- scabies** (ska'be-ēz). The itch; a contagious disease of the skin in man and certain of the lower animals due to the presence of *Acarus scabiei*, which bores its way into the skin, forming little burrows in the epidermis the course of which, in certain situations, especially about the hands and feet, the penis, and the nipples, is apparent upon the surface in the form of little curved or straight lines of roughened or broken cuticle, while in all situations the presence of the parasite is attended with intense itching and skin lesions due to scratching. The typical locations are: the back of the fingers, the flexures of the wrists, the axilla, the nip-
- ples, and the penis. [Lat., *scabere*, to scratch.]
- Scabiosa** (skab-e-o'sah). 1. Scabious; a genus of plants of the *Dipsacaceae*. 2. See *S. arvensis*. **flores scabiosae**. The flowers of *S. arvensis* (of *S. succisa* [Fr. Cod.]). **S. arvensis**. Clodweed. The herb is in use as a domestic aperient and alterative. **S. succisa**. The *morsus diaboli*, or devil's bit. The root and herb were formerly used in abscesses and locally in leukorrhœa. The root, which is bitter and mildly astringent, is chiefly employed by the veterinarians. [Lat., *scabiosus*, rough.]
- scala** (ska'lah). A ladder or staircase; a structure resembling a staircase. **s. tympani**. The inferior division of the canal of the cochlea, separated from the *s. vestibuli* by the lamina spiralis ossea. **s. vestibuli**. The superior division of the canal of the cochlea, which communicates with the vestibule. [Lat., *scala*, ladder.]
- scale** (skāl). 1. A thin fragment or lamina of dried epidermis or bone; also a similar product resulting from a dried discharge. See also *epidermal cell* under *cell*. 2. To remove tartar from teeth. [Old Eng., *secale*, shell, husk.]
- scalene** (ska'lēn). 1. Of a figure, having the sides unequal. 2. Pertaining to a *s. muscle*. [Gr., *skalenos*, uneven.]
- scalenus** (ska-le'nus). An oblique muscle with unequal sides. See *table of muscles*, under *muscle*. [Gr., *skalenos*, uneven.]
- scaler** (ska'ler). An instrument for clearing the teeth of tartar.
- scalp** (skalp). The tegumentary covering of the skull. **hairy s.** That portion of the *s.* that is usually provided with a growth of hair. [Early Eng., *skalp*, top of the head.]
- scalpel** (skal'pel). A surgical knife of medium size having usually a convex cutting edge and the blade wider than that of a bistoury. [Lat., *scalpellum*, dim. of *scalprum*, a knife.]
- scammonœa**, **scammonia** (skam-mo'ne-ah). 1. See *scammony*. 2. A subgenus of *Convolvulus*. **scammonia radix**. Scammony root [Br. Ph.]. **scammoniac resina**. Scammony resin [Br. Ph.].
- scammonin** (skam'mo-nin). A glucosid, C₂₄H₃₆O₁₂, extracted from scammony; probably identical with jalapin.
- scammonium** (skam-mo'ne-um). See *scammony* [U. S. Ph.]. **pilula scammonii composita**. A preparation consisting of resins of jalap and scammony, powdered animal soap, and tincture of ginger [Br. Ph., 1898]. **pulvis scammonii compositus**. A powder of resin of scammony, jalap, and ginger [Br. Ph.]. **resin of s.** A resinous substance obtained by precipitating an evaporated alcoholic extract of *s.* with water. [*Resina scammonii*, U. S. Ph.; *scammoniac resina*, Br. Ph.]
- scammony** (skam'o-ne). A gum resin obtained by incision from the root of *Convolvulus scammonia*. It has cathartic properties due to the presence of jalapin.

As its tendency is to gripe, it is usually given with other cathartics, or in emulsion with mucilage, almonds, or some other demulcent. It was used by the ancient Greeks and Arabians not only as a purgative, but externally in various skin diseases.

scanning (skan'ing). A type of speech showing regularly recurring pauses.

Scanzoni's maneuver. Bringing the occiput forward with the forceps by rotating the head, to facilitate delivery. [*Friedrich Wilhelm Scanzoni*, German obstetrician, 1821-1891.]

scapho- (skaf'o). Combining form of Gr., *skaphe*, boat.

scaphoid (skaf'oid). Resembling a boat. [Gr., *scaphoides*, from *skaphe*, a boat, + *eidos*, resemblance.]

scapula (skap'u-lah). A flat bone, irregularly triangular, with its apex directed downward on the posterior surface of the thorax, covering the space between the second and seventh ribs. **scapulae alatae.** Of Aristotle and Galen, the wing-like appearance of the scapulae occurring in weak-muscled and thin persons and in paralysis of the serratus magnus. [Lat.]

scapular (skap'u-lar). Pertaining to, attached to, or adjacent to the scapula.

scapulo- (skap'u-lo). Combining form of Lat., *scapula*, the shoulder.

scapuloclavicular (skap'u-lo-klav-ik'u-lar). Pertaining to the scapula and the clavicle.

scapulohumeral (skap'u-lo-hu'mer-al). Pertaining to the scapula and the humerus.

scapus (ska'pus). The hair shaft. [Lat., shaft.]

scar (skar). See *cicatrix*. [Gr., *eschara*, an eschar or scab formed in the healing of a wound.]

scarification (skar-if-ik-a'shun). The process of making small superficial incisions. [Lat., *scarificatio*, n. of action, from *scarificare*, to scratch.]

scarificator (skar'if-ik-a-tor). An instrument for effecting scarification.

scarlatina (skar-lat-e'nah). See *scarlet fever*, under *fever*.

scarlatinoid, scarlatinous (skar-lat'in-oid, skar-lat'in-us). Pertaining to, or of the nature of, or resembling scarlatina. [Lat., *scarlatina*, scarlet, + Gr., *eidos*, resemblance.]

scarlet R. Rubium scarlatinum, a proprietary compound obtained by coupling diazotized amido-azo-orthotoluol with betanaphthol. It has the formula, CH₃-C₆H₄.N:N.C₆H₃.CH₃.N:N.C₁₀H₇.OH. It is a dark red powder, generally used in the form of an ointment to promote the healing of ulcers.

Scarpa's fascia. A position of the superficial fascia which overlies the external abdominal ring. **S's foramina.** See *foramina of S.*, *S's foramen*. **S's triangle.** A t. with its apex below, bounded by Poupart's ligament, the adductor longus, and the sartorius. [*Antonio Scarpa*, Italian anatomist, 1747-1832.]

scatacratia (skat-ak-ra'she-ah). Obs. In-

continence of the feces. [Gr., *skor, skatos*, excrement, + *akratia*, lack of control.]

scatemia (ska-te'me-ah). Obs. Intestinal toxemia. [Gr. *skor, skatos*, excrement, + *aima*, blood.]

scatology (ska-to'l'o-je). Study of the feces. [Gr., *skor, skatos*, excrement, + *logos*, treatise.]

scavenger cell. A phagocyte.

scelcteuema (sel-et-u'mah). See *munmification*. [Gr., from *skellein*, to dry up.]

schar'lach R. See *scarlet R.*

Scheele's green. See *copper arsenite*, under *copper*.

Scheibler's reagent. A preparation made by boiling sodium tungstate with half as much phosphoric acid and water, precipitating with barium chlorid, dissolving in hot dilute hydrochloric acid, treating with sulphuric acid, and evaporating.

schematic (ske-mat'ik). Representing the essential elements of a process, or an organ, or a shape; said of a chart or model. [Gr., *schematikos*, resembling.]

Scherer's inosite test. A test which consists of evaporating a portion of the substance to be heated on a porcelain dish with a drop or two of nitric acid. The residue is treated with ammonia and a drop of calcium chlorid solution, and again evaporated to dryness. If inosite is present, the residue will have a rose red color.

Schiff's test for uric acid. A test which consists of treating filter paper, impregnated with silver nitrate solution, with a solution of uric acid in sodium phosphate. The filter paper is then reduced in the presence of uric acid with formation of a brown or black spot. The test is extremely sensitive and can be used to detect 0.002 gm. of uric acid.

schistocelia (skis-to-se'le-ah). A congenital abdominal fissure. See *fissure*. [Gr., *schistos*, divided, + *koiilia*, the belly.]

schistorachis (skis-tor'ra-kis). See *spina bifida*. [Gr., *schistos*, cleft, + *rachis*, the spine.]

schistosomiasis (skis-to-so-mi'as-is). Infection with the *Schistosomum haematobium*.

Schistosoma (skis-to-so'ma). Syns.: *Bilharzia*, *Distoma*, *Gynaecophorus*, and *Thecosoma*. A genus of trematode worms or flukes of the phylum *Platyhelmintha* and the order *Malacocotylea*. **S. haematobium.** See *Bilharzia haematobia*. **S. japonicum.** Parasite resembling *S. haematobium*, causing enlarging of the liver and spleen in Japan and China. **S. Mansoni.** A species found in the West Indies and South America. [Gr., *schistos*, cleft, + *soma*, body.]

schizo- (ske'zo). Irregularly representing the Gr., *schizein*, to split.

schizogenesis (skis-o-jen'es-is). See *schizogony*. [Gr., *schizein*, to divide, + *genesis*, production.]

schizogony (skis-og'o-ne). The asexual reproduction of protozoa by binary fission, budding, gemmation. [Gr. *skizein*, to divide, + *gone*, generation.]

Schizomycetes (skiz-o-mi-se'tēz). The lowest subdivision of the vegetable kingdom, known as the *fission fungi*, or bacteria. [Gr., *schizein*, to cleave, + *mykes*, a mushroom.]

schizomycetic (ski-zo-mi-set'ik). Pertaining to the presence of bacteria.

schizomycosis (ski'zo-mi-ko'sis). A disease due to the presence of schizomycetes or bacteria in the animal organism. [Gr., *schizein*, to cleave, + *mykes*, a mushroom.]

schizont (ski'zont). A developmental form of a protozoa showing alterations of generation. The s. develops by schizogony as an indifferent form of the parasite as regards sex, the intracorporeal segmenting growth of the malarial organism, or asexual form, serving as a good example. [Gr., *schizein*, to divide.]

schizophrenia (ski-zo-fre'ne-ah). A term used by Bleuler including dementia praecox and other psychoses showing the marked libido splitting.

Schleich's anesthesia. See *infiltration anesthesia*, under *anesthesia*.

Schmidt's fermentation test, see in *appendix*, page 907. **S's reaction to determine the presence of hydrobilirubin**, see in *appendix*, pages 907, 908. **S's test**. A t. for glucose by the red-brown color its presence produces in a liquid boiled with a solution of sugar of lead in ammonia. **S's test diet**. See in *appendix*.

Schneider's membrane. The highly vascularized mucous membrane lining the nasal cavity. It is erectile and contains muscular and elastic fibers. [Conrad Victor Schneider, German anatomist, 1610-1680.]

schneiderian (sny-de're-an). Pertaining to or named from Schneider.

Schönbein's test. A t. for hydrocyanic acid by the blue color its presence gives to a strip of filtering paper when dipped into a $\frac{1}{10}$ per cent. solution of copper sulphate after having been soaked in a 1 per cent. solution of tincture of guaiac resin and dried. [Christian Frederick Schönbein, German chemist, 1799-1868.]

Schott cure. The treatment of cardiac disease by means of the Nauheim baths and systematic resisted movements.

Schreger's lines. L's in dentin having a general parallelism to the pulp cavity. Believed to be the optical appearance due to a series or row of the primary or great curvatures of the dentinal tubules.

Schultze's method of resuscitation. A method of resuscitating the apparently stillborn child by holding it up by the shoulders and flexing and extending the trunk. [Bernhard Sigismund Schultze, German obstetrician, 1828-.]

Schulze's maceration fluid. A reagent, consisting of potassium chlorate dissolved to saturation in strong nitric acid, used in disintegrating vegetable tissues. It is useful in isolating cells in vegetable tissues, as it dissolves the middle lamella more rapidly than the rest of the cell wall. When thin sections of suberose tissue are boiled in it, the cells finally swell up and their walls liquefy, forming ceric acid.

Schwann's sheet. See *neurilemma*. **sciatic** (si-at'ik). Pertaining to the hip. [Lat., *sciaticus*, from Gr., *ischion*, socket, hip.]

sciatica (si-at'ik-ah). Syn.: *ischialgia*. A disease characterized by pain in the great sciatic nerve and its neighborhood. [Lat., *sciatica*, fem. of *sciaticus*.]

Scilla (sil'lah). 1. A genus of plants of the *Liliaceae*. 2. Of the U. S. Ph., Br. Ph. see *squill*. **acetum scillae**. Vinegar of squill; made by exhausting 1 part of squill with enough dilute acetic acid to make 10 parts [U. S. Ph.]; or by macerating 1 part of squill with 4.2 parts of dilute acetic acid [Br. Ph.]. **extractum scillae fluidum**. Fluidextract of squill [U. S. Ph.]. **oxymel scillae**. A preparation containing vinegar of squill and honey [Br. Ph.].

pitulae scillae compositae. A preparation consisting of gum ammoniac, squill, ginger, and soap [Br. Ph.]. **S. maritima**. See *Urginea maritima*, under *Urginea*.

syrupus scillae. A syrup containing 45 per cent. of vinegar of squill [U. S. Ph.]; the preparation of the Br. Ph. is essentially similar. **syrupus scillae compositus**. A syrup containing squill, senega, and antimony and potassium tartrate [U. S. Ph.].

tinctura scillae. Tincture of squill; 10 per cent. [U. S. Ph.]; 20 per cent. [Br. Ph.] [Lat., *scilla*, squill.]

scillain (sil'la-in). See *scillitoxin*.

scillin (sil'in). A narcotic convulsant substance, said to have been found in squill.

scillipicrin (sil-le-pik'rin). A yellow glucosid, contained in squill. It is probably identical with scillitoxin.

scillitin (sil'lit-in). A white or yellowish resinous substance obtained from squill; diuretic and expectorant.

scillitoxin (sil-le-toks'in). Scillain, probably $C_{54}H_{100}O_{27}$; a brown amorphous powder obtained from squill. Commercial s. contains a glucosid, having a digitalis action, but this glucosid has not been isolated in an absolutely pure form.

scirrhus (skir'ro). Combining form of Gr., *skirros*, hard.

scirrroid (skir'royd). Resembling scirrhus. [Gr., *skirros*, an induration, + *eidōs*, resemblance.]

scirrhoma (skir-ro'mah). A scirrhus tumor, especially a scirrhus cancer. s. **caminianorum**. Chimney-sweeps' cancer. [Gr., *skirros*, an induration, + *oma*, tumor.]

scirrhosarca (skir-ro-sar'kah). 1. See *scleroderma*. 2. Induration of the cellular tissue; sclerema neonatorum, or hardening of the flesh of the new-born. [Gr., *skirros*, induration, + *sarx*, flesh.]

scirrhosis (skir-ro'sis). See *scirrhus cancer*, under *cancer*. [Gr., *skirros*, induration.]

scirrhus (skir'rus). Indurated; adjective from scirrhus. [Gr., *skirros*, hard.]

scirrhus (skir'rus). An indurated tumor, especially a scirrhus cancer. **atrophic s.** A form of s. of the breast in old women in which, after the lapse of years,

what remains of the diseased gland together with the tumor is of less bulk than the healthy breast. *s. glandularis*. See *adenoscirrhus*. *s. palpebrarum*. See *scleriasis palpebrarum*, under *scleriasis*. *s. ventriculi*. 1. A diffuse thickening and induration of the stomach wall, especially of the pylorus. All the coats are more or less thickened by hyperplasia that is partly fibroid and partly cancerous. 2. A form of chronic gastritis, in which there is a growth of dense connective tissue in the layers of the mucous membrane. [Gr., *skirros*, induration.]

scirrophthalmia (skir-of-thal'me-ah). Cancer of the eyeball. [Gr. *skirros*, induration, + *ophthalmus*, eye.]

scission (sizh'un). A cutting apart. [Lat., *scissio*, a cutting.]

sclera (skle'rah). See *sclerotica*. *s. testis*. See *albuginea testis* under *albuginea*. [Gr., *skleros*, hard, from *sklerein*, to dry.]

sclerectasia (skle-rek-ta'se-ah). A bulging or staphyloma of the sclera. [Gr., *skleros*, hard, + *ektasis*, a stretching.]

sclerectomy (skle-rek'tom-e). Excision of a portion of the sclera. [Gr., *skleros*, hard, + *ektome*, a cutting out.]

sclerema (skle-re'mah). Sclerosis or hardening of the skin. *s. neonatorum*. A disease of premature infants characterized by hardening of the skin. [Gr., *skleros*, hard.]

sclerencephalia (skle-ren-sef-al'e-ah). Sclerosis or hardening of brain tissue. [Gr., *skleros*, hard, + *ekkephalos*, brain.]

sclererythrin (skle-er'ith-rin). Inactive red coloring matter existing in ergot. [Gr., *skleros*, hard, + *erythros*, red.]

scleriasis (skle-ri'as-is). Sclerema; sclerema cutis. *s. palpebrarum*. An old term for a cancerous disease of the eyelids; used later for any induration of the eyelids.

scleritis (skle-ri'tis). Deep inflammation of the sclera. [*Sclera*, + Gr., *itis*, inflammation.]

sclero- (skle'ro). Combining form of Gr., *skleros*, hard.

sclerochoroiditis (skle'ro-ko-royd-i'tis). Inflammation of the choroid and the sclerotic by which the sclera is weakened and gives way under interocular pressure. *s. anterior*. Anterior staphyloma. *s. posterior*. An atrophic process in the choroid and secondarily in the retina, occurring in the posterior segment of the eye, around the optic disk. [Gr., *skleros*, hard, + *chorioeides*, choroid, + *itis*, inflammation.]

sclerocrystallin (skle'ro-kris'tal-in). See *ergotinin*. (Of Podwyssotski.)

sclerodactylia (skle'ro-dak'til'e-ah). Scleroderma affecting any of the digits of the hands or the feet. [Gr., *skleros*, hard, + *daktylos*, finger.]

scleroderma (skle-ro-der'mah). Syn.: *scleriasis*, *hidebound disease*. Generally called diffuse symmetrical *s.* An affection in which large symmetrical areas of skin become diffusely indurated and stiff, it may be without other changes. The tissues are usually involved also. There are

two forms of *s.*; the infiltrated and the edematous and atrophic. [Gr., *skleros*, hard, + *derma*, skin.]

sclero-iodin (skle-ro'io-din). An inactive coloring matter extracted from ergot. [Gr., *skleros*, hard, + *iodes*, violet.]

sclero-iritis (skle'ro-i-ri'tis). Inflammation of sclerotic coat and iris. [Gr., *skleros*, hard, + *iris*, iris, + *itis*, inflammation.]

scleroma (skle-ro'mah). Induration or hardening of tissue, especially of the tissues of the nose and larynx. [Gr., *skleros*, hard, + *oma*, tumor.]

scleromucin (skle-ro-mu'sin). A mixture of substances including ergotinic acid, obtained from ergot. It interferes with absorption of aqueous preparations of ergot.

scleropathia (skle-ro-path'e-ah). See *scleriosis*. [Gr., *skleros*, hard, + *pathos*, diseased.]

sclerosed (skle-rôzd'). Having sclerosis.

sclerosis (skle-ro'sis). A hardening process or a hardened condition. See *induration*. **amyotrophic lateral s.** Progressive muscular atrophy, usually ending with bulbar paralysis, due to *s.* of the lateral columns of the spinal cord. **arterial s.** See *arteriosclerosis*. **arterio-capillary s.** General *s.* of the arteries and capillaries. **atrophic s.** *S.* with atrophy. **combined s.** *S.* of both the posterior and lateral columns of the spinal cord. **compound lateral s.** A *s.* of the spinal cord in which more than one series of spinal elements are involved. **cortical s.** Of Vulpian, myelomeningitis. **diffused cerebral s.** A morbid condition affecting large areas in the brain. **disseminated s.** See *multiple s.* **general s.** Interstitial fibrous hyperplasia affecting the whole of an organ. **insular s.** See *multiple s.* **lateral s.** *S.* of a lateral column of the spinal cord. **multiple s.** Chronic induration disseminated in patches in various parts of the nervous system. The most constant of the phenomena are muscular weakness and tremor when voluntary effort is made. **neural s.** *S.* associated with chronic inflammation of a nerve trunk or its branches. **pulmonary s.** See *interstitial pneumonia* under *pneumonia*. [Gr., *skleros*, hard.]

sclerostenosis (skle-ro-sten-o'sis). Induration with constriction. [Gr., *skleros*, hard, + *stenosis*, stenosis.]

Sclerostoma (skle-ros'to-mah). A genus of entozoa of the family *Agchylostomidae*. **S. duodenale**. Syn.: for *Agchylostoma d.* A small viviparous species found in the duodenum and small intestine of man, particularly in inhabitants of the tropics and in miners. **S. equinum**. A species of *S.* found in the intestines of the horse; also in aneurisms of the mesenteric arteries. [Gr., *skleros*, hard, + *stoma*, mouth.]

sclerotic (skle-rot'ik). Hardened; pertaining to or affected with sclerosis; pertaining to sclerotium, especially to the ergot of rye; as a *n.*, see *sclerotica*. *s. acid*. See under *acid*.

sclerotica (skle-ro'tik-ah). A dense,

tough, resisting, and inelastic membrane, also called the sclerotic coat or the sclerotic, which forms the posterior four-fifths of the external tunic of the eye. It is made up of coarse fibrillae of connective tissue gathered in bundles which are interlaced at various angles and united by a homogeneous cement. It is perforated behind by the optic nerve, and is continuous in front with the cornea. [Gr., *skleros*, hard.]

sclerotium (skle-ro'she-um). The hard blackish mass found in certain fungi on rye or other grains. [Gr., *skleros*, dry.]

sclerotomy (skle-rot'o-me). The making of an incision through the sclerotic and usually the choroid and retina also. **anterior s.** Lat., *sclerotomia anterior*. S. made by an incision through the most anterior portions of the sclera, in front of the ciliary body and most of the iris, and entering the anterior chamber; performed in glaucoma. **posterior s.** Lat., *sclerotomia posterior*. S. made by an incision passing through the sclera behind the ciliary body and into the vitreous chamber. [Gr., *skleros*, hard, + *tome*, a cut.]

sclerous (skle'rus). Hard, indurated. [Gr., *skleros*.]

scleroxanthin (skle-ro-zan'thin). An inactive yellow coloring matter, obtained from ergot.

scoleciasis, scolecisis (sko-les-i'as-is, sko-les'is-is). Infection with the larvae of beetles. [Gr., *skolex*, worm.]

scolecoïd (sko'le-koyd). Resembling a worm; vermiform. [Gr., *skolex*, worm, + *eidos*, resemblance.]

scolerology (sko-le-kol'o-je). See *helminthology*. [Gr., *skolex*, worm, + *logos*, discourse.]

scolex (sko'leks). The head and neck of a cestoid worm. [Gr., *skolex*, a worm.]

scoliosis (sko-le-o'sis). A constant deviation of the spinal column, or a portion of it, to either side of the median line, with a resulting distortion of the trunk, known as lateral curvature. It is classed as: **acquired** or **congenital s.** The former is divided into paralytic, pathological, and postural. [Gr., *skolios*, curved.]

scombrin. A protamin, $C_{30}H_{59}N_6O_6$, isolated from the spermatozoa of mackerel.

scoparin (sko-pa'rin). A bitter neutral principle ($C_{20}H_{39}O_{10} + 5H_2O$), obtained from the tops of *Cytisus scoparius*. It causes diuresis, probably through its action on the renal epithelium. [Lat., *scoparium*.]

scoparius (sko-pa're-us). Syn.: *scoparii cacumina* [Br. Ph.], *broom*. The dried tops of *Cytisus scoparius*. They contain scoparin and spartein. They are diuretic (see *scoparin*), but are not like digitalis in action (see *spartein*). The fluidextract of scoparius is official in the U. S. Ph. **infusum scoparii**. An infusion of dried and bruised broom tops in boiling distilled water [Br. Ph.]. **succus scoparii**. Juice of broom; prepared by crushing fresh broom tops, expressing, adding alcohol, and filtering [Br. Ph.].

scopola (sko'po-lah). The rhizome of *Scopola carniolica*, the Japanese belladonna. It should contain 0.5 per cent. of mydriatic alkaloids. The extract and fluidextract of s. are official in the U. S. Ph.

scopolamin (sko-pol-am'in). An alkaloid, $C_{17}H_{21}NO_3$, found in many solanaceous plants. It is identical with hyoscin. It is used with morphin as an anesthetic. S. exists in an optically inactive and a two-rotary form. See *atropin*. It is atropate of scopolin or oscin. s. **hydrobromid**. A salt of s. and hydrobromic acid. It has the actions of s. and is the form in which it is commonly employed. [*Scopolaminae hydrobromidum*, U. S. Ph.]

scopolin (sko'po-lin). Syn.: *oscin*. A decomposition product of scopolamin, ($C_8H_{13}NO_2$), which is scopolin tropate.

scorbatic (skor-bu'tik). Pertaining to scurvy.

scorbutus (skor-bu'tus). See *scurvy*. [Lat., *scorbutus*, scurvy.]

scordinemia (skor-din-e'me-ah). *obs.* Great latitude of beginning infection. [Gr., *skordinema*, yawning, stretching.]

scordium (skor'de-um). The herb of *Teucrium s.* It contains scordein, a volatile oil, and tannin. It is diaphoretic.

Scorpionidea (skor-pe-on-i'de-ah). An order of the class *Arachnida*, of the phylum *Arthropoda*; venomous scorpions most prevalent in the tropics. The toxin which is injected by them from poison glands with ducts opening on either side of the last abdominal segment, consists of a neurotoxin and a hemolysin.

scotodinia (sko-to-din'e-ah). Headache with vertigo and impairment of vision. [Gr., *skotos*, darkness, + *dinos*, whirl.]

scotoma (sko-to'mah). A blind patch in the field of vision. **absolute s.** A s. in which all perception of light is absent. **central s.** S. limited to the central part or region of the macula lutea and immediate vicinity. **color s.** Color blindness limited to a certain portion of the visual field. **negative s.** The blind area, being at the periphery, is not noticed by the patient. **positive s.** A defect in the visual field perceptible to the patient as a dark spot before his eyes. **relative s.** A s. within the limits of which the perception of light is impaired, but not altogether abolished. [Gr., *skotos*, dark, + *oma*, tumor.]

scotometer (sko-tom'e-ter). An instrument for detecting scotomata. [Gr., *skotos*, darkness, + *metron*, a measure.]

scotophobia (sko-to-fo'be-ah). Morbid fear of darkness. [Gr., *skotos*, darkness, + *phobos*, fear.]

screatus (skre-a'tus). A paroxysmal hawking due to psychoneurosis.

screw-worm. See *Comptosia macellaria s. disease*. See under *disease*.

scrivener's palsy. See *writer's cramp*, under *cramp*.

scrofula (skrof'u-lah). Syn.: *king's evil*. A term applied to swelling of the neck almost always due to tuberculosis of the cer-

vical glands. The neck was supposed to resemble that of a pig. [Lat., dim. of *scrofa*, a sow.]

scrofuloderma (skrof'u-lo-derm). See *scrofuloderma*. **large pustular s.** See *ecthyma scrofulosum*, under *ecthyma*. **small pustular s.** See *lichen scrofulosorum*, under *scrofuloderma*.

scrofuloderma (skrof'u-lo-der'mah). A term applied to sluggish inflammatory suppurating lesions of the skin, occurring about the sites of sinuses which connect with suppurating tuberculous glands or tuberculous foci. It is not a true tuberculosis of the skin. **lichen scrofulosorum**, **lichen scrofulosus**, **lichen scrophulosorum**, **lichen scrophulosus**. A papular cutaneous disease occurring in persons of a decidedly scrofulous habit. It commonly affects the back and abdomen, and is characterized especially by an eruption of small miliary papules arising from the hair follicles, of a pale red, brownish, or purplish color, often showing little crusts at their summits, and usually arranged in groups, sometimes in gyrate lines or rings. The eruption is not attended with itching, and usually has a protracted course. [Lat., *scrofula*, dim. of *scrofa*, a sow; + Gr., *derma*, the skin.]

scrofulosis (skrof-u-lo'sis). Having scrofulous, i. e., tuberculosis, tendencies.

scrofulous (skrof'u-lus). Pertaining to, of the nature of, or affected with scrofula.

Scrophularia (skrof-u-la're-ah). The fig-worts, a genus of scrophulariaceous plants. **S. nodosa**, **S. officinalis**. Great pilewort. The herb and root were formerly used, especially the root, in chronic eruptive diseases, etc. Preparations from the leaves are sometimes used for ulcers, piles, etc.

scro'tal. Pertaining to the scrotum.

scrotum (skro'tum). The purselike covering of the spermatic cords and testicles. It consists of a thin, dark-colored integument, marked in healthy subjects by numerous rugae which may be intensified by cold. Beneath this are the dartos, the spermatic fascia, fibers of the cremaster, and the infundibuliform fascia, and internally the tunica vaginalis. [Lat., *scrotum*, a bag.]

scru'ple. Twenty grains, apothecaries' weight. Its symbol is \mathfrak{D} . See *table of weights and measures, in appendix, pages 941, 942, 943*.

Scultetus' bandage. Syn.: *figure-of-eight b.*; *many-tailed b.* See *figure-of-eight b. under bandage*. [Johann Scultet (originally Schuetes), surgeon in Swabia, 1595-1645.]

scurf (skurf). 1. The product of superficial, abnormal exfoliation from the skin; usually composed of epidermic scales, of sebaceous matter, or of both. 2. Minute branlike scales on the epidermis of plant organs. [Old Eng., *scurf*.]

scurvy (skur've). A chronic disease occasioned by malnutrition, occurring especially after prolonged abstinence from vegetable food. It is characterized by

hemorrhagic conditions of the mucous membranes and later by hemorrhages beneath the skin. **s. of the Alps**. See *pellagra*.

Scutellaria (sku-tel-la're-ah). 1. Helmet-flower, skullcap; a genus of labiate plants. 2. Of the U. S. Ph., *S. lateriflora*. **extractum scutellariae fluidum**. Fluid extract of the herb of *S. lateriflora* [U. S. Ph.]. *S. lateriflora*. Mad weed, the *S.* of the U. S. Ph. It is probably inert, but is still somewhat employed as a nerve. [Lat., *scutella*, a salver.]

scutulum (sku'tu-lum). A shieldlike structure. **favus s., s. favi**. The concave or cup-shaped crust characteristic of favus. [Lat., dim. of *scutum*, shield.]

scybalous (sib'al-us). Pertaining to, or consisting of scybala.

scybalum (sib'al-um). Pl. *scybala*. A roundish mass of the feces. [Gr., *skybalon*, excrement.]

scypho- (si'fo). Combining form of Gr., *skyphos*, cup.

Se. Chemical symbol for the element *selenium*.

se-. Prefix from Lat., *se*, without, apart.

searcher (serch'er). A metallic sound of small size and moderate curve, used in exploring the bladder for calculus.

seasick'ness. Syn.: *mal-de-mer*. A morbid condition produced in many persons by the movements of a vessel at sea; characterized by loss of appetite, nausea, vomiting and mental depression.

seat-worm. See *Oxyuris*.

sebaceous (se-ba'shus). Pertaining to, containing, consisting of, or of the nature of sebum. [Lat., *sebaceus*.]

sebacic (se-ba'sik). Derived from or pertaining to sebum. **s. acid**. See under *acid*.

sebiferous (se-bif'er-us). Producing sebum. [Lat., *sebum*, grease, + *ferre*, to bear.]

sebolith (seb'o-lith). A calculus concretion in an obstructed sebaceous gland. [Lat., *sebum*, fat, + Gr., *lithos*, a stone.]

seborrhea (se-bor-re'ah). A hypersecretion of fat by the skin. **s. congestiva**. Another name for lupus erythematosus. **s. corporis**. Another name for lupus seborrhea. **s. oleosa**. A variety of *s.* consisting of an abnormal oiliness of the skin. **s. sicca**. An affection of the sebaceous glands in which there is an alteration in the composition of the sebaceous matter, resulting in its accumulation on the surface in greasy, yellowish scales. [Lat., *sebum*, + Gr., *roia*, a flowing.]

se'bum. 1. Tallow, grease, suet. 2. See *cutaneous s. cutaneous s.* The fatty matter secreted by the sebaceous glands; an oily fluid containing fatty acids and various volatile acids (caproic, etc.) which give it its peculiar odor. See *smegma*. **s. palpebrale**. See *lema*. **s. preputiale**, **s. preputii**. See *smegma preputii*. [Lat.]

secacornin (se-kak-or'nin). A proprietary preparation containing the ergotin of Keller.

Secale (se-ka'le). Rye, a genus of grasses.

S. cereale. Common rye. **s. clavatum, s. corniculatum, s. cornutum, s. luxurians, s. mater.** See *ergot*.

secalin (sek'al-in). Of Jacobi, ergotinin. **secalintoxin.** Of Jacobi, a mixture of *s.* (ergotinin) and spachelotoxin (ergotoxin).

secondary (sek'on-da-re). 1. Second or subordinate in order of time, development, interdependence, importance, etc.; of an electrical current, induced. 2. Of organic compounds in chemistry, having a substituted radicle in a hydrocarbon attached to a carbon atom which itself is connected with two other carbon atoms. The term is also applied to amins, amids, phosphins, stibines, and arsins in which two of the hydrogen atoms of ammonia, phosphorylated hydrogen, etc., are replaced by radicles. 3. Of a disease (e. g., syphilis), its manifestation after an interval following the primary lesions. [Lat., *secundus*, second.]

secreta (se-kre'tah). The secretions.

secretagogues (se-krēt'a-gōgs). Substances which stimulate the flow of a given secretion. The term is used in physiology especially for those substances that act on the gastric juice. [*Secretion* + Gr., *agogos*, drawing.]

secrēt'in. A hormone formed in the duodenum which stimulates the pancreas to secrete pancreatic juice.

secretion (se-kre'shun). 1. The process by which certain constituents of the blood are separated from that fluid by glands having that process for their function. See *excretion*. 2. The fluid so elaborated.

antilytic s. Of Langley, the watery saliva excreted continuously by a submaxillary gland with intact nerves after the chorda tympani of the other side has been divided. **internal s.** A *s.* (2d def.) which, instead of being eliminated externally by a duct is imparted to the blood. **menstrual s.** Menstrual blood. **nervous s.** A *s.* dependent upon the activity of secretory nerves. The term is used particularly in cases, such as the gastric juice, in which the *s.* is partly due to secretory nerves and partly to chemical stimuli. **paralytic s.** The abundant watery continuous discharge from the duct of a gland after section of its secretory nerves. **sebaceous s.** See *sebum*. [Lat., *secretio*, from *secrevere*, to hide.]

secretory (se'kre-to-re). Secreting.

section (sek'shun). 1. The act or process of cutting. 2. A part separated by cutting, also the surface made by such cutting. 3. A post mortem examination.

abdominal s. The operation of cutting into the abdominal cavity. **cesarean s.** See *cesarean operation*, under *operation*.

frontal s. A *s.* dividing the body into equal or unequal dorsal and ventral parts. **frozen s.** An anatomical *s.* of a cadaver that has been frozen in order that all the parts and organs may be retained in their normal relations. **perineal s.** External urethrotomy. **sagittal s.** A *s.* dividing the body into equal or unequal right and

left parts. **s. cutter.** See *microtome*. [Lat., *sectio*, from *secare*, to cut.]

secundine (sek-un'din). 1. The inner integument of an ovule; the coat immediately surrounding the nucellus. 2. In the pl., the placenta, the fetal membranes, and the umbilical cord as they are expelled after the birth of the child. [Lat., *secundus*, following.]

secund'um art'cm. [Lat.] According to art; term used in prescription writing, but usually abbreviated to *s. a.*

sedatin (sed'at-in). Antipyrin. **s. valerilamidophenetol.** The compound, $C_6H_4(OC_2H_5)NH.C_4H_9CO$; antipyretic and analgetic.

sedative (sed'at-iv). Producing a calm and quiet condition of mind and body, especially reducing excessive action of the heart; as a *n.*, a *s.* medicine. [Lat., *sedativus*.]

sedimentation (sed-im-en-ta'shun). The process of producing the deposit of a urinary sediment, especially by the use of a centrifuge. [Lat., *sedimentum*, subsidence.]

seduction (se-duk'shun). The act of leading away or astray; the action of inducing a woman to surrender her chastity. [Lat., *seductio*, *n.* of action from *se*, away, + *ducere*, to lead.]

segment. A part separated more or less completely from other parts. **intermediate s. of a cilium.** A soft, isotropic, faintly striated portion of a cilium intervening between the pedicle and the cilium proper. **lower s. of the uterus.** In an obstetrical sense, that portion of the organ which stretches and dilates during labor, but does not take part in the work of expelling the ovum; being all that portion situated below the ring of Bandl. **medullary s's.** *S's* or divisions in the medullary sheath of a nerve fiber, formed by the oblique markings or incisures of Schmidt. **rivianian s. of the tympanic ring.** The anterior superior grooveless *s.* lying between the two points of attachment of the tympanic portion of the temporal bone to its squamous portion. [Lat., *segmentum*, from *secare*, to cut.]

segmentation (seg-men-ta'shun). The process of becoming divided into parts; especially as in germ *s.* **discoidal s.** A variety of *s.* in which the germinal layer alone is involved. **uplicative s.** A *s.* of the microorganism of gonorrhoea in which there is an interval between the two segments. **free s.** The division of naked cells. **germ s.** The *s.* of the fecundated ovum. "A process of division and multiplication" of the blastospheres, "after the manner of cell cleavage." **metameric s.** The division of embryo into metameres. **partial s. of the vitellus.** That sort of *s.* of a mesoblastic ovum which takes place only in the formative vitellus. **primordial s.** A supposititious archetypal form of *s.* **protovertebral s.** A division of the mesoblast on each side of the notochord into the protovertebrae. **regular s.** A

form of s. in which the ovum is converted into spheres of equal size and regularly disposed. **s. of the ovum**, **s. of the yolk**. See *germ s.* **superficial s.**, **surface s.** A variety in which the s. occurs upon the surface of the ovum. **total s. of the vitellus**. That complete form of germ s. in which the whole yolk divides into two, four, eight, and so successively into smaller divisions, each with its nucleus, all destined to take part in the further development of the ovum. **unequal s.** A form of s. in which, after the ovum is divided into four equal segments, the spheres of one pole are smaller than those of the opposite pole and afterward are much more numerous. [Lat., *segmentatio*, from *secare*, to cut.] **segregation** (se-gre-ga'shun). The action of separating a portion or portions from the rest. [Lat., *segregatio*, n. of action from *segregare*, to separate from the flock, to isolate.] **Seid'ltz powder**. Pulvis effervescens compositus of the U. S. Ph.; a preparation consisting of two powders to be dissolved separately and the two solutions to be mixed at the time of use, one containing tartaric acid, put up in white paper; the other containing sodium bicarbonate and potassium and sodium tartrate, put up in colored paper, usually blue. **seismo-** (sis'mo). Combining form of Gr., *seismos*, earthquake. **seizure** (se'zhur). The attack or onset of a disease or a recurrence of its manifestations. **psychic s.** Psycholepsy, an attack of morbid sensations. **sejunction** (se-junk'shun). Interruption of complex associations, or of integrated cerebral mechanisms. **selenic** (se-len'ik). Containing selenium as a sexualent radicle. **s. acid**. See under *acid*. **selenid** (sel'en-id). A compound of an element or radicle with selenium. **selenium** (sel-e'ne-on). Of Tilden, selenium. **selenite** (sel'en-it). 1. A salt of selenious acid. 2. (Foliated) gypsum; a transparent or translucent form of hydrated calcium sulphate, distinguished by the facility with which it splits into thin, flexible, inelastic laminae. Powdered, it has been employed as an absorbent and internally as a refrigerant. **selenium** (sel-e'ne-um). A non-metallic element, resembling sulphur in some respects. Atomic weight, 79.2. Chemical symbol, Se. [Gr., *selene*, the moon.] **seleniureted** (sel-en'e-ur-et'ed). Combining or combined with selenium. **self'abuse'**. See *masturbation*. **self-infec'tion**. Systemic or local infection from a source contained within the organism. **self-inocula'tion**. Systemic or local inoculation from a source contained within the organism. **self-lim'ited**. Of a disease, having a tendency to pursue its course for a definite period, and then terminate spontaneously. **self-pollu'tion**. See *masturbation*.

Seliwanoff's fructose test. Ten c.c. of the urine are heated with a small amount of resorcin and 2 c.c. of dilute hydrochloric acid. If fructose is present a brilliant red color will appear.

sella (sel'lah). A seat; a part shaped like a seat or saddle. **s. turcica**. A deep depression, somewhat resembling a saddle, upon the upper surface of the body of the sphenoid bone which lodges the pituitary body. [Lat., *sella*, seat.]

semeiography (sem-i-og'raf-e). The science or art of portraying the symptoms of disease. [Gr., *semeion*, a sign, + *graphein*, to write.]

semeiol'ogy. See *symptomatology*.

se'men. 1. The fertilizing or impregnating liquid produced by the male reproductive organs. 2. A seed. **animal-culum seminis masculi**. See *spermatozoid*. [Lat., *semen*, seed.]

semi-. Combining form of Lat., *semi*, half.

semimembranosus (sem'e-mem-bra-no'-sus). Partly membranous; as a n. m., a muscle which arises from the tuberosity of the ischium by a strong flat tendon. See *table of muscles*, under *muscle*.

semimetal (sem'e-met'al). See *metaloid*.

semimolecule (sem'e-mol'ek-ül). A radicle which, when occurring in the free state, doubles the molecular formula that it had when in composition.

seminal (sem'in-al). Pertaining to the semen of animals or the seed of plants.

s. vesiculitis. Inflammation of the seminal vesicles. [Lat., *seminalis*.]

seminiferous (sem-in-if'er-us). Conveying, bearing, or producing seed or semen. [Lat., *semen*, seed, + *ferre*, to bear.]

semi-oxidized (sem'e-oks'id-ized). Combined with half the amount of oxygen that would be required to saturate the molecule.

semipronation (sem-e-pro-na'shun). Partial pronation, the attitude midway between pronation and supination.

semiprone' position. See *Sims' position*, under *Sims*.

semispina'lis, **semispina'tus**. The s. colli and s. dorsi regarded as one muscle. See *table of muscles*, under *muscle*.

semisulcus (sem-e-sul'kus). A depression in a bone which, with one on its neighbor, forms a groove. [Lat., *semi*, half, + *sulcus*, furrow.]

semitendinosus (sem'e-ten-din-o'sus). See *semitendinous*. **s. muscle**. See *table of muscles*, under *muscle*.

semitendinous (sem-e-ten'din-us). Partially tendinous.

sem'per-. Combining form of Lat., *semper*, always.

senecin (sen'e-sin). 1. An eclectic resinoid from *Senecio vulgaris*. - 2. A principle obtained from *Senecio vulgaris*.

Senecio (sen-e'se-o). Groundsel; a genus of tubuliflorous plants. **S. aureus**. (American) golden ragwort. The herb and the rootlets are used by the Indians as a vulnerary and by the eclectics as a diuretic and emmenagogue. **S. vulgaris**.

Common groundsel, the Gr. *erigeron* of Dioscorides. The herb was once used in hemoptysis and convulsions and as an anthelmintic and emmenagogue, but is now mainly employed as an emollient. [Lat., *senex*, an old man.]

Senega (sen'eg-ah). 1. A section of the genus *Polygala* S. 2. Of the U. S. Ph., the root of *Polygala* S. It is a stimulating expectorant and diuretic and more or less excitant to all the secretions. **false S.** See *Northern S.* **Northern S.** The false s. of commerce, referred by Maisch to *Polygala Boykinii*, but now regarded as the product of a variety of *Polygala* S. growing in Wisconsin. According to O. Linde, it agrees in structure with the official drug. **senegae radix.** See *Senega*, 2d def. [Br. Ph.]

senegin (sen'eg-in). Polygalic acid.

senescence (se-sen'sens). The various processes resulting in old age. [Lat., *senescere*, to grow old.]

senile (se'nīl). Showing signs of advanced age; of diseases, due to or common in old age. [Lat., *senilis*.]

senility (se-nīl'it-e). Old age, especially as manifested by physical or mental weakness or decay.

senium (se'ne-um). [Lat.] Old age.

Senna (sen'nah). 1. The genus *Cassia*. 2. Of the U. S. Ph., the dried leaves of *Cassia acutifolia*, imported especially from Alexandria and Tripoli, and the leaves of *Cassia angustifolia*, imported from India. They are much used as a purgative, usually in combination with some aromatic and an alkaline salt to prevent griping. The active constituents of senna are much like those of aloe, buckthorn, and rhubarb. Previous treatment with alcohol lessens the griping action. **Aleppo s.** The leaflets of *Cassia obovata*. **Alexandrian s.** The stiff, brittle leaflets of *Cassia acutifolia*. **American s.** *Cassia marylandica* or its leaflets. **Arabian s.** The leaflets, intermixed with pods, stalks, and flowers, of *Cassia acutifolia*. **confectio sennae.** A confection representing 10 per cent. each of s. and tamarind, 16 per cent. of *Cassia fistula*, 12 per cent. of fig, and 7 per cent. of prunes [U. S. Ph.]. **extractum sennae fluidum.** A fluid extract made from senna leaves from which the griping principle has been in part removed [U. S. Ph.]. **false s.** 1. The leaflets and fruit of *Tephrosia apollinea*. 2. Bladder s.; the leaves of *Coluta arborescens*. 3. The leaves of *Coriaria myrtifolia*. 4. The leaves of *Globularia alypum*. 5. The leaves of *Solenostemma argel*. **folia sennae.** See s. (2d def.). **Indian s.** See *Tinnevelly s.* **infusum sennae compositum.** Black draught; an infusion of s. leaves, fennel seeds, manna, and magnesium sulphate in boiling water [U. S. Ph.]. **liquor sennae concentratus.** A solution, which is practically a fluidextract, prepared by re-percolation, heating, and preserving with ginger and alcohol [Br. Ph., 1898]. **s. alexandrina.** See *Alexandrian s. sennae*

folia. See s. (2d def.). **s. indica.** See *Arabian s.*; of the Br. Ph., see *Tinnevelly s. s. marylandica.* See *American s. s. obtusa.* See *Cassia obovata*, under *Cassia*. See *Cassia angustifolia*, under *Cassia*. **syrupus sennae.** A syrup containing 25 per cent. of the fluidextract of s. from which the griping principle has been in part removed [U. S. Ph.]. **tinctura sennae composita.** A tincture of s. leaves, caraway seeds, and coriander seeds [Br. Ph.]. **Tinnevelly s.** Indian s.; a very superior drug produced by the same species (*Cassia angustifolia*) as Arabian s., but from the plant as cultivated in India [Br. Ph.]. **wild s.** See *American s.*, *Aleppo s.* and *false s.* (4th def.). [Lat., from Arabic.]

Senn's plates. Circular or oval p's of decalcified bone, having a central opening and marginal apertures for the passage of sutures. One plate is placed in each end of the severed intestine in intestinal anastomosis. [Nicholas Senn, American surgeon, 1844-1908.]

sensation (sen-sa'shun). A conscious impression produced on the higher cerebral centers by external objects through the medium of the organs of sense and their connecting nerves. **cutaneous s.** A sense impression produced through the medium of the skin. **epicritic s.** That variety of cutaneous s. which gives impression of light pressure (touch) and small differences of temperature, well-localized. **external s.** A s. transmitted from one of the peripheral organs of sense. See *internal s.* **general s.** See *subjective s.* **girdle s.** A painful s. like that produced by a cord or bandage tightened about the trunk or limbs; a common symptom in spinal disease. See *girdle anesthesia*, under *anesthesia*. **internal s.** A subjective s.; one not produced through the agency of the external organs of sense; such as hunger and thirst, the desire to sleep, etc. **objective s.** An external s. due to the agency of some object of sense. **protopathic s.** That variety of cutaneous s. which gives no impression of pain and causes differences of temperature not well localized. **radiated s., secondary s.** Of Müller, the excitation of one s. by another, or the extension, in disease, of a morbid s. to parts not actually affected. **s. transference.** Recognition of objects that are usually only distinguished by visual or auditory s. by means of tactile s.; clairvoyance. **special s.** See *special senses*, under *sense*. **subjective s.** 1. A s. which originates within the cerebrum. 2. See *internal s.* **tactile s.** An impression produced through the medium of the sense of touch. [Lat., *sensatio*.]

sense. A faculty by which an impression is gained of the existence and qualities of external objects. **color s.** The perception of colors; the faculty of distinguishing the various colors. **corporeal s's.** See *nutritive s's.* **intellectual s's.** Touch, sight, and hearing; so called because supposed to minister directly to the

intellect, **kinesthetic s.** See *muscular s.* **muscle s., muscular s.** A consciousness of the amount or quickness of muscular exertion involved in the performance of a given act. **neural s.** The supposed s. of effort produced in the central nervous system by every muscular action. **nutritive s's.** Smell and taste; so called because more directly concerned with nutrition than the other s's. **pressure s.** The faculty of judging of the amount of pressure exerted on a given part of the body. **s. of direction.** See *orientation* (2d def.). **s. of effort.** See *neural s.* **s. of locality, s. of space.** That s. by which one recognizes objects in space, their dimensions, and their differences from each other. **special s's.** Sight, hearing, touch, smell, and taste. **stereognostic s.** The ability to judge of the shape and consistency of objects handled with the fingers. **temperature s.** The faculty of apprehending degrees or differences of temperature. [Lat., *sensus*, from *sentire*, to think.]

sense or'gan. An organ or structure which receives stimuli from without and transforms them into sensation. **central s. o's.** The centers of the nerves of special sensations. **peripheral s. o's.** Peripheral terminations of nerves of special sensations.

sensibilin (sen-sib-il'in). An anaphylactic reaction body.

sensibility (sen-sib-il'it-e). The capacity of receiving sensations or impressions; the power of feeling. **crossed s.** See *alochiria*. **muscular s.** See *muscular sense*, under *sense*. **organic s.** 1. The assimilating power of living cells (an improper use). 2. The characteristic s. of cellular elements—e. g., amebae—in consequence of which they respond to excitation or irritation. **recurrent s.** The s. possessed by the anterior root of a motor nerve. It is ascribed to the presence of recurrent sensory fibers running from the posterior root into the anterior or motor root. **tactile s.** The faculty of apprehending the locality, form, and size of objects by the sense of touch. [Lat., *sensibilitas*.]

sensitive (sen'sit-iv). 1. Possessing sensibility, endowed with keenness of perception. 2. Capable of reacting against an irritation, such as that caused by a touch, a chemical agent, moisture, or light; said especially of parts or organs that change their form or direction in response to a slight mechanical stimulus. [Lat., *sensitivus*.]

sensitization (sen-si-ti-za'shun). The rendering of a cell sensitive to the action of the complement by uniting with the special amoceptor.

sen'sitizer, sen'sitizing sub'stance. See *amoceptor*.

sensormotor (sen''so-re-mo'tor). Of nerves, conveying both sensory and motor impressions.

sensorium (sen-so're-tum). The cerebrum; a sensory nervous center. **s. commune.** The portion of the brain particularly con-

cerned in the reception of sensory impressions. [Lat., *sentire*, to perceive.]

sensory (sen'so-re). 1. Pertaining to a sense; concerned in sensation. 2. Pertaining to the sensorium.

sensual (sen'shu-al). Pleasurable sense seeking; self-seeking; sense gratification, chiefly of the genital erogenous areas.

sentient (sen'te-ent). See *sensory* and *sensitive*.

separator (sep'ar-a-tor). 1. A device for obtaining the urine from each ureter separately by dividing the bladder into halves. Cathelin, Downes, Harris, and Luys have devised instruments for this purpose. 2. Of Laval, an instrument for separating the constituents of fluids in order to facilitate analyses. 3. Of Jarvis, a dental instrument for separating the teeth. 4. An apparatus for separating solids from liquids in which they are held in suspension, e. g., by centrifugal force (centrifuge). [Lat., *separare*, to divide.]

sepedon (sep'ed-on). [Gr.] Putridity.

sepia (se'pe-ah). 1. The cuttlefish. 2. A carbonaceous pigment obtained from *S. officinalis* and other cephalopods. **os sepiae.** Cuttlefish bone situated under the skin in the back of *S. officinalis*. Finely powdered, it is used as an antacid, and in tooth powders. A similar but smaller body obtained from *S. elegans* is also known as *os sepiae*. [Gr., *sepia*.]

sep'sin. A base obtained from putrid yeast and decomposed organic material. Injected into the veins, it produces vomiting and diarrhea, with ecchymosis of the stomach and intestines.

sep'sis. The presence in the blood or tissues of pathogenic organisms or their toxins. [Gr., *sepsis*, putrefaction.]

sep'tal. Pertaining to a septum.

sep'tan. Recurring every seventh day. [Lat., *septem*, seven.]

sep'tate. Divided by a partition or divisions. [Lat., *septum*, a fence or division.]

septentrionalin (sep-ten''tre-o-na'lin). An alkaloid obtained from *Aconitum septentrionale*.

sep'ti-, sep'to-. Combining forms of Lat., *septem*, seven.

sep'tic. Pertaining to, caused by, or promoting putrefaction. [Gr., *septikos*.]

septicemia (sep-te-se'me-ah). A general infection of the body with pathogenic organisms and their toxins in the circulatory blood. Its symptoms are chills, irregularly remittent fever, sweating and prostration. [Gr., *septikos*, putrid, + *aima*, blood.]

septicin (sep'tis-in). A mixture of amylin and hexylamin obtained from putrid material.

septicogenic (sep-tik-o-jen'ik). Descriptive of the bacteria of putrefaction. [Gr., *septikos*, rotten, + *gennan*, to produce.]

septivalent (sep-tiv'al-ent). Having a valency of seven. [Lat., *septem*, seven, + *valens*, able.]

septoforma (sep-to-for'mah). A veteri-

- nary antiseptic solution of soap and formic aldehyd in alcohol.
- septometer** (sep-tom'et-er). 1. An instrument for determining the quantity of organic putrescible matter present in air. [Gr., *septos*, corrupted, + *metron*, a measure.] 2. An instrument for measuring the thickness of the nasal septum. [Lat., *septum*, partition, + Gr., *metron*, a measure.]
- septum** (sep'tum). A thin partition.
- alveolar septa**. The walls of the pulmonary alveoli which project into the infundibula.
- interauricular s.** The s. between the right and left auricles of the heart.
- intermuscular septa**. Processes of fascia which dip down between the muscles, often serving as their origins.
- internasal s.** See *s. narium*.
- interventricular s.** The partition between the ventricles of the heart.
- longitudinal septa of the spinal cord**. Its anterior and posterior median fissures.
- rectovaginal s.** The structure which forms the partition between the rectum and the vagina, including the adjacent walls of those organs and the connective tissue between them at the upper part.
- s. aorticum**. The anterior segment of the mitral valve.
- s. atriorum (cordis)**, **s. auricularum**. See *interauricular s.*
- s. bulbi urethrae**. A thin longitudinal fibrous s. in the posterior part of the bulb of the urethra.
- s. femoris**. A thickening of the cancellous tissue of the femur at the union of the neck and shaft.
- s. linguae**. A vertical longitudinal plate of fibrous tissue in the root of the tongue (to which it is usually limited) and attached to the body of the hyoid bone.
- s. lucidum**. The delicate triangular s. separating the lateral ventricles of the brain. It is formed of two thin laminae which inclose the fifth ventricle between them.
- s. narium**. The median portion, composed of cartilage and bone, which separates the cavity in the nose into two parts.
- s. narium mobile**. The lower, mobile portion of the s. narium, made up of the thickened integument separating the nostrils.
- s. narium osseum**. The partition formed by the perpendicular plate of the ethmoid bone and the vomer.
- s. of the nose**. See *s. narium*.
- s. of the pons Varolii**. A band of mesial fibers which halves the pons Varolii more or less incompletely, especially in its posterior part.
- s. of the scrotum**. An anteroposterior partition derived from the dartos, which divides the cavity of the scrotum into two parts.
- s. pectiniforme**. The fibrous s. between the two corpora cavernosa of the penis, so called on account of a number of parallel slits in it.
- s. pellucidum**. See *s. lucidum*.
- s. sinuum sphenoidalium**. A thin bony s. between the sphenoidal sinuses.
- s. tenue**. See *s. lucidum*.
- s. testis**. See *corpus Highmori*, under *corpus*.
- s. tubae**. A bony division which separates the eustachian tube from the bony furrow containing the tensor tympani.
- transverse s.** A partition placed at right angles to the axis of a body.
- urethrovaginal s.** The partition between the urethra and the vagina.
- ventricular s.** See *interventricular s.*
- vesicovaginal s.** The partition between the bladder and the vagina. [Lat., from *sepire*, to fence in.]
- sequela** (se-kwe'lah). Pl. *sequelae*. A morbid state resulting from a preceding disease or injury. [Lat., *sequela*, from *sequi*, to follow.]
- sequestration** (se-kwes-tra'shun). 1. The formation of a sequestrum. 2. Seclusion of lunatics or of persons affected with contagious or infectious disease. [Lat., *sequestratio*.]
- sequestrectomy, sequestrotomy** (se-kwes-trek'to-me, sek-wes-trot'o-me). The operation of removing a sequestrum. [Lat., *sequestrum*, + Gr., *ektemnein*, to cut out, or *temnein*, to cut.]
- sequestrum** (se-kwes'trum). A portion of bone separated from the healthy bone in consequence of being necrosed, but not dislodged from its position. [Lat., *sequestrare*, to remove, to separate.]
- seralbumin** (ser-al-bu'min). Serum albumin.
- sericin** (ser'is-in). Syn.: *silk gelatin, silk glue*. A gelatinous substance obtained by boiling raw silk a long time with water.
- sericum** (ser'ik-um). The cocoon of the silk-worm, *Bombyx mori*; silk. **s. crudum**. See *s.*
- ser'in**. α -amino- β -hydroxy-propionic acid, $\text{CH}_2\text{OH}.\text{CHNH}_2.\text{COOH}$. An oxyamino acid, found in many proteins.
- sero-**. Combining form of Lat., *serum*, whey; used to signify having to do with serum.
- serofibrinous** (se-ro-fi'brin-us). Partaking of the nature of both serum and fibrin.
- serogelatinous** (se-ro-jel-at'in-us). Partaking of the nature of both serum and gelatin.
- se'ro-immu'nity**. Immunity produced by an antiserum.
- serolactesent** (se-ro-lak-tes'ent). Having the characters of serum and of milk (said of the secretion of Montgomery's glands).
- serolin** (ser'o-lin). A compound contained in blood. [Lat., *serolina*.]
- serology** (se-ro'l'o-je). The study of sera and their actions. [*Serum* + Gr., *logos*, a treatise.]
- seromucous** (se-ro-mu'kus). Partaking of the nature of both serum and mucus.
- seropneumothorax** (se'ro-nu-mo-tho'raks). Pleurisy with serous effusion and pneumothorax. [*Serum* + Gr., *pneumon*, the lung, + *thorax*, thorax.]
- seropu'alent**. Partaking of the nature of both serum and pus.
- seropus'**. A fluid which consists of both serum and pus.
- serosa** (se-ro'sah). A serous membrane.
- serositis** (se-ro-si'tis). Inflammation of a serous membrane.
- multiple s.** Simultaneous inflammatory effusion into several serous sacs. [Lat., *serosa*, a serous membrane, + Gr., *itis*, inflammation.]
- serosynovial** (se'ro-sin-o've'al). Partak-

ing of the nature of both serum and synovia.

serother'apy. The therapeutical use of serum, particularly of serum containing an antitoxin.

serotina (ser-ot-e'nah). See *decidua serotina*, under *decidua*.

serous (se'rus). Consisting of, containing, resembling, or producing serum; thin, watery.

serpentaria (ser-pen-ta're-ah). 1. The rhizome of *Aristolochia* s. and [U. S. Ph., Br. Ph.] of *Aristolochia reticulata*. 2. A section of the genus *Aristolochia*.

extractum serpentariae fluidum. A fluid extract of s. [U. S. Ph.].

liquor serpentariae concentratus. A concentrated solution of s. (2d def.) of the strength of 1 in 2. [Br. Ph., 1898.] [Lat., *serpens*, a serpent.]

serpiginous (ser-pij'en-us). Spreading gradually, creeping. Said of ulceration. [Lat., *serpiginus*, from *serpere*, to creep.]

serpyllum (ser-pil'lum). 1. *Thymus* s. or wild thyme. 2. A section of the genus *Thymus*.

serrate, serrated (ser'at, ser'at-ed). Indented like a saw. [Lat., *serratus*, from *serra*, saw.]

serratus (ser-ra'tus). See *serrate*; a s. muscle is a muscle having a digitated margin. See *table of muscles*, under *muscle*.

serrefine (sar-fen'). A small spring forceps invented by Vidal for catching bleeding vessels and controlling hemorrhage during operations; also used for closing a wound temporarily. [Fr.]

serrenoed (sar-ne'). An instrument for gradually tightening a ligature; used for cutting through a pedicle or other like part slowly and bloodlessly, also as a temporary constrictor of such a part in the course of an operation. [Fr., *serrer*, to press, + *noeud*, nut.]

se'rum. Pl. *sera*. The watery portion of an organic fluid (ordinarily of the blood).

anticholeraic s. A s. supposed to contain a cholera antitoxin.

antidiphtheritic s. The s. of an animal (usually the horse) that has been immunized against diphtheria by repeated inoculations with the virus of the disease; used for the prevention and cure of diphtheria.

antidysenteric s. A s. made by injecting horses with the bacillus of dysentery and employed in the treatment of that disease.

antimeningococcus s. A s. which greatly reduces the mortality from epidemic cerebrospinal meningitis, if it is injected directly into the spinal cord early in the disease.

antiphthisic s. A s. supposed to contain a tuberculous antitoxin.

antipneumonic s. A s. made by injecting the horse with pneumococci; it is employed occasionally in the treatment of lobar pneumonia.

antistreptococcus s. A s. made by injecting the horse with streptococci and used with indifferent results in streptococcus infections.

antitoxic s. A s. which will neutralize a soluble toxin in the test tube or tissues.

antityphoid s. A s. prepared by injecting typhoid bacilli into horses. **bac-**

tericidal s. A s. destroying bacteria.

bacteriolytic s. A s. destroying bacteria by bacteriolysis.

blood s. The fluid which separates from the blood after coagulation; defibrinated blood plasma.

Calmette's s. See under *Calmette*.

curative s. An antitoxic s. which not only prevents, but cures the disease of which it contains the antitoxin.

cytolytic s. A s. capable of dissolving any special cell.

Flexner's s. The s. for the cure of epidemic cerebrospinal meningitis.

hemolytic s. A s. capable of dissolving red blood corpuscles.

immune s. The serum of an immunized animal. Contains the specific antibody to the immunizing substance.

Lustig's s. See *Lustig*.

Maragliano's s. See *Maragliano*.

Marmorek's s. See *Marmorek*.

milk s. Whey.

opsonic s. A s. destroying bacteria by means of the opsonin.

polyvalent s. A s. prepared from more than two snake venoms or other toxins.

s. albumin. The proteins or mixture of proteins in blood serum which is not precipitated by half saturation with ammonium sulphate, but precipitated only when serum is completely saturated with the salt.

s. cells. Fat cells containing s. in place of part of the fat which was originally in the cell.

s. cerebrospinale. See *cerebrospinal fluid*, under *fluid*.

s. globulin. The proteins or mixture of proteins of the serum which is precipitated by half saturation with ammonium sulphate or complete saturation with magnesium sulphate.

s. lacteum, s. lactis. See *whey*.

s. sanguinis. See *blood* s. s. *sickness*. The various symptoms which sometimes develop from an injection of serum.

s. therapy. The use of curative sera for various diseases.

thyrolytic s. A s. cytolytic for the cells of the thyroid gland.

Yersin's s. See *Yersin*. [Lat., *serum*, whey.]

sesame (ses'am-e). *Sesamum orientale* and *Sesamum indicum*.

s. oil. Oil of sesamum.

sesamoid, sesamoidal (ses'am-oyd, ses'am-oyd'al). Resembling or having the shape of a grain of sesame.

s. bones. See under *bone*. [Gr., *sesamon*, sesame, + *eidōs*, resemblance.]

sesquibasic (ses-kwe-ba'sik). Of salts, formed from a tribasic acid by the replacement of three atoms of hydrogen by two of a basic element or radicle. [Lat., *sesqui*, one and a half, + *basis*, a base.]

sesquibromid (ses-kwe-bro'mid). See under *sesquichlorid*.

sesquicarbonat (ses-kwe-car'bon-āt). A carbonate containing one and a half times as much of the carbonic acid radicle as the normal carbonate.

sesquichlorid (ses-kwe-klo'rid). A compound consisting of an element or radicle united directly with chlorine in the proportion of one atom and a half of the latter to a certain definite quantity of the former assumed as the unit of comparison. Analogous compounds of bromine, hydroxyl, oxygen, and sulphur are called respectively the sesquibromid, sesqui-

dioxid, sesquioxid, and sesquisulphid. The term *s.*, etc., however, are often used where trichlorid, etc., would be more proper.

sesquihydrate (ses-kwe-hi'drät). 1. A sesquihydroxid. 2. A crystallized salt containing three molecules of water of crystallization in two molecules of the salt.

sesquihydroxid, sesquioxid (ses-kwe-hidroks'id, ses-kwe-oks'id). See under *sesquichlorid*.

sesquisalt (ses'kwe-salt). A salt in which, according to the old system of nomenclature, two equivalents of a base are combined with three of an acid; or which, according to modern views, contains one and a half times as much of the radicle as a protosalt.

sesquisulphate (ses-kwe-sul'fät). A sulphate containing three molecules of the sulphuric acid radicle combined with two atoms or molecules of a basic radicle; a sulphate formed from the sesquioxid. The term is often used for trisulphate.

sesquisulphid (ses-kwe-sul'fid). See under *sesquichlorid*.

sessile (ses'sil). Attached directly to a basis of support, without a peduncle. [Lat., *sessilis*, from *sedere*, to sit.]

se'ta. 1. A bristle (e. g., a stiff hair or a straight, slender prickle). 2. A bristle-like hair or hairlike organ. [Lat., *seta*, a bristle.]

setaceous (se-ta'shus). 1. Bristle-shaped. 2. Setose; composed of or covered with bristles. [Lat., *seta*, a bristle.]

setiferous (se-tif'er-us). Bearing a bristle or bristles. [Lat., *seta*, a bristle, + *ferre*, to bear.]

se'ton. A wisp of thread or a strip of gauze passed through the skin to form a sinus. [Lat., *seta*, a bristle.]

sewage (su'äj). Refuse matter, including feces, urine, etc., carried off from habitations by means of sewers.

sewer (su'er). A canal for carrying off waste water and sewage.

sewerage (su'er-äj). 1. The process of collecting and carrying off sewage. 2. Sewers collectively.

sexbasic (seks-ba'sik). Combining with six molecules of a univalent base; saturating a sexvalent base.

sexdecyl (seks'dek-il). See *cetyl*.

sextan (seks'tan). Recurring every sixth day. [Lat., *sextus*, sixth.]

sextipara (seks-tip'a-rah). A woman who has borne six children in as many pregnancies. [Lat., *sextus*, sixth, + *parere*, to bring forth.]

sexual (seks'u-al). Pertaining to sex. [Lat., *sexus*, sex.]

sexuality (seks-u-al'it-e). In broad sense all that pertains to race propagation. In narrow and obsolete sense pertaining to the reproductive organs only.

sexvalent (seks'va-lent). Having a valency of six (i. e., being capable of replacing six atoms of hydrogen in a molecule).

shadowgram, shadowgraph (shad'o-gram, shad'o-graf). An x-ray picture.

shaft. Of a long bone, its elongated central portion; of a cilium, its free portion, continuous with the proximal bulb; of a hair, see *hair s.*, under *hair*. [Ang.-Sax., *scæft*.]

shak'ing pal'sy. Paralysis agitans.

shank. The tibia, the shin, the leg. **s. bone**. The middle metatarsal (carpal) bone. [Ang.-Sax., *sceana*.]

Sharpey's fibers. Syn.: *perforating f's*. Bundles of connective tissue f's in bone, either branched or simple, agreeing in character with bundles of white fibrous tissue, and serving to bind the various lamellae together. They were described by Sharpey in 1856, and, according to Heitzmann, by Troja in 1814.

sheath (shéth). An enveloping structure, a case or covering. **axillary s.** A process of the prevertebral fascia covering the initial portion of the axillary artery and vein. **carotid s.** A process of the deep cervical fascia surrounding the carotid artery, pneumogastric nerve, and internal jugular vein, the last two separated from the first by a septum. **cellular s.** See *epineurium*. **circumvascular s.** A wide lymphatic tube completely surrounding the smallest blood vessels of bone, of the central nervous system, of the retina, and of the liver. **crural s.** A funnel-shaped fascial investment of the femoral vessels. It is continuous above with the transversalis and iliac fasciae, and is divided by septa into three compartments: the outer, for the femoral artery; the middle, for the femoral vein; and the inner, known as the femoral canal. **femoral s.** See *crural s.* **medullary s.** A sheath of myelin inclosing the axis cylinder in medullated nerve fibers. This in turn is inclosed by the neurilemma, in peripheral nerves at least. **myeline s.** See *neurilemma* and *medullary s. s. of a muscle*. The layer of fascia or aponeurosis covering a muscle. **s. of Schwann**. See *neurilemma*.

s. of the flexor tendons. Transverse and oblique fibrous bands which bind the tendons of the flexores digitorum profundis and sublimis to the palmar surfaces of the first and second phalanges. **s. of the optic nerve**. The structures covering the optic nerve, the tunica nervi optici externa and tunica nervi optici interna, and the intervening process of the arachnoïdes. **s. of the rectus abdominis**. The s. formed by the division of the aponeurosis of the obliquus abdominis externus at the outer border of the rectus and their union in the linea alba. **synovial s.** A synovial membrane which lines the cavity in which a tendon glides when it is bound down against a bone. [Ang.-Sax., *scæth*, *sceadare*, to separate.]

sheep-pox. Variicella.

sheet. An oblong piece of linen or cotton, forming part of bedclothes, usually next the sleeper. **draw s.** A folded s. placed under a patient so that it may be withdrawn without disturbing the bed or lifting the patient. [Ang.-Sax., *sceat*, *scæta*, *scyta*.]

shellac (shel-lak'). See under *lac*.
sherry (sher're). See under *wine*.
Shi'ga's se'rum. See *antidysenteric serum*, under *serum*.
shikimene (shik'im-en). A poisonous substance, $C_{10}H_{16}$, found in the ethereal oil obtained from the leaves of *Illicium religiosum* (Jap., *shikimi*) or its fruit.
shin'gles. Common name for herpes zoster. [Lat., *cingulum*, a girdle.]
shock. 1. A sudden depression of the vital functions, especially of the circulation, due to the nervous exhaustion following an injury or a sudden overwhelming emotion, and resulting either in immediate death or in prolonged prostration. 2. See *electric s.* **discharging s.** An electric s. produced by a discharge. **electric s.** The physiological effect caused by an electric discharge or by the closing or opening of a circuit in which the organism is included. **epigastric s.** S. caused by a blow on the epigastrium. **nervous s.** See *s.* (1st def.). **railway s.** The impression made on the body or the mind, or on both, by a railway accident. **secondary s.** A return of the symptoms of s. after apparent recovery.
short-circuit (short-sir'ket). 1. To introduce into an electrical current a by-path of small resistances so that the current passes through the path instead of through the original circuit. 2. To establish intestinal anastomoses.
shoulder (sho'lder). The prominence of the articulation of the cephalic limb with the trunk, constituted chiefly by the clavicle, the scapula, and the head of the humerus; also any similar prominence. [Ang.-Sax., *sculder*.]
show. An appearance. A colloquial term for the first discharge of blood in menstruation or in labor.
Shrapnell's membrane. That portion of the membrana tympani bounded by Prussak's striae and the grooveless fissure. It is situated at the anterior superior pole of the membrana tympani, is much thinner and less tense than the other parts of the membrane, and appears as a small, pit-like depression above the short process of the malleus.
Si. Chemical symbol for the element *silicon*.
sialagogue (si-al'ag-og). Augmenting the secretion of saliva; as a n., a substance so acting. [Gr., *sialon*, saliva, + *agogos*, a drawing forth.]
sialaporia (si-al-ap-o're-ah). Deficiency of saliva. [Gr., *sialon*, saliva, + *aporia*, non-acquisition.]
sialin (si'al-in). See *ptyalin*.
sialodochitis, sialoductitis (si'al-o-dok-i'tis, si'al-o-duk-ti'tis.) Inflammation of the salivary ducts. s. **pancreatica**. Inflammation of the ducts of the pancreas. It may be catarrhal or purulent. [Gr., *sialon*, saliva, + *doche*, receptacle, + *itis*, inflammation.]
sialolith (si'al-o-lith). See *salivary calculus*, under *calculus*. [Lat., *sialon*, saliva, + *lithos*, a stone.]

sialolithiasis (si'al-o-lith-i'as-is). The formation or presence of a salivary calculus. [Gr., *sialon*, saliva, + *lithiasis*, the formation of a stone.]
sibbens (sib/bens). Syn.: *sivrens*. A name for certain affections, probably including both frambesia and syphilis, regarded formerly as an endemic disease peculiar to Scotland.
sic'cant, sic'cative. See *desiccant*. [Lat., *siccans*, *siccativus*, from *siccare*, to dry.]
sic'cus. Dry.
sick. 1. Affected with disease. 2. Affected with nausea. 3. Menstruating. [Ang.-Sax., *seoc*.]
sickness (sik'le-nes). A condition of weakness and predisposition to contract disease upon slight cause.
sick'ly. 1. Weak, and predisposed to disease. 2. Insalubrious.
sick'ness. 1. A deviation from a state of health, especially in the form of an acute disease. 2. Nausea. **African sleeping s.** A fatal epidemic disease, due to the bite of the tsetse fly. **car s.** Nausea caused by riding on trains or trolley cars. **falling s.** See *Epilepsy*. **monthly s.** See *menstruation*. **morning s.** The morning nausea of pregnant women. **mountain s.** A sensation like nausea which attends respiration in the rarefied atmosphere of great altitudes. **sea s.** See under *seasickness*. **sleeping s.** See *African sleeping s.* **sweating s.** See *miliary fever*, under *fever*. [Ang.-Sax., *seoc*; Old Fris., *siak*, *sieck*, *sek*.]
Sida (si'dah). Indian mallow. Several species of s. are used medicinally.
side-chain theory. See *Ehrlich's side-chain theory*, under *Ehrlich*.
sid'ero-. Combining form of Gr., *sideros*, iron.
sideroscope (sid'er-o-sköp). An instrument for showing the presence of particles of iron or steel in the eye. Pooley's s. consists essentially of a suspended magnetic needle. [Gr., *sideros*, iron, + *skopein*, to examine.]
siderosis (sid'er-o'sis). A form of chronic interstitial pneumonia occurring among ironworkers and due to inhalation of the dust of iron oxid. [Gr., *sideros*, iron.]
siderous (sid'er-us). Containing iron. [Gr., *sideros*, iron.]
sidalon (si'don-al). Piperazin quinate, ($C_{18}H_{34}N_2O_{12}$). It is said to be useful in the treatment of gout.
sigmoid (sig'moyd). Curved like the letter S; as a n., the s. flexure. [Gr., *sigma*, the letter S, + *idos*, resemblance.]
sigmoiditis (sig-moyd-i'tis). Inflammation of the sigmoid flexure. [Gr., *sigmoides*, like the letter S, + *itis*, inflammation.]
sigmoidoscope (sig-moyd'o-sköp). A device for inflating the sigmoid flexure and illuminating it with an electric lamp. [Sigmoid + Gr., *skopein*, to look.]
sign (sin). An indication, especially one elicited by physical examination, hence objective in character as distinguished from a symptom which is subjective.
coin s. A s. obtained when a silver coin is placed upon the chest and struck by

another, over a pneumothorax or a large cavity. It is metallic and ringing in character. **halfpenny s.** A s. elicited by auscultatory percussion, said to indicate pleuritic effusion. "The patient is seated, and is auscultated in the dorsal region." An assistant places a sou on the thorax in different parts according to directions, and percusses. The ear of the auscultator listens at the opposed corresponding parts. The healthy side is first examined; then the side with pleurisy, where the note is much higher. A clear metallic sound indicates pleuritic effusion; when this sound is absent there is no effusion. **physical s's.** S's elicited by means of physical examination. **s. of the orbicularis palpebrarum.** In facial paralysis, inability to close the eye of the paralyzed side while keeping the other eye open; said to be almost decisive of the central origin of the palsy. For s's called by proper names, see under those names, e. g., Abadie's s., Skoda's s. See *Abadie* and *Skoda*. [Lat., *signum*.]

signatura (sig-na-tu'rah). 1. See *signature*. 2. In a prescription, the directions to the pharmacist to write certain things on the label, showing the patient how the medicine is to be taken. It is usually abbreviated to *sig.* or *s.* [Lat., *signara*, to write.]

signature (sig'nat-chur). The part of the prescription containing the directions to the patient. A characteristic mark. [Lat., *signatura*, from *signare*, to write.]

sig'num. A mark or sign.

signatera (sig-wah-ta'rah). A disease of the tropics, often fatal, produced by eating certain kinds of fish; characterized by abdominal pain, nausea, vomiting, diarrhea, coldness of the body. [Sp.]

si'lex. See *silicia*.

silica (sil'ik-ah). Silicon dioxide, SiO₂.

silicate (sil'ik-ät). A salt of silicic acid.

silicatus (sil-ik-a'tus). Combined with, or containing silicon.

silicic (sil-is'ik). Containing silicon. **s. acid.** See under *acid*. **s. anhydrid.** See *silica*.

silicid (sil'is-id). A direct compound of silicon with another element.

silicious (sil-ish'tus). Flinty, containing silicon. [Lat., *siliceus*.]

silicium (sil-is'e-um). See *silicon*.

silicon (sil'ik-on). A non-metallic element, existing in several allotropic forms. At ordinary temperatures it does not react with water or the ordinary mineral acids. In many ways it resembles carbon. It is found as silica or as the silicates in the urine and connective tissue, the hair and feathers. It occurs in nature in great abundance under the form of silica or the silicates. Atomic weight, 28.4. Symbol, Si. **s. carbid.** Syn.: *carborundum*. SiC, a compound which has a hardness almost equal to that of the diamond. It is used for grinding and polishing purposes. [Lat., *silix*, flint.]

silk gel'atin. Same as *sericin*.

Silphium (sil'fe-um). Rosinweed; a genus of composite plants. **S. laciniatum.**

Polar plant; found in the western United States. It exudes an oleosin that is used as a chewing gum. **S. terebinthinaceum.** Prairie burdock. It exudes a purgative resin, and the root is used like rhubarb. [Gr., *silphion*.]

sil'ver. A metal occurring in nature both uncombined and in combination, in the latter case usually as a sulphid. It is a good conductor of heat and electricity. It is not changed by the atmosphere, though it may be altered by hydrogen sulphid. It usually forms strong coherent solid masses, but it may be obtained as a fine dark powder (molecular s.), and it is also found in the crystalline form. Atomic weight, 107.9. Specific gravity, 10.5. Symbol, Ag., from Lat., *argentum*. **casein s.** See *argonin*. **colloid s.** See *collargol*. **diluted nitrate of s.** See *argenti nitras*, under *argentum*. **fused s. nitrate.** S. nitrate melted and run into sticks [U. S. Ph., *argenti nitras fusus*]. **gelatin s.** See *albargin*. **mitigated s. nitrate.** S. nitrate diluted with potassium nitrate and cast into moulds [U. S. Ph., Br. Ph., *argenti nitras mitigatus*]. **molded nitrate of s.** See *argenti nitras fusus*, under *argentum*. **s. citrate.** The normal silver salt of citric acid, Ag₃C₆H₅O₇, used under the name of Credé's antiseptic. **s. foil.** Metallic s. in the form of thin leaves, used for coating pills. **s. ichthyolate.** See *ichthargan*. **s. lactate.** AgC₆H₅O₃+H₂O, called also "actol," an antiseptic. **s. nitrate.** AgNO₃, formed by the action of dilute nitric acid on metallic s. When deposited from its solution in nitric acid, it forms transparent rhombic crystals, crystallized s. nitrate, vitriol of s., the *argenti nitras* of the U. S. Ph. It fuses at 198° C., and solidifies into a white, compact, crystalline mass, fused or molded s. nitrate, the *argenti nitras* of the Br. Ph. It is soluble in less than half its weight of water, has a caustic metallic taste, and exerts a caustic action on organic substances by coagulating their albumin. **s. oxid.** The monoxid of s., Ag₂O. It should not be trituated with substances which are readily oxidizable [U. S. Ph., *argenti oxidum*]. **s. protinate.** See *novargan*. **s. sulphichthyolate.** See *ichthargan*. **s. vitellin.** A soluble protein s. compound, described by Barnes and Hills; used in gonorrhoea, etc. See *argyrol*.

silvoddid (sil'vo-did). A proprietary preparation, said to be a suspension of silver iodid in mucilage. It has numerous synonyms and is said to be used like other silver salts in gonorrhoea, etc.

Simaba (sim-a'bah). A tropical genus of simarubaceous plants. **S. cedron.** A tree of Central America. The seed contains cedrin, a bitter volatile principle of unknown composition.

Simaruba (sim-ar-u'bah). 1. Bitter wood; a genus of quassieous plants. 2. Of the U. S. Ph., 1870, s. bark. **S. amara.** 1. Bitter damson, *S. guianensis*. 2. A Jamaica tree identified by most botanists

with *S. guianensis*. **s. bark.** The bark of *S. guianensis* and *S. amara* (2d def.). It was formerly in repute as an antidysenteric, but is now regarded as a simple bitter only [U. S. Ph., 1870].

Simon'ea folliculo'rum. See *Demodex folliculorum*.

sim'ple. 1. Consisting of but one piece, series, etc., uncomplicated, e. g., s. fracture. 2. Defective in intellect. 3. As a n., in the pl., s's, medicinal plants. [Lat., *simplex*.]

Simpson's forceps. An obstetrical forceps with short corrugated handles, blades with both pelvic and cephalic curves, and a double socket lock. [Sir James Y. Simpson, Scotch obstetrician, 1811-1870.]

Sims' position. The patient lies on the left side and the chest, both thighs are flexed on the abdomen, the right a little more than the left, and the left arm hangs over the edge of the table and the thighs are parallel with the bottom edge of the table. **S's speculum.** A form of vaginal speculum made in the shape of two ducks' bills joined by a curved arm. [J. Marion Sims, New York gynecologist, 1813-1883.]

simulation (sim-u-la'shun). 1. Malingering. 2. Mimicry. [Lat., *simulare*, to simulate.]

Simulium (sim-u'le-um). A genus of sandflies of the family *Simuliidae*, and the order *Diptera*. They are numerous in Europe and the tropics, and suck the blood of many animals as well as that of man, causing papules on the exposed portions of the body of the latter. **S. reptans.** A typical species known in Scotland.

sin'albin (sin-al'bin). A glucosid, $C_{30}H_{44}Na_2O_{16}$, found in white mustard seed.

sinamin (sin-am'in). Allyl cyanamid.

sinap'in (sin-ap'in). A very deliquescent alkaloid, $C_{16}H_{23}NO_5$, obtained from white mustard seed.

Sinapis (sin-a'pis). 1. A genus of cruciferous plants (the mustards). 2. Flour of mustard; of the Br. Ph., black and white mustard seeds powdered and mixed. **charta s.** A plaster containing mustard deprived of its fixed oil, spread upon stiff, well-sized paper by means of a solution of gutta percha in chloroform, so that each square inch of paper receives about 6 grains of mustard [U. S. Ph.]. The mustard paper of the Br. Ph., 1898, is not essentially different from that of the U. S. Ph., but the former directs equal parts of black and white mustard. **linimentum s.** A liniment of camphor, castor oil, and the volatile oil of mustard in alcohol [Br. Ph.]. **oleum s. volatile.** Obtained from *Brassica nigra* through the action of the ferment, myrosin, on the glucosid sinigrin in the presence of moisture. It should contain at least 92 per cent. of allyl isothiocyanate [U. S. Ph.]. **S. alba.** White mustard charlock. The seeds, larger than black mustard seeds and having a testa which contains a mucilaginous substance, have a composition like that of black

mustard, but in place of sinigrin contain sinalbin, which in presence of water is acted on by the myrosin and splits up into acrinyl sulphocyanate, sinapin sulphate, and sugar. Hence white mustard yields no volatile oil. It is, however, a powerful rubefacient, and is usually employed in the form of the flour mixed with that of black mustard. Of the U. S. Ph., the seed of *S. alba*. **s. albae semina.** See *S. alba* [Br. Ph., 1898]. **S. arvensis.** Corn mustard. The seeds are pungent and diuretic. **S. nigra.** Black (or brown, or red) mustard. The seeds, the *S. nigra* of the U. S. Ph., yield by distillation with water mustard oil. Black mustard is chiefly used as a rubefacient in sinapisms. The flour is often used as an emetic. The volatile oil is also a powerful rubefacient. [Gr., *sinapi*, mustard.]

sinapiscopy (sin-ap-is'ko-pe). A test of sensory disturbances by applying mustard; analogous to metalloscopy. [Gr., *sinapi*, mustard, + *skopein*, to examine.]

sinapism (sin'ap-ism). A mustard plaster or poultice. [Lat., *sinaspismus*.]

sin'ciput (sin'sip-ut). The portion of the head anterior to its most elevated portion, or vertex. [Lat., *sin'ciput*, half of the head.]

sinigrin (sin'ig-rin). A glucosid, potassium myronate, ($C_{10}H_{18}NKS_2O_{10}$), which is accompanied by the ferment myrosin, when mustard is moistened, yielding volatile oil of mustard.

sin'istral (sin'is-tral). On the left side. [Lat., *sinister*, left.]

sinistro- (sin-is'tro). Combining form of Lat., *sinister*, left, used in the sense of situated in, directed, or turning toward the left.

si'nus. Pl. *sinuses*. 1. A cavity having a relatively narrow opening or entrance. 2. A large venous canal into which several smaller veins empty, especially such a venous channel formed by the dura of the brain. 3. The bosom. 4. The long narrow suppurating tract communicating with an abscess or diseased tissue. **accessory s'es, air s'es.** Air-containing cavities within bones, especially those communicating with the nasal passages. **aortic s.** See *s'es of Valsalva*. **basilar s.** See *transverse s.* **Breschet's s.** See *Breschet*. **cavernous s.** A large s. extending from the sphenoidal fissure to the apex of the petrous portion of the temporal bone, communicating behind with the inferior and superior petrosal s'es, and receiving the ophthalmic vein in front. **circular s.** Syn.: *communicatio recepta colorum*. A venous s. surrounding the pituitary body, communicating on each side with the cavernous s. **circular s. of the placenta.** A plexus of veins in the maternal portion of the placenta in communication with uteroplacental s'es. **clino'id s.** See *circular s. confluence of the s'es.* See *torcular Herophili*, under *torcular*. **coronary s. of the heart.** A vein in the transverse groove between the left auricle and ventricle of the heart

on its posterior aspect; by some regarded as a dilatation of the great cardiac vein or a s. into which it opens. **cranial s'es.** Venous channels between the folds of the dura, lined with a continuation of the tunica interna of the veins. **ethmoidal s'es.** See *ethmoidal cells, under cells.* **frontal s.** An irregular cavity in the frontal bone, underlying the prominence at the root of the nose and over the superior orbital margin, extending upward and outward between the two tables of the bone, separated from its fellow of the opposite side by a thin septum, and communicating with the nose by the infundibulum. **genital s.** The cleft of the vulva. **genito-urinary s.** See *urogenital s.* **great s. of the aorta.** A dilatation generally found on the right side of the ascending portion of the aorta. **inferior longitudinal s.** A venous s. which extends along the posterior half of the lower border of the falx cerebri and terminates in the straight s. near the anterior margin of the tentorium. **inferior petrosal s.** A large venous s. arising from the cavernous s., running along the lower margin of the petrous portion of the temporal bone, and joining with the lateral s. to form the internal jugular vein. **intercavernous s'es.** The anterior and posterior halves of the circular s. **internal s.** See *straight s.* **lacrimal s.** A small pouch formed by a fold of skin at the inner angle of the eye in the deer and some other quadrupeds. **lacteal s.** See *ampulla ductus lactiferi, under ampulla.* **lateral s.** A venous s. which begins at the torcular Herophili and runs horizontally on the inner surface of the occipital bone to the base of the petrous portion of the temporal bone, where it unites with the inferior petrosal s. to form the internal jugular vein. **lymph s'es.** Small spaces scattered throughout the parenchyma of a lymphatic gland, between the pulp of the gland and the trabeculae or dilatations of the lymphatic vessels. **marginal s.** A variety of the occipital s. opening into the transverse s. **marginal s. of the placenta.** See *circular s. of the placenta.* **mastoid s'es.** See *mastoid cells, under cell.* **maxillary s.** See *maxillary antrum, under antrum.* **occipital s.** A small venous s. in the attached margin of the falx cerebelli opening into the torcular Herophili. See *lateral s.* **petrosquamous s.** A venous s. running along the petrosquamous suture and opening into the transverse s.; believed to be a relic of a fetal communication with the internal jugular vein. **pilonidal s.** Syn.: *congenital lumbosacral fistula.* See *foveola coccygea, under foveola.* **s's of Cuvier.** See under *Cuvier.* **s. Morgagni.** See *lacunae Morgagni, under lacuna, s's of Valsalva, and ventricle of the larynx, under ventricle.* **s'es of Valsalva.** Dilatations of the aorta and pulmonary artery opposite the segments of the aortic

and pulmonary valves. **s. pleurae.** The spaces in the pleural sac along the lower and inferior portions of the lung which the lung does not occupy. **s. prostaticus.** See *uterus masculinus, under uterus.* **s. pulmonalis.** The atrium of the left auricle of the heart. **s. pyriformis.** See *fossa laryngopharyngea, under fossa.* **s. terminalis.** A vein that encircles the vascular area of the blastoderm and empties either by one trunk, the anterior vitelline vein, into the left vitelline vein or by two trunks into both vitelline veins. **s. transversus pericardii.** An opening connecting the prolongation of the pericardium which covers the pulmonary artery and aorta with that covering the auricles. **s. tuberculi (ossis metacarpi).** A depression upon the external surface of a metacarpal bone just above its distal articular surface. **s. vinosus.** See *canal of Schlemm, under canal.* **sphenoidal s'es.** Air s'es which occupy the body of the sphenoid bone and connect with the nasal cavity. **sphenoparietal s.** 1. A vein uniting the cavernous s. and a meningeal vein. 2. The portion of the cavernous s. below the ensiform process. **straight s.** A s. which is continuous with the inferior longitudinal s. and, running along the junction of the falx cerebri and tentorium, is continuous with the lateral s. **superior longitudinal s.** A triangular canal which runs along the upper edge of the falx cerebri, beginning in front at the crista galli and terminating at the torcular Herophili. **superior petrosal s.** A venous canal running in a groove in the petrous portion of the temporal bone. **torcularian s'es.** Sinuses that open into the torcular Herophili. **transverse s.** 1. A s. uniting the inferior petrosal s'es. 2. A venous network in the dura over the basilar process of the occipital bone. It opens into the inferior petrosal s'es and the anterior spinal veins. **urinogenital s., urogenital s.** 1. The canal or duct into which, in the embryo, the Wolffian ducts and bladder empty and which opens into the cloaca. 2. In comparative anatomy, the common receptacle of the genital and urinary ducts. **uterine s'es.** The veins of the uterus when in a state of dilatation due to enlargement of the organ, as in pregnancy. **utero-placental s'es.** Slanting venous channels which issue from the placenta at its uterine surface by piercing the decidua serotina, and serve to convey the maternal blood from the intervillous lacunae back into the uterine veins. **venous s.** A s. conveying venous blood. See also *meatus venosus, under meatus.* **vertebral s'es.** Veins within the bodies of the vertebrae. [Lat., *sinus*, hollow, fold.]

sinusitis (si-nus-i'tis). Inflammation of the living membrane of a sinus. [Lat., *sinus*, a curve, a bend, + Gr., *itis*, inflammation.]

siphon (si'fon). A bent tube by means of which a continuous flow of liquid can be maintained so long as the outlet of the

s. is below the level of the surface of the body of liquid from which the stream is drawn, although part of the s. rises above that surface. [Gr., *siphon*, tube.]

siphonage (si'fon-āj). The action of a siphon.

siphonal (si'fon-al). After the manner of a siphon.

siphonoma (si-fon-o'mah). A soft fibroid tumor composed of small parallel or crossed tubes; a cylindroma. [Gr., *siphon*, a tube, + *oma*, tumor.]

si'ro. An old term for an animal parasite.

si'rup. See *syrupus*.

si'tio-, si'to-. Combining form of Gr., *sition*, *sitos*, food, food made from grain, bread.

sitiology, sitology (sit-e-ol'o'je, sit-ol'o'je). Dietics. See *dietetics*. [Gr., *sition*, *sitos*, food, + *logos*, understanding.]

sitomania (sit-o-ma'ne-ah). 1. A morbid or insane aversion or refusal to partake of food. 2. A periodical mania in which there is bulimia. [Gr., *sition*, *sitos*, food, + *mania*, madness.]

sitophobia (sit-o-fo'be-ah). Dread of or repugnance to taking food (as in certain forms of insanity). [Gr., *sition*, *sitos*, food, + *phobos*, fear.]

sitotoxin (si-to-tok'sin). A ptomain present in grain which produces poisoning.

sitotoxism (si-to-toks'ism). Poisoning by vegetable food infected with molds or bacteria. [Gr., *sitos*, food, + *toxikon*, poison.]

si'tus inver'sus. Transplantation of the viscera, affecting one or several organs.

Sjöqvist's test for loosely combined acid in examination of stomach contents, see in *appendix*, page 904.

skatol (ska'tol). B-methylindol, $\text{CH}_3\text{C}_8\text{H}_7\text{N}$, found in the feces and also obtained as a product of putrefaction of proteins. The tryptophan group of the protein molecule is the source of the s. [Gr., *skor*, *skatos*, dung.]

skatophagy (ska-tof'aj-e). See *coprophagy*. [Gr., *skatophagein*, to eat excrement.]

skatoxyl (ska-toks'il). Syn.: *methyl indoxyl*. The radicle, $\text{CH}_3\text{C}_8\text{H}_7\text{N}$; an oxidation product of skatol, found in large amounts in the urine of patients affected with disease of the large intestine. s. **sulphuric acid**. See under *acid*.

skeletins (skel'et-ins). Nitrogenous substances which form the skeletal tissue of various classes of invertebrates.

skeletology (skel-et-ol'o'je). The anatomy, etc., of the skeleton. [Gr., *skeleton*, a skeleton, + *logos*, understanding.]

skeleton (skel'et on). The hard portion of the body designed for the support or protection of the soft parts. **axial s.** The vertebral column, skull, sternum, and ribs, in contradistinction to the appendicular parts. **branchial s.** The osseous or cartilaginous support of branchiae. **cartilaginous s.** The embryonic cartilaginous precursor of the entire s. except the vault of the cranium, the bones of the face, and the inner plate of the pterygoid process of the sphenoid bone. **cr-**

niovertebral s. That portion of the s. that includes the cranium and the vertebrae. [Gr., from *skellein*, to dry up.]

Skene's glands. Two tubules found, one on each side of the floor of the urethra of the human female, which extend from the meatus urinarius upward from three-eighths to three-quarters of an inch, and open upon the free surface of the mucous membrane of the urethra, within the labia of the meatus urinarius.

skiagram (ski'ag-ram). A Röntgen ray picture. [Gr., *skia*, shadow, + *gramma*, writing.]

skiagraph (ski-ag-raf). See *skiagram*.

skiascope (ski'as-köp). See *retinoscope*.

skiascopy (ski-as'ko-pe). 1. A method of determining the refraction by observing the movement of light and shadow across the pupillary area. See *keratotomy*. 2. Examination by means of the Röntgen rays. [Gr., *skia*, a shadow, + *skopein*, to examine.]

skin. The external covering of the body in man and in most of the lower animals. It consists of three layers: the epidermis, corium, and subcutaneous connective tissue. **bronzed s.** See *Addison's disease*. **elastic s.** Syn.: *cutis elastica*. A rare condition in which the skin, without other changes, possesses abnormal elasticity. The "India-rubber men" who exhibit themselves as freaks are examples of this condition. **fish s.** 1. See *ichthyosis*. 2. A form of malignant variola observed in Brazil and occasionally in Europe. **glossy s.** A cutaneous disease of neuropathic origin, usually affecting the extremities and more especially the fingers, the skin of which becomes smooth, glossy, and pinkish or reddish, with atrophy, alopecia, and loss of the natural lines or furrows. Sometimes the surface is fissured or excoriated. **goldbeaters' s.** A very thin and tenacious sheet prepared from the peritoneal coat of the cecum of the ox; laid between the sheets of gold in the process of gold beating, and occasionally used in surgery as a dressing. **goose s.** See *cutis anserina*, under *cutis*. **loose s.** See *dermatolysis*. **piebald s.** Any disease characterized by persistent spots of coloration or discoloration. **re-entering s.** A mucous membrane. **scale s.** See *ichthyosis*. **s. grafting**. The supplying of deficit in the skin by transplanting either bits of epidermis or large strips of the entire skin on a denuded surface. It is autodermic when the grafts are taken from the skin of the patient himself, heterodermic when the grafts are taken from the skin of other persons, and zoödermic when the grafts are taken from animals other than man. **s. reaction of von Pirquet**. See *Pirquet*. **true s.** See *corium* (1st def.). [Old Norse, *skinn*.]

skodaic (sko-da'ik). Investigated by or named from *J. Skoda*, a Vienna physician, 1805-1881.

Sko'da's sign. A tympanitic percussion note in the subclavicular region, shading insensibly into a flat note in the lower

- mammary and axillary regions; indicative of pleural effusion.
- skull.** See *cranium*. **natiform s.** A s. so deformed by the presence of osteophytes or otherwise as to give it a natiform appearance. [Swedish, *skull* or *skol*; a bowl.]
- slant.** A sloping surface of agar in a test-tube. **s. culture.** A culture of bacteria on the slanting surface of agar, blood serum, and other solid media.
- sleep.** The natural condition of restful unconsciousness into which the system falls normally with more or less regularity daily. **hypnotic s., magnetic s., mesmeric s.** S. produced by hypnotism. **s. drunkenness.** A nervous disorder in which acts of violence are committed when the patient is suddenly awakened from s. **s. walker.** A somnambulist. [Ang.-Sax., *slæp*.]
- sleep'ing.** Of a limb, see *obdormition*. **s. sickness.** Syn.: *trypanosomiasis*. An African disease due to infection with the *Trypanosoma gambiense*, transmitted by the tsetse fly.
- slide.** In microscopy, a slip of glass or other material upon which the object to be examined is mounted.
- sling.** 1. A bandage suspended in a loop from the neck or shoulder to support the hand and forearm. 2. See *ansa*. 3. A fillet. **s. of the lenticular nucleus.** A tract of nerve fibers which pass beneath the optic thalamus to enter the lenticular nucleus. [Ang.-Sax., *slingam*, *sling*.]
- slough (sluf).** See *eschar*.
- sloughing (sluf'ing).** Gangrenous, spreading by gangrene; as a n., the death and separation of a part.
- slum'ber.** Light sleep; sound sleep. [Old Eng., *slumberen*, *slomberein*, to grow sleepy.]
- smallpox.** An infectious, contagious, acute febrile disease chiefly characterized by a pustular exanthem upon the skin. **modified s.** See *varioloid*. **natural s.** S. occurring casually (not from intentional inoculation) in an unvaccinated person.
- smear cul'ture.** A culture made by smearing the bacteria over the surface of solid culture material in flat plates.
- Smee's battery.** A b. each cell of which contains two amalgamated zinc plates and, between them, a thin plate of silver having its surfaces covered with a deposit of rough platinum in powder, all being immersed in dilute sulphuric acid.
- smegma (smeg'mah).** 1. Soap, grease, an unguent. 2. The secretion of the sebaceous glands; sebum. **s. articulare.** See *synovia*. **s. bacillus.** See *bacillus*. **s. cutaneum.** Cutaneous sebum. **s. embryonum.** See *vernix caseosa*, under *vernix*. **s. preputiale, s. preputii.** A yellowish white, fatty matter, of a peculiar odor, which accumulates under the foreskin in the male and about the region of the clitoris and the labia minora in the female, being the secretion of the se-
- baceous glands of the parts. [Gr., *smegma*, soap, unguent.]
- smell.** Sense perception through the olfactory nerves. [Old Eng., *smel*, *smil*, *smul*, *sméal*, *smeol*.]
- smilacin (smi'las-in).** A glucosid, $C_{40}H_{70}O_{18}$, or $C_{16}H_{26}O_6$, or $C_{15}H_{26}O_6$, found in sarsaparilla root.
- smilacina (smi-las-se'nah).** Solomon's seal.
- Smi'lax.** Sarsaparilla; a genus of liliaceous plants. See *sarsaparilla* and its subheadings. **S. medica.** A species yielding in part, if not wholly, the Mexican sarsaparilla. **S. officinalis.** A plant indigenous to tropical South America and cultivated in Jamaica. It yields the sarsaparilla of the U. S. Ph. **S. ornata.** A source of sarsaparilla recognized by the U. S. Ph. A Central American sarsaparilla. **S. papyracea.** A species found from Guiana to Brazil, regarded as the source of Para sarsaparilla. It is recognized by the U. S. Ph. **S. perfoliata.** A species found in India and Cochin-China. The root is used like sarsaparilla. **S. pseudo-china.** A species indigenous to the United States and the West Indies. **S. sarsaparilla.** A name for various tuberous-rooted species, especially *S. pseudo-china*, *S. lanceolata*, and *S. Walteri*. The *S. sarsaparilla* of Linnaeus, formerly regarded as the source of the true medicinal sarsaparilla, is of doubtful origin, and is not now recognized as growing in the United States. The *S. sarsaparilla* of Pursh is *S. glauca*. **S. syphilitica.** A species growing on the Cassiquiare River, said to be a source of true sarsaparilla. [Gr., *smilax*, a poisonous plant, identified by some authorities with the yew.]
- Smith's pessary.** A hard rubber vaginal p. with a marked curve anteroposteriorly.
- Smith's reaction.** See *anaphylaxis*. **S's test for bile pigments.** The urine is carefully stratified with tincture of iodine. If bile pigments are present, a green ring is formed at the junction of the two liquids.
- Sn.** Chemical symbol for the element tin. [Lat., *stannum*.]
- snake'root.** A large number of substances have been variously called "snake-root," "snakeweed," or "rattlesnake root," etc., in allusion to their supposed usefulness in treating the bites of poisonous serpents. These misleading names have led to confusion and their use should be discouraged.
- snap-finger.** See *trigger finger*, under *finger*.
- snap-joint.** A joint employed in orthopedic apparatus that admits of flexion of the limb, but becomes fixed by a catch on extension.
- snare (snair).** An instrument for removing morbid growths by encircling them in a loop and tightening or drawing upon the loop. See *ecraseur*.
- sneezing (snēz'ing).** A sudden, almost explosive expiration, resembling coughing,

but, from closure of the anterior pillars of the fauces, aided by the soft palate, the blast of air is mostly driven through the nose. **ear s.** S. due to irritation of the sensory nerves of the external auditory canal or middle ear. [Ger., *niesen*, to sneeze.]

Snellen's test lines for astigmatism.

Lines arranged in the form of rays or spokes of a wheel. Their deviation from the vertical is expressed in degrees.

snoring. The sound produced, especially in sleep, by breathing through the nose and mouth at the same time. It is produced by a vibration or flapping of the velum pendulum palati between the two currents of air, the sound being intensified by vibrations in the columns of air. [Old Dutch, *snorren*, to grumble, mutter.]

snuffles. See *coryza* and *coryza siphilitica*.

sodamin (so-am'in). A trade name applied to sodium arsanilate ($C_6H_7NAsO_5Na$).

soap. A substance prepared by the action of a caustic alkali or a metallic salt on animal or vegetable fats and oils, and consisting essentially of a compound of a metal with one or more fatty acids or with acids of the oleic acid group. Of the U. S. Ph., a soap made with sodium hydroxid and olive oil. **ammonia s., ammoniacal s.** See *linimentum ammoniacae*, under *ammonia*. **camphorated tincture of s.** See *linimentum saponis*, under *sapo*. **Castile s.** S. made from olive oil. **green s.** See *soft s.* **hard s.** Soda soap; ordinary castile s. [Br. Ph.]. **s. bark.** See *Quillaia* (1st def.). **s. liniment.** See *linimentum saponis*, under *sapo*. **s'root, s'wort.** These terms are used for more than one plant containing an abundance of saponin. See *Quillaia* and *Saponaria*. **soft s.** A liquid s. made of potash and an oil, as linseed or olive oil. [Lat., *sapo*.]

soaps. The sodium or potassium salts of palmitic, stearic, or oleic acid. They are soluble in a small amount of water and the solution becomes turbid upon dilution. The aqueous solution has the property of forming an emulsion with fats or grease and so removing them from surfaces to be cleansed. The calcium and magnesium salts of the three fatty acids named are insoluble in water, consequently a precipitate is formed when the so-called hard waters (which contain calcium and magnesium salts) are treated with soap. By the addition of an excess of soap, the hardness can be removed. Soaps are found in the chyle, the blood, bile, and in the milk.

socaloin (sok-al'o-in). Aloin derived from socotrine aloes. See *aloin*.

socius (so'se-us). Associated; as a n., in the f., *socia* (*glandula* understood), an accessory gland. **socia parotidis.** See *accessory parotid gland*, under *gland.* **socia thymi cervicalis.** An accessory thymus gland found in the neck. [Lat., *socius*, companion.]

soda (so'dah). 1. Caustic s., sodium hydroxid; a hard, white or grayish, opaque

solid, of fibrous texture, melting just below a red heat, deliquescent in moist air, efflorescent in dry air, and very soluble in alcohol, less soluble in water. It is a strongly alkaline base, of very acrid and caustic taste. From its great affinity for water, it acts as a caustic, but is less diffusive in its action than caustic potash.

2. A name used by the laity for various salts of sodium (especially sodium carbonate or bicarbonate). The term is now usually restricted to the salts of sodium occurring native or used in commerce. When used without qualification, caustic s. is generally understood. List of poisons and their antidotes, see in *appendix*, page 938.

liquor sodae. A solution of sodium hydroxid [U. S. Ph., 1890]. **liquor sodae arseniatis.** See *liquor sodii arsenatis*, under *sodium* [Br. Ph., 1885]. **liquor sodae chloratae** [U. S. Ph., 1890], **liquor sodae chlorinatae.** See *Labarraque's solution*. **s. tartrate.** See *potassium and sodium tartrate*, under *potassium* [Br. Ph.]. **washing s.** Sodium carbonate.

sodamid (so'dam-id). A crystalline substance, NH_2Na , formed by the action of ammonia gas on metallic sodium.

so'dic. Containing or derived from sodium. [Lat., *sodicus*.]

sodium (so'de-um). A metallic element discovered in 1807 by Sir H. Davy, who prepared it by electrolysis of caustic soda. It is one of the alkali metals, of a silvery white color, waxy at ordinary temperature, melting at $95.6^\circ C.$, and volatilizing at a red heat. It readily oxidizes on exposure to moisture, decomposes water with evolution of heat, and unites with potassium to form an alloy. It forms soluble salts with all of the acids. Atomic weight, 23. Symbol, Na. Specific gravity, 0.972. **acid s. metantimonate.** A crystalline substance, $Na_2H_2Sb_2O_7 + 6H_2O$, distinguished as being the only salt of s. insoluble in cold water. Its formation is therefore used as a test for the presence of s. **casein s.** See *nutrose*. **liquor sodii arsenatis.** An aqueous solution containing 1 per cent. of sodium arsenate. It should not be confused with the liquor sodii arsenatis, Pearson's of the N. F., which contains about $\frac{1}{10}$ per cent. of crystallized or $\frac{1}{6}$ per cent. exsiccated sodium arsenate [U. S. Ph., Br. Ph.]. **liquor sodii ethylatis.** A 19 per cent. solution of s. ethylate in absolute alcohol; obtained by dissolving 1 part of metallic s. in 20 volumes of absolute alcohol [Br. Ph., 1898]. **liquor sodii hydroxid.** Liquor sodii of the U. S. Ph., 1890; it contains 5 per cent. of NaOH dissolved in water [U. S. Ph.]. **liquor sodii phosphatis compositus.** A liquid of which 100 c.c. contains 100 gms. of s. phosphate, 4 gms. of s. nitrate, and 13 gms. of citric acid with a little water. It was introduced into the pharmacopoeia as a substitute for a proprietary preparation [U. S. Ph.]. **liquor sodii silicatis.** Solution of s. silicate, liquid (or water) glass; a substance consisting essentially of a liq-

uid acid *s. silicate* ($\text{Na}_2\text{SiO}_3 + 2\text{SiO}_2$), prepared by heating together quartz sand, anhydrous *s. carbonate*, and charcoal, or by dissolving silicic acid in a concentrated solution of caustic soda. It is a clear, odorless, and colorless or yellowish syrup, having a decided alkaline taste and reaction. **mel boracis** [Br. Ph.], **mel sodii boracis**. A preparation made of borax, clarified honey, and glycerin [U. S. Ph.]. *s. acetate*. A substance, $\text{NaC}_2\text{H}_3\text{O}_2 + 3\text{H}_2\text{O}$, occurring as efflorescent, colorless, prismatic crystals, moderately soluble in water, and having a salty taste [U. S. Ph.]. *s. acetsulphanilid*. A substitute for antipyrin. *s. acid salicylsulphonate*, *s. acid sulphosalicylate*. Used in rheumatism instead of the salicylate. *s. ammonium and hydrogen phosphate*. Ammonium and *s. phosphate*. *s. arsanilate*. Syn.: *arsanin*, *atoxyl*, *soamin*, ($\text{C}_6\text{H}_7\text{NAsO}_2\text{Na}$), used in the treatment of trypanosomiasis and of syphilis and like arsenic trioxid. **sodii arsenas exsiccatu**s. *S. arsenate* deprived of its water of crystallization, and hence nearly twice as active as the crystalline salt [U. S. Ph.]. *s. arsenate*, *s. arseniate*. A compound of *s.* and arsenic. The *s. arsenates* include (1) *normal s. arsenate*, *trisodic arsenate*, a crystalline body, $\text{Na}_3\text{AsO}_4 + 12\text{H}_2\text{O}$; (2) *disodic arsenate*, the common *s. arsenate*, the *sodii arsenias* of the U. S. Ph. and Br. Ph., Na_2HAsO_4 , forming crystals which combine with various proportions of water of crystallization (the official salt containing 7 molecules); (3) *monosodic arsenate*, *s. dihydrogen arsenate*, NaH_2AsO_4 , forming large crystals readily soluble in water. *s. arsenotartrate*. Used as a substitute for potassium arsenite and arsenous acid. *s. aurochlorid*. Gold and *s. chlorid*; used in syphilis. *s. benzoate*. A compound, $\text{NaC}_7\text{H}_5\text{O}_2 + \text{H}_2\text{O}$, of *s.* and benzoic acid, soluble in water, and of a sweetish but astringent taste. The German salt is anhydrous. It has been used in cystitis, phthisis, and various infectious diseases. *s. benzosulphindium*. *S. benzoylsulphonate*; the *s. salt* of saccharin ($\text{C}_6\text{H}_4(\text{CO})\text{SO}_2\text{NNa} + 2\text{H}_2\text{O}$) which is much more soluble in water than saccharin. Its uses and actions are not essentially different from those of saccharin, it being intensely sweet and also antiseptic. It is put on the market under a variety of trade names. *s. bichlorate*. See *s. borate*. *s. bicarbonate*. Acid *s. carbonate*, NaHCO_3 , occurring as a very white powder or as a white crystalline mass, of no odor and a cool, slightly saline taste, soluble in alcohol and in from 12 to 14 parts of cold water [U. S. Ph., Br. Ph.]. *s. bisulphite*. A substance, NaHSO_3 , occurring as transparent prismatic or irregular crystals or as a coarse powder of disagreeable sulphurous taste [U. S. Ph.]. **sodii boras** [U. S. Ph.]. Syn.: *s. biborate*, *s. pyroborate*, *s. tetraborate*. Occurs in crystals or in a white powder; slightly alkaline; used as a detergent. *s. bo-*

rate. A compound of *s.* and boric acid. The borates of *s.* are the orthoborate, Na_2BO_3 , an unstable salt, the pyroborate (see *borax*), and the metaborate, $\text{NaBO}_2 + 4\text{H}_2\text{O}$, a crystalline body. The neutral borate is used as an antiseptic [U. S. Ph.]. *s. bromid*. A compound, NaBr of *s.* and bromin, occurring as whitish or colorless cubical or prismatic bitterish, salty crystals, readily soluble in water. When crystallizing in the prismatic form, the salt contains two molecules of water of crystallization. Used in medicine like potassium bromid [U. S. Ph., Br. Ph.]. *s. butyrate*. A substance, $\text{C}_4\text{H}_7\text{O}_2\text{Na}$, used as a hypnotic. *s. cacodylate*. $\text{As}(\text{CH}_3)_2\text{ONa}$; used in psoriasis. *s. cantharidate*. A compound of *s.* and cantharidic acid. It has been used subcutaneously in laryngeal tuberculous disease. *s. carbolate*. A white crystalline substance, $\text{C}_6\text{H}_5\text{NaO}$. **sodii carbonas exsiccatu**s. This preparation is made by drying the crystalline salt until it has lost about 63 per cent. of its weight [Br. Ph.]. *s. carbonate*. A substance, $\text{Na}_2\text{CO}_3 + 10\text{H}_2\text{O}$, occurring as colorless transparent crystals or a white crystalline powder of strong alkaline taste, easily soluble in water, insoluble in alcohol, and melting at about 35°C . in its water of crystallization [U. S. Ph.]. *s. carbonate monohydrate*. *S. carbonate* containing only one molecule of water of crystallization. It contains about twice as much Na_2CO_3 as the normal crystalline salt [U. S. Ph.]. *s. chlorate*. A compound, NaClO_3 , occurring as large tetrahedral crystals soluble in rather more than their own weight of water; readily explosive, especially when in contact with organic substances. It is but little used in medicine [U. S. Ph.]. *s. chloraurate*. See *gold and sodium chlorid*, under *gold*. *s. chlorid*. Common salt, table salt, purified cooking or sea salt, NaCl , occurring as cubical crystals of agreeable saline taste, melting at 776°C . *S. chlorid* is an important constituent of the animal organism and of many articles of food. In strong solution, it is antiseptic. In the form of the so-called "physiological salt solution," it is sometimes used as a restorative in collapse [U. S. Ph., Br. Ph.]. *s. cinnamate*. ($\text{NaC}_9\text{H}_7\text{O}_2$); it has been suggested for use by intravenous injection, with proper precautions, in the treatment of phthisis. *s. citrate*. A soluble granular powder quite soluble in water. It is diuretic in action [U. S. Ph.]. *s. citrophosphate*. "melachol." See *liquor sodii phosphatis compositus*. **sodii citrotratartras effervescentis**. A dry pulverulent mixture containing 17 parts of *s. bicarbonate*, 9 of tartaric acid, 6 of citric acid, and 5 of sugar. On the addition of water it decomposes with effervescence, producing a compound of *s. citrate* and *s. tartrate* [Br. Ph.]. *s. cresotate*. A white, microcrystalline bitter powder, slightly soluble in water; used in rheumatism and as an antipyretic and intestinal antiseptic. *s.*

resylate. An antiseptic. **s. diethylbarbiturate.** ($\text{Na}(\text{C}_8\text{H}_{11}\text{O}_3\text{N}_2)$; its actions are the same as those of veronal, but it is more soluble. **s. diiodosalicylate.** Analgetic, antipyretic, and antiseptic. **s. dithiosalicylate.** A compound of *s. salicylate* and sulphur. Two such compounds exist, distinguished as i and ii. Salt ii, a compound of 2 atoms of sulphur and 2 molecules of *s. salicylate*, is a grayish white, hygroscopic powder, very soluble in water. It has been recommended in rheumatism and as an antiseptic. **s. ethylate.** Syn.: *caustic soda*. $\text{CH}_3\text{CH}_2\text{ONa}$; used as a caustic. **s. ethylsulphate.** The compound $\text{NaC}_2\text{H}_5\text{SO}_4 + \text{H}_2\text{O}$, used as a purgative. **s. fluorid.** "Fluorol," an antiseptic. **s. glyceroborate.** An antiseptic obtained by heating together equal parts of glycerin and *s. borate*. **s. glycerophosphate.** Used like glycerophosphoric acid. **s. glycocholate.** $\text{C}_{26}\text{H}_{42}\text{NO}_6\text{Na}$, occurring in oxgall; used as a cholagogue. **s. guaiacalcarbonate.** Used like *s. salicylate*. **s. hydrate.** See *soda* (1st def.). **s. hydrobromate.** See *s. bromid.* **s. hydrocarbonate.** See *s. bicarbonate.* **s. hydrochlorate.** See *s. chlorid.* **s. hydroxid.** The soda of the U. S. Ph., 1890. **s. hypochlorite.** A compound, NaOCl , of *s.* and hypochlorous acid. It has not been isolated, but occurs in combination with *s. chlorid* in liquor sodae chloratae. **s. hypophosphite.** A substance, $\text{NaH}_2\text{PO}_2 + \text{H}_2\text{O}$, occurring as colorless tabular crystals or as an amorphous or crystalline powder of no odor and a sweetish saline [U. S. Ph.] taste, soluble in water or dilute alcohol. The salt of the Br. Ph. is nearly anhydrous. **s. ichthyosulphonate.** See *ichthyol.* **s. iodate.** A salt of *s.* and iodic acid. **s. iodid.** A compound of *s.* and iodine, NaI ; used like potassium iodid [U. S. Ph., Br. Ph.]. **s. lygosinate.** ($\text{Na}_2\text{C}_{17}\text{H}_{12}\text{O}_8 + 7\text{H}_2\text{O}$). Sternutatory; said to be an active germicide. Useful in uterine gonorrhoea. **s. nitrate.** A salt, NaNO_3 , of a salty bitterish taste; used in angina pectoris, epilepsy, and spasmodic asthma [U. S. Ph.]. **s. nitrite.** This salt is used as a vasodilator. It undergoes oxidation readily, being converted into *s. nitrate* [U. S. Ph., Br. Ph.]. **s. oxynaphtholate.** $\text{C}_{10}\text{H}_6(\text{OH})\text{COONa}$; antipyretic and antiseptic. **s. paracresotate.** $\text{C}_6\text{H}_5(\text{OH})(\text{CH}_3)\text{CO}_2\text{Na}$; used like salicylic acid. **s. perborate.** ($\text{NaBO}_3 + 4\text{H}_2\text{O}$); it should contain at least 9 per cent. of available oxygen. It is antiseptic and bactericidal; used as a dusting powder or, in a 2 per cent. solution, like the solution of hydrogen peroxid. **s. peroxid.** Contains at least 75 per cent. Na_2O_2 ; used in acne and as a paste, with liquid petrolatum, to remove comedones. **s. phenate.** See *s. carbolate.* **s. phenolsulphonate.** See *s. sulphocarbolate.* **sodii phosphas.** Ordinary phosphate of *s.*; disodic orthophosphate. See *s. phosphate* [U. S. Ph., Br. Ph.]. **sodii phosphas effervescens.** A granular salt contain-

ing sodium phosphate, sodium bicarbonate, and citric and tartaric acids [U. S. Ph., Br. Ph.]. **sodii phosphas exsiccatum.** *S. phosphate* deprived of its water of crystallization, whereby its weight is reduced by about three-fifths. Its uses are the same as those of the crystalline salt, but the dose is smaller, corresponding to the loss of water of crystallization [U. S. Ph.]. **s. phosphate.** A salt of *s.* and phosphoric acid. The orthophosphates include three different salts: (1) the normal orthophosphate, or *s. phosphocarbonate*, $\text{Na}_3\text{PO}_4 + 12\text{H}_2\text{O}$, forming thin prismatic crystals; (2) the disodium hydrogen orthophosphate, or ordinary *s. phosphate* [sodii phosphas, U. S. Ph., Br. Ph.], $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$, occurring as large, transparent, prismatic crystals, which readily effloresce and are moderately soluble in water; and (3) the dihydrogen *s. orthophosphate*, the acid *s. phosphate* of the Br. Ph., $\text{NaH}_2\text{PO}_4 + 4\text{H}_2\text{O}$, forming large, transparent crystals, very soluble in water and of an acid reaction. Used as a purgative. **s. pyrophosphate.** A salt of *s.* and pyrophosphoric acid. The pyrophosphates of *s.* are: (1) the normal pyrophosphate [sodii pyrophosphas, U. S. Ph.], $\text{Na}_2\text{P}_2\text{O}_7 + 10\text{H}_2\text{O}$, forming colorless prismatic crystals, moderately soluble in water, and having a cooling, salty taste; and (2) the acid pyrophosphate, dihydrogen *s. pyrophosphate*, $\text{Na}_2\text{H}_2\text{P}_2\text{O}_7$, an acid crystalline powder. **s. saccharin.** Soluble saccharin, crystalline, $\text{C}_7\text{H}_5\text{COSO}_2\text{N} + 2\text{H}_2\text{O}$; used in place of saccharin because of its greater solubility. **s. salicylate.** Normal *s. salicylate* [Lat., *sodii salicylas*, U. S. Ph., Br. Ph.] is a substance, $\text{Na}_2(\text{C}_7\text{H}_5\text{O}_3)_2 + \text{H}_2\text{O}$, occurring as colorless crystalline scales or as a white powder containing water of crystallization, of no odor but of a salty taste. It is used in rheumatism, migraine, etc., also as an intestinal disinfectant. Besides this and the basic *s. salicylate*, acid *s. salicylate* is known, a substance forming colorless, hard, transparent crystals which are decomposed, with evolution of salicylic acid, on contact with water. **s. santonate, s. santoninate.** A salt, $\text{NaC}_9\text{H}_{15}\text{O}_4$, usually combined with water of crystallization of no odor, but of somewhat salty and bitter taste [U. S. Ph., 1880]. **s. silicate.** A salt of *s.* and silicic acid. The silicates of *s.* are the metasilicate, Na_2SiO_3 , the trisilicate, $\text{Na}_3\text{Si}_3\text{O}_9$, and the tetrasilicate, $\text{Na}_4\text{Si}_4\text{O}_{16}$. The last-named is the ordinary *s. silicate*, or soluble glass, a transparent vitreous mass, which, dissolved in water, forms liquor sodii silicatis. **s. silicofluorid.** A pulverulent, odorless body, Na_2SiF_6 , moderately soluble in water. It is known as salufer, and is used as a surgical antiseptic. **s. soziodolate.** Soziodol *s.*, $\text{C}_6\text{H}_5\text{I}_2(\text{OH})\text{S}_2\text{O}_3\text{Na} + 2\text{H}_2\text{O}$; an antiseptic. **s. sucrate.** A translucent substance, $\text{C}_{12}\text{H}_{21}\text{NaO}_{11}$, of alkaline taste. **s. sulphanilate.** Used in coryza. **sodii sulphas effervescens.** A granular powder containing

sulphate and bicarbonate of s. with citric and tartaric acids [Br. Ph.]. **s. sulphate.** Syn.: *Glauber's salts*. The s. sulphates include: (1) the normal sulphate (sodii sulphas, U. S. Ph., Br. Ph.), Na_2SO_4 , which occurs in combination with either seven or ten molecules of water of crystallization, in the latter case constituting the official salt, and forming prismatic efflorescent crystals, used as a purgative; and (2) the acid sulphate, NaHSO_4 , occurring as large prismatic crystals which are either anhydrous or combine with two molecules of water of crystallization. **s. sulphichthyolate.** See *ichthyol.* **s. sulphite.** A salt of s. and sulphurous acid. The normal s. sulphite, Na_2SO_3 , combines with various proportions of water of crystallization. The salt official in the U. S. Ph. and Br. Ph. as sodii sulphis is used as an antiseptic. **s. sulphocarbonate.** A salt, $\text{NaC}_6\text{H}_5\text{SO}_4 \cdot 2\text{H}_2\text{O}$, in white or colorless prisms; antiseptic and antifermentative. **s. tartrate.** A salt of s. and tartaric acid. **s. taurocholate.** A substance, $\text{C}_{24}\text{H}_{40}\text{O}_6\text{Na}$, occurring in oxgall; used like oxgall. **s. tetraborate.** 1. A compound obtained by heating a mixture of equal parts of borax, boric acid, and water. Recommended as a substitute for boric acid as an antiseptic, from its being much more soluble. 2. A synonym for borax. **s. thiosulphate.** The compound, $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$, commonly called hypsulphite of s. or simply "hypo." It has a cooling, but somewhat bitter and somewhat sulphurlike taste, but no odor. Used as an antiseptic and in photography [U. S. Ph.]. **trochisci sodii bicarbonatis.** Lozenges containing 3 grs. of s. bicarbonate. They are used in place of Vichy pastilles [U. S. Ph.]. **trochisci sodii santalinatis.** Troches containing each one grain of s. santalinat [U. S. Ph., 1880].

sodomy (sod'o-me). Introduction of the penis through the anus in unnatural sexual relations. [Biblical narrative of Sodom.]

so'dor. A Swiss apparatus for the instantaneous impregnation of liquids with carbon dioxid, similar to the "sparklet" apparatus.

soft chancre (soft shan'ker). See *chancreoid*.

softening (sof'n-ing). A nutritional organic lesion characterized by a decrease in the natural cohesion of the tissues.

atrophic s. of the brain. See *white s. of the brain*.

brown s. of the stomach. An alteration due to post mortem digestion of the wall of the stomach, extending even to the peritoneum.

cerebral s. See *s. of the brain*.

hemorrhagic s. Hemorrhage into an organ with consequent ischemia and s. of the hemorrhagic area. According to the color changes taking place from chemical or bacterial changes, the softened area becomes red, gray, green, yellow, or white.

ischemic s. A temporary or permanent ischemia with necrosis and s. of the tissues affected. **red s. of the brain.**

Ischemic s. of the brain accompanied by hemorrhage and the deposit of hematoïdin crystals and blood in the surrounding tissue. **s. of the bones.** See *osteomalacia*.

s. of the brain. As used by the laity, any disease, especially general paresis of the insane, associated with progressive dementia. **s. of the stomach.** See *gastromalacia*.

white s. of the brain. Ischemic s. of the brain unaccompanied by hemorrhage, the tissues remaining pale.

soft solder (soft sod'er). An alloy fusing at a low temperature for uniting metals.

Soja (so'yah). A genus of the *Leguminosae*, now included in the genus *Glycine*.

S. hispida. A Japanese species. Bread made from the beans has been used for diabetics.

solanein (sol-an-e'in). An alkaloidal glucosid, ($\text{C}_{52}\text{H}_{83}\text{NO}_{19}$), found in numerous solanaceous plants. See also *solanin*.

solanidin (so-lan'id-in). A crystalline decomposition product of solanin and solanein ($\text{C}_{40}\text{H}_{61}\text{NO}_2$).

solanin (so'lan-in). A saponinlike alkaloidal glucosid, ($\text{C}_{42}\text{H}_{75}\text{NO}_{19}$), occurring in many species of *Solanum* and in potatoes under bad conditions of storage, e. g., bad cellars. It is poisonous and on decomposition yields solanidin, which is also poisonous, but less so than s.

Solanum (so-la'nium). The typical genus of solanaceous plants. They are herbs or shrubs, or rarely trees, most abundant in the tropics. They furnish many useful drugs and foods. **S. carolinense.** American horse-nettle; the juice of the berries and the root has been used in epilepsy. **S. dulcamara.** The young branches, the leaves, and the berries contain solanin and solanein, and dulcamarin. The root bark is narcotic, but is not used. The term deadly nightshade is sometimes erroneously applied to this species. **S. nigrum.** Garden nightshade. There are numerous varieties and closely related species. The leaves contain solanin, though authorities differ as to their poisonous character, and also as to that of the berries. They are diaphoretic, diuretic, and mildly purgative.

so'lar. Pertaining to the sun, proceeding from the sun, or caused by sun heat; resembling the sun in occupying a central position. **s. exhaustion.** See *insolation*.

s. heat. See under *heat*.

s. plexus. See under *plexus*. [Lat., *solaris*, from *sol*, the sun.]

solarium (so-la're-um). An apartment fully exposed to the sun. A sun parlor. [Lat., *sol*, the sun.]

sol'dier's heart. Cardiac hypertrophy (probable dilatation) due to carrying a heavy knapsack and to overexercise.

soleus (so-le'us). 1. The strongest muscle of the leg. See *table of muscles*, under *muscle*. 2. In solipeds, a muscle which arises from the superior external tuberosity of the tibia and is inserted into the tendon of the bifemoroacaleaneus, of which it is an auxillary. [Lat., *solea*, the sole.]

solferino (sol-fer-e'no). Rosanilin hydrochlorid.

Solidago (sol-id-a'go). Goldenrod; a genus of composite plants. **S. odora**, **S. odorata**. The sweet-scented goldenrod of the United States and Canada. The aromatic leaves, formerly official in the U. S. Ph., are carminative, hemostatic, stimulant, and diaphoretic (in warm infusion). They yield a volatile oil, which is used, dissolved in alcohol, in flatulence, as a corrigent, etc. **S. virga aurea**, **S. vulgaris**. Common goldenrod. The leaves and flowering tops were formerly used as a lithotropic.

solidism (sol'id-izm). Solidistic pathology; the theory that disease depends upon alterations of the body solids.

solid or cubic measure. See in *appendix*, page 942.

solum (so'le-um). See *tenia*.

solidol (sol'oyd). A brand name for certain tablets. **s. nizin**. Tablets of zinc sulphaniolate. Astringent and antiseptic.

Solomon's seal. See *Polygonatum*.

solution (sol-u'shun). 1. The act or process by which a substance, whether solid, liquid, or gaseous, becomes diffused throughout a liquid and incorporated with it in a state of molecular subdivision. 2. The state or condition of being thus incorporated with a liquid. 3. The resulting product, consisting of the liquid with the substance so incorporated. 4. The act of separating. 5. Of the U. S. Ph., an aqueous s. of a non-volatile substance. See also *aqua* and *spiritus*. **alcoholic s.** A s. in which alcohol is employed as the solvent. **aqueous s.** A s. in which water is employed as the solvent. **Boulton's s.** See *Boulton*. **Burnett's s.** See *Burnett*. **Burrow's s.** See *Burrow*. **Campani's s.** See *Campani*. **centinormal s.** A volumetric s. of one hundredth of the strength of a normal s. **decinormal s.** A volumetric s. of one tenth of the strength of a normal s. **Dobell's s.** See *Dobell*. **Donovan's s.** See *Donovan*. **Farrant's s.** See *Farrant*. **Fehling's s.** See *Fehling*. **Fowler's s.** See *liquor potassii arsenitis*, under *potassium*. **gram-molecular s.** A s. containing to the liter as many grams of the substance dissolved as corresponds to the molecular weight. **Hall's s.** See *Hall*. **Labarraque's s.** See *Labarraque*. **Locke's s.** See *Locke*. **Lugol's s.** See *Lugol*. **Magendie's s.** See *Magendie*. **Monse's s.** See *liquor ferri subsulphatis*, under *ferrum*. **normal saline s.** A s. used as an intravenous injection in hemorrhage, etc., and in physiological experimentation, consisting of 7 to 9 gms. of sodium chlorid dissolved in a liter of water. **normal s.** A volumetric s. containing in each liter an amount of the reagent sufficient to exactly replace or combine with 1 gram of hydrogen; i. e., containing in each liter a number of grams of the reagent equal to the molecular weight of the latter divided by the number of hydrogen atoms which it can replace or combine with. **Pavy's s.**

See *Pavy*. **Pearson's s.** See *Pearson*. **Ringer's s.** See *Ringer*. **s. of continuity**. Disruption or separation in a structure that is normally continuous. **standard s.** See *volumetric s.* **standardized s.** A s. of standardized strength. **Stokes' s.** See *Stokes*. **supersaturated s.** A s. made in the presence of heat, containing a greater amount of the solid than possible at ordinary temperatures. **test s.** A s. used for detecting the presence or the amount of certain constituents in a substance undergoing analysis. **Thompson's s.** See *Thompson*. **Villati's s.** See *mistura adstringens et escharotica*, under *mistura*. **Vlemingx's s.** See *Vlemingx*. **volumetric s's.** S's containing known quantities of certain chemical constituents, and of such properties that given amounts of them are capable of producing definite chemical changes in certain substances. [Lat., *solutio*.]

solutol (sol'u-tol). A disinfectant said to be especially effective in the preservation of corpses; an alkaline solution of sodium cresylate in an excess of cresol.

sol'vent. A liquid in which a substance is or can be dissolved. [Lat., *solvens*.]

sol'veol (sol've-ol). A solution of sodium cresotate in an excess of cresol; an antiseptic of the creolin class.

sol'vein. Syn.: *polysove*. Any one of a series of thick syrupy liquids of a yellow or brown color, obtained from various fixed oils, especially from castor oil, olive oil, and rapeseed oil, by the action of concentrated sulphuric acid. They dissolve very many substances which are insoluble in water, but they decompose above 110° C. Their extended medicinal use has been shown to be highly objectionable.

solvosal (sol'vo-sal). Salophosphoric acid. **somacule** (so'mak-ül). Of M. Foster, the physiological unit of protoplasm.

somatic (so-mat'ik). Pertaining to the body at large. [Gr., *somatikos*, from *soma*, the body.]

somat'o-. Combining form of Gr., *soma*, body.

somatodidymus (som'at-o-did'im-us). A double monster the individuals of which are united at the trunk. [Gr., *soma*, the body, + *didymos*, twin.]

somatogenic (so-mat-o-jen'ik). Originating in the cells and tissues of the body. [Gr., *soma*, body, + *gennan*, to produce.]

somatology (so-mat-ol'o-je). The anatomy, physiology, etc., of organisms, especially of the human body. [Gr., *soma*, the body, + *logos*, understanding.]

somatome (so'mat-öm). A segment of the trunk of the embryo; a somite. [Gr., *soma*, the body, + *tome*, a cutting.]

somatopagus (som-at-op'ag-us). A double monster having two trunks. [Gr., *soma*, the body, + *pagos*, that which is fixed.]

somatoplasm (so'mat-o-plazm). The protoplasm constituting or giving rise to the body cells in general, as distinguished from the protoplasm (germplasm) of the reproductive cells. The s. has a limited

- existence, becoming senescent and finally dying, while germplasm under proper conditions is immortal. [Gr., *soma*, the body, + *plassein*, to mold.]
- somatopleure** (so-mat-o-pleur). 1. Of Foster and Balfour, the outer wall of the pleuropertitoneal space in the embryo. 2. See *parietal mesoblast*, under *mesoblast*. [Gr., *soma*, the body, + *pleura*, the side.]
- somatose** (so'mat-ös). A proprietary food-powder, made up from beef derivatives.
- somatotridymus** (som-at-o-trid'im-us). A monster having three bodies. [Gr., *soma*, the body, + *tridymos*, three-fold.]
- somesthetic** (so-mes-thet'ik). Relating to the bodily sensations. [Gr., *soma*, body, + *aisthesis*, sensation.]
- somite** (so'mit). 1. Any one of the individual embryonic segments out of which a particular segment of the body is subsequently developed. 2. A single segment in the body of an articulate animal.
- mesoblastic s's, protovertebral s's.** A row of s's formed on each side of the dorsal ridges of the embryo by the transverse cleavage of the protovertebral column of the mesoblast, and ultimately developed into the spinal ganglia, permanent vertebrae, and muscular and dermal plates. They were formerly called *primordial vertebrae* and *protovertebrae*.
- vertebral s's.** The rudimentary vertebrae. [Gr., *soma*, the body.]
- som'nal.** A bitter substance, $C_7H_{12}Cl_3O_3N$, essentially a mixture of urethan and chloral hydrate with a little alcohol. It is a hypnotic, producing a quiet and natural sleep. It is also a powerful diuretic and accelerates the heart action.
- somnambulism** (som-nam'bu-lism). A condition in which an individual, while apparently sleeping, automatically performs acts that seem to involve the exercise of consciousness and volition, especially that of walking about. [Lat., *somnus*, sleep, + *ambulare*, to walk.]
- somnambulist** (som-nam'bu-list). One who walks in his sleep.
- somnifacient** (som-ne-fa'shent). See *hypnotic* (2d def.). [Lat., *somnus*, sleep, + *facere*, to make.]
- somniferin** (som-nif'er-in). 1. Of Trehut, an alkaloid obtained from *Withania somnifera*. 2. Of Bombelon, an ether of morphin, forming clear vitreous crystals.
- som'no-**. Combining form of Lat., *somnus*, sleep.
- somnoform** (som'no-form). A mixture of ethyl chlorid, ethyl bromid, and methyl bromid, used as an anesthetic, particularly in dental practice.
- som'nos.** A proprietary hypnotic and sedative liquid containing hydrated chloral.
- som'nus.** Sleep. [Lat.]
- Sonnenschein's reagent.** A preparation made by precipitating ammonium molybdate dissolved in nitric acid by means of phosphoric acid, washing with water, boiling with nitrohydrochloric acid, evaporating, and dissolving in 10-per cent. nitric acid.
- sonometer** (so-nom'et-er). An instrument for determining the acuity of hearing by measuring the amount of sound required to produce an auditory impression. [Lat., *sonus*, sound, + *metron*, a measure.]
- so'nus.** See *sound* (1st def.). [Lat.]
- sophistication** (so-fis-tik-a'shun). Adulteration. [Gr., *sophistikos*, deceitful.]
- sophol** (so'fol). A compound of silver and methylene-nucleic acid, the silver being in the "masked" form. It is germicidal; used in the treatment of ophthalmia neonatorum.
- sophomania** (so-foma'ne-ah). Megalomania in which the patient vaunts his superior wisdom. [Gr., *sophos*, wise, + *mania*, madness.]
- Sophora** (sof-o'rah). A genus of leguminous plants. **S. sericea.** A species found in Colorado and Mexico, regarded as one of the loco plants. Its seeds contain, according to Parsons, a liquid alkaloid, probably identical with cytisin. **S. speciosa.** A shrub of Texas and New Mexico. The poisonous seeds contain cytisin.
- sophorin** (sof'or-in). A name applied to cytisin.
- soporific** (so-por-if'ik). Producing sleep. [Lat., *sopor*, coma, + *facere*, to make.]
- sorbefacient** (sor-be-fa'shent). Producing or promoting absorption. [Lat., *sorbere*, to suck in, + *facere*, to do, to make.]
- sor'bin, sor'binose, sor'bose.** A simple carbohydrate, $C_6H_{12}O_6$; one of the ketohexoses, formed from sorbite by the action of *Bacterium xylinum*. Also found in the juice of the berry of the mountain ash.
- sor'bite.** A hexahydric alcohol, $CH_2OH-(CHOH)_4CH_2OH$. Formed from certain hexoses by reduction.
- sordes** (sor'déz). Dirt, filth; especially the foul matter which collects on the teeth and lips in certain fevers. [Lat., *sordes*, from *sordere*, to be dirty or foul.]
- sore.** An ulcer or any painful or tender lesion on the surface of the body. **bed s.** Gangrene of the skin or of deeper tissues, due to prolonged pressure. **cold s.** See *herpes facialis*, under *herpes*. **hard s., infecting s.** See *syphilitic chancre*, under *chancre*. **Kandahar s.** See under *Kandahar*. **Lahore s., Moul-tan s.** See *Oriental sore*. **Natal s.** See *veld s.* **Oriental s.** Of Tilbury Fox, any one of the diseases occurring in the East which have the general characters of Aleppo and Delhi boil, Biskra button, etc. **soft venereal s.** See *chancroid*. **veld s.** A form of s. observed in southern Africa. It begins as a minute vesicle, which soon bursts and is succeeded by spreading vesication and ulceration with an erythematous border, often accompanied by lymphangitis and fever; attributed by A. Ogston to *Micrococcus campaneus*. [Old Eng., *sore*, *sare*, *sor*, *sar*.]
- sore mouth.** See *stomatitis*. **nursing s. m.** See *stomatitis materna*, under *stomatitis*.

sororiation (so-ro-re-a'shun). Puberal increase in the size of the breasts. [Lat., *sororiare*, to increase together, from *soror*, sister.]

so-sibious (so-sib'e-us). Used or fitted for preserving life. [Gr., *sozein*, to save, + *bios*, life.]

so'son. A certain nutrient preparation of meat.

souffle (soof'fl). A low blowing sound; a murmur. **bronchial s.** See *bronchial respiration*, under *respiration*. **funicular s.** A blowing sound, synchronous with the fetal heart systole, sometimes heard on auscultation of the abdomen of a pregnant woman. **placental s.** Syn.: *placental bruit*. See *uterine s.* **uterine s.** A blowing sound like that heard over an aneurism, recognized, on auscultating the uterus in advanced pregnancy, as synchronous with the mother's pulse. [Fr., *souffle*, a puff.]

sound (sownd). 1. The sensation produced on the auditory nerve filaments, an instrument, etc., by the vibrations of the air or some other sonorous body. 2. Healthy, not diseased. **blowing s.** An organic murmur likened to the s. of air expelled with moderate force through an aperture. **bottle s.** See *amphoric murmur*, under *murmur*. **bronchial s.** See *bronchial respiration*, under *respiration*. **cardiac s's.** See *heart s's.* **cracked pot s.** A variety of tympanitic resonance heard over pulmonary cavities, etc. **fetal heart s's.** The s's made by the beating of the fetal heart, as heard on auscultation of the mother's abdomen; the most trustworthy sign of pregnancy as well as of the fact that the child is alive. **friction s.** The s. produced by rubbing together two inflamed mucous surfaces. **heart s's.** The two s's, one dull and prolonged, the other short and sharp, heard over the cardiac region. The s's emitted have been compared to the pronunciation of the syllables *lub* and *dub*, with a short pause after the latter s. **hollow s.** Of Alison, an amphoric percussion s. **muscle s.** Syn.: *myophonia*. The s. heard by auscultation over a muscle that is contracted and kept in a state of tension. **pulmonary s.** See *vesicular murmur* and *respiratory murmurs*, under *murmur*. **to-and-fro s.** The rasping friction s. of pericarditis. See *to-and-fro murmur*, under *murmur*. **tubular s.** See *tracheal respiration*, under *respiration*. 3. Any elongated instrument, usually metallic, by which cavities of the body are explored. [Old Eng., *sound*, *sond*; Fr., *sonde*.]

Soyimida (soy'mid-ah). A genus of the *Meliaceae*. **S. febrifuga**. East Indian mahogany. The bark, rohun bark, is used as a tonic and antiperiodic. In very large doses it is said to cause vertigo.

so'zal. Aluminum paraphenylsulphonate; an astringent antiseptic of a slight carbolic acid odor.

soziodol (so-zi'o-dol). See *sozoidol*.

sozodont (so'zo-dont). A proprietary

liquid dentifrice said to consist mainly of Venetian soap and dilute alcohol.

soziodol (so-zo-i'o-dol). Diiodoparaphenol sulphonic acid, $C_6H_4I_2.SO_3H(OH)$, non-poisonous, and not decomposed by light, though containing over 50 per cent. of iodine. It has been used externally as an antiseptic, disinfectant, and antiparasitic, in burns, and in various cutaneous nasal and pharyngeal affections, and internally in diabetes.

space. Continuous extension in the three dimensions of length, breadth, and thickness; in a popular restricted sense, room, empty or vacant s. **air s.** Syn.: *air chamber*. 1. Space in cubic feet necessary for each person in a hospital, jail, etc. 2. An accumulation of air at the rounded end of an egg, between the middle and internal fibrous envelopes, which penetrates through the shell to replace a certain amount of the watery material of the egg lost by evaporation. **anterior mediastinal s.** A s. directed obliquely from above downward and to the left of the median line. **anterior perforated s.** A triangular s. on the lower surface of each cerebral hemisphere, bounded anteriorly by the three roots of the olfactory nerve, posteriorly by the optic tract, and externally by the beginning of the sylvian fissure. **arachnoid s.** See *subarachnoid lymph s.* and *subdural s.* **circumvascular lymph s's.** Tubes surrounding blood vessels and communicating with true lymphatic vessels. **circumvascular s.** See *cell s.*, under *cell*. **haversian s's.** Irregular spaces found especially in growing bones. They have jagged outlines, and appear to be the result of the absorption of compact bone. Such a s. may become filled by the development of haversian systems within it. **interarytenoid s.** The s. between the arytenoid cartilages behind the processus vocales. **intercellular s's.** Minute s's between the intercellular apophyses of prickle cells. They are crossed by the intercellular bridges. **intercostal s's.** S's between adjacent ribs. **intermesoblastic s's.** Cavities, one on each side, included between the parietal and the visceral laminae of the lateral mesoblastic plates of the embryo. **intermetatarsal s's.** S's between the metatarsal bones. **interpeduncular s.** Syn.: *cisterna chiasmatica*. A diamond-shaped cavity at the base of the brain, bounded anteriorly by the optic tracts and posteriorly by the crura cerebri. It contains the tuber cinereum, infundibulum, pituitary body, and corpora albicantia. **lateral perforated s.** A lamina of white substance perforated with numerous apertures, seen at the bottom of the fissure of Sylvius. **lymph s.** A cleft or s. in the tissues or in lymphatic glands containing or giving passage to lymph. See *lymph sinuses*, under *sinus*. **mediastinal s.** The cavum mediastinum (see under *mediastinum*). **pelvirectal s.** See *ischirectal fossa*, under *fossa*. **perforated s.** See *anterior perforated s.*, *lateral*

perforated s., and posterior perforated s. **perichoroidal s.** A lymph s. between the choroid and the sclerotic. **perivascular s.** See *circumvascular lymph s.s.* **placental blood s's.** See *intervillous lacunae*, under *lacuna*. **pleuroperitoneal s's.** See *intermesoblastic s's.* **popliteal s.** A s. on the posterior surface of the knee bounded by the hamstring tendons and the heads of the gastrocnemius. **posterior mediastinal s.** An irregular triangular s., running parallel with the vertebral column. **posterior perforated s.** A small mass of gray matter near the center of the lower surface of the brain. It is a portion of the floor of the third ventricle, and is pierced by numerous small vessels which supply the optic thalami. **posterior triangular s.** A s. bounded by the posterior border of the sternocleidomastoideus, the upper border of the clavicle, and the anterior border of the trapezius and occiput. **prevesical s.** The s. between the transversalis fascia and the posterior surfaces of the recti abdominis below the semicircular line of Douglas. **retroperitoneal s.** The s. posterior to the peritoneum and in front of the spinal column and the muscles of the lumbar region. **semilunar s.** See *Traube's s.*, under *Traube's s's of Fontana*. Cavities between the processes of the ligamentum pectinatum iridis communicating with the anterior chamber of the eye. **s's of His.** See *circumvascular s's.* **s. of Tenon.** A lymph s. between the fascia of Tenon and the sclerotic. **subarachnoid lymph s.** The interval between the arachnoid and the pia. That of the spinal cord and the brain are continuous and communicate with the ventricles of the brain by the foramen of Monro, the circumvascular s's of the brain, and the perineurium. **subdural s.** The s. between the dura and the arachnoid. **subvaginal s.** A lymph s. within the sheath of the optic nerve. **Traube's semilunar s.** See *Traube's uterorectal s.* The pouch of Douglas. **uterovesical s.** The vesico-uterine fossa. **visual s.** The s. contained within the visual field. **yolk s.** The s. left between the vitellus and the zona pellucida by a retraction of the vitellus at that point. Into this s. are expelled the extrusion globules. [Lat., *spatium*.]

spagiric (spaj-ir'ik). An old alchemistic system of medicine. [*Spa*, to tear open, + *ageirein*, to collect.]

Spanish fly. See *Cantharis*.

Spanish juice. Liqueur extract made in Catalonia.

spar. Any lustrous, lamellar mineral having distinct cleavage.

sparadrap (spar'ad-rap). *Obs.* A plaster, especially one used for uniting wounds. **s. vesicans.** A plaster made by melting cantharides cereate and spreading it upon oiled silk. [Lat., *sparadrapum*.]

Sparga-num. Syn.: *Bothriocephalus* and *Sigula*. A collective group of larval stages of the *Dibothriocephalidae* of the

Cestoidea. The species are *S. bacteri*, *S. Mansoni* and *S. prolifer*. Another name for *Bothriocephalus Mansoni*.

spark'lets. Steel capsules containing compressed carbonic acid. One is placed in the neck of a bottle made for the purpose and punctured by turning a screw in the closed cap; any liquid contained in the bottle is at once rendered effervescent.

spartein (spar'te-in). A volatile liquid alkaloid (C₁₅H₂₀N₂) obtained from broom. It is sometimes erroneously classed with the digitalis bodies, but its action resembles that of conin; it causes death through asphyxia due to paralysis of the phrenic endings. **s. sulphate.** A crystalline salt, (C₁₅H₂₀N₂)H₂SO₄ + 5H₂O, of s. It is of little or no therapeutic value [U. S. Ph.]. [Lat., *sparteina*.]

Spartium (spar'te-um). 1. *S. junceum*. 2. A genus of the *Leguminosae* including species referred to a section of the genus *Cytisus*. 3. A genus of the *Leguminosae* consisting of a single species referred by Baillon to the genus *Genista*. **S. junceum.** Rush broom. All parts, especially the seeds (which are recommended in dropsy), are tonic, diuretic, emetic, and purgative. **S. scoparium.** Common broom. See *Scoparius*. [Gr., *spartion*.]

spasm. 1. An involuntary and abnormal, usually painful, contraction of one or more muscles or groups of muscular fibers. 2. A convulsion. **Bell's s.** Convulsive tic of the face. **bronchial s.** See *asthma*. **choreiform s.** Spasmodic movements simulating chorea. **clonic s.** A s. in which the muscles or muscular fibers contract and relax alternately in very quick succession. **habit s.** A preferable term for what is called habit chorea. **intention s.** Persistent s. on attempting any muscular movement. **s. of accommodation.** S. of the ciliary muscles. **s. of the eyelids.** See *blepharospasm*. **s. of the glottis.** A spasmodic adduction of the vocal bands, producing a narrowing of the glottis during inspiration. **tonic s.** A s. in which the muscles or muscular fibers contract and remain contracted for a comparatively long time. [Gr., *spasmos*.]

spasmodic (spas-mod'ik). Pertaining to or of the nature of a spasm; convulsive. [Gr., *spasmos*, a spasm, + *eidōs*, resemblance.]

spasmophilia (spas-mo-fil'e-ah). Nervous overexcitability with a tendency to convulsions. [Gr., *spasmos*, a spasm, + *philein*, to love.]

spasmodin (spa'z-mo-tin). An impure substance, probably mainly ergotoxin, obtained from ergot.

spasmodotoxin (spas-mo-to'k'sin). A poisonous alkaloid of uncertain composition, found by Brieger in cultures made to isolate the toxic principle of tetanus. [Gr., *spasmos*, a convulsion, + *toxikon*, poison.]

spas'tic. 1. Spasmodic. 2. Dependent on spasm.

spatium (spa'she-um). See *space*. **s. in-**

teraponeuroticum suprasternale. A space above the sternum between the sternocleidomastoids and between the superficial and the deep layers of the deep cervical fascia. **s. interarytenoideum.** A space in the ventricle of the larynx between the inner surfaces of the bases of the arytenoid cartilages. **s. intercostale.** See *intercostal spaces*, under *space*.

spatula (spat'u-lah). A blunt-edged knife-like implement having a thin blade rounded at the distal end and of equal thickness throughout; used in mixing ointments, spreading plasters, etc. [Lat., dim. of *spatha*, a blade.]

spav'in. A disease of the hock joint of the horse.

spay. To remove the ovaries.

spear'mint. See *spiritus menthae viridis*, under *mentha*.

specialism (spesh'al-izm). Devotion to a special branch or division of a general subject or pursuit. In medicine the study and treatment of a particular group of diseases, as diseases of the throat, of the nervous system, etc.

specialist (spesh'al-ist). One who occupies himself mainly with some particular department (e. g., of scientific investigation or of medical practice). [Lat., *specialis*, particular.]

species (spe'shês). In classification, a group of individuals assumed, on account of their close similarity, to have emanated from the same stock, while specifically distinct from other groups of the same genus. 2. A mixture consisting chiefly of vegetable substances dried and pulverized; used in the preparation of infusions, decoctions, etc., a number of which have been introduced into the N. F. from the Ger. Phar. **s. emollientis.** The emollient cataplasm of the Ger. Phar.; a mixture of vegetable drugs having demulcent properties [N. F.]. **s. laxantes.** St. Germain tea of the Ger. Ph.; it consists of senna, elder flowers, fennel, anise, and potassium bitartrate [N. F.]. **s. pectorales.** Breast tea of the Ger. Ph.; it consists of althea, colts-foot leaves, glycyrrhiza, anise, mullein, and orris [N. F.]. [Lat., *species*, a particular sort.]

specific (spe-sif'ik). 1. Of a distinct or particular kind, having certain determinate characteristics. 2. Pertaining to a species. 3. Peculiar to a certain substance, e. g., s. gravity, s. heat. 4. Of medicines, exerting a special curative effect. 5. A euphemistic term for *syphilis*. **s. gravity.** One of the constants of chemical compounds. It represents the weight of a given compound in terms of the weight of an equal volume of water at the maximum density of water (4°). When a substance is dissolved in water or any other solvent, the s. g. of the solution is changed according to the concentration. On the other hand, we can easily and rapidly determine the amount of a solid in a given solution from its s. g. by the uses of the hydrometer. **s. heat.** See under *heat*. **s. nerve**

energy. The theory or doctrine that each sensory nerve, however stimulated, gives only one quality of sensation. [Lat., *specificus*, from *species*, sort, kind.]

specificity (spes-if-is'it-e). A direct relation of cause and effect between the substances such as the toxin-antitoxin relation, the latter only being produced by the former, or a special disease being produced by a certain organism.

specimen (spes'im-en). Anything shown as an example or for purposes of illustration or demonstration.

spectacles (spek'tak-lz). Glasses or lenses to assist or improve sight. **bifocal s.** **pantoscopic s.** Lenses having different foci in their upper and lower parts; first employed by Franklin. **prismatic s.** S. having prisms with bases so arranged that overstrain of an ocular muscle is relieved. **snow s.** A kind of s. used in high latitudes, as a protector against the glare of the snow. [Lat., *spectaculum*, a show.]

spec'tro- Combining form of Lat., *spectrum*, appearance, image, form, spectrum.

spectrocolorimeter (spek'tro-kol-or-im'-et-er). Of Vierordt, an ophthalmospectroscope that isolates a single spectral color; used in detecting color blindness.

spectrology (spek-trol'o-je). The science of spectrum analysis. [Lat., *spectrum*, an image, + Gr., *logos*, understanding.]

spectrometer (spek-trom'et-er). A spectroscopy having a graduated circle and vernier for determining the deflection of the telescope when directed upon different parts of the spectrum. [Lat., *spectrum*, image, + Gr., *metron*, a measure.]

spectrophotometer (spek'tro-fo-tom'et-er). A spectroscopy for determining the amount of given coloring matter, such as hemoglobin, by measuring the intensity of the light absorption. [Lat., *spectrum*, an image, + Gr., *phos*, light, + *metron*, a measure.]

spectroscope (spek'tro-sköp). An instrument used for forming and examining spectra. [Lat., *spectrum*, an image, + Gr., *skopein*, to examine.]

spectroscopic (spek-tro-skop'ik). Pertaining to, or obtained by the use of the spectroscopy. **s. tests.** Tests made by the use of the spectroscopy; especially useful in the examination of blood and bile pigments.

spectrum (spek'trum). 1. A band consisting of a definite succession of colors into which a beam of white light is decomposed when it is passed through a prism or a diffraction grating. 2. Of any specific substance, its absorption **s. absorption s.** A s. crossed with dark bands produced by the specific absorptive action of gases, liquids, or solutions of solids or translucent or transparent colored solids, such as monazite, on a beam of white light made to pass through them before falling upon the prism or other refracting medium. The position of the bands, which are called absorption bands, is constant for the same substance, but the breadth and definition of the

- bands depend to some extent on the degree of concentration of the absorbing medium. **continuous s.** A s. uninterrupted by dark or bright lines crossing it. **diffraction s., grating s.** A s. produced by passing light through a grating. **solar s.** The s. afforded by the refraction of a beam of sunlight. The s. is crossed by numerous dark lines, called *Fraunhofer's lines*, which is an absorption band due to substances in the atmosphere of the sun and of the earth. [Lat., *specere*, to look at.]
- speculum** (spek'u-lum). An instrument by means of which internal parts of the body may be observed or examined. **bivalve s.** A s. having two hinged blades that may be separated after its introduction. **cervical s.** See *uterine s.* **ear s.** Syn.: *otoscope*. A conical tube for introduction at its smaller end into the external auditory meatus. **fenestrated s.** A metal, glass, porcelain, or vulcanite cylinder having varying diameters, and a fenestra cut along a portion of one side of the cylinder so as to expose the membrane. **Fergusson's s.** See *Fergusson*. **Graves's s.** See *Graves*. **larynx s.** See *laryngoscope*. **rectal s.** A s. that may be introduced through the anus and permit examination of the rectum. **Sims' s.** See *Sims*. **trivalve s.** A s. having three blades. **uterine s.** A tube about 2 in. long and $\frac{1}{2}$ in. in diameter introduced through the cervical canal by means of an obturator. Used for inspecting the interior of the uterus and packing it with gauze. **vaginal s.** A s. for introduction into and inspection of the vagina. [Lat., *speculum*, a mirror, from *specere*, to look at.]
- spedalskhed** (sped-alsk'hed). Leprosy. [Nor.]
- sperm.** See *semen*; the male gamete or spermatozoid, s. **morula.** See *spermosphere*. s. **nucleus.** See *Spermatic nucleus*, under *nucleus*. [Gr., *sperma*, from *speirein*, to sow.]
- spermaceti** (sper-mas-et'e). In the skull of the white whale, there is a cavity filled with an oil which partially solidifies upon death. The solid portion is known as spermaceti; the liquid portion as spermaceti oil. S. consists chiefly of the ethylester of palmitic acid. The s. oil is a mixture of the glycerin esters of valeric, phytostolic, and the higher fatty acids. [Lat., *sperma ceti, cetaceum*; from Gr., *sperma*, seed, + *ketos*, whale.]
- spermacrasia** (sper-mak-ra'zhe-ah). Poverty of spermatozoa in the semen. [Gr., *sperma*, seed, + *akrasia*, want of.]
- spermatic** (sper-mat'ik). Pertaining to semen or sperm.
- spermatin** (sper'mat-in). A peculiar animal matter contained in the semen, said to be related to alkali albumin. See *spermin*.
- spermatism** (sper'mat-izm). The theory that the fetus is a direct product of the spermatozoid. See also *animalculism*.
- spermatismus** (sper-mat-is'mus). The emission of semen.
- sper'mato-**. Combining form of Gr., *sperma*, from *speirein*, to sow seed.
- spermatoblasts** (sper'mat-o-blasts). The separate cells or multinucleated cells arising from a proliferation of the nuclei of the seminal cells. From the nuclei of these s. arise the heads of the spermatozooids, while the middle piece, the tail, and the delicate layer of protoplasm around the head are derived from the protoplasm of the cell body of the s. [Gr., *sperma*, from *speirein*, to sow seed, + *blastos*, sprout.]
- spermatocystitis** (sper'mat-o-sis-ti'tis). Inflammation of a seminal vesicle. [Gr., *sperma*, seed, + *kystis*, bladder, + *itis*, inflammation.]
- spermatocyte** (sper'mat-o-cit). 1. The mother cell of a spermatozoid. 2. See *spermatoblasts*. [Gr., *sperma*, seed, + *kytos*, a cell.]
- spermatogenesis** (sper-mat-o-jen'es-is). The production of spermatozooids. [Gr., *sperma*, seed, + *genesis*, generation.]
- spermatogenous** (sper-mat-oj'en-us). Forming spermatozoa. [Gr., *sperma*, seed, + *gennan*, to beget.]
- spermatogonium** (sper'mat-o-go'ne-um). Syn.: *pycnidium*. An asexual sporiferous structure forming conidia, or pycnospores, present in the *Uredineae*. 1. Of La Valette, St. George, a young seminal cell. 2. Of Hartog, see *spermatospores*. [Gr., *sperma*, seed, + *gone*, generation.]
- spermatolysin** (sper-mat-ol'is-in). A substance causing spermatolysis.
- spermatolysis** (sper-mat-ol'is-is). Destruction or solution of spermatozooids. [Gr., *sperma*, seed, + *lysis*, solution.]
- spermatolytic** (sper-mat-ol-it'ik). Pertaining to the destruction of spermatozoa.
- spermatomere** (sper'mat-o-mër). 1. Of Van Beneden, one of the cells formed in the first section (*Keimzone*) of a seminiferous tubule. 2. Of O. Hertwig, an element which has entered the second section (*Wachstumszone*) of a seminiferous tubule. [Gr., *sperma*, seed, + *meros*, a part.]
- spermatophore** (sper'mat-o-för). The part of a spermospore that remains passive and does not become transformed into spermatoblasts. It may serve as an envelope or carrier of all the spermatozooids developed from the original spermospore. [Gr., *sperma*, seed, + *phorein*, to bear.]
- spermatopoeitic** (sper-mat-o-poy-et'ik). See *gonopoeitic*.
- spermatorrhæa** (sper-mat-or-e'ah). A morbid condition characterized by the frequent involuntary emission of semen. [Gr., *sperma*, seed, + *roia*, a flowing.]
- spermatoschesis** (sper-mat-os'ke-sis). See *aspermatisms*. [Gr., *sperma*, seed, + *schesis*, retention.]
- spermatospore** (sper'mat-o-spör). Cells, equivalent to ova, which by division give rise to the spermatoblasts. See also *seminal cell*, under *cell*. [Gr., *sperma*, seed, + *sporos*, a sowing.]
- spermatotoxin** (sper'mat-o-toks'in). A

toxin causing death to spermatozoa. [Gr., *sperma*, seed, + *toxikon*, poison.]

spermatoxin (sper-mat-oks'in). A toxin destructive to spermatozoa.

spermatozoid (sper-mat-o-zo'is-id). An agent destroying spermatozoa. [Gr., *sperma*, seed, + *zoon*, animal, + Lat., *caedere*, to kill.]

spermatozoid, **spermatozoid** (sper'mat-o-zoyd, sper-mat-o-zo'oid). Syn.: *sperm cell*, *spermatic cell*. The fertilizing element of the semen; the male reproductive cell. In man and most of the higher animals s.'s appear in shape and action like minute tadpoles. The head represents the nucleus of the cell, and a delicate layer of protoplasm enveloping the head, together with the tail, represents the cell body. In some cases there is seen a thickening in the tail at its junction with the head, and also in some cases the tail and middle piece are bordered by a kind of frill. [Gr., *sperma*, seed, + *zoon*, an animal, + *eidos*, resemblance.]

spermatozoön (sper'mat-o-zo'on). Pl. *spermatozoa*. See *spermatozoid*.

spermaturia (sper-mat-u're-ah). The continued presence of spermatozoa in the urine. [Gr., *sperma*, seed, + *ouron*, urine.]

spermiduct (sper'me-dukt). The tract (or a part thereof) through which the semen passes to arrive at the urethra. [Gr., *sperma*, seed, + Lat., *ducere*, to lead.]

spermin. 1. Of Schreiner (1878) and others, a non-poisonous base, C₈H₈N, having the odor of semen, occurring in putrefying sea polypi, in sputum, in human semen, in the organs of leukocythemic patients, in the alcohol in which anatomical preparations have been preserved, in cultures of choleraic matter, and, according to Poehl, in the thyroid gland and brain substance. 2. A proprietary preparation of s. (1st def.). [Gr., *sperma*, seed.]

spermolith (sper'mo-lith). A calculus in the spermatic duct or the seminal vesicle. [Gr., *sperma*, seed, + *lithos*, stone.]

spermolysin (sper-mol'is-in). See *spermatolysin*.

spermoplasma (sper-mo-plaz'mah). The central portion and the tail of the seed thread together with the outer sheath of the "head" of a spermatozoid. [Gr., *sperma*, seed, + *plasma*, anything formed.]

spermosphere (sper'mo-sfēr). A ball of cells arising by the repeated division of a germinal cell or gonoblast. Each cell ultimately becomes a spermatozoid. [Gr., *sperma*, seed, + *sphaira*, a sphere.]

spermatoxin (sper-mo-toks'in). See *spermatotoxin*.

spes phthis'ica. The hopefulness of the tuberculous.

spew. To discharge the contents of the stomach and to vomit. [Old Eng., *spewen*, *spuen*, *spiwen*.]

sp. gr. Abbreviation for *specific gravity*.

sphacelate (sfas'el-ät). Dead, necrosed. [Lat., *sphacelatus*, from Gr., *sphakelos*, gangrene.]

sphaceloderma (sfas'el-o-der'mah). Gangrene of the skin. [Gr., *sphakelos*, gangrene, + *derma*, skin.]

sphacelotoxin (sfas'el-o-toks'in). Of Jacobi, impure ergotoxin.

sphacelus (sfas'el-us). Moist gangrene; a slough. [Gr., *sphakelos*, gangrene.]

sphagnum (sfag'num). Turf-moss; used as an absorbent for pus, etc.

sphen-. Combining form of Gr., *sphen*, wedge; generally having reference to the sphenoid bone.

sphenobasilar (sfe'no-bas'il-ar). Pertaining to the sphenoid bone and the basilar apophysis.

sphenocephalia (sfe-no-sef-al'e-ah). A form of monstrosity in which the cranium is wedge-shaped. [Gr., *sphen*, a wedge, + *kephale*, the head.]

spheno-ethmoid, **spheno-ethmoidal** (sfe'no-eth'moyd, sfe'no-eth-moyd'al). Pertaining to the sphenoid and ethmoid bones.

sphenofrontal (sfe'no-fron'tal). Pertaining to the sphenoid and frontal bones.

sphenoid (sfe'noyd). Wedge-shaped; as a n., the s. bone. [Gr., *sphen*, a wedge, + *eidos*, resemblance.]

sphenoidal (sfe-noyd'al). 1. See *sphenoid*. 2. Pertaining to or connected with the sphenoid bone. s. **ganglion**. Syn.: *otopalatine ganglion*. See *Meckel's ganglion*, under *Meckel*.

sphenomaxillary (sfe'no-maks'il-a-re). Pertaining to the sphenoid bone and the superior maxilla.

sphenometer (sfe-nom'et-er). An instrument for determining the size of the wedge in cuneiform osteotomy. [Gr., *sphen*, a wedge, + *metron*, a measure.]

spheno-occipital (sfe'no-ok-sip'it-al). Pertaining to the sphenoid and occipital bones.

sphenopalatine (sfe'no-pal'at-ën). Pertaining to the sphenoid and palatine bones.

sphenoparietal (spe'no-par'i-et-al). Pertaining to the sphenoid and parietal bones.

sphenosalingostaphylinus (sfe'no-sal-pin''go-sta-fi-li'nus). See *table of muscles*, under *muscle*.

sphenosquamous (sfe'no-skwa'mus). Pertaining to the sphenoid bone and the squamous portion of the temporal bone.

sphenotemporal (sfe'no-tem'po-ral). Pertaining to the sphenoid and temporal bones.

sphere (sfēr). 1. A solid that has all parts of its surface equidistant from the center; hence, loosely, a ball or globe. 2. A limited space or aspect regarded as a scene of action. **hearing s.** Of Munk, certain portions of the temporal lobes of the brain supposed to be the seats of the sense of hearing. **motor s.** A region of the central nervous system that, when stimulated, originates movement. It lies anterior to the fissure of Rolando. **segmentation s.** One of the nucleated cells into which the vitellus is divided in the process of segmentation. See *blastula* and *embryonic cell*, under *cell*. **sensory s.** Of Meynert, a region of the central nervous system that perceives

- sensory impressions. It lies posterior to the fissure of Rolando. [Gr., *sphaira*.]
- spherobacterium** (sfe''ro-bak-te're-um). See *Micrococcus*. [Gr., *sphaira*, a ball, + *bakterion*, a little rod.]
- Spherococcus** (sfe-ro-kok'us). *Obs.* A genus of *Algae*. Most of the species formerly included in this are now referred to *Chondrus*, *Gigartina*, *Rhodymenia*, *Gelidium*, etc. [Gr., *sphaira*, a ball, + *kokkos*, a berry.]
- spherolith** (sfe''ro-lith). Doubly refractive crystals of urates present in the renal tubules of the new-born. [Gr., *sphaira*, a ball, + *lithos*, stone.]
- spheroma** (sfe-ro'mah). 1. A globular protuberance. 2. The head of the femur.
- spherometer** (sfer-om'et-er). An instrument for measuring the degree of curvature of a lens. [Gr., *sphaira*, a sphere, + *metron*, a measure.]
- sphincter** (sfink'ter). Syn.: *circular muscle*. An annular muscle which constricts or closes a natural orifice; especially the s. ani. **cardiac s.** The s. of plain muscle around the esophagus at the opening into the stomach. **external s. of anus.** The s. of striated muscle around the anus. **ileocecal s.** The s. of plain muscle around the ileum at its opening into the cecum. **internal s. of anus.** The s. of plain muscle around the anus. **s. of bile duct.** A s. of plain muscle around the opening of the bile duct into the duodenum. **s. of the bladder.** A s. of plain muscle around the opening of the bladder into the urethra. See *table of muscles*, under *muscle*. [Gr., *sphigkter*, from *sphiggein*, to squeeze.]
- sphincteroplasty** (sfink'ter-o-plas'te). Plastic operations on the sphincter ani. [Gr., *sphigkter*, a sphincter, + *plassein*, to mold.]
- sphingoin** (sfing'o-in). An alkaloid, $C_{17}H_{25}NO_2$, found in cerebral tissue in combination with cerebroses and neurostearic acid.
- sphygmie** (sfig'mik). Pulsating; of or pertaining to the pulse. [Gr., *sphygmos*, the pulse.]
- sphygmo-** Combining form of Gr., *sphygmos*, the pulse.
- sphygmochronograph** (sfig''mo-kro'no-graf). An instrument for recording graphically the extent and oscillations of the pulse wave, together with a record of time. [Gr., *sphygmos*, the pulse, + *chronos*, time, + *graphein*, to write.]
- sphygmodic** (sfig-mo'dik). Pulselike, throbbing like the pulse. [Gr., *sphygmos*, the pulse, + *eidosis*, resemblance.]
- sphygmodynamometer** (sfig''mo-di-nam-om'et-er). A device for showing the force of the pulse. [Gr., *sphygmos*, the pulse, + *dynamis*, power, + *metron*, a measure.]
- sphygmogenin** (sfig-moj'en-in). An extract of the suprarenal gland, thought to be synonymous with epinephrin.
- sphygmogram** (sfig'mo-gram). Syn.: *arteriogram*. The pulse curve; the curve that is traced by means of a sphygmo-
- graph. [Gr., *sphygmos*, the pulse, + *gramma*, a writing.]
- sphygmograph** (sfig'mo-graf). A recording pulsimeter, to give a graphic record of the form and rate of the pulse. [Gr., *sphygmos*, the pulse, + *graphein*, to write.]
- sphygmography** (sfig-mog'ra-fe). The use of the sphygmograph; also the collection and analysis of facts and principles that pertain to the sphygmograph and its use.
- sphygmoid** (sfig'moyd). See *sphygmodic*. [Gr., *sphygmos*, the pulse, + *eidosis*, resemblance.]
- sphygmology** (sfig-mol'o-je). The physiology, pathology, etc., of the pulse. [Gr., *sphygmos*, pulse, + *logos*, understanding.]
- sphygmomanometer** (sfig''mo-man-om'et-er). An apparatus for determining the pressure of the pulse wave, that is, to give the systolic or the systolic and diastolic pressure of an artery. [Gr., *sphygmos*, pulse, + *manos*, thin, + *metron*, a measure.]
- sphygmometer** (sfig-mom'et-er). See *sphygmograph*. [Gr., *sphygmos*, the pulse, + *metron*, a measure.]
- sphygmometroscope**. An instrument for taking the blood-pressure by the auscultatory method.
- sphygmophone** (sfig'mo-fon). An instrument for rendering the rhythm and variations of the pulse audible. [Gr., *sphygmos*, the pulse, + *phone*, a sound.]
- sphygmoscope** (sfig-mo-skop). A device for rendering the pulse beat visible. [Gr., *sphygmos*, pulse, + *skopein*, to examine.]
- sphygmosystole** (sfig-mo-sis'to-le). The expansion of the pulse corresponding to the systole of the heart, as represented graphically by the sphygmograph.
- sphygmus** (sfig'mus). See *pulse*. [Gr., *sphygmos*.]
- spica** (spi'kah). See *s. bandage*, under *bandage*. [Lat.]
- spiculate** (spik'u-lat). 1. Covered with spicules. 2. Having the form of a spicule. [Lat., *spiculatus*.]
- spicule** (spik'ul). 1. A fine, erect point. 2. An acicular crystal. 3. See *spiculum* (1st def.). **bony s.**, **osseous s.** One of the minute rodlike processes of bony matter which extend in a radiating manner from the center of ossification. [Lat., dim. of *spica*, a point.]
- spiculum** (spik'u-lum). 1. A pointed, needle-shaped body. 2. See *bony spicule*.
- Spigelia** (spi-je'le-ah). 1. A genus of the *Loganiaceae*. 2. (Indian) pinkwort; in the U. S. Ph., the rhizome and rootlets of *S. marilandica*. **extractum spigellae fluidum** [U. S. Ph.]. Fluidextract of *S. marilandica*. **S. Ionicera**, **S. marilandica**. Carolina pink. Its rhizome and the rootlets constitute the s., or pinkroot, of the U. S. Ph. [From *A. van der Spiegel*, Belgian anatomist.]
- spigelin** (spi-je'lin). An alkaloid said to occur in *Spigelia*.
- spike'nard**. See *Aralia*.
- Spilanthes** (spi-lan'thes). The typical

genus of the *Spilantheae*. **S. oleracea**. Para cress. The leaves and flower heads contain pyrethrin which closely resembles piperin. [Gr., *spilos*, a spot, + *anthos*, a flower.]

spina (spi'nah). Gen. and pl. *spinæ*. See *spine*. **s. helicis**. A projection on the lower anterior margin of the helix. **s. jugularis**. A sharp elevation on the jugular process of the occipital bone. **s. mentalis externa**. The mental protuberance. **s. muscularis inferior**. An elevation on the outer surface of the arytenoid cartilage near its lower third. **s. muscularis superior**. A blunt, knotlike prominence near the upper part of the external surface of the arytenoid cartilage. **s. orbitalis inferior**. A slight prominence below the *s. orbitalis superior*. **s. orbitalis superior**. A slight prominence on the border of the ala magna of the sphenoid bone, projecting into the sphenoidal fissure at the point where it is slightly constricted. **s. tympanica anterior**. A prominent point on the anterior and upper part of the tympanic ring, at the anterior end of a ridge forming the upper boundary of the sulcus malleolaris. **s. ventosa**. 1. A disease of the bones which causes them to dilate as if distended with air. 2. A bony tumor due to internal caries, generally confined to the wrist or ankle. **s. zygomatica**. An offshoot from the zygomatic process of the superior maxilla which aids in forming the sphenomaxillary fissure.

spina bifida (spi'nah bi'fid-ah). A congenital malformation caused by absence or deficiency of the laminae or spinous processes of some of the vertebrae, usually associated with a sacculated protrusion of the membranes of the spinal cord. The sac contains cerebrospinal fluid and sometimes a portion of the cord. **false s. b.** Any congenital tumor communicating with the spinal canal but not with the spinal membranes. **s. b. cervicalis**. **S. b. of the cervical vertebrae**. **s. b. completa**. A form in which the medullary groove fails to close in to form the neural canal. The ependyma and nerve substance remain in contact with the skin. **s. b. completa partialis**. **S. b. completa** only in the cervical region. **s. b. completa restricta**. **S. b.** affecting only a local area in the cervical or lumbar region. **s. b. completa totalis**. A form in which the neural canal is present as a broad plate, extending down the back and fusing on either side with the skin of the back. **s. b. cystica**. **S. b.** with the protrusion of a cyst through the fissure. **s. b. dorsalis**. **S. b.** of the dorsal vertebrae. **s. b. incompleta**. A form in which the neural canal has closed, but the laminae and the surrounding tissues have failed to close. **s. b. lumbalis**. **S. b.** of the lumbar vertebrae. **s. b. lumbosacralis**. **S. b.** of the lumbosacral region. **s. b. sacralis**. **S. b.** of the sacral vertebrae. **spinal**. Pertaining to the vertebral column. **s. anesthesia**. 1. Loss of sensa-

tion in the lower part of the body induced by the injection of a local anesthetic into the sheath of the lumbar portion of the spinal cord. 2. Localized loss of sensation in the region of the spine. **s. apoplexy**. See *hematomyelia*. **s. curvature**. A permanent deviation of some portion of the spinal column from its normal form. **s. fluid, how to stain organisms**; see in *appendix*, page 910. **s. puncture**. See *lumbar puncture*, under *puncture*. [Lat., *spinalis*.]

spinalis (spi-nal'is). Spinal; e. g., a muscle arising from, or inserted into, the spinous processes of the vertebrae. See *table of muscles*, under *muscle*.

spindle (spin'dl). 1. The tapering rod or pin on which the thread is wound in spinning. 2. Anything of like shape (see *fusiform*). **achromatic s., karyokinetic s.** See *nuclear s. cleavage s.* See *nuclear s.* and *amphaster*. **karyokinetic s.** See *nuclear s. nuclear s., nucleated s., nucleus s., segmentation s.* The striated s-shaped or double conelike appearance of the nucleus, especially in ova, during indirect division or karyokinesis. [Ang.-Sax., *spindel*.]

spine. 1. A hard, sharp projection. 2. The vertebral column; so called from the spinous processes of the vertebrae. **anterior inferior s. of the ilium**. A rough eminence on the margin of the ilium immediately above the acetabulum. **anterior nasal s.** The inferior sharp edge of the nasal crest of the superior maxilla. **anterior superior s. of the ilium**. The anterior termination of the crest of the ilium. **ethmoidal s.** A slight projection in the middle line of the anterior border of the body of the sphenoid bone, which articulates with the cribriform plate of the ethmoid bone. **hemal s.** The portion of the hemal arch of a typical vertebra that closes it in. **iliac s's.** The anterior superior and inferior and the posterior superior and inferior s's of the ilium. **irritable s.** See *spinal irritation*, under *irritation*. **ischadic s., ischiatic s.** See *s. of the ischium*. **nasal s.** A sharp process which descends in the middle line from the inferior surface of the frontal bone, between the superior maxillae. **neural s.** The portion of the neural arch of the typical vertebra that closes it in. It is found in all the vertebrae proper (except the last sacral and the coccygeal) as the spinous process. **neurasthenic s.** Of R. W. Lovett, a generic term for painful spinal affections in which the subjective symptoms greatly preponderate over the objective signs. **pharyngeal s.** A short elevation in the middle line of the lower surface of the basilar portion of the occipital bone. **posterior inferior s. of the ilium**. A slight eminence on the margin of the ilium immediately above the great sciatic notch. **posterior nasal s.** A prominence formed by the union in the middle line of the elevations upon the posterior internal contiguous margins of the palatal plate of the palate

bones. **posterior superior s. of the ilium.** The posterior extremity of the crest of the ilium. **pubic s.** See *s. of the pubes*. **railway s.** 1. Chronic meningomyelitis consequent upon shock caused by a railway accident. 2. Traumatic neurasthenia. **s. ache.** See *rachialgia*. **s. of Darwin.** A slight projection of the free margin of the helix near the upper part, assumed to represent the inverted upper pointed extremity of the ear of quadrupeds. **s. of the ischium.** An elevation on the posterior border of the ischium just behind the acetabulum. It forms the lower boundary of the great sciatic notch. **s. of the pubes, s. of the pubic bone.** The outer termination of the crest of the os pubis. **s. of the scapula.** An osseous plate projecting from the posterior surface of the scapula which extends obliquely upward and outward from a point near the upper fourth of the posterior border to terminate in the acromion process. **s. of the tibia.** An elevation on the upper surface of the tibia, between its articular surfaces, which terminates in two tubercles. **typhoid s.** An acute arthritis and peri-arthritis due to infection with the *Bacillus typhosus*, following or in the course of typhoid fever and causing spinal ankylosis. [Lat., *spina*, a thorn.]

spinobulbar (spi-no-bul'bar). Pertaining to the spinal cord and to the medulla oblongata.

spinus (spi'nus). Pertaining to a spine or sharp process of a bone; having or constituting such a process or processes. [Lat., *spinosus*.]

spintharoscope (spin-thar'is-kop). An instrument for studying radium emanations. [Gr., *spinthar*, a spark, + *skopein*, to examine.]

spiral. Screwlike; turning like the thread of a screw around an axis; a s. line or structure. **Curschmann's s's.** See *Leyden's s's*, under *Leyden*. **Finkler and Prior's s.** See *Spirillum Finkler-Prior*, under *Spirillum*. **Leyden's s's.** See under *Leyden*. [Lat., *spiralis*, from Gr., *speira*, a coil.]

spirem. In karyokinesis, the phase in which the nuclear figure shows no sign of division into two parts. [Lat., *spirema*, from Gr., *speira*, spiral.]

Spirilla. Plural of *Spirillum*.

Spirillum (spi-ril'lum). A genus of the family *Spirillaceae*, of the *Bacteria*, consisting of spirally curved or corkscrew forms, which are actively motile. Many species have been isolated and a few are pathogenic for man. **S. buccale.** A species derived from the tartar of teeth. **S. cholerae asiaticae.** Syn.: *comma bacillus*. The comma bacillus, regarded as the causal agent of Asiatic cholera. It is found in the dejecta and intestinal contents. The bacilli are usually minute and curved like a comma. **S. Deneke.** A s. isolated from butter. **S. Finkler-Prior.** A species obtained by Finkler and Prior from the dejecta of patients with cholera nostras. The bacilli

are somewhat thicker and longer than the cholera bacilli. **S. massana.** A s. isolated from a clinically doubtful case of true cholera. **S. Metchnikovi.** A s. causing diarrhea in domestic fowls. **S. Obermeieri.** Flexible, colorless threads found in the blood of patients with relapsing fever. **S. of hospital gangrene.** A species found in the membranous covering of the ulcers of hospital gangrene. **S. tyrogenum.** A species obtained by Deneke from very old cheese, resembling, but smaller than that of Asiatic cholera. [Lat., *spirillum*, a coil.]

spir'it. Alcohol, the volatile principle, or s., of wine; subsequently a term mainly restricted to preparations consisting of alcohol distilled with a volatile substance. Such preparations are now, however, usually made by simply dissolving the volatile substance in alcohol. Used without qualification, s. means distilled s. **adiaphoretic s.** Of Boyle, an alcohol (acetone) obtained by the distillation of wood. **animal s's.** See *pneuma. ardent s's*. See *distilled s's*. **Cologne s.** Odorless alcohol which has been kept in glass after distillation. **columbian s.** Same as methyl alcohol. **distilled s's.** Alcoholic beverages prepared by distillation. **ethylic s.** Ethyl alcohol. **methylated s., methylic s.** See *methyl alcohol*. **overproof s.** A spirituous liquor containing more alcohol than proof s. **proof s.** Originally, a liquid containing sufficient alcohol to ignite gunpowder moistened with it when the s. was set on fire; now, according to an act of the British Parliament, a spirituous liquor of sp. gr. 0.923077 at 51° F. It contains 49.3 per cent. by weight of alcohol. **pyro-acetic s.** See *acetone*. **pyroigneous s., pyroxylic s.** See *methyl alcohol. rectified s.* See *ethyl alcohol. s. of Mindererus*. A synonym for a solution of ammonium acetate. **s. of wine.** Alcohol. **underproof s.** A spirituous liquor containing less alcohol than proof s. **vital s's.** See *pneuma. wood s.* See *methyl alcohol. [Lat., spiritus.]*

spirituous (spir'it-u-us). Alcoholic; containing alcohol. [Lat., *spirituosus*.]

spiritus (spir'it-us). See *spirit* and *ethyl alcohol*. **abstractitious s.** Alcohol that has been impregnated with some of the principles of a plant by their distillation together. **s. aromaticus** [N. F.]. A mixture of compound spirit of orange [U. S. Ph.] with alcohol. **s. frumenti.** Whiskey; it must be four years old and must contain 50 per cent. of alcohol by volume [U. S. Ph.]. **s. glonoina** [U. S. Ph., 1890]. An alcoholic solution containing 1 per cent. of glyceryl trinitrate or nitroglycerin. **s. glycerylis nitratis** [U. S. Ph.]. **s. Mindereri.** See *liquor ammonii acetatis*, under *ammonium*. **s. morbi.** A morbid principle. **s. odoratus.** Syn.: *eau de cologne*. A solution of various amounts of the oils of orange flowers, bergamot, lemon, lavender flowers and rosemary in alcohol, with the addition of acetic ether. **s. ophthal-**

micus. An alcoholic solution of the oil of lavender and rosemary [N.F.]. s. **rectificatus.** See *ethyl alcohol*, under *alcohol*. s. **saponatus.** Tincture of soap. s. **tenuior**, s. **tenuis.** Dilute alcohol. s. **urinae.** An old name for aqueous ammonia, as the volatile principle of stale urine. s. **vini gallici.** Brandy; it must be four years old and must contain 50 per cent. of alcohol by volume. s. **volatilis aromaticus.** Aromatic spirit of ammonia. s. **volatilis causticus.** Ammonia water.

spirobacteria (spi-ro-bak-te're-ah). The spiral bacteria, including the *Spirilla* and *Vibrio*.

Spirochaeta (spi-ro-ke'tah). A genus of protozoa of the phylum *Mastigophora* and the order *Binucleata*, which show an undulating membrane and flexible form consisting of a number of cork-screwlike curves. s. **acuminata.** A s. found in the open sores of frambesia. s. **balanitidis.** A s. found in *Balanitis circinata*, having 6 to 10 very motile coils and being shorter and thicker than *S. pallida*. s. **Balbianii.** A form present in the stomach of the oyster, possessing from 5 to 8 spiral coils. s. **bronchialis.** A s. found in bronchial spirochetosis. s. **buccalis.** A form found in normal mouths; it has from 3 to 10 irregular flat coils. s. **Carterii.** A s. described by Carter as causing relapsing fever in Bombay. s. **colligyrum.** A species cultivated by Noguchi from condylomata. s. **dentium.** A very small s. with from 4 to 20 coils. s. **Duttoni.** A form producing African tick fever in human beings and capable of transmission to monkeys by the bites of infected ticks. s. **gallinarum.** A species causing disease in chickens. s. **hyos.** An organism probably bearing an etiological relationship to hog cholera. s. **macrodentium.** A s. resembling s. of Vincent's angina. s. **microdentium.** A s. cultivated from tooth deposits in children. s. **Obermeieri.** A long, flexible, slender spiral with wavy coils staining faintly with the anilin dyes, being negative to Gram's stain. The organism shows a rotary motion and is present in the blood and organs of patients with relapsing fever. It can be cultivated in celloidin capsules in the peritoneal cavity of rats, and monkeys can be infected with human blood containing it. s. **pallida.** Syn.: *Treponema pallidum*. A very delicate s. found in practically all of the lesions of syphilis. It has from 4 to 20 spirals and shows a rotary motion and a quivering movement. It may be stained by various modifications of the eosinate of methylene blue, such as Hastings' stain, and is found in the lesions in monkeys when inoculated with the virus of syphilis. s. **pertenius.** A s. obtained from cases of *frambesia tropica*, or *yaws*. s. **phagedenicus.** A s. cultivated from phagedenic lesions. s. **refringens.** A s. found in the mouth and also in various syphilitic lesions associated with the *S. pallida*. It

is longer and thicker than the former and its spirals are often very irregular. It is mostly a secondary invader. It can be cultivated in celloidin sacs in the peritoneal cavity of the rabbit. s. of **relapsing fever.** See *S. Obermeieri*. s. **Vincenti.** A form accompanying the fusiform bacillus in Vincent's angina, a fibrinous inflammation of the mouth and throat. [Gr., *speira*, a coil, + *chaite*, flowing hair.]

spirochetosis (spi'ro-ke-to'sis). Infection with spirochetes.

spiograph (spir'o-graf). See *atmograph*. [Lat., *spirare*, to breathe, + Gr., *graphein*, to write.]

spiroma, **spiradenoma** (spir-o'mah, spir'ad-en-o'mah). Names given to multiple benign cystic epithelioma.

spirometer (spi-rom'et-er). Syn.: *pneumometer*. An instrument constructed on the principle of a gasometer, for measuring the volume of air in the lungs, especially the breathing capacity. [Lat., *spirare*, to breathe, + *metron*, a measure.]

spirometry (spir-om'et-re). The use of a spirometer for determining the breathing capacity, the thoracic pressure, or the elasticity of the lungs. [Lat., *spirare*, to breathe, + Gr., *metron*, a measure.]

Spiromema (spi-rom-e'mah). Another name for *Spirochaeta*.

Spirop'tera. A genus of the *Filaridae*. s. **hominis.** Another name for *Filaria communis*.

spirosal (spi'ro-sal). A monoglycol salicylate, $C_6H_10O_4$. It may be absorbed from the skin and is said to liberate salicylic acid in the tissues. It is used in rheumatic affections.

Spirosoma (spi-ro-so'mah). A genus of the family *Spirillaceae* of the *Bacteria*, consisting of comma-shaped to spiral filaments which are non-motile. The various species are often chromogenic and are not pathogenic. [Gr., *speira*, a coil, + *soma*, body.]

spissated (spis'sa-ted). Inspissated. [Lat., *spissatus*, from *spissare*, to thicken.]

splanchnic (splank'nik). Pertaining to, or supplying the viscera; visceral. [Gr., *splagchnikos*, from *splagchna*, viscera.]

splanchno-. Combining form of Gr., *splagchnon*, a viscus; pl., *splagchna*, viscera.

splanchnology (splank-nol'o-je). The anatomy, pathology, etc., of the viscera. [Gr., *splagchnon*, a viscus, + *logos*, understanding.]

splanchnopleure (splank'no-plür). The inner wall of the pleuroperitoneal space in the embryo. See *splanchnic mesoblast*, under *mesoblast*. [Gr., *splagchnon*, viscus, + *pleuron*, the side.]

splanchnoptosis (splank-nop-to'sis). Syn.: *Glénard's disease*. Prolapse of an internal organ, particularly of an abdominal organ (see *enteroptosis*). [Lat., *splagchnon*, a viscus, + *ptosis*, a falling.]

splay-foot. See *flat-foot*.

spleen. Syn.: *lien*, *hepar sinistra*. A soft vascular organ, consisting of lymphoid tissue, about five inches in length, four in breadth, and an inch in thickness. It is

- situated in the upper left quadrant of the abdomen. **accessory s.** A nodule (of which there may be a number) of splenic tissue in the vicinity of the spleen. **floating s. or wandering s.** An anomalous condition of the s. in which the organ is movable, generally enlarged, and no longer protected by the ribs in the left hypochondriac region, and lies on the brim of the pelvis or even in the right side of the abdomen. **Indian s.** The hypertrophied or indurated s. observed in Anglo-Indians. **lardaceous s.** Enlargement of the s. from the presence of lardaceous matter. See *amyloid degeneration*, under *degeneration*. **sago s.** Amyloid degeneration of the follicles of the s. presenting on section the appearance of sago grains. **waxy s.** See *lardaceous s.* [Gr., *splen*.]
- splenectasis** (splen-ek'tas-is). Syn.: *splenomegaly*. Enlargement of the spleen. [Gr., *splen*, spleen, + *ektasis*, enlargement.]
- splenectomy** (splen-ek'to-me). Removal of the spleen. [Gr., *splen*, the spleen, + *ektome*, a cutting out.]
- splenectopia** (splen-ek'to'pe-ah). Displacement of the spleen. [Gr., *splen*, the spleen, + *ektos*, out of place.]
- splenemia** (splen-e'me-ah). See *leukocythemia*. [Gr., *splen*, the spleen, + *aima*, blood.]
- splenic** (splen-et'ik). See *splenic*.
- splenic** (spl'e-ne-al). 1. Of or pertaining to splenicus or to s. bone. 2. The s. bone.
- splenic**. 1. Pertaining to the spleen. 2. Affected with splenitis.
- splenification** (splen-if-ik-a'shun). See *splenization*. [Gr., *splen*, spleen, + Lat., *facere*, to make.]
- splénin**. A therapeutical preparation made from the spleen.
- splenitis** (splen-i'tis). Inflammation of the spleen. [Gr., *splen*, spleen, + *itis*, inflammation.]
- splénium**. 1. A plant used by the ancients in affections of the spleen. 2. A bandage or compress. 3. Syn.: *bulb of the fornix*. An enlargement at the posterior extremity of the corpus callosum, just before it joins the fornix. [Gr., *splénion*, bandage.]
- splénium** (spl'e-ne-us). See *table of muscles*, under *muscle*.
- splenization** (splen-i-za'shun). (*Obs.*) An infiltrated and thickened condition of tissue, especially of lung tissue, in which it resembles the spleen in consistence. See *hepatization*. **hypostatic s.** See *hypostatic pneumonia* under *pneumonia*.
- splenocele** (splen'o-sél). A hernia of the spleen. [Gr., *splen*, spleen, + *kele*, hernia.]
- splenicocolic** (splen-no-kol'ik). Pertaining to the spleen and the colon.
- splendynia** (splen-o-din'e-ah). (*Obs.*) Pain in the spleen. [Gr., *splen*, the spleen, + *odyne*, pain.]
- splénoid** (spl'e-noyd). Resembling the spleen. [Gr., *splen*, the spleen, + *eidós*, resemblance.]
- splenology** (splen-nol'o-je). The anatomy, etc., of the spleen. [Gr., *splen*, the spleen, + *logos*, understanding.]
- splenomalacia** (spl'e''no-mal-a'se-ah). Softening of the spleen. [Gr., *splen*, the spleen, + *malakia*, softness.]
- splenomegaly** (splen-no-meg'al-e). Hypertrophy of the spleen. [Gr., *splen*, the spleen, + *megas*, large.]
- splenomyelogenous** (spl'e''no-mi-el-oj'en-us). Due to disease of spleen and of bone marrow. [Gr., *splen*, the spleen, + *myelos*, marrow, + *gennan*, to engender.]
- splenophrenic** (splen-no-fren'ik). Pertaining to the spleen and the diaphragm. [Gr., *splen*, the spleen, + *phren*, the diaphragm.]
- splenophthisis** (splen-no'te-sis). (*Obs.*) Atrophy of the spleen. [Gr., *splen*, the spleen, + *phthisis*, a wasting.]
- splenoptosis** (splen-nop-to'sis). Prolapse of the spleen; a rare condition. [Gr., *splen*, spleen, + *ptosis*, a falling.]
- splenotoxin** (splen-no-tok'sin). The toxin present in splenic tissue.
- splenotyphoid** (splen-no-ti'foyd). Typhoid with a decided enlargement of the spleen.
- splint**. Any apparatus composed of firm and hard material to be applied to an injured or diseased part to prevent motion or displacement. Wood, tin, wire, steel, papier-maché, plaster of Paris, hard rubber, and leather are all used as materials from which to construct splints. [Old Eng., *splinte*, *splent*.]
- split pel'vis**. See under *pelvis*.
- spodogenous** (spo-doj'en-us). Pertaining to or caused by waste matters in an organ. [Gr., *spodos*, ashes, + *gennan*, to produce.]
- spondylarthrit'is**. Inflammation of the vertebral articulations. [Gr., *spondylos*, a vertebra, + *arthron*, a joint.]
- spondylic** (spon-dil'ik). Pertaining to the vertebral column. [Gr., *spondylos*, vertebra.]
- spondylitis** (spon-dil-i'tis). Inflammation of one or more vertebrae. [Gr., *spondylos*, a vertebra, + *itis*, inflammation.]
- spon'dylo-**. Combining form of Gr., *spondylos*, a vertebra.
- spondylolisthesis** (spon''dil-o-lis-the'sis). A deformity of the vertebral column due to the lumbar vertebrae gliding upon each other, so as to overhang and obstruct the brim of the pelvis, the body of the last lumbar vertebra, especially, being separated from that of the first sacral vertebra. [Gr., *spondylos*, vertebra, + *olisticheis*, a sliding.]
- spondylomyelitis** (spon''dil-o-mi-el-i'tis). Inflammation of the spinal cord with or without inflammation of one or more vertebrae. [Gr., *spondylos*, a vertebra, + *myelos*, marrow, + *itis*, inflammation.]
- spondyloschisis** (spon-dil-os'kis-is). Congenital fissure of one or more of the vertebral arches. [Gr., *spondylos*, a vertebra, + *schisis*, a fissure.]
- spon'dylose rhizomélique**. Ankylitic arthritis of large proximal joints. [Fr.]
- spondylosis** (spon-dil-o'sis). Vertebral ankylosis.
- spondylotomy** (spon-dil-o'to-me). See *laminectomy*. [Gr., *spondylos*, vertebra, + *tome*, a cutting.]

spongia (spon'je-ah). A sponge. In pharmacy, *S. officinalis* or *S. usiatissima* washed and pressed. **s. cerata**, **spongiae ceratae**. Fine sponges carefully cleansed, soaked in melted yellow wax, freed in a warm press, and, when cold, freed from the wax on their edges; used to make sponge tents. **s. compressa**, **spongiae compressae**, **s. funiculo pressa**. Compressed sponge. **s. praeparata**. 1. See *s. cerata*. 2. Sponge rendered soft and suitable for surgical purposes by maceration in cold water and separation of the calcareous matter. [Gr., *spoggos*, *spoggia*.]

spongin (spon'jin). An albuminoid which makes up the chief mass of the ordinary sponge.

spongioblasts (spon'je-o-blasts). A variety of cells from which the stroma of gray nervous tissue develops. [Gr., *spoggos*, a sponge, + *blastos*, a sprout.]

spongiopilin (spon'je-o-pi'lin). A sheet, about half an inch thick, of cotton wool mingled with small pieces of sponge, coated with gutta percha on one side; to be wrung out of hot water and applied as a poultice. [Gr., *spoggia*, a sponge, + *pilos*, felted wool.]

spongioplasm (spon'je-o-plasm). The material forming the reticulum of the protoplasm of a cell. See *hyaloplasm*. [Gr., *spoggia*, a sponge, + *plasma*, anything molded.]

spongiosa (spon-ge-o'sah). See *cancellous tissue*, under *tissue*.

spontaneous (spon-ta'ne-us). Voluntary; instinctive. Not in response to external stimulus. **s. evolution**. See under *evolution*. [Lat., *spontaneus*.]

sporadic (spo-rad'ik). Occurring at isolated points; of diseases, not epidemic. [Gr., *sporadikos*, from *speirein*, to sow.]

sporangium (spo-ran'je-um). The special spore case inclosing the terminal endospores of fungi. [Gr., *sporos*, seed, + *aggeion*, vessel.]

spore. 1. A reproductive motile body found in many of the lower vegetable cells, but not produced by the sexual elements. 2. An ovoid, non-staining, highly refractive, non-sexual body present in many bacteria. **resting s.** See *resting cell*, under *cell*. [Gr., *sporos*, seed.]

sporidium (spo-rid'e-um), pl., *sporidia*. 1. A spore found in a promycelium. 2. The spore stage of a protozoan organism. **S. vaccinale**. A protozoön supposed to be the microörganism of smallpox and vaccinia. See *Cytorrhynchus violaceus*.

sporiferous (spo-rif'er-us). Producing or bearing spores. [Lat., *spora*, spore, + *ferre*, to bear.]

sporiparous (spo-rip'ar-us). Producing spores. [Lat., *spora*, spore, + *parere*, to produce.]

sporoblast (spo'ro-blast). The mother cell that produces sporozoites. [Gr., *sporos*, seed, + *blastos*, germ.]

sporocyst (spo'ro-sist). A zygote in the cystic stage of its development. [Gr., *spora*, spore, + *kystis*, cell.]

sporogenesis (spo-ro-jen'es-is). The for-

mation of spores. [Gr., *spora*, spore, + *genesis*, production.]

sporogenous (spo-roj'en-us). Reproduction by spores; producing spores. [Gr., *sporos*, seed, + *gennan*, to produce.]

sporogeny (spo-roj'en-e). The development of spores by sexual conjugation. [Gr., *sporos*, seed, + *gennan*, to produce.]

sporogony (spo-rog'o-ne). The production of spores by multiple sexual reproduction. [Gr., *sporos*, seed, + *goneia*, generation.]

sporont (spo'ront). A form of developmental stage of protozoa having alternate generations in which the *s.* is produced by sexual conjugation and forms sporozoites.

sporophore (spo'ro-för). That part of an organism supporting a spore. [Gr., *sporos*, seed, + *phorein*, to bear.]

sporotheke (spo-ro-the'kah). The envelope enclosing the spores of the malarial parasite in the body of the mosquito. [Gr., *sporos*, seed, + *theke*, chest.]

sporotrichosis (spo''ro-trik-o'sis). An infective granuloma involving the skin and subcutaneous tissue and, less frequently, other structures, caused by the *Sporothrix Schenkii* or other similar species.

Sporotrichum (spo-rot'rik-um). A genus of fungi, of the order *Hyphomycetes*, with a slender mycelium growing on the ordinary culture media. Such species as *S. Beurmanni* and *S. indicum* cause nodular lesions resembling tubercles in man, and *S. Schenkii* causes Schenk's sporotrichosis. [Gr., *sporos*, seed, + *thrix*, *trichos*, hair.]

Sporozoa (spo''ro-zo'ah), pl.; sing. *sporozoön*. An older class of the *Protozoa* including many orders, such as *Coccidia*, *Haemosporidia*, and *Neosporidia*, having species pathogenic for men and animals.

sporozoite (spo-ro-zo'it). The young reproductive organisms formed in a sporoblast after fertilization and zygote formation as with the malarial organism in the mosquito. [Gr., *sporos*, seed, + *zoon*, animal.]

sporozoöid (spo-ro-zo'oyd). Falciform bodies found in cancers.

sport. An animal or plant or any part of either that varies suddenly or singularly from the normal type of structure. [Old Eng., *sporten*.]

sporulation (spo-ru-la'shun). The formation of spores. **arthrogenous s.** The change of bacteria with resistant forms which will reproduce the species where favorable conditions are restored. **endogenous s.** *S.* of a protozoan within its host or the formation of a spore within the bacterium. **exogenous s.** *S.* developing outside of the organism infected.

sporule (spo'rül). A small spore; a segmented malarial parasite after sporulation.

spot. A small extent of surface differing, especially in appearance, from surrounding parts. **blind s.** (of Mariotte). See *optic disk*, under *disk*. **embryonic s.** 1. The germinal s. 2. See *protosoma*. 3. See *embryonic area*, under *area*. **Fila-**

tow's s's, Flindt's s's. Minute white or bluish white s's almost invariably to be found on the mucous membrane of the mouth before the occurrence of the rash of measles. **genital s's.** See *nasal genital points*, under *points*. **germinal s., germinative s., germ s.** Syn.: *germinal macula*. A nucleolus of a germinal vesicle. **hectic s.** A bright red s. on the cheek of a person suffering from hectic fever. **Koplik's s's.** See *Filatow's s's*. **light s. on the membrana tympani.** A sharply defined and usually triangular s. of light situated in the inferior quadrant of the tympanic membrane. The principal cause of this light s. is the inclination of the membrane to the axis of the meatus in connection with the concavity of the membrane. **milk s.** An opaque patch $\frac{1}{2}$ inch to 1 inch in diameter, found, post mortem, on the outer aspect of the visceral layer of the pericardium. **rose s's.** The rose-colored maculae of the eruption of typhoid fever. **yellow s.** Syn.: *macula lutea*. An area surrounding and including the fovea centralis in the retina which has a slightly yellow color. Frequently used therefore to designate the area of distinct vision or central vision, although this designation is made preferably by the limits of the fovea centralis. [Ang.-Sax., *spot, speck.*] **sprain (sprän).** A forcible stretching of muscular, tendinous, or ligamentous tissues beyond their natural length. Swelling, disability, and pain are usual accompaniments. [Old Fr., *espreindre*, to press, to wring.] **sprew, sprue (spru).** 1. See *aphthae*. 2. Tropical disease; psilosis. 3. In mechanical dentistry, a piece of wood or metal used for making the ingots when casting the molten metal. **spring finger.** See *trigger finger*, under *finger*. **spring-halt.** A disease of horses manifested by sudden, convulsive, and exaggerated lifting of the hind leg, believed to be choreic. **spruce.** A tree of the genus *Abies*. **s. beer.** A fermented beverage made from the infusion of s., pimenta, ginger, and hops with molasses. It is diuretic and antiscorbutic. **spunk.** Surgeon's agaric. **spur.** A sharp projection, such as the hipocampus minor. [Ang.-Sax., *spora.*] **spu'tum.** Pl. *sputa*. The inflammatory material from the respiratory tracts ejected from the mouth. It may be simply saliva, or saliva plus the mucous secretions of the air passages; or it may be more or less purulent or bloody. **black pigmented s.** S. colored black by inhaled particles of carbon. **frothy s.** Saliva of thin mucous secretion from the bronchial tubes. **nummular sputa.** The thick, heavy, and roundish (somewhat coinlike) sputa of pulmonary phthisis. **prune juice s.** A thin, reddish, bloody s. characteristic of gangrene, cancer of the lung and certain forms of pneumonia. **rusty (-colored) s.** The typical dark reddish brown s. of

pneumonia. It is viscid and semitransparent, and adheres tenaciously to the side of the containing vessel. Its color is due to the presence of blood. **s. character and consistency;** see in *appendix*, page 902. **s. coctum.** A mucopurulent, yellowish, thick, opaque s., rich in cells, characteristic of the second stage of acute catarrh and also of chronic catarrh. **s. examination, how to make;** see in *appendix*, page 901. **s., how to examine a fresh preparation;** see in *appendix*, page . **s., how to recognize alveolar cells;** see in *appendix*, page 902. **s., how to recognize Bacillus influenza;** see in *appendix*, page 903. **s., how to recognize Curschmann's spirals;** see in *appendix*, page 902. **s., how to recognize elastic tissue;** see in *appendix*, page 902. **s., how to recognize Charcot-Leyden crystals;** see in *appendix*, page 902. **s., how to recognize pavement epithelium,** see in *appendix*, page 902. **s. how to recognize pneumococcus;** see in *appendix*, page 903. **s., smear, how to make;** see *appendix*, page 902. [Lat., *spuere*, to spit.]

squama (skwa'mah). A scale or scalelike object. **s. temporalis.** The thin scalelike part of the squamous portion of the temporal bone. [Lat., *squama*, flake, scale.]

squamomastoid (skwa-mo-mas'toyd). Pertaining to both the squamous and the mastoid portions of the temporal bone.

squamoparietal (skwa-mo-par-i'e-tal). Pertaining to both the squamous portion of the temporal bone and the parietal bone.

squamosal (skwa-mo'sal). 1. Scalelike. 2. As a n., in the pl., in comparative anatomy, the squamous portion of the temporal bone. [Lat., *squama*, scale, flake.]

squamosphenoïdal (skwa'mo-sfen-oyd'al). Pertaining to both the squamous portion of the temporal bone and the sphenoid bone.

squamotemporal (skwa-mo-tem'po-ral). Pertaining to the squamous portion of the temporal bone.

squamous (skwa'mus). 1. Pertaining to or resembling scales or a scale. 2. Scaly; marked by the formation of scales or by desquamation. [Lat., *squamosus*, from *squama*, scale.]

squamozygomatic (skwa'mo-zi-go-mat'ik). Pertaining to the squamous portion and the zygomatic process of the temporal bone.

square measure. See in *appendix*, page 942.

squaw-vine. See *Mitchella*.

Squibb's diarrhea mixture. A m. containing tincture of opium, tincture of capsicum, spirits of camphor, chloroform, and alcohol.

squill. 1. The genus *Scilla*. 2. Of the U. S. Ph. and Br. Ph., the sliced bulb of *Scilla maritima* (*Urginea Scilla*). [Lat., *scilla*; Gr., *skilla*.]

Sr. The chemical symbol for the element, *strontium*.

stable (stab'il). Fixed; stable. [Lat., *stare*, to stand.]

stadium (sta'de-um), pl., *stadia*. See *stage* (1st def.). **s. amphiboles.** (*obs.*) The stage of a disease intermediate between its acme and its subsidence. **s. contagii.** See *s. prodromorum* (1st def.). **s. florescentiae.** The stage of development of the exanthem of an exanthematous disease. **s. floritionis.** The stage of an eruptive fever during which the exanthem is at its height. **s. incubationis.** See *stage of latency, under stage.* **s. initiale.** The initial stage of a disease. **s. prodromorum.** 1. In eruptive fevers the stage intervening between the inception of the fever and the appearance of the eruption. 2. In obstetrics, the premonitory stage of labor. [Lat.]

staff. 1. A grooved steel rod, straight or curved like a catheter, introduced into the urethra to serve as a guide to the knife in perineal lithotomy. 2. The group of medical s., connected with a hospital, such as administration s., house s., outpatient s., resident s., etc. [Old Eng., *staff, staffe, staf*; Ang.-Sax., *staef*.]

stage. 1. A definite period or condition in the course of a disease. 2. That accessory part of a microscope that serves to support the slide on which the material to be examined is laid, and to admit of the transmission of reflected light from below through the material. **algid s.** A period in diarrheal diseases marked by lowered temperature, retarded circulation, secondary nervous disorders. **first s. of labor.** That s. which is occupied by the dilatation of the cervix uteri. **mechanical s.** An adjustment for a microscope, holding a slide, by means of which the special field under observation can be recorded for future observation. **placental s. of labor, third s. of labor.** The s. that follows the expulsion of the child and ends with that of the placenta and the fetal envelopes. **pre-eruptive s.** Of an exanthem the time that elapses from the entrance of the poison into the system to the first appearance of the eruption. **second s. of labor.** The s. that begins when the cervix is completely dilated and ends with the expulsion of the fetus. **s. of latency.** The s. of an infectious disease between the infection and the manifestation of disease. [Old Eng., *stage*; old Fr., *estage*, a story, floor, stage.]

stag'gers. 1. See *gid*. 2. A disease of horses and cattle characterized by a staggering gait, usually called blind s.

stain. 1. A discoloration, or a discolored spot. 2. A pigment used for staining microscopic objects such as bacteria, minute animal parasites, and sections of normal or diseased tissues in order to make that substance capable of study under the microscope. The stains include many anilin dyes and various other chemical materials. They are described in detail in the various text-books devoted to bacteriology, pathology, histology, and medical zoölogy. 3. A preparation made

from various anilin, vegetable, or mineral dyes, and used to color microscopic organisms and histological and pathological tissues for purposes of microscopic study.

stain'ing. The act of impregnating a substance, especially a tissue under microscopic examinations, with pigments so as to distinguish the various structures of which it is composed. The principal s's used in microscopy are hematoxylin, carmin, ammonia carmin, picrocarmin, silver nitrate, gold chlorid, and the various anilin dyes (fuchsin, eosin, vesuvin, auramin, safranin, fluorescin, methylene blue, gentian violet, methyl violet, malachite green, etc.).

stalagmometer (stal-ag-mom'et-er). An instrument for measuring the size of drops. [Gr., *stalagmos*, a dropping, + *metron*, a measure.]

stammering (stam'mer-ing). Faltering in speaking; as often used, stuttering.

standard certificate of birth, see in *appendix, page*. **standard certificate of death,** see in *appendix, page*

standardization (stan-dard-i-za'shun).

The process of bringing a preparation to a fixed standard of strength or efficiency. **biological s.** S. by means of the reaction of living organisms to the agent tested. **physiological s.** Same as biological s.

stand'still. The quiescent state resulting from suspension of action, especially of motion. **expiratory s.** A condition in which the respiratory apparatus remains in the state seen at the close of an ordinary or labored expiration. **inspiratory s.** A condition in which the respiratory rhythm is so accelerated that the diaphragm remains tetanically contracted, and hence the lungs remain filled with air. It may be produced by strongly stimulating the central end of a divided vagus nerve. **respiratory s.** A suspension of the respiratory movements in either the inspiratory or the expiratory phase.

stan'nic. Containing tin as a tetrad radicle. [Lat., *stannicus*.]

stan'nous. Containing tin as a bivalent element.

stan'num. Latin for *tin*.

stapedectomy (stap-ed-ek'to-me). Excision of the stapes.

stapedial (stap-e'de-al). Pertaining to, or connected with, the stapes.

stapedius (stap-e'de-us). See *table of muscles, under muscle*.

stapes (sta'péz). The stirrup-shaped third ossicle of the middle ear. It consists of a collum and a head, or capitulum, on which there is a hollowed articular surface for the lenticular process of the incus, and from which two crura diverge, that end in an oval or bean-shaped foot plate. The longitudinal axis of the s. stands almost perpendicular to the longitudinal axis of the malleus and incus. [Lat., *stapes*, a stirrup.]

staphisagria (staf-is-ag're-ah). Of the U. S. Ph., the seed of *Delphinium s.*

- [Gr., *staphis*, dried grapes, + *agrios*, wild.]
- staphisagrin** (staf-is-a'grin). Probably a mixture of alkaloids from staphisagria.
- staphylagra** (staf-il'ag-rah). *Obs.* An instrument for seizing and removing the uvula. [Gr., *staphyle*, the uvula, + *agra*, a seizure.]
- staphylinus** (sta-fi-li'nus). See *table of muscles*, under *muscle*.
- staphylitis** (staf-il'i'tis). Inflammation of the uvula. [Gr., *staphyle*, the uvula, + *itis*, inflammation.]
- staphylo-** (staf'il-o). Combining form of Gr., *staphyle*, the uvula.
- staphylobacterin** (staf'il-o-bak'ter-in). The bacterial vaccine prepared from staphylococci.
- staphylococcemia** (staf'il-o-kok-se'me-ah). The condition produced by staphylococci in the blood. [*Staphylococcus*, + Gr., *aima*, blood.]
- staphylococchia** (staf'il-o-kok'se-ah). Skin suppurative or secondary infection caused by staphylococci.
- Staphylococcus** (staf-il-o-kok'us). A genus of *Schizomycetes* in which the spheres become arranged in irregular masses compared to clusters of grapes, of the family *Coccaceae*. The genera are described under *Micrococcus*. **S. pyogenes aureus**. The most common of the pyogenic microbes, being found in acute abscesses, empyema, boils, acute osteomyelitis, pyemia, etc. **S. pyogenes citreus**. A form with citron-yellow cultures. [Gr., *staphyle*, bunch of grapes, + *kokkos*, a kernel.]
- staphylolysin** (staf'il-o-li'sin). The hemolysin produced by the staphylococcus.
- staphyloma** (staf-il-o'mah). A more or less irregular protrusion of some one of the tunics of the eye, due to a thinning or to a perforation from previous ulceration. **anterior s.** See *s. corneae*. **ciliary s.** *S. scleroticae* in the ciliary region, due to intra-ocular inflammation usually affecting the uveal tract. **posterior s.** 1. See *s. scleroticae*. 2. See *conus* (2d def.). **s. corneae**. A bulging of the cornea, in whole or in part, from thinning of the membrane, with or without a preceding ulceration, due to injury or to a chronic inflammation of the cornea and usually of the iris, with abolition of the anterior chamber, adhesion of the iris to the posterior surface of the cornea, and increased tension. The cornea is opaque and occasionally thickened instead of thinned. According to some, the term is restricted to protrusion originating in prolapse of the iris and consisting of the iridic tissue replacing the cornea. **s. scleroticae**. A bulging of the sclerotic at any portion of its circumference, from thinning of the membrane due to long-continued intra-ocular inflammation with increased pressure. [Gr., *staphyloma*, from *staphyle*, a bunch of grapes, + *oma*, tumor.]
- staphyloplasin** (staf'il-o-plaz'min). The intracellular poison of the staphylococcus.
- staphyloplasty** (staf'il-o-plas-te). The plastic surgery of the palate. [Gr., *staphyle*, the uvula, + *plassein*, to mold.]
- staphylorrhaphy** (staf-il-or'raf-e). The operation of closing a cleft of the velum palati. [Gr., *staphyle*, the uvula, + *raphe*, a sewing.]
- staphylotomy** (staf-il-ot'o-mi). 1. Amputation of the uvula. 2. Abscission of a staphyloma. [Gr., *staphyle*, the uvula, + *tome*, cutting.]
- staphylotoxin** (staf'il-o-toks'in). A toxin produced by the *Staphylococcus*, which causes necrotic changes in the viscera.
- star**. See *aster*. **daughter s.**, **double s.** See *amphiaster*. **mother s.** See *aster*. **polar s's.** Radiating masses of the granules of the cell protoplasm during karyokinesis, seen at the poles of the nuclear spindles.
- star an'ise**. See under *Illicium*.
- starch**. A carbohydrate having the empirical formula, C₆H₁₀O₅; a white, shining, tasteless, and colorless powder, which, under the microscope, is seen to be made up of striated granules, differing in size, shape, and markings according to the source from which the s. is derived. It consists of a large number of molecules of the hexose, glucose, united with each other by the elimination of molecules of water. One of the polysaccharids. By the action of ptyalin it is converted into maltose, a reducing disaccharid. **animal s.** See *glycogen*. **corn s.** A variety of s. obtained from Indian corn, distinguished by the small size of its granules. It is valuable for its nutritive properties. **explosive s.** Xyloidin. **hepatic s.** See *glycogen*. **hydrated s.** S. reduced to a pasty consistency by the action of hot water. **iodized s.** See *amylum iodatum*, under *amylum*. **liver s.** See *glycogen*. **oat s.** A variety of s. found in oats. **potato s.** S. obtained from the potato. **rice s.** Flour of rice. **soluble s.** A modification of s., produced by the action of heat or chemical agents, which is soluble in cold water, but still gives a blue color with iodine. **s. gum.** See *dextrin*. **s. in stool, how to determine presence of;** see in *appendix*, page 906. **s. iodized.** A compound of s. with iodine. Whether a true s. iodid actually exists is uncertain, although the iodized s. of the U. S. Ph. and that prepared in other ways is supposed to contain such a compound. **wheat s.** S. obtained from wheat.
- starvation** (star-va'shun). The condition resulting from deprivation of food or from lack of food sufficient for nutrition. [Ang.-Sax., *steorfan*, to perish with hunger or cold.]
- sta'sis**. A condition of standstill in any of the body fluids, but especially the blood. This occurs in the capillaries in the early stage of inflammation before the migration of the white blood corpuscles. **diffusion s.** S. with diffusion of serum or lymph. **venous s.** A blood s. due to venous congestion. [Gr., *stasis*, a halt.]
- Stas-Otto method.** A method of separating alkaloids and ptomains. The substance is treated with twice its weight

- of 90 per cent. alcohol and about 20 grains of tartaric or oxalic acid. It is then filtered and evaporated and the residue is dissolved in absolute alcohol. The process of filtering and evaporating is then repeated and the residue dissolved in water alkalinized with sodium bicarbonate, the alkaloid being extracted with ether. [Stas, a Belgian chemist, 1813-1891.]
- state'ment.** A declaration. **ante-mortem s.** A declaration made just before death, with special reference to its medicolegal bearings. Such a s., when made with the consciousness and belief that death is impending, is held in law as equally binding with a s. made on oath.
- sta'tic.** 1. Pertaining to what is stationary or in a state of rest or equilibrium. 2. Pertaining to the standing posture. See *s. ataxia, under ataxia.* 3. Of electricity, the form of electrical charge produced by friction of non-conduction. [Gr., *istanai*, to cause to stand.]
- Statice** (stat'is-e). Sea lavender; a genus of plants of the *Plumbaginaceae*. **S. caroliniana.** Marsh rosemary. The root is astringent, and is used in aphthae, angina, etc. **S. limonium.** Common sea lavender. The root and leaves are tonic and astringent. [Gr., *statike*, astringent.]
- station** (sta'shun). Manner of standing.
- statometer** (stat-om'et-er). An instrument used to determine the amount of protrusion of an eye. [Gr., *statos*, placed, + *metron*, a measure.]
- sta'tus.** A condition, a stage. **s. epilepticus.** That state in which an epileptic has a number of fits in rapid and often regular succession. **s. gastricus.** See *gastricism* (2d def.). **s. hystericus.** The hysterical state or condition. **s. lymphaticus.** The condition found to account for sudden death (especially under ether), when there is persistence of the thymus gland and hyperplasia of the lymphatic apparatus. **s. praesens.** The condition of an individual at the time a note is made of it (used generally of his condition when he first comes under observation as a patient). **s. typhosus.** The asthenic, delirious condition observed in typhoid and certain other fevers; characterized by great prostration, subsultus tendinum, feeble, frequent pulse, low muttering delirium or coma vigil, and dryness with brown color of the tongue. [Lat., *stare*, to stand.]
- stavesacre** (stävz'a-ker). See *staphisagria*.
- steapsin** (ste-ap'sin). An enzyme obtained from pancreatic juice, capable of hydrolysing fat with the formation of glycerin and fatty acids.
- stearaldehyd** (ste-ar-al'de-hid). Stearic aldehyd.
- ste'arate.** A salt of stearic acid.
- stearerin** (ste-ar'er-in). A fatty substance, analogous to stearin, found in the grease of sheep's wool.
- stearic** (ste-ar'ik). Derived from, or contained in stearin. **s. acid.** See *under acid.* **s. aldehyd.** A body, $C_{17}H_{35}CHO$, bearing the same relation to s. acid that ordinary aldehyd bears to acetic acid, **stearin** (ste'a-rin). A derivative of glycerin in which one or more molecules of stearyl replace one or more molecules of hydroxyl. The term, when used without qualification, is understood to mean tri-stearin. [Gr., *stear*, *steatos*, stiff fat.]
- stearyl** (ste'a-ril). A medicament having fat as an excipient.
- stearopten** (ste-ar-op'ten). A comphorlike solid residue formed by the essential oils at a low temperature.
- stearrhea** (ste-ar-re'ah). Another name for seborrhoea. [Gr., *stear*, fat, + *roia*, a flowing.]
- stearyl** (ste'ar-il). The univalent radicle, $C_{17}H_{35}CO$, of stearic acid.
- steatite** (ste-at-it). Soapstone; granular magnesium silicate. [Gr., *stear*, fat.]
- steatodes** (ste-at-o'des). Fatty; abounding in fat.
- steatoma** (ste-at-o'mah). Another name for sebaceous cyst. [Gr., *stear*, fat, + *oma*, tumor.]
- steatomyces** (ste-at-om'is-es). A fatty fungous excrescence. [Gr., *stear*, fat, + *mykes*, a mushroom.]
- steatopyga** (ste'at-o-pi'gah). Great fatness of the buttocks. [Gr., *stear*, fat, + *pyge*, buttocks.]
- steatosis** (ste-at-o'sis). 1. Fatty degeneration. 2. A tendency to the formation of abnormal deposits of fat. 3. A cutaneous affection consisting in an anomaly of sebaceous secretion. 4. See *seborrhoea*. [Gr., *stear*, fat.]
- Steatozoön** (ste-at-o-zo'on). See *Demodex folliculorum*. [Gr., *stear*, fat, + *zoön*, an animal.]
- steel.** 1. A form of iron containing 0.6 to 1.9 per cent. of carbon susceptible of being tempered by exposure to heat and a subsequent cooling in water, oil, lead, mercury, etc. 2. As sometimes used in Great Britain, any medicinal preparation of iron.
- stega'no.** Combining form of Gr., *steganos*, covered.
- Stegomyia** (steg-o-mi'e-ah). A genus of mosquitoes, of the order *Diptera* and the family *Culicidae*. Its head and scutellum have flat scales, the legs are banded, and the thorax often shows lines of a white or yellowish color. It bites chiefly in the afternoon. It is found all over the world. **S. calopus.** A species with white bands on the legs and two median white lines with laterally curved silvery lines on the thorax. The palpi are short like those of *Culex* and the larvae have a long respiratory siphon. It spreads yellow fever by biting infected persons and sucking up the blood, and later on injecting the unknown cause of the disease into a healthy person, during the act of biting. **S. fasciata.** See *S. calopus*. [Gr., *stegos*, a chamber, + *myia*, a gnat.]
- Stella'ria me'dia.** Chickweed; it is somewhat astringent and was formerly used for a variety of purposes.
- stellate** (stel'lat). Star-shaped; having pointed parts, projecting all round, like a star as conventionally figured. [Lat., *stellatus*, from *stella*, a star.]

Stell'wag's sign. The widening of the palpebral angle in exophthalmic goiter. [*Carl Stellwag von Carion*, Viennese ophthalmologist, born, 1823.]

stem. A stalk; any stalklike structure or formation. **brain s.** The brain, less the pallium (or fissured portion) and the cerebrum. [*Ang.-Sax., stemma*, trunk.]

stenion (sten'e-on). A point at the end of the least transverse diameter of the skull in the temporal fossa. [*Gr. stenos*, narrow.]

steno- Combining form of *Gr., stenos*, narrow.

stenobregmate (ste-no-breg'mät). Having the upper fore part of the head narrow. [*Gr., stenos*, narrow, + *bregma*, the bregma.]

stenocardia (ste-no-kar'de-ah). See *angina pectoris*, under *angina*. [*Gr., stenos*, narrow, + *kardia*, the heart.]

stenocephalism, stenocephaly (sten-o-sef'al-izm, sten-o-sef'al-e). A condition in which one of the diameters of the head is unusually short. [*Gr., stenos*, narrow, + *kephale*, the head.]

stenocrotaphy (sten-o-krot'af-e). A narrowing of the temporal region of the skull. [*Gr., stenos*, narrow, + *krotaphos*, the temple.]

stenopecic (sten-o-pe'ik). Having a narrow opening. [*Gr., stenos*, narrow, + *ope*, opening.]

stenosis (sten-o'sis). A constriction; the narrowing of a canal, passage, or aperture, especially of one of the cardiac valves. **aortic s.** S. of the aortic valves, of the aortic orifice, or of the aorta itself. **cicatricial s.** S. caused by a cicatrix. **granulation s.** S. caused by an encroachment of granulations or by their contraction. **mitral s.** S. of the mitral valve or orifice or of both. [*Gr., stenos*, narrow.]

steno thorax (ste-no-tho'raks). Abnormal narrowness of the chest, causing the condition known as pigeon-breast. [*Gr. stenos*, narrow, + *thorax*, chest.]

stenotic (sten-ot'ik). Constricted, stric-tured.

Stenson's duct. Syn.: *parotid duct*. A duct about 2½ inches long, which conveys the secretion of the parotid gland into the mouth. It opens on the inner side of the cheek, nearly opposite the second upper molar tooth. [*Nicholas Stenson*, Danish anatomist, 1638-1686.]

stephanion (stef-a'ne-on). The point where the coronal suture crosses the temporal ridge. [*Gr., stephanion*, dim. of *stephanos*, crown.]

ster'co- Combining form of *Lat., stercus*, dung.

stercobilin (ster-ko-bi'lin). A coloring matter found in the feces; a product of change in the bile pigments thought by some to be identical with hydrobilirubin.

stercoraceous (ster-ko-ra'se-us). Pertaining to, of the nature of, or containing feces; caused by the retention of feces. [*Lat., stercus*, excrement.]

stercoral (ster'ko-ral). See *stercoraceous*.

stercorin (ster'ko-rin). A crystalline sub-

stance obtained from feces, similar to cholesterolin, from which Flint supposed it to be derived.

ster'cus. *Obs.* Fecal matter. [*Lat.*]

stereo- (ste're-o). Combining form of *Gr., stereos*, solid.

stereochemical (ste're-o-kem'ik-al). Of, or pertaining to stereochemistry.

stereochemistry (ste're-o-kem'is-tre). That branch of chemistry which treats of the arrangement of elements and groups of elements about an atom in the three dimensions of space. See *symmetrical carbon atoms*, under *atom*.

stereocyst (ster'e-o-sist). A cyst containing fatty matter. [*Gr., stereos*, stiff, + *kystis*, a bladder.]

stereognosis (ste-re-og-no'sis). The faculty of recognizing the nature of objects by handling them. [*Gr., stereos*, solid, + *gignoskein*, to know.]

stereometry (ste-re-om'et-re). The measurement of the contents of a solid body, or the capacity of a hollow space. [*Gr., stereos*, solid, + *metron*, a measure.]

stereomonoscope (ste're-o-mon'os-köp). An instrument devised by Claudet, consisting of a stereoscope in which, by means of two lenses, two stereoscopic images are thrown upon the same spot of a ground glass plate. [*Gr., stereos*, solid, + *monos*, alone, + *skopein*, to examine.]

stereophantoscope (ste're-o-fan'to-sköp). A panorama stereoscope in which, instead of pictures, rotating stroboscopic disks are inserted. [*Gr., stereos*, solid, + *phantos*, visible, + *skopein*, to examine.]

stereophoroscope (ste're-o-for'os-köp). An instrument devised by Czermak and used in investigating the theories of visual perceptions with special reference to the effects produced on different zones of the retina. [*Gr., stereos*, solid, + *phoros*, bearing, + *skopein*, to examine.]

stereoscope (ste're-o-sköp). An apparatus employed to produce the impression of projection or solidity in a picture by throwing two slightly different pictures of the same object on the two eyes, so that the right image falls on the right eye and the left image on the left eye. **Brewster's prismatic s.** See *Brewster*.

hinged s. A s. devised by Javal for the determination of the muscular balance.

lenticular s. A s. having, instead of convex prisms, ordinary convex lenses of about 200 mm. focus. In other respects it resembles Brewster's prismatic s. **Wheatstone's mirror s.** See *Wheatstone*. [*Gr., stereos*, solid, + *skopein*, to examine.]

steresol (ster'e-sol). An antiseptic varnish originated by Berlioz, consisting of 270 grams of purified shellac, 10 each of purified benzoin and balsam of Tolu, 100 of crystallized carbolic acid, 6 each of Chinese essence of canella and of saccharin, and alcohol enough to make 1,000.

sterigma (ster-ig'mah). Any of the radially arranged growths on the surface of conidia of aspergilli. [*Gr., sterigma*, support.]

sterile (ster'il). 1. Barren, unfruitful, un-

productive. 2. Freed from living microorganisms. [Lat., *sterilis*, barren, unfruitful.]

sterility (ster-il'it-e). The condition of being sterile. **facultative s.** The prevention of conception. **idiopathic s.** See *azoospermatisms*. **relative s.** S. in consequence of the fertilizing element being wanting or of the ovum not coming to maturity, there being no abnormal condition of the sexual organs. [Lat., *sterilitas*.]

sterilization (ster-il-i-za'shun). The act or process of rendering sterile or freeing material from bacteria or other organisms. It is usually performed by dry or moist heat. **fractional s.**, **intermittent s.** S. in which intervals elapse between the heating, so that the spores may develop into bacteria and be more easily destroyed.

sterilize (ster'il-iz). To render sterile and free from germs.

sterilized (ster'il-ized). Deprived of all living matter; rendered sterile.

sterilizer (ster'il-i-zer). An apparatus used for sterilizing. **dry air s.** An apparatus using only heated air for sterilization. **steam s.** An apparatus sterilizing by steam.

ster'nal. Pertaining to the sternum.

sternalgia (ster-nal'je-ah). Pain in or about the sternum. [Gr., *sternon*, the sternum, + *algos*, pain.]

sternalis (ster-na'l'is). See *sternal s. muscle*. (1) A muscle connected with the sternum, especially the s. *brutorum*; (2) See *triangularis sterni*, under *triangularis s. rectus*, s. *rutorum*, s. *thoracicus*. An anomalous muscle on the anterior surface of the sternum connected with the sternocleidomastoideus, pectoralis major, and rectus abdominis.

sterneber, **sternebra** (ster'ne-ber, ster'ne-brah). A subdivision or segment of the sternum. [Lat., *sternebra*.]

ster'no-. Combining form of Lat., *sternum*.

sternoclavicular (ster'nò-klav-ik'u-lar). Pertaining to the sternum and the clavicle.

sternoclavicularis (ster'nò-kla-vik-u-la-ris). See *sternoclavicular s. muscle*. See *table of muscles*, under *muscle*.

sternocleidomastoid (ster'nò-kli-do-mas'toyd). See *table of muscles*, under *muscle*.

sternodidymus (ster-no-did'im-us). See *sternopagus*. [Gr., *sternon*, the sternum, + *didymos*, double.]

sternodorsal (ster-no-dor'sal). Pertaining to or extending between the sternum and the back.

sternohyoideus (ster-no-hi-oi'de-us). See *table of muscles*, under *muscle*.

sternomastoid (ster-no-mas'toyd). Pertaining to the sternum and to the mastoid process of the temporal bone. **s. muscle**. See *table of muscles*, under *muscle*.

sternothyroideus (ster-no-thi-roid'e-us). See *table of muscles*, under *muscle*.

ster'num. The breastbone; a long, flat bone with which the clavicles and the

costal cartilages of the true ribs articulate in front. From its general resemblance to a sword, its broad upper part has been called the manubrium, or pre-sternum; and the middle part, the gladiolus, mucro, or mesosternum. [Gr., *sternon*, chest.]

sternutatio (ster-nu-ta'te-oh). (*obs.*) Sneezing. **s. convulsiva**. Paroxysmal or spasmodic sneezing. The act of sneezing may be repeated many times before the paroxysm ends, and is accompanied by a profuse watery secretion from the nose. [Lat., *sternutare*, to sneeze.]

sternutatory (ster-nu'ta-to-re). Pertaining to or promoting sneezing; a substance that causes or promotes sneezing.

ster'tor. Snoring. [Lat., *stertere*, to snore.]

stertorous (ster'to-rus). Snoring; characterized by stertor. [Lat., *stertere*, to snore.]

stethal (ste'thal). An alcohol, C₁₅H₃₇OH, found in small quantities as an ester in spermaceti.

stetho-. Combining form of Gr., *stethos*, chest.

stethometer (steth-om'et-er). Of Quain, an instrument for measuring the variations in size of the thorax. [Gr., *stethos*, the chest, + *metron*, a measure.]

stethometry (steth-om'et-re). The process of measuring the size of the chest.

stethomyitis (steth-o-mi-i'tis). Inflammation of the pectoral muscles. [Gr., *stethos*, the chest, + *mys*, a muscle, + *itis*, inflammation.]

stethophonometer (steth'of-on-om'et-er). *Obs.* A straight stethoscope having a sliding graduated tube to measure the intensity of an auscultatory sound. [Gr., *stethos*, the chest, + *phone*, a sound, + *metron*, a measure.]

stethopolyscopium (steth'o-pol-is-ko'peum). *Obs.* A stethoscope furnished with conducting tubes, so as to be used by several persons simultaneously. [Gr., *stethos*, the chest, + *polys*, many, + *skopein*, to examine.]

stethoscope (steth'o-skòp). An instrument for conveying to the ear for diagnostic purposes the sounds produced within the body. [Gr., *stethos*, the chest, + *skopein*, to examine.]

stethoscopic (steth-o-skop'ik). Pertaining to stethoscopy.

stethoscopy (steth-os'kop-e). Examination by means of the stethoscope.

stethy'lic al'cohol. See *stethal*.

sthenic (sthen'ik). Strong, forcible. [Gr., *sthenos*, strength.]

stibamin (stib'am-in). Hydrogen antimonid.

stibdiamy'l (stib-di'am-il). The radicle, Sb(C₂H₅)₂.

stibialism (stib'e-al-ism). Systematic poisoning by antimony. [Gr., *stibi*, antimony.]

stib'in. Hydrogen antimonid.

stibium (stib'e-um). Antimony.

stigma (stig'mah), pl., *stigmata*. 1. A punctiform spot or mark on the skin (see *mark* and *nevus*). 2. A red spot on the

skin with an elevated efflorescence at its center; an umbo. 3. A characteristic. 4. In botany, that part of the pistil of a flower which lacks the epidermis and receives the pollen. 5. Any mark or distinguishing feature, especially of disease or defect of the nervous system. **hysterical stigmata**. Psychical or somatic stigmata indicative of neurasthenia. **physical stigmata of degeneration**. Certain variations from the normal type in the configuration of the skull, extremities, or other portions of the body, indicating a low or vicious type of mental development. **stigmata degeneracionis**. See *physical stigmata of degeneration*. **s. folliculi**. A small non-vascular spot (the macula) near the middle of the thinner and more projecting part of a maturing graafian vesicle, formed by the convergence of minute blood vessels. **s. of the graafian vesicle**. See *s. folliculi*. [Gr., *stigma*, mark.]

still'born. Dead at the time of birth.

stillicidium lacrimarum. See *epiphora*.

Stillingia (stil-'lin/'je-ah). 1. A genus of euphorbiaceous shrubs. 2. Of the U. S. Ph., the root of *S. silvatica*. **S. sebifera**. Chinese tallow tree. The seeds, which yield a fixed oil used externally in medicine and for burning, are thickly coated with a white tallowy substance (stills-tearin, or Tangawang fat), said to be nearly pure stearin. **S. silvatica**. Its root, the *s.* of the U. S. Ph., is little used in scientific medicine. [From *B. Stillingfleet*, English botanist.]

Stilling's diffused nuclei pyramidales. Groups of ganglion cells lying on the inner side of the anterior pyramids of the medulla oblongata. **S's fibers**. Association f's of the cerebellum.

sti'tus. 1. See *pencil*. 2. Of the N. F., a paste pencil used for the local application of medicating substances. **s. diluibilis**. Of Unna, a pencil composed of dextrin, gum arabic or tragacanth, and some medicant; used in the local treatment of skin diseases. **s. unguens**. Of Unna, a pencil composed of rosin, wax, olive oil, and some medicament; used in skin diseases.

stimulant (stim'u-lant). Stimulating; as a n., an agent that stimulates; colloquially, an alcoholic liquor. See *stimulus*. **diffusible s.** A s. that, administered by the mouth, or hypodermically, acts quickly. [Lat., *stimulans*.]

stimulate (stim'u-lät). 1. To incite or urge on to increased action. 2. To treat with stimulants. 3. To incite to functional activity. [Lat., *stimulare*.]

stimulation (stim-u-la'shun). The act or process or result of stimulating. **unipolar s.** The stimulus to a nerve effected by the application of a single electrode of an induction apparatus; the other, much larger electrode being applied to some distant part. [Lat., *stimulatio*.]

stimulin (stim'u-lin). A substance in serum which favors the action of the

leukocytes and which is probably similar to an opsonin.

stimulus (stim'u-lus). 1. An agent or agency that stimulates. 2. The action or result of a stimulant; stimulation. **adequate s.** That special form of s. which excites the terminal filaments of a nerve distributed to an organ of sense. **artificial s.** Any form of s. other than the normal process, as heterologous s. **chemical s.** An irritation of the animal economy or of a separate muscle or nerve, produced by the application of a chemical agent. **heterologous s.** An extrinsic (mechanical, thermal, chemical, electrical) s. that acts upon the nervous elements of the sensory apparatus along their entire course. **homologous s.** See *adequate s.* **mechanical s.** An irritation of a nerve or muscle brought about by mechanical means, as by pinching or striking. [Lat., from Gr., *stigma*, a pricking.]

stink. A strong offensive smell. A disgusting odor; a stench. [Old Eng., *stinke*, from *stinken*, *stynken*, to smell.]

stipp'ling. In histology, a speckling of a blood-cell or other structure with fine dots when exposed to the action of a basic stain, due to the presence of free basophil granules in a cell protoplasm. See also in *appendix*, page 901.

stirpiculture (stir'pe-kul-tür). The systematic attempt at improving a race or stock by attention to the laws of breeding. [Lat., *stirps*, stock, + *cultura*, culture.]

stir'rup. See *stapes*.

stock. Direct line of descent; race, lineage, family. [Old Eng., *stocke*, *stokke*, *stok*.]

stoichiology (stoy-ke-ol'o-je). The scientific investigation of elements (especially of the chemical elements) or of elementary principles. [Gr., *stoicheion*, an element, + *logos*, understanding.]

stoichiometry (stoy-ke-om'et-re). The determination of the proportions in which elements combine to form compounds; also the determination of the atomic weight of the elements. [Gr., *stoicheion*, an element, + *metron*, a measure.]

Stokes-Ad'ams syn'drome. Permanent slowness of the pulse with attacks of giddiness, faintness, transient unconsciousness, or epileptoid seizures. This is caused by atrophy, degeneration or inflammation of the bundle of His, a structure which conveys the impulse of muscular contraction from the auricles to the ventricles. [William Stokes, Dublin physician, 1804-1878; Robert Adams, Glasgow physician, 1794-1861.]

Stokes' law. The l. that muscles situated beneath an inflamed serous or mucous membrane are paralyzed. **S's liniment**. See *linimentum terebinthinae aceticum*, under *linimentum*. **S's reducing agent**. A liquid made by adding ammonia in excess to a solution of a ferrous salt, therefore an ammoniacal solution of ferrous hydrate; used in physiology to reduce oxy-hemoglobin to hemoglobin. **S's solution**. An ammoniacal solution of ferrous sul-

phate which contains some tartaric acid. Used as a reducing agent in the spectroscopic blood test. [William Stokes, Dublin physician, 1804-1878.]

Stoltz's operation. Operation for cystocele by denuding a circular patch on the anterior wall of the vagina and closing with a purse-string suture, passed through the edges of the healthy mucous membrane. [Joseph Stoltz, French gynecologist, 1803-1896.]

stoma (sto'mah). 1. A mouth or opening. 2. A minute opening in a serous membrane, surrounded by a ring of small cuboidal cells and leading into a lymph vessel. [Gr., *stoma*, mouth.]

stomatocae (sto-mak'as-e). Any severe form of stomatitis, usually ulcerative. [Gr., *stoma*, the mouth, + *kakos*, evil.]

stomach (stum'ak). 1. A somewhat conical hollow viscus, with rounded ends, constituting the largest dilatation of the alimentary canal. It is concave above, convex below, with its larger end (the cardia) directed to the left side and situated higher than its smaller extremity (the fundus). On the left it connects with the esophagus, on the right with the duodenum. It lies close beneath the diaphragm, and extends on the right side nearly to the liver and below to a point about midway between the diaphragm and the umbilicus. When moderately distended it is about 12 inches long and about 5 inches wide at its widest part. It consists of four coats, known as the serous, muscular (made up of longitudinal, circular, and oblique fibers), submucous, and mucous, and is provided with glands concerned in digestion. **hourglass s.** An hourglass-shaped distortion of the s. from constriction of its median portion by a band of inflammatory tissue. **s. ache.** Pain in the s.; popularly, colic. **s. bucket.** Of Einhorn, a small silver acornlike vessel to which is attached a silk thread; used to obtain a specimen of the gastric contents. **s. contents, how to determine amount of organic acids and acid salts,** see in *appendix, page 905.* **s. contents, how to make examination of,** see in *appendix, page 903.* **s., how to determine size, position and motility of,** see in *appendix, page 905.* [Gr., *stomachos*, gullet, maw.]

stomachal (stum'ak-al). See *gastric*.

stomachic (stum-ak'ik). 1. Gastric. 2. Acting as a digestive tonic.

stomatalgia (stum-at-al'je-ah). Pain in the mouth. [Gr., *stoma*, the mouth, + *algos*, pain.]

stomatic (sto-mat'ik). Pertaining to a stoma or mouth; as a n., a medicine for affections of the mouth. [Gr., *stoma*, the mouth.]

stomatitis (stum-at-'tis). Inflammation of the mouth. **aphthous s.** Small, roundish, grayish white spots upon the buccal mucous membrane. **catarrhal s.** Inflammatory redness and swelling of the oral mucous membrane without ulceration. **corrosive s.** 1. See *gangrenous s.* 2. S. produced by the action of corrosive

substances. **diphtheritic s.** See *buccal diphtheria*, under *diphtheria*. **gangrenous s.** S. accompanied by gangrene. **mercurial s.** S. due to mercurial poisoning. **simple s.** An erythematous inflammation of the mouth, especially of its mucous membrane, which occurs in patches, and may be due to heat, cold, irritation of the teeth, etc. It is also caused at times by gastric derangement. **s. materna.** S. occurring during pregnancy or lactation, due to the enfeeblement of the system incident to those conditions. **ulcerous s.** S. occurring with ulceration. [Gr., *stoma*, the mouth, + *itis*, inflammation.]

stom'ato-. Combining form of Gr., *stoma*, *stomatos*, mouth.

stomatol (stum'at-ol). An antiseptic mouth wash containing terpineol, soap, alcohol, and glycerin, with aromatics.

stomatology (stum-at-ol'o-je). The pathology, etc., of the mouth, including dentistry. [Gr., *stoma*, the mouth, + *logos*, understanding.]

stomatomalacia (stum-at-o-mal-a'se-ah). A morbid softening of the structures of the mouth. [Gr., *stoma*, the mouth, + *malakia*, softness.]

stomatomycosis (stum-at-o-mi-ko'sis). *Obs.* Any mycotic affection of the mouth. [Gr., *stoma*, the mouth, + *mykes*, a fungus.]

stomatonecrosis (stum-at-o-ne-kro'sis). *Obs.* See *gangrenous stomatitis*, under *stomatitis*. [Gr., *stoma*, the mouth, + *nekrosis*, necrosis.]

stomatopathia, stomatopathy (stum-at-o-path'e-ah, stom-at-op'ath-e). Any disease of the mouth. [Gr., *stoma*, the mouth, + *patheia*, disease.]

stomatoplasty (stum'at-o-plas-te). The plastic surgery of the mouth. [Gr., *stoma*, the mouth, + *plassein*, to mold.]

stomatoscope (stum-at'o-skop). An apparatus for the visual examination of the mouth cavity. [Gr., *stoma*, the mouth, + *skopein*, to examine.]

stomodeum (sto-mo-de'um). The primitive mouth of the embryo, being the common cavity of the mouth and the nose. [Gr., *stoma*, mouth, + *daiein*, to divide.]

stomoschisis (sto-mos'kis-is). Fissure of some oral structure, especially cleft palate. [Gr., *stoma*, the mouth, + *schisis*, a cleaving.]

Stomoxys calcitrans (sto-mok'sis kal'sit-ranz). A biting fly resembling the domestic fly, which may possibly transmit filariasis to human beings.

stool. The matter evacuated from the bowels; also the act of having the bowels move. **bilious s's.** Discharges in diarrhea, becoming yellowish or yellowish brown; darker after exposure to the air. **fatty s's.** S's in which fat is present, observed in diseases of the pancreas. **pea-soup s's.** The typical appearance of the typhoid diarrheal s. **rice-water s's.** Watery s's of serum containing detached epithelium and liquid feces, resembling rice-water; observed in cholera. **s. examination, how to make,** see in *appendix, page 905.* **s., how to determine**

presence of fat, see in appendix, page 906. s., how to determine presence of starch, see in appendix, page 906. s., how to determine reaction of, see in appendix, page 907. s., how to find parasites, see in appendix, page 906. s., how to recognize meat fibers, see in appendix, page 906. s., how to recognize various ova, see in appendix, page 907.

stopping. The operation of plugging a dental cavity.

storax. 1. True s.; a fragrant solid resin, somewhat like benzoin, obtained from the stem of *Styrax officinalis*. It was highly esteemed by the ancients, but does not now occur in commerce. 2. See *liquid s.*
liquid s. A mixture of resins obtained from the trunk of *Liquidambar orientalis*. Liquid s. is stimulant and expectorant, but is now rarely used, except, mixed with linseed oil, as an application in scabies and as an ingredient of the compound tincture of benzoin [U. S. Ph.].

storetin (sto'res-in). A substance, $C_{38}H_{58}O_8$, forming an important constituent of liquid storax and occurring in two isomeric forms.

stork sheeting. A form of waterproof cotton cloth used in midwifery.

stovain (sto-va'in). Benzoyl-ethyl-dimethyl-aminopropanol hydrochlorid, $C_{14}H_{22}O_2NCl$. It is closely related to alypin, having an anesthetic action about equal to that of cocain.

strabismic (stra-biz'mik). 1. Pertaining to strabismus. 2. Affected with strabismus.

strabismometer (stra-biz-mom'et-er). An instrument for measuring the amount or degree of deviation from the normal position in a squinting eye. [Gr., *strabismos*, squinting, + *metron*, a measure.]

strabismus (stra-biz'mus). Squinting; cross-eye; an inability to bring the visual axes of both eyes to bear simultaneously on one point, the axis of vision of one eye always deviating in a certain direction from the object. **alternating s.** S. affecting either eye alternately. **apparent s.** Convergent or divergent s. in which neither eye moves when the other is closed; due to retinal incongruence. **concomitant s.** S. in which the movements of the squinting eye accompany those of the normal one, but cannot fix it properly. **convergent s.** That variety of s. in which one eye deviates inward toward the nose. **divergent s.** S. in which one eye deviates outward toward the temple. **paralytic s.** S. due to paralysis of an ocular muscle. **periodic s.** S. observed in hypermetropia or myopia, occurring only when accommodation is made for near points, but not when fixation is made for distance. **spastic s.** S. due to spastic contraction of an ocular muscle. s. **supernus, s. sursumbergens, upward s.** S. in which the squinting eye turns upward beyond the point of fixation of the other eye. [Gr., *strabismos*.]

strabotomy (stra-bot'o-me). The opera-

tion for the cure of strabismus, consisting of cutting the tendon of the contracted muscle. [Gr., *strabismos*, + *tome*, a cutting.]

straight-pin. An artificial tooth with the pins securing it arranged vertically. The opposite of "cross-pin."

strain (strän). 1. Excessive use or exercise of a part of the body so that its efficiency is thereby impaired. 2. The resulting injury from such over-use. **cardiac s.** Cardiac irritability due to severe or protracted exercise or labor. **eye s.** Straining of the accommodation of the eye, also any morbid condition resulting therefrom. [Lat., *stringere*, to draw tight.]

strait (strät). A contracted passage. **inferior s. of the pelvis.** The lower contracted portion of the pelvic canal; bounded in front by the lower extremity of the symphysis pubis, behind by the tip of the coccyx, and on each side by the lower border of the ischium. **superior s. of the pelvis.** The brim, or inlet, of the pelvis; the upper boundary of the true pelvis. [Ang. Sax., *streccan*, to stretch.]

Stramonium (stra-mo'ne-um). 1. Of Tournefort, the genus *Datura*. 2. Of Baillon, a section of *Datura*. 3. *Datura s.* 4. Of the U. S. Ph., the leaves of *Datura s.* They are required to contain at least 0.25 per cent. of mydriatic alkaloids. **extractum stramonii.** An extract made from seeds of S. or of *Datura s.* It is required to contain 1.0 per cent. of mydriatic alkaloids [U. S. Ph.]. **extractum stramonii fluidum.** Fluid-extracts of s. containing 0.25 per cent. of mydriatic alkaloids. **Stramonii folia.** The leaves of *Datura s.* [Br. Ph.]. s. **seed.** The seeds of *Datura s.* [Br. Ph.]. **tinctura stramonii.** A 10 per cent. [U. S. Ph.] or a 20 per cent. [Br. Ph.] tincture of s. leaves. The U. S. Ph. tincture is required to contain 0.025 per cent. of mydriatic alkaloids. **unguentum stramonii.** An ointment containing 10 per cent. of the extract of s. [U. S. Ph.]. [Lat.]

strangles (stran'gls). In the horse, a febrile disease generally attacking young animals and terminating in the formation of an abscess or abscesses in the areolar tissue of the submaxillary space. The symptoms of choking give rise to this name.

strangulated (strang'u-la-ted). In a state of strangulation.

strangulation (strang-u-la'shun). 1. The act of choking; the state of being asphyxiated by choking. 2. A constriction; the state of being constricted so as to endanger the life of the part shut off by the stricture. [Lat., *strangulare*, to choke.]

strangury (strang'gu-re). Urination by painful, spasmodic effort. [Gr., *stragx*, a drop, + *ouron*, urine.]

strapping. 1. The process of applying straps; specifically, that of subjecting a part to compression or giving it support by the methodical application of

strips of adhesive plaster. 2. Strips of adhesive plaster, also any material for use as straps.

stratum (stra'tum). Pl., *strata*. See *layer*.
external molecular s. A thin layer of fibrillae, with intervening granular matter, connected with the lateral branches of Müller's fibers. **ligneous s.** One of the layers (observed on cross section of the trunk of a tree as annual rings) forming the woody, solid portion of a dicotyledonous plant. **s. adiposum.** A layer of subcutaneous tissue containing fat. **s. cellulolum (placentae).** The cellular layer of the maternal placenta, as distinguished from the s. spongiosum. **s. cellulolum of the cochlea.** The cellular layer found in the spiral canal of the cochlea, which brings about the connection of the nerve bundles entering the cochlea with those in the lamina spiralis. **strata cerebelli primaria.** The principal laminae, or folia, of the cerebellum. **s. ciliare.** The portion of the orbicularis palpebrarum that is situated along the margin of the lid. **s. cinereum.** The second layer of gray matter in the anterior corpora quadrigemina, sometimes described as the nucleus. **s. convolutum.** An important layer of large pyramidal cells seen in a section through the hippocampus major. It is prolonged into the pes hippocampi, its free border forming the point of the uncus. **s. corneum (epidermidis).** The true epidermis; the corneous or most superficial layer of the epidermis, consisting of transparent flattened cells, closely packed together and devoid both of nuclei and of granules. **s. cutaneum.** The external dermic layer of the membrana tympani. **s. cylindricum.** The layer of columnar cells in the rete mucosum next the corium. **s. fibrillosum.** The innermost s. of the retina, made up of fibers of the optic nerve consisting of axis cylinders only. **s. gangliosum (retinae).** A layer of multipolar, nucleated ganglion cells external to the expansion of the optic nerve. **s. gelatinosum.** The fourth layer in the olfactory bulb, consisting of large ganglion cells with branching processes. **s. germinativum.** See *germinal spot* under *spot*. **s. glomerulosum.** The second layer of the olfactory lobe, counting from the ventral side. **s. granulosum.** A layer of very small cells or of cells containing many granules, such as (1) the layer of minute cells in the cerebellum between the cells of Purkinje and the medullary substance; (2) a layer of minute ganglion cells imbedded in a mass of medullated nerve fibers found in the olfactory lobe between the medullary ring and the s. gelatinosum; (3) the s. of small cells in the cerebral cortex between the formation of the cornu Ammonis and the claustral formation; (4) the s. granulosum epidermidis. **s. granulosum epidermidis.** A layer of lozenge-shaped or trapezoid-shaped cells containing numerous coarse roundish granules of eleidin that strongly

refract light and render the epidermis more or less opaque. It covers the rete mucosum, and is itself covered by the s. lucidum. **s. granulosum (retinae) externum.** A layer of several strata of oval nuclei contained in a reticulated matrix immediately internal to the membrana limitans externa, which have processes connected with a retinal rod or cone. **s. horizontale.** That portion of the arciform fibers which covers the surface of the anterior pyramids immediately adjacent to the anterior median fissure. **s. lacinosum, s. lacunosum.** A layer of loose nerve fibers and lymph spaces seen in a section made through the hippocampus major, continuous with the s. radiatum. **s. lemnisci (tegmenti).** See *inferior lemniscus* under *lemniscus*. **s. ligneum.** See *ligneous s.* **s. lucidum.** A translucent layer of the epidermis, consisting of from four to six layers of clear transparent cells, with indefinite outlines and traces of a nucleus. **s. malpighianum, s. Malpighii.** See *rete mucosum* under *rete*. **s. marginale.** A thin medullary lamina of nerve substance on the upper free surface of the fascia dentata. **s. medianum.** A layer of nerve fibers which pass horizontally through the spinal cord, connecting the anterior and posterior extremities of the arciform fibers. **s. medianum horizontale.** See *s. horizontale*. **s. medianum horizontale pontis Varolii.** The raphe of the pons Varolii. **s. moleculare.** 1. Any layer appearing to be composed of minute granules without definite structure. 2. A thin layer of finely reticulated neuroglia, devoid of nerve cells, between the s. lacunosum and the superficial medullary lamina in the hippocampus major. 3. The second layer of the cerebral cortex, consisting mainly of neuroglia and fine nerve fibers with but few ganglion cells. **s. mucosum (epidermidis).** See *rete mucosum* under *rete*. **s. musculare circulare urethrae.** Muscular fibers beneath the constrictor urethrae, surrounding the membranous portion of the urethra. **s. musculare urethrae (or transversum) superius.** Muscular fibers embracing the prostate, continuous with the s. musculare circulare urethrae. **s. of Remak.** A narrow layer of medullated nerve fibers just beneath the first layer of the cortex cerebri. **s. of visual cells.** A retinal layer, subdivided into the bacillary layer, the membrana limitans externa, and the internal granule layer. **s. olfactorium.** The ventral layer of the olfactory bulb, consisting of olfactory nerve fibers. **s. opticum.** The third layer of fine nerve fibers in the corpora quadrigemina. **s. profundum pontis.** Deep transverse fibers of the pons Varolii. **s. proligerum.** The discus proligerus, including the cumulus proligerus. **s. radiatum.** One of the deep layers of the hippocampus major, consisting of radiating nerve fibers. **s. reticulare.** See *reticular formation* under *formation*. **s. spinosum.** A layer of prickle cells. **s.**

spinous epidermidis. The rete mucosum, especially the portion of it made up of prickle cells. **s. spongiosum (placenta).** The spongy layer of the maternal placenta. **s. striatum.** A layer of nerve fibers forming the inner lamina of the hippocampal gyrus. **s. superficiale pontis.** Transverse bundles of fibers upon the ventral surface of the pons Varolii. **s. uteri infravasculare.** The portion of the inner muscular layer of the uterus internal to the s. vasculare. **s. uteri submucosum.** The portion of the inner muscular layer of the uterus immediately beneath the mucous membrane. **s. uteri subserosum.** The outer muscular layer of the uterus. **s. uteri supravasculare.** The portion of the inner muscular layer of the uterus consisting principally of longitudinal fibers. **s. (uteri) vasculare.** The middle portion of the inner muscular layer of the uterus, made of interlacing fibers and blood vessels. **s. vasculosum cutis.** That portion of the corium just beneath the papillae, occupied by a network of blood vessels which run parallel to the surface and from which vascular loops are distributed to the papillae. **s. zonale corporis quadrigemini.** A thin layer of white nervous tissue upon the outer surface of the corpus quadrigeminum. **s. zonale corporis striati.** A thin layer of intercrossing nerve fibers and bundles on the free surface of the striatum and callosum. [Lat., from *sternere*, to spread out.]

straw mite dermatitis. An inflammation of the skin produced by an almost microscopic mite found in straw. It is characterized by intense itching and the presence of urticarial wheals, sometimes by macules or papules, most of which are surmounted by a characteristic central minute vesicle, which quickly becomes pustular. The eruption appears about 16 hours after exposure and is most abundant on the trunk.

streak. A line or stripe. **germinal s. See primitive s. medullary s.** See *medullary groove*, under *groove*. **primitive s.** Syn.: *axial plate*, *primitive trace*. In embryology, a temporary structure consisting of a sickle-shaped opacity (which becomes a straplike thickening) of the germinal disk of the blastoderm, starting from that side of the disk which afterward becomes the narrow end, and gradually extending to or beyond the center of the transparent area; a linear or straplike mass of cells formed by direct proliferation from the lower (inner) cells of the epiblast, constituting the origin of the mesoblast. It is the first indication of the lineaments of the future embryo. Supposed by some writers to be the vestige of a blastopore. [Ang-Sax., *strica*, line, from *strican*, to go.]

streamless. Devoid of electrical currents (said of fresh, intact muscles, which do not manifest the active phenomena of dying or injured muscles). See *difference theory*, under *theory*.

strep'to-. Combining form of Gr., *streptos*, twisted.

streptobacillus (strep-to-ba-sil'lus). A bacillus growing in chains.

Streptobacteria (strep-to-bak-te're-ah). A group including all bacteria in twisted chains.

streptobacterin (strep-to-bak'ter-in). The vaccine produced from the streptococcus.

streptococcal (strep-to-kok'al). Pertaining to or due to a streptococcus.

streptococemia (strep-to-kok-se'me-ah). A morbid condition caused by the presence of streptococci in the blood. [Gr., *streptos*, twisted, + *kokkos*, a kernel, + *aima*, blood.]

streptococcus (strep-to-kok'us). A member of the *Schizomycetes*, of the family *Cocccaceae* and the genus *Streptococcus*. Its individual members divide in one plane and its special characteristic is the formation of long chains of cocci. **S. angiosus.** A pathogenic type most commonly found in the throat in scarlet fever and other throat affections. The various types of this genus are differentiated by fermentation tests with various sugars and the presence or absence of hemolysis and pathogenesis. **S. equinus.** A type characteristic of the intestines of herbivora. **S. erysipelatos.** The exciting agent of erysipelas, a minute coccus, 0.3 to 0.4 μ in diameter, resembling *S. pyogenes*. **S. faecalis.** A type characteristic of the human intestine. **S. mucosus capsulatus.** A species resembling the *S. pyogenes*, but possessing a mucoid capsule. **S. mitis.** A type found in human saliva and feces, but not usually associated with disease. **S. pyogenes.** This organism was discovered by Fehleisen in 1883 and is found in erysipelas, abscesses, cellulitis, septicemia, and fibropurulent inflammation of the serous and mucous membranes. It forms short or long chains which stain by Gram's method and its colonies on agar plate cultures appear as fine gray pin-point dots. It forms a beaded growth in stab cultures of gelatin without liquefaction, milk is acidulated, a flabby growth occurs in bouillon, and an insoluble growth occurs on potato. No spores are formed; motility is negative, and it differs from the *Diplococcus pneumoniae* in not acidulating and coagulating inulin-serum water. The organism will produce local inflammation and bacteremia in mice, guinea-pigs, rabbits; in human beings it produces abscesses, cellulitis, bacteremia, bronchopneumonia, and inflammation of the serous or mucous membranes. A powerful hemolytic substance is produced by the organism and it also possesses an intracellular proteid toxin. **S. salivarius.** The most common type present in the mouth. [Gr., *streptos*, twisted, + *kokkos*, kernel.]

streptocolysin (strep-to-coll'is-in). An hemolysin derived from a streptococcus.

streptocosis (strep-to-ko'sis). Infection by streptococci.

streptomycosis (strep-to-mi-ko'sis). Infec-

tion with a streptococcus. [Gr., *streptos*, twisted, + *mykes*, fungus.]

streptosepticemia (strep'to-sep-tis-e'me-ah). Septicemia produced by the streptococcus.

Streptothrix (strep'to-thriks). Syn.: *Nocardia*. A genus of the *Schizomycetes*. See *Actinomyces* and *Nocardia*.

S. leproides. An organism cultivated from a leprotic tubercle and the family *Chlamydo-bacteriaceae*.

S. mycetomi. Syn.: *Madurella m.* The species causing Carter's black mycetoma. [Gr., *streptos*, twisted, + *thrix*, hair.]

stretch'er. 1. A hand litter. 2. An extension apparatus.

ambulance s. A portable folding s. that may be carried in an ambulance.

hospital s. A folding, rigid, or wheeled hand s. used for transportation of the sick in the hospital. [Old Eng., *streechen*.]

stria (stri'ah). Gen. and pl. *striae*. A fine line (e. g., a ridge, or streak of color; especially one of a number of such lines when they are parallel).

acoustic striae, auditory striae. A series of transverse white lines on the floor of the fourth ventricle at its lower part. They arise near the median line and extend outward, uniting with the auditory nerve roots.

s. alba tubervis. A bundle of fibers, about 1 mm. broad, stretching quite superficially from the corpus mamillare over the tuber cinereum and disappearing beneath the chiasm some 4 or 5 mm. from the mesal border of the crista. It turns outward beneath the optic tract to the fornix, of which it should be regarded as a detached fasciculus.

s. cornea. See *tenia semicircularis* under *tenia*.

striae et maculae atrophicae. So-called lineae albicantes. Whittish lines and spots which are seen on the skin, usually as a result of stretching as in pregnancy or suddenly occurring obesity.

s. germinativa. See *nasal genital points*, under *points*.

striae gravidarum. Lineae albicantes due to pregnancy.

striae longitudinales cordis. Nearly vertical muscular fibers in the upper half of the posterior longitudinal furrow of the heart.

striae longitudinales Lancisii. The nerves of Lancisi; anteroposterior white fibers on the upper surface of the corpus callosum on each side of the raphe, continuous with the peduncles of the septum lucidum.

striae longitudinales laterales. Longitudinal white fibers near the margins of the corpus callosum parallel to the striae longitudinales mediales.

s. longitudinalis medialis. The nerves of Lancisi; anteroposterior white fibers on the upper surface of the corpus callosum on each side of the raphe.

s. medullaris ascendens. A white s. at the upper part of the floor of the fourth ventricle, regarded as an accessory motor root of the trigeminal nerve or of the auditory nerve.

s. medullaris thalami. An oblique furrow on the upper surface of the optic thalamus.

striae of Retzius. Brown stripes parallel to the edge of a tooth, probably indicating the formation

of the layers of enamel.

striae of Schriger. Irregular lines crossing the striae of Retzius.

s. olfactoria. One of the roots of the olfactory nerve.

s. olfactoria lateralis. The external root of the olfactory nerve.

s. olfactoria medialis. The internal root of the olfactory nerve.

s. pinealis. The anterior peduncle of the pineal gland.

s. semicircularis, striae semilunares. See *tenia semicircularis* under *tenia*.

striae transversales (Willisii). Transverse ridges upon the upper surface of the corpus callosum marking the general direction of its fibers.

s. vascularis. The concave surface of the membranous cochlear canal where it is connected with the spiral ligament of the cochlea. [Lat., *stria*, ridge.]

striate, striated (stri'at, stri'a-ted). Striped, streaked, marked with striae. [Lat., *striatus*.]

stricture (strik'tür). A contracted part of a narrow tube, duct, or passage.

ciatricial s. A s. due to cicatricial contraction.

impassable s. A s. in which the passage is so tortuous and contracted that a filiform bougie can not be passed through it.

phantom s., spasmodic s. A s. due to muscular spasm and not to organic change. [Lat., *stricture*, a contraction, from *stringere*, to draw tight.]

stri'dor. A harsh shrill sound. [Lat., *stridere*, to make a creaking sound.]

strig'ment. Literally, that which is scratched or scraped off; filth or dirt scraped off, especially from the skin after a bath or athletic exercise. [Lat., *stringere*, to strip off.]

stroboscope (stro'bo-sköp). See *zoetrope*. [Gr., *strobos*, a whirling round, + *skopein*, to examine.]

stroke. A blow; a sudden attack of disease, especially of paralysis or apoplexy.

heat s. See *hyperpyrexia* and *insolation*.

paralytic s., s. of apoplexy. See *apoplexy*. [Ang.-Sax., *strac*.]

stroma (stro'mah). 1. The tissue or combination of tissues forming the principal mass of an organ and serving as a kind of matrix or support for its special anatomical elements. 2. The cell body of nucleated red blood corpuscles, or, in mammalian red blood corpuscles, the entire mass of the corpuscle exclusive of the coloring matter. [Gr., *stroma*, a coverlet.]

Strongyloides stercoralis intestinalis (stron-jil-oyd'es ster-ko-ral'is in-tes-tin-al'is). The proper term for *Anguillula intestinalis* et *stercoralis*. See *Anguillula*.

Strongylus (stron'jil-us). Syn.: *Hamularia*. A genus of the *Nemathelminthes* and of the family *Filaridae*. The mouth is nude and the esophagus dilated posteriorly.

S. bronchialis. Syn.: *Filaria lymphatica*. A yellowish viviparous worm, from $\frac{1}{35}$ to $\frac{1}{50}$ inch broad, the male being $\frac{1}{2}$ inch long and the female of double that length. It has been found occasionally in the lungs and bronchial glands of man.

S. Gibsoni. A species found in the feces of a Chinaman.

S. gigas. See *Eustrongylus gigas*.

S. re-

nalis. See *S. gigas*. [Gr., *stroggylos*, round.]

strontia (stron'shah). Strontium oxid, SrO; analogous in structure and chemical properties to lime.

strontium (stron'she-um). A bivalent element allied to calcium, found in various minerals and in some mineral waters. Sp. gr., 2.5; atomic weight, 87.2; symbol, Sr. Several of its salts are antiseptic. The bromid and the iodid are used like other bromids and iodids; the carbonate has been recommended as a dentifrice; the lactate and the salicylate are reputed intestinal antiseptics; the phosphate is a tonic; and a double sulphate of s. and caffein is known as symphoral. **ammonium and s. arsenate.** The compound $2\text{Sr}(\text{NH}_4)\text{AsO}_4 + \text{H}_2\text{O}$. **s. bromid.** A soluble salt of strontium and bromin [U. S. Ph.]. **s. iodid.** A very soluble salt of s. and iodin. Its nature is like that of the alkali iodids [U. S. Ph.]. **s. salicylate.** A soluble salt of s. and sodium salicylate. Its action is like that of sodium salicylate [U. S. Ph.].

strophanthidin (stro-fan'thid-in). A decomposition product of strophanthin.

strophanthin (stro-fan'thin). An intensely bitter glucosid obtained from *Strophanthus*, which has a digitalis action. The U. S. Ph. recognizes only that obtained from *Strophanthus Kombé*, but the s. of commerce is obtained largely from other species of *Strophanthus*. S. is freely soluble in water and may be used intravenously, or intramuscularly, but the subcutaneous injection of it is quite painful. It is much less active when given by the mouth than when injected by either the veins or the muscles. The oral dose for man has never been determined with any degree of precision. **crystalline s.** A name applied to ouabain. **gratus s.** A name applied to ouabain or to crystalline s. obtained from *s. gratus*. Also written g-strophanthin.

Strophanthus (stro-fan'thus). 1. A genus of the *Apocynaceae*. 2. Of the U. S. Ph., the seeds of *S. Kombé*. **S. hispidus.** A Gaboon species identified by some with *S. Kombé*. The seeds contain strophanthin, and probably do not differ in properties from those of *S. Kombé*. **S. Kambé, S. Kombé.** A weedy climber of Gaboon, where the seeds and those of other species are used as an arrow poison (kombé inée, or onage), which acts directly on the heart muscle. They contain strophanthin. The tincture is used as a heart tonic like digitalis. An extract is official in the Br. Ph. **S. seeds.** See *S.* [Br. Ph.]. [Gr., *strophos*, a twisted cord, + *anthos*, a flower.]

strophulus (strof'u-lus). Another name for *miliaria rubra*, **s. albidus.** Another name for *milium*. **s. pruriginex.** Another name for *prurigo*. [Lat., dim. of *strophos*, from Gr., *strophos*, twisted.]

struct'ural for'mula. A representation of a chemical compound in which the

arrangement of atoms in the molecule is chosen.

struma (stru'mah). 1. Scrofula. 2. Goiter. A word seldom used at the present time. [Lat., *struere*, to build, to pile up.]

strumiprivirus (stru-mip-ri'vus). Deprived of the thyroid gland; of a morbid condition, due to loss of the thyroid gland. See *cachexia strumipriva* and *myxedema*. [Lat., *struma*, goiter, + *privirus*, deprived of.]

strumous (stru'mus). Pertaining to, affected with, or of the nature of struma. [Lat., *strumosus*.]

strychnia (strik'ne-ah). See *strychnin*. **strychnin** (strik'nin). An alkaloid, $\text{C}_{21}\text{H}_{22}\text{N}_2\text{O}_2$, obtained from the seeds of *Strychnos nux-vomica*, occurring as small, four-sided prisms or rectangular octaetra or as a crystallin powder, having neither color nor odor, but an exceedingly bitter and persistent taste. The nitrate and the sulphate are official in the U. S. Ph., the hydrochlorid in the Br. Ph. S. and its salts enter into a large number of preparations. List of poisons and their antidotes, see in *appendix*, page 940. **liquor strychninae acetatis.** Hall's solution of s. Each fluid ounce of this solution contains 1 gr. of s. acetate [N. F.]. **liquor strychninae hydrochloridi.** This is a 1 per cent. solution of s. hydrochlorid [Br. Ph.]. *Caution.* The British solution is nearly 5 times as strong as that of the N. F. [Lat., *strychnina*.]

strychnium (strik'ne-um). A univalent radicle, $\text{C}_{21}\text{H}_{22}\text{N}_2\text{O}_2$, bearing the same relation to strychnin that ammonium bears to ammonia.

Strychnos (strik'nos). A genus of the *Loganiaceae*. **S. castelnaeana.** A species growing on the upper Amazon; it furnishes a variety of curare. **S. ignatia, S. Ignatii.** St. Ignatius's bean; a tree indigenous to the Philippine Islands. The hard, bony, inodorous, bitter seeds, the ignatia of the U. S. Ph., 1880, which have the same properties as nux-vomica, contain strychnin and brucin. **S. nux-vomica.** The source of nux-vomica; a tree indigenous to the East Indies, Indian Archipelago. **S. tiente.** The most poisonous species, a Javanese shrub. The root bark contains strychnin and is used to prepare an arrow poison known as upas tiente (not to be confounded with the upas antiar). **S. toxicaria, S. toxifera.** A tree indigenous to British Guiana and the upper regions of the Orinoco and Amazon. It yields a variety of curare. [Gr., *strychnos*.]

stump. The part that is left after a portion of an organ has been removed by amputation or otherwise. **conical s.** A troublesome condition, the result of insufficient flap, of sloughing, or of retraction of muscles, by which the bone is left after an amputation to be covered by granulation tissue. [Old Eng., *stumpe, stompe*.]

stupe. A cloth dipped in a liquid to be

- applied as a fomentation. [Lat., *stupa*, tow.]
- stupefacient** (stu-pe-fa'se-ent). Producing stupor. [Lat., *stupefacere*, to make numb.]
- stupefaction** (stu-pe-fak'shun). 1. The act of making or becoming stupefied or insensible. 2. Stupor, narcosis. [Lat., *stupefacere*, to make numb.]
- stupor**. A state of apathy with drowsiness. [Lat.]
- stuporous** (stu'po-rus). 1. In a state of stupor. 2. Attended with stupor.
- sturin**. The protamin prepared from the spermatozoa of the sturgeon.
- stuttering** (stat'ter-ing). A defect in speech in which there is a spasmodic repetition of the same syllable. **aphasic s.** The s. of aphasic persons. It is more or less spasmodic in character.
- stye**. See *hordeolum*.
- style** (stile). See *stylet*. **lacrimal s.** A stylet made of lead or flexible silver, usually solid, though sometimes tubular, which is introduced through the lacrimal canal and sac into the nasal duct. It is intended to be worn for a length of time in order to maintain the caliber of the duct after a stricture has been divided.
- stylet** (sti'let). 1. A probe. 2. A wire or slender rod passed through a trocar or catheter, for purposes of perforation or of stiffening. [Lat., *stylus*, a pointed instrument.]
- styloglossus** (sti-lo-glos'us). See *table of muscles*, under *muscle*. [Styloid + Gr., *glossa*, tongue.]
- stylohyoid, stylohyal** (sti-lo-hi'oyd, sti-lo-hi'al). Pertaining to the styloid process of the temporal bone and to the hyoid bone. **s. muscle**. See *table of muscles*, under *muscle*.
- stylohyoideus** (sti''lo-hi-oyd'e-us). See *table of muscles*, under *muscle*.
- styloid** (sti'loyd). Resembling a style or pointed instrument (said of osseous processes). [Gr., *stylos*, pillar, + *eidōs*, resemblance.]
- stylo mastoid** (sti-lo-mas'toyd). Pertaining to the styloid and mastoid processes of the temporal bone.
- stylomaxillary** (sti-lo-maks'il-a-re). Pertaining to the styloid process of the temporal bone and to the jaw.
- stylopharyngeus** (sti''lo-far-in'je-us). See *table of muscles*, under *muscle*.
- styptic** (stip'tik). Astringent, hemostatic; as a n., a remedy which arrests hemorrhage by its local astringent action or by coagulating the blood. [Gr., *styptikos*, astringent.]
- stypticin** (stip'tis-in). A proprietary name for cotarmin hydrochlorid.
- styptol** (stip'tol). A trade name for cotarmin phthalate.
- styracin** (sti'ras-in). Cinnyl cinnamate, $C_6H_7O_2(C_9H_8)$, the chief constituent of liquid storax.
- styracol** (sti'rak-ol). A proprietary name for guaiacol cinnamate ($C_{16}H_{14}O_3$).
- Styrax** (sti'raks). 1. A genus of plants of the *Ebenales*. 2. Of the U. S. Ph., see *liquid storax* under *storax*. [Gr., *styrax*.]
- styrax preparatus**. Liquid storax freed from gross mechanical impurities by dissolving it in alcohol, filtering and evaporating [Br. Ph.].
- styrol, styrolene** (sti'rol, sti'ro-lēn). Cin-namene obtained from liquid storax.
- styrone** (sti'rōn). 1. Cinnamic alcohol. 2. An antiseptic compound of storax and balsam of Peru.
- sub-**. Combining form of Lat., *sub*, under, beneath, somewhat (with qualifying force).
- subacetate** (sub-as'et-ăt). A basic acetate.
- subacid** (sub-as'id). Mildly acid.
- subacute** (sub-ak-ūt'). Of disease, showing symptoms less pronounced than in the acute type. [Lat., *sub*, somewhat, + *acutus*, sharpened.]
- subalbuminization** (sub-al''bu-min-i-za'shun). Diminution in the quantity of contained albumin.
- subanconeous** (sub-an-ko-ne'us). Scattered muscular fibers extending between the lower posterior surface of the humerus and the capsule of the elbow. See also *table of muscles*, under *muscle*.
- subaponeurotic** (sub-ap-on-u-ro'tik). Situated beneath an aponeurosis.
- subarachnoid** (sub-ar-ak'noyd). Situated beneath the arachnoid membrane.
- subbrachycephalic** (sub-bra-ki-sef-al'ik). Slightly brachycephalic; having the length-breadth index between 78° and 79°. [Lat., *sub*, under, + Gr., *brachys*, short, + *kephale*, head.]
- subcarbonate** (sub-kar'bon-ăt). 1. As formerly used, a normal carbonate (as distinguished from a bicarbonate). 2. A basic carbonate, so called because it contains with relation to its basic constituent less of the carbonic acid radicle than the normal carbonate. [Lat., *subcarbonas*.]
- subcarbonic** (sub-kar-bon'ik). Containing a smaller amount of carbon than normal carbonic compounds; of basic carbonates, containing a smaller relative amount of the carbonic acid radicle than the normal carbonates.
- subcarbonicus** (sub-kar-bon'ik-us). Sub-carbonic, containing a subcarbonate; with the name of a base, the subcarbonate of the base.
- subcaudal** (sub-kaw'dal). Situated under the tail or cauda (said in embryology of a rudimentary prolongation of the intestine below the anus). [Lat., *sub*, under, + *cauda*, tail.]
- subchlorid**. A chlorid containing less chlorin than another compound considered as the normal chlorid; as sometimes used, an oxychlorid.
- subclavius** (sub-cla've-us). See *table of muscles*, under *muscle*.
- subcostalis** (sub-cos-ta'lis). See *table of muscles*, under *muscle*.
- subcrepitant** (sub-krep'it-ant). Indistinctly crepitant, crackling. [Lat., *sub*, somewhat, + *crepitare*, to crackle.]

- subcrureus** (sub-cru-re'us). See *table of muscles*, under *muscle*.
- subculture** (sub-kul'tūr). A continued cultivation of a bacterium.
- subcuneus** (sub-ku-ne-us). A small group of cerebral convolutions on the lower surface of the occipital lobe, in front of the third occipital convolution, continuous with the gyrus fornicatus. [Lat., *sub*, under, + *cuneus*, a wedge.]
- subcutaneous** (sub-ku-ta'ne-us). 1. Situated immediately beneath the skin. 2. Of an injection, thrown under the skin. [Lat., *sub*, under, + *cutis*, the skin.]
- subcutaneus** (sub-cu-ta'ne-us). See *table of muscles*, under *muscle*.
- subdolichocephalic** (sub-dol-e-ko-sef-al'ik). Having the length-breadth index between 75° and 77.9°. [Lat., *sub*, under, + *Gr.*, *dolichos*, long, + *kephale*, head.]
- subencephalon** (sub-en-sef'al-on). The medulla oblongata, pons Varolii, and corpora quadrigemina. [Lat., *sub*, under, + *egkephalos*, brain.]
- subendocardial**. Beneath the endocardium.
- subendothelial**. Beneath the endothelium.
- suberose** (su'ber-ōs). Resembling cork, having a corky texture. [Lat., *suberosus*.]
- subfebrile** (sub-feb'ril). Mildly febrile.
- subflavus** (sub-fla'vus). Yellowish. **ligamentum subflavum**. See under *ligamentum*. [Lat., *sub*, somewhat, + *flavus*, yellow.]
- subfluorid** (sub-flu'o-rid). A fluorid containing a smaller amount of fluorin than the ordinary fluorid.
- subgenus** (sub-je'nus). A group nearly as important as a genus and immediately subordinate to it, comprising a section or sections of species.
- subgerminal** (sub-je'r'min-al). Situated beneath a germinal structure. [Lat., *sub*, under, + *germen*, a germ.]
- subhepatic** (sub-hep-at'ik). Beneath, on the lower surface of, or in the lower portion of the liver. [Lat., *sub*, under, + *Gr.*, *epar*, the liver.]
- subiculum** (sub-ik'u-lum). See *uncinate gyrus*, under *gyrus*. [Lat., dim. of *subex*, a layer.]
- subinfection** (sub-in-fek'shun). Infection to an extent insufficient for the time being to cause grave disease.
- subinflammation** (sub-in-flam-ma'shun). A slight inflammation of slow progress.
- subinfrant** (sub-in'frant). Obs. Of a fever, having a second paroxysm begin before the first has wholly subsided. [Lat., *subintrare*, to go into secretly.]
- subinvolution** (sub-in-vo-lu'shun). Incomplete involution; failure of an organ to return to its normal size or condition after a physiological hypertrophy, e. g., s. of the uterus after delivery. [Lat., *sub*, under, + *involutio*, a rolling up.]
- subiodid** (sub-i'o-did). A compound of an element or radicle with iodine, containing a smaller proportionate amount of iodine than the ordinary iodid; also, as sometimes used, an oxyiodid.
- sub'ject**. 1. An individual subjected to observation, treatment, or experiment. 2. A cadaver used for dissection. [Lat., *subjicere*, to throw under.]
- subjective** (sub-jec'tiv). Of symptoms, discernible by the patient, but not obvious to physical examination; the reverse of objective. [Lat., *subjectivus*.]
- sublamin** (sub'lam-in). The mercuric sulphosalt of ethylenediamin; an antiseptic.
- sublimate** (sub'li-māt). 1. In sublimation, that portion of a substance which volatilizes and subsequently condenses and assumes the solid form. 2. Any substance usually obtained by sublimation. **corrosive s.** See *mercury bichlorid* under *mercury*. [Lat., *sublimatum*.]
- sublimation** (sub-li-ma'shun). 1. The vaporization of a solid body by means of heat, with subsequent recondensation in a purified but essentially unaltered form. 2. In psycho-analysis the utilization of libido at socially valuable levels. [Lat., *sublimare*, to lift up on high.]
- sublime** (sub-lim'). 1. To subject to sublimation. 2. To undergo sublimation. [Lat., *sublimare*, to raise up on high.]
- subliminal** (sub-lim'in'al). Below the threshold. The term is used to designate sensory stimuli especially that are too feeble to cause a perceptible reaction. [Lat., *sub*, under, + *limen*, threshold.]
- sublobular** (sub-lob'u-lar). 1. Indistinctly lobular. 2. Situated beneath a lobule.
- subluxation** (sub-luk-sa'shun). A partial dislocation of a bone. [Lat., *sub*, somewhat, + *luxare*, to dislocate.]
- submicroscopic** (sub-mi-kro-skop'ik). Nearly microscopic; requiring a weak lens for its proper discernment. **s. particles**. Minute particles in colloid solutions which are not separately visible.
- submissio** (sub-mis'se-oh). A lowering. **s. cordis**. Cardiac systole. [Lat., *submittere*, to place under.]
- submucosa** (sub-mu-ko'sah). The areolar tissue immediately beneath a mucous membrane.
- submuriate** (sub-mu're-āt). A subchlorid or oxychlorid.
- subnitrate** (sub-ni'trāt). A basic nitrate.
- subnormal** (sub-nor'mal). Less than normal; lower than normal.
- subnucleus** (sub-nu'kle-us). One of the parts into which the larger collections of nerve cells are divided by the passage of delicate intersecting fasciculi through them.
- suboxid** (sub-oks'id). An oxid which contains less oxygen than the ordinary oxid.
- subphosphoricus** (sub-fos-for'ik-us). Containing a dihydric phosphate; with the name of a base, the dihydric phosphate of the base.
- sub'salt**. Basic salt.
- subscapularis** (sub-skap-u-la'ris). See *table of muscles*, under *muscle*.
- substance** (sub'stanz). 1. That of which anything is composed or of which it consists. 2. In histology, a general term for tissue. **alible s.** That portion of the chyme that is destined for the nourish-

ment of the body. **alimentary s.** An article of food in the crude form as supplied by nature. **cell s.** See *protoplasm*. **compact osseous s.** The more compact tissue found in long bones and forming the superficial portion of flat or short bones. **contractile s.** 1. Any living s. or tissue capable of contraction (e. g., undifferentiated protoplasm, muscular tissue, cilia, etc.). 2. The contractile portion of a muscle fiber (i. e., that within the sarcolemma). **cortical s. of a hair.** The bundles of fibers cemented together which constitute the larger portion of a hair. In colored hairs they contain pigment granules. **cortical s. of the kidney.** The portion of the kidney immediately beneath its fibrous covering. **cortical s. of the suprarenal capsule.** The s. forming the external and greater portion of the suprarenal capsule. **germinal s.** See *germ plasma* under *plasm*. **ground s.** 1. The homogeneous s. or matrix in which the structural elements (cells and fibers) are imbedded, or which cements them together. 2. The homogeneous hyaline material in the substance of cells in which is imbedded the network of protoplasm. See *plasm* and *stroma*. **horny s.** See *corneous tissue* under *tissue*. **interstitial osseous s.** Osseous tissue between the lamellae of bone. **intervertebral s.** See *intervertebral cartilages*, under *cartilage*. **living s.** See *protoplasm*. **medullary s.** 1. The s. forming the medulla of a part, as of bone; the tissue forming the medullary in contradistinction to the cortical part of an organ, as of the kidney. 3. In botany, pith. **medullary s. of hair.** The hair pith. See under *hair*. **medullary s. of the kidney.** The portion of the kidney internal to and denser and more distinctly striated than the cortical s. It consists mainly of the pyramids of Ferrein and the papillae. **medullary s. of the suprarenal capsules.** The internal portion of the suprarenal capsules. It consists of a reticular fibrous stroma inclosing irregularly shaped cells and venous capillaries. **reticular s.** See *reticular formation*, under *formation*. **reticular s. of bone.** See *spongy bone s.* **reticulated white s.** A reticulated layer of white nervous tissue on the anterior half of the uncinate gyrus. **Rolando's gelatinous s.** See *substantia gelatinosa Rolandi* under *substantia*. **solid nutritive s's.** Solid materials (e. g., eggs, slices of potatoes and of carrots, gelatin, agar and solidified blood serum) used in bacteriological cultures. **spongy bone (or osseous) s.** Bone tissue containing numerous cavities, giving a cancellated appearance; found in the articular ends of long bones and in the interior of the short and flat bones. **supporting s.** A supporting tissue of s. (e. g., neuroglia, connective tissue, etc.). **ventricular gray s.** Of Meynert, the gray matter immediately adjacent to one of the ventricles of the brain; also the floor of the fourth ventricle. **vitreous s.** See

enamel. **white s. of Schwann.** The medullary sheath of a nerve. [Lat., *substantia*, from *substare*, to be present, to exist.]

substantia (sub-stan'shah). See *substance*. **s. gelatinosa.** Neuroglia having a transparent, jellylike appearance when fresh. **s. gelatinosa centralis.** Syn.: *central ependymal thread, gray central nucleus.* The hollow, cylindrical or ellipsoidal mass of neuroglia surrounding the central canal of the myelospongium and forming a kind of membrane upon which rests the epithelium of the central canal. It is composed of an amorphous substance, granules, fine fibers, and a few neuroglia cells, and in the fresh state appears translucent like jelly. **s. gelatinosa columnae posterioris, s. gelatinosa Rolandi.** Neuroglia of a peculiarly transparent appearance found in the tip of the posterior gray cornu in the myelospongium. **s. glomerulosa.** The cortical substance of the kidney. **s. grisea.** The central gray nervous matter of the spinal cord. **s. innominata.** See *ansa of Reil*, under *ansa*. **s. lentis corticalis.** The cortex of the lens. **s. nigra.** See *locus niger* under *locus*. [Lat.]

substitution (sub-sti-tu'shun). 1. In chemistry, the process of replacing one or more atoms in a molecule by other atoms or radicles. 2. In physiology and pathology, compensatory or vicarious action; a manifestation of disease in alternation with another and especially a nervous disorder; of French writers, replacement of the tissue of an organ by an inflammatory product. 3. In pharmacy, the sale of a substitute for an article prescribed or asked for. 4. In psycho-analysis the carrying over of an emotional conflict to an indifferent idea. **s. product.** In chemistry, a product of the reaction of two bodies in which a molecule of the one replaces a portion of the molecule of the other. [Lat., *substituere*, to substitute.]

substrate (sub'strät). The special substance which is acted upon by a definite ferment. The s. from proteolytic ferments is some form of protein, from anolytic ferments some form of starch, etc. [Lat., *sub*, under, + *stratum*, layer.]

subsulphate (sub-sul'fät). A basic sulphate.

subsulphid (sub-sul'fid). A sulphid which contains a relatively smaller amount of sulphur than an ordinary sulphid.

subsultus (sub-sul'tus). A jerking or twitching. **s. tendinum.** Movements of the tendons caused by involuntary twitchings of the muscles, especially of the face and arms. [Lat., *subsilire*, to leap up.]

subte'nial. Beneath or below any tenia of the brain.

subtropical (sub-trop'ik-al). 1. Of climatological conditions, approaching the tropical, almost tropical. 2. Of plants, growing in countries approximating to the tropics in climatic conditions. [Lat., *sub*, near to, + Gr., *tropikos*, of the solstice.]

- subversion** (sub-ver'shun). The act of overthrowing; destruction. [Lat., *subversio*, n. of action, from *subvertere*, to overturn.]
- succedaneum** (suk-se-da'ne-um). A substitute. **caput s.** A swelling of the scalp and the underlying connective tissue, formed on the presenting part of the head of a fetus during birth. [Lat., *succedaneus*, substituted.]
- succenturiatus** (suk-sen-tu-re-a'tus). 1. Substituted. 2. Accessory, e. g., placenta succenturiata. [Lat., *succenturiare*, to supply as a recruit or substitute, from *sub*, in place of, + *centuriare*, to divide into hundreds.]
- succinate** (suk'sin-āt). A salt of succinic acid.
- succinated** (suk'sin-a-ted). Combined, mixed with, or containing amber or succinic acid. [Lat., *succinum*, amber.]
- succinic** (suk-sin'ik). Derived from, or contained in amber. **s. acid.** See under *acid. s. anhydrid*. The compound, $C_6H_8O_4$. **s. dioxyd.** See *alphozone*. [Lat., *succinum*, amber.]
- succinifer** (suk-sin'if-er). Productive of amber.
- succinimid** (suk-sin'im-id). The compound, $(CH_2)_2 < \begin{matrix} CO \\ CO \end{matrix} > NH$.
- succinone** (suk'sin-ōn). A liquid of empyreumatic odor, obtained in the dry distillation of calcium succinate.
- succinum** (suk'sin-um). Amber. See *ambra. oleum succini*. 1. Crude oil of amber, produced by the dry distillation of amber. 2. Of the U. S. Ph., 1880, rectified oil of amber. It was used as an excitant and antispasmodic in flatulent dyspepsia. [Lat., from *succus*, juice.]
- succinyl** (suk'sin-il). The bivalent radicle of succinic acid.
- succulence** (suk'u-lentz). The state of being succulent or juicy.
- succus** (suk'us). 1. A juice. 2. A pharmacopeial preparation made by squeezing out the juice from green plants and adding enough alcohol to preserve it. **s. carnis.** Meat juice. **s. entericus.** See *intestinal juice*, under *juice. s. expressed*. An expressed juice. **s. gastricus.** See *gastric juice*, under *juice. s. nervus.* See *nervous fluid*, under *fluid. s. pancreaticus.* Pancreatic juice. **s. pyloricus.** An alkaline fluid secreted by the pyloric end of the stomach. [Lat., from *sugere*, to suck.]
- succussion** (suk-kus'shun). Shaking a person to ascertain the presence of fluid in a cavity. [Lat., *succutere*, to shake.]
- sucholotoxin** (su'ko-lo-tok'sin). A poisonous base obtained from cultures taken of the hog cholera bacillus. [Lat., *sus*, pig, + Gr., *chole*, bile, + *toxin*.]
- sucrate** (su'krāt). A compound of cane sugar (sucrose) with a base.
- sucrol** (su'krol). Syn.: *dulcin, valgin*. Para-ethoxyphenylurea, $C_9H_{12}N_2O_2$. It is said to be two hundred times as sweet as sugar.
- sucrose** (su'krōs). Same as cane sugar.
- sudamen** (su-da'men). Commonly used in the plural, *sudamina*. q. v. [Lat., *sudare*, to perspire.]
- sudamina** (su-dam'in-ah), pl. of *sudamen*. Syn.: *miliaria sudamina*. Vesicles produced by sweat retained beneath the cuticle in consequence of occlusion of the orifices of the sweat ducts. See *miliaria*. [Lat., *sudare*, to perspire.]
- sudan'**. A substance employed as a stain. **s. III.** A red stain used in the detection of fat.
- sudanophil, sudanophilous** (su-dan-o'fil, su-dan-of'il-us). Staining easily with sudan.
- sudanophilia** (su-dan-o'fil'e-ah). A condition in which the leukocytes contain certain particles readily staining with sudan red and thought to indicate suppuration. [*Sudan*, + Gr., *philein*, to love.]
- sudatorium** (su-da-to're-um). A hot air bath, a sweating room.
- sudatorius** (su-da-to're-us). Sudatory, pertaining to perspiration. [Lat., *sudare*, to sweat.]
- sudoriferous** (su-dor-if'er-us). 1. Conveying perspiration. 2. See *sudorific*. [Lat., *sudor*, sweat, + *ferre*, to bear.]
- sudorific** (su-dor-if'ik). Producing perspiration. [Lat., *sudor*, sweat, + *facere*, to make.]
- sudorip'arous**. Producing or secreting sweat. [Lat., *sudor*, sweat, + *parere*, to produce.]
- su'et.** The hard fat obtained from the inside of the abdomen of the ox or the sheep. **prepared s.** The internal fat from the abdomen of the sheep, purified by melting and straining. It is used as an ointment base [U. S. Ph., Br. Ph.]. [Lat., *sebum*.]
- su'fix.** A letter or a syllable added or annexed to the end of a word or to a verbal root or stem. [Lat., *suffixus*, *subfixus*, fastened on, fixed on.] See *asphyxia*. [Lat., *suffocare*, to choke.]
- suffusion** (suf-fu'shun). 1. The act or process of overspreading or the state of being overspread (e. g., by a film or by moisture); also, that which overspreads. 2. Superficial hyperemia, as in blushing. 3. See *suggillation*. [Lat., *suffusio*.]
- sugar** (shūg'ar). A name at first applied only to cane s. and beet s.; subsequently to any sweet crystalline substance, and, more definitely, to a class of chemical compounds made up of the hexoses. See *cane sugar* and *glucose. acid s. of milk.* Mucic acid. **acorn s.** See *quercite. arabin s.* See *arabinose. beet s.* Cane sugar obtained from species of *Beta*, especially from *Beta vulgaris. brown s.* Cane s. not entirely freed from impurities and coloring matters. **burnt s.** Caramel. **cane s.** See *cane sugar*, under *separate heading. cellulose s.* S. derived from cellulose; identical with glucose. **chestnut s., diabetic s.** Glucose. **ferment s.** S. formed from starch, glycogen, and other carbohydrates by the action of the animal ferments. **fruit s.** Syn.: *fructose, in-*

versive ferment. See *levulose*. See *fructose*. **grape s.** *Glucose*. **gum s.** See *arabinose*. **honeys s.** *Glucose*. **invert s.** A product of the prolonged action of heat upon a solution of cane s. or of dilute mineral acids at 60°. It is a mixture of dextrose and levulose, and receives its name because its solution rotates the plane of polarization to the left, while the solution of cane s. from which it is produced rotates that plane to the right. **liver s.** *Glucose*; so-called because it is the form of s. elaborated in the liver from glycogen. **manna s.** See *mannite*. **maple s.** S. obtained from *Acer saccharinum*. It is identical with cane sugar, but contains a certain amount of coloring matter and flavoring substances. **milk s.** See *lactose*. **muscle s.** *Inosite*. **open-pan s.** S. prepared by concentration of the cane juice in vessels of the ordinary atmospheric pressure. **pectin s.** See *arabinose*. **rag s.** See *glucose*. **refined s.** White s.; cane s. purified and deprived of coloring matter. **starch s.** See *glucose*. **s. candy**. Rock candy. **s. in urine, how to test for**, see in *appendix*, page . **s. in urine, test for amount of**, see in *appendix*, page . **s. of lead**. Lead acetate. **s. of milk**. See *lactose*. **s. of urine**. *Glucose*. **s. puncture**. Name given to the operation of puncturing the floor of the fourth ventricle whereby the condition of glycosuria is produced. **uncrystallizable s.** See *levulose*. **vacuum pan s.** S. prepared by concentration of cane juice under a pressure much less than that of the atmosphere. [Lat., *saccharum*.]

sugarin (shug'ar-in). Methylbenzol sulphurid.

sugar test. See under *test*.

suggestion (suj-jest'shun). 1. The act of suggesting. 2. The thing suggested. **hypnotic s.** The process by which a hypnotized person is made to accept a hint or statement. [Lat., *suggerere*, to suggest.]

suggestions to medical authors. See in *appendix*.

suggillation (sug-jil-a'shun). A black and blue mark, as of a bruise. [Lat., from *suggillare*, to bruise.]

sui generis (su'e jen'er-is). Of his, or her, or its peculiar kind; singular. [Lat.]

sulcate (sul'kät). Grooved, furrowed. [Lat., *sulcare*, to furrow.]

sulculus (sul'ku-lus). A small furrow or sulcus. [Lat., dim. of *sulcus*, a furrow.]

sul'cus. Pl. *sulci*. A groove or furrow; a fissure, especially of the cerebrum. **anterior occipital s.** A s. separating the central fissure from the first occipital gyrus, connecting with the parietal fissure. **external s. of Reil**. A fissure separating the insula from the precentral, postcentral, and subfrontal gyri. **frontomarginal s.** Of Wernicke, a small longitudinal fissure on the ventral surface of the frontal lobe, which separates the orbital and frontal lobes. **infra-insular s.** A fissure separating the insula from

the temporosphenoidal lobe. **peduncular s.** Syn.: *peduncular fissure*, *horizontal fissure of the cerebellum*. A transverse s. which commences close to the middle peduncle of the cerebellum around the outer border of which it passes backward. **preinsular s.** A fissure in front of the insula and separating it from the posterior orbital convolution. **subparietal s.** A shallow depression or inconstant fissure that is a continuation upward and outward of the callosomarginal fissure. **s. alaris**. The furrow just above the ala nasi. **s. alveolobuccalis**. The s. between the gums and the inside of the cheek. **s. alveololingualis**. The s. between the gums and the mucous membrane of the tongue. **s. aorticus**. A depression on the median surface of the left lung for the descending aorta. **s. arteriae occipitalis**. A groove on the inner side of the internal aspect of the mastoid process of the temporal bone, which lodges the occipital artery. **s. ethmoidalis**. A groove on the posterior surface of the nasal bone. **s. infrapalpebralis**. The furrow beneath the lower eyelid. **s. jugularis**. A groove for the lateral sinus on the upper surface of the jugular process of the occipital bone. **s. longitudinalis**. One of the longitudinal grooves of the heart. **sulci meningei**. Furrows for blood vessels on the ental surface of the cranial bones. **s. mentolabialis**. A transverse depression between the lower lip and the chin. **s. nasolabialis**. The transverse groove between the nose and the upper lip. **s. nasopalatinus**. The furrow for the nasopalatine nerve on the side of the vomer. **s. preauricularis**. See *fossa preauricularis*, under *fossa*. **s. pulmonalis**. The depression on either side of the vertebral column formed by the backward curvature of the ribs. **s. sclerae**, **s. scleroticae**. A depression of the anterior margin of the sclera at its junction with the cornea. **s. sigmoideus**. See *fossa sigmoidea ossis temporalis* and *cavernous groove*, under *groove*. **s. spiralis cochleae**. The groove between the labium tympanicum and labium vestibulare. **s. subclavius**. 1. A groove on the first rib in which the subclavian artery rests, close to the tubercle for the insertion of the scalenus anticus. 2: A furrow on the apex of the lung formed by the subclavian artery. 3. A depression in the clavicle into which the subclavian muscle is inserted. **s. tali**. A deep furrow on the lower surface of the astragalus, dividing its articular surface into two portions. **s. transversus ossis occipitalis**. The groove in the occipital bone for the lateral sinus. **s. transversus ossis parietalis**. A broad flat groove on the inner surface of the postero-inferior angle of the parietal bone for the lateral sinus. **s. tympanicus**. The groove-like furrow in the bony tympanic ring for the reception of the margin of the tympanic membrane. **s. ulnaris humeri**.

- The groove on the posterior surface of the internal condyle of the humerus for the ulnar nerve. **sulci vertebrales**. The grooves seen on either side of the spinous processes of the vertebrae when viewed from behind. [Lat.]
- sulphacetamid** (sul-fas-et-am'id). The compound, $S(CH_2.CO.NH_2)_2$.
- sulphaminol** (sul-fam'in-o-l). Thioxydiphenylamin, $NH:(C_6H_5.OH)_2$. According to Moritz, it acts like iodoform in diminishing suppuration.
- sulphate** (sul'fât). A salt of sulphuric acid.
- sulphazotized** (sul-faz'o-tized). Containing sulphur and nitrogen.
- sulphid** (sul'fid). A compound of an element or radicle united directly with sulphur, or a salt of hydrogen sulphid.
- sulphin** (sul'fin). Any one of a class of radicles, analogous to the amins, in which sulphur is present as a quadrivalent body.
- sulphiodid** (sul-fi'od-id). A compound of sulphur and iodine with the same base.
- sulphite** (sul'fit). A salt of sulphurous acid.
- sulphobromid** (sul-fo-bro'mid). A compound of sulphur and bromine with the same base.
- sulphocarbonate** (sul-fo-kar'bo-lât). A salt of sulphocarbonic acid.
- sulphocarbonic** (sul-fo-kar-bol'ik-us). Sulphocarbonic; with the name of a base, the sulphocarbonate of the base.
- sulphochlorid** (sul-fo-klo'rid). A compound of sulphur and chlorine with the same base.
- sulphocyanid** (sul-fo-si'an-id). Syn.: *thiocyanid*. A salt of sulphocyanic acid (CNSH). The s's have been found in the saliva, the gastric juice, and the urine.
- sulpho-ethylicus** (sul-fo-eth-il'ik-us). Ethyl sulphuric; with the name of a base, the ethylsulphate of the base.
- sulphonal** (sul'fo-nal). Sulphon-methane; acetone diethylsulphone, $(CH_3)_2C(SO_2.C_2H_5)_2$; a white substance, slightly soluble in water. Used as a hypnotic. After the continuous use of s. hemato porphyrin may appear in the urine [Br. Ph.].
- sulphone** (sul'fôn). 1. A bivalent radicle, (SO_2) . 2. A compound of s. (1st def.) in which both free valences are satisfied by radicles containing carbon.
- sulphonethylmethane** (sul'fon-eth'il-meth'an). Trional, $C_8H_{18}S_2O_4$; a product of the solution of the mercaptol obtained by the condensation of methylethylketone with ethyl mercaptan. It is hypnotic, acting more promptly than sulphonal [U. S. Ph.].
- sul'phonmeth'an**. Sulphonal.
- sulphoparaldehyd** (sul-fo-par-al'de-hid). Trithialdehyd $(C_4H_4S_2)_3$; a hypnotic.
- sulphosal** (sul'fo-salt). A salt in which sulphur replaces an equivalent amount of oxygen.
- sulphur** (sul'fur). 1. A non-metallic element occurring in nature both free and combined. It forms yellow transparent rhombic crystals, insoluble in water, and only slightly soluble in alcohol or ether,

but very soluble in carbon disulphid, in benzene, in petroleum, and in oil of turpentine. Atomic weight, 32. Symbol, S. It is a laxative; also used in diseases of the skin. **confectio sulphuris, electuarium sulphuris**. A preparation made by rubbing together sublimed s., acid potassium tartrate in powder, syrup, tincture of orange peel, and powdered tragacanth [Br. Ph.]. **flowers of s.** Sublimed s. obtained in the form of light powdery flakes. **precipitated s.** S. obtained as a whitish amorphous powder, devoid of taste and odor, by precipitation of a solution of s. in milk of lime with hydrochloric acid [U. S. Ph., Br. Ph.]. **sublimed s.** S. obtained by sublimation in the form of a light microcrystalline powder [U. S. Ph.]. **s. depuratum**. Washed s. **s. dioxid**. Sulphurous oxid, sulphurous anhydrid; a colorless gas, SO_2 , of suffocating and irritating odor, formed by the combustion of sulphur and by the action of certain metals on sulphuric acid. It may be condensed into a liquid and has also been obtained in the solid form. In the presence of moisture it acts as a powerful bleaching and disinfecting agent. **s. iodidum**. A substance or mixture, composed of 20 per cent. of s. and 80 per cent. of iodine [U. S. Ph.]. **s. lotum**. Washed s. **s. sublimatum**. Of the U. S. Ph., **sublimed s. unguentum sulphuris**. S. ointment, containing 15 per cent. washed s. [U. S. Ph.] or 10 per cent. sublimed s. [Br. Ph.] with benzoated lard. **unguentum sulphuris alkalinum**. Helmerich's ointment; it consists of washed s. and potassium carbonate rubbed up with water and mixed with benzoated lard [N. F.]. **unguentum sulphuris compositus**. Hebra's itch ointment; it contains s., oil of cade, and soft soap [N. F.]. **washed s.** Sublimed s. freed from traces of sulphuric acid, etc., by washing with dilute ammonia water [U. S. Ph.].

sulphurated (sul'fur-a-ted). Containing or combined with sulphur.

sulphuratus (sul-fur-a'tus). Sulphureted; with the name of a base, the sulphid of the base.

sulphuret (sul'fu-ret). Same as *sulphid*.

sulphuretted (sul'fu-ret-ted). Combined with sulphur. **s. hydrogen**. H_2S , a gas, with an extremely disagreeable odor, resembling that of putrefied eggs. Formed on the putrefaction of proteins containing sulphur. It is poisonous. List of poisons and their antidotes, see in *appendix*, page 940.

sulphuric (sul-fu'rik). Containing sulphur combined with three atoms of oxygen. **s. acid**. See under *acid*. **s. anhydrid**. The anhydrid of s. acid. **s. ether**. See *ethyl ether*.

sulphuricus (sul-fu'rik-us). Containing sulphuric acid; with the name of a base, the sulphate of that base.

sulphurine (sul'fur-ën). A mixture of sodium and potassium sulphids with sulphur.

sulphurosus (sul-fu-ro'sus). Sulphurous;

with the name of a base, the sulphite of that base.

sulphurous (sul'fu-rus). Resembling sulphur; containing sulphur as a quadrivalent radicle. *s. acid.* See under *acid. s. anhydrid, s. oxid.* Sulphur dioxide.

sulphydrate (sulf-hi'drät). 1. See *hydro-sulphid.* 2. A compound of a metal or radicle with the univalent radicle (SH).

sulphydrin (sulf-i'drin). A compound of glycerin in which sulphydryl replaces hydroxyl.

sulphydryl (sulf-i'dril). A univalent radicle, SH.

sum'bul. Of the U. S. Ph., musk root. *S.* is also the name of various other fragrant roots or rhizomes, especially Indian nard. The extract and the fluidextract are official in the U. S. Ph. [Arab., *sumbul*, an ear or a spike.]

summation (sum-ma'shun). The production of larger contraction in a muscle by the production of two or more single contractions, when following at a certain rate; or in nerve cells the production of an efficient stimulus by the added effects of a number of stimuli which taken singly are insufficient. [Lat., *summare*, to sum up.]

sunstroke (sun'strök). Insolation; a morbid state due to exposure to great solar heat. There is marked muscular weakness, rapid and feeble pulse, and pyrexia.

super-. Combining form of Lat., *super*, above, beyond; used to signify above, superior.

superabduc'tion. Syn.: *hyperabduction.* Excessive abduction. [Lat., *super*, above, + *abducere*, to draw away.]

super'alimentation (su'per-al-im-en-ta'shun). Forced alimentation. See *alimentation.*

supercarbonate (su-per-kar'bon-ät). See *bicarbonate.*

supercilium (su-per-sil'e-um). The eyebrow; an arched eminence of integument which surmounts the upper border of the orbit and supports numerous short, thick hairs, directed obliquely to the surface. It consists of thickened integument connected beneath with the orbicularis palpebrarum, corrugator supercilii, and occipitofrontalis. *s. acetabuli.* The lip, or elevated margin, of the acetabulum. [Lat., *super*, above, + *cilium*, eyelid or eyelash.]

superfecundation (su'per-fe-kun-da'shun). The fecundation of more than one ovule of the same ovulation as the result of separate acts of coitus with one or more males. [Lat., *super*, in excess, + *fecundare*, to make fruitful.]

superfetation (su'per-fe-ta'shun). The supposed fecundation (now held to be impossible) of an ovule proceeding from one ovulation while a fecundated ovum proceeding from a previous ovulation is still in course of uterogestation. See *superfecundation.*

superfibrination (su'per-fi-brin-a'shun). See *hyperinosis* (2d def.).

superficialis (su-per-fish-e-al'is). Super-

ficial; an organ situated on or close to the surface.

superficies (su-per-fish'e-es). See *surface.*

s. articularis arytenoidea. The surface upon the cricoid cartilage for articulation with the arytenoid cartilage.

s. articularis fibularis (lateralis). A rounded or triangular articular surface on the tibia for articulation with the fibula.

s. articularis thyroidea. A depression on the cricoid cartilage for articulation with the thyroid cartilage.

s. auricularis. 1. The ear-shaped area by which the sacrum articulates with the ilium. 2. The corresponding area of the ilium.

s. cardiaca. The inner surface of the lung.

s. convexa, s. costalis. The outer surface of the lung.

s. diaphragmatica. The lower surface of the lung.

s. lunata (ossis coxae). That part of the acetabulum that is covered with cartilage.

s. lunata radii. The sigmoid cavity of the radius.

s. petro-occipitalis (ossis temporis). The deepened surface covered with cartilage, between the pyramidal portion of the temporal bone and the occipital bone.

s. symphyseos pubis. The surface of the horizontal ramus of the os pubis where it unites with its fellow of the opposite side in the symphysis. [Lat., *super*, above, + *facies*, a face.]

superimpregnation (su'per-im-preg-na'shun). See *superfetation* and *superfecundation.*

superinfection (su'per-in-fek'shun). Infection additional to a previous infection.

superinvolution (su'per-in-vol-u'shun). Excessive involution (which is impossible—the condition is really atrophy).

superior (su-pe'e-or). 1. Situated on the upper portion of a part or organ. 2. As a n. m., a muscle occupying a relatively high position. [Lat., comp. of *super*, above, beyond.]

superlactation (su'per-lak-ta'shun). Over secretion of milk. [Lat., *super*, in excess, + *lac*, milk.]

supernatant (su-per-na'tant). Of a liquid, situated above a solid layer, such as a precipitate. [Lat., *super*, above, + *natans*, from *natare*, to swim.]

supernutrition (su'per-nu-trish'un). See *hypertrophy.*

superoxydized (su-per-oks'id-ized). Containing an excess of oxygen.

superoxylate (su-per-oks'il-ät). An acid oxylate.

superphosphate (su-per-fos'fät). A dihydric phosphate.

supersalt (su'per-salt). A salt containing an excess of acid.

supersaturated (su-per-sat'u-ra-ted). More than saturated (said of certain solutions, e. g., a solution of sodium sulphate, which contain, as the result of dissolving by heat and subsequent cooling, more of a given substance than they are capable of dissolving at an ordinary temperature). *s. solution.* See under *solution.* [Lat., *super*, over, + *saturated.*]

supersaturation (su'per-sat-u-ra'shun). The process of supersaturating or the

- state of being supersaturated. [Lat., *super*, over, + *saturation*.]
- supersecretion** (su'per-se-kre'shun). Excessive secretion. [Lat., *super*, in excess, + *secernere*, to separate.]
- supertension** (su'per-ten'shun). Excessive tension. [Lat., *super*, in excess, + *tensio*, a stretching.]
- supervacuation** (su'per-vak-u-a'shun). An abnormal and critical discharge. [Lat., *super*, in excess, + *vacuare*, to make empty.]
- supination** (su-pi-na'shun). 1. That posture of the body in which, while it is recumbent, the face looks upward; of the hand, that posture in which the palm is directed upward. 2. The act of assuming or producing such a posture. [Lat., *supinare*, to bend backward.]
- supinator** (su-pi-na'tor). A muscle that effects or assists in supination of the forearm. See *table of muscles*, under *muscle*.
- suplago toxin** (su-pla-go-tok'sin). A toxin produced by the bacillus of swine plague. [Lat., *sus*, swine, + *plaga*, plague, + *toxin*.]
- support'**. 1. The act of holding anything up in its place. 2. Anything acting as a supporter. **s. of the perineum**. The act of supporting the perineum with the hand during the expulsion of the fetal head, to prevent or moderate its laceration. [Lat., *sub*, under, + *portare*, to carry.]
- support'er**. That by means of which anything is supported or held up in its place. **abdominal s.** See *abdominal belt*, under *abdominal*. **hypogastric s.** See *hypogastric belt*, under *hypogastric*. **pile s., prolapsus ani s.** A pad worn over the anus and strapped over the perineum and around the waist.
- supposit'orium**. Suppository.
- suppository** (sup-poz'it-or-e), pl., *suppositoria*. A s. is a mixture of medicinal substances with a solid vehicle, such as oil of theobroma, which melts at the temperature of the human body. Used for introduction into the vagina, urethra, etc. [Lat., *suppositorium*.]
- suppression** (sup-pres'shun). 1. Repression of the outward manifestations of a morbid condition. 2. The discontinuance of the formation of discharges, especially of secretions or of the menses. **s. of the menses**. 1. That variety of amenorrhea in which menstruation, after having once been established, ceases from some other cause than impregnation or the climacteric. 2. Suspension of menstruation from pregnancy. **s. of urine**. A condition in which the secretion of urine is interfered with in consequence of renal disorder. [Lat., *suppressio*, from *supprimare*, to press down.]
- suppurant** (sup'pu-rant). 1. Pertaining to suppuration. 2. An agent that produces suppuration.
- suppurating** (sup'pu-ra-ting). See *purulent*.
- suppuration** (šup-pu-ra'shun). The process by which leukocytes, serum, and various tissue form pus. [Lat., *sub*, under, + *puris*, pus.]
- suppurative** (sup'pu-ra-tiv). 1. Pertaining to suppuration. 2. See *purulent*. 3. Promoting suppuration.
- su'pra-**. Combining form of Lat., *supra*, above.
- supracapsulin** (su-prah-cap'su-lin). See *epinephirin*.
- supraclavicularis** (su'prah-cla-vic-u-la-ris). See *table of muscles*, under *muscle*.
- supramaxillary** (su-prah-maks'il-la-re). Pertaining to the superior maxilla.
- supra-orbital** (su-prah-or'bit-äl). Situated above orbit, either on face or within cranium.
- suprarenal** (su-prah-re'nal). 1. Situated above the kidney. 2. Pertaining to the s. capsule; as a n., the s. capsule. **s. alkaloid**. See *adrenalin*. **s. glands**. See *s. capsules*, under *capsule*. **s. liquid**. An aqueous extract of suprarenal glands preserved with chloretone. [Lat., *supra*, above, + *ren*, the kidney.]
- suprarenalin** (su-prah-re-näl'in). See *adrenalin*.
- suprarenin** (su-prah-ren'in). A substance obtained from the suprarenal gland, supposed to be its active principle. See also *adrenalin*.
- supraspinalis** (su'pra-spi-na'lis). See *table of muscles*, under *muscle*.
- supraspinatus** (su'prah-spi-na'tus). See *table of muscles*, under *muscle*.
- su'ral**. Pertaining to the calf of the leg. [Lat., *sura*, the calf of the leg.]
- surcingle** (sur'sin-gl). The slender, loop-like prolongation of the corpus striatum described by Dalton as "running forward in the roof of the inferior horn of the ventricle, to reach the amygdala at the base of the brain." [Lat., *supra*, over, + *cingulus*, belt.]
- surexcitation** (sur-ek-si-ta'shun). Excessive excitation.
- surface** (sur'fas). The outside or limiting part of a solid body; hence the face or one of the faces of a body. **auricular s. (of the ilium or of the sacrum)**. See *superficies auricularis*, under *superficies*. **demarcation s.** The cut s. of a muscle, which is electronegative to the uninjured portion of the muscle. **glenoid s.** See *glenoid cavity*, under *cavity*. **nasal s. (of the superior maxilla)**. S. of superior maxilla that is directed toward nose. **orbital s. (of the superior maxilla)**. Upper s. of superior maxilla. **popliteal s. of the femur**. A triangular s. of femur included between internal and external supracondylar lines. It forms floor of upper part of popliteal space. **sphenomaxillary s.** Portion of the ala magna of sphenoid bone that enters into the formation of the sphenomaxillary fossa. **temporal s.** A flat s. on parietal bone, bounded by temporal line. [Fr., *sur*, + *face*, from Lat., *facies*.]
- surgeon** (sur'jun). One who practises surgery; one who performs manual operations on patients. [Old Eng., *sourgeon*, *surgien*, *surgeyn*, *surgen*. Later, *chirurg*

geon, or *cheirurgeon*, from Gr., *cheir*, hand, + *ergon*, work.]

surgery (sur'jē-re). 1. That department of medicine which deals with operative or manipulative treatment. 2. As used in Great Britain, a place in which a surgeon does minor operations and dispenses medicines. **anaplastic s.** See *plastic s.* **antiseptic s.** S. practised in accordance with antiseptic methods. **conservative s.** S. which looks to the preservation of a part rather than its removal. **major s.** S. that deals with severe injuries or capital operations. **military s.** The s. which deals especially with the injuries received in war. **minor s.** S. which deals with minor operations and the dressing of wounds. **operative s.** S. which has to do with the performance of operations. **orthopedic s.** That branch of s. that deals with the prevention and the mechanical and operative treatment of deformities. **plastic s.** S. which effects the restoration of parts that have been lost or destroyed. **railway s.** The s. of those injured on railroads. **subcutaneous s.** S. in which the operation is performed beneath the skin, the instruments being introduced through a small cutaneous incision. **veterinary s.** The s. of the domestic animals. [Old Eng., *surgeire*, from Gr., *cheirourgia*.]

surgical (sur'jik-al). Pertaining to, effected by, calling for, or due to surgery; in accordance with the rules of surgery.

surprise. 1. The feeling excited by an unexpected occurrence. 2. The occurrence itself. [Lat., *super*, over, + *prehendere*, to lay hold of.]

sursumduc'tion. The power of rotating the eyes in the horizontal meridian so that the effect of prisms, bases up or down, is overcome. [Lat., *sursum*, upward, + *ducere*, to lead.]

susceptibility (sus-sep-ti-bil'it-e). A diminished power of resistance toward the action of pathogenic bacteria in the tissues of the body.

susotoxin (su-so-tok'sin). A basic substance, or ptomain, probably $C_{10}H_{16}N_2$, obtained from cultivations of the hog-cholera microbe; toxic only in large doses. [Lat., *sus*, hog, + *toxin*.]

suspended (sus-pend'ed). 1. Hanging. 2. Interrupted, e. g., s. animation. [Lat., *suspendere*, to suspend.]

suspension (sus-pen'shun). Suspending, sustaining. In pharmacy, a term applied to solutions in which the substance dissolved remains in particulate form, capable of settling out as a sediment. [Lat., *suspensio*, from *suspendere*, to hang.]

suppiration (sus-pi-ra'shun). Sighing. [Lat., *suspirare*, to draw a long breath.]

sustentaculum (sus-ten-tak'u-lum), pl., *sustentacula*. Support, stay. s. **tali**. See *calcaneus*. [Lat., *sustentare*, to support.]

suture (su'tūr). 1. That variety of synarthrosis in which the bones are articulated by their edges, generally by means of serrations; a dovetail joint. 2. The procedure of stitching parts together particularly the lips of a wound. 3.

The thread or other like material, together with the method of inserting it, in the operation of stitching parts together. The chief materials used for s's are: catgut, linen thread (twisted or braided), kangaroo tendon, silkworm gut, pure silver wire, silver-plated copper wire.

approximation s. A s. of the skin only. **basilar s.** The s. between the occipital bone and the body of the sphenoid bone. **bifrontal s.** See *coronal s.* **biparietal s.** See *sagittal s.* **buried s's.** S's (2d def.) that are completely covered by skin and do not involve that structure at all. **button s.** One in which the threads are passed through buttons on the surface and tied. **coaptation s.** A uniting or coapting s. as distinguished from a s. intended to relieve tension. **cobbler's s.** A form of s. in which the thread has a needle at each end. **continuous s.** The closure of a wound by means of one continuous thread, usually by transfixing first one lip and then the other, alternately, from within outward. **coronal s.** The frontal and parietal bones. **cranial s's.** The s's between the bones of the skull. **Cushing's s.** See *right-angled s.* **dentate s.** An articulation by s. into the formation of which long and toothlike processes and deep indentations enter. **ethmoidofrontal s.** The s. between the ethmoid and frontal bones. **ethmolacrimal s.** The s. between the ethmoid and lacrimal bones. **ethmosphenoidal s.** The s. between the ethmoid and sphenoid bones. **false s.** Any form of suture in which the bones interlock by serrations. **figure-of-eight s.** See *twisted s.* **frontal s.** An occasional s. in the frontal bone continued forward from the sagittal s. to the root of the nose. **fronto-ethmoidal s.** See *ethmoidofrontal s.* **frontolacrimal s.** The s. between the frontal and lacrimal bones. **frontomalar s.** The s. between the frontal and malar bones. **frontomaxillary s.** The s. between the frontal bone and the superior maxilla. **frontonasal s.** The s. between the frontal bone and the alae of the sphenoid bone. **frontoparietal s.** The coronoid suture. **frontotemporal s.** The s. between the frontal and temporal bones. **Glover's s.** A continuous s. in which the needle is, after each stitch, passed through the loop of the preceding stitch. **harelip s.** See *twisted s.* **implanted s.** A s. formed by implanting pins opposite each other on the two sides of a wound, and approximating the lips by winding thread or other similar material about the pins. **intermaxillary s.** The s. between the superior maxillae. **internasal s.** The s. between the nasal bones. **interparietal s.** See *sagittal s.* **interrupted s.** A s. formed by single stitches inserted separately, the needle being usually passed through one lip from without inward, and through the other from within outward. **jugal s.** See *sagittal s.* **lambdoid s.** The s. between the parietal bones and the two

superior borders of the occipital bone. **Lembert's s.** An intestinal s. in which the thread passes through the mucous membrane alone, so as to bring that membrane and the connective tissue upon which it rests together. **longitudinal s.** See *sagittal s.* **masto-occipital s.** See *occipitomastoid s.* **mastoparietal s.** See *parietomastoid s.* **mattress s.** A continuous s. in which a stitch is taken with a needle, the thread is tied, and then the needle is inserted upon the same side as that from which it emerged and passed in the opposite direction through both lips of the wound, the direction of the needle being reversed at each stitch. **maxillo-lacrimal s.** The s. between the maxilla and the lacrimal bone. **maxillo-premaxillary s.** A s. between the premaxillary portion of the superior maxilla and the rest of the bone. **mediofrontal s.** See *frontal s.* **metopic s.** See *frontal s.* **nasomaxillary s.** The s. between the nasal bone and the superior maxilla. **occipital s.** See *lambdaoid s.* **occipitomastoid s.** The s. between the occipital bone and the mastoid portion of the temporal bone. **occipitoparietal s.** See *lambdaoid s.* **palatine s.** A s. between the palate bones. **palatine transverse s.** A s. between the palate processes of the palate bone and the superior maxilla. **parietal s.** See *sagittal s.* **parietomastoid s.** The s. between the parietal bone and the mastoid portion of the temporal bone. **petro-occipital s.** The s. between the petrous portion of the temporal bone and the occipital bone. **petrosphenoidal s.** The s. between the petrous portion of the temporal bone and the ala magna of the sphenoid bone. **quilled s., quill s.** An interrupted s. in which a double thread is passed deep into the tissues, even quite below the bottom of the wound, the needle being so withdrawn as to leave a loop hanging from one lip and the two free ends of the thread from the other. A quill, or, more commonly, a piece of bougie is passed through the loops, which are tightened upon it, and the free ends of each separate thread are then tied together over a second quill. The object is to bring the deep parts into firm coaptation. **relaxation s.** A s. so arranged that it may be loosened if the tension of the wound becomes excessive. **relief s.** A row of supplementary s's including the tissues to the extent of 1 or 1½ inch on each side of a fistula or a deep wound, for the purpose of lessening the strain on the coaptation s's. **right-angled s.** A s. used in sewing intestine. The needle is passed in the same direction as the long axis of the incision and the process repeated on the opposite side of the incision, the suture being continuous. **sagittal s.** The s. between the upper margins of the parietal bones. **serrated s.** An articulation by s. in which the bones are interlocked by small projections and indentations that are fine

and delicate as compared with those of the dentated s. **shotted s.** A form of s. in which both ends of a wire or silk-worm gut are passed through a perforated shot that is then compressed tightly over them. **sphenoparietal s.** The s. between the parietal bone and the ala magna of the sphenoid bone. **sphenopetrosal s.** See *petrosphenoidal s.* **sphenosquamous s.** See *squamosphenoidal s.* **sphenotemporal s.** The s. between the sphenoid and temporal bones. **squamosarietal s., squamosal s.** The s. between the parietal bone and the squamous portion of the temporal bone. **squamosphenoidal s.** The s. between the squamous portion of the temporal bone and the great wing of the sphenoid bone. **squafous s.** 1. See *squamosarietal s.* 2. A sharpened wire shaped like a staple that is passed through both lips of a wound and then bent back. **subcuticular s.** A buried continuous catgut s. in which the needle is passed horizontally beneath the epidermis into the cutis vera, emerging at the angle of the wound, then in a similar manner passed through the cutis vera of the opposite side of the wound, and so on until the other angle of the wound is reached. **temporo-occipital s.** See *occipitomastoid s.* **temporoparietal s.** The s. between the temporal and parietal bones, made up of the squamosal and parietomastoid s's. **transverse (frontal) s.** See *coronal s.* **twisted s.** A s. in which pins are passed through the opposite lips of a wound, at right angles to the direction of the wound, and thread, floss, or other like material is wound about the pins, crossing them first at one end and then at the other in a figure-of-eight fashion, thus holding the lips of the wound firmly together. **uninterrupted s.** See *continuous s.* **zygomatic s.** A s. between the zygomatic process of the superior maxilla and the temporal bone. [Lat., *sutura*, a seam, from *suere*, to sew.]

swab (swob). A bit of cotton gauze or the like fastened to a handle for cleansing cavities, such as the mouth or the vagina, or for applying remedies, or for obtaining a bit of tissue or secretion for bacteriological examination. [Dutch, *swabben*, a fine brush.]

swage (swāj). A tool or die for imparting a given shape to metal when laid hot on an anvil or in a press or when cold. [Derivation doubtful.]

sweat (swet). 1. The product of secretion from the perspiratory glands, perspiration; a clear, colorless acid, and, when first secreted, odorless liquid, the chief constituents of which are water, chlorids (especially sodium chlorid), fatty substances, and urea. 2. In popular language, sensible perspiration. **bloody s.** See *hematidrosis.* **cold s.** Perspiration accompanied by a sensation of cold. **colored s.** See *chromidrosis.* **night s.** The dreching s. of phthisis and other debilitating diseases. [Ang.-Sax., *swāt*.]

sweating (swet'ing). Perspiration. **s.**
sickness. See *miliary fever*, under *fever*.
Swedish gymnastics. See under *gymnastics*.
swelling. A traumatic, inflammatory, or other morbid enlargement. **albuminous s.** See *cloudy s.* **cloudy s.** *Syn.*: *albuminous degeneration*. A s. of cells due to irritation from chemical and bacterial toxins; they increase in bulk while the added material is not properly assimilated, but deposited in visible albuminous granules. **glassy s.** Amyloid degeneration. **white s.** Tuberculous arthritis, especially of the knee. [Old Eng., *swelling*, n. of action from *swell*.]
swinepox. *Syn.*: *swine plague*. 1. A disease peculiar to swine, characterized by hard inflammatory tubercles on the legs and thighs. 2. *Varicella*, especially *varicella globata*.
swoon. To swoon or faint; syncope. [ME., *swounen*, to sigh or swoon.]
swooning. Syncope.
sy'co-. Combining form of Gr., *sykon*, fig.
sycose (si'kös). See *saccharine*.
sycosis (si-ko'sis). *Syn.*: *acne mentaga*, *barber's itch*, *folliculitis barbae*, *non-parasitic s.*, *s. staphylogenes*. A pustular folliculitis of the hair follicles in the beard and moustache. It occurs in two forms: **s vulgaris**, due to infection with the common pus; and **tinea s.**, due to a combined infection with the fungus of ringworm and common pus organisms. [Gr., *sykosis*, a rough figlike excrescence on the skin.]
Sydenham's laudanum. See *tincture opii crocata*, under *opium*.
syllapsiology (sil'lep-se-ol'o-je). The physiology of conception. [Gr., *syllapsis*, conception, + *logos*, understanding.]
syllapsis (sil-lep'sis). See *conception*. [Gr., *syllambanein*, to conceive.]
sylvian (sil've-an). Investigated by or named for *François de la Boë Sylvius*, a French anatomist, 1614-1672. **s. fissure.** **f. of Sylvius.** A deep f. of the brain which divides into two limbs, one of which terminates in the lower frontal convolution while the other forms the boundary between the parietal and the temporosphenoidal lobes.
sym-, syn-. Combining form of Greek prefix, *syn*, with, along, or together with, beside.
sympion, symbiont (sim'be-on, sim'be-ont). An organism living in a condition of symbiosis. [Gr., *syn*, together, + *bios*, life.]
symbiosis (sim-bi-o'sis). The normal association of dissimilar organisms, on account of their being mutually serviceable. [Gr., *symbioun*, to live with.]
symblepharon (sim-blef'ar-on). Adhesion between the bulbar and palpebral conjunctivæ. [Gr., *syn*, with, + *blepharon*, the eyelid.]
symbol (sim'bol). In chemistry, a letter or combination of letters used to designate the atom of an element. Thus, O is the s. of oxygen. 2. In psycho-analysis the means

employed for more or less evolved expression of an idea or emotion. [Gr., *symbolon*, from *syballein*, to compare.]
symbols and abbreviations, see in *appendix*, page 941.
Syme's amputation. A dislocation of the foot and removal of both malleoli. [James Syme, Scotch surgeon, 1799-1870.]
symmelia (sim-me'le-ah). A condition in which the lower extremities are completely or almost completely united. [Gr., *syn*, with, + *melos*, a limb.]
symmetrical (sim-met'rik-al). 1. Having the parts disposed in some regular order relatively to each other or relatively to an imaginary axis or medial plane in the organism. 2. Of a trisubstituted benzene compound, having all three of the replacing radicles attached to alternate atoms of carbon. [Gr., *syn*, with, + *metron*, a measure.]
symmetry (sim'met-re). The condition of being symmetrical.
sympathetic (sim-pa-thet'ik). Having sympathy with something else, due to sympathy, maintaining or promoting sympathy; pertaining to the s. nerve; as a n., the s. nerve. **great s.** See *s. nerve*, under *nerve*. [Gr., *syn*, with, + *pathos*, suffering.]
sympathy (sim'path-e). That relation of different parts of the system in virtue of which one part becomes diseased or disordered in consequence of disease or disorder existing in some other part, not because of actual extension of the morbid process by continuity of structure. [Gr., *sympatheia*, from *syn*, with, + *pathos*, suffering.]
symphora (sim'fo-rah). See *congestion*. [Gr., *sympotherein*, to bring together.]
sympthorol (sim'fo-rol). This is a collective name for a series of caffeine combinations, e. g., s. Na. is sodium and caffeine sulphonate, s. Li. and s. St. being the corresponding lithium and strontium compounds.
symphyseotomy (sim-fiz-e-ot'o-me). The operation of cutting through the symphysis pubis in order to enlarge the obstetric diameters of the pelvis. [Gr., *sympheysis*, symphysis, + *tomē*, a cutting.]
sympysis (sim'fis-is). A joint, whether movable or immovable, in which the bones are held together by some structure interposed between them. As commonly employed, the word refers more particularly to the pelvic joint, formed by the two pubic bones. **pubic s.** The union of the pubic bones in the middle line. **renal s.** More or less complete fusion of the two kidneys. **s. of the jaw.** An anterior median vertical ridge upon the outer surface of the lower jaw indicating the line of union of its two halves. [Gr., *sympheysis*, from *syn*, together, + *phyein*, to grow.]
sympophysodactylia (sim'fis-o-dak-til'e-ah). See *syndactylism*. [Gr., *sympheyein*, to grow together, + *daktylos*, a finger.]
sympophysoskelia (sim'fis-o-ske'le-ah). The condition of a symphysis. [Gr., *sympheysis*, a growing together, + *skelos*, the leg.]

Symphytum (sim'fi-tum). A genus of the *Boraginaceae*; of the ph's, *S. officinale*. *S. majus*, *S. officinale*. The common comfrey; a mucilaginous plant of Europe and northern Asia, naturalized in North America. The root was formerly reputed a vulnerary, but is now used as a demulcent and pectoral. [Gr., *symphyton*.]

sympiesometer, sympiezometer (sim-pi-es-om'et-er, sim-pi-ez-om'et-er). A barometer in which the changes of volume in a quantity of confined air indicate the fluctuations of the atmospheric pressure. [Gr., *sympiesein*, to compress, + *metron*, a measure.]

Symplocarpus (sim-plo-kar'pus). A genus of the *Aroideae*. *S. foetidus*. Skunk cabbage, the dracontium of the U. S. Ph., 1870. The rhizome and the radicles are stimulant, antispasmodic, and narcotic. [Gr., *symplokos*, entwined, + *karpos*, fruit.]

symplocia (sim-plo'se-ah). A morbid intertwining of parts. [Gr., *syn*, with, + *ploke*, a twining.]

symptom (simp'tom). Any perceptible change in the body or its functions which may be taken as an indication of the nature, situation, severity, etc., of a morbid process. See also *sign*. **constitutional s's.** S's causing a general feeling of illness. **direct s.** A s. that depends directly upon the disease it accompanies. **general s's.** See *constitutional s's.* **indirect s.** A s. which is the indirect consequence of the disease. **localizing s.** A s. pointing directly to the organ or part affected. **local s.** A s. in some particular part of the body. **objective s.** A s. which can be recognized by another person as well as the patient. **pathognomonic s.** A s. which undeniably indicates the existence of a certain disease. **premonitory s's.** S's which serve as a warning. [Gr., *symptetein*, to fall together.]

symptomatic (simp-to-mat'ik). According to or pertaining to symptoms; of the nature of a symptom.

symptomatology (simp-to-mat-ol'o-je). The science or study of symptoms. [Gr., *symploia*, a symptom, + *logos*, understanding.]

synadelphus (sin-ad-el'fus). A monster having one head and one trunk, but eight distinct limbs, instead of the normal four. [Gr., *syn*, with, + *adelphos*, a brother.]

synarthrosis (sin-ar-thro'sis). That order of articulation (arthrosis) which includes the immovable joints. Its varieties are suture, harmony, and gomphosis. **diarthrodial s.** See *amphiarthrosis*. [Gr., *syn*, with, + *arthron*, a joint.]

syncausis (sin-kaw'sis). Combustion. [Gr., *sygkausis*.]

synchondrosis (sin-kron-dro'sis). That variety of symphysis in which the bones are articulated by means of cartilage interposed between them. *s. arycorniculata*, *s. arysantoriniana*. The s. between the arytenoid cartilages and the cartilages of Santorini. *s. intersphenoidalis*. The fetal s. between the

basisphenoid and presphenoid bones. *s. sacrococcygea*. The s. between the sacrum and the coccyx. *s. sphenobasilaris*. See *s. sphenoccipitalis*. *s. sphenoidalis*. See *s. intersphenoidalis*. *s. sphenoccipitalis*. The s. between the basilar process of the occipital bone and the body of the sphenoid bone. [Gr., *syn*, with, + *chondros*, cartilage.]

synclitism (sin'klit-izm). The parallelism between the planes of the fetal head and the planes of the interior of the mother's pelvis. [Gr., *synklinein*, to lean together.]

synclonus (sin'klo-nus). See *general convulsion*, under *convulsion*. [Gr., *syn*, with, + *klonos*, a violent, confused motion.]

syncopal (sin'ko-pal). Pertaining to, affected with, or of the nature of syncope.

syncope (sin'ko-pe). Fainting; pallor and loss of consciousness from sudden weakness of the heart's action. **local s.** A sudden and temporary blanching and loss of sensibility in a part, generally one or more of the fingers. [Gr., *synkoptein*, to cut short.]

syncoptic (sin-kop'tik). Pertaining to or causing syncope.

syncrisis (sin'kri-sis). In ancient chemistry, the passage of a body from the liquid into the solid state. [Gr., *sygkrisis*, from *sygkrinein*, to compound.]

syncyanin (sin-si'an-in). The blue pigment produced by the *Bacillus syncyanus*.

syncytiolysin (sin-sit-e-o'is-in). A lysin that kills the syncytium; it is produced in the blood of animals by injecting the syncytium from another species of animal.

syncytioma (sin-sit-e-o'mah). Syns.: *chorio-epithelioma malignum*, *deciduoma malignum*, *syncytial carcinoma*. A malignant tumor of the puerperal uterus originating in the cells of the villi. [Gr., *syn*, with, + *kytos*, cell, + *oma*, tumor.]

syncytium (sin-sit'e-um). A cell-aggregate or group; particularly the tissue forming the outer layer of the early chorionic villi, a continuous protoplasmic mass containing numerous small, irregularly scattered nuclei. [Gr., *syn*, with, + *kytos*, hollow.]

syndactylism (sin-dak'til-izm). Coherence of two or more fingers or toes for the greater part of their extent. [Lat., *syndactylia*, from Gr., *syn*, with, + *dactylos*, a finger.]

syn'desm-. Combining form of Gr., *syndesmos*, a ligament, from *syn*, together, + *dein*, to bind.

syndesmectopia (sin'des-mek-to'pe-ah). Abnormal position of a ligament. [Gr., *syndesmos*, a bond, + *ektos*, out of place.]

syndesmosis (sin-des-mo'sis). That variety of articulation by symphysis in which the bones are united by ligaments. [Gr., *syndesmos*, a bond.]

syndeticon (sin-det'ik-on). A varnish made of fish-glue, glacial acetic acid, and

gelatin dissolved in water and mixed with shellac varnish.

syndrome (sin'drôm). A concomitant symptom; the concurrence of several symptoms not indicating a disease with well-defined anatomical lesions, but rather a condition. **Stokes-Adams s.** See *Stokes-Adams*. [Gr., *syndrome*, concurrence.]

synchia (sin-e'ke-ah). Continuity, union, adhesion. **anterior s.** Adhesion of the iris to the posterior surface of the cornea. **posterior s.** Adhesion of the posterior surface of the iris, usually the sphincter margin, to the anterior capsule of the lens. [Gr., *synchein*, to hold together.]

syncephalia (sin'en-sef-al'e-ah). A double monstrosity in which there are two fully developed bodies with only a single head. [Gr., *syn*, with, + *egkephalos*, the brain.]

synergia, synergy (sin-er'je-ah, sin'er-je). Associated energy. [Gr., *synergeia*.]

synergist (sin'er-jist). Cooperating; as a n., a muscle that cooperates with another, also a drug that intensifies the action of another drug.

synesthesia (sin-es-the'se-ah). Sensation produced in one part due to stimulation applied to another part. [Gr., *syn*, with, + *aisthesis*, sensation.]

syngenic, syngenic (sin-jen-et'ik, sin-jen'ik). See *congenital*.

synophthalmus (sin-of-thal'mus). See *cyclops*. [Gr., *syn*, with, + *ophthalmos*, the eye.]

synorchism (sin'or-kizm). Union or fusion of the testicles. [Gr., *syn*, together, + *orchis*, testicle.]

synostosis, synostosis (sin-os-te-o'sis, sin-os-to'sis). Union by means of bone; ankylosis. [Gr., *syn*, with, + *osteon*, a bone.]

synovia (sin-o've-ah). Syn.: *mucus articulo-rum*; *joint juice*. A tenacious, colorless, stringy secretion which lubricates a joint. [Lat., from Gr., *syn*, with, + Lat., *ovum*, egg.]

synovial (sin-o've-al). 1. Pertaining to or resembling synovia. 2. Possessed of a s. membrane.

synovin (sin'o-vin). A mucinlike body isolated from pathological synovial fluid.

synovitis (sin-o-vi'tis). Inflammation of the synovial sac of a joint or of that of a tendinous sheath. [Gr., *syn*, together, + Lat., *ovum*, egg, + Gr., *itis*, inflammation.]

synteresis (sin-ter-e'sis). Conservation, preservation. [Gr., *syn*, together, + *terein*, to watch over.]

synthesis (sin'the-sis). The building up of a single complex substance out of two or more simple substances. The primal body has the property of s. The classical example is the formation of hippuric acid in rabbits after the ingestion of benzoic acid and glycocholl. [Gr., *syn*, together, + *tithenai*, to put.]

synthetical (sin-thet'ik-al). Pertaining to, or obtained by synthesis. In chemistry,

that branch of it which deals with the building up of chemical compounds from the elements.

synthorax (sin-tho'raks). See *thoracopagus*. [Gr., *syn*, with, + *thorax*, the thorax.]

syntonin (sin'to-nin). A proteid obtained from muscular tissue.

syntoxoid (sin-toks'oyd). A toxoid which possesses the same affinity towards an antitoxin as that which the associated toxin has towards it. [Gr., *syn*, with, + *toxikon*, poison, + *eidosis*, resemblance.]

sypilid (sif'il-id). Syn.: *syphiloderma*. Any of the cutaneous lesions of syphilis. The following varieties characterized by the predominating skin lesion in each case are described: acneform, acuminate papular, annular, bullous, ecthymatous, erythematous, flat papular, follicular, frambesoid, gummatous, herpeticiform, lenticular, macular miliary papular, nodular, pemphigoid, pigmentary, pustular, tubercular, ulcerated, varicelliform, varioliform, vegetating, vesicular. [Fr.]

sypilology. See *syphilology*.

sypilis (sif'il-is). A specific, inoculable, constitutional disease, which in its earlier stage presents symptoms of systemic intoxication analogous to the symptoms of acute infectious fevers, especially the exanthemata, and in its later stage presents circumscribed lesions of many of the structures of the body, which have characteristics like tuberculosis and leprosy. It is propagated most often by sexual intercourse, less commonly by contaminated hands, or utensils, and sometimes by inheritance. The specific organism causing it is the *Treponema pallidum*, originally called *Spirochaeta pallida*. The course of the disease is marked by: 1. The first period of incubation, from the time of infection to the appearance of the initial lesion, from 12 to 21 days. 2. The primary stage, from the appearance of the initial lesion to the development of the skin lesions, from 40 to 45 days. 3. The secondary stage, from the appearance of the skin lesions (as a rule ushered in by mild fever) until the disappearance of evidences of an active constitutional infecting disease. 4. The tertiary stage, after the disappearance of the evidence of general infection the development of circumscribed gummatous lesions. This last stage may be wanting. **congenital s.** S. that has existed in an individual from birth, either as hereditary s., or by having been communicated to the fetus from the mother through the uteroplacental circulation during intra-uterine life (intra-uterine or placental s.), or by contact with syphilitic lesions in the genital passages of the mother during parturition (infectio per partum). **constitutional s.** See *secondary s. cutaneous s.* See *syphilid*. **encephalic s.** S. of the brain. **extragenital s.** S. contracted otherwise than by coitus. **hereditary s.** Properly, s. transmitted at the time of conception either through in-

fect ed semen of the father or an infected ovum of the mother or through both. The term is often used for congenital s. **infantile s.** See *congenital s.* and *hereditary s.* **latent s.** Any stage of s. in which there are no active manifestations of the disease. **malignant s.** The occurrence of severe constitutional symptoms early in the secondary stage. **primary s.** S. as it exists in an infected individual during the period intervening between the first appearance of the initial lesion (or syphilitic chancre) and the development of constitutional (secondary) s. **secondary s.** S. during the period succeeding the second incubation, characterized by generalized manifestations of infection, chiefly in the form of superficial lesions of the skin and mucous membranes, together with various functional disturbances of the nervous and vascular systems, and preceding the occurrence of the symptoms of tertiary s. s. **innocentium, s. insonitium.** Syn.: *s. of the innocent.* S. contracted otherwise than by coitus. **tertiary s.** S. in an advanced stage, characterized by localized deposits in the connective tissue of various parts of the body, chiefly in the form of syphilomata. It is attended with deep-seated ulceration of the skin or mucous membranes and syphilitic osteitis, together with organic affections of the viscera and of the nerves and blood vessels. **vaccination s.** (rare). S. acquired by vaccination, either through vaccine virus obtained from a syphilitic subject or through syphilitic contamination of the wound during the operation, as by unclean instruments. The characteristic vaccine pustule is followed by an indurated chancre. **visceral s.** Tertiary or congenital s. in which the viscera are especially subject to the inflammatory process. [This word was originally used to designate a mythical character by Fracastori, who, in a Latin poem, published at Verona in 1521, represents his hero, *Syphilus*, as smitten with the disease for disrespect shown to the gods. It has been variously derived from the Gr., *syn*, with, + *philos*, loving, or from *syphilos*, friend of a pig; but there is no authority for either.]

syphilitic (sif-il-it'ik). 1. Affected with syphilis. 2. Pertaining to or having the nature of syphilis. [Lat., *syphiliticus*.]

syphilography (sif-il-og'ra-fe). A treatise on or description of syphilis. [Syphilis, + Gr., *graphein*, to write.]

syphiloid (sif'il-oyd). Relating to or resembling syphilis; as a n., any one of certain epidemic diseases more or less resembling syphilis. [Lat., *syphilis*, + Gr., *eidos*, resemblance.]

syphilologist (sif-il-ol'o-jist). One versed in the knowledge of syphilis. A specialist in the diagnosis and treatment of syphilis.

syphilology (sif-il-ol'o-je). The pathology, etc., of syphilis. [Syphilis + Gr., *logos*, understanding.]

syphiloma (sif-il-o'mah). The gumma of

tertiary syphilis. [Syphilis + Gr., *oma*, tumor.]

syphilomania (sif-il-o-ma'ne-ah). See *syphilophobia*. [Syphilis + Gr., *mania*, madness.]

syphilophobia (sif-il-o-fo'be-ah). A morbid dread of having syphilis. [Syphilis + Gr., *phobos*, fear.]

syphilophyma (sif'il-o-fi'mah). Any growth or excrescence which is of a syphilitic character. [Syphilis + Gr., *phyma*, growth.]

syringe (sir'inj). An instrument consisting usually of a tube terminating in a small orifice and fitted with a piston by the action of which a liquid is first drawn in and then expelled in a stream, as for injecting animal bodies, cleansing wounds, and the like. Also a bag or receptacle for fluid together with an attached tube. [Gr., *syrix*, a tube.]

syringin (sir'in-jin). Lilacin, a glucosid, $C_{17}H_{24}O_6 + 4H_2O$, obtained from the bark of *Syringa vulgaris* and from *Ligustrum vulgare*. It is probably of no therapeutic value.

syringitis (sir-in-jit'is). Inflammation of the eustachian tube. [Gr., *syrix*, a tube, + *itis*, inflammation.]

syringo (sir-in-go). Combining form of Gr., *syrix*, *syringos*, pipe.

syringobulbia (sir-in-go-bul'be-ah). The presence of cavities in the medulla oblongata. [Gr., *syrix*, tube, + *bolbos*, bulb.]

syringocystadenoma (sir'in-go-sist'ad-e-no'mah). Of Unna, a papule said to be due to adenoid epithelioma of sweat glands. [Gr., *syrix*, a pipe, + *kystis*, a bladder, + *aden*, a gland, + *oma*, tumor.]

syringocystoma (sir-in'go-sis-to'mah). A cystic tumor situated in the ducts of the sweat glands. [Gr., *syrix*, a tube, + *kystis*, cyst, + *oma*, tumor.]

syringomeningocele (sir-in'go-men-in-go-sel). A meningocele which is similar in character to a syringomyelocele. [Gr., *syrix*, a pipe, + *menigr*, membrane, + *kele*, tumor.]

syringomyelia (sir-in-go-mi-e'le-ah). Syn.: *medullary gliomatosis*. A morbid condition characterized by the formation of irregular dilatations of the central canal of the spinal cord. [Gr., *syrix*, a fistula, + *myelos*, marrow.]

syringomyelocele (sir-in'go-mi'e'l-o-sel). A cyst of the spinal cord due to closure of the canal. See *spina bifida*. [Gr., *syrix*, tube, + *myelos*, marrow, + *kele*, tumor.]

syringomyelus (sir-in'go-mi'e'l-us). Dilatation of the central canal of the spinal cord accompanied by the conversion of the gray matter to connective tissue. [Gr., *syrix*, a tube, + *myelos*, marrow.]

syrup (sir'up). See *syrupus* [U. S. Ph., Br. Ph.]. **Easton's s.** See under *Easton*. **hive s.** Compound s. of squill. **simple s.** See *syrupus* (1st def.). [Lat., *syrupus*.]

syrupus (sir'up-us). 1. A concentrated solution of cane sugar in water. 2. A

medicinal preparation containing enough sugar to give it the consistence of syrup.

3. A class of pharmaceutical preparations consisting of ordinary s. containing some medicinal principle in solution [U. S. Ph., Br. Ph.]. **s. acidi citrici**. A s. of citric acid; citric acid 10 gm., tincture of fresh lemon peel 10 c.c., distilled water 10 c.c., syrup to make 1,000 c.c. [U. S. Ph.]. **s. aromaticus**. A preparation containing tincture of orange, cinnamon water, and syrup [Br. Ph.]. **s. fuscus, s. hollandicus**. Molasses. **s. hypophosphitum**. A syrup containing the hypophosphites of calcium, potassium, and sodium [U. S. Ph.]. **s. hypophosphitum compositus**. A very complex syrup containing, beside the hypophosphites of various bases, quinin and strychnin. It is reputed to be tonic, but the hypophosphites are probably useless therapeutically [U. S. Ph.]. [Lat.]

syssarcosis (sis-sai-ko'sis). That variety of articulation in which the bones are connected with each other by means of muscles (e. g., that of the scapula with the ribs). [Gr., *syn*, with, + *sarkosis*, fleshy growth.]

system (sis-tem). 1. A methodical arrangement of organisms, etc., according to their relationships. 2. A group or aggregation of organs or structures having special functions. **alimentary s.** See *gastro-enteric s.* **association s.** A s. of association fibers. **callosal s.** The s. of nerve fibers in the corpus callosum which, according to Meynert and Arnold, unite symmetrical regions in the two hemispheres. **cardiovascular s.** The heart and blood vessels. **central nervous s.** The brain and spinal cord. **circulatory s.** See *cardiovascular s.* **commissural s.** See *trabecular s.* **extraspinal ganglionic s.** Of M. Hall, the sympathetic nervous ganglia situated on each side of the spine. **first association s.** The s. of associated fibers connecting the optic thalamus with the cortex cerebri. **first projection s.** Of Meynert, those tracts of nerve fibers which extend between the great ganglionic masses of the brain and the convolutions. They include a portion or the whole of the corona radiata. **ganglionic nervous s.** See *sympathetic (nervous) s.* **gastro-enteric s., gastro-intestinal s.** The alimentary tract from the lips to the anus. **gastrovascular s.** A s. having both digestive and circulatory functions. **genito-urinary s.** The urinary and reproductive organs. **haversian s.** An haversian canal with its lamellae, lacunae, and canaliculi. **lymphatic s.** The lymph vessels and nodes. **lymph canalicular s.** Intercommunicating lymph cavities in the connective tissue of organs continuous with the lymphatic capillaries. **middle s. of the fibrae arcuatae.** The arciform fibers connected with the corpus dentatum olivae. They form its capsule, and then

enter it, being connected, according to Meynert, with its nerve cells. **nervous s.** The brain, spinal cord, sympathetic nervous s., and nerves. **organic nervous s.** See *sympathetic (nervous) s.* **projection s.** The sensory nerve fibers of the body which terminate in the cortex, passing through the central tubular gray matter after converging from the crura cerebri, primarily derived from peripheral sensory nerves; so-called because an image of the external world is considered as projected upon the cerebral cortex by the aid of this s. **respiratory s.** The lungs and air-passages. **spinal s. of nerves.** The nerves originating from the spinal cord in distinction with those having a cranial origin. **superior s. of the fibrae arcuatae.** The upper bundles of arcuate fibers of the medulla oblongata. **sympathetic (nervous) s.** The sympathetic nerves and ganglia and the plexuses connected with them. **trabecular s., transverse associating s.** Those bundles of nerve fibers (e. g., the corpus callosum and the anterior commissure) which connect similar regions of the opposite hemispheres of the brain. **vascular s.** The s. of vessels concerned in the circulation of the blood. [Gr., *systema*, *syn*, with, together, + *istanai*, to set, to arrange.]

systemic (sis-tem'ik). Pertaining to the body as a whole; not local. [Gr., *systema*, a whole compounded of several parts.]

systole (sis-to-le). Contraction; especially that of the walls of the heart, occurring alternately with their diastole. See also *diastole*. **aborted s., abortive s.** Of F. Franck, a cardiac s. that does not produce an elevation of pressure in the aortic system. It may be caused by mitral regurgitation, lack of ventricular distention, or deficient energy. **anticipated s.** Of F. Franck, an aborted s. due to a deficient quantity of blood in the ventricle. **arterial s.** The retraction of the arterial wall just subsequent to the cardiac s. **auricular s.** The contraction of the auricles of the heart. **extras.** A s. of the ventricle out of the normal sequence with the auricular s. produced usually by a stimulus arising in the ventricle or the A-V bundle. **hemic s.** A separate or independent s. of one half (one ventricle) of the heart. **ventricular s.** The s. of the ventricles. [Gr., *systemein*, to draw together.]

systolic (sis-tol'ik). Pertaining to the systole. **s. murmur.** See under *murmur*. **s. platan.** The more or less flattened top of the curve of intraventricular pressure, indicating a maintenance of maximum contraction for a certain period in the ventricular muscle. **s. pressure.** The highest pressure reached in an artery during the passage of the pulse wave.

Syzygium (siz-ij'e-um). A genus of the *Myrtaceae*, regarded by some as a section of *Eugenia*. **S. jambolanum.**

Jambolan tree; or jambul. The root bark is used as an astringent, the bark of the stem and branches in aphthae, and

the acidulous berries in gargles and in preparing an astringent and stomachic syrup. [Gr., *syzygos*, yoked.]

T

T. Abbreviation for temperature, and, in eye-practice, for intra-ocular tension. **T. bandage.** A bandage made in the shape of the letter T. The patient lies on bandage in dorsal position; ends of top of the T are brought forward around waist, while the upright is carried over perineum and its end fastened to ends of top piece on abdomen.

tab. A small piece of skin or tissue.

tab'acum. Syn.: *folia nicotiana*; *herba nicotiana*. The dried leaves of *Nicotiana t.* It contains the alkaloid nicotine.

Tabanus (tab'an-us). A genus of blood-sucking flies of the *Diptera* and the family *Tabanidae*. **T. bovinus.** A species sucking the blood from cattle.

tabardillo (tab-ar-dē'l'yo). An acute febrile disease in parts of Mexico. It resembles typhus in some respects but is thought to be a distinct disease. [Span.]

tabella (tab-el'lah). See *tablet*. [Lat., dim. of *tabula*, a board.]

tabes (ta'bēz). A wasting away, especially atrophy of the muscles; also t. dorsalis. **t. abdominalis.** T. due to tuberculous abdominal disease. **t. diabetica.** See *diabetic t.*, under *diabetic*. **t. dorsalis.** **t. dorsualis.** Consumption of the spinal cord. Syn.: *locomotor ataxia*. **t. mesenterica.** **t. meseraica.** See *phthisis meseraica*, under *phthisis*. [L.]

tabet'ic. Affected with tabes dorsalis.

ta'ble. A structure resembling the piece of furniture so called, or its flat top. **inner t. (of the cranial wall).** The inner solid osseous part of the bones of the cranial wall. **outer t. (of the cranial wall).** The outer solid osseous portion of the bones of the walls of the cranium. **t's of the skull.** The condensed inner and outer layers of the cranial bone which include the diploe. [Lat., *tabula*, board plank.]

tables of weights and measures, see in *appendix*, pages 941, 942, 943.

tab'let. A lozenge, powdered sugar or chocolate brought to the proper consistence with the aid of mucilage, or the drug may be compressed into tablets without a mixture. **compressed t.** A t. composed of a drug which has been subjected to sufficient pressure to cause it to retain its form. Usually more recipient is added. **hypodermic t.** A t. is compressed so as to retain its shape but without more than a trace of insoluble excipient; intended for solution and hypodermic injection. **t. triturate.** See *triturate*. [Lat., *tabula*, a board.]

tabloid (tab'loyd). Trade name of tablets for certain English medicinal preparations.

taboparesis (ta'bo-par'e-sis). A condition showing symptoms of both tabes and paresis.

tacamahac (tak'ah-ma-hak). Any one of various bitter balsamic resins, especially American t. and East Indian t., analogous to the turpentine in properties; formerly much used, but now only as a constituent of plasters and ointments. **North American t.** The balsamic resin obtained from the buds of *Populus balsamifera*. [Lat., *tacamahaca*.]

tâche (tash). A spot or macula. **t. cérébrale.** A persisting red streak caused by scratching the skin. A red dermatographia, seen in meningeal affections. **t. de feu.** *Nevus vascularis*. [Fr.]

tachiol (tak'e-ol). A synonym for silver fluorid; used as an antiseptic in cystitis.

tachistoscope (tak-is'to-sköp). Of Volkmann, a sort of stereoscope in which a falling lid or diaphragm opens for an instant one or both of the holes through which the observer looks. [Gr., *tachistos*, most swift, + *skopein*, to examine.]

tachometer (tak-om'et-er). See *hemotachometer*. [Gr., *tachys*, swift, + *metron*, a measure.]

tachy-. Combining form of Gr., *tachys*, swift.

tachycardia (tak-ik-ar'de-ah). Abnormally rapid action of the heart, especially the condition not induced by fright. **paroxysmal t.** T. occurring at intervals; it may be due to reflex irritation. [Gr., *tachys*, quick, + *kardia*, heart.]

tachyphylax'is. A tolerance or immunity acquired within a few minutes by the slow injection of a substance such as the extract of an organ.

tachypnea (tak-ip-ne'ah). Marked rapidity of breathing. [Gr., *tachys*, quick, + *pnoe*, breathing.]

tachysyne'chia. A term suggested in place of tachyphylaxis (q. v.).

taciturn (tas'it-urn). Characterized by silence or disinclination to conversation. [Lat., *tacere*, to be silent.]

tactile, tactual (tak'til, tak't'u-al). Pertaining to the sense of touch. [Lat., *tactilis*, from *tangere*, to touch.]

tac'tus. See *touch*. **t. eruditus.** The educated touch, delicacy of touch acquired by training. [Lat., *tangere*, to touch.]

tag. A small pendant piece or part hanging from or attached more or less loosely to the main body of anything.

tagatose (tag'at-ös). A ketohexose (carbohydrate), C₆H₁₂O₆.

Tagetes erecta (taj-e'tēz e-rek'tah). African marigold, indigenous to Mexico. The capitules are stimulating and anthelmintic,

and are often substituted for calendula.

The roots and fruits are purgative.

tagma (tag'mah). Of Pfeffer, an aggregate of molecules (e. g., a pleon or a micella). [Gr., a thing arranged.]

tail (tāl). In the human embryo, a conical caudal appendage visible during the fifth and sixth weeks; in other mammals, the vertebrae posterior to the sacrum, together with their muscles and integument; in general, any slender terminal prolongation. **t. of a bandage.** The portion first unrolled. **t. of a muscle.** The portion near its insertion when considerably attenuated. **t. of the epididymis.** See *globus minor of the epididymis*, under *globus*. **t. of the pancreas.** The left and smaller portion of that gland. [Ang.-Sax., *taegl*.]

Tait's operation for repair of the perineum. A transverse incision in the perineum and a blunt dissection carried inward for about an inch and a half between the vagina and the rectum. The incision is closed by interrupted sutures passed transversely from the skin surface, beginning next to the anus and ending at the reconstructed fourchet. [*Laxson Tait*, Eng., gynecologist, 1845-1899.]

taka-diastrase (tah'kah-di'as-tās). See under *diastase*.

talalgia (tal-al'je-ah). A pain in the heel. [Lat., *talus*, the heel, + Gr., *algos*, pain.]

talc (talk). A mineral consisting chiefly of tetra magnesian pentasilicate, $Mg_3Si_2O_8$.

pulvis talcis salicylicus. A mixture of talc with boric acid and salicylic acid [N. F.]. **talcum purificatum.** T. purified by the removal of impurities by hydrochloric acid and water. Used as a lubricant and dusting powder [U. S. Ph.]. **Venetian t.** Syn.: *soapstone*. A native hydrous magnesium silicate, used as a dusting powder. [Lat., *talcum* [U. S. Ph.]

talcum (tal'kum). See *talc*.

talipes (tal'ip-ēz). A distorted shape of the foot. **spasmodic t.** A variety of non-congenital t. due to the spasm or paralysis of certain muscles. **t. arcuatus.** See *t. cavus*. **t. calcaneovalgus.** The condition in which the foot is everted with depression of the heel. **t. calcaneovarus.** A variety in which the foot is inverted with depression of the heel. **t. calcaneus.** Permanent dorsal flexion of the foot, so that the weight of the body rests on the heel only. **t. cavus.** An exaggerated curvature of the arch of the foot, the anterior part of the foot being drawn backward. **t. equinovalgus.** A variety in which the foot is everted as well as extended. **t. equinovarus.** A deformity characterized by inversion, torsion, and depression of the fore part of the foot with elevation of the heel. **t. equinus.** Depression of the anterior portion of the foot to a greater or lesser degree, so that the patient walks without touching the ground with the heel. **t. planus, t. spuriovalgus.** See *flat-foot*. **t. valgus.** Splay-foot; a deformity, characterized by depression of the arch of the foot, so

that the inner side of the sole touches the ground. The sole may be everted. The deformity is an alteration in the positions of the astragalus, the os calcis, and the scaphoid bone. **t. varus.** Cross-foot; a t. in which the foot is twisted inward. [Lat., *talus*, the ankle, heel, + *pes*, foot.]

talipomanus (tal-ip-om'an-us). Club-hand; a more or less permanent deviation of the hand at the wrist in flexion, extension, abduction, adduction, or some intermediate posture. [Lat., *talipes*, club-foot, + *manus*, hand.]

talose (tal'ōs). An aldohexose, $C_6H_{12}O_6$ isomeric with glucose.

ta'lus. See *astragalus*. [Lat., *talus*, ankle.]

tamarind (tam'ar-in'dus). The genus *Tamarindus*; also the fruit *Tamarindus indica* or its preserved pulp. [Lat., *tamarindus*.]

ta'mar in'dien. A proprietary purgative confection consisting apparently of a pasty cake containing senna, inclosed in chocolate and sugared on the outside.

Tamarindus (tam-ar-in'dus). 1. A genus of the *Leguminosae*. 2. Of the U. S. Ph. and Br. Ph., the preserved pulp of the fruit of *T. indica*. **T. indica.** Tamarind, Indian date; a tree 70 to 80 feet in height, cultivated in tropical Asia and America, and found wild in northwestern Australia. The fruit (the tamarind), deprived of its brittle epicarp and preserved, constitutes tamarind pulp, which is used as a laxative. It contains tartaric acid, acid potassium, tartrate, traces of citric and malic acids, gum, pectin, etc. [Lat.]

tambour (tam'boor). An apparatus devised to demonstrate movements of various kinds. It consists of a small metal chamber with a top of rubber-dam. Variations of pressure within the chamber cause expansion or collapse of the rubber membrane and thus movements are magnified and recorded by a suitable lever. **Marey's t.** See under *Marey's*. **registration t.** See *Marey's t.*

tampicin (tam'pis-in). A resin, $C_{24}H_{34}O_{14}$, obtained from the root of *Ipomea simulans*.

tam'pon. A plug of some soft material for closing a wound, a cavity, or an orifice. **chain t., kite-tail t.** A t. consisting of a number of pledgets tied at intervals on a string, as in the tail of a kite. **diagnostic t.** A vaginal t. inserted to detect the uterine discharge for examination. [Fr., *tampon*, stopper, plug.]

tam'poning. The process of plugging by means of a tampon.

Tamus. A genus of the *Dioscoreaceae*. **T. communis.** A climbing plant of Europe, northern Africa, and temperate Asia. The acrid tuberous root is diuretic and purgative and in large doses emetic.

tanacetin (tan-as-et'in). A bitter substance, probably a mixture, contained in the leaves and flowers of *Chrysanthemum vulgare*.

tanacetone (tan-as-et'on). A liquid, C_{10}

H₂O, obtained from oil of tansy and other volatile oils from related plants. It acts as an abortifacient.

Tanacetum (tan-as-et'um). 1. A genus of plants included by some authors in *Chrysanthemum*. 2. Tansy; the leaves and tops of *Tanacetum vulgare*; an aromatic, bitter, and irritant narcotic.

tanal'um. Aluminum tannotartrate; used in diseases of the nose and throat.

tanfor'mal. A proprietary intestinal astringent and disinfectant.

tangential. See *Brewster's law*.

tanghin (tan'gĕn). *Cerbera*; its seed, the ordeal bean of Madagascar, contains tanghinin, the active principle. It acts much like digitalis. [Lat., *tanghinia*.]

tanghinin (tan'gin-in). A glucosid, isomeric with cerberin (probably C₂₆H₄₆O₁₂).

tan'nal. 1. Aluminum tannate (insoluble). 2. Aluminum tannotartrate (soluble).

tannalbin (tan-al'bin). An astringent compound of tannin and albumin; used in infantile diarrhea. It is said to act only in the intestine.

tannate (tan'at). A salt of tannic acid.

tannic (tan'nik). Derived from tan; containing t. acid.

tannicus (tan'nik-us). See *tannic*; as a n., in the neut., tannicum, an astringent that contains tannic acid.

tannigen (tan'ni-jen). Diacetyl tannin, C₁₄H₆(COCH₃)₂O₆; an intestinal astringent.

tannil (tan'nil). A proprietary preparation which (it is claimed) passes through the stomach unchanged and exerts an antiseptic action on the intestine.

tan'nin. See *tannic acid*, under *acid*. **t. formaldehyd**. See *tannoform*.

tannismuth (tan'is-muth). Bismuth bitannate, approximately Bi(OH)(C₁₄H₆O₆)₂, containing about 20 per cent. bismuth. Astringent; used in catarrhal enteritis.

tan'no-. Combining form of tannin; of or relating to tannin.

tannocol (tan'no-kol). An astringent composed of equal parts of tannin and gelatin.

tannoform (tan'no-form). A condensation product of tannin and formic aldehyd, CH₂(C₁₄H₆O₆)₂. It is astringent; used in catarrhal enteritis.

tan'non, **tan'nopin**. A condensation product of tannin and hexamethylamin; used in infantile diarrhea.

tannosal (tan'no-sal). Creosol.

tan'sy. See *Tanacetum*.

tapeworm. See *tenia* (2d def.). **armed t.** See *Taenia solium*. **beef t.** See *Taenia saginata*. **broad t.** See *Bothriocephalus latus*. **common t.** See *Taenia solium*. **dwarf t.** See *Taenia echinococcus*. **hydatid t.** See *Taenia solium*. **Swiss t.** See *Bothriocephalus latus*. **unarmed t.** See *Taenia mediocanellata*, under *tenia*.

tapioca (tap-e-o'kah). Cassava starch in the form of rounded masses. Used as a food.

tap'ping. See *paracentesis*.

tar. 1. A highly complex material pro-

duced by the destructive distillation of various organic substances. 2. Of the U. S. Ph. and Br. Ph., a product obtained by the destructive distillation of the wood of different species of pine. On distillation it yields oil of t. and an acid liquid (impure pyroligneous acid), the residue being pitch. T. yields a small proportion of its constituents, especially pyrocatechin, to water, imparting to it an acid reaction and a peculiar taste. It is readily soluble in alcohol, in ether, and in solutions of the caustic alkalis. In medicinal properties it resembles the turpentine, but is much less irritant.

beech t. A t. made from the wood of *Fagus sylvatica*; official in some ph's as the best source of creosote. **coal t.** A dark, semiliquid substance obtained in the dry distillation of coal. It is highly complex in structure, yielding by distillation and rectification many valuable products such as naphthalene and other solids, benzene and other neutral hydrocarbons, phenol and other alcohols, ammonia and other bases, as well as illuminating gases, heating gases, and certain impurities. **juniper t.** See *oil of cade*, under *cade*. **oil of t.** The volatile oily liquid obtained in the distillation of wood t.; almost colorless when freshly prepared, but becoming dark on standing. It contains various hydrocarbons of the paraffin series, hydrocarbons of the aromatic series, and the alcohols of the latter series, including carboic acid and the mixture of phenols constituting creosote. **Stockholm t.** A synonym for the official *pix liquida*.

tar'antism. An epidemic chorea that appeared in Apulia in the 15th century and spread through Italy; then supposed to be caused by the bite of *Lycosa tarantula*.

tarantula (tar-an'tu-lah). A venomous spider (*T. lycosa*) found in Europe. **T. cubensis**. A Cuban spider. **T. hispania**. A Spanish venomous spider.

taraxacerin (tar'aks-as-e'rin). A principle, C₈H₁₆O, obtained from the root of *Taraxacum officinale*.

taraxacin (tar-aks'as-in). A bitter principle obtained from the juice of the root of *Taraxacum officinale*.

Taraxacum (tar-aks'ak-um). 1. A genus of cichoriaceous plants. 2. Dandelion root; in the U. S. Ph., the root (in the Br. Ph., the fresh roots) of *T. officinale* gathered in autumn. 3. The leaves of *T. officinale*. **T. dens leonis**, **T. officinale**, **T. officinarum**. Dandelion. It is somewhat tonic, diuretic, and laxative, and was formerly used in hepatic disorders. Dried, ground, and roasted, it is sometimes used with or as a substitute for coffee. The extract and fluidextract of dandelion are official in the U. S. Ph., and a compound elixir of dandelion in the N. F.

tarchiol (tar'ke-ol). A trade name for silver fluorid.

Tar'nier's for'ceps. The original axis-traction obstetrical forceps. [*Etienne*

Stéphane Tarnier, French obstetrician, 1828-1897.]

tarsadenitis (tars-ad-en-i'tis). Inflammation in the meibomian glands. [Gr., *tarsos*, tarsus, + *aden*, gland, + *itis*, inflammation.]

tarsalgia (tar-sal'je-ah). 1. Pain in the tarsus. 2. Painful valgus. [Gr., *tarsos*, the tarsus, + *algos*, pain.]

tarsitis (tar-si'tis). Inflammation of the margin of the eyelids. [Gr., *tarsos*, eyelid, + *itis*, inflammation.]

tar'so-. Combining form of Gr., *tarsos*, the flat of the foot between the toes and the heel.

tarsoclasia (tar-sok'las-is). The operation of breaking a deformed tarsus by force. [Gr., *tarsos*, the tarsus, + *klasis*, a breaking.]

tarsophyma (tar-so-fi'mah). Any tarsal tumor. [Gr., *tarsos*, tarsus, + *phyma*, growth.]

tarsorrhaphy (tar-sor'af-e). Any operation for shortening and narrowing the palpebral fissure. [Gr., *tarsos*, the tarsus, + *raphé*, a seam.]

tarsotomy (tar-sot'o-me). 1. A cutting operation on the tarsus of the foot. 2. The removal of a portion or the whole of the tarsal cartilage. [Gr., *tarsos*, the tarsus, + *tome*, a cutting.]

tar'sus. 1. The bony structure constituting the greater part of the arch of the foot, consisting of the os calcis, the astragalus, the scaphoid, the cuboid, and the three cuneiform bones. 2. The so-called cartilage of the upper eyelid (tarsal cartilage), which forms the skeleton or support of the lid. [Gr., *tarsos*, lit., any broad, flat surface.]

tar'tar. 1. A substance deposited as a whitish or reddish crystalline crust on the inside of wine casks, consisting of a mixture of acids and normal tartrates, especially those of potassium and calcium. 2. See *sordes*. **cream of t.** See *potassium bitartrate*, under *potassium*. **t. emetic.** See *antimony and potassium tartrate*, under *antimony*. List of poisons and their antidotes, see in *appendix*, page 938. [Lat., *tartarus*, *tartarum*.]

tartaric (tar-tar'ik). Derived from or contained in tartar. **t. acid.** See under *acid*.

tartarized (tar'tar-izd). Containing tartar or tartaric acid.

tartarolithin (tar-tar-lith'in). A proprietary preparation of lithium bitartrate.

tartrate (tar'trät). A salt of tartaric acid. [Lat., *tartras*.]

tar'tro-. Combining form of Fr., *tartre*, tartar (bitartrate of potassium); used in the names of chemical compounds.

tartronyl (tar'tron-il). The bivalent radical of tartronic acid, $\text{CH}(\text{OH}) < \begin{smallmatrix} \text{CO}' \\ \text{CO}' \end{smallmatrix}$.

taste. The sensation of flavor due to the action of certain exciting substances upon special nerve endings in the tongue.

after-t. A t. perceived after the direct action of the sapid substance has ceased.

t. beakers, t. buds, t. bulbs, t. cups. See *t. buds*, under *bud*. **t. pore.** The

narrow end or summit of a t. bud seen on a free surface, usually on the side of a fungiform or foliate papilla.

tattooing (tat-too'ing). The process of introducing particles of coloring matter into the true skin, by punctures or incisions, so as to produce indelible stains. **t. of the cornea.** Artificial pigmentation of the cornea (usually with India ink) for the removal of the cosmetic defect produced by a dense leukoma. [Polynesian, *ta'tau*, markings made by tattooing.]

tauric (tau'rin). Amido-ethylsulphuric acid, $\text{NH}_2\text{CH}_2\text{SO}_3\text{H}$, found in the bile and in various animal tissues in combination with cholic acid, as taurocholic acid.

tau'ro-. Combining form of Gr., *tauros*, bull.

taurocho'lic. See *acid*. [Gr., *tauros*, bull, + *chole*, bile.]

taurocolla (tau-ro-kol'lah). Animal glue, especially that prepared from the ears, etc., of cattle. [Gr., *tauros*, a bull, + *kolla*, glue.]

tau'to-. Prefix representing Gr., *tauto*, a contraction of *to auto*, the same.

tautomerism (tau-tom'er-izm). The phenomenon of one and the same chemical substance reacting as though it has two different formulae. Classical examples are aceto-acetic ester and uric acid.

tax'in. A resinous alkaloid obtained from the leaves and berries of *Taxus baccata*.

tax'is. Lit., arrangement; a reduction, especially a methodical pressure by the hand for the purpose of reducing a hernia or other prolapsed structure. [Gr., *taxis*, from *tassein*, to arrange.]

Taxodium (taks-o'de-um). A genus of the *Taxodiaceae* (a tribe of the *Coniferae*). **T. distichum.** Bald cypress of the southern United States, Mexico, etc. The tree yields an essential oil, also a resin which is used as an external stimulant. [Gr., *taxos*, yew, + *eidos*, resemblance.]

taxonomy (taks-on'o-me). The science of classification; the arrangement of living organisms in groups according to their degrees of likeness. [Gr., *taxis*, arrangement, + *nomos*, a law.]

tea. The dried leaves of *Camellia thea* and its varieties, often further aromatized with the flowers or leaves of the rose, jasmine, sweet-scented olive, etc. T. contains from 1.5 to 4 per cent. of caffeine, a volatile oil, and a variable amount of tannin; very little of the latter is extracted when the leaf is infused for a minute or two minutes. There are many commercial varieties of t. **black t.** T. of a dark brown color; prepared from leaves which have been allowed to remain in heaps for some hours and undergo a kind of fermentation, and afterward slowly dried. It is less pungent and fragrant than green t. **Carolina t. plant.** The *Ilex comitoria* or *Apache t.* (not to be confused with *Camellia thea* now cultivated in the Carolinas). **green t.** T. of a dark green color; prepared from leaves which have undergone no fermentation, and have been so rapidly dried as not to lose their chlorophyll. Its

- color, however, is often due to an artificial coloring matter. It contains more volatile oil and tannin than black t. **Labrador t.** A t. made from the leaves of *Ledum latifolium*. **marsh t.** See *Ledum palustre*, under *Ledum*. **New Jersey t.** The genus *Ceanothus*, especially *Ceanothus americanus*. **Paraguay t.** See *Ilex paraguaiensis*, under *Ilex*. **t'berry.** *Gaultheria procumbens*. [Lat., *thea*.]
- tear.** See *laceration*.
- tease** (tēz). To separate tissues by means of fine needles for examination with the microscope.
- technic, technique** (tec'nik). The name of performance or the details of a surgical operation or any mechanical act. [Gr., *technikos*, of or pertaining to art, skilful.]
- technical chem'istry.** See under *chemistry*.
- tech'no-.** Combining form of Gr., *techne*, art.
- tec'no-.** Combining form of Gr., *tekonon*, child.
- teething** (tē'thing). See *dentition*.
- teg'men.** Any covering or integument.
- t. mastoideum.** The lower hollow part of the t. tympani covering the mastoid antrum. **t. tympani.** The superior wall or roof of the tympanic cavity, formed by an osseous plate continuous with the superior surface of the pyramid. This plate extends beyond the boundaries of the tympanic cavity, forming part of the superior lamella of the osseous meatus, of the upper wall of the cells of the mastoid process, of the roof of the canal for the tensor tympani, and of the osseous portion of the eustachian tube. It is pierced by several apertures, and may be in great part wanting. [Lat., *tegere*, to cover.]
- tegmentum** (teg-men'tum). The dorsal portion of the crus cerebri, made up of longitudinal bundles of white nerve fibers interlaced with numerous transverse and arching fibers. In the interstices are collections of gray matter containing ganglion cells. The t. may be regarded as the prolongation upward of the reticular formation. To one side of it lies the lemniscus. [Lat., from *tegere*, to cover.]
- teg'min.** A certain varnishlike preparation to be applied to slight wounds, said to consist of yellow wax, gum arabic, and water.
- te'gone.** A preparation similar to gelone, but having agar-agar as the base; used in making bandages.
- Teich'mann's crys'tals.** Syn.: *hematin*. The hydrochloric acid compounds of hematin. Their demonstration is an important test in the medico-legal proof of blood. [Ludwig Teichmann, German histologist, 1825-1895.]
- teichopsia** (ti-kop'se-ah). A bright, irregular blur before the eyes seen in migraine. [Gr., *teichos*, wall, + *opsis*, vision.]
- tela** (te'lah). 1. A web. 2. See *tissue*. [Probably from Lat., *texere*, to weave.]
- telangiectasia, telangiectasis** (tel-an''je-ek-ta-zhe-ah, tel''an-je-ek'ta-sis). Dilatation of the capillaries or small blood vessels due to an obstruction to the flow of blood, by pressure on contracting fibrous tissue. [Gr., *telos*, the end, + *aggeion*, vessel, + *ektasis*, dilatation.]
- telangiectatic** (tel-an''je-ek-tat'ik). Pertaining to the nature of telangiectasia.
- telangiectoma** (tel-an-je-ek-to'mah). A simple nevus or birth mark from dilated capillaries. [Gr., *telos*, the end, + *aggeion*, vessel, + *oma*, tumor.]
- telangioma** (tel-an-je-o'mah). Same as *telangiectoma*.
- telangiosis** (tel-an-je-o'sis). Any disease of the capillaries. [Gr., *telos*, the end, + *aggeion*, vessel.]
- Telanthera** (tel-an-the'rah). A genus of the *Amarantaceae*. **T. polygonoides.** A plant found in the southern United States; used as a diuretic.
- tele-, tel-.** Representing Gr., *tele*, combining form of *tele*, afar, far off.
- telegony** (tel-eg'o-ne). The part conjectured to be played by a male in so "inflecting" with his surplus semen those ovarian ova of the female that escape fecundation (or at least do not undergo development) as to incline her to produce to subsequent mates progeny resembling the first one. See *indirect atavism*, under *atavism*. [Gr., *tele*, afar, + *gonos*, offspring.]
- telegraph** (tel'eg-raf). An apparatus for conveying information to a distance, especially for conveying it very rapidly by electrical currents. **muscle t.** Of Du Bois-Reymond, an apparatus for recording muscular contractions. [Gr., *tele*, afar, + *graphein*, to write.]
- telencephalon** (tel-en-sef'al-on). See *prosencephalon*.
- tel'eo-, tel'e-.** Representing Gr., *teleo*, combining form of *teleos*, *teleios*, perfect, complete, from *telos*, end.
- teleology** (te-le-ol'o-je). The doctrine of design or of adaptation to purpose. See *dysteleology*. [Gr., *telos*, the end, + *logos*, understanding.]
- telepathy** (tel-ep'ath-e). A sympathetic sensation felt by one person in fancied connection with an occurrence happening to another at a distance, or the direct influence of the mental processes of one person by those of another. [Gr., *tele*, afar, + *pathos*, feeling.]
- telephone** (tel'e-fōn). An instrument for reproducing sound at a distant point by the transmission of impulses over a conducting wire or cord, especially by the agency of electricity. [Gr., *tele*, far away, + *phone*, sound.]
- telescope** (tel-es-ter'e-o-skōp). A stereoscope for viewing very distant objects by the artificial increase of the interocular distance by means of four plane mirrors so fixed in a box as to admit of slight rotation, and thus bring the images into coincidence. [Gr., *tele*, afar, + *stereos*, solid, + *skopein*, to examine.]
- tellurate** (tel'lu-rāt). A salt of telluric acid.

tellureted (tel'lu-ret-ed). Containing or combined with tellurium.

tellurid (tel'lu-rid). A compound of an element or radicle directly with tellurium.

tellurium (tel-lu're-um). A rare element, in some respects resembling sulphur and selenium. Atomic weight, 127. Chemical symbol, Te. [Lat., *tellus*, the earth.]

telolecithal (tel-o-les'ith-al). Having the nutritive yolk concentrated at the vegetative pole of an ovum. [Gr., *telos*, the end, + *lekithos*, the yolk of an egg.]

telolemma (te-lo-lem'mah). The double covering of a moterial end plate composed of sarcolemma and a prolongation of Henle's sheath. [Gr., *telos*, end, + *lemma*, rind.]

temperament (tem'per-am-ent). Peculiarity of constitution, embracing the humor or frame of mind, the mode of manifestation of the activity of the brain, etc. **lymphatic t.** See *phlegmatic t.* **melancholic t.** A t. marked by a tendency to brood overmuch over injuries or unpleasant experiences. **nervous t.** A t. characterized by marked sensitiveness to stimuli. **phlegmatic t.** A t. characterized by flabby muscles (when in repose), want of energy, a disposition to adipose deposit, small or slow reaction to psychic excitation, slightly developed passions, and little sensibility to bodily suffering. **sanguine t.** A t. characterized by marked irritability. [Lat., *temperamentum*, mixture.]

temperature (tem'per-a-tür). The degree of heat exhibited by a substance when measured by one of the accepted scales; i. e., Fahrenheit, Centigrade, Réaumur.

absolute t. T. measured from the absolute zero. **animal t.** The normal t. of the healthy adult. **body t.** The t. of the body. **maximum t.** and **minimum t.** Terms used in bacteriology to indicate the limits at which bacteria will develop. **normal t.** The t. of the healthy adult, 98.6° F. or 37° C. **t. coefficient.** The figure representing, for any process, chemical or physical, the acceleration caused by a rise in the temperature of 10 degrees C. [Lat., *temperare*, to regulate.]

tem'ple. The flattened or slightly hollowed area on the side of the head just above the zygomatic arch. [Lat., *tempus*.]

tem'poral. Pertaining to or in relation with the temples. **t. line.** See under *line*. [Lat., *temporalis*.]

temporalis (tem-po-ral'is). See *table of muscles*, under *muscle*.

tem'poro-. Combining form of Lat., *tempora*, temples (of the head).

temulentin (tem-u-len'tin). An alkaloid obtained from temulentic acid.

temulin (tem'u-lin). A crystalline base (C₇H₁₂N₂O), said to occur in darnel, but only when infested with mold.

tenaculum (ten-ak'u-lum). A sharp-pointed hook with a handle, used for seizing and holding tissues. **t. forceps.** A forceps the jaws of which consist of two

or more hooks. [Lat., from *tenere*, to hold.]

tenderness (ten'der-nes). The sensation of pain developed by touch or pressure as opposed to the subjective sensation of pain.

tendinosus (ten-di-no'sus). See *semiten-dinosus*.

tendinous (ten'din-us). Pertaining to, resembling, or constituting a tendon; made up of tendonlike tissue. [Lat., *tendineus*, *tendinosus*.]

ten'do. See *tendon*. **t. Achillis.** Syn.: *chorda Achillis*. The thickest and strongest tendon of the body, made up by the union of the tendons of the gastrocnemius and soleus muscles, and inserted into the middle of the posterior surface of the tuberosity of the os calcis. **tendines coronarii.** Fibrous rings surrounding the openings of the aorta and the pulmonary artery. [Lat.]

tendomu'coid. A protein found in connective tissue.

ten'don. A bundle of fibrous tissue of varying shape, which serves as an origin or attachment for a muscle or is interposed between portions of it. **accessory t's of the extensor communis digitorum.** The offshoots of the t. of the extensor digitorum manus communis which pass to those of the ring and little fingers. **central t. of the diaphragm, cordiform t.** The white aponeurotic center of the diaphragm, having a posterior concave margin and an anterior convex margin slightly notched on each side so as to give it the shape of a trefoil.

hamstring t. The t. of the biceps flexor cruris and that of the semimembranosus and the semitendinosus. [Lat., *tendo*, cord, sinew, from Gr., *teinein*, to stretch.]

tenesmus (ten-es'mus). A persistent inclination to defecate or urinate, accompanied by painful straining efforts, mostly ineffectual. [Gr., *teinein*, to stretch.]

tenia, Taenia (te'ne-ah). 1. A ribbon; a bandage; a tapelike structure. 2. A genus of flat worms of the phylum *Platyhelminthes*, the class *Cestoidea*, and the family *Taeniidae*. They are characterized by a scolex with a distinct head having four suckorial disks with or without a double or single row of hooks and by a bandlike body divided into segments or polyglottides, which, when mature, are bisexual. Each segment contains ovaries, testes, and a uterus, which becomes crowded with eggs that are laid in the intestine of the host. The adults inhabit the intestinal canal of carnivorous vertebrates, nearly every species of which has its specific t. The so-called "head" is really the adult parasite, that germinates segments as long as it remains in the intestine. In their larval state (*cysticercus*) they are usually found in herbivorous vertebrates. **T. acutissima.** A species from 30 to 130 mm. long. Found in man, ducks, and geese in Europe. **T. africana.** A form found in East Africa. **T. asiatica.** A species found in Asiatic Russia. **T. Bremmeri.**

A species found in a woman in Nigeria. **T. canina.** A species infesting dogs and cats and occasionally man. **T. cucumerina.** See *T. canina*. **T. cucurbitina.** See *T. saginata*. **T. diminuta.** A parasite affecting children and rats. **T. echinococcus.** A small worm, from 2 to 6 mm. long. In the adult stage it lives in the intestine of the dog and enters the various organs of man in the larval stage, forming the so-called hydatid cysts. **T. flavopuncta.** Syn.: *Hymenolepis flavopuncta*. A species of *t.* with yellowish spots in the middle of the segments. **T. hominis.** A species found in man in Siberia. **T. lanceolata.** See *T. acutissima*. **T. lata.** See *T. saginata* and *T. vulgaris*. **T. madagascariensis.** A tapeworm discovered in Madagascar. **T. mediocanellata.** See *T. saginata*. **T. nana.** See *T. echinococcus*. **T. philippina.** A species found in man in the Philippine Islands. **t. recessus pinealis.** The peduncle of the pineal gland. **t. recessus suprapinealis.** The prolongation of the choroid plexus of the third ventricle into the recessus pinealis. **T. saginata.** The common tapeworm of man. The unarmed beef worm, having its adult stage in man and its cysticercus stage in cattle. It is almost universal in distribution. It may measure 4 to 8 meters. **t. semicircularis.** A narrow, semitransparent, light-colored streak in the lateral ventricle between the nucleus caudatus and the optic thalamus. It is continuous with the white tissue of the roof of the descending cornu. **T. solium.** The armed tapeworm of man, passing its cysticercus stage in the pig and other animals. It may measure from 2 to 3 meters in length and is universal in distribution. Its rostellum or head has a double row of small hooks. **T. vulgaris.** This tapeworm is also called the *Bothriocephalus latus*. It is about 9 meters in length, the proglottides are very broad. It infests fish, and is found in the intestines of man, dogs, and cats, producing severe anemia. [Lat., *taenia*, a tapeworm, from Gr., *teinein*, to stretch.] **teniafuge** (te'ne-af-ūj). A medicine capable of expelling tapeworms. [Lat., *taenia*, a tapeworm, + *fugare*, to put to flight.] **Teniarrhyncus, Taeniarrhyncus** (te-near-rin'kus). See *tenia* (2d def.). [Lat., *taenia*, a tapeworm, + Gr., *rygchos*, a snout.] **teniasis** (ten-i'as-is). The presence of *tenia* in the body. **tenia toxin.** The toxin produced by the *tenia* in the intestines. **tenicide** (ten'is-id). A medicine destructive to tapeworms. [Lat., *taenia*, a tapeworm, + *caedere*, to kill.] **tenioid** (te-ne-oyd). Resembling a *tenia* or tapeworm. **teno-**. Combining element from Gr., *tenon*, tendon. **tenotomy** (ten-o-mi-ot'o-me). Of

tendon near its sclerotic insertion, and in excising a small portion of the muscle on each side. [Gr., *tenon*, tendon, + *mys*, muscle, + *tome*, a cut.] **tenonitis** (ten-on-i'tis). Inflammation of Tenon's capsule.

Tenon's capsule. Syn.: *fascia of T.*, *fascia vaginalis bulbi*, *T's membrane*. 1. The anterior portion of the sheath of the eyeball, in front of the situation where it is pierced by the muscles of the eyeball. 2. Of some anatomists, the entire sheath of the eyeball.

tenontophyma (ten-on-to-f'i'mah). Any tumor of a tendon. [Gr., *tenon*, tendon, + *phyma*, growth.]

tenorrhaphy (ten-or'ra-fe). The suture of a divided muscle. [Gr., *tenon*, a tendon, + *raphe*, a seam.]

tenositis, tenontitis (ten-os-i'tis, ten-on-ti'tis). Inflammation of a tendon.

tenosynovitis (ten'o-sin-o-vi'tis). Inflammation of the sheath of a tendon and of the contiguous surface of the tendon; "an affection usually occurring in the forearm and characterized by a peculiar creaking of the tendons as they move in their sheaths, depending upon a particular kind of strain to which the muscles belonging to these tendons have been subjected." **t. hyperplastica.** A painless swelling of the extensor tendons over the wrist joint. [Gr., *tenon*, a tendon, + *synovitis*.]

tenotome (ten'o-tōm). A small, narrow-bladed knife for dividing tendons subcutaneously. [Gr., *tenon*, a tendon, + *tennein*, to cut.]

tenotomy (ten-ot'o-me). The operation of dividing a tendon. **graduated t.** A partial *t.* of one or more of the ocular muscles for the purpose of relieving overaction. [Gr., *tenon*, a tendon, + *tome*, a cutting.]

tension (ten'shun). Pressure. **t. of gases.** Pressure exercised by a gas measured usually in terms of percentages of atmospheric pressure. When gases are in solution, the *t.* is measured by the pressure of gas in the surrounding medium, just sufficient to prevent any gas from escaping from that solution. [Lat., *tensio*.]

ten'sor. A muscle having the function of rendering a part tense. See *table of muscles*, under *muscle*. [Lat., *tendere*, to stretch.]

tent. A substance to be introduced into a wound or canal, so as to prevent it from closing or to dilate it slowly by its expansion when moistened. [Lat., *tenta*, *tentum*, from *tendere*, to stretch.]

tentorium (ten-to're-um). Lit., a tent. **t. cerebelli.** A fold of dura which separates the cerebrum and cerebellum supporting the occipital lobes. It is attached peripherally to the margins of the grooves for the lateral sinuses and to the superior posterior bodies of the petrous portions of the temporal bones, anteriorly to the anterior and posterior clinoid processes. [Lat., *tendere*, to stretch.]

ter-. Combining form of Lat., adv., *ter*, thrice.

te'ras. See *monster*. **t. anacatadidymum**. A double monster in which the two individuals are joined by the trunks, but have separate heads and limbs. **t. anadidymum**. A double monster in which the individuals are joined from the buttocks downward and separate above. **t. catadidymum**. A double monster in which the individuals are joined from the neck or trunk upward and separate below. [Gr., *teras*.]

teratic (ter-at'ik). Monstrous; having the characteristics of a monster.

ter'ato-. Combining form of Gr., *teras*, pl., *terata*, a marvel, prodigy, monster. **teratoblastoma** (ter'at-o-blas-to'mah).

Certain mixed tumors of the kidney, the salivary glands, and other structures which develop from embryonic rests, but do not represent all three germinal layers. [Gr., *teras*, monster, + *blastoma*.]

teratogenesis (ter'at-o-jen'es-is). The development of a fetal monstrosity. [Gr., *teras*, monster, + *genesis*, production.]

teratog'enous. Developing from one order of cell, but not originating from the tissues of the host, as a chorio-epithelioma. **t. blastoma**. A b. originating under the above conditions.

teratogeny (ter-at-oj'en-e). The production of monsters. [Gr., *teras*, a monster, + *genesis*, generation.]

teratoid (ter-at-oyd). Resembling or of the nature of a monster. [Gr., *teras*, monster, + *eidōs*, resemblance.]

teratology (ter-at-ol'o-je). The science of monstrosities. [Gr., *teras*, monster, + *logos*, understanding.]

teratoma (ter-at-o'mah). A tumor containing various structures of the body, as if from a malformed fetus. They arise by the abnormal inclusion of a whole embryo, or a portion of one, by another fetus and are defined by Adami as "an autonomous growth, the product of continuous development within one individual of another individual of the same species." [Gr., *teras*, monster, + *oma*, tumor.]

teratosis (ter-at-o'sis). Properly, the formation of a monstrosity; a congenital deformity. The *teratoses* of Fuchs are a family of the *morphonosi* of the skin, including *dysmorphoses* and *heteromorphoses*. [Gr., *teras*, monster.]

terbasic (ter-ba'sik). See *tribasic*.

terchlorid (ter-klo'rid). A trichlorid.

terebene (ter'eb-ēn). A mixture of optically inactive terpenes obtained by distilling oil of turpentine with 5 per cent. of concentrated sulphuric acid, washing with soda solution, drying with calcium chlorid, and then distilling the portion which boils between 156° and 160° C. It has an agreeable odor, and is used medicinally instead of oil of turpentine when the odor of the latter is objectionable, also as a surgical dressing and antiseptic. [U. S. Ph., Br. Ph.] [Lat., *terebenum*, from *terebinthus*, turpentine.]

terebinthina (ter-e-bin'thin-ah). Turpentine; an oleoresin obtained from the pine [U. S. Ph.]. **linimentum terebinthinae**. Syn.: *linimentum terebinthinatum*. A liniment made by mixing cerate of resin with turpentine [U. S. Ph.]; by mixing *sapo mollis* with water and adding a solution of camphor in rectified oil of turpentine [Br. Ph.]. **linimentum terebinthinae aceticum**. Stokes' liniment; St. John Long's liniment. A mixture consisting of fresh egg, oil of turpentine, oil of lemon, acetic acid, and rosewater [N. F.]; or of the Br. Ph., a mixture of rectified oil of turpentine, glacial acetic acid, and liniment of camphor. **oleum terebinthinae**. A volatile oil recently distilled from turpentine. It undergoes oxidation rapidly on exposure to the sunlight [U. S. Ph.]. **oleum terebinthinae rectificatum**. Oil of turpentine rectified by treatment with sodium hydroxid and distillation. This should be used when the oil is intended for internal administration [U. S. Ph., Br. Ph.]. **t. canadensis**. Canada turpentine; a liquid oleoresin from *Rhus balsama* [U. S. Ph., Br. Ph.].

teres (te'rez). Cylindrical. **ligamentum t.** See under *ligamentum*. **t. major**. See *table of muscles*, under *muscle*. **t. minor**. See *table of muscles*, under *muscle*. [Lat., *teres*, round, from Gr., *teirein*, to rub.]

ter'eti-. Combining form of Lat., *teres*, *teretis*, rounded.

ter'go-. Combining form of Lat., *tergum*, back.

teriodid (ter-i'o-did). A triodid.

term. 1. A limited or specified time or period. 2. The menstrual period. 3. The proper time for the cessation of gestation. **at (full) t.** At the proper time (said of a birth that takes place at the end of the normal period of gestation. [Lat., *terminum*, limit, boundary.]

ter'ma. A lamina of nerve substance extending between the anterior commissure of the brain and the optic chiasm.

teroxid (ter-oks'id). Same as *trioxid*. [Lat., *ter*, thrice, + *oxid*.]

terpene (ter'pēn). Any one of a series of hydrocarbons derived from that having the composition $C_{10}H_{16}$, and occurring very widely in the vegetable kingdom. They are found in all volatile oils except oil of rose, and often form the chief ingredient. They include the pinenes (australene, eucalyptene, and terebentene), the camphenes (terecamphene, borneocamphene, and inactive camphene), the limonene group (hesperidene, carvone, citrene, isoterpene, inactive limonene, cajuputene, cineene, diisoprene, isoterbentene, and caouthene), terpinolene, silvestrene, terpinene, and phellandrene.

ter'pin. A substance, $C_{10}H_{16}(OH)_2$. It is optically inactive, and is formed by the action of an alcoholic solution of nitric acid on pinene. **t. hydrate**. The compound $C_{10}H_{16}(OH)_2 + H_2O$. It is used as an expectorant and in hay fever and asthma. The N. F. gives the formula for

sweet elixirs containing t. h. [U. S. Ph., *terpini hydras*.] [Lat., *terpinum*.]

terpineol (ter-pin'e-ol). A substance, $C_{10}H_{17}OH$, derived from terpene by boiling with dilute mineral acids.

terpinol (ter'pin-ol). Of Merck, a mixture of principles, having the composition $C_{10}H_{16}$ and $C_{10}H_{18}O$. It is a bronchial stimulant and antiseptic.

terra (ter'rah). Gen. *terrae*. See *earth*. **oleum terrae**. See *petroleum*. **t. alba**. Kaolin; china clay. **t. cariosa**. Rotten stone. **t. simolia**. Fuller's earth. [Lat.]

terraline (ter'ra-lën). A jellylike petroleum derivative.

ter'ror. An intense degree of fear. **night t., night t's**. See *pavor nocturnus* (2d def.). [Lat.]

tersulphate (ter-sul'fât). A sulphate containing three molecules of the sulphuric acid radicle. [Lat., *tersulphas*.]

tersulphid, tersulphuret (ter-sul'fid, ter-sul'fu-ret). See *trisulphid*.

tertian (ter'shun). Recurring on the third day (both days of occurrence being reckoned); occurring at intervals of two days, or characterized by such occurrence. [Lat., *tertius*, third.]

tertiarism (ter'she-ar-ism). All the symptoms of the tertiary stage of syphilis, taken collectively.

tertiary (ter'she-a-re). 1. Of organic compounds, having a radicle substituted in a hydrocarbon attached to a carbon atom which itself is connected with three other carbon atoms; of amins and amids, phosphins, stibines, and arsins, having all three hydrogen atoms of ammonia, phosphoreted hydrogen, etc., replaced by radicles. 2. Of a disease, in the third stage (said especially of syphilis in the gummatous stage). [Lat., *tertarius*.]

tertipara (ter-tip'ar-ah). A woman who has borne three children. [Lat., *tertius*, third, + *parere*, to bring forth.]

tervalence (ter'va-lens). See *trivalence*.

test. 1. A trial or experiment made for ascertaining some particular fact or condition; also the substance employed in such an experiment. 2. See *testa*.

TABLE OF TESTS

acetic acid and ferrocyanid t.; see in *appendix*, page 893. **aceto-acetic acid t.** See *Gerhardt's reaction* and *Arnold's reaction*. **acetone t.** See *Lieben's acetone reaction*, under *Lieben*. **Adamkiewicz's t.** See under *Adamkiewicz*. **albumin t.** See *Heller's t.* **Benedict's t.** for sugar in urine; see in *appendix*, page 894. **bile pigments' t.** See *Gmelin and Hammersten*. **bile t.** See *Pettenkoffer*. **Bond-Ultmann's t.** See *Bond-Ultmann*. **Böttger-Almen-Nylander t.** See *Böttger-Almen-Nylander*, under *Böttger*. **Brücke's bismuth iodid t.** See *Brücke*. **Calmette's t.** See under *Calmette*. **crucial t.** A t. which determines the matter in question decisively one way or the other. **diazo t.** See *Ehrlich*. **differential density t.** A t. for glycosuria. Two specimens of the

urine are kept in a warm place for twenty-four hours in loosely corked bottles, yeast having been added to one of them. The density is determined before and after fermentation. See also *Robert's method for estimating glucose*, under *Robert*. **Ehrlich's t.** See *Ehrlich*. **Esbach's t.** See *Esbach*. **Fehling's t.** See *Fehling's solution*. **Fehling's t. for sugar in urine**; see in *appendix*, page 894. **fermentation t.** The detection of glucose by its fermentation with yeast cells in a fermentation tube. Carbon dioxide gas is formed in the tube. **Fleitmann's t.** See *Fleitmann*. **Garrad's t.** See *Garrad*. **Gerhardt's t.** See *Gerhardt*. **glucose t.** See *Fehling's solution*, *fermentation t.*, *Böttger-Almen-Nylander t.*, under *Böttger*; *Trommer*, and *phenyl-hydrazone t.* for glucose. **Gmelin's t.** See *Gmelin*. **Gmelin's t. for bile in urine**; see in *appendix*, page 894. **Grahe's t.** See *Grahe*. **Grandeau's t.** See *Grandeau*. **Green's t. objects.** See *Green*. **group t.** A t. by which the presence of some one of a group of substances is shown without indication of particular substance. **guaiac t. for blood.** A t. made by adding to an alcoholic solution of guaiaic a few drops of ozonized oil of turpentine and of the liquid to be examined. If the latter contains hemoglobin, the guaiaic solution becomes blue from the oxidation of the guaiaic by the ozone liberated by the hemoglobin. **Gubler's t.** See *Gubler*. **Gunzberg's t.** See *Gunzberg*. **Heller's albumin t.** See *Heller*. **Heller's blood t.** See *Heller*. **Heller's nitric acid t.**, see in *appendix*, page 893. **Heller's sugar t.** See *Heller*. **Heller's t. for hematuria.** See *Heller*. **Holmgren's t. for color blindness.** See *Holmgren*. **Horsley's t. for sugar.** See *Horsley*. **Hume's t. for arsenic.** See *Hume*. **hydrostatic t.** A t. made by placing the lungs of a dead infant in water; if unaërated they sink; if the infant has breathed, or the lungs have been otherwise inflated, they float. **indican t.** See *Jaffe and Obermeyer*. **indigocarmin soda t.** See *Mulder's t.* **Jaffe's t.** See *Jaffe*. **Jaffe's t. for indican in urine**; see in *appendix*, page 894, 895. **Jendrassik's t.** See *Jendrassik*. **Jolles' t.** See *Jolles*. **Justus' t. for syphilis.** See *Justus*. **Knapp's t.** See *Knapp*. **Lieben's t. for acetoneuria.** See *Lieben*. **Maddox t.** See *Maddox*. **maggie t.** A t. by which the presence of mercury is shown by the formation of a white precipitate of calomel and its rapid reduction to a grayish mass of metallic mercury when tin dichlorid is introduced into a solution containing that metal. **Marsh's t.** See *Marsh*. **Méhu's t.** See *Méhu*. **Mett digestion t.**, see in *appendix*, page 905. **Millon's t. for salicylic acid, phenol, or tyrosin.** See *Millon*. **Molisch's sugar t.** See *Molisch*. **Moore's t.** See *Moore*. **Mulder's t.** See *Mulder*. **murexid t. for**

uric acid. A t. which consists in adding moderately concentrated nitric acid to the suspected body and evaporating to dryness. Any uric acid present is converted into alloxan, urea, and volatile constituents. If now the residue is moistened with ammonia solution the alloxan is converted into murexid, and a purple color is developed. **Nessler's t.** See *Nessler*. **ninhydrin t.** See *ninhydrin*. **Nylander's t.** See *Böttger-Almen-Nylander's t.*, under *Böttger*. **Obermeyer's t.** See *Obermeyer*. **Oliver's t.** See *Oliver*. **ozone t.** See *guaiac t. for blood*. **Penzoldt's t.** See *Penzoldt*. **Pettenkofer's t.** See *Pettenkofer*. **phenol test for cerebrospinal fluid;** see in *appendix*, page 909. **phenylhydrazone t. for glucose.** Five drops of phenylhydrazone are mixed in a test tube with 10 drops of glacial acetic acid and 1 c.c. of a saturated solution of sodium chlorid. Then add 2 to 3 c.c. of the urine to be tested and heat for at least 2 minutes over a flame. If 5 per cent. of glucose is present an immediate formation of glucosazon is observed. **picric acid t.** 1. A t. for glycosuria in which 3 parts of a saturated solution of picric acid and 2 of potassium hydrate are added to 5 of urine, and the whole is boiled for a minute. If glucose is present, a dark mahogany red color will result. 2. A t. for albumin. See *Esbach's t.* **Pray's t. letters for astigmatism.** See *Pray*. **Purdy's t. for glycosuria.** See *Purdy*. **Rinne's t.** See *Rinne*. **Robert's t.** See *Robert*. **Rosenbach-Gmelin t.** See *Rosenbach-Gmelin*. **Rosenbach's t. for bile in urine;** see in *appendix*, page 894. **Sanson's candle-flame t.** See *Sanson*. **Scherer's inosite t.** See *Scherer*. **Schiff's t. for uric acid.** See *Schiff*. **Schmidt's diet test,** see in *appendix*, page 914. **Schmidt's fermentation t.,** see in *appendix*, page 907. **Schmidt's t.** See *Schmidt*. **Schönbein's t.** See *Schönbein*. **Seliwanoff's fructose t.** See *Seliwanoff*. **shadow t.** See *skiascopy*. **Smith's t.** See *Smith*. **sugar t.** A t. to detect the presence of sugar. For special tests for sugar in the urine, see *Trommer's t.*, *Fehling's t.*, *Böttger-Almen-Nylander t.* **t. for acetone in urine,** see in *appendix*, page 894. **t. for albumin in urine,** see in *appendix*, page 893. **t. for amount of free HCl in stomach contents,** see in *appendix*, page 904, 905. **t's for amount of loosely combined HCl in stomach contents,** see in *appendix*, page 905. **t. for amount of sugar in urine,** see in *appendix*, page 894. **t. for bile in urine,** see in *appendix*, page 894. **t. for diacetic acid in urine,** see in *appendix*, page 894. **t. for diazo-bodies in urine,** see in *appendix*, page 894. **t. for indican in urine,** see in *appendix*, page 894, 895. **t. for sugar in urine,** see in *appendix*, page 894. **t. lines.** See under *line t.* **meals,** see in *appendix*, page 903. **t. types.** See under *type*. **Trommer's**

t. See *Trommer*. **Uffelmann's t. for lactic acid.** See *Uffelmann*. **Weber's t.** See *Weber*. See also in *appendix*, page 907. **Widal's agglutination t.** See *Widal*. **Worm-Müller's t. for glycosuria.** See *Worm-Müller*. [Old Eng., *test*, a pot, from Lat., *testum*, *testre*, collateral form of *testa*, a tile, an earthen vessel, a pot.] **testa** (tes'tah). A shell. **t. ovi, t. ovorum.** Eggshell. **t. preparata.** A very fine, tasteless powder made from oyster shells by boiling with water, freeing from foreign substances, washing, drying, finely powdering, rinsing with water, and drying again. [Lat.] **testaceous** (tes-ta'shus). 1. Having or consisting of a hard shell. 2. Hard and firm like the shell of a mussel. [Lat., *testa*, a shell.] **tes'tes.** Pl. of *testis*. 1. The testicles. 2. The posterior pair of the corpora quadrigemina. **Tes'tevin's sign.** The formation of a colloidlike pellicle on the urine shortly after it has been acidulated, mixed with a third of its bulk of ether, and agitated briskly; said to occur in the incubation stage of many infectious diseases. **testibrachium** (tes-te-bra'ke-um). The anterior brachium of the corpora quadrigemina. [Lat., *testis*, a testicle, + *brachium*, arm.] **testicle** (tes'tik-kl). 1. The sexual gland of the male. 2. Any structure furnishing spermatozooids. In man the testicles are two in number, ovoid, and are developed from the genital gland, which in the fetus is situated below the lower pole of the kidney. Near the end of intra-uterine life they normally descend, guided and drawn by the gubernaculum testis, through the inguinal canal to the scrotum, where they are suspended by the spermatic cords, the left hanging somewhat the lower. In their descent they derive a series of investitures from the several layers of the abdominal wall. Each testicle consists of a number of secreting tubules, which produce spermatozoa, the secretion being gathered through the corpus Highmori and discharged through the vas deferens. **displaced t.** A t. abnormally situated, as within the pelvis or in the inguinal canal. **inverted t.** A condition in which the attitude of the t. in the scrotum is reversed, so that the free surface presents posteriorly, and the epididymis is attached to the anterior instead of the posterior part of the gland. **irritable t.** Neuralgia of the t. **pulpy t.** Medullary sarcoma of the t. **scrofulous t.** See *tuberculous orchitis*, under *orchitis*. **swelled t.** See *epididymitis*. **syphilitic t.** See *syphilitic orchitis*, under *orchitis*. **t. juice.** See under *juice*. **undescended t.** A congenital malformation in which one or both t's remain in the abdominal cavity or in the inguinal canal. [Lat., *testis*.] **tes'tis.** See *testicle*. **caput t.** See *epididymis*. **female testes.** An old term for the ovaries. **testes minores.** See

- prostate. testes muliebres.* See *female testes. testes siccati pulverisati.* The dried and powdered testicles of the bull.
- test meal.** A definite quantity of food given and removed from a patient's stomach for purposes of study of the changes taking place within a given period of time.
- test types.** Letters of various sizes for trying the acuteness of vision.
- tetan'ic.** Pertaining to, due to, or resembling tetanus; as a n., an agent capable of causing a tetanuslike state.
- tetanin** (tet'an-in). A poisonous ptomain, $C_{13}H_{30}N_2O_4$, found in cultivations made to isolate the poison of tetanus and in limbs which have been amputated for tetanus.
- tetanium** (tet-an'e-um). Of Magendie, strychnin.
- tetanocannabin** (tet'an-o-kan'nab-in). An alkaloid, resembling strychnin in its physiological properties, derived from *Cannabis indica*.
- tetanoid** (tet'an-oyd). Resembling tetanus. [Gr., *tetanos*, tetanus, + *eidōs*, resemblance.]
- tetanolysin** (tet-an-ol'is-in). The hemolytic substance present in fluid cultures of the tetanus bacillus.
- tetanomotor** (tet'an-o-mo'tor). Of Heidenhain, a small ivory hammer arranged so as to deliver light blows on a nerve to induce tetanus. [*Tetanus* + Lat., *movēre*, to move.]
- tetanospasmin** (tet'an-o-spas'min). The convulsant principle present in fluid cultures of the tetanus bacillus.
- tetanotoxin** (tet-an-o-toks'in). An inclusive term for toxic substances present in cultures of the tetanus bacillus.
- tet'anus.** Syn.: *lockjaw*. 1. An infectious disease characterized by tonic spasm of the muscles with marked exacerbations. It is caused by the *Bacillus tetani*. 2. A tonically contracted state of a muscle (e. g., when induced experimentally). **apryetic t., benign t.** See *tetany. breaking t.* A t. (2d def.) occurring at the moment of breaking the circuit in a muscle through which a galvanic current is passing. **cathodal closure t.** A t. (2d def.) occurring at the cathode on closure of a galvanic circuit. Symbol, CaCTe, KaClTe. **cathodal duration t.** See *galvanotonus* (2d def.). **cathodal opening t.** A t. (2d def.) taking place at the cathode at the opening of a galvanic circuit. Symbol, CaOTe. **cephalic t.** Hydrophobic t.; so-called because it only occurs in connection with injuries situated in the distribution of the cranial nerves. **closing t.** See *making t. electric t.* Tetanoid spasm produced by strong electrization of all the muscles of the body. **faradic t.** Electric t. produced by the faradic current. **head t.** See *cephalic t. heat t.* Tetanoid spasm caused by heat. **holotonic t.** See *holotetanus. hydrophobic t.* Of Rose, a variety of t. characterized by violent spasm of the pharynx and esophagus. **hysterical t., imitative t.** A variety of hysteria which simulates t. and is distinguished from it by the age and sex of the individual, absence of pain, occasional clonic spasms, and the occasional intermission of all muscular rigidity. **making t.** 1. A t. (2d def.) occurring at the moment of making a galvanic current in a muscle. 2. See *galvanotonus* (2d def.). **obstetrical t.** See *eclampsia. opening t.* See *breaking t. Pflüger's t.* See *breaking t. physiological t.* The contraction of a stimulated muscle that persists as a result of a number of fused contractions. **pseudot.** See *arthrogryposis. puerperal t.* See *eclampsia. secondary t.* The t. induced in a muscle when its nerve is brought in contact with a tetanized muscle. **t. uteri.** An abnormally strong, steady, and uninterrupted contraction of the uterus on its contents without inflammatory phenomena. **traumatic t.** T. supervening upon some bodily injury. **voluntary t.** See *physiological t.* [Gr., *tētanos*, from *teinein*, to stretch.]
- tetany** (tet'an-e). Syn.: *tetanoid convulsions.* A nervous affection, especially of children and young persons, characterized by attacks of intermittent tonic spasms of certain groups of muscles, generally of the upper extremities. It is suggested that the disease is connected with pathological changes in the parathyroid glands. **acute relapsing t., epidemic t.** An acute infectious t., lasting only a few weeks and occurring among the working classes in Germany. **secondary symptomatic t.** Often connected with pyloric obstructions and consequent dilatation of the stomach and other grave gastric and intestinal conditions. [Lat., *tetania*, from Gr., *tētanos*, tetanus.]
- te'tia.** Yaws.
- tetra-, tetr-.** Combining form of Gr., *tētares*, *tēttara*, four.
- tetrabasic** (tet-rah-ba'sik). Syn.: *quadribasic.* Having a basicity of four; of an acid or acid salt, containing four atoms of replaceable hydrogen.
- tetrabrombenzene** (tet'trah-brom-ben'zēn). A four-atom bromin substitution product of benzene, $C_6H_2Br_4$.
- tetrabromethene** (tet-rah-bro-meth'ēn). The compound, C_2Br_4 .
- tetrabromid** (tet-rah-bro'mid). A bromin compound analogous to a tetrachlorid.
- tetracarbon** (tet-rah-kar'bon). A radicle containing four atoms of carbon.
- tetracetate** (tet-tras'et-ät). An acetate containing four molecules of the acetic acid radicle.
- tetracetylmorphin** (tet-rah''set-il-mor'fin). A substitution compound, $C_{31}H_{44}(C_2H_3O)_4N_2O_8$, of morphin, formed by the action of acetic anhydrid in excess.
- tetrachlorbenzene** (tet''rah-klor-ben'zēn). A four-atom chlorin substitution compound, $C_6H_2Cl_4$, of benzene.
- tetrachlorid** (tet-rah-klo'rid). A compound consisting of an element or radicle united with chlorin in the proportion of four atoms of the latter to a certain defi-

- nite quantity of the former assumed as the unit of comparison.
- tetrachlormethane** (tet''rah-klor-meth'-än). An oily liquid, CCl_4 , of ethereal odor.
- tetracoccus** (tet-rah-kok'kos). A micrococcus occurring in clusters divided in two directions, forming groups of four. [Gr., *tetra*, four, + *kokkos*, a berry.]
- tetracodein** (tet-rah-cod-e'in). A base, $4(\text{C}_{20}\text{H}_{24}\text{N}_2\text{O}_6)$, polymeric with codein and formed from the latter by the action of phosphoric or sulphuric acid. Administered to animals, it produces vomiting, diarrhea, and salivation, with great vital depression.
- tetrad** (tet'rad). 1. An element having a valency of four; a quadrivalent element. 2. A group of four micrococci.
- tetrafluorid** (tet-rah-flu'or-id). A fluorin compound analogous to a tetrachlorid (*q. v.*).
- tetragenous** (tet-raj'en-us). Giving rise to bacterial tetrads; a splitting up into groups of four micrococci. [Gr., *tetra*, four, + *geman*, to produce.]
- tetraglycylglycin** (tet''rah-glis-il-glis'in). A polypeptid consisting of five glycocoll groups united in one molecule.
- tetragonus** (tet-ra-go'nus). See *table of muscles*, under *muscle*.
- tetrahydric** (tet-rah-hi'drik). Of acids or alcohols, containing four replaceable atoms of hydrogen.
- tetrahydrid** (tet-rah-hi'drid). A compound of an element or radicle with four atoms of hydrogen.
- tetrahydroperoxyquinolin** (tet''rah-hidro-par'oks-e-kwin'o-lin). A poisonous and antipyretic artificial alkaloid, $\text{C}_8\text{H}_{11}\text{NO}$.
- tetrahydroxid** (tet''rah-hi-droks'id). A compound of an element radicle with four radicles of hydroxyl.
- tetra-iodid** (tet''rah-i'o-did). An iodin compound analogous to a tetrachlorid (*q. v.*).
- tetra-iodoethylene** (tet-rah-i''o-do-eth'il-ën). The compound C_2I_4 , an odorless substitute for iodoform.
- tetrakyl** (tet-ral'kil). A compound containing 4 alkyl radicles.
- tetrakylammo'nium**. A univalent radicle, consisting of ammonium in which all 4 hydrogen atoms are replaced by alkyls.
- tetramazia** (tet-rah-ma'ze-ah). The condition of having four breasts. [Gr., *tetra*, four, + *mazos*, breast.]
- tetramethyl** (tet-rah-meth'il). The chemical group $(\text{CH}_3)_4$.
- tetramethylammonium** (tet''rah-meth-il-am-no'ne-um). A univalent radicle, $-\text{N}(\text{CH}_3)_4$. **t. hydrate**, **t. hydroxid**. A crystalline body, $\text{N}(\text{CH}_3)_4\text{OH}$, acting as a powerful caustic. **t. iodid**. The compound $\text{N}(\text{CH}_3)_4\text{I}$.
- tet''tramethylpa''raphenylened i a m'i n.**
 $\text{N}(\text{CH}_3)_2$
 $\text{N}(\text{CH}_3)_2$
 The compound C_6H_4 has been used by Wurster to prepare a test paper, tetrapapier, by the deep violet coloring of which the presence of ozone, hydrogen peroxid, or various other substances can be shown. It is used as a mydriatic.
- tetramethylputres'cin**. A very poisonous base, $\text{C}_4\text{H}_8(\text{CH}_3)_4\text{N}_2$, obtained by the substitution of methyl in putrescin.
- tetranitrol** (tet-rah-ni'trol). Erythrol tetranitrate; used to reduce arterial tension.
- Tetranychus** (tet-ran'ik-us). A genus of acarids. **T. autumnalis**. The harvest-bug. Its mite, *Lepitus autumnalis*, causes severe itching by burrowing under the skin. **T. molestissimus**. A species that infests man and is the cause of severe local irritation. **T. tealsahuate**. A Mexican variety of *T.* which attacks human beings.
- tetrapeptid** (tet-rah-pep'tid). A polypeptid containing four amino-acid radicles united as one molecule.
- tetraphenyl** (tet-rah-fe'nil). The chemical group, $(\text{C}_6\text{H}_5)_4$.
- tetrapus** (tet'rah-pus). A four-footed monster. [Gr., *tetra*, four, + *pous*, foot.]
- tetrargentie** (tet-rar-jen'tik). Containing four atoms of silver in the molecule.
- tetraster** (tet-ras'ter). A cross-shaped figure formed in the ovum by the junction of a portion of the rays of four adjacent astra. See also *Auerbach's vacuole*, under *vacuole*. [Gr., *tetra*, four, + *aster*, a star.]
- tetrastichiasis** (tet''ras-tik-i'as-is). A congenital anomaly of the eyelids in which the lashes are arranged in four rows. [Gr., *tetrastichos*, in four rows.]
- Tetrastoma** (tet-ras'to-mah). A genus of entozoa of the order *Trematoda*. **T. renale**. A species found rarely in the urine. It is ovoid, about $\frac{1}{8}$ inch long, and provided with four suckers at the caudal extremity. [Gr., *tetra*, four, + *stoma*, the mouth.]
- tetrasulphid** (tet-rah-sul'fid). A sulphur compound analogous to a tetrachlorid.
- tetratomic** (tet-rah-tom'ik). Syn.: *tetra hydric*. Containing four atoms of replaceable hydrogen; having its combining capacity saturated by union with four hydrogen atoms.
- tetravalent** (tet-rav'al-ent). Having a valency of four.
- tetrethyl** (tet-reth'il). The chemical group $(\text{C}_2\text{H}_5)_4$.
- tetrodonin** (tet-ro-don'in). A crystalline base isolated from the roe of the fish called tetrodon.
- tetronal** (tet'ro-nal). An analogue, $\text{C}_2\text{H}_5 > \text{C} < \text{SO}_2\text{C}_2\text{H}_5$ of sulphonal and $\text{C}_2\text{H}_5 > \text{C} < \text{SO}_2\text{C}_2\text{H}_5$ of sulphonal and trional. It acts as a hypnotic.
- tetrose** (tet'rös). A simple carbohydrate containing four carbon atoms.
- tetroxid** (tet-roks'id). An oxygen compound analogous to a tetrachlorid.
- tetryl** (tet'r'il). See *butyl*.
- tet'ter**. Another name for skin disease. [Old Eng., *teter*, a skin disease.]
- teucrin** (tew'krin). 1. A non-nitrogenous substance obtained from *Teucrium fruticosans*. 2. Of Moseitig, an aqueous extract prepared from *Teucrium Scordium*. Injected subcutaneously, it produces a sudden rise of temperature.

Teucrium (tew'cre-um). Germander; a genus of the *Ajugeae*. Numerous species of *T.* have been employed in a great variety of conditions, but these are little used at present by educated physicians in England and the United States. [Gr., *teukrion*, from *Teukros*, Teucer, king of Troy.]

Texas fever. A disease of cattle due to the presence in the blood of the animal parasite, *Babesia bigemina*, which gains entrance through food or drink; usually through the contamination of the water.

tfoot. A mineral used by the Arabs as a substitute for soap.

Th. The chemical symbol for the element *thorium*.

thalamencephalon (thal'am-en-sef'al-on). Syn.: *interbrain*. That portion of the embryonic brain which includes the region of the third ventricle, the primary ocular vesicles, and the infundibulum. [Gr., *thalamos*, an inner chamber, + *egkephalos*, the brain.]

thal'amo-. Combining form of Gr., *thalamos*, bed, used to designate a part of the brain at which a nerve originates.

thalamus (thal'am-us). The optic thalamus. An oval, grayish mass seen on the floor of the lateral ventricle, after removing the fornix and velum interpositum. It is bounded anteriorly and externally by the corresponding corpus striatum, from which it is separated by the tenia semicircularis. To its inner side lies the third ventricle, of which it forms the lateral wall. Its lower surface forms the covering of the descending cornu of the lateral ventricle. Posteriorly it ends in two rounded masses, the geniculate bodies. The optic t. consists essentially of gray matter, with a thin external covering of white. In its interior are several distinct ganglionic masses or nuclei. See *median center of Luys*, under *center*. [Gr., *thalamos*, a chamber.]

Thalictrum (thal-ik'trum). Meadow rue; a genus of ranunculaceous herbs. Several species are said to contain berberin. [Gr., *thaliktron*, *thaliektron*.]

thalleoquin (thal-e'o-kwin). A substance formed by treating a quinin salt with chlorine or a concentrated solution of calcium chlorid. The reaction whereby it is produced is employed as a test for quinin.

thallin (thal'lin). An artificial alkaloid of the quinolin group, $C_8H_8OCH_3N$. It was formerly employed, together with several of its salts, as an antipyretic. [Gr., *thallos*, a green twig.]

thallium (thal'le-um). A metallic element; soft, malleable, bluish white, and of leaden luster. In compounds it acts partly as a univalent, partly as a trivalent radicle. Atomic weight, 204. Chemical symbol, Tl. It is an energetic irritant poison. [Gr., *thallos*, a green twig.]

than'ato-. Combining form of Gr., *thanatos*, death.

thanatol (than'at-ol). A homologue of guaiacol, used medicinally like that substance.

thanatology (than-at-ol'o-je). The sci-

ence of the causes, etc., of death. [Gr., *thanatos*, death, + *logos*, understanding.]

thanatophidia (than'at-of-id'e-ah). Toxicophidia; the poisonous (venomous) snakes. [Gr., *thanatos*, death, + *ophis*, snake.]

Thapsia (thap'se-ah). 1. Deadly carrot; a genus of herbs of the *Umbelliferae*. 2. In pharmacy, *T. garganica*. **T. fenicula**, **T. garganica**. A species found in southern Europe and northern Africa. The root bark yields resina thapsiae, and is saturated with a vesicant juice.

Thap'sus. 1. A section of the genus *Verbascum*. 2. *Verbascum t.* or mullein. [Gr., *thapsos*.]

thau'mato-. Combining form of Gr., *thauma*, *thauamat*-, wonder, marvel.

thea (the'ah). The tea tree. [Lat.]

thebaic (the-ba'ik). Pertaining to, composed of, or containing opium. [Lat., *Theba'icus*, Theban: opium was once prepared at Thebes.]

thebain (the'ba-in). An alkaloid, $C_{19}H_{21}NO_3$, found in opium; resembling codein rather than morphin in its action.

theca (the'kah). A sheath, envelope, receptacle, case, or capsule. **t. cerebri**. See *cranium*. **t. crurii**. See *pericardium*. **t. folliculi**. Of von Baer, an envelope formed around a graafian vesicle by the fibrillation of a layer of young connective tissue following the heightened vascularity that accompanies the process of maturation. The internal layer (*tunica propria*) is vascular, and the external (*tunica fibrosa*) fibrillated. **t. medullaris spinalis**, **t. vertebralis**. See *spinal dura*, under *dura*. [Gr., *theke*, sheath.]

thecitis (the-si'tis). Inflammation of the sheath of a tendon. [Gr., *theke*, sheath, + *itis*, inflammation.]

the'co-, erroneously **theca-**. Combining form of Gr., *theke*, sheath, case, receptacle.

thecostegnosis (the'kos-tog-no'sis). Contraction of the sheath of a tendon. [Gr., *theke*, a case, + *stegnosis*, contraction.]

thein (the'in). The active principle of tea (*Camellia thea*); now known to be caffeine, but formerly considered a distinct substance. [Lat., *thea*, tea.]

theism (the'ism). Chronic poisoning by tea; characterized by insomnia, cephalalgia, nervous trembling, irritable weakness of the heart, dyspepsia, and cachexia. [Lat., *thea*, tea.]

thelalgia (the-lal'je-ah). Pain in the nipple region. [Gr., *thele*, nipple, + *algos*, pain.]

thelytocia (thel''it-o'she-ah). Parthenogenesis (1st def.) with the production of females only. [Gr., *thelytokein*, to bear female children, from *thelys*, female, + *tokein*, to bear.]

the'nar. The palm of the hand. **t. pollicis**. See *t. eminence*, under *eminence*. [Gr., *thenar*, palm.]

Theobroma (the-o-bro'mah). A genus of tropical American trees of the *Sterculiaceae*. All the species apparently furnish some variety of cacao. **oil of t.** Cacao

butter. It melts between 30° and 35° C. It is used in pomades, etc., for coating pills and making suppositories, and, smeared on the skin, as a protective [U. S. Ph., Br. Ph.]. **T. cacao.** Cacao tree; found wild in tropical America and cultivated in most tropical countries, especially Venezuela, for its seeds, which yield oil of t. and when ground, flavored, and sweetened, constitute chocolate. [Gr., *theos*, a god, + *broma*, food.]

theobromin (the-o-bro'min). 3-7 trimethyl-xanthin, $C_7H_5N_3O_2$, obtained from *Kola acuminata*, etc., and also prepared synthetically. It is an active diuretic. Being but slightly soluble it is frequently combined with alkaline salts to increase its solubility. **t. sodium acetate.** Agurin; a double salt of sodium acetate and t. sodium; used as a diuretic. **t. sodium formate.** See *theophorin*. **t. sodium salicylate.** Diuretin; a double salt of sodium salicylate and t. sodium; used as a diuretic.

theocin (the'o-sin). A trade name for theophyllin, prepared synthetically.

theomania (the-o-ma'ne-ah). Religious monomania. [Gr., *theos*, a god, + *mania*, madness.]

theophorin (the-o-fo'rin). Theobromin sodium formate, a double salt, $NaC_7H_5N_3O_2 + NaCH_2 + H_2O$. It has the diuretic action of theobromin, probably enhanced by that of sodium formate.

Theophylla (the-o-fil'lah). The genus *Thea*.

theophyllin (the-o-fil'in). 1-3 dimethyl-xanthin ($C_7H_5N_3O_2 + H_2O$) isomeric with theobromin. It occurs in tea to small amount and is prepared synthetically. See *theocin*. **t. sodio-acetate.** Syn.: *acetheocinsodium*. A double salt of 1-3 dimethylxanthin. Sodium and sodium acetate in which the diuretic properties of the constituents are combined.

theory (the'o-re). An idea or hypothesis sufficient to serve as a basis for an explanation or for action. **aposition t.** The t. of the growth of a tissue by the deposit of cells from without. **atomic t.** 1. Of the ancients, the t. that all matter consists of very minute, hard, absolutely indestructible bodies called atoms. 2. Of Dalton and succeeding chemists, the t. that molecules of substances are built up of one or more atoms, each of which represents a certain definite amount of a chemical element, which amount always remains constant, going into and out of combination without suffering increase or decrease. **binary t.** In chemistry, that t. of the composition of salts which regards them as made up of two constituents, acid and basic. **Bordet's t.** See *Bordet*. **cell t.** See under *cell*. **darwinian t.** See *evolution*. **Deny's t.** See *Deny*. **difference t.** A t. proposed by Hermann to explain the presence of electrical currents in muscles and nerves. **Ehrlich's side-chain t.** See *Ehrlich*. **Freud's t.** See under *Freud*. **germ t.** See *biogenesis*. **Goltz' static t.** See *Goltz*. **Hawkins' t.** See

Hawkins. **Hering's t. of color vision.** See *Hering*. **kinetic t.** Of Brown, a t. of the semicircular canals which assumes that the nerve terminates in the ampullar area, excited in rotation movements of the head by the lay of the endolymph. **Kirchhoff's t.** See *Kirchhoff*. **Metchnikoff's t.** See *Metchnikoff*. **mutation t. of de Vries.** The t. that evolution proceeds by the appearance of mutation (sports) from time to time. **neuron t.** The t. which assumes that the nerve fibers are elongated processes of a nerve cell, and that the cell with all its branches constitutes the unit of structure of the central nervous system. **pre-existence t.** Of Du Bois-Reymond, the t. that electric currents are normally present in muscles and nerves before they are divided. **side-chain t.** See *Ehrlich's side-chain t.*, under *Ehrlich*. **transmutation t.** The t. of the change of one species or element into another species or element. **unitarian t.** The Bordet t. of the single complement for each alexin for each species. See *Bordet t.* **Weigert's t.** See *Weigert*. [Gr., *theoria*, from *theorein*, to look at.]

therapeusis (ther-ap-u'sis). See *therapeutics*.

therapeutic (ther-ap-u'tik). Pertaining to therapeutics.

therapeutics (ther-ap-u'tiks). The science and practice of the application of remedies for disease. **suggestive t.** The treatment of disease by hypnotic suggestion. [Gr., *therapeutike*, from *therapeuein*, to do service.]

therapeutist (ther-ap-u'tist). A practitioner of therapeutics.

therapy (ther'ap-e). See *therapeutics*.

theriaca (the-re'ak-ah). 1. An old name for opium flavored with nutmeg, cardamom and mace, or with saffron and ambergris; afterward for other confections of opium. 2. Molasses. [Gr., *theriake*, an antidote.]

Thering's line. A l. tangent to the lower margin of the orbit, and passing through the auricular point.

therma (ther'mah). 1. Heat. 2. A warm spring. [Gr., *therme*, from *thermos*, hot.]

thermaërotherapy (ther-ma'er-o-ther'-ap-e). The therapeutic use of hot air. [Gr., *therme*, heat, + *aer*, air, + *therapy*.]

thermal. Pertaining to heat or to hot springs. [Lat., *thermalis*.]

thermesthesiometer (ther'mes-the-ze-om'et-er). An instrument for testing the power of an individual to appreciate the differences in temperature. [Gr., *therme*, heat, + *aisthesis*, feeling, + *metron*, a measure.]

thermic (ther'mik). Pertaining to or due to heat. [Gr., *therme*, heat.]

thermifugin (ther-mif'u-jin). A commercial name for the antipyretic sodium salt of methyl-trihydroxyquinolin-carbonic acid ($C_6H_5(CH_3).NCOONa$). [Gr., *therme*, heat, + Lat., *fugere*, to flee.]

thermin (ther'min). Tetrahydrobetanaph-

- thylamin, $C_{10}H_{11}NH_2$, a mydriatic. It is capable of increasing the body temperature materially.
- ther'mo-**. Combining form of Gr., *thermos*, hot, from *therme*, heat.
- thermocautery** (ther-mo-kaw'ter-e). See under *cautery*. [Gr., *therme*, heat, + *kauterion*, a branding iron.]
- thermochrosis** (ther-mo-kro'sis). The property of absorbing heat rays of a certain degree of refrangibility and allowing others to pass through. [Gr., *therme*, heat, + *chrosis*, a coloring.]
- thermodiffusion** (ther''mo-dif-fu'shun). Gaseous diffusion as the result of the unequal heating of a gaseous mass. [Gr., *therme*, heat, + Lat., *diffusio*, a spreading out.]
- thermodin** (ther-mo'din). Phenacetin urethane ($C_{13}H_{17}O_4N$). It is an analgesic, antipyretic, and antiseptic.
- thermodynamics** (ther''mo-di-nam'iks). The science of the relations of heat to mechanical work.
- thermo-electricity** (ther''mo-e-lek-tris'it-e). Electricity produced by an increase or decrease of temperature at the point of contact of two different metals.
- thermo-excitant** (ther''mo-ek-si'tant). Exciting the production of heat.
- thermogenesis** (ther''mo-jen'es-is). The production of heat, especially in the animal organism. [Gr., *therme*, heat, + *genesis*, production.]
- thermogenic, thermogenous** (ther''mo-jen'ik, ther-moj'en-us). Heat producing.
- thermo-inhibitory** (ther''mo-in-hib'it-o-re). Preventing or retarding thermogenesis. [Gr., *therme*, heat, + *inhibitory*.]
- thermolabile** (ther-mo-la'bil). Any material such as complement which loses its power by heating to 56° C. for 30 minutes.
- thermolysis** (ther-mol'is-is). 1. The decomposition of a body under the influence of a high temperature, with a subsequent recombination on cooling. 2. The dissipating of animal heat. [Gr., *therme*, heat, + *lysis*, a loosing.]
- thermometer** (ther-mom'et-er). An instrument or apparatus for measuring degrees or variations of sensible heat. Its construction is based on the property possessed by certain substances of expanding or contracting regularly as the temperature is increased or diminished. The ordinary t. consists of a bulb communicating with a tube of very small bore, the bulb and adjacent part of the tube containing mercury, while the distal part of the tube is empty. With a rise of temperature the mercury expands so as to fill more and more of the tube. The temperature is indicated by a scale attached to the tube. The scale is graduated by marking off equal intervals as degrees, the unvarying distance between the marks that indicate the freezing point and boiling point of water being divided into 180 of these degrees in the Fahrenheit t., 100 degrees in the centigrade t. or Celsius's t., and 80 in Réaumur's t.
- The freezing point of water is the zero in the centigrade t. and Réaumur's t., but Fahrenheit put his zero 32° below that point, and the boiling points of water in the three are thus 100° , 80° and 212° . The Fahrenheit scale (symbol, Fahr. or F.) is that in general use, especially for meteorological and clinical observations; but in some countries the centigrade (symbol C.), which is that now chiefly employed in scientific research, takes its place; they are connected by the formula $F. = \frac{9}{5} C. + 32^\circ$. For very low temperatures alcohol is used instead of mercury, and very high temperatures are measured by the pyrometer. **air t.** A t. in which the temperature is measured by the expansion of air. **Celsius's t.** See under *Celsius*. **centigrade t.** See *Celsius's t.* **clinical t.** A t. for testing the temperature of the body. **Fahrenheit's t.** See under *Fahrenheit*. **Réaumur's t.** See under *Réaumur*. **recording t.** A t. which makes automatically a tracing indicative of the variation of temperature to which it has been subjected. **registering t., self-registering t.** An automatic maximum or minimum t. The maximum or minimum is shown by some indicator remaining in position after the mercury falls or rises. **surface t.** A t. for taking the temperature of the surface of the body. [Gr., *therme*, heat, + *metron*, a measure.]
- thermometric** (ther-mo-met'rik). Pertaining to the thermometer or its use.
- thermometrograph** (ther-mo-met'ro-graf). A recording thermometer. [Gr., *therme*, heat, + *metron*, a measure, + *graphein*, to write.]
- thermometry** (ther-mom'et-re). The use of the thermometer; also the body of facts and theories connected with its use. **cerebral t.** Of Broca, a method of diagnosing certain diseases of the brain by taking the surface temperature upon certain parts of the head. [Gr., *therme*, heat, + *metron*, a measure.]
- thermopenetration** (ther''mo-pen-e-tra'shun). The production of warmth in the deeper portions of the body with currents of lower tension and high amperage.
- thermophil, thermophilic** (ther'mo-fil, ther-mo-fil'ik). Able to grow only in a high temperature, as much as 40° to 70° C. **t. bacteria.** Bacteria growing only at a high temperature, e. g., the bacteria found in hot springs in a temperature of 70° C. [Gr., *therme*, heat, + *philein*, to love.]
- thermopile** (ther'mo-pil). See *thermo-electric pile*, under *pile*. [Gr., *therme*, heat, + Lat., *pila*, a ball.]
- thermoregulator** (ther-mo-reg-u-la'tor). An apparatus for regulating the temperature of an incubator.
- ther'mos bot'tle.** A vacuum bottle. A bottle having a layer of air or a vacuum between an inner and outer glass bottle enclosed in a metal case, and thus the contents of the bottle may be kept hot or cold for 12-24 hours.

thermoscope (ther'mo-sköp). An instrument for registering changes of temperature without indicating the degree or amount of heat. [Gr., *therme*, heat, + *skopein*, to observe.]

thermostable (ther-mo-sta'bil). Of a substance which withstands a temperature of 56° C. for 30 minutes, such as an amboceptor.

thermostat (ther'mos-tat). An apparatus for the automatic regulation of temperature. [Gr., *therme*, heat, + *istanai*, to set.]

thermosteresis (ther''mo-ster-e'sis). Deprivation of heat; lowering of temperature. [Gr., *therme*, heat, + *steresis*, deprivation.]

thermosyaltic (ther-mo-sis-tal'tik). Contracting under the action of heat (said of a muscle).

thermosyaltism (ther-mo-sis'tal-tizm). The contractility of muscular tissue due to sudden changes of temperature. [Gr., *therme*, heat, + *systellein*, to contract.]

thermotaxis (ther-mo-tak'sis). The adjustment of the production of animal heat. [Gr., *therme*, heat, + *taxis*, arrangement.]

thermotonometer (ther''mo-ton-om'eter). An instrument devised by Gruenhagen for measuring the amount of muscular contraction induced by various thermic stimuli. [Gr., *therme*, heat, + *tonos*, a stretching, + *metron*, a measure.]

thermotoxin (ther''mo-tok'sin). Any toxin produced in the living body by heat, as from scalds or burns. [Gr., *therme*, heat, + *toxin*.]

thermotropism (ther-mo-tro'pizm). The attraction and repulsion which heat exerts upon some of the bacteria. [Gr., *therme*, heat, + *trope*, turn.]

theroid (the'royd). Resembling an animal of a lower order. [Gr., *theriodes*, beast-like.]

theromorpha, **theromorphism** (the-romor'fe-ah, the-ro-mor'fizm). A monstrosity characterized by resemblance to a lower animal. [Gr., *ther*, a wild beast, + *morphe*, a form.]

Thevetia (the-ve'te-ah). 1. The genus *Genipa*. 2. A genus of American apocynaceous shrubs. **T. nerifolia**. A South American tree, naturalized in the East Indies, where it is known as exile tree. It contains a glucosid, thevetin. [*Thevet*, a French monk traveler.]

thevetin (thev'et-in). A glucosid having a digitalis action, obtained from the seeds of *Thevetia nerifolia*.

Thiersch's carmin reagent. A staining solution containing oxalic acid. **T's skin graft'ing**. Comparatively large pieces of epidermis with true skin underneath are shaved off sound skin, and applied to the denuded area after the granulations have been trimmed off. [*Karl Thiersch*, German surgeon, 1822-1895.]

thigenol (thi-je'nol). A solution of sodium sulpho-oleate containing 2.85 per cent. of sulphur. It is used like ichthyol in affections of the skin.

thigh (thi). The upper portion of the lower limb, between the knee and the hip. [Ang.-Sax., *théoh*, leg.]

thigmatropism (thig-mot'ro-pizm). Mechanical stimability. [Gr., *thigma*, touch, + *trophos*, turning.]

thilanan (thi'lan-in). A yellowish, unctuous substance consisting of lanolin with 3 per cent. of sulphur.

thi'o-. Combining form of Gr., *theon*, sulphur.

thio-alcohol (thi-o-al'ko-hol). See *mercaptan*.

thiocol (thi'o-kol). Potassium sulphoguaiacolate, $C_6H_5(OH)(OCH_3)(KSO_3)$, used in pulmonary affections.

thiocyanate (thi-o-si'an-ät). A salt of thiocyanic acid.

thiocyanid. See under *sulphocyanid*.

thio-ether (thi-o-e'ther). An alkylsulphid.

thioform (thi'o-form). A basic bismuth salt of dithiosalicylic acid; an antiseptic.

thiol (thi'ol). A soluble mixture of sulphurated and sulphonated petroleum oils, resembling ichthyol in chemical character and medicinal action. It occurs in commerce in liquid form, containing about 2 per cent. of sulphur, and as a brown powder having 8 to 9 per cent. of sulphur.

thiolin (thi'o-lin). A substitute for ichthyol, made from linseed oil and sulphur.

thion (thi'on). See *sulphur*.

thionic (thi-on'ik). Having one or more atoms of sulphur; there are monothionic, dithionic, trithionic, tetrathionic, and pentathionic acids.

thionyl (thi'on-il). A bivalent radicle (SO). **t. chlorid**. A colorless, fuming liquid, $SOCl_2$.

thio-oxy-carbonate (thi''o-oks-e-kar'bon-ät). A salt of the general constitution $O : C < \begin{matrix} O,R' \\ S,R' \end{matrix}$

thiophen (thi'o-fën). A colorless, strongly refracting, oily liquid, C_6H_4S , found in benzene obtained from coal tar. **t. diiodid**. An aromatic, non-toxic, and non-irritant body, used as an antiseptic.

thioresorcin (thi''o-res-or'sin). A yellowish white, inodorous, non-poisonous powder formed by a combination of resorcin and sulphur; used as a local antiseptic.

thiosapol (thi-o-sa'pol). A soda soap containing 10 per cent. of sulphur.

thiosinamin (thi-o-sin'am-in). Thiosinamina rhodallin, allyl thio-urea, $(NH_2)_2CS.NHCH_2.CH : CH_2$. A soluble crystalline substance, used to hasten the absorption of exudates, scar tissue, etc., by an action which is not explained. Its therapeutic value is not established. See *fibrolysin*.

thiosulphate (thi-o-sul'fät). Syn.: *sulphosulphate*, *hyposulphite*. A salt of thiosulphuric acid.

Thiothrix (thi'o-thriks). A genus of the family *Chlamydobacteriaceae*, being filamentous, non-motile, saprophytic bacteria, having a sheath and cells containing sulphur granules. [Gr., *theon*, sulphur, + *thrix*, hair.]

thio-urea (thi-o-u're-ah). A crystalline

- solid, $\text{CS}(\text{NH}_2)_2$, or urea, in which sulphur replaces oxygen.
- thirst.** The uneasy or painful sensation caused by want of drink. [Ang.-Sax., *þurst*, *thurst*; old Fris., *thurst*.]
- Thiry's fistula.** A f. of the intestine, especially of the small intestine (suggested by Thiry, 1864), for obtaining the intestinal juices unmixed with the other digestive fluids. It is made by opening the abdomen and cutting out a segment of the intestine from 10 to 40 cm. long, leaving its mesenteric vascular and nervous connections intact. The upper or cephalic end of the isolated segment is stitched to the wound in the abdomen so that it will remain open; the other end is closed. The two ends of the intestine from which the segment were cut are sutured together, thus making a continuous alimentary tube again. The intestinal juices flow spontaneously from such a f. and are increased during digestion.
- thiuret** (thi'u-ret). The compound, $\text{C}_8\text{H}_7\text{N}_3\text{S}_2$. Its parasulphocarbolate is used as a substitute for iodoform.
- Thomas' hip splint.** A rigid splint made of two steel rods one on each side of the leg and thigh, the upper ends are attached to a curved steel band fitting into folds of the buttocks and the lower ends into a steel piece under the instep. For removing the weight of the body from the hip and knee. [Hugh Owen Thomas, Liverpool surgeon, 1834-1891.]
- Thomas' pessary.** An Albert-Smith vaginal pessary with a fat posterior arm, made of hair or soft rubber, or of a wire spring covered with soft rubber. [T. Gaillard Thomas, New York gynecologist, 1831-1903.]
- Thompson's diet tables,** see in appendix, page 917.
- Thompson's galvanometer.** See *mirror galvanometer*, under *galvanometer*.
- Thompson's solution of phosphorus.** A preparation made by dissolving, with heat and agitation, one part of p. in absolute alcohol and glycerin and flavored with peppermint to make 14 parts.
- thomsonian** (tom-sen'e-an). Pertaining to Thomsen's disease.
- Thomsen's disease.** An affection of obscure nervous origin, characterized by a tonic spasm of the voluntary muscles, especially at the beginning of a voluntary contraction.
- thomsonian** (tom-so'ne-an). Pertaining to thomsonianism; as a believer in or practitioner of it.
- thomsonianism** (tom-so'ne-an-ism). A system of medicine in which the remedies were largely botanical. [Samuel Thomson, Massachusetts physician, 1769-1843.]
- thoracentesis** (tho''rah-sen-te'sis). Perforation of the chest to evacuate fluid from the pleura. [Gr., *thorax*, the chest, + *kentesis*, a pricking.]
- thoracic** (tho-ras'ik). Pertaining to the chest.
- thor'aco-**. Combining form of Gr., *thorax*, *thorakos*, thorax.
- thoracoceloschisis** (thor-ak-o-sel-os'kis-
- is). Congenital fissure of the chest and abdomen. [Gr., *thorax*, chest, + *koihia*, belly, + *schisis*, fissure.]
- thoracocentesis** (tho''rah-ko-sen-te'sis). See *thoracentesis*.
- thoracodidymus** (tho''rak-o-did'im-us). See *thoracopagus*. [Gr., *thorax*, the chest, + *didymos*, twin.]
- thoracogastroschisis** (tho''rak-o-gas-tros'kis-is). Congenital fissure of the thorax and abdomen. [Gr., *thorax*, the thorax, + *gaster*, the belly, + *schisis*, a cleaving.]
- thoracoschisis** (tho-rak-os'kis-is). Congenital fissure of the thorax. [Gr., *thorax*, chest, + *schisis*, a fissure.]
- thoracosphygmus** (tho-rak-o-sfig'mus). The impulse of the heart felt through the chest wall. [Gr., *thorax*, the chest, + *sphygmus*, the pulse.]
- thorax** (tho'raks). The cavity bounded by the diaphragm below, the ribs and sternum in front, the ribs laterally and the ribs and vertebral column behind, being closed above by the structures at the root of the neck. It contains the heart and lungs and the vessels connected with them, the esophagus, the sympathetic and the pneumogastric nerves and their ganglia and plexuses, and a portion of the thoracic duct. [Gr., *thorax*, a breastplate.]
- Thorington's disk.** An instrument used in retinoscopy.
- thorium** (tho're-um). A metallic element. Atomic weight, 213. Chemical symbol, Th. Its oxid makes up the greater portion of the Welsbach gas burner. **t. nitrate.** $(\text{Th}(\text{NO}_3)_4 + 4\text{H}_2\text{O})$, a crystalline, astringent, radio-active salt. Emanations accumulating in a bottle partially filled with a solution of the salt may be used by inhalation. The therapeutic value is not established.
- thought-transference.** An animistic idea of communicating thoughts without any form of expression of same, verbal or otherwise.
- thread cells.** See *achromatic fibrils*, under *fibril*.
- thread-worm.** Syn.: *pin-worm*. *Oxyuris vermicularis*. The term is also applied to guinea-worms, hair-worms, and others.
- threps'is.** Nutrition. [Gr., *threpsis*, from *trephein*, to nourish.]
- threpsology** (threp-sol'o-je). The physiology, etc., of nutrition. [Gr., *threpsis*, nutrition, + *logos*, understanding.]
- Thresh's reagent.** A mixture of 1.8 gram of potassium iodid. 45 c.c. of hydrochloric acid, and 30 c.c. of the Br. Ph.'s solution of bismuth.
- thridacium** (thri-da'se-um). See *lactucarium*. [Gr., *thridax*, lettuce.]
- thrill.** A tremor discerned by palpation or auscultation. **aortic t.** A t. heard over the aortic aperture in lesions of the orifice or valves. **arterial t.** A t. perceived over an artery. **hydatid t.** The peculiar t. felt by palpation over a hydatid cyst. **presystolic t.** A t. which is to be felt before the systole in mitral stenosis.
- throat** (thrôt). The cavity extending from

the arch of the palate to the glottis and the superior opening of the esophagus; also popularly the front of the neck. [Ang.-Sax., *throtu*, gullet, from *thréotan*, to push, to thrust.]

throm'base. See *thrombin*.

thrombin (throm'bin). Schmidt's name for the fibrin ferment which causes clotting of the blood by the conversion of fibrinogen to fibrin. See *fibrin*.

throm'bo-. Combining form of Gr., *thrombos*, lump, piece, clot of blood, curd of milk; used in compound words to indicate of or having to do with a thrombus.

thrombocyst (throm'bo-sist). A cyst formed around a thrombus. [Gr., *thrombos*, a clot, + *kystis*, a cyst.]

thrombogen (throm'bo-jen). The name given by Morawitz to the antecedent substance (prothrombin) in the blood from which the active thrombin (fibrin ferment) is formed by the combined influence of calcium and thrombokinase. [*Thrombin* + Gr., *gennan*, to produce.]

thrombokinase (throm-bo-ki'nās). An organic activator or kinase supposed to be formed in all tissues, including the blood cells, and which with calcium is necessary for the production or activation of thrombin from the preliminary prothrombin present in the blood plasma.

thrombophlebitic (throm-bo-fle-bit'ik). Pertaining to venous thrombosis or to phlebitis with thrombosis.

thrombophlebitis (throm'bo-fle-bit'is). Phlebitis with thrombosis. [Gr., *thrombos*, a clot, + *phleps*, a vein, + *itis*, inflammation.]

thromboplas'tic substance, thrombo-plas'tin. Name given to the material contained in all the tissues that accelerates the clotting of blood. According to Howell, it is a phosphatid, probably kephalin, which exists in the tissues as a compound with protein, a lecithoprotein.

thrombosis (throm-bo'sis). Syn.: *intra-vascular coagulation*. Clogging of blood vessels by coagulation of the blood within them. **cardiac t.** T. within one or more cavities of the heart. **cerebral arterial t.** A narrowing of the caliber of an artery in the brain caused by a deposit of fibrin from the blood. **compression t.** Thrombus formation in a vein compressed as the result of trauma on a new growth. **embolic t.** T. following obstruction of a vessel by an embolus. **infection t.** T. due to bacterial inflammation. **marantic t., marasmic t.** T. due to a very feeble circulation. **placental t.** T. of the uterine veins due to an extension of the physiological t. from the placental site into the substance of the uterus. **plate t.** T. produced by a conglutination of blood plates preexisting in the blood. **sinus t.** T. of one or more of the sinuses in the petrous portion of the temporal bone. **traumatic t.** 1. T. secondary to concussion or contusion of a part. 2. See *placental t.* **venous t.** T. of a vein. [Gr., *thrombosis*, from *thrombousthai*, to become clotted.]

thrombotic (throm-bo'tik). Pertaining to or due to thrombosis.

thrombozym (throm-bo'sim). An enzyme which, according to Nolf, is furnished by the leukocytes and plates and constitutes one of the factors in the coagulation of the blood. It is assumed to combine with fibrinogen and thrombogen to form fibrin.

throm'bus. The clot formed in thrombosis. **ante mortem t.** A t. formed in the heart or large vessels before death. **autochthonous t.** See *primary t.* **ball t.** A globular t. which becomes loosened from its attachment to the wall of the auricle and lies free in the cavity; a rounded heart-clot. See *primary t.* **bland t.** A t. not containing bacteria. **blood plate t.** A t. consisting of blood plates, these elements forming the earliest stage of rejuvenated thrombi. **calcified t.** A phlebolith. **canalized t.** A t. containing one or more channels. **distal t.** The t. forming on the distal side of a ligated artery. **hyaline t.** A t. in a capillary or very small blood vessel. It is caused by the agglutination and hyaline transformation of red blood corpuscles. **infective t.** A t. containing bacteria. **laminated t.** A t. formed in strata or laminae by slow and continuous coagulation, with an intermitting force of condensation. **marantic t.** A t. forming in the auricular appendages, the recesses of the trabeculae, and various venous sinuses, due primarily to extreme cardiac weakness. **mixed t.** A t. composed of red and white areas. **mural t.** A t. projecting from the wall of a vessel into the lumen. **occluding t.** A t. entirely closing the lumen of a blood vessel. **organized t.** A t. transformed into vascularized connective tissue. **pale t.** A t. consisting mainly of white blood corpuscles. **parietal t.** See *mural t.* **post-mortem t.** A t. formed in the heart or large blood vessels after death. **primary t.** A t. which remains at the place of its formation. **progressive t.** A t. usually stratified, which grows continuously into the lumen of the vessel. **proximal t.** The t. forming in the cardiac side of a ligated artery. **red t.** A t. formed by the coagulation of blood which is at rest. It is dark red or brown in color, and contains few white corpuscles, consisting mainly of red blood corpuscles. **secondary t.** 1. A t. following inflammation of the vessels or of the tissues immediately surrounding them. 2. A t. which is continuous from a primary t. **simple t.** See *bland t.* **neonatorum.** See *cephalhematoma*. **vaginalis.** Hematoma beneath the mucous membrane of the vagina. **t. vulvae.** Hematoma of the labium pudendi majus. **valve t.** A t. which permits the blood to flow in one direction and occludes it in another. **white t.** One which contains no pigment. See *pale t.* [Gr., *thrombos*.]

thrush. Syn.: *muguet*. White spots in the mouth due to infection with *Oidium albicans*. See *aphthous stomatitis*, under *stomatitis*. [Old Eng., *thrusche*.]

thrust culture. See *stab culture*, under *culture*.

Thuja (thu'jah). Preferably written *Thuya*. 1. *Arbor vitae*; a genus of evergreen trees and shrubs of the *Cupressineae*. 2. Of the U. S. Ph., 1880, the fresh tops of *T. occidentalis*. **T. obtusa**, **T. occidentalis**. American arbor vitae. The fresh tops (leaves and twigs), the t. of the U. S. Ph., 1880, are used in coughs and as an embrocation for rheumatic pains. [Gr., *Thyia*.]

thu'jin. A substance, $C_{20}H_{32}O_{12}$, obtained from the green parts of *Thuja occidentalis*.

thu'jol. A substance, $C_{10}H_{16}O$, forming the chief constituent of the oil of *Thuja occidentalis*. It is capable of inducing abortion and it induces fatty degeneration of the vital organs.

thus. 1. Incense, common frankincense; olibanum. 2. A white, yellow, or reddish resin exuding from the branches of *Pinus sylvestris* and *Abies excelsa*. **T. americanum**. Common turpentine (the oleo-resin). The English synonym is frankincense, but the term frankincense is used as a synonym for olibanum in the U. S., but not for turpentine [Br. Ph., 1898]. **t. arabicum**. Olibanum. **t. libycum**. Gum ammoniac. **t. vulgare**. 1. Common frankincense. 2. Olibanum silvestre. [Lat.]

thymacetin (thi-mas-e'tin). The compound $\begin{matrix} CH_3 & & OC_2H_5 \\ & & / \quad \backslash \\ C_3H_7 & > & C_6H_5 < \\ & & \backslash \quad / \\ & & NH(CH_3CO) \end{matrix}$; used in headache and neuralgia.

thymal (thi'mal). Methylsopropyl-phenol, $CH_3(C_6H_5OH)C_3H_7$. A crystalline substance found in many vegetable oils; used as an antiseptic.

thymene (thi'mēn). A levorotary liquid, $C_{10}H_{10}$, found in oil of thyme.

thymiama (thim-e-ah'mah). Anything burned as incense or for fumigation. [Gr., *thymian*, to burn incense.]

thymiasis (thim-i'as-is). Fumigation. [Gr., *thymian*, to burn incense.]

thymine (thi'min). 5-methyl-2,6-dioxypyrimidin, $C_5H_8N_2O_2$. A pyrimidin derivative found in the nucleic acid of the thymus gland.

thymitis (thi-mi'tis). Inflammation of the thymus gland. [Gr., *thymos*, the thymus gland, + *itis*, inflammation.]

thy'mo-. Combining form of Gr., *thymos*, thymus.

thymoform (thi'mo-form). A product of the reaction between thymol and formic aldehyd; and used like iodoform.

thymol (thi'mol). Propylmethylphenol, $C_6(H_3H_2CH_2H_2OH)CH_2.CH_3$. A phenol from oil of thyme. It is antiseptic and is used as an addition to dusting-powders [U. S. Ph., Br. Ph.]. **thymolis iodium**. Syn.: *aristol*. A diiodid of t. It is used as an odorless substitute for iodoform [U. S. Ph.].

Thymus (thi'mus). 1. Thyme, a genus of the *Labiatae*; also *T. vulgaris*. 2. A two-lobed lymph gland in the neck and thorax of the young. **accessory t.** One of the lobules frequently met with belonging to

the t. gland, but isolated from the mass of the organ. **T. serpyllum**, **T. serpyllum**. Mother of thyme. The flowering leafy branches contain an essential oil, bitter extractive, tannin, etc., and are used as an external stimulant. **T. vulgaris**. Common thyme; a highly aromatic undershrub indigenous to southern Europe, often cultivated as a condiment. The leafy and flowering branches are used like those of *T. serpyllum*, and furnish oil of thyme. [Gr., *thymos*, thyme, a warty excrescence, i. e., resembling a bunch of thyme.]

thyraden (thi'rad-en). An extract of the thyroid gland.

thyroid, thyré-iodin (thi're-in, thi-re-i'o-din). See *iodothyrin*. **t. of Merck**, a preparation having the therapeutic action of thyroïd substance.

thyresol (thi're-sol). A proprietary preparation consisting mainly of the methyl blue of santalol, $C_{15}H_{23}OCH_3$. Its action and uses resemble those of sandalwood oil.

thy'ro-, **thy'reo-**. Combining form of Gr., *thyreos*, oblong shield.

thyro-antitoxin (thi'ro-an-te-toks'in). A crystalline substance free from iodine obtained from the thyroid gland.

thyro-arytenoid (thi'ro-ar-it'e-noyd). Pertaining to the thyroïd and arytenoid cartilages. **t. muscles**. See *table of muscles*, under *muscle*.

thyro-arytenoideus (thi'ro-ar-it-en-oyd'e-us). The t. internus and the t. externus regarded as one muscle. See *table of muscles*, under *muscle*.

thyrocele (thi'ro-sēl). A tumor situated in the thyroïd gland. Goiter. [Gr., *thyreos*, shield, + *kele*, tumor.]

thyro-epiglotticus (thi'ro-ep-i-glot'ti-cus). See *table of muscles*, under *muscle*.

thyroïdeus (thi'ro-hi-oyd'e-us). A flat quadrangular muscle arising from the outer surface of the thyroïd cartilage and inserted into the lower margin of the body and the cornu majus of the hyoid bone. See *table of muscles*, under *muscle*.

thyroïd (thi'royd). 1. Pertaining to, connected with, or derived from the t. gland.

2. The gland itself. See under *gland*.

accessory t's. See *accessory t. glands*, under *gland*. **desiccated t. gland**. The t. gland of sheep dried and powdered after the removal of adherent tissue [U. S. Ph., *glandulae thyroïdea siccae*]. **t. preparations**. The pharmaceutical preparations of t. gland, mainly proprietary, have become very numerous since the discovery was made that the oral administration of the gland sufficed to prevent the symptoms which follow removal of the t. gland. [Gr., *thyroeoïdes*, from *thyreos*, an oblong shield, + *eidos*, resemblance.]

thyroïdectin (thi-royd-ek'tin). A proprietary preparation consisting of gelatin capsules containing a powder prepared from the blood of thyroïdectomized animals.

thyroïdectomy (thi-royd-ek'to-me). Re-

removal of the thyroid gland. [Gr., *thyreoides*, thyroid, + *ektome*, a cutting out.]

thyroideum (thi-royd'e-um). The thyroid gland. **t. siccum**. The desiccated thyroid gland [Br. Ph.].

thyroidin (thi-royd'in). Of Merck, a purified albuminoid from the thyroid gland, having the actions of that gland.

thyroidism (thi-royd-izm). The group of symptoms supposed to be caused by the increased internal secretion of the thyroid gland and similar in general to those of exophthalmic goiter.

thyroiditis (thi-royd-it'is). Inflammation of the thyroid gland. [*Thyroid*, + Gr., *itis*, inflammation.]

thyro-iodinin (thi-ro-i'o-din-in). Iodothyrim; an organic iodine compound found in the thyroid gland and apparently the active medicinal principle of that organ.

thyrolytic (thi-ro-lit'ik). Destructive to thyroid tissue. [*Thyroid*, + Gr., *lysis*, dissolution.]

thyroncus (thi-ron'kus). See *goiter*. [*Thyroid*, + Gr., *ogkos*, tumor.]

thyropharyngeus (thi''ro-fa-rin'je-us). See *table of muscles*, under *muscle*.

thyroprivia (thi-ro-priv'e-ah). Condition after removal of thyroid body. [*Thyroid*, + Lat., *privus*, without.]

thyroprotein (thi-ro-pro'te-in). A protein belonging to the globulin group isolated from the thyroid glands and characterized by the presence of iodine.

thyrotomy (thi-ro'tom-e). 1. Splitting of thyroid cartilage. 2. Any cutting operation on thyroid gland. [Gr., *thyreooides*, thyroid, + *tome*, a cutting.]

thyrotoxin (thi-ro-toks'in). A serum claimed to be cytolytic, prepared by injecting animals with ground-up thyroid tissue.

tibia (tib'e-ah). A long bone, the larger of the two of the leg, on the anterior and medial side of which it is placed. Its upper extremity bears two concave surfaces covered with cartilage, separated by the crucial spine, for articulation with the femur, and bears on each side two prominences, the lateral and medial tuberosities. The shaft is three-sided, smaller in the middle than at either end, its medial surface being subcutaneous. The lower extremity is enlarged transversely and projects downward on the inner side as the medial malleolus, presenting a concave surface for articulation with the astragalus; laterally is a surface covered with cartilage for articulation with the fibula, and posteriorly are grooves for the tendons of the tibialis posticus and flexores digitorum pedis and pollicis longi. [Lat., *tibia*, shin.]

tibial (tib'e-al). Pertaining to or situated near or toward the tibia.

tibialis (tib-e-al'is). 1. Tibial. 2. A muscle connected with the tibia. See *table of muscles*, under *muscle*. **t. phenomenon**. The dorsal extension of the foot of a paralyzed leg on flexing the leg towards the body. [Lat.]

tibio-accessorius (ti''be-o-ak-ses-so're-us). See *table of muscles*, under *muscle*.

tic. Short, lightninglike, convulsive motions, especially of muscles in the face. **convulsive t.**, **facial t.** A psychasthenic manifestation, a coordinated and systematic act, often involving the action of muscles supplied by various nerves. **spasmodic t.** Paralysis of the muscles of one or both sides of the face, associated with tonic contraction of the same. See *facial paralysis*, under *paralysis*. **t. douloureux** [Fr.]. Facial neuralgia accompanied by an involuntary contraction of some of the facial muscles. **t. giratoire** [Fr.]. Clonic spasm of the obliquus capitis inferior, producing rotary movements of the head. [Fr.]

tick. A name common to certain small parasitic *Arachnida* constituting the order *Acarina*. They disseminate certain diseases among human beings, e. g., Dutton's relapsing fever and Rocky Mountain fever and various skin affections. **itch t.** See *Acarus scabiei*. **t. fever**. A f. attributed to infection from *Pyroplasma hominis*, a parasite of certain ticks, especially *Ornithodoros moubata*; said to resemble typhus, but of very low mortality. [Dutch, *tijk*.]

t. i. d. Abbreviation for Lat., *ter in die*, meaning, three times daily.

tigium (tig'le-um). See *Croton t.*, under *Croton*. **grana tiglii**. The seeds of *Croton t.* **oleum tiglii**. See *croton oil*, under *Croton* [U. S. Ph.]. **T. officinale**. See *Croton t.*, under *Croton*.

tigroid (ti'groyd). The material in nerve cells which stains with basic anilin dyes. See *Nissl's granules*. [Gr., *tigrooides*, spotted.]

Tilia (til'e-ah). 1. A genus of trees (the limes or lindens), of the *Malvales*. 2. See *flores tiliae*. **flores tiliae**. T. flowers contain a volatile oil, to which any action in them is probably due, and, perhaps, a glucosid, tiliacin, which is formed in the leaves. T. flowers are used for headache and indigestion.

time. Extent of duration. **physiological t.** The t. elapsing between the impression received by an organ of sense and its perception by the individual affected. **reaction t.**, **reflex t.** The t. occupied in the transfer of an impulse along a sensory nerve to the spinal cord and brain and back along a motor nerve.

tin. A metallic element known since the beginning of the Christian era, although confounded at that time with lead. Symbol, Sn (from stannum); atomic weight, 117.8; sp. gr., 7.293. List of poisons and their antidotes, see in *appendix*, page 939. **solution of chlorid of t.** A preparation made by heating granulated t. with water and hydrochloric acid until no more gas is obtained, adding water and boiling with the undissolved t. [Br. Ph.]. **tin'cal**. Crude borax.

tinctura (tink-tu'rah). See *tincture*. **t. amara**. Stomach drops; a tincture obtained from percolating gentian, centaury, bitter orange peel, orange berries, and zedoary with alcohol and water [N. F.]. **t. antacrida**. Antacid tincture; dys-

menorrhœa mixture; an alcoholic solution of mercuric chlorid, gûaiac, Canada turpentine, and oil of sassafras [N. F.]. **t. antiperiodica.** Warburg's tincture. This exceedingly complex preparation has no place in scientific medicine at this time. It was once used against malaria [N. F.]. **t. aromatica.** A tincture prepared from various aromatic drugs [N. F.]. **t. gambir composita.** An astringent remedy. Gambir, in No. 50 powder, 50 gm.; Saigon cinnamon, in No. 50 powder, 25 gm.; diluted alcohol, a sufficient quantity to make 1000 c.c. [U. S. Ph.]. **t. herbarum recentium.** Made by the general formula: 50 grams of the fresh drug macerated in enough alcohol to yield 100 c.c. of tincture when expressed [U. S. Ph.].

tincture (tink'tûr). A pharmaceutical preparation made by dissolving a drug in alcohol, especially by subjecting vegetable substances to the action of alcohol. **ammoniated t.** A t. prepared with aromatic spirits of ammonia as the menstruum. **antiperiodic t.** See *tinctura antiperiodica*. **etheral t.** A t. in the preparation of which an appreciable quantity of ether is used. **Fleming's t.** A concentrated tincture of aconite. **Huxham's t.** See under *Huxham*. **Warburg's t.** See *tinctura antiperiodica* [N. F.]. [Lat., *tinctura*, from *tingere*, to wet.]

tinea (tin'e-ah). A name applied to skin diseases which are caused by a microphytic fungus, such as that of ringworm. **t. albuginea.** A peculiar form of ringworm found in the Dutch East Indies. It occurs in large, roundish, white, scaly patches on the palms and soles and spreads thence to the adjacent skin of the hands and wrists and feet and ankles. **t. circinata.** Ringworm of the body, beginning as a flat reddish papule or slightly elevated circular spot, which spreads peripherally while it clears up at the center, thus forming a ringed lesion. Rings may be as large as three inches in diameter. **t. circinata cruris.** Ringworm occurring about the genitals, especially on the inside of the thighs. **t. circinata tropica.** See *t. imbricata*. **t. favosa.** Syn.: *favus*. An infectious disease of the skin, found typically on the scalp, due to a specific fungus and characterized by the occurrence of peculiar saucer-shaped sulphur yellow crusts. The fungus is called *Achorion Schoenleinii*. **t. furfuracea.** T. attended with the formation of whitish greasy scales or crusts. **t. imbricata.** Syn.: *tokelau*. A local infectious disease of the skin occurring in tropical countries. It is caused by a fungus closely resembling the large-spored trichophyton fungus and is characterized by peculiar, scaly, ringed, concentric lesions. **t. intersecto.** A rare disease, beginning as small, roundish, slightly elevated, itching spots on the arms, chest, and back. The patches become brown, presenting a smooth, tense surface, increase in size, and coalesce. **t. kerion.** A form of *t. tonsurans*. **t.**

lupinosa. See *t. favosa*. **t. nodosa.** Sheathlike, nodular masses developing in the hair of the beard and mustache from the growth of an unnamed fungus. The masses surround the hairs, which become brittle, and the hair may be penetrated by the fungus and thus split. **t. sycosis.** T. of the beard is either superficial, when it presents the features of ringworm of the scalp, or it may be deep-seated, causing a swollen, red, and angry mass of hypertrophied granulating tissue in which are imbedded distended hair follicles. **t. tonsurans.** See *t. sycosis*. **t. trichophytina.** Ringworm; a local infectious disease of the skin, produced by the trichophyton fungus. The organism grows by preference in the horny epithelium. The lesions vary according to the part of the body attacked, whether or no the hairs are involved. See also *t. circinata*. **t. trichophytina corporis.** See *t. circinata*, **t. trichophytina cruris.** See *t. circinata cruris*. **t. trichophytina unguis.** See *onychomycosis*. **t. vera.** See *favus*. **t. versicolor.** Syn.: *chromophytosis*. An infectious disease of the skin, produced by the *Microsporon furfur*. It is characterized by the occurrence on the trunk of persistent, brownish, furfuraceous, non-inflammatory patches. [Lat., *tinea*, a gnawing worm.]

tin'king. A clear, metallic sound like that produced by one piece of metal striking lightly against another. **metallic t.** A t. sound produced in a pneumothorax and in a large pulmonary cavity having solid walls.

tinnitus (tin-ni'tus, tin'ni-tus). A ringing or tinkling sound. **nervous t.** A true neurosis, characterized by the subjective sensation of a humming or buzzing sound, varying considerably in character, and occurring mostly in excitable, nervous persons, during mental strain, or in states of exhaustion, anemia, or shock. It is also known as t. without deafness, and proves obstinate to every kind of treatment. **t. aurium.** A subjective sound, varying in character, duration, and intensity, heard by patients suffering from various forms of ear disease, and also following the administration of large doses of certain drugs, notably quinin. It also occurs in certain febrile disorders and in marked anemia. [Lat., *tinnire*, to ring.]

-tion. A suffix from the Old Eng. and Lat., *-tionem*, forming abstract names.

-tious. A suffix from the Old Eng. and Lat., *-tiosus*, forming adjectives.

tissue (tis'su). A collection of cells or structural elements so modified in form, size, and arrangement as to have a constant and recognizable structure, wherever it may occur (being modified in different situations only so far as local connections and uses render necessary), and to be adapted to the performance of a special and definite function. All of one kind of t. in the body forms a system, such as the nervous or the muscular sys-

tem, while the t's combined form organs. Two systems of classification are used, the older and more common being based upon the appearance in the adult, and the other upon the origin from the different germ layers of the ovum. According to the first method, one of the most satisfactory classifications is the division into four groups—epithelium, connective t., muscular t., and nervous t.; according to the second, t's are ectodermic, endodermic, or mesodermic. **adenoid t.** The reticular framework of the lymph nodes, the meshes of the reticulum being filled with lymphoid cells. **adipose t.** Areolar t. in which the areolae are more or less filled with fat cells, a condition which may occur in any part of the body except the eyelids and parts of the male sexual apparatus. **alveolar t.** The t. forming the framework of the pulmonary alveoli. It consists of areolar t. in which the elastic fibers are numerous, and there are also a considerable number of muscular fiber cells. **animal t.** The t. of an animal in contradistinction to that of a plant. **aqueous t.** Water t., such as that of most succulent plants, containing parenchyma cells stored with sap and more or less mucilage. **areolar t., areolated connective t.** That part of the connective t. of the body in which white and yellow connective t. fibers and bundles cross at all angles and continually unite to form larger bundles or divide to form smaller ones, thus making a kind of network. **bone t.** See *osseous t.* **cancellous t.** The porous, spongy t. of the bones. **cartilaginous t.** See *cartilage.* **cavernous t.** Fibrous and elastic t. containing in the areolae a freely communicating plexus of veins or venous sinuses, all included in an elastic envelope and capable of great increase in bulk when the veins are distended with blood. **cellular t.** Areolar t. **chromaffin t.** Tissue composed of cells that stain readily with chromic salts. **compact osseous t.** See *compact osseous substance,* under *substance.* **complex t's, composite t's, compound t's.** T's composed of two or more simple t's in nearly equal proportions, as in blood vessels, lymph vessels, lymphatic glands, etc. **connective t.** T. serving for the support or connection of other t's. It consists of soft masses, as in areolar t., in tendons, and in ligaments, or of more or less hard and rigid masses, as in cartilage, bone, and dentin. The term connective t. is sometimes limited to the soft connective substances in the body, excluding bone and cartilage. See *areolar t., white fibrous t., elastic t., osseous t., and cartilage.* **corneous t.** Compact masses of cells which are soft near their vascular bases, but near their free surface hard, flat, and often devoid of a nucleus; found in the hair, nails, hoofs, horns, and epidermis. **dental t., dentinal t.** See *dentin.* **elastic t.** That part of the connective t. of the body consisting of branched and anastomosing elastic fibers or of elastic mem-

branes. **embryoplastic t.** Embryonic connective t. before the fibers are developed. **endothelial t.** The t. formed by the endothelia of the body. **epidermic t.** The epidermis and its appendages, with the epithelium of mucous membranes. **epithelial t.** The t. formed by the epithelia of the body. **erectile t.** See *cavernous t.* **fat t., fatty t.** See *adipose t.* **fibrillar connective t.** See *white fibrous t.* **fibrillated t.** See *fibrous t.* **fibrocartilaginous t.** See *fibrocartilage.* **fibrous cellular t., fibrous connective t.** See *white fibrous t.* **fibrous t.** 1. Connective t. composed of elastic or white fibers and bundles of fibers which extend in nearly parallel directions, as in tendons and the ligamentum nuchae. 2. Connective t. composed of fibers without regard to their nature or direction. **follicular t.** See *adenoid t.* **formative t.** A collection of cells which give rise, by becoming more or less modified, to a permanent or adult t. **fundamental t.** One of the t's forming a fundamental system. **gelatinous nervous t.** Nervous t. composed of non-medullated nerve fibers, as in the sympathetic nerve. **germinal t.** T. giving rise to ova or spermatozooids. See *germinal epithelium,* under *epithelium,* and *germ plasm,* under *plasm.* **granulation t.** A t. formed during the stage of inflammatory regeneration of repair and consisting of many newly formed tissue cells and blood vessels. **gray nervous t.** Nervous t. containing nerve cells. See also *gray matter of the brain,* under *matter.* **ground t.** See *stroma.* **homogeneous connective t.** Membranes, such as the coats of the malpighian corpuscles of the spleen, which agree in chemical character with connective t., but do not contain bundles of fibers. **horny t.** See *corneous t.* **hylic t.** Primitive pulp tissue of the embryo, including the neuroblast, the notochord, and the mesenchyme. **inflammatory t.** The t. formed during inflammation. **interlobular connective t. of the liver.** Connective t. between the acini of the liver, containing branches of the bile ducts, the hepatic artery, and the portal vein. **intermediate areolar t.** Connective t. lying between the muscles, blood vessels and other deep-seated parts. See *areolar t.* **interstitial connective t.** See *areolar t.* **investing areolar t.** A kind of sheath formed around the various muscles, blood vessels, nerves, etc., by the areolar t. **lardiform t.** T. that has undergone amyloid degeneration. **lepidic t.** The "lining membranes" tissue, including epiblastic, hypoblastic, mesothelial and endothelial tissues. **ligamentous t.** See *white fibrous t.* **lymphatic t., lymphoid t., lymph t.** See *adenoid t.* **medullary t.** See *medullary substance,* under *substance.* **mesothelial t's.** T's formed from the mesothelium. **mucinous t., mucoid (connective) t., mucous t.** Connective t., such as that in the umbilical cord of the fetus, consisting of an

abundant jellylike albuminous ground substance, in which are imbedded numerous round and branched, anastomosing cells and comparatively few white and elastic connective t. fibers. **muscular t.** T. composed of striated muscular fibers, of cardiac muscular fiber cells, or of muscular fiber cells. Its distinguishing characteristic is its power to contract in one direction, viz., along the long axis of the fibers composing it. **nerve t.** See *nervous t.* **nervous t.** T. composed of nerve fibers and nerve cells. **osseous t.** The combined structure consisting of the matrix of animal matter and the osseous granules deposited in it that constitutes bone. **phanerogenous t., phanerophorous t.** A structure which may be said to bear some evident part, such as the papilla of a hair, which seems to bear the hair. **porous t.** See *areolar t.* **pulp t.** T. forming the pulp of a gland or organ, such as the t. of the tooth pulp. **reticular t.** See *adenoid t.* **sarcous t.** See *muscular t.* **sclerous t.** A general term including osseous, cartilaginous, and fibrous t. **simple t's.** T's composed of but one structural element, or with but a slight admixture of others, as in blood, lymph, epithelium, the connective t., cartilage, bone, and muscular and nervous t's. **skelletal t.** A general term for fibrous, adenoid, adipose, osseous, and cartilaginous t. **spongy t. of bone.** See *spongy bone substance*, under *substance*. **subarachnoid t.** Trabeculae of fibrous t. between the arachnoid and pia, the surfaces of which have a covering of endothelia. **subcutaneous adipose t.** The adipose t. inclosed in subcutaneous t. **subcutaneous (cellular, or connective) t.** The areolar t. just beneath the corium and merging insensibly into it. **submucous areolar t.** Areolar t. beneath a mucous membrane and serving to connect it with other parts. **superiosteal t.** See *osteogenetic layer*, under *layer*. **subserous areolar t.** The areolar t. serving to attach serous membranes to the parts they invest. **supporting t.** T., such as woody t., serving to strengthen a part or organ; mechanical t. t. **resistance.** The resistance of the tissues to pathogenic bacteria. **trabecular t.** T., especially connective t., arranged in trabeculae, which often form a network. **ungual t.** See *corneous t.* **vesicular nervous t.** Nervous t. containing nerve cells, as in the ganglia and the cerebral cortex. **water storing t.** See *aqueous t.* **white fibrous t.** 1. Connective t. composed of white inelastic fibers and bundles of fibers extending in nearly parallel directions. It is exceedingly strong, and forms tendons, ligaments, and resistant membranes (e. g., periosteum, perichondrium, and the dura). 2. Connective t. composed of white, inelastic, and glue-yielding fibers without regard to the direction of the fibers. **white nervous t.** Nervous t. composed of medullated nerve fibers. **yellow elastic**

t., yellow fibrous t. See *elastic t.* [Fr., *tisser, tissu*, from Lat., *texere*, to weave.]

titanium (ti-ta'ni-um). A metallic element. It is distinguished by the readiness with which it combines with nitrogen at a high temperature. Symbol, Ti; atomic weight, 48; sp. gr., 5.3. [Gr., *titanos*, lime, white earth.]

tittillation (tit-il-a'shun). The act of tickling or the condition of being tickled. [Lat., *titillare*, to tickle.]

titration (ti-tra'shun). Volumetric analysis by means of standard solutions.

Tl. Chemical symbol for the element *thallium*.

tobacco (to-bak'ko). The leaves of various species of *Nicotiana*, especially *Nicotiana tabacum*. List of poisons and their antidotes, see in *appendix*, page —. **t. heart.** See under *heart*.

tocology (to-kol'o-je). See *obstetrics*. [Gr., *tokos*, childbirth, + *logos*, understanding.]

Toddalia (tod-dal'e-ah). A genus of the *Rutaceae*. **T. aculeata**, **T. asiatica**. A stimulant, carminative, and tonic Asiatic rutaceous species. The bark, especially the root bark, is used as a stomachic.

toe. A digit of the foot. **flexed t's.** A permanent distortion of the t's in which they are unduly flexed at the last joint, so that the tips or even the nails rest on the ground, while the first joints are drawn up above the proper level. **glossy t's.** See *glossy skin*, under *skin*. **great t.** The innermost and largest of the t's. **hammer t's.** See *flexed t's.* **t. itch.** See *uncinariasis*. [Old Eng., *to, too*.]

toilet (toy'let). The methodical cleansing of a part or region after a surgical operation. **t. of the peritoneum.** The aseptic measures tending to remove all extraneous substances from the peritoneum after laparotomy.

Tokelau ringworm (to'ke-law). *Tinea imbricata*.

to'ko-. Combining form of Gr., *tokos*, birth. **tolene** (tol'en). A terpene, C₁₀H₁₆, obtained from balsam of Tolu.

tolerance (tol'er-enz). The quality of being able to endure the action of a drug or other toxic substance. [Lat., *tolerare*, to bear.]

Tollen's reaction for pentoses. Consists of heating the solution to be tested with concentrated hydrochloric acid and orcin. If pentose is present, the solution turns first reddish blue, then bluish green. The coloring matter formed is soluble in amyl alcohol, yielding a bluish green solution with a characteristic absorption spectrum. A similar test is one in which phloroglucin is used instead of orcin. The color of the solution as well as the amyl alcohol is red, when pentose is present.

toluene (tol'u-ën). Syn.: *toluol*. Methylbenzene, a colorless liquid, C₆H₅(CH₃), occurring in light coal tar oils, having a benzenelike odor; used as an antiseptic and in the manufacture of dyes.

tolu'nyl al'cohol. Paraxylyl alcohol.

toluidin (tol-u'id-in). Amidotoluene; a substance, $C_7H_7N = C_6H_4(CH_3)NH_2$, known in three isomeric forms: Orthotoluidin, metatoluidin, and paratoluidin.

tolylacetamid (tol'u-il-as-et-am'id). $C_7H_7C_6H_4NH(CH_3CO)$; a white substance used as an antipyretic.

tolylendiamin (tol'u-il-en-di-am'in). $C_6H_5(N.H_2)_2CH_3$; it has no direct therapeutic importance, but its salts are of theoretical interest, in that they are capable of causing destruction of the red blood corpuscles. Used in physiological research.

tolylhypnal (tol-e-hip'nal). Antipyrin hydrochlorid.

tolypyrrin (tol-ip-i'rin). The compound

tolylsalicylate (tol'is-al). Tolyppyrin salicylate.

-tome. Combining form of Gr., *tome*, something that cuts, from *teinein*, to cut.

Tomes' fibers. See *dental fibers*, under *fiber*.

tonal. Of or pertaining to tone.

tone. 1. A distinct definite sound; also the character or quality of a sound. 2. The normal state of tension in healthy tissue; in physiology, the normal state of partial contraction of the arteries and muscles.

difference t. A name given to the t. heard when two t's are sounded together and whose vibration period is the difference between those of the two fundamental t's.

harmonic t. See *harmonic*.

reflex t. See *reflex tonus*, under *tonus*. [Gr., *tonos*, from *teinein*, to stretch.]

ton'ga (ton'gah). 1. A drug prepared in the Fiji Islands from the bark, leaves, and fibers of *Rhaphidophora vitensis*, *Premna taiensis*, etc. It has been recommended in neuralgia.

tongaline (ton'gal-en). A proprietary preparation of tonga.

tongue (tung). A muscular mass attached to the floor of the mouth and susceptible of protrusion from that cavity. It takes part in sucking, mastication, and articular speech, and the mucous membrane covering its upper surface is the seat of the organs of taste.

benign plaques of t. Spreading scab patches appearing upon the dorsal surface of the t.

bifid t. A t. having a longitudinal fissure that divides the fore part into two equal parts.

black t. Syn.: *hyperkeratosis linguae*. Discolored petechiae on the t., due to hyperkeratosis of the papillae. The color is usually black, but it may vary from yellow to blue.

circinate eruption of t. See *benign plaques of t.*

fungoid t. A manifestation of thrush in which a species of fungus grows upon the tongue. It occurs in children or debilitated adults.

furrowed t. Syn.: *cleft t.*, *fluted t.*, *lingua plicata*. Unusual furrowing of the dorsal surface of the t. The central furrow is deepened and radiating from this are numerous parallel deep furrows. It is a permanent condition.

geographical t. A t. affected with a serpiginous epithelial affection (e. g., leukoplakia) that makes it look like a map.

grooved

t. See *furrowed t.* **hairy t.** See *black t.* **ribbed t.**, **scrotal t.** See *furrowed t.* **strawberry t.** A t. that is hyperemic and shows fungiform papillae, as in scarlet fever.

sulcated t. See *furrowed t.* **wooden t.** See *actinomycosis*.

wrinkled t. See *furrowed t.* [Ang.-Sax., *tunge*.]

tongue-tied. Affected with ankyloglossum or abnormal shortness of the frenulum linguae.

ton'ic. 1. Possessing the property of maintaining or promoting the tone of the system; as a n., a drug possessing that property. 2. Characterized by continuous contraction (said of muscular spasm).

tonicity (to-nis'it-e). The condition of a tissue, organ, etc., in relation to tone, especially its normal elasticity.

tonka (ton'kah). The tonka bean.

to'nol. A brand mark for certain glycerophosphates.

tonometry (to-nom'et-re). The estimation or measurement of tension. [Gr., *tonos*, tension, + *metron*, a measure.]

tonopsychagogia (to'no-si-ka-go'je-ah). The characteristic action of certain sounds on the mind. [Gr., *tonos*, a tone, + *psyche*, the mind, + *agoge*, a leading.]

ton'sil. A prominent body situated (one on each side) between the pillars of the fauces, about half an inch long and a third of an inch wide and thick. On its free surface are numerous openings leading into lymphoid crypts, between which are a number of lymph follicles together with lymphoid tissue.

cerebellar t's. See *amygdalae cerebelli*, under *amygdala*.

Luschka's t. See *pharyngeal t.* **palatine t.** See *t. pharyngeal t.* Lymphoid tissue on the posterior superior wall of the pharynx, limited on each side by the eustachian tube. [Lat., *tonsilla*, almond.]

tonsillolith (ton-sil'o-lith). A concretion in the tonsil or its crypts. [Lat., *tonsilla*, a tonsil, + Gr., *lithos*, a stone.]

tonsillotome (ton'sil-lo-tom). A form of guillotine for removing the tonsils. [Lat., *tonsilla*, a tonsil, + Gr., *temnein*, to cut.]

tonsillotomy (ton-sil-ot'o-me). Removal of the tonsil.

tonsurans (ton'su-rans). Causing baldness (used chiefly in terms relating to parasitic skin diseases). [Lat., *tondere*, to shear.]

to'nus. The state of partial and more or less continuous contraction of the muscles, due to a constant flow of sensory impulses into the brain and cord.

neurogenic t. Tonic contraction of muscle due to stimulation received through the nervous system.

reflex t. Term used to express the belief that the tonus exhibited by muscles is a reflex phenomenon due to the inflow of sensory impulses into the central nervous system. [Gr., *tonos*, from *teinein*, to stretch.]

tooth, pl., *teeth*. A hard, bonelike organ implanted in man and most mammals, in the inferior and superior maxillae, which serves for the mastication of food. It consists of a central cavity containing t. pulp, dentin, enamel, and cement.

back teeth. See *molar teeth*. **bicuspid**

teeth. The teeth in each jaw that are placed next the canine teeth. Their crowns are compressed in front and behind, and are convex on the outer and inner sides. They have two points, or cusps, whence the name. **canine teeth.** Four teeth, one above and one below on each side, next to the lateral incisors. They are long and strong, with a thick conical crown, convex in front and concave behind, with one single central point. **conical teeth.** Teeth that are modifications of a cone in shape. **craggy teeth.** Irregular projections of dentin on the t. giving them a craglike appearance. They are not necessarily significant of any diathesis. **deciduous teeth.** Teeth which are shed, especially those of the first dentition. **dental teeth.** Teeth, such as those in man and most vertebrates, in which the main part is composed of dentin; distinguished from tooth-like structures composed mostly of a horny substance. **eighteen-year molar t.** The molar (or wisdom) t. which makes its eruption between the seventeenth and the twenty-fifth years. **eye teeth.** The two upper canine teeth. **front teeth.** See *incisor teeth*. **honeycombed teeth.** Teeth in which there are circumscribed areas of decay and deficient dentin development, causing a honeycombed appearance. **Hutchinson's teeth.** See *Hutchinson*. **incisor teeth.** The four median teeth of each jaw, having single roots and wide, thin, chisellike cutting edges. **milk molar teeth.** The molar teeth of the first dentition. **milk teeth.** Those teeth which appear in early childhood, to be replaced at various ages by the permanent teeth. They are twenty in number, five in the forward part of each side of each maxilla, as follows: Two molars, one canine, and two incisors. **molar t.** A t. having more than one root and a rounded quadrangular crown with several cusps. In adult dentition there are (including the bicuspids) ten molar teeth in each jaw. **palatine teeth.** Teeth attached to the palate bones. **pectinate teeth.** Teeth with the edges notched so as to resemble a comb. **pegged teeth.** Teeth, observed in various diatheses, in which the loss of enamel and exposure of the dentin present a series of small peglike excrescences. **permanent molar teeth.** The six-year, twelve-year, and eighteen-year molar teeth. **permanent teeth.** See *second teeth*. **pitted teeth.** Teeth in which, owing to deficient development of dentin or enamel, pits occur on the surface. **premolar teeth.** See *bicuspid teeth*. **pug teeth.** See *canine teeth*. **rasp teeth.** Sharp, conical teeth closely set so as to resemble the surface of a rasp or file. **screw-driver teeth.** See *Hutchinson's teeth*. **second teeth.** The teeth of the second dentition, normally thirty-two in number. **serrated teeth.** Teeth with notched edges, like a saw. **setiform teeth.** Teeth shaped like fine bristles. **six-year molar t.** The first

molar t. which makes its eruption about the seventh year. **stomach teeth.** See *canine teeth*. **syphilitic teeth.** See *Hutchinson's teeth*. **temporary molar teeth.** The molar teeth of the first dentition. **temporary teeth.** See *milk teeth*. **twelve-year molar t.** The second molar t. which makes its eruption during the thirteenth year. **villiform teeth.** See *pegged teeth*. **warty teeth.** Teeth in which the tissues are hypertrophied and folded into an irregular mass. **wisdom teeth.** The most posterior of the molar teeth, which appear about the eighteenth year. [Ang.-Sax., *tōth*, from *etan*, to eat.]

tooth'ache. Pain in a tooth, usually due to decay.

topalgia (to-pal'je-ah). Fixed or localized pain.

topesthesia (to-pezh-the'ze-ah). Capacity for discerning locality by touch. [Gr., *topos*, a place, + *aisthesis*, sensation.]

tophaceous (to-fa'shus). Consisting of, pertaining to, or resembling tophi.

tophus (to'fus), pl., *tophi*. 1. A nodular gouty deposit of sodium urate, most common in the knuckles, and the cartilages of the ear. 2. See *chalazion*. **syphilitic t.** See *syphiloma*. [Lat., *tophus*, *topus*, sandstone.]

topical. Local. [Gr., *topikos*, a place.]

topicus (top'ik-us). See *topical*; as a n., in the n., *topicum*, a remedy directly applied locally.

topography (to-pog'raf-e). The detailed description of a particular locality or portion of the body. [Gr., *topos*, place, + *graphein*, to write.]

toponeurosis (to-po-nu-ro'sis). A topical neurosis. [Gr., *topos*, place, + *neuron*, a nerve.]

toponymy (to-pon'im-e). The nomenclature of the local relations of bodily organs. [Gr., *topos*, a place, + *onyma*, a name.]

torcular (tor'ku-lar). A press for making oil or wine. **t. Herophilli.** An irregularly shaped venous sinus over the internal occipital protuberance to which the longitudinal, straight, posterior occipital, and lateral sinuses converge. [Lat., *torquere*, to twist.]

torment'til. *Potentilla tormentilla*; the plant and its astringent rhizome.

Tormentilla (tor-men'til-lah). A section of the genus *Potentilla*. See under *Potentilla*. **T. erecta**, **T. officinalis**. See *Potentilla t.*

tormina (tor'me-nah). (obs.) Gripping pain; colic. [Lat., pl. of *tormen*, from *torquere*, to twist.]

torpidity, **torpor** (tor-pid'it-e, tor'por). Numbness, drowsiness, sluggishness; insensibility to stimuli; functional inactivity. [Lat., *torpere*, to be stiff or numb.]

torrefaction (tor-re-fak'shun). Roasting, drying by artificial heat. [Lat., *torrefacere*, to dry by heat.]

torricellian (tor-re-chel'le-an). Investigated by or named for *E. Torricelli*, Italian physicist, 1608-1647. **t. vacuum.** The vacuum in a barometric tube.

tor'sion. The act or process of twisting.

[Lat., *torsio*, twist.]

torticollis (tor-tik-ol'lis). Wryneck; contraction of the cervical muscles on one side, drawing the head downward and forward. **intermittent t.** See *spasmodic t.* **ocular t.** Of Quignet, t. developed from inequality in the sight of the two eyes. **spasmodic t.** T. characterized by recurrent transient contractions of the muscles of the neck and especially of the sternocleidomastoid. [Lat., *tor-tus*, twisted, + *collum*, neck.]

Torula (tor'u-lah), pl., *torulae*. A group of microorganisms which includes *Streptococcus* and *Saccharomyces*. [Lat., *tor-ula*, a roll.]

Torula (tor'u-lah). A genus of fungi belonging to the *fungi imperfecti*. **T. cerevisiae.** See *Saccharomyces cerevisiae*, under *Saccharomyces*.

touch (tutch). The act, sense, or function of judging of the presence or character of external objects by means of direct contact with some part of the skin.

bimanual t. An examination used in gynecological practice in which both hands are used, one being placed flat on the abdomen while the finger or fingers of the other are introduced into the vagina. **rectal t.** The act of eliciting information by inserting a finger into the rectum. **recto-abdominal t.** Examination with one finger in the rectum and the other hand on the abdomen. **royal t.** The t. of a king, formerly in repute as a cure for scrofula (the "king's evil").

sound t. The gaining information as to the roughness, the presence of foreign bodies, or the abnormal shape of the interior of the uterus or bladder transmitted to the hand through a sound introduced into these organs. **vaginal t.** Investigation of the vagina by means of the finger or fingers introduced into it. **vagino-abdominal t.** See *bimanual t.* [Fr., *toucher*, to touch.] The word, "touch," rarely used, "examination" more common.

tour de maitre (the master's turn). An obsolete and dangerous procedure. The introduction of a sound into the male urethra by placing the shaft between the patient's thighs, passing the instrument into the urethra until its point is arrested at the bulb; the handle is then made rapidly to describe a semicircle until it reaches a vertical position, when it is once more depressed between the thighs. [Fr.]

tourniquet (toor'ne-ket). An instrument for stopping temporarily the flow of blood through a large artery in a limb. A broad band drawn tightly around the limb with a pad over the artery, a solid rubber cord passed around the limb and held by a clamp. [Fr., from *tourner*, to turn.]

toxalbumin (toks-al-bu'min). A name given to a variety of proteins that have a toxic action, owing to the presence of a toxophore grouping in the molecule. [Gr., *toxikon*, poison, + Lat., *albumen*, white of egg.]

toxemia (toks-e'me-ah). A condition in

which the blood contains soluble toxins from body cells, those elaborated by bacteria or other microorganisms or those produced by higher animal or vegetable organizations. [Gr., *toxikon*, poison, + *aima*, blood.]

toxemic (toks-e'mik). Pertaining to or due to toxemia.

toxenzyme (toks-en'zim). A poisonous enzyme of any kind. [*Toxin*, + *enzyme*.]

toxic (toks'ik). 1. Pertaining to poison.

2. Poisonous. [Gr., *toxikon*, poison.]

toxicant (toks'ik-ant). Poisonous. [Lat., *toxicare*, to poison.]

toxication (toks-ik-a'shun). Poisoning. [Lat., *toxicare*, to poison.]

toxicity (toks-is'it-e). The quality of being poisonous or toxic, especially the extent of virulence or power exerted by a toxic bacterium. It is estimated by the least amount of a poison required to kill an animal. [Gr., *toxikon*, poison.]

tox'ico- Combining form of Gr., *toxikon*, poison.

toxicodendrol (toks-ik-o-den'drol). An extremely irritant glucosid, formerly supposed to be an oil, occurring in poison oak. It is not volatile, but minute quantities may be borne in pollen or in dust.

toxicogenic (toks-ik-o-jen'ik). Poison producing. [Gr., *toxikon*, poison, + *gennan*, to produce.]

toxicohemia (toks-ik-o-he'me-ah). See *toxemia*.

toxicologist (toks-ik-ol'o-jist). One skilled in toxicology.

toxicology (toks-ik-ol'o-je). The science of the nature and action of poisons and of the detection and treatment of poisoning. [Gr., *toxikon*, poison, + *logos*, understanding.]

toxicomucin (toks-ik-o-mu'sin). A toxic albuminous material obtained from the tubercle bacillus. [Gr., *toxikon*, poison, + Lat., *mucus*, slime.]

toxicon (toks'ik-on). Arrow poison; hence, any poison. [Gr., *toxikon*, poison; originally poison for smearing arrows, from *toxon*, a bow.]

toxicophidea (toks-ik-o-fid'e-ah). Venomous snakes considered collectively. [Gr., *toxikon*, poison, + *ophis*, snake.]

toxicosis (toks-ik-o'sis). Poisoning. **endogenic t.** T. caused by toxic substances formed in the system. **exogenic t.** T. induced by substances taken into the system. **retention t.** T. depending upon the retention of a substance that should be excreted. [Gr., *toxikon*, poison.]

toxicosozin (toks'ik-o-so'zin). A sozin; a defensive protein which counteracts a toxin.

toxigrim (toks-ig'rim). An inactive decomposition product of digitoxin.

tox'in. 1. As a general term the word includes toxins produced by such bacteria as the diphtheria and tetanus bacilli; other vegetable toxins, such as abrin and resin, and many animal poisons, such as snake venom and eel serum. They may be obtained in an impure form by precipitation of the proteids, but active toxins can be produced by purification methods which are not of a proteid nature. They resemble

- enzymes in their action and are usually destroyed by a temperature of 80° C. z. A poisonous principle produced by certain pathogenic microorganisms. The poisons are soluble and by synthetic processes are secreted into the surrounding medium. They are capable of producing all the symptoms except the local reactions that are produced by the bacteria.
- animal t.** One produced by animal cells, as snake venom. **bacterial t.** One produced by bacteria. **extracellular t.** One produced as a secretion and thrown off into the surrounding medium, as the diphtheria t. **intracellular t.** A t. contained in the substance of bacterium as the bacterial proteids of the pyogenic bacteria. These are liberated as active agents only when the bacilli are destroyed. **pollen t.** A t. found by Dunbar in the starch bodies of the *Grammaceae* and said to produce hay fever. **vegetable t.** A t. produced by vegetable cells, as resin from the castor oil bean. [Gr., *toxikon*, poison.]
- toxinnemia** (toks-in-e'me-ah). Poisoning the blood by means of toxins. [Gr., *toxikon*, poison, + *aima*, blood.]
- toxicicide** (tok-sin'is-id). A substance that destroys a toxin, such as sunlight, oxygen, enzymes. [Gr., *toxikon*, poison, + Lat., *caedere*, to kill.]
- toxipeptone** (toks-e-pep'ton). A poisonous proteid or albuminoid resembling a peptone.
- toxiphobia** (tok-sif-o'be-ah). Monomania characterized by a fear of being poisoned. [Gr., *toxikon*, poison, + *phobos*, fear.]
- toxiphoric** (toks-if-or'ik). Possessing an affinity for a toxin.
- toxiresin** (toks-e-rez'in). An uncrystallizable, yellowish, poisonous resin produced by decomposing digitoxin with dilute acids or by heating it to 240° C. Its action resembles that of picrotoxin.
- toxis** (toks'is). Poisoning; especially poisoning by toxins. [Gr., *toxikon*, poison.]
- tox'ogen.** See *allergin*.
- toxoid** (tok'soyd). A toxin impaired in its poisonous properties, but still capable of producing an antitoxin.
- toxolysin.** Same as antitoxin.
- toxone, toxon** (tok'son, tok'sōn). The substance having a lesser affinity for antitoxin than the toxin, and possessing a weaker toxophore group which only produces chronic symptoms of emaciation and paresis.
- toxophile** (toks'o-fil). Easily affected by or having a special affinity for toxins. [Gr., *toxos*, bow, + *philein*, to love.]
- toxophore** (tok'so-fōr). The poison-bearing portion or group of a toxin. [Gr., *toxos*, bow, + *pherein*, to bear.]
- tox'ophore group.** The poisonous group of a toxin. See *Ehrlich's side-chain theory*, under *Ehrlich*.
- toxophorous** (toks-of'o-rus). Causing the combination of the toxin with the body cells. [Gr., *toxos*, bow, arrow, *pherein*, to bear.]
- toxophylaxin** (tok'so-fi-lak'sin). A defensive proteid produced in the body of an animal which has an acquired immu-
- nity, and acts by neutralizing the toxic products of the pathogenic bacteria to which the disease is due. [Gr., *toxos*, bow, + *phylaxin*.]
- toxosozin** (toks-o-so'zin). A defensive proteid that acts on a toxin.
- T. R.** Abbreviation for Tuberculin R., a special form produced by Koch.
- trabecula** (trab-ek'u-lah). Any one of various beamlike or stringlike masses of tissue arranged in bands or crossbars.
- cell trabeculae.** Masses of cells arranged in the form of cords or cylinders.
- trabeculae corporum cavernosorum.** Prolongations inward of the fibrous tissue covering the corpora cavernosa of the penis, dividing them into a large number of small cavities. **trabeculae of the spleen.** The reticular framework of connective tissue which runs in the substance of the spleen. **trabeculae of the testis.** Processes of the albuginea testis extending into the testicle and joining similar processes given off from the front and sides of the corpus Highmori. They inclose the separate lobules of the testis. [Lat., dim. of *trabs*, a beam.]
- trabecular** (trab-ek'u-lar). Pertaining to or constituting trabeculae.
- trabeculated, trabeculate** (trab-ek-u-la'ted, trab-ek'u-lā't). Having fibrous cords, layers, or processes of connective tissue. [Lat., *trabecula*, dim. of *trabs*, a beam.]
- trachea** (tra'ke-ah). The windpipe; a tube 4 to 4½ in. long, ¾ to 1 in. in diameter, in man, continuous with the larynx above and dividing about opposite the intervertebral fibrocartilage between the fourth and fifth thoracic vertebrae into the two bronchi. It consists of cartilaginous rings incomplete behind, united by fibrous tissue, and is lined with mucous membrane. [Gr., *tracheia arteria*, rough artery.]
- trachea-ectasy** (tra'ke-ah-ek'tas-e). Tracheal dilatation. [Gr., *tracheia*, the trachea, + *ektasis*, extension.]
- tracheal** (tra'ke-al). Pertaining to the trachea.
- trachealis** (tra-ke-a'lis). See *table of muscles*, under *muscle*.
- tracheitis** (tra-ke-i'tis). Inflammation of the trachea. [Gr., *tracheia*, the trachea, + *itis*, inflammation.]
- trachelism** (trak'el-izm). Spasmodic contraction of the muscles of the neck. [Gr., *trachelos*, neck.]
- trache'lo-** Combining form of Gr., *trachelos*, neck.
- trachelomastoides** (trak'el-o-mas-toid'e-us). See *table of muscles*, under *muscle*.
- trachelorrhaphy.** See *hysterotrachelorrhaphy*.
- tra'cheo-** Combining form of Gr., *tracheia*, windpipe, trachea.
- tracheophony** (tra-ke-of'o-ne). The sound heard on auscultation over the trachea. [Gr., *tracheia*, the trachea, + *phone*, the voice.]
- tracheoscopy** (tra-ke-os'ko-pe). (*obs.*) Inspection of the trachea. [Gr., *tracheia*, trachea, + *skochein*, to examine.]

tracheostenosis (tra'ke-o-sten-o'sis). Morbid constriction of the trachea. [Gr., *tracheia*, trachea, + *stenosis*.]

tracheotomy (tra-ke-o'to-me). The operation of making an opening into the trachea. **inferior t.** T. in which the incision is made below the thyroid gland. **superior t.** T. in which the incision is made above the isthmus of the thyroid gland. [Gr., *tracheia*, the trachea, + *tomē*, a cutting.]

trachoma (tra-ko'mah). Granular conjunctivitis. A contagious inflammatory disease of the palpebral conjunctiva, which becomes thickened, vascular, and covered with granular elevations which may ulcerate and cicatrize. [Gr., *trachys*, rough, + *oma*, tumor.]

tract (trakt). An extent of surface greater in length than in breadth. **anterior cerebropontine t.** A t. of internal (mesial) fibers of the crus cerebri extending from the anterior part of the frontal lobe to the pons. **anterior cortical t.** Bundles of fibers from the cortex of the frontal lobe running to the ganglion cells of the pons Varolii. **anterior fundamental fasciculi** of the anterior column of the spinal cord. **anterior pyramidal t.** The longitudinal bundles of nerve fibers in the ventral half of the pons which represent the prolongation of the anterior pyramids of the medulla oblongata. **Bechterew's t.** See *tegmental t.* **bulbar t.** **central medullary t.** The gray matter in the spinal cord which immediately surrounds the central canal. **central vagus t.** A t. of fibers passing from the layer of the fillet to the nucleus of the vagus of the opposite side. **cerebellar t.** See *direct cerebellar t.* **cerebropontine t.** A t. of fibers starting from the brain cortex and passing through the internal capsule and the upper part of the cerebral peduncles to the pons. **comma-shaped t.** A t. shaped like a comma, observed in descending degeneration in the middle of the anterior third of the dorsal spinal cord. **commissural t.** Of Owen, the cerebellar peduncles. **communicating quintus t.** A t. of fibers derived from the motor nucleus of the fifth nerve which at first surrounds the upper part of the sylvian aqueduct, and then widens, the fibers radiating through the tegmentum, and a portion of them curving around the lower border of the red nucleus as the fibrae arcuatae. This t. is brought into connection with the motor t's of fibers through the agency of intervening multipolar ganglion cells. **crossed thalamotegmental t.** A t. of fibers connecting the thalamus with the spinal cord by way of the tegmentum. **dentritic t's.** T's of fibers that arise from all parts of the cerebral cortex, diverging from each other like the limbs of a tree, and pass into the white substance. **digestive t.** The alimentary canal. **direct cerebellar t.** A t. coursing in the lateral zone of the posterior half of the

lateral column of the spinal cord, connecting the columns of Clarke with the cerebellum, which it enters as a component of the restiform column; called direct because it does not decussate. **direct lateral cerebellar t.** A t. of nerve fibers situated in the lateral column of the spinal cord, between the lateral pyramidal t. and the external surface. **direct t.** A bundle of nerve fibers in the anteromedian column of the spinal cord which may be traced upward in the crista as far as the point where the crus cerebri is crossed by the optic t. **fillet t.** A t. that emerges from the fillet and may be found on the upper and outer side of the nucleus ruber in its course to the cortex of the upper part of the parietal lobe by way of the internal capsule. **frontocerebellar t.** The t. of white fibers connecting the frontal lobe of the cerebrum with the cerebellum. **funicular t's.** See *funiculi graciles cerebelli*, under *funiculus*. **ganglionic association t.** Association fibers connecting different cerebral ganglia. **geniculate t.** A bundle of fibers in the pes pedunculi cerebri which lies next to the corticobulbar bundle. **genito-urinary t.** The genito-urinary passages. **Goll's t.** See *Goll*. **Gowers' t.** See *Gowers*. **habenua t.** A t. leaving the habenua and passing toward the base of the brain, running between the central gray lining and the substance of the thalamus and appearing to end on the mesial side of the red nucleus. **indirect t.** A bundle of nerve fibers in the lateral column of the spinal cord which joins the direct t. near the posterior edge of the pons Varolii, above which point the two t's are united. See *direct t.* **intermediary lateral t., intermediolateral t.** A pyramidal t. of nerve fibers in the posterior portion of the spinal cord, midway between the anterior and posterior gray columns and in front of the reticular process. **interolivary t.** A t. of arcuate fibers extending from the nuclei of the posterior columns ventrally toward the middle line; it terminates on the dorsal side of the pyramids in the opposite interolivary region or fillet layer. **intestinal t.** The large and small intestine. **lateral t. of the cerebellum.** A t. receiving its fibers from the direction of Clarke's vesicular column, at the medulla inclining obliquely toward the dorsal surface, across the ascending root of the fifth nerve, the other fibers of the inferior cerebellar peduncle gradually applying themselves to it, and the t. terminating in the vermis. It is a centripetal conducting system connecting the posterior roots and the cerebellum. **lateral t. of the medulla oblongata.** The continuation in the medulla oblongata of the lateral t. of the spinal cord. **lemniscus t.** A bundle of nerve fibers which begins in the upper part of the pons Varolii, below the reticular formation, and separates into three portions (the superior, median, and inferior lemnisci). **Lis-**

sauer's t. See *Lissauer*. **motor t.** The motor path from the cortex of the brain to a muscle. It consists of an upper (cerebrospinal) and a lower (spinomuscular) segment. **olfactory t.** The bundle of fibers forming the olfactory nerve. **olivary t.** See *olivary body* under *body*. **ophthalmic t., optic t.** The continuation of the optic nerves from the commissure backward to the brain. At its connection with the brain each optic t. divides into two bands, which are continued into the optic thalami, the corpora geniculata, and the corpora quadrigemina. **peduncular t.** A t. of nerve fibers in the crus cerebri. **pyramidal t.** A collection of nerve fibers in the spinal cord which may be traced from the point of origin of the lower sacral nerves upward in the posterior part of the lateral column to the lower part of the medulla oblongata, where they cross to the opposite side, enter the pyramid, and may be followed through it and the pons to the corresponding crus cerebri. Many of the fibers do not decussate, but run throughout their course in the anterior pyramidal t. **respiratory t.** The respiratory organs. **restiform t.** See *restiform body* under *body*. **sagittal medullary t.** A t. that comes from the posterior third of the posterior limb of the internal capsule, skirts the outer side of the posterior horn of the lateral ventricle, and runs to the cortex of the hinder portion of the cerebrum. **semilunar t.** A crescentic t. of fibers in the external portion of the cerebellar hemisphere. **sensory t.** A t. of fibers that conducts sensations from without to the brain. **speech t.** A t. of fibers passing from the cortex of the third frontal convolution through the white substance outside the tail of the nucleus caudatus and terminating in the nuclei of the nerves in the oblongata that are associated in producing speech. **spiral t.** See *lamina cribrosa anterior inferior* under *lamina*. **sylvian t.** The region of the brain around the fissure of Sylvius. **tegmental t.** A medullary t. occupying a position in the midst of the tegmentum dorsad of the olivary body and in the vicinity of the posterior accessory olivary nucleus. It probably connects the olivary body with the midbrain. **temporo-occipital t. of the crusta.** A t. of fibers on the outer side of the crusta that pass under the lenticular nucleus, or between the latter and the external geniculate body, to the temporal and the occipital lobes. **t's of the spinal cord.** Certain bundles of nerve fibers which pursue a similar course in the cord, and appear to have similar functions. **urogenital t.** See *genito-urinary t.* **uveal t.** See *uvea*. **voluntary motor t.** The entire t. of fibers from the cortex cerebri to the anterior horns. [Lat., *tractus*, from *trahere*, to draw.]

traction (trak'shun). The act or process of drawing. **axis t.** T. in a line with the direction of the long axis of the channel through which a body (e. g., the

fetus) is to be drawn. **elastic t.** T. by an elastic force. **elastic t. of the lung.** The elastic tension of the lung. [Lat., *trahere*, to draw.]

tragacanth (trag'ak-anth). The concrete exuded juice of various species of *Astragalus*. It contains two principal constituents, bassorin or tragacanthin and a substance resembling arabin and soluble in water. T. is demulcent, but is chiefly used for imparting firmness to troches, etc., and for suspending heavy powders in mixtures. [Gr., *tragacantha*, a plant producing it.]

tragacantha (trag-ak-an'thah). See *tragacanth* [U. S. Ph., Br. Ph.]. **glycerinum tragacanthae.** A preparation made by triturating to a transparent, homogeneous jelly powdered tragacanth, glycerin, and water [Br. Ph.]. **mucilago tragacanthae.** A tenacious, viscid mass formed by mixing tragacanth with water. The U. S. preparation contains 6 parts of tragacanth, 18 of glycerin, and enough water to make 100 parts. The Br. Ph. directs that 1.25 parts of tragacanth be triturated with 2.5 fluid parts of alcohol and enough water to make 100 parts. **pulvis tragacanthae compositus.** A preparation consisting of tragacanth, gum arabic, starch, and sugar [Br. Ph.].

tragacanthin (trag-ak-an'thin). An insoluble mucilaginous principle (probably $C_{12}H_{10}O_{10}$) existing in tragacantha, which swells with water, but does not dissolve.

tragicus (traj'ik-us). See *table of muscles*, under *muscle*.

tra'gus. A nipplelike projection of the cartilage of the auricle, directed backward and in front of the orifice of the external auditory canal. [Gr., *tragos*, a goat; having reference to the hairs growing on it.]

rance. A state of insensibility to ordinary external surroundings, together with suspension of volitional power and to a great extent of the vital functions, usually associated with hysteria or hypnotism. [Lat., *transitus*, a passing over.]

trans-. Representing the Lat. preposition, *trans*, across, over, beyond, on the other side of, through.

transfer, transfer'ence. A condition in which the symptoms of one region, definitely affected, are transmitted to the similar region on the other side of the body which is unaffected. In psychoanalysis, the dynamic factor in the cure coming from belief or faith or hope, i. e., unconscious desire. **thought t.** A supposed mode of transmission of ideas through suprahuman media, in reality a form of wish projection. [Lat., *transferre*, to bear across.]

transfusion (trans-fu'shun). 1. The transfer of blood from one person to another. 2. The injection of physiological salt into a vein or tissues. **arterial t.** The passage of blood into an artery of the receptor from an artery of the donor. **direct t.** The t. of blood from vessel to vessel without its exposure to the air. **galvanic**

t. See *cataphoresis*. **hypodermic t.** The t. of blood, milk, or a saline solution by hypodermic injection. **indirect t., mediate t.** The process of injecting blood which has first been drawn into an open vessel (and sometimes defibrinated). **nervous t.** The hypodermic injection of an extract made from the brain or spinal cord. **peritoneal t.** T. into the peritoneal cavity. **reciprocal t.** Of Brunton, a proposed exchange of equal volumes of blood between a fever patient and a healthy person who has recovered from the fever and is therefore proof against it, and whose blood is likely to contain an element (antitoxin) destructive to the microorganisms in the blood of the patient. **subcutaneous t.** See *hypodermic t.* **venous t.** The t. of blood by injecting it into a vein. [Lat., *trans*, over, + *fundere*, to pour.]

transitory benign plaques. See *benign plaques of tongue*, under *tongue*.

translumination (trans-lu-mi-na'shun). Illumination by transmitted light, as of a cavity through the tissues overlying it. [Lat., *trans*, through, + *luminare*, to light up.]

transmission (trans-mis'shun). The act or process of sending over or through. **duplex t.** The power possessed by nerves of transmitting impulses in two directions. [Lat., *transmissio*.]

transmutation (trans-mu-ta'shun). Conversion into another substance or form. [Lat., *transmutare*, to change.]

transpiration (trans-pi-ra'shun). The act of passing off, or the matter passed off, through an investing or lining membrane, especially through the skin; cutaneous exhalation; perspiration. **cutaneous t.** See *perspiration*. **insensible t.** See *insensible perspiration*, under *perspiration*. **pulmonary t.** The exhalation of watery vapor by the lungs. [Lat., *trans*, through, + *spirare*, to breathe.]

transplantation (trans-plan-ta'shun). The absolute removal of a portion from one part of the body and its implantation into another part or upon another organism. [Lat., *transplantatio*, from *transplantare*, to transplant.]

transposition (trans-po-sish'on). An interchange of situation. **t. of the viscera, visceral t.** T. of viscera so that those normally situated in the right are placed in the left half of body and vice versa. [Lat., *transponere*, to remove.]

transudate (trans'u-dat'). Any fluid that has passed through a serous membrane or a small vessel or capillary. [Lat., *trans*, through, + *sudare*, to sweat.]

transudation (trans-u-da'shun). 1. The passage of a liquid through a membrane or tissue by physical processes, especially the filtration of blood serum through the capillaries; also a transudate. See *exudation* and *diapedesis*. 2. The irrigation of cells by the nutritive plasma exuded from blood capillaries. [Lat., *trans*, through, + *sudare*, to perspire.]

transversalis (trans-ver-sa'lis). Lying crosswise; as a n. m., a muscle lying

transversely. **t. muscle.** See *table of muscles*, under *muscle*. [Lat., *transvertere*, to turn athwart.]

transversus (trans-ver'sus). See *table of muscles*, under *muscle*.

trapezium (trap-e'ze-um). 1. The outermost of the second row of the carpal bones. 2. A tract of nerve fibers at the lower part of the pons Varolii below the prolongations of the anterior pyramids. It comes below the superior olivary nucleus and extends upward to be continuous with the middle cerebellar peduncle. [Gr., *trapezion*, a table.]

trapezius (trap-e'ze-us). See *table of muscles*, under *muscle*.

trapezoid (trap-e'zeyd). Table-shaped, as the t. bone. **t. ligament.** See under *ligament*. [Gr., *trapezion*, a table, + *eidōs*, resemblance.]

Trau'be-Hering waves. The periodic waves of blood pressure, due to rhythmic variations in the activity of the vasomotor center.

Trau'be's semilu'nar space. The area on the thoracic wall overlying stomach and between the area of precordial dullness and seventh rib. In it there is normally a tympanitic resonance. [Ludwig Traube, German physician, 1818-1876.]

trauma (traw'mah). Pl. *traumata*. 1. A wound or injury. 2. External violence producing bodily injury. 3. In psychoanalysis an occurrence, actual or a product of phantasy, which produces psychological disturbance. [Gr., *trauma*, wound.]

traumatacin (traw-mat'as-in). Syn.: *liquid gutta-percha*. A 10 per cent. solution of gutta-percha in chloroform; used like collodion.

traumatic (traw-mat'ik). Pertaining to or due to mechanical injury.

traumatism (traw-mat-izm). The state of having suffered mechanical injury.

treat'ment. 1. Means employed for the relief of the sick or injured. 2. The act or manner of treating. **antiseptic t.** T. intended to prevent or limit sepsis.

dietetic t. The t. of disease by special diet. **empirical t.** Routine t. founded on experience. **expectant t.** T. directed against symptoms as they arise.

heroic t. Unusually energetic t., as by the use of powerful or severe measures. **home t.** T. of a patient at his own home. **hygienic t.** The t. of disease by the application of hygienic principles, involving environment, clothing, food, and exercise. **mechanical t.** 1. T. by mechanical appliances. 2. See *massage*.

mediate t. T. of the fetus or a nursing by medication of the mother. **Mitchell's t.** See *Mitchell*. **mixed t.** The t. of syphilis by the contemporary administration of potassium iodid and mercury.

palliative t. T. intended to modify or limit the severer manifestations of a disease. **radical t.** T. for the absolute cure of a disease. **symptomatic t.** T. of disease by attention to the symptoms as they arise. [Old Eng., *tretement*, from *treten*, to treat.]

trefusia (tre-fu'se-ah). Trade name of a

preparation of iron albuminate obtained from defibrinated blood.

trehalose (tre'ha-lôs). Syn.: *mycose*. A disaccharid sugar, $C_{12}H_{22}O_{11} + 2H_2O$, obtained from trehala, manna and also found in various fungi. Upon hydrolytic cleavage it yields glucose.

Treitz's muscle. A thin, flat, trapezoidal m. composed of non-striated fibers, which arise in the connective tissue around the celiac axis and terminate in the lower extremity of the duodenum. [*Wenzel Treitz*, Austrian physician, 1819-1872.]

Trematoda (trem-at-o'dah). The flukes, a class of the *Platyhelminthes*, or flat worms. They have oral suckers and are parasitic in the lungs, liver, bladder, and intestines. [Gr., *trematodes*, porous.]

trematode (trem'at-ôd). A member of the class *Trematoda*.

trematoid. Same as trematode.

tremor. A quivering or trembling, especially a more or less continuous quivering of a convulsive character. **alcoholic t.** The visible t. of alcoholism. **continuous t.** A form of t. that resembles that of paralysis agitans. **fibrillary t.** T. caused by the consecutive contractions of separate muscular fibrillae, rather than of a muscle or the muscles as a whole. **hysterical t.** T. due to the instability of nervous impulse existing in hysteria. **intermittent t.** T. common to paralyzed muscles in hemiplegia. It is induced by attempts at voluntary movement. **muscular t.** Slight oscillating muscular contractions following each other in rhythmical order. **volitional t.** Trembling of the limbs or of the entire body when a voluntary effort is made. It occurs in connection with multiple sclerosis and other nervous diseases. [Lat., *tremere*, to tremble.]

Trendelenburg's position. The patient lies on the back, head down, on a table inclined at an angle of 45°, legs flexed over the bottom edge. [*Friedrich Trendelenburg*, German surgeon, born 1844.]

trepan'. See *trephine*.

trephine (tre-fin'). An instrument for sawing a circular opening, generally in the skull; consisting of a crown (a steel tube with saw teeth at its free end), a shaft, and a handle. As a verb, to operate with the trephine. [Fr. *trepan*, *tréphine*, an auger.]

trephining (tre-fî'ning). The operation of using the trephine.

Treponema pallidum. The name finally chosen by Schaudinn for the organism which causes syphilis. See *Spirochaeta pallida*, under *Spirochaeta*.

treponemiasis (tre-po-ne-mi'as-is). Infection with the *Treponema*; syphilis.

treppe (trep'pe). Used originally by Bowditch to indicate the gradually increasing contractions given by heart muscle when stimulated repeatedly with the same strength of stimulus. Now used as a general term to indicate—for tissues in general—the increased irritability that results at first from repeated functional activity. [Ger., *treppe*, staircase.]

tri-. Combining form of Gr., *treis*, Lat., *tres*, three.

triacetin (tri-as'et-in). An oily principle, $C_9H_8(C_2H_5O_2)_3$, found in the oil of *Euonymus europaeus*, and in some of the fats, and obtainable from a mixture of glycerin and glacial acetic acid.

triacid (tri-as'id). Having an acidity of three; of an acid or an acid salt, containing three atoms of replaceable hydrogen; capable of replacing three atoms of hydrogen in an acid.

triad. 1. A combination of three. 2. A trivalent element or radicle. **Hutchinson's t.** See *Hutchinson*.

trialkyl (tri-al'kil). Three alkyl radicles.

tri-al plate. In dentistry, a thin sheet of soft metal, wax, or other substance, conformed to a model and used to support artificial teeth temporarily for adjusting and trying in the mouth.

triammonic (tri-am-mo'nik). Containing three molecules of ammonium.

triangle (tri'an-gl). A three-cornered and three-sided figure, an area or space of three-cornered shape. **anterior t. of the neck**. The space bounded by the middle line of the neck, the anterior border of the sternocleidomastoid, and a line running along the lower border of the mandible and continued to the mastoid process of the occipital bone. **carotid t., inferior**. The space bounded by the middle line of the neck, the sternomastoid and the anterior belly of the omohyoid muscle. **carotid t., superior**. The space bounded by the anterior belly of the omohyoid muscle, the posterior belly of the digastric and the sternomastoid. **cephalic t.** A t. on the anteroposterior plane of the skull formed by lines joining the occiput and forehead and chin, and one uniting the two latter. **facial t.** A t. bounded by lines uniting the basion and the alveolar and nasal points and one uniting the two latter. **femoral t.** See *Scarpa's t.*, under *Scarpa*. **frontal t.** A t. bounded by the maximum frontal diameter and lines joining its extremities and the glabella. **Hesselbach's t.** See *Hesselbach*. **inferior carotid t.** The space bounded by the middle line of the neck, the anterior border of the sternocleidomastoid, and the anterior belly of the omohyoid. **inferior occipital t.** Of Welcker, a t. having the bimastoid diameter for its base and the inion for its apex. **inguinal t.** See *Scarpa's t.*, under *Scarpa*. **lumbocosto-abdominal t.** The space bounded in front by the obliquus abdominis externus, above by the lower border of the serratus posticus inferior and the point of the twelfth rib, behind by the outer edge of the erector spinae, and below by the obliquus abdominis internus. **muscular t.** See *inferior carotid t.* **mylohyoid t.** The triangular space formed by the mylohyoid muscle and the two bellies of the digastric muscle. **occipital t. of the neck**. The space bounded by the sternocleidomastoid, the trapezius, and the omohyoid. **omoclavicular t.** See *subclavian t.* **omo-**

hyoid t. See *superior carotid t.*
Petit's t. See *Petit. posterior cervical t., posterior t. of the neck.* The space bounded by the upper border of the clavicle, the posterior border of the sternocleidomastoid muscle and the anterior border of the trapezius muscle.
pubo-urethral t. A triangular space in the perineum, bounded externally by the ischiocavernosus muscle, internally by the bulbocavernosus muscle, and posteriorly by the transversus perinei muscle.
Scarpa's t. See *Scarpa. subclavian t.* A space bounded by the posterior belly of the omohyoid, the upper border of the clavicle, and the posterior margin of the sternocleidomastoid.
submaxillary t. The space between the lower border of the inferior maxilla, the parotid gland, and the mastoid process of the temporal bone above, the posterior belly of the digastric and the stylohyoid below, and the middle line of the neck in front.
superior carotid t. The space bounded by the sternocleidomastoid, the posterior belly of the digastric, and the anterior belly of the omohyoid.
supraclavicular t. See *subclavian t.* [Lat., *tres*, three, + *angulus*, angle.]

triangularis. Triangular, as applied to a muscle. **t. labii superioris.** See *table of muscles, under muscle. t. sterni.* See *table of muscles, under muscle.* [Lat.]

triangular ridge. In dentistry, the ridge running down from the point of a cusp or tubule toward the center of the crown.

trianilesculetin (tri'an-il-es-ku'let-in). A 3-molecule anilin substitution compound, $C_6H_6O(C_6H_5N)_3$, of esuletin.

triatomic (tri-at-om'ik). 1. Of molecules of elementary bodies, containing three atoms. 2. Of compounds, containing three atoms of replaceable hydrogen. 3. Of radicles, having a combining capacity that is saturated by union with three hydrogen atoms. [Gr., *treis*, three, + *atomos*, an atom.]

tribadism (trib'ad-izm). Unnatural sexual indulgence between two women by rubbing their pudenda together. [Lat., *tribadismus*, from Gr., *tribein*, to rub.]

tribarytic (tri-bar-it'ik). Containing three atoms of barium.

tribasic (tri-ba'sik). 1. Of acids and alcohols, containing in the molecule three atoms of hydrogen replaceable by bases. As regards alcohols, the term is superseded by trihydric. 2. Of salts, formed from a t. acid by the replacement of three atoms of hydrogen by bases.

tribrombenzene (tri-brom-ben'zen). A triatomic bromin substitution product of benzene, $C_6H_3Br_3$.

tribromid (tri-bro'mid). A bromin compound analogous to a trichlorid.

tribromomethane (tri'bro-mo-meth'an). Bromoform.

tribromphenol (tri-brom-fe'nol). Syn.: *bromol.* $C_6H_2Br_3(OH)$. **t. bismuth.** Bismuth tribromcarbolate.

tribromsalol (tri-brom-sa'lol). Cordol, $C_6H_4(OH)COO.C_6H_2Br_3$; hypnotic, analgetic, and hemostatic.

tributyryn (tri-bu'ti-rin). The glycerin ester of butyric acid, $C_3H_7(O_2)_3$, one of the constituents of butter.

tricephalus (tri-sef'al-us). That form of double monster in which there is only one body below the umbilicus, two chests and necks with separate lungs, hearts, and trachea, but three heads with three distinct larynges. [Gr., *treis*, three, + *kephale*, the head.]

triceps (tri'seps). Three-headed. **t. muscle.** See *table of muscles, under muscle.* [Lat., *tres*, three, + *caput*, head.]

trich'i-, trich'o-. Combining form of Gr., *thrix*, *trich-*, hair.

trichiasis (trik-i'as-is). An abnormal position of the eyelashes, most frequently an inward growth. [Gr., *trichiasis*, from *thrix*, a hair.]

Trichina (tri-ki'nah). Syn.: *Trichinella*. A genus of parasitic worms of the *Nematelminthes*, order *Nematoda*, and family *Trichinellidae*. **T. contorta.** Syn.: *Anguillulina putrefaciens*. A small nematode which may cause gastric irritation and vomiting. **T. cysticus.** See *Filaria Bancrofti* under *Filaria*. **T. spiralis.** A small viviparous species from $1/30$ to $1/13$ of an inch in length (the female being somewhat the larger), having a pointed, narrow, and unarmed head with a small oral aperture. The larvae are very tenacious of life, having been kept alive for a month. They present the form of spirally coiled worms, in the interior of small globular or oval cysts, about $1/80$ of an inch long, and are usually found in the voluntary muscles. In some cases they are found free. The flesh containing the larvae having been eaten, they are set free during digestion and attain maturity rapidly, sometimes within forty-eight hours, and after a week the young, piercing the intestines, burrow into the tissues, producing trichiniasis. The *T.* is a parasite of the black rat and the sewer rat and the disease spreads to dogs, cats, and pigs. Human beings become infected by eating insufficiently cooked pork or smoked ham. [Gr., *thrix*, a hair.]

trichiniasis (trik-in-i'as-is). The disease produced by the entrance of trichinae into the organism.

trichinization (trik-in-iz-a'shun). Infestation with trichinae.

trichinous (trik'e-nus). Infested with trichinae, due to the presence of trichinae.

trichloracetal (tri-klor-as'et-al). A liquid, $CCl_3-CH(O.O_2H_5)_2$, formed by the action of chlorin on alcohol.

trichloracetic (tri-klor-as-e'tik). Acetic and containing three substituted atoms of chlorin. **t. acid.** See under *acid*.

trichloracetyl (tri-klor-as-et-il). The radicle, CCl_3CO .

trichloraldehyd (tri-klor-al'de-hid). See *chloral*.

trichlorhydrin (tri-klor-hi'drin). Glyceryl trichlorid.

trichlorid (tri-klor'id). A compound of an element or radicle united directly with chlorin in the proportion of three atoms

of the latter to a definite amount of the former assumed as the unit of comparison.

trichlorinated (tri-klor'in-a-ted). Combined with three atoms of chlorine.

trichlormethane. See under *chloroform*.

trichlorophenate (tri-klo-ro-fen'ät). A compound of trichlorophenol with a metallic radicle.

trichlorphenol (tri-klor-fe'nol). A solid substance, $\text{C}_6\text{H}_3\text{Cl}_3\text{OH}$, prepared by the action of chlorinated lime on carbolic acid, anilin, and other aromatic substances. It is a very powerful antiseptic.

trichobacteria (trik-o-bak-te're-ah). A group of bacteria resembling flagella. [Gr., *thrix*, a hair, + *bacteria*.]

trichocardia (trik-o-kar'de-ah). *Obs.* Hairy heart; a hairy appearance of the heart due to fibrinous pericarditis. [Gr., *thrix*, hair, + *kardia*, heart.]

Trichocephalus (trik-o-sef'al-us). A genus of nematode worms of the *Trichosomidae*. The anterior part of the body is thin and whiplike. **T. dispar**. Syn.: *Trichuris trichiura*. Long thread-worm, whip-worm; a species 1 to 2 inches in length (the female being somewhat longer) and having a long filiform neck. It is found in the cecum and appendix and is common in the tropics. The eggs get into the intestine from polluted drinking water and the embryos develop and later form adults which may cause intestinal irritation and appendicitis. **T. hominis**. See *T. dispar*. [Gr., *thrix*, a hair, + *kephale*, head.]

trichoclasia (trik-ok-la'se-ah). Pathological brittleness of the hair. Another name for trichorrhexis nodosa. [Gr., *thrix*, a hair, + *klasis*, a breaking.]

trichocryptoses (trik'o-krip-to'sēs). Diseases of the hair follicles. [Gr., *thrix*, a hair, + *kryptos*, hidden.]

tricho-epithelioma (trik'o-ep-ith-e-le-o'mah). A skin epithelioma, starting from the hair follicles. [Gr., *thrix*, hair, + *epithelioma*.]

tricholith (trik'o-lith). A concretion on the hair. [Gr., *thrix*, a hair, + *lithos*, a stone.]

trichomaphyte (trik-o'ma-fit). A vegetable parasite formerly supposed to be the cause of plica polonica, a matted condition of the hair. [Gr., *trichoma*, a trichoma, + *phyton*, a plant.]

Trichomonas (trik-om'on-as). A genus of protozoa of the phylum *Mastigophora* and class *Euflagellata*. The bodies are pyriform and flagellate at one end. **T. hominis**. A pear-shaped organism, found in the normal mouth and intestine and in cases of diarrhea in Europe and India. **T. intestinalis**. See *T. hominis*. **T. pulmonalis**. A form found in the sputum of lungs in phthisis. **T. vaginalis**. A species of fusiform shape found in the vagina, especially in cases of vaginitis. [Gr., *thrix*, a hair, + *monas*, a unit.]

Trichomyces (trik-om'is-es). See *Trichophyton*. [Gr., *thrix*, a hair, + *mykes*, a mushroom.]

trichomycosis (trik'o-mi-ko'sis). Any disease of the hair due to a vegetable parasite. **t. carcinata**. Ringworm of the hairy scalp; the disease produced by invasion of the epidermis and hair of the scalp by *Trichophyton tonsurans*. It is characterized by round, slightly reddened, scalp patches of skin upon which the hairs are usually broken off at a little distance from the cutaneous surface, leaving stumps the extremities of which appear more or less split and ragged. **t. nigra**. A nodular affection of the hair generally of the axillary region. **t. nodosa**, **t. palmellina**. A disease in which hard, fungus nodules are formed in the shaft of the hair. [Gr., *thrix*, hair, + *mykes*, fungus.]

trichonodosis (trik'o-no-do'sis). A peculiar knotting and breaking of the hair, resulting in alopecia and interference with the growth of the hair in length. A rare affection.

trichophytinus (trik-of-i-ti'nus). Pertaining to or due to the presence of *Trichophyton tonsurans*.

Trichophyton (tri-kof'it-on). A genus of fungi of the order *Ascomycetes*. The mycelial spores are large and the conidia round. The various species cause diseases of the hair and skin. **T. acuminatum**. See *T. Sabouraudi*. **T. albicans**. Found in tinea albigena. **T. ceylonense**. Present in tinea negrecircinata. **T. Mansonii**. The cause of tinea imbricata. **T. mentagrophytes**. A species that produces a pyogenic syco-sis in man. **T. Sabouraudi**. A species that produces tinea capitis. **T. tonsurans**. A species producing the "black dotted ringworm," either as tinea capitis or tinea corporis. [Gr., *thrix*, a hair, + *phyton*, a plant.]

trichophytosis (trik'o-fi-to'sis). Syn.: *tinea trichophytina*. Ringworm. **t. corporis**. See *tinea circinata*, under *tinea*.

trichorrhexis (trik'or-reks'is). A nutritional disturbance of the hairs in which minute swellings develop along the hair shaft and incomplete fracture of the hairs occurs at these points. [Gr., *thrix*, a hair, + *regmuthai*, to burst forth.]

trichospore (trik'o-spör). A spore produced on a thread as on the *Hypomyces*. A conidium. [Gr., *thrix*, a hair, + *sporos*, seed.]

Trichostrongylus (trik-o-stron'ji-lus). A genus of the family *Strongylidae* of the *Nemathelminthes*. The species *T. colubri-formis*, *T. probalurus*, and *T. vitrinus* are found in the intestines of man in the tropics.

Trichothecium (trik-o-the'se-um). A vegetable parasite of the hair. **T. roseum**. A fungous growth found in the ear. [Gr., *thrix*, a hair, + *thekion*, dim. of *theke*, a chest.]

trichotoxin (trik-o-toks'in). A cytotoxin obtained from the injection of ciliated endothelium and acting on such cells. It is probably not specific in its action.

trichuriasis (trik-u-ri'as-is). Infestation with *Trichocephalus*.

Trichur'is. See *Trichocephalus dispar*.

tricipital (tri-sip'et-al). 1. Having three heads. 2. Pertaining to the triceps muscle.

tricodein (tri-ko-de'in). A polymerid, $C_{108}H_{128}N_6O_{18}$, formed by the action of sulphuric acid on codein. Administered to animals, it produces vomiting, ptialism, and catharsis.

tricrosol, trikresol (tri-kre'sol). A mixture of orthometa- and paracosols, not essentially different from the official cresol.

tricrosolamin (tri''kre-sol-am'in). An antiseptic solution of ethylenediamin and tricrosol.

tricrotic (tri-krot'ik). Having a triple beat. See *dicrotic*. [Gr., *treis*, three, + *krotein*, to beat.]

tricrotism (tri'krot-ism). The state of being tricrotic.

tricuspid (tri-kus'pid). 1. Having three cusps. 2. Pertaining to the t. valve. *t. murmur*. See under *murmur*. [Lat., *tres*, three, + *cuspis*, a point.]

tricuspis (tri-kus'pis). The tricuspid valve of the right auriculoventricular ostium.

tri-cephalus (tri-en-sef'al-us). A genus of otocephalic monsters devoid of three of the principal cephalic parts, the buccal, nasal, and ocular. [Gr., *treis*, thrice, + *enkephalos*, the brain.]

triethyl (tri-eth'il). The chemical group $(C_2H_5)_3$.

triethylamin (tri''eth-il-am'in). A ptomain, $C_6H_{15}N$, found in decomposed had-dock and in cultures of a bacillus obtained from poisonous sausage.

triethylstibine. $(C_2H_5)_3Sb$, a poisonous inflammable liquid.

triethylsulphine. A univalent radicle, $(C_2H_5)_3S$.

Trietz's ligament. A fold of peritoneum, reflected as a bridle from the lower border of the stomach at the point of emergence of the latter from beneath the mesentery of the small intestine. **T's muscle**. A thin, flat, trapezoidal muscle composed of unstriped fibers which arise in the connective tissue around the celiac axis and terminate in the lower extremity of the duodenum.

trifacial (tri-fa'se-al). 1. Triple and pertaining to the face. 2. Pertaining to or affecting the t. nerve. [Lat., *tres*, three, + *facies*, face.]

triferrin (tri-fer'rin). Syn.: *ferrinol*. Ferric paranucleinate, containing 22 per cent. of iron and 2.5 per cent. of phosphorus in organic combination. It is a hematinic.

trifluorid tri-flu'o-rid). A fluorin compound analogous to a trichlorid.

Trifolium (tri-fo'le-um). Clover, trefoil; a genus of leguminous herbs. **T. pratense**. Common clover. The herb, flowers, and seed have been used as an alternative, but perhaps with little reason. [Lat., *tres*, three, + *folium*, a leaf.]

triformal. Formalin.

triformol. Paraformaldehyd.

trigeminal (tri-jem'in-al). 1. Triple, triune, or threefold. 2. Of or pertaining to the trigeminal nerve. 3. Three at a

birth. [Lat., *tres*, three, + *geminus*, twin-born.]

trigger finger. See under *finger*. **t. toe**. See *flexed toe*, under *toe*.

trigone (tri'gon). See *trigonom*. **olfactory t.** See *caruncula mammillaris*, under *caruncula*. **t. of the bladder**. A triangular smooth surface with its apex directed forward upon the fundus of the bladder to a point just posterior to the urethra and limited by two ridges which pass back to the apertures of the ureters and by a line uniting these points.

trigonitis (tri-gon-i'tis). Inflammation of the trigone. [Gr., *trigonon*, trigone, + *itis*, inflammation.]

trigonocephalus (tri'gon-o-sef'al-us). A triangular cephalic malformation caused by compression of the anterior part of the skull; often associated with microphthalmia and cleft palate. [Gr., *trigonos*, three-cornered, + *kephale*, the head.]

trigonom (tri-go'num). A triangle; in the brain, the interpeduncular space. **t.**

acustici. A triangular space on the dorsal surface of the medulla, bounded superiorly by the auditory nerve, internally by the t. hypoglossi, and externally by the corpus restiforme. **t. caroticum superius**. See *superior carotid triangle*, under *triangle*. **t. cerebrale**. See *fornix cerebri*, under *fornix*. **t. clavipectorale**. A triangular space bounded by the clavicle, the pectoralis minor, and the thorax. **t. coraco-acromiale**. The t. formed by the coracoid process, the apex of the acromion, and the concave border of the clavicle. **t. cubitale**. See *fossa cubiti*, under *fossa*. **t. deltoideopectoralis**. See *infraclavicular fossa*. **t. durum**. The triangular interval between the anterior pair of the corpora quadrigemina. **t. habenulae**.

A small triangular area at the posterior portion of the upper surface of the optic thalamus, in front of the lamina quadrigemina and between the sulcus habenulae and the sulcus subpinealis. **t. hypoglossi**. A triangular area on the dorsal surface of the medulla oblongata, bounded superiorly by the striae medullares acusticae, internally by the posterior longitudinal fissure, and externally by the ala cinerea. **t. inferius commissurae posterioris**. The lower triangular half of the posterior commissure of the brain. **t. infraclavicularis**. See *infraclavicular fossa*, under *fossa*. **t. inguinale**. See *Scarpa's triangle*, under *Scarpa*. **t. submaxillare**. See *submaxillary triangle*, under *triangle*. **t. subpineale**. A triangular fossa above the quadrigemina, formed by the median fissure, that rises abruptly from the velum medullare. It lodges the pineal gland. **t. superius commissurae posterioris**. The portion of the posterior commissure of the brain connected with the anterior portion of the pineal gland. **t. vagi**.

The narrow triangular area on the medulla oblongata, from which the vagus nerve arises. **t. ventriculi lateralis**. A triangular projection between the en-

- trances to the posterior and descending cornua of the lateral ventricle. **t. vesicae, t. vesical.** See *trigone of the bladder*, under *trigone*. [Gr., *trigoneon*, triangle, from *treis*, three, + *gonia*, angle.]
- trihaloid** (tri-hal'oyd). A compound of a radicle with three atoms of a halogen.
- trihydric** (tri-hi'drik). Containing three atoms of replaceable hydrogen in the molecule.
- tri-iodid** (tri-i'o-did). An iodine compound analogous to a trichlorid.
- Trillium** (tril'le-um). Wake-robin; a genus of the *Liliaceae*. **T. erectum.** Bath-flower; contains a saponin and is used occasionally in domestic practice. [Lat., *tres*, three.]
- trilobate, trilobed** (tri-lo'bät, tri'löbed). Having three lobes. [Lat., *trilobatus*, from Gr., *treis*, three, + *lobos*, a lobe.]
- trimericuric** (tri-mer-ku'rik). Containing three atoms of bivalent mercury.
- trimetallic** (tri-met-al'lik). Containing in the molecule three atoms of a metallic element. [Lat., *tres*, three, + *metallum*, a metal.]
- trimethyl** (tri-meth'il). The chemical group, $(CH_3)_3$.
- trimethylamin** (tri'meth-il-am'in). A slightly poisonous ptomain, C_3H_9N , found in cheese, decomposed perch, and the human viscera, and in cultures of *Staphylococcus pyogenes* and *Bacillus proteus*. The hydrochlorid is used in gout and rheumatism.
- trimethylendiamin** (tri'meth-il-en-di-am'in). A poisonous ptomain, $C_3H_{10}N_2$, obtained from cultures of the spirillum of Asiatic cholera, which causes convulsions and muscular tremor.
- trimethylethylene** (tri'meth-il-eth'il-ën). Pental, $(CH_3)_2C:CH.CH_3$, a dental anesthetic.
- trinitrate** (tri-ni'trät). A nitrate containing three nitro-groups (NO_2) or three ONO_2 groups.
- trinitrin** (tri-ni'trin). See *nitroglycerin*.
- trinitrinum** (tri-ni-tri'num). Nitroglycerin. **liquor trinitrini.** A solution of trinitrin; a solution of nitroglycerin. A liquid containing 1 per cent. of the trinitroglycerin (trinitroglycerin of commerce) in alcoholic solution [Br. Ph.]. **t. compositum.** A mixture of nitroglycerin, amyl nitrite, capsicin, and menthol.
- trinitrocellulin, trinitrocellulose** (tri''ni-tro-sel'lu-lin, tri''ni-tro-cel'lu-lose). Gun-cotton; a substitution compound, $C_6H_7O_5(NO_2)_3$, of cellulose, produced by the prolonged action of concentrated nitric acid with a little sulphuric acid on cotton wool. It resembles ordinary cotton wool, is insoluble in alcohol, but soluble in ether, and is inflammable and highly explosive. See *pyroxilin*.
- trinophenon** (trin-o-fe'non). A proprietary preparation of picric acid; used in burns.
- tri'ol.** A proprietary preparation containing 50 per cent. of tricesol, potassium linoleate, water, and glycerin. It is used as a disinfectant.
- triolein** (tri-o'le-in). $C_3H_5O_3(C_{17}H_{33}CO)_3$, the glycerin ester of oleic acid, which contains three oleic acid groups combined with one glyceryl radicle. One of the fats found abundantly in oleic acid and the liquid animal fats. At ordinary temperatures it is a liquid.
- trional** (tri'o-nal). A name applied to sulphonethyl-methane of the U. S. Ph.
- triorchidism** (tri-or'kid-izm). The condition of having three testicles. [Gr., *treis*, three, + *orchis*, a testicle.]
- triose** (tri'ös). 1. A compound carbohydrate containing three simple sugars, e. g., raffinose. 2. A simple carbohydrate containing three carbon atoms.
- trioxid** (tri-oks'id). An oxygen compound analogous to a trichlorid.
- trioxymethylene** (tri'öks-e-meth'il-ën). Paraformaldehyd (CH_2O); a polymeric condensation product of formaldehyd. It is antiseptic and escharotic. When heated it generates formaldehyd.
- tripalmitin** (tri-pal'mit-in). One of the solid fats. It is tripalmityl glycerin, $C_3H_5O_3(C_{15}H_{31}CO)_3$.
- tripeptids** (tri-pep'tids). A large class of compounds prepared synthetically, which contain three amino-acid radicles in combination. The most important is leucyl-glycyl-a-alanin.
- triphenamin** (tri-fen-am'in). A mixture of phenocoll and some of its compounds, used in rheumatism.
- triphenin** (tri-fen'in). A homologue, $C_6H_4.C_2H_5.O.NH.(CH_3.CH_2.CO)$, of phenacetin; antipyretic, analgetic, and hypnotic.
- triphenyl** (tri-fe'nil). The chemical group, $(C_6H_5)_3$.
- trip'let.** One of three born as the result of one gestation.
- triplopia** (trip-lo'pe-ah). The simultaneous formation of three visual images of an object. [Gr., *triploos*, triple, + *ops*, the eye.]
- tri'pod.** A support having three legs.
- vital t.** The brain, heart, and lungs, so called as being the main supports of vitality. [Gr., *treis*, three, + *pous*, the foot.]
- tripsinogen** (trip-sin'o-jen). The zymogen of the pancreas from which trypsin is formed.
- tri'salt.** A salt containing three times as much base as acid.
- tris'mus.** Lockjaw; tonic spasm of the muscles that close the jaws. [Gr., *trismos*, a creaking, from *trizein*, to gnash.]
- tristearin** (tri-ste'ar-in). Stearin, $C_3H_5O_3(C_{17}H_{33}CO)_3$; a glycerin ester of stearic acid, a constituent of most of the animal fats.
- tristichiasis** (tris-tik-i'as-is). A form of congenital distichiasis in which there are three rows of cilia. [Gr., *tristichia*, a triple row.]
- trisubstituted** (tri-sub'sti-tu-ted). Having three elements replaced by equivalent elements, or radicles.
- trisulphid** (tri-sul'fid). A sulphur compound analogous to a trichlorid.
- tritanopia** (trit-an-o'pe-ah). A variety of

color blindness—otherwise known as violet blindness—due to deficiency or absence of one of the three fundamental color perceiving substances in the retina. Compare with *protanopia* and *deuteranopia*. [Gr., *treis*, three, + *anopia*, absence of vision.]

trithiodoformaldehyd (trith-'i'o-do-formal'de-hid). A substance obtained by the interaction of formic acid, lead formate, and hydrogen sulphid.

trititina (trit-is-e'nah). Boiled flour. [Lat., *triticum*, wheat.]

Triticum (trit'ik-um). 1. Wheat; a genus of gramineous herbs of the *Hordeae*. 2. Of the U. S. Ph., the rhizome of *Agropyron repens*. **T. repens**. Couch-grass; its rhizome is the official triticum. It is used in cystitis and irritable bladder and as a diluent. It contains acid malates, sugar, trititina, and another gummy substance containing nitrogen. **T. sativum**, **T. vulgare**. Common wheat. Its seeds, ground and sifted, constitute flour. Wheat flour chiefly contains starch, gluten, albumin, sugar, and a gummy substance which differs from ordinary gum in containing nitrogen and in not yielding mucic acid when treated with nitric acid. Flour is sometimes sprinkled on inflamed surfaces. [Lat., from *terere*, to rub.]

trit'ol. An emulsion made with diastatic extract of malt.

tritopin (tri-to'pin). An alkaloid, $C_{22}H_{24}N_2O_7$, obtained from opium. Its tendency to cause convulsions contra-indicates its use as a narcotic.

triturate (trit'u-rät). A substance or combination of substances reduced to a fine powder, especially by rubbing up in a mortar. **tablet t's**. Tablets formed by adding the medicinal agent to lactose, moistening with alcohol and molding them without pressure. They disintegrate far more readily than many of the compressed tablets. [Lat., *triturare*, to thresh (grain), from *tritrus*, pp. of *terere*, to rub.]

trituration (trit-u-ra'shun). In pharmacy, the act or process of rubbing up in a mortar or otherwise, so as to reduce to a fine powder; also the resulting powder; of the U. S. Ph., a preparation in which a medicinal substance is rubbed up with nine times as much powdered sugar of milk into a homogeneous powder. **trituration elaterini**. A t. containing 10 per cent. of elaterin [U. S. Ph.]. [Lat., *tritura*, a rubbing.]

trit'us. See *trituration* and *friction*. [Lat., *tritrus*, pp. of *terere*, to rub.]

trit'yl (tri'til). See *propyl*.

trivalence (triv'al-ens). The condition or property of being trivalent.

trivalent (triv'al-ent). Having an atomicity of three; i. e., being capable of replacing three atoms of hydrogen in a compound. [Lat., *tres*, three, + *valere*, to be worth.]

trivalerin (tri-val'er-in). A glycerid of valeric acid, $C_3H_7O_5(C_6H_9CO)_3$; found in certain marine animal oils.

troc'ar (tro'kar). An instrument for draw-

ing off liquid from a cavity by puncture, consisting of a perforator and a cannula. [Fr., *troc'ar*, *trecart*, from *trois*, three, + *carre*, side-face.]

troc'hanter (tro-kan'ter). 1. Of Galen, the head of the femur. 2. One of two processes upon the upper end of the shaft of the femur. **great t.** See *t. major*. **lesser t.** See *t. minor*. **third t.** See *t. tertius*. **t. major**. A thick process at the upper end of the femur which projects upward externally to the union of the neck and shaft. **t. minor**. A conical tuberosity upon the inner and posterior surface of the upper end of the femur, at the junction of the shaft and neck. **t. tertius**. An anomalous process upon the upper end of the planum popliteum of the femur. [Gr., from *trechein*, to run.]

troche (tro'ke). See *lozenge*. [Gr., *trochos*, a round cake.]

trochiscus (tro-kis'kus). (*obs.*) A medicinal lozenge. [Gr., *trochos*, a wheel.]

trochlea (tro'kle-ah). A hook or ring over or through which a muscle or tendon slips. **t. of the astragalus**. The tibial articular surface of the astragalus. **t. of the humerus**. The articular surface for the ulna. **t. of the obliquus oculi superior**, **t. of the orbit**. The ligamentous ring or pulley attached by fibrous tissue to a depression beneath the internal angular process of the frontal bone. It transmits the tendon of the obliquus oculi superior. [Lat., *trochlea*, a pulley, from Gr., *trochos*, wheel.]

trochlear (trok'le-ah). Pulley-shaped, circular and contracted in the center; pertaining to a trochlea.

trochlearis (trok-le-a'ris). See *table of muscles*, under *muscle*. [Lat., *trochlea*, a pulley.]

trochocephalia (tro''ko-sef-a'le-ah). A malformation of the skull caused by partial synostosis of the parietal and frontal bones in the middle of the coronal suture. [Gr., *trochos*, a wheel, + *kephale*, the head.]

Trötsch's corpuscles. Spindle-shaped c's of connective tissue situated between the fibers of the two layers of the membrana tympani.

Trommer's extract of malt. A proprietary preparation, consisting of a thick, brownish yellow extract, having an aromatic malt sugar taste; said to be composed of the soluble constituents of Canada balsam. **T's test**. Can be used only when there is a considerable amount of sugar. It consists of treating the urine with caustic soda and then with copper sulphate solution until a small amount of cupric hydroxid is precipitated. Upon boiling, cuprous oxid, C_2O , is precipitated. More accurate tests for glucose in the urine are Fehling's t., the fermentation t., and the polerescope t.

tropacocain (tro'pah-ko-ka'in). An alkaloid, $C_{15}H_{19}NO_2$, obtained from the leaves of a Java coca plant; used like cocain, and is only about half as poisonous. The hydrochlorid, also called tropein, is the

TABLE OF PATHOGENIC TRYPANOSOMES. Including *T. Lewisi*.

SPECIES, NAME	WHEN DISCOVERED	VERTEBRATE HOST	DISEASE PRODUCED	HOW TRANSMITTED (INVERTEBRATE HOST)	DIMENSIONS IN μ (INCLUDING FLAGELLA AND UNDUUL. MEMB.)	OTHER CHARACTERISTICS
<i>T. Lewisi</i> , Kent.....	1878	Rats.	Occasional epidemics.	Louse (<i>Haematopinus spinulosus</i> .)	8-30 X 1.5-3	Narrow and pointed, a flagellar extremity, trichonucleus in anterior third of body.
<i>T. Evansi</i> , Steel.....	1880	Horses, mules, cattle, camels, elephants, buffaloes.	Surra.	<i>Stomoxys</i> (flies).	20-30 X 1-2	
<i>T. Brucei</i> , Plimmer and Bradford.....	1894	Horses and cattle.	Nagana.	Tsetse flies, especially <i>Glossina morsitans</i> .	26-35 X 1.5-2.5	Posterior end usually bluntly rounded.
<i>T. equiperdum</i> , Doflein.....	1896	Horses, asses.	Dourine.	By coitus.	24-28.	
<i>T. dimorphum</i> , Dutton and Todd.....	1902	Horses.	Trypanosomiasis in Senegambia.	(?)	13-30 X 0.18-2	Long and short form with protoplasm reaching to top of flagellum.
<i>T. Theileri</i> , Bruce....	1902	Cattle.	Gall sickness.	<i>Hippobosca rufipes</i> .	60-70 X 4-5	The largest form—a kinetonucleus of ten near midbody. Kinetonucleus very minute.
<i>T. equinum</i> , Voges....	1902	Horses, cattle.	Mal de Cademas.	<i>Hydrocoerus capybara</i> .	22-25 X 1.5-2	The smallest form—posterior end bluntly conical.
<i>T. gambiense</i> , Dutton.	1904	Man.	Trypanosomiasis (Sleeping sickness).	<i>Glossina palpalis</i> .	17-23 X 1.5-2	
<i>T. Cruzi</i> , Chagas.....	1909	Man and monkeys.	Trypanosomiasis (Sleeping sickness).	<i>Conorhinus</i> .	Small.	Large bipharoplast (kinetonucleus).

form in which the alkaloid is generally employed.

troph-, tropho-. Combining form of Gr., *trophe*, nourishment.

trophic (trof'ik). Of or pertaining to nutrition. [Gr., *trophe*, nourishment.]

trophoblast (trof'o-blast). The epiblast of the blastocyst, in contradistinction to the epiblast of the germinal area, or the formative epiblast. [Gr., *trophe*, nourishment, + *blastos*, sprout.]

trophoneurosis (trof'o-nu-ro'sis). 1. A neurosis dependent on nutritive changes. 2. Failure in nutrition, due to impairment of the nervous action. **facial t.** See *progressive facial atrophy*, under *atrophy*. **muscular t.** A t. in which the muscles suffer nutritive changes in connection with certain diseases of the nervous system. [Gr., *trophe*, nourishment, + *neuron*, a nerve.]

trophoplast (trof'o-plast). A layer of cells in the outer portion of the membranous chorion. They are supposed to have a digestive action by means of which spaces in the decidua membrane are hollowed out for the chorionic papillae. [Gr., *trophos*, a feeder, + *plassein*, to form.]

trophosphere (trof'o-sfēr). The layer of trophoplasts between the decidua and the chorion of the ovum. [Gr., *trophe*, nourishment, + *sphaira*, a sphere.]

trophotropism (tro-fot'ro-pism). A tendency to motion induced in the particles of protoplasm by the presence of nutritive material near it. [Gr., *trophe*, nourishment, + *trepein*, to turn.]

tropidin (trof'id-in). A substance, C₈H₁₃N, obtained by heating atropin to 180° C. with hydrochloric and glacial acetic acids.

tro'pin. A body, C₈H₇(C₂H₄.OH)N(CH₃), of peculiar tobaccolike odor, obtained by decomposing atropin.

tro'pon. A nutrient combination of vegetable and animal albumins. **iron t.** A mixture of t. and iron saccharate.

trough (trof). A receptacle, usually oblong in shape, for liquids. **pneumatic t.** A t. by means of which gases can be collected and isolated over water or mercury in inverted vessels.

Troy weight. See in *appendix*, page 942.

truncate (trun'kāt). A term used in descriptive bacteriology, meaning terminating abruptly as if cut off at the end; flattened. [Lat., *truncatus*.]

truncus (trun'kus). Gen. and pl. *trunci*. See *trunk*. **t. brachialis primarius inferior**. The cord formed by the union of the anterior branches of the eighth cervical and first thoracic nerve. **t. brachialis primarius medius**. The anterior branch of the seventh cervical nerve. **t. brachialis primarius superior**. The cord formed by the union of the anterior branches of the fifth and sixth cervical nerves. **t. facialis efferens**. A loop of communication between the adducens nucleus and the roots of the facial nerve near their exit from the medulla. **t. innominatus**. See in-

nominate artery, in *table of arteries*, under *artery*. **t. lymphaticus abdominalis**. A large abdominal branch of the thoracic duct. **t. lymphaticus (communis) dexter**. See *right lymphatic duct*, under *duct*. **t. lymphaticus communis sinister**. See *thoracic duct*. **t. lymphaticus jugularis dexter**. A lymphatic receiving the vasa efferentia of the right side of the head and neck, and emptying into the right lymphatic duct. **t. lymphaticus jugularis sinister**. A lymphatic receiving the vasa efferentia of the left side of the head and neck, and emptying into the thoracic duct. **trunk**. The main body or stem of any branched structure; the body as distinguished from the limbs and head. **axillary lymphatic t.** The exterior branch of the right lymphatic duct, formed by the vasa efferentia of the axillary nodes. **intestinal lymphatic t.** A lymphatic receiving the vasa efferentia of the mesenteric nodes. **lumbar lymphatic t.** A large vessel which is formed by the union of the efferent vessels from the lumbar lymphatic nodes, and empties into the thoracic duct or one of its branches. **lymphatic t's**. Large lymphatics formed by the union of the vasa efferentia of the lymphatic nodes. **primary t's of the brachial plexus**. The primary cords which make up the brachial plexus. [Lat., *truncus*, stem.]

truss. A device, such as a pad and bandage or spring for keeping parts in place, especially a hernia. [Old Eng., *trusse*, a bundle, a pack.]

Trypanosoma (tri-pan-o-so'mah). A genus of protozoa, of the phylum *Mastigophora* and the family *Trypanosomidae*, with a flagellum and an undulating membrane. They increase by longitudinal division and in some species several forms have been observed, which infest both vertebrates and invertebrates. A few species have been artificially cultivated. For *species of Trypanosoma*, see *table*. **T. Brucei**. A parasite widespread in Africa, causing nagana in horses and other equines. The intermediary host transmitting the disease is the tsetse fly or *Glossina morsitans*. **T. cruzi**. A species found in human blood in Brazil. **T. dimorphon**. See *table*. **T. equinum**. A species found in South America in the mal de caderas, a fatal febrile disease of horses. **T. equiperdum**. A species causing dourine, or *mal du coit*, a sexual disease, resembling syphilis, in horses. **T. Evansi**. A form which produces a disease in India called surra and affecting horses, mules, camels, and cattle with fever, paralysis and death. **T. gambiense**. A species occurring in the cerebrospinal fluid and the blood of human beings, suffering with the sleeping sickness. The disease is transmitted to the tsetse fly, called *Glossina palpis*. **T. hominis**. See *T. gambiense*. **T. Lewisi**. The t. of the rat, the disease being transmitted by lice and fleas. This parasite has been cultivated on rabbit blood agar. **T. Theileri**.

See table. [Gr., *trypan*, to bore, + *soma*, the body.]

trypanosome (trip-an'o-sōm). Any member of the genus *Trypanosoma*.

trypanosomiasis (tri-pan'ō-so-mi'as-is). Infection with a trypanosome.

trypsin (trip'sin). A soluble proteolytic ferment which may be separated from the pancreatic juice and which acts in many respects like pepsin, but differs from it in being most potent in a neutral or slightly alkaline medium.

tryptic (trip'tik). Pertaining to trypsin.

tryptone (trip'tōn). Of Kühne, a peptone produced by the action of trypsin upon albuminates.

tryptophan (trip'tō-fān). Indol amino-propionic acid, C₈H₆N.CH₂.CH.NH₂.CO.OH. An amino acid present in proteins in the combined form. The free acid is formed in the digestion of proteins by trypsin. It is this grouping which gives the Adamkiewicz as well as the Hopkins and Cole color reactions. With bromin water in a weakly acid solution it forms a violet compound, which is soluble in amyl alcohol.

tsetse (tset'se). Syn.: *nagana*. An African fly called *Glossina*, whose bite transmits various forms of trypanosomiasis to animals and human beings.

Tsuchiya's method to determine amount of albumin present in urine, see in appendix, page 893.

tua-tua (tu'ah-tu'ah). An Hawaiian name for a plant supposed to be *Jatropha gossypifolia*; used in leprosy.

tube. A tubular or trumpet-shaped canal.

absorption t. A graduated glass t., about 250 mm. long and 20 mm. in diameter, closed at one end and furnished with a lip at its open end; used in Bunsen's method of volumetric analysis.

auscultation t. A t. for testing the hearing power.

binocular t. The t. of a binocular microscope.

bronchial t's. The branches into which the bronchi divide and from which spring the smaller t's (bronchioles) that communicate with the pulmonary alveoli.

Crookes' t. See *Crookes*.

drainage t. A t. of soft rubber or other material perforated at one end with small holes, to be introduced into a wound or suppurating cavity to allow of the escape of fluids.

draw t. A t. sliding within the main t. of a microscope, used to increase or diminish the t. length.

eudiometer t. See *eudiometer* (2d def.).

eustachian t. The canal which connects the pharynx and the tympanic cavity and by which an exchange of air takes place between the atmosphere and that cavity.

fallopian t. See *oviduct*.

Geissler's t. See *Geissler*.

hearing t. An ear tube for the use of deaf persons in conversation.

Henle's loop t. See *Henle*.

Kobelt's t's. See *Kobelt*.

loop t. See *Henle's loop t.*

lymph t's. The lymphatic vessels.

medullary t. In embryology, the medullary or neural canal, the primary form of the brain and spinal marrow, formed by the union of the medullary

ridges over the medullary groove.

microscopic t. The cylindrical metal t. blackened on its internal surface that contains the objective, eyepiece, and draw t., if there is one, of a microscope.

O'Dwyer's t. See *O'Dwyer*.

ovarian t's. Ovular (or egg-) chains; germinal epithelium in a developing ovary; divided into t's or chainlike masses by vascular ingrowths from the ovarian stroma.

Pflüger's salivary t's. Ducts within the lobules of a salivary gland.

receiving t. of the kidney. See *collecting tubule*, under *tubule*.

rectal t. An elastic gum t. to be passed into the rectum.

Ribemont's laryngeal t. See *Ribemont*.

safety t. A small part of the upper portion of the eustachian t. which lies in the curve formed by the cartilage as it turns forward under the cartilaginous hook. It is always sufficiently open to allow a recoil of air to occur from the drum cavity if the drumhead is suddenly driven in, as in explosions, and also to permit of a slow equalization of pressure in the tympanic cavity from the pharynx.

speaking t. See *hearing t.*

spray t. A combination of two t's with fine nozzles placed at right angles so that a current of air or steam through one will cause a spray of fluid to issue from the other.

stomach t. A long t., made of rubber or other material, used for lavage of the stomach.

straight t. See *collecting tubule*, under *tubule*.

tracheotomy t. A curved silver t., used to keep the opening in the trachea free after tracheotomy.

uriniferous t's, uriniferous t's. See *uriniferous tubules*, under *tubule*.

[Lat., *tuba*, a trumpet.]

tu'ber, pl., tubera. 1. A swelling, tumor, or protuberance.

2. In botany, a fleshy underground stem, such as the potato.

t. anterius. See *t. cinereum*.

t. calcanei. The tuberosity of the calcaneum.

t. cinereum. A tract of gray matter which extends from the corpora albicantia to the optic commissure, forming a portion of the floor of the third ventricle.

t. frontale. See *frontal eminence*, under *eminence*.

tubera geniculata. The external and internal geniculate bodies.

t. ischii. See *tuberosity of the ischium*, under *tuberosity*.

t. maxillae, t. maxillare. See *tuberosity of the superior maxilla*, under *tuberosity*.

t. omentale hepatis. An elevation on the left lobe of the liver corresponding to the lesser curvature of the stomach.

t. omentale pancreatis. An elevation of the middle portion (corpus) of the pancreas corresponding to the lesser omentum.

t. parietale. See *parietal eminence*, under *eminence*.

t. supracondyloideum. A tuberosity on the fibula opposite the inferior end of the internal border of the linea aspera.

t. supra-orbitale. See *superciliary ridge*, under *ridge*.

t. zygomatium. A protuberance on the lower border of the zygoma near the junction of the superior maxilla and the zygomatic projection. [Lat.]

tubercle (tu'ber-kl). 1. In anatomy, a

blunt and rounded end of a bone; also a small rounded eminence on a bone or other part. See also *tuberosity*. 2. In dermatology, a little nodule in the skin produced by a morbid deposit or growth in the corium or subcutaneous tissue. 3. In pathology, a small granular body, varying in diameter from $\frac{1}{500}$ mm. to 3 mm. Its consistence is hard, and when fresh it is transparent, but it later becomes opaque, and yellowish at the center. The t. is the characteristic lesion of tuberculosis, and is produced by the bacillus of tuberculosis. 4. In dentistry, a small rounded eminence on the occlusal surface of a molar tooth. A cusp. **adductor t. of the femur**. A small sharp projection at the lower termination of the internal supracondylar line of the femur, to which is attached the tendon of the adductor magnus. **amygdaloid t.** A projection in the roof of the descending cornu of the lateral ventricle at its anterior extremity. **anterior t. (of a vertebra)**. A t. at the anterior portion of the extremity of the transverse process of certain vertebrae. **anterior t. of the atlas**. A prominence in the middle line upon the anterior arch of the atlas. **anterior t. of the calcaneum**. A rough projection on the inferior anterior surface of the os calcis. **anterior t. of the optic thalamus**. A rounded projection at the anterior extremity of the optic thalamus. **anterior t. of the vagina**. A rugose, rounded prominence of the soft parts at the upper part of the orifice of the vagina, behind the meatus urinarius. **bacillus t.** *Bacillus tuberculosis*. **carotid t.** The anterior t. of the transverse process of the sixth cervical vertebra. **conglomerate t.** A mass consisting of many fused t's. **conoid t.** A broad t. on the posterior border of the clavicle at the junction of its middle and outer thirds to which the conoid ligament is attached. **deltoid t.** A prominence upon the anterior border of the clavicle where the deltoideus arises in part. **external supracondyloid t.** A prominence on the outer portion of the posterior surface of the lower end of the femur, from which the plantaris muscle arises. **fibrous t.** T. which has undergone modification chiefly by the formation of connective tissue within the (tuberculous) nodule. **genial t's.** Double pairs of t's on the inner surface of the inferior maxilla (one pair on each side of the middle line), to which are attached the geniohyoglossi and the geniohyoidei muscles. **genital t.** A protuberance of the urogenital region of the embryo, in front of the cloaca, being the rudiment of the penis or the clitoris. **gray t.** See *miliary t.* **gray t. of Rolando**. An eminence situated between the posterolateral groove and the prolongation of the column of Burdach. **greater t. of the humerus**. Its greater tuberosity. **iliopubic t.** See *iliopubic eminence*, under *eminence*, and *spine of the pubes*, under *spine*. **inferior obturator t.** A prominence op-

posite to the superior obturator t. on the pubic margin of the obturator foramen. **infraglenoid t.** An eminence below the glenoid cavity of the scapula, from which the long head of the triceps arises. A prominence on the inner and posterior surface of the lower end of the femur from which the internal head of the gastrocnemius arises. **intravascular t.** A t. developed in the intima of a blood vessel. **jugular t.** A ridge on the inner surface of the occipital bone close to the outer wall of the anterior condylar foramen. **lacrimal t.** The little papillary elevation in the inner or nasal third of the margin of the eyelid. In its center is the opening of the punctum lacrimale. **laminated t.** See *nodule* (2d def.). **lesser t. of the humerus**. Its lesser tuberosity. **lymphoid t.** A miliary t. that consists of large and small round lymphlike cells. **mental t.** A prominence on the lower border of the inferior maxilla at the point where it changes from the transverse to the more or less anteroposterior direction. **miliary t.** A minute, nearly globular t. occupying the stroma of an organ. **nuchal t.** The spinous process of the seventh cervical vertebra. **olfactory t.** See *olfactory bulb*, under *bulb*. **papillary t. (of the liver)**. An overhanging projection of the spigelian lobe of the liver into the portal fissure. **pathological t.** See *verruca necrogenica*, under *verruca*. **pearly t's.** See *miliun*. **pharyngeal t.** See *pharyngeal spine*, under *spine*. **plantar t.** A prominence on the metatarsal bone of the great toe to which the tendon of the peroneus longus is attached. **posterior t. (of a vertebra)**. A t. at the posterior portion of the extremity of the transverse process of certain vertebrae. **posterior t. of the atlas**. An elevation or a depression with raised margins on the outer surface in the median line of the posterior arch of the atlas. **posterior t. of the optic thalamus**. An elevation on the posterolateral ventricular surface of the optic thalamus. **pterygoid t.** A small t. on the internal surface of the inferior maxilla, for the attachment of the internal pterygoid muscle. **quadrigenial t's.** See *corpora quadrigenina*, under *corpora*. **retrograde t.** A calcified t. **scalene t.** A t. on the first rib for the attachment of the scalenus anticus. **superior obturator t.** A flat prominence on the margin of the obturator foramen near the acetabular notch. **supraglenoid t.** A prominence above the glenoid fossa of the scapula from which the long head of the biceps arises. **t. of a rib**. A prominence on a rib adjoining the neck, directed backward, and articulating with the transverse process of the lower of the two vertebrae which the bone joins. **t. of Darwin**. See *spine of Darwin*, under *spine*. **t. of Lower**. A small projection on the wall of the right auricle, between the orifices of the superior and inferior venae cavae, only slightly

marked in man. **t's of Montgomery.** The prominences formed on the surface of the areola of the nipple by the sebaceous glands. **t. of Rolando.** See *gray t. of Rolando*. **t. of Santorini.** An elevation of the mucous membrane of the larynx caused by the cartilage of Santorini. **t. of the femur.** A prominence on the front part of the neck of the femur where it joins the greater trochanter. **t. of the scaphoid bone.** A stout conical projection on the outer end of the scaphoid bone, which gives attachment to the annular ligament. **t. of the thyroid cartilage.** A t. at the back part of the upper border of the outer surface of the ala of the thyroid cartilage. **t. of the tibia.** The anterior tuberosity of the tibia. **t. of the ulna.** An elevation at the base of the coronoid process of the ulna upon which the brachialis anticus is inserted. **t. of the zygoma.** A prominence at the beginning of the zygoma to which the external lateral ligament of the temporomaxillary articulation is attached. [Lat., *tuberculum*, dim. of *tuber*, a protuberance, a swelling.]

tubercular (tu-ber'ku-lar). Lumpy, having the appearance of a tubercle, or like tuberculosis. The word is sometimes used as synonymous with tuberculous, but a practically useful distinction is thus nullified.

tuberculid (tu-ber'ku-lid). Any skin lesion of a tuberculous nature.

tuberculin (tu-ber'ku-lin). A preparation made by R. Koch and considered by him to be a means of diagnosing and curing tuberculosis. An extract made with glycerin of cultures of the tubercle bacillus. It is injected subcutaneously and is now employed chiefly as a diagnostic test and curative method. **crude t.** A glycerin extract of the toxic substances present in cultures of the tubercle bacillus in veal broth containing 1 per cent. of peptone and 4 or 5 per cent. of glycerin. The culture liquid is evaporated and filtered. **modified t.** Crude t. that has undergone various changes by the precipitation of certain constituents or filtration, or in which the mode of preparation is changed, as in Koch's first modification. **old t.** See *crude t.* **residual t.** The sediment left when a watery extract of triturated tubercle bacilli is submitted to the action of a centrifuge. **T. A.** is made by extracting the tubercle bacillus with 10 per cent. normal caustic soda, filtering and neutralizing. **T. O.** (*Tuberculin Oberschicht*). This substance is prepared by making suspension of dried tubercle bacilli in distilled water and centrifugalizing this mixture. A sediment is formed and the supernatant liquid, which remains opalescent, is known as **T. O. T.** **purified** is a precipitate from t. made with 60 per cent. alcohol, which is redissolved. **T. R.** (*Tuberculin Rückstand*). The deposit from **T. O.** is dried and centrifugalized, and the supernatant liquid is **T. R.**

tuberculin'ic ac'id. See under *acid*.

tuberculino (tu-ber'ku-lin-ōs). Dialyzed, purified tuberculin.

tuberculinization (tu-ber-ku-li-za'shun). 1. The process of conversion into tubercle. 2. The treatment of a patient with tuberculin.

tuberculoacidin (tu-ber''ku-lo-si'din). An albumose remaining in solution in crude tuberculin after the noxious bodies in the latter have been precipitated by platinum chlorid.

tuberculofibroid (tu-ber''ku-lo-fi'broyd). A tubercle which has undergone fibroid metamorphosis.

tuberculofibrosis (tu-ber''ku-lo-fi-bro'sis). Fibroid phthisis.

tuberculozymes (tu-ber-ku-lom'is-ēz). The group of bacteria which contains the *Bacillus tuberculosus*, and other like bacteria. [Tuberculo, + Gr., *mykes*, fungus.]

tuberculoplasmin (tu-ber''ku-lo-plas'min). The filtered watery extract from moist tubercle bacilli, extracted by crushing by pressure.

tuberculosamin (tu-ber''ku-lo-sam'in). An amin occurring in the tubercle bacillus.

tuberculosis (tu-ber-ku-lo'sis). A disease caused by the presence of the bacilli of tuberculosis in the body tissues. The most common form is the pulmonary. See *pulmonary phthisis*. The primary anatomical lesion is the tubercle, hence the name. **acute miliary t.** A sudden general eruption of miliary tubercles in various parts of the body. **anatomical t.** See *verruca necrogenica*, under *verruca*. **anthracotic t.** See *pneumonoconiosis*. **avian t.** T. affecting birds. **bovine t.** Pearl disease; t. as it occurs in cattle. Probably due to a distinct strain of bacilli. **cerebral t.** See *tuberculous meningitis*, under *meningitis*. **intestinal t.** T. affecting a part or all of the intestinal tract. **meningeal t.** See *tuberculous meningitis*, under *meningitis*. **miliary t.** An acute or chronic disease caused by infiltration of one or more parts of the body with miliary tubercles. **t. of the skin** (miliary). Syn.: *t. cutis vera*, *t. cutis orifacialis*, *t. ulcerosa*. A rare affection consisting of the occurrence of miliary tubercles in the skin, rarely seen before they have undergone caseous degeneration and become ulcers. **t. verrucosa cutis.** See *lupus verrucosus*, under *lupus*; also known as *verruca necrogenica*. [Lat., *tuberculum*, a tubercle.]

tuberculous (tu-ber'ku-lus). Affected with, pertaining to, or after the manner of tuberculosis.

tuberculum (tu-ber'ku-lum). See *tubercle*. **t. acousticum.** Syn.: *auditory ganglion*. A projection on the lateral wall of the fourth ventricle crossed by the auditory striae. **t. anticum humeri.** The lesser tuberosity of the humerus. **tubercula Arantii.** See *corpora Arantii*, under *corpora*. **tubercula areolae.** See *tubercles of Montgomery*, under *tubercle*. **t. baseos cartilagineae arytenoideae.** The muscular process of the

arytenoid cartilage. **t. capituli fibulae laterale**. A not uncommon prominence on the upper end of the fibula from which the anterior head of the peroneus longus arises. **t. capituli fibulae mediale**. An ill-defined anomalous prominence on the upper end of the fibula from which a portion of the soleus arises. **t. caroticum**. See *carotid tubercle*, under *tubercle*. **t. cuboidci**. See *eminentia ossis cuboidei*, under *eminentia*. **t. epiglotticum**, **t. epiglottidis**. The projection of the convex posterior surface of the epiglottis into the larynx. **t. externum humeri**. The greater tuberosity of the humerus. **t. externum processus condyloidei mandibulae**. A prominence below the condyle of the inferior maxilla to which the ligamentum accessorium laterale is attached. **t. fibulae**. The styloid process of the fibula. **t. impar** [His]. In the embryo, a prominence in the middle line of the mouth from which the tongue is in part derived. **tubercula intercondyloidea**. The anterior and posterior extremities of the tibial spine. **t. internum humeri**. The lesser tuberosity of the humerus. **t. labii superioris**. A prominence in the middle line of the inner surface of the upper lip of nurslings. **t. Lisfrancii**. See *scalene tubercle*, under *tubercle*. **t. majus humeri**. The greater tuberosity of the humerus. **t. mallei**. The outer apophysis of the malleus. **t. mandibulare**. The articular eminence of the temporal bone. **t. medium**. The middle projection of the thalamus opticus. **t. minus humeri**. The lesser tuberosity of the humerus. **t. nuchae**. The t. on the occipital bone for the attachment of the ligamentum nuchae. **t. olfactorium**. A small projection of gray matter in front of the anterior perforated space from which arise the roots of the olfactory nerve. **t. ossis hyoidei**. A slight elevation in the middle line of the anterior aspect of the body of the hyoid bone. **t. ossis multanguli marjoris**. The prominence on the plantar surface of the trapezium. **t. ossis navicularis**. The tuberosity of the scaphoid bone. **t. prostatica**. The middle lobe of the prostate gland. **tubercula sebacea**. See *milium*. **t. sellae (equinae)**. An olive-shaped elevation between the optic groove and the sella turcica of the sphenoid bone. **t. spinosus ossis sphenoidalis**. The infratemporal crest or a prominence at its anterior extremity. **t. superius (anteriorius)**. The anterior tubercle of the optic thalamus. **t. tali laterale**. An elevation upon the outer margin of the incisura astragali. **t. tali mediale**. A prominence upon the inner side of the incisura astragali. **t. trochleare**. See *trochlea*. **t. tympanicum anticum**. A protuberance on the upper anterior part of the annulus tympanicus. **t. tympanicum posticum**. A protuberance on the middle and posterior part of the annulus tympanicus. **t. wrisbergianum**. An elevation of the mucous membrane of the

larynx caused by the cartilage of Wrisberg.

tuberositas (tu-ber-os'it-as). See *tuberosity*. **t. atlantis lateralis**. An eminence at the inner margin of that surface of the atlas which articulates with the occipital bone, to which the transverse ligament is attached. **t. clavicularae**. A roughened eminence on the lower surface of the clavicle, near its sternal end, for the attachment of the costoclavicular ligament. **t. coracoidea**. See *conoid tubercle*, under *tubercle*. **t. costalis**. See *t. clavicularae*. **t. glutealis**. The tubercle on the upper end of the femur for the attachment of the gluteus maximus. **t. iliaca**, **t. ilii**. A rough eminence behind that surface of the ilium which articulates with the sacrum, for the attachment of the sacro-iliac ligaments. **t. malaris**. A small tuberosity near the maxillary process of the zygomatic bone. **t. metacarpi quinti**. A prominent tuberosity on the ulnar side of the fifth metacarpal bone, near its base. **t. metatarsi hallucis**. See *plantar tubercle*, under *tubercle*. **t. metatarsi quinti**. A rough prominence upon the external surface of the tarsal end of the fifth metatarsal bone. **t. olecrani**. A prominence on the olecranon process into which is inserted the extensor triceps brachii. **t. ossis trapezii**. An oblique ridge on the volar surface of the trapezium. **t. palatinus**. A tuberosity formed on the internal surface of the palatine bone, at the angle of the posterior and horizontal borders. **t. patellaris**. See *anterior tuberosity of the tibia*, under *tuberosity*. **t. pectoralis**. A tubercle near the sternal end of the clavicle for the attachment of the pectoralis muscle. **t. pubo-ischiadica**. A rough eminence at the union of the rami of the ischium and pubes. **t. scapularis**. See *conoid tubercle*, under *tubercle*. **t. supracondyloidea ossis femoris**. The external or internal supracondyloid tubercle. **t. ulnae major**. A rough eminence at the base of the coronoid process of the ulna, for the attachment of the brachialis internus. **t. ulna minor**. A small tuberosity occasionally found below the lesser sigmoid cavity of the radius. **t. unguicularis phalangis**. A broad, horseshoe-shaped expansion of the distal end of a terminal phalanx. **t. vertebralis (medialis)**. A rough eminence on the posterior surface of the transverse process (near its apex) of some of the dorsal vertebrae. **t. zygomata**. See *tubercle of the zygoma*, under *tubercle*. **tuberosity (tu-ber-os'it-e)**. A rounded or blunt elevation on a bone or other organ. **anterior t. of the tibia**. A t. on the anterior aspect of the tibia, near its upper extremity, for the attachment of the ligamentum patellae. **bicipital t. of the radius**. A t. on the superior part of the internal aspect of the shaft of the radius to the posterior rough portion of which is attached the tendon of the biceps flexor cubiti. **external occipital t.**

See *external occipital protuberance*, under *protuberance*. **external t. of the femur**. A rough eminence above the external t. of the femur to which the external lateral ligament is attached. **external t. of the tibia**. A rounded eminence on the external side of the upper end of the tibia which articulates posteriorly with the fibula. **greater t. of the humerus**. An upward projection of the humerus on its outer side, serving as a point of attachment for the infraspinatus, supraspinatus, and teres minor muscles. **internal t. of the femur**. A rough t. above the internal condyle of the femur to which the internal lateral ligament of the knee is attached. **internal t. of the tibia**. A massive rounded eminence on the inner side of the upper end of the tibia. **ischio-pubic t.** See *tuberositas pubo-ischiadica*, under *tuberositas*. **lesser t. of the humerus**. A small t. at the proximal end of the humerus, on the inner side of the bicipital groove, for the attachment of the subscapularis muscle. **maxillary t.** See *t. of the superior maxilla*. **t. of the calcaneum**. The posterior extremity of the os calcis. **t. of the cuboid bone**. A thick, oblique ridge on the inferior surface of the cuboid bone, near its anterior extremity. **t. of the ilium**. See *tuberositas ilii*, under *tuberositas*. **t. of the ischium**. The thick downward projection of the lower portion of the ischium upon which the body rests when sitting. **t. of the olecranon**. See *tuberositas olecrani*, under *tuberositas*. **t. of the sacrum**. A t. behind and internal to the lateral articular surface of the sacrum. **t. of the scaphoid bone**. 1. The prominence of the infero-external portion of the volar surface of the scaphoid bone of the hand. 2. A t. on the lower inner margin of the scaphoid bone of the foot. **t. of the superior maxilla**. A rough convexity on the posterior part of the external surface of the superior maxilla. [Lat., *tuber*, knob.]

tu'bo-. Combining form of Lat., *tubus*, tube.

tubular (tu'bu-lar). 1. Hollow and nearly cylindrical, tube-shaped. 2. Of an auscultatory sound, suggestive of one produced by an air current in a tube. [Lat., *tubulus*, a small tube.]

tu'bule. A small tube or tubelike structure. **collecting t.** The part of a uriniferous t. into which the junctional t's open. **communicating t.** See *junctional t.* **connecting t.** See *second convoluted t.* **convoluted t.** 1. See *first convoluted t.* 2. Formerly, the entire uriniferous t., from Bowman's capsule to the point where it enters a collecting t. **curved collecting t.** See *junctional t.* **distal convoluted t.** See *second convoluted t.* **efferent t's of the testis**. The vasa efferentia of the testicle. **excretory t's**. The comparatively large uriniferous t's in the medullary portion of the kidneys, formed by the union of many straight collecting t's.

first convoluted t. The part of a uriniferous t. that extends in a very tortuous manner for a short distance beyond the capsule of Bowman, to which it is joined by the constricted part or neck of the tubule. **gastric t's**. See *gastric glands*, under *gland*. **Henle's looped t.** See *Henle's loop tube*, under *Henle*. **intercalary t.** **intercalated t.** See *second convoluted t.* **irregular t.** The part of a uriniferous t. between the termination of the ascending limb of Henle's loop tube and the second convoluted t. It winds between the convoluted t's of the labyrinth, so that its course is irregular. **junctional t.** The relatively short part of a uriniferous t. extending from the second convoluted t. to a straight collecting t. **lactiferous t's**. See *galactophorous ducts*, under *duct*. **liver t's**. A tubular ventral outgrowth of the duodenum from which the liver is developed. **looped t. of Henle**. See *Henle's loop tube*, under *Henle*. **proximal convoluted t.** See *first convoluted t.* **renal t's**. See *uriniferous t's*. **second convoluted t.** The part of a uriniferous t. between the irregular and the junctional t's. Some authors make this portion include the junctional t., and therefore terminate in a collecting t. **seminal t's**, **seminiferous t's**. Tubes from $\frac{1}{1500}$ to $\frac{1}{200}$ inch in diameter, lined with epithelium, from which the spermatozooids develop. **spiral t. of Schachowa**. The portion of a uriniferous t. just beyond the first convoluted t. It extends to the junction of the cortex and medulla, where it is continued as the descending limb of Henle's loop tube. **uriniferous t's**, **uriniparous t's**. Minute canals, consisting of a basement membrane and a lining of epithelium, which form the proper glandular substance of the kidney. They originate in Bowman's capsules, and, after extending in a tortuous manner for a considerable distance, finally join other t's to form a common t., which extends in a nearly straight direction, and, after joining others, empties into the pelvis of the kidney. While the uriniferous t's may be properly said to be continuous from their origin to their termination, various parts of their length differ in size and course and in the character of the lining epithelium, and are named as if they were independent t's, as follows: (1) The capsule of Bowman; (2) the neck or constricted part joining the t. and capsule; (3) the first convoluted t.; (4) the spiral t. of Schachowa; (5) the descending limb of Henle's loop tube; (6) Henle's loop tube; (7) the ascending limb of Henle's loop tube; (8) the irregular t.; (9) the second convoluted t.; (10) the junctional t., the last uniting with other junctional t's to form (11) a collecting t., which unites with others to form (12) an excretory t., which finally opens into one of the calices of the pelvis of the kidney. [Lat., *tubulus*, dim. of *tuba*, a tube.]

tubuli (tu'bu-le). The minute tubes that form the dentin, radiating from the pulp-

chamber and root canals to the inner surface of the enamel on the crown and to the cementum on the root.

Tufnell's diet. A form of d. employed in the treatment of internal aneurisms by Dr. Tufnell of Dublin.

tug'ging. A pulling or dragging. **tracheal t.** A sign of thoracic aneurism consisting in the sense of downward traction of the larynx with the cardiac systole when the thyroid cartilage is gently raised between the finger and thumb.

tulipin (tu'lip-in). A poisonous alkaloid obtained from the bulb of *Tulipa gesneriana*. It is an energetic sialagogue.

Tully's powder. A substitute for Dover's p. consisting of about 20 parts each of camphor, prepared chalk, and licorice, and 1 part of morphin sulphate.

tumefaction (tu-me-fak'shun). Swelling, puffiness. [Lat., *tumefacere*, to cause to swell.]

tumenol (tu'men-ol). A crude mixture of tumenol sulphone and tumenol sulphonic acid derived from bituminous shale. Used externally in eczema, and in burns, etc.

t. ammonium. The ammonium salt of s. sulphonic acid. Its actions and uses are like those of t. [Bitumen, + Lat., *oleum*, oil.]

tumescence (tu-mes'ens). The condition of swelling or being swollen. [Lat., *tumescere*, to begin to swell.]

tu'mor. A swelling, especially a new growth, cystic or solid, malignant or non-malignant. A t. proper is a mass of cells, tissues or organs resembling those normally present, but arranged atypically. It grows at the expense of the organism, without at the same time subserving any useful function. In a broader sense we may include any unusual swelling as a t., such as collections of fluid or gas, inflammatory and hemorrhagic swellings, and normal or hypertrophic increase in tissue, but the t. proper is a law unto itself or autonomous. T's are classified by Adami as: 1st. teratomata, or autonomous growths, the development of one individual within another, including various monstrosities such as fetal and visceral inclusions; 2d. terblastomata, or mixed t's of the kidney and various glands; 3d. autochthonous blastomata, or ordinary t's with an independent localized growth of tissue cells of one order, such as fibromata or glandular, benign, or malignant t's. **adenoid t.** See *adenoma*. **adipose t.** See *lipoma*. **aneurismal t.** See *aneurism*. **anthracoid t.** See *melanotic t.* **benign t.** See *innocent t.* **biliary t.** A t. formed by an enlargement of the gall-bladder. **blood t.** See *hematoma*. **bony t.** See *osteoma*. **butyroid t.** A galactoceles with contents of the consistence of butter. **cancerous t.** A t. formed by a cancer. **cartilaginous t.** See *chondroma*. **cavernous venous t.** See *cavernous angioma*, under *angioma*. **connective tissue t.** See *fibroma*. **cystic t.** A t. consisting of a sac or of sacs containing liquid. **dermoid t.** See *dermoid cyst*, under *cyst*. **desmoid**

t. Obs. A firm fibrous t. **embryoplastic t.** See *encephaloid sarcoma*, under *sarcoma*. **erectile t.** A t. composed chiefly of vascular tissue which may become more or less prominent when the vessels are filled with blood. **fatty t.** See *lipoma*. **fibrocalcareous t.** A fibrous t. that has undergone calcareous degeneration. **fibrocellular t.** [Paget]. A new growth made up of tissue more or less resembling the normal fibrocellular or connective tissue of the body. The typical form is firm, with a homogeneous surface on section, and bands of delicate filamentous white fibrous tissue intersecting its substance. **fibrocystic t.** A fibrous t. containing cysts. **fibrofatty t.** See *fibrolipoma*. **fibromuscular t.** See *fibromyoma*. **fibrous t.** See *fibroma*. **fibrovascular t.** See *fibroma teleangiectaticum*, under *fibroma*. **floating t.** A t. that is movable in some part of the body, e. g., the abdomen. **follicular t.** See *atheroma* (1st def.). **fungating t.** A t. composed of exuberant granulations, generally growing from the inner surface of the wall of a cystic t. **gaseous t.** A t. containing gas. **glandular t.** See *adenoma*. **granulation t.** A t. formed by the proliferation of granulation tissue. **Gubler's t.** See *Gubler*. **gummatous t.**, **gummos t.**, **gummy t.** Syphiloma; so called from either the softish semi-elastic consistence of the tumor or the peculiar character of its contents after the process of softening. **hair t.**, **hairy t.** A dermoid cyst containing hair. **heteradenic t.** A hyaline cylindroma. **heteroplastic t.** A t. differing from the tissue in which it grows. **histioid t.** A t. formed of a single tissue, resembling that of the surrounding parts. **homoplastic t.** A t. resembling the tissue in which it grows. **horny t.** See *cornu cutaneum*, under *cornu*. **hydatoid t.** A cystic t. resembling a hydatid cyst. **hylic t.** A term used in Adami's classification of t's to designate the "pulp" t's, made up of hylic tissue and consisting of organs or tissues in which the specific cells lie in a stroma that is homogeneous or fibrillar and in which there are blood or lymph vessels. **idopathic splenic t.** The enlargement of the spleen observed in pseudoleukocythemia. **infectious granulation t's.** Acute military tubercles. **infiltrating t.** A t. that spreads by infiltration. **innocent t.** A t. which affects the patient solely through its local influence, which has little disposition to soften or ulcerate, and has no tendency to multiplication in other tissues or to involve the absorbers with which it is connected. **irritable t. of the breast.** A t. of the breast characterized by exquisite pain and tenderness of one or more of its lobes. **lacteal t.** See *galactoceles*. **lepidic t.** In Adami's classification "rind t's of lepidic tissue in which blood vessels do not penetrate the groups of specific cells and in which there is an absence of definite stroma between the individual cells, although such

stroma of mesenchymatous origin may be present between groups of cells. They include such t's as the papillomata, adenomata, epitheliomata, and carcinomata." **malignant t.** A t. which infiltrates tissue, produces metastatic or secondary growths, induces cachexia, and tends to a fatal issue, unless removed. **melanotic t.** See *melanotic sarcoma*, under *sarcoma* and *melanoma*. **meningeal blood t.** A hematoma of the meninges. **mesoblastic t.** A t. arising from the mesoblast. **milk-like t.** Medullary sarcoma. **movable t.** See *floating t.* **mucous t.** See *myxoma*. **muscular t.** See *myoma* (1st def.). **nerve t., nervous t.** See *neuroma*, *osseous t.* A t. containing bone, either cancellous or compact. **painful subcutaneous t.** An encysted fibrous or fibrocellular t. situated in the subcutaneous tissue and giving rise to pain. **papillary t.** See *papilloma* (2d def.). **pearl t., pearly t.** See *cholesteatoma*. **pearly t. of the iris.** A small cyst of the iris containing a pultaceous, tallowy substance. **phantom t.** An abdominal tumefaction due to flatulence, fat, or to circumscribed hysterical contraction of the abdominal muscles. **pilocystic t.** A dermoid cyst containing hair. **recurrent fibrovascular t.** A telangiectatic fibroma that recurs after excision of a primary t. **recurrent t.** A t. tending to recur after removal. **rotated t.** A pediculated t. that has rotated on the pedicle. **sebaceous t.** 1. See *atheroma* (1st def.). 2. Of Toynebee, see *cholesteatoma*. **t. albus.** White swelling. **t. lacrimalis.** The swelling over the site of the lacrimal sac in purulent or phlegmonous dacryocystitis. **t. lardosis.** See *lipoma*. **turban t's.** Endothelioma capitis. **uterine t.** 1. A t. (neoplasm) of the uterus. 2. A tumidity due to enlargement of the uterus. **varicose t.** A t. composed of dilated and hypertrophied veins. See *cavernous angioma*, under *angioma*. **vascular t.** See *angioma*. **vascular t. of the meatus urinarius** (or of the urethral orifice [Clarke]). See *urethral papilloma*, under *papilloma*, and *urethral caruncle*, under *caruncle*. **villous t.** See *papilloma*. **warty t. of the umbilicus.** See *fungous excrescence of the umbilicus*, under *excrescence*. [Lat., from *tumere*, to swell.]

tumorous (tu'mor-us). Of the nature of tumors.

tungstate (tungs'tât). A salt of tungstic acid.

tungsten (tungs'ten). 1. A metallic element, used in the manufacture of t. steel and of the incandescent electric light. Atomic weight, 184. Symbol, W. (from wolfram). 2. Calcium tungstate.

tu'nic. A coat, an investing membrane; in botany, a skin or covering membrane, such as the testa of a seed, or a thick or thin separable layer, such as one of the coats of an onion. **choroid t.** The choroid membrane. **external elastic t.** See *external elastic coat*, under *coat*. **inner muscular t. of the epididymis.** Of Kölliker,

a layer of muscular tissue at the back of the testis and epididymis, beneath the fascia propria and opposite the lower two thirds of the testis. **internal elastic t.** See *internal elastic coat*, under *coat*. **vaginal t.** See *tunica vaginalis*, under *tunica*. [Lat., *tunica*, a long Roman undergarment.]

tunica (tu'nik-ah). See *tunic*. **t. abdominalis.** A deep layer of the abdominal fascia in animals, analogous to the transversalis fascia in man. **t. albuginea.** See *albuginea*, *albuginea testis*, and *Tenon's capsule*, under *Tenon*. **t. arachnoidea.** See *arachnoid*. **t. arteriae externa.** The adventitia of an artery. **t. arteriae fenestrata.** See *internal elastic coat*, under *coat*. **t. arteriae intima.** The intima of an artery. **t. arteriae media.** The middle coat of an artery. **t. darta.** See under *dartos*. **t. nervi optici interna.** The innermost layer of the sheath of the optic nerve, derived from the pia. **t. nervosa.** The stratum granulosum, internal granule layer, stratum gangliosum, and stratum fibrilloseum of the retina regarded as one layer. **t. oculi dura.** See *sclerotica*. **t. propria.** See *membrana propria*, under *membrana*. **t. vaginalis.** The serous covering of the testis; an offshoot of the peritoneum which is forced into the scrotum by the descent of the testicle. **t. vaginalis reflexa.** That part of the t. vaginalis that lines the scrotum. **t. vaginalis testis** (or *visceralis*). The portion of the t. vaginalis which invests the epididymis and the testicle. **t. vasculosa.** 1. A vascular network. 2. The choroid. **t. vasculosa lentis.** A very vascular envelope, made up of the various vascular projections of the embryonic cephalic plate, completely surrounding the crystalline lens in the embryo. **t. vasculosa oculi.** See *choroid*. **t. vasculosa testis.** A vascular network lining the albuginea testis. **t. vasorum interna.** See *intima*. **t. villosa.** The villous surface of the intestines. **t. vitrea.** See *hyaloid membrane*, under *membrane*.

turbinal (tur'bin-al). See *turbinate*. [Lat., *turbo*, a top.]

turbinate (tur'bin-ât). Top-shaped; scroll-like. **t. bone.** See under *bone*. [Lat., *turbinatus*, from *turbo*, a top.]

turbinctomy (tur-bin-ek'to-me). Excision of a turbinate bone. [*Turbinate* + Gr., *ektome*, excision.]

turgescence (tur-jes'ens). The act or process of swelling or enlargement (said especially of very vascular tissue. [Lat., *turgescere*, to begin to swell.]

turgid (tur'jid). Swollen, congested, bloated. [Lat., *turgere*, to swell out.]

turmeric (tur'mer-ik). The genus *Curcuma*, especially *Curcuma longa* and its rhizome. **t. paper.** Filter paper impregnated with that portion of the coloring matter of t. which is insoluble in water but soluble in alcohol; used as a test for alkalis in solution, which change its tint to brown.

turmerol (tur'mer-ol). A constituent of turmeric oil, $C_{10}H_{16}O$.

turn of life. See *menopause*.

turpentine (tur'pen-tin). An oleoresin, consisting of a mixture of rosin (colophony) and an essential oil (see *oil of t.*), obtained from various species of pine [U. S. Ph., *terebinthina*]. List of poisons and their antidotes, see in *appendix*, page 940. **Bordeaux t.** Common European t.; obtained from several species of *Pinus*, especially *Pinus maritima*. In its fresh state it is whitish, turbid, and thick, but separates, on standing, into two portions, one transparent and liquid, the other viscid and honey-like. The commercial article often consists entirely of the latter part. It yields large quantities of resin and oil of t. **Canada t., Canadian t.** Canada balsam, balsam of fir; a liquid oleoresin obtained from *Abies balsamea* [U. S. Ph., Br. Ph.]. **Chian t., Chio t., Cyprus t.** T. obtained from *Pistacia terebinthus*; a thick, tenacious liquid of a greenish yellow color or a soft solid of a dull brown hue, with little taste, and of a peculiar pleasant, mildly terebinthinous odor. It consists of resin (probably the resin of mastic) and an essential oil which contains a little oxygenated oil. **Hungarian t.** Carpathian (or Hungarian, or Riga) balsam; a thin fluid with a juniperlike smell that exudes from the young twigs of *Pinus cembra* and *Pinus pumilio*. It has the properties of ordinary t. **oil of t.** Spirit (or spirits) of t.; a volatile colorless liquid, $C_{10}H_{16}$, of penetrating smell, pungent, bitterish taste, and neutral or faintly acid reaction, obtained by distillation from t. It varies in physical properties according to its source. Its boiling point ranges from 152° to 172° C., and its sp. gr. from 0.856 to 0.870. It is used as a stimulant, diuretic, anthelmintic, cathartic, rubefacient, germicide, and antiseptic [U. S. Ph., *oleum terebinthinae*]. **Russian t.** T. obtained from *Pinus silvestris*. "Sanitas" is produced by passing air through its essential oil in contact with warm water. **Scio t.** See *Chian t.* **spirit (or spirits) of t.** See *oil of t.* **Strassburg t.** A t. obtained from the vesicles of the bark of *Pinus picea*, closely resembling Canadian balsam, but of a more agreeable odor and without acrid or bitter taste. It has the properties of common t. **Venetian t., Venice t.** A thick, turbid, pale yellowish fluid of bitter aromatic taste, obtained from *Larix europaea*. It is used mainly in veterinary practice. [Gr., *terebinthos*, the turpentine tree.]

turpeth. The *Ipomoea turpethum*, its root (t. root), or the resin (resin of t.) obtained from the root. T. root contains turpethin, a volatile oil, etc. It acts like jalap, but is less powerful. **t. mineral.** Mercury subsulphate; so called from the resemblance of its color to that of the root of *Ipomoea turpethum*. [Lat., *turpethum*.]

turpethin (tur'peth-in). A glucosid, C_{31} -

$H_{56}O_{16}$, isomeric with jalapin, obtained from turpeth resin.

Tussilago (tus-sil-a'go). 1. A genus of the *Compositae*. 2. The *T. farfara*. **T. farfara.** Coltsfoot, the *bechion* of Dioscorides. It is bitter, astringent, and demulcent, and is used as a pectoral. The leaves are the most active part. [Lat., from *tussis*, a cough.]

tus'sis. See *cough*. [Lat.]

tus'sol. Antipyrin mandelate, $C_{10}H_{10}O_4N_2$; used in whooping-cough.

tutamen (tu-ta'men). A protective structure. **tutamina cerebri.** The skull and the meninges of the brain. [Lat., *tutamen*, protection.]

tutia (tu'te-ah). Tutty; an impure zinc oxid. Finely powdered or washed, it is used as a desiccant in excoriations.

tu'tin. A glucosid, $(C_{17}H_{20}O_7)$, found in certain species of *Coriaria*. Its action resembles that of coriamyrtin, but it is not so active.

'tween-brain. See *mesencephalon*.

twin. Double, paired, geminate; as a n., one of two children that are the product of one gestation. **dichorial t's.** T's originating from two separate ova and having distinct chorions and placentas. **monochorial t's.** T's originating from a single ovum and having one chorion and one placenta. **unequal t's.** Syn.: *gemini inaequales*. T's of the same sex inclosed within a single chorion, one of them showing more or less grave developmental defects, and communicating with the other by means of the vessels of the umbilical cord in the neighborhood of the placenta. [Old Eng., *twin*, *twyn*, *twinne*.]

twinge. To press; to pull with a sharp pinching jerk; tweak, twitch; sting; to experience a sharp pain; as a n., a ripping or pinching. [Old Eng., *twingen*, from *thwingen*, to press, constrain, oppress.]

tylmarin (til'mar-in). A trade name for acetylorthocoumaric acid, $(C_8H_6O_4)$, suggested as an intestinal antiseptic; also used as a dusting powder.

tyloma (ti-lo'mah). A callosity. [Gr., from *tylos*, a callus, + *oma*, tumor.]

Tylophora (ti-lof'or-ah). A genus of the *Asclepiadeae*. **T. asthmatica.** Country (or East Indian) ipecacuanha; a shrub of southern Asia and the adjacent islands. The root is emetic in large, and cathartic in small, repeated doses, and is used like ipecacuanha in dysentery. [Gr., *tylos*, a callus, + *phorein*, to bear.]

tylophorin (ti-lof'or-in). An alkaloid obtained from *Tylophora asthmatica*; diaphoretic, expectorant, and emetic.

tylosis (ti-lo'sis). The formation of callus on the skin; a callus, a callosity. **t. linguae.** Same as leukoplakia buccalis. [Gr., *tylosis*.]

tympanectomy (tim-pan-ek'to-me). Incision of the membrana tympani. [Gr., *tympanon*, a kettle-drum, + *ektome*, excision.]

tympanic (tim-par'ik). Pertaining to or connected with the tympanum. [Lat., *tympanicus*.]

- tympantites** (tim-pan-i'tez). A distended condition of the abdomen due to paralysis of the muscular coat of the intestines and their inflation with gas generated within them. [Gr., *tympantites*, from *tympanon*, a kettle-drum.]
- tympantic** (tim-pan-i'tik). 1. Of the nature of or affected with tympantites. 2. Of a percussion note, resembling in quality the note produced by percussing a tympantic abdomen.
- tympano-**. Combining form of Gr., *tympanon*, drum, the tympanon of the ear.
- tympanium** (tim'pan-um). The drum of the ear, the cavity of the middle ear; in a more restricted sense, the membrana tympani. [Gr., *tympanon*, a kettle-drum, from *typtein*, to strike.]
- tympany** (tim'pan-e). See *tympantites*.
- type**. 1. A model, a representative or ideal form, structure, or specimen; of a disease, the course pursued in the majority of cases. 2. In chemistry, a substance the graphic formula of which serves as a model of construction for numerous other bodies whose graphic formulae, accordingly, may be reproduced by substituting the appropriate radicles for the radicles of the typical formula. 3. In biology, (a) the ideal plan on which an organ or form is constructed; (b) the primitive pattern on which a group was first established; and (c) a group (species, genus, etc.) representing as completely as possible the distinguishing characteristics of the group. **test t**. Letters of various sizes for trying the acuteness of vision. [Lat., *typus*, from Gr., *typos*, a mark.]
- typhase** (ti'fäs). A ferment produced by the typhoid bacillus capable of dissolving it.
- typhemia** (ti-fe'me-ah). The condition in which the typhoid bacilli are present in the blood. [*Typhoid* + Gr., *aima*, blood.]
- typhlitis** (tif-li'tis). Inflammation of the cecum. [Gr., *typhlon*, the cecum, + *itis*, inflammation.]
- typhlolithiasis** (tif'lo-lith-i'as-is). The formation of a calculus in the cecum. [Gr., *typhlon*, cecum, + *lithos*, stone.]
- typhlotomy** (tif-lot'o-me). An incision into the cecum. [Gr., *typhlon*, the cecum, + *temnein*, to cut.]
- ty'pho-**. Combining form of Gr., *typhos*, stupor, having reference to the fever, typhoid.
- typhobacillosis** (ti''fo-bas-il-o'sis). The general poisoning produced by the liberated intracellular toxins of the typhoid bacillus. [Gr., *typhos*, stupor, + *bacillus*.]
- typhobacterin** (ti'fo-bak'te-rin). The bacterial vaccine made from the typhoid bacillus and used as a preventive of typhoid fever.
- typhoid** (ti'foyd). Of the nature of or resembling typhoid fever. **t. ambulatorius**. See *walking t. carrier*. A person who, though apparently well, has bacilli of typhoid fever in his stools or urine. **t. condition**, **t. state**. The state or condition in which typhoid symptoms are present other than when produced by the typhoid bacillus. **t. fever**. Syn.: *follicular enteritis*, *enteric fever*, *abdominal typhus*. A general infection caused by the presence in the intestines and also in the blood of the typhoid bacilli. See also under *fever*. **walking t.** A form of *t. fever* where the patient is up and about, the general constitutional symptoms being very mild. [Gr., *typhos*, fever stupor, + *eidosis*, resemblance.]
- typhoid'in**. Extract of typhoid bacillus used as a cutaneous reaction as an indication of immunity against typhoid fever.
- typhoin** (ti-fo'in). A preparation of dead typhoid bacilli, used in the prevention and treatment of typhoid fever.
- typholysin** (ti-fo'lis-in). A lysin which destroys typhoid bacilli. [Gr., *typhos*, stupor, + *lysis*, dissolution.]
- typhomalarial** (ti''fo-mal-a're-al). Partaking of the nature of both typhoid and malarial fevers. See also under *fever*.
- typhomania** (ti''fo-ma'ne-ah). The low muttering delirium of typhus and typhoid fever.
- typhosus** (ti-fo'sus). Typhus, typhoid. [Gr., *typhos*, fever stupor.]
- typhotoxin** (ti-fo-tok'sin). A poisonous base, $C_7H_{17}NO_2$, isomeric with gadinin, found in cultures of *Bacillus typhosus*, and producing diarrhea, slow pulse, and respiration, and death in animals. [Gr., *typhos*, fever stupor, + *toxicon*, poison.]
- typhous** (ti'fus). Of the nature of, pertaining to, or resembling typhus. [Gr., *typhos*, fever stupor.]
- typhus** (ti'fus). A contagious disease, with eruption, severe fever, and prostration. It occurs under conditions of filth, overcrowding, bad ventilation, poor food, and is conveyed by the breath and skin exhalations. See also under *fever*. **abdominal t.** See *typhoid fever*, under *typhoid*. **abortive t.** An incomplete form of *t.* with a sudden and favorable stop in the evolution of the disease. **t. levissimus**. A febrile condition which presents fewer of the symptoms of typhus *f.*, but with great indistinctness; to be surely diagnosed only by laboratory methods. **t. malignans**. Severe and rapidly fatal *t. fever*. **t. recurrens**. Relapsing fever. [Gr., *typhos*, fever stupor.]
- ty'po-**. Combining form of Gr., *typos*, type.
- tyramin** (tir-am'in). Hydroxyphenylethylamin ($OH.C_6H_4.CH_2CH_2NH_2$). It resembles epinephrin chemically and in its physiological action. It is an important constituent of ergot and is also found in putrid meat. *T.* is sold in tablet form.
- tyrannism** (tir'an-izm). Insanity or morbid cruelty; also cruelty with sexual perversion. [Gr., *tyrannos*, tyrant.]
- tyrein** (ti're-in). See *casein*.
- tyroid** (ti'royd). Caseous; cheeselike. [Gr., *tyros*, cheese, + *eidosis*, resemblance.]
- tyrosin** (ti'ro-sin). One of the amino acids resulting from hydrolysis of proteins. It is alpha-amino-beta-hydroxy-phenyl-propionic acid, $CH_2(C_6H_4OH)CH(NH_2)COOH$. It may be found in urine, especially in acute yellow atrophy of liver. **t. hydan-**

toin. A substance, $C_{10}H_{10}N_2O_8$, found in the urine of dogs fed upon it.
tyrosinase (ti-ro'sin-ās). An enzyme found in several fungi which oxidizes tyrosin.
tyrototoxicin (ti-ro-tok'sik-on). A poisonous ptomain, C_6H_5NNOH , found by V. C. Vaughan in 1886 in poisonous cheese,

milk, and ice-cream. [Gr., *tyros*, cheese, + *toxikon*, poison.]

tyrotoxism (ti-ro-toks'izm). Cheese poisoning. [Gr., *tyros*, cheese, + *toxikon*, poison.]

Tyson's glands. See *preputial glands*, under *gland*. [Edward Tyson, English anatomist, 1649-1708.]

U

U. Chemical symbol for the element *uranium*.

uabain (wah'ba-in). See *ouabain*.

uaterium (wah-te're-um). A medicament for the ear. [Gr., *ous*, the ear.]

Uffelmann's reaction. The violet colored reaction formed by adding a trace of ferric chlorid to a weak solution of phenol, one per cent. **U's test for lactic acid.** Based upon the fact that lactic acid gives a brown color to a solution of weak carbolic acid, which contains a trace of ferric chlorid. Hydrochloric acid and the fatty acids give no color with this mixture. See also in *appendix*, page 904. [Julius Uffelmann, German physician, 1837-1894.]

ulalgia (u-lal'je-ah). Pain in the gums. [Gr., *oulon*, the gum, + *algos*, pain.]

ulatrophia (u-lat-ro'fe-ah). Atrophy of the gums. [Gr., *oulon*, the gum, + *a*, priv., + *trephein*, to nourish.]

ulcer (ul'ser). A localized loss of substance in one of the soft parts of the body, following a destructive inflammation and attended by suppuration. **Aden u.** Another name for phagedena tropica. **atonic u.** An u. having unhealthy granulations that cicatrize slowly. **autochthonous u.** See *chancre*. **cock's-comb u.** An u. with outgrowths resembling condylomata. **creeping u.** A ser-piginous u. **cystoscopic u.** An u. of the bladder due to a burn from the lamp of a cystoscope. **diphtheritic u.** A u. covered with a false membrane. **endemic u.** See *oriental sore*, under *sore*. **fistulous u.** An u. communicating with a fistula. **follicular u.** An u. due to inflammation in the lymph follicles of a mucous membrane. **fungous u.** An u. with fungous granulations. **gastric u.** U. of the stomach. **indolent u.** An u. observed in some dyscrasic or enfeebled condition of the system, that, while not spreading, shows no disposition to heal. **initial u. of syphilis.** See *chancre*. **Jacob's u.** See *rodent u.* **Malabar u.** See *phagedena tropica*, under *phagedena*. **peptic u.** An u. of the stomach supposed to be produced by a highly acid gastric juice. **perforated u., perforating u.** An u. that perforates through the tissues of a part, as of the stomach, intestines,

etc. **perforating u. of the foot.** Syn.: *malum perforans pedis*. A round, deep trophic ulcer of the sole of the foot, following injury of the nerve supplying the part. **rodent u.** A deeply ulcerating variety of epithelioma, differing from ordinary epithelioma chiefly in its very slow course and in its tendency to involve every tissue with which it comes in contact, including muscles and bones. It more commonly affects the upper portion of the face. **varicose u.** An u. caused by varicose veins. **venereal u.** See *chancre*. [Lat., *ulcus*, a sore.]

ulcerated (ul'ser-a-ted). Affected with ulceration.

ulceration (ul-ser-a'shun). The formation of an ulcer; of a part, the condition of being affected with an ulcer or with ulcers. [Lat., *ulceratio*.]

ulcerative (ul'ser-a-tiv). Pertaining to or characterized by ulceration.

ulcerous (ul'ser-us). 1. Having the character of an ulcer. 2. Affected with ulcers.

ulerythema (u'ller-ith-e'mah). A disease of the skin of erythematous nature, characterized by atrophy and cicatrization. **u. centrifugum.** Unna's term for lupus erythematosus. **u. ophryogenes.** Lupoid sycosis. **u. sycosiforme.** Unna's term for lupoid sycosis. [Gr., *oule*, scar, + *erythema*, redness of the skin.]

uletic (u-let'ik). Pertaining to the gum. [Gr., *oulon*, gum.]

ulexin (u-leks'in). An old name for cytisin.

ulitis (u-li'tis). *Obs.* Syn.: *gingivitis*. Inflammation of the gums. **interstitial u.** Inflammation of the connective tissue of the gums round the necks of the teeth. [Gr., *oulon*, the gum, + *itis*, inflammation.]

Ulmus. 1. The elm; the typical genus of the *Ulmaceae*. 2. Of the U. S. Ph., elm bark. **muclilago ulmi.** A preparation made by digesting 6 parts of elm bark with 100 parts of water [U. S. Ph.]. **U. alata.** The wahoo (elm) of the southern United States, winged (or American small-leaved) elm. The inner bark is used like that of *U. fulva*. **U. americana.** American white elm. The inner bark is used like that of *U. fulva*

- and as a hemostatic. **U. campestris**. Common European elm, indigenous to southern Europe and temperate Asia. The bark is mucilaginous and slightly astringent. **U. fulva**. Slippery elm. The inner bark is the u. of the U. S. Ph. [Lat., *ulmus*, elm.]
- ulna** (ul'nah). A long bone on the medial side of the forearm. It articulates above with the humerus by the greater sigmoid cavity, with the head of the radius by the lesser sigmoid cavity, and below with the radius by an articular eminence. [Lat., *ulna*, elbow, forearm, from Gr., *olene*, elbow.]
- ulnaris** (ul-na'ris). See *table of muscles*, under *muscle*.
- ulocarcinoma** (u'l'o-ka-r-se-no'mah). Carcinoma of the gums. [Gr., *oulon*, the gum, + *carcinoma*.]
- uloncus** (u-lon'kus). (*obs.*) A tumor of the gums. [Gr., *oulon*, the gum, + *onkos*, a tumor.]
- ultrafiltration** (ul-tra-h-fil-tra'shun). The separation of crystalloids from colloids by filtration, namely, under high pressure through porcelain or collodion filters. The crystalloids pass through, the colloids are held back.
- ultramarine** (ul-tra-h-mar-ēn'). An inorganic blue pigment, found in nature in lapis lazuli, which contains sodium aluminum silicate and polysulphids of sodium.
- ultramicroscope** (ul-tra-h-mi'kro-skōp). A term applied to the microscope with accessory illuminating apparatus designed to reveal the presence of small particles in colloid solutions not visible in the microscope as ordinarily used with transmitted light. The principle consists in intense side illumination so that particles are seen as bright spots in a dark field.
- ultramicroscopic** (ul'trah-mi-kro-skop'ik). A term applied to objects too small to be seen with the ordinary microscope.
- u. particles**. Particles less than $\frac{1}{4} \mu$ (.0002 mm.) and therefore not visible to microscopic vision by transmitted light, but revealed by the use of the ultramicroscope.
- ululation** (u-lu-la'shun). A howling or loud crying, observed in hysteria. [Lat., *ululare*, to howl.]
- umbelliferon** (um-bel-lif'er-on). An oily alkaline substance, $C_6[OH, H, H, CH: CH, O, CO, H]$, obtained from the ethereal extracts of certain umbelliferous plants.
- Umbellularia** (um-bel-lu-la're-ah). A genus of the *Laurineae*. [Lat., *umbellula*, a little umbel.]
- umbilical** (um-bil'ik-al). Pertaining to the umbilicus. [Lat., *umbilicalis*.]
- umbilicate** (um-bil'ik-āt). A term used in descriptive bacteriology, meaning shaped like an umbilicus or navel having a central depression. [Lat., *umbilicatus*.]
- umbilication** (um-bil-ik-a'shun). A condition in which there is a central depression resembling the navel, as in variculous and vaccinal pocks.
- umbilicus** (um-bil-ik'us). The navel; the depression caused by the contraction of the remains of the umbilical cord. [Lat., *umbilicus*, navel, boss.]
- um'bo**. 1. The projecting center of a rounded surface. 2. See *u. tympani*. **u. femoris**. See *fossa capitis (femoris)*, under *fossa*. **u. tympani**. The deepest part of the funnel-shaped curvature or concavity of the membrana tympani which is turned toward the external auditory canal. It corresponds with the inferior extremity of the handle of the malleus, by the traction of which inward the membrane appears hollowed out. [Lat., *umbo*, a boss (as of a shield).]
- umbonate** (um'bo-nāt). *Obs.* A term used in descriptive bacteriology to signify having a central, rounded, slightly projecting elevation. [Lat., *umbo*, a boss.]
- un-**. Prefix from old Eng., *un-*, used with verbs to signify back and to denote the reversal or annulment of the action of the simple verb.
- Uncaria** (un-ka're-ah). A genus of the *Rubiaceae*. **U. Gambier**, **U. Gambir**. A species that yields catechu. [Lat., *uncus*, a hook.]
- uncia** (un'se-ah). Lat. for ounce.
- unciform** (un'sif-orm). Hook-shaped, hooked. As a n., the u. bone. **u. bone**. See *bone*. **u. process**. See under *process*. [Lat., *uncus*, a hook, + *forma*, form.]
- Uncinaria** (un-sin-a're-ah). *Syn.*: *hookworm*. See *Ankylostoma*. **U. americana**. See *Necator americana*. **U. duodenale**. See *Ankylostoma duodenale*.
- uncinariasis, uncinariosis** (un-sin-ar-i'-as-is, un-sin-ar-i-os'is). See *ankylostomiasis* and *hookworm disease*, under *disease*. **u. of the skin**. *Syn.*: *ground itch*. A vesicular dermatitis, due to the invasion of the skin by the larvae of *Uncinaria duodenale*. The feet are generally affected and the hands may be so. The larvae are excreted in the feces.
- uncinate** (un'sin-āt). 1. Hooked, curved at the tip in the form of a hook; provided with hooks or bent spines. 2. In descriptive bacteriology, a term meaning hooked or abruptly curved at the end. [Lat., *uncinatus*.]
- unconscious** (un-kon'shus). State of being cut off from all sensory contacts with the external world chiefly through sleep or toxic influences. In psycho-analysis the historical past of the individual not in action in performing directed activities.
- unctuous** (unk'shus). Oily, greasy.
- uncus** (un'kus). A hook, or hook-shaped structure. **u. gyri fornicati**. The hook-shaped termination of the gyrus fornicatus. [Lat., *uncus*, a hook.]
- un'dertoe**. A deformity in which one of the toes lies under the adjoining toe.
- un'dulant fe'ver**. Malta fever.
- undulation** (un-du-la'shun). A wavelike motion; also a condition characterized by wavelike motion. **jugular u.** See *venous pulse*, under *pulse*. **respiratory u.** The variation of the curve of blood pressure due to respiration.
- ungual** (un'gu-al). Pertaining to the

finger-nail or toe-nail. [Lat., *unguis*, a nail.]

unguentum, unguent (un-gwen'tum, un'-gwent). 1. An ointment. 2. Of the U. S. Ph., specifically, a mixture of lard and white wax. **u. acre**. Of the Ger. Ph. (1st ed.), a mixture of cantharides, colophony, and turpentine with yellow wax, lard, and euphorbium. **u. cinereum**. Gray ointment. **u. citrinum**. Nitrate of mercury ointment. **u. flavum**. Resin ointment. **u. griseum**. Diluted mercurial ointment. **u. Hebrae**. An ointment of litharge plaster and olive oil with glycerin. **u. neapolitanum**. Mercurial ointment. **u. opodeldoc**. Camphorated soap liniment. [Lat., from *unguere*, to smear.]

unguis (un'gwis). A finger-nail or toenail. [Lat.]

uni-. The combining form of Lat., *unus*, one.

unicellular (u-ne-sel'lu-lar). Consisting of but one cell. [Lat., *unus*, one, + *cellula*, a small cell.]

uniceptor (u'nis-ep-tor). A receptor having a single combining group, as an antitoxin. See *Ehrlich's theory*, under *Ehrlich*. [Lat., *unus*, one, + *capere*, to take.]

unilateral (u-nil-at'er-al). Affecting only one side of the body or one of two laterally paired organs. [Lat., *unus*, one, + *latus*, a side.]

unilocular (u-nil-ok'u-lar). 1. Having but one loculus; one-celled. 2. Of a cystic tumor, made up of only one cyst. [Lat., *unus*, one, + *loculus*.]

uninuclear (u-ne-nu'kle-ar). Having but a single nucleus. [Lat., *unus*, one, + *nucleus*, a nut.]

union (u'ne-on). The act or process of conjoining two or more things, also the condition of being so conjoined. **non-u.** Failure to unite, as in a fracture. **primary u.** See *first intention*, under *intention*. **secondary u.** See *second intention*. **u. of granulations.** See *third intention*. [Lat., *unio*, oneness, one.]

unipara (u-nip'ar-ah). A woman who is parturient for the first time. [Lat., *unus*, one, + *parere*, to bring forth.]

uniparous (u-nip'ar-us). Of animals, usually bringing forth but one fetus at a birth. [Lat., *unus*, one, + *parere*, to bring forth.]

unipolar (u-nip-o'lar). Of cells, having but one process. **u. stimulation**. The name applied to a mode of electrical stimulation in which only one pole or electrode is applied to the point to be stimulated. The other pole (indifferent electrode) is of large size and is applied to some distant part of the body. [Lat., *unus*, one, + *polus*, a pole.]

u/nit. 1. A single individual. 2. A quantity adopted as a starting point by comparison with which other quantities are measured. **antitoxin u.** A u. for expressing the strength of an antitoxin, being 100 times the amount of antitoxin necessary to neutralize the least fatal dose of a standard toxin that will kill

a guinea pig weighing 250 grams. [Lat., *unus*, one.]

unitarian the'ory. See under *theory*.

univalence (u-niv'al-ens). 1. The condition or property of being univalent. 2. In bacteriology, made from a single strain of an organism, as u. serum.

univalent (u-niv'al-ent). Having a valency of one, i. e., being capable of replacing one atom of hydrogen in a compound. [Lat., *unus*, one, + *valere*, to be worth.]

Unna's paste. Composed of one part of oxid of zinc and two parts each of mucilage of acacia and of glycerin. [*Paul Unna*, German dermatologist, 1850—.]

unsaturated (un-sat'u-ra-ted). Of a compound, not having the total combining capacities of all its elements satisfied; of a solution, not containing its maximum of a soluble body.

unsymmetrical (un-sim-met'rik-al). Of a trisubstituted benzene compound, having two of the replacing radicles attached to two neighboring carbon atoms, and the third to the carbon atom which is not adjacent to either of these two.

u'pas. A poison, especially the u. antiar and u. tieute. **u. antiar**. See *antiar*. **u. tieute**. A poison prepared from a decoction of the root bark of *Strychnos tieute*. It resembles strychnin in its effects. **u. tree**. See *Antiaris toxicaria*, under *Antiaris*. [Malay.]

urachus (u'rak-us). In the embryo, a tubular extension of the walls of the urinary bladder toward and in part through the umbilicus to join the allantois; in the human embryo, it does not generally pass beyond the root of the umbilical cord. In the adult, a ligamentous cord resulting from obliteration of the u. of the embryo connecting the bladder with the front wall of the abdomen. [Gr., *ourachos*, from *ouron*, urine, + *echein*, to hold.]

uracil (u'ras-il). 2-6 dioxypyrimidin, a pyrimidin derivative found in thymus and yeast nucleic acids.

ural, uralium, uralum (u'ral, u-ra'le-um, u-ra'lum). A hypnotic combination of urethane and chloral hydrate. [Lat.]

uramil (u'ram-il). Dialuramid, a crystalline

$$\text{CO} - \text{NH}$$
body, $\text{NH}_2\text{CH} < \begin{matrix} > \text{CO} \\ \text{CO} - \text{NH} \end{matrix}$, which can be obtained from uric acid and other substances.

uramin (u-ram'in). See *guanidin*.

urinal'ysis, urin'alysis. The analysis of urine. See *charts in appendix*, page 893. [Gr., *ouron*, urine, + *analysis*.]

uranate (u-ran-ät). A compound of a metallic oxid with uranium trioxid.

uranic (u-ran'ik). Containing uranium as a hexad radicle.

uranin (u'ran-in). 1. A compound of fluorescein with ammonia. 2. The compound, $\text{C}_{20}\text{H}_{10}\text{O}_5\text{Na}_2$, the sodium salt of fluorescein.

uraniscochasma (u-ran''is-ko-kas'mah). *Obs.* See *cleft-palate*, under *palate*. [Gr., *ouraniskos*, the palate, + *chasma*, cleft.]

uranisconi'tis. *Obs.* Syn.: *palatitis*. Inflammation of the palate. [Gr., *ouraniskos*, roof of the mouth, + *itis*, inflammation.]

uranism, urnism (oo'ran-izm, oor'nizm). Feminism in the male; homosexuality. [Gr., *Urania*, a surname of Venus.]

uranist (u'ran-ist). A person who is the subject of uranism.

uranium (u-ra'ne-um). A metallic element discovered in 1789, eight years after the discovery of the planet Uranus, from which it was named. Symbol, U; sp. gr., 18.33; atomic weight, 240. The acetate has been used topically in coryza, and the nitrate internally in diabetes, but the salts of u. are of but little therapeutic importance.

uranocoloboma (u'ran-o-kol-o-bo'mah). *Obs.* See *cleft-palate*, under *palate*. [Gr., *ouranos*, the palate, + *koloboma*, mutilated part.]

uranoplastic (u'ran-o-plas'tik). Pertaining to uranoplasty.

uranoplasty (u'ran-o-plas-te). The plastic surgery of the palate. See *staphylorhaphy*. [Gr., *ouranos*, the palate, + *plasein*, to mold.]

uranoschisis, uranoschisma (u-ran-os'-kis-is, u-ran-os-kis'mah). See *cleft-palate*, under *palate*. [Gr., *ouranos*, the palate, + *schizein*, to cleave.]

uranoschism (u-ran/os-kism). See *uranoschisis*.

uranosouranic (u-ran-o'su-ran'ik). Containing uranium both as a tetrad and as a hexad radicle.

uranous (u'ra-nus). Containing uranium as a tetrad radicle.

uranyl (u'ran-il). The bivalent radicle, UO_2 , supposed to be present in the uranic compounds. **u. acetate.** The compound $UO_2(C_2H_3O_2)_2 + H_2O$, proposed as a test for albumin. Also used to precipitate glucosids and enzymes. **u. nitrate.** $NO_2(NO_3)_2 + 6H_2O$, appears as greenish yellow crystals. Used as a spray for the throat.

urari (oo-rah're). See *curare*.

urate (u'rate). A salt of uric acid. Some of the u's are present in urine. There are two kinds, the acid and the neutral u's. The neutral u's are easily soluble in water whereas the acid u's are soluble with difficulty. The latter are present in urinary sediment and calculi.

uratic (u-rat'ik). Pertaining to an excess of urates.

uratoma (u-rat-o'mah). A tophus or concretion made up of urates. [*Urate* + Gr., *oma*, tumor.]

urartosis (u-rat-o'sis). The precipitation of crystalline urates in the tissues or fluids of the body.

urea (u-re'ah). Carbamid, or rather carboxyldiamin, $CO(NH_2)_2$, the chief solid constituent of the urine and the principal excretory product containing nitrogen. It is also present in the blood, bile, liver, and muscle. It forms long, colorless, prismatic crystals, melting at $132^\circ C.$, soluble in water and in alcohol. It acts as a base, forming addition compounds

with acids and their salts and with metallic oxids. It is decomposed by heat and moisture, and more slowly by the action of bacteria into normal ammonium carbonate. This process takes place in the urine, constituting its so-called alkaline fermentation and giving to stale urine its peculiar strong ammoniacal odor. U. is also decomposed into cyanogen compounds (cyanuric acid biuret) by the action of dry heat. It is remarkable as being the first organic body that was prepared artificially; Wöhler having accomplished this in 1828 by making the isomeric cyanate of ammonium, and then transforming the latter into u. by allowing it to stand in an alcoholic solution. It has been used medicinally in pulmonary tuberculous disease, and it is an active non-toxic diuretic, which is rapidly eliminated. **u. in urine, Hüfner's method to determine amount of;** see in *appendix*, page 895. **u. in urine, to determine amount of;** see in *appendix*, page 895. **u. nitrate.** A crystalline compound used to isolate urea from the urine. [Gr., *ouron*, urine.]

ureameter (u-re-am'et-er). An apparatus for the quantitative determination of urea.

urease (u're-äs). A standardized preparation of urease, the urealytic enzyme obtained from the soy bean, *Soja hispida*, used in the quantitative estimation of urea in the urine, blood and other body fluids. [*Dunning*.]

urechysis (u-rek'kis-is). Effusion of urine into the cellular tissue. [Gr., *ouron*, urine, + *ekchysis*, a pouring out.]

urein (u-re'in). A name given by W. O. Moor to a yellow, slightly bitter, fatty liquid obtained by evaporating urine, treating the residue with silver nitrate, cooling, and filtering; supposed by him to be the "most characteristic component part of urine." It is probably a concentrated solution of normal urinary constituents and of the reagent used in its supposed isolation.

uremia (u-re'me-ah). A poisoned state of the blood due to defective elimination of the elements of urine, and the condition resulting from this retention; characterized by stupor, urinous breath, and (especially in lying-in women) by convulsions. [Gr., *ouron*, urine, + *aima*, blood.]

uremic (u-re'mik). Pertaining to or due to uremia.

uresin (u-re'sin). Trade name for urotropin dithiocitrate; used as a solvent of uric acid and urates.

uresis (u-re'sis). See *urination*. [Gr., *ouresis*, from *ourein*, to urinate.]

ureter (u-re'ter). The tube continuous with the pelvis of the kidney, which transports the urine to the bladder. It consists of an external fibrous, an internal mucous, and an intervening muscular coat, is about fifteen or sixteen inches in length, of the size of a goose quill, and descends beneath the peritoneum to the point of reflection of the posterior false ligament of the bladder,

- between the folds of which it passes to the side of the bladder along which it runs, and pierces it obliquely about an inch and a half to two inches posterior to the opening of the urethra. [Gr., *oureter*, from *ourein*, to urinate.]
- ureterectomy** (u-re-ter-ek'to-me). Excision of the ureter or of a portion of it. [Gr., *oureter*, the ureter, + *ektome*, excision.]
- ureteric** (u-re-ter'ik). Pertaining to the ureters.
- ureteritis** (u're-ter-i'tis). Inflammation of the ureters. [Gr., *oureter*, ureter, + *itis*, inflammation.]
- uretero-**. Combining form of Gr., *oureter*, ureter.
- ureterolith** (u-re'ter-o-lith). A ureteric concretion. [Gr., *oureter*, ureter, + *lithos*, a stone.]
- ureterolithotomy** (u-re''ter-o-lith-ot'o-me). The removal of a ureteric calculus by a cutting operation. [Gr., *oureter*, ureter, + *lithos*, a stone, + *tome*, cut.]
- ureterotomy** (u're-ter-ot'o-me). An incision into the ureter. [Gr., *oureter*, ureter, + *tome*, cut.]
- uretero-ureterostomy** (u-re''ter-o-u-ter-os'to-me). The operation of implanting one ureter into the other. [Gr., *oureter*, ureter, + *stoma*, the mouth, + *tome*, cut.]
- urethan** (u're-thān). 1. Of Dumas, ethyl carbamate, so called because first regarded as a compound of urea with ethyl carbonate, $\text{NH}_2\text{COOC}_2\text{H}_5$. It acts as a hypnotic. 2. Any one of the carbamates of a hydrocarbon radicle. **u. methane**. Trade name applied to ethylis carbamas [U. S. Ph.].
- urethra** (u-re'thrāh). The tube, consisting of an internal mucous coat and an external coat made up of two layers of muscular fibers, the internal being longitudinal and the external circular, which serves for voiding the urine, and in the male sex for the ejaculation of the semen. In the adult male it is about 9 inches in length and forms a portion of the penis. It is divided into three portions; the prostatic, where it passes through the prostate gland; the membranous, or intermediate part; and the spongy, or that which is surrounded by erectile tissue (the corpus spongiosum). Its mucous lining is freely supplied, except near the meatus urinarius, with a large number of glands (glands of Littre) and pouchlike recesses. Into the prostatic portion the ejaculatory ducts open. Except during the passage of urine or semen it is collapsed, with its longest diameter directed transversely. In the female it is about $1\frac{1}{2}$ inches in length, is highly distensible, and is lodged in the anterior wall of the vagina. **penial u.**, **penile u.** That portion of the u. which is lodged within the penis. **posterior u.** See *prevesical u.* **prevesical u.**, **prostatic u.** The prostatic portion of the u. **u.**, **how to prepare smears from**, see in *appendix*, page 911. [Gr., *ourethra*, from *ourein*, to urinate.]
- urethral** (u-re'thrāl). Pertaining to the urethra.
- urethralgia** (u-re'thrāl'je-ah). Pain in the urethra. [Gr., *ourethra*, the urethra, + *algos*, pain.]
- urethritis** (u-re-thri'tis). Inflammation of the urethra, usually gonorrhoea. **anterior u.** Affecting the anterior part of the u. **catarrhal u.** Non-virulent gonorrhoea. **chronic u.** See *gleet*. **membranous desquamative u.** Chronic u. with desquamation of the urethral mucous membrane. **non-specific u.** U. due to the gonococci cannot be found, as from a gouty diathesis or in diabetes. **papillomatous u.** U. characterized by the development of papillomata in the form of pointed warts in the urethra. **posterior u.**, **prevesical u.** Inflammation of the prostatic urethra. **syphilitic u.** An involvement of the u. in a syphilitic chancre. **traumatic u.** U. caused by foreign bodies, rough catheterism, caustics, and wounds. [Gr., *ourethra*, urethra, + *itis*, inflammation.]
- urethro-**. Combining form of Gr., *ourethra*, urethra.
- urethrocele** (u-re'thro-sēl). A hernialike protrusion of a dilated portion of the urethra (generally into the vagina). [Gr., *ourethra*, the urethra, + *kele*, a tumor.]
- urethrometer** (u-re'throm'et-er). An instrument for measuring the caliber of the urethra. [Gr., *ourethra*, the urethra, + *metron*, a measure.]
- urethroplasty** (u-re'thro-plas-te). The plastic surgery of the urethra. [Gr., *ourethra*, the urethra, + *plassein*, to mold.]
- urethrorrhaphy** (u-re'thror'raf-e). Closure of an abnormal opening into the urethra with sutures. [Gr., *ourethra*, the urethra, + *raphe*, a seam.]
- urethrorrhea** (u-re'thro-re'ah). A non-purulent urethral discharge due to excessive secretion of the urethral glands. [Gr., *ourethra*, the urethra, + *roia*, a flowing.]
- urethroscope** (u-re'thro-skōp). A tubular or fenestrated instrument used to dilate the urethra to permit of examination of its lining membrane. [Gr., *ourethra*, the urethra, + *skopein*, to examine.]
- urethrotome** (u-re'thro-tōm). An instrument for dividing strictures of the urethra. **dilating u.**, **divulsing u.** A combined dilator and u., the two blades of which can be separated equally along their entire length by a screw attachment at the handle, one of the blades carrying the knife in a groove. [Gr., *ourethra*, the urethra, + *temnein*, to cut.]
- urethrotomy** (u-re'throt'o-me). The operation of dividing a stricture of the urethra, either internally or from without. [Gr., *ourethra*, the urethra, + *tome*, a cutting.]
- uretic** (u-re't'ik). 1. Pertaining to urine. 2. Diuretic. [Gr., *ouretikos*, from *ouron*, urine.]
- Urginea** (ur-jin'e-ah). A genus of the *Liliaceae*. **U. maritima**, **U. scilla**,

- Squill, sea onion. Squill is used as a diuretic, expectorant, emetic, and purgative. [Lat., *urgere*, to press.]
- u'ric.** 1. Derived from or contained in the urine. 2. Due to the excessive production of u. acid (e. g., arthritis urica). **u. acid free diet**, see in *appendix*, page 914.
- uricacidemia** (u'rik-as-id-e'me-ah). The presence of a recognizable amount of uric acid in the blood. [Gr., *ouron*, urine, + Lat., *acidus*, acid, + Gr., *aima*, blood.]
- uric-acid-free menus.** See in *appendix*, page 914.
- uricometer** (u-re-kom'et-er). An apparatus for ascertaining the amount of uric acid in urine.
- uridin** (u'rid-in). A nucleosid, isolated by partial hydrolysis of yeast nucleic acid. It contains uracil in combination with d. silver.
- uridrosis** (u-rid-ro'sis). A condition in which the elements of the urine, especially urea, are excreted in the perspiration. [Gr., *ouron*, urine, + *hidros*, sweat.]
- uriform** (u'rif-orm). A proprietary preparation containing hexamethylenamin and certain diuretics.
- urina** (u-re'nah). See *urine*. **u. araneosa.** Urine loaded with cobweblike filaments. **u. cibi, u. digestionis.** Urine voided several hours after digestion. It contains more solids and has a higher specific gravity than at other times. **u. flammea.** High-colored urine. **u. galactodes.** Urine of a milky appearance. **u. potus.** Urine of low specific gravity, which is passed soon after drinking freely. **u. sanguinis.** Urine secreted after a night's rest, and hence not influenced by food or drink. **u. spastica.** Urine secreted during or after spasms (of hysteria, asthma, etc.). It is generally abundant, clear, and limpid, the coloring matter, urea, and sodium chlorid being deficient in quantity. [Lat., from Gr., *ouron*, urine.]
- urinal** (u'rin-al). A receptacle for receiving urine.
- urinary** (u'rin-a-re). Pertaining to, secreting, or containing urine. **u. calculi.** These may contain uric acid and urates, calcium oxalate, phosphates, calcium carbonate, and cystin. **u. pigments.** The u. p. are: urochrome, urobilin, hematoporphyrin, and uro-erythrin. **u. sediments.** These are mainly water, phosphates, uric acid, calcium oxalate, calcium carbonate, calcium phosphate, magnesium and ammonium phosphate, and, more rarely, cystin, tyrosin, xanthin, hippuric acid, hematoidin. [Gr., *ouron*, urine.]
- urination** (u-rin-a'shun). The act of voiding urine.
- urine** (u'rin). The excretion of the kidneys; normally an amber colored, transparent fluid, having an acid reaction, a specific gravity varying from 1.010 to 1.030, a saline taste, and a faint odor. The latter is modified by food and drugs; the specific gravity, color, and reaction vary with the ingestion of food, the character and duration of the occupation, and the temperature. **Benedict's test for sugar in u.**, see in *appendix*, page 894. **chylous u.** U. which is milky in appearance from the presence of fat. See *chyluria*. **diabetic u.** U. containing sugar passed in diabetes. **febrile u.** The high-colored, scanty, acid, and slightly albuminous u. passed during acute febrile affections. **Gmelin's test for bile in u.**, see in *appendix*, page 894. **hysterical u.** See *urina spastica*, under *urina*. **Hüfner's method to determine amount of urea in u.**, see in *appendix*, page 895. **Jaffe's test for indican in u.**, see in *appendix*, page 894. **nervous u.** See *urina spastica*, under *urina*. **u. analysis, how to make a;** see in *appendix*, page 893. **u., how to clear;** see in *appendix*, page 893. **u., how to determine amount of urea in;** see in *appendix*, page 895. **u., how to determine reaction of;** see in *appendix*, page 893. **u., how to obtain sediment in;** see in *appendix*, page 895. **u., how to preserve,** see in *appendix*, page 893. **u., how to take specific gravity of;** see in *appendix*, page 893. **u., how to test for albumin in,** see in *appendix*, page 893. **u., test for acetone in;** see in *appendix*, page 894. **u., test for amount of sugar in;** see in *appendix*, page 894. **u., test for bile in;** see in *appendix*, page 894. **u., test for diacetic acid in;** see in *appendix*, page 894. **u., test for indican in;** see in *appendix*, pages 894, 895. **u., test for sugar in;** see in *appendix*, page 894. [Lat., *urina*, from Gr., *ouron*.]
- urinemia** (u-rin-e'me-ah). Poisoning by the retention of various urinary constituents in the blood. [Lat., *urina*, urine, + Gr., *aima*, blood.]
- uriferous** (u-rin-if'er-us). Producing and conveying urine. [Lat., *urina*, urine, + *ferre*, to bear.]
- uriniparous** (u-rin-ip'ar-us). Urine-producing (said of the cortical portion of the uriniferous tubules). [Lat., *urina*, urine, + *parere*, to produce.]
- u'rinod.** A light yellow oil, C₆H₈O; a toxic substance found in urine by *Dehn* and *Hartman*. (*Jour. Am. Chem. Soc.*, 1914, xxxvi, 2136.)
- urinometer** (u-rin-om'et-er). A hydrometer for measuring the specific gravity of the urine. [Gr., *ouron*, urine, + *metron*, a measure.]
- urinous** (u'rin-us). Like urine. [Lat., *urina*, urine.]
- urisolvin** (u-ris-ol'vin). A compound of urea and lithium citrate; used in the uric acid diathesis.
- uro-** Combining form of Gr., *ouron*, urine; also *oura*, tail.
- urobilin** (u-ro-bi'lin). A derivative, C₃₂H₄₀N₄O₇, of bilirubin formed by the action of nascent hydrogen. It is the most important coloring matter in the urine.
- ur'ning.** See *uranism*.
- urobilinoiden** (u-ro-bil-e-noy'din). A reduction product of hematin, resembling

urobilin, but not identical with it. It occurs in the urine under certain pathological conditions.

urobilinuria (u'ro-bil-in-u're-ah). The presence of an excess of urobilin in the urine. [*Urobilin* + Gr., *ouron*, urine.]

urochrome (u'ro-krom). A yellow pigment, the cause of the yellow color in urine. [Gr., *ouron*, urine, + *chroma*, pigment.]

urodialysis (u'ro-di-al'is-is). 1. See *uropnea*. 2. Decomposition of urine. [Gr., *ouron*, urine, + *dialysis*, a separating.]

uro-erythrin (u-ro-er'ith-rin). A coloring matter found in small quantities in normal urine, but forming a copious deposit in certain febrile conditions, especially acute rheumatism. [Gr., *ouron*, urine, + *erythros*, red.]

urogenital (u-ro-jen'it-al). Having reference both to the urinary and to the genital tract. [Lat., *urogenitalis*.]

urog'enous. Uropoietic, uriniparous.

uroglau'cin. Urocyanin.

urogravimeter (u-ro-grav-im'et-er). Of Thudichum, a urometer. [Gr., *ouron*, urine, + Lat., *gravis*, heavy, + Gr., *metron*, a measure.]

urohematin (u-ro-hem'at-in). 1. Of Harley, uro-erythrin. 2. Of MacMunn, isohematoporphyrin.

urohematoporphyrin (u'ro-hem'at-o-por'fir-in). Hematoporphyrin derived from urine.

u'rol. Urea quinate, used in gout and urinary lithiasis.

urolith (u'ro-lith). A urinary concretion. [Gr., *ouron*, urine, + *lithos*, a stone.]

urolithiasis (u-ro-lith-i'as-is). The formation of urinary calculi, also the condition of the system that results from such formation. [Gr., *ouron*, urine, + *lithiasis*, lithiasis.]

urology (u-ro'l'o-je). The physiology, pathology, etc., of the urine and the urinary system. [Lat., *ouron*, urine, + *logos*, understanding.]

uromelanin (u-ro-mel'an-in). A black coloring matter present normally in urine. [Gr., *ouron*, urine, + *melas*, black.]

urometer (u-rom'et-er). See *urinometer*.

uroncus (u-ron'kus). A tumor containing urine. [Gr., *ouron*, urine, + *ogkos*, tumor.]

uronephrosis (u-ro-nef-ro'sis). Abnormal distension of the pelvis and tubules of the kidney with urine. [Gr., *ouron*, urine, + *nephros*, kidney.]

uronitrotolu (u'ron-i-tro-to-lu'). Syn.: *olic acid*. A substance found in the urine after the ingestion of orthonitrotoluene. It is levorotary in aqueous solution, and on treatment with dilute acids is decomposed into orthonitrobenzyl, alcohol, and glycuronic acid.

urophanic (u-ro-fan'ik). Appearing in the urine. [Gr., *ouron*, urine, + *phanos*, conspicuous.]

urophain (u-ro-fe'in). Of Heller, the ordinary coloring matter of the urine. [Gr., *ouron*, urine, + *phaios*, gray.]

uropherin b (u-ro-fer-in). A trade name

for theobromin and lithium benzoate, containing 47 per cent. of theobromin. u. s. A trade name for theobromin and lithium salicylate.

uropla'nia. A condition in which the elements of urine are present in other parts than the urinary organs. [Gr., *ouron*, urine, + *plane*, a wandering.]

uropoiesis (u'ro-poy-e'sis). The secretion of urine. [Gr., *ouron*, urine, + *poiein*, to make.]

uropoietic (u'ro-poy-et'ik). Pertaining to or concerned in the secretion of urine.

urorosein (u-ro-ro'ze-in). A rose-colored pigment, C₂H₁₀N₂O₈, found in the urine of persons affected with diabetes, chlorosis, osteomalacia, nephritis, carcinoma, etc.

uro Rubin (u-ro-ru'bin). A cherry-red coloring matter found in normal and pathological urines.

uro Rubrohematin (u'ro-ru-bro-hem'at-in). Of Baumstork, a brown urinary pigment obtained from a patient suffering with pemphigus leprosus. [Gr., *ouron*, urine, + Lat., *ruber*, red, + Gr., *aima*, blood.]

uroscopy (u-ros'kop-e). Examination of the urine. [Gr., *ouron*, urine, + *skopein*, to examine.]

urosin (u'ro-sin). Lithium quinate.

urostealthin (u-ro-ste'al-ith). A pseudocalculus consisting of fatty matter combined with lime, forming a kind of soap. [Gr., *ouron*, urine, + *stear*, fat, + *lithos*, a stone.]

urotoxic (u-ro-toks'ik). Pertaining to the toxicity of urine.

urotropin (u-ro-tro'pin). Hexamethylenetetramin, (CH₂)₆N₄, a urinary antiseptic.

uroxanthin (u-ro-zan'thin). See *indoxyl-sulphuric acid*, under *acid*.

ur'sal. A combination of urea and salicylic acid; used in gout and rheumatism.

Urtica (ur-tik'ah). 1. The nettle; a genus of herbs with stinging hairs. 2. Another name for wheal. **U. dioica**. The common (stinging) nettle. The root, herb, and achenes were formerly used, but are of little therapeutic importance. **U. urens**. The dwarf nettle. The herb and fruits (achenes) were formerly used like those of *U. dioica*. [Lat., from *urere*, to burn.]

urticaria (ur-tik'a-re-ah). Hives, nettle rash; an acute or chronic affection of the skin characterized by an eruption of red, elevated, rounded efflorescences of irregular shape and size, which at a certain stage of their development appear blanched in the center and erythematous at the periphery, being then commonly known as wheals. The eruption is attended with intense itching. It is usually transitory, though sometimes disposed to recur. **u. pigmentosa**. Syn.: *xanthelasma*. A rare affection characterized by the development of wheals which are followed by peculiar persistent pigmented macules, papules or nodules. The following varieties are classified by dermatologists. **u. acuta**, **u. bullosa**, **u. chronica**, **u. factitia**, **u. febrilis**, **u. gigans**,

- u. hemorrhagica, u. papulosa, u. perstans, u. pigmentosa** (see *above*), **u. subcutanea, u. subserosa**. [Lat., *urtica*, a nettle.]
- urticular** (ur-tik-a're-al). Pertaining to or resembling *urticaria*.
- Usnea barbata** (uz'ne-ah bar-bah'tah). Necklace moss. Used by homeopathic physicians.
- Ustilago** (us-til-a'go). 1. A genus of the *Basichomycetes*, parasitic on flowering plants. The mycelium penetrates through the intercellular spaces of the host plant and destroys it. 2. Of the U. S. Ph., 1880, see *U. maidis*. **U. maidis, U. maydis**. Corn (or maize) smut; a species which occurs on the stem, grains, and tassel of *Zea maiz*. It is the U. of the U. S. Ph., 1880 (see *ergot of maize*, under *ergot*).
- us'tus**. Burnt, calcined. [Past ppl. of Lat., *urere*, to burn.]
- uterine** (u'ter-in). Pertaining to or associated with the uterus.
- utero-**. Combining form of Lat., *uterus*, womb.
- uterofixation** (u'ter-o-fik-sa'shun). See *hysteropexia*. [Lat., *uterus*, + *figere*, to fix.]
- uterolith** (u'ter-o-lith). A calculus of the uterus. [Lat., *uterus*, + Gr., *lithos*, a stone.]
- utero-ovarian** (u'ter-o-o-va'ri-an). Pertaining to the uterus and the ovary.
- uteropexia** (u'ter-o-pek'se-ah). See *hysteropexia*.
- uteroplacental** (u'ter-o-pla-sen'tal). Pertaining to both the uterus and the placenta.
- uterosacral** (u'ter-o-sa'kral). Pertaining to the uterus and the sacrum.
- uterovaginal** (u'ter-o-vaj'en-al). Pertaining to the uterus and the vagina.
- uterovesical** (u'ter-o-ves'ik-al). Pertaining to or involving the uterus and the urinary bladder.
- uterus** (u'ter-us). The organ of gestation; made up chiefly of muscular fibers and having a cavity lined with mucous membrane continuous with that of the vagina. It is covered before and behind with peritoneum. In the human subject it is situated in the pelvis, with its long axis corresponding to the axis of the pelvic cavity. In the non-gravid state it has the shape of a pear flattened from before backward, and is about three inches long, the upper rounded portion being the fundus carrying at each lateral extremity a cornu where the fallopian tube enters the uterine cavity. It is suspended in the pelvis by the broad ligaments. It is divided into a body and a neck; the latter projects backward and somewhat downward into the vagina. **arcuate u.** One with a depression at the fundus; an incomplete *u. bicornis*. **bicornate u.** Syn.: *u. bicornis, u. bicornatus*. That form of *u.* in which the longitudinal median furrow marking the union of the primitive halves of the organ is more than ordinarily pronounced at the fundus, from the fusion of the horns being somewhat defective. **bilobed u.** See *u. bicornis*. **divided u.** See *u. septus*. **double u.** That malformation of the *u.* in which the two horns are developed, but have not become fused into one organ. See also *u. bicornis* and *u. septus*. **duplex u.** See *double u. fusiform u.* That form of the *u.* in which, during advanced pregnancy, its vertical diameter is the greatest. **gravid u.** A *u.* containing a fecundated ovum. **impregnated u.** See *gravid u.* **incudiform u.** An anvil-shaped *u.* **infantile u.** That abnormality of the *u.* in which it is normally formed, but has been arrested in its development. **inverted u.** The *u.* in a state of inversion. **male u.** See *u. masculinus*. **pregnant u.** See *gravid u.* **retort-shaped u.** A flexed *u.* that has an elongated cervix, giving the organ the appearance of a retort. **twin u.** See *double u.* **u. bicornis**. That malformation of the *u.* in which the two rudimentary lateral halves, or horns, remain more or less separate, instead of coalescing through their whole length. See also *u. bicornis duplex* and *u. bicornis semiduplex*. **u. bicornis duplex**. That variety of double *u.* in which the duplicate formation affects the whole organ. **u. bicornis semiduplex** (or *infrasinplex*), **u. bicornis simplex, u. bicornis unicolis**. A duplex *u.* in which the body alone is double and the cervix is single. **u. bicorpor**. A *u.* consisting of two bodies. **u. biforis**. See *u. bicornis*. **u. bifundalis unicolis**. See *u. bicornis unicolis*. **u. bilocularis, u. bipartitus**. See *u. septus*. **u. cordiformis**. That form of defective development of the *u.* in which the fundus remains depressed, so that the organ has somewhat the shape of the heart of a playing-card. **u. deficiens**. Absence of the uterus. **u. didelphys**. See *double u.* **u. diductus**. That variety of double *u.* in which there are complete independence and divergence of the two halves. **u. duplex**. See *double u.* **u. duplex separatus**. A double *u.* in which there is no connection between the two halves of the organ; associated with double vagina. **u. fetalis**. See *infantile u.* **u. globularis**. A *u.* subseptus with complete fusion of the two lateral halves externally. **u., how to prepare smears from**; see in *appendix, page 911*. **u. imperforatus**. 1. An imperforate *u.* 2. A *u.* that has no cavity at all. **u. masculinus**. A depression in the middle line at the fore part of the verumontanum, into which open the ejaculatory ducts. It is so called, because it is developed from the fused lower ends of the müllerian ducts and is therefore homologous embryologically with the uterus. **u. parvicollis**. Syn.: *u. acollis*. That malformation of the *u.* in which its body is normal, but its neck atrophied or lacking. **u. retroflexus**. See *retroflexion of the uterus*, under *retroflexion*. **u. retroversus**. A retroverted uterus. **u. semipartitus**. See *u. subsep-*

mus. u. septus. That form of defective development of the u. in which, while the two müllerian ducts have united, the partition between them remains wholly or in part. See also *u. septus duplex* and *u. subseptus*. **u. septus duplex.** That variety of u. bilocularis in which there is a division from the fundus to the external os, forming two equal halves. **u. subseptus.** That variety of u. septus in which the dividing wall between the two lateral canals has partly disappeared, leaving the vagina and the cervix single, while the cavity of the body of the u. is double. **u. unicornis.** A one-horned u.; that malformation of the u. in which only one of the two original lateral halves is fully developed, the other being rudimentary or wanting. **u. unilocularis.** That form of double u. in which the cavity of the organ is normally formed, the duplicity appearing only at the fundus on the outside. **u. virilis.** See *u. masculinus*. [Lat., *uterus*, womb.]

utricle (u'trik-l). 1. A little pouch or bag, especially a membranous, closed, sac-like part or organ. 2. The larger of the two vesicles into which the otic vesicle of the embryo is divided by a constriction which at last shuts it off from the sacculus. **primordial u.** 1. The membrane of a cartilage cell directly in contact with the cell. 2. A layer of protoplasm first deposited upon the inner surface of the wall of a cell. **u. of the prostatic portion of the urethra.** See *uterus masculinus*, under *uterus*. **u. of the vestibule.** The vestibular cavity which connects with the semicircular canals. It is imbedded in the recessus ellipticus, and communicates with the semicircular canals by five foramina. It is attached to the wall of the bony vestibule by loose connective tissue. It is surrounded by perilymph and contains endolymph. It consists of a fibrillar *substantia propria* bounded externally by vascular connective tissue and internally by angular pavement epithelium. [Lat., *utriculus*, from *uter*, a leathern bag.]

utricular (u'trik'u-lar). Pertaining to a utricle; bladderlike in appearance; con-

sisting of a utricle or bearing many utricles.

utriculus. See *utricle*. **u. prostaticus.** See *uterus masculinus*, under *uterus*.

uva (u'vah). 1. A grape or cluster of grapes; a grapelike fruit. 2. The uvula. 3. In the pl., *uvae*, raisins, the dried fruit of *Vitis vinifera*. [Lat., *uva*, grape.]

U'va ur'si. 1. The genus *Arctostaphylos*. 2. The *Arctostaphylos u. u.* 3. [U. S. Ph.] Of the Ph's, the leaves of *Arctostaphylos u. u.* The fluidextract of *uva ursi* is official in the U. S. Ph. **infusum uvae u.** A preparation made by infusing u. u. in twenty times as much boiling water for an hour [Br. Ph.] and straining. **u. u. folia.** *Uva ursi* (3d def.) [Br. Ph.].

uvea (u've-ah). The pigmented, or middle, coat of the eye, including the iris, ciliary body, and choroid; usually confined to the choroid. [Lat., *uva*, a bunch of grapes.]

uveal (u've-al). Pertaining to or constituting the uvea.

uveitis (u-ve-i'tis). Inflammation of the uvea, i. e., the iris, ciliary body, and choroid, together. [*Uvea* + Gr., *itis*, inflammation.]

uvula (u'vu-lah). A conical process dependent in the middle line from the soft palate and made up of the azygos uvulae muscle and of elastic and areolar tissue, small acinous glands, and an investment of mucous membrane. **u. bifida.** A fissured state of the u., presenting the appearance of two uvulae. **u. of the cerebellum.** A small projection on the inferior vermiform process of the cerebellum in front of the pyramid and between the amygdalae. **u. vesicae, vesical u.** The posterior part of the caput galli that projects into the prostatic urethra. [Lat., dim. of *uva*, a bunch of grapes.]

uvular (u'vu-lar). Pertaining to the uvula. **uvularia perfoliata** (u-va-la're-ah per-fol-ah'tah). Mealy bellwort. The root was used to make an astringent gargle.

uvulitis (u-vu-li'tis). See *staphylitis*.

uvulotomy (u-vu-lot'o-me). See *staphylotomy*.

V

V. Chemical symbol for the element *vanadium*.

vaccigenous (vak-sij'en-us). Producing vaccine. [*Vaccine*, + Gr., *gennan*, to produce.]

vaccinable (vak'sin-a-bl). Susceptible of successful vaccination.

vaccinate (vak'sin-ät). 1. To inoculate with vaccine virus. 2. To inoculate with any of the preventive or curative vaccines made from such organisms as the typhoid bacillus or the pyogenic micrococci.

vaccina'tion. Inoculation with vaccine

virus as a protective measure against smallpox. Recently the term has been extensively applied to inoculation with various other viruses. **anthracic v.** Inoculation of animals with attenuated cultivations of the anthrax bacillus. **anti-choleraic v.** Inoculation with dead cultures of the *Spirillum cholerae*, to prevent Asiatic cholera. **antiplague v.** Inoculations with dead cultures of *Bacillus pestis*, in order to produce immunity to bubonic plague. **antirabic v.** Protective inoculation against rabies. The virus is in-

oculated from rabbit to rabbit until it attains its maximum virulence. This is known as fixed virus and kills a rabbit in about seven days after subdural inoculation. The spinal cord from a rabbit so killed is dried over sticks of caustic potash. At the end of fourteen days it is practically avirulent. A portion of this cord emulsified in saline solution forms the first injection. Successive injections are made with material from cords dried for shorter and shorter periods until fresh cord is used. **antityphoid v.** Inoculation with dead cultures of the *Bacillus typhosus*, in order to produce immunity to typhoid. **intra-uterine v.** Variolus immunity communicated by the mother to the fetus as the result of her having been successfully vaccinated during pregnancy.

vaccinationist (vak-sin-a'shun-ist). One who supports the practice of vaccination.

vaccinator (vak'sin-a-tor). 1. One who practices vaccination. 2. An instrument used in the process of vaccination.

vaccine (vak'sin). Modern v. is preserved in glycerin and water and the glycerin destroys pyogenic bacteria, avoiding secondary inflammation. 2. Cultures of various bacteria killed by heat or antiseptics and used in the prevention or cure of many diseases. **autogenous v.** A bacterial v. prepared for a particular case from cultures obtained from the patient. **bacterial v.** Killed bacteria in normal salt solution; used in raising the opsonic index of patients infected with the same bacteria. **polyvalent v.** A v. made from several types of the same bacterium. **v. bodies.** See *Cytorrhycetes*. [Lat., *vaccinus*.]

vaccinella (vak-sin-el'lah). A spurious form of vaccinia.

vaccinia (vak-sin'e-ah). Syn.: *cowpox*. A disease of cattle, considered to be a modified form of smallpox. When this infection is communicated to man, either by accident or inoculation by proper methods of vaccination, it produces a marked immunity to smallpox, which in all probability lasts from five to seven years. [Lat., *vacca*, a cow.]

vacciniform. Resembling cowpox.

vaccinum (vak'sin-in). 1. A non-nitrogenous substance obtained from *Vaccinium myrtillus*. 2. The morbid unknown germ of cowpox. 3. Vaccine virus.

vacciniola (vak-sin-e'o-lah). A secondary form of vesicle, appearing after vaccination. [Dim. of *vaccinia*.]

Vaccinium (vak-sin'e-um). The typical genus of the *Vacciniaceae*. Some include in it the cranberries (*Oxycoccus*) as well as the blueberries. **V. myrtillus**, **V. nigrum**. British huckleberry (or bilberry). All parts of the bush, especially the leaves, contain quinic acid. An extract of the fruits has been used in an enema or suppository in dysentery. The fruit was formerly used as a mildly astringent gargle and as a hemostatic. **V. oxycoccus**, **V. oxycoccus**. The cranberry of Europe. The fruits are used as

an astringent, detersive, and antiscorbutic and as a refrigerant in fevers. **V. vitis idaea**. Red huckleberry of Mt. Ida. The leaves and berries were formerly official. The leaves have been used to adulterate *uva ursi* leaves. [Lat., *vaccinus*, pertaining to the cow.]

vaccinize (vak'sin-iz). To vaccinate a subject repeatedly until no further effect is produced (until, as has been thought, the system is saturated with the virus).

vaccinoid (vak'sin-oyd). Spurious or modified vaccination.

vacuole (vak'u-ol). A small air cell or a globular space containing either air or a pellucid liquid. **Auerbach's v.** An 8-shaped, transparent v. formed at the center of the vitellus, according to Auerbach's theory of segmentation, after the disappearance of the original nucleus and as a step preliminary to the formation of the nuclei of the two succeeding segmentation spheres. See *aster*, *amphiaster*, and *tetraster*. **contractile v.** A v. observed in a structureless mass of protoplasm (as in the *Endoplastica*) which slowly fills with a watery fluid and, after reaching a certain size, contracts to obliteration, the process of distention and contraction being repeated rhythmically, after the manner of a systole and diastole. **food v's.** 1. Of Lankester, large v's in the endoderm cells of one of the *Medusae* (*Limnocoelium*). They have been found to contain an albuminous substance supposed to be the product of intracellular digestion. 2. See *gastric v.* **gastric v.** A v. formed in the protoplasm of certain protozoa around a particle of food surrounded with water. **nuclear v.** See *Auerbach's v.* **pulsating v.** See *contractile v.* [Lat., *vacuolum*, from *vacuum*, empty.]

vacuum (vak'u-um). A space entirely devoid of matter (more accurately called an absolute v.), and generally a space exhausted of its air content to a high or the highest degree. **torricellian v.** See *torricellian*. **v. distillation.** A distillation with the aid of a v. By the use of this method water can be made to distil at the ordinary temperature or a slight elevation of it. [Lat.]

vagina (vaj-i'nah). That part of the parturient canal which serves as the organ of copulation, extending from the vulva backward and somewhat upward to terminate in a blind pouch situated in front of the rectum and slightly to the right of it. Its anterior wall, near its posterior extremity, is pierced by the cervix uteri. When the v. is not distended, its anterior and posterior walls are flattened and in contact with each other. Its anterior wall lodges the urethra. **double v.**, **septate v.** A v. divided into two lateral portions by a longitudinal septum. **v. bipartita.** See *double v.* **v. femoris.** See *fascia lata*, under *fascia*. **v., how to prepare smears from the urethra;** see in *appendix*, page 911. **v. subseptata.** A v. that is double for only a portion of its length. [Lat., *vagina*, sheath.]

vaginal (vaj'in-al). Pertaining to the vagina or to a sheath, ensheathing. **v. smears, examination of**; see in *appendix*, page 911. [Lat., *vaginalis*.]

vaginismus (vaj-in-is'mus). Painful spasmodic contraction and hyperesthesia of the vagina. [Lat., *vagina*, sheath.]

vaginitis (vaj-in-i'tis). Syn.: *colpitis*. Inflammation of the vagina. [Lat., *vagina*, sheath, + Gr., *itis*, inflammation.]

vagino-. Combining form of Lat., *vagina*, sheath.

vaginofixation (vaj'in-o-fiks-a'shun). Fixation of the vagina to the sides of the pelvis or to the abdominal wall. [Lat., *vagina*, sheath, + *figere*, to fasten.]

vaginotomy (vaj-in-ot'o-me). See *elytrotomy*. [Lat., *vagina*, sheath, + Gr., *tome*, a cutting.]

vagitus (vaj'it-us). Cry of a newborn child. **v. interuterinus**, **v. uterinus**. Intra-uterine cry; the cry of a fetus while its head is yet within the uterus. **v. vaginalis**. Child's cry heard while its head is in vagina. [Lat., *vagire*, to cry.]

vagotonia (va-go-to'ne-ah). A condition of increased tonus of the autonomic (parasympathetic) nervous system.

va'gus. Uncertain, wandering. **v. nerve**. See *pneumogastric nerve*, under *table of nerves*. [Lat., *vagus*, roving.]

valence, valency (va'lens, va'len-se). The property possessed by an element or a radicle of uniting with the element hydrogen or replacing it in chemical compounds. If the element or radicle replaces or unites with only one hydrogen atom it is univalent; if two, bivalent; if three, trivalent, etc.

valerate (val'er-ät). A salt of valeric acid.

valerian (val'e-re-an). 1. Any plant of the genus *Valeriana*, especially *Valeriana officinalis*. 2. V. root. **v. rhizome, v. root**. Lat., *valeriana* [U. S. Ph.]. The rhizome and rootlets of *Valeriana officinalis*. [Lat., from *valere*, to be strong.]

Valeriana (val-e-ri-an'ah). 1. A genus of the valerians, or valerianworts, which are an order of the *Asterales*. 2. Of the U. S. Ph., Br. Ph., valerian roots and rhizome. **tincturae valerianae**. Of the U. S. Ph., an alcoholic tincture representing 20 per cent. of valerian. **tinctura valerianae ammoniata**. A 20 per cent. tincture of valerian with a menstruum of aromatic spirit of ammonia [U. S. Ph.]. The preparation of the Br. Ph. is essentially similar. **tinctura valerianae etheria**. A preparation made by macerating valerian root for some days with 5 times as much spiritus aethereus. **V. officinalis**. Great wild valerian. It contains oil of valerian and valerianic acid. It is used in hysteria.

valerianic acid (val'er-i-an'ik). See under *acid*.

valeric acid (val'er'ik). See under *acid*.

valeridin (val'er'id-in). The synthetic compound, $C_6H_4(CO_2C_2H_5)NH.C_6H_5O$, said to resemble valerian medicinally.

valerin (val'er-in). A compound of glycerin and valeric acid; a glyceryl valerate.

valerol (val'er-ol). That part of oil of valerian which boils between 205° and 215° C.

valeryl (val'er-il). An old name for the radicle, $C_6H_5.CO$, contained in valerianic acid.

valerylene (val'er'il-ën). The unsaturated compound, $CH_3.C; C:C_2H_5$.

val'gus. 1. Bow-legged. 2. As a n., see *talipes v.*, under *talipes*. **nervous v.** V. of neurotic origin. **paralytic v.** V. caused by paralysis of the muscles of the foot, especially the tibialis anticus. **spasmodic v.** An ephemeral intermittent v. caused by muscular paresis. **spurious v.** *Pes planus*. **statical v.** *Talipes v.* caused by an altered axis of bodily pressure toward the inner side of the foot. **traumatic v.** V. caused by fracture or dislocation of the tibia, or by injury of the tarsal or metatarsal joints, or by cicatrices. [Lat., *valgus*, bow-legged.]

validol (val'id-ol). Menthyl valerianate, $(C_{10}H_{18}O.C_6H_5O)$, containing 30 per cent. of free menthol. It is used in anorexia, in migraine, etc. **v. camphorata**. A 10 per cent. solution of camphor in v.

va'lin. Amido-isovaleric acid, $(CH_3)_2:CH.CHNH_2.COOH$. An amido acid abundantly present in the protein molecule.

vallecula (val-lek'u-lah). A longitudinal depression; specifically, the cerebelli. **v. cordis**. A shallow furrow at the apex of the heart uniting the anterior and posterior longitudinal furrows. **v. Reilii**. The depression between the cerebellar hemispheres which is occupied by the vermiform process. **v. unguis**. The fold of the nail. [Lat.]

Vallet's mass. See *massa ferri carbonatis*, under *ferrum*.

val'lum. An old term for the supercilium. **v. of the circumvallate papillae of the tongue**. An elevation in the mucous membrane of the tongue which surrounds the fossa of the circumvallate papillae. [Lat., *vallum*, a rampart, a palisade, from *vallus*, stake.]

valoid (val'oyd). Syn.: *equivalent extract*. A term applied in the United Kingdom to a class of proprietary pharmaceutical preparations. The v's seem to be nothing more than fluidextracts. [Lat., *valere*, to be worth.]

val'sol. A liquid ointment base containing petrolatum.

valve. A movable flap or fold which acts to close a passage or orifice more or less completely. **aortic v.** The v. situated at the exit of the aorta from the heart. It consists of three semilunar segments, which prevent the reflux of the blood into the heart. **bicuspid v.** See *mitral v.* **cerebral v.** See *v. of Vieussens*. **eustachian v.** A crescentic fold of the lining structure of the fetal heart so situated as to direct the blood entering the right auricle by the inferior vena cava toward the opening of the foramen ovale. In the adult it may be obliterated, it may be reduced to a trace, or it may persist nearly as in the fetus. **Gerlach's v.** See *Gerlach*. **Houston's v.** See *Hous-*

- ton. ileocecal v., ileocolic v.** An incomplete partition divided by a narrow slitlike opening, through which the cavities of the ileum and colon communicate. It is made up of the mucous membrane, its submucosa, and a few muscular fibers.
- mitral v.** A v. situated at the left auriculoventricular opening, consisting of two more or less jointed segments continuous at their attached borders.
- pulmonary v.** The v. in the left ventricle of the heart, at the entrance of the pulmonary artery. It consists of three semilunar segments, and prevents reflux of blood from the heart into the artery.
- pyloric v.** A ringlike elevation of the mucous membrane of the stomach around the pylorus.
- rectal v's.** See *Houston*.
- semilunar aortic v.** See *aortic v.*
- semilunar pulmonary v.** See *pulmonary v.*
- semilunar (or sigmoid) v's of the heart.** Those v's of the heart which consist of three semilunar segments attached by their convex borders.
- tricuspid v.** A v., made up of three triangular segments, situated at the right auriculoventricular opening.
- v's of a vein.** Semilunar folds of the inner coat of the veins, strengthened by connective tissue, with their concave side placed like the inside of a pouch toward the heart, so that when they are filled they retard the backward flow of the blood.
- v. of Thebasius.** A semicircular fold of the endocardium at the entrance of the coronary sinus into the heart.
- v. of the colon.** See *ileocecal v.*
- v. of the foramen ovale.** A thin crescentic valvular fold, situated a little to the left of the foramen, in the embryonic heart, growing forward from the posterior wall of the auricles and projecting into the left auricle. Its office is to prevent the regurgitation of blood from the left auricle into the right one.
- v's of the lymphatics.** Semilunar folds of the inner coat placed opposite each other, as in the veins.
- v's of the rectum.** See *Houston*.
- v. of Vieussens.** A triangular lamina of white nerve substance which bridges over the interspace between the superior cerebellar peduncles, forming a portion of the roof of the fourth ventricle. [Lat., *valva*, a folding door.]
- valvula** (val'vu-lah), pl., *valvulae*. See *valve*.
- v. ceci.** See *ileocecal valve*, under *valve*.
- valvulae conniventes.** Crescent folds of the mucous membrane of the intestine placed transversely to its long axis.
- v. fossae navicularis.** A transverse fold of the mucous membrane at the posterior extremity of the fossa navicularis urethrae.
- v. processus vermiformis.** A mucous fold surrounding the small orifice by which the vermiform appendix opens into the cecum.
- v. pylori.** The valvelike structure of the pylorus.
- v. sacci lacrimalis inferior.** A fold of mucous membrane at the junction of the lacrimal duct and sac.
- v. sacci lacrimalis superior.** A crescentic fold of the mucous membrane of the lacrimal sac below the openings of the canaliculi lacrimales.
- v. vaginae, v. vaginalis.** See *hymen*.
- v. vesicae, v. vesico-urethralis.** A valvular membrane found in middle-aged men at the junction of the internal portion of the urethra and the neck of the bladder. It is formed by hypertrophied prostatic fibers and fibers of the sphincter urethrae. [Lat., dim. of *valva*, a valve.]
- valvulitis** (val-vul-i'tis). Inflammation of one or more of the valves of the heart. [Lat., *valvula*, a valvule, + *itis*, inflammation.]
- valvulotomy** (val-vu-lot'o-me). The operation of incising Houston's valves of the rectum. [Lat., *valvula*, dim. of valve, + Gr., *tome*, a cutting.]
- valyl** (val'il). Diethylamid of valerianic acid, $C_4H_8CON(C_2H_5)_2$.
- v. glycin.** $C_6H_7CHNH_2.CO.NH.CH_2COOH$, a synthetic dipeptid of amidovaleric acid and glyceroll.
- valylene** (val'il-ën). A liquid hydrocarbon, C_8H_6 .
- val'zin.** See *sucrol*.
- vanadate** (van'ad-ät). A salt of vanadic acid.
- vanadic** (van-ad'ik). Containing vanadium as a pentad radicle.
- v. acid.** See under *acid*.
- vanadious** (van-a'de-us). Containing vanadium as a trivalent radicle.
- vanadium** (van-a'de-um). A rare element. Symbol, V. Atomic weight, 51.2. [*Vanadis*, a Scandinavian goddess.]
- vanadiumism** (van-a'de-um-izm). Chronic intoxication caused by the ingestion or absorption of some form of vanadium. [*Vanadis*, a Scandinavian goddess.]
- vanilism** (van-il'izm). A disease occurring among those who sort vanilla pods, due to contact with an insect found on the pods.
- alimentary v.** V. attributed to the ingestion of vanilla. Poisoning with tyrotoxin has erroneously been called v.
- Vanilla** (van-il'lah). 1. A genus of tropical climbing orchids. 2. The fruit of *V. planifolia* from which a tincture, *tinctura vanillae* [U. S. Ph.], is made. Tincture of v. is known popularly as essence of v.
- V. planifolia.** V. plant; indigenous to tropical America, cultivated for its fruit, which forms the bulk of the v. of commerce. It has been used medicinally, but is chiefly employed for flavoring. V. is said by Grasset to produce paralysis of the spinal cord and motor nerves in frogs.
- V. pompona.** A South American species said to yield vanillin. [Span., *vainilla*, a small pod or husk.]
- vanillin** (van-il'in). A substance, $C_8[CHO, H, OCH_3, OH, H, H, H]$, found in the pods of *Vanilla planifolia* and in Siam benzoin, asafetida, and prepared synthetically from enzymol and conifrin. It is used almost exclusively as a flavoring. [U. S. Ph., *vanillinum*.]
- Van't Hoff's law of temperature coefficient.** The l. that in chemical reactions the intensity of the reaction is doubled or more for each rise of 10° in temperature. [*Jacobus Hendricus Van't Hoff*, Dutch chemist, 1852-1911.]
- va'por.** 1. A visible or invisible gas. 2.

See *inhalation* (3d def.). **v. sanguinis.** See *gas of the blood, under gas.*

vaporarium (va-por-a're-um). A vapor bath, also the apartment in which it is administered.

vaporizable (va'por-iz-a-bl). Capable of being converted into vapor.

vaporization (va-por-iz-a'shun). 1. The conversion of a liquid or solid into a vapor by means of heat. 2. Cauterization with steam.

vaporize (va'por-iz). To convert or be converted into vapor.

vaporizer (va'por-i-zer). See *atomizer.*

vaporole (va'por-öl). Of Burroughs, Wellcome and Co., a friable glass capsule containing a drug to be employed for inhalation or fumigation, ensheathed in concentric layers of absorbent cotton, and the whole inclosed in a silken sack.

vaporous (va'por-us). 1. Pertaining to or containing vapor. 2. Of the blood, arterial.

vapors. An old popular term for hysterical and hypochondriacal affections.

fuliginous v. The name given by the ancient writers to supposed deleterious substances exhaled in a vaporous state in the expired air or (Galen) also through the skin, comparable to the invisible vapors or smoke from a furnace.

variation (va-re-a'shun). The act or process of changing in form, character, rate of motion, etc.; also the amount or degree of such change. **negative v. of the muscle or nerve current.** The diminution in the demarcation of a muscle or nerve when stimulated to functional activity, due to the passage of a wave of negativity over the muscle or nerve.

varicella (var-is-el'lah). Chickenpox, a mild infectious disease of children, characterized by an eruption of vesicles on the skin and mucous membranes.

varicoblepharon (var'ik-o-blef'ar-on). A varicose tumor or swelling of the eyelid. [*Varix*, + Gr., *blepharon*, the eyelid.]

varicocele (var'ik-o-sel). An enlarged and tortuous condition of the veins of the pampiniform plexus. **ovarian v.** A varicose enlargement of the veins of the broad ligament. **utero-ovarian v.** V. of the uterine and ovarian veins. [*Lat*, *varix*, varix, + Gr., *kele*, a tumor.]

varicose (var'ik-ös). Pertaining to a varix; of a vein, abnormally dilated. [*Lat*, *varicosus*.]

varico'sis. A varicose state of the veins of a part.

varicosity (var-ik-os'it-e). See *varix* and *varicosis*.

varicotomy (var-ik-ot'o-me). See *circotomy*. [*Varix*, + Gr., *tome*, a cutting.]

variola (va-ri'o-lah). See *smallpox. v. confluens.* V. in which the pustules form and run into each other; a variety that is often but not necessarily malignant. **v. hemorrhagica.** V. (usually of a grave form) associated with hemorrhages into the efflorescences, giving the pustules and crusts a blackish color. [*Lat*, dim. of *varius*, mottled.]

Variolaria (va-re-o-la're-ah). A genus of

lichens. **V. amara.** A species used as an anthelmintic and febrifuge. [*Lat*, *variola*, smallpox.]

variolate (var'e-o-lät). Having markings resembling the pits of smallpox.

variolation, variolization (va-re-o-la'shun, var-e-o-li-za'shun). Inoculation with the virus of unmodified smallpox.

varioid (var'e-o-loyd). Resembling variola; pertaining to the disease v.; as a n., smallpox modified by recent vaccination or by a previous attack of variola. [*Lat*, *variola*, smallpox, + Gr., *eidos*, resemblance.]

variolo vaccine (var-i'ol-o-vak'sen). 1. Pertaining to bovine variola. 2. A vaccine produced by inoculating the heifer with the smallpox virus.

var'ix, pl., varices. Abnormal dilatation of a vein or tortuosity; varicosity. **aneurismal v.** A direct communication between an artery and a varicose vein, without any intervening sac. See also *varicose aneurism* and *aneurism by anastomosis*, under *aneurism*. **arterial v.** A cirroid aneurism, especially one composed of a single dilated and tortuous artery. **lymphatic v.** V. of the lymphatic vessels. **varices gelatinosae.** Nodular accumulations of the gelatinous matter of the umbilical cord. [*Lat*, *varix*, a dilated vein.]

var'us. A deformity characterized by inversion of the foot. [*Lat*, *varus*, bent, stretched, or grown inward.]

vas. Pl., *vasa*. See *vessel. v. aberrans.* A vessel following an anomalous course or occupying an anomalous position. **vasa afferentia.** Vessels conveying blood to a part. **vasa afferentia of the malpighian corpuscles.** Branches of the interlobular arteries of the kidney from which the glomeruli are formed. **v. deferens.** Syn.: *spermatic duct, testicular duct.* The excretory duct of the testicle, a tube about 2 feet long, the upward continuation of the canal of the epididymis. **v. efferens glomeruli.** The efferent vein from a glomerulus of the kidney. **vasa efferentia corporis Malpighii.** The venous twigs which emerge from the glomeruli of the kidney and form a dense network over the walls of the uriniferous tubules. **vasa intestini tenuis.** Small intestinal branches of the mesenteric arteries. **vasa recta of the kidney.** Veins which collect the blood from the substance of the medulla and pass upward to join the arches at the bases of the pyramids. **vasa vasorum.** Small arteries and veins which supply blood to and return it from the coats of arteries, lymphatics, and veins. **vasa vorticosa.** The whorllike arrangement of the veins of the choroid just before they unite into the short, straight trunks which perforate the sclera obliquely to empty into the ophthalmic vein. [*Lat*, *vas*, vessel.]

vascular (vas'ku-lar). Having vessels; richly supplied with blood vessels; pertaining to the circulatory system. **v. glands.** See *hematopoietic glands*, under

gland. v. murmur. See under *murmur*. [Lat., *vascularis*.]

vascularity (vas-ku-lar'it-e). The state of being vascular.

vascularization (vas-ku-lar-i-za'shun). The production or condition of vascularity.

vasculomotor (vas''ku-lo-mo'tor). See *vasomotor*.

vasculose (vas'ku-lōs). See *vascular*.

vasectomy (vas-ek'to-me). Excision of a portion of the vas deferens. [Lat., *vas*, a vessel, + Gr., *ektome*, excision.]

vaselin (vas'el-in). Petroleum ointment; a commercial product for which the official petrolatum is intended as a substitute. **white v.** V. that is freed from impurities by melting and filtering through charcoal.

vasifactive (va-sif-ak'tiv). Forming new red blood vessels in vascular tissue, as in the repair of inflammation. [Lat., *vas*, vessel, + *facere*, to do.]

vasiform (vas'if-orm). Resembling a duct.

va'so-. Combining form of Lat., *vas*, a vessel, i. e., blood vessel.

vasoconstrictor (va''so-kon-strik'tor). Of nerves and drugs, serving to constrict blood vessels.

vasodilator (va-so-dil-a'tor). Causing active dilatation of the smaller arteries (said of certain nerves and drugs). [Lat., *vas*, a vessel, + *dilatare*, to dilate.]

vasoformative (vas-o-form'a-tiv). Connected with the formation of blood or lymph vessels.

vasogen (vas'o-jen). An ointment base said to be oxygenated vaselin; used as a solvent for iodine, creosote, etc.

vasohypotonic (vas''o-hi-po-ton'ik). Pertaining to or causing subnormal vascular tension.

vaso-inhibitory (vas''o-in-hib'it-o-re). Producing or causing inhibition of the action of the vasomotor nerves.

vas'ol. A mixture of liquid petrolatum and ammonium oleate.

vasomotor (va-so-mo'tor). Causing constriction of the smaller arteries; pertaining to or constituting nerves or drugs so acting.

vasoneurosis (va''so-nu-ro'sis). See *angioneurosis*.

vasosensory (va-so-sen'sor-e). Sensory and supplying filaments to the blood vessels.

vasotomy (vas-ot'o-me). Cutting the vas deferens for the cure of prostatic hypertrophy or for epididymitis. [Lat., *vas*, a vessel, + Gr., *tome*, a cutting.]

vastus (vas'tus). See *table of muscles*, under *muscle*. [Lat., *hugē*.]

Vateria (va-te're-ah). A genus of tropical Asiatic trees of the *Dipterocarpeae*.

V. acuminata. A Ceylon tree yielding East Indian dammar. **V. indica**. 1. See *V. acuminata*. 2. A species which is the source of Indian copal. The seeds contain an aromatic fat used in rheumatism, etc. [*A. Vater*, a German botanist.]

vault (vawlt). See *fornix. v. of the cranium*. The upper curved portion of

the cranium. **v. of the vagina**. The upper portion of the vagina. [Lat., *vo-luta*, from *volvare*, to roll, to turn.]

vectis (vek'tis). 1. A lever; in obstetrics, an instrument, usually shaped like one of the blades of an obstetrical forceps, but with only the cephalic curve, used as a lever or tractor. [Lat., *vectis*, a pole, a bar, from *vehere*, to carry.]

vector (vek'tor). 1. A carrier. 2. The animal host transmitting a protozoan disease. [Lat., *vehere*, *vectus*, to carry.]

vegetable (vej'it-ab-l). 1. Pertaining to plants or plant life. 2. Derived from plants or plant life. 3. Any form or species of plant. **v. albumins**. Proteins which have been derived from plants, especially from their seeds. Some of them have been obtained in a crystalline form. **v. globulins**. See under *globulin*. [Lat., *vegetabilis*, quickening.]

vegetarian (vej-it-a're-an). A person who subsists exclusively on vegetable food.

vegetarianism (vej-it-a're-an-izm). The practice of living exclusively on vegetable food; also the doctrine that this is the only kind of food proper for man.

vegetation (vej-e-ta'shun). 1. The vital processes (absorption, circulation, exhalation, assimilation, etc.) on which the life and growth of a plant depend. 2. Plants in general. 3. A growth or deposit upon some portion of the body of a substance or tissue foreign to that part; especially a condylooma acuminatum. **adenoid v's**. V's due to the great hypertrophy of lymphoid tissue in the nasopharynx. These v's are comblike, tongue-shaped, or globular, and are mostly found on the superior pharyngeal wall, but often extend forward into the posterior nares. [Lat., *vegetare*, to quicken.]

vegetative (ve'je-ta-tiv). Pertaining to the organs and processes of growth and nutrition.

vehicle (ve'he-kl). A liquid or solid excipient. An indifferent substance used to dilute the medicinal agent in a prescription or to render the taste agreeable. [Lat., *vehiculum*, from *vehere*, to carry.]

vein (vān). A vessel the function of which is to convey blood toward the heart.

TABLE OF VEINS.

acromiothoracic v. A v. accompanying the artery of like name, and emptying into the axillary v. **alar thoracic v.** A branch of the axillary v. accompanying the alar thoracic artery. **angular v.** A v. formed by the union of the supra-orbital, frontal, superior palpebral, and nasal v's, emptying into the facial v. **anterior auricular v.** A small v. emptying into the temporomaxillary v. **anterior cardiac v's**. Two or three v's on the front of the right auricle and the right border of the heart, emptying separately into the auricle. **anterior ciliary v's**. V's accompanying the anterior ciliary arteries which empty into the ophthalmic v. **anterior ethmoidal v.** A v. accompanying the ante-

rrior ethmoidal artery, and emptying into the ophthalmic v. **anterior intercostal v's.** Small offshoots of the internal mammary v. which accompany the arteries of like name. **anterior jugular v.** A v. formed by branches from the submaxillary region, the lower lip, and the chin, and ending in the external jugular v. or in the subclavian v. **anterior tibial v.** A v. corresponding to the artery of like name; it empties into the popliteal v. **anterior ulnar v.** A v. which returns the blood from the dorsal plexus of the hand to the posterior ulnar v. or the median basilic v. **anterior vertebral v.** A v. arising from a plexus over the cervical vertebrae, receiving branches from the prevertebral and scapular muscles, and emptying into the inferior end of the vertebral v. **anterior vitelline v.** The v. (often two v's) by which the sinus terminalis of the primitive embryonic circulation empties into the posterior vitelline v. **articular v.** A v. that returns blood from the structures of a joint. **ascending lumbar v.** A v. formed by a series of vertical communications between the lumbar v's, and also connecting the lateral sacral, ilio-lumbar, and common iliac v's. It empties into the azygous v. of its side. **axillary v.** A v. that returns the blood from the arm. It is a continuation of the basilic v., and extends from the lower border of the teres major muscle to the outer margin of the first rib. **azygous v.** See *large azygous v., left upper azygous v., and small azygous v.* **basilar v.** A branch of the v. of Galen from the choroid plexus and the base of the brain in the vicinity of the inner side of the crus cerebri. **basilic v.** A v. formed by the union of the median basilic and posterior ulnar cutaneous v's; continuous with the axillary v. **basivertebral v's.** Small v's, reduced to their intima, which ramify in the bodies of the vertebrae and empty into the anterior longitudinal spinal v's. **brachial v's.** V's, one on each side of the brachial artery, which follow its branches and empty into the axillary v. at the lower border of the subscapularis. **brachiocephalic v.** See *innominate v's.* **branchial v's.** The vessels that return the blood from the branchial arches. **bronchial v's.** Small v's receiving the blood from the nutrient arteries of the lungs and bronchial tubes. **buccal v's.** V's returning the blood from the buccal muscles and emptying into the facial v. **capsular v's.** 1. See *suprarenal v's.* 2. Branches of the portal v. which return the blood from the capsule of the liver. **cardiac v's.** V's from the tissue of the heart. **cardinal v's.** The fetal v's which return the blood from the mesonephros, the vertebral column, and the parietes of the trunk; above the latter they become obliterated for the most part. **central v. of the retina.** A branch of the superior ophthalmic v. which returns the blood from the tissues supplied by the branches of

the central artery of the retina. **central v's of the spinal cord.** Two v's, one on each side, in the *substantia gelatinosa centralis* of the spinal cord, which terminate at the upper and lower ends of the cord in a number of small branches. **cephalic v.** A v. formed by the union of the median cephalic and radial cutaneous v's, which passes up along the outer border of the biceps brachii to empty into the axillary v. **cerebral v's.** V's divided into two sets: those which return the blood from the surface of the brain, and those which return it from the ventricles. **choroid v.** A v. which returns the blood from the lateral ventricle and choroid plexus, and unites with the *vena corporis striati* to form the v. of Galen. **ciliary v's.** V's which usually extend from the choriocapillaris in a radiate direction through the choroid, and form the *vasa vorticosa*, five or six in number, which perforate the sclera obliquely at or just behind the equator of the eye, pass into the orbit, and empty into the ophthalmic v. **circumflex v's.** V's accompanying the circumflex arteries. **common facial v.** A v. formed by the union of the facial and temporal v's, emptying into the internal jugular v. **common iliac v.** A v. formed by the union of the external and internal iliac v's. It unites with its fellow to form the inferior vena cava. **common jugular v.** The portion of the internal jugular v. below the entrance of the common facial v. **coronary v.** See *large coronary v.* **coronary v. of the placenta.** A v. which courses along the border of the placenta for more or less of its extent, gathers its blood from radicles in the substance of the placenta, and returns it to the maternal organism by channels leading to the v's of the uterus. **coronary v. of the stomach.** A v. which runs parallel to the coronary artery and empties into the portal v. **deep auricular v's.** V's which return the blood from a portion of the auricle and empty into the temporal v. **deep cervical v.** A branch of the vertebral v., close to its entrance into the innominate v., which returns the blood from the suboccipital region. **deep circumflex iliac v.** A branch of the external iliac v. receiving the blood from the distribution of the deep circumflex iliac artery. **deep femoral v.** A branch of the femoral v. which returns the blood from the parts supplied by the deep femoral artery. **digital v's.** Small v's returning the blood from the parts supplied by the digital arteries. **dorsal spinal v's.** V's returning the blood from the muscles and integument of the back. **dorsal v. of the clitoris.** A v. returning the blood from the clitoris and its vicinity and emptying into the pudendal plexus. **dorsal v. of the penis.** A v. returning the blood from the glans penis and prepuce, the corpus spongiosum, the *corpora cavernosa*, and the overlying skin, and emptying into the prostatic plexus. **dorsal v's of the tongue.** V's which

connect the plexus beneath the mucous membrane of the posterior third of the tongue with the internal jugular or common facial v. **dorsispinal v's.** V's lying on the exterior of the spinal column. **effluent v's of the kidney.** The v's which emerge from the glomeruli of the kidney and form a network on the convoluted tubules. **ethmoidal v's.** The anterior and posterior ethmoidal v's. **external hemorrhoidal v.** A v. following the distribution of the inferior hemorrhoidal arteries and emptying into the hemorrhoidal plexus. **external iliac v.** The continuation of the femoral v. from Poupart's ligament to its junction with the internal iliac v. near the lumbosacral articulation. **external jugular v.** A v. formed by the union of the posterior auricular v. and the posterior part of the temporomaxillary v. and joined by the posterior external jugular, transverse cervical, and suprascapular v's. **external mammary v.** A branch of the axillary v. or subclavian v. accompanying the artery of the same name. **external pudic v's.** V's returning the blood from the parts supplied by the inferior and superior external pudic arteries and emptying into the internal saphenous v. **external saphenous v.** A v. formed by the confluence of v's on the dorsum of the foot. **external spermatic v.** A branch of the external iliac v. running from the inguinal canal. **facial v.** A v. which receives the frontal, supra-orbital, angular, inferior palpebral, superior labial, deep facial, buccal, submental, submaxillary, and inferior palatine v's, and empties into the common facial v. **femoral v.** The continuation upward of the popliteal v. above the opening in the adductor magnus to Poupart's ligament, where it terminates in the external iliac v. **frontal v.** A v. which returns the blood from the upper surface of the head and forehead, emptying into the facial v. **funicular v.** The umbilical v. **gastric v's.** Branches of the splenic v. running from the left extremity of the stomach. **gastroduodenal v.** A branch of the right gastro-epiploic v. running from the pancreas and duodenum. **gastro-epiploic v's.** The right and left gastro-epiploic v's. **gluteal v.** A branch of the internal iliac v. following the ramifications of the gluteal artery. **hemorrhoidal v's.** The external, inferior, middle, and superior hemorrhoidal v's. **hepatic v's.** A number of v's, usually in three sets, which empty into the inferior vena cava, where it lies in its fissure. They arise in the substance of the liver as the interlobular v's. **hyaloid v.** A v. accompanying the hyaloid artery. **iliac v's.** The common external and internal iliac v's. **lilolumbar v's.** V's from the posterior part of the abdominal wall, the muscles of the back, and the spinal canal, which empty into the common iliac v. **inferior cerebellar v's.** V's from the lower surface of the cerebellum which enter the inferior petrosal and the occip-

ital sinuses. **inferior cerebral v.** A v. which receives the blood from the lower surface of the cerebrum and empties into one or another of the sinuses at the base of the skull. **inferior dental v.** A v. which returns the blood from the parts supplied by the inferior dental artery into the pterygoid plexus. **inferior hemorrhoidal v.** A v. which returns the blood from the parts supplied by the artery of like name and empties into the internal iliac v. **inferior labial v's.** Two or three v's which collect the blood in the lower lip and empty into the submental branch of the facial v. **inferior laryngeal v.** A branch of the inferior thyroid v. which receives the blood from the lower part of the larynx. **inferior mesenteric v.** A branch of the portal or the splenic v. which returns the blood from the distribution of the inferior mesenteric artery. **inferior thyroid v's.** V's whose radicles form a plexus on the anterior surface of the larynx, returning the blood from the thyroid gland, the lower part of the larynx, the trachea, and the esophagus, and emptying, one on each side, into the innominate v's. **innominate v's.** The large v's, one on each side, formed by the union of the subclavian and internal jugular v's behind the sternoclavicular articulations. They unite on the right side a little below the cartilage of the first rib to form the superior vena cava. **intercostal v's.** Branches of the large and small azygous v's and the superior intercostal v's which accompany the arteries of the same name. **internal cerebral v.** A v. formed by the union of the choroid v. and the vena corporis striati, which is continuous with the v. of Galen of its own side when there are two, but converging to form the v. of Galen when it is single. **internal iliac v.** A short trunk which lies behind the internal iliac artery, receives the blood from the v's corresponding to the branches of that vessel, and unites near the margin of the pelvis with the external iliac v. to form the common iliac v. **internal jugular v.** A large v. which is continuous above with the lateral sinus and joins below with the subclavian v. to form the innominate v. Its most important branches are the lingual, pharyngeal, occipital, laryngeal, and superior thyroid v's. **internal mammary v.** A branch of the innominate v. receiving small v's from the costal region. **internal maxillary v.** A v. which returns the blood from the pterygoid plexus, and empties into the temporal v. **internal pudic v.** A v. emptying into the internal iliac v. or into the pudendal plexus formed by the union of a number of small v's from the perineum, scrotum, and anus. It accompanies the internal pudic artery. **internal saphenous v.** A v. which, beginning in a plexus upon the dorsal aspect of the foot, runs upward in front of the inner ankle and along the inner side of the leg to the internal condyle of the femur, be-

hind which it passes to ascend upon the inner side of the thigh to the saphenous opening, through which it passes to empty into the femoral v. a little below Poupert's ligament. **internal spermatic v.** A v. (sometimes one of several) that returns the blood from the testicle. **labial v.** A branch of the facial v. from the region of the lip. **lacrimal v's.** V's from the upper eyelid and lacrimal gland which accompany the lacrimal artery and empty into the palpebral and ophthalmic v's. **large azygos v.** A v. of the right side which arises opposite the first or second lumbar vertebra by a branch from one or more of the lumbar v's, the renal v's, or the inferior vena cava. It perforates the diaphragm in company with the aorta and ends in the superior vena cava close to the pericardium. It receives the nine or ten lower right intercostal v's, the small azygos v., the right bronchial v., and small v's from the thoracic cavity. **large coronary v. (of the heart).** A v. which arises upon the anterior surface of the apex of the heart, and terminates in the left end of the coronary sinus. **laryngeal v.** A branch of the internal jugular v., or of one of its branches. **lateral sacral v's.** V's which receive the blood from the lateral sacral arteries and, with the middle sacral v's, form the anterior sacral plexus. **lateral vitelline v's.** Those two of the vitelline v's which, arising laterally, accompany the trunks of the large arteries of the primitive embryonic circulation. **left gastro-epiploic v.** A v. from the great curvature of the stomach which empties into the splenic v. **left lower azygos v.** See *small azygos v.* **left upper azygos v.** An inconstant v. which receives those of the intercostal v's below the superior intercostal v. of the left side that do not empty into the small azygos v. When it is absent its place is supplied by the left superior intercostal v. **lingual v.** A branch of the internal jugular or facial v. which anastomoses freely with the v's of the vicinity and returns the blood from the tongue, the sublingual and submaxillary glands, and the floor of the mouth. **longitudinal spinal v's.** The anterior and posterior longitudinal spinal v's. **long thoracic v.** A branch of the axillary v. accompanying the branches of the external mammary artery. **lumbar v's.** V's accompanying the lumbar arteries and emptying into the inferior vena cava. **masseteric v's.** Branches of the facial v. from the masseter muscle. **median basilic v.** The innermost of the two terminal branches of the median cutaneous v. **median cephalic v.** The outer and smaller of the two terminal branches of the median cutaneous v. **median v.** A short v. upon the anterior surface of the forearm which divides at the bend of the elbow into the median basilic v. and the median cephalic v. **mediastinal v's.** The anterior and posterior mediastinal v's. **mental v.** A branch of the anterior

jugular v. running from the chin. **mesenteric v's.** The inferior and superior mesenteric v's. **middle cardiac v.** The largest of the v's on the posterior surface of the heart. It lies in the groove between the ventricles, and empties into the right extremity of the coronary sinus. **middle cerebral v.** A v. accompanying the middle cerebral artery and emptying into the cavernous or sphenoparietal sinus. **middle hemorrhoidal v's.** Small v's which connect the hemorrhoidal plexus with the internal iliac v. **middle meningeal v.** A v. accompanying the middle meningeal artery. **middle sacral v.** A v. on the anterior surface of the sacrum, returning the blood from the middle sacral artery and emptying into the left common iliac v. or the inferior vena cava. **middle temporal v.** A v. which arises in the vicinity of the eyebrow, communicates with the supra-orbital and frontal v's, receives the palpebral v's and branches from the temporalis, and unites with the superficial temporal v. over the temporal portion of the zygomatic arch. **middle thyroid v.** A branch of the lower portion of the internal jugular v. which returns the blood from the lower portion of the lateral lobe of the thyroid gland and receives twigs from the trachea and larynx. **obturator v.** A branch of the internal iliac v. which returns the blood from the distribution of the obturator artery. **occipital v.** A branch of either the external or internal jugular v. which arises in a plexus in the occipital region. **ophthalmic v.** A large v. which commences the frontal v. at the inner angle of the orbit, and passes out of the orbit through the inner extremity of the sphenoidal fissure to empty into the cavernous sinus. **orbital v's.** Branches of the ophthalmic v. and the vena ophthalmica externa running from the tissues in the orbit. **ovarian v.** A v. following the same course as the ovarian artery and emptying into the vena cava or renal v. **palatine v.** A branch of the facial v., or of one of its branches, returning the blood from the vicinity of the tonsil and soft palate. **pancreatico-duodenal v's.** Branches of the superior mesenteric v. running from the head of the pancreas and from the duodenum. **pancreatic v.** A branch of the splenic v. running from the pancreas. **pharyngeal v's.** Branches of the internal jugular (occasionally of the superior thyroid or lingual) v's which form a plexus in the walls of the pharynx. **phrenic v's.** Small branches of the inferior vena cava which accompany the phrenic arteries. **plantar v's.** The deep v's of the sole of the foot. **popliteal v.** A v. formed by the union of the anterior and posterior tibial v's near the lower border of the popliteus. It receives small branches in the popliteal space and also the external saphenous v. **portal v.** A v. from three to four inches long, formed by the union of the splenic and superior mesenteric v's, which conveys the blood

from the chylopoietic organs to the liver **posterior auricular v.** A branch of the temporomaxillary v. which receives the blood from the back part of the external ear and its vicinity. **posterior cardiac v's.** Three or four v's which run on the posterior surface of the ventricles and empty into the coronary sinus at its lower border. **posterior ciliary v's.** V's which collect the blood from the choroid, pass out through the sclera midway between the cornea and the optic nerve, and empty into the ophthalmic v. **posterior dental v.** A branch of the internal maxillary v. accompanying an artery of the same name. **posterior ethmoid v.** A branch of the ophthalmic v. accompanying an artery of the same name. **posterior external jugular v.** A v. which collects blood from the occipital region and from the integument and superficial muscles of the back of the neck, and empties into the external jugular v. **posterior tibial v's.** Two v's following the distribution of the posterior tibial artery and emptying into the popliteal v. **posterior ulnar (cutaneous) v.** A v. which begins on the back of the hand by a number of vessels which unite to form the vena salvatella, and run up on the posterior aspect of the ulnar border of the forearm to unite with the anterior ulnar cutaneous v. **pulmonary v's.** Four (occasionally five) v's which return the aerated blood from the lungs to the left auricle of the heart, into the posterior portion of which they open. **radial (cutaneous) v.** A v. which arises in a plexus on the posterior surfaces of the thumb and index finger and ascends upon the radial border of the forearm, where it unites with the median cephalic v. **ranine v.** A branch of the internal jugular, facial, or lingual v., which arises at the apex of the tongue and runs superficially on its lower surface close to the frenum, in company with the ranine artery. **renal v.** A short v. with a large lumen which returns the blood from the kidney into the inferior vena cava. **right gastro-epiploic v.** A branch of the superior mesenteric v. running from the right extremity of the stomach. **sciatic v.** A v. which collects the blood from the parts supplied by the sciatic artery and empties into the internal iliac v. **small azygous v.** A v. which arises from one or two lumbar v's and the renal, suprarenal, or spermatic v. of the left side, and empties into the right azygous v. after crossing the vertebral column over the ninth dorsal vertebra. It receives a varying number of the lower intercostal v's, also small v's from the thoracic cavity. **small cardiac (or coronary) v.** A v. which receives the blood from the posterior portion of the right auricle and ventricle of the heart, and empties into the right extremity of the coronary sinus. **spermatic v's.** The external and internal spermatic v's. **sphenopalatine v.** A v. from the sphenoid bone and palate,

emptying into the pterygoid plexus. **spinal v's.** The venous plexuses placed upon and within the vertebral column. **splenic v.** A large branch of the portal v. which returns the blood from the spleen, the pancreas, the duodenum, part of the rectum, the descending colon, and the larger part of the stomach and omentum; formed by the union of several vessels which emerge from the spleen. It receives the gastric and left gastro-epiploic v's and a number of unnamed vessels from the intestines, etc. **stylomastoid v.** A v. accompanying the stylomastoid artery and emptying into the posterior auricular v. **subclavian v.** A large v., the continuation of the axillary v., extending from the upper margin of the serratus anticus major to the inner end of the clavicle, where it unites with the internal jugular v. to form the innominate v. It receives the anterior and external jugular and the vertebral v's. **subscapular v.** A branch of the axillary v. accompanying the distribution of the subscapular artery. **superficial circumflex iliac v.** A v. returning the blood of the artery of like name, and emptying into the internal saphenous v. **superficial epigastric v's.** Branches of the internal saphenous v. running from the superficial epigastric region. **superficial external pudic v.** A branch of the internal saphenous v. corresponding to the inferior external pudic artery. **superficial temporal v.** A v. made up of the posterior auricular v's and their branches. **superficial ulnar v's.** The anterior and posterior ulnar v's. **superior auricular v's.** Branches of the external jugular v's running from the cranial aspect of the auricle and the side of the head. **superior cerebellar v's.** Branches of the straight or transverse sinus or of the v. of Galen running from the upper surface of the cerebellum. **superior cerebral v's.** Ten or twelve v's lying mostly in the sulci of the upper part of the cerebrum and emptying into the superior and inferior longitudinal sinuses. **superior epigastric v.** A branch of the internal mammary v. which accompanies the superior epigastric artery. **superior hemorrhoidal v.** A branch of the inferior mesenteric v. which returns the blood from the upper half of the rectum. **superior intercostal v's.** V's which return the blood from the upper three or four intercostal spaces. **superior labial v.** A branch of the facial v. which returns the blood from the upper lip. **superior mesenteric v.** A large v. which by its union with the splenic v. forms the portal v. It lies on the right side of and a little in front of the superior mesenteric artery, accompanying its branches and returning the blood from the parts supplied by them. **superior palpebral v's.** Branches of the facial v. running from the upper eyelid. **superior phrenic v's.** Branches of the innominate v's running from the dia phragm. **superior thoracic v.** A

branch of the axillary v. which returns the blood from the parts supplied by the superior thoracic artery. **superior thyroid v.** A branch of the internal jugular v. which arises by branches in the thyroid gland which anastomose freely with the v's of the vicinity. **supra-orbital v.** A branch of the facial or frontal v. which lies beneath the occipitofrontalis, running in toward the eyebrow. **suprarenal v's.** V's running from the suprarenal capsules. That of the right side empties into the vena cava, that of the left into the phrenic or renal v. of the same side. **suprascapular v.** A branch of the external jugular v., near its termination, which accompanies the suprascapular artery and its branches. **systemic v's.** The v's which return the blood to the right auricle of the heart from all the tissues and organs except the lungs and chylopoietic organs. **temporal v.** A v. formed by the union of the superficial and middle temporal v's and joining with the internal maxillary v. to form the temporomaxillary v. **temporomaxillary v.** A v. formed by the union of the temporal and internal maxillary v's near the neck of the lower jaw. It divides near the angle of the jaw into two branches, one of which goes to the facial v., the other to the external jugular v. **thymic v's.** Branches of the right and left innominate v's (especially of the former) running from the thymus gland. **thyroid v's.** The inferior, middle, and superior thyroid v's and the vena thyroidea ima. **transverse cervical v.** A branch of the transverse cervicoscapular v. which receives blood from the deep lateral cervical muscles. **transverse cervicoscapular v.** A v. formed by the union of the transverse cervical and scapular v's. It lies beneath the trapezius and empties normally into the subclavian v., occasionally into the external jugular v. **transverse facial v.** A branch of the temporal v. which accompanies the branches of the transverse facial artery. **transverse scapular v.** A branch of the transverse cervicoscapular v. which receives blood from the posterior and upper scapular regions. **ulnar v.** A branch of the brachial v. accompanying the branches of the ulnar artery. **umbilical v's.** Two v's, a right and a left, made up of radicles arising in the chorionic villi of the placenta, and formed in the embryo at the time of the development of the allantoic circulation. Uniting to form a short trunk, they return the blood from the placenta into the meatus venosus. **uterine v's.** Branches of the internal iliac v. which accompany the uterine arteries and form a plexus in the walls of the uterus. **v's of Galen.** Two v's, one on each side, which are continuations of the internal cerebral v's. Often they are replaced by a single vessel, then called the v. of Galen, which sometimes is separated by a longitudinal septum into two. **v. of the corpus cavernosum.** A v. which returns the

blood from the corpus cavernosum and empties into the internal pudic v. **v's of the corpus spongiosum.** V's carrying blood from the corpus spongiosum to the dorsal v. of the penis. **vertebral v.** A branch of the subclavian v., near its termination, which arises in the suboccipital region and accompanies the vertebral artery. **vitelline v's.** Several venous trunks of the primitive embryonic circulation which carry the blood from the sinus terminalis to the meatus venosus. [Lat., *vena*, vein.]

velamen (ve-la'men). A covering; a veil; in the pl., *velamina*, the meninges of the brain. **v. vulvae.** See *pudendal apron*, under *apron*. [Lat., *velare*, to cover.]

velamentous (vel-am-en'tus). Resembling a veil or a cover. **v. insertion.** A condition in which the vessels uniting to form the umbilical cord run, for a considerable distance, from the surface of the placenta in the chorion before forming the cord. [Lat., *velum*, a veil, from *velare*, to cover.]

velamentum (vel-am-en'tum). A covering or investment. **v. abdominale.** See *peritoneum*. **velamenta cerebri.** The cerebral dura, pia, and arachnoid. **v. nativum.** The skin, the common integument. [Lat., from *velare*, to cover.]

veld sore. An infected ulcerating lesion of the skin, which has come into notice since its frequent occurrence in British soldiers in Africa during the Boer war. An ecthyma, exaggerated in its symptoms by the heat and dirt of semitropic conditions.

vellarin (vel'lar-in). A substance obtained from *Hydrocotyle asiatica*. It causes gastro-enteritis when administered to animals by the mouth.

Vella's fistula. A modification of Thiry's f. in which the isolated segment of intestine has both ends stitched to the abdominal wound so that both ends shall remain open instead of but one end.

vellolin (vel'lo-lin). A purified adeps lanae.

vellosin (vel'lo-sin). The compound $C_{23}H_{28}N_2O_4$, said to resemble brucin in physiological action.

veloporphyre (vel-o-por'fir-e). A cylindrical apparatus used for mixing fatty bodies intimately by means of a solid ball which rolls inside it.

ve'lum. A veil or curtain; a membrane or other thin structure serving as a covering or partition. **anterior medullary v.** See *valve of Vieussens*, under *valve*. **inferior medullary v., posterior medullary v.** A lamina of gray nerve substance which stretches across the fourth ventricle from the sides of the uvula to the amygdalae. **v. confine.** A close irregular plexus formed by the spongioblasts at the junction of the gray with the white matter of the brain. **v. flocculi, v. interjectum cerebelli.** See *posterior medullary v.* **v. interpositum.** A fold of pia situated just beneath the fornx, which extends over the third ventricle and the optic thalami. Its borders are vascular fringes

which constitute the choroid plexuses of the lateral ventricles. **v. medullare anterius.** See *valve of Vieussens*, under *valve*. **v. medullare cerebelli, v. medullare posterius** (or **posticium**). See *posterior medullary v.* **v. medullare superius.** See *valve of Vieussens*, under *valve*. **v. palati, v. palatinum.** The incomplete partition between the mouth and the pharynx which is suspended from the posterior margin of the hard palate. [Lat., *velum*, veil, sail, from *vehere*, to carry.]

vena (ve'nah). See *vein*. **inferior v. cava.** A large vein which collects the blood from the lower limbs and the abdomen. It starts from the junction of the common iliac veins and ends in the right auricle of the heart. **superior v. cava.** A large vein which carries the blood from the head and neck, the upper limbs, and the walls of the thorax to the heart. It originates in the union of the right and left innominate veins. **v. anguli oris.** A branch of the facial vein leading from the angle of the mouth. **v. aqueductus cochleae.** One of the *venae auditivae internae* running from the aqueduct of the cochlea. **venae articulares genu.** Branches of the popliteal vein running from the knee joint. **venae ascendentes columnae vertebralis.** The anterior and posterior longitudinal spinal veins. **v. auditiva.** A branch of the inferior petrosal sinus that returns the blood from the distribution of the auditory artery. **venae auditoriae internae.** Branches of the superior petrosal and transverse sinuses which convey the blood from the internal ear. **v. azygos cerebelli posterior.** One of the inferior cerebellar veins that returns the blood from the vermis posterior. **v. azygos conarii.** A branch of the vein of Galen running from the conarium. **venae bronchiales anteriores.** Branches of the innominate veins running from the bronchi. **venae bronchiales posteriores.** Branches of the superior intercostal veins running from the bronchi. **venae bulbosae** (or **bulbo-urethrales**). Branches of the pudendal plexus running from the bulb of the urethra. **venae calcaneae.** Veins running from the heel to the posterior tibial veins. **venae cavernosae.** Branches of the pudendal plexus running from the corpora cavernosa of the penis. **venae cerebelli superiores laterales.** The most external of the superior cerebellar veins. **venae cerebelli superiores mediae.** Those of the cerebellar veins that have a median situation. **venae cerebrales inferiores.** Branches of the cavernous, circular, or petrosal sinus from the lower surface of the cerebrum. **venae cerebrales laterales.** Veins from the lower lateral portions of the cerebrum emptying into the cavernous, circular, or petrosal sinus. **v. circumflexa brachii posterior.** A branch of the axillary vein accompanying the posterior circumflex artery of the arm.

venae circumflexae femoris. Branches of the *v. profunda femoris* accompanying the external and internal circumflex arteries of the thigh. **venae circumflexae penis.** Branches of the dorsal vein of the penis running from the lateral portions of the organ. **v. colica dextra.** A branch of the superior mesenteric vein that returns the blood from the distribution of the right colic artery. **v. colica sinistra.** A branch of the superior mesenteric vein that returns the blood from the distribution of the left colic artery. **v. communicans magna.** A vein connecting the middle cerebral vein and the superior petrosal sinus. **v. communicans ulnaris.** A branch of the basilic vein which communicates with the *arcus volaris carpi venosus profundus*. **venae communicantes obturatoriae.** Two veins into which the dorsal vein of the penis sometimes divides, that empty into the obturator veins. **venae corporis callosi anteriores inferiores.** Branches of the *v. corporis striati* running from the corpus callosum. **venae corporis callosi posteriores inferiores.** Veins running from the posterior and superior part of the corpus callosum, and emptying into the cavernous or inferior longitudinal sinus. **v. corporis striati.** A vein which aids in forming the internal cerebral vein and returns the blood from the corpus striatum. **v. diploica frontalis.** A vein from the diploë of the frontal bone which empties either into the superior longitudinal sinus or into the frontal vein. **v. diploica occipitalis.** A vein from the diploë of the tabular portion of the occipital bone which empties into the torcular Herophili, the transverse sinus, or one of the occipital veins. **v. diploica temporalis anterior.** A vein from the diploë of the temporal bone which empties into the sphenoparietal sinus or some vein over the temporal bone. **v. diploica temporalis posterior.** A vein from the diploë of the posterior portion of the temporal bone which empties into the superior longitudinal or the cavernous sinus or the deep auricular vein. **v. dorsalis pedis externa.** A superficial dorsal vein in the first metatarsal space. **v. dorsalis pedis interna.** A superficial dorsal vein in the fourth metatarsal space. **venae dorsales nasi.** Branches of the angular vein running from the dorsum of the nose. **venae dorsales pedis.** Veins forming a plexus on the dorsum of the foot. **venae dorsales penis subcutaneae.** Small veins running from the prepuce and skin of the dorsum of the penis. **venae profundae brachii.** Branches of the axillary vein which accompany the inferior and superior profunda arteries of the arm. **venae profundae clitoridis.** Branches of the pudendal plexus running from the clitoris. **venae profundae crurales et femorales.** The veins that return the blood from the deep structures of the leg and thigh. **v. profunda penis.** A branch

of the pudendal plexus running from the deep portions of the penis. **venae pterygoideae**. Branches of the internal maxillary plexus running from the pterygoid muscles. **v. pulmonalis dextra inferior**. A vein running from the lower lobe of the right lung to the right pulmonary vein. **v. pulmonalis dextra media**. An occasional vein running from the middle lobe of the right lung to the right pulmonary artery. **v. pulmonalis dextra superior**. A vein running from the middle and upper lobes (occasionally from the latter alone) to the right pulmonary vein. **v. pulmonalis sinistra inferior**. The lower of the two vessels which unite to form the left pulmonary vein. **v. pulmonalis sinistra superior**. The upper of the two vessels which form the left pulmonary vein. **v. pylorica**. A branch of the portal vein, or of one of its branches, that returns the blood from the pylorus. **v. saci lacrimalis**. A branch of the ophthalmic vein running from the lacrimal sac. **venae scrotales anteriores**. Branches of the internal saphenous vein running from the anterior portion of the scrotum. **venae scrotales posteriores**. Branches of the internal iliac vein running from the posterior portion of the scrotum. **v. semino-urethrosacralis**. A branch of the internal iliac vein connected with the pudendal plexus. It receives veins from the seminal vesicles and one emerging from the second anterior sacral foramen. **v. septi lucidi**. A vein which enters the anterior extremity of the septum lucidum and runs backward along its lower edge to anastomose with the *v. corporis striati*. **v. spinalis mediana posterior**. A vein running along the middle of the posterior aspect of the spinal cord. **venae spinales propriae**. The veins running from the substance of the spinal cord. **venae spinales propriae laterales**. Small veins running along the posterolateral surfaces of the spinal cord. **venae stellatae**. Numerous small groups of venous radicles on the surface of the kidney, which converge, unite, penetrate the renal substance, and form the beginnings of the interlobular renal veins. **v. stylo-mastoidea**. A branch of the temporal vein running from the mastoid region. **venae subvertebrales laterales**. A collective name for the veins in front of and on each side of the vertebral column (i. e., the large, small, and left upper azygos, superior intercostal, external vertebral, internal jugular, ilio-lumbar, and lateral and middle sacral veins). **v. sulci centralis**. A vein in the central fissure of the brain which empties into the superior longitudinal or transverse sinus. **v. thyroidea ima**. An unpaired vein running from the isthmus of the thyroid gland and emptying into the left innominate vein. **v. tonsillaris**. A branch of the facial vein, or of one of its branches, running from the venous plexus around the tonsil. **venae vasorum**. Veins that return blood from the walls of blood vessels.

venenific (ven-en-if'ik). Poison-producing. [Lat., *venenum*, poison, + *facere*, make.]

venenous (ven'en-us). Poisonous or toxic. [Lat., *venenosus*.]

venereal (ven-e're-al). Pertaining to or arising from sexual intercourse. [Lat., *venereus*, from *Venus*, the goddess of love.]

venery (ven'er-e). Sexual intercourse.

venesection (ven-e-sek'shun). Blood-letting by opening a vein. [Lat., *vena*, a vein, + *sectio*, a cutting.]

Venetian turpentine, Venice turpentine. See under *turpentine*.

ven'om. A poison; especially one secreted by a serpent. There are a large number of distinct substances in *v.*, including neurotoxins, agglutinins, hemolysins, leukolysins, hemorrhagins, antibactericidal substances and poisonous substances. **snake v.** This is usually a pale, clear fluid of an acid reaction, containing albumin, globulin, and a non-nitrogenous poison called ophiotoxin.

venomous (ven'om-us). Pertaining to or characterized by venom; secreting venom.

venosclerosis (ve-no-skle-ro'sis). Induration of a vein. [Lat., *vena*, vein, + Gr., *skleros*, hard.]

venosity (ve-nos'it-e). A condition of the blood in which it contains less than the normal proportion of oxygen (i. e., is venous in the systemic arteries). It is due to a deficient aëration of the blood in the lungs, and often occurs in physiological experiments by a cessation of the use of the bellows supplying air to the lungs.

venous (ve'nus). 1. Pertaining to the veins or their contents. 2. Pertaining to blood containing a relatively large amount of carbon dioxide and a relatively small amount of oxygen. See *v. blood*, under *blood*. **v. murmur**. See under *murmur*. [Lat., *venosus*, from *vena*, a vein.]

ven'ter. See *abdomen*. **v. of the ilium**. The broad expanded portion of the innominate bone. **v. scapulae**. The broad expanded portion of the scapula. [Lat., *venter*, belly.]

ventilation (ven-til-a'shun). The act or process of supplying fresh and pure air (e. g., to a chamber or to the lungs).

lung v., pulmonary v., pulmonic v. The constant supply of pure air to the lungs and the removal of vitiated air by the processes of inspiration and expiration. **respiratory v.** The constant supply of a fluid rich in oxygen and comparatively poor in carbon dioxide to a respiratory membrane, and the constant removal of the fluid (air or water) after it has given up oxygen and received carbon dioxide in return. [Lat., *ventilatio*, from *ventilare*, to fan.]

ven'trad. Toward the belly; in human anatomy, anterior to the vertebral column.

ven'tral. Pertaining to the belly or to the portion of the body anterior to the vertebral column; the opposite of dorsal. [Lat., *ventralis*, from *venter*, belly.]

ventricle (ven'trik-l). A small, thick-walled cavity in an organ, especially the heart or brain. **cerebral v.** A v. of the brain. **fifth v., first v.** The space between the two laminae of the septum lucidum. **fourth v.** A lozenge-shaped space bounded laterally above by the *processus e cerebello ad testes* and below by the posterior pyramids and the restiform bodies. Its floor is formed by the posterior surface of the pons Varolii and medulla oblongata, and its roof by the valve of Vieussens and the inferior surface of the cerebellum (a layer of the pia being interposed). It connects above with the aqueduct of Sylvius, and below with the central canal of the spinal cord. **large v's, lateral v's (of the brain).** Serous cavities, 1 on each side of the third v., in the substance of the cerebral hemispheres, the floor being formed by the corpus striatum, tenia semicircularis, optic thalamus, choroid plexus, corpus fimbriata, fornix, cornu Ammonis, eminentia collateralis, fascia dentata, and the substance of the cerebrum. **lateral v. of the cerebellum.** A furrow on the floor of each half of the fourth v. near the lateral wall. **left v. of the heart.** The cavity which occupies a small part of the left anterior portion of the heart and the larger part of its left posterior portion, and forms the apex. It communicates with the aorta and the left auricle. **middle v. of the cerebellum.** The median fissure on the floor of the fourth v. **right v. of the heart.** The rounded triangular cavity of the heart which forms the greater part of its anterior and a small part of its posterior portion. It communicates with the right auricle, and propels the venous blood through the pulmonary arteries. **third v.** An open space between the optic thalami, bounded above by the lower surface of the velum interpositum, and laterally by the peduncles of the pineal gland. Its floor is formed by the lamina cinerea, tuber cinereum, infundibulum, corpora albicantia, and posterior perforated space. It communicates with the lateral v's through the foramen of Monro, and with the fourth v. through the aqueduct of Sylvius and with the cavity of the infundibulum. **v. of Arantius.** The small depression or cavity at the pointed extremity of the calamus scriptorius. **v. of the larynx.** An elongated depression between the superior and inferior vocal bands which is prolonged upward as the laryngeal pouch. [Lat., *ventriculus*, dim. of *venter*, belly.]

ventriloquism (ven-tril'o-kwism). The art or practice of speaking so that the sounds appear not to come from the speaker's lips, but to have some other origin. [Lat., *venter*, the belly, + *loqui*, to speak.]

ventriloquist (ven-tril'o-kwist). One who practises ventriloquism.

ventro- Combining form of Lat., *venter*, belly, abdomen.

ventrofixation (ven'tro-fiks-a'shun). Fix-

ing the uterus firmly to the abdominal parietes. [Lat., *venter*, belly, + *fixare*, to fasten.]

ventrosuspension (ven'tro-sus-pen'shun). The operation of attaching an organ (e. g., the uterus) to the abdominal wall so that it hangs from such point of attachment. [Lat., *venter*, belly, + *suspensio*, suspension.]

vein (ven'ül). A small vein. [Lat., dim. of *vena*, a vein.]

veratralbin (ver-at-ral'bin). An amorphous alkaloid, $C_{28}H_{48}NO_8$, obtained from the root of *Veratrum album*.

veratrin (ver-at'rin). 1. Crystalline v. or cevadin ($C_{32}H_{48}NO_8$); a poisonous alkaloid usually obtained from cevadilla seed. 2. Commercial v., an amorphous mixture of crystalline cevadin and other alkaloids. [U. S. Ph.]

veratrina (ver-at-re'nah). See *veratrin* [U. S. Ph.]. **oleatum veratrinae.** A preparation containing 2 per cent. of veratrin in oleic acid [U. S. Ph., 1890]. **unguentum veratrinae.** An ointment consisting of 4 parts of veratrin, 6 of olive oil, and 90 of benzoinated lard [U. S. Ph., 1890].

veratroidin (ver-at-royd'in). An amorphous or partially crystalline alkaloid said to be found in veratrum. Its action differs qualitatively from that of veratrin.

veratrol (ver-at-rol). A liquid, $C_6H_4(OCH_3)_2$. It is the dimethyl ether of pyrocatechu. It is said to cause depression of the central nervous system.

Veratrum (ver-at'rum). 1. False hellebore; a genus of the *Veratreae*, which are a tribe of the *Liliaceae*. 2. Of the U. S. Ph., the rhizome of *V. album* and of *V. viride*. The chemistry of *V. album* and of *V. viride* has been the subject of dispute, but they contain practically the same constituents, the most important being protoveratrin, jervin, rubijervin, and pseudojervin, probably traces of cevadin or crystalline veratrin, being also present. *V. album* and *V. viride* are also known as white and green hellebore respectively, but are quite distinct from black hellebore, which belongs to an entirely different group. See *Helleborus*. **tinctura veratri.** A 10 per cent. tincture of v. [U. S. Ph.]. **V. album.** White hellebore. **V. sabadilla.** A species that resembles *V. album*, and is said, probably erroneously, to furnish a portion of the cevadilla seed of commerce. **V. viride.** American green hellebore. The rhizome (the v. viride of the U. S. Ph.) is a spinal and arterial depressant.

Verbas'cum. Mullein; a genus of scrophulariaceous plants. **V. thapsus.** Common mullein. The flowers are used in mild catarrhs, etc., and externally in itching skin diseases. The leaves are mildly astringent.

Verbena (ver-be'nah). 1. A genus of gamopetalous, dicotyledonous herbs and shrubs. 2. The rhizome and roots of *V. hastata*, blue vervain. [From Lat., *verbena* or *verbenae*, foliage, used in religious ceremonies.]

verbigeration (ver'bij-er-a'shun). The repetition by an insane person of meaningless words and phrases in the form of a discourse, but without sense or sequence. See *catatonia*. [Lat., *verbigerare*, to chatter.]

verdigris (ver'dig-ris). Copper subacetate. The term is also applied, although less properly, to any green deposit occurring on utensils of copper. [O. F., *verd*, green, + *de*, of, + *Gris*, Greks.]

ver'in. An alkaloid, $C_{28}H_{48}NO_8$, a decomposition product of veratrin.

vermicide (ver'mis-id). A medicine that destroys intestinal worms. See *vermifuge*. [Lat., *vermis*, a worm, + *caedere*, to kill.]

vermicular (ver-mik'u-lar). Wormlike in appearance or in movement. [Lat., *vermiculus*, a little worm.]

vermicule (ver'mik-ül). A zygote, especially that of the malarial organism in the mosquito.

vermiform (ver'mif-orm). Worm-shaped, wormlike. **v. appendix**. See *appendix ceci*, under *appendix*. [Lat., *vermis*, a worm, + *forma*, form.]

vermiformis (ver-mi-form'is). Wormlike in shape. [Lat., *vermis*, worm, + *forma*, form.]

vermifuge (ver'me-füj). Having the property of expelling intestinal worms. [Lat., *vermis*, a worm, + *fugare*, to put to flight.]

vermilion (ver-mil'yun). The red mercuric sulphid, HgS ; used as a pigment. [Lat., *vermiliunum*.]

ver'min. An external animal parasite; animal parasites as a group. [Lat., *vermis*, worm.]

verminal (ver'min-al). Pertaining to or caused by worms or vermin.

vermination (ver-mi-na'shun). The state of being infested with worms or other parasites. [Lat., *verminatio*.]

verminous (ver'min-us). Due to or having the character of worms.

ver'mis. A worm or wormlike structure. **v. major**. One of the cerebellar hemispheres. [Lat., *vermis*, worm.]

vermouth, **vermuth** (ver'mooth). A fortified white wine flavored with *Artemisia absinthium* and various other bitter and aromatic substances. [Ang.-Sax., *vermöd*, wormwood.]

ver'nin. A substance, $C_8H_{10}N_4O_4$, obtained from *Trifolium*, *Medicago sativa*, etc.

ver'nix. Varnish. **v. caseosa**. A viscid, whitish, fatty material found on the fetus at birth; a mixture of cast-off epithelium, downy hairs, and the secretion of the sebaceous glands. [Lat.].

Vernonia (ver-no'ne-ah). Ironweed; a genus of the *Compositae*. **V. anthelmintica**. The seeds, which yield a solid green oil, are diuretic, anthelmintic, and, according to some, tonic and stomachic. [*W. Vernon*, an English botanist.]

vernonin (ver-non'in). A febrifuge glucosid, $C_{10}H_{20}O_7$, obtained from *Vernonia nigriflora*.

ver'oform antiseptic. A proprietary solution of formaldehyd and soap. **v.**

germicide. A proprietary solution like *v. antiseptic*, but more concentrated.

veronal (ve'ro-nal). Diethylmalonylurea, or diethylbarbituric acid, $(C_2H_5)_2C:(CO-NH)_2:CO$, a hypnotic. **v. sodium**. See *sodium diethylbarbiturate*, under *sodium*.

Veronica (ve-ron'ik-ah). Cancerwort; a genus of the *Scrophularineae*. **V. beccabunga**. Brooklime; a succulent salad plant found in all climates, especially in the temperate regions. The fresh herb is used as an antiscorbatic and in chronic diarrhea. **V. officinalis**. Common medicinal speedwell. The stem, including the leaves and flowers, is astringent and tonic. **V. virginica**. Great Virginian speedwell. The rhizome is the leptandra of the U. S. Ph. In its dried state it is a mild cathartic. The eclectics use it in place of mercurials, though it probably has no influence on the liver. The fresh root is a violent purgative and emetic. [Perhaps from Lat., *verus*, true, + Gr., *eikon*, an image.]

verruca (ver-ru'kah). Pl., *verrucae*. A benign hypertrophic growth of the skin that anatomically shows proliferation of the papillae and hypertrophy of the overlying epidermis. **v. acuminata**. See *condyloma acuminata*, under *condyloma*. **v. digitata**. A term applied to warts in which the papillary hypertrophy is much greater and the lesions, instead of consisting of an agglutinated mass of papillae and epidermis, are a group of separated fingerlike projections arising from one base. **v. filiformis**. A threadlike wart, made up of one or a few hypertrophic papillae. **v. necrogenica**. A post-mortem wart, a form of lupus developing about the knuckles, as a result of inoculation with the tubercle bacillus from cadavers. **v. peruana**. Peruvian wart; Carrion's disease; an endemic disease in Peru. It is characterized by fever, rheumatic pains, anemia and an eruption which develops into warty, bleeding tumors. **v. plana juvenalis**. The usual flat abundant, small, smooth, glistening warts, which are seen especially about the face in children. **v. plantaris**. Warts on the soles of the feet; smooth and hard from pressure, with a pitted surface. **v. senilis**. Keratosis senilis. **v. vulgaris**. The common wart with a base as broad as a pea and a rounded or slightly flattened top. Hyperkeratosis is marked as the wart becomes older. Hands and fingers, face and scalp are the most common situations for it. [Lat., *verruca*, a wart, a steep place.]

verrucose (ver'ru-kös). Warty, of the nature of a wart; attended with or covered with warts or wartlike growths. [Lat., *verrucosus*.]

ver'ruca peruana. Syn.: *Carrion's disease*, *Oroya fever*. Peruvian wart, a disease endemic in certain valleys of the Peruvian Andes, which is characterized by a prodromal febrile disturbance of several weeks' duration, with the subsequent development of wartlike granular tumors upon the skin and in other structures.

verru'gas. Peruvian wart; an endemic disease resembling frambesia. [Sp. *warts*.]
versicolor (ver'sik-ol-or). 1. Variegated. 2. Changing color. [Lat., *vertere*, to turn, + *color*, color.]

version. 1. The operation of turning the fetus in utero so as to change the presenting part materially. 2. A deviation of an organ, especially the uterus, from its natural posture; an inclination. **abdominal v.** See *external v.* **bipolar v.** Turning by acting upon both poles of the fetus. See also *combined (external and internal) v.* **cephalic spontaneous v.** That variety of spontaneous v. in which the cephalic pole engages. **cephalic v.** Syn.: *head turning, rectification* (applied to a mere change of position). Turning so as to cause the head to present. **combined (external and internal) v.** Of J. B. Hicks, a variety of bipolar v.; only two or three fingers are introduced into the uterus, and with them the presenting pole is pushed away from the brim of the pelvis while the other hand, applied to the abdominal wall, presses or slides the opposite pole down into the pelvic inlet. **external v.** V. by external manipulation solely. **forced v.** See *accouchement forcé*. **Hicks's method of v.** See *combined v.* **internal v.** V. with the hand carried into the uterus. **pelvic v.** Turning by the breech; v. by the pelvic pole. **podalic v.** Turning by the feet. **spontaneous v.** The process by which a transverse presentation of the fetus is converted by the powers of nature into a presentation of one or the other pole. [Lat., *versio*, a n. of action, from *vertere*, to turn.]

vertebra (ver'te-brah). One of the osseous segments of which the skeleton proper is made up. It consists typically of a number of osseous pieces definitely arranged so as to form two rings, a dorsal and a ventral, meeting in a common center (the centrum), which inclose respectively the central nervous system and the circulatory organs and viscera, and are known as the neural and hemal arches. **cephalic vertebrae.** The bones of the skull considered as vertebral in type. **cervical vertebrae.** The anterior or superior seven of the vertebrae, the two nearest the skull being termed the atlas and axis. They have the transverse processes perforated for the vertebral artery, the spinous process short and bifid and the lumen of the neural arch somewhat triangular and larger than in the dorsal or lumbar vertebrae. **coccygeal vertebrae.** The vertebrae of the coccygeal region. They are rudimentary, commonly four in number, sometimes five, seldom three. **cranial vertebrae.** Vertebrae whose component parts consist of cranial bones and the osseous and cartilaginous appendages of the skull. The theory of their existence was advanced by Goethe and Oken and elaborated by Cuvier and Sir Richard Owen. Their homology with true vertebrae is no longer accepted on embryological evi-

dence. **dorsal vertebrae.** See *thoracic vertebrae.* **lumbar vertebrae.** The five vertebrae which lie above or anterior to the sacrum. They lack costal articular surfaces, and the transverse diameter of their bodies is greater than the anteroposterior. **sacral vertebrae.** The segments, five in number, which in adult life fuse to form the sacrum. **thoracic vertebrae.** The vertebrae, twelve in number, with which the ribs articulate. They are especially characterized by articular surfaces for the ribs, downward sloping spinous processes, and a small circular lumen of the neural arch. [Lat., *vertebra*, joint, from *vertere*, to turn.]

vertebral (ver'te-bral). 1. Pertaining to a vertebra. 2. Having vertebrae, vertebrate.

vertebrata (ver-te-brah'tah). Animals having a spinal column.

vertebrate (ver'te-brät). Pertaining to a vertebra; having vertebrae; as a n., a v. animal.

vertebro- Combining form of Lat., *vertebra*, a joint.

vertebrobasilar (ver'te-bro-bas'il-ar). Pertaining to the vertebrae and the lower portion of the skull, especially the basilar bone or process.

vertebrochondral (ver'te-bro-kon'dral). Connecting the vertebrae and the costal cartilages.

vertebrocostal (ver'te-bro-kos'tal). Pertaining to or connecting the ribs and the vertebrae.

vertebrodidymia (ver'te-bro-did-im'e-ah). A double monstrosity in which the individuals are united by the vertebrae. [Lat., *vertebra* + Gr., *didymos*, double.]

vertebrofemoral (ver'te-bro-fem'o-ral). Pertaining to the vertebral column and the femur.

vertebroiliac (ver'te-bro-il'e-ak). Pertaining to the vertebrae and the ilium.

ver'tex. The crown of the head; a somewhat indefinite area of the head that is highest when the subject is in the erect posture. [Lat., *vertere*, to turn.]

vertiginous (ver-tij'en-us). Pertaining to, of the nature of, subject to, or affected with vertigo.

vertigo (ver'tig-o). Any movement or sense of movement, either in the individual himself or in external objects, that involves a real or seeming defect in the equilibrium of the body. Giddiness, dizziness. **arteriosclerotic v.** V. due to impaired brain nutrition in consequence of arteriosclerosis of the cerebral vessels. **auditory v., aural v., auricular v.** See *Ménière's disease*, under *Ménière*. **gastric v.** V. caused by disorder of the stomach. **horizontal v.** V. which appears when the patient reclines, and ceases when he assumes the erect posture. **labyrinthine v.** See *Ménière's disease*, under *Ménière*. **nocturnal v.** A sensation of falling felt shortly after going to sleep. **objective v.** V. in which external objects seem to whirl around. **rotatory v.** V. produced by

rapid rotation of the body or by looking at rotating objects. **stomachal v.** See *gastric v.* [Lat., *vertere*, to turn.]

verumontanum (ve'ru-mon-ta'num). See *caput galli*, under *caput*.

vesania (ve-sa'ne-ah). See *insanity*. [Lat., *vesanus*, insane.]

vesicant (ves'ik-ant). Producing vesication; as a n., a v. substance. [Lat., *vesicans*, from *vesica*, a bladder.]

Vesicaria (ves-ik-a're-ah). A genus of the *Taeniadae* in the larval state. **V. granulosa**. See *Echinococcus hominis*, under *Echinococcus*. **V. hygroma**, **V. lobata** (*suilla*), **V. orbicularis**. See *Cysticercus cellulosae*, under *Cysticercus*. **V. socialis**. See *Centurus cerebralis*, under *Centurus*. [Lat., *vesica*, bladder.]

vesication (ves-ik-a'shun). 1. The act or process of raising a blister. 2. The formation of a blister. [Lat., *vesica*, a bladder.]

vesicatory (ves'ik-a-to-re). See *vesicant*.

vesicle (ves'ik-l). 1. A little sac or cyst; in histology, a minute solid or semisolid mass (e. g., a cell or nucleus) inclosed by a membrane. 2. A lesion of the skin or mucous membrane formed by a collection of clear liquid within or beneath the epithelium, causing a small, circumscribed elevation of the surface. See *bleb*, *bulla*, and *pock*. **allantoic v.** The internal, epithelial portion of the allantois. **anterior cephalic**. A thin-walled cavity formed by the closing in of the dorsal laminae over the cephalic extremity of the primitive groove of the embryo and a subsequent transverse constriction at about the extremity of the notochord. From it are developed the cerebral hemispheres, pineal gland, pituitary body, corpus callosum, cerebral peduncles, fornix, and lateral and third ventricles. Subsequently it is divided by an anteroposterior cleft, which finally becomes the longitudinal fissure. **blastodermic v.** See *blastula*. **encephalic v's.** The three compartments into which the anterior extremity of the primitive medullary tube is divided at an early period in fetal life. Other secondary v's spring from the primary one, from which are formed the organs of sense. **fat v.** See *fat cell*, under *cell*. **germinal v.**, **germinative v.** A somewhat spherical body in the ovum with an investing membrane, having fluid and granular contents with a protoplasmic network and germinal spot or spots; regarded essentially as a nucleus. **graafian v.** Syn.: *follicle of de Graaf*, *ovarian follicle*. A closed sac which contains the ovarian ovum. It consists of an external membrane lined with small granular cells (the *membrana granulosa*) which are condensed at one point to form the discus proligerus. Prior to the ripening of the ovum the v. is situated within the stroma of the ovary, but as maturation advances it becomes superficial, its walls grow vascular, and it is distended with a serous fluid. It finally ruptures, allowing the ovum to escape. **middle cerebral v.**

In embryology, the dilatation of the medullary tube just posterior to the cephalic extremity of the notochord, from which the corpora quadrigemina, cerebral peduncles, and aqueduct of Sylvius are developed. **optic v.** See *primary ocular v.* **otic v.** Syn.: *auditory capsule*. The embryonic rudiment of the organ of hearing, formed by an involution of the epiblast from the outer surface of the head in the region of the medulla oblongata, opposite the dorsal end of the hyoidean arch. **primary ocular** (or **optic**) **v's.** Lateral projections from the anterior cerebral v., from which the eyes are developed. **primitive cerebral v.** An expansion at the anterior extremity of the medullary tube, from which is developed the encephalon. It is subsequently divided into the anterior, middle, and posterior cerebral v's. **seminal v's.** Two membranous tubes, coiled and doubled upon themselves so as to present a sacculated appearance, lying on the posterior surface of the base of the bladder with their blind posterior extremities (between which the vasa deferentia run) considerably separated. They converge toward the prostate and unite each with its corresponding vas deferens. They serve as receptacles for the semen. **umbilical v.** The navel sac, a structure of the human ovum which in the lower animals is called the vitelline sac or yolk sac. It is situated on the abdominal aspect of the embryo, being continuous with the omphalomesenteric duct. [Lat., *vesicula*, dim. of *vesica*, a bladder.]

vesico-. Combining form of Lat., *vesica*, bladder.

vesicular (ves-ik'u-lar). 1. Pertaining to a vesicle; affected with, consisting of, or of the nature of vesicles. 2. Pertaining to or resembling a bladderlike structure. 3. Of a murmur, sounding as if generated within air vesicles of the lungs. [Lat., *vesicularis*.]

vesiculated (ves-ik'u-la-ted). Having the appearance of a bunch of grapes; hydratidiform. [Lat., *vesicula*, a vesicle.]

vesiculitis (ves-ik-u-li'tis). Inflammation of a vesicle, especially of the seminal vesicles. **seminal v.** An acute or chronic infective inflammation of the seminal vesicles. [Lat., *vesicula*, a vesicle, + Gr., *itis*, inflammation.]

vesiculotomy (ves-ik-u-lot'o-me). Incision of one or both seminal vesicles. [Lat., *vesicle*, + Gr., *tome*, a cutting.]

ves'sel. A utensil for holding liquids, etc.; in anatomy, a duct or channel for containing or conveying any fluids of the body, especially the blood. In botany, a form of tubes resulting from confluent cells, distinguished by peculiar markings from which they are designated as "dotted v's," "scalariform v's," etc. **absorbent v's.** The lacteals and lymphatics. **blood v's.** See *artery*, *vein*, and *capillary*. **chyliferous v's.** Absorbent v's which arise in the villi of the intestinal walls and terminate in the thoracic duct.

hemorrhoidal v's. The dilated veins of the rectum and anus. **lacteal v's.** See *chyliferous v's*. **lymphatic v's, lymph v's.** See *lymphatic*.

vestibular (ves-tib'u-lar). Pertaining to a vestibule, especially the vestibule of the vulva.

vestibule (ves'tib-ūl). 1. A triangular space bounded on the two sides by the labia pudendi minora and below by the ostium vaginae. 2. The first division of the osseous labyrinth of the internal ear; an irregular, elliptical cavity, 4 to 5 mm. in diameter. **v. of the mouth.** The portion of the mouth outside of the teeth, bounded by the lips and the cheeks. **v. of the nose.** The region of the external nostrils, including all parts roofed by the nasal cartilages. [Lat., *vestibulum*, from *vestis*, a garment.]

vestigial (ves-tij'e-al). Of the nature of a vestigium; rudimentary.

vestigium (ves-tij'e-um). A trace, a slight impression or marking, a rudimentary structure; also the sole. [Lat., *vestigium*.]

vesuvium (ves-u'vin). Trimido-azobenzene hydrochlorin.

veterinarian (vet'er-in-a're-an). A practitioner of veterinary medicine. [Lat., *veterinarius*.]

veterinary (vet'er-in-a-re). Pertaining to or concerned with the domestic animals. [Lat., *veterina*, beast of burden.]

via (ve'ah). pl. *viae*. A way, passage, or tract; also a method or manner. **primae viae.** The gastro-intestinal tract. [Lat., *via*, a way, a road.]

viability (vi-a-bil'it-e). The state of being viable.

viable (vi'ab-l). Of a fetus, far enough advanced in development to be capable of survival apart from the maternal organism. [Lat., *vitabilis*, from *vita*, life.]

vi'al. Also written phial. A small bottle. [Gr., *phiale*, a drinking bowl.]

vi'bex. Pl., *vibices*. *Obs.* 1. A mark produced or appearing as if produced by the stroke of a whip. 2. A linear echymosis. [Lat., *vibex*, the mark of a blow.]

vibratile (vi'brat-il). Capable of shaking or quivering. [Lat., *vibratilis*.]

vibration (vi-bra'shun). 1. The act or process of shaking or quivering. 2. An oscillating or quivering motion. **elastic after v.** The final oscillations which follow the period of elongation in a muscular contraction. **hydatid v.** See *hydatid thrill*, under *thrill*. **nerve v.** See *percussion* (2d def.). [Lat., *vibrare*, to shake.]

vibratory (vi'bra-to-re). Shaking, quivering, oscillating.

Vibrio (vib're-o). An elongated, coiled bacillus; a synonym for *Microspira* and for *Spirillum*. [Lat., *vibrare*, to shake.]

vibrissae (vi-bris'se). *Obs.* The hairs that grow at the entrance of a mucous orifice, especially of the nose. [Lat., *vibrare*, to shake.]

Viburnum (vi-bur'num). A genus of the *Sambuceae*. The vesicant bark is used for setons. **V. opulus.** The bark, flowers, and fruits have properties like those

of *Sambucus nigra*, and were formerly official. The bark, known as cramp bark, is antispasmodic. Both bark and fruits contain valerianic acid. **V. prunifolium.** American black haw; of the U. S. Ph., the bark of *V. prunifolia*. Its medicinal properties are not well determined. It is recommended in uterine pain and in the nervous complaints of pregnant women. The fluidextract of *V. opulus* and that of *V. prunifolia* are official in the U. S. Ph.

vicarious (vik-a're-us). Exercising the function of a substitute. **v. menstruation.** See under *menstruation*. [Lat., *vicareus*, from *vicis*, interchange.]

vidian (vid'e-an). Named for or described by *Guido Guidi* (Lat., *Vidus Vidius*), Italian anatomist, 1500-1569. See *v. artery, canal, and nerve*.

Vienna caustic. See under *caustic*.

Villate's solution. See *mistura adstringens et escharotica* [N. F.], under *mistura*.

villoma, villioma (vil-lo'mah, vil-le-o'mah). A villous tumor, as of the rectum. [*Villus* + Gr., *oma*, tumor.]

villosity (vil-los'it-e). A soft, flexible offshoot, more or less branching, from a membranous surface (e. g., that of the vitelline membrane and that of the chorion).

villous (vil'lus). Shaggy or hairlike; covered with villi. [Lat., *villosus*.]

vil'lus. Pl., *villi*. A tuft of hair, a hairlike growth or process, especially from a membranous surface. **intestinal villi.** Minute fingerlike or tongue-like processes projecting from the free surface of the mucous membrane of the small intestine.

They consist of a central part, or core, formed by a projection of the mucous membrane and a few longitudinally arranged muscular fiber cells from the muscularis mucosae. The core of the v. contains a closely set network of blood vessels and one or more lacteal trunks with a cecal termination near the free end of the v. **synovial villi.** Minute fingerlike processes projecting from the surface of the vascular or haversian fringes of the synovial membranes. They consist of a central non-vascular core of connective tissue and a covering of small, rounded cells which appear, after staining with silver nitrate, somewhat like endothelia. **villi of a mucous membrane.** Small threadlike elevations of the corium seen in the stomach and elsewhere. They are covered with epithelium, and contain blood vessels, nerves, and lacteals. **villi of the chorion.** Syn.: *chorionic villi*.

Cellular processes of fringes growing outward from the external surface of the vitelline membrane or the outer layer of the blastoderm and eventually covering the entire chorion. Only those confined to that portion of the chorion that forms the fetal part of the placenta become fully developed. [Lat.]

Vinca (vin'kah). Periwinkle; a genus of the *Corolliflorae*. **V. major.** Large periwinkle, having the properties and uses

- of *V. minor*. **V. minor**. Ground ivy. The leafy and flowering branches are used as a hemostatic, as a mild purgative and diaphoretic. [Lat., *vincire*, to bind.]
- Vincent's angina**. A form generally affecting only one tonsil and not accompanied by fever. There is at first an exudate and then ulceration. The microscope shows the presence of a spirochete and a fusiform bacillus. [*H. Vincent*, Parisian physician, born 1862.]
- Vincetoxicum** (vin-se-tok'se-kum). 1. A genus of the *Asclepiadaceae*. 2. In pharmacy, *Cynanchum v. (V. officinale)*. It yields a glucosid, asclepiadin, which is sometimes classed with the aconitin group. [Lat., *vincere*, to conquer, + *toxicum*, poison.]
- vinculum** (vin'ku-lum). A band or tie. See *ligament* and *bandage*. **vincula tendinum**. Vascular synovial folds which stretch over the flexor tendons of the hand and foot on the first and second phalanges. [Lat., *vincere*, to bind.]
- vinca imbrica'ta**. See *Malabar itch*.
- vinegar** (vin'e-gar). 1. A liquid of pungent aromatic odor and sour taste obtained from cider, wine and other alcoholic solutions by acetous fermentation. 2. A pharmaceutical preparation consisting of a solution of medicinal substance in dilute acetic acid. **v. of four thieves**. *Obs.* The aromatic v. of the French pharmacopeia. The name is due to a legend that it conferred immunity from the plague upon four men who robbed the sick under the guise of succoring them. [Fr., *vinaigre*, sour wine.]
- vinometer** (vi-nom'et-er). An instrument for measuring the percentage of alcohol in a liquor. [Lat., *vinum*, wine, + Gr., *metron*, a measure.]
- vi'nous**. Containing wine or possessing its characteristics. [Lat., *vinum*, wine.]
- vi'num**. See *wine*. **spiritus vini**. 1. Alcohol. 2. Brandy. **spiritus vini depuratus**. Alcohol obtained by distillation of brandy. **spiritus vini dilutus**. Dilute alcohol. **spiritus vini gallici**. Of the U. S. Ph., brandy which must be at least 4 years old. **v. adustum**. Brandy. **v. album**. White wine; any wine of light color, made from white grapes or from dark grapes fermented apart from the skins and seeds (marc) containing 8.5 to 15 per cent of alcohol [U. S. Ph.]. **v. album fortius**. A mixture of white wine with one-seventh as much alcohol [U. S. Ph., 1880]. **v. aromaticum**. A preparation made by extracting lavender flowers, peppermint, rosemary, sage leaves, and the herbs of wormwood and origanum with stronger white wine. **v. portense**. Port wine. **v. rubrum**. Red wine; any wine of deep red color made from black grapes fermented with the skins and seeds (marc) containing 8.5 to 15 per cent. of alcohol [U. S. Ph.]. **v. stibiatum**. Wine of antimony. **v. thebaicum**. Wine of opium. **v. xerense**, **v. xericum**. Sherry wine [Br. Ph.]. [Lat., *vinum*, wine.]
- vioform** (vi'of-orm). Nioform; iodochloroxyquinolin, C_6H_5ONCH . A substitute for iodoform.
- Vi'ola**. Violet, pansy, a genus of herbs, rarely undershrubs. **V. odorata**. Sweet-scented violet. The flowers and the root are used occasionally. The flowers are employed only in the preparation of a pectoral and emollient syrup and as a test for acids and alkalis. The root is emetic and purgative. **V. tricolor**, **V. trinitatis**. Heart's ease or pansy; of the gardens, herb Trinity. The herb is laxative, emollient, and diuretic. [Lat.]
- Viperidae** (vi-per'i-de). A family of snakes of the order *Ophidia*, and including the *Crotalinae* which includes the rattlesnakes, water moccasins, and copperheads, as well as the *Viperinae* or true vipers and adders, all of these genera being venomous.
- viperin** (vi'per-in). A principle found in the venom of the adder.
- Virchow's degeneration**. See *amyloid degeneration*, under *degeneration*. **V's law**. That the cell elements of tumors are derived from preëxisting tissue cells.
- virgin** (vir'jin). 1. A woman who has had no experience of sexual intercourse. 2. As an adj. (applied to oil, wine, etc.), flowing spontaneously, without pressure being used. [Lat., *virgo*, *virginis*, virgin.]
- virginal** (vir'jin-al). Pertaining to or in the state proper to virginity.
- virginity** (vir-jin'it-e). The condition of being a virgin. **physical v.** That condition of a woman in which no coitus has actually taken place, whatever the real state of her virtue may be. [Lat., *virginitas*, from *virgo*, a virgin.]
- viridin** (vir'id-in). 1. An oily liquid, $C_{24}H_{40}N$, derived from the oils obtained from the distillation of organic matter. 2. Chlorophyll.
- virile** (vir'il). Pertaining to a man or to the faculties or powers of a man or the male sex. [Lat., *virilis*, from *vir*, a man.]
- virility** (vir-il'it-e). The condition of possessing virile powers. [Lat., *virilis*, virile.]
- virose** (vi'rōs). Poisonous; having a taste and smell suggestive of poisonous properties, the so-called narcotic smell and taste. [Lat., *virus*, poison.]
- virtue**. 1. Efficacy of an active medicinal substance. 2. Rectitude, chastity.
- virulence** (vir'u-lenz). The power possessed by organisms to produce disease in a living host, with the formation of poisonous substances. The variations in v. of an organism in different species of hosts are due to greater power to grow than to produce poisonous processes. [Lat., *virus*, poison.]
- virulent** (vir'u-lent). Poisonous, containing or due to an active virus, malignant. [Lat., *virulentus*, from *virus*, poison.]
- virulin** (vir'u-lin). A material which, when extracted from virulent cultures by means of salt solution, renders the bacteria susceptible to phagocytosis and which, when added to avirulent cultures,

makes them more resistant to this action.

vi'rus. 1. A poison. 2. Any morbid agent which, when brought into contact with animal tissue, disseminates itself so as to affect the vitality of the parts on which it acts and in many cases that of the entire organism. **anticholeraic v.** A preventive injection employed against Asiatic cholera, made from dead cholera spirilla. **antidysenteric v.** A preventive injection employed against dysentery, made from dead dysentery bacilli. **anti-plague v.** A preventive injection, employed against bubonic plague, made from dead cultures of the bacillus of bubonic plague. **antirabic v.** An injection made from the dried and attenuated spinal cords of rabbits which have been inoculated with rabic virus; used to prevent the development of rabies. **antityphoid v.** An injection made from dead typhoid bacilli; used as a preventive against typhoid fever. **attenuated v.** A v. that has become weakened. **Haffkine's v.** Antibubonic v. A v. used against the bubonic plague. **specific v.** The characteristic poison of a particular disease. **vaccine v.** See *vaccine*. [Lat., *virus*, poison.]

vis. Pl., *vires*. Force, power. **v. a tergo**. Pressure from behind (used especially, in physiology, for that exerted by the heart's action on the circulation of the blood). **v. conservatrix**. See *v. medicatrix naturae*. **v. contractilis insita**. See *muscular irritability*, under *irritability*. **v. essentialis**. The "physical soul," the mysterious cause of the development of animal organisms according to the wolfian theory of epigenesis. **v. expulatrix**. An old term for a supposed force which effected the removal of excrementitious matters from the system. **v. formativa**. See *plastic force*, under *force*. **v. insita**. The inherent irritability of a muscle. **v. medicatrix**. A remedial force or impulse. **v. medicatrix naturae**. The remedial impulse of nature; the self-recuperative power of the bodily system independent of the use of medicines. **v. metabolica**. See *metabolism*. **v. mortua**. The physical properties of tissues aside from those depending on their vitality (e. g., the elasticity which may remain in tendons after the occurrence of somatic death). **v. muscularis**. See *muscular force*, under *force*. **v. nervosa**. Nervous power or impulse. **v. opposita**. A force acting in the direction opposite to that of another force or of the resultant of other forces. **v. plastica**. See *plastic force*, under *force*. **v. vitae**, **v. vitalis**. The energy or force that characterizes an organism in virtue of its possessing life. **v. viva**. See *living force*, under *force*. (Nearly all obsolete terms.) [Lat.]

visceral (vis'ser-al). Pertaining to the viscera or to a viscus. [Lat., *visceratis*.]

visceral'gia. See *enteralgia*. [Lat., *viscus*, viscus, + Gr., *algos*, pain.]

visceroptosis (vis'eer-op-to'sis). General prolapse of the abdominal organs; com-

monly enteroptosis. [Lat., *viscus*, viscus, + Gr., *ptosis*, a fall.]

viscin (vis'sin). A viscous, soft, and elastic substance, $C_{20}H_{40}O_8$, obtained from *Viscum album*, the bark of *Ilex aquifolium*, the sap of *Ficus religiosa*, etc.

viscose (vis'kōs). Slimy, glutinous; as a n., the gummy substance formed by the viscous fermentation of cane sugar.

viscosimeter (vis-kos-im'tet-er). An instrument employed for determining the viscosity of the blood. [*Viscosity* + Gr., *metron*, a measure.]

viscosity (vis-kos'it-e). The state of being viscous.

Viscum (vis'kum). 1. A genus of lorantheaceous shrubs parasitic on trees. 2. See under *V. album*. **V. album**. Common mistletoe. The young branches (including the bark and leaves) were formerly used in epilepsy, catarrh, etc. It is now used but little in medical practice. [Lat.]

viscus (vis'kus). Pl., *viscera*. Any one of the internal organs of the body; generally used in the pl., viscera. [Lat.]

vision (vizh'un). The act of seeing; the power of seeing; sight. **after v.** The perception of an after image. **binocular**

(single) v. V. with both eyes. The object is seen singly, if the images fall on corresponding points in the two eyes, i. e., on the two foveas. **double v.** See *diplopia*. **half v.** See *hemiofia*.

multiple v. V. in which one object appears as several. **peripheral line of v.** The field of v. corresponding to the parts of the retina outside the fovea centralis. **stereoscopic v.** That form of v. in which the combined image seen appears to be a solid body. [Lat., *visio*.]

visual (viz'u-al). Pertaining to vision. **v.**

acuity. Capacity of the retina for distinguishing contiguous impressions as separate objects. The standard for acuteness of vision in ophthalmology is the ability to distinguish at 20 feet (6 meters) letters which subtend at the eye an angle

of 5 min. $V = \frac{20}{20}$. **v. line**. See under

line. **v. purple**. Syn.: *erythropsin*, *rhodopsin*. The pigments in the rods of the retina. Its constitution is not known. **v. red**. See *v. purple*. [Lat., *visualis*, from *videre*, to see.]

visuometer (vis-u-om'tet-er). An instrument for measuring the range of vision. [Lat., *visus*, sight, + *metron*, a measure.]

vi'sus. See *vision*. [Lat., *visus*, p.p. of *videre*, to see.]

vi'tal. Pertaining to life, also essential to life; as a n., in the pl., *v's*, organs which are regarded as necessary to life, or injury to which endangers or destroys life.

v. functions. See under *function*. **v. heat**. See *animal heat*, under *heat*. [Lat., *vitalis*, from *vita*, life.]

vitalism (vi'tal-ism). The doctrine of vital force; a system of physiology which considers that vital phenomena imply the action of a specific force or energy not present in dead substances.

- vitality** (vi-tal'it-e). 1. Principle of life. 2. Action, animation. 3. State of being alive, also power to resist death.
- vitalize** (vi'tal-iz). To impart life to, to endow with life.
- vitamin** (vi-tam'in). One of a class of substances existing in minute quantities in natural foods, and necessary to normal nutrition and growth. Its absence causes such diseases as beriberi, scurvy, etc. [Lat., *vita*, life, + *amin*.]
- vitellin** (vit-el'in). 1. Ovovitellin, nuclein, containing some lecithin obtained from the yolk of eggs. 2. Globulin, obtained from lentils. [Lat., *vitellus*, yolk.]
- vitelline** (vit-el'len). 1. Pertaining to the vitellus. 2. Of the color of the yolk of egg. [Lat., *vitellus*, yolk.]
- vitellose** (vit-el'los). An intermediate product in the hydration of vitellin analogous to an albumose.
- vitellus** (vit-el'lus). 1. The cell body of the ovum; the yolk of an egg or of an ovule; that portion of the contents of the vitelline membrane which is to afford nutriment to the embryo and take part in its development during the period of incubation in the *Ovipara*, and up to the time of the establishment of a nutrient connection with the maternal organism in the *Vivipara*. 2. Of U. S. Ph., 1890, yolk of egg, yolks of hens' eggs. **glyceritum** [U. S. Ph., 1890]. A preparation made by triturating together 9 parts of yolk of egg and 11 of glycerin. [Lat.]
- vitiligo** (vit-il'i'go). See *leukoderma*. [Lat., *vitiligo*, tetter.]
- Vitis**. The vine; a genus of the *Ampelideae*. **V. vinifera**. The grapevine; a native probably of Caspian regions, but now cultivated under numerous forms in all countries having a mean summer temperature of 66° F. or more. The leaves and tendrils contain tartaric and malic acids, glucose, and cane sugar; they are astringent. The ripe fruits are diuretic and laxative, and their fermented juice constitutes wine. The seeds contain 5 or 6 per cent. of tannin and over 15 per cent. of a bland fixed oil.
- vitium** (ve'te-um). Pl. *vitia*. A fault, defect, abnormality. **v. cordis**. An organic lesion of the heart. **v. primæ conformationis**. See *congenital malformation*, under *malformation*. [Lat.]
- vitreous** (vit're-us). Glassy, resembling glass. **v. humor**. See *corpus vitreum*, under *corpus*. [Lat., *vitreus*, glassy.]
- vitriol** (vit're-ol). Any metallic salt (as now used, generally a sulphate) having a glassy luster. **blue v.** See *copper sulphate*, under *copper*. **calcareous v.** Calcium sulphate. **copper v.** See *copper sulphate*, under *copper*. **double v.** An impure copper sulphate containing 70 to 80 per cent. of ferrous sulphate. **green v., martial v.** Syn.: *copperas*. See *iron sulphate*, under *iron*. **Nordhausen oil of v.** Nordhausen sulphuric acid. **oil of v.** Sulphuric acid; so-called because originally prepared from green vitriol. **Roman v.** See *copper sulphate*, under *copper*, and *iron sulphate*, under
- iron. white v.** Zinc sulphate, especially the commercial salt. [Lat., *vitrum*, glass.]
- vitriolated** (vit're-ol-a-ted). Composed of or containing vitriol; containing sulphur or sulphuric acid.
- vitriolic** (vit-re-ol'ik). Containing or derived from vitriol; sulphuric. **v. acid**. See *sulphuric acid*, under *acid*.
- vitriolum**. (vit-re'o-lum). See *vitriol*. **v. album**. White vitriol. **v. calcareatum**. Calcium sulphate. **v. hungaricum, v. londinense, v. Riverii**. Iron sulphate. **v. veneris**. Copper sulphate.
- vitro, in**. In glass, in a test tube. [Lat., *vitrum*, glass.]
- vitrum**. Glass. **v. causticum**. See *burning glass*, under *glass*. **v. hypoclepticum**. A funnel for separating water from oil. [Lat.]
- vivi**. Combining form of Lat., *vivus*, alive.
- viviparous** (vi-vip'ar-us). Bringing forth the young alive and free. [Lat., *vivus*, alive, + *parere*, to bring forth.]
- vivisection** (viv-is-ek'shun). The performance of any operation on living animals for purpose of investigation or demonstration. [Lat., *vivus*, alive, + *secare*, to cut.]
- vivisector** (viv-is-ek'tor). One who practices vivisection.
- Vlemmckx's solution**. A preparation consisting of 30 parts of quicklime, 20 of water, and 60 of flowers of sulphur, mixed for use with 10 parts of water for 3 of solution and boiled down to 12.
- vocal** (vo'kal). Pertaining to, produced by, or contributing to the production of the voice. [Lat., *vox*, voice.]
- vocalis** (vo-ka'lis). See *table of muscles*, under *muscle*.
- voice** (voise). The utterance of articulate sounds; also the faculty of uttering such sounds, or the instrumentality by which they are produced, or an articulate sound of some particular character. **cavernous v.** See *pectoriloquy*. **nasal v.** See *mycterophonia*. **whispered v.** The transmission of a whisper to the ausculting ear. Heard in consolidation of the lung. [Lat., *vox*, *voxis*, voice.]
- volatile** (vol'at-il). Fleeting; tending to assume the state of vapor. [Lat., *volatilis*.]
- volatilization** (vol'at-il-iz-a'shun). Conversion of a solid or liquid into vapor.
- volatilizer** (vol'at-il-i-zer). An apparatus for affecting volatilization.
- volsella, vulsella, vulsellum** (vol-sel'lah, vul-sel'lah, vul-sel'lum). A forceps having one or more hooks at the free extremity of each blade. [Lat., *volsella*, or *vulsella*, pincers for pulling out hair.]
- volt**. The unit of electromotive force; the electromotive force which will produce a current of one ampere with a resistance of one ohm. [*A. Volta*, one of the discoverers of galvanism, 1775-1827.]
- voltage** (vol'taj). The electromotive strength of an electrical current measured in volts.
- Volt'aire face**. The face of a child suffering from severe intestinal catarrh.

voltalism (vol'ta-izm). See *galvanism*.

voltmeter (vôlt'me-ter). An instrument for indicating the voltage of an electric current. [*Volt*, + Gr., *metron*, a measure.]

volume (vol'ûm). Bulk. **equivalent v.**, **molecular v.** The v. occupied by a molecule of a substance in the gaseous state. At the ordinary conditions of temperature and pressure the m. v. of all chemical compounds is 22.4 liters. In the gaseous state, and under equal conditions of temperature and pressure, the molecular v's are the same for all substances, and are equal to the molecular weights divided by the specific gravity referred to hydrogen as a unit. In the solid and liquid states the molecular v. is equal to the molecular weight divided by the specific gravity referred to water as a unit. [Lat., *volumen*, volume.]

volumetric (vol-u-met'rik). Pertaining to measurement by volume. **v. analysis**. Syn.: *tetrametric a.* A method of quantitative analysis in which volumes of solutions of known concentration are used. See *alkalimetry*, *acidimetry*, etc. [Lat., *volumen*, volume, + Gr., *metron*, a measure.]

volvulus (vol'vu-lus). 1. A twisting of an intestine about its mesenteric axis, or (rarely) upon its own axis, so that the lumen is occluded. 2. An intertwining or knotting of two coils of intestines so as to cause obstruction in their lumina. [Lat., *volvare*, to roll.]

vomer. A thin mesial bone, which is irregularly quadrilateral, placed vertically between the nasal fossae, articulating at its base with the sphenoid, anteriorly with the perpendicular plate of the ethmoid, inferiorly with the palatal processes of the maxillae. Its posterior border is free. It forms part of the median septum of the nose. [Lat., *vomer*, a plowshare.]

vomica (vom'ik-ah). A pulmonary cavity from tuberculosis, abscess formation, or gangrene. [Lat., *vomica*, an ulcer.]

vomicin (vom'is-in). See *brucin*.

vomit. Matter vomited. **bilious v.** V. stained by bile forced back into the stomach. **black v.** 1. The vomiting of dark-colored matter, most usually partly digested blood. 2. The characteristic v. of yellow fever. **bloody v.** V. of blood or containing blood. **coffee-ground v.** V. consisting of partially digested blood clots mingled with the contents of the stomach. [Lat., *vomitus*.]

vomiting (vom'it-ing). The forcible ejection from the mouth of matter regurgitated from the stomach. **dry v.** A popular term for persistent nausea withretch-

ing and straining, but with little or no actual ejection. **fecal v.** See *stercoraceous v.* **hysterical v.** V. which sometimes accompanies an attack of hysteria; said to be sometimes a complement of hysterical suppression of urine. **pernicious v. of pregnancy**. See *vomitus gravidarum perniciosus*, under *vomitus*. **stercoraceous v.** The v. of fecal matter or what appears to be such. **v. of pregnancy**. V. occurring during the early months of pregnancy and due to disturbances of the sympathetic nervous system, often from mal-position of the uterus.

vomitus (vom'it-us). See *vomit* and *vomiting*. **v. gravidarum perniciosus**. A term proposed by M. Horwitz for severe cases of the vomiting of pregnancy—those which prove intractable and which affect the general health.

vor'tex. A structure having the appearance of being produced by some whirling or twisting motion. **v. of the heart**. The spiral concentration of muscle fibers at the apex of the heart; its whorl. [Lat., *vortex*, a whirlpool.]

vulcanite (vul'kan-it). Hard rubber.

vulcanization. 1. The process of heating caoutchouc with sulphur under pressure. The degree of hardness of the product is determined by the temperature. 2. Loosely, the subjecting of any organic body to a high heat for the purpose of increasing its resistance to decay, etc.

vulnerability (vul'ner-a-bil'it-e). Susceptibility to hurt or to contagion. [Lat., *vulnus*, a wound.]

vulnerary (vul'ner-ar-e). (*obs.*) 1. Relating to a wound. 2. A remedy used to promote the healing of wounds. [Lat., *vulnerarius*.]

vulsel'la, **vulsel'lum**. See *volsella*.

vulva (vul'vah). The external genitals of the female, except the mons Veneris. The latter and the v. together constitute the pudendum. **v. clausa**, **v. connivens**. That form of the v. in which the labia majora are plump and closely approximated. **v. hians**. That form in which the labia majora are flaccid and gaping. [Lat., from *vulva*, a wrapper.]

vul'var. Pertaining to the vulva.

vulvitis (vul-vi'tis). Inflammation of the vulva. [*Vulva*, + Gr., *itis*, inflammation.]

vulvo-. Combining form of Lat., *vulva*, a covering, the vulva.

vulvovaginal (vul'vo-vaj'in-al). Pertaining to the vulva and the vagina.

vulvovaginitis (vul'vo-vaj-in-i'tis). Inflammation of the vulva and of the vagina.

W

W. Chemical symbol for the element *tungsten* (*wolfram*).

wabain (wah-ba'in). See *ouabain*.

wa'fer. A small sheet of gelatinous material which becomes flexible when it is moistened, in which state it is wrapped

around a dose of medicine and swallowed.

wahoo (wah'hooh). See *Euonymus*.

Wal'cher's position. A position used in obstetrics to enlarge the pelvic diameters. The patient is on the back on a table with the thighs and legs hanging over the table's edge. [*Gustav Adolph Walcher*, German obstetrician, born 1856.]

wall. An inclosing or limiting structure.

germinal w. That portion of the formative substance of the yolk that forms a ringlike thickening around the germinal disk.

parietal w. The outer or upper composite sheet of the blastoderm, made up of the epiblast and the outer layer of the mesoblast.

periotic w. The w. of the otic vesicle.

splanchnic w. The inner layer of the blastoderm, made up of the hypoblast and the inner layer of the mesoblast. [Ang.-Sax., *weal*, a rampart.]

waller'ian degenera'tion. Term used to designate the secondary degeneration in nerve fibers which ensues when these fibers are cut off from their cells; so-called from the English neurologist, Waller, who first described the process satisfactorily. During the degeneration the axis cylinder and myeline sheath disappear completely and nerve fibers are formed subsequently by the growth of the neurilemmal nuclei and the down growth of the axis cylinder from the intact central stump of the nerve.

Waller's law of degeneration. The l. that if a spinal nerve is completely divided, the peripheral portion undergoes fatty degeneration, while the proximal part preserves its original character. [*Augustus Volney Waller*, English physiologist, 1816-1890.]

wan'dering cell. A leukocyte that has emigrated from a blood vessel into the tissues.

w. rash. Benign plaque of the tongue. See under *tongue*.

Warburg's tincture. See *tinctura anti-periodica*, under *tinctura*.

Warren's styptic. See *lotio adstringens*, under *lotio*.

wart. See *verruca*.

fig w. A condyloma, especially condyloma acuminatum.

necrogenic w's. See *verruca necrogenica*, under *verruca*.

Peruvian w. See *verruca peruana*, under *verruca*.

venereal w. See *condyloma acuminatum*, under *condyloma*. [Old Eng., *wert*, *werte*, from Ang.-Sax., *wearte*.]

warty. See *verrucose*.

wash. See *lotion*.

black w. See *lotio hydrargyri nigra*, under *hydrargyrum*.

red w. A weak solution of zinc sulphate colored with compound tincture of lavender.

white w. Any wash or liquid composition for whitening something.

yellow w. See *lotio hydrargyri flava*, under *hydrargyrum*.

wash-bot'tle. A corked flask having two tubes passing through the stopper; one extending to the bottom of the flask, the other just projecting through the cork. The two tubes are so arranged that blowing into one will force the liquid in the flask out through the other tube. Used in the chemical laboratory for test-tube

experimentation; also to wash gases by passing them through the liquid contained in the bottle.

Wassermann reaction. The complement fixation method applied to the serum diagnosis of syphilis.

wa'ter. 1. A transparent, colorless liquid, H₂O, devoid of odor or taste and neutral in reaction. 2. In pharmacy, a solution of a gas, a solid, or a liquid in w. 3. A familiar term for urine.

acratothermal w's. Weak mineral w's.

aërated w. W. containing air or other gas in solution.

black w. A disease of cattle; also black w. fever.

carbonated w., carbonic acid w. W. containing carbonic acid in solution.

chalybeate w's. W's holding salts of iron in solution.

chlorin w. A saturated aqueous solution of chlorin.

chloroformed w. A saturated aqueous solution of chloroform.

cologne w. See *spiritus odoratus*, under *spiritus*.

distilled w. W. freed from its impurities by distillation.

eye w. See *collyrium*.

ferruginous w's. See *chalybeate w's*.

hard w. W. containing in solution salts of calcium or magnesium. Such w. requires more soap than ordinary w. to make a lather, because the fatty acid of the soap forms an insoluble compound with calcium and magnesium, and the salts of these metals must first be decomposed before a permanent lather is formed.

ice w. W. obtained wholly or in part from the melting of ice or made cold by the addition of ice.

mineral w's. W's having a special effect upon the system in virtue of salts or similar substances contained in them to such an amount as to give them a characteristic taste.

natural w. W. as it occurs in nature.

oxygenated w., oxygenized w. See *hydrogen peroxid*, under *hydrogen*.

sea w. The salt w. of the ocean and the great seas communicating with it.

soft w. W. which readily forms a lather with soap.

spring w. W. derived from springs. It is often prescribed in medicines.

subsoil w. A sheet of w. found below the surface of the soil, at depths that vary with the character and situation of the ground.

w-borne. Propagated by polluted drinking water; said of the intestinal diseases such as typhoid fever and dysentery.

w. brash. See *pyrosis*.

w. closet. A closet containing a stool for defecation.

w. cure. See *hydrotherapy*.

w. of crystallization. W. which is associated with another substance in a state of molecular combination and in definite proportions, and is essential to the preservation of the crystalline form of that substance.

w. on the brain. See *hydrocephalus*.

w. rigor. The death rigor caused by immersion in water. [Ang.-Sax., *waeter*.]

water-hammer pulse. See *Corrigan's pulse*, under *Corrigan*.

wa'ters, pl. of *water*. See *liquor amnii*, under *amnion*.

bag of w. See *amnion*.

breaking of the w. The rupture of the fetal envelopes at the time of parturition.

Watsonius Watsoni. Syn.: *Cladorchis*

W., *Amphistomum W.*, and *Paramphistomum W.* A trematode worm of the family *Paramphistomidae*, causing diarrhea and anemia in man.

wave. A ridgelike elevation (accompanied by a corresponding depression) of the surface of a fluid which advances while the particles of the fluid have little or no onward motion; hence a cycle of rhythmical alternating movement. **contraction w.** 1. The w-like progression of the contraction from the point of stimulation in a muscle. 2. The graphic representation of a contracting muscle. **dicrotic w.** A pulse w. showing dicrotism, due to low tension and extensibility of the vessel walls. It is regarded as an oscillation w. **fixed w. of contraction of voluntary muscle tissue.** One or more swellings which appear on a dead muscle fiber (as prepared for the microscope) due to the fixation of the muscle while contracted. **oscillation w.** A secondary pulse w. due to inertia of the vessel walls. **percussion w.** A vibration produced by the act of percussing. **predicrotic w.** A slight rise in the pulse w. which precedes the dicrotic rise. **pulse w.** The w. of pressure proceeding throughout the arterial system from the root of the aorta due to the output of blood from the ventricle during systole. **recoil w.** See *dicrotic w.* **reflected w.** In physiological physics, a w. which travels along a closed tube, and, meeting with an obstruction, is reflected back to its origin. **respiratory w.** An oscillation in the blood-pressure curve, rising during inspiration and falling during expiration in consequence of the variations of intrathoracic pressure during respiration. **stimulus w.** The w. of chemical change which passes along a muscle as the result of a stimulus applied at a certain point. **tricrotic w.** A third w., in addition to the tidal and dicrotic w's, occurring during systole and giving the impression of a triple-striking pulse. [Old Eng., *wave*.]

wax. A plastic concrete substance, consisting essentially of various compounds of the higher acids of the fatty acid series, especially myricylic and cerotic acids. **beesw'**, **bees' w.** A yellowish or brownish concrete substance deposited by the honey-bee in the honeycomb. It dissolves in boiling alcohol and sparingly in ether, and melts at 63° C. It consists essentially of myricin, cerotic acid, and cerolein. When bleached, it forms the *cera alba*, when unbleached, the *cera flava* of the U. S. Ph. and Br. Ph. **China w.**, **Chinese (insect) w.** A hard, white, crystalline substance, consisting chiefly of ceryl cerotate, used in China and Japan medicinally and for making candles. It is the purified product of an insect (*Coccus ceriferus*) which deposits it on the twigs of *Fraxinus chinensis*. **ear w.** See *cerumen*. **earth w.**, **fossil w.** See *ozokerite*. **grave w.** See *adipocere*. **Japanese w.**, **Japan w.** A hard, waxy fat, derived from the stone fruits of several species of *Rhus*, consisting chiefly

of palmatin. It occurs in commerce in hard, yellowish cakes or large, rectangular blocks covered with a fine white efflorescence, and is used like beesw'. **myrica w.**, **myrtle w.** Myrtleberry w., the bayberry tallow of commerce; a hard, green, or grayish yellow substance of resinous smell, obtained from various species of *Myrica*. It is more brittle than beesw', is somewhat bitter, and is readily saponifiable with the alkalis. It varies somewhat in composition. It is used with beesw' for candles. **ocuba w.** A fatty substance (sometimes confounded with myrtle w.) obtained from the fruits of *Myristica ocuba*; used like beesw'. **paraffin w.** See *paraffin* (1st def.). **pulverulent w.** See *cera amyлата*, under *cera*. **vegetable w.** A waxy substance of vegetable origin, especially myrtle w. **white w.** See *cera alba*, under *cera*, U. S. Ph., Br. Ph. **yellow w.** Beesw' obtained from comb without purification [U. S. Ph., Br. Ph.]. [Ang.-Sax., *weax*.]

waxberry. See *Myrica*.

way. 1. A road or path. 2. A manner or method. **dry w.** In chemistry, the employment of heat for liquefaction and chemical heat. **wet w.** In chemistry, the employment of liquid solvents for chemical tests.

weak'ness. Lack of physical or mental force.

wearing (ween'ing). The discontinuance of the nursing of a child.

Weber's law. The l. that "when a stimulus is continually increased the smallest increase of sensation which we can appreciate remains the same, if the proportion of the increase of stimulus to the whole stimulus remains the same." **W's guaiac turpentine test for occult blood,** see in *appendix*, page 907. **W's test.** A test for the hearing power. A vibrating tuning fork is placed on the vertex, and the patient observes whether the sound appears more or less loud by the ear under examination when it is stopped by the finger.

web-fin'ger. Two fingers joined by an abnormal extension of the web between the base of the fingers.

wedge. 1. A solid block two of the opposite sides of which slope to a narrow edge. 2. A piece of soft rubber or strands of silk to be inserted between two teeth to force them apart. [Old Eng., *wegge*, *wigge*, *wege*.]

Weich'selbaum's diplococcus. See *Diplococcus intracellularis*, under *diplococcus*. [Anton Weichselbaum, Austrian pathologist, born 1845.]

Weigert's theory. A theory explaining the formation of antitoxins and other antibodies by the general law of regeneration of the molecular groups of a cell, known as receptors, and their formation in excess owing to continuous stimulation by doses of a toxin. Ehrlich's theory is a continuation of this fundamental law. [Karl Weigert, German pathologist, 1843-1904.]

weight (wät). 1. That property of matter

(due to the force of gravitation) in virtue of which it tends to fall toward the earth. 2. The amount of such tendency to downward motion. **atomic w.** The w. of an atom of an elementary substance compared with that of hydrogen as unity. **curve of w.** A graphic representation of the different w's of the human body at different ages. **molecular w.** The w. of a molecule of a substance as compared with that of an atom of hydrogen. **weights and measures, table of;** see in *appendix, pages 941, 942, 943.*

Weil's disease (wil). Syn.: *febrile jaundice.* An acute infectious inflammation of the gall-ducts with jaundice and an enlarged spleen. Infectious jaundice. [Adolf Weil, German physician, born 1848.]

Weissmann's fibers. F's within the muscle-spindle.

Welcher's angle. See *nasal angle, under angle.*

wen. A sebaceous cyst commonly occurring on the scalp. [Old Eng., *wen, wenne,* from Ang.-Sax., *wen, waen.*]

Wenzell's ergotin. A preparation containing a mixture of alkaloids.

Werneck's commissure. The c. of the lemniscus; a tract of nerve fibers extending from the raphe of the tegmentum obliquely outward and forward.

Wernich's ergotin. (Liquid.) A dialyzed extract of ergot in the form of a reddish brown, syrupy liquid.

Westberg's disease. See *white spot disease, under disease.* [Friedrich Westberg, German physician, of the 19th century.]

Westphal's sign. Absence of the knee-jerk. [Karl Friedrich Otto Westphal, German neurologist, 1833-1890.]

Weyl's reaction for creatinin. Consists in treating a solution of the material to be tested with a fresh solution of sodium nitroprussiate and then adding a trace of caustic soda solution. A transient red solution is obtained, which, if creatinin is present, becomes yellow on standing. Upon boiling with dilute acetic acid Prussian blue is formed. [Theodor Weyl, German chemist, 1851-1913.]

Wharton's duct. Syn.: *submaxillary duct.* The d. of the sublingual gland, about 2 in. long, which opens into the mouth at the side of the frenum linguae. **W's jelly.** The gelatinous connective tissue of the umbilical cord. [Thomas Wharton, English physician and anatomist, 1610-1673.]

wheel (hwël). An elevation of the skin, usually of transient duration, of a roundish, oval, linear, or irregular shape, pinkish in color except during the height of its development, when at the center it becomes pale or blanched. [Old Eng., *wheel, a pimple.*]

Wheatstone's bridge. See under *bridge.*

W's mirror stereoscope. A s. which consists of two plane mirrors joined together at right angles, in which are reflected the projected images corresponding to the right and left eye, which are placed at the limit of distinct vision

in front of the mirrors at an angle of 45° to their reflecting surface. The two eyes then see the reflected images united at one point. [Charles Wheatstone, English physicist, 1802-1875.]

wheel and axle joint. See *trochoid articulation, under articulation.*

whcy (hwä). The watery part of milk remaining after the separation of the butter and casein. **alum w.** A preparation made by boiling cow's milk, adding gradually powdered alum, removing the clot, and straining. **wine w.** A mixture of milk and Rhine wine. [Dut., *wet, whey.*]

whiskey (hwis'ke). Spiritus frumenti, an alcoholic beverage obtained by the distillation of an infusion of fermented grain; a liquid of peculiar taste and odor, nearly colorless when freshly prepared, but acquiring by age from charred barrel or coloring matter, a tint varying from light amber to a yellowish brown. Sp. gr., 917 to 930. It contains about 50 per cent. by weight of alcohol. The U. S. Ph. requires that w. be at least 4 years old. **blended w.** A mixture of new and old w's. **blue grass w.** W. made in Kentucky, the "Blue Grass State." **Bourbon w.** A corn w. originally made in Bourbon County, Kentucky. **corn w.** W. manufactured from maize. **Irish w.** W. made in Ireland from malt and raw grain. **rye w.** W. made from rye. **Scotch w.** W. made in Scotland from malted grain, usually barley. The smoky flavor is due to the peat and turf fires used in drying the grain. [Irish, *usquebaugh.*]

whis'per. A sound uttered by the voice without sonant breath. **cavernous w.** In auscultation the direct transmission of whispered words through a cavity, as through a speaking tube.

whites. A popular term for leukorrhea.

white spot disease. See under *disease.*

white swelling. Tuberculous arthritis of the knee-joint.

whiting (hwi'ting). A purified calcium carbonate prepared from chalk by pulverization and decantation.

whitlow (hwit'lo). See *paronychia.* **melanotic w.** Melanotic sarcoma having the appearance of a w. with a faint border of melanotic tissue. **Morvan's w.** See under *Morvan.* [Prov. Eng., *whickflaw,* from *whick, quick, + flaw, a defect.*]

whoop (hwööp). The peculiar crowing sound which occurs during inspiration in a paroxysm of whooping cough.

whoop'ing-cough. See *pertussis.*

Widal's agglutination test. A test for typhoid fever, performed by adding 1 part of blood serum of a suspected case to 24 parts of distilled water and adding 1 platinum loopful of this mixture to a 24 hour motile peptone culture of the typhoid bacillus on a clean cover slip. This is placed drop downwards in a hollow glass slide and usually during some part of the course of the disease, the diluted serum of a typhoid patient will cause agglutination or clumping of the bacilli with cessation of their motility. This is called a positive reac-

tion for typhoid fever. **W's reaction for xanthin.** A reaction which consists of treating the substance to be tested with chlorin water and a trace of nitric acid and evaporating to dryness on the water bath. A yellow spot thus obtained turns red upon the addition of ammonia if xanthin is present.

Wigger's ergotin. (Pure, dried.) A dried extract of ergot purified by means of alcohol.

wind. 1. Moving air, a current of air. 2. See *flatus*. **electric w.** That form of current from a static electrical machine, which, striking the person, causes a sensation as if a gentle breeze were blowing upon the part.

wind pipe. See *trachea*.

wine. 1. The fermented juice of the grape, also of currants, etc. 2. W. holding a medicinal substance in solution. **Burgundy w.** Red or white w. from Burgundy in France. It is one of the strongest of the light wines. **heavy w's.** W's containing more than 12 per cent. by weight of alcohol, such as sherry, port, and Madeira. **high w's.** Commercial ethyl alcohol. **light oil of w.** A mixture of etherin and etherol; a light yellow oily liquid of aromatic odor, derived from heavy oil of wine by heating with water or alkalis. **light w's.** W's containing less than 12 per cent. by weight of alcohol, such as Rhine w., Sauterne, claret, or Burgundy. **low w.** The weakly alcoholic distillate first obtained in the preparation of whisky. **Madeira w.** A strong w. from the island of Madeira having an aromatic, nutlike taste. It contains about 15½ per cent. of alcohol. **Malaga w.** A sweet Spanish w. from the region of Malaga, containing about 13¼ per cent. of alcohol. **Moselle w.** W. from the district along the river Moselle in Germany, containing about 12 per cent. by volume of alcohol. **mulled w.** W. to which eggs and spices have been added, and the w. then heated. **port w.** A red or, sometimes, white w. from Oporto in Portugal, containing from 15.82 to nearly 18 per cent. of alcohol. **red w.** See *vinum rubrum*, under *vinum*. **sherry w.** A white or brown w. from the neighborhood of Xeres, in Spain, containing from 16.34 to 18.66 per cent. of alcohol. The Br. Ph. demands 16 per cent. **spirit of w.** Ethyl alcohol. **white w.** See *vinum album*, under *vinum*. [Ang.-Sax., *win*.]

wing. Any broad expanded structure or process resembling a bird's w. or occupying some analogous position. See *ala*. **ceratohyal w.** The lesser cornua of the hyoid bone. **greater w. of the sphenoid bone.** See *alae magnae*, under *ala*. **lesser w's of the sphenoid bone.** See *alae parvae*, under *ala*. **w's of the sacrum.** See *alae of the sacrum*, under *ala*. [Mid. Eng., *winge*, wing.]

Winslow's foramen. The space between the larger and smaller peritoneal cavities. **W's ligament.** See *posterior ligament of the knee-joint*, under *ligament*. [Jacques

Bénigne Winslow, Danish anatomist, 1669-1760.]

wintergreen (win'ter-grēn). 1. A plant of the genus *Pyrola* (including *Chimaphila*). 2. *Gaultheria procumbens*. 3. The genus *Vinca*. **common w.** *Pyrola minor*. **oil of w.** See *oleum gaultheriae*, under *Gaultheria*.

wir'ing. Fastening by means of wire.

Wirsung's duct. See *pancreatic duct*, under *duct*.

wis'dom tooth. See under *tooth*.

wistarin (wis'tar-in). A poisonous crystallizable glucosid obtained from the bark of *Wistaria chinensis*.

witch hazel. See *Hamamelis*.

with'ers. The ridge on a horse's back extending from the root of the neck to between the shoulder blades; formed by the prominent spinous processes of the first eight or ten dorsal vertebrae.

wolff'ian. Investigated by or named for *Kaspar Friedrich Wolff*, a Russian embryologist, 1733-1794.

wolfsbane (wolfs'bān). 1. A plant of the genus *Aconitum*, especially *Aconitum lycoctonum* and *Aconitum napellus*. 2. *Arnica montana*. 3. *Veratrum viride*.

womb (woom). See *uterus*. [Old Eng., *wambe*, from Gothic, *wamba*, belly.]

wood spirits. See *methyl alcohol*, under *alcohol*.

wood-ticks. Temporary parasites on man. Their bites produce wheals with central punctures with itching.

wool. The hair of sheep. It consists chiefly of keratin, one of the classes of proteins. **Holmgren's w's.** See under *Holmgren*.

wool-sort'er's disease. See *anthrax*.

woorali, woorara, woorari (woo'ral-e, woo'rah-rah, woo'rah-re). See *curare*.

word blind'ness. See *aphasia*.

word deaf'ness. See *aphasia*.

worm. 1. A small, limbless, creeping animal such as a member of the phyla *Platyhelminthes*, *Nemathelminthes*, or *Annelata*. 2. The median portion of the cerebellum, as distinguished from its hemispheres. **bladder w.** See *Oxyuriscus*.

bot w. The larva of the genus *Oestrus*.

flesh w. See *comedo*. **gourd w.** An old term for a distoma. **guinea w.** See *Filaria medinensis*, under *Filaria*.

hair-headed w. See *Trichocephalus*. **hooked w's.** The *Uncinariæ*, **long round w.** See *Ascaris lumbricoides*, under *Ascaris*.

long thread w. See *Trichocephalus dispar*. **palisade w.** See *Sclerostoma equinum*, under *Sclerostoma*, and *Eustrongylus gigas*, under *Eustrongylus*.

pin w. See *Oxyuris vermicularis*, under *Oxyuris*. **round w.** See *Ascaris lumbricoides*, under *Ascaris*.

tapew. See *tenia*.

thread w. Any w. of threadlike appearance, especially *Oxyuris vermicularis*.

wheat w. See *Leptus autumnalis*, under *Leptus*, and *Sarcoptes scabei*, under *Sarcoptes*.

whip w. See *Trichocephalus dispar*, under *Trichocephalus*. [Ang.-Sax., *wyrn*, snake.]

worm'ian bones. See under *bone*. [O. *Worm*, a Danish physician.]

Worm-Müller's test for glycosuria. A filtered solution of 2.5 grams of cupric sulphate in 100 c.c. of distilled water and a filtered solution of 10 grams of potassium tartrate and 4 grams of sodium hydrate in 100 c.c. of distilled water are used. Five c.c. of clear urine is mixed with 2.5 c.c. of the second and 1.5 to 3 c.c. of the first solution, and boiled. If sugar is present, cuprous hydrate is formed.

worm'seed. 1. *Santonica* or one of the plants yielding it. 2. *Chenopodium anthelminticum* or its seed. 3. *Erysimum cheiranthoides*.

worm'wood. 1. *Artemisia absinthium* and other species of *Artemisia*. 2. Of the U. S. Ph., 1890, the leaves and tops of *Artemisia absinthium*.

wound (woound). A division of the soft parts of the body by a mechanical force applied externally. In legal medicine, any lesion of the body resulting from external violence, whether accompanied or not with rupture of the skin or mucous membrane. **complicated w.** A w. accompanied by great hemorrhage, pain, or the presence of a foreign body. **contused w.** A w. produced by contusion.

flesh w. A w. involving only skin and superficial muscular layer. **gunshot w.** A w. inflicted by firearms. **incised w.** A cut produced by a sharp-edged instrument. **lacerated w.** A w. produced by tearing. **open w.** A w. that has free external communication. **poisoned w.** A w. to which poison has gained access. **punctured w.** A more or less deep w. with but little laceration of the skin; produced by a thrust with a sharp instrument, an animal's horn or tooth, etc. **simple w.** A w. in which the parts are only divided, as distinguished from a complicated w. **subcutaneous w.** A w. in which the external opening is very small. [Old Eng., *wound, wonde*, from Ang.-Sax., *winnan, wunnen*, to strive, to suffer.]

Wrightia antidysenterica. See *Holarhena antidysenterica*, under *Holarhena*.

wrightin (rit'in). See *conessin*.

Wrisberg's ganglion. See *superior cardiac ganglion*, under *ganglion*.

wrist. The carpus; the part between the hand and forearm. **w. drop.** See under *drop*.

writer's cramp. See under *cramp*.

wry neck. See *torticollis*.

X

xanol (za'nol). A proprietary preparation, consisting of caffeine and sodium salicylate.

xanthalin (zan'tha-lin). An alkaloid, $C_{37}H_{36}N_2O_8$, found in opium. It has no therapeutic value.

xanthelasma (zan-thel-as'mah). Another name for xanthoma. [Gr., *xanthos*, yellow, + *elasma*, a lamina.]

xanthelasmoides (zan-thel-as-moy'de-ah). Another name for urticaria pigmentosa. [Gr., *xanthos*, yellow, + *elasma*, lamina, + *eidōs*, resemblance.]

xanthic (zan'thik). 1. Yellow. 2. Derived from xanthin. **x. oxid.** See *xanthin*. [Gr., *xanthos*, yellow.]

xanthin (zan'thin). 1. 2-6 dioxypurin, $C_5H_4N_4O_2$, a substance occurring in the urine, in the serum of the blood, in muscular tissue, in the liver, spleen, thymus gland, pancreas, and brain, and pathologically as a constituent of xanthic calculi. **x. bases.** See *purin bases*. **x. oxidase.** Same as xantho-oxidase. [Gr., *xanthos*, yellow.]

Xanthium (zan'the-um). Cocklebur; a genus of the *Compositae*. **X. spinosum.** Bathurst bur, spiny clotbur; perhaps a native of Chili. It is a tonic and a febrifuge. **X. strumarium, X. vulgare.** Small burdock, cocklebur; a widely spread species containing a yellow dye and probable a glucosid, *xanthostrumarin*. [Gr., *xanthion*, from *xanthos*, yellow.]

xanthuria (zan-the-u're-ah). A condition of urine in which xanthic oxid is de-

posited. [Gr., *xanthos*, yellow, + *ouron*, urine.]

xanthochroia (zan-tho-kroy'ah). See *xanthoderma*. [Gr., *xanthos*, yellow, + *chroia*, the skin.]

xanthochromia (zan-tho-kro'mi-ah). Yellow patches occurring in the skin. The condition resembles xanthoma, but without the nodules or plates. [Gr., *xanthos*, yellow, + *chroma*, color.]

xanthocreatinin (zan'tho-kre-at'in-in). A poisonous alkaloid, $C_8H_{10}N_4O$, obtained from fresh beef. It produces lassitude, sleepiness, vomiting, and purgation. [Gr., *xanthos*, yellow, + *creatinin*.]

xanthoderma (zan-tho-der'mah). Yellowness of the skin. [Gr., *xanthos*, yellow, + *derma*, the skin.]

xanthogen (zan'tho-jen). The radicle, $CS_2OC_2H_5$, of xanthic acid. [Gr., *xanthos*, yellow, + *gennan*, to engender.]

xanthoglobulin (zan'tho-glob'u-lin). A substance found by Scherer in the liver and pancreas; now known to be identical with hypoxanthin. [Gr., *xanthos*, yellow, + Lat., *globulus*, a globule.]

xanthoma (zan'tho-mah). Syn.: *molluscum cholesterique*. A disease of the skin consisting of chamois-yellow plates or nodules embedded in the corium. **x. chromia.** See *xanthochromia*. **x. diabelicorum.** A form of x. occurring nearly always in association with diabetes and characterized by an eruption of x. lesions, which arise from inflammatory papules. **x. multiplex.** Syn.: *x. tu-*

- berosum*. The lesions in this form of *x.* are nodular instead of flat, otherwise they are like those of *x. planum*. **x. planum**. Roughly rectangular chamois-yellow plates embedded in the corium. They are from $\frac{1}{8}$ to $\frac{1}{2}$ an inch in their long diameter, situated on the eyelids, with the long diameter parallel to the margin, slightly, if at all, elevated, and soft to the touch. [Gr., *xanthos*, yellow, + *oma*, tumor.]
- xantho-oxydase** (zan''tho-oks'id-äs). An enzyme found in many organs, extracts from which have the property of converting hypoxanthin into xanthin and xanthin into uric acid.
- xanthophane** (zan'tho-fän). A yellowish fat obtained from the cones of the retina. [Gr., *xanthos*, yellow, + *phainein*, to show.]
- xanthophyll** (zan'tho-fil). The yellow coloring matter of plants. [Gr., *xanthos*, yellow, + *phyllon*, a leaf.]
- xanthopic'rin**, **xanthopic'rite**. 1. See *berberin*. 2. The aromatic principle in the bark of *Xanthoxylum caribbaeum*. 3. A bitter astringent crystalline substance in the root of *Xanthoxylon ternatum*. [Gr., *xanthos*, yellow, + *pikros*, pungent.]
- xanthoplasma** (zan-tho-plas'mah). See *xanthoma*.
- xanthopsia** (zan-thop'se-ah). A disturbance of vision in which objects appear yellow. [Gr., *xanthos*, yellow, + *opsis*, vision.]
- Xanthorrhiza** (zan-thor-ri'zah). A genus of the *Ranunculaceae*. **X. apiifolia**, **X. simplicissima**, **X. tinctoria**. North American yellow root. The root, formerly in the secondary list of the U. S. Ph., may be used as a simple tonic. The bark of the stem has the same properties. [Gr., *xanthos*, yellow, + *riza*, a root.]
- xanthose** (zan'thös). A yellow pigment found in cancers, usually forming a fatty or opalescent infiltration without any trace of a preceding extravasation of blood.
- xanthoxylene** (zan-thok'sil-ën). A volatile oil, $C_{10}H_{16}$, obtained from the fruit of *Xanthoxylum alatum*.
- xanthoxylin** (zan-thok'sil-in). 1. A slightly aromatic crystalline substance, $C_{20}H_{24}O_8$, obtained from the fruit of *Xanthoxylum alatum*. 2. A preparation made in North America from *Xanthoxylum fraxineum* or *Xanthoxylum carolinianum*.
- Xanthoxylon**, **Xanthoxylum** (zan-thok'sil-on, zan-thok'sil-um). 1. A genus of the *Rutaceae*. Most of the plants of the division are aromatic and pungent. 2. Of the U. S. Ph., the bark of *X. americanum* (northern prickly ash) or of *Fagara clava Herculis* (southern prickly ash). **X. americanum**. See *X. fraxineum*. **X. carolinianum**. 1. See *X. clava*. 2. A species found in the Southern States. The bark has properties like those of *X. fraxineum*. **X. clava (Herculis)**, **X. clavatum**. 1. Hercules's club. The aromatic and astringent bark contains berberin and is used like that of *X. aromaticum*. 2. See *X. fraxineum*.
- X. fraxineum**. Toothache tree; a North American species. The capsules and leaves smell like oil of lemon. The bark, with that of *X. carolinianum*, constitutes the *x.* of the U. S. Ph. It is diuretic, diaphoretic, and stimulant. The powder is also used topically as an irritant. The bark is chewed for odontalgia. [Gr., *xanthos*, yellow, + *xylon*, wood.]
- xaxa** (zaz'ksah). A trade name for acetyl salicylic acid.
- xenogenous** (ze-noj'en-us). Produced by a foreign substance or organism originating outside of the body. [Gr., *xenos*, strange, + *gennan*, to produce.]
- xenon** (ze'non). A chemical element found in extremely small quantities in the atmosphere. Atomic weight, 0.128. Symbol X. [Gr., *xenos*, strange.]
- Xenopsylla**. An insect of the order siphonaptera and family *Pulicidae*. **X. cheopis**. The rat flea which transmits bubonic plague.
- xenosite** (zen'o-sit). A parasite when in its intermediate host or lodged in an organ other than that in which it will eventually breed. [Gr., *xenos*, a stranger, + *sitos*, food.]
- xerase** (ze'räs). A mixture of specially prepared beer yeast, dextrose, white bole and nutritive salts. It is used as an absorbent and antiseptic in inflammation and ulceration of the vaginal and cervical mucous membranes.
- xeroderma** (ze-ro-der'mah). A cutaneous affection characterized by dryness of the skin. **x. ichthyoides**. See *ichthyosis*. **x. pigmentosum**. Syn.: *melanosis progressiva*. A disease of the skin, usually beginning in childhood and occurring in family groups, characterized at first by the development of an abundant crop of freckles accompanied by atrophic changes in the skin and later by the appearance of malignant growths. In its later manifestations it resembles the extreme forms of senile atrophy of the skin. The lesions are commonly on the exposed parts of the body and generally appear early in childhood. [Gr., *xeros*, dry, + *derma*, the skin.]
- xeroform** (ze'ro-form). Bismuth tribrom-carbolate, approximately, $Bi_2O_3(C_6H_2Br_3OH)$, a substitute for iodoform.
- xerophthalmia**, **xerophthalmus** (ze-rof'thal'me-ah, ze-rof'thal'mus). Xerosis of the conjunctiva, which is rough, thickened, and dry. It follows long-continued and severe conjunctivitis. [Gr., *xeros*, dry, + *ophthalmos*, the eye.]
- xeroplasta** (ze-ro-plas'tah). Of Schultz, morbid states characterized by suppressed or defective secretion, including atrophy, sterility, agalactia, anuria, marasmus, etc. [Gr., *xeros*, dry, + *plassein*, to mold.]
- xero'sis**. Another name for ichthyosis.
- Bacillus xerosis**. A member of the diphtheria group. [Gr., *xeros*, dry.]
- xerotic** (ze-rot'ik). Drying, desiccant.
- Ximenia** (zi-me'ne-ah). A genus of the *Olaceae*. **X. americana**. False sandalwood. The wood is used in place of

sandalwood. The root, bark, and leaves are purgative. [*F. Ximenes*, a Spanish naturalist.]

xinol (zi'nol). A mixture of zinc acetate and albumin naphthosulphonate, used topically in gonorrhoea.

xiphoid (zi'foy'd). Sword-shaped, ensiform. **x. process**. See *ensiform cartilage*, under *cartilage*. [Gr., *xiphos*, sword, + *eidōs*, resemblance.]

x-rays. See *Röntgen rays*, under *Röntgen*.

xylene (zi'len). Dimethyl-benzene, $C_6H_4(CH_3)_2$, known in three isomeric liquid forms. [Gr., *xylon*, wood.]

xylenin (zi'len-in). A poison resembling etherin extracted by xylol from the tubercle bacillus.

xilenobacillin (zi'len-o-bas-sil'in). See *xylenin*.

xylidin (zi'lid-in). A substance, $C_6H_3(CH_3)_2NH_2$, known in six isomeric forms. Commercial x. is a mixture of several of the forms. **x. red**. A red dye made by

mixing anilin and x. It closely resembles rosanilin.

xyloidin (zi-loy'din). A substance ($C_6H_9(NO_2)_6$), obtained by the action of nitric acid on starch. An explosive. [Gr., *xylon*, wood, + *eidōs*, resemblance.]

xylol (zi'lol). See *xylene*.

xylon (zi'lon). 1. Wood. 2. The genus *Gossypium*. 3. Of Berzelius, a substance, $C_{12}H_{22}O_{11}$, identical with wood cellulose and the shell tissue of fruit stones. [Gr., *xylon*.]

xylose (zi'lōs). One of the simple sugars (pentose), $CH_2OH(CHOH)_3CHO$, found widely distributed in plant life.

xylostein (zi-lo'ste-in). A bitter principle obtained from the poisonous berries of *Lonicera xylosteum*.

xylol (zi'lol). The radicle of xylene, $C_6H_3(CH_3)_2$.

xylylacamid (zi'lil-as-et-am'id). The substance, $C_8H_9.NH.C_2H_5O$ (or $C_6H_3(CH_3)_2.NH.C_2H_5O$).

Y

Y. Chemical symbol for the element *yttrium*.

ya'bin. An alkaloid obtained from yaba (the bark of *Andira excelsa*).

yar'row. See *Achillea*.

yaws. Syn.: *frambesia*, *gatlor*, *kwena*, *lupani*, *momba*, *ogodo*, *pian*, *polypapilloma*. An African term, meaning literally a raspberry, for frambesia; in the sing., yaw, a single efflorescence of the disease. "Daddy," "fadee," "grande," "mama," "master," "moder," and "mother" y. are the large tubercles occurring in the course of the eruption, often at the seat of inoculation. A specific infectious disease occurring in tropical countries, which is characterized by more or less constitutional disturbance and by the development in the skin of reddish tubercles, capped by a cheesy crust.

Yb. Chemical symbol for the element *ytterbium*.

yeast (yēst). A semifluid, viscid, flocculent scum forming on the surface of a saccharine juice when it is in a state of vinous fermentation. Y. is composed chiefly of *Saccharomyces*. Ordinary y. is beer y. beer y. The ferment (see *Saccharomyces cerevisiae*) obtained in brewing beer. It is insoluble in water or alcohol, has a dirty yellowish color, a bitter taste, and a sourish odor. Its ultimate composition, according to Schlossberger, is carbon 49.9 per cent., hydrogen 6.6 per cent., nitrogen 12.1 per cent., and oxygen 31.4 per cent. If separated from its nitrogenous principle, it becomes inert as a ferment. It has been used as an external stimulating poultice, also topically as a remedy for leukorrhoea. **bottom y**. The y. that settles when fermentation is

restrained by cold. **top y**. The y. formed on the surface of fermenting liquids. **y's in examination of stomach contents**, see in *appendix*, page 904. **y. plant**. The genus *Saccharomyces*, especially *Saccharomyces cerevisiae*. **y. poultice**. See *cataplasma fermenti*, under *fermentum*. [Ang.-Sax., *gist*; Old High Ger., *jesan*, ferment.]

yel'low. Of a color resembling that of gold; as a n., a y. color or pigment, also anything of a y. color; as a n., in the pl., y's, jaundice, more particularly in horses, cattle, and sheep. **y. spot**. An area surrounding and including the fovea centralis in the retina which has a slightly yellow color. Frequently used, therefore, to designate the area of distinct vision or central vision, although the designation is made preferably by the limits of the fovea centralis. [Ang.-Sax., *geolo*, *geolu*.]

yer'ba san'ta. See *Eriodictyon*.

Yer'sin's se'rum. A serum employed in the treatment of bubonic plague.

yohimbin (yo-him'bin). An alkaloid obtained from the bark of the yohimbeho tree. It is an aphrodisiac and is sometimes used as an anesthetic.

yolk (yök). See *vitellus*. **y. rest**. In embryology, the residual internal mass of segmentation spheres. **y. sac**. The embryonic vesicle. **y. stalk**. That portion of the y. sac that connects the latter with the embryo. [Ang.-Sax., *geolca*, *geolu*, yellow.]

Young-Helmholtz color theory. The theory of color vision, devised by Young and expanded by Helmholtz. It assumes that there are three fundamental color sensations: red, green, violet, and corresponding to these, three photochemical

substances in the retina. Each of these, if acted upon alone, gives the corresponding fundamental color sensation. Other color sensations are due to a simultaneous action of two or three of these substances. White is produced by equal stimulation of all three substances; black by entire absence of all stimulation.

Young's rule. See under *dosage*.

ytterbia (it-ter'be-ah). Ytterbium oxid.

ytterbium (it-ter'be-um). A metallic element. Symbol, Yb. Atomic weight, 173. [From *Ytterby*, in Sweden.]

yttrium (it'tre-um). A metallic element discovered at Ytterby, in Sweden, whence it derives its name. It occurs in very minute quantities. In compounds it acts as a trivalent radicle. Symbol, Y; atomic weight, 89.

Yucca. A genus of plants of the order of *Libiaceae*, growing in Mexico; several of the species are called soap-root. It has been employed as a diuretic.

Yvon's ergotin. A fluidextract of ergot, the menstruum being a dilute solution of tartaric acid.

Z

Zea (ze'ah). 1. A genus of grasses. 2. [Of the U. S. Ph.] Cornsilk, stigmata maydis. **Z. mais**, **Z. maiz**, **Z. mays**. Indian corn, maize; probably indigenous to tropical America. The male flowers (tassel) were formerly used in diseases of the urinary organs. The fresh styles and stigmas [zea, U. S. Ph.], are mildly diuretic. The fluidextract is official in the U. S. Ph. [Gr., *zea*, *zeia*.]

zedoary (zed'o-a-re). Long z. and round z., also the plants yielding them. **long z.** The aromatic rhizome of the *Curcuma zerrumbet*. It is bitter, pungent, and somewhat camphoraceous in taste, and is used as a tonic and carminative. **round z.** A rhizome resembling long z., but occurring usually in small sections having a heart-shaped outline. It is the product of *Curcuma aromatica*, or, according to some, of *Kaempferia rotunda*. It is said to be less spicy than long z. [Lat., *zedoaria*.]

zein (ze'in). A crystalline proteid prepared from maize.

Zeiss's glands. Small sebaceous g's which open into follicles of the eyelashes, and which serve to lubricate the latter.

zenkerism (zen'ker-izm). A peculiar form of degeneration, allied to coagulation necrosis, described by Zenker as occurring in the voluntary muscles in typhoid fever.

Zen'ker's degenera'tion. See *zenkerism*.

zeoscope (ze'o-skōp). An apparatus for determining the alcoholic strength of a liquid, zero marking the boiling point of pure water and 100 that of absolute alcohol. [Gr., *zein*, to boil, + *skopein*, to examine.]

zerrumbet (ze-rum'bet). 1. *Zingiber z.*, or its root stock (z. root). 2. A section of the genus *Zingiber*. 3. The genus *Curcuma*, especially *Curcuma z.* 4. The genus *Alpinia*.

ze'sis. Ebullition.

zestocausis (zes-to-kaw'sis). Cauterization with steam. [Gr., *zestos*, boiling hot, + *kausis*, a burning.]

zestocautery (zes-to-kaw'ter-e). An apparatus for applying zestocausis.

Ziehl-Neelsen method to stain tubercle bacillus in sputum, see in *appendix*, page 903.

Ziehl's solution. The carbolfuchsin solution employed to stain tubercle bacilli.

zinc (zink). A hard, bluish white metal, malleable and ductile at a temperature of 100° to 150° C., but brittle when heated above 200° C. Symbol, Zn; atomic weight, 65.4; sp. gr., 6.9. List of poisons and their antidotes, see in *appendix*, page 939. **aërated z.** **Z. carbonate.** **flowers of z.** **Z. oxid** prepared by subjecting pure metallic z. to a bright red heat with access to the air. **granulated z.** **Z.** obtained in granulated masses by pouring the fused metal into cold water. **precipitated z. carbonate.** A basic z. carbonate prepared by precipitation from a solution of z. sulphate by the action of sodium carbonate. It varies in composition according to the degree of concentration of the solutions and the temperature at which precipitation occurs. It is a very fine white powder, devoid of taste and odor, and insoluble in alcohol and in water [U. S. Ph., Br. Ph.]. **z. acetate.** A white crystalline substance $Zn(C_2H_3O_2)_2 + H_2O$ [U. S. Ph., Br. Ph.]. **z. aluminat.** The compound Al_2ZnO_4 . **z'amid.** A white amorphous substance, $Zn(NH_2)_2$.

z. bromid. A white, granular deliquescent powder, $ZnBr_2$, of saline, metallic taste [U. S. Ph.]. **z. carbonate.** Normal z. carbonate, $ZnCO_3$, occurs native in the impure form as calamine. It may also be prepared artificially. What is usually called z. carbonate is the precipitated z. carbonate. **z. carbonate (precipitated)** [*zinci carbonas precipitatus*, U. S. Ph.]. Hydrated zinc carbonate. **z. chlorid.** Butter of z.; a white deliquescent crystalline substance, $ZnCl_2$, of caustic, metallic taste, acid reaction, and marked caustic properties. It is readily soluble in water and in alcohol [*zinci chloridum*, U. S. Ph., Br. Ph.]. **z. ferrocyanid.** An amorphous white powder, $Zn_2Fe(CN)_6 + 3H_2O$. **z. gallate.** A white precipitate obtained by boiling z. acetate with gallic acid. **z. iodid.** The compound ZnI_2 , forming acicular crystals [*zinci*

iodidum, U. S. Ph.]. **z. oleate**. A preparation made by dissolving 1 part of z. oxid in 8 parts of oleic acid, forming a soft, talclike white powder. It is used in hyperidrosis and various skin diseases.

z. oleostearate. A creamlike compound of z. stearate with benzoated liquid albolene; used as an antiseptic and protective application [N. F., Br. Ph.]. **z. oxid**. A soft, white or yellowish white, amorphous powder, ZnO, devoid of taste and odor and insoluble in water and in alcohol [*zinci oxidum*, U. S. Ph., Br. Ph.]. **z. oxychlorid**. A crystalline substance, $ZnCl_2 \cdot 3ZnO + 4H_2O$, obtained by the action of a strong solution of z. chlorid on z. oxid. **z. permanganate**. $Zn(MnO_4)_2 + 6H_2O$; resembles potassium permanganate but is more active. It is used in urethritis. **z. peroxid**. The z. salt of hydrogen peroxid, being a mixture containing not more than 55 per cent. of z. oxid. It is used for the extemporaneous preparation of hydrogen peroxid. **z. phenolsulphonate**. A mildly antiseptic salt of z. $(Zn(C_6H_5O_4S)_2 + 8H_2O)$ [*zinci phenolsulphonas*, U. S. Ph.]. **z. phosphid**. The compound Zn_3P_2 , forming either crystalline fragments or a dark grayish powder, having a faint taste of phosphorus [*zinci phosphidum*, U. S. Ph., 1890]. **z. stearate**. The compound $Zn(C_{18}H_{35}O_2)_2$ [*zinci stearas*, U. S. Ph.]. **z. sulphate**. White vitriol (or white copperas), $ZnSO_4 + 7H_2O$, forming small, colorless, prismatic or acicular crystals having a saline metallic taste and acid reaction, soluble in about half its weight of water. It is used as an emetic and topically as an astringent [*zinci sulphas*, U. S. Ph., Br. Ph.]. **z. sulphocarbolate** [*Zinci sulphocarbolas*, Br. Ph., 1898]. See *z. phenolsulphonate*. **z. valerianate**. The compound $Zn(C_8H_{15}O_2)_2$, forming white scaly crystals, which have a faint odor of valerianic acid and a sweetish metallic taste [*zinci valeris*, U. S. Ph.; *zinci valerianas*, Br. Ph.]. [Lat., *zincum*.]

zincum (zin'kum). See *zinc* [U. S. Ph.]. **liquor zinci chlorati, liquor zinci chloridi**. A solution of zinc chlorid, containing 50 per cent. [U. S. Ph.], or about 30 per cent. [Br. Ph.]; made by dissolving metallic zinc in hydrochloric acid and removing the impurities. **unguentum zinci**. An ointment containing 15 per cent. of zinc oxid and 85 per cent. of benzoated lard [Br. Ph.]. **unguentum zinci oleatis**. An ointment of zinc oleate with soft white paraffin or petrolatum [Br. Ph.]. **unguentum zinci oxid**. A 20 per cent. ointment of z. oxid with benzoated lard [U. S. Ph.]. **unguentum zinci stearatis**. An ointment containing 50 per cent. each of zinc, stearate, and white petrolatum [U. S. Ph.].

Zingiber (zin'jib-er). 1. A genus of plants of the *Scitamineae*. 2. The rhizome of *Z. officinale*. **extractum zingiberis fluidum**. Fluidextract of ginger [U. S. Ph.]. **oleoresina zingiberis**. A prepara-

tion made by exhausting ginger with acetone and evaporating the acetone [U. S. Ph.]. **syrupus zingerberis**. Syrup of ginger [U. S. Ph., Br. Ph.]. **tinctura zingerberis**. Tincture of ginger, 20 per cent. [U. S. Ph.]; 10 per cent. [Br. Ph.]. **trochisci zingerberis**. Lozenges made of tincture of ginger with tragacanth and enough syrup of ginger. **Z. officinale**. A native probably of India, but not known in its wild state; a plant cultivated in the tropics for its fleshy rhizome, which constitutes ginger. Ginger contains starch, a yellow, volatile oil belonging to the terpenes, and a pungent resinous principle; it is used as a stimulant, carminative, rubefacient, etc. [Lat., for *ginger*.]

zingiberin (zin-jib'er-in). The oleoresin of ginger.

zinziber (zin'zib-er). Ginger.

zir'con. Native zirconium silicate.

zirconate (zir'kon-ät). A compound of zirconium oxid with the oxid of another element or radicle.

zirconia (zir-ko'ne-ah). Zirconium oxid.

zirconium (zir-ko'ne-um). A metallic element. Atomic weight, 91. Symbol, Zr.

Zittmann's decoction. See *decoctum sarsaparillae compositum*, under *sarsaparillae*.

Zizyphus (ziz'e-fus). A genus of shrubs or trees of the *Rhamnaceae*; in the pl., zizyphi, the fruits of *Z. vulgaris*. **Z. vulgaris**. A species found in the Orient, especially of Syria, cultivated in the Mediterranean regions of Europe for its fruits.

Zn. Chemical symbol for the element *zinc*. **zoetrope** (zo'e-tröp). The stroboscope; a toy in which a number of pictures, closely alike, yet varying progressively in certain features, are brought into view in rapid succession by rotating a drumlike wheel in which they are laid, the effect being that the object portrayed seems to perform intrinsic movements; the prototype of the cinematoscope. [Gr., *zoe* life, + *trope*, a turning.]

zo'ism. The aggregate of vital functions and processes. [Gr., *zoe*, life.]

Zöllner's lines. A series of vertical parallel lines which give the optical deception of appearing to converge or diverge with reference to one another because of a series of short, oblique lines drawn across their course. The figure illustrates our tendency to overvalue obtuse angles and to undervalue acute angles.

zomidin (zom'id-in). An aromatic brown substance obtained from beef extract. [Gr., *zomos*, broth.]

zomodmon (zo-mod'mon). A reddish-brown aromatic coloring matter obtained from flesh, bile, and other animal substances.

zomotherapy (zo-mo-ther'ap-e). Treatment by feeding with raw meat or its juices. [Gr., *zomos*, soup, + *therapeia*, medical treatment.]

zona (zo'nah). See *zone*. **z. arcuata**. The middle section of the membrana basilaris. **z. choriacea**. The thickened margin of the membrana basilaris where

it rests on the lamina spiralis ossea. **z. denticulata.** The *z. choriacea* and the *z. interna* of the basilar membrane. **z. externa.** That portion of the membrana basilaris that is external to the outer rods of Corti. **z. fasciculata.** The main portion of the cortex of the suprarenal capsule. It lies beneath the *z. glomerulosa*, and is composed of elongated and columnlike anastomosing groups of cells. **z. ganglionaris.** A large ganglion layer in Rosenthal's canal, lying on the periphery of the modiolus, between the fibrous bundles of the latter and the spiral lamina. **z. glomerulosa.** The layer of the suprarenal capsule next the fibrous capsule, forming the proper substance of the body of the organ and consisting of oval or rounded masses of cells that are really the ends of cells of the *z. fasciculata*. **z. herpetic.** See *herpes periscelis*, under *herpes*. **z. ignea.** See *zoster*. **z. incerta.** A layer of fine longitudinal nerve fibers, with a few scattered ganglion cells, immediately adjoining the reticular formation. **z. interna, z. levis.** The portion of the membrana basilaris that is internal to the outer rods of Corti. **z. orbicularis.** A thickening of the capsular ligament of the hip joint corresponding to the margin of the acetabulum. **z. pectinata.** The external, finely striated section of the lamina spiralis membranacea. **z. pellucida.** The vitelline membrane, so-called on account of its appearing as a broad transparent band lying between the opaque yolk substance within and the granular cells of the discus proligerus which adhere to it externally. When moderately magnified it appears homogeneous, but under a high power it exhibits a striated appearance as if it were porous. **z. perforata.** The inner division of the lamina spiralis membranacea, which is perforated in numerous places for the passage of the fibers of the cochlear nerve. **z. radiata.** The subepithelial coat of the ovarian ovum, made up of a layer of columnar cells, belonging to the discus proligerus. **z. reticularis.** The deepest layer of the cortex of the suprarenal capsule. Here the columns of cells disappear, only round groups remaining in between the septal connective tissue. [Gr., *zone*, belt, girdle.]

zone. A belt or girdle, a circular band differing from the surface carrying it. **boundary z.** The part of the medulla of the kidney next the cortex. In it the groups of blood vessels and uriniferous tubules alternate. **ciliary z.** A thin, transparent membrane which begins with a serrated margin on the ciliary processes, and extends inward nearly to the equator of the lens, where it is intimately connected with the anterior capsule. Microscopically it consists of slight, sharply defined fibers connected by a delicate intercellular substance. **epileptogenic z.** A *z.* comprising certain motor tracts in the cerebral cortex artificial irritation of which gives rise to

epileptoid convulsions. **hysterogenic z's.** Hypersensitive areas in various portions of the body pressure on which produces symptoms of hysteria. **intermediate z.** Of Guillard, the active *z.* of tissue immediately surrounding the central region of parenchyma in the stem of monocotyledonous plants. **internal z. of the lenticular nucleus.** A *z.* adjacent to the internal capsule, with which it is connected by transverse white fibers. **z's of the lenticular nucleus.** Three laminae consisting of masses of gray matter separated by white bundles (medullary laminae). **z's of the uterus.** Three *z's* into which R. Barnes divides the inner surface of the gravid uterus, with reference to the implantation of the placenta, designated the fundal *z.*, the meridional *z.*, and the cervical *z.* **z. of Zinn.** See *ciliary z.* [Gr., *zone*, from *zonunai*, to gird.]

zonesthesia (zo-nes-the'se-ah). See *girdle sensation*, under *sensation*. [Gr., *zone*, a girdle, + *aisthesis*, sensation.]

zon'ule. A small zone. **z. of Zinn.** See *ciliary zone*, under *zone*. [Lat., *zonula*, dim. of *zona*, girdle.]

zoöamylon (zo-o-am'il-on). See *amyloid*. [Gr., *zoon*, animal, + *amylon*, starch.]

zoöbiology (zo-o-bi-ol'o-je). Animal biology. [Gr., *zoon*, an animal, + *bios*, life, + *logos*, understanding.]

zoöchemia (zo-o-kem'e-ah). See *biochemistry*. [Gr., *zoon*, an animal, + *chemieia*, chemistry.]

zoödynamia (zo'o-di-nam'e-ah). Vital force as developed in animals. [Gr., *zoon*, animal, + *dynamis*, power.]

zoögenous (zo-oj'en-us). Transmissible from animals to man.

zoögeny (zo-oj'en-e). Animal reproduction. [Gr., *zoon*, animal, + *gennan*, to engender.]

zoöglea (zo-o-gle'ah). 1. A mass or colony of schizomycetous fungi enveloped in a gelatinous matrix secreted by them in some stage (the *z.* stage) of development during which the cells increase rapidly by fission. 2. The genus *Palmella*. [Gr., *zoon*, an animal, + *glaios*, a glutinous substance.]

zoögony (zo-og'o-ne). That department of embryology which relates to the origin of species of animals. [Gr., *zoon*, an animal, + *gone*, generation.]

zoöid (zo'o'oyd). 1. Like an animal; of the nature of an animal. 2. As a *n.*, an organism resembling an animal, especially one of the more or less completely independent organisms produced by gemination or fission, whether remaining attached to one another or detached and set free. 3. As a *n.*, of Brücke, the nucleus and coloring matter of a red blood corpuscle. [Gr., *zoon*, an animal, + *eidōs*, resemblance.]

zoölak. Matzoon. See *kumyss*.

zoölogy (zo-ol'o-je). The science of the structure, physiology, distribution, and classification of animals. **medical z.** Of Moquin-Tandon, the study of drugs of animal origin. [Lat., *zoologia*, from

Gr., *zoon*, an animal, + *logos*, understanding.]

zöomagnetism (zo-o-mag'net-ism). See *animal magnetism*, under *magnetism*. [Gr., *zoon*, an animal, + *magnes*, a magnet.]

zöomephititis (zo-o-mef-i'tis). Mephititis originating in the decay of animal matter. [Gr., *zoon*, an animal, + Lat., *mephitis*, a pestilential exhalation.]

zöonomy (zo-on'o-me). Animal physiology. [Gr., *zoon*, an animal, + *nomos*, a law.]

zöonotic (zo-on-ot'ik). Due to animal parasites.

zöoparasite (zo-o-par'is-it). An animal parasite. [Gr., *zoon*, an animal, + *parasite*.]

zöoparasitic (zo'o-par-as-it'ik). Pertaining to or produced by animal parasites.

zöopathology (zo'o-path-ol'o-je). The study of the diseases of animals. [Gr., *zoon*, an animal, + *pathology*.]

zöophysiology (zo'o-fiz-e-ol'o-je). Animal physiology. [Gr., *zoon*, an animal, + *physis*, nature, + *logos*, understanding.]

zöophyte (zo'o-fit). A plantlike animal, such as a sponge, a coral, etc. [Gr., *zoon*, an animal, + *phyton*, a plant.]

zöoplastic (zo-o-plas'tik). Formed from the tissue of an animal (said of grafts transplanted from some lower animal to man). [Gr., *zoon*, an animal, + *plassein*, to mold.]

zöoprecipitin (zo'o-pre-sip'it-in). A precipitin obtained by injecting albuminous substances of animal origin.

zöosperm (zo'o-sperm). Another name for spermatozoön. [Gr., *zoon*, an animal, + *sperma*, seed.]

zöotherapy (zo-o-ther'ap-e). Veterinary therapeutics. [Gr., *zoon*, an animal, + *therapeia*, medical treatment.]

zöotocous (zo-ot'ok-kus). See *viviparous*. [Gr., *zoe*, life, + *tokos*, childbirth.]

zöotomy (zo-ot'o-me). The dissection of animals; comparative anatomy. [Gr., *zoon*, an animal, + *tome*, a cutting.]

zöotoxin (zo-o-tok'sin). A toxin or poison of animal origin, such as snake venom. [Gr., *zoon*, animal, + *toxikon*, poison.]

zöotrophoxismus (zo'o-tro-fo-toks-is'-mus). Poisoning due to some kind of animal food.

zopissa (zo-pis'sah). Pitch. [Gr.]

zos'ter. Shingles; an acute vesicular eruption usually painful, characterized by the development of groups of herpetic (see *herpes*) vesicles corresponding in situation to the cutaneous distribution of a nerve. So called because it tends to encircle the body like a girdle. See *herpes zoster*, under separate heading. [Gr., *zoster*, from *zonnunai*, to gird.]

Zr. Chemical symbol for the element *zirconium*.

Zygaedenus (zig-ad'en-us). A genus of the *Melanthaceae*. **Z. elegans**. A Kansas species. The herb is said to cause fatal cerebral disturbance in sheep. **Z. Nuttallii**. A poisonous Californian species.

The tuber has properties similar to those of *Z. venenosus*. **Z. venenosus**. Hogs' potato; a Californian species having a very poisonous tuber. [Gr., *zygon*, a yoke, + *aden*, a gland.]

zygapophysis (zi-gap-of'is-is). An articular process of a vertebra. [Gr., *zygon*, a yoke, + *apophysis*, a process.]

zygocyte (zi'go-sit). The organism resulting from the conjugation of two gametes. [Gr., *zygon*, a yoke, + *kytos*, cell.]

zygoma (zi-go'mah). See *zygomatic arch*, under *arch*. [Gr., *zygoma*.]

zygomaticus (zi-go-mat'ik-us). See *table of muscles*, under *muscle*.

Zygomycetes (zi-go-mi-se'tes). The conjugating fungi; so called because they reproduce sexually by zygospores. They are one suborder of the *Phycomycetes*. [Gr., *zygon*, a yoke, + *mykes*, a mushroom.]

zygospore (zi'go-spör). 1. A compound spore formed by the fusion of the protoplasm of two similar cells (gametes). It germinates after a long period of rest. 2. A fertilized egg cell. [Gr., *zygon*, a yoke, + *spora*, a spore.]

zygote (zi'göt). See *zygocyte*. [Gr., *zygotos*, yoked.]

zygotoblast (zi-go'to-blast). Any germ set free by a zygote. These form in sacs in the body cavity of the mosquito and later migrate to the salivary glands, where they form the infecting agent of malaria. [*Zygoté* + Gr., *blastos*, germ.]

zylonite (zi'lon-it). An American filtering paper prepared from nitrated cellulose with camphor and alcohol; recommended for quantitative analysis. [Gr., *xylon*, wood.]

zymad (zi'mad). The morbidic germ of a zymotic disease.

zymase (zi'mäs). The alcoholic ferment formed by the yeast cell.

zyme (zim). See *ferment*. [Gr., *zyme*, from *zein*, to boil.]

zymic (zi'mik). Pertaining to fermentation.

zymo-. Combining form of Gr., *zyme*, ferment, leaven.

zymogen (zi'mo-jen). The preparatory material from which an enzyme (ferment) is formed. [Gr., *zyme*, a ferment, + *gennan*, to engender.]

zymogene (zi'mo-jën). A microbe that induces fermentation.

zymogenic (zi-mo-jen'ik). Causing fermentation or pertaining to fermentation.

zymoid (zi'moyd). The modified condition of an enzyme, produced by heating and other causes, in which it possesses still the power of combining with its substrate but can not produce any decomposition in this latter substance. [Gr., *zyme*, ferment, + *eidōs*, resemblance.]

zymology (zi-mol'o-je). The sum of knowledge concerning fermentation. [Gr., *zyme*, leaven, + *logos*, understanding.]

zymolysis (zi-mol'is-is). Fermentation or digestion by means of an enzyme. [Gr., *zyme*, leaven, + *lysis*, solution.]

zymoma (zi-mo'mah). 1. Leaven, a fer-

- ment. 2. An old term for gluten washed with water and alcohol.
- zymophytes** (zi'mof-its). Plants that produce fermentation. [Gr., *zyme*, a ferment, + *phyton*, a plant.]
- zymoplastic** (zi-mo-plas'tik). Ferment-forming. **z. substances.** Syn.: *thromboplastic substances*, *thromboplastin*, *thrombokinase*, *cytogen*, *coagulin*. The name given by A. Schmidt to those substances in the tissues which accelerate or favor the process of coagulation of the blood. [Gr., *zyme*, a ferment, + *plassein*, to form.]
- zymose** (zi'mōs). See *zymase*.
- zymosis** (zi-mō'sis). 1. Fermentation. 2. The development or propagation of an infectious disease caused by bacteria. 3. An infectious or contagious disease. [Gr., *zymoein*, to ferment.]
- zymotechny** (zi-mo-tek'ne). The employment of fermentation processes; the manufacture of products of fermentation. [Gr., *zyme*, a ferment, + *techne*, art.]
- zymothermae** (zi-mo-ther'me). Baths of a warm fermenting fluid. [Gr., *zyme*, a ferment, + *thermai*, hot springs.]
- zymotic** (zi-mot'ik). Of diseases, produced by a microorganism supposed to act as a ferment. **z. disease.** See *zymosis*. **z. papilloma.** Yaws. [Gr., *zymosis*, fermentation.]
- zymotoxic** (zi-mo-toks'ik). Toxic and of the nature of a ferment. **z. group.** The active dissolving group of atoms of a complement. [Gr., *zyme*, ferment, + *toxikon*, poison.]
- zymurgy** (zi'mur-je). The chemistry of fermentation. [Gr., *zyme*, leaven, + *ergon*, work.]

APPENDIX TO
APPLETON'S MEDICAL DICTIONARY

ANALYSES OF BODY FLUIDS

L. F. WARREN, A.B., M.D.,

Associate Professor, Internal Medicine, Director Clinical Laboratories,
Long Island College Hospital, Brooklyn, N. Y.

In the following pages the analyses of the body fluids are considered from a practical standpoint. They are not specific or detailed enough for a specialist in any of these lines. The description and blanks, however, will serve a useful purpose for the beginner, the general practitioner, or the student who wishes a ground work. With this idea they are presented. A chemical or theoretical explanation of any reaction will not be discussed.

HOW TO MAKE A URINE ANALYSIS

Name.....	Ward.....	Date.....	Sample.....
<i>Chemical Exam.</i> Quant.....	c.c. Turbid.....	Sp. Gr.....	Reaction..... Color.....
Albumin, Heat and Nitric.....	vol, Acetic-ferrocyanid.....	Heller's.....

<i>Microscopical Exam.</i> Crystals.....	R.B.C.....	W.B.C.....	
Epithelium.....	Casts.....		
Cylindroids.....	Spermatozoa.....	Bacteria.....	
Remarks.....	Examined by.....		

How to Preserve Urine.—As the specific gravity, determinations of albumin, sugar, etc., are only significant when the entire 24 hour specimen is collected, it must be kept from decomposing. Several substances may be used but I have found thymol to give the most satisfactory results. A 10 per cent. solution of thymol in alcohol is used. The vessel in which the 24 hour specimen is to be saved, is washed, dried, and the entire inside coated with this thymol solution. The excess is poured out and the alcohol then begins to evaporate, leaving thymol crystals not only on the bottom, but likewise on the sides of the container. Each specimen is placed in this vessel as soon as passed.

How to Take the Specific Gravity.—For general purposes the specific gravity should never be taken unless it can be determined from a 24 hour specimen. Normally the specific gravity varies from 1005 to 1040 during the day, and any conclusion drawn from a single specimen is very untrustworthy. Any urinometer on the market graduated from 1000 to 1040 is good enough for practical work.

To Determine the Reaction of Urine.—The litmus papers are sufficiently sensitive for practical work and the reaction should be determined from freshly voided urine. Most urines on standing become distinctly alkaline.

How to Clear the Urine.—Before beginning the usual tests, the urine should be as clear as possible. This can be accomplished by filtering through several thicknesses of filter paper, or by adding a small amount of powdered charcoal and then filtering. The charcoal mechanically holds back organisms, pigments, organic matter, etc., but does not disturb those bodies in solution.

TO TEST FOR ALBUMIN

Certain chemical and organic substances may appear in the urine and give indefinite reactions by the following tests. As such may occur in any urine, it is urged that the following 3 tests be made on every specimen before drawing conclusions as to the presence or absence of albumin.

Heat and Nitric Acid.—Take 5 c.c. of urine, heat to boiling and add 10 drops of nitric acid. A definite cloud or precipitate is a positive reaction.

Heller's Nitric Acid Test.—Underlay some urine in a test tube with concentrated nitric acid. A white ring at the zone of contact is a positive reaction.

Acetic Acid and Ferrocyanid Test.—To a third of a test tube of urine add one-third of a test tube of 10 per cent. acetic acid. Mix and add 1 drop of a 10 per cent. solution of potassium ferrocyanid. A cloud following the drop indicates albumin.

TO DETERMINE THE AMOUNT OF ALBUMIN PRESENT

By Volume.—Fill a test tube half full of urine, heat to boiling. Add 1 c.c. of concentrated nitric acid and set aside for 24 hours. Judge the volume by determining the relation of the sediment to the entire amount of urine used, that is, one-third, one-half, etc.

Tsuchiya's Method.—In an Esbach's tube place urine to the mark "U." Add Tsuchiya's reagent to the mark "R." Invert slowly 12 times, and set aside for 24 hours. It is read in grams per liter.

Purdy's Centrifugal Method.—This method is important as the amount may be determined in a very short time. To 10 c.c. of urine in a centrifuge tube, add 3 c.c. of a 10 per cent. solution of potassium ferrocyanid and 2 c.c. of a 50 per cent. solution of acetic acid. Invert until there is an even mixture. Allow the tube to stand 15 minutes. Place in a centrifuge for 3 minutes, using a speed of 1500 revolutions a minute. Each division of the graduated centrifuge tube represents 1 per cent., which is equivalent to .021 per cent. by weight of albumin.

TO TEST FOR SUGAR

Fehling's Test.—To 1 c.c. of each of the white and blue Fehling's solution³ in a test tube, add 4 c.c. distilled water. Heat to boiling and add 1 c.c. of suspected urine. A red precipitate is a positive sugar reaction.

Benedict's Test.—Two c.c. of Benedict's reagent⁴ are placed in a test tube with 10 drops of urine. Boil for 2 minutes. If glucose be present a precipitate red or yellowish in color, will appear. A small quantity of glucose may give the test only on cooling.

Fermentation Test.—Ten c.c. of urine are placed in a mortar and are ground up with compressed yeast, size of a pea. This is placed in a fermentation tube in the incubator for 24 hours. The presence of sugar is indicated by gas in the upper portion of the tube.

TEST FOR THE AMOUNT OF SUGAR

Gravimetric Method.—To 100 c.c. of urine compressed yeast the size of a cherry is added and evenly mixed. The specific gravity is accurately taken. The urine is then placed in an incubator for 24 hours at which time, if the Fehling test is negative, it is allowed to remain at room temperature for 1 hour. The specific gravity is again taken and the difference between the two multiplied by 234. This gives approximately the per cent.

Fermentation Method.—To determine this method the urine should be diluted so that there is not over 1 per cent. of glucose. It is then placed in an Einhorn fermentation tube after having been mixed thoroughly with a piece of compressed yeast the size of a pea. The carbon dioxide which evolves is read off in terms of per cent. of glucose as the tube is graduated in this manner. The amount read on the tube should be multiplied by the dilution to get the per cent. of sugar in the specimen.

By the Polariscopes.—Fifty c.c. of urine are placed in an Ehrlenmeyer flask. Powdered charcoal is added. The mixture is shaken very vigorously at minute intervals for five times. Filter through three thicknesses of filter paper, when if properly cleared, a colorless filtrate will be present. Place the filtrate in the specimen tube of the polariscopes and determine the degree of rotation.

TEST FOR ACETONE

Modified Legal's.—Place 5 c.c. of urine in a sedimentation glass. Add 2 small pieces of sodium nitroprussid. Dissolve by breaking with a glass rod. Add and thoroughly mix 15 drops of glacial acetic acid. Incline and overlay with ammonium hydroxid. A purple or violet ring is a positive test for acetone.

TEST FOR DIACETIC ACID

Gerhardt's Test.—To a third of a test tube of urine add drop by drop 10 per cent. ferric chlorid until all the phosphates are precipitated. Filter, and to the filtrate again add ferric chlorid. A red color, which fades on boiling, is a positive reaction.

TEST FOR BILE

Foam.—Place an inch of urine in a test tube and shake vigorously. The yellow color carried in the foam is a positive test.

Rosenbach's Test.—Filter a quantity of urine. Remove the filter paper, allowing the excess of water to evaporate, and add nitric acid in several places to same. A play of colors of green, purple, blue, red, indicates bile.

Gmelin Test.—By means of a 5 c.c. pipet underlay 5 c.c. of urine in a sedimentation glass with old nitric acid. A green color at the zone of contact beneath which later a purple, blue, red color appears, is a positive reaction.

TEST FOR DIAZO-BODIES

Ehrlich's Reaction.—First make fresh diazo-solution by adding 1 c.c. of the sodium nitrite solution to 40 c.c. of sulphanilic acid solution.⁵ Shake to an even mixture. A third of a test tube of this diazo-mixture is added to a third of a test tube of urine. A tube is inverted twice and ammonium hydrate, 2 c.c. is immediately added. A pink or salmon color in the fluid and foam is a positive reaction.

TEST FOR INDICAN

Jaffe's Test.—To a third of a test tube of urine, 1 drop of calcium hypochlorite solution is added to the side of the test tube. This is washed into the urine by a third of a test tube

of concentrated hydrochloric acid. Add quickly 2 c.c. of chloroform, and invert gently for several minutes. A blue color in the chloroform is a positive reaction.

TO DETERMINE THE AMOUNT OF UREA

A portion of a 24 hour specimen which has been preserved should be used. Occasionally the urines obtained by ureteral catheterization are subjected to this test to compare the kidney elimination of this body.

Hufner's Method.⁶—A Doremus or a Hinds modification of the Doremus ureometer is necessary. Two standard stable solutions are made up as follows: Solution A: sodium hydrate 100 grams dissolved in 250 c.c. water. Solution B: bromin 1 part, potassium bromid 1 part, and water 8 parts. These are kept separately and equal quantities are mixed and placed in the large tube of the apparatus each time a determination is made. The tube must be completely filled and this is accomplished by inverting several times. One c.c. of urine is then allowed to flow slowly into this tube either by means of a graduated pipet or of a second tube attached to the standard. The apparatus is graduated to read in milligrams of urea per c.c., as .01 gram of urea in 1 c.c. represents 1 gram per 100 c.c. of urine, the amount of urea in a 24 hour specimen is easily determined.

HOW TO DETERMINE THE FUNCTION OF THE KIDNEY

Rowntree and Geraghty's Phenol-Sulphone-Phthalein Test.⁷—After emptying the bladder the patient is injected with 1 c.c. of this dye. An accurately graduated tuberculin syringe should be used. He is then given 200 c.c. of water and voids or is catheterized at the end of 1 hour. This constitutes the first hour's excretion. He again takes 200 c.c. of water and voids at the end of the second hour from the injection. These 2 specimens are placed separately in 1000 c.c. measuring flasks and enough N-4 sodium hydrate is added to make them distinctly alkaline. Distilled water is then added to 1000 c.c. A small amount from each flask is filtered and the amount of the dye excreted is determined by comparing with standard solutions in a tintometer. A Hellige colorimeter is practical and easy. The standard solution is made by taking 1 c.c. of the dye, placing it in 1000 c.c. flask, making it distinctly alkaline with N-4 sodium hydrate and diluting with distilled water to 1000 c.c. This solution is placed in the wedge of the colorimeter and compared with the unknown which has been placed in the small rectangular chamber of the instrument. The instrument is graduated and the per cent. excreted each hour is thus directly determined.

HOW TO OBTAIN SEDIMENT

The examination of sediment should be made as quickly as possible after the urine is voided. The sediment is obtained by centrifuging for 3 minutes, or by placing some urine in a glass with a conical base, allowing the organic matter to settle down merely by gravity. If the sediment from a 24 hour specimen is to be examined, the entire urine should be shaken vigorously before portions are placed in either the centrifuge tube or the sediment glass.

HOW TO RECOGNIZE RED BLOOD CELLS

Red blood cells are round, usually numerous, all the same size, have a greenish tinge, are non-nucleated, non-granular, and are occasionally crenated. As a last resort they may be stained with the usual blood stains.

HOW TO RECOGNIZE WHITE BLOOD CELLS

They are round, the edges occasionally are broken, they are nucleated, granular, have a greyish color, are occasionally clumped and lastly, can be stained as polynuclears from other places.

HOW TO RECOGNIZE EPITHELIAL CELLS

They are usually irregular in shape, larger than the above, have a single nucleus; frequently 2 or 3 are joined together. They may be hyaline or granular.

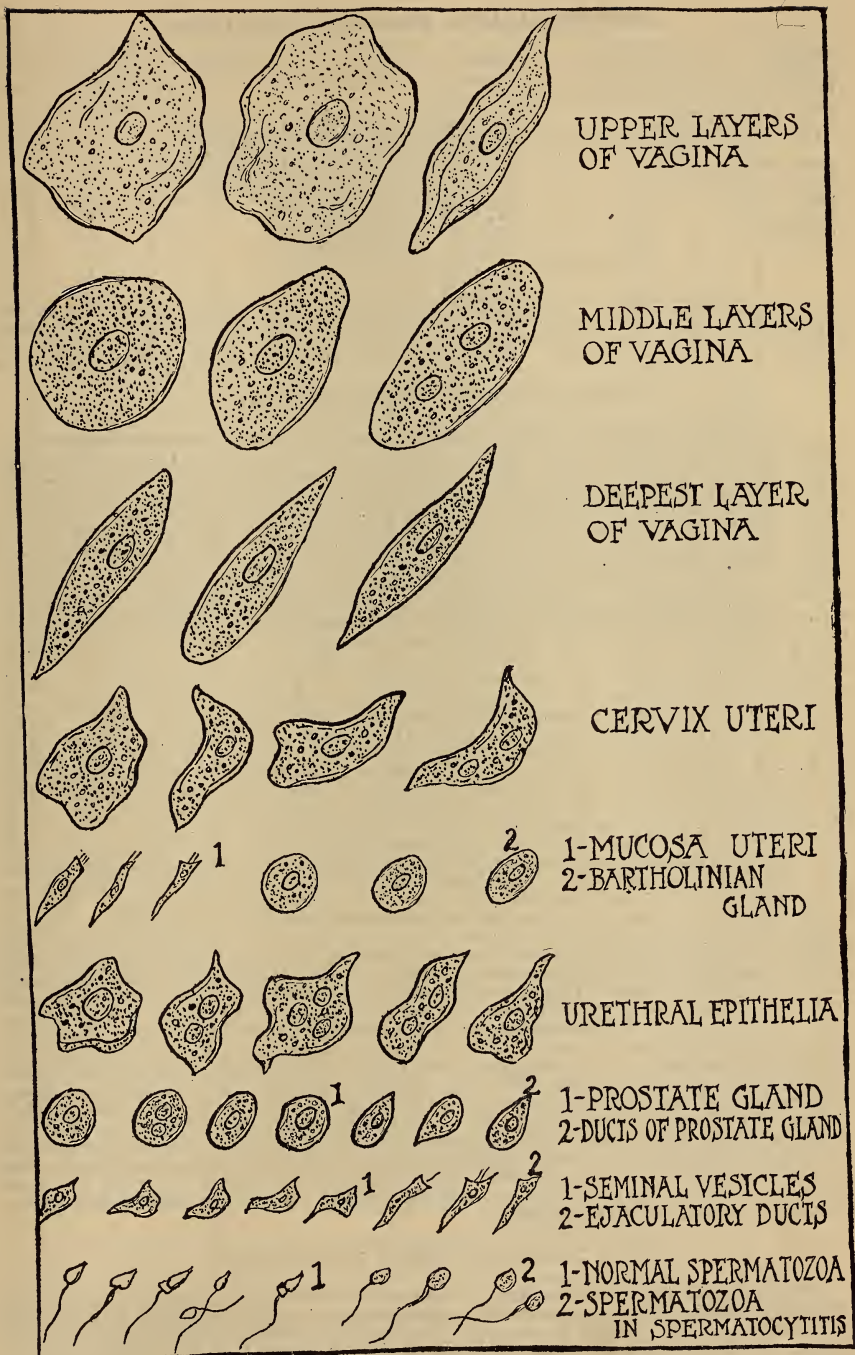

HOW TO RECOGNIZE CASTS

Casts may be recognized by their having a limiting membrane enclosing a matrix or substance in which are epithelial cells, pus cells, red blood cells, granules, fat globules. From these latter characters they take their name as epithelial casts, red blood casts, etc. Casts have usually square ends, their diameter is the same throughout—they usually do not twist or bend. Their ends are not pointed.

HOW TO RECOGNIZE CYLINDROIDS

Cylindroids are recognized by having twists, turns, varying markedly in diameter in different places, most frequently pointed at the ends and frequently crossing an entire field. They usually do not have cellular intrusions.

Any standard blood counting apparatus is necessary. Those made by Leitz or Zeiss are excellent, but I have seen marked errors from use of inferior makes. The apparatus consists of 2 pipets. The red pipet is graduated for a 1 to 101 dilution, the white pipet for a 1 to 11, or a 1 to 21 dilution. The ruling of the well should be either Zappert-Ewing or Turk.

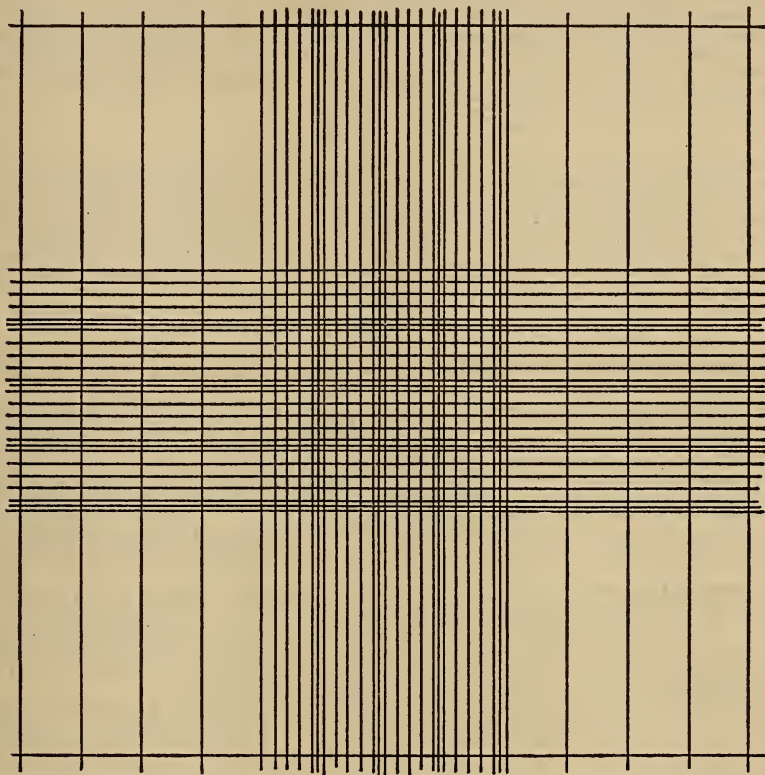

HOW TO COUNT RED BLOOD CELLS

After cleansing the finger with alcohol, it is thoroughly dried. A small instrument as a Hagedorn needle or a Ford blood lancet is used. The first drop is discarded, and with a small amount of pressure a second drop is expressed. It should be the size of a small cherry pit before beginning to fill the pipet. With the aid of the small rubber tube of the apparatus, blood is drawn into the 1 to 101 pipet up to the mark 5, the end of the pipet is cleaned with a small piece of gauze, and placed in a dish containing Hayem's solution. Suction is then made through the rubber tube and the pipet filled to the mark 101. The rubber tube is then removed and the pipet is rolled between the 2 hands, keeping it always in a horizontal position. This is continued for 1 minute as it is necessary at this time to get an even suspension of the red blood cells. The tube is then laid aside until the white pipet has been filled, smears made and the hemoglobin determined. The count can be made following this or any time during the next 12 hours as the cells do not disintegrate. When the count is made the well is thoroughly cleaned with distilled water, and dried with a silk handkerchief. The cover glass is likewise cleaned. The red pipet is again rolled between the hands for 1 minute and one-third of its contents is blown out and wasted. A drop is then placed upon the center of the island of the counting chamber and is immediately covered with the cover glass. The size of the drop and the technic of covering it to get a good preparation, must be learned by experience. My own method is as follows: The rubber tube is placed on the pipet, and doubled upon itself one-half inch from the end of the pipet. By squeezing it slightly between the thumb and index finger, a drop is expressed and wasted. The pressure of the thumb and finger is still applied, and the end of the pipet is placed on and in the middle of the island. Slight pressure with the thumb and finger is again exerted until enough suspension is on the island so that when the cover glass is applied it covers from three-fourths to seven-eighths of the island. The cover glass is sealed to the well by firmly applying pressure on the cover glass over the glass table of the well until colored rings appear where the two are in contact. They are seen between the cover glass and this table when looked at obliquely with direct light. The well is now placed on the stage of the microscope and viewed with the third objective. The eye piece of the scope is drawn upward to secure better magnification. Although there are many methods for counting red cells, I have found the following short, easy, and most useful. The central square millimeter is placed under the field and one of the horizontal spaces having a line in the middle is found. This will be seen to be one-twentieth of a mm. wide and 1 mm. long. It is divided by intersecting lines into 20 small squares. All the red cells within the space are counted and their number noted. A second vertical space is likewise chosen, the cells counted and the number noted. The well is again cleaned, another drop is added and the same process repeated. To the number of cells counted in these 4 spaces add 4 zeros which give the number of cells in a cubic millimeter of undiluted blood. This is explained as follows: Each space has 20 small squares, hence, the 4 spaces have 80 small squares which are one-fifth of the 400 small squares into which the central millimeter is ruled. Hence, one-fifth of a square millimeter of surface was counted, but the depth of the well is one-tenth of a millimeter, hence, one-fiftieth of a cubic millimeter of diluted blood was counted, and as the dilution by this method is 1 to 200, we must multiply the number counted by 50 and by 200 to secure the number of red cells in 1 c.c. of undiluted blood. This is the same as multiplying by 10,000 or adding as above, 4 ciphers.

HOW TO COUNT WHITE BLOOD CELLS

After filling the white blood cells in the manner described above, but using as a diluent a freshly prepared one-half per cent. acetic acid solution, the pipet is rolled for 1 minute and again one-third of its contents is expressed. A drop is placed upon the island in the same manner as is described above. The cover glass is applied, and the well allowed to stand for 1 minute. This gets all the white cells in the same plane. The 4 corner square millimeters are chosen and one of the side square millimeters is used. The small round, rather dark

bodies will be easily seen and the number in each square millimeter is noted. After the 5 square millimeters are counted, the well is cleaned and another drop is taken from the pipet after it has been thoroughly rolled, and 5 more square millimeters are counted and the number of each noted. These 10 numbers added give the number in 1 cubic millimeter of diluted

ZAPPERT-EWING RULING.

blood and must be multiplied by 20 to get the number of white corpuscles in 1 cubic millimeter of undiluted blood. This last is true if a 1 to 11 pipet is used, the blood drawn to .5, and acetic acid to 11. If, however, a 1 to 21 pipet is used we multiply by 40.

HOW TO TAKE HEMOGLOBIN

Many instruments are used for the estimation of hemoglobin but I have found 3 methods of particular importance. I believe for outside work the Dare hemoglobinometer is the best, as the blood does not have to be diluted and needs only a dark room for its determination. For hospital work I have found the Miescher most useful, but of late the Sahli has in many places been substituted. Theoretically the instrument is the best and gives best practical results. Instructions as to use comes with each apparatus and will not be discussed here.

HOW TO DETERMINE THE COLOR INDEX

The color index of the red cells is easily determined if the following is noted. A red blood count of 5,000,000 should have 100 per cent. hemoglobin. A cell count of 4,000,000 should have 80 per cent., one 3,000,000, 60 per cent., etc. It will be observed if the first two figures of the red count are multiplied by 2, it is what the hemoglobin should be if red cells and hemoglobin were diminished in the same proportion. Hence in any given case where the red count and hemoglobin are known, multiply the first 2 figures of the red cell count by 2 and place it as the denominator, the numerator of the fraction being the hemoglobin as determined by instrument in the case. Reduce the fraction placing it in decimal form and we have the color index.

HOW TO MAKE BLOOD SMEARS

For the easy recognition of white cells, it is essential that a good smear be made. This is easily done as follows: Cover glasses three-quarters of an inch square must be perfectly clean and lint free. This is accomplished by cleaning them with hydrochloric acid for 24 hours. They are then washed in water and placed in alcohol. A silk cloth is used to dry them. The finger should never come in contact with the flat sides of the glasses. A small drop of blood the size of the head of a pin is taken on one of these cover glasses which in turn is placed upon a second similar film. If they are clean, the blood runs out covering the entire surfaces in apposition. Just before this movement of the blood stops, the films are gently pulled apart and allowed to dry in the air.

HOW TO STAIN A FILM

Although many blood stains are used and have their advantages in bringing out certain special characteristics, I have found Wright's stain particularly applicable for the ease with which it is used and because of its good differentiation. Five drops are placed on a dried film and left for 1 minute, when 5 drops of distilled water are added and left for 2 minutes. The film is then gently washed with distilled water until the blue color just disappears and a pink color appears. It is then dried with blotting paper and mounted in balsam. If the stain is good, the red cells take a pinkish or copper color and white cells have their nuclei blue, with their respective granules differentiated.

HOW TO RECOGNIZE VARIOUS WHITE CELLS

Polymorphonuclear Neutrophils.—In the following, the cells are described as they appear stained with Wright's stain.

Neutrophilic polynuclears make up 60 to 70 per cent. of the normal white cells and are characterized as follows: They are usually round, about twice the size of a red blood cell, have a blue nucleus which is multiple, lobulated, or horseshoe-shape. The protoplasm has a pinkish color and contains a few fine granules usually having a lilac tint.

Lymphocytes, small.—These cells are characterized by their deeply staining compact nucleus taking a dark blue color. The nucleus occupies all or most of the cell, and is either in the center or at one side. The protoplasm is a clear blue. There are no granules but occasionally a few small vacuoles are present. They vary in size from that of a red cell to twice the size of such a cell. They form from 15 to 25 per cent. of the white cells of normal blood.

Lymphocytes, large.—This cell is frequently difficult to classify but typically it is characterized by its irregular shape, being easily indented by any cell with which it comes in contact. Its protoplasm is larger in amount than its nucleus. The nucleus is usually oval and situated in the middle of the cell. It stains a faint, even blue color. The protoplasm stains palely blue, is very clear, and does not stain for a small area around the nucleus. Occasionally there are a few small vacuoles or a few eosinophilic granules.

Eosinophils.—The eosinophils are large, slightly irregular cells with very distinct bright pink granules. These granules cover the protoplasm often making it invisible. Occasionally there are vacuoles scattered about through the granules. The nucleus is of a polymorphonuclear type and stains definitely blue. They make up from a half to 2 per cent. of the white cells of normal man.

Transitionals.—These cells are characterized by their large size, at times being 3 times as large as a red cell. They are commonly slightly irregular and occur in from 2 to 4 per cent. of a normal differential. The nucleus is oval, lobulated or a horseshoe and stains an even dirty blue color. The protoplasm likewise is stained a dirty blue tint, and has scattered throughout neutrophilic granules which take a lilac shade.

Mast Cells.—This cell is present in normal blood from one-quarter to one per cent. It is characterized by its deeply staining lobulated or cloverleaf nucleus. The protoplasm is very blue and it is difficult to determine where the nucleus stops and the protoplasm begins. The distinctive feature of the cell is a number of blue black granules which at times entirely fill the protoplasm.

Degenerates.—This term is used to include all cellular masses whose staining reactions, form, size, etc., do not admit of their classification. Although the number of these cells is determined in each differential they do not enter into the per cents. of the differential.

Myelocytes.—These cells are characterized first by their large, oval, saddle bag or kidney-shaped nucleus which stains palely and often shows reticulation. The nucleus is often situated at one side of the cell, the protoplasm of the cell stains a pale blue; the granules are either neutrophilic, eosinophilic, or basophilic. The former are small, usually abundant with a lilac tint. The eosinophilic granules vary greatly in number. Some cells have few, others being filled with them. The basophilic granules are large and take a heavy blue black color.

HOW TO MAKE A DIFFERENTIAL CELL COUNT

After the film is stained it is examined with the sixth objective. The white cells in any field are noted as to number and kind. The film is then moved and the same note again made. This is continued until 200 white cells have been counted and properly noted and classified. The number of each kind is then determined and this is divided by 2 to get the per cent. of each as they exist in the film.

HOW TO RECOGNIZE VARIOUS RED CELLS

Poikilocytosis—Anisocytosis.—Normal red cells are round, but under pathological conditions they may assume many and various shapes. This is called poikilocytosis and is naturally a thing of degree. When over one-half of the cells have altered form, this property is marked. Normally red cells vary slightly in their size or diameter. Under abnormal conditions there may be extreme variations. This variation in diameter above the normal variation is called anisocytosis and if over one-half of the cells of the film differ in size from normal cells, anisocytosis is marked.

Polychromasia—Stippling.—A red cell showing polychromasia is one having a grayish tint when its neighbors have a pink or copper stain. At times this is very slight, but in severe anemia, pernicious anemia, lead poisoning, etc., may be abundant. Stippled red blood cells are those having small blue black granules scattered through their protoplasm. They are seen particularly in lead poisoning, pernicious anemia, and occasionally in severe anemias. They are best noted with the oil immersion.

Normoblasts.—A normoblast is a nucleated red cell which has a small, darkly staining pycnotic nucleus. Occasionally the protoplasm may show polychromasia or stippling. A megaloblast is a nucleated red cell with a large, open, reticulated or wagon-wheel nucleus. It usually also shows polychromasia or stippling. The cell is commonly large and may be irregular in shape. Although there are many points of differentiation between these 2 cells and each hematologist has his own opinion as to their identity, I have found the above differentiation as described by Grawitz, to be easy and practical.

Malarial Plasmodii—Tertian Organism.—With the Wright's stain malarial organisms are beautifully colored and easy of differentiation. They are characterized by having a nucleus, protoplasm and granules. The tertian organism at about 24 hours after the chill occupies one-quarter to a third of the cell, although the cell is usually larger. The chromatin mass or nucleus is red, small, and situated at one side of the organism. The protoplasm is fairly abundant, stains blue, and is commonly irregularly placed through the red cell. The granules at this age are small, brownish in color and at the end of the pseudopods. The organism continues to grow until 40 hours old, filling quite the entire cell which has enlarged to accommodate it. The nucleus at this time breaks up in from 18 to 24 portions and is gradually placed through the protoplasm. The granules now lie in 2 or 3 nests throughout the protoplasm until the new segments are formed. At the end of 48 hours the cell is broken, the segments freed, and the granules placed in the blood stream.

Estivo-autumnal Organism.—In this form we see the typical signets. They are found best in the peripheral blood 8 or 10 hours after a chill. The protoplasm is pale, takes the form of a ring with a knob on one side which is the nucleus. This stains a red color. Occasionally 2 or 3 of these signets are seen in the same cell. They must be looked for with the immersion objective. During development the signet passes to the internal organs and only occasionally is its growth carried on in the peripheral stream. However, if the infection has been present for a week or more, crescents and ovoids may be present in the peripheral blood. They are characterized by having a crescent or oval form. This deforms and stretches the red blood cell so that only a bib of the cell is usually seen. The protoplasm of the organism stains blue, and the granules are either scattered throughout or arranged centrally in a single clump. The chromatin is either scattered about or is quite compact at the center, depending upon the sex.

Quartan Organism.—The red cell host is smaller, often crenated and takes a brassy color. The pigment is coarse, black and the granules are large. They lie at the periphery of the organism. The organism develops in the peripheral stream and at 60 hours old the pigment passes in rows toward the center, and finally collects in a central clump. At 66 hours segments begin to form and division lines again run from the periphery of the organism to its center. This form is spoken of as the "daisy" age of the plasmodium. At 72 hours, 8 to 10 segments are freed and the cycle begins again.

HOW TO MAKE A SPUTUM EXAMINATION

MACROSCOPIC EXAMINATION

It is always well to ascertain the amount of sputum that is raised in 24 hours as well as to ascertain in what manner it was raised. Thus a patient with cavities, bronchiectasis,

abscess, etc., raises a large amount in a paroxysm of cough and then is free for a certain length of time. A patient with tuberculosis commonly raises sputum in the morning but not through the day, while a patient with chronic bronchitis or broken compensation may raise most of the sputum at night. Although it is well to have this information, it is not best to wait for a 24 hour specimen for examination. The sputum should be examined as soon after it is expectorated as possible, because large numbers of saprophytic organisms may make it liquid and organisms which were previously present, may be difficult to find. Again the bacterial flora of the sputum cannot be properly judged from old sputum.

Color.—It is important to note the color of the sputum in all cases. A bloody or bloody streaked sputum, which may be present from many causes, should always throw the balance in favor of tuberculosis until that can be absolutely ruled out. This is particularly true when patients are apparently well. The rusty sputum of pneumonia is at times a strong diagnostic point in unusual cases. The dark sputum of coal and mine worker is often a significant finding in association with a bronchitis.

Character and Consistency.—The sputum varies in character and consistency from a mucoid to a liquid purulent condition. If a few pus cells are incorporated in the mucus, giving small yellowish patches in same, it is spoken of as a mucopurulent sputum. If enough blood is present to determine by the eye, it is spoken of as a blood streaked, and if abundant blood is present, a hemorrhagic sputum. If abundant pus is present and is spit up in mouthfuls, it is a purulent sputum. The rusty sputum of pneumonia is very tenacious and has a peculiar glairy appearance, while the sputum of a perforating empyema is usually thin, liquid, and distinctly purulent. The odor of sputum is usually of less significance than the amount and color. However, the odor of sputum of bronchiectasis and putrid bronchitis, is usually fetid, while the odor in gangrene is that of proteid putrefaction and is worst of all. Sputum which has not stood either within or without the body, excepting the above mentioned conditions, usually has very little odor.

MICROSCOPIC EXAMINATION

How to Examine a Fresh Preparation.—The examination of sputum in a fresh unstained preparation is usually, but should never be, omitted. Much can be learned that a stained preparation will not show. Thus the types of cells present, aiding us in judging from what part of the respiratory tract the sputum came; the finding of elastic tissue, speaking of the disintegration of the lung substance; the crystals, plugs, and spirals of asthma and bronchitis; these are important findings which should be looked for in this manner as the case demands. For this examination 1 dram of sputum is placed on a 4 by 5 inch glass plate. A small portion of this sputum is covered with a 1 by 3 inch glass slide. Pressure is applied until all in the field can be easily interpreted when viewed with the third objective.

How to Recognize Pavement Epithelium.—Epithelial cells get into the sputum from the mouth, pharynx and the respiratory tract as low as the larynx. They are large, irregular in shape, have a single small nucleus, and usually several cells are massed together. They often show granular and fatty degeneration.

How to Recognize Alveolar Cells.—It is important to recognize alveolar epithelium. The cells are 3 or 4 times the size of a leukocyte, are usually oval and have a coarsely granular protoplasm with one or more large vesiculated nuclei. They are found in normal sputum but are markedly increased in inflammatory process in the lungs, especially tuberculosis. Some of them contain intrusions of dust particles, carbon, blood pigment, etc., and are hence named dust cells, carbon cells, heart failure cells. Dust or carbon cells are found most often in the sputum of patients who have a dusty occupation. Heart failure cells are found most commonly in chronic passive congestion due to mitral disease in which condition the entire sputum may have a yellowish color. More commonly, however, these cells give yellow or brownish areas scattered throughout a mucous sputum. The yellow granules which the cells contain are usually large but some cells take a diffuse yellowish tinge.

How to Recognize Elastic Tissue.—It may appear either in small shreds or in its alveolar arrangement, and is characterized by its double hair-line wall, its homogeneous hyaline appearance, its square but often curved ends, and by its branching. The alveolar arrangement is easily recognized as it has large numbers of fibers intertwining, enclosing definite small spaces.

How to Recognize Charcot-Leyden Crystals.—They are long, narrow, transparent diamond-shaped crystals. They vary markedly in size but are usually found in groups or clumps. They are soluble in hot water and stain red with eosin.

How to Recognize Curschmann's Spirals.—They consist of twisted strands of mucus enclosing pus cells, eosinophils and occasionally Charcot-Leyden crystals. Most spirals have a central axis which is very refractile. They are seen most often in bronchial asthma but occasionally are seen in other types of bronchitis and pneumonia.

STAINED PREPARATION

How to Make a Sputum Smear.—When, during the examination of the fresh preparation, elastic tissue, fatty acid crystals, or a clump of pus cells with a few red blood cells about, are found, that portion is taken to the edge of the large plate and a smear is made. This is best done by grinding the small glass slide over this portion as it rests upon the larger plate. The small plate is then steadily drawn from the surface of the larger plate and the preparation fixed by passing it five times through a flame. Care must be taken that it is not charred. Several smears are made in this way and are later stained.

How to Stain the Tubercle Bacillus—Ziehl-Neelsen Method.—If the examination is made with the object of finding the tubercle bacillus, one of the slides is covered with carbolfuchsin⁹ and is heated to steaming for 3 minutes, care being taken to keep the film covered with the dye during this entire process. The excess of dye is washed off and the slide is decolorized in acid alcohol (2 per cent. HCl and 80 per cent. alcohol). This is continued until the pink color does not return upon rewashing in water. Methylene blue¹⁰ is then added for 45 seconds and the film is again washed in water, dried and examined with the oil immersion. The organism is recognized by its pink color, its long, narrow shape, its curved, beaded, parallel, and apparently branched forms. It is also commonly found in clumps.

Other Organisms—Gram's Stain.—Although most sputum examinations are made for the tubercle bacillus, still we have times when we wish to know what other types of organisms are present. These organisms will be stained in the smear stained for the tubercle bacillus but they cannot be classified except morphologically. We are further aided then by using Gram's stain. A slide prepared as above is covered by carbol-gentian-violet¹¹ for 2 minutes. The excess is poured off and the smear gently blotted. Gram's iodine¹² is then added for 1 minute and again the excess is removed. The slide is then decolorized in 95 per cent. alcohol until the film has a whitish, translucent appearance. It is then gently washed in water and counterstained. I have found the carbolfuchsin solution used for staining the tubercle bacillus diluted 20 times, an excellent and easy counterstain. This is applied for 1 minute, the slide is washed, dried and examined in cedar oil with the oil immersion. We then note the predominating organism as well as its reaction to Gram's.

How to Recognize the Pneumococcus.—Although it is impossible in many cases to be sure of the pneumococcus by its morphology and Gram's reaction, still in the sputum of pneumonia its recognition is not hard. It is characterized by its paired arrangement, is longer than it is wide, occasionally slightly curved in the pairs, may appear in short chains of 4 or 6, and commonly lies in clumps. It takes a Gram positive stain.

How to Recognize the Bacillus Influenzae.—Bacillus influenza is characterized as short, thick, Gram-negative bacillus usually abundant, having clumps of almost pure culture.

TEST MEALS

For a thorough stomach examination more than one test meal is necessary. Two test breakfasts and one full meal will usually be sufficient; but when there are symptoms of retention, a raisin test should be added.

Test Breakfast (Dock—Shredded Wheat Biscuit).—We have found the meal as suggested by Dock, an exceptionally good one. A shredded wheat biscuit without sugar, milk or cream is masticated thoroughly and eaten in 5 minutes. Two glasses of distilled water are taken at intervals during this time. In 45 minutes the tube is passed and the contents withdrawn.

Full Meal.—A full meal of mixed diet is taken at the time of day at which the patient is accustomed to eat, usually at 12 noon. In 4 hours the tube is passed and contents drawn and examination made.

Retention Meal.—If there are evidences of retention from any cause, 10 seeded raisins are given at 10 p.m. They are swallowed, not masticated. At 7 o'clock in the morning the tube is passed and the stomach washed with 200 c.c. of water. Normally no traces of raisins will be found.

MACROSCOPICAL EXAMINATION

A shredded wheat biscuit should give 50 to 100 c.c. of stomach contents in 45 minutes and the lavage should be clear. If 15 c.c. only is withdrawn and the lavage contains considerable food particles no definite conclusions can be drawn as regards the amount in the stomach. If, however, 15 c.c. are obtained and the lavage is clear, we apparently have a hypermotile organ. If no contents can be withdrawn in 45 minutes and the lavage is clear, the second tubing is made the following morning in 30 minutes. On a full meal the quantity removed should be from 150 to 200 c.c. with a lavage likewise clear. It is important to wash the stomach after every tubing as we can only then say if the entire amount in the stomach has been withdrawn.

Blood.—Occasionally blood-streaked mucus is spit up after tubing and is usually due to trauma from the tube or from violent spasm associated with retching. However, if any free HCl is present the blood quickly loses its red color and assumes a brownish tint. That the brown color comes from a hemoglobin, can be easily told by the occult test. (See *Stool Examination, Weber's test.*) Remains from previous meals will be occasionally seen and are usually skins, seeds, etc. At times the test breakfast shows meat particles and fat from the previous evening meal. This finding is very significant as it indicates retention.

Mucus.—Mucus is always present in the stomach contents in a slight amount, but any content which strings on a glass rod when it is passed through it, or which contains a layer of mucus on the top of the contents, or which, on account of the mucus, is not fluid and will not filter easily, shows a definite increase in this body.

Bile.—Any coloring of the stomach contents which may be suspicious of bile or the biliary pigment, can be tested as under bile tests. (See *Urinary Examination.*)

MICROSCOPIC EXAMINATION

Red Blood Cells.—Red blood cells do not remain intact if free HCl is present. They are broken up and the hemoglobin is put in solution as a hematin which gives a brown color if a sufficient amount is present in the fluid.

White Blood Cells.—See *description under Urine.* They are usually, however, in pieces of mucus and can be stained by the ordinary blood stains.

Bacteria.—A few bacteria are present in every gastric contents but with abnormal secretions and retentions enormous numbers may be present. They can be stained with the ordinary dyes and their morphology determined or they can be isolated and determined by cultural methods. The Oppler-Boas bacillus is at times an aid in diagnosis and is seen particularly in carcinoma of the stomach with ulceration and retention. They are long, narrow, non-motile, branching and chain organisms giving a Gram positive reaction. They are usually numerous.

Yeasts.—A few yeasts are present in every stomach content and can be recognized by their form and staining reaction. They are usually oval, occur in pairs or short chains with a small one budding from a larger one. They have a greenish color, a definite hair-line border, and are stained a brownish color by Lugol's solution.¹³ They are markedly increased in retention.

Sarcines are recognized by their form as they occur in bales. They likewise stain a yellowish, brownish color with Lugol's iodine solution. They are most commonly seen in benign retention.

Moulds can be told by their threadlike mycelia and conidia.

Mucosa.—Occasionally pieces of the mucous membrane of the stomach may be obtained with the stomach contents. Pathological examination of such reveal the true nature of the morbid-gastric condition. The literature gives many cases of cancer so diagnosed. Commonly epithelial cells from the lining of the stomach are present and they may be recognized by their irregular shape, and by a single small nucleus. They take a yellow stain with Lugol's solution.

CHEMICAL EXAMINATION

The stomach content is filtered and the filtrate is tested for its acidity with litmus paper. Most contents are acid but occasionally one is alkaline. If the stomach contents be acid, Congo red paper will turn a deep blue if this acidity be due to free HCl.

Test for Free HCl (Günzburg).—Günzburg's test is the most reliable. To determine the presence of free HCl place 2 drops of stomach filtrate with 2 drops of Günzburg¹⁴ reagent on a porcelain plate and mix. Heat gently until the water is evaporated. A red or pink color on the plate is a positive test for free HCl. The amount is determined later by titration. If the Günzburg reaction is negative, the acidity as told by litmus paper is due to loosely combined acid or organic acid which is determined as follows:

Test for Loosely Combined Acid (Sjoqvist).—To 5 c.c. of stomach filtrate add barium carbonate to excess and incinerate in a crucible to white heat. To the crucible add distilled water and heat to boiling. Filter and to the filtrate add a drop of sulphuric acid. A finely granular white precipitate shows the presence of loosely combined acid.

Test for Lactic Acid (Uffelmann).—One c.c. of each 5 per cent. solution of phenol and 10 per cent. solution ferric chlorid is placed in a test tube and diluted with distilled water until a light amethyst color appears. To this several drops of stomach filtrate are added. If lactic acid is present a yellow color follows the drop as it descends.

Kelling.—This modification I have found to be most satisfactory. A drop of 10 per cent. solution of ferric chlorid is placed in each of 2 test tubes. Distilled water is added until each is half filled. To one tube add several drops of stomach filtrate. A yellow color or a greenish-yellow tinge is a positive reaction. One tube is used simply as a control.

TO TEST FOR THE AMOUNTS OF ACID PRESENT

Test for Free HCl.—If the Günzburg is positive, place 5 c.c. of the stomach filtrate in a whiskey glass and add 1 drop of a 1 per cent. alcoholic solution of diamethyl-amido-azobenzol. This gives a bright red color. Titrate with $\frac{N}{10}$ NaOH until a yellow color appears and the pink has completely gone. The number of c.c. of the hydrate used is the amount necessary to neutralize the free hydrochloric acid in 5 c.c. of stomach filtrate. Hence, we multiply the number of c.c. used by 20 to determine the amount of hydrate necessary to neu-

tralize the free acid in 100 c.c. of stomach filtrate. When the free acid has been titrated out, add 1 drop of phenolphthalein to the same filtrate and again titrate with $\frac{N}{10}$ NaOH until the first definite pink color returns.

The number of c.c. of hydrate used from the beginning of the titrate for free HCl to the end with the phthalein as an indicator, is the number of c.c. necessary to neutralize the total acid bodies in 5 c.c. of stomach filtrate. This must be multiplied by 20 to determine the total acidity as all findings are recorded on the amount of $\frac{N}{10}$ NaOH necessary to neutralize the entire acids in 100 c.c. of stomach filtrate.

Normally a shredded wheat biscuit gives a free HCl from 15 to 30 and a total acidity of 30 to 40. A full meal from a normal stomach gives a free HCl of 30 to 50 with a total acidity of 65 to 80. Lactic acid is not present unless the patient has taken milk, rye bread, beer or something of that nature with the meal.

To Test for the Amount of Loosely Combined HCl.—Although for practical purposes the determination of free HCl and total acidity with a qualitative test for organic acid gives us our most significant findings, still at times we determine the amount of loosely combined HCl. To a fresh 5 c.c. of stomach filtrate add 1 drop of a 1 per cent. aqueous solution of alizarin-monosulphonate and titrate with $\frac{N}{10}$ sodium hydrate until the addition of more hydrate does not increase the density of the violet color. The number of c.c. of $\frac{N}{10}$ sodium hydrate used in this titration is the number necessary to neutralize all but the loosely combined acid in 5 c.c. of stomach filtrate, and it would take 20 times that much hydrate to neutralize all but the loosely combined acid in 100 c.c. of stomach filtrate. Hence, the total acidity less this titration which determines all but loosely combined, gives the loosely combined acid.

To Determine the Amount of Organic Acids and Acid Salts.—Add the free HCl to the loosely combined HCl, and subtract from the total acidity for the amount of organic acids and acid salts. If the qualitative tests for lactic acid are negative, we may have acetic, oxalic, or butyric acid present or the acid salts may be sufficient to give the entire amount.

To Determine Size, Position and Motility of the Stomach.—No stomach examination is complete unless the size, position and motion of the organ are accurately determined. This can be done easily by passing a tube with a standard Goodrich aspirating bulb attached. The stomach is first emptied and air is then blown into the stomach by the aid of the bulb. A normal sized stomach will hold with slight distress about 15 bulbs. The greater curvature should also lie on a level with or above the umbilicus and there should be about 3 contractions per minute as determined by auscultation over the pylorus. I believe the patient should stand after the stomach is inflated as I have found that it is frequently lower in the upright position than when the patient is recumbent.

THE METT DIGESTION TEST¹⁵

Quantitative methods for determining pepsin are occasionally used. The results vary markedly and the determination is only of relative value. It is done as follows: 1 c.c. of filtered gastric contents is diluted with 15 c.c. of a twentieth normal hydrochloric acid. Two small capillary tubes which contain coagulated egg albumen are placed in this mixture in an incubator for 24 hours, at the end of which time the amount of digestion at the ends of the tubes is accurately measured in millimeters. An average of the amount digested at each end is made. The square of this number represents the number of units of pepsin in a diluted gastric juice. This must be multiplied by 16 to obtain the number of units of pepsin in the undiluted specimen. The units vary normally from 8 to 200.

HOW TO MAKE A STOOL EXAMINATION

MACROSCOPIC EXAMINATION

Inspecting the specimen with the unaided eye is often, although should never be, omitted. For this examination a stool, as is usually passed by the patient, should be used and not one the result of an enema or a cathartic. There is a practice of asking the patient to bring a small portion of a bowel movement but I believe this should be discouraged. The entire stool passed at a single time is distinctly better as it permits us to note form, color, consistency, etc., as they exist at that time. An excellent plan to secure the stool is to have the patient pass same at the office where a basin may be placed in a wire support in the hopper.

Form.—By observing the entire movement in this manner the actual form is easily determined. I have frequently seen patients who stated that their bowels were regular and moved every day but who passed at these movements, hard scybalous, dried-up particles. Although the form depends upon the diet, a normal stool on a mixed diet should be a cylinder of soft consistency, or semi-formed.

Color.—In many cases the color of the stool is of much importance and should not be left to the judgment of the patient. It, of course, may depend upon certain medicines, certain food stuffs, or upon a diseased condition of the gastro-intestinal tract. Iron and bismuth are the drugs commonly given which turn the stool black. Certain vegetable pigments as huckleberries, blackberries, etc., also give a dark color. The color met with under pathological conditions are the acholic stool, usually having a grayish or a whitish, glistening color; the tarry stool, seen in hemorrhage from the stomach and small intestine; and the stool showing fresh blood. In the latter case it usually gets into the tract below the sigmoid flexure, or from the rectum.

Consistency.—The consistency of the stool depends in part upon the form. A formed, dry stool is usually hard. An acholic or a fatty stool is usually of smooth, pasty consistency. The stool of fermentation is spongy and doughy and if placed in a glass with straight sides, many bubbles are seen slowly passing up through the mass. Although the tarry stool is usually a thick, black liquid, a stool may contain enough blood to give an absolutely black color and still be formed or semi-formed.

Food Remains.—Certain undigestible foods are seen in many stools. They are skins, seeds, etc., but under abnormal conditions portions of undigested food may be present. The most common ones found are portions of vegetables, fruit pulp, pieces of meat, etc. Under catharsis much undigested food may be present and easily recognized by the eye.

MICROSCOPIC EXAMINATION

The microscopical examination should be made from a portion of the stool as it is normally passed by any given patient. In this way only can we judge of the digestion of the fats, starches, and proteids in the gastro-intestinal tract. It is obvious that if a cathartic stool is used, these food stuffs are hurried along the tract and appear in the stool in abnormal amounts.

TO DETERMINE THE PRESENCE OF FAT

Upon a clean glass slide place a portion of stool the size of a wheat kernel. Add to this 1 drop of distilled water and mix, forming a suspension. To this add 2 drops of a concentrated alcoholic solution of sudan III. Again mix and cover with a cover glass. The neutral fat is stained a red or an orange color. Soaps are not stained. Normally there is found 2 or 3 small particles of fat to each field of the sixth objective. Under pathological conditions, however, the amount may be markedly increased.

TO DETERMINE THE PRESENCE OF STARCH

The preparation is made as above for the determination of fat and 2 drops of Lugol's solution are added. Unaltered starch stains with a blue color, erythrodextrin takes a mahogany color while achrodextrin is unstained by the iodine. A normal person on mixed diet shows 2 or 3 small pieces of unaltered starch in each field of the sixth objective.

HOW TO RECOGNIZE MEAT FIBERS

The digestion of proteid along the gastro-intestinal tract is usually determined by the way it uses meat. A specimen prepared as above is examined with the third objective when if meat fibers are properly used there will be seen 3 or 4 small pieces to each field. If the recognition is not definite they may be viewed with the sixth objective, when the following characteristics will be seen. They have a yellowish tint, usually square or rounded ends, rectangular in shape, and show both longitudinal and cross striations. Occasionally partial digestion makes them appear granular but their form and yellow color easily identifies them to the experienced eye.

HOW TO FIND PARASITES

Ameba.—The method of procedure depends upon the parasite suspected. Only a few of the more common ones will be here described. The ameba is best found by taking some blood-streaked mucus either directly from the rectum or from a fresh stool and examining it with the sixth objective on a warm stage. The ameba is characterized by its grayish color, by its single or multiple nuclei, by red cells within itself, by granules occasionally in motion, and above all by its ameboid motion. It should be emphasized that one not expert in looking for this parasite, should see it move before he pronounces it an ameba.

To find the hookworm or pin-worm, the stool is mixed with water to a thin suspension. This is strained through gauze and the residue in the gauze examined for the worms. Once they are discovered they are easily recognized thereafter. The round-worm and the tapeworm are occasionally passed in part or *in toto* and are characterized as follows:

The round-worm is usually 2 to 10 inches long, pointed anteriorly, conical posteriorly. It is about a quarter of an inch in width at the center and has a reddish gray color. The segments of the tapeworm vary from a half to an inch long, having likewise about the same breadth. When freshly passed they may show contractile movements. They are white or grayish in color.

To differentiate between the solium and saginata, the segments are pressed firmly between 2 glass plates when the uterus of the former will be seen to consist of a central tube from which

12 or 15 side tubes branch, while the uterus of the *saginata* segment has a large number of side tubes which continue to break up into a series of smaller tubes as they extend to the edges of the segment.

HOW TO RECOGNIZE THE VARIOUS OVA

Although parasites are not commonly looked for, the stool is frequently examined for their ova. The egg of the pin-worm usually shows one straight side with the other side curved, and has a clear, thin shell. They are occasionally found in the feces but it is distinctly better to examine skin scrapings from around the anus if their presence is suspected. The hook-worm's egg is a large, sharply outlined ovum having a thick, colorless shell. Inside the shell the yolk may be either unsegmented or present 4 or 8 segments. The yolk is usually granular and of a grayish color. The method of examination of Dock and Bass¹⁶ is recommended. The round-worm has a large egg with a serrated, albuminous coat inside of which is a thin, transparent shell. Occasionally this albuminous coat is digested away leaving only the clear inner shell. The egg is yellow or grayish yellow in color and is oval. The tape-worm has a large round egg with a thick shell radially striated. The yolk is granular, usually of a brownish gray color. The egg of the *Taenia solium* and *Taenia saginata* cannot be differentiated.

Mucus.—By inspecting a stool as a patient normally passes it, we may not only determine the amount of mucus present, but may be able to judge from what part of the tract it came. Large amounts of unstained ropy mucus, usually comes from the colon or rectum and lie around the stool. If mucus gets into the stool from the small intestine, it is usually colored brown, is in small shreds, and is evenly mixed through the entire fecal mass.

Blood.—Unless the hemorrhage is very severe and acute, blood from the stomach or small bowel is usually black. Occasionally blood from the lower portion of the small bowel may be passed with a dark red color. A blood-streaked stool is usually due to a fissure or a hemorrhoid and a stool with a clot of blood on or beside it, is usually associated with a bleeding hemorrhoid.

Pus.—Pus cells are not commonly present in large numbers and are usually seen in conditions associated with the formation of mucus. When, however, an ounce or more of pure pus is passed by bowel, it usually means some abscess has broken into the colon or rectum. On two occasions, however, I have seen as much as 2 ounces of pure pus repeatedly passed by bowel where a proctoscopic examination failed to reveal sufficient cause, and where an exploratory operation failed to find any evidence of an abscess. Pus cells may be stained with the usual blood stains.

CHEMICAL EXAMINATION

How to Test for Occult Blood—Guaiaic Turpentine Test (Weber's).—Place a gram of stool in a mortar and add 5 c.c. of glacial acetic acid. Grind with a pestle for 2 minutes. Add 20 c.c. of chemically pure ether and pass same through the acetic acid by the aid of the pestle for 1 minute. In each of 2 test tubes place 2 c.c. of this ethereal extract and allow distilled water to run down the sides of the tubes until each is half filled. To one add, on the point of a knife, some powdered guaiaic. To the one to which guaiaic was not added, add 30 drops of old white turpentine containing oxygen. To the one to which the guaiaic was added, add 30 drops of this same turpentine. A change in the second tube to a green, greenish yellow, blue or black color, is a positive reaction if it fades. The first tube is used only as a control. It is to be remembered that certain substances other than blood may give this reaction, *i.e.*, a large number of meat fibers, pus, chlorophyll, etc. They are usually easily ruled out by a microscopic examination. A negative test is very significant and means no hemoglobin is escaping along the gastro-intestinal tract.

HOW TO DETERMINE THE REACTION OF A STOOL

The reaction of a stool is usually taken with litmus paper. If the stool is formed, a small portion is ground up with distilled water and it is then taken in the same way. Normally it is neutral or slightly alkaline but under certain conditions of infections and diets, it may be distinctly acid.

FERMENTATION TEST

Schmidt's Test.—An apparatus devised by Schmidt is necessary. It contains a glass beaker in which is placed a suspension of stool in water. About 5 grams of the stool are used. The beaker is stoppered and care is taken not to enclose any air bubbles. An upright tube, connected by a small glass tube passing through the stopper, is filled with water while a side tube of the apparatus is left empty. The apparatus is then placed in an incubator for 24 hours during which time gas collects in the upright tube, displacing the water. In a normal stool a small amount of gas is formed under this condition but where large amounts of undigested carbohydrate or albumins are present, the upright tube may be filled from one-half to two-thirds its length with gas. If carbohydrates are in excess, the gas will smell of butyric acid, while if albumin is present in large amounts the odor will be that of putrefaction.

HOW TO DETERMINE THE PRESENCE OF HYDROBILIRUBIN

Schmidt's Reaction.—This test is important to determine the presence of the biliary coloring matter in the stool. It is used particularly in acholic stools, fatty stools, obstructive jaundice, etc. A portion of the stool is rubbed in a mortar with a concentrated aqueous solu-

tion of bichlorid of mercury. The suspension is set aside for 24 hours, when if hydrobilirubin is present it takes on a mahogany red color. All particles stained with bilirubin will give a green color. If the color is not visible to the eye a portion is examined with a microscope to determine the presence of these colors.

HOW TO DETERMINE BLOOD PRESSURE

Name..... Age..... Date..... Hour.....
 Diagnosis.....
 Systolic pressure..... Diastolic pressure..... Instrument.....
 Method..... Examined by.....

The most popular instruments at present are the Faught, Tycos, Nicholson, and Stanton. The aneroid apparatus is the most suitable for a consultant as it is easily carried from place to place. The mercury column with a single tube is slightly more accurate and is an excellent office or hospital apparatus. In taking the blood pressure it is to be emphasized that the arm should be bare, the patient recumbent, and the palpating fingers on the radial should not be moved until the entire determination is made.

TO DETERMINE THE SYSTOLIC PRESSURE

By Palpation.—After placing the cuff on the patient's arm and connecting same with the mercury column, the radial is palpated over the small bones of the wrist and its rhythm is determined. Then enough air or pressure is introduced, by means of a bulb or hand pump, into the cuff to obliterate the impulse in the brachial artery. This is determined by palpating the radial. By means of an escape valve the pressure is then gradually lowered until the first small radial impulse returns. The point on the manometer where this occurs is the systolic pressure.

TO DETERMINE THE DIASTOLIC PRESSURE

After the systolic pressure is recorded, the diminution of pressure in the manometer is continued until the pulsations of the radial, or the oscillations of the mercury column, reach their widest amplitude. Reading the manometer at this point gives the diastolic pressure.

TO DETERMINE THE SYSTOLIC AND DIASTOLIC PRESSURE

By Auscultation.—Korotkoff suggested a simple way of taking the pressure by using the stethoscope. Personally I feel this has definite advantages. The cuff is applied to the brachial in the same manner as before and air is introduced until the vessel is obliterated. The chest piece of the stethoscope is then placed over the brachial below the arm cuff and some of the air in the manometer's air chamber is allowed to escape. At the moment the first pulse wave breaks through the artery, a slight sound is heard through the stethoscope. Reading the manometer at this point gives the systolic pressure. As the pressure in the cuff continues to fall this sound increases gradually to a maximum and then gradually becomes fainter and fainter. The pressure at which the sound is last heard is the diastolic pressure.

HOW TO EXAMINE CEREBROSPINAL FLUID

Spinal puncture is easily done if the patient is in the proper position and the field is thoroughly anesthetized. The patient should be placed at the edge of the bed one shoulder directly above the other, one hip directly above the other hip. The thighs should be flexed well into the abdomen. The interspace on a level with, or above, or below the crest of the ilium should be chosen. A small amount of novocain should be used to infiltrate the skin. If the patient is extremely nervous novocain may be introduced in the intraspinal ligament. The needle is inserted in the median line at right angles to the body surface. Occasionally it has to be directed forward. For an ordinary examination 10 c.c. is sufficient. Patient is kept in bed for 24 hours, the first 4 hours of this time with the foot of the bed elevated. This may save the patient an attack of headache, vomiting, etc.

MACROSCOPIC EXAMINATION

Color.—A normal spinal fluid is transparent but under abnormal conditions it may be serum color, cloudy or milky. The latter condition is usually found when pus cells are present. Occasionally hemorrhagic fluid is obtained. It is usually due to wounding the spinal vessels, and makes the determination of cells and globulin very difficult of interpretation.

Pressure.—The cerebrospinal fluid pressure is taken by means of a graduated glass rod and varies normally from 75 to 150 mm. Under abnormal conditions as brain tumor, general paresis, meningitis, etc., it may reach from 300 to 700 mm.

MICROSCOPIC EXAMINATION

How to Count the Cells.—I believe the cells are best counted unstained. They should be counted immediately as they deteriorate and are difficult of recognition when allowed to remain in the fluid. An ordinary blood counting chamber is used and the cells counted over 10 square mm. surface. As the chamber is one-tenth of a mm. deep, the number counted is the number of cells in 1 cubic mm. of undiluted fluid. A method commonly in use and recommended by Emerson is to fill the leukocyte pipet of a blood counting apparatus to the mark .5 with Unna's polychrome methylene blue. Then to the mark 11 (eleven) with the fresh cerebrospinal fluid. By this method the cells are stained so they can be recognized easily. The count is made in the same manner as above for the error introduced by adding so small an amount of stain is negligible. The normal fluid has from 1 to 6 cells per cubic millimeter.

DIFFERENTIAL WHITE BLOOD COUNT

After drawing the spinal fluid, it is immediately placed in a centrifuge tube having a rather pointed bottom, centrifuged for 5 minutes, the sediment removed with a small glass rod, and placed on a glass slide. It should not be spread over an area larger than a nickel unless fluid is cloudy or turbid. The ordinary blood stains, as Wright's, eosin and azur or Wilson's, etc., are used and a differential made as described under blood examination. Normally small lymphocytes are practically the only cells present. In tuberculous and syphilitic meningitis, lymphocytes are increased and usually predominate. In tabes, general paresis, syphilitic endarteritis, etc., lymphocytes make up the major per cent. of the differential while in epidemic cerebral meningitis and other purulent forms of meningitis the polymorphonuclear cells predominate.

CHEMICAL EXAMINATION

Phenol Test.—Several tests have been evolved to determine if the albumins are in excess. They should not be made if any blood is present. Phenol test is made as follows: In a small, clean test tube place 2 c.c. spinal fluid and add several drops of a clear filtered 5 per cent. phenol solution. If albumins are increased a silvery cloud follows the drop when the tube is viewed against a dark background.

HOW TO TEST FOR GLOBULIN

Saturated Ammonium Sulphate Test (Ross and Jones).¹⁷—A small amount of spinal fluid is placed in a clean test tube and a saturated solution of ammonium sulphate is placed under it by means of a pipet. After standing for 5 minutes a sharp ring will develop at the contact point if globulin is increased. The ring should likewise be viewed against the black background using indirect light.

Butyric Acid Test (Noguchi).¹⁸—To one-tenth of a c.c. of spinal fluid, .5 of a c.c. of a 10 per cent. solution of pure butyric acid in .7 sodium chlorid is added. Boil for a few seconds and add quickly one-tenth of a c.c. of normal sodium hydrate and again boil. A precipitate appears on cooling usually within 30 minutes. If this does not appear the tube is set aside for 2 hours. If globulin is increased a precipitate, fine or coarse, will develop. I believe it is much better to use 10 times the amount suggested by Noguchi, hence, using 1 c.c. of spinal fluid, 5 c.c. of butyric acid, and 1 c.c. of sodium hydrate.

TO DETERMINE THE PRESENCE OF REDUCING BODIES IN THE SPINAL FLUID

Fehling's Test.—One c.c. of each the blue and white Fehling's solution are placed in a test tube and 4 times the amount of distilled water added. Five c.c. of this mixture are thoroughly boiled and 2 drops of spinal fluid are added. The normal fluid should give no reduction. This is again boiled and 2 c.c. of fluid added. A normal fluid should give a slight but definite red precipitate. About 10 c.c. of normal spinal fluid are necessary to give a complete reduction.

Colloidal Gold Reaction (Lange's).¹⁹—Twelve test tubes are placed in a rack. In the first tube place 1.8 c.c. of a .4 per cent. solution of sodium chlorid. In the other tubes place 1 c.c. of the chlorid solution. In the first tube add .2 of a c.c. of spinal fluid which must contain no blood. The dilution in this tube is then 1 to 10. Mix it thoroughly and place 1 c.c. of the dilution of first tube in the second tube, making a 1 to 20 dilution. Continue in this manner until all the remaining tubes have received their proper dilution of spinal fluid. The last tube has then a spinal fluid diluted about 20,000 times. To each of these

tubes now add 5 c.c. of the colloidal gold solution and let them stand at room temperature for 24 hours. As the precipitation of the gold occurs the color in the tubes takes on a bluer tint and finally becomes clear and colorless. The dilution in which the greatest precipitation occurs is noted and the results are expressed as follows: Thus— indicates no precipitation; + a red color with a beginning bluish tinge; xx, a red with a bluish red shade; and so on, until xxxxx indicates a complete precipitation and a clear and colorless solution. In syphilitic or parasymphilitic cases the precipitation is toward the 1 to 10 dilution. In non-syphilitic cases complete precipitation is toward the 1 to 20,000 dilution.

HOW TO STAIN ORGANISMS IN THE SPINAL FLUID

The organisms most commonly found in cerebrospinal fluid are the tubercle bacillus, the diplococcus intracellularis meningitidis, the pneumococcus, streptococcus and staphylococcus. Occasionally the bacillus of influenza and the colon and typhoid organisms are encountered. The tubercle organism is often difficult to find but the method suggested by Hemenway²⁰ gives us the best result. About 10 c.c. of spinal fluid are placed in an incubator for 24 hours during which time a whitish, delicate clot forms. This is transferred and spread upon a slide and the Ziehl-Neelsen stain applied as is described under sputum examination. In staining for the *Micrococcus intracellularis meningitidis* the Gram method is used. The organism is usually found in small clumps both within and without the pus cells. It is a small diplococcus, biscuit-shaped and Gram-negative. Occasionally where few are present it may take a long search and the organism may be present only in single pairs. The other organisms mentioned above are usually numerous in the cerebrospinal fluid and should be stained by the Gram method. Their morphology may aid us at once in determining the type of the infection but their identification should be made by cultural methods.

¹⁹ How to Make Colloidal Gold Solution:

Lange, C., *Berl. Klin. Wochnschr.*, 1912, XLIX, 897-901.
 In a 1000 c.c. Jena flask, place 500 c.c. of distilled water and heat gently to 60° C. At this temperature add 5 c.c. of a 1 per cent. solution of gold chlorid (C.P.). Quickly add 5 c.c. of a 2 per cent. solution of potassium carbonate and heat rapidly to boiling when heating is stopped. Now add 5 c.c. of a 1 per cent. dil. of formalin, and shake continuously until the color changes from a faint blue—blue, purple, violet and finally red. The colloidal solution if properly made is red and clear. It is kept in an amber bottle.

THE EXAMINATION OF VAGINAL SMEARS

		Methylene Blue	Gram Stain
Material from Urethra		Pus cells	Intercellular organisms
		Bacteria	Diagnosis
		Intracellular organisms	
Skene's tubules		Pus cells	Intercellular organisms
		Bacteria	Diagnosis
		Intracellular organisms	
Vagina		Pus cells	Intracellular organisms
		Bacteria	Diagnosis
		Intracellular organisms	
Cervix		Pus cells	Intercellular organisms
		Bacteria	Diagnosis
		Intercellular organisms	

To be of any value smears from the female genital tract must be made from material obtained from the urethra, Skene's tubules, the vagina, the cervix, and in some cases the uterine cavity. Least in importance is the examination of the vaginal secretion alone.

How to Prepare Smears from the Urethra.—With the index finger in the vagina milk the urethra towards the meatus by means of a platinum loop, transfer some of the discharge to a glass slide. At the same time material from Skene's tubules may be obtained.

From the Vagina.—After spreading the labia widely apart pass a small sterile cotton swab or platinum loop into the vagina and transfer some of the secretion to a sterile slide.

From the Cervix.—Introduce a sterile vaginal speculum and after exposing the cervix wipe away all visible discharge. Pass a sterile swab or platinum loop slightly within the canal and make smears with the same. In cases of gonorrhoea the best time to make smears from the cervix is immediately after the menstrual period or several days after labor, abortion or miscarriage. Before making a negative diagnosis it is well to make smears from the cervix 24 hours after the same has been subjected to the irritation of silver nitrate.

From the Uterus.—After introducing a sterile vaginal speculum and exposing the cervix, all discharge should be wiped away and the cervix should be painted with iodine. Following this a sterile "Little" tube is to be passed into the uterine cavity. As the plunger is withdrawn some of the exudate will be sucked into the tube. The tube is then withdrawn and broken in the middle. Smears are made from the discharge contained therein.

Pathological Organisms.—Pathological organisms most frequently found are gonococci, streptococci, staphylococci, and colon bacillus.

How to Recognize Gonococci.—Suspicious smears should be stained with methylene blue and by Gram's method. See *Sputum Examination*. The gonococci occur in pairs and tetrads, never in chains. The slit between the diplococci is parallel to the long diameter of the organism. They are biscuit-shaped and the adjacent surfaces are concave. They are Gram-negative and intracellular. While an examination of the smear gives valuable evidence, a positive diagnosis cannot be made without a clinical history or positive cultural findings.

EXAMINATION OF PLEURAL AND ASCITIC FLUID

Name.....	Ward.....	Date.....	Age.....	Sex.....
<i>Macroscopical Examination</i>		<i>Microscopical Examination</i>		
Color	Consistency	Amount	Specific gravity.....	White cells per cu. mm.....
				Differential count
				Polynuclear leukocytes.....
				Lymphocytes.....
				Eosinophils.....
				Endothelial cells.....
<i>Chemical Examination</i>				Tumor cells.....
Reaction	Glucose	Nucleo-albumin	Albumin (quantitative)	Unrecognized
				Bacteria, etc.....
				Cultural Examination
Remarks.....				Examined by

Aspiration of either the pleural or peritoneal cavity is commonly made for both diagnostic and therapeutic measures. The examination of the fluid withdrawn aids us in determining whether it is a transudate or exudate and may give us direct evidence of the cause of its abnormal deposition. The technic of obtaining the fluids is very simple if aseptic precautions are followed and novocain is used to infiltrate the skin and underlying tissues.

Color.—The color of the fluid withdrawn may be serous, hemorrhagic, bilious, milky, or certain shades of green or yellow, depending particularly upon the amount of fibrin, blood, fat, albumins, pus cells and organisms present.

Consistency.—A serous fluid is usually present in transudates but is also commonly found in an exudate of tubercular origin. In the latter condition, however, there is usually enough fibrin to give the fluid a translucency. It is then called a serofibrinous fluid. A hemorrhagic fluid is one which is colored by blood or blood pigments. However, a fluid should not be spoken of as hemorrhagic if it is due to wounding vessels when the puncture is made. The other conditions commonly giving rise to a hemorrhagic fluid are tuberculosis, injury, and new growth in either the pleural or abdominal cavities. A fluid containing a moderate number of pus cells, 3,000 or 4,000 per c.c., is turbid and is called a seropurulent fluid. Enough pus cells, however, may be present to give it the consistency of thin pus and it is then called a purulent exudate. In certain conditions the fluid may resemble chyle, is milky in color and is then called, if fat is present, a chylous fluid. If fat cannot be demonstrated and the fluid does not clear in ether, it is spoken of as a chyloid fluid. The latter is occasionally found in carcinomatous conditions in the peritoneal cavity.

Amount.—If the fluid is drawn for diagnostic purposes, 25 c.c. is usually sufficient, if for therapeutic purposes, the amount withdrawn depends upon the reaction of the patient. Seldom more than 1000 c.c. of pleural fluid is withdrawn at any one tapping but if the patient becomes restless, coughs, is cyanotic or the pulse becomes small and increases in rate, much smaller amounts should be taken. The fluid from the abdominal cavity should be withdrawn slowly and pressure should be applied from above downward during the tapping. This pressure should be continued for several hours after tapping as it may prevent grave accidents. In this manner several thousand c.c. of fluid may be withdrawn at a single tapping.

Specific Gravity.—Transudates of the peritoneal cavity usually have a specific gravity from 1005 to 1015, while exudates of the cavity have a specific gravity of 1020 or above. From the pleural cavity transudates usually show a specific gravity below 1020, while exudates most commonly show the same above that figure.

CHEMICAL EXAMINATION

Reaction.—The reaction of transudates is alkaline as is also the reaction of exudates. This may be determined by the use of litmus paper.

Glucose.—Transudates show a small amount of glucose varying from .05 to .1 per cent. In diabetics, however, there may be an excess of this amount. About the same amounts of sugar are likewise present in exudates. (See *Urine Examination for Tests.*)

Nucleo-albumin.—This test is valuable as an aid in distinguishing exudates and transudates. It is performed as follows: A few drops of acetic acid (10 per cent.) are added to the fluid, when a cloud of varying depth will appear if it is an exudate. The cloud is much fainter in the transudates.

Quantitative Albumin.—If the specific gravity is above 1010, the fluid should be diluted. It is usually advised that the fluid be diluted 5 times if the specific gravity lies between 1010 and 1025. If the specific gravity is above 1025 the fluid should be diluted 10 times. The amount of albumin is then determined by any of the methods given under this heading in the urinary examination. If Tsuchiya's method is used it is necessary to remember that an accurate determination is impossible if the reading on the tube is above 4.

MICROSCOPICAL EXAMINATION

Although occasionally it is impossible to accurately classify certain cells found in these fluids, still the number per cubic millimeter and a knowledge of the predominating type may be of distinct aid. Normally the pleural and peritoneal fluid contains very few or no cells resembling small lymphocytes and endothelial cells. Only occasionally is a polymorphonuclear seen. However, under pathological conditions all or any may be markedly increased. The cell count is made in the same way as the white count of the blood. The fluid, however, should be taken into the white pipet up to the mark "1" as soon as drawn and diluted with one-half per cent. acetic acid. This prevents clotting.

HOW TO MAKE SMEARS FROM THE FLUID

The fluid should be centrifuged for 2 minutes immediately after it is withdrawn. This prevents the formation of small fibrinous clots, after which good smears cannot be made. If the fluid cannot be centrifuged immediately, it is placed in an equal amount of a one and one-half per cent. solution of sodium citrate. If this is used smears should be made within 12 hours as the cells deteriorate rapidly. After centrifuging, the sediment is picked up and placed in a thin film upon a slide, fixed and stained by any of the methods described under sputum or blood examination.

A Differential Count.—A differential count is made in a similar manner to the differential in blood work. The stained specimen is viewed with the sixth objective and the number

and kind of each cell in any field is noted. The slide is then moved and the same process repeated until 500 cells have been counted. The number of each kind is then determined and this must be divided by 5 to obtain the per cent. of each present. In the following, the cells are described as they appear with Wright's stain:

Polymorphonuclear Leukocyte.—The cell is similar to that of the blood but occasionally it shows degenerations. It may be small, granular, the nucleus may be very small, compact or the protoplasm contain large numbers of fatty granules. These cells are found predominating in purulent fluids due to pneumococcus, streptococcus, staphylococcus, etc., and occasionally, though not often, predominate in acute tuberculous fluids.

Lymphocytes.—Lymphocytes likewise are similar to those found in the blood. Usually, however, large numbers of these cells do not show any protoplasm, or the nucleus is naked. Tubercular exudates are usually associated with a marked increase in this type of cell. At times it is difficult to differentiate between small endothelial cells, if they are degenerated, or mononuclear cells frequently found in malignant fluids.

Eosinophils.—Although eosinophils are less commonly met with than the above, their presence at times predominates in the differential. They are usually seen in association with active tuberculosis.

Endothelial Cells.—Endothelial cells are differentiated by their large size, irregular form, abundance of protoplasm, and have one or more round nuclei which stain poorly. Occasionally several cells may be seen held together and commonly degenerative changes are present. They are increased in transudates or where mechanical means pushes them from their basement membrane.

Tumor Cells.—Fluids aspirated are commonly searched for evidences which may lead to the diagnosis of new growth. Small pieces of tumor tissue may be withdrawn with the fluid at times but this is not of common occurrence. Occasionally the fluid from malignant cause will show large numbers of large mononuclear cells differing from lymphocytes in the following way. They are slightly larger, contain more protoplasm and most of these cells show a rim of protoplasm. They are occasionally grouped in small clumps and may present division figures. In addition to the above many observers believe large cells measuring 40 to 50 microns in diameter having multiple nuclei and abundant evidence of degeneration, speak in favor of malignant fluids.

Unrecognized Cells.—As one might believe cells free in body fluids degenerate and disintegrate; hence, there must be all forms passing through this transition. This makes certain cells or cellular masses unrecognizable.

Bacteria.—Smears made as above described may likewise be used to determine if possible the cause of the exudates. In staining for the tubercle organism, however, it is best to let the clot form which enmeshes the tubercle organism as it settles. This is then smeared and stained by the Ziehl-Neelsen method as described under sputum examination. If one of the pyogenic organisms is suspected, a methylene blue and a Gram stain is made. It is needless to say that for the bacteriological examination the fluid, tubes, pipets, etc., must all be kept sterile. It should be likewise stated that the organisms commonly cannot be differentiated by their morphology and need cultural methods for their exact identification.

DIETARY

These diets have been suggested by Dr. Alexander B. Johnson as used at the New York Hospital.

HIGH PROTEIN DIET (6 meals Q. D.)

6:00 A. M. and 8:00 P. M.—Milk, 4 ounces.

8:00 A. M.—BREAKFAST

Cereal with milk, sugar, cream.

1 piece bread and butter.

1 cup cocoa with milk.

10:00 A. M.

2 soft boiled eggs.

2 pieces Zwieback.

4 ounces milk.

12:00 NOON—DINNER

1 piece meat.

1 baked potato.

Vegetable (peas, beans, asparagus, Brussels sprouts).

Pudding or ice cream.

Milk, 4 ounces.

2:00 P. M.

Custard.

2 pieces Zwieback.

Milk, 4 ounces.

4:00 P. M.

Scraped beef, 40 grams

Rice, 40 grams.

Milk, 4 ounces.

6:00 P. M.

Cream soup, 6 ounces.

2 soft boiled eggs.

1 piece bread and butter.

1 cup cocoa or tea with milk and sugar.

LOW PROTEIN DIET

CEREALS or PUDDINGS

Tapioca, Sago, Arrowroot.

VEGETABLES, EXCEPT

Peas, Beans, Artichokes, Asparagus, Brussels sprouts.

FRUITS

All fresh or cooked.

SWEETS

Except chocolate.

BUTTER

WHEY

SOUPS

Vegetable with above exceptions.

MILK

3½ per cent.

PURIN FREE DIET, NO. 2

CALORIES

6:00 A. M.—Milk, 6 ounces. 120

8:00 A. M.—BREAKFAST

Milk—6 ounces. 120
 1½ slices bread with 1 pat butter. 200
 2 tablespoonfuls wheatina or cream of wheat with cream, 2 ounces, and sugar, 2 teaspoonfuls. 100
 1 soft boiled egg. 75

12:00 NOON—DINNER

Milk—6 ounces. 120
 1 soft boiled egg, s. o. s. 75
 1 potato with cream, 1 ounce. 200
 1 pat butter. 100
 Lettuce or cabbage with dressing. 30
 1½ slices bread with 1 pat butter. 200

3:00 P. M.

Milk—6 ounces. 120

5:00 P. M.—SUPPER

1 soft boiled egg. 75
 Milk—6 ounces. 120
 2½ tablespoonfuls rice with cream, 1 ounce. 200
 1 tablespoonful sugar. 50
 Crackers with 1 pat butter. 100
 1 cube cheese. 50
 1 cup weak tea with cream, 1 ounce. 100
 1 teaspoonful sugar, s. o. s. 50

 Carbohydrate 225 gms. }

URIC ACID FREE DIET

Breakfast

1. Toast, milk, nuts, oatmeal.
2. Chip potatoes, johnnycake, bread, milk, hominy.
3. Fried potatoes, buckwheat pancakes, milk, toast, oatmeal.

Lunch

1. Potatoes in their skins, cheese baked with onions, toast, butter, milk.
2. Boiled potatoes, macaroni and cheese, lettuce, bread.
3. Potatoes, Irish stew, batter pudding (baked), sago pudding.
4. Mashed potatoes, bread and butter pudding, rice.

DINNER FOR HOT WEATHER

1. Tomato soup, vegetable marrow (stuffed), new potatoes, rice, stewed plums, cheese straws.
2. Spinach soup, stuffed tomatoes, fried whole potatoes, ginger and cream, cheese fritters.
3. Vegetable marrow soup, cucumber stewed with onions, new potatoes, sweet salad, Canadian cheese pudding.

DINNER FOR COLD WEATHER

1. Artichoke soup, tomato and potato pie, almond and raisin pudding, cheese on toast.
2. Almond soup, curried cauliflower and rice, potato snow, apple tart, cheese ramequins.
3. Swiss soup, walnut cutlets, bread sauce and brown gravy, potatoes, sea kale, charlotte russe, peach truffle, stewed cheese, biscuits.

SCHMIDT'S TEST DIET

7:30 A. M.—EARLY BREAKFAST

500 c.c. milk.
 50 grams Zwieback.

10:00 A. M.—LATER BREAKFAST

500 c.c. oatmeal gruel, made as follows:
 40 grams oatmeal,
 10 grams butter,
 200 c.c. milk,
 300 c.c. water.

12:30 P. M.—NOON

125 grams chipped beef (weigh raw) broiled rare with 20 grams butter.
 250 grams potato broth made as follows:
 190 grams mashed potato,
 100 c.c. milk,
 10 grams butter.

3:00 P. M.—AFTERNOON

Same as "Early breakfast."

5:30 P. M.—EVENING

Same as "Later breakfast."

Schmidt's Test Diet—2230 calories.
102 grams albumen.
111 grams fat.
191 grams carbohydrate.

LENHARTZ TREATMENT

1ST DAY

Eggs—2 iced—raw beaten (2 dram q. h.)
in 1 dram doses, to alternate with
Milk—6 ounces iced (4 dram q. h.) in 1
dram doses.
Egg—1 teaspoonful q. ½ h.
Milk—1 teaspoonful q. 15 m.

2ND DAY

Eggs—3 iced—raw beaten (2 dram q. h.)
in 1 dram doses, to alternate with
Milk—10 ounces iced (8 dram q. h.) in 1
dram doses.
Egg—1 teaspoonful q. ½ h.
Milk—1 teaspoonful q. 7½ m.

3RD DAY

Eggs—4 iced—raw beaten, add sugar, 5
dram to eggs, in 6 dram doses.
Milk—13 ounces iced (1ss. ounce, q. h.)
in 1 dram doses.
Egg—1 teaspoonful q. 15 min.
Milk—1 teaspoonful q. 5 min.

4TH DAY

Eggs—5 raw beaten (5 dram q. h.) in 1
dram doses, add sugar, 5 dram to eggs;
salt to taste; to alternate with
Milk—16 ounces iced (2¼ ounce q. h.) in
1 dram doses.
Egg—1 teaspoonful q. 12 m.
Milk—1 teaspoonful q. 3½ m.

5TH DAY

Eggs—6 iced—raw beaten (6 dram q. h.) in
1 dram doses, add sugar, 6 dram to eggs;
to alternate with
Milk—19 ounces iced (4 ounce q. h.) in 1
dram doses.
Egg—1 teaspoonful q. 10 m.
Milk—1 teaspoonful q. 4 m.

6TH DAY

Eggs—7 iced—raw beaten (ounce 1 q. h.) in
1 dram doses, add sugar, 10 dram to eggs;
to alternate with
Milk—22 ounces, iced (3 ounce q. h.) in 1
dram doses.
Scraped beef—gms. 35, in 3 portions.
Egg—1 teaspoonful, q. 7½ m.
Milk—1 teaspoonful, q. 2½ m.
8:00 A. M.—Scraped beef, 12 gms.
2:00 P. M.—Scraped beef, 12 gms.
8:00 P. M.—Scraped beef, 11 gms.

7TH DAY

Eggs—4 iced—raw beaten (dram 4 q. h.) in
1 dram doses, add sugar, 10 dram to raw
eggs; to alternate with
Milk—25 ounces iced (2 ounce ss. q. h.) in
1 dram doses.
Raw chopped beef—(70 gms.) 23½ gms.,
1 D.
Boiled rice—(boiled in milk) 1 ounce, 1 D.
(given with meat).
4 soft boiled eggs, 1 q. 4 h.
Egg—1 teaspoonful, q. 15 m.
Milk—1 teaspoonful, q. 3 m.

9:00 A. M.—Chopped meat (raw), gms.
23½, with rice, 1 ounce.
3:00 P. M.—Chopped meat (raw), gms.
23½, with rice, 1 ounce.
9:00 P. M.—Chopped meat (raw), gms.
23½, with rice, 1 ounce.
1 soft boiled egg at 8:00 A. M., 12 N.,
4:00 P. M., 8:00 P. M.

8TH DAY

4 raw eggs.
4 soft boiled eggs.
Add sugar, gms. 50, to raw eggs.
Milk—28 ounces, iced (2¼ ounce q. h.) in
1 dram doses.
Raw chopped beef—(gms. 70) gms. 23½,
1 D.
Boiled rice—gms. 100, in 3 portions, 1 D.
Zwieback—gms. 20.
Egg—1 teaspoonful, q. 15 m.
Milk—1 teaspoonful, q. 3½ m.
9:00 A. M.—Raw chopped meat, gms.
23½, with rice, 1 ounce.
3:00 P. M.—Raw chopped meat, gms.
23½, with rice, 1 ounce.
9:00 P. M.—Raw chopped meat, gms.
23½, with rice, 1 ounce.
Rice—Boiled in milk.
8:00 A. M.—Soft boiled egg with Zwieback,
gms. 20.
12:00 Noon—Soft boiled egg with Zwie-
back, gms. 20.
4:00 P. M.—Soft boiled egg with Zwieback,
gms. 20.
8:00 P. M.—Soft boiled egg with Zwieback,
gms. 20.

9TH DAY

4 raw eggs.
4 soft boiled eggs.
Same as before.
Milk—32 ounces, iced (3 ounce q. h.).
Raw chopped meat—(gms. 70) gms. 23½,
1 D.
Boiled rice—(in milk) gms. 66½, 1 D.
Zwieback—Gms. 40, 8:00 A. M. and 12 N.
Egg—1 teaspoonful q. 15 m.
Milk—1¼ teaspoonfuls q. 2½ m.
8:00 A. M.—Soft boiled eggs with Zwie-
back, gms. 40.
12:00 Noon—Soft boiled eggs with Zwie-
back, gms. 40.
4:00 P. M.—Soft boiled eggs with Zwie-
back, gms. 40.
8:00 P. M.—Soft boiled eggs with Zwie-
back, gms. 40.
9:00 A. M.—Raw chopped beef, gms. 23½,
with rice, gms. 66½.
3:00 P. M.—Raw chopped beef, gms. 23½,
with rice, gms. 66½.
9:00 P. M.—Raw chopped beef, gms. 23½,
with rice, gms. 66½.

10TH DAY

Eggs and milk as on 9th day.
Raw chopped meat—(gms. 120) gms. 40,
1 D.
Boiled rice—(in milk) (gms. 200) gms.
66½, 1 D.
Zwieback—Gms. 40, in 2 portions.
Butter—Gms. 20.
Egg—1 teaspoonful q. 15 m.
Milk—3¼ ounces, 1 teaspoonful q. 15 m.
8:00 A. M.—Soft boiled egg with Zwieback,
gms. 20, with butter.

- 12:00 Noon—Soft boiled egg with Zwieback, gms. 10, with butter.
 4:00 P. M.—Soft boiled egg with Zwieback, gms. 10, with butter.
 8:00 P. M.—Soft boiled egg with Zwieback, gms. 10, with butter.
 9:00 A. M.—Raw chopped meat, gms. 40, with rice, gms. 66 $\frac{2}{3}$.
 3:00 P. M.—Raw chopped meat, gms. 40, with rice, gms. 66 $\frac{2}{3}$.
 9:00 P. M.—Raw chopped meat, gms. 40, with rice, gms. 66 $\frac{2}{3}$.

11TH DAY

- Eggs and milk as on 10th day.
 Raw chopped beef—Gms. 40, 1 D.
 Boiled rice—(in milk) gms. 100, D.
 Zwieback—Gms. 60, in 3 portions.
 Butter—Gms. 20, in 2 portions.
 Egg—1 teaspoonful q. 15 m.
 Milk—1 $\frac{1}{4}$ teaspoonfuls q. 2 $\frac{1}{2}$ m.
 8:00 A. M.—S. B. egg with Zwieback, gms. 20, with butter, gms. 10.
 12:00 Noon—S. B. egg with Zwieback, gms. 20, with butter, gms. 10.
 4:00 P. M.—S. B. egg with Zwieback, gms. 20, with butter, gms. 10.
 8:00 P. M.—S. B. egg with Zwieback, gms. 20, with butter, gms. 10.
 9:00 A. M.—Raw chopped beef, gms. 40, with rice, gms. 100.
 3:00 P. M.—Raw chopped beef, gms. 40, with rice, gms. 100.
 9:00 P. M.—Raw chopped beef, gms. 40, with rice, gms. 100.

12TH DAY

- Eggs and milk as on 10th day.
 Raw chopped meat, gms. 40, D.
 Rice—(boiled in milk) gms. 66 $\frac{2}{3}$, D.
 Zwieback—Gms. 40, in 2 portions.
 Butter—Gms. 40, in 2 portions.
 Egg—1 teaspoonful q. 15 m.
 Milk—1 $\frac{1}{4}$ teaspoonfuls q. 2 $\frac{1}{2}$ m.
 8:00 A. M.—S. B. egg with Zwieback, gms. 20, with butter, gms. 20.
 12:00 Noon—S. B. egg with Zwieback, gms. 20, with butter, gms. 20.
 4:00 P. M.—S. B. egg with Zwieback, gms. 20, with butter, gms. 20.
 8:00 P. M.—S. B. egg with Zwieback, gms. 20, with butter, gms. 20.
 9:00 A. M.—Raw chopped meat, gms. 40, with rice, gms. 66 $\frac{2}{3}$.
 2:00 P. M.—Raw chopped meat, gms. 40, with rice, gms. 66 $\frac{2}{3}$.
 9:00 P. M.—Raw chopped meat, gms. 40, with rice, gms. 66 $\frac{2}{3}$.

13TH DAY

- Eggs and milk as on 10th day.
 Raw chopped meat, gms. 40, 1 D.
 Rice—(boiled in milk) gms. 100, 1 D.
 Zwieback—Gms. 80, in 3 portions.
 Butter—Gms. 20, in 2 portions.
 Egg—1 teaspoonful, q. 15 m.
 Milk—1 $\frac{1}{4}$ teaspoonfuls, q. 2 $\frac{1}{2}$ m.
 8:00 A. M.—S. B. egg with Zwieback, gms. 26 $\frac{2}{3}$, with butter, gms. 10.
 12:00 Noon—S. B. egg with Zwieback, gms. 26 $\frac{2}{3}$, with butter, gms. 10.
 4:00 P. M.—S. B. egg with Zwieback, gms. 26 $\frac{2}{3}$, with butter, gms. 10.
 8:00 P. M.—S. B. egg with Zwieback, gms. 26 $\frac{2}{3}$, with butter, gms. 10.

- 9:00 A. M.—Raw chopped beef, gms. 40, with rice, gms. 100.
 2:00 P. M.—Raw chopped beef, gms. 40, with rice, gms. 100.
 9:00 P. M.—Raw chopped beef, gms. 40, with rice, gms. 100.

14TH DAY

- Eggs and milk as on 10th day.
 Raw chopped meat—Gms. 40, 1 D.
 Rice—(boiled in milk) gms. 100, 1 D.
 Zwieback—Gms. 100, in 3 portions.
 Butter—Gms. 20, in 2 portions.
 Egg—1 teaspoonful q. 15 m.
 Milk—1 $\frac{1}{4}$ teaspoonfuls q. 2 $\frac{1}{2}$ m.
 8:00 A. M.—S. B. egg with Zwieback, gms. 33 $\frac{1}{2}$, with butter, gms. 10.
 12:00 Noon—S. B. egg with Zwieback, gms. 33 $\frac{1}{2}$, with butter, gms. 10.
 4:00 P. M.—S. B. egg with Zwieback, gms. 33 $\frac{1}{2}$, with butter, gms. 10.
 8:00 P. M.—S. B. egg with Zwieback, gms. 33 $\frac{1}{2}$, with butter, gms. 10.
 9:00 A. M.—Raw chopped beef, gms. 40, with rice, gms. 100.
 2:00 P. M.—Raw chopped beef, gms. 40, with rice, gms. 100.
 9:00 P. M.—Raw chopped beef, gms. 40, with rice, gms. 100.
 Ice cap: apply to epigastrium while on diet.
 Allow cracked ice with diet.
 To be followed with a high proteid diet or a light diet with extras.

KARELL TREATMENT FOR "ANASARCA"**FOR FIRST 5 TO 7 DAYS**

- 200 c.c. milk, q. 4 h., at 8:00, 12:00, 4:00, 8:00.
 No other fluids.

8TH DAY

- Milk as above with at
 10:00 A. M.—1 egg (soft boiled).
 6:00 P. M.—2 pieces dry toast.

9TH DAY

- Milk as above.
 10:00 A. M.—1 soft boiled egg.
 2 pieces dry toast.
 6:00 P. M.—1 egg.
 2 pieces dry toast.

10TH DAY

- Milk as above.
 12:00 Noon—Chopped meat.
 Rice (boiled in milk).
 Vegetable.
 6:00 P. M.—1 soft boiled egg.
 2 pieces toast.

11TH DAY

- Same as 10th day.

12TH DAY

- Same as 10th day.

Then allow regular diet, but restrict fluids to 800 c.c. q. d. Cracked ice allowed with diet.

DIET TABLES USED IN PRIVATE
PRACTICE

BY DR. W. GILMAN THOMPSON

Dietary for..... Date.....

FOODS ALLOWED

- Purees; Soups:** Vegetable, meat.
- Shellfish:** Oysters, clams, scallops (stewed, broiled or escalloped, *not* fried), (*soft parts only*). Oyster broth, clam broth.
- Fish:** Fresh fish (boiled or broiled, *not* fried), as: bass, bluefish, butterfish, cod, flounder, haddock, halibut, mackerel, perch, red snapper, smelts, sole, weakfish, shad, shad roe.
- Eggs:** Soft-cooked, scrambled or poached (*not* hard boiled), omelette.
- Cereals:** Stale bread, toast (dry, milk), Graham bread, pulled bread, crackers, Huntley and Palmer wafers and biscuits, Zwieback, shredded wheat, triscuit, oatmeal, wheatena, wheaten grits, thin ginger snaps, cornmeal (mush), corn bread, boiled rice, puffed rice, puffed wheat, farina, corn starch, hominy, sago, tapioca, samp, macaroni, spaghetti (without cheese).
- Butter.** **Cream.**
- Vegetables:** Artichokes (French, Jerusalem), asparagus, beet tops, Brussels sprouts, butter beans, cauliflower, celery (raw, stewed), egg plant, lettuce (French dressing), Romaine, Lima beans, okra, onions, oyster plant, carrots, parsnips, young fresh peas, white potatoes, (baked, mashed, stewed), sweet potatoes, spinach, squash, string beans, tomatoes, cooked bananas.
- Red Meats:** Rare roast beef, beefsteak, corned beef, veal, chops, mutton, lamb (sparingly, *once a day only*) (*every other day*).
- Poultry and Game:** Chicken, capon, turkey, squab, guinea fowl, duck, goose, quail, partridge, snipe, grouse, pheasant.
- Miscellaneous:** Sweetbread, ham, thin crisp bacon, liver, tongue.
- Desserts:** Rice pudding, bread pudding, junket, custard, baked custard, Bavarian cream, whipped cream, sponge cake, maca-

rooms, gelatin foods, as plain, wine or lemon jelly, blanc-mange; ice cream, plain vanilla.

Fruits: Oranges, lemons, grape fruits, pineapple (*juice only*), peaches, plums, stewed prunes, apples (raw, baked, stewed), canteloup, bananas, grapes, olives, dates, figs, prunelles, strawberries, raspberries.

Beverages: Tea, coffee, cocoa, alkathrepta, lemonade, orangeade, milk or cream with Celestin's Vichy, buttermilk, bacillac, ginger ale, Apollinaris, koumyss, matzol, zoolak; hot water with Liebig's or other meat extract; Postum, Poland water, White Rock, Lithia water.

FOODS FORBIDDEN

(Other forbidden foods are erased from above list.)

- Sweets** of all kinds, as: confectionery, bonbons, candy, honey, sugar, cake, "cakes," syrup, molasses, jams, marmalades, preserves.
- Pastry,** pies, puddings, corn bread, Boston brown bread, muffins, gingerbread, hot bread, patties.
- Rich soups,** gravies, sauces, "dressing" or "stuffing," hashes, stews, ragouts.
- Fried food** of all kinds, all twice cooked or "made-over" dishes, canned, dried, smoked, salted, potted, candied and preserved food of every kind. Veal, pork, sausage, pâté de foie gras, brains, tripe, kidneys, marrow.
- Condiments** and spices, vinegar, mustard, pickles, cheese, mushrooms.
- Lobster,** crabs, terrapin, caviare, herring, salmon, sardines, chowder.
- New potatoes,** radishes, cucumbers, cabbage, corn, beets, turnips, horseradish, cranberries, beans.
- Nuts,** raisins, berries.

GENERAL RULES

1. *Eat slowly:* masticate thoroughly.
2. Have meals at regular hours.
3. Rest for half an hour or more after luncheon and dinner.
4. Do not eat more than a half dozen kinds of food at any one meal.
5. Do not eat too much.
6. Take but little fluid of any sort with meals, but do not fail to drink a glass of water half an hour before and two hours after meals.

BOTTLE-FED BABIES

BY EMELYN LINCOLN COOLIDGE, M.D.

OF THE BABIES' HOSPITAL, NEW YORK CITY, AND OF THE EDITORIAL STAFF OF
THE LADIES' HOME JOURNAL

When a mother cannot give her child the food intended for it by Nature something else must be found as near like the natural food as possible; after much experimenting it has been found that cow's milk properly modified comes as near like mother's milk as it is possible to make any artificial food. It contains the essential ingredients of breast milk (which few of the proprietary foods do), but they are in different proportions, and so the milk must be "modified" or "humanized" before it can be given to the baby.

The Milk Supply

It is better to use milk that comes from a herd of healthy cows than to use that from one cow, because it differs less from day to day. Milk sold in glass bottles is by far the best to use; that bought in bulk from a grocery store should never be used, as it is too apt to be full of germs to be suitable for a baby. If living in the country, and the bottled milk cannot be obtained, be sure that the barn and cows are kept clean, and that the milk is cooled immediately after milking. It should then be put into clean glass jars and placed on ice or kept below 50° Fahrenheit. It should stand at least 4 hours after milking before the baby's food is made up; the proportion of cream and milk in a quart will then be correct according to the formulas I shall give here. It should never be dipped into for other purposes until the baby's food is prepared.

How to Prepare the Food

The entire quantity for 24 hours should be prepared at one time. Have all the articles needed to prepare the food absolutely clean; if possible measure in ounces; if not count 2 tablespoonfuls as 1 ounce. It is better to have a separate bottle for each meal, but if one cannot afford this the day's supply may be poured into a glass jar or quart milk bottle and kept covered until feeding-time, when enough for a meal may be poured into the nursing-bottle and warmed by standing the bottle in warm water until the food is just lukewarm.

Pasteurized Milk

In Winter it is usually not necessary to Pasteurize the milk, but from May 1 to October 1 it is better to do so, as bacteria develop in it much more rapidly during warm weather. A regular Pasteurizer may be bought for 3 dollars, but if one does not care to go to this expense the bottles of modified milk may be placed in a pot of cold water, which is then rapidly brought to the boiling point; the pot is then removed from the stove and the bottles allowed to remain in it for 20 minutes, when they are taken out and cooled as quickly as possible by allowing first warm and then cold water to run over the outside of the bottles; when quite cold they should be placed on ice until mealtime, when they may be heated as described above.

Plain Milk Formulas

Pour the entire quart of bottled milk out into a clean pitcher and then back into the bottle several times, thus thoroughly mixing the milk; then take:

FOR THE FIRST MONTH. Six ounces of milk, 24 ounces of barley-water, half a tablespoonful of granulated or 1 of milk sugar, a pinch of bicarbonate of soda; mix all well together and pour the proper number of ounces into separate bottles, and either Pasteurize or place on ice.

FOR THE SECOND MONTH. Nine ounces of milk, 21 ounces of barley-water, 1 tablespoonful of sugar, and a pinch of soda.

FOR THE THIRD AND FOURTH MONTHS. Fourteen ounces of milk, 21 ounces of barley-water, sugar and soda as above.

FOR THE FIFTH AND SIXTH MONTHS. Twenty ounces of milk, 20 ounces of barley-water, sugar and soda as above.

FOR THE SEVENTH, EIGHTH AND NINTH MONTHS. Twenty-four ounces of milk, 16 ounces of barley-water, sugar and soda as usual.

TENTH, ELEVENTH AND TWELFTH MONTHS. Thirty-two ounces of milk, 8 ounces of barley-water, sugar and soda as usual.

The following "time-table" tells the quantity of food and intervals of feeding which the average healthy baby can take. No rule can be given which will suit every baby. If more or less food is required for any particular case divide or multiply the different ingredients, but keep the proportion the same as in above formulas.

Time-Table for Feeding During the First Year

AGE	Number of meals during day. 6 or 7 A. M. to 9 or 10 P. M.	Interval between meals by day.	Number of night meals 9 or 10 P. M. to 6 or 7 A. M.	Amount of 1 meal	Amount for 24 hours
1 Month	8	2 hours	2 meals	1½-3 ounces	15-30 ounces
2 Months	7	2½ hours	1 meal	2½-4 ounces	20-32 ounces
3 and 4 Months	6	3 hours	1 meal	3½-5 ounces	24½-35 ounces
5 and 6 Months	6	3 hours	0	4-6 ounces	24-36 ounces
7, 8, 9 Months	6	3 hours	0	6-7 ounces	36-42 ounces
10, 11, 12 Months	5	3½ hours	0	6-9 ounces	30-45 ounces

Barley and Oatmeal Gruels from the Flour

Take 1 teaspoonful of the barley-flour, or 2 of oatmeal, and mix into a smooth paste with a little cold water; now stir this into 1 pint of boiling water and boil for 15 minutes; add a pinch of salt and enough water to make up the pint (for some will have boiled away); then strain and add to milk and other ingredients mentioned. Use oatmeal for constipated babies; otherwise use barley.

If the flours cannot be obtained use the grains. Take 2 tablespoonfuls of the barley or 3 of oatmeal grain; soak in cold water over night; the next morning pour off this water and add 1 quart of fresh water and a pinch of salt, and boil steadily for 4 hours down to 1 pint, adding water as it boils away so that a pint will be obtained at the end of the time; then strain through muslin or a fine sieve. Gruels must be made fresh every day.

When a child gains steadily in weight, has smooth, yellow movements, and does not vomit, then he is doing well and the food is agreeing with him. If he vomits directly after a meal give him less food at a time, and if this does not help him increase the length of intervals between meals. Should he vomit sour masses some time after feeding the food contains too much cream or fat for this especial child, and it would be well to try the plain milk mixtures. If the baby has curds in his movements and much colic the food is probably too strong; use a weaker formula, or add 1 or 2 extra ounces of water or barley-water to the present formula. If he has a sharp attack of vomiting, with diarrhea, stop all milk at once and give barley-water, a dose of castor oil, and send for a doctor. In very warm weather it is a good plan to pour out an ounce or 2 of the food and use water or barley-water to make up the amount. If the child is very much constipated add 1 or 2 teaspoonfuls of 1 of the reliable patent foods that contain malt sugar to each bottle of milk and oatmeal gruel, and leave out the other sugar.

Care of Bottles and Nipples

Plain, round bottles with ounces marked on them are best. Have as many bottles as the child takes meals in 24 hours, and 1 or 2 extra ones in case of breakage. If the child leaves any food throw it away—do not warm it over—then at once rinse the bottle and let it stand full of cold water in which is a pinch of bicarbonate of soda or borax. Just before making up the food for the day thoroughly wash in hot soapsuds and water all the bottles that have collected, using a bottle-brush and carefully rinsing them; then boil them for 20 minutes, when they will be ready to fill with the food.

Use plain black rubber nipples; after each meal rinse them out at once in cold water and let them stand in a covered cup filled with boric acid solution (1 teaspoonful to a pint of cold water), or water to which a pinch of borax has been added; once each day turn them inside out and scrub them with hot water and soapsuds; then rinse in cold water. It is well to have 2 nipples in use taking first one and then the other. The hole in the nipple should be made with a rather coarse needle, heated red hot, and just large enough for the milk to drop rapidly through when the bottle of food is inverted; it should never be large enough to allow the milk to run through in a stream.

WHAT THE NORMAL BABY SHOULD BE

The following measurements, given by Dr. L. E. Holt in "Diseases of Infancy and Childhood," are now taken as the standard for the normal baby.

The weights are taken without any clothing. The height is taken by placing the baby on a perfectly flat surface like a table, and having some one hold the child's knee down so that he lies out straight, then taking a tape-measure and measuring from the top of his head to the bottom of his foot, holding the tape line absolutely straight. The chest is measured by means of a tape line passed directly over the nipples around the child's body and midway between full inspiration and full expiration. The head measurement is taken directly around the circumference of the head over the forehead and occipital bone.

		WEIGHT POUNDS	HEIGHT INCHES	CHEST INCHES	HEAD INCHES
Birth	Boys.....	7.55	20.6	13.4	13.9
	Girls.....	7.16	20.5	13.0	13.5
6 Months	Boys.....	16.0	25.4	16.5	17.0
	Girls.....	15.5	25.0	16.1	16.6
12 Months	Boys.....	20.5	29.0	18.0	18.0
	Girls.....	19.8	28.7	17.4	17.6
18 Months	Boys.....	22.8	30.0	18.5	18.5
	Girls.....	22.0	29.7	18.0	18.0
2 Years	Boys.....	26.5	32.5	19.0	18.9
	Girls.....	25.5	32.5	18.5	18.6
3 Years	Boys.....	31.2	35.0	20.1	19.3
	Girls.....	30.0	35.0	19.8	19.0

The teeth are always of interest. Here is the way the average normal baby cuts his first set of teeth: Two lower central incisors, 6 to 9 months; 4 upper incisors, 8 to 12 months; 2 lower lateral incisors and 4 anterior molars, 12 to 15 months; 4 canines, 18 to 24 months, 4 posterior molars, 24 to 30 months.

At 1 year a child should have 6 teeth; at 1½ years, 12 teeth; at 2 years, 16 teeth; at 2½ years, 20 teeth.

BIRTH AND DEATH CERTIFICATES

INTERNATIONAL LIST OF CAUSES OF DEATH*

NOTE.—All the states of the Union, also Alaska (act of Congress April 25, 1913), now use or approve the United States Standard Certificate of Death with the exception of Alabama, Georgia (no registration law, bill pending, 1913), Illinois, New Hampshire, New Mexico, Rhode Island, South Carolina (no registration law), and West Virginia. This indicates great progress in the movement for uniform and comparable statistics of causes of death and occupational mortality because in 1902, prior to the introduction of the Standard Certificate, no two states and scarcely any two cities used precisely the same forms of blanks for the registration of deaths. Following is a reduced facsimile showing the portion for which information is usually given by the physician or coroner (Medical Certificate of Death) properly filled out:

Revised United States Standard Certificate of Death

MARGIN RESERVED FOR BINDING

WRITE PLAINLY, WITH UNFADING INK—THIS IS A PERMANENT RECORD

1 PLACE OF DEATH			DEPARTMENT OF COMMERCE BUREAU OF THE CENSUS		
County _____			STANDARD CERTIFICATE OF DEATH		
Township _____			State of _____		
Village _____			Registered No. _____

Back of Certificate of Death

REVISED UNITED STATES STANDARD CERTIFICATE OF DEATH

[Approved by U. S. Census and American Public Health Association]

Statement of occupation.—Precise statement of occupation is very important, so that the relative healthfulness of various pursuits can be known. The question applies to each and every person, irrespective of age. For many occupations a single word or term on the first line will be sufficient, e. g., *Farmer* or *Planter*, *Physician*, *Compositor*, *Architect*, *Locomotive engineer*, *Civil engineer*, *Stationary fireman*, etc. But in many cases, especially in industrial employments, it is necessary to know (a) the kind of work and also (b) the nature of the business or industry, and therefore an additional line is provided for the latter statement; it should be used only when needed. As examples: (a) *Spinner*, (b) *Cotton mill*; (a) *Salesman*, (b) *Grocery*; (a) *Foreman*, (b) *Automobile factory*. The material worked on may form part of the second statement. Never return "Laborer," "Foreman," "Manager," "Dealer," etc., without more precise specification, as *Day laborer*, *Farm laborer*, *Laborer—Coal mine*, etc. Women at home, who are engaged in the duties of the household only (not paid *Housekeepers* who receive a definite salary), may be entered as *Housewife*, *Housework*, or *At home*, and children, not gainfully employed, as *At school* or *At home*. Care should be taken to report specifically the occupations of persons engaged in domestic service for wages, as *Servant*, *Cook*, *Housemaid*, etc. If the occupation has been changed or given up on account of the DISEASE CAUSING DEATH, state occupation at beginning of illness. If retired from business, that fact may be indicated thus: *Farmer (retired, 6 yrs.)*. For persons who have no occupation whatever, write *None*.

Statement of cause of death.—Name, first, the DISEASE CAUSING DEATH (the primary affection with respect to time and causation), using always the same accepted term for the same disease. Examples: *Cerebrospinal fever* (the only definite synonym is "Epidemic cerebrospinal meningitis"); *Diphtheria* (avoid use of "Croup"); *Typhoid fever* (never report "Typhoid pneumonia"); *Lobar pneumonia*; *Bronchopneumonia* ("Pneumonia," unqualified, is indefinite); *Tuberculosis of lungs, meninges, peritoneum*, etc., *Carcinoma, Sarcoma*, etc., of (name origin; "Cancer" is less definite; avoid use of "Tumor" for malignant neoplasms); *Measles*; *Whooping cough*; *Chronic valvular heart disease*; *Chronic interstitial nephritis*, etc. The contributory (secondary or intercurrent) affection need not be stated unless important. Example: *Measles* (disease causing death), *29 ds.*; *Bronchopneumonia* (secondary), *10 ds.* Never report mere symptoms or terminal conditions, such as "Asthemia," "Anemia" (merely symptomatic), "Atrophy," "Collapse," "Coma," "Convulsions," "Debility" ("Congenital," "Senile," etc.), "Dropsy," "Exhaustion," "Heart failure," "Hemorrhage," "Inanition," "Marasmus," "Old age," "Shock," "Uremia," "Weakness," etc., when a definite disease can be ascertained as the cause. Always qualify all diseases resulting from childbirth or miscarriage, as "PUERPERAL septicemia," "PUERPERAL peritonitis," etc. State cause for which surgical operation was undertaken. For VIOLENT DEATHS state MEANS OF INJURY and quality as ACCIDENTAL, SUICIDAL, or HOMICIDAL, or as probably such, if impossible to determine definitely. Examples: *Accidental drowning*; *Struck by railway train—accident*; *Revolver wound of head—homicide*; *Poisoned by carbolic acid—probably suicide*. The nature of the injury, as fracture of skull, and consequences (e. g., *sepsis, tetanus*) may be stated under the head of "Contributory." (Recommendations on statement of cause of death approved by Committee on Nomenclature of the American Medical Association.)

NOTE.—Individual offices may add to above list of undesirable terms and refuse to accept certificates containing them. Thus the form in use in New York City states: "Certificates will be returned for additional information which give any of the following diseases, without explanation, as the sole cause of death: Abortion, cellulitis, childbirth, convulsions, hemorrhage, gangrene, gastritis, erysipelas, meningitis, miscarriage, necrosis, peritonitis, phlebitis, pyemia, septicemia, tetanus." But general adoption of the minimum list suggested will work vast improvement, and its scope can be extended at a later date.

In addition to the statement of cause of death, for which the physician is responsible, it is desirable that he should also note the correctness of the statements of **Age, Special Occupation, and Industry**, as well as other important personal and statistical particulars usually stated by the informant.

In reporting causes of death the physician is requested to read carefully the instructions upon the back of the certificate.

The physician should enter—

(1) **THE DISEASE CAUSING DEATH** (*primary* cause with respect to time and causation), with its **Duration** from the beginning of the illness.

(2) **Contributory Cause (or Causes)** (*secondary*), with **Duration**.

N. B.—Duration, or approximate duration, should always be stated. It should date from the *beginning* of the illness or the origin of the condition, and not relate merely to the time under observation or of confinement to bed. The *primary* cause is of the longer duration. If the causes were entirely unrelated, one not being a result or complication of the other, enter the disease most important as the cause of death *first*, without regard to relative duration, and strike out the word "Secondary" on the blank. **In naming the disease causing death it is urgently recommended that the exact names printed in bold-faced type in the List below be employed, whenever they are applicable, and that no other terms be used instead.** Thus, *always* write **Typhoid fever**; not sometimes *Typhoid fever*, sometimes *Enteric fever*, or "*Continued fever*," "*Typhomalarial fever*," etc. Of course many diseases are not given in the terms in bold-faced type below, but only the most important ones. For others, any terms recommended by the Nomenclature of Diseases of the Royal College of Physicians, London (fourth edition, 1906), or the Nomenclature of Diseases and Conditions of Bellevue and Allied Hospitals, New York (last edition, 1911), may be used. *Terms printed in italics are indefinite or otherwise undesirable, and should never be used when a more definite statement can be given.* "*Heart failure*," for example, is simply equivalent to cause of death unknown. "*Convulsions*," "*Marasmus*," "*Debility*," "*Old age*," are terms of this character. See List of Undesirable Terms, also special instructions for deaths from External Causes. **Please aid in the improvement of our vital statistics by using only precise and definite terms.**

(I.—GENERAL DISEASES.)

1. **Typhoid fever.**
2. **Typhus fever.**
3. **Relapsing fever.** [Insert "(spirillum)."]
4. **Malaria.**
5. **Smallpox.**
6. **Measles.**
7. **Scarlet fever.**
8. **Whooping cough.**
9. **Diphtheria and croup.**
10. **Influenza.**
11. **Millary fever.** [True **Febris millaris** only.]
12. **Asiatic cholera.**
13. **Cholera nostras.**
14. **Dysentery.** [**Amebic? Bacillary?** Do not report ordinary diarrhea and enteritis (104, 105) as dysentery.]
15. **Plague.**
16. **Yellow fever.**
17. **Leprosy.**
18. **Erysipelas.** [State also cause; see Class XIII.]
19. Other epidemic diseases:
 - Mumps,**
 - German measles,**
 - Chicken-pox,**
 - Rocky Mountain spotted (tick) fever,**
 - Glandular fever, etc.**
20. Purulent infection and **septicemia.** [State also cause; see Classes VII and XIII especially.]
21. **Glanders.**
22. **Anthrax.**
23. **Rabies.**
24. **Tetanus.** [State also cause; see Class XIII.]
25. **Mycoses.** [Specify, as **Actinomycosis of lung, etc.**]
26. **Pellagra.**
27. **Beriberi.**
28. **Tuberculosis of the lungs.**
29. **Acute millary tuberculosis.**
30. **Tuberculous meningitis.**
31. **Abdominal tuberculosis.**
32. **Pott's disease.** [Preferably **Tuberculosis of spine.**]
33. **White swellings.** [Preferably **Tuberculosis of — joint.**]
34. **Tuberculosis of other organs.** [Specify organ.]
35. **Disseminated tuberculosis.** [Specify organs affected.]

36. **Rickets.**
 37. **Syphills.**
 38. **Gonococcus infection.**
 39. **Cancer**¹ *of the buccal cavity.* [State part.]
 40. **Cancer**¹ *of the stomach, liver.*
 41. **Cancer**¹ *of the peritoneum, intestines, rectum.*
 42. **Cancer**¹ *of the female genital organs.* [State organ.]
 43. **Cancer**¹ *of the breast.*
 44. **Cancer**¹ *of the skin.* [State part.]
 45. **Cancer**¹ *of other or unspecified organs.* [State organ.]
 46. Other *tumors* (tumors of the female genital organs excepted). [Name kind of *tumor* and organ affected. **Malignant?**]
 47. **Acute articular rheumatism.** [Always state "rheumatism" as *acute* or *chronic.*]
 48. **Chronic rheumatism** [preferably **Arthritis deformans**] and **gout.**
 49. **Scurvy.**
 50. **Diabetes.** [**Diabetes mellitus.**]
 51. **Exophthalmic goiter.**
 52. **Addison's disease.**
 53. **Leukemia.**
 54. **Anemia, chlorosis.** [State form or cause. **Pernicious?**]
 55. Other general diseases:
 Diabetes insipidus,
 Purpura hemorrhagica, etc.
 56. **Alcoholism (acute or chronic).**
 57. **Chronic lead poisoning.** [State cause. Occupational?]
 58. Other chronic occupation poisonings. [State exact **name of poison**, whether the poisoning was **chronic and due to occupation**, and also please be particularly careful to see that the **Special Occupation and Industry** are fully stated. If the occupation stated on the certificate is not that in which the poisoning occurred, add the latter in connection with the statement of cause of death, e. g., "**Chronic occupational phosphorus necrosis (dipper, match factory, white phosphorus).**" Give full details, including pathologic conditions contributory to death. Following is a List of Industrial Poisons (Bull. Bureau of Labor, May, 1912) to which the attention of physicians practicing in industrial communities should be especially directed:

Acetaldehyd,
Acridin,
Acrolein,
Ammonia,
Amyl acetate,
Amyl alcohol,
Anilin,
Anilin dyestuffs [name],
Antimony compounds [name],
Arsenic compounds [name],
Arseniureted hydrogen,
Benzin,
Benzol,
Carbon dioxide,
Carbon disulphid,
Carbon monoxid (coal vapor, illum-
inating water gas, producer gas),
Chlorid of lime,
Chlorin,
Chlorodinitrobenzol,
Chloronitrobenzol,
Chromium compounds [name],
Cyanogen compounds [name],
Diazomethane,
Dimethyl sulphate,
Dinitrobenzol,
Formaldehyd,
Hydrochloric acid,

Hydrofluoric acid,
Lead (57),
Manganese dioxid,
Mercury,
Methyl alcohol,
Methyl bromid,
Nitranilin,
Nitrobenzol,
Nitroglycerin,
Nitronaphthalin,
Nitrous gases,
Oxalic acid,
Petroleum,
Phenol,
Phenylhydrazin,
Phosgene,
Phosphorus (yellow or white),
Phosphorus sesquisulphid,
Phosphureted hydrogen,
Picric acid,
Pyridin,
Sulphur chlorid,
Sulphur dioxide,
Sulphureted hydrogen,
Sulphuric acid,
Tar,
Turpentine oil.

Not all substances in the preceding list are likely to be reported as causes of death, but the physician should be familiar with it in order to recognize, and to report, if required, cases of illness, and should also be on the alert to discover new forms of industrial poisoning not heretofore recognized. In the Bulletin cited full details may be found as to the branches of industry in which the poisoning occurs, mode of entrance into the body, and the symptoms of poisoning. Attention should also be called to industrial infection, e. g., Anthrax (22), and the influence of gases and vapors, dust, or unhygienic industrial environment.]

¹ "Cancer and other malignant tumors." Preferably reported as **Carcinoma of —, Sarcoma of —, Epithelioma of —, etc.**, stating the exact nature of the neoplasm and the **organ or part of the body first affected.**

59. Other chronic poisonings:
Chronic morphinism,
Chronic cocainism, etc.

(II.—DISEASES OF THE NERVOUS SYSTEM AND OF THE ORGANS OF SPECIAL SENSE.)

60. *Encephalitis.*
 61. *Meningitis:*
Cerebrospinal fever or Epidemic cerebrospinal meningitis,
Simple meningitis. [State cause.]
 62. **Locomotor ataxia.**
 63. Other diseases of the spinal cord:
Acute anterior poliomyelitis,
Paralysis agitans,
Chronic spinal muscular atrophy,
Primary lateral sclerosis of spinal cord,
Syringomyelia, etc.
 64. **Cerebral hemorrhage, apoplexy.**
 65. *Softening of the brain.* [State cause.]
 66. *Paralysis without specified cause.* [State form or cause.]
 67. **General paralysis of the insane.**
 68. Other forms of mental alienation. [Name **disease causing death.** Form of insanity should be named as CONTRIBUTORY CAUSE only, *unless* it is actually the disease causing death.]
 69. **Epilepsy.**
 70. *Convulsions (non puerperal).* [State cause.]
 71. *Convulsions of infants.* [State cause.]
 72. **Chorea.**
 73. **Neuralgia and neuritis.** [State cause.]
 74. Other diseases of the nervous system. [Name the disease.]
 75. Diseases of the eyes and their annexa. [Name the disease.]
 76. Diseases of the ears. [Name the disease.]

(III.—DISEASES OF THE CIRCULATORY SYSTEM.)

77. **Pericarditis.** [**Acute** or **chronic; rheumatic** (47), etc.]
 78. **Acute endocarditis.** [Cause? Always report "endocarditis" or "myocarditis" as **acute** or **chronic.** Do not report when mere terminal condition.]
Acute myocarditis.
 79. Organic diseases of the heart: [Name the disease.]
Chronic valvular disease, [Name the disease.]
Aortic insufficiency,
Chronic endocarditis, [See note on (78).]
Chronic myocarditis, [See note on (78).]
Fatty degeneration of heart, etc.
 80. **Angina pectoris.**
 81. Diseases of the arteries, **atheroma, aneurism, etc.**
 82. **Embolism and thrombosis.** [State organ. Puerperal (139)?]
 83. Diseases of the veins (**varices, hemorrhoids, phlebitis,** etc.).
 84. Diseases of the lymphatic system (**lymphangitis,** etc.). [Cause? Puerperal?]
 85. *Hemorrhage;* other diseases of the circulatory system. [Cause? *Pulmonary hemorrhage* from **Tuberculosis of lungs** (28)? Puerperal?]

(IV.—DISEASES OF THE RESPIRATORY SYSTEM.)

86. Diseases of the nasal fossae. [Name disease.]
 87. Diseases of the larynx. [Name disease. Diphtheritic?]
 88. Diseases of the thyroid body. [Name disease.]
 89. **Acute bronchitis.**
 90. **Chronic bronchitis.** } [Always state as **acute** or **chronic.** Was it tuberculous?]
 91. **Bronchopneumonia.** [If secondary, give *primary* cause.]
 92. *Pneumonia.* [If lobar, report as **Lobar pneumonia.**]
 93. **Pleurisy.** [Cause? If tuberculous, so report (28).]
 94. *Pulmonary congestion, pulmonary apoplexy.* [Cause?]
 95. **Gangrene of the lung.**
 96. **Asthma.** [Tuberculosis?]
 97. **Pulmonary emphysema.**
 98. Other diseases of the respiratory system (tuberculosis excepted). [Such indefinite returns as "*Lung trouble,*" "*Pulmonary hemorrhage,*" etc., compiled here, vitiate statistics. **Tuberculosis of lungs** (28)? Name the disease.]

(V.—DISEASES OF THE DIGESTIVE SYSTEM.)

99. Diseases of the mouth and annexa. [Name disease.]
 100. Diseases of the pharynx. [Name disease. Diphtheritic?]
Streptococcus sore throat.

101. Diseases of the esophagus. [Name disease.]
 102. **Ulcer of the stomach.**
 103. Other diseases of the stomach (cancer excepted). [Name disease. Avoid such indefinite terms as "*Stomach trouble*," "*Dyspepsia*," "*Indigestion*," "*Gastritis*," etc., when used vaguely.]
 104. **Diarrhea and enteritis** (under 2 years).
 105. **Diarrhea and enteritis** (2 years and over).
 106. **Ankylostomiasis.** [Better, for the United States, **Hookworm disease** or **Uncinariasis.**]
 107. Intestinal parasites. [Name species.]
 108. **Appendicitis** and typhlitis.
 109. **Hernia**, intestinal obstruction. [State form and whether **strangulated.**]
Strangulated inguinal hernia (operation),
Intussusception,
Volvulus, etc.
 110. Other diseases of the intestines. [Name disease.]
 111. **Acute yellow atrophy of the liver.**
 112. **Hydatid tumor of the liver.**
 113. **Cirrhosis of the liver.**
 114. **Biliary calculi.**
 115. Other diseases of the liver. ["*Liver complaint*" is not a satisfactory return.]
 116. Diseases of the spleen. [Name disease.]
 117. **Simple peritonitis (nonpuerperal).** [Give cause.]
 118. Other diseases of the digestive system (cancer and tuberculosis excepted). [Name disease.]

(VI.—NON-VENEREAL DISEASES OF THE GENITO-URINARY SYSTEM AND ANNEXA.)

119. **Acute nephritis.** [State primary cause, especially **Scarlet fever**, etc. Always state "**nephritis**" as **acute** or **chronic.**]
 120. Bright's disease. [Better, **Chronic interstitial nephritis**, **Chronic parenchymatous nephritis**, etc. Never report mere names of symptoms, as "*Uremia*," "*Uremic coma*," etc. See also note on (119).]
 121. **Chyluria.**
 122. Other diseases of the kidneys and annexa. [Name disease.]
 123. **Calculi** of the urinary passages. [Name **bladder**, **kidney.**]
 124. Diseases of the bladder. [Name disease.]
Cystitis. [Cause?]
 125. Diseases of the urethra, **urinary abscess**, etc. [Name disease. Gonorrheal (38)?]
 126. Diseases of the prostate. [Name disease.]
 127. Nonvenereal diseases of the male genital organs. [Name disease.]
 128. **Uterine hemorrhage (nonpuerperal).** [Cause?]
 129. **Uterine tumor (noncancerous).** [State kind.]
 130. Other diseases of the uterus. [Name disease.]
Endometritis. [Cause? Puerperal (137)?]
 131. **Cysts** and other tumors of the ovary. [State kind.]
 132. **Salpingitis** and other diseases of the female genital organs. [Name disease. Gonorrheal (38)? Puerperal (137)?]
 133. **Nonpuerperal** diseases of the **breast** (cancer excepted). [Name disease.]

(VII.—THE PUERPERAL STATE.)

NOTE.—The term **puerperal** is intended to include pregnancy, parturition, and lactation. Whenever parturition or miscarriage has occurred within one month before the death of the patient, the fact should be certified, even though childbirth may not have contributed to the fatal issue. Whenever a woman of childbearing age, especially if married, is reported to have died from a disease which might have been puerperal, the local registrar should require an explicit statement from the reporting physician as to whether the disease was or was not puerperal in character. The following diseases and symptoms are of this class:

Abscess of the breast,
Albuminuria,
Cellulitis,
Coma,
Convulsions,
Eclampsia,
Embolism,
Endometritis,
Gastritis,
Hemorrhage (uterine or unqualified),
Lymphangitis,
Metritis,

Metroperitonitis,
Metrorrhagia,
Nephritis,
Pelvipерitonitis,
Peritonitis,
Phlegmasia alba dolens,
Phlebitis,
Pyemia,
Septicemia,
Sudden death,
Tetanus,
Thrombosis,
Uremia.

Physicians are requested always to write **Puerperal** before the above terms and others that might be puerperal in character, or to add in parenthesis (**Not puerperal**), so that there may be no possibility of error in the compilation of the mortality statistics; also to respond to the requests of the local registrars for additional information when, inadvertently, the

desired data are omitted. The value of such statistics can be greatly improved by cordial coöperation between the medical profession and the registration officials. If a physician will not write the true statement of puerperal character on the certificate, he may privately communicate that fact to the local or state registrar, or write the number of the International List under which the death should be compiled, e. g., "Peritonitis (137)."

134. Accidents¹ of pregnancy: [Name the condition.]

Abortion. [Term not used in invidious sense; **Criminal abortion** should be so specified (184).]

Miscarriage,
Ectopic gestation,
Tubal pregnancy, etc.

135. **Puerperal hemorrhage.**

136. Other accidents¹ of labor: [Name the condition.]

Caesarean section,
Forceps application,
Breech presentation,
Symphysiotomy,
Difficult labor,
Rupture of uterus in labor, etc.

137. **Puerperal septicemia.**

138. **Puerperal albuminuria and convulsions.**

139. **Puerperal phlegmasia alba dolens, embolus, sudden death.**

140. *Following childbirth (not otherwise defined).* [Define.]

141. **Puerperal diseases of the breast.** [Name disease.]

(VIII.—DISEASES OF THE SKIN AND CELLULAR TISSUE.)

142. **Gangrene.** [State part affected, **Diabetic** (50), etc.]

143. **Furuncle.**

144. *Acute abscess.* [Name part affected, nature, or cause.]

145. Other diseases of the skin and annexa. [Name disease.]

(IX.—DISEASES OF THE BONES AND OF THE ORGANS OF LOCOMOTION.)

146. Diseases of the bones (tuberculosis excepted): [Name disease.]

Osteoperiostitis, [Give cause.]

Osteomyelitis,

Necrosis, [Give cause.]

Mastoiditis, etc. [Following **Otitis media** (76)?]

147. Diseases of the joints (tuberculosis and rheumatism excepted). [Name disease; always specify **Acute articular rheumatism** (47), **Arthritis deformans** (48), **Tuberculosis of — joint** (33), etc., when cause is known.]

148. *Amputations.* [Name disease or injury requiring amputation, thus permitting proper assignment elsewhere.]

149. Other diseases of the organs of locomotion. [Name disease.]

(X.—MALFORMATIONS.)

150. **Congenital malformations** (stillbirths not included): [Do not include **Acquired hydrocephalus** (74) or **Tuberculous hydrocephalus** (**Tuberculous meningitis**) (30) under this head.]

Congenital hydrocephalus,
Congenital malformation of heart,
Spina bifida, etc.

(XI.—DISEASES OF EARLY INFANCY.)

151. **Congenital debility, icterus, and sclerema:** [Give cause of *debility*.]

Premature birth,

Atrophy, [Give cause.]

Marasmus, [Give cause.]

Inanition, etc. [Give cause.]

152. Other diseases peculiar to early infancy:

Umbilical hemorrhage,

Atelectasis,

Injury by forceps at birth, etc.

153. **Lack of care.**

(XII.—OLD AGE.)

154. **Senility.** [Name the **disease** causing the death of the old person.]

¹In the sense of *conditions or operations dependent* upon pregnancy or labor, not "accidents" from external causes.

(XIII.—AFFECTIONS PRODUCED BY EXTERNAL CAUSES.)

NOTE.—Coroners, medical examiners, and physicians who certify to deaths from violent causes, should always clearly indicate the fundamental distinction of whether a death was due to **Accident, Suicide, or Homicide**; and then state the **Means or instrument of death**. The qualification "*probably*" may be added when necessary.

155. **Sulcide by poison.** [Name poison.]
156. **Sulcide by asphyxia.** [Name means of death.]
157. **Sulcide by hanging or strangulation.** [Name means of strangulation.]
158. **Sulcide by drowning.**
159. **Sulcide by firearms.**
160. **Sulcide by cutting or piercing instruments.** [Name instrument.]
161. **Sulcide by jumping from high places.** [Name place.]
162. **Sulcide by crushing.** [Name means.]
163. **Other sulcides.** [Name means.]
164. **Poisoning by food.** [Name kind of food.]
165. **Other acute poisonings.** [Name poison; specify **Accidental**.]
166. **Conflagration.** [State fully, as **Jumped from window of burning dwelling, Smothered—burning of theater, Forest fire, etc.**]
167. **Burns** (conflagration excepted). [Includes **Scalding**.]
168. Absorption of deleterious gases (conflagration excepted):
Asphyxia by illuminating gas (accidental),
Inhalation of — (accidental), [Name gas.]
Asphyxia (accidental), [Name gas.]
Suffocation (accidental), etc. [Name gas.]
169. **Accidental drowning.**
170. Traumatism by **firearms.** [Specify **Accidental**.]
171. Traumatism by **cutting or piercing instruments.** [Name instrument. Specify **Accidental**.]
172. Traumatism by **fall.** [For example, **Accidental fall from window**.]
173. Traumatism in mines and quarries:
Fall of rock in coal mine,
Injury by blasting, slate quarry, etc.
174. Traumatism by **machines.** [Specify kind of machine, and if the Occupation is not fully given under that head, add sufficient to show the exact industrial character of the fatal injury. Thus, **Crushed by passenger elevator; Struck by piece of emery wheel (knife grinder); Elevator accident (pile driver), etc.**]
175. Traumatism by other crushing.
Railway collision,
Struck by street car,
Automobile accident,
Run over by dray,
Crushed by earth in sewer excavation, etc.
176. Injuries by animals. [Name animal.]
177. **Starvation.** [Not "inanition" from disease.]
178. Excessive cold. [**Freezing**.]
179. Excessive heat. [**Sunstroke**.]
180. **Lightning.**
181. **Electricity** (lightning excepted). [How? Occupational?]
182. **Homicide by firearms.**
183. **Homicide by cutting or piercing instruments.** [Name instrument.]
184. **Homicide by other means.** [Name means.]
185. **Fractures** (cause not specified). [State means of injury. The nature of the lesion is necessary for hospital statistics but not for general mortality statistics.]
186. Other external causes:
Legal hanging,
Legal electrocution,
Accident, injury or traumatism (unqualified). [State **Means of injury**.]

(XIV —ILL-DEFINED DISEASES.)

NOTE.—If physicians will familiarize themselves with the nature and purposes of the International List, and will cooperate with the registration authorities in giving additional information so that returns can be properly classified, the number of deaths compiled under this group will rapidly diminish, and the statistics will be more creditable to the office that compiles them and more useful to the medical profession and for sanitary purposes.

187. Ill-defined organic disease:
Dropsy, Ascites, etc. [Name the disease of the heart, liver, or kidneys in which the dropsy occurred.]
188. **Sudden death.** [Give cause. Puerperal?]
189. Cause of death not specified or ill-defined. [It may be extremely difficult or impossible to determine definitely the cause of death in some cases, even if a post mortem be granted. If the physician is absolutely unable to satisfy himself in this respect, it is better for him to write **Unknown** than merely to guess at the cause. It will be helpful if he can specify a little further, as **Unknown disease** (which excludes

external causes), or **Unknown chronic disease** (which excludes the acute infective diseases), etc. Even the ill-defined causes included under this head are at least useful to a limited degree, and are preferable to no attempt at statement. Some of the old "chronics," which well-informed physicians are coming less and less to use, are the following: *Asphyxia; Asthenia; Bilious fever; Cachexia; Catarrhal fever; Collapse; Coma; Congestion; Cyanosis; Debility; Delirium; Dentition; Dyspnea; Exhaustion; Fever; Gastric fever; HEART FAILURE; Laparotomy; Marasmus; Paralysis of the heart; Surgical shock; and Teething.* In many cases so reported the physician could state the **disease** (not mere symptom or condition) **causing death.**]

LIST OF UNDESIRABLE TERMS

As a result of the conferences between the Committee on Nomenclature and Classification of Diseases appointed by the American Medical Association with committees of other national medical organizations and with medical representatives of the Army, Navy, Public Health Service, and the Bureau of the Census,¹ it was agreed:

"That practical suggestions be framed relative to the reporting of causes of death and of sickness by physicians, and that a list of the most **undesirable terms** frequently employed be brought to their attention with the **recommendation that they be disused.**"

In framing the following list of undesirable terms use has been made of the London Nomenclature, the Bellevue Nomenclature, and especially of the "Suggestions to Medical Practitioners respecting Certificates of Causes of Death," issued by the Registrar-General of England and Wales, October, 1911.

UNDESIRABLE TERM.	REASON WHY UNDESIRABLE, AND SUGGESTION FOR MORE DEFINITE STATEMENT OF CAUSE OF DEATH.
(It is understood that the term criticised is in the <i>exact form</i> given below, <i>without further explanation or qualification.</i>)	
"Abscess," "Abscess of brain," "Abscess of lung," etc.	Was it tuberculous or due to other infection? Traumatic? The return of "Abscess," unqualified, is worthless. State cause (in which case the fact of "abscess" may be quite unimportant) and location.
"Accident," "Injury," "External causes," "Violence." Also more specific terms, as "Drowning," "Gunshot," which might be either accidental, suicidal, or homicidal.	Impossible to classify satisfactorily. Always state (1) whether Accidental, Suicidal, or Homicidal ; and (2) Means of injury (e. g., Railroad accident). The lesion (e. g., Fracture of skull) may be added, but is of secondary importance for general mortality statistics.
"Anasarca," "Ascites"	See "Dropsy."
"Atrophy," "Asthenia," "Debility," "Decline," "Exhaustion," "Inanition," "Weakness," and other vague terms.	Frequently cover tuberculosis and other definite causes. Name the disease causing the condition.
"Blood poisoning"	See "Septicemia." Syphilis?
"Cancer," "Carcinoma," "Sarcoma," etc.	In all cases the organ or part first affected by cancer should be specified.
"Catarrh"	Term best avoided, if possible.
"Cardiac insufficiency," "Cardiac degeneration," "Cardiac weakness," etc.	See "Heart disease" and "Heart failure."
"Cardiac dilatation"	Do not report when a mere terminal condition. State cause.
"Cellulitis"	See "Abscess," "Septicemia."
"Cerebrospinal meningitis"	See "Meningitis."

¹ Mortality Statistics, 1907, p. 19.

UNDESIRABLE TERM.	REASON WHY UNDESIRABLE, AND SUGGESTION FOR MORE DEFINITE STATEMENT OF CAUSE OF DEATH.
"Congestion," "Congestion of bowels," "Congestion of brain," "Congestion of kidneys," "Congestion of lungs," etc.	Alone, the word "congestion" is worthless, and in combination it is almost equally undesirable. If the disease amounted to <i>inflammation</i> , use the proper term (lobar pneumonia, chronic nephritis, enteritis, etc.); merely passive congestion should not be reported as a cause of death. State the primary cause.
"Convulsions," "Eclampsia," "Fit," or "Fits."	"It is hoped that this indefinite term ["Convulsions"] will henceforth be restricted to those cases in which the true cause of that <i>symptom</i> can not be ascertained. At present more than eleven per cent. of the total deaths of infants under one year old are referred to 'convulsions' merely."— <i>Registrar-General</i> . "Fit.—This is an objectionable term; it is indiscriminately applied to epilepsy, convulsions, and apoplexy in different parts of the country."— <i>Dr. Farr, in First Rep. Reg.-Gen., 1839.</i>
"Croup"	"Croup" is a most pernicious term from a public health point of view, is not contained in any form in the London or Bellevue Nomenclatures, and should be entirely disused. Write Diphtheria when this disease is the cause of death.
"Dentition," "Teething"	State disease causing death.
"Disease," "Trouble," or "Complaint" of [any organ] e. g., "Lung trouble," "Kidney complaint," "Disease of brain," etc.	Name the disease , e. g., Lobar pneumonia, Tuberculosis of lungs, Chronic interstitial nephritis, Syphilitic gumma of brain , etc.
"Dropsy"	"Dropsy" should never be returned as the cause of death without particulars as to its probable origin, e. g., in disease of the heart, liver, kidneys, etc."— <i>Registrar-General</i> . Name the disease causing (the <i>dropsy</i> and) death.
"Edema of lungs"	Usually terminal. Name the disease causing the condition.
"Fever"	Name the disease, as Typhoid fever, Lobar pneumonia, Malaria , etc., in which the "fever" occurs.
"Fracture," "Fracture of skull," etc.	Indefinite; the principle of classification for general mortality statistics is <i>not</i> the lesion but (1) the nature of the violence that produced it (Accidental, Suicidal, Homicidal), and (2) the Means of injury.
"Gastritis," "Gastric catarrh," "Acute indigestion."	Frequently worthless as a statement of the actual cause of death; the terms should not be loosely used to cover almost any fatal affection with irritation of stomach. Gastro-enteritis? Acute or chronic, and cause?
"General decay," etc.	See "Old age."
"Heart disease," "Heart trouble," even "Organic heart trouble."	The exact form of the cardiac affection, as Mitral regurgitation, Aortic stenosis , or, less precisely, as Valvular heart disease , should be stated.
"Heart failure," "Cardiac weakness," "Cardiac asthenia," "Cardiac exhaustion," "Paralysis of the heart," etc.	"Heart failure" is a recognized synonym, even among the laity, for ignorance of the cause of death on the part of the physician. Such a return is forbidden by law in Connecticut. If the physician can make no more definite statement, it must be confined among the class of ill-defined diseases (<i>not</i> under Organic heart disease).

UNDESIRABLE TERM.	REASON WHY UNDESIRABLE, AND SUGGESTION FOR MORE DEFINITE STATEMENT OF CAUSE OF DEATH.
"Hemorrhage," "Hemoptysis," "Hemorrhage of lungs."	Frequently mask tuberculosis or deaths from injuries (traumatic hemorrhage), Puerperal hemorrhage , or hemorrhage after operation for various conditions. What was the cause and location of the hemorrhage? If from violence, state fully.
"Hydrocephalus".....	"It is desirable that deaths from hydrocephalus of tuberculous origin should be definitely assigned in the certificate to Tuberculous meningitis , so as to distinguish them from deaths caused by simple inflammation or other disease of the brain or its membranes. Congenital hydrocephalus should always be returned as such."— <i>Registrar-General</i> .
"Hysterectomy".....	See " <i>Operation</i> ."
"Infantile asthenia," "Infantile atrophy," "Infantile debility," "Infantile marasmus," etc.	See " <i>Atrophy</i> ."
"Infantile paralysis".....	This term is sometimes used for paralysis of infants caused by instrumental delivery, etc. The importance of the disease in its recent endemic and epidemic prevalence in the United States makes the exact and unmistakable expressions Acute anterior poliomyelitis or Infantile paralysis (acute anterior poliomyelitis) desirable.
"Inflammation".....	Of what organ or part of the body? Cause?
"Laparotomy".....	See " <i>Operation</i> ."
"Malignant," "Malignant disease."	Should be restricted to use as qualification for neoplasms; see Tumor.
"Malnutrition".....	See " <i>Atrophy</i> ."
"Marasmus".....	This term covers a multitude of worthless returns, many of which could be made definite and useful by giving the name of the disease causing the "marasmus" or wasting. It has been dropped from the English Nomenclature since 1885 ("Marasmus, term no longer used"). The Bellevue Hospital Nomenclature also omits this term.
"Meningitis," "Cerebral meningitis," "Cerebrospinal meningitis," "Spinal meningitis."	Only two terms should ever be used to report deaths from Cerebrospinal fever , <i>synonym</i> , Epidemic cerebrospinal meningitis , and they should be written as above and in no other way. It matters not in the use of the latter term whether the disease be actually <i>epidemic</i> or not in the locality. A single sporadic case should be so reported. The first term (Cerebrospinal fever) is preferable because there is no apparent objection to its use for any number of cases. No one can intelligently classify such returns as are given in the margin. Mere terminal symptomatic meningitis should not be entered at all as a cause of death; name the disease in which it occurred. Tuberculous meningitis should be reported as such.
"Natural causes".....	This statement eliminates external causes, but is otherwise of little value. What disease (probably) caused death?
"Old age," "Senility," etc.....	Too often used for deaths of elderly persons who succumbed to a definite disease. Name the disease causing death.

UNDESIRABLE TERM.	REASON WHY UNDESIRABLE, AND SUGGESTION FOR MORE DEFINITE STATEMENT OF CAUSE OF DEATH.
<p>"Operation," "Surgical operation," "Surgical shock," "Amputation," "Hysterectomy," "Laparotomy," etc.</p>	<p>All these are entirely indefinite and unsatisfactory—unless the surgeon desires his work to be held primarily responsible for the death. Name the disease, abnormal condition, or form of external violence (Means of death; accidental, suicidal, or homicidal?), for which the operation was performed. If death was due to an anesthetic (chloroform, ether, etc.), state that fact and the name of the anesthetic.</p>
<p>"Paralysis," "General paralysis," "Paresis," "General paresis," "Palsy," etc.</p>	<p>The vague use of these terms should be avoided, and the precise form stated, as Acute ascending paralysis, Paralysis agitans, Bulbar paralysis, etc. Write General paralysis of the insane in full, not omitting any part of the name; this is essential for satisfactory compilation of this cause. Distinguish Paraplegia and Hemiplegia; and in the latter, when a sequel of Apoplexy or Cerebral hemorrhage, report the primary cause.</p>
<p>"Peritonitis"</p>	<p>"Whenever this condition occurs—either as a consequence of Hernia, Perforating ulcer of the stomach or bowel [Typhoid fever?], Appendicitis, or Metritis (puerperal or otherwise), or else as an extension of morbid processes from other organs [Name the disease], the fact should be mentioned in the certificate."—<i>Registrar-General</i>. Always specify Puerperal peritonitis in cases resulting from abortion, miscarriage, or labor at full term. Always state if due to tuberculosis or cancer. When traumatic, report means of injury and whether accidental, suicidal, or homicidal.</p>
<p>"Pneumonia," "Typhoid pneumonia."</p>	<p>"Pneumonia," without qualification, is indefinite; it should be clearly stated either as Bronchopneumonia or Lobar pneumonia. The term Croupous pneumonia is also clear. "The term '<i>Typhoid pneumonia</i>' should never be employed, as it may mean either Enteric fever [Typhoid fever] with pulmonary complications, on the one hand, or Pneumonia with so-called typhoid symptoms on the other."—<i>Registrar-General</i>. When lobar pneumonia or bronchopneumonia occurs in the course of or following a disease, the primary cause should be entered first, with duration, and the lobar pneumonia or bronchopneumonia be entered beneath as the contributory cause, with duration. Do not report "<i>Hypostatic pneumonia</i>" or other mere terminal conditions as causes of death when the disease causing death can be ascertained.</p>
<p>"Ptomain poisoning," "Auto-intoxication," "Toxemia," etc.</p>	<p>These terms are used very loosely and it is impossible to compile statistics of value unless greater precision can be obtained. They should not be used when merely descriptive of symptoms or conditions arising in the course of diseases, but the disease causing death should alone be named. "Ptomain poisoning" should be restricted to deaths resulting from the development of putrefactive alkaloids or other poisons in food, and the food should be named as Ptomain poisoning (mussels), etc.</p>
<p>"Pulmonary congestion," "Pulmonary hemorrhage."</p>	<p>See "<i>Congestion</i>," "<i>Hemorrhage</i>."</p>
<p>"Pyemia"</p>	<p>See "<i>Septicemia</i>."</p>
<p>"Septicemia," "Sepsis," "Septic infection," etc.</p>	<p>Always state cause of this condition, and, if localized, part affected. Puerperal? Traumatic?</p>

UNDESIRABLE TERM.	REASON WHY UNDESIRABLE, AND SUGGESTION FOR MORE DEFINITE STATEMENT OF CAUSE OF DEATH.
"Shock" (post-operative).....	See " <i>Operation.</i> "
"Specific".....	The word <i>specific</i> should never be used without further explanation. It may signify <i>syphilitic, tuberculous, gonorrheal, diphtheritic</i> , etc. Name the disease.
"Tabes mesenterica," "Tabes.".....	"The use of this term [" <i>Tabes mesenterica</i> "] to describe tuberculous disease of the peritoneum or intestines should be discontinued, as it is frequently used to denote various other wasting diseases which are not tuberculous. Tuberculous peritonitis is the better term to employ when the condition is due to tubercle." — <i>Registrar-General</i> . Tabes dorsalis should not be abbreviated to " <i>Tabes.</i> "
"Teething".....	See " <i>Dentition.</i> "
"Toxemia".....	See " <i>Ptomain poisoning.</i> "
"Tuberculosis".....	The organ or part of the body affected should always be stated, as Tuberculosis of the lungs, Tuberculosis of the spine, Tuberculosis meningitis, Acute general miliary tuberculosis , etc.
"Tumor," "Neoplasm," "New growth.".....	These terms should never be used without the qualifying words Malignant, Nonmalignant, or Benign . If malignant, they belong under Cancer , and should preferably be so reported, or under the more exact terms Carcinoma, Sarcoma , etc. In all cases the organ or part affected should be specified.
"Uremia".....	Name the disease causing death , i. e., the primary cause, not the mere terminal conditions or symptoms, and state the duration of the primary cause .
"Uterine hemorrhage".....	See " <i>Hemorrhage.</i> "

STATEMENT OF OCCUPATION AND OTHER IMPORTANT DATA

The physician's responsibility is usually confined to the correct statement of the cause of death, but he may in some instances fill out the entire certificate, or he may note errors in the statement of the personal and statistical particulars, the correction of which will be of service to statistical accuracy as well as insure more truthful legal records. Hence his interest is solicited in the **completeness and correctness in all respects** of all certificates passing through his hands, and more especially in the correct statement of **sex, color, marital condition, age, occupation, birthplace, birthplace of father, birthplace of mother, and length of residence** when the latter is required.

Age is of special importance, and as a check on the accuracy of the statement, the **date of birth** is also required. **For infants under 1 day old state the hours, or even the minutes if less than 1 hour old.** This is necessary in order that stillbirths may be distinguished with absolute precision from deaths of children born alive. Stillbirths may be registered, under various laws, either as births, as deaths, or, preferably, both as births and deaths; they should be *compiled*, in statistical tables, neither as births nor deaths, but separately as *stillbirths*. **A stillborn child is dead at the moment of birth, hence no age whatever, not even 1 minute, should be entered under the statement of age, but the space should be filled with a cipher ("0").** Conversely, if the child lived any time whatever, even a single minute, after birth, "**Stillborn**" should not be reported as the cause of death.

Precise statement of **OCCUPATION** (including **Special occupation and Industry**) is very important, so that the relative healthfulness of various pursuits can be known. The instructions on the back of the Revised United States Standard Certificate of Death, together with any additional instructions approved by state or municipal authority, should be carefully followed in this respect, and physicians should especially note **occupational influences affecting the cause of death.**

The statement should include (a) **Trade, profession, or particular kind of work** (e. g., Spinner); and (b) **General nature of industry, business, or establishment** in which employed (or employer), whenever the latter is indicated (e. g., Cotton mill).

STANDARD CERTIFICATE OF BIRTH

The following is a reduced facsimile of the Standard Certificate of Birth which is now in use in many of the states and cities:

Standard Certificate of Birth

PLACE OF BIRTH		Department of Commerce BUREAU OF THE CENSUS	
County of <u>Alleghany</u>		STANDARD CERTIFICATE OF BIRTH	
Township of _____		Registered No. <u>374</u>	
or Village of _____		St. _____ Ward _____	
City of <u>Lumberland</u> (No. <u>190</u> , <u>Washington</u>)		St. _____ Ward _____	
FULL NAME OF CHILD <u>James Smith</u>		If child is not yet named, make supplemental report as directed	
Sex of Child <u>M.</u>	Twin, triplet, or other? _____	Number in order of birth _____	Legit-imate? _____

MARGIN RESERVED FOR BINDING
WRITE PLAINLY, WITH UNFADING INK—THIS IS A PERMANENT RECORD
 N. B.—In case of more than one child at a birth, a SEPARATE RETURN must be made for each, and the number of each, in order of birth, stated

1Adopted by the American Public Health Association and approved by the Bureau of the Census for use beginning January 1, 1910. A reduced fac-simile is shown on p. 920.

RECIPROCITY

By reciprocity is meant the arrangement between two or more states whereby an examining board may waive the written examination for an applicant formerly licensed in another state, and who, in the judgment of the board, can fully comply with their requirements to practice medicine. The term "reciprocity" implies that the State Examining Board whose license is thus accepted will return the courtesy. As usually provided, reciprocity is a discretionary and not a mandatory measure. In individual instances, therefore, where the applicant cannot satisfy the board that he is properly qualified to practice medicine, the board has the right to refuse a license on that basis.

The ideal basis for reciprocity would, of course, be uniform—and therefore equally high—standards enforced in all the states. As conditions now exist a number of states having comparatively equal standards have arranged for reciprocity on one or both of the two following bases: (1) On the basis of a written examination by a State Examining Board, and (2) on the basis of a diploma from a recognized medical college without examination.

1. On the Basis of an Examination.—This basis is acceptable to a larger number of states than the second. Applicant must have passed a written examination before another examining board and received his license to practice medicine.

2. On the Basis of a Diploma.—This basis is mostly for old practitioners and applies only where the applicant was registered in another state prior to the date when the state receiving him through reciprocity required an examination. For example, a physician of good repute was registered to practice medicine in Nebraska in 1880. For good reasons he desires to change residence to Minnesota. Taking for granted his credentials are otherwise acceptable, he is eligible to registration in that state through reciprocity, since Minnesota did not require examination of all applicants until Jan. 1, 1887. Those who registered in Nebraska since Jan. 1, 1887, would not be eligible to register in Minnesota through reciprocity unless they could register on Basis No. 1.

The accompanying reciprocity table has been prepared to show at a glance what states have reciprocity with others. If the state has reciprocity only on the basis of an examination it is indicated by the figure 1. The figure 2 indicates that the state reciprocates on both bases.

The table in reality shows more than the title would indicate, since a number of states accept certificates from others regardless of reciprocity.

While the various states reciprocate, as stated in the table, most of them have other requirements. All of them require that the applicant must be of good moral character and that he shall hold credentials from a recognized medical college. Many require one or two years of reputable practice, and some require that he must have been a member of a county, state or national medical society for at least a year. Regarding these special requirements one should correspond with the secretary of the examining board of the state wherein he wishes to locate.

No Reciprocity.—The following states do not reciprocate: Alabama, Arizona, Rhode Island and Washington.

RECOGNIZE GOVERNMENT EXAMINATION

The examination given under federal authority, which should be generally recognized by all state licensing boards as a qualification for license to practice medicine, is that given to medical officers of the United States Army, Navy, and Public Health Service. In fact, retired officers from the services mentioned are now eligible to receive licenses without further examination in

of a diploma or of an examination. must have been issued prior to the date (shown in the second column) when the state in tiates of any state who present satisfactory evidence of good moral character and practice respective states at the time such licenses were issued. permission, taken from "Laws," American Medical Association, 1915.

THE MORE COMMON POISONS, THEIR SYMPTOMS, ANTIDOTES, AND TREATMENT

POISONS.	Symptoms.	Antidotes and treatment.
<p>ACIDS.</p> <p>Acetic.</p> <p>Citric.</p> <p>Muriatic.</p> <p>Nitric.</p> <p>Oxalic.</p> <p>Sulphuric.</p> <p>Tartaric.</p>	<p>All highly corrosive, excoriating the parts with which they come in contact, occasioning intense pain, followed by symptoms of shock. Nitric acid makes yellow stains; sulphuric blackens.</p>	<p>For nitric and oxalic acids, the carbonate of magnesia or lime; for sulphuric acid, strong soapsuds; for oxalic, limewater; for the others, any dilute alkali. Induce vomiting, give demulcent drinks, and treat the consequent inflammation and shock as if from any other injury. Neutralization or dilution of the irritant is of first importance. After dilution prompt washing of the stomach is of more importance than all other means in phenol poisoning.</p>
<p>Carbolic (<i>Creosote</i>).</p>	<p>Caustic; whitening of the mucous membrane, with intense burning and numbness, nausea, weakness, stupor, and collapse.</p>	<p>Oil, milk. Alcohol used immediately and then washed out. Secure rest, warmth of the body, and stimulation.</p>
<p>Prussic.</p>	<p>Gives an odor of peach kernels; nausea, giddiness, pain in the head, convulsions, and death.</p>	<p>Dilute ammonia. Cold affusion to the spine, emetics, and stimulants. A fatal dose leaves scarcely time for any treatment, death occurring in from 3 to 5 minutes.</p>
<p>ALKALIS and EARTHS.</p> <p>Ammonia.</p> <p>Baryta.</p> <p>Lime.</p> <p>Potash.</p> <p>Soda.</p>	<p>Violent caustics, causing destruction of the mucous membrane, acute burning pain, vomiting and purging of bloody matter, and death by shock.</p>	<p>The vegetable acids—dilute vinegar, lemon-juice, etc.—neutralize them. The fixed oils—castor, linseed, olive, etc.—unite with them to form harmless soaps. Give these, and demulcent drinks; stimulants, if necessary.</p>
<p>METALLIC IRRITANTS.</p> <p>Antimony.</p> <p><i>Tartar Emetic.</i></p>	<p>Symptoms like those of cholera; violent cramps and purging, collapse; inflammation of whole alimentary canal, with metallic taste, suppression of urine, vomiting, cramps, delirium or stupor, death.</p>	<p>Induce vomiting, if the poison has not already done so, and give astringent infusions, as of strong tea or oak bark.</p>
<p>Arsenic.</p> <p><i>Paris Green.</i></p> <p><i>Scheele's Green.</i></p> <p><i>Fowler's Solution.</i></p> <p><i>Arsenate of Lead.</i></p> <p><i>Rough on Rats.</i></p> <p><i>Green coloring matters</i></p>	<p>Intense pain, thirst, vomiting and purging, tenesmus, suppression of urine, clammy sweat, delirium or collapse, and death either in a few hours from shock, or after several days from inflammation.</p>	<p>Arsenic should be removed by lavage as promptly as possible, saline catharsis for that which has passed beyond the stomach.</p>

THE MORE COMMON POISONS, THEIR SYMPTOMS, ANTIDOTES, AND TREATMENT

POISONS.	Symptoms.	Antidotes and treatment.
Bismuth. Copper. <i>Blue Vitriol.</i> <i>Verdigris.</i> <i>Food cooked in copper vessels.</i>	Symptoms like other irritants.	Emetics, milk, albumin, and mucilaginous drinks.
Iodin. Iron. <i>Green Vitriol.</i>	May occasion paralysis.	Starch unites with iodine, forming an insoluble compound, but not with the iodide of potassium. Iodized starch should be removed after its formation.
Lead. Mercury. <i>Calomel.</i> <i>Corrosive Sub.</i> <i>Vermilion.</i>		Albumin in some form, preferably the white of eggs, milk, flour gruel.
Phosphorus. <i>Matches.</i>		Emetics, mucilage, and magnesia. No oil.
Silver, <i>Nitrate of.</i> Tin. Zinc. <i>White Vitriol.</i>		Dilute solutions of copper sulphate (1-500) precipitate an insoluble coating on metallic phosphorus. May be decomposed by common salt. Carbonate of soda in solution, milk and albumin.
VEGETABLE IRRITANTS. Colocynth. Croton Oil. Savin Oil.	Violent vomiting, diarrhea, and pain, thirst and constriction of the throat, difficult breathing, delirium or stupor, death.	Evacuate the stomach and bowels as promptly as possible, and stimulate.
ANIMAL IRRITANTS. Cantharides.	Severe pain and burning all through the alimentary canal, bloody evacuations, strangury or retention of urine, convulsions, delirium, death.	Excite vomiting, give emollient drinks and enemata, but no oil. Rub the abdomen with camphor, or camphorated oil to relieve the strangury.
Poisonous fish.	Indigestion, headache, vertigo, thirst, vomiting and diarrhea, collapse. Often an eruption on the skin.	Emetics, purgatives, and stimulants.

THE MORE COMMON POISONS, THEIR SYMPTOMS, ANTIDOTES, AND TREATMENT

Poisons.	Symptoms.	Antidotes and treatment.
<p>NARCOTICS and ACRONARCOTICS. Aconite. Alcohol. Belladonna (<i>Night-shade</i>) Camphor. Choral. Colchicum. Conium (<i>Hemlock</i>). Dulcamara (<i>Bitter-sweet</i>). Ergot. Hellebore. Hyoscyamus. Laburnum. Lobelia. Nux Vomica. Strychnin. Physostigma. Opium. <i>Morphin</i>. Tobacco. Toadstools. Turpentine.</p>	<p>These are nearly all vegetable poisons. They occasion nausea, numbness, stupor, delirium or convulsions, over-stimulation of the heart, followed by its failure, insensibility, coma, death. With the acronarcotics, these symptoms are preceded by those of irritants, an acrid taste, dryness, and constriction of the mouth and throat, fever, vomiting and diarrhoea, with intestinal pain. The pupils of the eyes are usually dilated, except under opiates, which contract them. Belladonna dilates them widely.</p> <p>Strychnin excites violent convulsions, like those of tetanus.</p>	<p>Evacuate the stomach as thoroughly as possible, and give active purgatives; give strong coffee and keep the patient roused. The custom of walking the patient up and down, and slapping with wet towels, is objectionable; it adds exhaustion to depression, and risks giving him pneumonia. Keep him in the recumbent position, and employ friction, and, if necessary, artificial respiration.</p> <p>The spasms may be quieted by inhalation of ether.</p>
<p>GASES. Acetylene. Acetic acid. Carbonic acid. Carbonic oxid. Nitrous oxid. Sulphuretted hydrogen. Chlorin. Chloroform.</p>	<p>Chlorin violently irritates the respiratory organs; the others act like narcotics. Each has a certain characteristic odor, by which it may be recognized.</p>	<p>Give plenty of fresh air, cautious inhalations of ammonia, stimulants, and artificial respiration, if necessary.</p>

ABBREVIATIONS AND SYMBOLS

AA, <i>ana</i> , of each.	Hor. decub., <i>hora decubitus</i> , at bedtime.
Add., <i>adde</i> , add to it.	Inf., <i>infusum</i> , an infusion.
Ad lib., <i>ad libitum</i> , as you please.	Inject., <i>injection</i> , an injection.
Alt. dieb., <i>alternis diebus</i> , every other day.	Lb., <i>libra</i> , a pound.
Alt. hor., <i>alternis horis</i> , every other hour.	Liq., <i>liquor</i> .
Alt. noc., <i>alterâ nocte</i> , every other night.	Lot., <i>lotio</i> , a lotion.
Ante., <i>anteriorum</i> , before.	M., <i>misce</i> , mix.
Ante cib., <i>ante cibum</i> , before meals.	Man., <i>manipulus</i> , a handful.
Applic., <i>applicatur</i> , apply.	Mist., <i>mistura</i> , a mixture.
Aq. dest., <i>aqua destillata</i> , distilled water.	N., <i>nocte</i> , at night.
Aq. pur., <i>aqua pura</i> , pure water.	No., <i>numero</i> , in number.
B. i. d., <i>bis in dies</i> , twice a day.	O., <i>octarius</i> , a pint.
C., <i>congius</i> , a gallon.	Ol., <i>oleum</i> , oil.
Cap., <i>capiat</i> , let him take.	O. m., <i>omni mane</i> , every morning.
Comp., <i>compositus</i> , compound.	Ov., <i>ovum</i> , an egg.
Conf., <i>confectio</i> , a confection.	Pil., <i>pilula</i> , a pill.
Cort., <i>cortex</i> , bark.	P. r. n., <i>pro re natâ</i> , as occasion arises.
Decub., <i>decubitus</i> , lying down.	Pulv., <i>pulvis</i> , a powder.
Det., <i>detur</i> , let it be given.	Q. d., <i>quater in die</i> , four times a day.
Dil., <i>dilutus</i> , dilute.	Q. S., <i>quantum sufficit</i> , as much as is sufficient.
Dim., <i>dimidius</i> , one-half.	℞, <i>recipe</i> , take.
Div. in p. æq., <i>dividatur in partes æquales</i> , divide into equal parts.	Rad., <i>radix</i> , root.
Dr., <i>drachma</i> , a dram.	S. or Sig., <i>signa</i> , write.
Emp., <i>emplastrum</i> , a plaster.	Sem., <i>semen</i> , seed.
F., <i>fahrenheit</i> , degree of heat.	SS. or s., <i>semissts</i> , a half.
F. m., <i>fiat mistura</i> , make a mixture.	Sum., <i>summendum</i> , to be taken.
Far., <i>faradic</i> , faradic.	S. V. G., <i>spiritus vini gallici</i> , brandy.
Fe., <i>ferrum</i> , iron.	S. V. R., <i>spiritus vini redificatus</i> , alcohol.
F. pil., <i>fiat pilula</i> , make a pill.	Syr., <i>syrupus</i> , sirup.
Fl. or f., <i>fluidus</i> , fluid.	T. i. d., <i>ter in dies</i> , three times a day.
Ft., <i>fiat</i> , let there be made.	Tr., <i>tinctura</i> , tincture.
Garg., <i>gargarisma</i> , a gargle.	Troch., <i>trochisci</i> , lozenges.
Gr., <i>granum</i> or <i>grana</i> , a grain, or grains.	Ung., <i>unguentum</i> , ointment
Gtt., <i>gutta</i> or <i>guttae</i> , a drop, or drops.	℥, <i>minimum</i> , a minim.
Guttat., <i>guttatim</i> , by drops.	ʒ, <i>drachma</i> , a dram.
H., <i>hora</i> , an hour.	ʒ, <i>unica</i> , an ounce.
Hg., <i>hydrargyrum</i> , mercury.	ʒ, <i>scrupulum</i> , a scruple.

TABLES OF WEIGHTS AND MEASURES

APOTHECARIES' WEIGHT

In preparing prescriptions druggists use apothecaries' weight

20 grains (gr. xx)	= 1 scruple (℥ sc. or ʒ j)
3 scruples (ʒ iiij)	= 1 dram (℥ dr. or ʒ j)
8 drams (ʒ viij)	= 1 ounce (℥ oz. or ʒ j)
12 ounces (ʒ xij)	= 1 pound (℥ lb. or lb j)

APOTHECARIES' MEASURE

60 min. (℥ lx)	= 1 fluid dram (f ʒ j)
8 fluid dram (f ʒ viij)	= 1 fluid ounce (f ʒ j)
16 fluid ounces (f ʒ xvj)	= 1 pint (O j)
8 pints (O viij)	= 1 gallon (C j)

45 drops, or a common teaspoonful, make about 1 fluid dram; 2 tablespoonfuls about 1 fluid ounce; a wineglassful about 1½ fluid ounces; and a teacupful about 4 fluid ounces.

AVOIRDUPOIS WEIGHT

16 ounces (oz.)	= 1 pound (lb.)
2,000 pounds	= 1 ton (T.)

100 lb. is still sometimes used as a unit of measure and abbreviated cwt. 2,000 lb. is often called a *short ton*, and the ton of 2,240 lb., used at the mines in weighing coal and ores, is called the *long ton* or *gross ton*. A pound avoirdupois (avd.) contains 7,000 grains.

DRY MEASURE

2 pints (pt.)	= 1 quart (qt.)
8 quarts	= 1 peck (pk.)
4 pecks	= 1 bushel (bu.)

LINEAR MEASURE

12 inches (in.)	= 1 foot (ft.)
3 feet	= 1 yard (yd.)
16.5 feet	= 1 rod (rd.)
320 rods	= 1 mile (mi.)
1,760 yards	= 1 mile
5,280 feet	= 1 mile

LIQUID, OR WINE MEASURE

4 gills (gi.)	= 1 pint (pt.)
2 pints	= 1 quart (qt.)
4 quarts	= 1 gallon (gal.)
63 gallons	= 1 hogshead
2 hogsheads	= 1 pipe
2 pipes	= 1 tun

SQUARE MEASURE

144 square inches (sq. in.)	= 1 square foot (sq. ft.)
9 square feet	= 1 square yard (sq. yd.)
30¼ square yards	= 1 square rod (sq. rd.)
160 square rods	= 1 acre (A.)
640 acres	= 1 square mile (sq. mi.)
36 square miles	= a township.

SOLID OR CUBIC MEASURE

1,728 cubic inches (cu. in.)	= 1 cubic foot (cu. ft.)
27 cubic feet	= 1 cubic yard (cu. yd.)

TROY WEIGHT

Valuable metals like gold and platinum are still weighed by troy weights.

24 grains (gr.)	= 1 pennyweight (pwt. or dwt.)
20 pennyweights	= 1 ounce (oz.)
12 oz.	= 1 pound (lb.)

The *carat* weight, used in weighing diamonds, varies; but it should be taken as 3½ troy grains unless otherwise stated.

In speaking of gold as "so many carats fine," one means so many twenty-fourths of pure gold. Thus, gold 14 carats fine is 14/24 pure gold and 10/24 alloy (cheaper metals).

METRIC, OR FRENCH WEIGHTS

	Gram	Troy Gr.		
Milligram	= .001	= .01543		
Centigram	= .01	= .15433		
Decigram	= .1	= 1.5433	Avoir. Oz.	Avoir. Lb.

Sq. Decimeter	= .1	= 15.5	= .10763	= .01196	
Centiare	= 1.	= 1549.88	= 10.763	= 1.196	= .00025
Are	= 10.	= 154988.	= 1076.3	= 119.6	= .0247
Hectare	= 100.		= 107630.	= 11959.	= 2.47
Sq. Kilometer	= 38607	Sq. Mile			= 247.
Sq. Myriameter	= 38607	Sq. Miles			= 24708

WEIGHTS

Unit of Measurement	Approximate Equivalent	Accurate Equivalent
1 gram	15 $\frac{1}{2}$ grains	15.432
1 grain	0.064 gram	0.064
1 kilogram (1000 grams)	2 $\frac{1}{2}$ lbs. avoirdupois	2.204
1 pound avoirdupois	$\frac{1}{2}$ kilogram	0.453
1 ounce avoirdupois (437 $\frac{1}{2}$ grains)	28 $\frac{1}{2}$ grams	28.349
1 ounce, Troy or apothecary (480 grains)	31 grams	31.103

SUGGESTIONS TO MEDICAL AUTHORS

INSTRUCTIONS FOR READING GALLEY PROOF

1. Gallies should be carefully read and corrected on the margins in ink, *all queries being answered.*

2. Special attention should be given to the spelling of proper names and the dosage of drugs, as errors of this sort are not easily caught by the printer.

3. As few corrections as possible should be made, as the printer's charge for author's alterations is very high—out of all proportion to the original cost of composition.

4. It should be borne in mind that the addition of even a few words at the beginning of a paragraph will necessitate the resetting of the entire paragraph.

5. Proofs of all cuts, bearing the figure number and caption, should be returned with the galleys in which they are called for. The point at which they are to be inserted in the proof should be indicated on the galley margin thus: < Figure 8. Proofs of cuts should *not* be pinned or pasted to the galleys.

6. Corrections should be made on the set of proofs bearing the printer's marks and these should be returned *with the original manuscript. This is very important.*

7. The duplicate set of proofs is to be retained by the author.

INSTRUCTIONS FOR READING PAGE PROOF

1. Pages should be read to see that all corrections marked on the galleys have been properly made. Any corrections should be made in ink on the margin and all queries should be answered.

2. It should not be necessary to make any extensive changes in page proof, and under no circumstances should material be added to a page without the elimination of an equal amount of matter to balance the page.

3. References to cuts should be verified and all cross references should be filled in with the proper page number.

4. Corrections should be made on the set of proofs containing the printer's marks and these should be returned *with the galleys originally corrected. This is very important.*

5. The duplicate set of pages is to be retained by the author.

PROOF MARKS

Marginal Mark	Corresponding Mark in Proof	Meaning
human ^	When in the course of events	insert
∩	When in the course of human events	invert
∩	When in the course of human events	take out
∩	When in the course of human events	close up
l.c.	When in the course of human events	lower case letter
w.f.	When in the course of human events	wrong font letter
tr	When in the course of events human	transpose
stet	When in the course of human events	let stand
□	When in the course of human events	indent em quad
#	When in the course of human events	space
√ √	When in the course of human events	even spacing
↓	When in the course of human events	push down space
¶	days. When in the course of human	make paragraph
⌈	⌈ When in the course of human events	move over
Ⓢ?	When in the course of human event	query to author
x	When in the course of human events	broken letter
⊙	When in the course of human events	period
∨	Human events mark the days course	apostrophe
∨ ∨	When in the course of human events	quotation marks
-/	The course of the sidetracked events	hyphen
Capo	When in the course of human events	capitals
sm.c.	When in the course of human events	small capitals
rom.	When in the course of human events	put in roman
ital	When in the course of human events	put in italic
b.f.	When in the course of human events	bold-face

BIBLIOGRAPHIC REFERENCES

- I. Number the quotations from authorities in the text; 1 for the first, 2 for the second, etc., to the end of the article, at the same time affixing to the full reference to each authority its corresponding number. When all are numbered, arrange the references in a column at the end of the article as a "Bibliography," if exhaustive; "References," if only a partial list.
- II. In each reference conform to the style of the "Index Medicus" and "Index Catalogue of the Library of the Surgeon-General's Office."
- A. If the reference is to a book, give:
1. Author's name with initials.
 2. Title of Book.
 3. Publisher.
 4. Place of Publication.
 5. Date of Publication (Year).
 6. Volume (if more than one).
 7. Page or pages.
- B. If the reference is to an article in a magazine, or a "system," the form is nearly the same; give:
1. Author's name with initials.
 2. Title of Article.
 3. Title of Periodical.
 4. Place of Publication.
 5. Date of Publication (Year). (Exact date, as, Jan. 24, 1913, is sometimes a help.)
 6. Volume (with series number if necessary) in Roman Notation.
 7. Page (inclusive paging) in Arabic.

Examples:

- A. 1. Hall, J. N. "*Borderline Diseases.*" D. Appleton & Co. N. Y. 1915. I. 351.
 2. Hiss, P. H., and Zinsser, H. "*A Text-book of Bacteriology.*" D. Appleton & Co. N. Y. 1914.
- B. 3. Janeway, T. C. "*A Clinical Study of Hypertensive Cardiovascular Disease,*" *Archives of Internal Medicine.* Chic. 1913. XII. 755-798.
 4. Lyle, H. H. M. "*Amputations,*" *Operative Therapeutics.* (A. B. Johnson.) D. Appleton & Co. N. Y. 1915. II. 263-373.

- III. Verify all references by consulting the original sources. (2)
