German priest, 1821-1897.]

kneippism (nip'izm). A form of treatment advocated by a priest named Kneipp, consisting in walking barefooted in grass wet with dew.

knismogenic (nis-mo-jen'ik). Causing a tickling sensation.

knit'ting. The process of union in a broken bone.

knot. An intertwining of the ends of one or more cords or tapes so that they cannot be separated. The common k.'s used in surgery are: *clove-hitch k.*, *half-hitch k.*, *square or reef k.*, *Staffordshire k.*, *surgeon's k.* [Old Eng., Dutch, low Germ., *cnotta*, *cnot*, *knotte*, *knot*.]

knuckle (nuk'l). The prominence formed by the back of a joint of a finger when it is flexed; also any similar object. [Mid. Eng., old Fris., mid. Dutch, *knockel*, *nuckel*, *knucle*, *nucle*.]

knuckling (nuk'ling). In horses, a form of clubfoot in which the fetlock joint is thrown forward.

Kobelt's tubes. In the paroöphoron, vestiges of the ducts of the wolfian bodies. [Georg L. Kobelt, German physician, 1804-1857.]

Kocher's operation. An operation for excision of the ankle joint, in which the foot is held at a right angle, and an incision is made just below the external malleolus from the tendo Achillis to the extensor tendons; the peroneal tendons are dissected out, divided, and the tendons sutured. [Theodor Kocher, Swiss surgeon, born 1841.]

Koch's law, Koch's postulate. The 1. that in order to prove an organism to be the cause of a given disease or lesion the following conditions must be fulfilled: 1st, the microorganism in question must appear in the lesion at all times; 2nd, pure cultures must be obtained from it; 3rd, the cultures must reproduce the disease in animals and pure cultures must be again obtained from these lesions. **K's reaction.** See *tuberculin reaction*, under *reaction*. [Robert Koch, German bacteriologist, 1843-1910.]

Ko'la. See *Cola*.

kombé poison (kom'ba). An arrow poison containing strophanthin prepared from the seed of *Strophanthus kombé*.

koosso (koo'so). See *kouso*.

Kop'lik's sign. Truncate, white, scale-like spots, often surrounded by a red areola, on the buccal mucous membrane opposite the molar teeth. **K's spots.** A sign of measles. Small irregular spots of a bright red color, found on the buccal mucous membrane. In the center of each spot there is noted, in strong daylight, a minute bluish white speck. [Henry Koplik, New York physician, born 1858.]

koprosterin (kop-ro-ste'rin). A cholesterolin which has been isolated from human feces.

Kordofan gum. See under *gum*.

Korsakoff's psychosis. Syn.: *cerebro-pathia-psychia toxemia*. A form of mental disturbance in polyneuritis, usually of alcoholic origin.

ko'sam. An oriental drug thought to be derived from a simarubaceous plant allied to *Brucea*, used as a hemostatic and as a remedy for dysentery.

ko'sin. A crystalline substance, $C_{31}H_{38}O_{10}$, obtained from kouso flowers; used against tapeworm.

kosotoxin (ko-so-toks'in). The active principle of kouso.

kossein (kos'se-in). A slightly acid, crystallin, styptic principle extracted from kouso.

koussin (ku'sin). Syn.: *cosein*. An anthelmintic resin derived from kouso.

kouso (koo'so). Flowers of *Hagenia abyssinica*. **Brayera k.** **Brayera k.** is used as an anthelmintic. Fluidextract of k. is official [U. S. Ph., Br. Ph.].

Kr. Chemical symbol for the element *krypton*.

Krameria (krah-me're-ah). Syn.: *crameria*. 1. A genus of the *Polygleae*. 2. Of the U. S. Ph. and the Br. Ph., rhatany, the root of *K. triandra*, *K. ivina* and *K. argentea*. **extractum krameriae** [U. S. Ph., Br. Ph.]. Extract of rhatany. **extractum krameriae fluidum** [U. S. Ph.]. Fluidextract of rhatany. **K. argentea.** A species furnishing Pará rhatany. **K. cistoidea.** A species nearly identical with *K. triandra*; the source of Chile rhatany. **krameriae radix** [Br. Ph.]. Rhatany root. **k. triandra.** Rhatany root; the chief source of the k. of the U. S. Ph. **syrupus krameriae** [U. S. Ph.]. Syrup of rhatany representing 45 per cent. of the root. **tinc-**

tura krameriae [U. S. Ph., Br. Ph.]. Tincture of rhatany, representing 20 per cent. of the root. [For J. G. H. Kramer, Austrian physician and botanist, 18th century.]

Kraske's operation. Resection of a portion of the sacrum and coccyx, in order to obtain access to the rectum in operation for resection of the rectum in cancer. [Paul Kraske, German surgeon, living.]

kraurosis (kraw-ro'sis). Atrophy and contraction of tissue in the external genitals of women, occurring usually after the age of forty. Varieties of it are: *k. pudendi* or *k. vulvae*. [Gr., *krauros*, dry.]

Krause's bud, Krause's bulb. See *end bud*, under *separate heading*. **K's cells.** Bodies analogous in structure to the pacinian corpuscles, but found in mucous membranes. **K's corpuscles.** Bodies analogous in structure to the *pacinian c's*, but found in mucous membranes. **K's end bulbs.** See *end bud*, under *separate heading*. **K's glands.** Acinous glands in the orbital portion of the conjunctiva. **K's membrane.** See *intermediate disk*, under *disk*. **K's reaction.** The action of a precipitin in filtered cultures of the intestinal bacteria when added to immune serum made from the same species, the union of the two fluids resulting in a precipitate. [Wilhelm Krause, German anatomist, born 1833.]

kreotoxicon (kre-o-tok'sik-on). Any bacterial poison in meat causing poisoning.

kreotoxin (kre-o-toks'in). Any ptomain present in meat from bacterial action.

kreotoxism, kreotoxismus (kre-o-toks'ism, kre-o-toks-is'mus). Poisoning by infected meat.

kresamin (kres-am'in). A proprietary preparation consisting of a solution of 25 per cent. each of trikresol and ethylenediamin. It is bactericidal used locally.

Krey'sig's sign. See *Heim* and *Kreysig's sign*. [Friedrich Ludwig Kreysig, Dresden physician, 1770-1839.]

kryofin (kri'o-fin). Syn.: *cryofin*. Methylglycollic phenetidin; antipyretic and analgetic.

krypton (krip'ton). One of the elementary gases present in exceedingly small quantities in the atmosphere. Atomic weight 82. Symbol, Kr. [Gr., *kryptos*, hidden.]

kubisagari (koo-bis-a-gah're). A disease observed in Japan, thought to be similar to the paralytic vertigo of Switzerland.

ku'myss, kou'miss. 1. A beverage prepared from fermented mare's milk. 2. *Lac fermentatum*, of the N. F.; a beverage prepared by fermenting cow's milk with sugar and yeast. Nutrient and anti-emetic. [Tartar.]

kwe'na. Another name for *yaws*.

kymograph (ki'mo-graf). An instrument for registering, on a surface moved by clockwork, the height of the blood pressure, as well as pulsatile and other oscillations. **drum k.** A k. in which the moving surface is a metallic drum covered with blackened paper. [Gr., *kyma*, a wave, + *graphein*, to write.]

kymoscope (ki'mo-sköp). An apparatus

for examining and registering pulsation. [Gr., *kyma*, a wave, + *skopem*, to examine.]

kypho-. Another form of *cypho-*, from Gr., *kyphos*, crooked; used as a prefix in compound words to mean bent.

kyphoscoliosis (ki'fo-sko-le-o'sis). Scoliosis with compensating kyphosis. [Gr., *kyphos*, bent, + *skoliosis*, curvature.]

kyphosis (ki-fo'sis). Syn.: *cyrtosis*, *spinal curvature*, *humpback*. Abnormal curvature and dorsal prominence of the verte-

bral column. [Gr., *kyphosis*, from *kyphos*, bent.]

kyphotic (ki-fo'tik). Pertaining to or being affected with kyphosis.

kyrins (ki'rins). Basic bodies which Siegfried has isolated by the partial hydrolysis of proteins. These complex substances contain a large amount of nitrogen and upon hydrolytic cleavage yield an unusual amount of the hexone bases.

kysthi'tis. Colpitis, inflammation of the vagina.

L

L. Abbreviation for *Latin*, *left*, *liter*, *lithium*, and *libra*, a pound.

L+. The sign employed for "Limes plus." It represents the amount of toxin required to neutralize one antitoxin unit and still be sufficiently in excess to cause the death of a guinea-pig weighing 250 grams in four or five days.

Labarraque's solution. A solution consisting essentially of sodium chlorid and sodium hypochlorite dissolved in water. It should contain at least 2 per cent. [U. S. Ph.] or 2.5 per cent. [Br. Ph.] of available chlorin. [*Antoine Germain Labarraque*, Parisian chemist, 1777-1850.]

lab ferment. See *rennin*.

lab'ia. Pl. of *labium*, lip.

labial (la'bi-al). Pertaining to the lips.

l. angles. In dentistry, the angles of the lip surface of the teeth, where they join the other surface. **l. glands**. See under *gland*.

labidometer (lab-id-om'et-er). An instrument for measuring the fetal head within the obstetric forceps. [Gr., *labis*, a forceps, + *metron*, a measure.]

labile (la'bil). In chemistry, easily deranged. [Lat., *labi*, to glide.]

labitome (lab'it-om). A cutting forceps. [Gr., *labis*, a forceps, + *tome*, a cutting.]

labium (la'be-um). Pl. *labia*. See *lip*.

labia cerebri. The margins of the cerebral hemispheres which overlap the corpus callosum. **l. duplex**. A congenital malformation consisting of a longitudinal reduplication of the mucous membrane of the upper lip and sometimes of the lower lip. **l. inferius**. The lower lip. **labia pudendi majora**. The rounded longitudinal folds of integument, with included adipose tissue, which form the lateral boundaries of the vulva. **labia pudendi minor**a. Syn.: *nymphæ*, *alæ internæ minores clitoridis*. The lesser, inner lips of the vulva; two short longitudinal folds of mucous membrane situated within the labia majora. **l. superius**. The upper lip. **l. tympanicum**. The tympanic or outer edge of the organ of Corti. **labia urethrac**. The lateral margins of the meatus urinarius externus. **labia uteri**. The lips of the cervix uteri. **l. vestibulare**. The inner or

vestibular edge of the organ of Corti. [Lat.]

labor, labour (la'bor). Childbirth; the bringing forth of a child. **artificial l.** L. induced, hastened or completed artificially. **atonic l.** L. rendered tedious or incapable of spontaneous accomplishment by atony of the uterus. **complex l., complicated l.** L. accompanied by some extraordinary feature, such as a plurality of fetuses, prolapse of the umbilical cord, convulsions, excessive hemorrhage, abnormalities or injuries of the maternal parts, etc. **dry l.** L. in which the liquor amnii escapes prematurely or is very small in amount. **false l.** An assemblage of phenomena calculated to lead to the mistaken belief that l. is in progress. **instrumental l.** L. aided by means of some instrument, most commonly the forceps. **missed l.** A term used by Oldham to describe cases in which, at the natural term of pregnancy (whether intra-uterine or extra-uterine), uterine contractions set in, but, proving inadequate to expel the ovum, finally subside, leaving the ovum retained, generally to undergo mummification or some other form of degeneration. **multiparous l.** L. with more than one child. **natural l., normal l.** An easy l.; one in which the head presents, and the delivery is completed without artificial aid, without injury to mother or child, or any complication, and, according to some authors, within the space of twenty-four hours. **obstructed l.** L. in which progress is impeded by some mechanical obstruction. **precipitate l.** L. of very short duration. **premature l.** L. considerably before term, but when gestation is sufficiently advanced for the child to be viable, particularly between the 180th and the 270th days. **protracted l.** L. occupying more than the usual time (from 10 to 20 hours in primiparae, from 2 to 6 hours in multiparae). **spontaneous l.** L. occurring or completed without artificial aid. **twin l.** L. with twins. **vertex l.** L. with a vertex presentation. [Lat., *labor*, labor, toil, distress, old Fr., *labour*, *labour*, mod. Fr., *labour*.]

laboratory (lab'o-ra-to-re). A building or

a room fitted up for scientific work. [Lat., *laborare*, to work.]

labyrinth (lab'ir-inth). An intricate arrangement of communicating passages; the cavities of the internal ear. **bony l.** See *osseous l.* **ethmoidal l.** The lateral masses of the ethmoid bone. See *membranous l.* **l. of the (cortex of the) kidney.** That part of the cortical substance of the kidney which is arranged around the uriniferous tubules of the medullary rays in the cortex. **membranous l.** A structure contained in the osseous l., consisting of the utricle and sacculle of the vestibule, the three membranous semicircular canals, and the membranous portion of the cochlea. **olfactory l.** See *ethmoidal l.* **osseous l.** The osseous capsule or envelope of the membranous l. It is divided into the vestibule, the three semicircular canals, the cochlea, and the internal auditory canal. It lies in the petrous portion of the temporal bone. [Gr., *labyrinthos*.]

lac. A gummy incrustation consisting of resin, coloring matter, laccin, and a small proportion of wax and saline matters formed on the twigs and young branches of various trees. In its crude state it is very astringent and is now chiefly employed as an ingredient in sealing wax, etc. **shell l.** Syn.: *shellac*. L. as it usually occurs in commerce. [Lat., *lacca*.]

lac. 1. Milk; fresh cow's milk. 2. Any milklike fluid. **l. humanisatum.** Humanized milk; cow's milk, cream, and water, treated with pancreatin, with the addition of milk sugar [N. F.]. **l. vacinum.** Cow's milk. **saccharum lactis.** Syn.: *lactose*, *milk sugar*. See *lactose* [U. S. Ph., Br. Ph.]. **serum lactis.** See *whey*. **serum lactis acidum.** Syn.: *serum lactis acetosum* (seu *tartarisatum*). A preparation made by boiling cow's milk, adding tartaric acid or cream of tartar, straining, filtering, and sometimes clarifying with white of egg. **serum lactis aluminatum** (seu *aluminosum*). Alum whey. [Lat., *lac*, milk.]

lac'case. An oxidizing enzyme which has the property of oxidizing polyhydric phenols, such as hydroquinon.

laccin (lak'sin). A peculiar principle found in lac, partaking of the character of wax.

lacerate (las'er-ät). A term used in descriptive bacteriology meaning having the margin deeply cut into irregular segments as if torn.

lacerated (las'er-a-ted). Torn, cleft irregularly, as if torn; in osteology, having irregular edges.

laceration (las'er-a'shun). The act of tearing. A breach made by tearing. **l. of the cervix.** A division in one or more places of the cervix uteri, caused generally by childbearing. It may be unilateral, bilateral, or stellate. **l. of the perineum.** Injury of the female perineum and the structures of the pelvic floor, generally due to childbirth. It is complete when the l. extends through the

sphincter ani muscles. [Lat., *laceratio*, from *lacerare*, to tear to pieces.]

Lachesis (lak'es-is). 1. A genus of serpents. 2. The poison obtained from the fangs of a Brazilian snake (*Trigonocephalus l.*), used as a medicine in homeopathy.

lacinate (las'in'e-ät). A term used in descriptive bacteriology meaning deeply cut into incisions or lobes, or slashed. The term signifies more irregular and coarser than fimbriate.

lacmus (lak'mus). Litmus.

lacrimation (lak-rim-a'shun). 1. Weeping. 2. A profuse secretion of tears. [Lat., *lacrimare*, to shed tears.]

lacta'cidase. A lactic acid bacterial enzyme which produces lactic acid fermentation.

lactagogue (lak'ta-gog). See *galactagogue*.

lactalbunin (lak-tal-bu'min). A protein (albumin) from milk. Isolated from milk after removing the casein and globulin by saturation with magnesium sulphate, by precipitating the filtrate of magnesium sulphate with a small amount of acetic acid. [Lat., *lac*, milk, + *albumin*.]

lactamid (lak-tam'id). The amid of lactic acid, CH₃CHOH.CONH₂.

lactamin (lak-tam'in). See *alanin*.

lactans (lak'tans). 1. Suckling, giving suck. As a n., a woman who gives suck. 2. Sucking; as a n., a suckling. [Lat., *lactare*, to suckle.]

lactarius (lak-ta're-us). 1. Milky, prepared with or containing milk. 2. A genus of hymenomycetous fungi formerly included in *Agaricus*, so called from its milky juice; as a n., in the n., *lactarium*, an article of food prepared with milk. [Lat., *lac*, milk.]

lactase (lak'täs). An enzyme which hydrolyzes lactose, with the production of glucose, and galactose. Present in the intestinal juice.

lactate (lak'tat). A salt of lactic acid.

lactation (lak-ta'shun). 1. The production of milk. 2. The function of suckling. [Lat., *lactatio*, from *lactare*, to suckle.]

lactal (lak'te-al). Pertaining to or resembling milk; as a n., a chyloferous vessel. [Lat., *lacteus*, from *lac*, milk.]

lacteous (lak'te-us). 1. See *lactal*. 2. Of the color of milk. 3. Of the consistence of milk. 4. Containing lac or a milky juice.

lactescence (lak-tes'ens). A condition (e. g., of the chyle) resembling that of milk. [Lat., *lactescere*, to turn to milk.]

lactic (lak'tik). Of or pertaining to milk.

l. acid. See *acid*. **l. anhydrid.** Syn.: *lactid*. A double molecule of lactic acid from which two molecules of water have been extracted. [Lat., *lacticus*, from *lac*, milk.]

lactid (lak'tid). See *lactic anhydrid*.

lactiferous (lak-tif'er-us). Producing, secreting, or conveying milk. 2. See *galactophorous*. **l. glands.** See under *gland*. [Lat., *lac*, milk, + *ferre*, to bear.]

lactiform (lak'tif-orm). Resembling milk. [Lat., *lac*, milk, + *forma*, form.]

lac'tin. See *lactose*.

lactobacillin (lak-to-bas-il'in). A preparation of lactic acid and bacteria which produces lactic acid fermentation in milk; used to counteract abnormal intestinal fermentation.

lactobiose (lak-to-bi'ōs). Same as *lactose*.

lactocaramel (lak'to-kar'am-el). An amorphous substance of unknown constitution formed by heating lactose to 180° C.

lactocrit (lak'to-krit). An instrument for testing the quantity of fatty matter in milk. [Lat., *lac, lactis*, milk, + Gr., *krinein*, to test.]

lactodensimeter (lak'' to-den-sim'et-er). See *galactometer*.

lactoglobulin (lak-to-glob'u-lin). A globulin found in milk.

lac'tol. See *lactonaphthol*.

lactolase (lak'to-lās). Same as *lactacidase*.

lactolin (lak'to-lin). Condensed milk.

lactometer (lak-tom'et-er). See *galactometer*. [Lat., *lac, milk*, + Gr., *metron*, a measure.]

lactonaphthol (lak-to-naf'thol). A lactic ester of β-naphthol; used as an intestinal antiseptic.

lac'tone. The compound, C₁₀H₈O₄, derivatives of the γ- and δ-oxy-acids. Formed from these acids by the intramolecular extraction of one molecule of water. They are cyclic esters of these acids.

lactopeptin (lak-to-pep'tin). A proprietary acidulated, saccharated pepsin, combined with various inert substances. A liquid form is much used as a vehicle for some medicines.

lactophenin (lak-to-fe'nin). A product of the action of lactic acid on phenetidin; antipyretic and sedative. Its action and uses are quite similar to those of phenacetin.

lactophosphas (lak-to-fos'fas). See *lactophosphate*.

lactophosphate (lak-to-fos'fāt). A phosphate and lactate of the same base.

lactoscope (lak'to-skōp). See *galactoscope*. [Lat., *lac, lactis*, milk, + Gr., *skopein*, to examine.]

lactose (lak'tōs). Syn.: *milk sugar, galactosaccharum, saccharum lactis*. C₁₂H₂₂O₁₁ + H₂O, a compound carbohydrate (hexobiose) present in milk; also present at times in the urine of pregnant women. Upon hydrolysis with dilute acids or lactase one molecule of l. is converted into one molecule of d.-glucose and one molecule of d.-galactose. It responds to the ordinary reduction tests, which are characteristic of glucose, such as the Fehling test, Nylander's test, etc. But it will not ferment with yeast cells, a property which is made use of to distinguish it from glucose. With phenylhydrazin it forms a crystalline phenyl-lactosazone. [Lat., *lac, milk*.]

lactoserum (lak-to-se'rum). 1. The precipitate for the protein of milk. 2. See *whey*. [Lat., *lac, milk*, + *serum, whey*.]

lactoso'matose. A food consisting of somatose and desiccated milk.

lactosuria (lak-to-su're-ah). Presence of

lactose in the urine; sometimes seen in pregnant or nursing women. [Lat., *lac, milk*, + Gr., *ouron, urine*.]

Lactuca (lak-tu'kah). Syn.: *herba lactucae, herba lactucae virosae* (2d def.). 1. Lettuce, a genus of composite plants. 2. The flowering herb of *L. virosa*. **L. sativa.** The common garden lettuce. **L. virosa.** Acrid lettuce; found in Europe, abounding in a bitter, milky, unpleasantly smelling juice which was long reputed to be diuretic and narcotic. It furnishes the lactucarium of the U. S. Ph. [Lat., *lac, milk*.]

lactucarium (lak-tu-ka're-um). The concrete juice of several species of *Lactuca*. In the U. S. Ph. that of *Lactuca virosa*. **extractum lactucarii fluidum.** [U. S. Ph.]. Fluidextract of l. **syrupus lactucarii** [U. S. Ph.]. A preparation representing 5 per cent. of l. with syrup. **tinctura lactucarii** [U. S. Ph.]. A 50 per cent. tincture of l., from which insoluble matter has been removed. Used for the preparation of the syrup. [Lat., *lac, milk*.]

lactucerin (lak-tu'se-rin). Syn.: *lactucone*. A crystalline constituent of lactucarium. [Lat., *lactuca, lettuce*.]

lactyltropolin (lak-til-tro'pe-in). A product of the action of lactic acid on tropin; said to strengthen the heart's action and the respiration.

lacuna (lak-u'nah). 1. A small crypt, cavity, or depression. 2. In embryology, a space formed between the vitellus and the vitelline membrane by the shrinkage of the former consequent on the extrusion of the polar globules from the germinal vesicle.

absorption lacunae. See *Howship's lacunae*. **bone lacunae.** The isolated ovoid spaces situated mostly between the osseous lamellae, and connected with one another by canaliculi. Each l. contains, during life, a protoplasmic body or bone cell. **haversian lacunae.** The lacunae between the haversian lamellae. **Henle's lacunae.** Lacunae separating the muscular fasciculi of the heart.

Howship's lacunae. 1. The absorption pits at the surface of bone next the periosteum. 2. Recesses or excavations in bone filled with granulation tissue, the result of caries. **intervillous lacunae.**

Syn.: *placental blood spaces*. The sinuses of the maternal portion of the placenta in which the fetal placental villi hang free. **lacunae Morgagni.** Recesses in the mucous membrane of the male urethra. **lacunae of cementum.** Lacunae in the cement of teeth resembling those in bone. **lacunae of the cornea.** Interspaces between the laminae of the cornea. **lacunae of the urethra.** Recesses in the mucous membrane of the urethra, most abundant along the floor and especially in the bulb. **l. vasorum (cruralium).** Internal aperture of femoral canal. [Lat., dim. of *lacus, lake*.]

lacu'nar. Adj. form of lacuna.

lacu'nule. A small lacuna. **air l.** A minute, irregular cavity containing air. Such l's are very numerous, especially in

the fibrous and medullary substance of white hair.

ladanum (lad'an-um). 1. A gummy exudation from the leaves and branches of *Cistus creticus*, *Cistus ladaniferus*, and other species of *Cistus*. It is a stimulant expectorant, but is now used chiefly in perfumery. 2. The genus *Galeopsis* (in part).

Lady Webster pill. A pill of aloes and mastic [U. S. Ph.].

Laen'neec's cirrho'sis. Atrophic cirrhosis of the liver. [*René Théophile Hyacinthe Laennec*, French physician, 1781-1826.]

Lafayette mixture. A m. of 2 fl. oz. each of copaiba, spirit of nitrous ether, and compound tincture of lavender, 4 fl. drams of liquor potassae, 5 fl. oz. of syrup, and mucilage of acacia enough to make 16 fl. oz.; used in gonorrhoea.

Lagenaria (laj-en-á're-ah). The gourd; a genus of tropical cucurbitaceous herbs. **L. vulgaris.** The calabash. The pulp of the fruit is bitter and somewhat laxative, and may be substituted for colocynth. In the West Indies it is used as a poultice for inflamed eyes. One variety is poisonous. [Gr., *lagenos*, a flask.]

lagochilus (lag-o-ki'lus). Harelip. [Gr., *lagos*, hare, + *cheilos*, lip.]

lagophthalmia, lagophthalmus (lag-of-thal'me-ah, lag-of-thal'mus). Inability to close the eyelids over the eyeballs, owing to paralysis of the orbicular muscles of the lids or protrusion of the eyeball. [Gr., *lagos*, a hare, + *ophthalmos*, the eye.]

laiose (li'ós). A substance isolated from diabeturic urine; supposed to be a carbohydrate.

lakmoid (lak'moyd). A blue compound resulting from the action of sodium nitrite on resorcin, used as a delicate indicator in place of litmus in alkalimetry. In an acid solution it is red.

lak'mus. See *litmus*.

lak'y blood. See under *blood*.

lalia. The faculty of speech. [Gr., *lalia*.]

lamarckism (lam-ark'izm). 1. The theory, in evolution, that the growth of and changes in organs were due to the super-vention of a new requirement (e. g., that the neck of the giraffe was originally short and became lengthened on account of the efforts of the animal to reach food high above its head), as opposed to the theory of natural selection. 2. As sometimes used, the theory that all animal and vegetable life is descended from a common stock. [*Lamarck*, a French botanist 1744-1829.]

lambdoid (lam'doyd). Having the form of the Greek letter λ . See *l. suture* under *suture*. [Lat., *lambdoides*, from Gr., *lambda*, the letter λ , + *eidós*, resemblance.]

Lambliá (lam'ble-ah). See *Cercomonas*. A genus of the *Protozoa* and order *Poly-mastigina*. **L. intestinalis.** A species causing diarrhoea and dysentericlike conditions in man.

lame. Of a person or animal, or of a part,

crippled or impaired in any way; weak, infirm, maimed, halting. [Old Fris., old Sax., old high Ger., *lain*, *lom*, *lamo*, *lam*, old Eng., *lama*.]

lamella (lam-el'lah). A thin plate or scale. **bone lamellae.** Thin plates or layers of bone forming the ground substance of osseous tissue. **concentric lamellae.** The concentric plates of bone surrounding an haversian canal. **fundamental (or general) lamellae.** A general term for all the periosteal, intermediate, and medullary lamellae of bone. **intermediate lamellae.** Bone lamellae extending in various directions and filling the irregular spaces between the concentric lamellae. **l. carnosá.** That portion of the parietal mesoblast from which are derived the muscles of the trunk, the endoskeleton, the parietal lining of the pleuroperitoneal space, and the testes. **medullary lamellae.** The osseous lamellae which surround and form the wall of the medullary cavity of tubular bones. **periosteal (or periphéric) lamellae.** Bone lamellae situated next to and parallel with the periosteum, and hence forming the peripheral or ectal part of the bone. **triangular l.** A small fibrous lamina stretched between the choroid plexuses of the third ventricle of the brain. [Lat., dim. of *lamina*, plate, sheet, leaf.]

lam'in. An alkaloid obtained from *Laminum album*. The sulphate and the hydrochlorid are said to be powerfully hemostatic.

lamina (lam'in-ah). A thin layer or lamella. **dorsal laminae.** The dorsal ridges of the embryo. **embryonic terminal l.** The wall which closes the primary forebrain in front. **external medullary l.** The outer of two white laminae in the nucleus lentiformis. **inner medullary l., internal medullary l.** A layer of fibers which pass from the thalamus to the red nucleus. **l. cartilaginis cricoideae.** The flat, platelike, posterior portion of the cricoid cartilage. **laminae cartilaginis thyroideae.** The alae of the thyroid cartilage. **l. choroidea inferior.** The choroid plexus of the fourth ventricle. **l. cinerea.** Syn.: *eminentia cinerea*, *corpus cinereum*. A thin layer of gray matter situated between the corpus callosum and the optic chiasm, connected with the tuber cinereum superiorly and with the anterior perforated spaces laterally. It forms a part of the inferior boundary of the third ventricle. **laminae concharum.** The internal surfaces of the lateral masses of the ethmoid bones. **l. cribrosa.** 1. That portion of the sclerotic coat behind, through which the optic nerve penetrates the eyeball. **l. cribrosa anterior inferior.** The anterior portion of the fossula inferior. It contains openings for the passage of the divisions of the cochlear branch of the auditory nerve. **l. cribrosa cerebri.** A partly gray, partly white l. perforated with many openings for the passage of blood vessels,

situated beside and in front of the anterior end of the optic tract. **l. cribrosa choroideae.** The portion of the choroid in the lower animals which presents a number of foramina for the passage of the optic nerve into the eye. **l. cribrosae fasciae latae.** The perforated layer of fascia filling in the saphenous opening. **l. elastica (Bowmani, seu corneae) anterior.** A clear, structural layer of the cornea situated between the epithelial layer and the substantia propria. **l. fusca.** See *l. suprachoroidea*. **l. genu.** A small, thin medullary l. extending from the genu of the corpus callosum backward to the l. terminalis. **laminae lentis.** The concentric layers which form the crystalline lens. **l. mastoidea.** The basal plate of the mastoid process. **l. medullaris.** A layer of medullated nerve fibers representing the thickened external layer of the typical cerebral cortex inclosed in the fold made by the stratum convolutum of the hippocampus. **l. propria of the membrana tympani.** The middle fibrous layer of the tympanic membrane. **l. quadrigemina.** A layer of gray matter forming the roof of the aqueduct of Sylvius and supporting the corpora quadrigemina. **l. spiralis.** Syn.: *crista spiralis*. A l. which divides the interior of the spiral canal of the cochlea into two scalae. It is divided into the l. spiralis ossea and the l. spiralis membranacea, or membrana. **l. suprachoroidea.** Syn.: *l. fusca*. The outermost layer of the choroid, consisting of very thin, delicate, and loose meshed areolar tissue mingled with pigment cells of irregular shape, either scattered or clustered together, and composing communicating lymph spaces. **vitreous l.** A smooth, transparent membrane covering the inner surface of the choroid. [Lat., *lamina*, plate, sheet, leaf.]

Laminaria (lam-in-a're-ah). 1. A genus typical of the sea aprons, a family of dusky spored *Algae*. 2. Of the Ger. Ph. (2d ed.), the stalks of the thallus of *L. Cloustoni*. **L. bulbosa.** Sea furbelows, sea hangers. One of the largest species, very rich in iodine. **L. Cloustoni.** A species rich in iodine. Its stalks constitute the l. of the Ger. Ph. **L. conica, L. digitata.** Sea tangle, weed; a species found in northern seas, by some identified with *L. Cloustoni*. It is especially rich in iodine. The stems are used as bougies and tents for dilating the cervix uteri, strictures, sinuses, etc., because of their property of shrinking much in drying, and afterward swelling up to their original size when exposed to moisture. [Lat., *lamina*, a layer.]

laminated (lam'in-a-ted). Consisting of, or arranged in, thin plates or a succession of layers. [Lat., *laminatus*, from *lamina*, a thin piece of metal or wood; a plate, a leaf.]

laminectomy (lam-in-ek'to-me). The operation of removing one or more of the posterior spinal arches. [Lat., *lamina*,

a thin plate, + Gr., *ektemnein*, to cut out.]

laminitis (lam-in-i'tis). Acute inflammation of the laminae of the horse's foot; a form of founder. [Lat., *lamina*, a thin plate, + Gr., *itis*, inflammation.]

laminoids ferruginous (lam'in-oyds fer-ru'jin-us). Tablets containing the separated constituents of the Blaud pill, intended to form the ferrous carbonate in the stomach.

Lanium (la'me-um). A genus of herbaceous labiate plants. **L. album.** White dead nettle. The herb and flowers were formerly official. The flowers are still used as a hemostatic.

lam'pas. A disease of horses characterized by an inflammation of the mucous membrane of the hard palate just posterior to the teeth. [Fr., *lampas*, a disease causing intense thirst.]

lamprophony (lam-pro'fo-ne). A clear sonorous condition of the voice. [Lat., *lamprophonia*, from Gr., *lampros*, sonorous, + *phone*, voice.]

lamprotometer (lam-pro-tom'et-er). An instrument for measuring the degree of brightness of daylight or other illumination. [Gr., *lamprotes*, brilliancy, + *metron*, a measure.]

la'na. See wool. **lana collodii.** See *pyroxylin*. **l. gossypii, l. gossypina.** See *cotton*.

lancet (lan'set). A small, pointed, double-edged surgical knife. [Old Fr. and Fr., *lancette*, dim. of *lance*, lance.]

lancinating (lan'sin-a-ting). Lacerating, darting; said of pain. [Lat., *lancinans*.]

Landol'fi's caustic. A preparation used as an application to cancers; it contains chlorids of bromid, zinc, gold, and antimony.

Landolt's operation. A form of blepharoplasty on the lower lid.

Lan'dry's disease. See *acute ascending spinal paralysis*, under *paralysis*. [Jean Baptiste Octave Landry, French physician, 1826-1865.]

land scur'vy. Another name for *purpura hemorrhagica*.

lanesin (lan'es-in). A product analogous to lanolin, prepared from the waters used in bleaching wool. [Lat., *lana*, wool.]

Lange's colloidal gold reaction, how to determine presence of reducing bodies in cerebrospinal fluid, see in *appendix, page 909*.

lanichol (lan'ik-ol). One of the proprietary preparations of wool fat.

laniol (la'ne-ol). One of the proprietary preparations of wool fat.

lanocerin (lan-o-se'rin). A substance present in wool fat, supposed to be the internal anhydrid of lanoceric acid.

lanofom (lan'o-form). Lanolin containing one per cent. of formic aldehyd; an antiseptic.

lanolin (lan'o-lin). An ointment base, being a mixture of cholesterol and fatty acids, prepared from sheep's wool. It is of neutral reaction, mixes with solid fats and oils, and readily takes up its own weight of water or of mercury. It is

easily absorbed by the skin. See *adepts lanæ* and *adepts lanæ hydrosolus*. [Lat., *lanolinum*, from *lana*, wool, + *oleum*, oil.]

lantanim (lan'tan-in). An alkaloid obtained from *Lantana brasiliensis*. Its use as an antiseptic has been suggested.

lanthanum (lan'than-um). A metallic element. Symbol, *La*. [Gr., *lanthanein*, to hide.]

lanthopin (lan'tho-pin). An alkaloid, $C_{20}H_{22}NO_4$, of opium.

lanu'go. Downy hair. **1. pudendorum**. The pubic hair. [Lat., *lana*, wool.]

laparectomy (lap-ar-ek'to-me). Excision of strips from the wall of the abdomen in cases of abnormal laxity of the structures composing it. [Gr., *lapara*, flank, + *ektomēin*, to cut out.]

lap'aro-. Combining form of Gr., *lapara*, flank; a prefix used in compound words to signify having to do with the flank and also applied to operations to denote that they are performed by cutting through the abdominal wall.

laparocholecystotomy (lap'ar-o-ko'lle-sis-to'to-me). The operation of opening the gall-bladder through an abdominal incision. [Gr., *lapara*, loin, + *chole*, gall, + *kystis*, a bladder, + *tome*, a cutting.]

laparocolotomy (lap'ar-o-ko-lek'to-me). See *colectomy*. [Gr., *lapara*, flank, + *kolon*, the colon, + *ektome*, a cutting out.]

laparocolotomy (lap'ar-o-ko-lot'o-me). See *colotomy*. [Gr., *lapara*, flank, + *kolon*, colon, + *tome*, a cutting.]

laparocystectomy (lap'ar-o-sis-tek'to-me). The removal of a cyst by an abdominal incision (e. g., that of an extra-uterine fetus with its envelopes). [Gr., *lapara*, flank, + *kystis*, cyst, + *ektomēin*, to cut out.]

laparocystotomy (lap'ar-o-sis-tot'o-me). **1.** Suprapubic cystotomy. **2.** The removal of an extra-uterine fetus by laparotomy, the cyst being incised but not removed.

laparo-elytrotomy (lap'ar-o-el-it-rot'o-me). The operation of making an opening into the vagina through the abdominal wall for the purpose of extracting the fetus above the pelvis, but through the os uteri, as a substitute for the cesarean operation. [Gr., *lapara*, flank, + *elytron*, a sheath, + *tome*, a cutting.]

laparotomist (lap-ar-ot'o-mist). One who performs laparotomy or advocates its performance in certain pathological states.

laparotomized (lap-ar-ot'o-mizd). Subjected to laparotomy.

laparotomy (lap-ar-ot'o-me). The operation of opening the abdominal cavity by incision. [Lat., *laparotomia*, from Gr., *lapara*, flank, groin, + *tome*, a cutting.]

lap'ides cancer'um. Concretions consisting mostly of calcium carbonate and phosphate, obtained from the stomach of the craw-fish.

lapidification (lap-id'if-ik-a'shun). Conversion into stonelike material.

lap'pis, pl., *lapides*. A stone; a stony concretion. **1. calaminaris**. Native zinc carbonate. **1. causticus**. Caustic potash.

1. infernalis. Silver nitrate. **1. lazulis**. The ultramarine; a valuable blue pigment found in nature. **1. lunaria**. Silver nitrate. **lapides spongiæ**. Concretions consisting chiefly of calcium carbonate, found in sponges; formerly calcined and used in goiter. [Lat.]

lappa (lap'ah). Burdock root. An obsolete folk remedy.

lard. The fat obtained from hogs.

lardacein (lar-da'se-in). An amyloid substance of a proteid nature found in amyloid degeneration.

lardaceous (lar-da'shus). Resembling lard; used in describing the appearance of amyloid infiltration. **1. degeneration**. See *amyloid degeneration* under *degeneration*.

largin (lar'jin). An albuminous compound of silver; used like protargol.

Lar'ix. The larch, a genus of coniferous trees. **1. americana**. The hackmatack or tamarack of North America. Two varieties, *L. microcarpa*, or red larch, and *L. pedula*, or black larch, yield a good turpentine. Their bark is used as a diuretic. **1. communis**, **1. decidua**, **1. europæa**, **1. excelsa**. The common European larch. Its bark is astringent and mildly stimulant. See also *Venice turpentine*, under *turpentine*.

lark'spur. See *staphisagria*.

larva (lar'vah). The young stage of various lower animals, such as insects, in which the "grub" emerges from the egg. **1. nigrans**. See *creeping eruption*, under *eruption*. [Lat., *larva*, a mask.]

laryngectomy (lar-in-jek'to-me). Excision of the larynx. [Gr., *larygx*, larynx, + *ektome*, excision.]

laryngismus (lar-in-jiz'mus). Spasm of the larynx. **infantile 1.** L. occurring in badly nourished children under one year of age. **1. stridulus**. Sudden spasm of the larynx, with crowing inspiration and cyanosis. It occurs chiefly in children with rickets. [Gr., *larygx*, the larynx.]

laryngitis (lar-in-ji'tis). Inflammation of the mucous membrane of the larynx. **acute catarrhal 1.** L. due to an acute but mild infection. **chronic catarrhal 1.** L. due to repeated acute attacks. **chronic hypertrophic 1.** Chronic 1. with hypertrophy of the affected tissues. **diphtheritic 1.** L. due to invasion of the larynx by the bacillus of diphtheria, usually with the formation of membrane. **dry 1.** A form of 1. analogous to angina sicca. **1. submucosa**. See *edema of the glottis*, under *edema*. **phlegmonous 1.** An inflammation of the larynx with diffuse purulent infiltration or the formation of abscesses. **phthisical 1.** See *tuberculous 1.* **syphilitic 1.** L. due to constitutional syphilis, and manifested in simple catarrh, the formation of broad condylomata, follicular hyperplasia, syphiloma, syphilitic perichondritis, etc. **tuberculous 1.** The formation of miliary tubercles in the laryngeal mucous membrane. **ulcerative 1.** Chronic 1. with ulceration of the

- mucous membrane. [Gr., *larynx*, the larynx, + *itis*, inflammation.]
- laryngo-**. Combining form of Gr., *larynx*, larynx; used as a prefix to signify of or pertaining to the larynx.
- laryngocele** (lar-in'go-sel). Protrusion of the mucous membrane across the cricothyroid space. [Gr., *larynx*, larynx, + *kele*, tumor.]
- laryngocentesis** (lar-in'go-sen-te'sis). Surgical puncture into the larynx. [Gr., *larynx*, the larynx, + *kentesis*, a pricking.]
- laryngofission** (lar-in-go-fish'un). The operation of cleaving the larynx, especially the thyroid cartilage, for the extirpation of tumors in the interior of the larynx. [Lat., *laryngofissio*, from Gr., *larynx*, the larynx, + Lat., *findere*, to cleave.]
- laryngological** (lar-in-go-loj'ik-al). Pertaining to laryngology.
- laryngology** (lar-in-go'l-je). Knowledge relating to the larynx and its diseases. [Gr., *larynx*, the larynx, + *logos*, understanding.]
- laryngoparalysis** (lar-in'go-par-al'is-is). Motor paralysis of the larynx. [Gr., *larynx*, the larynx, + *paralysis*, paralysis.]
- laryngopathy** (lar-in-gop'ath-e). Any disease of the larynx. [Gr., *larynx*, the larynx, + *pathos*, a disease.]
- laryngophantom** (lar-in-go-fan'tom). A model of the larynx for purposes of study. [Gr., *larynx*, the larynx, + *phantos*, visible.]
- laryngophony** (lar-in-gof'on-e). The sound perceived on auscultation of the voice when the ear or the stethoscope is placed over the thyroid cartilage, and vocal tones are emitted. It is less intense than tracheophony. [Gr., *larynx*, the larynx, + *phone*, the voice.]
- laryngophthisis** (lar-in-gof'this-is). Tuberculous laryngitis. [Gr., *larynx*, the larynx, + *phthisis*, consumption.]
- laryngoplasty** (lar-in'go-plas-te). The plastic surgery of the larynx. [Gr., *larynx*, the larynx, + *plassein*, to mold.]
- laryngorhinology** (lar-in'go-rin-ol'o-je). The science and study of the larynx and the nose and of their diseases. [Gr., *larynx*, larynx, + *ris*, nose, + *logos*, knowledge.]
- laryngorrhagia** (lar'in-gor-raj'e-ah). Hemorrhage from the larynx. [Gr., *larynx*, the larynx, + *regnunai*, to burst forth.]
- laryngoscope** (lar-in'go-skop). A mirror with a reflector, used to examine the larynx and the trachea. [Gr., *larynx*, the larynx, + *skopein*, to examine.]
- laryngoscopy** (lar-in-gos'kop-e). The use of the laryngoscope.
- laryngospasmus** (lar-in-go-spas'mus). Spasm of the larynx.
- laryngotomy** (lar-in-got'o-me). The operation of cutting into the larynx. **complete l.** An incision into the larynx through the whole length of the thyroid and cricoid cartilages and the cricothyroid membrane. **median l.** Incision of the thyroid cartilage. **subhyoid l.** The opening of the larynx by a cut through the thyrohyoid membrane. **superior l.** An incision through the thyrohyoid membrane into the larynx. [Gr., *larynx*, the larynx, + *tome*, a cutting.]
- laryngotracheitis** (lar-in'go-trak-e-i'tis). Inflammation of the larynx and trachea. [Gr., *larynx*, the larynx, + *tracheia*, trachea, + *itis*, inflammation.]
- laryngotracheotomy** (lar-in'go-tra-ke-o'to-me). Laryngotomy continued downward through one or more of the tracheal rings. [Gr., *larynx*, the larynx, + *tracheia*, the trachea, + *tome*, a cutting.]
- larynx** (lar'inx). The organ of voice, situated at the superior anterior part of the neck, below the tongue and the hyoid bone, lying in the median line of the body, and extending down to the trachea. It consists of three single cartilages (the thyroid, the cricoid, and that of the epiglottis) and three paired (the arytenoid, the cornicula laryngis, and the cuneiform cartilages). It contains the vocal bands.
- artificial l.** A metal or vulcanite tube having a vibratory reed, to replace an excised l. [Gr., *larynx*, windpipe, throat.]
- lascivia** (las-iv'e-ah). Great sexual excitement.
- laserpitin** (la-ser'pit-in). A bitter principle, $C_{15}H_{22}O_4$, extracted from *Laserpitium latifolium*.
- Laserpitium** (la-ser-pit'e-um). Laserwort; a genus of umbelliferous herbs. **L. latifolium.** The herb frankincense, the root of which was once employed as a tonic and stimulant, but is now little used.
- latent.** Hidden, concealed; present or existing, but not manifest. **l. heat.** The heat which disappears or becomes concealed in a body while producing some change (evaporation or melting) in it other than an increase in temperature. **l. life.** See under *life*. **l. period.** See under *period*. [Lat., *latentum*, pres. pple. of *latere*, to be hidden.]
- lateral-chain theory.** See *Ehrlich's side-chain theory*, under *Ehrlich*.
- lateropulsion** (lat-er-o-pul'shun). A propulsion or involuntary tendency to fall to one side, frequent in cerebellar and labyrinthine disease. [Lat., *latus*, the side, + *pulsio*, a pushing.]
- lathyrin** (lath'ir-in). A bitter principle extracted from a species of *Lathyrus*.
- lathyrism** (lath'ir-izm). Poisoning by certain lupines, species of *Lathyrus*.
- lat'i, pl.** The proglottides of *Taenia solium*.
- latissimus** (la-tis'si-mus). See *table of muscles*, under *muscle*.
- latrine** (lat'rin). A public privy.
- Latrodectus** (lat-ro-dek'tus). A genus of dark colored poisonous spiders, found in tropical countries and belonging to the class *Arachnida* and order *Aranea*. **L. mactens.** A New Zealand species found among the rushes and sedges near the sea shore. Its bite is said to be dangerous and even fatal. **L. scellio.** The kalipo or poisonous spider of New Zealand.
- laudable** (law'dab-l). Healthy, having the normal qualities (said formerly of pus).

[Lat., *laudabilis*, from *laudare*, to praise.]
laudanin (law-dan'id-in). An alkaloid, $C_{20}H_{25}NO_4$, occurring in small amounts in opium.

laudanin (law'dan-in). A base, $C_{20}H_{25}NO_4$, found in small amounts in opium.

laudanotin (law-den'o-sin). An alkaloid, $C_{21}H_{27}NO_4$, found in small amounts in opium.

laudanum (law'dan-um). [Probably a contraction of *laudatum medicamentum* (the celebrated remedy) or *laude dignum* (the praiseworthy remedy), although by some supposed to be from *ladanum* (*q. v.*)] A paracelsian name for tincture of opium, formerly applied also to any anodyne. See *tinctura opii*, under *opium*. **Sydenham's l.** See *tinctura opii crocata*, under *opium*.

laugh (laf). The characteristic sound produced in laughing. **canine l., sardonic l.** See *risus sardonius*, under *risus*.

laughing (laf'ing). A movement (usually involuntary) of the muscles of the face, indicating merriment, satisfaction, or derision, and attended by an interrupted expulsion of air from the lungs.

laundryman's itch. See *itch*.

laurel (law'rel). See *Laurus*.

lauretin (law-re'tin). A fatty substance extracted from the seeds of *Laurus nobilis*.

laurin (law'rin). A compound of glyceryl and lauric acid.

laurocerasin (law-ro-ser'as-in). Amorphous amygdalin.

Laurocerasus (law-ro-ser'as-us). 1. A section of the genus *Prunus*. 2. The leaves of *Prunus l. aqua laurocerasi*. Cherry laurel water; made by distilling the fresh leaves of *Prunus l.* with water [Br. Ph.]. [Lat., *laurus*, laurel, + *cerasus*, the cherry tree.]

laurotetanin (law-ro-tet'an-in). A tetanizing alkaloid found in various laurineous plants.

Laurus (law'rus). A genus of plants formerly including most of the laurels. **L. nobilis.** The laurel tree. The leaves and the berries contain a volatile oil upon which their aromatic properties depend. The leaves, fruit, and oil are used now chiefly to impart a pleasant odor to external remedies. [Lat.]

lavage (lav-ahj'). A washing, especially a washing of the stomach. [Fr., from Lat., *lavare*, to wash.]

Lavandula (lav-an'du-lah). 1. A genus of labiate plants, the lavenders. 2. Lavender flowers. **L. vera.** The true lavender. Lavender flowers and their oil are a stimulant and tonic, but are now chiefly employed in perfumery or as a pleasant adjuvant to other remedies. **L. vulgaris. L. vera. oleum lavandulae florum.** Oil of lavender flowers [U. S. Ph.]. **spiritus lavandulae.** A preparation made by dissolving oil of lavender flowers in alcohol [U. S. Ph., Br. Ph.]. **spiritus lavandulae compositus** [U. S. Ph., 1870]. See *tinctura lavandulae composita*. **tinctura lavan-**

dulae composita. [U. S. Ph., Br. Ph.]. Compound spirits of lavender, a preparation made by dissolving oil of lavender flowers and oil of rosemary in alcohol, which is used to extract cinnamon, cloves, and nutmeg, and colored red [U. S. Ph.]. The preparation of the Br. Ph. is essentially similar. [Lat.]

lavender (lav'en-der). See *Lavandula*.

Laveran'ia. A species of *Plasmodia* in which the gametocyte is in the form of a crescent. **L. malariae.** The parasite of malignant and chronic malaria. It is smaller than the tertian organism, having fewer segments and its gametocytes are crescentic in shape.

Laveran's bodies, Laveran's corpuscles. See *Plasmodium malariae*, under *Plasmodium*. [Charles Laveran, Parisian physician, born 1845.]

law. A general rule or principle governing individual events. **Ampère's l.** See under *Ampère*. **Avogadro's l.** See under *Avogadro*. **Behring's l.** See under *Behring*. **Bell-Magendie's l.** See under *Bell-Magendie*. **Berthollet's l's.** See under *Berthollet*. **Boudin's l.** See under *Boudin*. **Boyle's l.** See under *Boyle*. **Brewster's l.** See under *Brewster*. **Bunsen's l's.** See under *Bunsen*. **Charles's l.** See under *Charles*. **Colles's l.** See under *Colles*. **Coulomb's l.** See under *Coulomb*. **Courvoisier's l.** See under *Courvoisier*. **Dalton's l.** See under *Dalton*. **Delboeuf's l.** See under *Delboeuf*. **Donder's l.** See *Listing's l.* under *Listing*. **Du Bois-Reymond's l.** See under *Du Bois-Reymond*. **Dulong and Petit's l.** See under *Dulong and Petit*. **Faraday's l's of electrolysis.** See under *Faraday*. **Fechner's l.** See *psychophysical l. fundamental biological l.* Of Haeckel, the l. that the ontogeny (the life history of the individual) is a short repetition of the phylogeny (the history of a species). **Gay-Lussac's l.** See under *Gay-Lussac*. **Godelier's l.** See under *Godelier*. **Graham's l.** See under *Graham*. **Gudden's l.** See under *Gudden*. **Henry's l., Henry and Dalton's l.** See under *Henry*. **Hooke's l.** See under *Hooke*. **Kirchoff's l.** See under *Kirchoff*. **Koch's l.** See under *Koch*. **l's, medical,** see in *appendix*, page 935. **l. of definite proportions.** The l. that when two or more bodies unite to form a new chemical compound they unite in a certain definite and constant proportion by weight. **l. of diffusion of gases.** See *Graham's l.*, under *Graham*. **l. of eccentricity of sensation.** The l. that a sensation is referred to the termination or end organ of the stimulated nerve and not to the nerve center. **l. of mass action.** The l. (Guldberg and Waage) that in chemical reactions the amount of change taking place is proportional to the action mass of the reacting substance. **l. of molecular weights.** The l. that the weight of a molecule is the sum of the weights of its atoms and that the relative molecular weight of a compound is

equal to the sum of the atomic weights of its components divided by two. **l. of multiple proportions.** The l. that when two substances unite to form a series of chemical compounds the proportions in which they unite are simple multiples of one another or of one common proportion. **l. of projection.** In physiological optics the l. that stimulation of any point on the retina gives a visual sensation, which is projected outward along the secondary axes from the point stimulated through the nodal point. **l. of reciprocal proportions.** In chemistry, the l. that the proportions in which two elementary bodies unite with a third body are simple multiples or simple fractions of the proportions in which these two bodies unite with each other. **l. of volumes.** See *Gay-Lussac's l.*, under *Gay-Lussac* (2d def.). **Listing's l.** See under *Listing*. **Malaguti's l.** See under *Malaguti*. **Mariotte's l.** See *Boyle's l.*, under *Boyle*. **mendelian l. of inheritance.** The l. that characteristics transmitted by parents to offspring may be treated as separate units and may exist in the offspring in an apparent or dominant form as well as in a hidden or recessive form. **Metchnikoff's l.** See under *Metchnikoff*. **Mikulicz's law.** See under *Mikulicz*. **Ohm's l.** See under *Ohm*. **periodic l.** The l. which states that the physical and chemical properties of the chemical elements are periodic junctions of their atomic weights. **Pfeiffer's l.** See under *Pfeiffer*. **Pflüger's l. of contraction and stimulation.** See under *Pflüger*. **Profeta's l.** See under *Profeta*. **psychophysical l.** A l. enunciated by Fechner and others according to which the magnitudes of the sensations produced by given stimuli form an arithmetical progression, while the stimuli themselves form a geometrical progression—the sensations, in other words, varying as the logarithms of the stimuli. This l. finds its mathematical expression in Fechner's formula (*q. v.*). It is said to hold fairly good for stimuli and sensations of medium intensity, but not for those that are high or low in the scale. **Ritter and Valli's l.** See under *Ritter and Valli*. **Stokes's l.** See under *Stokes*. **Van't Hoff's l. of temperature coefficient.** See under *Van't Hoff*. **Virchow's l.** See under *Virchow*. **Waller's l. of degeneration.** See under *Waller*. **Weber's l.** See under *Weber*. [Ang.-Sax., *laga, lage, lag, lah.*]

lax'atin. A proprietary preparation of phenolphthalein.

laxative (lax'a-tiv). Relaxing, loosening, as a mild purgative. [Lat., *laxus*, loose, *laxativus*, loosening.]

lax'ol. A proprietary preparation of castor oil.

lay'er. A structure spread out like a sheet. **bacillar l. of the retina.** The outermost l. of the retina, the one nearest the choroid, and intimately connected with the l. of hexagonal pigment cells. **Bowman's l., Bowman's l. of the**

cornea. The anterior layer of the cornea situated immediately beneath the epithelial l. **cuticular l.** The highly refractive, finely striated, hyaline l. at the free extremity of a typical columnar cell (*q. v.*), especially one of the columnar cells of the small intestine. **epithelium forming l.** The deepest cells of an epithelium which multiply and increase in size to take the place of the worn-out and exfoliated cells at the surface. **exterior limiting l. of the iris.** The endothelium covering the anterior surface of the iris. **fibrous l. of the pericardium.** The external l. of the pericardium, consisting of connective tissue fibers which interlace in every direction. **ganglionic l.** A small l. of angular nerve cells lying between the third and fourth l's, sometimes observed in the cerebral cortex, especially in the motor region. **germ (or germinal) l's.** The l's into which the blastoderm divides, termed respectively, from without inward, epiblast, mesoblast, and hypoblast. See *epiblast*, *mesoblast*, *hypoblast*, *somatopleure*, and *splanchnopleure*. **Henle's l.** See under *Henle*. **Huxley's l.** See under *Huxley*. **internal granule l.** One of the l's in the retina situated between the internal granular l. and the external reticular l. **internal molecular l.** One of the l's which compose the retina, situated between the l. of ganglion cells and the l. of internal granules. **l. of rods and cones.** See *bacillar l. of the retina*. **malpighian l.** See *rete mucosum*. **muscular l. A l.**, as of a mucous membrane or of a blood vessel, consisting of muscular fibers. **osteogenetic l.** Syn.: *subperiosteal tissue*. The l. of periosteum or perichondrium next the surface of bone or of cartilage which is destined to become bone. **papillary l. of the corium.** The dense part of the corium next the epidermis. **primitive l's, primordial l's. 1.** The primordial epiblast and hypoblast; the l's of a two-layered blastoderm. **2.** The l's of a three-layered blastoderm, epiblast, mesoblast, and hypoblast. **reticular l. of the corium.** The deeper or less dense part of the corium. It merges insensibly into the subcutaneous connective tissue on one side and into the papillary l. on the other. **reticular l. of the iris.** The second l. of the iris from before backward. **retinal pigment l.** A l. of pigmented epithelial cells forming the innermost lining of the retina, choroid, ciliary body, and iris. Embryologically, it is part of the retina. **secondary germ l's.** The germ l's after the appearance of the mesoblast; i. e., epiblast, parietal mesoblast, visceral mesoblast, and hypoblast. **sluggish l.** The l. of corpuscles next to the wall of a blood vessel, which move more slowly than those in the center of the stream. **spindle l.** The fifth l. of cells in a section through one of the cerebral convolutions. It consists mostly of fusiform cells having a vertical arrangement.

- vascular l. of the iris.** The third l. of the iris; from before backward. [Mid. Eng., *leyer*, from Ang.-Sax., *leagan*, to lay.]
- lazaretto** (laz-ar-et'to). An establishment for quarantine, disinfection, and for observation of infectious diseases. [Ital., a pest-house.]
- lb.** An abbreviation for the Latin word *libra*, meaning pound.
- leaching.** The process of causing water or other fluid to percolate through some substance, e. g., through wood ashes to extract their soluble constituents.
- lead** (led). A metallic element usually occurring native in the form of a sulphid (galena), less often in other combinations, and very rarely uncombined. Symbol, Pb. (from *plumbum*); atomic weight, 206.9. The compounds of l. are poisonous, giving rise to lead colic, lead palsy, etc. It is a soft ductile metal of a bluish color. Upon exposure to the air only the surface is oxidized. In a compact mass it is not dissolved by sulphuric or hydrochloric acid. It has a low melting point and is used in the preparation of alloys. List of poisons and their antidotes, see in *appendix*, page 939.
- black l.** Graphite.
- l. acetate.** A compound of l. and acetic acid. The normal l. acetate, or sugar of l., is a body, $Pb(C_2H_3O_2)_2 + 3H_2O$, forming colorless, transparent prismatic crystals of sweet, astringent taste, soluble in water, slightly soluble in alcohol. Used as an astringent. [Lat., *plumbi acetas*, U. S. Ph., Br. Ph.]
- l. and opium wash.** See *lotio plumbi et opii*, under *plumbum*.
- l. carbonate.** Normal l. carbonate, a body, $PbCO_3$, occurring native as the mineral cerusite, and also obtained artificially. What is usually called l. carbonate is basic l. carbonate. [Lat., *plumbi carbonas*, U. S. Ph., 1880, Br. Ph. 1898.]
- l. iodid.** A body, PbI_2 , occurring as a heavy, bright-yellow crystalline powder, slightly soluble in water and in alcohol. Used topically as a discutient. [Lat., *plumbi iodidum*, U. S. Ph., Br. Ph.]
- l. line.** The blue line on the gums in l. poisoning.
- l. lotion.** A lotion containing a salt of lead, usually the subacetate.
- l. nitrate.** Plumbic nitrate, a body, $Pb(NO_3)_2$, of sweet astringent taste, readily soluble in water. It is used in solution as an astringent lotion, and internally in hemoptysis, epilepsy, and asthma. [Lat., *plumbi nitras*, U. S. Ph.]
- l. oleate.** The lead salt of oleic acid, $(C_{17}H_{33}.COO)_2Pb$. Used as an ointment.
- l. oxid.** Litharge or yellow oxid of lead and the red oxid are known. [Lat., *plumbi oxidum*, U. S. Ph., Br. Ph.]
- l. poisoning.** See *l. cachexia*, under *cachexia*; *l. palsy*, under *palsy*; *leading*, and *plumbism*.
- l. subacetate.** Basic l. acetate, a term applied usually to the mixture of basic l. acetates contained in the *liquor plumbi subacetatis* of the U. S. and Br. Ph.'s.
- sugar of l.** See under *l. acetate* and *l. subacetate*. [Ang.-Sax., *loed*.]
- leading** (led'ing). Of smelters, a chronic form of lead poisoning induced by their occupation.
- lecibrin** (les'ib-rin). Lecithin obtained from the brain in combination with nucleo-proteins, containing 33 $\frac{1}{3}$ per cent. of lecithin.
- lecithin** (les'ith-in). A term for a class of bodies derived from the tissues of the brain and nerves, from amniotic fluid, from yolk of egg, from bile, from spermatozooids, and from certain vegetable substances. All are derivatives of glycerin, formed by the substitution of the molecules of 2 fatty acid radicles for 2 molecules of hydroxyl, while the third molecule of hydroxyl is replaced by a molecule of neurin in combination with phosphoric acid. Upon boiling in alkalis or baryta water the l's are hydrolyzed to fatty acids, glycerin, phosphoric acid, and cholin. Intermediate products, such as glycerin and phosphoric acid, have also been isolated. [Gr., *lekithos*, the yolk of an egg.]
- lecithoid** (les'ith-oyd). Vitellin, resembling the yolk of an egg. [Gr., *lekithos*, the yolk of an egg, + *eidōs*, resemblance.]
- lecithol** (les'ith-ol). An emulsionlike solution, containing 18 per cent. of alcohol and 0.015 gm. of lecithin in a c.c. of the solution.
- lecithoprotein** (les'ith-o-pro'te-in). A protein containing a lecithin.
- Le'dum.** 1. A genus of ericaceous shrubs. 2. The genus *Rhododendron*.
- L. groenlandicum, L. latifolium.** Labrador tea. The leaves are used as a pectoral and tonic.
- L. palustre.** Marsh tea. The leaves are used in domestic practice. They contain a tannin and a volatile oil. In Germany the leaves are substituted for hops in making beer. [Gr., *ledon*.]
- leech.** 1. See *Hirudo*; the leech, *Hirudo medicinalis*, used to extract blood from a patient. 2. An old term for a physician.
- artificial l.** Syn.: *hirudo mechanica*. An instrument for puncturing a part and drawing blood from it by suction after the manner of a leech.
- leeching.** The abstraction of blood by means of leeches.
- leg.** 1. A limb used in walking; in man, the lower limb, especially that portion of it that extends from the knee to the ankle. 2. A supporting pillar.
- bandy l's.** See *genu varum*.
- Barbados l.** Elephantiasis of the l. **bow l.** See *bowlegs* under *separate heading*.
- lawn tennis l.** A rupture of some of the calf muscles, with localized pain and loss of power in the l.; caused by strain in playing lawn tennis.
- milk l.** See *phlegmasia alba*.
- white l.** See *phlegmasia alba*. [Mid. Eng., *legge*.]
- legitimacy** (le-jit'im-as-e). Being born in wedlock. [Lat., *legitimus*, lawful.]
- legumin** (leg'u-min). Vegetable protein. [Lat., *legumen*, pulse.]
- leiomyoma** (li'o-mi-o'mah). A myoma composed of smooth muscle fibers. See

- fibromyoma*. [Gr., *leios*, smooth, + *mys*, muscle, + *oma*, tumor.]
- leiomyosarcoma** (li'ō-mi-o-sar-ko'mah). A leiomyoma which has undergone sarcomatous degeneration; occurring most frequently as spindle-celled sarcomata of the uterus or the alimentary and genitourinary tract.
- Leishman-Donovan bodies**. See *Leishmania Donovanii*.
- Leishmania** (lish-man'e-ah). Protozoa of the class *Mastigophora* and family *Herpetomonidae*. They are oval or pyriform in shape. **L. Donovanii**. Syn.: *Herpetomonas*. A species found in *kala-azar*. **L. tropica**. The cause of *oriental sore*.
- Leishmanniosis** (lish-man-e-o'sis). Disease due to infection by various species of the protozoan genus *Leishmania*.
- Leiter's coil**. See *cold water coil* under *coil*.
- lema**. Of old writers, the dried secretion of the meibomian glands; also a discharge from the eye. [Gr., *leme*.]
- Lembert suture**. An intestinal s. in which the thread passes through the mucous membrane alone, so as to bring that membrane and the connective tissue upon which it rests together.
- lemniscus** (lem-nis'kus). Syn.: *fillet*. The name given to two bundles of sensory fibers found in the medulla, pons and mid-brain. **lateral or external l.** A bundle containing sensory fibers mostly from the cranial nerves, terminates in the inferior colliculus, internal geniculate, and thalamus. **median internal l.** A bundle formed from decussating fibers that arise in the fasciculus gracilis and fasciculus cuneatus. It passes forward in the tegmental region to terminate in the thalamus. [Gr., *lemniskos*, a woolen band.]
- lemoid** (le'moyd). Pertaining to or associated with contagious disease. [Gr., *loimos*, a plague, + *eidōs*, resemblance.]
- lem'on**. The fruit of *Citrus limonum*. **essential salt of l's**. A commercial name for potassium tetroxalate. **l. juice**. See under *limo* [Lat., *limonis succus*, U. S. Ph.; *succus limonis*, Br. Ph.]. **l. peel**. See under *limo* [Lat., *limonis cortex*, U. S. Ph., Br. Ph.]. **oil of l.** See under *limo* [Lat., *oleum limonis*, U. S. Ph., Br. Ph.]. **tincture of l. peel**. See under *limo* [Lat., *tinctura limonis corticis*, U. S. Ph.; *tinctura limonis*, Br. Ph.]. [Lat., *limo*.]
- Lenhartz' treatment**. See in *appendix*, pages 915, 916.
- lenigallol** (len-e-gal'ol). Pyrogallol triacetate, C₂H₃O₆. It is used as a substitute for pyrogallol in certain conditions.
- lenirobin** (len-e-ro'bin). Chrysarobin tetracetate.
- lenitive** (len'ti-iv). See *laxative*, *emollient*, and *demulcent*. [Lat., *lenire*, to soothe.]
- lens**. 1. A piece of glass or other transparent substance so curved on one or more of its surfaces as to refract rays of light, either dispersing or converging them or rendering them parallel. 2. See *crystalline l.* **achromatic l.**, **apochromatic l.** A l. so constructed as to correct the aberration of refrangibility, or chromatic aberration, of common l's. **bicylindrical l's**. L's which have two cylindrical curved surfaces the axes of which are at right angles to each other. **bifocal l's**. L's in which the upper half is so ground as to be suitable for distant objects, and the lower half so ground as to be suitable for near objects. **concave cylindrical l.** A l. the surface of which represents the concave or inner surface of a cylindrical tube. **concave l.** See *double concave l.*, *planoconcave l.*, and *convexoconcave l.* **concavoconvex l.** A l. with one surface convex and the other concave, the curvature of the former being the greater. **convergent l.**, **converging l.** A l., double convex, planoconvex, or concavoconvex, such as causes the rays to converge to a focus. **convex cylindrical l.** A l. the surface of which represents the convex or outer surface of a cylindrical tube. **convexoconcave l.** A l. with one surface convex and the other concave, the curvature of the latter being the greater. **crystalline l.** A biconvex transparent body, lying in its capsule behind the pupil of the eye and maintained in place by its suspensory ligament. It is made of long nucleated and prismatic fibers, with serrated edges, so arranged as to divide the mass into sectors. The l. is also divisible into concentric lamellae. It serves to refract the rays of light entering the pupil and impinging on its surface so as to bring them to a focus upon the retina. **cylindrical l.** See *concave cylindrical l.* and *convex cylindrical l.* **double concave l.** A l. both faces of which are concave. **double convex l.** A l. both faces of which are convex. **oil immersion l.** See under *immersion*. **planoconcave l.** A l. one face of which is plane and the other concave. **planoconvex l.** A l. one face of which is plane and the other convex. **plus l.**, **positive l.** A convex or magnifying l. **trial l.** A l. employed in testing the refraction of the eye. [Lat., *lens*, a lentil.]
- lenticonus** (len-tik-o'nus). An abnormal curvature of the anterior or posterior surface of the lens. [Lat., *lens*, lens, + *conus*, cone.]
- lenticular** (len-tik'u-lar). 1. Lentil or lens-shaped. 2. Pertaining to a lens. **l. fossa**. See under *fossa*. **l. glands**. See under *gland*. **l. nucleus**. See under *nucleus*. [Lat., *lenticularis*, from *lenticula*, dim. of *lens*.]
- lenticinose**, **lenticinuous** (len-tig'in-ōs, len-tig'in-us). 1. Affected with lentigo. 2. Covered with minute dots.
- lentigo** (len-ti'go). Syn.: *freckles*, *ephelides*. A cutaneous disease characterized by brown lenticular spots on the skin due to pigmentation, and occurring most commonly on the face, neck, hands, and arms.

Sometimes, but not necessarily, it is provoked by exposure to the sun. [Lat., *lens*, a lentil.]

lentitis (len-ti'tis). See *phakitis*. [Lat., *lens*, lens, + Gr., *itis*, inflammation.]

leontiasis (le-on-ti'as-is). A bilateral and symmetrical hypertrophy of the bones of the face and skull leading to a lionlike facial expression. [Gr., *leontiasis*, from *leon*, a lion.]

Leontodon (le-on'to-don). Dandelion, a genus of cichoriaceous plants. **L. taraxacoides**. *Taraxacum officinale*, var. *taraxacoides*. **L. taraxacum**. The common dandelion (*Taraxacum officinale*). **L. tenuifolius**. *Taraxacum officinale*, var. *lividum*. **L. vulgare**. *Taraxacum officinale*. [Gr., *leon*, a lion, + *odous*, a tooth.]

lep'er. One affected with leprosy.

le peta. Another name for *tinea imbricata*.

lepidic (le-pid'ik). A term used to denote a tissue in which the specific cells are arranged in layers or clusters in direct apposition and are not separated by lymph spaces, stroma, or blood vessels. The term is used to describe tumors arising from such tissues, which include epidermis, epithelium, mesothelium, and endothelium. [Gr., *lepis*, scale.]

lep'ido-. Combining form of the Gr., *lepis*, *lepidos*, scale. To indicate having to do with scales.

lepidoid (lep'id-oyd). Scaly. [Gr., *lepis*, scale, + *eidos*, resemblance.]

lepidoma (lep-id-o'mah). A tumor springing from the tissue of a lining membrane and distinguished as epilepidoma, hypolepidoma, mesolepidoma, and endolepidoma. [Gr., *lepis*, scale, husk, + *oma*, tumor.]

lepidophyton (lep-id-o-fi'ton). A fungus said to cause *tinea imbricata* or *Tokelau ringworm*, a disease common in the Pacific islands. [Gr., *lepis*, a scale, + *phyton*, plant.]

lepidosarcoma (lep'id-o-sar-ko'mah). A sarcoma covered with scales, found in the mouth. [Gr., *lepis*, *lepidos*, a scale, + *sarkoma*, sarcoma.]

leptothrix (lep'o-thriks). Concretions upon hairs produced by the growth of microorganisms. [Gr., *lepis*, *lepidos*, scale, + *thrix*, hair.]

lepra (lep'rah). An old name for *psoriasis*, now sometimes applied to leprosy. [Gr., *lepra*, from *lepis*, a rind, a scale, a husk.]

leprology (lep-ro'l'o-je). The study and science of leprosy. [Gr., *lepra*, leprosy, + *logos*, science.]

leproma (lep-ro'mah). The specific lesion of tubercular leprosy. [Gr., *lepra*, leprosy, + *oma*, tumor.]

leprophobia (lep-ro-fo'be-ah). Morbid dread of leprosy and lepers. [Gr., *lepra*, leprosy, + *phobos*, fear.]

leprosy (lep'ro-se). Syn.: *lepra*, *lepra Arabum*, *elephantiasis Graecorum*. A chronic, infectious disease caused by the *Bacillus leprae*, with symptoms which appear chiefly in the skin or the nervous system, according to whether the organ-

isms find their chief development in one or the other of these tissues. The symptoms of the disease were fully described in the first century of the Christian era by Aretaeus. The *Bacillus leprae* was discovered by Hansen in 1871. The disease is divided into *tubercular l.*, which chiefly affects the skin, and *anesthetic or maculo-anesthetic l.*, which chiefly affects the nerves. [Old Fr., *lepre*, *lepre*, mod. Fr., *lepre*, Lat., *lepra*, from Gr., *lepra*, scaly disease.]

leptous (lep'rus). Relating to or suffering from leprosy.

Leptandra (lep-tan'drah). 1. The genus *Veronica*. 2. Of the U. S. Ph., Culver's root, the rhizome and rootlets of *Veronica virginica*. The extract and fluidextract are official in the U. S. Ph. [Gr., *leptos*, delicate, + *aner*, a man.]

leptandrin (lep-tan'drin). 1. A resinous cathartic substance isolated from *Leptandra* (*Veronica virginica*).

leptocephalia (lep-to-sef-al'e-ah). Abnormal smallness of the head. [Gr., *leptos*, slender, + *kephale*, head.]

Leptodera (lep-tod'er-ah). A genus of worms of the order *Nematoda*, and family *Anguillulidae*, which occasionally infest the human intestine. **L. pellio**. A genus infesting the vagina or intestines of Hungarians, being introduced from the soil.

leptomeningitis (lep'to-men-in-ji'tis). An inflammation of a thin or delicate membrane, especially of the pia of the brain or spinal cord. It may be acute or chronic and is caused by a variety of bacterial agents. [Gr., *leptos*, delicate, + *meninx*, a membrane, + *itis*, inflammation.]

leptomeninx (lep'to-men'inx). The arachnoid, or the arachnoid and pia together. [Gr., *leptos*, delicate, + *meninx*, membrane.]

Leptomitus (lep-tom'it-us). A genus of fungi.

Leptothrix (lep'to-thriks). A genus of the bacteria belonging to the family *Trichomycetes* and characterized by stiff, straight, long, threadlike, processes of division or branching. **L. buccalis**. A form found in the human mouth, probably without pathogenic properties. **L. epidermidis**. A variety of *Leptothrix* found in the epidermis. [Gr., *leptos*, slender, + *thrix*, hair.]

Lep'tus. A genus of acari or mites; the harvest mite. **L. americanus** and **L. autumnalis** burrow beneath the skin, causing irritation and itching. [Lat.]

les'bian. Homosexual love between women, psychically or physically expressed.

lesion (le'shun). Any morbid alteration in a tissue, gross or microscopic. **central l.** A l. of the central nervous system. **degenerative l.** A l. due to degeneration. **diffuse l.** A l. not circumscribed by distinct limits; particularly one not occupying a large extent of an organ or part. **focal l.** A l. circumscribed by definite and restricted limits. **functional l. of the nervous system.** See *molecu-*

lar l. inflammatory l. A l. produced by inflammation. **initial l. (of syphilis).** See *syphilitic chancre*, under *chancre*. **irritative l.** Of the nervous system, an excess of functional activity associated with a morbid alteration. **l. of continuity.** See *solution of continuity*, under *solution*. **molecular l.** Syn.: *functional l. of the nervous system*. A l., as of the axis cylinder of a nerve, undetected by chemistry or the microscope, and yet producing loss or excess of functional activity. It is supposed to consist in an alteration of the equilibrium of the molecules of the part. **neoplastic l.** A compressive l. produced by a neoplasm. **organic l.** Any structural change in the organs or tissues of the body. **peripheral l.** Of the nervous system, a functional disorder generally limited to a single nerve or branch of a nerve. **primary l's.** The l's of primary syphilis. See *secondary l's*. **secondary l's.** The l's of secondary syphilis. See *primary l's*. **spinal l.** Of the nervous system, a l. limited to the spinal cord. **systematic l. of the nervous system.** A lesion involving one or more distinct tracts in the spinal cord. **tertiary l's.** The tertiary lesions of syphilis. **toxic l.** An alteration in the tissues produced by a toxic agent. **traumatic l's.** L. due to traumatism. **vascular l.** A l. of a blood vessel, including hyperemia, anemia, hemorrhage, embolism and thrombosis. [Lat., *laesio*, from *laedere*, to wound.]

leth'al. An alcohol, $C_{12}H_{25}OH$, occurring, combined with fatty acids, in spermaceti. [Lat.]

le'thal. Deadly, fatal, mortal.

lethargic (leth-ar'jik). Pertaining to, affected with, or of the nature of lethargy. [Gr., *lethargikos*, from *lethe*, a forgetting.]

lethargy (leth-ar-je). A state of functional or constitutional torpor; drowsiness. [Gr., *lethargia*.]

leucic (lu'sik). Pertaining to, or derived from leucin. [Gr., *leukos*, white.]

leucin (lu'sin). Amido-iso-caproic acid, $(CH_3)_2CH.CH_2.CHNH_2.COOH$. A white substance, crystallizing in shining plates, soluble in about fifty parts of water. It has both acid properties (carboxy-group) and basic properties (amido-group). It is found widely distributed in plant and animal life. All the proteins which have been closely studied yield l. upon hydrolytic cleavage and most proteins yield an abundance of this acid. It has been isolated as a normal constituent of the pancreas, the spleen, and many other glands, its presence being probably due to the action of the enzymes present in the gland upon the proteins of that gland. In pathological conditions it is found in the urine. L. contains one symmetrical carbon atom. The levo-form is the one found in nature. Upon feeding the racemic form, the unnatural component, the dextro-form, is excreted in the urine;

the other form is retained or used up in the organism. [Gr., *leukos*, white.]

leucinethylester (lu'sin-eth'fil-es'ter). The ethylester of leucin, $C_4H_9-CHNH_2-COO-C_2H_5$. An oily liquid which can be distilled.

leucinimid (lu-sin'im-id). A crystalline body, the anhydrid of leucin, $C_{12}H_{22}N_2O_2$, one of the decomposition products of some proteins.

leucinuria (lu-sin-u're-ah). A pathological condition in which leucin is found in the urine.

leucylalanin (lu-kil-al'an-in). A dipeptid of leucin and alanin prepared from elastin by partial hydrolysis.

leucylglycin (lu-kin-glis'in). A dipeptid of leucin and glycin, prepared from elastins by partial hydrolytic cleavage. Erepsin has the property of hydrolyzing this dipeptid to its two soluble amino acids.

leukemia (lu-ke'me-ah). See *leukocythemia*. [Gr., *leukos*, white, + *aima*, blood.]

leu'kin. The bactericidal substance contained within the leukocyte.

leu'ko-, leuk-. Combining form of the Gr., *leukos*, white; used as a prefix to signify deficiency of color.

leukoblasts (lu'ko-blasts). 1. Special cells in the red marrow of bone, which are supposed to develop into red blood corpuscles. 2. Developing leukocytes. [Gr., *leukos*, white, + *blastos*, shoot.]

leukocidin (lu-ko-si'din). A soluble toxin produced by the *Staphylococcus aureus* which causes the death and partial solution of the leukocyte. [Gr., *leukos*, white, + Lat., *caedere*, to kill.]

leukocotoin (lu-ko-ko'toin). A substance forming one of the principles of the coto barks.

leukocyte (lu'ko-sit). A general term for ameboid or lymphoid cells wherever found, but especially applied to the white blood corpuscles. **alpha-l's.** L's which undergo disintegration during the coagulation of the blood. **beta-l's.** L's which do not undergo disintegration during the coagulation of the blood. [Gr., *leukos*, white, + *kytos*, cell.]

leukocythemia (lu'ko-si-the'me-ah). The morbid conditions where the leukopoietic part of the blood-forming tissues are affected. **lymphatic l.** L. in which the blood changes are due mainly to hyperplasia of the lymphatic tissue and characterized by an increase of the lymphocytes in the blood. **medullary l., myelogenous l.** That form of l. in which the osseous marrow tissue is chiefly affected, hypertrophying and throwing off quantities of newly formed amyloid cells. **splenic l.** L. in which the blood changes are chiefly referable to disorder of the spleen. **symptomatic l., temporary l.** See *leukocytosis*. [Gr., *leukos*, white, + *kytos*, cell, + *aima*, blood.]

leukocytogenesis (lu'ko-si-to-jen'es-is). The development of leukocytes. [Gr., *leukos*, white, + *kytos*, a cell, + *genesis*, producing.]

- leukocytolysin** (lu'ko-si-tol'is-in). A cytolytin produced by injecting leukocytes into animals. [*Leukocyte* + Gr., *lysis*, solution.]
- leukocytolysis** (lu-ko-si-tol'is-is). The breaking down or destruction of leukocytes by cytolytic sera or other agencies. [*Leukocyte* + Gr., *lysis*, solution.]
- leukocytoma** (lu'ko-si-to'mah). A heteroplastic tumor consisting of cellular elements resembling white blood corpuscles and their derivatives. [Gr., *leukos*, white, + *kytos*, a cell, + *oma*, tumor.]
- leukocytosis** (lu-ko-si-to'sis). The formation of leukocytes. As usually applied, an increase above the usual number of leukocytes found in the blood. This increase may be due to physiological causes, as digestion, or as a response to inflammatory conditions and various diseases.
- leukoderma, leukodermia** (lu-ko-der'mah, lu-ko-der'me-ah). Syn.: *vitiligo*, *leukopathia*, *acquired leukopathia*, *acquired achroma*, *acquired piebald skin*. A disease characterized by the appearance of non-pigmented areas in the skin. It is classed as *congenital* and *syphilitic*. [Gr., *leukos*, white, + *derma*, the skin.]
- leukokerato'sis bu'ccalis**. Another name for *leukoplakia*.
- leukol** (lu'kol). Of Runge, quinolin. [Gr., *leukos*, white.]
- leukolin** (lu'ko-lin). Quinolin. [Gr., *leukos*, white.]
- leukolysis** (lu-kol'is-is). The destruction and dissolution of the leukocytes in the blood by bacterial toxins or other substances. [*Leukocyte* + Gr., *lysis*, solution.]
- leukoma** (lu-ko'mah). A dense white opacity of the cornea. [Gr., *leukoma*, from *leukos*, white.]
- leukomain** (lu'ko-mān). Any one of the basic substances formed necessarily in the living organisms, as decomposition products of proteins, which are considered as products of physiological metabolism. They include cholin, uric acid, creatinin, and some of their derivatives. Some of the l's are poisonous.
- leukomainemia** (lu'ko-ma-in-e'me-ah). Excess of leukomains in the blood. [*Leukomain* + Gr., *aima*, blood.]
- leukonecrosis** (lu-ko-ne-kro'sis). A form of gangrene occurring in young people in which the slough assumes a whitish, shriveled, parchmentlike appearance. [Gr., *leukos*, white, + *nekrosis*, a state of death.]
- leukonuclein** (lu-ko-nu'kle-in). A nucleoprotein which has been prepared from the nucleohiston of the thymus gland.
- leukopathia** (lu-ko-path'e-ah). See *achromatosis*, *leukoderma*, *chlorosis*, and *albinism*. [Gr., *leukos*, white, + *pathos*, disease.]
- leukopenia** (lu-ko-pe'ne-ah). A smaller number of white corpuscles than normal. [Gr., *leukos*, white, + *penes*, poor.]
- leukophobia** (lu-ko-fo'be-ah). Morbid dread of the color white. [Gr., *leukos*, white, + *phobos*, fear.]
- leukoplakia** (lu-ko-pla'ke-ah). The whitening of a surface. **I. buccalis**. Dull whitish spots, looking like scars, on the buccal surface of the tongue. Lingual carcinoma sometimes develops on the surface so affected. [Gr., *leukos*, white, + *plax*, a surface.]
- leukoplasts**. See *leukoblasts*.
- leukoprotease** (lu-ko-pro'te-ās). An enzyme produced by the leukocytes, which digests a protein.
- leukopsin** (lu-kop'sin). Visual white, resulting from exposing visual purple or rhodopsin to white light. [Gr., *leukos*, white, + *ops*, eye.]
- leukorrhea**. A white or whitish morbid discharge from the female genitals. Called also "*the whites*." [Gr., *leukos*, white, + *roia*, a flowing.]
- leukorrhœal** (lu-kor-re'al). Pertaining to leukorrhea.
- leukosis** (lu-ko'sis). Paleness of the skin; pallor; anemia. [Gr., *leukos*, white.]
- leukotoxin** (lu-ko-toks'in). See *leukocidin*.
- leukous** (lu'kus). White; especially affected with a white skin. [Gr., *leukos*.]
- levator** (le-va'tor). A muscle, the action of which is to raise a part. See *table of muscles*, under *muscle*. **Hamilton's I.** A flat piece of steel, about half an inch broad, slightly curved, and sharpened at the end, for inserting under the edge of a bone and elevating it. **I. ani.** A thin, broad muscle arising from the anterior and lateral portions of the inner surface of the true pelvis, the inferior ramus of the pubes and spine of the ischium and the pelvic fascia, uniting with its fellow of the opposite side, and inserted into the side of the lower portion of the coccyx, the side and lower portion of the rectum, and the fascia covering the prostate gland. Its lowermost fibers blend with those of the opposite side and the external and internal sphincters of the anus and the constrictor urethra forming, with the coccygeus, the floor or diaphragm of the pelvis. [Lat., *levare*, to lift up, to raise.]
- levigation** (lev-ig-a'shun). The reduction of a substance to a state of minute division by trituration, especially after it has been made into a paste with water or other liquid. [Lat., *levigare*, to smooth.]
- Levisticum** (lev-is'tik-um). A genus of umbelliferous herbs closely allied to *Selinum* and *Angelica*. **L. officinale, L. paludapifolium**. Common lovage. All parts of the plant contain a yellowish, milky juice, which hardens on exposure into a resinous substance like opopanax. The root, stems, leaves, and fruit have aromatic, carminative, diaphoretic, and emmenagogue properties.
- levo-**. A prefix to chemical terms from the Lat., *levus*, left, signifying either that the compound turns the plane of polarized light to the left (as levolactic acid) or that it bears some relation to a closely related compound which does turn the plane of polarized light to the left (as levofructose which is associated with the levoglucose).

Ievoglucose (le-vo-glu'kös). The optical antimer of d.-glucose.

Ievogyrate, Ievogyrous (le-vo-ji'rät, le-vo-ji'rüs). Having the property of turning the plane of polarized light to the left (the opposite of *dextrorotary*). [Lat., *levus*, left, + Gr., *gyros*, a turn.]

Ievorotary (le-vo-ro'ta-re). See *Ievogyrate*.

Ievulose (lev'u-lös). Syn.: *fructose*, *fruit sugar inverse ferment*. See *fructose*. [Lat., *levus*, left.]

Ievulosuria (lev-u-lo-su're-ah). A form of diabetes characterized by the presence of Ievulose in the urine. [Ievulose + Gr., *ouron*, urine.]

Ievurin (lev'u-rin). A dried extract of brewers' yeast; used medicinally as a convenient substitute for that article.

Leyden jar. A glass j. coated on the inside and outside with tinfoil, the inner coating having in contact with it a metallic rod which projects from the mouth of the j. and terminates in a knob. The j. is charged by placing the knob in contact with a static machine and putting the outside coating in communication with the ground by a metallic knob brought near the j. Sparks are thus drawn from the machine to the inner coating and are lodged upon the surface of the glass. The j. is discharged by placing one knob of the discharging rod in contact with the outer coat and turning the other knob close to the inner coating, from which a spark is immediately elicited. [Described by *van Musschenbroek* in *Leyden, Holland, in 1746.*]

Leyden's spirals. A thick meshwork of very delicate fibers, commonly looped round in s's, but occasionally retiform, formed in desquamative catarrh of the bronchi and alveoli. They are often overlaid with epithelium and sometimes with Charcot-Leyden crystals. They may be found in the sputum in pneumonia, asthma, or pulmonary tuberculosis.

Leydig's duct. See *mesonephric duct*, under *duct*. [Franz von *Leydig*, German anatomist, 1821-1908.]

L. F. D. Formula signifying the "least fatal dose," as of a toxin.

Li. 1. Chemical symbol for the element *lithium*. 2. Abbreviation used sometimes for *liter*.

Liatrix (li-at'ris). Button snakeroot; blazing star. A genus of American eupatoriaceous plants. **L. spicata.** Long spiked button snakeroot. According to Schoepf, the root is diuretic.

libanol (lib'an-ol). The trade name for the volatile oil distilled from the wood of *Cedrus atlantica*.

libidinous (li-bid'e-nus). Given to, full of, or characterized by lust or lewdness; lustful, lecherous. [Lat., *libidinosus*, from *libido*, energy.]

Ibido (li-bi'do). Striving, energy, erotic sensation. In psycho-analysis, an energy concept with nutritive or reproductive values. [Lat., *libido*, energy, desire.]

licentious (li-sen'shus). Disregarding the restraints of chastity; libertine, lascivious,

lewd. [Lat., *licentiosus*, from *licentia*, license.]

Lichen (li'ken). 1. A plant of the *Lichenes*; of *Matthæa*, *Cetraria islandica*; of the pharmacopœias, Iceland moss. 2. A dry, papular eruption of the skin.

1. annularis. Syn.: *granuloma annulare* (Crocker), *ringed eruption of the extremities* (Galloway). A rare disease characterized by ringed eruptions upon the sides and back of the fingers. Probably a form of *l. planus*. **1. planus.** Syn.: *l. rubra planus*, *l. psoriasis*. A chronic inflammatory disease of the skin characterized by peculiar, glistening, flattened papules of polygonal outline and of a purplish red color. Twenty-six varieties have been described by dermatologists, named according to the prevailing form of lesion, to the situation in which the disease occurs, or as complicating some disease, as syphilis. [Gr., *leichen*.]

lichenin (li'ken-in). A compound carbohydrate, closely resembling starch, obtained from certain lichens and *Algae*.

lichenoid. Resembling the disease lichen.

licorice (lik'or-is). 1. *Glycyrrhiza glabra* and *Glycyrrhiza echinata*. 2. Their inspissated juice. 3. Their roots. [Gr., *glukus*, sweet, + *riza*, a root.]

lid. A movable covering, especially the cartilaginous, cutaneous, and mucous covering of the eye. **granular l's.** See *trachoma*.

lie. Manner of lying; direction or position in which something lies; direction and amount of slope or inclination. Of the fetus, its attitude in relation to the shape of the uterine cavity. [Ang.-Sax., *licgan*, lie.]

Lieben's acetone reaction. Consists of treating an aqueous solution of acetone with alkali and then warming with a small amount of a solution of iodine in potassium iodide. A yellow deposition occurs in the presence of acetone. This reaction is not characteristic of acetone; it is also given by ethyl alcohol. [*Adolf Lieben*, Viennese chemist, contemporary.]

Lieberkühn's ampulla. The cecal end of a lacteal in an intestinal villus. **crypts of L., L's follicles, L's glands.** The minute, cecal glandular tubes of the mucosa of the small and large intestine. They open singly or in twos or threes into the lumen of the intestine. **L's condenser.** Also called a Lieberkühn. A concave mirror attached to a microscope to concentrate the rays upon an opaque object.

Liebermann-Burchard reaction for cholesterin. Cholesterin, when dissolved in chloroform, to which a small amount of acetic anhydride has first been added and then concentrated sulphuric acid drop by drop, yields a red color changing to blue and finally to green. [C. *Liebermann*, H. *Burchard*, German biological chemists.]

Liebermann's reaction for proteins. Consists of heating a protein, which has been washed with alcohol and ether, with concentrated hydrochloric acid, when a violet color is produced. This color, as

Cole has shown, is due to the presence of glyoxylic acid in the ether, which reacts with the tryptophans, yielding this violet color with hydrochloric acid. [*Leo von Szentlőrincz Liebermann*, Hungarian physician, born 1852.]

Liebig's condenser. An attachment to a retort by which the distillate is cooled and condensed before passing into the receiver. The glass tube through which the distillate passes is covered throughout its length by a larger tube, and a current of water is made to flow constantly in the space intervening between the two tubes.

lien (li'en). See *spleen*. **l. cereus**. See *lardaceous spleen*, under *spleen*. **l. ingens**. An hypertrophied spleen.

lienase (li'en-ās). An enzyme of the spleen, which, beside digesting its own protein, has the property of digesting fibrin and coagulated blood serum.

life. 1. That existence which is characterized by the power an organized being (an animal or a plant) has to assimilate from its surroundings material for its support, to change its form by growth, and to reproduce its kind. 2. The state of an organized being before permanent cessation of the distinctive vital functions. 3. The condition or manner of living. **animal l.** 1. The manifestations of l. in an animal as contrasted with a plant. 2. The manifestations of l. dependent especially upon the cerebrospinal nervous system and the skeletal muscles in contradistinction to the purely vegetative functions of digestion, respiration, etc. See *psychic l.* and *l.* (1st def.). **cell l.** The l. and activities of the individual cells or structural elements in contradistinction to the l. of the entire organism. **extra-uterine l.** The l. of an animal after it has been born. **fetal l.** The l. of the fetus. **intra-uterine l.** Fetal l. within the uterus. **latent l.** L. in an organism or a germ which is hidden and not apparent, but which is capable of manifesting itself under favorable conditions of l. (said of the l. of some ova, of a semidesiccated rotifer, etc.). **psychic l.** The mental and spiritual manifestations and activities in an animal; frequently contrasted with vegetative or organic l., or manifestations of l. due to reflex action, such as is seen in an animal devoid of a cerebrum. **reproductive l., sexual l.** That portion of l. during which the individual is capable of reproduction. **to feel l.** In popular language, to experience the sensation of "feeling l.," i. e., of feeling fetal movements (said of a pregnant woman). **uterine l.** The period of l. during which the female is capable of childbearing. **vegetable l.** The vital phenomena, absorption, circulation, exhalation, assimilation, etc., presented in the growth and development of a plant. **vegetative l.** See *l.* (1st def.). [*Ang-Sax., lif.*]

ligament (lig'am-ent). Any strong, fibrous, compact tissue serving to bind or more or less closely connect one struc-

ture with another. The l's uniting the bones consist of a white, solid, inelastic substance. **accessory l.** A l. which supplements and strengthens another l., especially one on the lateral surface of a joint. **acromioclavicular l.** An l. extending from the clavicle to the acromial process of the scapula. **alar l's of the knee.** Two crescentic folds of the synovial membrane of the knee joint which extend upward on each side of the mucous l. toward the edges of the patella. **annular l.** A ring-shaped l. **arterial l.** A fibrous cord constituting the remains of the ductus arteriosus of the fetus. **atlanto-axial l's.** The l's uniting the atlas and axis. **atlanto-occipital l's.** The l's uniting the atlas and the occipital bone. **auricular l's.** The anterior, posterior, and superior auricular l's, which unite the external ear to the side of the head. **broad l. of the liver.** A wide, somewhat sickle-shaped duplicature of the peritoneum, attached to the lower surface of the diaphragm and the internal surface of the right rectus abdominis muscle, as far down as the umbilicus, and to the convex surface of the liver. **broad l. of the uterus (or womb).** A peritoneal fold on each side of the uterus, formed by an extension of the anterior and posterior peritoneal investments of that organ, attached laterally to the side of the pelvis, and dividing the pelvic cavity into an anterior and a posterior portion. **calcaneo-astragaloid interosseous l.** A strong bundle of fibers extending from the furrow on the upper surface of the os calcis, between its surfaces of articulation with the astragalus, to the depression in the lower surface. **calcaneofibular l.** A thick, flattened, cylindrical l., extending between the apex of the external malleolus and the outer surface of the os calcis, constituting the middle portion of the external lateral l. of the ankle joint. **capsular l's.** The fibrous structures, lined with synovial membrane, which surround and close in the articulations. **carpal l's.** The l's uniting the carpal bones. **caudal l.** A series of insignificant bundles of fibrous tissue uniting the dorsal surfaces of the two lower coccygeal vertebrae and the superjacent skin. **check l.** A l. which greatly restrains the motion of a joint, especially the lateral odontoid l's. **conoid l.** The posterior or internal portion of the coracoclavicular l. **coraco-acromial l.** A broad triangular l. attached by its wider extremity to the outer edge of the coracoid process of the scapula, and by the narrower to the tip of the acromion. **coracoclavicular l.** The l. uniting the clavicle and the coracoid process of the scapula; made up of the conoid and trapezoid l's (*q. v.*). **coracohumeral l.** A broad l. attached to the outer margin of the coracoid process of the scapula and inserted into the upper and posterior portion of the capsule of the shoulder joint and into the upper and inner part of the bicipital

groove of the humerus. **corniculo-pharyngeal l.** An insignificant bundle of fibrous tissue passing toward the pharynx from the apex of the cartilage of Santorini. **coronary l. of the liver.** A duplicature of the peritoneum which extends between the lower surface of the diaphragm and the posterior margin of the liver, and is continuous at each end with the right and left lateral l's of the liver. **costocentral l's.** The l's uniting the head of a rib with the bodies of its vertebrae. **costocoracoid l.** The lower margin of the costocoracoid membrane, extending between the coracoid process of the scapula and the first rib. **costotransverse l's.** The l's uniting the ribs with the transverse processes of the vertebrae. **costovertebral l's.** The l's uniting the ribs and vertebrae. **cotyloid l. (of the hip).** A fibrocartilaginous ring attached to the margin of the acetabulum and covered with synovial membrane. **craniovertebral l's.** The l's extending between the cranium and the vertebrae. **cricopharyngeal l.** A ligamentous bundle extending between the upper and posterior border of the cricoid cartilage and the anterior wall of the pharynx. **crico-santorini l.** Ligamentous bands uniting the cartilages of Santorini and the cricoid cartilage. **cricothyroid l's.** The l's uniting the cricoid and thyroid cartilages. **crico-tracheal l.** The ligamentous structure uniting the upper ring of the trachea and the cricoid cartilage. **crucial l.** See *cruciform l.* **cruciform l.** A structure consisting of l's which cross each other like the arms of a cross, especially the ligamentous structure made up of the transverse l. of the atlas, and a process which passes down from the middle of its posterior surface to be attached to the body of the axis, while another process passes up to the basilar process. **deltoid l.** The internal lateral l. of the ankle. **dentate l.** Processes of the pia mater that extend across the subdural space on either side of the spinal cord. **falciform l.** See *great sacro-ischiadic l.* **falciform l. of the liver.** See *broad l. of the liver.* **gastrophrenic l.** See *phrenicogastric l.* **gastrosplenic l.** Syn.: *gastrosplenic epiploön.* A fold of peritoneum extending between the cul-de-sac of the stomach and the hilum of the spleen, including the splenic vessels. **Gimbernat's l.** See under *Gimbernat.* **glenohumeral l.** Some of the fibers of the coracohumeral l. which pass into the joint, and are inserted into the inner and upper part of the bicipital groove. **glenoid l's.** The l's which extend between the palmar surfaces of the phalanges and their corresponding metacarpal bones. **glenoid l. (of the scapula or shoulder joint).** The fibrocartilaginous ring attached to the margin of the glenoid fossa of the scapula. **great sacro-ischiadic (or -ischiatric, or -sciatic) l.** A triangular l. attached by its base to the sides of

the sacrum and coccyx and to the posterior inferior spine of the ilium, and by its apex to the tuberosity of the ischium. **hepaticoduodenal l.** A fold of the peritoneum extending from the transverse fissure of the liver to the vicinity of the duodenum and the right flexure of the colon, forming the anterior boundary of the foramen of Winslow. **Hey's l.** See under *Hey.* **Hunter's l.** See *round l. of the uterus.* **iliofemoral l.** [Barkow]. The strong bundle of fibers forming the upper and anterior portion of the capsular l. of the hip joint. **iliopectineal l.** A condensed portion of the pelvic fascia attached to the iliopectineal line and to the capsular l. of the hip joint. **infundibulopelvic l.** The free margin of the broad l. of the uterus which extends between the ovary or infundibulum and the inner surface of the pelvis. **inguinal l.** See *Poupart's l.* under *Poupart.* **interclavicular l.** A flattened bundle of fibers extending between the sternal ends of the clavicles and attached to the interclavicular notch of the sternum. **interspinal l's, interspinous l's.** Thin l's which extend from the superior margin of a spinous process of one vertebra to the lower margin of that above. **intervertebral l's.** See *intervertebral cartilages* under *cartilage.* **lateral l. A l.** situated on the side of a joint or on the external side of a structure or part. **lateral l's of the liver.** Folds of the peritoneum which extend respectively from the lower surface of the diaphragm to the adjacent borders of the right and left lobes of the liver. **lateral occipito-atlantal l's.** Two l's, one on each side, extending between the transverse processes of the atlas and the jugular process of the occipital bone. **lateral odontoid l's.** Strong, thick l's which extend between the sides of the odontoid process of the axis and the inner sides of the condyles of the occipital bone, some fibers of which unite in the middle line behind the odontoid process. **lateral patellar l's.** Membranous triangular l's which extend on each side from the condyle of the femur and the lateral margin of the patella to the inferior patellar l. and the extensor tendons of the leg. **lesser sacro-ischiadic l., lesser sacro-sciatic l.** A short l. arising from the lateral margin of the lower portion of the sacrum and of the upper portion of the coccyx, lying in front of and blended with the great sacro-ischiadic l. **l's of the stomach.** The lesser omentum and the phrenicogastric l. **l. of Trietz.** See under *Trietz.* **l. of Zinn.** The membranous structure which forms the common tendon of origin for the external, inferior, and internal recti muscles of the eye. **middle costotransverse l.** A l. consisting of parallel bundles of fibers which extend between a vertebra and its adjacent rib. **middle odontoid l.** A l. extending between the apex of the odontoid process of the axis and the anterior margin of the

foramen magnum. **palpebral l.** See *ligamentum palpebrale internum* and *ligamentum palpebrale externum*, under *ligamentum*. **phrenicogastric l.** A fold of the peritoneum extending between the esophageal end of the stomach and the diaphragm. **posterior crucial l.** A l. arising from behind the spine of the tibia, the popliteal notch, and the external semilunar fibrocartilage, and pressing upward, forward, and inward, to be inserted in the anterior part of the inner condyle of the femur. **posterior l. of the knee joint.** A flat thickening of the capsule l. of the knee which extends across its posterior surface from the internal tuberosity of the tibia to the external condyle of the femur. **Poupart's l.** See under *Poupart*. **pterygomaxillary l.** A fibrous band extending between the apex of the internal pterygoid plate of the sphenoid bone and the posterior extremity of the internal oblique line of the inferior maxilla, separating the buccinator and superior constrictor muscles. **pubic l.** The posterior margin of the superior crus of the falciform process of the fascia lata, attached to the crest of the pubes. **reticular l.** A l. which holds a muscle down to a bone. **rhomboid l.** A strong ligamentous structure extending from the tuberosity of the clavicle to the outer surface of the cartilage of the first rib and the adjacent portion of the rib. **round l.** A round, cordlike l. **round l. of the forearm.** A small roundish l. extending between the coronoid process of the ulna and a point slightly below the tuberosity of the radius. **round l. of the hip.** See *ligamentum teres*. **round l. of uterus.** A long round band made of fibers from the superficial layer of the uterus, which passes from the side of the uterus, near the fundus, upward and forward, to be inserted into the connective tissue of the mons Veneris. **sacrosciatic l.** See *great sacro-ischiatic l.* and *lesser sacro-ischiatic l.* **stylohyoid l.** A thin fibro-elastic cord which stretches between the lesser cornu of the hyoid bone and the apex of the styloid process of the temporal bone. **stylomaxillary l.**, **stylomyloid l.** A broad band of fibrous tissue which extends between the styloid process of the temporal bone and the lower part of the posterior border of the ramus of the inferior maxilla, separating the parotid and submaxillary glands. **suprascapular l.** A thin band of fibrous tissue, sometimes divided into two parts, which extends from the base of the coracoid process of the scapula to the inner margin of the suprascapular notch, forming the foramen scapulare. **supraspinal l.**, **supraspinous l.** A l. which unites the apices of the spinous processes of the vertebrae. **suspensory l.** A l. having for its function that of suspending an organ. **suspensory l's of the mamma.** Fibrous processes of the layer of fascia covering the anterior surface of the mamma, which pass forward

to the skin and nipple. **suspensory l. of the mesentery.** The root of the mesentery. **suspensory l. of the penis.** A triangular bundle of fibrous tissue with a free anterior border, which extends from the anterior surface of the symphysis pubis and the adjacent structures to the dorsum of the penis. **suspensory l's. of the uterus.** A general term for the broad l's of the uterus, the round l's of the uterus, and the recto-uterine folds. **sutural l's.** Thin layers of fibrous tissue often interposed between the articulating surfaces of bones united by suture. **tarso-l l.** The tarso-orbital fascia (*q. v.*). It is thick and dense at the outer part of the orbit, but becomes thinner as it approaches the tarsus. It serves to support the eyelids and retain the tarsus of the lids in position. **transverse l. of the atlas.** 1. A strong l. which passes over the odontoid process of the axis, being attached on each side to a small tubercle on the inner surface of the atlas. 2. See *cruciform l.* **transverse l. of the hip joint.** A ligamentous band, continuous on each side with the cotyloid l., and sometimes regarded as a portion of it, which extends across the cotyloid notch of the acetabulum. **transverse l. of the knee joint.** A fibrous band extending from the anterior margin of the external semilunar fibrocartilage of the knee to the extremity of the internal semilunar fibrocartilage. **trapezoid l.** The anterior external portion of the coracoclavicular l. It is quadrilateral in shape, is attached to the upper surface of the coracoid process of the scapula, and is inserted into an oblique line on the lower surface of the clavicle. See *conoïd l.* **triangular l.** Syn.: *fascia triangularis*. 1. A triangular portion of the aponeurosis of the external oblique muscle. 2. See *coraco-acromial l.* 3. See *deep perineal fascia*. **uterosacral l's.** See *recto-uterine folds*, under *fold*. **vaginal l.** A fibrous sheath occurring in the inguinal canal. **vaginal l. of the testicle.** The obliterated portion of the tunica vaginalis. **vesico-uterine l's.** See *vesico-uterine folds* under *fold*. **Winslow's l.** See *posterior l. of the knee joint*. **Y-shaped l. of Bigelow.** The iliofemoral l., so called on account of its being made up of two diverging portions. [Lat., *ligamentum*, from *ligare*, to tie.]

ligamentum (lig-am-en'tum). See *ligament*. **l. alare externum.** The external of the alar ligaments of the knee. **l. alare internum.** The internal of the alar ligaments of the knee. **l. arcuatum externum.** The ligamentous portion of the diaphragm which extends between the body and transverse process of the first lumbar vertebra (occasionally reaching that of the second), arching over the psoas. **l. arcuatum internum.** The ligamentous portion of the diaphragm which extends between the transverse process of the first lumbar vertebra and the first rib, arching over the quadratus

lumborum. **l. arteriosum.** A fibrous cord constituting the remains of the ductus arteriosus of the fetus. **l. cruciatum atlantis.** See *cruciform ligament*. **l. cruciatum cruris.** A Y-shaped process of the deep fascia of the leg, with the straight portion directed outward, situated opposite the bend of the ankle. **l. dentatum, l. denticulatum.** A delicate band of connective tissue which extends between the anterior and posterior nerve roots in the subarachnoid space of the spinal cord. **l. nuchae.** A thin, fibrous membrane between the trapezii muscles, many fibers of which are inserted into it. It stretches between the external occipital protuberance and the spinous process of the seventh cervical vertebra, giving off a slip to the spinous processes of all the cervical vertebrae except the atlas. In man it is of no great importance, but in some of the lower animals is strong and supports the weight of the head. **l. palpebrale externum.** A ligamentous band extending between the outer margin of the orbit and the tissues of the eyelids. **l. palpebrale internum.** A broad ligamentous band arising from the nasal process of the superior maxilla and dividing into two limbs. The anterior limb gives origin to the orbicularis palpebrarum muscle, the posterior limb to the tensor tarsi. **l. patellae.** A strong, flat band attached above to the apex and lower border of the patella, and below to the tubercle of the tibia. **l. pectinatum.** The lax spongy tissue filling up the sinus of the anterior chamber of the eye at the junction of the cornea and sclera (filtration angle), and forming the root of the iris. **l. spirale (cochleae).** A projecting ligamentous band attached to the wall of the cochlea, opposite the free edge of the lamina spiralis ossea, upon which is inserted the lamina spiralis membranacea. **ligamenta subflava.** Ligaments, consisting of yellow elastic tissue, which connect the lamina of the vertebrae from the axis downward. **l. suspensorium.** See *suspensory ligament*. **l. teres.** 1. A triangular band of fibers arising from the margins of the cotyloid notch at the bottom of the acetabulum and inserted in a depression near the center of the head of the femur. 2. See *round ligament of the forearm*. 3. See *middle costotransverse ligament, under ligament*.

ligation (li-ga'shun). The act of applying a ligature. **multiple l.** The operation of ligating a blood vessel in several parts of its course (e. g., a vein, for the cure of varices). [Lat., *ligatio*, from *ligare*, to tie.]

ligature (lig'a-tūr). Anything used in binding or tying. A thread or cord used to tie a bleeding artery. **elastic l.** A l. made of India rubber. **l. en masse, or in mass.** The enclosing of a mass of tissue containing a blood vessel by a ligature. [Lat., *ligare*, to tie.]

light reflex. See under *reflex*.

ligneous (lig'ne-us). Composed of, or having the texture of, wood.

lignification (lig-nif-ik-a'shun). The process of becoming ligneous. [Lat., *lignum*, wood, + *facere*, to make.]

lignin. A substance present in cell walls, which is very resistant to chemical reagents. It contains aromatic groups and responds to the lignin reaction.

lignin reaction. A color reaction given by cellulose made from wood, due to the presence of some of the lignin from the cell wall. It consists of a yellow coloration with salts of anilin and a red coloration with a solution of phoroglucinol in concentrated hydrochloric acid.

lignosulphite (lig-no-sul'fit). A liquid obtained as a by-product in the manufacture of cellulose; used by inhalation in pulmonary tuberculosis.

lignum. Wood; that part of the stem of a tree or shrub situated beneath the bark; in a restricted sense, the duramen, or heart wood. **l. febrifugum.** Quassia wood. [Lat.]

ligroin (lig'ro-in). A clear, colorless, inflammable and liquid petroleum benzene.

Ligula (lig'u-lah). Syn.: *Sparganium Mansonii*. A genus of the class *Cestodea* and the order *Pseudophyllidea*, being a species of flat worm. **l. Mansonii.** Syn.: *Bothriocephalus liguloides*. A species found in larval form in the tissues of man in China. [Lat., *ligula*, a strap.]

Lilium (lil'e-um). The lilies. **l. convallium.** Lily-of-the-valley. *Convallaria majalis*.

lily-of-the-valley. See *Convallaria*.

limatura (li-mat-u'rah). Metallic filings. [Lat.]

limb (lim). 1. A member of an animal body jointed to the trunk; a member as distinguished from the trunk and head, e. g., a leg or an arm. 2. See *limbus*.

anterior l. of the internal capsule. The portion of the internal capsule anterior to the genu, included between the caudate and lenticular nuclei. **pectoral l.** The upper l. in man, the fore l. in quadrupeds. **pelvic l.** The lower l. in man, the hind l. in quadrupeds. [Ang-Sax., *lim*.]

lim'ber. Easily bent, without danger to shape or structure; flexible, pliant, supple. [Of obscure origin.]

lim'bus. A margin or border. **l. alveolaris maxillae inferioris.** The alveolar process of the inferior maxilla. **l. alveolaris maxillae superioris.** The alveolar process of the superior maxilla. **l. conjunctivae.** The rim of ocular conjunctiva overlapping the corneal epithelium. **l. palpebralis anterior.** The anterior or outer edge of the margin of the eyelid. It is furnished with cilia and comes into exact apposition with the l. palpebralis anterior of the other eyelid when the lids are closed. **l. palpebralis posterior.** The posterior or inner portion of the margin of the eyelid, which is so placed as to form in connection with the l. palpebralis posterior of the other eyelid and the anterior surface of the

eyeball, when the lids are closed, a triangular canal for the passage of tears.

l. sphenoidal. The sharp anterior margin of the groove upon the sphenoid bone for the optic commissure. [Lat., *limbus*, line, border, edge.]

lime. 1. The fruit of *Citrus acidula*. 2. The genus *Tilia*, especially *Tilia europaea*. 3. A substance, CaO, obtained by calcining certain minerals (such as limestone) which consist essentially of calcium carbonate. On account of its affinity for water and the heat evolved in its combination with the latter, it exerts a caustic action when brought into contact with living tissues. It is not fusible at any temperature yet attained, but when heated to incandescence gives an intense white light. List of poisons and their antidotes, see in *appendix*, page 938. **chlorid of l.**, **chlorinated l.** See under *calx. l. water*. See *liquor calcis*, under *calx. milk of l.* Calcium hydroxid suspended in water so as to form a milky mixture. **quick l.** L. that has not been slaked. [Lat., *calx*, U. S. Ph., Br. Ph.] **slaked l.** L. that has been subjected to the action of water.

limestone. The mineral, calcium carbonate, CaCO₃, widely distributed in nature.

liminal (lim'in-al). Minimal (said of that intensity of a stimulus which is barely sufficient to give rise to an appreciable sensation). [Lat., *limen*, threshold.]

limmenia (lim-ne'me-ah). Malarial cachexia.

li'mo. 1. The lemon; the fruit of *Citrus limonum*. 2. Of Rumphius, the shaddock (*Citrus pompeiros*). **limonis cortex.** Lemon peel, the outer part of the pericarp of the fresh fruit of *Citrus limonum* [U. S. Ph., Br. Ph.]. **limonis succus** [U. S. Ph.], **succus limonis** [Br. Ph.]. The juice of the ripe fruit of *Citrus limonum*. It contains citric acid, gum, and sugar, and inorganic salts; used as an antiscorbutic [U. S. Ph.]. **oleum limonis.** The volatile oil of lemon oil [U. S. Ph., Br. Ph.]. **spiritus limonis.** A preparation representing 5 per cent. each of oil of lemon and lemon peel in alcohol [U. S. Ph., 1890]. **syrupus limonis** [Br. Ph.]. Syrup of lemon. **tinctura limonis.** A 50 per cent. [U. S. Ph., 25 per cent. Br. Ph.] tincture of lemon peel; used as a flavoring.

limotherapy (li-mo-ther'ap-e). The treatment of disease by abstinence from food. [Gr., *limos*, hunger, + *therapeia*, medical treatment.]

limp. The action of limping or walking lamely. [Mid. high Ger., *limfin*, to walk lamely, to halt.]

Linaria. Toad flax; a genus of antirrhineous plants. **L. vulgaris.** The common toad flax. The herb has been used as a diuretic and cathartic and, when fresh, as a poultice or fomentation for hemorrhoids. [Lat., *linum*, flax.]

line. 1. A thread or cord. 2. A row. 3. A threadlike mark, such as an elongated

ridge or notch or an extended strip of tissue or texture varying from surrounding parts. **alveolar basilar l.** A l. joining the basion to the alveolar point. **alveolonasal l.** A l. joining the nasal to the alveolar point. **atrope l.** Of Helmholtz, the l. normal to the plane of the axes of rotation of the eye. **auriculobregmatic l.** In craniometry, a l. passing from the auricular point to the bregma and dividing the preauricular from the postauricular part of the cranium. **axillary l.** A vertical line extending downward from the axilla on the side of the trunk. **basinasal l.** A l. extending from the basion to the nasion. **colored l's of the enamel.** Concentric brown l's or striae crossing the enamel prisms. **contour l's of Owen.** L's in dentin more or less parallel with the pulp cavity. The l's are now supposed to be due to two distinct structural conditions: (1) a series of the primary curves of the dentinal tubules giving the optical appearance of a l. and (2) a row of interglobular spaces. **Eberth's l's.** See under *Eberth*. **ectental l.** The l. of junction of the ectoderm and the entoderm. **embryonic l.** The primitive trace in the center of the area germinativa of the ovum. **external oblique l. of the inferior maxilla.** A well-marked ridge on the external surface of the inferior maxilla, just below the mental foramen, from which it runs outward, upward, and backward to the anterior margin of the ramus. **external supracondylar l. of the femur.** The external inferior continuation of the linea aspera of the femur. **facial l.** A straight l. tangent to the glabella and some point at the lower portion of the face (e. g., the subnasal spine, lower part of the nasal septum, alveolar border of the superior maxilla, and any of the other points at the apex of the facial angle). **festooned l. of the cardia.** The whitish wavy or dentated border of the mucous membrane of the esophagus at its junction with the mucous membrane of the stomach, with the softness and coloration of which it contrasts. **fixation l.** A l. which joins the object with the center of rotation, frequently corresponding to the visual axis. **focal l's.** The l's, anterior and posterior, which bound the focal interval. **Frauenhofer's l's.** See under *Frauenhofer*. **Frommann's l's.** See under *Frommann*. **Gant's l. of section.** See under *Gant*. **gingival l.** A l. of bluish coloration on the gums, indicative of chronic lead poisoning. **Göttinger's l.** See under *Göttinger*. **iliopectineal l.** The bony ridge marking the brim of the pelvis, situated partly on the ilium and partly on the os pubis. **incremental l's of Salter.** Curved l's in dentin, supposed to indicate the laminar structure, and to correspond to the successive laminae or strata of dentin. **inferior curved l. of the occipital bone.** A ridge extending transversely across the outer surface of the occipital bone at about one third

of the distance between its anterior border and the anterior margin of the foramen magnum. **inferior sinuous l. of the anus.** The convoluted l. at the junction of the mucous membrane of the rectum with the integument at the anus. **inner l. of Baillarger.** A thin whitish l. parallel to the surface (the fifth l. from without inward), seen with the naked eye in a section of the gray matter of the cerebrum. **interaauricular l.** A l. joining the two auricular points. **intercellular l's.** The narrow intervals between contiguous cells of epithelium or endothelium. They are filled by the cell cement, which stains black or brown with silver nitrate. **intercondylar l., intercondylean l.** A transverse ridge joining the condyles of the femur above the intercondyloid fossa. **interjugal l.** A l. joining the jugal points. **intermalar l.** A l. joining the malar points. **intermediate l. of the ilium.** The ridge upon the crest of the ilium between its inner and outer lip. **internal oblique l. of the inferior maxilla.** A ridge on the internal surface of the lower jaw, commencing at the back part of the sublingual fossa, continuing upward and outward so as to pass just below the last two molar teeth. **internal supracondylar l. of the femur.** The inner of the two ridges into which the linea aspera of the femur divides. **interstellar l's.** See *achromatic fibrils*, under *fibril*. **intertrochanteric l.** A ridge upon the posterior surface of the femur extending between the greater and lesser trochanters. **intertuberal l.** A l. joining the inner borders of the ischial tuberosities immediately below the small sciatic notch. **lead l.** See under *lead*. **l. of accommodation.** See *accommodation*. **l. of fixation.** In optics, an imaginary l. drawn from the subject viewed to the fovea centralis. **l. of sight.** An imaginary line drawn from an object viewed, through the center of rotation of the eye, to the fovea centralis. **mamillary l.** A vertical l. passing through the center of the nipple. **median l.** A l. joining any two points in the periphery of the median plane of the body; also, generically, a l. bisecting a part longitudinally, such as the median l. of the hand. **oblique l. of the fibula.** A prominent ridge on the internal surface of the shaft of the fibula, subdividing its upper three-fourths. **oblique l. of the radius.** A prominent ridge running from the lower part of the bicipital tuberosity downward and outward to form the anterior border of the bone. **oblique l. of the tibia.** A rough ridge which crosses the posterior surface of the tibia obliquely downward from the back part of the articular facet of the fibula to the internal border. **outer l. of Baillarger.** A thin whitish l. parallel to the surface (the 3d l. from without inward) seen with the naked eye in a section of the gray matter of the cerebrum. **parasternal l.** A l. midway between

the two nipples. **parturient l.** The axis of the parturient canal. **pectineal l.** That portion of the iliopectineal l. which is formed by the os pubis. **scapular l.** A perpendicular l. downward from the lower angle of the scapula. **Schreger's l's.** See *Schreger*. **semicircular l. of Douglas.** The curved lower edge of the internal layer of the aponeurosis of the obliquus abdominis internus where it ceases to cover the posterior surface of the rectus abdominis. **semilunar l. (of Spiegel).** A curved tendinous condensation of the aponeurosis of the obliquus abdominis externus running along the outer border of the rectus abdominis. **spino-umbilical l.** An imaginary l. drawn from the anterior superior spine of the ilium to the umbilicus. **superior curved l. of the occipital bone.** A semicircular l. passing outward and forward from the external occipital protuberance, and giving attachment to the trapezius, occipitofrontalis, and sternocleidomastoid muscles. **superior curved l. of the parietal bone.** A ridge upon the outer surface of the parietal bone parallel to and slightly above the temporal l. **temporal l.** A curved l. on the outer surface of the parietal bone just below the parietal eminence forming in part the upper boundary of the temporal fossa. **test l's.** Lines for detecting fracture or shortening of the neck of the femur; described by *T. Bryant*. **umbilicopubic l.** That portion of the median l. that extends from the umbilicus to the symphysis pubis. **visual l.** The l. that extends from the object to the macula lutea passing through the nodal point. [Lat., *linea*, from *linum*, a linen thread.]

linea (lin'e-ah). See *line*. **l. alba.** A tendinous rhapshe in the median line of the abdomen formed by the blending of the aponeuroses of the oblique and transversalis muscles; it extends from the pubes to the ensiform cartilage, and increases in width from below upward. **l. aspera.** A rough longitudinal ridge on the superior surface of the middle third of the femur, dividing below into two and above into three ridges. **l. costo-articularis.** A line drawn between the sternoclavicular articulation and the point of the 11th rib. **lineae cruciatae.** The four ridges upon the inner surface of the occipital bone which radiate from the internal occipital protuberance. **l. directoris pelvis.** The axis of the pelvic canal. **l. eminentis.** A ridge on the posterior surface of the patella which divides that surface into two unequal parts, the outer of which is the larger. **l. eminentis cartilaginis cricoideae.** A vertical ridge in the middle line of the posterior half of the cricoid cartilage. **l. eminentis transversa ossis hyoidei.** The horizontal ridge crossing the anterior surface of the body of the hyoid bone. **lineae eminentes.** The ridges upon the anterior surface of the scapula in the subscapular fossa. **l. obliqua**

cartilaginea. An oblique line extending downward and outward from the tubercle of the thyroid cartilage. **l. quadrati.** A well marked eminence commencing about the middle of the posterior intertrochanteric line, and descending vertically for about two inches along the posterior surface of the shaft of the femur. To it are attached the quadratus femoris and a few fibers of the adductor magnus muscles. **l. sternalis.** The median line of the sternum. **lineae transversae ossis sacralis.** The ridges formed by the lines of union of the four sacral vertebrae.

linear measure. See in appendix, page 942.

lingua (lin'gwah). The tongue or any tongue-like structure. **l. nigra.** See *black tongue*, under *tongue*. **l. plicata.** See *furrowed tongue*, under *tongue*. [Lat., *lingua*, the tongue.]

Linguatula (lin-gwa'tu-lah). A parasitic tick of the order *Acarina*. **l. serrata.** A species infesting the nasal cavity and frontal sinus in man. **l. taenoides.** Same as *L. serrata*.

lingula (lin'gula). The small convoluted mass of gray matter at the anterior border of the cerebellum which is seen on longitudinal section to be intimately united with the valve of Vieussens. **l. auriculæ.** The small projection of cartilage toward or into the upper part of the lobe of the ear. **l. mandibulæ.** A small, toothlike process upon the anterior edge of the inferior dental foramen. To it is attached the lower end of the ligament of the temporomandibular articulation. **l. sphenoidalis.** A small tongue-like process projecting backward in the angle between the body of the sphenoid bone and the ala magna. **l. Wrisbergi.** Fibers uniting the motor and sensory roots of the fifth cranial nerve. [Lat., dim. of *lingua*, the tongue.]

liniment (lin'im-ent). A liquid preparation usually containing an oily substance, designed for external use. **St. John Long's l.** See *linimentum terebinthinæ aceticum*, under *terebinthina*. **Stokes' liniment.** See *linimentum terebinthinæ aceticum*, under *terebinthina*. [Lat., *linimentum*, from *linere*, to smear.]

linimentum (lin'im-en'tum). See *liniment*. **l. saponatocamphoratum.** Solid opodeldoc, a liniment containing soap, camphor, oil of thyme, and oil of rosemary in alcohol and ammonia water [N. F.].

linin. A peculiar drastic principle to which *Linum catharticum* apparently owes its activity.

linoxanthin (li-no-zan'thin). An orange-colored pigment produced by *Sarcina aurantica* and found in orange peel. [Lat., *linum*, flax, + Gr., *xanthos*, yellow.]

linseed. Flaxseed, the seed of *Linum usitatissimum*. **l. meal.** Ground flax. **l. oil.** Oil of flaxseed. Consists mainly of the glycerids of linolic acid. Often used as a food. [Lat., *linum*, U. S. Ph., Br. Ph.]

lint. 1. Flax, the fiber of *Linum usitatissimum*. 2. Scrapings or shreds from linen

fabric. **marine l.** Picked oakum. [Ang.-Sax., *linet*.]

lin'tin. A certain absorbent material made from cotton.

linum. 1. Of the ancients, flax, the fiber of *L. usitatissimum*. 2. A genus of linaceous plants. 3. Of the U. S. Ph., flaxseed. **cataplasma lini.** A poultice made by mixing linseed meal gradually with boiling water. **l. arvense.** See *L. usitatissimum*. **l. catharticum.** Dwarf flax; the herb was formerly used as a gentle laxative. It is still used as a vermifuge, and has been recently recommended as a cathartic and diuretic. It contains *linin* (q. v.). **l. contusum.** Flaxseed reduced to meal or powder [Br. Ph.]. **lini farina.** See *l. contusum*. **l. minimum.** *L. usitatissimum*. **l. perenne.** The perennial flax; a species found in Asia, Europe, and the western United States. It yields flax and linseed oil. **lini semina.** Linseed, flaxseed [Br. Ph.]. **l. usitatissimum.** Common flax. The seeds are the l. of the pharmacopœias. **oleum lini.** Flaxseed (or linseed) oil expressed from linseed. It is laxative, but is seldom used medicinally except in purgative enemata and in making Carron oil, or lime liniment. It is used very extensively in the arts [U. S. Ph., Br. Ph.]. [Gr., *linon*.]

liomyoma (li-o-mi-o'mah). See *fibromyoma*.

lip. The soft structure forming the upper or lower covering of the oral cavity. **hare-l.** A failure in continuity of the upper lip giving it the split appearance of a hare or rabbit. **l. reading.** A system first taught in Holland in 1692 by which deaf and dumb children are taught to read speech by the movements of the speaker's l's. **l. talking.** A system by which mutes are taught to talk. [Ang.-Sax., *lippa*.]

lipacide'mia. The presence of fatty acids in the blood. [Gr., *lipos*, fat, + Lat., *acidus*, acid, + Gr., *aima*, blood.]

lipaciduria (lip-as-id-u're-ah). The presence of fatty acids in the urine. [Gr., *lipos*, fat, + Lat., *acidus*, acid, + *ouron*, urine.]

lipanin (lip'an-in). A solution of oleic acid in olive oil; proposed as a substitute for cod-liver oil.

lipase (li'pās). The fat-splitting enzyme. It has the property of converting fats into glycerin and fatty acids. It has been studied especially in its action upon ethylbutyrate. It is widely distributed in the animal organism.

lipemia (lip-e'me-ah). A morbid condition in which molecules of fat, in greater or less abundance, circulate in the blood. [Gr., *lipos*, fat, + *aima*, blood.]

lipo-, lip-. Combining form of Gr., *lipos*, fat; used as a prefix to signify of or concerning fat.

lipochromes (lip'ok-roms). See *luteins*.

lipodermia (lip-o-der'me-ah). Deficiency of skin, especially of the prepuce. [Gr., *leipein*, to leave, + *derma*, skin.]

lipofibroma (lip-o-fi-bro'mah). A fatty

- tumor with fibrous tissue in plates. [Gr., *lipos*, fat, + Lat., *fibra*, a fiber, + Gr., *oma*, tumor.]
- lipoids** (lip'oyds). A general term to include all those substances in protoplasm which are soluble in the solvents of fats, such as ether, chloroform, etc. It includes such bodies as lecithin, jecorin, cholesterolin, cerebrin, etc.
- lipolytic** (lip-o-lit'ik). Having the power of hydrolysing fats.
- lipoma** (lip-o'mah). A tumor composed of soft or firm lobular masses of adipose or fatty tissue bound together with fibrous septa. These tumors may undergo calcification, necrosis, or gangrene, and are frequently multiple, but not metastatic. **cystic l.** A l. containing cysts. **diffuse l.** A l. that is not definitely circumscribed. **fibrous l.** See *l. durum*. **hernial l.** A lipolece. **l. arborescens**. Branching papillary excrescences of fatty tissue within a tendon sheath. **l. arborescens (articulorum)**. A lipomatous degeneration of all the normal villous excrescences of the synovial membrane of a joint. **l. capsulare**. Of Virchow, a l. arising from the capsule of the mammary gland, often producing atrophy of the gland by its pressure. **l. colloides**. A myxolipoma. **l. durum (mixtum)**. A l. in which there is marked hypertrophy of the fibrous stroma and capsule. **l. myxomatodes**. A lipomyxoma. **l. telangiectodes**. A rare form of l. containing a large number of blood vessels. **nasal l.** A fibrous growth of the subcutaneous tissue of the nose. **osseous l.** A l. in which the connective tissue has undergone calcareous degeneration. [Gr., *lipos*, fat, + *oma*, tumor.]
- lipomatoid** (lip-o'ma-toid). Resembling a lipoma.
- lipomatosis** (lip-o-mat-o'sis). Fatty degeneration or an abnormal deposit of fat. **diffuse muscular l.** See *pseudohypertrophic muscular paralysis*, under *paralysis*. **l. interstitialis**. Of Müller, fatty degeneration in progressive muscular atrophy. **l. luxurians musculorum progressiva**. Of Heller, pseudohypertrophic muscular paralysis. **l. musculorum luxurians**. Muscular pseudohypertrophy. **l. universalis**. Obesity. **myo-atrophic l.** See *pseudohypertrophic muscular paralysis*, under *paralysis*. [Lat., *lipoma*, a fatty tumor.]
- lipomatous** (lip-o'mat-us). Resembling a lipoma; fatty.
- lipomeria** (lip-o-me're-ah). Absence of one of the limbs. [Gr., *leipein*, to leave, + *meros*, a part.]
- lipomyxoma** (lip-o-mix-o'mah). A tumor in which mucoid material is associated with adipose tissue. [Gr., *lipos*, fat, + *myxoma*.]
- liporhodin** (lip-o-ro'din). A lipochrome having a red color. [Gr., *lipos*, fat, + *rodon*, rose.]
- liposarcoma** (lip-o-sar-ko'mah). Sarcoma containing fatty tissue. [Gr., *lipos*, fat, + *sarcoma*.]
- lipostomy** (li-pos'to-me). Atrophy of the mouth. [Gr., *leipein*, to leave, + *stoma*, mouth.]
- lipotrophic** (li-po-trof'ik). Increasing fat. [Gr., *lipos*, + *trophe*, nutrition.]
- Lippia** (lip'pe-ah). Fog fruit; a genus of verbenaceous plants. **L. mexicana**. An evergreen shrub of New Mexico. The leaves and stalks are used as a demulcent and expectorant. [From *Lippi*, a French physician.]
- lippiol** (lip'pe-ol). A camphor derived from *Lippia mexicana*.
- lippitude** (lip'pi-tüd). See *blepharadenitis*. **l. angularis**. A chronic marginal blepharitis at the external canthus. **l. senilis**. A form of l. supposed to be peculiar to old age. [Lat., *lippus*, bleary-eyed.]
- lip'pus**. Blear-eyed; as a n., a bleary-eyed person. [Lat.]
- lipuria** (lip-u're-ah). The presence of fat in the urine. [Gr., *lipos*, fat, + *ouron*, urine.]
- liqutation** (li-kwa'shun). The act of melting or liquefying. [Lat., *liquare*, to melt.]
- liquatorium** (li-kwa-to're-um). A strainer, a filter. [Lat., *liquare*, to make liquid.]
- liquefaction** (lik-we-fak'shun). The act or process of reducing to a liquid state. **gelatin l.** The reduction of gelatin to a fluid state by the proteolytic enzymes of many bacteria. **puriform l.** The retrograde metamorphosis into a puslike liquid by means of which certain deposits in the tissues are disposed of. [Lat., *liquere*, to flow, + *facere*, to make.]
- liquescent** (lik-wes'sent). Deliquescent. [Lat., *liquescere*, to become liquid.]
- liqueur** (le-ker'). 1. An alcoholic spirit sweetened, flavored with some aromatic vegetable substance, and often colored. 2. See *liquor*. [Fr.]
- liquid** (lik'wid). A body which flows; i. e., one the cohesion of whose particles is such as to be readily overcome by the force of gravitation, so that the body changes its form without suffering any alteration of its volume, and completely fills the most dependent portion of the vessel in which it is placed. It differs from a gas in presenting no tendency to change its shape except when acted on by an extraneous force and in resisting any attempt to alter its volume. **bleaching l.** Javelle water. **blistering l.** See *liquor epispasticus*, under *liquor*. **culture l's**. Sterilized l's employed for the artificial culture of microbes. **Dutch l.** Ethylene dichlorid. **Labarraque's disinfecting l.** Syn.: *liquor sodae chloratae*. See *Labarraque's solution*, under *Labarraque*. **litmus l.** Milk colored with litmus to indicate the reaction in cultures of bacteria. **Maynard's adhesive l.** See *collodium*. **Pictet's l.** See under *Pictet*. [Lat., *liquidum*.]
- Liquidambar** (lik-wid-am'bar). 1. A genus of trees of the *Hamamelidaceae*. 2. Liquid amber (or liquidamber); the sweet gum or balsamic product of *L. styraciflua*, known also as *American l.* It is aromatic and stimulant, is considered styp-tic, and is often substituted for the bal-

sams of Peru and Tolu, as well as for liquid storax, with which it has been confounded by many authors. The term *l.* is sometimes applied to the products of *L. orientale* and *L. altingiana*. **American *l.*** See *L.* (2d def.). **Liquidambar imberbe**, **Liquidambar orientale**. The oriental sweet gum, liquid storax tree, or lordwood; a tree growing in southwestern Asia Minor. It is the source of liquid storax, the styrax of the U. S. Ph. **Liquidambar styraciflua**. Bilsted, copalm balsam tree, sweet gum. The bark was formerly used in summer diarrhea and dysentery, especially in children. **oriental *l.*** Liquid storax. [Lat., *liquidus*, liquid, + *ambra*, amber.]

liquid, or wine measure. See in appendix, page 942.

liquiritia (lik-ker-e'te-ah). 1. Licorice. 2. In part, the genus *Glycyrrhiza*. 3. The root of *Glycyrrhiza glabra*. **sucus liquiritiæ**. See *extractum glycyrrhizæ*, under *Glycyrrhiza*. [Corrupted from Gr., *glykurriza*, the licorice plant.]

liquor (lik'er). Pl., *liquores*. 1. Any liquid, especially (a) a spirituous liquid, obtained by distillation, or (b) an animal or vegetable juice or secretion. 2. In pharmacy, a solution of a solid, non-volatile substance in water. **Hoffmann's *l. anodynus mineralis***. See *spiritus ætheris compositus*, under *ether*. ***l. amnii***. The fluid contained within the amniotic sac surrounding the fetus. ***l. anæstheticus***. A variable mixture of the different substitution products between ethylidene dichlorid and carbon hexachlorid produced by the action of chlorin on ethyl chlorid. The lower members of the group compose mainly what is known as *l. anæstheticus Aranii*, which boils between 64° and 100° C., while the higher chlorinated members of the group constitute the *l. anæstheticus* of Wiggers, which boils between 100° and 140° C. ***l. anthracis***. A solution of coal tar in benzene and alcohol; an antiseptic. ***l. antigerminalis***. A solution of thymol and the oils of eucalyptus and lavender in alcohol and water [N. F.]. ***l. antisepticus***. A preparation consisting of boric and boracic acid, thymol, eucalyptol, and the oils of peppermint, gaultheria, and thyme, dissolved in alcohol and water [U. S. Ph.]. ***l. antisepticus alkalinus***. A preparation much like the *l. antisepticus* [U. S. Ph.], except that it is rendered alkaline and colored with cudbear [N. F.]. ***l. arsenicalis*** (Fowler). See *l. potassii arsenitis*, under *potassium* [Br. Ph.]. ***l. carbonis detergens***. A proprietary preparation, said to be much like the *l. picis carbonis* of the Br. Ph. ***l. cerebrospinalis***. See *cerebrospinal fluid*, under *fluid*. ***l. discutiens***. See *fomentum commune*. ***l. Donovanii***. See *l. arsenii et hydrargyri iodidi*, under *arsenium*. ***l. electropœicus***. Syn.: *battery fluid*. An aqueous solution of sodium dichromate and sulphuric acid [N. F.]. ***l. epispasticus***. A preparation containing 0.4 per cent. of cantharidin [Br. Ph.]. ***l. formal-***

dehydi. A solution containing not less than 37 per cent. by weight [U. S. Ph.] of absolute formaldehyd gas. It is a valuable disinfectant. ***l. Fowleri***. See *l. potassii arsenitis*, under *potassium*. ***l. fumans Beguini***. A preparation made by distilling sublimed sulphur with slaked lime and sal ammoniac; or by passing a current of sulphureted hydrogen gas through a mixture of flowers of sulphur and caustic ammonia solution. ***l. graafianus***. The fluid contained in the graafian follicles. ***l. mercurialis Van Swieten***. See *l. hydrargyri perchloridi*, under *hydrargyrum*. ***l. Morgagni***. The fluid found in small quantity in normal crystalline lenses between the lens proper and the inner surface of the posterior capsule on the one hand and between the lens proper and the so-called capsular epithelium on the other. ***l. pericardii***. A clear yellowish serous fluid found in the pericardium, which serves to lubricate the surfaces. ***l. perilymphæ***. See *perilymph*. ***l. peritonei***. The serous fluid in the peritoneal cavity; not large in quantity except when pathological. ***l. pleuræ***. The serous fluid found in the pleural cavity; not large in quantity except when pathological. ***l. prostaticus***. The secretion of the prostate gland. ***l. seriparus***. A solution of 10 per cent. of calves' rennet in alcohol and water, with sodium chlorid. ***l. trinitrini***. Spirit of nitroglycerin 1 per cent. [Br. Ph.]. **mother *l.*** The liquid left after the crystallization of a salt. **spirituous *l.*** A distilled alcoholic *l.* for use as a beverage. [Lat., *liquere*, to be fluid.]

liquorice (lik'er-is). See *licorice*.

Liriodendron (lir-e-o-den'dron). 1. A genus of magnoliaceous trees. 2. The bark of *L. tulipifera*. ***L. tulipifera***. The tulip tree. The bark has been employed in dyspepsia, dysentery, and other diseases requiring a mild stimulant and tonic. [Gr., *leirion*, a lily, + *dendron*, a tree.]

Lisfranc's amputation. Amputation of the foot at the tarsometatarsal joint, with preservation of the sole to make the flap. [Jacques Lisfranc, French surgeon, 1790-1847.]

Lis'sauer's tract. A small tract of fibers at the junction of the tip of the posterior horn and lateral column; the fibers come from the posterior roots, course upward for a short distance, and then enter the posterior horn. [Heinrich Lissauer, German neurologist, 1861-1891.]

listerism (lis'ter-ism). The principles of antiseptic surgery. [Joseph Lister (Lord Lister), English surgeon, b. 1827.]

Listing's law. The *l.* that "if, with normal eyes and parallel visual lines, the visual line passes from the primary position into any other position, the rotatory movement of the eyeball in this secondary position is of such a kind as if it (the eyeball) had been turned round a fixed axis, lying perpendicular to the first and second direction of the visual line." [John Benedict Listing, German physicist, 19th century.]

liter (le'ter, li'ter). A measure of capacity in the metric system equal to 1000 cubic centimeters, or 2.113 American pints, or 1.76 English pints. [Fr., *litre*.]

lithagogue (lith-'ag-og). Having the property of expelling calculi. [Gr., *lithos*, a stone, + *agein*, to lead.]

litharge (lith-'arj). Lead oxid, PbO, obtained by fusing lead. [Gr., *lithos*, a stone, + *argyros*, silver.]

lithargyrum (lith-'ar'ji-rum). Lead monoxid.

lith'ate. See *urate*.

lithia (lith'ya). Lithium oxid. The salts of lithium are often considered, according to the principles of the old nomenclature, as compounds of the base l. with acid radicles, and are named in correspondence with this idea. This method of nomenclature is not used in the U. S. and Br. Ph's. For such salts see under *lithium*. Many so-called lithia waters contain at most but traces of lithium salts. [Gr., *lithos*, a stone.]

lithiasis (lith-i-'as-is). The formation of calculi anywhere in the body. **l. biliaris**. See *biliary calculi*, under *calculus*. **l. conjunctivae**. The formation of calcareous deposits in the retained glandular secretions of the meibomian glands. **l. nephritica**. See *nephrolithiasis*. **l. pulmonum**. The formation of a pulmonary calculus. **l. renalis**. See *nephrolithiasis*. [Gr., *lithiasis*, from *lithos*, a stone.]

lithisiac (lith-is'e-ak). Of *M. Forbes*, having to do with uric acid.

lithium (lith'e-um). A metallic element, CH_3COOLi , belonging to the class of alkaline metals in common with sodium, potassium, rubidium, and cesium. It forms a series of compounds resembling the compounds of these radicles in chemical structure and physical qualities. Symbol, Li. Atomic weight, 7.03. Its salts are found widely distributed through nature, although in small amounts. Traces are present in many mineral waters. Specific gravity, 0.59. **l. and caffeine sulphate**. A double salt of l. and caffeine with sulphonic acid; used in rheumatism and gout. **l. and theobromin salicylate**. The double salicylic acid salt of l. and theobromin; used as a diuretic. **l. benzoate**, $\text{C}_6\text{H}_5\text{COOLi}$, a white substance. **l. carbonate**. LiCO_3 , a white powder soluble with difficulty in water. Used in the uric acid diathesis and also to reduce acidity of the urine. There is also an acid carbonate, l. bicarbonate, LiHCO_3 , which is present in many charged mineral waters. **lithii citras effervescens**. A preparation made with l. citrate, tartaric acid, milk sugar, white sugar, and sodium bicarbonate, moistened with alcohol [U. S. Ph., Br. Ph.]. **l. citrate**. The lithium salt of citric acid, $\text{Li}_3\text{C}_6\text{H}_5\text{O}_7$. A white powder. **l. glycerophosphate**. The l. salt of glycerin phosphoric acid. **l. iodate**. The l. salt of iodic acid, LiIO_3 . Used in gout. **l. salicylate**. A substance, $2\text{LiC}_7\text{H}_5\text{O}_3 + \text{H}_2\text{O}$ [U. S. Ph.]; forming white acidular crystals of sharp, sweetish taste, sol-

uble in water and alcohol. **l. sozo-iodolate**. The salt of sozo-iodol, $\text{C}_6\text{H}_2\text{I}_2(\text{OH})\text{SO}_3\text{Li}$. Glancing white plates, which sometimes assume a yellowish tinge without affecting their purity. Dissolves easily in water and aqueous alcohol. **l. sulpho-ichthyolate**. A compound obtained by neutralizing ichthyolsulphonic acid with l. carbonate; used in rheumatism. [Gr., *lithos*, a stone.]

litho-, lith-. Combining form of Gr., *lithos*, stone; used as a prefix to signify of or pertaining to a stone.

lithogeny (lith-oj'en-e). The formation of calculi or calculous material. [Gr., *lithos*, a stone, + *gennan*, to engender.]

litholapaxy (lith-o'lap-ak-se). The removal of a vesical calculus by first crushing it and subsequently washing out the fragments. [Gr., *lithos*, stone, + *lapaxis*, evacuation.]

lithology (lith-o'l'o-je). The science of calculi or of calculous formation. [Lat., *lithologia*, from Gr., *lithos*, stone, + *logos*, understanding.]

lithopedion (lith-o-pe'di-on). A fetus which has undergone shriveling and calcareous degeneration, usually in the course of ectopic gestation. [Gr., *lithos*, a stone, + *paidion*, a little child.]

lithotomist (lith-ot'om-ist). One who performs a lithotomy.

lithotomize (lith-ot'om-iz). To subject to the operation of lithotomy.

lithotomy (lith-ot'om-e). Syn.: *cystotomy*. The removal of a stone by cutting into the bladder. **lateral l.** A l. in which the perineum is incised to one side of the median line. **median l.** A l. in which the incision is made through the median raphe of the perineum. **perineal l.** A l. in which the incision for the removal of stone is made through the perineum. **suprapubic l.** An operation in which the bladder is entered by an incision just above the symphysis pubis. **vaginal l.** A l. in which the bladder is entered through an incision through the vagina. [Gr., *lithotomia*, from *lithos*, stone, + *tome*, a cutting.]

lithotripsy (lith-ot'rip-se). See *lithotrixy*. [Gr., *lithos*, stone, + *tribein*, to rub.]

lithotrite (lith-o'trit). An instrument for crushing a stone, especially a vesical calculus.

lithotrixy (lith-ot'rit-e). The operation of crushing a stone in the bladder by means of a lithotrite. [Gr., *lithos*, a stone, + Lat., *tritrus*, from *terere*, to rub.]

lithuria (lith-u're-ah). The presence of uric acid and urates in excessive amount in the urine. [Gr., *lithos*, a stone, + *ouron*, urine.]

lit'mus. The coloring matter obtained from the species of *Rocella*, *Variolaria*, *Leconora*, and similar lichens. It is used chiefly as a test for acids and alkalis, being colored red by the former and restored to its original color by the latter. **l. paper**. A test paper for acids (blue l. paper, *charta exploratoria coerulea*, prepared by staining unsized paper with a strong, clear infusion of l. (1 part of l.

- to 4 of water). If a test for alkalis is required, the infusion is first reddened by an acid, forming red l. paper. [Lat. A corruption of *lacmus*.]
- Litrameter** (lit-ram'et-er). An instrument for measuring the specific gravity of liquids. [Lat., *litrametrum*, from Gr., *litra*, a pound, + *metron*, a measure.]
- litre** (le'ter, li'ter). See *liter*.
- lit'ter**. 1. An appliance for transporting sick and wounded persons for short distances. 2. The whole number of young brought forth at a time. [Old Fr., *litiere*, Fr., *litière*, Span., *litera*, Lat., *lectus*, bed.]
- Litré's glands**. Syn.: *follicles of Litré*. The small racemose mucous glands in the mucous membrane of the cavernous portion of the urethra. [*Alexis Litré*, Parisian anatomist, 1658-1726.]
- liv'er**. A glandular organ, the largest in the body, situated in the right upper quadrant of the abdomen, immediately beneath and in contact with the diaphragm, having for its chief function the secretion of the bile and the storage of glycogen. It is the clearing house of carbohydrate metabolism in the body. Liver tissue contains proteins, fats, lecithin, cholesterolin, jecorin, purin bases, glycogen, urea, and other substances in small quantities, also a number of inorganic salts.
- accessory l.** An additional part of the l., sometimes found attached to the left extremity of the organ by a fold of peritoneum, which contains blood vessels, etc., for it. **amyloid l.** A l. that has undergone amyloid degeneration. **atrophic nutmeg l.** The atrophic form of chronic interstitial hepatitis. **biliary cirrhotic l.** A greatly enlarged l., in which there is an overgrowth of connective tissue, both around and within the lobules, together with an arrangement of the liver cells resembling bile capillaries. **bronze l.** The bronze-colored liver of malarial fever. **cachectic fatty l.** The l. of a person affected with some cachexia in which fat has accumulated. **cirrhotic fatty l.** Fatty l. with proliferation of the interstitial connective tissue observed in habitual drunkards. **cirrhotic l.** See *nutmeg l.* **drunkard's l.** A cirrhotic l. produced by the protracted use of alcoholic drinks. **fatty atrophic l.** An atrophic liver with fatty degeneration of the cells. **fatty l.** Syn.: *hepar adiposum*. A l. which has undergone fatty degeneration. **fatty nutmeg l.** See *fatty atrophic l.* **fibrofatty l.** See *cirrhotic fatty l.* **floating l.** Syn.: *hepar migrans*. A l. in which there is abnormal mobility due to relaxation of the hepatic ligament. **gin drinker's l.** **gin l.** See *atrophic nutmeg l.* **granular l.** **granulated l.** A cirrhotic l. in which the contour of the organ is modified and its surface nodulated in consequence of irregular atrophy of the newly formed connective tissue. **hobnailed l.** **hobnail l.** A l. the surface of which shows irregular granules resembling the heads of hobnails. It is the result of the microscopic changes accompanying cirrhosis of the l. **lardea-**
- ceous l.** See *amyloid l.* **leukemic l.** The l. hypertrophied in consequence of leukemia and showing on section minute grains resembling miliary tubercles in the portal venules. **mamillated l.** A granulated l. **melanemic l.** The l. of a person having melanemia, in which black pigment matter has been deposited in the interior of the blood vessels and in the interstitial connective tissue. **movable l.** See *floating l.* **nutmeg l.** Syn.: *hepar variegatum*. A l. in which chronic venous engorgement from heart disease has produced dilatation of the capillaries and a peculiar mottled appearance. **tropical l.** The acutely congested liver of unacclimated residents of the tropics, resulting from heat excess of food, alcohol, and lack of exercise. **tuberculated l.** A granulated l. **wandering l.** See *floating l.* **waxlike l.** **waxy l.** See *amyloid l.* **whisky l.** See *interstitial hepatitis*, under *hepatitis*. [Ang.-Sax., *lifer*.]
- liv'er spots**. See *chloasma*.
- liverworm**. See *Distoma hepaticum*.
- liv'erwort**. A name applied to several species of *Anemone*.
- liv'id**. Of a bluish color; discolored by a bruise. [Fr., *livide*, from Lat., *lividus*, dark in color.]
- liv'or**. A bluish or leaden color of the body, produced by a blow. [Lat., *livere*, to be of a blue color.]
- lixa** (lix'ah). Of Kerr, potash. **l. phosphorosa**. Potassium phosphite. **l. sulphureosa**, **sulphurous l.** Potassium sulphite.
- lixivia** (lix-iv'e-ah). Lye.
- lixivial** (lix-iv'e-al). Pertaining to a lye; obtained by lixiviation. [Lat., *lix*, ashes.]
- lixiviation** (lix-iv-e-a'shun). The act or process of washing wood ashes to obtain alkaline salts, or the process or act of making lye. [Lat., *lixivius*, made into lye.]
- Lo**. The sign employed by Ehrlich for "limen zero" (*limen*, threshold). This represents the largest quantity of toxin which exactly neutralizes one standard antitoxin unit.
- Loa** (lo'ah). A subgenus of the genus *Filaria*.
- loadstone**. See *magnetic iron oxid*, under *iron*.
- lo'bar**. Pertaining to or affecting a lobe. [Gr., *lobos*, a lobe.]
- lobate** (lo'bät). 1. Resembling or pertaining to a lobe. 2. Divided into lobes or bearing lobes.
- lobe**. A projecting and somewhat rounded portion of a part or organ; in the brain, either (a) a rounded elevation (e. g., one of the corpora quadrigemina) or (b) a group of cerebellar folia (e. g., the *semilunar l.*), or (c) a group of cerebral gyri more or less distinctly demarcated by deep fissures and corresponding approximately to the cranial bones (e. g., the *occipital l.*); in botany, a subdivision of an organ, especially a rounded projection from the margin of a leaf, or other flattened organ. **biventral l. (of the cerebellum)**. A projection on the under surface of each

cerebellar hemisphere, between the amygdalae anteriorly and the slender l. posteriorly. **caudate l. of the liver.** An elevation of the hepatic tissue which extends between the spigelian l. and the right l. **floating l.** A projecting, tongue-like portion of the right l. of the liver which may extend below the crest of the ilium. **frontal internal l. of the cerebrum.** See *marginal convolution*, under *convolution*. **frontal l. (of the brain).** That part of a cerebral hemisphere lying in front of the central and sylvian fissures. **interoptic l.** An area in the gray matter of the aqueduct of Sylvius, said to represent the distinct pair of l's which are seen in the iguana in front of the origin of the trochlearis nerve. **lateral l's of the prostate.** The portions of the prostate gland situated on each side of the urethra, usually not very well defined from the general mass of the organ. **lateral l's of the thyroid gland.** The two main portions of the gland situated one on each side of the trachea and united below by the thyroid isthmus. **left l. of the liver.** The left portion of the liver separated from the rest by the longitudinal fissure. **l's of the cerebrum.** 1. The anterior, middle, and posterior l's of the brain. **l. of the ear.** The lower portion of the auricle (below the incisura intertragica), in which there is no cartilage. **l's of the liver.** The right and left l's. See *quadrate*, *caudate*, and *spigelian l's*. **l's of the lung.** The small divisions comprising a l. of the lungs, each l. containing the terminal ramification of a bronchial tube and of the pulmonary vessels. **l's of the mamma.** The portions into which the glandular tissues of the mammary gland are divided by fibrous or areolar tissue. **l. of the nose.** A rounded eminence at the lower extremity of the dorsum of the nose. **l's of the pancreas.** The roundish aggregations of the glandular tissue of the pancreas separated from each other by connective tissue. **l's of the prostate.** The lateral l's and the middle l. of the gland. **occipital l.** The caudal region of either hemiserebrum; on the mesal aspect a definite boundary is the occipital fissure, but otherwise it is continuous with the parietal and the temporal l's. **olfactory l. (of the cerebrum).** A l. of the cerebrum consisting of a series of convolutions lying below the horizontal portion of the intraparietal fissure. It is divided into the supramarginal and angular convolutions, and is connected with the occipital lobe by several annectant gyri. **optic l's.** See *corpora quadrigemina*, under *corpora*. **orbital l's.** The convolutions lying above the orbit. **parietal l.** The upper and lateral portion of the hemisphere of the cerebrum. **quadrate l. of the cerebellum.** A large l. on the upper surface of the cerebellum, situated between the central l. anteriorly and the great horizontal fissure posteriorly. It is divided into the anterior and pos-

terior crescentic l's. **quadrate l. of the liver.** An oblong elevation (with its long axis running anteroposteriorly) on the lower surface of the liver in front of the transverse fissure and between the gall-bladder and the longitudinal fissure. **Riedel's l.** See *floating l.* **slender l.** A narrow portion of the inferior surface of one of the cerebellar hemispheres, bounded in front by the biventral l. and behind by the posterior inferior l. **spigelian l. (of the liver).** An irregular quadrangular portion of the liver lying behind the fissure for the portal vein and between the fissure for the vena cava and the ductus venosus. **temporal l.** See *temporosphenoidal l.* **temporo-occipital l.** The posterior inferior portion of the mesial surface of the cerebral hemisphere, including the fusiform lobule and the inferior occipito-temporal convolution. **temporosphenoidal l.** A pyramidal portion of the brain, limited anteriorly and superiorly by the posterior limb of the fissure of Sylvius, while posteriorly it runs into the occipital l. **true optic l's.** The anterior corpora quadrigemina, so called because they represent the real termination of the optic tracts. [Lat., *lobus*, Gr., *lobos*.]

lobelacrin (lo-be-lak'rin). The acrid substance of lobelia.

Lobelia (lo-be'le-ah). 1. A genus of herbaceous plants resembling *Campanula*. 2. Of the U. S. and Br. Ph's, the dried flowering herb (the leaves and tops) of *L. inflata*. It is emetic and, in large doses, a poison. L. is used in pectoral and laryngeal affections, especially spasmodic asthma. See *list of poisons and their antidotes*, in *appendix*, page 940. **acetum lobeliae.** Vinegar of l., made by percolating l. with dilute acetic acid [U. S. Ph., 1890]. **extractum lobeliae fluidum.** An alcoholic fluidextract of *L. inflata* [U. S. Ph.]. **L. cardinalis.** Cardinal flower l.; a North American species with acrid properties. The root has been used as an anthelmintic and antisyphilitic. **L. inflata.** Indian tobacco. All parts are medicinal, but the root and capsules are said to be most active. It yields the official l. **L. syphilitica.** Blue l.; a species growing in the United States and Canada. Its root is sudorific, though of no value as an antisyphilitic. **L. urens.** Acrid l., a species found in Europe. The juice is a caustic poison and a violent emetic and purgative. **tinctura lobeliae.** Tincture of l. (2nd def.) [U. S. Ph.]. **tinctura lobeliae etherea.** A 20 per cent. ethereal tincture of l. (2nd def.) [Br. Ph.]. [From *M. de Lobel*, a botanist and physician to James I. of England.]

lobelin (lo-be'lin). An alkaloid found in *Lobelia inflata*.

lob'ster foot. A congenital deformity of the foot in which the metatarsus is split, each prong carrying one or more large and deformed digits.

- lob'ster hand.** The same deformity as in lobster foot. See *lobster foot*.
- lobulated** (lob'u-la-ted). Divided into or having lobules.
- lobulation** (lob-u-la'shun). The state of being divided into lobules. **l. of the kidney.** A persistence after birth of the fissuring of the surface of the kidney and division of it into distinct portions, as in the fetus.
- lobule** (lob'ül). A lobelet or small lobe. **fat l's.** Clusters of fat cells, each cluster being somewhat isolated from the others by connective tissue and blood vessels. **hepatic l's.** Solid masses, from $\frac{3}{12}$ to $\frac{1}{24}$ of an inch in diameter, of the shape of polyedral compressed sphenoids, separated from each other by connective tissue. **inferior parietal l.** A l. of the cerebrum consisting of a series of convolutions lying below the horizontal portion of the intraparietal fissure. **parietal l's.** One of the two portions into which the parietal lobe is divided by the horizontal part of the intraparietal sulcus. [Lat., *lobulus*, dim. of *lobus*, lobe.]
- lobulus** (lob'u-lus). See *lobule*. **l. centralis vermis superior.** A small l. at the anterior part of the superior vermiform process situated in the incisura anterior. **lobuli epididymidis.** The parts into which the epididymis is divided by transverse septa from its tunica albuginea. **lobuli testiculi** (seu *testis*). Conical lobules, variously estimated at from 250 to 400 in number, which make up the glandular structure of the testicle.
- lob'us.** See *lobe*. **lobi cerebelli anteriores.** The lobes which form the anterior and superior portion of the hemisphere of the cerebellum. **lobi pulmonales.** The lobes of the lung. **l. pulmonis inferior accessorius.** An anomalous lobe of the lower portion of the inferior lobe of the lung. **lobi reniculi** (seu *renis*). The separate lobes in the fetal kidney which later form the pyramids of Malpighi.
- localization** (lo-kal-i-za'shun). 1. The process of determining the situation in which physiological and morbid processes originate; especially the determination of the portions of the central nervous system in which the nerve fibers that preside over particular functions take their origin (see *cerebral l.*). 2. The process by which a general physiological or morbid action or condition becomes concentrated in one particular locality. **cerebral l.** 1. The localization of different functions (motor, sensory) in the cortex of the cerebrum. 2. A cerebral manifestation of a systemic disease. **experimental l.** The l. of cerebral functions by means of experiments on animals. **morbid l.** See 1st def.
- lochia** (lo'ke-ah). The discharges that take place from the parturient canal for a few days after parturition. [Gr., *lochias*, from *lochios*, pertaining to childbirth.]
- lochial** (lo'ke-al). Pertaining to the lochia.
- Locke's solution.** A Ringer's solution adapted especially for perfusing the isolated mammalian heart. It contains NaCl 0.9 per cent., CaCl₂ 0.024 per cent., KCl 0.042 per cent., NaHCO₃ 0.02 per cent., and dextrose 0.1 per cent.
- lock'finger.** A peculiar affection of the fingers by which they become fixed in a flexed attitude; said by Agnew to be due to the presence of a small fibroma attached to the synovial fringe of the metacarpophalangeal articulation.
- lockjaw.** See *tetanus*.
- locoed** (lo'köd). Afflicted with loco disease.
- locomotion** (lo-ko-mo'shun). The action or power of moving from one place to another. [Lat., *loco*, abl. of *locus*, place, + *motio*, from *movere*, to move.]
- locomotor ataxia** (lo-ko-mo'tor at-aks'e-ah). See *tabes dorsalis*, under *tabes*.
- locomotorium** (lo-ko-mo-to're-um). Of Haeckel, the locomotory apparatus (the bones and muscles concerned in locomotion).
- locomotory** (lo-ko-mo'to-re). Pertaining to locomotion.
- lo'co weed.** This term is applied to a number of species of *Astragalus* and *Aragalus* which induce a peculiar habit and symptoms of poisoning in cattle which eat them.
- loculate, loculated** (lok'u-lät, lok'u-lat-ed). Celled; divided into small chambers or cells. [Lat., *loculatus*, from *loculus*, dim. of *locus*, place.]
- loculus** (lok'u-lus). A compartment. [Lat., dim. of *locus*, place.]
- locus** (lo'kus). A place, a spot. **l. caeruleus, l. cinereus, l. ferrugineus.** A depression in the floor of the fourth ventricle at its upper part; so called from its dark gray color. **l. luteus.** The true olfactory region of the nose; so called from the yellow granules in the epithelium. **l. niger** (*cruris* [seu *crurum*] *cerebri*). A tract of gray matter which separates the crista and tegmentum of the crura cerebri. [Lat. for place.]
- Loeffler's bacil'lus.** The bacillus of diphtheria. **l's blood serum.** A coagulated mixture of 1 part of glucose bouillon to 3 parts of blood serum; used especially for cultivating the bacillus of diphtheria. **l's stain.** A solution of methylene blue, used for staining the diphtheria bacillus. [Friedrich August Johannes Loeffler, German bacteriologist, 1852-1915.]
- logadectomy** (log-ad-ek'to-me). Excision of a portion of the conjunctiva. [Gr., *logades*, conjunctivae, + *ektome*, a cutting out.]
- logaditis** (log-ad-i'tis). Inflammation of the sclera. [Gr., *logades*, conjunctivae, + *itis*, inflammation.]
- logamnesia** (lo'gam-ne'se-ah). Inability to recognize spoken or written words. [Gr., *logos*, word, + *amnesia*, forgetfulness.]
- loganin** (log'an-in). A crystalline glucosid, C₂₈H₃₄O₁₄, found in strychnos seeds.
- logomania** (lo-go-ma'ne-ah). Monomania

- characterized by loquacity. [Gr., *logos*, word, + *mania*, madness.]
- log'wood.** See *hematoxylin*.
- logy.** A suffix used to signify the science of or study of. [Gr., *logos*, discourse, understanding, science.]
- loin.** In man, the dorsal and posterior lateral portions of the trunk between the pelvis and the last dorsal vertebra. [Lat., *lumbus*.]
- loliin** (lo'le-in). A poisonous alkaloid obtained from the seeds of *Lolium temulentum*.
- Lo'lium.** Darnel; a genus of grasses. **L. temulentum.** Bearded darnel. The seeds, when ground up with other grain and made into bread, have a narcotic effect, producing headache, vertigo, sleepiness, and confusion of mind. They contain acrid oils, and a bitter principle.
- lombardian drop'sy.** Another name for pellagra.
- longevity** (lon-jev'ti-e). Long life.
- longi-** (lon'je). A prefix from the Lat., *longus*, long; used to signify long, longitudinal.
- longissimus** (lon-jis'sim-us). See *table of muscles*, under *muscle*. [Lat., superl. of *longus*, long.]
- longitudinalis** (lon''ji-tu-di-na'lis). See *table of muscles*, under *muscle*.
- long'us.** See *table of muscles*, under *muscle*. [Lat.]
- loop.** A fold as of a string or a cord.
- Henle's l.** Henle's looped tubule. [Ir., *lub*, a bend, a noose.]
- loop'ing ill.** Of the veterinarians, a subacute inflammation of the spinal cord with serous and cellular infiltration; the principal symptom is trembling.
- loose.** Unconfined, lax, relaxed; of the intestinal canal, discharging its contents freely; of a cough, attended with free secretion. **l. skin.** Another name for *dermatolysis*.
- L. O. P.** Abbreviation for left occipital posterior presentation of the fetus in utero.
- lrophophorin** (lo-fof'o-rin). An alkaloid found in *Anhalonium Lewinii* and in *A. Williamsii*.
- lordosis** (lor-do'sis). An unnatural curvature of the spinal column with the convexity forward; generally an exaggeration of the natural curve of the lumbar region. [Gr., *lordosis*, from *lordos*, bent backward.]
- Lo'renz operation.** Manual reduction of congenital dislocation of the hip with retention of the hip in a position of abduction by a plaster of Paris splint until a new socket has formed. [*Adolph Lorenz*, Viennese orthopedist, born 1854.]
- loretin** (lo-re'tin). A derivative of quinin; used as an antiseptic.
- losophan** (los'o-fan). Tri-iodometacresol; used typically in skin diseases.
- lotahiston** (lo-tah-his'ton). The histon isolated from the spermatozoa of the frog.
- lo'tio.** See *lotion*. **l. adstringens.** Warren's styptic. A mixture of about equal parts of sulphuric acid, alcohol, and oil of turpentine. It should be used with caution [N. F.]. **l. flava** [N. F.], **l. hydrargyri flava** [Br. Ph.]. Yellow wash; made by adding mercuric chlorid in solution to solution of lime. **l. nigra** [N. F.], **l. hydrargyri nigra** [Br. Ph.]. Black wash; made by the addition of calomel to a solution of lime. **l. rubra.** A weak solution of zinc sulphate, colored with compound tincture of lavender. [Lat., *lotio*, lotion.]
- lo'tion.** A wash for local application.
- lead l.** See under *lead*. [Lat., *lotio*, lotion, from Gr., *lousis*, from *louein*, to wash.]
- Louis' angle.** An angle or recession first described by Louis as occurring between the manubrium and the body of the sternum in consequence of shrinking or retraction in the upper part of the thorax, especially in phthisis. [*Antoine Louis*, Parisian surgeon, 1723-1792.]
- loupe** (loop). A watchmaker's glass for magnifying.
- louse.** Pl., *lice*. A parasitic insect of the genus *Pediculus*, infesting the human hair and skin. [Old Eng., *lūs*.]
- lovage** (luv-aj). 1. *Levisticum officinale*. 2. The dried root of *Levisticum officinale*. It is official in several pharmacopœias. Said to be stimulant and carminative.
- low protein diet.** See in *appendix*.
- lox'a-bark.** Pale peruvian bark (unofficial) from *Cinchona officinalis*.
- loxotic** (lok-sot'ik). Slanting.
- loxotomy** (loks-ot'o-me). Amputation by oblique section. [Gr., *loxos*, oblique, + *tome*, a cutting.]
- lozenge** (loz'enj). Syn.: *troche*. A small, dry, solid, and generally flat mass, consisting chiefly of powders incorporated with sugar and mucilage (gum arabic or tragacanth). It is meant to be held in the mouth till dissolved in the saliva.
- lubraseptic** (lu-brah-sep'tik). A proprietary jelly or Irish moss with antiseptics.
- lubricant** (lu'brik-ant). Making smooth or slippery; as a n., a l. agent. [Lat., *lubricans*.]
- lucid** (lu'sid). Clear, not confused. As lucid interval it is used in law erroneously as a synonym of freedom from mental disease.
- luciform** (lu'sif-orm). Resembling light, of the nature of light. [Lat., *lux*, light, + *forma*, form.]
- Lucilia** (lu-sil'e-ah). A genus of flies. **L. caesar.** A species depositing their eggs on ulcers. **L. hominivorax.** Same as *Chrysomyia macellaria*. A fly occurring in Mexico and South America, the larvae of which are found in man, principally in the nasal cavities, perforating sometimes the parts they inhabit. **L. nobilis.** A species found in the auditory meatus. **L. regina.** A species causing intestinal myiasis. **L. sericata.** A species acting like *L. caesar*.
- lucilin** (lu'sil-in). A mixture of brown coal oil and lamp petroleum.
- ludato'ria.** See *hyperidrosis*.
- Ludwig's ganglion.** A g. in the right

- auricle of the heart. [Karl Friedrich Wilhelm Ludwig, German physiologist, 1816-1895.]
- lues** (lu'ez). A plague pestilence. Commonly applied to syphilis. [Lat., *lues*, plague.]
- luetic** (lu-et'ik). Having or pertaining to syphilis.
- luetin** (lu'et-in). An extract of a killed culture of several strains of *Treponema pallidum*; used in a skin test for syphilis. [Lat., *lues*, syphilis.]
- Lugol's caustic**. An aqueous solution containing 25 per cent. each of iodine and potassium iodide. **L's solution**. Liquor iodi compositus. [J. G. A. Lugol, physician in Paris, 1786-1851.]
- lumbago** (lum-ba'go). A rheumatic affection of the sheaths of the lumbar muscles on one or both sides, extending often to the ligaments of the sacrum. [Lat., *lumbus*, loin.]
- lum'bar**. Pertaining to the loin. [Lat., *lumbus*, loin.]
- lum'bar puncture**. Insertion of the point of a hollow needle into sheath of the spinal cord in the lumbar region, preferably through third intervertebral disk.
- lum'bo-**. Combining form of Lat., *lumbus*, loin; used to signify of or pertaining to the loin.
- lumbrical** (lum'brik-al). Pertaining to or resembling a *Lumbricus*.
- lumbricalis** (lum-brik-al'is). See *table of muscles*, under *muscle*.
- lumbricoid** (lum'brik-oid). Shaped like or resembling the earthworm, *Ascaris lumbricoides*. [Lat., *lumbricoides*, from *lumbricus*, an earthworm.]
- Lumbricus** (lum-bri'kus). Pl. *lumbrici*. 1. A genus of annelids, including earthworm. 2. Intestinal parasitic worm. [Lat.]
- lu'men**. The cross section of a cavity or tube. [Lat., *lumen*, light, window.]
- luminosity** (lu-min-os'it-e). Endowed with the property of producing light. In physiological optics the brightness factor in different colors. The distribution of luminosity in the spectral colors change with the amount of illumination. See *Purkinje phenomenon* under *Purkinje*.
- lump'y jaw**. Another name for *actinomyces*.
- lunacy** (lu'na-se). See *insanity*. [Lat., *luna*, the moon.]
- lu'nar**. Belonging to, associated with, or shaped like moon. **I. caustic**. Silver nitrate. [Lat., *lunaris*, from *luna*, moon.]
- lu'natic**. A person with a mental disease.
- lung**. The respiratory organ; the organ which serves for the aëration of the blood in an air breathing animal. In man the l's, two in number, are situated one in each lateral half of the thorax. They are divided into lobes and lobules made up of assemblages of air vesicles, to which the bronchi and bronchioles convey atmospheric air, and from which the same channels carry off carbon dioxide and other waste products of respiration. **black l**. See *anthracosis*. **fetal l's**. L's such as are found in the fetus, containing no air; they are relatively small, situated at the back of the thorax, yellowish pink, granular, and compact, and will not float in water. **fibroid l**. A l. affected with chronic interstitial pneumonia. **fibrous induration of l**. See *interstitial pneumonia* under *pneumonia*. **l. capacity**. See *breathing capacity*, under *breathing*. **l. fever**. Pneumonia. [Ang.-Sax., *lungen*.]
- lunula** (lu'nu-lah). The light colored arched or semilunar section of the nail near its root. **l. lacrimalis (ossis maxillae)**. A small ridge of bone which separates the antrum of Highmore from the lacrimal groove. **lunulae of the valves of the heart**. Two narrow lunated portions of the flaps of the semilunar and mitral valves. **l. scapulae**. See *suprascapular notch* under *notch*. [Lat., dim. of *luna*, the moon.]
- lupani** (lu'pan-e). Another name for *yaws*.
- lupanin** (lu'pan-in). A liquid alkaloid, $C_{15}H_{25}N_2O$, or $C_{15}H_{22}N_2O$, found in *Lupinus angustifolius*. It produces in animals paralysis of the encephalic centers together with an increase of the reflex excitability of the medulla oblongata.
- lupinin** (lu'pin-in). A name variously applied to extracts of *Lupinus* or to their alkaloids.
- lupinosis** (lu-pin-o'sis). A disease of cattle. [Lat., *lupinus*, lupine.]
- lupinotoxin** (lu'pin-o-toks'in). Of Arnold, a resinoid principle obtained from species of lupine producing lupinosis. Capable of producing the same disease in animals. [Lat., *lupinus*, lupine, + *toxin*.]
- lupinus** (lu-pi'nus). 1. (Adj.) See *lupinosus*. 2. Lupine; a genus of leguminous herbs or under shrubs. **l. albus**. Lupine or white lupine; an annual species, probably of Egyptian or east Mediterranean origin. It contains a poisonous uncrystallizable alkaloid, *lupinin*. **l. luteus**. Yellow lupine; a species of Mediterranean origin. In its physiological and toxic action it resembles *L. albus*. [Lat., *lupus*, a wolf.]
- lupiology** (lu-pe-ol'o'-je). The pathology of malignant ulcers. [Lat., *lupiologia*, from *lupia*, a wen, + Gr., *logos*, understanding.]
- lupous** (lu'pus). Pertaining to lupus.
- lupulin** (lu'pu-lin). Syn.: *humulin*. The glandular trichomes obtained from the fruit of hops. The oleoresin and the fluidextract are official in the U. S. Ph. [Lat., *lupulinum*, U. S. Ph.]
- lupulirrhetin** (lu'pu-lir-re'tin): A resinous substance, $C_{10}H_{16}O_4$, obtained from lupulin. [Lat., *lupulus*, the hop, + Gr., *retine*, resin.]
- Lupulus** (lu'pu-lus). 1. The genus *Humulus*. 2. Hops. **glandulae lupuli**. See *lupulin*. **tinctura lupuli**. A 20 per cent. tincture of hops [Br. Ph.]. [Lat. dim. of *lupus*, the hop plant.]
- lupus vulgaris** (lu'pus vul-gar'is). A chronic neoplastic infiltration of the skin, produced by the tubercle bacillus and characterized by brownish red tubercles, deeply embedded in the skin and coalescing to form nodules and patches. These,

- on disappearing, either with or without ulceration, leave scars. Clinical forms are: **1. marginatus**. Syn.: *Hilliard's l.* An eruption which begins with an initial patch resembling *l. verrucosus*, apparently due to local inoculation on the hand, spreading to the arm and the hand. **1. verrucosus**. Syn.: *tuberculosis verrucosa cutis, verruca necrogenica*. In this form the lesion consists of an elevated plaque with an indolent inflammatory base and a warty papillary surface. There are many varieties named according to the chief form of lesion or the situation of the growth, as: **1. annularis**, **1. disseminatus** (seu *discreta*), **1. erythematodes**, **1. lymphaticus**, **1. pernio**, **1. sclerosus**, **1. sebaceus**. [Lat., *lupus*, wolf.]
- Luschka's gland**. See *coccygeal gland*.
L's ton'sil. See *pharyngeal tonsil*.
- Lustig's serum**. A serum made for the treatment of bubonic plague. [*Alessandro Lustig*, Italian pathologist.]
- lu'sus**. A game, a jest. **1. naturae**. An object or form showing marked deviation from the course of nature; a freak. [Lat., *ludere*, to play.]
- lute**. A composition used for sealing vessels air-tight. [Lat., *lutum*, mud.]
- lutein** (lu'te-in). A preparation consisting of the desiccated yellow bodies of the ovaries, the corpora lutea, freed from adherent tissue. Sold in tablets of 5 grains, each representing 20 grains of *corpora lutea*. [Lat., *luteus*, yellow.]
- luteins** (lu'te-ins). Syn.: *lipochromes*. Very resistant pigments present in the yolks of eggs and various parts of the animal organism and soluble in alcohol, ether, and chloroform.
- luteolin** (lu-te-o'lin). A substance said to have been found in *Digitalis purpurea*.
- lutidin** (lu'tid-in). A liquid, dimethylpyridin, $C_8H_{12}N(CH_3)_2$, obtained among the products of the dry distillation of tar and bones. It has an acid odor and mixes in all proportions with water.
- luxation** (luks-a'tion). Dislocation or the removal of the articular surfaces of bones out of their proper relation to each other. See *dislocation*. [Lat., *luxatio*, from *luxare*, to put out of joint.]
- luxus consumption**. An old term, used in physiology to express the fact that more protein food is usually taken in the diet than is needed to maintain nitrogenous equilibrium.
- lycaconin** (li-kah'kon-in). A substance, having probably the composition $C_{23}H_{56}N_4O_8$, obtained by decomposing lycaconitin with boiling water.
- lycaconitin** (li-kah-kon'it-in). An alkaloid of the probable composition $C_{27}H_{34}N_2O_6 + H_2O$, obtained from *Aconitum lycotonum*. It is an energetic poison and is unsuitable for therapeutic purposes.
- Lycoperdon** (li-ko-per'don). Puffball; tuckahoe; Indian weed. A genus of gasteromycetous fungi. Of interest only because of their relation to poisonous fungi.
L. bovista. With other species, has a limited use in medicine. [Gr., *lykos*, a wolf, + *perdesthai*, to break wind.]
- Lycopodium** (li-ko-po'de-um). **1.** Club moss, the principal genus of the *Lycopodiaceae*. **2.** Of the *pharmacopeias*, the spores of *L. clavatum*; also of the U. S. Ph., the spores of other species. L. is a fine light yellow powder, odorless, tasteless, very mobile, floating on cold water without being wet by it, and burning in a flame with a slight explosion, but without smoke. L. is now used medicinally only as an absorbent application to excoriated surfaces, and in pharmacy for preventing the adhesion of pills or suppositories to each other. [Gr., *lykos*, a wolf, + *pous*, a foot.]
- Lycopus** (li'ko-pus). **1.** The water horehound; a genus of labiate bog herbs. **2.** The herb of *L. virginicus*. **L. virginicus**. Bugleweed; indigenous to North America. Its herb is used in infusion as a hemostatic. It is astringent. [Gr., *lykos*, a wolf, + *pous*, the foot.]
- Lycosa** (li-ko'sah). A genus of spiders.
L. tarantula. The European tarantula, the bite of which is very poisonous. See *tarantism*. [Gr., *lykos*, a kind of spider.]
- lying-in** (li'ing-in). Puerperal, parturient, in the condition incident to parturition; as a n., parturition and the puerperium.
- lymph** (limf). A clear fluid found in the lymphatic vessels and finally poured into the great veins at the nape of the neck. Chemically considered it consists of the substances found in the plasma of the blood. Histologically, it contains only white corpuscles (lymphocytes) and, after meals, the fat particles (chyle, fat) absorbed from the intestines. **animal l.** Vaccine l. from an animal. **bovine l.** Vaccine l. from a bovine animal. **calf l.** Vaccine l. from the calf. **croupous l.** Of Rokitsansky, the fibrinous exudation forming the false membrane in croup. **dried l.** Vaccine l. dried for preservation. **glycerinated l.** **glycerine l.** **glycerized l.** **glycerinized l.** Tube vaccine l. to which glycerin has been added to maintain its fluidity and to aid in its preservation. **humanized l.** Vaccine l. from the human subject. **inflammatory l.** A like exudate due to inflammation. **tissue l.** Syn.: *parenchymatous fluid*. Lymph bathing the tissue elements in contradistinction to that in the lymphatics. **tube l.** Vaccine l. preserved in the liquid form in sealed glass tubes. **vaccinal l.** **vaccine l.** The clear liquid contained in the pock of vaccinia, holding in suspension the microorganisms peculiar to the disease. In the human subject it exudes abundantly on multiple puncture of the pock on or before the eighth day after vaccination; in the cow its spontaneous flow is very sparing, but much of it may be squeezed out with forceps. Human vaccine l. is viscid, but clear; that from the cow is often straw-colored. Inoculated directly from the pock or in the form of stored l. (preserved in the liquid form in sealed glass tubes or dried be-

tween plates of glass or on a non-absorbent surface, and moistened at the time of use), vaccine 1. is employed in vaccination. **vituline 1.** See *calf 1.* [Lat., *lymphā.*]

lymphadenectasis (lim''fad-en-ek''ta-sis). Distention of the lymph vessels. [Lat., *lymphā*, lymph, + Gr., *aden*, a gland, + *ektasis*, distention.]

lymphadenia (lim-fad-e''ne-ah). That condition in which there is hypertrophy of all the lymphatic glands and organs, with or without an increase of the white blood corpuscles. [Lat., *lymphā*, lymph, + Gr., *aden*, gland.]

lymphadenitis (lim''fad-en-i''tis). Inflammation of a lymphatic gland. [Lat., *lymphā*, lymph, + Gr., *aden*, gland, + *itis*, inflammation.]

lymphadenoid (lim-fad'en-oyd). Of the nature of a lymph node. [Lat., *lymphā*, lymph, + *aden*, a node, + *eidōs*, resemblance.]

lymphadenoma (lim''fad-en-o''mah). 1. A lymphoma; especially one which tends to become generalized and to be developed in organs other than lymphatic glands; a lymphosarcoma. 2: A chronic disease characterized by multiple, disseminated growths of this sort; also called Hodgkin's disease, adenia, and pseudoleukocythemia. [Lat., *lymphā*, lymph, + Gr., *aden*, a gland, + *oma*, tumor.]

lymphagogus (lim-fag-og''us). Producing lymph. The *lymphagoga* of R. Heidenhain are chemical substances which, passing into the blood, promote the formation of lymph. He divides them into two classes; crystalline substances having a high osmotic pressure and organic substances of a protein nature. [Lat., *lymphā*, lymph, + Gr., *agein*, to lead.]

lymphangiectasis (lim''fan-ji-ek''ta-sis). An abnormal dilatation of a lymphatic vessel frequently present on the face or neck. **acquired 1.** L. due to lymphatic obstruction as from filarial elephantiasis. **cavernous 1.** A cavernoma containing lymph, and causing enlargement of certain tissues as macroglia. [Lat., *lymphā*, lymph, + Gr., *ageion*, vessel, + *ektasis*, dilatation.]

lymphangio-endothelioma (lim-fan''je-o-en''do-the-le-o''mah). A tumor consisting of whorled cell masses of endothelial cells, derived from the lymph channels.

lymphangiofibroma (lim-fan''je-o-fi-bro''mah). A neoplasm containing the elements of a lymphangioma and those of a fibroma. [Lat., *lymphā*, lymph, + Gr., *ageion*, a vessel, + Lat., *fibra*, fiber, + Gr., *oma*, tumor.]

lymphangiology (lim''fan-je-o''lo-je). The anatomy of the lymphatic vessels. [Lat., *lymphā*, lymph, + *ageion*, vessel, + *logos*, understanding.]

lymphangioma (lim''fan-ji-o''mah). A growth, congenital or acquired, consisting of dilated lymph spaces and lymphatic vessels, the resulting stricture resembling cavernous tissue. **cavernous 1.** **cystic 1.** A tumor consisting of a congeries of

large and small cysts having transparent lymphatic contents. **ganglionar 1.** L. with numerous small ganglia. **1. cavernosum.** See *cavernous lymphangiectasis*, under *lymphangiectasis*. **1. simplex.** A tumor consisting of an anastomosing network of small and capillary lymph glands. **1. vulvae.** Elephantiasis vulvae with hypertrophy of the lymph vessels and nodules. [Lat., *lymphā*, lymph, + Gr., *ageion*, a vessel, + *oma*, tumor.]

lymphangiosarcoma (lim-fan''ji-o-sar-ko''mah). A neoplasm containing the elements of a lymphangioma and those of a sarcoma.

lymphangitis (lim''fan-ji''tis). Inflammation of the lymphatic vessels. [Lat., *lymphā*, lymph, + Gr., *ageion*, a vessel, + *itis*, inflammation.]

lymphangoncus (lim-fan-gon''kus). An indurated swelling of the lymphatic vessels. [Lat., *lymphā*, lymph, + Gr., *ageion*, vessel, + *ogkos*, a mass.]

lymphatic (lim-fat''ik). Pertaining to lymph or to a lymph vessel; containing, producing, or modifying lymph; as a n., pl., *'s*, the vessels which convey the lymph from the different parts of the body which have a vascular supply and the chyle (the latter being more commonly termed lacteals), into the venous system. **'s of origin.** The small 's consisting of a single layer of endothelium. [Lat., *lymphaticus*, from *lymphā*, lymph.]

lymphatocele (lim-fat'o-sēl). A tumor formed by dilatation of lymphatic vessels.

lymphemia (lim-fe''me-ah). That form of leukocythemia in which the chief pathological activity is manifested in the lymphatic glands. These become hypertrophied, and elements of lymphatic tissue are even found in the liver, and sometimes in the kidneys. [Lat., *lymphā*, lymph, + *aima*, blood.]

lymphendothelioma (lim-fen''do-the-li-o''mah). See *lymphangio-endothelioma*.

lymphitis (lim-fi''tis). See *lymphangitis*. [Lat., *lymphā*, lymph, + Gr., *itis*, inflammation.]

lymphocele (lim'fo-sēl). A tumor containing a morbid accumulation of lymph. [Lat., *lymphā*, lymph, + Gr., *kele*, tumor.]

lymphocyte (lim'fo-sīt). A lymph corpuscle. See also in *appendix*, pages 900, 913. [Lat., *lymphā*, lymph, + Gr., *kytos*, a cell.]

lymphocythemia (lim-fo-si-the''me-ah). Excess of lymphocytes in the blood.

lymphocytoma (lim''fo-si-to''mah). A tumor of the lymphatic system with lymphocytes as the predominating element. [*Lymphocyte* + Gr., *oma*, tumor.]

lymphocytosis (lim''fo-si-to''sis). An increase in the number of lymphocytes in a blood or a serous exudate.

lymphocytotoxin (lim-fo-si-toks''in). A bacterial product or cytolytic serum acting on lymphocytosis. [Lat., *lymphā*, lymph, + Gr., *kytos*, a cell, + *toxin*.]

lymphodermia (lim-fo-der'me-ah). Another name for *mycosis fungoides*. [Lat., *lymp̄ha*, lymph, + Gr., *derma*, the skin.]

lymphogenic (lim-fo-gen'ik). Caused by extension from the lymphatic glands or vessels, as *lymphogenic tuberculosis*.

lymphogenous (lim-foj'en-us). Producing or secreting lymph. [Lat., *lymp̄ha*, lymph, + Gr., *gennan*, to produce.]

lymphogranulomatosis (lim''fo-gran-u-lo-ma-to'sis). Hödkin's disease. See *lymphadenoma*.

lymphoid (lim'foyd). 1. Lymphlike. 2. Pertaining to or associated with lymph or the lymphatic system. [Lat., *lymp̄ha*, lymph, + Gr., *eidōs*, resemblance.]

lymphoma (lim'fo'mah). A general term for a series of conditions ranging from chronic hyperplasia of lymphoid tissue to true tumors consisting of the various elements of a lymphatic gland. **1. granulomatousum**. The small white lymphatic nodules present in the liver in Hödkin's disease. [Lat., *lymp̄ha*, lymph, + Gr., *oma*, tumor.]

lymphomatosis (lim''fo-mat-o'sis). General glandular disease, usually a lymphosarcomatous type.

lymphomatous (lim-fo'ma-tus). Pertaining to or of the nature of lymphoma.

lymphomyceloma (lim''fo-mi-el-o'mah). A myeloma involving the lymphatic system.

lymphomyxoma (lim''fo-miks-o'mah). A lymphatic tumor composed of adenoid and myxomatous tissue.

lymphosarcoma (lim''fo-sar-ko'mah). A sarcoma developing from any of the cellular elements of a lymphatic gland. **1. thymicum**. L. that commences in the thymus glands with the secondary formation of large nodulated tumors in different parts of the body. [Lat., *lymp̄ha*, lymph, + Gr., *sarkōma*, a fleshy excrescence.]

lymphosarcomatosis (lim''fo-sar-ko-mat-o'sis). A malignant, multiple, hyperblastoid overgrowth of lymphatic tissue, including productive lymphadenitis, hyperblastosis with or without leukemia, and lymphoma. See *pseudoleukemia*.

lymphostasis (lim-fos'tas-is). A stasis of lymph. [Lat., *lymp̄ha*, lymph, + Gr., *stasis*, a placing.]

lymphotoxin (lim-fo-toks'in). The toxin or lysin found in the lymphatic glands.

lymphous (lim'fus). Pertaining to or consisting of lymph.

lymph varices (limf'va'ri-ses). Dilated spaces of cysts formed in the lymph nodes, from obstruction to the flow from the efferent lymphatics.

lypmania (li-pe-ma'ne-ah). Melancholia. [Gr., *lype*, sadness, + *mania*, mania.]

lyra (li'rah). The ventral surface of the fornix cerebri at its posterior part, which, from the transverse lines that cross it, *arbor vitae*. **1. vaginalis**. The rugos bears some resemblance to a lyre. **1. uterina**. See *arbor vitae uterina*, under surface of the vagina. [Gr., *lyra*, harp.]

lysemia (li-se'me-ah). Disintegration of the blood. [Gr., *lysis*, solution, + *aima*, blood.]

lysidin (lis'id-in). A 50 per cent. solution of ethylene-ethyl-amidin, $C_4H_8N_2$. It is used as a substitute for piperazin.

lysin (li'sin). 1. One of the amino acids resulting from the hydrolysis of proteins. It is alpha-epsilon-diamino-caproic acid, $NH_2(CH_2)_4CH(NH_2)COOH$. It is one of the hexone bases. 2. Antibody which disintegrates or dissolves its antigen.

lysis (li'sis). 1. The general solvent power of normal or immune serum for foreign cells or other substances. 2. The gradual defervescence of a fever. [Gr., *lyein*, to dissolve.]

lysoform (lis'o-form). A soapy preparation of formic aldehyd; used as a disinfectant.

lysogenesis (li-so-jen'es-is). The production of lysins.

lysol (li'sol). A brownish, syrupy preparation, saponaceous in character, made from coal-tar products consisting to a large extent of cresols. It is used as an antiseptic and disinfectant. In surgery, it is often used as a wash in a solution of one to three per cent.

lysolvoeol (li-so-sol've-ol). A disinfectant solution of potassium linoleate and cresols.

lyssa (lis'sah). Syn.: *hydrophobia*, *rabies*. See *hydrophobia*. See *rabies*. [Gr., *lyssa*.]

lyssic (lis'ik). Pertaining to hydrophobia.

lyssin (lis'in). The specific virus of hydrophobia.

lyssophobia (lis-so-fo'be-ah). Groundless fear of rabies, often inducing actual hydrophobic symptoms. [Gr., *lyssa*, madness, + *phobos*, fear.]

lysyl-lysin (li'sil-li'sin). A dipeptid containing two molecules of lysin in combination.

lytic (lit'ik). Pertaining to lysis or to a lysin; producing lysis.

Lytta (lit'tah). A genus of coleopterous insects. **L. vesicatoria**. See *Cantharis vesicatoria*. **L. vittata**. The potato fly; a black species about six lines long, formerly official in the U. S. Ph. It contains cantharidin, and may be applied to the same purposes as cantharides.

M

macaco worm (mah-kah'ko worm). The larva of the fly, *Dermatobia noxialis*.

mace (mäs). The aril of the nutmeg (fruit of *Myristica fragrans*). [Lat., *macis*, *macidis*.]

macene (ma'sen). An essential oil, $C_{20}H_{32}$, obtained by distilling nutmeg flowers with water.

maceration (mas-er-a'shun). In pharmacy, the soaking of a substance in a

- liquid in order to separate the soluble parts. In anatomy, the more or less prolonged immersion of tissues in a liquid for the purpose of dissolving certain principles and modifying their consistence, in order to facilitate their isolation from other parts and render them capable of more minute examination. In obstetrics, the partial dissolving of the *fetus in utero* (or, in the case of a very young fetus, its entire solution), first manifested by the epidermis becoming loosened, with the formation of blebs. **Schultze's m. fluid.** See under *Schultze*. [Lat., *macerare*, to macerate.]
- Macewen's operation.** Supracondyloid osteotomy of the femur for the cure of knock-knee. [Sir *William Macewen*, Scotch surgeon, born 1848.]
- macis** (ma'sis). See *mace*. **oleum macidis.** Oil of mace.
- mackintosh** (mak'in-tosh). The name used to designate garments or waterproof material made by cementing together with india rubber two layers of cloth. Now applied to any cloth made waterproof by a coating of india rubber. [*Charles Mackintosh*, 1766-1843.]
- mac'ro-, macr-**. Combining form of Gr., *makros*, long, large; used as a prefix in compound words to indicate large or long.
- macrocephalia** (mak-ro-sef'al'e-ah). An abnormally large size of the head. [Gr., *makros*, large, + *kephale*, the head.]
- macrocephalus** (mak-ro-sef'al-us). A fetus with an abnormally large head. [Gr., *makros*, large, + *kephale*, the head.]
- macrocheiria** (mak-ro-ki're-ah). Excessive development of the hands. [Gr., *makros*, large, + *cheir*, hand.]
- macrochemical** (mak-ro-kem'ik-al). Chemical and recognizable without the aid of the microscope. [Gr., *makros*, large, + *chemical*.]
- macrocococcus** (mak-ro-kok'us). A bacterial coccus of the largest recognized size. [Gr., *makros*, large, + *kokkos*, berry.]
- macrocyt** (mak'ro-sist). A large cyst. [Gr., *makros*, large, + *kystis*, cyst.]
- macrocytase** (mak-ro-si'tas). The cytase or ferment contained in the macrophage and which digests various tissue cells and certain bacteria of the chronic infections, such as tuberculosis.
- macrocyte** (mak'ro-sit). An abnormally large red blood corpuscle present in certain diseases. Its diameter is from 10 to 12.9 μ . [Gr., *makros*, large, + *kytos*, a cell.]
- macrocythemia** (ma-kro-si-the'me-ah). The occurrence of macrocytes in the blood. [*Macrocyte* + Gr., *aima*, blood.]
- macrocytosis** (mak-ro-si-to'sis). The formation of macrocytes.
- macroactylia** (mak-ro-dak-til'e-ah). Abnormal size of the fingers or toes. [Gr., *makros*, large, + *daktylos*, finger.]
- macrogamete** (mak-ro-gam'et). The female extracorporeal gamete or cell before fertilization. [Gr., *makros*, large, + *gametes*, spouse.]
- macrogametocytes** (mak-ro-gam-e'to-sits). The female intracorporeal parasite observed in the blood in malarial disease. [Gr., *makros*, large, + *gametes*, spouse, + *kytos*, cell.]
- Macrogaster** (mak-ro-gas'ter). A genus of the order *Acarina*, and the family *Demodicidae*, or small mites. **M. platiplus**, **M. platypus**. See *Demodex folliculorum*. [Gr., *makros*, large, + *gaster*, the belly.]
- macrogastrica** (mak-ro-gas'tre-ah). Dilatation of the stomach. [Gr., *makros*, large, + *gaster*, stomach.]
- macrogllossia** (mak-ro-glos'se-ah). A hypertrophic enlargement of the tongue. [Gr., *makros*, large, + *glossa*, tongue.]
- macromelia** (mak-ro-me'le-ah). Excessive size of some limb. [Gr., *makros*, large, + *melos*, limb.]
- macropathology** (mak'ro-path-ol'o-je). The study of the non-microscopic changes produced by disease of organs and tissues. [Gr., *makros*, large, + *pathology*.]
- macrophage** (mak'ro-faj). A large phagocytic cell, which incorporates and digests red blood corpuscles and other tissue cells. [Gr., *makros*, large, + *phagein*, to devour.]
- macrophagocyte** (mak-ro-fag'o-sit). A phagocyte of relatively large size. [Gr., *makros*, large, + *phagein*, to eat, + *kytos*, cell.]
- macrophallus** (mak-ro-fal'lus). An abnormally large penis. [Gr., *makros*, large, + *phallos*, the penis.]
- macrophthalmus** (mak-rof-thal'mus). An over-developed eye. [Gr., *makros*, large, + *ophthalmos*, eye.]
- macroptia** (mak-ro'pe-ah). A disorder of vision in which all objects seem larger than they really are. [Gr., *makros*, large, + *ops*, eye.]
- macroscopic** (mak-ro-skop'ik). 1. Easily seen with the naked eye. 2. Pertaining to gross appearances. **macroscopical examination of stomach contents**, see in *appendix*, page 903. **m. examination of cerebrospinal fluid**, see in *appendix*, page 909. **m. examination of sputum**, see in *appendix*, page 901. **m. examination of stool**, see in *appendix*, page 905. [Gr., *makros*, long, + *skopein*, to examine.]
- macrosomatia**, **macrosonia** (mak-ro-so-ma'te-ah, mak-ro-so'me-ah). A monstrosity consisting in enormous size of the body. [Gr., *makros*, large, + *soma*, the body.]
- macrostoma** (mak-ro'sto-mah). A variety of harelip, in which the deformity involves the cheeks, the fissures extending from the angles of the mouth outward, causing an enlargement of this natural opening.
- macrostyle**. See *giant blood cell*, under *cell*.
- macrotin** (mak'ro-tin). Of the eclectics, an impure resin obtained by precipitating a saturated tincture of cimicifuga with water.
- macula** (mak'u-lah), pl., *maculae*. A macule, spot, stain, or blemish. **cerebral**

maculae. Reddened lines, becoming gradually deeper in color and persisting a considerable time, produced, in tubercular meningitis, by drawing the finger nail lightly across the skin (especially that of the abdomen or thorax). **germinal m.** See *germinal spot*, under *spot*. **maculae ceruleae.** Pea to finger-nail sized, steel gray stains of the epidermis, without elevation and do not disappear on pressure, occurring in persons with fair delicate skins in connection with pediculosis pubis. **maculae cribrosae.** See *maculae cribrosae (vestibuli)*. **m. cribrosa inferior.** The group of foramina through which the fibers of the auditory nerve pass to the posterior semicircular canals. **m. cribrosa media.** The group of foramina through which the fibers of the auditory nerve pass to the sacculle. **m. cribrosa quarta, m. cribrosa recessus cochlearis.** The group of foramina through which passes the twig of the small branch of the cochlear nerve. **m. cribrosa superior.** The group of foramina through which the fibers of the auditory nerve pass to the utricle and to the ampullae of the anterior vertical and the horizontal semicircular canals. **maculae cribrosae (vestibuli).** Certain spots or regions on the crista vestibuli, as well as on the floor of the two vestibular recesses, having a number of foramina for the passage of the filaments of the vestibular nerve. **m. folliculi.** See *stigma folliculi*. **m. fossae hemisphaericae.** See *m. cribrosa media*. **m. gonorrhoeica.** A red spot at the orifice of each vulvovaginal gland in gonorrhoeal vulvitis. **m. lutea (retinae).** The region of the center of vision in the retina, an ill-defined space of reddish yellow or tawny color, having at its center a depression, the *fovea centralis*. **m. of the graafian vesicle.** See under *stigma*. **Robert's m.** See under *Robert*. **Sanger's m.** See under *Sanger*. [Lat.].

macular (mak'u-lar). Of or pertaining to maculae. Characterized by maculae.

maculated (mak'u-la-ted). Spotted.

macule (mak'ül). A permanent discoloration of some portion of the skin, but with no elevation of its surface. [Lat., *macula*, a spot, or stain.]

madarosis (mad-ar-o'sis). Loss of the eyelashes. [Gr., *madaros*, bald.]

Mad'der. 1. The genus *Rubia*, especially *Rubia tinctorum*. 2. Dyer's m., the root of *Rubia tinctorum*, formerly official.

Maddox test. A t. to determine the relative direction of the visual axes by the use of small glass cylinders set in a frame.

madefaction (mad-e-fak'shun). The act of moistening or making wet. [Lat., *madefacere*, to moisten.]

madidans (mad'id-ans). Weeping, exuding. [Lat., pres. pple. of *madidare*, to wet, to moisten.]

ma'dor. A dripping sweat. [Lat., *madere*, to be wet.]

Madu'ra foot. Another name for *mycetoma*. [Madura, a province of Madras, India.]

Madurel'la myceto'mi. Syn.: *Streptothrix mycetomi*. The fungus causing mycetoma.

Magendie's solution. A solution of 16 grains of morphin sulphate in an ounce of water. The name Magendie is often unfortunately applied to solutions of morphin sulphate of different strengths. [François Magendie, French physiologist, 1783-1855.]

magisterium (mah-gis-te're-um). A name used by the followers of Paracelsus for certain medicinal preparations, especially such as were made by precipitation and which were believed to possess extraordinary virtues. The term is still sometimes employed for bismuth subnitrate (*m. bismuth*) and for precipitated sulphur (*m. sulphuris*). [Lat., *magister*, master.]

magistral (maj'is-tral). Pertaining to a master or to one who gives direction; of medicines, made up to order, compounded as prescribed for a special occasion. [Lat., *magister*, master.]

magma (mag'mah). A pasty or pulpy mass, especially the residuum after water has been pressed out or drained or poured off. **m. magnesiae.** See under *magnesia*. [Gr., *magma*, from *massein*, to knead.]

magnumal (mag-na'le-um). A silver white alloy of aluminum and magnesium, of high reflecting power.

magnesia (mag-ne-se'ah). Originally, black oxid of manganese, so called from confusion with magnetic iron ore. This was subsequently called *m. nigra*, and the term *m. alba* was given to what is now known as magnesium carbonate, and is still used occasionally. In German medical literature the term *m.* usually refers to the carbonate, in English medical literature to the oxid, MgO, but blocks of magnesium carbonate are commonly called *magnesia* by the laity. *M.* is obtained by the calcination of magnesium carbonate; it is odorless, has a slightly alkaline taste, and shows a faint alkaline reaction when moistened; it is insoluble in alcohol and only slightly soluble in water. When occurring in the form of powder, it is designated according to its density as *light m.* and *heavy m.* The *m.* of the U. S. Ph., 1890 (magnesium oxidum, U. S. Ph., viii) is light *m.*; a light powder, white and fine, devoid of odor and having an earthy taste. **calcined m.** Magnesium oxid obtained by freeing magnesium carbonate from its water and carbonic acid by heating to a low red heat. **heavy m.** (calcined *m.*). See *m. ponderosa*. **Henry's m.** See under *Henry*. **Husband's m.** See *m. ponderosa*. **lac magnesii.** Milk of *m.*; made by triturating magnesium with water or water and glycerin, so as to form a suspension. See also *magma magnesiae*. **magma magnesiae.** Milk of *m.*; a mixture containing 5 per cent. of freshly precipitated magnesium hydroxid in suspension [N. F.]. **m. alba.** A mixture of magnesium hydroxid and magnesium carbonate. **m.**

levis. Light calcined magnesia [Br. Ph.]. **m. meta.** See *magnesium oxid.*
m. mixture. In chemistry, a solution of magnesium sulphate and ammonium chlorid in an excess of ammonium hydroxid. Used to precipitate phosphoric acid. **m. ponderosa.** M. obtained by the calcination of heavy magnesium carbonate. It is a white powder, having the same properties as light m., but $3\frac{1}{2}$ times the density [U. S. Ph., Br. Ph.]. [Gr., *magnes*, a magnet.]

magnestic (mag-ne'sik). Pertaining to or containing magnesium or some of its compounds. [Lat., *magnesticus*.]

magnesium (mag-ne'se-um). A silvery white metal, which readily oxidizes in moist air, is both malleable and ductile, melts at a red heat, and, on ignition, burns with a brilliant white light, particularly rich in chemical rays. It occurs extensively distributed throughout the mineral kingdom, and is also present in small quantities in animal and vegetable organisms. Atomic weight, 24.41. Symbol, Mg. Sp. gr., 1.75. **heavy m. carbonate.** A preparation made by precipitating a solution of m. sulphate with sodium carbonate and drying the precipitate [Br. Ph.]. **liquor magnesi bicarbonatis.** Solution of bicarbonate of m.; made by dissolving extemporaneously prepared basic m. carbonate in water charged with carbon dioxide. It contains about 10 grains of the bicarbonate to the fluidounce [Br. Ph.]. **liquor magnesi citratis.** Commonly called "*citrate of magnesia*." A preparation made by introducing potassium bicarbonate into an acid solution of m. citrate and syrup of lemon and sealing hermetically [U. S. Ph.]. **m. ammonium phosphate.** $MgNH_4PO_4$, an insoluble white substance, present in urinary calculi and often deposited in alkaline urine. Crystallizes in starlike crystals. **m. borocitrate.** A mixture of m. borate, m. citrate, and borax. **magnesi carbonas** [U. S. Ph.], **magnesi carbonas levis** [Br. Ph.]. See *m. carbonate*. **magnesi carbonas ponderosus.** See *heavy m. carbonate* [Br. Ph.]. **m. carbonate.** $MgCO_3$, an insoluble white substance. The magnesi carbonas of the U. S. Ph. is $(MgCO_3)_2Mg(OH)_2 + 5H_2O$, a mixture of m. carbonate and m. hydroxid. It is an anti-acid and a mild purgative. **magnesi citras.** See *m. citrate*. **magnesi citras effervescens.** A preparation of m. carbonate, citric acid, and water enough to form a paste; this mixture (forming a m. citrate), is then dried, powdered, mixed with sodium bicarbonate, sugar, and citric acid, dampened with alcohol and rubbed through a coarse sieve, so as to form a coarsely granular powder [U. S. Ph., 1890]. **m. citrate.** The m. salt of citric acid or a mixture of citric acid and m. carbonate, which has been moistened with water or alcohol and then dried. Used as a purgative. **m. fluorid.** MgF_2 , a white powder, used as an antiseptic. **m. glycerinophosphate.** The m. salt of glycerophosphoric acid, $C_3H_7O_3PO_3Mg$.

A nerve tonic. **m. ichthyolate.** A mixture of m. oxid and ichthylol. **m. lactate.** The m. salt of lactic acid $(CH_3-CHOH.COO)_2Mg$. A white substance, used as a laxative. **m. oxid.** MgO , a white powder formed by heating m. carbonate. **m. phosphate.** $Mg_3(PO_4)_2$, a white insoluble substance, present in many plants and found at times in urinary calculi. **m. salicylate.** The m. salt of salicylic acid, $Mg(C_6H_4(OH)COO)_2$, a white crystalline substance, used in typhoid fever. **magnesi sulphas.** See *m. sulphate* [U. S. Ph., Br. Ph.]. **m. sulphas effervescens.** Effervescent m. sulphate, a granular salt of sodium bicarbonate and of citric and tartaric acids. It is a laxative [U. S. Ph.]. **m. sulphate.** Syn.: *Epsom salts*. $MgSO_4 + 7H_2O$; a bitter salt, readily soluble in water. Used as a mild purgative. **m. sulphite.** $MgSO_3 + 6H_2O$; an antiseptic. **solution of bicarbonate of m.** See *liquor magnesi bicarbonatis*. [Br. Ph.]. **solution of citrate of m.** See *liquor magnesi citratis* [U. S. Ph.].

mag'net. A substance possessing the property of attracting iron, also other substances (especially nickel) in a much feebler degree, and of being itself attracted by those substances. The points at or near the ends of a magnetic bar where such attraction is concentrated, and which, owing to the earth's magnetic attraction, assume a position toward the north and south respectively, are the poles of the magnet. There are two kinds of m's, the natural m.—loadstone, magnetic iron oxid. (*q. v.*, under *iron*)—and artificial m's (i. e., bars or needles of steel), which have acquired magnetic properties from being rubbed with a m., or otherwise. **electro-m.** A bar of soft iron rendered magnetic during the passage of a galvanic current through insulated copper wire wound around it. **Gruening's m.** See under *Gruening*. **horseshoe m.** An artificial m. bent into the shape of a horseshoe. **permanent m.** A m. whose magnetic properties are lasting, i. e., not depending on contact with another m. or on imparted magnetic influence. **temporary m.** A m. whose magnetic properties are dependent upon contact with another m. or upon the influence of a neighboring galvanic current. [Gr., *magnes*, *magnetos*, a magnet, from *Magnesia*, a district of Thessaly.]

magnetic (mag-net'ik). Of or pertaining to a magnet or magnetism; having the properties of a magnet.

magnetism (mag-net-izm). 1. The cause of the attraction exercised by a magnet. 2. That branch of science which treats of the magnet, its properties, and their phenomena. **animal m.** A supposititious power by means of which persons of strong will influence those of weaker will; the power which is said to induce the mesmeric state.

magnetite (mag-net-īt). See *magnetic iron oxid*, under *iron*. [Gr., *magnes*, a magnet.]

magnetization (mag-net-i-za'shun). 1. The act of imparting magnetic properties to a substance. There are three sources of m.; the influence of a natural or artificial magnet, the action of the earth as a magnetic substance, and electricity. 2. The act of being brought under, or the state of being under, the influence of magnetism. [Gr., *magnes*, a magnet.]

mag'neto-. Prefix, formerly representing the combining form of Gr., *magnes*, *mag-netos*, magnet; now used to form combinations denoting processes carried on by magnetic means.

magneto-electric (mag'net-o-e-lek'trik). Pertaining to magneto-electricity. [Gr., *magnes*, a magnet, + *elektron*, amber.]

magneto-electricity (mag'net-o-e-lek-tris'-it-e). 1. Electricity developed by means of magnetism. 2. The science of the mutual relations of magnetism and electricity and the phenomena of their conjunction or their combinations.

magnetograph (mag-net'o-graf). An instrument for indicating the intensities and variations of magnetic forces. [Gr., *magnes*, a magnet, + *graphein*, to write.]

magnetologia (mag'net-o-lō'j'e-ah). The science of the action (real or pretended) of a magnet or of magnetic forces. [Gr., *magnes*, a magnet, + *logos*, understanding.]

magnetometer (mag-net-om'et-er). An instrument for measuring magnetic forces. [Gr., *magnes*, a magnet, + *metron*, a measure.]

Magnolia (mag-no'le-ah). 1. A genus of plants. 2. The bark of *M. glauca*, *M. acuminata*, and *M. tripetala*; used as a mild aromatic tonic and diaphoretic. The bark of *M. glauca* was formerly official in the U. S. Ph. **M. acuminata**. The cucumber tree; a species growing in the interior mountainous regions of the United States. It is one of the sources of m. (2d def.). **M. glauca**. White bay, beaver tree, swamp sassafras, white laurel, elk bark, castor wood; found in low situations near the sea from Massachusetts to the Gulf of Mexico. It is largely used as a source of m. bark. **M. tripetala**, **M. umbrellata**. The common umbrella tree; common in the southern United States. Its fruit contains magnolin, and its bark constitutes part of the m., of the U. S. Ph., 1880. [*P. Magnol*, 1638-1715.]

maidenhead (mād'en-hed). The state or condition of a maiden; virginity.

maidism (ma'id-izm). Poisoned by damaged maize.

maim (mām). To mutilate, cripple, render powerless. [Mid.-Eng., *maynke*, *mayn*, Old-Fr., *mayner*, to mutilate, to cripple.]

main (mān). Hand. [Fr.]

mal. See *disease*. **grand m**. See *epilepsia gravior*. **m. de Melada**. Symmetrical keratosis of the extremities, endemic on the island of Melada, off the coast of Dalmatia. See *keratoderma*. **m. de mer**. See *seasickness*. **m. de tête**. See *cephalgia* and *headache*. **petit m**. A mild, or minor attack of

epilepsy. [Fr., from Lat., *malum*, an evil.]

Mal'abar itch. Another name for *tinea imbricata*. **M. ulcers**. Another name for *phagedena tropica*.

malacia (mal-a'se-ah). 1. A softening, especially a morbid softening of tissues. 2. See *pica*. **hallisteric m**. A form of m. in which the calcium salts are absorbed. **vascular m**. A form of m. in which there is an enormous new formation of vessels. [Gr., *malakia*, from *malakos*, soft.]

malacoma (mal-ak-o'mah). See *malacia*. **malacosarcosis** (mal-ak-o-sar-ko'sis). Softness of muscular tissue. [Gr., *malakos*, soft, + *sarx*, flesh.]

malacosis (mal-ak-o'sis). See *malacia*. **malady** (mal'ad-e). See *disease*. [Lat., *malum*, an evil.]

Malaguti's law. The l. that when solutions of two different salts are mixed, "metathesis occurs and four salts result, the proportions of the salts to each other are dependent on the strength or intensity of force with which the respective basic and acid radicles are united."

malakin (mal'ak-in). Salicyl-paraphenetidin, (C₆H₄(OC₂H₅)N.CH.C₆H₄.OH + H₂O). An antipyretic.

malakoplakia vesicae (mal'ak-o-pla'keh-ah ves-i'ke). A funguslike growth of the bladder.

malaria (mal-a're-ah). Malarial fever, known to be due to a blood parasite and not to foul air. [Ital., *mala aria*, bad air.]

malarial (mal-a're-al). Pertaining to, or of the nature of malaria.

malarin (mal'ar-in). Acetophenonephenetidin citrate, (C₆H₅C(CH₃):N.C₆H₄.OCa-H₅); antipyretic and antispasmodic.

malarious (mal-a're-us). 1. See *malarial*. 2. Abounding in malaria.

Malasse'zia. A genus of the order *Hyphomycetes*. **M. furfur**. A species which causes *pityriasis versicolor*. **M. tropica**. A species causing *tinea flava*.

malassimilation (mal-as-sim-il-a'shun). Morbid or defective assimilation.

malate (mal'lät). A salt of malic acid.

malformation (mal-form-a'shun). A structural anomaly or abnormal formation of the fetus, due to defective or misdirected development, as distinguished from graver departures from the normal, known as abnormalities and monstrosities. **congenital m**. A congenital anomaly of a part, fetus, or organ. **parasitic m**. A parasitic anomaly. [Lat., *malus*, evil, + *formatio*, a forming.]

Malgaigne's hook. An apparatus for approximating the fragments in fracture of the patella; consisting of two sliding plates, each terminating in two sharp h's, which pierce to the bone above and below, and are then drawn together by a screw.

malgenic (mal-jen'ik). Disease producing. [Lat., *malum*, disease, + Gr., *gennan*, to engender.]

malign (mal-in'). See *malignant*.

malignancy (mal-ig'nān-se). The state of being malignant. **traumatic m**. The

- development of a malignant neoplasm as the result of traumatism. [Lat., *mal-ignitas*.]
- malignant** (mal-ig'nant). 1. A term applied to that class of tumors which infiltrate tissues, form secondary growths, produce cachexia, and destroy life. The term is often opposed to benign. 2. Of a disease, threatening a fatal issue. [Lat., *malignans*, p. ppl. of *malignare*, to do mischief.]
- malignerer** (mal-in'jer-er). One who feigns sickness, especially with the object of being excused from work. [Fr., *malingre*, sickly.]
- mal'is pedic'uli**. Another name for *pediculosis*.
- mallein** (mal'e-in). A glycerinated bouillon extract of the bacillus of glanders which is used for diagnostic purposes in suspected glanders in horses, an injection producing a rise of temperature in diseased animals. [Lat., *malleus*, farcy.]
- malleinization** (mal-le-in-is-a'shun). Inoculation with mallein.
- malleolus** (mal-le'o-lus). See under *ankle*.
- lateral m.** The prominence formed by the inferior extremity of the fibula.
- medial m.** A thick process on the inferior extremity of the tibia.
- m. radialis**. The styloid process of the radius.
- m. ulnaris**. The styloid process of the ulna. [Lat., dim. of *malleus*, hammer.]
- mal'let fing'er**. See *drop-finger*, under *finger*.
- malleus** (mal'le-us). The first of the chain of small bones in the tympanic cavity. It articulates by its head with the incus, forming the malleo-incudal joint, and its handle is surrounded by the fibers of the membrana tympani. [Lat., *malleus*, a hammer.]
- mallotoxin** (mal-lo-toks'in). A crystalline body, $C_{18}H_{16}O_8$, obtained from kamala (see *Mallotus philippinensis*).
- Mallotus** (mal-lo'tus). A genus of euphorbiaceous trees and shrubs. **M. philippinensis**. A species usually known as *Rottlera tinctoria*. The glands and hairs of the capsules constitute the *kamala* (q. v.) of the U. S. Ph., 1890.
- malnutrition** (mal-nu-trish'un). Defective nutrition.
- malonate** (mal'on-ät). A salt of malonic acid.
- malonyl** (mal'on-il). The bivalent radicle of malonic acid, CO_2CH_2CO . **m. urea**. Syn.: *barbituric acid*.
- Malot's reaction**. A r. for the quantitative determination of phosphoric acid in urine, based on the r. with cochineal and a uranium salt.
- Malouetia** (mal-u-e'te-ah). A genus of apocynaceous trees or shrubs. **M. nitida**. A species said to be one of the sources of curare.
- malpighian** (mal-pig'e-an). Described by or named from *Marcello Malpighi*, an Italian anatomist. **m. corpuscles**. Syn.: *m. capsule*. 1. The globular cecal dilations forming the origin of the urinary tubules. 2. The glomeruli or malpighian tufts of blood vessels contained in a Bow-
- man's capsule. 3. The globular masses of lymphoid tissue developed in the adventitia of the arteries of the spleen.
- malpractice** (mal-prak'tis). 1. Misconduct on the part of a medical attendant in the treatment of a case, whether arising from culpable ignorance or neglect or consisting in acts or practices that are themselves criminal. 2. The criminal induction of abortion; usually called *criminal m.* [Lat., *malpraxis*, from *malus*, evil, + Gr., *praxis*, an action.]
- malt**. Grain, chiefly barley, which has become sweet by the conversion of its starch into sugar as a result of the process of malting or artificial germination. It contains dextrin, maltose and diastase. It is nutritive and digestant, aiding in the digestion of starchy foods, and is used in tuberculosis, cholera, infantum and other wasting diseases. **dry extract of m.** A proprietary preparation consisting of a white powder having the taste of m. sugar. **m. sugar**. See *maltose*. **Merck's dry extract of m.** See under *Merck*. **Trommer's extract of m.** See under *Trommer*. [Lat., *maltum*.]
- Malta fever**. A specific continued endemic f. of the island of Malta, due to the *Micrococcus melitensis*; characterized by profuse perspiration and sudamina, constipation, swelling of the joints, and usually an enlarged spleen.
- maltase** (maw'l'täs). An enzyme which has the property of hydrolyzing maltose to glucose.
- malthusianism** (mal-thu'se-an-izm). The doctrine that at the normal rate of increase the population tends to increase faster than the means of subsistence can; and that, therefore, society should check the growth of population by late marriages and sexual continence. [Rev. T. R. Malthus, English economist, 1766-1834.]
- maltine** (maw'l'tën). A proprietary preparation of malt; a yellow syrup with a sweet, maltlike taste. **m. extractive**. Of Schmidt, a substance obtained by precipitating the aqueous solution of malt by alcohol, evaporating to a firm consistence, and adding 10 per cent. of glycerin.
- maltobiose** (maw'l-to-bi'ös). Of *Scheibler*, maltose.
- maltocarnis** (maw'l-to-kar'nis). An English proprietary food preparation of extract of malt, cocoa, and uncooked beef juice.
- maltodextrin** (maw'l-to-deks'trin). A compound carbohydrate, forming an intermediate product in the conversion of starch into glucose.
- maltose** (maw'l'tös). A compound carbohydrate, $C_{12}H_{22}O_{11} + H_2O$, obtained from starch by the action of dilute acids, diastase, or the animal hydrolytic ferments. By the action of dilute acids and maltase it is hydrolyzed to two molecules of glucose. It is fermentable with baker's yeast and will reduce Fehling's solution. It is one of the hexobioses.
- maltum**. See *malt* [U. S. Ph.].

- maltzyme** (mawlt'zim). A preparation somewhat similar to the extractum malti of the U. S. Ph.
- malum** (mah'lum). See *disease*. **m. coxae senile**. A form of arthritis deformans of the hip in which the symptoms closely resemble those of intracapsular fracture. **m. perforans pedis**. Perforating ulcer of the foot; a severe form of ulceration affecting the sole of the foot. The disease begins with thickening of the epidermis, and perhaps other trophic changes, such as abnormal pigmentation, hypertrichosis, and modifications in the growth of the nails. The ulcer, which at first is always round as if punched out with a perforating instrument, extends both in depth and in area, involving all the tissues, including the joints and the bones. The disease is believed to be of neuropathic origin. [Lat., *malus*, wicked, injurious, hence disease.]
- malum** (ma'lum). The apple; of the ancients, any rounded, fleshy fruit (e. g., the peach, orange, or pomegranate). [Lat., *malum*.]
- Malva** (mal'vah). The mallow. **flores malvae silvestris**. The flowers of *M. silvestris* or of *M. rotundifolia*, or of both. **M. silvestris**. The common mauls. The whole plant, especially the root, abounds in mucilage, and is used in its fresh state as an antiphlogistic cataplasm. The herb (leaves) and flowers are used as emollients and demulcents.
- Mamillaria** (mam-il-la're-ah). The nipple cactus. **M. Lewini**. A species yielding the so-called *mescale buttons*, and containing a poisonous alkaloid, anhaloin. See *Anhalonium*. [Lat., *mamilla*, nipple.]
- mamillary** (mam'il-la-re). 1. Pertaining to the nipple. 2. Nipple-shaped. **m. line**. See under *line*. [Lat., *mamillaris*.]
- mamma** (mam'mah). The mammary gland. **m. aberrans**. That variety of supernumerary mammary gland in which a separate gland lying on or near the pectoralis major muscle has a distinct outlet for its ducts, separate from the true nipple, as in the axilla. **mammæ accessoriae**. Anomalous situated glandular structures secreting milk. **m. erratica**. A true supernumerary mammary gland situated anywhere except in its normal position. **uterine mammæ**. A term sometimes applied to the maternal cotyledons of the placenta, on account of their secreting the so-called uterine milk. [Lat., *mamma*, breast.]
- mam'mal**. Having mammæ; an individual belonging to the *Mammalia*.
- Mammalia** (mam-ma'le-ah). A class of vertebrates (being the highest group of all animals), mostly viviparous, consisting of those that suckle their young. **M. choriata**. Those m. in which there is a direct connection between the mother and the fetus through the medium of the chorionic villi. **M. deciduata**. Those m. in which the fetal and the maternal parts are blended in a placenta of definite formation, and in which a portion of the mucous membrane of the uterus is always cast off at the time of parturition. **M. implantentalia**. See *achoresis*. **M. non-deciduata**. A subdivision of the *M. choriata* in which the villi of the chorion penetrate into recesses in the uterine mucous membrane which do not develop until impregnation takes place, and are wholly extruded from these recesses at the time of parturition. **M. placentalia**. See *M. choriata*. [Lat., *mammalis*, from *mamma*, breast.]
- mammary** (mam'ma-re). Pertaining to the organ or function of lactation, situated in or near the mamma. **m. gland**. See under *gland*. [Lat., *mammarius*.]
- mammotomy** (mam-of'om-e). An incision into the mammary gland. [Lat., *mamma*, the breast, + Gr., *temnein*, to cut.]
- Mandolini's reagent**. A solution of ammonium vanadate in concentrated sulphuric acid.
- mandible** (man'dib-l). In man and other mammals, the inferior maxilla. [Lat., *mandibulum*, jaw, from *mandere*, to chew.]
- Mandiocca** (man-de-ok'kah). 1. The genus *Manihot*. 2. See *tapioca*.
- Mandragora, Mandragoras** (man-drag'-or-ah, man-drag'-or-as). 1. A genus of solanaceous plants. 2. Of the ancients, *M. officinalis*; under this name, however, belladonna, stramonium, and other *Solanaceae* are apparently confounded. **M. autumnalis**. The autumn flowering mandrake, having properties like those of *M. officinalis*, of which it was formerly considered a variety. **M. officinalis, M. officinarum**. European mandrake, the *morion* of the ancients, and the *mandrake* of the Bible. It is not to be confounded with *mandrake root* (*podophyllum*). A European species, the root of which contains mandragorin, and has poisonous, hypnotic, and narcotic properties.
- mandragorin** (man-drag'or-in). A crystalline alkaloid, $C_{17}H_{23}NO_3$, obtained from the roots of *Mandragora autumnalis* and *Mandragora officinalis*, having properties like those of atropin.
- mandrake** (man'drāk). See *Mandragora officinalis*, under *Mandragora*.
- manducation** (man-du-ka'shun). See *mastication*. [Lat., *manducatio*, from *manducare*, to chew.]
- manganate** (man'gan-ät). A salt of manganic acid.
- manganese** (man'gan-ēs). A metallic element. It occurs in nature chiefly in the form of the black oxid. M. resembles cast iron in color, appearance, and physical properties, being very hard and brittle. It is used in the preparation of m. steel. Symbol Mn. Atomic weight 55. Specific gravity 8.0. **black m. oxid**. See *m. dioxide*. **m. and ammonium sulphate**. Ammoniomanganic alum, $Mn_2(SO_4)_3(NH_4)_2SO_4 + 24H_2O$, strongly resembling m. and potassium sulphate. **m. and potassium sulphate**. The common variety of m. alum, $Mn_2(SO_4)_3 \cdot K_2SO_4 + 24H_2O$. **m. biniodid**. See *m.*

iodid. m. dioxid. A heavy black or dark brown powder, MnO_2 . A valuable oxidizing agent; used in amenorrhea, anemia and chlorosis. [*Mangani oridum nigrum*, U. S. Ph.]. **m. hypophosphite.** A pink, crystalline, soluble salt of m. and hypophosphorous acid [*mangani hypophosphis*, U. S. Ph.]. **m. iodid.** $MnI_2 + 4H_2O$; used in anemia and cachexia. **m. monoxid.** Manganous oxid, MnO . **m. oxid.** A compound of m. and oxygen. See *m. monoxid* and *m. dioxid.* **m. peroxid.** See *m. dioxid.* **m. protiodid.** Manganous iodid. **m. protoxid.** See *m. monoxid.* **m. saccharate.** A compound of m. and saccharic acid. **m. salicylate.** The m. salts of salicylic acid, $Mn(C_7H_5O_2)_2 + 2H_2O$. **m. sulphate.** 1. Manganous sulphate [*mangani sulphas*, U. S. Ph.]. $MnSO_4 + 4H_2O$, a crystalline salt, used in rheumatism, gout, and catarrhal jaundice. 2. Manganic sulphate, $Mn_2(SO_4)_3$. **m. tannate.** A substance obtained by mixing 4 parts of m. carbonate, 7 of tannin, and 5 of water, and evaporating to dryness over the water bath. [Lat., *manganum*, *manganesium*, *manganium*.]

manganic (man-gan'ik). Containing manganese as an apparently trivalent radicle.

manganicum (man-gan'ik-um). That form of manganese which exists in manganic compounds.

manganium (man-ga'ne-um). Manganese.

manganization (man-gan-i-za'shun). The adulteration and sophistication of drugs. [Lat., *manganisatio*, from Gr., *magganon*, a philter.]

manganosum (man-gan-o'sum). The variety of manganese which occurs in manganous compounds.

manganous (man'gan-us). Containing manganese as a univalent radicle. **m. salts.** See under *manganese*. [Lat., *manganosus*.]

mange (månj). A skin disease occurring on hairy and woolly animals; caused by an arachnidan parasite. [Old Fr., *manjue*, itch.]

Mangifera (man-gif'er-ah). A genus of anacardieous plants. **M. indica**, **M. montana**. The mango tree. The kernel contains a large proportion of gallic acid. [*Mango* + Lat., *ferre*, to bear.]

Mangini's reagent for alkaloids. A mixture of 3 parts each of hydrochloric acid and potassium iodid and 16 of bismuth iodid.

mangostin (man'gös-tin). A crystalline substance, $C_{20}H_{20}O_5$, forming the bitter principle of the shells of the fruit of *Garcinia mangostana*.

mania (ma'ne-ah). 1. An old term for an acute psychosis with active and violent symptoms, now obsolete as a special type. 2. See *psychosis*. **acute m.** M. of sudden onset, with violent symptoms. **alcoholic m.** Acute delirium due to alcoholic excesses. **dancing m.** Syn.: *leaping ague*. Hysteria. **epileptic m.** Acute excitement occurring in an epileptic, sometimes associated with a decided propensity to the performance of

criminal acts. It may come on either gradually or very suddenly. **hallucinatory m.** M. in which hallucinations are the predominating symptoms. **homicidal m.** M. in which there is an intense propensity to homicide. **m. of character.** Of Pinel, reasoning monomania. **m. persecutoria puerperalis.** M. of persecution occurring in a puerperal woman. **m. potatorum.** See *alcoholic insanity*, under *insanity*. **transitory m.** Acute m. lasting a few hours or a few days. Maudsley considers it a mental epilepsy. **traumatic m.** See *delirium nervosum traumaticum*, under *delirium*, and *traumatic insanity*, under *insanity*. **typhom'.** Acute delirious m. in which the temperature and general condition resemble those of typhoid fever. [Gr., *mania*, from *mainesthai*, to rage.]

maniac (ma'ne-ak). 1. One who is violent in his language or actions from mental disease. 2. One affected with mania (*q. v.*). **periodical m.** One who suffers from recurring attacks of acute excitement—manic-depressive psychosis.

maniacal (ma-ni'ak-al). Pertaining to, affected with, or of the nature of mania or madness.

manic-depressive. A new synthesis in psychiatry by Kraepelin, showing the essential unity of manic and of depressive attacks, formerly considered as mania and as melancholia and as separate diseases.

manicure (man'ik-ür). The care of the hands and nails. [Lat., *manus*, hand, + *cura*, cure.]

Manihot (man'e-hot). 1. A section of the genus *Hibiscus*. 2. A genus of crotoneous plants. 3. Tapioca. **M. utilisissima.** The bitter cassava; a species cultivated in the West Indies, Brazil, and other parts of tropical America. From its roots various food stuffs are prepared. The cassava meal, used for cassava cakes, etc., is obtained by rasping; the contained starch is separated and used as food under the name of Brazilian arrow-root, and, made into pellets by heat, forms commercial tapioca.

manikin (man'ik-in). A model or lay figure of the body or a portion of it; used in anatomical demonstrations and for practice in bandaging, etc. [Mid. Eng., *mannekin*, little man.]

manipulation (man-ip-u-la'shun). A handling; any manual procedure, whether for a diagnostic, experimental, or therapeutic purpose. [Lat., *manipulare*, to handle.]

manna (man'nah). Syn.: *aëromel*. The concrete exudation of *Fraxinus ornus* (and probably other species of *Fraxinus*). It is a mild laxative, and is usually given with other purgatives to conceal the taste of the latter or to add to their cathartic effects [U. S. Ph.]. [Gr., *manna*, morsel.]

mannite (man'nit). Syn.: *mannitol*. (1st def.) 1. A hexahydric alcohol, $CH_2OH-(CHOH)_4-CH_2OH$, derived from manna and from various acids. 2. A sugar used in culture media to differentiate between two types of the dysentery bacilli, since

only the *B. Flexneri* or the American type will acidulate mannite. ([Lat., *mannita, mannitum*.])

mannitol (man'it-ol). See *mannite*.

mannose (man'nōs). A simple carbohydrate (aldohexose), $\text{CH}_2\text{OH}_2(\text{CHOH})_4\text{-CHO}$; in the combined form in some plants. It reduces Fehling's solution and is fermentable with brewer's yeast.

Mann's reagent. A r. made by triturating 1 part of molybdic acid with 2 parts of citric acid, melting the product, dissolving it in water, soaking filter paper in the solution, and drying at 100°C .; used for the detection of water in moist air or in alcohol or ether. The paper is blue when prepared, and becomes white in the presence of water.

manometer (man-om'et-er). 1. An instrument for measuring the density of gases or vapors, more rarely of liquids. 2. An instrument used to determine the force of blood pressure, consisting of a U-shaped tube, partly filled with mercury, on the surface of which, in one limb, is a float carrying an indicator. The other limb is connected with an artery, so that by the force of the blood pressure the mercury is carried upward in the limb bearing the float. **differential m.** Of Bernard, a manometer used in physiology to measure the comparative pressures in the blood vessels. **Hürthle m.** See under *Hürthle*. **maximal m.** A m. tube provided with a valve opening from the heart. Inserted into an artery or a ventricle it measures the maximal pressure during any given period of observation.

mercury m. See *Poiseuille's m.* under *Poiseuille*. **minimal m.** A m. with a valve opening toward the heart. Introduced into an artery or a ventricle, it measures the lowest pressure during any given period of observation. **Poiseuille's m.** See under *Poiseuille*. **spring m.** Of Fick, a hollow spring connected by a tube with an artery. The pressure of the blood tends to straighten the spring, and communicates a movement to a registering lever. [Lat., *manometrum*, from Gr., *manos*, thin, rare, + *metron*, a measure.]

manoscope (man'o-skōp). See *manometer* and *baroscope*. [Gr., *manos*, thin, rare, + *skopein*, to examine.]

manubrium (man-u'bre-um). 1. A handle (as of obstetrical forceps). 2. See *m. sterni*. **m. of the malleus.** The part of the malleus inserted into the membrana tympani. **m. sterni.** The flat triangular bony segment forming the uppermost piece of the sternum; articulating with the clavicles and the first pairs of costal cartilages. [Lat., from *manus*, the hand.]

manustupration (man'u-stu-pra'shun). Masturbation.

Maraglia'no's se'rum. A form of antiphthitic serum. [*D. Maragliano*, Italian physician, contemporary.]

Maranta (mah-ran'tah). 1. A genus of scitamineous herbs. Most of the species contain in their rhizomes an abundance of pure starch. 2. Of the U. S. Ph. of 1870, the fecula obtained from the root

of *M. arundinacea*. See *arrowroot*. **M allouya.** A species indigenous to South America and the West Indies. The root yields part of the arrowroot of commerce. **M. arundinacea.** The arrowroot plant, the *araruta* of Brazil; a species indigenous to tropical America from Mexico to Brazil and to the West Indies. The fecula of the root (the m. of the U. S. Ph. of 1870) constitutes most of the true arrowroot of commerce. **M. starch.** See *arrowroot*. [*Maranta*, a Venetian botanist of the sixteenth century.]

marantic (mar-an'tik). Pertaining to general malnutrition or prostration. **m. thrombus.** A clot forming in the heart during the last hours of life when the heart action is very weak. [Gr., *marainein*, to grow thin.]

maraschino (mar-as-ke'no). A liqueur made from a special kind of cherry called *marasca*, growing wild in northern Italy, especially in Dalmatia.

maras'mic. Pertaining to, attended with, or affected with *marasmus*.

marasmus (mar-as'mus). A kind of atrophy; a wasting of flesh without fever or apparent disease. **general m.** Wasting or decay of the entire body and vital forces, as from long continued pain, loss of sleep, starvation, etc. **infantile m.** M. existing at birth, or supervening from feebleness of constitution or deficiency of milk. **m. senilis.** The atrophy of all the tissues which occurs normally and slowly in old people. **m. syphilitic.** M., an indirect result of syphilis. [Gr., *marasmos*, from *marainein*, to decay.]

marc (mark). 1. The residue left after the expression of oil from olives, castor oil seeds, etc. 2. The residue after the extraction of a powdered vegetable drug, as in the preparation of a tincture.

Mar'ey's tam'bour. An adjustable recording tambour, much used for respiratory movements and volume movements of different kinds. [*Etienne Jules Marey*, Parisian physiologist, 1830-1904.]

margarate (mar'gar-ät). A salt of margaric acid.

margarin (mar'gar-in). A glycerin ester of margaric acid, usually trimargarin, $\text{C}_5\text{H}_5(\text{C}_{17}\text{H}_{35}\text{O}_2)_3$.

Margaro'pus. Syn.: *Boöphilus*. A genus of ticks of the order *Acarina* and the family *Ixodidae*. **M. annulatus.** Syn.: *Boöphilus bovis*. The spreader of *Babesia bigemina*, the cause of Texas cattle fever. **M. decoloratus.** A spreader of *Babesia bigemina*.

marginal (már'jin-al). Pertaining to or situated upon a margin or border. **m. ridges.** In dentistry, the ridges or elevations of enamel on the outer margins of the occlusal surfaces of the bicuspids and molar teeth. [Lat., *marginalis*.]

marginoplasty (mar'jin-o-plas-te). The formation of a margin or border, as the conjunctiva in trichiasis. [Lat., *margo*, a margin, + Gr., *plassein*, to mold.]

mar'go. pl. *marginēs*. A margin or border. [Lat., *margo*, brink, bank, edge.]

Marienbad (mah-re'en-baht). Alkaline-saline-chalybeate-carbonated waters. Used by drinking and bathing in urinary disorders, vesical catarrh, anemia, dyspepsia, cardiac disorders, gall-stones, diseases of women, etc.

marigold (mar'ig-old). See *Calendula*.

Mariotte's law. See *Boyle's law*, under *Boyle*. [Edmé Mariotte, French physicist, 1620-1684.]

marjoram (mar'jor-am). A name applied to *Origanum vulgare*; variously called wild, bitter, or winter marjoram.

mark. A localized peculiarity, presenting a visible difference of color or surface, as a line, spot, cut, bruise, nevus, etc.

birthm. Some peculiar m. or blemish present on the body at birth.

mothers' m. See *nevus vascularis*, under *nevus*. **port wine m**. See *nevus flammens*, under *nevus*. **strawberry m**. *nevus flammens*, especially when it is of small size. [Old Eng., *mearc*, old Sax., *marka*.]

markasol (mar'kas-ol). See *bismuth borophenate*, under *bismuth*.

Marme's reagent. A mixture of 2 parts of cadmium iodid, 4 of potassium iodid, and 12 of water.

marmite (mar'mit). A proprietary preparation probably not differing essentially from an extract of beef.

marmorate (mar'mo-ra-te). A term used in descriptive bacteriology, signifying covered with faint, irregular stripes, or traced with veinlike markings like marble.

marmora'tion. Marbleization.

Mar'morek's serum. A form of anti-streptococcic serum. [Alexander Marmorek, Austrian physician, contemporary.]

mar'row. A soft reddish or yellowish substance filling the medullary cavities and canals of bones. In the medullary cavity of the long bones it is yellow (*yellow m.*), and is composed of fat cells supported by retiform tissue. In the articular ends of the long bones and in the other bones the fat cells are fewer, but numerous rounded nucleated cells are present, and smaller reddish cells like the primitive nucleated corpuscles of the embryo, which have been regarded as transition forms between m. cells and red blood corpuscles (*red m.*). Various preparations of m. have been used in anemia. **beef m**. The m. obtained from the long bones of a cow or ox; used as an article of food and as a remedy for anemia. **fetal m**. The mass, consisting of blood vessels, osteoblasts, and mucoid connective tissue, which fills the primary cavities or medullary spaces of a developing endochondral bone. **gelatinous m**. Semitransparent, soft, gray or red m. sometimes found in healthy persons, but most frequently observed after protracted diseases. **m. cavities**. See *primary areolae*, under *areola*. **red m**. The reddish non-fatty m. contained in the articular ends of the long bones, in the flat and short bones, the vertebrae, sternum, and ribs. **yellow m**. The soft yellow m. filling the shafts of the long

bones. It contains 96 per cent. of fat. [Ang.-Sax., *mearg*, *mearh*.]

marrubin (mar-ru'bin). A bitter principle obtained from *Marrubium vulgare*.

Marrubium (mar-ru'be-um). Syn.: *herba marrubii* (2d def.). 1. A genus of labiate plant. 2. Of the U. S. Ph., the leaves and flowering tops of *M. vulgare*. **M. vulgare**. White horehound. The herb contains a volatile oil, tannin, resin, and a bitter principle marrubin. It is a mild tonic and laxative and a diuretic in large doses.

marsh gas. See *methane*.

marshmallow (marsh'mal-o). See *Althea*.

Marsh's test. A very sensitive test for arsenic or antimony with the aid of the specially constructed Marsh apparatus. The arsenic and antimony compounds are converted into arsin and stibine which are easily detected by certain chemical tests. [James Marsh, English chemist, 1794-1846.]

marsupialization (mar-su'pe-al-iz-a'-shun). The formation of a pouch or a pouchlike cavity. [Lat., *marsupium*, pouch.]

marsupion, **marsupium** (mar-su'pe-on, mar-su'pe-um). A pouch or bag, or a pouchlike structure. **m. cerebelli**. The posterior transverse fissure of the brain. **m. cerebri anterioris**. The anterior transverse fissure of the brain. **m. cerebri posterioris**. The posterior transverse fissure of the brain. [Gr., *marsipion*, from *marsipos*, a bag.]

marsyle (mar'sil). Iron cacodylate.

martial (mar'shal). See *ferruginous*. [Lat., *martialis*, from *mars*, iron.]

mar'tol. A ferruginous preparation prepared from the shell of the cacao bean; it contains theobromin in addition to cacao.

Maruta (mar-u'tah). Mayweed; a genus of composite herbs found in Europe. **M. cotula**, **M. fetida**. The cotula of the U. S. Ph. of 1870; dog's (or wild, or stinking) chamomile (or fennel, or mayweed); an acrid, ill-scented species growing in waste places, by roadsides, etc. The whole plant is active and contains a volatile oil, valerianic and tannic acids, anthemic acid, an acrid fat, and various salts. The leaves and flowers, especially the latter, have been employed, preferably in infusion, as a substitute for chamomile, though, on account of its very disagreeable odor, it is rarely employed except in domestic practice.

maschi. The arrow poison of the natives of British Guiana, prepared from the tubers of *Arum venenatum*.

mask. A covering for the face, with openings to permit of seeing and breathing, used for applying medicaments or for protection of the face in case of injury or disease. **uterine m**. The pigmentation of the face sometimes seen in pregnant women. See *chloasma uterinum*, under *chloasma*. [Fr., *masque*.]

masked (maskt). Of diseases, having their true nature or characters obscured or concealed.

masochism (mas'o-kizm). A condition in

which the sexual libido is fixed upon self punishment, actual or psychical. In the grosser forms gratification comes from actual pain infliction; in the more psychical forms self pity, self condemnation, desire to be mastered, play a servant's part, etc., are the rôles.

mass. Any agglomeration of matter; in pharmacy, a solid or semisolid mixture of a number of ingredients. **blue m.** See *massa hydrargyri*, under *hydrargyrum*. **granular m's, granule m's.** Collections of partly disintegrated blood plates. **intermediate cell m.** The m. of blastema from which the mesonephros is formed; so called from its being situated between the epiblast and the intermesoblastic space. **lateral m's of the atlas.** The solid portions of bone forming the lateral $\frac{2}{5}$ of the atlas and bearing above and below facets for articulation with the occiput and the axis. **lateral m's of the ethmoid.** Two roughly cubic portions of bone dependent laterally from the inferior surface of the horizontal plate of the ethmoid. Each is honeycombed with air sinuses, of which the posterior communicate with the superior nasal meatus, the anterior with the middle nasal meatus. The medial surface of each lateral mass of the ethmoid forms part of the lateral wall of the nasal fossa, and the lateral surface forms part of the medial wall of the orbit. **lateral m's of the sacrum.** The portions of the sacrum external to the posterior sacral foramina. **segment m's.** See *segmentation cells*, under *cell*. **Vallet's m.** See *massa ferri carbonatis*, under *ferrum*. [Gr., *masa*, from *massein*, to knead.]

mass ac'tion, law of. See under *law*.

massage (mas-sazh'). The treatment of a member or the body by stroking, kneading, tapping, or beating, or by the application of active or passive motion, by the hands of another person or by a machine. [Fr., from Gr., *massein*, to knead.]

masseter (mas-se'ter). See *table of muscles*, under *muscle*.

masseur (mahs-ser'). A man trained to practice massage.

masseuse (mahs-uhz'). A female practitioner of massage.

mast cell. A leukocyte containing dark basophilic granules of irregular size.

mastic (mas'tik). A resinous exudation of *Pistacia lentiscus*. It is no longer regarded as having any important therapeutic virtues, though it is a constituent of pills of aloes and mastic. It consists of a volatile oil and two resins, masticic acid and masticin. [*Mastiche*, U. S. Ph.] [Gr., *mastiche*.]

mastication (mas-ti-ka'shun). The act of grinding and insalivating food by chewing. [Lat., *masticare*, to chew.]

masticatory (mas'tik-a-to-re). 1. Pertaining to or subserving mastication. 2. Any substance which is chewed, whether to stimulate the secretion of saliva or to acts as a disinfectant, or for other purposes.

Mastigophora (mas-tig-of'o-rah). A phylum of the *Protozoa* comprising many parasitic species for man, including such species as *Trichomonas*, *Trypanosoma*, and *Plasmodium*. [Gr., *mastix*, whip, + *phorein*, to bear.]

mastitis (mas-ti'tis). Inflammation of the glandular and surrounding cellular tissue of the mamma. **interstitial m.** Inflammation of the glandular substance of the breast. **parenchymatous m.** Inflammation of the glandular substance of the breast. [Gr., *mastos*, the breast, + *itis*, inflammation.]

mastochondroma, mastochondrosis (mas-to-kon-dro'mah, mas-to-kon-dro'sis). A cartilaginous tumor of the breast. [Gr., *mastos*, breast, + *chondroma*.]

mastodynia (mast-o-din'e-ah). Pain in the breast; usually neuralgia of the mammary branches of the intercostal or of the anterior supraclavicular nerves. [Gr., *mastos*, the breast, + *odyne*, pain.]

mastoid (mas'toyd). 1. Resembling a nipple; as a n., the m. process of the temporal bone. 2. Pertaining to the m. process. [Gr., *mastos*, the breast, + *eidos*, resemblance.]

mastoiditis (mas-toyd-i'tis). Inflammation of the mastoid process, usually confined to the periosteum; strictly speaking, inflammation of the air cells and their lining mucous membrane.

mastoi'do-. Prefix signifying of, or pertaining to, the mastoid.

mastology (mas-to'l'o-je). The anatomy, pathology, etc., of the mamma. [Lat., *mastologia*, from Gr., *mastos*, the breast, + *logos*, understanding.]

masturbation (mas-tur-ba'shun). The act or practice of gratifying sexual desire by mechanical stimulation of the genitals. [Lat., *masturbari*, to pollute one's self.]

masturbatory (mas'tur-ba-to-re). Pertaining to masturbation.

maté (mah'ta). Paraguay tea; the leaves of *Ilex paraguayensis*. It contains caffeine.

matein (mah'e-in). The caffeine contained in the leaves of *Ilex paraguayensis*.

ma'ter. 1. A mother. 2. Anything that produces a substance or structure or subserves its growth; a membrane covering the brain or spinal cord. **dura m.** See *dura*. **matres cerebri.** The dura mater and pia mater. **m. dura.** See *dura*. **m. mollis, m. pia.** See *pia*. **m. tenuis, pia m.** See *pia*. [Gr., *meter*, mother.]

materia (mat-e're-ah). See *material m. medica*. 1. Material which has medicinal properties, or which is used in medicine. 2. The science which treats of the substances and agencies used in the practice of medicine. [Lat.]

material (mat-e're-al). The substance or matter of which a thing consists or is made up. **formative m.** See *protoplasm*. [Lat., *materia, materies*.]

materies morbi (mat-e're-ēz mor'bi). An old term. Any substance which when brought into contact with the body produces disease. [Lat., the matter of disease.]

maternal (mat-er'nal). Of, or pertaining to, a mother or mothers.

maternity (mat-er'nit-e). The quality or condition of being a mother. [Fr., *maternité*, from Lat., *maternitas*, motherhood.]

maticin (mat'is-in). A bitter principle extracted from *matico* leaves.

matico (mah-te'ko). The dried leaves of the bitter aromatic flower heads of *M. chamomilla*. They contain a volatile oil and a bitter extractive, and are very similar to common chamomile (flowers of *Anthemis nobilis*) in medicinal properties; used in Europe as an antispasmodic and antelmintic. 3. *Chrysanthemum parthenium*.

M. chamomilla. German chamomile. The flowers are the *m.* (*q. v.*, 2d def.) of the U. S. Ph. [Lat.]

matriculation (mat-rik-u-ia'shun). Enrollment of a student in college. [Lat., *matriculus*, register.]

ma'trix. 1. An old name for the uterus. 2. A tissue or organ containing and determining the form or growth of another structure. 3. Intercellular substance when great in amount as compared with the cellular elements. **m. of a hair**. See *hair follicle*, under *follicle*. **m. of a tooth**. The homogeneous matter in a tooth which is impregnated with lime salts. **m. of bone**. A dense fibrous connective tissue, yielding gelatin when boiled, and, when impregnated with salts, constitutes bone. See *ossein*. **m. of cartilage**. The ground substance of cartilage. **m. of connective tissue**. Its intercellular substance. **m. of hyaline cartilage**. A homogeneous or finely granular substance in which the cells are imbedded. It yields chondrin on being boiled. **m. of the nail**. The corium which underlies the root of the nail. **m. of the vertebrae**. A membranous column of cells formed around the notochord from the inner part of the protovertebral column previous to the cartilaginous differentiation of the permanent vertebrae in the embryo. **m. pill**. See *hair follicle*, under *follicle*. **m. unguis**. See *m. of the nail*. **membranous m. of the vertebrae**. See *m. of the vertebrae*. **neuroglia m.** 1. The ground substance of the neuroglia. 2. The neuroglia. **nuclear m.** See *cytochylema* and *achromatin*. [Lat., *mater*, mother.]

mat'ter. 1. Substance which is cognizable by the senses. 2. Material; that of which anything is composed. 3. See *pus*. **aqueeduct gray m.** The gray substance forming the walls of the sylvian aqueduct. **central gray m. of the spinal cord**. The anterior and posterior gray columns

of the spinal cord taken as a whole. See *anterior gray cornu* and *posterior cornu of the spinal cord*. **cheesy m.** The yellowish m., found especially in the lungs and the lymphatic glands in tuberculosis, as the result of degenerative processes. See *caseation*. **contractile m.** See *protoplasm*. **fecal m.** See *feces*. **formative m.** See *protoplasm*. **germinal m.** See *bioplasm* and *protoplasm*. **germinal m. of a cell**. See *cell protoplasm* and *cell nucleus*, both under *cell*. **gray matter**. See under *gray*. **gray m. of the brain**. The grayish substance found in the cortex and various points in the interior of the brain made up of a connective tissue matrix and nerve cells. **white m.** That portion of the brain and spinal cord composed chiefly of nerve fibers. [Lat., *materia*, *materies*, substance, from *mater*, mother.]

mattoïd (mat'toyd). Of Lombroso, a person of high intellectual cultivation, but a monomaniac. [Lat., *matius*, drunken.]

maturation (mat-u-ra'shun). 1. The process of ripening; of an ovum, the process by which it is rendered capable of fertilization and development, characterized by the extrusion of the polar globules. 2. The completion of the formation of an abscess. [Lat., *maturatio*, from *maturus*, ripe.]

mature (mat-ür'). 1. Ripe; fully developed. 2. Having the process of body and mind fully developed. [Lat., *maturus*.]

maturity (mat-u'ri-te). The state of being mature; fullness or perfection of development or growth. Also puberty. [Fr., *maturité*, from Lat., *maturitas*.]

mat'zol. A proprietary mixture of matzoon and cod-liver oil.

matzoon (mat-zo'on). A variety of fermented milk.

maw. The stomach. **m. worm**. Any worm entering the stomach. See *Ascaris lumbricoïdes* and *Oxyuris vermicularis*. [Ang.-Sax., *maga*, crop.]

maxilla (maks-il'lah). See *jaw*. **inferior m.** The lower jaw or mandible. **superior m.** The upper jaw. It consists of a body and four processes. Within the body of the bone is the maxillary antrum. [Lat., dim. of *mala*, jaw, cheek.]

maxillary (maks'il-la-re). Pertaining to the maxilla. [Lat., *maxillaris*.]

maxilli'tis. Of the veterinarians, inflammation of the maxillary gland.

Mayer's reagent. A solution of 13.546 grams of mercury bichlorid and 49.8 of potassium iodid in water, diluted to 1 liter.

Maynard's adhesive liquid. See *colloidum*.

maza (maz'ah). The placenta.

M. B. Abbreviation of Lat., *Medicinae Baccalaureus*, bachelor of medicine.

McBurney's operation. An o. for the radical cure of hernia, in which the hernial sac is exposed, the anterior wall of the inguinal canal is incised, the sac is ligated and excised at the internal ring,

- and the edges of the skin are inverted and sutured to the ligamentous and tendinous tissue. The wound heals by cicatrization.
- M's point.** A p. about $2\frac{1}{2}$ in. distant from the anterior superior spine of the ilium on a line drawn from that process to the umbilicus; thought by C. McBurney to be usually the p. of greatest tenderness in cases of inflammation due to a lesion of the appendix ceci.
- McCor'mack's osteotomy.** Subcutaneous o., on the outside of the femur, above the condyle, for relief of knock-knee.
- M. D.** Abbreviation of Lat., *Medicinae Doctor*, doctor of medicine.
- mead** (mēd). A liquor made from honey and water fermented and variously flavored. [Ang.-Sax., *meado*.]
- measle** (me'sl). See *cysticercus* and *measles* (2d def.). **beef m.** See *Cysticercus saginata*. **m. worm.** See *cysticercus*. **pork m. worm.** See *Cysticercus cellulosae*.
- measles** (me'zls). 1. An acute contagious eruptive disease characterized by an incubation period of 10 to 14 days and a course of 9 to 12 days, by fever, by catarrh of the conjunctiva and air passages, and by an eruption of slightly elevated dots of about the size of millet seeds, nearly impalpable, without hardness, and either isolated or forming crescentic patches. 2. A vesiculopustular parasitic disease of swine, due to the invasion of *Cysticercus cellulosae*, with the formation of tumors in the subcutaneous tissue and muscles of the trunk and limbs. It may also occur in man. [Dut., *maselen*.]
- measly** (me'zle). 1. Covered with an eruption like that of measles. 2. Feeling like a person suffering with measles. 3. Of pork, affected with measles (2d def.).
- meatorrhaphy** (me-at-or'raf-e). Suture of the cut end of the urethra to the adjacent tissue of the glans penis after enlargement of the meatus by incision. [Lat., *meatus*, + Gr., *raphē*, suture.]
- meatoscope** (me-at'o-skōp). A small tubular speculum for examining that portion of the male urethra that immediately adjoins the external urinary meatus. [Lat., *meatus*, meatus, + Gr., *skopein*, to examine.]
- meatome** (me-at'ot-ōm). An instrument with a concealed blade for incising the meatus urethrae.
- meotomy** (me-at'ot'o-me). Incision of the meatus urethrae.
- meat poisoning.** Syn.: *kreotoxismus*. Poisoning or infection from meat containing *Bacillus botulinus*, *Bacillus enteritidis*, *Bacillus paratyphosus*, or *Bacillus coli*, their products, or those of non-specific toxicogenic bacteria.
- meatus** (me-a'tus). A canal or passage. **auditory m.** The external or internal auditory canal. **cartilaginous m.** A tubular continuation of the auricle, directed inward, and forming the outer part of the external auditory canal. It is partly cartilaginous. **external auditory m.** See *external auditory canal*, under *canal*. **inferior m. of the nose.** The lowermost of the three divisions of the nasal cavity. **internal auditory m.** See *internal auditory canal*, under *canal*. **m. ad cellulas mastoidea.** See *mastoid aperture*, under *aperture*. **m. auditorius externus.** Syn.: *foramen acusticum*. See *external auditory m.* **m. narium.** The superior, middle, and inferior m. of the nose. **m. urethrae, m. urinarius.** The external opening of the urethra. **m. venosus.** The common vitelline vein. **middle m. of the nose.** The middle of the m's into which the cavity of the nose is divided. **superior m. of the nose.** A small passage at the upper and back part of each nasal fossa, between the superior and middle turbinated bones. [Lat., *meatus*, passage, from *meare*, to go.]
- mechanical** (mek-an'ik-al). 1. Pertaining to mechanics. 2. Caused or produced by machinelike forces or agencies. 3. Acting by virtue of physical as opposed to vital or chemical properties.
- mechanics** (mek-an'iks). The science which treats of the behavior of bodies acted on by external forces. [Lat., *mechanica*.]
- mechanism** (mek'an-ism). 1. The structure or arrangement of a machine. 2. The manner in which mechanical acts are performed, or the apparatus acting in such performance. **m. of accommodation.** See under *accommodation*. [Lat., *mechanismus*.]
- mechanochemical** (mek'an-o-kem'ik-al). Pertaining or related to mechanics and chemistry jointly.
- mechanology** (mek-an-ol'o-je). The science of mechanics. [Gr., *mechane*, a machine, + *logos*, understanding.]
- mechanotherapy** (mek'an-o-ther'ap-e). The treatment of disease by mechanical agencies. [Gr., *mechane*, a machine, + *therapeia*, medical treatment.]
- Meck'el's diverticulum.** Syn.: *diverticulum ceci*. A d. of the small intestine about a meter above the cecum, which is the remains of the omphalomesenteric duct. **M's ganglion.** Syn.: *sphenoidal ganglion*. A g. situated in the sphenomaxillary fossa near the sphenopalatine foramen. **M's lesser ganglion.** See *submaxillary ganglion*, under *ganglion*. [Johannes Friedrich Meckel, German anatomist, 1718-1774.]
- mecon** (mek'on). 1. The poppy. 2. Opium. [Gr., *mekon*.]
- meconic** (mek-on'ik). 1. Derived from or containing opium. 2. Pertaining to or containing meconium. **m. acid.** See under *acid*. [Gr., *mekon*, the poppy.]
- meconidin** (mek-on'id-in). An alkaloid, $C_{21}H_{23}NO_4$, found in small quantities in opium.
- meconin** (mek'on-in). An active principle, $C_{10}H_{10}O_4$, found in opium, and resulting from the decomposition of narcotin.
- meconious** (me-ko'ne-us). Having the properties of meconium.
- meconium** (me-ko'ne-um). 1. The material contained in the intestinal canal of

- the fetus at term; a mixture of intestinal mucus, bile, epithelial cells, etc. 2. *Opium*. **m. thebaicum**. *Opium*. [Gr., *mekonion*, from *mekon*, the poppy.]
- meconoid** (mek'ō-noyd). Pertaining to, or resembling meconium.
- me'di-**. Prefix, taken from the Lat., *medius*, middle, denoting median or pertaining to the middle.
- media** (me'de-ah). 1. The middle coat; said especially of the middle coat of an artery. 2. Pl. of medium. [Lat., fem. of *medius*, middle.]
- median** (me'de-an). Situated or directed toward the middle, especially toward the median plane. **m. line**. See under *line*. [Lat., *medius*, middle.]
- mediastinitis** (me'de-as-tin-i'tis). Inflammation of the mediastinum (i. e., of the mediastinal pleura).
- mediastinum** (me'de-ah-sti'nūm). Of the ancients, any structure serving as a partition, especially those portions of the pleurae that form the lateral boundaries of the m. of modern anatomists (more properly the *cavum mediastini*), which is the interpleural space, or median space of the thorax, between the two pleurae, containing all the thoracic viscera except the lungs. **anterior m.** That portion of the inferior m. which lies in front of the pericardium. **inferior m.**, **lower m.** That portion of the m. (1st def.) which is situated below the lower margin of the fourth thoracic vertebra; divided into the anterior, middle, and posterior mediastina. **m. dorsale**. See *posterior m.* **m. pectorale**. The interspace in the chest between the two pleural sacs. **m. posticum**. See *posterior m.* **m. testis**. See *corpus Highmori*, under *corpus*. **middle m.** That portion of the inferior m. which is situated between the anterior and posterior mediastina, and contains the heart, the ascending aorta, the superior vena cava, the bifurcation of the trachea, the pulmonary vessels, and the phrenic nerves. **posterior m.** That portion of the inferior m. which is situated behind the pericardium and the roots of the lungs. **superior m.**, **upper m.** That portion of the m. which is situated above the level of the lower margin of the fourth thoracic vertebra. [Lat., *mediastinum*, from *medius*, middle.]
- mediate** (me'de-āt). Acting through or affected by an interposed medium or agency; not immediate. [Lat., *mediare*, to halve.]
- medicable** (med'ik-a-bl). Curable, especially by medical treatment.
- medical** (med'ik-al). Pertaining to medicine.
- medical licensure**, etc., see in *appendix*, page 935.
- medicament** (med-ik-ah-ent). Any substance used as a remedy or palliative in disease. [Lat., *medicari*, to heal.]
- medicamentum** (med-ik-ah-men'tum). See *medicament*. **m. arcanum**. A secret or proprietary remedy.
- medicated** (med'ik-a-ted). Impregnated with some medicinal substance.
- medication** (med-ik-a'shun). 1. The act of medicating or impregnating with medicine. 2. Medical treatment. **substitutive m.** The substitution of a local inflammation, produced by some therapeutic agent, for the primary inflammation of a disease (e. g., the use of nitrate of silver in dysentery or cystitis, etc.). [Lat., *medicatio*.]
- medicinal** (med-is'in-al). Pertaining to, or having the properties of, a medicine.
- medicine** (med'is-in). The science and art of preserving the health of the animal organism, of assisting it to recovery when injured or diseased, of promoting the comfort and prolonging the life of the sick and injured; in a restricted sense, the same science and art exclusive of surgery. 2. Any substance used as a remedy or palliative in disease. **clinical m.** The observation and treatment of disease at the bedside. **eclectic m.** M. as practiced by an eclectic (*q. v.*). **experimental m.** The observation of the pathological changes in experimentally induced diseases and of the physiological action of drugs in experiments made on animals. **forensic m.** See *medical jurisprudence*, under *jurisprudence*. **legal m.** See *medical jurisprudence*, under *jurisprudence*. **patent m.** A m. for which a patent has been obtained. The term is very commonly misapplied to *proprietary m's*, the composition of which is secret, or for which a name has been copyrighted. The composition of a patent m. must be stated before a patent is issued and after the expiration of the patent, it may be made by anyone. **preventive m.** The direction of medical science to the tasks of preventing disease. **proprietary m.** A m. in which proprietary interests are maintained either by patent, or, more commonly, by secrecy of composition, or by copyrighting the name or package. The privileges conferred by copyright are perpetual. [Lat., *medicina*.]
- medicochirurgical** (med'ik-o-ki-rur'jik-al). Pertaining jointly to medicine and surgery.
- medicolegal** (med'ik-o-le'gal). Pertaining to medical jurisprudence.
- medicus** (med'ik-us). Medical; as a physician or surgeon.
- mediglycin** (med-ig-li'sin). A liquid glycerin soap, used as a vehicle for creolin, ichthyol, etc.
- medinal** (med'in-al). See *sodium diethylbarbiturate*, under *sodium*.
- Medi'na worm**. See *Filaria medinensis*.
- medio-**. Combining form of Lat., *medius*, middle; used to signify of, or concerning the middle.
- med''locar'pal**. Pertaining to the articulation between the two rows of the carpal bones.
- me'dium** pl. *media*. 1. The agency through the intervention of which an effect is produced. 2. The material by which an object is surrounded, in which it is imbedded. 3. A substance used for the cultivation and differentiation of bacteria. Also called a *culture m.* There

- are many special media, named and described in the textbooks on bacteriology.
- clearing m.** A m. for clearing or rendering transparent histological specimens. [Lat., *medius*, middle.]
- medulla** (med-ul'lah). 1. See *marrow*. 2. The pith of a plant. **aëriferous m.** The central or medullary portion of a hair, containing air within or between the cells. See *air lacunule*, under *lacunule*. **central m.** The m. proper or pith. **cortical m.** Cortical parenchyma. **external m.** See *cortical m.* **fetal m.** See *fetal marrow*. **m. bovina**, **m. bovina**, **m. bovis**. See *beef marrow*, under *marrow*. **m. ciliaris**. See *corpus dentatum*. **m. oblongata**. That portion of the encephalon which rests in the basilar groove, being limited above by the lower borders of the pons and continuous at the lower edge of the foramen magnum with the spinal cord. It is covered in posteriorly by the cerebellar hemispheres. As originally used, the term included also the pons Varolii and crura cerebri. **m. of a hair**. The hair pith. **m. of a nerve fiber**. The white substance of Schwann. **m. of bone**, **m. ossium**. See *marrow*. **m. spinæ**, **m. spinalis**, **m. vertebralis**. See *spinal cord*, under *cord*. [Lat.]
- medulladen** (med-ul-a'den). A certain proprietary extract of bone marrow.
- medullary** (med-ul-a-re). Of, or pertaining to the medulla. **m. sarcoma**. See under *sarcoma*. **m. spaces**. See *primary areolæ*, under *areola*.
- medullic** (med-ul'lik). Contained in, or derived from the medulla.
- medulline** (med-ul'lin). A sterilized glycerin extract of the spinal cord of the ox.
- medullization** (med-ul-iz-a'shun). The softening of bony tissue. [Lat., *medulla*, marrow.]
- medullo-arthritis** (med-ul'lo-ar-thri'tis). An inflammation of the pink marrow in the cancellated ends of the long bones that proceeds to disintegration of the structures of the articulation. [Lat., *medulla*, marrow, + *arthritis*.]
- mega-, meg-**. Combining form of Gr., *megas*, great; used as a prefix in compound words to signify large.
- megacoccus** (meg-ah-kok'us). The largest form of coccus, distinguished from micrococcus. [Gr., *megas*, large, + *kokkos*, a berry.]
- mega-erg** (meg'ah-erg). An electrical unit equal to a million ergs. [Gr., *megas*, large, + *erg*.]
- megafarad** (meg-af-ar'ad). An electrical unit equal to a million farads. [Gr., *megas*, large, + *farad*.]
- megalanthropogenesis** (meg'al-an-thro-po-jen'es-is). The production of men of large stature or of genius (a name given by Robert to his scheme for securing this by suitable intermarriage). [Gr., *megas*, large, + *anthropos*, a man, + *genesis*, origin.]
- megalectrometer** (meg'al-ek-trom'et-er). Of Dulc, an electrometer by which electricity of great intensity can be measured. [Gr., *megas*, large, + *elektron*, amber, + *metron*, a measure.]
- megalo-**. Combining form of Gr., *megas*, great; used as a prefix to signify large, great.
- megaloblast** (meg'al-o-blast). See *gigantoblast*. [Gr., *megas*, large, + *blastos*, sprout.]
- megaloccephaly** (meg'al-o-sef'al-e). Having an abnormally large head. [Gr., *megas*, large, + *kephale*, the head.]
- megalocytes** (meg'al-o-sits). Red blood corpuscles decidedly larger than the average (in human blood ranging from 8.5 to 15 μ in diameter). [Gr., *megas*, large, + *kytos*, cell.]
- megalodactylous** (meg-al-o-dak'til-us). Having abnormally large fingers or toes. [Gr., *megas*, large, + *daktylos*, a digit.]
- megalodont**. Macrodon.
- megaloglossia** (meg'al-o-glos'se-ah). A pathological condition the most prominent feature of which is a congenital enlargement and prolapse of the tongue. [Gr., *megas*, large, + *glossa*, the tongue.]
- megalokaryocyte** (meg'al-o-kar'e-o-sit). Name given (Howell) to the giant cells of the marrow, on account of the large, lobulated nucleus, to distinguish them from the multinucleated giant cells (osteoclasts). In the embryo they are found in the liver, spleen and other blood-forming organs. They are supposed to give origin to the blood plates (Wright). [Gr., *megas*, large, + *karyon*, nucleus, + *kytos*, cell.]
- megalomania** (meg'al-o-ma'ne-ah). See *delirium grandiosum*, under *delirium*. [Gr., *megas*, large, + *mania*, mania.]
- megalopthalmus** (meg-al-of-thal'mus). A congenital deformity in which the eye is excessively large and protuberant; usually the result of an intra-uterine iritis or iridochoroiditis. [Gr., *megas*, large, + *ophthalmos*, the eye.]
- megalopodia** (meg-al-o-po'de-ah). The condition in which there are abnormally large feet. [Gr., *megas*, large, + *pous*, foot.]
- megalopsia** (meg-al-op'se-ah). An affection of the eye in which objects appear unnaturally large. [Gr., *megas*, large, + *opsis*, vision.]
- Megastoma** (meg-as'to-mah). See *Cercomonas*.
- megavolt** (meg'ah-volt). An electrical unit equal to a million volts. [Gr., *megas*, large, + *volt*.]
- megohm** (meg'om). An electrical unit equal to a million ohms. [Gr., *megas*, large, + *ohm*.]
- me'grim**. See *migraine* and *headache*.
- Me'hu's test**. A test by which the presence of albumin in urine is shown by the precipitate formed when the urine has been treated with nitric acid or sodium sulphate, and a mixture of 1 part each of carbolic acid and acetic acid and 2 parts of alcohol has been added.
- meibomian** (mi-bo'me-an). Investigated by or named for *H. Meibom*, **m. glands**. See under *gland*. [*H. Meibom*, Ger. anatomist, 1638-1700.]

meiocardia (mi-o-kar'de-ah). See *miocardia*.

Meissner's corpuscles. See *tactile corpuscles*, under *corpuscle*. **M's ganglia**. The ganglia of M's plexus. **M's plexus**. A p. of non-medullated nerve fibers, with ganglia at the nodal or crossing points, situated in the submucosa of the intestine.

mel. Syn.: *honey*. A saccharine secretion deposited by the common bee [U. S. Ph.]. **m. boracis**. Borax honey; it consists of clarified honey, borax, and glycerin [Br. Ph.]. **m. depuratum**. Syn.: *mellitum simplex*. Honey purified by heating and clarifying with paper pulp [U. S. Ph.], charcoal, Irish moss, white of egg, etc. [U. S. Ph., Br. Ph.]. [Lat.]

Melaleuca (mel-al-u'kah). The Australian tea tree. **M. cajuputi**, **M. cajeputi**, **M. cajuputi**. The small cajuput tree; a variety of *M. leucadendron*, indigenous to the Moluccas and furnishing cajuput oil. **M. leucadendron**, **M. leucadendrum**. The cajuput tree; long recognized as the source of the official oil of cajuput; now considered by some authors as distinct from *M. cajuputi*. [Gr., *melas*, black, + *leukos*, white; so called from the contrast between the trunk and the branches.]

melancholia (mel-an-ko'le-ah). 1. A state of mental disorder formerly used to indicate great mental depression. 2. See *melancholy*. **active m.**, **acute m.** M. in which the subject, instead of remaining passive, goes about restlessly, under the influence of delusions, hallucinations, or anxious feelings. **alcoholic m.** M. as it occurs among inebriates. It is of brief duration and favorable prognosis. **homicidal m.** M. with homicidal impulses. **m. of puberty**. M. occurring at puberty; the chief delusion is that of personal unattractiveness. **puerperal m.** M. appearing after and apparently dependent on childbirth. **sexual m.** M. associated with ideas of impotence, venereal infection, or ungratified sexual desire. **suicidal m.** M. (most frequently periodical m.) in which the predominating impulse is to commit suicide. [Gr., *melas*, black, + *chole*, bile.]

melancholic (mel-an-ko'lik). Pertaining to or affected with melancholy.

melancholy (mel'an-ko-le). A gloomy state of mind; mental depression that is of some continuance or is habitual.

melanedema (mel-an-e-de'mah). See *anthracosis*. [Gr., *melas*, black, + *edema*.]

melanemia (mel-an-e'me-ah). A condition in which the blood contains granules or masses of black pigment, melanin. [Gr., *melas*, black, + *aima*, blood.]

melanencephaloma (mel'an-en-sef-al-o'mah). A melanotic or black excrescence of the brain. [Gr., *melas*, black, + *egkephalos*, the brain, + *oma*, tumor.]

melanic (mel-an'ik). 1. Of a dark color. 2. Pertaining to melanosis.

melaniferous (mel-an-if'er-us). Containing melanin or other black pigment. [*Melanin*, + Lat., *ferre*, to bear.]

melanin (mel'an-in). The brown, amor-

phous pigments present normally in the skin (especially of brunettes and of negroes) in the hair, the retina, and the urine, and occurring pathologically in the blood. [Gr., *melas*, black.]

melanism (mel'an-ism). A condition characterized by a dark or black color of the skin. [Gr., *melas*, black.]

melanistic (mel-an-is'tik). Characterized by the presence of melanin.

melano-. Combining form of Gr., *melas*, black; used as a prefix to signify of or concerning blackness.

melanocarcinoid (mel'an-o-kan'kroyd). A melanotic epithelioma. [Gr., *melas*, black, + *canceroid*.]

melanocarcinoma (mel'an-o-kar-sin-o'mah). Carcinoma in which there is a deposit of melanin. [Gr., *melas*, black, + *carcinoma*.]

melanocyte (mel'an-o-sit). A cell containing black pigment. [Gr., *melas*, black, + *kytos*, cell.]

melanoid (mel'an-oid). Pertaining to, or of the nature of melanosis. [Gr., *melas*, black, + *eidos*, resemblance.]

melanoma (mel-an-o'mah). 1. Any black mass. 2. A melanotic tumor of alveolar or non-alveolar arrangement, developing from the pigmented areas of the skin, pigmented nevi or moles, or from the choroid. [Gr., *melas*, black, + *oma*, tumor.]

melanopathy (mel-an-op'ath-e). Any disease in which there is an excess of dark pigment. [Gr., *melas*, black, + *pathos*, disease.]

melanosarcoma (mel'an-o-sar-ko'mah). Melanotic sarcoma. [Gr., *melas*, black, + *sarcoma*.]

melanoscirrhus (mel'an-o-skir'us). A pigmented scirrhus. [Gr., *melas*, black, + *scirrhus*.]

melanosis (mel-an-o'sis). Abnormal dark pigment deposits in the skin. **m. lenticularis progressiva**. Another name for *xeroderma pigmentosum*. [Gr., *melas*, black.]

melanotic (mel-an-ot'ik). 1. Pertaining to or of the nature of melanosis. 2. Containing a deposit of melanin.

melanthin (mel-an'thin). An irritant glucosid, obtained from the seeds of *Nigella sativa*. It forms a froth in aqueous solution like saponin.

melanuria (mel-an-u're-ah). A disorder chiefly characterized by the excretion of an excess of pigmentary matter in the urine. [Gr., *melas*, black, + *ouron*, urine.]

melanurin (mel-an-u'rin). A black substance sometimes found in urine.

melasma. A form of pigmentation of the skin attended with a very dark or blackish discoloration; usually an acquired disease. [Gr., *melasma*, from *melas*, black.]

melena (mel-e'nah). 1. A condition in which blood (rendered black by the action of the alimentary juices) is present in the feces. 2. Black vomit. [Gr., *melaina*, fem. of the adjective, *melas*, black.]

melanemesis (mel-e-nem'es-is). Black

vomit. [Gr., *melas*, black, + *emesis*, vomiting.]

meliolotol (mel-il'ō-to-l). An oily liquid, $C_6H_8O_2$, obtained from *Melilotus officinalis*.

meliolotus (mel-il-o'tus). 1. The herb of *M. officinalis*. 2. *Trigonella corniculata*. 3. Melilot, sweet clover; a genus of leguminous annual or biennial herbs. **M. officinalis**. The common (or yellow) melilot, a species widely cultivated throughout Europe and western Asia for forage. The flowering tops have been used in various diseases. **M. vulgaris**. White (-flowered) melilot; a species sometimes gathered instead of *M. officinalis*. [Gr., *meli*, honey, + *lotos*, lotus.]

Melissa (mel-is'sah). 1. A genus of labiate plants. 2. The leaves and tops of *M. officinalis*. **aqua melissae**. A preparation made by distilling the leaves or flowering tops of *M.* (or both) with water. **M. occidentalis**, **M. officinalis**. Balm. It was probably the Gr., *melisso-phylon* of Dioscorides. The leaves and tops, the m. of the U. S. Ph., 1890, are used as a diaphoretic. [Gr., *meli*, honey.]

mellit (me-li'tis). Inflammation of the cheek. [Gr., *melon*, cheek, + *itis*, inflammation.]

mellituria (mel-it-u're-ah). See *diabetes mellitus*, under *diabetes*. [Lat., *mel*, honey, + Gr., *ouron*, urine.]

mellitiate (mel'li-tāt). A salt of mellitic acid.

mellit (mel-i'tus). Pertaining to or containing honey or glucose. [Lat., *mel*, honey.]

Melophagus (mel-of'ag-us). A genus of dipterous insects. **M. ovinus**, **M. ovis**. A wingless species, found buried in the wool of sheep, whose blood it sucks. [Gr., *melon*, a sheep, + *phagein*, to eat.]

melioplasty (mel'ō-plas-te). The plastic surgery of the cheek. [Gr., *melon*, the cheek, + *plassein*, to form.]

meloschisis (me-los'ke-sis). A congenital buccal cleft. [Gr., *melon*, the cheek, + *schisis*, a cleaving.]

mem'ber. A part of an animal body capable of performing a distinct office; especially a limb, as distinguished from the trunk of the body. **abdominal m's.** The lower limbs in man; the hind limbs in quadrupeds. **inferior m's.** The lower limbs. **posterior m's.** The hind limbs. **superior m's.** The upper limbs. **thoracic m's.** The upper limbs in man; the fore limbs in quadrupeds. **virile m.** See *penis*. [Lat., *membrum*, limb.]

membrana (mem-bra'nah). See *membrane*. **m. adventitia**. See *adventitia*. **m. basilaris of the cochlea**. That portion of the lamina spiralis membranacea of the cochlea into which the bases of Corti's and Deiter's cells are inserted. It forms one wall of the cochlear canal. **m. caduca reflexa**. See *decidua reflexa*. **m. caduca vera**. See *decidua vera*. **m. capsularis genu**. The capsular ligament of the knee. **m. cellulosa**. The decidua. **m. chalzifera**.

The chalziferous membrane; a sort of membrane formed by the white of an egg around the yolk, and extending toward both poles of the egg in the form of a spiral cord (see *chalaza* [2nd def.]). **m. chorii**. The chorion. **m. choriocapillaris**. See *m. ruyschiana*. **m. communis**. A membrane common to two structures. **m. decidua**. See *decidua*. **m. eboris**. The layer of odontoblasts situated between the tooth pulp and the wall of the pulp cavity. **m. elastica laryngis**. A layer of yellow elastic tissue subjacent to the mucous membrane of the larynx, which takes part in the formation of the true vocal cords. **m. flaccida**. See *Shrapnell's membrane*. **m. germinativa**. The blastoderm. **m. granulosa**. Syn.: *formatio granulosa*. The layer of granular cells that forms the lining of the maturing graafian vesicle. See also *follicular epithelium*, under *epithelium*. **m. humeris aequi**. The membrane of Descemet with the corneal endothelium. **membranae interceptantes**. Membranes that separate one space from another, such as the diaphragm. **m. limitans externa retinae**. A very delicate membrane in the retina, formed by the terminal extremities of the fibers of Müller, situated between the outer granular layer and the layer of rods and cones. **m. limitans interna retinae**. The hyaloid capsule; an extremely thin and delicate structureless membrane lining the inner surface of the retina, and more or less intimately connected with the hyaloid membrane. **m. nictans**, **m. nictitans**. See *nictitating membrane*, under *membrane*. **m. prolifera**. The blastoderm. **m. prolifera**. See *discus proligerus*. **m. propria**. Syn.: *basement m.*, *hyaline m.*, *structureless m.* A thin, apparently homogeneous layer of connective tissue at the surface of many membranes. Upon the m. propria rests the epithelium. **m. pupillaris**. The delicate, transparent, vascular membrane which closes the pupil in the fetus during the process of development of the eye. **m. putaminis**. The membranous and reticular but cuticular covering of a bird's egg, situated between the shell and the albumen. **m. ruyschiana**. The middle layer of the choroid, between the vitreous lamina and the layer of larger blood vessels. **m. serotina**. See *decidua serotina*. **m. succingens**. The visceral layer of the pleura. **m. trachealis**, **m. transversa**. The posterior portion of the trachea where the cartilages are wanting. **m. tympani**. The drum membrane, or tympanic membrane, an irregularly rounded, concave membrane stretched out at the inner extremity of the osseous auditory meatus, and placed obliquely to its longitudinal axis, so that the plane of the membrane forms an obtuse angle with the superior wall of the meatus and an acute angle with the inferior. It is attached periplurally to the tympanic ring. **m. tympani secundaria** (Scarpa). A m. which closes the fenestra ovalis. **m. vo-**

callis. The part of the laryngeal mucous membrane that covers the vocal bands.

membrane (mem'brān). A thin expansion of tissue; a sheetlike organized structure.

amphiblestroid m. The retina.

anhistous m. See *decidua*.

animal m's. The fetal envelopes.

arachnoid m. A delicate membrane interposed between the pia mater and the dura mater of the brain and spinal cord, being separated from the dura mater by the subarachnoid space.

articular synovial m. A synovial m. lubricating a diarthrodial articulation. These m's cover the inside of the capsule of the joint and any contained ligaments.

basal m., basement m. See *membrana propria*.

Bowman's m. See *Bowman's layer*, under *Bowman*.

Bruch's m. See under *Bruch*.

Cargile m. See under *Cargile*.

cricothyroid m. The ligamentous membrane which connects the thyroid and cricoid cartilages.

croupous m. A m. resulting from fibrinous exudation upon a serous or mucous surface.

diphtheritic m. A fibrinous m. produced by the diphtheria bacillus.

drum m. See *membrana tympani*.

dysmenorrhœal m. The m. detached in membranous dysmenorrhœa.

elastic m. A m. composed largely of elastic tissue; it is often fenestrated.

enamel m. See *cuticula dentis*.

endo-cardial m. The serosa lining the cavities of the heart, and the spongy heart of reptiles continued over the surface of the muscular trabeculae.

external limiting m. A delicate m. between the stratum of rods and cones and the outer nuclear stratum of the retina, formed of the fibers of the matrix of the latter stratum and lateral branches of the fibers of Müller containing nuclei.

false m. See *croupous m.* and *fibrinopurulent m.*

fenestrated m. Any m. containing minute holes.

fibrinopurulent m. A membranous exudation occurring on mucous and serous surfaces and consisting of a meshwork of fibrin enclosing numerous pus cells.

fibroserous m. A fibrous m. lined with a serous m.

fetal m's. See *fetal envelopes* under *envelope*.

germinal m. See *blastoderm*.

hyaline m. See *membrana propria*.

hyaloid m. Syn.: *m. of the vitreous humor*. The envelope or limiting m. which invests the vitreous humor. It is a structureless m., which anteriorly lies in folds and here shows under the microscope a fine striation. Beneath it may be seen a more or less continuous layer of flattened epithelial cells.

thyrohyoid m. See *thyrohyoid m.*

inner cell m. A membrane-like condensation of the protoplasm of the cell body around the nucleus.

interosseous m. A m. connecting two or more adjacent bones; especially one designed for broadening the surface for muscular attachment.

Krause's m. See *intermediate disk*, under *disk*.

limiting m. See *membrana limitans externa retinae* and *membrana limitans interna retinae*.

m. of Descemet. A thin, crystal-clear, homogeneous and elastic m., forming the

posterior layer of the cornea. It is strongly refractive. On its posterior surface there is a single layer of flat cells, the endothelial cells of the anterior chamber.

m's of the spinal cord. The arachnoid, dura, and the pia of the spinal cord.

m. of the tympanum. See *membrana tympani*.

m. of the vitreous humor. See *hyaloid m.*

mucous m. A m. secreting mucus, which lines all the cavities of the body that communicate with its external surface.

Nasmyth's m. See *cuticula dentis*.

nictating m., nictitating m. The nictating membrane, third eyelid, or haw; a structure highly developed in some of the lower animals, consisting of a fold or reduplication of the conjunctiva, covering a sheet or lamina of fibrocartilage which can be made to advance from the inner and lower side of the lower lid and more or less completely cover the eyeball.

nuclear m. Syn.: *nuclear envelope*. The wall or envelope surrounding the cell nucleus, and separating it from the cell body.

obturator m. The strong fibrous m. which closes in the obturator foramen, except near its upper and outer edge.

periodental m., periodontal m., periodontoid m. A dense fibrous tissue covering the cement of a tooth.

pharyngeal m. The m. formed by layers of the epiblast and the hypoblast which separates the buccal cavity from the pharynx in early embryonic life.

protecting m., protective m. A layer of compactly arranged cells forming a protecting sheath around single fibrovascular bundles, or sometimes groups of them.

pseudom. See *croupous m.* and *fibrinopurulent m.*

pupillary m. See *membrana pupillaris*.

pyogenic m. A highly vascular layer of granulation tissue lining the wall of an abscess.

Reichert's m. See *Bowman's layer*, under *Bowman*.

Reissner's m. See under *Reissner*.

respiratory m. An animal m. through which, mainly by diffusion, the gas interchange of respiration takes place.

schneiderian m., Schneider's m. See under *Schneider*.

semipermeable m. A membrane which allows the molecules of the solvent (water) to pass through it but is impermeable to the molecules of the substance in solution.

serous m. A smooth, glistening, and transparent m., secreting a serous fluid and lining any of the closed cavities of the body.

Shrapnell's m. See under *Shrapnell*.

structureless m. See *membrana propria*.

synovial m. Syn.: *synovial capsule*. A connective tissue m. lining a closed cavity in connection with movable structures. It resembles a serous m., but secretes a glairy and viscid albuminous fluid.

See *synovia*.

tectorial m. 1. Of Waldeyer, a membrane which begins immediately at the point of attachment of Reissner's membrane on the crista spiralis, and terminates in a free and extremely delicate edge in the neighborhood of the outermost row of ciliated cells. 2. The roof of the lower half of the fourth ventricle. 3. Of

- Hasse, see *cupula terminalis*, under *cupula*. 4. Of Claudius, see *organ of Corti*, under *organ*. **Tenon's m.** See *Tenon's capsule*, under *Tenon*. **thyrohyoid m.** The membrane which connects the thyroid cartilage with the hyoid bone. **tympanic m.** See *membrana tympani*. **undulatory m. of a spermatozoid.** The delicate hyaline m. connecting the spiral filament of a spermatozoid with the middle piece and the tail. **vascular m.** A m. freely supplied with blood vessels. **vascular m. of the eye.** See *choroid*. **vesicular m.** The external wall of an ovisac. **virginal m.** See *hymen*. **vitellary m., vitelline m.** 1. The egg m. formed by the protoplasm of the ovum and immediately surrounding it, in contradistinction to an egg m. formed by the follicular epithelium or the epithelium of the oviduct. 2. The investing m. of the vitellus of an ovum. In the fecundated ovum it becomes the chorion. See also *zona pellucida*. **vitreous m.** 1. The basement m. of a hair follicle. It is continuous with the basement m. of the adjacent corium. 2. See m. of *Descemet*. 3. See *vitreous lamina*, under *lamina*. [Lat., *membrana*, web, from *membrum*, a member.]
- membranins** (mem'bra-nins). A special group of proteoses, investigated by Möner, which yield a reducing substance upon boiling with dilute acids. Present in the capsule of the lens and in Descemet's membrane.
- membrano-**. Combining form of membrane.
- membranous** (mem'bran-us). 1. Consisting of, resembling, or pertaining to membrane. 2. Of an inflammation, resulting in the formation of false membrane.
- membrum** (mem'brum). See *member* and *limb* (1st def.). **m. genitale virorum.** See *penis*. **m. muliebre.** See *clitoris*. **membra pudenda.** The genitals. **m. seminale.** See *penis*. **membra vilia.** The genitals of the male. **m. virills.** See *penis*.
- memory** (mem'o-re). The mental function of reproducing past experience. [Lat., *memoria*.]
- mendelian** (men-de'le-an). Relating to *Gregor Johann Mendel*, 1822-1884, an Austrian monk and naturalist.
- Menière's disease** (men-e-'är'). Syn.: *ear* or *auditory*, or *labyrinthine vertigo*. A d. of the vestibular pathways, characterized by apoplectic symptoms, as giddiness, nausea, and vomiting. [*Prosper Ménière*, French physician, 1799-1862.]
- meningeal** (men-in'je-al). Pertaining to the meninges.
- meninges** (men-in'jēz). Membranes, especially the membranes of the brain. **cerebral m.** The cerebral membranes. **spinal m.** The enveloping membranes of the spinal cord. [Pl. of Gr., *menigx*, membrane.]
- meningitiform** (men-in-jit'if-orm). Resembling meningitis. [*Meningitis*, + Lat., *forma*, form.]
- meningitis** (men-in-jit'is). Inflammation of the cerebral or spinal meninges, usually involving the subjacent tissues of the brain or spinal cord. **acute cerebral m.** Syn.: *encephaloid m.* Inflammation of the cerebral pia and arachnoid (never of the dura). **ascending m.** Of Charcot, m. in which the inflammation commences in the lower portion of the spinal cord and ascends. **basilar m.** Inflammation of the membranes of the inferior surface of the brain. **cerebrospinal m.** Inflammation involving both cord and brain. **chronic cerebral m.** An affection made to include chronic vertical and chronic basilar m. **epidemic cerebrospinal m.** Syn.: *spotted fever*. An epidemic disease due to the action of the *Diplococcus intracellularis meningitidis*. Cutaneous eruption occurs in it, hence the name spotted fever, formerly given to it. **fulminant epidemic cerebrospinal m.** M. in which grave symptoms follow each other with great rapidity. **metastatic m.** M. occurring late in the course of an acute disease (e. g., in pneumonia, ulcerative endocarditis, acute rheumatism, purulent pleurisy, and pericarditis). **traumatic m.** M. resulting from injury to the head. **tuberculous m.** A form of m. secondary to miliary tuberculosis, and affecting chiefly the pia (less frequently the dura also) at the base of the brain. [Gr., *menigx*, a membrane.]
- meningocele** (men-in'go-sēl). A congenital tumor protruding through an opening in a cranial bone or in the vertebral column, existing at the time of birth. [Gr., *menigx*, a membrane, + *kele*, a tumor.]
- meningocerebritis** (men-in'go-ser-e-bri'tis). Inflammation of both meninges and brain. [Gr., *menigx*, a membrane, + Lat., *cerebrum*, brain, + Gr., *itis*, inflammation.]
- meningococcus** (men-in'go-kok'us). The micrococcus of cerebrospinal meningitis. See *Diplococcus intracellularis*, under *diplococcus*. [Gr., *menigx*, membrane, + *kokkus*, berry.]
- meningo-encephalitis** (men-in'go-en-sef-al-it'is). Inflammation of the brain and its meninges. [Gr., *menigx*, a membrane, + *ekkephalos*, brain, + *itis*, inflammation.]
- meningomyces** (men-in-gom'is-es). A fungus exrescence on the cerebral meninges. [Gr., *menigx*, a membrane, + *mykes*, a mushroom.]
- meningomyelitis** (men-in'go-mi-e-li'tis). Inflammation of the spinal cord and its meninges. [Gr., *menigx*, a membrane, + *myelos*, marrow, + *itis*, inflammation.]
- meningomyelocele** (men-in-go-mi-el'o-sēl). Hernial protrusion of a part of the spinal cord and its membranes. [Gr., *menigx*, membrane, + *myelos*, marrow, + *kele*, hernia.]
- meningosymphysis** (men-in'go-sim'fis-is). Any abnormal adhesion of membranes. [Gr., *menigx*, a membrane, + *syn*, together, + *phyein*, to grow.]
- meniscus** (men-is'kus). 1. In physics, a

body or portion of a body having a crescentic appearance, as (a) the convex or concave surface of a liquid in a narrow tube, due to capillary attraction, or (b) a lens which is convex on the one side and concave on the other. 2. An interarticular cartilage. **m. interarticularis tibiofibularis**. A fold of synovial membrane uniting the inferior tibiofibular articulation and the ankle joint. **m. medialis**. The internal semilunar fibrocartilage (see under *semilunar fibrocartilages*). **negative m.** A convexoconcave lens. **positive m.** A concavoconvex lens. **tactile menisci**. Of Ranvier, the concavoconvex expansions in which intra-epidermic nerve fibers terminate. [Gr., *meniskos*, crescent, from *mene*, moon.]

Menispermum (men-e-sper'mum). 1. Moonseed, a genus of plants. 2. The rhizome and rootlets of *M. canadense*. **M. canadense**. Canadian moonseed. Its rhizome and rootlets, the m. of the U. S. Ph., 1890, were known at first as Texas sarsaparilla, having been used as a substitute for sarsaparilla. It contains menispin, a small proportion of berberin, and some starch. It is considered tonic. [Gr., *mene*, the moon, + *sperma*, seed.] **menispin** (men'is-pin). An alkaloid obtained from the rhizome of *Menispermum canadense*.

menopause (men'o-pawz). Syn.: *climacteric*, *change of life*. The final physiological cessation of the menstrual function. [Gr., *menes*, the menses, + *pausis*, a stopping.]

menorrhagia (men-or-ra'je-ah). Excessive menstrual hemorrhage. [Gr., *menes*, the menses, + *regnumai*, to burst forth.]

menorrhea (men-or-e'ah). Very profuse menstruation. [Gr., *men*, month, + *roia*, flow.]

mens. See *mind*. **non compos mentis**. Of unsound mind; a legal phrase used to denote a condition intermediate between idiocy and lunacy.

men'ses. Syn.: *catamenia*. The monthly periodical bloody discharge from the genitals of women. [Lat., pl. of *mensis*, month.]

menstrual (men'stru-al). Pertaining to menstruation.

menstruate (men'stru-ât). To be in process of menstruation.

menstruation (men'stru-a'shun). The act or process of discharging the catamenia or menses. **vicarious m.** A hemorrhage from some other part than the genital tract, due to the menstrual effort and unaccompanied by any true menstrual discharge. The term is occasionally applied to vicarious discharges that are not bloody (e. g., a flow of milk from the mammary gland). [Lat., *menstruatio*, from *menstruare*, to menstruate.]

menstruum (men'stru-um), pl., *menstrua*. A solvent; any liquid agent by which a solid substance may be dissolved. [Lat., neuter of *menstruus*, monthly. The alchemists employed the term as a solvent liquid, from the old belief that the fetus

consisted of a "spermatic" and a "menstrual" part.]

mensuration (men-su-ra'shun). The act of measuring; one of the steps in physical diagnosis for the purpose of obtaining information as to either the relative or the absolute dimensions (externally) of parts, as in craniometry, etc. [Lat., *mensuratio*, from *mensura*, measure.]

mentagra (men-tah'grah). See *sycosis*. [Lat., *mentum*, chin, + Gr., *agra*, a catching.]

mentagrophyte (men-tag'rof-it). See *Trichophyton* or *Microsporon mentagrophytes*. [Lat., *mentum*, chin, + *agra*, a catching, + *phyton*, a plant.]

mentagrophyton (men-tag-rof'it-on). The fungus *Trichophyton* or *Microsporon mentagrophytes*, the cause of a form of sycosis. [Lat., *mentagra*, sycosis, + Gr., *phyton*, plant.]

men'tal. 1. Pertaining to the mind; to the functions of the cerebral mechanism in bringing about social adaptation. [Lat., *mens*, *mentis*, the mind.] 2. Pertaining to the chin. [Lat., *mentum*, the chin.]

mentalis (men-ta'lis). See *table of muscles*, under *muscle*.

Mentha (men'thah). Mint; a genus of labiate herbs. **aqua menthae piperitae**. Peppermint water; a preparation made from oil and the leaves of *M. piperita* [U. S. Ph., Br. Ph.]. **aqua menthae viridis** [U. S. Ph., Br. Ph.]. A preparation consisting of oil of spearmint dissolved in water [U. S. Ph.], or oil of spearmint distilled with water [Br. Ph.]. **essentia menthae piperitae**. Oil of peppermint. **M. arvensis**. Corn (or field) mint; a species having the odor of decayed cheese. Its herb is sometimes gathered in place of *Mentha pulegium*, though it is milder in its properties. **M. piperita**. Syn.: *folia (herba) menthae piperitae* (2d def.). 1. The common peppermint, brandy mint; a species much cultivated as a source of oil of peppermint. 2. In the U. S. Ph., the leaves and tops of the plants; a pleasant aromatic stimulant, much employed as a carminative and as an agreeable adjuvant to nauseating or harsh medicines. **M. viridis**. 1. Spearmint. Its virtues, like those of *M. piperita*, depend upon a volatile oil (*oleum menthae viridis*). 2. Of the U. S. Ph., the leaves and tops of the plant. **oleum menthae piperitae**. Oil of peppermint [U. S. Ph., Br. Ph.]. **oleum menthae viridis**. Oil of spearmint [U. S. Ph., Br. Ph.]. **spiritus menthae piperitae**. Spirit of peppermint, made by dissolving 10 parts of oil of peppermint in 90 of alcohol and coloring with spearmint herb [U. S. Ph.]. **spiritus menthae viridis**. Spirit of spearmint, made from spearmint in the same way as the spiritus menthae piperitae is made from peppermint [U. S. Ph.]. **trochisci menthae piperitae**. A preparation consisting of peppermint oil, powdered sugar, and tragacanth, made into lozenges [U. S. Ph., 1890]. [Lat.]

men'thol. Syn.: *peppermint camphor*.

- $\text{CH}_3\text{C}_6\text{H}_5\text{OH}\cdot\text{C}_6\text{H}_7$, a crystalline substance found abundantly in peppermint oil. It acts as an antineuralgic, antiseptic, anesthetic, and stimulant. **m. pencil.** M. melted and cast into a conical shape; used as an application to the skin. **m. valerianate.** See *validol*. **surgical m. pencil.** A pencil made by melting cacao butter mixed with 2 or 3 per cent. of wax, adding m., and casting in glass tubes smeared on the inside with diluted glycerin. [Lat., *mentha*, mint.]
- mento-** Combining form of Lat., *mentum*, chin; used as a prefix in compound words to signify of, or concerning, the chin.
- men'tum.** The chin. [Lat.]
- Menyanthes** (men-e-an'théz). The buckbean; a genus of the *Gentianaceae*, so called because of its reputed emmenagogue properties. **M. trifoliata.** The buckbean; growing in the northern hemisphere. The entire plant is tonic, cathartic, and in large doses emetic, its virtues depending on a bitter principle, *menyanthin*. [Gr., *men*, a month, + *anthos*, a flower.]
- menyan'thin.** A turpentine-like substance, $\text{C}_{20}\text{H}_{30}\text{O}_{14}$, obtained from *Menyanthes trifoliata*.
- meralgia** (mer-al'je-ah). Neuralgia of the thigh. **m. parasthetica.** An affection characterized by sensory disturbances of the outer and anterior surfaces of the thigh, due to disease of the external cutaneous nerve. [Gr., *meros*, the thigh, + *algos*, pain.]
- mercaptan** (mer-kap'tan). Syn.: *thioalcohol*. 1. One of the class of organic compounds which contain the SH group in combination with an alkyl radicle. Some are formed in the putrefaction of proteids. 2. Ethyl mercaptan, $\text{CH}_3\text{CH}_2\text{SH}$. An oily liquid of extremely disagreeable odor. [Lat., *mercurio aptum*, or *mercurium captans*, because of the readiness with which it combines with mercury.]
- mercaptid** (mer-kap'tid). A compound resulting from the action of mercaptan (or ethyl sulphhydrate) on certain metallic oxids.
- mercauro** (mer-kaw'ro). A proprietary compound containing gold and mercury; used in syphilis.
- Merck's dry extract of malt.** A proprietary preparation consisting of a dry, very hygroscopic powder, which becomes liquid when in contact with moist air.
- mercuran** (mer'ku-ran). A proprietary ointment, not differing essentially from the official mercurial ointment.
- mercurial** (mer-ku're-al). Pertaining to, consisting of, or due to mercury; as a n., a medicinal preparation containing mercury. Sprightly, volatile (said of the temperament). [Lat., *mercurialis*.]
- mercuric** (mer-ku'rik). Pertaining to or containing mercury as a radicle. **m. salts.** See under *mercury*.
- mercurification** (mer'ku-rif-i-ka'shun). 1. The process of obtaining mercury from minerals containing it. 2. The process of combining any substance with mercury. [Lat., *mercurius*, mercury, + *facere*, to make.]
- mercurol** (mer'ku-rol). Mercury nucleinate, an organic compound of mercury with nucleic acid from yeast, containing 10 per cent. of metallic mercury. It is bactericidal, and possesses the actions of mercury.
- mercurous** (mer'ku-rus). Containing mercury as a univalent radicle. **m. salts.** See under *mercury*.
- mercury** (mer'ku-re). Syn.: *quicksilver*. A liquid metallic element of silvery color and metallic luster. At about 40°C . it freezes into a ductile and malleable solid, like tin; it also crystallizes at a low temperature. It occurs free, and also combined with sulphur (in cinnabar), with chlorine, and with iodine. It forms two classes of compounds: the *mercurous* and the *mercuric* salts, in which it seems to act as a univalent and a bivalent radicle respectively. Symbol, Hg. Atomic weight, 200. Specific gravity, 13.61. Many metals dissolve in m. or form compounds with it, which are called amalgams. Its salts are poisonous, especially the soluble ones. Many of its salts are used in syphilis. List of poisons and their antidotes, see in appendix, page 939. **acid solution of nitrate of m.** See *liquor hydrargyri nitratis acidus*, under *hydrargyrum* [Br. Ph.]. **black lotion of m.** See *lotio hydrargyri nigra*, under *hydrargyrum*. **calcin'd m.** See *red m. oxid.* **casein m.** A soluble compound of "casein alkali" and mercuric chloride; an antiseptic. **caustic m. nitrate.** A solution of 1 part of m. nitrate in 2 parts of commercial nitric acid. **compound ointment of m.** See *unguentum hydrargyri compositum*, under *hydrargyrum* [Br. Ph.]. **compound pill of subchlorid of m.** See *pilulae hydrargyri subchloridi compositae*, under *hydrargyrum*. **corrosive m. chlorid.** See *m. bichlorid.* **green iodid of m.** See *m. protiodid.* **liniment of m.** See *linimentum hydrargyri*, under *hydrargyrum*. **mass m.** See *massa hydrargyri*, under *hydrargyrum*. **m. acetate.** $\text{Hg}_2(\text{CH}_3\text{COO})_2$, shining white scales, soluble with difficulty in water. **m. alanate, m. amidopropionate.** The m. salt of alanin (amidopropionic acid). **m. bichlorid.** Syn.: *corrosive sublimate*. Mercuric chloride, Hg_2Cl_2 , a substance forming colorless acicular or prismatic crystals, having an acrid metallic taste, and an acid reaction. It is used internally in syphilis, and diarrhea and other conditions, where septic conditions of the intestinal tract exist. Externally, it is employed as an antiseptic in surgical operations. It is a powerful corrosive poison [U. S. Ph., Br. Ph.]. **m. biniodid.** Mercuric iodid, red m. iodid. A substance, Hg_2I_2 , occurring as a brilliant scarlet crystalline powder, devoid of taste and odor, almost insoluble in water, and soluble with difficulty in alcohol. It dissolves in a solution of potassium iodid or of corrosive sublimate. It is used as

an alterative in syphilis, in various skin diseases, especially eczema, and in iritis; externally [U. S. Ph., Br. Ph.] **m. bisulphid.** Mercuric sulphid, HgS , so called from its analogy with m. bichlorid, binioidid, bicyanid, etc. It exists in a black and a red modification. The latter is used as the pigment known as vermilion. **m. chlorid.** Syn.: *calomel*. Hg_2Cl_2 , a white powder insoluble in water. It is used internally as a purgative and in syphilis. **m. cyanid.** Mercuric cyanid, $\text{Hg}(\text{CN})_2$, obtained by the action of potassic cyanid on a mercurous salt. Used in syphilis [U. S. Ph.]. **m. dioxide.** See *m. oxid.* **m. ethid.** **m. ethyl.** 1. A univalent radicle, $\text{Hg}(\text{C}_2\text{H}_5)$. 2. *m. diethyl*, or *mercuric ethid*, $\text{Hg}(\text{C}_2\text{H}_5)_2$, a colorless inflammable liquid, poisonous in character, but less so than m. methyl. **m. ethyl chlorid.** A crystalline solid, $\text{Hg}(\text{C}_2\text{H}_5)\text{Cl}$. **m. ethylenediamin.** A disinfectant for the hands compounded of m. and ethylenediamin, and used in aqueous solution. **m. gallate.** A salt of m. and gallic acid; used in syphilis. **m. iodid.** HgI_2 , a compound resembling m. chlorid. **m. oleate.** Mercuric oleate; a yellowish salvelike substance, having an odor of oleic acid, and insoluble in water and in alcohol. It is used externally in syphilis, various skin diseases, and rheumatism, and as a local stimulant over chronic swellings. *Oleatum hydrargyri* [U. S. Ph.]. **m. oxid.** A compound of m. and oxygen; red m. oxid; yellow m. oxid. **m. pernitrate.** Mercuric nitrate, a salt, $2\text{Hg}(\text{NO}_3)_2 + \text{H}_2\text{O}$, forming large deliquescent crystals, obtained by boiling m. with nitric acid. In solution it is the *liquor hydrargyri nitratis*. It is a powerful caustic. **m. peroxid.** See *m. oxid.* **m. protiodid.** Mercurous iodid, green or yellow m. iodid, or simply m. iodid; a greenish or greenish yellow powder, HgI_2 , formed by the action of iodine on metallic m. It is devoid of taste and odor, almost completely insoluble in water, and insoluble in alcohol. It is used in syphilis. **m. salicylarsenate.** Syn.: *enesol*. A compound said to combine the actions of mercury and arsenic. It is used by intramuscular injection. **m. salicylate.** A mercury salt of salicylic acid. Two salts are known, mercuric salicylate, $\text{Hg}(\text{C}_6\text{H}_4\text{OHCOO})_2$, a white amorphous powder; and mercurous salicylate, $\text{Hg}(\text{C}_6\text{H}_4\text{OHCOO})$. Mercuric salicylate is used for intramuscular injection in syphilis. **m. sodiodolate.** A yellow powder of the following composition, $\text{C}_6\text{H}_4\text{I}_2\text{O}_2\text{SO}_3\text{Hg}$. Used in syphilis as an antiseptic. **m. subsulphate.** Syn.: *turpeth mineral*. Basic mercuric sulphate, yellow m. sulphate or subsulphate, $2\text{HgO} \cdot \text{HgSO}_4$. It is used as an emetic, especially in croup. **m. suppositories.** A preparation made by melting oil of theobroma, adding mercurial ointment and molding into suppositories [Br. Ph., 1885]. **m. tannate.** A salt of m. and tannic acid; used in syphilis. **m. thymolacetate.** A compound of m. and thymol with

acetic acid; recommended for use in surgery and especially for hypodermic injection in syphilis. **m. thymolate.** Thymol m.; thymol in which m. replaces hydrogen; recommended for use in surgery. **m. urea.** A compound of mercuric oxid and urea, $\text{CON}_2\text{H}_4 \cdot \text{HgO}$. Another compound, $2\text{CON}_2\text{H}_4 \cdot 3\text{HgO}$, is obtained by treating corrosive sublimate with alkaline urea solution, and a third compound, $\text{CON}_2\text{H}_4 \cdot 2\text{HgO}$, by treating urea with mercuric nitrate. **m. with chalk.** See *hydrargyrum cum creta*. **ointment of ammoniated m.** See *unguentum hydrargyri ammoniati*, under *hydrargyrum* [U. S. Ph., Br. Ph.]. **ointment of m.** See *unguentum hydrargyri*, under *hydrargyrum* [U. S. Ph., Br. Ph.]. **ointment of nitrate of m.** See *unguentum hydrargyri nitratis*, under *hydrargyrum*. **ointment of subchlorid of m.** See *unguentum hydrargyri subchloridi*, under *hydrargyrum*. **pill of m.** See *massa hydrargyri*, under *hydrargyrum*. **red m. oxid.** Red precipitate; mercuric oxid, HgO , obtained by calcination of metallic m., or of m. nitrate. It forms a bright-red crystalline powder, or red crystalline scales. It is used as a stimulant application like the yellow oxid, but is slightly harsher in action [U. S. Ph., Br. Ph.]. **red m. sulphid.** Cinnabar, HgS , found native, and also obtained artificially by subliming a mixture of m. and sulphur. It forms either red crystalline masses or a scarlet crystalline powder, devoid of taste and odor, and insoluble in water and in alcohol. **solution of nitrate of m.** See *liquor hydrargyri nitratis*, under *hydrargyrum* [U. S. Ph.]. **solution of perchlorid of m.** See *liquor hydrargyri perchloridi*, under *hydrargyrum*. **thymol m.** See *m. thymolate*. **vegetable m.** *Franciscea uniflora*, *Cyananthum giganteum*, and *Lobelia syphilitica*, and (in India) *Calotropis gigantea* and *Calotropis procera*; so called from their supposed antisiphilitic properties. **vitriol of m.** M. sulphate. **yellow lotion of m.** See *lotio hydrargyri flava*, under *hydrargyrum*. **yellow m. oxid.** Mercuric oxid prepared by precipitation from a solution of a mercuric salt (usually m. bichlorid) by a caustic alkali, and forming an amorphous bright yellow powder. It is used as a stimulant application, particularly under the form of an ointment for blepharitis, chronic conjunctivitis, opacities of the cornea, etc. [U. S. Ph., Br. Ph.]. [Lat., *mercurius*.]

mer'gal. A proprietary preparation of mercury cholate and albumin tannate in capsules. The constituents are said to be liberated in the intestine. Actions those of mercury mainly.

meridian (mer-id'e-an). A great circle drawn from pole to pole on the surface of a spherical body (especially the earth) and passing through a given point, of which it is said to be the m. **magnetic m.** A m. passing through the place of observation and the magnetic poles of the earth. **principal m's of the eye.** The

m's of the astigmatic cornea that have the greatest and least curvature.

meridional (mer-id-'e-on-al). Meridian.

Merismopodia (mer-'is-mo-pe'de-ah). A genus of fission plants, of the *Chroococcaeae*, or, of some authors, of the *Schizomycetes*. **M. Goodsirii**. *Sarcina ventriculi*. **M. urinae**. *Sarcina urinae*. **M. ventriculi**. *Sarcina ventriculi*. [Gr., *merismos*, a dividing, + *pedion*, a plain.]

merispor (mer-'is-pör). In *fungi*, a secondary spore formed by division of the endospores or the exospores. [Gr., *meros*, a part, + *sporos*, a sowing.]

meristem. 1. In botany, the new tissue at the sprouting end of a twig or growing leaf, consisting largely of actively dividing cells. 2. Embryonal tissue.

mero-, mer-. Combining form of Gr., *meros*, part, fraction; used to signify partial or fractional as a prefix.

mero-. Combining form of Gr., *'meros*, thigh; used in a few words as a prefix to signify of, or concerning the thigh.

merozoite (me-ro'zo-it). One of the spindle-shaped bodies, formed from segmentation of *schizont* of a protozoön, as in segmentation of malarial organism. [Gr., *meros*, part, + *zoon*, animal.]

merycism (mer-'is-izm). Regurgitation of food from stomach.

Méry's glands. Syn.: *Cowper's g's*. In the male, two small acinous g's situated above the bulb, behind the membranous portion of the urethra, between the two layers of the triangular ligament. They were described by *Jean Méry* in 1684.

mesad (me'sad). Toward the median line.

mes'cal but'tons. Also *mus'cal*. The dried tops of *Lophophora Williamsii* and other cacti. They contain a number of alkaloids, including mescaline, pelotina, etc.

mesencephalon (mes-en-sef'al-on). The second of the three primitive cerebral vesicles from which are developed the middle cerebral ganglia, including the corpora quadrigemina and crura cerebri. [Gr., *mesos*, middle, + *egkephalos*, brain.]

mesenteric (mēs-'ēn-ter'ik). Mesentery.

mesentery (mēs-'ēn-tēr-i). Fold of peritoneum which attaches intestine to posterior abdominal wall. It consists of mesentery proper, connecting small intestine with spinal column, and mesentery of the cecum, colon and rectum respectively. [Gr., *mesos*, middle, + *enteron*, intestine.]

mesial (me'se-al). Situated in, or directed toward middle of body. **m. deduplication**. A condition in which the superior and inferior growing points of fetus remain single, but the cells projecting backwards fail to unite and a double monster is formed (Adami). [Gr., *mesos*, middle.]

mesitylene (mes-it'il-ēn). Symmetrical trimethylbenzene, C₆H₄(CH₃)₃. Oxidized in the body to mesitylenic acid.

mesmerize (mes'mer-iz). To produce a hypnotic state, usually accompanied by insensibility to pain and muscular rigidity induced by an influence exercised by the operator over the will and nervous system

of the patient. [*F. A. Mesmer*, Austrian physician, 1734-1815.]

meso-, mes-. Combining form of Gr., *mesos*, middle; used as a prefix to signify in the middle or middle.

mesoarium (mes-o-a're-um). See *mesovarium*.

mesoblast (mes'o-blast). The middle layer of three in the embryo developing the structures of the skin, connective tissue, bones, muscles, organs of excretion and internal genitals. **parietal m.** The upper or outer plate of the m. **splanchnic m.** The lower or inner plate or layer of the m.

mesocardia (mes-o-kar'de-ah). The position of the heart in the center and anterior part of the chest. [Gr., *mesos*, middle, + *kardia*, heart.]

mesococcus (mes-o-kok'us). A coccus larger than a micrococcus and smaller than a macrococcus.

mesogas'ter. Syn.: *midgut*. That portion of the embryonic alimentary canal from which are developed the duodenum, liver, pancreas, jejunum, ileum, and umbilical vesicle. [Gr., *mesos*, middle, + *gaster*, belly.]

mesognathion (me-sog-na'the-on). The portion of superior maxilla, separate in fetus, which bears the incisor tooth. [Gr., *mesos*, middle, + *gnathos*, jaw.]

mesometrium (mes-o-me'tre-um). 1. Middle layer of uterus. 2. The broad ligaments. [Gr., *mesos*, middle, + *metra*, uterus.]

mesonephric, mesonephritic (mes-o-nef'rik, mes-o-nef-rit'ik). Pertaining to the mesonephros.

mesonephros (mes-o-nef'ros). Syn.: *corpus wolffianum*. The wolffian body (so called from its discoverer, *C. F. Wolff*), or primordial kidney, the middle or largest division of the segmental apparatus of the embryo. In the female a portion of it persists as the epoöphoron. See *pronephros*. [Gr., *mesos*, middle, + *nephros*, the kidney.]

mesophilic (mes-o-fil'ik). Preferring a moderate temperature. Said of bacteria developing best at the body temperature of 37° C. [Gr., *mesos*, middle, moderate, + *philein*, to love.]

mesophlebitis (mes-o-fle-bi'tis). Inflammation of the middle coat of an artery.

mesoporphyrin (mes-o-por'fi-rin). A pigment obtained by reducing hemin or hemochromogen. It is closely related to phylloporphyrin, a derivative of chlorophyll.

mesorchion, mesorchis, mesorchium (mes-or'ke-on, mes-or'kis, mes-or'ke-um). A peritoneal fold by which the testicle of the embryo is attached to the mesonephros. [Gr., *mesos*, middle, + *orchis*, the testicle.]

mesorectum (mes-o-rek'tum). A peritoneal fold attaching rectum to sacrum.

mesostate (mes'os-tāt). A substance formed by the protoplasm of a cell, to be eventually converted into secretory products (e. g., trypsinogen, pepsinogen, etc.).

mesotan (mes'o-tan). Ericin, methoxy-methyl salicylate, C₆H₁₀O. Its actions

- and uses are similar to those of oil of wintergreen.
- mesothelioma** (mes''o-the-le-o'mah). A tumor arising from mesothelium, such as the serous surfaces or the adrenal gland, the testis, or the ovary. It is generally of an adenomatous type.
- mesothelium** (mes-o-the'le-um). The epithelioid part of the mesoderm, the peritoneal pleural lining cells, muscle plates, etc. [Gr., *mesos*, middle, + *thele*, nipple.]
- mesothermal** (mes-o-ther'mal). Moderately warm; said of mineral waters.
- mesovarium** (mes-o-va're-um). A peritoneal fold by which the ovary of the embryo is attached to the mesonephros. [Gr., *mesos*, middle, + Lat., *ovarium*, ovary.]
- meta-, met-**. Combining form of Gr., *meta*, between, with, after. Used as a prefix in anatomy and zoölogy to signify behind or hindmost, also subsequent and more developed. In chemistry, to designate organic compounds of the benzene series denoting the 1-3 position. See *benzene*.
- meta-acetphenetidín** (me'tah-as-et-fen-et'id-in). See *phenacetin*.
- metabolic** (met-ah-bol'ik). Pertaining to metabolism.
- metabolín** (met-ab'ol-in). See *metabolite*.
- metabolism** (met-ab'ol-izm). Of Schwann (1839), the series of chemical changes occurring in nutritive material taken into an organism by which it is converted into an integral part of the living substance (constructive m., anabolism), also the changes taking place in living substance by which energy is set free (destructive m., catabolism). In modern physiology the term is used to include the functional chemical changes occurring in the living cell. [Gr., *metaballein*, to throw into a different position.]
- metabolite** (met-ab'ol-it). Any substance produced in metabolism.
- metacarpal, metacarpian** (met-ah-kar'pal, met-ah-kar'pe-an). Pertaining to the metacarpus.
- metacarpophalangeal** (met-ah-kar'po-fal-an'je-al). Pertaining to the metacarpus and the phalanges.
- metacarpus** (met-ah-kar'pus). The metacarpal bones taken as a whole. [Gr., *meta*, beyond, + *karpos*, the wrist.]
- metachromatic** (met-ah-kro-mat'ik). Pertaining to, or affected with metachromatism. **m. bodies**. Certain bodies in the protoplasm of some species of bacteria that by special staining methods take on a deeper stain than the rest of the bacterial protoplasm, as with the diphtheria bacillus. **m. granules**. See *m. bodies*. [Gr., *meta*, change, + *chroma*, color.]
- metachromatism** (met-ah-kro'mat-izm). Variation in the action of a staining agent.
- metacresol** (met-ah-kre'sol). The compound, $C_6H_4(CH_3)OH$; an antiseptic.
- metagenesis** (met-ah-jen'es-is). See *alternation of generations*, under *generation*.
- [Gr., *meta*, beyond, + *genesis*, a production.]
- metagenetic, metagenic** (met-ah-jen-et'ik, met-ah-jen'ik). Pertaining to metagenesis.
- metagglutinín** (met-ag-glu'tin-in). Syn.: *partial agglutinín*, *minor agglutinín*. The partial agglutinín present in an agglutinative serum which acts on a different organism than the one used for producing the serum and in a lower dilution. Thus typhoid immune serum may agglutinate the typhoid bacillus in a dilution of 1 to 1,000 by means of its haupt-agglutinín and also agglutinate the colon bacillus in a solution of 1 to 200. [Gr., *meta*, after, + *agglutinín*.]
- metakinesis** (met'ah-kin-e'sis). The stage in indirect cell division in which the longitudinally divided nuclear fibrils rearrange themselves to form the fibrils of the daughter nuclei, and the daughter nuclei separate from each other. [Gr., *metakinesis*, from *meta*, beyond, + *kinesis*, movement.]
- met'al.** Syn.: *metallic element*. Any one of a class of elementary bodies distinguished by their luster, their high specific gravity, their malleability, ductility, and electrical and thermal conductivity, and, chemically, by the basic properties of their oxids (hence called "basic elements"). **alkali m., alkaline m.** One of a group of metallic elements comprising sodium, potassium, lithium, rubidium, and cesium. They are all univalent, and are distinguished by the strong basic properties of their oxids and the solubility of their salts in water. The radicle ammonium, (NH_4) , is often included in this group on account of the similarity of its reactions and the isomorphism of its salts with those of the metals of this class. **alkaline earth m's.** M's whose oxids form the alkaline earths. They are calcium, strontium, and barium. [Lat., *metallum*.]
- metalbumín** (met-al-bu'min). A protein substance found by Hammerstein in the fluids of ovarian cysts, a white hygroscopic powder, readily soluble in water. It belongs to the mucin group.
- metaldehyd** (met-al'de-hyd). A polymer of acetaldehyd, $(C_2H_4O)_n$.
- metallic** (me-tal'lik). Pertaining to, consisting of, or having the properties of a metal or metals. [Gr., *metallon*, metal.]
- metalliform** (met-al'if-orm). Having the appearance or properties of a metal. [Gr., *metallon*, a metal, + Lat., *forma*, form.]
- metalloid** (met'al-loyd). 1. A non-metallic element. 2. An element intermediate in properties between the non-metallic and the metallic elements. [Gr., *metallon*, a metal, + *eidos*, a resemblance.]
- metallotherapy** (met-al-o-ther'ap-e). The treatment of certain nervous diseases by the application of plates, bracelets, rings, or chains of different metals to the affected locality. [Gr., *metallon*, a metal, + *therapeia*, medical treatment.]
- metallurgy** (met-al-er'je). The science

treating of the preparation of the metals from the natural ores.

metacre (met'am-ēr). One of a number of similar segments (which often become differentiated), placed longitudinally or serially. [Gr., *meta*, after, + *meros*, part.]

metamerie (met-am'er-ik). Of, pertaining to, or characterized by metamerism, or division into, or arrangement according to metameres.

metamorphic (met-ah-mor'fik). Of or pertaining to metamorphosis; metamorphosed.

metamorphism (met-ah-mor'fizm). The transformations to which rocks have been subjected since their original formation. [Gr., *meta*, across, + *morphe*, form.]

metamorphopsia (met-ah-mor-fop'se-ah). A defect of vision in which horizontal or vertical lines, instead of appearing straight, seem bent and crooked, causing distortion. [Gr., *meta*, across, + *morphe*, form, + *ops*, the eye.]

metamorphosis (met-ah-mor'fo-sis). A change of structure or form; a transformation. **regressive m.**, **retrograde m.**, **retrogressive m.** A retrograde change; degeneration; atrophy of tissues or their transformation into matter of lower organization (effete material). See *histolysis*. [Gr., *meta*, across, + *morphe*, form.]

metamorphous (met-ah-mor'fus). Amorphous, but showing a tendency to crystallization.

metanephric (met-an-ef'rik). Pertaining to or connected with the metanephros.

metanephros (met-an-ef'ros). The posterior division of the segmental duct, which becomes the kidney and ureter. [Gr., *meta*, after, + *nepros*, kidney.]

metaphases (met'af-āz-es). The changes taking place in an indirectly dividing nucleus from the time the nuclear fibrils have divided longitudinally till the daughter nuclei have become wholly separated from each other. [Gr., *meta*, beyond, + *phasis*, a phase.]

metaphlogosis (met-ah-flo-go'sis). Inflammation with sanguineous engorgement but without much induration. [Gr., *meta*, beyond, + *phlogosis*, a burning.]

metaphosphate (met-ah-fos'fat). A salt of metaphosphoric acid.

metaplasia (met-ah-pla'ze-ah). Of Virchow, the replacement of one tissue by another, or the transformation of one tissue into another, such as the replacement of the cartilaginous by the osseous skeleton, the transformation of red into yellow marrow or the reverse. The process may be pathological also, as in osteomalacia. It only occurs in tissues from the same germ layer, and is mostly seen in those derived from the mesoblast. [Gr., *meta*, beyond, + *plasis*, conformation.]

metaplastm (met'ah-plasm). Material in a cell which is of lower quality than the true protoplasm. It is protoplasm undergoing retrograde metamorphosis, or nourishment not fully transformed into

protoplasm. [Gr., *meta*, beyond, + *plasma*, anything molded.]

metaplastic (met-ah-plas'tik). Of Strelzoff, pertaining to the direct transformation of cartilage or membrane into bone. [Gr., *meta*, beyond, + *plastikos*, plastic.]

metapneumonic (met-ah-nu-mon'ik). Occurring after pneumonia.

metapsychosis (met-ah-si-ko'sis). See *telepathy*. [Gr., *meta*, beyond, + *psychosis*, mental action.]

metastable solutions. Solutions in a condition of supersaturation as regards the amount of substance dissolved.

metastannate (met-ah-stan'nāt). A salt of metastannic acid.

metastasis (me-tas'tas-is). 1. The sudden subsidence of an inflammation, with the appearance at the same time of inflammation in another part not anatomically connected with the part first diseased, as in the orchitis following mumps. 2. The progress of disease from one part of the body to another by recognized channels, as in the development of secondary carcinoma in the liver following a primary tumor in the stomach. [Gr., *meta*, removal, in the midst of, + *stasis*, a placing.]

metastatic (met-as-tat'ik). Pertaining to, or of the nature of metastasis. **m. inflammation**. See under *inflammation*.

metasyphilis (met-ah-sif'il-is). A condition resulting from syphilis, producing degeneration in the central nervous system. Said particularly of tabes and paresis.

metasyphilitic (met'ah-sif-il-it'ik). The group of degenerative brain and cord diseases, due to the remote action of syphilitic infection.

metatarsal (met-ah-tar'sal). Pertaining to the metatarsus; as a n., a m. bone.

metatarsalgia (met'ah-tar-sal'je-ah). Pain in the metatarsus. [Gr., *metatarsion*, the metatarsus, + *algos*, pain.]

metatarsus (met-ah-tar'sus). The middle of the foot; as an anatomical division, the part situated between the tarsus and the digits, made up in man of five metatarsal bones. [Gr., *metatarsion*, from *meta*, beyond, + *tarsos*, the flat of the foot.]

metathesis (met-ath'es-is). See *simple decomposition* and *double decomposition*, under *decomposition*. [Gr., *metathesis*, from *metatithenai*, to change the place of.]

metathetic (met-ath-et'ik). Pertaining to or of the nature of metathesis.

metatrophia (met-at-ro'fe-ah). A disease originating in disorder of nutrition. [Gr., *meta*, beyond, + *trophe*, nourishment.]

Metazoa (met-ah-zo'ah). Animals consisting of many cells resulting from the segmentation of the ovum and comprising all phyla except the protozoa. [Gr., *meta*, beyond, + *zoon*, an animal.]

Metchnikoff's law. The 1. that the phagocytes attack and destroy invading bacteria by intracellular digestion. **M's theory**. The 2. that explains the phagocytic action of leukocytes and other tissue cells in incorporating and destroying bac-

- teria or other foreign cells or waste products. [*Elie Metchnikoff*, Russian biologist, Pasteur Institute, Paris, born 1845.]
- metencephalon** (met-en-sef'al-on). Syn.: *afterbrain*, *hindbrain*. That portion of the embryonic brain which, being formed from the posterior encephalic vesicle, is subsequently developed into the medulla oblongata, the fourth ventricle, and the auditory nerve. [Gr., *meta*, after, + *egkephalos*, the brain.]
- metensomatosis** (met'en-so-mat-o'sis). Transformation into or incorporation with another body. [Gr., *meta*, amid, + *ensomatosis*, an embodying.]
- meteorism** (me'te-or-ism). See *tympanites*. [Gr., *meteorizein*, to raise up.]
- me'ter**. The unit of length in the metric system; equal to 1.094 yds. [Gr., *metron*, a measure; Fr., *mètre*.]
- methacetin** (meth-as'et-in). An antifermentative and antipyretic; a lower homologue of phenacetin.
- methaform** (meth'af-orm). A name applied to chlorbutanol.
- methal** (meth'al). An alcohol, $C_{14}H_{28}(OH)$, occurring combined with fatty acids in spermaceti.
- methanal** (meth'an-al). A synonym for solution of formaldehyd.
- methane** (meth'an). Syn.: *marsh gas*. A colorless, odorless, inflammable gas, CH_4 . All the aliphatic compounds are considered as derivatives of m. It is found in the intestine during putrefaction.
- methemoglobin** (meth-em-o-glo'bin). A substance formed from oxyhemoglobin in decomposing blood and also by the action of ozone, potassium, ferri cyanid, chlorates, nitrates, and certain other agents. Its spectrum contains a peculiar band in the red. In alkali solution, upon reduction it is converted into reduced hemoglobin, which is distinguished by its absorption spectrum. M. is present in the urine in cases of poisoning with arseniuretted hydrogen and chlorates, as well as after serious burns and sometimes in fevers.
- methemoglobinemia** (meth'em-o-glo-bin-e'me-ah). The presence of free methemoglobin in the blood. It has occurred after the administration of various coal-tar products. [*Methemoglobin* + Gr., *aima*, blood.]
- methemoglobinuria** (meth'em-o-glo-bin-u're-ah). The presence of methemoglobin in the urine. [*Methemoglobin* + Gr., *ouron*, urine.]
- methethyl** (meth-eth'il). A local anesthetic said to consist of ethyl chlorid with a little methyl chlorid and chloroform.
- meth'od**. An orderly process or course of action by means of which any desired end is sought to be attained. The term is applied to many forms of technic used in laboratory work. **m.**, **Purdy's centrifugal, how to determine amount of albumin present in urine**; see in *appendix*, page 894. **m.**, **Tsuchiya's, how to determine amount of albumin present in urine**; see in *appendix*, page 893. [Gr., *methodos*, from *meta*, after, + *odos*, a way.]
- methonal** (meth'on-al). The compound $(CH_3)_2C(SO_2CH_3)_2$, analogous to sulphonal; used as a hypnotic.
- methoxycfeain** (meth-ok-se-kaf'e-in). A derivative, $C_8H_9(OCH_3)_4N_4O_2$, of caffeine; an analgetic.
- methyl** (meth'il). Syn.: *emyl*. Used in the names of chemical compounds to denote the univalent radicle, CH_3 . **m. chlorid**. Syn.: *monochloromethane*. CH_3Cl ; a gas with a sweetish odor. **m. ether**. See under *ether*. **m. glycochol**. See *saccharin*. **m'guanidin**. $CH_3NH_2C(NH)NH_2$. A base present in small amounts in meat extract. **m. hydrate**. Same as *m. alcohol* (separate heading). **m. iodid**. CH_3I ; a liquid with a sweet odor. **m. orange**. Syn.: *heliantin*. An indicator faintly colored by acid solutions, but having a red color in alkaline solutions. **m. salicylate**. The methyl ester of salicylic acid, $C_6H_4OH.COOCCH_3$. A liquid of an agreeable odor which forms about 90 per cent. of the oil of wintergreen. [Gr., *methy*, wine, + *yle*, substance.]
- meth'yl alco'hol**. Syn.: *methyl alcohol*, *methyl hydrate* or *hydrated oxid*, *carbinol*, *wood spirit*, *methyl spirit*, *pyroxylic spirit*, *wood naphtha*. A monohydric alcohol, CH_3OH , found among the products of the distillation of wood, or prepared from oil of wintergreen by boiling with an alkali.
- methylamin** (meth-il-am'in). A primary methyl amin, $CH_3N.H_2$. a strongly alkaline body, obtained in the distillation of morphin, codein, caffeine, etc., with a caustic alkali, and also found in animal oil obtained by distillation. It occurs as a constituent of *Mercurialis annua* and *Mercurialis perennis*; is found in herring brine, ergot, etc.
- methylar'sen**. See *arsenmethyl*.
- methylate** (meth'il-ät). A substitution product of methyl alcohol in which a metal replaces the hydrogen of the hydroxyl.
- methylated** (meth'il-a-ted). Combined with methyl or containing methyl alcohol. **m. spirit**. Denatured alcohol.
- methylation** (meth-il-a'shun). The processes of combining, or causing to combine, with methyl or of mixing with methyl alcohol.
- methylene** (meth'il-ën). A bivalent radicle. **m. bichlorid**. A colorless liquid, CH_2Cl_2 , closely allied to chloroform in its properties, recommended by Richardson and Junker as an anesthetic, but found to be too dangerous for this purpose. **m. blue**. $C_{10}H_8N_2S_2Cl$, a coal-tar dye, used as a stain for bacteria and exudates, as an anodyne, and as a remedy for vesical catarrh and for nephritis. [*methylthioninae hydrochloridum*, U. S. Ph.]. **m. iodid**. A liquid, CH_2I_2 , obtained by the action of phosphorous pentachlorid on iodoform. **m. oxid**. See *formic aldehyd*, under *fornic*. [Lat., *methylenum*.]

methyl ether. More correctly *dimethyl ether*. Dimethyl oxid, $\text{CH}_3\text{O.CH}_3 = \text{C}_2\text{H}_6\text{O}$, an inflammable gas of ethereal odor, condensing at -21°C . to a mobile, colorless liquid.

methylie (meth-il'ik). Of or pertaining to methyl.

methyl indol. See *skatol*.

methylmercaptan (meth'il-mer-kap'tan). A gas, CH_3SH , present in the intestine. Also found in the putrefaction of proteins.

methylpentose (meth-il-pen'tös). See *rhamnose*.

methylpyridin. CH_3CNH_2 , a basic substance. In the body it is oxidized to pyridin-carboxylic acid.

methylquinolin (meth-il-kwin'o-lin). d- $\text{CH}_3(\text{C}_6\text{H}_5\text{N})$, a base found in the secretion of the common skunk. Also present in bone oil.

methylthionin hydrochlorid (meth-il-th'on-in hi-dro-klor'id). Methylene blue. [U. S. Ph.].

methyluram'in. Same as *methylguanidin*, under *methyl*.

methylxanthin. See *heteroxanthin*.

methysis (meth'is-is). Intoxication. [Gr., *methysis*, from *methyein*, to be drunk.]

metopatron, metopantum (met-o-pan'tron, met-o-pan'trum). See *frontal sinus*, under *sinus*. [Gr., *metopon*, the forehead, + *antron*, a cavern.]

metopic (met-op'ik). Pertaining to the forehead. See *frontal suture*, under *suture*. [Gr., *metopon*, forehead, from *meta*, between, + *ops*, eye.]

metopism (met'op-ism). Persistence of the frontal sinus.

metoxenus (met-oks'e-nus). Requiring two hosts for the cycle of development; said of many animal parasites. [Gr., *meta*, across, + *xenos*, a stranger.]

metranoikter (met-ran-o-ik'ter). An instrument, composed of two to four spring blades, that is inserted closed into the uterine canal for the purpose of gradual dilatation of the cervix by the expansion of the blades. [Gr., *metra*, uterus, + *anoigein*, to open.]

metreurynter (met-ru-rin'ter). An instrument for gradual dilatation of the neck of the uterus. It consists of a collapsed rubber bag which is introduced into the uterine canal and distended with air or water. [Gr., *metra*, uterus, + *eurynein*, to stretch.]

metric, or French cubic or solid measure. See in *appendix*, page 943. **m.**, or **French dry and liquid measure.** See in *appendix*, page 942. **m.**, or **French lineal measure.** See in *appendix*, page 943. **m.**, or **French square measure.** See in *appendix*, page 943. **m.**, or **French weights.** See in *appendix*, page 942.

metritis (me-tri'tis). Inflammation of the uterus. [Gr., *metra*, the uterus, + *itis*, inflammation.]

metro-. Combining form of Gr., *metron*, a measure; used as a prefix to signify of or relating to measure or measurements.

metro-. Combining form of Gr., *metra*, uterus; used as a prefix to signify of or relating to the uterus.

metrocarcinoma (met-ro-kar-se-no'mah). A carcinoma of the womb. [Gr., *metra*, womb, + *carcinoma*.]

metrofibroma (met-ro-fi-bro'mah). A uterine fibroid. [Gr., *metra*, womb, + *fibroma*.]

metronome (met'ro-nöm). An instrument for indicating time in music; also used to ascertain the hearing distance of patients. [Gr., *metron*, a measure, + *nomos*, law.]

metropéritonitis (me'tro-per-it-o-ni'tis). Inflammation of the uterus and the surrounding peritoneum. [Gr., *metra*, the uterus, + *peritonaion*, the peritoneum, + *itis*, inflammation.]

metrorrhagia (me-tror-ra'je-ah). Hemorrhage from the uterus. **m. myopathica.** Post partum hemorrhage. [Gr., *metra*, the uterus, + *regnatai*, to burst forth.]

metrorrhea (met-ror-re'ah). A free discharge from the uterus. [Gr., *metra*, the uterus, + *roia*, a flowing.]

metrorrhexis (met-ror-reks'is). Rupture of the uterus. [Gr., *metra*, the uterus, + *rexis*, rupture.]

metrosalpingitis (me'tro-sal-pin-ji'tis). Inflammation of the uterus and fallopian tube or tubes. [Gr., *metra*, the uterus, + *salpigx*, a tube, + *itis*, inflammation.]

metroscope (me'tro-sköp). An instrument for inspection of the interior of the uterus. [Gr., *metra*, uterus, + *skopein*, to observe.]

metrostaxis (me-tro-staks'is). Slight, but persistent uterine hemorrhage. [Gr., *metra*, uterus, + *staxis*, a dripping.]

metrostenosis (me'tro-sten-o'is). Uterine stenosis. [Gr., *metra*, the uterus, + *stenosis*.]

Metroxylon (met-roks'il-on). 1. The sago palm; a genus of wing-leaved palms. 2. The genus *Raphia*. **M. leve.** Spineless sago palm; it yields much of the sago of commerce. **M. Rumphii.** Prickly sago palm; one of the chief sources of sago. **M. sagu.** *M. Rumphii* and *M. leve*. [Gr., *metra*, the pith of a tree, + *xylon*, wood.]

Mett digestion test, see in *appendix*, page 905.

Meynert's commissure. A small commissure of white fibers imbedded in the gray matter behind the optic chiasm, separated from the latter and from the optic tracts by a layer of gray substance and passing backward to penetrate the ventral surface of the cerebral peduncles.

mezcalin (mez'ka-lin). A poisonous alkaloid found in *Anhalonium Lewinii*; it resembles anhalonin in its action, but is not the same.

mezeroin (mez-e're-in). A neutral and volatile substance, the active principle of *Daphne mezereum*.

mezeron (mez-e're-on). See *mezereum* (2d def.).

Mezereum (miz-e're-um). Syn.: *m. cortex*, *mezerei cortex*, *cortex mezerei*, *cor-*

- tex thymeleae, cortex coccognidii*. 1. A section of the genus *Daphne*. 2. *Daphne m.* and *Cneorum tricoccum*. 3. Of the U. S. Ph., the bark of *Daphne m.* and other species of *Daphne*. It is sudorific and diuretic and, in large doses, purgative and emetic. It has been used in rheumatism. The fluidextract is official in the U. S. Ph.
- M. F. D.** Formula signifying the "minimum fatal dose" as of a toxin.
- miasm** (mi'asm). An obsolete term for a foul or noxious emanation. **hospital m.** The air of a hospital polluted by the emanations from the patients. **living m.** A moribund microorganism. [Gr., *miasma*, from *miainein*, to defile.]
- miasma** (mi-as'mah). See *miasm*.
- miasmatic**, **miasmatic** (mi-as'mal, mi-as-mat'ik). Pertaining to or caused by a miasm.
- mica** (mi'kah). A form of aluminum silicate occurring in thin, transparent sheets. [Lat.].
- micaceous** (mi-ka'shus). Pertaining to or resembling mica; composed of friable particles. [Lat., *mica*, a crumb.]
- mication** (mi-ka'shun). 1. A quick motion. 2. See *blepharismus*. [Lat., *micatio*, from *micare*, to glitter.]
- micella** (mi-sel'ah). Tagma.
- micellar** (mi-sel'lar). Pertaining to a micella.
- Mich'aelis's rhomboid**. An area over the sacrum, rhomboid or lozenge-shaped, its lower point being the cleft of the nates and its upper point 2.5 centimeters above the middle of a line drawn between the depressions marking the attachments of the fascia to the posterior superior spine of the ilia. These points are usually clearly visible and mark the outer limits of the rhomboid.
- micracoustic** (mi-krah-koo'stik). Pertaining to or aiding in the hearing of faint sounds; as a n., an instrument for remedying or assisting imperfect hearing. [Gr., *mikros*, small, + *akoustikos*, belonging to the sense of hearing.]
- micrencephalon**, **micrencephalum** (mik-ren-sef'al-on, mik-ren-sef'al-um). See *cretinism*. [Gr., *mikros*, small, + *egkephalos*, the brain.]
- micrencephaly** (mik-ren-sef'al-e). General smallness of the brain, sometimes but not necessarily accompanied by micrencephalon. [Gr., *mikros*, small, + *egkephalos*, brain.]
- micro-**, **micr-**. Representing Gr., *mikro*, combining form of *mikros*, small; used as a prefix to denote small size or extent.
- microbacteria** (mi-kro-bak-te're-ah). See under *Bacterium*. [Gr., *mikros*, small, + *bakterion*, a bacterium.]
- microbe** (mi'kröb). A minute organism. See *bacillus*, *bacterium*, and *micrococcus*.
- aërobic m's.** M's which consume oxygen from the air, and live on the surface of substances. **anaërobic m's.** M's living beneath the surface of liquids or inside living organisms. **pathogenic m's.** M's that cause disease. [Gr., *mikros*, small, + *bios*, life.]
- microbemia** (mi-kro-be'me-ah). Microbic infection of the blood. [Gr., *mikros*, small, + *bios*, life, + *aima*, blood.]
- microbial**, **microbian**, **microbic** (mi-kro-be'al, mi-kro-be'an, mi-kro'bik). Pertaining to, or caused by microbes.
- microbicide** (mi-kro'bis-id). A substance that destroys microorganisms. [*Microbe* + Lat., *caedere*, to kill.]
- microbiology** (mi'kro-bi-ol'o-je). The biology of minute organisms. [Gr., *mikros*, small, + *bios*, life, + *logos*, understanding.]
- microbiosis** (mi-kro-bi-o'sis). The morbid condition caused by infection with bacteria.
- microbism** (mi'kro-bism). Infection with microbes.
- microblast** (mi'kro-blast). A small, immature blood corpuscle. [Gr., *mikros*, small, + *blastos*, sprout.]
- microblepharia** (mi'kro-blef-a're-ah). Partial alblepharia in which the lids are rudimentary and only partially surround the orbital opening. [Gr., *mikros*, little, + *blepharos*, the eyelid.]
- microbrachia** (mi-kro-brak'e-ah). Congenital smallness of the arms. [Gr., *mikros*, small, + *brachion*, arm.]
- microcardia** (mi-kro-kar'de-ah). Congenital diminutiveness of the heart. [Gr., *mikros*, small, + *kardia*, heart.]
- microcephalia**, **microcephaly** (mi'kro-sef-al'e-ah, mi'kro-sef'al-e). The state of being a microcephalus. [Gr., *mikros*, small, + *kephale*, head.]
- microcephalous** (mi'kro-sef'al-us). Having a small and imperfectly developed head; of Broca, having a skull with an anteroposterior diameter of not more than 148 mm. [Gr., *mikros*, small, + *kephale*, head.]
- microcephalus** (mi-kro-sef'al-us). A monster having a very small head.
- microchemistry** (mi-kro-kem'is-tre). Chemical investigation carried on with the aid of the microscope. Based upon the principle that certain chemical compounds have characteristic color reactions. [Gr., *mikros*, small, + *chemistry*.]
- Micrococcus** (mi-kro-kok'us). A minute coccus; a genus of the *Schizomycetes* and of the family *Coccaceae*, with division in two planes, in which the cocci are globular or ovoid, and either undivided, single, or congregated into groups or irregular masses. **chromogenic m.**, **chromogenous m.** A m. producing a pigment. **fermentative m.** See *zymogenic m.* **M. caprinus**. A m. isolated from the heart's blood of Angora goats with takosis. **M. catarrhalis**. A m. resembling the gonococcus but larger. It may cause bronchitis or lobular pneumonia, and is frequently associated with influenza bacilli or with pneumococci. **M. erysipelatis**, **M. erysipelatosus**. See *Streptococcus erysipelatis*, under *streptococcus*. **M. foetidus**. An anaërobic species discovered by Rosenbach in carious teeth. It grows in nutrient agar with the evolution of gas and a fetid smell. The cocci, which are very small,

- oval, and somewhat irregular, stain faintly with anilin dyes. **M. gonococcus**, **M. gonorrhoeae**. See *gonococcus*. **M. intracellularis meningitidis**. See *Diplococcus intracellularis*, under *diplococcus*. **M. lanceolatus**. See *Diplococcus pneumoniae*, under *diplococcus*. **M. melitensis**. The cause of Malta fever. **M. mucilaginosus**. A cause of slimy milk. **M. nigrescens**. A m. producing a black pigment, and found in symbiosis, a bacillary-like fungus in cases of trichomycosis axillaris nigra. **m. of acute infectious osteomyelitis**. See *Staphylococcus pyogenes aureus*, under *Staphylococcus*. **m. of gonorrhoea**. See *gonococcus*. **m. of osteomyelitis**. See *Staphylococcus pyogenes aureus*, under *Staphylococcus*. **M. paramelitensis**, **M. pseudomelitensis**. M's found in some cases of Malta fever, resembling *M. melitensis*, but differing in their agglutination and absorption tests. **M. pharangis siccus**. A m. resembling *Diplococcus intracellularis*, but differentiated by fermentation tests. **M. tetragenus**. A species found in the sputum and walls of the cavities in the lung. **m. urea**. A m. decomposing urea into ammonia. **pathogenic m.**, **pathogenetic m.** Any m. capable of producing disease. **pigment forming m.** See *chromogenic m.* **zymogenic m.**, **zymogenous m.** Any m. which causes fermentation. [Gr., *mikros*, small, + *kokkos*, a berry.]
- microconidia** (mi-kro-kon-ni'de-ah). Small non-sexual spores or conidia. [Gr., *mikros*, small, + *conidia*.]
- microcornea** (mi-kro-kor'ne-ah). A congenital smallness of the cornea. In extreme cases the eyeball appears flattened. [Gr., *mikros*, small, + Lat., *cornea*, the cornea.]
- microcosm** (mi'cro-cosm). A symbolic expression for man as a miniature of the universe.
- microcoustic** (mi-kro-koos'tik). See *micracoustic*.
- microcrith** (mi'kro-krith). The unit of molecular weight, equivalent to the weight of an atom of hydrogen. [Gr., *mikros*, small, + *krithe*, barley.]
- microcrystalline** (mi-kro-kris'tal-in). Composed of microscopically small crystals. [Gr., *mikros*, small, + *krystallinos*, of crystal.]
- microcyst** (mi'kro-sist). A small cyst. [Gr., *mikros*, small, + *kystis*, cyst.]
- microcytase** (mi-kro-si'tas). A cytase formed by a microphage which digests the bacteria of most of the acute infections.
- microcyte** (mi'kro-sit). 1. A very minute red blood corpuscle. 2. A polymorphonuclear leukocyte. 3. A small degenerated blood corpuscle. [Gr., *mikros*, small, + *kytos*, cell.]
- microcythemia** (mi'kro-si-the'me-ah). A disease in which microcytes appear in the blood. [Gr., *mikros*, little, + *kytos*, a cell, + *aima*, blood.]
- microdactylia** (mi-kro-dak-til'e-ah). Abnormal shortness of the fingers. [Gr., *mikros*, small, + *daktylos*, a finger.]
- micro-electrometer** (mi'kro-e-lek-trom'et-er). Of Deluc, an instrument for detecting and measuring minute quantities or intensities of electricity. [Gr., *mikros*, small, + *elektron*, amber, + *metron*, a measure.]
- microfarad** (mi-kro-far'ad). A unit of electrical capacity equal to the millionth part of a farad. [Gr., *mikros*, small, + *farad*.]
- microgamete** (mi-kro-gam'et). A flagellum or conjugating reproductive male element of certain protozoa, or the motile bodies from the antheridia of fungi which fertilize the oösporangium. [Gr., *mikros*, small, + *gametes*, spouse.]
- microgametocyte** (mi-kro-gam-e'to-sit). Any cell producing a microgamete. [Gr., *mikros*, small, + *gametes*, spouse, + *kytos*, cell.]
- microgenesis** (mi-kro-jen'es-is). A dwarfed development of a part or organ. [Gr., *mikros*, small, + *genesis*, an origin.]
- microgerm** (mi'kro-jerm). A minute vegetable organism, a microbe; properly, the spore (microspore) of a microorganism. [Gr., *mikros*, small, + Lat., *germen*, a sprig.]
- microglossia** (mi-kro-glos'se-ah). Abnormal smallness of the tongue. [Gr., *mikros*, small, + *glossa*, the tongue.]
- microlentia** (mi-kro-len'te-ah). The condition of having an abnormally small or undeveloped crystalline lens. [Gr., *mikros*, small, + *lens*.]
- micromania** (mi-kro-ma'ne-ah). A form of parietic dementia in which the subject imagines himself physically and mentally insignificant. [Gr., *mikros*, little, + *mania*, mania.]
- micrometer** (mi-krom'et-er). An instrument for measuring microscopical objects or very small distances. [Gr., *mikros*, small, + *metron*, a measure.]
- micromillimeter** (mik-ro-mil'im-e-ter). See *micron*.
- micromycetes** (mi-kro-mi-se'tes). Minute fungi. [Gr., *mikros*, small, + *mykes*, a mushroom.]
- micron** (mi'kron). Represented by the letter μ ; one millionth part of a meter; $1/25000$ part of an inch approximately.
- micronecrosis** (mi-kro-ne-kro'sis). Molecular necrosis.
- microorganism** (mi-kro-or'gan-ism). Any minute organism, whether animal or vegetable. A general term for microscopic organisms. See also *Bacterium*, *Bacillus*, *coccus*, *Micrococcus*, *Protozoa*, etc. [Gr., *mikros*, small, + *organon*, an instrument.]
- microparasite** (mi-kro-par'is-it). A microscopic parasite.
- micropathology** (mi'kro-path-ol'o-je). The study of the microscopic changes in diseased tissues and their minute parasitic causes. [Gr., *mikros*, small, + *pathology*.]
- microphage** (mi'kro-faj). (*Metchnikoff*.) The phagocytic leukocytes of the blood which ingest bacteria. They correspond to the polymorphonuclear variety. [Gr., *mikros*, small, + *phagein*, to eat.]

microphagocyte (mi-kro-fag'o-sit). See *microphage*.

microphthalmia (mi-krof-thal'me-ah). The condition of having an abnormally small or undeveloped eye. [Gr., *mikros*, slight, + *ophthalmos*, eye.]

microphyte (mik'ro-fit). A vegetable microorganism. [Gr., *mikros*, small, + *phyton*, a plant.]

micropia (mi-kro'pe-ah). A condition in which objects, plainly seen, appear diminished in size. [Gr., *mikros*, small, + *ops*, the eye.]

microplasia (mi-kro-pla'se-ah). Arrested development. [Gr., *mikros*, small, + *plasis*, a molding.]

micropsia (mi-krop'se-ah). See *micropia*.

micropyle (mi'kro-pil). A minute opening in the vitelline membrane of the unimpregnated ovum, in certain of the lower animals, supposed by M. Barry, its discoverer, to serve for the passage of the spermatozooids into the vitellus in the act of fecundation, by others to assist the nutrition of the ovum during its development. [Lat., *micropyla*, from Gr., *mikros*, small, + *pyle*, entrance.]

microrheometer (mi'kro-re-om'ter-er). An instrument for measuring or examining liquids flowing through small tubes. [Gr., *mikros*, small, + *retin*, to flow, + *metron*, a measure.]

microscope (mi'kro-sköp). An optical apparatus by which one may obtain a clear image of a minute, near object, the image being always larger than the object.

achromatic m. A m. in which the chromatic aberration is corrected so that the image is not bordered by colored fringes, but appears, except in size, practically as if seen with the unaided eye.

binocular m. A m. in which the rays are divided, after traversing the objective, and part of them pass through a properly arranged ocular to the right and a part to the left eye, so that in using it one looks with both eyes.

compound m. A m. consisting of two essential optical parts: (1) a converging lens or lens system, called an objective, to give an enlarged, inverted real image of an object; and (2) an ocular acting like a simple m. to give an enlarged virtual image of the real image. Unless an erecting prism is used, the image seen in a compound m. is therefore always inverted.

demonstration m. A simple or compound m. which may be held in the hand and passed around in a class to show some microscopic object. The object is fixed and properly focused, then the m. is held toward the window or other source of light.

dissecting m. A m. for use in dissecting minute objects or for making very delicate dissections of parts of large objects. It may be simple, compound, unioocular, binocular, or erecting.

erecting m. A m. in which a prism is placed somewhere above the objective to cross the rays and thus render the image erect as with the simple m.; used mostly with dissecting m's.

hand m. A m. for holding in the hand for purposes of dem-

onstration. See *demonstration m.*

monocular m. See *unioocular m.*

perspective m. Of Burch, a form of m. giving constant magnification along the optic axis, so that objects are shown by its microscopic perspective.

petrographic m., petrographical m., petrologic m. A m. especially designed for the study of the structure of rocks. It has a revolving stage graduated in degrees, a polariscope, etc.

polarizing m. A m. with a polariscope attachment, the polarizer being placed somewhere below the object and the analyzer somewhere above the objective, frequently just above the objective or the eye lens of the ocular.

simple m. A converging lens or lens system enabling the eye to obtain an enlarged erect image of an object. The object is always placed somewhere within the principal focus of the magnifier, thus giving a virtual image.

solar m. A m. illuminated with sunlight. Sometimes the direct rays of the sun are used for the purposes of projection.

stereoscopic m. A binocular m. giving a stereoscopic image comparable to the image seen in a stereoscope.

traveling m. A compound m. which may be folded up and packed in a small space for special convenience in traveling.

unioocular m. A m. in which one looks with one eye, instead of with both eyes, as with a binocular m. [Lat., *microscopium*, from Gr., *mikros*, small, + *skopein*, to examine.]

microscopic, microscopical (mi-kro-skop'ik, mi-kro-skop'ik-al). 1. Pertaining to or observed with the microscope. 2. Of such minute size as to be visible only through the microscope. Most writers use the two words indifferently; some use *microscopic* in the second sense, and *microscopical* in the first sense.

m. examination of cerebrospinal fluid, see in *appendix*, page 909.

m. examination of sputum, see in *appendix*, page .

m. examination of stomach contents, see in *appendix*, page 904.

m. examination of stool, see in *appendix*, page 906.

microscopist (mi-kros'ko-pist). One who uses the microscope or is versed in microscopy.

microscopy (mi-kros'ko-pe). The art of using the microscope.

microsomes (mi'kro-söms). 1. The very minute, highly refringent granules imbedded in protoplasm, especially in the inner achromatic portions. 2. The granules of chromatin which, together with a homogeneous ground substance, form the nuclear fibrils of a resting nucleus. [Lat., *microsomata*, from Gr., *mikros*, small, + *soma*, the body.]

microspectroscope (mi-kro-spek'tro-sköp). A direct vision microscope in connection with a microscopic ocular. The slit arrangement is in the place of the diaphragm of the ocular and the prisms are above the eye lens. The ocular occupies the usual place, and, by swinging the prisms aside and opening the slit, it may be used as an ordinary ocular, and the object to be examined put in the

proper position. In connection with the best forms of m's are a comparison prism and a scale of wave lengths for the different parts of the spectrum. [Gr., *mikros*, small, + *spectroscope*.]

microsphixia (mi-kro-sfik's'e-ah). 1. Smallness of the pulse. 2. The state of having a small pulse. [Gr., *mikros*, small, + *sphixis*, the pulse.]

Microspira (mi-kro's'pir-ah). A genus of bacteria, resembling the family *Spirillaceae*, the order *Eubacteriae*, and the class *Schizomycetes*, having rigid cells, each bearing several wavy flagella.

Microsporidium (mi-kro-spor-id'e-um). A doubtful genus of the order *Myxosporida*, the phylum *Neosporidia*, and the subkingdom *Protozoa*. **M. bombycis**. See *corpuscles of Cornalia*, under *corpuscle*. **M. polyedrium**. A doubtful species said to occur in man. [Gr., *mikros*, small, + *sporidium*.]

Microsporon (mi-kro's'po-ron). A genus of the class *Fungi* and order *Ascomycetes*, having spores within asci and consisting of a mycelium, they being parasitic on man. **M. Audouini**. A species detected by Gruby (1843) in *tinea capitis*. It has numerous wavy filaments and very minute sporules, the latter forming a whitish matter on the skin and hair. The organism grows best on maltose agar and slowly liquefies gelatin. It produces an obstinate form of *tinea capitis*. **M. flavescens**. A species producing squamous patches on the neck of children. **M. furfur**, **M. Malassezii**. A species from 4 to 6 μ in diameter, the fungus of pityriasis versicolor. It invades the superficial part of the skin and consists of a mycelium composed of short, slender, variously sized, twisted, wavy, or angular filaments crossing each other in all directions, and containing, especially about the joints, small oval spores which evince a marked tendency to aggregate into groups or grapelike clusters. **M. lanosum**. A species producing *tinea capitis*, *barbae*, or *corporis*. **M. Macfadyein**. See *Trichophyton*. **M. Masoni**. Mycelium with bent and globular spores. Grows on agar and produces *tinea nigris*. **M. mentagrophytes**. The *mentagrophyte* of Gruby; a species [by Saccardo referred to the genus *Sporotrichum*] causing *mentagra*. It occurs in the follicle of the hair, and forms densely woven masses of hyphae with numberless, nearly spherical, conidia from 6 to 12 μ in diameter. It causes trichophytic *sycosis* and *tinea corporis* with suppurative foci in man. **M. minimum**. A species producing *tinea corporis*. **M. pubescens**. A species causing *tinea capitis*. **M. tropicum**. Thick mycelial threads with constrictions and double-contoured spores. The parasite does not grow on artificial media. It is the cause of *tinea flava*. [Gr., *mikros*, small, + *sporos*, a seed.]

microtome (mik'ro-töm). Syn.: *section cutter*. An apparatus for making thin sections of objects. Many kinds have been devised, some serving to hold the

object and move it sufficiently for the successive sections, which are made by passing a knife along the guide by hand. In others both knife and object are held by the machine, and the power may be applied by hand or by a special mechanism. Frequently the object must be moved sufficiently for the sections by turning a screw by hand; in other cases all the movements are automatic. **freezing m.** A m. in which the object to be cut may be frozen to render it of the proper consistence for cutting. **Minot's automatic m.** See under *Minot*. **rocking m.** A mechanical m. in which the specimen to be cut is fastened to the end of a lever which moves up and down, thus carrying the specimen across a stationary knife. [Gr., *mikros*, small, + *tome*, a cutting.]

microvolt (mi'kro-volt). A millionth part of a volt. [Gr., *mikros*, small, + *volt*.]

microzyme (mik'ro-zym). Of Béchamp, minute particles in the granules and fluids of living matter, constituting, with a ferment (zymose) secreted by them, protoplasm. According to him, they are living organisms capable of exciting fermentation and putrefaction, and capable of developing into and forming from bacteria. He alleges that they occur as organized primary cells in the liver, in the yolk of egg, and in the pancreas, and that they are readily obtained, particularly in winter, by grinding the pancreatic gland with water containing a little alcohol, and by filtering and washing. When obtained from the pancreas of an ox, they resemble beer yeast. [Lat., *microzyma*, from Gr., *mikros*, small, + *zyme*, leaven.]

micturition (mik-tu-rish'un). Syn.: *emiction*. Urination. [Lat., *micturire*, to urinate.]

mid'brain. See *mesencephalon*.

midget (midj'et). 1. An extremely small person. 2. A Canadian name for the sandfly. [Old Eng., *mycg*, midge, + *et*.]

mid'gut. That portion of the rudimentary intestinal canal of the embryo which, being situated between the foregut and the hindgut, is ultimately developed into the greater portion of the intestines.

mid'riff. See *diaphragm*.

mid'wife. A woman who assists other women in childbirth; a female accoucheur. [Probably from Old Eng., *mid*, with, + *wife*.]

midwifery (mid'wif-re). The art or practice of assisting women in childbirth. The department of medical knowledge relating to obstetrics.

Miescheria (me-she're-ah). A genus of *Sarcosporidia*. [Miescher.]

migraine (me'grän). Syn.: *megrin*, *sick headache*. Periodic headache, often limited to one side of the head and accompanied by nausea, vomiting, and various sensory manifestations. **ophthalmic m.** See *epileptoid amaurosis*, under *amaurosis*. [Fr., from Lat., *migrana*.]

migrainin (mig-ran'in). A proprietary remedy for migraine, said to contain antipyrin, caffeine, and citric acid.

migration (mi-gra'shun). Of bodily organs, cells, etc., change of place, which may be physiological or abnormal, as migration of leukocytes from the blood into the tissues. **calcareous m.** The separation of a calcareous incrustation from the wall of an artery and its transportation to a distal vessel which it occludes. **external m. of the ovum.** The entrance of an ovum into the oviduct of the opposite side to that of the ovary from which it proceeded. **external m. of the semen.** The passage of the semen through one oviduct to the ovary of the opposite side. **internal m. of the ovum.** The passage of an ovum from the ovary to the opposite horn of a uterus bilocularis, after passing first into the horn of the same side with the ovary from which it started. **m. of the ovum.** See *external m. of the ovum* and *internal m. of the ovum*. **m. of the testicle.** The descent of the testicle into the scrotum. **m. of white blood corpuscles.** The passage of the white blood corpuscles through the walls of the capillaries during acute inflammation. [Lat., *migratio*, from *migrare*, to wander.]

migratory (mi'gra-to-re). 1. Pertaining to migration. 2. Changing position or locality; capable of so changing.

Mikulicz's law. Anesthetic is not to be administered to a patient whose hemoglobin is below 30 per cent. [*Johannes von Mikulicz-Radecki*, Polish surgeon, 1850-1905.]

mil'dew. A general term for the effects produced by a number of molds or parasitic fungi.

milfoil (mil'foyl). See *Achillea*.

miliaria (mil'e-a-re-ah). A skin disease caused by retention of sweat in the epidermis of the mouths of the sweat follicles. It occurs in two forms: *m. crystallina* and *m. rubra*. **m. crystallina.** Syn.: *sudamen* or (pl.) *sudamina*. An abundant eruption of closely set, but discrete, minute, acuminate, non-inflammatory vesicles, which are filled with sweat. They are translucent, glistening, and show by their appearance the watery character of their contents. The affection generally occurs in the course of prostrating diseases. **m. rubra.** Syn.: *prickly heat*, *red gum*, *heat rash*, *lichen tropicus*, *strophulus*. An eruption of inflammatory miliary vesicles and papules at the mouths of the sweat follicles. It differs from *m. crystallina* by the addition of the inflammation. The lesions are the same as in *m. crystallina*, except that they are situated upon a slightly inflamed base. The disease generally occurs following exposure to high temperatures. [Lat., *milium*, millet seed.]

miliary (mil'e-a-re). Of the size of a millet seed. **m. tubercles.** Pertaining to the small gray nodules forming in the first stage of tuberculosis. [Lat., *milium*, millet.]

milium (mil'e-um), pl., *milia*. A skin disease characterized by the appearance in the skin of small pink and white tumors,

formed by the accumulation of inspissated sebum beneath the horny epidermis. They occur most frequently in the skin of the face and frequently in the scrotum. **colloid m.** See *colloid degeneration*, under *degeneration*. [Lat., *milium*, millet.]

milk. 1. The white opaque fluid secreted by the mammary glands. In the human female it consists of from 86 to 90 per cent. of water, 3 to 3.9 of casein, 3.7 to 3.9 of lactose, 2.5 to 3.8 of butter, 0.1 to 0.27 of lactoprotein, traces of albumin, and 0.5 per cent. of various salts (chiefly calcium phosphate). According to Sebelien, lactalbumin and lactoglobulin are also present. Its opacity is due to fat globules (see *m. corpuscles*, under *corpuscle*). 2. Any fluid resembling milk; an emulsion. **blue m.** An alteration in m., due to the *Bacillus cyanogenes*, which flourishes best at a temperature of 15° to 18° C. and dies at 37° C. As far as known, blue m. is not unwholesome. **butterm.** The thin liquid constituting the residue after butter has been separated from cream by churning. **cream m.** A form of modified m. containing less of proteids than is contained in whole m. **ferment of m.** A diastatic ferment found in milk. **male m.** The seminal fluid. **malted m.** A proprietary lactated food obtained from wheat. **m. cure.** The treatment of disease by an exclusively milk diet. It is employed in albuminuria, neurasthenia, and gastric diseases. **m. fat.** The f. from cows' m. consists mainly of olein and palmitin; the glycerids of myristic, stearic, lauric, myric, and caproic acids are also present. The volatile fatty acids present in m. fat as glycerids (that is butyric and caproic acids) make up about 7 per cent. of the fat. **m. ferment.** See *ferment of m.* **m. leg.** Syn.: *galactophlebitis*, *phlegmasia alba dolens*. See *galactophlebitis*. **m. line.** A line drawn from the anterior margin of the axilla downward through the nipple over the flank. Supernumerary mammae, when present, are usually in this line. **m. sugar.** See *lactose*. **modified m.** M. whose composition in proteins, fats, etc., has been changed for a definite purpose in nutrition. **pasteurized m.** M. that has been sterilized by pasteurization. **peptonized m.** M. partially predigested by means of pepsin and hydrochloric acid. **red m.** 1. M., either fresh or coagulated, on the surface of which reddish purple patches due to the growth of *Micrococcus prodigiosus* occur. 2. M. tinted red throughout by the growth of *Bacillus lactis erythrogenes*, accompanied by a diminished coagulability and a disgusting sweet taste. **sterilized m.** M. that has been freed from living germs, usually by boiling. **suppressed m.** M., or its elements, that, according to the old doctrine of m. metastasis, was diverted from the breasts, and, being retained in the blood or deposited in some part of the body, gave rise to disease. **vegetable m.** 1. The latex of plants, especially the milky juice

- of the cow trees (*Brosimum galactodendron*, *Tabernaemontana utilis*, *Mimusops elata*, etc.). 2. A fatty preparation, made largely from almonds, for diluting cows' milk for infant's food. **witch's m.** 1. The colostrumlike fluid formed in the mammary gland of a new-born child in consequence of a slight inflammation. 2. M. often secreted by the human male at birth and puberty. **yellow m.** A m. discolored to a lemon yellow by the presence of *Bacterium synxanthum*. [Ang.-Sax., *melce*.]
- Millefolium** (mil-le-fo'le-um). 1. The genus *Achillea*. 2. The flowering herb of *Achillea m.*, or milfoil. [Lat., *mille*, a thousand, + *folium*, a leaf.]
- milli-**. Prefix used in the metric system to indicate the thousandth part, as a milligram.
- milliampere** (mil-le-am-pair'). A thousandth part of an ampere. [Fr., from Lat., *mille*, thousand, + *ampere*.]
- milliamperemeter** (mil''le-am-pair'meter). An instrument for showing the intensity of an electrical current in milliamperes. [*Milliampere*, + Gr., *metron*, a measure.]
- Millon's reaction**. A color reaction given by all proteins which contain tyrosin. It consists of a pink or red color upon treating with Millon's reagent, a mixture of mercuric nitrite and nitrate. The reaction is due to the presence of tyrosin in the protein molecule and especially to the free hydroxyl group. When the hydrogen of the hydroxyl group has been substituted by some other group, the M. r. is negative. **M's test** (for salicylic acid, phenol, or tyrosin). A solution of mercury in nitric acid; used to show aromatic compounds which contain one hydroxyl group united with a benzene or naphthalene nucleus with which no nitrogen group is connected. Such compounds are colored red by 1 or 2 drops of the reagent to a c.c. of the solution containing the compound.
- milossin** (mi-los'in). A nitrogenous crystalline principle, obtained from the leaves of *Taxus baccata*.
- mimetic, mimical** (mi-met'ik, mim'ik-al). Imitative. [Gr., *mimēisthai*, to mimic.]
- mind**. Sum of symbolic activities of nervous system. [Ang.-Sax., *gemynd*.]
- mi'ner's el'bow**. Acute traumatic serous olecranon bursitis.
- mineral** (min'er-al). An inorganic substance present in nature. **kermes m.** The sulphureted antimony of the U. S. Ph., 1890. **m. acid**. See under *acid*. **turpeth m.** The yellow mercuric sulphate of the U. S. Ph., 1890. [Lat., *minerale*.]
- mineralization** (min-er-al-i-za'shun). 1. The process of becoming a mineral. 2. Impregnation (as of water) with mineral matter.
- mineromphitis** (min'er-o-mef-i'tis). A noxious exhalation arising from the decomposition of inorganic matters. [Lat., *minera*, a mine, + *mephitis*, a noxious exhalation.]
- min'im**. A liquid measure; the sixtieth of a fluid dram, often accepted as being equal to a drop. [Lat., *minimum*, least.]
- Minot's automatic microtome**. An automatic m. devised by Minot for making paraffin sections. The knife is fastened and the object is moved past it in a vertical plane and pushed forward for successive sections by turning a heavy wheel.
- miocardia** (mi-o-kar'de-ah). Of Ceradim, the diminution in the heart's volume during systole. [Gr., *meion*, less, + *kardia*, heart.]
- miosis** (mi-o'osis). The condition of contraction of the pupil due to contraction of the sphincter muscle of the iris. [Gr., *meiosis*.]
- miotic** (mi-ōt'ik). 1. Relating to contraction of pupil. 2. An agent that causes pupil to contract. 3. Diminishing, declining.
- mir'ror**. A polished surface by which images are formed by reflection. **forehead m.**, **frontal m.**, **head m.** A circular, slightly concave m., to be attached to the forehead by a head band, generally by means of a ball-and-socket joint, so as to permit of throwing the light in various directions. **m. writing**. The production of writing that looks as if viewed in a m. (running from right to left); a manifestation of nervous disease. [Lat., *mirari*, to admire.]
- mis-**. Prefix derived from Old Eng., *mis*, signifying when used in compound words *amiss*, *wrong*(ly), *bad*(ly), *improper*(ly).
- misanthrope** (mis'an-thrōp). A hater of mankind; one who distrusts men and avoids their society. [Gr., *misanthropos*, from *misein*, to hate, + *anthropos*, man.]
- miscarriage** (mis-kar'rij). The expulsion of a fetus before it has become viable; in a stricter sense, such expulsion at any time (in the human subject) between the completion of the third and that of the seventh month of gestation.
- miscegenation** (mis-se-jen-a'shun). Mixture of races, especially the sexual union of whites with negroes. [Lat., *miscere*, to mix, + *genus*, race.]
- misemission** (mis-em-is'shun). The failure of seminal emission in copulation.
- misocainia** (mi-so-ki'ne-ah). Hatred of new ideas, characteristic of negativistic personalities, the presenile and senile, and those with strong hate complexes.
- misogynist** (mis-oj'in-ist). A woman hater. [Gr., *misogynes*, from *misein*, to hate, + *gyne*, woman.]
- misoneism** (mis-o-ne'izm). See *misocainia*.
- misopedia** (mis-o-pe'de-ah). Morbid dislike for children. [Gr., *misein*, to hate, + *pais*, *paidos*, child.]
- mistio** (mis'te-o). See *mixture*. [Lat., *miscere*, to mix.]
- mistura** (mis-tu'rah). See *mixture* [U. S. Ph., Br. Ph.]. **m. adstringus et escharotica**. Villati's solution. A mixture of the sulphates of zinc and copper with a solution of lead subacetate and dilute acetic acid [N. F.]. **m. carminativa**. A mixture containing two and one half per cent. of the tincture of opium

- with volatile oils, syrup, and alkaline salts [N. F.]. **m. magnesiæ et asafetidae.** An alkaline mixture containing 1 per cent. of tincture of opium with asafetida and syrup [N. F.]. **m. oleo balsamina.** A mixture of various aromatic oils with balsam of Peru in alcohol [N. F.]. **m. pectoralis.** Stokes' expectorant; contains opium and various nauseants [N. F.].
- Mitchella** (mich-el'lah). A genus of rubiaceous plants. **M. repens.** Partridge berry, checkerberry; a North American trailing evergreen. It is diuretic, tonic, and astringent, and is often used like *pipissisewa*. [Mitchell, a Virginian botanist.]
- Mitchell's treatment.** The treatment of certain neuroses by absolute and complete rest in bed, isolation except for the presence of the nurse and the physician, massage, hydrotherapy, electricity, and full diet. [S. *Weir Mitchell*, Philadelphia neurologist, 1830-1914.]
- mite.** A minute insect; an acarid. **harvest m.** See *Leptus*. **itch m.** See *Sarcoptes*.
- mithridatism** (mith-rid'at-ism). Immunity from poisoning induced by the administration of gradually increased doses of poison to an organism. [After *Mithridates*, King of Pontus, who took poisons so as to become immune to them.]
- mitigated** (mit'ig-a-ted). 1. Diminished in severity. 2. Diluted.
- mitoschisis, mitosis** (mi-tos'kis-is, mi-to'-sis). See *karyokinesis*.
- mito'sis.** See *karyokinesis*.
- mi'tral.** Pertaining to the mitral valve. See *valve*. **m. insufficiency.** See under *insufficiency*. [Lat., *mitralis*, from Gr., *mitra*, turban.]
- mixed** (mixt). Composed of several constituents; affecting several parts at the same time; manifesting two or more separate characteristics. **m. infection.** Infection with more than one form of microorganism. **m. sore.** The occurrence of both chancre and chancroid as adjoining lesions. **m. treatment.** The treatment of syphilis with both mercury and iodids.
- mixture** (miks-tu'rah). See *mixture*.
- mixture** ('miks'tür). 1. The act or process of mixing. 2. A combination of several elements or bodies. 3. A substance produced by the mechanical combination of two dissimilar substances without the existence of any chemical union between their molecules. 4. In pharmacy, a liquid preparation containing solid or liquid substances in a state of suspension or incomplete solution [U. S. Ph., Br. Ph.]. **A. C. E. anesthetic m.** A m. of 1 part of alcohol, 2 parts of chloroform, and 3 of ether, by measure; used by inhalation as an anesthetic. The letters are the initials of the ingredients. **Basham's m.** See *liquor ferri et ammonii acetatis*, under *ferrum*. **brown m.** See *mistura glycyrrhizæ composita*, under *glycyrrhiza*. **freezing m.** A m. for reducing temperature, consisting generally of a salt and an acid, or of one or more salts, acids, or alcohols with snow, ice, or water. Freezing m's are sometimes used to saturate a package of moss or cotton wool as a makeshift for an ice bandage. **fri-gorific m.** See *freezing m.* **Griffith's m.** See *mistura ferri composita*, under *ferrum*. **Hope's m.** See under *Hope*. **Lafayette m.** See under *Lafayette*. **Squibb's diarrhea m.** See under *Squibb*. [Lat., *miscere*, to mix.]
- Mn.** Chemical symbol for the element *manganese*.
- mnemonics** (ne-mon'iks). Schemes or systems for aiding memory.
- Mo.** Chemical symbol for the element *molybdenum*.
- modiolus** (mo-de'o-lus). Syn.: *conus cochleæ, columella auris*. The osseous axis of the cochlea of the ear. [Lat., dim. of *modius*, a measure.]
- modulus** (mod'u-lus). A unit of calorific or other physical effects. [Lat., dim. of *modus*, measure.]
- Mohrenheim's fossa.** See *infraclavicular fossa*, under *fossa*. [Baron Joseph Jacob Freiherr von Mohrenheim, -1799.]
- mol.** Abbreviation for gram-molecule, that is, a number of grams equal to the figure expressing the molecular weight.
- mo'lar.** 1. Having power to grind; as a n., a m. tooth. 2. Situated near the m. teeth. [Lat., *molaris*, from *mola*, millstone.]
- mo'lar.** Of or pertaining to masses of appreciable size, as distinguished from molecules, such as *m. forces*. [Lat., *moles*, a mass.]
- mold.** Syn.: *Eumycetes, Hyphomycetes*. A common name for the *Mucorineæ* and *Erisporiaceæ*, two orders of fungi. Several species of *Mucor*, *Aspergillus*, and *Trichophyton* are pathogenic for man.
- mole.** Syn.: *pigmented mole*. 1. A spot or blemish on the human skin; in dermatology, a raised and pigmented area of skin; either with or without overgrowth of the skin including the hair. See also *nevus pigmentosus*. 2. A shapeless mass formed in the uterus as a result of irregular development or degeneration of an ovum. **carneous m.** Syn.: *blood m.* A mass formed by the retained fetal and maternal membranes, mingled with coagulated blood, after the embryo has been expelled, in cases of abortion. **fleshy m.** An advanced state of the blood m., so called from its having assumed a fleshy appearance. **hydatidiform m.** That form of degeneration of a fecundated ovum in which the chorionic villi become proliferated in the form of clustered cysts looking like a bunch of grapes. The cysts were supposed to be true hydatids. [Ang-Sax., *mæl*, a spot, 1st def.; Lat., *mola*, a mass of moistened meal, 2nd def.]
- molecular** (mol-ek'u-lar). Pertaining to, derived from, or consisting of molecules. **m. depression.** Certain constants in organic chemistry which are used in the estimation of the m. weight of chemical compounds. The m. d. of a given solvent expresses the depression of the

freezing point of that solvent, when it contains a gram molecule of any chemical compound in 100 gr. of the solvent. **m. elevation.** A constant in organic chemistry which expresses the elevation of the boiling point of a given solution when it contains 1 gram molecule of any compound dissolved in 100 gr. of the solvent. **m. heat.** See under *heat*. **m. solution.** A solution of a compound containing in every liter the number of grams which is equal to its molecular weight. **m. weight.** The relative weight of any chemical compound in terms of oxygen as a unit, the molecular weight of which has been placed at 32.

molecule (mol'ek-ül). The smallest particle into which a substance can be divided without losing its chemical identity. Each molecule is made up of like and unlike atoms. **bipolar m.** See *peripolar*. **electrical m.** Of Du Bois-Reymond, one of the small m's, arranged like systems of magnets with their positive and negative poles in contact, of which he conceived the muscles and nerves as made up. On passing a polarizing current through the nerve or muscle, the poles are reversed. **organic m.** A hypothetical m. not supposed to be capable of corruption or regeneration. **peripolar m.** See *peripolar*. **refrangent m's.** Minute bodies or corpuscles that possess the property of bending rays of light (e. g., the highly refractive spores of the fission fungi and some other cryptogams). [Lat., *molecula*, dim. of *moles*, a mass.]

mollimen (mo-li'men). Effort, endeavor. **intermenstrual m.** See *intermenstrual pain*, under *pain*. **menstrual m.** A collective term for the evidences of an attempt on the part of the generative organs of the female to give rise to menstruation, even if unsuccessful. [Gr., *molis*, with difficulty.]

Mo'lich's sug'ar test. This consists of treating the unknown solution with a few drops of a 10 per cent. alcoholic solution of *a*-naphthol, and then adding concentrated sulphuric acid. A violet color is obtained if glucose is present. In the presence of acetone, this test cannot be used. [Hans Molisch, chemist in Vienna, born 1856.]

mollichthyolin (mol-lik'the-ol-in). A mixture of ichthylol and mollin.

mol'lin. A soft, yellowish white soap, containing 17 per cent. of uncombined fat. [Lat., *mollinum*.]

mollities (mol-lish'e-éz). Softness, tenderness. **m. ossium.** See *osteomalacia*. [Lat.]

mollisin (mol'lo-sin). A mixture of wax and liquid vaselin; used as an ointment basis.

Moll's glands. Modified sweat g's found at the free margin of the eyelids and emptying into Zeiss's g's. [Jacob Antonius Moll, born 1849.]

molluscum (mol-lus'kum). A soft tumor of the skin. **m. cholesteriquc.** Another name for *xanthoma*. **m. contagiosum.**

Syn.: *m. sebaceum*, *m. sessile*, *m. verrucosum*, *m. acne varioliformis*, *epithelioma molluscum*. A disease of the skin, consisting of small, waxy, rounded epithelial tumors, having a rounded opening at the apex, which is filled with degenerated epithelial débris. It occurs more often in the children of the poorer classes and is contagious, though the contagion is very weak. The organism producing it has not been discovered. **m. pendulum**, **m. simplex.** See *fibroma molluscum* under *fibroma*. [Lat., neut. of *molluscus*, soft.]

molybdate (mol-ib'dät). A salt of molybdic acid.

molybdenic (mol-ib'den-ik). 1. Pertaining to, derived from, or containing molybdenum. 2. See *molybdic*. **m. acid.** See under *acid*.

molybdenicus (mo-lib-den'ik-us). Molybdenic; with the name of a base, the molybdate of the base.

molybdenum (mo-lib-de'num). A metallic element used in the preparation of steel. M. is noted for the great variety of its compounds. Atomic weight, 96.9; symbol, Mo; specific gravity, 8.6 [Gr., *molybdaína*, a piece of lead.]

molybdic (mo-lib'dik). Containing molybdenum as a tetrad radicle, as in *m. oxid*, MoO₂, or as a hexad radicle, as in *m. acid*. **m. acid.** See under *acid*.

molybdous (mo-lib'dus). Containing molybdenum.

momba (mom'bah). See *yaws*.

monacid (mon-as'id). Of a base, capable of replacing one atom of hydrogen in an acid, or, in the case of addition compounds, uniting directly with a single molecule of a monobasic acid, with half a molecule of a dibasic acid, etc.

monad (mo'nad). 1. A univalent radicle. 2. See *monas*. [Gr., *monas*, a unit.]

monadenoma (mon-ad-e-no'mah). A uniglandular adenoma. [Gr., *monos*, single, + *aden*, a gland, + *oma*, tumor.]

monadology (mon-ad-ol'o-je). The science of monads. [Gr., *monas*, a unit, + *logos*, understanding.]

monalkylic (mon-al-kil'ik). Of or containing a single alkyl radicle.

monammonic (mon-am-mon'ik). Containing one molecule of ammonia.

Monarda (mon-ar'dah). Horsemint; a genus of herbs. *M. punctata*. **M. punctata**, **M. punctula**. Horsemint; a species growing from New Jersey to Louisiana. The herb is stimulant and carminative, but is rarely used. It is rich in volatile oil which is a source of thymol. [Monardes, a Spanish botanist of the sixteenth century.]

monardin (mon-ar'din). A crystalline principle, C₁₀H₁₄O, derived from monarda oil, and isomeric with thymol.

monargentie (mon-ar-jen'tik). Containing 1 atom of silver in the molecule.

monarthritie (mon-ar-thri'tis). Arthritis limited to a single joint. [Gr., *monos*, single, + *arthritis*.]

monas (mo'nas). An animal parasite of the phylum Protozoa, of the class Mastigophera, and order Monadidea. **M.**

- leus**. A form found in bronchitis in man.
- M. muris**. A form infesting the muscles and liver of domestic animals, and occasionally human beings, producing Miescher's tubules. **M. pyophila**. A parasite shaped like a large spermatozoon, found in Japan in the pus of pulmonary and hepatic abscesses. [Gr., *monas*, a unit.]
- monaster** (mon-as'ter). See *aster*. [Gr., *monos*, alone, + *aster*, a star.]
- monatomic** (mon-at-om'ik). 1. Containing but 1 atom of replaceable hydrogen. 2. Having a combining capacity that is saturated by union with 1 atom of hydrogen (said of radicles). 3. Formed by replacing 1 atom of hydrogen in a hydrocarbon by 1 molecule of hydroxyl (said of alcohols). See *monohydric*. [Gr., *monos*, single, + *atomos*, an atom.]
- mondamin** (mon'dam-in). Maize meal deprived of fatty matter; fine maize starch.
- monesia** (mon-e'se-ah). The dried bark of *Chrysophyllum glycephloeum*. It is astringent.
- monesin** (mon'i-sin). A bitter amorphous substance extracted from monesia bark.
- Monilia** (mo-nil'e-ah). A genus of the *Fungi*, of the order *Hyphomycetes*, with erect hyphae and terminal conidia in chains. **M. albicans**. See *Endomyces albicans*. **M. bronchiales**. A species found in sputum. **M. candida**. A species causing white patches on the tongue and buccal mucous membrane of children. **M. Chalmersi**. A species found in bronchitis. **M. cutanea**. A species found in sporotrichosis. **M. faecalis**. A species found in the feces. **M. Hochi**. A species producing pink colonies. **M. pulla**. A brownish violet growth found in mycotic affections of the lung. **M. rhoi**. A species found in otomycosis. **M. rosea**. A species found in hepatitis. **M. subtilis**. A species found in ulcers. **M. tropicum**. A cause of tropical bronchomycosis. [Lat., *monile*, necklace.]
- monilithrix** (mon-il'e-thriks). A condition of the hair in which it exhibits fusiform swellings separated by constricted portions. The swellings represent the normal hair and are pigmented, while the narrow intervening portions are lighter colored. [Lat., *monile*, necklace, + Gr., *thrix*, hair.]
- moniliform** (mon-il'le-form). A term used in descriptive bacteriology signifying neckless-shaped, cylindrical, and contracted at regular intervals, so as to resemble a string of beads. **m. hair**. See *monilithrix*. [Lat., *monile*, necklace, + *forma*, form.]
- mono-, mon-**. Combining form of Gr., *monos*, alone, single; used as a prefix to denote singleness or unity.
- monobasic** (mon-o-ba'sik). 1. Of an acid or acid salt, containing in the molecule 1 atom of hydrogen replaceable by a base. 2. Of an alcohol, monohydric. [Gr., *monos*, alone, + Lat., *basis*, a base.]
- monoblastic** (mon-o-blast'ik). Pertaining to the single germinal layer that succeeds segmentation in the ovum. [Gr., *monos*, single, + *blastos*, a sprout.]
- monoblepsia** (mon-o-blep'se-ah). 1. Vision in which one eye sees more distinctly than both. 2. Color blindness; perceiving one color alone. [Gr., *monos*, single, + *blepsis*, sight.]
- monobromalin** (mon-o-bro'mal-in). The compound, $C_6H_4Br.NH_2$.
- monobromated** (mon-o-bro'ma-ted). Containing or combined with 1 atom of bromine in the molecule. **m. phenol**. An oily reddish liquid, C_6H_5BrO , used as an antiseptic externally in 1½ per cent. ointment.
- monobromethylbenzene** (mon'o-brom-eth'il-ben'zën). The compound, $C_6H_4Br.C_2H_5$.
- monobromid** (mon-o-bro'mid). A compound consisting of an element or radicle united directly with bromine in the proportion of 1 atom of the latter to a definite quantity, assumed as the unit of comparison, of the element or radicle.
- monobromphenol** (mon'o-brom-fe'no'l). C_6H_5OHBBr , an external antiseptic.
- monobromphenylacetamid** (mon'o-brom-fe'no'l-as-et'am-id). The compound $C_6H_4 < NHC_2H_5O$; an antiseptic.
- monocalcic** (mon-o-kal'sik). Containing one atom of calcium in the molecule.
- monocephalus** (mon-o-sef'al-us). A double monster having one head and two bodies. [Gr., *monos*, single, + *kephale*, head.]
- monoceros** (mon-os'er-us). Having a single horn. [Gr., *monokeras*, from *monos*, single, + *keras*, horn.]
- monochloracetic** (mon'o-klor-as-e'tik). Acetic and containing 1 atom of chlorine in the molecule. **m. acid**. See *chloroacetic acid*, under *acid*.
- monochloralantipyrin** (mon'o-klor'al-an-tip-ir'in). Hypnal, $C_{15}H_{13}N_2Cl_2O_2$, obtained by heating chloral hydrate and antipyrin with water; a hypnotic and analgetic.
- monochloranilin** (mon'o-klor-an'il-in). A substance, $C_6H_4Cl.NH_2$, known in three isomeric varieties: (1) *orthochloranilin*; (2) *metachloranilin*; (3) *parachloranilin*.
- monochlorated** (mon'o-klor'a-ted). Containing or combined with 1 atom of chlorine in the molecule.
- monochlorbenzoic** (mon'o-klor-ben-zo'ik). Benzoic and containing 1 atom of chlorine in the molecule. **m. aldehyd**. The compound, $C_6H_4Cl.CHO$, known in three isomeric varieties: (1) *orthochlorbenzoic aldehyd*; (2) *metachlorbenzoic aldehyd*; (3) *parachlorbenzoic aldehyd*.
- monochlorcamphor**. Syn.: *monochlorated camphor*. See *chlorcamphor*.
- monochlorid** (mon-o-klor'id). A chloric compound analogous to a monobromid.
- monochlormethane** (mon'o-klor-meth'-än). See *methyl chlorid* under *methyl*.
- monochloroluene** (mon'o-klor-tol'u-ën). A substitution compound, $C_6H_4Cl.CH_3$, of toluene, isomeric with benzyl chlorid.
- monochord** (mo'no-kord). An instrument for testing uppertone audition.

monochordon (mon-o-kor'don). An instrument with a single string. [Gr., *monos*, alone, + *chorde*, a string.]

monochorial (mon-o-ko're-al). A term used to describe twins developing in one chorion and having a single placenta. [Gr., *monos*, single, + *chorion*, skin.]

monoclinic (mon-o-klin'ik). Having an inclination or obliquity in a single direction. [Gr., *monos*, single, + *klinein*, to bend.]

monococcus (mon-o-kok'us). A micrococcus consisting of a single granule. [Gr., *monos*, alone, + *kokkos*, a kernel.]

monocranus (mon-ok'ra-nus). A double monster having a single cranium. [Gr., *monos*, alone, + *kranon*, cranium.]

monocyst (mon'o-sist). A tumor composed of a single cyst. [Gr., *monos*, single, + *kystis*, a tumor.]

monogamous (mon-og'am-us). Pairing with only one female. Having only one wife or refraining from marriage after the death of a wife. [Gr., *monogamos*, marrying only once, from *monos*, single, + *gamos*, marriage.]

monogastric (mon-o-gast'rik). 1. Having but one stomach (said of man, as distinguished from some of the lower animals, especially the ruminants). 2. Having a single belly (said of muscles). [Lat., *monogastricus*, from Gr., *monos*, single, + *gaster*, belly.]

Monogenea (mon-o-je'ne-ah). A class of *Trematoda* in which the development is direct, without the mediation of a nurse form (scolex).

monogenesis (mon-o-jen'es-is). 1. Oneness of origin; the origin of different races from one pair. 2. Of Haeckel, reproduction by buds or by fission, never by ova; asexual reproduction. [Gr., *monos*, solitary, + *genesis*, an origin.]

monogenous (mon-o'je-ne-us). 1. Of a single race or family. 2. Of only one sex (i. e., without sex differentiation).

monograph (mon'o-graf). A work devoted to one subject. [Gr., *monos*, single, + *graphein*, to write.]

monogynous (mon-og'in-us). See *monogamous*. [Gr., *monos*, single, + *gyne*, wife.]

monohydrated (mon-o-hi'dra-ted). 1. Existing in combination with 1 molecule of water. 2. Containing 1 molecule of hydroxyl in the molecule.

monohydric (mon-o-hi'drik). 1. Containing in the molecule a single atom of replaceable hydrogen (said especially of acid salts). 2. Of alcohols, those which contain one hydroxyl group, (OH). 3. Derived from a hydrocarbon by the replacement of 1 atom of hydrogen by hydroxyl.

monohydrobromid (mon'o-hi-dro-brom'id). A compound of a base with a single atom each of bromin and hydrogen.

mono-iodid (mon-o-i'o-did). An iodin compound analogous to a monobromid.

mon'ol. A 2-to-1,000 aqueous solution of calcium permanganate.

monolein (mon-o'le-in). The compound containing one molecule of glycerin in

combination with one molecule of oleic acid. One of the fats.

monomagnesianic (mo-no-mag-ne'sic). Containing 1 atom of magnesium in the molecule.

monomania (mon-o-ma'ne-ah). A term formerly used to designate a type of mental disease with persistent ideas on one subject. It is an obsolete conception in present day psychiatry, but is found in legal concepts. [Gr., *monos*, single, + *mania*, madness.]

monomercurous (mo-no-mer'ku-rus). Containing one atom of mercury in the compound.

monometallic (mo-no-met-al'lic). 1. Containing of a single metal. 2. Of salts, containing in the molecule 1 atom of a metallic element; or replacing 1 atom of hydrogen in an acid.

mononitrated (mon-o-ni'tra-ted). 1. Containing one nitro group in the molecule. 2. An ester of nitric acid, which contains one nitric acid group. This definition, which is not strictly in accordance with our present nomenclature, is still applied to the nitric acid esters of glycerin and of cellulose.

mononitrophenol (mon'o-ni-tro-fe'no'l). The compound $C_6H_4(NO_2)OH$, known in four isomeric forms: (1) *orthonitrophenol*; (2) an apparently dimorphous form of orthonitrophenol; (3) *metanitrophenol*, (4) *paranitrophenol*.

mononuclear (mon-o-nu'kle-ahr). Having but one nucleus; uninuclear. [Gr., *monos*, single, + Lat., *nucleus*, nucleus.]

mononucleotids (mon-o-nu'kle-o-tids). Complex compounds containing one phosphoric acid group united with one d. ribose group, which in turn is united to a purin or pyrimidin group.

monophagia (mon-o-fa'je-ah). 1. An appetite for a single kind of food. 2. The custom of eating only one meal a day. [Gr., *monos*, single, + *phagein*, to eat.]

monophasia (mon-o-fa'se-ah). Dyslalia in which only a single syllable, word, or sentence can be uttered when speech is attempted. [Gr., *monos*, single, + *phasis*, speech.]

monophenetidin (mon'o-fen-et'id-in). A substance analogous to phenetidid, but containing the radicle of citric acid instead of that of acetic acid; an antipyretic and analgetic.

monophobia (mon-o-fo'be-ah). A morbid dread of being alone. [Gr., *monos*, alone, + *phobos*, panic.]

monophosphate (mon-o-fos'fat). A phosphate containing but 1 atom of phosphorus in the molecule.

monophthalmus (mon-of-thal'mus). See *cyclops*. [Gr., *monos*, single, + *ophthalmos*, the eye.]

monophyletic (mon'o-fi-let'ik). Descended from a single source. [Gr., *monos*, single, + *phyle*, race.]

monoplasmatic (mon-o-plas-mat'ik). Of Kölliker, having the cell body apparently composed of a single substance, in contradistinction to those composed of two or more, as when fat or glycogen is pres-

ent in the protoplasm. [Gr., *monos*, single, + *plasma*, plasm.]

monoplegia (mon-o-ple'je-ah). Paralysis of a single part of the body. [Gr., *monos*, single, + *plege*, stroke.]

monoplumbic (mon-o-plum'bik). Containing one atom of lead in the molecule.

monopotassic (mon-o-po-tas'sik). Containing 1 atom of potassium in the molecule.

monops (mon'ops). See *cyclops*. [Gr., *monos*, single, + *ops*, eye.]

monorchidism (mon-or'kid-ism). The state of having only one testicle. [Gr., *monos*, single, + *orchis*, the testicle.]

monorchis (mon-or'kis). An individual having only one testicle. [Gr., *monos*, single, + *orchis*, the testicle.]

monorchism (mon-or'kism). The condition in which there is but one descended testicle. [Gr., *monos*, one, + *orchis*, testicle.]

monosaccharid (mon-o-sak'ar-id). Any one of the simple carbohydrates, e. g., *glucose*, *galactose*, *fructose*.

monosilicate (mon-o-sil'ik-ät). A compound of one of the silicic acids containing 1 atom of silicon in the molecule.

monosodic (mon-o-so'dik). Containing 1 atom of sodium in the molecule.

monospasm (mon'o-spasm). Spasm limited to one muscle or group of muscles. [Gr., *monos*, single, + *spasmos*, a spasm.]

Monostomum len'tis. A trematode found in the opaque lens of an old woman.

monosubstituted (mon-o-sub'stit-u-ted). Having only one of its elements replaced.

monosulphid (mon-o-sul'phid). A sulphur compound analogous to a monobromid.

monotal (mo'no-tal). Guaiacol, or guaiacyl glycolate, $C_{10}H_{12}O_4$. It is said to exert the systemic effects of guaiacol.

Monotricha. A group of bacteria having a single flagellum at one pole. [Gr., *monos*, single, + *thrix*, hair.]

monotrichous (mo-not'rik-us). Pertaining to Monotricha.

monovalent (mo-nov'al-ent). Having an equivalency equal to that of one atom of hydrogen.

monoxeny (mo-noks'en-e). The condition of parasitic existence on but one host. [Gr., *monos*, one, + *xenos*, host.]

monoxid (mon-ox'id). An oxygen compound analogous to a monobromid.

Monro's foramen. An opening back of the fornx, forming a passage between the third and the lateral ventricle of the brain. [Alexander Monro, Scottish anatomist, 1697-1767.]

Monro-Richter line. A line passing from the umbilicus to the left anterior superior spine of the ilium. [A. Monro; A. G. Richter.]

mons (monz). A mountain; a prominence or protuberance. **m. cerebelli**. See *monticulus*. **m. pubis**. **m. Veneris**. A rounded prominence of the soft parts situated in front of and above the cleft of the vulva, consisting of subcutaneous fat, and covered with hairs after puberty. [Lat., *mons*, mountain.]

Monse's salt. Iron subsulphate. **M's solution**. See *liquor ferri subsulphatis*, under *ferrum*.

mon'ster. 1. An individual congenitally so malformed or defective in certain parts as to be unfitted for the course of life proper to its species. Less serious departures from normal are called *malformations*. 2. In botany, an abnormally developed part or organ. **autositic m.** See *autosite*. **compound m.** A double or triple m. that is autositic or parasitic. **dicephalodisomatous m.** A m. that has two bodies each having a separate head. **double m.** A m. made up of the whole or parts of two individuals. **double parasitic m.** A double m. in which one is almost complete, analogous to an autosite; the other rudimentary, analogous to a parasite. **parasitic m.** A double m. in which an imperfect or deformed body is attached to a more perfect body. **simple m.** A m. in which are found only the complete or incomplete elements of a single individual. **triple m.** A m. made up of the whole or parts of three individuals. [Lat., *monstrum*.]

monstrosity (mon-stros'it-e). The state or condition of being monstrous; also a monster. **atresic m.** A m. in which a natural opening is occluded from disease, injury, or operation. **ceasmic m.** A m. in which a cleft results from disease, injury, or operation. **double m.** See *double monster*. **ectopic m.** A m. in which a part is displaced by disease or injury. **ectrogenic m.** A m. caused by the loss of some part from disease, injury, or operation. **hypergenetic m.** A m. in which certain parts are disproportionately large. **m. by defect**. M. caused by agenesis. **m. by excess**. M. caused by hypergenesis. **m. by inclusion**. See *fetal inclusion*, under *inclusion*. **m. by perversion**. A m. in which there is displacement of the thoracic or abdominal viscera or malformation of the genitals. **parasitic m.** See *fetal inclusion*, under *inclusion*. **symphysic m.** A m. produced by the fusion or coalition of organs or parts. [Lat., *monstrum*, monster.]

monstrous (mon'strus). Having the characteristics of a monster.

mon'strum. See *monster*. [Lat.]

Montgomery's glands. Syn.: *lactiferous glands*. The 20 to 24 sebaceous glands in the areola around the nipple of the human breast. [William Fetherston Montgomery, Irish physician, 1797-1850.]

monticulus (mon-tik'u-lus). A small prominence. **m. carnosus urethrae**. See *caput gallinaginis*. **m. cerebelli**. The prominent central portion of the superior vermiform process; more rarely, the entire process. **m. Veneris**. See *mons Veneris* under *mons*. [Lat., dim. of *mons*, mountain.]

Moore's test. A test by which the presence of sugar is shown by the changing of color of the liquid to be tested through yellow, red brown, and deep brown to black, caused by boiling with enough

caustic soda or potash solution to give a strong alkaline reaction. The value of the t . is lessened by the fact that other substances produce a like result.

moradin (mo-ra'din). An acid substance, $C_{27}H_{18}O_8$ (or $C_{16}H_{14}O_6$), obtained from the bark of *Cascarilla morada*.

morbidity (mor-bid'it-e): 1. The state of being morbid. 2. The prevalence of disease in proportion to population, as shown by statistics; the sick rate.

morbific (mor-bif'ik). Causing disease. [Gr., *morbificare*, to produce disease.]

morbilli (mor-bil'le). See *measles* (1st def.). [Lat., *morbis*, a disease.]

mor'bus. See *disease*. **cholera m.** See under *cholera*. [Lat.]

morcellation (mor-sel-la'shun). See *morcellement*.

morcellement (mor-sel'mon). The removal of a growth or of a fetus piecemeal. [Fr., *morceler*, to break in pieces.]

mordaceous (mor-da'shus). Biting, pungent, acrid. [Lat., *mordax*.]

mor'dant. 1. Corrosive. 2. A substance, such as alum or copperas, which is used to fix a stain or dye. [Lat., *mordere*, to bite.]

morgagnian (mor-gahn'ne-an). Investigated by, or named for, *Giovanni Battista Morgagni*, Italian anatomist, 1682-1771.

Morgagni's fossa. See *fossa navicularis urethrae*, under *fossa*.

moria (mo're-ah). An old term to denote extreme mental deterioration. [Gr., *moria*, folly.]

moribund (mor'e-bund). At the point of death; in a dying state. [Lat., *moribundus*, from *moriri*, to die.]

mo'rin. A coloring substance, $C_{12}H_8O_5 + H_2O$, extracted from *Morus tinctoria*.

morindin (mo-rin'din). A substance, $C_{28}H_{30}O_{15}$, derived from *Morinda citrifolia*.

morning sick'ness. Nausea, with or without vomiting, occurring in the early morning during early pregnancy.

Morocco gum. See *Barbary gum*, under *gum*.

moron (mo'ron). A type of mental defective not advanced beyond twelve years' mental age as determined by the Binet-Simon tests.

morphea, **morphoea** (mor-fe'ah). A disease characterized by the occurrence of persistent yellowish ivorylike areas of infiltrated skin, surrounded by faint lilac borders. [Gr., *morphe*, form.]

morpheum (mor'fe-um). See *morphin*.

morphia (mor'fe-ah). See *morphin*.

morphin (mor'fin). A natural alkaloid, $C_{17}H_{19}NO_3 + H_2O$, found in opium, occurring as a crystalline powder or in shining white or colorless prisms of bitter taste and no odor, almost insoluble in ether, very slightly soluble in chloroform and in cold water, somewhat soluble in boiling water, and more soluble in alcohol, especially boiling alcohol, becoming anhydrous and opaque at about $100^\circ C$., and melting at about $228^\circ C$. For its medicinal properties see under *opium* [U. S. Ph., Br. Ph.]. List of poisons and their antidotes, see in *appendix*, page 940. dia-

cetyl morphin. Heroin, a synthetic alkaloid, $C_{21}H_{23}O_5N$, obtained by the acetylation of morphin. It is used to relieve cough. **ethyl-m-hydrochlorid**. Syn.: *dionin*. $C_{17}H_{17}NO(OH)(OC_2H_5) \cdot HCl \cdot H_2O$, the hydrochlorid of the ethyl ester of morphin. It acts much like codein when administered internally. When applied internally to the eye, it causes a local vasomotor constriction leading to conjunctival edema. **m. acetate**. A white or yellowish white crystalline or amorphous powder, $C_{17}H_{19}NO_3 \cdot HC_2H_3O_2 + 3H_2O$, having a bitter taste and a smell like acetic acid. **m. hydrochlorate**, **m. hydrochlorid**. A crystalline salt, $C_{17}H_{19}NO_3 \cdot HCl + 3H_2O$, occurring in feathery white flexible needles, of bitter taste and no odor, insoluble in ether, somewhat soluble in alcohol, more so in glycerin and in water, especially boiling water, and becoming anhydrous at $100^\circ C$. [U. S. Ph., Br. Ph.]. **m. sulphate**. A crystalline salt, $(C_{17}H_{19}NO_3)_2 \cdot 2H_2SO_4 + 5H_2O$, occurring in colorless needles easily soluble in boiling water, somewhat soluble in cold water, less soluble in alcohol, and becoming anhydrous at $100^\circ C$. [*Morphinae sulphas*, U. S. Ph.]. **m. tartrate**. A salt, $(C_{17}H_{19}NO_3)_2 \cdot C_4H_6O_6 + 5H_2O$, occurring in wartlike groups of acicular crystals very soluble in water and in alcohol [*Morphinae tartras*, Br. Ph.]. **troches of m. and ipecac**. See *trochisci morphinae et ipecacuanhae*, under *morphina*. [Lat., *Morpheus*, the god of sleep.]

morphina (mor-fe'nah). See *morphin* [U. S. Ph., Br. Ph.]. **injectio morphinae hypodermica**. A sterile solution containing 2.5 per cent. of morphin tartrate [Br. Ph.]. **liquor morphinae acetatis**. A solution containing 1 per cent. of morphin acetate [Br. Ph.]. **liquor morphinae hydrochloridi**. A solution containing 1 per cent. of morphin hydrochlorid [Br. Ph.]. **liquor morphinae hypodermicus**. A solution containing 3.3 per cent. of morphin sulphate and 9.1 per cent. of salicylic acid. *Caution*. While this solution is sometimes called "Magendie's solution," it is not the one commonly employed under that name [N. F.]. **liquor morphinae tartratis**. A solution containing 1 per cent. of morphin tartrate [Br. Ph.]. **morphinae acetatis**. See *morphin acetate* [U. S. Ph., Br. Ph.]. **morphinae hydrochloras**. See *morphin hydrochlorate* [U. S. Ph., Br. Ph.]. **morphinae sulphas**. See *morphin sulphate* [U. S. Ph.]. **pulvis morphinae compositus**. A powder containing 1.5 per cent. of morphin sulphate and 32 per cent. of camphor. The camphor being volatile, the composition of the powder will change rapidly on exposure to the air [U. S. Ph.]. **suppositoria morphinae**. Suppositories containing each $\frac{1}{4}$ grain of morphin hydrochlorid [Br. Ph.]. **trochisci morphinae**. Troches each containing $\frac{1}{32}$ grain of morphin hydrochlorid [Br. Ph.]. **trochisci morphinae et ipecacuanhae**. Each lozenge contains

$\frac{1}{32}$ grain of morphin hydrochlorid and $\frac{1}{12}$ grain of ipecac [Br. Ph.].

morphinism (mor'fin-izm). A morbid condition produced by the habitual use of preparations of opium. [Lat., *morphinismus*.]

morphinomania (mor-fin-o-ma'ne-ah). 1. An uncontrollable desire for opium or its derivatives. 2. Mania produced by opium, or by abstinence from it in a person addicted to its habitual use.

morphinum (mor-fin'um). See *morphin*.

morphinophagy (mor-fe-of'aj-e). Opium-eating. [*Morphia*, + Gr., *phagein*, to eat.]

morphobiologic (mor'fo-bi-o-loj'ik). Pertaining to shape of an organism and its biology. [Gr., *morphe*, form, + *bios*, life.]

morphogeny (mor-foj'en-e). The evolution of form. [Gr., *morphe*, form, + *gennan*, to engender.]

morphological (mawr-fô-lôj'ik-al). Relating to morphology.

morphology (mor-fôl'o-je). The science of biologic forms, including their relations, changes, and analogies; the science of the shape and modifications of organs or parts considered under the idea of unity of plan. [Gr., *morphe*, form, + *logos*, understanding.]

morphic (mor-fot'ik). Pertaining to organic form.

morphotomy (mor-fot'o-me). General anatomy. [Gr., *morphe*, form, + *tome*, cutting.]

morphio (mor'pe-o). The crab-louse, *Pediculus pubis*. [Lat.]

morrhua (mor'ru-ah). See *Gadus oleum hepatis morrhuae, oleum morrhuae*. See *cod-liver oil* [U. S. Ph., Br. Ph.]

morrhuin (mor'ru-in). A thick ptomain, $C_{22}H_{37}N_3$, found in brown cod-liver oil.

morrhual (mor'ru-ol). An alcoholic extract of cod-liver oil. It lacks the nutrient properties of the oil.

mors. Death. [Lat.]

morsulus (mor'su-lus). A lozenge, tablet, or troche. [Lat., dim. of *morsus*, a bite.]

mor'sus. A bite. **m. Adami**. See *hyoid bone*. **m. diaboli**. Lit., the devil's bite. 1. See *fimbriae of the oviduct*, under *fimbria*. 2. The alleged part played by the fimbriae in seizing upon the ovary at the time of the escape of an ovule. [Lat., *mordere*, to bite.]

mortality (mor-tal'it-e). 1. The condition of being subject to death. 2. Syn.: *death-rate*. The number of deaths which occur in a given area or period. [Lat., *mortalitas*, from *mors*, death.]

mor'tar. A cup-shaped vessel in which substances, especially drugs, are pounded or triturated by means of a pestle. [Lat., *mortarium*.]

mortification (mor-tif-ik-a'shun). See *gangrene*.

Morton's toe. Same as *metatarsalgia*. [Samuel George Morton, American physician, 1799-1851.]

mortuary (mor'tu-a-re). Pertaining to death or burial, as a n., a dead-house. [Lat., *mortuarius*, from *mortuus*, death.]

morula (mor'u-lah). The mulberrylike

mass of cells formed after complete segmentation of the ovum, and before the formation of the blastula. [Lat., dim. of *morus*, mulberry.]

moruloid (mor'u-loyd). A term used in descriptive bacteriology, signifying like a morula or segmented like a mulberry.

morum (mo'rum). 1. The mulberry (fruit of *Morus niger*); also the fruit of various kinds of blackberry. [Gr., *moron*, *moria*.]

mo'rus. The mulberry tree. The fruits are acid and have been used in domestic practice. [Gr., *morea*.]

Morvan's disease. See *syringomyelia*.

M's whitlow. The anesthetic-analytic w. forming an initial symptom in Morvan's disease. [Augustus Marie Morvan, French physician, 1819-1897.]

mosaic inheritance. An inherited type showing paternal dominance in one group and maternal dominance in another group of cells.

moschatin (mos'ka-tin). The compound $C_{22}H_{37}NO_7$, obtained from *Achillea moschata*.

moschiferous (mos-kif'er-us). Bearing or yielding musk. [Gr., *moschos*, musk, + Lat., *ferre*, to bear.]

moschocaryon (mos-ko-kar'e-on). The nutmeg. [Gr., *moschos*, musk, + *karyon*, a nut.]

Moschus (mos'kus). 1. A genus of mammals of the *Pecora*, found in central Asia. It differs from all true deer in having a gall-bladder. 2. Of the U. S. Ph., *musk*, the dried secretion of the preputial follicles of the *Moschus moschiferus*. The tincture (5 per cent.) is official in the U. S. Ph. [Gr., *moschos*.]

mosquito (mus-ke'to). Insects belonging to the order *Diptera* and the family *Culicidae*, species of which transmit several diseases to man. There are various species of m., such as *Culex*, *Anopheles*, and *Stegomyia*. [Span., a little gnat.]

mosquitocide (mus-ke'to-sid). Any agent destructive to mosquitoes. [*Mosquito*, + Lat., *caedere*, to kill.]

moss. 1. Plants belonging to the cryptogamic order, *Musci*. 2. A substance derived from these plants. **Ceylon m.** An edible m. obtained from *Spearococcus lichenoides*. **club m.** Lycopodium. **Iceland m.** See *Cetraria*. **Irish m.** See *Chondrus*.

moth'er's mark. See *nevus vascularis* under *nevus*.

moth patch'es. See *chloasma*.

motile (mo'til). Capable of motion, especially of voluntary or spontaneous motion. [Lat., *motilis*, from *movere*, to move.]

motility (mo-til'it-e). The property, possessed by various animal and vegetable cells, of moving rapidly through a fluid.

motion (mo'shun). 1. The act of moving. 2. Continuous change of place or position. [Lat., *motio*, *motus*.]

mo'tor. Pertaining to, causing, or subserving motion; as a n., a m. organ or apparatus. [Lat., *movere*, to move.]

mould (mold). See *mold*.

moun'tain sick'ness. The sickness exhib-

ited in vertigo, nausea, muscular weakness, etc., which is brought on by great altitudes (above 10,000 to 12,000 feet). Supposedly due to lack of oxygen.

mount'ing. The process of preparing an object for observation in a laboratory or museum. In microscopy, the arrangement of an object, usually on a glass slide, so that it may be studied with a microscope.

mouse. An animal of the genus *Mus*. **joint m.** See *floating cartilage* under *cartilage*. [Gr., *mys*, Lat., *mus*.]

mousenin (müs'sen-in). An alkaloid isolated from the bark of *Albizzia anthelmithica*; used as a tenniacide.

mouth. 1. The ingestive aperture of the alimentary canal, including, in the higher animals, the oral cavity, extending from the lips to the pharynx. 2. The terminal opening of any channel. See *os* and *ostium*. **m. breathing.** See under *breathing*. [Ang.-Sax., *muþh*.]

movement (moov'ment). 1. The act or process of moving or being moved; passing from one place to another. For various m's not here given see under the adjectives or the cognate nouns. 2. The evacuation of feces; also the feces evacuated. **ameboid m.** The m. of cells or of unicellular organisms (e.g., white blood corpuscles) resembling that of the ameba (i.e., a change in form by the rapid projection or withdrawal from any part of the surface of processes, or the change in position as well as in form by the flowing of all the protoplasm into one of the processes). **angular m.** A m. by which the angle between two bones is increased or diminished. **autonomic m.** A spontaneous m.; a m. made, apparently, independently of external stimulation. **brownian m.** A peculiar rapid whirling and oscillating m. of minute particles seen under the microscope (e.g., of the granular particles within the salivary corpuscles or of particles of vegetable or mineral origin suspended in a liquid); probably mechanical, but, according to some, entirely independent of appreciable external influences. **ciliary m.** The m. of the cilia of a ciliated cell or epithelium. **circus m.** A phenomenon observed in an animal after injury to one corpus striatum, optic thalamus, or crus cerebri, consisting in its moving about in a circle. **febrile m.** See *fever*. **fetal m's.** Muscular m's performed by the fetus in utero. **forced m.** An involuntary m. performed by an animal after injury to a portion of its brain. See *circus m.* and *index m.* **index m.** A peculiar rotatory m. executed by an animal after unilateral injury to the corpora quadrigemina, the anterior extremity of the body being rotated about the posterior extremity as an axis. **manège m.** See *circus m.* **molecular m.** See *brownian m.* **m. of restitution.** A partial rotation of the fetal head, in cases of head presentation, whereby after its expulsion it resumes the attitude occupied by it before the turn that imme-

diately preceded its expulsion. **pendular**

m. The swinging movements of the intestine, observed when the intestines are exposed, due to rhythmic contractions of the circular layer of muscle. **respiratory m's.** All the m's causing or consequent upon the ventilation of the respiratory membrane, lungs, gills, etc. See *inspiration*, *expiration*, and *respiration*. **sarcodic m.** See *ameboid m.* **vermicular m.** See *peristalsis*. **vibratile m.** See *ciliary m.* [Lat., *moveo*, to move.]

mower's mite. Another name for *Lep-tus autumnalis*.

moxa (moks'ah). A roll of some combustible material (cotton, lint, agaric, or the pith of the sunflower) designed to be burned against the skin for the purpose of producing an eschar. **artificial m.** A m. made from cotton impregnated with niter, etc. Bretonneau's m. is a mixture of charcoal, potassium nitrate, and gum tragacanth with water. The mass is rolled into little sticks, which burn readily without scintillation. **Chinese m.** A m. occurring in small cones, prepared from the leaves of *Artemisia chinensis* and *Artemisia indica*, or (Lindley) *Artemisia m.* [Japanese.]

muavin (mu-ah'vin). An alkaloid obtained from "muavi" bark. It is said to act like digitalin.

mucago (mu-kah'go). 1. A coating of mold or of mucus. 2. Mucus. 3. Mucilage. [Lat., *mucus*, mucus.]

mucamid (mu-kam'id). A crystallin body, $\text{C}_8\text{H}_{12}\text{N}_2\text{O}_6$, isomeric with saccharamid.

mucate (mu'kät). A salt of mucic acid.

mucedin (mu'se-din). A neutral mucoid and uncrystallizable substance obtained by treating gluten with hot alcohol.

mucedinous (mu-sed'in-us). Having the character of mold; resembling mold. [Lat., *mucedo*, mucus, from *mucere*, to be moldy.]

mucic (mu'sik). Derived from mucous or mucilage. **m. acid.** See under *acid*. [Lat., *mucus*, mucus.]

mucific (mu-sif'ik). Producing or secreting mucus.

mucigen (mu'sij-en). The mucin-producing substance in a muciparous cell. [Lat., *mucus*, mucus, + Gr., *gennan*, to engender.]

mucilage (mu'sil-ey). 1. A pharmaceutical preparation consisting of an aqueous solution of a gum or of vegetable principles containing gums. 2. See *vegetable m.* **vegetable m.** Of Berzelius and others, bassorin. [Lat., *mucilago*, from *mucere*, to be moldy.]

mucilaginous (mu-sil-aj'in-us). Having the consistence of, containing, or yielding mucilage.

mucin (mu'sin). A yellowish white, tenacious substance, which forms an important part of secretions such as the saliva or bile. It is secreted largely by the epithelial cells lining mucous membranes. Chemically, true m. is a conjugated protein, a glycoprotein, consisting of a simple protein combined with a carbohydrate group. **m. substances.** Com-

- pound proteids. The prosthetic group of the m. s. is either a carbohydrate or a derivative of a carbohydrate (as glucosamin). They are divided into two groups: the *mucins* (true mucins) and *mucoids*. [Lat., *mucus*, *mucus*.]
- mucinogen** (mu-sin'o-jen). A principle from which mucin is formed. [Lat., *mucus*, *mucus*, + Gr., *genman*, to engender.]
- mucinoid** (mu'sin-oyd). Like mucin. [*Mucin*, + Gr., *eidōs*, form, resemblance.]
- mucinoids** (mu'sin-oids). See *mucoids*.
- mucins** (mu'sins). Syn.: *true mucins*. Compound proteids present in the various mucous membranes. The prosthetic group of the m's is glucosamin.
- muciparous** (mu-sip'ar-us). Producing or secreting mucus. [Lat., *mucus*, *mucus*, + *parere*, to beget.]
- mucos-**. Combining form of Lat., *mucus*; used as a prefix to denote having relation to mucus.
- mucocarneous** (mu-ko-kar'ne-us). Myxomatous. [Lat., *mucus*, *mucus*, + *caro*, *carnis*, flesh.]
- mucocoele** (mu'ko-sēl). 1. A tumor consisting largely of mucus. 2. See *dacryocystitis catarrhalis*, under *dacryocystitis*. [Lat., *mucus*, *mucus*, + Gr., *kele*, a tumor.]
- mucoid** (mu'coyd). Resembling mucus. [Lat., *mucus*, *mucus*, + Gr., *eidōs*, resemblance.]
- mucoids** (mu'koyds). Syn.: *mucinoids*. Compound proteids, present in connective tissue, in the vitreous humor, in cysts, hens' eggs, and in ascitic fluids. They contain sulphur, which can be split off as sulphuric acid by hydrolysis, and some carbohydrate complex.
- mucolysin** (mu-ko'lis-in). A cytolysin which can dissolve mucus. [*Mucus* + Gr., *lysis*, dissolution.]
- mucolytic** (mu-ko-lit'ik). Destroying or dissolving mucus.
- mucopurulent** (mu-ko-pu'ru-lent). Partaking of the characters of both mucus and pus.
- mucopus** (mu-ko-pus'). Mucus having the appearance of pus from the presence of leukocytes and particles of necrosed mucus membrane. [Lat., *mucus*, *mucus*, + *pus*, *pus*.]
- Mucor** (mu'kor). 1. The typical genus of the subclass *Phycomycetes* and the order *Mucorineae*, or mucoriniferous molds. 2. See *mucus*. **M. corymbifer**. A species obtained from wheat bread kept at the body temperature, and also found in the auditory meatus. The mycelium is grayish white. According to Flüggé, it is pathogenic. The spores, injected into the blood of rabbits, produce death, and various species have been found in peritonitis and multiple abscesses of the viscera in man. **M. mucedo**. A species containing trehalose, found on horse dung, rotten fruits, etc. The hyphae branch profusely through the substratum, deriving nourishment from it. Apples and pears are rendered bitter and unfit to eat by this fungus if the surface or skin of the fruit is broken. It causes a fatal disease in bees, called mucorin, and has been found in pulmonary infarcts in men. **m. narium**. The mucous secretion of the nostrils. **M. ramosa**, **M. septatus**. A species found in otomycosis. **M. vulgaris**. See *M. mucedo*. [Lat.]
- mucoriferous** (mu-kor-ifer-us). Bearing mold or a moldlike covering. [Lat., *mucor*, mold, + *ferre*, to bear.]
- mucorin** (mu'kor-in). An albuminoid substance discovered by Van Tieghem in many species of molds.
- mucosa** (mu-ko'sah). See *mucous membrane*, under *membrane*. **m. in examination of stomach contents**, see in *appendix*, page 904. [Lat., *mucus*, *mucus*.]
- mucosity** (mu-kos'it-e). A mucuslike fluid, especially a fluid formed on the surface of a mucous membrane, consisting mainly of mucus. [Lat., *mucosus*, *mucosus*.]
- mucoso-**. Combining form of Lat., *mucosus*, *mucosus*; used occasionally as a prefix to denote partly mucous and partly something else.
- mucous** (mu'kus). 1. Having the qualities of, consisting of, or containing mucus. 2. Covered with a slimy secretion or with matter which becomes slimy with water. 3. Mucilaginous. 4. Secreting mucus. [Lat., *mucosus*, from *mucus*, *mucus*.]
- Mucuna** (mu-ku'nah). 1. A genus of leguminous plants, having the seed pods covered with stinging hairs. 2. *M. pruriens*. **M. pruriens**, **M. prurita**. Cowhage; a species common throughout the tropics. The hairs or spicula of the pods are used as an anthelmintic, it is supposed to act mechanically by penetrating the worms. *M. prurita* is considered by some authorities to be distinct from *M. pruriens*. [Lat., *M.*, U. S. Ph., 1870.]
- mucus** (mu'kus). The clear viscid secretion that lubricates the mucous membranes, consisting of a limpid liquid containing suspended epithelial cells, a few leukocytes, and granular debris. Chemically it consists of water containing mucin (which gives it its viscosity) and a small amount of salts. **m. articulatorum**. See *synovia*. **m. carphodes**. Stringy **m. m. in examination of stomach contents**, see in *appendix*, page 904. **m. in stool**, see in *appendix*, page 907. [Lat., from *ungere*, to blow the nose.]
- mudarin** (mu'dar-in). A principle extracted from the root bark of *Calotropis gigantea* and *Calotropis procera*; a powerful emetic.
- mutget** (mu-gwa'). See *thrush*. [Fr.]
- Mulder's test**. A test by which the presence of sugar is shown by mixing with the liquid to be tested a few drops of indigo carmin solution, made alkaline with sodium carbonate, and heating, when the color changes through green, red-purple, and violet to bright yellow.
- mulled**. Heated (occasionally also sweetened and spiced) for drinking.
- mullein** (mul'in). See *Verbascum*.
- müllerian** (mul-le're-an). Investigated or named for *Johannes Müller*, German physiologist, 1801-1858.

Müller's ducts. Tubes in the embryo, one on each side of the body. From them, in the female, are developed the oviducts, uterus and vagina. In the male they atrophy. **M's dust bodies.** See *hemokonia*. **M's fibers.** Finely striated f's whose bases form the internal limiting membrane of the retina. **M's fluid.** A solution of 1 part of sodium sulphate and 2 parts of potassium bichromate in 100 of distilled water; used in hardening objects for examination under the microscope. **M's ganglion.** See *jugular ganglion*. **M's reaction.** A sphincterlike muscular r. situated at the point where the canal of the cervix uteri joins the cavity of the body of the uterus at an advanced stage of gestation.

multangular (mul-tan'gu-lar). Many sided. [Lat., *multus*, many, + *angulus*, angle.]

multi-, mult-. Combining form of Lat., *multus*, many; used to denote many, much.

multifidus (mul-tif'i-dus). See *table of muscles*, under *muscle*.

multigravida (mul-te-grav'id-ah). A female who has often been pregnant. [Lat., *multus* + *gravidus*, pregnant.]

multilocular (mul-te-lok'u-lar). Divided into many chambers. [Lat., *multus*, many, + *loculus*, compartment.]

multinuclear. Containing several nuclei. [Lat., *multus*, many, + *nucleus*.]

multinucleolate (mul-te-nu-kle'o-lât). Containing many nucleoli. [Lat., *multus*, many, + *nucleolus*.]

multipara (mul-tip'ar-ah). A female who has borne several children. [Lat., *multus*, many, + *parere*, to bring forth.]

multipleparous (mul-tip'ar-us). 1. Having gone through with gestation more than once. 2. Bringing forth many young at a birth.

multipolar (mul-te-po'lar). Of a cell, especially a nerve cell, having more than two processes extending from it. [Lat., *multus*, many, + *polus*, a pole.]

multivalent (mul-tiv'il-ent). Capable of combining with more than two atoms of a univalent element or radicle. [Lat., *multus*, many, + *valere*, to be worth.]

mummification (mum-mif-ik-a'shun). 1. The act of mummifying. 2. The state of being mummified. 3. The drying of the parts in dry gangrene. [Lat., *mumma*, a mummy, + *facere*, to make.]

mumps. An infectious and contagious febrile disease characterized by inflammation of the parotid gland. **m. of the lacrimal glands.** Non-suppurative, acute dacryo-adenitis occurring in scrofulous subjects.

Munro's point. A point midway between the umbilicus and the left anterior iliac spine. [John Cummings Munro, Boston surgeon, 1858-1910.]

muurexid (mu-reks'id). Ammonium purpurate, $C_8H_4N_2O_6(NH_4) + H_2O$. The formation of m. is the basis of the so-called m. test for the presence of uric acid. **m. test.** A characteristic color test for uric acid. It consists of carefully heating a trace of the crystalline acid

with a drop of nitric acid on a porcelain surface until the nitric acid has been evaporated and a red coloration appears. Upon the addition of ammonia the color becomes purple, owing to the formation of murexid. It is a very sensitive test. [Lat., *murex*, the sea snail, yielding a purple dye.] **muriate** (mu'ri-ät). A salt of muriatic (hydrochloric) acid.

muriated (mu'ri-a-ted). 1. See *chlorinated*. 2. Containing a chlorid (e. g., m. tincture of iron).

muriatic (mu-ri-at'ik). Prepared from brine; hydrochloric. **m. acid.** See under *acid*. **m. ether.** Ethyl chlorid.

muricated (mu'rik-a-ted). Covered with prickles or with rough blunt points. [Lat., *muricatus*, striped like the murex.]

murigen (mu're-o-jen). Hydrogen.

mur/mur. Any noise heard on auscultation. **amphoric m.** A m. produced in respiration, especially in expiration, of an amphoric character. **anemic m.** Syn.: *anemic bruit*. A hemic m. arising from no valvular disease. **aneurismal m.** A whizzing or whirring systolic sound heard over an aneurism. **aortic m.** A systolic, diastolic, or intersonal m. heard over the aortic valve. **aortic obstructive m.** A harsh systolic m. heard with and after the first sound of the heart. It is loudest at the base and may be limited to that region. **aortic reflex m., aortic regurgitant m.** A blowing, hissing m., which accompanies and follows the second sound of the heart. **apex m.** An inorganic m. heard over the apex of the heart. **arterial m.** A soft blowing m. synchronous with the pulse, heard when a stethoscope is lightly pressed upon a large artery. **blood m's.** Vascular or cardiac m's. **bronchial m.** A m. resembling a respiratory laryngeal m. heard over the large bronchi. **cardiac m.** See *heart m.* **cardiopulmonary m., cardiorespiratory m.** A systolic m. that is caused by structural changes in the substance of the lung, and is excited by the ordinary movements of the heart. **diastolic m.** A m. occurring during the diastole, the current being from either the auricles or the aorta. **direct m.** A rough m. arising from obstruction in the blood current as it is flowing in its normal direction. **expiratory m.** A soft whizzing, buzzing, or indefinite sound produced by the outward current of air through the bronchi. **Flint's m.** See under *Flint*. **friction m.** See *friction sound*, under *sound*. **functional m.** See *inorganic m.* **heart m.** An abnormal heart sound, either added to a normal heart sound or accompanying or replacing it; it is either organic or inorganic. **indirect m.** A soft m., arising in blood flowing in a direction contrary to that of the normal current. **inorganic m.** An endocardial m. caused by functional disturbance of the heart or by anemia. **inspiratory m.** The m. heard over the lungs during inspiration. **metallic m.** A metallic and musical sound like that produced by blowing gently into a nar-

row-necked glass bottle, usually circumscribed, and most commonly heard in inspiration. **mitral m.** A m. that is systolic, or presystolic in rhythm. **mitral direct m., mitral obstructive m., mitral presystolic m.** A m. occurring in mitral stenosis. **mitral systolic m.** A m. originating in the mitral valve during the ventricular systole. It accompanies and follows the first sound of the heart, and is loudest at and often limited to the apex. It is due to incomplete closure of the mitral valve. **musical m.** A cardiac m. like the cooing of a dove. **normal vesicular m's.** See *respiratory m's.* **organic m.** A cardiac m. due to structural disease of the heart. **pericardial friction m.** A friction sound produced by opposed surfaces of the pericardium. **postdiastolic m.** A presystolic m. **presystolic mitral m., presystolic m.** A cardiac m. heard before the systole. The murmur of mitral stenosis. **puerile m.** See *puerile respiration*, under *respiration*. **pulmonary m.** A cardiac m. heard over and arising from the pulmonary valve. **reduplication m.** A condition in which the mitral and tricuspid first sounds or the aortic and pulmonary second sounds are heard separately. **regurgitant m.** A cardiac m. due to a backward flow of blood into the ventricle. **respiratory m's.** Sounds produced by the passage of a current of air in the bronchi during respiration. **systolic aortic m.** An aortic obstructive m. which is systolic. **systolic mitral m.** A mitral regurgitant m. which is systolic. **systolic m.** A cardiac m. occurring during the systole. The murmur heard in both systole and diastole. **to-and-fro m.** The cardiac regurgitant m. heard in aortic insufficiency. **tricuspid m.** A systolic or presystolic m. heard over the tricuspid valve. **valve m., valvular m.** An endocardiac m. due to an abnormal condition of the valves. **vascular m.** A hemic m. produced by vibration in the walls of the blood vessels. **venous m.** A *bruit de diable* heard over a vein, especially in anemia. **vesicular m.** Of Laennec, the normal m. heard during inspiration and expiration over the entire lung. [Lat.]

Murphy's but'ton. An appliance for intestinal anastomosis, consisting of two hollow metal cylinders with collars that fasten to each other. After each cylinder has been sewed into a divided end of the intestine to be united, the ends of the bowel are clamped together by the collars. [John Benjamin Murphy, Chicago surgeon, born 1857.]

Musca (mus'kah). A genus of flies of the class *Hexopoda*, the order *Diptera*, and the family *Muscidae*. Some of them deposit their eggs in mucous orifices or on wounded surfaces, while others wound the skin and insert their eggs beneath the skin, giving rise to swellings with central apertures from which a sanious discharge escapes, or to severe and sometimes extensive gangrene. They also con-

vey diseases by infectious bacteria, such as the typhoid bacillus on their soiled legs or in their intestines. See *fly*. **entohyaloid muscae.** Muscae volitantes due to opacities in the vitreous. **fixed muscae.** Small dark spots on the field of vision which do not change their relative positions to the eye, and are caused by fixed minute opacities in some portion of the dioptric apparatus. **M. corvina.** The larvae that infest the human intestine. **M. domestica.** The common house fly. **M. hispanica, M. hispaniola.** See *Cantharis vesicatoria*. **M. leprae.** The species which may possibly transmit leprosy. **M. luteola.** The "Congo floor maggot." The larvae suck the blood of sleeping persons. **M. pluvialis.** A fly which, in rainy weather, attaches itself to the eyes of men and animals. **M. vesicatoria.** See *Cantharis vesicatoria*, under *Cantharis*. **muscae volitantes.** Small faint shapes, which float before the eye, but do not interfere with sight. [Lat.]

muscarin (mus'kar-in). A poisonous base, $\text{OH}(\text{CH}_2)_8\text{N}.\text{CH}_2.\text{CHO}$; present in certain mushrooms. [Lat., *muscarius*, pertaining to flies.]

muscle (mus'sl). An organ which by contraction produces the movements of an animal organism. The structural elements are usually much greater in length than in breadth, and hence are mostly designated as muscular fibers. These may be apparently homogeneous and in spindle-shaped cells or fibers (*unstriated, smooth, or involuntary m.*), or the substance composing the elements may appear to be composed of alternating segments of light and dark material (*striated m.*). The striated elements of the vascular system (*cardiac m.*) are usually quite short, branched, and in *Mammalia* anastomosing. The *skeletal m's* are composed of elements much greater in length than in breadth. Only in a few cases do the fibers branch or anastomose. The fibers rarely exceed 40 to 60 mm. in length, and in m's of considerable length the fibers continually terminate and originate, but in short m's they extend from tendon to tendon. *Smooth or unstriated m.* is mostly in sheets or isolated bundles, and in connection with the organs of vegetative life. It is mostly involuntary, the m. of accommodation forming an apparent exception. *Cardiac m.* is wholly involuntary, while the ordinary *skeletal striated m.* is voluntary. That in the esophagus is an exception, and the m's of respiration are only partially voluntary. The chief chemical constituents of the muscle, beside the muscle proteins, are creatin, hypoxanthin, carnin, inosit, phosphocarnic acid, glycogen, sarcocactic acid, fat, and mineral salts, especially potassium, sodium, magnesium, calcium, and iron combined with chlorin and phosphoric acid. For m's with special generic names, such as *abductor, adductor, etc.*, see under those names. **absolute power of m.** The greatest load that a

given m. can lift, or the load which it is just unable to lift. **accessory m's.** See under *accessorius*. **antagonistic m.** See *antagonist*. **artificial m.** (of Engelmann). A device by which a string of catgut, previously soaked in warm water, may be made to shorten suddenly as a result of heating. The shortening, when recorded, gives curves identical with those furnished by plain muscle. **bicaudate m.** M's inserted by two distinct portions. **bicipital m's.** M's having their origins each from two separate points. **bipenniform m's.** See *penniform m's.* **broad m.** A m. having its long diameter at right angles to the course of its fibers. **cardiac m.** See *myocardium*. **choroid m., ciliary m.** Syn.: *tensor choroideae*. The portion of the ciliary body lying between the ciliary processes and the ciliary ligament and including the latter. It is the muscle of accommodation. **circular m.** See *sphincter*. **complex m., compound m.** A m. having more than one point of origin or insertion or both. **converging m's of the eye.** The *recti oculi interni*. **craniovisceral m's.** The m's connected with the head and with the visceral skeleton. **curvilinear m.** A m. the principal axis of which forms a curve. **cutaneous m's.** In a restricted sense, m's having cutaneous origins and insertions; in a broad sense, m's having cutaneous insertions. **demipenniform m's.** M's having a tendinous portion along their free margins, into or from which the muscular fibers are inserted or arise. **diagonal m.** A m. whose fibers run obliquely. **digastric m.** A long m. in which the muscular fibers are divided into two portions by a tendinous transverse septum. See *digastricus*. **dorsolateral m's.** That group of the m's of the trunk, in the embryo, situated above a horizontal septum extending outward from the transverse processes of the vertebrae. **ectodermal m.** A m. developed from the ectoderm. **endodermal m.** A m. developed from the endoderm. **epaxial m's, episkeletal m's.** Those m's of the trunk and head that are derived from the protovertebrae, and lie dorsally (in man posterior) to the endoskeleton and the ventral (anterior) branches of the spinal nerves. **extrinsic m's.** 1. M's of the limbs that have an origin distinct from the limb or its appropriate arch. See also *extrinsic*. 2. M's that have their origin independent of the organ or part into which they are inserted. **extrinsic m's of the ear.** The m's that move the outer ear upon the head. **extrinsic m's of the eye.** The *recti* and *obliqui oculi*, *levator palpebrae*, and *orbicularis palpebrarum*. **extrinsic m's of the larynx.** The *omohyoideus*, *sternohyoideus*, *sternothyreoideus*, the inferior and middle constrictors of the pharynx, the m's of the suprahyoid region, and any anomalous m's connected with them. **extrinsic m's of the tongue.** The *hyoglossus*, *chondroglossus*, *geniohyoglossus*, *palatoglossus*, *styloglos-*

musculus, and part of the superior constrictor of the pharynx. **fusiform m's.** M's with small origins and insertions, usually tendinous, and a long, somewhat spindle-shaped intermediate mass of muscular tissue. **hamstring m's.** The biceps flexor cruris, *semimembranosus*, and *semitendinosus* m's. **heart m.** See *myocardium*. **hollow m.** A m. inclosing a cavity (e. g., the heart). **hypaxial m's, hyposkeletal m's.** Those m's of the trunk and head that are situated ventrally (anteriorly in man) to the endoskeleton. **inflected m.** A m. that turns around an osseous or cartilaginous pulley, thus changing the direction of its axis. **internal m's.** See *involuntary m's.* **intrinsic m's.** 1. M's of the limbs in the higher vertebrates which arise within the limb itself or from the arch to which the limb is attached. 2. M's which have their origins and insertions wholly within the organ or part they move. **involuntary m's.** M's that are not under conscious control. Most of these, except the muscles of the heart and of the esophagus, are made up of non-striated fibers. **long m's.** M's that lie upon two or more segments of a limb, or pass over two or more joints. **lumbrical m's.** See *table of muscles*. **midriff m.** See *diaphragm*. **monomere m's, momic m's.** M's that extend between two adjacent monomeres. **multicaudate m's.** M's terminating in more than two divisions. **multicipital m's.** M's having more than one distinct origin. **m. extract.** A glycerin extract of m.; used in muscular dystrophies. **m. of accommodation.** See *ciliary m.* **m's of animal life.** Muscular tissue especially connected with the organs of animal life, as in the organs of speech and locomotion. Such m's are almost invariably striated. **m's of expiration.** M's producing expiratory movements. Expiration is ordinarily mostly due to the elasticity of the lungs, thorax, abdominal walls, and viscera, but in labored respiration the m's are aided by the so-called auxiliary or accessory m's of expiration (the *obliquus externus*, *obliquus internus*, *transversalis*, and *sacrolumbalis*). **m's of inspiration.** M's producing the movements of inspiration. Ordinarily these are the *diaphragm*, *scalenus anticus*, *scalenus medius*, *scalenus posticus*, the external intercostals, the sternal portion of the internal intercostals, and the twelve *levatores costarum*. In labored respiration these m's are aided by the so-called accessory or auxiliary inspiratory m's. **m's of mastication.** The *masseter*, *temporalis*, and *pterygoidei externus* and *internus*. **m's of organic life.** See *m's of vegetative life*. **m's of respiration.** See *m's of inspiration* and *m's of expiration*. **m's of the ureters.** A band of thin, condensed muscular fibers of the urinary bladder extending between the openings of the ureters. **m's of vegetable (or vegetative) life.** Muscular tissue forming a part of the organs of

vegetative life, such as that in the vascular, digestive, respiratory systems. Sometimes applied especially to unstriated m's. **m. plasma.** See under *plasm.* **non-striated m's.** Unstriated m's. See under *m.* **orbicular m.** A m. whose fibers form a more or less complete ring around a bone, aperture, etc. (e. g., the sphincter ani). **orbital m.** A set of fibers of the orbicularis palpebrarum m. lying beneath the tendon of the levator palpebrae. **organic m's.** See *involuntary m's.* **palmar m's.** In the foot, all the m's lying superficial to the deep branch of the external plantar nerve; in the hand, all the m's lying superficial to the deep branch of the ulnar nerve. **pectinate m's.** See *serrated m's.* **pectoral m's.** See under *pectoralis.* **penate m's, pennated m's, penniform m's.** M's having a central tendinous portion in their long axes toward which the muscular fibers on each side converge. **polygastric m's.** Long m's divided into two or more parts by transverse tendinous septa. **polymere m's.** M's in which one or more monomeres are interposed between their origins and insertions. **postaxial m's.** M's on the posterior aspects of the limbs when they are at right angles to the spine. **preaxial m's.** M's on the anterior aspects of the limbs when they are at right angles to the spine. **respiratory m's.** See *m's of inspiration* and *m's of expiration.* **Ruyseh's uterine m's.** See under *Ruyseh.* **serrated m's.** Broad m's having a toothed margin by means of which they have their origins or insertions. **short m's.** M's lying upon one segment only of a limb, and passing over only one joint. **simple m's.** M's having a single origin and insertion. **skeletal m.** A m. attached to or acting on the skeleton. **smooth m's.** See under *m.* **striated m's, striped m's.** See under *m.* **subvertebral m's.** See *hyposkeletal m's.* **tailor's m.** See *sartorius.* **Treitz's m.** See under *Treitz.* **tricipital m's.** M's having their origins from three distinct points. **unstriated m's, unstriped m's.** See under *m.* **uterine m.** The muscular fibers of the uterus. **ventrolateral m's.** That group of m's of the trunk situated below a horizontal septum which, in the embryo, extends outward from the transverse processes of the vertebrae. **visceral m's.** The m's connected with the visceral skeleton. **voluntary m's.** M's that are under the direct control of the will. Most m's composed of striated muscular tissue are voluntary, while only a few of the unstriped m's are voluntary. See under *m.* See also *table of muscles.* [Lat., *musculus*, dim. of *mus* (Gr., *mys*), muscle.]

muscular (mus'ku-lar). 1. Pertaining to, distributed to, or resembling a muscle. 2. Characterized by well-developed muscles. [Lat., *muscularis*.]

muscularity (mus-ku-lar'it-e). 1. The condition of being muscular. 2. The contractile power or tone of a muscle.

musculature (mus'ku-la-tür). 1. The muscular system in general. 2. The muscular tissue of some special part, such as the esophagus.

musculin (mus'ku-lin). A protein of the muscle belonging to the class of the globulins.

musculo-. Combining form of Lat., *musculus*, muscle; used as a prefix to denote of, or pertaining to a muscle.

musculocutaneous (mus'ku-lo-ku-ta'ne-us). Pertaining to or connected with muscles and the integument.

musculomembranous (mus'ku-lo-mem'bra-nus). Partaking of the nature of muscle and of membrane.

musculophrenic (mus'ku-lo-fren'ik). Relating to or distributed to the muscular portion of the diaphragm.

musculospiral (mus'ku-lo-spi'ral). Pertaining to muscles and having a spiral direction; said of nerves.

musculus (mus'ku-lus). See *muscle. m. accessorius ad rectum.* An anomalous prolongation of the rectus abdominis muscle upward on the chest for a varying distance. **musculi alopeces.** The psoas muscles. **m. anomalus menti.** An anomalous muscular slip arising near the insertion of the levator menti, and inserted near the mental foramen. **m. bicornis.** The extensor carpi radialis. **m. biventer.** See *digastric muscle.* **musculi breves.** See *short muscles.* **m. broncho-esophageus.** A triangular bundle of fibers which arises from the posterior wall of the left bronchus and blends with the longitudinal fibers of the esophagus. **musculi cruris gemelli** (seu *geminii*). The two heads of the gastrocnemius. **musculi dentati.** See *serrated muscles.* **m. incisurae Santorini.** A very small muscle found rarely in the auditory canal, below and farther in than the tragus. **musculi pectinati.** Muscular ridges on the interior surface of the auricles of the heart, which serve to prevent overdistention of the auricles.

mush'room. Generally restricted to the *Agaricus campestris*, or common edible fungus. It is used as synonymous with fungus by some authors, or as distinguishing an edible fungus from a toadstool, a non-edible one. [Fr., *mousseran*.]

mu'sin. A proprietary preparation of tamarinds.

musk. A substance secreted from the preputial follicles of *Moschus moschiferus*. It is a stimulant and antispasmodic.

American m. The sacs of the m.-rat (*Fiber zibethicus*); used as a substitute for true m. **artificial m.** A preparation made by treating oil of amber with nitric acid for twenty-four hours, and washing with cold water. [U. S. Ph.] [Lat., *moschus*.]

must. Unfermented grape juice. [Lat., *mustum*, from *mustus*, new.]

must'ard. See *Sinapis*.

mutation (mu-ta'shun). Transformation, change. An abrupt change new to the stock, as supernumerary mammae or fingers. [Lat., *mutatio*, from *mutare*, to change.]

TABLE OF MUSCLES

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Abductor digiti quinti..... (Abductor minimi digiti).	Pisiform bone.	Inner side, 1st phalanx of little finger.	Ulnar.	Abducts little finger.
Abductor hallucis.....	Inner tubercle of os calcis.	Inner side, 1st phalanx of great toe.	Internal plantar.	Abduction of great toe.
Abductor pollicis brevis.....	Ridge of trapezium and anterior angular ligament.	Outer side of 1st phalanx of thumb.	Median.	Abducts thumb.
Abductor pollicis longus.....	Posterior surfaces of radius and ulna.	Outer side of base of 1st metacarpal bone.	Radial.	Abducts and assists in extending thumb.
Accelerator urinae..... Accessorius..... Adductor brevis.....	See <i>Bulbocavernosus</i> . See <i>Iliocostalis dorsi</i> . Superior ramus of pubis.	Upper part of linea aspera of femur.	Obturator.	Adducts thigh.
Adductor hallucis.....	Tarsal ends of three middle metatarsals. Front of pubes.	Base of first phalanx of great toe. Middle of linea aspera of femur.	External plantar. Obturator.	Adducts great toe. Adducts thigh.
Adductor magnus..... Adductor minimus.....	Rami of pubes and ischium. Upper portion of adductor magnus.	Linea aspera of femur. Space above linea aspera.	Obturator and sciatic.	Adducts thigh and rotates it outward.
Adductor obliquus hallucis... Adductor obliquus pollicis... Adductor pollicis.....	See <i>Adductor hallucis</i> . See <i>Adductor pollicis</i> . Third metacarpal.	Base of 1st phalanx of thumb.	Ulnar.	Adducts thumb.
Adductor transversus hallucis.	See <i>Adductor hallucis</i> .			
Amygdaloglossus.....	Pharyngeal aponeurosis over tonsil.	Glossopalatinus.		Lifts edge of tongue.
Anconeus.....	Back of external condyle of humerus.	Olecranon and posterior surface of ulna.	Radial.	Extends forearm.

TABLE OF MUSCLES—*Continued*

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Arrectores pili.....	Pars papillaris of skin.	Follicles of the hair.	Sympathetic.	Elevates hairs of skin.
Articularis genu.....	Lower anterior shaft of femur.	Synovial membrane of knee-joint.	Femoral.	Lifts capsule of knee-joint.
Aryteno-epiglottideus inferior	Arytenoid cartilage.	Epiglottis; anterior.	Recurrent laryngeal.	Compresses sacculus laryngis.
Aryteno-epiglottideus superior	Tip of arytenoid cartilage.	Aryteno-epiglottidean folds.	Recurrent laryngeal.	Narrows the opening of the larynx.
Arytenoideus.....	Base of arytenoid cartilage.	Apex of the other arytenoid cartilage.	Recurrent laryngeal.	Narrows rima glottidis.
Attollens aurem.....	See <i>Auricularis superior</i> .	Cartilage of auricle.	Facial.	Draws pinna of ear forward.
Auricularis anterior.....	Superficial temporal fascia.		Facial.	Draws back the pinna of ear.
Auricularis posterior.....	Mastoid process.	Root of auricle.	Facial.	Raises pinna of ear.
Auricularis superior.....	Galea aponeurotica.	Upper margin front of auricle.	Facial.	Flexes and supinates forearm.
Azygos uvulae.....	See <i>Uvulae</i> .	Bicipital tubercle of radius.	Musculocutaneous.	
Biceps brachii.....	{ Long—Glenoid cavity. Short—Coracoid process.			
Biceps femoris.....	{ Long—Tuberosity of ischium. Short—Outer lip of linea aspera.	Head of fibula.	{ Long head, tibial. Short head, peroneal. }	Flexes knee and rotates it outward.
Biventer cervicis.....	See <i>Spinialis capitis</i> .	Coronoid process of ulna.	Musculocutaneous and radial.	Flexes forearm. ✓
Brachialis.....	Lower half, shaft of humerus.	Front of base of styloid process of radius.	Radial.	Flexes forearm.
Brachioradialis.....	External supracondyloid ridge of humerus.	Orbicularis oris.	Facial.	Flattens cheek, retracts angle of mouth.
Buccinator.....	Buccinator ridge of mandible, alveolar process of maxilla, and pterygomandibular ligament.	Bulb, spongy and cavernous part of penis.	Perineal.	Ejects urine.
Bulbocavernosus.....	Central point of perineum.			

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Caninus.....	Canine fossa of maxilla.	Orbicularis oris and skin at angle of mouth.	Facial.	Raises angle of mouth.
Cephalopharyngeus.....	See <i>Constrictor pharyngis superior</i> .			
Ceratocricoides.....	Portion of crico-arytenoides posterior inserted into thyroïd cartilage.			
Ceratopharyngeus.....	Part of the constrictor pharyngis medius arising from hyoid bone.			
Cervicalis ascendens.....	Angles of five upper ribs.	Fourth, fifth, and sixth cervical.	Branches of cervical.	Keeps neck erect.
Chondroglossus.....	Muscular fibers usually forming part of the hyoglossus.			
Chondropharyngeus.....	Part of the constrictor pharyngis medius arising from the lesser cornu of hyoid bone.			
Ciliaris.....	<ol style="list-style-type: none"> 1. Longitudinal (Brucke's) —junction of cornea and sclera. 2. Circular part (Müller's)—fibers forming a circle. 	<ol style="list-style-type: none"> 1. External layers of choroid. 2. Ciliary process. 	Ciliary.	Visual accommodation.
Cleido-epitrochlearis.....	The anterior portion of the deltoid, arising from the clavicle.			
Cleidomastoideus.....	Part of the sternocleidomastoid muscle passing between the clavicle and the mastoid process.			
Cleido-occipitalis.....	Part of the sternocleidomastoid muscle between the clavicle and the superior curved line of the occipital bone.			
Coccygeus.....	Ischial spine.	Coccyx.	3d and 4th sacral.	Supports coccyx and closes pelvic outlet.
Complexus.....	See <i>Semispinalis capitis</i> .			
Complexus minor.....	See <i>Longissimus capitis</i> .			

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Compressor narium.....	Superior maxilla.	Aponeurosis over bridge of nose.	Facial.	Narrows nostril.
Constrictor pharyngis inferior.....	Thyroid and cricoid cartilages.	Posterior portion of wall of pharynx.	Pharyngeal plexus.	Contracts pharynx.
Constrictor pharyngis medius.	Stylohyoid ligament and cornua of the hyoid.	Middle of posterior wall of the pharynx.	Pharyngeal plexus.	Contracts pharynx.
Constrictor pharyngis superior.....	Internal pterygoid plate, pterygomandibular ligament, jaw, side of tongue.	Posterior wall of pharynx.	Pharyngeal plexus.	Contracts pharynx.
Constrictor urethrae.....	See <i>Sphincter urethrae membranacea</i> .			
Coracobrachialis.....	Coracoid process of scapula.	Inner shaft of humerus.	Musculocutaneous.	Raises arm.
Corrugator cutis ani.....	Submucous tissue, interior of anus.	Subcutaneous tissue on opposite side of anus.	Sympathetic.	Corrugates skin of anus.
Corrugator supercilii.....	Superciliary ridge.	Skin of eyebrow.	Facial.	Draws eyebrows down, wrinkles forehead vertically.
Cremaster.....	Middle of Poupert's ligament.	Cremasteric fascia and pubic bone.	Genitocrural.	Raises testicle.
Crico-arytenoideus lateralis..	Upper margin of arch of cricoid cartilage.	Muscular process of arytenoid.	Recurrent laryngeal.	Narrows glottis.
Crico-arytenoideus posterior.	Back of cricoid.	Muscular process of arytenoid.	Recurrent laryngeal.	Opens glottis.
Cricopharyngeus.....	Part of the constrictor pharyngis inferior arising from the cricoid cartilage.			
Cricothyroideus.....	Anterior surface of cricoid.	Thyroid cartilage.	Superior laryngeal.	Tightens vocal cords.
Crureus.....	See <i>Vastus intermedius</i> .			
Cucullaris.....	See <i>Trapezius</i> .			
Deltoides.....	Clavicle, acromion process, spine of scapula.	Shaft of humerus.	Subscapular.	Rotation of arm.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Depressor alae nasi.....	Incisor fossa of maxilla.	Ala and septum of nose.	Facial.	Contracts nostril.
Depressor anguli oris.....	See <i>Triangularis</i> .			
Depressor labii inferior.....	See <i>Quadratus labii inferioris</i> .			
Depressor septi.....	The septal insertion of the depressor alae nasi.			
Depressor urethrae.....	A band of fibers of the sphincter urethrae membranaceae passing over the urethra.			
Detrusor urinae.....	The external longitudinal layer of the muscular coat of the bladder.			
Diaphragma.....	Ensiiform cartilage, 7th to 12th ribs, arcuate ligaments and lumbar vertebrae.	Central tendon.	Phrenic.	Increases chest capacity.
Digastricus (anterior).....	Inferior maxillary, near symphysis.	Lower border of mandible.	By mylohyoid from third division of trigeminus.	Depresses jaw.
Digastricus (posterior).....	Digastric groove of the mastoid.	Lower border of mandible, by anterior belly.	Facial.	Helps to fix hyoid bone.
Dilator naris anterior.....	Alar cartilage.	Border of ala.	Facial.	Dilates nostril.
Dilator naris posterior.....	Nasal notch of superior maxilla.	Skin at the margin of nostril.	Facial.	Dilates nostril.
Ejaculator seminis.....	See <i>Bulbocavernosus</i> .			
Epicranius.....	The scalp muscle, of 2 bellies, the frontalis and the occipitalis and a central aponeurosis, the galea aponeurotica.			
Epitrochleo-anconeus.....	Back of the internal condyle of the humerus.	Inner side of the olecranon process.		
Erector clitoridis.....	See <i>Ischio cavernosus</i> .			
Erector penis.....	See <i>Ischio cavernosus</i> .			
Erector spinae.....	See <i>Sacrospinalis</i> .			
Extensor brevis digitorum.....	See <i>Extensor digitorum brevis</i> .			
Extensor brevis pollicis.....	See <i>Extensor pollicis brevis</i> .			
Extensor carpi radialis brevis.....	External condyloid ridge of humerus.	Base of third metacarpal bone.	Radial.	Extends and abducts wrist.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Extensor carpi radialis longus.	External condyloid ridge of humerus.	Base of second metacarpal bone.	Radial.	Extends and abducts wrist.
Extensor carpi ulnaris.....	External epicondyle of humerus.	Base of fifth metacarpal bone.	Radial.	Extends and abducts wrist.
Extensor coccygis.....	Last segment of the sacrum.	Tip of coccyx.	Sacral branches.	Extends coccyx.
Extensor communis digitorum.....	See <i>Extensor digitorum communis</i> .			
Extensor digiti quinti proprius.....	External condyle of the humerus.	Second and third phalanges.	Radial.	Extends little finger.
Extensor digitorum brevis....	Dorsal surface of os calcis.	First phalanx of great toe and tendons of extensor longus.	Deep peroneal.	Extends toes.
Extensor digitorum communis.....	External epicondyle of humerus.	Second and third phalanges.	Radial.	Extends fingers.
Extensor digitorum longus....	External tuberosity of tibia and shaft of fibula.	Second and third phalanges of toes.	Peroneal.	Extends toes.
Extensor hallucis longus.....	Front of tibia and interosseous membrane.	Terminal phalanx of great toe.	Anterior tibial.	Extends great toe.
Extensor indicis proprius.....	Dorsal surface of ulna.	First phalanx of index finger.	Radial.	Extends forefinger.
Extensor longus digitorum....	See <i>Extensor digitorum longus</i> .			
Extensor longus pollicis.....	See <i>Extensor pollicis longus</i> .			
Extensor minimi digiti.....	See <i>Extensor digiti quinti proprius</i> .			
Extensor pollicis brevis.....	Dorsal surface of radius.	First phalanx of thumb.	Radial.	Extends and abducts terminal phalanx of thumb.
Extensor pollicis longus.....	Posterior surface of ulna.	Second phalanx of thumb.	Radial.	Extends terminal phalanx of thumb.
Flexor accessorius digitorum.	See <i>Quadratus plantae</i> .			
Flexor brevis digitorum.....	See <i>Flexor digitorum brevis</i> .			

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Flexor brevis minimi digiti.	See <i>Flexor digiti quinti brevis</i> .	Second and third metacarpal bones.	Median.	Flexes and abducts wrist.
Flexor carpi radialis	Internal condyle of humerus.	Pisiform bone.	Ulnar.	Flexes and adducts wrist.
Flexor carpi ulnaris	1. Internal condyle of humerus. 2. Olecranon and posterior border of ulna.			
Flexor digiti quinti brevis.	Ulnar bone.	First phalanx of little finger.	Ulnar.	Flexes first phalanx of little finger.
Flexor digitorum brevis	Os calcis and plantar fascia.	Second phalanges of lesser toes.	Internal plantar.	Flexes toes.
Flexor digitorum longus	Posterior surface of tibia.	Terminal phalanges of four outer toes.	Tibial.	Flexes phalanges and extends toes.
Flexor digitorum profundus.	Upper third of ulna.	Base of terminal phalanges of fingers by four tendons.	Ulnar and median.	Flexes terminal phalanges of fingers.
Flexor digitorum sublimis.	1. Internal condyle of humerus. 2. Coronoid process. 3. Outer border of radius.	By four tendons to second phalanx of each finger.	Median.	Flexes middle phalanges of the fingers.
Flexor hallucis brevis	Inner surface of cuboid and external cuneiform bones.	By tendons into first phalanx of great toe.	Internal and external plantar.	Flexes great toe.
Flexor hallucis longus	Lower two-thirds of shaft of fibula.	Ungual phalanx of great toe.	Tibial.	Flexes great toe.
Flexor longus digitorum	See <i>Flexor digitorum longus</i> .			
Flexor longus hallucis	See <i>Flexor hallucis longus</i> .			
Flexor longus pollicis	See <i>Flexor pollicis longus</i> .			
Flexor ossis metacarpi pollicis	See <i>Opponens pollicis</i> .			
Flexor pollicis longus	Middle third of radius.	Terminal phalanx of thumb.	Median.	Flexes last phalanx of thumb.
Flexor profundus digitorum.	See <i>Flexor digitorum profundus</i> .			
Flexor sublimis digitorum.	See <i>Flexor digitorum sublimis</i> .			
Frontalis	Frontal bone.	Galea aponeurotica.	Facial.	Wrinkles scalp and forehead.
Gastrocnemius	External and internal condyles of the femur.	By tendo Achillis into os calcis.	Tibial	Flexes foot.
Gemellus inferior	Tuberosity of ischium.	Great trochanter.	Sacral.	Rotates thigh.
Gemellus superior	Ischial spine.	Great trochanter.	Sacral.	Rotates thigh.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Genioglossus.....	Superior genial tubercle of inferior maxilla.	Hyoid and bottom of tongue.	Hypoglossal.	Protrudes and retracts tongue.
Geniohyoideus.....	Inferior genial tubercle of inferior maxilla.	Hyoid.	Hypoglossal.	Elevates and advances hyoid, or depresses jaw.
Glossopalatinus.....	Under surface of soft palate.	Side of tongue.	Pharyngeal plexus.	Raises back of tongue and constricts fauces.
Glossopharyngeus.....	Part of constrictor pharyngis superior arising from floor of the mouth.			
Gluteus maximus.....	Superior curved iliac line and crest, coccyx and sacrum.	Fascia lata and femur below great trochanter.	Inferior gluteal.	Extends thigh.
Gluteus medius.....	Ilium between superior and middle curved lines.	Outer surface of great trochanter.		Abducts and rotates thigh.
Gluteus minimus.....	Ilium between middle and inferior curved lines.	Great trochanter of femur.	Superior gluteal.	Abducts thigh.
Gracilis.....	Pubis near symphysis.	Tibia below inner tuberosity.	Obturator.	Flexes and abducts leg.
Helicis major (et minor).....	Tubercle on helix.	Rim of helix.		
Hyoglossus.....	Hyoid bone.	Side of tongue.	Auriculotemporal and posterior auricular.	Depresses side of tongue.
Hyopharyngeus.....	See <i>Constrictor pharyngis medius</i> .		Hypoglossal.	
Iliacus.....	Margin of iliac fossa.	Lesser trochanter.	Lumbar plexus.	Flexes and rotates thigh.
Iliocostalis.....	The outer division of sacrospinalis.			
Iliocostalis cervicis.....	Angle of middle and upper ribs.	Middle cervical vertebrae.	Branches of cervical.	Extends cervical spine.
Iliocostalis dorsi.....	Angles of 12th to 7th ribs.	Sixth to first ribs and seventh cervical vertebra.	Branches of dorsal.	Keeps spine erect.
Iliocostalis lumborum.....	With sacrospinalis.	Angles of 5th to 12th ribs.	Branches of dorsal and lumbar.	Extends lumbar spine.
Infracostalis.....	See <i>Subcostalis</i> .			
Infraspinatus.....	Infraspinous fossa of scapula.	Great tuberosity of humerus.	Suprascapular.	Rotates arm backward and outward.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Intercostalis externus.....	Lower border of rib.	Upper border of rib below.	Intercostal.	Expands chest.
Intercostalis internus.....	Lower border of rib.	Upper border of rib below.	Intercostal.	Expands chest.
Interosseus dorsalis manus.....	Sides of metacarpal bones.	First phalanges.	Ulnar.	Abduct and adduct fingers.
Interosseus dorsalis pedis (four muscles).....	Shafts of adjacent metatarsal bones.	First phalanges of lesser toes.	External plantar.	Adducts 2nd toe. Abducts 2nd, 3d, and 4th toes.
Interosseus plantaris (three muscles).....	Third, fourth and fifth metatarsal bones.	First phalanx of same toes.	External plantar.	Adducts three outer toes.
Interosseus volaris (three).....	1. Ulnar side of second metacarpal. 2, 3. Radial sides of fourth and fifth metacarpals.	1. Ulnar side of index finger. 2, 3. Radial sides of ring and little fingers.	Ulnar.	Adducts index finger. Abducts ring and little fingers.
Interspinalis (series).....	Spine of one vertebra.	Spine of vertebra above.	Posterior branches of spinal.	Extend vertebral column.
Intertransversarius.....	Between the transverse processes of contiguous vertebrae.		Posterior branches of spinal.	Support and extend vertebral column.
Ischiocavernosus.....	Tuberosity of ischium and great sacrosacrotic ligament.	Corpus cavernosum penis (or clitoridis).	Perineal.	Maintains erection of penis (or clitoris).
Ischiococcygeus.....	See <i>Coccygeus</i> .			
Keratocricoid.....	See <i>Ceratohericoideus</i> .			
Keratopharyngeus.....	See <i>Ceratopharyngeus</i> .			
Latissimus colli.....	See <i>Platysma</i> .			
Latissimus dorsi.....	Lower thoracic and lumbar vertebrae, sacrum and iliac crest.	Bicipital groove of humerus.	Brachial plexus.	Adducts and rotates arm.
Levator anguli oris.....	See <i>Caninus</i> .			
Levator anguli scapulae.....	See <i>Levator scapulae</i> .			
Levator ani.....	Pubis, pelvic fascia and ischial spine.	Rectum, coccyx and fibrous raphe.	Pubic and sacral.	Supports rectum.
Levator costae.....	Last cervical and eleven thoracic vertebrae.	Into rib next below.	Intercostal.	Raise ribs.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Levator labii inferioris.	See <i>Mentalis</i> .	Upper lip.	Facial.	Elevates lip.
Levator labii superioris.	Maxilla below infra-orbital foramen.	Alar cartilage and upper lip.	Facial.	Elevates lip and dilates nostril.
Levator labii superioris alaeque nasi.	Nasal process of maxilla.	Tarsal plate of the upper eyelid.	Oculomotorius.	Raises upper eyelid.
Levator palpebrae superioris.	Lesser wing of sphenoid.	Superior angle of scapula.	Dorsal scapular from bronchial plexus.	Raises posterior angle of scapula.
Levator scapulae.	Transverse processes of 4 upper cervical vertebrae.	Aponeurosis of soft palate.	Pharyngeal plexus.	Raises soft palate.
Levator veli palatini.	Petrous portion of temporal bone.	Mastoid process.	Branches of cervical.	Keeps head erect.
Longissimus capitis.	Upper thoracic and lower and middle cervical vertebrae.	Middle and upper cervical vertebrae.	Lower cervical and upper dorsal.	Extends cervical spine.
Longissimus cervicis.	Upper thoracic vertebrae.	Ribs and upper lumbar and thoracic vertebrae.	Dorsal and lumbar.	Extends spinal column.
Longissimus dorsi.	Lower thoracic vertebrae.	Occipital bone, basilar process.	Cervical.	Twists or bends neck.
Longitudinalis inferior.	Intrinsic muscles of the tongue.			
Longitudinalis superior.	Transverse processes of 3d to 6th cervical vertebrae.			
Longus capitis.				
Longus colli:				
1. Upper oblique.	1. Transverse processes, 3d to 5th cervical vertebrae.	1. Anterior tubercle of atlas.	Anterior branches of cervical.	Twists and bends neck forward.
2. Lower oblique.	2. Bodies of 1st to 3d thoracic vertebrae.	2. Transverse processes of 5th and 6th cervical vertebrae.		
3. Vertical.	3. Bodies of 3d thoracic to 5th cervical vertebrae.	3. Bodies of 2nd to 4th cervical vertebrae.		
Lumbricalis manus (four).	Tendons of flexor digitorum.	First phalanx and extensor tendon.	Median and ulnar.	Flex first, extend 2nd and 3d phalanges.
Lumbricalis pedis (four).	Tendons of flexor longus.	Phalanx of four outer toes.	External and internal plantar.	Flex first, extend 2nd and 3d phalanges.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Masseter	Zygomatic arch.	Ramus and coronoid process of mandible.	Third division of trigemini- nus. Facial. Posterior spinal branches.	Closes jaw. Wrinkles skin of chin. Rotates vertebral column.
Mentalis	Inner fossa of mandible.	Skin of chin.		
Multifidus	Sacrum, iliac spine, lumbar and cervical vertebrae and dorsal.	Laminae and spines of next four vertebrae above.		
Mylohyoideus	Mylohyoid line of mandible.	Body of hyoid and raphe.	Mylohyoid from 3d division of trigemini- nus.	Elevates hyoid; elevates floor of mouth.
Mylopharyngeus	Portion of constrictor pharyngis.			
Obliquus auriculæ	Conch of the ear.	Fossa of antihelix.	Auricular and temporal.	Rotates head.
Obliquus capitis inferior	Spine of axis.	Transverse process of the atlas.	Suboccipital.	Rotates head.
Obliquus capitis superior	Transverse process of the atlas.	Occipital bone.	Suboccipital.	Rotates head.
Obliquus externus abdominis	Fifth to twelfth ribs.	Iliac crest, Poupart's ligament, sheath of the rectus.	Lower thoracic.	Contracts abdomen.
Obliquus internus abdominis	Iliac crest, Poupart's ligament and lumbar fascia.	Four lower ribs, linea alba and pubic crest.	Lower thoracic.	Compresses viscera, bends thorax forward.
Obliquus superior	Above optic foramen.	By a tendon through the trochlea to the sclerotic.	Trochlear nerve.	Rotates eyeball down and outward.
Obturator externus	Thyroid foramen and obturator membrane.	Digital fossa of great trochanter.	Obturator.	Rotates thigh outward.
Obturator internus	Thyroid foramen and obturator membrane.	Inner surface of great trochanter.	Sacral.	Rotates thigh outward.
Occipitalis	Superior curved line of occipital bone.	Galea aponeurotica.	Facial.	Pulls scalp backward.
Occipitofrontalis	See <i>Epiptoranius</i> .			
Omohyoideus	Upper border of scapula.	Hyoid bone.	Upper cervical through ansa hypoglossi.	Depresses hyoid.
Opponens digiti quinti	Unciform bone.	Fifth metacarpal bone.	Ulnar.	Flexes little finger and ulnar side of hand.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Opponens pollicis.....	Trapezium and annular ligament.	First metacarpal bone.	Median.	Flexes thumb.
Orbicularis oculi:				
1. Pars orbitalis.....	1. Frontal processes of maxilla and frontal bone.	1. Encircles aperture of orbit, to origin.	} Facial.	} Wrinkles forehead vertically, compresses lacrimal sac.
2. Pars palpebralis.....	2. Inner canthus.	2. Outer canthus.		
3. Pars lacrimalis.....	3. Lacrimal bone.	3. Crosses palpebral sac to join palpebral portion.		
Orbicularis oris.....	Nasal septum, lower jaw, by fibers.	Surround mouth.	Facial.	Closes mouth.
Orbicularis palpebrarum.....	See <i>Orbicularis oculi</i> .			
Orbitalis.....	A rudimentary muscle crossing	the infra-orbital groove and		the supra-orbital fissure, united with periosteum of the orbit.
Palatoglossus.....	See <i>Glossopalatinus</i> .			
Palatopungens.....	See <i>Tensor veli palatini</i> .			
Palmaris brevis.....	Central portion of palmar aponeurosis.	Skin of ulnar side of hand.	Ulnar.	Wrinkles skin on inner side of hand.
Palmaris longus.....	Internal condyle of humerus.	Annular ligament and palmar fascia.	Median.	Tightens palmar fascia.
Pectinatus.....	Projecting from inner walls of Crest of pubis.	the auricles of the heart.		
Pectineus.....		Pectineal line of femur.	Obturator and femoral.	Flexes thigh.
Pectoralis major.....	Sternum, clavicle, and cartilages of 1st to 6th ribs.	Bicipital ridge of humerus.	Anterior thoracic.	Adducts and rotates arm.
Pectoralis minor.....	Third to fifth ribs.	Coracoid process of scapula.	Anterior thoracic.	Draws down scapula, raises ribs.
Peroneus brevis.....	Lower part of fibula.	Fifth metatarsal.	Peroneal.	Abducts foot.
Peroneus longus.....	Upper fibula and external condyle of tibia.	By tendon to internal cuneiform and first metatarsal.	Peroneal.	Extends and everts foot.
Peroneus tertius.....	Lower part of fibula.	Fifth metatarsal bone.	Deep branch of peroneal.	Flexes tarsus.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Pharyngopalatinus.....	Soft palate.	Thyroid cartilage and aponeurosis of pharynx.	Pharyngeal plexus.	Narrows fauces.
Piriformis.....	Anterior sacral foramina and great sacrosciatic notch of ilium.	Great trochanter.	Sciatic plexus.	Rotates thigh outward.
Plantaris.....	External supracondyloid ridge of femur.	Inner margin of tendo Achillis and internal annular ligament of ankle.	Tibial.	Extends foot.
Platysma.....	Clavicle, acromion and fascia.	Lower border of mandible, risorius and opposite platysma.	Cervical branch of facial.	Wrinkles skin of neck and upper chest.
Pleuro-oesophageus.....	Mediastinal pleura.			Reinforces muscles of esophagus.
Popliteus.....	External condyle of femur.	Posterior surface of tibia.	Tibial.	Flexes and rotates leg.
Popliteus minor.....	Popliteal space of femur.	Posterior ligament of knee-joint.	Tibial.	Raises posterior ligament in flexion of knee.
Procerus.....	Bridge of nose.	Frontalis.	Facial.	Assists frontalis.
Pronator quadratus.....	Lower fourth of ulna.	Lower fourth of radius.	Volar interosseous.	Pronates forearm.
Pronator teres.....	1. Internal condyle of humerus. 2. Coronoid process of ulna.	Outer side of shaft of radius.	Median.	Pronates forearm.
Psoas major.....	Bodies of vertebrae and intervertebral disks, 12th thoracic to 5th lumbar and transverse processes of lumbar vertebrae, 12th thoracic and 1st lumbar vertebrae.	Lesser trochanter of femur.	Lumbar plexus.	Flexes thigh.
Psoas minor.....		Iliopectineal eminence and iliac fascia.	Lumbar plexus.	Makes iliac fascia tense.
Pterygoideus externus.....	1. Outer plate of pterygoid, palatine bone, tuberosity of maxilla. 2. Great wing of the sphenoid.	Pterygoid fossa of head of mandible and interarticular fibrocartilage.	External pterygoid from trigeminus.	Brings jaw forward.
Pterygoideus internus.....	Pterygoid fossa of sphenoid and tuberosity of maxilla.	Inner surface of angle of jaw.	Internal pterygoid from trigeminus.	Closes jaw.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Pterygopharyngeus.....	Portion of constrictor pharyngeus superior.			
Pubococcygeus.....	Fibers of levator ani arising from inferior ramus of pubis.			
Pubovesicalis.....	Lower part of the back of the symphysis pubis.	Linea alba.	Iliohypogastric.	Tightens linea alba.
Pyramidalis.....	Crest of pubis.			
Pyramidalis nasi.....	See <i>Procerus</i> .			
Pyiformis.....	See <i>Piriformis</i> .			
Quadratus femoris.....	Tuberosity of ischium.	Intertrochanteric ridge.	Sciatic.	Rotates thigh outward.
Quadratus labii inferioris.....	Lower border of mandible.	Skin of lower lip.	Facial.	Depresses lower lip.
Quadratus labii superioris.....	Three muscles: 1. See <i>Levator labii superioris alaeque nasi</i> . 2. See <i>Levator labii superioris</i> . 3. See <i>Zygomaticus minor</i> .			
Quadratus lumborum.....	Iliac crest, ilio-lumbar ligament and lower lumbar vertebrae.	Twelfth rib and upper lumbar vertebrae.	Upper lumbar.	Flexes trunk laterally.
Quadratus plantae.....	Inferior surface of os calcis.	Tendons of flexor digitorum longus.	External plantar.	Assists long flexor.
Quadriceps femoris.....	By four heads—rectus femoris, vastus lateralis, vastus intermedius and vastus medialis.	Patella and tuberosity of tibia.	Femoral.	Extends leg.
Radialis externus.....	See <i>Extensor carpi radialis</i> .			
Radialis internus.....	See <i>Flexor carpi radialis</i> .			
Rectococcygeus.....	Second and third coccygeal segments.	Posterior surface of rectum.		
Rectus abdominis.....	Pubis.	Cartilages of 5th to 7th ribs.	Branches of lower thoracic.	Diminishes capacity of abdomen.
Rectus capitis anterior.....	Base of atlas.	Occipital bone.	1st and 2nd cervical.	Turns and inclines head.
Rectus capitis anticus major.	See <i>Longus capitis</i> .			

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Rectus capitis lateralis.	Transverse process of atlas.	Jugular process of occipital bone.	Suboccipital.	Inclines head to one side.
Rectus capitis posterior major.	Spine of axis.	Inferior curved line of occipital bone.	Suboccipital.	Rotates and draws head backward.
Rectus capitis posterior minor.	Posterior tubercle of atlas.	Inferior curved line of occipital bone.	Suboccipital.	Rotates and draws head backward.
Rectus femoris.	Iliac spine, upper margin of acetabulum.	Common tendon of quadriceps femoris.	Oculomotorius.	Rotates eyeball downward.
Rectus inferior.	Lower margin of optic foramen.	Sclerotic coat of eye.		
Rectus lateralis.	Outer margin of optic foramen.	Sclerotic.	Abducens.	Turns eyeball outward.
Rectus medialis.	Inner margin of optic foramen.	Sclerotic.	Oculomotorius.	Moves eyeball inward.
Rectus superior.	Upper margin of optic foramen.	Sclerotic.	Oculomotorius.	Moves eyeball upward.
Retrahens aurem.	See <i>Auricularis posterior</i> .	Atlas.		
Rhomboidaeus major.	Cervical and thoracic vertebrae. Spinous processes of first four thoracic vertebrae.	Vertebral border of scapula below spine.	Dorsal scapular brachial plexus.	Elevates scapula.
Rhomboidaeus minor.	Spinous processes of 6th and 7th cervical vertebrae.	Vertebral border of scapula above spine.	Dorsal scapular brachial plexus.	Elevates scapula.
Risorius.	Platysma and fascia of masseter.	Angle of mouth.	Facial.	Draws out angle of mouth.
Rotator spinae.	Transverse processes of 2nd to 12th dorsal vertebrae.	Lamina of next dorsal above.	Posterior branches of spinal.	Rotates vertebral column.
Sacrocoxygeus posticus.	See <i>Extensor coccygis</i> .			
Sacrolumbalis.	See <i>Iliocostalis lumborum</i> .			
Sacrospinalis.	Sacrum, lumbar vertebrae and crest of ilium.	Iliocostalis and longissimus dorsi muscles.	Posterior branches of spinal nerves.	Extends vertebral column.
Sartorius.	Anterior superior spine of ilium.	Tuberosity of tibia.	Femoral.	Flexes and crosses legs.
Scalenus anterior.	Transverse processes of 3d to 6th cervical vertebrae.	Tubercle of first rib.	Cervical plexus.	Raises first rib.
Scalenus medius.	Transverse processes of 2d to 6th cervical vertebrae.	First rib.	Cervical plexus.	Raises first rib.
Scalenus posterior.	Transverse processes of 4th to 6th cervical vertebrae.	Second rib.	Cervical and brachial plexus.	Raises second rib.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Semimembranosus.....	Tuberosity of ischium. Transverse processes upper 5 thoracic and lower 4 cer- vical vertebrae.	Inner tuberosity of tibia. Occipital bone between su- perior and inferior curved lines.	Tibial. Suboccipital and branches of cervical.	Flexes and rotates leg. Rotates head and draws it backward.
Semispinalis capitis.....				
Semispinalis cervicis.....	Transverse processes of 2nd to 5th cervical vertebrae.	Spines of 2nd to 5th cervical.	Cervical branches.	Erects cervical spine.
Semispinalis dorsi.....	Transverse processes of 5th to 11th thoracic vertebrae.	Spines of first four thoracic and 6th and 7th cervical vertebrae.	Cervical branches.	Erects vertebral column.
Semitendinosus.....	Ischial tuberosity.	Shaft of tibia below internal tuberosity.	Tibial.	Flexes and rotates leg.
Serratus anterior.....	Upper 8 or 9 ribs.	Superior and inferior angles and border of scapula.	Posterior thoracic.	Moves scapula, elevates ribs.
Serratus posterior inferior....	Spines of two lower thoracic and two upper lumbar vertebrae.	Last 4 ribs.	Intercostal.	Draws ribs backward and downward.
Serratus posterior superior....	Spines of two lower cervical and two upper thoracic vertebrae.	Angles of 2nd to 5th ribs.	Intercostal.	
Solens.....	Upper shaft of fibula and oblique line of tibia.	By tendo Achillis to os calcis.	Tibial.	Extends foot.
Sphenosalphingostaphylinus....	See <i>Tensor veli palatini</i> .			
Sphincter ani externus.....	Ring of muscular fibers sur- rounding the anus.	Coccyx and central point of perineum.	Hemorrhoidal.	Closes anus.
Sphincter ani internus.....	Muscular ring. Thickening of rectal fibers above anal canal.		Hemorrhoidal.	Contracts rectum.
Sphincter urethrae membran- aceae.....	Ramus of pubis.	Behind and in front of urethra.	Pubic.	Constricts membranous urethra.
Sphincter vaginae.....	See <i>Bulbocavernosus</i> .			
Spinalis capitis.....	Spines of upper thoracic and lower cervical vertebrae.	Blends with and forms a part of semispinalis capitis.		
Spinalis cervicis.....	Spines of 6th and 7th cervical.	Third and fourth cervical spines.	Cervical branches.	Extends cervical spine.
Spinalis dorsi.....	Spines of upper lumbar and two lower thoracic vertebrae.	Spines of middle and upper thoracic vertebrae.	Dorsal branches.	Erects spinal column.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Splenius capitis.	Spines of last 4 cervical and first 3 thoracic vertebrae.	Superior curved line of occipital.	Cervical.	Rotates head.
Splenius cervicis.	Spines of 3d to 5th cervical vertebrae.	Transverse processes of 1st and 2nd cervical vertebrae.	Cervical.	Rotates head.
Stapedius.	Under surface of pyramid.	Neck of stapes.	Facial.	Depresses base of stapes.
Staphylinus externus.	See <i>Tensor veli palatini</i> .			
Staphylinus internus.	See <i>Levator veli palatini</i> .			
Staphylinus medius.	See <i>Uvulae</i> .			
Sternocleidavicularis.	Sternum.	Clavicle internally to the subclavius.		
Sternocleidomastoideus.	By two heads from sternum and clavicle.	Mastoid process.	Spinal accessory.	Rotates and depresses head.
Sternohyoideus.	Sternum and first costal cartilage.	Hyooid bone.	Upper cervical through ansa hypoglossi.	
Sternomastoideus.	See <i>Sternocleidomastoideus</i> .			
Sternohyoideus.	Sternum and 1st or 2nd costal cartilage.	Side of thyroid cartilage.	Hypoglossal.	Depresses larynx.
Styloglossus.	Styloid process.	Side of tongue.	Hypoglossal.	Retracts and elevates tongue.
Stylohyoideus.	Styloid process.	Hyooid bone.		Fixes hyoid.
Stylopharyngeus.	Styloid process.	Thyroid cartilage and wall of pharynx.	Glossopharyngeal.	Elevates pharynx.
Subanconeus.	Lower end of humerus.	Posterior ligament of elbow-joint.	Radial.	Tightens posterior ligament.
Subclavius.	First costal cartilage.	Acromial end of clavicle.	Subclavian from brachial plexus.	Draws down clavicle.
Subcostalis.	One of a number of inconstant muscles of same direction as intercostalis internus.			
Subcrureus.	See <i>Articularis genu</i> .			
Subcutaneus colli.	See <i>Platysma</i> .			
Subscapularis.	Subscapular fossa.	Lesser tuberosity of humerus.	Subscapular from 5th and 6th cervical.	Rotates arm inward.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Supinator	External condyle of humerus and oblique line of ulna. See <i>Brachioradialis</i> .	Outer surface of radius.	Radial.	Supinates forearm.
Supinator longus	An anomalous muscle from upper edge of manubrium sterni	between the spinal processes of	to upper surface of clavicle.	
Supraclavicularis	One of a number of bands between the spinal processes of	Great tuberosity of humerus.	Suprascapular from 5th and 6th cervical.	Raises arm.
Supraspinalis	Supraspinous fossa.			
Supraspinatus				
Temporalis	Temporal fossa.	Coronoid process of mandible.	Trigeminal branches.	Closes jaw.
Tensor fasciae latae	Dorsum of ilium.	Iliotibial of fascia lata.	Superior gluteal.	Makes fascia lata tense.
Tensor palati	See <i>Tensor veli palatini</i> .			
Tensor tarsi	Part of orbicularis oculi.			
Tensor tympani	Eustachian tube and temporal bone.	Handle of malleus.	Otic ganglion.	Makes tympanum tense.
Tensor veli palati	Sphenoid, pterygoid process, and eustachian tube.	Posterior border of hard palate and aponeurosis of soft palate.	Otic ganglion.	Stretches soft palate.
Teres major	Axillary border of scapula.	Bicipital groove of humerus.	Subscapular.	Draws arm down and back.
Teres minor	Axillary border of scapula.	Great tuberosity of humerus.	Fifth and 6th cervical.	
Tetragonus	See <i>Platysma</i> .			
Thyro-arytenoideus	Thyroid cartilage.	Arytenoid.	Recurrent laryngeal.	Relaxes vocal cord.
Thyro-arytenoideus internus	See <i>Vocalis</i> .	Epiglottis.	Recurrent laryngeal.	Depresses epiglottis.
Thyro-epiglotticus	Fibers of the thyro-arytenoideus.			
Thyrohyoideus	Thyroid cartilage.	Hyoid bone.	Hypoglossal.	Elevates larynx.
Thyropharyngeus	Part of constrictor pharyngis.			
Tibialis anterior	Upper tibia, interosseous membrane and intermuscular septum.	Internal cuneiform and first metatarsal.	Peroneal.	Elevates and flexes foot.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Tibialis gracilis.....	See <i>Plantaris</i> .	Tuberosity of scaphoid, 2nd to 4th metatarsal, internal cuneiform.	Tibial.	Extends tarsus and inverts foot.
Tibialis posterior.....	See <i>Quadratus plantae</i> . Band of unstriated fibers connecting tracheal rings. See <i>Longissimus capitis</i> .			
Tibio-accessorius.....	Tragus.	Tragus.	Auricular and temporal.	
Trachealis.....	See <i>Longissimus capitis</i> . See <i>Longissimus cervicis</i> .			
Trachelomastoideus.....	Lumbar fascia, 7th to 12th costal cartilages, Poupart's ligament, and iliac crest. Band of fibers on cranial surface of auricle.	Xiphoid cartilage, linea alba, pubic crest and iliopectineal line.	Lower thoracic.	Compresses abdomen, bends thorax.
Tragicus.....				
Transversalis capitis.....				
Transversalis cervicis.....				
Transversus abdominis.....				
Transversus auriculæ.....				
Transversus linguae.....	A muscle of tongue which arises from septum toward sides and dorsum. Fibers of the triangularis.			
Transversus menti.....				
Transversus perinei profundus.....	Ramus of ischium.	Central tendon.	Pudic.	Assists compressor urethrae.
Transversus perinei superficialis.....	Ramus of ischium.	Central point of perineum.	Pudic.	Draws back central portion of perineum.
Transversus thoracis.....	Xiphoid cartilage and sternum.	Costal cartilages, 2nd to 6th ribs.	Intercostal.	Narrows chest.
Trapezius.....	Superior curved line of occipital, spinous processes of last cervical and all dorsal vertebrae.	Clavicle, acromion process and base of the spine of scapula.	Spinal accessory and cervical plexus.	Draws head backward or to one side.

TABLE OF MUSCLES—Continued

NAME	ORIGIN	INSERTION	INNERVATION	ACTION
Triangularis.....	Lower border of jaw.	Lower lip near angle of mouth.	Facial.	Pulls down corners of mouth.
Triangularis labii superior.....	See <i>Caninus</i> .			
Triangularis sterni.....	See <i>Transversus thoracis</i> .			
Triceps brachii.....	Long head from axillary border of scapula. Outer head from posterior surface of humerus below great tubercle. Inner head from humerus below radial groove.	Olecranon process of ulna.	Radial.	Extends forearm.
Trochlearis.....	See <i>Obliquus superior</i> .			
Ulnaris externus.....	See <i>Extensor carpi ulnaris</i> .			
Ulnaris internus.....	See <i>Flexor carpi ulnaris</i> .			
Uvulae.....	Posterior nasal spine.	Forms uvula.	Pharyngeal plexus.	Raises uvula.
Vastus externus.....	See <i>Vastus lateralis</i> .			
Vastus intermedius.....	Shaft of femur.	Common tendon of quadriceps femoris.		
Vastus internus.....	See <i>Vastus medialis</i> .			
Vastus lateralis.....	Linea aspera to great trochanter.	Common tendon of quadriceps femoris.		
Vastus medialis.....	Inner lip of linea aspera.	Common tendon of quadriceps femoris.		
Vocalis.....	Depression of thyroid cartilage.	Vocal process of arytenoid.	Recurrent laryngeal.	Shortens and relaxes vocal cords.
Zygomatius.....	Malar bone.	Angle of mouth.	Facial.	Elevates upper lip.
Zygomatius minor.....	Under surface of malar bone.	Angle of mouth.	Facial.	Elevates upper lip.

mutilation (mu-til-a'shun). The action of depriving of a limb or the use of a limb; excising, maiming; rendering imperfect. [Lat., *mutilatio*, noun of action, from *mutilare*, to injure, to destroy.]

muto-. Probably combining form of Lat., *mutare*, to change; used as a prefix to denote change.

mutualism (mu'tu-al-ism). That form of symbiosis in which one or both of the symbionts obtain some advantage from the association without injury to the other.

myalgia (mi-al'je-ah). Tenderness or pain in one or more muscles, generally neuralgic in nature, but sometimes inflammatory or due to strain. It is attended with cutaneous hyperesthesia. **m. rheumatica**. Muscular rheumatism. [Gr., *mys*, a muscle, + *algos*, pain.]

myasis (mi-as'is). See *myiasis*.

myasthenia (mi-as-the'ne-ah). Muscular weakness. **m. pseudoparalytica**. Muscular weakness simulating paralysis, but wholly due to the myasthenia. Also called *asthenic bulbar paralysis*. [Gr., *mys*, a muscle, + *astheneia*, weakness.]

myatonia (mi-at-o'ne-ah). Loss or deficiency of muscular power. [Gr., *mys*, a muscle, + *a*, priv., + *tonos*, tone.]

mycellial (mi-se'le-al). Of, pertaining to, or having the characters of a mycelium.

mycelium (mi-se'le-um). The spawn or vegetative portion of a fungus, as distinguished from the reproductive portion; usually consisting of more or less distinct threads or hyphae. [Gr., *mykes*, fungus, + *eios*, nail.]

mycelioid (mi-se'li-oyd). A term used in descriptive bacteriology in referring to colonies with the radiate, filamentous appearance of molds.

myceto-, mycet-. Combining form of Gr., *mykes*, mushroom; used as a prefix to denote of, or pertaining to a fungus.

mycetogenesis (mi-se-to-jen'es-is). The production and development of fungi. [Gr., *mykes*, fungus, + *genesis*, generation.]

mycetogenic, mycetogenous (mi-set-o-jen'ik, mi-set-oj'en-us). Caused by fungus growths.

mycetoid (mi-se'toyd). Resembling a mushroom or fungus. [Gr., *mykes*, a fungus, + *eidos*, resemblance.]

mycetoma (mi-se-to'mah). Syn.: *Madura foot*, *fungus foot*. A tumor formed by the action of a fungus. [Gr., *mykes*, fungus, + *oma*, tumor.]

Mycetozoa (mi-se-to-zo'ah). A group of fungi which are ameboid and consist of a large confluent plasmodial mass. [Gr., *mykes*, fungus, + *zoon*, animal.]

myco-. Combining form of Gr., *mykes*, fungus; used as a prefix in the same way as myceto-, to denote of, or pertaining to fungus.

Mycobacterium (mi-ko-bak-te're-um). A genus of the bacteria, consisting of short rods, often bent, swollen and clavate, which at times show Y-shaped or true branching forms. According to the authorities on determinative bacteriology, this genus includes the organism of tuber-

culosis, of leprosy, and of diphtheria, as well as other bacteria.

mycoderma (mi-ko-der'mah). 1. An old term for a mucous membrane. 2. A genus of fungi. It occurs in the form of a membrane (also called a *m.*) on the surface of fermented liquids exposed to the atmosphere. **M. aceti**. Mother of vinegar; saccharomycete that causes acetous fermentation. **M. of beer**. Acetic skin; a smooth or finely wrinkled slimy thin membrane or scum composed of bacteria, forming on alcoholic liquids which contain few fruit acids, such as beer, or on vinegar to which wine has been added (Nägel). **M. plicae (polonicae)**. The *Trichophyton* of plica polonica. **M. saccharinum**, **M. vini**. Alcoholic ferments. See *Saccharomyces*. [Gr., *mykes*, mucus, + *derma*, skin.]

mycodesmoid (mi-ko-des'moyd). A fibrous degeneration, especially pronounced in the lungs in the horse, caused by *Micrococcus ascoformans*.

mycofibroma (mi-ko-fi-bro'mah). Same as *mycodesmoid*.

mycohemina, mycohemina (mi-ko-he'me-ah, mi-ko-he'min-ah). The presence of bacteria in the blood. [Gr., *mykes*, fungus, + *aima*, blood.]

mycoid (mi'koyd). Funguslike. **m. degeneration**. An excessive formation of mucus in catarrhal conditions of mucous membranes or in tumors, benign and malignant. [Gr., *mykes*, a fungus, + *eidos*, resemblance.]

mycology (mi-ko'lo-je). The study of the fungi. [Gr., *mykes*, a fungus, + *logos*, understanding.]

Mycomycetes (mi-ko-mi-se'tes). Fungi in which the mycelium is divided into numerous portions, and reproduction is only by oöspores or zygosporos. [Gr., *mykes*, a fungus.]

myconucleo-albumin (mi-ko-nu'kle-o-al-bu'min). A toxic albumin present in the bodies of many pathogenic bacteria.

mycophylaxin (mi-ko-fil-aks'in). Any phylaxin that destroys microbes. [Gr., *mykes*, fungus, + *phylaxin*.]

mycoprotein (mi-ko-pro'te-in). The proteid material present as a component part of the bacterial cells which, when liberated from its intracellular position, is capable of producing most of the symptoms and lesions characteristic of the bacteria themselves, unless they are caused by a soluble toxin, such as the diphtheria toxin. [Gr., *mykes*, fungus, + *protein*.]

mycoproteination (mi'ko-pi-o-te-in-a'shun). Inoculation with dead bacterial cells.

mycorrhiza (mi-kor-ri'zah). A name given to the bacteria found around the roots of certain plants which are concerned with the fixation of nitrogen. [Gr., *mykes*, fungus, + *riza*, root.]

mycose (mi'kös). See *trehalose*.

mycosis fungoides (mi-ko'sis fun-goyd'es). Syn.: *granuloma fungoides*, *granuloma sarcomatodes*, *inflammatory fungoid neoplasm*, *ulcerative scrofuloderma*, *eczema scrofuloderma*, *eczema tuberculatum*,

- fibroma fungoides, lymphoderma pernicioso, sarcomatosi generalis.* A skin disease of slowly malignant course, characterized in the beginning by numerous areas of circumscribed itching dermatitis, and later by the development of fungoid tumors which tend to ulcerate and ultimately produce a fatal cachexia. The disease is of unknown etiology. It gets its name from the fungoid nature of the growths in its later stages. It has been classed as a granuloma or sarcoma. [Gr., *mykes*, fungus, + Lat., *fungus*, fungus, + Gr., *eidosis*, similar.]
- mycosozin** (mi-ko-so'zin). Any sozin destroying bacteria. [Gr., *mykes*, fungus, + *sozin*.]
- mycotic** (mi-kot'ik). Affected with mycosis caused by microorganisms.
- mycotoxin** (mi-ko-tok-sin-a'shun). Inoculation with the products of bacteria.
- myctrophonia** (mik-ter-o-fó'nia). Imperfection of the voice characterized by a nasal twang. [Gr., *mykter*, the nose, + *phone*, voice.]
- mycteroxerosis** (mik'ter-o-ze-ro'sis). Dryness of the nostril. [Gr., *mykter*, the nose, + *xerosis*, dry.]
- mydalein** (mi-da'le-in). A poisonous alkaloid of uncertain composition found in human corpses. It excites profuse diarrhea, vomiting, enteritis, and death with the heart in diastole. Its effects on the pupil and the circulation are similar to those of atropin.
- mydatoxin** (mi-da-toks'in). A poisonous alkaloid, $C_8H_{13}NO_2$, found in putrefying meat and human corpses. It produces symptoms like those caused by neurin. [Gr., *mydaein*, to be moldy, + *toxin*.]
- mydesis** (mi-de'sis). 1. Putrefaction. 2. A purulent discharge from the eyelids. [Gr., *mydesis*.]
- mydin** (mi'din). A non-poisonous ptomain, $C_8H_{13}NO$, discovered by Brieger in human corpses and cultures made from typhoid material in peptonized serum albumin. [Gr., *mydos*, decay.]
- mydriasis** (mid-ri'as-is). Persistent dilatation of the pupil due to paralysis of the sphincter iridis. **drug m.** M. caused by drugs. **m. paralytica.** M. from paralysis of the sphincter pupillae. **m. spasmotic, m. spastic.** M. due to reflex irritation of the cervical sympathetic or of the ciliospinal centers. [Gr., *mydriasis*.]
- mydriatic** (mi-dri-at'ik). Producing mydriasis; as, any substance so acting.
- mydrol** (mid'rol). Phenylpyrazol iodomethylate; a mydriatic.
- myelatrophia** (mi-el-at-ro'fe-ah). 1. Atrophy of the spinal cord. 2. Atrophy from spinal paralysis. [Gr., *myelos*, marrow, + *atrophia*, atrophy.]
- myelencephalon** (mi'el-en-sef'al-on). The cerebrosplinal axis. [Gr., *myelos*, marrow, + *egkephalos*, the brain.]
- myelin** (mi'el-in). 1. A phosphatid present in brain and nerve tissue. Probably identical with escithin. 2. The material composing the white or medullated sheath of nerve fibers. [Gr., *myelos*, marrow.]
- myelinic** (mi-el-in'ik). 1. Medullated. 2. Pertaining to or characterized by the presence of myelin.
- myelinization** (mi-el-in-i-za'shun). The process in nerve fibers of acquiring their myelin or medullary sheath. **m. method.** Of Flechsig, the histological method of working out the paths of groups of fibers in the central system by means of the fact that different groups take on their myelin sheaths at different times.
- myelitis** (mi-e-li'tis). Inflammatory degenerative disease of the spinal cord, the symptoms being dependent on the portion of the cord involved. Hence a large number of localizing names. **acute bulbar m.** A form of m. characterized by its sudden onset, soon followed by acute bulbar paralysis and death from asphyxia. **acute transverse m.** A form of m. affecting the whole thickness of the cord developed after severe injuries of the spinal cord and vertebral column. **bulbar m.** A disease with symptoms of bulbar paralysis, caused by uncircumscribed centers of softening in the medulla oblongata. **chronic m.** True chronic m. is rare. The chronic types are the resultants from acute conditions. **disseminated m.** Small foci of degeneration distributed throughout the cord. Hard to distinguish from the true transverse m., but certain cases give the picture of simple m. or m. combined with track degeneration. **transverse m.** M. of all or a considerable portion of the thickness of the cord. **traumatic m.** An interstitial or parenchymatous m. produced by direct injury to the cord or by concussion. [Gr., *myelos*, marrow, + *itis*, inflammation.]
- myelo-, myel-**. Combining form of Gr., *myelos*, marrow; used as a prefix to denote of, or pertaining to marrow.
- myeloblast** (mi'el-o-blast). A form of cell supposed to develop into a myelocyte. [Gr., *myelos*, marrow, + *blastos*, bud.]
- myelocoele** (mi'el-o-sél). See *spina bifida*. [Gr., *myelos*, marrow, + *kele*, tumor.]
- myelocystocoele** (mi'el-o-sis'to-sél). A diffuse dilatation of the central canal of the spinal cord. [Gr., *myelos*, marrow, + *kystis*, cyst, + *kele*, tumor.]
- myelocystomeningocoele** (mi'el-o-sis'to-men-in'go-sél). A variety of *spina bifida* in which the cyst contains a portion of the spinal cord and its meninges as well as fluid.
- myelocyte** (mi'el-o-sit). The cell in the bone marrow from which the leukocytes originate. See *granule*; and *free nuclei*, under *nucleus*. See also in *appendix*, page 900. [Gr., *myelos*, marrow, + *kytos*, a cell.]
- myelocythemia** (mi'el-o-si-the'me-ah). An excess of myelocytes in the blood. [Gr., *myelos*, marrow, + *kytos*, cell, + *aima*, blood.]
- myelogenic, myelogenous** (mi-e-lo-jen'ik, mi-e-loj'en-us). 1. Producing marrow. 2. Originating in marrow or in the spinal cord. [Gr., *myelos*, marrow, + *gennan*, to generate.]

myeloid (mi'el-oyd). Resembling medullary tissue; as a n., a m. tumor or growth; of Gray and Paget, a new formation made up of the medullary tissue of the bones. [Gr., *myelos*, marrow, + *eidos*, resemblance.]

myelolymphangioma (mi'el-o-lim-fan-je-o'mah). Elephantiasis.

myeloma (mi-el-o'mah). 1. See *encephaloid*. 2. A tumor developing from one or more of the constituent cells of the bone marrow. **giant-celled m.** A m. developing into a giant-celled sarcoma. [Gr., *myelos*, marrow, + *oma*, tumor.]

myelomalacia, myelomalacosis, myelomalaxia (mi'el-o-mal-a'se-ah, mi'el-o-mal-ak-o'sis, mi'el-o-mal-aks'is). Ischemic softening of the spinal cord. [Gr., *myelos*, marrow, + *malassein*, to soften.]

myelomatosis (mi-el-o-ma-to'sis). A general infiltration of bone with soft tumors consisting of a fine stroma and plain cells.

myelomeningitis (mi'el-o-men-in-ji'tis). Inflammation of the spinal cord and its meninges. [Gr., *myelos*, marrow, + *meningitis*.]

myelomeningocele (mi'el-o-men-in'go-sel). See *spina bifida*.

myelomere (mi-el-o-mēr). An embryonic brain or spinal segment of the mesoblastic somite. [Gr., *myelos*, marrow, + *meros*, part.]

myelomyces (mi-el-om'is-es). A fungoid growth from the spinal cord. [Gr., *myelos*, marrow, + *mykes*, a fungus.]

myelon (mi'el-on). The spinal cord. [Gr., *myelos*, marrow.]

myeloplaxoma (mi-el-o-plaks-o'mah). A tumor in a region where osteoclasts predominate. [Gr., *myelos*, marrow, + *plax*, plate, + *oma*, tumor.]

myeloplegia (mi-el-o-ple'ge-ah). Paralysis caused by disease of the spinal cord. [Gr., *myelos*, marrow, + *plege*, stroke.]

myelopore (mi'el-o-pōr). An opening in the spinal cord. [Gr., *myelos*, marrow, + *poros*, opening.]

myelosarcoma (mi-el-o-sar-ko'mah). See *osteosarcoma*. [Gr., *myelos*, marrow, + *sarcoma*.]

myelosclerosis (mi-el-o-skle-ro'sis). Sclerosis.

myelosphonium (mi-el-o-spon'ge-um). See *neurospodium*.

myelotome (mi-el'o-tōm). A short, thin, narrow knife blade with a wooden handle; used for cutting the spinal cord squarely across in removing the brain. [Gr., *myelos*, marrow, + *temnein*, to cut.]

myelotoxic (mi-el-o-toks'ik). Destructive to bone marrow. [Gr., *myelos*, marrow, + *toxikon*, poison.]

myelotoxin (mi-el-o-toks'in). A cytotoxin with specific action against bone marrow.

myenergia (mi-en'er'je-ah). Muscular energy. [Gr., *mys*, a muscle, + *energeia*, energy.]

myiasis (mi-i'as-is). Lesions produced by the accidental invasion of the tissues of the human body, by the larvae of the dipterous insects, as the gadfly and botfly. [Gr., *myia*, fly.]

Mylabris (mil'ab-ris). A genus of beetles. **M. cichorei, M. cichorii**. Chinese blistering fly, Telini fly; an Eastern species yielding cantharidin; used as a vesicant.

mylohyoideus (mi-lo-hi-oi'de-us). See *table of muscles*, under *muscle*.

mylopharyngeus (mi-lo-far-in'je-us). See *table of muscles*, under *muscle*.

myo-. Combining form of Gr., *mys* (gen. *mysos*), muscle; used as a prefix to denote of or pertaining to muscle.

myoalbumose (mi-o-al'bu-mōs). An albumose sometimes found in muscles.

myoblast (mi'o-blast). 1. An embryonic muscle cell. 2. A striated muscular fiber. [Gr., *mys*, a muscle, + *blastos*, a sprout.]

myoblastic. Pertaining to a myoblast.

myocarditis (mi-o-kar-di'tis). Inflammation of the myocardium. [Gr., *mys*, muscle, + *kardia*, heart.]

myocardium (mi-o-kar'de-um). The muscular tissue of the heart. [Gr., *mys*, a muscle, + *kardia*, heart.]

myocele (mi'o-sel). 1. A muscular tumor (see *myoma*). 2. An enlargement produced by the dislocation or lateral displacement of a muscle from its normal position, or by muscular hernia. [Gr., *mys*, muscle, + *kele*, a tumor.]

myoceptor (mi'o-sep-tor). Muscle fiber nerve receptor.

myochrome (mi'o-krōm). See *myohematin*. [Gr., *mys*, a muscle, + *chroma*, color.]

myochronoscope (mi-o-kro'no-skōp). Of Czermak, an instrument for measuring the speed of the transmission of a motor nervous impulse. [Gr., *mys*, a muscle, + *chronos*, time, + *skopein*, to examine.]

myoclonia (mi-o-klo'ne-ah). A disease in which chronic spasm occurs in symmetrical groups of muscles, coming on in paroxysms, but without disturbance of consciousness. **infected m.** See *chorea*. [Gr., *mys*, muscle, + *klonos*, a tumult.]

myocrismus (mi-o-kris'mus). A peculiar cracking sound produced by the motion of a muscle. [Gr., *mys*, muscle, + *krizein*, to creak.]

myoctonin (mi-ok'to-nin). A highly poisonous alkaloid, $C_{27}H_{40}N_2O_8$, obtained from *Aconitum lycoctonum*. It resembles curare in its action, and acts most energetically when introduced directly into the circulation. [Gr., *mys*, a mouse, + *ktonos*, killing.]

myocyte (mi'o-sit). See *muscle cell*, under *cell*. [Gr., *mys*, a muscle, + *kytos*, a cell.]

myodemia (mi-o-de'me-ah). Fatty degeneration of muscle. [Gr., *mys*, muscle, + *demos*, fat.]

myodynamia (mi-o-di-nam'e-ah). Muscular force. [Gr., *mys*, muscle, + *dynamis*, force.]

myodynamometer (mi'o-di-nam-om'eter). See *dynamometer* (1st def.). [Gr., *mys*, muscle, + *dynamis*, force, + *metron*, a measure.]

myodynia (mi-o-din'e-ah). See *myalgia*. [Gr., *mys*, muscle, + *odyne*, pain.]

myo-edema (mi'o-e-de'mah). Edema of a

- muscle. [Gr., *mys*, muscle, + *oidema*, edema.]
- myofibroma** (mi-o-fi-bro'mah). 1. See *myoma* (2d def.). 2. Fibrous degeneration of muscular tissue. [Gr., *mys*, muscle, + Lat., *fibra*, a fiber, + Gr., *oma*, tumor.]
- myofibrosis** (mi-o-fi-bro'sis). An increase in the connective tissue between the muscle fasciculi and fibrillae, especially of the heart, as in myocarditis. [Gr., *mys*, muscle, + *fibrosis*.]
- myogen** (mi'o-jen). A simple protein of the albumin class, obtained from muscle; heat coagulation 55°-65° C. **m. fibrin**. An insoluble modification of myogen, formed spontaneously in solutions of the latter. [Gr., *mys*, muscle, + *gennan*, to produce.]
- myogenesis** (mi-o-jen'es-is). Production or development of muscular tissue. [Gr., *mys*, muscle, + *genesis*, generation.]
- myogenic** (mi-o-jen'ik). Pertaining to or derived from muscle. **m. theory of heart beat**. The theory that the stimulus which originates the heart beat arises in the muscle of the heart (auricular end) and is propagated from part to part through the muscular tissue. **m. tonus**. The condition of tonus in muscle arising from changes in the muscle itself. [Gr., *mys*, muscle, + *gennan*, to produce.]
- myognathus** (mi-og'na-thus). A double polygnathous monster in which the accessory cephalic portions are united to the lower jaw of the principal head by muscles and integument. [Gr., *mys*, muscle, + *gnathos*, the jaw.]
- myogonic** (mi-o-gon'ik). Inherent in muscular tissue (said of contraction of a muscle). [Gr., *mys*, muscle, + *gonos*, offspring.]
- myogram** (mi'o-gram). A graphic curve traced by a myograph. [Gr., *mys*, muscle, + *gramma*, a writing.]
- myogramma** (mi-o-gram'mah). A mark or line upon or in a muscle. [Gr., *mys*, muscle, + *gramma*, a writing.]
- myograph** (mi'o-graf). An apparatus for recording graphically the curve of a muscular contraction. **cardiac m.** See *cardiograph*. **comparative m.** **double m.** A m. to be used with two different muscles simultaneously. **fall m.** A m. devised by Harless in which the contraction is registered upon a falling plate. **palate m.** A m. for recording the movements of the uvula during deglutition, phonation, etc. **pendulum m.** A heavy pendulum carrying a smoked plate upon which muscular contractions may be registered in curves. **spring m.** An instrument in which the recording surface is given a rapid movement by means of a spring. It is used to obtain curves of muscular contraction. **thickness m.** A m. that records graphically the variations of the thickness of a muscle as it contracts or relaxes. [Gr., *mys*, muscle, + *graphein*, to write.]
- myohematin** (mi-o-hem'at-in). The pigment present in muscle, which gives it its red color; presumably a derivative of hemoglobin and supposed to have the property of forming a dissociable compound with oxygen. [Gr., *mys*, muscle, + *hematin*.]
- myoid** (mi'oyd). Resembling muscle; as a n., a tumor consisting of smooth muscular fibers. [Lat., *myodes*, from Gr., *mys*, muscle, + *eidos*, resemblance.]
- myokymia** (mi-o-ki'me-ah). Persistent fibrillar quivering of a muscle. [Gr., *mys*, muscle, + *kymainein*, to undulate.]
- myolemma** (mi-o-lem'ah). See *sarcolemma*. [Gr., *mys*, a muscle, + *lemma*, a rind.]
- myolipoma** (mi-o-lip-o'mah). A tumor made up of muscular and fatty tissue. [Gr., *mys*, muscle, + *lipos*, fat, + *oma*, tumor.]
- myolysis** (mi-o-l'is-is). Disintegration and destruction of muscle. **m. cardiotoxica**. Degeneration of the heart muscle, due to toxic influence, as in an infectious disease. [Gr., *mys*, muscle, + *lysis*, solution.]
- myoma** (mi-o'mah). Syn.: *fibromyoma*, *inomyoma*. 1. A tumor consisting of or containing muscular tissue. 2. Of Virchow, a fibromuscular tumor. **eccentric m.** A m. developing in the muscular wall of a hollow organ and projecting externally from the organ. **m. cysticum**. A sarcoma in which there are nests of muscular tissue. **m. lymphangiectodes**. A m. containing dilated lymphatic vessels. **m. striocellulare**. See *rhabdomyoma*. **non-striated m.** A leiomyoma. [Gr., *mys*, muscle, + *oma*, tumor.]
- myomalacia** (mi-o-mal-a'se-ah). Morbid softening of muscle. **m. cordis**. Abnormal softening of the heart muscle. [Gr., *mys*, muscle, + *malakia*, softening.]
- myomatosis** (mi''o-mat-o'sis). The formation of multiple myomata.
- myomectomy** (mi-o-mek'to-me). Excision of a myoma from the uterus. [*Myoma*, + Gr., *ektome*, excision.]
- myomelanosis** (mi''o-mel-an-o'sis). The formation of a blackish mass within a muscle. [Gr., *mys*, muscle, + *melas*, black.]
- myometritis** (mi''o-me-tri'tis). Inflammation of the uterine muscle. [Gr., *mys*, muscle, + *metra*, the uterus, + *itis*, inflammation.]
- myometrium** (mi-o-me'tre-um). The muscular tissue of the uterus. [Gr., *mys*, muscle, + *metra*, womb.]
- myomotomy** (mi'o-mot'o-me). See *myomectomy*.
- myonarcosis** (mi-o-nar-ko'sis). Numbness of the muscles. [Gr., *mys*, muscle, + *narkosis*, a numbing.]
- myoneoplasma** (mi-o-ne-o-plas'mah). A neoplasm containing muscular tissue. [Gr., *mys*, muscle, + *plasma*, anything formed.]
- myoneuroma** (mi-o-nu-ro'mah). A neuroma containing muscular tissue. [Gr., *mys*, muscle, + *neuroma*.]
- myonicity** (mi-on-is'ti-e). The power of contraction or relaxation which is characteristic of living muscular tissue.
- myonosis** (mi-on'os-us). Disease of a

muscle. [Gr., *mys*, muscle, + *nosos*, disease.]

myopachynsis (mi-o-pak-in'sis). Muscular thickening, especially in a pathological sense. **m. lipomatosa**. The muscular hypertrophy with fatty degeneration that occurs in pseudohypertrophic muscular paralysis. [Gr., *mys*, muscle, + *pachynsis*, a thickening.]

myopalmus (mi-o-pal'mus). Twitching of the muscles. [Gr., *mys*, muscle, + *palmos*, a twitching.]

myopathia (mi-o-path'e-ah). See *myopathy*.

myopathy (mi-op'ath-e). A disease or morbid condition of the muscles. **atrophic m.** A disease in which there is a primary idiopathic atrophy of the muscles. **primitive progressive m.** Simple atrophy of the muscular substance progressively involving different groups of muscles. **spinal m.** M. due to disease or injury of the spinal cord. [Gr., *mys*, muscle, + *pathos*, disease.]

myope (mi'öp). A person affected with myopia.

myophone (mi'of-ön). An instrument for rendering audible the sounds accompanying muscular contraction. [Gr., *mys*, muscle, + *phone*, a sound.]

myophonia (mi-o-fo'ne-ah). See *muscle sound*, under *sound*.

myophysic (mi-o-fis'iks). The science of the physical properties of muscle.

myopia, **myopiasis** (mi-o'pe-ah, mi-o-pi'-as-is). Shortsightedness; that condition of the eyeball in which parallel rays are not brought to a focus on the retina, but at a point in front of it. [Gr., from *myops*, shortsighted.]

myopic (mi-öp'ik). Pertaining to, or affected with myopia.

myoplegia (mi-o-ple'je-ah). Muscular paralysis. [Gr., *mys*, a muscle, + *plege*, a blow.]

myopolarity (mi-o-po-lar'it-e). The polarity of a muscle.

myosarcoma (mi-o-sar-ko'mah). A sarcoma containing muscular tissue. **m. striocellulare**. A m. in which spindle cells with more or less perfect striation are found associated with smooth muscle fibers. [Gr., *mys*, muscle, + *sarcoma*.]

myosclerosis (mi-o-skle-ro'sis). Hardening or sclerosis of muscle. [Gr., *mys*, muscle, + *skleros*, hard.]

myoseism (mi'o-sizm). Violent or irregular muscular action. [Gr., *mys*, muscle, + *seismos*, an earthquake.]

myosin (mi'o-sin). A simple protein of the globulin class obtained from muscle. Heat coagulation 44°-50° C.; easily precipitated by neutral salts. **m. fibrin**. An insoluble proteid, which forms in myosin solutions on standing; an insoluble modification of myosin.

myosinogen (mi-o-sin'o-jen). The material from which myosin is developed.

myositis (mi-os-i'tis). Inflammation of muscular tissue. **fibrous m.**, **interstitial m.** M. in which there is hyperplasia of the connective tissue, with atrophy of the muscular fibers. **m. inter-**

stitialis lipomatosa progressiva paralytica. Muscular pseudohypertrophy.

m. ossificans (progressiva). A form of m. characterized by infiltration of the intermuscular tissue, then fibrous induration, and finally true ossification. [Gr., *mys*, muscle, + *itis*, inflammation.]

mysome (mi'o-söm). The fundamental and contractile substance of muscle. [Gr., *mys*, a muscle, + *soma*, a body.]

myospasms (mi-os'pa-sis). 1. A muscular contraction or a convulsion. [Gr., *mys*, muscle, + *spasms*, a drawing in.]

myspectroscope (mi-o-spek'tro-sköp). A spectroscope devised by Ranvier in which suitably prepared transversely striated muscular fibers serve as a diffraction grating.

myostypsis (mi-o-stip'sis). Of Schultz, (1) a muscular contraction, (2) obstruction of any functional movement. [Gr., *mys*, muscle, + *stypsis*, a contracting.]

myosynizesis (mi-o-sin-iz-e'sis). The adhesion of one or more layers of muscular tissue. [Gr., *mys*, muscle, + *synizesis*, a sitting together.]

myothelium (mi-o-the'le-um). The cells composing myotomes. [Gr., *mys*, muscle, + *thela*, a nipple.]

myothermic (mi-o-ther'mik). Producing heat, or pertaining to the production of heat, by muscular action. [Gr., *mys*, muscle, + *therme*, heat.]

myotic (mi-öt'ik). Same as mitotic.

myotome (mi'o-töm). One of the metamericly arranged segments of a muscle, either in the adult or embryo. [Gr., *mys*, muscle, + *temnein*, to cut.]

myotomy (mi-öt'o-me). 1. Dissection of muscles; muscular anatomy. 2. In ophthalmology, section of a muscle of the eye. [Lat., *myotomia*, from Gr., *mys*, muscle, + *tome*, a cutting.]

myotonia (mi-o-to'ne-ah). Tonic muscular spasm. **congenital m.** See *Thomson's disease*, under *Thomson*. [Gr., *mys*, a muscle, + *tonos*, a stretching.]

myotonus (mi-öt'on-us). The condition of tonus or tonicity in a muscle. [Gr., *mys*, muscle, + *tonos*, a stretching.]

Myrcia (mir'se-ah). A botanical genus, including the bay tree. **M. acris**. The bay tree. **oil of m.**, **oleum myrciacae**. Oil of bay; distilled from the leaves of *M. acris* [U. S. Ph.]. **spiritus myrciacae**. Bay rum; made by dissolving oil of m., oil of orange peel, and oil of pimenta in alcohol, and adding water gradually [U. S. Ph., 1890].

Myrica (mir-ik'ah). Candleberry myrtle; a genus including the galeworts. **M. cerifera**. Wax myrtle; a North American shrub. The tonic, astringent bark of the stem and root is used in chronic catarrhs of the throat, and, powdered, as an external application to indolent ulcers. The eclectics use it in various conditions. [Gr., *myrike*.]

myricin (mir'is-in). 1. A substance, (C₃₀H₄₄)C₁₆H₃₂O₂, derived from beeswax. 2. An alcoholic extract of the bark of *Myrica cerifera*; used in diarrhea and jaundice. 3. Myristicoid.

- myricyl** (mir'is-il). A univalent hydrocarbon, $C_{30}H_{62}$, the radicle of m. alcohol. **m. alcohol**. A white crystalline alcohol, $C_{30}H_{61}OH$, obtained by hydrolyzing beeswax.
- myricylate** (mir-is'il-ät). A salt of myricyl.
- myricylic** (mir-is'il'ik). Of or pertaining to myricyl. **m. alcohol**. See *myricyl alcohol*, under *myricyl*.
- myringodectomy** (mir-in-go-dek'to-me). The surgical removal of the membrana tympani. [Lat., *myringa*, the tympanic membrane, + Gr., *ektome*, a cutting out.]
- myringomycosis** (mir-in'go-mi-ko'sis). Disease of the membrana tympani resulting from the presence of a fungus. **m. aspergillina**. Inflammation of the external auditory canal; produced by various species of *Aspergillus*. [Lat., *myringa*, the tympanic membrane, + Gr., *mykes*, a fungus.]
- myringotomy** (mir-in-got'o-me). Incision of the tympanic membrane.
- Myristica** (mir-is'tik-ah). 1. A botanical genus including *Myristicaceae* (or *Myristiceae*); the nutmegs. 2. Of the U. S. Ph. and Br. Ph., the nutmeg; the kernel of the seed of *M. fragrans* divested of its testa. **myristicae adeps**. Expressed oil of nutmeg [Br. Ph., 1864]. **M. fragrans**. The true nutmeg tree. The fruit contains a stimulant carminative volatile oil. Nutmeg is aromatic and in large quantities a narcotic poison. It is chiefly used as an adjuvant and as a condiment. The aril (mace) possesses about the same properties, but is rarely employed medicinally. **M. moschata**. 1. *M. fragrans*. 2. See *m.* (2d def.). **nucis myristicus**. See *m.* (2d def.). **oleum myristicæ**. Of the U. S. Ph. and Br. Ph., the volatile oil of nutmeg. **spiritus myristicæ**. A preparation made by dissolving oil of nutmeg in alcohol [Br. Ph.]. [Gr., *myrisein*, to anoint.]
- myristication** (mir-is-ti-ka'shun). The development of nutmeg liver. [Gr., *myrisein*, to anoint.]
- myristicene** (mir-is'tis-ën). A hydrocarbon boiling at 167° C., obtained from oil of nutmeg.
- myristin** (mir'is-tin). Glyceryl myristate.
- myristicol** (mir-is'to-kol). A phenol, $C_{10}H_{16}O$ (or $C_{10}H_{14}O$), probably hydroparacymene hydrate, $C_6H_4(C_4H_9)(OH).H_2$, isomeric with camphor; obtained from oil of nutmeg.
- myrobalan** (mir-o'bal-an). 1. The fruit of various East Indian plants, especially of species of *Terminalia*. The name was given by the ancients to the fruit of *Balanites aegyptiaca*, and in medieval times to a variety of plum. 2. *Chebulic myrobalans*; the fruit of *Terminalia chebula*; astringent. [Gr., *myron*, ointment, + *balanos*, nut.]
- myron** (mi'ron). 1. A balm or soft resin. 2. An ointment. [Gr., *myron*.]
- myrophorum** (mir-o'for-um). An apparatus for applying ointments to parts of the body that are difficult of access. [Gr., *myron*, an unguent, + *phorein*, to bear.]
- myrosin** (mir'o-sin). The ferment of mustard seed.
- myroxocarpin** (mir-oks-o-kar'pin). A substance, $C_{24}H_{34}O_8$, obtained from white balsam of Peru.
- myroxylin** (mir-oks'o-lin). A substance obtained from the wood and bark of *Myroxylon peruiferum*.
- Myroxylon, Myroxylum** (mir-oks'il-on, mir-oks'il-um). A genus of leguminous trees. **balsamum myroxyliperuiferi**. See *balsam of Peru*. **M. balsamiferum**. *M. peruiferum*. **M. Pereirae**. Fine balsam of Peru plant; a tree of the Balsam Coast in Central America and cultivated in Ceylon. It is very closely related to *M. toluiferum*. **M. peruiferum**. Balsam of Peru plant, growing in South America and formerly supposed to be the source of balsam of Peru; by some authorities still considered identical with *M. Pereirae*. **M. toluiferum**. The species yielding balsam of Tolu. [Gr., *myron*, an unguent, + *xylon*, wood.]
- myrrh** (mur). 1. A gum resin obtained from *Commiphora myrrha*. *M.* is a stimulant tonic, and appears to have a special action on the mucous membrane. It is usually combined with other medicines, and is used in pectoral complaints with difficult expectoration, and, with aloe, in amenorrhæa, etc. 2. The genus *Myrrhis*. [Lat., *myrrha*, Gr., *myrra*.]
- myrrha** (mur'rah). See *myrrh* [U. S. Ph., Br. Ph.]. **tinctura myrrhæ**. A preparation made by macerating or digesting with alcohol and filtering [U. S. Ph., Br. Ph.].
- myrrhin** (mur'rin). A resin, $C_{24}H_{32}O_8$, obtained from myrrh.
- myrrhol** (mir'rol). A volatile oil, $C_{10}H_{16}O$, or $C_{22}H_{32}O_2$; obtained from myrrh.
- myrrholin** (mir'ro-lin). A proprietary solution of myrrh in its own weight of oil; used as corrigent of creosote in phthisis.
- myrtillin** (mer-til'in). A thick extract of blueberries.
- myrtillus** (mer-til'lus). Syn.: *fructus myrtilli, grana myrtillorum*. The dried fruit of *Vaccinium m.*; dried blueberries, sometimes used in dysentery. [Gr., *myrtos*, myrtle.]
- myrtol** (mir'tol). The oil obtained by distilling the leaves of *Myrtus communis*. It is balsamic, disinfectant, and antiseptic, and is used internally as a stomachic and in small doses as a sedative, also in subacute catarrhal affections of the respiratory tract, although here it is said to act as an irritant from the presence of terpene. Externally it is employed in rheumatism and psoriasis.
- myrton, myrtum** (mir'ton, mir'tum). The fruit of *Myrtus communis*.
- Myrtus** (mir'tus). A genus including the myrtles. **M. chekan, M. cheken**. The *chekan* or *chequen* of the Chileans; an evergreen shrub. The aromatic and astringent leaves are used in chronic bronchitis. They contain chekenin and an oil resembling that of eucalyptus. [Gr., *myrtos*.]

mysophobia (mi-so-fó-be-ah). A morbid fear of being polluted by contact with objects or of being unclean. [Gr., *mysos*, uncleanness, + *phobein*, fear.]

mythomania (mith-o-ma'ne-ah). A term propounded by Dupré to designate a marked propensity to lie or to exaggerate seen in many hystericals. [Gr., *mythos*, myth, + *mania*, madness.]

mytilotoxicon (mit-il-o-toks'ik-on). The supposed toxic principle in poisonous mussels, etc.

mytilotoxin (mit'il-o-toks'in). A poisonous ptomain, $C_6H_{15}NO_2$, found in mussels. [Gr., *mytilos*, mussel, + *toxikon*, poison.]

mytilotoxism (mit'il-o-toks'ism). Poisoning from mussels.

myurous (mi-u'rus). Tapering like a mouse's tail (said of the pulse when the second beat is weaker than the first, the third weaker than the second, etc.). [Gr., *mys*, a mouse, + *oura*, the tail.]

myxangitis (mix-an-ji'tis). Inflammation of the ducts of a mucous gland. **m. fibrosa**. M. with fibrous hyperplasia. **m. hyalinosa**. M. with hyaline degeneration about the ducts. [Gr., *myxa*, mucus, + *aggeion*, a vessel, + *itis*, inflammation.]

myxedema (miks-ed-e'mah). A chronic disease or assemblage of phenomena occurring in adult life; marked by loss of expression and a subcutaneous infiltration of the face and the surface of the body. There is first an increase of the interstitial mucin and later an hypertrophic fibrosis, or connective tissue thickening. The disease depends on defective secretion of the thyroid gland due to atrophy. M. ultimately leads to grave implication of the nervous system and death, but may be held in check by thyroid medication. **artificial m.** [Horsley], **operative m.** See *cachexia strumipriva*. [Gr., *myxa*, mucus, + *oidema*, edema.]

myxurisma (mik-su-riz'mah). A lymphangioma cavernosum. [Gr., *myxa*, mucus, + *eurynein*, to make wide.]

myxiosis (miks-e-o'sis). A mucous secretion or discharge. [Gr., *myxa*, mucus.]

myxo-, myx-. Combining form of Gr., *myxa*, slime, mucus; used as a prefix in compound words to denote of, or pertaining to mucus.

myxo-adenoma (miks'o-ad-en-o'mah). An adenoma that has undergone myxomatous degeneration. [Gr., *myxa*, mucus, + *adenoma*.]

myxochondrofibrosarcoma (miks'o-kon'dro-fi'bro-sar-ko'mah). A sarcoma in which there are fibrous, cartilaginous and myxomatous elements.

myxochondroma (miks-o-kon-dro'mah). An enchondromatous myxoma. [Gr., *myxa*, mucus, + *chondroma*.]

myxochondrosarcoma (miks'o-kon'dro-sar-ko'mah). A rare form of myxosarcoma containing cartilage cells. [Gr., *myxa*, mucus, + *chondros*, cartilage, + *sarcoma*.]

Myxococcidium (miks'o-kok-sid'e-um). A genus of the *Protozoa*. **M. stegomyiae**.

A species referred provisionally to the *Haemosporidia*, parasitic in *Stegomyia fasciata*; once supposed to be the cause of yellow fever, but now known to be a yeast cell normally present in the mosquito.

myxocylindroma (miks'o-sil-in-dro'mah). A cylindroma showing myxomatous degeneration. [Gr., *myxa*, mucus, + *kylin-dros*, a cylinder, + *oma*, tumor.]

myxocystoma (miks-o-sis-to'mah). A cystoma containing myxomatous tissue. [Gr., *myxa*, mucus, + *cystoma*.]

myxofibroma (miks'o-fi-bro'mah). A fibrous myxoma. [Gr., *myxa*, mucus, + *fibroma*.]

myxofibrosarcoma (miks'o-fi'bro-sar-ko'mah). A sarcoma containing fibrous and myxomatous tissue.

myxoglioma (miks-o-gli-o'mah). See *gliomyxoma*.

myxolipoma (miks-o-lip-o'mah). A lipomatous myxoma. [Gr., *myxa*, mucus, + *lipoma*.]

myxoma (miks-o'mah). Syn.: *collonema*. An embryonic tissue tumor consisting of a homogeneous or finely fibrillated, soft, gelatinous, mucinlike basement substance in which are imbedded a variable number of spheroidal, fusiform, branching, and often anastomosing cells. Their consistency resembles Wharton's jelly of the umbilical cord. They may contain few or many blood vessels and nerves. **cartilaginous m.** A m. which either has a firmer consistency than usual or contains cells like those of cartilage. **cystic m.**, **cystoid m.** A m. containing parts so fluid as to resemble cysts. **enchondromatous m.** A m. containing nodules of hyaline cartilage. **erectile m.** See *telangiectatic m.* **fibrous m.** A m. consisting largely of fibrous tissues. **intracanalicular m. of the mamma.** A m. developing in the interstitial connective tissue of the mamma, and sending polypoid expansions into the dilated ducts of the gland. **lipomatous m.** A m. containing much fat. **m. lipomatodes.** See *lipomatous m.* **telangiectatic m.**, **vascular m.** A m. of highly vascular structure. [Gr., *myxa*, mucus, + *oma*, tumor.]

myxomatous (miks-o'ma-tus). Of the nature of myxoma.

myxomycetes (miks'o-mi-se'tes). The slime molds, by De Bary placed among the *Mycetozoa*, but now usually regarded as an order of the *Fungi*. They are distinguished by forming in their first stages mobile masses (plasmodia) with small scattered nuclei and protoplasm showing a streaming movement. As they proceed toward maturity they lose their gelatinous structure, and become a mass of spores mingled with threads. When the spores germinate, the contents escape either in the form of ameoboid bodies or zoöspores with cilia, which come together and produce mobile plasmodia. [Gr., *myxa*, mucus, + *mykes*, a fungus.]

myxomyoma (miks-o-mi-o'mah). A myoma containing myxomatous areas.

myxoneuro'ma. A neuroma containing

myxomatous tissue. [Gr., *myxa*, mucus, + *neuron*, a nerve, + *oma*, tumor.]

myxopapilloma (miks''o-pap-il-o'mah). A myxomatous papilloma.

myxopod (miks'o-pod). An amebula; the earliest stage of the malarial parasite in the red blood corpuscle. [Gr., *myxa*, mucus, + *pous*, *podos*, foot.]

myxopoesis (miks''o-poy-e'sis). The formation of mucus. [Gr., *myxa*, mucus, + *poiein*, to make.]

myxosarcoma (miks''o-sar-ko'mah). 1. A tumor that is partly myxomatous and partly sarcomatous. 2. A sarcocele. 3. See

myxoma. [Gr., *myxa*, mucus, + *sarcoma*.]

myxosarcomatous (miks''o-sar-ko'mat-us). Pertaining to or affected with myxosarcoma.

myxospores (miks'o-spōrs). Spores produced within a gelatinous mass. [Gr., *myxa*, mucus, + *sporos*, a sowing.]

Myxosporidia (miks''o-spor-id'e-ah). Endoparasitic ameboid sporozoans, some species of which infest animals, fishes, and insects. It is said that they sometimes infest man. [Gr., *myxa*, mucus, + *sporidea*.]

N

N. Chemical symbol for the element *nitrogen*.

Na. Chemical symbol for the element *sodium*. [Lat., *natrium*, sodium.]

naboth'ian. Investigated by *Martin Naboth*, Leipzig anatomist, 1675-1721. **n. follicles**. Dilated mucous follicles in the cervix uteri; minute retention cysts.

Naboth's glands. See *nabothian follicles*, under *nabothian*.

nacreous (nak're-us). Bacterial colonies having a pearllike luster.

Nae'gele's obliq'uity. The inclination of the fetal head in cases of flat pelvis, so that the biparietal diameter is oblique in relation to the plane of the brim. **N. pelvis**. Syn.: *oblique pelvis*. A pelvis so distorted that its conjugate diameter lies obliquely. [*Franz Carl Naegele*, German obstetrician, 1778-1851.]

nagana (na-gah'nah). Syn.: *tsetse disease*. A disease affecting horses and cattle in Central Africa. It is caused by the presence of the animal parasite, *Trypanosoma Brucei*, which is transmitted by the bite of the tsetse fly.

nail (nāl). The flat, scalelike corneous growth situated in a fold of the skin on the dorsal surface of the terminal phalanges of the fingers and toes in man, homologous with the hoof, claw, or talons of lower animals. The chemical constituents, which resemble those of the horny structures, are chiefly, keratins and mineral salts, especially calcium phosphate.

hippocratic n. Simple hypertrophy of the nail. **ingrowing n.** A growth downward and inward of the margin of the great toenail. The overlapping tissues become ulcerated and very painful. [Ang-Sax., *naegel*.]

naja (nah'jah). A venomous snake of India, *Naja tripudians*. The cobra.

nanism (na'nism). The condition of being dwarfed; dwarfishness. [Lat., *nanus*, a dwarf.]

nanocephalism (nan-o-sef'al-ism). Microcephalia. The condition of possessing a dwarfed head. [Gr., *nanos*, a dwarf, + *kephale*, the head.]

nanosomia (nan-o-so'me-ah). The condi-

tion of having a dwarfed body. [Gr., *nanos*, a dwarf, + *soma*, the body.]

nan'us. 1. A dwarf. 2. As an adj., dwarfed or dwarfish. [Gr., *nanos*.]

nape. The back of the neck; that part of the body in man and animals which contains the first cervical vertebra. [Of obscure origin.]

napellin (na-pel'in). An alkaloid obtained from crude aconitin; a white, very bitter substance, $C_{28}H_{35}NO_7(OH)_4$. Its action somewhat resembles that of aconitin.

Napellus (na-pel'us). A species of the genus *Aconitum*.

naphthalin (naf'tah-lin). See *naphthalene*.

naphthenes (naf'tēns). The group of the cyclic hydrocarbons, of which hexahydrobenzene is an example.

naphtha (naf'thah). Petroleum, especially that which is used in the naphthenes.

coal (tar) n. Light oil of tar, derived from the distillation of coal tar; a complex substance containing benzene and other hydrocarbons. **crude n.** That part of the oil which, in the manufacture of benzene, comes over at a temperature not higher than 210° C. **wood n.** A commercial name for methyl alcohol.

naphthalan (naf'thal-an). A purified Russian naphtha mixed with anhydrous soap; a gelatinous mass used topically for burns, inflamed wounds, etc.

naphthalene (naf'thal-ēn). A crystalline substance, $C_{10}H_8$, obtained from coal tar. It is antiseptic and anthelmintic, and is used in diarrhea and catarrhal enteritis, and to expel moths, etc., from clothing [U. S. Ph.]. [Lat., *naphthalinum*.]

naphthalenesulphochlorid (naf''thal-ēn-sul''fo-klo'rid). The chlorid of naphthalene-sulphonic acid, $C_{10}H_7SO_2Cl$. It has been used to isolate amino-acids from organic extracts and secretions.

naphthalenum (naf-thal-e'num). See *naphthalene*. **n. benzoicum**. A certain antiseptic said to be a mixture of naphthalene and benzoic acid [U. S. Ph.].

naphthalol (naf'thal-ol). See *betol*.

naphthoresol (naf-tho-kre'sol). A certain antiseptic resembling creolin.

naphthoformin (naf-tho-for'min). A cer-

- tain antiseptic preparation of α -naphthol, β -naphthol, and formic aldehyd.
- naphthol** (naf'thol). A substance, $C_{10}H_7$ -OH, known in two isomeric forms: (1) α -n., crystallizing in shining needles having a smell like that of phenol, slightly soluble in hot water; (2) β -n., or *ison*, forming colorless rhombic tables, or a white crystalline powder, having a faint odor of phenol and a burning acrid taste, soluble in alcohol and in ether, and in 1,000 parts of cold water. After ingestion of n. it is excreted in the urine in combination with glycuronic acid. It is used as a test for sugar in Molisch's sugar test. *B-n.* is employed internally as an antifermentative and externally in various cutaneous diseases. **n'antipyrin**. See *naphthopyrin*. [Lat., *naphtholum*, *naphtholum*.]
- naphthopyrin** (naf-tho-pi'rin). A compound of naphthol and antipyrin; used as an intestinal antiseptic.
- naphthosolol** (naf-tho-sa'lol). Syn.: *naphthalol*. See *betol*.
- naphthoxol** (naf-thoks'ol). A solution of hydrogen dioxide containing naphthol.
- naphthyl** (naf'thil). The univalent radicle, $C_{10}H_7$, of naphthalene. **n'sulphonic acid**. See *naphthionic acid*, under *acid*. **n'sulphuric acid**. See *naphthalenesulphonic acid*, under *acid*.
- napiform** (na'pe-form). A term used in descriptive bacteriology, meaning formed like a turnip. [Lat., *napus*, turnip, + *forma*, shape.]
- napropathy** (nap-rap'ath-e). A type of pseudomedicine which attributes all disease to disorders of the ligaments and connective tissue.
- narceia**, **narceina** (nar-se'ah, nar-se'nah). See *narcein*.
- narcein** (nar'se-in). An alkaloid found in opium, $C_{22}H_{27}NO_5$. It has a bitter taste and a feeble action. The hydrochlorid and the meconate are used medicinally. [Lat., *narceia*, *narceina*, *narceinum*, from Gr., *narke*, stupor.]
- Nar'cissism**. In psychanalysis signifying unconscious self-love. An adolescent bisexual phase in the evolution of the primacy of the genital erotic zones.
- Narcissus** (nar-sis'us). The daffodil; a genus of amaryllidaceous plants. **N. pratensis**, **N. pseudonarcissus**, **N. silvestris**. Common daffodil. The bulb was formerly used as an emetic.
- narcolepsy** (nar'ko-lep-se). Attacks of ungovernable sleepiness, found in a number of psychoneuroses and psychoses.
- narcomania** (nar-ko-ma'ne-ah). An uncontrollable craving for narcotic drugs. [Gr., *narke*, numbness, + *mania*.]
- narcophin** (nar'ko-fin). A proprietary preparation consisting of equal parts of morphin, narcotin and meconic acid.
- narcosis** (nar-ko'sis). The stupefaction or insensibility produced by the action of a narcotic or an anesthetic. [Gr., *narkosis*.]
- narcotic** (nar-kot'ik). Producing stupor; as a n., a n. substance. See also *hypnotic* and *soporific*.
- narcotin** (nar'ko-tin). An alkaloid, $C_{22}H_{23}NO_7$, discovered in opium by Derosne in 1803. It is so weakly narcotic that the term *narcotin* has been proposed for it. [Lat., *narcotinum*, from Gr., *narkotikos*, narcotic.]
- narcotism** (nar'kot-ism). See *narcosis*.
- voltaic n.** N. produced by the cataphoresis of a narcotic.
- narcotization** (nar-kot-i-za'shun). The production of narcosis.
- narcotize** (nar'kot-ize). To render somnolent or insensible.
- narcyly** (nar'sil). The hydrochlorid of ethylnarcein. It is said to be antispasmodic and hypnotic.
- Nar'dus**. A genus of grasses. **N. agrestis**. The root of *Valeriana officinalis*. [Gr., *nardos*.]
- naregamin** (nah-rej'am-in). An alkaloid isolated from the root of *Naregamia alata*; used as an emetic.
- nar'gol**. A therapeutic preparation of nucleic acid and silver; used in solutions for gonorrhoea and purulent conjunctivitis and in ointment (10 per cent.) for burns and ulcers.
- naringin**, **narangin** (nar-in'jin, nar-an'jin). A crystallin substance, $C_{21}H_{26}O_{11} + 4H_2O$ or $C_{28}H_{36}O_{12} + 4H_2O$, found in *Citrus decumana*. [Span., *naranja*, an orange.]
- na'ris**, pl., *nares*. A nostril. **anterior nares**. The two anterior orifices of the nasal cavities. **posterior nares**. The openings by which the nasal fossae communicate with the pharynx. [Lat.]
- na'sal**. Pertaining to the nose or the nostrils; as a n., a vowel, or consonant, such as *m* or *n*, pronounced mainly through the nose. **n. ganglion**. See *Meckel's ganglion*, under *Meckel*. [Lat., *nasalis*, from *nasus*, nose.]
- nasalis** (na-sal'is). See *Table of Muscles*, under *muscle*.
- nascent** (na'sent). In the act of being born; said especially of a substance in the act of being set free from a compound, as the hydrogen set free by the action of an acid upon a metal, and not yet having entered into a new combination. Beginning to exist. **n. hydrogen**. Hydrogen in the form in which it is evolved when zinc is acted upon by hydrochloric acid. [Lat., *nasci*, to be born.]
- na'sion**. The point where the median anteroposterior plane cuts the nasofrontal suture. [Lat., *nasus*, nose.]
- Nasmyth's membrane**. See *cuticula dentis*, under *cuticula*.
- na'so**. Combining form of Lat., *nasus*, nose; used as a prefix to signify pertaining to the nose.
- na''sofron'tal**. Pertaining to or connected with the nasal and frontal regions or bones.
- na''so-in'iac**. Pertaining to the nasion and the inion.
- na''sola'bial**. Pertaining to or connected with the nose and the upper lip. [Lat., *nasus*, nose, + *labium*, lip.]
- na''sopal'atine**. Pertaining to the nose and the palate.

- na''sopharyn'geal.** Pertaining to the nose and the pharynx.
- na''sophar'ynx.** Upper portion of pharynx above level of palatine arch.
- na''sotur'binal.** Pertaining to or connected with the nasal and turbinated bones.
- nas'rol.** Sodium sulphocacfeate.
- nastin** (nas'tin). A fatty substance from cultures of the streptothrix of leprosy; said to produce active immunity against leprosy. [Gr., *nastos*, solid.]
- nasturtium** (nas-tur'she-um). 1. Water cress. 2. A garden name for the genus *Tropaeolum*. 3. Of the Ph's, *N. officinale*. **N. amphibium.** Yellow cress; a species having properties of *N. officinale*. The root and herb were formerly used as antiscorbatics. **N. officinale.** Common water cress. It contains a volatile oil.
- nataloin** (na-tal'o-in). See *aloin*.
- na'tal sore.** Another name for *bedsore*.
- na'tant.** Swimming, floating. [Lat., *nant*, pres. ppl. of *natare*, to swim.]
- na'tes.** 1. The buttocks; the fleshy prominences formed by the glutei muscles and the overlying fat and skin. 2. The corpora quadrigemina, especially the anterior pair. [Lat., pl. of *natis*, buttock.]
- na'tive.** 1. Indigenous. 2. In chemistry, found pure in nature; occurring as a natural product or organic constituent. [Lat., *nativus*, from *nasci*, to be born.]
- Nativalle's digitalin.** See *crystalline digitalin*, under *digitalin*.
- nativistic** (na-tiv-is'tik). Pertaining to the doctrine that the mind has or forms innate ideas, and does not derive its knowledge exclusively from sensations or experience. [Lat., *nativus*, native.]
- natrium** (na'tre-um). Sodium. See *sodium*. [Lat.]
- natron** (na'tron). 1. Native soda (sodium carbonate or $\text{CO}_3\text{Na}_2 + 10\text{H}_2\text{O}$), found on the surface of the ground or dissolved in lake water. 2. See *soda*. For subheadings not here given see under *sodium*.
- n. vitriolatum.** See *sodium sulphate*.
- natronatus** (na-tron-na'tus). Combined with or containing soda or sodium.
- na'trum.** Soda or sodium.
- na'tural.** Taking place in conformity with the ordinary course of nature; not unusual. Of children, actually begotten, but not legitimate. Dealing or concerned with nature. [Lat., *naturalis*, from *natura*, nature.]
- Nauheim baths.** B's of the natural gaseous waters of Nauheim. The term is often used of any CO_2 baths for the treatment of heart disease.
- nausea** (naw'se-ah). Sickness at the stomach, with desire to vomit. [Gr., *nausia*, from *naus*, a boat.]
- nauseant** (naw'se-ant). A drug that causes nausea. [Lat., *nauseare*, to be seasick.]
- nau'seate.** To make sick at the stomach.
- nauseous** (naw'she-us). Producing disgust with sickness at the stomach.
- na'vel.** The umbilicus. **membranous n.** The borders of the incompletely united abdominal plates which in the fetus surround the umbilical vesicle. **vascular n.** A white glistening cicatrix in the center of the n., corresponding to the point of union of the three umbilical vessels after the cord has dropped off. [Ang.-Sax., *nafela*, dim. of *nafu*, nave, boss.]
- navic'ular.** Shaped like a boat. **n. fossa.** See *fossa*. [Lat., *navis*, a ship.]
- Nb.** Chemical symbol for the element *niobium*.
- neapol'itan oint'ment.** See *unguentum hydrargyri*, under *hydrargyrum*.
- near point.** In physiological optics the shortest distance at which distinct vision can be obtained with maximal effort of accommodation. It recedes with increasing age, according to a definite curve, varying from 3 in. at 10 years to 40 in. at 60 years.
- near'sight.** See *myopia*.
- near'sighted.** Affected with myopia.
- neat's foot oil.** The yellowish, odorless oil of mild taste obtained by boiling the feet of an ox with the hoofs for some time in water, removing the fat, and then purifying. It is little used medicinally.
- nebula** (neb'u-lah). A slight haziness; a cloud. **n. corneae.** A faint opacity of the cornea, due to former inflammation. [Lat.]
- Neca'tor america'nus.** Syn.: *Uncinaria americana*, *Ankylostoma americana*. The name given by Stiles to the small nematode worm resembling *Ankylostoma duodenale*, which is the cause of the ankylostomiasis of North America. It is shorter and more slender than *A. duodenale*, and the eggs are larger.
- neck.** A more or less constricted portion of a structure connecting its parts, especially that part of the body of an animal which connects the head and the trunk.
- anatomical n. of the humerus.** The slightly constricted margin of the articular surface to which the capsular ligament of the shoulder joint is attached.
- n. of a rib.** The constricted portion between its head and tubercle. **n. of the femur.** The obliquely directed process which supports the head or articular surface of the bone. **n. of the fibula.** The portion immediately below the head of the fibula. **n. of the humerus.** A short portion of bone which supports the head of the humerus. Inferiorly it passes into the shaft of the bone. **surgical n. of the humerus.** The constriction just below the tuberosities; so called on account of its being commonly the seat of fractures when they occur in that neighborhood. [Ang.-Sax., *hnecca*, nape.]
- ne'cro-.** Combining form of Gr., *nekros*, dead; used as a prefix to denote of, or pertaining to death.
- necrobic** (nek-ro'bik). Pertaining to, or affected with, necrosis.
- necrobiosis** (ne-kro-bi-o'sis). The slow molecular death, such as caries, taking place in tissues. [Gr., *nekros*, dead, + *biosis*, life, way of life.]
- necrogenic** (ne-kro-jen'ik). Caused by or originating from dead material. [Gr., *nekros*, a corpse, + *gennan*, to engender.]
- necrology** (nek-ro'l'o-je). A death roll; an obituary notice; the history of the

- dead. [Gr., *nekros*, dead body, + *logos*, science.]
- neomania** (ne-kro-ma'ne-ah). Mania with a desire for death; or a morbid pleasure in death or the presence of corpses. [Gr., *nekros*, corpse, + *mania*, madness.]
- necometer** (ne-krom'et-er). An instrument for weighing organs at an autopsy. [Gr., *nekros*, a corpse, + *metron*, a measure.]
- neconarcema** (ne-kro-nar-se'mah). See *rigor mortis*, under *rigor*. [Gr., *nekros*, a corpse, + *narkema*, numbness.]
- nerophagus** (nek-rof'a-gus). Devouring or living on dead bodies. [Gr., *nekros*, dead, + *phagein*, to eat.]
- nerophilia** (nek-ro-fil'e-ah). A form of sexual perversion in which a corpse affords gratification. [Gr., *nekros*, a corpse, + *philein*, to love.]
- nerophilous** (ne-krof'il-us). Subsisting on dead matter; said especially of fungi.
- nerophobia** (nek-ro-fo'be-ah). A morbid fear of death or of dead bodies. [Gr., *nekros*, a corpse, + *phobos*, fear.]
- neropsy**, **neropsocopy** (nek'rop-se, nekros'ko-pe). A postmortem examination. [Gr., *nekros*, a corpse, + *opsis*, a view.]
- necrosis** (ne-kro'sis). 1. Death, mortification, especially bone tissue, *en masse*, as distinguished from caries. 2. A local death of cells, tissues, or portions of viscera.
- anemic n.** N. due to interference with the circulation of a part.
- caseous n.** Caseation.
- circulatory n.** See *anemic n.*
- coagulation n.**, **coagulative n.** Fibrinous n. It occurs in embolic infection and many exudative inflammations.
- colliquative n.** A form of n. due to liquefaction of tissue by self-digestion or autolysis, or to putrefactive necrosis produced by bacteria.
- embolic n.** Anemic n. caused by an embolus.
- fat n.** A n. of scattered areas throughout the abdominal cavity, produced by leakage of the pancreatic fat-splitting ferment.
- fibrinous n.** See *coagulation n.*
- focal n.** Small scattered areas of coagulation n. in such viscera as the liver and lymph glands, serous and mucous surfaces.
- gangrenous n.** N. associated with gangrene.
- neurotrophic n.** A form of n. due to nervous influences acting upon the vasomotor nerves.
- putrefactive n.** N. produced by bacteria of decomposition.
- thrombotic n.** Anemic n. caused by a thrombus. [Gr., *nekrosis*, from *nekros*, a corpse.]
- Nectandra** (nek-tan'drah). 1. A genus of lauraceous plants. 2. *Nectandra cortex*. Syn.: *bebeeru bark*. The dried bark of *N. Rodioei*; it contains bebeerin and is tonic, astringent, and febrifuge. [Gr., *nektar*, nectar, + *aner*, a man.]
- nectandrin** (nek-tan'drin). A white, amorphous, bitter alkaloid, C₂₂H₂₃O₄N, obtained from the wood of *Nectandra Rodioei*.
- nee'dle**. A metallic instrument used for sewing or puncturing, usually having one end pointed and an opening in the other for a thread.
- aneurism n.**, **artery n.**
- A blunt curved n. for passing a ligature around a blood vessel in its continuity.
- aspirating n.** A long, hollow n. having a broad base to fit over the aperture of an aspirator or to be connected with a syringe.
- cataract n.** A fine steel n., usually with a lance head and two cutting edges; used in various operations on the crystalline lens, such as opening the capsule, discission, keratonyxis, depression, and reclination, also in tearing holes through secondary cataracts or through filmy membranes which block the pupil.
- electropuncture n.** A long gold, gilded steel or platinum n. that is insulated for two thirds of its length with hard rubber, collodion, or shellac. The head has a ring for connection with the rheophore of a battery.
- Hagedorn's n.** See under *Hagedorn*.
- hypodermic n.** A hollow n. having a wide base to fit over the aperture of a hypodermic syringe. [Old Eng., *naedl*, Old Fris., *nedle*.]
- nee'dle hold'er**. A forceps or other apparatus for holding a needle, pushing it through the tissues, and drawing it out.
- Negri bodies**. Syn.: *neurorrhynchys hydrophobiae*. Minute bodies found in the nerve cells of the brain in rabies. [Luigi Negri, Ital. physician.]
- Neisser's coc'cus**. The micrococcus of gonorrhea. [Albert Ludwig Siegmund Neisser, Breslau physician, born 1850.]
- Nélaton's probe**. A p. with an unglazed porcelain tip, used in bullet wounds. The tip receives a black mark when it touches a leaden bullet. [Auguste Nélaton, Parisian surgeon, 1807-1873.]
- nel'avan**. Sleeping sickness of Africa.
- Nemathelminthes** (nem-ath-el-min'thes). Wormlike, unsegmented parasites forming a phylum of the animal kingdom, which contains mainly species that infest the intestines of animals and man. [Gr., *nema*, a thread, + *elminis*, a worm.]
- nem'ato-**. Combining form of Gr., *nema*, *nematos*, thread; used as a prefix to denote threadlike or of a slender, cylindrical form.
- nematocyst** (nem'at-o-sist). The netting, stinging organ or thread (lasso) cell of the jelly fish, polyp, etc. [Gr., *nema*, a thread, + *kystis*, a bladder.]
- Nematoda**, **Nematodea** (nem-at-o'dah, nem-at-o'de-ah). An order of the *Nemathelminthes*.
- nematode** (nem'at-od). See *nematoid*.
- nematoid** (nem'at-oyd). Filamentous. [Gr., *nema*, a thread, + *eidōs*, a resemblance.]
- neo'o-**. Combining form of Gr., *neos*, new; used as a prefix to denote new or recent.
- neo-arsycodil** (ne'o-ar-sik-o'dil). A proprietary preparation, probably identical with arrhenal.
- neoblast** (ne'o-blast). See *parablast*.
- neoblastic** (ne-o-blas'tik). Constituting or pertaining to a new growth. [Gr., *neos*, young, + *blastos*, a germ.]
- neodermin** (ne-o-der'min). An ointment said to consist of fluoropseudocumol, difluordiphenyl, vaselin, and anhydrous lanolin; used to relieve itching.

neof ormation (ne-o-for-ma'shun). See *neoplasm*.

neogenesis (ne-o-jen'es-is). The regeneration of tissue. [Gr., *neos*, new, + *genesis*, production.]

neologism (ne-o'l'o-jizm). The invention of new words; also the apparently meaningless words uttered by those having one or other mental disturbance; particularly frequent in dementia praecox.

neomembrane (ne-o-mem'brān). See *false membrane*, under *membrane*. [Gr., *neos*, new, + Lat., *membrana*, membrane.]

neomorphism (ne-o-mor'fizim). A new development of form or structure. [Gr., *neos*, new, + *morphe*, form.]

neon (ne'on). A gaseous element discovered in the air in 1898.

neopallium (ne-o-pal'e-um). The term used by Elliot Smith to designate the higher type of cortex found in mammals.

neophrenia (ne-o-fre'ne-ah). Primary psychical debility appearing in early youth. [Gr., *neos*, new, + *phren*, the mind.]

neoplasia (ne-o-pla'se-ah). The process of formation of new tissue or tumors of unknown origin. [Gr., *neos*, new, + *plassein*, to mold.]

neoplasm (ne'o-plasm). 1. A new autonomous, abnormal mass of cells, tissues or organs resembling those normally present but arranged atypically. It grows at the expense of the organism without subserving any useful function. 2. A tumor. **benign n.** A neoplasmlike normal tissue, not spreading by metastases or infiltration of tissue. **histoid n.** A n. in which the structure suggests merely the tissues and elements of which it is composed. **inflammatory fungoid n.** See *mycosis fungoides*, under *mycosis*. **malignant n.** A n. that grows rapidly, infiltrates tissue, forms metastases, and tends towards recurrence after removal. **mixed n.** A n. containing tissues from two of the germinal layers. **multicentric n.** A n. arising from several distinct groups of cells. **organoid n.** A n. in which the structure suggests some organ of the body. **unicentric n.** A n. arising from one group of cells. [Gr., *neos*, new, + *plassein*, to mold.]

neoplasty (ne'o-plas-te). Any operation for the formation of a part anew. [Gr., *neos*, new, + *plassein*, to mold.]

neosalvarsan (ne-o-sal'var-san). Also termed 914. A formaldehyd sulphoxyl acid sodium compound of salvarsan. It is a soluble compound of salvarsan and has the therapeutic properties of the latter.

ne'osote. Of Allen, a phenoloid obtained from blast-furnace tar. It has marked antiseptic and disinfectant properties.

nepalin (nep'al-in). Pseudoconitin.

nepenthe, **nepenthes** (ne-pen'the, nep'en'thes). 1. Of the ancients, an undetermined plant which was mixed with wine and used as an exhilarant. 2. The Indian pitcher plant. [Gr., *nepenthes*, from *ne*, neg., + *penthos*, grief.]

Nepeta (nep'e-tah). 1. Catnep; a genus of

labiate plants. 2. *N. cataria*. **N. cataria**. Common catnep. The herb was formerly used as an excitant, tonic, antispasmodic, and emmenagogue. It is now rarely used except empirically in amenorrhœa, chlorosis, hysteria, and the flatulent colic of infants. It contains a volatile essential oil. **N. citriodora**. A species having a lemonlike odor; used externally in stimulating baths and internally as an emmenagogue. **N. glechoma**. Ground ivy; a mild stimulant and tonic; formerly used in chronic pulmonary and vesical affections and as a vulnerary.

nephradenoma (nef'rad-en-o'mah). Adenoma of the kidney. [Gr., *nephros*, kidney, + *adenoma*.]

nephralgia (nef-ra'l'je-ah). Pain in the kidney. [Gr., *nephros*, kidney, + *algos*, pain.]

nephrectasia (nef-rek-ta'ze-ah). Dilatation of a kidney. [Gr., *nephros*, a kidney, + *ektasis*, a distension.]

nephrectomy (nef-rek'to-me). Excision of the kidney. [Gr., *nephros*, the kidney, + *ektome*, a cutting out.]

nephric (nef'rik). Of the kidney. [Gr., *nephros*, kidney.]

nephridium (nef-rid'e-um). The embryonic kidney structure.

neph'rin. See *cystin*.

nephri sm (nef'risim). The aggregate of symptoms produced by chronic disease of the kidney.

nephritic (nef-rit'ik). 1. Having the seat or origin of disease in the kidney. 2. Affected with disease of the kidney.

nephritis (nef-ri'tis). A diseased condition of the kidney including degenerative changes such as cloudy swelling, fatty degeneration, necrosis, etc., and acute and chronic inflammatory changes such as congestion, hemorrhage, cellular and serous exudation, and hyperplasia of connective tissue. **acute n.** A type including acute suppurative, hemorrhagic, cellular exudative, or parenchymatous degenerative changes. **arteriosclerotic n.** The chronic interstitial form present in arteriosclerosis. **chronic interstitial n.** Inflammation of the intertubular connective tissue of the kidney, producing the pale granular or contracted kidney.

chronic n. A progressive diffuse inflammation and degeneration of the kidneys. **glomerulocapsular n.** That which affects both the capsule and the glomerulus. **hemorrhagic n.** An acute form characterized by hemorrhages into the tubules. **interstitial n.** The types which principally affect the connective tissue stroma of the kidney. The acute type shows an exudation of lymphocytes and plasma cells, and the chronic form is characterized by hyperplasia of connective tissue or fibrosis. **parenchymatous n.** That which principally affects the parenchyma of the kidney. It may be acute or chronic. **saturnine n.** A form due to chronic lead poisoning. **scarlatinal n.** Acute n. due to scarlet fever with an irregular distribution of lymphocytes and plasma cells in the interstitial tissue and

- a proliferation of the epithelium lining Bowman's capsule. **suppurative n.** A form showing acute purulent inflammation. **tubal n., tubular n.** A variety principally affecting the tubules. [Gr., *nephros*, the kidney, + *itis*, inflammation.]
- neph'ro-**. Combining form of Gr., *nephros*, the kidney; used as a prefix to denote of, or pertaining to, the kidney.
- nephrocele** (nef'ro-sel). Hernial protrusion of the kidney. [Gr., *nephros*, the kidney, + *kele*, a tumor.]
- nephrocology** (nef-ro-ko'lo-peks-e). Suspension of kidney and colon through the nephrocolic ligament.
- nephrocystitis** (nef'ro-sis-ti'tis). Inflammation of the bladder and kidneys. [Gr., *nephros*, the kidney, + *kystis*, the bladder, + *itis*, inflammation.]
- nephrocystosis** (nef'ro-sis-to'sis). The formation of a cystic condition of the kidney. **bacterial n.** N. caused by bacteria. **capsular n.** That which specially affects Bowman's capsule. **catarrhal n.** That in which the epithelium is desquamated from the tubules. **desquamative n.** See *catarrhal n.* **diffuse n.** A type which affects both the parenchyma and the stroma. It may be acute or chronic. **fibrous n.** That which specially affects the stroma. **glomerular n.** Nephritis principally affecting the glomeruli. [Gr., *nephros*, the kidney, + *kystis*, the bladder.]
- nephrogenous** (nef-roj'en-us). Arising in or from the kidney. [Gr., *nephros*, the kidney, + *gennan*, to beget.]
- nephrolith** (nef'ro-lith). Renal calculus. [Gr., *nephros*, the kidney, + *lithos*, a stone.]
- nephrolithiasis** (nef-ro-lith-i'as-is). Syn.: *lithiasis nephritica*, *lithiasis renalis*. The formation of calculi in the kidney. [Gr., *nephros*, the kidney, + *lithiasis*.]
- nephrolithotomy** (nef'ro-lith-ot'o-me). Nephrotomy for the removal of a renal calculus. [Gr., *nephros*, the kidney, + *lithos*, a stone, + *temnein*, to cut.]
- nephrolysin** (nef-rol'is-in). A toxic principle isolated from the serum of animals in whose peritoneal sac had been implanted renal tissue from another animal. This acts as a cytolytic agent in dissolving kidney cells. [Gr., *nephros*, the kidney, + *lysis*, dissolution.]
- nephrolysis** (nef-rol'is-is). 1. Destruction of the kidney tissue by the action of a nephrotoxin. 2. Freeing the kidney from adhesions. [Gr., *nephros*, the kidney, + *lysis*, solution.]
- nephromalacia** (nef'ro-mal-a'se-ah). Softening of the kidney. [Gr., *nephros*, the kidney, + *malakia*, softness.]
- nephromegaly** (nef-ro-meg'al-e). Enlargement of the kidneys. [Gr., *nephros*, the kidney, + *megas*, great.]
- nephromere** (nef'ro-mer). The protovertebral somite in the embryo from which the future kidney is formed. [Gr., *nephros*, the kidney, + *meros*, a part, a segment.]
- nephroncus** (nef-ron'kus). A tumor of the kidney. [Gr., *nephros*, the kidney, + *ogkos*, mass.]
- nephropathy** (nef-rop'ath-e). Any disease of the kidneys. [Gr., *nephros*, the kidney, + *pathos*, a disease.]
- nephropexy** (nef'ro-peks-e). Fixation of the kidney by suture. [Gr., *nephros*, the kidney, + *pexis*, fixation.]
- nephroptosis** (nef-rop-to'sis). Prolapse of the kidney. [Gr., *nephros*, the kidney, + *ptosis*, a falling.]
- nephrorrhaphy** (nef-ror'af-e). The operation of fixing a floating kidney by stitching its capsule to the posterior wall of the abdomen. [Gr., *nephros*, the kidney, + *raphe*, a seam.]
- nephrosclerosis** (nef-ro-skle-ro'sis). Hardening of the kidney. [Gr., *nephros*, the kidney, + *skleros*, hard.]
- nephrotomize** (nef-rot'o-mize). To perform nephrotomy.
- nephrotomy** (nef-rot'o-me). A surgical incision into the kidney. It is called abdominal when performed through an incision into the abdomen, and lumbar when through an incision into the loins. [Gr., *nephros*, kidney, + *tome*, cutting.]
- nephrotoxic** (nef-ro-toks'ik). Pertaining to a nephrotoxin.
- nephrotoxin** (nef-ro-toks'in). A cytotoxin acting on kidney cells. [Gr., *nephros*, kidney, + *toxikon*, poison.]
- nephro-ureterectomy** (nef'ro-u're-ter-ek'to-me). Excision of the kidney, together with the whole or a portion of its ureter. [Gr., *nephros*, + *ureterectomy*.]
- nephrozymase** (nef-ro-zi'mas). Of Béchamps, an albuminoid substance acting as a diastatic ferment, obtained from urine by the addition of alcohol. [Gr., *nephros*, the kidney, + *zyme*, leaven.]
- neriodorein, neriodorin** (ne-re-o-do're-in, ne-re-o-do'rin). A glucosid obtained from *Nerium odorum*. It has a digitalis action.
- Nerium** (ne're-um). Oleander; a genus of apocynaceous shrubs. **N. odoratum**, **N. odorum**. The sweet-scented oleander; closely allied to *N. oleander* and having the same poisonous properties. It contains neriodorein and neriodorin, having actions similar to those of oleandrin and neriin (or digitalein). **N. oleander**. Common oleander, rosebay, the *nerion* and *rododendron* of the ancients. It resembles digitalis in its action. The root contains neriin, and oleandrin. [Gr., *nerion*.]
- neropathy** (ne-rop'ath-e). That part of the system of weltmerism known as the laying on of hands; manual gerokomy.
- nerve**. The specialized tissue which serves to convey nerve impulses to and from the nerve centers. Histologically, a n. is composed of n. fibers united by connective tissue, each n. fiber containing as its essential part the axis cylinder process from a nerve cell. **accelerator n's.** See *augmentor fibers*, under *fiber*. **afferent n.** A n. which conveys impressions toward the nerve centers. **articular n's.** Small n's distributed to the ligaments and interior structures of the articulations. **augmentor n's.** See *augmentor fibers*, under *fiber*. **calorific n.** A variety of

n. fiber, not actually demonstrated, which is supposed to cause the production of heat in the peripheral tissues. **catabolic n's.** N's whose influence increases the functional activity of a part or organ. **centrifugal n.** See *effluent n.* **centripetal n.** See *afferent n.* and *centripetal fibers*, under *fiber*. **cerebral n's.** See *cranial n's.* **compound n's.** N's containing both motor and sensory fibers. **cranial n's.** The n's which are located in different portions of the cerebrum, the medulla oblongata, or the upper end of the spinal cord, and emerge through fissures and foramina in the base of the skull. By Sömmerring they were divided into twelve pairs, and by Willis into nine. **cutaneous n's.** N's distributed to the integument. **depressor n.** See *inhibitory n.* **effluent n.** A n. which conveys impressions from the n. center toward the periphery. **ganglionic n.** See *sympathetic n.* **gustatory n.** A branch of the inferior division of the inferior maxillary, which communicates tactile sensibility and the sense of taste to the tongue. **inhibitory n.** A n. which lessens or stops the action of the part which it innervates. See also *inhibitory fibers*, under *fiber*. **innominate n's.** The fifth pair of cranial n's. **mixed n.** A n. containing both motor and sensory fibers. **motor n.** A n. containing motor fibers only. **n. axis.** See *axis cylinder*. **n. bulb.** See *end bud*, under *separate heading*. **n. cement.** See *neuroglia*. **n. current.** See under *separate heading*. **n. endings.** The terminations of n. fibers. **n. fibers.** See under *separate heading*. **n. hill, n. hillock.** See *motor end plate*, under *end plate*. **n. impulse.** The name given to the excitatory change propagated along nerve fibers. **pressor n.** A n. conveying impulses to a vasomotor center which increase its activity. **secretory n.** A n. consisting of or containing secretory fibers. **sensorimotor n.** A n. that is both sensory and motor. **sensory n.** A n. which conveys sensory impressions only. **spinal n's.** The n's which are located in the spinal cord and emerge between the vertebrae. **sympathetic n.** A system of ganglia and intercommunicating fibers so called on account of the belief that it established a sympathy between remote organs, especially in cases of disease. It consists of a series of ganglia on each side of the spinal column, those of one side intimately connected with each other by ascending and descending branches, and less intimately with those of the opposite side. **thermic n's.** See *caloric n.* **trophic n.** A n. the function of which is to promote or modify the nutrition of the part to which it is distributed. **vasoconstrictor n's.** N's originating in the vasomotor centers which induce contraction of the blood vessels. **vasodilator n's.** Efferent n's, the stimulation of which produces dilatation of the blood vessels. **vasohypertonic n's.** See *vasoconstrictor n's.* **vaso-inhibitory**

n's. See *vasodilator n's.* **vasomotor n's.** General term for all nerve fibers which control the contraction and dilatation of the blood vessels. For individual n's, see *Table of Nerves*. [Lat., *nervus*, from Gr., *neuron*.]

nerve bulb. See *end bud* and *motorial nerve end plate*, under *end plate*. **terminal n. b's of Krause.** Small nodular endings of cutaneous nerves found in the papillae of the lip, glans penis, and clitoris.

nerve current. The electrical current exhibited by excised nerves. **natural n. c.** An old term for the demarcation current of injury, exhibited by an excised nerve, on the view, now known to be erroneous, that such currents are present in the uninjured nerve.

nerve endings. The terminations of nerve fibers. They are: (a) the central termination or origin in the axis cylinder process of nerve cells, in the central nervous system, and perhaps also in the peripheral ganglia; and (b) the peripheral terminations in the various tissues and organs, in which the fibers either divide into a network or form specialized bulbs, or end in epithelial cells, as in the organs of sense.

nerve fibers. The histological unit of structure in the nerve trunks, each consisting of an axis cylinder, myelin sheath and neurilemma. **medullated n. f's.** N. f's with a sheath of myelin enclosing the axis cylinder. **myelinic n. f's.** See *medullated n. f's.* **non-medullated n. f's.** N. f's in which the axis-cylinder is not enclosed in a sheath of myelin.

nerviduct (ner've-duct). An opening in a bone for the passage of a nerve.

nervine (ner'vin). 1. A remedy which mainly affects the nervous system. 2. A glycerin extract of the sheep's brain. [Lat., *nervinum*.]

ner'vo-. Combining form of Lat., *nervus*, nerve; used as a prefix to denote of or pertaining to a nerve.

nervosin (ner'vo-sin). A mixture of reduced iron, valerian, etc., in pill form.

nervousness (ner'vus-ness). Excessive response to sensory stimuli; chiefly shown in a mismanagement of repressions.

ner'vus. 1. See *nerve*. 2. Of old writers, a tendon or ligament, or other cordlike structure in the body.

Nessler's reagent. A mixture of 1 part of mercury bichlorid dissolved in 6 parts of water, 2½ parts of potassium iodid dissolved in 6 of water, and 6 of caustic potash dissolved in 6 of water, the whole being then diluted to 36 parts; used for the detection of ammonium or its salts by producing a yellow or reddish brown color or a precipitate, according to the quantity of ammonium present. **N's test.** A test for detecting ammonium or its salts by producing a yellow or reddish brown color or a precipitate, according to the quantity of ammonium present. For this Nessler's reagent is used: a mixture of mercury bichlorid, potassium iodid, caustic potash, and water.

TABLE OF NERVES

NAME	B. N. A. EQUIVALENT	ORIGIN	FUNCTION	DISTRIBUTION
Abducent.....	N. Abducentis.	Fasciculus teres.	Motor.	External oblique muscle of eye.
Auditory.....	N. Acusticus.	Cochlea.	Special sense of hearing.	Temporal lobes.
Auricular— Anterior.....	N. Auricularis, anterior.	Mandibular div. of trigeminal.	Sensory.	Skin of pinna.
Great.....	N. Auricularis, magnus.	Second and third cervical through cervical plexus.	Sensory.	Side of neck and ear.
Posterior.....	N. Auricularis, posterior.	Auriculotemporal.	Motor.	Lobule of ear.
Auriculotemporal.....	N. Auriculotemporalis.	Facial.	Sensory.	Retratars auram and occipitofrontalis.
Buccal.....	N. Buccalis.	Mandibular div. of trigeminal.	Motor.	Side of scalp.
Buccinator.....	N. Buccinatorius.	Mandibular div. of trigeminal.	Sensory.	Buccinator and orbicularis oris.
Calcareus, internal.....	N. Calcareus, medialis.	Posterior tibial.	Sensory.	Cheek.
Chorda tympani.....	N. Chorda tympani.	Facial.	Motor.	Sole of foot.
Ciliary, long.....	N. Ciliare longi.	Nasal branch of ophthalmic div. of trigeminal.	Sensory and motor.	Submaxillary gland.
Ciliary, short.....	NN. Ciliares, breves.	Ciliary ganglion.	Sensory and motor.	Cornea, iris and ciliary body.
Circumflex.....	N. Axillaris.	Posterior cord of brachial plexus.	Motor and sensory.	Deltoid, teres minor, shoulder joint, and overlying skin.
Coccygeal.....	N. Coccygeus.	Spinal cord.	Motor and sensory.	Coccygeus muscle and skin over coccyx.
Cochlear.....	N. Cochlearis.	Auditory.	Special sense of hearing.	Cochlea.
Colli, superficialis.....	N. Cutaneus, colli.	Second and third cervical through cervical plexus.	Sensory.	Skin of neck and throat.
Crural.....	N. Lumbo-inguinalis.	Genitocrural.	Sensory.	Skin of upper part of thigh.
Crural, anterior.....	N. Femoralis.	Second, third and fourth lumbar through lumbar plexus.	Motor and sensory.	Iliacus, pectineus, sartorius, quadriceps extensor, skin of thigh and inner aspect of leg.
Cutaneous, internal.....	N. Cutaneus, antibrachii medialis.	Inner cord of brachial plexus.	Sensory.	Skin of inner aspect of forearm.
Cutaneous, lesser internal (of Wrisberg).....	N. Cutaneus, brachii medialis.	Inner cord of brachial plexus.	Sensory.	Skin of inner aspect of upper arm.
Dental, anterior, superior.....	N. Descendens hypoglossi.	Maxillary div. of trigeminal.	Sensory.	Superior incisors and canine teeth.
Dental, middle, superior.....		Mandibular div. of trigeminal.	Sensory and motor.	Teeth of lower jaw, mylohyoid muscle and skin of chin.
Dental, posterior, superior.....		Maxillary div. of trigeminal.	Sensory.	Superior bicuspids teeth.
Descendens hypoglossi (or nomi).....		Hypoglossal.	Motor.	Superior molar teeth.
Digastric.....		Facial.	Motor.	Sternohyoid, sternothyroid, omohyoid.
Facial.....	N. Facialis.	Floor of fourth ventricle.	Motor.	Stylohyoid and posterior belly of digastric muscle.
Frontal.....	N. Frontalis.	Ophthalmic div. of trigeminal.	Motor.	Muscles of expression.
Genital.....		Genitocrural.	Motor.	Skin of forehead.
				Cremaster muscle and round ligament.

TABLE OF NERVES—Continued

NAME	B. N. A. EQUIVALENT	ORIGIN	FUNCTION	DISTRIBUTION
Genitocrural.....		First and second lumbar through lumbar plexus.	Sensory and motor.	Cremaster and skin of groin and upper part of thigh.
Glossopharyngeal.....	N. Glossopharyngeus.	Floor of fourth ventricle.	Motor, sensory and special sense.	Muscles and mucous membrane of pharynx, posterior third of tongue.
Gluteal, inferior.....	N. Gluteus, inferior.	2nd and 3rd sacral through sacral plexus.	Motor.	Gluteus maximus.
Gluteal, superior.....	N. Gluteus, superior.	2nd and 3rd sacral through sacral plexus.	Motor.	Gluteus medius and minimus, tensor fasciæ femoris.
Hypogastric.....	N. Ramus cutaneus, anterior.	Iliohypogastric.	Motor and sensory.	Muscles and skin of abdominal wall.
Hypoglossal.....	N. Hypoglossa.	Floor of 4th ventricle.	Motor.	Thyrohyoid, hyoglossus, geniohyoid, styloglossus, and palatoglossus.
Iliac.....	N. Ramus cutaneus lateralis.	Iliohypogastric.	Sensory.	Skin of gluteal region.
Iliohypogastric.....	N. Iliohypogastricus.	1st lumbar through lumbar plexus.	Sensory and motor.	Muscles and skin of hypogastrium.
Ilio-inguinal.....	N. Ilio-inguinalis.	1st lumbar through lumbar plexus.	Sensory and motor.	Internal oblique muscle and skin of groin.
Incisive.....		Inferior dental.	Sensory.	Lower incisor and canine teeth.
Infra-orbital.....	N. Infra-orbitalis.	Maxillary div. of trigeminal nerve.	Sensory.	Skin of cheek and lower eyelid.
Infratrochlear.....	N. Infratrochlearis.	Nasal.	Sensory.	Skin of lower eyelid and side of nose.
Intercostal.....	NN. Intercostales.	Thoracic nerves.	Sensory and motor.	Muscles and skin of back thorax and upper abdomen.
Intercostohumeral.....	N. Intercostobrachialis.	2nd or 3rd intercostal.	Sensory.	Skin of axilla.
Intersosseus, anterior.....	N. Intersosseus valaris.	Median.	Motor.	Deep flexor and pronator muscles of forearm.
Intersosseus, posterior.....	N. Intersosseus dorsalis.	Musculospiral.	Motor and sensory.	Muscles and skin of back of forearm and wrist.
Lacrimal.....	N. Lacrimalis.	Ophthalmic div. of trigeminal	Sensory.	Lacrimal gland and conjunctiva.
Laryngeal, inferior or recurrent.....	N. Recurrens.	Vagus.	Motor.	Muscles of larynx.
Laryngeal, superior.....	N. Laryngeus, superior.	Vagus.	Sensory and motor.	Mucous membrane of larynx; arytenoid and cricothyroid muscles.
Lingual.....	N. Lingualis.	Mandibular branch of trigeminal.	Sensory.	Mucous membrane of anterior two-thirds of tongue.
Lumbar.....	NN. Lumbales.	Spinal cord.	Motor and sensory.	Loins and front of lower abdomen and thigh through lumbar plexus.
Mandibular.....	N. Mandibularis.	Trigeminal.	Sensory and motor.	Teeth and skin of lower jaw and cheek; muscles of mastication.
Masseteric.....	N. Massetericus.	Mandibular div. of trigeminal.	Motor.	Nasal pharynx, palate, teeth of upper jaw and skin of cheek.
Maxillary.....	N. Maxillaris.	Trigeminal.	Sensory.	Pronators and flexors of forearm, two external, lumbricales, thenar, muscles, skin of palm of outer three and a half fingers.
Median.....	N. Medianus.	Internal and external cords of brachial plexus.	Motor and sensory.	Skin of lower lip and chin.
Mental.....	N. Mentalis.	Inferior dental.	Sensory.	

TABLE OF NERVES—Continued

NAME	B. N. A. EQUIVALENT	ORIGIN	FUNCTION	DISTRIBUTION
Musculocutaneous.....	N. Musculocutaneus.	External cord of brachial plexus.	Motor and sensory.	Flexors of upper arm and skin of external aspect of forearm.
Musculocutaneous of leg.....	N. Peroneus superficialis.	External popliteal.	Motor and sensory.	Peroneal muscles, skin of external aspect of lower leg and foot.
Musculospiral.....	N. Radialis.	Posterior cord of brachial plexus.	Motor and sensory.	Extensors of entire arm and hand, skin of back of forearm.
Mylohyoid.....	N. Mylohyoideus.	Inferior dental.	Motor.	Mylohyoid and anterior belly of digastric muscles.
Nasal (nasociliary).....	N. Nasociliaris.	Ophthalmic div. of trigeminal.	Sensory.	Ciliary ganglion, iris conjunctiva, ethmoid cells, mucous membrane and skin of nose.
Nasopalatine.....	N. Nasopalatinus.	Meckel's ganglion.	Sensory.	Mucous membrane of nose and palate.
Obturator.....	N. Obturatorius.	3rd, 4th and 5th lumbar through lumbar plexus.	Motor and sensory.	Adductors of thigh, hip and knee joints and skin of inner aspect of thigh.
Occipital, greater.....	N. Occipitalis, major.	2nd cervical.	Motor and sensory.	Muscles of back of neck, skin over occiput.
Occipital, lesser.....	N. Occipitalis, minor.	2nd cervical through cervical plexus.	Sensory.	Skin behind ear and on back of scalp.
Oculomotor.....	N. Oculomotorius.	Floor of aqueduct of Sylvius.	Motor.	Levator palpebrae superioris, superior, internal and inferior recti, and inferior oblique muscles of eye.
Olfactory.....	NN. Olfactorii.	Olfactory lobe.	Special sense of smell.	Upper turbinates and ethmoid plate.
Ophthalmic.....	N. Ophthalmicus.	Trigeminal.	Sensory.	Lacrimal gland, conjunctiva, skin of forehead, skin and mucous membrane of nose.
Optic.....	N. Opticus.	Corpora quadrigemina.	Special sense of sight.	Retina.
Orbital.....	N. Zygomaticus.	Maxillary div. of trigeminal.	Sensory.	Skin of temple.
Palatine, posterior.....	N. Palatinus, posterior.	Meckel's ganglion.	Motor.	Levator palati, and azygos uvulae muscles.
Pectineal.....	N. Perineal.	Anterior crural.	Motor.	Pectineus muscle.
Perineal.....	N. Perineus.	Internal pudic.	Motor and sensory.	Muscles and skin of perineum.
Phrenic.....	N. Phrenicus.	Third and fourth cervical.	Motor.	Diaphragm.
Pneumogastric.....	N. Vagus.	Floor of fourth ventricle.	Motor and sensory.	Pharynx, larynx, heart, lungs, stomach.
Popliteal, external.....	N. Peroneus communis.	Great sciatic.	Motor and sensory.	Extensor muscles of lower leg and foot and overlying skin.
Popliteal, internal.....	N. Tibialis.	Great sciatic.	Motor and sensory.	Flexors of lower leg and foot and overlying skin.
Pterygoid, external.....	N. Pterygoideus, externus.	Mandibular div. of trigeminal.	Motor.	External pterygoid muscle.
Pterygoid, internal.....	N. Pterygoideus, internus.	Mandibular div. of trigeminal.	Motor.	Internal pterygoid muscle.
Pudic, anal.....	N. Pudendus.	Small sciatic.	Sensory.	Skin of perineum and genitalia.
Pudic.....	N. Pudendus.	3rd, 4th and 5th sacral through sacral plexus.	Motor and sensory.	Muscles and skin of perineum and genitalia.
Radial.....	N. Radialis, ramus superficialis.	Musculospiral.	Sensory.	Back of hand and outer three and a half digits.
Sacral.....	NN. Sacrales.	Spinal cord.	Motor and sensory.	Muscles and skin of loins and lower extremities.

TABLE OF NERVES—Continued

NAME	B. N. A. EQUIVALENT	ORIGIN	FUNCTION	DISTRIBUTION
Saphenous, external or short.	N. Suralis.	Internal popliteal.	Sensory.	Skin of foot and fifth toe.
Saphenous, internal or long.	N. Saphenus.	Anterior crural.	Sensory.	Skin of inner aspect of knee, leg, ankle and dorsum of foot.
Sciatic, great.	N. Ischiadicus.	2rd, 3rd and 4th sacral through sacral plexus.	Motor and sensory.	Flexor muscles of thigh, leg and foot, skin of calf and sole.
Sciatic, small.	N. Cutaneus femoris, posterior.	Sacral plexus.	Sensory.	Skin of perineum and back of thigh.
Sphenopalatine.	N. Accessorius.	Maxillary div. of trigeminal.	Sensory.	Meckel's ganglion.
Spinal accessory.	N. Accessorius.	Floor of fourth ventricle and cervical cord.	Motor.	Sternomastoid and trapezius muscles.
Stapedial.	N. Suboccipitalis.	Facial.	Motor.	Stapedius muscle.
Stylohyoid.	N. Suboccipitalis.	Posterior div. of first cervical.	Motor.	Stylohyoid and posterior belly of digastric muscle.
Suboccipital.	N. Subscapularis, inferior.	Posterior cord of brachial plexus.	Motor.	Complexus oblique and rectus muscles of back of neck.
Subscapular, inferior.	N. Thoraco-dorsalis.	Posterior cord of brachial plexus.	Motor.	Teres major.
Subscapular, middle.	N. Subscapularis, superior.	Posterior cord of brachial plexus.	Motor.	Latissimus dorsi.
Subscapular, superior.	N. Cutaneus colli.	Cervical plexus.	Motor.	Subscapularis.
Superficial cervical.	NN. Supraclavicularis, posterior.	Cervical plexus.	Sensory.	Skin of front of neck.
Supra-acromial.	N. Supra-orbitalis.	Frontal.	Sensory.	Skin over shoulder.
Supra-orbital.	NN. Supraclavicularis, anterior.	5th and 6th cervical.	Motor.	Skin of forehead.
Suprascapular.	NN. Supraclavicularis, anterior.	Cervical plexus.	Sensory.	Supraspinatus and infraspinatus.
Suprasternal.	N. Supratrochlearis.	Frontal.	Sensory.	Skin over top of sternum.
Supratrochlear.	N. Temporalis.	Mandibular div. of trigeminal.	Motor.	Skin of upper eyelid and root of nose.
Temporal, external anterior.	N. Thoracalis, anterior.	External cord of brachial plexus.	Motor.	Temporalis major.
Thoracic, external anterior.	N. Thoracalis, anterior.	Internal cord of brachial plexus.	Motor.	Pectoralis minor and major.
Thoracic, long, external, respiratory or posterior.	NN. Thoracalis, longus.	5th, 6th and 7th cervical.	Motor.	Serratus magnus.
Thoracic, spinal.	NN. Thoracales.	Spinal cord.	Motor and sensory.	Muscles and skin of thorax.
Tibial anterior.	N. Peroneus profundus.	External popliteal.	Motor and sensory.	Extensor muscles of foot and toes, skin of dorsum of foot.
Tibial posterior.	N. Tibialis.	Internal popliteal.	Motor and sensory.	Flexor muscles of foot and toes, skin of sole.
Trigeminal.	N. Trigeminus.	Floor of 4th ventricle.	Sensory and motor.	Skin of face, tongue, teeth and muscles of mastication.
Trochlear.	N. Trochlearis.	Floor of aqueduct of Sylvius.	Motor.	Superior oblique muscle of eye.
Tympanic.	NN. Tympanici.	Glossopharyngeal.	Sensory.	Tympanum, eustachian tube and structures of middle ear.
Ulnar.	N. Ulnaris.	Inner cord of brachial plexus.	Motor and sensory.	Flexor carpi ulnaris, flexor profundus digitorum, elbow and wrist joints, skin of 5th and inner half of 4th fingers and hypothenar eminence.
Vidian.	N. Canalis pterygoidei.	Facial.	Sensory.	Meckel's ganglion.

nestotherapy (nes-to-ther'ap-e). A hunger form of therapy. Restricted dietary fads. [Gr., *nestis*, fasting, + *therapy*.]

nettlerash. See *urticaria*.

net'work. A netlike substance or texture; a structure or surface marked by intersecting lines. **Gerlach's n.** Syn.: *nerve fiber n.* See under *Gerlach*. **Haller's n.** See *rete testis*, under *rete*. **peripheral n.** Any n., as of vessels or nerves, at their peripheral extremities. [Ang.-Sax., *nett*, + *weorc*.]

neural (nu'ral). Pertaining to a nerve or to nervous matter; connected with or affecting the nervous system. [Gr., *neuron*, a nerve.]

neuralgia (nu-ral'je-ah). A nervous disorder, characterized solely by pain due to a disease of a definite sensory nerve. The pain is in the course of a nerve or its branches, is of considerable intensity, and, as a rule, paroxysmal. **cardiac n.** Angina pectoris. **trigeminal n.** N. of the trigeminal nerve. [Gr., *neuron*, nerve, + *algos*, pain.]

neuragenesis, neuranaaphysis (nu''ran-ah-jen'es-is, nu''ran-af'es-is). The regeneration or renewal of nerve tissue. [Gr., *neuron*, nerve, + *ana*, again, + *genesis*, an engendering.]

neurapophysis (nu-rap-of'is-is). The lateral portion of the neural arch. [Gr., *neuron*, a nerve, + *apo*, from, + *physis*, growth.]

neurasthenia (nu-ras-the'ne-ah). Nervous exhaustion (or prostration, or debility); a condition appearing in the early and middle periods of adult life, presenting objective symptoms of deranged function of the nervous system. **gastric n.** See *nervous dyspepsia*. **n. sexualis**. N. popularly supposed to be caused by masturbation or excessive venery and associated with an absence of sexual desire, or of the power of erection or ejaculation, or of ability to experience pleasure during copulation. In reality a complex series of conditions. [Gr., *neuron*, nerve, + *astheneia*, weakness.]

neurasthenic (nu-ras-then'ik). 1. Belonging to, or caused by, neurasthenia. 2. As a n., one having neurasthenia.

neurasthenope (nu'ras-then-op). A person affected with asthenopia and neurasthenia, the latter causing trifling errors of refraction to result in symptoms of eye strain.

neuraxon (nu-raks'on). An axis cylinder process.

neurectomy (nu-rek'to-me). Excision of a portion of a nerve. [Gr., *neuron*, a nerve, + *ektome*, a cutting out.]

neuroctopia (nu-rek-to'pe-ah). Displacement or abnormal situation of a nerve. [Gr., *neuron*, a nerve, + *ek*, forth from, + *topos*, a place.]

neuridin (nu'rid-in). A ptomain, $C_5H_{14}N_2$, obtained from decomposing horseflesh, human muscle, haddock, cheese, gelatin, and cultures of the typhoid bacillus. This has been isolated also from corn-beef, where it produced food poisoning, but in a pure state it is not poisonous.

neurilemma (nu-ril-em'mah). Syn.: *sheath of Schwann*. 1. The elastic, hyaline, apparently structureless sheath inclosing a nerve fiber. By some authors the term n. is restricted to the peripheral medullated nerves, whereas others describe non-medullated nerves as possessing a n. but without nodes of Ranvier. See also *internode of Ranvier*, under *internode*. [Gr., *neuron*, nerve, + *lemma*, husk.]

neurin (nu'r'in). Syn.: *trimethylvinylammonium hydrate*. A highly poisonous alkaloid, $C_5H_{13}NO = (CH_3)_3N(CH_2CH_2)(OH)$, produced by the chemical decomposition of protagon, and occurring in putrefying meat and in the putrefaction by which certain esculent fungi are rendered poisonous. It is very poisonous and its action is physiologically intermediate between that of muscarin and curare, producing dilated pupils, profuse secretions, acceleration followed by paralysis of respiration, and general convulsions preceding death. Atropin antagonizes its effect on the heart and the glandular system only. The n. of commerce consists of a mixture, in various proportions, of cholin and n., and the term n. is sometimes applied to the former base. [Gr., *neuron*, nerve.]

neurino'ma, neu'r'inomato'sis. See *neurofibromatosis*.

neurite. See *axon*.

neuritis (nu-ri'tis). Inflammation of a nerve or group of nerves, manifested by pain and tenderness along the course of a nerve. **alcoholic n.** Multiple n. caused by free indulgence in alcoholic beverages. **cancerous n.** N. caused by the infiltration of the nerve by cancerous tissue. **epidemic multiple n.** Beriberi. **multiple (degenerative) n.** N. affecting many nerves, either simultaneously or in rapid succession. It is due to the presence of toxins in the body. **multiple n.** N. affecting many nerves, either simultaneously or in rapid succession, and especially intense at the peripheral distribution. **multiple peripheral n.** An affection of the peripheral nerves in which paralytic phenomena occur, as the result of a true n., which, if it becomes chronic, leads to an excessive formation of connective tissue in the substance of the nerves, with atrophy of their fibers. **n. nodosa**. N. in which the thickening of the nerve takes place in the form of swellings at regular or irregular intervals. Pressure upon one of the swollen portions produces eccentric pains and formication. **optic n.** Inflammation of the optic nerve, either of the optic disk alone or of the trunk of the nerve; characterized by an infiltration of the connective tissue framework with the products of inflammation and by the proliferation of the connective tissue cells. Vision is almost always seriously affected, owing to the presence of a scotoma. [Gr., *neuron*, nerve, + *itis*, inflammation.]

neu'ro-. Combining form of Gr., *neuron*, nerve; used as a prefix to indicate of,

- or pertaining to a nerve. More often used than *nervo*.
- neu'roblasto'ma.** A blastoma formed from either the hylic or lepidic elements of nervous tissue.
- neuroblasts** (nu-ro'-blasts). The elements destined to form the nervous system. [Gr., *neuron*, nerve, + *blastos*, sprout.]
- neu'rocyto'ma.** See *neuroma*.
- neurodendrite** (nu-ro-den'drit). A nerve-cell process combining neuraxon and dendrite.
- neurodin** (nu-ro'din). 1. A proprietary antipyretic and analgesic. 2. A ptomain, $C_5H_{10}N_2$, formed in decomposing flesh.
- neurodynamia, neurodynamis** (nu-ro-di-nam'e-ah, nu-ro-din'am-is). Nervous energy. [Gr., *neuron*, nerve, + *dynamis*, power.]
- neuro-epithelioma** (nu''ro-ep-i-the-le-o'-mah). A tumor composed of neuro-epithelium. [Gr., *neuron*, a nerve, + *epithelioma*.]
- neu''ro-epithe'lium.** 1. A specialized epithelium forming the perceptive elements of the organs of special sense, as the hair-cells of the organ of Corti or the rods and cones of the retina. 2. The epithelium of the epiplast whence the cerebrospinal axis is developed.
- neurofebrin** (nu-ro-feb'rin). A proprietary preparation consisting of a mixture of neuronal and acetanilid.
- neurofibril** (nu-ro-fi'bril). Fine fibrillary structures within the neurons, thought to be the conducting elements.
- neurofibroma** (nu-ro-fi-bro'mah). A tumor of the connective tissue of a nerve, unassociated with any multiplication of its nerve fibers. [Gr., *neuron*, a nerve, + *fibroma*.]
- neu'rofibrinato'sis.** Multiple nodules upon the stems of peripheral nerves consisting of fibrous tissue and nerve fibers.
- neurogamia** (nu-ro-gam'e-ah). See *animal magnetism*, under *magnetism*. [Gr., *neuron*, nerve, + *gaminein*, to marry.]
- neurogenic** (nu-roj-en'ik). Pertaining to the nerves. **n. tonus.** Tonic contraction of the muscles, due to stimuli received from the nerve centers. [Gr., *neuron*, nerve, + *gennan*, to produce.]
- neurogenous** (nu-roj'en-us). Of nervous origin. [Gr., *neuron*, nerve, + *gennan*, to produce.]
- neuroglia** (nu-rog'le-ah). The tissue which forms the supporting framework of the brain and spinal cord. It is composed of cells derived from primitive nerve cells, specially modified for this particular function. **n. cell, n. corpuscle.** See under *cell*. [Gr., *neuron*, nerve, + *glia*, glue.]
- neuroglioma** (nu''ro-gli-o'mah). A tumor composed of nervous and gliomatous tissue. [Gr., *neuron*, a nerve, + *glioma*.]
- neurography** (nu-rog'raf-e). See *neurology*. [Gr., *neuron*, nerve, + *graphein*, to write.]
- neurohypnology, neurohypnotism** (nu-ro-hip-nol'o-je, nu-ro-hip'not-ism). See *hypnotism*.
- neuroid** (nu'royd). 1. Abounding in nerves or nervous substance. 2. Resembling a nerve or a nervous system. [Gr., *neurodes*, from *neuron*, nerve, + *eidos*, a resemblance.]
- neurokeratin** (nu-ro-ker'at-in). A substance analogous to keratin, forming one of the constituents of the gray matter of the brain.
- neurolecithin** (nu-ro-les'ith-in). A proprietary preparation consisting of lecithin with small amounts of cholesterol and fats.
- neurologist** (nu-ro'l'o-jist). One versed in neurology.
- neurology** (nu-ro'l'o-je). The science relating to the nervous system and its diseases. [Lat., *neurologia*, from Gr., *neuron*, nerve, + *logos*, understanding.]
- neurolysis** (nu-ro'l'is-is). Exhaustion of a nerve by prolonged overstimulation. [Gr., *neuron*, nerve, + *lysis*, a loosing.]
- neuroma** (nu-ro'mah). A rare form of tumor containing true nerve cells as well as fibers, being an autonomous and independent growth of nervous tissue. **amputation n.** A bulbous mass from the swelling at the end of a nerve, following amputation. **false n.** A myxofibroma, or myxosarcoma of the nerve sheaths or intrafascicular connective tissue, but containing no nervous tissue. **fibrillated n., fibron.** General terms for neuromata consisting of non-medullated fibers. **gliomatous n.** See *neuroglioma*. **multiple n.** Numerous tumors along the course of a nerve, in which the nerve fibers take no part. **myxomatous n.** A tumor composed of myxomatous and nervous tissue. **plexiform n.** An old name for multiple **n. sarcomatous n.** A sarcoma developing in the course of a nerve. [Gr., *neuron*, nerve, + *oma*, tumor.]
- neuromalacia** (nu''ro-mal-a'se-ah). Softening of the nerves. [Gr., *neuron*, a nerve, + *malakia*, softness.]
- neuromere** (nu''ro-mër). A segment of the cerebrospinal axis. [Gr., *neuron*, nerve, + *meros*, a part.]
- neurometabolic** (nu''ro-met-ah-bol'ik). Pertaining to the metabolism of the nervous system. [Gr., *neuron*, nerve, + *metabolikos*, changeable.]
- neurometastasis** (nu''ro-met-as'tas-is). Metastasis to the nervous system. [Gr., *neuron*, nerve, + *meta*, between, + *istanai*, to place.]
- neuromuscular** (nu-ro-mus'ku-lar). 1. Pertaining to nerve and muscle. 2. Of a medicament, affecting at once nervous and muscular action. [Gr., *neuron*, nerve, + Lat., *musculus*, muscle.]
- neuromyxoma** (nu-ro-miks-o'mah). See *myxoneuroma*. [Gr., *neuron*, a nerve, + *myxoma*.]
- neuron, neurone** (nu'ron, nu'rôn). The essential cellular element or unit of the central nervous system. It consists of a cell-body, with its various branches, processes and derivatives. [Gr., *neuron*, nerve.]
- neuronal** (nu'ro-nal). Bromodiethacetamid; it contains about 41 per cent. of bromin. Used as a hypnotic.

neuroneoplasma (nu'ro-ne-o-plas'mah).

A neuroma. [Gr., *neuron*, nerve, + *neos*, new, + *plassein*, to mold.]

neuroniðia (nu-ro-nid'e-ah). A proprietary aromatic elixir of veronal.

neuronist (nu'ron-ist). One who considers the nervous system as an aggregation of neurons. [Gr., *neuron*, a nerve.]

neuronophage, **neurophage** (nu-nu'o-faj, nu'ro-faj). Name given by Marinesco to the phagocyte supposed to destroy the nerve cells. [Gr., *neuron*, nerve, + *phagein*, to eat.]

neuronophagy (nu-nu-off'aj-e). Destruction of neurons by phagocytes. [Gr., *neuron*, nerve, + *phagein*, to eat.]

neuropath (nu'ro-path). One who regards nervous affections as the chief or sole cause of disease; or one having a nervous disease. [Gr., *neuron*, nerve, + *pathos*, a disease.]

neuropathology (nu'ro-path-ol'o-je). The pathology of the nervous system. [Gr., *neuron*, a nerve, + *pathos*, a disease, + *logos*, understanding.]

neuropathy (nu-ro-path-e). Any disease of the nervous system. [Gr., *neuron*, nerve, + *pathos*, a disease.]

neurophysiology (nu'ro-fiz-e-ol'o-je). The physiology of the nervous system. [Gr., *neuron*, nerve, + *physis*, nature, + *logos*, understanding.]

neuropil (nu'ro-pil). Axis-cylinder processes in invertebrates.

neuroneplasia (nu-ro-pla'se-ah). Of Virchow, a neuromatous diathesis. [Gr., *neuron*, a nerve, + *plassein*, to mold.]

neuroplasty (nu'ro-plas-te). The plastic surgery of the nerves. [Gr., *neuron*, a nerve, + *plassein*, to mold.]

neuropore (nu-ro-por). A pore at anterior end of anterior cerebral vesicles.

neuropsychic (nu-ro-si'kik). Denoting a combination of neural and psychical factors.

neuroretinitis (nu'ro-ret-in-i'tis). Optic neuritis with retinitis. [Gr., *neuron*, a nerve, + Lat., *rete*, a net, + Gr., *itis*, inflammation.]

neurorrhaphy (nu-ror'af-e). Suture of a divided nerve. [Gr., *neuron*, a nerve, + *raphe*, a suture.]

Neurorrhyses hydrophobiae (nu-ro-rik'tes hy-dro'fo-be-e). See *Negri bodies*.

neuroscirrhus (nu-ro-skir'rus). A neuroma. [Gr., *neuron*, a nerve, + *skirron*, an induration.]

neuro sclerosis (nu'ro-skle-ro'sis). Sclerosis of nervous tissue. [Gr., *neuron*, a nerve, + *skleros*, hard.]

neurosis (nu-ro'sis). A functional affection, such as neuralgia, of the nervous system unattended by inflammation or any ascertainable structural lesion. See also *psychoneurosis*. **alcoholic n.** A n. due to alcoholic excesses. **anxiety n.** A form of n. characterized by anxious apprehensions. **compulsion n.** See under *compulsion*. **occupation or professional n.** N. due to the long-continued and repeated use of a group of muscles

in the performance of labor incident to a profession. **thyo-exophthalmic n.** Of Corlieu, exophthalmic goiter. **traumatic n.** N. due to injury. See also *railway spine*, under *spine*. **vascular n.** See *angioneurosis*. [Gr., *neuron*, a nerve.]

neurosoma (nu'ro-som). The nerve cell body. [Gr., *neuron*, nerve, + *soma*, body.]

neurospasmus (nu-ro-spas'mus). Nervous twitching. [Gr., *neuron*, a nerve, + *span*, to draw.]

neurospogium. Syn.: *myelospogium*. Network of fine anastomosing nerve fibrils in interior of nerve ganglia in insects. [Gr., *neuron*, nerve, + *spongos*, a sponge.]

neurotabes (nu-ro-ta'bes). An assemblage of sensory and motor troubles, resembling those caused by posterior spinal sclerosis, that is due to peripheral neuritis. [Gr., *neuron*, a nerve, + *tabes*.]

neurotic (nu-ro'tik). 1. Pertaining to or dependent on a neurosis. 2. Having a tendency to nervous disease.

neurotomy (nu-ro'to-me). The section of a nerve to produce sensory paralysis. [Gr., *neuron*, a nerve, + *temnein*, to cut.]

neurotoxic (nu-ro-toks'ik). Poisonous to the nervous system. [Gr., *neuron*, a nerve, + *toxikon*, poison.]

neurotoxin (nu-ro-toks'in). A toxin acting on the nervous system. [Gr., *neuron*, a nerve, + *toxikos*, poisonous.]

neurotroph (nu-ro'tro-fe). Pertaining to the nutrition of the nervous system. [Gr., *neuron*, nerve, + *trophein*, to nourish.]

neurotropic (nu-ro-trop'ik). Having an affinity for nervous matter, tending to combine with it. [Gr., *neuron*, nerve, + *trepein*, to turn.]

neutral (nu'tral). 1. Possessing neither of two opposite qualities. 2. In chemistry and physics, it denotes the condition of a solution with reference to its hydrogen and hydroxyl ion concentration, which is the same as that of pure water. [Lat., *neuter*, neither.]

neutralization (nu-tral-iz-a'shun). The act or process of rendering neutral (i. e., of annulling a positive quality in such a manner that neither it nor the quality opposed to it shall exist). Thus, acidity is neutralized by reducing it to a condition in which neither an acid nor an alkaline reaction is present, and the combining capacity of an atom is neutralized by uniting it with other atoms until a saturated compound is formed.

neutrophil (nu'tro-fil). A neutrophilous substance or cell. See also in *appendix*, page 900.

neutrophilous (nu-trof'il-us). Staining readily by means of neutral dyes (said of anatomical elements, such as leukocytes). [Lat., *neuter*, neither, + Gr., *philein*, to love.]

nevold (ne'voyd). Resembling a nevus. [Lat., *naevus*, a mark, + *eidosis*, resemblance.]

nevolipoma (ne'vo-lip-o'mah). See *lipoma telangiectodes*, under *lipoma*.

nevus. Pl., *nevi*. Nevi are of two kinds: pigmented and vascular, and are anom-

alies of development of the skin, one showing chiefly in excessive deposit of pigment, the other in overgrowth of vascular tissue. **n. flammens.** Syn.: *port-wine mark, claret stain, strawberry mark.* Nevi vascularis forming smooth, flat, irregular patches of a red, bluish, or purplish color. **n. lipomatodes.** A variety of n. marked by increase in the amount of cutaneous fat. **n. papillomatosus.** A form of n. characterized by excessive growth of the papillae of the skin. **n. pigmentosus.** See *mole* (1st def.). **n. pilosus.** A variety of n. in which the hair is in excess, a mole covered with hair. **n. spillus.** A small variety without elevation. **n. vascularis.** Syn.: *birthmark, mother's mark, fungus vasculosum.* A congenital hypoplasia of a circumscribed area of the vascular system of the skin. It is of three kinds: (1) *Cavernous n.* A n. of steady growth destroying the surrounding tissues by mechanical interference. (2) *Flat n.* A form in which the n. consists of a superficial plexus of dilated capillaries, e. g., the *port wine mark.* (3) *Hypertrophic n.* Well-defined angiomas, made up of a network of large dilated vessels. Cavernous nevi and hypertrophic nevi are comparatively rare. **n. verrucosus.** A variety in which there is excessive development of the horny layer and the n. itself is wartlike. **telangiectatic n.** A n. containing dilated capillaries. [Lat., *naevus, fr. natus, congenital.*]

nex'us. A tying, a binding together. [Lat., *nectere, to bind.*]

N. F. Abbreviation of *National Formulary.*

Ni. Chemical symbol for the element *nickel.*

Nicholson's hydrometer. A hollow metal cylinder loaded with lead so as to float upright in water, and having a standard mark on its stem and a scale pan at the top of the stem, and also one at the bottom of the cylinder.

nick'el. A metallic element. Symbol Ni. Atomic weight, 58.7. **n. acetate.** A salt of n. and acetic acid. It has been used medicinally. **n. bromid.** Nickelous bromid, NiBr₂. The anhydrous salt forms golden yellow scales which readily deliquesce. The hydrated salt, NiBr₂ + 3H₂O, forms deliquescent green acicular crystals. This salt has been employed in epilepsy. **n. phosphate.** Nickelous phosphate; a green precipitate obtained by the action of boiling phosphoric acid on n. and in other ways. It is insoluble in water, but soluble in the mineral acids, and has been used in medicine. [Lat., *niccolum.*]

nic'ol. A food preparation of milk albumin and an iron compound.

Nicolaier's bacillus. The *Bacillus tetani*, or bacillus of tetanus.

Nicol's prism. A p. made by cutting a crystal of Iceland spar diagonally and cementing the pieces with Canada balsam; used to effect the polarization of light.

Nicotiana (nik'o-she-an'ah). The tobacco plant. *folia nicotianae, herba nico-*

tianae tabaci. See *Tabacum.* **N. amercana.** See *N. tabacum.* **N. tabacum.** Virginian tobacco plant; indigenous to tropical America, now widely cultivated in both hemispheres. The dried leaves, the *tabacum* of the U. S. Ph., 1890, have a peculiar penetrating odor wanting in the fresh plant. They contain nicotine, nicotianin, a very small percentage of essential oil, and several acids. Tobacco smoke is very complex in composition, but, if nicotine is excepted, the only constituents found in appreciable quantities are numerous basic substances of the picolinic series. A dark brown, acrid, highly poisonous empyreumatic oil is obtained from tobacco by distillation. Tobacco, used in moderation, causes in those accustomed to its use a gentle exhilaration or a state of quietude and repose. Tobacco was formerly much used for various disorders, but its use is attended with danger, as its poisonous principle is easily absorbed by the skin. [From *J. Nicot*, who is said to have brought the plant from France.]

nicotianin (nik-o'she-a-nin). A substance resembling camphor obtained by distilling tobacco with water.

nicotin (nik'o-tin). A poisonous base, C₁₀H₁₄N₂, present in tobacco leaves to the extent of 8 per cent., depending upon the grade. It is an oil, easily soluble in water. Highly poisonous. [Lat., *nicotiana, tobacco.*]

nicotin'ic acid. See under *acid.* **nicotinism, nicotism** (nik'o-tin-ism, nik'o-tism). Tobacco poisoning.

nicoulin (nik'oo-lin). A poisonous alkaloid, C₈H₄O, causing stupefaction and paralysis, used by Boinet in tetanus.

nictation, nictitation (nik-ta'shun, nik-ti-ta'shun). Winking. [Lat., *nictare, to move the eyelids.*]

nidation (ni-da'shun). The formation of a nest. **uterine n.** Of Aveling, the periodical development of the uterine mucosa in the form of a decidua membrane that would serve to receive the ovule detached from the ovary. See *denidation.* [Lat., *nidus, a nest.*]

ni'dus. 1. A nest or a nestlike structure. 2. A focus of development or growth; the seat of a germ. **n. cochlearis.** See *accessory auditory nucleus*, under *nucleus.* **n. facialis.** See *facial nucleus*, under *nucleus.* [Lat., *nidus, nest.*]

night-blind'ness. See *nyctalopia.*

night'mare. A female spirit or monster, supposed to beset human beings and animals by night, sitting upon them when asleep and producing a feeling of suffocation by its weight. A bad dream. [Mid. Dutch, *nachtmare*; mid. Low Ger., *nachtmar*; mid. High Ger., *nahtmare.*]

night-soil. The contents of privies (removed at night).

night-sweat. A profuse and exhausting sweat occurring during sleep in certain depressed conditions of the system (e. g., pulmonary tuberculosis or the prostration following severe illness).

night-ter'rors. See *pavor nocturnus.*

- nigre'do.** Blackness. **n. cutis.** N. of the skin; melasma. **n. nativa.** A natural dark pigmentation of the skin. [Lat., *niger*, black.]
- ni'gri-, ni'gro-** Combining form of Lat., *niger*, black; used as a prefix to denote of, or pertaining to blackness.
- nigrismus, nigritia, nigrities** (ni-gris'-mus, ni-grish'e-ah, ni-grish'e-ēz). See *melasma, melanosis*, and *nigredo*. [Lat., *niger*, black.]
- nigrosin** (ni'gro-sin). Anilin black; used as a microscopic stain. [Lat., *niger*, black.]
- nihilism** (ni'hil-izm). A disbelief in the efficacy of drugs, at least in their power to modify the course of the so-called self-limited diseases.
- ni'o'bic.** Containing niobium as a pentad radicle.
- niobium** (ni-o'be-um). A metallic element. Symbol Nb. Atomic weight 94.
- nioform** (ni'o-form). See *vioform*.
- niphablepsia** (nif-ab-lep'se-ah). Snow-blindness. [Gr., *nipha*, snow, + *ablepsia*, blindness.]
- nip'ple.** The organ for delivering the mammary secretion; a conical or half-spherical erectile body projecting slightly from the center of the mamma. **Paget's disease of n.** See *Paget*. [Mid. Eng., *neple*, pap, teat, dug.]
- nirvanin** (nir-van'in). The hydrochlorid of the methyl ester of diethylglycoyl paramido-ortho-oxybenzoic acid; used as a substitute for cocaine as a local anesthetic.
- Nissl's gran'ules.** The granules found in nerve cells that stain with the basic anilin dyes. So-called from the observer who first described them.
- ni'sus.** Force, tendency, impulse; the vernal sexual impulse in animals. See *molimen*. **n. formativus.** See *plastic force*, under *force*. [Lat., *niti*, to strive.]
- niter, nitre** (ni'ter). Potassium nitrate; saltpeter. **sweet spirits of n.** See *spiritus etheris nitrosi*, under *ether*. [Lat., *nitrum*, from Gr., *nitron*.]
- ni'trate.** A salt of nitric acid. The n's have been found in normal urine.
- ni'trated.** United with nitric acid, or with niter, the NO group.
- ni'tra'tion.** The act or process of treating with nitric acid.
- ni'tric.** Containing nitrogen as a pentad radicle.
- ni'tric ac'id.** See under *acid*.
- ni'tric ox'id hemoglo'bin.** The compound of hemoglobin with nitric oxid, analogous to the compound of oxygen and hemoglobin, but not so readily dissociated.
- ni'tricus.** 1. Nitric; containing nitric acid. 2. With the name of a base, the nitrate of that base.
- ni'trid.** A compound of an element or a radicle directly with nitrogen.
- nitrifica'tion.** The conversion of ammonia and elementary nitrogen into nitric acid or ammonia derivatives which may be brought about by the presence of certain bacteria. [Lat., *nitrum*, native soda, + *facere*, to make.]
- ni'tril.** Syn.: *cyanid*. A compound of CN with an alkyl radicle, in which the nitrogen is trivalent.
- ni'trite.** A salt of nitrous acid.
- ni'tro-** Combining form of Gr., *nitron*, niter; used as a prefix to denote (1) the combination of nitric acid with an organic acid; (2) the presence of the nitro-grouping (NO₂) in place of hydrogen.
- nitrobacter** (ni-tro-bak'ter). Same as *nitrobacteria*.
- nitrobacteria** (ni'tro-bak-te're-ah). Soil bacteria, that convert ammonia and other nitrogenous substances into nitrates and nitrites.
- nitrobenzene** (ni'tro-ben'zēn). C₆H₅NO₂; an oily substance which has an odor resembling that of bitter almond oil. Used in large quantities for the preparation of dyes.
- nitrocellulin, nitrocellulose** (ni-tro-sel'u-lin, ni-tro-sel'u-lose). A substitution compound of cellulose. *Monon'*, C₆H₉(NO₂)O₅, *din'* (pyroxilin), C₆H₈(NO₂)₂O₅, and *trin'* (gun-cotton), C₆H₇(NO₂)₃O₅, are known. The latter is used in the manufacture of smokeless powder. Collodium is an alcoholic ethereal solution of pyroxilin. Celluloid contains nitrocellulose.
- nitro-ethane** (ni-tro-eth'an). A liquid, C₂H₅NO₂.
- ni'troform.** An acid body, CH(NO₂)₃, analogous in composition to chloroform and iodoform.
- nitrogen** (ni'tro-jen). Syn.: *azote*. A non-metallic element, discovered by Priestley in 1772. It is an indifferent, colorless, tasteless gas, present in the atmosphere; also present, in small quantities, in the intestinal tract and in the blood. Symbol N. Atomic weight, 14.01. Intrapleural injections of n. have been used to compress the lung in the treatment of tubercular disease. **n. determination.** See *Kjeldahl*. **n. dioxide.** NO₂; a brown, poisonous gas. **n. monoxid.** Nitrous oxid, laughing gas; a colorless gas, N₂O, of agreeable odor and sweetish taste. When inhaled it produces anesthesia, without muscular relaxation. It is now widely used for inducing anesthesia, to avoid the disagreeable early stages of ether anesthesia. It is often used with oxygen when it is desired to maintain narcosis for more than a minute. **n. oxid.** See *n. monoxid*, *n. tetroxid*, and *n. pentoxid*. **n. pentoxid.** Nitric anhydrid, anhydrous nitric acid; a white crystalline substance, N₂O₅. It is volatile and deliquescent, and is a powerful oxidizing agent. United with water, it forms nitric acid. **n. peroxid.** See *n. tetroxid*. **n. protoxid.** See *n. monoxid*. **n. tetroxid.** A liquid which at temperatures below 0° C. is colorless, but which above this point becomes yellow and gradually deepens in color till it attains a dark orange hue. [Gr., *nitron*, niter, + *gennan*, to produce.]
- nitrogenous** (ni-troj'en-us). Containing nitrogen.
- nitroglycerin** (ni-tro-glis'er-in). Syn.: *glyceryl nitrate, trinitrin, glonoin*. The glycerin ester of nitric acid. A colorless,

oily, explosive liquid, $C_8H_5(O.NO_2)_3$, prepared by the action of nitric and sulphuric acids on glycerin and subsequent precipitation with water. It is a powerful explosive and mixed with earth is known as dynamite. In minute doses it causes acceleration of the heart's action by dilatation of the arterioles, with violent headache. It is used in solution for lowering the blood pressure. [Gr., *nitron*, niter, + *glykys*, sweet.]

nitromalonyl urea (ni-tro-mal'on-il u're-ah). Dilituric acid.

nitromannitan (ni-tro-man'it-an). A substance prepared by adding mannitan to a mixture of concentrated sulphuric and fuming nitric acids. It detonates violently on percussion.

nitromannite (ni-tro-man'it). Syn.: *hexone*, *hexanitate*, *mannite nitrate*. The compound, $C_6H_5(NO_2)_6$.

nitrometer (ni-trom'et-er). A gas buret used for measuring the amount of nitrogen in the analysis of nitroglycerin and other nitrogenous substances. [*Nitrogen* + Gr., *metron*, a measure.]

nitromethane (ni-tro-meth'an). A nitro-substitution compound of methane $CH_3.NO_2$. In small doses it acts as an analgetic.

nitron. The weight of a radium emanation.

nitronaphthalene (ni-tro-naf'thal-en). The compound, $C_{10}H_7(NO_2)$.

nitronaphthol (ni-tro-naf'thol). The compound, $C_{10}H_6(NO_2)OH$.

nitroparaffin (ni-tro-par'af-in). A paraffin in which the nitro-group replaces hydrogen.

nitrophenol (ni-tro-fe'no'l). A nitro-substitution compound of phenol.

nitrophenyl (ni-tro-fe'n'il). A univalent radicle, $C_6H_4(NO_2)$, a substitution compound of phenyl.

nitrosaccharose (ni-tro-sak'ar-ōs). An explosive compound produced by the action of nitric acid on saccharose.

nitro'so-. A combining form, used in chemistry to denote the presence of nitroxyl (NO).

nitrosobacteria (ni-tro''so-bak-te're-ah). Bacteria oxidizing ammonia into nitrites.

nitrosococcus. A nitrite-forming coccus.

nitrosomonas. The nitrite-forming organism of the soil.

nitro'soni'tric. Containing nitrogen both as a triad and as a pentad. **n. acid**. See under *acid*.

nitrososubstitution (ni-tro''so-sub-sti-tu'shun). The substitution of the nitryl radicle in a compound.

nitrosu'gars. Any one of the nitro-substitution products of the carbohydrates.

nitrosyl (ni'tro-sil). A univalent radicle, NO; found combined in nitrous acid.

nit'rous. Containing nitrogen as a trivalent radicle. **n. acid**. See under *acid*.

n. ether. See *ethyl nitrate*, under *ethyl*.

n. oxid. Nitrogen monoxid. List of poisons and their antidotes, see in *appendix*, page 940.

nitrox'yl. A univalent radicle.

ni'trum. Niter; a name applied originally to natural sodium carbonate (afterward called natron), potassium nitrate being

called at first *sal petrae*, subsequently *sal nitri*, and finally *n*.

nitryl (ni'tril). A univalent radicle, NO_2 .

Nocardia (no-kar'de-ah). Syn.: *Actinomyces*, *Streptothrix*. One of the subdivisions of the order *Hyphomycetes* of the *Fungi*. **N. asteroides**. See *Actinomyces*.

N. aurea. Found in cases of ulcerative conjunctivitis. **N. bovis**. See *Actinomyces*.

N. brasiliensis. Found in mycetoma of the leg in Brazil. **N. buccalis**. Produces stomatitis resembling thrush. **N. Foersteri**. Found in concretions called davyolithes in the lacrimal canal. **N. hominis**. Found in multiple abscesses and appendicitis in man. **N. Israeli**. The anaerobic species found in human and bovine actinomycosis. **N. madurea**. The cause of Vincent's white mycetoma. **N. Pelletieri**. The cause of a type of mycetoma with small red grains common in Senegal. **N. pulmonalis**. This species causes a type of pseudotuberculosis. **N. tennis**. Found in a tropical nodular affection of the hair. These forms produce threads showing true branching with fragmentation and the formation of conidia, which serve as spores and cause pseudotubercles in human beings.

noci-association (no-se-as-o-se-a'shun). An unconscious discharge of nervous energy during surgical shock.

noctiphobia (nok-ti-fo'be-ah). Morbid dread of night, darkness or silence. [Lat., *nox*, *noctis*, night, + Gr., *phobos*, fear.]

no'dal. Of, or pertaining to a node.

node. A knot; a knotlike swelling. **lymphatic n's**, **lymph n's**. Masses of encapsulated lymphoid tissue, situated at intervals along the course and distribution of the lymphatic vessels. They are most numerous in the neck, axilla, and groin. Their function is to serve as stations for the arrest of infections traveling by the lymphatics. **n's of Ranvier**. Ringlike constrictions in peripheral medullated nerve fibers. At these n's the medullary sheath is absent or nearly so, and the neurilemma of the neighboring internodes comes nearly in contact with the axis cylinder. **solitary lymph n's**. Small lymph nodes scattered over the whole mucous membrane of the small intestine. **syphilitic n.** A circumscribed bony elevation due to syphilitic periostitis, usually on the crest of the tibia, on the cranium, or on the sternum. During its inflammatory stage it is attended with extreme sensitiveness and severe pain, especially at night. [Lat., *nodus*, knot.]

no'dose. A term employed in descriptive bacteriology or pathology, to signify knotted or swollen at intervals; having nodes or projections. [Lat., *nodosus*.]

nodos'itas crin'ium. Another name for *trichorrhæxis nodosa*.

nodosity (no-dos'it-e). A knot, a node, a nodule. [Lat., *nodosis*, knotty.]

nodular (nod'u-lar). Having the form of,

- or occurring in nodules. [Lat., *nodulus*, a little knot.]
- no'dule.** 1. A small node or knot. 2. In cerebral anatomy, a small projection on the inferior vermiciform process of the cerebellum at its anterior extremity, in front of the uvula. It encroaches slightly on the fourth ventricle. [Lat., *nodulus*, dim. of *nodus*, knot.]
- no'dus.** 1. See *knot*, *node*, and *nodule*. 2. A band or bond. **n. vitalis.** Flourens's term for a center in the medulla, the destruction of which causes death by suspension of the respiratory movements.
- noematachometer** (no-e'-'mah-tak-om'eter). An apparatus for estimating the time taken in recording a simple sensation. [Gr., *noema*, thought, + *tachys*, swift, + *metron*, a measure.]
- Noguchi's butyric acid test for globulin in cerebrospinal fluid**, see in *appendix*, page 909. **N's reaction.** A reaction for syphilis, consisting in the deviation of the complement in a mixture of red blood corpuscles, hemolytic serum, and syphilitic blood, the test being positive if no hemolysis takes place. It differs from the Wassermann reaction in using human red blood corpuscles instead of sheep's corpuscles.
- noli-me-tangere** (no''li-me-tan'jer-e). An old term for a malignant ulcer, especially when occurring on the face. [Lat., "touch-me-not," occurring in the Vulgate.]
- no'ma.** See *cancrem oris*. **n. pudendi**, **n. vulvae.** A gangrenous inflammation of the vulva, occurring chiefly in young children, leading to foul ulceration, accompanied by great constitutional depression. [Gr., *nomē*, a spreading (sore).]
- non'ane.** A hydrocarbon of the paraffin series, C₆H₁₂.
- non compos mentis.** In law irresponsible by reason of unsound mind. [Lat.]
- non-met'al.** Syn.: *metalloid*. A chemical element which is not classed among the metals.
- nonyl** (non'il). The hypothetical radicle, C₉H₁₉, of the nonylic compounds.
- Nordhausen oil of vitriol.** Nordhausen sulphuric acid.
- norm.** A model or standard. [Lat., *norma*, a rule.]
- nor'ma.** A line used to define the aspects of the face. **n. frontalis.** The contour of the face viewed from in front. **n. inferior.** The contour of the base of the skull. **n. lateralis.** The contour of the skull in profile. **n. occipitalis.** The profile of the skull from behind, the skull being on a level with the eye. **n. sagittalis.** The contour of an antero-posterior section of the skull in the median line. **n. temporalis.** See *n. lateralis*. **n. verticalis.** The contour of a horizontal plane through the glabella. [Lat., *norma*, rule, model, pattern.]
- nor'mal.** 1. Corresponding to the perfect type in all respects. 2. Conforming to the ordinary standard. 3. Of the salts of polybasic acids, having all the hydrogen of the latter replaced by a metal; of hydrocarbons and their derivatives (alcohols, ethers, aldehyds, acids, etc.), having no carbon atom directly connected in their structural formulæ with more than two other carbon atoms. **n. solution.** An aqueous solution of any chemical compound, which contains in every liter its hydrogen equivalent expressed in grams. [Lat., *norma*, a rule.]
- normoblast** (nor'mo-blast). Of Ehrlich, a nucleated red blood corpuscle having a small deeply stained nucleus. See also in *appendix*, page 901. [Lat., *norma*, rule, + Gr., *blastos*, germ.]
- nosema** (no-se'mah). 1. Disease. 2. A genus of the Protozoa, order *Myxosporidia*. **N. apis.** The cause of microsporidiosis in bees. **N. bombycis.** Syn.: *Microsporidium bombycis*. See *corpuscles of Cornalia*, under *corpuscule*. [Gr., *nosema*, disease.]
- nosencephalus** (no-sen-sef'al-us). A monster in which the brain is represented only by a vascular tumor, the cranium being open in the region of the frontal sinus and the occipital opening distinct. [Gr., *nosos*, disease, + *egkephalos*, the brain.]
- nosetiology** (no-set-e-o'l'o-je). The science of the causation of disease. [Gr., *nosos*, disease, + *aitios*, causative, + *logos*, treatise.]
- no'so-.** Combining form of Gr., *nosos*, disease; used as a prefix to signify of, or pertaining to disease.
- nosocomesis, nosocomia** (no-so-kom-e'-sis, no-so-ko'me-ah). Nursing of the sick. [Gr., *nosokomesis*, *nosokomia*.]
- nosocomium** (no-so-kom'e-um). See *hospital*. - [Gr., *nosokomeion*, from *nosos*, disease, + *komein*, to take care of.]
- nosogeny** (nos-oj'en-e). See *pathogenesis*. [Gr., *nosos*, disease, + *gennan*, to produce.]
- nosography** (no-sog'raf-e). 1. See *nosology*. 2. The description of disease. [Gr., *nosos*, disease, + *graphein*, to write.]
- nosology** (no-so'l'o-je). The definition, classification, etc., of diseases. [Lat., *nosologia*, from Gr., *nosos*, disease, + *logos*, understanding.]
- nosoparasite** (no-so-par'as-it). An organism modifying a disease, while not its direct cause. [Gr., *nosos*, disease, + *parasite*.]
- nosophen** (no'so-fen). An iodine compound of phenolphthalein; an antiseptic.
- nosophobia** (no-so-fo'be-ah). A morbid fear of disease. [Gr., *nosos*, disease, + *phobos*, panic, fear.]
- nosophyte** (no'so-fit). A pathogenic vegetable microorganism. [Gr., *nosos*, disease, + *phyton*, plant.]
- nosopoietic** (nos'o-poi-et'ik). Causing or producing disease. [Gr., *nosos*, disease, + *poiein*, to make.]
- nosotoxin** (nos-o-toks'in). Any toxin produced by the processes of disease. [Gr., *nosos*, disease, + *toxin*.]
- nostalgia** (nos-tal'je-ah). Homesickness. [Gr., *nostalgia*, from *nostos*, a return home, + *algos*, pain.]
- nostomania** (nos-to-ma'ne-ah). Nostalgia bordering on insanity. [Gr., *nostos*, a return home, + *mania*, mania.]

nostosite (nos'to-sīt). A parasite located in or on its permanent host or part. [Gr., *nostos*, a return home, + *sitos*, nourishment.]

nos'tril. One of the two external apertures of the nose. [Ang.-Sax., *nosthyrl*, from *nosu*, nose, + *thyril*, hole.]

nos'trum. A proprietary medicine or one of secret composition. [Lat., *noster*, our.]

notanencephalia (no''tan-en-sef'al'e-ah). A variety of exencephalia in which the brain forms a tumor in the posterior cervical or dorsal region, the latter portion of the skull being absent. [Gr., *noton*, the back, + *an*, priv., + *egkephalos*, the brain.]

notch. A rather deep and narrow gap in a border. **acetabular n.** The gap in the margin of the acetabulum close to the obturator foramen. **clavicular n.** A n. at the upper part of the sternum with which the clavicle articulates. **cotyloid n.** See *acetabular n.* **interclavicular n.** A rounded n. at the top of the manubrium of the sternum, between the surfaces with which the clavicles articulate. **interlobar n.** The n. in the anterior margin of the liver, separating the left and right lobes. **intervertebral n's.** The concavities on the upper and lower borders of the radices of the vertebrae. By their apposition in contiguous vertebrae they constitute the intervertebral foramina. **jugular n.** A n. on the margin of the jugular process of the occipital bone which forms the posterior and middle portions of the jugular foramen. **nasal n.** A deep excavation at the inner margin of the facial surface of the maxilla. Its sharp inferior edge is prolonged below into the anterior nasal spine. **n. of Rivinus.** The n. in the upper and anterior portion of the osseous ring to which the tympanic membrane is attached. **popliteal n.** A shallow depression which separates the tuberosities of the head of the tibia posteriorly. **sacrosciatic n's.** Two n's, the greater and the less s. n., situated on the posterior border of the innominate bone. **sigmoid n.** A n. between the condyle and the coronoid process of the ramus of the mandible. **suprascapular n.** Syn.: *lunula scapulae*. A n., sometimes converted into a foramen by a ligament or bony process, in the upper border of the scapula just behind the coracoid process, through which the suprascapular nerve passes. **suprasternal n.** See *interclavicular n.* [Old Eng., *nocke*.]

note. A musical sound; a sound of definite pitch. **metallic percussion n.** A variety of tympanic sound. [Lat., *nota*, from *noscere*, to know.]

notencephalia (no''ten-se-fal'e-ah). Exencephalia affecting the occipital region. [Gr., *noton*, the back, + *egkephalos*, the brain.]

notencephalus (no-ten-sef'al-us). Affected with notencephalia; as a n. m., a fetal monster so characterized. [Gr., *noton*, the back, + *egkephalos*, the brain.]

notochord (no'to-kord). Syn.: *dorsal cord*, *chorda dorsalis*. A cartilaginous rod or rod forming the primitive basis of the spinal column in vertebrates. [Gr., *noton*, back, + *chorde*, cord.]

notomelus (no-tom'el-us). A monster having one or two accessory members on the back. [Gr., *noton*, the back, + *melos*, a limb.]

notophorus (no-tof'o-rus). A monster having a dorsal pouch. [Gr., *notophoros*, carrying on the back.]

novargan (no-var'gan). Silver proteinate; an organic silver albumin compound containing 10 per cent. of silver.

novaspirin (no-vas'pir-in). Methylene-citrylsalicylic acid, $C_{20}H_{16}O_{11}$. Its systemic action and uses are probably much like those of salicylic acid.

novatophan (no-vat'o-pan). The ethyl ester of paratophan. Its actions and uses are the same as those of atophan, over which it has the advantage of being practically tasteless.

novocain (no-vo-ka'in). The hydrochlorid of para-amino-benzoyl-diethyl-amino-ethanol, $(CH_2(C_6H_{11}.NH_2.COO).CH_2(N(C_2H_5)_2HCl)$. Its action and uses are much like those of cocain, but it is less toxic. The nitrates of this base may be used with silver salts.

noxa (noks'ah). A materies morbi.

noxious (nox'shus). Hurtful; pernicious. [Lat., *noxius*.]

nubile (nu'bil). Marriageable; capable of fertilizing or of being fertilized. [Lat., *nubilis*, from *nubere*, to wed.]

nubil'ity. Capability for marriage (properly speaking on the part of males). [Lat., *nubilitas*, from *nubere*, to marry.]

nucha (nu'kah). The nape of the neck. [Lat.]

nuchal (nu'kal). Pertaining to the nucha. **nucin** (nu'sin). See *juglone*.

nucista (nu-sis'tah). A nutmeg. **bal-samum nucistae**. Syn.: *ceratum myrsiticæ*. 1. Expressed oil of nutmeg. 2. A mixture of yellow wax, of olive oil, and expressed oil of nutmeg. [Lat., *nux*, a nut.]

Nuck's canal. Syn.: *canal of Nuck*. A pouch of peritoneum, which descends a short distance along the round ligament. It is the analogue of the processus vaginalis peritonei in the male. [Anton Nuck, Dutch anatomist, 1650-1682.]

nuclear (nu'kle-ar). Pertaining to a nucleus.

nuclease (nu'kle-ās). Any enzyme causing hydrolysis of the nucleic acids.

nucleated (nu'kle-a-ted). Containing a nucleus.

nuclein (nu'kle-in). A modified nucleoprotein, obtained by peptin digestion or by treatment with dilute acids. Its actions and uses are similar to those of nucleic acid and nucleates. It is said to increase the number of white blood corpuscles in the blood, and thereby increase its resistance to infection, but its exact value has not been demonstrated. The term n. has been erroneously used for impure nucleic acid and for nucleates.

nu'cleo-. Combining form of Lat., *nucleus*, dim. of *nux*, a nut; used as a prefix to signify of or pertaining to a nucleus.

nucleolar (nu-kle'o-lar). Of, pertaining to, or resembling a nucleolus.

nucleo'olo-. Combining form of Lat., *nucleolus*, a little nut; used as a prefix to denote of, or pertaining to the nucleolus.

nucleolus (nu-kle'o-lus). A small body or group of bodies situated within a nucleus. Its nature and function are still uncertain. [Lat., dim. of *nucleus*.]

nucleoplasm (nu'kle-o-plasm). The more solid substance forming the reticulum and membrane of a cell nucleus. See *karyoplasm*, **germinal n.** See *germ plasma*, under *plasma* (1st def.). **histogenetic n.** See *histogenetic plasma*, under *plasma*. **ovogenous n.** Histogenetic n. in the ovum which controls the formation of egg membranes, yolk, etc. In contradistinction to the term *plasma*. **somatic n.** See *histogenetic plasma*, under *plasma*. **spermogenous n.** N. in the spermatozoid which controls the development of the tail, etc., in contradistinction to the proper generative or germ plasma. [Lat., *nucleoplasma*, from *nucleus*, a little nut, + Gr., *plassein*, to mold.]

nucleoprotein (nu'kle-o-pro'te-in). One of a group of compound proteins consisting of a compound of simple protein with nucleic acid; an important constituent of the cell nucleus.

nucleotoxin (nu-kle-o-toks'in). 1. A toxin found in the nuclei of cells. 2. A toxin acting upon the nuclei of cells.

nucleus (nu'kle-us). 1. The comparatively large body within and usually near the center of any typical cell and forming an integral part of it. The n. is a special agent in cell multiplication, a regulating center for protoplasmic movement, and has a direct influence on digestion. 2. In chemistry, the elements of a radicle which give the latter its characteristic form and about which all the other elements of the radicle are considered to be grouped; specifically, in the chemistry of the hydrocarbons, the carbon ring apart from the hydrogen atoms and side chains united to it. 3. Any one of the separate masses of gray matter in the medulla oblongata, the floor of the fourth ventricle, and the aqueduct of Sylvius that represent the gray cornua of the spinal cord in its intracranial portion. **abducens (facialis) n., abducent n.** A gray n. in the fasciculus teres, on the floor of the fourth ventricle, behind the trigeminal n., and extending close up to the anterior stria medullaris. **accessory auditory n.** A ganglionic mass on the lateroventral aspect of the restiform body at the convergence of the two roots or divisions of the auditory nerve. **amygdaloid n.** A mass of gray matter forming the anterior extremity of the descending cornu of the lateral ventricle, and connected with the claustrum. **arcuate n.** The largest of the masses of cinerea in the arciform fibers of the pyramids on the ventral side. **auditory nuclei.** Nests of nerve cells

in the oblongata from which the auditory nerve arises. **Burdach's n.** See *cuneate n.* **caudal n.** See *oculomotor n.* **caudate n.** The intraventricular portion (or ganglion) of the corpus striatum, a pyramidal body on the floor of the anterior cornu of the third ventricle, composed mainly of gray matter traversed by white fibers from the internal capsule. Microscopically it is made up of multipolar nerve cells, which are probably connected with the surrounding fibers. **central n. of Roller.** A ganglionic mass in the oblongata near the rhaphe and between the lemniscus on the ventral side and the fasciculus longitudinalis posterior on the dorsal side. **chromatic n.** The principal n. of a cell as distinguished from the accessory n. or corpuscle. **cleavage n.** See *segmentation n.* **common n. of the third and fourth cranial nerves, common oculomotor n.** A collection of ganglion cells in the floor of the aqueduct of Sylvius. **cuneate n.** Syn.: *Burdach's n.* The elongated mass of ganglionic substance appearing in the external posterior column of the postoblongata at the level of the established pyramids and extending nearly to the pons. **cuneiform n.** See *ala cinerea*. **daughter nuclei.** The nuclei (usually two) produced by the division of a mother nucleus. **Deiters's n.** A collection of cells situated back of the acoustic n. **dentate n.** See *corpus dentatum*. **ectoblastic n.** A n. in one of the cells of the epiblast. **emboliform n.** A small mass of gray matter lying to the inner side of the corpus denticulatum. **endothelial n.** One of the nuclei of connective tissue corpuscles in serous membranes. **entoblastic n.** A n. in a hypoblast cell. **external accessory olivary n.** A small collection of gray matter on the dorsal aspect of the olivary n. **facial n.** Ganglionic mass forming origin of seventh cranial nerve. **free nuclei.** Cell nuclei without a cell body, so called in accordance with the original conception of cell genesis advanced by Schwann and Schleiden. It was supposed that the n. was developed before the cell body, and in many cases independently of it, and that it might exist for a time before the cell body was developed around it. **gelatinous n.** A n. in the substantia gelatinosa of the oblongata. **germinal n., germ n.** The n. resulting from the fusion of the male and female pronuclei. **glossopharyngeal n.** The n. of the glossopharyngeal nerve; continuous with the nuclei for the pneumogastric and spinal accessory nerves. **gracile n.** A slender elongated ganglionic mass appearing in the median posterior column of the postoblongata and extending cephalad nearly to the pons. **gray central n.** 1. The central gray matter of the spinal cord. 2. See *lamina cinerea*. 3. See *gray tubercle of Rolando*. 4. The gray n. of the optic thalamus, a group of masses of gray matter scattered about at irregular intervals, distinguished as the external and internal nuclei. **gustatory**

n. The sensory glossopharyngeal **n.** **hypoglossal n.** Either of two nuclei, one of which, the large-celled **n.**, chief or main hypoglossal **n.**, is situated in the postoblongata somewhat ventrad of the central canal and very close to the meson. The second **n.** is the small-celled **n.** of Roller. This is an indistinctly circumscribed, round clump of small nerve cells lying close against the ventral side of the main **n.** **internal accessory olivary n.** See *median internal accessory olivary n.* **intraventricular n.** See *caudate n.* **large-celled auditory n.** A mass of large nerve cells situated mesad of the restiform body. **lenticular n.** 1. See *n. lentis*. 2. In the corpus striatum, the gray matter of its extraventricular portion. **main n.** The larger or principal of the ganglionic oculomotor nuclei. **median internal accessory olivary n.** A ganglionic mass situated at the mesal or inner side of the olive, and dorsad of the anterior pyramid. **mesoblastic n.** A **n.** belonging to a cell of the mesoblast. **mother n.** A **n.** that is in course of division into two or more parts called *daughter nuclei*. **motor n.** A ganglionic mass in the central nervous system from which motor nerve fibers arise. **muscle nuclei.** See *muscle corpuscles*, under *corpuscle. n.* **cochlearis.** The **n.** or nuclei of the cochlear division of the auditory nerve. **n. fastigii.** A mass of gray matter in the anterior portion of the white **n.** of the vermiform process, near the roof of the fourth ventricle. **n. lentis.** The **n.** or central portion of the crystalline lens, as distinct from its periphery or cortex. It is composed of the denticulated fibers. **nuclei of origin of a nerve.** The gray matter of the nervous center representing the deep origin of a nerve. **n. of the tegmentum.** A **n.** of gray matter, through which are scattered numerous ganglion cells of a red color, situated in the tegmental region of the crus cerebri. **n. of the trapezium.** See *superior accessory olivary n.* **nuclei pontis.** A number of multipolar nerve cells, lying between the bundles of nerve fibers near the lower or anterior portion of the pons Varolii. **n. pulposus.** The remnant of the notochord in the adult in man and other mammalia; it appears as a pulpy mass at the center of the intervertebral fibrocartilages. **n. pyramidalis.** The inner accessory olivary nucleus. **n. quadrigeminus.** The central ganglionic portion of the corpora quadrigemina. **oculomotor n.** The **n.** of origin of the third or oculomotor nerve. **quintus n.** The trigeminal **n.** **red n.** See *n. of the tegmentum*. **restiform n.** The central gray matter of the restiform body. **roof n.** See *n. of the tegmentum*. **segmentation n.** The **n.** formed by the union of a male and female pronucleus, undergoing segmentation. Also called *cleavage n.* **sensory n.** A nucleus of nerve cells forming the origin of the sensory portion of the trigeminal nerve. **spermatic n.** A spermatozoid after it has

given off the counterpart of the extrusion globule in the ovum. **spheroidal n.** 1. A cell **n.** of rounded form. 2. A rounded ganglionic mass or nidus in the central or peripheral nervous system. **Stilling's diffused nuclei pyramidales.** See under *Stilling*. **styloid n.** A small bony nodule found in the cartilages uniting the lesser (styloid) cornua and the body of the hyoid bone. **subependymal n.** The internal nucleus of the auditory nerve. **subthalamie n.** Syn.: *corpus subthalamicum*. A lenticular mass of gray substance in the subthalamie region, containing many pigmented ganglion cells and surrounded by a layer of white matter. **superior accessory olivary n.** A body imbedded in the pons Varolii, similar to the lower olivary body of the medulla oblongata, but smaller. **triangular n.** The cuneate nucleus. **trochlear n.** The ganglionic mass of the gray aqueduct, giving origin to the fibers of the fourth nerve. **vagus n.** The portion of the accessorio-glossopharyngeal nuclei giving origin to the pneumogastric nerve. **vesicular n.** A **n.** having a membrane and one or more nucleoli. **vitelline n.** A body formed by the union of the male and female pronuclei within the vitellus. **white n.** The central white substance of the corpus dentatum of the olive. [Lat., *nucleus*, kernel, from *nux*, nut.]

nu'di-. Combining form of Lat., *nudus*, nude; used as a prefix to denote uncovered.

nullipara (nul-lip'ah-rah). A woman who has not borne children. [Lat., *nullus*, none, + *parere*, to bring forth.]

nulliparous (nul-lip'ar-us). Having never brought forth young (sometimes restricted to one that has not been pregnant). [Lat., *nullus*, none, + *parere*, to bring forth.]

nummiform (num'me-form). Having the shape of a coin. [Lat., *nummus*, a coin, + *forma*, form.]

nummular (num'mu-lar). Coinlike; term used to describe sputa. [Lat., *nummulus*, money.]

nummulation (num-u-la'shun). The aggregation of red blood corpuscles into rolls, like coins placed face to face. [Lat., *nummulus*, dim. of *nummus*, money.]

Nuphar (nu'far). A genus of plants including the pond lily. **N. lutea**, **N. luteum**. Yellow water lily, the Gr., *nunphaia cetera* of the ancients. The root flower and seed were formerly used like those of *Nymphaea alba*. [Gr., *nouphar*.]

nuptiality (nup-she-al'ti-e). The ratio of the number of marriages to population in a community. [Lat., *nuptiae*, nuptials.]

nur'sing. 1. Lactation. 2. The act of giving suck. 3. The act of taking the breast. 4. Attention to the sick.

nuta'rian. One who lives chiefly on nuts. **nutation** (nu-ta'shun). A nodding or oscillating movement. **n. of the sacrum.** A partial rotation of the sacrum on its transverse axis, whereby either its upper or its lower extremity recedes from the

anterior wall of the pelvis, so as to give greater space for the passage of the fetus. [Lat., *nutatio*, from *nutare*, to nod.]

nut'gall. An abnormal growth upon the leaves of oak trees, caused by the puncture of insects. N's are rich in tannic acid. They have an astringent and acidulous taste and little odor. In modern medicine they are seldom used internally. See also *galla*.

nut'meg. The kernel or nucleus of the seed of various species of *Myristica*, especially *Myristica fragrans* (*officinalis*). [Lat., *myristica*, U. S. Ph., Br. Ph.]

nu'trin. A proprietary preparation of meat.

nutrition (nu-trish'un). The function possessed by living organisms of repairing tissue waste by the absorption and assimilation of new alimentary materials; also the state of general well-being kept up by that function. [Lat., *nutrire*, to nourish.]

nutritive (nu'tre-tiv). Having the property of nourishing.

nu'trol. A proprietary digestive preparation said to contain maltose, dextrose, pepsin, and hydrochloric acid.

nutrolactis (nu-tro-lak'tis). A proprietary preparation made from *Galega officinalis*, *Galega tephrosia*, and *Tephrosia apollinea*. Claimed to be a galactagogue.

nu'trose. Sodium caseinate, containing 65 per cent. of proteids. Nutritive.

nux vom'ica. Syn.: *nuces vomicae*, *semen nucis vomicae*. Of the U. S. and Br. Ph's, the seeds of *Strychnos n. v.* N. v. contains two poisonous alkaloids (strychnin and brucin) combined with igasuric acid and loganin. The properties and uses of n. v. are those of its chief alkaloid, strychnin. List of poisons and their antidotes, see in *appendix*, page 940.

extractum nucis vomicae alcoholicum. [U. S. Ph., Br. Ph.]. An extract of n. v. containing 5 per cent. of strychnin.

extractum nucis vomicae fluidum. The fluidextract of n. v., which must assay 1 per cent. of strychnin

[U. S. Ph.]. **extractum nucis vomicae liquidum.** The liquid extract of n. v. of the Br. Ph. must contain 1.5 per cent. of strychnin [Br. Ph.].

tinctura nucis vomicae. The tincture of n. v. of the U. S. Ph. is required to contain 0.1 per cent. of strychnin; that of the Br. Ph. 0.125 per cent. [U. S. Ph., Br. Ph.]. [Lat., *nux*, *nucis*, nut, + *vomere*, to vomit.]

nyctal'gia. Pain that occurs in sleep only.

nyctalopia (nik-tal-o'pe-ah). Night-blindness; sometimes used in a reverse sense, the patient seeing better in an obscure light than in bright sunlight. [Gr., *nyx*, night, + *alaos*, blind, + *ops*, eye.]

nycthemerus (nik-them'e-rus). Pertaining to night and day; lasting a night and a day; ephemeral; as a n. in the neut., *nycthemeron*, the space of a night and a day. [Gr., *nycthemeros*.]

nyctophobia (nik-to-fo'be-ah). Morbid dread of darkness.

Nyctotherus (nik-toth'er-us). A protozoon of the phylum *Ciliata* and the order *Heterotricha*, being a bean-shaped organism with a large peristome and a macro-nucleus. The various species are parasitic in the intestines of *Amphibia*, *Insecta*, and *Myriapoda*, but *N. faba* has been found in the diarrheal discharges of man. Other species known in man are, *N. giganteus* and *N. africanus*.

nycturia (nik-tu're-ah). Night bed-wetting.

Nylander's reagent. A filtered solution of Rochelle salt, bismuth subnitrate, and sodium hydrate in water. Used to test for sugar. See also *Böttger's test*.

Nylander's sugar test. See *Böttger-Almen-Nylander's sugar test*, under *Böttger*.

nympha (nim'fah). 1. See *chrysalis*. 2. See *labia pudenda minor*, under *labium*.

nymphae pendulae. Elongated, pendulous labia minora. [Gr., *nympha*, *nymphe*, bride.]

Nymphaea (nim-fe'ah). The typical genus of the water lilies. **N. odorata.** American sweet-scented water lily. The rhizome contains much tannin and gallic acid. [Gr., *nymphaia*.]

nymphec'tomy. Surgical removal of the hypertrophied nymphae.

nymphitis (nim-fi'tis). Inflammation of the nymphae.

nymphomania (nim-fo-ma'ne-ah). Excessive uncontrollable venereal desire in the female. [Gr., *nymphe*, a bride, + *mania*, madness.]

nymphotomy (nim-fo't'o-me). 1. Excision of a portion of the nymphae. 2. Clitoridectomy. 3. A religious rite, analogous to circumcision, practiced on females among certain Oriental peoples. [Gr., *nymphe*, a bride, + *tome*, a cutting.]

Nyssa (nis'sah). A genus of trees including the gum tree. **N. grandidentata.** A species the root of which (tupelo root) is used for making surgical tents.

nystagmus (nis-tag'mus). A rapid lateral or rotatory oscillation of the eyeball, either continuous or intermittent and involuntary or nearly so. **miner's n.** An acquired form of n. prevalent in certain coal mines. **vertical n.** N. in which the oscillations are in the vertical meridian. **vestibular n.** N. due to aural disturbance. [Gr., *nystazein*, to roll.]

nyxis (nik'sis). Paracentesis.

O

O. Chemical symbol for the element *oxy-
gen*.

o. In chemistry an abbreviation for *ortho-*
oak bark. See *Quercus*.

oakum (ôk'ûm). Shreds of rope; used as
a substitute for lint. [Old Eng., *acumbe*.]

ob-. Combining form of Lat. preposition,
ob, towards, against, in the way of; used
in compound words, as *obcordate*, inver-
sely conical, *obovoid*, egg-shaped with the
large end up, *obstipation*, excessive con-
stipation.

obcordate (ob-kord'ât). Inversely heart-
shaped. [Lat., *ob*, against, + *cor*, the
heart.]

obdormition (ob-dor-mish'un). The ting-
ling numbness produced in a limb by
pressure on the nerve trunk supplying it.
[Lat., *obdormitio*, from *ob*, against, +
dormire, to sleep.]

obduction (ob-duk'shun). A post mortem
examination.

obelon (o-be'le-on). The point in the
median line where a line running between
the two parietal foramina intersects the
sagittal suture of the skull. [Gr., *obelos*,
a spit.]

Obermayer's indican test (o'ber-mi-erz
in'di-can). A test for indican in the
urine, which resembles the Jaffe test.
The urine is made slightly acid with
acetic acid and then treated with an
excess of basic lead acetate. The filtrate
is then treated with an equal volume of
concentrated hydrochloric acid, which con-
tains a small amount of ferric chlorid,
and then shaken vigorously with 2 to 3
c.c. of chloroform. Indigo is formed,
which dissolves in the chloroform, giving
it a blue tinge. **O's reagent.** A solution
of ferric chlorid in concentrated hydro-
chloric acid. [Fritz Obermayer, Viennese
physician, born 1861.]

Obermeier's spirillum (o'ber-mi-erz spi-
ril'um). Spirillum of relapsing fever.

O'bermiller's cholest'erin reaction.

This consists of fusing cholesterin at a
low temperature, with a small amount of
propionic anhydrid. A mass is obtained
which, upon cooling, changes from a violet
to a blue, green, orange, and red color.

obesity (o-bes'it-e). Superabundance of
adipose tissue in different parts of the
body. [Lat., *obesitas*.]

obex (o'beks). A thickening of the epen-
dyma at the point of the calamus scrip-
torius. [Lat., *obex*, barrier.]

obfuscation (ob-fus-ka'shun). The pro-
cess of making obscure. [Lat., *obfusca-
tio*, darkening.]

objective (ob-jek'tiv). 1. Of symptoms,
revealed by physical examination, as op-
posed to those that are *subjective*. 2. A
lens or combination of lenses in an optical
instrument which is next the object and
serves to form a real image of it. With

the microscope and telescope this real
image is then observed with an ocular.

achromatic o. An o. of a microscope in
which the lenses eliminate the color or
chromatic aberration. **dry o.** An o. in
which the space between the front lens
and the object is filled with air. **homo-
geneous immersion o.** An o. in which
the immersion fluid has the same refrac-
tive index as crown glass; frequently des-
ignated as oil immersion o., as thickened
cedar oil is the commonest homogeneous
immersion fluid. **immersion o.** A mi-
croscope o. in which the space between
the front lens and the object or the cover
glass is filled with some liquid. [Lat.,
objecere, to throw before.]

obligate (ob'lig-ât). Necessary, essential.
o. aërobie. Living and developing only
in the presence of oxygen, as with cer-
tain bacteria. **o. anaërobie.** Living
and developing only when oxygen is ex-
cluded. [Lat., *obligatus*.]

oblique (ob-lèk', ob-lik'). Slanting, direct-
ly between the horizontal and vertical; as
a n., an o. muscle. [Lat., *obliquus*, from
obliquare, to bend.]

obliquity (ob-lik'wi-te). The condition of
being oblique. **o. of the fetal head.** 1.
A position of the head in which its long
diameter coincides more or less with one
of the oblique diameters of the pelvis.
2. Flexion of the fetal head to one side
when it presents at the brim of the pel-
vis. **o. of the uterus.** The state in
which its anteroposterior median plane
is not coincident with that of the trunk.

obliquus (ob-li'kwus). See *Table of Mus-
cles*, under *muscle*. [Lat.]

oblongata (ob-long-a'tah). See *medulla
oblongata*, under *medulla*.

obsession (ob-sesh'un). A dominating
idea; a compulsive type of thinking.

obsolescence (ob-so-les'ens). The condi-
tion of passing into disuse; simple atrophy.
[Lat., *obsolescere*, to fall into disuse.]

obsolete (ob'so-lè't). Gone out of use.

obstetric, obstetrical (ob-stet'rik, ob-
stet'rik-al). Pertaining to obstetrics.

obstetrician (ob-stet-rish'an). A practi-
tioner of obstetrics.

obstetrics (ob-stet'riks). The medical and
surgical management of pregnancy, par-
turation, and the puerperium. [Lat., *ob-
stetricus*, from *obstare*, to stand before or
against.]

obstipation (ob-stip-a'shun). Intestinal
obstruction, especially obstruction of a se-
verer type than ordinary constipation.
[Lat., *obstipatio*.]

obstruction (ob-struk'shun). A stopping
or blocking up, especially the blocking
up of any organ or any tubular tract so
as to prevent the normal free flow of its
contents. [Lat., *obstruere*, to build be-
fore.]

obstruent (ob/'stru-ent). A medicine which closes the orifices of ducts or vessels; an astringent remedy. [Lat., *obstruere*, to obstruct.]

obtundent (ob-tun/'dent). Serving to deaden the sensibility of a part or to reduce irritability. [Lat., *obtundere*, to make blunt.]

obturation (ob-tu-'ra'shun). The closure or stoppage of an opening or passage. **o. of the teeth.** The filling of cavities produced by caries in teeth with a substance capable of resisting the destructive action of the fluids or the force of mastication.

obturator (ob'tu-'ra-tor). That which closes an opening or cavity or which pertains to a structure that effects such closure (see under *canal*, *foramen*, *membrane*, and *Table of Nerves*); specifically, in anatomy, a muscle which closes an opening. See *Table of Muscles*, under *muscle*. [Lat., *obturare*, to stop up, from *ob*, against, + *Gr.*, *thura*, door.]

occipital (ok-sip-'it-al). Pertaining to the occiput. [Lat., *occipitalis*, from *ob*, against, + *caput*, head.]

occipitalis (ok-'sip-it-al'is). See *occipital*; also in *Table of Muscles*, under *muscle*.

occipito-. Combining form of Lat., *occiput*; used in compound words to signify a relationship between the occiput and another part.

occipito-anterior (ok-sip-'it-o-an-te're-or). Of the fetal head, having the occiput directed forward in relation to the mother.

occipito-atloid (ok-sip-'it-o-at'loid). Pertaining to the occiput and the atlas.

occipito-axoid (ok-sip-'it-o-aks'oid). Pertaining to the occiput and the axis.

occipitobregmatic (ok-sip-'it-o-breg-mat'ik). Pertaining to the occiput and the bregma.

occipitofacial (ok-sip-'it-o-fa'se-al). Pertaining to the occiput and the face.

occipitofrontal (ok-sip-'it-o-fron'tal). Pertaining to or extending between the occiput and the forehead.

occipitofrontalis (ok-sip-'it-o-fron-tal'is). See *Table of Muscles*, under *muscle*.

occipitomastoid (ok-sip-'it-o-mas'toid). Pertaining to the occiput and the mastoid process.

occipitomenal (ok-sip-'it-o-men'tal). Extending from the occiput to the chin.

occipitoparietal (ok-sip-'it-o-par-i'et-al). Pertaining to the occipital and parietal bones.

occipitoposterior (ok-sip-'it-o-pos-te're-or). Of a fetal position, having the occiput lying toward the mother's sacrum.

occipitotemporal (ok-sip-'it-o-tem'po-ral). Pertaining to the occipital and temporal regions.

occiput (ok'se-put). The posterior portion of the head. [Lat., *ob*, against, + *caput*, head.]

occlusion (ok-lu'shun). 1. The act of stopping up or the state of being stopped up; said of a passage or an opening. 2.

In chemistry, the adsorption of a gas by a solid substance, not caused by a chemi-

cal affinity between the two substances. Finely divided carbon at a temperature of 19° has an extremely great power of o. for air. 3. In dentistry, the term is applied to the upper teeth striking on the lower when the jaws are closed. [Lat., *occlusio*, from *occludere*, to shut up.]

occulustro (ok-u-lus'tro). A potassium oleate soap containing glycerin and oil of turpentine.

occlusion, etc., statement of; see in *appendix*, page 933.

ochlesis (ok-le'sis). Disease due to overcrowding.

Ochromyia anthropoph'aga. A yellowish gray fly of Africa, whose larva burrows beneath the skin of man and beast, producing inflammatory swellings.

ochronosis (ok-ron-o'sis). A dark colored diffuse pigmentation resembling melanin, which affects the ear cartilages, the tendons, the periosteum, the intima of the arteries, the epithelium, and sometimes the intercellular substance. [Gr., *ochros*, yellow, + *nosos*, disease.]

Ocimum basilicum (os'im-um bas-il'ik-um). Sweet basil; a widely cultivated, aromatic plant.

oc'ta-, oc'to-. Combining form of Gr., *okto*, eight; as in *octopus*, *octoroon*, *octogenarian*.

octane (ok'tan). A hydrocarbon, C₈H₁₈, of the paraffin series. [Gr., *okto*, eight.]

octoroon (ok-to-roon'). The child of a white person and a quadroon.

octyl (ok'til). A univalent radicle, C₈H₁₇; also called *capryl*.

ocular (ok'u-lar). Of or belonging to the eye; conducted by means of the sense of sight (said of an examination); as a n., an eyepiece; the part of a compound optical apparatus, such as a telescope or microscope, into which the observer looks.

achromatic o. An o. in which the chromatic aberration is wholly or nearly eliminated.

aplanatic o. An o. corrected for spherical aberration, with the chromatic aberration usually eliminated.

binocular stereoscopic o. An o. composed of two o's about as far apart as the two eyes and connected with a single tube which is put in place of the o. of a unicocular microscope.

compensating o. An o. especially constructed for use with apochromatic objectives and serving to correct or compensate for aberrations in the objectives outside the axis.

erecting o. An o. with which an erecting prism is connected so that the image in the compound microscope appears erect as with a simple microscope; it is mostly used for dissecting microscopes.

goniometer o. An o. with a goniometer for measuring the angles of microscopic crystals.

Huygens's o. See under *Huygens*.

micrometer o., micrometric o. An o. with which is connected a micrometer for the purpose of measuring the real image of objects.

microscopic o., microscopical o. An o. consisting of one or more converging lenses or lens systems, the combined action of which is like that of a simple microscope, magnifying

the real image formed by the objective, **negative o.** An o. in which the real image is formed somewhere between the two lenses or lens systems of the o. **orthoscopic o.** An o. with an eye lens like one of the combinations of an objective, and a double convex field lens in the focus of the eye lens. It gives a large, flat field. **parfocal o's.** Of Pennock, o's so mounted or so constructed that they may be interchanged without the microscopic image getting out of focus. **periscopic o.** A positive o. devised by Gundlach. It has a double convex field lens and a triplet eye lens. **positive o.** An o. in which the real image formed by the objective is below the o. **projection o.** An o. especially designed for projecting the image formed by a microscopic objective on a screen for class demonstration or for photography. **Ramsden's o.** See under *Ramsden*. **searching o., seeker o.** A low o., used especially with high objectives, for the purpose of finding or locating minute objects or parts for study with the working o's. **solid o.** A negative o. devised by Tolles, consisting of a solid piece of glass with a moderate curvature at one end for a field lens and a much greater curvature at the other for an eye lens. It is especially adapted for use when a high o. is desired. **working o.** An o. used for ordinary microscopic observation, in contradistinction to a searching o. (*q. v.*). [Lat., *oculus*, the eye.]

oculin (ok'u-lin). A glycerin extract of the ciliary body of the ox.

oculist (ok'u-list). A person occupied chiefly with the study and treatment of diseases of the eye. [Lat., *oculus*, the eye.]

oculomotor (ok'u-lo-mo'tor). Moving the eye; as a n., the o. nerve. [Lat., *oculus*, the eye, + *movere*, to move.]

oculomotorius (ok'u-lo-mo-to're-us). The third, or oculomotor, nerve.

oculonasal (ok'u-lo-na'sal). Distributed or pertaining to the eye and the nose.

oculozygomatic (ok'u-lo-zi-go-mat'ik). Pertaining to the region of the eye and to the zygomatic arch.

O. D. Abbreviation for *oculus dexter*, right eye.

od. Of Reichenbach, a force supposed to produce the phenomena of mesmerism.

o'dol. A proprietary mouth wash, composed of salol, volatile oils, alcohol, and some form of sweetening.

odontalgia (o-don-tal'je-ah). Pain in a tooth. [Gr., *odous*, tooth, + *algos*, pain.]

odontiasis (o-don-ti'as-is). See *dentition*. [Gr., *odontian*, to cut teeth.]

odontin (o-don'ten). A fanciful name for various dentrifices and remedies for toothache.

odontinoid (o-don'tin-oyd). Resembling or having the nature of teeth. A preferable form for *dentinoid*. [Gr., *odous*, a tooth, + *eidosis*, resemblance.]

odon'to-, o'dont-. Combining form of Gr., *odous*, tooth.

odontoblast (o-don'to-blast). Syn.: *med-*

ullary corpuscle, odontoblastic cell. A columnar cell forming the superficial layer of the dental pulp and sending processes into the dentinal tubules. These cells produce the dentin. [Gr., *odous*, tooth, + *blastos*, bud.]

odontodol (o-don'to-dol). A certain dental anodyne containing cocain.

odontogeny (o-don-toj'en-e). The embryology of the teeth. [Gr., *odous*, tooth, + *gennan*, to engender.]

odontography (o-don-tog'raf-e). See *odontology*. [Gr., *odous*, tooth, + *graphein*, to write.]

odontoid (o-don'toyd). Toothlike. **o. process.** See *process*. [Gr., *odous*, tooth, + *eidosis*, resemblance.]

odontolith (o-don'to-lith). A salivary calculus. [Gr., *odous*, tooth, + *lithos*, stone.]

odontolithus (o-don-to'l'ith-us). Tartar on the teeth; calculus in the cavity of a tooth. [Gr., *odous*, a tooth, + *lithos*, a stone.]

odontology (o-don-to'l'o-je). The anatomy, etc., of the teeth. [Gr., *odous*, tooth, + *logos*, understanding.]

odontoloxia (o-don-to-loks'e-ah). Obliquity of the teeth. [Gr., *odous*, tooth, + *loxos*, slanting.]

odontoma (o-don-to'mah). A small tumor composed of dentin. Sometimes any hard outgrowth. [Gr., *odous*, tooth, + *oma*, tumor.]

odontosis (o-don-to'sis). See *dentition*. [Gr., *odous*, a tooth.]

odoriferant, odoriferous (o-dor-if'er-ant, o-dor-if'er-us). Emitting an odor, especially an agreeable one. [Lat., *odor*, an odor, + *ferre*, to bear.]

O'Dwyer's tube. A metal tube used for intubation of the larynx after the method introduced by O'Dwyer. [Joseph O'Dwyer, New York physician, 1841-1898.]

Oedipus complex. In psychoanalysis the instinctive and unconscious rivalry of the son with the father for the mother, or daughter of mother.

oese (e'ze). A looped platinum wire within a glass rod, for handling fluid bacterial cultures. [Ger., *loop*.]

Oesophagostomum. A genus of parasitic nematode worms of the family *Strongylidae* found in the intestinal wall of man and of many domestic animals in Africa. The parasite forms cysts and the eggs are hatched in water, thus reaching a fresh host. **Oe. Brumpti.** A species found in cystlike nodules in the cecum of man. **Oe. stephanostomum.** A species found in multiple tumors of the intestine in man.

official (of-fish'al). Of medicines, authorized by holding a place in a pharmacopeia. In the United States, articles included in the National Formulary are also official. The word official in this sense is incorrect. [Lat., *officium*, an office.]

officina (of-fis'e'nah). A workshop, a laboratory; specifically, an apothecary's shop.

official (of-fis'in-al). 1. Pertaining to a workshop, especially to an apothecary's shop; of medicines, kept ready for use (opposed to *magistral* [*q. v.*]). 2. As

sometimes improperly used, official (*q. v.*). [Lat., *officinalis*, from *officina*, a workshop.]

ogodo (o-go'do). Another name for yaws. **ohm**, **ohmad** (ôm, ô'mad). In electro-physics, the unit of resistance. The legal ohm is the resistance at 0° C. of a column of mercury 106 cm. in length and 1 mm. in cross-section. [*G. S. Ohm*, a German professor of physics, 1787-1854.]

Ohm's law. The l. stating the relations between resistances, amount of current and electromotive force as $C = \frac{E}{R}$, in which

C=current, E=electromotive force, and R=resistance. [*Georg Simon Ohm*, German physicist, 1787-1854.]

-oid. A suffix from Gr., *eidōs*, form, through *eides* and *ooides*, having the form or likeness of.

Oidium (o-id'e-um). A genus of the order *Ascomycetes*, with the preferable generic name of *Endomyces*. **O. albicans**. Syn.: *Endomyces albicans*, *Aphthaphyte*, *Monilia albicans*. Cotton fungus, fungus of thrush; a species the filaments and spores of which make up the flakes and patches characteristic of stomatitis parasitica. According to Grawitz, it is a transitional form of *Mycoderma vini*. **O. furfur**. Syn.: *Malassezia furfur*. The cause of pityriasis versicolor. See *Microsporon furfur*. **O. Schoenleinii**. The cause of favus. See *Achorion Schoenleinii*, under *Achorion*. **O. tonsurans**. Syn.: *Trycophyton tonsurans*. The cause of tinea capitis. **O. tropicale**. A species producing bronco-oidiosis. [Gr., dim. of *oon*, egg.]

oikology (oi-kol'o-je). Sanitation of houses. [Gr., *oikos*, house, + *logos*, treatise.]

oikosite (oi'ko-sit). An animal parasite that is fixed to its host. See *coinosite*.

oil. 1. A more or less greasy liquid or viscous substance, of animal or vegetable origin, composed of glycerin combined chemically with an animal or vegetable acid. In a more comprehensive sense the term includes, besides the fluid fixed o's and the volatile o's, the waxes, solid fats, tallow, and mineral hydrocarbons, all of which, though differing widely in physical and chemical characters, possess the property of ready inflammability and are compounds chiefly of carbon and hydrogen. They are also mostly insoluble in water. 2. Any substance of an oily consistency, such as sulphuric acid (o. of vitriol). **Carron o.** An emulsion made up of lime water and linseed o. in equal proportions; first employed at the iron works at Carron, in Scotland, for the treatment of burns. It is the linimentum calcis [U. S. Ph.]. **cedar o.** See *o. of cedar*. **Dippel's animal o.** See under *Dippel*. **distilled o's.** See *volatile o's*. **essential o.** A volatile o.; so called because it contains, in a concentrated state, the active properties of the plant or part of the plant from which it is obtained. **ethereal o.** 1. A mixture of equal

parts of heavy oil of wine and ether. 2. A volatile o. **expressed o's**, **fat o's**, **fatty o's**. See *fixed o's*. **ferment o's**. Volatile o's (probably alcohols or compound ethers) produced in the fermentation of bruised vegetables or their expressed juice. **fixed o's**. Also called simply *o's*. Non-volatile fats; peculiar compounds obtained by expression from various organic substances. They are insoluble in water, slightly soluble in cold alcohol, easily soluble, as a rule, in ether and in chloroform. When pure they are often without color, taste, or smell. **neat's foot o.** A yellowish odorless o. of mild taste obtained by boiling the feet of the ox without the hoofs for some time in water, removing the fat, and then purifying. It is little used medicinally. **o. immersion lens**. A lens which must be immersed in o. in order to properly focus the light rays for the examination of bacteria. **o. of cedar**. Syn.: *cedar wood oil*. A thick oil used for the immersion lens in examining bacteria. **o. of cloves**. An o. used for clearing stained sections of tissue before mounting them for microscopic examination. **olive o.** The o. obtained from the fruit of the olive tree. It contains about 65 per cent. olein, 6 per cent. linoleic acid, 1 per cent. ester of glycerin, and 28 per cent. stearin and palmitin. It is used as a food, as a lubricant, and in the preparation of soap and of salves. **sweet o.** See *olive o.* **virgin o.** The finest brand of olive o., obtained from olives picked before they are quite ripe and gently pressed immediately. **volatile o's**. Various odorous oily products of compound distillation from vegetable substances, insoluble or but sparingly soluble in water, more soluble in alcohol and in ether. They are inflammable, tend to become resinous in the air, and usually have an agreeable odor. [Lat., *oleum*.]

ointment. Syn.: *unguent*. 1. A pharmaceutical preparation of the consistence of butter. 2. See *unguentum*. **basilicon o.** The *ceratum* (or *unguentum*) *resinae* of the U. S. Ph. and Br. Ph. **blue o.** See *unguentum hydrargyri*, under *hydrargyrum*. **citrine o.** See *unguentum hydrargyri nitratis*, under *hydrargyrum*. **mercurial o.**, **Neapolitan o.** See *unguentum hydrargyri*, under *hydrargyrum*. **simple o.** See *unguentum*.

okra, okro (o'krah, o'kro). See *Abelmoschus esculentus*.

Olea (o'le-ah). A genus of oleaceous trees or shrubs. **fructus oleae**. See *olive* (1st def.). **O. europaea**. The European olive. The ripe fruit contains in its sarcocarp nearly 70 per cent. of olive oil. All parts of the plant (except the ripe fruits) contain mannite, the unripe fruits especially, from which it disappears as they ripen, being apparently transformed into olive oil. [Lat., *olea*, olive.] **oleaceous** (o-le-a'shus). Pertaining to or resembling the olive tree. **oleaginous** (o-le-aj'in-us). Oily. [Lat., *olea*, an olive.]

- oleandresin** (o-le-an'dre-sin). A decomposition product from certain glucosids of *Oleander*. It has a picrotoxinlike action.
- oleandrin** (o-le-an'drin). A glucosid discovered in *Nerium oleander*, having a digitalis action. It is but slightly soluble in water. [Lat., *oleandrinum*.]
- Oleaster** (o-le-as'ter). The genus *Elaeagnus*.
- oleate** (o'le-ât). 1. A salt of oleic acid. 2. Of the U. S. Ph., a solution of an oxid or an alkaloidal oleate in oleic acid.
- olecranal** (o-lek'ra-nal). Pertaining to the olecranon.
- olecranon** (o-lek'ra-non). The thick hook-shaped process forming the upper extremity of the ulna. It is broad above, and terminates there in the process forming the upper portion of the great sigmoid cavity and behind in a quadrangular subcutaneous surface. **o. fossa**. See under *fossa*. [Gr., *olekranon*, from *olene*, the elbow, + *kranion*, the skull.]
- olefant** (o-lef'e-ant). Literally, oil-making. [Lat., *oleum*, oil, + *facere*, to make.]
- olefins** (ol'ef-ins). The hydrocarbons of the ethylene series.
- oleic** (o-le'ik). Pertaining to, derived from, or present in oil. **oleic acid**. See under *acid*. [Lat., *oleicus*.]
- olein** (o'le-in). Syn.: *elain*. The glycerin ester of oleic acid, generally the one containing three oleic acid groups, known as triolein, present in many fats and oils, especially olive oil and fish oil. [Lat., *oleum*, oil.]
- o'leo-**. Combining form of Lat., *oleum*, oil.
- oleocresote** (o''le-o-kre'o-sôt). The oleic ester of creosote; used in tuberculous disease.
- oleomargarin** (o''le-o-mar'gar-in). A substitute for butter made from animal fat with the addition of some milk and other substances. Its nourishing value is practically the same as that of butter.
- oleoresin** (o''le-o-rez'in). Syn.: *etheral extract*. A natural product or a pharmaceutical preparation containing a volatile oil and a resin; prepared by extraction from the crude drug with ether. [Lat., *oleoresina*.]
- oleosaccharose** (o''le-o-sak'ar-ôs). A compound of saccharose with a volatile oil. [Lat., *oleum*, oil, + Gr., *sakcharon*, sugar.]
- oleosaccharum** (o''le-o-sak'ar-um). See *oleosaccharum*. [Lat., *oleum*, oil, + *sakcharon*, sugar.]
- oleum** (o'le-um). See *oil*. **o. cinereum**. An ointment made by triturating mercury to extinction with oil or liquid paraffin, varying in the amount of mercury from 1 to 33 per cent. **o. destillatum**. A volatile oil. **o. Dippellii**. See *Dippel's animal oil*. **o. etherum**. 1. See *etheral oil*. 2. Of the U. S. Ph., a preparation consisting of equal volumes of heavy oil of wine and ether. **o. paraffinosum**. Liquid paraffin; liquid petrolatum. **o. petrae**. See *petrolatum*. **o. phosphoratum**. Phosphorated oil; a clear, nearly colorless oily solution of phosphorus [Br. Ph.]. **o. pini**. The oil of pine needles, from *Pinus pumilio*. It is used by inhalation [Br. Ph., 1898]. [Lat., from Gr., *elaia*, the olive tree.]
- oleyl** (o'li'l). The univalent radicle of oleic acid, C₁₇H₃₅.CO.
- olfaction** (ol-fak'shun). The function of smell. [Lat., *olfactus*, smell.]
- olfactometer** (ol-fak-tom'et-er). An apparatus for measuring the acuteness of smell. [Lat., *olfactus*, smell, + Gr., *metron*, a measure.]
- olfactor** (ol-fak'tor). The unit of olfactory sensitiveness.
- olfactory** (ol-fak'to-re). Pertaining to the sense of smell. **o. epithelium**. See *o. cell*, under *cell*. [Lat., *olfactere*, to smell.]
- olibanum** (o-lib'an-um). Syn.: *thus*. Frankincense; a gum resin obtained by incision from the stem of *Boswellia Carterii* and other species of *Boswellia*. **O.** is chiefly used as an incense, though it is probably equal to other balsamic medicines as a stimulant to the mucous membranes, and its use as a fumigatory in bronchitis and chronic laryngitis is recommended.
- oligemia** (ol-e-ge'me-ah). Poverty of the blood in the sense of diminution in the volume of the blood of the entire body. [Gr., *oligos*, little, + *aima*, blood.]
- oligo-**, **olig-**. Combining form of Gr., *oligos*, small, little; plural, few.
- oligochromemia** (ol''ig-o-kro-me'me-ah). Deficiency of hematin in the blood. [Gr., *oligos*, little, + *chroma*, color, + *aima*, blood.]
- oligocythemia** (ol''ig-o-si-the'me-ah). Deficiency of red blood corpuscles. [Gr., *oligos*, little, + *kytos*, a cell, + *aima*, blood.]
- oligomania** (ol''e-go-ma'ne-ah). Obsolete term for a psychosis thought to be confined to a few subjects, although potentially affecting all the mental faculties. [Gr., *oligos*, slight, + *mania*, madness.]
- oligoplasmia** (ol''ig-o-plaz'me-ah). A decrease in the amount of the blood plasma. [Gr., *oligos*, scanty, + *plasma*, a thing formed.]
- oligospermia** (ol-e-go-sper'me-ah). See *aspermatism*. [Gr., *oligos*, slight, + *sperma*, seed.]
- oligozoöpermia** (ol''ig-o-zo-o-sper'me-ah). A variety of sterility in the male in which the spermatozooids are diminished in number and activity. [Gr., *oligos*, few, + *zoon*, an animal, + *sperma*, seed.]
- oliva** (o-li'vah). 1. The olive tree or its fruit. 2. See *olivary body*, under *body*.
- fructus olivae**. See *olive* (1st def.).
- oleum olivae**. See *olive oil*, under *oil* [U. S. Ph., Br. Ph.]. **oleum olivarum virgineum**. See *virgin oil*, under *oil*. [Lat.]
- olivary** (ol'iv-a-re). Pertaining to olives, olive-shaped; as a n., see *o. body*.
- olive** (ol'iv). 1. The fruit of *Olea europaea*; also an o-bearing tree. 2. Any o-shaped body, especially the olivary body.
- external accessory o.** See *external accessory olivary nucleus*. **inferior o.** See *inferior olivary body*. **inner (or internal) accessory o.**, **mesial acces-**

- sory o.** See *median internal accessory olivary nucleus*. **o. oil.** See under *oil*.
- outer accessory o.** See *external accessory olivary nucleus*. **superior accessory o.** See *superior accessory olivary nucleus*. **superior o.** 1. See *corpus denticulatum*. 2. See *superior accessory olivary nucleus*, under *nucleus*. **superior o. of Luys.** See *nucleus of the tegmentum*. **upper o.** See *nucleus of the trapezium*. [Lat., *oliva*.]
- Oliver's test.** A test by which the presence of bile in the urine is said to be shown by a cloudiness produced by an aqueous solution of pectone, salicylic acid, and acetic acid. [Thomas Oliver, English physician, born in 1853.]
- ology.** A suffix from the Gr., *logos*, science, knowledge, through *-logia*.
- olophonia** (oi-o-fō'ne-ah). Congenital malformation of the vocal organs. [Gr., *oloo*s, ill, destroyed, + *phone*, the voice.]
- olymp'ian brow.** Prominence of the frontal bones, due to infiltration and softening between the tables and in the sutures from syphilis.
- o'ma.** A suffix from the Gr., *oma*, tumor or swelling; used to denote a morbid condition, especially a tumor.
- omacephalus** (o-mah-sef'al-us). A monster having a large but badly shaped head and with only the face distinct, with rudimentary sensory organs and no thoracic members. [Gr., *omos*, the shoulder, + *akephalos*, without a head.]
- o'mal.** Trichlorophenol; used by inhalation in bronchial affections.
- omalgia** (o-mal'je-ah). Pain in or about the shoulder. [Gr., *omos*, the shoulder, + *algos*, pain.]
- omasum** (o-ma'sum). The manyplies, psalterium, or third stomach of ruminants; the pouch into which their food passes after having been masticated a second time. [Lat., *omasum*, tripe, paunch.]
- omental** (o-men'taf). Pertaining to the omentum.
- omentum** (o-men'tum). Syn.: *epiloön*. A double fold of the peritoneum containing adipose tissue. **colic o., gastric o., gastrotcolic o.** See *great o. gastrohepatic o.* See *lesser o. gastrosplenic o.* See *gastrosplenic ligament*, under *ligament*. **greater o., great o.** Syn.: *epiloön majus*. A duplicature of the peritoneum which descends from the lower border of the stomach in front of the intestines to the level of the pelvis, where it turns and ascends to the colon, which, after separating, it includes between its two layers. It represents the posterior primitive mesentery of the stomach. **hepatogastric o., lesser o.** Syn.: *epiloön minus*. A double layer of the peritoneum which extends between the transverse fissure of the liver and the lesser curvature of the stomach. It represents the posterior portion of the anterior primitive mesentery of the stomach. **o. colicum.** That portion of the great o. in fetal life which becomes in the adult the hepatocolic ligament. **o. gastrocolicum.** See *great o. gastrohepaticum*. See *lesser o.*
- o. majus.** See *great o.* **o. minus.** See *lesser o.* [Lat.]
- omitis** (o-mi'tis). Inflammation of the shoulder. [Gr., *omos*, the shoulder, + *itis*, inflammation.]
- om'ni-.** Combining form of Lat., *omnis*, all.
- omnivorous** (om-niv'or-us). Feeding indiscriminately on all sorts of food. [Lat., *omnis*, all, + *vorare*, to devour.]
- o'mo-.** Combining form of Gr., *omos*, shoulder; used as a prefix to signify pertaining to the shoulder.
- omohyoid** (o'mo-hi'oyd). Pertaining to or connected with the hyoid bone and the scapula; as a n., the omohyoideus. See *Table of Muscles*, under *muscle*. [Gr., *omos*, shoulder, + *hyoid*.]
- omphalic** (om-fal'ik). See *umbilical*. [Gr., *omphalikos*.]
- omphal'o., om'phal-.** Combining form of Gr., *omphalos*, navel, boss, hub.
- omphalocranioididymus** (om''fal-o-kra''ne-o-did'e-mus). A double monstrosity in which the parasite is joined to the head of the autosite. [Gr., *omphalos*, navel, + *kranion*, skull, + *didymos*, double.]
- omphalomesenteric** (om''fal-o-mes-en-ter'ik). Pertaining to or connected with the mesentery and the umbilical vesicle. [Gr., *omphalos*, the navel, + *mesenterion*, the mesentery.]
- omphalomonodidymi** (om''fal-o-mon-o-did'im-i). Twins united at the umbilicus. [Gr., *omphalos*, the navel, + *monos*, alone, + *didymos*, twin.]
- omphalopagus** (om-fal-op'ag-us). A double monstrosity in which the bodies are united at the umbilicus. [Gr., *omphalos*, the navel, + *pegnunai*, to make fast.]
- omphalosite** (om-fal'o-sit). An embryo or fetus of imperfect development due to the presence of a second embryo in the uterus, which supplies blood for both by means of anastomoses of the placental vessels of a common placenta as in monochorial twins. [Gr., *omphalos*, navel, + *sitos*, food.]
- omphalus** (om'fal-us). See *umbilicus*. [Gr., *omphalos*, the navel.]
- onanism** (o'nan-ism). 1. See *masturbation*. 2. The practice of incomplete sexual intercourse, the semen of the male being deposited elsewhere than within the genital passages of the female. **conjugal o.** Any deviation, physical or psychical, from natural and complete coitus. [Onan, the son of Judah, who practised it.]
- onaye** (o-nah'ye). In the Gaboon country, an arrow poison obtained from the seeds of *Strophanthus*.
- oncograph** (on'ko-graf). A form of manometer used for registering the increase in volume of a swollen organ (especially the kidney or spleen), when enclosed in an oncometer. [Gr., *ogkos*, a tumor, + *graphein*, to write.]
- oncology** (on-kol'o-je). The pathology of tumors. [Lat., *oncologia*, from Gr., *ogkos*, a tumor, + *logos*, understanding.]
- oncoma** (on-ko'mah). An old term for tumor. [Gr., *ogkoma*.]

oncometer (ong-kom'et-er). An apparatus devised by Roy for measuring plethysmographically the variations in size of the kidney due to changes in the blood-supply. [Gr., *ogkos*, a mass, + *metron*, a measure.]

on'cos. See *tumor*. [Gr., *ogkos*.]

oncosis (on-ko'sis). 1. Tumefaction. 2. A tumor. 3. A disease due to a tumor. [Gr., *ogkosis*, from *ogkon*, to distend.]

oneiric (o-ni'rik). Pertaining to a dream. [Gr., *oneiros*, a dream.]

oneirodymia (o'ni-ro-din'e-ah). Painful dreaming. **o. activa**. Somnambulism. **o. gravans**. See *incubus* (2d def.). [Gr., *oneiros*, a dream, + *odyne*, pain.]

oneironosus (o-ni-ron'o-sus). Morbid dreaming. [Gr., *oneiros*, a dream, + *nosos*, a disease.]

onomatology (o-nom-at-ol'o-je). The science of nomenclature. [Gr., *onoma*, a name, + *logos*, understanding.]

onomatomania (on-o-mat-o-ma'ne-ah). A compulsive activity in which the patient is possessed by an agonized effort to recall some particular word or by an irresistible impulse to repeat a given word continually.

Ononis (o-no'nis). Rest harrow; a genus of leguminous herbs or undershrubs. Several species are used in European domestic practice.

on'to-. Combining form of Gr., *onto*, being, present participle of *einai*, to be.

ontogenesis (on-to-jen'es-is). The origin and development of the individual living being. [Gr., *onto*, being, + *genesis*, birth.]

ontogeny (on-toj'en-e). 1. The history of the evolution of an individual. See *phylogeny*. 2. The doctrine of the production of species by special creation only, as opposed to phylogeny. [Gr., *onto*, being, + *geman*, to engender.]

onychaxis (o-nik-awk'sis). Overgrowth of the nail plate. It is generally accompanied by changes in color, texture, and the shape of the nail, as it becomes thick, roughened, opaque, and brittle. [Gr., *onyx*, nail, + *auxesis*, growth.]

onychchia (o-nik'e-ah). Inflammation of the matrix of the nail, whereby the growth of the nail is impaired or the nail is undermined by suppuration and sometimes lost. It is usually acute, but may be chronic. [Gr., *onyx*, the nail.]

onychogryposis (on'ik-o-gri-po'sis). A curvature or clawlike deformity of the nails, due to hyperplasia of the matrix and usually associated with irregularities of the surface. See *clubbed finger*, under *finger*. **o. idiopathica**. O. occurring as an independent affection. **o. neuritica**. O. due to a neuropathy. [Gr., *onyx*, the nail, + *gryposis*, a crooking.]

onychomycosis (on'ik-o-mi-ko'sis). A disease of the nails due to the *Achorion keratophagus*. **o. tonsurans**. A disease of the nails due to the presence of *Trichophyton tonsurans*. [Gr., *onyx*, nail, + *mykes*, fungus.]

onyx (o'niks). A finger or toe nail. [Gr.]

oö-, **o-**. Combining form of Gr., *oon*, egg;

used as a prefix, as in *oöblast* [Gr., *oon*, + *blastos*, germ], the primordial cell, which develops into an ovule.

oöblast (o'o-blast). A cell that develops into an ovum; a germinal epithelium giving rise to ova. [Gr., *oon*, an egg, + *blastos*, a sprout.]

oöcyst (o'o-sist). A fertilized cyst containing spores, as the cyst containing protozoites of malaria in the intestine of the mosquito. [Gr., *oon*, egg, + *kystis*, bladder.]

oögenesis (o-o-jen'es-is). The origin and development of ova. [Gr., *oon*, an egg, + *genesis*, origin.]

oögonium (o-o-go-ne-um). 1. The cell from which an ovum is derived. 2. The female element of a fungus, which when fertilized forms the oöspore. [Gr., *oon*, egg, + *gone*, generation.]

oökinesis (o-o-ki-ne'sis). The active phenomena occurring in an ovum during maturation, fertilization, and segmentation, especially the active changes of the vitellus. [Gr., *oon*, an egg, + *kinesis*, movement.]

oökinete (o-o-kin'-ët). The malarial parasite after the formation of the zygote, when it assumes the form of a motile vermicle with a pointed end, which pierces the epithelium of the stomach of the mosquito. [Gr., *oon*, egg, + *kinesis*, motion.]

oöphorectomy (o'of-o-rek'to-me). Excision of the ovary, especially (as conventionally distinguished from *ovariotomy*) for any other reason than the existence of an ovarian tumor. [Gr., *oon*, an egg, + *phoros*, bearing, + *ektome*, a cutting out.]

oöphoritis (o'of-o-ri'tis). Inflammation of the capsule or of the tissues composing the stroma of the ovary. **follicular o.** Inflammation of the graafian follicles. [Gr., *oon*, an egg, + *phoros*, bearing, + *itis*, inflammation.]

oöphoron (o-of-or-on). See *ovary*. **o. masculinum**. See *testicle*. [Gr., *oon*, an egg, + *phoros*, bearing.]

Oöspora (o-os'po-rah). 1. Another name for *Actinomyces* and *Nocardia*. 2. A genus of the order *Ascomycetes* of the *Fungi*. The mycelium is slender and septate with terminal spores. **O. canina**. The cause of favus in dogs.

opacity (o-pas'it-e). 1. The condition of being opaque. 2. An opaque area or spot, as an o. of the cornea. [Lat., *opacitas*.]

opaque (o-päk'). Admitting no light; not transparent. [Lat., *opacis*.]

opening (o'pen-ing). 1. The act of laying open (e. g., by making an incision or puncture); also the act of breaking an electrical current. 2. An orifice, a gap, a perforation. See *aperture*, *apertura*, *foramen*, *ostium*, and their subheadings. **abdominal o. of the oviduct**. The fimbriated extremity of the fallopian tube by which it communicates with the peritoneal cavity and applies itself to the surface of the ovary. **anodal o.** See under *anodal*. **aortic o.** The o. in the diaphragm which transmits the aorta and

- the vena azygos minor. **cathodal o.** The opening of a galvanic circuit attended with some phenomenon (e. g., muscular contraction) taking place at the cathode. Symbol, CaO or KaO. **esophageal o.** The o. in the diaphragm which transmits the esophagus and vagi. **saphenous o.** An oval o. in the fascia lata, slightly below and external to the inner extremity of Poupart's ligament, which transmits the lateral internal saphenous vein. **urinogenital o., urogenital o.** The external o. of the genito-urinary tract.
- operable** (op'er-a-bl). Admitting of the performance of an operation (said of tumors, etc.). [Lat., *operari*, to work.]
- operation** (op'er-a'shun). The performance of any act; in surgery, of a manual act upon the body, generally with instruments; also the act thus performed. **bloodless o.** An o. performed with the use of Esmarch's bandage, ligatures, and hemostatic forceps so as to prevent the loss of blood. **buttonhole o.** External urethrotomy. **cesarean o.** See *cesarian operation*, under separate heading. [Lat., *sectio caesarea*.] **elective o.** An o. which the patient chooses to have done, but which is not absolutely required; also one in which the particular procedure is a matter of choice with the operator. **plastic o.** An o. that has for its object the construction of absent parts, or the replacement or removal of deformed parts. **subcutaneous o.** An o. in which either there is no external wound or the external wound is made at a distance from the seat of o. and in such a way as not to expose the field of o. to the action of the air. For operations distinguished by the names of individuals, see under separate headings. [Lat., *operatio*, from *operari*, to work.]
- operative** (op'er-a-tiv). 1. Having the power of acting; effective. 2. Pertaining to an operation. **o. dentistry.** The department of dentistry in which manipulations, mechanical or surgical, are made in the mouth of the patient, as distinguished from those which are made in the workshop or laboratory.
- operculum** (o-per'ku-lum). Lit., a lid or flap. A group of small convolutions situated at the angle formed by the two limbs of the sylvian fissure and concealing the insula. [Lat., from *operire*, to cover.]
- ophidismus** (o-fid-is'mus). Snake poisoning. [Gr., *ophis*, snake.]
- ophio-** Combining form of Gr., *ophis*, serpent.
- ophiotoxin** (o-fe-o-toks'in). A non-nitrogenous poison, separated from the toxalbumens of snake venom. [Gr., *ophis*, snake, + *toxikon*, poison.]
- ophioxylin** (o-fe-oks'il-in). An anthelmintic and a cathartic principle from the root of *Ophioxylon serpentinum*.
- ophioxylon** (o-fe-oks'il-on). Serpent wood. **O. serpentinum, O. trifoliatum.** East Indian snakewood. The root is used as a febrifuge and anthelmintic. In very large doses it is a drastic purgative. [Gr., *ophis*, a serpent, + *xylon*, wood.]
- ophthalmalgia** (of-thal-mal'je-ah). Pain or neuralgia in the eye; ciliary neuralgia. [Gr., *ophthalmos*, the eye, + *algos*, pain.]
- ophthalmatrophia.** Atrophy of the eye.
- ophthalmia** (of-thal'me-ah). Any inflammation of the eye or of the conjunctiva. **Egyptian o.** Purulent conjunctivitis; trachoma. **electric o.** O. observed in workmen obliged to stand near arc lights, and supposed to be caused by the electric light. **epidemic o.** See *pink-eye*.
- gonorrhoeal o.** O. due to infection with the gonococcus. **military o.** Purulent o.; so called because it is common among soldiers. **o. neonatorum.** Purulent o. occurring in new-born children; generally due to infection from the genital canal of the mother. **o. nodosa.** Nodular swellings on the conjunctiva produced by the irritation of caterpillar hairs. **pustular o.** A mild form of conjunctivitis; pink-eye. **sympathetic o.** Inflammation of one eye, following an infecting injury to the other. [Gr., from *ophthalmos*, the eye.]
- ophthalmic** (of-thal'mik). 1. See *ocular*. 2. Used as a noun, a remedy for certain eye diseases. **o. migraine.** See *epileptoid amaurosis*, under *amaurosis*. [Gr., *ophthalmikos*.]
- ophthalmitis** (of-thal-mi'tis). Inflammation of the entire eyeball. [Gr., *ophthalmos*, the eye, + *itis*, inflammation.]
- ophthal'mo-** Combining form of Gr., *ophthalmos*, eye.
- ophthalmocarcinoma** (of-thal'mo-kar-seno'mah). A carcinoma of the eye. [Gr., *ophthalmos*, eye, + *carcinoma*.]
- ophthalmodynia** (of-thal-mo-din'e-ah). Neuralgia of the eye. [Gr., *ophthalmos*, the eye, + *odyne*, pain.]
- ophthalmolith** (of-thal'mo-lith). A stony concretion in the lacrimal duct. [Gr., *ophthalmos*, the eye, + *lithos*, a stone.]
- ophthalmology** (of-thal-mol'o-je). A knowledge of the working of the eye and of its diseases. [Gr., *ophthalmos*, the eye, + *logos*, understanding.]
- ophthalmomelanoma** (of-thal'mo-mel-an-o'mah). A melanotic sarcoma of the eye. [Gr., *ophthalmos*, eye, + *melanoma*.]
- ophthalmometer** (of-thal-mom'et-er). An instrument employed to determine irregularities in the curvature of the cornea, causing astigmatism. [Gr., *ophthalmos*, the eye, + *metron*, a measure.]
- ophthalmometry** (of-thal-mom'et-re). Measurement or examination of the eye by means of the ophthalmometer. [Gr., *ophthalmos*, the eye, + *metron*, a measure.]
- ophthalmosology** (of-thal'mon-os-ol'o-je). The pathology of the eye. [Gr., *ophthalmos*, the eye, + *nosos*, disease, + *logos*, understanding.]
- ophthalmoplegia** (of-thal-mo-ple'je-ah). Paralysis of one or more muscles of the eyeball. **o. externa.** Paralysis of one or more of the extrinsic muscles of the eyeball. **o. interna.** Paralysis of the muscles of the iris, of the ciliary muscle, or of both. **o. totalis.** O. in which all

the ocular muscles are affected. [Gr., *ophthalmos*, the eye, + *plege*, a stroke.] **ophthal'moreaction**. See *Calmette test*, under *Calmette*.

ophthalmoscope (of-thal'mo-sköp). An instrument invented by Helmholtz in 1851 for examining the media and fundus of the eye by illuminating the interior of the organ. [Gr., *ophthalmos*, the eye, + *skopein*, to examine.]

ophthalmoscopy (of-thal-mos'kop-e). Examination of the media and fundus of the eye by means of the ophthalmoscope.

ophthalmostat (of-thal'mos-tat). An instrument for fixing the eye and controlling its movements for purposes of examination or operation. [Gr., *ophthalmos*, the eye, + *istanai*, to place.]

ophthalmotoxin (of-thal-mo-tok'sin). A specific cytotoxin obtained by injections of emulsions of the ciliary body.

ophthalmotrope (of-thal'mo-tröp). Originally, a movable model of both eyes, in which the muscles are represented by correspondingly drawn threads, which are stretched by springs and weights, and the movements of which can be read off on a scale. The artificial eyes rotate around their centers on a ball and socket joint. The equator, cornea, and vertical and horizontal meridians are all drawn upon them, and the threads representing the muscles are of different colors. [Gr., *ophthalmos*, the eye, + *trope*, a turning.]

opianin (o'pe-an-in). An alkaloid, C₁₆H₂₂N₂O₂, obtained from opium. Its narcotic action resembles that of morphin.

opiate (o'pe-ät). A medicine containing opium.

opiophagism (o-pe-of'aj-ism). Addiction to opium eating. [Gr., *opion*, opium, + *phagein*, to eat.]

opisthenar (o-pis'the-nar). The back of the hand. [Gr., *opisthenar*, from *opisthen*, behind, + *thenar*, the palm.]

opisthion (o-pis'the-on). A point at the middle of the posterior margin of the foramen magnum. [Gr., *opisthios*, hinder.]

opis'tho-, opisth'-. Combining form of Gr., *opisthen*, behind; as *opisthotosos*.

opisthoreia (o-pis'tho-po-re'ah). A morbid condition where the patient walks backward when walking forward is attempted. [Gr., *opisthen*, behind, + *porcia*, a mode of walking.]

Opisthorchis (o-pis-thor'kis). A genus of trematode worms, or flukes, having testicles near the posterior end of the body.

O. felineus. The Siberian liver-fluke, which infests the bile ducts of cats, dogs, and man. **O. noverca**. The Asiatic liver-fluke of dogs and man.

opisthotonos (o-pis-thot'o-nos). An excessive recurving of the muscles of the back, where the patient in spasm of pain rests on his head and heels. [From *opisthen*, behind, + *tonos*, stretching.]

opium (o'pe-um). Syn.: *o. crudum, meconium*. The inspissated juice of the unripe capsules of *Papaver somniferum* and its varieties. Besides water, resin, fatty matter, gum, caoutchouc, pectin, glucose,

and other substances not yet definitely determined, *o.* contains numerous alkaloids, of which morphin, codein, narcotin, and narcein are used in medicine. These bases occur in combination with meconic and lactic acids. Two neutral principles, meconin and meconoin, have also been isolated. *O.* is a narcotic, acting directly upon the cerebrum. It destroys life by paralyzing the respiratory centers in the medulla. *O.* is chiefly used for the relief of pain, but its diversity of properties gives it a wide range of usefulness. An unconquerable longing for *o.* or one of its alkaloids often leads to its habitual use, which causes anemia, emaciation, headache, vertigo, wakefulness, tremor, and mental disturbance [U. S. Ph., Br. Ph.]. List of poisons and their antidotes, see in *appendix*, page 940. **acetum opii**. Vinegar of *o.* It represents 10 per cent. of powdered opium [U. S. Ph.]. **ammoniated tincture of o.** See *tinctura opii ammoniata*. **aqueous extract of o.** See *extractum opii*. **camphorated tincture of o.** See *tinctura opii camphorata*. **compound powder of o.** See *pulvis opii compositus*. **denarcotized o.** See *o. deodoratum*. **deodorized tincture of o.** See *tinctura opii deodorata*. **em-plastrum opii**. A plaster containing 6 per cent. of extract of *o.* [U. S. Ph.] **extractum opii**. An extract of *o.* assaying 20 per cent. of morphin [U. S. Ph., Br. Ph.]. **extractum opii li- quidum**. A preparation of which 100 c.c. represents 0.75 grms. of anhydrous morphin [Br. Ph.]. **linimentum opii** [Br. Ph.]. A preparation consisting of equal parts of tincture of *o.* and soap liniment. **liquid extract of o.** See *extractum opii liquidum*. **liquor opii sed- ativus Battley**. This is said to resemble the extractum opii liquidum of the Br. Ph. **magisterium opii**. See *morphin*. **o. denarcotinatum, o. denarcotisa- tum, o. deodoratum**. A preparation made by percolating *o.* with petroleum benzin, which removes narcotin, as well as many of the odoriferous and nauseating principles [U. S. Ph.]. **o. plaster**. See *em-plastrum opii*. **opii pulvis**. *O.* dried and powdered. The powder must contain from 12 to 12.5 per cent. of morphin [U. S. Ph.]. **pillulae opii**. Pills, each of which contains 1 grain of powdered *o.* The pill mass is official in the Br. Ph. as *pillulae saponis composita*, containing 20 per cent. of *o.* [U. S. Ph.]. **pulvis opii**. See *opii pulvis*. **pulvis opii com- positus**. A mixture of powdered *o.*, tragacanth, black pepper, ginger, and car- away fruit [Br. Ph.]. **tinctura opii**. A tincture of *o.* representing 10 per cent. of powdered *o.* [U. S. Ph.] or containing 1 per cent. of morphin [Br. Ph.], the latter preparation being about four-fifths as active as that of the U. S. Ph. **tinctura opii ammoniata**. The ammoniated tincture of *o.* contains 10 per cent. of its volume of the tincture of opium [Br. Ph.], with benzoic acid and ammonia water

- [Br. Ph.]. **tinctura opii camphorata**. Syn.: *elixir paregoric*, *tinctura camphorae composita* [Br. Ph.]. A preparation containing 0.4 per cent. of powdered o. [U. S. Ph.] or 5 per cent. of tinctura of o. [Br. Ph.] with benzoic acid, camphor, and anise in dilute alcohol. It is commonly called paregoric. **tinctura opii crocata**. Syn.: *Sydenham's laudanum*, *vinum opii aromaticum*, *vinum thebaicum crocatum*, *tinctura opii vinosa Sydenhami*. A preparation made by macerating or digesting o. with cloves and either cinnamon or cassia, saffron, and dilute alcohol. **tinctura opii deodorata**. This tincture represents 10 per cent. of deodorized o. or from 1.2 to 1.25 per cent. of morphin [U. S. Ph.]. **tinctura of o.** See *tinctura opii*. **trochisci opii**. Lozenges of licorice and o. See *trochisci glycyrrhizae et opii*, under *glycyrrhiza*. **vinegar of o.** See *acetum opii*. **vinum opii**. A 10 per cent. preparation of granulated o. aromatized [U. S. Ph.]. **vinum opii aromaticum** (seu *compositum*). See *tinctura opii crocata*. **vinum opii crocatum**. See *tinctura opii crocata*. **wine of o.** See *vinum opii*. [Gr., *opion*.]
- opo-** Combining form of Gr., *opos*, juice; used as a prefix signifying (1) the juice or latex of a plant; (2) an integral part of the names of a class of preparations, each name signifying the organ from the tissues of which the preparation is made, e. g., *oposuprarenalium* is a preparation said to be made from the suprarenal gland.
- opobalsamum** (o-po-bal'sam-um). Opobalsam; a resinous substance, obtained in Arabia from *Balsamodendron o.* and *Balsamodendron gileadense*. [Gr., *opos*, juice, + *balsamon*, balsam.]
- opocerebrin** (o-po-ser'e-brin). A medicinal preparation of the gray matter of the brain. [Gr., *opos*, juice, + Lat., *cerebrum*.]
- opodeldoc** (o-po-del'dok). Camphorated soap liniment. A quasi-oriental name, apparently first used and probably invented by Paracelsus.
- opodidymus** (o-po-did'im-us). A monster with a single head, but two faces. [Gr., *ops*, the face, + *didymos*, double.]
- opohepatoidin** (o''po-hep-at-oyd'in). A medicinal preparation made from liver tissue. [Gr., *opos*, juice, + *epar*, the liver, + *eidosis*, resemblance.]
- opohypophysin** (o''po-hi-pof'is-in). A medicinal preparation made from the pituitary gland. [Gr., *opos*, juice, + *hypophysis*.]
- opolienin** (o-po-li'en-in). A medicinal preparation made from the spleen. [Gr., *opos*, juice, + Lat., *lien*, the spleen.]
- opomammin** (o-po-mam'in). A medicinal preparation made from the mammary gland. [Gr., *opos*, juice, + Lat., *mamma*, breast.]
- opomedullin** (o''po-med-ul'in). A medicinal preparation of bone marrow. [Gr., *opos*, juice, + Lat., *medulla*, marrow.]
- opoorchidin** (o-po-or'kid-in). A medicinal preparation made from the testicle. [Gr., *opos*, juice, + *orchis*, the testicle.]
- opoössein** (o-po-os'se-in). A medicinal preparation of yellow bone marrow. [Gr., *opos*, juice, + Lat., *os*, bone.]
- opoövairin** (o''po-o-va're-in). A medicinal preparation made from the ovary. [Gr., *opos*, juice, + *ovary*.]
- opopancreatin** (o-po-pan'kre-at-in). A medicinal preparation of the pancreas. [Gr., *opos*, juice, + *pancreas*.]
- opoprostatin** (o-po-pros'tat-in). A medicinal preparation of the prostate. [Gr., *opos*, juice, + *prostate*.]
- oporenin** (o-po-ren'in). A medicinal preparation of the kidney. [Gr., *opos*, juice, + Lat., *ren*, the kidney.]
- oposuprarenalin** (o''po-su-prah-re-nal'in). A medicinal preparation of the suprarenal gland. [Gr., *opos*, juice, + *suprarenal*.]
- opotherapy** (o-po-ther'ap-e). Treatment by means of tissue extracts or internal secretions. [Gr., *opos*, juice, + *therapeia*, treatment.]
- opothymin** (o-po-thi'min). A medicinal preparation of the thymus gland. [Gr., *opos*, juice, + *thymus*.]
- opothyroidin** (o''po-thi-royd'in). A medicinal preparation of the thyroid gland. [Gr., *opos*, juice, + *thyroid*.]
- Op'penheim's sign**. Turning upwards of the big toe on forcibly drawing the fingers along the sides of the tibia; seen in central lesions of the nervous system. [*H. Oppenheim*, Berlin neurologist.]
- opponens** (op-po'nens). Opposing. See *Table of Muscles*, under *muscle*. [Lat.]
- oppression** (op-pres'shun). A morbid sensation of weight or fullness. [Lat., *oppressio*, from *opprimere*, to press against.]
- opsinogen** (op-sin'o-jen). The substance in the bacterial cells which stimulates the body cells or tissues to form an opsonin.
- opsomania** (op-so-ma'ne-ah). A morbid desire for dainty or sweet food. [Gr., *opson*, dainty, + *mania*, madness.]
- opsonic in/dex**. The percentage of bacteria taken up by the leukocytes of diseased or immunized animals or men, as compared with the number taken up by the leukocytes of a healthy person. The opsonic power is now calculated by noting the dilution at which the serum still contains an opsonin, so that when mixed with bacteria and leukocytes, the latter will still show phagocytosis. This is called the dilution of opsonic extinction.
- opsonif'erous group**. The active group of the opsonin, as compared with the haptophoric or combining group.
- opsonification** (op-son-if-ik-a'shun). Raising the opsonic power of the blood by the injection of dead bacteria.
- opsonin** (op'so-nin). A substance present in normal and immune serum which combines with bacteria, and thus prepares them to be taken up more readily and in larger numbers by the phagocytic cells. [Gr., *opsonem*, to prepare food for.]
- ops'onocytophag'ic in/dex**. The rela-

- tion of the action of the leukocytes and serum of a blood specimen to be tested for its phagocytic action, as compared with that of a normal person. See *opsonic index*.
- opsonotherapy** (op'son-o-ther'ap-e). A form of treatment in which the opsonic power of the blood is increased by means of bacterial vaccines.
- optactin** (op-tak'tin). The visual axis. [Gr., *optos*, visible, + *aktis*, a ray.]
- optic, optical** (op'tik, op'tik-al). Pertaining to the eye or to the sight. **optical activity**. The property, possessed by many organic chemical compounds, of turning the plane of polarized light, when it is passed through a solution of the substance. It is due to the presence of one or more asymmetrical carbon atoms. See also *polarimeter*. **o. deceptions**. Visual phenomena in which an erroneous judgment is made in regard to size, color, etc. [Gr., *optikos*.]
- optician** (op-tish'an). A maker or purveyor of optical instruments.
- op'tico-**. Combining form of Gr., *optikos*, relating to the eye.
- optics** (op'tiks). The science of light and vision. **physiological o.** That branch of o. which treats of and establishes the conditions necessary for the act of vision. It is subdivided into three branches: (a) dioptrics; (b) the consideration of the impressions produced by light, with special reference to the relation of objective light to light perception; (c) the visual sensations. [Gr., *optika*, from *optikos*, of sight.]
- op'to-**. Combining form of Gr., *optos*, seen, visible.
- optogram** (op'to-gram). The image of an external object produced on the retina by bleaching of the visual purple. It can be fixed and permanent after the manner of a photograph. [Gr., *ops*, the eye, + *gramma*, a writing.]
- optometer** (op-tom'et-er). An instrument for determining the refraction of an eye. [Gr., *optos*, visible, + *metron*, measure.]
- optometry** (op-tom'et-re). The study of visual defects and their remedy by glasses.
- Opuntia** (o-pun'te-ah). Prickly pear, Indian (or bastard) fig; a genus of cactaceous shrubs. **O. coccinellifera** (seu *cochinellifera*). The cochineal cactus of tropical America, the *nopal* of Mexico, where it is cultivated for the purpose of rearing the cochineal insect (*Coccus cacti*). [Gr., *Opous*, a town of Locris, Greece.]
- ora** (o'rah). A border, margin. **o. serrata**. The anterior dentated margin of the retina along the edge of the ciliary processes of the choroid membrane.
- o'ral**. 1. Spoken, verbal. 2. Of or pertaining to the mouth. [Lat., *os*, *oris*, mouth.]
- orange** (or'anj). The genus *Citrus*, especially *Citrus aurantium*, also its fruit. See under *Aurantium* and *Citrus*. **sweet o. peel**. The rind of the sweet o. (see *Citrus aurantium* [2d def.]). It is aromatic, but has not the tonic properties of bitter o. peel, and is preferred for flavoring only [U. S. Ph.]. [Lat., *aurum*, gold.]
- orbicular** (or-bik'u-lar). Circular or rounded. [Lat., *orbiculus*, a small circle.]
- orbicularis** (or-bik-u-lar'is). See *Table of Muscles*, under *muscle*. [Lat.]
- or'bit**. The eye socket; a quadrilateral conical cavity situated at the upper and anterior part of the face, with its base directed forward and outward and its apex backward and inward. [Lat., *orbita*, from *orbis*, a circle.]
- or'bita**. Pertaining to the orbit.
- or'bito-**. Combining form of Lat., *orbita*, orbit.
- orcein** (or-se'in). A brown coloring matter, obtained from orcin; employed as a stain.
- or'chic substance**. A proprietary preparation consisting of the pulp from the fresh testicles of the ram, dried and powdered. It has been used in prostatic hypertrophy. [Gr., *orchis*, testicle.]
- orchidectomy** (or-kid-ek'to-me). Excision of the testicle. [Gr., *orchis*, the testicle, + *ektome*, a cutting out.]
- or'chido-**. Combining form of Gr., *orchis*, testicle, or of the plant *orchis*, the orchid, so named because of the shape of its flower.
- orchietomy** (or-ki-ek'to-me). Excision of a testicle.
- orchis** (or'kis). 1. The testicle. 2. The typical genus of the orchidaceous plants; so called from the shape of the root. Various species of o., including *O. acuminata*, *O. coriophora*, *O. maculata*, *O. mascula*, and others, furnish saleg. [Gr., *orchis*, the testis.]
- orchitis** (or-ki'tis). Inflammation of the testicle. There are three varieties: (1) traumatic, in which the epididymis is usually involved; (2) a chronic inflammation of low grade, occurring in individuals of a gouty or rheumatic diathesis; (3) a form due to acute inflammation in some other part of the body, as a complication of mumps, and occasionally of typhoid fever, influenza, smallpox, tonsillitis, and rheumatism. The symptoms of o. are severe pain, and gradual symmetrical enlargement in one testicle, with sensitiveness, drawing up of the testicle, chills and fever. The disease may end in resolution, leaving a practically normal testicle or in atrophy or gangrene. **syphilitic o.** Syphilitic disease of the body of the testicle. It is characterized by moderate enlargement of the organ, accompanied with little or no pain and with marked insensibility to pressure. The surface is usually smooth and uniform, sometimes nodular. It often results in atrophy, rarely in softening. In the latter case perforation occurs, with fungous outgrowths. Two forms have been described: a diffuse form, in which the tunica albuginea is especially involved and becomes thickened and sclerosed; and a circumscribed form, in which gummatous material is deposited in nodular masses. **tuberculous o.** Tuberculous disease of

the testicle beginning generally in the epididymis. Caseation and suppuration with thickening of the spermatic cord and enlargement of the vesiculae seminales are the usual results. [Gr., *orchis*, the testicle, + *itis*, inflammation.]

or'cin. Syn.: *orcinol*. Dihydroxytoluene, $C_6H_3(OH)_3$. A crystalline substance, easily soluble in water; prepared from various lichens; used as an antiseptic.

orectic (o-rek'tik). Exciting an appetite. [Gr., *orexis*, desire.]

orexin (o-reks'in). A base having the composition of phenyldihydroquinazolin (or its hydrochlorid, $C_{14}H_{12}H_2.HCl$). It is a stomachic and antemetic, and increases the appetite. The tannate has been used as a preventive of seasickness. [Gr., *orexis*, appetite.]

orexis (o-rek'sis). See *appetite*. [Gr., *orexis*, from *oregein*, to reach.]

or'gan. Any individual part, or system of parts, of an organism, having a specific physiological function, considered with reference to its action, processes, or results. **accessory o's.** O's which have a subordinate function. **appendicular o's.** The limbs. **enamel o.** Of Purkinje, the special enamel germ after it has become differentiated into a three-layered o., which covers the enlarged tooth papilla like a cap. **end o.** See under separate heading. **excretory o's.** The o's which dispose of the excrementitious substances of the body. **generative o's, genital o's.** The o's which are concerned in the reproduction of the species. **Jacobson's o.** The canal a few millimeters in length which extends along the septum of Stenson's duct to end in a blind extremity. It is the homologue of a more extensively developed o. in some animals having a more acute sense of smell. In man it is only rudimentary. **o. of Corti.** The terminal apparatus of the cochlear nerve. It lies on the membranous spiral lamina which springs from the free edge of the osseous spiral lamina. It consists of the rods of Corti, the two rows of which form the arches of Corti. **o. of Giralde.** See *paradidymus*. **o. of Rosenmüller.** See *epoöphoron*. **o's of sense.** The structures endowed with the special senses (i. e., the skin and some of the mucous membranes, the ears, the eyes, the nose, and the portion of the mouth possessing the sense of taste). **uropoietic o's.** The kidneys. **vibratile o's.** Cilia. [Gr., *organon*, an organ.]

organ'ic. 1. Possessing organs. 2. Pertaining to or possessing an organized state. 3. Of disease, accompanied by structural change, as opposed to functional. 4. In chemistry, containing carbon or relating to bodies containing carbon.

organism (or'gan-ism). An organized body (animal or plant) capable of separate existence. **o., estivo-autumnal.** See also in *appendix*, page 901. **o., quartan.** See also in *appendix*, page 901. **o., tertian.** See also in *appendix*, page 901. [Lät., *organismus*, from Gr., *organizein*, to fabricate.]

organization (or-gan-i-za'shun). 1. An organism. 2. The process or act of being converted into living and active material (e. g., the o. of a blood clot). [Gr., *organizein*, to fabricate.]

or'gano- Combining form of Gr., *organon*, organ.

or'ganochem'istry. See *organic chemistry*, under *chemistry*.

organogenetic (or-gan-o-jen-et'ik). Taking part in or pertaining to the origin and development of the special organs or structures of an organized body. Relating to organogeny. [Gr., *organon*, organ, + *genesis*, generation.]

organogeny (or-gan-oj'en-e). The embryology of the different organs. [Gr., *organon*, an organ, + *gennan*, to engender.]

organography (or-gan-og'raf-e). A description of the organs of a living body.

organoid (or'gan-oyd). Of tumors, resembling an organ. [Gr., *organon*, an organ, + *eidosis*, resemblance.]

organology (or-gan-ol'o-je). The investigation of the structure and functions of organs. [Gr., *organon*, an organ, + *logos*, understanding.]

organoma (or-gan-o'mah). A tumor which affects an organ, e. g., a dermoid cyst.

organometallic (or'gan-o-met'al'ik). Of chemical compounds, containing an alcoholic radicle combined with a metal.

organon (or'gan-on). See *organ*.

o. adamantinae. See *enamel organ*.

o. auditus. The ear. **o. gustus.** The

portions of the mouth and tongue concerned in the sense of taste.

organa ingestionis. The mouth, pharynx, and

esophagus. **o. innominatum.** See *pan-*

creas. **o. Kollikeri.** The larger of the

two epithelial ridges in the canalis coch-

learis of the embryonic cochlea. **o. ol-**

factorium, o. olfactus. The nose. **o. ol-**

tactus. The skin and portions of the

mucous membrane having tactile sensibility. **o. visus.** The eye.

organopathy (or-gan-op'ath-e). An or-

ganic disease. [Gr., *organon*, an organ,

+ *pathos*, a disease.]

organophylly (or-gan-of'il-le). The de-

velopmental history of organs.

organoscopy (or-gan-os'ko-pe). Examina-

tion of the viscera directly, through

epigastric incision and a cystoscope.

organosol (or-gan'o-sol). A solution of

colloid silver in an organic liquid, such

as alcohol.

organotherapy (or'gan-o-ther'ap-e). The

therapeutical use of organic juices, ex-

tracts, etc. [Gr., *organon*, an organ, +

therapeia, medical treatment.]

organotrophic (or'gan-o-trof'ik). Per-

taining to the nutrition of organs or of

an organism. [Gr., *organon*, an organ,

+ *trophein*, to nourish.]

orgasm (or'gazm). 1. The swelling of a

part or tissue from acute active hyper-

emia. 2. Erethism; acute excitation in

the vital action of a part, especially the

nervous excitement accompanying the

culmination of the sexual act. [Gr., *organ*,

to swell.]

Oriental plague. See under *plague* and *bubonic*.

Orien'tal sore. Syn.: *Aleppo boil*, *Bagdad boil*, *Delhi boil*, *Biskra button*, *Aleppo button*, *Gassa button*. A specific ulcerating granuloma of the skin, endemic in tropical countries and caused by *Leishmania tropica*.

orientation (or-i-en-ta'shun). 1. The position or bearing of any object in relation to the east, and hence in relation to the points of the compass generally. 2. The faculty or process of judging of the relative position of objects in space. 3. The arrangement of embryos, organs, etc., so that microscopic sections may be made in a known and definite plane. **objective o.** The faculty or process by which external objects are referred to their correct position with reference to one another, so that the relations of the separate parts of a body are rightly apprehended, although the body as a whole may be wrongly located by the observer. **subjective o.** The faculty or process by which external objects are referred to their correct position as regards the observer, so that a body appears to him in its proper place. [Lat., *oriens*, the east.]

orifice (or'if-is). See *opening*. **anal o.** The anus. **aortic o.** The circular o. in the left ventricle connecting it with the aorta. **auriculoventricular o.** 1. An oval opening in the lower and front part of the left auricle, leading into the left ventricle of the heart. 2. An oval opening situated at the right angle of the base of the right ventricle of the heart and leading into the right auricle. **cardiac o. of the stomach.** The o. in the cardiac end of the stomach where the esophagus enters it. **mitral o.** See *auriculoventricular o.* (1st def.). **o. of the coronary sinus of the right auricle.** An o. situated between that of the inferior vena cava and the auriculoventricular o. **pulmonary o.** An o. in the left angle of the base of the right ventricle of the heart and leading into the pulmonary artery. **pyloric o.** See *pylorus*. [Lat., *orificium*, from *os*, *oris*, mouth, + *facere*, to make.]

Origanum (o-rig'an-um). 1. Marjoram; a genus of labiate undershrubs or herbs. 2. Of the U. S. Ph., 1880, the herb of *O. vulgare*. **oil of o.** The volatile oil of *O. vulgare*; an acrid, stimulating oil, of yellowish color and camphoraceous odor, consisting of a terpene, $C_{10}H_{16}$, with sometimes small proportions of ordinary camphor. **O. majorana.** Sweet marjoram. It has a peculiar aromatic odor and a warm, bitterish taste, and yields tannin and a volatile oil, to which the excitant and mildly tonic properties of the plant are due. **O. vulgare.** Wild marjoram. The herb was formerly used as a diaphoretic and emmenagogue and externally in poultices and fomentations. It is stimulant and mildly tonic. [Gr., *origanon*.]

origin (or'ij-in). That from which anything arises or takes its beginning; a

source; a starting point. **apparent o. of a nerve.** See *superficial o. of a nerve*. **deep o. of a nerve.** That part of the nervous center where the fibers of a nerve spring from the nerve cells. **o. of a muscle.** The relatively fixed point of attachment of a muscle. **o. of a nerve.** That part at which it is attached to the center of its system. **real o. of a nerve.** See *deep o. of a nerve*. **superficial o. of a nerve.** That part of the central nervous structure at which the nerve cord first comes in contact with it. [Lat., *origo*, *originis*, from *oriri*, to rise.]

-orium. Lat., neuter sing. ending of adj. in *-orius*; used as a suffix indicating place for or belonging to, requisite.

or'mosin. An alkaloid obtained from the seeds of *Ormosia dasycarpa*. The hydrochlorid has been used as a narcotic.

ornithin (or'nith-in). A d-diamino acid, $NH_2.CH_2.CH_2.CH_2.CHNH.COOH$, a basic substance, present in the urine of birds after the injection of benzoic acid in a combined form as ornithuric acid. Also formed by arginin by the action of a strong base or by the enzyme, arginase.

or'nitho-, or'nith-. Combining form of Gr., *ornith*, from *ornis*, bird.

Ornithodoros (or'nith-o-do'rus). A member of the family *Argasidae*, or ticks, which has no eyes. **O. moubata.** The tick that spreads Dutton's relapsing fever, otherwise known as African tick fever, by acting as the intermediate host of *Spirocheta Duttoni*. **O. Savignyi.** A species of tick attacking man in Africa and India. **O. thyolozani.** Dangerous to man in Persia. **O. turicatus.** Attacks men and fowls in Central America.

oropharynx (o-ro-far'inks). The region of the junction of the mouth and the pharynx.

oroselin (or-os'el-in). A substance, $C_{14}H_{12}O_4$, obtained from athamantin.

oroselon (or-os'el-on). A substance, $C_{14}H_{10}O_5$, obtained from athamantin.

orotherapy (o-ro-ther'ap-e). A whey or serum therapy. [Gr., *oros*, whey, + *therapeia*, treatment.]

oroxylin (o-roks'il-in). A principle probably obtained from *Oroxylum indicum*. It has been used in rheumatism.

oro'ya fever. Another name for a skin disease called *verruca peruviana*.

orphol (or'fol). A proprietary compound of bismuth and β -naphthol; used in diarrheal diseases of children.

orpiment (or'pim-ent). Native sulphid of arsenic, As_2S_3 , realgar, or red orpiment, and As_2S_5 , yellow orpiment. [Lat., *auri pigmentum*.]

orrhos (or'ros). Whey; serum. [Gr., *orros*.]

orrhosis (or-ro'sis). The formation of serum. [Gr., *orros*, serum.]

orrhotherapy (or-ro-ther'ap-e). The therapeutical use of serum. [Gr., *orros*, serum, + *therapeia*, medical treatment.]

or'ris. See *Iris florentina*.

or'tho-. Combining form of Gr., *orthos*, straight, right; used as a prefix in chemical nomenclature.

orthobasic (or-tho-ba'sik). Of acids, having the two replaceable hydrogen atoms occur in the orthoposition (i. e., next each other).

orthocephalism (or-tho-sef'al-ism). The condition in which the height-length index of the skull is between 70° and 75°.

[Gr., *orthos*, straight, + *kephale*, head.]
orthochlorophenol (or'tho-klo-ro-fe'nol). Monochlorophenol, C₆H₄Cl.OH; used topically in erysipelas and in painful laryngeal affections, and by inhalation in phthisis.

orthochromatic (or'tho-kro-mat'ik). Normally stained.

orthodiagram (or-tho-di'ag-ram). A drawing or photograph of the shadow of an internal organ (heart) obtained by means of an orthodiagraph.

orthodiagraph (or-tho-di'ag-raf). An apparatus for transmitting the x-ray through the body in parallel lines so as to obtain shadows of internal organs (heart) of the correct size. [Gr., *orthos*, straight, + *dia*, through, + *graphein*, to write.]

orthodontia (or-tho-don'te-ah). The treatment of irregularities in the position, etc., of the teeth. [Gr., *orthos*, straight, + *odous*, a tooth.]

orthoform (or'tho-form). A trade name for paramidometoxybenzoic methyl ester; said to be an antiseptic and local anesthetic. It is insoluble, hence it does not penetrate the tissues. **new o.** Metamidoparoxibenzoic methyl ester; used like o.

orthognathous (or-thog'na-thus). 1. Having a gnathic index below 98°. 2. No marked projection of the jaw or the incisor teeth. [Gr., *orthos*, straight, + *gnathos*, the jaw.]

orthometer (or-thom'et-er). An instrument for determining the degree of protrusion of the eyes. [Gr., *orthos*, straight, + *metron*, a measure.]

orthope'dia, **orthope'dics**. The branch of surgery having to do with the treatment of diseases of the joints and the correction of deformities. At first limited to children. **dental o.** Correction of deformities of the teeth in the child. [Gr., *orthos*, straight, + *pais*, *paidos*, a child, or *paideuin*, to educate or train children.]

orthopedist (or-thop'e-dist). One who practises orthopedics.

orthophoria (or-tho-'fo-re-ah). Normal binocular fixation. [Gr., *orthos*, straight, + *pherein*, to carry.]

orthopnea (or-thop'ne-ah). Difficulty in breathing in the recumbent position. [Gr., *orthos*, upright, + *pnein*, to breathe.]

orthoscope (or'tho-sköp). An instrument for examining the eye, using water, so as to neutralize the refraction of the cornea. [Gr., *orthos*, straight, + *skopein*, to examine.]

orthotonus (or-thot'o-nus). Tetanus characterized by an upright posture of the body. [Gr., *orthos*, straight, + *tonos*, a stretching.]

orthrin (or'thrin). A derivative of phenylhydrazin, obtained by the action of paroxybenzoic acid on hydrazin. Its anti-

pyretic action is very energetic but uncertain, and it is apt to cause profuse perspiration, collapse, and intoxication.

Oryza (o-ri'zah). The rice plant; a genus of grasses.

Os. The chemical symbol for the element *osmium*.

os. Pl., *ossa*. See *bone*. **o. brachii**, **o. humeri**. See under *humerus*. **o. calcis**. See *calcaneus*. **o. illi**. See under *ilium*. **o. innominatum**. 1. See *innominate bone*, under *bone*. 2. See *ilium*. **o. magnum**. The third bone of the second row of the carpus. **o. planum**. A thin smooth lamina of bone on the external aspect of each lateral mass of the ethmoid bone. **o. pubis**. The bone which, although distinct in early life, in adult life unites with the ilium and ischium to form the pelvis. [Lat., *os*, *ossis*, bone.]

os. Pl., *ora*. The mouth; an orifice. **ab ore**. By the mouth. **o. tincae**. Like a tench's mouth. The transverse external orifice of the cervix uteri before it has been distended by childbirth. **o. uteri externum**. The transverse external opening of the cervical canal of the uterus. It is bounded anteriorly and posteriorly by two thick lips, the posterior of which is the thinner and longer. In nulliparae they are smooth, but in those who have borne children they are usually slightly rugose or fissured. **o. uteri internum**. The circular, internal, somewhat constricted opening of the cervical canal into the cavity of the uterus. Some writers think it best to restrict the term to the non-gravid uterus. See also *Bandl's ring*. [Lat., *os*, *oris*, mouth.]

osazon (o'sa-zön). Of E. Fischer, a group of substances formed by the combination of two molecules of phenylhydrazin with one molecule of a sugar. These compounds are used for the identification of the carbohydrates.

os'cheio-, **os'cheo-**. Combining form of Gr., *oscheon*, scrotum.

oscheitis (os-ke-i'tis). Inflammation of the scrotum. [Gr., *oscheon*, scrotum, + *itis*, inflammation.]

oscheocarcinoma (os'ke-o-kar-sin-o'-mah). See *chimney-sweep's cancer*, under *cancer*. [Gr., *oscheon*, the scrotum, + *carcinoma*.]

oscheolith (os'ke-o-lith). A calculus of the scrotum. [Gr., *oscheon*, the scrotum, + *lithos*, stone.]

oscheoplasty (os'ke-o-plas-te). The plastic surgery of the scrotum. [Gr., *oscheon*, the scrotum, + *plassein*, to mold.]

Oscillaria (os-sil-la're-ah). A genus of filamentous organisms composed of compactly arranged rows of cells separated by delicate transverse partitions. They occur in ponds, ditches, etc. **O. tigrina**. *Beggiatoa tigrina*. [Lat., *oscillum*, a swing.]

oscillation (os-il-la'shun). A swinging motion. [Lat., *oscillare*, to swing.]

oscitation (os-sit-a'shun). See *chasma*.

osculant (os'ku-lant). Interosculant, connecting two higher groups by characters

common to both. [Lat., *osculari*, to kiss.]

-ose. A chemical suffix originating in the ending of glucose and used to form the names of the related carbohydrates.

Osler's disease. Chronic cyanosis with polycythemia and enlarged spleen.

osme (os'me). An odor; also the sense of smell. [Gr., *osme*.]

osmic. Containing osmium as a hexad or an octad. **o. acid.** See under *acid*.

osmium (os'me-um). A metallic element, associated in nature with platinum and iridium. The metal is used for incandescent electric lamps. Its salt, OsO₄, is used as a stain. Symbol, Os; atomic weight, 191. It is the heaviest body known, having a specific gravity of 22.477. **o. amid.** An orange yellow, odorless, crystalline powder, OsO₂NH₂, discovered by Fremy. It colors all animal tissues at first brown and subsequently black. It has been recommended in place of osmic acid for histological research.

o. tetroxid. OsO₄, the anhydride of the theoretical osmic acid. It has been used by intraneural injection to produce degeneration of nerves in persistent neuralgia. It is to be avoided in renal disease. Locally applied, it acts as a caustic. It has the property of staining fatty matters black, and is used as a reagent in microscopy for this purpose. [Gr., *osme*, an odor.]

os'mo-. 1. Combining form of Gr., *osme*, smell, odor. 2. Combining form of Gr., *osmos*, push or thrust.

osmology (os-mol'o-je). See *osphresiology*. [Gr., *osme*, the sense of smell, + *logos*, understanding.]

osmometer (os-mom'et-er). An instrument for measuring the acuteness of the sense of smell. [Gr., *osme*, the sense of smell, + *metron*, a measure.]

osmonosology (os-mon-os-ol'o-je). The pathology of disorders of the sense of smell. [Lat., *osmonosologia*, from Gr., *osme*, the sense of smell, + *nosos*, disease, + *logos*, understanding.]

osmosis (os-mo'sis). The passage of water through a porous septum, in consequence of a difference in osmotic pressure or concentration of the dissolved substances. The osmotic pressure of any solution is dependent upon the number of particles (molecules and ions) in solution and, mechanically measured, it is equal to the gas pressure exerted by the same number of gas molecules in the same volume. [Gr., *osmos*, a thrusting.]

osmotic (os-mo'tik). Pertaining to osmosis. **o. pressure.** The pressure exerted upon a membrane, which divides a solution of some substance in water from pure water, the membrane allowing the free diffusion of the water but not the diffusion of the substance.

Osmunda (os-mun'dah). Flowering fern.

O. regalis. Royal fern. The front tops and the pith of the root stock were formerly used as astringents and vulneraries, and the root stock was employed especially as a tenifuge.

osphresiology (os-fre-se-ol'o-je). The

study of the odors given off from the body and from the excreta in their relations to disease. [Gr., *osphresis*, the sense of smell, + *logos*, understanding.]

osphrestics (os-fris'tiks). The science of the phenomena of smell. [Gr., *osphresis*, the sense of smell.]

os pubis. The bone which, although distinct in early life, in adult life unites with the ilium and ischium to form the pelvis. It is of an irregular shape, and is divided into a body or horizontal ramus, an ascending ramus, and a descending ramus. The outer extremity of the body forms about one-fifth of the acetabulum, and the inner unites in the middle line with the corresponding portion of the bone of the opposite side, forming the symphysis pubis. The junction of the articulating and superior surfaces is termed the angle, and somewhat external to this is a tubercle, projecting forward, the portion between the two being the spine. The portion of the bone which descends downward and outward from the body to unite with the ischium forms the descending ramus, and that passing backward to unite with the ilium and ischium in the acetabulum forms the ascending ramus. On the upper surface is the commencement of the ileopectineal line. The descending ramus unites with the ascending ramus of the ischium to form the inner and lower part of the obturator foramen.

ossagen (os'saj-en). The calcium salt of bone marrow; used in rickets.

ossalin (os'sal-in). An ointment basis made from beef marrow.

ossein (os'se-in). Syn.: *collagen*. 1. Bone cartilage; the organic base or matrix of bone. 2. Dental cartilage; the organic base of the teeth. It seems precisely like the o. of bone, but perhaps slightly firmer. [Lat., *os*, a bone.]

osseous (os'se-us). 1. See *bony*. 2. Of bony hardness. [Lat., *os*, a bone.]

ossicle (os'si-kl). A small bone. **auditory o's, o's of the ear.** See *incus, malleus, and stapes*. [Lat., *ossiculum*, dim. of *os*, a bone.]

ossiculectomy (os'ik-u-lek'to-me). Surgical removal of one or more of the ossicles of the ear. [Lat., *ossiculum*, a small bone, + Gr., *ektome*, a cutting out.]

ossiculum (os-sik'u-lum). A small bone or bony body, also any hard structure of small size. **ossicula auditii** (seu **aurium**). Syn.: *ear bones*. See *incus, malleus, and stapes*. [Lat., dim. of *os*, bone.]

ossiferous (os-sif'er-us). Containing or yielding bone. [Lat., *os*, a bone, + *ferre*, to bear.]

ossification (os-sif-ik-a'shun). 1. The formation of bone. See *osteogenesis*. 2. Change into a bony substance. **accidental o.** A term incorrectly applied to calcareous degeneration. **intermembranous o.** See *intramembranous o.* **intracartilaginous o.** O. from temporary cartilage, the cartilage becoming at first partly calcified and then absorbed by osteoclasts as the formation of the true bone proceeds from the investing peri-

- osteum, **intramembranous o.** 1. The development of bone in connective tissue, without any intermediate formation of cartilage, by the outward growth from the center of o. of osteogenic fibers around and upon which are arranged the osteoblasts which deposit the bone. 2. O. within a membranous sac. **o. of permanent cartilage.** The formation of osteoblasts in permanent hyaline cartilage; it must not be confounded with calcareous or uratic deposits in the cartilage. **periosteal o.** O. in the osteogenetic layer of the periosteum. See *osteogenesis*. **senile o.** A term incorrectly applied to vascular and interstitial calcareous degeneration occurring in old persons. **subperiosteal o.** The projection of osteoblasts from bone into the layer of round or polygonal cells beneath the periosteum. [Lat., *ossificatio*, from *os*, a bone, + *facere*, to make.]
- ossifluent** (os-sif'lu-ent). Proceeding from or constituting a process involving the disappearance of bone as if by melting away. [Lat., *os*, a bone, + *fluere*, to flow.]
- ostalgia** (os-tal'je-ah). See *osteodynia*. [Gr., *osteon*, a bone, + *algos*, pain.]
- osteid** (os'te-id). A small bony kernel sometimes occurring in the pulp cavity of a tooth. 2. Any accidental bony formation. [Gr., *osteon*, a bone.]
- ostein** (os'te-in). 1. See *ossein*. 2. Bony tissue. [Gr., *osteon*, bone.]
- osteitis** (os-te-'i-tis). Inflammation of bone. **condensing o.** O. in which the marrow is converted into dense bone. **o. deformans.** A retrogressive change with absorption of the trabeculae and fibrosis of the fatty marrow. **rarefying o.** A type showing progressive absorption of the bony lamellae. [Gr., *osteon*, a bone, + *itis*, inflammation.]
- ostemia** (os-te'me-ah). Morbid congestion of blood in a bone. [Gr., *osteon*, bone, + *aima*, blood.]
- os'teo-, os'te-.** Combining form of Gr., *osteon*, a bone.
- osteo-arthritis** (os'te-o-ar-thri'tis). Rheumatic arthritis. **chronic o.** A disease of the joints characterized by pain, stiffness, and deformity and attended by decided changes in structure, such as erosion of the cartilage, atrophy of the bony parts, the formation of osteophytes, and the complete destruction of the joint. See *rheumatic arthritis*, under *arthritis*. [Gr., *osteon*, a bone, + *arthron*, a joint, + *itis*, inflammation.]
- osteo-arthropathy** (os'te-o-ar-throp'ath-e). Disease of the articular portions of bones. [Gr., *osteon*, a bone, + *arthron*, a joint, + *pathos*, disease.]
- osteoblasts** (os'te-o-blasts). Syn.: *black corpuscles*. The granular cells present in all developing bone. They are supposed to deposit the bony matter, and, becoming inclosed, to form the bone cells. [Gr., *osteon*, a bone, + Gr., *blastos*, a sprout.]
- osteocarcinoma** (os'te-o-kar-sin-o'mah). Carcinoma involving bone. [Gr., *osteon*, a bone, + *carcinoma*.]
- osteochondritis** (os'te-o-kon-dri'tis). 1. An inflammatory defect in calcification in which there is a layer of soft, yellowish white tissue between the calcified and cartilaginous portions of a rib. 2. Inflammation involving both bone and cartilage. [Gr., *osteon*, a bone, + *chondros*, cartilage, + *itis*, inflammation.]
- osteochondroma** (os'te-o-kon-dro'mah). Osteoma blended with chondroma; a tumor made up of both osseous and cartilaginous tissue. [Gr., *osteon*, a bone, + *chondros*, cartilage, + *oma*, tumor.]
- osteochondrophyte** (os'te-o-kon-dro-fit). A tumor composed of cartilage and bone. [Gr., *osteon*, a bone, + *chondros*, cartilage, + *phyton*, a growth.]
- osteochondrosarcoma** (os'te-o-kon'dro-sar-ko'mah). A tumor containing cells intermediate between cartilage cells and bone corpuscles, and also areas of true bone and cartilage.
- osteoclasia** (os-te-ok'las-is). Fracture of a bone, especially intentional fracture in order to remedy a deformity. It may be instrumental or manual. [Gr., *osteon*, a bone, + *klasis*, a breaking.]
- osteoclasts** (os'te-o-klasts). Large multinuclear cells, which appear in depressions on the surface of bone, causing a resorption of the bone "in toto." These depressions are called *Hovship's lacunae*; they give the bone a gnawed, eroded appearance. [Gr., *osteon*, bone, + *klan*, to break.]
- osteocystoma** (os'te-o-sis-to'mah). A cystic tumor developing in bone. [Gr., *osteon*, bone, + *cystoma*.]
- osteodynia** (os-te-o-din'e-ah). Pain, especially chronic pain, in a bone. [Gr., *osteon*, a bone, + *odyne*, pain.]
- osteo-epiphysis** (os'te-o-ep-if'is-is). A bony epiphysis. [Gr., *osteon*, bone, + *epiphysis*.]
- osteofibroma** (os'te-o-fi-bro'mah). A tumor consisting of bony and fibrous tissue. [Gr., *osteon*, a bone, + *fibroma*.]
- osteogenesis** (os-te-o-jen'es-is). The formation of bone. This takes place either in cartilage or in connective tissue, but the process is nearly the same in both situations. **o. imperfecta.** A congenital disease of bone in which the bones show an abnormal liability to fracture. [Gr., *osteon*, bone, + *genesis*, generation.]
- osteogeny** (os-te-oj'en-e). 1. See *osteogenesis*. 2. The development of the bony system. [Gr., *osteon*, bone, + *gennan*, to engender.]
- osteography** (os-te-og'ra-fe). The descriptive anatomy of the bones. [Lat., *osteographia*, from Gr., *osteon*, bone, + *graphein*, to write.]
- osteoid** (os'te-oyd). Resembling bone; osseous. **o. sarcoma.** A s. growing rapidly, forming metastases, with cells like bone corpuscles. [Gr., *osteon*, bone, + *eidos*, resemblance.]
- osteolith** (os'te-o-lith). A petrified bone. [Gr., *osteon*, bone, + *lithos*, a stone.]
- osteology** (os-te-ol'o-je). The anatomy of the bones or of bone tissue. [Lat., *oste-*

- ologia*, from Gr., *osteon*, bone, + *logos*, understanding.]
- osteolysis** (os-te-o'lis-is). Softening and destruction of bone, as in caries. [Gr., *osteon*, a bone, + *lysis*, a loosing.]
- osteoma** (os-te-o'mah). A rare tumor, having a growth independent of the tissue in which it exists, composed of osseous tissue, usually developing in connection with bone (homoplastic) though it may develop elsewhere (heteroplastic).
- cancellous o.** An o. in which the texture of the tumor is soft and spongy. It consists of thin and delicate trabeculae inclosing large medullary spaces resembling those of cancellous bone.
- dental o.** An excrescence consisting of cement, developing from a tooth.
- eburnated o., ivory o.** An o. in which the texture of the tumor is dense, resembling ivory. It consists of compact tissue with narrow nutrient canals, and is similar to the cortical layer of the long bones.
- heteroplastic o.** An o. situated in a tissue or organ in which bone does not normally occur.
- o. durum, o. eburneum.** See *eburnated o.*
- o. medullosum.** See *cancellous o.*
- parosteal o.** An o. developing near a bone but not connected with it. [Gr., *osteon*, a bone, + *oma*, a tumor.]
- osteomalacia** (os'te-o-mal-a'se-ah). Syn.: *mollities ossium*, *malacosteon disease*. Softening of the bones taking place in adult life; due to a diminution of the lime salts.
- o. apathyros.** That form of o. in which the bones become unnaturally flexible, like wax.
- o. carcinomatosa.** A diffuse cancerous infiltration of the medullary tissue of bones, with softening.
- o. cerea, o. cohaerens.** See *o. apathyros.*
- o. fracturosa, o. fragilis, o. psathyra.** That form of o. in which the bones become brittle. [Gr., *osteon*, a bone, + *malakia*, softness.]
- osteomatoid** (os-te-o'mat-oyd). A localized or generalized outgrowth or hyperplasia of bone, producing an exostosis, which is not independent, thus differing from a true osteoma. [Gr., *osteon*, bone, + *oma*, tumor, + *eidosis*, resemblance.]
- osteomiosis** (os-te-o-mi-o'sis). Deterioration of the bony tissues. [Gr., *osteon*, a bone, + *meiosis*, diminution.]
- osteomyelitis** (os'te-o-mi-el-i'tis). Inflammation of the marrow of bone and of the bone itself. Its varieties are: *acute, chronic, suppurative, syphilitic, tuberculous.*
- o. fibrosa.** A fibroid change of bone in osteitis deformans. [Gr., *osteon*, a bone, + *myelos*, marrow, + *itis*, inflammation.]
- osteoncosis, osteoncus** (os-te-on-ko'sis, oste-on'kus). An exostosis; a tumor of bone. [Gr., *osteon*, a bone, + *ogkos*, mass.]
- osteonecrosis** (os'te-o-ne-kro'sis). Necrosis of bone. [Gr., *osteon*, a bone, + *nekrosis*, necrosis.]
- osteopath** (os'te-op-ath). A practitioner or a believer in osteopathy.
- osteopathic** (os-te-o-path'ik). Pertaining to osteopathy.
- osteopathy** (os-te-op'ath-e). A system of treatment based on the idea that disarranged bones are the cause of disease and that manipulation tending to restore the bones so displaced is curative. [Gr., *osteon*, bone, + *pathia*, method of cure.]
- osteoplast.** Same as *osteoblast*.
- osteoplasty** (os'te-o-plas-te). The plastic surgery of bone. [Gr., *osteon*, a bone, + *plassein*, to form.]
- osteoporosis** (os'te-o-po-ro'sis). 1. The absorption taking place in the methembryonic development of bone, whereby the medullary canals and adjacent medullary spaces are greatly enlarged. 2. A variety of eccentric atrophy occurring in bones and resulting in a widening of the medullary spaces and an increase of their contents, of which fatty matter forms a very important element.
- adipose o., fatty o.** See *o.* (2d def.). [Gr., *osteon*, bone, + *poros*, passage.]
- osteopathyrosis** (os'te-op-sath-ir-o'sis). Fragility of the bones. [Gr., *osteon*, bone, + *psathyros*, brittle.]
- osteosarcoma** (os'te-o-sar-ko'mah). Syn.: *myelosarcoma*. A malignant sarcomatous tumor of bone, usually originating in the periosteum.
- pulsating o.** See *osteotelangiectasis*. [Gr., *osteon*, a bone, + *sarcoma*.]
- osteosarcosis** (os-te-o-sar-ko'sis). The transformation of bone into a fleshy mass. [Gr., *osteon*, a bone, + *sarx*, flesh.]
- osteoscope** (os'te-o-sköp). An appliance for testing the condition of a Röntgen ray apparatus by observing under its action a preparation of the bones of the forearm and hand. [Gr., *osteon*, a bone, + *skopein*, to examine.]
- osteo'sis cutis.** A rare disease of the skin characterized by diffuse thickening of the skin and subcutaneous tissue. In a reported case it affected about one-third of the external plantar surface of the left foot, accompanied by a club-shaped thickening of the fourth toe.
- osteospongioma** (os'te-o-spon-je-o'mah). A spongy or fungous condition of bone. See *spina ventosa*, under *spina*. [Gr., *osteon*, a bone, + *spoggos*, a sponge, + *oma*, a tumor.]
- osteospongiosis** (os'te-o-spon-je-o'sis). 1. The formation of osteospongioma. 2. See *osteospongioma*.
- osteosteoma** (os'te-o-ste-at-o'mah). A steatoma that has undergone calcareous degeneration. [Gr., *osteon*, a bone, + *stear*, stiff fat, + *oma*, a tumor.]
- osteotabes** (os-te-o-ta'bëz). A disease of the bone with destruction of the bone marrow.
- osteotelangiectasis** (os'te-o-tel-an-je-ek'ta-sis). 1. Dilatation of the small blood vessels in the bones. 2. An osteosarcoma containing numerous large blood vessels. [Gr., *osteon*, a bone, + *telos*, the end, + *ageion*, a vessel, + *ektasis*, a stretching.]
- osteotome** (os'te-o-töm). An instrument for cutting bone. [Gr., *osteon*, a bone, + *temnein*, to cut.]
- osteotomy** (os-te-o'to-me). The operation of cutting bone, especially section of a long bone in its continuity for the relief

- of some deformity. For different forms of *o.* see *separate heads*. [Gr., *osteon*, a bone, + *temnein*, to cut.]
- osthësia** (os-thek'se-ah). Abnormal ossification. [Gr., *osteon*, bone, + *exis*, condition.]
- ostial** (os'te-al). Relating to an orifice.
- ostium** (os'te-um). A mouth, entrance, aperture, opening. **o. abdominale**. The abdominal opening of the oviduct. **o. pharyngeum**. The pharyngeal opening of the eustachian tube. **o. tubæ uterini**. The opening of the oviduct into the uterus. **o. tympanicum tubæ**. The tympanic orifice of the eustachian tube. [Lat., *os*, mouth.]
- os'traco-, os'trao-**. Combining form of Gr., *ostrakon*, hard shell.
- ostrea** (os'tre-ah). The oyster. The shells, which consist largely of calcium carbonate, are sometimes used in medicine. [Gr., *ostreon*.]
- ostreios** (os-tre'i-os). The poison contained in some mussels and oysters. [Gr., *ostreon*, an oyster, + *ios*, poison.]
- ostreotoxicum** (os-tre-o-toks'e-kum). See *ostreios*. [Gr., *ostreon*, the oyster, + *toxikon*, poison.]
- ostreotoxismus** (os'tre-o-toks-is'mus). Poisoning from diseased or unwholesome oysters. [Gr., *ostreon*, oyster, + *toxikon*, poison.]
- otalgia** (o-tal'je-ah). Syn.: *earache*. Pain in the ear; aural neuralgia. [Gr., *ous*, *otos*, the ear, + *algos*, pain.]
- othematoma** (o'them-at'o'mah). A hemorrhagic cyst of the ear, occurring in football players and wrestlers. [Gr., *ous*, ear, + *hematoma*.]
- o'tic**. See *aural*. [Gr., *otikos*, from *ous*, *otos*, ear.]
- o'tic**. A suffix representing Gr., *otikos*, indicating a noun of action from verbs ending in *o'a*.
- otitic** (o-ti'tik). Pertaining to otitis.
- otitis** (o-ti'tis). Inflammation of the ear.
- catarrhal o.** See *o. media catarrhalis*.
- dry o.** Eczema affecting the external auditory canal. **o. externa circumscripta**. See *o. externa follicularis*. **o. externa crouposa**. A rare form of inflammation of the external meatus, characterized by the exudation of fibrin in the form of a membrane, mainly in the membrana tympani. **o. externa diffusa**. Diffuse inflammation of the whole external auditory canal. **o. externa diphtheritica**. A rare form of inflammation of the external meatus usually a complication of scarlatinous diphtheria of the throat and middle ear. **o. externa follicularis**, **o. externa furunculosa**. *O.* with furuncles of the external auditory canal, or follicular inflammation of the external meatus, beginning in a hair follicle, in a gland, or in a number of follicles or glands. **o. externa hemorrhagica**. A form of diffuse inflammation of the external auditory canal characterized by hemorrhagic effusion in the osseous portion. **o. externa parasitica**. Inflammation of the external auditory canal due to the presence of parasites, especially of *Aspergillus* and other fungi.
- o. externa phlegmonosa**. External *o.* with localized suppuration. **o. interna**. Inflammation of the membranous structure of the internal ear or labyrinth. **o. media (acuta)**. An inflammation of the lining mucous membrane of the middle ear. **o. media catarrhalis**. Inflammation of the middle ear, especially catarrh, as distinguished from serous and purulent inflammation. [Gr., *ous*, *otos*, the ear, + *itis*, inflammation.]
- o'to-, ot-**. Combining form of Gr., *ous*, *otos*, ear.
- otoblast** (o'to-blast). The embryological ear cells. [Gr., *ous*, ear, + *blastos*, a sprout.]
- otocephalus** (o-to-sef'al-us). A monster whose ears are united into one or are in contact. [Gr., *ous*, the ear, + *kephale*, the head.]
- otocephaly** (o-to-sef'al-e). The form of monstrosity of an otocephalus.
- otocerebritis** (o'to-ser-e-bri'tis). Cerebral inflammation induced by ear disease. [Gr., *ous*, the ear, + *cerebritis*.]
- otocleisis** (o-to-kl'i'sis). Occlusion of the ear. [Gr., *ous*, the ear, + *kleisis*, a shutting up.]
- otoconia** (o-to-ko'ne-ah). A dustlike substance, composed of fine otoliths. [Gr., *ous*, the ear, + *konía*, dust.]
- otoconium** (o-to-ko'ne-um). An otolith.
- otocrane** (o'to-krän). The cavity containing the organ of hearing. [Lat., *otocranium*, from Gr., *ous*, ear, + *kranion*, the skull.]
- otoganglion** (o-to-gan'gle-on). See *otic ganglion*, under *ganglion*. [Gr., *ous*, the ear, + *gaggion*, ganglion.]
- otography** (o-tog'raf-e). The descriptive anatomy of the ear. [Gr., *ous*, the ear, + *graphein*, to write.]
- otoliths** (o'to-liths). Syn.: *ear stone*, *ear-sand*, *ear crystals*. Two small round bodies consisting of a mass of minute crystalline grains of calcium carbonate, held together in a delicate mesh of fibrous tissue and contained in the wall of the auditory utricle and sacculæ opposite the distribution of the nerves. [Lat., *otolitha*, from Gr., *ous*, the ear, + *lithos*, a stone.]
- otologist** (o-to'l'o-jist). A student or a practitioner of otology.
- otology** (o-to'l'o-je). The anatomy, etc., of the ear. [Lat., *otologia*, from Gr., *ous*, the ear, + *logos*, understanding.]
- Otomyces** (o-tom'is-ez). A fungous growth in the ear. **O. Hageni**. A fungus with grass-green conidia occasionally met with in the external auditory canal, first described by Hagen. **O. purpureus**. A fungous growth of the ear first described by Wreden, with reddish or purple conidia. [Gr., *ous*, the ear, + *mykes*, a fungus.]
- otomycosis** (o-to-mi-ko'sis). Inflammation of the external auditory meatus due to the presence of a fungus. [Gr., *ous*, the ear, + *mykes*, a fungus.]
- otopathy** (o-top'ath-e). Disease of the ear. [Gr., *ous*, the ear, + *pathos*, a disease.]

- otopharyngeal** (o'to-far-in/'je-al). Pertaining to the ear and to the pharynx.
- otophone** (o'to-fôn). An apparatus for improving the hearing. [Gr., *ous*, *otos*, the ear, + *phone*, a sound.]
- otopie-sis** (o-to-pi'e-sis). Depression of the membrana tympani by atmospheric pressure, consequent on the formation of a more or less complete vacuum within the tympanum. [Gr., *ous*, the ear, + *pie-sis*, a squeezing.]
- otoplasty** (o'to-plas-te). Plastic surgery of the ear. [Lat., *otoplastia*, from Gr., *ous*, the ear, + *plassein*, to form.]
- otorrhea** (o-tor-re'ah). A discharge through the external auditory canal, as of blood or of serous fluid, but especially of pus, from the ear. [Gr., *ous*, the ear, + *roia*, a flowing.]
- otosalpinx** (o-to-sal'pinks). See *eustachian tube*, under *tube*. [Gr., *ous*, the ear, + *salpigx*, a trumpet.]
- otosclerectomy** (o'to-skle-ro-nek'to-me). Excision of ankylosed sound conducting apparatus of the middle ear. [Gr., *ous*, ear, + *skleros*, hard, + *ektome*, excision.]
- otoscope** (o'to-sköp). Syn.: *auriscope*. See *ear speculum*, under *speculum*. [Gr., *ous*, the ear, + *skopein*, to examine.]
- otosis** (o-to'sis). False hearing.
- oturia**, **otury** (o-tu're-ah, o'tu-re). A fancied metastasis of urine to the ear. [Gr., *ous*, the ear, + *ouron*, urine.]
- ouabain** (wah-ba'in). A crystalline glucosid, $C_{20}H_{30}O_{12} + 9H_2O$, or an amorphous form, obtained from ouabaio wood, and later from *Strophanthus gratus*. It has the same action as strophanthin, but appears more active when given by the vein or intramuscularly than strophanthin, though it seems to be absorbed somewhat slowly and uncertainly from the alimentary canal. It is also known as crystalline strophanthin, a term which has led to much confusion.
- ouabaio** (wah-bah'yo). An Abyssinian tree, *Acocanthera ouabaio*, from the wood of which ouabain was first obtained.
- ounce** (ouns). A weight equal to one-sixteenth of a pound avoirdupois, 437.5 grains, or one-twelfth of a pound troy, 480 grains.
- ourari**. See *curare*.
- out knee**. See *bow-legs*.
- out'let**. An opening or passage for egress.
- o. of the pelvis**. See *inferior strait of the pelvis*, under *strait*.
- outpatient**. A patient who receives treatment at a hospital without being an inmate of it.
- ova** (o'vah). Latin plural of *ovum*, egg.
- o. in stool, how to recognize**, see in *appendix*, page 907.
- ovadin** (o'vad-in). A medicinal preparation made from the ovaries of cows and sows.
- ovalbumin** (o-val-bu'min). The albumin of the white of the egg. Probably a mixture of various proteins.
- ovarian** (o-va're-an). 1. Of or pertaining to an ovum (especially one that has emitted an extrusion globule) or to the ovary. 2. Of or pertaining to the ovary.
- o. sub'stance**. A proprietary preparation, consisting of the entire fresh ovaries, including the corpora lutea, of the hog, dried and powdered. It has been used for the relief of symptoms following the menopause and in dysmenorrhea. [Lat., *ovarium*, the ovary.]
- ovari'num sic'cum**. A medicinal preparation consisting of cows' ovaries dried and powdered.
- ovarin** (o'var-in). A sterilized extract of sows' ovaries.
- ova'rio-**. Combining form of Lat., *ovarium*, from *ovum*, egg.
- ovariocycesis** (o-va're-o-si-e'cis). Ovarian pregnancy.
- ovariotomy** (o'va-re-ot'o-me). Removal of one or both of the ovaries. The term is conventionally restricted to the removal of ovaries that are the seat of manifest tumors, as distinguished from *oöphorectomy*.
- abdominal o.** O. by means of an incision through the abdominal wall. **normal o.** See *oöphorectomy*. **vaginal o.** O. by means of an incision through the vagina. [Lat., *ovarium*, ovary, + Gr., *tome*, a cutting.]
- ovariotubal** (o-va're-o-tu'bal). Pertaining to the ovary and to the oviduct.
- ovaritis** (o-var-i'tis). Inflammation of the ovary. It is acute or chronic. In the acute form the ovary is enlarged and tender and there is pain and fever. In the chronic form the ovary is enlarged at first and may be the seat of small cystic degeneration. Later on, it is atrophied. [Lat., *ovarium*, ovary, + Gr., *itis*, inflammation.]
- ovarium** (o-va're-um). See *ovary*. **o. masculinum**. Of Fleisch, the testicle.
- ovaria siccata**. The dried ovaries of cows, powdered and mixed with lactose and made into tablets; used in chlorosis, etc.
- ovary** (o'va-re). The structure in which the ova are developed. In the human species the ovaries are two flattened, oval bodies, one on each side, situated in the posterior layer of the broad ligament of the uterus, each averaging about 1½ in. long, ¾ in. wide, and ½ in. thick. The organ weighs from 60 to 100 grains. Its two sides and the upper border are free; the lower border (the hilum) is attached to the broad ligament; and to the upper end is attached one of the fimbriae of the oviduct. **irritable o.** Intermittent and paroxysmal oöphoralgia with slight or imperceptible ovarian congestion. [Lat., *ovarium*.]
- ovate** (o'vāt). A term used in descriptive bacteriology to signify having the outline of an egg.
- overtone** (o'ver-ton). A tone into which a clang can be resolved other than the fundamental tone.
- o'vi-**. 1. Combining form of Lat., *ovum*, egg. 2. Combining form of Lat., *ovis*, sheep.
- ovicapsule** (o've-kap-sūl). The ovisac; also its internal coat. See also *membrana*

granulosa, under *membrana*. [Lat., *ovum*, an egg, + *capsula*, a capsule.]

ovicell (o've-sel). See *ovisac*. [Lat., *ovum*, egg, + *cella*, a cell.]

oviducal (o've-du-kal). Pertaining to an oviduct. [Lat., *ovum*, egg, + *ducere*, to lead.]

oviduct (o've-dukt). Syn.: *fallopian tube*. A muscular tube, usually about 4 in. long, passing from a cornu of the uterus in a lateral direction and opening into the peritoneal cavity. It is muscular and lined with mucous membrane showing longitudinal folds and covered with ciliated epithelium. It serves to convey the ovum into the cavity of the uterus. **fimbriated extremity of the o.** The abdominal extremity of the o., which divides into a number of radiating processes (fimbriae) in the middle of which is the abdominal opening of the o. One of these processes is longer than the others and is attached to the upper end of the ovary. [Lat., *ovum*, egg, + *ducere*, to lead.]

ovigenesis (o-vij-en-es-is). Production from an egg. [Lat., *ovum*, egg, + Gr., *gennan*, to produce.]

ovigerum (o've-jerm). 1. See *primitive ovum*, under *ovum*. 2. The rudiment of a primitive ovum; a germ epithelium cell in process of development into a primitive ovum in the embryo. [Lat., *ovum*, an egg, + *germen*, a germ.]

ovigerous (o-vij'er-us). Egg-producing (said of that portion of the ovary which is the seat of the production of ovarian ova). [Lat., *ovum*, an egg, + *gerere*, to bear.]

oviparous (o-vip'ar-us). Producing eggs which are developed after their extrusion from the body. See *viviparous*. [Lat., *ovum*, an egg, + *parere*, to bring forth.]

oviprotogen (o-ve-pro'to-jen). A dietetic preparation said to be a methylene compound of albumin.

ovisac (o've-sak). 1. See *graafian vesicle*. 2. The external sac in which certain of the invertebrates carry their eggs after their extrusion from the body. [Lat., *ovum*, an egg, + *saccus*, bag.]

ovism (o'vism). The doctrine that the ovum contains in an undeveloped state, all the organs of the future individual. [Lat., *ovum*, an egg.]

o'vo-. Combining form of Lat., *ovum*, egg.

ovoferrin (o-vo-fer'in). Ferri vitellinum syntheticum. A soluble proprietary preparation, consisting of a 5 per cent. solution of an artificial product of proteid and iron.

ovogal (o'vo-gal). Syn.: *albumen cholicum*. A proprietary preparation consisting of albumen combined with bile acids. It is said to pass the stomach practically unchanged. Its actions and uses are similar to those of bile salts.

ovogenous (o-voj'en-us). Pertaining to the development or production of ova. [Lat., *ovum*, an egg, + Gr., *gennan*, to engender.]

ovoglobulin (o-vo-glob'u-lin). The globulin of the white of the egg.

ovoid (o'voyd). Egg-shaped (said of solids having an oval or ovate longitudinal section); as a n., an o. body, also the ovoid, non-flagellated female form of the malarial parasite, before fertilization, also called the *macrogamete*. **fetal o.** Syn.: *fetal ellipse*. The o. mass into which the fetus is molded by uterine contraction. [Lat., *ovum*, an egg, + Gr., *eidos*, form.]

ovolemma (o-vo-lem'mah). The light-colored membrane inclosing the vitellus of the human ovum.

ovomucoid (o-vo-mu'koyd). The mucoid of the hen's egg.

ovoserum (o-vo-se'rum). The serum from an animal injected with egg albumen. Such serum contains a precipitin from egg-white of the species used for injection.

ovoviparous (o-vo-vip'ar-us). Producing live young from eggs hatched within the body. [Lat., *ovum*, an egg, + *vivus*, alive, + *parere*, to bring forth.]

ovovittellin (o-vo-vit-el'lin). A nucleoalbumin of the yolk of hen's egg.

o'vula Nabothi. Small, shotlike cysts, occurring in the tissues of the cervix uteri. [Martin Naboth, Leipzig anatomist, and physician, 1675-1721.]

ovular, ovulary (o'vu-lar, o'vu-lar-e). Pertaining to an ovule or to an ovum. [Lat., *ovularis*, from *ovum*, an egg.]

ovulase (o'vu-läs). An enzyme supposed to be present in living eggs which provokes karyokinesis.

ovulate (o'vu-lät). Ovuliferous, containing ovules. [Lat., *ovum*, an egg, + *iatum*, supine of *ferre*, to bear.]

ovulation (o-vu-la'shun). The process of the maturation and rupture of a follicle and the discharge of an ovule. [Lat., *ovulum*, an ovule.]

ovule (o'vül). The primitive ovum. [Lat., *ovulum*, dim. of *ovum*, an egg.]

ovuliferous (o-vu-lif'er-us). See *ovulate*. [Lat., *ovulum*, a little egg, + *ferre*, to bear.]

ovulist (o'vu-list). A believer in the theory that the ovum was the true animal germ and incased all future generations, and that the spermatozooids acted simply as an excitant. [Lat., *ovum*, an egg.]

ovum (o'vum). The large nucleated cell formed in the generative organs which is capable of development into an organism similar to the parent. In its young stage it is a typical cell, consisting of a mass of naked protoplasm containing a nucleus and a nucleolus; at a more advanced stage of development (a) an inclosing membrane or membranes (the vitelline membrane, the zona pellucida, and in some cases a shell), (b) the vitellus, (c) the nucleus (germinal vesicle), and (d) the nucleolus (germinal spot). The human o. is about $\frac{1}{6}$ mm. in diameter, and, as with the ova of higher animals generally, is produced only by the female and must be fertilized by union with a spermatozoid before it is capable

- of developing into an organism like its parent. **albor ovi, albumen ovi, albumen ovi**. White of egg. **ovi albumen, ovi albumentum, ovi albus liquor, ovi candidum**. White of egg. **primitive o.** 1. One of the large clear cells in the germinal epithelium which usually collect into groups and sink into the ovarian stroma, where some become transformed into ova, others into follicular epithelium. 2. One of the primitive sexual cells. **testae ovorum preparatae**. Eggshells, especially shells of hen's eggs, powdered and freed from impurities by agitation with water. [Lat., from Gr., *oon*, egg.]
- ox'al-, ox'alo-**. Combining element in chemical terms used in the sense derived from oxalic acid.
- oxalaldehyd** (ox-al-al'de-hid). The aldehyd of oxalic acid; glyoxal.
- oxalate** (ox'al-ät). A salt of oxalic acid.
- oxalemia** (ok-sal-e'me-ah). A condition due to an accumulation of oxalates in the blood. [Gr., *oxalis*, sorrel, + *aima*, blood.]
- oxalic** (oks-al'ik). Derived from, or contained in a plant of the genus *Oxalis*. **o. acid**. See under *acid*. [Gr., *oxalis*, sorrel.]
- Oxalis** (oks'al-is). Wood sorrel; a genus of geraniaceous plants. **O. acetosella**. Common wood sorrel; a small herb growing in northern Asia, Europe, and North America. It has a pleasant acid taste, and contains potassium binoxalate. The herb and the expressed juice were formerly used as refrigerants. [Gr., *oxalis*, sorrel.]
- oxaloptysis** (ok-sal-op'tis-is). The excretion of oxalic acid in the saliva. [Gr., *oxalis*, sorrel, + *ptyein*, to spit.]
- oxaluria** (ok-sal-u're-ah). A condition characterized by an excessive excretion of calcium oxalate in the urine. [Gr., *oxalis*, sorrel, + *ouron*, urine.]
- oxalyl** (oks'al-il). The radicle of oxalic acid.
- oxaphor** (oks'af-or). A proprietary preparation, consisting of a 50 per cent. solution of oxycamphor.
- oxethyl** (ox-eth'il). Syn.: *oxyethyl*. The equivalent radicle, $\text{CH}_3\text{CH}_2\text{O}-$, entering into the composition of the compound ethyl ethers.
- oxydryl** (oks-hi'dril). See *hydroxyl*.
- oxibasic** (oks-e-ba'sik). Of salts, having an oxid as a base.
- ox'id.** A compound of a metal, or of a radicle, with oxygen. According as one or more atoms of oxygen enter into the compound, the latter is designated as a monoxid (or protoxid), a dioxid (or binoxid), a trioxid, a tetroxid, a pentoxid, etc. **basic o.** An o. containing a relatively small amount of oxygen and possessed of basic properties. The basic o's combine with water to form hydroxids which are often strongly alkaline. **hydrated o.** See *hydroxid*. [Lat., *oxidum*.]
- oxidases** (ok'sid-äs-es). Active principles present in many cells which have the property of oxidizing chemical compounds.
- oxidated** (oks'e-da-ted). See *oxidized*.
- oxidation** (oks-e-da'shun). 1. The act of combining with oxygen. 2. The process by which this combination is effected.
- ox'idized**. Combined with or containing oxygen.
- oxim** (oks'im). Any of a series of compounds formed by the action of hydroxylamin upon an aldehyd.
- ox'in**. A saccharated extract of beef.
- oxides, oxoides** (ok-so'fdes, ok-soy'des). Resembling vinegar. [Gr., *oxos*, vinegar, + *eidós*, resemblance.]
- oxone** (oks'ön). A name applied to fused sodium peroxid, containing a fractional percentage of a catalytic agent.
- oxos** (ok'sos). Vinegar. [Gr.]
- ox'y-**. Combining form of Gr., *oxys*, sharp, keen, acute, pungent, acid.
- oxyacucis** (oks-e-ak-u'sis). See *hyperacucis*. [Gr., *oxys*, sharp, + *akucis*, a hearing.]
- oxyblepsia** (ok-se-blep'se-ah). Unusual acuity of vision. [Gr., *oxys*, sharp, + *bleps*, vision.]
- oxybutyric acid** (oks'e-bu-tir'ik). See under *acid*.
- oxycamphor** (oks-e-kam'for). The compound, $\text{C}_{10}\text{H}_{16}\text{O}_2$; used in inspiratory disorders, chiefly in cardiac dyspnea.
- oxycephalic** oks-e-sef-al'ik). Having a sharp pointed head.
- oxychlorid** (oks-e-klor'id). A compound of an element or radicle with both oxygen and chlorin.
- oxycinesia** (ok'se-sin-e'ze-ah). Painful motion. [Gr., *oxys*, sharp, + *kinesis*, motion.]
- oxyco'toin**. Cotoin in which hydroxyl replaces hydrogen.
- oxycroceus** (oks-e-kro'se-us). Containing vinegar and saffron. [Gr., *oxos*, vinegar, + *krokos*, saffron.]
- oxydase** (oks'id-äs). An oxidizing ferment.
- oxydatous** (ok-sid-a'tus). Oxidized; with the name of a base, that one of two oxids which contains the more oxygen; with the name of a base coupled with an adjective denoting an acid, that salt of the acid which contains the more oxygen (and hence relatively less of the basic element).
- oxydimorphin** (oks'e-di-mor'fin). Pseudomorphin, dihydromorphin ($\text{C}_{17}\text{H}_{15}\text{NO}_3$)₂, a non-toxic decomposition product resulting from the oxidation of morphin. The reaction occurs readily and may take place when morphin is made into pills with acacia or when a solution of the alkaloid stands in the light.
- oxydulated** (ok-sid'u-la-ted). Slightly oxidized. [Lat., *oxydulatus*.]
- oxydulatous** (ok-sid-u-la'tus). Oxydulated, with the name of a base, that one of two oxids which contains the less oxygen; with the name of a base and an adjective denoting an acid, that salt of the acid which contains the less oxygen (and hence relatively more of the base).
- oxydulum** (ok-sid'u-lum). That one of

two oxids of an element or basic substance which contains relatively the less oxygen.

oxydum (ok'sid-um). See *oxid*.

oxyecoa (oks'e-e-ko'i'ah). Great acuteness of hearing. [Gr., *oxys*, sharp, + *akoe*, hearing.]

oxygen (ok'sij-en). A non-metallic element discovered by Priestley in 1774, and termed by him dephlogisticated air, its present name being given to it by Lavoisier in 1778. It is a colorless, tasteless, and odorless gas, of a sp. gr. of 1.105 as compared with that of air, and soluble in water, which takes up about 4 per cent. of it by volume. Atomic weight, 16.00; symbol, O. Under the combined influence of a very low temperature (-130° C.) and great pressure (475 atmospheres, or about $3\frac{1}{2}$ tons to the square inch) o. is liquefied. Under certain conditions it is converted into ozone. It is used therapeutically by inhalation in bronchitis and pneumonia where there is deficient aeration in consequence of heart distention, in resuscitating persons asphyxiated by coal gas, in chloroform or ether narcosis, and to relieve dyspnea in phthisis and diabetic coma. The saturated water is used for gastric or intestinal indigestion, nausea, and gastric or neuralgic headache. **electropositive o.** See under *antozone*. **pol- arized o.** Ozone. **respiratory o.** The o. loosely combined with hemoglobin, which is available for respiration. [Gr., *oxys*, acid, + *gemma*, to engender.]

oxygenase (oks'e-jen-as). Substances in the tissues which take up oxygen and form organic peroxids. These peroxids, by action of peroxidase, liberate active (atonic) oxygen.

oxygenated (oks'e-jin-a-ted). Charged with oxygen, as a mineral water.

oxygenation (ok-se-jen-a'shun). The act or process of becoming or causing to become oxygenated. See *arterialization*.

oxygenic (ok-se-jen'ik). Giving rise to acids.

oxygeusia (oks-e-ju'se-ah). Great acuteness of taste. [Gr., *oxys*, sharp, + *gusis*, taste.]

oxyhaloid (ok-se-hal'oïd). A compound of an element or compound radicle with oxygen and a halogen.

oxyhematin (ok'se-hem'at-in). See *hematin*.

oxyhemoglobin (ok'se-hem-o-glo'bin). Syn.: *hematoglobulin*, *hematocrystalline*. The molecular combination of hemoglobin with oxygen. Present in oxygenated blood. This substance is the oxygen carrier in the blood to the body tissues. The oxygen in it is rather loosely combined and may be replaced by carbon dioxide, carbon monoxid, and other gases. By the action of a reducing agent, as Stokes' solution, o. is converted into hemoglobin. The absorption spectrum of o. (and its reduction product hemoglobin) is used in its identification.

oxyhydrate (ok-se-hi'drät). A compound containing both oxygen and hydroxyl.

oxyhydrogen (ok-se-hi'dro-jen). Pertaining to or consisting of a gaseous mixture of oxygen and hydrogen.

oxyiodid (ok-se-i'o-did). A compound containing both oxygen and iodine united to another element or radicle.

oxylalia (oks-e-la'le-ah). Rapid speech. [Gr., *oxys*, swift, + *lalein*, to speak.]

oxymel (oks'e-mel). Of the Br. Ph., a preparation containing clarified honey, acetic acid, and distilled water. [Gr., *oxys*, acid, + *meli*, honey.]

oxymethyl (ok-se-meth'il). A univalent radicle, CH_3O .

oxymetrum (ok-se-met'rum). See *acidimeter*. [Gr., *oxys*, acid, + *metron*, a measure.]

oxymuriate (ok-se-mu're-ät). An old name for a chlorid.

oxynaphthol (ok-se-naf'thol). $\text{OH.C}_{10}\text{H}_6\text{-ON}$, a substance known in two isometric forms: dioxynaphthalene and naphtho-hydroquinone.

oxynarcotin (oks-e-nar'ko-tin). An alkaloid, $\text{C}_{22}\text{H}_{23}\text{NO}_5$, obtained from narcein.

oxyn'dol. See *indoxyl*.

oxyn'tic. Acid-forming.

oxyntin (oks-in'tin). A compound of protein and hydrochloric acid, containing 5 per cent. of absolute HCl. It is used as a substitute for hydrochloric acid in the digestion of proteids.

oxynucleus (ok-se-nu'kle-us). A nucleus containing oxygen.

oxyopia (oks-e-o'pe-ah). Excessive acuteness of the sense of light. [Gr., *oxys*, sharp, + *opsis*, vision.]

oxyosphresia (oks'e-os-fre'ze-ah). Great acuteness of smell. [Gr., *oxys*, sharp, + *osphresis*, sense of smell.]

oxypathy (oks-ip'ath-e). Poisoning by non-fixation of unoxidizable acids.

oxyphenacetin salicylate (oks'if-e-nas'-et-in sal-is'il-ät). A product of the action of chlorophenacetin or bromophenacetin on sodium salicylate; an antipyretic.

oxyphenyl (ok-se-fe'nil). The univalent radicle, $\text{OH.C}_6\text{H}_5$.

oxyphenylalanin (ok'se-fen'il-al'an-in). See *tyrosin*.

oxyphilia (oks'if-il). An acid staining cell.

oxyphonia (oks-e-fo'ne-ah). Shrillness of voice. [Gr., *oxys*, sharp, + *phone*, voice.]

oxyphosphid (ok-se-fos'fid). A compound of an element or radicle with oxygen and phosphorus.

oxyprotein (ok-se-pro'te-in). A proteid richer in oxygen than ordinary proteids.

oxypurin (ok-se-pu'rin). A purin body containing oxygen.

oxyquinizin (ok-se-kwin'iz-in). A derivative of quinizin in which an atom of oxygen replaces two atoms of hydrogen: $\text{C}_9\text{H}_8\text{N}_2\text{O}$.

oxyquinolin (ok-se-kwin'o-lin). An hydroxyl substitution compound of quinolin, $\text{C}_8\text{H}_6(\text{OH})\text{N}$.

ox'ys. Sharp, keen, acid.

oxysaccharum (oks-e-sak'ar-um). A mixture of sugar and vinegar. [Gr., *oxys*, sour, acid, + *sakcharon*, sugar.]

oxysepsis (ok-se-sep'sis). 1. Putrefaction

- with the development of acidity. 2. Putrefaction that supervenes quickly after death. [Gr., *oxys*, acid, + *sepsis*, putrefaction.]
- oxysparteïn** (oks-e-spar'te-in). An oxidation product, $C_{12}H_{24}N_2O$, of sparteïn. It is said to slow the pulse rate.
- oxystrychnin** (oks-e-strik'nin). An oxidation product, $C_{21}H_{28}N_2O_7$, obtained by the action of boiling potassium nitrite on strychnin sulphate.
- oxysulphate** (ok-se-sul'fât). A compound of a sulphate and an oxid; a basic sulphate.
- oxysulphid** (ok-se-sul'fid). A compound of an element or radicle with oxygen and sulphur.
- oxysulphuratus** (ok'se-sul-fu-rah'tus). Oxidulated; with the name of a base, that one of two oxids which contains the less oxygen; with the name of a base and an adjective denoting an acid, that salt of the acid which contains the less oxygen (and hence relatively more of the base).
- oxytocic** (ok-se-to'sik). An agent that hastens parturition or childbirth. [Gr., *oxys*, rapid, + *tokos*, a birth.]
- oxytoxin** (ok-se-tok'sin). Any substance produced by the oxidation of a toxin.
- Oxytropis** (ok-sit'ro-pis). Oxytrope; a genus of leguminous plants, closely allied to *Astragalus*. **O. campestris**. A species said to produce loco. **O. Lambertii**. A Colorado species said to cause loco disease. **O. multiflora**. A reputed loco plant. [Gr., *oxys*, sharp, + *tropis*, a ship's keel.]
- oxytropism** (oks-it'ro-pizm). The stimulus reaction of oxygen upon living matter.
- oxytuberculin** (ok'se-tu-ber'ku-lin). A tuberculin from very virulent cultures modified by oxidation with hydrogen.
- Oxyuris** (ok-se-u'ris). A genus of nematoid worms. **O. curvula**. A species found in the cecum and colon of the horse and the ass. **O. vermicularis**. Syn.: *fusaria vermicularis*, *maw-worm*. Thread or pin worm, parasitic in the intestine of man. It is found in the sigmoid flexure of the colon and in the rectum.
- oz**. An abbreviation for ounce. See *table of weights and measures*, in *appendix*, pages 941, 942, 943.
- ozena** (o-ze'nah). A disease of the nasal passages causing a disagreeable odor and accompanied with an offensive discharge. [Gr., *ozein*, to smell.]
- ozochrotia** (o-zo-kro'she-ah). Strong skin odor. [Gr., *ozein*, to smell, + *chros*, skin.]
- ozokerin** (o-zok-e'rïn). A commercial proprietary article resembling vaselin.
- ozokerite** (o-zok-e'rit). A mixture of solid natural paraffins found in Utah, Galicia, and Roumania; used with glycerin or linseed oil in skin diseases. [Gr., *ozein*, to smell, + *keros*, wax.]
- ozonation** (o-zo-na'shun). Subject to the action of ozone.
- ozone** (o'zôn). An allotropic form of oxygen produced by the discharge of an electric machine in air or in oxygen gas, or by the electrolysis of water. It is constantly present in the atmosphere, but in very small amount. It is a colorless gas of peculiar odor, and, chemically, consists of oxygen so condensed that 3 atoms of the element occupy a molecule instead of 2, as in ordinary oxygen gas. Its symbol is therefore O₃. When condensed, it is dark blue in color. It very readily parts with its extra atom of oxygen and is hence one of the most energetic oxidizing agents, attacking organic substances, such as caoutchouc, destroying organic tissues, and decolorizing blood. It has accordingly been used as a bleaching and disinfecting material. O₃ is slightly soluble in water. It is a powerful disinfectant. [Gr., *ozein*, to smell.]
- ozonized** (o'zon-izd). Containing, or impregnated with ozone.
- ozoniform** (o-zo'no-form). A compound of ozone and a pine distillate; used as a disinfectant.
- ozonometer** (o-zon-om'et-er). An apparatus for ascertaining the presence of ozone and measuring its quantity. It consists usually of papers treated with a solution of potassium iodid and starch. On exposure to an atmosphere containing ozone, the potassium iodid is decomposed, and the liberated iodin colors the starch blue. [Ozone, + Gr., *metron*, a measure.]

P

- P**. The chemical symbol for the element phosphorus.
- p**. Abbreviation for the prefix, *para*, beyond.
- pabulum** (pab'u-lum). See *aliment*.
- pacchionian** (pak-e-o'ne-an). From *Pacchioni*. **p. bodies**, **p. depressions**. Syn.: *cerebral granulations*, *meningeal granulations*, *pacchionian granulations*. Small rounded or pedunculated masses of fibrous tissue growing on the arachnoid along the longitudinal fissure of the brain.

- They are present in nearly all adults and are of no pathological significance.
- p. corpuscle**. A small granulation seen on the surface of the dura mater along the longitudinal sinus. **p. fossae**. The depressions upon the inner surface of the skull in which the pacchionian bodies are lodged. [Antonio Pacchioni, Italian anatomist, 1665-1726.]
- Pacchioni's glands**. See *pacchionian bodies*.
- pachismus** (pak-is'mus). Thickening or condensation. [Gr., *pachys*, thick.]

pachy-, pach-. Combining form of Gr., *pachys*, thick, large, massive.

pachyacia (pak-e-a'kre-ah). Enlargement of the soft parts of the extremities. [Gr., *pachys*, thick, + *akron*, end.]

pachyblepharon (pak-e-blef'ar-on). A thickening of the border of the eyelid.

pachychilia (pak-e-ki'le-ah). Thickness of the lips. [Gr., *pachys*, thick, + *cheilos*, lip.]

pachydactylia (pak-e-dak-til'e-ah). A condition characterized by abnormal thickness of the fingers. [Gr., *pachys*, thick, + *daktylos*, a finger.]

pachydermia (pak-e-der'me-ah). Another name for *elephantiasis*. [Gr., *pachys*, thick, + *derma*, skin.]

pachyema (pak-e-e'mah). Coagulated blood. [Gr., *pachys*, thick, + *aima*, blood.]

pachyemia (pak-e-e'me-ah). Thickening of the blood.

pachymeningitis (pak'e-men-in-ji'tis). Inflammation (usually chronic) of the cerebral or spinal dura, with thickening.

hemorrhagic p. 1. P. in which there is an inflammatory growth of vascular connective tissue into which a hemorrhage occurs. 2. A hematoma of the dura. [Gr., *pachys*, thick, + *meninx*, a membrane, + *itis*, inflammation.]

pachynsis (pak-in'sis). See *inspissation*. [Gr.]

pachyntic (pak-in'tik). Thickening, inspissating.

pachyperitonitis (pak'e-per-it-on-i'tis). Peritonitis with the formation of new membranes and thickening of the peritoneum. **hemorrhagic p.** P. with the formation of vessels in the new membrane that rupture easily, causing circumscribed hemorrhage. [Gr., *pachys*, thick, + *peritonitis*.]

pachysomia (pak-e-so'me-ah). Thickening of parts of the body. [Gr., *pachys*, thick, + *soma*, body.]

pacinian (pa-sin'e-an). From *Pacini*. **p. corpuscles**. A form of nerve ending discovered by Vater (1741), first described by Pacini (1830), and named after him by Kölliker and Henle (1844). Each c. consists of a centrally situated blind termination of a medullated nerve fiber surrounded by an ovoid mass consisting of several concentrically arranged layers with a central, nearly homogeneous core next to the nerve fiber. The nerve fiber enters the c. at one pole, very soon loses its myelin, and then extends as a naked axis cylinder nearly to the opposite pole, where it enlarges into one or more club-shaped terminal masses. [*Filippo Pacini*, an Italian anatomist, 1812-1883.]

pack. 1. As a noun, a cloth used to envelop the whole or a part of the body. 2. As a verb, to fill a cavity, as the vagina. **cold p.** A p. in which cold or iced water is used. **dry p.** A procedure in which a sheet is placed about the body, excepting the head, and several blankets are placed about the sheet. **wet p.** A hydrotherapeutical measure in which a cloth wet with warm or cold

water is folded around the bare body or a part and a blanket folded over it. The application is made for variable periods of time.

pack'ing. 1. The application of a pack. 2. Any material used to surround a wound or injury, or to occlude a wound or cavity.

page proof reading. See *in appendix*, page 944.

Paget's disease' of the nipple. Squamous carcinoma about the nipple. A local manifestation of carcinoma of the breast which develops slowly. [*Sir James Paget*, English surgeon, 1814-1899.]

pain. A sensation in consciousness, drawing attention to a disorder of a bodily function, at a physico-chemical, sensory or psychological level. In the pl., the throes of childbirth. **electric p.** A form of sudden p. affecting the subjects of locomotor ataxia. **girdle p.** See *girdle sensation*, under *sensation*. **intermenstrual p.** P. occurring in the intermenstrual period in persons affected with dysmenorrhea. **lightning p.** See *electric p.* [Old Fr., *peine*.]

paku-kidang. A styptic drug composed of very soft, long, silky hairs obtained in Sumatra from the rhizomes of different ferns (according to the Russ. Ph., from *Cibotium barometz*).

palaktogen (pal-ak'to-je-n). A nutrient preparation of casein.

pal'ate. The roof of the mouth. **artificial p.** A plate made of some hard substance, such as ivory, formed to fit the roof of the mouth and close a fissure in the palate. **cleft-p.** A congenital deficiency of the p. in which there is a fissure involving the uvula and the soft p. **hard p.** The osseous structures forming the portion of the roof of the mouth posterior to the alveolar arch. **soft p.** The incomplete partition between the mouth and the pharynx which is suspended from the posterior margin of the hard palate. In the middle line it is prolonged into the uvula. [Lat., *palatum*.]

palatine (pal'at-in). Pertaining to the palate: as a n., see *palatal bone*, under *bone*. [Lat., *palatinus*, from *palatum*, the palate.]

palatitis (pal-at-i'tis). See *uranisconitis*. [Lat., *palatum*, the palate, + Gr., *itis*, inflammation.]

palatoglossus (pal-at-o-glos'sus). See *table of muscles*, under *muscle*.

palatognathous (pal-at-og'na-thus). Having a cleft palate. [Lat., *palatum*, palate, + Gr., *gnathos*, jaw.]

palatoplasty (pal'at-o-plas-te). See *staphyloorrhaphy*. [Lat., *palatum* + Gr., *plassein*, to mold.]

palatoplegia (pal'at-o-ple'je-ah). Paralysis of the palate. [Lat., *palatum*, palate, + Gr., *plege*, a blow.]

palatosalpingeus (pal-at-o-sal-pin'je-us). See *table of muscles*, under *muscle*.

palatoschisis (pal-at-os'kis-is). Fissure of the palate. [Lat., *palatum*, the palate, + Gr., *schisis*, a cleaving.]

palingenesia, palingenesis (pal-in-je-n'e'-

- se-ah, pal-in-jen'es-is). Evolution in which similar forms are reproduced in each succeeding generation. [Gr., *palin*, again, + *genesis*, a producing.]
- palinodia** (pal-in-o'de-ah). Retraction of a member of the body. [Gr., *palin*, again, + *odos*, a way.]
- palladium**. A metallic element, which has the property of occluding large quantities of elementary hydrogen. Symbol, Pd. Atomic weight, 106.5. Palladium chlorid, PdCl₂, is used as a test for carbon monoxid gas, with which it forms a brown or black precipitate.
- pallium** (pal'e-um). The cerebral cortex.
- pal'lor**. Paleness, especially of the skin. [Lat., from *palere*, to be, or to look pale.]
- palm** (pahm). 1. A species of the *Palmae*; also *Salix caprea*, *Taxus baccata*, etc. 2. The anterior surface of the hand, superior to a line along the base of the fingers.
- p. butter**. See *p. oil*. **p. oil**. P. butter; a fixed oil obtained from the fruits of *Elaeis guineensis*, composed of tripalmitin and triolein. It has an orris root odor, whitens by age, and is more readily saponified than other fatty oils. [Lat., *palma*.]
- pal'mar**. Pertaining to or situated in the palm of the hand. [Lat., *palmaris*, from *palma*, the palm of the hand.]
- palmaris** (pal-ma'ris). See *table of muscles*, under *muscle*.
- palmata** (pal-mah'tah). Palmate-lobed salrep.
- palmic** (pal'mik). 1. Pertaining to pulsation or to palpitation. 2. Pertaining to or derived from a palm. [Gr., *palmikos*.]
- palmitamid** (pal-mit-am'id). Ammonia in which 1 molecule of the radicle of palmitic acid replaces 1 atom of hydrogen, C₁₅H₃₁CONH₂.
- palmitate** (pal'mit-at). A salt of palmitic acid.
- palmitic** (pal-mit'ik). 1. Pertaining to or obtained from palm oil. 2. Derived from or contained in palmitin. **p. acid**. See under *acid*.
- palmitin** (pal'mit-in). A glycerin ester of palmitic acid, found in the fats; especially tripalmitin.
- palmityl** (pal'mit-il). The univalent radicle, C₁₅H₃₁CO, of palmitic acid.
- palpation** (pal-pa'shun). In physical examination, the touching or handling of a part or region of the body in order to ascertain its condition or that of subjacent contiguous parts. **abdomino-vaginal p.** An examination of the pelvic contents by means of a finger in the vagina and a hand over the hypogastric region. **bimanual p.**, **conjoined p.** See *bimanual examination*, under *examination*. [Lat., *palpatio*.]
- palpebra** (pal'pe-brah). See *eyelid*.
- palpebral** (pal'pe-bral). Pertaining to the eyelids.
- palpitation** (pal-pit-a'shun). A rapid or tumultuous throbbing. **arterial p.** P. in the course of an artery. **p. of the heart**. A violent, rapid, and often irregular beating of the heart, caused by emotional excitement, disease, or excessive action of any kind. [Lat., *palpitatio*.]
- pal'pus**. A tactile organ or feeler attached to the labium of an insect. [Lat., *palpare*, to touch softly.]
- palsy** (pawl'se). See *paralysis*. **lead p.** See *plumbism*. **scrivener's p.** See *writer's cramp*, under *cramp*.
- paludal** (pal'u-dal). Pertaining to or originating from swamps; hence of malarial fever, before the discovery of the *Plasmodium malariae*. [Lat., *palus*, a marsh.]
- paludism** (pal'u-dizm). Intoxication by marsh miasm. [Lat., *palus*, a marsh.]
- pamphagous** (pam'fa-gus). Omnivorous. [Gr., *pas*, all, + *phagein*, to eat.]
- pampiniform** (pam-pin'if-orm). Resembling a tendril; intricately convoluted. [Lat., *pampinus*, tendril, + *forma*, form.]
- pan**. A broad, flat-bottomed vessel, usually shallow; hence any hollow formation or organ. **brain p.**, **head p.** See *brain case*, under *brain*. **knee p.** See *patella*. [Ang.-Sax., *panna*.]
- pan-, panto-**. Combining form of Gr., *pan*, the neuter of *pas*, all.
- panacea** (pan-a-se'ah). 1. A universal remedy; a name given by old writers to various nostrums and also to certain plants. 2. The genus *Panax*. [Gr., *panakeia*.]
- panacon** (pan'ak-on). Of Garrigues, a substance, C₂₂H₁₉O₈, obtained from the root of *Aralia quinquefolia*.
- panada**, **panado** (pan-ah'dah, pan-ah'do). Bread boiled to a pap. [Lat., *panis*, bread.]
- Panama fever**. A severe form of malarial fever acquired on the Isthmus of Panama, often developing into the pernicious or hemorrhagic form of malarial f. Also called *Chagres f.*
- panaquilon** (pan-ak'wil-on). Of Garrigues, a substance, C₂₄H₂₈O₈, found in the root of *Aralia quinquefolia*. [Gr., *pas*, all, + Lat., *aquilo*, the north wind.]
- panase** (pan'äs). A proprietary preparation of the digestive enzymes of the pig's pancreas.
- panatrophly** (pan-at'ro-fe). A generalized atrophy.
- Pa'nax**. 1. A genus of araliaceous shrubs or trees. 2. Ginseng. [Gr., *pas*, all, + *akos*, a remedy.]
- pancreaden** (pan'kre-ad-en). A medicinal preparation of the pancreas. It has been suggested in diabetes.
- pancreas** (pan'kre-as). Syn.: *abdominal salivary gland*. A long, reddish, acinotubular gland running transversely behind the stomach, about opposite the first lumbar vertebra. Its right and larger extremity, the head, lies in the curvature of the duodenum, while the left and smaller, the tail, is in contact with the spleen. Its anterior surface is covered by the stomach, its posterior is separated from the vertebral column by the aorta, the superior mesenteric vessels, and the pillars of the diaphragm, and the inferior surface rests upon the

junction of the duodenum and jejunum, and on the left end of the transverse colon. It consists of a somewhat loose aggregation of lobes and lobules, which empty by canals into a central duct (the canal of Wirsung) which traverses the entire length of the gland a little nearer the upper than the lower border. The human *p.*, as also that of many animals, has normally two ducts, the main duct or the duct of Wirsung, opening into the intestine near or in conjunction with the bile duct, while the lesser, or duct of Santorini, opens independently. It secretes the pancreatic fluid, and either has the action of modifying the blood or secretes a ferment destructive of glucose, as its extirpation is followed by glycosuria and azoturia. **accessory p.** A small mass of tissue similar to the *p.* situated close to it and apparently a detached portion of it. **lesser p.** See *little p.* **little p.** A lobular semidetached portion of the posterior surface of the head of the *p.* which sometimes has a separate duct opening into the principal one. **p. aberrans, p. accessorium.** See *accessory p.* [Gr., *pas, pan, all, + kreas, flesh.*]

pancreatic (pan-kre-at'ik). Of or pertaining to the pancreas. **p. diabetes.** See *diabetes.* **p. juice.** The secretion of the pancreas, which flows into the intestine. Its important physiological constituents are the enzymes, which have the property of digesting the proteids, fats, and carbohydrates. **liquor pancreaticus.** A solution containing 1.7 per cent. *p.* in gelatin and water with bicarbonate of sodium flavored with cardamon [N. F.]. **pulvis pancreaticus compositus.** Peptonizing powder; it consists of 20 per cent. of *p.* and 80 per cent. of sodium bicarbonate [N. F.].

pancreatin (pan'kre-at-in). 1. Of Kühne, the active part of the pancreatic juice, including all its ferments. The term has also been applied to each of its three ferments: trypsin, amylopsin, and steapsin. 2. A digestive extract obtained from the chopped pancreas of an animal, usually the hog. It consists of a mixture of digestive enzymes, principally amylopsin, myopsin, trypsin, and steapsin. It must be capable of converting 25 times its weight of starch into soluble substances. [Lat., *pancreatinum*, U. S. Ph.] [Gr., *pagkreas, the pancreas.*]

pancreatitis (pan'kre-at-i'tis). Inflammation of the pancreas. **acute hemorrhagic p.** Acute *p.* in which there are hemorrhages into the interacinous tissue. **centrilobular p.** Fibrosis around the branches of the duct. **chronic p.** A form marked by fibrosis. **perilobular p.** Fibrosis separating groups of acini. **purulent p.** *P.* with suppuration. [Gr., *pagkreas, the pancreas, + itis, inflammation.*]

pancreatoid (pan'kre-at-oid). Of tumors, resembling the pancreas. [Gr., *pagkreas, the pancreas, + eidos, resemblance.*]

pancreatolith (pan-kre-at'o-lith). A cal-

culus of the pancreas and ducts. [Gr., *pagkreas, the pancreas, + lithos, a stone.*]

pancreatoncus (pan-kre-at-on'kus). A tumor of the pancreas. [Gr., *pagkreas, pancreas, + ogkos, mass.*]

pancreone (pan'kre-on). A product of the action of tannin on pancreatin; used in deficiency of trypsin in the pancreatic secretion.

pancreotomy (pan-kre-ot'o-me). An incision of the pancreas. [Gr., *pagkreas, the pancreas, + tome, a cutting.*]

pancreotoxin (pan-kre-o-toks'in). A cytolytic serum for the pancreas producing glycosuria, having an antitryptic action. [Gr., *pagkreas, pancreas, + toxikon, poison.*]

pandemic (pan-dem'ik). Existing or prevalent everywhere; of a disease, widespread, epidemic over a wide geographical range. [Gr., *pas, all, + demos, the people.*]

pang. An acute sudden pain, either transitory or recurrent. [Ang.-Sax., *pinan.*]

pangaduin (pan-gad'u-in). A collective name for the bases of cod-liver oil. [Gr., *pas, all, + Lat., gadus, the cod.*]

pangenesis (pan-jen'es-is). Of Darwin, the hypothesis for the provisional explanation of such facts as the inheritance by offspring of both original and newly acquired characters of parents, the appearance of characters belonging to remote ancestors (atavism), and the appearance in metembyronic or even adult life of characters before latent. The hypothesis depends on the assumption that every living cell of the organism at all periods of development throws off gemmules or molecules capable of reproduction. These circulate through the system and become aggregated in the reproductive cells, and can give rise to a new individual, as by the buds of plants or by the combined action of distinct sexual elements. In each case the gemmules give rise to cells corresponding to those from which they originated in the parent body. Generally the gemmules develop in the following generation; but they may be permanently lost or may remain quiescent and develop after several generations. [Gr., *pas, all, + genesis, genesis.*]

panidrosis (pan-id-ro'sis). Perspiration of the whole body. [Gr., *pas, pan, all, + idros, perspiration.*]

pan'is. Bread. **cataplasma p.** A poultice made by boiling bread crumb with water. **mica p.** Bread crumb; the soft part of wheat bread, used as an excipient. **p. laxans.** A biscuit painted on one side with a solution of jalap resin and then covered with a saccharine mixture. [Lat., *panis.*]

panmixia (pan-miks'e-ah). Indiscriminate intercrossing, as opposed to the careful selection of individuals to perpetuate desired traits in their offspring. [Gr., *pas, all, + mignynai, to mix.*]

panneuritis (pan-nu-ri'tis). A general inflammation of the peripheral nerves. **p. endemica.** Beriberi. [Gr., *pas, pan, all, + neuron, a nerve, + itis, inflammation.*]

- panniculus** (pan-nik'u-lus). A layer, tissue, or membrane. **p. adiposus**. The subcutaneous layer of connective tissue. It contains large quantities of fat in its meshes. **p. carnosus**. A subcutaneous layer of muscular fibers by means of which the skin is moved, covering the sides of the thorax and abdomen of most of the lower mammals. In many instances a condensed portion is inserted into the humerus or blends with the insertion of the latissimus dorsi. **p. cordis**. See *pericardium*. **p. subtilis**. See *pia*. **p. transversus**. See *diaphragm*. [Lat., dim. of *pannus*, a cloth.]
- pan'nus**. Syn.: *granular keratitis*. A generalized inflammation of the cornea, covering it with an inflammatory process as with a cloth or veil. [Lat., "cloth."]
- panopepton** (pan-o-pep'ton). A proprietary preparation, containing about 18 per cent. of alcohol and having a nutritive value about equal to that of milk.
- panophobia** (pan-o-fo'be-ah). A generalized fear.
- panophthalmitis** (pan'of-thal-mi'tis). Inflammation of the entire eyeball. [Gr., *pas*, all, + *ophthalmos*, the eye, + *itis*, inflammation.]
- panotitis** (pan-o-ti'tis). Otitis in which both the middle ear and the labyrinth are affected. [Gr., *pas*, *pan*, all, + *ous*, the ear, + *itis*, inflammation.]
- panpharmakon** (pan-far'ma-kon). A panacea. [Gr., *pas*, all, + *pharmakon*, a drug.]
- panplegia** (pan-ple'je-ah). General paralysis. [Gr., *pas*, all, + *plege*, a blow.]
- panspermia, panspermatism** (pan-sper-me-ah, pan-sper-mat-ism). 1. The doctrine that disease germs and bacteria are always present. 2. See *biogenesis*. [Gr., *pas*, all, + *sperma*, a seed.]
- panspermium** (pan-sper-me'um). The hypothetical elementary principle of matter.
- pansphygmograph** (pan-sfig'mo-graf). A modification of the cardiograph, devised by Brondgerst, which also registers the pulse curves. [Gr., *pas*, all, + *sphygmos*, the pulse, + *graphein*, to write.]
- pan'sy**. See *Viola tricolor*, under *Viola*.
- pantagogus** (pan-tag-o'gus). Driving off everything noxious or morbid (said of medicines). [Gr., *pas*, *pan*, all, + *agogos*, a leading.]
- pantanencephalia** (pan'tan-en-sef-al'e-ah). In a fetal monstrosity, entire absence of the brain. [Gr., *pas*, all, + *an*, privative, + *egkephalos*, the brain.]
- panthodic** (pan-thod'ik). Of nervous impulses, radiating from one point to all parts of the body. [Lat., *panthodicus*, from Gr., *pas*, all, + *odos*, a way.]
- pantophagous** (pan-tof'ag-us). Omnivorous. [Gr., *pas*, all, + *phagein*, to eat.]
- pantoplethora** (pan-to-pleth'o-rah). General hyperemia or fullness. [Gr., *pas*, all, + *plethore*, fullness.]
- pantopon, pantopium** (pan'to-pon, pan-to'pi-um). A proprietary preparation said to represent opium in all its essential constituents.
- papain** (pah'pa-in). Papayotin; a diges-
- tive ferment prepared from *Carica papaya*.
- Papaver** (pah-pa'ver). 1. A genus made up of the poppies. 2. Poppy capsules. **fructus papaveris (albi, seu immaturi)**. Poppy capsules. **P. album**. *P. officinale*. **papaveris capita, seu capsulae**. Poppy capsules. **P. nigrum**. Black opium poppy; a black-seeded variety of *P. somniferum*; cultivated especially for the oil-yielding seed. **P. officinale**. White poppy; usually regarded as a variety of *P. somniferum*. It is cultivated in Persia for its opium, and furnishes most of the poppy capsules. **P. rheas, P. rubrum**. (Red) corn poppy, abundant in western Asia, in northern Africa, and throughout Europe. The petals, which have a heavy odor, when fresh, and a somewhat bitter taste, are the red poppy petals of pharmacy, the rheados petals of the Br. Ph. They contain rheadin and probably meconic acid, but no morphin. **P. somniferum**. 1. Opium poppy; indigenous probably to southern Europe and western Asia. It is now extensively cultivated for the opium obtained by scarifying the unripe but fully grown capsules, and in Europe for the seed, which yields oil of poppy. The dried, nearly ripe capsules constitute the poppy capsules, the *papaveris capsulae* of the Br. Ph., 1898, which possess in a mild form the properties of opium. [Lat.]
- papaverin** (pap-av'er-in). An alkaloid found in opium. It acts as a narcotic and soporific, and produces muscular relaxation and subsequent convulsions. [Lat., *papaver*, poppy.]
- Papa'ya commu'nis**. See under *Carica*.
- papayotin** (pap-ah-yo'tin). A preparation, which contains the digestive principle of the pawpaw.
- papilla** (pap-il'lah). 1. The nipple. 2. Any minute soft or fleshy prominence or nipple-shaped projection. 3. See *optic disk*. **calciform papillae, circumvallate papillae**. Papillae of the tongue, situated near the base on the dorsal surface. In man they are from seven to twelve in number, and are arranged like a V with its point toward the throat. **clavate papillae**. See *fungiform papillae*. **compound p.** A p. that bears several minute secondary papillae, each having the structure of a simple p. **conoidal papillae**. See *filiform papillae*. **dental p., dentin p.** See *tooth p.* **filiform papillae (of the tongue)**. Minute, conical or cylindrical, simple or compound eminences on the dorsum of the tongue, very numerous except near its base. Taste buds are not found in them, but their denser covering of horny epithelium suggests a mechanical use. **fungiform papillae**. Numerous small, rounded, deep-red eminences, with narrow bases, situated on the middle and anterior parts of the dorsum and especially along the sides of the tongue. **gustatory papillae**. Taste papillae; either (1) all the papillae of the tongue or (2) the circumvallate and fungiform papillae (1.

e., those supplied with taste buds). **hair p.** A conical process of the corium projecting upward into a corresponding depression in the end of the hair bulb. It is richly supplied with vessels and nerves, and nourishes the hair. **lacrimal papillae.** The little elevations in the edge of the eyelid occupied by the lacrimal puncta. **lingual papillae.** Small eminences covering the anterior two-thirds of the tongue. They include the circumvallate, filiform, fungiform and conical papillae. **nerve papillae.** Papillae of the skin containing tactile corpuscles, nervous plexuses, or the terminal nerve bulbs of Krause, and sometimes blood vessels. See *tactile corpuscles*, under *corpuscles*, and *vascular papillae*. **optic p.** See *optic disk*, under *disk*. **papillae cutis.** Conical prolongations of the corium with rounded or blunt tops, sometimes cleft into two or more points, when they are called compound papillae. **p. duodenalis, p. duodeni.** The slight eminence in the duodenum indicating the opening of the ductus choledochus communis. **primary p.** A p., either simple or compound, arising directly from the corium. **secondary papillae.** Papillae arising from a primary p. as a primary p. arises from the corium. See *compound*. **simple p.** An unbranched or undivided p. arising directly from the corium. **tactile papillae.** See *nerve papillae*. **taste papillae.** See *gustatory papillae*. **tooth p.** A process of mucoid connective tissue having the general appearance of the future tooth, which arises from the bottom of the dental groove and extends toward the enamel organ. In developed teeth the tooth p. is known as the tooth pulp. **vascular papillae.** Papillae of the skin to the tips of which one or more capillary loops extend. The presence of nerves is doubted. [Lat., dim. of *papula*, a pimple.] **papillary** (pap'il-la-re). 1. Pertaining to or consisting of papillae. 2. Supplied with papillae. **papillate** (pap'il-ât). Having papillae. **papillectomy** (pap-il-lek'to-me). Excision of one or more papillae (as of the kidney). [Lat., *papilla*, + Gr., *ektome*, excision.] **papilledema** (pap-il-e-de'mah). Choked disk; edema of the optic disk, usually from pressure. **papilliform** (pap-il'if-orm). 1. Having the shape or appearance of a papilla. 2. A term used in descriptive bacteriology meaning shaped like a watch crystal or a shallow saucer; more shallow than crateriform. [Lat., *papilla*, + *forma*, form.] **papillitis** (pap-il-li'tis). Acute inflammation of the optic disk and the immediately surrounding retinal zone, characterized by enormous swelling and minute hemorrhages. [Lat., *papilla*, + Gr., *itis*, inflammation.] **papilloma-adenocystoma** (pap-il'o-ad'en-o-sis-to'mah). A papilloma containing adenomatous and cystomatous areas. **papilloma** (pap-il-o'mah). 1. Any abnor-

mal excrescence having a villous structure. 2. More properly, a tumor of the skin or mucous membrane, either sessile or pedunculated, consisting of hypertrophied or new-formed papillae covered by an envelope of epithelial cells. The epithelium is sometimes spread over the mass of hypertrophied papillae so as to form a smooth tumor, and sometimes it forms a separate envelope to each papilla so as to produce a villous or filiform appearance. See *p. corneum* and *p. mucosum*. **blastomatous p.** A soft p. of a mucous membrane with a vascular framework of connective tissue covered with epithelium. **inflammatory p. of the skin.** A form of p. attended with inflammation and the formation of intrapapillary abscesses. **intracystic p.** A p. developing within single or multiple cysts. A p. showing feathery tufts like chorionic cells. **p. corneum, p. durum.** A hard or horny p. (e. g., a corn or wart) attended with a marked development of the corneous layer of the epithelial envelope. See *p. mucosum*. **p. molle, p. mucosum.** A p. in which the epithelium covers the enlarged or new-formed papillae in a thin layer, with but little development of the stratum corneum. See *condyloa acuminata*, under *condyloa*. **urethral p.** The painful urethral caruncle, carnosity, vegetation, fungosity, or polypus of the older writers, the mucous hypertrophy of A. Guérin, the urethral hemorrhoid of Richet and Dupin and of Hutchinson; a single or multiple, soft, gelatinous or fibrocellular tumor arising from the urethra. **villous p.** A persistent chorionic villus. [Lat., *papilla*, a teat, + Gr., *oma*, tumor.] **papillomatosis** (pap'il-lo-mat-o'sis). The formation of papillomata, also the state of being affected with them. **papillomatous** (pap-il-om'at-us). Pertaining to or resembling a papilloma. **papilloretinitis** (pap-il'lo-ret-in-i'tis). Inflammation, usually acute, of the optic disk and retina. See *neurorretinitis*. **Papin's digester.** An instrument for digesting substances in liquids heated under a pressure greater than that of the atmosphere, thereby raising the boiling point. **papoid** (pap'oyd). A proprietary digestive powder. **papular** (pap'u-lar). 1. Pertaining to, resembling, or characterized by papules. 2. Furnished with papules. [Lat., *papularis*, *papulatus*.] **pap'ule.** A pimple; a small circumscribed elevation of the skin, sometimes miliary, sometimes lenticular in size, not due to a collection of fluid in the epidermis. See *pustule* and *vesicle*. It constitutes one of the primary lesions of skin diseases. **dry p.** The indurated p. of primary syphilis. **moist p.** See *condyloa lata*, under *condyloa*. **mucous p.** See *mucous patch*, under *patch*, and *condyloa lata*, under *condyloa*. [Lat., *papula*.] **papulo-** Combining form of Lat., *papula*, a pimple, a papule. **papyraceous, papyrean** (pap-ir-a'shus,

pap-ir'-e-an). Resembling parchment paper. [Lat., *papyraceus*.]

Paquelin's cautery. An apparatus consisting of a hollow platinum tip, in the shape of a knife or button, which is heated to redness by forcing into it benzoin vapor mixed with air and ignited. [*Claude André Paquelin*, Parisian physician, born 1836.]

para-, par-. Combining form of Gr., *para*, by the side of, alongside of, by, past, beyond, e. g., parametritis, inflammation of the tissue alongside of the uterus. 2. In chemistry, *para* is used to form names of substances that are modifications (or are supposed to be) of substance to which the prefix is added.

para-anesthesia (par''ah-an-es-the'se-ah). Anesthesia limited to the lower extremities and lower half of the body. [Gr., *para*, beside, + *anaesthesia*, anesthesia.]

parabin (par''ab-in). More properly written pararabin. A carbohydrate $C_{12}H_{22}O_{11}$, found in carrots and beets, in agar, and in *Gigartina lichenoides*, believed to be identical with gelose.

par'ablast. A special part of the mesoblastic elements, formed from the lower primitive layer of the blastoderm and giving origin to the vascular and connective structures.

parablastoma (par-ah-blas-to'mah). Any tumor developing from parablatic tissue. [*Parablast* + Gr., *oma*, tumor.]

parabuxin (par-ah-buks'in). An alkaloid, $C_{24}H_{45}N_5O$, found in the bark of *Buxus sempervirens*.

parabuxinidin (par-ah-buks-in'id-in). An alkaloid found in *Buxus sempervirens*.

paracentesis (par''ah-sen-te'sis). The act of puncturing a part or organ for the removal of fluid matter. **p. tympani.** The operation of puncturing the membrana tympani. [Gr., *para*, beside, + *kentesis*, tapping.]

paracephalus (par-as-ef'al-us). A monster having a deformed but large head, a distinct face with rudimentary mouth and sensory organs, and thoracic members. **p. apus.** A p. in which there are the trunk and vestiges of a head, the limbs being absent. **p. dipus.** A p. in which the thoracic limbs may be absent while there are abdominal limbs. **p. pseudo-acormus.** A p. in which the trunk is rudimentary. [Gr., *para*, beside, + *kephale*, the head.]

paracholia (par-ah-ko'le-ah). A disturbance in the function of the liver cells. [Gr., *para*, beside, + *chole*, bile.]

parachroma (par-ah-kro'mah). 1. Color blindness. 2. Any pigmentary disease of the skin. **p. caerulosis.** Cyanosis. **p. chlorosis.** The discoloration of the skin observed in chlorosis. **p. lapidis infernalis.** See *argyria*. **p. leucosis.** See *albinism*. **p. melanosis.** See *melanosis*. [Gr., *para*, beside, + *chroma*, a color.]

parachromatosis (par''ah-krom-mat-o'-sis). Any pigmentary disease of the skin. In the pl., *parachromatoses*, Auspitz's term for a family of pigmentary diseases

of the skin comprising discolorations due to deposit of coloring matter, chiefly in the corium. They include argyria, jaundice, the discolorations incident to Addison's disease and to the malarial cachexia, and those produced by tattooing.

parachromophore (par-ah-kro'mo-för). A bacterium which secretes a pigment, but retains it in its own tissues. [Gr., *para*, beside, + *chroma*, color, + *pherein*, to bear.]

parachrosis (par-ah-kro'sis). 1. The development of parachroma. 2. Discoloration. [Gr., *para*, beside, + *chrosis*, a coloring.]

paracinesis (par''ah-sin-e'sis). A condition due to perversion of the motor powers. [Gr., *para*, beside, + *kinesis*, motion.]

paracolitis (par-ah-ko-li'tis). Localized inflammation of the serous coat of the colon not dependent on disease of any other structure of the colon. [Gr., *para*, beside, + *colitis*.]

paracolon bacillus. See *paratyphoid bacillus*, under *table of bacilli*.

paraco'to bark. An undetermined aromatic, astringent bark resembling coto bark, but much less active.

paracotoin (par''ah-ko'to-in). A crystallizable substance, $C_{12}H_{15}O_4$, obtained from *faracoto*. It resembles cotoin, but has not the same biting taste and fails to give with iron chlorid the red brown, afterward dark brown, coloration characteristic of cotoin. It is astringent and is used in diarrhea and dysentery.

paracrisis (par-ah-kri'sis). Any disorder of the secretions. [Gr., *para*, beside, + *krinein*, to secrete.]

paracusia, paracrisis (par-ah-ku'se-ah, par-ah-ku'sis). Any morbid condition of the hearing. [Gr., *para*, beside, + *akouein*, to hear.]

paracyanogen (par''ah-si-an'o'-jen). A polymeric form of cyanogen.

paracytic (par-ah-si'tik). Denoting cell elements present in the blood or other parts of the organism, but not normal to it. [Gr., *para*, near, + *kytos*, a cell.]

paradenitis (par''ad-en-i'tis). Inflammation about a gland. [Gr., *para*, beside, + *aden*, a gland, + *itis*, inflammation.]

paradidymis (par-ah-did'im-is). Syn.: *organ of Giralde*s. A body formed of certain convoluted tubules, scattered remains of the mesonephros in the male, lying near the head of the epididymis. It is the analogue of the epöphoron of the female. [Gr., *para*, beside, + *didymos*, the testicle.]

paradiphtherial, paradiphtheritic (par-ah-dif'the-al, par-ah-dif-ther-it'ik). Resembling or having an indirect relation to diphtheria.

paradoxical (par-ah-doks'ik-al). Unexpected variation from the normal. [Gr., *paradoxos*, strange.]

paraffin (par''af-in). 1. A tasteless, odorless, waxy substance, soluble in carbon disulphid, chloroform, and benzoin, first obtained by the distillation of beechwood tar, and now manufactured from bitu-

- minous coal. It consists of a number of hydrocarbons. 2. Of Watts and others, one of the series of saturated hydrocarbons. The series includes the colorless gases methane, ethane, propane, and butane, and the liquids, pentane, hexane, heptane, octane, nonane, and decane, etc. **hard p.** P. having a melting point between 50° C. and 60° C. **liquid p.** A liquid hydrocarbon of the p. and olefin series. **normal p.** A p. which contains its carbon atoms united in a straight chain. **soft p.** A semisolid mixture of the soft members of the paraffin series of hydrocarbons. It melts at about 96-102° F. (35.5°-38.9° C.). **solid p.** Ordinary p. [Lat., *parum*, little, + *affinis*, having affinity.]
- paraffinoma** (par-af-fin-o'mah). A tumor developing at the site of the injection of paraffin.
- paraffinum** (par-af-fe'num). A mixture of solid hydrocarbons, obtained from petroleum. It has numerous pharmaceutical uses. It melts at 15.6°-57.2° C. [U. S. Ph.]. **hard p.** Ordinary paraffin. **p. durum.** See *hard paraffin* [Br. Ph.]. **p. liquidum.** See *liquid paraffin* [Br. Ph.]. **p. molle.** See *soft paraffin* [Br. Ph.]. **unguentum paraffini.** Paraffin ointment; a preparation made by mixing hard and soft paraffin and white beeswax [Br. Ph.].
- parangolin** (par-ah-gan'glin). An extract of the medullary portion of the suprarenal gland of the ox.
- parangolion** (par-ah-gang'le-on). Chromaffin tissues; blood glands.
- parageusia** (par-ah-ju'se-ah). Perversion of the sense of taste. [Gr., *para*, beside, + *geusis*, taste.]
- paraglossia, paraglossa** (par-ah-glos'se-ah, par-ah-glos'sa). 1. Prominence of the tongue. See *glossocoele*. 2. A bending backward of the tongue against the pharynx. 3. An inflammation of the muscles, etc., under the tongue. [Gr., *para*, beside, + *glossa*, the tongue.]
- paragnathus** (par-ag'na-thus). A monster characterized by a supernumerary lower jaw placed laterally. [Gr., *para*, beside, + *gnathos*, jaw.]
- paragonimiasis** (par-ah-go-nim-i'as-is). Infection due to the lung fluke, *Paragonimus Westermanni*.
- Paragonimus** (par-ag-on'im-us). A genus of trematode worms. **P. Westermanni.** Syn.: *Distoma Westermanni*. A lung fluke found in cysts of the viscera and causing hemoptysis. It occurs in Asia and infects the lower animals and man.
- parahemoglobin** (par''ah-hem-o-glo'bin). A ferruginous preparation made from blood.
- parahypophysis** (par''ah-hi-pof''is-is). An accessory pineal body.
- parakeratosis** (par-ah-ker-at-o'sis). Imperfect cornification, the cells being imperfectly cornified and forming friable scales. **p. variegata.** Another name for resistant maculopapular scaly erythrodermia. [Gr., *para*, beside, + *keras*, a horn.]
- parakinesis** (par''ah-kin-e'sis). Irregular movement from motor mechanism disorder. [Gr., *para*, beside, + *kinesis*, motion.]
- paralactate** (par-al-ak'tat). A salt of paralactic acid.
- paralbumin** (par-al-bu'min). An isomeric variety of albumin discovered by Scherer in ovarian cysts and also occurring in the serosity of the peritoneal cavity. According to Landwehr and Hammarsten, it is a mixture. [Gr., *para*, beyond, + Lat., *albumen*, the white of egg, from *albus*, white.]
- paraldehyd** (par-al'de-hid). A polymeric modification, C₆H₁₂O₃, of aldehyd. It is a strong diuretic. It has been used as a hypnotic, but gives a persistent unpleasant odor to the breath. It has been recommended in tetanus, mania, melancholia, and other nervous affections, and also as an antidote to strychnin, brucin, thebain, and picrotoxin. [Lat., *paraldehydum*.]
- paralexia** (par-ah-leks'e-ah). Impairment of reading with meaningless transpositions and combinations of words. [Gr., *para*, beside, + *lexia*, speech.]
- paralinin** (par-ah-li'nin). The nuclear foundation substance.
- parallagma** (par-al-ag'mah). Displacement of a bone or of broken fragments of a bone. [Gr.]
- parallax** (par'al-aks). An apparent displacement in an object. [Gr., *parallax*, in turn.]
- parallelism** (par'al-el-izm). An hypothesis of the correlativity of physical and psychical processes.
- paralogia** (par-al-o'je-ah). Diseased logical associations, false reasoning. [Gr., *para*, beside, + *logos*, reason.]
- paralysin** (par-al'is-in). See *agglutinin*.
- paralysis** (par-al'is-is). The suspension or abolition of a functional power, motor or sensory, in any portion of the living body. **acute anterior spinal p. of adults.** See *spinal p. in the adult*. **acute ascending spinal p.** A progressive motor p. beginning in the lower extremities. Also known as Landry's p. **acute atrophic spinal p.** See *acute anterior poliomyelitis*, under *poliomyelitis*. **alcoholic p.** A peripheral neuritis caused by alcoholic excess resulting in pseudotabes or p. affecting the upper and lower extremities. **asthenic bulbar p.** See *myasthenia pseudoparalytica*, under *myasthenia*. **atrophic p.** A chronic or congenital p. in which there is atrophy of that part of the cerebral cortex that is the center for the atrophied regions of the body. **Bell's p.** See *facial p.* **brachial p.** A p. of one or both arms due to lesions of the cerebral cortex or of the nerve roots of the brachial plexus, or to traumatism affecting the latter. **bulbar p.** P. of a part directly innervated by the medulla oblongata. **cerebral p.** P. caused by a lesion of some portion of the cerebrum. **cerebrospinal p.** Any p. in which the lesion is in those motor centers of the cerebral cortex or of the pyramidal tract. **cross p.** P. of the upper extremity on

one side and the lower extremity on the other. **crutch p.** P. in the distribution of the musculospiral nerve caused by compression with a crutch. **diphtheritic p.** P. following diphtheria, especially in youths and adults. **exhaustion p.** A functional p. produced by excessive and prolonged voluntary movement involving exhaustion of the nerve centers. **facial p.** A unilateral or bilateral p. of the facial nerve. **general p. of the insane.** Syn.: *softening of the brain, paresis.* A gradual progressive disease of the brain and nervous system in which there are ataxy and paresis usually following a definite order and course of development. **hysterical p.** A functional p. occurring in hysteria and simulating any type or form of organic p. **idiopathic p.** See *tetany.* **Indian bow p.** Of German writers, p. of the thyro-arytenoid muscles. **infantile p.** See *acute anterior poliomyelitis, under poliomyelitis.* **Landry's p.** See *acute ascending spinal p.* **lead p.** The paralytic phenomena due to lead poisoning, especially paralysis of the forearm. **musculospiral p.** P. of the extensor and supinator muscles of the forearm and wrist, in consequence of injury or disease of the musculospiral nerve. **obstetrical p.** P. due to cerebral or nerve injury during parturition. **p. agitans.** A chronic nutritional disease of the central nervous system, characterized by muscular weakness, tremors, rigidity, a peculiar attitude (the head bent, the back bowed, the arms held away from the body and flexed), and festination of gait. There are no characteristic lesions. **p. notarium.** See *writer's cramp, under cramp.* **partial p.** A species of p. affecting less than half the body or some one particular part or organ. **pseudohypertrophic muscular p.** Syn.: *myo-atrophic lipomatosis.* A chronic disease characterized by feebleness of the muscles of the lower limbs and of the erector muscles of the spine, gradually extending to those of the upper extremities. There is increase in the volume of some muscles and atrophy of others. **pseudohypertrophic spinal p.** See *pseudohypertrophic muscular p.* **sensory p.** Loss or diminution of general or special sensibility. **spinal p. in the adult.** Of Duchenne, anterior poliomyelitis in the adult. **vascular p., vasomotor p.** Partial or complete loss of power in the motor innervation of the vessels of an affected part, shown by their dilatation and lessening of their tension. **wasting p.** Progressive muscular atrophy. **writer's p.** See *writer's cramp, under cramp.* [Gr., *paralysis*, from *paralyein*, to loose from the side.]

paralytic (par-al-it'ik). Pertaining to, characterized by, or affected with paralysis; as a n., a person affected with paralysis. **p. elbow.** See *flail elbow, under elbow.* **p. secretion.** See under *secretion.*

paramagnetism (par-ah-mag'net-ism).

The property which certain bodies possess of being attracted by magnets and of tending to assume a position in which their greatest length is in the direction of a magnetic force acting on them (see *diamagnetism*). Iron, cobalt, oxygen, etc., are paramagnetic substances, while bismuth, antimony, water, hydrogen, etc., are diamagnetic. [Gr., *para*, beside, + *magnes*, a magnet.]

paramenia (par-ah-me'ne-ah). Disordered menstruation. [Gr., *para*, beside, + *menes*, menses.]

paramesial (par-ah-me'se-al). Situated near the medial line. [Gr., *para*, beside, + *mesos*, middle.]

parametric (par-ah-met'rik). Situated beside the uterus, especially between the layers of the broad ligament. [Gr., *para*, beside, + *metra*, the uterus.]

parametritis (par-ah-met-ri'tis). Of Virchow, inflammation of the pelvic connective tissue in the immediate neighborhood of the uterus.

parametrium (par-ah-me-tre'um). The connective tissue immediately adjacent to the uterus. [Gr., *para*, beside, + *metra*, the uterus.]

paramnesia (par-am-ne'se-ah). A morbid state characterized by the erroneous use of known and remembered sounds. [Gr., *para*, beside, + *amnesia*.]

Paramoeba (par-am-e'bah). A species of the *Sarcodina*, **P. hominis**. A rare species of ameba, found in the Philippines, which causes severe diarrhea. [Gr., *para*, beside, + *ameba*.]

Paramoecium (par-ah-me'se-um). See *Balanitidum*.

paramorphia (par-ah-mor'fe-ah). Morbid structure; structural diseases. [Gr., *para*, beside, + *morphe*, form.]

paramorphin (par-ah-mor'fin). See *thebain*.

Paramphis'tomum. Trematode parasite of the order *Malacocotylea*, **P. Watsoni**. Syn.: *Watsonius Watsonii*. A species of trematode parasite in man, found in Africa.

paramucin (par-ah-mu'sin). A proteid (mucin) which has been isolated from ovarian cysts.

paramusia. Loss of the ability to read or to render music correctly.

paramyoclonus (par'ah-mi-ok'lo-nus). Clonic spasm in symmetrical groups of muscles. **p. multiplex**. Of Friedreich, a disease characterized by clonic contractions of the muscles, occurring in paroxysms. Between the contractions there may be tremor of the muscles. The disease is usually bilateral, and is not accompanied by motor or sensory disturbances. Its nature is unknown. [Gr., *para*, beside, + *mys*, a muscle, + *klonos*, a violent confused motion.]

paramyosinogen (par'ah-mi-o-sin'o-jen). Same as *musculin*.

paramyotonia (par-ah-mi-o-to'ne-ah). Tonic spasm. **p. congenita**. Of Eulenberg, an hereditary disease, in which there are tonic spasms of various muscles excited chiefly by cold. [Gr., *para*, beside, + *mys*, a muscle, + *tonos*, a stretching.]

paraneprhin (par-ah-nef'rin). Of Merck, a sterilized solution of epinephrin.

paranepritis (par-ah-nef-ri'tis). 1. Inflammation of the connective tissue which unites the kidneys to the vertebral column. 2. Inflammation of the suprarenal capsules. [Gr., *para*, beside, + *nephros*, the kidney, + *itis*, inflammation.]

paranephros (par-ah-nef'ros). See *suprarenal capsules*, under *capsule*. [Gr., *para*, beside, + *nephros*, the kidney.]

parangi (pah-ran'je). Syn.: *Spanish pox*. A disease, allied to yaws, occurring in Ceylon.

paranoia (par-ah-noy'ah). 1. A term applied loosely to various mental diseases limited to a small group by Kraepelin of slowly progressive, non-dementary delusional psychoses. 2. Chronic delusional psychosis. A functional psychosis, starting from a degenerative condition. It is almost always accompanied with hallucinations and more or less systematized delusions. The course is neither continuous nor uniform, but is essentially chronic. **acute p.** Of Mendel, p. coming on without prodromes and characterized by a delusion of vague persecutions without persecutors. **intermediate p.** P. in which there are no delusions, but in which there is a tendency to quibbling or quarreling. **p. corrupta**. See *diastrephia*. [Gr., *para*, beside, + *nous*, the mind.]

paranoiac (par-ah-noy'ak). Pertaining to, of the nature of, or affected with paranoia.

paranoid (par'an-oid). Having symptoms allied to paranoia.

paranomia (par-ah-no-me-ah). A loss of recognition of objects to sight and touch in an aphasic. [Gr., *para*, beside, + *onoma*, name.]

parapedesis (par-ah-ped-e'sis). The passing of bile into the blood capillaries instead of the bile capillaries. [Gr., *para*, beyond, + *pedesis*, deflection.]

parapeptone (par-ah-pep'ton). A name applied to one of the products formed in peptic digestion.

paraphasia (par-ah-fa'ze-ah). Aphasia characterized by the substitution of words which are unfitted to express the idea that the person intends to convey. [Gr., *para*, beside, + *aphasia*, aphasia.]

paraphemia (par-ah-fe-me-ah). The use of wrong words in an aphasic. [Gr., *para*, beside, + *pheme*, speech.]

paraphimosis (par'ah-fi-mo'sis). Strangulation of the glans penis by a retracted prepuce with a narrow orifice. [Gr., *para*, amiss, + *phimoioin*, to muzzle.]

paraphrenia (par-ah-fre-ne-ah). 1. An old term for mental disease in general. 2. A group of dementia praecox cases as used by Kraepelin. [Gr., *para*, beside, + *phren*, mind.]

paraphyte (par'ah-fit). A disease caused or accompanied by a proliferation of tissue. [Lat., *paraphyllum*, from Gr., *paraphyein*, to produce shoots.]

paraplasm (par'ap-lasm). 1. A heteroplasia. 2. Of Kupffer, any material with-

in a cell other than the protoplasm. [Gr., *para*, beside, + *plassein*, to mold.]

paraplast (par'ah-plast). A plaster mass containing rubber, wool-fat, rosin, and dammar resin.

paraplegia (par-ah-ple'je-ah). Paralysis or paresis of both lower limbs. **alcoholic p.** P. of spinal origin, caused by alcohol. **ataxic p.** A combined lateral and posterior sclerosis of the spinal cord, presenting symptoms of ataxia. **functional p.** Incomplete p. attributable to some functional disorder. **p. dolorosa**. Painful p., due to pressure of new growth on the posterior minor roots. **spasmodic p.**, **spastic p.** P. caused by primary lateral sclerosis of the spinal cord. [Gr., *para*, beside, + *plege*, a blow.]

paraplegic (par-ah-ple'jik). Pertaining to, or affected with paraplegia.

parapophysis (par-ah-poph'is-is). The transverse process of a typical vertebra. [Gr., *para*, beside, + *apophysis*, an offshoot.]

parapraxia (par-ah-prak'se-ah). Impairment of ability to perform purposeful movements. [Gr., *para*, beside, + *praxis*, doing.]

paraproctitis (par'ah-prok-ti'tis). Inflammation of the tissue about the rectum. [Gr., *para*, beside, + *proktos*, anus, + *itis*, inflammation.]

paraquinanisol (par'ah-kwin-an'is-ol). An artificial antipyretic alkaloid, $C_{10}H_9NO$.

parasalpingitis (par'ah-sal-pin-jit'is). Inflammation around the fallopian tube. [Gr., *para*, beside, + *salpigx*, a trumpet, + *itis*, inflammation.]

parasite (par'ah-sit). 1. An animal or plant living and subsisting within some tissue or organ, or upon some surface, of another animal or plant. 2. See *fetus in fetu*. **accidental p's.** Internal p's having the habits, but not referable to the class, of *Entozoa*. The following are included in this class in the nomenclature of the Royal College of Physicians of London: *Pentastoma denticulatum*, *Pentastoma constrictum*, *Estrus hominis*, and *Anthomyia canicularis*. **endophytic p.** A p. living in the tissues and organs of its host. **epiphytic p.** A p. living on the surface of the skin and mucous membranes of the host. **external p.** See *ectoparasite*. **facultative p.** 1. A p. that is not confined to any particular animal organism. 2. A p. which can only satisfy the conditions of its life in the animal organism, but which nevertheless leaves it at a certain period of its existence. **false p.** See *pseudoparasite*. **internal p.** See *endoparasite*. **obligatory p.** Of De Bary, a p. that cannot subsist away from its host. **occasional p.** A p. that can subsist away from its host, but has a morbid preference for it. **p's, how to find in stool**, see in *appendix*, page 906. **strict p.** A p. that grows only in or on its host or in artificial media kept at a suitable temperature. [Gr., *parasitos*, lit., one who eats with another, from *para*, beside, + *sitos*, food.]

parasitic (par-ah-sit'ik). Pertaining to or

- of the nature of a parasite; of a disease, caused by parasites.
- parasiticide** (par-as-it'is-id). Any substance destructive to parasites. See *antiparasitic*. [Gr., *parasitos*, a parasite, + Lat., *caedere*, to kill.]
- parasitifer** (par-ah-sit'if-er). An organism which serves as the host of a parasite. [Gr., *parasitos*, a parasite, + Lat., *ferre*, to bear, to make.]
- parasitism** (par'ah-sit-izm). 1. The state of existence as a parasite. See *symbiosis*. 2. The state of being infested with a parasite. 3. The part played by a parasite in causing or modifying disease. [Gr., *parasitos*, parasite.]
- parasitogenic** (par'ah-si-to-jen'ik). Caused by parasites.
- parasitologist** (par-ah-si-tol'o-jist). A person familiar with parasitology. [Gr., *parasitos*, a parasite, + *logos*, a treatise.]
- parasitology** (par-ah-si-tol'o-je). The science or study of parasites. [Gr., *parasitos*, a parasite, + *logos*, a treatise.]
- parasitophobia** (par'ah-sit-o-fo'be-ah). Morbid dread of being infested with parasites, also the state of having such sensations. [Gr., *parasitos*, a parasite, + *phobos*, fear.]
- parasitotropic** (par'ah-si-to-trop'ik). Having a special affinity for parasites. [*Parasite* + Gr., *trepein*, to turn.]
- parasternal** (par-ah-ster'nal). Situated at the side of the sternum. [Gr., *para*, beside, + *sternon*, the sternum.]
- parasyovitis** (par'ah-sin-o-vi'tis). Inflammation in the tissues about the synovial membrane. [Gr., *para*, beside, + *syn*, with, + Lat., *ovum*, an egg.]
- parasyphilis** (par-ah-sif'il-is). A group of conditions caused as remote effects of syphilis, such as tabes, paresis, and other forms of syphilitic disease in which some other, possibly anaphylactic factor, enters into the pathology.
- parasytostole** (par-ah-sis-to-le). The interval between the cardiac systole and diastole. [Gr., *para*, beside, + *systole*, systole.]
- parathyroid** (par-ah-thi'roid). Endocrinous glands situated within or near the thyroid glands.
- paratoloidin** (par-ah-tol-oy'din). See *tuberculin*.
- paratoluidin** (par-ah-to-lu'i-din). See *toluidin*.
- paratophan** (par-at'o-fan). Methyl atophan. Its action and uses are the same as those of atophan.
- paratrophy** (par-at'ro-fe). Qualitative alteration in a tissue caused by a trophic disorder. **neurotic p.** A p. of nervous origin, such as an arthropathy occurring in connection with locomotor ataxia. [Gr., *para*, beside, + *trophe*, nourishment.]
- paratyphlitis** (par'ah-tif-li'tis). Inflammation of the connective tissue between the cecum and the iliac fascia. [Gr., *para*, beside, + *typhlos*, blind, + *itis*, inflammation.]
- paratyphoid** (par-ah-ti'foy'd). Resembling typhoid fever or the typhoid bacillus. **p.**
- bacillus**. An organism belonging to the hog cholera group, which causes paratyphoid fever. It differs from the typhoid bacillus in producing gas in glucose bouillon and agglutinating with the diluted serum of paratyphoid patients. **p. fever**. A disease resembling typhoid fever, but differing from it in being caused by the paratyphoid bacillus and showing the agglutinative serum test with the paratyphoid bacillus. [Gr., *para*, beside, + *typhoid*.]
- par'avagini'tis**. Inflammation of the tissues about the vagina.
- paraxanthin** (par-aks-an'thin). A poisonous leukomain, $C_7H_8N_2O_2$, found in urine and thought to be one of the causes of gout.
- parazoön** (par-ah-zo'on). An animal organism parasitic upon another animal. [Gr., *para*, on, + *zoön*, an animal.]
- parazygosis** (par-az-i-go'sis). A double monster with union of the trunks above the umbilicus and including xiphopagus, thoracopagus, and pleuropagus. [Gr., *para*, beside, + *zygon*, yoke.]
- paregoric** (par-e-gor'ik). 1. Camphorated tincture of opium. 2. Anodyne; as a n., an anodyne medicine. **p. elixir**. See *tinctura opii camphorata*, under *opium*. [Gr., *paregorein*, to console.]
- pareira** (par-a'rah). Syn.: *pareirae radix*, *p. brava*. Of the U. S. Ph., the root of *Chondodendron tomentosum*. It is considered tonic, aperient, and diuretic. It is now chiefly employed in chronic catarrhal cystitis. **extractum pareirae fluidum** [U. S. Ph.]. A fluid extract of p. **p. brava**. 1. See p. 2. A bitter drug derived from *Cissampelos p.*, used as a substitute for true p. [Port., "a brier."] **pareirin** (par-a'rin). See *Cissampelos p. hydrochlorate*, **p. hydrochlorid**. A salt of p. used for malarial disease.
- parencephalitis** (par'en-sef-ah-li'tis). Inflammation of the cerebellum.
- parencephalus** (par-en-sef'al-us). A congenital malformation of the brain. [Gr., *para*, beside, + *egkephalon*, the brain.]
- parenchyma** (par-en-ki-mah). The proper and characteristic substance of an organ, especially a glandular organ, in contradistinction to the connective tissue, nerves, and vessels distributed to it. **glandular p.** The substance of a gland. [Gr., *para*, beside, + *egchein*, to pour in.]
- parenchymatitidis** (par'en-ki-mat-i'tis). Inflammation of a parenchyma. [Gr., *paregchyma*, parenchyma, + *itis*, inflammation.]
- parenchymatous** (par-en-ki'mat-us). Of, pertaining to, resembling, or affecting parenchyma.
- parencranis** (par-en-kra'nis). See *cerebellum*. [Gr., *paregkranis*.]
- paren'teral**. Not through the alimentary canal, as by a subcutaneous or intravenous route. [Gr., *para*, contrary to, + *enteron*, intestine.]
- parepididymus** (par'ep-id-id'im-us). A group of small masses above the head of the epididymis in front of the spermatic cord; believed to be relics of the wolf-

fian body. [Gr., *para*, beside, + *epi*, upon, + *didymos*, the testicle.]

paresis (par'e-sis). 1. Incomplete paralysis. 2. General paralysis of the insane (popular). **general p.** Parasyphilis of the brain. [Gr., *paresis*.]

paresthesia, paraesthesia. Any abnormality of sensation. [Gr., *para*, beside, + *aisthesis*, perception by the senses.]

paretic (par-e'tik). Pertaining to, affected with, or of the nature of paresis.

pareunia (par-u'ne-ah). Sexual intercourse. [Gr., *pareunos*, acting as a bed-fellow.]

paridin (par'e-din). A glucosid, $C_{16}H_{28}O_7$, found in the herb and root of *Paris quadrifolia*.

paridrosis (par-e-dro'sis). Any disorder of the perspiratory system. [Gr., *para*, beside, + *idrosis*, perspiration.]

paries (pa're-ez). See *wall*. [Lat.]

parietal (par-i'e-tal). 1. Pertaining to a wall; conected with the walls of a cavity or of the body. 2. Pertaining to the p. bones; as a n. pl., *p's*, the p. bones. [Lat., *parietalis*, from *paries*, a wall.]

Parietaria (par-e-ta're-ah). 1. Pellitory; a genus of herbs. 2. *P. officinalis*. **P. major**, **P. officinalis**. Wall pellitory; a species containing niter, found throughout the greater part of Europe, where its herb was formerly official. It is still employed empirically in diseases of the urinary organs. [Lat., *paries*, a wall.]

parieto-. Combining form of Lat., *paries*, a wall.

parillin (par-il'in). See *smilacin*.

Parinaud's conjunctivitis. An inflammatory condition of the conjunctiva characterized by large polypoid granulations and ulcerations. It attacks one eye at a time. [Henri Parinaud, French ophthalmologist, 1844-1905.]

Par'is. 1. A genus of smilacaceous plants. 2. *P. quadrifolia*. **P. quadrifolia**. Herb p.; a species found in most parts of Europe. The herb and root furnish paridin. All parts of the plant are more or less acrid and poisonous.

paristhmie (par-ist'mik). Relating to the tonsils. [Gr., *para*, beside, + *isthmus*, a narrow passage.]

paristhynin (par-is-tif'nin). A glucosid, $C_{28}H_{46}O_{18}$, extracted from the root of *Paris quadrifolia*.

Parkinson's disease. Paralysis agitans. [James Parkinson, English physician, died 1824.]

parodyne (par'o-din). See *antipyrim*.

parolein (par-o'le-in). A preparation consisting of liquid petrolatum with from 1 to 5 per cent. of menthol.

paronychia (par-on-ik'e-ah). Syn.: *run-round*, *felon*. An inflammation with pus formation near or around the nail or of the pulp of the finger and the matrix of the nails. It is acute or chronic. [Gr., *para*, beside, + *onyx*, the nail.]

paroöphoritis (par'o-o-of-o-ri'tis). Inflammation of the paroöphoron. [Gr., *para*, beside, + *oon*, an egg, + *phoros*, bearing, + *itis*, inflammation.]

paroöphoron (par-o-of'o-ron). A body

formed from the posterior segmental tubes of the mesonephros in the female embryo, consisting of scattered tubular structures, with yellow pigment; situated in the broad ligament of the uterus internally and inferiorly to the epoöphoron. [Gr., *para*, beside, + *oon*, egg, + *phoros*, bearing.]

parotid (par-ot'id). Situated near the ear. **p. gland.** The largest of the salivary glands; situated in front of the ear. The use of the desiccated gland has been suggested in conditions for which the mammary gland and the ovary are employed. [Gr., *para*, beside, + *ous*, *otos*, the ear.]

parotideo-masseteric (par-ot-id'e-o-masse-ter'ik). Pertaining to or connected with the regions of the masseter muscle and the parotid gland. [Gr., *parotis*, the parotid gland, + *masseter*, a chewer.]

parotiditis (par-ot-id-i'tis). See *parotitis*.

parotidoauricularis (par-ot'id-o-aw'rik-u-la'ris). A muscle of the lower animals arising from the surface of the parotid gland and attached to the base of the concha of the ear. It abducts and depresses the ear. [Gr., *parotis*, the parotid gland, + Lat., *auricula*, the external ear.]

parotitis (par-ot-i'tis). Mumps; inflammation of the parotid gland. [Gr., *parotis*, the parotid gland, + *itis*, inflammation.]

parous (pa'rus). Pregnant or having been pregnant. [Lat., *parere*, to bring forth.]

parovarium (par-o-va're-um). See *epoöphoron*. [Gr., *para*, beside, + Lat., *ovarium*, a receptacle for eggs.]

paroxysm (par'oks-izm). 1. A point in the course of a disease at which its symptoms appear with unusual force. 2. A violent attack or seizure of any sort. [Gr., *paroxysmos*, from *paroxynein*, to prick.]

paroxysmal (par-oks-iz'mal). Pertaining to, caused by, or appearing in paroxysms.

pars, partis. See *part*. **p. carnea diaphragmatis.** The muscular portion of the diaphragm. **p. carnosa urethrae.** The membranous portion of the urethra. **p. cartilaginea tubae Eustachii.** The cartilaginous portion of the eustachian tube. **p. cavernosa urethrae.** The cavernous portion of the urethra. **p. cephalica nervi sympathici.** The plexuses, ganglia, and nerves derived from the sympathetic nerve. **p. cervicalis nervi sympathici.** Ganglia, plexuses, and branches of the sympathetic nerve in the neck. **p. ciliaris retinae.** The portion of the retina situated in front of the ora serrata. **p. frontalis ossis frontis.** The upper and larger portion of the frontal bone, excluding the orbits and nasal process. **partes genitales.** The genitals. **p. intestinalis choledochi.** The portion of the ductus choledochus communis that pierces the duodenum. **p. membranacea urethrae.** See *membranous portion of the urethra*, under *portion*. **partes minoris resistentiae.** Those parts of the body which seem least able to resist disease when

invaded by it. **p. olfactoria**. That part of the anterior cerebral commissure of the brain the fibers of which, in the shape of a horseshoe, turn toward the basal mass of the head of the corpus striatum. **p. scleralis corneae**. The corneal substance proper. **p. tendinea diaphragmatis**. The tendinous portion of the diaphragm. **p. urethrae cavernosa**. The cavernous portion of the urethra. **p. urethrae membranacea**. The membranous portion of the urethra. **p. uvealis corneae**. See *membrane of Descemet*, under *membrane*.

pars'ley. See *Petroselinum* and *Apium*.

part. 1. A subdivision, a section. 2. Any separate member, organ, or region. **private p's**. See *external genitals*, under *genitals*. **vital p's**. A vague term for the organs or structures of the body injury to which causes death. [Lat., *pars*.]

parthenin (par'then-in). A principle obtained from *Parthenium hysterophorus*.

Parthenium (par-then'e-um). A genus typical of the partheniaceous plants. **P. hysterophorus**. Bastard feverfew; a febrifuge species found in the West Indies and the Gulf States. **P. integrifolium**. Prairie dock; common in the middle and southwestern United States. The flower tops have been recommended as a febrifuge. [Gr., *parthenos*, a virgin.]

parthenogenesis (par'then-o-jen'es-is). 1. Generation or reproduction by means of unfertilized ova. 2. Non-sexual reproduction by gemmation or fission. [Gr., *parthenos*, a virgin, + *genesis*, reproduction.]

parthenogenetic, **parthenogenous** (par'then-o-jen-et'ik, par'then-oj'en-us). Pertaining to or developing by parthenogenesis.

parturient (par-tu're-ent). Pertaining to or undergoing parturition; as a n., a female in labor, also a medicine to bring on or hasten labor. [Lat., *parturiens*.]

parturition (par-tu-ri'shun). Labor; childbirth. [Lat., *parturire*, to be in labor.]

parvi-. Combining form of Lat., *parvus*, small.

parvulin (par'vo-lin). A ptomain, C₆H₁₃N, from the decaying flesh of fish or of horses.

pas'sage. 1. Any channel of communication, especially any such channel between the various cavities and structures of the body, or between its cavities and the external surface. 2. The act of passing from one locality to another. 3. The act of passing anything (e. g., an instrument) into, through, or around a structure. 4. The act of evacuating the bowels, or the material expelled in such evacuation. **alveolar p's**. Sacculated p's into which the bronchioles are transformed and into which the infundibula open. **back p**. The anus in women. **front p**. The orifice of the vagina. **lacrimal p's**. Properly, the excretory ducts of the lacrimal gland; the puncta,

canaliculi, lacrimal sac, and nasal ducts. [Lat., *passare*, to pass.]

Passiflora (pas-se-fló'rah). A genus of which the passion-flower is typical. **P. incarnata**. Flesh-colored granddilla; found from Virginia to Brazil. The plant appears to be of little or no therapeutic value, but it is used in the preparation of a much advertised proprietary article. [Lat., *passio*, passion, + *flos*, a flower.]

pas'sion. Suffering. Strong emotion or disease. **ileas p**. See *ileus*. [Lat., *passio*, from *pati*, to suffer.]

pas'sion-flow'er. See *Passiflora*.

passive (pas'iv). Not opposing or resisting. [Lat., *passivus*, from *passus*, suffered.]

pas'ta. Paste.

paste. 1. A soft, moist pulling mass. 2. A medicinal preparation of the consistence of p. (1st def.) or of dough, used externally. 3. A harder (sometimes solid) preparation for internal use, the base of which is gum or sugar. The National Formulary contains formulas for pastes of dextrin, ichthyol, resorcin, zinc, and sulphurated zinc. **arsenical p**. Various formulas have been used for combining arsenic trioxid in the form of a paste for local application for its caustic effect. These pastes are painful and are now used but little. **Canquoin's p**. See under *Canquoin*. **fumigating p**. A pastille containing aromatic substances with potassium nitrate, intended to be burned slowly. **Vienna p**. See *potassa cum calce*, under *potassa*. [Gr., *paste*, from *passein*, to sprinkle.]

pas'tern. The part of a horse's foot that lies between the fetlock joint and the hoof.

Pasteur-Chamberland filter. A tubular filter of unglazed porcelain, used for separating bacteria from the soluble toxins in fluid media and for removing bacteria from drinking water.

Pas'teur fil'ter. See *Pasteur-Chamberland filter*. **P's flask**. A glass f. the neck of which is bent into a long variously bent tube, used for the reception of culture fluids in the study of microbes. **P's fluid**. A culture solution of 1 gram of ammonium tartrate and 10 grams of sugar candy in 100 c.c. of distilled water, the ash of 1 gram of yeast being added. **Pasteur's system of inoculation**. A system of i. for rabies in which a portion of the spinal cord of a rabid dog is used to inoculate a rabbit, which contracts the disease in about thirteen days. The spinal cord of this rabbit is used to inoculate another, and so on through a long series of cases. The cords are then dried and collected, some stale, others fresh and virulent. The system consists in beginning with the weakest for i. and progressing gradually to those of the greatest intensity, when the patient is supposed to be proof against the disease. **P. treatment**. See *P's system of inoculation*. [L. *Pasteur*, French scientist, 1822-1899.]

- pasteurization** (paz'tur-iz-a'shun). 1. The heating of wine, beer, etc., from 60° to 70° C. for the destruction of germs to prevent fermentation. 2. The heating of milk for 30 minutes at a temperature of 140°-145° F. to destroy the disease-producing bacteria, such as the tubercle bacillus.
- pasteurizer** (pas'tur-i-zer). A machine employed for pasteurizing milk or other fluids.
- pastille** (pas-têl'). A lozenge or tablet having granulated sugar as its basis. [Fr.]
- patch**. A spot or blotch, more or less distinct from the surrounding parts of a surface in appearance or character.
- moth p.** See *chloasma*. **mucous p.** Syn.: moist papule, mucous tubercle. A variety of syphilitic eruption having a moist, eroded surface, occurring most commonly on the mucous membrane of the mouth or external genitals, but also on the skin in situations where the surface is habitually subject to heat and moisture. It consists of a papule or tubercle over which the epithelium appears macerated, moist, of a whitish, grayish, or reddish color, and more or less eroded. See *condyloma lata*, under *condyloma*. **Peyer's p'es.** See *Peyer's glands*.
- patchouli** (pat-choo'le). See *Pogostemon*.
- patel'la**. A lens-shaped sesamoid bone in the front of the knee.
- pat'ent medicine**. See under *medicine*.
- path'ematology**. The science of mental affections and passions. [Gr., *pathema*, disease, + *logon*, treatise.]
- patheticus** (path-et'ik-us). 1. Of the fourth pair of nerves. 2. Superior oblique eye muscle.
- patho-, path-**. Combining form of Gr., *pathos*, suffering, disease.
- patho-amin** (path-o-am'in). An amin that causes disease; a ptomain.
- path'o-anatom'ical**. Pertaining to pathological anatomy.
- patho-anatomy** (path'o-an-at'o-me). Pathologic anatomy or the study of the gross lesions caused by disease.
- pathobiology** (path'o-bi-ol'o-je). See *pathology*.
- pathogen** (path'o-jen). Any organism or substance that produces disease. [Gr., *pathos*, disease, + *gennan*, to produce.]
- pathogenesis** (path-o-jen'es-is). The development of disease. [Gr., *pathos*, disease, + *genesis*, a begetting.]
- pathogenicity** (path-o-jen-is'it-e). The condition of being pathogenic; the power of an organism or other substance, material, or condition to produce disease.
- pathogeny** (path-oj'en-e). See *pathogenesis*.
- pathognomonic, pathognostic** (path-og-no-mon'ik, path-og-nos'tik). Characteristic of a disease and thus affording a basis for diagnosis. [Gr., *pathos*, disease, + *gignoskein*, to know.]
- pathonomy** (path-og'no-me). The science of the signs and symptoms of disease. [Gr., *pathos*, disease, + *gnome*, opinion.]
- pathography** (path-og'raf-e). Descriptive pathology. [Gr., *pathos*, disease, + *graphein*, to write.]
- pathological** (path-o-loj'ik-al). 1. Pertaining to pathology. 2. Diseased.
- pathologist** (path-ol'o-jist). One who is versed in pathology.
- pathology** (path-ol'o-je). The science of disease; specifically, the science of the nature of diseases. **cellular p.** Of Virchow, p. based on the propositions that all vital processes, normal or diseased, issue from cellular forms and that every cell originates from some pre-existent cell. **comparative p.** The study of p. by the observation of pathological conditions, spontaneous or artificial, in the lower animals or in vegetable organisms. **exotic p.** A method or system of p. which is foreign to the country or school in which it has obtained a lodgment, or in which it is referred to. **experimental p.** The study of diseases that are induced intentionally, especially in animals. **external p.** See *surgical p.*
- general p.** The general facts or principles of p. deduced from a comparison of particular diseases with each other. **geographical p.** P. in its relations to climate and other geographical conditions. **histop.** The study of the microscopic changes produced by disease. **humoral p.** Syn.: *humoralism*. 1. Of Hippocrates, p. based on the supposition that disease depended on an abnormal condition of four humors in the body. 2. Of Rokitsansky and other modern writers, p. based on the theory that all changes produced by disease are the result of a blood dyscrasia. **internal p.** See *medical p.* **local p.** 1. P. in its relations to disease of individual parts or organs. 2. See *geographical p.* **medical p.** The p. of disorders the treatment of which does not call for manipulative interference. **neurop.** The p. of the nervous system. **physiop.** The study of the alterations in function produced by disease. **special p.** The p. of particular diseases. **surgical p.** The p. of surgical diseases. [Gr., *pathos*, disease, + *logos*, understanding.]
- pathomain** (path'o-mân). A pathogenic ptomain.
- pathophobia** (path-o-fo'be-ah). A morbid dread of disease. [Gr., *pathos*, disease, + *phobos*, fear.]
- pathopsychology** (path'o-si-kol'o-je). Disordered or diseased psychological mechanisms.
- pathy**. Suffix representing Gr., *patheia*, suffering, feeling, and extended to mean the method of curing, curative treatment.
- Paullinia** (pawl-lin'e-ah). A genus of sapindaceous plants. **P. cupana**. A species growing on the Orinoco River. An intoxicating beverage is made from the seeds, which are also said to be used in making guarana. It contains caffeine. **P. sorbilis**. The guarana tree of South America, found in northern and western Brazil. The seeds furnish guar-

- ana.* [C. F. Paullini, German botanist, 1643-1712.]
- Pavesi's styptic collodion.** See *collodium stypticum*, under *collodium*.
- pa'vor.** Anxiety, dread. **p. nocturnus.** 1. Nightmare. 2. Night terror of children. [Lat., *pavor*, fear.]
- Pavy's solution.** An aqueous s. of 4.158 grams of copper sulphate and 20.4 each of potassium and sodium tartrate and caustic potash, mixed with 300 c.c. of ammonia water of the sp. gr. of 0.880 and diluted to 1,000 c.c. with water. [Frederick William Pavy, English physician, 1829-1911.]
- paw'paw.** The tree *Carica papaya*, or its melon-shaped fruit. The milk within the fruit contains an enzyme, which has the property of digesting proteins. See also *Carica*.
- paytin** (pa'tin). An alkaloid, $C_{21}H_{24}N_2O + H_2O$, contained in the white cinchona bark of Payta and in a species of *Aspidosperma*. [Lat., *paytina*.]
- pearl** (purl). 1. A shelly concretion found in mollusks, especially in p. oysters and river mussels. 2. See *medicinal p. epithelial p.'s.* Globules formed in the epithelial tubes in epitheliomata by the union of groups of cells. **medicinal p.** 1. A small capsule made of gelatin, etc., intended for the administration of a volatile liquid like ether. 2. A capsule made of very thin glass containing a liquid, such as amyl nitrite, which is intended for inhalation. The p. is broken in a handkerchief, and the escaping vapor inhaled.
- pearl ash.** Crude, impure potassium carbonate.
- Pearson's solution.** A solution containing sodium arsenate, but not the official solution. [George Pearson, English physician, 1751-1828.]
- peat.** The vegetable matter present in bogs, formed by the decay of plant remains.
- peccant** (pek'kant). Morbid, unhealthy; said of humors. [Lat., *peccans*, sinning.]
- peciloblast** (pe'sil-o-blast). A misshapen red blood corpuscle. [Gr., *poikilos*, mottled, varied, + *blastos*, germ.]
- pecilocyte** (pe'sil-o-sit). Same as *peciloblast*. [Gr., *poikilos*, mottled, varied, + *kytos*, cell.]
- Pecquet's duct.** See *thoracic duct*, under *duct*. [Jean Pecquet, French anatomist, 1622-1674.]
- pectase** (pek'tās). A ferment supposed to exist in plants which coagulates the pectin bodies.
- pectate** (pek'tāt). A salt of pectic acid.
- pecten** (pek'ten). The pubic bone, so called from the fancied resemblance of the two pubic bones, when united, to a comb. **p. commissurae anterioris.** Transverse fibrous bundles in the velum of the anterior cerebral commissure. **p. pubis.** A ridge on the horizontal ramus of the os pubis, extending from its spine and becoming continuous with the linea arcuata of the ilium. [Lat., *pecten*, comb, from Gr., *pekein*, to card.]
- pectenin** (pek'ten-in). A poisonous alkaloid obtained from *Cereus pecten*, a cactus growing in Mexico.
- pectinase** (pek'tin-ās). An enzyme which has the property of hydrolyzing the pectin bodies with the formation of a reducing sugar.
- pec'tin bod'ies.** Vegetable jellies. Compounds which belong without doubt to the carbohydrates.
- pectineus** (pek'tin-e'us). A muscle which adducts the lower limb and is an accessory flexor of the thigh. See *table of muscles*, under *muscle*. [Lat., *pecten*, a comb.]
- pectinose** (pek'tin-ōs). See *arabinose*.
- pectoral** (pek'to-ral). Pertaining to the breast or to the chest; efficacious in diseases of the chest, especially of the air passages. [Lat., *pectoralis*, from *pectus*, the breast.]
- pectoralis** (pek-to-ra'lis). A pectoral muscle, especially the p. major. See *table of muscles*, under *muscle*. [Lat., *pectus*, the breast.]
- pectoriloquism** (pek-to-ri'l'o-kwizm). See *pectoriloquy*.
- pectoriloquy** (pek-to-ri'l'o-kwe). In auscultation of the voice, abnormal distinctness of the words articulated by the patient. **aphonic p.** 1. Of Laennec, the pulmonary sound heard in auscultating a lung containing a cavity. 2. Of Bocelli, the sound heard in auscultation of a patient having a pleuritic effusion, when he speaks in a low voice. **whispering p.** The hollow chest sound heard over a pulmonary cavity of limited extent when the patient speaks in a whisper. [Lat., *pectus*, the breast, + *loqui*, to speak.]
- pectose** (pek'tōs). A body found in unripe fleshy fruits, converted into pectin bodies by the action of acids or heat, or by the process of ripening.
- pe'dal.** 1. Pertaining to the foot. 2. Pertaining to the pes or crista of the crus cerebri and pons. [Lat., *pes*, the foot.]
- pedatrophia** (pe-dat-ro'fe-ah). Malnutrition in children from improper food. [Gr., *pais*, a child, + *atrophia*, atrophy.]
- pederasty** (ped'er-as-te). Copulation with boys *per anum*. [Gr., *paiderastia*, from *pais*, boy, + *erastes*, lover.]
- pediatrics, pediatry** (pe-de-at'riks, ped'e-at-re). The pathology, treatment, etc., of children's diseases. [Gr., *pais*, *paídos*, a child, + *iatria*, medical treatment.]
- pedicle** (ped'ik-l). The narrow portion of a growth, from which it is developed.
- allantoid p.** See *allantois*. [Lat., *pediculus*, dim. of *pes*, foot.]
- pediculosis** (ped-ik-u-lo'sis). Syn.: *vagabond's disease*, *malis pediculi*. Infestation with lice. Its varieties among human skin diseases are: p. capillitii, p. capitis, p. corporis, p. pubis, p. vestimenti (or vestimentorum). [Lat., *pediculus*, a louse.]
- pediculus** (ped-ik'u-lus). 1. See *pedicle*. 2. A genus of insects of the class *Hexapoda* and the order *Siphunculata* (the lice) parasitic on man and other animals. Three varieties infest man: *P. capitis*, *P. vestimenti* and *P. pubis*. Some writers

limit the term to *P. capitis* and *P. vestimenti*, while *P. pubis* is termed *Phthirus* (*q. v.*). **P. capitis**, **P. cervicalis**. See *P. humanus*. The head louse; a form of *p.* inhabiting the hairy scalp. It varies in length from $\frac{2}{3}$ to $1\frac{1}{2}$ mm., and has an elongated, ovalish body with an acorn-shaped head, provided with two antennae, prominent eyes, and a suctorial mouth. Attached to the thorax are six legs armed with claws and hairs. Its color is commonly grayish or ashy, but is said to vary according to the color of its host, in Eskimos appearing white, in negroes black, and in Chinese yellowish brown. The ova ("nits") are pyriform or oval in shape, and are firmly attached to the hairs. It may produce impetigo, by its bite. **P. corporis**. The clothes or body louse; a variety closely resembling *P. capitis*, but considerably larger. Its habitat is the clothing, while it obtains its food in the same manner as *P. capitis*, upon the skin. The eggs are deposited in seams or folds of the clothing. Its bite produces much irritation and it is a carrier of typhus fever. **P. humanus**. The proper name by priority for *P. capitis*. **P. pubis**. Syn.: *morpio*. A louse infesting the pubic hairs, being larger than the *P. capitis*. **P. tabescentium**. A form erroneously supposed to be a special variety of *P.* occurring in tabetic patients. **P. vestimenti**. See *P. capitis*. [Lat., *pediculus*, a louse.] **pediluvium** (ped-il-uv'e-um). A foot bath. [Lat., *pes*, *pedis*, a foot, + *luere*, to wash.] **pediophobia** (pe-de-o-fo'be-ah). Great fear of dolls or of children. [Gr., *paidion*, child, + *phobos*, fear.] **pedogamy** (pe-dog'á-me). Marriage within the family. [Gr., *pais*, child, + *gamos*, marriage.] **pedological** (pe-do-log'ik-al). Pertaining to the diseases of children. **pedology** (pe-dol'o-je). The study of children. [Gr., *pais*, child, + *logos*, understanding.] **peduncle** (pe'dung-kl). A stalk; a prolongation of nervous matter connecting one portion of the brain with another portion of the organ. **cerebral p's.** See *crura cerebri*, under *crura*. **inferior cerebellar p's**, **inferior p's of the cerebellum**. Bundles of white nerve fibers arising in the white matter of the hemispheres. **middle cerebellar p's**, **middle p's of the cerebellum**. Bundles of white nerve fibers that issue from the sides of the cerebellar hemispheres, extend forward and outward, and enter the ventral portion of the pons Varolii. **olivary p.** A bundle of fibers which arises in the nucleus olivae and passes partly to the lemniscus and partly to the tegmentum. **p's of the cerebellum**. The superior, middle, and inferior p's of the cerebellum. **p's of the cerebrum**. See *crura cerebri*, under *crura*. **p's of the optic thalamus**. Bands which connect the optic thalamus with other portions of the cerebrum. **p's of the pineal gland**.

Slender white bands which connect the pineal gland with the cerebrum. **p's of the septum lucidum**. Certain bundles of fibers which project downward from the anterior extremity of the septum lucidum and enter the white substance of the frontal lobe, near the base of the lenticular nucleus. **superior cerebellar p's**, **superior p's (of the cerebellum)**. Bands of white fibers which arise from the medullary portions of the cerebellar hemispheres in their mesial aspects, and extend forward and upward to dip beneath the corpora quadrigemina. [Lat., *pedunculus*, dim. of *pes*, foot.]

pedunculus (ped-un'ku-lus). See *peduncle*. **p. anterior callosi**. The anterior extremity of the corpus callosum. **p. flocci**. The pedicle, or a constricted portion, of a cerebellar lamina. **p. pulmonum**. The root of the lung. **p. trigoni cerebri anterior**. The anterior pillar of the fornix.

peg'nin. Milk sugar rennet, a proprietary preparation consisting of the milk-curdling enzyme of calf's rennet diluted with milk sugar and sodium chlorid.

peimotherapy (pi-no-ther'ap-e). Hunger cure. [Gr., *peina*, hunger, + *therapeia*, treatment.]

pelagia (pe-la'je-ah). An erysipelatos disease of the face or hands.

pelidnoma (pel-id-no'mah). A livid spot or patch on the skin. [Gr., *pelidnos*, livid, + *oma*, tumor.]

pellagra (pel-lag'rah). Syn.: *dermatagra*, *lombardian leprosy*, *endemic erythema*, *malrisso*. An endemic trophic disease formerly attributed to eating spoiled maize, but probably caused by the bite of an infected sand fly. It is characterized by gastro-intestinal, cerebrospinal, and cutaneous symptoms. The skin is affected with an erythematous eruption, especially of the exposed parts of the body, and sometimes with desquamation, erosion, or crusting. It comes on rapidly and the eruption is confined to parts which are exposed to the sun. Therefore it is apt to begin on the back of the hands. The digestive derangement may consist of either anorexia, dyspepsia, vomiting, or diarrhea. The nervous symptoms, which are usually grave, may assume the form of either melancholia, mania, convulsions, or idiocy. [Ital., *pelle*, skin, + *agro*, rough.]

pellagrazein (pel-ah-gra'se-in). Poisonous ptomaines found in damaged maize. Some authorities believe them to be the cause of pellagra.

pel'let. A small pill.

pelletierin (pel-let-i'e-rin). An alkaloid, $C_8H_{12}NO$, found, along with isop', methylp', and pseudop', in the root bark of *Punica granatum*. Isop' is distinguished from p. only by being optically inactive. **pelletierinae tannas**. A mixture in varying proportions of the tannate of the four alkaloids, mentioned under p. [U. S. Ph.]. [From Bertrand Pelletier, French chemist, 1761-1797.]

pellicle (pel'ik-l). See *pellícula*.

pellicula. 1. A very thin membrane or scum. 2. A valve of the heart.

pellotin (pel'ō-tin). An alkaloid, C₁₃H₁₉NO₃, obtained from *Anhalonium Williamsii*; a hypnotic.

pelma (pel'mah). The sole of the foot. [Gr., *pelma*, sole.]

pelosin (pel'ō-sin). An alkaloid from *Cismampelos*; identical with *beberin* and with *buxin*.

pelotherapy (pe-lo-ther'ap-e). The use of earth or mud in therapy. [Gr., *pelos*, mud, + *therapeia*, treatment.]

pelation (pel-ta'shun). The protective influence exerted by serum inoculation. [Lat., *pelta*, a shield.]

pelvic. Pertaining to or situated in the pelvis. [Lat., *pelvicus*, from *pelvis*, basin.]

pelviography (pel-vig'raf-e). The systematic description of pelves. [Lat., *pelvis*, pelvis, + *graphein*, to write.]

pelvimeter (pel-vim'et-er). An instrument for measuring the dimensions or proportions of the pelvis, shaped like the calipers used in carpentering and engineering. [Lat., *pelvis*, the pelvis, + Gr., *metron*, a measure.]

pelvimetry (pel-vim'et-re). The measurement of the dimensions or proportions of the pelvis. **combined p.** P. by a combination of the external with the internal method. **digital p.** P. by hand.

external p. An external measurement of the pelvis for the purpose of deducing therefrom the internal diameters. **internal p.** A measurement of the internal diameters of the pelvis. [Lat., *pelvis*, the pelvis, + Gr., *metron*, a measure.]

pel'vis. 1. The osseous structure formed by the innominate bones, the sacrum, the coccyx, and the ligaments uniting them. It articulates through the sacrum with the vertebral column, and serves as a support for the posterior limbs. 2. The cavity included within these bones. It is divided into a false, or superior, p., and a true, or inferior, p., by a plane passing through the promontory of the sacrum, the iliopectineal line, and the upper border of the symphysis pubis, the circumference of this plane constituting the inlet of the true p. The lower margin of the true p. is formed by the coccyx, the tuberosities of the ischia, the ascending rami of the ischia, the descending rami of the ossa pubis, and the sacrosacral ligaments. In the female all its diameters are slightly greater than in the male. 3. Any basin-shaped structure or cavity. See *p. of the kidney*. **contracted p.** A p. the shape of which is changed by contraction in one or more diameters. Contracted p's are classified by Jarnier and Budin in six classes, viz.: I. Pelvic anomalies due to excess of malleability of the pelvic bones. II. Abnormalities due to abnormal transmission of body weight to the pelvis. III. Anomalies resulting from abnormal articulation of the vertebral column with the sacrum. IV. Anomalies resulting from the abnormal direction of the upward and inward force exerted by

the femora. V. Anomalies resulting from primary defects in the development of the pelvic bones. VI. Atypical deformities.

cordate p. The normal form of the pelvic inlet in women of European races, the ratio of the conjugate to the transverse diameter, being as four to five.

dwarf p. That variety of the p. equabiliter justo minor in which the p. preserves its feminine type, but is small in conformity with the general dwarfed condition of the individual. **p. equabiliter justo major.** Syn.: *justo major p.* A p. in which all the diameters are above the standard in about the same proportions.

p. equabiliter justo minor. Syn.: *justo minor p.*, *p. ubique justo minor.* A p. in which all the diameters are below the standard in about the same proportions. **female p.** See under def. 2. **floor of the p.** In gynecology, obstetrics, etc., the pelvic fascia, the levator ani, transversus perinei, sphincter vaginae, and sphincter ani muscles, together with the cellular tissue connecting all these structures. **masculine p.** That variety of the p. equabiliter justo minor in which, while it may have the feminine form in general or resemble the male type, the promontory of the sacrum is high, the ilia are steep, the symphysis pubis is convex and erect, the sacrum is small, and the bones are of uncommonly heavy build. **Naegeli's p.** Syn.: *oblique p.* See under *Naegeli*.

p. major. The false pelvis. **p. minor.** The true pelvis. **p. nana.** See *dwarf p. p.*

of the kidney. The cavity into which the ureter seems to dilate after it has entered the body of the kidney. **simple flat p.** A non-rhachitic contracted p. in which the flattening is due to the sacrum having advanced between the iliac bones, producing an increase in the transverse width of the p. **split p.** A rare form of deformed p. in which there has not been union between the pubic bones at the symphysis. **superior p.** The false pelvis. [Lat., *pelvis*, a basin.]

pemphigus (pem'fig-us). A skin disease characterized by the primary occurrence of bullae in the skin, not bullae occurring in the course of some other skin affection. When unqualified, the term p. is understood to mean p. chronicus. The lesions of the disease are bullae which develop usually with discoverable preliminary erythema. At first they are tense and translucent, with thin walls and without perceptible areolae, varying in size from a pea to an egg. Their duration is one to two weeks and they heal quickly, leaving no scar. The constitutional symptoms are slight fever and malaise. **p. acutus.** A form in which the cutaneous lesions are the same as in p. chronicus, but the constitutional symptoms, usually of little moment in the chronic form, are marked and the disease is apt to terminate fatally. **p. foliaceus.** This variety presents an essential difference from p. chronicus, in that the lesions, instead of healing rapidly, remain as excoriations or

leave denuded areas from which epidermal scabs are constantly thrown off. **p. vegetans.** In this form of *p.* the excoriations left by the bullae persist and papillomatous vegetations develop in them. It is a very rare disease. [Gr., *pemphix*, a blister.]

pen'cil. A pointed instrument used for writing or drawing. In pharmacy, a pencil-shaped medicine, such as a stick of lunar caustic.

pen'dular. Hanging or swinging. **p. movements.** See under *movement*. [Lat., *pendulus*, hanging.]

Penicillium (pen-is-il'le-um). Pencil fungus; bread mold. A genus of fungi, of the order of *Ascomycetes*, growing on organic substances. **P. barbae.** A species found on the hairs of the beard and on those of the body. **P. brevicaulis.** Found in onychomycosis. **P. glaucum.** Common mildew or blight, the type of the genus; a highly polymorphic fungus the mycelium of which produces an abundance of conidia in long chains. It is common on moldy bread and other moist substances, and one variety, *P. crustaceum*, is used in the barren mycelioid stage in the domestic manufacture of vinegar from saccharine liquor, on the surface of which it forms a tough, leatherlike substance known as the vinegar plant. **P. minimum.** Found in inflammation of the ear. **P. roseum.** A rose-colored species found on bread, reaching its full growth a few hours after the bread leaves the oven; probably a variety of *P. glaucum*. [Lat., *penicillum*, a brush.]

penile (pe'n'il). Pendulous, dependent; pertaining to the penis. [Lat., *penilis*, from *penis*, tail.]

penis (pe'n'is). The male organ of generation. [Lat.]

penischisis (pen-is'kis-is). A split or fissure of the penis. [*Penis*, + Gr., *schisis*, splitting.]

Penjdeh sore. See *oriental sore*.

penta-, pent-. Combining form of Gr., *pente*, five.

pentabromid (pen-tah-bro'mid). A compound of 5 atoms of bromin and a certain definite quantity of an element or radicle assumed as unit of comparison.

pentacetate (pen-tas'et-ät). 1. A compound with 5 molecules of acetic acid. 2. Containing 5 atoms.

pentachlorid (pen-tah-klo'rid). A chlorine compound analogous to a pentabromid.

pen'tad. An element or radicle with a valency of five. [Gr., *pente*, five.]

pentahydric (pen-tah-hi'drik). Used in connection with chemical names denoting that the compound has five hydroxy (OH) groups.

pen'tal. Trimethylethylene, C_5H_{10} ; an anesthetic used in minor surgery, and in dental practice.

pen'tane. A hydrocarbon, C_5H_{12} , of the paraffin series.

Pentastoma (pen-tas'to-mah). Syn.: *Linguatula serrata*. A genus of the order *Acarina*, being a form of ticks with hooks

at the mouth and vermiform bodies. They are parasitic in man and dogs. Found in Europe and Africa. **P. denticulatum.** The pupal stage of *P. taenioides*; also of a separate variety; of *Rudolphi*, the *P. taenioides*. It is found encysted in the ox and some other animals and sometimes invades the human body. **P. taenioides.** A species the male of which is 18 to 20 mm. long and 3 mm. wide. The head is truncated and the mouth broad, with a horny lip. It is found in man in the larval condition and sometimes, though rarely, in the adult form. It infests the lung, liver, spleen, and intestinal wall. In the mature stage it inhabits the nostrils and frontal sinuses of the dog and the wolf. [Gr., *pente*, five, + *stoma*, the mouth.]

pentasulphid (pen-tah-sul'fid). A sulphur compound analogous to a pentabromid.

pentatomic (pent-at-om'ik). Containing 5 atoms of replaceable hydrogen in the molecule.

pentavalent (pen-tav'al-ent). Having a valency of five.

pentiodid (pent-i'o-did). An iodine compound analogous to a pentabromid.

pen'tosan. A digestive principle of the stomach. In an acid reaction, it has the property of converting the proteids of the food into soluble compounds, the proteins (or albumoses) and peptones. It is used as a remedy for dyspepsia.

pen'tose. Any one of the carbohydrates which contain five atoms of carbon. The most important are arabinose, ribose, and xylose. They do not ferment with baker's yeast. After the use of morphin, a pentose is excreted in the urine.

pentosuria (pen-to-su're-ah). The presence of pentose in the urine. [*pentose*, + Gr., *ouron*, the urine.]

pentoxid (pen-toks'id). An oxygen compound analogous to a pentabromid.

pentyl (pen'til). A univalent hydrocarbon radicle, C_5H_{11} .

pentylic (pen-til'ik). Pertaining to pentyl or amyl.

Pen'zoldt ac'etone reac'tion. A saturated solution of ortho-nitrobenzaldehyd, when treated with a solution and then with caustic soda, turns yellow, then green, and finally blue. The indigo blue which is formed is made more apparent by shaking with chloroform, in which it is soluble.

pepastic (pe-pas'tik). Of medicines, digestive.

pe'po. 1. The gourd fruit; the characteristic fruit of the *Cucurbitaceae*. 2. [U. S. Ph.]. The seed of *Cucurbita p.*; pumpkin seed. Pumpkin seed is sometimes used in teniafuge mixtures. 3. The genus *Cucurbita*. [Gr., *pepon*.]

pep'per. See *piper*.

pep'permint. See *Mentha piperita*, under *Mentha*. **Chinese oil of p.** A volatile oil, containing a large proportion of menthol, distilled from *Mentha arvensis glabrata*. **essence of p.** See *spiritus menthae piperitae*. **Japanese oil of p.** A volatile oil distilled from *Mentha arvensis piperascens*. **oil of p.** The volatile oil

of *Mentha piperita* [U. S. Ph., Br. Ph.].
pep'sin. Syn.: *peptic ferment*. The main digestive principle of the gastric juice; also a preparation of the same made from the mucous membrane of the stomach of the hog, sheep, or calf. It has the power of converting proteids into peptones. It requires an acid medium for its action.
vegetable p. A ferment occurring in the glandular secretion of insectivorous plants. It has the property of dissolving albuminoids, and is analogous to, if not identical with, the p. of the gastric juice of animals. The p. of the U. S. Ph. and the Br. Ph. must be capable of digesting 3000 times its weight of freshly coagulated and disintegrated egg albumin [U. S. Ph.] or 2500 times its weight of hard-boiled white of egg [Br. Ph.]. [Lat., *pepsinum*, from Gr., *pepsis*, digestion.]
pepsinogen (pep-sin'o-gen). The preliminary material or proferment from which pepsin is formed. It exists in the gland cells in the form of granules, and it is activated to pepsin by the hydrochloric acid of the secretions.
pepsinum (pep-se'num). See *pepsin* [U. S. Ph., Br. Ph.].
essentia pepsini. An aromatic vinous solution of about 2 per cent. of pepsin [U. S. Ph.].
glycerinum pepsini. A preparation containing pepsin, hydrochloric acid, glycerin, and distilled water [N. F., Br. Ph.].
liquor pepsini. A clear, bright yellow liquid, containing 5 per cent. of pepsin in wine [N. F.].
p. saccharatum. Pepsin prepared from the stomach of the hog (or from the rennet bag of the sheep or ox) and mixed with milk sugar, so as to form a white powder of slight taste and smell, not wholly soluble in water [U. S. Ph., 1890].
vinum pepsini. A preparation containing about 1.5 per cent. of pepsin in water [N. F.].
peptid (pep'tid). A compound of two or more amido acids.
peptinotoxin (pep-tin-o-toks'in). A poisonous product of the intestines due to defective gastric digestion.
peptoid (pep'toid). A proteolytic digestive product.
peptomangan (pep-to-man'gan). A proprietary compound of manganese, peptone, and iron.
peptomedullin (pep-to-med-ul'in). A peptonized preparation of bone marrow.
pep'tone. A form of protein produced by the hydrolytic action of pepsin or trypsin. It is very soluble, diffusible and not coagulated by boiling.
gelatin p. A variety of p. produced by the action of pepsin on gelatin.
p. blood, p. plasma. The incoagulable or slowly coagulable blood, produced in some animals, e. g., the dog, by the sudden injection into the circulation of solutions of Witte's peptone in the proportion of 0.3 gms. to each kilogram of the animal. [Gr., *pepton*, digesting.]
peptonization (pep-ton-iz-a'shun). The process of conversion into peptones.
peptonoids (pep'to-noyds). A proprietary

preparation, containing about 17 per cent. alcohol and having a nutritive value about equal to that of milk (liquid p.) or a powder containing about 40 per cent. proteins and 55 per cent. carbohydrates, 500 gms. corresponding to approximately 2000 calories (dry p.).
peptonuria (pep-ton-u're-ah). The excretion of peptones in the urine. Albuminuria. [*Peptone*, + Gr., *ouron*, urine.]
peptotoxin (pep-to-toks'in). Of Brieger, a very poisonous ptomain, isolated from putrid albuminates and from peptonized fibrin, casein, brain, liver, and muscles in the early period of decomposition.
peptozym (pep'to-zim). A hypothetical substance, occurring in Witte's peptone, which is responsible for producing (for a time) an incoagulable condition of the blood, when the peptone solution is injected into the circulation of a dog in amounts equal to 0.3 gms. of peptone to one kilogram of the animal.
per-. Prefix from Lat., preposition, *per*, through, by, by means of; used in chemical nomenclature to denote the maximum of some element in a chemical combination.
peracephalus (per-ah-sef'al-us). Of G. St.-Hilaire, a genus of monsters of the *acephalia*, characterized by an asymmetrical body with the different regions quite distinct, but with a deformed or absent thorax and without the thoracic limbs. [Lat., *per*, through, + Gr., *akephalos*, without a head.]
perbromic (per-bro'mik). See *perchloric*.
perbromid (per-bro'mid). See *perchlorid*.
perchlorate (per-klo'rät). A salt of perchloric acid.
perchloric (per-klo'rik). Containing chlorine combined with a greater relative amount of oxygen than is present in the chloric compounds. Perbromic and periodic are analogous terms.
perchlorid (per-klo'rid). That one of two or more compounds of chlorine with an element or radicle which contains the greatest relative amount of chlorine.
percolate (per'ko-lät). A solution obtained by percolation.
percolation (per-ko-la'shun). The process of extracting a drug by packing the drug (in powder) in a percolator (*q. v.*) and causing an aqueous or spirituous menstruum to pass through it. [Lat., *percolare*, to strain through.]
percolator (per'ko-la-tor). A conical or cylindrical vessel in which is to be packed a drug through which a liquid poured on above it is allowed to trickle through a smaller aperture at the bottom.
percussion (per-kus'shun). 1. A method of physical examination by tapping on the surface overlying a part or organ in order to ascertain its condition by the sounds elicited. 2. A therapeutic measure consisting of repeated tapping of a part.
auscultatory p. P. combined with auscultation of the part percussed.
immediate p. P. in which the region examined is struck directly with the finger. **me-**

- diate p.** P. in which a pleximeter is used. [Lat., *percutere*, to strike through.]
- percussor** (per-kus'sor). A small hammer used for percussion.
- pererin** (per-e'ir-in). An alkaloid of the probable formula, $C_{15}H_{24}N_2O$, found in the bark of *Geissospermum laeve*.
- perencephalia, perencephaly** (per-en-sef'al-e-ah, per-en-sef'al-e). A condition characterized by the presence of multiple cystic brain tumors. [Gr., *pera*, a pouch, + *egkephalos*, brain.]
- perforation** (per-for-a'shun). The act of boring or piercing through a part. [Lat., *perforare*, to bore through.]
- perforator** (per'for-a-tor). Any instrument or apparatus used for perforating; an instrument for perforating the fetal skull in the operation of craniotomy.
- trephine p.** A p. having a long shaft, with a trephinelike extremity, for removing a disk of bone from the fetal skull. [Lat., *perforare*, to bore through.]
- perfusion** (per-fu'shun). The passing of a fluid through the channels in a structure, e. g., through the vessels of an isolated animal organ. [Lat., *perfusio*.]
- perhydrate, perhydroxid** (per-hi'drät, per-hi-droks'id). That one of two or more hydroxids which contains the greatest relative amount of hydroxyl.
- perhydrol** (per-hi'drol). A trade name for a solution containing 30 per cent. of hydrogen dioxide.
- peri-**. Prefix from the Gr., *peri*, signifying around.
- peri-adenitis** (per'e-ad-en-i'tis). Inflammation of the tissues around a gland. [Gr., *peri*, around, + *aden*, a gland, + *itis*, inflammation.]
- peri-angiocholitis** (per'e-an''je-o-ko-li'tis). Inflammation of the tissue surrounding the biliary canaliculi and canals. [Gr., *peri*, around, + *ageion*, a vessel, + *cholos*, bile, + *itis*, inflammation.]
- peri-angioma** (per-e-an-je-o'mah). A tumor or capillary growing from the outer coat and sheath of an artery. See *perithelioma*. [Gr., *peri*, around, + *ageion*, a vessel, + *oma*, tumor.]
- peri-arteritis** (per'e-ar-ter-i'tis). Inflammation of the outer coat of an artery. [Gr., *peri*, around, + *arteria*, an artery, + *itis*, inflammation.]
- peri-arthritis** (per'e-ar-thri'tis). Inflammation of the tissues about a joint. [Gr., *peri*, around, + *arthron*, a joint, + *itis*, inflammation.]
- periblastula** (per-e-blas'tu-lah). An ovum in a slightly more advanced stage than a perimorula, the cells of the outer layer being more clearly defined and more highly developed. [Gr., *peri*, around, + *blastos*, a sprout.]
- peribronchial** (per-e-bron'ke-al). Surrounding a bronchus. [Gr., *peri*, around, + *brogchos*, a bronchus.]
- peribronchitis** (per-e-bron-ki'tis). Inflammation of the tissue surrounding the bronchi.
- pericarditic** (per-e-kar-di'tik). Pertaining to pericarditis.
- pericarditis** (per'e-kar-di'tis). Inflammation of the pericardium.
- dry p.** P. without effusion.
- fibrinous p.** P. with fibrinous exudation.
- fibrous p.** P. with an exudation of pus.
- p. adhesiva.** P. with adhesion of the pericardium to the heart.
- p. obliterans.** P. causing the heart and pericardium to be everywhere united by fibrous adhesions. [Gr., *perikardion*, pericardium, + *itis*, inflammation.]
- pericardium** (per-e-kar'de-um). The somewhat conical membranous sac that contains the heart. It is attached by its base to the central tendon of the diaphragm, and its apex surrounds the vessels arising from the base of the heart. It consists of a dense external fibrous layer, which is continued up on to the great vessels in tubular prolongations that blend above with the cervical fascia. The internal or serous layer covers the heart and the origins of the great vessels, and is reflected upon the inner surface of the outer layer, forming a closed sac which secretes a thin watery fluid. See *epicardium*.
- p. externum.** The fibrous layer of the p.
- p. internum.** The serous layer of the p.
- p. parietale.** See *p. externum*.
- visceral p.** See *p. internum*. [Gr., *peri*, around, + *kardia*, the heart.]
- pericardosis** (per'e-kar-do'sis). Bacterial infection of the pericardium.
- pericholecystitis** (per'e-ko''le-is-ti'tis). Inflammation of the tissue about the gall-bladder. [Gr., *peri*, about, + *chole*, bile, + *kystis*, a bladder, + *itis*, inflammation.]
- perichondritis** (per'e-kon-dri'tis). Inflammation of the perichondrium. [Gr., *peri*, around, + *chondros*, cartilage, + *itis*, inflammation.]
- pericranium** (per-e-kra'ne-um). The outer pericostium of the skull. **p. internum.** See *endocranium*. [Gr., *peri*, around, + *kranion*, the skull.]
- pericystitis** (per'e-sis-ti'tis). Inflammation of the peritoneum covering the bladder or of the connective tissue surrounding it. [Gr., *peri*, around, + *kystis*, the bladder, + *itis*, inflammation.]
- pericystium** (per-e-sist'e-um). The vascular covering of certain cysts.
- pericytial** (per-e-sis'h'al). Surrounding a cell. [Gr., *peri*, around, + *kytos*, cell.]
- pericytula** (per-e-sit'u-lah). A fecundated ovum before superficial segmentation occurs, in which the formative yolk completely surrounds the nutritive. [Gr., *peri*, around, + *kytos*, a hollow.]
- periderm** (per'e-derm). The rete Malpighii of the skin. [Gr., *peri*, around, + *derma*, skin.]
- peridesmic** (per-e-dez'mik). Around a ligament. [Gr., *peri*, about, + *desmos*, band.]
- perididymis** (per-e-did'im-us). The tunica albuginea testis. [Gr., *peri*, around, + *didymos*, testicle.]
- peri-endothelioma** (per'e-en-do-the-le-o'-mah). A tumor presenting the characteristics of perithelioma and endothelioma combined. [Gr., *peri*, around, + *endothelioma*.]
- peri-enteron** (per-e-en'ter-ton). The prim-

- itive perivisceral cavity of the embryo. [Gr., *peri*, around, + *enteron*, intestine.]
- peri-esophagitis** (per''e-sof-aj-i'tis). Inflammation of the connective tissue surrounding the esophagus. [Gr., *peri*, around, + *oisophagos*, the gullet, + *itis*, inflammation.]
- perigastrula** (per-e-gas'tru-lah). The bladder gastrula; a gastrula in which the cleavage cavity is filled with unsegmented (ungrooved) nutritive yolk. [Gr., *peri*, around, + *gaster*, the belly.]
- perihepatitis** (per''e-hep-at-i'tis). Inflammation of the peritoneal coat of the liver. [Gr., *peri*, around, + *epar*, the liver, + *itis*, inflammation.]
- perilymph** (per'e-limf). A pale, limpid fluid which is poured into the labyrinth from the subarachnoid space through the foramina acustica and leaves the labyrinth through the aqueductus cochleae. It is contained in the space between the osseous and membranous labyrinths. [Gr., *peri*, around, + *lymph*, lymph.]
- perimeter** (per-im'it-er). An instrument for measuring or charting the field of vision in a fixed position of the eye. [Gr., *peri*, around, + *metron*, a measure.]
- perimetritis** (per''e-met-ri'tis). 1. Inflammation of the peritoneal coat of the uterus. 2. See *parametritis*. [Gr., *peri*, around, + *metra*, the uterus, + *itis*, inflammation.]
- perimetrium** (per-e-me'tre-um). The peritoneal coat of the uterus. [Gr., *peri*, around, + *metra*, the uterus.]
- perimorula** (per-e-mor'u-lah). An ovum in the morula stage, where the nutritive yolk is completely surrounded by a layer of cells derived from the formative yolk. See *periblastula*. [Gr., *peri*, around, + *moron*, mulberry.]
- perimysium** (per-e-mis'e-um). The areolar tissue of striated muscle. **p. externum**. The areolar tissue enveloping an entire muscle. **p. internum**. The areolar sheath of the muscular fasciculi. [Gr., *peri*, around, + *mys*, a muscle.]
- perineal** (per-e-ne'al). Pertaining to or situated in or on the perineum.
- perineo-**. Combining form of Lat., *perineum*, signifying the region of the body between the anus and the scrotum or vulva.
- perineoccele** (per-e-ne'o-sel). A perineal hernia, between rectum and prostate or between the rectum and the vagina. [Gr., *perinaion*, perineum, + *kele*, hernia.]
- perineorrhaphy** (per''e-ne-or-ra-fe). The operation of suturing a ruptured perineum and pelvic floor. **flap-splitting operation for p.**, **Tait's operation**. See under *Tait*. [Gr., *perinaion*, the perineum, + *raphe*, a seam.]
- perinephric** (per-e-nef'rik). Surrounding the kidney; pertaining to the perinephrium. [Gr., *peri*, around, + *nephros*, the kidney.]
- perinephritic** (per''e-nef-rit'ik). 1. Pertaining to perinephritis. 2. See *perinephric*.
- perinephritis** (per''e-nef-ri'tis). Inflammation of the perinephrium. [Gr., *peri*, around, + *nephros*, the kidney, + *itis*, inflammation.]
- perinephrium** (per''e-nef'ri-um). The areolar tissue enveloping the kidney. [Gr., *peri*, around, + *nephros*, kidney.]
- perineum** (per-e-ne'um). The space bounded by the anus behind, the external genital organs in front, and the ischial tuberosities laterally. [Gr., *perinaion*.]
- perineuritis** (per''e-nu-ri'tis). Inflammation of the epineurium. **p. optica**. P. of the optic nerve. [Gr., *peri*, around, + *neuron*, a nerve, + *itis*, inflammation.]
- perineurium** (per-e-nu're-um). The special sheath of a funiculus of nerve fibers. **p. internum**. See *neuroglia*. [Gr., *peri*, around, + *neuron*, a nerve.]
- period** (per'e-od). 1. The time during which a process or a condition continues, or at which an act or an event takes place. 2. The menses. **childbearing p.** The p. of life in the female during which she is capable of procreation, extending from puberty to the menopause. **dodging p.** A vulgar term for the menopause. **incubation p. of disease, incubative p.** See *incubation* (2d def.). **latent p.** The time elapsing between stimulation and the resulting response. Used especially in connection with muscular contraction. **menstrual p.** An individual act of menstruation. **puerperal p.** The p. that elapses between delivery and the first menstruation thereafter; or the p. between delivery and the approximate return of the parts altered by pregnancy (except the breasts) to their original condition. [Gr., *peri*, around, + *odos*, a way.]
- periodate** (per-i-o'dat). A salt of periodic acid.
- periodic** (per-i-o'dik). See under *perchloric*.
- periodic** (per-e-od'ik). Recurring at certain intervals. **p. law**. See under *law*.
- periodicity** (pe-re-od-is'it-e). The quality of recurring after definite intervals. [Lat., *periodicitas*, from Gr., *periodikos*, periodical.]
- periodic system of the elements**. The division of the chemical elements into groups based upon their comparative atomic weights.
- peri-onychium** (per''e-o-nik'e-um). The epidermis about the nail. [Gr., *peri*, around, + *onyx*, the nail.]
- peri-optometry** (per''e-op-tom'et-re). The determination or measurement of the acuteness of vision in the peripheral parts of the retina. [Gr., *peri*, around, + *optos*, visible, + *metron*, a measure.]
- peri-orchitis** (per''e-or-ki'tis). Inflammation of the tunica vaginalis testis. [Gr., *peri*, around, + *orchis*, the testicle, + *itis*, inflammation.]
- peri-oste-**. Combining form of Lat., *periosteum*, periosteum.
- peri-osteoma** (per''e-os-te-o'mah). A bony tumor developed from a matrix resembling the deeper layers of the periosteum. [Gr., *peri*, around, + *osteon*, a bone, + *oma*, tumor.]
- peri-osteophyte** (per-e-os'te-o-fit). A bony growth from the periosteum. [Gr., *peri*,

around, + *osteon*, a bone, + *phyton*, a growth.]

peri-osteosis (per-e-os-te-o'sis). 1. Periostitis with swelling of the periosteum and often necrosis of the bone. 2. A fusiform variety of exostosis. [Gr., *peri*, around, + *osteon*, a bone.]

peri-osteotomy (per'e-os-te-o'to-me). The operation of making an opening in the periosteum. [Gr., *peri*, around, + *osteon*, a bone, + *tomē*, a cutting.]

peri-osteum (per-e-os'te-um). A strong fibrous membrane which surrounds and is closely adherent to the bones except where they are covered with cartilage.

p. externum. The p. covering the external surface of bones. **p. internum**. See *endosteum*. [Gr., *peri*, around, + *osteon*, a bone.]

peri-ostitis (per'e-os-ti'tis). Inflammation of the periosteum. [Gr., *peri*, around, + *osteon*, a bone, + *itis*, inflammation.]

peri-ostoma (per-e-os-to'mah). An adventitious osseous formation surrounding a bone.

periphacitis (per'e-fas-i'tis). Inflammation of the capsule of the lens of the eye.

peripherad (per-if'er-ad). 1. Toward the circumference. 2. In anatomy, away from the heart or the central nervous system. [Gr., *periphēria*, the circumference.]

peripheral (per-if'er-al). 1. Pertaining to, situated at or near, or connected with the periphery. 2. In anatomy, applied mostly to the blood vessels or nerves extending from the heart or from the brain and spinal cord considered as centers. [Gr., *peri*, around, + *pherein*, to carry.]

periph'eral line of vis'ion. See under *vision*.

Periploca (per-ip'lo-kah). A genus of twining shrubs. **P. graeca**. Climbing dog's bane. All parts of the plant contain an acrid juice which has been used in the East for poisoning wolves. See *periplocin*. [Gr., *periplekein*, to twine round.]

periplocin (per-ip-lo'sin). A glucosid, $C_{30}H_{48}O_{12}$, identical with strophanthin, or nearly so.

peripol'ar. Surrounding poles, as of regions surrounding the positive and negative poles of molecules.

periproctitis (per'e-prok-ti'tis). Inflammation of the connective tissue surrounding the rectum. [Gr., *peri*, around, + *proktos*, the rectum, + *itis*, inflammation.]

periprostatitis (per'e-pros-tat-i'tis). Inflammation of the tissue surrounding the prostate. [Gr., *peri*, around, + *prostates*, prostate, + *itis*, inflammation.]

perisalpingitis (per'e-sal-pin-ji'tis). Inflammation of the tissues about the fallopian tube. [Gr., *peri*, around, + *salpigx*, tube, + *itis*, inflammation.]

perisopic (per-e-skop'ik). Concavoconvex (said of lenses, because p. lenses give a more distinct view of the peripheral parts of the visual field). **p. glasses**. See under *glasses*. [Gr., *periskopein*, to look round.]

perisplenitis (per'e-splen-i'tis). Inflam-

mation of the tissues surrounding the spleen. **capsular p.** P. limited to the peritoneal covering of the spleen. [Gr., *peri*, around, + *splen*, the spleen, + *itis*, inflammation.]

peristalsis (per-is-tal'sis). The progressive contraction of tubular organs of the body, especially of the intestines, due to the successive contractions of the circular muscular fibers from above downward, whereby the contents of the organs are carried onward. [Gr., *peri*, around, + *stalsis*, a compression.]

peristaltic (per-e-stal'tik). Pertaining to peristalsis.

perithelioma (per'e-the-le-o'mah). A tumor composed of capillaries running in various directions lined with endothelioma and surrounded by a mass of cells many layers deep and radially arranged. These cells spring from the perithelium which lines the perivascular spaces of blood vessels. [Gr., *peri*, around, + *thelē*, the nipple, + *oma*, a tumor.]

perithelium (per-e-the'le-um). The partial or complete sheath of a capillary, small artery, or vein, formed by the branched cells of the surrounding areolar or adenoid tissue, the branched cells being in intimate connection with the cells forming the proper wall of the vessel; also, one of those branched cells. [Gr., *peri*, around, + *thelē*, a nipple.]

peritoneal (per-e-ton-e'al). Of or pertaining to the peritoneum.

peritoneum (per-e-ton-e'um). The largest serous membrane of the body which lines the abdominal cavity and furnishes a more or less complete investment for the abdominal viscera except the kidneys (which are retroperitoneal), and retains them in position by its duplicatures. It is divided into two portions, the parietal (that lining the wall of the abdomen) and the visceral (covering the viscera). It forms a closed sac except in the female, where it communicates with the exterior by means of the oviducts. **abdominal p.** The portion of the p. which lines the inner surfaces of the abdominal parietes. **genito-urinary p.** The retrovesical folds. **parietal p.** That which lines the abdominal and pelvic walls and the under-surface of the diaphragm. **subduodenal p.** The folds and ligaments of the p. below the duodenum. **supraduodenal p.** The folds and ligaments of the p. above the duodenum. **visceral p.** The portion of the p. which invests more or less completely the abdominal organs except the kidneys. [Gr., *peritonaion*, from *peri*, around, + *teinein*, to stretch.]

peritonism (per'it-on-ism). A sort of false peritonitis in which the symptoms are those of peritonitis with rigidity and tenderness of the abdomen, but there is no inflammation of the peritoneum.

peritonitis (per-it-on-i'tis). Inflammation of the peritoneum. **general p.** Inflammation of the major part of the peritoneum. **localized p.** Inflammation of a circumscribed area of the peritoneum. **p. deformans**. Syn.: *cirrhosis peritonei*.

- Of Klebs, p. with hyperplasia of the peritoneal tissue. [Gr., *peritoneion*, peritoneum, + *itis*, inflammation.]
- peritonsillar** (per'e-ton-sil-ar). Near to, or surrounding, the tonsil. **p. abscess.** See *abscess*. [Gr., *peri*, around, + Lat., *tonsilla*, a tonsil.]
- peritonillitis** (per'e-ton-sil-i'tis). Inflammation of the tissue around the tonsils. [Gr., *peri*, around, + Lat., *tonsilla*, a tonsil, + Gr., *itis*, inflammation.]
- peritricha** (per-it'rik-ah). Bacilli having flagella projecting from all parts of the cellular membrane. [Gr., *peri*, around, + *thrix*, hair.]
- peritrichal** (per-it'rik-al). A term applied to flagella or cilia projecting from all parts of the cellular membrane. [Gr., *peri*, round, + *thrix*, hair.]
- peritrichous** (per-it'rik-us). See *peritrichal*.
- perityphlitis** (per'e-tif-li'tis). Inflammation of the peritoneal coat of the cecum. [Gr., *peri*, around, + *typhlon*, the cecum, + *itis*, inflammation.]
- peri-urethritis** (per'e-u-re-thri'tis). Inflammation of the connective tissue surrounding the urethra. [Gr., *peri*, around, + *ourethra*, the urethra, + *itis*, inflammation.]
- perivaginitis** (per'e-vaj-in-i'tis). Inflammation of the cellular tissues about the vagina. [Gr., *peri*, around, + Lat., *vagina*, sheath, + Gr., *itis*, inflammation.]
- perivascular** (per-e-vas'ku-lar). Situated about a blood vessel.
- per'kinism**. A form of suggestive therapeutics in which the treatment consisted in rubbing on the skin two "tractors," or pointed rods, made of different metals. [*E. Perkins*, an American physician, 1740-1799.]
- permanganas** (per-man'gan-as). See *permanganate*.
- permanganate** (per-man'gan-ät). A salt of permanganic acid.
- permanganic** (per-man-gan'ik). Containing manganese combined with a greater proportion of oxygen than in the manganic compounds.
- pernicious** (per-nish'us). Destructive in character; of diseases, virulent, of a very grave or deadly type. **p. anemia.** See under *anemia*. [Lat., *perniciosus*, from *pernicies*, destruction.]
- pernio** (per'ne-o). See *chilblains*. [Lat.]
- per'ogen, per'ogen bath.** Oxygen bath salts, a preparation consisting of a catalyzer and sodium phosphate, capable of yielding 10 per cent. of oxygen. The two substances are wrapped separately and mixed when used for the bath.
- peronarthritis** (per'o-nar-thro'sis). A joint in which the articular surfaces are both concave and convex, as in the carpometacarpal articulation of the thumb. [Gr., *perone*, the tongue of a buckle, + *arthron*, a joint.]
- peroneal** (per-o-ne'al). Pertaining to or situated near the fibula. [Gr., *perone*, the fibula.]
- peroneo-**. Combining form of Lat., *peroneus*, having to do with the fibula.
- peroneus** (per-o-ne'us). See *table of muscles*, under *muscle*. [Gr., *perone*, the fibula.]
- peronin** (per'o-nin). The hydrochlorid of the benzyl ether of morphin; an anodyne.
- peroxid** (per-oks'id). 1. Of two or more compounds of oxygen with the same element or radicle, the one which contains the greatest relative amount of oxygen. 2. See *hydrogen peroxid*, under *hydrogen*.
- peroxidase** (per-oks'id-äs). An enzyme of plant and animal tissue, which causes an oxidation in the presence of hydrogen peroxid.
- peroxol** (per-oks'öl). A generic name for various antiseptic preparations containing hydrogen peroxid.
- peroxyhydrate** (per-oks-e-hi'drät). The hydrate of a peroxid.
- perplication** (per-plik-a'shun). A method of closing the end of a severed blood vessel by isolating the extremity, making a small hole in its side at a little distance from the end, introducing the points of a fine forceps through the puncture, seizing the free end, and drawing it backward through the puncture in the side. [Lat., *per*, through, + *plicare*, to fold.]
- per rec'tum**. By or through the rectum. [Lat.]
- perseveration** (per-sev-er-a'shun). Tendency to marked repetition of letters, words, syllables, or ideas. [Lat., *perseverare*, to persist.]
- Persica** (per'sik-ah). A genus of rosaceous trees. **P. vulgaris.** The peach tree, *Amygdalus p.* The flowers, the leaves, the bark, and especially the kernels of the fruit, yield hydrocyanic acid. [Gr., *persikos*, Persian.]
- perspiration** (per-spi-ra'shun). The liquid secreted by the sweat glands of the skin. It has a low specific gravity and contains chiefly inorganic salts with traces of organic substances, such as urea. **insensible p.** P. which evaporates as quickly as formed, so as not to form visible drops. **sensible p.** P. in which the watery element collects on the skin in the form of visible moisture. [Lat., *per*, through, + *spirare*, to breathe.]
- persulphate** (per-sul'fat). Of two or more sulphates of the same radicle, that one which contains the greatest proportionate amount of the sulphuric acid radicle.
- persulphid** (per-sul'fid). Of two or more compounds of sulphur with the same element or radicle, that one which contains the greatest amount of sulphur.
- persultation** (per-sul-ta'shun). A sudden and profuse outburst of perspiration.
- pertussin** (per-tus'sin). A proprietary remedy for whooping cough; said to be a saccharated extract of thyme.
- pertussis** (per-tus'is). Whooping cough. [Lat., *per*, intensive, + *tussis*, a cough.]
- peruol** (per'u-ol). A clear, odorless, un-irritating oil said to represent the active principle of balsam of Peru; used, diluted with castor oil, as an application in scabies.
- Peru'vian wart.** Another name for *verruca peruana*.

peruvín (pe-ru'vin). Cinnamic alcohol (contained in balsam of Peru).

perversion (per-ver'shun). Deviation from the usual way of doing things.

sexual p. Gratification of the sexual instinct in infantile ways. Often confused with inversion, or homosexuality. [Lat., *per*, through, + *versio*, a turning.]

pes. The foot or a footlike structure. **infra-orbital p.** The terminal radiating branches of the infra-orbital nerve after its exit from the infra-orbital canal.

p. anserinus. The radiating structure consisting of the three primary branches of the facial nerve soon after its emergence from the stylomastoid foramen. **p. equinus.** See *talipes equinus*, under *talipes*. **p. planus.** Flat-foot. **p. valgus.** See *talipes valgus*. **p. varus.** See *talipes varus*. [Lat., *pes*, *pedis*, foot.]

pessary (pes'ar-e). An instrument of elastic or rigid material worn in the vagina or the uterine canal in the treatment of uterine diseases. **Albert Smith p.** See under *Smith*. **cradle p.** An oblong oval p. that is curved like a cradle rocker; used for retrodeviation. **cup p.** A vaginal stem p. that is supported by an abdominal belt in which a cup at the extremity of a stem supports the cervix; used in prolapse of the uterus. **galvanic p.** A p. composed of different metals for the purpose of generating a galvanic current. **ring p.** A vaginal p. shaped like a ring. **stem p.** One with a slender stem for introduction into the canal of the uterus. **Thomas p.** See under *Thomas*. [Lat., *pessarium*.]

pest. See *plague*. [Lat., *pestis*.]

pestiferous (pes-tif'er-us). Plague-producing. [Lat., *pestis*, plague, + *ferre*, to bear.]

pestilence (pes'til-enz). See *plague*. [Lat., *pestilentia*, from *pestis*, a plague.]

pes'tis. See *pest*. **p. siderans.** A form of plague fatal in two or three days, before the bubonic manifestations appear. [Lat.]

pes'tle. An instrument used for pounding, mixing, or triturating substances in a mortar. [Lat., *pistillum*.]

petalobacteria (pet'al-o-bak-te're-ah). Bacteria which form a surface scum or pedicle. [Gr., *petalon*, leaf, + *bacteria*.]

petechia (pe-te'ke-ah). Pl., *petechiae*. A small circumscribed spot of ecchymosis upon the skin, resembling a flea bite. [Ital., *petecchie*, a speck or freckle.]

petiolule (pet'e-o-lul). A small petiole. **p. epiglottidis.** The constricted, attached portion of the epiglottis. [Lat., *petiolulus*.]

petiolus (pet'e-o-lus). The manubrium of the malleus. **p. glandulae pinealis.** See *peduncles of the pineal gland*, under *peduncle*.

Petit's tri'angle. The space bounded by the anterior border of the latissimus dorsi, the posterior border of the obliquus abdominis externus, and the crest of the ilium. [*Jean Louis Petit*, Parisian surgeon, 1674-1750.]

petroleum (pet-re-le'um). Petroleum. [Lat., *petra*, rock, + *oleum*, oil.]

Petri dish. A flat glass dish with a cover, used for securing isolated colonies of bacteria in gelatin or agar. [*Julius Petri*, German bacteriologist, 1852—.]

petrifaction (pet-rif-ak'shun). 1. Calcification. 2. The condition of being stone-like. 3. Conversion into stone. 4. In obstetrics, the reduction of a fetus to a lithopedion. [Lat., *petra*, a stone, + *facere*, to make.]

pet'ro-. Combining form of Lat., *petra*, stone; used to signify pertaining to the petrous portion of the temporal bone.

petrogen (pet'ro-je-n). See *petrolatum saponatum*.

petrolatum (pet-ro-la'tum). Syn.: *paraffinum molle* [Br. Ph.], *vaselina*, *ceratum* (or *unguentum*) *petrolei adeps mineralis*, *saxolinum*, *oleum petrae*. Petroleum ointment; a substitute for the proprietary vaselin or cosmolin. Of the U. S. Ph., viii, (*p. molle* and *p. spissum*, U. S. Ph., 1890) a mixture of hydrocarbons, chiefly of the methane series, obtained by distilling off the lighter and more volatile portions from petroleum and purifying the residue. **p. album.** This is similar to petrolatum, but is lighter in color, owing to further purification [U. S. Ph.]. **p. liquidum.** This corresponds very nearly with petrolatum, except that it is a liquid owing to the retention of some of the lighter and more volatile portions [U. S. Ph.]. **p. saponatum liquidum.** P. saponified with ammonium oleate [N. F.]. **p. saponatum spissum.** A preparation resembling the liquid saponified p., but of a semisolid structure. Essentially similar preparations are sold under various trade names [N. F.]. [U. S. Ph.] [Lat.]

petroleum (pe-tro'le-um). Rock oil, mineral oil; a tarry, oleaginous mixture found in the earth. It occurs in commerce under two forms: white p., a limpid, yellowish, volatile liquid of peculiar but not disagreeable odor, which contains mainly the saturated carbons, and ordinary or crude p., a thick, brownish liquid of disagreeable odor produced from white p. by the evaporation of its more volatile constituents, and also occurring naturally in the earth. **p. benzin.** See *benzin*. [Lat., *petra*, rock, + *oleum*.]

petros (pet'ros). See *petrolatum saponatum*, under *petrolatum*.

petrosal, petrous (pe-tro'sal, pet'rus). Stony, hard; also pertaining to the p. portion of the temporal bone, so named on account of its hardness. [Lat., *petrosus*, from *petra*, a stone, a rock.]

Petroseli'num. 1. A genus of umbelliferous plants. 2. Parsley. [Lat., *petra*, a rock, + Gr., *selinon*, parsley.]

petrosulphol (pet-ro-sul'fol). A proprietary substitute for ichthyol.

Pettenkofer's test for bile acids. Consists of dissolving a small amount of the bile in concentrated sulphuric acid in an evaporating dish and warming to a temperature not higher than 70°. To this

mixture is added a 10 per cent. solution of cane sugar, drop by drop, with continual stirring. If bile salts are present, the fluid turns red and, upon standing, becomes gradually blue. The red fluid, when just obtained, has a characteristic absorption spectrum. [*Max von Pettenkofer*, German hygienist, 1818-1901.]

peucedanin (pu-sed'an-in). A substance, $C_{12}H_{12}O_8$ (or $C_{16}H_{16}O_4$), extracted from the root of *Peucedanum ostruthium* and *Peucedanum officinale*.

Peumus (pu'mus). A genus of the *Moni-mieae*. **P. boldo**, **P. boldus**, **P. fragrans**. The boldo of Chili, a species having a small aromatic fruit and an astringent bark. The leaves contain boldin and a glucosid said to be useful in inflammations of the genito-urinary passages. They have been used in a variety of conditions.

Peyer's glands. Syn.: *agminate follicles*, *follicles of Peyer*. From 30 to 60 or more groups of lymphoid follicles, usually of an oblong shape, found at the free side of the intestines. They are most common in the ileum, though a few are situated in the jejunum and colon. [*Johann Konrad Peyer*, Swiss anatomist, 1653-1712.]

Pfeiffer's law. A law that the blood serum of an animal immunized against bacteria will destroy the bacteria used for immunization by bacteriolysis. **P's reaction**. The dissolving of bacteria injected into the peritoneal cavity of a normal guinea pig. The bacteria must be mixed with diluted immune serum, made by injecting the special bacterium into another animal in several non-fatal doses. [*Richard Friedrich Johannes Pfeiffer*, German physician, living.]

Pflüger's law of contraction and stimulation. A l. expressing the relation of the strength and direction of a galvanic current to its stimulating action upon a nerve. **P's salivary tubes**. Ducts within the lobules of a salivary gland. [*Edward Friedrich Wilhelm Pflüger*, German physiologist, 1829-1910.]

phaco-. A prefix from the Gr., *phokos*, lens, i.e., of the eye.

phagedena (faj-e-de'nah). A form of ulceration in which the soft parts are destroyed rapidly in large masses. **p. tropica**. Syn.: *Malabar ulcer*. An atonic ulcer occurring in inhabitants of southern Asia. [Gr., *phagedaina*, an eating ulcer, from *phagein*, to eat.]

phagedenic (faj-e-den'ik). Rapidly spreading and destroying tissue. **p. inflammation**. See *phagedena*.

phagocyte (fag'o-sit). Syn.: *devouring*, or *wandering*, *cell*, *leukocyte*, *white blood corpuscle*, *carrier cell*. Of Metchnikoff, any ameboid cell regarded as a structure capable of inclosing and digesting solid particles. In the body they act (1) in absorbing healthy tissues, as in the metamorphosis of batrachia and the development of bone; (2) in active degeneration of parts in disease; and (3) as a protective mechanism, removing bacteria and minute solid masses that have reached the

tissues. [Gr., *phagein*, to eat, + *kytos*, a cell.]

phagocytic (fag-o-si'tik). Pertaining to or produced by phagocytes.

phagocytoblast (fag-o-si'to-blast). A cell from which the phagocytes are developed.

[*Phagocyte*, + Gr., *blastos*, a germ.]

phagocytolysis (fag-o-si-to'li's-is). The destruction and solution of phagocytes; also destruction of the phagocytic power of the leukocytes. [Gr., *phagein*, to eat, + *kytos*, a cell, + *lysis*, solution.]

phagocytolyte (fag-o-sit'o-lit). A phagocytolytic substance.

phagocytolytic (fag-o-si-to-lit'ik). Capable of effecting phagocytolysis.

phagocytosis (fag-o-si-to'sis). The destruction of bacteria, red blood corpuscles, leukocytes, and other tissue cells by fixed or free leukocytes.

phagokaryosis (fag-o-kar-e-o'sis). The phagocytic action exercised by the nucleus of the cell. [Gr., *phagein*, to eat, + *karyon*, nucleus.]

phagolysis (fag-ol'is-is). Destruction or dissolution of phagocytes. [Gr., *phagein*, to eat, + *lysis*, solution.]

phagolytic (fag-o-lit'ik). Pertaining to phagolysis.

phagomania (fag-o-ma'ne-ah). See *bulimia*. [Gr., *phagein*, to eat, + *mania*, madness.]

phagosome (fag'o-sit). Of Van Beneden, an animal parasite (such as a leech or a flea) that feeds on but does not reside in or on its host. [Gr., *phagein*, to eat, + *sitos*, food.]

phakitis (fa-ki'tis). Syn.: *lentilitis*. Inflammation of the crystalline lens or of its capsule. [Gr., *phakos*, a lens, + *itis*, inflammation.]

phalangitis (fal-an-ji'tis). Inflammation of a phalanx. [Gr., *phalagx*, a line of soldiers, + *itis*, inflammation.]

phalanx (fa'lanks). Any one of the bones of a finger or toe. **basilar p.** See *proximal p.* **distal p.** The p. most remote from the metacarpus or metatarsus.

metacarpal p., **metatarsal p.** See *proximal p.* **middle p.** The p. (in cases where there are three) intermediate between the distal and proximal phalanges.

phalanges of Deiters. Fiddle-shaped structures, probably cuticular in nature, united to each other, forming the lamina reticularis of the cochlea. Between them are intervals through which the hairs of the outer hair cells pass, and to each of them is attached the phalangeal process of the cells of Deiters. **proximal p.** The p. articulating with a metacarpal or metatarsal bone. **terminal p.**, **ungual p.**, **unguicular p.** See *distal p.* [Gr., *phalagx*, line, rank.]

phallin (fal'in). A hemolytic substance found in the poisonous fungus or mushroom *Amanita phalloides*.

phallitis (fal-li'tis). Inflammation of the penis. [Gr., *phallos*, the penis, + *itis*, inflammation.]

phallus (fal'lus). 1. The penis. 2. The typical genus of the *Phalloidei*. **P. Adriani**. A European species of *P.* (2d def.).

- The juice has been recommended for gout. [Gr., *phallos*.]
- phanero-, phaner-**. Combining form of Gr., *phaneros*, visible, evident.
- phanerobiotic** (fan'er-o-bi-ot'ik). See *phanerozoous*. [Gr., *phaneros*, visible, + *bioun*, to live.]
- phanerozoous** (fan'er-o-zo'us). Showing evidence of life; manifestly alive. [Gr., *phaneros*, visible, + *zoön*, an animal.]
- phantasy** (fan'tas-e). Thinking in terms of self as opposed to logical thinking in terms of reality. [Gr., *phantasia*, appearance.]
- phantom** (fan'tum). 1. An illusion or an hallucination. 2. A model of the body used for teaching purposes.
- pharbitisin** (far-bit'is-in). A purgative resin, prepared from the seeds of *Ipomoea nil*; said to agree in composition with the resin of jalap.
- pharmacial** (farm'a-kal). See *pharmaceutical*.
- pharmaceia** (far-ma-se'ah). 1. The use of medicines, or of poisons; pharmacy. 2. A remedy. [Gr., *pharmakeia*.]
- pharmaceutical** (far-ma-su'tik-al). Pertaining to pharmacy. [Gr., *pharmakeutikos*.]
- pharmaceutics** (far-ma-su'tiks). See *pharmacy* (def. 1st). [Gr., *pharmakeutike*.]
- pharmaceutist** (far-ma-su'tist). See *apothecary*.
- pharmaco-**. Combining form of Gr., *pharmakon*, drug, medicine, poison.
- pharmacocollocyst** (far-ma-ko-kol'o-sist). A gelatinous capsule for containing medicine. [Gr., *pharmakon*, a drug, + *kolla*, glue, + *kystis*, a cyst.]
- pharmacodynamics** (far'ma-ko-di-nam'iks). The science of the potency or action of drugs on living organs. [Gr., *pharmakon*, a drug, + *dynamis*, power.]
- pharmacognosy** (far'mak-og'no-se). 1. See *pharmacology*. 2. In a more restricted sense, the science which treats of the chemical and physical characters of drugs, more especially crude vegetable and animal drugs. [Gr., *pharmakon*, a drug, + *gnosis*, knowledge.]
- pharmacology** (far-ma-kol'o-je). 1. In the broadest sense, the science of medicine. 2. In a more restricted sense as a synonym for pharmacodynamics. [Gr., *pharmakon*, a drug, + *logos*, understanding.]
- pharmacomania** (far-ma-ko-ma'ne-ah). Insanity (or eccentricity) in regard to the use of drugs, especially an inordinate desire to consume or to prescribe them. [Gr., *pharmakon*, a drug, + *mania*, madness.]
- pharmacometry** (far-ma-kom'et-re). The art of weighing or measuring drugs. [Gr., *pharmakon*, a drug, + *metrein*, to measure.]
- pharmacomorphic** (far-ma-ko-mor'fik). Pertaining to the form in which medicines are to be prepared. [Gr., *pharmakon*, a drug, + *morphe*, form.]
- pharmacopeia** (far-ma-ko-pe'ah). The descriptive list of drugs and their preparations recognized in any country or locality as official. The U. S. P. is revised every ten years by the Pharmacopeial Convention which consists of delegates from regularly incorporated medical and pharmaceutical colleges and associations and from certain branches of the Government service. [Gr., *pharmakon*, a drug, + *poiein*, to make.]
- pharmacoepial** (far'ma-ko-pe'al). Pertaining to or recognized in a pharmacopeia.
- pharmacotherapy** (far'ma-ko-ther-a-pe'ah). Pharmaceutical therapeutics. [Gr., *pharmakon*, drug, + *therapeia*, treatment.]
- pharmacy** (far'ma-se). 1. The science of preparing and dispensing medicines. 2. An apothecary's shop. 3. The term "pharmacy" is also used in a restricted sense to indicate that branch of pharmaceutical education, which treats of galenic preparations. [Gr., *pharmakeia*, from *pharmakeuein*, to administer a drug.]
- pharyngeal** (far-in'ge-al). Of or pertaining to the pharynx. **p. tonsil**. See under *tonsil*.
- pharyngectomy** (far-in-jek'to-me). Partial excision of the pharynx. [Gr., *pharynx*, the pharynx, + *ektome*, a cutting out.]
- pharyngitis** (far-in-ji'tis). Inflammation of the pharynx. **follicular p.** Inflammation, usually chronic, of the mucous follicles of the pharynx. **granular p.** 1. See *follicular p.* 2. An ulcerative condition of the tonsils and the follicles of the pharynx which accompanies chronic pharyngeal catarrh. [Gr., *pharynx*, pharynx, + *itis*, inflammation.]
- pharyngo-**. Combining form of Gr., *pharynx*, the pharynx, the cavity with its enclosing mucous membrane and muscles situated behind and communicating with the nose.
- pharyngocele** (far-in-go-sel). An enlargement of the pharynx in which an esophageal diverticulum passes between the muscular fibers of the inferior constrictor muscle. [Gr., *pharynx*, pharynx, + *kele*, hernia.]
- pharyngolith** (far-in-go-lith). A calcareous concretion of the pharynx. [Gr., *pharynx*, pharynx, + *lithos*, a stone.]
- pharyngotomy** (far-in-got'o-me). An incision into the pharynx, the tonsils, or the esophagus. [Gr., *pharynx*, the pharynx, + *temnein*, to cut.]
- pharynx** (far'inks). The cavity bounded by the base of the skull, the posterior nares, the opening into the mouth, the tonsils, the posterior wall of the larynx, the commencement of the esophagus, and the prevertebral structures. [Gr., *pharynx*, gullet.]
- phaselin** (fas'el-in). A certain proprietary antiseptic.
- phasemannite**. Same as *inosite*.
- Ph. B.** Bachelor of philosophy.
- Ph. D.** Doctor of philosophy.
- PHELLANDRIUM** (fel-lan'dre-um). 1. A section of the genus *Oenanthe*. 2. The fruit

- of *Oenanthe p.* [Gr., *phellos*, the cork tree, + *aner*, a man.]
- phenacetin** (fe-nas'it-in). P. acetamidophenetol, $\text{C}_8\text{H}_9\text{CO.NH.C}_6\text{H}_5\text{O.C}_2\text{H}_5$. A slightly soluble crystalline substance or powder. It is used as an antipyretic and analgesic. It is official in the U. S. Ph. as acetphenetidin.
- phenacetinum** (fe-nas-et-e'num). Acetphenetidini; phenacetin [Br. Ph.].
- phenacetinurethan** (fe-nas'et-in-u-re'than). See *thermodin*.
- phenacylidin** (fe-nas-il'id-in). The compound $\text{C}_6\text{H}_4(\text{OC}_2\text{H}_5)\text{NH}.\text{CH}_2\text{CO.C}_6\text{H}_5$; a veterinary antipyretic.
- phenallyl alcohol** (fe-nal'il al'ko-hol). Cinnamic alcohol.
- phenamin** (fen'am-ën). Phenocoll hydrochlorid.
- phenanthrene** (fe-nan'thrën). An aromatic hydrocarbon, $\text{C}_{14}\text{H}_{10}$.
- phenantipyrin** (fe'nan-te-pi'rin). A certain proprietary antipyretic.
- phenas** (fe'nas). See *phenolate*.
- phē'nate**. A phenolate.
- phenazone** (fen'az-ön). See *antipyrin*.
- [Lat., *phenazonum*, Br. Ph.]
- phene** (fën). Benzene.
- phenetidini** (fen-et'id-in). A substance, $\text{C}_6\text{H}_4(\text{O.C}_2\text{H}_5)\text{NH}_2$, from which phenacetin is derived by substitution.
- phenic** (fe'nik). Derived from, or containing phenyl.
- phenixin** (fe-niks'in). Carbon tetrachlorid.
- phenobromate** (fe-no-bro'mät). A certain proprietary analgetic and antiseptic.
- phenocoll** (fe'no-kol). Amidophenacetin, $\text{C}_{10}\text{H}_{12}\text{O}_2\text{N}_2$, a substance bearing the same relation to phenacetin that glycoll bears to acetic acid. **p. hydrochlorid.** A compound of p. and hydrochloric acid; used as an antipyretic and sedative in influenza, rheumatism, and neuralgia. **p. salicylate.** A compound of p. and salicylic acid; antipyretic and antirheumatic. [*Phenyl* + Gr., *kolla*, glue.]
- phenol** (fe'nol). Hydroxybenzene, $\text{C}_6\text{H}_5\text{OH}$, commonly called carbolic acid. It is antiseptic and germicidal and has a variety of uses. **glyceritum phenolis.** A preparation containing 20 per cent. of liquefied p. in 80 per cent. of glycerin [U. S. Ph.]. **p. liquefactum.** P. liquefied by the addition of 13.6 per cent. of water [U. S. Ph.]. **p. test of cerebrospinal fluid,** see in *appendix*, page 909. **unguentum phenolis.** An ointment consisting of 3 per cent. of p. in white petrolatum. [*Acidum carbolicum*, U. S. Ph., 1890.]
- phenolate** (fen'o-lät). A salt of carbolic acid.
- phenolphthalein** (fe-nol-thal'e-in). A product of the interaction of phenol and phthalic acid ($\text{C}_8\text{H}_4\text{O}_4$) formerly used mainly as an indicator in acidimetry; it has now been used under a variety of trade names as a mild laxative.
- phenolsulphonphthalein** (fe'nol-sul-fon-thal'e-in). $\text{C}_{20}\text{H}_{18}\text{O}_4\text{SO}_3\text{H}$, the sulphuric acid derivative of phenolphthalein. With an alkali, it gives a red soluble salt.
- Used in the functional test of the kidney.
- phenomenon** (phe-nom'en-on). 1. Any occurrence or manifestation, especially one that is unusual or significant. 2. A symptom of disease. **knee p.** See *patellar reflex*, under *reflex*. [Gr., *phainomenon*, from *phainesthai*, to appear.]
- phenokinone** (fe-no'kwin-ön). A substance, $\text{C}_6\text{H}_4(\text{O.O.C}_6\text{H}_5)_2$, obtained by oxidizing phenol, also by mixing phenol and quinone.
- phenosal** (fe'no-sal). Phenetidini acetosalicylate.
- phenosol** (fe'no-sol). A compound of phenacetin and salicylic acid; used in rheumatism.
- phenychinolin** (fen-ik-in'o-lin). Any one of the group of chinolin derivatives. They are fatal to bacteria and to microscopic animals.
- phenyl** (fe'nil). A univalent radicle, C_6H_5 .
- p. acetate.** A colorless liquid, $\text{C}_6\text{H}_5(\text{CH}_3\text{COO})$, boiling at 193°C . It has the same refractive index as common soda-lime glass, thus rendering invisible a tube of such glass dipped into it. **p. acetic acid.** See under *acetic*. **p. acetic aldehyd.** A liquid, $\text{C}_6\text{H}_5\text{CH}_2\text{CHO}$.
- p. acetonitril.** Benzyl cyanid; a liquid, $\text{C}_6\text{H}_5\text{CH}_2\text{CN}$, the chief constituent of the oils of *Tropaeolum majus* and *Lepidium sativum*. It is a violent poison, and is excreted in the urine as phenaceturic acid.
- p'alanin.** $\text{C}_8\text{H}_9\text{CH}_2\text{CHNH}_2\text{COOH}$, an amido acid, found widely distributed in the protein molecule. The dextroform is the one found in nature. **p. alcohol.** Carbolic acid. **p'amidopropionic acid.** See *p'alanin*. **p'ethylamin.** A liquid base, $\text{C}_8\text{H}_{11}\text{N}$, formed by the decomposition of p'amidopropionic acid. **p'glucosazone.** Syn.: *glucosazone*. $\text{C}_6\text{H}_{10}\text{O}_4(\text{N.NH.C}_6\text{H}_5)$, the osazone of glucose, which is used in the identification of glucose or fructose. A yellow crystalline substance, whose melting point is 205° .
- p'hydrazin.** The compound, $\text{C}_6\text{H}_5\text{NH.NH}_2$. It is used as a test for sugar in urine. **p'hydrid.** Benzene. **p'methylketone.** A liquid, $\text{C}_6\text{H}_5\text{CO.CH}_3$, having a strong odor, resembling that of cherry laurel and giving, when taken internally, a peculiar and disagreeable odor to the breath. **p'propionic acid.** See under *acid*. **p. salicylate.** The salicylic ester of phenyl, $\text{C}_6\text{H}_4(\text{OH})\text{COOC}_6\text{H}_5$ 1:2. Salol, as it is almost universally called, is decomposed in the intestine with the liberation of the constituents, phenol and salicylic acid, both of which are actively antiseptic. Salol is also used pharmaceutically to coat pills which are intended to pass through the stomach unchanged and dissolve in the intestine. [*Phenylis salicylas*, U. S. Ph.; *salol*, Br. Ph.]
- phenylate** (fe'nil-ät). See *phenolate*.
- phenylhydrazin test for sugar.** A test used to identify glucose in the urine; 6 c.c. of urine are treated with about 1 gr. of phenylhydrazin hydrochlorid and about 1.5 gr. of sodium acetate. If the salts do not dissolve upon warming, a

small amount of water is added. The solution is heated in boiling water for $\frac{3}{4}$ of an hour and filtered while boiling hot. Upon cooling characteristic yellow crystals of glucosazone are deposited, having a melting point of 205° F.

phenylic (fe-nil'ik). Pertaining to, or containing phenyl.

phenylon (fen'il-on). Antipyrin.

pheorretin (fe-or-re'tin). A resinous substance obtained from rhubarb root.

phesin (fe'sin). A sulphur derivative of phenacetin; antipyretic.

phial (fi'al). See *viol*. [Gr., *phiale*.]

philocatalase (fi-lo-kat'al-äs). A substance present in the tissues which protects catalase against anticatalase. [Gr., *philein*, to love, + *catalase*.]

philocytase (fi-lo-si'täs). See *intermediary body*, under *body*. [Gr., *philein*, to love, + *cytase*.]

philter, **philtre** (fil'ter). A preparation intended to excite love or sexual appetite. [Lat., *philtrum*.]

philtrum (fil'trum). A philter.

phimos (fi-mo'sis). The stopping of an orifice; specifically, a congenital or pathological narrowing of the opening of the prepuce, so that it can not be retracted behind the glans penis. [Gr., *phimos*, from *phimoun*, to muzzle.]

phlebangioma (fle-ban-je-o'ma). A venous angioma. [Gr., *phleps*, *phlebis*, vein, + *angioma*.]

phlebectasis (fle-bek'ta-sis). A local dilatation of a vein. See *varix*. [Gr., *phleps*, vein, + *ektasis*, dilatation.]

phlebitis (fle-bi'tis). Inflammation of a vein. [Gr., *phleps*, a vein, + *itis*, inflammation.]

phlebogram (feb'o-gram). A sphygmographic tracing of the pulsation of a vein. [Gr., *phleps*, a vein, + *gramma*, anything traced.]

phlebolith (fle'bo-lith). Syn.: *vein stone*. A concretion found in a vein. [Gr., *phleps*, vein, + *lithos*, a stone.]

phlebopaly (fle-bop'al-e). Venous pulsation. [Gr., *phleps*, a vein, + *pallein*, to beat.]

phlebothrombosis (fle-bo-throm-bo'sis). The formation of a thrombus in a vein. [Gr., *phleps*, vein, + *thrombosis*.]

phlebotomania (feb-ot-o-ma'ne-ah). A mania for blood-letting as a curative measure. [Gr., *phleps*, a vein, + *tome*, a cutting, + *mania*, a madness.]

Phlebotomus (fle-bot'o-mus). A blood-sucking fly of the suborder *Orthorrhapha*.

P. pappatasi. A species said to carry "papataci fever" in Bosnia. [Gr., *phleps*, vein, + *temnein*, to cut.]

phlebotomy (fle-bot'o-me). The action or practice of cutting open a vein in order that the blood may flow. [Gr., *phleps*, a vein, + *temnein*, to cut.]

phlegm (flem). What is coughed up and expectorated; of some authors mucus. [Gr., *phlegma*, from *phlegein*, to burn.]

phlegmasia (fleg-mah'se-ah). Syn.: *galactophlebitis*. An old term for inflammation accompanied with fever or for any inflammatory disease. **p. alba**. Syn.:

milk-leg, white leg, crural phlebitis. **p. alba dolens**. Milk-leg; a painful swelling of the lower limb in lying-in women, without redness, due to phlebitis. [Gr., *phlegmasia*, from *phlegein*, to burn.]

phlegmatic (fleg-mat'ik). 1. Pertaining to or abounding in phlegm. 2. Not easily excited to action or passion, apathetic (said of temperament). [Gr., *phlegmatikos*, from *phlegma*, inflammation.]

phlegmon (fleg'mon). A local inflammation giving rise to and characterized by a mass of exudate, whether it ends in suppuration or not. [Gr., *phlegmone*, inflammation, a boil.]

phlobaphene (flo'ba-fen). One of a group of plant substances, somewhat resembling tannins and somewhat like resins, found in many vegetable dyes. [Gr., *phloios*, bark, + *baphe*, dye.]

phlogistic (flo-jis'tik). 1. Pertaining to phlogiston. 2. Inflammatory. [Gr., *phlogistos*, inflammable.]

phlogisticated (flo-gis'tik-a-ted). Containing phlogiston.

phlogis'ton. A hypothetical imponderable principle contained, according to Stahl, in all combustible substances and by its liberation causing their combustion (when they were said to be dephlogisticated). [Gr., *phlogistos*, inflammable.]

phlogochymia (flo-go-ki-me'ah). The chemistry of the tissue changes effected by inflammation. [Gr., *phlox*, a flame, + *chymeia*, chemistry.]

phlogogenic (flo-go-jen'ik). Producing inflammation. [Gr., *phlox*, flame, + *gennan*, to produce.]

phlogosin (flo-go'sin). A crystalline principle found in cultures containing *Staphylococcus aureus*. It produces inflammation. [Gr., *phlogos*, inflammation.]

phlogosis (flo-go'sis). 1. Inflammation. 2. Phlegmonous inflammation. [Gr.]

phloridzin (flo-rid'zin). See *phlorrhizin*.

phloroglucinol (flo-ro-glu'sin). Syn.: *phloroglucinol*, *phloroglucol*. Symmetrical trihydroxybenzene, $C_6H_3(OH)_3$. + $2H_2O$, isomeric with pyrogallic acid; used for the identification of pentose in the urine.

phlorrhizin, **phlorizin**, **phloridizin** (flo-ri'zin, flo-rid'i-zin). A substance, $C_{21}H_{34}O_{10}$ + $2H_2O$, found in the root bark of apple, pear, plum, and cherry trees. It is capable of destroying the parasites of malaria and when administered to man or to the lower animals, it induces glycosuria of renal origin. It is used for testing the functional activity of the kidney. [Gr., *phloios*, bark, + *riza*, root.]

phlyctena (flik-te'nah). A blister, a bulla, an ampulla, or vesicle. [Gr., *phlyktaina*, a blister.]

phlyctenular (flik-ten'u-lar). Characterized by the presence of small blisters.

phobia (fo'be-ah). A fixed or persistent dread of some one thing. The p's are the different forms of fear distinguished psychopathically. [Gr., *phobos*, fear.]

-phobia. Suffix from the Gr., *phobos*, dread, horror, e. g., *ydrophobia*, hydrophobia, dread of water.

phocomelia (fo-ko-me'le-ah). A mon-

strosity in which one or both of the hands or feet, or all four of those members, or rudimentary semblances of them, are attached to the trunklike flippers, with little or no intervening structures. [Gr., *phoke*, the seal, + *melos*, a limb.]

phonation (fo-na'shun). The production of vocal sound; vocalization. [Gr., *phone*, voice.]

phonautograph (fon-aw'to-graf). Of Donders, an apparatus by which the vibrations of the air due to the voice are transmitted to a delicate membrane. A lever connected with this writes upon a revolving drum by means of which a tracing of the vibrations is obtained. [Gr., *phone*, the voice, + *autos*, self, + *graphein*, to write.]

phonautosthenia (fon-aw'tos-the'ne-ah). Of P. Dida, the stimulation of thought in a speaker by the excitement of speaking. [Gr., *phone*, sound, + *autos*, self, + *sthenos*, strength.]

phone (fôn). 1. A sound. 2. The voice. [Gr., *phone*.]

phonendoscope (fo-nen'do-sköp). A stethoscope by which the sounds are intensified. [Gr., *phone*, sound, + *endon*, within, + *skopein*, to examine.]

phonetic, phonic (fo-net'ik, fôn'ik). Pertaining to the voice or to sound or to the agencies producing them. Phonetics or phonics is the science of articulate sound, especially that of the human voice. [Gr., *phone*, sound.]

phono-. Combining form of Gr., *phone*, voice, sound.

phonograph (fo'no-graf). An apparatus for registering vocal sounds so that they can be reproduced. [Gr., *phone*, the voice, + *graphein*, to write.]

phonology (fo-nol'o-je). The science of vocal sounds. [Gr., *phone*, the voice, + *logos*, understanding.]

phonometer (fo-nom'et-er). An instrument for measuring the intensity of the voice. [Gr., *phone*, sound, + *metron*, a measure.]

Phoradendron (for-ad-en'dron). Mistletoe. **P. flavescens**. American mistletoe; parasitic on North American elm and hickory trees. It is poisonous, producing thirst and vomiting followed by diarrhea. [Gr., *phor*, a thief, + *dendron*, a tree.]

phorometer (fo-rom'et-er). An instrument for measuring the amount of heterophoria. [Gr., *phorein*, to bear, + *metron*, a measure.]

phosferrin (fos-fer'in). A mixture of iron chlorid, phosphoric acid, and glycerin.

phosgene (fos'jên). Carbonyl chlorid, COCl₂, a gas with a powerful stifling odor. [Gr., *phos*, light, + *geman*, to produce.]

phosote (fo'sôt). A compound of creosote and phosphoric acid; used in the diarrhea of tuberculosis.

phosphas (fos'fas). See *phosphates*. **syrupus phosphatum compositus**. Compound syrup of phosphates; chemical food.

phosphates. Salts of phosphoric acid.

phosphatids. A group of complex sub-

stances, containing nitrogen and phosphoric acid, which are present in animal and plant cells, especially in nerve tissue, yolk of egg, and spermia. They are divided into various groups, based upon the atomic proportion of nitrogen and phosphorus contained in them. The mono-amino-monophosphatids contain 1 atom of N and 1 atom of P, the mono-amino-diphosphatids, 1 atom of N and 2 atoms of P, the diamino-monophosphatids, 2 atoms of N and 1 of P; and the triamino-monophosphatids, 3 atoms of N to 1 of P.

phosphatol (fos'fa-tol). A creosote preparation analogous to guaiacol phosphate.

phosphaturia (fos-fat-u're-ah). A state in which an excessive amount of phosphates is excreted in the urine. [Lat., *phosphas*, phosphate, + Gr., *ouron*, urine.]

phosphid (fos'fid). 1. A compound of phosphorus with another element or a radicle. 2. A compound, analogous to an amid, formed by the replacement of one or more atoms of hydrogen in phosphin (PH₃) by an acid radicle.

phosphin (fos'fin). 1. Phosphoreted hydrogen, PH₃. 2. A base which bears the same relation to phosphoreted hydrogen that an amin does to ammonia. 3. A yellow coloring matter obtained as a by-product in the manufacture of fuchsin.

phosphite (fos'fit). A salt of phosphorous acid.

phosphonium (fos-fo'ne-um). A radicle, PH₃, bearing the same relation to phosphorus that ammonium bears to nitrogen.

phosphorated, phosphoreted (fos'for-a-ted, fos'for-et-ed). Containing or combined with phosphorus. **p. hydrogen**. Syn.: *phosphin*, *hydrogen phosphid*. PH₃, a poisonous, inflammable gas.

phosphorescence (fos-for-es'enz). A mild luminosity (like that of phosphorus in the dark) without apparent heat. It is observed in certain fungi and other plants, and in various animals. [Gr., *phos*, light, + *phoros*, bearer.]

phosphoric (fos-for'ik). 1. Pertaining to phosphorus. 2. Containing phosphorus as a quinivalent body. **p. acid**. See under *acid*. **p. anhydrid**. P₂O₅, the anhydrid of p. acid; phosphorus pentoxid.

phosphoricus (fos-for'ik-us). Phosphoric; containing phosphorus; with the name of a base, the phosphate of that base.

phosphorismus (fos-for-is'mus). Phosphorus poisoning.

phosphorized (fos'for-ized). Combined or associated with phosphorus.

phosphoscope (fos'for-o-sköp). An apparatus devised by Becquerel for rendering low degrees of phosphorescence visible.

phosphorous (fos'for-us). 1. Pertaining to phosphorus. 2. Containing phosphorus as a trivalent body. List of poisons and their antidotes, see in *appendix*, page 939. **p. acid**. See under *acid*.

phosphorus (fos'fo-rus). A name given at first to any phosphorescent substance

but now applied exclusively to a non-metallic element discovered by Brand in urine. It was afterward obtained from bone ash, and is still so prepared. Combined with calcium, aluminum, and iron, it occurs in nature forming various minerals, and is also an important constituent of the animal and vegetable organism, where it is found combined with calcium, magnesium, sodium, ammonium, and certain organic radicles. In the animal body it occurs more especially in the bones, teeth, and nervous tissue. P. presents several allotropic modifications. Ordinary, or colorless, p. is a colorless or slightly yellow, waxlike, translucent body of crystalline structure, and having a garlicky odor, but no taste. At ordinary temperatures it is soft and cuts readily with a knife, but at low temperatures it is brittle. It melts at 44.3° C. to a colorless or slightly yellowish liquid, which boils at 200° C., forming a colorless gas. It also sublimates in a vacuum at ordinary temperatures, and recondenses in colorless crystals. It is almost insoluble in water, and soluble with difficulty in ether and in alcohol, but dissolves readily in carbon disulphid. It is readily inflammable, and possesses the property of becoming luminous in the dark when in contact with moist air, giving off at the same time white fumes of a garlicky odor. Its sp. gr. is 1.831. Red, or amorphous, p. is formed from ordinary p. by the action of heat or light and also by the presence of iodine in minute quantities. It is a hard, compact, reddish brown solid, of a metallic luster, devoid of taste and odor. It is insoluble in carbon disulphid, oxidizes with great difficulty, is non-luminous at ordinary temperatures, and is not poisonous. Its sp. gr. is 2.106. P. acts as an irritant poison, but the symptoms depend upon the state in which it is taken. In chronic poisoning necrosis of the bones may occur. Fatty degeneration of various organs is seen in acute p. poisoning. It has been employed in solution in oil, or in pill form, in cases of nervous debility, in cerebral or spinal paralysis, in hydrocephalus, and in osteomalacia. The dose is $\frac{1}{200}$ to $\frac{1}{32}$ of a grain. Atomic weight, 30.96; symbol, P or Ph. **bolognian p.**, **bononian p.** Barium sulphate ignited with combustible matter, such as charcoal. **oleum phosphoratum.** A preparation consisting of 1 per cent. of p. dissolved in expressed oil of almond [Br. Ph.], with about 10 per cent. of ether [N. F.]. **pilulae phosphori** [U. S. Ph.], **pilula phosphori** [Br. Ph.]. Pills of p.; p. pill; pills containing $\frac{1}{100}$ gr. of p. each [U. S. Ph.] or 1 per cent. of p. [Br. Ph.]. **Thompson's solution of p.** A preparation made by dissolving, with heat and agitation, one part of p. in absolute alcohol and glycerin and flavored with peppermint to make 14 parts. **vitreous p.** Ordinary colorless p. [Gr., *phos*, light, + *phorein*, to bear.]

photalgia (fo-tal'je-ah). Pain caused by

intensity of light. [Gr., *phos*, light, + *algos*, pain.]

phote (fot). A unit of photochemical energy. [Gr., *phos*, light.]

photesthesia (fo-tes-the'se-ah). Sensibility to light; capability of distinguishing light. [Gr., *phos*, light, + *aisthesis*, perception.]

photics (fo'tiks). See *optics*. [Lat., *photica*, from *phos*, light.]

photism (fo'tizm). A visual image; highly emotional light, produced by stimuli on other sense organs, such as of hearing, touch. [Gr., *phos*, light.]

photo- Combining form of Gr., *photo*, from *phos*, *photos*, light.

photobacterium (fo-to-bak-te're-um). A form of light-producing bacterium obtained from decomposing meat or from phosphorescent sea water.

photocampsis (fo-to-kamp'sis). Refraction of light. [Gr., *phos*, light, + *kampsis*, a bending.]

photochemistry (fo'to-kem'is-tre). The science of the chemical action of light. [Gr., *phos*, light, + *chemistry*.]

photochronography (fo-to-kron-og'ra-fe). The process of taking successive photographs of objects in motion. [Gr., *phos*, light, + *chronos*, time, + *graphein*, to write.]

photodynamic (fo''to-di-nam'ik). Substances having light energy. [Gr., *phos*, light, + *dynamis*, power.]

photogenesis (fo-to-jen'es-is). The power possessed by certain bacteria and other organisms of producing phosphorescence and giving out light. [Gr., *phos*, light, + *gennan*, to produce.]

photogenic (fo-to-jen'ik). Produced by light or possessing the power of producing light.

photokinetic (fo-to-kin-et'ik). Exciting motion by means of luminous rays. [Gr., *phos*, light, + *kinetikos*, causing motion.]

photology (fo-to'l'o-je). See *optics*. [Gr., *phos*, light, + *logos*, understanding.]

photomagnetism (fo-to-mag'net-izm). Magnetism engendered by the action of light. [Gr., *phos*, light, + *magnetism*.]

photomechanical (fo-to-mek-an'ik-al). Mechanical movement produced by the influence of light. [Gr., *phos*, light, + *mechanical*.]

photometer (fo-tom'et-er). An instrument for measuring or comparing intensities of light. [Gr., *phos*, light, + *metron*, a measure.]

photometry (fo-tom'et-re). The determination of the degree of illumination requisite for the recognition of an object. [Gr., *phos*, light, + *metron*, a measure.]

photomicrograph (fo-to-mik'ro-graf). A photograph of a microscopic object. [Gr., *phos*, light, + *mikros*, small, + *graphein*, to write.]

photomicrography (fo-to-mi-krog'raf-e). The production of photomicrographs. [Gr., *phos*, light, + *mikros*, small, + *graphein*, to write.]

photophobia (fo-to-fo'be-ah). Aversion to or intolerance of light. [Gr., *phos*, light, + *phobos*, fear.]

photopsia (fo-top'se-ah). Subjective sensations of light, such as sparks and flashes of fire, due to disease of the optic nerve and retina, or to sudden pressure. [Gr., *phos*, light, + *ops*, the eye.]

photorrhexis (fo-tor-reks'is). Refraction of light. [Gr., *phos*, light, + *rexis*, a breaking.]

photosynthesis (fo-to-sin'the-sis). Combining by light energy. [Gr., *phos*, light, + *synthesis*, synthesis.]

phototherapeutics, phototherapy (fo'-to-ther-ap-u'tiks, fo-to-ther'ap-e). The therapeutical employment of light. [Gr., *phos*, light, + *therapeia*, medical treatment.]

phototropism (fo-to'tro-pizm). Negatively or positively influenced by light. [Gr., *phos*, light, + *tropos*, a turning.]

photoxylin, photoxylon (fo-toks'il-in, fo-toks'il-on). Pyroxylin made by digesting wood pulp or cotton in a mixture of sulphuric acid and potassium nitrate. A solution of this in ether and alcohol has been recommended as a substitute for collodion.

photuria (fo-tu're-ah). Luminous urine.

Phragmidiothrix (frag-mid'e-o-thriks). A genus of the family of bacteria known as *Chlamydoacteriaceae*, consisting of filaments with a delicate sheath, which divide in three directions. **P. multi-septata**. A species found attached to the bodies of the crustacean *Gammarus locusta*. [Gr., *phragmos*, enclosure, + *idion*, diminutive ending, + *thrix*, hair.]

phren. 1. The diaphragm. 2. The mind. [Gr., *phren*.]

phrenic (fren'ik). 1. Pertaining to the mind. 2. Pertaining to the diaphragm. [Gr., *phren*, the mind, the diaphragm.]

phrenitis (fre-ni'tis). An old term for delirium. In Hippocrates, a typhoid delirium; later, all infectious deliria. [Gr., *phren*, the mind, + *itis*, inflammation.]

phreno-. Combining form of Gr., *phren*, midriff, mind.

phrenocardia (fren-o-kar'de-ah). A psychogenic cardiac disturbance. [Gr., *phren*, the mind, + *kardia*, the heart.]

phrenograph (fren'o-graf). An instrument devised by Rosenthal (1862) to demonstrate and register the movements of the diaphragm. [Gr., *phren*, the diaphragm, + *graphein*, to write.]

phrenography (fren-og'raf-e). Of Guisbain, psychology. [Gr., *phren*, the mind, + *graphein*, to write.]

phrenoin (fren'o-in). See *phrenosin*.

phrenology (fren-ol'o-je). The doctrine that the different mental faculties have their seats respectively in particular tracts of brain surface, and that the relative predominance of the faculties can be diagnosed from the conformation of the parts of the skull overlying those tracts. [Gr., *phren*, the mind, + *logos*, understanding.]

phrenomagnetism, phrenomesmerism (fren-o-mag'net-izm, fren-o-mes'mer-izm). See *animal magnetism*, under *magnetism*.

phrenosin (fren'o-sin). Of Thudichum, a body extracted from the white substance

of the brain by fractional crystallization from alcohol.

phrictopathic (frik-to-path'ik). Psychogenic skin susceptibility. [Gr., *phrikτος*, producing a shudder, + *pathos*, a disease.]

phronesis (fron-e'sis). 1. Reason. 2. Of Hippocrates, sensory power, sensibility. [Gr., *phronesis*.]

phrynin (fri'nin). A substance, probably impure, obtained from the skin of the toad. [Gr., *phryne*, a toad.]

phrynolysin (frin-ol'is-in). A soluble toxin, obtained from the fire toad. [Gr., *phryne*, toad, + *lysis*, destruction.]

phthalein (thal'e-in). A substance produced by the combination of a phenol and phthalic anhydrid with the elimination of the elements of one molecule of water.

phthalic (thal'ik). A word syncopated from naphthalic and applied to certain naphthalene derivatives which do not belong to the regular naphthalene series.

p. acid. See under *acid*. **p. aldehyd**. The compound, $C_6H_4(CHO)_2$. **p. anhydrid**. The compound, $(C_6H_4CO_2)_2O$, the anhydrid of phthalic acid.

phthalin (thal'in). $COOH.C_6H_4.CH:(C_6H_4OH)_2$, a colorless compound produced by reducing phthalein with nascent hydrogen.

phthalyl (thal'il). The bivalent radicle, $C_6H_4 \begin{matrix} \diagup CO' \\ \diagdown CO' \end{matrix}$, of phthalic acid.

phthiriasis (thir-i'as-is). Infested with lice; pediculosis. [Gr., *phthir*, a louse.]

Phthirius (thi're-us). 1. A louse (see *Pediculus*). 2. More commonly, the crab louse (see *P. pubis*).

P. inguinalis, P. pubis. The crab louse; a variety of louse that inhabits the region of the pubes most commonly, but is also found about the hair of the perineum and of the axillae, about the eyelashes, and in men about the hairy parts of the chest, abdomen, and thighs. It is smaller, broader, and flatter than *Pediculus capitis* and *Pediculus vestimenti*, and attaches itself more firmly to the skin. Its eggs ("nits") are attached to the hairs like those of *Pediculus capitis*. [Gr., *phthir*, a louse.]

phthisic (tiz'ik). 1. As an adjective, see *phthisical*. 2. As a noun, a popular term for any chronic pulmonary disease causing dyspnea and cough. [Gr., *phthisikos*.]

phthisical (tiz'ik-al). Affected with or of the nature of phthisis. [Gr., *phthisikos*.]

phthisiology (tiz-e-ol'o-je). The study of the causes, pathology, hygiene, prevention and treatment of tuberculosis. [Gr., *phthisis*, phthisis, + *logos*, understanding.]

phthisiophobia (tiz'e-o-fo'be-ah). A morbid dread of phthisis. [Gr., *phthisis*, phthisis, + *phobos*, fear.]

phthisis (ti'sis). 1. Any wasting, atrophic disease. 2. As usually employed, pulmonary tuberculosis. **fibroid p.** 1. Interstitial pneumonia. 2. Pulmonary tuberculosis in which dense layers of fibrous tissues surround the cavity, usually in the upper lobe, the pleura is thickened, and

- the lower lobe is gradually invaded by the sclerotic change. **p. mesaraica**, **p. mesenterica**. Tuberculosis of the mesenteric glands. **pulmonary p.** Pulmonary tuberculosis, of advanced degree, with suppuration and destruction of lung tissue, producing fever and consequent wasting of the body. **stonecutter's p.** Syn.: *chalicosis*. A wasting form of bronchopneumonia due to the irritation of inhaled particles of stone. [Gr., *phthisis*, from *phthiein*, to waste.]
- phulluah** (foo'loo-ah). An oily substance obtained from some plant that grows on the hills about Nani Tal; used topically in rheumatism.
- phy'cocoll.** See *vegetable gelatin*, under *gelatin*.
- Phycomyces** (fi-kom'is-es). An order of the *Fungi* including such genera as *Mucor* and *Rhizomucor*. [Gr., *phykos*, seaweed, + *mykes*, fungus.]
- phygogalactic** (fi''go-gal-ak'tik). Arresting the secretion of milk. [Gr., *pheugein*, to flee, + *gala*, milk.]
- phylacogen** (fi-lak'o-jen). A specific defense-producing substance from polybacterial products. [Gr., *phylax*, guard, + *gennan*, to produce.]
- phylaxin** (fi-laks'in). Any defensive substance in immunized animals or persons. The mycophylaxin acts against microorganisms; the toxophylaxin against the toxins or other poisonous products of bacteria. [Gr., *phylax*, guard.]
- phyletic** (fi-let'ik). Of the stem; pertaining to phylogeny.
- phyllo-**. Combining form of Gr., *phyllon*, leaf.
- phyllocyanin** (fil-o-si'an-in). A chlorophyll derivative, which yields hemopyrrol upon reduction.
- Phylloxera** (fi-loks-e'rah). A genus of insects or plant lice of the *Aphididae*. **P. vastatrix**. A destructive species which infests the grapevine. [Gr., *phyllon*, a leaf, + *xeros*, dry.]
- phylogenesis, phylogeny** (fi-lo-jen'es-is, fi-loj'en-e). The development of an organism or of a genus. [Gr., *phylon*, a tribe, + *genesis*, generation.]
- phylogeny** (fi-loj'en-e). The science of tracing the development of species through a series of changes and its genetic relationship to other forms. The ancestral history of a species. [Gr., *phylon*, a tribe, + *genesis*, generation.]
- phylogeny** (fi-loj'en-e). That department of embryology which relates to the origin of species by evolution. [Gr., *phylon*, a tribe, + *gennan*, to produce.]
- phylopor'phyrin**. $C_{32}H_{24}N_4O_2$, a chlorophyll derivative which resembles the blood pigment hematoporphyrin.
- phyma** (fi'mah). A skin tubercle, usually resulting from exudation into the corium.
- physaliphore** (fis-al'if-or). 1. A cavity of globular form in certain brood cells of carcinoma. 2. The cell which contains such a cavity. [*Physalis* + Gr., *phorein*, to carry.]
- physalis** (fis'al-is). Pl., *physalides*. 1. A brood cell of large size, present in carcinoma. 2. More correctly, a globular cavity present in certain cells, e. g., the large brood cells of carcinoma or the giant cells of sarcoma. [Gr., *physallis*, a bubble.]
- physema, phyesis** (fi-se'mah, fi-se'sis). An emphysematous tumor. [Gr., *physema*, *phyesis*.]
- physic** (fiz'ik). 1. See *medicine*. 2. Colloquially, a purgative. [Gr., *physikos*, natural.]
- physical** (fiz'ik-al). 1. Pertaining to physics. 2. Material; bodily. [Gr., *physikos*, from *physis*, nature.]
- physician** (fiz-ish'un). A practitioner of medicine. [Gr., *physikos*.]
- physico-**. Combining form of Gr., *physikos*, natural, physical.
- physics** (fiz'iks). The science (often called natural philosophy) which takes cognizance of the properties of matter, the forces that act on material bodies, the conditions of their rest and motion, etc. In recent use the term excludes chemistry, which deals with the atomic constitution and chemical reactions of material substances. [Gr., *physike*.]
- physio-**. Combining form of Gr., *physis*, nature.
- physiogeny** (fiz-e-oj'en-e). The production of things by nature. [Gr., *physis*, nature, + *gennan*, to produce.]
- physiognomy** (fiz-e-og'no-me). 1. The art of judging character by examination of the features of the face. 2. The countenance. [Gr., *physis*, nature, + *gnomon*, judge.]
- physiologic, physiological** (fiz'e-o-loj'ik, fiz'e-o-loj'ik-al). Pertaining to physiology. 2. Natural, not pathological.
- physiology** (fiz-e-ol'o-je). The science of life; the study of the functions of living organisms. **animal p.** The p. of animals. **cellular p.** The p. of the individual cells as separate units. **comparative p.** The comparative study of vital phenomena in animals and plants. **general p.** The science of life in the abstract, or of vital functions in animals generally. **pathogenetic p., pathological p.** See *pathology*. **special p.** The p. of a special organ or set of organs, or in a particular species or group of animals. **vegetable p.** The p. of plants. [Gr., *physis*, nature, + *logos*, understanding.]
- physiolysis** (fiz-e-ol'is-is). The natural decomposition of dead matter. [Gr., *physis*, nature, + *lysis*, dissolution.]
- physionomy** (fiz-e-on'o-me). The science of the laws of nature. [Gr., *physis*, nature, + *nomos*, law.]
- physiopathology** (fiz'e-o-path-ol'o-je). See under *pathology*.
- physo-**. Combining form of Gr., *physis*, bellows, bladder, bubble.
- physol** (fiz'ol). Of M. I. Wilbert, a "physiological solvent" containing pepsin, hydrochloric acid, glycerin, menthol, eucalyptol, and oil of wintergreen; used as a detergent.
- physometra** (fi-so-me'trah). A collection of gas in the uterus, usually caused by the

- gas bacillus. [Gr., *physa*, gas, + *metra*, womb.]
- Physostegia** (fi-so-ste'je-ah). False dragon's head; a genus of North American labiate herbs. *P. virginiana*. Lion's heart; said to have been used as an antitachyplegic. [Gr., *physa*, a bladder, + *stega*, a covering.]
- Physostigma** (fi-so-stig'mah). 1. A genus of the *Phaseoleae*. 2. Of the U. S. Ph., Calabar bean (seed of *P. venenosum*). List of poisons and their antidotes, see in appendix, page 940. **extractum physostigmatis**. A preparation made by extracting Calabar bean with alcohol. It should contain 2 per cent. of ether-soluble alkaloids [U. S. Ph.]. **P. venenosum**. Calabar bean; indigestible near the mouths of the Niger and Old Calabar rivers of western Africa, and naturalized in India and Brazil. The fruit is a deadly poison. It is used in Africa as an ordeal poison. It contains several poisonous alkaloids (see *eserin* and *calabarin*) and an indifferent substance, phytosterin, closely allied to cholesterolin. P. is used chiefly as a miotic in glaucoma. It is antagonistic to atrophin and hyoscyamin. **tinctura physostigmatis**. A 10 per cent. tincture of Calabar bean [U. S. Ph.]. [Gr., *physa*, a bladder, + *stigma*, a mark.]
- physostigmin, physostigmina** (fi-sotig'min, fi-so-stig-me'nah). Eserin, an alkaloid found in Calabar bean. It is very poisonous. It counteracts the effect of atropin; also used to increase intestinal peristalsis after surgical operations about the abdomen. **lamellae physostigminae**. Wafers made of gelatin and glycerin, each containing $\frac{1}{1000}$ grain of physostigmin sulphate [Br. Ph.]. **physostigminae salicylas**. A soluble, but not deliquescent salt of physostigmin [U. S. Ph.]. **physostigminae sulphas**. Eserin sulphate, a very deliquescent salt of physostigmin and sulphuric acid [U. S. Ph.].
- Phytelminthus** (fi-tel-min'thus). See *Bothriocephalus*. [Gr., *phyton*, a plant, + *elmis*, a worm.]
- phytin** (fi'tin). A compound containing about 23 per cent. of phosphorus in organic combination.
- phyto-, phyt-**. Combining form of Gr., *phyton*, a plant; that which has grown.
- Phytolacca** (fi-to-lak'kah). Poke; a genus of shrubs or herbs (rarely trees) of the *Chenopodiales*. The species are acrid and emetic. Of the U. S. Ph., the root of *P. decandra*. The fluid extract of poke root is official in the U. S. Ph. **p. berry**. *Phytolaccae fructus*; the fruit of *P. decandra* [U. S. Ph., 1890]. **P. decandra**. Virginian poke; indigenous to the United States and also found (probably naturalized) in northern Africa and southern Europe. The root is used medicinally. It is emetic, cathartic, and in overdoses produces convulsions and death by respiratory paralysis. The berries are less active than the root. [Gr., *phyton*, a plant, + Lat., *lacca*, lac.]
- phytolaccatoxin** (fi'to-lak-kah-toks'in). A principle occurring in Japanese poke-berry and possibly in our *Phytolacca decandra*, having an action like that of picrotoxin.
- phytolaccin** (fi-to-lak'sin). 1. Of Clausen, a neutral tanninlike principle obtained from the seeds of *Phytolacca decandra*. 2. An alkaloid occurring in very small amounts in phytolacca.
- phytoparasitic** (fi'to-par-a-sit'ik). A vegetable parasitic organism. [Gr., *phyton*, plant, + *parasite*.]
- phytopathogenic** (fi'to-path-o-jen'ik). Producing disease in plants.
- phytopathology** (fi'to-path-ol'o-je). 1. The science of plant diseases. 2. The pathology of diseases traceable to vegetable origin. [Gr., *phyton*, a plant, + *pathology*.]
- phytoplasm** (fi'to-plasm). Vegetable protoplasm. [Gr., *phytos*, a plant, + *plasma*, formed matter.]
- phytoprecipitin** (fi'to-pre-sip'it-in). A precipitin produced by the injection of vegetable proteids into animals.
- phytosis** (fi-to'sis). 1. Phytogenesis. 2. A morbid condition caused by the presence of a vegetable parasite, especially a dermatomycosis. [Gr., *phyton*, plant.]
- phytosterin** (fi-tos'te-rin). Fatlike vegetable substances present in seeds and young shoots resembling cholesterolin.
- phytotoxin** (fi-to-toks'in). A soluble toxin obtained from the vegetable tissue, from the jequirity bean (*Abrus precatorius*). [Gr., *phyton*, plant, + *toxikon*, poison.]
- pia** (pe'ah). One of the cerebrospinal meninges, a delicate network of connective tissue in immediate relation to the surface of the brain and of the spinal cord. **cerebral p.** The p. of the brain. It contains in its meshes the ramifications of the cerebral vessels, closely follows the convolutions and gyri of the brain surface, lines the great fissures; and by some of them is continued into the ventricular cavities. **external p.** The p. covering the exterior of the brain as distinguished from the part within the ventricles. **internal p.** The p. which extends into the ventricles of the brain. **p. mater**. See *p.* **p. spinalis**, **spinal p.** The p. of the spinal cord. It is prolonged within the anterior and posterior median fissures, and forms the epineurium of each of the spinal nerves. [Lat., fem. of *pius*, gentle, delicate.]
- pia-arachnoid** (pi'ah-ar-ak'noid). The pia and the arachnoid considered as forming one organ.
- pian** (pe-an' or pi'an). Another name for yaws.
- piarhemia** (pi-ar-he'me-ah). Syn.: *chylous blood*. Fat in the blood. Lipemia. [Gr., *piar*, fat, + *aima*, blood.]
- pica** (pi'kah). An appetite or craving for unusual, unwholesome, even disgusting substances for food. [Lat.]
- picealis** (pi-se-al'is). Due to the action of tar; e. g., *acne picealis*. [Lat., *pix*, pitch.]
- piceous** (pi'se-us). 1. Pitchy; containing

pitch or tar. 2. Pitch-colored, reddish black.

pichi (pe'tche). See *Fabiana*.

picolin (pik'o-lin). Methylpyridin, $C_6H_4N \cdot CH_3$, found in animal tar and coal tar; also prepared synthetically. Upon injection in the animal organism, it is oxidized to pyridin, carboxylic acid, and excreted in the urine as pyridinuric acid.

Picraena (pik-re'nah). A genus of the *Simarubaceae*. **P. excelsa**. *Picraena* wood; indigenous to Jamaica and the Caribbean Islands. Its wood is the quassia (2d def.) of the U. S. Ph. [Gr., *pikros*, bitter.]

picrate (pik'rät). A salt of picric acid. [Gr., *pikros*, bitter.]

picratol (pik'rat-ol). Silver trinitratophenolate. Antiseptic and antigonorrhoeic.

pic'ric acid. See under *acid*.

picro-, picr-. Combining form of Gr., *pikros*, bitter.

picro-aconitin (pik'ro-ak-on'it-in). A base, $C_{31}H_{45}NO_{10}$, obtained from the bulbs of *Aconitum napellus*.

picrocarmin, picrocarminate (pik-ro-kar'min, pik-ro-kar'min-ät). A liquor obtained by mixing a solution of carmin in ammonia with a concentrated solution of picric acid; used as a staining agent in microscopy.

picro-er'ythrin. A crystalline bitter substance, $C_{12}H_{16}O_7 + 3H_2O$.

picrol (pik'rol). Potassium diiodoresorcin monosulphonate; an antiseptic.

picrolichenin (pik-ro-li'ken-in). A principle, of the probable formula, $C_{12}H_{20}O_6$, found in *Variolaria amara*.

picromel (pik'ro-mel). A mixture of impure taurocholates and glycocholates, having a bitter taste and a sweetish after-taste.

picropodophyllin (pik'ro-pod-o-fil'in). A decomposition product of podophyllotoxin.

picropyrin (pik-ro-pi'rin). A compound of picric acid and antipyrin.

Picrorrhiza (pik-ro-ri'zah). A genus of the *Digitaleae*. **P. kuerva**, **P. kurroa**, **P. kurroo**. An herb of the Himalayas; the P. of the Br. Ph., 1885. The intensely bitter root, the kali-kutki of India, is said to be a valuable tonic. It is used as a febrifuge, and is one of the numerous roots sold in the Bengal bazaars as *teeta*. [Gr., *pikros*, bitter, + *riza*, a root.]

picrosclerotin (pik-ro-skle'ro-tin). Of Dragendorff, mainly ergotinin with, possibly, some ergotoxin.

pirotin (pik'ro-tin). ($C_{16}H_{15}O_2$). An inactive decomposition product of picrotoxin.

picrotoxin (pik-ro-toks'in). A very bitter substance, $C_{30}H_{33}O_{12}$, found in cocculus indicus, of which it forms the active principle. It acts on the nervous centers, and especially on the motor, inhibitory, and respiratory centers of the medulla oblongata. It is used for the night sweats of phthisis, but it probably does more harm than good. It is a dangerous poison, causing convulsions and death by respiratory paralysis [U. S. Ph., 1890]. [Gr., *pikros*, bitter, + *toxikos*, poisonous.]

picrotoxinin (pik-ro-toks'in-in). $C_{16}H_{16}O_6$,

an exceedingly active decomposition product of picrotoxin, being about twice as poisonous as the latter.

Pictet's liquid. A mixture of sulphurous anhydrid and carbon dioxide liquefied by pressure; used by inhalation as a disinfectant.

piebald skin. See *leukoderma*.

piedra (pi-e'drah). A disease of the hair occurring in Colombia, South America. It consists of nodular concretions on the hair, produced by a fungus which grows in the oil used for dressing the hair. The nodules are the size of a pin's head and are so hard that they rattle when the hair is combed. [Sp., *pieдра*, a stone.]

pigeon breast. A deformity of the chest in which the sternum is prominent, caused by a forcing in of the sides.

pig'ment. 1. Any coloring matter. 2. A substance for topical application with a pencil or brush. **biliary p's**. See *biliprasin*, *bilifuscin*, *bilipurpurin*, *bilirubin*, *biliverdin*, *choletelin*, and *hydrobilirubin*. **blood p's**. See *hemoglobin*, *hematin*, *hemocyanin*, *hematoporphyrin*, *hemochromogen*, *methemoglobin*, and *oxyhemoglobin*. **urinary p's**. See *urobilin*, *urochrome*, and *uro-erythrin*. **uveal p**. The p. contained in the cells on the inner or posterior surface of the iris, the ciliary processes, and the choroid; properly a portion of the retina (*pars retinalis iridis*). [Lat., *pingere*, to paint.]

pigmen'tal, pig'mentary. Pertaining to or containing pigment.

pigmentation (pig-men-ta'shun). 1. The production of pigment. 2. The change of color caused by its presence. **lymphatic p**. The arrest of pigment granules, such as carbon or coloring matters used in tattooing, by the lymph nodules.

pigmented mole. See *nevus pigmentosus*.

pigmentophagy (pig-ment'o-faj). A cell that devours pigment. [Pigment + Gr., *phagein*, to eat.]

pile. 1. See *battery*. 2. See *hemorrhoid*. In this connection it is generally used in the plural. **thermo-electric p**. A battery, in which the development of an electric current depends upon heating the point of junction of two metals. [Lat., *pila*, 1. a pillar; 2. a ball.]

piliganin (pi-lig'an-in). A poisonous alkaloid obtained from *Lycopodium saururus*. It causes vomiting, purging, convulsions, and death.

pilimiction (pil-im-ik'shun). The passage of urine containing hairs. [Lat., *pilus*, hair, + *mictio*, passage of urine.]

pill. A pharmaceutical preparation consisting of a small, more or less spherical mass, of a size convenient for swallowing; of some pharmacopoeias, a pilular mass.

Blancard's p's. See *pilulae ferri iodidi*, under *ferrum*.

Griffith's p's. See *pilulae ferri carbonatis*, under *ferrum*.

Lady Webster p. See under *Lady Webster*. **Plummer's p**. See *pilulae antimonii compositae*, under *antimonium*.

[Lat., *pilula*, dim. of *pila*, a ball.]

pill'lar. A column or upright support;

also a structure resembling a column. **anterior p's of the fornix.** Two diverging columns that extend downward from the anterior extremity of the body of the fornix, anterior to the foramen of Monro, along the sides of the third ventricle. **external p. of the abdominal ring.** The outer aponeurotic margin of the external abdominal ring, formed by a portion of Poupart's ligament. **internal p. of the abdominal ring.** The inner aponeurotic margin of the external abdominal ring. **muscular p's.** See *muscle columns*, under *columns*. **p's of Corti.** See *rods of Corti*, under *rod*. **p's of the diaphragm.** Bundles of tendinous fibers which arise on the right side from the anterior surfaces of the first, second, and third lumbar vertebrae and the intervertebral fibrocartilages, and on the left side from the anterior surfaces of the second and third lumbar vertebrae, and pass upward and outward, forming an arch over the aorta. **p's of the fauces.** The folds of mucous membrane between which the tonsil is situated. **posterior p's of the fornix.** The two bands forming the prolongation of the fornix posteriorly. [Lat., *pila*, mole, pier, pillar.]

pilo- Combining form of Lat., *pilus*, hair.

pilocarpidin (pi-lo-kar'pid-in). An alkaloid derived from jaborandi leaves, $C_{10}H_{14}N_2O_2$. It acts qualitatively like pilocarpin, but more weakly.

pilocarpin (pi-lo-kar'pin). A base, $C_{11}H_{13}N_3O_2$, found in jaborandi. It is an active diaphoretic and is used as a miotic in glaucoma. **p. hydrochloridum.** The hydrochlorid of p. [U. S. Ph.]. **pilocarpinae nitras.** The nitrate of p. [U. S. Ph.]. **P. phenas.** Aseptolin. [Lat., *pilocarpina*.]

Pilocarpus (pi-lo-kar'pus). 1. A genus of the Rutaceae. 2. The dried leaflets of *P. microphyllus* or *P. jaborandi*. They are bitter and somewhat pungent, and when bruised, slightly aromatic. *P.* is a powerful diaphoretic and sialagogue. It is used in dropsy, etc., and is a strong mydriatic. It is antagonistic to atropin. The fluidextract of *P.* is official in the U. S. Ph. **P. jaborandi.** The dried leaves are official. **P. microphyllus.** See *P.* (2d def.). **P. pennatifolius**, **P. pinnatifolius**, **P. pinnatus.** The jaborandi plant, the species yielding the p. of the U. S. Ph., 1880; probably identical with *P. selloanus*; a shrub of tropical and subtropical Brazil. The bark, as well as the leaves, contains p. and is used as a sudorific and sialagogue. **P. selloanus.** Rio Janeiro jaborandi; a species found in Brazil and Paraguay, differing little, if at all, from *P. pinnatifolius*, official in U. S. Ph., 1890. [Gr., *pilos*, a cap, + *karpos*, fruit.]

pilomotor (pi-lo-mo'tor). Applied to muscles causing movement of hairs. [Lat., *pilus*, hair, + *motor*, mover.]

pilonidal (pi-lo-ni'dal). Serving as a nest for the lodgment of hair. See *foveola coccygea*, under *foveola*. [Lat., *pilus*, a hair, + *nidus*, a nest.]

pilosis (pi-lo'sis). Excessive growth of hair. [Lat., *pilus*, hair.]

pilula (pil'u-lah). See *pill*. **pilulae catharticae compositae.** Compound cathartic pills, containing calomel, resin, gamboge, and compound extract of colocynth [U. S. Ph.]. **pilulae catharticae vegetabiles.** These differ from the compound cathartic pills mainly in the omission of calomel and the addition of extract of leptandra and resin of podophyllin [U. S. Ph.]. **pilulae laxativae compositae.** A pill of aloin, strychnin, extract of belladonna, and ipecac [U. S. Ph.]. **pilulae triplexes.** Triplex pills. A pill composed of purified aloes, mass of mercury, and resin of podophyllin. Francis triplex pills are more complex, containing aloes, scammony, mass of mercury, castor oil, oil of caraway, and tincture of aloes and myrrh [N. F.]. [Lat., dim. of *pila*, a ball.]

pilular (pil'u-lar). Pertaining to, resembling, or proper for making into pills. [Lat., *pilula*, a pill.]

pi'lus. A hair. See *capillus*, *crinis*, *villus*, and *seta*. **pili anales.** Hairs which grow about the anus. **pili capitis.** Hairs of the head; capilli. **pili cupulati.** Hairs having cup-shaped bulbous roots; papilla hairs. **p. cutis.** The short, downy hairs that grow over the general surface of the skin; lanugo hairs. **pili pudendorum.** The pubic hair. **pili subaxillares.** The hair of the axillae. [Lat.].

pimel- Combining form of Gr., *pimele*, fat; used as a prefix to designate fatty or associated with fat.

pimelitis (pim-el-i'tis). 1. Inflammation of the adipose tissue. 2. Inflammation of connective tissue. [Gr., *pimele*, fat, + *itis*, inflammation.]

pimeloma (pim-el-o'mah). A fatty tumor. [Gr., *pimele*, fat, + *oma*, a tumor.]

pimelorrhœa (pim'el-o-re'ah). Fatty diarrhea. [Gr., *pimele*, fat, + *roia*, flow.]

pimelosis (pim-el-o'sis). A more correct name for adiposis. [Gr., *pimele*, fat.]

pimeluria (pim-el-u're-ah). Fatty urine. [Gr., *pimele*, fat, + *ouron*, urine.]

Pimenta (pim-en'tah). 1. A genus of very fragrant myrtaceous trees of tropical America. 2. Allspice; the dried, nearly ripe aromatic fruit of *P. officinalis* [U. S. Ph.]. **agua pimentae.** A preparation made by distilling allspice with water. **oleum pimentae.** A volatile oil distilled from the fruit of *P. officinalis*. It has essentially the same composition as oil of cloves, but differs in flavor. It is used as an aromatic stimulant [U. S. Ph.]. **P. acris.** Wild cinnamon, the wild clove of the West Indies. Its fruit yields an oil (oil of bayberry), which consists of eugenol and a hydrocarbon. The leaves are used as a spice and medicine in the West Indies. **P. aromatica**, **P. communis**, **P. officinalis**, **P. vulgaris.** An evergreen tree indigenous to the West Indies, Mexico, and South America, and cultivated especially in Jamaica for its fruits, which are the allspice of com-

merce (see *P.*, 2d def.). The bark is mildly aromatic and astringent. The leaves are aromatic and astringent and are used as a spice. [Span., *pimenta*, allspice, from Lat., *pimentum*, spice.]

Pimpinella (pim-pin-el'lah). A genus of the *Umbelliferae*. **P. anisum**. Anise. **P. magna**. A species the root of which is larger than that of *P. saxifraga*. Its properties are similar, but less active, and it was formerly used medicinally. **P. saxifraga**. Burnet saxifrage, or pimpinella; a perennial species growing throughout Europe and in Asia. The root is considered diaphoretic, diuretic, and stomachic. It has an aromatic but disagreeable odor, and a pungent, acrid, sweetish taste. It yields a volatile oil of penetrating odor and biting taste; it also contains an acrid resin. The herb and seed also were formerly official.

pimple. A small rounded tumor of the skin, usually reddened. [Ang.-Sax., *pimpele*.]

pinacolin (pin-ak'o-lin). 1. A liquid, C_8H_{16} — $\text{CO} - \text{C} \equiv (\text{CH}_3)_3$, derived from pinacone. 2. Any ketone obtainable by the decomposition of a pinacone in the more general sense.

pinapin (pin'ap-in). Fermented pineapple juice; used in gastric catarrh and, as a spray, in nasal catarrh.

pine. See *Pinus*. **p. needle oil**. A volatile oil distilled from the leaves of *Pinus pumilio*. It is colorless, or nearly so, with an aromatic, lavenderlike odor and a pungent but not unpleasant flavor. It resembles turpentine in medicinal properties, but is milder. It is used by inhalation in the treatment of respiratory diseases.

pineal (pi'ne-al). 1. Shaped like a pine cone. 2. See *pineal gland*, under *gland*.

pinealism (pi'ne-al-izm). A clinical syndrome due to derangement of the pineal body functions.

pinene (pi'nēn). A hydrocarbon, $\text{C}_{10}\text{H}_{16}$, of the terpene series. It is the principal constituent of the oil of turpentine and is found in many of the essential oils.

pinguefaction (pin-gwe-fak'shun). Conversion into fat. [Lat., *pinguis*, fat, + *facere*, to make.]

pinite (pi'nit). A very sweet crystalline body, $\text{C}_6\text{H}_8(\text{OH})_4\text{O}$, isomeric with mannitan, found in the exudation of *Pinus lambertiana*; used as a laxative.

pink-eye. An acute catarrhal conjunctivitis, giving a pink or red appearance to the eyeball.

pink-root. See *Spigelia*.

pinna (pin'nah). The external part of the ear.

pinol. The volatile oil of the leaves of *Pinus pumilio*.

pint. In the United States, 16 fluidounces. The imperial p. of Great Britain contains 20 ounces, imperial measure, nearly one-fourth more than the pint in use here. See *table of weights and measures*, in *appendix*.

pin'ta. A contagious disease endemic in tropical America, produced by several

fungi, such as *Aspergillus*, *Penicillium*, etc., and characterized by the occurrence of peculiar persistent violet, red, yellow, grayish blue or black patches in the skin. [Sp., *pinta*, spot, stain, mark.]

Pinus. 1. A genus of coniferous trees; the pines. 2. A family of plants including *P.*, *Larix*, *Abies*, *Thuja*, *Cupressus*, *Juniperus*, *Taxus*, *Ephedra*, *Casuarina*, and *Equisetum*. 3. See *pineal gland*, under *gland*. **balsamum nativi pini laricis**. Venice turpentine. **balsamum nativum pini silvestris**. Common turpentine. **balsamum pini laricis**. Venice turpentine. **oleum pini silvestris**. Pine needle oil. **P. abies**. *Abies pinus*. **P. australis**. Yellow pine; a species yielding much turpentine, resin, pitch, and tar through all seasons. **P. pumilio**. The upright-coned mountain pine; a recumbent bush closely allied to *P. silvestris*; found on the Alps and the Carpathians. It yields the oil of pine. **P. silvestris**. Birk apples; a tree of middle and northern Europe and northern Asia; a source of pitch, tar, and turpentine. An essential oil, obtained by distillation from the leaves, is used in medicine (*pine needle oil*). [Lat., *pinus*.]

pinworms. See *Oxyuris vermicularis*.

pilo-epithelium (pi'lo-ep-ith-e'le-um). Epithelium containing deposits of fat.

pioscope (pi'os-kōp). A galactometer in which the richness of the milk is estimated from its correspondence with one or other of six shades of color painted on the instrument. [Gr., *pion*, fat, + *skopein*, to examine.]

pip. A disease of fowls in which a pellicle grows on the tip of the tongue.

Piper. 1. The peppers, a genus of the *Piperaceae*. They contain an acrid resin, an aromatic volatile oil, and a crystallizable principle, piperin, chiefly present in the root and fruit. 2. Of the U. S. Ph., the unripe fruit of *P. nigrum*. Black peppers are berrylike fruits having an aromatic smell and a hot, pungent taste. They contain piperin, a resin, an essential oil isomeric with oil of turpentine, gum, starch, lignin, etc. Black pepper is carminative and stimulant, but is used chiefly as a condiment. **confectio piperis**. A mixture of black pepper, caraway fruit, and clarified honey [Br. Ph.]. **oleoresina piperis**. A preparation made by extracting black pepper with acetone and evaporating off the acetone [U. S. Ph.]. **P. cubeba**. A shrub indigenous to Java, Borneo, Sumatra, and parts of the East Indies; the source of cubeb. **P. decortiatum**. White pepper. **P. longum**. 1. A shrub indigenous to Malabar, Ceylon, eastern Bengal, Timor, and the Philippines, and cultivated in India for its fruits (see 2d def.). 2. The unripe fruit of *P. officinarum* and of *P. longum* (1st def.); long pepper, the *peperi makron* of the ancients. It is rarely used medicinally, except in veterinary practice. **P. longum**. A Java species with fruits closely resembling true cubeb. **P. methysticum**, *P. methysticum*. The ava or

- kava of the South Sea Islands. **P. ni-grum**. Black pepper (plant). See *P.* (2d def.). **P. officinarum**. Long pepper. [Lat., *piper*, pepper.]
- piperazin, piperazidin** (pip'er-a'zin, pip'er-az'id-in). Diethylendiamin, $C_4H_{10}N_2 + 6H_2O$, a synthetic base. It is a solvent of uric acid and has been used in gout and as a solvent for urinary calculi. **p. quinates**. See *sidonal*.
- piperidin** (pi-per'id-in). A strongly alkaline, colorless liquid, C_4H_9N , obtained from pyridin by reduction; it acts like conium, but is weaker.
- piperin** (pip'er-in). An alkaloid, $C_{17}H_{19}NO_3$, found in various species of *Piper*. It was used in malaria at one time. It is nearly tasteless when first put into the mouth, but develops a sharp, pungent taste. [Lat., *piperina*, U. S. Ph.]
- pipet** (pi-pet'). A glass tube or narrow vessel, with or without expanded portions, graduated or not, open at both ends, generally drawn out to a moderately small size at one end, used for conveying definite quantities of liquids. [Fr., *pipette*, dim. of *pipe*, pipe.]
- pipmen'thol**. See *menthol*.
- Pipissewa** (pip-sis'se-wah). See *Chimaphila*.
- piqûre** (pe'ker). The operation of puncturing the floor of the fourth ventricle with a probe, resulting in the production of glycosuria. [Fr.]
- piriformis** (pi-ri-for'mis). Pear-shaped. See *table of muscles*, under *muscle*. [Lat., *pirus*, pear, + *forma*, form.]
- Pirogoff's amputation**. Amputation of the foot, the lower articular surfaces of the tibia and fibula being sawn through and the ends covered with a portion of the os calcis. [Nikolai Ivanovitch Pirogoff, Moscow surgeon, 1810-1881.]
- Piroplas'ma**. A genus of parasitic protozoans in the blood corpuscles of horses, dogs, sheep, and cattle. **P. bigeminum**. Syn. for *Babesia bigemina*. A species causing Texas cattle fever.
- Pirquet's skin reaction**. In cases of tuberculosis by the application of tuberculin to the skin from which the epithelium has been removed.
- Piscidia** (pis-sid'e-ah). 1. A genus of leguminous trees, scarcely different from *Louhocarpus*. 2. The root bark of *P. erythrina*. **P. erythrina**. Jamaica white dogwood. The leaves, twigs, and root bark have long been used to stupefy fish. [Lat., *piscis*, a fish, + *caedere*, to slay.]
- piscidin** (pis-i'din). Probably a mixture of principles having a curare action obtained from *Piscidia erythrina*.
- pisiform** (pi'si-form). Shaped like a pea. [Lat., *pisiformis*, from *pisum*, a pea, + *forma*, form.]
- Pistacia** (pis-ta'se-ah). A genus of anacardiaceous trees or shrubs; in the pl., *pistaciae*, p. nuts. **P. lentiscus**. Common mastic tree, indigenous to the shores of the Mediterranean. Its sap constitutes, after hardening, the mastic of commerce. The wood was formerly used as a hemostatic and astringent. **p. nuts**. The edible cotyledons of the fruit of *P. vera*. The fruits themselves (which are also called p. nuts) are oblong drupes somewhat larger than olives, with a brittle shell containing the cotyledons. These have a greenish color and agreeable taste, and are much used as food, either dried like almonds or made into confections, etc. They contain sugar, and a fixed oil obtained from them by expression, and are a mild demulcent. They are not much employed medicinally and readily turn rancid. [Gr., *pistakia*.]
- pit.** 1. See *fossa* and *depression*. 2. To be or become marked with a pit or shallow depression; to p. on pressure, where edema is present, is to preserve for a short time a depression made by pressure, as with the tip of the finger. **nasal p's, olfactory p's**. Two small depressions on the anterior cerebral vesicle, from which the nasal fossae develop. **p. of the stomach**. 1. See *infrasternal depression*, under *depression*. 2. See *anticardium*. **stomach p's**. The openings or mouths of the gastric tubules seen in the mucous surface of the stomach; also called stomach cells and stomach ducts. **tear p.** See *lacrimal sinus*, under *sinus*. [Ang.-Sax., *pyt*, hole.]
- pitayin** (pit-ah'yin). An alkaloid contained in some varieties of cinchona bark.
- pitch**. The substance left behind in the distillation of tar. It is a shiny, black, solid substance which, on the application of moderate heat, becomes viscous and adhesive. It consists of fixed resin and volatile resinous principles. It was formerly official in the Br. Ph. as *pix* (*pix nigra* or *pix arida*). **artificial Burgundy p.** A factitious product, devoid of the fragrance of Burgundy p., made by melting together p., rosin, and turpentine, or rosin and palm oil or some other fat, and agitating the mixture with water to give it the necessary opaqueness. **Burgundy p.** The prepared resin of *Abies excelsa*. In commerce the term includes the prepared turpentine of various other coniferous trees. When pure, it is a somewhat opaque, yellowish brown, aromatic, strongly adhesive substance, differing from turpentine chiefly in its smaller proportion of volatile oil. It breaks with a clear conchoidal fracture, and when cold is brittle and hard, yet eventually assumes the form of the vessel in which it is kept. It is used in the form of plaster as a mild rubefacient. **Canada p.** Hemlock p., the prepared resin of *Abies canadensis*, a hard, brittle, reddish brown, opaque, nearly tasteless substance of a weak peculiar odor. It contains but a minute percentage of volatile oil. It is used like Burgundy p., but softens at a much lower temperature [Lat., *pix canadensis*, U. S. Ph., 1880]. **mineral p.** Asphalt. [Ang.-Sax., *pic*; Lat., *pix*.]
- pith**. The medulla, or central portion, of a stemlike structure. It consists chiefly of soft, thin-walled cells, which become dry and light after the growing period.
- pithiatism** (pith-i'at-izm). A term sug-

gested by Babinski as separating from hysteria those cases in which suggestion alone caused the symptoms. [Gr., *peith-ein*, to persuade, + *iatos*, curable.]

pituitary (pit-u'it-a-re). Pertaining to or secreting mucus. **p. body**. See under *body*. **p. gland**. See *p. body*, under *body*. **p. fossa**. See *sella turcica*, under *sella*. **p. substance**. The desiccated pituitary substance (anterior lobe) consists of the dried and powdered anterior lobe of the pituitary of the ox; the desiccated substance of the posterior lobe as well as the desiccated substance of the entire pituitary body, is used. The action of the two proteids, as well as of the entire gland, have not been determined, though the association of a pathologic condition of the gland with acromegaly suggests the therapeutic employment of the substance in that disease. [Lat., *pituita*, phlegm, mucus.]

pituitin (pit-u'it-in). The name given to the hormone supposed to be formed in the posterior lobe of the pituitary body. It causes vasoconstriction, slowing of the heart, secretion of urine, and dilatation of the pupil.

pituitous (pit-u'it-us). Containing or secreting mucus.

pituri (pit-u're). The leaves of *Duboisia Hopwoodii*. They contain piturin and are used by the Australian natives for chewing.

piturin (pit'u-rin). An alkaloid found in pituri; it resembles nicotin closely and may be identical with it.

pitiriasis (pit-ir-i'as-is). The name of various skin diseases which are characterized by the formation of branny scales.

p. alba atrophicans. Another name for atrophoderma albidum. **p. capitis**. Syn.: *dandruff*. Another name for dermatitis seborrhoica. **p. lichenodes seborrhoica chronica**. Another name for resistant maculopapular, scaly, erythrodermia. **p. linguae**. Another name for transitory benign plaques of the tongue. **p. maculata et circinata**. See *p. rosea*. **p. nigra**. The dark brown or black patches sometimes found in *p. versicolor* occurring in warm climates. **p. pilaris**. See *p. rubra*. **p. rosea**. Syn.: *p. maculata et circinata*. A disease of the skin characterized by the development of symmetrically distributed macules or patches which are rounded or circinate in outline, slightly scaly, and of a faint red color. **p. rubra** (*Hebra*). This is a form of persistent general exfoliative dermatitis, first described by Hebra under the name *p. rubra*. **p. rubra pilaris**. A chronic disease characterized by the formation around the hair follicles of subacute inflammatory papules, which are capped by acuminate horny scales. These coalesce and produce infiltrated plaques of dry, scaling dermatitis involving large areas. **p. versicolor**. Another name for *tinea versicolor*. [Gr., *pituron*, bran.]

pivot joint. See *trochoid articulation*, under *articulation*.

pix. See *pitch*. **emplastrum picis**. A plaster made with Burgundy pitch, frankincense, rosin, yellow wax, and olive oil. **emplastrum picis canadensis**. A plaster consisting of 1 part of yellow wax and 9 parts of Canada pitch [U. S. Ph., 1880]. **emplastrum picis cantharidatum**. Syn.: *emplastrum calefaciens*. A plaster made of create of cantharides and Burgundy pitch [U. S. Ph., 1890]. **emplastrum picis liquidae compositum**. A preparation of resin, tar, podophyllin, phytolacca, and sanguinaria [N. F.]. **liquor picis alkalinus**. A 25 per cent. solution of tar in water with 12.5 per cent. of potassium hydroxid [N. F.]. **liquor picis carbonis**. A solution containing about 20 per cent. of prepared tar in a tincture of quillaia. **oleum picis (liquidae)**. Tar oil [N. F.]. **p. abietina**. See *Burgundy pitch*, under *pitch*. **p. asphalti**. Asphalt. **p. betulina**. *p. betulina*. Birch tar. **p. burgundica**. Burgundy pitch. **p. canadensis**. See *Canada pitch*, under *pitch* [U. S. Ph., 1880]. **p. liquida**. Pine tar, obtained by the distillation of different species of pine [U. S. Ph., Br. Ph.]. **syrupus picis (liquidae)**. Syrup of tar, containing ½ per cent. of tar [U. S. Ph.]. **unguentum picis liquidae**. A 50 per cent. ointment of tar [U. S. Ph.], or about 70 per cent. [Br. Ph.]. [Lat.]

pix'ol. A disinfectant made of tar, soft soap, and caustic potash, used in 5 per cent. solution like lysol.

placebo (plas-e'bo). A make-believe medicine; something administered for its effect on the patient's imagination rather than because it is of medicinal value. [The first person sing. fut. ind. of Lat., *placere*, to please. Lit., *I will please you*.]

placenta (pla-sen'tah). Syn.: *hepar uterinum*. The afterbirth; an organ which during fetal life, in nearly all mammals, performs the function of aerating the blood of the fetus by providing the mechanism necessary to a direct interchange of gases between the fetal and the maternal blood; consisting of a maternal portion (see *maternal p.*) and a fetal portion (see *fetal p.*) closely interwoven with each other, the whole organ, thus doubly constructed, being intimately connected with the internal organism by its implantation upon the interior of the uterine wall on the one hand and connected with the fetal circulation by the umbilical cord on the other. **annular p.** See *zonary p.* **basal p.**, **basilar p.** A free central p., a p. in which the ovules are borne on a column which rises free from the bottom of the ovary. **battledore p.** That form of insertion of the umbilical cord into the margin of the p. in which it spreads out so as to resemble a battledore. **bell-shaped p.** See *dome-like p.* **circinate p.** A cup-shaped p. **cordiform p.** A p. having a marginal indentation giving it a heart shape. **deciduate p.** A p. of which the maternal

portion comes away at delivery. **diffused p.** See *p. diffusa*, *p. membranacea*, and *villous p.* **discoid p.** That variety of *p.* in which, as in the human subject, it constitutes practically one mass, circumscribed in outline and more or less circular in form. **disseminated p.** See *villous p.* **domelike p.** That variety of *p.* in which the chorionic villi persist at the upper pole of the chorion, and for some distance around that point, but disappear from the lower pole. **double p.** A placental mass formed of the two placentae of a twin gestation. **fetal p.** That portion of the *p.* which is formed by the aggregation of chorionic villi and in which the umbilical vein and arteries ramify. **free central p.** See *basal p.* **fundal p.** A *p.* that is attached to the uterine wall within the fundal zone. **horseshoe p.** A placental formation in which the two placentae of a twin gestation are united by a strip of placental tissue. **lateral p.** A *p.* attached to the lateral wall of the uterus. **marginate p.** A *p.* which has a large amount of elevated tissue on the edge. **maternal p.** That portion of the *p.* which originally consisted of the superficial part of the decidua serotina, forming a thin, translucent, whitish gray layer attached to the uterine surface of the fetal *p.* so closely as to be separable only in small pieces. **membranous p.** See *p. membranacea.* **non-deciduate p.** A *p.* of which the maternal portion is not shed at birth. **p. biloba**, **p. bipartita.** See *p. dimidiata.* **p. cirsoides.** A *p.* with a cirroid arrangement of the branches of the umbilical arteries. **p. diffusa.** The diffused *p.*; that variety of placental formation in which small, simple chorionic villi are scattered over nearly the whole outer surface of the chorion, without any aggregation. **p. dimidiata.** A two-lobed *p.*; to be distinguished from the true double *p.* **duplex.** A double *p.* **p. fenestrata.** A *p.* so formed that at some point not involving the periphery its substance is lacking, the chorion being free from villi at that point and transparent like a window. **p. fetalis.** See *fetal p.* **p. membranacea.** A pathological thinning of the *p.* from atrophy. **p. previa.** A *p.* placed between the fetus and the uterine canal. *i. e.*, a *p.* which is "in the way." It is central or total or partial according to its situation. **p. reniformis.** A kidney-shaped half of a *p. dimidiata.* **p. sanguinis.** A blood clot. **p. spuria.** An outlying portion of *p.* which has not preserved its vascular connection with the decidua vera. **p. succenturiata.** One of the separate lobes which are sometimes formed near the general mass of the organ, from which they are more or less detached. **p. tripartita.** A *p.* consisting of three separate lobes; to be distinguished from the triple *p.* **p. uteri.** See *maternal p.* **polycotyledonary p.** That variety of placental formation in which, as in the ruminants, the chorionic villi are collected into a number of large

separate tufts scattered over the surface of the chorion, each tuft being received into a cryptlike depression in a thickened portion of the uterine mucous membrane. **retained p.** A *p.* which fails to be expelled after childbirth, because it is retained within the uterus, either from irregularity of the uterine contractions or because it is adherent. **triple p.** A placental mass formed of the three placentae of a triple gestation. See *p. tripartita.* **twin p.** See *double p.* **uterine p.** See *maternal p.* **velamentous p.** A *p.* having the umbilical cord attached at one end. **villous p.** A placental formation in which the cotyledons are scattered and have the form of chorionic villi. **zonary p.** A *p.* in which the organ extends around the interior of the uterus in the form of a belt (*zona*) or ring surrounding the equator of the chorion. [Gr., *plakous*, a flat cake, from *plax*, plain.]

placental. Belonging to or resembling the placenta. **p. blood spaces.** See *intervillous lacunae*, under *lacuna*. **p. bruit.** See *uterine souffle*, under *souffle*.

placenteritis (plas-en-ti'tis). Inflammation of the placenta. [*Placenta*, + Gr., *itis*, inflammation.]

placentolysin (pla-sen-to'lis-in). A lysin obtained by injecting placental tissue into an animal. The serum thus obtained is destructive to the placental cells of the species of animal from which the placenta was taken. [*Placenta*, + Gr., *lysis*, solution.]

Placi'do's disk. An instrument used to detect faint opacities or irregularities in the surface curvatures of the cornea.

plague (pläg). Any destructive pestilence; especially a specific, acute and malignant disease, epidemic malignant adenitis, otherwise known as *babonic* or *oriental p.* It is transmitted to man from infected rodents by means of fleas. **swine p.** 1. See *hog cholera*, under *cholera*. 2. A disease of hogs in Europe, differing in character from the American swine *p.*, or hog cholera, and caused by *B. suisepiticus*. [Lat., *plaga*, pestilence.]

plane. 1. A level surface; a surface such that if any two of its points are joined by a straight line that line will lie wholly within the surface. 2. An ideal *p.* as above defined, used as a basis or standard of reference by means of which the positions of the parts of a body or organism are indicated. **alveolocondylar p.** The *p.* tangent to the alveolar point and most prominent points on the lower aspects of the condyles of the occipital bone. **coccygeal p.** The fourth parallel *p.* of the pelvis. **diagonal p.** Of a flower, any vertical *p.* which is not anteroposterior or lateral. **double inclined p.** Two boards united by hinges and resting upon a third; used to support the lower limb flexed in the treatment of fractures. **first focal p.** See *focal p.'s.* **first principal p.** See *focal p.'s.* **focal p.'s.** Two *p.'s* drawn respectively through the anterior and posterior principal foci of a dioptric system (*e. g.*, the eye) and perpen-

dicular to the line (axis of the system) connecting the two. The p. passing through the anterior focus is called the anterior (or first) focal p.; that passing through the posterior focus the posterior (or second) focal p. **glabello-occipital p.** The vertical p. of the maximum anteroposterior diameter of the skull. **inclined p.** A surface situated obliquely to the p. of the horizon; one of the elementary mechanical powers. **inclined p's of the pelvis.** "The sciatic spines," says Lusk, "divide the pelvic cavity into two unequal sections. In the larger, anterior section, the lateral walls slope toward the symphysis and arch of the pubes, while posteriorly the walls slope in the direction of the sacrum and coccyx. The declivities in front of the spines are termed the anterior inclined p's of the pelvis, over which rotation of the occiput takes place in the mechanism of normal labor. Behind the spines the lateral slopes are known as the posterior inclined p's." **medial p., median p., mesial p.** A p., usually anteroposterior, which divides a body or organ into two equal and symmetrical parts. The median p. of the body is known as the meson. **orbital p.** See *planum orbitale*. **parallel p's of the pelvis.** P's intersecting the axis of the pelvic canal at right angles, and therefore in reality not parallel. Four such p's are distinguished: the first parallel p. of the pelvis is the p. of the superior strait; the second is the p. extending from the middle of the sacral vertebra to the level of the subpubic ligament; the third is the p. at the level of the spines of the ischia; and the fourth is the p. at the outlet. **p. of refraction.** A p. passing through a refracted ray of light and drawn perpendicular to the surface at which refraction takes place. **p. of regard.** A p. passing through the fovea of the eye and the fixation point. **p's of the pelvis.** Imaginary p's touching the same parts of the pelvic canal on the two sides. **principal p's.** See *focal p's*. **sagittal p.** The median anteroposterior p. of the body. **single inclined p.** A support for the lower limb in the treatment of certain fractures, consisting of a board laid under the limb which is raised at the distal end and inclines downward to the buttocks. [Lat., *planus*, flat.]

Planococcus (pla-no-kok'us). A genus of the *Coccaceae* *flagella* the members of which are flagellated and divide in two directions. [Gr., *plane*, wandering, + *kokkos*, coccus.]

Planosarcina (pla-no-sar'se-nah). A genus of motile spherical *Coccaceae* occurring in twos or tetrads and dividing in three directions. They are usually chromogenic and non-pathogenic, being isolated from manure and sewage. [Gr., *plane*, wandering, + Lat., *sarcina*, a bundle.]

Planta'go latifo'lia. Syn.: *P. major*. Greater plantain. The root, herb, and seed were formerly official. The leaves are still used empirically as an outward stimulant application to sores and wounds.

They contain resin, wax, albumin, pectin, and citric and malic acids.

plantaris (plan-ta'ris). See *table of muscles*, under *muscle*.

planum (pla'num). See *plane*. **p. frontale orbitae.** The roof of the orbit. **p. maxillare orbitae.** The floor of the orbit. **p. orbitale.** The maxillary portion of the orbit. **p. popliteum femoris.** The flat triangular area on the posterior surface of the tibia, between the ridges into which the *linea aspera* divides. **p. semicirculare ossis frontis.** The portion of the frontal bone entering into the formation of the temporal fossa. **p. semilunare.** An elevation on the epithelial layer of the walls of the ampullae, at right angles to each end of the *crista acustica*, to which some of the terminal filaments of the auditory nerve are conveyed. **plana temporalia.** The lateral surfaces of the skull.

plaque (pläk). A flat circumscribed area on the skin or mucous membrane; a blood platelet. [Fr.]

plasm, plasma (plaz'm, plas'mah). 1. Of Haeckel, the animal or the vegetable substance which is the seat of all vital activity. See *protoplasm*. 2. The liquid portion of the unclotted blood and lymph. See *blood p.* **blood p.** The clear transparent fluid in which the blood corpuscles float. **germ p.** Syn.: *germinal nucleoplasm*. 1. The protoplasm of the germ cells. At every ontogenesis a portion of the germ plasma, on Weismann's theory, is not used for the formation of the offspring, but is reserved unchanged to produce the germ cells of the following generation. It is, therefore, as deathless as the species itself. 2. See *karyoplasm* and *nucleoplasm*. **histogenetic p.** Syn.: *histogenetic nucleoplasm*. The protoplasm of the body, which controls the development or regeneration of the tissues, in contradistinction to the germ p. **lymph p.** The liquid part of lymph; lymph less the lymph corpuscles. **muscle p.** A juice obtained from muscle by prolonged pressure. It coagulates spontaneously, forming myosin. **somatic p.** Syn.: *somatoplasm*. The protoplasm of the cells of the body, other than the germ cells or the portion of the fertilized germ cell, which gives rise in development to these cells. [Gr., *plasma*, from *plassein*, to mold.]

plasmaphere'sis. The process of removing the plasma from drawn blood and returning the cells to the circulation. Used in experimental investigations.

plasmatic, plasmatical (plas-mat'ik, plas-mat'ik-al). Pertaining to or of the nature of plasma, especially the blood plasma; containing plasma.

plas'ment. A proprietary jellylike substance made from *Cetraria islandica*; used as a soothing application and as a lubricant.

plas'min. A name, given by Buchner, to the cell juices which can be expressed free from various bacteria capable of

- producing the same effects as the bacteria themselves. See *endotoxin*.
- Plasmodidae** (plas-mo'de-di). A family of the Protozoa and the class *Mastigophora*.
- Plasmodium** (plas-mo'de-um). A genus of unicellular animal organisms belonging to the subkingdom *Protozoa*, the phylum *Mastigophora*, and the order *Binucleata*.
- P. falciparum**. Syn.: *Laverania malariae*. The parasite of estivo-autumnal malaria developing within or outside of the red blood corpuscle.
- P. malariae**. Syn.: *Laveran's bodies*, *Laveran's corpuscles*, *Hematomonas*. See also in appendix, page 901. The parasite of quartan malaria; also a general term for the parasite of malaria. An organism usually growing in and at the expense of the red blood corpuscles.
- P. vivax**. The parasite of tertian malaria. [Gr., *plasma*, plasma, + *eidōs*, resemblance.]
- plasmolysis** (plas-mol'is-is). The liberation of the cell cytoplasm or its granules from the cell, as the freeing of digestive ferments from the leukocytes. [Gr., *plasma*, plasma, + *lysis*, solution.]
- plasmon**. A proprietary food preparation made from the albumin of milk.
- plasmona** (plas-mo'nah). A collection of "plasma cells," inflammatory products observed in chancre, lupus, etc., and acute interstitial visceral inflammation, such as acute interstitial nephritis.
- plasmotropism** (plaz-mot'ro-pizm). A destructive action on the red blood cells in the liver, spleen, or marrow. [Gr., *plasma*, plasma, + *trepein*, to turn.]
- plasmon**. Of Denis, a supposed fibrin-producing substance in the blood. According to his view, coagulation is due to the conversion of p. into fibrin. [Gr., *plassein*, to form.]
- plas'ter**. A medicinal preparation for external use in which the ingredients are made into a tenacious mass of harder consistency than a cerate, having as the base an insoluble lead soap or a mixture of resin with fat or wax, and spread upon skin, linen, muslin, or paper.
- adhesive p.** See *emplastrum resinae*, under *resina*.
- blistering p.** See *emplastrum cantharidis*, under *Cantharis*.
- court p.** A p. consisting of a solution of isinglass in water spread thinly and very smoothly upon a silk backing so as to adhere to the skin when moistened, the silk being painted on the reverse side with tincture of benzoin. [*Emplastrum ichthyocolle*, U. S. Ph., 1890.]
- diachylon p.** See *emplastrum plumbi*, under *plumbum*.
- English p.** See *court p.*
- p. of Paris**. See *calcium sulphate*, under *calcium*.
- sticking p.** See *emplastrum resinae*, under *resina*. [Lat., *emplastrum*.]
- plas'tic**. 1. Formative (said of lymph, etc.). See *p. surgery*, under *surgery*. 2. Capable of being easily molded. [Gr., *plastikos*.]
- plasticity** (plas-tis'it-e). The property of being easily molded into different forms.
- plas'tid**. Of Haeckel, one of the morphological units (a cell or a cytoide) of

- which a simple or complex organism is formed. See *bioplast*. [Lat., *plastidium*, from Gr., *plastos*, molded.]
- plastidules** (plas'tid-ils). Of Elsberg, the molecules or ultimate physical units of living matter. [Gr., *plastos*, molded.]
- plastocolysis** (plas-to-kol'is-is). An arrest of development in growth. [Gr., *plastos*, molded, + *kolysis*, a hindering.]
- plastodynamia** (plas-to-din-am'e-ah). Of Lobstein, nutritive plastic force (e. g., of blood). [Gr., *plastos*, formed, + *dynamis*, power.]
- plate**. A sheetlike structure, especially a thin layer of bone or other resistant tissue.
- basilar p.**, **basiscranial p.** The cartilaginous p. formed by the anterior extremity of the notochord and the parachordal cartilages.
- blood p's.** See under *blood*.
- cribriform p. of the ethmoid bone**. The portion of the ethmoid bone that fits into the ethmoidal notch of the frontal bone.
- cytoplasmic p.** The part of the cell p. in the cell body. See *cell p.*, under *cell*.
- dorsal p's.** See *medullary ridge*, under *ridge*.
- electrical p.** In the torpedo and other electrical fishes, a finely granular p. containing nerve endings and large nuclei, surrounded by a layer of gelatinous tissue and placed in each compartment of the electrical organs.
- enamel p's.** A variety of odontomata resembling small drops of congealed wax, situated usually about the neck of a tooth.
- end p.** An oval, p'like structure lying on a muscle fiber; it represents the terminal spreading out of its supplying nerve fiber.
- epiphyseal p's.** Syn.: *epiphyseal disks*. The disklike epiphyses at each end of the centrum of a vertebra.
- equatorial p.** Syn.: *nuclear p.* (or *disk*). In karyokinesis, a p'like appearance in a dividing nucleus due to the massing of the chromatin fibrils in a plane midway between the poles of the nuclear spindle; the mother star seen in profile.
- external pterygoid p.** The outermost and broadest of the two p's into which the pterygoid process of the sphenoid bone divides.
- facial p's.** Syn.: *preoral arches*. A group of p's consisting mainly of the single (or median) frontonasal p. and the external pairs of nasal and maxillary p's in the embryo.
- flat-foot p.** A curved piece of metal fashioned to fit the bottom of the foot and support the arch in flat-foot.
- flesh p.** See *lamella carnosae*, under *lamella*.
- foot p.** The flat portion of the stapes which fits into the fenestra ovalis.
- frontonasal p.** The median p. of the facial group, designed for the formation of the external nose.
- gray p.** See *lamina cinerea*, under *lamina*.
- ground p.** The hyaline ground substance of the cell body of endothelial cells and connective tissue corpuscles, in which are contained the nucleus of the cell and the intracellular network.
- hair p's.** See *hair scales*, under *hair*.
- horizontal p. of the palate bone**. That portion of the palate bone forming a part of the hard palate.
- hyoid p's.** The second pair of the subcranial p's in which the

upper part of the hyoid bone is developed. **internal pterygoid p.** The longer and narrower of the two p's into which the pterygoid process of the sphenoid bone divides. **intervertebral p's.** The intervertebral fibrocartilages. **lateral mesoblastic p's.** Syn.: *abdominal or intestinal*, or *visceral*, or *protovertebral p's.* The longitudinal thickenings of the lateral portions of the mesoblast that run along one on each side of the notochord, at an early period in the development of the embryo. **ligamentous p's.** The intervertebral disks in the embryo. **mandibular p's.** The first pair of subcranial p's, in which the lower jaw is developed. **motor p.** See *motorial nerve end plate*, under *end plate*. **muscle p's, muscular p's.** The embryonic source of the voluntary muscles; layers of the mesoblast which are developed in the upper and outer part of the protovertebral column. **nuclear p., nucleus p.** See *equatorial p.* **orbital p. of the ethmoid bone.** See *os planum*. **orbital p. of the frontal bone.** A thin horizontal lamina of the frontal bone which forms the roof of the orbit. **palate p. of the maxilla.** The portion of the maxilla which, with its fellow of the opposite side, forms the larger portion of the hard palate. **secondary p.** A p'like process of a connective tissue corpuscle of the corium. Other threadlike processes connect the cells into a network. **Senn's p's.** See *Senn*. **spindle p.** The part of a cell p. situated within the nucleus. **tympanic p.** An osseous lamina one surface of which forms the anterior wall of the tympanum and external auditory canal, and the other the posterior portion of the glenoid fossa, terminating below in the vaginal process. **valvular p.** The valvular curtain of the fetal heart; a valvelike growth which fills up the fossa ovalis in the fourth month of intra-uterine life, allowing the blood to flow from the right into the left auricle, but preventing a current in the reverse direction. **vertebral p's.** 1. Lateral mesoblastic folds, or p's, in which the mesoblast is not split into layers, extending longitudinally between the lateral mesoblastic p's and the medullary p's. 2. The laminae which, one on each side of the primitive groove, unite to form a vertebra. **vertical p.** That part of the palate bone extending along the outer side of the nasal fossa and reaching the orbit. **visceral p's.** See *lateral mesoblastic p's.* [Gr., *platys*, flat.]

plate'let. A little plate; especially a blood plate.

platinat (plat'in-ät). A compound of platinum dioxide (platinic oxid) with a basic oxid.

platinic (plat-in'ik). Containing platinum as a tetrad radicle. **p. chlorid.** PCl₄, a yellowish brown substance, soluble in water; used to identify potassium. Used medicinally for syphilis.

platinochlorid (plat'in-o-klo'rid). 1. A compound of platinum dichlorid with the chlorid of another element or radicle; a

salt of chloroplatinous acid. 2. One of the compounds more properly designated platinichlorids.

platinous (plat'in-us). Containing platinum as a bivalent radicle.

platinum (plat'in-um). A metallic element. It is a soft, ductile, and very malleable white metal, which is infusible at all temperatures ordinarily obtainable, but melts in the oxyhydrogen flame. It is very heavy, its sp. gr. being 21.5. Spongy p. is a porous mass obtained by heating chlorid of p. and ammonium. P. black is very finely divided metallic p., forming a soft black powder. P. has a marked capacity for absorbing hydrogen and for condensing oxygen upon its surface, and this property is especially pronounced in the case of the two varieties just described. P. is not oxidizable by exposure to air, oxygen, or water. It is not attacked by nitric acid, but is dissolved by aqua regis. It is attacked by the alkalis and alkaline cyanids and by potassium nitrate. It forms with several metals alloys which are fusible at temperatures much below its own melting point. In composition it acts partly as a dyad, forming platinous salts, partly as a tetrad, forming platinic salts. Symbol, Pt; atomic weight, 195.

Plattner's salts. See *bile salts*, under *bile*.

platy-. Combining form of Gr., *platys*, broad; used as a prefix signifying broad.

platycoria (plat-ik-o're-ah). A dilated condition of the pupil. [Gr., *platys*, broad, + *kore*, pupil.]

platyhelminthes (plat-e-hel-min'thes).

Worms having a flat, more or less elongated body, with a cerebral ganglion, and often provided with hooks and suckers. They are usually hermaphrodite, and include flatworms, flukes, and tapeworms, or *Turbellaria*, *Trematoda*, and *Cestodea*. [Gr., *platys*, broad, + *elmins*, worm.]

platyrrhine (plat'ir-in). Having an abnormally broad nose. [Gr., *platys*, broad, + *ris*, nose.]

platysma (plat-iz'ma). See *table of muscles*, under *muscle*.

platytrope (plat'et-röp). A lateral homologue. [Gr., *platys*, broad, + *trepein*, to turn.]

pleio-, pleo-, plio-. Combining forms of Gr., *pleon*, more.

pleocytosis (ple'o-si-to'sis). Increased number of cells in the cerebrospinal fluid—usually over 5-10 to the cu. mm. [Gr., *pleon*, more, + *kytis*, a cell.]

pleomastia (ple-o-mast'e-ah). The condition of having supernumerary breasts or nipples. [Gr., *pleon*, more, + *mastos*, the breast.]

pleonasm (ple'o-nazm). An excess in the number of parts. [Gr., *pleonasmos*, exaggeration.]

plerocercus (ple-ro-ser'kus). The encysted state of the larva of the tapeworm.

plessesthesia (ples-es-the'ze-ah). Palpatory percussio. [Gr., *plessein*, to strike, + *aisthesis*, sensation.]

plethora (pleth'o-rah). Full-bloodedness;

as a disease, *polycythemia*. [Gr., *plethore*, fullness.]

plethoric (pleth-or'ik, or pleth'or-ik). Pertaining to or affected with plethora.

plethysmograph (ple-thiz'mo-graf). An instrument for measuring the changes in volume in an organ. In principal it consists of a rigid box containing water or air which encloses the organ and is closed everywhere except at one point through which communication is made with a recording apparatus. It is used chiefly in determination of the changes in volume of the arm or hand, due to variations in the blood supply. Similar instruments for other organs are sometimes given special names, that for the kidney or spleen is an oncometer, that for the heart a cardiometer, etc. [Gr., *plethysmos*, increasing, + *graphein*, to write.]

pleura (plu'rah). The serous sac that invests a lung and lines one lateral half of the thoracic cavity. **costal p.** The portion of p. underlying the ribs. **diaphragmatic p.** The portion of p. covering the upper surface of the diaphragm. **parietal p., p. costalis.** See *costal p.* **p. pericardiaca.** The portion of p. covering the pericardium. **p. phrenica.** See *diaphragmatic p.* **p. pulmonalis, pulmonary p., visceral p.** The portion of p. covering the lung. [Gr., *pleura*, the side.]

pleural fluid, examination of; see in *appendix, page 911.*

pleurapophysis (plu-rap-of'is-is). 1. A portion of the hemal arch of a typical vertebra. 2. A rib. [Gr., *pleura*, a rib, + *apophysis*, an offshoot.]

pleurisy (plu'ris-e). Inflammation of the pleura, which is dry, serous, serofibrinous, hemorrhagic or purulent, according to the condition of the exudate. **diaphragmatic p.** Inflammation of the pleura covering the diaphragm. **dry p.** P. with but little, if any, exudate, manifested subjectively by pain and objectively by a friction rub. **embolic p.** P. started by a pulmonary embolus. **encysted p.** P. with the effusion limited by adhesions. **hemorrhagic p.** P. attended by hemorrhage. **interlobar p.** P. affecting an interlobar space. **p. root.** See *Asclepias*. **purulent p.** P. with purulent effusion. **secondary p.** An infectious p. consequent upon specific inflammation in some part of the body. **serofibrinous p.** P. with both serous effusion and fibrinous exudation. **suppurative p.** See *purulent p.* **tuberculous p.** P. due to tuberculosis, [Gr., *pleuritis*.]

pleuritic (plu-rit'ik). Pertaining to pleurisy.

pleuritis (plu-rit'is). See *pleurisy*. [Gr., *pleura*, the side, + *itis*, inflammation.]

pleurocele (plu'ro-sel). 1. A hernia of the lung. 2. An effusion of serous fluid into the pleural cavity. [Gr., *pleura*, the side, + *kele*, tumor.]

pleurodynia (plu-ro-din'e-ah). Severe intercurrent pains in the intercostal muscles; as an expression of a neuritis, a tabes, pressure in the intercostal nerve

roots, spinal cord tumor, etc. [Gr., *pleura*, the side, + *odyne*, pain.]

pleuropathy (plu-rop'ath-e). Any disease of the pleura or of the respiratory organs. [Gr., *pleura*, the pleura, + *pathos*, a disease.]

pleuropericarditis (plu''ro-per-e-kar-di'tis). Concomitant pleurisy and pericarditis. [Gr., *pleura*, the pleura, + *pericarditis*.]

pleuropneumonia (plu''ro-nu-mo'ne-ah). Simultaneous inflammation of the pleura and the lung. **epizootic p.** A contagious febrile disease of cattle, with an acute inflammation of the lungs and pleura.

plexiform (pleks'e-form). Having the form of a plexus. [Lat., *plexus*, a braid, + *forma*, form.]

plexus (pleks'us). Pl. *plexuses*. Lit., a braiding or twining. A complex or intricate collection of vessels or nerves. **abdominal aortic p.** A sympathetic p. situated along the abdominal aorta. **anterior coronary p.** A p. formed of fibers from the deep and superficial cardiac p'es, situated between the aorta and pulmonary artery, and distributed concomitantly with the anterior coronary artery. **anterior pulmonary p.** A p. formed by the union of the anterior pulmonary branches of the pneumogastric nerve with the sympathetic nerves around the pulmonary artery. **anterior uterine p.** A p. formed by branches from the inferior hypogastric p., distributed to the cervix and anterior surface of the uterus. **basilar p.** Of Virchow, the transverse sinus. **brachial p.** A nervous p. made up of the anterior branches of the fifth, sixth, seventh, and eighth cervical and first dorsal spinal nerves. **cardiac p.** A nervous p. connected with the heart, especially by the superficial cardiac p. **carotid p.** A sympathetic p. situated in the carotid canal, on the outer side of the internal carotid artery. **cavernous p.** A sympathetic p. in the cavernous sinus, upon and below the highest portion of the internal carotid artery, which furnishes branches to that vessel and connects with the third, fourth, and fifth cranial nerves. **cervical p.** A p. made up of the union of the anterior divisions of the four upper cervical nerves. Each nerve is united to the one above and the one below by an ascending and a descending branch, which join to form a loop, except the first, which has a descending branch only. It gives off superficial branches supplying the integument of the neck and the platysma myoides, and deep branches which are almost exclusively muscular. **choroid p.** Vascular prolongations of the pia, best marked in the lateral ventricles of the brain, where they are covered with villous projections. **coccygeal p.** A small p. (one on each side) on the posterior surface of the coccyx and the lower end of the sacrum. **celiac p.** See *solar p.* **cranial p.** Any nervous or venous p. within the cranium.

crural p. 1. See *lumbar p.* 2. Branches of the anterior crural nerve surrounding the upper portion of the femoral artery.

cystic p. A p. formed from branches of the hepatic p. which accompanies the cystic artery to the gall-bladder.

diaphragmatic p. A sympathetic p. formed by the nerves of the upper part of the solar p., situated on the lower surface of the diaphragm, to which it is principally distributed.

epigastric p. See *solar p.*

external carotid p. A p. on the lower portion of the external carotid artery, intimately connected with the pharyngeal p., superior cardiac nerve, and superior cervical ganglion; distributed to the external carotid artery and its branches.

gangliform p. The plexiform arrangement of the two roots of origin of the inferior maxillary nerve.

ganglionic p. A nervous p. containing ganglion cells in its meshes.

gastric p. A prolongation of the esophageal p. which distributes branches to the anterior and posterior surfaces of the stomach.

gastrooduodenal p. An offshoot of the solar p. distributed to the duodenum and the adjoining portion of the stomach.

gastro-epiploic p. A sympathetic p. formed by branches from the celiac p., and following the gastro-epiploic artery.

hemorrhoidal p. 1. A nervous p. made up of branches from the middle hemorrhoidal nerves and of the pudendal p.; distributed to the lower half of the rectum. 2. A freely anastomosing venous p. immediately beneath the mucous membrane of the lower part of the rectum, from which the inferior, middle, and superior hemorrhoidal veins arise.

hepatic p. A nervous p. derived from the solar p. It enters the liver with the hepatic vessels, and is distributed with the hepatic artery and portal veins.

hypogastric p. An unpaired nervous p. derived from the abdominal aortic p. and the lumbar ganglia of the sympathetic nerve, situated in front of the last lumbar vertebra, and between the common iliac arteries. It divides into two portions, which descend on the two sides of the rectum, forming the inferior hypogastric p'ies.

hypogastric p. of lymphatics. A lymphatic p. within the pelvis.

iliac p. A lymphatic p. upon the internal and external iliac arteries.

inferior dental p. A nervous p. formed by branches from the dental branches of the inferior dental nerve.

inferior hypogastric p. The prolongation (one on each side) of the hypogastric p. on the side of the rectum, in the male, and of the vagina in the female.

inferior mesenteric p. An unpaired p. derived from the left side of the aortic abdominal p. and distributed to the descending colon, the sigmoid flexure, and the upper portion of the rectum.

infra-orbital p. A nervous p. formed from the terminal branches of the infra-orbital nerve and branches of the facial nerve.

interlobular biliary p. A p. formed by the interlobular biliary ducts or canals.

interlobular venous p. The p. formed

by the interlobular veins of the liver.

intrahachidian p'ies. The venous p'ies within the spinal canal.

ischiodic p. See *sacral p.*

lingual p. A derivative of the external carotid p. following the lingual artery.

lumbar p. A nervous p. formed by the anterior divisions of the four upper lumbar spinal nerves.

lumbosacral p. The lumbar and sacral p'ies regarded as one.

lymphatic p. A network of lymphatic vessels and glands.

Meissner's p. See *Meissner, mesenteric p'ies.* See *inferior mesenteric p.* and *superior mesenteric p.*

myenteric p. See *Auerbach's p.*, under *Auerbach.*

nasopalatine p. A p. uniting the nasopalatine nerves in the incisor foramen.

ovarian p. 1. See *pampiniform p.* 2. A p. derived from the hypogastric p. which follows the course of the ovarian artery.

pampiniform p. 1. A venous p. which, receiving blood from the uterus, the oviduct, and the ovary, becomes condensed into a single trunk on each side, the internal spermatic vein, which empties into the renal vein on the right side, and into the ascending vena cava on the left side. 2. In the male, the spermatic p.

pancreaticoduodenal p. A sympathetic p. formed by branches of the celiac p., and following the distribution of the celiac artery.

patellar p. A p. formed over the patella by the union of branches from the patellar branch of the internal saphenous and the internal, middle, and external cutaneous nerves.

pelvic p. See *inferior hypogastric p.*

pharyngeal p. 1. A nervous p. on the side of the pharynx, nearly on a level with the middle constrictor, derived from the pneumogastric and glossopharyngeal nerves and the superior cervical ganglion. 2. A venous p. around the pharynx.

phrenic p. See *diaphragmatic p.*

p. deferentialis. A derivative of the vesical p. distributed to the vas deferens, prostate gland, and seminal vesicle.

plexuses digitales. Venous p'ies on the anterior and posterior surfaces of the second and third phalanges.

p. esophageus. A nervous p. formed of branches of the pneumogastric nerve and the dorsal ganglia of the sympathetic nerve surrounding the esophagus.

p. mammarius internus. A lymphatic p. surrounding the internal mammary artery and vein.

plexuses nervorum spinalium. P'ies formed by the spinal nerves (e. g., the cervical, brachial, lumbar, and sacral p'ies).

p. nervosus plenus (repletus). A nervous p. in which the meshes contain nerve cells or portions of the organ in which it is situated.

p. nodosus. See *inferior ganglion of the pneumogastric nerve*, under *ganglion.*

p. occipitalis. A small p. derived from the external carotid p. and distributed to the posterior portion of the parotid gland.

p. of Auerbach. See *Auerbach's p.*, under *Auerbach.*

p. of Meissner. See *Meissner's p.*, under *Meissner.*

p. of Santorini. See *gangliform p.*

p'ies of the fourth ventricle. Two prolongations of the pia situated on the roof

of the fourth ventricle near the median line. They are covered by a layer of epithelium. **p. of the obturator nerve.** A p. formed by the union of a branch of the obturator nerve, the nerve of the sartorius muscle, and the internal saphenous nerve. **p. omentalis.** Sympathetic fibers in the omenta. **p. ophthalmicus.** A p. made up of sympathetic fibers and branches of the ciliary nerves surrounding the ophthalmic artery and optic nerve. **p. simplicissimus.** An anastomosis between two nerves by the transfer of one bundle of fibers to the other. **p. thyroideus impar.** A venous p. derived from the inferior thyroid veins, and situated beneath the isthmus of the thyroid gland. **p. thyroideus inferior.** A p. formed of branches of the middle cervical ganglion which surround the external carotid and inferior thyroid arteries and are distributed to the larynx, pharynx, and thyroid gland. **p. thyroideus superior.** A p. of sympathetic filaments uniting the superior laryngeal and superior cardiac nerves. **p. tonsillaris.** A venous p. in and around the tonsil. **p. triangularis nervi trigemini.** The plexiform arrangement of the fibers of the posterior root of the trigeminal nerve, just above the gasserian ganglion. **p. vesicovaginalis.** A p. of nerves formed by many filaments derived from the pelvic p. and distributed to the lower part and side of the bladder and the adjoining portion of the vagina. **p. vidianus.** The plexiform arrangement of the branches of the vidian nerve. **posterior coronary p. of the heart.** A p. derived from the cardiac p. and distributed with the posterior coronary artery of the heart and its branches. **posterior pulmonary p.** A p. situated on the posterior surface of the root of the lung, formed by the union of the posterior pulmonary branches of the pneumogastric nerve with branches from the second, third, and fourth thoracic ganglia of the sympathetic system. **prostatic p.** 1. A sympathetic p. formed from branches of the inferior hypogastric p., and distributed to the prostate gland, the vesicula seminalis, and the erectile tissue of the penis. 2. A venous network surrounding the prostate gland, into which the dorsal vein of the penis empties. **pterygoid p.** A venous p. between the temporalis and pterygoideus externus, formed of branches of the internal maxillary vein. It communicates with the facial vein and the cavernous sinus. **pudendal p.** 1. A portion of the inferior hypogastric p. at the lower border of the pyriformis and beneath the sacral p. 2. A venous p. which in the male surrounds the prostate and membranous portion of the urethra, and in the female receives the veins of the clitoris, labia minora, urethra, and vestibule of the vagina. **pyloric p.** A sympathetic p. derived from the solar p. which accompanies the pyloric artery. **renal p.**

A p. derived from the solar and abdominal aortic p'es, which accompanies the renal artery to be distributed to the kidney. **sacral p.** 1. A nervous p. situated on the pyriformis and the anterior surface of the sacrum, and formed by the union of the fifth and a portion of the fourth lumbar nerves, and the anterior branches of the first, second, and third, and part of the fourth sacral nerves, into a broad flat cord, which passes out through the great sacrosciatic notch, to terminate in the great sciatic nerve. It also gives off the pudic and small sciatic nerves and branches to the muscles in its vicinity. 2. A lymphatic p. on the anterior surface of the sacrum. **semilunar p., solar p.** An unpaired p.; the largest in the body, situated behind the stomach and in front of the aorta and the pillars of the diaphragm. It is made up of branches from both pneumogastric and great splanchnic nerves. **spermatic p.** 1. A derivative of the abdominal aortic and renal p'es, distributed to the same parts as the spermatic artery. 2. The p. of convoluted veins around the spermatic cord. **spinal p'es.** Venous p'es along the anterior aspect of the spinal column. **splenic p.** A p. made up of branches from the left semilunar ganglion and the right pneumogastric nerve, and distributed to the spleen along with the splenic artery and its branches. **superior dental p.** A p. of nerves formed by the union of branches from the superior dental nerves and distributed to the teeth and gums. **superior mesenteric p.** A p. derived from the solar p. It receives a branch from the right pneumogastric nerve, surrounds the superior mesenteric artery and is distributed along with it and its branches. **supramaxillary p.** Syn.: *Bochdalek's ganglion.* A nervous p. or ganglion situated above the root of an upper incisor tooth, containing nerve cells. **suprarenal p.** A p. accessory to the renal p., also receiving fibers from the diaphragmatic and solar p'es, and distributed to the suprarenal capsules. **sympathetic p.** A p. of branches of the sympathetic nerve. **terminal p.** Syn.: *end p.* A lamina of nerve substance extending between the anterior commissure of the brain and the optic chiasm. **tympanic p.** The tympanic portion of the tympanic nerve; so called because it contains so great a number of large ganglion cells, either solitary or grouped, and thus makes numerous connections with other important ganglia and nerves. **urethrovessical p.** A p. of veins which lies on the front and sides of the urethra and lower part of the bladder. **uterine (venous) p.** The venous p. which, receiving blood from the uterus alone, extends between the folds of the broad ligament and empties into the hypogastric vein. **utero vaginal p.** A venous p. surrounding the vagina, the cervix uteri, and the body of the uterus. It includes the uterine and vaginal p'es. **vaginal p.**

A venous p. surrounding the vagina and communicating freely with the hemorrhoidal and vesical p'es. **vascular p.** A p. of intercommunicating blood vessels. **venous p.** A network of intercommunicating veins. **vertebral p.** A nervous p. surrounding the vertebral artery, in the vertebral canal, derived from the first dorsal ganglion of the sympathetic nerve and the upper cervical nerves. **vesical p.** 1. A nervous p. derived from the inferior hypogastric p'es, and distributed to the fundus of the urinary bladder. 2. A venous network external to the muscular coat of the bladder, which communicates freely with the hemorrhoidal and prostatic p'es in the male and with the vaginal p'es in the female. [Lat., from *plectere*, to twist.]

plica (ple'kah). 1. A fold; a convolution of the brain. 2. Of Riolan and Rolfink, a valve of a blood vessel. 3. A matted condition of the hair (see *p. polonica*). **plicae adiposae.** 1. Folds of the parietal pleura containing fat. 2. See *synovial fringes*, under *fringe*. **plicae adiposae pericardiacae.** Fatty tassellike processes of the visceral pericardium projecting into the pericardial cavity. **p. alaris.** The feathered fold of skin on the front border of the axilla. **plicae ciliares.** The folds of the choroid posterior to and corresponding to each of the ciliary processes. **p. coli.** The fold forming the upper margin of the ileocecal valve. **p. fimbriata.** In mammals, a fold of mucous membrane with a fimbriated margin extending outward from the frenum to the apex of the tongue; regarded as the representative of the sublingua of lower vertebrates. **p. ilei.** The fold forming the lower margin of the ileocecal valve. **p. mitralis.** A form of *p. polonica* in which a stiff mass of tangled and matted hair covers the head like a cap. **p. nervi laryngei.** A fold on the mucous membrane of the larynx produced by a branch of the superior laryngeal nerve. **plicae palmatae.** See *arbor vitae uterina*. **p. polonica.** The matting together of the hair by the accumulation of filth due to the presence of innumerable parasites, usually pediculi. **plicae recti.** See *valves of the rectum*, under *valve*. **p. salpingopalatina.** A fold of mucous membrane which constitutes the anterior edge of the mouth of the eustachian tube, and is intimately connected with the tensor palati. **plicae serosae.** Folds of serous membrane found in different parts of the body. **plicae sigmoideae coli.** Transverse folds of the mucous membrane of the cecum and colon. **p. transversalis recti.** A well marked transverse fold of the mucous membrane on the anterior wall of the rectum at some distance above the anus. **p. urachi.** A fold of peritoneum covering the urachus. **plicae uretericae.** The folds of mucous membrane of the bladder which diverge from the middle line of the fundus to the

openings of the ureters. **p. urogenitalis.** A prominent fold in the posterior wall of the embryonic peritoneal cavity which incloses the lower end of the wolffian duct. **plicae vaginae.** The rugae of the vagina. **p. villosa.** See *p. mitralis*. **plicae villosae ventriculi.** Folds of the mucous membrane of the stomach which form a sort of network in the meshes of which are the openings of the gastric glands. [Lat.]

Plimmer's bodies. B's found in the cells of carcinoma and described as protozoa by Plimmer in 1892, and previously by Ruffer and Walker. They are rounded, measure 6 to 16 μ in diameter, and exhibit a nucleus, radial striae running from border to nucleus and fainter striae running from nucleus to cell border. They lie within the tumor cells near the nuclei, are surrounded by a vacuole, and occur principally in the growing edges of the tumor and in adjacent lymph nodes. [Henry George Plimmer, English zoölogist, living.]

plumb-, plumbi-. Combining form of Lat., *plumbum*, lead; used as a prefix in chemical nomenclature.

plumbic (plum'bik). Of or pertaining to lead; containing lead (designating that one of two similar chemical compounds which contains the lesser proportion of lead). [Lat., *plumbicus*.]

plumbicum (plum'bik-um). Red lead oxid. **p. rubrum.** Red lead oxid. [Lat., *plumbum*, lead.]

plumbism (plum'bism). Any condition produced in the system by the toxic properties of lead.

plumbous (plum'bus). Containing lead (designating that one of two similar chemical compounds which contains the greater proportion of lead). [Lat., *plumbosus*.]

plum'bum. See *lead*. **ceratum plumbi subacetatis.** A cerate containing 20 per cent. of solution of lead subacetate [U. S. Ph.]. **emplastrum plumbi.** Syn.: *emplastrum diachylon simplex*, *emplastrum plumbicum*. Lead plaster, the basis of many pharmaceutical plasters, consisting of a lead soap [U. S. Ph., Br. Ph.]. **emplastrum plumbi iodidi.** Plaster of lead iodid; it consists of lead plaster, resin, and lead iodid. **glycerinum plumbi subacetatis.** Made by evaporating solution of lead subacetate, taking up the residue in glycerin and adding water. **linimentum plumbi subacetatis.** A mixture of solution of lead subacetate with cotton-seed oil [U. S. Ph., 1880]. **liquor plumbi subacetatis.** Vinegar of lead, Goulard's extract, solution of subacetate of lead. The preparation of the Br. Ph. is almost exactly identical in strength with that of the U. S. Ph., each containing about 25 per cent. of the mixed basic acetates of lead [U. S. Ph., *fortis*, Br. Ph.]. **liquor plumbi subacetatis dilutus.** Solution of lead subacetate diluted with 24 times its weight of water [U. S. Ph.], or about 80 times its weight [Br. Ph.]. **lotio plumbi et opii.** Lead and opium wash;

- a mixture of lead subacetate solution and laudanum. **pilula plumbi cum opii**. A pill mass made of powdered lead acetate, and opium with an excipient [Br. Ph.]. **suppositoria plumbi composita**. Compound lead suppositories, each containing 3 grains of lead acetate, 1 grain of opium, and oil of theobroma [Br. Ph.]. **unguentum plumbi carbonatis**. Ointment of carbonate of lead, consisting of 1 part of basic carbonate of lead (white lead) mixed with 9 parts of benzoated lard [U. S. Ph., 1890]. **unguentum plumbi Hebrae**. See *unguentum diachylon*, under *diachylon*. **unguentum plumbi iodidi**. Ointment of lead iodid, consisting of 1 part of lead iodid mixed with 9 parts of benzoated lard [U. S. Ph., 1890]. **unguentum plumbi subacetatis**. Ointment of lead subacetate, consisting of 12.5 per cent. of solution of lead subacetate. **unguentum plumbi subacetatis compositum**. See *ceratum plumbi subacetatis*. [Lat.]
- Plummer's pills**. Pills containing mercurous chlorid, sulphurated antimony, and guaiac resin.
- plumose** (plu'mōs). A term used in descriptive bacteriology meaning like a plume or feather; feathery. [Lat., *plumosus*, from *pluma*, a feather.]
- pluri-**. Combining form of Lat., *plus*, *pluris*, more. In the plural, several.
- pluripara** (plu-rip'ar-ah). See *multipara*. [Lat., *plus*, *pluris*, more, + *parere*, to bring forth.]
- plutomania** (plu-to-ma'ne-ah). A variety of megalomania in which the person affected has an insane delusion that he is very wealthy. [Gr., *ploutos*, wealth, + *mania*, madness.]
- pneo-**. Combining element from Gr., *pnein*, to blow, or *pnein*, to breathe.
- pneodynamics** (ne''o-di-nam'iks). The dynamics of respiration. [Gr., *pnein*, to breathe, + *dynamis*, power.]
- pneograph** (ne'o-graf). 1. See *pneumograph*. 2. Of M. Granville, an instrument for indicating graphically the character of expiration as regards force, continuity, and duration by means of a delicately poised semidisk suspended in front of the mouth. [Gr., *pnein*, to breathe, + *graphein*, to write.]
- pneometer** (ne-om'et-er). See *spirometer*. [Gr., *pnein*, to breathe, + *metron*, a measure.]
- pneoscope** (ne'o-skōp). See *pneumograph*. [Gr., *pnein*, to breathe, + *skopein*, to examine.]
- pneuma** (nu'mah). 1. See *breath*. 2. Of old writers, a subtle material derived from the air in respiration, which was necessary to life. According to Praxagoras the arteries were filled with p. [Gr., *pneuma*, from *pnein*, to breathe.]
- pneumatic** (nu-mat'ik). Pertaining to gases, especially to air; pertaining to the respiratory system; pertaining to or subserving respiration or aëration. [Gr., *pneumatikos*.]
- pneumaticity** (nu-mat-is'it-e). The state of containing air.
- pneumatics** (nu-mat'iks). The physics of gases.
- pneumatocardia** (nu''mat-o-kar'de-ah). Accumulation of gas in the cavities of the heart. [Gr., *pneuma*, air, + *kardia*, the heart.]
- pneumatocoele** (nu-mat'o-sēl). 1. A confined collection of gas beneath the skin or other membranous structure (e. g., a fascia), differing from emphysema in not being diffused. 2. Hernia of lung tissue. [Gr., *pneuma*, air, + *kele*, a tumor.]
- pneumatochemia** (nu''mat-o-kem'e-ah). The chemistry of gases. [Gr., *pneuma*, air, + *chemeia*, chemistry.]
- pneumatogram** (nu-mat'o-gram). A tracing of the respiratory system. [Gr., *pneuma*, air, + *gramma*, a writing.]
- pneumatograph** (nu-mat'o-graf). See *pneumograph*. [Gr., *pneuma*, air, + *graphein*, to write.]
- pneumatology** (nu-mat-ol'o-je). The physics, chemistry, etc., of gases. [Gr., *pneuma*, air, + *logos*, understanding.]
- pneumometer** (nu-mat-om'et-er). 1. See *spirometer*. 2. An instrument for measuring the pressure of the air in respiration. [Gr., *pneuma*, air, + *metron*, a measure.]
- pneumatometry** (nu-mat-om'et-re). A system of treating diseases of the respiratory and circulatory organs by the use of pneumatic apparatus.
- pneumatotherapy** (nu''mat-o-ther'ap-e). The treatment of disease by the use of compressed or rarefied air. [Gr., *pneuma*, air, + *therapeia*, medical treatment.]
- pneumin** (nu'min). A condensation product of guaiacol and creosote with formic aldehyd; used in tuberculous disease.
- pneumo-, pneumono-**. Combining forms of Gr., *pneuma*, air, or *pneumon*, lung.
- pneumobacterin** (nu-mo-bak'te-rin). The vaccine made from the pneumococcus.
- pneumocentesis** (nu-mo-sen-te'is). Paracentesis of a pulmonary cavity. [Gr., *pneumon*, the lung, + *kentesis*, a pricking.]
- pneumococcal** (nu-mo-kok'al). Pertaining to or occasioned by the pneumococcus.
- pneumococcemia** (nu''mo-kok-se'me-ah). The presence of pneumococci in the blood. [*Pneumococcus* + Gr., *aima*, blood.]
- pneumococcus** (nu-mo-kok'us). See *Diplococcus pneumoniae*, under *diplococcus*.
- p. in sputum, how to recognize**; see in appendix, page 903. [Gr., *pneumon*, the lung, + *kokkos*, a kernel, a berry.]
- pneumonoconiosis** (nu-mo''no-ko-ni-o'is). See *anthracosis*. [Gr., *pneumon*, the lung, + *konis*, dust.]
- pneumoderma** (nu-mo-der'mah). Subcutaneous emphysema. [Gr., *pneuma*, air, + *derma*, the skin.]
- pneumogalactocele** (nu''mo-gal-ak'to-sēl). A tumor which contains both gas and milk. [Gr., *pneuma*, air, + *gala*, milk, + *kele*, tumor.]
- pneumogastric** (nu-mo-gast'rik). Pertaining to the lungs and the stomach; also to the p. nerve. [Gr., *pneumon*, the lung, + *gaster*, the belly.]

- pneumograph** (nu'mo-graf). An instrument for recording the movements of the chest wall in respiration. [Gr., *pneumon*, the lung, + *graphein*, to write.]
- pneumometer** (nu-mom'et-er). See *spirometer*. [Gr., *pneumon*, the lung, + *metron*, a measure.]
- pneumomycosis** (nu'mo-mi-ko'sis). The presence of fungi in the lungs. **p. aspergilla**. A form due to the *Aspergillus fumigatus*. [Gr., *pneumon*, lung, + *mycosis*.]
- pneumonectomy** (nu-mon-ek'to-me). Excision of a portion of a lung. [Gr., *pneumon*, the lung, + *ektome*, excision.]
- pneumonia** (nu-mo'ne-ah). Any inflammation of the lungs. **abortive p.** A form of p. in which there is simple pulmonary congestion. **apex p.**, **apical p.** P. involving the apex of the lung; supposed to run a severe course. **catarrhal p.** Bronchopneumonia, the form of p. commonly met with in children; an acute catarrhal inflammation of the finer bronchial tubes and of the pulmonary alveoli. **central p.** A form of p. in which the symptoms are the same as in ordinary croupous p. but the consolidation is central and hence is discoverable only with difficulty. **croupous p.** See *lobar p.* **embolic p.** P. caused by embolism of the bronchial arteries. **fibrinous p.** See *lobar p.* **fibroid p.**, **fibrous p.** See *interstitial p.* **food p.** P. caused by particles of food reaching the smaller bronchial tubes in consequence of faulty deglutition. **hypostatic p.** A form of p. frequently complicating other troubles, especially when the circulation is weak. It attacks the lowermost portions of each lung. **interstitial p.** A chronic form involving chiefly the pulmonary connective tissue. **lobar p.** An acute form of p. in which the air vesicles are the seat of an inflammatory deposit of coagulable fibrin, which fills them and paralyzes their action. Usually it involves a lobe or an entire lung. It is most commonly caused by infection with the *Diplococcus pneumoniae*, but it may be caused by a variety of other organisms. **lobular p.** P. that limits itself to scattered groups of lobules, the intervening tissue remaining sound. **massive p.** P. of the entire lung. **p. alba**. Pulmonary syphilis of the newborn. **tuberculous p.** P. caused by tubercles. It follows the course of catarrhal p., and results in pulmonary tuberculosis. **typhoid p.** P. with adynamic symptoms. It must not be confounded with pneumotyphus. [Gr., *pneumonia*, from *pneumon*, the lung.]
- pneumonic** (nu-mon'ik). 1. Pertaining to the lungs; of expectoration, discharged from the lungs. 2. Pertaining to or affected with pneumonia.
- pneumonitis** (nu-mon-i'tis). See *pneumonia*.
- pneumonocele** (nu-mon'o-sēl). Hernia of the lung. [Gr., *pneumon*, the lung, + *kele*, hernia.]
- pneumonolith** (nu-mon'o-lith). A pulmonary calculus. [Gr., *pneumon*, the lung, + *lithos*, a stone.]
- pneumonolithiasis** (nu-mo'no-lith-i'as-is). Lithiasis of the lung. [Gr., *pneumon*, lung, + *lithiasis*.]
- pneumonomalacia** (nu-mo'no-mal-a-se-ah). Softening of the lung. [Gr., *pneumon*, the lung, + *malakia*, softness.]
- pneumonomelanosis** (nu-mo'no-mel-an-o'sis). See *anthracosis*. [Gr., *pneumon*, the lung, + *melas*, black.]
- pneumometer** (nu-mon-om'et-er). See *spirometer*. [Gr., *pneumon*, the lung, + *metron*, a measure.]
- pneumonophthisis** (nu-mon'of-tis'is). Pulmonary phthisis. [Gr., *pneumon*, lung, + *phthisis*, phthisis.]
- pneumonotomy** (nu-mon-ot'o-me). An incision into the lung (as for draining a tuberculous cavity). [Gr., *pneumon*, the lung, + *tome*, a cutting.]
- pneumopericardium** (nu-mo'per-ik-ar'de-um). The presence of gas in the pericardium. [Gr., *pneuma*, air, + *peri*, around, + *kardia*, the heart.]
- pneumophymia** (nu-mo-fim'e-ah). Pulmonary tuberculosis. [Gr., *pneumon*, lung, + *phyma*, a growth.]
- pneumoprotein** (nu'mo-pro'te-in). The toxic proteid present in the pneumococcus.
- pneumopyothorax** (nu-mo'pi-o-tho'raks). The presence of pus and gas in the pleura. [Gr., *pneuma*, air, + *pyon*, pus, + *thorax*, thorax.]
- pneumotherapy**, **pneumotherapeutic**. The treatment of pulmonary disease. [Gr., *pneumon*, lung, + *therapeia*, medical treatment.]
- pneumothorax** (nu-mo-tho'raks). The presence of air or gas in the pleural cavity. **artificial p.** Production of p. artificially in treatment of tuberculosis of lungs. [Gr., *pneuma*, air, + *thorax*, the thorax.]
- pneumotoxin** (nu-mo-toks'in). The toxic substance formed by the pneumococcus in the living organism or in cultivations in nutrient media which gives rise to the symptoms of systemic infection in pneumonia. An antipneumotoxin is formed in animals inoculated with p. that prevents the development of the pneumococcus. [Gr., *pneumon*, the lung, + *toxikon*, poison.]
- pneusis** (nu'sis). 1. See *respiration*. 2. Anhelation. [Gr., *pneusis*, from *pnein*, to breathe.]
- pneusimeter** (nu-som'et-er). See *spirometer*. [Gr., *pneusis*, a blowing, + *metron*, a measure.]
- pock**. The vesicle or pustule of an eruptive fever. [Dutch, *pocke*, a pustule or a bubble; Old Eng., *poc*, a pock.]
- podagra** (pod-ag'rah or pod'ag-rah). Gout, especially of the articulations of the foot or the great toe. [Gr., *podagra*, from *pous*, *pod-*, the foot, + *agra*, a seizure.]
- podagric** (pod-ag'rik). Pertaining to or affected with podagra.
- podagrous** (pod-ag'rus). Gouty.
- podalic** (po-dal'ik). Pertaining to the

feet or to the pelvic pole of the fetus. [Gr., *pous*, the foot.]

podelcoma (pod-el-ko'mah). Another name for mycetoma or Madura foot. [Gr., *pous*, the foot, + *elkoma*, ulcer.]

podencephalia (po-den-sef-al'e-ah). Exencephalia affecting the interparietal region of the head forming a podencephalus. [Gr., *pous*, foot, + *egkephalos*, the brain.]

podencephalus (pod-en-sef'al-us). A monster having a cerebral hernia through a cranial fissure and the brain contained in a pedunculated sac. [Gr., *pous*, foot, + *egkephalos*, the brain.]

pod-, **pod-**. Combining form of Gr., *pous*, *podos*, foot.

podophyllin (pod-o-fil'in). Syn.: *vegetable calomel*. An amorphous resinous substance of peculiar bitter taste and disagreeable odor obtained from the root of *Podophyllum peltatum*; used as a drastic cathartic. See *podophyllotoxin*. [*Resina podophylli*, U. S. Ph.]

podophyllotoxin (pod'o-fil-o-toks'in). The active principle ($C_{20}H_{18}O_8(OCH_3)_3 + 13H_2O$) of podophyllum. It is a drastic cathartic, causing violent gastro-enteritis, frequent respiration, lowering of temperature, and coma. It is decomposable into picropodophyllotoxin and podophyllic acid.

Podophyllum (pod-o-fil'um). Syn.: *podophylli indicii rhizoma* [Br. Ph.] (2d def.). 1. A genus of berberidaceous herbs. 2. Of the U. S. Ph., the rhizome and rootlets of *P. peltatum*. **extractum podophylli**. An extract of the rhizome of *P. peltatum* [U. S. Ph., 1890]. **extractum podophylli fluidum**. A liquid preparation made by exhausting the rhizome of *P. peltatum* with alcohol and water [U. S. Ph.]. **P. montanum**, **P. peltatum**. American May apple. Its active purgative properties exist in its resin (see *podophyllin*). It resembles jalap in its action, but is more drastic and slower. It is used as a general cathartic and as a cholagogue. **podophylli indicii rhizoma**. See *P.* (2d def.) [Br. Ph.]. **podophylli resina**. See *podophyllin* [Br. Ph.]. **resin of p.**, **resina podophylli**. A resin extract obtained from *P.* by percolation with alcohol and precipitation with water to which alcohol has been added [U. S. Ph.].

pogoniasis (po-go-ni'as-is). Excessive growth of the beard; also, its presence in women. [Gr., *pogon*, the beard.]

Pogoste'mon. A genus of labiate herbs. **P. patchouli**. The patchouli, or *pucha pat*, of the East Indies. [Gr., *pogon*, the beard, + *stemon*, a thread.]

poikilocytes (poy'kil-o-sits). Red corpuscles of irregular shape, supposed to be characteristic of the blood in pernicious anemia, but found in many other conditions. [Gr., *poikilos*, manifold, + *kytos*, a cell.]

poikilocytosis (poy'kil-o-si-to'sis). A condition of the blood in which many of its cells are altered into peculiar shapes, the condition usually being present in pernicious anemia. See also in *appendix*,

page 901. [Gr., *poikilos*, manifold, + *kytos*, a cell.]

poikilothermism (poy'kil-o-ther'mizm). The ability of bacteria or of other plants and animals to adapt themselves to marked changes in temperature. [Gr., *poikilos*, varied, + *therme*, heat.]

poikilothermos (poy'kil-o-ther'mos). Changing temperature. A term applied to those animals, like frogs and fish, which are usually designated cold-blooded. The term means that their body temperature changes with that of the surrounding medium. [Gr., *poikilos*, varied, + *therme*, heat.]

point. 1. The sharp end or fine tapering extremity of any object. 2. That which has position, but no extension; hence, position in space, time, or degree. 3. Of an abscess, to be about to break at a certain portion of its periphery that has approached a free surface. **absolute near p.** The nearest p. to which a single eye can be accommodated and still retain distinct vision. **alveolar p.** The middle p. of the inferior margin of the upper alveolar arch. **anterior focal p.** See *focal p's* and *anterior focus*, under *focus*. **anterior nodal p.** See *nodal p's*. **anterior principal p.** See *principal p's*. **apophysial p.** The tender spot over a vertebral spinous process, under which neuralgic nerves have their exit. **auricular p.** The center of the external orifice of the auditory canal. **binocular near p.** The nearest p. upon which the accommodation, with simultaneous convergence of the visual axes, can be directed. **boiling p.** The temperature at which a liquid passes into vapor with ebullition. **cardinal p's.** Six p's which determine the direction of the rays emerging from and entering a series of refracting media (e. g., the eye). See *principal p's*, *focal p's*, and *nodal p's*. **corresponding retinal p's**, **covering p's.** See *identical retinal p's*. **critical p. of gases.** A temperature, fixed for every gas, at or above which it can no longer be liquefied by pressure alone. **critical p. of liquids.** That temperature above which no amount of pressure is sufficient to retain a body in a liquid form. **deaf p's of the ear.** Certain p's near the ear, discovered by Urbantschitsch, at which a vibrating tuning fork held perpendicularly in front of the ear can not be heard when started from the lower edge of the zygoma and moved backward toward the occiput. The position of the first p. is at the lower end of the tragus; the second is where the helix intersects the line of motion given above. **dew p.** The temperature at which the moisture in cooling air begins to be deposited as dew. **external orbital p.** The moist prominent p. at the outer edge of the orbit immediately above the frontomalar suture. **eye p.** 1. An eye spot, an ocellus. 2. The bright circle at the crossing p., or nearest approximation of the rays above the ocular of a microscope. **far p.** The point at which dis-

tinct vision is obtained without using the muscles of accommodation; in the normal eye at 20 ft. or farther, since then the rays are parallel; in the *myopic eye* at some point nearer than 20 ft., varying with the amount of myopia; in the *hypermetropic eye* there is no far point. **first nodal p.** See *nodal p.'s.* **first principal p.** See *principal p.'s.* **fixation p.** That point on which the two visual axes converge. **focal p.'s.** The anterior and posterior principal foci of a compound dioptric system. The anterior (or first) focal p. of the eye is the p. to which rays that are parallel in the vitreous would converge in front of the eye; the posterior (or second) focal p. is the p. of the back of the eye to which rays that are parallel as they impinge upon the cornea converge. **freezing p.** The temperature at which a liquid body becomes solid. **fusing p., fusion p.** See *melting p.* **genital p.'s.** See *nasal genital p.'s.* **hystero-epileptogenous p.'s., hysterogenic p.'s.** Of Charcot, circumscribed regions of the body pressure or rubbing on which produces the symptoms of an hysterical aura, and eventually causes an hysterical attack. **identical retinal p.'s.** Those p.'s in the two retinae the images upon which are seen as one. **jugal p.** The p. where the posterior border of the frontal process of the malar bone is cut by a line tangent to the upper border of the zygoma. **malar p.** The most prominent p. of the outer surface of the malar bone. **maximum occipital p.** A spot on the maximum anteroposterior diameter of the skull most remote from the glabella. **McBurney's p.** See *McBurney.* **melting p.** The temperature at which a body begins to melt. **metopic p.** See *glabella.* **motor p.** The p. corresponding to that at which a motor nerve enters a muscle, where an electrode must be placed to produce the maximum amount of electrical contraction of that muscle. **Munro's p.** See *Munro.* **nasal genital p.'s.** Certain p.'s on the nasal mucous membrane (one at the anterior end of the lower turbinated bone, the other at the tuberculum septi) irritation of which, when in a hyperesthetic state, produces respectively pain in the hypogastrium and in the sacral region. Dysmenorrhœa is said to have been relieved by applying cocain to these p.'s, and cured by cauterizing them. **near p. (of distinct vision).** The nearest p. at which the eye can accommodate for distinct vision. **nodal p.'s.** Two p.'s, called respectively the first (or anterior) nodal p. and the second (or posterior) nodal p., situated on the optical axis of a dioptric system, and so related that every incident ray which is directed toward the first p. is represented after refraction by a ray emanating from the second p. and having a direction parallel to that of the incident ray. **painful p.'s.** The p.'s at which a neuralgic nerve is tender on pressure. **p. of ossification.** See *cen-*

ter of ossification. **posterior focal p.** See *focal p.'s.* and *posterior focus*, under *focus.* **posterior nodal p.** See *nodal p.'s.* **posterior principal p.** See *principal p.'s.* **pressure p.'s.** The p.'s of emergence of the infra-orbital and supra-orbital, and sometimes also of branches of the facial nerve, upon the face in the vicinity of the margins of the orbit, pressure upon which will sometimes arrest an attack of blepharospasm. **principal p.'s.** Two p.'s situated on the optical axis or the line connecting the centers of curvature of the various refracting surfaces of a compound dioptric system, and so related that the final emergent ray bears the same relation to the second (or posterior) principal p. (E') that the initial or incident ray would bear to the first (or anterior) principal p. (E) after having undergone refraction through a single refracting surface of determinate curvature situated at E. **second focal p.** See *focal p.'s.* **second nodal p.** See *nodal p.'s.* **second principal p.** See *principal p.'s.* **vital p.** See *respiratory center*, under *center.* [Lat., *punctum*, from *pungere*, to prick, to pierce.]

Poiseuille's manometer. A U-shaped glass tube containing mercury, having one of its stems longer than the other; the shorter leg is bent horizontally and has a stopcock at its end; a piece of elastic tubing is attached to the latter to connect it with the artery. Between the mercury and the artery is a solution of carbonate of sodium. [*Jean Marie Poiseuille*, Parisian physiologist, 1797-1869.]

poison (poy'son). The term has various shades of meaning dependent upon the relation in which it is employed. P. may be defined as a substance, organic or inorganic, originating in the organism or introduced from without, artificially or naturally formed—not organized, e. g., bacteria—which through its chemical nature under certain conditions so influences organs that the health or relative well-being is thereby injured, temporarily or permanently. List of poisons and their antidotes, see in *appendix*, pages 938, 939, 940. **arrow p.** One of the numerous preparations used by savages on their arrows, e. g., in Africa, an extract of strophanthus; in Guiana, curare; in Java, the tiéut tjétté, etc. **bish p.** See *Aconitum ferox.* **hemetic p.** See *blood poisoning*, under *poisoning.* **morbid p.** The p. of a specific disease. **muscle p.'s.** Toxalbumins formed during muscular action. **ordeal p.** Any one of the various poisons, such as physostigma, tanghinia, etc., used by savage tribes to test the guilt or innocence of accused individuals. **vascular p.** A p. which acts by increasing or diminishing the blood pressure in the vessels. **list of poisons and their antidotes.** See in *appendix*, pages 938, 939, 940. [Fr., from Lat., *potio*, a draught.]

poisoning (poy'son-ing). 1. The act of administering a poison in such an amount or manner as to produce its specific poisonous effect. 2. The condition pro-

- duced by a poison. **blood p.** See *bacteriemia*. **meat p.** See under *meat*.
- polarimeter** (po-lar'im-et-er). An apparatus for measuring the degree of polarization, the proportion of polarized light present in a beam of light, or the amount by which the plane of polarization is rotated by the passage of a polarized ray through an optically active substance. See *polariscope* and *saccharimeter*. [Lat., *polaris*, polar, + Gr., *metron*, a measure.]
- polariscope** (po-lar'is-kōp). An instrument used for investigating the phenomena of polarization and the changes produced in these phenomena by the interposition of certain substances in the path of the polarized ray. [Lat., *polaris*, polar, + Gr., *skopein*, to examine.]
- polaristrobometer** (po-lar''is-tro-bom'et-er). A variety of polarimeter in which the plane of polarization is indicated with great delicacy by the disappearance of a set of parallel black lines which are produced by passing the light through a double interference plate of calcite. [Lat., *polaris*, polar, + Gr., *strobos*, a whirling round, + *metron*, a measure.]
- polarity** (po-lar'it-e). The property of having poles or of being under the influence of forces acting in the direction of poles. [Lat., *polaris*, polar.]
- polarization** (po-lar-iz-a'shun). 1. In optics, the induction of a peculiar condition by virtue of which a ray of light, instead of vibrating as usual in all planes transverse to its line of propagation, vibrates in one plane only (plane of p.). P. may be induced by reflection from surfaces placed at a special angle (angle of p.), or by transmission through certain media, the doubly refractive crystals especially. 2. Of a galvanic battery, the collection of bubbles of hydrogen on the negative plate, and oxygen on the positive plate, whereby the generation of the current is interfered with. **chromatic p.** P. accompanied by a peculiar play of colors; a phenomenon observed when doubly refracting crystals or singly refracting substances, which have undergone distortion of their structure, are seen by polarized light. **circular p.** The rotation of the plane of p. to the left or right. **di-electric p.** The condition of a non-conductor when strained under the action of two adjacent charges of positive and negative electricity. **electrolytic p.**, **galvanic p.** See p. (2d def.). [Lat., *polaris*, polar.]
- polarizer** (po-lar-i-zer). That portion of a polariscope which polarizes the light; usually a Nicol's prism, but sometimes a reflecting plate of unsilvered glass.
- polar rays.** See *unipolar filaments*, under *filament*.
- pole.** The extremity of any axis around which a body or the forces acting on it are more or less symmetrically disposed. **antigerminial p.** The p. of an ovum opposite the germinal p. At this p. is situated the food yolk. **cephalic p.** Of the fetus, that end of the ovoid formed by it at which the head is situated. **germinal p.**, **germinative p.** The p. of an ovum at which the development of the embryo takes place. This term and antigerminial p. are especially applicable to ova in which a large amount of food yolk is present, as in those of birds and reptiles. **lower p. (of an egg).** See *antigerminial p.* **negative p.** That electrode or other portion of the terminal apparatus of a battery which is connected with the electropositive element in the galvanic cell. **north p.** That extremity of a magnet which is directed toward the north. **nuclear p.** See *polar figure*, under *figure*. **nutritive p.** See *antigerminial p.* **occipital p.** The posterior pointed extremity of the occipital lobe. **placental p. of the chorion.** That p. of the chorion at which the domelike placenta, when present, is situated. **p's of the chorion.** The upper and lower extremities of the chorion, corresponding to the fundus uteri and the os uteri. **p's of the eye.** The anterior and posterior extremities of the optic axis. **p's of the kidney.** The upper and lower extremities of a kidney. **p's of the testicle.** The upper and lower extremities of a testis. **positive p.** That electrode or other portion of the terminal apparatus of a battery which is connected with the electronegative element in the galvanic cell. **south p.** That extremity of a magnet which is directed toward the south. **upper p. (of an egg).** See *germinal p.* **vitelline p.** See *antigerminial p.* [Gr., *polos*, from *pelein*, to go, to move.]
- police'.** In medicine, an organization intrusted with the care of all matters affecting the public health; also the work of such an organization. [Gr., *politeia*, from *polis*, a city.]
- poliencephalitis** (pol''e-en-sef-al-it'is). Inflammation of the gray matter of the cerebral cortex; usually of an infectious type. [Gr., *polios*, gray, + *egkephalos*, the brain, + *itis*, inflammation.]
- polioencephalitis** (pol''e-o-en-sef-al-it'is). See *poliencephalitis*.
- poliomyelitis** (pol''e-o-mi-el-it'is). An infectious inflammation of the spinal cord. **acute anterior p.** Syn.: *infantile paralysis*. An acute infectious disease of the nervous system frequently localized chiefly in the spinal cord, causing flaccid paralyseis with later atrophy of the muscles. [Gr., *polios*, gray, + *myelos*, marrow, + *itis*, inflammation.]
- poliomyeloencephalitis** (pol''e-o-mi-el-o-en''sef-al-it'is). Poliomyelitis associated with poliencephalitis. [Gr., *polios*, gray, + *myelos*, marrow, + *egkephalos*, the brain, + *itis*, inflammation.]
- Politzer's operation.** 1. For artificial aperture of the membrana tympani; a crucial incision of the membrane, and the application of nitrate of silver to the edges of the flaps. The galvanic cautery is now used for the purpose. 2. For atrophied membrana tympani and otitis media

- catarrhalis, an o. which consists in the repeated incision of the tissue of the membrana tympani by means of a double-edged paracentesis needle, midway between the handle of the malleus and the periphery of the membrane. 3. Section of the anterior ligament of the malleus. [Adam Politzer, Austrian otologist, born 1835.]
- pollantin** (pol-an'tin). The antitoxin obtained by injecting horses with the pollen of certain plants; used as a curative serum in hay fever.
- pollution** (pol-lu'shun). 1. Contamination with foul or injurious matter. 2. An involuntary seminal emission. See *spermatorrhoea*. [Lat., *polluere*, to defile.]
- poly-**. Combining form of Gr., *polys*, many; used as prefix, signifying many.
- polyadenitis** (pol'e-ad-e-ni'tis). Inflammation of many lymphatic glands at the same time. **malignant p.**, **p. maligna**. See *oriental plague*. [Gr., *polys*, many, + *aden*, a gland, + *itis*, inflammation.]
- polyadenoma** (pol'e-ad-e-no'mah). See *multiglandular adenoma*, under *adenoma*. [Gr., *polys*, many, + *aden*, a gland, + *oma*, a tumor.]
- polyarthrititis** (pol'e-ar-thri'tis). Inflammation, especially acute rheumatism, affecting several joints at once. [Gr., *polys*, many, + *arthron*, a joint.]
- polyatomic** (pol'e-at-om'ik). Containing more than one atom of replaceable hydrogen; of a radicle, requiring the addition of more than one atom of hydrogen to saturate its combining capacity. [Gr., *polys*, many, + *atomos*, an atom.]
- polybasic** (pol-e-ba'sik). 1. Of acids or alcohols, containing in the molecule more than one atom of hydrogen replaceable by a base. 2. Of salts, formed from a p. acid by the replacement of more than one hydrogen atom by a base. [Gr., *polys*, many, + *basis*, base.]
- polyblasts** (pol'e-blasts). Wandering cells, resembling lymphocytes, which are said to form connective tissue cells, plasma cells or "mast cells" in the regeneration of the tissues. [Gr., *polys*, many, + *blastos*, germ.]
- polyblennia** (pol-e-blen'e-ah). Secretion of abnormal quantities of mucus. [Gr., *polys*, many, + *blenna*, mucus.]
- Polycephalus** (pol-e-sef'al-us). A genus of tapeworms in the larval state. **P. cenusurus**, **P. echinococcus**, **P. granulosis**, **P. hominis**, **P. humanus**. See *Echinococcus hominis*, under *echinococcus*.
- polyceptor** (pol-e-sep'tor). An amboceptor having more than one complementophilous haptophore group, capable of combining with a complement. [Gr., *polys*, many, + Lat., *capere*, to take.]
- polycheiria** (pol-e-ki're-ah). The condition of having a supernumerary hand. [Gr., *polys*, many, + *cheir*, hand.]
- polycholia** (pol-e-ko'le-ah). Excessive secretion of bile. [Gr., *polys*, many, + *chole*, bile.]
- polychromatophilia** (pol-e-kro'mat-o-fil'e-ah). A morbid condition (as of the red blood corpuscles) characterized by an affinity for many staining reagents. [Gr., *polys*, many, + *chroma*, color, + *philein*, to love.]
- polychylia** (pol-e-ki'le-ah). Excessive production of chyle. [Gr., *polys*, much, + *chylus*, chyle.]
- polyclinic** (pol-e-kin'ik). A place where clinics are held, for the treatment of various diseases. [Gr., *polys*, many, + *kline*, a couch, a bed.]
- polycoria** (pol-e-ko're-ah). The presence of more than one pupil in the same eye. [Gr., *polys*, many, + *kore*, the pupil.]
- polycrotic** (pol-e-krot'ik). Showing more than one wave for each cardiac systole (said of the pulse). See *dicrotic*. [Gr., *polys*, many, + *krotein*, to beat.]
- polycrotism** (pol-ik'ro-tism). The state of being polycrotic.
- polycyesis** (pol'e-si-e'sis). Multiple pregnancy. [Gr., *polus*, many, + *kyesis*, pregnancy.]
- polycythemia** (pol'e-si-the'me-ah). Plethora with excess of red blood corpuscles. [Gr., *polys*, many, + *kytos*, a cell, + *aima*, blood.]
- polydipsia** (pol-e-dip'se-ah). Inordinate thirst as in diabetes. [Gr., *polys*, many, + *dipsa*, thirst.]
- polyemia** (pol-e-e'me-ah). See *plethora*.
- p. aquosa**. Excess of water in the blood, occurring physiologically after drinking a large amount of fluid. **p. serosa**. Excess of serum in the blood of an animal, brought about by the injection of blood serum into the veins. [Gr., *polys*, many, + *aima*, blood.]
- polyesthesia** (pol'e-es-the'se-ah). Of Fischer, a peculiar condition of sensation in which a single point touching the skin is felt as more than one. [Gr., *polys*, many, + *aisthesis*, perception by the senses.]
- Polygala** (pol-ig'al-ah). Milkwort; a genus of bitter herbs or shrubs; so called because they have been thought to be galactagogue. **P. amara**. A European species, also found in Mexico, used as a pectoral. **P. Boykinii**. A species to which false or northern senega is sometimes erroneously referred; found in Georgia and Florida. **P. senega**. Senega root; found in Canada and the United States. The root is the senega of the U. S. Ph. and Br. Ph. [Gr., *polys*, much, + *gala*, milk.]
- Polygonatum** (pol-ig-o-na'tum). The true Solomon's seal; a genus of liliaceous plants. **P. biflorum**, **P. giganteum**. Varieties of *P. uniflorum*. **P. officinale**, **P. uniflorum**. The root was formerly used externally in bruises, tumors, wounds, skin eruptions, etc., and powdered and mixed with rose water, as a cosmetic, but is now rarely used. It is emetic, and the berries and flowers are acid and poisonous.
- Polygonum** (pol-ig'o-num). Knotgrass; a genus of herbs. **P. acre**. 1. Smartweed; a species with a caustic juice, by some identified with *P. hydroperoides*; used as an astringent and febrifuge. 2. *P. hydroper*. **P. bistorta**. Bistort, a

- species common in Europe and northern Asia, and said to be found in Connecticut. The root is astringent. **P. hydro-piper**. Water pepper; the Gr. *hydropeperi* of Dioscorides. The leaves or herbs were formerly employed as a diuretic and antiscorbutic, but are now chiefly used by the veterinarians as a wash for ulcers. They contain polygonic acid, have a biting and burning taste, and inflame the skin if rubbed on it. **P. hydro-piperoides**. The mild water pepper of North America, having properties like those of *P. hydro-piper* and sometimes used as a wash for old ulcers. [Gr., *polys*, many, + *gonu*, the knee.]
- polyhydrate** (pol-e-hi'drät). A hydrate or hydroxid containing more than one molecule of hydroxyl.
- polydrosis** (pol''e-id-ro'sis). Another name for *hyperidrosis*. [Gr., *polys*, much, + *idos*, sweat.]
- polymastia, polymazia** (pol-e-mas'te-ah, pol-e-ma'ze-ah). The state of having supernumerary breasts. [Gr., *polys*, many, + *mastos*, or *mazos*, the breast.]
- polymelia** (pol-e-me'le-ah). The state of having supernumerary members. [Gr., *polys*, many, + *melos*, a limb.]
- polymerid** (pol-im'er-id). A substance which bears to another the relation of polymerism (said especially of chemical compounds whose formulae are the higher multiples of the common primitive formula).
- polymerism** (pol-im'er-izm). Multiplicity of component parts. See *polymerization*. [Gr., *polys*, many, + *meros*, a part.]
- polymerization** (pol-e-mer-iz-a'shun). The phenomenon of uniting together two or more molecules of the same substance with the formation of a new chemical compound, from which the original chemical compound may be regenerated, e. g., the p. of acetaldehyd to paraldehyd. [Gr., *polys*, many, + *mikros*, small, + *merizein*, to divide.]
- polymicrotome** (pol-e-mik'ro-töm). A microtome for making a great number of microscopic sections in a short time. [Gr., *polys*, many, + *microtome*.]
- polymorphic, polymorphous** (pol-e-mor'fik, pol-e-mor'fus). Syn.: *heteromorphous*. Showing widely different types of structure or varieties of appearance. [Gr., *polys*, many, + *morphe*, form.]
- polymorphism** (pol-e-mor'fizm). Showing a variety of forms under different conditions of growth or environment; the quality or character of being polymorphous. [Gr., *polys*, many, + *morphe*, form.]
- polymyositis** (pol''e-mi-os-i'tis). Simultaneous inflammation in a number of muscles, attended by pain, swelling, and loss of power, the process frequently extending to the skin (dermatomyositis). [Gr., *polys*, many, + *mys*, a muscle, + *itis*, inflammation.]
- polyneurial** (pol-e-nu'ral). Innervated by two or more nerves. [Gr., *polys*, many, + *neuron*, a nerve.]
- polyneuritis** (pol''e-nu-ri'tis). See *multiple peripheral neuritis* and *multiple neuritis*, under *neuritis*.
- polyodontia** (pol-e-o-don'te-ah). The possession of supernumerary teeth. [Gr., *polys*, many, + *odous*, a tooth.]
- polyonichia** (pol-e-o-nik'e-ah). The condition of having supernumerary nails. [Gr., *polys*, many, + *onyx*, the nail.]
- polyopia, polyopsia** (pol-e-o'pe-ah, pol-e-op'se-ah). The state in which several images of an object are seen at the same time. [Gr., *polys*, many, + *ops*, the eye.]
- polyorchidism** (pol-e-or'kid-izm). The condition of having more than two testicles. [Gr., *polys*, many, + *orchis*, testicle.]
- polyorrhomenitis** (pol-e-or''o-men-i'tis). A progressive and malignant inflammation of various serous membranes. [Gr., *polys*, many, + *orros*, serum, + *ymen*, a membrane.]
- polyotia** (pol-e-o'te-ah). The formation of two or more external ears on one side. [Gr., *polys*, many, + *ous*, the ear.]
- polyp** (pol'ip). See *polypus*.
- polypapilloma** (pol-e-pap-il-o'mah). The condition commonly known as yaws. [Gr., *polys*, many, + *papilloma*.]
- polypeptids** (pol-e-pep'tids). A large group of compounds which have been prepared synthetically and some of which are found in the intermediate hydrolysis of proteins. They consist of the amino-acids, combined in such a way that the carboxyl group (COOH) of one acid is united with the amido group (NH₂) of another amido-acid. When two amido-acids are combined in such a way we have a dipeptid, e. g., glycyl, glycin, alanyl-glycin. When three are combined we have a tripeptid, e. g., leucyl-glycyl-alanin. And when more than three are combined, we have a polypeptid in the narrower sense of the word. There have been united in this way 18 amido-acid groups, with the formation of Fischer's octadecapeptid, a compound with a molecular weight of 1212, which compound has the highest molecular weight of any synthetical product of known constitution. Thus far eight of the dipeptids have been isolated as hydrolytic decomposition products of proteins.
- polyphagia** (pol-e-fa'je-ah). 1. Gluttony. 2. See *bulimia*. [Gr., *polys*, many, + *phagein*, to eat.]
- polypharmacy** (pol-e-far'mas-e). 1. Excess in the use of drugs or in prescribing them. 2. The practice of ordering a great number of drugs to be taken together, now in complete disrepute among reputable physicians.
- polypodia** (pol-e-po'de-ah). A monstrosity characterized by supernumerary feet. [Gr., *polys*, many, + *pous*, the foot.]
- polypoid** (pol'e-poyd). Resembling a polyp. [Gr., *polypous*, a polyp, + *eidos*, resemblance.]
- Polyporus** (pol-ip'o-rus). A genus of hymenomycetous fungi allied to *Boletus*. **P. fomentarius**. Amadou; a species, a foot or more in diameter, growing on the

trunks of trees, especially the beech. It is used in Europe to prepare amadou.

P. ignarius. Hard amadou; used in the preparation of an amadou which is said to be inferior to that of *P. fomentarius* (with which some botanists identify this species). **P. officinalis.** White agaric, the Gr. *agarikon*, of Dioscorides; a species found especially on the trunks of larch trees. Externally it is used as a hemostatic. [Gr., *polys*, many, + *pdros*, a passage.]

polypous (pol'e-pus). Of the nature of a polypus.

polypus (pol'e-pus). A tumor or node arising by a hyperplastic process, especially from or beneath the skin or a serous or mucous membrane. The term is generally applied to pedunculated excrescences. **blood p.** See *placental p.* **bronchial p.** Polyps of greater or smaller size and of varying consistence in the bronchial tubes. See *croupous bronchitis*, under *bronchitis*. **cancerous p.** See *scirrhous p.* **cellulofibrous p.** An old term for a p. partly fibrous and partly mucous in structure. **fibrous p., fleshy p.** A p. composed of fibrous tissue; most frequently found in the uterus, pharynx, rectum, or intestine. **glandular p.** 1. Adenoma. 2. Of Thomas, a p. consisting of hypertrophied nabothian glands. **lipomatous p.** A pedunculate lipoma. **malignant p.** A malignant growth having the appearance of a p. **mucolympathic p.** See *cellulofibrous p.* **mucous p.** A p. the substance of which is soft and contains mucoid tissue. **myomatous p.** A p. consisting of muscular tissue. **nasal p.** A p. developing in the nasal canal. **osseous p.** A bony p. **papillary p.** A p. of a papillary appearance. **placental p.** A fibrinous p. constituted by the coagulation of blood deposited on a portion of placenta retained in the uterus after parturition, the pedicle being formed by the attachment of the placental tissue. **p. carnosus.** See *sarcoma*. **p. mamillae.** 1. See *caruncula mamillaris*, under *caruncula* (2d def.). 2. The nipple. **raspberry cellular p.** The aural p. most frequently met with; it consists of numerous round raspberry-like beads, varying much in size, attached by small filaments to a central stem, which forms the root. **sarcomatous p.** A sarcoma that has the appearance of a p. **scirrhous p.** A true cancerous tumor. **soft p., spongy p.** See *mucous p.* **stony p.** A p. that has undergone calcareous degeneration. **tooth p.** A p. growing from the pulp of a carious tooth and filling its cavity. **vascular p.** A pedunculated angioma. **vascular p. of the umbilicus.** See *fungous excrescence of the umbilicus*, under *excrescence*. **vesicular p.** An old term for a mucous p. [Gr., *polys*, many, + *pous*, foot.]

polysaccharids (pol-e-sak'kar-idz). The compound carbohydrates which contain more than three molecules of simple carbohydrates in combination with each other. The most important of the p's

are starch, glycogen, cellulose, and the dextrins.

polysarcia, polysarcosis (pol'e-sar'se-ah, pol'e-sar-ko'sis). Excess of flesh, obesity. **p. cordis.** See *cor adiposum*. [Gr., *polys*, many, much, + *sarx*, flesh.]

polyscelia (pol'e-se'le-ah). A monstrosity characterized by supernumerary legs. [Gr., *polys*, many, + *skelos*, the leg.]

polyscope (pol'e-sköp). Syn.: *diaphanoscope*. An apparatus for illuminating an accessible hollow organ. [Gr., *polys*, many, + *skopein*, to examine.]

polysolve, polysolv (pol'e-solv, pol'e-sol'vol). Sodium or ammonium sulphuric acid, used as a solvent of phenol, menthol, and salicylic acid.

polysomia (pol'e-so'me-ah). A monstrosity characterized by the union of two or more bodies. [Gr., *polys*, many, + *soma*, the body.]

polysulphid, polysulphuret (pol'e-sulf'id, pol'e-sul'fur-et). A compound of an element or radicle with several atoms of sulphur.

polythelism (pol'e-the'lism). The existence of supernumerary nipples. [Gr., *polys*, many, + *thela*, a teat.]

polytrichia (pol'e-trik'e-ah). Another name for *hypertrichosis*.

Polytrichum (pol-i'trik-um). Hair moss; a genus of acrocarpus mosses. **P. commune.** Common hair moss; formerly considered a mild astringent, aperient, diaphoretic, and diuretic. It is now rarely used. [Gr., *polys*, many, + *thrix*, a hair.]

polytrophy (pol-i'tro-fe). Excess of nutrition. See *hypertrophy*. [Gr., *polys*, many, + *trophe*, nourishment.]

polyuria (pol'e-u're-ah). Excessive secretion of the urine. [Gr., *polus*, much, + *ouron*, urine.]

pomade (po-mäd'). An ointment, especially for cosmetic purposes. [Fr., *pom-made*.]

pomatum (po-mah'tum). An ointment. [Lat., from *pomum*, an apple, because originally made from apples.]

pomegranate (pom'gran-et). 1. The fruit of *Punica granatum*, also the tree itself. 2. Of the U. S. Ph., the bark of the root of *Punica granatum*. [Lat., from *pomum*, apple, + *granatus*, many seeded.]

pomphi (pom'fe). Another name for *wheals*. [Gr., *pomphos*.]

pompholyx (pom'fo-likes). Written also, less correctly, *pompholix*. Syn.: *cheiropompholyx*, *dysidrosis*. A skin disease occurring on the hands and feet. It is characterized by deep-seated, clear, grouped vesicles, which appear suddenly, have narrow red areolae and run a short course. [Gr., *pompholyx*, a bubble.]

po'mum. An apple. **p. Adami.** The prominence in the middle line of the throat formed by the junction of the two lateral wings of the thyroid cartilage. **p. oculi.** The eyeball. [Lat.]

pons. A bridge or bridgelike structure; especially the p. Varolii. **p. hepatis.** Syn.: *isthmus hepatis*. A part of the liver which sometimes extends from the

- quadrate to the left lobe, crossing the umbilical fissure. **p. Tarini**. A lamina of gray matter at the bottom of the posterior perforated space at the base of the brain, between the corpora albicantia. It forms a portion of the floor of the third ventricle. **p. Varolii**. That division of the encephalon which connects the medulla oblongata and the crura cerebri. It consists partly of longitudinal fibers continued above into the pes and tegmentum of the crura, partly of transverse fibers connecting the two cerebellar hemispheres, and partly of central gray nuclei. **p. zygomaticus**. The zygomatic arch. [Lat., *pons*, from *ponere*, to place.]
- popliteal** (pop-lit'e-al). Pertaining to the region posterior to the knee joint and between the hamstring tendons. [Lat., *poples*, the ham.]
- popliteus** (pop-lit'e-us). See *table of muscles*, under *muscle*.
- populin** (pop'u-lin). Benzoyl salicin. [Lat., *populus*, a poplar.]
- Populus** (pop'u-lus). The poplars; a genus of salicaceous trees. **P. balsamifera**. 1. Balsam (or tacamahac) poplar, the *lard* of the Canadians; a species found in North America, Siberia, and the Himalayas. The buds contain a balsam resin which is considered antiscorbutic and diuretic. The buds themselves are used but rarely. **P. tremula**. European aspen. The bark, which contains salicin and populin, is used by the veterinarians as a vermifuge. **P. tremuloïdes**, **P. trepida**. American aspen. The leaves and the bark contain salicin, and the bark is used as a tonic and febrifuge. [Lat.]
- pore**. A minute aperture or passageway in a structure; especially, a fine tubular opening. **absorbent p's**. Of the early physiologists, the minute openings thought to be the channels through which nutritive fluids were absorbed into the general circulation. **exhalant p's**. Of the older physiologists, the small openings supposed to exist in the skin for the transmission of excrementitious fluids. **p's of the skin**. The orifices of the cutaneous follicles. **sweat p**. The external orifice of a sweat duct (see *sudoriferous glands*, under *gland*). [Lat., *porus*; Gr., *poros*.]
- porocephaly** (po'ren-sef'a-le). Congenital atrophy of brain cortex with cystic replacement. [Gr., *poros*, pore, + *egkephalos*, brain.]
- pornography** (por-nog'raf-e). Obscene and vulgar language or literature, chiefly dealing with sensuality. [Gr., *porne*, a prostitute, + *graphein*, to write.]
- Poroceph'alus armilla'tus**. A vermiform arthropod of the class *Arachnida* and the order *Acarina* whose larva infests the lungs and liver of man, various snakes serving as the intermediate hosts.
- porokeratosis** (por'o-ker-at'o'sis). Syn.: *mibelli*, *hyperkeratosis eccentrica*. A skin disease characterized by the presence of one or more slowly spreading patches, which consist of a thorny ridge at the border with a less elevated or depressed central area. It occurs most commonly on the dorsal aspects of the hands and feet. [Gr., *poros*, a pore, + *keras*, a horn.]
- poroma** (po-ro'mah). An inflammatory induration. [Gr., *poroma*, callus.]
- porosis** (po-ro'sis). 1. See *poroma*. 2. The formation of callus in the healing of a fractured bone. [Gr., *poroma*, callus.]
- porotic** (po-ro'tik). Favoring the growth of connective tissue.
- porphyri-zation** (por'fir-iz-a'shun). The reduction of a substance to a very fine powder by crushing it with a muller on a flat, hard surface, especially of porphyry.
- porphyrroxin** (por-fir-ok's'in). An alkaloid, $C_{24}H_{22}NaO_3$, found in the bark of *Alstonia constricta*.
- porrigo** (por-ri'go). A term applied to many different skin diseases, especially those affecting the hairy scalp. **p. contagiosa**. An old name for impetigo. **p. decalvana**. An old name for alopecia areata. **p. favora**. Another name for favus. **p. furfurans**. An old name for tinea tonsurans. **p. lupinosa**. Another name for favus. [Lat., *porrigo*, scurf, dandruff.]
- Porro's operation**. Cesarean section, followed by supravaginal amputation of the uterus. [Eduardo Porro, Milanese obstetrician, born 1842.]
- porta** (por'tah). A gate or an entrance. **p. hepatis**, **p. jecoris**. The transverse fissure of the liver, where its vessels enter. **p. labyrinthi**. See *fenestra rotunda*. **p. lienis**. The hilum of the spleen. **p. omenti**. See *foramen of Winslow*. **p. pulmonis**. The hilum of the lung. **p. renis**. The hilum of the kidney. [Lat., *porta*, gate.]
- portagion** (por-ta'jun). A disease germ that is capable of transmission.
- por'tal**. 1. Pertaining to a porta, especially the porta hepatis, or to the parts there situated. 2. Pertaining to the portal circulation. [Lat., *porta*, a gate.]
- portio** (por'she-o). See *portion*. **p. dura (nervi septimi)**. The motor portion of the seventh cranial nerve, or, as now used, the facial nerve. **p. inter durum et mollem**. A filament uniting the anterior root of the auditory nerve with the trunk of the facial nerve. **p. intermedia Wrisbergii (nervi facialis)**. A bundle of fibers from the anterior root or nucleus of the auditory nerve which unites with the facial nerve. **p. vaginalis uteri**. The infravaginal portion of the uterus or its cervix. **p. ventriculi lienalis**. The fundus of the stomach. [Lat., *portio*, a part.]
- por'tion**. A part, a subdivision, or section. **cavernous p. of the urethra**. The posterior, dilated part of the spongy p. of the male urethra, the urethral bulb. **descending p. of the duodenum**. The p. of the duodenum which most nearly approaches the vertical, which is farthest to the right, and into which the ductus communis choledochus opens. **facial p. of the skull**. The p. of the skull underlying the face. **frontal p. of the**

frontal bone. See *pars frontalis ossis frontis*, under *pars*. **iliac p. of the fascia lata.** The p. of fascia lata external to the saphenous opening. **infravaginal p., intravaginal p.** See *vaginal p. of the neck of the uterus*. **mastoid p. of the temporal bone.** See *mastoid process*, under *process*. **membranous p. of the urethra.** That part between the apex of the prostate gland and the bulb of the corpus spongiosum. **petrous p. of the temporal bone.** The three-sided, somewhat pyramidal process of the temporal bone which projects forward and inward from between the squamous p. and the mastoid process, with its base turned outward, and which contains the internal ear. **prostatic p. of the urethra.** The urethra as it pierces the prostate gland. **spongy p. of the urethra.** That part between the posterior limit of the bulb of the urethra and its external orifice in the glans penis. **squamous p. of the temporal bone.** The expanded curved anterior and superior p. of the temporal bone. Its upper border is beveled to overlap the parietal bone, with which it articulates. **supravaginal p. of the neck of the uterus.** That p. of the neck of the uterus which lies above the vaginal insertion. **tabular p. of the occipital bone.** The p. of the occipital bone posterior to the foramen magnum. **tabular p. of the temporal bone.** See *squamous p. of the temporal bone*. **vaginal p. of the neck of the uterus.** That part which projects into the vagina. [Lat., *portio*, from Gr., *porain*, to share.]

port wine mark. Another name for *nevus vascularis*.

po'rus. See *pore*. **p. acusticus externus.** The external opening of the external auditory canal. **p. acusticus internus.** The opening of the internal auditory canal into the cranial cavity. **p. auditorius externus.** See *p. acusticus externus*. **pori biliares.** See *biliary ducts*, under *duct*. **p. centralis.** The channel in the optic nerve which contains the central artery of the retina. **p. cranionasalis.** The foramen cecum of the frontal bone. **p. deferens.** See *vas deferens*, under *vas*. **p. opticus.** The aperture in the sclera and choroid which contains the optic disk. **p. pulmoneus.** A pulmonary air cell. [Lat.]

pose (pōz). An attitude or posture of the body. [Fr., *pose*, from *poser*, to put, to place.]

position (po-sish'un). Syn.: *situation, posture, attitude*. 1. The place occupied by a thing or in which it is put; situation, site, station. 2. The manner in which a body as a whole or the several parts of it are disposed or arranged; disposition, posture, attitude. **dorsal p.** The patient lies on the back with knees flexed and everted and feet resting on the couch or in foot rests at the level of, or slightly above, the surface of the examining table. In the latter case the hips are at the edge of the table.

Fowler's p. See *Fowler*. The patient rests on knees and elbows, the head on the hands. **knee-chest p.** The patient rests on knees and chest. The thighs are vertical, the chest and head supported on a folded pillow or on a small compact cushion. The face is turned to one side. **knee-elbow p.** The position in which the head of the patient's bed is raised 18 or 20 inches above the level. **left occipito-anterior p.** Syn.: *first p.* That p. of the fetal head, in vertex presentations, in which the occiput is directed toward the mother's left side and somewhat anteriorly. **left occipitoposterior p.** That p. of the fetal head, in vertex presentations, in which the occiput is directed toward the mother's left side and somewhat posteriorly. **lithotomy p.** The p. in which a patient is placed for lithotomy (i. e., in the dorsal p. with the thighs strongly flexed on the abdomen and abducted, and the legs flexed upon the thighs). **mento-anterior p. (of the face).** That p. of the fetal head in which, in face presentations, the chin is directed to the mother's right or left and somewhat forward. **mento-iliac p. (of the face).** That p. of the fetal head in which, in face presentations, the chin looks directly toward the mother's right or left ilium. **mentoposterior p. (of the face).** That p. of the fetal head in which, in face presentations, the chin is directed to the mother's right or left and somewhat backward. **mentopubic p.** That p. of the fetal head in which, the face presenting, the chin is directed toward the mother's symphysis pubis. **mentosacral p.** That p. of the fetal head in which, the face presenting, the chin is turned toward the mother's sacrum. **oblique p. of fetal head.** See *obliquity of the fetal head*, under *obliquity*. **obstetric p.** The p. ordinarily assumed by a woman in labor. In Great Britain, on the left side; in France, Germany, and most parts of the United States, on the back. **occipitopubic p.** Of Baudelocque, that p. of the fetal head in which, the vertex presenting, the occiput is directed toward the mother's symphysis pubis. **occipitosacral p.** That p. of the fetal head in which, with a vertex presentation, the occiput is directed quite backward into the hollow of the mother's sacrum. **right occipito-anterior p.** That p. of the fetal head, in vertex presentations, in which the occiput is directed toward the mother's right side and somewhat anteriorly. **right occipitoposterior p.** That p. of the fetal head, in vertex presentations, in which the occiput is directed toward the mother's right side and somewhat posteriorly. **sacro-anterior p.** That p. of the fetal head in vertex presentation in which the sacrum of the child is directed forward. **sacrosacral p.** A breech presentation with the child's sacrum turned directly to the mother's sacrum. **Sims' p.** Syn.: *lateroprone p.* See *Sims*. **Trendelenburg's p.** See *Trendelenburg*. **Wal-**

- cher's p.** See *Walcher*. [Lat., *positio*, from *ponere*, to place.]
- positive phase.** The period during which the amount of antibody or other protective substance in the serum is increased after the injection of the antigen.
- posology** (po-sol'o-je). Syn.: *dosology*. The science of the dosage of medicine. [Gr., *posos*, how much, + *logos*, understanding.]
- possession.** The condition of being possessed or occupied. **demoniacal p.** The condition of being (or of being supposed to be) under the mastery of demons or evil spirits. [Lat., *possidere*, to possess.]
- pos'set.** A beverage of hot milk curdled with wine or otherwise. [Lat., *possetum*.]
- post-**. A prefix, from the Lat., *post*, after, signifying after, behind.
- postconvul'sive.** Following a convulsion.
- posterior** (pos-te're-or). Situated backward; in erect vertebrates, nearer or looking toward the dorsum of the body; in others, nearer the caudal extremity of the body than the cephalic. [Lat., *posteriorius*, behind.]
- postgraduate** (post-grad'u-ät). After graduation. **p. course, p. school.** A course of study taken to supplement a regular course. [Lat., *post*, after, + *gradus*, step.]
- postmalar'ial.** Following malarial disease.
- post mor'tem.** Occurring after death or in a dead body; as a n., a necropsy. [Lat., *post*, after, + *mortem*, death.]
- postpone'**. To cause to occur after the regular time.
- postsystolic** (post-sis-to'l'ik). Occurring after the systole.
- pos'ture.** See *position*.
- pot'ash.** 1. The alkali obtained by the lixiviation of the ashes of wood and of various plants. It includes both the caustic alkali, more commonly called caustic p. (potassium hydroxid), and the mild alkali (potassium carbonate). 2. Commercial p., an impure potassium carbonate mixed with a variable amount of potassium hydroxid. It is caustic and readily deliquescent. When partially purified it forms pearl-ash. List of persons and their antidotes, see in *appendix*, page 938. [Lat., *potassa*.]
- potassa** (po-tas'sah). 1. See *potash*. 2. Of the U. S. Ph., 1890, caustic potash (potassium hydroxid). It corresponds to the *p. caustica* of the Br. Ph. **liquor potassae.** See *liquor potassii hydroxidus*, under *potassium*. [U. S. Ph., 1890, Br. Ph.]. **p. caustica.** Caustic potash [Br. Ph.]. **p. cum calce.** P. with lime, Vienna caustic, Vienna paste; made by rubbing together equal parts of caustic p. and quick lime; a grayish white, deliquescent alkaline powder [U. S. Ph., 1890. **p. cumoreta.** See *p. caustica*, **p. fusa.** A caustic prepared by evaporating liquor potassae till water ceases to escape, drying the residue on a warm stone, and breaking into pieces when cold. **p. sulphurata.** 1. Liver of sulphur, consisting essentially of two equivalents (about 65 per cent.) of potassium trisulphid and one equivalent (about 35 per cent.) of potassium thiosulphate. Pure p. sulphurata (liver of sulphur) is an amorphous substance, liver colored when fresh, afterward of a greenish or yellowish hue, turning to a dirty green if the access of air is not prevented. It has an odor of hydrogen sulphid, is deliquescent in moist air, and is completely soluble in 2 parts of water. 2. A preparation made like that of the 1st def., but with crude potassium carbonate and unwashed sulphur. It consists essentially of the same constituent. If, however, the process of heating is carried too far, the thiosulphate is decomposed into potassium sulphate and potassium pentasulphid, the latter breaking up again into sulphur and potassium trisulphid. This impure liver of sulphur has essentially the same properties as the purer variety, but is used externally [U. S. Ph., 1890, Br. Ph.]. [Lat.].
- potassic** (pot-as'sik). Derived from or containing potash or potassium. For the various p. compounds, see under *potassium*.
- potassium** (po-tas'se-um). A metallic element; a silvery white solid, at ordinary temperatures waxy and ductile. It decomposes water at ordinary temperature with the evolution of hydrogen. Atomic weight, 39.2. Specific gravity, 0.875. Symbol, K (from *kalium*). **charta potassii nitratis.** Unsized white paper, soaked in a solution of p. nitrate and dried [U. S. Ph., 1890]. **crude p. carbonate.** Pearl-ash; an impure p. carbonate occurring as a dry granular powder or as a porous mass of a white color sometimes shading into bluish or greenish gray, containing 90 per cent. of the pure salt. **liquor potassii arsenitis.** Solution of arsenite of p. [U. S. Ph.], arsenical (or Fowler's) solution, the liquor arsenicalis of the Br. Ph.; an aqueous solution of p. arsenite, made by dissolving arsenic trioxid in water with equal parts of p. bicarbonate. The solution contains 1 part of arsenic trioxid in 100 parts. **liquor potassii citratis.** Solution of citrate of p., made by mixing, when required, a solution of 8 parts of p. bicarbonate in 42 parts of water, with a solution of 6 parts of citric acid in 44 of water [U. S. Ph.]. **liquor potassii hydroxidus.** A liquid containing 5 per cent. of potassium hydroxid in aqueous solution [U. S. Ph.]. **liquor potassii permanganatis.** A solution of 1 part of p. permanganate in 99 of distilled water [Br. Ph.]. **mistura potassii citratis.** Mixture of citrate of p.; a preparation made by saturating 100 parts of lemon juice with p. bicarbonate [U. S. Ph.]. **monohydric p. phosphate.** A white amorphous deliquescent substance, HK_2PO_4 , occasionally used in medicine. **p. acetate.** A white powder, $\text{KC}_2\text{H}_3\text{O}_2$, made up of foliate or scaly crystals (or

amorphous), easily soluble in water or alcohol, and volatilizing on exposure to the air. It is obtained by neutralizing p. carbonate with dilute acetic acid and drying. **p. amalgam.** An alloy of p. with mercury. The product is a silvery white liquid when a very great excess of mercury is employed, but when less mercury is used the amalgam is solid, and when the mercury and p. are brought together in suitable proportions, crystalline compounds, Hg_2K_2 and HgK_2 , are formed. **p. and ammonium tartrate.** A substance, $KNH_4C_4H_4O_6$, occurring as transparent prismatic crystals of pungent and saline but cooling taste, becoming opaque in the air, and easily soluble in water. **p. and copper carbonate.** A substance obtained by dissolving recently precipitated copper carbonate in a solution of p. carbonate; used as a test, as it is reduced by glucose and milk sugar, but not by cane sugar, dextrin, or soluble starch. **p. and gold cyanid.** See *p. aurocyanid.* **p. and sodium tartrate.** Rochelle salts; a double salt, $C_4H_4NaKO_6 + 4H_2O$, forming colorless, transparent, rhombic crystals, odorless, of saline taste, and quite soluble in water. It is nearly always used in solution. In small doses it is a diuretic and in larger doses a mild hydragogue cathartic. It is much used as a cathartic. **p. arsenate.** A compound of p. and arsenic acid. Three arsenates of p. are known: (1) normal p. arsenate, or tripotassic arsenate, a crystalline body, K_3AsO_4 ; (2) monacid p. arsenate, or dipotassic arsenate, HK_2AsO_4 ; and (3) diacid p. arsenate, or monopotassic arsenate, often called simply p. arseniate, H_2KAsO_4 , a body forming large crystals of acid reaction. The last mentioned is official in some continental pharmacopias. **p. arsenite.** A compound formed by the action of arsenious oxid on caustic potassa in solution. It differs in composition according to the relative proportions of the ingredients, normal p. arsenite is K_3AsO_3 , diacid p. arsenite is H_2KAsO_3 . The so-called solution of p. arsenite, "Fowler's solution," probably does not contain this salt, but only the uncombined arsenious acid. **p. aurobromid.** The compound $AuBr_3KBr + 2H_2O$; an antiseptic. **p. aurocyanid.** The compound $KAu(CN)_2$. **p. bicarbonate.** Acid p. carbonate, $KHCO_3$; occurring as colorless transparent rhombic prisms or tablets, of saline but not sharp taste, and soluble in water, almost insoluble in alcohol. It is usually prepared by passing carbon dioxide gas through a solution of the normal carbonate. It has been used as an antacid. **p. bichromate.** $K_2Cr_2O_7$. A red crystalline substance. **p. bisulphite.** See under *p. sulphite.* **p. bitartrate.** Cream of tartar, $KHC_4H_4O_6$, a white crystalline substance; used as a cathartic. The sediment of fermented grape juice consists mainly of p. bitartrate. **p. bromate.** The compound $KBrO_3$. **p. bromid.** A salt, KBr , occurring as colorless cubical crystals, of

bitterish saline taste, soluble in 1.6 part of water, slightly soluble in alcohol. Its solution should never be more than faintly alkaline. It is used in functional disorders of the nervous system, especially as a hypnotic in epilepsy and whenever a nervous sedative is required [U. S. Ph., Br. Ph.]. **p. carbonate.** A deliquescent, white, pulverulent substance, K_2CO_3 , either granular or finely crystalline in structure, of alkaline taste, and more readily soluble in water than the acid carbonate. Its solution has a strong alkaline reaction. The p. carbonate of the U. S. Ph. and Br. Ph. is the purified p. carbonate. See also *crude p. carbonate.* **p. chlorate.** The compound $KClO_3$. It is used as a gargle in inflammatory affections of the throat and in mercurial salivation. **p. chlorid.** The compound KCl . **p. chromate.** Yellow potassium chromate, K_2CrO_4 , forming yellow pyramidal crystals, which become red on heating. **p. citras effervescens.** A granular effervescent preparation containing 20 per cent. of potassium citrate [U. S. Ph.]. **p. citrate.** The compound $C_6H_5O_7K_3 + H_2O$; used as a febrifuge, as a diuretic, and in the early stages of bronchitis. There are also known a monacid or monohydric p. citrate, or dipotassic citrate, $C_6H_5O_7K_2$, and a diacid or dihydric p. citrate, or monopotassic citrate, $H_7O_7K + 2H_2O$ [U. S. Ph., Br. Ph.]. **p. cyanate.** A substance, $KCNO$, known in two isomeric forms: the ordinary cyanate, $O:C.N.K$, produced by the oxidation of p. cyanid, and another body, probably $K.O.C.:N$, or true p. cyanate. Both forms occur as acicular crystals. **p. cyanid.** A body, KCN , formed by the decomposition by heat of p. ferrocyanid, with or without the addition of p. carbonate and charcoal. It forms white deliquescent cubical or octahedral crystals, or white crystalline powder having a faint odor of hydrocyanic acid. It is readily soluble in water, less soluble in alcohol. In aqueous solution it is very unstable. It readily absorbs oxygen, and is therefore a powerful reducing agent. It is very poisonous. It is used as an antispasmodic and sedative. **potassii dichromas.** See *p. dichromate.* **p. dichromate.** A substance, $K_2Cr_2O_7$, occurring as large dark, orange-red, four-sided prisms, of acid reaction. Not much used therapeutically [U. S. Ph.]. **p. ethylate.** A substance, C_2H_5OK , forming transparent crystals usually united with a molecule of ethyl alcohol of crystallization. In contact with organic tissues it decomposes with the formation of metallic p., which takes oxygen from the tissues and so acts as a caustic, and with the simultaneous formation of absolute ethyl alcohol, which acts as a preservative and antiseptic. **p. ferri-cyanid.** Red p. prussiate; a poisonous substance, $K_3Fe_2(C_6N_6)_4$, occurring as large red prismatic crystals, decomposing on exposure to light; formed by passing chlorine through a solution of p. ferrocyanid until the latter no longer deposits

a blue precipitate on the addition of ferric chlorid [U. S. Ph., 1880]. **p. ferrocyanid**, **p. ferrocyanuret**, **p. ferroprussiate**. Yellow p. prussiate, $K_4Fe(CN)_6 \cdot 3H_2O$. It is produced by the reactions taking place between animal charcoal, iron, and pearl-sh when subjected to heat [U. S. Ph.]. **p. glycerino-phosphate**. A glycerin-phosphoric salt of p.; used like phosphoric acid. **p. hydrate**. See *p. hydroxid*. **potassii hydroxid**. See *p. hydroxid*. **p. hydroxid**. Caustic potash, potassa. A compound, KOH, occurring as a white, very deliquescent, hard substance, either entirely amorphous or presenting traces of a fibrous structure. It is readily soluble in water and in alcohol, and has a very acid taste, a strong alkaline reaction, and marked caustic properties. It is usually molded into the form of sticks which contain moisture. Chemically, it acts as a strong base. It is used as a caustic and, in very dilute solution, as an antacid. **p. hypochlorite**. A substance, KOCl; its solution forms Javelle water. **p. hypophosphite**. A body, KPH_2O_2 , forming deliquescent, inflammable, tabular crystals, of saline taste, very readily soluble in water, less soluble in alcohol. **p. hyposulphite**. See *p. thiosulphate*. **p. inosinate**. A crystalline substance, the p. salt of inosinic acid, obtained from aqueous extract of meat. **p. iodate**. A body, KIO_3 , forming minute cubical crystals. **p. iodid**. A substance, KI, forming colorless cubical crystals, of a peculiar feeble odor and a saline, bitterish taste. It is soluble in less than its own weight of cold water, cold alcohol, and in glycerin. It should have a slightly alkaline reaction. It melts at a low red heat. It is used in syphilis, in rheumatism, in internal aneurism, and to accelerate the absorption of inflammatory exudate [U. S. Ph., Br. Ph.]. **p. nitrate**. Saltpetre, nitre, KNO_3 , occurring as colorless, transparent prismatic crystals, or as a white crystalline powder, of sharp saline taste, soluble in water, nearly insoluble in alcohol. Paper saturated with a solution of the salt and then dried is burned to relieve asthma [U. S. Ph., Br. Ph.]. **p. nitrite**. KNO_2 , a white or slightly yellow substance. **p. permanganate**. The compound, $KMnO_4$. Being a strong oxidizing agent, it has been used as a deodorant, disinfectant, escharotic, and stimulant, especially in gonorrhoea, burns, and frostbite [U. S. Ph., Br. Ph.]. **p. phosphate**. A compound of p. and phosphoric acid. The phosphates of p. are the p. orthophosphates (often called simply p. phosphates), the p. metaphosphates, and the p. pyrophosphates. See also *monohydric p. phosphate*. **p. picrate**. A yellow crystalline substance, $C_6H_2(NO_2)_3OK$, of bitter taste, nearly insoluble in water. It explodes on heating. **p. sulphate**. The compound K_2SO_4 , of bitter, saline taste. It is laxative [U. S. Ph., Br. Ph.]. **p. sulphid**. There are five such compounds known: 1. P. monosulphid, or simply p.

sulphid, K_2S . 2. P. hydrosulphid, HKS. 3. P. trisulphid, a brownish crystalline substance, K_2S_3 , soluble in water. It enters into the composition of potassa sulphurata. 4. P. tetrasulphid, K_2S_4 . 5. P. pentasulphid, a reddish brown mass, K_2S_5 , easily soluble in water and of bitter, alkaline taste. See also *potassa sulphurata*, under *potassa*. **p. sulphite**. The compound $K_2SO_3 + 2H_2O$, of bitter saline and sulphurous taste, without odor, and soluble in 4 parts of cold water. There is also an acid *p. sulphite* or *p. bisulphite* (Lat., *potassii bisulphitis*), $KHSO_3$, forming acicular crystals of sulphurous taste and neutral reaction [U. S. Ph., 1880]. **p. tartrate**. A compound of p. and tartaric acid. *Normal p. tartrate* (the p. tartrate of the pharmacopeias), $K_2C_4H_4O_6$ —according to the Br. Ph., $(CHOH)_4COOH.COOK$ —occurs as small transparent or white crystals or as a white powder of bitterish saline taste, readily soluble in water. Acid p. tartrate, p. bitartrate, or cream of tartar. Lat., *potassii bitartras* [U. S. Ph.] (*tartras acidus* [Br. Ph.]). **p. thiosulphate**. A salt, $K_2S_2O_3$. It enters into the composition of liver or sulphur. See *potassa sulphurata*, under *potassa*. **trochisci potassii chloratis**. Troches of p. chlorate combined with sugar, Tolu balsam, etc. The U. S. and Br. lozenges contain about $2\frac{1}{2}$ grains of p. chlorate [U. S. Ph., Br. Ph.]. **unguentum potassii iodidi**. An ointment containing 10 per cent. of p. iodid [U. S. Ph., Br. Ph.]. [Lat.]

potency (po'ten-se). The strength of a medicine. In homeopathy the power of a medicine developed by certain procedures of attenuation or trituration.

potentia coeundi (po'ten'she-ah ko-e-un'di). Ability completely to perform sexual intercourse. [Lat.]

potential (po'ten'te-al). 1. Of a remedy, not acting immediately or directly. See *p. cautery*, under *cautery*. 2. As a noun, the amount of the electrical charge present on a conductor. Differences in p. are the cause of electric currents; for, whenever two bodies differing in p. are connected by a conductor, a current passes from the body having the higher p. to the one having a lower p. until the p's are equalized. **electric p.** See *p.* (2d def.). **static p.** The difference in electric level between the earth and a body charged with static electricity. [Lat., *potentia*, power.]

Potentilla (po'ten-ti'l'ah). Cinquefoil; a genus of rosaceous undershrubs or herbs. **P. alba**. White cinquefoil; a mildly astringent species. **P. anserina**. The root and herb are astringent, and were formerly used in intermittent fever, diarrhea, dysentery, hemorrhages, etc. **P. argentea**. Silvery cinquefoil; a European and North American species. The mildly astringent herb was formerly official. **P. canadensis**. Canadian five fingers; a diuretic and diaphoretic species. **P. comarum**. Marsh cinquefoil; a bitter, tonic species, by some botanists made a distinct genus. The root and herb were

*formerly used in diarrhea, dysentery, hemorrhage, and intermittent fever. **P. fragarioides**. Rock cinquefoil. The root was formerly used as a mild astringent. **P. palustris**. See *P. comarum*. **P. reptans**. Creeping cinquefoil, the *Gr. pentaphyllon* of the ancients; a perennial creeping herb. The root and herb were formerly used as mild astringents. **P. rubra**. *P. comarum*. **P. rupestris**. *P. fragarioides*. **P. tormentilla**. Tormentil; an astringent species formerly in the secondary list of the U. S. Ph. It is made by many botanists a distinct genus, *Tormentilla*. The root is powerfully astringent, and was formerly much used in diarrhea, passive hemorrhage, etc. [Lat., *potens*, powerful.]

po'tio. A potion. [Lat.]

po'tion. A medicinal draught.

potomania (po-to-ma'ne-ah). See *dipsomania*. [Lat., *potus*, a drinking, + *Gr.*, *mania*, madness.]

Pott's disease. Tuberculous spondylitis; caries of the vertebra. **P's fracture**. Fracture of the lower part of the malleolus of the tibia with outward displacement of the foot. [*Percival Pott*, English surgeon, 1713-1788.]

pouch (powch). A pocket; a small bag; any baglike structure. **Douglas's p.**

Syn.: *fossa recto-uterina p.*; *rectovaginal p.* See *recto-uterine p.* **hair p.** The depression or crypt in the skin within which a hair grows. See *hair bulb* and *hair follicle*, under *hair*. **internal inguinal p. (of the peritoneum)**. The internal of two p's formed by the urachus and the obliterated hypogastric artery raising up the peritoneum into a well-marked fold as it passes from the apex of the bladder to the back of the recti muscles. **pararectal p.** See *cavum Douglasii laterale*, under *cavum*. **paravesical p.** See *fossa paravesicalis*, under *fossa*. **pharyngeal p.** See *recessus pharyngeus*, under *recessus*. **p'es of the larynx**. Conical p'es curving slightly backward, and extending from the anterior part of the ventricles upward for half an inch, between the superior vocal cords and the thyroid cartilage. **p'es of the membrana tympani**. The three p'es on the inner side of the upper part of the drumhead, formed by duplicatures of mucous membrane around the chorda tympani in the horizontal portion of its passage through the tympanic cavity. **recto-uterine p.**, **rectovaginal p.** Syn.: *Douglas's p.* (or *space*, or *caldesac*), *fossa recto-uterina*. A p. of peritoneum situated between the rectum behind and the cervix uteri and the upper part of the vagina in front, and bounded laterally by the recto-uterine folds. **rectovesical p.** Syn.: *excavatio recto-vesicalis*. A p. formed by the reflection of the peritoneum from the lower part of the rectum to the base and upper part of the bladder in the male. **utero-vesical p.**, **vesico-uterine p.** Syn.: *excavatio vesico-uterina*. The peritoneal p. situated between the uterus and the bladder; bounded laterally by the vesico-

co-uterine folds of the peritoneum. [Fr., *poché*, pocket.]

poultice (powl'tis). A soft, mushlike mass, to be applied (usually hot) to a part. See *cataplasma*. [Perhaps from *Gr.*, *pol-tos*, porridge.]

pound (pownd). See *table of weights and measures*, in *appendix*, pages 941, 942, 943. [Lat., *pondus*, weight.]

poundal (pown'del). A unit of force; the force exerted in causing a mass weighing a pound to move at the uniform rate of a foot a second. **foot p.** The force exerted in causing a mass weighing a pound to move through the space of a foot in a second.

Poupart's ligament. Syn.: *crural arch*, *femoral arch*. The lower condensed portion of the aponeurosis of the external oblique muscle of the abdomen.

pow'der. In pharmacy, a substance or combination of substances in solid, dry form such as will pass through a sieve of a certain degree of fineness; also a single dose of such p. The U. S. Ph. recognizes five degrees of fineness of p's, designated, according to the number of meshes to the square inch, as No. 20 or coarse p., No. 40 or moderately coarse p., No. 50 or moderately fine p., No. 60 or fine p., and No. 80 or very fine p.

aromatic, p. See *pulvis aromaticus*, under *pulvis*. **Dover's p.** See *pulvis ipecacuanhae et opii*, under *pulvis*. **Goa p.** See *chrysarobin*. **gray p.** See *hydrargyrum cum creta*, under *hydrargyrum*. **Gregory's p.** See under *Gregory*.

James's p. See under *James*. **p. of algaroth**. An old name still used occasionally for oxychlorid of antimony. **p. of bayberry**. Consists of bayberry bark, ginger, capsicum, and cloves [N. F.]. **p. blower**. See *insufflator*. **Seidlitz p.** See *pulvis effervescentis compositus*, under *pulvis*. **Tully's p.** See under *Tully*. [Fr., *poudre*, powder.]

practice (prak'tis). 1. The carrying on or exercise of a profession or occupation. 2. To exercise the profession of medicine. [Lat., *practicare*, to perform, do, act, execute, carry on.]

Prague maneuver. A method of engaging the child's head in the pelvis in breech presentations. Traction is made upon the head (occiput posterior) by means of the operator's fingers hooked over the shoulders while the child's body is carried upward and forward on to the mother's abdomen. [*Prague*, capital of Bohemia and seat of a celebrated obstetric clinic.]

Pray's test letters for astigmatism. T. letters composed of stripes running at different angles.

pre-. A prefix from the Lat., *prae*, used in combination to signify before, in front of.

preataxic (pre-at-aks'ik). Preceding ataxia.

precipitant (pre-sip'it-ant). An agent causing precipitation.

precipitate (pre-sip'it-ät). 1. See *festination*. 2. In chemistry, the act or process of forming a precipitate. **fractional p.** See *fractional precipitation*, under *pre-*

- cipitation*. A method used to precipitate the various proteins of animal tissues by successive portions of ammonium sulphate or some other salt. **partial p.** See *partial precipitation*, under *precipitation*. **white p.** A term usually applied to ammoniated mercury, a white p. from a solution of mercuric chlorid by ammonia. [Lat., *precipitare*, to precipitate.]
- precipitation** (pre-sip-it-'shun). In chemistry, the act or process of forming a precipitate. **fractional p.** A method of separating a mixture of fatty acids by adding a small portion of the acetate of a heavy metal, which combines with a relatively large proportion of the less volatile acid and with a small proportion of the more volatile acid. These metallic compounds, being insoluble, are separated by filtration. The filtrate contains a higher charge of the more volatile acid, and by a repetition of the process may be entirely freed from the less volatile acid. **partial p.** A method of separating a mixture of two soluble salts by precipitating a portion of each and decomposing the precipitate, which is redissolved and again in part precipitated.
- precipitins** (pre-sip-'it-ins). The specific antibodies produced in an animal body by the injection of foreign proteins. The blood of an animal thus treated has the power of precipitating solutions of the protein used owing to the presence of a precipitin.
- precipitogen** (pre-sip-'it-o-jen). The substance capable of producing a precipitin when injected into an animal in repeated doses.
- precipitoid** (pre-sip-'it-oyd). A precipitin deprived of its active or precipitating group of atoms.
- precipitum** (pre-sip-'it-um). See *precipitate*.
- precordium** (pre-kor-'de-um). The area on the surface of the chest overlying the heart. See *diaphragm*. [Lat., *prae*, before, + *cordis*, heart.]
- pre'cox**. Precocious.
- precuneus** (pre-ku-'ne-us). A quadrilateral surface on the mesial aspect of the cerebral hemisphere, bounded anteriorly by the termination of the callosomarginal fissure and posteriorly by the internal parieto-occipital fissure. [Lat., *prae*, before, + *cuneus*, wedge.]
- prediastole** (pre-di-'as-to-le). The period in the heart's cycle immediately preceding the diastole.
- predigested** (pre-di-jest-'ed). Partially digested (as by the action of a digestive ferment) before being taken into the stomach.
- predisponent** (pre-dis-po-'nent). Predisposing.
- predisposition** (pre-dis-po-sish'un). An abnormal liability to respond to irritants or stimuli so that the development of morbid conditions is favored. It may be inherited or acquired. [Lat., *prae*, before, + *disponere*, to dispose.]
- pregnancy** (preg-'nan-se). Syn.: *gestation*, *gravidity*, *fetation*. The condition of bearing with child. The state of a female after conception until the birth of the child. **abdominal p.** A form of ectopic p. in which the fetus develops in the abdominal cavity. **cervical p.** The development of the impregnated ovum in the cervical canal. **cornual p.** Development of the ovum in one of the horns of the uterus. **ectopic p.**, **extra-uterine p.** Development of the impregnated ovum outside the cavity of the uterus. **hydatid p.** The growth of a hydatid mole in the uterine cavity. **interstitial p.** Development of the ovum in the fallopian tube during its course in the uterine wall. **ovarian p.** Development of an impregnated ovum in a graafian follicle of the ovary. **phantom p.** Syn.: *false p.* A phantom tumor simulating p. **secondary abdominal p.** The continued growth of a fertilized ovum in the abdominal cavity after it has been expelled from a ruptured fallopian tube. **spurious p.** Syn.: *pseudocyesis*. A condition in which many or all of the objective signs of p. are present, even enlargement of the abdomen, and yet the patient is not pregnant. **tubal p.** Development of a fertilized ovum in the fallopian tube. **twin p.** Syn.: *bigeminal p.* The simultaneous development of two impregnated ova. **uterine p.**, **normal p.** Development of the ovum in the uterus. [Lat., *praegnans*, with child.]
- prehensile** (pre-hen-'sil). Adapted for grasping or seizing. [Lat., *prehendere*, to lay hold of.]
- premolars** (pre-mo-'lars). The teeth in front of the molars or grinders, called, in man, bicuspids.
- premycotic** (pre-mi-'ko-'sik). The stage of a mycotic disease prior to the maturity of the fungus.
- preparation** (prep-ar-a-'shun). Anything prepared or made ready; specifically, a pharmaceutical compound, also a prepared anatomical or pathological specimen.
- preparator**, **preparative** (pre-par-'a-tor, pre-par-'a-tiv). See *amboceptor*.
- prepuce** (pre-'pūs). The foreskin; the retractable prolongation of the skin of the penis downward upon the glans. It extends to a varying distance upon or beyond the glans, and is lined with mucous membrane. [Lat., *praeputium*, from *prae*, before, + *putium*, from Gr., *posthion*, penis.]
- preputial** (pre-pu-'shal). Pertaining to the prepuce. **p. glands.** Syn.: *Tyson's glands*. See under *gland*.
- preputium** (pre-pu-'she-um). See *prepuce*.
- p. clitoridis**. The prepuce of the clitoris, formed by the two layers into which the labia pudendi minora split at their junction anteriorly.
- presbyope** (pres-'be-ōp). A person affected with presbyopia.
- presbyophrenia** (pres-be-o-'fren'e-ah). Senile dementia. [Gr., *presbys*, an old man, + *phren*, the mind.]
- presbyopia** (pres-be-o-'pe-ah). Old sight; farsightedness. The condition of de-

creased accommodation in persons who have passed middle life, due to the increasing rigidity of the crystalline lens. [Gr., *presbys*, an old man, + *ops*, the eye.]

presbyopic (pres-be-o'pik). Affected with presbyopia.

prescription (pre-skrip'shun). A direction given by a medical practitioner, especially, a written specification of a remedy or remedies to be employed in a particular case, with directions for their use. A typical p. consists of four parts as follows: the superscription, the sign; the inscription, consisting of an enumeration of substances to be used and the amount of each; the subscription, or directions to the pharmacist, such as "misc-e"; and the signature, or directions for the patient, to be written on the label by the pharmacist.

presegmenter (pre-seg-men'ter). The full-grown malarial parasite just before segmentation.

presenile (pre-se'nil). Pertaining to impending or incipient senility. [Lat., *prae*, before, + *senilis*, old.]

presentation (pre-sen-ta'shun). The part of the fetus that is in advance at the beginning of labor. Normally, either of the two poles, vertex or breech, presents in the os uteri; abnormally the following parts present; the arm, brow, cord, ear, face, foot, knee, pelvis, shoulder. Normal p's and most abnormal p's are longitudinal, the long axis of the child's body corresponding with the long axis of the mother's body. Occasionally the p. is transverse. [Lat., *praesentio*.]

presphygmie (pre-sfig'mik). Of or pertaining to the presystolic interval, preceding the pulse wave. [Lat., *prae*, before, + Gr., *sphygmos*, the pulse.]

pres'sure. Force or stress exerted on a body, as by weight, tension, etc. **after p.** A sense of p. which, for a brief interval, succeeds the removal of a weight from a portion of the body. **arterial p.** The blood p. in the arteries. See *venous p.*

atmospheric p. The p. of the weight of the atmosphere, stated usually in terms of the height of a column of mercury which it will support. The average pressure at the sea level is equal to 760 mm. of mercury. **blood p.** The p. exerted by the blood against the walls of the blood vessels. **diastolic p.** Arterial pressure during diastole. **intracranial p.** The p. in the cranial cavity in the space occupied by the cerebrospinal liquid. **intra-ocular p.** The normal tension of the interior of the eyeball, equal to 25 mm. of mercury. **intrapulmonic p.** The p. within the lungs; in the lung alveoli. **intrathoracic p.** The p. within the thorax, but outside the lungs, therefore in the pleural cavity. **intraventricular p.** The p. within the ventricle during the different phases of systole and diastole. **negative p.** P. less than that of the atmosphere. **partial p.** In a mixture of gases, such as the atmosphere, the p. exerted by each of the constituents. taken

separately. **p.**, **diastolic**, how to determine; see in *appendix*, page 908. **p. of inspiration.** The p. of the air in the respiratory tract during inspiration. **systolic p.** Arterial pressure at the time of systole. **p.**, **systolic**, how to determine; see in *appendix*, page 908. **venous p.** The blood p. in the veins. [Lat., *pressio*, *pressura*.]

pre'ter. Prefix from the Lat., *praeter*, past, by, beyond, above, more than; e. g., *preternatural*, more than natural.

preventive (pre-ven'tiv). Protective; prophylactic. **p. substance.** See *amboceptor*.

priapism (pri'ap-ism). Prolonged or frequently recurrent erection of the penis, with or without venereal desire or pain. [Gr., *priapismus*.]

prick'ly heat. Another name for *miliaria rubra*.

primary (pri'ma-re). 1. Original; first in order of time, development, interdependence, importance, etc.; central or median. 2. Of organic compounds in chemistry, having a substituted radicle in a hydrocarbon attached to a carbon atom which itself is connected with only one other (carbon atom). The term is also applied to amines and amides, phosphines, stibines, and arsines, in which but one atom of the hydrogen in ammonia, phosphoreted hydrogen, etc., is replaced by a radicle. **p. secondary.** Partly p. and partly secondary (said of those dihydric alcohols in which one of the molecules of hydroxyl is united to a terminal carbon atom and the other is united to an intermediate carbon atom which is itself connected with two other carbon atoms).

p. tertiary. Partly p. and partly tertiary (said of those dihydric alcohols in which one of the substituted molecules of hydroxyl is united to a terminal carbon atom, and the other is combined with an intermediate carbon atom which is itself connected directly with three other carbon atoms). [Lat., *primarius*, from *primus*, first.]

primipara (pri-mip'ah-rah). A woman who has given birth or is giving birth to her first child. [Lat., *primus*, first, + *parere*, to bring forth.]

primitive (prim'it-iv). Original, not derived. [Lat., *primitivus*, from *primus*, first.]

primordial (pri-mor'de-al). Earliest developed; first in the order of existence or appearance. [Lat., *primus*, first, + *ordo*, order.]

principle (prin'sip-l). 1. A general truth; a general or widely prevailing law. 2. An element or ultimate constituent, especially that one on which the distinctive characters of anything depend. **active p.** That constituent of any substance to which its characteristic energy or properties are due. **astrigent p.** An old name for gallic acid. **digestive p.** Any one of the principles which cause digestion of food. **proximate p.** An old name given to the foodstuffs of which foods are composed, namely, water, salts,

proteins, fats, and carbohydrates. [Lat., *principium*.]

Prinos (pri'nos). 1. Winterberry. 2. Of the U. S. Ph., 1880, the bark of *Ilex verticillata*. [Gr., *prinos*.]

prism. A solid the sides of which are parallelograms and its cross section a figure of three or more sides. **abducting p's**. P's to be held before the eyes with their bases directed toward the nose, so as to cause divergence of the eyes. **adducting p's**. P's to be held before the eyes with the bases outward, so as to adduct or converge the eyes in ophthalmological examinations. **enamel p's**. See *enamel fibers*, under *fiber*. The solid hexagonal p's, about 0.015 millimeter in diameter, which, standing side by side, form the enamel of the teeth. **Nicol's p.** A p. made by cutting a crystal of Iceland spar diagonally and cementing the pieces with Canada balsam; used to effect the polarization of light. **sarcous p.** See *sarcous elements*, under *sarcous*. [Gr., *prisma*, from *prizein*, to saw.]

p. r. n. Abbreviation for Lat., *pro re nata*, signifying, as occasion requires.

pro-. Combining form of Lat., *pro*, before, from Gr., *pro*, *pros*, before; signifying before, in front of, for, on behalf of, instead of, in return for, on account of, etc.

proagglutinoid (pro-ag-glu'tin-oid). A substance having a stronger affinity for the agglutigen than an agglutinin and which prevents agglutination in strongly agglutinating serum by preventing the combination of agglutinin with agglutigen. [Gr., *pro*, before, + *agglutinoid*.]

pro'bang. A long flexible sound for passage into the larynx or esophagus.

sponge p. A long whalebone rod with a sponge attached to its end, intended for passing into the esophagus and pushing impacted bodies into the stomach.

probe. A slender rod or wire with a smooth bulbous extremity used for exploring a wound or a sinus or cavity of the body. **Nélaton's p.** See *Nélaton*. [Lat., *proba*, a proof, from *probare*, to try, to test.]

problin (pro-bi'tin). A proprietary pill, containing phenolphthalein and sodium oleate.

procerus (pro-se'rus). See *table of muscles*, under *muscle*.

process (pro'ses). 1. The course of occurrence, development, or modification. 2. See *method*. 3. In anatomy, an outgrowth or projecting part. **acromion p.** See *acromion*. **alveolar p.** The thick curved border of either maxilla that contains the alveoli. **ameboid p.** See *pseudopodium*. **anterior clinoid p.** A small rounded knob on the posterior margin of the inner portion of the ala minor of the sphenoid bone, below and to the inner side of the optic foramen. **apex p., apical p.** The single large p. that usually extends from the apex of the pyramidal cells of the cortex cerebri toward the free surface of the cortex.

articular p'es. The surfaces by means of which adjacent vertebrae articulate with each other. **axis cylinder p., axis p.** The single large unbranched p. arising from a multipolar nerve cell which, after continuing for a short distance and becoming surrounded by a myelinic sheath, is continued as a medullated nerve. **basilar p.** The narrow part of the base of the occipital bone, in front of the foramen magnum, which articulates with the sphenoid bone. **ciliary p'es**. Folds or thickenings of the ciliary body arranged radially around its anterior margin, interdigitating with p'es of the suspensory ligament of the lens. **conoid p.** The tuberosity of the clavicle. **coracoid p.** A thick, strong, hooklike p. which rises from the upper border of the scapula above the glenoid cavity. **coronoid p.** 1. A pointed p. which extends vertically upward from the front portion of the anterior margin of the ramus of the mandible. 2. A sharp-curved p. with its upper concave surface lined with cartilage, which projects forward from the upper extremity of the ulna, and is received into the coronoid fossa of the humerus during flexion. **costiform p'es**. The transverse p'es of the lumbar vertebrae to which no ribs are attached; supposed to be rudimentary ribs. **ethmoidal p.** A small projection on the upper surface of the inferior turbinate bone which articulates with the uncinata p. of the ethmoid bone. **external angular p.** A p. at the inferior outer angle of the orbital arch which articulates with the malar bone. **external auditory p.** An irregular curved p. which forms the circumference of the external auditory meatus (except its upper portion) and to which the cartilage of the ear is attached. **external nasal p. (of the embryo)**. A small plate which forms the outer portion of the nostril. **external orbital p.** See *external angular p.* **falciform p.** 1. A prolongation forward and upward of the great sacrosciatic ligament along the ramus of the ischium to the arched upper margin of which is attached the obturator fascia. 2. The curved outer margin of the saphenous opening. **frontal p.** 1. Of the malar bone, the upward projecting portion, which articulates with the frontal and the sphenoid bones. 2. See *nasal p. of the maxilla*. **hamular p.** A hooklike p. on the lower extremity of the internal pterygoid plate of the sphenoid bone around which the tendon of the tensor palati muscle plays. **inferior vermiform p.** The projection on the lower surface of the cerebellum occupying the fossa between the hemispheres. **internal angular p.** A p. forming the inner end of the orbital arch of the frontal bone. **jugular p.** Syn.: *eminentia jugularis*. A projection on the occipital bone, external to the condyle, which fills in the angle between the mastoid and petrous p'es of the temporal bone. **lacrimal p. of the in-**

ferior turbinated bone. A p. on the attached margin of the inferior turbinated bone which articulates with the lacrimal bone and aids in forming the lacrimal canal. **lenticular p. of the incus.** The extremity of a small tubercle covered with cartilage, on the long p. of the incus, which forms the articulation with the capitulum of the stapes. **long p. of the incus.** A p. which descends almost vertically from the body of the incus and at its end is bent inward to terminate in the lenticular p. **long p. of the malleus.** The long p. of the hammer, which passes from the junction of the handle and neck of the malleus anteriorly into the glaserian fissure. **malar p.** A thick triangular p. of the superior maxilla, above the first molar tooth, which articulates with the malar bone. **mamillary p'es of a lumbar vertebra.** Tubercles which project backward from the upper margins of the superior articular p'es. **mastoid p. (of the temporal bone).** A conical or nipple-shaped p., varying in size and form, situated at the back part of the temporal bone. It contains the mastoid cells and maxillary antrum. **maxillary p.** 1. A folded part of the extended portion of the attached margin of the inferior turbinated bone, behind the lacrimal process. It articulates with the maxilla and forms a portion of the inner wall of the antrum. 2. The broad lower portion of the malar bone which articulates with the superior maxilla. 3. A thin p. of the vertical plate of the palate bone which overlies the opening of the antrum. **middle clinoid p.** An anomalous p. the posterior angle of the tuberculum sellae. **muscular p'es of a vertebra.** The p'es which serve for the attachment of muscles. **muscular p. of the arytenoid cartilage.** The short round angle of the cartilage which projects backward and outward. **nasal p.** 1. The nasal p. of the superior maxilla. 2. The lacrimal p. of the inferior turbinated bone. **nasal p. of the frontal bone.** See *nasal spine*. **nasal p. of the palate bone.** The maxillary p. of the palate bone. **nasal p. of the maxilla.** A slender and tapering p. of the superior maxilla. **odontoid p.** A large, blunt, toothlike p. on the body of the axis, which extends upward to articulate with the atlas. **orbital p.** A somewhat pyramidal p. which ascends from the anterior margin of the vertical plate of the palate bone. **palatal p'es (of the embryo).** Those p'es of the superior maxillary plates which, advancing inward from the two sides, meet and coalesce to form the bony palate. **posterior clinoid p.** The posterior lateral angle of the dorsum sellae. **postglenoid p.** A small p. on the temporal bone just behind the articular cavity of the glenoid fossa. **protoplasmic p'es.** 1. The branching p'es of the nerve cells, in contradistinction to the unbranched axis cylinder p. 2. P'es of protoplasm, especially those thrown out by leukocytes

when subjected to heat. **pterygoid p'es.** P'es of the sphenoid bone which project downward and forward between the body and the alae majores. They divide into the external and internal pterygoid plates. **reticular p.** A peculiar network seen in a cross section of the spinal cord, especially in the cervical region. **short p. of the incus.** A short p. which passes back horizontally from the body of the incus, to be connected ligamentously with the posterior wall of the tympanum. **short p. of the malleus.** A projection of bone at the junction of the handle of the malleus with the neck, which pushes the membrana tympani in front of it and points toward the auditory canal. **sphenoidal p.** A p. which passes upward, inward, and backward from the posterior portion of the vertical plate of the palate bone. **spinous p. of a vertebra.** The p. which projects backward in the middle line from the posterior portion of the arch of a vertebra. **spinous p. of the sphenoid bone.** A sharp p. which projects downward from the lower posterior portion of the great wing of the sphenoid bone. **styloid p.** A long, slender p., especially the styloid p. of the temporal bone. **styloid p. of the fibula.** 1. A blunt conical elevation at the upper posterior portion of the head of the fibula. 2. The pointed extremity of the external malleolus. **styloid p. of the radius.** A stout, pyramidal p. which projects downward from the outer part of the inferior end of the radius. **styloid p. of the temporal bone.** A long, tapering p. of the petrous portion of the temporal bone, in front of the digastric fossa, passing down and outward. **styloid p. of the ulna.** A short cylindrical eminence on the inner and back part of the rounded head of the inferior extremity of the ulna. **superior maxillary p.** In the embryo, a prominence on the side of the face in which are developed the maxilla and the malar bone. **superior vermiform p.** The most anterior of the lobes on the upper surface of the cerebellum. **temporal p.** The posterior angle of the malar bone which articulates with the extremity of the zygoma. **transverse p'es.** Two p'es, one on each side of a vertebra, which project outward from the arch, at the junction of the pedicle with the lamina. **unciform p.** 1. A long thin lamina of bone which descends from the orbital plate of the ethmoid to articulate with the inferior turbinated. 2. A flat hooklike p. on the palmar surface of the unciform bone. **uncinate p.** 1. A long, thin lamina of bone which descends from the orbital plate of the ethmoid to articulate with the inferior turbinated. 2. A flat hooklike p. on the palmar surface of the unciform bone. **ungual p'es.** The outer extremities of the terminal phalanges. **vaginal p.** 1. The lower margin of the tympanic plate of the temporal bone, which descends to surround the front of the base of the styloid p.

2. Of the sphenoid bone, see *processus ad vomerem*. **vermiform processes**. *inferior v. p.* The projection on the lower surface of the cerebellum occupying the fossa between the hemispheres. *superior v. p.* The most anterior of the lobes on the upper surface of the cerebellum. It lies in front of and partly beneath the quadrate lobe, near the median line, posterior to the lingula, and anterior to the monticulus. **vocal p.** (of the arytenoid cartilage). The anterior pointed angle which projects horizontally forward, and to which the true vocal cord is attached. **zygomatic p.** That portion of the zygoma which belongs to the temporal bone. [Lat., *processus*, from *pro*, before, + *cedere*, to go.]
- processus** (pro-cēs'sus). See *process*. **p. abdominalis ossis ilii**. The broad expanded portion of the ilium. **p. ad vomerem ossis sphenoidel**. The portion of the internal pterygoid plate of the ethmoid bone which articulates with the vomer. **p. alares**. The diverging processes into which the anterior portion of the crista galli sometimes divides. **p. alati**. The alae of the sphenoid bone. **p. anonymus**. A p. on the lower surface of the occipital bone above the anterior condylar foramen. **p. cochleariformis**. The spoon-shaped tympanic end of the septum tubae, on the anterior part of the inner wall of the tympanic cavity; the sulcus over which the tendon of the tensor tympani plays. **p. dentalis**. 1. The alveolar process of either maxilla. 2. The malar p. of the superior maxilla. **p. dentatus**. See *odontoid process*, under *process*. **p. e cerebello ad cerebrum**, **p. e cerebello ad corpora gemina**. See *superior cerebellar peduncles*, under *peduncles*. **p. e cerebello ad medullam**. See *inferior cerebellar peduncles*, under *peduncles*. **p. e cerebello ad pontem**. See *middle cerebellar peduncles*, under *peduncles*. **p. e cerebello ad testes**. See *superior cerebellar peduncles*, under *peduncles*. **p. gracilis mallei**. The long process of the malleus. **p. hamatus**. See *uncinate process*, under *process*. **p. medullaris**. A band of fibers that connects the two corpora quadrigemina upon the same side and then extends to the corresponding corpus striatum. **p. membraniformis**. The choroid plexus of the fourth ventricle. **p. musculares**. The muscular processes of the arytenoid cartilages or of a vertebra. **p. spinosi spurii**. The prominences on the posterior surface of the sacrum in the median line which represent the spinous processes of the true vertebrae. **p. spurii durae matris**. The prolongations of the dura which cover the roots of nerves and become continuous with the neurilemma. **p. transversi accessorii vertebrarum lumbalium**. Small tubercles beneath the mamillary processes of the lumbar vertebrae. **p. transversi spurii**. A row of tubercles on the posterior surface of the sacrum, near the margin, which represent the transverse processes of the true vertebrae. **p. trochlearis**. An osseous eminence over which tendons glide. **p. tubarius**. A process on the inner surface of the internal pterygoid plate of the sphenoid bone upon which the extremity of the cartilaginous portion of the eustachian tube rests. **p. vaginalis peritonei**. The peritoneal pouch of the fetus which passes down into the scrotum in advance of the testicle and, after being shut off from the general peritoneum, becomes the tunica vaginalis testis. **p. ventriculi lateralis descendens**. The descending cornu of the lateral ventricle. **p. vermiformis**. Syn.: *cauda cerebelli*. See *vermiform processes*, under *process*. [Lat.]
- prochoresis** (pro-ko-rē'sis). The propulsion of partly digested food through the pylorus into the intestinal tract. [Gr., *prochoresis*, advance.]
- procidencia** (pro-sid-en'she-ah). Prolapse, protrusion; generally used to signify p. uteri; complete prolapse of the uterus. [Lat., *procidere*, to fall down.]
- proctagra** (prok'tag-rah). Pain in and about the anus. [Gr., *proktos*, the anus, + *agra*, seizure.]
- proctalgia** (prok-tal'je-ah). Neuralgia of the anus or the rectum. [Gr., *proktos*, the anus, + *algos*, pain.]
- proctectomy** (prok-tek'to-me). Excision of a portion of the anus. [Gr., *proktos*, the anus, + *ektēmein*, to excise.]
- proctitis** (prok-ti'tis). Inflammation of the anus or the rectum. [Gr., *proktos*, the anus, + *itis*, inflammation.]
- procto-, proct-**. Combining form of Gr. *proktos*, the anus, also rectum.
- proctocoele** (prok'to-sēl). A tumor formed by a prolapse of the rectum into the vagina. **vaginal p.** A vaginal hernia of the rectum. [Gr., *proktos*, the rectum, + *kele*, a tumor.]
- proctoclysis** (prok-tok'lis-is). The injection of large amounts of liquids into the rectum. [Gr., *proktos*, the rectum, + *klysis*, a drenching.]
- proctodeum** (prok-to-de'um). That portion of the anal invagination of the epiblast which is distinct from the primitive hypoblastic part of the hindgut, but subsequently becomes united with it to form the lower portion of the intestine. [Gr., *proktos*, the anus, + *odaios*, on the way.]
- proctologist** (prok-to'l'o-jist). One who practises the treatment of diseases of the rectum. [Gr., *proktos*, anus, + *logos*, treatise.]
- proctoscope** (prok'to-skōp). A tubular speculum, provided with an obturator to facilitate its introduction for examining the sigmoid flexure. [Gr., *proktos*, the rectum, + *skopein*, to examine.]
- proctotomy** (prok-to'to-me). Incision of the anus or rectum. [Gr., *proktos*, the anus, + *temnein*, to cut.]
- procumbent** (pro-kum'bent). Lying on the face; prostrate. [Lat., *procumbens*, leaning forward.]
- prodigiosin** (pro-dij-e-o'sin). The red

pigment produced by the *Bacillus prodigiosus*.

prodroma (pro'dro-mah). Correct form of *prodromata*.

prodromal (pro-dro'mal). Pertaining to a prodrome, premonitory.

prodromata (pro-dro'mat-ah). Premonitory symptoms. Incorrect form of prodromes.

prodrome (pro'drôm). A forerunner or premonitory symptom of a disease. [Gr., *pro*, before, + *dromos*, a running.]

production (pro-duk'shun). The act of producing; also the thing produced.

proencephalia (pro-en-sef-al'e-ah). Exencephalia affecting the frontofacial region. [Gr., *pro*, in front, + *encephalia*.]

proencephalus (pro-en-sef'al-us). Having a cranial fissure in the frontal region. [Gr., *pro*, in front, + *ekkephalos*, brain.]

professional (pro-fesh'on-al). Pertaining to a profession or calling; specifically, to the medical profession; consistent with the etiquette recognized in that profession. **p. neurosis**. A neurosis, caused by the subject's vocation. [Lat., *profiteri*, to profess.]

Profe'ta's law. That the non-syphilitic child of a syphilitic mother is immune against the acquired disease. [*Giuseppe Profeta*, Italian dermatologist, living.]

profundus (pro-fund'us). Deep, deep-seated; as a n. in the f., *profunda*, a deep-seated artery or vein. [Lat., *pro*, before, + *fundus*, bottom.]

proglottis (pro-glot'tis). The fully developed generative segment of a *Taenia*. [Gr., *pro*, before, + *glottis*, the glottis.]

prognathous (prog'na-thus). Having the jaws projecting forward; having the gnathic index above 103°, or the profile angle below 89°, or Camper's facial angle below 80°. [Lat., *prognathus*, from Gr., *pro*, before, + *gnathos*, the jaw.]

prognosis (prog-no'sis). An opinion, expressed in advance, of the probable course, modifications, and termination of a disease. [Gr., *prognosis*, from *prognoskein*, to know beforehand.]

prognostic (prog-nos'tik). Serving for the formation of a prognosis.

prognosticate (prog-nos'ti-kât). To make a prognosis; to declare as a prognosis.

progression (pro-gres'shun). The process of moving in any given direction. **backward p.** Inability to walk except backward. [Lat., *progressio*, from *progredi*, to step forth.]

projection (pro-jek'shun). 1. A process or prominence; any projecting appendage. 2. Any act or process of throwing forward. In the physiology of the senses this term is used to denote the fact that we refer some of the sensations to the point in the body at which the stimulus acts, or to some point outside of the body at which the stimulus originates. The most perfect projection is made with visual sensations; each point on the retina, when stimulated, gives a sensation which is projected to the exterior along the secondary axis, passing through the point stimulated and the nodal point of the

eye. 3. In psycho-analysis the process by which mental conflict is displaced upon an object of the external world, usually in distorted form. **binocular p.** The projection into space of the two somewhat dissimilar images formed by the object upon the two retinas. Each projection gives the conception of solidity. **p. of visual impressions**. The fact that stimulations of the retina are referred to the exterior to the source of the visual stimulus. Each stimulus is projected along the secondary axis from the point stimulated to the nodal point of the eye. **uniocular p.** The faculty of projecting into space the impressions made by objects upon the retina of one eye. [Lat., *projicere*, to throw before.]

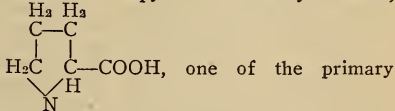

prolapse, prolapsus (pro'laps, pro-laps', pro-lap'sus). A falling down of a part. Often used to signify falling of the womb, a sagging down of the uterus so that the os uteri presents at the orifice of the vagina or a part of the uterus or, it may be, the entire organ is outside the body. In the latter case the condition is spoken of as *procidencia*. See also *procidencia* and *ptosis*. [Lat., *prolapsus*, from *prolabi*, to fall down.]

proliferating (pro-lif'er-a-ting). Undergoing proliferation; of cells, dividing to form daughter cells.

proliferation (pro-lif'er-a'shun). The condition of being proliferous; growth by the multiplication of component elements (see *cell genesis*); in pathology, the continuous growth of cells in abnormal amount or direction. [Lat., *proles*, offspring, + *ferre*, to bear.]

proliferous (pro-lif'er-us). Bearing progeny; exuberant, reproducing.

pro'lin. A. pyrrolidin-carboxylic acid,

hydrolytic decomposition products of the proteins. Soluble in water and alcohol.

prolyl-glycin-anhydrid (pro'lil-gli'sin-an-hi'drid). A compound, containing prolin and glycin combined together, as a ring compound, which has been isolated from the products of the tryptic digestion of gelatin.

prominence (prom'in-enz). 1. An elevation or projection on the surface of a part or organ. 2. A projection or tooth between two incisions in the margin of a part or organ. 3. The state of being prominent or elevated. See *protuberance*.

genital p. An elevation on the ventral wall of the cloaca in the embryo from which the generative organs are developed. **mental p.** A triangular elevation on the inferior maxilla continuous below with the symphysis. [Lat., *prominentia*, from *pro*, before, + *minere*, to jut out.]

prominentia (prom-i-nen'te-ah). See *prominence*. **p. canalis facialis** (or *Fallopii*). A slight elevation in the wall

- of the tympanum, above and behind the fenestra ovalis, marking the course of the aqueduct of Fallopius. **p. spiralis**. An elevation upon the outer wall of the cochlear duct containing a small capillary.
- promontory** (prom'on-to-re). 1. A prominence or protuberance. 2. A slight prominence on the inner wall of the tympanic cavity, below the fenestra ovalis.
- double p., false p.** An unusual prominence of the anterior aspect of the junction of the first and second sacral vertebrae.
- p. of the sacrum, sacrovertebral p.** The projection forward formed by the last lumbar vertebra and the upper part of the sacrum. See also *sacrovertebral angle*, under *angle*. [Lat., *promontorium*, from *pro*, before, + *mons, montis*, a mountain.]
- promycelium** (pro-mi-se'le-um). A short-lived and imperfectly developed mycelium bearing sporidia which germinate and form a true mycelium.
- pronation** (pro-na'shun). The action of placing the limb with the palmar surface downward. [Lat., *pronatio*, from *prone*, to bend forward.]
- pronator** (pro-na'tor). See *table of muscles*, under *muscle*.
- prone**. Lying with the face directed downward; of the forearm, having the lower end of the radius turned around that of the ulna so that, in ordinary postures, the palm looks downward. [Lat., *pronus*, bent downward.]
- pronephron** (pro'nef-ron). The primitive kidney. [Gr., *pro*, before, + *nephros*, kidney.]
- pronograde** (pro'no-gräd). Carrying the body in a horizontal position. [Lat., *pronus*, bent downward, + *gradi*, to walk.]
- pronucleus** (pro-nu'kle-us). A primordial or germinal nucleus. **female p.** A small body, lying at first near the periphery, just beneath the extrusion globules, and representing the portion of the nucleus of the ovum (see *germinal vesicle*, under *vesicle*) which remains after the extrusion of the polar globules. It sinks to or toward the center of the vitellus, where it usually remains, and must fuse with the male p. before segmentation can take place. A system of radiating lines runs out from it into the yolk, forming a starlike figure, the so-called female aster. **male p.** The p. into which the head or some other portion of a spermatozoid is transformed after it has imbedded itself in the vitellus and become enlarged, clear, and spheroidal. It finally unites with the female p., and, like the latter, is surrounded by radiating lines forming the so-called male aster. [Lat., *pro*, before, + *nucleus*, from *nux*, nut.]
- proof marks**. See in *appendix*, page 944.
- propane** (pro'pan). A gaseous hydrocarbon, $\text{CH}_3\text{—CH}_2\text{—CH}_3$, of the paraffin series.
- propenylate** (pro-pen'il-ät). A compound of a metal or ether with propenyl (glyceryl) alcohol.
- propepsin** (pro-pep'sin). See *pepsinogen*.
- propeptone** (pro-pep'tön). An old term for the intermediate stages (proteoses) in the formation of peptones.
- prophetin** (prof'et-in). A bitter glucosid found in elaterium and in cucumis fruits.
- prophylactic** (pro-fil-ak'tik). Preventive of disease or intended to prevent it.
- prophylaxis** (pro-fi-laks'is). Prevention of disease. [Gr., *prophylax*, an advanced guard.]
- propionic** (pro-pe-on'ik). Derived from propyl. **p. acid**. See under *acid*. **p. aldehyd.** Propylic aldehyd, $\text{CH}_3\text{.CH}_2\text{.CHO}$, bearing the same relation to propyl alcohol and propionic acid that ordinary aldehyd bears to ethyl alcohol and acetic acid; a mobile liquid of a peculiar suffocating odor. **p. anhydrid.** The compound $\text{CH}_3\text{CH}_2\text{CO}$.
- propionitril** (pro-pe-on-i'nil). Ethyl cyanid, $\text{CH}_3\text{.CH}_2\text{CN}$.
- propionoxyl** (pro-pe-on-oks'il). See *propionyl*.
- propionyl** (pro-pe'on-il). The univalent acid radicle, $\text{CH}_3\text{.CH}_2\text{CO}$, of propionic acid.
- proplex** (pro'pleks). The choroid plexus of the lateral ventricles.
- propolis** (pro'po-lis). An aromatic, somewhat viscous matter used by bees at the base of the hive as a sort of mortar to stop cracks. It seems to be slightly anodyne and soporific. [Gr., *pro*, before, + *polis*, a city.]
- proprietary** (pro-pri'et-a-re). Of medicinal preparations, constituting the property of an individual or corporation that, by copyrighting the name or otherwise, has, or professes to have, the exclusive right to produce and vend them. See also *patent medicine*, under *medicine*. [Lat., *propriarius*.]
- proprioceptive** (pro'pre-o-sep'tiv). Designation applied to sensory impulses arising in sense-organs or receptors in the deep tissues which are acted upon by internal stimuli; opposed to exteroceptive.
- propulsion** (pro-pul'shun). A tendency to fall forward; specifically, the peculiar gait of paralysis agitans. [Lat., *pro*, before, + *pulsus*, from *pellere*, to drive.]
- propyl** (pro'pil). The univalent radicle, C_3H_7 , of p. alcohol. It occurs in two isomeric forms: normal p., $\text{CH}_3\text{.CH}_2\text{.CH}_2$, and isop', or secondary p., $(\text{CH}_3)_2\text{:CH}$.
- propylamin** (pro-pil-am'in). A primary amin of p., $(\text{C}_3\text{H}_7)\text{NH}_2$. Two isomeric forms are known: one, $\text{CH}_3\text{.CH}_2\text{.CH}_2\text{.NH}_2$, derived from normal propyl and occurring as a liquid boiling at 49°C . and having an ammoniacal odor; the other, CH_3
> CH—NH_2 , derived from isopropyl CH_3 (isopropylamin), a mobile liquid boiling at 32°C . and having the odor of herring brine.
- propylene** (pro'pil-ën). A colorless gas, $\text{CH}_3\text{—CH=CH}_2$, of alliaceous odor.
- propylic** (pro-pil'ik). Of, belonging to, containing, or derived from propyl.
- pro re nata**. As occasion requires. [Lat.]
- proscoplex** (pro-sko'leks). The scolex of a *Taenia* prior to its encysted stage in its

host. [Gr., *pro*, before, + *skolex*, a worm.]

prosector (pro-sek'tor). One who makes dissections for anatomical instruction. [Lat., *pro*, before, + *secare*, to cut.]

prosencephalon (pros-en-sef'al-on). That portion of the embryonic brain which includes the cerebral hemispheres with their lateral ventricles, the corpora striata, the olfactory lobes, the corpus callosum, and the fornix. [Gr., *pros*, before, + *egkephalos*, the brain.]

pro'sogaster. Syn.: *foregut*. The anterior portion of the primitive alimentary canal of the embryo, comprising the rudiments of the pharynx, the esophagus, the stomach, and the duodenum. [Gr., *pros*, before, + *gaster*, stomach.]

prostalgia (pros-tat-al'je-ah). Pain in the prostate. [Prostate, + *algos*, pain.]

prostate. A gland surrounding the first portion of the male urethra. It is made up of a fibrous capsule lined with a layer of unstriated muscular fibers which also divide the organ into a number of compartments containing small vesicles whose ducts empty into the excretory ducts. It is about $1\frac{1}{2}$ in. wide, $\frac{1}{4}$ in. long, and 1. in. deep, and is pierced by the urethra and nearer the anterior than the posterior surface by the common seminal ducts. It resembles a flattened cone with its base resting on the bladder and its apex directed upward, with the posterior surface on the rectum and the anterior just below the symphysis pubis. It is divided into three lobes—two lateral which unite in front of the urethra and are separated behind by a notch in its base, and a middle which lies between the lateral against the neck of the bladder. [Gr., *prostates*, from *pro*, before, + *istanai*, to set.]

prostatectomy (pros-tat-ek'to-me). Removal of a portion of the prostate. [Gr., *prostates*, the prostate, + *ektome*, a cutting out.]

prostatitis (pros-tat-i'tis). Inflammation of the prostate. [Gr., *prostates*, prostate, + *itis*, inflammation.]

prostatorrhoea (pros'ta-tor-re'ah). A catarrhal discharge from the prostate. [Gr., *prostates*, prostate, + *roia*, to flow.]

prosthesis (pros'the-sis). 1. That branch of surgery which deals especially with the supplying of deficiencies by artificial means. 2. An appliance for supplying a part that is lacking. [Gr., *prosthesis*, from *prostithenai*, to put on.]

prosthetic group. Some definite chemical group, which combines with a protein and gives it a certain characteristic property, e. g., the nucleic acids in the p. g. of the nucleoproteids.

prostitution (pros-te-tu'shun). Practice of indiscriminate lewdness for hire. [Lat., *prostitutus*, placed or set forth openly.]

prostration (pros-tra'shun). A condition of extreme weakness. **nervous p.** See *neurasthenia*. [Lat., *prostratio*.]

protagens (pro'tag-ons). Complex substances, present in the nerve and brain cells, which contain phosphoric acid, fatty acids, cholin, and glycerin in com-

ination, also a carbohydrate. They are soluble in warm alcohol and ether. [Gr., *protos*, first, + *agein*, to lead.]

protalbumose (pro-tal'bu-mos). An albumen isolated from the crude mixture of albumoses, which is soluble in water and in salt solutions.

protamins (pro-tam'ins). Proteins found in semen; not sperma. Upon hydrolytic cleavage they yield a large percentage of the hexone bases. They have strong basic properties and contain as high as 25 per cent. of nitrogen.

pro'tan. A proprietary preparation of tannin nucleoproteid, containing 50 per cent. of tannin. Used as an astringent in diarrhea.

protanopia (pro-tan-o'pe-ah). The name proposed by von Kries for a variety of color blindness formerly known as red blindness. The name is intended to convey the belief that one of the three fundamental color perceptions or color-perceiving substances of the retina is lacking. [Gr., *protos*, first, + *anopia*.]

protargol (pro-tar'gol). A protein compound of silver; an antiseptic and anti-blennorrhagic.

protectin (pro-tek'tin). A substance that develops in serum on standing which protects red blood corpuscles against hemolysis. It may be increased by heating to 60° C., be taken up by non-sensitized cells and extracted by various fat solvents such as ether.

protective (pro-tek'tiv). Affording protection against disease or injury; as a n., a waterproof material to be placed in direct contact with a wound in antiseptic treatment. [Lat., *protectere*, to protect.]

proteid. See *protein*.

proteidid (pro'te-id-in). An immunizing bacteriolytic substance, produced within an organism by a bacteriolytic enzyme uniting with an albuminous substance of any kind.

protein (pro'te-in). 1. A substance or principle formerly supposed to be the base of the proteids and an essential constituent of foods. 2. A peculiar body, closely allied to alkali albumin and fibrin, and analogous to if not identical with casein, to which Mulder assigns the formula $C_{15}H_{25}N_4O_{15}$. **circulating p.** See under *separate head*. **p. diet, high;** see in *appendix*, page 913. **p. diet, low;** see in *appendix*, pages 913, 914. [Gr., *protos*, first.]

proteolysis (pro'te-ol'i-sis). Ferment conversion of proteins into peptones. [Protein, + Gr., *lysis*, solution.]

proteolytic. Adj. form of *proteolysis*.

proteose (pro'te-os). An intermediary product between protein and peptone.

Proteosoma (pro'te-o-so'mah). A syn. for *Plasmodium*. **P. grassii**. A microzoön present in the blood of birds, which is believed to take part in causing a condition in them which resembles malarial fever. [Gr., *Proteus*, a many-formed deity, + *soma*, body.]

Proteus (pro'te-us). A genus of the *Schizomycetes*. **P. vulgaris**. See *Bacil-*

- lus proteus*, under *table of bacilli*. [Gr., *Proteus*, a sea god who changed his form at will.]
- prothrombin** (pro-throm'bin). The antecedent or inactive form of thrombin (fibrin ferment) occurring in the circulating blood.
- prothymia** (pro-thim'e-ah). Alertness of mind. [Gr., *pro*, before, + *thymos*, mind.]
- protista** (pro-tis'tah). Lowest forms of animal and plant life according to Haeckel.
- proto-**. Prefix from Gr., *protos*, first.
- protoblast** (pro'to-blast). 1. A mass having the attributes of a cell, but with no investing membrane; also a cell exclusive of the cell wall. 2. Of Villot, the nucleus of the ovum. [Gr., *protos*, first, + *blastos*, sprout.]
- prochlorid** (pro-to-klo'rid). That one of a series of chlorids which contains the smallest relative amount of chlorine. Analogous compounds of bromine, iodine, oxygen, and sulphur are called respectively the protobromid, proto-iodid (or protiodid), protoxid, and protosulphid. This nomenclature is almost obsolete.
- protocol** (pro'to-kol). A detailed account of experiments or operations performed, of the medical history, etc.
- pro'tocompound**. A compound of the kind described under *prochlorid*.
- procurarin** (pro'to-ku-rah'rin). An alkaloid obtained from "pot" or "jar" curare, having an action similar to that of curarin.
- pro'togaster**. Syn.: *foregut*. See *prosgaster*. [Gr., *protos*, first, + *gaster*, belly.]
- proto-iodid** (pro-to-i'o-did). See under *prochlorid*.
- protileukocytes** (pro-to-lu'ko-sits). The minute primary lymph cells (or corpuscles) found in the red marrow of bones and in the spleen. They resemble the smallest lymph corpuscles. [Gr., *protos*, first, + *leukos*, white, + *kytos*, a cell.]
- protonephron** (pro-to-nef'ron). The embryonal excretory organ. [Gr., *protos*, first, + *nephros*, kidney.]
- protoneuron** (pro-to-nu'ron). The first sensory neuron. [Gr., *protos*, first, + *neuron*, nerve.]
- protonitrate** (pro-to-ni'trat). That one of two or more nitrates which contains the smallest amount of the nitric acid radicle.
- protons** (pro'tons). Products formed from the protamins by the action of tyrosin or by mild acid hydrolysis.
- protopathic** (pro-to-path'ik). Idiopathic; primary. **p. sensation**. See *sensation*. [Gr., *protos*, first, + *pathos*, disease.]
- protopin** (pro'to-pin). A base, $C_{20}H_{18}NO_5$, found in opium. It has no therapeutic value.
- protoplasm** (pro'to-plazm). The complex, jellylike, proteid, living substance of animals and plants which, in its undifferentiated stage, is capable of nutrition, growth, movement, and reproduction. The term was introduced independently by Purkinje (1839 to 1840) and von Mohl (1844). [Gr., *protoplasma*, from *protos*, first, + *plasma*, anything molded.]
- protosoma** (pro-to-so'mah). A large, dark, oval spot formed in the middle of the transparent area of the blastoderm by a multiplication of the epiblastic and mesoblastic cells at that point, representing the primitive stage in the development of the embryo. [Gr., *protos*, first, + *soma*, body.]
- protosulphate** (pro-to-sul'fat). Of two or more sulphates, that which contains the smallest amount of the sulphuric acid radicle.
- prototoxid** (pro-to-toks'oid). The toxin derivative having a higher affinity for antitoxin than the toxin itself. [Gr., *protos*, first, + *toxine*.]
- protoxid**. See under *prochlorid*.
- Protozoa** (pro-to-zo'ah). The lowest subdivision or phylum of the animal kingdom, consisting always of a single cell. It includes many species pathogenic to man. [Gr., *protos*, first, + *zoon*, animal.]
- protozoölogy**. The science which treats of the *Protozoa*.
- protuberance** (pro-tu'ber-ans). A knoblike projection. **cerebral p.** A p. formed by the upper of the two flexures of the cerebral extremity of the embryo. **external occipital p.** Syn.: *occipital eminence*. A p. on the outer surface of the tabular portion of the occipital bone, near its center. **frontal p.** The lower p. of the two formed by the flexures of the cerebral extremity of the embryo. **inferior maxillary p's.** Two p's, one on each side, formed by a division of the first pharyngeal arch of the embryo, being the rudiments of the lower jaw. **internal occipital p.** A p. on the inner surface of the tabular portion of the occipital bone. **lateral frontal p's.** Two p's formed one on each side of the frontal p. of the embryo. [Lat., *pro*, before, + *tuberare*, to swell.]
- protyl** (pro'til). An old name for methyl, so called as being the first of the series of univalent hydrocarbons. [Gr., *protos*, first, + *yle*, matter.]
- protylic** (pro-til'ik). Containing or derived from protyl; methylic.
- proximad**. Toward the proximal aspect. [Lat., *proximus*, nearest.]
- proximal** (proks'im-al). Nearer or nearest (to the body); situated nearest a center, axis, or point of attachment. See *distal*. [Lat., *proximus*, nearest.]
- pro'zone**. In constructing a curve indicating the action of an antibody at different dilutions, it sometimes happens that stronger solutions have less effect than more dilute ones. The region of the curve in which this inhibition of the action is brought about by an excess of the active substance is called the "prozone" or "zone of inhibition."
- prunum**. Of the U. S. Ph., the partly dried ripe fruit of *Prunus domestica*. It is used as a laxative.

Pru'nus. A genus of rosaceous trees or shrubs. **infusum pruni virginianae** (or **virginiani**). An infusion of the bark of *P. serotina* [U. S. Ph.]. **P. Amygdalus.** See *Amygdalus communis*, under *amygdalus*. **P. domestica.** Common garden plum. The var. *juliana* is the principal if not the exclusive source of the prunes of the U. S. Ph. The pulp is an ingredient of the confectio sennae. **P. laurocerasus.** Common laurel; a species forming the section *Laurocerasus*, a native of countries bordering on the Black Sea, and cultivated in Europe. All parts of the tree contain hydrocyanic acid. The fresh leaves, the laurocerasi folia of the Br. Ph., contain also an essential oil resembling oil of bitter almonds, which is used in flavoring. **P. serotina.** 1. The black cherry tree of North America. The bark (*p. virginiana* of the U. S. Ph.) has an astringent, aromatic, bitter taste; it contains amygdalin, and when macerated in water emits the odor of hydrocyanic acid. It is tonic and sedative, and is much used in the United States as a pectoral. 2. *P. semperflorens*. **P. virginiana.** The chokecherry; a small tree or shrub growing in the United States, bearing a small astringent fruit. 3. Of the U. S. Ph. (Br. Ph., *pruni virginianae cortex*), the bark of *P. serotina* (1st def.). **syrupus pruni virginianae** [U. S. Ph., Br. Ph.]. A syrup made from the bark of *P. serotina* (1st def.). **tinctura pruni virginianae** [Br. Ph.]. A tincture of the bark of *P. serotina* (1st def.). [Gr., *prounne*.]

prurigo (pru-ri'go). A disease characterized by a persistent abundant eruption of recurring pale inflammatory papules, which itch intensely and result accordingly in an exaggerated condition of scratched skin. [Lat., *prurire*, to itch.]

pruritus (pru-ri'tus). The sensation of itching. [Lat., *prurire*, to itch.]

Prussak's fibers. Two short fibers from the malleus to the notch of Rivinus.

prussian blue. Ferriferrocyanid, $\text{Fe}[\text{FeCy}_6]_3$. A blue pigment, insoluble in water; used in the identification of urea and nitrogens in chemical compounds.

prussiate (prus'se-ät). See *cyanid*.

prus'sic. Pertaining to prussian blue.

p. acid. See *hydrocyanic acid*, under *acid*.

psalterium (sal-te're-um). See *omasum*. [Gr., *psalterion*, harp., from *psan*, to touch, to rub.]

psammo- (sam'mo). Prefix from Gr., *psammos*, sand.

psammocarcinoma (sam'o-kar-sin-o'mah). See *carcinoma psammosum*, under *carcinoma*. [Gr., *psammos*, sand, + *carcinoma*.]

psammoma (sam-mo'mah). A variety of small endotheliomatous tumor found in the cerebral meninges, containing granular calcareous concretions. [Gr., *psammos*, sand, + *oma*, tumor.]

psammous (sam'mus). Sandy. [Gr., *psammos*, sand.]

pseudacousma (su-dak-ooz'mah). A variety of autophony in which the pitch and timbre of the voice are heard falsely in one or both of the speaker's own ears. [Gr., *pseudes*, false, + *akousma*, a thing heard.]

pseudangioidosis (su-dan-je-o'sis). The formation of blood vessels in adventitious tissue. [Gr., *pseudes*, false, + *aggeion*, vessel.]

pseudangium (su-dan'je-um). An adventitious vessel. [Gr., *pseudes*, false, + *aggeion*, vessel.]

pseudang'sten. See *brucia*.

pseudargomorphosis (su'dar-go-mor-f'o-sis). The formation of false membrane. [Gr., *pseudes*, false, + *argos*, white, + *morphe*, form.]

pseudelmint (su-del'minth). A structure resembling an endoparasitic worm. [Gr., *pseudes*, false, + *elmis*, worm.]

pseudencephalia (su-den-sef-al'e-ah).

That malformation of the head in which a vascular tumor replaces the brain. [Gr., *pseudes*, false, + *egkephalos*, the brain.]

pseudesthesia (su-des-the'ze-ah). Sensation or perception without a corresponding impression or object. [Gr., *pseudes*, false, + *aisthesis*, feeling.]

pseudinogenesis (su-din-o-jen'es-is). An abnormal formation of fibers in the tissues. [Gr., *pseudes*, false, + *is*, a fiber, + *genesis*, generation.]

pseudo- (su'do). Combining form of Gr., *pseudes*, lying, false; used as a prefix to signify a close relationship rather than actual spuriousness. It is frequently contracted to *pseud-*.

pseudo-aconin (su'do-ak-on-in). An amorphous decomposition product of pseudo-aconitin, $\text{C}_{27}\text{H}_{41}\text{NO}_8$.

pseudo-aconitin (su'do-ak-on-it-in). Also called nepalin, or nepaul, or British aconitin ($\text{C}_{26}\text{H}_{40}\text{NO}_{12}$). A yellowish, amorphous powder, obtained from *Aconitum ferox*. It acts qualitatively like aconitin, but is even more poisonous.

pseudo-angina (su'do-an'jin-ah). Cardiac pain resembling that of true angina pectoris, but without the sense of impending death. [Gr., *pseudes*, false, + *angina*.]

pseudo-angioma (su'do-an-je-o'mah). A temporary angioma occasionally formed during the reparative process in an amputation stump. **urethral p.** Of Savage, a urethral caruncle. [Gr., *pseudes*, false, + *aggeion*, a vessel, + *oma*, tumor.]

pseudocarcinoma (su'do-kar-se-no'mah). A benign tumor resembling carcinoma. [Gr., *pseudes*, false, + *carcinoma*.]

pseudocephalocele (su-do-sef'al-o-sel). An apparent cephalocele that is a traumatic hematoma. [Gr., *pseudes*, false, + *kephale*, head, + *kele*, cyst.]

pseudoceratogenesis (su'do-ser'at-o-jen'es-is). The formation of adventitious horny tissue. [Gr., *pseudes*, false, + *keras*, a horn, + *genesis*, generation.]

pseudocholera (su'do-kol'er-ah). Having symptoms similar to cholera.

pseudocodein (su-do-ko'de-in). The com-

- pound, $C_{18}H_{21}NO_3$, obtained as a by-product in the preparation of apocodein. Said to act medicinally like codein, but with less energy.
- pseudocolloid** (su-do-kol'oyd). A mucoid material which is sometimes present in ovarian cysts.
- pseudocurarin** (su-do-ku-rah'rin). A substance found in *Nerium oleander*; apparently impure oleandrin.
- pseudocyc'esis**. See *spurious pregnancy*, under *pregnancy*.
- pseudocylindroid** (su''do-sil-in'droyd). A fragment of mucin in the shape of a band and resembling a cylindroid which is sometimes seen in the urine. [Gr., *pseudes*, false, + *cylindroid*.]
- pseudodiphtheria** (su''do-dif-the're-ah). A fibrinous pharyngeal and tonsillar exudation caused by bacteria other than the diphtheria bacillus. **p'diphtheria bacillus**. See under *Bacillus*. [Gr., *pseudes*, false, + *diphtheria*.]
- pseudo-ephedrin** (su-do-ef'ed-rin). An alkaloid having a weakly atropinlike action, obtained from *Ephedra vulgaris*.
- pseudogonococcus** (su''do-gon-o-kok'us). A name given to certain organisms resembling the gonococcus in appearance. [Gr., *pseudes*, false, + *gonococcus*.]
- pseudohermaphroditism** (su''do-her-ma'f'rod-it-ism). A congenital imperfection of the external genitalia and of the body form in which the person exhibits the appearance of the other sex, but there is not a set of ovaries or of testes in the same individual as there is in true hermaphroditism. **p. femininus**. A female with a large clitoris resembling the penis and with the labia majora hypertrophied so as to resemble the scrotum, the person thus resembling a male. **p. masculinus**. A male with a small penis and perineal hypospadias, and a scrotum without testes, the condition resembling the vulva. [Gr., *pseudes*, false, + *hermaphroditism*.]
- pseudohyoscyamin** (su-do-hi-os-i'am-in). An alkaloid, $C_{17}H_{23}NO_3$, found in *Duboisia myoporoides*, having a feeble atropinlike action.
- pseudohypertrophy** (su''do-hi-per'trof-e). A degenerative increase in the size of a part. [Gr., *pseudes*, false, + *hypertrophy*.]
- pseudojervin** (su-do-jer'vin). An alkaloid, $C_{20}H_{25}NO_7$, found in certain species of *Veratrum* and *Sabadilla*.
- pseudoleukemia** (su''do-lu-ke'me-ah). A disease characterized by enlargement of groups of glands, or of the entire glandular system, but without the leukemic picture. See *Hodgkin's disease*. [Gr., *pseudes*, false, + *leukos*, white, + *aima*, blood.]
- pseudoleukocythemia** (su''do-lu-ko-si-the'me-ah). See *lymphadenoma*.
- pseudoligament** (su''do-lig'am-ent). Inflammatory bands of adhesion. [Gr., *pseudes*, false, + Lat., *ligamentum*, ligament.]
- pseudomembrane** (su''do-mem'brän). See *croupous* and *fibrinopurulent membrane*, under *membrane*. [Gr., *pseudes*, false, + *membrane*.]
- Pseudomonas** (su-dom'o-nas). A genus of the family *Bacteriaceae*, consisting of straight, motile rods with monotrichous or amphitrichous flagella. **P. aëru-ginosa**. The bacillus of green pus. [Gr., *pseudes*, false, + *monas*, monad.]
- pseudomorphin** (su-do-mor'fin). See *oxydimorphin*.
- pseudomorphosis** (su''do-mor-fo'sis). An abnormal structure or formation; a generic term for tumors, deformities, and malformations. [Gr., *pseudes*, false, + *morphe*, form.]
- pseudomucin** (su''do-mu'sin). A mucoid material found in ovarian cysts. The prosthetic group of this protein is glucosamin.
- pseudomyxoma** (su-do-miks-o'ma). A tumor containing colloid material that has escaped from a ruptured mucous cyst.
- p. peritonei**. A plastic peritonitis produced by the contact of the gelatinous material from a ruptured ovarian cyst. [Gr., *pseudes*, false, + *myxoma*.]
- pseudonarcissin** (su-do-nar-sis'in). An alkaloid isolated from the bulb of *Narcissus pseudonarcissus*.
- pseudonucleins** (su-do-nu'kle-ins). Syn.: *paranucleins*. Insoluble substances, formed in the peptic digestion of certain nucleo-albumins or phosphogluco-proteids.
- pseudoparasite** (su-do-par'is-it). A facultative parasite. [Gr., *pseudes*, false, + *parasite*.]
- pseudopelletierin** (su''do-pel-le-ti'er-in). **Pseudopunicin**. An alkaloid, $C_6H_{15}NO + 2H_2O$, obtained from the root bark of *Punica granatum*. It is not a teniafuge.
- pseudoplasm** (su''do-plazm). See *neoplasm*.
- pseudopodium** (su-do-po'de-um). Syn.: *ameboid process*. One of the contractile projections of protoplasm from the surface of an ameboid cell. [Gr., *pseudes*, false, + *pous*, *pod*-, the foot.]
- pseudopus** (su-do-pus'). A liquid having the appearance, but not the composition, of pus. [Gr., *pseudes*, false, + *pus*.]
- pseudoreaction** (su''do-re-ak'shun). A slight clumping reaction, present naturally in a heavy culture of the typhoid bacillus, which may be mistaken for the true agglutination reaction. [Gr., *pseudes*, false, + *reaction*.]
- pseudosclerosis** (su''do-skle-ro'sis). A general neurosis simulating multiple degeneration of the brain and spinal cord. [Gr., *pseudes*, false, + *sklerosis*, hardening.]
- pseudoscope** (su''do-sköp). An instrument, consisting of two rectangular prisms placed with their hypotenuses inward or outward in front of the eyes, which causes projecting surfaces to be seen depressed, and *vice versa*, that is to say, causes an inversion of the projection. [Gr., *pseudes*, false, + *skopein*, to observe.]
- pseudostrophanthin** (su-do-stro-fan'thin). A name applied by Feist to the strophanthin.

- thin obtained from *Strophanthus kombé*, which Arnaud had named methylouabain and which is now called strophanthin, (C₂₁H₄₈O₁₂).
- pseudoxanthin** (su-do-zan'thin). The compound, C₄H₈N₂O, found in muscle extract.
- psilosis** (si-lo'sis). Falling out of the hair. [Gr., *psilosis*, a stripping.]
- psilothron** (sil-o'thron). A depilatory. [Gr.]
- psaos** (so'as). A muscle in the region of the loins. See *table of muscles*, under *muscle*. [Gr., *psao*, loin.]
- psoriasis** (so-rí'as-is). A common chronic inflammatory disease characterized by the occurrence of sharply circumscribed roundish patches of all sizes up to several inches in diameter which have an infiltrated base and are covered with whitish abundant scales. The varieties, according to the shape of the lesions, are: **p. carcinata** (or **annulata**), **p. guttata**, **p. gyrata**, **p. nummularis**, **p. punctata**. The disease usually begins on the extensor surfaces, just below the knees or the elbows, as small reddish papules, slightly elevated and infiltrated and capped with whitish adherent scales. [Gr., *psoriasis*, from *psora*, the itch.]
- porosperm** (so'ros-perm). A name given to myxosporidia found in Teleostean fish. [Gr., *psora*, scabies, + *sperma*, a seed.]
- porospermia** (so-ro-sper'me-ah). The spore of a porosperm. Rainey's corpuscle.
- porospermial**, **porospermic** (so-ro-sper'me-al, so-ro-sper'mik). Of the nature of a porosperm.
- psychalgia** (si-kal'je-ah). Melancholia; so called because supposed to be a mental pain. [Gr., *psyche*, the soul, + *algos*, pain.]
- psychasthenia** (si-kas-the'ne-ah). Weakness of will and of mind. A term utilized by Janet to describe a psychoneurosis in which fears and obsessions are prominent symptoms. [Gr., *psyche*, the soul, + *astheneia*, weakness.]
- psychasthenic** (si-kas-then'ik). Pertaining to psychical asthenia.
- psychentonia** (si-ken-to'ne-ah). Mental overexertion. [Gr., *psyche*, the soul, + *entonia*, tension.]
- psychiatrist** (sik-i'at-ríst). See *alienist*. [Gr., *psyche*, the soul, + *iatros*, a physician.]
- psychiatry** (si-ke'at-re). The pathology, treatment, etc., of mental diseases. [Gr., *psyche*, the soul, + *iatreia*, healing.]
- psychic**, **psychical** (si'kik, si'kik-al). Pertaining to the mind. [Gr., *psychikos*.]
- psycho-analysis** (si''ko-an-al'is-is). A detailed analysis of mental mechanisms, chiefly of the unconscious. [Gr., *psyche*, soul, mind, + *analysis*.]
- psycho-analyst** (si''ko-an-al-íst). One who practices psycho-analysis.
- psychogenetic** (si''ko-ge-net'ic). Of psychic or purely mental origin, as contrasted with somatogenetic, or of bodily origin. [Gr., *psyche*, mind, + *genesis*, origin.]
- psychology** (si-kol'o-je). The science of mental functioning. [Gr., *psyche*, the soul, + *logos*, understanding.]
- psychometry** (si-kom'et-re). The measurement of the sense relations of mental phenomena. Gr., *psyche*, the soul, + *metron*, a measure.]
- psychoneurosis** (si''ko-nu-ro'sis). Nervous disease or disturbance of purely mental origin; chiefly hysterias and compulsive states. (Gr., *psyche*, mind, + *neuron*, nerve.)
- psychopathia** (si-ko-path'yah). See *psychopathy*. **p. sexualis**. Morbid sexual perversion.
- psychopathy** (si-kop'ath-e). A purely psychical disorder. [Gr., *psyche*, the soul, + *pathos*, disease.]
- psy''chophysical law**. See under *law*.
- psychophysics** (si-ko-fiz'iks). The science of the relations of physical nerve stimuli to the psychical sensations they produce. [Gr., *psyche*, the soul, + *physikos*, physical.]
- psychosensory** (si-ko-sen'so-re). Sensory perception as conscious.
- psychosis** (si-ko'sis). Any mental disease. **polyneuritic p.** Korsakoff's disease. **Korsakoff's p.** Polyneuritis with impairment of memory and a tendency to unfounded reminiscences. [Gr., *psyche*, the soul.]
- psychotherapeutics** (si''ko-ther-a-pu'tiks). Treatment of disease by such agencies as suggestion and hypnotism. [Gr., *psyche*, soul, + *therapeia*, treatment.]
- psychrometer** (si-krom'et-er). An instrument for measuring tension of aqueous vapor in the atmosphere. [Gr., *psychros*, cold, + *metron*, a measure.]
- psychrophilic** (si-kro-fil'ik). Preferring cold, as with bacteria that grow best at from 15° to 20° C. [Gr., *psychros*, cold, + *philein*, to love.]
- psychrophobia** (si-kro-fo'be-ah). Morbid dread of cold, especially of cold water. [Gr., *psychros*, cold, + *phobos*, fear.]
- Pt.** Chemical symbol for the element *platinum*.
- Ptelea** (te'le-ah). 1. Of the ancients, the elm. 2. Shrub trefoil. **P. trifoliata**. Hop-tree; a species growing in Canada and the United States. The root bark is used as a tonic. [Gr., *ptelea*.]
- pterion** (te're-on). The region, near the anterior part of the temporal fossa, where the great wing of the sphenoid, temporal, parietal, and frontal bones meet. [Gr., *pteron*, a wing, a feather.]
- Pterocarpus** (ter-o-kar'pus). A genus of plants. **pterocarpi lignum**. See *Santalum rubrum*. **P. marsupium**. East Indian kino tree. It furnishes the best medicinal kino [Br. Ph.]. **P. santalinus**. Red sandal (or saunders) wood; a species closely related to *P. marsupium*, indigenous to southern India and the Philippines. It yields a sort of dragon's blood, and the astringent red sandal wood. [Gr., *pteron*, a wing, + *karpos*, fruit.]

pterygium (te-rij'e-um). 1. One of the alae nasi. 2. A triangular patch of thickened conjunctiva the apex of which encroaches on the cornea; generally occupying the palpebral fissure and most frequently growing from the nasal side into the cornea, between the epithelium and the substantia propria. **p. carnosum**. A thick, vascular, musclelike p. (2d def.); developed from a p. tenue by inflammation, or forming the initial stage of a p. tenue. **p. of the neck**. A congenital malformation of the skin of the neck consisting of a prominent winglike fold that may extend from the mastoid process to the acromion. **p. tenue**. A thin grayish p. (2d def.). **p. unguis**. A prolongation of the epidermis over the nail, covering the lunula. [Gr., *pterygion*, dim. of *pteryx*, a wing.]

pterygoid (ter'ig-oyd). Pertaining to or resembling a wing; as a n., the p. bone, also the internal p. plate. [Gr., *pterygoides*, from *pteryx*, a wing, + *eidōs*, resemblance.]

pterygoides (ter-i-goid'e-us). See *table of muscles*, under *muscle*.

pterygopharyngeus (ter''i-go-fa-rin-je'-us). See *table of muscles*, under *muscle*.

ptisan (tiz'an). An infusion or decoction designed as a medicinal beverage. [Gr., *ptisane*.]

ptomain (to'ma-in). An organic chemical compound basic in character, formed by the action of bacteria on nitrogenous matter and resembling the vegetable alkaloids. They all contain nitrogen and some contain oxygen, the former corresponding to the fixed alkaloids and the latter to the volatile alkaloids. Some p's are poisonous; others are physiologically inert. They include such non-poisonous substances as methylamin, CH_3NH_2 , and many poisonous materials, such as neurin, $\text{C}_5\text{H}_{13}\text{NO}$. [Gr., *ptomā*, a corpse.]

ptomatin (tom'at-in). A more correct form of *ptomain*.

ptosis (to'sis). A falling, a prolapse; commonly used in the sense of blepharoptosis. **p. iridis**. See *hernia iridis*, under *hernia*. **p. oculi**. See *exophthalmia*. **p. palpebrae**, **p. palpebrarum**. See *blepharoptosis*. [Gr., *ptōsis*, fall.]

ptyalin (ti'al-in). Syn.: *animal diastase*, *salivary ferment*. A soluble amylolytic ferment in saliva. It converts starch to sugar (maltose) by a process of hydrolysis. German writers apply the name to the amylolytic ferment of the pancreatic juice, which is similar in action, but much more powerful. [Gr., *ptyalon*, saliva.]

ptyalism (ti'al-ism). See *salivation*.

ptyalocoele (ti-al'o-sēl). A cyst due to obstruction or rupture of a salivary duct. [Gr., *ptyalon*, saliva, + *kele*, tumor.]

puberty (pu'ber-te). 1. The sum of the changes in the generative organs and in the general system which accompany the assumption of functional activity by the former. 2. The age at which those changes take place. [Lat., *pubertas*.]

pubes (pu'bēs). 1. The hair about the genitals in the adult. 2. The hairy re-

gion of the hypogastrium overlying the os pubis. 3. See *os pubis*, under *os*. [Lat., *pubes*, down, hair.]

pu'bic. Pertaining to the pubes or to the os pubis.

pubio-, pubo-. Combining form of Lat., *pubes*, *pubis*, the pubic hair.

pubiotomy (pu-be-ot'o-me). The operation of sawing through the pubic bone on either side of the symphysis, to facilitate delivery in cases of contracted pelvis. [Lat., *pubes*, the pubes, + Gr., *temnein*, to cut.]

pubendum (pu-den'dum). Used most frequently in the pl., *pubenda*. The external genitals (especially those of a woman, including the vulva and the mons Veneris). **p. muliebre**. The p. of a woman. [Lat., *pubere*, to be ashamed.]

puericulture (pu'er-e-kul'tūr). Systematic cultivation of the physical development and vigor of children, especially (before their birth) by measures addressed to the mother. [Lat., *puer*, a child, + *cultivare*, to cultivate.]

puerpera (pu-er'pe-rah). A woman who is or has recently been in labor. [Lat., fem. of *puerperus*, parturient, from *puer*, a child, + *parere*, to bring forth.]

puerperal (pu-er'pe-ral). Pertaining to or caused by childbirth; of a woman, in the lying-in state. [Lat., *puerperalis*.]

puerperium (pu-er-pe're-um). The condition or period of lying-in. [Lat., *puerperus*, parturient.]

puff-ball. See *Lycoperdon*.

Pulegium (pu-le'je-um). 1. Pennyroyal. 2. A section of the genus *Meniha*. [Lat., *pulex*, a flea, + *agere*, to drive.]

Pu'lex. A genus of insects belonging to the class *Hexapoda* and the family *Pulicidae*, including the true fleas. **P. brasiliensis**. See *P. cheopis*. **P. cheopis**. Syn. for *Xenopsylla cheopis*. The rat flea of the tropics; it is the chief transmitter of bubonic plague from rats to men. **P. hominis**. See *P. irritans*. **P. irritans**. The common flea parasitic on man, but also infesting dogs, cats, rats, and other animals. **P. penetrans**. Syn. for *Dermatophilus p.* The chigoe, jigger, sand flea; a minute insect resembling in its general anatomy the common flea, but much smaller, found in various regions of Central and South America, in the West Indies, and in parts of the southern United States. The impregnated female, which is of about half the size of the male, burrows under the skin of the feet, especially about the toe nails, and there lays its eggs. Irritation with more or less inflammation supervenes unless the parasite is removed, and sometimes ulceration, gangrene, loss of the toes, or tetanus may result. **P. philippinensis**. See *P. cheopis*. **P. vulgaris**. See *P. irritans*. [Lat., *pulex*, flea.]

pul'mo-. Combining form of Lat., *pulmo*, *pulmonis*, lung.

pulmometer (pul-mom'et-er). A measure for air capacity of the lung. [Lat., *pulmo*, lung, + Gr., *metron*, measure.]

pul'monary. Pertaining to the lungs.

pul'motor. An instrument for inducing artificial respiration; oxygen under pressure is forced into the lungs, and when they are distended, sucks out the air. This is continued until natural respiration is restored. [*Pulmo*, lung, + *motus*, to move.]

pulp. Any soft, usually juicy, slight cohesive mass, of either animal or vegetable nature. **dental p.** See *p. of tooth*. **fruit p.** The *p.* in which the seeds of certain fruit are embedded. **p. canal.** That portion of the *p.* cavity traversing the root of a tooth from the apical foramen to the bottom of the pulp cavity. **p. of tooth.** The nucleated cells of the primary basis of the tooth contained in the hollow of the tooth or the pulp cavity. **splenic p.** The soft substance of the spleen. [Lat., *pulpa*.]

pulpitis (pul-pi'tis). Inflammation of the dental pulp.

pul'ke. A beverage made in Mexico from the juice of agave.

pul'satile. Attended with pulsations or throbs. [Lat., *pulsare*, to beat.]

Pulsatilla (pul-sat-il'lah). 1. A section of the genus *Anemone*, also *Anemone p.* 2. The flowering herb of *Anemone p.*, of *Anemone pratensis*, or of *Anemone patens* [U. S. Ph., 1890]. [Lat., *pulsare*, to beat.]

pulsation (pul-sa'shun). 1. A beating or throbbing. 2. A pulse beat.

pulse. A beat or throb; the movement of an artery or other vessel, especially the perceptible impulse communicated to the contained column of blood by each beat of the heart. **abdominal p.** A *p.* observed in emaciated persons over the line of the abdominal aorta. **abrupt p.** A quick *p.* **anacrotic p.** A *p.* showing a secondary wave on the ascending limb of the main wave. **arachnoid p.** An old term for a small and tremulous *p.* **ardent p.** A *p.* which seems to strike the finger at a single point. **capillary p.** A condition of alternating redness and pallor of a tissue sometimes observed (most readily in the matrices beneath the nails), attributed to a pulsatile flow of blood through the capillaries instead of the usual steady current; occurring chiefly where an excessive cardiac impulse coincides with general arterial narrowing. **caprizant p.** A peculiar irregularity of the *p.* in which a weak pulsation is succeeded by a strong one. **catacrotic p.** A *p.* that shows one or more secondary waves on the descending limb of the main wave. **collapsing p.** A *p.* that strikes the finger feebly and abruptly and subsides suddenly and completely. **complex p.** A *p.* continuously alternating from hard and rapid to soft and slow. **compressible p.** See *soft p.* **Corrigan's p.** Syn.: *locomotive water hammer p.* See under *Corrigan*. **critical p.** See *incident p.* **dicrotal p.**, **dicrotic p.**, **dicrotous p.** A *p.* in which the finger feels two distinct blows, one lighter than the other, for each cardiac systole. It occurs when the heart pulsations are strong and the arterial

tension is diminished; it is due to the emphasizing, under these conditions, of the dicrotic wave. **dropped-beat p.** See *intermittent p.* **clastic p.** A full *p.* that presents an elastic feeling to the finger. **entopical p.** A pulsation sometimes observed normally in the arteries of the retina while the heart is beating rapidly after bodily exercise. **epigastric p.** See *abdominal p.* **febrile p.** A *p.* indicative of fever. When the fever comes on it is usually full and bounding, becoming weak and feeble when the fever subsides or when prostration ensues. **filiform p.** See *thready p.* **formicant p.** Of the pulse, small, weak, and frequent, producing a tingling sensation under the finger. **full p.** A *p.* in which the artery has a distended, tense feeling; observed in sthenic inflammation. **gaseous p.**, **hemorrhagic p.** The full, soft, and readily compressible *p.* of a distended artery which has lost its tone. **hard p.** A *p.* in which, owing to changes in the arterial wall or to vascular distention, a sensation of hardness is imparted to the finger. **hepatic p.** An expansion sometimes observed in the veins of the liver at each ventricular contraction, due to an impulse propagated from the heart back along the vena cava inferior. **incident p.** A *p.* in which the second beat is weaker than the first, and the third than the fourth, a stroke then following which is as strong as the first. **infrequent p.** As frequently used, a slow *p.*; properly, a *p.* due not to lengthened but to less frequent systolic contractions. **intermittent p.** One in which the rhythm is broken by the absence of one or more beats. **irregular p.** A *p.* in which the beats are unequal in frequency and in force, or in which the force is the same but the rate varies. **jerking p.** The *p.* of aortic regurgitation; so called because from a state of emptiness the artery is suddenly filled with blood. **jugular p.** See *venous p.* **locomotive p.** See *water hammer p.* **long p.** A *p.* in which the duration of the systolic wave is comparatively long. **monocrotous p.** A form of *p.* which indicates a grave condition of the circulation and impending death. The sphygmographic tracing shows a simple ascending and descending line, without interruptions. **myurous p.** A *p.* in which the beats gradually become weaker and of diminishing amplitude. **p. curve.** A graphic representation of the variations of the *p.* on a chart. **p. pressure.** The difference in pressure in the arteries caused by the heartbeat, or the difference between the systolic and the diastolic pressure in the arteries. **p. trace**, **p. tracing.** See *p. curve*. **quick p.** A *p.* that strikes the finger rapidly. **renal p.** The hard and full *p.* observed in cases of coma from kidney disease. **respiratory p.** The alternate dilatation and contraction of the great veins of the neck occurring simultaneously with the acts

of expiration and inspiration. **retrosternal p.** A venous p. detected by depressing the integument covering the suprasternal notch. **senile p.** The p. which is peculiar to old age. Its peculiarities are largely due to inelasticity of the arteries. The sphygmographic tracing shows a high position of the secondary waves in the line of descent and great size of the first secondary wave as compared with the second. **short p.** A p. in which the duration of the systolic wave is comparatively short. **shuttle p.** Of C. H. Hughes, a p. in which the wave passes under the finger as if it were floating something solid as well as fluid; observed in rheumatic endocarditis or endarteritis. **slow p.** In a physiological sense, a p. corresponding to a lengthened systolic contraction of the heart succeeded by a long diastole. **small p.** A p. giving the sensation that the artery is small. **soft p.** A p. that may readily be stopped by digital compression. **splashing p.** See *jerking p.* **steel hammer p.** An abrupt, energetic p. like the rebound of a smith's hammer from the anvil; observed in the arteries near a joint affected with rheumatism. **subungual capillary p.** A p. observed beneath the nail by slightly raising its tips. **supradicrotic p.** Of Wolff, a dicrotic p. in which the reduplicated beat closely resembles the cardiac beat. **tense p.** A p. in which, in consequence of vascular tension, the vessel is hard and tense, like a cord. **thready p.** A slight and scarcely appreciable p. observed during syncope. **throbbing p.** See *collapsing p.* **tremulous p.** A p. in which a series of oscillations is detected with each beat. **tricrotic p.** 1. The normal p. curve, so called because it consists of three distinct waves. 2. A p. in which the three waves normally present are abnormally distinct. **undulating p.** A p. that communicates to the finger the sensation of successive waves. **unequal p.** A p. which varies in strength, some throbs being strong and others weak. **vaginal p.** The perceptible arterial p. sometimes to be felt in the vagina as the result of heightened vascular development in the pelvis in consequence of pregnancy or of inflammatory disease. **venous p.** A pulsation noticed in the jugular vein and due to waves of pressure transmitted backward from the contracting heart. It shows usually three crests, known as the A, C, and V. waves. **vermicular p.** A small frequent p. that communicates to the finger the sensation of a wormlike motion. **vibrating p.** See *jerking p.* **water hammer p.** Syn.: *Corrigan's p.*, *locomotive p.* A jerking, visible, collapsing, tortuous, and yet regular and rapid p., characteristic of aortic incompetence with hypertrophy of the left ventricle or of aneurism of the ascending or transverse portion of the arch of the aorta, and of disease of the aorta when that vessel has become rigid and dilated. **wiry p.** A tense p. which feels like a firm

cord or wire beneath the finger. [Lat., *pulsus*.]

pulsimeter (pul-sim'et-er). Any apparatus used to record the force of the pulse beat. [Lat., *pulsus*, the pulse, + Gr., *metron*, a measure.]

pul'sus. See *pulse*. **p. aequalis.** A pulse in which the beats are equal. **p. alternans.** A pulse having a regular rhythm, in which stronger and weaker beats alternate. **p. bigeminus.** Of Traube, an irregular p. with a slight pause after every two pulsations. **p. celer.** See *quick pulse*. **p. cerebralis.** A slow pulse sometimes observed in apoplexy. **p. irregularis perpetuus.** An absolutely irregular pulse both in force of beat and rhythm. **p. myurus.** A pulse marked by a wave, the apex of which is reached suddenly, and which then subsides very gradually. **p. myurus deficiens.** A p. myurus in which the waves diminish so that they are scarcely appreciable. **p. paradoxicus, p. paradoxus.** A phenomenon observed under certain rare pathological conditions (e. g., in that form of pericarditis in which the aorta is compressed by adhesions) in which the pulse disappears during each full inspiration and reappears during expiration. **p. quadrigeminus.** A pulse with an appreciable pause after every four beats. **p. quinquegeminus.** A pulse with an appreciable pause after every five beats. **p. rarus.** See *infrequent pulse*. **p. serratus.** A strong, hard, full pulse. **p. tardus.** See *slow pulse*. **p. trigeminus.** An irregular p. in which every third beat is followed by a pause.

pultaceous (pul-ta'shus). Macerated, pulpy. [Lat., *pultaceus*.]

pulverization (pul-ver-iz-a'shun). The process of reducing a substance to powder. [Lat., *pulverizare*, to reduce to dust.]

pulvinar (pul-vi'nar). Lit., a cushion or pillow; the posterior eminence, or tubercle, of the optic thalamus.

pulvinate (pul'vin-ät). A term used in descriptive bacteriology, meaning in the form of a cushion, decidedly convex. [Lat., *pulvinar*, a cushion.]

pul'vis. A powder. **p. antimonialis.** James' powder; a mixture of antimony oxid with calcium phosphate [U. S. Ph., Br. Ph., 1890]. **p. aromaticus.** Syn.: *p. cinnamomi compositus* [Br. Ph.]. A mixture of cinnamon and ginger with nutmeg and crushed cardamom seeds [U. S. Ph.]; or ginger with cinnamon and cardamom seeds [Br. Ph.]. **p. effervescens compositus.** Seidlitz powder; a preparation consisting of two powders to be dissolved separately and the two solutions mixed at the time of use, one containing tartaric acid, put up in white paper, the other containing sodium bicarbonate and potassium and sodium tartrate [U. S. Ph.], put up in colored paper (usually blue). **p. ipecacuanhae et opii.** Powder of ipecac and opium, Dover's powder; consisting of 10 parts each of powdered ipecac and powdered opium, with 80 parts sugar of milk [U. S. Ph.].

p. pro lacto humanisato. A powder to be used in preparing humanized milk. It contains 3.5 per cent. of compound pancreatic powder and 96.5 per cent. of powdered sugar of milk [N. F.]. **p. salis Carolini factitii effervescens.** Effervescent artificial Carlsbad salt. 6 grms. added to 200 c.c. of water represents an equal volume of Carlsbad Sprüdel water [N. F.]. **p. salis Kissingensis factitii effervescens.** Effervescent artificial Kissingen salt. 5½ grms. added to 200 c.c. of water represents an equal volume of Rackoczi Spring water of Kissingen [N. F.]. **p. salis Vichyani factitii effervescens.** Effervescent artificial Vichy salt. 3¾ grms. added to 200 c.c. of water represents an equal volume of the Grande Grille Spring water of Kissingen [N. F.]. [Lat.]

pu'mcx. See *pumice*.

pumice, pumice stone (pum'is). A light, porous mineral of volcanic origin, used for polishing, etc.; composed chiefly of silica. Lat., *pumex, pumic-*]

pumilin (pu'mil-in). The volatile oil of *Pinus pumilio*; also a pharmaceutical preparation containing it.

pu'na. See *mountain fever*, under *fever*.

punctate (punk'tāt). A term used in descriptive bacteriology and pathology to signify in the form of a dot or point. [Lat., *punctum*, point.]

punctum (punk'tum). A dot or point.

p. adhesionis. The point of attachment of a muscle. **p. alae vomeris.** The point upon the rostrum of the sphenoid bone where it is included between the alae vomeris. **puncta ciliaria.** The perforations in the eyelid through which the hairs emerge. **p. foraminis incisivi.** The posterior border of the incisor foramen. **p. inscrtionis.** The point of insertion of a muscle. **puncta lacrimalia.** Two small contractile openings, one in the ciliary margin of each eyelid; the patent orifices of the lacrimal ducts. **p. spinæ nasalis anterioris.** The apex of the anterior nasal spinal or, when that is absent, the upper end of the suture between the superior maxillæ. **p. spinæ nasalis posterioris.** The middle of the posterior nasal spine. [Lat., *pungere*, to prick.]

puncture (punk'tūr). 1. A small hole made by a sharp point. 2. The act or process of making such a hole. See *paracentesis*. **diabetic p.** See under *diabetic*. **lumbar p., Quincke's p.** P. of the meninges of the spinal cord in the lumbar region for diagnostic or therapeutical purposes. **sugar p.** See *diabetic p.*, under *diabetic*. [Lat., *punctura*, from *pungere*, to prick.]

Punica (pu'nik-ah). A genus of myrtaceous trees. **P. granatum.** The pomegranate (tree), Carthaginian apple. All parts are astringent. The fruit is sometimes used as a mild laxative. The rind, the pomegranate peel of commerce, was formerly official in the U. S. Ph. The bark and root bark are *temiäfuqe*. See

Granatum (2d def.). [Lat., *Punicus*, Carthaginian.]

punicin (pu'nic-in). A synonym of *pelletierin*.

pup'il. The circular aperture in the iris for the transmission of light, situated a little to the nasal side of the center. **Argyll Robertson p.** See *Robertson p.* **Robertson p.** A condition which is miotic and when the p. will not retract to light, but contracts promptly under efforts of accommodation. [Lat., *pupilla*, dim. of *pupa*, a girl.]

Purdy's centrifugal method to determine amount of albumin present in urine, see in *appendix*, page 894. **P's test for glycosuria.** A solution is made of 4.15 grams of copper sulphate, 10 grams of pure mannite, and 50 c.c. of glycerin in 250 c.c. of distilled water, and added to 250 c.c. of distilled water, containing 20.4 grams of caustic potash; when the mixture is cold 300 c.c. of strong ammonia are added, together with enough water to make a liter, and the solution is carefully filtered; 25 c.c. of this solution is heated with 50 c.c. of distilled water, and the urine is added drop by drop until the solution is colorless. The number of minims of urine necessary to decolorize the solution contain just a quarter of a grain of sugar.

purgamen'ta cere'bri. See *excrementa cerebri*, under *excrementa*.

purgatin, purgator (pur'gat-in, pur'gat-ol). A synthetic diacetyl ester of anthrapurpurin; purgative.

purgation (pur-ga'shun). The free emptying of the intestines by means of a purgative. [Lat., *purgare*, to purge.]

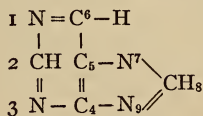

purgative (pur'ga-tiv). Purging or effecting purgation, cathartic; as a n., a drug or other agent that effects purgation.

pur'gen. A trade name for phenolphthalein.

purging nut. See *curcas*.

puriform (pu're-form). Resembling pus. [Lat., *pus*, pus, + *forma*, form.]

pu'rin. A substance, C₅N₄H₄, which is an acid and at the same time a strong base. It has the following structure:

From this compound are derived the so-called purin bases. The 9 atoms, which make up its two rings, are numbered as in the diagram, to simplify the nomenclature of its derivatives.

pu'rin ba'ses. Syn.: *alloxopuric bases, alloxopuric bodies.* A group of substances, which may be considered derivatives of purin. The most important are: adenin (6-aminopurin); guanin (amino 6-oxypurin); hypoxanthin (6-oxypurin); xanthin (2+6 dioxypurin); uric acid (2-6-8 tri-

oxypurin); as well as the alkaloids caffeine and theobromin.

purin free diet. See in *appendix*, page 914.

Purkall filter. A balloon-shaped filter made of porous earthenware which is immersed into the fluid to be filtered and the solution drawn through by suction.

Purkin'je's fibers. Transversely striped muscular f's having a center of protoplasm with regularly disposed nuclei found in the subendocardial areolar tissue of birds and mammals. They are connected with the auriculoventricular bundle and form part of the conducting system of the heart. **P's figure.** The image (shadow) of the retinal blood vessels of one's own eye, seen by candle light. **P's images.** The three reflected images from the eye, one from the anterior surface of the cornea, one from the posterior surface of the cornea, and one from the front of the lens. They were used by Helmholtz to prove that in the accommodation of the eye it is the curvature of the lens which undergoes change. **P's phenomenon.** The changing value of colors and their luminosity which occurs in dim light, the colors of long wave lengths disappearing sooner than those of the shorter wave lengths. [*Johannes Evangelista Purkinje*, Hungarian physiologist, 1787-1850.]

pur'ple. Of a color more or less resembling both blue and red (including violet); as a n., such a color or a substance possessing it. **retinal p., visual p.** A pigmentary photochemical substance, secreted from the hexagonal pigment epithelium of the retina and contained in the external segments of the rods. There is none in the cones. When the eyes are kept for a long time in darkness, it becomes abundant, but is bleached on exposure to light. [Lat., *purpureus*.]

purpura (pur'pu-rah). Syn.: *land scurvy*. A cutaneous affection characterized by hemorrhages into the skin. It is not a disease, but a symptom of various disturbances, and when used without qualification signifies a hemorrhagic eruption.

p. hemorrhagica. Very severe or extensive p. or morbus maculosus Werlhofii.

p. rheumatica. P. appearing in the course of an infective arthritis.

p. symptomatica. P. appearing in eruptive fevers. [Lat., *purpura*, purple.]

purpu'ric. Pertaining to, resembling, or associated with purple or with purpura.

p. acid. See under *acid*.

purru. Another name for *yaws*.

purulence (pu'ru-lens). The condition of being purulent; also, a disposition to the formation of pus. [Lat., *purulentia*.]

purulent (pu'ru-lent). Accompanied by the formation of pus. [Lat., *purulentus*.]

purulescence (pu-ru-les'ens). Transition to a purulent condition.

puruloid (pu'ru-loyd). Resembling pus (said of a fluid such as is found in the cold abscess, which has the appearance but lacks the pathological character and pathogenic property of pus). [Lat., *pus*, pus, + Gr., *eidos*, resemblance.]

pus. Syn.: *matter*. A liquid (usually thickish and yellowish white) occurring as the result of inflammation; consisting of emigrated leukocytes, liquid plasma, granular detritus from broken-down cellular structures, and sometimes fibrin flakes.

blue p. P. that is colored blue by the *Bacillus pyocyaneus*.

concrete p. Fibropurulent coagula found in a case of infective endocarditis.

healthy p. See *laudable p.*

ichorous p. See *ichor*.

laudable p. An old term for a yellowish white, creamy, inodorous p. that was supposed to indicate a normal reparative process.

p. benignum, p. equale. See *laudable p.*

p. in stool, see in *appendix*, page 907.

p. malignum. See *ichor*.

p. maturam. P. supposed to be well matured.

p. organisms. Various micrococci and bacilli, such as *Staphylococcus aureus* and *B. pyocyaneus*, that produce purulent inflammation.

p. spiritum. A puruloid fluid.

sanious p. P. tinged with the coloring matter of the blood.

serous p. P. consisting chiefly of a thin serum mixed with flakes.

watery p. See *ichor*. [Gr., *pyon*.]

pustule (pus'tül). A p. is an elevated pathological formation of the skin, not longer than a split pea and containing pus.

malignant p. Syn.: *wool-sorter's disease*. Another name for anthrax. [Lat., *pustula*, blister, pimple, pustule.]

putamen (pu-ta'men). In the corpus striatum, the outer part of the lenticular nucleus. [Lat., *putare*, to prune.]

putaminous (pu-tam'in-us). Pertaining to the membrana putamin. [Lat., *putamen*, a husk.]

putrefaction (pu-tre-fak'shun). The earlier stages of decomposition in which the anaërobic bacteria reduce the albuminous substances to offensive by-products and gases. [Lat., *putrefactio*.]

putrescin (pu-tres'in). Tetramethylene diamine, $\text{NH}_2(\text{CH}_2)_4\text{NH}_2$. A poisonous basic compound, one of the ptomaines, formed in the putrefaction of proteins.

putrilage (pu'tril-āj). 1. A putrescent, putrid, or gangrenous substance, especially a putrid liquid or putraceous substance. 2. See *eschar*. [Lat., *putrilago*, from *puter*, rotten.]

putromain (pu-tro-ma'in). Any poison produced by decomposition of food within the living body.

put'ty. A pasty substance which hardens on drying, ordinarily made from whiting and linseed oil.

Horsley's p. A preparation of white and yellow wax, vaselin and carbolic acid; used to arrest bleeding from the cut surface of bone.

Pycnanthemum (pik-nan'the-mum). North American mountain mint. **P. linifolium.** Dysentery weed, flax-leaved tufted savory; used in digestive complaints. [Gr., *pyknos*, compact, + *anthemon*, a flower.]

pycno- (pik'no). Combining form of Gr., *pyknos*, thick, dense.

pycnometer (pik-nom'et-er). An instrument used to determine the specific gravity of a solution.

pycnosis (pik-no'sis). Inspissation, condensation, thickening. [Gr., *pyknoun*, to make close.]

pyelitis (pi-el-i'tis). Inflammation of the mucous membrane of the pelvis of the kidney. [Gr., *pyelos*, trough, pan (taken in sense of pelvis), + *itis*, inflammation.]

pyelo- Combining form of Gr., *pyelos*, pelvis.

pyelonephritis (pi''el-o-nef-ri'tis). Inflammation of the kidney and its pelvis. [Gr., *pyelos*, pelvis, + *nephros*, kidney, + *itis*, inflammation.]

pyelotomy (pi-el-of-o-me). Incision of the renal pelvis. [Gr., *pyelos*, the pelvis, + *temnein*, to cut.]

pyemia (pi-e'me-ah). Syn.: *purulent infection*. A febrile disease supposed to be due to the absorption of pus or its constituents into the blood. It usually follows wounds, suppurative inflammation of bone, or the puerperal state, and results in the formation of secondary abscesses in the viscera, joints, and connective tissue. It is sometimes associated with phlebitis or embolism.

metastatic p., **multiplex p.** The condition of multiple abscess from infected thrombi of pyemic origin. [Gr., *pyon*, pus, + *aima*, blood.]

pygo- Combining form of Gr., *pyge*, rump.

pyle- Combining form of Gr., *pyle*, gate, orifice; applied to the portal vein.

pylephlebitis (pi''le-fle-bi'tis). Syn.: *endophlebitis portalis*. Inflammation of the portal vein.

adhesive p. Thrombosis of the portal vein. **p. obturans.** P. associated with an obstructed flow in the portal vein. [Gr., *pyle*, gate, + *phleps*, a vein, + *itis*, inflammation.]

pylethrombosis (pi''le - throm - bo'sis). Thrombosis of the portal vein. [Gr., *pyle*, a gate, + *thrombosis*, thrombosis.]

pyloralgia (pi-lo-ral'je-ah). Pain in the pylorus. [Gr., *pyloros*, the pylorus, + *algos*, pain.]

pylorectomy (pi-lo-rek'to-me.) Resection of the pylorus. [Gr., *pyloros*, the pylorus, + *ektemmein*, to cut, excise.]

pyloro- Combining form of Gr., *pyloros*, gatekeeper (hence pylorus).

pylorus (pi-lo'rus). 1. The opening of the stomach into the duodenum. 2. See *pyloric valve*, under *valve*. [Gr., *pyloros*, gatekeeper.]

pyo-, py- Combining form of Gr., *pyon*, pus.

pyococcus (pi-o-kok'us). Any pus-forming coccus. [Gr., *pyon*, pus, + *kokkos*, a berry.]

pyocyanase (pi-o-si'an-az). A proteid produced by the *Bacillus pyocyaneus*, which is said to be capable of dissolving such bacteria as the diphtheria bacillus and conferring immunity against anthrax in animals. [Gr., *pyon*, pus, + *kyanos*, dark blue.]

pyocyanin (pi-o-si'an-in). A non-poisonous crystalline base, C₁₃H₁₃NO₂, perhaps an anthracene derivative; the coloring matter of blue pus, from which it can be extracted by means of chloroform. [Gr.,

pyon, pus, + *kyanos*, a dark blue substance.]

pyocyanolysin (pi-o-si-an-ol'is-in). An hemolysin derived from *Bacillus pyocyaneus*.

pyocyte (pi'o-sit). The leukocyte of pus. [Gr., *pyon*, pus, + *kytos*, a hollow.]

pyogenesis (pi-o-jen'es-is). The formation of pus. See *suppuration*. **p. corrosiva**. See *ulceration*. [Gr., *pyon*, pus, + *genesis*, a begetting.]

pyogenic (pi-o-jen'ik). Pertaining to the formation of pus, e. g., a p. bacteria.

pyogenin (pi-oj'en-in). A compound, C₆₃H₁₂₈N₂O₁₆₁, obtained from the bodies of pus cells.

pyogenous (pi-oj'en-us). Caused by pus.

pyoid (pi'yoid). Resembling pus. [Gr., *pyon*, pus, + *eidos*, resemblance.]

pyoktanin (pi-ok'tan-in). Methyl violet. It is recommended as an antiseptic, to diminish suppurations, and in diphtheria.

yellow p. Auramin; an antiseptic. [Gr., *pyon*, pus, + *kteinein*, to kill.]

pyon (pi'on). See *pus*. [Gr., *pyon*.]

pyonephrosis (pi-o-nef-ro'sis). Purulent inflammation of the kidney with pouching and dilatation. [Gr., *pyon*, pus, + *nephros*, the kidney.]

pyopericardium (pi''o-per-ik-ar'de-um). An accumulation of pus in the pericardium. [Gr., *pyon*, pus, + *peri*, around, + *kardia*, heart.]

pyophthalmia (pi-of-thal'me-ah). See *hypopyon*. [Gr., *pyon*, pus, + *ophthalmia*, ophthalmia.]

pyophylactic (pi-o-fi-lak'tik). Serves as a defense against pus infection; noting a membrane lining wall of an abscess. [Gr., *pyon*, pus, + *phylassein*, to guard.]

pyoplasia (pi-o-pla'ne-ah). Infusion or burrowing of pus. [Gr., *pyon*, pus, + *planos*, wandering.]

pyopneumothorax (pi''o-nu-mo-tho'raks). Pneumothorax with pyothorax. [Gr., *pyon*, pus, + *pneuma*, air, + *thorax*, thorax.]

pyopoesis (pi''o-poy-e'sis). See *suppuration*. [Gr., *pyon*, pus, + *poiesis*, production.]

pyoptysis (pi-op'tis-is). Purulent expectoration. [Gr., *pyon*, pus, + *ptysis*, a spitting.]

pyorrhea (pi-or-re'ah). A flowing discharge of pus. **p. alveolaris**. Syn.: *Rigg's disease*. A purulent inflammation of the periosteum of the teeth, due to an endameba, causing necrosis of the alveola and loosening of the teeth. [Gr., *pyon*, pus, + *roia*, a flowing forth.]

pyosalpinx (pi-o-sal'pinks). An accumulation of pus in the fallopian tube. [Gr., *pyon*, pus, + *salpigr*, a trumpet.]

pyosin (pi'o-sin). A compound, C₅₇H₁₁₀N₂O₁₅, obtained from the plasma of pus.

pyothorax (pi-o-tho'raks). Empyema. [Gr., *pyon*, pus, + *thorax*, the thorax.]

pyraconitin (pi-rak-on'tin-in). An alkaloid acting qualitatively like aconitin, but about 50 times weaker.

pyraloxin (pi-ral-oks'in). Oxidized pyrogallol, recommended as a substitute for pyrogallol.

pyramid (pir'am-id). 1. A solid resting on a plane base of three or more sides, and having as its sides triangular planes which meet at the apex. 2. A part of the body shaped more or less like a p. 3. A large compact bundle of medullated nerve fibers situated ventrad in the medulla oblongata, being the downward continuation of the motorial tract. **anterior p's of the medulla oblongata**. A pair of oblong bodies on the anterior surface of the medulla oblongata, separated by the anterior median fissure. **posterior p. of the medulla oblongata**. The expanded portion of the funiculus gracilis at the lower angle of the fourth ventricle. **p's of Malpighii**. Syn.: *cones of Malpighii, coni bullosi*. The pyramidal masses of the renal cortex, composed of glomeruli, blood vessels, and convoluted tubules, situated between the medullary radii. They have the base of the p. next the surface of the kidney, and the apex terminating as a renal papilla. **p. of the cerebellum, p. of the inferior vermiform process**. A small elevation near the middle of the inferior vermiform process, between the biventral lobes. **pyramid of the spinal cord**. See *pyramidal tract*, under *tract*. **p. of the thyroid gland**. A slender conical process of the gland which extends from the upper part of the isthmus or the adjacent part of the lobes to the hyoid bone, to which it is attached by loose fibrous tissue. **p. of the tympanum**. A small, hollow bony projection on the inner wall of the tympanum, behind the oval fenestra. The stapedius muscle passes through a small opening at its apex. [Gr., *pyramis*, or *pyramida*, of Egyptian origin.]

pyramidalis (pir'am-id-a'lis). See *table of muscles*, under *muscle*.

pyramidon (pir'am'id-on). A dimethyl-amido substitution compound of antipyrin, $C_{13}H_{17}N_3O$; used like antipyrin, but in smaller doses. **p. acid camphorate**. $C_{13}H_{17}N_3O.C_{10}H_{16}O_4$; said to combine the antipyretic action of p. and the anhydrotic action of camphoric acid.

pyrantimonate (pi-ran-tim'on-ät). A salt of pyrantimonic acid.

pyrantin (pi-ran'tin). Parethoxyphenyl succinimid, $C_{12}H_{13}NO_3$, an antipyretic.

pyrazin (pi'ra-zin). See *antipyrin*.

pyrazol (pi'raz-ol). The compound $C_3H_4N_2$, a derivative of pyrrol; according to B. Fischer, formed in the manufacture of antipyrin.

pyrazolin (pi-raz'o-lin). See *antipyrin*.

pyrazolon (pi-raz'o-lon). An oxygen substitution compound, $C_8H_4ON_2$, of pyrazolin. It is a weak antiseptic.

pyrenol (pi're-nol). A name applied to effervescent sodium benzoate.

Pyrethrum (pi-re'thrum). 1. *Chrysanthemum parthenium*. 2. The genus *Spilanthes*. 3. A section of the genus *Chrysanthemum*. 4. The root of *Anacyclus p.* [U. S. Ph.]. The tincture of p. is official in the U. S. Ph. and Br. Ph. **p. cam-**

phor. A constituent, $C_{10}H_{16}O$, of oil of *Chrysanthemum parthenium*, differing from laurel camphor only in turning the plane of polarized light to the left.

pyrethri radix. See *Pyrethrum*, (4th def.) [Br. Ph.]. [Gr., *pyrethron*, from *pyr*, fire.]

pyretic (pi-ret'ik). Pertaining to fever; feverish; as a n., a remedy for fever. [Gr., *pyretos*, fever.]

pyretogenesis, pyretogenesis (pi'ret-o-jen-e'se-ah, pi'ret-o-jen'es-is). The origin and production of fever. [Gr., *pyretos*, fever, + *genesis*, generation.]

pyretogenin (pi-re-toj'en-in). A soluble, granular, homogeneous white substance isolated from cultures of microorganisms; given to dogs in very small doses, it produces intense fever. [Gr., *pyretos*, fever, + *gemma*, production.]

pyrexia (pi-reks'e-ah). Fever. **nervous p.** See *nervous fever*, under *fever*. [Gr., *pyrexia*.]

pyridin (pir'id-in). A colorless basic liquid, C_5H_5N , of acid odor and burning taste; an alkaloid obtained from the oils derived by distillation from bones and other organic matter. When taken into the animal organism, it is converted into methylpyridin, an acid, C_5H_4NCOOH , present in the urine after ingestion of a picolin or pyridinuric acid, a monobasic acid, $C_5H_4(COOH)N$.

pyriform (pir'if-orm). Pear-shaped. [Lat., *pyriformus*, from *pyrum*, a pear, + *forma*, form.]

pyriformis. The pyramidalis muscle.

pyrimidin (pi-rim'id-in). $C_4H_4N_2$, a base which is precipitable with bichlorid of mercury. Several of its derivatives have physiological importance.

pyro-animalis (pi-ro-an-im-al'is). Produced by the destructive distillation of animal substances. [Gr., *pyr*, fire, + Lat., *animalis*.]

pyroborate (pi-ro-bo'rät). A salt of pyroboric acid. The p's are frequently called simply borates.

pyrocatechin, pyrocatecol (pi-ro-kat'ek-in, pi-ro-kat'ek-ol). Syn.: *catechol, orthodihydroxybenzene, oxyphenol*. A substance, $C_6H_4(OH)_2$, isomeric with resorcin and hydroquinone. It has been found in normal urine.

pyrodextrin (pi-ro-deks'trin). A brittle, brownish substance, $C_48H_{74}O_{37}$, produced by the action of dry heat on dextrin.

pyrogallol (pi-ro-gal'ol). $C_6H_3(OH)_3$; a triatomic phenol, obtained chiefly from gallic acid. It is decomposed by light, is poisonous, and an active reducing agent; used mainly in photography. **p. triacetate**. Known as *lenigallol* ($C_{12}H_{12}O_6$). It has been used as a substitute for p. It is said to be non-toxic.

pyrogenesis, pyrogenesis (pi-ro-jen-e'se-ah, pi-ro-jen'es-is). The generation or production of fever or heat. [Gr., *pyr*, fire, + *genesis*, generation.]

pyrogenetic, pyrogenic (pi-ro-jen-et'ik, pi-ro-jen'ik). Producing fever or inflammation.

pyrogenous (pi-roj'en-us). 1. Produced

- by combustion. 2. Capable of causing fever or inflammation. [Gr., *pyr*, fire, + *gennan*, to generate.]
- pyroleum** (pi-ro'le-um). 1. Petroleum. 2. An oil obtained by heat or dry distillation.
- pyroligneous** (pi-ro-lig'ne-us). Derived from the combustion of wood. **p. acid**. See under *acid*. **p. alcohol**, **p. spirit**. See *methyl alcohol*, under *alcohol*. **p. vinegar**. See *p. acid*, under *acid*. [Gr., *pyr*, fire, + Lat., *lignum*, wood.]
- pyrolysis** (pi-rol'is-is). Decomposition by heat. [Gr., *pyr*, fire, + *lyein*, to loose.]
- pyrolytic** (pi-rol-it'ik). Pertaining to pyrolysis. The p. inhalation of Thudichum is inhalation of the vapor of a heated extract of opium. [Gr., *pyr*, fire, + *lyein*, to loosen.]
- pyromania** (pi-ro-ma'ne-ah). Mania for incendiarism. [Gr., *pyr*, fire, + *mania*, madness.]
- pyromel** (pi-ro'-mel). Molasses. [Gr., *pyr*, fire, + Lat., *mel*, honey.]
- pyrometer** (pi-rom'et-er). An instrument used to measure temperatures which are too high for the application of the ordinary thermometer. [Gr., *pyr*, fire, + *metron*, a measure.]
- pyrophobia** (pi-ro-fo'be-ah). Morbid dread of fire. [Gr., *pyr*, fire, + *phobos*, fear.]
- pyrophorus** (pi-rof'er-us). A body which absorbs atmospheric oxygen so energetically as to take fire, or at least to emit light, when exposed to the air.
- pyrophosphate, pyrophosphas** (pi-ro-fo'sfāt, pi-ro-fo'sfās). A salt of pyrophosphoric acid.
- Pyroplasma** (pi-ro-plas'mah). See *Piroplasma*.
- pyrosal** (pi-ro-sal). An antipyretic compound of antipyrin, salicylic acid, and acetic acid.
- pyroscope** (pi-ro-skōp). A kind of differential thermometer, used for measuring the intensity of thermal radiation. [Gr., *pyr*, fire, + *skopein*, to examine.]
- pyrosis** (pi-ro'sis). Syn.: *water-brash*. Heartburn; a burning sensation in the esophagus and the pharynx resulting from indigestion; often accompanied by eructations of an acid liquid. [Gr., *pyrosis*, burning.]
- Pyrosoma** (pi-ro-so'mah). A genus of microorganisms belonging to the *Protozoa*. **P. bigeminum**. Syn.: *Babesia bigemina*. A microorganism which destroys the red blood corpuscles of cattle sick with Texas fever. [Gr., *pyr*, fire, + *soma*, body.]
- pyrosulphate** (pi-ro-sul'fāt). Syn.: *disulphate*. A salt of pyrosulphuric acid.
- pyrotechnia** (pi-ro-tek'ne-ah). The scientific use of fire; especially, among the older chemical writers, the application of dry heat. **p. chirurgica**. The use of fire in surgery. [Gr., *pyr*, fire, + *technē*, art.]
- pyrotic** (pi-rot'ik). Caustic; burning. [Gr., *pyr*, fire.]
- pyrotoxin** (pi-ro-toks'in). 1. A toxin developing during a fever. 2. A poisonous fluid. [Gr., *pyr*, fire, + *toxikon*, poison.]
- pyroxylic** (pi-roks-il'ik). Derived from the combustion of wood. **p. acid**. See *pyroligneous acid*, under *acid*. **p. spirit**. See *methyl alcohol*, under *alcohol*.
- pyroxylin, pyroxylon** (pi-roks'il-in, pi-roks'il-on). Syn.: *cana collodii*. (Soluble) gun-cotton, collodion cotton, cotton wool which has been treated with a mixture of nitric and sulphuric acids whereby an explosive substance, nitrocellulose, is formed. It is used pharmaceutically in the preparation of collodion. [Gr., *pyr*, fire, + *xylon*, wood.]
- pyrozone** (pi-ro-zōn). A proprietary solution of hydrogen dioxide.
- pyrrol** (pi'r'rol). A colorless liquid, C₄H₉NH, of agreeable odor, obtained from coal tar, from the products of distillation of horn, bone, feathers, etc., and from the distillation of ammonium saccharate and mucate. **p. red**. An orange-red powder, C₁₂H₁₄N₂O, produced by treating p. with strong acids. [Gr., *pyrros*, flame colored, on account of the deep red color of p. red.]
- pythogenesis** (pi-tho-jen'es-is). The causation of decay. Generation from decaying matter. [Gr., *pythein*, to rot, + *genesis*, origin.]
- pythogenic** (pi-tho-jen'ik). Caused by, or originating from, putrefaction or filth.
- pyuria** (pi-u're-ah). That morbid condition in which pus is discharged with the urine. [Gr., *pyon*, pus, + *ourein*, to urinate.]

Q

- q. h.** Abbreviation of Lat., *quaque hora*, for, every hour.
- q. l.** Abbreviation of Lat., *quantum libet*, for as much as one pleases.
- q. s.** Abbreviation much used in prescription writing for Lat., *quantum sufficit*, signifying a sufficient quantity.
- quack** (kwak). See *charlatan*. [Abbrev. of Dutch *quacksalver*, from *kwakken*, to quack, + *zalf*, salve.]
- quackery** (kwak'er-e). See *charlatanism*.
- quadrant** (kwod'rānt). A quarter of a circular area, e. g., of the cornea or of the abdomen. [Lat., *quadrans*, from *quattuor*, four.]
- quadrate** (kwod'rāt). Squared, square, or nearly so. **q. lobe**. See *lobe*. [Lat., *quadratus*, from *quadrare*, to square.]
- quadratus** (kwod-rah'tus). Quadrate, e. g., a quadrate muscle. **q. lumborum**.

See *table of muscles*, under *muscle*.
 [Lat., *quadrare*, to make square.]

quadri-, **quadru-**. Combining form of Lat., *quadrus*, having, consisting of, connected with, four.

quadribasic (kwod-rib-a'sik). See *tetra-basic*.

quadriceps (kwod'ri-seps). Having four heads; as a n. m., a muscle so characterized, especially the extensor cruris q. **q. cruris**, **q. extensor cruris**, **q. femoris**. See *table of muscles*, under *muscle*. [Lat., *quattuor*, four, + *caput*, a head.]

quadrigeminal (kwod-re-jem'in-al). Four-fold; consisting of four symmetrically disposed parts. See *corpora quadrigemina*, under *corpora*. [Lat., *quadrigeninus*, from *quattuor*, four, + *geminus*, twin born.]

quadriplegia (kwod-ri-ple'je-ah). Paralysis of four limbs.

quadrivalent (kwod-riv'a-lent). Capable of replacing four atoms of hydrogen in a compound. [Lat., *quattuor*, four, + *valere*, to be worth.]

quadroon (kwod-roon'). A hybrid blend of a white and a mulatto.

quadruplet (kwod'ru-plet). One of four children born at one birth. [Lat., *quadriplus*, fourfold.]

qualitative (kwol'ti-a-tiv). Pertaining to or regarding the quality or character of a body. [Lat., *qualitas*, a quality.]

quantitative (kwon'ti-ta-tiv). Pertaining to or regarding quantity. [Lat., *quantitas*, quantity.]

quantivalence (kwon-tiv'al-ens). The combining power of an element or a radicle as measured by the number of atoms of hydrogen with which it will combine. See *atomicity*. [Lat., *quantus*, how much, + *valere*, to be worth.]

quarantine (kwor'an-tën). 1. Originally isolation of a ship for a period of forty days when coming from foreign parts. 2. The place at which vessels are stopped and properly attended to, to prevent the spread of contagious disease. 3. The isolation of a person or district on land, to prevent the spread of contagion. [Fr., *quarante*, forty.]

quart (kwart). See *table of weights and measures*, in *appendix*, pages 941, 942, 943.

quartan (kwor'tan). 1. Recurring on the fourth day (both days of occurrence being included); occurring at intervals of three days. 2. A parasite; the *Plasmodium malariae*. [Lat., *quartanus*, from *quartus*, fourth.]

quartiparous (kwar-tip'ar-us). Having borne four children or pregnant for the fourth time. A *quartipara* (also written *IV para*) is a woman that can be so described. [Lat., *quartiparus*, from *quartus*, fourth, + *parere*, to bring forth.]

quartanol (kwar'ton-ol). A proprietary preparation of sodium, calcium, and quinin and strychnin glycerophosphates.

Quassia (kwash'shah). 1. A genus of the *Simarubeae*. 2. Of the U. S. Ph. and Br. Ph., the wood of *Picroena excelsa*, or *Quassia amara*. In the shops it is usual-

ly met with in chips or raspings; it is also made into cups, called q. cups or bitter cups. It is intensely bitter, and was formerly used to replace hops in beer. Its medicinal properties are due to the presence of quassin. It is used as a stomachic and tonic, and against constipation due to intestinal atony. **extractum quassiae**. An extract made from quassia wood with cold or hot water and brought to a thick or pilular consistence [U. S. Ph., Br. Ph.]. **extractum quassiae fluidum**. A fluidextract of Jamaica q. wood [U. S. Ph.]. **infusum quassiae**. A 1 per cent. infusion of q. wood [Br. Ph.]. **Q. amara**. A branching shrub or small tree growing in Surinam. Its wood constitutes q. **q. cup**. See *Q.* (2d def.). **quassiae lignum**. See *Q.* (2d def.) [Br. Ph.]. **tinctura quassiae**. A 20 per cent. tincture of q. wood [U. S. Ph.]. [From *Quassi*, a Surinam negro, who used Surinam q. for fever.]

quassin (kwas'sin). A brittle crystalline substance obtained from quassia wood. It is official in the French Ph.

quebrachamin (kwe-brah'kam-in). One of the alkaloids obtained by Hesse from white quebracho bark.

quebrachin (kwe-bra'kin). A colorless crystalline alkaloid, $C_{21}H_{26}N_2O_2$, found in white quebracho bark.

quebracho (kwe-brah'cho). See *Aspidosperma q.*, under *Aspidosperma*.

quebrachol, **quebrachol alcohol** (kwe-brah'kol). An alcohol-like levorotatory crystalline substance, $C_{20}H_{34}O$, found in white quebracho bark. It gives the chemical reactions of cholesterolin.

quercite (kwer'sit). Pentahydroxyl-cyclohexane, $C_6H_7(OH)_5$; a compound closely related to inosite. It is found in acorns.

quercitrin (kwer-sit'rin). A yellow glucosidal coloring matter obtained from black oak bark.

Quercus (kwer'kus). The oak; a genus of cupuliferous trees, rarely shrubs. Of the U. S. Ph., the dried bark of *Q. alba*. It contains about 8 per cent. of tannin. The fluidextract of *Q.* is official in the U. S. Ph. **Q. alba**. (American) white oak; found from Canada to the Gulf and westward to Texas. Except the epidermis, all parts of the tree (especially the fruit and bark) are astringent. [Lat.]

Quevenne's iron, reduced iron. Ferrum reductum [U. S. Ph.]. A soft, fine, grayish powder, obtained by reducing a ferric salt by contact with hydrogen. [Theodore Auguste Quevenne, Fr. physician, 1805-1855.]

quickening (kwik'en-ing). The mother's first perception of the movements of the fetus, being a fluttering sensation in the hypogastrium. [Ang.-Sax., *civic*, alive.]

quicklime (kwik'lim). See, under *lime*.

quicksilver (kwik'sil-ver). The metal mercury, so called on account of its mobility and its silvery appearance. See *mercury*.

Quillaia (kwil-la'yah). Written also *Quillaja* and *Quillaya*. 1. A genus of rosaceous trees, with a saponaceous bark. 2.

Of the U. S. Ph., soap bark; the bark of *Q. saponaria*. It is inodorous, very acrid, and sternutatory. Its active principle is saponin. **quillaia cortex**. See *Q.* (2d def.) [Br. Ph.]. **tinctura quillaiae**, [U. S. Ph.], **tinctura quillaiae** [Br. Ph.]. A 20 per cent. tincture of soap [U. S. Ph.] or 5 per cent. [Br. Ph.]. [Chilean, *quillai*, from *quillean*, to wash.]

quillain (kwil-la'in). Saponin.

quina (ke'nah). 1. *Cinchona*. 2. The genus *Toluifera*.

quinacetin (kwim-as-e'tin). An alkaloid, $(C_{37}H_{31}NO_2)_2$. Its sulphate is used as an antipyretic and analgetic.

quinalgen. See *analgen*.

quinaminin, **quinamidin** (kwim-am'is-in, kwim-am'id-in). Isomeric amorphous bases, $C_{19}H_{24}N_2O_2$, obtained from peruvian bark.

quinamin (kwim-am'in). An alkaloid, $C_{20}H_{26}N_2O_2$ (or $C_{19}H_{24}N_2O_2$), found in nearly all species of *Cinchona*. It is less bitter than the other cinchona alkaloids and is a monacid base.

quinaphthol (kwim-af'thol). A betanaphthol alpha-monosulphonate of quinin; used as an intestinal antiseptic.

quinaseptol (kwim-as-ep'tol). See *diaphthol*.

quince (kwins). The *Cydonia vulgaris* and its fruit.

Quincke's puncture. Syn.: *lumbar puncture*. Puncture of the meninges of the spinal cord in the lumbar region for diagnostic or therapeutical purposes. [Heinrich Irenaeus Quincke, German physician, born 1842.]

quinetum (kwi-ne'tum). A mixture of the cinchona alkaloids in varying proportions as they occur in cinchona bark.

quinia (kwim'e-ah). See *quinin*.

quinic (kwim'ik). Pertaining to cinchona.

q. acid. See under *acid*.

quinin (kwim'is-in). An alkaloid, $C_{20}H_{24}N_2O_2$, isomeric with quinin; bitter and febrifuge.

quinidamin (kwim-id-am'in). An alkaloid, $C_{19}H_{24}N_2O_2$, obtained from *Cinchona rosulenta*, *Cinchona succiruba*, and probably other red cinchona barks.

quinidin (kwim'id-in). An alkaloid, $C_{20}H_{24}N_2O_2$, isomeric with quinin.

quinin (kwim'in, kwim'en, ke-nen'). Syn.: *chinin*.

An alkaloid, $C_{20}H_{24}N_2O_2$, obtained from various species of *Cinchona*. It has a very bitter taste and an alkaline reaction. **acetyl q.** The compound, $C_2H_5O.O.C_{20}H_{23}N_2O_2$.

acid q., **hydrochlorid**. An acid hydrochlorid of q., $C_{20}H_{24}N_2O_2 \cdot 2HCl + 3H_2O$. It is soluble in less than its own weight of water.

2. Neutral q. hydrochlorid, $C_{20}H_{24}N_2O_2(HCl)_2 + 3H_2O$, sometimes called q. bihydrochlorid; a white crystalline mass, becoming darker in the light and very soluble in water. **beta-q.** See *quinidin*.

q. acetate. The compound, $C_{20}H_{24}N_2O_2 \cdot C_2H_3O_2$.

q. and iron citrate. See *iron and q. citrate*, under *iron*. **q. and urea hydrochlorid**. A crystalline salt soluble in an equal weight

of water or in strong alcohol, recommended particularly for hypodermic injection.

q. arsenate. A substance, $(C_{20}H_{24}N_2O_2)_3 \cdot AsH_3O_4 + 8H_2O$, occurring as small, white acicular crystals, containing about 70 per cent. of q. and 6 per cent. of arsenic.

q. arsenite. A substance, $(C_{20}H_{24}N_2O_2)_3 \cdot H_3As_2O_3 + 3H_2O$, occurring as white acicular crystals; sometimes used in chronic cutaneous troubles. It contains about 12 per cent. of arsenic.

q. bisulphate. A substance, $C_{20}H_{24}N_2O_2 \cdot 2SH_2O_4 + 7H_2O$, occurring as shining white rhombic prisms, of very bitter taste and acid reaction, soluble with brilliant blue fluorescence in 11 parts of cold water or 32 of cold alcohol, very soluble in boiling water or alcohol [Br. Ph.].

q. bromid. See *q. hydrobromid*.

q. hydrobromid. Basic q. hydrobromid; a substance, $C_{20}H_{24}N_2O_2 \cdot HBr + H_2O$, occurring as fine silky needles grouped about a center, soluble in 40 parts of cold water, very easily soluble in boiling water or alcohol, and containing about 75 per cent. of anhydrous q.

q. hydrochlorate, **q. hydrochlorid**. 1. Basic q. hydrochlorid, $C_{20}H_{24}N_2O_2 \cdot HCl + 2H_2O$, occurring as white acicular crystals of very bitter taste, soluble in 18 parts of water, very soluble in alcohol or boiling water and containing about 80 per cent. of anhydrous q. [U. S. Ph., Br. Ph.].

q. lygnosinate. A q. compound of dioxybenzylacetone, $C_{67}H_{66}N_4O_6$. It is said to be capable of preventing the development of cultures of staphylococcus. It is employed as a dusting powder, in suspension, etc.

q. salicylate. A substance, $(C_{20}H_{24}N_2O_2 \cdot C_7H_5O_3)_2 + H_2O$, crystallizing from alcoholic solutions in concentrically grouped prisms; soluble in 77 parts of water and containing about 70 per cent. of q. It is used for neuralgia and rheumatic gout [U. S. Ph.].

q. salicylic acid ester. See *saloquinin*.

q. subsulphate. Basic q. sulphate, ordinary q. sulphate.

q. sulphate. A substance, $(C_{20}H_{24}N_2O_2)_2 \cdot SH_2O_4$, occurring as white acicular crystals of very bitter taste, volatilizing in the air or under the influence of gentle heat, soluble in 720 parts of water, in 86 parts of alcohol, very soluble in boiling alcohol, soluble with difficulty in chloroform, and especially in ether, and containing about 75 per cent. of anhydrous q. [U. S. Ph., Br. Ph.].

q. tannate. A substance, $C_{20}H_{24}N_2O_2(C_6H_4O_6)_3 + 8H_2O$, occurring as a colorless or yellowish amorphous powder of slightly bitter taste and little odor, slightly soluble in water, easily soluble in boiling alcohol and containing about 30 per cent. of q.

q. valerianate. A substance, $C_{20}H_{24}N_2O_2 \cdot C_8H_{10}O_2 + H_2O$, occurring as shining white crystalline needles, tablets, or scales, or as a crystalline powder of very bitter taste and slight odor of valerianic acid. [Lat., *quinina*, U. S. Ph.]

quinina (kwim-e'nah). See *quinin* [U. S. Ph.].

quinina bisulphas. See *quinina bisulphate* [U. S. Ph.].

quininae hydrobromidum. See *quinin hydrobromidum*.

- mid* [U. S. Ph.]. **quinina hydrochloridum**. See *quinin hydrochlorid* [U. S. Ph., 1890; Br. Ph.]. **quininae hydrochloridum acidum**. A very soluble hydrochlorid of *q.*; used subcutaneously. **quininae salicylas**. Quinin salicylate [U. S. Ph.]. **quininae sulphas**. See *quinin sulphate* [U. S. Ph., Br. Ph.]. **quininae valerianas**. A preparation made by dissolving quinin hydrochlorid in tincture of orange peel [Br. Ph.]. **tinctura quininae ammoniata**. A preparation made by dissolving quinin sulphate in alcohol [Br. Ph.]. **vinum quininae**. A preparation made of quinin hydrochlorid and orange wine [Br. Ph.].
- quininurethane** (kwi'nin-u're-thān). A compound of quinin hydrochlorid and urethane; used subcutaneously in place of quinin.
- quiniretin** (kwin-ir-e'tin). Of Flückiger, the brownish product resulting from exposure of an aqueous solution of quinin sulphate to sunlight; bitter, somewhat aromatic, and isomeric with quinin, but not alkaline.
- quinium** (kwin'e-um). A yellow amorphous brittle extract of cinchona.
- quinochloral** (kwin-o-klo'ral). An oily liquid probably containing quinin and chloral; used as an antiseptic and hypnotic.
- quinoform** (kwin'o-form). A compound of formic aldehyd and cinchotannic acid.
- quinoïdin** (kwin-oy'din). Syn.: *chinoidin*. An amorphous mixture of alkaloids obtained as a by-product in the preparation of crystallizable cinchona alkaloids. It was formerly used to a considerable extent because of the high price of quinin.
- quinol** (kwin'ol). See *hydroquinon*.
- quinolin** (kwin'o-lin). Syn.: *chinolin*. An oily alkaline liquid, (C₈H₇N). Its occurrence as a decomposition product of quinin led to its use in efforts to produce quinin synthetically, which, though unsuccessful in that aim, led to the discovery of numerous synthetics. *Q.* is very poisonous.
- quinon** (kwin'on). 1. C₆H₄O₂, a yellow compound. 2. A class of organic compounds of which *q.* is the first member.
- quinopyrin** (kwin-o-pi'rin). A solution of quinin hydrochlorid in water and antipyrin.
- quinosol** (kwin'o-sol). See *chinosol*.
- quinotropin** (kwin-o-tro'pin). Urotropin quinate.
- quinova** (kwin-o'vah). False cinchona.
- quinovin** (kwin'o-vin, kwin-o'vin). Syn.: *chinovin*. A white, amorphous, bitter mass, C₈₀H₈₅O₈, extracted from quinoa and several of the true cinchona barks.
- quinqui-**. Combining form of Lat., *quinque*, five.
- quinivalent** (kwin-kwi'al-ent). Having an atomicity of five, capable of replacing 5 atoms of hydrogen in a compound. [Lat., *quinque*, five, + *valens*, able.]
- quinsy** (kwin'ze). Acute suppurative tonsillitis. [Gr., *kynanche*, sore throat, fr. *kuon*, dog, + *anchein*, to throttle.]
- quintan** (kwin'tan). Recurring at intervals of five days. [Lat., *quintus*, fifth.]
- quintane** (kwin'tān). See *pentane*.
- quinti-**. Combining form of Lat., *quintus*, fifth.
- quintivalence**. See under *atomicity*.
- quintuplet** (kwin'tu-plet). One of five born at a birth. [Lat., *quintuplex*, five-fold.]
- quiz**. Instruction by questions and answers.
- quotidian** (kwo-tid'e-an). Daily; recurring daily; as a *n.*, see *q. fever*, under *fever*. [Lat., *quotidianus*.]
- quotient** (kwo'shent). The result obtained by dividing one number or quantity by another. **respiratory q.** The ratio between the carbon dioxide excreted and the oxygen taken up in a given time, CO₂ ÷ O. [Lat., *quotiens*, how often.]
- q. v.** 1. Abbreviation for Lat., *quod vide*, which see. 2. Abbreviation for Lat., *quantum vis*, as much as you wish.

R

- r-**. For words in **r** not here given, see the corresponding forms in **rh**.
- R.** An abbreviation for *recipe*, take.
- Ra.** Chemical symbol for the element *radium*.
- rabdoidal** (rab-doy'dal). See *rhabdoidal*.
- rab'id.** Affected with rabies. [Lat., *rabidus*.]
- rabies** (ra'be-ez). Syn.: *lyssa*, *hydrophobia*. An acute specific disease of animals (commonly called hydrophobia) that may be communicated, most often by bites, to man. It occurs most frequently in the dog, the wolf, and the cat. **dumb r.** *R.* in which the paralytic stage is most pronounced. **furious r.** A form in which there is pronounced excitement. **para-**

- lytic r.** *R.* in which the first and second periods of the disease are latent, and the third period—that of paralysis—manifests the existing infection. **tanacetic r.** A morbid state resembling *r.*, though not necessarily fatal, produced in rabbits by intravenous injections of oil of tanacetum. [Lat., *rabere*, to rave.]
- rabiatic** (ra-be-et'ik). Pertaining to, or affected with, rabies.
- rabific** (ra-bif'ik). Productive of rabies. [Lat., *rabies*, + *facere*, to make.]
- racahout des Arabes** (rak'a-hu). A mixture of chocolate, starch, and sugar flavored with vanilla.
- rachi-, rachio-**. Combining form of Gr., *rachis*, spine, ridge, rib of a leaf.

rachialgia (rak-e-al'ge-ah). Pain in or about the spine. [Gr., *rachis*, the spine, + *algos*, pain.]

rachipagus (ra-kip'a-gus). A double monster showing union at the spine. [Gr., *rachis*, spine, + *pagos*, fixed.]

rachiphyma (rak-e-hi'mah). A tumor of the spine. [Gr., *rachis*, spine, + *phyma*, growth.]

rachis (ra'kis). The vertebral column. [Gr.]

rachischisis (ra-kis'kis-is). Congenital fissure of the spinal column. [Gr., *rachis*, spine, + *schisis*, cleft.]

rachitic (ra-kit'ik). Affected with rickets; connected with or pertaining to rickets.

rachitis (rak-i'tis). Syn.: *rickets*, *English disease*. A constitutional disease of early childhood characterized chiefly by curvature of the shafts of the long bones with thickening of their epiphyses, by deformities of other parts of the skeleton, by delayed detention, and sometimes by degenerative disease of the liver or spleen. [Gr., *rachitis*.]

radia (ra'de-ah). The second stage in the development of a distoma.

ra'dial. Toward the radial aspect.

ra'dial. Situated toward or near the radius; pertaining to the radius; as a n., the scaphoid bone, also the r. artery, a r. muscle, etc. [Lat., *radialis*.]

radiate (ra'de-ät). A term used in descriptive bacteriology meaning spreading from the center with irregular rays or lobes. [Lat., *radiatus*.]

radiation (ra-de-a'shun). 1. Divergence in raylike lines from a central point (said especially of light and heat). 2. Any structure presenting the appearance of radiating lines. **auditory r.** A bundle of fibers in the posterior part of the internal capsule constituting the final neurons in the auditory path. They arise from the thalamus and posterior corpora quadrigemina to terminate in the temporal lobe, superior gyrus. **optic r's**, **optic r.** A bundle of nerve fibers in the posterior part of the internal capsule. They constitute the secondary neurons of the optic path. They are derived from the external geniculate bodies, the anterior corpora quadrigemina, and the thalamus (pulvinar), and radiate into the occipital lobes. **thalamic r's**. Of Spitzka, certain tracts of fibers which radiate into the hemisphere from the optic thalamus. [Lat., *radiatio*.]

radical (rad'ik-al). 1. Pertaining to a root. 2. Springing from the root or from a rootlike portion of the stem. 3. Concerned with the root, origin, or essence; reaching to the root, thorough; curative as opposed to palliative. 4. Of an operation, one which removes thoroughly every trace of diseased tissue or the whole of an organ or organs. [Lat., *radicalis*, from *radix*, a root.]

radicle (rad'ik-l). 1. A minute initial portion of a fiber, nerve, or vein. 2. A group of atoms which goes into and out of combination without change, and which

determines the character of a molecule. **acid r.** See under *acid*. **alcohol r.** A r. which, when it replaces half the hydrogen in one or more molecules of water, forms an alcohol. **electronegative r.** In the dualistic theory of salts, the non-metallic component of a salt, which in electrolysis is evolved at the positive pole. **Acid r's** are electronegative. **electropositive r.** In the dualistic theory of salts, that constituent of the salt which, in electrolysis, is evolved at the negative pole, and which consists either of a metal or of a group of atoms which go into and out of combination like a metal. **Alkali r's** are electropositive. **negative r.** See *electronegative r.* **positive r.** See *electropositive r.* [Lat., *radicula*.]

radicular (rad-ik'u-lar). Pertaining to a radicle.

radiculitis (rad-ik-u-li'tis). Inflammation of the nerve roots. [Lat., *radix*, root, + Gr., *itis*, inflammation.]

radio-. Combining form of Lat., *radius*, a staff, spoke, or ray.

radio-active (ra-di-o-ak'tiv). Having the property of emitting radium rays.

radiodermatitis (ra'de-o-der-mat-i'tis). Dermatitis caused by some radio-active agent.

radiodiagnosis (ra'de-o-di-ag-no'sis). Diagnosis by means of Röntgen ray examination.

radiograph (ra'de-o-graf). A Röntgen ray picture. Same as *skiagraph*. [Lat., *radius*, a ray, + Gr., *graphein*, to portray.]

radiotherapy (ra-de-o-ther'ap-e). The therapeutic employment of a radio-active agent. [Lat., *radius*, ray, + Gr., *therapeia*, cure.]

radium (ra'de-um). A substance contained in minute quantities in pitchblende and in other minerals, capable of emitting rays or particles (α , β , γ) due to the disintegration of the molecule, which perhaps have therapeutic properties. The metal has properties which resemble barium. Atomic weight, 225. Symbol, Ra. Used only in the form of its salts, the emanations of which are employed in the treatment of lupus, epithelioma, and other affections.

radius (ra'de-us). 1. A ray of light, heat, or the like. 2. The semidiameter of a circle or of a sphere. 3. That bone of the forearm which, when the forearm is supinated, lies laterally. It articulates with the ulna and humerus above and with the ulna and carpus below. **auricular radii**. Lines at right angles to a line passing through the auricular points. **medullary radii**. The bundles of straight uriniferous tubules originating from one main trunk and extending from the medullary nearly to the surface of the cortical portion of the kidney. **r. fixus**. A line drawn from the inion to the punctum alae vomeris. **radii lentis**. Lines radiating from the poles of the crystalline lens, which indicate the sutures of the fibers or the points where

the ends of these fibers meet. [Lat., *radix*, rod, staff.]

ra'dix. A root. **r. accessoria sphenopalatina ganglii ciliaris**. An accessory branch of the ciliary ganglion running to the sphenopalatine ganglion. **r. brevis ganglii ciliaris**. A branch of the oculomotor nerve running to the ciliary ganglion. **r. brevis ganglii submaxillaris**. The immediate or mediate branches of the lingual nerve running to the submaxillary ganglion. **r. dentis**. The root of a tooth. **r. epiglottidis**. The constricted, attached part of the epiglottis. **radices fornicis**. The pillars of the fornix. **r. gangliosa**. The sensory root of the trigeminal nerve. **r. media ganglii ciliaris**. The branch of the ciliary ganglion made up of fibers from the internal carotid plexus. **r. media nervi olfactorii**. The middle root of the olfactory nerve. **r. mesenterii**. The root of the mesentery. **r. minor trigemini**. The motor root of the trigeminal nerve. **r. motoria ganglii otici**. The portion of the otic ganglion derived from the inframaxillary nerve. **r. motoria ganglii submaxillaris**. A branch of the chorda tympani running to the submaxillary ganglion. **r. nasi**. The root of the nose. **r. nervi optici**. The optic tract. **r. olfactoria grisea**. The middle root of the olfactory nerve. **r. olfactoria superior**. A bundle of fibers which arises from the apex of the caruncula mamillaris and aids in forming the olfactory nerve. **r. processus spinosa**. The broader, anterior part of a spinous process of a vertebra. **r. pulmonis**. The root of a lung. **radices sensitivae ganglii otici**. Branches of the glossopharyngeal nerve running to the otic ganglion. **radices sensitivae ganglii sphenopalatini**. The sphenopalatine nerves. **radices sympathicae ganglii otici**. The fibers uniting the otic ganglion with the sympathetic plexus upon the middle meningeal artery. **radices sympathicae ganglii submaxillaris**. Fibers uniting the submaxillary ganglion with the sympathetic plexus upon the external maxillary artery. **r. unguis**. The root of a nail. **r. vestibularis**. The anterior root of the auditory nerve. [Lat., *radix*, root.]

raffinose (raf'in-ōs). A carbohydrate, $C_{18}H_{32}O_{16} + 5H_2O$. A trisaccharid consisting of gelatin, glucose, and fructose in combination with each other.

rail'way spine. A traumatic neurosis following a railroad accident.

Rainey's corpuscle. See *psorospermia*. **râle** (rah'l). A rattle: adventitious respiratory sounds which are heard on auscultation. They are always pathological. They are of two kinds: moist and dry, according as there is fluid in the air passages or not and are designated according as they are located in the larynx, trachea, larger or smaller bronchi; the air cells or the pleural cavity. **bronchial r.** A r. occurring in the bronchial tubes. **bubbling r.** See *mucous r.*

cavernous r. A metallic gurgling sound heard over a cavity or over a dilated bronchus. **consonating r.** An explosion of small r's occurring with a cough or at the end of strong inspiration. **crepitant r.** A fine, dry, crackling sound, heard only in inspiration and sometimes only in the latter part of it; said by Flint to be "almost pathognomonic of pneumonia." It is produced in the bronchioles and the air vesicles. **dry crackling r.** A succession of short sharp sounds. **dry r.** A r. produced, for the most part, by the vibration of thick mucus in the larger bronchi. **friction r.** The r. produced by the rubbing together of two serous surfaces. **hissing r.** A sibilant, high-pitched r. **in-thoracic r.** A r. produced within the thorax. **laryngeal r.** A r. produced in the larynx. **metallic r.** A r. having a metallic sound produced by the bursting of bubbles in large pulmonary excavations or in pneumothoracic cavities occupied by a certain quantity of fluid. [Guttman.] **moist bronchial r.** See *mucous r.* **moist r.** The sound produced by the passage of air through air tubes containing fluid. **mucous r.** Of Laennec, the sound produced by the bursting of small, slightly viscid bubbles in the air passages. **piping r.** A sibilant r. having a piping sound. **pleural r.** A term sometimes applied to pleural friction sounds. **sibilant r.** A dry, high-pitched r., produced by a narrowing in a small bronchial tube. **small bubbling r.** See *subcrepitant r.* **snoring r., sonorous r.** A low-pitched, musical r. **subcrepitant r., submucous r.** A fine, moist, bubbling sound, heard in inspiration or expiration or both. It may be associated with a crepitant r. and is produced in the bronchial tubes of small caliber. **tracheal r.** A r. which seems to be produced in the larynx or trachea. **vesicular r.** See *crepitant r.* **whistling r.** See *sibilant r.* [Fr., *râle*, rattle.]

Rameau's cardiac formula. A f. assumed to show the relation between the number of cardiac pulsations in two persons: $n \sqrt{d} = n' \sqrt{d'}$, in which n = the number of pulsations in a given individual; d = his height; n' = the number of pulsations in the second individual; and d' his height.

ramex (ra'meks). A hernia. [Lat.]

ramification (ram-if-ik-a'shun). A branching, as of vessels or of nerves. [Lat., *ramus*, a branch, + *facere*, to make.]

Rams'den's ocular. A positive ocular formerly much used for micrometry, consisting of two planoconvex lenses with the convex surfaces facing, and very close together.

ra'mus. See *branch*. **ascending r. of the ischium**. The portion included between its tuberosity and the acetabulum. **ascending r. of the pubic bone**. See *horizontal r. of the pubic bone*. **descending r. of the ischium**. The portion forming the posterior boundary of

the obturator foramen. **descending r. of the pubic bone.** The portion that passes downward and outward from the body of the bone to articulate with the ischium. **horizontal r. of the pubic bone.** The portion that passes backward and outward from the body of the bone to the acetabulum. **ischiopubic rami.**

The descending rami of the ischium and pubic bone regarded as one. **rami accelerantes.** Accelerator nerves. **r. acetabuli.** A branch of the internal circumflex artery of the thigh that supplies the hip joint. **rami alares.**

Branches of the lateral nasal artery running to the nasal pinnae. **r. anastomoticus.** The communicating branch by which an anastomosis is established. **rami anteriores nervorum spinalium.** The anterior branches of the spinal nerves. **r. communicans anterior.**

The anterior communicating artery of the brain. **r. communicans medullae spinalis.** A branch of the spinal nerve that connects it with the sympathetic nerve. **r. communicans posterior.**

The posterior communicating artery of the brain. **rami communicantes noni.** Nerves that pass from the descending branch of the hypoglossal nerve to the branch between the second and third cervical nerves. **r. descendens.** 1. The descendens noni nerve. 2. The inferior division of the inferior maxillary nerve. **rami emisarii.** Branches of the anterior spinal plexuses which pass out through the intervertebral and anterior sacral foramina. **rami intestinales.**

Branches of the cerebrospinal nerves distributed to the abdominal viscera. **rami linguales (nervi glossopharyngei).** The terminal branches of the glossopharyngeal nerve. **rami marginales.** The branches of the palpebral arteries which aid in forming the arcus tarsei. **rami musculares.** Unnamed branches of nerves or blood vessels supplying the muscles. **r. nutriens.** A nutrient artery of a bone. **rami ventrales.** The branches of the intercostal arteries running to the intercostal muscles and to the ribs.

ranine (ra'nin). Relating to the part of the tongue liable to be affected with ranula. [Lat., *rana*, a frog.]

ranula (ran'u-lah). A cyst connected with the duct of the sublingual salivary gland or any cystic tumor of the under surface of the tongue or of the floor of the mouth. **r. pancreatica.** A cystic condition of the pancreas from obstruction of the ducts. [Lat., dim. of *rana*, a frog.]

Ranunculus (ran-un'ku-lus). The typical genus of the *Ranunculaceae*, the crow-foot or buttercup family which furnishes numerous drugs, many of which are poisonous. [Lat., dim. of *rana*, a frog.]

rape. In law, copulation with a woman by force or intimidation and against her will. [Lat., *rapere*, to seize or snatch.]

raphania (raf-a'ne-ah). Poisoning by the black radish (*Rhaphanus niger*), also

by strawberries or by ergot (see *ergotism*). **r. maisitica.** Pellagra; so called because supposed to be due to the use of damaged maize as food. [Gr., *raphanos*, the radish.]

raphe, rhapshe (ra'fe). 1. Literally, a seam; hence (its ordinary meaning) a line projecting above the surrounding surface like a seam, especially the line that marks the junction of the two lateral halves of the scrotum. 2. In anatomy and surgery, a suture. 3. In botany, the portion of the funiculus which becomes adnate to the body of the ovule in seeds.

palatine r. A narrow ridge of mucous membrane in the middle line of the palate. **perineal r.** A slightly elevated ridge of the integument sometimes found in the middle line of the perineum. **r. exterior.** The stria longitudinalis medialis. **r. inferior corporis callosi.**

The r. on the inferior surface of the corpus callosum. **r. of the penis.** A prolongation of the r. of the scrotum forward upon the penis. **r. of the pharynx.** The streak of connective tissue in the middle line of the posterior wall of the pharynx. **r. of the scrotum.**

A ridge of the integument of the scrotum which divides it into two lateral halves and is continuous behind with the r. of the perineum. **r. of the tongue.** A median furrow on the dorsum of the tongue. It sometimes ends posteriorly in a closed depression, the foramen cecum of Morgagni. **r. postoblongata.** The posterior median fissure of the medulla oblongata. **r. superior corporis callosi.**

The median longitudinal furrow on the upper surface of the corpus callosum. [Gr., *raphe*, a seam.]

Raphia (ra'fia). A genus of palms.

raphidiospore (ra-fid'e-o-spör). A needle-shaped spore.

rarefacient (rar-e-fa'shunt). 1. Causing rarefaction. 2. Diaphoretic.

rarefaction (rar-e-fak'shun). 1. The act or process of rendering anything less dense. 2. Diaphoresis. **r. of bone.** The attenuation of bone from atrophy or inflammation. [Lat., *rarefacere*, to make thin.]

rash. A superficial eruption of the skin, usually inflammatory; an exanthem. **wandering r.** Syn. for *transitory plaques of the tongue*. [Lat., *radere*, to scrape.]

raspatory (ras'pa-to-re). An instrument for scraping, especially for detaching the periosteum from bone. [Lat., *raspatorium*.]

ratany (rat'an-e). Syn.: *krameria* [U. S. Ph.]. The root of *Krameria triandra*. *Krameria arguta*, or *Krameria ixina*. It is a tonic and astringent, especially the cortical portion of it. [Pg., *ratanhia*.]

rats'bane. White arsenic, which is commonly used for rat poison.

rat'tle. See *râle*. **death r.** A gurgling sound heard in the trachea of a dying person.

raucous (raw'kus). Hoarse. [Lat., *raucus*.]

rav'ish. To commit rape upon a woman

or girl. To carry away; to remove by force. [Fr., *raviss*, lengthened stem of *ravir*, to seize, take away.]

ray. A radiating line, especially a line of light. **actinic r's.** Solar r's that produce chemical transformations. **Becquerel's r's.** R's of light given out by uranium salts after exposure to the sun. They may cause inflammation when applied to the body. **bipolar r's.** R's leading from one center of radiation to another, as in the amphister of an ovum. **cathode r's.** R's resembling Röntgen's rays, sent out as particles from the cathode in discharges through the vacuum. They consist of five electrons negatively charged. **chemical r's.** See *actinic r's*. **medullary r's.** See *medullary radii*, under *radius*. **polar r's.** See *unipolar filaments*, under *filament*. **r. fungus.** See *Actinomyces*. **Röntgen r's, x-r's.** See under *Röntgen*. [Lat., *radius*, spoke.]

Raynaud's disease. A general nervous disease, specially characterized by local disorders of the circulation of the skin, affecting the extremities, and attended with severe pain, together with symmetrical gangrene of the ends of the fingers, toes, nose, ears, etc. [Maurice Raynaud, Paris physician, 1834-1881.]

Rb. Chemical symbol for the element rubidium.

re-. Prefix of Lat. origin with the general sense of back or again.

reaction (re-ak'shun). 1. An action or motion resulting from and opposed to another action or motion. In Newton's third law of motion, the word *r.* designates the effect produced upon a moving body by its own motion as distinguished from "action," the effect which it produces upon other bodies. The word hence denotes mutual action, interaction. 2. In chemistry, a physical phenomenon occurring on the application of a chemical test, and hence indicative of the possession of a special chemical property; also, a physical phenomenon indicative of a change in the chemical state of a body; hence the change of state itself, whether this is brought about by the molecular interaction of two or more substances or the application of a physical force. 3. In electrophysiology, a physical phenomenon occurring upon the application of electricity and indicating therefore the possession of certain electrical properties or some change in electrical condition. 4. In psycho-analysis the psychical response to an emotional situation. 5. The process of recovery from "shock." 6. The development of fever as the result of an injury, a surgical operation, or the like. **acid r.** 1. The reddening of blue litmus paper to test the presence of acids. **Adamkiewicz's r.** See *Adamkiewicz-Hopkins r.* **agglutination r.** See *Widal's agglutination r.*, under *Widal*. **alkaline r.** A *r.* indicative of alkaline properties, such as the turning of red litmus paper blue by an alkali. **amphicroitic r., amphigenous r., amphoteric r., amphoterous r.** A combination of acid and

alkaline *r.* shown under certain conditions, when substances stain red litmus paper blue and blue litmus paper red. **biuret r.** A *r.* by which a trace of a solution of copper sulphate and an excess of caustic soda produces a reddish or deep violet color when brought into the presence of biuret, of proteins, of their first decomposition products, the proteoses and peptones. **chemical r.** See *r.* (2d def.). **diazo-r.** The dark red *r.* obtained with certain pathological urines when treated with Ehrlich's reagent, which is diazobenzenesulphuric acid. **Ehrlich's r.** See *diazo-r.* **electrical r.** See *r.* (3d def.). **fixation r.** The fixation of the complement. See *complement deviation*, under *complement*. **furfurol r.** See under *furfurol*. **galvanic r.** See *r.* (3d def.). **galvanotropic r.** A phenomenon observed by L. Hermann in small aquatic animals placed in a vessel through which a galvanic current is made to pass. After a few violent movements they place themselves in the direction of the galvanic current, with the head directed toward the anode, and remain motionless while the current is passing. **Gerhardt's r.** See *Gerhardt*. **Gmelin's r.** See under *Gmelin*. **group r.** "A reaction with an antibody (usually an agglutinin) which is common to several species of bacteria, forming a well-defined group, as the intestinal group" [Emory]. **Gubler's r.** See *Gubler*. **Gunning-Lieben's r.** See under *Gunning*. **hemioptic pupillary r.** Of Wernicke, a *r.* observed in hemiopia in which light thrown on the blind side of the retina produces contraction of the pupil, if the cerebral lesion is posterior to the pupillary center and an absence of reaction if the lesion is anterior to those centers, but, thrown on the normal side of the retina, produces binocular contraction of the pupil. **Hueppert's r.** See *Hueppert*. **hydrochloric acid r.** The assumption of a violet color by albuminoids when boiled with crude fuming hydrochloric acid. **Koch's r.** See *tuberculin r.* **Koler r.** See *Adamkiewicz's r.* **Krause's r.** See *Krause*. **Lieben's acetone r.** See *Lieben*. **Liebermann's r.** See *Liebermann-Burchar'd's r.* for *cholesterin*. See *Liebermann*. **lignin r.** See under *lignin*. **Malot's r.** See *Malot*. **Millon's r.** See *Millon*. **myotonic r.** A *r.* observed in Thomsen's disease, in which the faradic excitability is increased quantitatively and qualitatively. **neutral r.** A *r.* indicative of the absence of both of two opposite positive qualities; usually of the absence of both acidity and alkalinity. **ninhydrin r.** The blue color given by amino acids or their compounds when their solutions are boiled with a few drops of ninhydrin (triketohydrindene). **Noguchi's r.** See *Noguchi*. **Obermuller's cholesterin r.** See *Obermuller*. **Pfeiffer's r.** See *Pfeiffer*. **r. clump.** The agglutination of bacilli by means of agglutinative serum. **r., Ehrlich's, for**

diazo-bodies in urine; see in *appendix*, page 894. **r. of degeneration**. The electrical r. indicative of degenerative changes in a nerve. It consists in a rapid loss of the galvanic and faradic irritability of the muscles supplied by it, while the galvanic irritability of the muscles increases and remains exalted for a number of months (until muscular atrophy supervenes). During this condition the anodal closing contraction may be obtained with less than the cathodic closing contraction, contrary to the normal sequence. **r. of stool, how to determine**; see in *appendix*, page 907. **r., Schmidt's, to determine presence of hydrobilirubin**; see in *appendix*, page 907, 908. **r. time**. The time which elapses between the conscious reception of a stimulus and the emission of a consequent motor response. **reversible r's**. Chemical r's which are reversible, depending upon various conditions, such as temperature, amounts of the various reagents used, etc. The best example is the esterification of acetic acid with ethyl alcohol, $\text{CH}_3\text{COOH} + \text{CH}_3\text{CH}_2\text{OH} \rightleftharpoons \text{CH}_3\text{COOCH}_2\text{CH}_3 + \text{H}_2\text{O}$. By increasing the quantities of the substances on one side of the equation, we force the reaction to the other side. **Smith's r**. See *anaphylaxis*. **tryptophan r**. The pink or purple color r. obtained by treating tryptophan in weak acetic acid with elementary bromin. The r. is not given when a hydrogen of the NH_2 group is replaced by an amido-acid group, as in glycytryptophan. **tuberculin r**. The febrile response of a tuberculous subject to the injection of tuberculin. **tuberculin skin r**. The local inflammatory response when tuberculin is applied to the skin denuded of its epithelium in a tuberculous subject. **von Pirquet's r**. See under *Pirquet*. **Wassermann r**. See *Wassermann*. **Widal's agglutination r**. See *Widal*. **xanthoproteic r**. A reaction seen on adding strong nitric acid and then ammonia to a solution containing a proteid. A characteristic orange color results. [Lat., *reactio*.]

reactivate (re-ak'tiv-ät). To restore inactive immune serum to activity.

reactivation (re-ak-tiv-a'shuun). The addition of complement to an inactive serum, thus restoring its cytolytic properties.

reagent (re-a'jent). In chemistry, any body, of known properties, brought into contact with other bodies for the purpose of observing the phenomena which ensue. **general r**. A r. that serves to determine the group of substances to which a body under test belongs, without indicating what member of the group it is. **special r**. A r. capable of indicating the presence of an individual body, and not merely of a body of a certain group. For reagents having individual names, see under those names. [Lat., *re*, again, + *agere*, to act.]

realgar (re-al-gar'). See *arsenic disulphid*,

under *arsenic*. [Arabic, *rahj al-gahr*, powder of the mine.]

reaper's keratitis. See under *keratitis*.

Réaumur's thermom'eter (ra-o-mür'). A thermometer the zero point of which is the temperature of melting ice, the boiling point of water at sea-level being 80°. [René Antoine Ferschault de Réaumur, French physicist, 1683-1757.]

Recam'ier's caust'ic. A solution of 1 part of chlorid of gold in 100 parts of nitrohydrochloric acid.

receiver (re-se'ver). In an air pump, the vessel in which the vacuum is produced.

receptaculum (re-sep-tak'u-lum). A vessel or place into which something is received or in which something is contained.

r. chyli. A dilatation of the thoracic duct opposite the first lumbar or last dorsal vertebra. **r. seminis**. The posterior culdesac of the vagina, from its supposed function as a special receptacle for the semen in the act of copulation. [Lat., *re*, again, + *capere*, to take.]

receptor (re-sep'tor). A molecular group in various cells having a special affinity for toxins, amboceptors, and other similar substances. See *Ehrlich's theory*. [Lat., *re*, back, + *capere*, to take.]

recess (re-ses'). A depression or cavity. [Lat., *re*, back, + *cedere*, to go.]

recession (re-sesh'un). Hidden, concealed. In the mendelian theory of heredity, those inherited characteristics which are not apparent in the individual but may be transmitted and appear in the progeny. [Lat., *recessus*, a cavity, a recess.]

recessive (re-ses'iv). A type of heredity described by Mendel wherein two simple characters coming together transmit the repressed character.

recessus (re-ses'us). See *recess*. **r. cochlearis**. A slight depression between the two diverging ridges into which the crista vestibuli divides. **r. conarii**.

A small cavity at the base of the pineal gland, included between the lamina conarii and lamina pedunculorum. **r. hemisphericus**. An oval depression in the roof of the wall of the vestibule behind the crista vestibuli. **r. hemisphericus**.

A small roundish depression in the inner wall of the vestibule of the ear, in front of the crista vestibuli, perforated for the transmission of branches of the auditory nerve. **r. infundibuli**. The depression in the floor of the third ventricle which forms the cavity of the infundibulum. **r. intercruialis**. The interpeduncular space. **r. labyrinthi**. A fetal structure corresponding to the aqueduct of the vestibule of the ear. See *fossula sulciformis*. **r. nasopalatinus**.

The nasal opening of the nasopalatine canal. **r. occipitalis**. Posterior horn of lateral ventricle. **r. peritonei**. Pouch-like processes formed by peritoneum. **r. pharyngeus**. Blind pouchlike process of mucous membrane of pharynx below opening of eustachian tube.

recipe (res'ip-e). The 2d person sing. imperative of Lat., *recipere*, to take. See *prescription*.

reciprocal (re-sip'ro-kal). Having an interchangeable character. **r. innervation.** A term applied by Sherrington to designate the relationship existing between the flexor and extensor motor centers of the spinal cord, so that when one is stimulated, the other is inhibited.

reciprocity table, etc. See in *appendix*, pages 936, 937.

Recklinghausen's disease (rek'ling-how-sen). Multiple neurofibroma.

recomposition (re-kom-po-sish'on). The reconstitution of a decomposed chemical compound.

reconstituent (re-kon-stit'u-ent). Serving to promote reconstitution.

reconstitution (re-kon-sti-tu'shon). Continuous repair or renovation of decaying tissues.

recrement (re'kre-ment). 1. A fluid which after its secretion has been resorbed in whole or in part. 2. Excrement. [Lat., *recrementum*.]

recrudescence (re-kru-des'ens). A return of acute conditions in a disease after a decline or intermission. [Lat., *recrudescencia*.]

recrudescent (re-kru-des'sent). Showing recrudescence.

recrystallization (re''kris-tal-i-za'shun). The act or process of crystallizing a second time.

rectification (rek-tif-ik-a'shun). 1. The act or process of setting anything straight or in the proper position. 2. The process of purifying liquors by repeated distillation. [Lat., *rectificatio*.]

rectified (rek'tif-id). Subjected to rectification (2d def.), and often also specially flavored. [Lat., *rectificatus*.]

recto-. Combining form of Lat., *rectum*, rectum, n. of *rectus*, straight.

rectocele (rek'to-sel). A forward protrusion of the rectal wall into the vagina. [Lat., *rectum*, + Gr., *kele*, a tumor.]

rectococcygeus (rek-to-kok'si-je-us). See *table of muscles*, under *muscle*.

rectoscope (rek'to-sköp). See *proctoscope*. [Lat., *rectum*, + Gr., *skochein*, to examine.]

recto-uterine hematocele. See *pelvic hematocele*, under *hematocele*.

recto-uterine pouch. Syn.: *excavatio Douglasii*. See under *pouch*.

rectovesical pouch. Syn.: *excavatio rectovesicalis*. See under *pouch*.

rectum (rek'tum). The portion of the large intestine extending from the sigmoid flexure to the anus. It passes from opposite the left sacro-iliac synchondrosis, from left to right, to about the middle of the sacrum, whence it descends in the middle line to the anus. It is partially invested by the peritoneum (see *meso-rectum*), and has an external layer of longitudinal muscular fibers, beneath which are circular fibers (see *sphincter ani internum*, in *table of muscles*, under *muscle*) and an inner coat of mucous membrane united to the muscular layers by connective tissue. The mucous membrane is covered with columnar epithelium and raised into crescentic

longitudinal folds. [Lat., *rectus*, straight.]

rectus (rek'tus). Any straight muscle. See *table of muscles*, under *muscle*. [Lat., *regere*, to direct.]

recuperation (re-ku-per-a'shun). Return to health after illness or loss of normal vigor. [Lat., *recuperatio*.]

recurrent (re-kur'rent). Of a disease, occurring again after having subsided. [Lat., *recurrens*, from *recurrere*, to run back.]

red. Of a color resembling that of blood; as a n., such a color or a substance possessing it. **congo r.** A coloring matter which is colored blue by free acids, and thus forms a very delicate test for them.

indigo r. A coloring matter, $C_{16}H_{10}N_2O_2$, isomeric with indigotin. **neutral r.** An anilin dye used in culture media for detecting the presence of intestinal bacteria. **r. bone marrow.** Marrow consisting of more than 90 per cent. fat, of which about one-third is lecithin. It also contains about 1 per cent. of iron.

r. induration. Induration due to chronic passive congestion. **r. infarction.** An infarct containing many red blood corpuscles. **r. milk.** See under *milk*. **retinal r., visual r.** See *visual purple*, under *purple*. [Ang.-Sax., *redd*.]

red gum. 1. Eucalyptus gum, eucalyptus kino, exuding from the bark of several species of *Eucalyptus*. It is astringent. 2. See *miliaria rubra*, under *miliaria*.

redintegration (red-in-te-gra'shun). Restoration, renewal. [Lat., *redintegrare*, to renew.]

red pop'py pe'tals. The fresh petals of *Papaver rhoeas*. [Lat., *rhoeados petala*, Br. Ph.]

red saun'ders. See *santalum rubrum*, under *santalum*.

reduce (re-düs'). To perform the process of reduction.

reduced (re-düst'). Lessened in number or amount. In chemistry, having undergone the subtraction of oxygen or the addition of hydrogen. **r. hemoglobin.** Hemoglobin free from oxygen. **r. schematic eye (of Lister).** A hypothetical eye with a single refractive surface, having the same refractive power as the normal eye with its series of refractive surfaces.

reducin (re-du'sin). A leukomoin, $C_{12}H_{24}N_6O_6$, from urochrome.

reductase (re-duk'täs). An enzyme found in tissue which has a reducing action.

reduction (re-duk'shun). 1. The action of bringing to or from a previous state, condition or belief; restoration. 2. In chemistry, the process of adding hydrogen to some chemical compound or of extracting oxygen, chlorine, or other elements combined with some metal. [Lat., *reductio*, from *reducere*, to bring back.]

reduplication (re-du-pli-ka'shun). A doubling; of a heart sound, its division.

refined (re-find'). Purified.

reflection (re-flek'shun). 1. A turning or bending back, especially the turning back of a ray of light, etc. See *angle of r.*

under *angle*. 2. A turning back or turning aside of a structure, as of a flap; also that point of the structure at which the folding takes place. [Lat., *reflexio*.]

reflector (re-flek'tor). 1. See *mirror*. 2. A muscle the action of which is to turn a part back. **forehead r.** See *head mirror*, under *mirror*. [Lat., *reflectere*, to bend back.]

reflex (re'fleks). The term used to express the fact that when a sensory nerve is stimulated, the nerve impulse, on reaching the nerve center, is returned (reflected) through an efferent nerve to the periphery; as a noun, a r. action, movement, secretion, etc. **abdominal r.** A r. contraction of the abdominal muscles, resulting from stimulation of the skin over them. **auditory r.** R. irritation (such as respiratory spasm) caused by excitation of the auditory nerve. **Babinski's r.** See *Babinski*. **biceps r.** A r. elicited by striking the biceps tendon at the bend of the elbow. **bone r.** A r. muscular contraction caused by blows over a bone. **Cheyne-Stokes r.** A type of respiration seen in exhaustion of the pneumogastric nucleus, in which the breathing movements rapidly accelerate and deepen, then stop and repeat this peculiar rhythm. **chin r.** A sudden elevation of the lower jaw immediately following a blow on the lower teeth or on the chin. **choking r.** See *pharyngeal r.* **ciliospinal r.** Dilatation of the pupil produced by irritating the skin of the neck on the same side. **corneomandibular r.** A r. by which the lower jaw moves toward the side opposite the eye tested when the cornea is lightly touched, the mouth being slightly open. **cremasteric r., cremaster r.** A raising of the testicle when the skin on the front and inner side of the corresponding thigh is stimulated; best marked in young children. **crossed r.** A r. manifested on the opposite side of the body from that in which the original impulse took place (e. g., the contraction of the right hind leg of a frog caused by irritation of the left eye after the brain is removed). **cutaneous r.** A r. excited by stimulation of the skin. **deep reflexes.** Reflexes from stimulation of sensory parts lying beneath the skin, e. g., the muscles, tendons, and joints. **epigastric r.** A r. muscular contraction producing a dimpling in the epigastric region; elicited by applying a stimulant to the skin over the sixth rib. **fascial r.** A r. produced by a sudden tap over a fascia. **genital r.** R. irritation due to any abnormality of the genital organs. **gluteal r.** A contraction of the gluteal muscles caused by irritating the overlying skin. **guttural r.** A r. observed in certain cases of disease of the genitalia in women, in which the patient has a desire to spit but can not. **infraspinatus r.** The r. by which outward rotation of the arm and straightening of the elbow are produced on tapping a spot over the scapula on a line bisecting the angle formed by the spine of the

bone and its inner border. **interscapular r.** A r. contraction of the scapular group of muscles resulting from stimulation of the skin over the interscapular region. **knee r.** See *knee-jerk*, under *jerk*. **light r.** A narrow circular spot of light, seen reflected from the retina with the retinoscopic (skiascopic) mirror. The direction of the movements of this spot with reference to the movements of the mirror are used in determining the refractive condition of the eye. **muscle r.** See *tendon r.* **nasal r.** See *pathological nasal r.* **oblique r.** Of Geigel, a contraction of the lower fibers of the internal oblique muscle, just above Poupert's ligament, on sharply stimulating the skin over the upper and inner part of the thigh in women; there is no retraction of the labium. **patellar r.** Syn.: *knee-jerk*, *knee phenomenon*, *knee clonus*. Spasmodic contraction of the quadriceps femoris (see *knee-jerk*, under *jerk*). **pathological nasal r.** Any neurosis resulting from a morbid state of the nasal mucous membrane. **periosteal r.** See *bone r.* **pharyngeal r.** Retching caused by tickling the pharyngeal mucous membrane; frequently absent in hysteria and bulbar paralysis. **plantar r.** Flexion of the toes elicited by stroking the sole of the foot; absent or replaced by extension in certain morbid conditions. **r. tone.** See *reflex tonus*, under *tonus*. **scapular r.** Contraction of the scapular muscles produced by stimulation of the overlying skin. **scapulohumeral r.** Adduction and slight outward rotation of the arm elicited by tapping upon the inner border of the scapula; said to be impaired in muscular dystrophies and exaggerated in hemiparesis and cerebral hemiplegia. **superficial r.** See *cutaneous r.* **tendo Achillis r.** See *ankle clonus*, under *clonus*. **tendon r.** The r. contraction of a muscle (or group of muscles) resulting from a sudden blow on its tendon. See *knee-jerk*, under *jerk*. **too r.** A r. elicited by grasping the great toe of a patient lying on his back with extended legs, and flexing it strongly. There immediately follows involuntary flexion of the foot, then of the leg, and lastly of the thigh. It is only met with in patients in whom the knee-jerk, ankle clonus, and other tendon r's are highly developed. **triceps r.** Contraction of the triceps extensor cubiti elicited by striking its tendon when the forearm hangs downward with the arm at right angles to the trunk. **vagus r.** Supersensitiveness to pressure over the course of the vagus, usually observed on the side of the affected lung in phthisical subjects. **virile r.** A r. retraction of the bulbocavernous portion of the penis elicited by pulling the organ toward the umbilicus and sharply percussing its urethral or lateral aspect near the perineum; said to be present in healthy adults. [Lat., *reflectere*, to turn back.]

reflux (re'fluks). A return flow. [Lat., *refluxus*, from *refluere*, to flow back.]

refraction (re-frak'shun). Deflection from a straight course; especially the change of direction of rays of light, heat, and sound in passing from one medium to another of different density, or through a medium the density of which is not uniform. See *angle of r.*, under *angle*, and *refractive index*, under *index*. **double r.** The breaking up of a ray of light into two rays, which proceed in different directions on emerging from the medium (such as Iceland spar) which produces this bifurcation. **r. equivalent.** A number expressing the product of the specific refractive power of a substance by the molecular weight of the latter. This number, when calculated for the different members of an homologous series of organic compounds, is found to vary according to more or less definite rules; and, its value being determined for the elementary bodies, its value for compounds can be deduced, at least in some instances. [Lat., *refrangere*, to break up.]

refractor (re-frak'tor). 1. An apparatus for producing refraction. 2. As improperly used, a person who "refracts" the eyes (i. e., examines them for errors of refraction).

refractory (re-frak'to-re). Stubborn; resisting treatment; especially resisting the action of heat, melting with great difficulty. **r. period.** The term used to designate the fact that in the muscle and nerve there is a short period after activity in which the tissue cannot be excited by stimuli. The phenomenon is exhibited most distinctly by heart-muscle. [Lat., *refractorius*.]

refrangibility (re-fran-ji-bil'it-e). Susceptibility to refraction.

refresh'. To denude of an epithelial covering for surgical purposes. [Old Fr., *refrescher*.]

refrigerant (re-trij'er-ant). Cooling; as a n., an agent that effects cooling. [Lat., *refrigerans*.]

regeneration (re-jen'er-a'shun). 1. A reparative process in which lost elements or attributes are renewed. 2. In chemistry, the process of obtaining from the end products or by-products of an operation a material which is employed in an earlier stage of the same operation. **pathological r.** A renewal of destroyed or injured tissues which takes place in conformity with a pathological instead of a physiological process. [Lat., *re*, again, + *generare*, to beget.]

regimen (rej'im-en). A systematic course, especially of eating and drinking, for preserving or restoring health. [Lat., *regimen*, guidance.]

region (re'jon). A certain definite space, more or less circumscribed. **auric r.** The r. about the aula. **central gray r.** The medullary substance of the cerebral hemisphere. **ciliary r.** 1. The zone of the eyeball which contains the ciliary body. 2. That portion of the lid that bears the cilia. **clavicular r.** The space about the clavicle. **costal r's.** The lateral aspects of the chest. **epigastric**

r. The portion of the anterior abdominal surface bounded by two vertical lines passing through the middle points of Poupart's ligaments, and by two horizontal lines touching respectively the lower margin of the sternum and the lowest part of the thorax. **gastic r.** The r. over the stomach. **gustatory r.** The tip, margins, and root of the tongue in the neighborhood of the circumvallate papillae, also the lateral parts of the soft palate and the anterior surface of the anterior pillars of the fauces. **hypochondriac r.** The r. that adjoins the epigastric r. laterally. **hypogastric r.** That r. of the abdominal surface bounded above by a horizontal line drawn through the anterior superior crests of the ilia, and on either side by vertical lines drawn through the middle points of Poupart's ligaments. **iliac r.** The r. external to the hypogastric r. **ilio-inguinal r.** The iliac r. and groin conjointly. **inferior sternal r.** The space bounded by that portion of the sternum which lies below the lower margin of the third costal cartilages. **infra-axillary r.** A triangular r. on the lateral wall of the chest, below the axilla, limited anteriorly by the edge of the pectoralis major, posteriorly by the latissimus dorsi. **infraclavicular r.** The r. lying between the lower border of the clavicle and the lower border of the third rib, and between the edge of the sternum and a vertical line from the acromial end of the clavicle to the spine of the pubes. **infrahyoid r.** The r. below the hyoid bone, between the sternocleidomastoidei and the sternum. **inframammary r.** The r. lying between a line drawn along the upper border of the xiphoid cartilage and the margin of the false ribs, and between the middle line of the xiphoid cartilage and a vertical line passing through the spine of the pubes. **infrascapular r.** The r. lying below a transverse line drawn from the angle of the scapula to the seventh dorsal vertebra and above the continuation of the lower boundary of the inframammary r. **infraspinous r.** The r. beneath the spine of the scapula. **inguinal r.** See *groin*. **interscapular r.** The r. lying between the scapulae. **ischio-rectal r.** The r. between the ischium and rectum. **jugal r.** The r. over the zygoma. **lumbar r.** The r. posterior to a vertical line through the middle point of Poupart's ligament, and extending vertically as far as the lumbar vertebrae. **mammary r.** The r. nearly square, bounded above by a line passing through the lower border of the third rib at its junction with the sternal cartilage, below by a line passing along the upper border of the xiphoid cartilage, externally by a vertical line to the spine of the pubes, and internally by the edge of the sternum. **middle cervical r.** The space bounded by the lower jaw, the anterior borders of the sternocleidomastoidei, and the sternum. **mylohyoid r.** See *mylohyoid triangle*, under *triangle*.

olfactory r. That portion of the nasal mucous membrane which corresponds to the ramifications of the olfactory nerve and is specially concerned with the sense of smell. **psychomotor r.** The r. of the higher cerebral centers; the cortex cerebri. **pterygomaxillary r.** The r. between the pterygoid process and the maxillary bone. **pubic r.** 1. The lower portion of the hypogastric r. 2. See *hypogastric r.* **pulmocardiatic r.** That r. of the thorax in which a portion of the left lung covers the heart. **pulmogastric r.** That r. in which the lower border of the left lung overlies the stomach. **pulmohepatic r.** That r. in which the lower border of the right lung overlies the liver. **respiratory r. of the nose.** All the lower part of the nasal passages through which there is a free passage of air during respiration. **sacral r.** The r. over the sacrum. **scapular r.** The r. overlying the scapula. **sternal r.** The r. overlying the sternum. **subauricular r.** The r. immediately below the ear. **subicular r.** The anterior extremity of the temporosphenoidal lobe. **submental r.** The space immediately beneath the chin. **subthalamie r.** The prolongation of the tegmentum beneath the posterior portion of the thalamus opticus. **superior r. (of the skull).** The r. extending from the supra-orbital ridge in front to the superior curved line of the occipital bone behind, and bounded laterally by the temporal lines. **superior sternal r.** That portion of the r. overlying the sternum which is above the lower border of the third rib. **supraclavicular r.** The r. lying above the clavicle. **suprahyoid r.** The r. between the upper margin of the hyoid bone, the anterior borders of the sternocleidomastoidei, and the lower border of the inferior maxilla. **supraspinous r.** The r. bounded by the supraspinous fossae. **suprasternal r.** The r. bounded inferiorly by the notch of the sternum, and laterally by the sternomastoid muscles. **umbilical r.** The r. about the umbilicus, bounded above by a horizontal line connecting the cartilages of the ninth rib, below by a line joining the anterior superior crests of the two ilia, and laterally by vertical lines passing through the central points of Poupert's ligament. [Lat., *regio*, from *regere*, to direct.]

register (rej'is-ter). 1. An apparatus for registration. 2. The compass of a voice or of a musical instrument; also a subdivision of this compass, comprising a range of tones similarly produced and of the same character. [Lat., *registrum*.]

regression (re-gres'shun). Retrograde development; degeneration. [Lat., *regredi*, to go back.]

regressive. In psycho-analysis, a turning back of the libido to infantile interests.

regular (reg'u-lar). Conforming to rule or custom; of the pulse, rhythmical. [Lat., *regularis*, from *regula*, a rule.]

regulin (reg'u-lin). A proprietary mixture of agar-agar and cascara.

regulus (reg'u-lus). An old chemical term for several of the metals when separated by fusion from the ore and obtained in a pure state; particularly the metallic button formed at the bottom of the crucible in the process of assaying; also, in England, an impure mixture of sulphids of a metal obtained by fusion of the ore. [Lat., dim. of *rex*, king.]

regurgitation (re-gur-ji-ta'shun). A flowing backward or reflux, as of blood in cases of incompetent heart valves, or of food or liquid that has been swallowed. **aortic r., mitral r., tricuspid r.** The backward flow of blood through the aortic, mitral and tricuspid valves, due to their incomplete closure. [Lat., *re*, again, + *gurgitare*, to ingulf.]

Reichert's membrane. Syn.: *Bowman's layer*. The anterior layer of the cornea, situated immediately beneath the epithelial layer.

reimplantation (re'im-plan-ta'shun). The restoration of extracted teeth to their sockets. [Lat., *re*, again, + *implant*, to plant.]

reinfection (re-in-fek'shun). Infection after a previous infection of the same sort.

reinoculation (re-in-ok-u-la'shun). Inoculation after a previous inoculation of the same sort.

Reissner's membrane. A membrane which extends from the upper surface of the lamina spiralis ossea obliquely to the external walls of the cochlea, and thus divides the scala vestibuli into two divisions.

rejuvenescence (re-ju-ven-es'ens). 1. The renewal of youth; the property possessed by a protoplasmic cell of undergoing a rearrangement of its parts and taking on renewed activity. 2. Of Strasburger (1875), the complete development of cells. 3. The exhibition by cells of renewed activity in binary division, instead of their breaking up into spores after conjugation. [Lat., *rejuvenescentia*.]

relapse'. A return of a diseased condition. [Lat., *relapsus*, from *relabi*, to slide back.]

relaps'ing. Returning after having subsided.

relaxant (re-laks'ant). Relaxing, producing relaxation; laxative. [Lat., *relaxans*.]

Remak's fibers. Non-medullated nerve f's. **R.'s ganglion.** A g. in the tissue of the heart near the entrance of the superior vena cava. [Robert Remak, German anatomist, 1815-1865.]

remedial (re-me'de-al). Acting as a remedy.

remedy (rem'e-de). Any means employed to cure or mitigate disease. [Lat., *re*, again, + *mederi*, to heal.]

Remijia (re-mij'e-ah). A genus of tropical American cinchonaceous shrubs or small trees, which yield cuprea bark, from which quinin was formerly extracted.

remission (re-mish'un). That stage of a disease, especially a fever, in which its severer symptoms are abated. [Lat., *remissio*.]

- remittent** (re-mit'tent). Disappearing in part, but recurring periodically. [Lat., *remittens*.]
- re'nal**. Pertaining to the kidney. **r. function, how to determine**; see in *appendix*, page 895. [Lat., *renalis*, from *ren*, the kidney.]
- reniform** (ren'e-form). 1. Kidney-shaped. 2. Having the outline of the longitudinal section of a kidney. [Lat., *ren*, the kidney, + *forma*, form.]
- ren'net**. A ferment which coagulates milk, found in the fourth stomach of ruminants, and in general in the gastric and pancreatic secretions. See *abomasum* and *milk-curdling ferment*, under *ferment*.
- vegetable r.** The various coagulating rennets from different plants.
- ren'nin**. Syn.: *milk-curdling ferment*, *lab ferment*. 1. The rennet ferment of gastric juice which causes coagulation of milk. 2. Supposed internal secretion of the kidney, which causes a rise of blood pressure.
- repand'**. A term used in descriptive bacteriology meaning with an edge, like the border of an open umbrella. [Lat., *re*, back, + *pandus*, bent.]
- repercolation** (re'per-ko-la'shun). The successive application of the same percolating menstruum to fresh portions of the substance to be percolated.
- reposition** (re-po-sish'on). Replacement; restoration of a part to its normal position. [Lat., *repositio*, n. of action, from *reponere*, to replace.]
- repositor** (re-pos'it-or). An instrument used for replacement or readjustment of a part. [Lat., *repositorium*.]
- repression**. In psycho-analysis the unconscious control of primitive libido trends.
- reproduction** (re-pro-duc'shun). The process by which a species of organized beings is perpetuated by the formation of new individuals. See *generation*.
- asexual r.** R. without sexual congress.
- endogenous r.** The formation of new offspring within the body of the parent, especially the genesis of cells.
- merismatic r.** See *fission*.
- nutritive r.** A form of r. in which the exact character of preceding cells or organs is repeated.
- parthenogenic r.** See *parthenogenesis*.
- sexual r.** R. by the union of sexually distinct cells. [Lat., *re*, again, + *productio*, production.]
- repullulation** (re-pul-ul-a'shun). The return of a morbid growth. [Lat., *repullulare*, to sprout again.]
- repulsion** (re-pul'shun). The act or process of driving back; also the force exerted by one body on another which tends to cause their separation. See *attraction*.
- capillary r.** R. due to the forces which cause the movements of liquids in small tubes, or to analogous forces. [Lat., *re*, back, + *pellere*, to drive.]
- resalgin** (res-al'jin). A product of the action of potassium resorcylate on antipyrin.
- resection** (re-sek'shun). The act of cutting away, especially the articular surfaces or the ends of bones. [Lat., *re-*
- sectio*, n. of action from *resecare*, to cut off.]
- residual** (rez-id'u-al). Constituting a residue. [Lat., *residuus*.]
- residue** (rez'id-u). That which is left of a material after its subjection to a process, e. g., percolation. [Lat., *residuum*, from *re*, back, + *sidere*, to sit.]
- residuum** (re-zid'u-um). That which remains; a residue; a deposit or sediment. [Lat., *residuum*, from *residere*, to remain.]
- resiliency** (re-sil'e-en-se). Tendency to rebound or recoil; buoyancy, power of recovery. [Lat., *resilientia*, from *resilire*, to leap back.]
- res'in**. 1. An excretory product of various plants; an amorphous, more or less translucent, readily fusible substance, insoluble in water, mostly soluble in alcohol, ether, essential oils, or hot fixed oils, and combining with alkalis to form soaps. It is sometimes mixed with volatile oils, sometimes contains benzoic or cinnamic acids (see *balsam*), and sometimes contains mucilaginous matter (see *gun r.*, under *gun*). It is also obtained in a fossil state (see *amber* and *dammar*). 2. Rosin, colophony; of the U. S. Ph. and Br. Ph., the residue left after the distillation of oil of turpentine. It consists of the anhydrid, $C_{14}H_{22}O_4$, of abietic acid. It is used as a stimulant constituent of plasters and ointments.
- acaroid r.** A r. occurring as a spontaneous exudation on the leaves and in the stem of *Xanthorrhoea hastilis* and other species of *Xanthorrhoea*. It contains benzoic and cinnamic acids, and is used as a stimulating expectorant.
- Botany Bay r.** See *acaroid r.*
- Cayenne r.** See *caoutchouc*.
- cowdie r.**, **cowrie r.** See *dammar*.
- emplastrum resinae** [Br. Ph.]. Adhesive plaster (*emplastrum adhesivum*, U. S. Ph.). It consists of resin, lead plaster, and hard soap [Br. Ph.], or rubber petrolatum and lead plaster [U. S. Ph.].
- kauri r.** See *dammar*.
- pine r.** See *r.* (2d def.).
- r. ointment.** See *ceratum resinae*, under *resina*.
- r. plaster.** See *emplastrum resinae*, under *resina*. [Lat., *resina*.]
- resina** (res-e'nah). See *resin* (2d def.) [U. S. Ph., Br. Ph.].
- ceratum resinae**. Basilicon ointment; it consists of yellow wax, lard, and resin [U. S. Ph.].
- ceratum resinae compositum**. Deshler's salve; a compound of rosin, yellow wax (prepared suet, turpentine, and linseed oil) [U. S. Ph.].
- emplastrum resinae**. Rosin (or adhesive) plaster; made by adding powdered rosin to a mixture of lead plaster and yellow wax melted together [U. S. Ph.].
- unguentum resinae**. An ointment made of yellow wax, rosin, lard, and olive oil [Br. Ph.].
- resino-**. Combining form of *resin*.
- resinoid** (rez'in-oyd). 1. Resembling a resin. 2. A class of preparations obtained by precipitating alcoholic tinctures by pouring them into water and collecting the precipitate. They are obviously of

variable activity and do not necessarily represent the drugs from which they are prepared.

resistance. In psycho-analysis the unconscious energy devoted to the retention of repressed material expressed through antagonism to the analyst.

resolution (rez-o-lu'shun). The subsidence of an inflammation; the softening and disappearance of a swelling. **cumulative r.** In chemistry, the process by which from a single substance there is formed a series of substances, each member of the series being derived from the preceding member by the addition of one or more molecules of the original substance, less a certain portion of the latter.

resolvent (re-sol'vent). Causing resolution; promoting absorption. [Lat., *resolvens*, pres. pple. of *resolvere*, to loosen, to dissolve.]

resonance (res'o-nans). The resounding of a part subjected to auscultation or percussion. **amphoric r.** 1. In auscultatory percussion, the high-pitched sound heard over a large superficial cavity. 2. In auscultation, the respiratory sound like that produced by blowing over the neck of a bottle, heard over large cavities. **bronchial r.** See *bronchophony*. **skodaic r.** The high-pitched, tympanitic r. above a pleural exudate; the auscultatory sound is also high-pitched bronchial. **tympanitic r.** R. of clear, high-pitched quality, produced by percussion over a cavity well distended by air. **vesicular r.** Normal pulmonary r. **vocal r.** The r. heard on auscultation of the chest while the patient is using the voice. [Lat., *resonare*, to resound.]

resopyrin (res-o-pi'rin). Resorcinopyrin, the compound obtained by mixing resorcin and antipyrin.

resorbent (re-sor'bent). Promoting resorption.

resorbin (re-sor'bin). An ointment basis, said to be made of oil of sweet almonds, wax, gelatin, soap, and water.

resorcin (re-sor'sin). Metadihydroxybenzene, $C_6H_4(OH)_2$, occurring as large colorless or slightly yellowish rhombic prisms or tabular crystals, of very sweet but afterward irritating taste; used as an antiseptic, a topical stimulant, and an antipyretic. In poisonous doses it causes epileptoid convulsions. **r. blue.** A blue coloring matter found under certain circumstances in animal and vegetable albuminous tissues, and obtainable synthetically by heating r. and urea together. **r. monacetate.** See *euresol*. **r. phthalein.** Fluorescein, a substance known in two forms, one, $C_{20}H_{14}O_6$, occurring as yellow flocks, the other, $C_{20}H_{12}O_6 = C_{20}H_{14}O_6 - H_2O$, as a brick-red crystalline powder.

resorcinol (re-sor'sin-ol). Same as *resorcin*. **r.-azobenzene.** The compound, $C_6H_5.N_2.C_6H_5(OH)_2$. **r.-ether.** The compound, $C_{12}H_{10}O_8$. **r.-phthalein.** See *fluorescein*. **r.-quinone.** The compound, $C_6H_4O_2 + C_6H_4(OH)_2$, isomeric with quinhydrone.

resorption (re-sorp'shun). 1. The act of

taking up again into the circulation that which has been deposited in the tissues; the digestion of red blood corpuscles or other cells by macrophages. 2. The absorption of pathological exudates or fluids. **morbid r.** See *pathological absorption*, under *absorption*. **purulent r.** The absorption of purulent fluids. [Lat., *resorbere*, to suck up.]

respirability (res-pir-a-bil'it-e). The quality of being respirable.

respirable (res'pir-a-bl). 1. Of a medium such as air, water, etc., capable of sustaining life by serving for respiratory gas interchange. 2. Capable of being breathed, as in the case of nitrogen and hydrogen, which may be inspired and expired, although incapable of serving for the respiratory gas interchange. [Lat., *respirare*, to breathe.]

respiration (res-pi-ra'shun). 1. The mechanical processes of inspiration and expiration of air, or of supplying water to the gills, etc. 2. One complete inspiration followed by a complete expiration. 3. The taking up of oxygen and the giving off of carbon dioxide by the tissues of animals or plants; that part of the nutrient process which has to do with nutriment and waste in the gaseous form. 4. The absorption of oxygen by the blood in the lungs, the gills, etc., and the elimination of carbon dioxide and watery vapor at the same time and by the same organs. See *external r.* **abdominal r.** R. (1st def.) due chiefly to the contraction of the diaphragm and the consequent protrusion of the abdominal walls and the viscera; said to be common to adult man, the horse, the cat, and the rabbit. **aquatic r.** R. in water, i. e., r. in which the respiratory membrane, branchial mucosa (gills), skin, etc., are supplied with oxygen and relieved of carbon dioxide by means of water. **artificial r.** 1. Imitation of the natural movements of r. as by alternately drawing the arms up over the head and pressing them against the sides of the chest, thus in turn enlarging the thoracic cavity by elevating the ribs and diminishing it by depressing them, as in Sylvester's method of resuscitating asphyxiated persons. Hall's method (the so-called "ready method") of treating asphyxia consists in laying the person on the face, to allow liquids to run out from the air passages, then turning him on one side, so as to allow of the expansion of the walls of the chest from the weight of the body having been removed from the breast. Howard's method is by the direct application of compression to the ribs by the hands of the operator, who kneels over the patient, slowly brings his weight to bear upon the chest, compressing the ribs and costal cartilages, and then suddenly removes the pressure, allowing the thorax to expand by its own elasticity. Schäfer's method is similar to Howard's, except that the patient lies on his face and the operator throws his weight gently upon his hands as they press upon the flanks. 2. A form of r.

in which the lungs are inflated by positive pressure from a bellows or similar apparatus. **branchial r.** R. by means of gills or branchiae, as in aquatic animals. **bronchial r.** 1. The sound heard over the bronchial tubes. 2. A form of r. which displaces vesicular r. in certain diseases of the lungs. In inspiration it is tubal, short in duration, incomplete, and of high pitch. Expiration is as long as inspiration or longer, of greater intensity, and of higher pitch. It indicates condensed lung tissue, as in pneumonia, pleurisy with effusion, etc. **broncho-vesicular r.** R. having both bronchial and normal vesicular qualities. **buccal r.** See *mouth breathing*, under *breathing*. **cavernous r.** R. accompanied by a sound like that produced by blowing into a cavity. **Cheyne-Stokes r.** See *Cheyne-Stokes*. **clavicular r.** A form of r. practised by singers in which the clavicle takes part in the respiratory movement, the shoulders being elevated. **cog-wheel r.** R. in which the sound of inspiration and expiration is not continuous, but jerky. **costal r.** R. (1st def.) due chiefly to the elevation and depression of the ribs, especially the upper ones, the diaphragm taking a comparatively small part; seen especially in women and supposed by most physiologists to be due to gestation, although some attribute it to the mode of dress. **costo-inferior r.** Of Beau and Maissiat, r. (1st def.) produced mainly by the elevation and depression of the lower ribs; said to be especially well seen in dogs. **costosuperior r.** Of Beau and Maissiat, a form of respiratory movement produced mainly by the elevation and depression of the upper ribs; most common in women. **cutaneous r.** The taking up of oxygen and the giving off of carbon dioxide by the blood through the skin. **diaphragmatic r.** See *abdominal r.* **exaggerated r.** R. which differs from normal r. only in showing greater intensity. **external r.** The absorption of oxygen and rejection of carbon dioxide carried on by the blood in its passage through the respiratory membranes of the lungs or the gills. **fetal r.** See *placental r.* **forced r.** Respiratory movements stronger than normal. **harsh r.** See *bronchovesicular r.* **inner r., internal r.** See *tissue r.* **interrupted r.** R. in which the respiratory murmur is interrupted; supposed to be caused by incomplete dilatation of the air cells and oftenest found at the anterior surface of the apex of the right lung. **intestinal r.** The process of the absorption and evolution of gas by the mucous membrane of the intestines. **intra-uterine r.** 1. R. by the fetus before delivery. 2. See *placental r.* **jerking r.** See *interrupted r.* **labored r.** 1. Respiratory movements in which the ordinary muscles of r. are unable to ventilate the lungs sufficiently for the aëration of the blood and are assisted by the so-called auxiliary respiratory muscles. 2. Dyspnea. **laryngeal r.**

The rhythmical widening and narrowing of the glottis during r. In inspiration the glottis is wide open, allowing the freest entrance of the air, while in expiration it is narrowed and somewhat retards the air's exit. **lung r.** See *pulmonary r.* **muscle r.** R. (3d def.) by a muscle when in action. **nasal r.** R. (1st def.) through the nose. **normal r.** See *tranquil r.* **oral r.** See *mouth breathing*, under *breathing*. **ordinary r.** See *tranquil r.* **periodical r.** R. with periodical intermissions or variations in intensity and rhythm. **pharyngeal r.** Of Garland, rhythmical expansions and contractions of the pharynx in connection with the other respiratory movements. The expansion is preliminary to inspiration and synchronous with expiration, while the contraction coincides with inspiration and is essentially an inspiratory act. It was first observed and investigated in dogs, but has been observed in man. **placental r.** The gas interchange between the fetal and the maternal blood, through the intermediation of the placenta, by which the former is maintained in its normal condition. **puerile r.** An exaggerated respiratory murmur. See also *exaggerated r.* **pulmonary r.** 1. R. in which the gas interchange between the blood and the air takes place in the lungs. 2. Inspiration and expiration, and the changes taking place between the tidal and the stationary air. See *expired and inspired air*, under *air*. **r. of cells.** See *vesicular r.* **r. of mucous membranes.** External r. through mucous membranes, carried on chiefly, in the higher animals, through the pulmonary and (to a lesser extent) the nasal and gastro-intestinal mucosae, though in some fishes r. through the last named is sufficient to support life. **rude r.** See *bronchovesicular r.* **sighing r.** Deep r. accompanied with sighs, as in pulmonary congestion. **stertorous r.** See *stertor*. **superficial r.** See *external r.* **supplementary r.** See *exaggerated r.* **thoracic r.** See *costal r.* **tissue r.** The taking up of oxygen and giving off of carbon dioxide by the tissues of the body. In man and the higher animals generally the tissues obtain their oxygen from the blood in the capillaries, and give their carbon dioxide up to it in return, the capillary walls acting as a respiratory membrane to the tissues. **tracheal r.** Syn.: *tubal murmur*. The normal respiratory murmur heard over the suprasternal fossa, said to be generated in the trachea and bronchi. It is tubular in character; in inspiration it is higher in pitch than vesicular r., and in expiration it is more intense, longer, and higher-pitched than in inspiration. See *bronchial r.* (2d def.). **tranquil r.** The quiet, almost effortless movements of r. that occur when the body is in a state of rest or moderate activity. This form of breathing is understood when no qualifying term is used. **tubal r., tubular r.** See *tracheal r.* **vaginal r.** The movements of the vagina due to the depres-

sion and elevation of the diaphragm in *r. ventral r.* See *abdominal r. vesicular r.* See *vesicular murmur*, under *murmur*. [Lat., *respiratio*, from *respirare*, to breathe.]

respirator (res'pir-a-tor). An apparatus to be fitted over the mouth, or over the mouth and nose, for modifying the inspired air or filtering it from impurities.

respiratory (res'pir-a-to-re). Pertaining to or affecting respiration or the respiratory organs. *r. murmur*. See under *murmur*. [Lat., *respiratorius*.]

rest. 1. Natural repose; relief from activity. 2. That which remains over; a remnant. 3. A group of cells or a portion of fetal tissue which has become displaced and lies embedded in tissue of another character. [Lat., *restare*, to remain.]

restiform (res'te-form). Cordlike; cord-shaped. [Lat., *restis*, a rope, + *forma*, form.]

rest'ing. Dormant, quiescent, functionally inactive.

restitution (res-tit-u'shun). 1. A restoring or being restored; a return to a previous condition. 2. See *movement of r.*, under *movement*.

restorative (res-tor'a-tiv). Having the power to restore a lost or suspended function; as a n., an agent having such power, a tonic. [Lat., *restaurans*.]

restraint (re-strānt'). 1. The act of checking or holding back. 2. The state of being checked or controlled; specifically, the abridgment of liberty in the case of the insane. [Lat., *restringere*, to draw back.]

resuscitation (re-sus-si-ta'shun). The revival of the apparently dead. [Lat., *resuscitatio*.]

resuscitator (re-sus'si-ta-tor). A device employed in resuscitation. **intra-gastric r.** Of F. B. Turck, a recurrent tube for applying a current of hot water within the stomach; used in the treatment of shock.

retamin (ret'am-in). An alkaloid, C₁₅H₂₈-N₂O, obtained from *Retarma sphaerocarpa*.

retch'ing. Abortive efforts at vomiting.

rete (re'te). A network, anastomosis, or plexus. **bipolar r. mirabile**. A r. mirabile the elements in which unite to form a single efferent vessel. **r. acromiale**. An arterial anastomosis over the acromion. **r. articulare cubiti**. An arterial anastomosis over the elbow. **r. articulare genu**. An arterial anastomosis over the anterior and lateral surfaces of the knee. **r. calcaneum**. An arterial r. over the os calcis. **r. carpeum dorsale**. The posterior carpal arch. **r. carpi volare**. An arterial network, made up of branches of the radial and ulnar arteries and deep palmar arch, upon the anterior surface of the carpus. **r. malleolare externum**. An arterial anastomosis over the external malleolus. **r. malleolare internum**. An arterial anastomosis over the internal malleolus. **r. Malpighi, r. Malpighii**. See *r. mucosum*. **r. mirabile**. A cluster of

fine arteries or veins which anastomose freely with each other. **r. mirabile duplex**. A r. mirabile consisting of both veins and arteries. **r. mirabile of Galen**. A r. mirabile found in the intracranial part of the internal carotid artery of the sheep and other quadrupeds. **r. mirabile simplex**. A r. mirabile of either arteries or veins only. **r. mucosum**. Syn.: *corpus reticulare, Malpighian layer*. The layer of epidermis lying next the corium, into which the papillae of the skin project. The cells of the r. mucosum are connected by fine processes, and the layer next the corium is connected with corium in a similar way. **r. tarsum (dorsale)**. An arterial anastomosis upon the dorsal surface of the tarsus. **r. testis**. Syn.: *Haller's network*. The anastomosing network of the vasa recta in the mediastinum testis. **r. vasculosum**. A plexus or network of blood vessels. **r. venosum dorsale manus**. A venous network upon the dorsum of the hand. **r. venosum dorsale pedis**. A venous network upon the dorsum of the foot. **unipolar r. mirabile**. A r. mirabile in which the elements do not unite to form a single vessel. [Lat., *rete*, net.]

retention (re-ten'shun). 1. A holding back or holding in of natural excretions of the body. 2. The absence of a natural discharge without any real retention. [Lat., *retentio*, from *retinere*, to keep back.]

reticular, reticulated (re-tik'u-lar, re-tik'u-la-ted). Having the appearance of or forming a reticulum. **r. formation**. See under *formation*. [Lat., *reticularis, reticulatus*, from *reticulum*, dim. of *rete*, a net.]

reticulate (re-tik'u-lāt). A term used in descriptive bacteriology, meaning in the form of a network, as the veins of a leaf. [Lat., *reticularis*.]

reticulin (re-tik'u-lin). An albuminoid of the reticular tissue of the lymphatic glands.

retina (re'tin-ah). The innermost of the three coats of the eyeball, the nerve, or sensitive coat, which receives visual images. [Lat., *rete*, a net.]

retinaculum. 1. One of the solid fibers in lymphatic glands which pass from the follicular capsule across the intervening space to the follicle, holding the follicular reticulum tense. 2. In embryology, in the pl., *retinacula*, of Barry, certain tense filaments which connect parts of the cellular membrane lining the graafian follicle. [Lat., *retinaculum*, a halter.]

retinitis (ret-in-i'tis). Inflammation of the retina. **albuminuric r.** R. occurring in the course of chronic renal disease. **glycosuric r.** See *r. diabetica*. **r. apoplectica**. See *r. hemorrhagica*. **r. cerebrealis**. R. due to intracranial inflammation. **r. choroido**. R. associated with choroiditis, especially that of syphilitic origin. **r. diabetica**. A form of r. occurring in diabetes mellitus of very inconstant type. **r. hemorrhagica**. R.

characterized by numerous hemorrhages over the fundus without very marked tissue changes; due to disease of the heart or the vascular system or to some grave disturbance of the general circulation. **r. syphilitica**. A chronic diffuse *r.*, of syphilitic origin, occurring usually as a late manifestation. [*Retina* + Gr., *itis*, inflammation.]

retinol (ret'in-ol). A substance produced by the dry distillation of resin; used as a solvent. [Gr., *retine*, resin.]

retinoscope (ret'in-o-sköp). An instrument consisting of a plane or concave mirror, with a peep-hole through the middle for throwing a light on the fundus of the eye. By observing the movement of the light on the fundus, as the mirror is moved with or against the light, and by placing plus or minus lenses in front of the eye, so as to just reverse the movement of the light, the refractive condition of the eye may be determined. The instrument must be used at a definite distance from the other eye, usually a meter.

retinoscopy (ret-in-os'kop-e). 1. Examination of the retina by means of the retinoscope. 2. Diagnosis of the refraction of an eye by retinoscope examination of the retina. 3. See *skiascopy* and *keratascopy*. [*retina* + Gr., *skopein*, to examine.]

retort (re-tort'). A vessel used to contain a liquid during the process of its distillation. The common form consists of a bulb with a long neck. **tubulated r.** A *r.* with a stoppered tube on the shoulder of the bulb. [Lat., *retorquere*, to bend back.]

retractility (re-trak-til'it-e). 1. The state of being retractile. 2. Of Pajot, a property of the uterine tissue by virtue of which the uterus, having been emptied of a portion of its contents, becomes thicker walled, while its capacity and its volume are diminished. It differs from contractility in that it is permanent and not intermittent, and is in inverse proportion to the distention undergone. [Lat., *retrahere*, to draw back.]

retraction (re-trak'shun). The act of drawing back; the state of being drawn back. [Lat., *retractio*, n. of action from *retrahere*, to draw back.]

retractor (re-trak'tor). The instrument for drawing back the edges of a wound. [Fr., *rétracteur*.]

retrahens (ret'rah-ens). Retracting, drawing back; as a n. m., a retractor muscle. **r. aurem**, **r. auricularae**, **r. auriculam**, **r. auris**. See *table of muscles*, under *muscle*. [Lat., *retrahere*.]

retrenchment (re-trench'ment). In plastic surgery, a method of operating by removing superfluous material and procuring cicatricial contraction. [Fr., *retranchement*.]

re'tro-. Combining form of Lat., *retro*, backward.

retrocession (re-tro-sesh'un). A going backward. See *retroposition*. [Lat., *retrocessio*.]

retrodeviation (re'tro-de-vi-a'shun). Backward displacement of a part or organ.

retroflexion (re-tro-flek'shun). The bending backward of an organ. **r. of the uterus**. A uterine distortion in which the body of the uterus is bent backward; the cervix usually being more or less displaced. [Lat., *retroflexio*.]

retrojection (re-tro-jek'shun). Irrigation of a canal from within outward by a stream carried by a tube to the deep part of the canal. [Lat., *retro*, backward, + *jacere*, to throw.]

retropharyngeal (re'tro-far-in'je-al). Situated behind the pharynx. **r. abscess**. See under *abscess*.

retropharyngitis (re'tro-far-in-ji'tis). Inflammation of the connective tissue posterior to the pharynx.

retroposition (re-tro-po-sish'un). Posterior displacement of the uterus as a whole. [Lat., *retropositio*.]

retropulsion (re-tro-pul'shun). 1. The act of forcing a part back. 2. A backward movement sometimes seen in paralysis agitans, taking the place of the ordinary progression. See *propulsion*. [Lat., *retro*, backward, + *pellere*, to push.]

re'trovaccina'tion. The inoculation of a heifer with virus from a human subject.

retroversion (re-tro-ver'shun). The process of turning a part or organ backward, also the state of being turned backward. In the case of the uterus, a uterus in which the long axis is turned backward. [Lat., *retroversio*.]

revaccination (re-vak-sin-a'shun). Vaccination of one who has been vaccinated before. [Lat., *re*, again, + *vaccination*.]

reversible reactions. See under *reaction*.

reversion (re-ver'shun). 1. A turning back, as of a fold of tissue. 2. The fact or action of reverting or returning to a primitive or ancestral type or condition. [Lat., *re*, back, + *versio*, turning.]

revivification (re-viv''if-ik-a'shun). 1. Resuscitation. 2. The isolation of a metal existing in a state of combination. 3. The process of freshening the surfaces of parts by paring, to enable them to cohere when kept in close apposition. [Lat., *re*, again, + *vivus*, alive, + *facere*, to make.]

revulsive (re-vul'siv). Producing revulsion, i. e., diminishing an abnormal condition in one part of the body by operating or acting on another (not in general use at present). [Lat., *revulsivus*, from *revellere*, to drag down or fall back.]

Reynold's acetone test. Based upon the property possessed by acetone of dissolving freshly precipitated mercuric oxid, (HgO) in aqueous solution.

Rh. Chemical symbol for the element *rhodium*.

Rhabditis (rab-di'tis). A genus of small worms of the phylum *Nemathelminthes*, the order *Nematoda*, and the family *Anquilulidae*, having no teeth in the oral cavity. **R. genitalis**. A worm found in the urine of a certain woman, proved to have come from the genitals. **R. Niellyi**. A species found in the papules,

blood, sputum, feces, and urine of a boy with an itching eruption. [Gr., *rabdos*, a rod, + *itis*, inflammation.]

rhab'do-. Combining form of Gr., *rabdos*, rod.

rhabdoid, rhabdoidal (rab'doyd, rab-doyd'al). Rod-shaped; said of the sagittal suture. [Gr., *rabdos*, a rod, + *eidōs*, resemblance.]

rhabdomyoma (rab-do-mi-o'mah). A fibroma in which the muscular fibers are striated. [Gr., *rabdos*, rod, + *mys*, a muscle, + *oma*, a tumor.]

rhabdomyosarcoma (rab'do-mi''o-sar-ko'mah). A sarcoma developing from the muscle elements in the kidney and in other tissues.

Rhabdonema (rab-do-ne'mah). A nematode group of the family *Angiostomidae*, having an unarmed mouth and a long esophagus. **R. intestinale**. An intestinal parasite present in the feces in Cochin China diarrhea. The eggs are voided in the feces and hatch in water. The embryos penetrate the skin of man and eventually reach the intestine. **R. strongyloides**. Syn.: *Strongyloides intestinalis*. See *R. intestinale*. [Gr., *rabdos*, a rod, + *nema*, a thread.]

ragades (rag'ad-ēz). Fissures in the skin, occurring often in the vicinity of the mouth or anus and also on the hands or feet. [Gr., *ragades*, pl. of *ragas*, rent.]

ramnetin (ram'net-in). A principle, $C_{12}H_{10}O_8$, obtained from various species of *Rhamnus*.

rhamnecathartin (ram-no-kath-ar'tin). A bitter principle contained in the berries of *Rhamnus cathartica*.

rhamnose (ram'nōs). Syn.: *isodulcite*. Methylpentose, $CH_3(CHOH)_4CH_2O$; a simple carbohydrate, found as glucosids in nature. There are two forms of it, namely, *alpha-* and *beta-*.

Rhamnus (ram'nus). Buckthorn. **fructus rhamni catharticae**. The berries of *R. cathartica*. **R. californica**. Californian buckthorn. The bark is a purgative. **R. cathartica, R. catharticus**. Common buckthorn; a shrub indigenous to northern Africa, Europe, and northern Asia, and naturalized in North America. The drupes, or buckthorn berries, are an energetic purgative. The bark is also strongly purgative and, when fresh, emetic. **R. frangula**. Alder buckthorn; growing in northern Africa, in northern and middle Asia, and throughout Europe except in the far north. The dried bark, the frangula of the U. S. Ph. and Br. Ph., is analogous in its action to rhabarb, though, when fresh, it is very irritant to the gastro-intestinal tract, producing vomiting and purging accompanied by much pain. **R. purshiana, R. purshianus**. 1. California bearberry. 2. The bitter bark known as cascara sagrada. It is analogous in properties to *R. frangula*. The fluidextract, the aromatic fluidextract, and the extract of cascara sagrada are official in the U. S. Ph. and the N. F. gives formulae for an elixir, a compound

elixir, and an alkaline fluidextract [U. S. Ph.]. **syrupus rhamni**. Of the Br. Ph., 1885, a preparation made by evaporating the juice of *R. cathartica*, flavoring, and adding sugar. [Gr., *rannos*, buckthorn.]

Rhaphanus (raf'an-us). The radish. **R. raphanistrum**. Wild mustard, the *lampsane* of Dioscorides; a European species, naturalized sparingly in North America. The seeds are acrid and stimulating, and were formerly used like mustard seed. *Raphania* has been erroneously attributed to this plant. [Gr., *raphanos*.]

rhein (re'in). A crystalline constituent, $C_6H_8(CH_3)(OH)_4O_2$, obtained from rhabarb. It has no medicinal importance. [Lat., *rheum*, rhabarb.]

rhe'o-. Combining form of Gr., *reos*, stream, current.

rheocord (re'o-kord). An apparatus for increasing the resistance in an electric circuit. In its simplest form it consists of a wire stretched between two fixed points. Along the wire slides a piece of metal to which is attached one of the wires of a battery. [Gr., *rein*, to flow, + *chorde*, a cord.]

rheometer (re-om'et-er). 1. See *galvanometer*. 2. An instrument for measuring the velocity of the blood current. [Gr., *rein*, to flow, + *metron*, a measure.]

rheophore (re'o-för). The conducting cord connecting an electrode with the source of the electrical current. [Gr., *rein*, to flow, + *phoros*, bearing.]

rheoscope (re'o-sköp). An apparatus for detecting the existence of an electric current. **physiological r**. A r. consisting of two muscle-nerve preparations, so arranged that the nerve of one specimen rests upon the muscle of the other. If the nerve of the first preparation is stimulated, the other muscle will contract. [Gr., *rein*, to flow, + *skopein*, to examine.]

rheostat (re'o-stat). An apparatus for regulating the intensity of an electrical current by interposing an adjustable length of some substance that is relatively a poor conductor; usually a volume of water or a number of coils of wire. [Gr., *reos*, current, + *istanai*, to place.]

rheotome (re'o-töm). An instrument for interrupting an electric current at regular intervals. **differential r**. A r. for studying the negative variation in muscle and nerve currents. It consists of a rotating wheel so arranged that it alternately opens and closes a galvanometer circuit at a certain determined interval after stimulation of a nerve-muscle preparation. [Gr., *rein*, to flow, + *tome*, a cutting.]

rheotrope (re'o-tröp). Syn.: *gyrotrope*. An apparatus for reversing the direction of an electrical current. [Gr., *rein*, to flow, + *trope*, a turning.]

rheotropism (re-ot'ro-pizm). A tendency to movement in a mass of protoplasm, induced by the action of a current of water. R. is positive when the animal tends to move toward the source of the current,

and negative when it tends to move away from the source.

Rheum (re'um). 1. A genus of polygona-ceous herbs. 2. Of the U. S. Ph. rhu-barb, the root of *Rheum officinale*. **extractum rhei**. An extract of rhubarb of a pilular consistence [U. S. Ph.] **extractum rhei fluidum**. Fluidextract of rhubarb [U. S. Ph.]. **liquor rhei concentratus**. A 50 per cent. tincture of rhubarb prepared by percolation with 20 per cent. alcohol [Br. Ph., 1898]. **mistura rhei et sodae** [U. S. Ph.]. **mistura rhei natronata**. A mixture of the fluidextract of ipecac and rhubarb with sodium bicarbonate, spirit of peppermint, glycerin and water. **pilulae rhei compositae**. Pills each containing 0.13 gm. of rhubarb and 0.10 gm. of purified aloe with myrrh and oil of peppermint [U. S. Ph.]. **pulvis rhei compositus**. A powder of rhubarb, ginger, and calcined magnesia [U. S. Ph., Br. Ph.]. **R. officinale**. A perennial plant resembling *R. rhabonticum*, but larger, indigenous to southeastern Tibet, where it is cultivated for its root, which is official in the U. S. Ph. and Br. Ph. as rhubarb, and is identified with Chinese or commercial rhubarb, though specimens of it cultivated in Europe lack the rich yellow color of the latter. It is supposed to grow also in various parts of western and northwestern China. **R. palmatum**. Palmate-leaved rhubarb; recognized in the Br. Ph. as a source of rhubarb, though its cultivation in Russia has failed to produce a root agreeing with that of Chinese rhubarb. **R. rhabarbarum**. *R. undulatum*. **R. rhabonticum**. Garden rhubarb; a native of southern Siberia and the regions of the Volga; cultivated in Europe and the United States for its acidulous and edible leaf stalks and for its medicinal root. The juice of the leaf stalks contains oxalic acid and malic acid, and is sometimes expressed and made into a wine. **syrupus rhei**. A syrup made by adding 10 c.c. of fluid-extract of rhubarb with a small amount of potassium carbonate to syrup flavored with cinnamon [U. S. Ph.]. The syrup of the Br. Ph. represents 5 per cent. of rhubarb [U. S. Ph., Br. Ph.] **syrupus rhei aromaticus**. A mixture of 15 c.c. of aromatic tincture of rhubarb and 85 c.c. of sryup [U. S. Ph.]. **tinctura rhei**. A 20 per cent. tincture of rhubarb flavored with cardamom [U. S. Ph.]. **tinctura rhei aromatica**. Of the U. S. Ph. a tincture of rhubarb, cloves, cinnamon, and nutmeg. **tinctura rhei dulcis**. A tincture made by maceration and percolation of rhubarb, anise seed, licorice, and cardamom seeds [U. S. Ph., 1890]. **vinum rhei** [U. S. Ph.], **vinum rhei aromaticum**. Wine of rhubarb flavored with orange peel and cardamom seeds. [Gr., *reon*.]

rheum (rūm). A liquid discharge, especially from the air passages or the eyes. **salt r.** A popular term for chronic eczema. [Gr., *reuma*, from *rein*, to flow.]

rheumatic (ru-mat'ik). Pertaining to, of the nature of, or affected with rheumatism.

rheumatin (ru'mat-in). Salicyl quinin salicylate; used in rheumatism.

rheumatism (ru'mat-ism). A term formerly used to designate practically all pain in the joints and muscles not due to trauma or gout; a general term for the forms of disease mentioned in the sub-headings. **acute articular r.** Rheumatic fever; an acute infectious disease characterized by inflammation of the fibrous structures about one or more of the joints, usually a part of a general septicemia. An acute infectious arthritis. **articular r.** Acute or chronic r. affecting one or more joints. **bannorrhagic r.** See *gonorrhoeal r.* **chronic articular r.** See *chronic osteo-arthritis*, under *osteo-arthritis*. **gonorrhoeal r.** An acute arthritis due to infection with the gonococcus. **gouty r.** See *rheumatoid arthritis*, under *arthritis*. **Heberden's r.** See *Heberden*. **inflammatory r.** See *acute articular r.* **muscular r.** A painful affection of the voluntary muscles and of the fasciae and peritoneum to which they are attached. It has received special names according to the region affected, such as lumbago, pleurodynia, etc. **nodose r.**, **nodular r.** See *rheumatoid arthritis*, under *arthritis*. **r. of the heart.** The infection of the heart occurring in the course of an acute arthritis. It is the most frequent cause of valvular disease. **visceral r.** R. that involves the viscera. [Gr., *reuma*, a flux.]

rheumatoid (ru'mat-oid). Resembling rheumatism.

rhexis (reks'is). A rupture of any organ, vessel, or tissue. [Gr., *rexis*, rupture.]

rhigolene (rig'o-lēn). A very volatile, limpid liquid obtained by the distillation of petroleum. [Gr., *rigos*, frost, + *elaion*, oil.]

rhinencephalia (ri-nen-sef-al'e-ah). A monstrosity with the nose prolonged into a sort of proboscis. [Gr., *ris*, *rinos*, the nose, + *kephale*, the head.]

rhinencephalon (ri''nen-sef'al-on). The portion of the cerebrum concerned in the reception of olfactory impulses. [Gr., *ris*, nose, + *egkephalos*, brain.]

rhinion (rin'e-on). The lower point of the suture between the nasal bones. [Gr., *rinion*, dim. of *ris*, the nose.]

rhinitis (ri-ni'tis). Inflammation of the mucous membrane of the nose. See *corryza*. **acute catarrhal r.** Acute corryza. **atrophic r.** Chronic r. with atrophy or complete disappearance of the erectile structure. **hyperplastic r.** **hypertrophic r.** Chronic r. with hypertrophy of the walls of the erectile structure. **r. sicca**. Dry r. where there is deficient or absent secretion. **r. sympathetica**. A general term proposed by J. N. Mackenzie for a number of "so-called reflex neuroses" of the nasal passages, including "hay fever." **simple r.** The first stage of r., before hypertrophic

or atrophic changes have occurred. [Gr., *ris*, the nose, + *itis*, inflammation.]

rhino-. Combining form of Gr., *ris*, *rhinos*, the nose.

rhinocephalus, rhinencephalus (ri-no-sef'al-us, ri-nen-sef'al-us). A cyclopic monster with a tubular nose and eyes below the nose, fused in the median line. [Gr., *ris*, the nose, + *kephale*, head.]

rhinocoprion (ri-no-ko'pre-on). Another name for *Pulex penetrans*.

rhinolith (rin'o-lith). Syn.: *nasal calculus*. A calculus in the nose; one formed from calcareous matter being a true r. and one formed around a foreign body a false r. [Gr., *ris*, the nose, + *lithos*, stone.]

rhinolithiasis (ri'no-lith-i'as-is). A calculus affection of the nose.

rhinological (ri-no-loj'ik-al). Pertaining to rhinology.

rhinologist (ri-nol'o-jist). A student or practitioner of rhinology.

rhinology (ri-nol'o-je). The anatomy, pathology, etc., of the nose. [Gr., *ris*, the nose, + *logos*, the understanding.]

rhinometer (ri-nom'et-er). An instrument for measuring the size of the nares. [Gr., *ris*, the nose, + *metron*, a measure.]

rhinophony (ri-nof'on-e). A nasal quality of speech. [Gr., *ris*, the nose, + *phone*, the voice.]

rhinophyma (ri-no-fi'mah). Syn.: *hypertrophic rosacea*. A lobular enlargement of the nose, with a dusky coloration, due to hypertrophy of all the structures of the skin, to congestion, and to overproduction and retention of sebum. It is a variety of acne rosacea. [Gr., *ris*, the nose, + *phyma*, a tumor.]

rhinoplasty (ri'no-plas-te). The plastic surgery of the nose. [Gr., *ris*, the nose, + *plassein*, to mold.]

rhinoscleroma (ri-no-skle-ro'mah). A specific local disease, characterized by the development of densely hard, painless, slowly increasing nodules or plaques about the anterior nares and adjacent parts. [Gr., *ris*, the nose, + *skleroma*, an induration.]

rhinoscope (ri'nos-kop). An instrument for aiding in the visual examination of the nasal passages. [Gr., *ris*, the nose, + *skopein*, to examine.]

rhinoscopy (ri-nos'kop-e). Inspection of the cavities of the nose, especially the posterior nares. **anterior r.** R. through the anterior nares with the aid of specula or dilators. **posterior r.** R. from behind, and also inspection of the nasopharynx. [Gr., *ris*, the nose, + *skopein*, to examine.]

rhizo-. Combining form of Gr., *riza*, root.

rhizoid (ri'zoyd). A term employed in descriptive bacteriology to signify an irregular, branched, rootlike character. [Gr., *riza*, root, + *eidōs*, resemblance.]

rhizome (ri-zōm'). A root stock; a prostrate or subterranean stem emitting rootlets along the lower surface and sending up aerial shoots from the extremity of

its branches. [Gr., *rizoma*, from *rizoun*, to cause to strike root.]

rhizophyto-alopecia (riz-o-fi'to-al-o-pe-se-ah). See *trichomyces circinata*. [Gr., *riza*, a root, + *phyton*, a plant, + *alopecia*.]

rhodallin (ro-dal'lin). See *thiosinamin*.

rhodium (ro'de-um). 1. A white, lustrous metal, less fusible than platinum even, and scarcely attacked by acids, or aqua regia. Atomic weight, 103. Symbol, Rh. 2. See *lignum rhodii*. **lignum rhodii, lignum r.** 1. The root wood of *Convolvulus scoparius*, probably also of *Convolvulus floridus*. It has the odor of rosewood, and yields oil of rhodium. 2. American rosewood (wood of *Amyris balsamifera*). **oil of r.** A fragrant oil distilled from the wood of *Convolvulus scoparius*, *Convolvulus floridus*, and *Genista canariensis*; used to adulterate oil of rose. [Gr., *rodon*, a rose, its chlorid being rose-colored.]

rhodopsin (ro-dop'sin). See *visual purple*. [Gr., *rodon*, rose, + *opsis*, vision.]

rhocadin (re'a-din). An alkaloid, C₂₁H₂₁NO₆, found in opium. It has no therapeutic usefulness.

rhombo-atloideus (rom'bo-at-loi'de-us). See *table of muscles*, under *muscle*.

rhomboideus (rom-boyd'e-us). See *table of muscles*, under *muscle*.

rhomboid of Mich'aelis. See *Michaelis*.

rhombus (rom'bus). A four-sided figure the sides of which are equal, but its angles not right angles; a lozenge-shaped figure. **muscle r.** A muscle so divided that its cut end has a rhombic shape. The region near the obtuse angle of the surface is then electropositive to that near the acute angle. A regular muscle r. is one in which the cross sections of the muscle are parallel; an irregular muscle r., one in which the ends are not parallel. [Gr., *rhombos*.]

rhonchus (ron'kus). A rāle, especially a sonorous one, produced in a layer bronchus. [Gr., *regkein*, to snore.]

rhubarb (ru'barb). 1. Of the U. S. Ph. and Br. Ph., the root of *Rheum officinale* and other undetermined species of *Rheum*. The various species supposed to yield rhubarb produce under cultivation in Europe roots lacking some of the characteristics of the Chinese drug. All varieties of r. root have the properties, though in a lesser degree, of the Chinese drug. It is purgative and in small doses a mild laxative and stomachic tonic. 2. The genus *Rheum*. For the preparations, see under *Rheum*. **China r., Chinese r.** R. root as now known to commerce. There are two varieties of China r.—one believed to be produced by *Rheum palmatum*, and the other referred to *Rheum officinale*. **crown r.** See *Russian r.* **East Indian r.** See *Chinese r.* and *Himalaya r.* **English r.** 1. See *Rheum rhaponticum*. 2. The root of *Rheum rhaponticum* and *R. officinale* cultivated in Great Britain. **garden r.** *Rheum rhaponticum*, *Rheum palmatum*, *Rheum undulatum*, or hybrids of these, cultivated for their edible leaf

stalks. **Himalaya r.** A variety produced by *Rheum australe*, *Rheum spiciforme*, *Rheum moorcroftianum*, etc.; said to be nearly equal to Russian r. **Persian r.** See *Turkey r.* **rhapontic r.** See *Rheum rhaponticum*. **Russian r.** Crown (or Muscovitic) r.; r. root, not now occurring in commerce, formerly brought into Russia and subjected to rigorous official inspection. **Turkey r.** Originally, r. that reached Europe through the ports of Aleppo, Tripoli, Alexandria, and Smyrna. After its disappearance from commerce the term was transferred to Russian r., with which it was probably identical in botanical origin. [Lat., *rhubarbarum*, wild rhubarb; Gr., *ra*, rhubarb.]

Rhus (rus). Sumach; a genus of anacardiaceous trees or shrubs. **R. aromatica.** Fragrant (or sweet) sumach; a North American shrub. The acid drupes are edible. It is said to stimulate muscular action in the bladder, uterus, and lower intestine. **R. cotinus.** Purple-fringed sumach; indigenous to southern Europe and to Arkansas. The yellow wood, Hungarian fustic, contains fustin. The bark has a feeble aromatic odor and an astringent taste. The leaves are used in a wash or gargle for ulcerated mouth or throat. **R. glabra.** Smooth (or scarlet, or Pennsylvania, or upland) sumach; a shrub indigenous to the United States and Canada. Excrecences on the lower surface of the leaves contain much tannic and gallic acids. The berries, the *R. glabra* of the U. S. Ph., are astringent and refrigerant. **R. radicans.** Poison ivy; a variety (by some authors considered distinct) of *R. toxicodendron*, with climbing stem and pale green or whitish berries. Its juice is highly poisonous. It is common in damp woods in Canada and the United States. **R. toxicodendron.** Poison oak; a shrub found in woods and fields and along fences from Canada to Georgia. All parts of the plant, especially the leaves and root, contain a poisonous glucosidal substance, toxicodendrol, which on contact with the human skin produces in most persons redness, itching, swelling, and vesication. The leaves, including those of the variety *R. radicans*, constitute the *R. toxicodendron* of the U. S. Ph., 1890. They contain toxicodendrol. **R. venenata.** Poison sumach; a shrub or tree found in North America and Japan, more poisonous than *R. toxicodendron*. [Gr., *rhus*, sumach.]

Rhynchoprion (rin-kop-re'on). A genus of fleas. **R. penetrans.** See *Pulex penetrans*, under *Pulex*. [Gr., *rygchos*, a snout, + *prion*, a saw.]

rhythm (rith'im). Regular movement or periodically recurring action, such as is seen in the thorax in respiration and in the heart beats. **couple r.** An abnormal relation between heart beat and pulse; every other beat of the heart produces no pulse at the wrist. **respiratory r.** The measured and successive charac-

ter of the respiratory movements. [Gr., *rhythmos*.]

rib. One of the long, flat curved bones with the concavity inward which extend ventrally from the vertebral column. In man the ribs are normally twelve in number on each side. **abdominal r's.** See *floating r's.* **asternal r's.** See *false r's.* **bicipital r.** An anomalous r., probably due to the more or less incomplete coalescence of two r's, common in certain whales. **cervical r's.** Riblike bones or processes extending ventrally from the cervical vertebrae. **false r's.** The r's which do not join the sternum directly, each by its own cartilage. They include the vertebrochondral r's and the floating r's. **floating r's.** R's that have no anterior attachment. **sternal r's.** See *true r's.* **true r's.** The ribs that articulate, through the costal cartilages, directly with the sternum. **vertebral r's.** See *floating r's.* **vertebrochondral r's.** Those of the false r's that have an indirect cartilaginous connection with the sternum. **vertebrosternal r's.** See *true r's.* [Ang.-Sax., *ribb*.]

Ribemont's laryngeal tube. A hook tube for laryngeal insufflation in asphyxia neonatorum.

ribose (ri'bōs). A pentose (aldopentose) present in yeast, in nucleic acids, and in the nucleosids.

rice. The husked seeds of *Oryza sativa* (and by extension the plant itself). R. is used, chiefly in the form of decoction, as a demulcent. Powdered r. is used as a dusting powder. **r. bodies.** See *corporea oryzoidea*, under *corporea*.

Richardson's styptic collodion. See *collodium stypticum*, under *collodium*.

Rich'mond crown. See *collar-crown*.

ricin (ri'sin). A toxalbumin obtained from the castor oil bean. It is intensely poisonous when injected subcutaneously or intravenously. It is not found in castor oil.

ricinin (ris'in-in). An alkaloid obtained from the castor oil bean.

Ricinus (ris'in-us). A genus of euphorbiaceous plants. **R. communis.** Castor oil plant, palma Christi, the Gr., *kiki*, or the Gr., *kroton*, of Dioscorides; a native probably of the East Indies and Africa, now widely distributed through cultivation in most tropical and many temperate countries. The seeds yield castor oil. The seeds contain the extraordinarily poisonous ricin.

ricketts (rik'ets). See *rachitis*.

Ricord's chancre (ri-korz' shan'ker). A chancre with a very thin, parchmentlike base. [*Philippe Ricord*, Paris surgeon, 1800-1889.]

ri'der's bone. A circumscribed formation of bone in the adductor muscles of the thigh; caused by traumatism in horseback riding.

ridge. A narrow elongated elevation. **external bicipital r.** The r. forming the outer border of the bicipital groove. **external condylar r.** A sharp edge ascending from the external condylar emi-

nence of the humerus. **genital r.** An elevation of the blastema on the mesial side of the wolffian body, from which the testicle in the male and the ovary in the female are developed. **gluteal r.** A r. extending obliquely downward from the great trochanter of the femur to which the gluteus maximus muscle is attached. **inferior occipital r.** See *inferior curved line of the occipital bone*, under *line*. **internal bicipital r.** The r. forming the inner border of the bicipital groove. **internal condylar r.** A sharp r. ascending from the internal condylar eminence of the humerus. **interosseous r. of the fibula.** A r. on the fibula which gives attachment to the interosseous membrane. **intervertebral r. (of a rib).** A r. on the vertebral extremity of a rib which separates the articular surface into two portions. **lateral r's (of the blastoderm).** Two r's of the transparent area that by their coalescence close in the primitive groove. **medullary r's.** Syn.: *medullary folds*. The laminae of nerve substance which are situated on each side of the primitive groove in the embryo, and finally unite to inclose the medullary canal. **mylohyoid r.** See *internal oblique line of the inferior maxilla*, under *line*. **neural r.** See *neural crest*, under *crest*. **palatine r's.** Corrugations of the mucous membrane of the hard palate, one longitudinal and several transverse. **parietal r.** The continuation of the temporal r. upon the parietal bone. **pteroic r.** A cartilaginous or osseous r. on the supero-external portion of the ear capsule, represented in some animals by the pterotic bone. **pterygoid r.** See *infratemporal crest*, under *crest*. **r's of the skin.** The fine r's with intervening furrows, which intersect each other at various angles on the surface of the skin and are produced by the ranges of papillae of the corium. **superciliary r's.** Syn.: *superciliary arches*. The curved r's of the frontal bone corresponding to the eyebrows. **superior occipital r.** See *superior curved line of the occipital bone*, under *line*. **temporal r.** See *temporal crest*, under *crest*. **villous r's of the chorion.** Radiating ridgelike villi observed on the outer surface of the chorion in the formation of the placenta diffusa. [Ang.-Sax., *hrycg*, back.]

Riedel's lobe. See *floating lobe*, under *lobe*.

Riggs' disease. See *pyorrhoea alveolaris*.

rigidity (rij-id'it-e). Stiffness; of muscles, tonic contraction. **cadaveric r.** See *rigor mortis* (1st def.). **post mortem muscular r.** See *rigor mortis* (1st def.). [Lat., *rigiditas*.]

rigor (ri'gor). See *chill*, also *rigidity*. **heat r.** See *r. caloris*. **r. cadaverosus.** See *r. mortis*. **r. caloris.** The r. produced in muscles by high temperatures. **r. maxillae inferiores.** See *trismus*. **r. mortis.** Syn.: *necronarcema*. 1. The temporary rigidity which occurs soon after death; due to certain chemical changes

in the muscles resulting in the formation of myosin. 2. In a physiological sense, rigidity due to the changes which take place in a muscle that has lost its irritability. The muscle becomes opaque and inelastic, no muscle currents are present, and its acidity is increased. [Lat., *rigere*, to be stiff with cold.]

rima (re'mah). A fissure, cleft, chink, crack, rift. **r. ad infundibulum.** The anterior opening of the third ventricle of the brain. **r. cerebri transversa.** The transverse fissure of the brain. **r. clunium.** See *cleft of the nates*, under *cleft*. **r. glottidis.** The cleft between the true vocal bands. **r. glutea.** See *cleft of the nates*, under *cleft*. **r. heli-cis.** An anomalous fissure in the lower anterior portion of the helix. **r. laryngis.** See *r. glottidis*. **r. oris.** The line of junction of the lips. **r. palpebrarum.** See *palpebral fissure*, under *fissure*. **r. pudendi.** See *cleft of the vulva*, under *cleft*. **r. pudendi conni-vens.** The cleft between the labia majora when they entirely conceal the nymphae. **r. transversa.** Syn.: *choroidal fold, fissure of Bichat*. See *transverse fissure of the brain*, under *fissure*. **r. ventriculi laryngis.** The opening of the ventricles of the larynx. **r. vocalis.** See *r. glottidis*. **r. vulvae.** See *cleft of the vulva*, under *cleft*. [Lat., *rima*, a slit.]

rinderpest (rin'der-pest). Syn.: *cattle plague*. A specific, malignant, contagious fever, occurring in cattle, indigenous to the Asiatic steppes of Russia.

ring. A circular band or hoop; a structure surrounding a circular opening. **abdominal r.** The external or internal abdominal r., especially the former. **Bandl's r.** Syn.: *contraction r.* A r-shaped muscular thickening of the uterus during labor, pointed out by Bandl as constituting the boundary between the contractile portion of the organ and the thinned and flabby portion below, and constituting, in his opinion, the true os uteri internum. **benzene r.** The benzene nucleus, C₆H₆, found in many organic chemical compounds. **contraction r.** Of Schröder. See *Bandl's r.* **crural r.** See *femoral r.* **deep abdominal r.** See *internal abdominal r.* **diaphragmatic r.** The opening in the diaphragm for the passage of the vena cava. **external abdominal (or inguinal) r.** The external aperture of the inguinal canal. **femoral r.** An oval opening with its longest diameter transverse, forming the abdominal opening of the femoral canal. **inguinal r.** See *abdominal r.* **internal abdominal (or inguinal) r.** The inner aperture of the inguinal canal, an opening in the transversalis fascia about midway between the anterior superior spine of the ilium and about ½ inch above Poupart's ligament. **Müller's r.** A sphincterlike muscular r. situated at the point where the canal of the cervix uteri joins the cavity of the body of the uterus

at an advanced stage of gestation. **r. of Bandl.** See *Bandl's r.* **r. of Waldeyer.** A r. of lymphatic tissue running from the pharyngeal tonsil to the region of the eustachian orifice, to the rim of the velum palati, around the posterior palatal fold to the faucial tonsil, over the base of the tongue to the opposite side, and back to the place of beginning. [Ang.-Sax., *hring*.]

Ringer's solution. A solution containing sodium, potassium and calcium chlorid in balanced quantities, such as exist in the liquids of the body. Used for perfusing surviving organs, especially the heart.

ring worm. A local infectious disease of the skin, produced by *Trichophyton* fungi. The organism grows by preference in horny epithelium, so that the manifestations are generally confined to the epidermis and the hair. Inflammatory reactions are present in proportion as the disease invades the deeper structures of the skin. The lesions are of a ring shape. The varieties are: *tinea circinata*, *tinea cruris*, *tinea tonsurans*, and *tinea sycosis*.

Rinne's test. A t. for acuteness of hearing, made by estimating how long a tuning fork is heard when brought near the external auditory meatus after its vibration has ceased to be perceived when it touches the cranium.

risiccol (ris'ik-ol). A proprietary preparation. A so-called castor oil powder, consisting of castor oil and an absorbent powder.

risorius (ri-so're-us). See *table of muscles*, under *muscle*.

risus (ri'sus). A laugh. **r. caninus**, **r. de Sardonias**, **r. involuntarius**, **r. sardanicus**, **r. sardonius**, **r. spasticus**. Spasm of the facial muscles producing a grinning effect. [Lat., *ridere*, to laugh.]

Ritter and Valli's law. The l. of increased inherent (e. g., electric) excitability in a nerve when separated from its center. The heightened irritability begins at the proximal and extends toward the distal end, eventually disappearing in the same order.

Rit'ter's disease'. Dermatitis exfoliativa neonatorum. **R's tetanus.** See *breaking tetanus*, under *tetanus*. [Gottfried Ritter, German physician, 1820-1883.]

Rivini's ducts. The d's of the sublingual gland. **R's glands.** See *sublingual glands*, under *gland*.

rivulose (riv'u-lös). A term used in descriptive bacteriology meaning marked with lines like the rivers on a map.

Robb's leg-holder. An apparatus for maintaining the lithotomy position. See *lithotomy*. [Hunter Robb, Cleveland surgeon, living.]

Rob'ert's macula. A distinct collection of coloring matter, formed in a portion of a red blood corpuscle when blood is treated with a very dilute solution of tannic acid.

Ro'bert's pel'vis. A transversely contracted pelvis, the inlet being long and narrow from before backward. [César

Alphonse Robert, Parisian surgeon, 1801-1862.]

Rob'ert's quantitative su'gar estima'tion. Consists of determining the specific gravity of a specimen of urine before and after fermentation with baker's yeast. A decrease of every 0.001 in the specific gravity indicates a percentage of 0.23 of sugar.

Rob'ert's test (for albumin). At the plane of junction between urine to be tested and an underlying solution of sodium chlorid containing 5 per cent. of HCl, a white ring indicates albumin.

Robertson pupil. A condition when the pupil will not retract to light, but contracts promptly under efforts of accommodation. [Douglas Effort-Robertson, Scotch physician, 1837-1909.]

robin (ro'bin). A toxalbumen from the bark of *Robinia pseudacacia*, a North American locust tree.

Robinia (ro-bin'e-ah). A genus of North American leguminous trees or shrubs.

R. pseudacacia. False acacia, common locust tree of North America. Various parts of it are used by the eclectic physicians. Cases are recorded of poisoning in children who had eaten the root, with symptoms like those of belladonna intoxication. [From *Robin*, a French herbalist.]

roborant (rob'o-rant). Strengthening, tonic. [Lat., *roborans*.]

Roche's embrocation. An English patent medicine.

Rochelle salt (ro-shel'). Sodium potassium tartrate, NaCOO.CHOH.CHOH.COOK.

rock salt. The crystalline sodium chlorid found in salt mines.

Rocky Mountain fever. A continuous fever of one to two weeks' duration.

rod. An extended slender bar, generally straight and more or less rigid. **auditory r's.** See *r's of Corti*. **enamel r's.** Enamel prisms. **intracellular r's.** The fibrillae of fibrillated cells. **muscle r's.** R-shaped sarcous elements, forming the contractile and principal part of the contractile disk of a muscular fiber. **retinal r's, r's of the retina.** Cylindrical bodies, 50 to 60 μ in length and 2 μ thick, made up of an inner and outer segment cemented together, found in the layer of r's and cones of the retina. Each r. is connected with a fibrilla of the external molecular stratum of the retina. **r's of Corti.** Two layers, an inner and an outer, of lightly swung r's (Corti's fibers), the inferior ends of which stand on the membrana basilaris, while their superior ends are connected like joints. **r's of Heidenhain.** The fibrillated structure in the fibrillated cells. [Ang.-Sax., *rod*.]

ro'dent ul'cer. Syn.: *Jacob's ulcer*; *noli me tangere*; *Krompacher's tumor*. A form of epithelioma in which there is much loss of tissue in the deeper structures. The process is slow and there is little tendency to metastasis.

Rolando's fissure. See *central fissure*,

under *fissure*. **R's gelatinous substance**. See *Substantia gelatinosa Rolandi*. **roll-culture**. A culture made by rolling a tube containing melted gelatin on ice, thus solidifying the medium and later obtaining scattered colonies.

ro'ller band'age. See under *bandage*.

Rom'berg's sign. Swaying; inability to stand erect with the feet close together and the eyes closed; a s. of *tabes dorsalis*. [Moritz H. Romberg, Berlin physician, 1795-1873.]

röntgenism (rent'gen-ism). The employment of the Röntgen rays in the diagnosis and treatment of disease.

Röntgen rays (rent'gen). R's into which the cathode r's in a Crookes's tube are converted on the aluminum projector. They have the property of penetrating various solid media and exposing to view the denser structures, such as bone, a calculus, etc., that may lie beyond. Hence they are largely used for purposes of diagnosis. They are prone to cause obstinate ulceration if improperly applied. They are supposed to have therapeutical properties. [William Konrad Röntgen, German physicist, born 1845.]

root. 1. The descending axis of a plant. 2. Any structure or part of a structure resembling or analogous to the r. of a plant. 3. The chief or ultimate cause or source of anything. 4. In dentistry, that portion of a tooth that is buried in the gum and is covered with cementum.

fascicled r's. Multiple r's; branches of the embryonic root forming a cluster of fibers or of tubers. **motor r's of the pneumogastric nerve**. Fibers of the pneumogastric nerve arising from the motor accessorio-vagoglossopharyngeal nucleus.

motor r. of the trigeminal nerve. The smaller of the two r's which form the trigeminal nerve. It arises in the motor nucleus of the fifth nerve, and, after receiving fibers from the gasserian ganglion, is continued as the inferior maxillary nerve. **multiple r's**. See *fascicled r's*. **r. canal**. The canal in the center of the root of a tooth, containing the branches of the pulp.

r. of a hair. The portion of a hair imbedded in the skin. **r. of a nail**. The portion of a nail that is covered by the skin. **r. of a tooth**. The portion of a tooth that is imbedded in an alveolus.

r. of the aorta. See *aortic bulb*, under *bulb*. **r. of the lung**. The mass formed by the bronchi, blood vessels, and nerves as they enter the lung. **r. of the mesentery**. The portion of the mesentery that is attached to the posterior wall of the abdomen.

r. of the nose. The upper narrow portion of the nose between the orbits. **r. of the optic tract**. The connection of the optic tract with the brain. **r. of the tongue**. The posterior thick portion of the tongue.

secondary r. An inaxial r.; one not continuous with the stem, but produced laterally from the sides of the abortive primary radicle or from some other part of the plant. **sensory r. of the trigem-**

inal nerve. The larger of the two r's of the fifth nerve. It arises from the sensory nucleus of the nerve, and terminates in the gasserian ganglion. **superior r's of the spinal accessory nerve**. The fibers of the nerve that arise from the medulla. [Ang.-Sax., *rot*.]

root sheath. A cuticular covering of the root of an organ. **inner r. s. of a hair**. A layer, in the root of a hair, lying immediately external to its cuticle and made up of Henle's and Huxley's layers (*q. v.*), and a very delicate cuticle. **outer r. s. of a hair**. A layer of stratified epithelium, similar to the stratum Malpighii of the skin, immediately beneath the glossy membrane of a hair follicle.

roriferous (ro-rif'er-us). Dew-bringing; of ducts or vessels, excreting fluids upon the surface of organs. [Lat., *rorifer*, from *ros*, dew, + *ferre*, to bring.]

Rosa (ro'sah). The rose; a genus of shrubby prickly plants. **aqua rosae**. A preparation made by distilling fresh pale rose petals with water [Br. Ph.] and diluting with water [U. S. Ph.]. The U. S. Ph. distinguishes the undiluted distilled rose water as *aqua rosae fortior*.

confectio rosae. A conserve made of 8 parts of red rose petals, clarified honey, and rose water to 100 parts. **confectio rosae gallicae**. A confection of red rose petals and sugar beaten together [Br. Ph.]. **flores rosae sale conditi**. Pale rose petals put up with half their weight of common salt.

infusum rosae acidum. A preparation made by infusing red rose petals in boiling water acidulated with sulphuric acid and straining [Br. Ph.]. **mel rosae** [U. S. Ph.], **mel rosarum**. Honey of rose; a preparation consisting of fluidextract of red rose petals and honey. **oleum rosae**. Oil of roses [U. S. Ph., Br. Ph.]. **R. centifolia**. 1. Cabbage (or hundred-leaved) rose. It is much grown in southern France and southern Asia for the production of the water and oil of rose. A decoction of the fresh leaves is used as a mild laxative.

2. Of the U. S. Ph., 1890, the petals. **R. gallica**. 1. French rose. It furnishes red rose petals. 2. Of the U. S. Ph., red rose petals. **syrupus rosae**. A syrup of red rose petals [U. S. Ph., Br. Ph.]. **unguentum aquae rosae**. Ointment of rose water, cold cream; a white soft ointment, used especially as a cosmetic; made by mixing expressed oil of almonds, white wax, spermaceti, and rose water, to which a little borax is added to give it a white appearance [U. S. Ph.]. [Lat.]

rosacea (ro-za'se-ah). See *acne rosacea*, under *acne*.

rosanilin (ro-san'il-in). A colorless, crystalline base, $C_{20}H_{19}N_3 + H_2O$. Its salts form the different anilin reds, fuchsin, magenta, rosein, and azalein; and its substitution products with methyl, ethyl, and phenyl form the various violets, blues, and greens of the anilin series.

rosary (ro'za-re). A string of beads or beadlike formations. **rachitic r.** A series of beadlike enlargements at the junction of the cartilages with the ribs, found in rachitis. [Lat., *rosa*, a rose.]

rosatus (ros-at'us). Containing, or made from roses.

rose. 1. The genus *Rosa*. 2. A flower of a plant of that genus. **atar** (or **athar**, or **attar**) of **r.** (or **r's**). See *oil of r.* **oil of r.** [U. S. Ph., Br. Ph.]. **Attar of r.**; a volatile oil distilled from the petals of *Rosa damascena* [U. S. Ph.] and various other species of *Rosa*. If rapidly cooled to 12.5° C. it solidifies, owing to the separation of crystals of a stearoptene. The strong diffusive odor is due entirely to the liquid portion. Oil of r. is used as a perfume and for making r. water. **ottar** (or **otto**) of **r's**. See *oil of r.* **pale r.** Cabbage r. petals; the petals of *R. centifolia*. They are now chiefly used to prepare r. water [U. S. Ph., 1890]. **red r. petals.** The unexpanded petals of *Rosa gallica*. They are somewhat tonic and astringent [U. S. Ph., Br. Ph.]. [Lat., *rosa*.]

rosein. See *English fuchsin*, under *fuchsin*.

Rosenbach's test for bile in urine, see in *appendix*, page 894.

Ros'enbach's-Gmel'in test for bile pig'ments. A modification of Gmelin's test. The urine is filtered in a small filter paper which retains the pigments. A drop of nitric acid, containing some nitrous acid, is placed upon the inside of the filter paper. If bile pigments are present, a yellow spot is formed, enclosed by red, violet, blue, and green rings.

Rosenmüller's cavity. A depression in the posterolateral wall of the pharynx, between the posterior lip of the eustachian tube and the posterior pharyngeal wall. **R's fossa.** A depression, one on each side of the opening of the eustachian tube in the pharynx. **organ of R.** See *epiphoëron*.

ro'seo-. Combining form of Lat., *roseus*, rose-colored; used as a prefix in chemical terms.

roscola (ro-se'o-lah). Syn.: *macular erythema*. Rose rash; scarlet rash. **r. idiopathic.** A term applied for want of a better to those macular erythemas, which are not associated with any well-defined symptoms, although they are the cutaneous expression of constitutional disturbance. **r. symptomatic.** A term applied to the macular erythemas which occur with well-defined diseases, such as measles, scarlet fever, typhoid and typhus fevers, the prodromal eruption of smallpox, and the early macular eruption of syphilis. [Lat., dim. of *roseus*, rosy.]

ro'sin. See *resin*.

Ro'sin's fruc'tose reac'tion. The spectroscopic examination of the substance formed in Seliwanoff's fructose test (*q. v.*) as a means of identifying fructose.

Rosmarinus (ros-mar-i'nus). 1. A genus of plants of the *Monardeae*. 2. The

leaves of *R. officinalis*. **R. hortensis**, **R. officinalis**. Common rosemary. All parts, especially the leaves, have a bitter, camphoraceous taste and a balsamic odor, and yield oil of rosemary. Rosemary is a mild stimulant, and is sometimes used as an emmenagogue, and in fomentations. [Lat., *ros*, dew, + *marinus*, marine.]

Ross and Jones saturated ammonium sulphate test for globulin in cerebrospinal fluid, see in *appendix*, page 909.

rostellum (ros-tel'lum). A small beak or a process resembling a small hook, especially that portion of the head of an endoparasitic worm which bears the hook. [Lat., *rostellum*, a little beak.]

ros'trum. Pl., *rostra*. A beak or nose (of a still); a beak or snout of an animal; a prominence on the sphenoid bone. **r. cochleare.** The spoon-shaped process in front of and above the fenestra ovalis; the termination of the bony canal for the tensor tympani. **r. corporis callosi.** See *beak of the corpus callosum*. **r. laminae spiralis.** See *processus cochleariformis*, under *processus*. **r. sphenoidale.** The beak of the sphenoid bone; the vertical prominence on the inferior surface of the body of the sphenoid bone, articulating with the vomer. [Lat., *rostrum*, beak, from *rodere*, to gnaw.]

rot. The process of decay of organic matter by natural decomposition, or the condition of undergoing such process.

rotation (ro-ta'shun). The process of turning round with a wheellike motion.

chin r. The movement of r. of the chin of the fetus in face presentations, analogous to that of the occiput in vertex presentations. **r. of polarized light.** See *polarimeter*. **r. of protoplasm.** A flowing of the protoplasm in slender currents on the inner surface of the primordial utricle, as in the cells of *Chara*.

specific r. The rotary power of an optically active substance; the amount to which it rotates the plane of polarization when a beam of polarized light is passed through the substance. [Lat., *rotatio*, n. of action from *rotare*, to revolve.]

rotator (ro-ta'tor). See *table of muscles*, under *muscle*.

rötheln (ret'lin). German measles. See *rubeola*.

rottlerin (rot'tler-in). 1. The compound, $C_{22}H_{20}O_6$, obtained from kamala, 2. The coloring matter of *Mallotus philippinensis*.

Rowntree and Geraghty's phenol sulphone phthalein test to determine renal function; see in *appendix*, page 895.

Ru. Chemical symbol for the element ruthenium.

rub'ber. See *caoutchouc*. **hard r.** Ebonite; vulcanized caoutchouc which has been rendered hard and susceptible of a polish by being subjected to pressure and heat during the process of vulcanization, or by the incorporation of some other ingredient, such as tar, white lead, etc. It can be molded and rolled at a high temperature, and when cold is firm, brit-

tle, hard, light, impermeable to liquids, and resistant to ordinary chemicals.

indian r., india r. See *caoutchouc*.

rubefacient (ru-be-fa'shent). Producing redness; as a n., an application that produces hyperemic reaction of the skin. [Lat., *rubefaciens*, from *ruber*, red, + *facere*, to make.]

rubella (ru-bel'lah). See *rubeola*.

rubeola (ru-be-o'lah). German measles; an acute, infectious variety of roseola, of mild character and short duration. It has an exanthem resembling that of measles. [Lat., *rubere*, to be red.]

Rubia (ru'be-ah). 1. A genus of plants of the *Rubiaceae*. 2. Madder, the dried root of *R. tinctorum*. It was formerly considered diuretic and emmenagogue. Its most important constituent is alizarin.

R. peregrina. Wild madder. Its root yields a part of the madder of commerce.

R. sativa major, R. tinctoria, R. tinctorum. Dyers' madder. Its root, dried and powdered, constitutes madder. [Lat., *rubeus*, red.]

rubidium (ru-bid'e-um). A metal discovered by Bunsen in 1861 and found widely diffused through the mineral kingdom, although always in small quantities. The element as well as its salts resembles potassium and its salts. Atomic weight, 85.5. Symbol, Rb. [Lat., *rubidus*, dark red, on account of the characteristic absorption lines which the metal gives in the extreme red portion of the spectrum.]

Ru'binat-Con'dal. A certain Spanish purgative spring water containing magnesium sulphate.

Rub'ner's sug'ar reac'tion. Based upon the principle that glucose is precipitated by an ammoniacal solution of basic lead acetate, the precipitate turning pink or rose-red upon warming.

Ru'bus. 1. A genus of plants (including the blackberry, raspberry, dewberry, etc.) of the *Rosaceae*. 2. Of the U. S. Ph., the root bark of *R. villosus*, *R. cuneifolius*, or *R. nigrobaccus*. The fluidextract and the syrup of blackberry-root bark are official in the U. S. Ph.

R. ideus. 1. Common raspberry, the *batos idaea* of Dioscorides. The leaves are mildly astringent, and were formerly used medicinally. 2. Of the U. S. Ph., 1890, the fruit of this species, used in the preparation of a refrigerant syrup.

R. villosus. Common (or high) blackberry of North America, of which there are two varieties, *R. frondosus*, in which the fruit is more acid, and a procumbent or trailing variety *R. humifusus*, which is not easily distinguished from the *R. trivialis* of Pursh. The root is covered with a thin, brownish bark, which constitutes in part the r. of the U. S. Ph. The bark of the root, the leaves, and the flowers are astringent. [Lat.]

ructus (ruk'tus). Belching of wind.

rudiment (ru'dim-ent). An undeveloped organ or part; an element or elementary principle.

cerebral r. The primitive medullary expansion or cerebral vesicle.

primitive unpaired cerebral r. The

simple form of the primitive brain; originally, merely a dilatation of the medullary canal divided into compartments or primary cerebral vesicles. [Lat., *rudis*, unwrought.]

rudimentary (ru-dim-en'ta-re). Undeveloped; imperfectly developed.

rue (ru). See *Ruta* and *Ruta graveolens*.

oil of r. A volatile oil distilled from *Ruta graveolens* [U. S. Ph., 1890].

rugae (ru'gah). A ridge or raised fold.

rugae vaginae (or **vaginales**). The transverse ridges of the anterior and posterior walls of the vagina.

rugae ventriculi. The folds of the mucous membrane of the collapsed stomach. [Lat., *rugae*, fold, wrinkle.]

rugose (ru'gös). Marked by rugae or wrinkled corrugations, ridge. [Lat., *rugae*, a wrinkle.]

rugosity (ru-gos'it-e). 1. The state of being rugose. 2. A ruga.

Ruhmkorff's coil. An induction apparatus in which the secondary coil is of very fine wire which is of great length. The two ends of the primary coil are connected with the two coatings of a condenser, and a Toucault's contact breaker is used for breaking the current. The secondary coil is not movable.

rum. An alcoholic liquor distilled from the residue obtained in the manufacture of cane sugar or molasses. Average pure r. contains from 50 to 60 per cent. of alcohol.

ru'men. The paunch; in ruminants, the pouch, or, more properly, an esophageal dilatation into which the food first passes, and where it is retained, so as to be moistened or macerated, before it is returned to the mouth. [Lat., *rumen*, throat, gullet.]

Ru'mex. 1. A genus of weedlike herbs (docks and sorrels) of the *Polygonaceae*. 2. Of the U. S. Ph., 1890, the astringent root (dock root) of *R. crispus*, *R. acutus*, *R. silvestris*, and other species of *R.* It is little used therapeutically.

R. acetosella. The field sorrel. It is used as an antiscorbutic. The juice of the leaves is acidulous.

R. crispus. Curled dock. The root constitutes in part the r. of the U. S. Ph., 1890. In Europe the fruits are used as an antidiysenteric.

rumicin (ru'mis-in). A substance found in *Rumex*, closely resembling chrysophanic acid.

ruminant (ru'min-ant). Chewing the cud; belonging to the *Ruminantia*, which are a group of hoofed mammals consisting of those which chew the cud. [Lat., *ruminans*.]

rumination (ru-min-a'shun). The act or process of chewing the cud characteristic of the *Ruminantia*; in a pathological sense, merycism. [Lat., *ruminatio*.]

rump. The sacrococcygeal region. [Ger., *Rumpf*, trunk.]

run'ning. 1. Locomotion by a succession of more or less rapid leaps with first one foot and then the other, one foot leaving the ground before the other has reached it. 2. A popular term for a morbid discharge.

run'round. See *paronychia*.

rupia (ru'pe-ah). A skin eruption occurring in syphilis, which consists of individual tubercles or groups of tubercles, which may ulcerate with the production of heaped-up, laminated crusts, characteristic of the lesion. **r. escharotica.** Another name for *ecthyma gangrenosum*. [Gr., *rypos*, filth.]

rupture. 1. A laceration or bursting. 2. A popular term for hernia. [Lat., *ruptura*, from *rumpere*, to break.]

Rus'sell's bod'ies. Small hyaline bodies, staining intensely with fuchsin, which are present in malignant growths and inflammatory conditions. See *cancer bodies*, under *cancer*. [William Russell, Edinburgh physician.]

Rus'sian catarrh'. See *influenza*.

rust. 1. Iron oxid or hydroxid, appearing as a brownish red deposit formed on metallic iron by exposure to moisture. 2. A fungous disease affecting plants in which rustlike spots appear upon them.

rut. The annually recurring sexual excitement of male deer; extended to other

animals. [Old Fr., *rot*, from Lat., *rugitum*.]

Ruta (ru'tah). 1. Rue. 2. *R. graveolens*. **R. graveolens**, **R. hortensis**, **R. latifolia.** Common rue; formerly official in the U. S. Ph. as *r.* All parts are active, but the leaves are commonly used. Rue has the exciting, irritant, narcotic properties of its volatile oil, and is used as a vermifuge and antihysterical, in colic and amenorrhœa. [Gr., *rute*.]

ruthenium (ru-the'ne-um). A steel gray metallic element. It oxidizes on prolonged exposure to the air, but is scarcely affected by the action of any acids. Symbol, Ru. Atomic weight, 102.

ru'tin. A glucosid, $C_{12}H_{20}O_{15}$, probably identical with barosmin of buchu.

rutyl (ru'til). See *capryl*.

Ruysch's uterine muscles. A bundle of fibers at the fundus uteri. [Frederic Ruysch, Dutch anatomist, 1638-1731.]

rye (ri). *Secale cereale* or its grain. **horned r.**, **spurred r.** See *claviceps purpurea* and *ergot*. [Ang.-Sax., *ryge*.]

S

S. Chemical symbol for the element sulphur.

S. The letter S, also an S-shaped structure. **S. romanum.** See *sigmoid flexure of the colon*, under *flexure*.

sabadillin (sab-ad-il'in). A supposed alkaloid, probably a mixture from cevadilla.

sa'bal. Of the U. S. Ph., the partially dried ripe fruit of *Serenoa serrulata*. The fluidextract of *s.* is official in the U. S. Ph.

Sabbatia (sab-ba'she-ah). A genus of plants of the *Sabbatinae*. **S. angularis.** American centaury. The herb is used as a digestive tonic and an anthelmintic. **S. paniculata.** A species common in the southern United States; used like *S. angularis*. [From *Sabbati*, Italian botanist.]

Sabina (sab-i'nah). 1. The genus *Juniperus*. 2. Of the U. S. Ph., the tops of *Juniperus sabinus*. The fluidextract of *savin* (*q. v.*) is also official in the U. S. Ph. 3. The tops of *Juniperus*. 4. *Savin* leaves. [Lat., *Sabini*, the Sabines.]

sabromin (sa-bro'min). Calcium dibromobenzenate, $C_6H_4Br_2Ca$. Dibromobenzenic acid liberated in the stomach, passing unchanged into the intestine, from which it is absorbed, acting as a non-irritant bromid.

saburral (sab-ur'al). *obs.* Pertaining to foulness of the stomach. [Lat., *saburra*, sand.]

sac. A pouchlike structure. **air s.** An air cell. **allantoid s.** The allantoids. **amniotic s.** See *amnion*. **aneurismal s.** That dilatation of a blood vessel constituting the wall of an aneurism. **conjunctival s.** The s. formed by the re-

flection of the palpebral conjunctiva on to the eyeball. **embryonic s.** The body of the embryo at an early period of development, when the closure of the abdomen has been accomplished, and it presents a saclike appearance. **fetal s.** The s. which contains the fetus in cases of extra-uterine gestation. **hernial s.** The pouch of peritoneum which incloses a hernia. **lacrimal s.** The dilated upper portion of the lacrimal duct. **vaginoperitoneal s.** The s. of a congenital inguinal hernia. **vitelline s.** The s. (called the *umbilical vesicle* in the human subject) surrounding the yolk in the embryo produced by the cleavage of the mesoblast. **yolk s.** An organized and vascular covering formed by the extension of the layers of the blastoderm over the surface of the yolk, in vertebrate animals. See *umbilical vesicle*, under *vesicle*. [Lat., *saccus*, a bag.]

saccate (sak'ät). 1. Sac-shaped. 2. Provided with a sac. 3. In descriptive bacteriology, a term signifying shaped like a sac, tubular, cylindrical. [Lat., *saccatus*.]

saccharamid (sak-ar-am'id). An amid of saccharic acid, $C_6H_{10}(NH)_2$.

saccharate (sak'ar-ät). 1. A compound of a metal with saccharose; more properly termed a sucrate. 2. A salt of dibasic saccharic acid, the most usual meaning of the word.

saccharated (sak'ar-a-ted). Containing sugar.

saccharic (sak'ar-ik). Derived from, or related to, sugar. **s. acid.** See under *acid*.

saccharid (sak'ar-id). An ether com-

pounded of dextrose and an acid radicle or some other compound; also dextrose itself. See *disaccharid*, and *polysaccharids*.

saccharification (sak''ar-if-i-ka'shun).

The act or process of converting into sugar. [Gr., *sakcharon*, sugar, + Lat., *facere*, to make.]

saccharimeter (sak-ar-im'et-er). An apparatus for determining the amount of sugar in a solution. A special form of polarimeter so constituted as to indicate the amount of sugar present in a solution by the degree to which the latter rotates the plane of polarization. A hydrometer for determining the percentage of sugar in a solution from the specific gravity is also called a s. [Gr., *sakcharon*, sugar, + *metron*, a measure.]

saccharin (sak''kar-in). The anhydrid of orthosulphaminbenzoic acid,

CO

$C_6H_4 < > NH$, of intensely sweet taste.

SO

It is said to be 280 times as sweet as sugar, and is used as a substitute for it in diabetes and obesity. It has an acid reaction and is feebly antiseptic.

saccharine (sak''ar-ēn). 1. Combined with or containing sugar. 2. Having a sweet taste.

saccharo- (sak''kar-oh). Combining form of Gr., *sakcharon*, sugar.

saccharobiose (sak''ar-o-bi'ōs). Saccharose.

saccharogen (sak''ar-o-jen). A glucosid.

saccharoid (sak''ar-oyd). Resembling sugar. [Gr., *sakcharon*, sugar, + *eidōs*, resemblance.]

saccharol (sak''ar-ol). See *saccharin*.

saccharometer (sak-ar-om'et-er). See *saccharimeter*.

Saccharomyces (sak-kar-om'fīs-ēs). Syn.: *yeast fungi*. A genus of the *Fungi*, of the order *Ascomycetes*, being non-chlorophylleous organisms, forming a group commonly known as the yeast fungi.

They include most of the fungi capable of exciting alcoholic fermentation in saccharine liquids, and are able to live without free oxygen. They consist of rounded or ellipsoidal, non-nucleated cells, which, under suitable conditions, reproduce themselves by repeated processes of budding. **S. albicans**. See *Oidium albicans*. **S. anginae**. A form found in tonsillitis. **S. Blanchardi**. A form found in a case of peritonitis, showing a large gelatiniform mass. **S. Busse**. A pathogenic form isolated by Busse in 1894 from the necrotic nodules of the tibia, lungs, spleen, and kidney in a case of general infection with this yeast. **S. Cantliei**. A form producing seborrhea in children in the tropics. **S. cerevisiae**. The yeast of beer (or brandy), brewers' yeast. **S. conglomeratus**. A species composed of nearly spherical cells, 5 to 6 μ in diameter, bound together in the form of glomerules or small balls. It occurs on fermenting grapes and at the beginning of the vinous fermentation. **S. ellipsoides**. Found in a case of

otitis media. **S. linguae-pilosae**. A species present in "black tongue." **S. neoformans**. A species found by Sanfelice on the skin of a lemon; productive, when injected into animals, of growths closely resembling sarcoma. **S. ovalis**. The organism of pityriasis capitis and pityriasis alba atrophicans. **S. pasteurianus**, **S. pastorianus**. An organism forming in the fermentation of beer and the last stage of the fermentation of cider and wine. **S. ranulatus**. A form present in a tumor of the submaxillary bone. **S. Samboni**. A form causing dermatitis of the cruroscrotal region. **S. tumiefaciens**. Found by Curtis in a benign tumor. See also *blastomyces*. [Gr., *sakcharon*, sugar, + *mykes*, a fungus.]

saccharomycetic (sak''ar-o-mi-set'ik). Pertaining to or caused by a *Saccharomyces*. **saccharomycetolysis** (sak''ar-o-mi-set-ol'is-is). The splitting up of sugar by a yeast fungus. [Gr., *sakcharon*, sugar, + *mykes*, a fungus, + *lysis*, dissolution.]

saccharomycosis (sak''ar-o-mi-ko'sis). Any disease produced by a yeast fungus.

s. hominis. Another name for blastomycosis.

saccharorrhoea (sak''kar-or-re'ah). 1. The secretion of a saccharine fluid. 2. See *diabetes mellitus*, under *diabetes*. **s. cutanea**. See *ephidrosis saccharata*, under *ephidrosis*. [Gr., *sakcharon*, sugar, + *rein*, to flow.]

saccharose (sak''ar-ōs). See *cane sugar*.

Saccharum (sak''kar-um). 1. A genus of plants of the *Andropogoneae*. 2. Of the U. S. Ph., *sucrose*. See *cane sugar*. 3. See *sugar*. **s. acernum**. Maple sugar. **s. amylaceum**. See *dextrose*. **sacchari fex**. Molasses. **s. lactis**. See *lactose*. **S. officinarum**. (Common) sugar cane; believed to have been originally of the Indo-Chinese countries, Bengal, and the Malay Archipelago. **s. purificatum** [Br. Ph.], **s. purum**. Purified or refined sugar. See *cane sugar*. **spiritus sacchari**. See *rum*. **syrupus sacchari**. See *syrupus*. [Gr., *sakcharon*.]

saciform (sak''se-form). Shaped like a sac. [Lat., *saccus*, a sac, + *forma*, form.]

sacchar (sak''u-lar). See *sacculate* (1st def.). [Lat., *sacculus*, a little sac.]

sacculate (sak''u-lāt). 1. In the form of a small sac. 2. Provided with small sac-like projections. [Lat., *sacculus*, a little sac.]

sacculated (sak''u-la-ted). 1. Formed into sacs; in the form of a sac. 2. Encysted. [Lat., *sacculatus*.]

saccule (sak''ūl). A little sac; any small pouch-shaped part. **vestibular s.** One of the two cavities of the vestibule, which is connected with the canal of the cochlea. It is circular, and lies in front of the entrance to the scala vestibuli of the cochlea. On its anterior wall is the opening of the canalis reuniens, which communicates with the cochlear canal. [Lat., *sacculus*, dim. of *saccus*, sac.]

sa'cral. Pertaining to or connected with the sacrum. [Lat., *sacralis*.]
sacro- Combining form of Lat., *sacrum*, i. e., *os sacrum*.
sacrococcygeal (sa''kro-kok-sij'e-al). Pertaining to the sacrum and to the coccyx. [Lat., *sacrococcygeus*.]
sacrocoxygeus (sa''kro-kok-sij'e-us). See *table of muscles*, under *muscle*.
sacro-iliac (sa-kro-il'e-ak). Pertaining to the sacrum and to the ilium.
sacrolumbalis (sak''ro-lum-ba'lis). The analogue in quadrupeds of the quadratus lumborum. See *table of muscles*, under *muscle*.
sacrolumbar (sak-ro-lum'bar). Pertaining to the sacrum and the lumbar region.
sacropubic (sak-ro-pu'biik). Pertaining to the sacrum and to the os pubis.
sacrospinal (sa-kro-spi'nal). Pertaining to the sacrum and to the vertebral spines.
sacrospinalis (sa''kro-spi-na'lis). See *table of muscles*, under *muscle*.
sacro-uterine (sa-kro-u'ter-ën). See *utero-sacral*.
sacrovertebral (sa-kro-ver'te-bral). Pertaining to the sacrum and to the vertebral column.
sacrum (sa'krum). The sacred bone (so called from an ancient belief that it was indestructible); a bone of the back part of the pelvis (really made up of five vertebrae) situated between the ossa innominata and articulating with them, forming the "keystone" of the pelvic arch. [Lat., *sacer*, sacred.]
sacto- Combining form of Gr., *saktos*, stuffed.
sactosalpinx (sak-to-sal'pinkx). *obs.* A generic term for hydrosalpinx, hematosalpinx, and pyosalpinx, i. e., an over-filled tube. [Gr. *saktos*, stuffed, + *salpizx*, a trumpet.]
sadism (sa'dizm). The association of pain and sexuality; so named from the Marquis de Sade, who was infamous for his crimes and the character of his intrigues. Its ambivalent is masochism. It is met with in psycho-analysis in attenuated form. [*Marquis de Sade*, 1740-1814, French nobleman.]
sadist'ic. Pertaining to sadism.
safflower (saff'low-er). See *carthamus*.
saffron. The dried stigmata of *Crocus sativus*. It has a peculiar, strong, aromatic odor and a bitter, pungent taste. S. contains a bitter principle (picrocrocin), and polychroite (on which its coloring power depends, and which yields crocin on decomposition). S., commonly called Spanish s., is used mainly for coloring. See *carthamus*. [U. S. Ph., 1890; Br. Ph., 1885.]
safranin (saf'ran-in). 1. A pink dyestuff (anilin pink), $C_{18}H_{18}N_4$, a violent poison, producing diarrhea, dyspnea, convulsions, acceleration and enfeeblement of the heart's action, and death by respiratory paralysis. 2. See *crocin*.
safrene (saf'rën). A constituent, $C_{10}H_{10}$, of oil of sassafras.
saffrol. A liquid, $C_{10}H_{10}O_2$, obtained from oil of sassafras, camphor oil and other

volatile oils. Used in headaches, neuralgia, and subacute rheumatism. [U. S. Ph., *safrolum*.]
sagapenum (sag-ap-e'num). A concrete gum resin of uncertain botanical origin, ascribed by many authors to *Ferula persica* or *Ferula szowitziana*. It resembles asafetida and galbanum. [Gr., *sagapennon*.]
sage (sāj). See *Salvia*.
sagittal (saj'it-al). Pertaining to the anteroposterior median plane or a plane parallel to it. s. *plane*. See *sagittal plane*, under *plane*. s. *suture*. See *sagittal suture*, under *suture*. [Lat., *sagittalis*.]
sa'go. The starch meal obtained from the stem of *Metroxylon Rumphii* and *Metroxylon leve* (or of certain other palms, which, however, yield an inferior product), washed, reduced to grains, and heated till the surface becomes slightly glutinous. s. *spleen*. The appearance of the spleen in amyloid degeneration. [Malay, *sagu*.]
St. Anthony's fire. Another name for *erysipelas*.
St. Guy's dance. See *chorea*.
St. Ignatius' bean. The seed of *Strychnos ignatia*. It contains strychnin.
St. John's dance. See *epidemic chorea*, under *chorea*.
St. Vitus's dance. See *chorea*.
sajodin (sa'jo-din). Calcium mono-iodobenenate, $C_6H_5O_4I_2Ca$. It is used in place of the iodids. It contains 26 per cent. of iodine.
saki (sa'ke). See *arrack*.
sal. See *salt*. s. *aëratum*. Saleratus; a commercial product, a mixture of potassium carbonate and bicarbonate, or a salt of intermediate composition. s. *alembroth*. See *alembroth*. s. *amarum*. Magnesium sulphate. s. *ammoniac*, s. *ammoniacum*, s. *ammoniacum*. Ammonium chlorid. s. *carolinum factitium*. Artificial Carlsbad salt, containing sodium sulphate, potassium sulphate, sodium chlorid, and sodium bicarbonate [N. F.]. s. *Glauberi*. Sodium sulphate. s. *kissingense factitium*. A mixed artificial salt containing potassium and sodium chlorids, magnesium sulphate, and sodium bicarbonate. An aqueous solution has the essential composition of Kissingen water (Rakoczi Spring) [N. F.]. s. *microcosmicus*. Sodium and ammonium phosphate. s. *soda*. Sodium carbonate. s. *thamarum carolinensium artificiale*. See *s. carolinum factitium*. s. *volatile*. See *ammonium carbonate*. [Lat.].
salacetol (sal-as'e-tol). Acetyl carbinol, a synthetic compound of salicylic acid; used like salol.
salaman'derin. See *samandaridin*.
salantol (sal-an'tol). See *salacetol*.
salazolon (sal-a'zo-lon). See *antipyrin salicylate*, under *antipyrin*.
salborol (sal-bo'rol). A mixture of salol and boric acid; used as an antiseptic.
sal'ep. The dried tubers of various orchids. The most important constituent

- of s. is a mucilage, but it also contains some sugar and albumin and sometimes starch. It is used as an article of diet and its decoction, flavored, is used as a demulcent.
- saleratus** (sal-er-a'tus). Formerly, potassium bicarbonate; now, also, sodium bicarbonate; used as a source of carbon dioxide and hence entering into the composition of baking powders and used in the preparation of effervescent drinks. [Lat., *sal*, salt, + *aeratus*, aerated.]
- salhyppone** (sal-hip'nōn). An antiseptic benzoylmethylsalicylic ester.
- salicamar** (sal-ik'am-ar). Glycerin ether of glycerolsalicylic acid; a stomachic.
- salicifrice** (sal-is'if-ris). A proprietary antiseptic tooth paste containing salicylic acid and soap.
- salicin** (sal'is-in). A glucosid, $C_6H_4(CH_2OH)OC_6H_{11}O_5$, found in the bark and leaves of different species of willows and poplars, especially *Salix helix*, *Salix pentandra*, and *Populus tremula*. It was introduced as a substitute for salicylic acid, but is little used. [U. S. Ph., *salicinum*.]
- salicol** (sal'ik-ol). 1. Carbolic acid. 2. A solution of methyl alcohol, salicylic acid, and oil of wintergreen in water.
- salicyl** (sal'is-il). The hypothetical oxygenated radicle, $C_7H_5O_2$, of salicylic and salicylic acids. **s'acetic acid**. See *aceto-salicylic acid*, under *acid*. **s. acetol**. See *salacetol*. **s. aldehyd**. Orthohydroxybenzaldehyd, a substance, $C_6[H.OH,CHO,H.H,H]$, obtained from the juice of various plants of the genus *Spirea*, from the larvae of *Chrysomelon populi*, and in other ways, and occurring as an aromatic liquid of spicy and burning taste. It is said to be antiseptic. **s'anilid**. 1. A crystalline substance, $C_8H_7NO_2 = C_6H_4(OH)CO.NH(C_6H_5)$, formed by the action of phosphorus protochlorid on a mixture of salicylic acid and anilin heated to $180^\circ C$. 2. A term erroneously used for an anilic derivative of salicylic aldehyd, properly *salhydranilid*. **s'uric acid**. See under *acid*.
- salicylamid** (sal'is-il-am'id). The compound $C_6H_4(OH)CO.NH_2$, obtained by the action of alcoholic ammonia on methyl salicylate; acting medicinally like salicylic acid.
- salicylase** (sal-is'il-ās). An oxidizing enzyme present in many plants, as well as in the liver, which oxidizes salicylic aldehyd to salicylic acid.
- salicylic** (sal-is-il'ik). Of, pertaining to, or containing the radicle salicyl; pertaining to or derived from s. acid. **s. acid**. See under *acid*. **s. anhydrid**. See *disalicylic acid*, under *acid*. [Lat., *salix*, the willow.]
- salicylid** (sal'is-il-id). A salicylic anhydrid.
- salifebrin** (sal-if-e'brin). See *salicyl-anilid*, under *salicyl*.
- salifiable** (sal'if-i-ab-l). Of a base, capable of forming a salt by combining with an acid. [Lat., *sal*, salt, + *fiere*, to become.]
- salification** (sal-if-ik-a'shun). The formation of a salt.
- saliformin** (sal-if-or'min). A trade name for hexamethylenamin salicylate, $(CH_2)_6N_4C_6H_4.OH.COOH$. It does not differ essentially from a mixture of its constituent acid and base.
- saligallol** (sal-ig-al'ol). Disalicylate of pyrogallic acid.
- saligenin** (sal-ij'en-in). Orthohydroxybenzyl alcohol, $C_6H_4OH.CH_2OH$, derived from salicin by the action of animal and vegetable ferments.
- salimeter** (sal-im'et-er). See *salinometer*.
- salinaphthol** (sal-in-af'thol). See *betol*.
- saline** (sa'lin). Pertaining to or containing a salt or salts, especially sodium chlorid. [Lat., *sal*, salt.]
- salinometer** (sal-in-om'et-er). A salt gauge; a hydrometer for determining the strength of saline solutions. [Lat., *salinus*, saline, + Gr., *metron*, a measure.]
- saliphen** (sal'if-en). A combination of phenetidid and salicylic acid; used as an antipyretic.
- salipyrazolon** (sal-ip-ir-az'o-lon). See *antipyrimin salicylate*, under *antipyrimin*.
- salipyrim** (sal-ip-i'rim). See *antipyrimin salicylate*, under *antipyrimin*.
- sal'it**. The salicylic ester of borneol, $C_{17}H_{22}O_2$. A proprietary antineuralgic and antirheumatic.
- salitannol** (sal-it-an'ol). A condensation product, $C_{14}H_{10}O_7$, of salicylic and gallic acids; an antiseptic.
- salithymol** (sal-ith-i'mol). A thymol ester of salicylic acid; used like salol.
- saliva** (sal-i'vah). Spit, spittle; an insipid, transparent, somewhat viscid fluid secreted by the salivary glands, and poured into the cavity of the mouth. It contains water, an amylolytic digestive ferment (ptyalin), mucus, and mucous corpuscles, and has a weak alkaline reaction. The s. secreted by the various salivary glands varies in composition, as does also s. from different animals. In man s. begins the conversion of starch into sugar, but its chief use seems to be the aiding of deglutition by moistening the food.
- chorda** s. S. obtained from the submaxillary gland by irritation of the chorda tympani. **sympathetic** s. S. obtained by stimulation of the sympathetic nerve fibers supplying the glands; it is thicker and more scanty than the chorda saliva. [Lat.]
- salivant** (sal'e-vant). Promoting the production of saliva.
- salivary** (sal'e-va-re). Pertaining to the saliva or to its formation.
- saliva'tion**. Syn.: *ptyalism*. An excessive production and flow of saliva, caused either by certain poisons (especially mercury) or by visceral disease. **pancreatic** s. The supposed regurgitation and vomiting of pancreatic fluid.
- Salix** (sa'liks). 1. The willow; a genus of trees or shrubs. 2. The bark of *S. alba* and other species. It is a mild tonic and febrifuge. **S. alba**. Common white willow. A distilled water was formerly prepared from the male catkins. **S.**

babylonica. Weeping willow. The catkins, leaves, and young branches are considered tonic and anthelminthic. **S. helix.** A variety of *S. purpurea*, rich in salicin. **S. nigra.** Black willow. The bark, especially that of the root, is bitter and antiperiodic. [Lat.]

salization (sal-i-za'shun). Muscular jerking.

sal'min. The protamin, $C_{30}H_{57}N_{14}O_8$, isolated from the spermatozoa of the salmon.

salocoll (sal'o-kol). Phenocoll salicylate; an antipyretic and antirheumatic.

sal'ol. Phenyl salicylate, $C_6H_4(OH)CO\bar{O}-C_6H_5$. A white crystalline substance; used as an antipyretic and disinfectant, also in rheumatism. [U. S. Ph., 1890; Br. Ph.]

salophen (sal'o-fen). Acetylpara-amidophenol-salol, $C_6H_4 \begin{matrix} OH \\ COO \end{matrix}, C_6H_4N \left\{ \begin{matrix} H \\ COCH_3 \end{matrix} \right.$

occurring in white crystalline scales. Taken into the system, it splits up into sodium salicylate and acetylpara-amidophenol. It actions resemble those of salol. It is used both internally and externally.

salouquin (sa-lo-kwin'in). The quinin ester of salicylic acid, $C_{27}H_{28}O_4N_2$. Used as a tasteless substitute for quinin and for salicylic acid. **s. salicylate.** The salicylate of s. has been used in rheumatism, neuralgia, etc.

salpingectomy (sal-pin-jek'to-me). Excision of the oviduct. [Gr., *salpigx*, a trumpet, + *ektēmeîn*, to cut out.]

salpingian (sal-pin'je-an). Pertaining to a tube, especially to the eustachian tube or the oviduct. [Gr., *salpigx*, a trumpet.]

salpingitis (sal-pin-ji'tis). Inflammation of the fallopian tube or of the eustachian tube. [Gr., *salpigx*, a trumpet, + *itis*, inflammation.]

salpingo-. Combining form of Gr., *salpigx*, from *salpigx*, trumpet; used to denote either the fallopian or eustachian tubes.

salpingocele (sal-pin'go-sēl). The fallopian tube, forming part of a hernial sac. [Gr., *salpigx*, tube, + *kele*, hernia.]

salpingo-oöphorectomy (sal-pin'go-o'-of-or-ek'to-me). Excision of the fallopian tube and ovary. [Gr., *salpigx*, a trumpet, + *oon*, an egg, + *phoros*, bearing, + *ektēmeîn*, to cut out.]

salpingo-oöphoritis (sal'pin-go-o-of-or-i'tis). Inflammation of the fallopian tube and ovary. [Gr., *salpigx*, a trumpet, + *oon*, an egg, + *itis*, inflammation.]

salpingostomy (sal-pin-gos'to-me). The operation of reopening the occluded ostium, allowing the liquid to escape, excising a piece of the wall of the tube, and stitching the mucous and serous membranes together along the margin of the artificial opening, so as to form a fistula. [Gr., *salpigx*, a trumpet, + *stoma*, an aperture.]

salpingotomy (sal-pin-got'o-me). Incision of the oviduct. [Gr., *salpigx*, trumpet, + *temneîn*, to cut.]

salpinx (sal'pinks). A tube, particularly the eustachian tube or the oviduct. [Gr., *salpigx*, a trumpet.]

salt. 1. Sodium chlorid. 2. In chemistry, a compound produced by the union of an electronegative element or radicle and an electropositive element or radicle. The latter constitutes the basic constituent, and is either a metal or the oxid or hydrate of a metal. The former is the acid constituent, and is either a non-metallic (oxygenic) element or a metal united with a large amount of oxygen. **acid s.** That one of two or more s's formed from a dibasic or polybasic acid and a base in which only a portion of the hydrogen of the acid is replaced by the base, so that the s. still has acid properties, i. e., is capable of undergoing replacement by bases. **alkaline s's.** 1. S's which are alkaline in reaction. 2. S's which still possess alkaline properties, i. e., are still capable of neutralizing acids. **amphid s's.** Of Berzelius, certain salts believed to be compounds of two oxids, two sulphids, two selenids, or two tellurids. **artificial Carlsbad s.** See *sal carolinum factitium*, under *sal*. **bakers' s.** Ammonium sesquicarbonate; so called from bakers using it as a substitute for yeast. **basic s.** A compound of a normal s. with an oxid or hydroxid. **bay s.** 1. See *sodium chlorid*, under *sodium*. 2. The salt evaporated from sea water by solar heat. **bitted (purging) s.** See *magnesium sulphate*, under *magnesium*. **Cheltenham s.** A mixture of equal parts of magnesium sulphate, sodium sulphate, and sodium chlorid, or some similar mixture. **common s.** See *sodium chlorid*, under *sodium*. **double s.** A s. in which two bases have replaced the hydrogen of an acid. **Epsom s.** See *magnesium sulphate*. **Glauber's s.** See under *Glauber*. **martial sea s.** Iron chlorid. **Monse's s.** Iron subsulphate. **neutral s., normal s.** A s. formed by the replacement of all the replaceable hydrogen atoms of an acid by a basic radicle. **oxygen s., oxys'.** A s. containing oxygen; the s. of an oxygen acid. **Rochelle s.** Potassium and sodium tartrate. **rock s.** Native crystallized sodium chlorid occurring in masses; also, as used in the United States, sodium chlorid obtained by the evaporation of sea water when occurring in large crystals. **s. of Seignette.** Potassium and sodium tartrate. **s. of Sorrel.** A mixture of potassium oxalate and quadroxalate; also called (without good reason) salt of lemon. It is commonly used to remove ink stains. **Poisonous. s. of tartar.** A synonym for potassium carbonate. **s. of wisdom.** See *alembroth*. **s. solution.** A solution of sodium chlorid in distilled water. Such a solution, when of a strength of 0.7 to 0.9 per cent., causes little or no change in animal tissues with which it comes in contact, and is hence called indifferent (or normal, or physiological) s. solution, and is used in physiological experiments and microscopy whenever it is desired to keep the tissues as nearly normal as possible; also, injected subcutaneously, as a restorative remedy. **sea s.** Sodium chlorid, more or less

pure, obtained by evaporation of sea water. **smelling s.** Any pungent volatile s., particularly ammonium carbonate, used by inhalation as a respiratory and cardiac stimulant. **spirit of s.** An old name for hydrochloric acid. **table s.** See *sodium chlorid*, under *sodium*. **volatile s.** Ammonium sesquicarbonate. [Lat., *sal*.]

saltpeter (salt-pe'ter). Crude potassium nitrate. [Lat., *salpetra*.]

salt rheum (room). See *eczema*.

salubrol (sal'u-brol). A product of the action of bromin on a compound of methylene and antipyrin; a substance for iodiform.

salufer (sal'u-fer). A trade name for sodium silicofluorid. [Lat., *salus*, health, + *ferre*, to bring.]

salsarsan (sal'var-san). Trade name for Ehrlich-Hata preparation, No. 606 used in treatment of protozoan diseases, notably syphilis. It is paradihydroxy-meta-diamino-arseno-benzene dihydrochlorid [AsC₆H₄(OH)(NH₂)₂·2HCl].

salve (sahv). See *ointment*.

Salyia (sal've-ah). 1. Sage; a genus of labiate herbaceous or shrubby plants. 2. Of the U. S. Ph., sage leaves; the leaves of *S. officinalis*. Formerly used as a stimulant in excessive secretion and flatulence. **S. officinalis**. Garden sage; the leaves are official. [Lat.]

salviol (sal've-ol). A principle, C₁₀H₁₆O, contained in oil of sage.

samandaridin (sam-an-dar'id-in). *Obs.* A poisonous leukomatin, C₃₄H₅₀N₂O₅, obtained from the skin of the salamander.

Sambucus (sam-bu'kus). 1. A group of plants of the *Caprifoliaceae*. 2. Elder flowers. **aqua sambuci**. A water distilled from elder flowers [Br. Ph.]. **S. canadensis**. American elder; closely related to *S. nigra* and similarly used.

Sambuci flores. Elder flowers; the flowers of *S. nigra* [Br. Ph., 1898]. **S. nigra**. Common elder. The flowers contain a volatile oil and are used to prepare *unguentum sambuci* and *aqua sambuci*. The berries are aperient and diaphoretic.

sam-shi. See *arrack*.

sanative (san'a-tiv). Having the power to heal; curative; healing. [Old Fr., *sanatif*, or Lat., *sanativus*, from *sanare*, to heal.]

sanatogen (san'at-o-jen). A certain dietetic preparation made from casein and glycerophosphate.

sanatol (san'at-ol). See *creolin*.

sanatorium (san-a-to're-um), pl. *sanatoria*. 1. A health resort; a locality selected as a retreat for its salubrity. 2. An establishment for the reception and medical treatment of invalids (often spelled *sanitarium*, *sanitaria*). Often incorrectly written *sanatarium* and *sanataria*. [Lat., neut. of *sanatorius*, giving health, from *sanus*, from *sanare*, to heal.]

sandalwood (san'dal-wood). As commonly used, lignum santali; also the wood of other species of *Santalum*, red saunders.

sandarac (san'dar-ak). The dried resinous secretion of *Callitris quadrivalvis*.

It is said to consist of three distinct resins, one of which, forming the largest proportion, is entirely soluble in alcohol, another is less soluble, while the third is soluble only in hot alcohol. It is used as an incense and in varnish.

sand flea. See *chigoe*.

sand fly. Members of the family *Simuliidae* and genus *Simulium*, being blood-sucking insects that attack man and beast in Europe and the tropics.

san'dix. Red lead oxid.

Sänger's macula. Red spots, resembling flea bites, occurring at the orifices of Skene's and Bartholin's glands in gonorrhoea. [M. *Sänger*, Prague gynecologist, born 1853.]

sanguinal (san'gwin-al). Defibrinated blood evaporated to a pitular consistence.

Sanguinaria (san-gwin-a're-ah). 1. A genus of plants of the *Papaveraceae*. 2. Of the U. S. Ph., blood-root; the rhizome of *S. canadensis*. In small doses it is an expectorant, in somewhat larger doses an emetic, and in overdoses a narcotic poison. The fluidextract and the tincture of sanguinaria are official in the U. S. Ph. **acetum sanguinariae**. A preparation made by percolating blood-root with vinegar [U. S. Ph., 1880]. [Lat., *sanguis*, blood.]

sanguinarin (san-gwin-a'rin). An alkaloid, (C₂₀H₁₅NO₄), obtained from *Sanguinaria canadensis* and other plants. It is a convulsant poison. The nitrate of s. is used as a stimulant expectorant in chronic bronchitis.

sanguine (san'gwin). 1. Blood-red. 2. Characterized by abundance and active circulation of the blood. 3. Lively, cheerful, hopeful (said of temperament). [Lat., *sanguis*, *sanguinis*, blood.]

sanguineous (san-gwin'e-us). 1. Of the nature of blood; consisting of or abounding in blood. 2. Blood-red.

sanguinification (san'gwin-if-ik-a'shun). The formation of blood from the nutriment.

sanguino (san'gwin-o). A proprietary preparation said to contain the essential constituents of blood; used in anemia.

sanguiniform (san-gwin'o-form). A proprietary hematonic preparation said to be made from the blood-forming organs, with flavoring.

sanguinolent (san-gwin'o-lent). Of the color of blood; bloody.

sanguis (san'gwis). See *blood*. [Lat.]

sanies (sa'nēs). *Obs.* A purulent, serous, or sanguinolent discharge, having a fetid odor, from a wound or ulcer. [Lat.]

sanitas (san'it-as). 1. Health. 2. A proprietary antiseptic solution containing hydrogen peroxid, camphor, and camphoric acid. [Lat., *sanitas*, health.]

sanity. A legal term indicating a hypothetical normal mind.

sanoform (san'o-form). Di-iodosalicylic methyl ester prepared by the action of iodine on oil of wintergreen; a substitute for iodoform.

san'ose. A proprietary dietetic preparation of albumin.

Sanson's candle-flame test. A test to discover the presence of cataract.

san'tal. See *santalum*. oil of *s.* Volatile oil of sandalwood. It is used like copiba in gonorrhoea [U. S. Ph., Br. Ph.].

santalal (san'tal-in). 1. A resinous substance, $C_{15}H_{14}O_5$, forming the coloring principle of red sandalwood. 2. A red substance, $C_{14}H_{12}O_4$, obtained from *Pterocarpus santalinus*.

santalol (san'ta-lo'). A liquid constituting at least 90 per cent. of oil of sandal of the U. S. Ph.

Santalum (san'tal-um). The sandalworts, an order of the *Achlamydozsporeae*, sometimes parasitic on trees or roots. **lignum santali (albi, seu ambrati, seu citrini)**. Sandalwood, the fragrant wood of *S. album*. In India it is used as a diaphoretic, and ground up with water to a paste, as a cooling application. It yields oil of santal. **S. album**. East Indian sandalwood tree. Its fragrant heart wood constitutes in part the sandalwood of commerce. **S. rubrum**. The heartwood of *Pterocarpus santalinus*. Red saunders, a red wood used in pharmacy for coloring pharmaceutical preparations [U. S. Ph.].

san'talyal carbonate. See *carbosant*.

Santolina (san-to-le'nah). Lavender cotton. **S. chamaecyparissus**, **S. cupressiformis**, **S. dentata**. Common lavender cotton, an odoriferous insecticidal plant; used as a stimulant and antispasmodic and especially as an anthelmintic. [Lat., *sanctus*, holy, + *linum*, flax.]

santonica (san-ton'ik-ah). Wormseed; the minute unopened flower heads of *Artemisia cina*, *Artemisia contra*, *Artemisia vahliana*, *Artemisia maritima*, *Artemisia pauciflora* [U. S. Ph.], and of various other species of *Artemisia*. It is used, chiefly in the form of its peculiar principle (santonin), as an anthelmintic.

santonin (san'to-nin). A substance, $C_{15}H_{13}O_3$, obtained from wormseed. It is anthelmintic [*santoninum*, U. S. Ph., Br. Ph.].

calcium s. A tasteless powder, $C_{15}H_{13}O_3$, CaHO, used as a vermifuge. **trochisci santonini**. Each lozenge contains $\frac{1}{2}$ grain of *s.* [U. S. Ph.].

santoninoxim (san'to-nin-oks'im). A substance, $C_{15}H_{15}O_2.NOH$, a derivative of santonin and hydroxylamin. Recommended as a substitute for santonin.

Santorini's duct. See *accessory pancreatic duct*, under *duct*.

santyl (san'til). The salicylic ester of santolol, $C_{22}H_{28}O_4$. It is said to pass unchanged into the intestine, there to exert the action of santalol and salicylic acid. It is used in gonorrhoeal arthritis.

saphe'na. Either of two large superficial veins of the leg.

saphenous (saf'e-nus). Pertaining to two prominent veins of the leg known as *saphenae* or to the region or parts adjoining them. [Gr., *saphenes*, manifest, from *saphes*, clear, plain.]

sa'po. 1. Soap. 2. Of the U. S. Ph., castile soap made from olive oil by the action of caustic soda. **emplastrum sa-**

ponis. A preparation consisting of 10 parts of soap incorporated in 90 of lead plaster by the aid of water [U. S. Ph.]; or of hard soap, lead plaster, and resin melted together [Br. Ph.].

linimentum cum saponem, linimentum saponis. Soap liniment; made by dissolving soap in water, adding a solution of camphor and oil of rosemary in alcohol, filtering the mixture, and adding water [U. S. Ph.]. The Br. preparation is essentially similar. **s. animalis.** A soda soap made with tallow [Br. Ph.]. **s. domesticus.** 1. See *s. animalis*. 2. A marbled soap resembling castile soap in constituents. **s. durus.** See *s.* (2d def.) [Br. Ph.]. **s. mollis.** 1. Soft soap. 2. Green soap [U. S. Ph.]. **s. viridis.** Green soap (*sapo mollis*, U. S. Ph.); a greenish, oily, gelatinous soap made by the action of caustic potash on linseed oil. It is soluble in water and in alcohol. **tinctura saponis viridis.** Tincture of green soap; containing green soap, oil of lavender, and alcohol. [Lat.]

sapodermin (sa-po-der'min). An antiseptic soap containing mercury albuminate.

sapogenin (sa-poj'en-in). A decomposition product, $C_{14}H_{22}O_2$, of saponin.

sapolanolin (sa-po-lan'o-lin). An ointment basis consisting of soft soap and lanolin.

sapolentum (sa-po-len'tum). A certain potash soap containing an excess of fat.

saponaceous (sa-po-na'shus). 1. Soapy. 2. Belonging to the *Saponaceae*, an order of plants. [Lat., *sapo*, saponis, soap.]

saponal (sap'o-nal). A detergent containing soap, sodium carbonate, sodium chloride, etc.

Saponaria (sap-o-na're-ah). Soapwort; a genus of caryophyllaceous herbs. **S. officinalis.** Common soapwort. The root and herb are both used, but the root is much the more active. Soaproot contains over 30 per cent. of saponin, to which its properties are due. [Lat., *sapo*, soap.]

saponarin (sa-po-na'rin). A crystalline glucosid ($C_{21}H_{34}O_{12}$), obtained from *Saponaria*. It is colored blue by iodine and may be identical with the soluble starch of certain authors.

saponification (sa-pon-if-ik-a'shun). The process of hydrolysis of neutral fats by which they are split, with the formation of glycerin and fatty acids. When the hydrolysis is effected by alkalis, the fatty acids unite with the base to form soap. [Lat., *sapo*, saponis, soap, + *facere*, to make.]

saponimentum (sap-o-ni-men'tum). A general term for opodeldoc and similar substances (compounds of stearin soap, olein soap, alcohol, and various medicaments). [Lat., *sapo*, soap.]

saponin (sap'on-in). The term is used generically for a group of not well-defined glucosidal, non-nitrogenous substances, which are hemolytic and which cause frothing even in very dilute solution, hence the term. The *s*'s are widely distributed; most of them are neutral in

reaction, some are acid, and one (solanin) contains nitrogen and acts as a base. In a more restricted sense the term is applied to the saponin obtained from *Saponaria officinalis* and *Quillaja*. The formula is probably $C_{17}H_{26}O_{10}$. Commercial s. consists largely of sapotoxin. See *sapotoxin*. [Lat., *saponum*.]

sapotoxin (sap-o-toks'in). ($C_{17}H_{26}O_{10}$); the term is applied to the more actively hemolytic of the saponins, there being no sharp distinction between them. Many of the saponins are mixtures containing sapotoxin; commercial saponin from *Saponaria officinalis* being a source of the purest obtainable sapotoxin. See *saponin*.

saponin (sap'an-in). A substance, $C_{12}H_{20}O_4 + 2H_2O$, obtained by fusing commercial extract of sapan wood with caustic soda.

sapphism (saf'izm). Homosexuality in the female, symbolic or actual. [*Sappho*, Greek poetess.]

sapremia (sap-re'me-ah). A febrile condition due to the introduction of the products of putrefaction into the blood, as in retained placentas (rarely used). [Gr., *sapros*, putrid, + *aima*, blood.]

sapremic (sap-re'mik). Pertaining to sapremia.

sap'rin. A non-poisonous alkaloid, $C_6H_{14}N_2$, found in corpses. [Gr., *sapros*, putrid.]

sapro-. Combining form of Gr., *sapros*, putrid.

saprogenic, saprogenous (sap-ro-je'nik, sap-roj'en-us). Causing or arising from putrefaction. [Gr., *sapros*, putrid, + *gennan*, to produce.]

saprol (sap'rol). A dark brown oily compound containing phenol, creosol, and other coal-tar products; used as a disinfectant. [Gr., *sapros*, putrid.]

Saprolegnia (sap-ro-leg'ne-ah). A genus of phycomycetous fungi, which are partly saprophytic in their nature. **S. ferax**. A variety of s. which destroys certain kinds of water animals. [Gr., *sapros*, putrid, + *legnon*, border.]

saprophilous (sap-rof'il-us). Living on dead or decaying matter. [Gr., *sapros*, putrid, + *philein*, to love.]

saprophyte (sap'ro-fit). A plant that derives its sustenance from decomposing organic substances, as opposed to a parasite living in or on a living host. The term is especially applied to bacteria.

facultative s's. Bacteria which may develop either as parasites or as s's. [Gr., *sapros*, putrid, + *phyton*, a plant.]

saprophytic (sap-ro-fit'ik). Of animals or plants, obtaining their nutrition from dead organisms.

Sarcina (sar'se-nah). Lit., a packet. A genus of the *Schizomycetes*, so-called because the cocci divide in three directions, thus resembling corded bales of goods. Same as *sarcine*. **S. aurantiaca**. A species found in the air, forming on nutrient jelly orange-colored colonies which grow slowly and gradually liquefy the gelatin. **S. lutea**. Yellow S.; spherical cocci over 1μ in diameter. **S.**

ventriculi. A form found in the contents of the stomach of man and animals. [Lat., from *sarcire*, to put in order.]

sarcine (sar'sin). 1. Of Strecker, see *hypoxanthin*. 2. See *Sarcina*. s's in examination of stomach contents, see in appendix, page 904.

sarcitis (sar-si'tis). Inflammation of muscular tissue. [Gr., *sarx*, flesh, + *itis*, inflammation.]

sarco-. Combining form of Gr., *sarx*, *sarkos*, flesh.

sarcocarcinoma (sar'ko-kar-si-no'mah). Sarcoma and carcinoma combined; a very rare form of tumor.

sarcocoele (sar'ko-se'l). A fleshy tumor of the testicle. [Gr., *sarx*, flesh, + *kele*, tumor.]

sarcocystin (sar-ko-sist'in). A toxin obtained from *Sarcocystis muris*, an animal parasite belonging to the *Sarcosporidia*.

Sarcocystis (sar-ko-sist'is). A genus of pathogenic protozoa belonging to the phylum *Neosporidia* and the order *Sarcosporidia*. Various species are pathogenic for pigs, horses, sheep, mice, cattle, and man. **S. Lindemanni**. A species infesting the heart muscle of man in the tropics. [Gr., *sarx*, flesh, + *kystis*, bladder.]

sarcocyte (sar'ko-sit). The middle layer of the ectoplasm of a protozoön lying between the epicyte and the mycocyte. [Gr., *sarx*, flesh, + *kytos*, cell.]

sarcode (sar'kod). Of Dujardin, animal protoplasm. [Gr., *sarx*, flesh, + *eidós*, resemblance.]

Sarcodina (sar-ko-di'nah). A group of the simplest protozoa.

sarco-enchondroma (sar'ko-en-kon-dro'mah). Sarcoma combined with enchondroma.

sarcogenic (sar-ko-jen'ik). Producing flesh or muscular tissue. [Gr., *sarx*, flesh, + *gennan*, to produce.]

sarcoglia (sar-kog'le-ah). See *sarcogenic cell*, under cell. [Gr., *sarx*, flesh, + *glia*, glue.]

sarcoid (sar'koyd). Fleishy, fleshlike. [Gr., *sarx*, flesh, + *eidós*, resemblance.]

sarcolactate (sar-ko-lak'tat). A salt of sarcolactac acid. [Gr., *sarx*, flesh, + [Lat., *lac, lactis*, milk.]

sarcolemma (sar-ko-lem'ah). Syn.: *myolemma epimysium*. A delicate elastic and homogeneous sheath entirely inclosing each individual striated muscular fiber, exclusive of the cardiac muscular fibers. [Gr., *sarx*, flesh, + *lemma*, a rind.]

sarcology (sar-kol'o-je). The anatomy, etc., of fleshy or muscular tissues. [Gr., *sarx*, flesh, + *logos*, understanding.]

sarcoma (sar-ko'mah), pl. *sarcomata*. 1. Formerly any fleshlike tumor. 2. A richly cellular tumor of the connective tissue type, the cells being vegetative, imperfectly developed, or embryonic, and the cells developing interstitial substance (Adami). The tumor is infiltrative and malignant, rapidly invading the surrounding tissue. Hemorrhage into the tissues is frequent and metastatic growths occur from the transportation of cells along the blood stream in the capillaries and larger vessels. **adi-**

pose s. A s. (2d def.) containing lipomatous elements. **alveolar s.** A form of s. (2d def.) found chiefly in bone, muscle, and skin, having a largely developed stroma and alveoli, which, with the fibrillated appearance produced by the fibroid transformation of some of the cells, cause it to closely resemble carcinoma. **angiolithic s.** See *psammoma*. **calcifying s.** A s. (2d def.) in which calcification of the matrix occurs, simulating an osteosarcoma. **chondros'.** A s. composed of masses of cartilage interspersed with groups of stellate s. cells in a mucoid matrix. **deciduous'.** See *syncytioma malignum*, under *syncytioma*. **encephaloid s.** A variety of s. consisting for the most part of simple embryonic cells imbedded in a scanty homogeneous or granular matrix. There are two varieties, the small-celled and large-celled. The tumors are of very rapid growth, often ending fatally in a few months, especially in children. They are soft and pinkish, gray, or yellowish white, with frequent patches of extravasation. When coming to the surface, they form the so-called fungus hematodes. **fibros'.** A malignant tumor containing fibrous tissue with many spindle cells and dilated vessels. **giant-celled s.** A form of s. (2d def.) which generally grows from the cancellous tissue of bone, especially from the jaws and the ends of the long bones. It consists structurally of large round, oval, or branched cells, with many nuclei imbedded in a round-celled or spindle-celled sarcomatous tissue. **intermediate s.** An s. in which the cells are not absolutely differentiated as in fibros' and osteos'. **large round-celled s.** A s. consisting of an "epithelioid" type and some interstitial tissue. **large spindle-celled s.** A s. with large spindle cells often having several nuclei. **lymphangiosarcoma.** A growth arising from the endothelium of the lymph vessels in a lymph gland. **lipos'.** A lipoma containing areas of sarcomatous tissue. **lymphos'.** A s. of a lymphatic gland. **medullary s.** Syn.: *fungus canarusus*, *fungus centralis*, *fungus hematoides*, *hematomyces*. A s. resembling the substance of the brain. See *encephaloid s.* **melanotic s.** A s. developing from the various pigmented tissue such as the retina and containing within the cell substance or interstitial tissue a pigment called melanin. **mixed cell s.** A s. with cells of different sizes and shapes. **myeloid s.** See giant cells. **myxos'.** A myxomatous tumor with islands of typical sarcomatous cells without the processes of the myxomatous cell. **oat-shaped s.** A s. containing blunt cells with oval nuclei. **osteochondros'.** A tumor containing cells intermediate between cartilage cells and bone corpuscles and also areas of true bone and cartilage. **osteoid s.** A tumor containing cells, intermediate cartilage and bone corpuscles which are polymorphous, together with giant cells. Bone salts may also be present. **osteos'.** A tumor composed of

atypical lamellae of bone as well as variously shaped sarcomatous cells. **pigmented s.** See *melanotic s.* **rhabdomyos'.** A tumor of the kidney or of other tissue, showing large imperfectly formed muscle fibers with transverse striations. **small round-celled s.** A s. containing closely packed small round cells with deeply staining nuclei and little reticulum. **small spindle-celled s.** A s. consisting of small spindle cells. [Gr., *sarx*, flesh, + *oma*, tumor.] **sarcomatoid** (sar-ko'mat-oid). Resembling sarcoma. **sarcomatosis** (sar-ko-mat-o'sis). Syn.: *mycosis fungoides*. A condition in which there is the formation of multiple sarcomata. **sarcomatous** (sar-ko'mat-us). 1. Fleishy, succulent. 2. Having the characters of sarcoma. **sarcomeres** (sar'ko-mères). The cylindrical into which a muscular fibrilla (sarcostyle) is divided by the transverse membrane of Krause. [Gr., *sarx*, flesh, + *meros*, part.] **sarcophalocoele** (sar-com-fal'o-sél). A fleshy tumor of the umbilicus. [Gr., *sarx*, flesh, + *omphalos*, navel, + *kele*, tumor.] **Sarcophilina** (sar-kof'il-i-ah). A genus of flies of the class *Hexopoda*, and the order *Diptera*. The larvae of various species, such as *S. latifrons*, *S. meigeni*, and *S. ruralis*, are found in ulcers affecting persons living in various parts of Europe. [Gr., *sarx*, flesh, + *philein*, to love.] **sarcoplasm** (sar'ko-plazm). The hyaline or finely granular substance of striated muscular fibers, exclusive of the fibrillae. It incloses the nuclei, and passes without a break into the motorial end plate. [Gr., *sarx*, flesh, + *plassein*, to mold.] **sarcoplast** (sar'ko-plast). A cell that gives rise to muscle fibers. See *muscle corpuscle*, under *corpuscle*. **sarcopoietic** (sar'ko-poy-et'ik). Forming flesh or muscle. [Gr., *sarx*, flesh, + *poi-ein*, to make.] **Sarcoptes** (sar-kop'tès). *Scabias communis*, a species of *Acarus* (itch mite) from the horse, the sheep, and the dog, chicken, pig, and other animals that occasionally attacks man and produces eruptions similar to that of scabies. These parasites cannot live in the human skin and accordingly do not form burrows. **S. scabiei** (var. *hominis*). The itch mite; a minute parasitic species with numerous pointed tubercles, spines, and hairs on the dorsal surface. The females burrow deep in the epidermis to lay their eggs, and thus produce scabies. The mite occurs both in man and in certain of the lower animals, receiving special names, such as *S. hominis*, *S. equi*, *S. canis*, *S. suis*, *S. cati*, *S. cuniculi*, *S. vulpis*, and *S. caprae*. Some of the varieties that usually infest lower animals also attack man, producing a scabies of short duration. **S. squamiferus**. A species infesting dogs, swine, goats, sheep, etc., and producing mange. [Gr., *sarx*, flesh, + *koptein*, to cut.]

sarcosepsis (sar-ko-sep'sis). Sepsis due to the presence of bacteria in the tissues. [Gr., *sarx*, flesh, + *sepsis*.]

sarcosis (sar-ko'sis). The condition of being affected with sarcoma or sarcomatosis. [Gr., *sarx*, flesh.]

sar'cosome. The darker and contractile part of a muscle fibril. [Gr., *sarx*, flesh, + *soma*, body.]

Sarcosporidium (sar-ko-spor-id'e-um). A genus of protozoa found in the muscle cells of animals and sometimes, though rarely, in man. [Gr., *sarx*, flesh, + *sporidium*.]

sarcostosis (sar-kos-to'sis). Ossification of muscular tissue. [Gr., *sarx*, flesh, + *osteon*, bone.]

sarcostroma (sar-kos-tro'mah). A fleshy false membrane. [Gr., *sarx*, flesh, + *stroma*, a covering.]

sarcostyle (sar'ko-stil). The name given by Schäfer to the ultimate fibrillae or bundle of fibrillae composing the muscle fiber. [Gr., *sarx*, flesh, + *stylos*, column.]

sarcous (sar'kus). Pertaining to, or consisting of flesh or muscular tissue. **s. elements of Bowman**. The supposed unit of muscular tissue consisting of the dark prism or band of a fibrilla with its adjacent light substance. [Gr., *sarx*, flesh.]

sardonic (sar-don'ik). Sardinian. Denoting a kind of spasmodic grin or smile; so-called from a plant of Sardinia, supposed to produce it. [Lat., *sardonicus*.]

Sargassum (sar-gas'sum). A genus of *Algae*. **S. bacciferum**. Gulf weed; a species which forms the so-called Sargasso Sea in the Atlantic. It contains iodine.

sar'kin. Same as *hypoxanthin*.

sarkosin (sar'ko-sin). Methylglycocoll, $\text{CH}_3\text{NH}\cdot\text{CH}_2$. Formed by boiling creatin with barium hydroxid.

Sarracenia (sar-as-e'ne-ah). North American pitcher plant. **S. flava**. Trumpets. The astringent root is used in dyspepsia and diarrhea. **S. purpurea**. Side-saddle flower or huntsman's cap. The root is but little used by educated physicians, but has been recommended for a variety of conditions in which it is probably useless. The glandular secretion of the flower appears to contain a digestive ferment which, however, is not used medicinally. [*Sarrazin*, a proper name.]

sarsa (sar'sah). See *sarsaparilla*.

sarsaparilla (sar'sap-ar-il'ah). Of the U. S. Ph., the root of *Smilax officinalis*, *Smilax medica*, and other undetermined species of *Smilax*. The Br. Ph. 1898 recognized the root (dried) of *Smilax officinalis*. It contains several saponins. It is much vaunted by nostrum makers, but probably has no therapeutic value. The syrup may be used to mask the taste of potassium iodid [U. S. Ph.]. **decoctum sarsaparillae compositum**. A decoction of guaiac wood, sassafras wood, licorice, and mezereum [U. S. Ph.]. **decoctum sarsaparillae compositum fortius**. Syn.: *decoctum Zittmanni for-*

tius. A decoction consisting of s. and water with alum, sugar, aniseed, fennel seed, senna leaves, and licorice. **decoctum sarsaparillae compositum mitius**. Syn.: *decoctum Zittmanni mitius*. A preparation of half the strength in s. of the stronger decoction, consisting of s. and water, with cinnamon, lemon peel, cardamom, and licorice. **extractum sarsaparillae compositum fluidum**. A fluidextract made from s., licorice, sassafras, and mezereum and a mixture of glycerin, alcohol, and water [U. S. Ph.]. **extractum sarsaparillae fluidum**. Fluidextract of s. [U. S. Ph.]. **syrupus sarsaparillae compositus**. A compound syrup, used largely as a vehicle, containing fluidextracts of sarsaparilla, glycyrrhiza, and senna, with the oils of sassafras, gaultheria, and anise in syrup [U. S. Ph.]. [Sp., *zarza*, bramble, + *parra*, vine.]

sartorius (sar-to're-us). The tailors' muscle, so called because its action is to cross the legs after the manner of tailors at work. See *table of muscles*, under *muscle*. [Lat., *sartor*, a tailor.]

Sassafras (sas'saf-ras). 1. A genus of plants of the *Laurinae*. 2. Of the U. S. Ph., the root bark of *S. variifoli*. **mucilago S. medullae**. Mucilage of s. pith [U. S. Ph.]. **oil of S.** A pungent aromatic volatile oil obtained by distillation from the root of *S. variifoli*; a mixture of S. camphor and safrene. It is used for flavoring effervescent beverages, etc., and may be used in medicine as an aromatic, though in overdoses it acts as a narcotic poison and in some cases as an abortifacient. **oleum Sassafras**. See *oil of S.* [U. S. Ph.]. **s. medulla**. S. pith [U. S. Ph.]. **S. officinale**, **S. variifolium**. American s.; the only species. Various parts are distinguished by a pleasant aromatic odor and taste, which is most pronounced in the root bark. The leaves are sometimes used as a condiment and chewed to allay thirst. **s. pith**. The spongy, mucilaginous medulla of *S. officinale*. It forms with water the mucilago s. medullae (*q. v.*), which is used as an emollient and demulcent [U. S. Ph.]. **s. radix**. The root of *S. officinale* [Br. Ph. 1898]. [Lat., *saxum*, stone, + *frangere*, to break.]

sassafrasid (sas-af-ras'id). Of Reinsch, a decomposition product of tannic acid found in sassafras bark.

sas'sy bark. See *Erythrophleum*.

satellitosis (sat-el-li-to'sis). The presence of ameboid neuroglia cells in the vicinity of the ganglion cells of the brain cortex.

saturated (sat'u-ra-ted). Fully charged, as with a liquid or a gas; of a solution, having all the solid matter taken up that the liquid can dissolve; of a compound, having the valencies of all its elements satisfied.

saturation (sat-u-ra'shun). In chemistry, the condition of being saturated (said of a compound); also the process of rendering a compound or a solution saturated.

- partial s.** Partial neutralization. [Lat., *saturatio*.]
- saturnine** (sat'ur-nin). 1. Plumbic; containing lead. 2. Due to saturnism. 3. Dull, phlegmatic. [Lat., *saturninus*.]
- saturnism** (sat'ur-nism). See *lead cachexia*, under *cachexia*, also *leading*, and *plumbism*. [Lat., *saturnus*, lead.]
- saturnus** (sat-ur-nus). See *lead*. [Lat.]
- satyriasis** (sat-ir-i'-as-is). 1. Excessive sexual appetite in the male. 2. An obsolete term for leprosy and elephantiasis. [Gr., *satyros*, a satyr.]
- sauriasis** (saw-ri'-as-is). An extreme form of ichthyosis; ichthyosis sauroderma or crocodile skin. [Gr., *sauros*, lizard.]
- sauridon** (saw'rid-on). A disinfectant preparation said to consist of the granular residuum of the distillation of a kind of Blackstone shale containing semifossilized animal and vegetable remains. [Gr., *sauros*, a lizard.]
- sav'in**. 1. *Juniperus sabina*; also its tops. 2. *Juniperus virginiana*; also its tops, used as a substitute for those of *Juniperus sabina*. **oil of S.** A volatile oil, obtained by distillation from the fresh tops of *Juniperus sabina*. It is a terpene (C₁₀H₁₆). It is a violent irritant and has been used in atonic amenorrhœa and menorrhœgia. Used as an abortifacient it has often caused death [U. S. Ph., *oleum sabinae*]. List of poisons and their antidotes, see in *appendix*, page 939. [Lat., *sabina*.]
- saw palmet'to**. See *sabal*.
- Saxifraga** (saks-if-raj'ah). Saxifrage; a genus of plants, several species of which have been used medicinally. [Lat., *saxum*, rock, + *frangere*, to break.]
- sax'in**. A proprietary substance, resembling or identical with benzosulphanid.
- sax'ol**. A very pure petroleum.
- saxolinum** (saks-o-li'num). See *vaselin* and *petrolatum*. [Lat., *saxum*, a rock, + *oleum*, oil.]
- Sayre's suspension jacket**. A tripod derrick with rope and pulley for suspending a patient during the application of a plaster of Paris jacket. [Levis Albert Sayre, New York orthopedist, 1820-1900.]
- scab**. A hard substance or crust formed by the drying of pus or blood on a superficial wound. [Old Eng., *sceabb*; Dan., *skab*.]
