APPLETON'S MEDICAL DICTIONARY

EDITED BY

SMITH ELY JELLIFFE, A.M., M.D., PH.D.,

Adjunct Professor of Diseases of the Mind and Nervous System,
New York Post Graduate Hospital and Medical School

ASSISTED BY

CAROLINE WORMELEY LATIMER, M.D., A.M.,

Formerly Instructor in Biology,
Women's College of Baltimore

SPECIAL CONTRIBUTING EDITORS

ROBERT M. GREEN, M.D.

Instructor in Anatomy and Assistant in Obstetrics and
Gynecology, Harvard Medical School.

ARTHUR H. KOELKER, Ph.D., M.D.

Formerly Instructor in Chemistry, Johns
Hopkins University.

**ROBERT ANTHONY HATCHER,
Ph.G., M.D.**

Professor of Pharmacology and Materia Medica,
Cornell University

WILLIAM ROYAL STOKES, M.D., Sc.D

Professor of Pathology and Bacteriology, University
of Maryland School of Medicine and College
of Physicians and Surgeons of Baltimore

**WILLIAM HENRY HOWELL,
Ph.D., M.D., Sc.D., LL.D.**

Professor of Physiology, Johns Hopkins
University.

ARTHUR K. STONE, A.M., M.D.

Instructor in Medicine, Harvard Medical School.

WALTER L. BURRAGE, A.M., M.D.

Formerly Clinical Instructor in Gynecology, Harvard
Medical School, Boston.

PREFACE

The field of medicine is for the student or the practitioner a vast country with always new discoveries to be made, new objects of knowledge and of activity. These are diverse in sphere though all belong to medicine. Effectually to meet these diversities and operate upon them and through them to obtain increasing knowledge of the nature of man which makes for the wider and truer scope of medical service, the physician needs tools to conquer these territories and appropriate unto his service the wealth of resource they offer in understanding and in opportunity through the problems presented.

The chief tool of the intellect is language, a mobile tool, by which the intellect can lay hold of one thing after another, material things first, then concepts, ideas which through language alone are caught and held for active use.

It has been the endeavor in the preparation of this dictionary to rearrange and select such tools as will be of greatest advantage in the departments of medical work. Some tools are no longer serviceable to newer concepts and broader knowledge. Others there are that have been tested and have proved effectual where newer ones have failed. There are still others whose use must change with extended knowledge and shifting points of view. Again we find new terms developed in a new sphere of activity such for example as the analytic penetration into the mental life which has begun to open up such far-reaching possibilities in the investigation of the causes and in the effectual treatment of human ailments.

The main emphasis we would lay upon this, that because language is not only a tool but a mobile tool it is in a continuous state of growth and alteration. What serves to-day may be inadequate and useless to-morrow. It is impossible therefore that the matter of this book should be fixed and perfected. There are terms whose value is already passing but whose functioning is as yet indispensable, there are others whose meaning as well as whose value must be more fully discovered and appraised by experience.

The dictionary as a whole represents the process of growth. Its use will not only determine its worth, it will also create its worth in so far as the tools it furnishes are utilized and applied to constructive work in the direct medical service of the sick, physical and mental together, and it will, moreover, in so doing be itself further developed, will alter and grow.

It is with an understanding of its necessary limitations and imperfections but possibilities as an instrument for a service reaching far beyond itself through the mobility of the tool, that we offer it to the minds that are to supply the motive and directing force.

KEY TO THE PRONUNCIATION

- a at the end of a syllable as a in rate, before a consonant as a in rat.
ă as a in rat.
ā as in rate.
ah as a in arm.
ai as ai in pair.
aw as a in all.
e at the end of a syllable as e in compete, before a consonant as e in pet.
ě as e in pet.
ē as e in compete.
ë as the French eu or the German oe, almost as e in pilfer.
eh as in rate, though not so prolonged.
i at the end of a syllable as i in fine, before a consonant as i in fin.
ī as i in fin.
ī as i in fine.
o at the end of a syllable as o in rote, before a consonant as o in rot.
ö as o in rot.
ō as o in rote.
oo as oo in root.
öö as oo in stood.
ow as ow in now.
oy as oy in toy.
u at the end of a syllable as u in cure, before a consonant as u in cut, before r as u in cur.
û as u in cut.
ū as u in pure.
ü as the French u or the German ü or ue.
dh as th in the.
g as in good.
kh a guttural k, like ch in German Buch.
n nasal as the French n in bon.
th as th in thrust.
zh as s in pleasure.

Other consonants as in English.

CONTENTS OF APPENDIX

PAGES

ANALYSES OF BODY FLUIDS

How to make a urine analysis—Comparative sizes of epithelia found in urine—
 How to make a blood examination—How to make a sputum examination—
 How to make an examination of the stomach contents—How to make a stool
 examination—How to determine blood pressure—How to examine cerebro-
 spinal fluid—The examination of vaginal smears—Examination of pleural and
 ascitic fluid 893-913

DIETARY

High protein diet—Low protein diet—Purin free diet, No. 2—Purin free diet
 (Folin)—Uric acid free diet—Dinner for hot weather—Dinner for cold weather—
 Schmidt's test diet—Lenhartz treatment—Karell treatment for "Anasarca"—
 Diet tables used in private practice by Dr. W. Gilman Thompson 913-917

BOTTLE-FED BABIES

The milk supply—How to prepare the food—Pasteurized milk—Plain milk
 formulas—Time-table for feeding during the first year—Barley and oatmeal
 gruels from the flour—Care of bottles and nipples—What the normal baby
 should be 917-919

DEATH CERTIFICATE AND INTERNATIONAL LIST OF CAUSES OF DEATH

General diseases—Diseases of the nervous system and of the organs of special
 sense—Diseases of the circulatory system—Diseases of the respiratory system—
 Diseases of the digestive system—Non-venereal diseases of the genito-urinary
 system and annexa—The puerperal state—Diseases of the skin and cellular
 tissue—Diseases of the bones and of the organs of locomotion—Malforma-
 tions—Diseases of early infancy—Old age—Affections produced by external
 causes—Ill-defined diseases 920-928

LIST OF UNDESIRABLE TERMS 928-932

STATEMENT OF OCCUPATION AND OTHER IMPORTANT DATA 933

STANDARD CERTIFICATE OF BIRTH 933

RECIPROCITY 934

ESSENTIAL FEATURES OF STATE LAWS AND CONDITIONS SURROUND-
 ING MEDICAL LICENSURE 935

RECIPROCITY TABLE 936-937

THE MORE COMMON POISONS, THEIR SYMPTOMS, ANTIDOTES, AND
 TREATMENT 938-940

ABBREVIATIONS AND SYMBOLS 941

TABLES OF WEIGHTS AND MEASURES

Apothecaries' weight—Apothecaries' measure—Avoirdupois weight—Dry meas-
 ure—Linear measure—Liquid, or wine measure—Square measure—Solid, or
 cubic measure—Troy weight—Metric, or French weights—Metric, or French
 dry and liquid measure—Metric, or French cubic or solid measure—Metric, or
 French lineal measure—Metric, or French square measure—Weights . . . 941-943

SUGGESTIONS TO MEDICAL AUTHORS

Instructions for reading galley proof—Instructions for reading page proof—
 Proof marks—Bibliographic references 943-945

APPLETON'S
MEDICAL DICTIONARY

A

A

A. 1. An abbreviation for anode and anterior. 2. The symbol for argon. 3. A symbol used to denote total acidity.

a-, an-. Prefix from the Gr., *alpha*, priv., before a vowel *an*, used in the sense of the English *un*, meaning *not*, *without*, *less*.

AA, aa. Used in prescription writing following the names of two or more ingredients to signify of *each*. [Gr., *ana*; in a distributive sense, of *each*.]

a-, ab-. Lat. prefix from a preposition meaning *from* or *away from*.

Abadie's sign (ă-bă-de'). 1. Insensibility of the tendo Achillis to pressure in locomotor ataxia. [*Abadie*, Bordeaux physician.] 2. Spasm of the levator palpebræ superioris in exophthalmic goiter. [*J. M. Abadie*, Parisian ophthalmologist.] **A.'s treatment of syphilis.** Intravenous injection of the oxycyanid of mercury.

abarticulation (ab-ar-tik-u-la'shun). 1. That variety of articulation known as diarthrosis. 2. Dislocation of a joint. [Lat., *ab*, from, + *articulatio*, joint.]

abasia (ah-ba'ze-ah). Loss or impairment of the power of walking due to motor incoördination, usually of psychogenic origin and seen in hysteria, compulsive states, psychosis. See *astasia-a. paroxysmal trepidant a.* *Astasia-a.*, in which walking is hindered by opposing movements that stiffen the legs and produce a sort of impediment resembling that of spastic paraplegia. [Gr., *a*, priv., + *basis*, step.]

Abbé's condenser. An illuminating apparatus placed beneath the stage of the microscope used either in indirect sunlight or with artificial light. It consists of two or three lenses which concentrate the light reflected from a mirror. [*Abbé*, a German physicist, 1845-1905.]

abbreviations and symbols. See in *appendix*, page 941.

abdomen (ab-do'men or ab'domen). The belly; the largest of the great visceral cavities of the body, bounded above by the diaphragm, below by the floor of the pelvis, in front by the fasciæ and muscles and partly by the ribs, and behind by the spine, ribs, fasciæ, and muscles. It is lined with peritoneum and is divided into the abdomen proper, above, and the pelvic cavity, below. **pendulous a.** Hanging

ABERRATION

or lax abdomen. **scaphoid a.** Hollowed out abdomen [Lat., *abdere*, to hide.]

abdom'inal (ab-dom'in-al). Of or pertaining to the abdomen. **a. belt.** A broad belt for encircling the abdomen for the purpose of support, as during pregnancy, etc. [Lat., *abdominalis*.]

abdom'ino-. A prefix from the Lat., *abdomen*; used in compound words to signify of or pertaining to the abdomen.

abducens. The sixth cranial nerve which, innervating the muscle of like name, external rectus, causes it to move the eye ball outward. **a. oris.** The levator anguli oris muscle.

abduct'. To draw a part away from the median line of the body. [Lat., *ab*, away from, + *ducere*, to lead.]

abduc'tion. A movement which carries a part away from the median line of the body or (in case of the fingers and toes) away from the middle line of a limb. As applied to the hand, the word means flexion toward the radial side of the forearm. [Lat., *ab*, away from, + *ducere*, to draw.]

abduc'tor. A muscle or nerve, the action of which is to abduct a part; the opposite of adductor. **a. muscle.** See *table of muscles*, under *muscle*.

Abelmos'chus esculen'tus. A species of *A.* growing in the West Indies. It furnishes the okra pods which are used in soups.

aber'rant (a-bèr'rant). Varying from the customary structure or type. [Lat., *aber-rare*, to wander.]

aberration (ab-er-a'shun). 1. Any deviation from the normal course. 2. In optics, the deviation of the rays of light from the principal focus of a curved lens or speculum. 3. See *mental a.* 4. An abnormal determination of one of the fluids of the body, especially the blood, to a part, as in vicarious menstruation; a metastasis. **chromatic a.** In the refraction of light by a lens, an inequality in the degree of refraction of the rays of the different colors, so that a series of tinted images is produced more or less removed from the focus. **mental a.** A vague term signifying strange or abnormal mental functioning; in law used loosely as synonymous with the still more vague term insanity. **spherical a.** In the refraction of light by a lens, an inequality in the degree of

convergence of the rays from different portions of the lens, producing a series of images at different focal distances, so called because the character of the a. is due to the fact that the surface of the lens is a segment of a sphere. [Lat., *aberratio*, a deviation.]

Abies (a'bi-*ez*). A genus of the *Coniferae*.

A. balsamea. Syn.: *A. balsamifera*. *Pinus balsamea*. The American silver fir; a species indigenous to the Northern United States and Canada, which furnishes Canada balsam (Canada turpentine). **A. balsamifera**. See *A. balsamea*. **A. canadensis**. The hemlock or hemlock spruce; a species indigenous to British America and the Northern United States, and furnishing the so-called Canada pitch. **A. communis**, **A. excelsa**. Syn.: *A. communis*, *Pinus Abies*, *Pinus picea*. The Norway spruce; indigenous to Europe and Northern Asia. It furnishes Burgundy pitch. **A. pectinata**, **A. picea**. The European silver fir, furnishing Strassburg turpentine and *abietite*, a sugar resembling mannite, from the needles. **A. Sabauiana**. The California nut-pine, which yields *abietene*, identical with heptane. [Lat., *abies*, fir-tree.]

abiogenesis (ab'i-o-jen'e-sis). Spontaneous generation; the hypothetic production of living matter without descent from other living matter. [Gr., *a*, priv., + *bios*, life, + *genesis*, generation.]

abiotrophy. A condition of premature death of the tissues from cell decay without the action of an immediate irritant. [Gr., *a*, priv., + *bios*, life, + *trophe*, nutrition.]

ablation (ab-la'shun). Removal. The action or process of removing. [Lat., *ablatio*, n. of action, from *ablat*-ppl. stem of *auferre*, to take away.]

ablepharia, **ablepharon** (ah-blef-a-re-ah, ah-blef-ar-on). Congenital absence of, or defect in, one or both eyelids. [Gr., *a*, priv., + *blepharon*, eyelid.]

ablep'sia, **ablep'sy**. 1. Blindness. 2. Stupidity, dulness. [Gr., *ablepsia*, blindness.]

abluent (ab'lu-ent). 1. Washing away. 2. A cleansing agent. 3. Cleansing. [Lat., *abluens*, pr. ppl. of *abluere*, to wash off.]

abnormal. Irregular, not according to rule; unnatural, departing from average. [Lat., *abnormis*, from *ab*, away from, + *norma*, rule.]

abnormal'ity, **abnor'mity**. An abnormal state, especially a malformation, as distinguished from a graver departure from normal, known as a monstrosity.

abolition (ab-o-lish'un). The destruction or removal of a part; the suppression of a function. [Lat., *abolescere*, to decay, vanish.]

abomasum. Syn.: *venter faliscus*, *ventriculus intestinalis*. The fourth, or principal, stomach of a ruminant animal. The mucous coat of the a. of the calf, or a preparation made from it (termed *rennet*), is used for curdling milk in making cheese.

abo'ral. Situated away from the mouth in

distinction from *adoral*. [Lat., *ab*, from, + *os*, *oris*, mouth.]

abort'. 1. To suffer an abortion. 2. To fall short of full development, to come to an untimely end; said of a disease. The word is also used (but improperly) in an active sense; e. g., a remedy is said to abort a disease, i. e., to cut it short. [Lat., *aboriri*, to miscarry.]

abor'ticide. An agent causing destruction of a fetus by producing abortion. [Lat., *abortus* + *caedere*, to kill.]

abortient, **abortifacient** (ab-or'shent, ab-or-tif-a'shent). A substance used to induce abortion. Said of a drug such as ergot or tansy. [Lat., *abortificiens*, from *abortus*, abortion, + *facere*, to produce.]

abortion. 1. The termination of pregnancy by the expulsion of the ovum before the fetus has become viable; in a stricter sense, the expulsion of the ovum before the completion of the third month of gestation (in the human subject), as distinguished from miscarriage. 2. A fetus which has been expelled prematurely.

3. The premature cessation of any physiological or pathological process. **criminal a.** Syn.: *feticide*. The act of inducing or attempting to induce a. for any other purpose than that of saving the mother's life. **habitual a.** The repeated occurrence of a. in the same individual in successive pregnancies, formerly imputed to "habit." **incomplete a.** One in which unusual delay occurs, so that portions of the ovum are retained. **induced a.** A. produced intentionally.

missed a., called also **concealed a.** That condition in which the ovum is retained in the uterus for a considerable time after its death, and the fetus is macerated or mummified, and finally expelled. **partial a.** A. resulting in the expulsion of one fetus (or fewer than the whole number) in cases of multiple gestation. **repeated a.** A. occurring at about the same period of time in repeated pregnancies. **spontaneous a.** A. not due to any interference or to any known accidental cause. **tubal a.** The escape of a fertilized ovum from the fallopian tube into the peritoneal cavity. [Lat., *abortus*, from *aboriri*, to miscarry.]

abortionist. One who practises criminal abortion.

abor'tive. 1. Cutting short the course of a disease. 2. A disease or a lesion is said to be a., when, after having begun in the usual way, it suddenly disappears or stops short in its progress. 3. In botany, an a. stamen is one that has no anther or only a rudimentary one; and an a. flower is one that falls without leaving any trace of fecundation. [Lat., *abortivus*.]

abrachiocephalus (a-bra''ke-o-sef'al-us). A monster without head or arms. [Gr., *a*, priv., + *brachion*, arm + *kephale*, head.]

abra'sion. Syn.: *excoriation*. 1. The rubbing or scraping away of a superficial portion of skin or mucous membrane or an incrustation, also the resulting lesion.

2. In dentistry the wearing away of tooth

substance. [Lat., *abrasio*, from *abradere*, to rub off.]

abras'tol. See *asaprol*.

abreac'tion. The adequate handling of an emotional situation.

ab'rin. A toxin, containing a globulin and an albumin chiefly obtained from jequirity (*Abrus precatorius*).

abrotanum, abrotonum (ab-rot'an-um, ab-rot'o-num). Southernwood; a bitter, irritant to mucous membranes. Used as a household remedy. See *Artemisia*. [Gr., *abrotonon*, southernwood.]

A'brus. A genus of the *Leguminosae*, one species of which, *A. precatorius* (jequirity), growing in the tropics, yields abrin. [Gr., *abros*, pretty, delicate.]

A. B. S. pill. An official pill of aloes, belladonna and strychnin.

ab'scess. Properly a circumscribed collection of pus in a cavity formed as the result of suppuration and disintegration of tissue) not an infiltration with pus or a collection in a natural cavity, though often applied to these conditions). The varieties are: acute. alveolar. amebic. Bartholinian. biliary. Brodie's. bursal. canalicular. caseous, or cheesy. cerebral. chronic. circumscribed. cold. consecutive. constitutional. critical. dental. diffuse. embolic. encysted. fecal. follicular. gangrenous. glandular. hemorrhagic. hypostatic. idiopathic. iliac. indolent. infecting mitral. interlamellar a. of the membrana tympani. ischio-rectal. lacrimal. lacunar. lumbar. lymphadenitic. lymphangitic. mammary. marginal. mastoid. metastatic. microscopical. miliary. milk. multiple. mural. necrotic. ossifluent. otic cerebral. otitic cerebral. parametric. parametric. perinephric. perinephritic. peripleuritic. peritoneal. peritonilar. perityphlitic. phlegmonous. post-fascial. post-mammary. post-pharyngeal. prelacrimal. preperitoneal. progressive ulcerative a. of the cornea. psoas. puerperal. pyemic. quiet bone. residual. retro-esophageal. retroperitoneal. retro-pharyngeal. secondary. septic. shirt-stud. spermatic. spinal. stercoraceous or stercoral. stitch. subaponeurotic. subareolar. subcutaneous. subdiaphragmatic. subfascial. submammary. subpectoral. subperitoneal. subphrenic. sudoriparous. supramammary. thecal. tropical. tuberculous. tympanitic. urethral. urinary. wandering. [Lat., *abscessus*, from *abscedere*, to depart; from the animistic reasoning that the formation of an abscess was a way by which a disease departed.]

absciss (ab'sis). See *complement*.

abscission (ab-si'zhun). A cutting off. Removal by cutting. [Lat., *abscissio*, n. of action, from *abscindere*, to cut off.]

absinthe (ab'sinth). 1. A liqueur consisting of an alcoholic solution of oil of wormwood, flavored with angelica, anise,

and marjoram. 2. *Artemisia absinthium*. [Lat., *absinthium*, wormwood.]

absinthin, absynthin (ab-sin'thin). The bitter principle of wormwood; a white, imperfectly crystalline substance; according to Kromayer, an aldehyd, $C_{10}H_{16}O_8 + H_2O$.

Absinthium (ab-sin'the-um). 1. A genus corresponding in part to the Linnean genus *Artemesia*. 2. Wormwood; the leaves and tops of *Artemisia A.* The volatile oil is an active narcotic poison. Wormwood is aromatic and bitter; but little used. **A. vulgare.** See *Artemisia Absinthium*. [Lat., *absinthium*, wormwood.]

ab'solute. 1. Actual, positive, as the a. weight of a body as distinguished from its specific weight. 2. Pure (e. g., a. alcohol). [Lat., *absolutus*, from *absolvere*, to complete.]

absorbefacient (ab-sor-be-fa'she-ent). Causing absorption. Drying up. An agent or medicine that does this, such as atropin in coryza. [Lat., *absorbere*, to suck up, + *facere*, to make.]

absorbent (ab-sor'bent). 1. Sucking up. 2. A lacteal, lymphatic, or other absorbing vessel. 3. A medicine or dressing that favors a sucking up. [Lat., *absorbens*, pr. ppl. of *absorbere*, to swallow up.]

absorp'tion. 1. In general the act or process of absorbing; the imbibition of nutritive or other material by a living organism; the process of taking up waste or foreign material into the general circulation. 2. The method of extracting certain groups of agglutinins from a serum by adding to it the bacilli which will agglutinate with the other agglutinins in it, thus leaving the special agglutinating groups only which act on one type of bacilli. **a. bands.** Dark bands observed in a spectrum when the light is transmitted through certain colored liquids. They are due to the absorption of rays of a certain wave length. The position and number of these bands are characteristic for the substance. **a. coefficient.** A term used to indicate the amount of gas absorbed by a definite volume (1 cc.) of liquid (water) at a given temperature and barometric pressure. **a. lines.** Narrow bands on lines in spectrum when light is absorbed after passing through certain liquids or vapors. **a. spectrum.** A spectrum in which there are definite dark lines or bands due to the absorption of the rays of light of the corresponding wave lengths. **pathological a.** The a. of an excretion (like the bile) of a morbid product (like pus or the contents of a cyst) into the blood. [Lat., *absorptio*, a sucking down.]

abstergent (ab-ster'jent). A cleansing substance, application, or medicine. [Lat., *abstergens*, pr. ppl. of *abstergere*, to wipe away.]

abstract (ab'strakt). A powdered extract diluted with sugar of milk, so that 1 part of the abstract represents 2 parts of the crude drug. Abstracts were official prod-

- ucts of the U. S. Ph. for 1880. [Lat., *abstractum*, from *abstrahere*, to withdraw.]
- abulia.** Signifies a blocking of the motor impulse to carry out a purposeful activity frequently met with in the psychoneuroses and psychoses and is of mental origin, spoken of as a weakness of will in the older faculty psychology.
- abuloma'nia, abouloma'nia.** Marked inability to decide. An old and indefinite term.
- Acacia** (a-ka'she-ah). 1. A genus of the *Leguminosae*, sub-order *Mimoseae*. 2. Gum arabic. In the U. S. Ph. a dry gummy exudate from *A. senegal* and other species. It is used in making mucilage and as a vehicle in pharmacy. **A. Catechu.** See *catechu*. **A. senegal.** Several species have been confounded under this name. One of them furnishes gum senegal, official Br. Ph., 1900. **A. stenocarpa.** A species found in Upper Egypt and adjacent countries, furnishing Suakin gum arabic. **A. vera, A. veravel.** Syn.: *Mimosa nilotica*. A moderate-sized tree, indigenous to Egypt, but growing also in Nubia, Senegal, and probably other parts of Africa, also found in India. This and *A. vereck* are the most important sources of gum arabic. **A. vereck.** A species growing in eastern Africa, but chiefly in western Africa, north of the Senegal River. **acaciae gummi.** Gum arabic. [Br. Ph.] **mulcilo acaciae.** A mucilage containing 34 per cent. [U. S. Ph.] or 40 per cent. [Br. Ph.] of acacia in water. **syrupus acaciae.** A syrup of a. containing 25 parts of mucilage of a. and 75 parts of syrup. [U. S. Ph.] [Gr., *akakia*, an Egyptian tree; from *ake*, a spine.]
- acampsia** (a-kamp'sha). Inflexibility, rigidity of a limb. [Gr., *akampsia* (from *a*, priv., + *kamptein*, to bend).]
- Acanthia lectularia.** The bedbug. See *Cimex lectularius*.
- acantho-.** Comb. form of Gr. *akantha*, thorn, used in the sense of thorn, thorny in compound words.
- acantho'ma.** Hyperplasia of the reticular layer of the skin. **a. adenoides cysticum** (Unna). A multiple benign cystic epithelioma. [Gr., *akantha*, a thorn, + *oma*, tumor.]
- acanthopelyx** (a-kan-thop'el-ix). A pelvis deformed by exostosis of the bones forming the pelvis. [Gr., *akantha*, thorn, + *pelyx*, basin.]
- acantho'sis.** Any disease of the prickle cells of the skin. **a. bullosa.** Same as *epidermolysis bullosa*. **a. nigrans.** A growth consisting of pigmented, warty, papillomatous nodules, showing a hyperplasia of the papillae and epidermis, dilatation of the blood and lymph vessels, and an increase of pigment in the palisade cells, with imperfect "cell-nest" formation. [Gr., *akantha*, spine, thorn.]
- acap'nia.** A condition in which the blood contains less than the usual amount of carbon dioxid. [Gr., *a*, priv., + *kapnos*, smoke.]
- acardia** (a-kar'de-ah). Congenital absence of the heart. [Gr., *a*, priv., + *kardia*, heart.]
- acardiacus** (a-kar-di'ak-us). A monster, which is sometimes developed in single ovum twin pregnancies, one twin being normal while the other is imperfectly formed and lacks a heart. [Gr., *a*, priv., + *kardia*, heart.]
- acarophobia** (ak-ar-o-fo'be-ah). Fear that itching is due to the presence of the acarus. [Gr., *akaros*, mite, + *phobos*, fear.]
- Ac'arus.** A minute parasitic animal or mite belonging to the order *Acarina* of the class *Arachnida*. **A. autumnalis.** The mower's mite, wheal worm, rouget, or harvest bug. A minute animal of a bright red color which attacks the legs of man during the harvest season and may spread to other parts of the body. It causes papules, vesicles, and pustules. **A. folliculorum**, also called *Demodax folliculosum*. The pimple mite, a species that inhabits the hair sacs and sebaceous follicles, especially those of the nose in persons who have acne. It may occur in the dog, the cat or the sheep. **A. scabiei.** See *Sarcoptes*. [Gr., *akaros*, a mite.]
- acatamathe'sia.** Impairment of the faculty of understanding spoken words [Gr., *a*, priv., + *katamathesis*, comprehension.]
- acatapha'sia.** Inability to express thought in orderly fashion. [Gr., *a*, priv., + *kataphasis*, a well-ordered statement.]
- A. C. C.** Anodal closure contraction.
- accelerator** (ak-sel'er-a-tor). 1. A term applied to the sympathetic nerve to the heart, the stimulation of which increases the rapidity of the heart's action. 2. A muscle supposed to hasten the flow of a physiological discharge. See *table of muscles*, under *muscle*. [Lat., *accelerare*, to hasten.]
- accesso'rius.** Accessory, contributing, aiding, as an accessory muscle. See *table of muscles*, under *muscle*. [Lat., *accedere*, to be added to.]
- accessory** (ak-ses'so-re). Joined to, additional, supplementary; applied to certain nerves and muscles. In pathology, a term used to express small isolated accessory organs, produced by the snaring off of certain cells during embryonic development, e. g., an accessory spleen. [B. N. A. *accessorius*.]
- ac'cident.** A mishap; chance; unintentional act. [Lat., *accidens*, slipping.]
- accipiter** (ak-sip'i-ter). A bandage applied over the nose resembling the spreading wings of a hawk. [Lat., *accipiter*, hawk.]
- acclimatiza'tion.** 1. The process of adaptation to a strange climate. 2. Artificial adaptation of animal or plant organisms under experimental condition. [Fr., *a*, to, + *climat*, climate.]
- acclivitas, adclivitas.** An upward slope; an elevation. **a. tibiae.** The rough projection on the summit of the tibia, between the two articular surfaces. [Lat., *acclivitas*, from *clivus*, a slope.]

accommodation (ak-kom-o-da'shun). 1.

The process by which the refractive power of the eye is changed in accordance with the distance at which an object is to be viewed so as to secure a distinct focus on the retina. 2. The process by which an organ or an entire organism adapts itself to a change in its conditions or environment.

binocular a. The convergence of the two eyes so as to bring the image of the object looked at upon the fovea of each retina.

mechanism of a. The anatomical and physiological means by which the curvature of the crystalline lens is altered so as to focus near objects on the retina. **range of accommodation.** Term used to express the extent of the change in curvature of the crystalline lens that can be effected by a maximum contraction of the ciliary muscle. It is expressed in the number of diopters by which the refractive power of the lens is thus increased. The range of accommodation diminishes steadily with age, according to a definite curve, from 14 diopters at 10 years to 1 diopter at 60 years. [Lat., *accommodatio*, an adapting or adjusting.]

accouchement (ak-koosh'mon). Confinement, labor, parturition. **a. forcé.** Labor brought on artificially and terminated forcibly. [Fr., *accoucher*, or *s'accoucher*, to go to bed.]

accoucheur (ak-koo-shûr'). A man who assists women in childbirth; an obstetrician.

accoucheuse (ak-koo-shûz'). A midwife. [Feminine of *accoucheur*.]

accretion. 1. Growth by organic enlargement; the growing of separate things into one; 2. The whole resulting from this. [Lat., *ad*, to, + *creescere*, to grow.]

accu'mula'tor. An electrical storage battery made of lead plates and coated alternately with lead sulphate and lead peroxid, immersed in dilute sulphuric acid. By recharging it can be used again. **galvanic a.** See *storage battery*, under *battery*. **secondary a.** See *storage battery*, under *battery*.

A. C. E., A. C. E. mixture. The abbreviation commonly used for an anesthetizing mixture of 1 volume of alcohol, 3 of chloroform, and 2 of ether.

-acea. A Lat. suffix (neut. pl.) used to form names for orders of animals, as crustacea.

aceognosia (as-e-og-no'sha). Knowledge of remedies. [Gr., *akos*, a remedy, + *gnosis*, knowledge.]

acephalia, acephalism, acephaly (a-sef-a'le-ah, a-sef'al-ism, a-sef'al-e). That form of monstrosity in which the head is wanting or is anencephalic. [Gr., *a*, priv., + *kephale*, head.]

acephalicus (a-sef'al'i-kus). A headless fetus. [Gr., *a*, priv., + *kephale*, head.]

acephalobranchius (a-sef-al-o-bra'ke-us). A monster without head or arms. [Gr., *a*, priv., + *kephale*, head, + *brachion*, arm.]

acephalocardius (a-sef-a-lo-kar'de-us). A monster without head or heart. [Gr., *a*,

priv., + *kephale*, head, + *kardia*, heart.]

acephalochirus (a-sef-a-lo-ki'rus). A monster without head or hands. [Gr., *a*, priv., + *kephale*, head, + *cheir*, hand.]

acephalocyst (a-sef'al-o-sist). The bladder-worm, a sterile echinococcus cyst. A class of hydatids consisting only of a membranous bag filled with fluid. One of the stages of existence of a sterile cestoid worm. [Gr., *a*, priv., + *kephale*, head, + *kystis*, a bag.]

acephalogaster (a-sef-al-o-gas'ter). A monstrosity in which the head and the upper part of the abdomen are wanting. [Gr., *a*, priv., + *kephale*, head, + *gaster*, belly.]

acephalopo'dius. A monster in which the head and feet are lacking. [Gr., *a*, priv., + *kephale*, head, + *podion*, foot.]

acephalorhacus (a-sef'al-o-ra'kus). A monster in which the head and vertebral column are wanting. [Gr., *a*, priv., + *kephale*, head, + *rhachis*, backbone.]

acephalostomus (a-sef-al-o'sto-mus). A variety of acephalia in which there is a mouthlike opening at the upper extremity of the body. [Gr., *a*, priv., + *kephale*, head, + *stoma*, mouth.]

acephalothorus (a-sef-al-o-tho'rus). A monster in which the head and the thorax are wanting. [Gr., *a*, priv., + *kephale*, head, + Lat., *thorax*, chest.]

acephalous (a-sef'al-us). Destitute of a head; said of monsters.

acephalus (a-sef'al-us). An acardiac monster without a head, or with only a rudimentary head. **a. dibrachius.** An a. with both upper limbs present but more or less undeveloped. **a. dipus.** One with both lower limbs present but more or less undeveloped. **a. monobranchius.** One with only one upper limb. **a. monopus.** One with only one lower limb. **a. para-cephalus.** See *paracephalus* and *hemicephalus*. **a. sympus.** One in which the trunk ends in a long conical extremity, having a foot or two feet at the end; due to fusion of the two lower limbs. [Gr., *a*, priv., + *kephale*, head.]

A'cer. The genus name of the maples. **A. saccharinum.** The sugar maple or rock maple. [Lat., *acer*, sharp, vigorous.] **acerbity** (as-er'bit-ē). Harshness, sourness or astringency of taste. [Lat., *acerbitas*.]

acero-se (as-er-ōz'). Chaffy. [Lat., *acerosus*, chaffy, from *acus*, *aceris*, chaff.]

acervuloma (as-er-vu-lo'mah.) See *psammoma*. [Lat., *acervulus*, little heap, + Gr., *oma*, tumor.]

acervulus (as-er'vu-lus). Brain-sand. A collection of gritty, laminated, calcareous concretions, found in the pineal body and sometimes also in the choroid plexus. [Lat., dim. of *acervus*, a heap.]

acescence (as-es'ens). Sourness, the process of becoming sour. [Lat., *acescere*, to become sour.]

acestoma (as-es'to-mah). The mass of granulation tissue which later goes to form the scar. [Gr., *akestos*, healed, + *oma*, tumor.]

aceta (as-e'tah). Pl. of *acetum*. The vine-

- gars; a series of pharmaceutical preparations. For the individual *aceta*, see under *acetum* and under the drugs from which they take their names.
- acetabulum** (as-et-ab'u-lum). The round cavity in the os coxae that receives the head of the femur. The cotyloid cavity. [B. N. A., *acetabulum*.] [Lat., *acetabulum*, a vessel for vinegar, hence any cup-shaped receptacle.]
- acetal** (as'-et-al). Syn.: *ethylidene, diethyl-ether*. A colorless mobile liquid, $C_2H_5(OC_2H_5)_2$, produced by the incomplete oxidation of ethyl alcohol. Used as a hypnotic in doses of 3i-ii. [Lat., *acet-alium*.]
- acetaldehyd** (as-et-al'de-hid). A low-boiling liquid, CH_3CHO , of penetrating odor.
- acetamid** (as-et-am'id). A white crystalline substance, CH_3CONH_2 . **a. chloral**. See *chloralamid*. **a. nitrate**. A crystalline substance formed by the action of nitric acid on acetamid.
- acetamido-antipy'rin** (as-et-am'i-do - anti-pi'rin). A product obtained by treating antipyrin with nitric acid and reducing by means of zinc and acetic acid; an antipyretic analgesic like antipyrin.
- acetam'inol**. A white crystalline substance, $C_{15}H_{22}NO_4$, used in the treatment of pulmonary tuberculosis.
- acetan'ilid**. A white crystalline substance, $C_6H_5NH(CH_3CO)$. It is antipyretic and analgesic. Average dose 5 grs. Overdosage leads to asphyxia by oxygen fixation in blood.
- acetarct** (as'-et-arkt). An acetic extract.
- acetate** (as'-et-ät). A salt of acetic acid. For the individual a's, see under the names of the bases. **acid a.** One in which the base replaces only a part of that portion of the hydrogen of the acid that is capable of displacement. **basic a.** One in which one or more of the acid radicles (CH_3COO) of the neutral acetate, have been replaced by hydroxyl (OH); or a combination of a normal a. with the hydrate or the oxid of the base. [Lat., *acetat*.]
- acet'ic**. Pertaining to vinegar or acetic acid. [Lat., *aceticus*.]
- acet'ic anhy'drid**. Anhydrous acetic acid (CH_3CO)₂O.
- acet'ic es'ter**. An easily volatile liquid of agreeable odor and an excellent organic solvent, $CH_3COO(C_2H_5)$.
- acet'ic e'ther**. An incorrect designation for acetic ester.
- acet'icus, acet'ic**. With the name of a base, the acetate of that base.
- acetocautin** (as'-et-o-kaws'tin). A caustic consisting of a 50-per-cent. solution of trichloroacetic acid.
- ac'etol**. 1. The alcohol of acetone, $C_3H_5O(OH) = CH_3CO.CH_2OH$. 2. A proprietary remedy for toothache. The active ingredients are said to be acetic acid and alum.
- acetoluid** (as-et-ol'u-id). See *toluylacetamid*.
- acetometer** (as-et-om'et-er). A hydrometer graduated for determining the strength of commercial acetic acid according to its density. [Lat., *acetum, vinegar, + Gr., metron, a measure*.]
- acetone** (as'-et-on). Syn.: *pyro-acetic spirit, acetylmethyl, dimethyl ketone*. A colorless, mobile liquid, of pleasant odor, produced by the destructive distillation of acetates (whence the name *pyro-acetic spirit*), and of sugar, cellulose, and various organic compounds: $CH_3CO.CH_3$. It has been found in small quantities in normal urine, [von Jaksch]; in larger amounts in diabetic urine. The fruitlike odor of the breath in diabetic patients is supposed to be due to a. A feeble anesthetic action has been attributed to it. Circulating in the blood, it gives rise to acetoneuria. **a. alcohol**. See *acetol*. **a. in urine, test for**. See in *appendix, page 894*. [Lat., *acetonium*.]
- acetonemia** (as-et-on-e'me-ah). A morbid condition imputed to the presence of acetone bodies (acetone, diacetic acid, β -oxybutyric acid) in the blood, characterized by a peculiar odor of the breath and of the urine and various derangements of the nervous systems. They are present in most severe cases of diabetes and have been thought to be causative of diabetic coma. [Lat., *acetonium, acetone, + Gr., aima, blood*.]
- ac'etoni'tril**. A colorless liquid, the nitril of acetic acid, CH_3CN .
- acetophenone** (as-et-o-fe'nön). Phenylmethylketone, $C_6H_5CO.CH_3$, a crystalline substance sometimes used as a hypnotic.
- acetophe'nonephenet'idin**. Syn.: *malarin citrate*. Sometimes used as an antineuralgic and an antipyretic.
- acetopyrin** (as'-et-o-pi'rin). A compound of antipyrin and acetylsalicylic acid.
- acetorthotoluid** (as-et-or-tho-tol'u-id). A white substance, $C_6H_3(CH_3).NH.CO.CH_3$. Used as an antipyretic.
- acetous** (as'-et-us). Having the qualities of vinegar. [Lat., *acetosus, from acetum, vinegar*.]
- acetozone** (as-et'o-zön). A proprietary mixture of equal parts of acetylbenzoylperoxid and an inert absorbent powder; one of the organic peroxids which slowly liberates nascent oxygen.
- acetparatoluid** (a's'-et-par-a-tol'u-id). The compound $C_6H_4(CH_3)NH.CO.CH_3$; an antipyretic.
- acetphenetid** (a-set-fen-et'id-in). See *phenacetin*.
- acetum** (as-e'tum). Pl. *aceta*. 1. Vinegar. 2. A pharmaceutical preparation made with vinegar or dilute acetic acid. **a. aromaticum**. Syn.: *vinegar of the four thieves*. Acetic acid and alcohol diluted with water and aromatized with volatile oil. **a. camphorata**. Camphorated vinegar. **a. commune**. Vinegar. **a. crudum**. Crude or commercial vinegar. **a. empyreumaticum**. Wood vinegar. See *pyroigneous acid*. **a. pyroignosum**. Crude pyroigneous acid. **a. pyroglignosum rectificatum**. Rectified pyroigneous acid. [Lat., *acere, to turn sour*.]
- acetyl** (as'-et-il). The chemical radicle, CH_3CO .

- acetylene** (as-et'il-ēn). A gaseous hydrocarbon, $\text{CH} \equiv \text{CH}$. A colorless, inflammable gas of agreeable odor. Prepared for illuminating purposes, although impure, from calcium carbide and water. List of poisons and their antidotes, see in appendix, page 938. [Fr., *acétylène*.]
- ac'etylyth'mol.** A liquid used as an antiseptic.
- ache.** Continuous pain. [Old Eng., *acan*, to ache.]
- ache'bone.** See *innominate bone*, under *bone*.
- acheilia** (a-ki'le-ah). A deformity consisting of partial or complete absence of the lips. [Gr., *a*, priv., + *cheilos*, lip.]
- acheiria** (a-ki're-ah). Congenital absence of one or both hands. An individual born without hands. [Gr., *a*, priv., + *cheir*, hand.]
- achei'rous** (a-ki'rus). Affected with acheiria.
- Achillea** (ak-il-e'ah). A genus of the *Compositae*. **A. millefolium.** Milfoil, yarrow, nosebleed, bastard pellitory, the Achillea of the U. S. Ph. (1870); a species growing in Europe and northern America. It is a mild aromatic bitter tonic astringent and antispasmodic. [Gr., *achilleia*, Achilles having been fabled to have first made use of the plant.]
- achillein** (ak-il-e'in). 1. A bitter glucosid, $\text{C}_{20}\text{H}_{38}\text{N}_2\text{O}_{15}$, by some called an alkaloid, obtained from *Achillea millefolium* and *Achillea moschata*; used by the Italians in intermittent fever. 2. Of Zanoni, a hydro-alcoholic extract, of complex composition (probably impure a.), obtained by him from the same plant.
- Achil'les tendon.** See *tendo Achillis*.
- achillodyn'ia.** Pain in the tendo Achillis region.
- achlorhydria** (ah-klor-hi'dre-ah). Absence of hydrochloric acid in the gastric juice. [Gr., *a*, priv., + *chlorhydric*.]
- achloropsia** (ah-klor-op'se-ah). Green blindness; inability to distinguish the color green. [Gr., *a*, priv., + *chloros*, green, + *opsis*, vision.]
- acholia** (ah-ko'le-ah). Absence or deficiency of the secretion of bile; also the condition resulting from its non-secretion. [Gr., *a*, priv., + *chole*, bile.]
- acholuria** (ah-kol-u're-ah). Absence of bile pigment in the urine. [Gr., *a*, priv., + *chole*, bile, + *ouron*, urine.]
- achondroplasia** (ah-kon-dro-pla'se-ah). A congenital anomaly of deficient cartilaginous growth, causing dwarfism, primarily occasioned through disorder of the endocrinous glands. [Gr., *a*, priv., + *chondros*, cartilage, + *plassein*, to form.]
- achordal** (ah-kor'dal). In embryology, situated away from or formed apart from the notochord. [Gr., *achordos*, without strings, from *a*, priv., + *chorde*, a string.]
- achoresis**, Pl. *achoreses* (ah-kor-e'sis). Diminished holding capacity of a hollow organ, as of the bladder. [Gr., *a*, priv., + *chorein*, to make room.]
- Achorion** (ah-ko're-on). A genus of fungi producing various skin diseases. **A.**
- Schönleinii.** The species producing favus. The plant consists chiefly of mycelia, or narrow ribbonlike filaments and rounded or oval-shaped spores, about six microns in diameter. It grows by sprouting. [Gr., *achor*, dandruff.]
- achroicythemia** (ah-kroi''o-si-the'me-ah). Deficiency of hemoglobin in the red blood corpuscles. [Gr., *achroios*, colorless, + *kytos*, cell, + *aima*, blood.]
- achroma, achromia** (ah-kro'ma, ah-kro'me-ah). Absence of color in the skin, whether congenital or acquired, such as in vitiligo, etc. [Gr., *a*, priv., + *chroma*, color.]
- achromacyte** (ah-kro'ma-sit). An erythrocyte without any pigment or color, often called a "phantom" or a "shadow" corpuscle. [Gr., *a*, priv., + *chroma*, color, + *kytos*, cell.]
- achromatic** (ah-kro-mat'ik). 1. Devoid or non-productive of color. 2. Pertaining to a non-stainable substance (achromatin) of the nucleus of a cell. **a. sensation.** A term used to designate the white, black, and gray visual sensations in contradistinction to the colored or chromatic sensations. [Gr., *a*, priv., + *chromatikos*, suited for color.]
- achromatin** (ah-kro'mat-in). Flemming's term for the non-fibrillated proteid portion of the nucleus of an animal or vegetable cell, which does not become deeply colored by staining reagents. There are three so-called a. substances: linin, matrix, and amphipyrenin. [Gr., *a*, priv., + *chromatikos*, pertaining to color.]
- achromatize.** To render achromatic.
- achromatolysis** (ah-kro-mat-ol'is-is). Degeneration of the achromatic portion of a cell. [*Achromatin* + Gr. *lysis*, dissolution.]
- achromatopsia, achromatopsis** (ah-kro-mat-op'se-ah, ah-kro-mat-op'sis). Color-blindness. [Gr., *a*, priv., + *chroma*, color, + *opsis*, sight.]
- achromatosis** (ah-kro-mat-o'sis). A disease of the skin characterized by defective pigmentation. **a. acquisita.** Acquired a., including vitiligo and canities prematura. **a. congenitalis.** Congenital a., including albinism. [Gr., *a*, priv., + *chroma*, color.]
- achromaturia** (ah-kro-ma-tu're-ah). A condition in which the urine is colorless. [Gr., *a*, priv., + *chroma*, color, + *ouron*, urine.]
- achroödextrin** (ah-kro-o-dek'strin). A modification of dextrin, which is not colored by iodine and is with difficulty converted into glucose or maltose by enzymes. [Gr., *achroos*, colorless, + *dextrin*.]
- achylia** (ah-ki'le-ah). 1. A lack of juice. 2. A defective formation of chyle. **a. gastrica.** Permanent absence of gastric secretion. [Gr., *a*, priv., + *chylos*, juice.]
- acicular** (as-ik'u-lar). Needle-shaped; applied to crystals. [Lat., dim. of *acus*, a needle.]
- a'cid.** A salt of hydrogen. The following properties are common to the most important acids: 1. Solubility in water. 2.

A sour taste. 3. The power of reddening most organic blue and violet coloring matters, and of restoring the original color of substances which have been altered by alkalis. 4. The power of decomposing most carbonates, causing effervescence. 5. The power of destroying the characteristic properties of alkalis more or less completely, at the same time losing their own distinguishing characters and forming alkaline salts. **abietic a.**, **abietinic a.** $C_{20}H_{30}O_2$, a crystalline substance derived from rosin. **abric a.** $C_{12}H_{24}N_3O$, crystalline, derived from jequirity. **acetic a.** $C_2H_4O_2$, crystalline, the a. of vinegar. **acetic a. and ferrocyanid test for albumin in urine**, see page 893. **aceto-acetic a.** See *diacetic a.* **acetosalicylic a.** $C_9H_8O_4$, acetate of salicylic a. **acid radicle.** An element or a combination of elements which, when united with hydrogen, forms an a. **aconitic a.** $C_6H_6O_6$, crystalline, from *Aconitum napellus*, and other plants. **acrylic a.** A general term for organic acids of the group $C_nH_{2n-2}O_2$, comprising the normal acrylic and the iso-acrylic acids. **adenylic a.** An a. derived from the thymus gland, which contains adenin. **adipic a.** $C_6H_{10}O_4$, crystalline, formed by action of nitric a. on fats. **agaric a.**, **agaric a.**, **agaric a.** $C_{16}H_{30}O_5 + H_2O$, from the white agaric, a fungus. **ailantic a.** A bitter a., having tonic properties obtained from *Ailantus excelsus*. **alantic a.** An a., $C_{15}H_{22}O_3$, derived *Imula helenium*. **alcohol a.** A body having at once the constitution of an alcohol and an a. (e. g., glycollic a., $CH_2(OH)-CO.OH$ formed by the oxidation of ethyl alcohol, and of ethylene alcohol. **aldehyd a.**, **aldehydic a.** A substance possessing the properties both of an aldehyd and of an a. **alginic a.** An organic a. obtained from certain algae. **aldepalmic a.** An a. obtained from cow's butter, $C_{16}H_{30}O_2$. **allophanic a.** $C_4H_4N_2O_3$, used for crystallizing certain liquids. **alloxanic a.** A crystalline a. derived from alloxin. **aloitinic a.** An almost insoluble yellow substance obtained from aloes. **amalic a.** A crystalline a., $C_{12}H_{12}N_4O_7 + H_2O$, formed by the action of chlorin on caffeine. **amic a.'s.** A class of nitrogenized a.'s derived from a polybasic a. by the substitution of amidogen for one of the molecules of hydroxyl in the a. characteristic. **amido a.** An a. derived from another a. by the substitution of amidogen for hydrogen in the acid radicle. **amido-acetic a.** See *glycoll.* **amidobenzoic a.** $C_7H_7NO_2$, an acid occasionally found in urine. **amidosuccinic a.** See *asparagin.* **amidovaleric a.** An a., $C_8H_{11}NO_2$, having the constitution of valeric acid in which amidogen replaces hydrogen in the acid radicle, or that of hydroxyvaleric a. in which amidogen replaces the hydroxyl. **angelic a.** $C_5H_8O_2$, crystalline, derived from *Angelica archangelica*. **animal a.** An a. found in animal tissues or secretions. **anistic a.** $C_8H_8O_3$, from anise seed. **antimonic a.** Sb_2O_5 , yellowish

powder. **antimonious a.** Sb_2O_3 , white-gray powder. **arabic a.** $C_{12}H_{22}O_{11}$, from gum arabic. **aromatic a.** any one of the acids derived from resins, balsams, etc. **arsanilic a.** Arsenic acid, in which an hydroxyl group is replaced by an anilin group. **arsenic a.** H_3AsO_4 ; its salts are arsenates. **arsenious a.** Arsenous a., H_3AsO_3 , known only in aqueous solution H_3AsO_2 . **asparaginic a.**, **aspartic a.** $C_4H_7NO_4$, crystalline, from beet root. **auric a.** $Au(OH)_3$, gold trihydroxid. **axinic a.** A brownish, oily acid, $C_{18}H_{38}O_2$, produced by the saponification of axin. **benzoic a.** $C_7H_6O_2$, crystalline, white, derived from certain resins. **boracic a.**, **boric a.** H_2BO_3 , powder, white, derived from borax. **borophenylic a.** The compound $C_6H_5-B(OH)_2$, a preservative and antiseptic. **borosalicylic a.** The compound $B(OH)-(OC_6H_4.CO_2H)_2$, known only in a sodium and a barium salt. **botulinic a.** A mixture of various substances found in poisonous sausages. **brom-a.** One in which one or more atoms of hydrogen in the a. radicle are replaced by bromin. **bromacetic a.** An a. derived from acetic a. by the substitution of one or more atoms of bromin for hydrogen. **bromic a.** $HBrO_3$, a monobasic a. known only in aqueous solution. **butyric a.** $C_4H_8O_2$, viscid, rancid, from butter and from excreta. **cacodylic a.** A crystalline acid $(CH_3)AsOOH$, used in psoriasis; also used internally in tuberculosis and chlorosis. **caffaic a.** $C_9H_8O_4$, crystalline, from coffee. **camphoric a.** $C_{10}H_{16}O_4$, crystalline, from camphor. **cantharidic a.** A dibasic acid, $C_{10}H_{14}O_4 = C_5H_{12}(CO.OH)_2$, formed from cantharidin by the addition of the elements of a molecule of water. **capric a.** $C_{10}H_{20}O_2$, from butter. **caprylic a.** $C_8H_{16}O_2$, fatty acid, from cocoanut oil and butter. **carbamic a.** $CO.NH_2.OH$, monobasic a. **carbazotic a.** See *picric a.* **carbolic a.** C_6H_6O , crystalline, officially known as *phenol*, from coal-tar; antiseptic and germicide, very poisonous. **carbonic a.** CO_2 , carbon dioxide, gas, colorless, odorless. **carminic a.** $C_{17}H_{18}O_{10}$, from cochineal insect and certain plant buds; coloring matter. **cerebric a.** Impure cerebrin. **cerotic a.** $C_{27}H_{54}O_2$, fatty acid derived from beeswax. **chloracetic a.** Acetic a. and chlorin in a caustic combination. **chloric a.** $HClO_3$, known in its compounds only. **chlorous a.** $HClO_2$, aqueous solution, caustic; forms salts called chlorites. **cholalic a.**, **cholic a.** $C_{24}H_{42}O_5$, crystalline, from bile. **chlor-a.** One in which one or more of the hydrogen atoms of the a. radicle are replaced by chlorin. **chondroitic a.** A substance of acid reaction obtained from cartilage by long treatment with caustic soda. **chromic a.** 1. H_2CrO_4 . 2. CrO_3 , chromium trioxid, crystalline, escharotic. **chrysophanic a.** $C_{15}H_{10}O_4$, crystalline, yellow, from rhubarb, lichens, senna. **cinnamic a.** $C_9H_8O_2$, from balsams and resins. **citric a.** C_6

H_2O_7 , crystalline, from currants, lemons, etc. **cocatannic a.** A variety of tannic a. obtained by Niemann from the leaves of *Erythroxylon coca*. **creosulphuric a.**, $C_7H_7O.SO_2.O_4$, found in urine. **cre-sylic a.** See *crezol*. **crotonic a.**, $C_4H_6O_2$, a monobasic acid of which three isomeric varieties are known. **cubebic a.** An amorphous resin, $C_{13}H_{14}O_7$, obtained from cubebs; in small doses it is laxative, and in large doses diuretic and irritant to the urinary passages. **cumic a.**, $C_6H_4(C_3H_7)CO.OH = C_{10}H_{12}O_2$, a para-propylbenzoic a. obtained by the oxidation of cuminol. **cyanic a.**, $CHNO$. **cyanuric a.**, $C_3N_3O_3H_3$, crystalline, also called tricyanic a. **dextrotartaric a.** A dense colorless liquid of a very acid reaction, sometimes found in diabetic urine. **diacetic a.**, $C_4H_6O_3$, occurs in diabetic urine. **diatomic a.** An a. which contains 2 atoms of hydrogen replaceable by metallic or organic radicles. **dibasic a.** An a. containing 2 replaceable atoms of hydrogen in the acid characteristic. **dichloroacetic a.** A monobasic acid, $CHCl_2 - CO.OH$, formed from acetic acid by the substitution of 2 atoms of chlorine for 2 atoms of hydrogen in the acid radicle. **diethyl-barbituric a.** See *veronal*. **digallic a.** See *tannic a.* **diiodosalicylic a.** An amorphous substance, $C_7H_4I_2O_3 = C_6H_2I_2(OH).COOH$. Its sodium salt is used as an analgetic and antipyretic. **disalicylic a.**, $C_{14}H_{10}O_5$, salicylic anhydrid. **ellagic a.** See *gallogen*. **ergotic a.** A volatile a. obtained by distilling ergot with sulphuric acid. **ergotinic a.** An a. derived from ergot. **exeretoleic a.**, **exeretolic a.** An acid found in the feces. Its formula is unknown. **fatty a.**, $C_nH_{2n}O_2$, produced by the oxidation of a primary alcohol. **felic a.** An acid of the empirical composition $C_{50}H_{72}O_6 + 4H_2O$, said to be obtained by treating bile with hydrochloric acid. **fibril a.** A horny compound contained in the neurofibrils, which stains an intense violet color with toluidin blue. **filicic a.** A crystalline powder, $C_{26}H_{36}O_9$, obtained from ethereal extract of *Aspidium filix mas*. **formic a.**, CH_2O_2 , liquid, colorless, pungent, from nettles and secretion of ants. **gallic a.**, $C_7H_6O_5$, crystalline, from nut-galls, tannic acid, tea, etc.; astringent, disinfectant. **gambogic a.** An acid, $C_{68}H_{36}O_{12}$, obtained from gamboge and resembling cambogic acid. **gluconic a.** A substance, $C_6H_{12}O_7$, derived from glucose by oxidation with chlorine. It is isomeric with mannitic acid. **glutaric a.** A crystalline dibasic acid, $C_5H_8O_4$, said to have been discovered in decomposed pus, and also to be obtainable artificially. **glyceric a.** An a. $CH_2OH.CHOH.COOH$, formed by oxidation of alanin with nitric acid. **glycerin-phosphoric a.**, $C_3H_5PO_6$, pale yellow, oily, odorless, of sour taste; a dibasic a., found in combination with the fatty a's and cholin, in bile, brain and nervous tissue; used in the treatment of neurasthenia. **glyco-**

cholic a., $C_{26}H_{43}NO_{61}$, crystalline, found in bile. **glycollic a.**, $C_2H_4O_3$, derived from action of nascent hydrogen upon oxalic acid. **glycuronic a.**, $C_6H_{10}O_7$, found in the urine. **guaiacol-carbonic a.**, **guaiacol-carboxylic a.** A monobasic, crystalline acid, $C_8H_8O_4$, said to possess antipyretic and antiseptic properties. **gynocardic a.** An acid constituting about 12 per cent. of the oil of *Gynocardia odorata* and, according to Moss, forming the active principle of the oil. **haloid a.** A hydrogen a. formed by the direct combination of an atom of hydrogen with an atom of one of the haloid elements. **hematic a.** A yellow crystalline substance of undetermined composition, obtained by Treviranus from carbonized red blood corpuscles treated with sodium carbonate, and washed with alcohol. **hexabasic a.** An a. containing 6 atoms of replaceable hydrogen in the a. characteristic. **hexatomic a.** An a. which contains 6 atoms of replaceable hydrogen, whether in the a. radicle, or in the a. characteristic, or in both. **hippuric a.**, $C_9H_8NO_3$, crystalline, from urine of herbivorous animals. **homogentisic a.** Dioxiphenylacetic a., $(OH)_2C_6H_3.CH_2.COOH$. An acid body easily soluble in water. Present in the urine in cases of alcaptonuria. The organism in such cases has the abnormal property of converting tyrosin and phenyl alanin into h. a. The urine of such a person turns brown and black upon the addition of alkalis and agitation with air. **hydantoic a.** Glycoleuramic a., $NH_2.CO.NH.CH_2.COOH$. **hydracrylic a.** B-hydroxypropionic a., $CH_2OH.CH_2.COOH$, a syrupy liquid isomeric with lactic a. **hydriodic a.**, HI, gaseous; in solutions used as an alternative. **hydrobromic a.**, HBr, gaseous, irritating; used in diluted form in nervous conditions. **hydrobutyric a.** One of the two isomeric B-h-acids. The B-h-a., $CH_3-CHOH.CH_2.COOH$ is found in the urine of diabetic patients. **hydrochloric a.**, HCl, gas, colorless; in aqueous solution it is used in certain digestive disorders. **hydrocinnamic a.** A crystalline a., $C_9H_8.CH_2.CH_2.COOH$, formed in the putrefaction of proteins. **hydrocoumaric a.** 1. Melilotic acid; a monobasic, crystalline acid, $C_9H_{10}O_3$ found in *Melilotus officinalis*, and also obtained by treating coumarin or coumaric acid with sodium amalgam. 2. An anhydrous crystalline acid, apparently not the same as melilotic acid, but having the molecular formula, $C_{18}H_{18}O_6$. **hydrocyanic a.**, HCN, liquid, volatile, poisonous; from bitter almonds, cherry leaves, etc.; diluted, used as a sedative. **hydroferrocyanic a.** A hydrogen acid, $H_4FeC_6N_6$. **hydrofluoric a.**, HF, liquid, colorless, caustic. **hydrofluosilic a.** A salt of hydrofluosilic a. **hydrogen a.** Originally an a. containing hydrogen; hence (as distinguished from an oxygen a.) one containing no oxygen. **hydroglycocholic a.** An a. obtained from pig's bile. **hydroparacoumaric a.**

Syn.: *para*oxyphenyl-propionic a. A crystalline acid, $\text{OH.C}_6\text{H}_4.\text{CH}_2.\text{COOH}$, found in normal human urine and among the products of putrefaction of proteins. It gives the Millon reaction. **hydrosulphuric a.**, H_2S , a foul-smelling gas, formed during putrefaction of albuminoid substances. **hydroxy-a's**. A class of a's formed from other a's by the substitution of one or more molecules of hydroxyl for an equal number of atoms of hydrogen in the a. radicle. **hyoglycholic a.** An amorphous resinous substance, $\text{C}_{27}\text{H}_{43}\text{NO}_5$, obtained from pig's bile. **hyotauricholic a.** An a. occurring in pig's bile. **hypobromous a.** HBrO . Forms the hypobromites which are used in tests for urea. **hypochlorous a.**, HClO , disinfectant. **hyoctic a.** An acid, $\text{C}_{16}\text{H}_{30}\text{O}_2$, found in peanut oil and in the oil of *Physeter macrocephalus*. **hyponitrous a.** HNO . A monobasic a. **hypophosphoric a.**, $\text{P}_2\text{O}_2(\text{OH})_4$, exists in the water in which phosphorus has been kept. **hypophosphorous a.**, $\text{PH}(\text{OH})_2$, forms salts known as hypophosphites. **hyposulphurous a.** Thio-sulphuric a. **ichthyosulphonic a.** A sulphonic a. prepared from ichthol by the action of concentrated sulphuric acid. Its salts are used in skin diseases. **indolacetic a.**, $\text{C}_8\text{H}_8\text{N.CH}_2.\text{COOH}$, formed in the intestine in the putrefaction of proteins. **indoxylsulphuric a.** A very unstable acid $\text{C}_8\text{H}_8\text{N.O.SO}_2.\text{OH}$, formed by the union of sulphuric a. with indoxyl; an oxidation product of indol in the body, furnishing the indigo occurring in the urine. **inosinic a.** A mononucleotid, $\text{CO}(\text{OH})_2.\text{C}_5\text{H}_5\text{O}_4.\text{C}_5\text{H}_5\text{N}_4\text{O}$, present in muscle extract. By hydrolytic cleavage it yields phosphoric acid, d-rebose, and hypoxanthin. **iodic a.**, HIO_3 , used in dilute solutions as alterative. **iodosalicylic a.** An acid formed by treating salicylic acid with iodine in the presence of iodic acid or an alkali. **iodosobenzoic a.** The compound $\text{C}_6\text{H}_4\text{OI.COOH}$. **isanic a.** A compound derived from the isano tree; purgative. **isobutyric a.**, $(\text{CH}_3)_2\text{CH.COOH}$. Occurs in the fruit of *Silvina dulcis* and in arnica root. It is prepared by oxidation of isobutyl alcohol with a mixture of sulphuric acid and potassium dichromate. **isonaphthalic a.** Benzene-metadicarboxylic acid, $\text{C}_6\text{H}_4(\text{COOH})_2$; isomeric with phthalic a. **isocyanic a.** An a., O:C:N.OH , known only in the form of its salts and esters. **itaconic a.** Methylsuccinic a., $\text{COOH.C}(\text{CH}_3).\text{CH}_2.\text{COOH}$, formed in the dry distillation of citric acid. **jaboric a.** A curdy mass, $\text{C}_{19}\text{H}_{24}\text{N}_3\text{O}_7\text{Ag}$, AgNO_3 , resembling jaborin in appearance, but very soluble in water, prepared from pilocarpidin by precipitating with excess of silver. **jalapic a.** A dibasic acid, $\text{C}_{22}\text{H}_{100}\text{O}_{25}$, produced by the action of baryta on jalapin. **jervic a.** An acid, $\text{C}_{14}\text{H}_{30}\text{O}_{12}$, obtained from the root of *Veratrum album*. **juglonic a.** A dibasic a. derived from juglone. **kinnotannic a.** A form of tannin apparently related to that of

catechu. **kynurenic a.** γ -oxy- β -quinolin carboxylic a., $\text{C}_{10}\text{H}_7\text{NO}_3$, an a. present in dog's urine. Its amount is increased by meat feeding. Its source is probably the tryptophan group of the protein molecule. **lactic a.**, $\text{C}_3\text{H}_5\text{O}_3$, syrupy liquid, occurs in four isomeric forms. The ordinary lactic a. is formed in milk-fermentation; used in diabetes, and in indigestion, etc. **lanoceric a.** An oxy-fatty a., $\text{C}_{30}\text{H}_{60}\text{O}_4$, present in wool fat. **lanopalmitic a.** Oxypalmitic a., $\text{C}_{15}\text{H}_{30}\text{OH.COOH}$, found in wool fats. **leucic a.** Syn.: *leucinic a.* A hydrox-isocaproic a., $\text{C}_4\text{Hg.CHOH.COOH}$, derived from leucin by the substitution of the OH group for the NH_2 group. **levotartaric a.** The levorotatory form of tartaric acid. **levulinic a.** An a. obtained from the nucleic acid of the thymus gland. **linoleic a.**, $\text{C}_{18}\text{H}_{34}\text{O}_2$, found in drying oils. **lithofellic a.** An acid, $\text{C}_{30}\text{H}_{30}\text{O}_4$, which forms the chief constituent of Oriental bezoar stones. **maialic a.** An a. obtained from *Convallaria maialis*. **maleic a.** An unsaturated dibasic a., COOH.CH:CH.COOH , isomeric with fumaric a. **malic a.**, $\text{C}_4\text{H}_6\text{O}_5$, crystalline, found in many fruit and plant juices. **malonic a.** A crystalline a., $\text{COOH.CH}_2.\text{COOH}$, present in the sugar beet. **maloric a.**, $\text{C}_3\text{H}_4\text{O}_4$, from beets. **mandelic a.** Phenylhydroxyacetic a., $\text{C}_6\text{H}_5\text{CHOH.COOH}$, a crystalline a. formed by treating amygdalin with concentrated hydrochloric acid. It has an asymmetrical carbon atom. The natural acid is the leviform. **manganic a.** A dibasic a., H_2MnO_4 , known only in solution. It forms salts called manganates. **mannitic a.** The compound $\text{C}_6\text{H}_{12}\text{O}_7$, derived from mannite by oxidation. **margaric a.** A monobasic fatty a., $\text{C}_{16}\text{H}_{33}\text{COOH}$, existing in nearly all natural fats. **meconamic a.** An a., $\text{C}_7\text{H}_5\text{NO}_6$, derived from meconic acid. **meconic a.**, $\text{C}_7\text{H}_4\text{O}_7$, crystalline, white, from opium. **mellitic a.** Benzene hexacarboxylic, $\text{C}_6(\text{COOH})_6$, obtained by oxidizing charcoal or graphite with fuming nitric acid. Its aluminum salt is found deposited in coal. **mercaptaric a's.** Derivatives of thiolactic a., found in dog's urine upon feeding chlorin and bromin derivatives of benzene. **mesitylenic a.** Dimethylbenzoic a., $(\text{CH}_3)_2\text{C}_6\text{H}_3.\text{COOH}$. Excreted in the urine upon feeding mesitylene in combination with glycochol. **mesitylenuric a.** Dimethylbenzoicglycochol $(\text{CH}_3)_2\text{C}_6\text{H}_3.\text{CO.NH}_2.\text{CH}_2.\text{COOH}$. Found in the urine after feeding with mesitylene. **mesotartaric a.** The intramolecular compensation in tartaric a. **mesoxalic a.** Dihydroxymalonic a., $(\text{OH})_2\text{C:C}(\text{COOH})_2$. A crystalline substance, one of the few chemical compounds which contain two hydroxyl groups (OH) in combination with the same carbon atoms. **metaboric a.** A monobasic a., HBrO_2 . **metaphosphoric a.** HPO_3 , compound used in testing urine for albumin. **metapurpuric a.** An acid, $\text{C}_8\text{H}_6\text{N}_4\text{O}_4$, not yet isolated, but present in potassium metapurpurate.

metarabic a. A body derived from arabin by heating to above 120° C. **metastannic a.** A substance, probably isomeric with stannic a., formed by the action of nitric a. on tin. **methazonic a.** A crystalline acid, $(\text{CH}_2)_2\text{N}_2\text{O}_3$, of highly explosive character. **mineral a.** An inorganic a.; one of which the radicle is not a carbon derivative. **molybdic a. molybdenic a.** H_2MoO_4 . **monamino a's, mono-amino a's.** Any one of the organic a's which contain an NH_2 group. The position of the NH_2 group in the biologically important m. acid is always in the α - position (the one adjoining the COOH group). The m. a's in combination with each other make up the greater portion of the protein molecule. **monatomomic a.** An a. which contains one atom of replaceable hydrogen, which must be in the α characteristic. **monobasic a.** An a. which, whether containing 1, 2, or more atoms of replaceable hydrogen, contains only one of them in the α characteristic. **monochloroacetic a.** Syn.: *chloroacetic a., chloro-acetic a.* A crystalline substance, $\text{Cl}\cdot\text{CH}_2\text{COOH}$, of strong caustic properties; easily soluble in water. **morruhic a.** The *gaduline* of De Jongh; a weak acid, $\text{C}_6\text{H}_{13}\text{NO}_3$, having also basic properties. It acts as a diuretic and appetizer. It occurs in cod liver oil. **mountannic a.** A substance, $\text{C}_8\text{H}_{10}\text{O}_6 + \text{H}_2\text{O}$, thought to be isomeric with morin, found in *Morus tinctoria*. **mucic a.** A dibasic a., $\text{C}_6\text{H}_{10}\text{O}_8$, derived from oxidation of milk sugar. **muriatric a.** See *hydrochloric a.* **myronic a.** $\text{C}_{10}\text{H}_{16}\text{NSO}_{10}$ found in black mustard. **myroxylic a.** An a., probably impure cinnamic a., obtained by treating cinnamic acid with concentrated alcoholic solution of potash. **naphthalenesulphonic a.** A monobasic a., $\text{C}_{10}\text{H}_7(\text{SO}_2\cdot\text{OH})$. **naphthionic a.** $\text{C}_{10}\text{H}_9\text{NSO}_3$. **nicotinic a.** $\text{C}_6\text{H}_5\text{NO}_2$, formed by the oxidation of nicotin. **nitric a.** HNO_3 , liquid, colorless; used as caustic and escharotic. Official nitric a. contains 68 per cent. of pure acid; dilute nitric a., 10 per cent., and crude nitric a., 61 per cent. Fuming nitric a. is a brownish liquid which gives off a suffocating vapor. **nitrohydrochloric a.** Syn.: *acidum nitromuriaticum, aqua regis.* A mixture of 1 part of nitric a. and 3 parts of hydrochloric a.; a liquid having a strong odor of chlorin and fuming on contact with air. It is a powerful corrosive, dissolving gold and platinum. It contains free chlorin (whence its solvent powers) and nitrosyl chlorid, produced by the interaction of the two a's. The n. a. of the U. S. Ph. is made by adding 820 c.c. of hydrochloric acid. **nitromuriatic a.** See *nitrohydrochloric a.* **nitrophenylpropionic a.** $\text{NO}_2\cdot\text{C}_6\text{H}_4\cdot\text{C}\cdot\text{COOH}$, used as a test for sugar. Upon heating this substance in an alkaline solution with a reducing agent (as glucose) it is inverted into indigo-blue. **nitrosonitric a.** Fuming nitric a. **nitrous a.** A monobasic acid, HNO_2 , known only in an unstable aqueous solution, prepared by dissolving

nitrogen trioxid in water. Its salts are the nitrites. **nondecatoic a.** Syn.: *nondecylic a.* A monobasic a., $\text{C}_{19}\text{H}_{38}\text{O}_2$, of the series of fatty a's. **nucitannic a.** Syn.: *nucitanin.* A glucosid occurring in the episperm of walnuts. **nucleic a.** An organic a. obtained from nuclein by the action of alkalis or by tryptic digestion. Its action and uses are those of nuclein. **oleic a.** $\text{C}_{18}\text{H}_{34}\text{O}_2$, crystallizable oil, colorless, found in several fats and oils. **organic a.** An a. the radicle of which is a carbon derivative. **ornithuric a.** Dibenzoylornithin, $(\text{C}_6\text{H}_5\text{CO})\text{NH}\cdot\text{CH}_2\cdot\text{CH}_2\cdot\text{CH}_2\cdot\text{CHNH}(\text{C}_6\text{H}_5\text{CO})\cdot\text{COOH}$, an a. obtained from the excrement of birds fed with benzoic a. **ortho-amidosalicylic a.** A derivative, $\text{C}_6\text{H}_3(\text{NH}_2)(\text{OH})\cdot\text{COOH}$, of orthonitrosalicylic a.; used in rheumatism. **orthobrombenzoic a.** One of the isomeric varieties of brombenzoic a., $\text{C}_6\text{H}_4\text{Br}\cdot\text{CO}\cdot\text{OH}$, which has the two groups attached to adjacent carbon atoms. **orthophosphoric a.** Ordinary phosphoric a., H_3PO_4 . It is official as a syrup, containing 85 per cent. [U. S. Ph.] or 66 per cent. [Br. Ph.] of absolute H_3PO_4 . **osmic a.** $\text{H}_2\text{Os}_2\text{N}_2\text{O}_8$, a dibasic a. formed by the action of ammonia on osmium tetroxid. **oxalic a.** $\text{C}_2\text{H}_2\text{O}_4$, crystalline, colorless, poisonous, from sugar, and other substances. **oxaluric a.** A monobasic a., $\text{NH}_2\cdot\text{CO}\cdot\text{NH}\cdot\text{CO}\cdot\text{CO}\cdot\text{OH}$, present in small quantities in the urine. **oxyacetic a.** Glycollic a., $\text{CH}_2\cdot\text{OH}\cdot\text{COOH}$. **oxy-a.** Any one of the organic a's which contains an oxy- (or hydroxy-) group, (OH). **oxybenzoic a.** Hydroxybenzoic a., $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{COOH}$. Ortho-o' is salicylic a. The meta-oxybenzoic a., taken into the animal organism is excreted in combination with glycocholl and sulphuric a. **oxybutyric a.** $\text{C}_4\text{H}_8\text{O}_4$, a monobasic a. found in the urine in certain fevers and in diabetes. **oxycopaivic a.** A substance, $\text{C}_{20}\text{H}_{30}\text{O}_3$, found in the deposit of Pará copaiba balsam. **oxymandelic a.** $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{CHOH}\cdot\text{COOH}$, present in the urine in acute yellow atrophy of the liver. **oxymono-amino a's.** Organic a's which contain, beside the oxy-group (OH), one amino radicle (NH_2). Three have been found in the proteid molecule, viz., serin, tyrosin, and oxyprolin. **oxyphenylacetic a.** $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{CH}_2\cdot\text{COOH}$, an a. formed in the intestine by putrefaction of the tyrosin group of the proteid molecule. Found in the urine. **oxyphenylpropionic a.** $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{CH}_2\cdot\text{CH}_2\cdot\text{COOH}$, present in the urine in small quantities, its source being the intestinal putrefaction of the tyrosins of the proteid molecule. **oxyproteic a.** An a. of unknown constitution present at times in the human urine; also present in dog's urine after phosphorous poisoning. **palmitic a.** $\text{C}_{16}\text{H}_{32}\text{O}_2$, found in palm oil. **paracotoinic a.** An amorphous mass, $\text{C}_{16}\text{H}_{12}\cdot\text{O} + \text{H}_2\text{O}$, obtained by boiling paracotoin with caustic potash. **paracoumaric a.** An a., $\text{C}_6\text{H}_3(\text{OH})\cdot\text{C}_2\text{H}_2\cdot\text{CO}\cdot\text{OH}$, obtained by the action of sulphuric a. on aloes. **para-**

lactic a. A body closely resembling lactic a., but differing in its power of rotating the polarized beam to the right. It occurs in the muscular juice. **paraoxyphenylacetic a.** A substance found in dog's urine, resulting from dosage. **parosorbic a.** $\text{CH}_3\text{CH}_2\text{CH}(\text{OH})\text{COOH}$, an oily liquid obtained in the preparation of malic a. from mountain ash berries. It is a powerful emetic and its vapors are stupefying. **pectic a.** $\text{C}_{28}\text{H}_{20}\text{O}_{26}$, found in many fruits. **pentabasic a.** An a. that contains 5 atoms of replaceable hydrogen, all in the a. characteristic. **pentatomic a.** An a. containing 5 atoms of replaceable hydrogen. **perchloric a.** HClO_4 , a mobile volatile liquid, which decomposes with explosion when brought into contact with certain organic compounds. **periodic a.** $\text{HIO}_4 + 2\text{H}_2\text{O}$, an a. obtained from iodine; a powerful oxidizer. **permanganic a.** HMnO_4 , a monobasic a., known only in aqueous solution. **phenacetic a.** An a. found in urine of dogs after ingestion of phenylacetic a. and of phenylacetone. **phenylacetic a.** An a., $\text{C}_6\text{H}_5\text{CH}_2\text{COOH}$, formed by putrefaction of proteids; may be made by boiling benzyl cyanid with alkalis, when it is yielded with ammonia. **phenylamido-acetic a.** $\text{C}_6\text{H}_5\text{CHNH}_2\text{COOH}$, an amido a. changed within the body to mandelic a. and excreted in the urine as salts. **phenylamidopropionic a.** $\text{C}_8\text{H}_{11}\text{NO}_2$, a substance of putrefactive origin. **phenylpropionic a.** $\text{C}_6\text{H}_5\text{CH}_2\text{CH}_2\text{COOH}$, an a. formed by putrefaction of proteins or by boiling a- or b-bromocinnamic a's with alcoholic potash. **phosphatic a.** An old name for the mixture of phosphoric and phosphorous a's formed by the slow combustion of phosphorus. **phosphinic a's.** A's produced by the oxidation of the primary or secondary phosphines. **phosphocarnic a.** A compound of unknown composition isolated from meat extract. Upon hydrolytic change it yields a carbohydrate, carbon dioxide, carnic a., sarcocollin a., succinic a., and phosphoric a. **phosphoric a.** H_3PO_4 , crystalline, but in ordinary form a liquid. **phosphormolybdic a.** A compound of phosphoric a. with molybdenum trioxide; used as a reagent in testing for alkaloids. **phosphorous a.** H_3PO_3 ; its salts are the phosphites. **phosphotungstic a.** A compound of phosphoric a. and tungstic a., or of the former with tungsten trioxide. One such compound, $\text{H}_{11}\text{PW}_{10}\text{O}_{38} + 8\text{H}_2\text{O}$, is used as a test for alkaloids. **phthalic a.** $\text{C}_8\text{H}_6\text{O}_4$, derived from oxidation of naphthalene. **picric a.** $\text{C}_6\text{H}_3\text{N}_3\text{O}_7$, crystalline; yellow; used as a dye, fixing agent, and explosive; also in medicine as an anthelmintic, and in erysipelas. **polyatomic a.** An a. containing more than one atom of replaceable hydrogen, whether in the a. radicle, in the a. characteristic, or in both. **polybasic a.** An a. containing more than one replaceable atom of hydrogen in the a. characteristic. **polygalic a.** $\text{C}_{32}\text{H}_{54}\text{O}_{18}$, a glucosid con-

tained in the root of *Polygala senega*. **propionic a.** $\text{C}_3\text{H}_6\text{O}_2$, colorless, occasionally found in sweat and in diabetic urine. **prussic a.** See *hydrocyanic a.* **purpuric a.** $\text{C}_8\text{H}_5\text{N}_3\text{O}_6$, not known in the free state. **pyro-a.** An a. derived from another by the action of heat. **pyroarsenic a.** A tetrabasic crystalline a., $\text{H}_4\text{As}_2\text{O}_7$, obtained by heating arsenic a. to 180°C . **pyroborate a.** A diabasic a., $\text{H}_2\text{B}_4\text{O}_7$, formed by heating boric a. **pyroboric a.** $\text{H}_2\text{B}_4\text{O}_7$, formed by the heating of boric a. **pyrogallic a.** $\text{C}_6\text{H}_6\text{O}_3$, crystalline, white poisonous compound; used in dermatology. **pyrogallic-carbonic a.** A compound obtained by heating pyrogallol with a 5 per cent. solution of sodium carbonate and dissolving the product in cold concentrated sulphuric a.; a delicate test for nitric a., showing a violet coloration. **pyroligneous a.** Impure acetic a. obtained by the destructive distillation of wood. **pyrophosphoric a.** $2\text{H}_2\text{O} \cdot \text{P}_2\text{O}_5$, crystalline, a form of phosphoric a. **pyrosulphuric a.** An a., $\text{H}_2\text{SO}_4\text{SO}_3$, prepared by crystallization from cooled Nordhausen sulphuric a. **quercetic a.** The compound, $\text{C}_{15}\text{H}_{10}\text{O}_7 + 3\text{H}_2\text{O}$. **quercitannic a.** A substance, $\text{C}_{17}\text{H}_{16}\text{O}_6$, found in oak bark. It differs from gallotannic a. in not being transformable into gallic a. and in showing no trace of pyrogallol on dry distillation. **quinic a.** $\text{C}_7\text{H}_{12}\text{O}_6$, crystalline, obtained from cinchona. **racemic a.** 1. Any organic a. containing one or more asymmetrical carbon atoms which is made up of equal quantities of the dextro- and levo-forms of this a. 2. A substance found in the juice of certain species of grape, $\text{COOH} \cdot \text{CHOH} \cdot \text{COOH}$; chemically, a mixture of equal parts of dextrotartaric a. and levotartaric a's. **rheumic a.** See *oxalic a.* **ricinic a.** An a. produced by the saponification or dry distillation of castor oil. **ricinoleic a.** Syn.: *hydroxylic a.* $\text{C}_{17}\text{H}_{32}(\text{OH})\text{COOH}$, present as a glycerin ester in castor oil. It is liberated from castor oil in the alimentary tract and by its irritant action induces purgation. **rosolic a.** $\text{C}_{20}\text{H}_{16}\text{O}_3$, used as a test for a's, and in histology as a dye. **saccharic a.** $\text{C}_6\text{H}_{10}\text{O}_6$, a dibasic a. formed by oxidation of saccharin by nitric a. **salicylic a.** $\text{C}_7\text{H}_6\text{O}_3$, crystalline, found in plants and obtained from carbolic a.; has many uses in medicine, particularly in rheumatic conditions. **sali-cylsulphonic a.** A substance used in testing proteins; crystalline. **salicyluric a.** $\text{C}_6\text{H}_5(\text{OH})\text{NO}_2$, found in urine after use of salicylic a. **sarcocollin a.** $\text{C}_8\text{H}_6\text{O}_3$, found in phosphorous poisoning in the blood and muscles. **sclerotic a.**, **sclerotinic a.** An acid, the active principle of ergot. **sebacic a.** $\text{C}_{10}\text{H}_{18}\text{O}_4$, a crystalline a., derived from olein and some fixed oils. **secale-amidosulphonic a.** A substance isolated by Kraft from ergot. **selenic a.** H_2SeO_4 , a clear liquid resembling sulphuric a. **silicic a.** An a. forming silicates; orthosilicic a., H_4SiO_4 ; metasilicic a., H_2SiO_3 , and parasilicic a.,

H_6SiO_6 . **silicic a. liquid.** A colloidal form of s. a., produced by the action of hydrochloric a. on a solution of sodium silicate and the subsequent removal of the sodium chlorid and the excess of a. by dialysis. **sinapoleic a.** An a., $\text{C}_{20}\text{H}_{38}\text{O}_2$, occurring in small quantities in the fixed oil of mustard. **skatoxyl sulphuric a.** A product of protein fermentation in the intestine which is found in the urine. **smilaspermic a.** Hemidesmic a. **sphacelinic a.** Of Kobert, an inactive resin with some adherent alkaloid obtained from ergot. **stearic a.** $\text{C}_{18}\text{H}_{36}\text{O}_2$, waxlike, derived from fats. **stearoleic a., stearolic a.** A monobasic a., $\text{C}_{17}\text{H}_{34}\text{COOH}$. **stillistearic a.** A fatty acid, $\text{C}_{15}\text{H}_{30}\text{O}_2$, obtained by the saponification of stillistearin. **succinic a.** $\text{C}_4\text{H}_6\text{O}_4$, obtained from amber by distillation. **sulphaminbenzoic a.** A product formed in the excretion of saccharin, found in the urine. **sulphanilic a.** $\text{C}_6\text{H}_4(\text{NH}_2)\text{SO}_3\text{H}$, crystalline; a reagent. **sulphinic a's.** Monobasic a's which may be regarded as derived from sulphurous a. by the replacement of one molecule of hydroxyl by a univalent radicle. **sulpho-a.** 1. A thio-a. 2. A sulphonic a., especially one derived from another a. **sulphobenzoic a.** An a., $\text{C}_6\text{H}_4(\text{COOH})\text{SO}_3\text{H}$, known in three isomeric forms. **sulphocarbolic a.** $\text{C}_6\text{H}_5\text{SO}_4$, an oily, reddish disinfectant. **sulphocarbonic a.** Thiocarbonic a. **sulphonic a's.** A's derived from sulphuric a. by the substitution of a radicle for hydroxyl; or acid sulphites derived from sulphurous a. by the replacement of half of its hydrogen by a basic radicle. **sulphosalicylic a.** The compound $\text{C}_6\text{H}_3(\text{SO}_3\text{H})(\text{OH})\text{CO.OH}$, used like sodium salicylate. **sulphoxybenzoic a.** Benzoic a. in which one atom of hydrogen is replaced by hydroxyl and another by the radicle SO_2OH . **sulphuric a.** H_2SO_4 , liquid, colorless, caustic; oil of vitriol; used as a caustic. **sulphurous a.** H_2SO_3 , liquid, colorless; bleaching agent and antiseptic in dermatology. **tannic a.** $\text{C}_{14}\text{H}_{10}\text{O}_6$, powder, astringent, obtained from nut-galls and sumac leaves. **tartaric a.** $\text{C}_4\text{H}_6\text{O}_6$, powder, white, obtained from grape juice. **tartronic a.** A dibasic crystalline a., COOH.CHOH.COOH . **taurocarbamic a.** A crystalline a., $\text{NH}_2\text{CO.NH.CH}_2\text{SO}_3\text{H}$, occurring in the urine after the administration of taurin. **taurocholic a.** $\text{C}_{24}\text{H}_{45}\text{NOS}_7$, crystalline, obtained from bile. **telluric a.** A dibasic a., H_2TeO_4 . **tellurous a.** A dibasic a., H_2TeO_3 . **temulentie a.** A poisonous, crystalline a. obtained from *Lilium temulentum*. **terebenzic a.** Paratoluic a. **tetrabasic a.** A polybasic a. supposed to contain 4 replaceable atoms of hydrogen, all of which must be contained in the a. characteristic. **tetrahydric a.** See *tetratomic a.* **tetrahydroxy-a's.** A's formed from other a's by the substitution of 4 molecules of hydroxyl for 4 atoms of hydrogen. **tetratomic a.** An a. which con-

tains 4 atoms of hydrogen replaceable by metallic or organic radicles, those atoms being found either entirely in the a. characteristic or partly in the a. radicle as well. **thio-a.** An a. in which sulphur replaces oxygen. **thiocyanic a.** CNSH, present as a salt in the stomach and in the saliva. **thiophenic a.** A crystalline a., $\text{C}_6\text{H}_5\text{S.COOH}$, analogous in structure and properties to benzoic a.; when fed to rabbits it is excreted in the urine as thiophenic acid. **thiophenicuric a.** An a., $\text{C}_4\text{H}_5\text{S.CONH.CH}_2\text{COOH}$, resembling hippuric a. in constitution; found in rabbits' urine after feeding them with methyl thiophene and thiophenic acid. **thiosulphuric a.** An a., $\text{S}_2\text{O}_3\text{H}_2$, known only in its salts, the thiosulphates. **titanic a.** A white powder, $\text{T}_2(\text{OH})_4$, obtained by precipitating titanium dioxide from an a. solution by means of ammonia. **toluic a.** An a., $\text{C}_6\text{H}_4(\text{CH}_3)\text{CO.OH}$, known in three isomeric forms: *Ortho' a.*, *meta' a.*, and *para' a.* **toluric a.** Paratoluyamidoo-acetic a., $\text{CH}_3\text{C}_6\text{H}_4\text{CO.NH.CH}_2\text{CO.OH}$, present in urine after the ingestion of valeric a. **triatomic a.** An a. which contains 3 atoms of hydrogen replaceable by metallic or organic radicles. **tribasic a.** A polybasic a. containing 3 replaceable atoms of hydrogen, all in the a. characteristic. **tribromacetic a.** A monobasic a., $\text{CBr}_3\text{CO.OH}$, derived from acetic a. **trichloracetic a.** $\text{HC}_2\text{Cl}_3\text{O}_2$, crystalline, caustic. **trichlorbenzoic a.** A crystalline a., $\text{C}_6\text{H}_2\text{Cl}_3\text{CO.OH}$. **trihydroxybenzoic a.** An a., $\text{C}_6\text{H}_2(\text{OH})_3\text{COOH}$, known in several isomeric forms, namely, gallic a., pyrogallol carboxylic a., phloroglucinol carboxylic a., and a hydroxyquin-carboxylic a. **trinitrobenzoic a.** A monobasic a., $\text{C}_6\text{H}_2(\text{NO}_2)_3\text{CO.OH}$. **trinitrocarbolic a.** Syn.: *picric a.* Trinitrophenol. **trisilicic a.** An a. containing three atoms of silicon. **tropic a.** An a., $\text{C}_6\text{H}_5\text{CH}(\text{CH}_2\text{OH})\text{CO.OH}$, obtained by decomposing atropin or hyoscyamin. **tuberculinic a.** An a. derived from fat-free tubercle, supposed to be the toxic principle of the bacilli. **uric a.** $\text{C}_5\text{H}_4\text{N}_4\text{O}_3$, crystalline, found in urine. **urobutylchloralic a.** A body, $\text{C}_{10}\text{H}_{15}\text{Cl}_3\text{O}_7$, obtained from the urine after the ingestion of butyl chloral. **uroleucic a.** A monobasic a. found in the urine in alkaptonuria. It has considerable antiseptic power, and is probably antipyretic. **valerianic a.** $\text{C}_5\text{H}_{10}\text{O}_2$, liquid, colorless, pungent; used in neurology. **valeric a.** See *valerianic a.* **vanadic a.** An a. formed by the union of vanadium pentoxid with water. **vanillic a.** An isomeric variety, $\text{C}_8(\text{CO.OH.H.OCH}_3.\text{OH.H.H.})$, of methylprotocatechuic a. **veratric a.** A white crystalline a., $\text{C}_6\text{H}_3(\text{OCH}_3)_2\text{CO.OH}$, which results from the decomposition of cevadin. **vitrolic a.** See *sulphuric a.* **xanthic a.** A monobasic a., $\text{SH.CSOC}_2\text{H}_5$. **xanthoproteic a's.** The nitro-compounds produced in the xanthoproteic reaction by the action of strong nitric a. on a solution containing albumin or albuminoids.

With ammonia they give a dark yellow solution. **xylic a.** An a., $C_6H_5(CH_3)_2CO.OH$, isomeric with mesitylenic a., and known in four forms. **xylicid a.** An a., $C_6H_5(CH_3)(CO.OH)$, known in two forms. **zymic a.** Of Ploucquet, an a. formed in the fermentation of amylaceous substances, probably a mixture of lactic and butyric a's. List of poisons and their antidotes, see in *appendix*, page 938. [Lat., *acidus*, sour.]

ac'idalbu'min. The substance formed from a protein by treatment with dilute acids.

acid-fast. A term used in bacteriology to describe certain bacteria, such as the *Bacillus tuberculosis*, which will retain an anilin dye even after treatment with a dilute acid.

acidif'erous. 1. Containing acid. 2. Acid-forming. [Lat., *acidum*, an acid, + *ferre*, to bear.]

acidifica'tion. Capable of conversion into an acid. [Lat., *acidum*, acid, + *ferri*, to become.]

acid'ify. 1. To convert into an acid. 2. To give acid properties.

acidimeter (as-id-im'et-er). An instrument for determining the strength of an acid; either a hydrometer or a simple graduated tube. [Lat., *acidum*, an acid, + Gr., *metron*, a measure.]

acidim'etry. 1. The determination of the quantity of real acid in a sample of hydrated acid. 2. The determination of the strength, i.e., the saturating power of an acid.

acid'ity. 1. In chemistry the word is used in different senses, denoting: *a.* the quality of possessing the characteristics of an acid and so, in acids or acid salts, equivalent to basicity; *b.* the capacity for saturating an acid evinced by a base; *c.* the intensity of an acid reaction, expressed usually in terms of the hydrogen-ion concentration. 2. Sourness of the stomach; the overproduction of acid in the stomach, characterized by a sensation of burning and of distention and acid eructations. [Lat., *aciditas*.]

ac'idol. Betain hydrochlorid, a proprietary preparation which liberates hydrochloric acid when dissolved in water.

acidophil (as-id'o-fil). Easily stained with acid dyes. [Lat., *acidum*, an acid, + Gr., *philein*, to love.]

acidophilic, acidophilous (as-id-o-fil'ik, as-id-of'il-us). Of bacteria, growing by preference on an acid medium. [Lat., *acidus*, acid, + Gr., *philein*, to love.]

acido'sis. A condition of diminished ability to neutralize normal acid products of metabolism. Chiefly seen in the neutralization of oxybutyric acid in diabetes. A widespread type of reactions.

acid'ulae. Waters containing carbon dioxide in solution. **a. artificiales.** Artificially aerated waters. **a. naturales.** Natural aerated waters. [Lat., pl. of adj. *acidulus* (*aquae* understood).]

acid'ulum, a'cidule. An acid salt. **oxalic a.** Acid oxalate of potassium. **tartrous a.** Acid tartrate of potassium.

acies (a'sēs). 1. A ridge or edge formed by the intersection of two planes (said of

prominent edges of bones). 2. A little eminence formed by the tenia semicircularis at the side of the foramen of Monro, about a line distant from it. 3. Keeness of vision. 4. The pupil of the eye. [Lat., *acies*, an edge.]

acinesia, acinosis (as-in-e'se-ah, as-in-e'-sis). 1. Absence of motion; rest. 2. The parasystole, the stage of rest intervening between the systole and the diastole of the heart. [Gr., *akinesia*, from *a*, priv., + *kinein*, to move.]

aciniform (as-in'if-orm). Clustered like grapes in form or arrangement. [Lat., *acinus*, grape, + *forma*, form.]

ac'inose, ac'inous. 1. Pertaining to an acinus. 2. Having acini. See *racemose gland*, under *gland*. 3. Rounded and transparent like a grape. 4. In pathology, resembling a racemose gland. See *a. adenoma*, under *adenoma*. [Lat., *acinus*.]

acinus (as'i-nus). Pl. *acini*. Syn.: *alveolus, insula, follicle, gland granule, gland vesicle*. 1. The smallest lobule of a racemose gland or of the liver. 2. One of the smallest lobules of the lung. 3. The cavity or saccular recess in the finest lobule of a racemose gland. 4. That part of the excretory duct of a racemose gland into which the cavities of several alveoli open. 5. One of the closed vesicles of a gland having no excretory duct, such as the thyroid. 6. A cell of the liver containing glycogen. [Lat., *acinus*, berry or grape.]

Acipenser (as-ip-en'ser). A genus of the order *Sturiones*, class *Pisces*. **A. huso.** The *beluga*, or Russian sturgeon. Its swimming-bladder constitutes isinglass, or *ichthyocolla*. [Lat., *acipenser*, the sturgeon.]

aclas'tic. Transmitting rays of light without refracting them. [Gr., *aklastos*, unbroken.]

acleistocardia (a-kli-to-kar'de-ah). An open condition of the foramen ovale, causing incomplete oxidation of the red blood corpuscles and producing the condition known as *morbus ceruleus* or the *blue disease*. [Gr., *a*, priv., + *kleistos*, closed, + *kardia*, heart.]

acme (ak'me). Syn.: *crisis, fastigium*. 1. The culminating point of a fever. 2. An acne pimple; according to some authors, a wart. [Gr., *akme*, highest point.]

acne (ak'ne). An inflammation of the sebaceous follicles or of the tissue around them. Its usual form is *acne vulgaris* and the term *acne* generally signifies this affection. It is characterized by an eruption of inflammatory lesions, varying in types from papules to pustules, involving the sebaceous follicles and in nearly all cases associated with comedones. The ordinary "bad complexion" is *acne*. **a. rosacea.** A form of *a.* characterized by a permanent congestion and dilatation of the terminal blood vessels and inflammation of the sebaceous follicles of the cheeks and nose. It is the red nose of alcoholism. **a. varioliforme.** Another name for *molluscum contagiosum*. Rare varieties of *a.* are: **a. exulcerans serpiginosa nasi**; **a., keratosa**; **a.**

scrofulorum; a. urticaria. [Gr., *akme*, point.]

acne'mia. 1. Defective development of the calves of the legs. 2. Absence of the lower limbs. [Gr., *a*, priv., + *kneme*, leg.]

acnitis (ak-ni'tis). A disease characterized by the grouping of acne papules and pustules on the chin, the central areas of the cheeks, in the eyebrows and the glabella, and over the temples. It is associated with a tuberculous cachexia.

Acocanthe'ra, Akokanthe'ra. A genus of the *Apocynaceae*. **A. Schimperii.** Yields acocantherin, or dimethyl ouabain, which resembles ouabain closely in its physiological action, except that it is less active. From this and other species of *Acocanthera*, the natives of Africa prepare arrow poison. [Gr., *akoke*, a point, + *antheros*, flowering.]

acoellous (ah-se'le-us). So wasted as to appear to have no belly. [Gr., *a*, priv., + *koilia*, belly.]

acolin (ak-o'in). A derivative of guanin, allied to caffein and theobromin; a local anesthetic.

aco'mia. Another name for *alopecia*. Absence of hair. [Gr., *a*, priv., + *kome*, hair.]

aconin (ak'o-nin). A base formed by the saponification of true aconitin; than which it is far less poisonous.

aconitanilid (ak-on-it-an'il-id). A compound, $N_3(C_6H_5O_3)'''(C_6H_5)_3.H_3$, which appears to be formed, together with aconitidaniil, by the action of aconitic acid or oxychlorocitric acid on anilin.

aconite (ak'o-nit). Syn.: *monkshood*, *wolfsbane*. The genus *Aconitum*; in pharmacy, the leaves or the tuberous root of *Aconitum napellus* (in the U. S. Ph., the root only). List of poisons and their antidotes, see in *appendix*, page 938. **a. leaves.** In pharmacy, the leaves of *Aconitum napellus*. **a. root.** In pharmacy, the tuber, or root stock of *Aconitum napellus*. [*Aconitum* U. S. Ph., *aconiti radix* Br. Ph.] **Fleming's tincture of a.** An alcoholic tincture of a. of which 150 c.c. represents 100 gms. of the aconite root. **Indian a.** See *Aconitum ferox*. **Japanese a.** A term applied to several varieties found in Japan. **Nepal a.** The tubers of *Aconitum ferox* and perhaps those of other species growing in Nepal. [Gr., *akoniton*, a poisonous plant said by Pliny to be so called because it grew *en akonais*, on sharp, steep, rocks (*akone*, a whetstone). Lat., *aconitum*.]

aconitin. An alkaloid, $C_{33}H_{43}NO_{12}$ (probably benzoylaconine, $C_{26}H_{35}[C_7H_5O]NO_{11}$) derived from *Aconitum napellus* and from other species of *Aconitum*. It is too active for use without dilution. Commercial varieties of a. vary considerably in physical properties and activity.

amorphous a. An amorphous base combined usually with several molecules of water. As formerly official it was very impure. [Lat., *aconitina*.]

Aconitum. 1. A genus of plants of the *Ranunculaceae*, tribe *Helleboreae*. 2. The drug aconite, in the U. S. Ph., the tu-

berous root of *A. napellus*. *Caution:* Tincture of aconitin now represents but 10 per cent. of the rhizome, whereas that of the U. S. Ph., 1890, represented 35 per cent. and Fleming's tincture of aconite is even stronger and should not be used. The root of *Aconitum napellus*, not indigenous to the United States, occasionally escaped from gardens, somewhat resembles that of horse-radish. Poisoning consists in respiratory and cardiac depression. The tincture (2-10 m) and fluid extract ($\frac{1}{2}$ -1 m) are official in the 1910 U. S. Ph. [For deriv. see *aconite*.]

Aconitum ferox. Indian aconite; found in the Himalayas, being the source of the terrible *bish*, or *bishk*, poison of India, used as an arrow poison.

aconuresis. Involuntary passage of urine. [Gr., *akon*, unwilling, + *ouresis*, urination.]

aco'pia. Freedom from fatigue. [Gr., *akopia*, from *a*, priv., + *kopos*, fatigue.]

acopyrin (ak-op-i'rin). Acetyl-salicylate of antipyrin; used in rheumatism and as an antipyretic.

acorea (ah-ko're-ah). Absence of the pupil of the eye. [Gr., *a*, priv., + *kore*, the pupil.]

acor'mus. An acardiac monster consisting of an imperfectly developed head and a rudimentary trunk, the umbilical cord being inserted in the cervical region. [Gr., *a*, priv., + *kormos*, trunk.]

acoulalion. A patented apparatus used to train deaf mutes to speak.

acoumeter (ak-oo'meter). An instrument for measuring the acuteness of the hearing. [Gr., *akouein*, to hear, + *metron*, a measure.]

acousma. Hallucinations of hearing.

acousmatagnosis (ak-ooos-mat-ag-no'sis). Inability to recognize previously known sound symbols; mind-deafness. [Gr., *akousma*, hearing, + *a*, priv., + *gnosis*, recognition.]

acousmatamnesia (ak-ooos-mat-am-ne'se-ah). Inability to recall sound symbols. [Gr., *akousma*, hearing, + *amnesia*, forgetfulness.]

acoustic (ak-ooos'tik or ak-ows'tik). Relating to sound or to the sense of hearing. [Gr., *akoustikos*, pertaining to the faculty of hearing.]

acous'ticomalle'us. The tensor tympani muscle. See *table of muscles*, under *muscle*.

acousticon (ak-oo'stik-on) An apparatus for aiding the deaf to hear.

acoustics (ak-ooos'tiks or ak-ows'tiks). Pertaining to the physics of sound or to the sense of hearing.

acraconitin (ak-ra-kon'it-in). Nepalin, napellin, or pseudoaconitin. [Gr., *akros*, extreme (on account of its virulence) + *aconitin*.]

acrania (ah-kra'ne-ah). The condition of entire or partial absence of the skull. [Gr., *a*, priv., + *kranion*, skull.]

acrasia (ah-kra'se-ah). 1. Intemperance. 2. Any dyscrasia. [Gr., *a*, priv., + *krasis*, moderation.]

acratia (ah-kra'te-ah). 1. Loss of strength,

- impotence. 2. Incontinence. 3. Intemperance. [Gr., *a*, priv., + *kratos*, strength.]
- ac'rid.** Producing a burning or sharp taste on the tongue or fauces as an acrid poison. [Lat., *acer*, *acris*, sharp.]
- ac'ridin.** An artificial alkaloid, $C_{12}H_{10}N$, first obtained from crude anthracene, that causes marked irritation when brought into contact with the skin or a mucous surface. [Lat., *acer*, *acris*, sharp.]
- a'crimony.** The quality of being irritant, pungent or biting. [Lat., *acer*, acrid.]
- acro-.** Combining form of Gr. *akros*, highest, topmost, extremity, peak; used in compound words to signify of or to the topmost point or extremity or extreme, complete.
- acro-asphyxia.** A condition seen in many disturbances of the blood vessels in which the extremities, fingers, toes, tip of nose, ear lobe, etc., receive a diminished blood supply and either get cold or actually die, by obstructive gangrene.
- acroblast.** The external layer of the mesoblast. They are cells lying between the ectoblast and the endoblast, but independent of the mesoblast, that take up food in an ameboid manner. They also give rise to bodies called porocytes. [Gr., *akros*, at the edge of, + *blastos*, bud.]
- acrobystitis** (ak-ro-bis-ti'tis). Inflammation of the prepuce. [Gr., *akrobystia*, foreskin, + *itis*, inflammation.]
- acrocephalia** (ak-ro-sef-a'le-ah). A deformity of the head in which it is increased in its vertical diameter and more or less pointed or conical at the top. [Gr., *akron*, the summit, + *kephale*, head.]
- acrochordon** (ak-ro-kor'don). A soft, pendulous wart consisting of myomatous or edematous fibrous tissue. [Gr., *akros*, extreme, + *chorde*, string.]
- acrocinesia** (ak-ro-sin-e'sis). An increase of the ease, freedom, and completeness of the normal muscular movements; one of the phenomena of hysteria, to be distinguished from *hypercinesia*. [Gr., *akros*, extreme, + *kinesis*, movement.]
- acrodermatitis** (ak-ro-der-mat-i'tis). Forms of infectious disease of the skin, involving the extremities. They are: **a. chronica atrophica.** **a. perstans.** **a. pustulosa hiemalis.** [Gr., *akron*, extremity, + *derma*, skin, + *itis*, inflammation.]
- acrodynia** (ak-ro-din'e-ah). A disease characterized by gastro-intestinal symptoms followed by pain, burning, and swelling of the feet and of the face, with the development on them of patches of erythema and thin vesicles and bullae. It is apparently a toxic disease and is usually followed by recovery. [Gr., *akron*, extremity, + *odyne*, pain.]
- acrogenous** (ak-roj'en-us). A term used in descriptive bacteriology, meaning produced at the end. [Gr., *akron*, extremity, + *gennan*, to engender.]
- acrolein** (ak-ro'le-in). A thin, colorless, highly volatile liquid, the fumes of which are highly pungent and irritating, pro-
- duced by the dry distillation of glycerin, $CH_2:CHO$. [Lat., *acer*, sharp, + *oleum*, oil.]
- acromania** (ak-ro-mā'ne-ah). Violent excitement, as seen in many psychoses, delirium tremens, excited paretics, meningitis, abscess, etc. [Gr., *akros*, complete, + *mania*, madness.]
- acromegaly** (ak-ro-meg'al-e). Hypertrophy of the extremities; a chronic trophic disease characterized by enlargement of the head, face, and extremities, with severe pain in them and mental dulness. It is referred usually to a hypersecretion of the anterior lobe of the pituitary gland. [Gr., *akros*, an extremity, + *megas*, *megale*, great.]
- acro'mial.** Pertaining to the acromion. **a. artery.** See *table of arteries* under *artery*.
- acromicria** (a-kro-mik're-ah). Abnormal smallness of one or more of the extremities. [Gr., *akron*, an extremity, + *mikros*, small.]
- acromion** (ak-ro'me-on). A massive outward prolongation of the spine of the scapula, which articulates with the clavicle, overhangs the articulation of the humerus with the scapula, and forms the point of the shoulder. [B. N. A., *acromion*.] [Gr., *akron*, extremity, + *omos*, shoulder.]
- ac'roneuro'sis.** Vasomotor trophic and other neuroses of the extremities, usually due to disorder of the vegetative nervous system.
- ac'roparesthesia.** Sensations of tingling and formication in the extremities, at times with stiffness and numbness.
- acropathology** (ak-ro-path-ol'o-je). Pathology of the extremities; a branch of orthopedics. [Gr., *akron*, extremity, + *pathology*.]
- acrophobia.** Morbid dread of remaining in a high place. [Gr., *akros*, high, + *phobos*, fear.]
- acroposthitis** (ak-ro-pos-thi'tis). Inflammation of the prepuce. [Gr., *akroposthia*, foreskin, + *itis*, inflammation.]
- acrose** (ak'rōs). d + l fructose. The first hexose prepared by synthesis from formaldehyd.
- acrosome** (ak'ro-sōm). The central portion of the sphere which is to form the anterior portion of the spermatogonium. [Gr., *akron*, summit, + *soma*, body.]
- acrotism** (ah'kro-tizm). Complete or partial failure of the pulse. [Gr., *a*, priv., + *kratos*, the pulse.]
- act.** The performance of a function or of a particular part of a function; e. g., *a's* of respiration. **compulsive** or **imperative a.** The *a.* of a person in consequence of an imperative or compulsive, usually unconscious, impulse. [Lat., *actus*, from *agere*, to put in motion.]
- Actaea** (ak-te'ah). A genus of the *Ranunculaceae*, tribe *Cimicifugae*. **A. alba.** White cohosh, white baneberry; a species formerly classed as a variety of *A. spicata*. It is found in most parts of the United States and closely resembles *A. spicata*, var. *rubra*. **A. racemosa.** See

- Cimicifuga racemosa*. **A. rubra**. Red cohosh, red baneberry; considered by some botanists as *A. spicata* (seu *americana*), var. *rubra*. **A. spicata**. Baneberry, herb Christopher; found widely distributed through Europe and in the United States. The medicinal properties are probably the same as those of *Cimicifuga racemosa*, which are related to aconite. [Gr., *aktea*, the elder tree.]
- actinic** (ak-tin'ik). 1. Having the power of exciting chemical action. 2. Applied usually to the rays of light in the spectrum of short wave length or to the ultraviolet rays. [Gr., *aktis*, a ray.]
- actiniform**. Radiate; having the shape of a ray. [Gr., *aktis*, ray; + Lat., *forma*, form.]
- actinism**. The actinic property of rays of light.
- actino-**. Combining form of Gr. *aktis* (*aktin-*), a ray or beam; used in compound words to signify of or pertaining to rays or beams of light. Sometimes used in composition to signify pertaining to x-rays.
- actinochemistry**. The science of the chemical action of light waves. [Gr., *aktis*, ray; + chemistry.]
- actinodermatitis**. Syn.: *radiodermatitis*. The inflammatory lesions of the skin produced by the application of the x-rays.
- actinology**. The science of radiant light. [Gr., *aktis*, a ray; + *logos*, understanding.]
- actinometer** (ak-tin-om'et-er). An instrument used to measure the sun's rays. Also one to measure the penetrating power of the Röntgen rays. [Gr., *aktis*, a ray; + *metron*, a measure.]
- actinomorph, actinomorphous**. Having a radiated form. In descriptive bacteriology, the term denotes the capability of bisection into planes identical in form. [Gr., *aktis*, ray; + *morphe*, form.]
- Actinomyces** (ak-tin-om'is-ez). One of the lower types of fungi, belonging to the family of *Mycobacteriaceae* and the genus *Actinomyces*. The organism consists of threads with branching forms, and coccoid sporelike forms, but without spores, and is pathogenic for cattle and for man. It stains by Gram's method and shows clubbed ends in fresh tissue or by special stains in the hardened tissue. **A. asterioides**. A species growing on culture media with a yellow color and producing abscesses in the brain, lungs, and other viscera. **A. bovis**. The species that produces the disease termed *actinomycosis*. **A. Madurac**. A species causing white mycetoma in Asia and Africa. [Gr., *aktis*, a ray; + *mykes*, fungus.]
- actinomyco'sis**. An infectious disease of cattle, and occasionally of human beings, characterized mainly by tumorlike growths of the jaws, due to the lodgment and growth of *Actinomyces bovis*. The substance of the growths, which spring mostly from the alveoli of the lower molars, resembles that of chronic inflammatory tissue called granulomata, in having a granular structure, but the growths contain abscesslike cavities inclosing sulphur yellow bodies consisting of felted masses of the mycelia of the actinomyces. The disease in man is attended by loss of weight and strength and by fever. The granulomata may develop in the viscera as well as in the bones and skin.
- actinoneuritis**. Neuritic changes set up to actinic, or light, or related activities, as radium emanations, x-ray emanations, etc.
- actinostephyte** (ak-tin-os'te-o-fit). A radiate osteophyte. [Gr., *aktis*, ray; + *osteon*, a bone; + *phyton*, a growth.]
- actinotherapy** (ak'tin-o-ther'ap-e). Therapeutic application of the violet and ultraviolet rays, or of the rays from radium and the x-rays. [Gr., *aktis*, a ray; + *therapeia*, service, attendance.]
- action** (ak'shun). 1. In mechanics, the effect of a force, whether apparent or concealed. 2. Any chemical change. See *reaction*. 3. In physiology, the performance of a function. 4. In pathology, a morbid process, e. g., *febrile a.* 5. In therapeutics, the operation of a drug. [Lat., *actio*, a doing, a performance, from *agere*, to do.]
- activate** (ak'tiv-âte). To render active. In the terminology of immunity to restore activity to an inactive cytolytic or cell-dissolving serum by adding the proper amount of fresh serum containing an active complement. Hemolytic or bacteriolytic serum heated to 60° C. for half an hour and rendered inactive will again dissolve such cells when fresh serum is added to the mixture of amboceptor and cells or organisms. [Lat., *activus*, from *agere*, to act.]
- active** (ak'tiv). Characterized by action; not passive; producing effect.
- actol** (ak'tol). Silver lactate, $\text{CH}_3\text{CHOH.COOAg}$. A white tasteless powder soluble in 20 parts of water, used as an antiseptic in diseases of the teeth and in infectious diseases, such as gonorrhoea, in a 2 per cent. solution.
- acuity** (ak-u'i-te). Acuteness or keenness, especially of vision. In ophthalmic practice the visual acuity is measured by test letters, each of which subtends an angle of 5' at the eye. [Lat., *acuitas*.]
- aculeate** (ak-u'le-ate). Aculeated. A term used in descriptive pathology, meaning beset with sharp points; having a sting; pointed. [Lat., *aculeatus*, thorny.]
- acumen** (ak-u'men). Keen discernment, penetration. [Lat., *acuere*, to sharpen.]
- acuminate** (ak-u'min-ate). Pointed, tapered to a point. [Lat., *acuminatus*, p. ppl. of *acuminare*, to point.]
- acupressure**. A process of arresting hemorrhage from divided blood vessels, or impeding the flow of blood through vessels that are not divided, by means of pressure with a needle passed across their course. [Lat., *acus*, a needle; + *pressura*, pressure.]
- acupuncture**. The *kingking*, *zinking*, or *xinkien* of the Chinese. A method of treating diseases by plunging one or more needles deep into the body. It is used now

only occasionally, mostly for neuralgia, or to give exit to serum in edema, or in the form of *electropuncture*, for the purpose of treating the parts with galvanic electricity. [Lat., *acus*, a needle, + *punctura*, a puncture.]

acusticus. The auditory portion of the eighth pair of cranial nerves.

acyesis (ah-si-e'-sis). Sterility in women. [Gr., *akyesis*, from *a*, priv., + *kyesis*, pregnancy.]

ad. Lat. preposition denoting "to"; used in prescription writing to indicate that a sufficient quantity is to be used to make the entire prescription equal to the amount stated.

ad-. A prefix from the Lat. prep. *ad*, "to"; used to denote increase, motion towards, or as an intensive.

-ad. A suffix sometimes used in anatomical nomenclature to signify toward or in the direction of, as *dorsad*, toward the back.

adactylia (ah-dak-til'e-ah). Congenital absence of fingers and toes. [Gr., *a*, priv., + *daktylos*, finger.]

adamant. 1. The diamond. 2. A magnet. 3. A substance impenetrably hard. [Gr., *a*, priv., + *damazein*, to overpower, to tame.]

adaman'tine. Of great hardness, used with reference to the enamel of the teeth. [Gr., *adamantinos*, from *a*, priv., + *damazein*, to tame.]

adamantinoma (ad'am-an-tin-o'mah). A benign tumor of the jaw occurring occasionally in young people. These tumors originate in the enamel organ, developing from the remains of its epithelium, and may reach the size of an apple.

adaman'toblast. See *ameloblast*. [*Adamant*, + Gr., *blastos*, germ.]

adamantoma (ad-am-an-to'mah). Same as *adamantinoma*.

Adamkiewicz's serum (ad-am-ke'vitz's se'rum). Syn.: *cancroin*. A material resembling neurin, injected hypodermically as an alexin to destroy malignant growths.

A's test. A test for protein bodies. On dissolving the substance to be tested in glacial acetic acid containing a small amount of glyoxalic acid and gradually adding concentrated sulphuric acid, the presence of albuminous bodies causes a violet coloration due to the presence of tryptophan in the protein. [*Albert Adamkiewicz*, Viennese pathologist, 1850, living.]

Adamkiewicz-Hopkins reaction (ad-am-ke'vitz). Method of treating the substance to be tested with a little concentrated sulphuric acid and double the volume of glacial acetic acid containing some glyoxalic acid. In the presence of tryptophan a violet color is obtained.

Ad'am's ap'ple. 1. See *Pomum Adami*, under *pomum*. 2. The fruit of the plantain trees, *Musa paradisiaca*. [B. N. A., *eminentia laryngea*.]

Adams' operation. See *Alexander-Adams' o.*

Adam-Stokes disease. Bradycardia with epileptiform attacks of unconsciousness

due to lesions of the auriculoventricular bundle of His.

adapta'tion. 1. Faculty possessed by an organism or an organ of accommodating itself to varying conditions. The adjustment of the individual to conditions of reality. 2. In pathology, it is used as in immunization and also to designate principle of adjustment of tissues to changed conditions produced by disease, as hypertrophy of the heart following obstruction of the valves. **dark and light a. in eyes.** Terms used to express the fact that the condition of the retina changes when kept in darkness or in light, so that in the dark its sensitiveness gradually becomes much greater, especially outside the fovea. [Lat., *adaptare*, to adjust.]

add. An abbreviation of the Latin *adde*, meaning "add"; or of *addetur*, meaning "let there be added." Used in prescription writing.

addepha'gia. Uncontrolled eating. [Gr., *adden*, to satiety, + *phagein*, to eat.]

addiment (ad'im-ent). Syn.: *complement*. A substance described by Ehrlich, which resembles a ferment in its action and is present in normal serum. It is destroyed by 56° to 58° C., and when attached to such cells as bacteria or red blood corpuscles by the intermediary body or amboceptor it dissolves or destroys these substances by bacteriolysis or hemolysis. [Lat., *addere*, to add.]

Addison's disease. A disease due to disorder (usually tuberculous) of the suprarenal capsules modifying their hormone activity, characterized by a bronze-like pigmentation of the skin, severe prostration and progressive anemia. [*Thomas Addison*, English physician, 1793-1860.]

addit'ion. In chemistry, the formation of a new molecule by the direct union of two or more atoms.

adducens (ad-du'sens). Adductive, acting as an adductor. **a. oculi.** See *rectus medialis in table of muscles*, under *muscle*. [Lat., *ad*, to, + *ducere*, to lead.]

adduc'ion. The drawing of a part toward the median line of the body or (in the case of the fingers and toes) toward the middle line of a limb. As applied to the hand, flexion toward the ulnar side of the forearm. [Lat., *ad*, towards, + *ducere*, to draw.]

adduc'tor. 1. A muscle whose office is to draw a part towards the median line of the body, or towards the middle line of a limb. See *table of muscles*, under *muscle*. 2. As applied to the *Lamelli branchiata*, a muscle that closes the valves of the shell. 3. In botany, a delicate filamentous structure found in the thecae of mosses.

adelomor'phous. Having a not clearly defined form. [Gr., *adelos*, not evident, + *morphe*, form.]

adelphia, adelphism (ad-el'fe-ah, ad-el'fism). A general term for monstrosities in which two or more organisms are separated below and united above. [Gr., *adelphos*, brother.]

adelphotaxy (ad-el'fo-taks-e). The tend-

- ency of motile cells to assume definite positions. [Gr., *adelphos*, brother, + *taxis*, arrangement.]
- aden-.** **adeni-.** **adeno-.** Combining forms of Gr., *aden*, a gland, used in compound words to denote of or pertaining to a gland.
- ad'ense.** An enzyme found in various organs which has the property of converting adenin into hypoxanthin by desamidization.
- adentric, adendritic** (ah-den'drik, ah-den-drit'ik). Said of nerve cells which have only the axis cylinder. [Gr., *a*, priv., + *dendrites*, of a tree.]
- aden'iform.** See *adenoid*. [Gr., *aden*, gland, + Lat., *forma*, shape.]
- adenin** (ad'en-in). A non-toxic leukomain, $C_8H_8N_8$, formed as a decomposition product of nuclein and found in various glands and viscera, as well as in the urine of patients suffering from leukemia. [Gr., *aden*, a gland.]
- adenitis** (ad-en-i'tis). Inflammation of a gland. [Gr., *aden*, a gland, + *-itis*, inflammation.]
- adeniza'tion.** Adenoid degeneration.
- adenoblast** (ad'en-o-blast). 1. A functional gland cell. 2. An embryonal cell from which glandular tissue is developed. [Gr., *aden*, a gland, + *blastos*, a germ.]
- ad''enocarcino'ma.** A malignant tumor, usually showing glandular tubules with lumina, but often having acini with several layers of cells or even consisting of solid masses of cells, and showing no *membrana propria*. The growth originates in the epithelium of various glands.
- adenocele** (ad'en-o-sel). A rare form of tumor of the breast, consisting of a cyst or cysts of the ducts or sinuses containing adenomatous growths apparently springing from the walls. [Gr., *aden*, a gland, + *kele*, a tumor.]
- adenocyst** (ad'en-o-sist). A glandular cyst. [Gr., *aden*, gland, + *kystis*, bladder.]
- ad''enocysto'ma.** A cystic tumor the walls of which are made up of adenomatous tissue. Generally applied to ovarian tumors.
- ad''enofibro'ma.** An adenoma having a fibrous stroma, which is so dense as to form the main portion of the tumor. It appears frequently in the mammary gland.
- ad''enofibro'sis.** Fibroid transformation of a gland; often caused by infection with *Botryomyces*.
- ad'enoid.** 1. Resembling a gland in structure; as a glandular tumor. See *adenoma*. 2. Pertaining to glands. In 1860 His applied the term to the feltlike or reticular connective tissue forming the framework of lymphatic nodes and other lymphoid structures. See *a. tissue*, under *tissue*. **a. cancer.** See *adenocarcinoma*. For other use of the word, see *a. body*, under *body*. [Gr., *aden*, gland, + *eidōs*, appearance.]
- ad''enolipomato'sis.** A disease characterized by fatty deposits in the neck, axilla, and inguinal regions.
- ad''enolymph'ocle.** A cyst of a lymph
- node, due to the dilatation of lymph sinuses by an obstruction of the efferent lymphatics by inflammation or other causes.
- ad''enolymph'oma.** See *lymphadenoma*.
- adenoma** (ad-en-o'mah), pl., *adenomata*. Syn.: *glandular* or *adenoid tumor*. A benign tumor composed of glandular epithelium, arranged in acini, ducts, or solid rows of cells, according to its origin. The acini are contained in a connective tissue stroma and usually possess a basement epithelium. They originate from mucous surfaces and glandular organs, and usually produce an abnormal secretion.
- acinous a.** One that contains acinous gland structure. **multiglandular a.** An a. made up of a mass of altered small glands. **a. sebaceum.** An a. of the sebaceous glands. [Gr., *aden*, a gland, + *oma*, tumor.]
- adenomalacia** (ad''en-o-mal-a'se-ah). Softening of a gland. [Gr., *aden*, a gland, + *malakia*, softness.]
- adenomatous** (ad-en-o'mat-us). Relating to an adenoma.
- adenomyo'ma**, pl., *adenomyomata*. A tumor composed of smooth muscle tissue and containing gland tissue, generally occurring in the uterus. [Gr., *aden*, gland, + *mys*, muscle, + *oma*, tumor.]
- ad''enomixo'ma.** An adenoma having its stroma invaded by myxomatous material.
- adenopathy** (ad-en-op'ath-e). A general term for any morbid state of the lymphatic glands, especially a lymphadenitis due to infection. **syphilitic adenopathies.** Enlarged and indurated lymphatic glands symptomatic of syphilis; most commonly the inguinal, the posterior cervical, and the cubital. [Gr., *aden*, a gland, + *pathos*, a disease.]
- ad''enosarco'ma.** A false term, formerly used to describe what is now known as adenoma having a stroma of a very cellular type.
- adenoscirrhus.** Scirrhus of a gland, or an adenoma with its stroma infiltrated with carcinoma.
- adeno'sis.** Any disease of a gland or a set of glands.
- ad'eps.** 1. Animal fat, grease. 2. Lard, the prepared internal fat of the abdomen of the hog (*Sus scrofa*), purified by washing, melting and straining. A soft, white unctuous solid, having a faint odor, free from rancidity and a bland taste. Its chief use in pharmacy is as an ingredient of ointment. **a. anserinus.** **a. anseris.** Goose-grease; formerly used in pharmacy and still employed as a domestic remedy, both internally and externally. **a. benzoatus** [Br. Ph.] **a. benzoïnatus** [U. S. Ph.]. Benzoinated lard, prepared by melting lard and adding benzoïn. It is fragrant and does not become rancid. **a. lanæ.** The purified fat of sheep's wool. [U. S. Ph., Br. Ph.] **a. lanæ hydrosus.** Syn.: *lanolin*. Wool fat mixed with 30 per cent of water. **oleum adipis** [U. S. Ph.]. Lard oil; the fixed oil expressed from lard at a low temperature. It is rarely

- employed in medicine. [U. S. Ph.] [Lat., *adepts*, fat.]
- adequate.** The possession of sufficient functional activity to meet the requirements of the organism; said of the organs of the body. [Lat., *adaequare*, to make equal, sufficient.]
- adhesion** (ad-he'zhun). 1. The act of sticking or growing fast to. 2. The molecular force which causes bodies to attach themselves to each other when brought into contact. 3. A band of fibrous tissue in a serous cavity due to inflammation. [Lat., *adhaerere*, to stick to.]
- adhe'sol.** An antiseptic varnish consisting of copal resin, benzoin, balsam of tolu, oil of thyme, alpha-naphthol, and ether.
- adiabatic** (ad'i-a-bat'ik). In thermodynamics, a change in volume whether by expansion or contraction, unaccompanied by a gain or loss of heat. [Gr., *a*, priv., + *diabainein*, to pass through.]
- adiadochokine'sia, adiadochokinesis** (ah-de-ad'o-ko-kin-e'se-ah, or e'sis). A frequent sign of cerebellar pathway disease consisting in an inability to perform rapid alternating acts, in the absence of paralysis, such as pronation and supination, flexion and extension. [Gr., *a*, priv., + *diadochos*, succeeding, + *kinesis*, motion.]
- Adiantum** (ad-e-an'tum). A genus of ferns, distinguished by special coverings (*indusia*) for the fruit dots (*sori*), formed by a reflection of distinct portions of the edge of the frond. **A. capillus Veneris.** Maidenhair; a European species reputed to be expectorant, aromatic, and stimulant. **A. pedatum.** Canadian (or American) maidenhair; indigenous to North America; used as an expectorant, chiefly in France, and often substituted for *A. capillus Veneris*. [Gr., *adiantos*, *adianton*, from *a*, priv., + *diainein*, to moisten, because it sheds water.]
- adiaphoresis** (ah-di-af-o-re'sis). Deficiency or suppression of perspiration. [Gr., *a*, priv., + *diaphoresis*, a sweating.]
- adiaphoria.** 1. Morbid indifference. 2. Neutrality, as of a chemical substance. [Gr., *adiaphoria*, indifference.]
- adiathermic** (ah-di-ath-er'mik). Impervious to heat. [Gr., *a*, priv., + *dia*, through, + *thermainein*, to heat.]
- adipate.** A salt of adipic acid.
- adipocere** (ad'e-po-ser). Grave-wax or corpse fat; a peculiar soft, white material consisting of a mixture of the fatty acids (especially palmitic acid) produced by the decomposition of animal matter under the influence of moisture without the access of air; discovered by Fourcroy in Paris in 1786. Regarded as a soap. Buried corpses have been found converted into it. [Lat., *adepts*, fat, + *cera*, wax.]
- adipofibroma** (ad-ip-o-fi-bro'mah). A benign tumor composed of fatty and fibrous tissue. [Lat., *adepts*, fat, + *fibroma*.]
- adipolysis** (ad-ip-ol'is-is). The enzymatic hydrolysis of fats. [Lat., *adepts*, fat, + Gr., *lysis*, solution.]
- adipoma** (ad-ip-o'mah). See *lipoma*.
- ad'ipose.** Fatty, pertaining to fat, especially to tissue containing fat. [Lat., *adepts*, fat.]
- adiposis** (ad-ip-o'sis). Increased fat, corpulence, fatty degeneration. **a. cerebrealis.** Adiposis of cerebral origin, usually hypophysial. **a. dolorosa.** A condition of the subcutaneous connective tissue showing many areas of fatty tissue and painful to touch. **a. hepatica.** Fatty degeneration, or infiltration of the liver. [Lat., *adepts*, fat.]
- adiposogenitalis** (ad-ip-o'so-jen-it-al'is). A condition characterized by progressive accumulation of adipose tissue, and lack of development of the primary and secondary sexual characters.
- adiposuria.** Fat in the urine. [Lat., *adepts*, fat, + Gr., *ouron*, urine.]
- adip'sia.** Absence of thirst; a phenomenon observed in certain grave diseases, but a natural condition in some aged persons. [Gr., *a*, priv., + *dipsa*, thirst.]
- ad'itus.** An approach; an entrance. **a. ad antrum.** The recess of the tympanic cavity, which lodges the head of the malleus and the greater part of the incus. **a. ad aquaeductum Sylvii.** The entrance to the sylvian aqueduct, situated at the lower posterior angle of the third ventricle of the brain. **a. ad infundibulum.** A small canal leading from the third ventricle into the infundibulum. **a. ad laryngem, a. laryngis.** Upper aperture of larynx. [Lat., *adire*, to go to.]
- adjustment** (ad-just'ment). The process of setting right, regulating, arranging. Said of the mechanism for raising or lowering the tube of a compound microscope. It is coarse if the screw raises or lowers the tube quickly and fine if it raises or lowers it slowly. [Fr., *adjuster*, now *ajuster*, to arrange.]
- ad'juvant.** Auxiliary, assisting; in therapeutics, a measure or drug designed to assist the action of the principal means. [Lat., *adjuvans*.]
- ad lib.** Abbreviation for Lat. *ad libitum*, at pleasure, or as desired.
- admixture** (ad-miks'tür). 1. The act of mixing or of adding to a mixture. 2. The compound formed by mixing different substances. [Lat., *admixio*, a mingling.]
- ad'mov.** Abbreviation for Lat. *admove*, *admoveatur*, imperat. sing. and 3rd pers. sing. subj. pass. of *admove*, to apply. Directions used in prescriptions signifying "apply" and "let there be applied."
- adnephrin** (ad-nef'rin). See *adrenalin*.
- adnex'a.** Appendages. **a. bulli oculi.** The appendages of the eyeball, as lids, and lacrimal glands. **a. uteri.** See *uterine appendages*, under *appendage*. [Pl. of past ppl. of Lat., *adnectere*, to join to.]
- adoles'cence.** Period between puberty and full development. [Lat., *adolescentia*.]
- adoles'cent.** 1. (Adj.) pertaining to adolescence; at the age of adolescence; growing. 2. (N.) a person at the age of adolescence. **a. cardiopathy.** The weak heart of young, rapidly growing persons fourteen and seventeen years of age. **a. insanity.** Clouston's term for

- a number of psychoses of youth, later resolved chiefly into group of dementia praecox, and of manic depressive psychosis. [Lat., *adolescens*.]
- adon'idin.** A glucosid with the action of digitalis extracted from *Adonis vernalis*. Commercial a. is impure.
- ado'nin.** A glucosid cardiac stimulant, $C_{20}H_{40}O_8$, obtained from *Adonis amurensis*, a ranunculaceous herb.
- Ado'nis.** A genus of the *Ranunculaceae*.
A. estivalis. Pheasant's eye; a species growing in England and on the continent of Europe. **A. verna**, **A. vernalis.** A species indigenous to Europe and cultivated in the United States. The fresh plant is a vesicant, but its irritant property is lost by drying. It is employed as a cardiac stimulant. It yields the glucosid adonidin. [From *Adonis*, from whose blood the plant was fabled to have sprung.]
- ado'ral.** Situated near mouth in distinction from *aboral*, away from mouth. [Lat., *ad*, near, + *os*, *oris*, mouth.]
- adrenal** (ăd-rĕn'ăl). One of the endocrinous glands situated near the kidney. [Lat., *ad*, to, + *ren*, gland.]
- adrenalin** (ad-re'nal-in). Syn.: *epinephrin*. The blood pressure raising principle or hormone of the adrenal gland. A white crystalline substance $(OH)_2C_8H_{17}CHOH.CH_3.NH.CH_3$. Its aqueous solution is slowly oxidized upon exposure to the air. It is a very valuable hemostatic, used in solution of 1-5000 locally, 5-30 m. internally.
- adrenal'itis, adreni'tis.** Inflammation of the suprarenal gland. [Lat., *ad*, near, + *ren*, kidney, + Gr., *itis*, inflammation.]
- adreucain** (ad'ru-kān). A name given to a solution of epinephrin and eucaïn.
- ad'rin.** See *epinephrin*.
- adrovain** (ad'ro-vān). A name given to a solution of epinephrin and stovain.
- adsorp'tion.** The power possessed by certain substances of retaining in their surface, gases, liquids, and solids, either in solution or in the colloidal state. [Lat., *ad*, to, + *sorbere*, to suck.]
- adstringens** (ad-strin'jens). Astringent.
a. Fothergillii. Kino.
- adult'**. 1. (Ādj.) having reached the stage of full development (said of living organisms). 2. (N.) a fully developed individual. [Lat., *adultus*, full grown.]
- adulterant** (ă-dul'ter-ant). 1. A substance with which an article is adulterated. 2. One who adulterates.
- adulteration** (ă-dul'ter-ă'shun). 1. The fraudulent addition of worthless or injurious material to an article. 2. The state of being adulterated. 3. A substance used in adulterating. [Lat., *adulterare*, to pollute.]
- advancement.** A process of surgery by which a tendon is severed and reattached at a point in advance of its original attachment. **capsular a.** The artificial attachment of a part of Tenon's capsule in such a way as to draw forward point of insertion of an ocular muscle.
- adventi'tia** (ad-ven-tish'yah). Any membrane covering an organ but not made up of the tissues of that organ. The outer connective tissue coat of blood vessels; tunica adventitia. [Lat., *adventitius*, foreign, from *ad*, to, + *venire*, to come.]
- adventi'tious.** Accidental or against in distinction to natural or hereditary. [Lat., *adventitius*.]
- adynamia** (ah-din-a'me-ah). Loss of or deficiency of vital power. [Gr., *adynamia*, from *a*, priv., + *dynamis*, power.]
- adynamic** (ah-din-am'ik). Lacking in strength or power.
- ae.** For words beginning with the diphthong æ see *e*.
- a'ërate.** 1. To supply with air, especially new or fresh air; to ventilate. 2. To charge with gas, especially carbon dioxide; to expose to the action of carbon dioxide. 3. To arterialize. [Gr., *aer*, Lat., *aer*, air.]
- aërial** (a-ë're-al). Pertaining to the air, existing or moving in the air. **a. perspective.** The term used to express the fact that in vision we obtain an idea of depth or perspective from the haze covering distant objects, due to thickness of intervening atmosphere, e. g., mountains in the distance. [Lat., *aërius* or *aëreus*, airy.]
- aëri'fication** (ă-e-rif-i-ka'shun). 1. The conversion of a solid or a liquid into the gaseous state. 2. The introduction of air into anything. 3. State of being filled with air. 4. State of being aeriform. [Lat., *aer*, air, + *facere*, to make.]
- a'ëri'fied.** 1. Converted into air or gas. 2. Filled or combined with gas.
- a'ëri'form.** Having the form or the nature of air or of gas. [Lat., *aer*, air, + *forma*, form.]
- aëro-** (a'ë-ro). Combining form of Gr. *aero-*, from *aer*, *aeros*, air, the atmosphere, used in compound words to denote of or pertaining to the air.
- aërobe** (a'er-ōb), pl. *aërobia*, *aërobes*. An organism requiring air or oxygen in order to live or develop. Commonly used in connection with bacteria or other low forms of vegetable life. **facultative aërobia.** Plants which grow better when oxygen is present, but may develop (less favorably) when oxygen is excluded. [Gr., *aer*, air, + *bios*, life.]
- aërobic, aërobiotic** (a'er-o'bik, a'er-o-bi-ot'ik). Growing only in free air and oxygen. [Gr., *aer*, air, + *bios*, life.]
- aëro'bion**, pl., *aërobia*. A plant needing free oxygen in order to grow. [Gr., *aer*, air, + *bios*, life.]
- aërobioscope** (a'er-o-bi'o-skōp). An instrument for determining the bacterial content of the air. [Gr., *aer*, air, + *bios*, life, + *skopein*, to observe.]
- aërocele** (a'er-o-sĕl). An air tumor. [Gr., *aer*, air, + *kele*, tumor.]
- aërocolpos** (a'ë-ro-kol'pos). Distension of the vagina with air. [Gr., *aer*, air, + *kolpos*, vagina.]
- aërocystoscopy** (a'ë-ro-sis-tos'ko-pe). Inspection of the bladder through an air-filled cystoscope. [Gr., *aer*, air, + *kystis*, bladder, + *skopein*, to inspect.]
- aërodynam'ics.** That branch of physics

which treats of the laws regulating the motion of elastic fluids, of atmospheric pressure, and of the mechanical effects of air in motion. [Gr., *aer*, air, + *dynamis*, power.]

aërogenesis (a-er-o-jen'e-sis). Gas production. [Gr., *aer*, air, + *genesis*, formation.]

aëromicrobe (a'er-o-mi'krōb). Any microscopic organism which requires free oxygen for the maintenance of its vitality. [Gr., *aer*, air, + *mikros*, small, + *bios*, life.]

aërophagy (a-er-of'a-gi). Swallowing of air. [Gr., *aer*, air, + *phagein*, to eat.]

aërosis (a-er-o'sis). The formation of gas in the organs or tissues of the body. [Gr., *aeresthai*, to become air.]

aërostatics. The science of the conditions of equilibrium of gases. [Gr., *aer*, air, + *statikos*, causing to stand.]

aërotherapy. See *pneumotherapy*. [Gr., *aer*, air, + *therapeia*, treatment.]

affect. Partly synonymous with emotion; feeling reaction.

affectio. A morbid condition. [Lat., *aficere*, to exert an influence upon.]

affective. Pertaining to the emotions, to instinctive feeling reactions, to unconscious feeling attitudes.

afferent. Serving to convey a fluid, like blood or lymph, to an organ or part (e. g., *a. vessels*). **a. nerves**. Those conveying nerve impulses from the periphery to the nerve centers. [Lat., *afferens*, from *adferre*, to bear to.]

affinity. 1. Relationship or kinship. 2. In chemistry, the attraction of elements or groups of elements for each other or the tendency of dissimilar substances to unite with each other. 3. In teratology, the tendency of double monsters to unite with each other. **a. of composition**. The tendency displayed by two or more substances to unite directly to form a compound without the destruction of any previously existing compound. **elective a.** That force by which a substance elects to unite with one substance rather than another. [Lat., *affinitas*.]

affluent (af'flu-ent). 1. Flowing toward; proceeding in a determinate direction. 2. In pathology, accumulating in excess in one part or organ; producing an afflux. 3. Confluent. [Lat., *affluens*, flowing to.]

afflux, **affluxion** (af'flucks, af-fluck'shon). A flowing to or into; in pathology, the accumulation of an unnaturally large quantity of fluid in any part of the body. [Lat., *affluere*, to flow toward.]

affusion. A pouring upon; especially the discharge of liquid from a reservoir upon any part of the body. It differs from douching in that the water is poured from a height. **cold a.** A method of cooling the body in fevers by pouring cold water over the patient. [Lat., *affusio*, noun of action from *affundere*, to pour upon.]

African lethargy. The African sleeping sickness.

afridol. Sodium hydroxymercuric tolylate, $\text{CaH}_3(\text{CH}_3)(\text{COONa})\text{HgOH}$, 2 : 3 : 1. An odorless, tasteless white powder solu-

ble with difficulty in neutral or acid mediums but soluble in an ammoniacal solution containing ammonium chlorid. It is said to be of value as a disinfectant and has been recommended in the treatment of parasitic diseases of the skin and scalp. It is on the market only as afridol soap which contains 4 per cent. of a.

after-action. A term used particularly in connection with nerve centers to designate the fact that they continue to react for some time after the stimulus ceases. In the sensory centers this action gives rise to after-sensations.

afterbrain. See *metencephalon*.

after-damp. The irrespirable mixture of carbon dioxide, carbon monoxid and other gases formed as the result of the explosion of fire-damp in coal-mines.

after-image. An impression of an object upon the retina which remains for a certain time after the light is withdrawn. **colored a.-i's**. Retinal impressions of objects looked at, which remain after the object has passed away from the field of vision. They may be either of the same color as the object or of a complementary color. **negative a.-i's**. A.-i's in which what is bright in the image corresponds to what is dark in the object, and *vice versa*; or in case of colored objects are complementary. **positive a.-i's**. Those in which the after-image retains its normal colors.

after-pains. Painful contractions of the uterus after delivery.

after-sensation. The persistence of a sensory perception after the sensory stimulus which gives rise to it has ceased to act.

after-treatment. A term generally applied to the management of a case after a surgical operation.

Ag. Chemical symbol for the element silver (*argentum*).

agalactia (ah-gal-ak'she-ah). A failure of the mammary secretion to appear after confinement or its untimely disappearance. [Gr., *a*, priv., + *gala*, milk.]

agalactorrhea (ah-gal-ak-to-rhe'ah). That form of agalactia in which there is a cessation of the flow of milk, as distinguished from an original absence of the secretion. [Gr., *a*, priv., + *gala*, milk, + *rein*, to flow.]

agamogenesis (a-gam-o-jen'e-sis). The production of offspring otherwise than by the union of parents of distinct sexes; asexual reproduction. [Gr., *agamos*, unmarried, + *genesis*, generation, birth.]

agar, **agar-agar**. A substance resembling isinglass, consisting of a dried seaweed, brought into commerce from the East Indies under the form of transparent colorless strips, almost wholly soluble in water. It absorbs water in the stomach and intestines and forms a jelly, which, being indigestible, increases the bulk of the feces. It is employed as a medium for the cultivation of the bacteria, and for making suppositories; more recently used in the treatment of constipation. [E. Ind.]

agaric (ag-ar'ik). A broad group of fungi. Especially belonging to genus *Agaricus*. **fly a.** *Amanita (Agaricus) muscaria*, *Amanita (Agaricus) phalloides*, two poisonous species; the latter often confused with *Psalliota (Agaricus) campestris*, the field mushroom. [Gr., *agarikon*, a tree fungus.]

agaricin (ag-ar'is-in). 1. A poisonous principle obtained from white agaric. It is official in Ger. Ph. as *agaricimum*, and is called agaric, or agaricic, acid. It should be prescribed under the name of agaric acid in order to insure uniformity. 2. An impure alcoholic extract of white agaric, improperly called agaricin, and commonly sold when agaricin is called for.

Agaricus (ag-ar'ik-us). 1. A large group of hymenomycetous fungi, divided into many sub-genera, now given generic rank. The group contains a large number of edible and a small number of poisonous species. Some of the more noteworthy are: **A. (Psalliota) campestris**. The usually eaten field mushroom. **A. chirogorum**. See *amadou*. **A. muscarius**. Syn.: *Amanita muscaria*. Fly agaric; bug agaric. A very poisonous species belonging to the *Amanita*, and containing the alkaloid *muscarin*. It must be carefully distinguished from the edible *A. caesareus*. **A. phalloides**. Syn.: *Amanita phalloides*. A very poisonous species also containing amanita toxin and a glucosid. **A. venenosus**. Probably *Amanita verna*, also a poisonous species, smaller than *Amanita phalloides*, and frequent at the edge of woods and fields. [For deriv. see *agaric*.]

ag'athin. A proprietary name for salicyl-methylphenylhydrazone. A greenish white crystalline substance used in neuralgia and rheumatism in the same manner as salicylic acid. [Gr., *agathos*, good.]

agenesia, agenesis (ah-jen-e'se-ah, ah-jen'esis). 1. Defective development or absence of a portion of the body. 2. Impotence or barrenness. [Gr., *a*, priv., + *genesis*, creation.]

agenosomus (ah-jen-os-o'mus). A monster characterized by median or lateral evagination, especially at the lower part of the abdomen, with defective development of the genitals. [Gr., *a*, priv., + *gennan*, to produce, + *soma*, body.]

ageusia (ah-gu'se-ah). Loss of the sense of taste. [Gr., *a*, priv., + *geusis*, the sense of taste.]

ag'ger. A prominence, as *a. nasi*, a ridge on the outer wall of the middle meatus of the nose. **a. perpendicularis, a. ponticulcus**. See *eminentia scaphae*, under *eminentia*. **a. valvarum venarum**. A little projection of the valves of a vein with the wall of the vessel. [Lat., *agger*, a heap.]

agglomerated (ag-lom'er-ā-ted). A term used in descriptive bacteriology meaning clustered together in a group, but not cohering. [Lat., *agglomeratus*.]

agglu'tinant. 1. Promoting the repair of

wounds by adhesion (said of sticking plaster and the like). 2. As formerly used, a medicine which favored the union of wounds by promoting absorption. 3. As a noun, agar, gelatin, and similar substances. [Lat., *agglutinans*, from *agglutinare*, to glue to.]

agglutina'tion. 1. The process of union in the healing of a wound. 2. In immunity the term is used to designate the loss of motility and the clumping together of motile bacteria in fluids or the grouping of cells, such as red blood corpuscles or trypanosoma by means of the serum of normal or of immunized animals. See *Widal's a. test.* **a. maxillae inferius**. Trismus. **a. squamaformis**. See *false suture*, under *suture*. **chief a.** See *haupt-agglutinin*. **immediate a.** The healing of a wound by simple adhesion. **major a.** See *haupt-agglutinin*. **mediate a.** Healing by the interposition of new material. **minor a.** See *metagglutinin*. **partial a.** See *metagglutinin*. [Lat., *agglutinatio*, n. of action from *agglutinare*, to glue to.]

agglu'tinin. A bacteriotropic principle contained in the normal serum, which is greatly increased by any of the intestinal infectious bacterial diseases and can also be produced artificially by the injection of non-fatal doses of such bacteria as *Bacillus typhosus* and *Spirillum cholerae* into animals. The serum of such animals will agglutinate the organism used for injection in very high dilution, the agglutinin combining with the receptors of the bacterial cell. It is destroyed by 75° C., acids and alkalis, and consists of two groups, a *combining* and an *agglutinating group*. **chief a.** See *haupt-a.* **group a.** An a. consisting of certain substances which act specifically on one species, but containing others which, in addition, will act on another species. This explains immune typhoid serum acting in a lower dilution on the paratyphoid bacillus. **haupt-agglutinin**. See under special heading. **ido-a.** An a. consisting of substances acting specifically on a single species of cells. **major a.** See *haupt-a.* **minor a.** See *metagglutinin*. **partial a.** See *metagglutinin*.

agglutin'ogen. The antigen or substance in the foreign cell, which produces the agglutinin when injected into an animal.

agglu'tinoid. An agglutinin changed by heating to 65° C., or by the action of acids, so that its active group, or agglutinating receptors, can no longer act. Its combining or haptophorous group can still unite with the combining receptors of the bacterium.

agglutogen'ic. Causing the formation of agglutinins.

agglutom'eter. An instrument containing a suspension of dead typhoid bacilli and used for obtaining the macroscopic agglutination test from diluted typhoid blood.

aggressin (ag-res'in). A supposititious substance, produced by living organisms injected into animals, and liberated as an

- endotoxin by bacteriolysis. It is supposed to inhibit the action of the leukocytes preventing phagocytosis, and the bacteria thus become more aggressive. Virulent organisms thus produce their own antibodies as a defense to themselves. [Lat., *aggressor*, an assailant.]
- aglobulia, aglobulism** (ah-glo-bu'le-ah, ah-glo'bu-lism). A deficiency in the number of the red corpuscles of the blood. Oligocythemia. [Gr., *a*, priv., + Lat., *globulus*, a globule.]
- aglossia** (ah-glos'se-a). 1. Congenital absence of the tongue. 2. Loss of the faculty of speech. [Gr., *a*, priv., + *glossa*, tongue.]
- aglossostoma** (ah-glos-sos'to-mah). A monster showing absence of the tongue and closure of the mouth. [Gr., *a*, priv., + *glossa*, tongue, + *stoma*, mouth.]
- ag'mina**. Collected multitudes. **a. digitorum manus**. The phalanges of the fingers. [Lat., pl. of *agmen*, a crowd.]
- ag'minate**. Arranged in clusters. [Lat., *agmen*, a group.]
- agnathia** (ag-na'the-ah). Congenital absence of one or both jaws. [Gr., *a*, priv., + *gnathos*, jaw.]
- agné'a, agnoí'a**. Loss of the perceptive power either tactile, auditory, optic, gustatory, etc. [Gr., *agnóia*, from *agnóein*, not to perceive.]
- ag'nin**. A fat prepared from sheep's wool. [Lat., *agnus*, a lamb.]
- agnosia** (ag-no'se-ah). Inability to recognize the import of sensory stimuli. [Gr., *a*, priv., + *gnosia*, perception.]
- ag'ogue**. A suffix denoting agents causing evacuation or flow, as hydragogue, emmenagogue. [Gr., *agoge*, a carrying off.]
- agomphosis** (ah-gom-fo'sis). Loosening of the teeth from disease. [Gr., *a*, priv., + *gomphoein*, to fasten with nails.]
- ag'ony**. 1. Anguish of mind; sore trouble or distress. 2. The death struggle. [Lat., *agonia* (Gr., *agonia*), contest, struggle.]
- agopyrin** (ag-op-ir'in). A proprietary preparation, containing ammonium chloride, cinchonin sulphate and salicin.
- agorapho'bia**. Morbid fear of open spaces. [Gr., *agora*, a market place, + *phobos*, fear.]
- ag'ra**. A suffix signifying severe pain as in *podagra*. [Gr., *agra*, a seizure.]
- agrammatism**. An aphasic disturbance characterized by "inability to form words grammatically and to arrange them in sentences syntactically." See *paraphasia*. [Gr., *agrammatos*, unable to read or write.]
- agraphia** (ah-graf'e-ah). Inability to write, due to disease of the central nervous system. A mental defect in which the patient finds it difficult or impossible to recall or arrange written characters. [Gr., *a*, priv., + *graphie*, the art of writing.]
- Agrimonia** (ag-ri-mo'ni-ah). Liverwort; a genus of the suborder *Roseae*, tribe *Rosidaeae*. **A. eupatoria**. Hemp-agrimony. A species growing wild in the United States and Canada. It contains a bitter principle and tannic acid, and is sometimes used as a tonic and astringent. [Gr., *agros*, field, + *monos*, alone.]
- agrip'pa**. A person born feet foremost. [Probably from the Roman family name, one of the Agrippas having been born feet foremost.]
- agroma'nia**. A passion for solitude or a country life. [Gr., *agros*, field, + *mania*, madness.]
- agryp'nia**. Persistent insomnia. [Gr., *agrypnos*, sleepless.]
- ague** (a'gu). A popular name for malaria. See *malaria*. **latent a.** 1. Intermittent fever in which the paroxysms are not attended with a chill. 2. A form without paroxysms, in which there is a feeling of great depression and chilliness, pains, and a coated tongue. [Fr., *aigu*, acute.]
- ag'urin**. Theobromin and sodium acetate; a proprietary diuretic.
- aho'ra**. Retarded development. [Gr., *aoros*, untimely, immature.]
- Ailanthus, Ailantus** (a-lan'thus, a-lan'tus). Syn.: *Chinese sumach*; *tree of heaven*. A genus of the *Simarubaceae*. **A. excelsa**. An East Indian species; the bark is used in India as a tonic and febrifuge. **A. glandulosa**. A large tree indigenous in Eastern Asia, cultivated in the United States as a shade tree. It is sometimes used medicinally. [Chinese, *ailanto*.]
- ailuropho'bia**. Cat phobia or compulsion. [Gr., *ailourus*, cat, *phobos*, fear.]
- ainhum** (án'hum). A disease of African countries characterized by the formation of a constricting ring around one or more digits, usually the little toe, and the gradual spontaneous amputation of the affected part. [Said to be an African word meaning "to saw."]
- air**. A name originally applied to any gas. It is now restricted to the gas forming the earth's atmosphere, which is a mixture of 78 per cent. nitrogen, 21 per cent. oxygen, 0.03 per cent. carbon dioxide, and 0.94 per cent. argon by volume. It contains beside very small amounts of helium, krypton, neon, and xenon. It may also contain water vapor, ammonia, nitric acid, nitrous acid and ozone, beside other occasional vapors. **alveolar a.** The air contained in the alveoli of the lungs. **complemental a.** The volume of a. in addition to the tidal a. which may be drawn into the lungs by a forced inspiration. **dephlogisticated a.** Oxygen. **expired a.** The a. forced from the lungs in respiration. **inspired a.** The a. taken into the lungs in inspiration. **fixed a.** Carbon dioxide. **liquid a.** A. condensed by pressure to the form of a liquid. It has been used as a refrigerant and caustic. **minimal a.** The small amount of a. left in the lungs after their collapse from the opening of the chest wall. It is the a. entrapped in the alveoli by occlusion of the small bronchioles opening into the alveoli. **reserve a.** Syn.: *respiratory reserve*. The volume of a. that may be voluntarily forced from the lungs after an ordinary respiration. **residual a.** Syn.: *respiratory residue*. The volume of

- a. that remains in the lungs after the most forcible respiration. **stationary a.** The amount of a. which remains constantly in the lungs in ordinary respiration. **supplemental a., supplementary a.** See *reserve a.* **tidal a.** Syn.: *breath, breathing a., breathing volume.* The volume of a. taken in at one inspiration in ordinary tranquil breathing. For other combinations of the word *air*, as *air-chamber, air passages*, see *separate heads.* [Gr., *aer.* Lat., *aer, air.*]
- air-chamber.** In prosthetic dentistry improperly used for vacuum-chamber.
- airol** (a'e-röl). Bismuth oxyiodogallate. A dark grayish green, odorless and tasteless powder. An external antiseptic, used in a 10 per cent. emulsion in gonorrhoea.
- air passages.** The passages through which air reaches the vesicular structure of the lungs, including the nasal passages, mouth, larynx, trachea, and bronchial tubes.
- a'ja-a'ja.** See *agar-agar.*
- ajowan** (aj'ow-an). See *Carum ajowan*, under *Carum.* A stearopten obtained from the essential oil of a.; the same as thymol.
- ak.** For words in *ak* see *ac.*
- akath'isia.** A phobic or compulsive idea preventing one from sitting down and frequently related to an unconscious infantile fecal fantasy. [Gr., *a, priv., + kathesthai*, to sit.]
- Al.** Chemical symbol for the element *aluminium.*
- ala** (a'lah). Pl. *alae.* 1. A wing-like structure. 2. Any winglike process of a bone, a muscle, or any other part of the body. 3. The pavilion of the ear. **alae atlantis.** The transverse process of the atlas. **a. auris, a. auriculae.** The pinna of the ear. **a. cinerea.** A small triangular tract of gray matter in the lower part of the fourth ventricle. **a. descendens.** The pterygoid process of the sphenoid bone. **alae diaphragmatis.** The lateral segments of the diaphragm. **a. fornicis.** The posterior pillar of the cerebral fornix. **a. lobus centralis.** A lateral part of the lobus centralis cerebelli. **alae magnae.** The great, or temporal wings of the sphenoid bone. **alae narium, alae nasi.** The lower lateral cartilages of the nose. **alae of the sacrum.** The wings of the sacrum. **alae parvae.** The lesser, or orbital wings of the sphenoid bone. **alae ptergoideae.** The pterygoid processes of the sphenoid bone. **alae vespertilionis.** Lit., "bat's wings." The broad ligaments of the uterus, so-called from their resemblance to the outspread wings of a bat. [Lat., *ala*, a wing.]
- alalia** (ah-la'le-ah). Inability to utter words, especially when due to injury or disease of the vocal apparatus itself or the peripheral nervous mechanisms. [Gr., *a, priv., + lalein*, to talk.]
- al'anin.** Syn.: *lactamic acid, a. amidopropionic acid.* A body, $\text{CH}_3\text{CHNH}_2\text{COOH}$, formed by the hydrolysis of proteins.
- alan'tin.** Inulin.
- alan'tol.** An oily liquid, boiling at 200°C ., and having probably the composition $\text{C}_{10}\text{H}_{16}\text{O}$, obtained from ecampane root and forming what was formerly known as helenin.
- alapu'rin.** A purified fat made from wool.
- a'lar.** 1. Pertaining to a wing. 2. Pertaining to the shoulder or the axilla. [Lat., *alaris.*]
- alba** (al'bah). The white substance of the central nervous system. [Lat., fem. of *albus*, white (*substantia* understood).]
- albargin** (al-bar'jin). Gelatin silver. A compound of silver nitrate with gelatin, containing from 13 to 15 per cent. of silver. It is used as a substitute for silver nitrate in the treatment of gonorrhoea.
- albe'do.** Whiteness. **a. unguium.** The white part at the base of the nail; the lunule. [Lat., *albere*, to be white.]
- albidurea** (al-bid-u're-ah). Excretion of a white or pale urine. [Lat., *albidus*, whitish, + Gr., *ouron*, urine.]
- al'binism.** A congenital absence of pigment in the skin. It may be complete or confined to limited areas.
- albi'no.** A person in whom the normal pigmentation of the epidermis, the hair, the iris, and the choroid is congenitally deficient, the skin being uncommonly white, the hair yellowish, resembling flax or silk in color; and the eyes pinkish and more or less affected with photophobia, blepharospasm, and occasionally, nystagmus. [Span. or Port., *albino*, orig. whitish, from *albo*, white. Lat., *albus.*]
- albofer'rin** (al-bo-fer'in). A proprietary preparation of iron.
- al'bolene, al'bolin.** A proprietary liquid petrolatum. It is nearly colorless.
- albuginea** (al-bu-jin'e-ah). A layer of firm, white, fibrous tissue forming the investment of an organ or part. **a. epididymidos.** The fibrous coat of the epididymis, resembling the *a. testis*, but much less firm and strong. **a. lienis.** Syn.: *tunica propria of the spleen.* The white, highly elastic fibrous coat, lying directly beneath the serous investment of the spleen. **a. ovarii.** The layer of firm fibrous tissue lying beneath the epithelial covering of the ovary. **a. penis.** A strong, very elastic white fibrous coat, forming an investment common to both corpora cavernosa of the penis. **a. renis.** The fibrous capsule of the kidney. **a. testiculi, a. testis.** The thick, unyielding layer of white fibrous tissue lying beneath the tunica vaginalis. [Lat., *albus*, white.]
- albugin'eous, albu'ginous.** Of or pertaining to the albuginea.
- albugo** (al-bu'go). A white spot or film upon the cornea. [Lat., *albus*, white.]
- albu'kalin.** A body, $\text{C}_8\text{H}_{16}\text{N}_2\text{O}_6 + \text{H}_2\text{O}$, found in the blood of leukemic patients.
- albu'men.** 1. An old name for albumin. 2. Term still applied at times to the white of an egg. **test solution of a.** A filtered solution of the white of one egg in

100 c.c. of distilled water [U. S. Ph.] [Lat., *albumen*, *albuminis*, white of egg.]

albumin. A group of protein substances, one of which is the chief and characteristic constituent of white of egg; substances also found in the blood, in chyle, lymph, and all serous fluids, as well as in the juice of flesh, in the brain, the pancreas, and the liquor amnii, and generally in all transudations from the blood vessels. They are coagulable by heat and by treatment with strong acids. In certain diseased conditions they are found in the urine. See *albuminuria*. They are present, in small quantities, in vegetable juices. In their chemical behavior the albumins are weak acids, forming salts (*albuminates*) with bases; they also combine with acids to form the compounds known as *acid a's*. For the properties and chemical composition of the different varieties of a. see *egg a.*, *serum a.*, and *vegetable a.* **acid a.** A compound formed by the action of an acid upon a. **a. in urine, how to determine the amount present;** see in *appendix*, page 893. **a. in urine, test for,** see in *appendix*, page 893. **alkali a.** The product formed by the action of weak alkalis upon albumin. **Bence-Jones a.** See under *Bence-Jones*. **blood a.** See *serum a.* **circulating a.** 1. Voit's term for the albumin present in the liquids of the body in non-organized form but utilizable by the tissues in metabolism. The term is contrasted with tissue albumin or protein contributing part of the living tissue. 2. A. in solution in the lymph as distinguished from that stored in the tissues. **crystalline a.** Different crystalline forms obtained from seeds and nuts. **egg a.** [*albumen ovi*, Br. Ph., 1867]. The variety of a. occurring in white of egg. **incipient a.** A name given by Prout to a variety of imperfect a. present in chyle and in chylous urine. **muscle a.** A variety of a. present in small quantities in the aqueous extract of muscular tissue. **myosin a.** Of F. W. F. Ross, the mixed a's of meat. **native a.** An a. occurring in the natural state in animal or vegetable tissues or juices. **serum a.** Syn.: *blood a.* The variety of a. present in blood serum and supposed to be identical with the form usually found in albuminous urine. **soluble a.** A. that has not been coagulated or so changed by chemical reagents as to be insoluble in water. **vegetable a.** The variety of a. found in vegetable tissues and juices. **wehy a.** An albuminous substance, readily soluble in water, obtained, along with another less soluble a., from whey. [Lat., *albumen*.]

albuminate. A compound of albumin with a base or an acid. See *acid* and *alkali albumin*.

albuminid. Acid albumin derived from serum albumin by the action of dilute acids.

albuminiferous. Producing or generating albumin. [*Albumin* + Lat., *ferre*, to bear.]

albuminimeter (al-bu-min-im'et-er). An

apparatus for estimating the amount of albumin in a liquid. [*Albumin* + Gr., *metron*, a measure.]

albuminoid. 1. (Adj.) Resembling albumin; of or pertaining to a substance resembling albumin. See *a. degeneration*. 2. (N.) One of a class of very complex nitrogenous substances called proteins of which ordinary albumin is a type.

albuminous. Of or pertaining to albumin; containing albumin.

albuminuria (al-bu-min-u're-ah). 1. The presence of albumin in the urine. 2. That condition or habit of the body in which there is a tendency to the discharge of albumin in the urine. It is often used as a synonym for Bright's disease. See also *globulinuria* and *peptonuria*. **acute a.** Acute Bright's disease. **a. gravidarum.** A. occurring during pregnancy. **a. renalis.** Nephrogenous a. **cardiac a.** A. which has for its cause some disease of the heart. **chronic a.** Chronic Bright's disease. **cyclic a.** Of F. W. Pavy, "a. in the apparently healthy," "intermittent a." or "a. in adolescents," from his observation of a diurnal periodicity in the maximum excretion of albumin. **dietetic a.** Temporary a. due to taking large quantities of albuminous food. **false a.** A. in which some albuminous substance, usually nuclear albumin, not serum albumin, appears in the urine. **febrile a.** A. due to a febrile condition. **functional a.** A. due to digestive or neurotic disturbances or to alterations in the composition of the blood. **hematogenous a.** A. due to some morbid condition of the blood and not to any structural disease of the kidney. **mixed a.** A combination of true and false a.; i. e., an a. in which the urine contains albumin derived from the blood circulating in the kidneys, together with blood, pus, and mucus from the urogenital tract. **nephrogenous a.** A. due to kidney disease, as distinguished from hematogenous a. **pathological a.** A. dependent upon some diseased condition, as distinguished from physiological a. **physiological a.** A temporary a. occurring in a healthy condition of the body and having no pathological significance. **sero-a.** A. in which only serum albumin is found in the urine. **toxic a.** A. dependent upon the introduction of a poison into the system. **true a.** A. in which the albumin enters the urine at the time of its secretion in the kidneys. [Lat., *albumen*, + Gr., *ourein*, to urinate.]

albumose. The mixture of soluble substances formed in the peptic digestion of proteins and precipitated by saturation with ammonium sulphate. They are probably mixtures of polypeptides. See *anti-albumose*, *deutero-albumose*, *dysalbumose*, *hemi-albumose*, *hetero-albumose*, *protalbumose*.

albumosuria. A morbid condition characterized by albumose in the urine. **myelopathic a.** Invasion of the cancellous tissue of the bones of the trunk by a cellular growth, with disappearance of

that tissue and the presence of large quantities of albumose in the urine.

alcaptonuria (al-kap-to-nu're-ah). An abnormal condition of human metabolism in the human body. The urine contains homogentisic acid, which is formed from the tyrosin and phenylalanin groups of the protein molecules.

alcarnose (al-kar-nös). A proprietary preparation of predigested meat.

alcarome (al'kar-öm). An aromatic liquid, proposed as a base for elixirs, made from coriander, oil of cassia, magnesium carbonate and cardamom seeds, digested in alcohol.

alchemy (al'kem-e). The crude beginnings of chemistry in the Middle Ages. Much occupied with seeking the elixir of eternal life and the transmutation of metals into gold. [Arab., *Al-kimiä*.]

alcohol (al'ko-hol). 1. The pure spirit of wine, ethyl alcohol or ethyl hydroxid, C_2H_5OH , obtained by distillation from all liquids which have undergone vinous fermentation. When it contains about an equal weight of water, it is termed proof spirit. The first product of distillation is technically called *low wines* and is again subjected to distillation. The latter portions of what comes over are called *feints* and are reserved for a further process in the wash-bowl. The second product is termed *raw spirit* and when again distilled is called *rectified spirit*. The strongest alcohol that can be produced is termed *absolute alcohol*, or *anhydrous alcohol*, to denote its entire freedom from water. 2. The U. S. Ph. name for a liquid composed of 91 per cent. by weight (94 per cent. by volume) of absolute ethyl alcohol and 9 per cent. by weight (6 per cent. by volume) of water. Alcohol is used by some as a heart stimulant in diseases associated with debility or depression of the system, as typhoid and typhus fever, diphtheria, etc., generally in the form of wine or spirits. Locally, alcohol is antiseptic and astringent and is used in the preservation of anatomical and biological preparations. It is also universally used in the making of tinctures and fluid extracts. 3. A general name for organic hydroxid compounds, derived from hydrocompounds by replacing hydrogen by the group hydroxyl (OH). Alcohols are divided into *hydric*, *dihydric*, and *trihydric*, according as one, two, or three hydroxyl radicles enter into their composition. Alcohols are also divided into primary, secondary, and tertiary a's, according as the hydroxyl radicle is attached to a primary, secondary, or tertiary carbon atom. **absolute a.** See *a. absolutum*. **a. absolutum**. A liquid containing 99 per cent. of ethyl alcohol [U. S. Ph.; Br. Ph.]. See *ethyl a. a.* **amylicum** (amylic alcohol). 1. A name for fusel oil, an oily, nearly colorless liquid having a strong, offensive odor and an acrid taste. It is an active irritant poison. See *fusel oil*. 2. Any one of the alcohols, which contain five carbon atoms, $C_5H_{11}OH$. The isobutyl a. is the chief

constituent of fusel oil. **a. dilutum**. A liquid containing 49 per cent. of ethyl a. [U. S. Ph.]. **aromatic a.** An a. in which one of the hydrocarbon groups is phenyl, C_6H_5 , or one of its homologues. **butyl a.** CH_3OH . One of the constituents of fusel oil. **cumin a.** An aromatic alcohol, $C_{10}H_{14}O$, derived from cuminic aldehyd. **denatured a.** A commercial term for any alcoholic liquid which has been rendered unfit for drinking, so that it may be sold without a license. **deodorized a.** Ethyl a. from which odorous and coloring matters have been removed by filtration through charcoal. **dilute a.** See *a. dilutum*. **ethyl a.** NCH_3-CH_2-OH . A colorless mobile liquid, almost odorless and having a burning taste. It is inflammable, burning with a blue flame. Specific gravity, 0.789 at 20° C. Boiling point, 78.3° C.; melting point, 112° C. It has a strong affinity for water; when mixed with equal parts of it, there is an evolution of heat and a contraction of volume. It is one of the most valuable organic solvents and the mother substance of many important pharmaceutical preparations. For certain industrial purposes it is denatured. **methyl a.** Syn.: *wood spirits*, *wood alcohol*, CH_3OH . A colorless liquid of a peculiar pleasant odor. It is inflammable and its boiling point is 67° C. Its poisonous effect is much greater than that of ethyl a. It is prepared from the distillation products of wood. **myricyl a.** Melissyl alcohol, $C_{30}H_{62}OH$. **vanillyl a.** The compound, $C_6H_4(OH)(OCH_3)CH_2OH$, formed from vanillin by reduction. **wood a.** See *methyl a.* [Arab., *al*, the, + *koh'l*, the fine powder of antimony used in the East to paint the eyebrows, indicating something very subtle.]

alcoholase (al'ko-hol-äs). An enzyme which decomposes alcohol. See *zymase*.

alcoholate (al'ko-hol-ät). 1. Any one of a class of medicines which differ from alcoholic tinctures, first, in that the solvent contains the volatile principles of medicinal substances, and, second, in the mode of preparation, which consists in impregnating the alcohol with medicinal principles, first by maceration and then by distillation. 2. A chemical compound in which one atom of hydrogen in the alcohol is replaced by metal.

alcohol'ic. 1. Of or pertaining to an alcohol, especially to ethyl alcohol. 2. Prepared with or contained in alcohol, as an a. specimen. 3. A chronic drinker. **a. fermentation.** See under *fermentation*.

al'coholism. The morbid phenomena due to excessive use in alcoholic beverages.

acute a. 1. Acute intoxication produced by alcohol. 2. Acute alcoholic delirium. See *delirium tremens*. **chronic a.** The series of phenomena induced by the persistent and immoderate use of alcoholic beverages. [Lat., *alcoholismus*.]

al'coholize. 1. To transform into alcohol; of dilute alcohol, to free from water. 2.

To mix with alcohol. 3. To produce alcoholism in the animal organism.

alcoholometer (al-ko-hol-om'et-er). An instrument (usually a hydrometer) for determining the strength of spirits. [*Alcohol* + Gr., *metron*, a measure.]

aldehyd (al'de-hid). 1. Any one of a large class of compounds which contain the CHO radicle (aldehyd radicle) in combination with hydrogen or an allyl or aryl radicle. The a's are the first oxidation product of the alcohols. 2. See *acetic a. acetic a.* CH_3CHO . A very volatile liquid, boiling at 21°C . **benz-a.** See *oil of bitter almond*, under *almond*.

form-a. H.CHO . At ordinary temperatures a gas of very penetrating and irritating odor. An excellent bactericide. In 40 per cent. aqueous solution it is known as *formalin*. **salicylic a.** $\text{C}_6\text{H}_4\text{OH.CHO}$. A fragrant colorless liquid. It has antiseptic and diuretic properties. [Lat., *aldehydum*, a contraction of *alcohol dehydrogenatus*, alcohol deprived of hydrogen.]

aldehydase (al'de-hi-dās). An enzyme having the power to oxidize an aldehyd. A specific member of this group found in the liver is *salicylase*, which oxidizes salicylic aldehyd to salicylic acid.

ale (āl). A fermented liquor made from the wort of barley malt flavored with hops. [Ang.-Sax., *eadu*.]

alemb'ic. A utensil used in distillation. [Arab., *al*, the, + Gr., *ambix*, beaker.]

alembroth (al-em'broth). A crystalline salt, $\text{Hg}(\text{NH}_4)_2\text{Cl}_2\text{H}_2\text{C}$, made by dissolving mercuric chlorid and ammonium chlorid in boiling water. It was used for a time by Lister as an antiseptic. [Lat., *sal alembroth*.]

Aleppo boil, A. button. See *Oriental sore*, under *sore*.

alcresta-. Used as a prefix to names of alkaloids prepared by precipitating them in combination with hydrous aluminum silicate.

Alet'oris farino'sa. Star-grass, colic-root, unicorn-root, devil's-bit, blazing-star; a species growing through the United States. The rhizome contains a bitter principle which is tonic in small doses and emetic and cathartic in large doses.

aleukemia (ah-lu-ke'me-ah). A deficiency of white cells in the blood. [Gr., *a*, priv., + *leukos*, white, + *aima*, blood.]

Aleurites (al-u-ri'tes). A genus of the *Euphorbiaceae*, of the tribe *Jatrophaeae*. **A. triloba.** The akhrouit, candlenut-tree, or candleberry-tree, found on the islands of the Indian and South Pacific oceans. It furnishes a cathartic oil. [Gr., *aleurites*, made of flour, from the white dusty substance on the plant.]

aleurom'eter. An apparatus for testing the suitability of flour for breadmaking. [Gr., *aleuron*, flour, + *metron*, measure.]

aleuronat (al-u'ro-nat). A vegetable albumin used as a substitute for bread for diabetes and also as an injection in the serous cavities of animals to produce an exudate of leukocytes for experimental purposes. [Gr., *aleuron*, flour.]

aleurones. Crystalloid proteids stored in

plants, products of simpler syntheses in plant metabolism. [Gr., *aleuron*, flour.]

Alexander-Adams' operation. Shortening the round ligaments of the uterus, through the inguinal canals and suturing them to the pillars of the external ring and the conjoined tendon. Sometimes called *Alqui's o.* [William Alexander, Liverpool surgeon, and James A. Adams, Glasgow surgeon. First described in 1844.]

Alexander's operation. See *Alexander-Adams' o.*

alexia. A loss of the knowledge of the significance of word symbols without loss of visual perception. [Gr., *a*, priv., + *lexis*, word.]

alexin (al-eks'in). The term given by Buchner in 1889 to the substance in normal blood which he regarded as a single and universal protective agent against bacteria and other foreign cells. It was destroyed by heating to 56°C . and represents to-day the complement of Ehrlich, which, however, consists of a plurality of substances. [Gr., *alexin*, to defend.]

alexipyretic (al-eks-e-pi-ret'ik). Preventive or curative of fever; as a febrifuge. [Gr., *alexin*, to ward off, + *pyretikos*, feverish.]

Algae (al'je). The chlorophyll-containing thallophytes, as opposed to the chlorophyll-tree fungi. Certain species of A. impart unpleasant tastes or odors to drinking water and they are very prevalent in fresh water as microorganisms. [Pl. of Lat. *alga*, seaweed.]

algedonic. Related to the pleasure-pain concepts and their bearing on conduct.

algisia (al-je'se-ah). Sensibility to pain. Opposed to analgesia. [Gr., *algesis*, a sense of pain.]

algid (al'jid). Characterized by extreme chilliness of the surface and extremities of the body; chilled with cold. **a. cholera.** Asiatic cholera, so-called because of its characteristic lowering of body temperature. [Lat., *algidus*.]

algin (al'jin). Syn.: *alginic acid*. The residual by-product in the wet process of obtaining iodine from certain marine algae. It has considerable alimentary value. [Lat., *alga*, a seaweed.]

al'gin. Syn.: *bitter of aloes*. A glucosid contained in and constituting the active principle of aloes. [U. S. Ph., Br. Ph.]

algotol'nia. The unconscious association of pain with sexuality as seen in the more frank expressions of sadism or masochism and widespread in minor manifestations as in teasing, jealousy and related stimuli. [Gr., *algos*, pain, + *lagneia*, lust.]

algopho'bia. Morbid dread of pain. [Gr., *algos*, pain, + *phobos*, fear.]

alienation (āl-yen-ā'shun). Mental disorder. **mental a.** A loose term including every form of deviation from the physiological mental activities in conduct. In law, an insanity, varying according to situation involved, state in which statute is made, etc. [Lat., *alienare*, to make strange.]

al'ienism. The branch of medicine that

deals with mental disorders. See also *psychiatry*. [Lat., *alienus*, of another.]

alienist. One who investigates mental disturbances. Psychiatrist.

al'iment. Any substance capable of nourishing or repairing the waste of the body. Food. [Lat., *alimentum*, nourishment.]

alimen'tary. 1. Nourishing, nutritious. 2. Pertaining to alimentation, as alimentary tract or canal. **a. canal.** See under *canal*. **a. principles.** Name given to the food stuffs found in different foods. They consist of: water, inorganic salts, proteins, fats, and carbohydrates.

alimenta'tion. 1. A process or system of giving food. 2. The processes of digesting and absorbing food. **artificial a.** The nourishing of persons who are unable or unwilling to take food in the ordinary way. **forced a.** 1. The feeding of a person against his will. 2. The giving of more food to a person than he craves, as in Weir Mitchell's treatment. **rectal a.** Feeding by means of nutrient enemata. [Lat., *alimentum*, nourishment.]

aliphatic (al-if-at'ik). Derived from or pertaining to the a. series, a series of chemical compounds which may be derived from the open chain hydrocarbons in contradistinction to the carbocyclic and heterocyclic series of organic chemical compounds. [Gr., *aleiphar*, oil.]

alis'min. An acrid, bitter extract, probably a mixture of several substances, obtained from *Alisma plantago*.

alizarin (al-iz'ar-in). Dihydroxyanthraquinon. A red dye-stuff extracted from madder (*rubia tinctorum*). Now prepared from the products of coal-tar. Used extensively in dyeing cotton. [Probably from Arab. *al*, the, + *acara*, to press.]

alkalescent (al-ka-les'ent). Weakly alkaline; becoming alkaline. [Lat., *alcalescens*.]

alkali (al'ka-li). A chemical compound of a strong base with either a weak acid (AsCO_2) or with the hydroxyl radicle. In an aqueous solution it is dissociated into the positive ions of the metal and hydroxyl ions. The strength of the alkali depends upon the number of hydroxyl ions present in its solution. A's have the power of neutralizing acids with which they form salts. They have also the property of turning many vegetable matters blue, a color test which is used to detect their presence. List of poisons and their antidotes, see in *appendix*, page 938. **a. albuminate.** The product formed by the action of an alkali upon a proteid at ordinary temperature. **a. metals.** Lithium, potassium, sodium, rubidium and cesium. **caustic a.** Any hydroxyd of the a. metals. [Arab., *al*, the, + *kali*, the plant from which soda was first obtained.]

alkalimetry (al-ka-lim'et-re). The determination of the amount of an alkali by titration, based upon changes in color caused by the action of acids and alkalis upon various dyes. [*Alkali*, + Gr., *metron*, a measure.]

alkaline (al'ka-lin). Of alkalis; of the nature of an alkali. **a. earths.** The oxids of the metals, calcium, strontium and barium.

alkalinu'ria. Alkalinity of the urine. [*Alkali*, + Gr., *ouron*, urine.]

alk'aloid. 1. Resembling an alkali. 2. Any alkaline principle found in plants. A general name applied to the large group of organic bases found in plants which have marked physiological action. Morphine, quinine, caffeine, nicotine, atropine, coniine, and strychnine are alkaloids. The majority of a's are formed by plants; some are prepared synthetically. They are mostly solid, crystallizable substances, except nicotine, the active principle of tobacco, and coniine, the active principle of conium. These are liquid and volatile.

cadaveric a. An a. generated in dead bodies by the processes of putrefaction.

glucosid a. A substance which shows the properties and reactions of an a., but, like a glucosid, may be decomposed by dilute acids into glucose and another compound. [*Alkali*, + Gr., *eidōs*, form.]

alkamet'ric. Pertaining to the apportionment of doses of alkaloids.

alk'anet. 1. A commercial name for several different plants belonging to the genera *Anchusa* (*Alkanna*, *Lithospermum*, and *Lawsonia*). 2. The root of *Anchusa tinctoria*, which is used for its red coloring matter. [Lat., *alkanna*.]

alkan'in. A principle contained in *Alkanna* (*Anchusa tinctoria*): a red dye.

alkap'ton. An amorphous, brownish or yellowish, nitrogenous substance discovered in the urine under certain pathological conditions. It stains the linen, particularly when the urine becomes alkaline.

alkaptonu'ria. The morbid condition in which alkapton is present in the urine. Such urine turns dark on standing.

alkyl (al'kil). The chemical univalent radicle, derived from any saturated aliphatic hydrocarbon by the extraction of one hydrogen atom.

al'lachesthesia (al-ak-es-the'ze-ah, al-ok-es-the'ze-ah). The placing of a tactile sensation elsewhere than at the point of touch. [Gr., *allache*, elsewhere, + *aisthesis*, feeling.]

allantiasis (al-an-ti'as-is). Sausage poisoning, produced by a soluble exotoxin from the *Bacillus botulinus*. [Gr., *allās* (*allant-*), a sausage.]

allan'toate. A salt of allantoic acid.

allanto'ic. Of, pertaining to, or derived from the allantois. **a. fluid.** The fluid contained in the sac of the allantois. **a. vessels.** The umbilical vessels.

allan'toin. A colorless, crystalline body, found in the allantoic fluid of the cow, in the urine of new-born children, in the urine of adults in very small amount, and in larger quantities in the urine of pregnant women. [Lat., *allantoina*.]

allantois (al-an'to-is). An organ developed from the hind-gut of the embryo in early fetal life. Within the body it enters into the formation of the bladder,

externally it contributes to the formation of the umbilical cord and placenta. [Gr., *allos*, sausage, + *eidōs*, resemblance.]

allelomorph. In the Mendelian theory a unit character. [Gr., *allelon*, of one another, + *morphe*, form.]

al'ergen, al'ergin. The antigen producing allergy or anaphylaxis.

allergia, allergy (al-er'je-ah, al'er-je). The condition of an infected organism towards a reinfection by the primary infection or its reaction towards the toxin of that infective agent. The allergy may be in the line of hypersensitiveness, anaphylaxis or of immunity. [Gr., *allos*, other, + *ergon*, energy.]

allia'ceous. Pertaining to garlic; having an odor resembling that of garlic.

Allingham's operation for hemorrhoids. Ligation of the tumors after partially dividing their bases with scissors, so as to leave as little to be tied off as possible except the vessels supplying them. [William Allingham, English surgeon, 1830-1900.]

Allium. 1. A genus of the *Liliaceae* of the tribe *Asphodeleae*. 2. The bulb of garlic, *A. sativum*. It was formerly much esteemed as a diuretic and an emmenagogue. **A. cepa.** Syn.: *Cepa*, *Cepa vulgaris*. The onion: the bulb is stimulant, expectorant, and diuretic; externally it acts as a mild irritant by virtue of a volatile oil that it contains. **A. porrum.** The leek. The scaly bulb has been occasionally employed medicinally. **A. vulgare.** Common garlic. [Lat., *alium*, or *allium*, garlic.]

allo- A prefix from the Gr. *allos*, other.

allochiria, allocheiria (al-o-ki're-ah). A derangement of the sense of touch in which a tactile impression made on one side of the body is apt to be referred by the patient to the corresponding point on the opposite side; observed in hysteria and in locomotor ataxia. [Gr., *allos*, another, + *cheir*, the hand.]

allog'amy. In botany, cross-fertilization. [Gr., *allos*, other, + *gamos*, marriage.]

al'lo-isom'erism. The special isomerism of the ethylene derivatives.

allola'lia. A general term for affections of the faculty of speech. [Gr., *allos*, different, + *lalein*, to speak.]

allomor'phism. A change of shape (said, in teratology, of gross developmental abnormalities unaccompanied by apparent histological changes). [Gr., *allos*, different, + *morphe*, shape.]

allop'athy (al-lop'ath-e). The art of curing disease, founded upon differences by which a morbid state is relieved by inducing a different action in the body. The term is incorrectly applied to the regular school of medicine by the homeopaths. [Gr., *allos*, other, different, + *pathos*, suffering.]

allopsychic (al-o-si'kik). Pertaining to mind in its relation to the external world. [Gr., *allos*, other, + *psyche*, mind.]

alloorhythmia (al-o-rith'me-ah). Irregular cardiac rhythm.

allotoxin (al-o-toks'in). Any substance

produced by the tissues which acts as a defense against toxins. [Gr., *allos*, other, + *toxīn*.]

allotrio- A prefix from the Gr. *allotrios*, strange.

allot'riodon'tia. 1. The transplantation of teeth from one person to another. 2. An abnormal situation of teeth, as in a dermoid tumor. [Gr., *allotrios*, foreign, + *odous*, a tooth.]

allotriophagy (al-ot-re-of'aj-e). A depraved or abnormal appetite. [Gr., *allotriophagos*, from *allotrios*, foreign, + *phagein*, to eat.]

allotrope. One of two or more different forms of the same element. [Gr., *allos*, different, + *trope*, a change.]

allotrop'ic. Belonging to or constituting an allotrope. Of or pertaining to allotropism.

allot'ropism, allot'ropy. The existence of isomeric forms of the same chemical element, having different chemical and physical properties (as oxygen and ozone). See *isomerism*. [Gr., *allotropia*, variety.]

allox'an. A substance obtained by the action of nitric acid or of nascent chlorine upon uric acid.

It has been found in the intestinal mucus in catarrhal enteritis. It gives a red color to the skin, and has been used as the basis of cosmetic preparations. [Lat., *alloxanum*.]

allox'puric bases, allox'puric bodies. See *purin bases*.

alloy' Any combination of metals fused together. [Fr., *aloyer*, to combine.]

allyl (al'lil). The chemical radicle, $\text{CH}_2\text{:}-\text{CH}\cdot\text{CH}_2$. Its compounds are found in the oil of garlic and oil of mustard. **a. isosulphocyanate.** Allyl mustard oil, volatile oil of mustard, $\text{CH}_2\text{:CH}\cdot\text{CH}_2\text{-N}\cdot\text{SC}$. Present in mustard seeds as a glucosid from which it may be prepared by self-digestion and distillation. It is an oil of penetrating odor and strong taste. **a. sulphid.** $(\text{C}_3\text{H}_5)_2\text{S}$. A colorless oil of disagreeable odor. Used in the treatment of cholera and of phthisis. **a. tribromid.** $\text{C}_3\text{H}_5\text{Br}_3$. A liquid which has been used as a sedative and an anodyne. [Lat., *allium*, garlic, + Gr., *yle*, matter.]

allylamin (al-il-am'in). A base, $\text{C}_3\text{H}_7\text{N}=\text{N}(\text{C}_3\text{H}_5)_2$, formed by the substitution of allyl for an atom of hydrogen in ammonia. It is a liquid of sharp caustic taste derived from the crude oil of mustard. [*Allyl* + *amin*.]

almatein (al-mat-e'in). A condensation product of hematoxylin and formaldehyd, $\text{C}_{34}\text{H}_{28}\text{O}_{12}$, used as a disinfectant and dusting powder.

almond (ah'mund). The seed or nut of *Amygdalus communis*. **a. powder.** Used for washing the hands. **artificial oil of bitter a.** See *benzaldehyd*. **bitter a.** The seed of *Amygdalus communis*, variety, *amara*. It has a bitter taste and triturated with water forms an emulsion

having the odor of hydrocyanic acid. It contains a glucosid (amygdalin), and about 43 per cent. of fixed oil. [U. S. Ph., Br. Ph.]. **oil of a.** [Br. Ph.] **expressed** [U. S. Ph.] A fixed oil expressed from the seed of either bitter or sweet almonds. It is demulcent. **oil of bitter a.** A volatile oil developed in bitter almond seeds, in the presence of moisture, by the action of the ferment emulsin on the glucosid amygdalin. Hydrocyanic acid is formed at the same time and traces of it are usually found in the oil. [U. S. Ph.] **sweet a.** The seed of *A. communis*, variety, *dulcis*. It contains about 50 per cent. of fixed oil. [Mid. Eng., *almande*, from Lat., *amygdala*.]

Al'nus. The alder, a genus of the *Betulaceae*. **A. glutinosa.** The common alder. The bark contains from 15 to 20 per cent. of tannin; used for astringent gargles, also in diarrhea and hematuria. **A. rubra**, **A. serrulata.** The common American (or smooth) alder. Its medicinal properties are the same as those of *A. glutinosa*. [Lat., *alnus*, the alder.]

Alöë (al'o-e). 1. A genus of plants of the natural order *Liliaceae*. 2. The inspissated juice of the leaves of *Alöë vera*, *A. chinensis*, *A. Perryi* or other species of alöë. [U. S. Ph.] **A. capensis.** Cape a.; a species obtained at the cape of Good Hope. **A. chinensis.** A species which probably yields curaçao and the so-called Barbados a. [Gr., *aloe*.]

aloes (al'oze). In medicine the term is applied to plants of the genus *Alöë*, also to the inspissated juice of several of the species. **a. caballina.** An inferior variety of a. used only in veterinary practice. **a. depurator.** A. freed from gross impurities. **a. hepatica.** A dark, opaque, brownish variety of a. **a. natalensis.** A variety of aloes obtained from Natal, which is of a greenish color. **a. purificata.** Purified a., melted and strained through a number 60 sieve. [U. S. Ph.] **Barbados a.** A variety of a. once obtained in Barbados but practically none of the a. now sold as Barbados a. comes from that island. **Curaçao a.** A variety of a. probably obtained from *A. chinensis*, coming from Curaçao. **extractum aloes.** An aqueous extract of a. nearly identical with purified a. [U. S. Ph.] **extractum aloes barbadensis.** An aqueous extract of Barbados a. [Br. Ph.] **pilulae aloes.** Pills of a., each of them containing 0.13 gm. of purified a. and soap. [U. S. Ph.] **pilulae aloes and asafetidae.** A pill mass containing about 25 per cent. of socotrine a. and asafetida in powder. [Br. Ph.] **pilulae aloes barbadensis.** A pill containing about 50 per cent. of powdered a. [Br. Ph.] **pilulae aloes et ferri.** Pills, each of which containing 0.07 gm. of sacch. purified a. and exsiccated ferrous sulphate. [U. S. Ph.] The Br. Ph. preparation contains practically the same ingredients. **pilulae aloes et mastiche.** Pills each containing 0.13 gm. of purified a. and 0.04 of mastic. [U. S.

Ph.] **pilulae aloes et myrrhae.** Pills each containing 0.13 gm. of purified a. and 0.06 gm. of myrrh. [U. S. Ph.] The pill mass of the Br. Ph. does not differ essentially. **pilulae aloes socotrinae.** A pill mass containing about 25 per cent. of powdered socotrine a. [Br. Ph.] **socotrine a.** A variety of a. procured from the ports on the Red Sea and the East African coast. **tinctura aloes.** A preparation containing 10 per cent. of purified a. with glycyrriza. The tincture of the Br. Ph. contains 2.5 per cent. of Barbados a. **tinctura aloes et myrrhae.** A preparation containing 10 per cent. each of purified aloes and myrrh. [Gr., *aloe*.]

al'o'etin. A substance soluble in water, obtained from aloes.

alogia (ah-lo'je-ah). Aphasia. [Gr., *a*, priv., + *logos*, word.]

al'o'in. A neutral bitter principle obtained from aloes.

alopecia (al-o-pee'sha). Falling off of the hair from any part of the body (but more especially from the scalp or face) in sufficient quantity to produce marked thinning of the hair or baldness. 2. The baldness so produced. It is classified as *acquired* or *congenital*. Under the former are the varieties: **a. arcata**, sharply circumscribed patches of baldness. **idiopathic premature a. senile a. symptomatic a.** In the form of a. due to acute infectious diseases the baldness is due to the sudden shedding of hairs of normal size. When these are replaced, the new hairs may be as vigorous and large as at first. In the forms of a. which develop gradually, the hairs that fall out are replaced by finer hairs and the decrease in size continues until the hair disappears altogether. [Gr., *alopekia*, a disease like the mange in foxes.]

al'pha. 1. Used in chemical notation, either spelled out or in the Greek form *a*, to denote: The first of a series of isomeric bodies. The first carbon atom of an organic compound. 2. In ophthalmology, see *angle a*. 3. The fiber of the esparto grass. [Gr., *alpha*, the first letter of the Greek alphabet.]

al'phol. See *betol*.

al'phos. A name for psoriasis. [Gr., *al-phos*, white leprosy.]

alophzone (al'fo-zon). Succinic dioxid ((COOH.CH₂.CH₂.CO)₂ O₂). It is a germicide and antiseptic organic peroxid. It does not effervesce when in contact with pus or living tissue.

Alquies' operation. See *Alexander-Adams' operation*.

al'sol. A mixture of aluminium acetate and aluminium tartrate. An astringent and disinfectant, especially in diseases of the nose and throat.

alsto'nia. Dita bark obtained from *A. scolaris*. A bitter tonic used in the treatment of dysentery. [Named after *Charles Alston*, an Edinburgh physician, 1683-1760.]

al'stonin. A principle found in *Alstonia constricta*.

alterant, alterative. An old term for a medicine which is supposed to produce favorable changes in the body without appreciably changing the nature of its fluids and solids. The following drugs were classed as alteratives: Mercury, arsenic, iodine, gold, iron and the iodides of sodium and potassium. [Lat., *alterare*, to change.]

Althae'a. 1. A genus of the *Malvaceae*. 2. The official title in the U. S. Ph. of the root of *A. officinalis*. **A. rosea.** Holly-hock. The flowers were formerly used as a substitute for those of *A. officinalis*. [Gr., *althaia*, from *althaino*, to heal.]

alum. A name given to a class of double sulphates, resembling each other in chemical structure and in crystalline form. a. of the U. S. Ph. should contain not less than 99.5 per cent. of pure aluminium and potassium sulphate, $\text{AlK}(\text{SO}_4)_2 + 12\text{H}_2\text{O}$, known also as potassa alum. [U. S. Ph., Br. Ph.]

ammonia a. The double sulphate of aluminium and ammonium; its uses are those of the ordinary alum.

burnt a. See *alumen exsiccatum*, under *alumen*. **calcined a.** See *alumen exsiccation*, under *alumen*.

iron a. A double sulphate of iron and another element or a radicle, especially the double sulphate of iron and potassium. [U. S. Ph.]

iron ammonium a., iron potassium a. See *iron and ammonium sulphate* and *iron and potassium sulphate*, under *iron*. [Mid. Eng., *alum*, *alom*, from Lat., *alumen*.]

alum'en. Alum. [U. S. Ph., Br. Ph.] **a. exsiccatum.** Dried alum, burnt alum. Alum from which the water of crystallization has been expelled by heat. [U. S. Ph., Br. Ph.] **a. ustum.** *a. exsiccatum*.

alu'mina. Aluminium oxid, Al_2O_3 . **a. acetica.** Aluminium acetate. **a. hypochlorosa.** Aluminium hypochlorite. **a. sulphurica.** Aluminium sulphate.

alu'minate, alumin'iate. A salt formed by the combination of alumina with a stronger base.

alu'minated. Containing or combined with alum, alumina, or aluminium.

aluminio-. Combining form of aluminium, used in compound words to denote of or pertaining to *aluminium*.

aluminium, aluminum (al-u-min'i-um, al-u'min-um). A metallic element; atomic weight 27. Symbol Al. It occurs in nature in a great variety of minerals, usually combined with silica, either alone or in connection with iron, magnesium, calcium, and sodium. It also occurs native as an oxid. a. is a white metal, capable of taking a fine polish. Its specific gravity is 2.58. It is very malleable and ductile. It does not oxidize in the air and resists the action of ordinary acids, except hydrochloric acid, but is acted on by alkalis and rapidly changed by mercury or mercury salts. **a. acetate.** $\text{Al}_2(\text{CH}_3\text{COO})_6$. Used in aqueous solution as an antiseptic and astringent. **a. acetotartrate.** Syn.: *alsol*. Recommended by Schaeffer as an antiseptic application in

a 1 to 5 per cent. solution in catarrhal affections of the nose and pharynx. **a. bromid.** AlBr_3 . Used as an antiseptic in diphtheria. **a. chlorid.** AlCl_3 . Used as an antiseptic.

a. hydrate, a hydroxid. $\text{Al}_2(\text{OH})_6$. A mild astringent and desiccant, given internally as an antacid.

a. naphthol disulphonate. Syn.: *alumnol*. Aluminium salt of naphthol sulphonic acid. An antiseptic and astringent. Used for gonorrhoea. **a. sulphate.** $\text{Al}_2(\text{SO}_4)_2 + 18\text{H}_2\text{O}$. A crystalline substance of marked astringent and antiseptic properties. Often applied locally to foul ulcers as a caustic. **a. tannate.** A salt of tannic acid. An astringent.

alumino'sis. A disease acquired by workers in alum, chiefly a form of bronchitis.

alum'nol. Aluminium naphthol sulphonate ($\text{C}_{10}\text{H}_7\text{O}(\text{SO}_3)_2\text{Al}$). Used as a topical antiseptic and astringent particularly in gonorrhoea.

alveolar (al-ve'o-lar). 1. Pertaining to an alveolus or to alveoli. 2. Containing alveoli, channeled, honeycombed. **a. process.** The raised margin of the inferior maxillary bone, that serves as a socket for the roots of the teeth. [Lat., *alveolus*, dim. of *alveus*, a hollow or cavity.]

alve'olate. Provided with alveoli arranged symmetrically so as to resemble honeycomb.

alve'oliform. Having the form of an alveolus. [Lat., *alveus*, a hollow, + *forma*, shape.]

alveolitis (al-ve-o-li'tis). Inflammation of the periodontal membrane, usually associated with inflammation of the alveolar process.

alve'ololabia'lis. 1. The buccinator muscle. 2. The molaris externus et internus; a muscle of the solipeds, analogous to the buccinator in man. [Lat., *alveolus*, a socket, + *labialis*, of the lips.]

alve'olus, pl., alveoli. 1. The bony socket of a tooth. 2. The smallest pulmonary air space. 3. Communicating section in a lymphatic gland, formed by the trabecular framework and filled with adenoid tissue. 4. A shallow polygonal pit or recess, like those found especially on the mucous surface of the bladder, formed by the intersection of low ridges.

a. pulmoneus. A pulmonary air space. **mucous alveoli of the salivary glands.** Those that secrete the ropy material of the saliva, containing mucin.

parietal a. An air space in the wall of an alveolar passage in the lung. **serous alveoli of the salivary glands.** Those that secrete the serous albumin of the saliva, which coagulates when heated.

terminal a. An air space connected with a pulmonary infundibulum. [Lat., dim. of *alveus*, a hollow.]

al'veus. 1. A cavity, hollow, or excavation. 2. A channel. **a. ampullascens, a. ampullescens, a. ampullosus.** The receptaculum chyli. **a. hippocampi.** A prolongation of the medullary substance of the hippocampal gyrus, investing the

convex surface of the hippocampus major. [Lat., *alveus*, a hollow.]

al'vine. Pertaining to the abdomen or to the intestines; said especially of evacuations from the latter. [Lat., *alvinus*.]

alypin (al-i'pin). 2-benzyoxy-2-dimethylaminomethyl-1-dimethylaminobutane hydrochlorid. [CH₃.CH₂.C(C₆H₅COO)(CH₂N(CH₃)₂).CH₂N(CH₃)₂.HCl]₂ or C₁₆H₂₈O₂N₂HCl, is closely related to cocaine, being used as a local anesthetic, especially for the eye.

Alyselminthus (al-is-el-min'thus). A genus of *Teniadae*. **A. cuniceps**, **A. ellipticus**. See *Taenia elliptica*. [Gr., *alysis*, a chain, + *elmins*, a worm.]

amacrine (am'ak-rin). A branched retinal nerve structure, regarded as a modified nerve cell. [Gr., *a*, priv., + *makros*, long, + *is*, *inos*, sinew.]

amadou (ah'mah-du). Touchwood, punk, spunk, tinder, oak agaric; obtained from *Polyporus igniarius* and other species of *Polyporus*; formerly much used as a hemostatic application and occasionally for the protection of abraded surfaces. [Fr.]

amal'gam. Any alloy that combines with mercury. An a. of silver, tin, and mercury is used for filling teeth. [Fr., *amalgame*, perhaps from Gr., *malagma*, a plaster or soft mass.]

Amani'ta. A genus of *Agaricinae*. See *Agaricus*. **A. muscaria**. Fly agaric; a poisonous species. **A. phalloides**. The poisonous mushroom from which the poisonous amanita toxin has been obtained which induces immunization in animals. [Gr., *amanita*, a mushroom.]

amanitotoxin (am-an-it-o-toks'in). The toxin obtained from *Amanita phalloides*.

ama'ra. Bitters. [Lat., neut. pl. of *amarus*, bitter.]

am'aroid. A vegetable bitter principle; other than alkaloids or glycosids.

amarthri'tis. Inflammation of several joints at the same time. [Gr., *ama*, together, + *arthritis*, inflammation of a joint.]

amas'tia, **ama'zia**. Absence or atrophy of the breasts. [Gr., *a*, priv., + *mastos*, *mazos*, the breast.]

am'ativeness. The sexual appetite. [Lat., *amare*, to love.]

amaurosis (am-aw-ro'sis). Blindness unaccompanied by lesions demonstrable by the ophthalmoscope. At present the term is not much used. **albuminuric a.** a. due to retinitis albuminurica. **a. alcoholica.** a. due to the excessive use of alcohol. **a. amarautic.** Blindness due to atrophy of the optic nerve or the centers of vision. **a. diabetica.** An a. occurring in diabetes, ranging from slight impairment of vision to nearly complete loss of it. **a. from abuse.** A generic term including all cases of defective vision due to poisoning by alcohol, tobacco, or syphilis. **cerebral a.** a. due to disease within the cranium, especially in the substance of the brain. **congenital a.** a. due to either arrested development or to prenatal disease. **epileptoid a.** An attack of sudden blindness considered by H. Jackson to be of the same

nature as epilepsy. **lead a.** An a. produced by lead poisoning in which the changes revealed by the ophthalmoscope vary from a simple hyperemia of the disk to gray atrophy. **tobacco a.** The a. caused by poisoning from tobacco, which resembles that caused by alcohol. **toxic a.** A generic term including all forms of a. due to systemic poisoning, e. g., those due to lead, alcohol, quinin, etc. [Gr., *amaurosis*, from *amauroein*, to darken.]

amaurotic (am-aw-rot'ik). Pertaining to or of the nature of amaurosis.

amaxopho'bia. Morbid dread of being in a vehicle. [Gr., *amaxa*, a wagon, + *phobos*, fear.]

am'ber. Syn.: *succinum*. A yellowish fossil resin, the gum of several species of coniferous trees, found in the alluvial deposits of N.E. Prussia. [Lat., *ambra*.]

am'bergris, **am'bergrease**, **am'bergreese**. A substance probably derived from the intestines of the sperm whale (*Physeter macrocephalus*), found on the surface and shores of the ocean. It occurs in opaque, rounded fragments usually grayish, but often variegated in color, having a peculiar aromatic odor, and consisting chiefly of *ambrein*. **factitious a.** A compound of orris root, spermaceti, gum benzoin, asphalt, ambergris, musk, oil of cloves, oil of rhodium, and ammonia water. [Abbreviated from Lat., *ambra grisea*, gray amber.]

ambiva'lence, **ambiva'lency**. The manifestation of the positive and negative feeling tone of the same idea.

Amblyomma (am-bli-om'mah). A genus of *Acarina* resembling *Argas* and *Ixodes*.

A. hebraeum. A species capable of transmitting heartwater to sheep. [Gr., *amblys*, dull, + *omma*, the eye.]

amblyopia (am-ble-o'pe-ah). Dimness of vision from imperfect function of the optic nerve. **alcoholic a.** A. caused by the excessive use of alcohol. **crossed a.** A. affecting one eye and accompanied by hemianesthesia of the same side. **hysterical a.** A form of a. seen in hysteria. **reflex a.** A. rising from peripheral irritation. **toxic a.** A. due to the excessive use of some toxic substance. [Gr., *amblyopia*, from *amblys*, dim., + *ops*, the eye.]

amblyoscope (am'bli-o-scöp). An instrument for exercising the fusion faculty in young children having strabismus. [Gr., *amblys*, dull, + *skopein*, to see.]

ambocepto'itoid. A modified amboceptor which will combine with the complement, but not with a cell, such as a bacterium or a red blood corpuscle.

amboceptor (am-bo-sep'tor). Syn.: *immune body*; *substance sensibilatrice* of Bordet; *coöula*; *desmon*; *preparator*; *intermediary body*; *fixateur*; *sensitizer*. Ehrlich's term for the substance in blood which is not destroyed by heating to 56° C., and which acts as an intermediary body that binds the complement to red blood corpuscles, bacteria, and other foreign cells by its two haptophorous

groups, uniting with the two sets of receptors. It thus produces hemolysis, bacteriolysis, etc., and is greatly increased by non-fatal injections of these foreign cells or their products. **bacteriolytic a.** The substance which acts with the complement in dissolving and destroying bacteria by lysis. A bacteriolysin. **hemolytic a.** The substance dissolving red blood corpuscles as above. An hemolysin. **immunine a.** Amboceptor produced by the repeated artificial injection of foreign cells into animals or man. **natural a.** Amboceptor normally present in blood. [Lat., *ambo*, both, + *capere*, to take.]

amboceptorgen. A free receptor capable of producing an amboceptor.

am'bra. See *amber*.

Ambro'sia. A genus of the *Compositae*, suborder *Tubuliflorae* or *Ambrosiaceae*. **A. artemisifolia.** Ragweed. Employed in domestic practice for a variety of purposes. Its pollen is supposed to induce hay fever. [Gr., *ambrosia*, the food of the gods.]

am'balance. 1. A wagon in which to carry the sick and wounded. 2. The movable hospital for an army. [Lat., *ambulare*, to walk about.]

am'bulant, am'bulatory. Not confined to bed. Walking about, as of certain fevers, e. g., typhoid. See *typhoid*. [Lat., *ambulare*, to walk about.]

Ameba (am-e'bah). Syn.: *proteus animalcule*. A genus of the subclass *Amebida* and the order *Gymnamebida*, including naked ameboid forms with lobose pseudopodia. This order includes the genera *Ameba* and *Entameba*. The amebae possess a nucleus and contain contractile vacuoles, acting as an excretory system, and storage vacuoles for the digestion of food. They thrust out pseudopodia and have an outer clear protoplasm or ectosarc and an inner granular endosarc. They reproduce themselves by simple or binary fission and live by ingesting minute portions of organisms which they digest and assimilate. They often undergo encystation, existing thus under adverse conditions. **A. buccalis.** See *Entameba*. **A. coli.** See *Entameba*. **A. in stool,** see in *appendix*, page 906. **A. proteus.** A saprophytic form found widely scattered in nature. [Gr., *amōibe*, alternation.]

amebadiastase (am-e'bah-dī'as-tās). The intracellular enzyme in the ameba which digests bacteria and other foreign bodies.

ame'bic. Pertaining to or caused by an ameba.

ameb'iform. See *ameboid*.

amebio'sis. See *entamebiasis*.

amebism (am-e'bism). Infestation by amebae.

ame'boïd. Syn.: *amebalike*. Resembling an ameba in form, structure, or especially behavior, such as rapid change of shape and thrusting out of pseudopodia, called ameboid movements. [Gr., *ameba*, + *eidōs*, resemblance.]

amebula (a-me'bu-lah). The young which are liberated from the spores of *Grega-*

rina gigantea, a protozoa infesting the lobster. [Dim. of *ameba*.]

amebu'ria. Amebae in the urine.

amel'oblast. The inner layer of cells of the enamel organ by which the enamel is produced. [Ang.-Sax., *amel*, enamel, + Gr., *blastos*, germ.]

a'melus. A monster having an absence of one or more limbs. [Gr., *a*, priv., + *melos*, a limb.]

amenorrhea (ah-mēn-ōr-rhē'ah). Absence or stoppage of the menses. [Gr., *a*, priv., + *men*, month, + *rein*, to flow.]

a'ment. One without mind, an idiot. [Gr., *a*, priv., + Lat., *mens*, *mentis*, mind.]

ament'ia. A confusional psychosis, following Meynert; also loosely used by some English authors as synonymous with various grades of mental defect.

ametria (ah-met're-ah). Congenital absence of the uterus. A word seldom used at the present time. [Gr., *a*, priv., + *metra*, the uterus.]

ametrometer (ah-met-rom'et-er). An instrument for detecting degrees of ametropia, i. e., of errors of refraction in the eye. [Gr., *a*, priv., + *metron*, a measure.]

ametropia (ah-met-ro'pe-ah). A generic term including all defects of vision due to error of refraction. [Gr., *a*, priv., + *metron*, measure, + *ops*, eye.]

Amian'thium, Amiantan'thium. A genus of plants closely allied to *Veratrum*. **A. muscaetoxicum.** Fly poison; a species found in the middle and southern Atlantic States. It contains a narcotic poison, which affects cattle feeding upon it, and the bulbs are employed as a fly-poison. [Gr., *amiantos*, pure, + *anthos*, a flower.]

am'ic. Pertaining to or derived from ammonia. [Lat., *amidieus*, from *ammonia*.]

amicrobic (ah-mi-kro'bi'k). Not caused by nor containing microbes. [Gr., *a*, priv., + *mikros*, small, + *bios*, life.]

amicroscop'ic particles. Minute particles, less than 5 μ (.00005 mm.), present in colloidal solutions, which are not separately visible even by use of the ultramicroscope. See *ultramicroscope*.

am'id. A compound derived from ammonia by the substitution of an acid radicle for one or more atoms of hydrogen.

acid a. An a. in the strict sense, as distinguished from an amin. [Probably from *am*, of ammonium, + *id*.]

amid-, amido-. Combining forms of *amid*, a name given to the first discovered derivatives of ammonia (NH₃) in which one atom of H was exchanged for a metal or an organic radical.

amidase (am'id-ās). An enzyme which has the property of converting an NH₂ group into an OH group with the production of ammonia.

am'idin. Guérin-Vary gave the names expressed in the following subtitles to the inner and outer portions of starch granules. Used without qualification, the word means soluble a. **soluble a.** The interior portion of a starch granule, which is soluble in water and is released from the insoluble tegumentary substance

(*amylin*) by boiling. **tegumentary a.** See *amylin*. [Fr., *amidon*, starch.]

am''ido-a'cetal. The compound $H_2N.CH_2-CH(O.C_2H_5)_2$, acting as a poison by paralyzing the respiratory center.

ami''dobenzene. Anilin.

amidogen (am-id'o-jen). A hypothetical univalent amido radical, NH_2 . An obsolete designation for amido. [Lat., *amido-genium*.]

amidol'ica. Pharmaceutical preparations made with starch, including *pastae, collae, pulves*, etc.

amidoplasts. See *leukoblasts*. [Lat., *amidum*, starch, + Gr., *plassein*, to fashion.]

amid'ulin. Of Schultze, a substance obtained by heating starch with sulphuric acid up to the point of complete solution, neutralizing the acid, and cooling, when the a. is deposited in white flocks; probably soluble starch freed from the investing starch cellulose. [Lat., *amidulinum*.]

amilka pana. A preparation made by macerating tamarind pulp in water, straining, and adding black pepper, sugar, cloves, camphor, and cardamom. Used as a cooling draught and as an appetizer in debilitated conditions. [Sanscr.]

amimia (ah-mim'e-ah). A form of aphasia consisting in inability to express oneself by signs and gestures. See *apraxial*. [Gr., *a*, priv., + *mimesis*, imitation.]

am'in. A compound formed by the replacement of 1, 2, or 3 hydrogen atoms in ammonia by an allyl or aryl radicle. The a's are divided into *monamins, diamins, triamins*, etc., according as one, two, or three hydrogen atoms are replaced.

amino-. See *amido-*.

amin'oforn. A name applied to hexamethylenamin or urotropin.

am'inol. An antiseptic preparation said to contain calcium hydrate, sodium chloride, and trimethylamin.

amitosis (ah-mit-o'sis). Direct or non-karyokinetic cell division. [Gr., *a*, priv., + *mitos*, a thread.]

am'meter. An instrument for measuring the amount of electric currents, estimated in amperes. [Fr., *Ampère*, the name of a French physicist, + Gr., *metron*, a measure.]

am'mion. Cinnabar in a sandlike condition; minium. [Gr., *ammion*, cinnabar in its sandy state, from *ammos*, sand.]

ammo-, ammonio-. Combining forms of ammonium used in compound words to signify of or pertaining to ammonium.

ammonia (am-mo'ne-ah). A colorless gas, NH_3 , with a pungent suffocating odor, and a strong alkaline taste and reaction. Specific gravity 0.589. Soluble in water and alcohol. In its compounds it is widely diffused in nature. In composition it acts as a monacid base and forms crystalline salts, known as ammoniacal salts. For these salts see *ammonium*. List of poisons and their antidotes, see in *appendix*, page 938. **anhydrous a.** Gaseous *aqua ammoniacae*. Syn.: *hartshorn*. An aqueous solution of a., containing 10 per cent. by weight of the gas. In-

correctly called *spirit of a.* or *spirit of hartshorn* [U. S. Ph.]. **aqua ammoniacae fortior.** The stronger water of ammonia. An aqueous solution of a. containing 28 per cent. by weight of the gas. **linimentum ammoniacae.** Syn.: *volatile liniment*. An emulsified soap, made of a. water, cotton-seed oil, alcohol, and olive oil [U. S. Ph.] or a. water, olive oil, and almond oil [Br. Ph.]. **liquor ammoniacae acetatis.** See under *ammonium*. **spiritus ammoniacae.** Spirit of a. An alcoholic solution of a. containing 10 per cent. by weight of a. [U. S. Ph.]. **spiritus ammoniacae aromaticus.** Aromatic spirit of a.; made by dissolving oil of lavender flowers, oil of pimenta, and oil of lemon in alcohol and adding a solution of ammonium carbonate in a. water and water. It is frequently used as an antacid and stimulant. **spiritus ammoniacae fetidus.** Fetid spirit of a.; made by mixing stronger water of a. with the distillate from a mixture of asafetida and spirit [Br. Ph.]. [Lat., *sal ammoniacus*, which is said to have been so named from the temple of Jupiter Ammon in Libya, near which it was prepared from camel's dung.]

ammoni'acal. Containing ammonia.

ammoniacal'ia. Preparations containing ammonia, or any of the salts of ammonia.

ammoniacum (am-o-ni'ak-um). A gummy resinous exudation obtained, according to some authorities, from *Dorema a.* but, according to others, from species of *Hera-cleum, Ferula*, and other related genera. It is used in chronic bronchitis with excessive secretion, and externally as a counterirritant. **emplastrum ammoniaci.** Ammoniac plaster, made by emulsifying gum ammoniac with dilute acetic acid, straining, and evaporating on a water-bath to a suitable consistence [U. S. Ph., 1890; Br. Ph.]. **emplastrum ammoniaci cum hydragero** [Br. Ph.]. A preparation containing ammonia, olive oil, and sublimed sulphur. **lac ammoniaci.** See *mistura ammoniaci*. **mistura ammoniaci.** Ammoniac mixture, milk of ammonia, made by rubbing ammoniacum with water [Br. Ph.]. **sal a.** See *ammonium chlorid*.

ammo'niated. Combined with or mixed with ammonia.

ammonie'mia. A condition, consequent upon extravasation or retention of urine, in which the blood is supposed to be poisoned by ammonium carbonate set free by decomposition of the retained urea. [Lat., *ammonia* + Gr., *aima*, blood.]

ammo'nio-. Prefix denoting ammonium.

ammonirrh'e'a. The excretion of ammonia or of an ammoniacal salt either by the urine or by the sweat. [Lat., *ammonium* + *rein*, to flow.]

ammo'nium. A hypothetical univalent radicle, NH_4 , supposed to be contained in ammoniacal salts, and to have the property of combining with an electro-negative element or radicle, forming a salt. A. salts stimulate respiration and the action of the heart. Many of them are of little

or no therapeutic interest. **a. acetate.** A compound of a. with acetic acid. *Normal or neutral a. acetate*, CH-COONH_4 , is a white odorless substance, obtained by saturating glacial acetic acid with dry ammonia. It is contained in the liquor ammonii acetatis. **a. base.** A base imagined to be derived from a. by the substitution of radicles for the hydrogen of the latter, forming compounds of a structure similar to that of the a. compounds. **a. benzoate.** A substance forming thin white crystals readily soluble in water and alcohol. Used for the same purposes as benzoic acid. **a. benzoicum solutum.** A preparation made by dissolving benzoic acid 2 oz. and a. carbonate 1 oz. in a pint of distilled water. **a. biborate.** A compound of a. and pyroboric acid; used in renal and vesical complaints. **a. bromid.** A substance, NH_4Br , forming colorless crystals or a white granular powder, readily soluble in water, but soluble with difficulty in alcohol and ether. Used as an anodyne and hypnotic and in the treatment of epilepsy. **a. carbonate.** A compound of a. and carbonic acid. *A. sesquicarbonate*, also called *salt of hartshorn*, and *sal volatile*, is the a. carbonate of the pharmacopoeias. It forms a white, translucent, fibrous mass, having a strong ammoniacal odor and a pungent caustic taste. It is soluble in 4 parts of water and partially soluble in alcohol. It is a valuable expectorant and stimulant in bronchitis, etc., and also a heart stimulant. **a. chlorid.** Sal ammoniac, NH_4Cl , found native in volcanic regions and in small quantities in sea water and formed artificially by the direct combination of ammonia and hydrochloric acid gas. Used in bronchitis. **a. citrate.** A salt of a. and citric acid. **a. lactate.** A compound of a. and lactic acid, occasionally used in dyspepsia and disorders of nutrition, especially rickets. **a. molybdate.** The compound used in the laboratory as a test for phosphoric acid. **a. nitrate.** A compound, NH_4NO_3 , of a. and nitric acid, occurring, according to the mode of preparation, in long, colorless, prismatic crystals [U. S. Ph.], or compact crystalline masses [Br. Ph.], or as a white crystalline powder, or in fibrous masses. Its principal use is in the manufacture of nitrogen monoxid. **a. persulphate.** The compound $(\text{NH}_4)_2\text{S}_2\text{O}_8$, a powerful antiseptic. **a. phosphate.** A compound of a. and phosphoric acid. It is used in gout and in diarrhea. **a. phosphomolybdate.** The characteristic yellow compound $2(\text{NH}_4)_3\text{PO}_4 \cdot 22\text{MoO}_3 + 12\text{H}_2\text{O}$, which is precipitated on the test for phosphoric acid. **a. salicylate.** A compound, $\text{C}_6\text{H}_4\text{OH} \cdot \text{COONH}_4 + \text{H}_2\text{O}$, of a. and salicylic acid. It has been used as an expectorant. **a. sulphate.** A compound of a. and sulphuric acid. Normal a. sulphate, $(\text{NH}_4)_2\text{SO}_4$, formerly known as *sal secretum Glauberi*, is found native as a mineral, *muscagnin*, and is also prepared artificially. **a. urate.** A compound of

a. and uric acid. Several such compounds exist, the most important being *acid a. urate*, $\text{C}_5\text{H}_3\text{N}_4\text{O}_8(\text{NH}_4)$, which occurs in alkaline urine and in certain urinary calculi. **liquor ammonii acetatis.** An extemporaneously prepared aqueous solution of a. acetate, made by neutralizing more or less diluted acetic acid with a. carbonate. **liquor ammonii caustici.** See *aqua ammoniae*, under *ammonia*. **liquor ammonii citratis.** An aqueous solution of citrate of a. containing about 20 per cent. of the salt [Br. Ph.]. **liquor ammonii citratis fortior.** An aqueous solution of a citrate, of which 4 c.c. contains 2.5 gms. of the citrate. **test solution of carbonate of a.** A solution of 1 part of a carbonate (sesquicarbonate) in 10 parts of distilled water [U. S. Ph.]. **test solution of chlorid of a.** A solution of 1 part of a. chlorid in 10 parts of distilled water [U. S. Ph.]. **test solution of oxalate of a.** A solution of normal a. oxalate 1 part in 20 parts of distilled water [U. S. Ph.]. **test solution of phosphat of a.** A solution of hydric diammonic phosphate 1 part in distilled water 10 parts. **test solution of sulphid of a.** An aqueous solution of a. sulphid made by passing gaseous hydrogen sulphid into 3 parts of ammonia water up to the point of saturation and then adding ammonia water 2 parts [U. S. Ph.]. **troches of chlorid of a., trochisci ammonii chloridi.** A preparation consisting of troches each containing a. chlorid [U. S. Ph.].

am'monol. A proprietary preparation, consisting of acetanilid, sodium bicarbonate, and ammonium carbonate.

ammother'apy. The treatment of disease by the external application of sand. [Gr., *ammos*, sand, + *therapeia*, therapeutics.]

amne'sia. 1. Forgetfulness, morbid or senile loss of memory. 2. Amnesic aphasia. **a. traumatica.** An a. which is the result of injuries. **auditory verbal a.** Impairment of memory of the meaning of spoken words. **periodic a.** See *double consciousness*, under *consciousness*. **verbal a.** Loss of memory as regards words. It may exist as an element of aphasia. [Gr., *amnesia*, from *a*, priv., + *mnesis*, memory.]

amne'sic. Pertaining to or affected with amnesia. See *ataxiamnestic*. **a. aphasia.** See *word deafness* under *deafness*.

am'nion. A thin double membrane, forming an ovoid bag, the immediate investment of the embryo in reptiles, birds and mammals, and containing the liquor amnii. **false a.** The reflected amnion, the serosa or primitive chorion. See *chorion*. **liquor amnii.** Amniotic fluid, the liquid commonly termed "the waters," surrounding the fetus in the amniotic sac. It increases in quantity as gestation progresses, its office being to protect the fetus and the umbilical cord from pressure and act as a fluid wedge in dilating the cervix uteri during the first stage of labor. **reflected a.** See *false*

- a. [Gr., *amnion*, a caul, diminutive of *amnos*, a lamb, from its being first observed as a fetal envelope in that animal.]
- amniot'ic**. Pertaining to the amnion. **a. sac.** See *amnion*.
- amniotitis** (am-ne-o-ti'tis). Inflammation of the amnion. [Gr., *amnion*, caul, + *itis*, inflammation.]
- amor'pha**. 1. A cutaneous eruption which has no definite form. 2. A macula. **A. fructinosa**. Bastard indigo; a plant growing in the southeastern Atlantic States. The bruised root is used as a remedy for toothache. [For deriv. see *amorphus*.]
- amor'phinism**. The morbid mental and physical condition which takes place when a person addicted to the use of morphin is deprived of the drug. [Gr., *a*, priv., + *morphin*.]
- amorphous** (ah-morf'us). Having no regular or definite shape or structure. [Gr., *a*, priv., + *morphe*, shape.]
- amorphus** (ah-morf'us). An acardiac monster without shape or form. [Gr., *a*, priv., + *morphe*, form.]
- amo'tio ret'inae**. Separation of the retina due to injuries, hemorrhage, tumors, and inflammation.
- Ampelop'sis**. A genus of climbing plants. **A. quinquefolia**. The Virginia creeper, woodbine, American (or five-leaved) ivy; a species found wild in the United States, often cultivated for its beauty. [Gr., *ampelos*, a vine, + *opsis*, an appearance.]
- ampelotherapy** (am''pe-lo-ther'a-pe). Syn.: *grape-cure*. The therapeutic use of grapes. [Gr., *ampelos*, the vine, + *therapeia*, medical treatment.]
- ampere**. In electricity a unit of electrical current, representing the current furnished by a potential of 1 volt (the unit of electromotive force) through 1 ohm (the unit of resistance). **Ampère's law**. A law to the effect that the directing force of electric currents on mobile magnets causes the latter's austral pole to deviate to the left of the current. [*A. M. Ampère*, a French physicist, 1775-1836.]
- ampere'meter**. An apparatus for measuring the quantity of a galvanic current in amperes. [*Ampère*, + Gr., *metron*, measure.]
- am'phi-**. Combining form of Gr., *amphi*, both, around, used as a prefix in compound words to denote both, around, about, on both sides.
- amphiarthrosis** (am-fi-ar-thro'sis). A form of articulation intermediate between diarthrosis and synarthrosis, in which the articulating bony surfaces are separated by an elastic substance to which both are attached, so that the mobility is slight, but may be exerted in all directions. The articulations of the bodies of the vertebrae are examples. [Gr., *amphi*, on both sides, + *arthrosis*, joint.]
- amphias'ter** (am-fe-as'tur). 1. The figure formed by the two asters or radiate masses of chromatin connected by a spindle-shaped body composed of bipolar fila-
- ments in a maturing ovum. [Gr., *amphi*, on both sides, + *aster*, a star.]
- Amphibia** (am-fib'e-ah). 1. Popular name for animals living in both water and air. 2. In zoölogy, a name given to a subdivision of the vertebrates which includes the frogs, toads, salamanders, etc. [Gr., *amphibios*, from *amphi*, double, + *bios*, life.]
- amphiblas'tula**. A stage in the development of an ovum, characterized by the formation of a roundish vesicle, the wall of which consists of small cells at the animal pole and of larger cells at the vegetative pole.
- amphiblestroid** (am-fi-bles'troyd). Net-like, reticular. The retina. [Gr., *amphiblestron*, a casting net, + *eidos*, resemblance.]
- amphibo'lia**. A state of hesitation, uncertainty, as in the amphibolic period of a disease. [Gr., *amphibolia*, the state of being attacked on both sides.]
- amphicelous** (am-fi-se'lus). Concave both before and behind; said of the body of a vertebra. [Gr., *amphi*, on both sides, + *koilos*, hollow.]
- amphicroic, amphicroitic** (am-fi-kro'ik, am-fi-kro-it'ik). Capable of coloring blue litmus-paper red and red litmus-paper blue. [Gr., *amphi*, in both directions, + *krouein*, to test.]
- amphicytula** (am-fi-sit'u-lah). A stage in the development of an ovum, characterized by the formation of a parent cell cytula, out of the amphimorula.
- amphid** (am'fid). 1. (Adj.) Having a double character. See *a. salts*, under *salts*. 2. (N.) See *amphigen*. [Gr., *amphi*, on both sides.]
- amphidesmous** (am-fi-des'mus). Having a double ligament. [Gr., *amphi*, on both sides, + *desmos*, a ligament.]
- amphidiarthrosis** (am''fi-di-ar-thro'sis). An articulation partaking of the nature of both amphiarthrosis and diarthrosis, i. e., having an interarticular fibrocartilage, but having also free mobility. The only example is the temporomandibular joint. [Gr., *amphi*, on both sides, + *dianarthrosis*, a joint.]
- amphigas'trula**. A stage in the development of an ovum, succeeding the amphiblastula, in which the primitive intestine is partly filled with segmented nutritive yolk.
- amphigen** (am'fi-jen). An element, such as oxygen, sulphur, selenium, and tellurium, which in combination can form either an acid or a base. [Gr., *amphi*, on both sides, + *gennan*, to engender.]
- amphigenetic** (am-fi-jen-et'ik). Reproduction by means of both sexes. [Gr., *amphi*, both, + *genesis*, generation.]
- amphigenous, amphogenous** (am-fi-jen-us, am-fo'gen-us). Of or resembling an amphigen; amphoteric. **a. reaction**. See *amphicroic reaction*, under *reaction*.
- amphig'ony**. Reproduction by the union of two distinct cells; i. e., bisexual reproduction. [Lat., *amphigonia*, from Gr., *amphi*, on both sides, + *gonos*, offspring.]

- amphimixis** (am-fi-miks'is). The mingling of the molecular structures of the two germs in sexual reproduction. [Gr., *amphi*, both, + *mixis*, a mingling.]
- amphimoner'ula**. A stage in the development of the ovum, characterized by the appearance of formative yolk at the animal pole and nutritive yolk at the vegetative pole.
- amphimor'ula**. A stage in the development of an ovum, characterized by the formation of a solid globular mass of cleavage cells, the animal cells being at one pole and the vegetative at the other. This stage succeeds the amphicytula.
- amphipy'renin**. A constituent of the nuclear membrane of the cells described by Hertwig.
- Amphistoma** (am-fis'to-mah). A genus of parasitic animals of the *Scolecida*, order *Trematoda*. They infest the *Mammalia* chiefly. **A. hominis**. A species found in great numbers in the large intestine and the appendix vermiformis of two East Indians who had died of cholera; a worm 5 to 8 mm. long and 3 to 4 mm. broad. [Gr., *amphistomos*, having a double mouth or opening.]
- amphitricha** (am-fit'rik-ah). Bacteria having a flagellum at each pole, as in many spirilla. [Gr., *amphi*, both, + *thrix* (*trich-*), hair.]
- am'phopep'tone**. A peptone, which, according to Kühne, is formed in the peptic digestion of proteids and which is changed into hemi- and antipeptone by pancreatic digestion.
- amphophil**, **amphophilous** (am'fo-fil, am-fo'fil-us). Having an affinity for both acid eosin and basic methyl blue. [Gr., *ampho*, both, + *philein*, to love.]
- amphor'ic**. 1. Resembling the sound produced by blowing across the mouth of a bottle (said of auscultatory sounds). 2. Tympanitic and of a metallic character (said of percussion sounds). [Lat., *amphora*, jar.]
- amphoteric**, **amphoterous** (am-fo-ter'ik, am-fo'ter-us). Having opposite characters; affecting both red and blue litmus paper. [Gr., *amphoterous*, pertaining to both.]
- amplifica'tion**. 1. The apparent enlargement of an object when viewed through a microscope or telescope. 2. The magnifying power of a microscope. [Lat., *amplius*, larger, + *facere*, to make.]
- amplifier**. A lens for increasing the visual field of a microscope.
- amplitude**. 1. In physics, the distance between the extreme limits of an oscillation or vibration. Thus, the a. of vibration of a pendulum is the chord of the arc through which it oscillates; the a. of vibration of a wave is the distance from the crest to the trough of the wave. 2. Of the pulse, its fullness, i. e., the extent of dilatation of the artery at each impulse of the heart. [Lat., *amplitudo*.]
- ampule** (am-pül'). A small bottle or flask, usually sealed hermetically; used for preparations which must be kept aseptically or without exposure to air. [Fr., *ampoule*.]
- ampul'la**. 1. In chemistry and physics, a glass flask with long neck and dilated body or a small hollow glass globe. 2. In anatomy, a flasklike expanded portion of a canal. 3. In pathology (rarely used), a bleb or blister. **a. canaliculi lacrimalis**. A dilatation at the curvature of the lacrimal canal. **a. chyli**, **a. chyliifera**. See *receptaculum chyli*. **a. ductus lactiferi**. A sinus of the mammary gland, being the expanded portion of a milk duct near the nipple, serving as a kind of temporary reservoir for the milk. **a. Fallopii tubae**. The outer, sinuous dilated portion of the oviduct. **a. membranacea labyrinthi**. That portion of the membranous labyrinth of the ear which is inclosed in the a. of a semicircular canal. **a. nervi optici**. The dilatation of the subvaginal space of the optic nerve at its anterior extremity. **a. of the rectum**. That portion which is situated between the muscular floor of the pelvis below and the "third sphincter" above; closed in the normal condition by the collapse. **a. of the vagina**. The dilatate upper portion of the vagina. **a. of the vas deferens**. A saccular enlargement near the termination of the canal beneath the bladder. **a. of Vater**. A small cavity in the wall of the duodenum, between the muscular and mucous layers, into which the ductus choledochus and the pancreatic duct empty independently; described by Vater, a Dutch anatomist. **a. ossea**. The dilated portion of an osseous semicircular canal of the ear at its union with the vestibule, serving for the lodgment of the a. membranacea. **Lieberkühn's a.** The cecal end of a lacteal in an intestinal villus. [Lat., *ampulla*, flask.]
- ampul'late**. Flask-shaped; pertaining to or shaped like an ampulla, e. g., a goblet-cell.
- amputa'tion**. The operation or process of cutting off a limb in part or entirely, or a projecting part of the body, as the breast, the tongue, the penis, etc. In the case of an internal organ or a tumor, the terms excision, extirpation, or removal are used. In dentistry, the operation of excising with a surgical bur the apical portion of a diseased root. **Chopart's a.** See *Chopart*. [Lat., *amputatio*, a pruning.]
- amu'sia**. Morbid impairment or loss of the power of producing or appreciating musical qualities. [Gr., *a*, priv., + *mousa*, music.]
- amus'sis**. One of two irregular masses into which the posterior commissure of the brain is divided by a median fissure. [Lat., *amussis*, an artisan's rule or level.]
- amyasthenia**. See *amyosthenia*.
- amyelencephalus** (ah-mi-len-sef'a-lus). A monster with absence of the brain and spinal cord. [Gr., *a*, priv., + *myelos*, marrow, + *egkephalos*, the brain.]
- amyelus** (ah-mi'e-lus). A monster having absence of the spinal cord. [Gr., *a*, priv., + *myelos*, marrow.]

amygdala (am-ig'dal-ah). 1. The almond.
2. Any almond-shaped body, especially the tonsil. **a. amara**. Bitter almond [U. S. Ph.]. **amygdalae cerebelli**. Syn.: *cerebellar tonsils, lobuli cerebelli spinales*. A pair of cerebellar lobules, projecting from the inferior surface of the cerebellum, on either side of the uvula. **amygdalae decorticatae**. Blanched almonds. **a. dulcis**. Sweet almond [U. S. Ph., Br. Ph.]. **amygdalae faucium**. The tonsils. **aqua amygdalae amarae**. Bitter almond water, containing $\frac{1}{10}$ per cent. of oil of bitter almonds [U. S. Ph.]. **emulum amygdalae**. An emulsion made with sweet almonds, gum water, sugar, and distilled water [U. S. Ph.]. **farina amygdalae**. Almond meal. **mistura amygdalae**. A preparation composed of 20 parts of compound powder of almonds and 80 parts of distilled water [Br. Ph.]. **oleum amygdalae amarae**. The volatile oil of bitter almonds. **oleum amygdalae dulcis** [U. S. Ph., 1860], **oleum amygdalae expressum** [U. S. Ph.]. A fixed oil obtained by expression from almonds. Used as a demulcent and as an ingredient in ointments and liniments. **pasta amygdalae**. Almond paste, made of blanched bitter almonds, white of egg, water and alcohol. Used as a cosmetic. **pulvis amygdalae compositus**. Compound of almonds, confection of almonds; made of blanched sweet almonds, sugar, and gum arabic, triturated together [Br. Ph.]. **syropus amygdalae** [U. S. Ph.]. Syrup of bitter almond, orange-flower water, and syrup. [Lat., "an almond," from Gr., *amygdale*.]
amygdalin. A glucosid, $C_{20}H_{27}NO_{11}$, derived from bitter almonds, peach-kernels, etc.
amygdaline. Pertaining to or made of almonds.
amygdalitis (am-ig-dal-i'tis). Any inflammation of the tonsil. [Gr., *amygdale*, almond (popular term for tonsil), + *itis*, inflammation.]
amygdaloglossus (am-ig'dal-o-glos'sus). See *table of muscles under muscle*.
amygdaloid (am-ig'da-loid). Almond-shaped. [Gr., *amygdale*, almond, + *eidōs*, form.]
Amygdalus communis. The common almond tree, indigenous to Barbary and cultivated in southern Europe.
amygdoph'enin. A derivative of paramidophenol, $C_6H_4.OC_2H_5.NH.CO.CH.OH.C_6H_5$; used in rheumatism and neuralgia.
amykos. An antiseptic cosmetic and tooth-wash containing cloves, glycerin, and borax. [Probably from Gr., *a*, priv., + *mykos*, anything defiled, impure.]
amyl (am'il). The alkyl radicle containing five carbon atoms, C_5H_{11} . **a. alcohol**. Any one of the monohydric alcohols which contain five carbon atoms, $C_5H_{11}.OH$. Seven isomeric alcohols of this formula are known. Fermentation a. a. formed in the fermentation of grain by

the yeast cells, is a powerful poison, producing an intoxication similar to that of ethyl alcohol (see *alcoholism*), but the symptoms, more particularly those of cerebral involvement, are more marked. Two of the a. a's form the greater portion of the fusel oils, used as a hypnotic and in epilepsy. **a. chlorid**. $C_5H_{11}Cl$, a liquid sometimes used as an anesthetic. **a. nitrate**. $C_5H_{11}.ONO$. Syn.: *amylum nitrosum*. A yellow liquid acting as an important heart stimulant and vasodilator. **a. valerianate**. The amyl ester of valeric acid. [Gr., *amylon*, starch.]

amylaceous (am-il-ā'shus). Starchlike or containing starch. [Lat., *amylaceus*, starchy.]

amylase (am'il-ās). An enzyme which will hydrolyse starch. [Gr., *amylon*, starch, + *ase*.]

amylene (am'il-ēn). A hydrocarbon of the olefine series of the constitution, C_5H_{10} . **a. chloral**. Syn.: *dormiol*. A liquid containing amylene hydrate and chloral. **a. hydrate**. Tertiary amyl alcohol $(CH_3)_2C(OH)C_2H_5$. Used as a hypnotic.

amyleniza'tion. Anesthetization with amylene.

amyles'ter. An ether of amyl alcohol.

amyl'ic. Containing or pertaining to amyl.

a. acid. See *valerianic acid under acid*.

a. alcohol. See *alcohol*.

amylin (am'il-in). The insoluble substance forming the cell walls and interstitial striae of starch granules. Probably a kind of cellulose.

am'yliod'oform. An antiseptic powder, made of starch, iodine, and formaldehyd.

amyl-. Combining form of Gr., *amylon*, starch, used as a prefix in compound words to denote of or pertaining to starch.

Amylobacter (a-mil-o-bak'tur). A genus of *Schizomycetes*, distinguished by containing starch in its interior at certain periods of its development. [Gr., *amylon*, starch, + *bakterion*, a little rod or staff.]

amylocar'bol. Antiseptic solution made of crude carbolic acid, soap, amyl alcohol, and water.

amylodex'trin. Soluble starch, formed by heating starch grains with water or very dilute acids.

amylodyspepsia (am-i'llo-dis-pep'se-ah). Difficulty in digesting starchy foods. [Gr., *amylon*, starch, + *dyspepsia*.]

amyl'oform. A compound of formaldehyd and starch. Used as an antiseptic.

am'yloid. 1. Starchlike or containing starch. 2. A waxy material found in the animal tissues as a result of diseases such as tuberculosis, syphilis, and prolonged suppuration. Like starch it stains with iodine, but it is a proteid and does not resemble starch in its other properties. It consists of a mixture of chondroitin and sulphuric acid and has the formula $C_{15}H_{27}NSO_4$. **a. degeneration**. See *degeneration*. [Gr., *amylon*, starch, + *eidōs*, form.]

amylolysis (am-il-ol'is-is). The conver-

- sion of starch into sugar. [Gr., *amylon*, starch, + *lysis*, solution.]
- amylolytic** (am-il-ol-it'ik). Having the power of breaking up the starch molecule by hydrolysis, as in the conversion of starch to sugar. [Gr., *amylon*, starch, + *lytikos*, capable of resolving into parts.]
- amyllopsin** (am-il-op'sin). An enzyme present in the pancreatic secretion, which converts starch into maltose. [Gr., *amylon*, starch, + *opsis*, appearance.]
- amylosclema** (am-il-os-klé'mah). The bran of starch. [Gr., *amylon*, starch, + *sklema*, dryness, hardness.]
- amylose**. A substance resembling starch; one of a group of carbohydrates comprising starch, dextrin, inulin, glycogen, gums, and cellulose.
- amylum**. 1. Starch. 2. In chemistry, the soluble starch (granulose) which forms the inner portion of the starch granules.
- a. iodatum**. Iodized starch. The U. S. preparation is made by triturating 5 parts of iodine with a little distilled water, then gradually adding starch to the amount of 95 parts, and drying at a temperature below 40° C. [U. S. Ph.]
- [Gr., *amylon*, starch.]
- amy'o-**. A prefix used in compound words to denote lack of muscular strength. [Gr., *a*, priv., + *mys*, muscle.]
- amycardia** (ah-mi-o-kar'de-ah). A permanent weakness of the heart's contraction as opposed to cardiotoxic systole. [Gr., *a*, priv., + *mys*, muscle, + *kardia*, heart.]
- amyo'stia**. Muscular tremor as seen in locomotor ataxia. [Gr., *a*, priv., + *mys*, muscle, + *stasis*, standing.]
- amyo'sthenia** (ah-mi-o-sthen'e-ah). Want of muscular power. Often incorrectly written amyasthenia. [Gr., *a*, priv., + *mys*, muscle, + *sthenos*, strength.]
- amyo'sthenics** (ah-mi-o-sthen'iks). Agents that depress muscular action. [Gr., *a*, priv., + *mys*, muscle, + *sthenos*, strength.]
- amyo'taxy** (ah-mi'o-tak-se). Muscular ataxia. [Gr., *a*, priv., + *mys*, muscle, + *tassein*, to arrange.]
- amyo'tonia** (ah-mi-o-to'ne-ah). See *myatonia*. [Gr., *a*, priv., + *mys*, muscle, + *tonos*, tone.]
- amyo'trophia, amyo'trophy** (ah-mi-o-tro'fe-ah, ah-mi-ot'ro-fe). Muscular atrophy.
- primary spinal a.** Muscular atrophy occurring as the direct result of disease of the motor cells. [Gr., *a*, priv., + *mys*, muscle, + *trophe*, nourishment.]
- amyo'trophic** (ah-mi-o-trof'ik). Relating to muscular atrophy.
- amyo'xia** (ah-mix'e-ah). Absence or deficiency of the normal secretion of mucus. [Gr., *a*, priv., + *myxa*, mucus.]
- ana** (an'ah). Of each; in equal parts by measure or weight. Usually written *aa* in prescriptions. [Gr. prep., *ana*, used in a distributive sense, of each.]
- anabio'sis**. A term applied to the "coming to life" of certain bodies which apparently were lifeless or incapable of development, e. g., the unfertilized ovum [Gr., *anabiosis*, from *anabioein*, to come to life again.]
- anabiot'ic**. Apparently lifeless, but capable of living.
- anabol'ic**. Relating to constructive metabolism-synthesis.
- anab'olism**. That form of metabolism in which a substance is transformed into one more complex or more highly organized. [Gr., *anaballein*, to throw up.]
- Anacardium** (an-a-kar'de-um). 1. The cashew nut, *A. occidentale*. 2. A genus of anacardiaceous plants. The genus *A.* of Lamarck is the *Semecarpus* of Linnaeus. **anacardii occidentalis fructus**. The cashew nut. [Gr., *ana*, up, + *kardia*, heart, on account of its heart-shaped seeds.]
- anacatadidymus** (an'ah-kat-ad-id'im-us). A double monster divided above and below, but united centrally. [Gr., *ana*, up, + *kata*, down, + *didymos*, twin.]
- anachlorhydria** (an-ah-klor-hid're-ah). Same as achlorhydria. Absence of hydrochloric acid from the gastric juice.
- anacid'ity**. Without acid; used to express the condition of the stomach when no hydrochloric acid is present in it. [Gr., *an*, priv., + *acidity*.]
- anacnasmeter** (an-ak-las-im'et-er). An instrument with which to measure the refraction of the media of the eye. [Gr., *anaklasis*, refraction, + *metron*, measure.]
- anac'lasis, anacnasm'us**. 1. Reflection or refraction of light or sound. 2. Refraction of the media of the eye. 3. Forcible flexion of a joint to break up adhesions in ankylosis. [Gr., *anaklasis*, a bending back.]
- anacroasia** (an-ah-kro-a'se-ah). Inability to understand spoken language. [Gr., *a*, priv., + *akroasis*, hearing.]
- anacrot'ic, anacrotous**. Relating to or affected with anacrotism. **a. limb**. The ascending limb of a pulse wave. **a. wave**. A wave on the anacrotic limb of a pulse wave.
- anacrotism**. An irregularity or wave in the ascending curve of a sphygmographic pulse tracing. [Gr., *ana*, up, + *krotos*, a stroke.]
- anacusis** (an-ah-ku'sis). Deafness, particularly that form due to disease of any part of the acoustic nerve. [Gr., *a*, priv., + *akousis*, a hearing.]
- anadicrotic**. A type of pulse shown by a double indentation of the ascending curve in the sphygmographic record.
- anadidymus** (an-ah-did'em-us). A double monster developed from one germinal vesicle, united below but separate above. [Gr., *ana*, up, + *didymos*, twin.]
- anadip'sia**. Great thirst. [Gr., *ana*, intensive, + *dipsa*, thirst.]
- an'adol**. A proprietary antipyretic preparation.
- ana'ërobe, anaëro'bion**, pl., *anaërobes, anaërobia*. Organisms having the power to live without air or free oxygen. **facultative anaërobia**. Plants, including bacteria, which flourish when oxygen is not present, but grow less luxuriantly

- when oxygen is present. [Gr., *an*, priv., + *aer*, air, + *bios*, life.]
- anaërobio'sis.** Existence in a medium destitute of free oxygen.
- anagen'esis.** The process of regeneration of parts that have been destroyed. [Gr., *anagenesis*.]
- anagnosasthenia** (an-ag-nôs-as-the'ne-ah). Inability to concentrate or read a printed page although the words can be distinguished. A form of neurosis. [Gr., *anagnosis*, reading, + *asthenia*.]
- anagyrin** (an-aj'i-rin). An alkaloid obtained from *Anagyris fetida* and *Anagyris indica*. The hydrobromid is said to be a cardiac stimulant.
- anakhre** (an-ah'kra). A disease characterized by a hornlike exostosis generally situated by the side of each nasal bone; almost restricted to the negroes of the Gold Coast of Africa. Called also *goundrou* and *big nose*. [Fr.]
- a'nal.** Relating to the anus. **a. canal** [pars analis recti BNA], the terminal portion of the rectum from the level of the levatores ani muscles to the anal orifice. **a. reflex.** The contraction of the sphincter ani muscle following irritation of the skin about the anus.
- analep'tic.** 1. (Adj.) Supporting, restorative (said of foods and drugs). 2. (N.) An agent that is thought to restore strength. [Gr., *analeptikos*, from *analambanein*, to restore.]
- anal'gen.** Syn.: *quinalgin*, *benzanalgin*. Ortho - oxyethylanamono - acetylamidoquinolin ($C_8H_8(OC_2H_5).NH(COC_6H_5)N$). Used as an antirheumatic and antineuralgic.
- analgesia** (an-al-je'ze-ah). Commonly used of loss of sensitiveness to painful impressions without loss of the sense of touch, in which respect it differs from anesthesia. **paretic a.** A peculiar state of a. of the upper limb, more or less complete, usually accompanied with partial paralysis and connected with some inflammation or injury of the hand, especially felon. [Gr., *analgesia*, insensibility.]
- analysis** (an-al'is-is). 1. In chemistry, the resolution of a compound into simpler bodies or into its ultimate elements for the purpose of ascertaining its composition and properties. 2. In pathology, an examination of a clinical history, of symptoms, etc., to determine the nature or cause of a disease. 3. A formal statement of the results arrived at in any of these processes. **absorbiometric a.** A method of determining the composition of gaseous bodies by noting the amount of absorption that takes place on exposure to a liquid, the coefficient of absorption of different gases in that liquid being known. **a., urine, how to make a;** see in appendix, page 893. **colorimetric a.** A. conducted by comparing the colors of solutions with those of standard test solutions. **densimetric a.** A. by ascertaining the specific gravity of a solution, thus determining the proportion of dissolved matter. **dry a.** A. by means of heat, using the blowpipe, crucible, fluxes, etc., and including spectral a. **elementary a.** The estimation of the amount of each element in any compound. **audiometric a.** See *gasometric a.* **forensic a.** An a. conducted for medico-legal purposes. **gasometric a.** An a. conducted by estimating the volume of the gases evolved in the decomposition of a compound. **gravimetric a.** A quantitative a. conducted by weighing the bodies analyzed or the products derived from them. **proximate a.** An a. to determine in what proximate principles the elements of a body are grouped. **psycho-a.** Mental a.; a term used in Freudian psychology. **qualitative a.** An a. undertaken simply to determine and isolate the elements of which a body is composed, without trying to ascertain the proportions in which they are combined. **quantitative a.** An a. undertaken to determine the proportions, either by weight or by volume, of the component elements of a body. The chief varieties are *gasometric*, *gravimetric*, and *volumetric a.* **spectral a., spectrometric a., spectroscopic a., spectrum a.** The determination of the chemical or physical constitution of a body by means of the spectroscope. **titration a.** See *volumetric a.* **ultimate a.** An a. to ascertain the ultimate elements of which a body is composed. **volumetric a., volumetrical a.** A quantitative a. by estimating the constituents by volumes. **weight a.** See *gravimetric a.* **wet a.** A. by means of solution, precipitation, etc. [Gr., *analyein*, to resolve matters into their elements.]
- anal'yst.** One who conducts an analysis, especially a chemist employed to make analyses for public purposes.
- analy'tic, analy'fical.** Pertaining to, or having the power of analysis.
- an'al'yzér.** 1. An analyst. 2. In a polarizing instrument, that part of the apparatus which distinguishes polarized from ordinary light, as opposed to the polarizer, which converts ordinary into polarized light.
- anamne'sia, anamne'sis.** The past history of a disease; any information bearing upon the case that can be furnished from memory. [Gr., *anamnesis*, from *anaminneskein*, to call to mind.]
- anamorph'ism, anamorpho'sis.** 1. In botany and zoology, an irregular or retrograde development. 2. In optics, the process by which a distorted image is restored to its proper form by means of a reflecting surface. 3. In pathology, an irregularity, distortion, or anomaly of development. [Gr., *anamorphosis*, from *anamorphoun*, to transform.]
- ananabasia** (an-an-ab-a'se-ah). Inability to ascend to high places. [Gr., *an*, priv., + *anabasis*, ascent.]
- anandria** (an-an'dre-ah). Absence of male characteristics. [Gr., *an*, priv., + *aner*, man.]
- anangioplasmia** (an-an-je-o-pla'se-ah). Congenital diminution of the caliber of the arteries. [Gr., *an*, priv., + *ageion*, vessel, + *plassein*, to form.]

anapeiratic (an-a-pi-rat'ik). Caused by the frequent repetition of some particular muscular action; applied to a class of occupation paralyses. [Gr., *anapeirasthai*, to continue or repeat an exercise.]

an'aphase. The stage in nuclear division (mitosis) as the chromosomes separate to form the diaster.

ana'phia. See *anhaphia*.

anaphore'sis. Diminished secretory activity of the sweat glands.

anapho'ria. Tendency of the visual axis of the eyes upward. [Gr., *ana*, upward, + *pherein*, to bear.]

anaphrodisia (an-af-ro-diz'e-ah). Absence or loss of sexual feeling. [Gr., *an*, priv., + *Aphrodite*, Venus.]

anaphrodisiac (an-af-ro-dis'e-ak). A drug or agent that diminishes sexual desire. [Gr., *an*, priv., + *aphrodisiakos*, venereal.]

anaphylactic (än-ah-fil-äk'tik). Decreasing immunity; pertaining to anaphylaxis.

anaphylactin. The substance in the blood which produces anaphylaxis. [Gr., *a*, priv., + *phylaktikos*, preservative.]

anaphylaxis (an-af-il-aks'is). 1. The sensitization of an animal, such as a guinea-pig, to a foreign proteid, so that a second dose finds an exaggerated susceptibility to the foreign substance. A guinea-pig injected with 0.01 c.c. of horse serum and in 10 to 12 days again injected with from 3 to 5 c.c., will die in about 10 minutes with respiratory failure, clonic spasm, and paralysis. The sensitized cells have probably produced receptors which grasp the non-poisonous moiety of the proteid and thus the poisonous group is liberated and acts. 2. A state of excessive susceptibility to the action of a toxin or drug after repeated injections or use. [Gr., *a*, priv., + *phylaxis*, protection.]

anapla'sia. The reversion of cells in their morphology, as the simplification of the tubular cells of the kidney in nephritis. [Gr., *ana*, again, + *plassein*, to form.]

Anaplas'ma. A genus of minute infusoria possibly causative of a disease in cattle.

anaplas'tic. Restoring a lost or absent part. [Gr., *anaplastos*, capable of being molded, plastic.]

anap'nograph. An apparatus for indicating the speed and pressure of the respiratory current of air. [Gr., *anapnoe*, respiration, + *graphein*, to register.]

anapno'ic. 1. Relieving dyspnea. 2. Pertaining to the respiration. [Gr., *ana*, against, toward, + *apnoia*, breathlessness (1st def.), + *pnoe*, respiration, 2nd def.]

anapnom'eter. See *anapnograph* and *spirometer*.

anapophysis (an-a-pof'is-is). The accessory process of a lumbar vertebra, a small process, pointing downward, situated behind the base of the transverse process and corresponding to the inferior tubercle of the transverse process of a dorsal vertebra. [Gr., *ana*, up, + *apophysis*, offshoot.]

anap'tic. Affected with anaphia, loss of the sense of touch. [Gr., *an*, priv., + *aptein*, to touch.]

anarcotin (ah-nar'kot-in). A name proposed for narcotin on account of its lack of narcotic properties. [Gr., *a*, priv., + *narkosis*, narcotism.]

anarithmia (an-ar-ith'me-ah). A form of aphasia in which the patient is unable to count. [Gr., *an*, priv., + *arithmos*, number.]

anarth'ria. 1. Want of vigor. 2. Absence of limbs or joints. 3. Inability to utter words distinctly from motor defect. [Gr., *an*, priv., + *arthron*, articulation.]

anasal'pin. Anhydrous wool fat. See *adeps lanae*.

anasar'ca. A puffy swelling, or bloating, extending over the whole body or the greater part of it, due to serous infiltration of the subcutaneous cellular tissue; general edema. **acute a.** A in which the skin preserves its natural color, and pitting under the finger disappears rapidly. **a., Karel treatment for;** see in *appendix*, page 916. [Gr., *ana*, throughout, + *sarx* (*sarc-*), flesh.]

anaspadias. The condition of urethral opening on the dorsum of the penis.

anastal'sis. A term applied by W. B. Cannon to an upward moving contraction of the intestine (Am. J. Physiol. Vol. XXX, 1912, p. 126). It being more exact than the general term, peristalsis. See *katastalsis* and *diastalsis*. [Gr., *ana*, up, + *stalsis*, a compression, restriction.]

anastomose. To communicate with or join each other by anastomosis.

anastomosis (an-as-to-mo'sis). Syn.: *in-osculation*. The communication of an artery or vein with another artery or vein; also the vascular branch by which such communication is established. **a. by convergence.** A union of two arteries running in the same general direction. **a. by inosculation.** The union of two vessels coming from opposite directions like that of the intestinal arteries in the mesentery. **a. by transverse communication.** A communication between two parallel vessels by means of a communicating (anastomotic) branch. **a. per coailitum.** The simple coalescence of two arteries so as to form one trunk of a caliber equal to the sum of the calibers of the two. **a. per dehiscientiam.** A communication between two adjacent arteries for a small portion of their course, so that the entering and emergent branches together form a figure somewhat like a cross. [Gr., *ana*, up, + *stomosis*, from *stoma*, mouth.]

anastomotic (an-as-to-mot'ik). Pertaining to anastomosis.

anatom'ic, anatom'ical. 1. Pertaining to anatomy or to the ultimate parts into which an organism may be resolved by dissection. 2. Structural, as opposed to functional. 3. Due to dissection.

anatom'ico-. A prefix signifying of or pertaining to anatomy.

anat'omist. 1. One who is versed in anatomy. 2. One who practises dissection.

pathological a. One who is versed in pathological anatomy, or who gives his

attention to making post-mortem examinations.

anatomiza'tion. 1. Dissection. 2. Analysis.

anat'omy. 1. Dissection. 2. Analysis. 3. The science of structure of an organism; of the examination and appreciation of its several parts and of their relations to each other and to the functions of the organism. **applied a.** A. in its relations to the diagnosis and treatment of disease. **artificial a.** The art of making models in wax or other material to illustrate a., normal or pathological. **artistic a.** That branch of a. which deals with the external form of the human body, or that of the other mammalia, in its various attitudes, as an aid to painters and sculptors. **comparative a.** The study or science of the anatomic and structural relations between the lower animals and man. **corrosion a.** The study of a. by destroying obscure parts by corrosion, the elements it is desired to observe, such as ducts and vessels, having previously been injected with some substance that resists the action of the corrosive agent, so that, on the completion of the process, their exact form is represented. **descriptive a.** A. studied by a separate consideration of the different systems in an organism, with reference to their relation to other systems. **general a.** A consideration of the tissues and fluids of the body in general, with the properties of the tissues and their arrangement into systems. **gross a.** A. without reference to the minute structure of parts. **histological a.** See *histology*. **homological a.** That branch of a. which deals with the correlation of parts. **human a.** The a. of man, i. e. of the human body. **macroscopic a.** See *gross a.* **medical a.** The application of a. to the study of the causes, symptoms, and treatment of non-surgical diseases. **microscopic a.** 1. Histology. 2. The study of microscopic organisms. **minute a.** See *histology* and *microscopic a.* **morbid a.** See *pathological a.* **palaeontological a.** The study of fossil remains with a view to their classification. **pathological a.** The science of the anatomical changes in the solids and fluids of the body which result from or give rise to disease, and of the relations between these changes and the phenomena of disease. **physiological a.** Anatomical study of the tissues for the purpose of ascertaining their functions. **practical a.** 1. Dissection. 2. Applied a. **preservative a.** The preservation of anatomical specimens. **regional a.** See *topographical a.* **special a.** The a. of a single species, or of a single system, apparatus, or organ. **surgical a.** The application of a. to the elucidation of surgical diseases and the performance of surgical operations. **theoretical a.** 1. The science of a. as opposed to the practice of dissection. 2. Transcendental a. **topographical a.** A study of all the structures met in any particular part

of the body, with regard to their relation to each other. **transcendental a.** A. in its bearings upon theories of type, evolution, developmental changes, the adaptation of means to ends, etc. **vegetable a.** The a. of plants. **veterinary a.** The a. of domesticated animals. [Gr., *anatome*, dissection, from *ana*, up, + *temnein*, to cut.]

anatricot'ic. A type of pulse shown by a triple indentation of the ascending curve in the sphygmographic record.

anatriptic (an-at-rip'tik). A medicine which is applied by rubbing. [Gr., *anatriptos*, rubbed up.]

anazotu'ria. A deficiency or absence of nitrogenous matter (urea) in the urine, also a morbid condition characterized thereby. [Gr., *an*, priv., + *azote*, not fit to preserve life, + *ouron*, urine.]

anazyme (an'az-im). A compound of boric and carbolic acids, employed as a substitute for iodoform.

An. C. C. Abbreviation for anodal closure contraction.

anchietin (an-ki'et-in). An alkaloid obtained from the *Anchietea salutaris* and thought to be its native principle.

anchorage (an'kor-age). 1. In surgery the fixation of a displaced viscus. 2. In dentistry the points of the fixation of fillings or of artificial crowns or bridges. [Old Eng. *ancor*, from Lat., *ancora*, from Gr., *agkyra*, a hook.]

Anchusa tinctoria (an-ku'sah tink-to're-ah). Dyers' alkanet; a perennial herb growing in southern Europe and the neighboring Mediterranean islands. Its root contains an astringent coloring principle called anchusic acid, anchusin, or alkannin. It is occasionally employed in medicine.

anchylosis. See *ankylosis*.

anchylostomum. See *Ankylostoma*.

an'conad. Toward the elbow. [Gr., *agkon*, elbow, + Lat., *ad*, toward.]

an'conal. Pertaining to the elbow or the olecranon. [Gr., *agkon*, the elbow.]

anconeus (an-co'ne-us). See *table of muscles*, under *muscle*.

anconiradialis (an-co''ni-ra-di-a'lis). Situated on the radial border of the forearm. **a. digiti medii.** The first dorsal interosseous muscle of the hand.

anconulnaris (an-co''ni-ul-na'ris). Situated on the ulnar border of the forearm. **a. digiti annularis.** The third dorsal interosseous muscle of the hand. **a. digiti medii.** The second dorsal interosseous muscle of the hand.

An'da. A genus of euphorbiaceous plants. **A. de Pison, A. Gomesii, A. joannesia, Johannesia princeps.** oil of a. A fixed oil obtained from the seeds of *Johannesia princeps*. It has been recommended as a substitute for castor oil, being more limpid; applied to the skin it acts as an irritant. [From the Brazilian name *andaagu*.]

Ander's disease. Adiposis tuberosa simplex.

Andi'ra araro'ba. A large tree growing

- in the province of Bahia, in Brazil, and furnishing araroba, or Goa-powder.
- andrei'a, an'dria.** A male hermaphrodite. See *hermaphroditism*. [Gr., *andrea*, manliness, from *aner*, *andros*, a man.]
- andro-** A prefix from the Gr. *aner*, *andros*, man, signifying of or pertaining to the male sex.
- androgenous** (an-droj'en-us). Giving birth to males. [Gr., *aner*, man, + *genesis*, to beget.]
- androgyna** (an-droj'in-ah). A female hermaphrodite. See *hermaphroditism*. [Gr., *aner*, a man, + *gynē*, a woman.]
- andrology** (an-drol'o-je). The branch of medicine that treats of man and of the diseases peculiar to the male sex. [Gr., *aner*, man, + *logos*, science.]
- androm'edotox'in, andrometox'in.** An anodyne and poisonous principle obtained from *Andromeda japonica* and some other ericaceous plants.
- andropho'bia.** An insane dislike or dread of men. [Gr., *aner*, man, + *phobos*, dread.]
- androphonomania** (an'dro-fo-no-may'ne-ah). Old term for homicidal mania. [Gr., *androphonos*, man-killing, + *mania*, madness.]
- anecta'sia, anec'tasis.** A lack of the usual size in an organ. [Gr., *an*, priv., + *ektasis*, extension.]
- anec'tasin.** A vasoconstrictor bacterial product.
- anelect'ric.** Insusceptible of being electrified by friction; readily parting with electricity. [Gr., *an*, priv., + *elektron*, amber.]
- anelectrode.** The positive pole of a battery. [Gr., *ana*, upward, + *elektron*, amber, + *odos*, a path.]
- anelectroton'ic.** Characteristic of or dependent on anelectrotonus.
- anelectrot'onous.** The state of diminished irritability and conductivity in the region of the anode when an electric current is passed through a nerve. [Gr., *ana*, upward, + *elektron*, amber, + *tonos*, tone.]
- Anel's operation.** Ligation of an artery immediately on the proximal side of an aneurism. A's **probe.** A probe for the nasal duct and punctum lacrimale. [Dominique Anel, French surgeon, 1679-1730.]
- anemia.** A diminution of the amount of blood in the body, either from hemorrhage or from deficiency of the hemoglobin or albumin of the blood. **acute a.** An a. due to the sudden loss of a large quantity of blood. **acute pernicious a.** See *progressive pernicious a.*
- ankylostoma a.** See *miners' a.* **essential a.** See *progressive pernicious a.*
- infantile splenic a.** An a. of early infancy due to hypertrophic alteration of the spleen. It is progressive and of a grave nature. **miners' a.** The disease, resulting from the presence of the intestinal parasite *Ankylostoma duodenale*, observed in miners and workers in tunnels. See *ankylostomiasis*. **paludal a.** The a. due to malarial influences. **perni-**
- cious a.** See *progressive pernicious a.*
- phenylhydrazin a.** A condition of the blood similar to that of pernicious a., produced in animals by subcutaneous injections of phenylhydrazin. **primary a.** Same as *pernicious a.* **progressive cachectic a.** A variety of progressive pernicious a. distinguished by a decided cachexia without any discernible cause. **progressive pernicious a.** A form of a. without any apparent cause which tends toward a fatal issue. It begins insidiously and is unattended by any bronzing of the skin, enlargement of the spleen and lymphatics, or any great disproportion in number between the red and white blood corpuscles. **retinal a.** A condition sometimes observed in marked general a., in which the retinal arteries are somewhat diminished in caliber. Usually the veins are not affected and there is little, if any interference with vision. **secondary a.** An a. due to hemorrhage or to reduction of red corpuscles from a well-recognized cause, as malaria, or cancer, or toxic conditions, such as lead poisoning. **spinal a.** A deficiency in the supply of blood to the spinal cord. It may affect the motor or sensory tracts of the cord, giving rise to disturbances of motion or sensation in different parts of the body. The sensory symptoms caused by this condition are those of irritation. **splenic a.** A condition characterized by anemia and an enlarged spleen, in which cirrhosis of the liver may develop later; usually a secondary a. **tropical a.** A form of a. met with in unaccimatized persons living in the tropics. [Gr., *anaimia*, from *an*, priv., + *aima*, blood.]
- anem'ic.** Pertaining to, caused by, or affected with anemia. [Gr., *anaimos*.]
- Anemone** (an-em'o-nē). A genus of the *Ranunculaceae*. **A. hepatica.** Liverwort, a species common throughout continental Europe. The leaves were formerly much employed in chronic disease of the thoracic and abdominal viscera. **A. pratensis.** Meadow a. The herb has a slight pungent odor and a burning, acrid taste, which it loses to a great extent upon drying. It contains *anemonin*, *anemonol*, and tannin. It is used for the same purposes as *A. pulsatilla*. **A. pulsatilla.** The herb was formerly official in the U. S. Ph., as *pulsatilla*. It is said to be somewhat less acrid than *A. pratensis*, but it probably contains the same constituents. It is used in acute catarrhal affections. [Gr., *anemone*, the wind flower, from *anemos*, wind, because plants of this genus grew in windy places.]
- anem'onin.** A poisonous crystalline substance, C₁₆H₁₂O₆, obtained from the leaves and flowers of several species of *Anemone*. It is volatile and has a burning, aromatic taste like that of pepper. It has been used in whooping-cough, bronchitis, and asthma.
- anem'onol.** Oil of anemone; it is exceedingly pungent and irritating.
- anemopho'bia,** Aphobia or compulsive

- idea relative to the danger from winds or drafts. [Gr., *anemos*, wind, + *phobos*, fear.]
- anemotrophy** (an-em-ot'ro-fe). Impoverishment (defective formation) of the blood. [Gr., *an*, priv., + *aima*, blood, + *trophe*, nourishment.]
- anenceph'alus**. A monstrosity characterized by absence of the brain and spinal cord, the cranium being open throughout its whole extent and the vertebral canal converted into a groove. [Gr., *an*, priv., + *egkephalos*, the brain.]
- anep'ia**. Loss of the power of speech. [Gr., *anepes*, speechless.]
- anerethisia** (an-er-e-this'e-ah). Impaired irritability of a muscle or nerve. [Gr., *a*, priv., + *erethizein*, to excite, to provoke.]
- anergia** (an-er'je-ah). Inactivity. [Gr., *an*, priv., + *ergo*, work.]
- an'croid**. Not containing liquid; as, an a. barometer. [Gr., *a*, priv., + *neros*, moist, + *eidōs*, appearance.]
- anerythrospia** (an-er-ith-rop'se-ah). Red blindness, or, more properly, red-green blindness. [Gr., *an*, priv., + *erythros*, red, + *opsis*, sight.]
- ane'sin**. A one-per-cent. solution of acetone in chloroform; a hypnotic and local anesthetic. Same as *chloretone*. [Gr., *anesis*, relaxation.]
- anesthescinesis** (an-es'the-sin-e'sis). Absence of both sensibility and the power of movement. [Gr., *an*, priv., + *aisthesis*, sensibility, + *kinesis*, movement.]
- anesthe'sia**. 1. Complete or nearly complete loss, temporary or permanent, of the power of sensation, either in the whole body or in any part of it, involving either common tactile sensibility, the special sensibility of an individual organ, or any sort of perceptive faculty, whether due to disease, to the action of a drug, or to injury. 2. The production of this condition. The varieties are: **doll's head a.** Central a. affecting the head, neck, and upper part of the thorax. **electrical a.** Temporary a. due to the passage of the electrical current. **facial a.** Insensibility of the parts supplied by the facial nerve. **general a.** A. affecting the whole body. **girdle a.** A ring of a. which surrounds the body. **gustatory a.** Loss or absence of the sense of taste. **infiltration a.** Local a. produced by hypodermic injections of solutions such as cocain, eucaïn, salt solution, etc. **local a.** A. confined to one limited part of the surface. **mixed a.** A. produced by the use of more than one anesthetic agent. **morphin-scopolamin a.** A general a. produced by injecting 0.01 gm. of morphin and 0.0012 gm. of scopolamin hydrobromate. **muscular a.** Absence or loss of the muscular sense. **olfactory a.** Loss of the sense of smell. **partial a.** A. with retention of some degree of sensibility. **peripheral a.** A. due to changes in the peripheral nerves. **pressure a.** In dentistry, the forcing of anesthetic agents into the tissues, as into the pulp of the tooth or even the dentin by means of a powerful syringe or unvulcanized rubber. **primary a.** A temporary a. occurring in the early stages of general a. **pulmonary a.** A. by inhalation. **rectal a.** Local a. caused by placing an anesthetic agent in the rectum. **Schleich's a.** See *infiltration a.* **sexual a.** Loss of the sexual sense. **spinal a.** 1. A. due to a spinal lesion. 2. Cocainization of the spine. **surgical a.** A. due to the administration of an anesthetic. **tactile a.** Loss or deficiency of the sense of touch. **thermic a.** Loss of the perception of heat. **total a.** Complete loss of sensation. **unilateral a.** A. of either lateral half of the body. **visceral a.** Loss of sensation in the viscera. [Gr., *anaesthesia*, from *an*, priv., + *aisthesis*, perception by the senses.]
- anesthesin** (an-es'the-sin). A name applied to ethylaminobenzoate (C₆H₄.NH₂.COO(C₂H₅)). It is used as a substitute for cocain. **soluble a.** A soluble, sweet preparation of anesthesia, intended for subcutaneous injection.
- anesthet'ic**. 1. (Adj.) pertaining to, accompanied by, or producing anesthesia. 2. (N.) any agent capable of producing anesthesia, either general or local. [Lat., *anestheticus*.]
- anes'thetiza'tion**. The production of anesthesia, general or local.
- anes'thetizer**. A person charged with the administration of an anesthetic.
- anes'thyl**, **anes'thol**, **anes'til**. A mixture of ethyl chlorid and methyl chlorid, used as a local anesthetic.
- an'ethene**. A hydrocarbon, C₁₀H₁₆, found in oil of dill.
- an'ethol**. Allylmethylphenol, C₁₀H₁₂O. A liquid or solid substance, formed in oil of anise, fennel, and tarragon. Antiseptic. **a. hydrid**. See *anise camphor*. **solid a.** See *anise camphor*. [Gr., *anethon*, anise.]
- aneu'ria**. Lack of nervous power. [Gr., *a*, priv., *neuron*, a nerve.]
- an'eurism**. A tumor formed by localized dilatation of an artery through which blood circulates. Such tumors are distinguished by their expansive pulsation with each systole of the heart, by a thrill to be felt in them on palpation, and by a *bruit* heard on auscultation. As they increase in size they produce absorption of adjacent structures and give rise to distressing symptoms by their pressure on nerves. Their final tendency is to burst and, if a large artery is the seat of the tumor, to cause death. They are classed as: (1.) *true arterial a.* and (2.) *arteriovenous a.* A *pulsating arterial hematoma*, even though its walls are not formed by the wall of an artery must be classified with aneurisms. **a. by anastomosis**. 1. J. Bell's term for a vascular tumor made up of enlarged and proliferated capillaries. 2. See *arteriovenous a.* 1. **true arterial a.** If only a portion of the wall of an artery is affected, a *sac-cular a.* is formed; if the entire wall is involved, a *cylindrical* or *cirsoid a.* develops. Other varieties of arterial a. are:

a. by erosion. **congenital a.** dissecting **a.** embolic **a.** false traumatic **a.** spontaneous **a.** True arterial **a.** is about twice as frequent in the male as the female and develops most often between the thirtieth and fiftieth year, involving the following arteries in the order of frequency given: thoracic aorta, popliteal, femoral, abdominal aorta, subclavian, innominate, axillary, iliac, visceral, central, and pulmonary. **arteriovenous a.** Those having a venous sac, connecting with a vein on one side and an artery on the other, called *aneurismal varix*; those having a false sac without direct communication with vein or artery called *varicose a*; and the rare form occurring when a true arterial **a.** erodes the wall of a vein and ruptures into it, called *arteriovenous a.* with *arterial sac*. *Arteriovenous a.* is usually due to punctured wounds and the vessels usually involved are the following in the order of frequency given: *brachial, femoral, popliteal, carotid*, arteries of the head, especially the temporal and the subclavian and axillary arteries. **varicose a.** An **a.**, either traumatic or spontaneous, consisting in the communication of an artery with a vein through the medium of a distinct sac formed between the two. [Gr., *aneurysma*, a dilatation, from *aneuryein*, to dilate.]

anfractuosity (an-frak-tu-os'i-te). Lit., an interruption, a winding, a breaking, a detour (as of a path). 1. Any one of a number of spiral turns. 2. A roughness of surface. 3. A cerebral fissure or sulcus. **ethmoidal anfractuositities.** The ethmoidal cells. [Lat., *anfractus*, a bending.]

angatra. A native name for a disease observed in Madagascar, characterized by pain extending around the head and the abdomen in the form of a ring, not accompanied by fever or any apparent organic change, but ending in marasmus.

angeli-. For words beginning thus see *angi-*.

Angelica (an-jel'ik-ah). 1. Lungwort. A genus of the *Umbelliferae*. 2. The root of *Archangelica officinalis*. Various parts of numerous species are used under the name of *A.*, especially the roots of *A. archangelica* and *A. atropurpurea*. The root is used as a simple bitter. [Lat., *angelicus*, angelic, on account of the marvelous medicinal properties ascribed to some species.]

angelicin (an-jel'is-in). A crystalline substance obtained from *Angelica*.

angi-. In composition having to do with a blood vessel. [Gr., *ageion*, vessel.]

angiectasis (an-je-ek'ta-sis). Dilatation of vessels without the power of independent growth, as contrasted with true blastomas. [Gr., *ageion*, a vessel, + *ektasis*, extension.]

angiectopia (an-je-ek-to'pe-ah). Abnormal position or course of a blood-vessel. [Gr., *ageion*, vessel, + *ek*, out, + *topos*, place.]

angiitis (an-je-i'tis). Inflammation of a

blood or lymph vessel. [Gr., *ageion*, a vessel, + *itis*, inflammation.]

angina (an'ji-nah or an-ji'nah). Lit. a sense of suffocation, a difficulty in breathing or swallowing; a general term for any inflammatory disease of the throat or the trachea, or of the adjacent structures, characterized by pain or difficulty in breathing or swallowing. A term now but little used except as referring to acute and painful conditions of the throat, and tonsils and more commonly of a pectoris. **a.** ab *hydrargyrosi*. Mercurial stomatitis. **a.** *acuta*. An ordinary sore throat of an acute character with pronounced fever. **a.** *aphthosa*. See *aphthous a.* **a.** *arthritica*. A sore throat occurring during the course of an arthritic attack, sometimes resulting in abscess. **a.** *carbuncularis*, **a.** *carbunculosa*. 1. A form of anthrax affecting the throat, often accompanied with erysipelas; observed in swine. 2. An **a.** complicated with carbuncle. **a.** *cruris*. Intermittent lameness, with pain and cyanosis of the affected limb, due to arterial obstruction. **a.** *exanthematica*. The **a.** of an eruptive fever (e. g., scarlet fever). **a.** *follicularis*, **a.** *folliculosa*, **a.** *folliculosa pharyngea*. See *follicular a.* **a.** *Ludovici*, **a.** *Ludwigii*. A diffuse phlegmonous inflammation of the floor of the mouth and of the intermuscular and subcutaneous tissue of the submaxillary region. **a.** *pectoris*. Breast pang, dyspnea of the heart, neuralgia of the heart, diaphragmatic gout; a term applied by Heberden to a disease first described by Rougnon in 1768. It is characterized by sudden attacks of terrible pain in the region of the heart, often radiating to the shoulders and down the left arm, with intense difficulty in breathing, a feeling of constriction of the chest, an overpowering apprehension of impending death (so that all movements are avoided, lest they should precipitate that event), deadly pallor, cold sweat, and great weakening of the heart's action, while the pulse is diminished in volume. Death frequently occurs in an attack. True **a.** *p.* is associated with serious disease of the heart (either valvular disease, degeneration of the muscular tissue, or embolism of the coronary arteries), and it is not uncommon for the paroxysm to prove fatal. The false or pseudo-form has been referred to some pathological condition of the nervous apparatus of the heart. **aphthous a.** Angina accompanied with the formation of aphthae on the tonsils or in some other part of the throat. **follicular a.** Syn.: *chronic bronchitis, clergyman's sore throat*. A chronic diffused catarrh of the pharynx and larynx, common in persons much employed in public speaking or singing, or who drink alcoholic liquors to excess. **simple a.** Ordinary sore throat; hyperemia of the fauces with more or less pain in swallowing, often accompanied with a swollen state of the uvula, coryza, and fever. **toxic a.** A form due to the abuse of tea,

- coffee, or tobacco. **vasomotor a.** A condition in which, together with the usual symptoms of a. pectoris, there are numbness, pain, and difficulty of movement in all the limbs, which become pale and decidedly cyanotic. The pulse remains unaffected and no abnormal sounds are heard over the heart. According to Landois and Nothnagel, the condition is due to a widely distributed spasm of the blood vessels. **Vincent's a.** See *Vincent*. [Lat., *angina*, from *angere*, to choke.]
- an'giniform, ang'inoid.** Resembling angina.
- an'ginose, an'ginous.** Of the nature or character of angina.
- angio-.** Combining form of Gr., *aggeion*, vessel, receptacle; used as a prefix in compound words to denote of or pertaining to a blood vessel. Sometimes incorrectly spelled angei-.
- an'gioblast.** An embryonic cell-form, whence the vessels are derived. [Gr., *aggeion*, vessel, + *blastos*, germ.]
- ang'ioardiopathy.** A morbid condition of the heart and blood vessels.
- an'giocardi'tis.** Inflammation of the heart and blood vessels.
- angiocholi'tis.** Inflammation of the bile ducts.
- an'giokerato'ma.** An outgrowth of the horny layer of the epidermis upon a telangiectatic patch. [Gr., *aggeion*, vessel, + *keras*, horn, + *oma*, tumor.]
- an'giokine'sis.** Excited motion or action of the blood-vessels.
- an'gioleuki'tis.** See *lymphangitis*.
- an'giolipo'ma** (an-je-o-li-po'mah). An angioma containing fatty tissue.
- angiolith** (an'je-o-lith). A calculus in a blood vessel. [Gr., *aggeion*, a vessel, + *lithos*, a stone.]
- an'giolymph'i'tis.** See *lymphangitis*.
- an'giolympho'ma.** See *lymphangioma*.
- angioma** (an-je-o'mah). A tumor composed of abnormally arranged, tortuous and dilated blood or lymph vessels, or of vessels showing true proliferation of cells. The varieties are: **a. simplex.** Known also as *telangiectasis*, but incorrectly, because there is present something more than a dilatation of vessels in an actual new formation of vessels. **cavernous a.** Similar in structure to the corpus cavernosum of the penis, being made up of the retiform blood spaces. **cirroid a.** A variety of a. characterized by thickened, dilated, tortuous, pulsating vessels; arteries forming the tumor rather than capillaries and many of the capillaries having aneurismal dilatation. **cutaneous a., subcutaneous a.** This form of a. develops most frequently in the skin and subcutaneous tissue, especially in the cheeks, eyelids, lips, and scalp. They are red in color and the blood may be driven out on pressure, returning when the pressure is removed. [Gr., *aggeion*, a vessel, + *oma*, tumor.]
- an'giomala'cia.** Softening of the blood-vessels.
- angioneurosin** (an'je-o-nu-ro'sin). See *nitroglycerin*.
- an'gioneuro'sis.** Any neurotic condition characterized by deranged vasomotor nerves. It may have its origin in lesions, either of the brain or cord, or even of the peripheral nervous system and its ganglia, and manifest itself by redness, or pallor, or edema of areas of the skin or subcutaneous tissue. [Gr., *aggeion*, a vessel, + *neuron*, a nerve.]
- angiopathy** (an-je-op'a-the). Any disease of the blood vessels. [Gr., *aggeion*, vessel, + *pathos*, affection.]
- angioplany** (an'je-o-pla-ne). An abnormality in the course of a vessel. [Gr., *aggeion*, vessel, *plane*, a wandering.]
- angioplasty.** Plastic surgery of blood vessels. [Gr., *aggeion*, vessel, + *plassein*, to form.]
- an'giosarco'ma.** A sarcoma in which a proliferation of blood vessels is the predominant element; sometimes developed from a diffuse cavernous angioma.
- angiosclerosis** (an'je-o-skle-ro'sis). A hardening of the blood vessels, both arteries and veins. See *arteriosclerosis*. [Gr., *aggeion*, a vessel, + *skleros*, hard.]
- angiosialitis** (an'je-o-si-al-i'tis). Inflammation of the duct of a salivary gland. [Gr., *aggeion*, vessel, + *sialon*, saliva, + *itis*, inflammation.]
- angio'sis.** Any disease of the blood or lymph vessels.
- an'giosteno'sis.** Constriction or contraction of the blood-vessels.
- angiosteogeny, angiosteosis** (an'je-oste-o'je-ne, an'je-os-te-o'sis). Calcification of the vessels. [Gr., *aggeion*, vessel, + *osteon*, a bone.]
- angiotelctasia, angiotelctasis** (an'je-o-tel-ek-ta'se-ah, an'je-o-tel-ek'ta-sis). Distension of capillary vessels or of minute arteries and veins. [Gr., *aggeion*, vessel, + *telos*, end, + *ektasis*, distention.]
- angiotomy** (an-je-ot'o-me). 1. Section of an artery or vein. 2. Dissection of the blood vessels or lymphatics. [Gr., *aggeion*, a vessel, + *tome*, a cut.]
- an'gle.** 1. The degree of divergence of two straight lines or two planes which meet each other or would meet if sufficiently projected. 2. A corner, a point at which two or more edges or sides of an object or the walls or boundaries of a cavity or opening meet; an abrupt bend.
- acromial a.** An a. formed by the clavicle and the head of the humerus. **a. a., a. alpha.** The a. (of 5°) formed by the visual axis and the optic axis. **a. of a rib.** The sharp turn taken by a rib in its posterior portion at a point corresponding to the outer edge of the erector spinae muscle. **a. of deviation.** 1. In optics, the a. between a refracted ray and the prolongation of the incident ray beyond the point of incidence. 2. The a. through which a galvanometer needle or the needle of a compass is made to move by the action of some disturbing force. **a. of incidence.** The angle which a ray of light or a wave of sound makes with the perpendicular to a surface at which it undergoes reflection or refraction. **a. of the lower jaw.** The prom-

inence of the junction of the ramus and body of the lower jaw. [B. N. A., *angulus mandibulae*.] **a. of polarization**. That a. of reflection, varying with the nature of the reflecting substance in which light is most completely polarized. **a. of the pubes**. The internal extremity of the pubic crest. [B. N. A., *angulus pubis*.] **a. of reflection**. The a. which a reflected ray of light or sound wave makes with a perpendicular let fall upon the reflecting surface at the point of reflection. **a. of refraction**. The a. which a refracted ray of light makes with the prolongation of a perpendicular let fall upon the surface at which the refraction takes place. **a. of vision**. See *optic a.* **auricular a.** The suboccipital and supra-occipital a.'s combined. **basilar a.** An a. included between two lines meeting at the basion, one being drawn from the nasion and the other from the opisthion. **biorbital a.** The a. formed by the intersection of the axes of the orbits. **cephalic a.'s**. A general term for the cranial and facial a.'s. **condylar a.** An a. formed by the plane of the occipital foramen with that of the basilar groove. **cranial a.'s**. Cephalic a.'s corresponding to the auricular a.'s but having their apices at the anterior border of the occipital foramen. **critical a.** Syn.: *limiting a.* The greatest a. which a ray of light passing from a denser to a rarer medium can make with the perpendicular to their surfaces of contact without undergoing total reflection. **ethmocranial a.** See *olfactory a.* **facial a.** 1. Of Camper, an a. formed by the intersection of a line tangent to the most prominent part of the forehead and the point of intersection and a line running from the auricular point to the point of intersection. 2. Of Albrecht Dürer, an a. formed by a line tangent to the brow and the lobule of the nose and a line running from the lobe of the ear to the lower part of the nasal septum. 3. Of G. Cuvier and Geoffroy St. Hilaire, an a. formed by a line running from the glabella to the lower end of the nasal septum in the living subject (to the subnasal spine of a skull) and a line running from the auricular point to the latter. 4. Of Cloquet, an a. formed by a line tangent to the glabella and the alveolar border of the maxilla and a line running from the auricular point to the latter. 5. Of Jacquart, the same a. as that of Cuvier and Geoffroy St. Hilaire, but having its apex at the nasal spine. **frontal a.** The a. formed by a line running from the auricular point to the bregma and one running from the auricular point to the glabella. [B. N. A. *angulus frontalis*.] **frontoglabella a.** The slope of the forehead. **ilio-ischial a.** The a. formed by the ischium with the cotylosacral rib of the ilium. **iliovertebral a.** The a. formed by the ilia with the vertebral column. **limiting a.** See *critical a.* **Louis's a.** See under *Louis*. **metafacial a.** The a. formed by the pterygoid processes with the plane

of the lower surface of the base of the skull. **meter-a.** The a. of convergence of the two eyes when both are fixed upon an object situated at a distance of 1 meter from each. **nasal a. of the eye**. The inner a. of the eye. **nasomalar a.** An a. formed at the base of the nose by the intersection of two lines running from the outer margins of the orbits; from 130° to 135° in Europeans and from 140° to 145° in Mongolians. **occipital a.** Of Broca, the a. formed by the plane of the occipital foramen with a line running from the opisthion to the root of the nose. [B. N. A., *angulus occipitalis*.] **olfactory a.** Syn.: *ethmocranial a.* The a. formed by the basicranial axis with the plane of the cribriform plate of the ethmoid bone. **optic a.** Syn.: *visual a.* The a. included between the lines joining the extremities of an object looked at with the posterior nodal point of the eye. **parietal a.** 1. of Quatrefages, an a. formed by the intersection of two lines, drawn one on either side of the head tangent to the most prominent points of the zygomatic arch and the frontoparietal suture. 2. Of Broca, an auricular a. formed by two lines running from Broca's auricular point to the bregma and the lambda [B. N. A., *angulus parietalis*]. **rolandic a.** The a. formed by the meeting of the upper part of the fissure of Rolando with the mesial plane. **sacrovertebral a.** The a. formed by the anterior surfaces of the last lumbar and the first sacral vertebrae [B. N. A., *promontorium*]. **sphenoidal a.** Virchow and Welcher's term for an a. formed by two lines meeting in the median line at the center of the transverse groove of the optic commissure, one of which is drawn from the nasion and the other from the basion [B. N. A., *angulus sphenoidalis*]. **sternoclavicular a.** Walsh's term for the a. formed by the clavicle with the sternum. **symphyseal a.** The a. formed by the lower axis of the symphysis menti with the plane of the lower part of the body of the lower jaw. **temporal a. of the eye**. The external canthus. **vertebro-iliac a.** The a. formed by the iliac portion of the plane of the pelvic inlet with the vertebral column. **vestibular a.** The a. formed by the posterior and middle walls of the vestibule, containing the opening of the ampulla common to the two vertical semicircular canals. **visual a.** See *optic a.* **Welcher's a.** See *sphenoidal a.* **xiphoid a.** The space between the two borders of the xiphoid notch. [B. N. A., *angulus*.] [Lat., *angulus*, corner, angle.]

angola seeds (an-go'lah). Jequirity beans. See *Abrus precatorius*.

Angostura, Angostura (an-gos-tu'rah, angus-tu'rah). See *Cusparia*. A genus, usually referred to *Galipea*. **a. bark**. See *Cusparia*. **false a. bark**. The bark of *Esenbeckia febrifuga* Juss.; *Brazilian a. bark*. The bark of *Strychnos nux vomicae*, sometimes accidentally mixed with a bark. [Said to be derived from *Angos-*

tura, the name of a Venezuelan city on the Orinoco River.]

anguilliform (an-gwil'e-form). Eel-shaped.

Anguillula (ang-gwil'lu-lah). A nematoid worm of the family *Anguillulidae*, having a mouth without teeth or spine, when parasitic, but possessing small teeth and two spicules when in the free-living state. **A. aceti**. The common vinegar, at times found in the human bladder and urine. **A. intestinalis**. A parasitic worm 2.2 mm. in length causing catarrhal diarrhea, and anemia from its presence in the human intestine. Discovered by Babay in 1877 in Cochín-China diarrhea. They bore into the epithelium of Lieberkühn's glands and lay eggs, which hatch out in the intestine and pass out with the feces. No male parasite has been discovered and the parasite is thought to be hermaphroditic or to develop by parthenogenesis. **A. stercoralis**. Syn.: *A. intestinalis*, *Strongyloides stercoralis*, *Strongyloides intestinalis*. The free living generation of *A. intestinalis*, which is sexually differentiated. These worms reach the open, mature, and propagate. [Lat., "little eel."]

anguilluliasis (an-gwil-u-li'as-is). The presence of an anguillula within the body.

angular. 1. Shaped like or having an angle. 2. Pertaining to a part termed an angle, e. g., the a. artery. 3. As a n., a bone of the mandible in some vertebrates.

angulus (an'gu-lus). An angle. **a. acutus tibiae**. The shin, or anterior edge of the tibia. **a. costac**. See *angle of a rib*. **a. ethmolacrimalis**. The angle of the orbital plate of the maxilla at its junction with the ethmoid bone. **a. femoris medius**. The prominent ridge or line which extends from the upper to the lower end of the shaft of the femur, separating the anterior and median surfaces. **a. frontalis**. The superior anterior angle of the parietal bone. **a. humeri anterior**. The prominent line or ridge on the anterior surface of the os brachii, which runs from about the middle of the bone down toward the condyles. **a. humeri lateralis**. The prominent line or ridge which begins behind the roughened point for the insertion of the deltoid muscle and runs down the shaft of the bone, forming the edge of the "gutter of torsion." **a. humeri medius**. The prominent line or ridge which begins near the insertion of the coracobrachialis muscle and runs down toward the inner condyle. **a. Ludovici**. See *Louis's angle*, under *Louis*. **a. mastoideus**. The posterior inferior angle of the parietal bone. **a. occipitalis**. The superior posterior angle of the parietal bone. **a. ocularis**, **a. oculi**. Syn.: *canthus*. The angle formed either at the inner or the outer side of the eye by the union of the upper and lower lids. **a. oculi externus**. Syn.: *canthus oculi externus* (seu *temporalis*). The outer angle of the eye. **a. oculi internus**.

Syn.: *canthus oculi internus* (seu *nasalis*).

The inner angle of the eye. **a. oris**. The angle formed at either side of the mouth by the meeting of the upper and lower lips. **a. prepubicus**. The sharp bend made by the urethra of the male in front of the pubes when the penis is in a flaccid state. **a. pubis**. See *angle of the pubes*, under *angle*. [Lat., *angulus*, angle.] **angustia** (an-gus'te-ah). A narrowing; a constriction. **a. abdominalis pelvis**. The superior strait of the pelvis. **a. perinealis pelvis**. The inferior strait of the pelvis. [Lat., *angustus*, narrow.] **angustu'rin**. An alkaloid said to exist in angustura bark.

anhalonin (an-ha-lo'nin). A poisonous alkaloid, $C_{12}H_{15}NO_3$, found in *Anhalonium Lewinii*, a Mexican plant called *mescal buttons*.

anhalo'nium. A Mexican genus of cactaceous plants.

anhaphia (an-ha'fe-ah). Loss of the sense of touch. [Gr., *an*, priv., + *aphe*, touch.]

anhedonia (an-hed-o'ne-ah). Loss of ability to have pleasant sensations. [Gr., *an*, priv., + *edone*, pleasure.]

anhematosis (an-hem-at-o'sis). Deficient formation of the blood. [Gr., *an*, priv., + *aimatoin*, to make bloody.]

anhidro'sis, **anidro'sis**. A relative condition consisting of a diminution in the secretion of sweat. [Gr., *an*, priv., + *idros*, sweat.]

anhistous (an-his'tus). Amorphous; devoid of special structure. [Gr., *an*, priv., + *istos*, web.]

anhydrata'tion. In chemistry, the state of not being hydrated. [Gr., *an*, priv., + *ydor*, water.]

anhidremia (an-hi-dre'me-ah). An abnormal decrease in the relative amount of water as compared to that of salts in the blood. [Gr., *an*, priv., + *ydor*, water, + *aima*, blood.]

anhydrid. An oxid derived from an acid, oxyacid, or other oxy-compound by the loss of the elements of one or more molecules of water; e. g., carbonic acid, H_2CO_3 , deprived of the elements of a molecule of water, H_2O , becomes carbonic a. (carbon dioxid), CO_2 . **carbonic a.** See *carbon dioxid*. **etheral a.** The a. of a fatty acid, formed by the deduction of the elements of water from two molecules of the acid. **mixed a.** An a. made up of the acid radicles of two dissimilar fatty acids united by an atom of oxygen. **simple a.** An ethereal a. made up of two similar fatty acid radicles, united by an atom of oxygen. [Gr., *an*, priv., + *ydor*, water.]

anhydrite. A native anhydrous calcium sulphate.

anhydro-. Combining form of the Gr., *anhydros*, waterless; used as a prefix in compound words to signify having no water in the composition.

anhydromyelia (an'hid-ro-mi'e-le-ah). A deficiency of the spinal fluid. [Gr., *an*, priv., + *ydor*, water, + *myelon*, marrow.]

anhydrous. Entirely free from water,

- either admixed or in combination. [Gr., *an*, priv., + *ydor*, water.]
- anianthinopsy** (an-e-an'thin-op-se). Inability to distinguish violet shades. [Gr., *an*, priv., + *ianthinos*, violet, + *opsis*, vision.]
- anideus** (an-id'e-us). A fetal monster consisting of a shapeless mass. [Gr., *an*, priv., + *eidos*, form.]
- anidrosis**. See *anhidrosis*.
- an'ilid**. A derivative of anilin, in which one of the hydrogen atoms of the NH₂ has been replaced by some radicle.
- an'ilin**. Phenylamin. C₆H₅.NH₂. An oily liquid prepared from the products of coal tar. Its sulphate is used in nervous diseases and in cholera. Many artificial dyes, including indigo, are prepared from anilin. **a. dyes**. Any dye-stuff which is a derivative of a blue, the hydrochloric acid salt of triphenylbrosanilin, C₂₀H₁₆-(C₆H₅)₃N₃HCl. A dye-stuff. [Arab., *annil*, the indigo plant.]
- anilipyrin** (an-il-ip-ir'in). A compound of anilipyrin and acetanilid.
- an'itim**. A morbid condition produced by the action of anilin vapor. In acute cases, the chief symptoms are a cyanotic hue of the skin, giddiness, dyspnea, uncertainty of the gait, nausea, choking, and, in severe cases, loss of consciousness followed by vomiting and headache. In chronic cases, there is a cyanotic hue of the skin, with muscular feebleness, symptoms of gastric catarrh, and, in aggravated cases, nervous disturbances.
- animal**. 1. A living organism endowed with sensation and the power of voluntary motion, and characterized by taking its food into an internal cavity for digestion. 2. Any other a. than man. [Lat., *animal*.]
- animalcule** (an-i-mal'kule). See *animalculum*.
- animalculism**. Syn.: *spermatism*. 1. The doctrine that the embryo is formed from the spermatozoon. See *animalculovism*. 2. The doctrine that the vital processes are due to the action of animalcula.
- animalculo'vism**. The doctrine that the embryo is the joint product of the spermatozoid and the ovule. [Lat., *animalculum*, dim. of animal, + *ovum*, an egg.]
- animal'culum**. Pl. *animalcula*. An animal that is visible only with the microscope. **animalcula seminalia**. 1. The spermatozoa. 2. The motile granules found in pollen. **animalcula seminis masculi**, **animalcula spermatica**. See *spermatozoon*. [Lat., dim. of *animalis*, animal.]
- anima'tion**. 1. The condition of being alive. 2. Maniacal or emotional excitement. **suspended a.** The apparent death of an individual, as in asphyxia. [Lat., *animatio*.]
- an'imism**. A doctrine which considered the soul (assumed to be an isolable entity) to be the cause of every vital phenomenon, whether in health or in disease, widely prevalent among primitive peoples and surprisingly persistent in the interpretation of many so-called occult phenomena. [Lat., *anima*, the soul.]
- ani'odol**. A syrupy germicide composed of trimethanal and a derivative of allyl. [Gr., *an*, priv., + *iodes*, poisonous.]
- an'ion**. In electrolysis, that element or radicle which accumulates at the anode. [Gr., *anion*, a going up.]
- an'iridia** (an-ir-id'e-ah). Absence or defect of the iris. [Gr., *an*, priv., + *iris*, a rainbow.]
- an'isal**. See *anisic aldehyd*.
- anisalol**. (an-is-al'ol). The phenyl ester of anisic acid, C₆H(OCH₃)CO₂C₆H₅; used in much the same manner and for the same indications as salol.
- anischuria**. Inability to control the urinary discharge. Enuresis. [Gr., *an*, priv., + *ischouria*, retention of urine.]
- anise** (an'is). 1. The plant *Pimpinella anisum*. 2. Aniseed [U. S. Ph.]. The fruit of *Pimpinella anisum*. It contains a volatile oil, rich in anethol, which is an aromatic stimulant and carminative. In the form of a. water it is much used as a vehicle. **a. camphor**. Syn.: *anisic camphor*, *anethol hydrid*, *solid anethol*. A form of anethol, C₁₀H₁₂O, which forms the chief part of oil of a. **Bengal a.** The ajowan seed. **French a.** Fennel. **Malta a.** One of the varieties of a. most highly esteemed. [Gr., *anison*, anise, dill.]
- anisette** (an-is-et'). A liqueur made by distilling the seeds of star anise, coriander, and fennel with water and alcohol, and adding sugar. There are several varieties, named after the places in which they are made, that of Bordeaux being most esteemed. [Fr.]
- an'isic** (an-es'ik). Of, or pertaining to anise or anisyl. **a. acid**. See under *acid*. **a. alcohol**. A crystalline compound, C₆H₁₀O₂ = C₆H₄ { OCH₃ } CH₂OH, formed by the action of alcoholic potash on a. aldehyd. **a. aldehyd**. Methoxybenzaldehyd, CH₃O-C₆H₄.CHO. An aromatic oil of agreeable odor.
- an'isin**. A crystalline artificial alkaloid, C₂₂H₂₄N₂O₃, formed by heating anishydramid, with which it is isomeric.
- anisoco'ria**. Inequality of the pupils. [Gr., *anisos*, unequal, + *kore*, the pupil.]
- anisocytosis** (an-is-o-si-to'sis). Inequality in the size of cells; usually applied to inequality of the red blood corpuscles. See also in *appendix*, page 901. [Gr., *anisos*, unequal, + *kytos*, cell.]
- anisog'amy**. Sexual conjugation in the protozoa in which the individuals are unequal in size. [Gr., *anisos*, unequal, + *gamos*, marriage.]
- an'isol**. Methylphenylether, CH₃OC₆H₅. A colorless liquid of pleasing aromatic odor.
- anisomelous** (an-is-om'e-lus). Having limbs of unequal length.
- anisomer'ic**. Not isomeric.
- anisometropia** (an-i-so-met-ro'pe-ah). Dissimilarity of the refractive power of the two eyes. [Gr., *anisos*, unequal, + *opsis*, vision.]
- aniso'pia**. Inequality of visual power in the two eyes. [Gr., *anisos*, unequal, + *opsis*, sight.]

anisospore (an-is'os-pore). A sexual cell that unites with one of the opposite sex by conjugation to form a new organism; in contradistinction to a non-sexual cell or isospore. [Gr., *anisos*, unequal, + *sporos*, spore.]

anisot'rop'al, anisotrop'ic, anisot'ropous. Doubly refractive; refracting with different degrees of intensity along different axes. [Gr., *anisos*, unequal, + *trope*, a turning.]

Ani'sum. 1. A genus of the *Umbelliferae*. 2. Aniseed; the fruit of *Pimpinella a. anisi fructus* [Br. Ph.]. See *A.*, 2nd def. **aqua anisi**. An aromatic water containing 1 part of oil of anise in 500 parts of the preparation [U. S. Ph.]. **oleum anisi**. A volatile oil, obtained by distillation, either from anise or star anise (*Illicium verum*) [U. S. Ph.]. **spiritus anisi** [U. S. Ph.]. A ten per cent. solution of oil of anise in alcohol. [Gr., *anison*, anise, dill.]

anisu'ria. Alternation of oliguria and polyuria.

an'itin. A proprietary preparation made from ichthyol, said to be a solution of ichthyolsulphonic acid.

an'itol. A substance rendered soluble by the action of anitin.

an'kle. The joint which connects the foot with the leg; the slender part of the leg between the joint and the calf; also the bony prominence (malleolus) on either side of that situation. [Old Fris., *ankel*; Dut., *enkel*, from Lat. root, *ang*, to bend, to crook.]

ankyloblepharon (an-kil-o-blef'ar-on). Adhesion of the ciliary edges of the eyelids to each other. [Gr., *agkyke*, loop, + *blepharon*, eyelid.]

anxyloglossia (an-kil-o-glos'eah). An adhesion of the tongue; tongue-tie. [Gr., *agkyke*, loop, + *glossa*, tongue.]

ankylosis (an-kil-o'sis). Incorrectly spelled *anchylosis*, because the Greek letter is *k* not *ch*. Stiff-joint. The adhesion of the articulating ends of two or more bones. If the bones themselves are fused the condition is known as **bony a.** If only the surrounding structures, as **false** or **spinous a.** [Gr., *agkylosis*, from *agkyke*, a joint bent and stiffened.]

Ankylostoma (ang-kil-os'to-mah). A nematoid worm of the family *Strongylidae*, infesting the intestines of human beings, and characterized by an oval aperture or mouth with two teeth on the ventral border and a broad bilobate bursa with two spicules at the tail end of the male. The male is 8 to 10 mm. in length and the female 12 to 18 mm. The female lays eggs in the intestine which are voided with the feces. **A. americana**. See *Necator americanus*. **A. duodenale**. Syn.: *Strongylus duodenalis*; *Dochmius duodenalis*, and *Uncinaria duodenalis*. A form discovered by Dubini in 1838 and occurring in Europe, Asia, and tropical America. It infests the small intestine of man, attaching itself to the mucous membrane by its buccal armature. The parasite causes ankylostomiasis in the Old

World. [Gr., *agkylos*, crooked, + *stoma* mouth.]

ankylostomiasis (ang-kil-os-to-mi'as-is). Syn.: *uncinariasis*, *dochmiasis*, *hookworm disease*, *miner's anemia*, *tropical chlorosis*. A toxemia resulting in a progressive anemia, caused by *Ankylostoma duodenale* and *Necator americanus*. Present in the tropics and the lower temperate zone of America, Africa, and Asia. Caused probably by a toxin set free by embryos in passing from skin to intestine. These embryos enter the skin through a papular or vesicular dermatitis, called "bunches" or "ground itch." The principal symptoms are local dermatitis of the feet, eosinophilia, anemia, debility, pallor, and edema. [Gr., *agkylos*, crooked, + *stoma*, mouth.]

aukyrism (an'ki-rism). That form of articulation in which one bone is hooked on to another, as the palatine is hooked on to the superior maxillary. [Gr., *agkyrizein*, to hook on to.]

anlage (an'lah-geh). The embryonic area in which the traces of a part first appear. [Ger.]

anneal (an-nee'l'). To alter by the action of fire; to bake earthenware; to toughen anything made brittle by the action of fire, by exposure to continuous and slowly diminished heat. [Prefix *an*, on, + Old Eng. *aelan*, to set on fire, burn, bake.]

annex'itis. Inflammation of the uterine appendages.

annid'alin. Dithymol trioxid; used like aristol.

annot'to. Also *arnotta*, *arnotto*, and *annatto*. A reddish coloring matter derived from the pulp of *Bixa orellana*, a tree of tropical America.

an'nular. Ring-shaped.

an'nulus. Pl. *annuli*. A ring or ring-shaped structure. **annuli cartilaginei, annuli cartilaginosi tracheae**. The incomplete cartilaginous rings of the trachea. **annuli of Böttcher**. The first row of meshes in the membrana reticularis of the ductus cochlearis, passing outward from the junction of the inner and outer pillars. Corti's cells fill or rest upon these meshes. **a. cruralis externus**. The saphenous opening of the fascia lata. **a. ovalis**. The prominent upper and lateral borders of the fovea ovalis of the right auricle of the heart. **a. tendineus, a. tendinosus**. The tendinous ring of Arnold; the structure from which the fibers of the middle layer of the membrana tympani originate. **a. trachea**. A tracheal ring. **a. tympani, a. tympanicus**. The tympanic ring; an osseous ring which develops into the external canal. **a. valvulosus**. The annular membrane attached to the margin of the auriculoventricular opening and formed by the union of the bases of the right auriculoventricular valves. [Lat., *annulus*, a ring.]

ano-. Combining form of Lat., *anus*, used in compound words to signify of or pertaining to the anus.

ano'ci-associat'ion. A condition in which the patient is freed from noci-association

- by cocain blocking and suggestion. See *nocci-association*.
- ano'dal, ano'dic.** Pertaining to the anode or positive pole of an electrical current.
- a. closure contraction.** A contraction of the muscles, occurring on closure of the current, when the stimulating electrode is the anode of the current used, expressed by the symbol AnCIC or ACC.
- a. opening contraction.** A contraction of the muscle, occurring at the opening or breaking of the current, when the stimulating electrode is the anode of the current used, expressed by the symbol AnOC or AOC.
- an'ode.** The positive pole of a galvanic battery. **physiological a.** Term used in stimulating nerves through the skin to emphasize the fact that the peripheral anode is the point (or points) at which the threads of current actually enter the nerve. [Lat., *anodus*, from *ana*, up, + *odos*, a course.]
- anodont'ia.** The state of having no teeth. [Gr., *an*, priv., + *odous*, tooth.]
- anodyne** (an'o-dine). Relieving pain; as a remedy having that effect. **Hoffmann's a.** See *compound spirit of ether* under *ether*. [Gr., *an*, priv., + *odyne*, pain.]
- anodynin** (an-od'in-in). See *antipyrin*.
- anoia.** Not knowing anything. Either applied to congenital lack, as in the concepts of idiocy, imbecility, or in acquired defects as in the loss of mental capacity due to acute delirium, coma, or senility. [Gr., *anoia*, want of knowledge.]
- anoint'.** To smear or rub with oil, or an unctuous substance.
- anom'alism.** A deviation from the normal standard.
- anomal'ogy.** The science of anomalies. [Gr., *anomalos*, anomalous, + *logos*, understanding.]
- anomalot'rophies.** A class of diseases consisting of nutritive anomalies. [Gr., *anomalos*, anomalous, + *trophe*, nutrition.]
- anomalous** (an-om'a-lus). Irregular, dissimilar; abnormal, irregular. [Lat., *anomalus*, from Gr., *anomalos*, irregular, uneven.]
- anomaly** (an-om'a-li). A deviation from the normal; an example of this. [Lat., *anomalia*, from Gr., *anomalia*, from *anomalos*, irregular.]
- anomia** (ah-no'me-ah). Optic aphasia; inability to name objects although they are perceived subjectively. [Gr., *a*, priv., + *onoma*, name.]
- anomodon'tous.** Having an anomalous formation or arrangement of the teeth. [Gr., *a*, priv., + *nomos*, a law, + *odous*, a tooth.]
- anoöpsia** (an-o-op'se-ah). A variety of strabismus in which the eye is turned upward; hyperphoria. [Gr., *ano*, upward, + *opsis*, vision.]
- anope'nile.** Pertaining to the anus and penis. A term used for the fibrous layer, prolonged backward from the sheath of the penis and continuous with the inferior aponeurosis of the perineum.
- Anopheles** (an-of-el-ees). A genus of mosquitoes belonging to the *Arthropoda*, order of *Diptera* and family of *Culicidae*, the females of which serve as hosts for the malarial parasite. They are two-winged and lay eggs which hatch in stagnant water into wormlike larvae. The larva develops into a nymph or pupa. The adult or imago develops by rupturing the pupa case. Their geographic range is from the frigid zone to the tropics. The eggs are laid in stagnant water and the female sucks the blood of mammals, birds, and man. The *Anopheles* differs from *Culex* in the horizontal attitude of the larva at the surface of the water, and the spotted wings and longer palpi of the adult female. Numerous species have been described, but the species conveying malaria in different countries are as follows: *A. maculipennis*, in America and Europe; *A. formosensis*, in Japan; *A. bifurcatus*, in Europe; *A. Martini* and *A. Pursati*, in Cambodia; *A. vagus*, in the Celebes; and *A. faranti* in the New Hebrides. [Gr., *anopheles*, harmful, of no use.]
- Anophelinae** (an-of-el'in-i). A sub-family of the family of mosquitoes (*Culicidae*) having a simple scutellum and palpi long, both in the male and the female.
- anoph'elism.** Infestation of a district with *Anopheles*.
- anophthal'mos.** Congenital lack of the eyes. [Gr., *an*, priv., + *ophthalmos*, eye.]
- ano'pia.** Congenital absence or rudimentary development of the eyes. [Gr., *a*, priv., + *ops*, the eye.]
- anop'sia.** 1. Amblyopia. 2. Anooöpsia. [Gr., *a*, priv., + *ops*, the eye.]
- anorchia, anorchism** (an-or'ke-ah, an'orkism). Congenital absence or imperfect development of the testicles. **a. duplex.** Lack of both testicles. **a. simplex.** Lack of one testicle. [Gr., *an*, priv., + *orchis*, the testicle.]
- anor'chus.** Without testicles, e. g., a male without testicles in the scrotum either because of absence or failure of descent.
- anorex'ia.** A deficiency or entire lack of appetite for food. **a. paralytica.** A. due to nervous derangement of the stomach, also that accompanying apoplexy, etc.
- hysterical a.** A. as a manifestation of hysteria. [Gr., *anorexia*, from *an*, priv., + *orexis*, appetite.]
- anor'mal.** Abnormal, anomalous.
- anortho'pia.** A defect or vision in which absence of parallelism or of symmetry is not recognized. [Gr., *a*, priv., + *orthos*, straight, + *opsis*, vision.]
- anos'mia.** Loss or deficiency of the sense of smell. **afferent a.** A. from loss of the conducting power of the olfactory nerves. **a. atonica.** A. from defective nervous power or from no ascertained cause. [Gr., *an*, priv., + *osme*, the sense of smell.]
- anos'mous.** 1. Having no odor. 2. Lacking the sense of smell.
- anosp'i'nal.** Pertaining to the anus and situated in the spinal cord, e. g., the a. center.

anosto'sis. Defective development of bone. [Gr., *an*, priv., + *osteon*, bone.]

anotus (an-o'tus). A fetus having congenital absence of the ears. [Gr., *an*, priv., + *ous*, *otos*, ear.]

anoxe'mia. A deficiency of oxygen in the blood. [Gr., *a*, priv., + *oxus*, sharp, + *aima*, blood.]

ano'zol. A mixture of iodoform and thymol.

ansa (an'sah). Pl. *ansae*. A loop or coil, as of an intestine, a blood vessel, etc. **a. atlantis.** The uppermost one of the *ansae cervicales*. **ansae cervicales.** The connecting branches between the anterior cervical nerves. **a. galvanocautica.** Syn.: *ligatura candens*. The wire loop of a galvanic cautery. **ansae intestinales.** The loops or coils of the intestines. **a. lenticularis.** A tract of nerve fibers which passes under the optic thalamus, extending from the crista to the lenticular nucleus. **ansae lumbales, ansae lumbares.** The communicating branches between the anterior branches of the lumbar nerves. **a. nervi hypoglossi.** The communicating branch between the descending branch of the hypoglossal nerve and one or two branches of the second or third anterior spinal nerve, or both. **a. of Reil.** Syn.: *substantia innominata*. The region of the brain ventrad of the thalamus. **a. sacralis.** A communicating branch between two sacral nerves. **ansae Vieusenii.** The communicating branches between the middle and lower cervical ganglia. **a. Wrisbergii.** A loop connecting the right great splanchnic and the right vagus nerves, at the level of the sixth dorsal vertebra. [Lat., *ansa*, handle of a jug.]

ant'acid. Counteracting acidity; as a n., a remedy so acting.

antacidity (ant-as-id'i-ē). Below normal acidity.

antagonism (an-tag'o-nism). Opposition of action; in anatomy, the opposing action of two muscles or sets of muscles; in physiology, a balance of opposed actions on particular organs or tissues; in pathology, the opposition exerted by one organism against another, either within or without the body. [Gr., *antagonisma*, struggle.]

antagonist. 1. A muscle that opposes another, as a flexor opposes an extensor. 2. A drug that counteracts the effect of another drug. [Gr., *antagonistes*, opponent.]

antagonis'tic. Acting against; opposed to. **a. method.** The derivative method in therapeutics. [Gr., *antagonistos*, opposing.]

antal'gic. Anodyne. [Gr., *anti*, against, + *algos*, pain.]

antal'kali. A corrective of alkalinity.

antal'kaline. A substance which neutralizes an alkali. [Gr., *anti*, against, + *alkali*.]

anta-pa'na. A certain proprietary demulcent and antipyretic.

antaphrodisiac (ant-af-ro-diz'i-ak). Counteracting venereal desire. [Gr., *anti*, against, + *aphrodisiakos*, venereal.]

ante- Combining form of Lat., *ante*, before; used as a prefix in compound words, to signify before, in front of.

antebrachium (an-te-brā'ke-um). The forearm [B. N. A.]. [Lat., *ante*, before, + *brachium*, arm.]

ante cibum (an'te ke'bum). Used in prescription writing. [Lat., "before food."]

anteflex'ion. The bending forward of an organ; generally applied to the uterus in which one or both extremities are bent forward. See *anteversion*. [Lat., *ante*, in front, + *flexio*, a bending.]

antemet'ic. A remedy used to counteract vomiting. Cracked ice, for example.

ante'rior. Situated forward or in front of; in human anatomy, ventrad; in the lower animals, cephalad. In dentistry, applied to the six front teeth. [Lat., *anterior*, from *ante*, in front of.]

antero- Combining form of Lat., *anterior*; used in compound words as a prefix to signify front, fore.

anterograde. Proceeding from before backward; said of operations for the division of urethral stricture. [Lat., *anterior*, in front of, + *gradus*, step.]

an'tero-infe'rior. Situated in front and below.

an'tero-inte'rior. Situated in front of and internally.

an'terolat'eral. Situated anteriorly and laterally, or extending from side to side.

an'teroposte'rior. Extending from before backward.

an'terosupe'rior. Situated in front of and above.

anteversion (an-te-ver'shun). A tilting forward of the long axis of the uterus. [Lat., *ante*, in front, + *versus*, a turning.]

an'thelix. A curved ridge on the external ear, running anterior and parallel to the helix, from which it is separated by one of the scaphoid fossa. [Gr., *anti*, opposite, + *elix*, the outer ear.]

anthelmintic (an-thel-min'tik). Efficacious against intestinal worms; as a n., a remedy so acting, a vermifuge. **direct a.** See *vermicide*. **indirect a.** See *vermifuge*. [Lat., *anthelminthicus*, from Gr., *anti*, against, + *elmens*, a worm.]

An'themis. 1. Chamomile; a genus of the *Compositae*, suborder *Tubuliflorae*. Of the U. S. Ph., the flower heads of *Anthemis nobilis*. **A. nobilis.** The Roman or common chamomile. The flowers of a. [U. S. Ph.], *anthemidis flores* [Br. Ph.], are used as a stomachic, tonic, emetic, and diaphoretic, and externally as an anodyne. **extractum anthemidis.** An aqueous extract of chamomile is added [Br. Ph.]. **oleum anthemidis.** The oil distilled from chamomile flowers [Br. Ph.]. [Gr., *anthesis*.]

an'ther. That part of the stamen of a flowering plant that contains the pollen.

antherid'ium. The male sexual organ of the mosses corresponding to the anther of flowering plants.

Anthomy'ia. A genus of dipterous insects which, in the larval state, infest flowers. **A. canicularis.** A species having the

larva pinnated; taken into the alimentary canal, it may cause violent irritation. **A. Desjardensii**. A species causing intestinal irritation in the tropics. [Gr., *anthos*, a flower, + *myia*, a fly.]

anthracemia (an-thrah-se'me-ah). 1. Asphyxia from carbon monoxid poisoning. 2. The presence of *Bacillus anthracis* in the blood. [Gr., *anthrax*, coal, + *aima*, blood.]

anthracene, anthracin (an'thras-ēn, an'thras-in). A substance prepared from heavy coal-tar oil, of the constitution $C_6H_4 \left\langle \begin{array}{c} CH \\ CH \end{array} \right\rangle C_6H_4$. The substance from which alizarin is prepared. [Gr., *anthrax*, coal.]

anthracina (an-thra'se-nah). See *melanotic cancer* under *cancer*.

anthracometer. An instrument for determining the amount of carbon dioxide in the atmosphere, and especially in the breath. [Lat., *anthracometrum*, from Gr., *anthrax*, carbon, + *metron*, a measure.]

anthracosis. Black phthisis, a disease of coal-miners. Produced by the inhalation of particles of solid matter, such as the dust from coal, iron, glass, stone, etc., which accumulate in the pulmonary alveoli, and are taken up by the lymphatics and deposited in the bronchial glands, eventually in other situations, and finally throughout the lung tissue. They may even appear in the liver. See *pneumoconiosis*. [Gr., *anthrakosis*.]

anthraquinone (an-thrah-quin'ōn). A derivative of anthracene, $C_{14}H_8O_2$, constituting a nucleus found in many of the purgative principles known as the anthracene derivatives.

anthrarobin (an-thrah-ro'bin). Liebermann's name for several compounds analogous to chrysarobin, prepared by the reduction of alizarin and purpurin. The one obtained from alizarin has been used in psoriasis.

anthrasol. Colorless coal-tar. Coal-tar freed from pitch and other substances and mixed with juniper tar. It is antiseptic. Used in treating skin diseases and for removal of dandruff.

anthrax. Syn.: *splenic fever*. 1. A carbuncle. 2. An infectious febrile disease of man and certain lower animals (chiefly horses, sheep and cattle) due to inoculation with *Bacillus anthracis*. The chief physical sign is enlargement of the spleen.

anthropism. Humanity; the sum of the attributes that distinguish man from the lower animals. [Gr., *anthropismos*.]

anthropo-. Combining form of Gr., *anthropos*, man; used as a prefix to denote of or pertaining to man.

anthropogeny. The doctrine of the descent of man from lower forms of animal life by evolution. [Gr., *anthropos*, a man, + *genesis*, origin, generation.]

anthropoid. Resembling man; said chiefly of a family of apes. [Gr., *anthropos*, a man, + *eidōs*, form.]

anthropolite, anthropolith. Petrified

human remains. [Gr., *anthropos*, a man, + *lithos*, a stone.]

anthropometry. The systematic study or determination of the dimensions, proportions, weight, strength, and other physical attributes of the human body, especially for purposes of comparison with certain standards or of different races with each other. [Gr., *anthropos*, a man, + *metron*, a measure.]

anthroponomy. The science of the laws governing the formation and functions of the body. [Gr., *anthropos*, a man, + *nomos*, a rule.]

anthropophagy. Cannibalism. Also a condition of unconscious hunger association with sexuality not infrequently shown in schizophrenic patients, and more often appearing in dream activities. [Gr., *anthropos*, a man, + *phagein*, to eat.]

anthropin, antihydropin (an-ti-hi'dro-pin, an-ti-hi'dro-pin). See under *Blatta orientalis*.

anti-. A prefix from the Gr. preposition, *anti*, against, opposite; used in compound words to denote against, opposed to, opposite.

antiabrin (an-te-a'brin). An antitoxin produced in the blood by injections of abrin into animals.

antiagglutinin (an-te-ag-lu'tin-in). A substance opposing the action of an agglutinin and produced by repeated injections of a serum substance containing agglutinin.

antiaggressin (an-te-ag-res'in). A substance produced by injecting an aggressin into the tissues that opposes the action of the aggressin.

antialbumate. A body formed when a protein is digested with gastric juice. Similar to an acid albuminate.

antialbumid, antialbumin. A body formed in the gastric digestion of proteins. It contains a higher proportion of carbon and a lower proportion of oxygen than either antipeptone or hemipeptone and is very resistant to the action of trypsin.

antialbumose (an-ti-al'bu-mose). A variety of a. formed in the process of the digestion of albumin, and converted by further digestion into antipeptone. It closely resembles acid albumin in its general characters.

antialex'in. See *anticomplement*.

antiamboceptor (an-te-am'bo-sep-tor). A material produced by injecting animals with the immune serum of an organism, such as the typhoid bacillus, which antagonizes the action of such an immune serum in another animal.

antiar'. A variety of the upas poison of Java, derived from *Antiaris toxicaria*.

antiarin (an-te'ar-in). A poisonous glucosid, probably $C_{27}H_{42}O_{10}$, obtained from the juice of *Antiaris toxicaria*. Its action resembles that of digitalin.

Antiaris (an-te'ar-is). A genus of the *Artocarpaceae*. **A. toxicaria**. The upas tree; a Java species containing an acid milky juice having marked poisonous properties. This juice, the *ipo* or *upas*

- antiar* of the Malays, contains antiarin and is used as an arrow-poison. [Jav., *antiar*.]
- antiarthrin** (an-te-ar'thrin). A proprietary antarthritic said to consist mostly of salicin.
- antibacterin** (an-te-bak'te-rin). 1. A certain proprietary antiseptic inhalant. 2. A mixture of crude aluminum sulphate and soot.
- antibiotic** (an-te-bi-ot'ik). Destructive to life. [Gr., *anti*, against, + *bios*, life.]
- antibodies** (an'te-bod-ez). The reaction products produced from injections of antigens into susceptible animals. These include such substances as bacteriolytic, hemolytic, and other cytolytic amboceptors, agglutinins, precipitins, and antitoxins. [Gr., *anti*, against, + *bodies*.]
- antibromic**. Deodorizing. [Gr., *anti*, against, + *bromos*, stench.]
- anticardium**. The pit of the stomach. [Gr., *anti*, against, + *kardia*, heart.]
- anticholerin** (an-te-kol'er-in). A substance produced by killing cultures of the cholera spirillum, which is used in small doses as a preventive inoculation against cholera. [Gr., *anti*, against, + *cholera*.]
- anticipate** (an-tis'ip-ät). 1. In therapeutics, to meet an indication in advance, e. g., to a prostration by the early employment of alcohol. 2. To occur before the regular time or at shorter and shorter intervals, said of periodical phenomena, especially the paroxysms of malaria. [Lat., *anticipare*, from *ante*, before, + *capere*, from *capere*, to take.]
- anticol**. A proprietary mixture said to contain acetanilid, sodium bicarbonate, and tartaric acid.
- anticomplement**. Any substance which possesses the power of reducing or preventing the action of the complement. Acids, alkalis, and certain sera possess this property and it may also be produced in the blood of an animal by repeated injections of fresh serum from another species.
- anticor**. 1. See *anticardium*. 2. A sore of the front of the chest in horses and cattle, due to chafing of harness. [Fr., *anticoeur*, *avantcoeur*.]
- anticritical**. Interrupting or preventing a crisis; said of phenomena and of drugs. [Lat., *anticriticus*.]
- anticrotin**. The antitoxin of crotin, the poison of *Croton tiglium*.
- anticus**. Anterior. [Lat., *anticus*, in the very front.]
- anticytolysis** (an-te-si-to'l'e-sis). See *anticytotoxin*.
- anticytotoxin** (an-te-si-to-toks'in). A substance which resists the action of a cytotoxin. [Gr., *anti*, against, + *cytotoxin*.]
- antidiabetin**. A mixture of mannite and saccharin, proposed as a substitute for sugar in the diet of diabetics.
- antidinic**. Controlling or contraverting vertigo. [Gr., *anti*, against, + *dinos*, whirl.]
- antidolorin** (an-te-do-lor'in). A proprietary preparation containing ethyl chlorid.
- antido'tal**. 1. As formerly used, remedial, given as a remedy for. 2. Efficacious as a counterpoison. [Gr., *antidotos* (*dosis*), counterpoison.]
- an'tidote**. A remedial agent which counteracts the effect of a poison or destroys the poison itself. List of poisons and their antidotes, see in *appendix*, page 938.
- chemical a.** One that acts by converting the poison into an insoluble or innocuous compound.
- mechanical a.** One that acts either by diluting the poison, by absorbing it into its own substance, or by ensheathing it so as to protect the tissues.
- physiological a.** One which, either hastens the excretion of the poison or counteracts it by exerting an opposite effect on the system. [Gr., *anti*, against, + *didonai*, to give.]
- antidrom'ic**. The condition of nerve conduction in a direction opposite to the usual one. [Gr., *anti*, against, + *dromos*, race course.]
- antidynam'ic**. Depressing, lowering, weakening. [Lat., *antidynamicus*, from Gr., *anti*, against, + *dynamis*, strength.]
- antienzyme** (an-te-en'zim). An agent produced by injecting repeated doses of an enzyme into animals, that neutralizes the action of the enzyme. [Gr., *anti*, against, + *enzyme*.]
- antifeb'rile**. See *antipyretic* and *febrifuge*. [Lat., *antifebrilis*.]
- antifeb'rin**. A trade name for acetanilid.
- antiferment**. An agent that checks fermentation.
- antiformin** (an-te-for'min). A proprietary preparation consisting of an alkaline solution of sodium hypochlorite. It dissolves the bodies of bacteria except acid-fast organisms, such as the tubercle bacillus. It is used also to dissolve the mucus in sputum in order to obtain a sediment of tubercle bacilli and in obtaining pure cultures of this organism directly from sputum.
- antigen** (an'te-jen). Any substance which produces special antibodies by one or many injections into a susceptible animal, such as bacteria, red blood corpuscles or other foreign cells. Blood serum, milk, and bacterial extracts are also antigens, because they produce specific precipitins, but inorganic substances, and such inorganic materials as alkaloids, do not produce antagonistic bodies and are not antigens. Diphtheria and tetanus toxins, snake venoms, and ricin are antigens. [Gr., *anti*, against, + *gen*, root of *gennan*, to form.]
- antiger'minal**. Pertaining to the pole of the ovum opposite the germinal pole.
- antihemagglutinin** (an-te-hem-ag-lu'tin-in). A substance which is produced by injecting a hemagglutinin into the tissues which antagonizes the action of the hemagglutinin.
- antihemolysin** (an'te-he-mol'is-in). A substance in the blood which resists the action of a hemolysin.
- antihy'dropin**. Trade name of a diuretic obtained from the cockroach, *Blatta orientalis*.

anti-immune body. An antibody to the immune body.

anti-isolysin (an'ti-i-sol'is-in). A substance that counteracts an isolysin, being produced by injecting repeated doses of isolytic serum into animals.

antikam'nia. A proprietary antipyretic and analgetic, said to contain phenacetin, sodium bicarbonate and citric acid. [Gr., *anti*, against, + *kamnein*, to be in distress.]

antilactase (an-ti-lak'tās). An antienzyme which neutralizes the lysins produced by bacteria.

antilep'sis. 1. Revulsive treatment. 2. A taking effect; said of inoculation. 3. A seizure, an attack of sickness. [Gr., *antilepsis*, from *anti*, against, + *lepsis*, a seizing.]

antilith'ic. Preventing the formation of stone in the bladder or capable of dissolving it. [Gr., *anti*, against, + *lithos*, a stone.]

ant'itlobe. See *antitragus*.

antiluetic (an-te-lu-et'ik). Antisyphilitic. [Gr., *anti*, against, + Lat., *lues*, syphilis.]

antilysin (an-te-li'sin). An immunizing substance formed in the blood of animals, that neutralizes the lysins produced by injecting bacteria or red blood corpuscles.

antilyssic. Efficacious against rabies. [Gr., *anti*, against, + *lyssa*, rabies.]

antimetro'pia. An opposite state of refraction in the two eyes, e. g., myopia of one and hyperopia of the other. [Gr., *anti*, against, + *metron*, a measure, + *ops*, the eye.]

antimigraine (an'ti-me-grān'). A proprietary remedy for hemicrania, containing caffeine and antipyrin.

antimo'nial. Pertaining to, consisting of, or containing antimony.

antimon'ic. Of or pertaining to antimony; in chemical nomenclature, containing antimony as a quivalent radicle. **a. acid.** See under *acid*. **a. anhydrid.** See *antimony pentoxid*. **a. hydrate.** See *a. acid* under *acid*. **a. oxid.** See *antimony pentoxid*. **a. sulphid.** See *antimony pentasulphid*. [Lat., *antimonius*.]

antim'onid. A compound formed by the chemical union of antimony directly with another element or a radicle; also an alloy containing antimony.

antimonif'erous. Producing or containing antimony. [Lat., *antimonium*, antimony, + *ferre*, to bear.]

antim'onite. A salt of antimonious acid.

antimo'nious. 1. Of or containing antimony. 2. In chemical nomenclature, combining antimony as a trivalent radicle. **a. acid.** See under *acid*.

antimo'nium. Antimony. **antimonii sulphidum** [U. S. Ph., 1890]. Antimony trisulphids fused, finely pulverized, and freed as far as possible [by levigation and elutriation] from admixed impurities, especially arsenic [U. S. Ph.]. See *antimony trisulphid*. **antimonii sulphidum purificatum** [U. S. Ph., 1890]. Syn.: *a. nigrum purificatum* [Br. Ph.]. Prepared antimony trisulphid (antimonii

sulphidum) reduced to a very fine powder and freed from impurities, especially from traces of copper, by prolonged maceration with ammonia water and subsequent washing with water [U. S. Ph., Br. Ph.]. **a. nigrum.** Black antimony; antimony trisulphid purified by fusion and pulverized. See *antimonii sulphidum*. **a. nigrum purificatum.** See *antimonii sulphidum purificatum* [Br. Ph., "1898"]. **a. sulphuratum.** Sulphurated antimony; oxysulphuret of antimony; precipitated sulphuret of antimony. A mixture of antimony trisulphid and antimony trioxid made by boiling antimony trisulphid with solution of caustic soda and precipitating with dilute sulphuric acid. [U. S. Ph., 1890, Br. Ph.]. **a. tartaratum.** [Br. Ph.]. See *antimony and potassium tartrate*. **pilulae antimonii compositae** [U. S. Ph., 1890]. Syn.: *pilulae hydrageri subchloridi compositae*, *compound pills of antimony*, *compound calomel pills*, *Plummer's pills*, each of which contains sulphureted antimony, calomel, guaiac, and castor oil. **vinum antimonii.** A solution of 4 parts of antimony and potassium tartrate in 1000 parts of wine. [U. S. Ph.] [Lat., for *antimony*.]

ant'imony. A silvery white metallic element, not affected by the air. Type metal contains 25 per cent of antimony. Chemical symbol Sb. Its salts have emetic and diaphoretic properties. List of poisons and their antidotes, see in *appendix*, page 938. **a. and potassium tartrate.** Tartrated or tartarized a., tartar emetic. A double salt of tartaric acid, $2C_2(OH)_2H_2 \begin{matrix} < \\ CO-O.SbO \\ CO-O.K \end{matrix} + H_2O$. It is used as a diaphoretic, emetic, and nauseant expectorant. In large doses, it acts as an irritant poison, producing violent gastro-enteritis, with vomiting and choleraic purging [U. S. Ph.]. **a. pentasulphid**, Sb_2S_5 . A diaphoretic, emetic and expectorant. **a. pentoxid**, Sb_2O_5 . A light yellow powder of acid properties. **a. trichlorid**, $SbCl_3$. Syn.: *butter of a.* Prepared by treating a trisulphid or a sulphate with chlorin or a metallic chlorid. It is strongly corrosive and is frequently used as a caustic application to tumors or ill-conditioned ulcers. **a. trioxid**, Sb_2O_3 . A substance occurring in nature as valentinate or a bloom. **a. trisulphid**, Sb_2S_3 . A substance occurring native, either in the crystalline or in the massive state, as stibnite. Used as a diaphoretic and as a source of the other a. compounds. [Probably of Arabic origin. From the mineral Stibnite, Lat., *Stibium*, whence the symbol Sb.]

antim'onyl (an-tim'on-il). The univalent radicle ($Sb=O$) occurring in antimonious compounds. **a. and potassium tartrate**, $SbO.OOC.CHOH.CHOH.COOK$. The antimonyl and potassium salt of tartaric acid. Soluble in water, has a metallic taste. An unimportant emetic.

antineural'gic. Efficacious against neuralgia.

ant'ion. That point in the median line of the forehead which is farthest from the inion. [Gr., *anti*, opposite, + *inion*, the nape of the neck.]

antion'nin. A proprietary preparation, said to consist chiefly of the potassium salt of orthodinitroresol. It is an antiseptic and insecticide.

antin'osin. A sodium compound of nosphen.

antiparasit'ic. Efficacious against parasites, especially external parasites.

antiparas'itin. An insecticide said to contain potassium dinitroresol.

antip'athy. Contrariety of feeling, disposition or nature; hostile feeling toward. [Lat., *antipathia*, from Gr., *antipatheia*, the state of being opposed in feeling.]

antipep'tone. A variety of peptone, formed in the gastric digestion of proteins, which cannot be converted into the mono-amino acids.

antiperiod'ic. Efficacious against the periodical recurrence of paroxysms, especially those due to malarial infection.

antiperistal'sis. Reversed peristalsis; a muscular contraction of the intestines or the stomach in which the movement progresses upward, that is, toward the mouth. See *anastalsis*.

antiphlogistin (an'te-flo-jis'tin). A proprietary remedy composed of purified clay and glycerin, used like a poultice in inflammatory conditions. [Gr., *anti*, against, + *phlogistos*, on fire.]

antiphrynyolysin (an'te-frin-ol'is-in). The antitoxic serum from toad poison.

ant'ipode. One of the two chemical compounds which contain one or more asymmetrical carbon atoms and which bear the same special relation to each other as an object to its mirror image.

antiprecipitin (an-te-pré-sip'it-in). A substance in serum, produced by injecting a precipitating serum containing a precipitin into an animal, which acts in an antagonistic manner towards this serum.

antiprurit'ic. Preventing or controlling itching. [Gr., *anti*, against, + Lat., *pruritus*, itching.]

antipy'ic. Preventing or checking supuration. [Gr., *anti*, against, + *pyon*, pus.]

antipyogenic (an'te-pi-o-jen'ik). Preventing the formation of pus. [Gr., *anti*, against, + *pyon*, pus, + *gennan*, to form.]

antipyonin (an'te-pi'o-nin). A preparation said to consist of sodium polyborate; used externally in conjunctivitis and keratitis.

antipyret'ic. Febrifuge; efficacious against fever. [Gr., *anti*, against, + *pyretos*, fever.]

antipyrin (an'te-pi'rin). Syn.: *anodyrin*, *dimethyloxyquinizin*. An artificial alkaloid, $C_{11}H_{12}N_2O$. First obtained by L. Knorr of Erlangen. A white crystalline powder soluble in water and in alcohol. It was introduced into medicine as an antipyretic by Filehne in 1881. **a. camphorate.** A compound of a. and camphoric acid. Two forms, the *acid* and the

neutral, are said to be antipyretic and antithrotic. **a. chloralhydrate.** Monochloral a. ($C_{11}H_{12}N_2O_3Cl_3$); also known as *hypnal*. It is antipyrin combined with one molecule of hydrated chloral. Its action resembles that of chloral. **a. mandelate.** Tussol, $C_{11}H_{12}N_2O_2.C_6H_5CH(OH)COOH$, used in whooping-cough. **a. salicylate.** Salipyrin, $C_{13}H_{13}N_2O_4$. It has the properties of antipyrin and salicylic acid. **a. salol.** A mixture of equal parts of a. and salol fused together; used as an antiseptic and hemostatic. **dichloral-a.** A hypnotic, $C_{11}H_{12}N_2O + 2(CCl_3CH(OH)_2)$. [U. S. Ph.] [Gr., *anti*, against, + *pyr*, fever.]

antirab'ic, antirabiet'ic. Preventive or curative of rabies; said particularly of Pasteur's system of preventive inoculation. [Gr., *anti*, against, + Lat., *rabies*, madness.]

antirennet (an-te-ren'net). A ferment produced by injecting animals with rennet.

antirennin (an-te-ren'in). The anti-enzyme in blood serum produced by injecting rennin, which counteracts its action in coagulating milk.

an'tirheumat'ic. Efficacious against rheumatism.

antiricin (an-te-ri'sin). An antitoxin produced by injecting ricin into animals.

Antirrhinum (an-tir-ri'num). An ancient name for the plant snapdragon. A genus of the *Scrophulariaceae*. **A. majus.** Snapdragon; indigenous to southern and central Europe and cultivated in America; formerly employed as a diuretic. [Gr., *antirrhinon*.]

antirobin (an-te-ro'bin). An antitoxin produced by injecting robin into animals.

antiscorbu'tic. Efficacious against scurvy.

antisep'sin. A bromated acetanilid, used as an antipyretic, analgetic, and antiseptic. [Gr., *anti*, against, + *sepsis*, putrefaction.]

antisep'sis. A collective name for the use of measures intended to prevent putrefaction or infection with septic material. See *asepsis*. [Gr., *anti*, against, + *sepsis*, putrefaction.]

antisept'ic. 1. Having the power to prevent putrefaction or other bacterial processes. 2. An agent that inhibits the growth of bacteria. See *aseptic*.

antisept'ikon. A certain dental antiseptic.

antisept'in. A mixture of zinc sulphate and iodid, thymol, and boric acid.

antisept'ol. A proprietary name for cinchonin sulphiodate.

antiserum (an-te-se'rum). See *immune serum*, under *serum*.

antisider'ic. Physiologically incompatible with iron, counteracting its effects; also exerting an action opposite to that of iron, impoverishing the blood. [Gr., *anti*, against, + *sideros*, iron.]

antis'pasis. Revulsive derivation, counterirritation.

antispas'min. A compound of a narcein salt and sodium salicylate; used as a hypnotic and analgetic, and in whooping cough.

- antispasmodic** (an''te-spas-mod'ik.) Efficacious against spasmodic attacks; as a remedy so acting. [Gr., *anti*, against, + *spasmos*, a convulsion.]
- antispas'tic.** 1. Pertaining to antispasmodic. 2. Antispasmodic.
- antispermatoxin** (an''te-sper-ma-toks'in.) A substance opposing the action of spermatoxin.
- antistaphylolysin** (an''te-staf-il-ol'is-in.) A substance in the blood opposing the action of staphylolysin.
- an''tistreptococ'cic.** Antidotal to streptococci.
- antistreptococcin** (an''te-strep-to-koks'in.) The antitoxic principle of Marmorek's serum acting against streptococci.
- antistreptokolysin** (an''te-strep-to-kol'is-in.) A material found in antistreptococcic serum, which is antagonistic to the hemolysin produced by the streptococcus.
- antisu'dorin.** A proprietary lotion for excessive sweating of the feet, containing boric, citric, and salicylic acids, borax, glycerin, alcohol, and certain ethers.
- antisyphilit'ic.** Efficacious against syphilis.
- antitaenia.** A proprietary preparation of *Cucurbita maxima* seeds; used for tapeworm.
- antithenar.** An eminence; the prominence formed at the ulnar border of the palm by the abductor, the opponens, and the flexor brevis minimi digiti muscles. [Gr., *anti*, opposite, + *thenar*, the flat of the hand.]
- antither'mal.** 1. (Adj.) See *antithermic*. 2. (N.) A certain proprietary antipyretic.
- antither'mic.** Efficacious against fever. [Gr., *anti*, against, + *therme*, heat.]
- antither'min.** Phenylhydrazin levulinate, a highly poisonous antipyretic. No longer used.
- antither'molin.** A proprietary preparation not differing essentially from the cataplasma kaolini of the U. S. Ph.
- antithyroidin** (an-te-thi'roy-din.) The serum of the thyroidectomized sheep; said to have an opposite effect to thyroid feeding and used in exophthalmic goiter.
- antiton'ic.** Having opposite effects to those of a tonic. See *antisideric*.
- antitox'ic.** 1. See *antidotal*. 2. Overcoming the action of a toxin. [Gr., *anti*, against, + *toxikon*, a poison for arrows.]
- antitoxin** (an-te-tok'sin.) A substance in the plasma and serum produced by the injection of the soluble products or toxins of such organisms as *Bacillus diphtheriae*, *Bacillus tetani*, or by the toxins of snake venom or other animal poisons. It acts by combining with the haptophorous group of the molecules of the toxin, thus preventing the toxophorous or poisonous group from injuring the cells of the body. [Gr., *anti*, against, + *toxikon*, a poison for arrows.]
- antitragus** (an-tit'ra-gus.) A conical projection of the cartilage of the external ear at the termination of the anhelix, situated opposite the tragus. [Gr., *anti*, opposite, + *tragos*, the tragus.]
- antitryp'sin.** A substance in the blood supposed to prevent the action of trypsin.
- antitus'sin.** An ointment containing difluordiphenyl, used externally in whooping-cough. [Gr., *anti*, against, + *Lat.*, *tussis*, cough.]
- an''tity'phoid.** Counteracting or preventing typhoid.
- an''tity'pical.** See *antiperiodic* and *atypical*. [Gr., *anti*, against, + *typos*, a type or form of disease.]
- an''tivaccina'tionist.** An opponent of the practice of vaccination.
- antivene'real.** Preventive of venereal infection.
- antivenin** (an-ti-ven'in.) A serum made by injecting a mixture of viperine and cobra venom into horses. The extractive from the blood serum of these horses acts as a curative agent for snake bites. [Lat., *anti*, against, + *venenum*, venom.]
- antivivise'ctionist.** An opponent of vivisection.
- antizymot'ic.** Preventive of zymotic diseases.
- an'tozone.** "Electropositive oxygen." The name that Schoenbein gave to the substance found at the electronegative pole in the electrolysis of water. An obsolete name for hydrogen peroxid.
- an'tral.** Pertaining to an antrum.
- antri'tis.** Inflammation within an antrum, especially the maxillary antrum.
- antrocele** (an'tro-sel.) A maxillary antrum fluid collection. [Gr., *antron*, antrum; *kele*, tumor.]
- antrophore** (an'tro-för.) A form of soluble medicated bougie. [Gr., *antron*, a cavity, + *phorein*, to bear.]
- antrot'omy.** The operation of cutting into an antrum. [Gr., *antron*, an antrum, + *temnein*, to cut.]
- an'trum.** A cavity, especially one within a bone; also a dilatation, an ampulla. **a. ethmoidalis.** See *ethmoidal cells*, under *cell*. **a. Highmorii.** See *maxillary a. a. pylori*. **a. pyloricum Willisii.** The pyloric portion of the stomach. **a. sphenoidale, a. sphenoidalium.** See *sphenoidal sinuses*, under *sinus*. **duodenal a.** The normal dilatation of the duodenum near its origin. **mastoid a.** The cavity of the horizontal portion of the mastoid process of the temporal bone. **maxillary a.** Syn.: *maxillary sinus, a. of Highmore*. A large, irregularly pyramidal cavity of the body of the superior maxilla. It is lined with mucous membrane, and communicates with the middle meatus of the nose. [B. N. A. sinus maxillaris.] [Gr., *antron*, cave.]
- anuria** (an-u're-ah.) Total suppression of urine. [Gr., *an*, priv., + *ouron*, urine.]
- anus** (a'nus.) The terminal or distal orifice of the alimentary canal. **artificial a.** An opening from the bowel made by surgery. **imperforate a.** Closure of the a., either congenital or acquired. **preternatural a.** An a. situated at some other than the normal place. [B. N. A., same.] [Lat., *anus*.]
- anusol** (an'u-sol.) A proprietary prepara-

tion said to consist of balsam of Peru, zinc oxid, resorcin, bismuth oxyiodid, and cacao butter; used in suppositories for hemorrhoids.

an'vil. See *incus*.

an'ytin. See *anitin*.

an'ytole. See *anitole*.

AOC. Anodal opening contraction.

a'odin, ai'odin. A preparation made from the thyroid gland; used in myxedema.

aorta (a-or'tah). The main trunk of the systemic arterial system, springing from the left ventricle of the heart, proceeding upward, then to the left, forming an arch around the root of the left lung, then downward, through the diaphragm, to a point opposite the fourth lumbar vertebra, where it divides into the two common iliac arteries. **abdominal a.** That part of the a. situated below the diaphragm. **anterior a.** The smaller of the two branches into which the common a. divides in many quadrupeds. **ascending a.** That portion of the a. which is contained within the cavity of the pericardium. **cardiac a.** That portion of the vascular system of the embryo which is situated just anterior to the bulbous aortae, giving origin to the aortic arches. **common a.** That portion of the a. which, in many quadrupeds, extends from its origin at the heart to the point of its division into the anterior and posterior aortae. **descending a.** That portion of the a. which is situated below the termination of the arch. **dorsal a.** 1. In the embryo, the vessel formed by the union of the two primitive aortae; the representative of the abdominal a. of the fully formed animal. 2. The thoracic a. **posterior a.** The posterior of the two branches of the common aorta in many quadrupeds. **primitive aortae, primitive subvertebral aortae.** Syn.: *inferior vertebral arteries*. In the embryo, two branches given off from the cardiac a., which pass through the first visceral and unite to form the dorsal a. **right a.** That division of the aortic bulb in the embryo, which eventually forms the pulmonary artery. **systemic a.** That division of the vascular apparatus of the embryo which ultimately forms the aorta. **thoracic a.** That portion of the a. which extends from the lower border of the third dorsal vertebra, on its left side, to the diaphragm. [Gr., *aorte*, from *airein*, to lift, to carry.]

aortectasia, aortectasis. Dilatation of the aorta. [Gr., *aorte*, aorta, + *ektasis*, a dilatation.]

aor'tic. Pertaining to the aorta or to the opening leading from the heart into that vessel.

aortit'is. Inflammation of the aorta. [Gr., *aorte*, aorta, + *itis*, inflammation.]

aortolith (ā-or'to-lith). A calcareous concretion in the aorta. [Gr., *aorte*, aorta, + *lithos*, stone.]

aos'mic. Without odor.

apaconitin (ap-ak-on'tit-in). An artificial alkaloid, $C_{23}H_{11}NO_{11} = C_{26}H_{35}(O)(OH)(O-CO - C_6H_5)NO_7$, formed by the dehydra-

tion of true aconitin. [Gr., *apo*, from, + *aconitin*.]

apallogin (ap-al'oj-in). The tetra-iodophenol phthalein; the mercury salt of nosophin.

apan'thropy. Morbid aversion to the male sex. [Gr., *apo*, from, + *anthropos*, man.]

apathet'ic. Pertaining to or affected with apathy.

ap'athy. A state of more or less profound insensibility, mental or bodily, to external impressions [Gr., *apatheia*.]

apatropin (ap-at'ro-pin). A derivative of atropin. Its molecular formula, $C_{17}H_{21}NO_2$, differs from that of atropin by one molecule of water. [Gr., *apo*, from, + *atropin*.]

apel'lous. 1. Skinless. 2. A person having a prepuce too short to cover the glans penis; a circumcised person. [Gr., *a*, priv., + Lat., *pellis*, a skin.]

apenta (ah-pen'tah). A Hungarian aperient water resembling Hunyadi János water.

apepsin'ia. Absence of pepsin or pepsinogen from the gastric juice.

apergol (a'per-gol). A proprietary mixture of apiol, oil of sabin, aloin, and ergotin.

ape'rient. Laxative. [Lat., *aperiens*, opening.]

aperiod'ic. Destitute of periodicity. [Gr., *a*, priv., + *periodos*, a circuit.]

aperistal'sis. Cessation of the peristaltic movements of the stomach.

aperitol (a-per'e-tol). A proprietary preparation, said to be a mixture of valeryl and acetylphenolphthalein. Used as a laxative.

apertu'ra. See *aperture*. **a. aquaeductus cochleae.** The small opening of the aqueduct of the cochlea. **a. chordae.** The internal opening of the canal for the chordae tympani. **a. externa aquaeductus cochleae.** A small foramen in the temporal bone just below the internal auditory meatus. **a. externa aquaeductus vestibuli.** A fissure, covered by a depressed scale of bone, on the posterior surface of the petrous portion of the temporal bone. **a. inferior canaliculi tympanici.** An opening on the inferior surface of the petrous portion of the temporal bone, which transmits Jacobson's nerve. **a. interna aquaeductus vestibuli.** The internal opening of the aquaeductus vestibuli within the vestibule. **a. pyriformis narium.** The triangular anterior opening of the nasal passages in the skull. **a. scalae vestibuli cochleae.** An opening by which the vestibule of the ear communicates with the scala tympani. **a. superior canaliculi tympanici.** The internal opening of the tympanic canal. **a. superior canalis incisivi.** The superior opening of the anterior palatine canal. **a. uterina tubae.** The uterine mouth of the oviduct.

ap'erture. 1. An opening. 2. Of a lens, the diameter of the portion of the lens exposed to the light. **angular a.** The angle included between the extreme rays proceeding from the object to the lens or

- the angular breadth of the train of light entering the lens. **auriculoventricular a.** The opening of communication between an auricle and the corresponding ventricle of the heart. **mastoid a.** Syn.: *meatus ad cellulas mastoideas*. The opening of communication between the cavity of the tympanum and the mastoid cells. **umbilical a.** The opening in the intestinal canal of the embryo at its union with the umbilical vesicle. [Lat., *apertura*, from *aperire*, to open.]
- apex** (ă'pecks). Pl. *ap'ices*. 1. The top or point of anything. 2. In dentistry, the terminal end of the root of a tooth. [Lat., *apex*, top, summit.]
- aphacia, aphakia** (a-fă'se-ah, a-fă'ke-ah). Absence of the crystalline lens from the eye or from its proper position. [Gr., *a*, priv., + *phakos*, anything shaped like a lentil.]
- aphagia** (ah-fă'je-ah). Inability to swallow. [Gr., *a*, priv., + *phagein*, to eat.]
- aphasia** (ah-fă'se-ah). An impairment of the power of intellectual expression due to lesions in the brain. **amnemonic a.**, **amnesic a.**, **amnesic a.** Word deafness. **a. universalis.** Complete a., in which the patient can not speak a single word. **ataxic a.** A. dependent on impairment or loss of the power of properly saying words due to central lesion. **functional a.** A. not dependent on a manifest cerebral lesion, but occurring as a congenital defect, in severe constitutional diseases, or as the result of emotional excitement in hysterical persons. **insular a.** A. due to a lesion strictly confined to the island of Reil. **traumatic a.** A. due to injury of the head. [Gr., *a*, priv., + *phasis*, speech.]
- aphemia** (ah-fe'me-ah). See *ataxic aphasia*, under *aphasia*. [Gr., *a*, priv., + *pheme*, speech.]
- aphonia** (a-fô'ne-ah). Loss of voice, i. e., of the power of intonation, the faculty of articulation being preserved, although enfeebled. **a. albuminurica.** A. due to a so-called specific form of edema of the larynx occurring as a sequel or a complication of certain forms of renal disease. **a. aneurismatica.** A. due to the pressure of an aneurism on the laryngeal nerves. **a. atonica.** A. due to disease or injury of the laryngeal nerves. **a. catarrhalis.** See *catarrhal a.* **a. paralytica.** See *paralytic a.* **a. saturnina.** A. due to lead poisoning. **a. trachealis.** A. due to compression of the trachea. **catarrhal a.** A. due to laryngeal catarrh. **centric a.** A. due to disease of the central nervous system. **essential a.** A. which can not be traced to any apparent pathological change (e. g., hysterical and idiopathic a.). **functional a.** A. due to loss of functional power in the vocal bands independently of structural disease in the larynx. **glottic a.** A. due to causes interfering directly with the action of the muscles of the glottis or with the vibration of the vocal bands. **hysterical a.** A form of a. which occurs in hysterical persons, coming on suddenly, lasting an indefinite time, and often disappearing as suddenly as it came.
- idiopathic a.** See *essential a.* **intermittent a.** An intermittent variety of essential a. **nervous a.** See *essential a.*, *hysterical a.*, and *paralytic a.* **paralytic a.** 1. A. due to paralysis of the larynx (i. e., of the laryngeal branches of the pneumogastric nerve). 2. A. accompanying apoplexy and hemiplegia. **peripheral a.** Any a. not due to disease of the central nervous system. **spastic a.** A. due to spasm of the tensor muscles of the vocal bands. [Gr., *a*, priv., + *phonein*, to produce a vocal tone.]
- aphrasia** (a-fră'ze-ah). Dumbness, speechlessness. [Gr., *a*, priv., + *phrasis*, utterance.]
- aphrodis'iac.** Pertaining to or causing venery or sexual pleasures. [Gr., *Aphrodisios*, from *Aphrodite*, Venus.]
- aphronesis** (ah-fron-e'sis). Want of judgment, foolishness, madness. [Gr., *a*, priv., + *phronesis*, possession of the senses.]
- apthae** (af'the). The whitish spots in the mouth that are characteristic of thrush. See *thrush*. [Lat., pl. of *apthā*, from Gr., *apthā*, ulceration in the mouth; thrush.]
- apthaphyte** (af'tha-fit). See *Oidium albicans*. [Gr., *apthā*, a little ulcer, + *phyton*, a plant.]
- apthous.** Pertaining to, resembling, or affected with apthae.
- a'pical.** Pertaining to or situated at the apex, e. g., of the lung.
- apinol** (ă'pin-ol). A proprietary product of the destructive distillation of the wood of *Pinus palustris* and *Pinus australis*, said to consist mainly of levomenthone, C₁₀H₁₆O.
- apiol** (ă'pe-ol). A white crystalline, camphorlike principle, parsley-camphor, C₁₂H₁₄O₄, obtained from *Petroselinum sativum*; used for dysmenorrhea. **a. green.** A commercial name for the oleoresin of parsley. [Lat., *apium*, parsley, + *oleum*, oil.]
- apiolin** (ă'pe-o-lin). A substance supposed to be the active principle of apiol.
- A'pis.** A genus of hymenopterous insects. **A. mellifica.** The common honey-bee. The homeopaths apply the term also to a medicinal preparation of the poison of the bee. [Lat., *apis*, bee.]
- Apium** (ă'pe-um). A genus of the *Umbelliferae*. **A. graveolens.** Syn.: *A. palustre*. Celery, smallage. The root is sometimes used as a diuretic.
- a''plana'sia.** Complete or almost complete freedom from spherical aberration (said of lenses). [Gr., *a*, priv., + *planan*, to wander.]
- aplasia** (ah-plă'se-ah). Defective formation or growth of a part. **a. of inactivity.** A. due to insufficient use of a part. [Gr., *a*, priv., + *plassein*, to fashion.]
- apnea.** 1. asphyxia. 2. The period of cessation of breathing after taking a long breath or during the process of swallowing, or while performing a forced muscular effort. [Gr., *a*, priv., + *pnœ*, breath.]

apneumatosi (ap''nu-mah-to'sis). Absence or deficiency of inflation. **congenital a.** See *atelectasis*. [Gr., *a*, priv., + *pneumatou*, to inflate.]

apneumia (ap-nu'me-ah). Congenital absence of the lungs. [Gr., *a*, priv., + *pneumon*, lung.]

apo- Prefix representing the Gr., *apo-*, off, from, away; used in compound words to denote detached, separate.

apoaconitin (ap-o-ak-on'tit-in). See *apacoinin*.

apotropin (ap-o-at'ro-pin). See *apatropin*.

apocaffein (ap-o-kaf'fe-in). A derivative of caffeine, forming prismatic crystals, $C_7H_7N_3O_6$.

apochromat'ic. Serving to do away with chromatic aberration. [Gr., *apo*, away from, + *chroma*, color.]

apocodein (ap-o-ko'de-in). An amorphous alkaloid, $C_{18}H_{21}NO_3 \cdot H_2O$, obtained by treating codein with zinc chlorid. [Gr., *apo*, from, + *codein*.]

apocynin (ap-os'in'e-in). A glucosid obtained from *Apocynum cannabinum*.

apocynin (ap-os'in-in). 1. An amorphous resinous body found in the roots of *Apocynum cannabinum*. 2. A preparation made from the root of *Apocynum androsæmifolium*.

Apocynum (ap-os'i-num). A genus of apocynaceous herbs of the U. S. Ph.; the dried rhizome of *A. cannabinum* and other related species. **A. androsæmifolium**. Dog's bane; a species growing wild in the United States. It contains a bitter principle, and a resin. It belongs to the digitalis group of drugs. **A. cannabinum**. Canadian or Indian hemp; a species growing in the eastern United States and Canada. Its action is much like that of digitalis. [Gr., *apo*, from, + *kyon*, a dog, because believed fatal to dogs.]

apodermialgia (ap''o-de-me-al'je-ah). A morbid condition in which there is a strong desire to leave home; the reverse of homesickness. [Gr., *apodemia*, a journey, + *algain*, to grieve.]

apolar (ah-po'lar). Having no poles or processes; said of nerve cells in particular. [Gr., *a*, priv., + *polos*, axis.]

apollinar'is. A natural table water, highly charged with carbon dioxide, from springs in Germany.

apolysin (ap-ol'is-in). An antipyretic and analgetic derivative of parphenitidin and citric acid.

apomorphia, apomorphin (ap-o-mor'fe-ah, ap-o-mor'fin). An artificial alkaloid derived from morphin and codein by dehydration. **a. hydrochlorate, a. hydrochlorid**. A salt of apomorphin, $C_{17}H_{17}NO_2 \cdot HCl$, used as an emetic. [Gr., *apo*, from, + *morphin*.]

aponeurosis (ap'on-u-ro'sis). A white, shining membrane made up of interlacing fibers. **abdominal a.** A term applied to the a. of the oblique muscles of the abdomen. **anterior a. of the transversalis abdominis**. The anterior fibrous portion of the transversalis ab-

dominis, which is blended with its fellow of the opposite side. **anterior crural a.** The fibrous layer which in many of the lower animals descends from the fold of the flank to the patella and inner surface of the leg, and is connected with the fascia lata. **antibrachial a.** The continuation of the brachial a. upon the forearm. **a. of insertion**. An a. which serves as the means of attachment of a muscle to a bone. **a. of intersection**. The fibrous bands which form part of the continuity of some muscles. **a. of the diaphragm**. The central tendon of the diaphragm. **a. of the external oblique muscle**. The broad fibrous expansion of the external oblique muscle which blends with its fellow of the opposite side at the linea alba. **a. of the internal oblique muscle**. The fibrous expansion of the internal oblique muscle. **a. of the leg**. The a. covering the calf of the leg. It sends numerous septa into the calf between the muscles. **dorsal a. of the metacarpus**. A fibrocellular tissue of transverse fibers prolonged downward from the wrist over the extensor tendons of the fingers. **epicranial a.** The fibrous structure connecting the two portions of the occipitofrontalis muscle. **orbital a.** A fibrous structure in the orbit which gives off prolongations that cover the muscles, pass into the eyelids, and extend over certain portions of the eyeballs. **vertebral a.** The a. which separates the muscles of the shoulder and arm from those that support the head and arm. [Gr., *apo*, from, + *neuron*, sinew.]

aponeurot'ic. Relating to, resembling, or constituting an aponeurosis.

apophyseal. Of, or pertaining to, an apophysis.

apophysis (ap-of'is-is). A bony projection or protuberance developed without an independent center of ossification. **a. lenticularis**. The point of the incus where it articulates with the stapes. **articular apophyses**. The articular processes of a vertebra. **basilar a.** The basilar process of the occipital bone. **metacromial a.** A term applied to the superior branch of a bifurcated acromion. **transverse apophyses**. The transverse processes of a vertebra. [B. N. A., same.] [Gr., *apo*, from, + *physis*, growth.]

apoplec'tic. Pertaining to, of the nature of, or affected with, apoplexy.

apoplexy. 1. A stroke or blow by which the person is felled. 2. A sudden hemorrhage into an organ or tissue of the body, most commonly, therefore, a cerebral hemorrhage by which a person usually loses consciousness and has paralysis of his muscles. A stroke of paralysis. A similar condition may be produced by a cerebral embolus or a spasm of cerebral vessels. **bulbar a.** Hemorrhage into the substance of the medulla oblongata. **capillary a.** A form of cerebral hemorrhage in which the blood is effused in minute quantities from ruptured capillaries. **congestive a.** An apoplectic state due to cerebral congestion.

- consecutive a.** a. attributed to the suppression of an habitual hemorrhage or other evacuation or an eruption. **embolic a.** Apoplectoid cerebral embolism; loss of consciousness, etc., due to cerebral embolism. **fulminant a.** 1. A sudden and overwhelming a., speedily causing death. 2. As formerly used, sudden death from some such cause as the bursting of an aneurism. **heat a.** See *sunstroke*. **hysterical a.** A paralysis seen in hysteria. **ingravescent a.** A form in which the symptoms come on gradually and increase in severity, usually ending in death. **meningeal a.** A hemorrhagic or serous effusion within the skull or the vertebral canal, but not into the substance of the brain or the spinal cord. **nervous a.** 1. A state in which, although the symptoms of cerebral congestion and hemorrhage are observed during life, no evidence of those conditions is found after death. 2. Acute anemia of the brain; probably due to arterial spasm. **progressive a.** A. in which the symptoms (paralysis, etc.) increase very gradually. **pulmonary a.** Hemorrhage from the pulmonary capillaries into the air-cells and terminal bronchi, and into the surrounding tissue. [Gr., *apoplexia*, from *apoplessein*, to strike down.]
- apoquinamin** (ap-o-quin'am-in). An artificial alkaloid, $C_{10}H_{22}N_2O$, derived from quinamin, conquiramin, or quinamidin.
- apo'retin.** A resin obtained from rhubarb. [Gr., *apo*, from, + *retine*, resin.]
- aposi'tia.** Aversion to food.
- apost'iasis.** 1. The termination of a disease by the formation of an abscess or by some critical discharge. 2. An abscess, especially a wandering abscess or one that is accompanied by the separation of a piece of bone. [Gr., *apostasis*, from *apo*, away from, + *istanai*, to stand.]
- aposthia** (ah-pos'the-ah). Absence of the foreskin. [Gr., *a*, priv., + *posthe*, the prepuce.]
- Apostoli's method.** The method of applying electricity to uterine fibroids and other gynecological affections perfected by Dr. Apostoli in the latter part of the 19th century. [*Georges Apostoli*, Parisian physician, 1847-1900.]
- apothecaries' measure.** See in *appendix*, page 941.
- apothecaries' weight.** See in *appendix*, page 941.
- apothecary.** One who prepares and sells drugs as medicines. In Great Britain the term is applied to a "general practitioner" who is not a legally qualified practitioner. [Old Fr., *apotecaire*, from Lat., *apothecarius*, store-keeper.]
- apoth'e'rial.** A term used by Haeckel to designate all tissues arising, directly or indirectly, from the exoblast and entoblast, the latter structures being termed epithelial. [Gr., *apo*, from, + *thallein*, to bloom, flourish.]
- apothem, apotheme** (ap'oth-em, ap'oth-ēm). Of Berzelius, an insoluble brown deposit formed in vegetable infusions and decoctions as the result of heating, evaporation, exposure to the air, and some other influences; a mixture of various substances in a state of decomposition. [Gr., *apo*, from, + *thema*, deposit.]
- apoz'ema, ap'ozeme, ap'ozem.** A decoction or infusion to which several medicinal ingredients are subsequently added, designed for occasional use only and prepared at the time of using. [Gr., *apozein*, to boil.]
- appara'tus.** 1. An instrument made up of several parts. 2. A system of organs concerned in the performance of some function, as *lacrimal a.*, consisting of the l. gland, l. canal, l. sac, and naso-l. duct. **diffusion a.** An a. for illustrating, or taking advantage of, the law of diffusion of gases. [Lat., *apparare*, to prepare.]
- apparit'ion.** A visual hallucination. [Lat., *apparitio*, from *apparere*, to appear.]
- appendage** (ap-pen'dāj). A dependent, supplementary or accessory structure. **auricular a.** A projecting portion of the auricle of the heart. **caudal a.** A tail, or a prolongation of the vertebral column in the form of a tail. **cecal a.** See *appendix ceci*. **cutaneous a's, dermal a's.** The nails and hair, also other analogous structures in the lower animals. **epiploic a's.** See *appendices epiploicae*, under *appendix*. **ileocecal a's.** See *appendix ceci*. **uterine a's.** The ovaries and oviducts. **vermiform a.** See *appendix ceci*. [Lat., *ad*, to, + *pendere*, to hang.]
- appendalgia** (ap-en-dal'je-ah). Pain in the region of the appendix vermiformis. [Lat., *appendix*, + Gr., *algos*, pain.]
- appendec'tomy, appendicce'tomy.** Removal of the appendix vermiformis by operation. [Lat., *appendix*, + Gr., *ektome*, excision.]
- append'ical, appendi'ceal.** Relating to the appendix.
- appendic'i'tis.** Inflammation of the vermiform appendix. [Lat., *appendix*, + Gr., *itis*, inflammation.]
- appendicos'tomy.** The operation of attaching the tip of the appendix vermiformis to the abdominal wall and establishing an opening into the intestine through the abdominal wall and the lumen of the appendix. [Lat., *appendix*, + Gr., *stoma*, mouth.]
- appendic'ular.** Relating to an appendix.
- append'ix.** Pl. *appendices*. An appendage; an accessory part of an organ. **a. ad cerebrum.** The pituitary body. **appendices allantoïdes.** See *diverticulum allantoidis*. **a. ceci, a. ceci vermiformis.** The vermiform appendix (or appendage) of the cecum; a slender cylindrical diverticulum, from 1 to 5 inches long and ½ inch thick in the human being, springing from the inner and posterior part of the cecum at its lower portion, below and a little behind the opening of the ileum. **appendices epiploicae.** Certain small fringelike projections of the serous coat of the colon and the upper part of the rectum, containing fat and resembling the omentum. **ensiform a.**

See *xiphoid a. vermiform a.* See *a. cecii.* **xiphoid a.** The xiphoid cartilage. [B. N. A., same.] [Lat., *appendere*, to hang upon.]

apperception. Mind's perception of itself; mental perception. [Lat., *ad*, + *percipere*, to perceive.]

appetite. A desire or disposition to do anything which is attended with a physical sensation of pleasure; as commonly understood, the desire to eat or drink.

depraved a., perverted a. See *pica.*

sexual a., venereal a. Desire for sexual intercourse. [Lat., *appetere*, to desire.]

apple. The fruit of *Pyrus malus*; also any large fleshy fruit. **Adam's a.** See *pomum Adami.* **a. of the eye.** The globe of the eye; also the pupil. [Perhaps Sansc., *ap*, water, + *p'hala*, fruit.]

application (ap-p'li-ká'shun). 1. The act of applying anything (such as a forceps, a leech, a plaster, etc.) 2. Anything applied (said of surgical dressings and of remedies used externally or applied to a particular part). [N. of action from Lat., *applicare*, to apply to.]

applicator (ap'pli-ka-tor). An instrument for applying remedies to a particular part, such as the uterine canal or the urethra, consisting of a flexible shaft on which cotton imbued with the medicament is wrapped. [Lat., from *applicare*, to apply.]

apposition (ap-po-zish'un). 1. The bringing of the lips of a wound or of the fragments of a broken bone into their proper relations. 2. The contact of two surfaces. [Lat., *appositio*, n. of action, from *appondere*, to put on.]

apraxia (ah-prak'se-ah). Loss of the power of communication by signs, also of knowledge of the uses of objects; object blindness. Inability or awkwardness in performance of intentional muscular movement. General term for loss of power of expressing or effecting ideas of muscular movements of any kind. [Gr., *a*, priv., + *prassein*, to do.]

a'pron. A term sometimes applied to any structure resembling the garment so called. **Hottentot a.** See *puddental a.*

puddental a. An hypertrophy of the nymphæ and the preputium clitoridis in the form of an a. hanging down over the vulva.

aprosexia (ah-pros-ex'e-ah). Impaired ability to fix the attention on a given subject. [Gr., *a*, priv., + *prosexia*, attention.]

aprosopia (ah-pro-so'pe-ah). A malformation characterized by absence of the eyelids and more or less of the rest of the face. [Gr., *a*, priv., + *prosopon*, the face.]

apsithyria, apsithuria (ap-si-thi're-ah, ap-si-thu're-ah). A form of paralysis or spasm of the larynx in which there is inability to whisper. [Gr., *a*, priv., + *psithyrizein*, to whisper.]

apynomorphous (ah-pik-no-mor'fus). A term used by Nissl to denote a nerve cell without large compact staining granules.

[Gr., *a*, priv., + *pyknos*, compact, + *morphe*, form.]

apyonin (ah-pi'on-in). A yellow crystalline powder, introduced as a substitute for yellow pyocyanin. [Gr., *a*, priv., + *pyon*, pus.]

apyretic (ap-ir-et'ik). Free from fever.

apyrexia (ah-pir-ek'se-ah). Freedom from fever. [Gr., *a*, priv., + *pyrexia*.]

aqua (ak'wah). Pl. *aquæ*. 1. Latin for water. 2. Natural water in the purest attainable state [U. S. Ph.]; water filtered through alternate layers of sand and charcoal [Ger. Ph.]. 3. As a pharmaceutical preparation, water containing a volatile substance in solution, obtained either by distilling the substance with water or by dissolving it in water after distillation. 4. Used with chemical formulæ to denote water of crystallization. **aquæ acidulæ.** Aërated waters. **a. acoustica.** An old term for any fluid preparation, used in diseases of the air passages. **a. destillata.** The official title of distilled water in a large number of pharmacopæias. **a. fortis.** See *nitric acid*, under *acid*. **a. phagedenica.** 1. A solution of 1 part of corrosive sublimate in 30 parts of water. 2. An old term for an aqueous solution of corrosive sublimate and sal ammoniac. **a. sedativa.** A preparation containing 12.5 per cent. of ammonia water and 1.2 per cent. of spirit of camphor in water.

aqueductus (ak-we-duk'tus). See *aqueduct.* **a. cerebri.** See *infundibulum cerebri.* **a. communicationis.** A small canal often found at the junction of the mastoid and petrous portions of the temporal bone, transmitting a small venous twig to the termination of the transverse sinus. **a. cotunnii.** See *aqueduct of the vestibule.* **a. temporalis.** A canal sometimes found at the posterior portion of the temporal bone for the passage of the squamoso-petrosal sinus. [Lat.]

a'quapuncture. 1. A French method of producing counterirritation or revulsion by forcing a fine jet of water or some other liquid into or through the unbroken skin. 2. The subcutaneous injection of water as a placebo. [Lat., *aqua*, water, + *puncture*.]

a'quate. A substance containing water of crystallization with which it is in molecular combination.

aqueduct (ak'we-duk't). A canal, channel, or tube for the conveyance of fluid; used also of a few canals which transmit blood-vessels or nerves. **a. of Cotunnus.** See *a. of the vestibule.* **a. of Fallopius** [B. N. A., *canalis facialis*]. A canal in the petrous portion of the temporal bone. **a. of Sylvius.** Syn.: *iter a tertio ad quartum ventriculorum.* A narrow canal, leading from the third into the fourth ventricle. **a. of the cochlea.** A small canal leading from the scala tympani into the cranial cavity near the lower edge of the pyramid and effecting a communication of the arachnoid space with perilymphic fluid of the labyrinth.

a. of the vestibule. A canal which rises as a thin membranous tube from the utricle and proceeds through a thin osseous canal to the posterior wall of the pyramid, opening into a spacious cul-de-sac covered by the dura mater. [Lat., *aqua*, water, + *ducere*, to lead.]

aqueous, aqueus (ah'kwe-us). Watery; resembling, containing, combined with, dissolved in, diluted with, made with, or formed from water.

aquip'arous. Water-producing; said of glands, the secretion of which contains a large amount of water, like the parotid, as contrasted with the muciparous glands. [Lat., *aqua*, water, + *parere*, to bring forth.]

arab'inose. A crystalloid carbohydrate, found in many members of the rose family as in cherry gum, peach gum.

arachnoid (ar-ak'noid). 1. Resembling a spider's web in texture. 2. Pertaining to the a. membrane. 3. (As a n.) The a. membrane; the middle one of the three membranes which invest the brain and spinal cord, separated from the pia mater by the subarachnoid space containing serous fluid. It is usually described as consisting of a parietal and a visceral layer, inclosing the a. space or cavity; Kölliker, however, denies the existence of a parietal layer distinct from the epithelium of the dura mater. Tuke maintains that there is no separate membrane answering to this description, and thinks the name should be dropped. The term has also been applied to several delicate investing and lining membranes. [Lat., *arachnoideus*, from Gr., *arachne*, a spider's web, and *eidos*, appearance.]

arachnolysin (ar'ak-nol'is-in). A toxin produced by many spiders which acts as a hemolysin. [Gr., *arachne*, spider, + *lysis*, dissolution.]

aracu. See *kumyss*.

Aralia (ar-a'le-ah). Wild sarsaparilla. **A. edulis.** A species with edible aromatic roots and young shoots. **A. hispida.** Bristly a., bristly sarsaparilla, wild elder, dwarf elder. **A. nudicaulis.** False (or wild) sarsaparilla, shotbush, small spike-nard. It is aromatic, diuretic, and diaphoretic, and is used in domestic practice as a substitute for sarsaparilla. **A. spinosa.** Angelica tree, toothache tree, Hercules' club. Used mainly in domestic practice.

Aran-Duchenne's disease. See *progressive muscular atrophy*, under *atrophy*.

araro'ba. Goa powder or crude chrysarobin, derived from *Andira* a. See *chrysarobin*.

arbores'cent. Branched like a tree. In descriptive bacteriology, the term is used in the sense of branched or treelike.

arboriza'tion. A formation resembling the branches of a tree. **terminal a.** 1. See *motor end-plate* under *end-plate*. 2. A term also applied to the branched terminations of sensory nerves.

ar'bor vi'tae. 1. Tree of life. A name given to various trees supposed to have

the power of prolonging life. 2. An arborescent structure found in various parts of the body. **a. v. cerebelli.** An arborescent structure seen upon vertical section of the cerebellum, due to the peculiar arrangement of the white and gray laminae. **a. v. uterina.** A fanciful term applied to the ridges of the canal of the cervix uteri. [Lat., *arbor*, tree, + *vita*, life.]

ar'butin. A glucosid, (C₁₂H₁₆O₇) + H₂O, extracted from the leaves of *Arctostaphylos* (*Arbutus*) *uva-ursi*. It is decomposable into glucose and hydroquinone, and this change probably occurs to some extent in the human body.

Ar'butus. A genus of evergreen ericaceous shrubs. **A. alpina.** See *Arctostaphylos*. **trailing a.** The *Epigaea repens*. It contains arbutin. Its actions resemble those of *uva-ursi* nearly.

arc. See *arch*. **electric a.** See *voltaic a.* **reflex a.** The nerve pathway of a reflex act. **voltaic a.** The band of light produced by passing a strong electric current between two adjacent carbon points.

arch. The curved portion of any tissue or organ, or a curve made by a nerve or a vessel. **alveolar a.** The a. formed by the alveolar processes. **anastomotic a.** A curved vessel connecting arteries or veins. **anterior a. of the atlas.** That part of the atlas anterior to the articular surfaces [B. N. A., *arcus anterior*]. **a. of the aorta.** The curved part of the aorta, extending from the left ventricle to the fourth dorsal vertebra. **a. of the colon.** See *transverse colon*. **a. of the foot.** A term applied to three a's made by the bones of the foot. **a. of the palate.** The a. formed by the anterior pillars of the fauces. **bronchial a's.** The posterior visceral a's, especially the third, fourth, and fifth.

cotylosacral a. Syn.: *standing a.* The a. formed by the sacrum and bony structures extending to the coxofemoral articulation. **crural a.** See *Poupart's ligament*. **dental a.** 1. The alveolar a. 2. The curved line of the teeth. **facial a.** The first postural a. **femoral a.** See *Poupart's ligament*. **gluteal a.** An opening in the gluteal aponeurosis for the passage of the gluteal vessels and nerves. **hyoid a.** The second postural a. It gives origin to the lesser cornu of the hyoid bone, the styloid bone, and the stapes. **ischiopubic a.** The a. formed by the ischiopubic rami and the body of the os pubis. **ischiosacral a.** An a. formed by the sacrum, the descending rami of the ischia and the intervening ilia. **nasal a.** An anastomotic vessel connecting the two frontal veins. **neural a.** The postaxial portion of a vertebra, which encloses the medullary canal. **orbital a.** The upper margin of the orbit. **osteoblastic a's.** The a's formed by the osteoblasts of developing bone. **palmar a's.** The loops, superficial and deep, by which the radial and ulnar arteries communicate in the palm of the hand. **pectoral a.** The

- scapulae and clavicles. **pelvic a.** The bones of the pelvis. **pharyngeal a's.** The fifth pair of branchial a's. **plantar a.** An arterial a. formed by the union of the external plantar artery and a communicating branch of the artery of the foot. **posterior a. of the atlas.** That part of the atlas posterior to its articular surfaces [B. N. A., *arcus posterior*]. **posthyoid a's.** The fourth and fifth postoral a's. Ridges springing from each side of the anterior aspect of the head of vertebrate embryos at an early period of development. **pubic a.** The a. formed by the ascending ramus of the pubes and the lower surface of the body [B. N. A., *arcus pubis*]. **superciliary a's.** See *superciliary ridges* under *ridge* [B. N. A., *arcus superciliaris*]. **superficial palmar a.** The continuation of the ulnar artery across the palm of the hand. **thyrohyoid a.** The third of the postoral arches. **zygomatic a.** The bony a. formed by the zygomatic process of the temporal bone and that of the malar bone [B. N. A., *arcus zygomaticus*]. [Lat., *arcus*, bow, curve.]
- archamphiaster** (ark-am'fe-as-ter). One of the mitotic figures. See *karyokinesis*. [Gr., *arche*, first, + *amphi*, around, + *aster*, star.]
- Archangelica.** A genus of the *Umbelliferae*. ***A. atropurpurea.*** Syn.: *Angelica atropurpurea* (seu *triquinata*). A species growing throughout the northern and western United States, used for the same purposes as *A. officinalis*. ***A. hirsuta.*** A species growing in the Atlantic States, sometimes used to replace *A. officinalis*. ***A. officinalis.*** Syn.: *Angelica a.* (seu *officinalis*, seu *sativa*). Garden angelica; a species growing in damp localities in central and northern Europe. Its root, leaves, and fruit are used as an aromatic tonic, diaphoretic, diuretic, and carminative. [For deriv. see *Angelica*.]
- archebiosis** (ar-ke-bi-o'sis). See *spontaneous generation* under *generation*. [Gr., *arche*, a beginning, + *biosis*, life.]
- archenteron** (ark-en'te-ron). The primitive alimentary canal of the embryo. [Gr., *arche*, beginning, + *enteron*, the intestine.]
- archetype, architype** (ar'ke-tip). An abstract conception of an original type or pattern on which a group of animals or plants or a system of organs is assumed to have been constructed, and to which their various modifications may be referred. [Gr., *arche*, beginning, + *typos*, impression.]
- archiblast** (ar'ke-blast). A small whitish circular granular areola that surrounds and encloses the germinal vesicle of the ovum. After fecundation it becomes the blastula. [Gr., *arche*, beginning, + *blastos*, bud, sprout.]
- archiblastula** (ar-ke-blas'tu-lah). A blastula in the stage of a simple sac, the wall of which consists of a single layer of similar cells.
- archicytula** (ar-ki-sit'u-lah). A fertilized egg cell, in which the nucleus has again become evident. [Gr., *arche*, beginning, + *kytos*, hollow.]
- archigastrula** (ar-ke-gas'tru-lah). A gastrula of which the endoderm and exoderm consist of a single layer of cells, and in which the primitive intestinal cavity has been formed. [Gr., *arche*, beginning, + *gaster*, belly.]
- archil** (ar'kil). A pigment obtained from the lichen that yields litmus.
- archimonerula** (ar-ke-mon-er'u-lah). Fertilized egg cell in which the formative and nutritive yolks are not yet distinct, and the nucleus has disappeared. [Gr., *arche*, beginning, + *moneres*, single, solitary.]
- archimorula** (ar-ke-mor'u-lah). A morula made up of similar cells. [Gr., *archi*, first, + *moron*, mulberry.]
- archinephron** (ar-ke-nef'ron). The primitive renal excretory apparatus of the embryo. [Gr., *arche*, beginning, + *nephros*, kidney.]
- archipallium** (ar-ke-pal'e-um). A term of Elliot Smith to designate the lower vertebrate forerunner of the higher mammalian cortex or neopallium.
- arciform** (ar'si-form). See *acuate*. [Lat., *arcus*, bow, + *forma*, shape.]
- Arctostaphylos** (arc-to-staf'il-os). Syn.: *Arbutus alpina*. Bearberry; a genus of trailing ericaceous plants. ***A. glauca.*** The manzanita; a species found in California. Its leaves are used in medicine like those of *A. uva-ursi* and contain arbutin and tannin. ***A. uva-ursi.*** Bearberry. The source of uva-ursi of the U. S. Ph. [Gr., *arktos*, a bear, + *staphyle*, a bunch of grapes.]
- arcuate** (ar'ku-at). Bow-shaped, arched. [Lat., *arcuare*, to bend.]
- arcus** (ar'kus). See *arch*. ***a. arteriae subclaviae.*** The curved portion of the subclavian artery. ***a. arteriosus inferior.*** The arterial arch on the greater curvature of the stomach formed by the union of the right and left gastro-epiploic arteries. ***a. arteriosus superior.*** The arterial arch on the lesser curvature of the stomach formed by the union of the right and left coronary arteries of the stomach. ***a. cartilaginis cricoideae.*** The anterior arched portion of the cricoid cartilage. ***a. dorsalis humeri posticus.*** The anastomosis just above the olecranon fossa, between the superior profunda artery of the arm and the anastomotic artery of the arm. ***a. dorsalis pedis superficialis.*** An arch formed by the veins uniting the superficial metatarsal veins. ***a. epiploicus magnus.*** The network of the branches of the left gastro-epiploic artery which supply the walls of the stomach. ***a. minor ventriculi.*** The lesser curvature of the stomach. ***a. nervi hypoglossi.*** The curve in the hypoglossal nerve as it crosses the carotid artery. ***a. senilis.*** A ring of degeneration seen about the corneal periphery in aged persons. ***a. unguium.*** See *lunula*. ***a. venosi digitales.*** Venous arches on the dorsum of the first phalanges of the fingers. ***a. venosus juguli.*** A connecting

branch between the two anterior jugular veins.

ar'dor. 1. A sensation of burning or heat. 2. Pain. [Lat., *ardere*, to burn.]

area (a're-ah). A surface, district or space, without reference to its size or shape. **a. intercruralis.** The interpedicular space of the brain. **a. lucida.** See *transparent a. a. mammae*. The areola surrounding the breast. **a. Martegiani.** The funnel-shaped opening of the hyaloid canal on the posterior surface of the vitreous body. **a. obscura, a. opaca.** See *opaque a. a. optica*. The visual field. **a. pellucida.** See *transparent a. a. vasculosa*. See *vascular a. a. ventriculi quarti*. The floor of the fourth ventricle of the brain. **a. vitellina.** See *vitelline a.* **Cohnheim a's.** See under *Cohnheim*. **embryonic a.** Syn.: *germinal a., germinal disk*. The a. of an oval thickening or opacity of the central part of the blastoderm, which subsequently becomes the vascular a. It comprises the transparent a. and the opaque a. **germinal a.** See *embryonic a. intercalated a.* See *non-nucleated a.* **middle lemniscus a.** The median region of the lemniscus, when seen in cross-section. **motor a's.** See *motor centers* under *center*. **non-nucleated a.** Syn.: *intercalated a.* The clear spaces sometimes seen between the endothelial cells of blood vessels, supposed to be due to the removal of portions of the surrounding endothelium. They are smaller than the endothelium and always without nuclei. **opaque a.** The outer part of the embryonic a., after it has become thickened by the accumulation of formative elements derived from the yolk. **transparent a.** The thin central part of the embryonic a. of the ovum; so-called from its being clear in comparison with the peripheral part. **vascular a.** The embryonic a. after the primitive blood vessels have formed. **vitelline a.** The outer surface of the vitelline membrane of the ovum, bordering on the opaque a. [Lat., *area*, open place.]

Ar'ca (ar-e'kah). A genus of lofty palmaceous trees. **a.-nut.** Lat., *areca* [Br. Ph., 1867], *semen arecae*. Syn.: *betelnut*, because chewed with the leaf of the betel pepper. Employed mainly in veterinary practice.

a'recane, a'rekane. A colorless, volatile, oily alkaloid obtained from the areca nut; said to increase the flow of saliva, retard the pulse, and act as a purgative.

are'olin. A liquid alkaloid obtained from *Areca catechu*. Taken internally, it causes vomiting and diarrhea.

arena'tion. The therapeutical application of hot sand, either by immersing a portion of the body in hot sand or by applying bags of the same. [Lat., *arena*, sand.]

are'ola. Pl. *areolae*. 1. A zone of hyperemia or pigmentation, e. g., the circular blush surrounding a vaccinal lesion, the pigmented disk surrounding the nipple. 2. A space between adjacent con-

stituents of organs or tissues, especially between the bundles and laminae of areolar tissue. **a. of the breast, a. of the nipple.** A circular area, usually from an inch to an inch and a half in diameter, surrounding the nipple; of a pink color (varying somewhat with the complexion) in healthy women who are not pregnant; provided with from ten to twenty visible sebaceous follicles. During pregnancy, and sometimes in consequence of uterine disease, it becomes darker in color, occasionally almost black, and somewhat raised above the surrounding skin, and the follicles are enlarged and moisten its surface with their secretion. See *secondary areolae*. **primary areolae.** Syn.: *primary marrow cavities, small medullary spaces*. The cell spaces in the calcifying matrix of an ossifying cartilage, which are still occupied by the cartilage cells, either singly or in groups. **secondary a.** The spotted peripheral portion of the a. of the breast, or a spotted appearance around it, sometimes formed during the latter part of pregnancy. **secondary areolae.** The comparatively large spaces in an ossifying cartilage, which result from the absorption of the partitions between the primary areolae, the spaces between the two becoming filled at the same time with embryonic marrow. **true a.** The central portion of the a. of the breast, containing a great number of sebaceous glands. **vaccinal a.** A ring-shaped redness of the skin which forms around a vaccinal pock, usually on the eighth or ninth day, and fades from the center toward the border. [Dim. of Lat., *area*, an open place.]

are'olar. Having or pertaining to areolae or spaces, or pertaining to a tissue or a part containing interspaces. **a. tissue.** See under *tissue*.

are'olate, are'olated. Divided into or containing depressed areas or areolae.

areola'tion. The state of being or the process of becoming areolar or areolate.

areometer (a-re-om'e-ter). Syn.: *hydrometer*. An instrument for measuring the specific gravity of fluids; a hydrometer. [Gr., *araios*, thin, not dense, + *metron*, measure.]

ar'gal. Written also *argol* and *orgol*. The commercial name of crude tartar as taken from the sides of wine casks.

Argas (ar'gas). A tick belonging to the phylum *Arthropoda* and to the family *Ixodidae*. It is from 4 to 8 mm. in length. Several species, such as *A. reflexus* of Europe, *A. persicus* of Persia and South America, and *A. chinche* of Colombia, infest fowls and pigeons, as well as humans. They bite and then suck the blood of their host.

argen'tamin (ar-jen'tam-in). A liquid made by dissolving 10 parts of silver nitrate in 100 of a 10-per-cent. watery solution of ethylenediamin. Used as an injection for gonorrhea.

argenta'tion. 1. The act or process of silvering. 2. The injection of the vessels of an anatomical specimen with mercury. 3. Argyria. [Lat., *argentum*, silver.]

argen'tic. Of or containing silver; produced by silver.

argento-. Combining form of Lat., *argentum*, silver; used as a prefix to denote of or pertaining to silver.

argental (ar'jen-tol). Silver oxyquinolin-sulphonate; used as an antiseptic and in gonorrhoea.

argen'tous. Containing silver in a relatively greater amount than the ordinary silver compounds (argentic compounds).

argentum (ar-jen'tum). Latin for silver.

argenti nitras. Nitrate of silver [U. S. Ph., Br. Ph.]. **argenti nitras fusum**, **argenti nitras fusus.** Fused nitrate of silver; generally prepared in the form of sticks with 4 per cent. of hydrochloric acid [U. S. Ph.]. **argenti nitras induratus.** Toughened caustic, made by fusing together 95 parts of silver nitrate and 5 of potassium nitrate [Br. Ph.]. **argenti nitras mitigatus.** Diluted, or mitigated, silver nitrate; the mitigated stick. A preparation consisting of nitrate of silver and potassium nitrate fused together and cast in molds [U. S. Ph., Br. Ph.]. **argenti oxidum.** Silver oxid (monoxid) [U. S. Ph.]. **a. purificatum**, **a. purissimum**, **a. purum.** Pure metallic silver, adapted for pharmaceutical and medicinal purposes. In classical Latin *a. purum* meant silver without figures or raised work upon it. The metal is used in medicine in the form of silver wire for a suture material, and silver leaf as a surgical dressing. [Allied to Gr., *argos*, white, and this to Sansk., *ardjuna*, white, and *radjata*, silver, both from the root *radj*, to shine.]

arginase (ar'jin-äs). An enzyme present in the liver and other organs which convert arginin into urea and ornithin.

arginin (ar'jin-in). A-amido-d-guanidino-valeric acid, $\text{NH}_2\text{.CNH.NH.CH}_2\text{.CH}_2\text{.CH}_2\text{.CH}_2\text{.CHNH}_2\text{.COOH}$. An amido acid of strong basic properties formed from proteins by hydrolytic cleavage.

ar'gol. Crude potassium bitartrate formed in casks containing wine.

ar'gon. A gas constituting about one per cent. of the atmosphere. [Gr., *argos*, idle (from its lack of chemical activity).]

ar'gonin. A compound of silver nitrate with a combination of sodium and casein, containing 4.28 per cent. of silver. Used as an antiseptic and in gonorrhoea.

Argyll-Robertson pupil. A type of pupillary reaction named by Argyll Robertson which is insensitive to light but freely active to accommodation. Seen in interference with the oculo-pupillary pathways, chiefly in cerebral syphilis, but also present in other conditions, though rarely.

ar'gyr-, ar'gyro-. Combining form of Gr., *argyros*, silver; used as a prefix to denote of or pertaining to silver.

argy'ria, argyri'asis, ar'gyrism, argy-ro'sis. Discoloration of the skin to a gray-blue color due to the prolonged internal use of the salts of silver. [Gr., *argyros*, silver.]

argy'ric. Pertaining to silver and its effects.

ar'gyrol. Silver vitellin, obtained from protein and silver oxid, containing 20 to 25 per cent. silver. It is used in the treatment of cystitis, conjunctivitis, etc.

arheol (ar'e-ol). Santalol, $\text{C}_{15}\text{H}_{26}\text{O}$. A sesquiterpene alcohol, the chief constituent of oil of sandalwood.

aricin (ar'is-in). Syn.: *cinchovatin*. An alkaloid, $\text{C}_{28}\text{H}_{36}\text{N}_2\text{O}_4$, isomeric with cuscoalin, obtained from the bark of an unknown tree growing near Arica, Peru, and from cusco and cuprea bark.

aristogen'ics. See *eugenics*.

ar'istol. Syn.: *annidalin*, *iodothymol*. Dithymolbiniodid. A brownish-red powder; used as an antiseptic dusting powder. [Gr., *aristos*, best.]

Aristolochia (ar-is-to-lo'ki-ah). Birthwort, heartwort. **A. serpentaria.** Virginia snake-root. The rhizome contains volatile oil and a bitter principle (*aristolochin*, *serpentarin*). [Gr., *aristos*, best, + *lochia*, the lochia, because formerly considered useful in parturition.]

aristolochin (ar-is-to-lo'kin). A golden yellow, bitter substance, obtained from the root of *Aristolochia serpentaria* and *Aristolochia clematidis*, believed to constitute the active principle of those plants. Identical substances have been called *serpentaria* and *clematidin*.

arithmoma'nia. A morbid propensity to count, keep statistics, or make calculations. [Gr., *arithmos*, a number, + *mania*, madness.]

arkyochro'ma. A term given by Nissl to those nerve cells whose staining substance to methylene blue arranges itself in rods or in network form. [Gr., *arkus*, net, + *chroma*, color.]

arico-urease (ar'co-u-re-as). A standard preparation of the urealitic enzyme obtained from the soy bean, *Soja hispida*. It decomposes urea in the presence of water, forming ammonia and carbon dioxide. It is used for quantitative estimation of urea in the urine, blood, and other body fluids.

arm. In man and the higher animals, the upper, or anterior, limb, from the shoulder to the wrist; more strictly, that portion of it which is included between the shoulder and the elbow. **a. hole.** The axilla. [B. N. A., *brachium*.] [Ang-Sax., *earm*.]

armamenta'rium, arma'rium. Lit., an arsenal or armory; a collection of instruments or appliances. **a. chirurgicum.** A collection of surgical instruments. [Lat.]

ar'mature. 1. Any defensive equipment of a plant or an animal. 2. The keeper of a magnet; a piece of soft iron placed in contact with the poles of a magnet, to prevent the dissipation of its magnetic force. [Lat., *armatura*.]

armil'la ma'nus membrano'sa. The annular ligament of the wrist.

armil'la ner'vi trigem'ini. The Gasserian ganglion.

Arneth's phagocytic index. The pro-

portionate number of polynuclear leukocytes in a cubic millimeter having three or more nuclei, such neutrophils being supposed to have the greatest phagocytic power. To make an Arneth is laboratory slang for such a count. [Joseph Arneth, German physician, 1873—.]

Arnica (ar'nik-ah). A genus of the *Senecionidae*. **arnicae flores** [U. S. Ph.]. The flower heads of *A. montana*. **arnicae radix** [U. S. Ph.]; **arnicae rhizoma**. See *a. root*. **a. root**. The rhizome of *A. montana*. **emplastrum arnicae** [U. S. Ph.]. A plaster made by mixing 1 part of the extract of *a. root* with 2 parts of resin plaster over a water bath. **extract of a. root**. An extract made by extracting the root of *A. montana* with dilute alcohol, evaporating the liquid to the pilular consistence, and adding 5 per cent. of glycerin [U. S. Ph.]. **extractum arnicae radiceis fluidum** [U. S. Ph.]. Fluid of *a. root*; made by exhausting powdered *a. root* with dilute alcohol, reserving the first 90 parts (by volume) of the percolate, evaporating the rest to the consistence of a soft extract, mixing this with the reserved portion and adding enough dilute alcohol to bring the whole up to 100 parts by volume. **tinctura arnicae flores**. A tincture made by macerating *a. flowers* in dilute alcohol and filtering [U. S. Ph.]. **tinctura arnicae radiceis**. Tincture of *a. root*; made by macerating in dilute alcohol and filtering [U. S. Ph.]. [Origin unknown.]

ar'nicin. A glucosid found in many species of *Arnica*.

Arnold's auricular ganglion. See *otic ganglion*. **A's reaction**. A test for diacetic acid in urine. A mixture of an aqueous solution of para-amido-acetophen, hydrochloric acid and potassium nitrate with the urine. Ammonium hydrate is added. A purple color resulting shows diacetic acid.

aro'ma. The characteristic odor of a substance, especially one of an agreeable character; also the odoriferous constituent of the substance. [Gr., *aroma*.]

aromatic (ar-o-mat'ik). Having a fragrant smell and a warm, slightly pungent taste of spice. A substance or plant emitting a spicy odor; a fragrant drug. [Lat., *aromaticus*, from Gr., *aromatikos*, aromatic.]

ar'rack, ar'rak. Syn.: *toddy, saki, tsin, sam-shu*. 1. A liquor distilled from the yeasty liquid in which boiled rice has fermented for many days, and to which cocoanut juice is sometimes added. There are several varieties, differing in color, taste, alcoholic strength, etc., made from fermented date-juice, rice, cocoanut milk, the sap of the cocoanut tree, or sugar-cane juice. 2. An Oriental name for distilled liquors in general. [Arab., *'araq*, or, *'arqi*, sweat and milk; afterwards applied to a fermented drink made of dates.]

arrectores pilorum (ar-rek-to'rēs pi-lor'-um). Involuntary muscles of the skin

which control the skin tone. Strong contractions cause goose-flesh. They are under sympathetic influence. See *table of muscles*, under *muscle*.

arrhenoto'cia, arrhenot'oky (ar-ren-o-to'se-ah, ar-ren-ot'o-kee). That form of parthogenesis in which, as among bees, the female lays eggs which produce only males. [Gr., *arren*, male, + *tokos*, a bringing forth.]

arrhinia (a-rin'e-ah). Congenital absence of the nose. [Gr., *a*, priv., + *ris*, *rin*os, nose.]

ar'rowroot. A form of starch obtained from the rhizome of the *Maranta arundinacea*, *Maranta nobilis*, and *Maranta indica*. It has the chemical properties of starch, and is distinguished by its bland quality as an article of food. [Said to be so called because it was used by the West Indian aborigines as a cure for the wounds inflicted with poisoned arrows; but, according to more authorities, from the native name, *araruta*, meaning mealy root.]

arsaben'zol. See *salvarsan*.

arsa'ctin. Acetyl atoxyl, an arsenic derivative.

ar'san. A name given to a preparation of arsenic and gliden.

ar'sen-. Combining form of *arsenic*; used as a prefix to denote of or pertaining to arsenic.

ar'senate, arsen'iate. A salt of arsenic acid.

arsenauro (ar-sen-aw'ro). A proprietary preparation of gold bromid and arsenic bromid.

arsendimeth'yl. See *cacodyl*.

arsenhem'ol. A proprietary preparation of hemol and arsenious acid.

ar'senic. An element frequently ranked among the metals, but now usually regarded as non-metallic. Both the amorphous and crystalline forms of *a.* are known. In the crystalline form it has a steel gray color and a specific gravity of 5.73. *A.* usually volatilizes directly, without fusion, giving off a lemon yellow vapor of garlicky odor, but under increased pressure it can be melted and then solidified into a crystalline mass. Its chemical symbol is *As*; its atomic weight is 75. The salts of *a.* are tonic and alterative. They are all poisonous. **a. bromid**. A crystalline substance (*AsBr*₃) used in diabetes. **a. disulphid**. *As*₂*S*₂. Syn.: *realgar, red orpiment*. A ruby red substance used as a pigment. Occasionally given for intermittent fever. **a. triiodid**. *AsI*₃. A red substance; used externally for ulcerating tubercular skin affections, and internally for impetigo, lepra, and affections resembling cancer. **a. trioxid**. *As*₂*O*₃. Commonly called arsenic acid or arsenious acid. A substance obtained by volatilizing *a.* in the presence of oxygen. It is much employed in chorea and other nervous affections, as well as in chronic skin affections and as an adjuvant to quinin in the treatment of malaria, especially the non-febrile manifestations of it. In larger

doses, it is an acrid poison producing inflammation and ulceration of the digestive tract. Locally, it is an escharotic and is sometimes employed, especially by irregular practitioners, in the treatment of cancerous ulcers. **a. trisulphid.** As_2S_3 . A yellow substance, used as a pigment and in medicine as a depilatory. **liquor arsenicalis.** See *liquor potassii arsenitis*, under *potassium* [Br. Ph.]. **liquor arsenici hydrochloricus.** A solution containing 1 per cent. of arsenious anhydrid, acidulated with hydrochloric acid [Br. Ph.]. [Gr., *arsenikon*, *arrenikon*, so called from *arrenikos*, masculine, on account of its strength.]

arsenic. Of, pertaining to or containing arsenic. List of poisons and their antidotes, see in *appendix*, page 938. **a. acid.** See under *acid*. **a. anhydrid.** A white mass, soluble in water, forming arsenic acid.

arsenic'alism, arsenici'asis. Chronic arsenical poisoning.

arsenicophagy (ar'sen-ik-of'aj-e). The practice of eating arsenic. [*Arsenic* + Gr., *phagein*, to eat.]

arsenic'um. 1. Orpiment or native arsenic trisulphid. 2. Common arsenic; arsenic trioxid. 3. Metallic arsenic. **aqua arsenici.** See *liquor potassii arsenitis*, under *potassium*. [For deriv. see *arsenic*.]

arsenic'us. Arsenical, arsenic; with the name of a. base, the arsenate of that base.

arsenio-. Combining form of arsenious; of the nature of or containing arsenic.

arsenious. 1. Containing arsenic. 2. In chemistry, containing arsenic as a trivalent radicle. **a. acid.** See under *acid*. **a. anhydrid.** Arsenic trioxid. **a. bromid, a. chlorid, a. ioddid, a. oxid, a. sulphid.** Arsenic tribromid, arsenic trichlorid, arsenic triiodid, arsenic trioxid, and arsenic trisulphid.

ar'senite. A salt of arsenious acid.

arsen'ium. Arsenic. **arsenichloridum.** Arsenic trichlorid. **arseni iodum.** Arsenic triiodid [U. S. Ph., Br. Ph.]. **liquor arsenii et hydrargyri ioddidi.** Syn.: *liquor arsenici et hydrargyri ioddidi*. Solution of ioddid of arsenic and mercury; Donovan's solution, containing 1 part of arsenic triiodid and 1 part of mercuric ioddid in 100 parts of distilled water [U. S. Ph.] [Br. Ph.].

arsen'iu'eted. Compounded with or containing arsenic. **a. hydrogen.** See *arsin*.

arseniza'tion. Medication with arsenic. **arsenmeth'yl.** Syn.: *methylarsen*, *arsenomonomethyl*. A bivalent or quadrivalent radicle $As(CH_3)''$ or $As(CH_3)''''$. It is not known in the free state. **a. dichlorid.** A colorless, heavy, highly refractive liquid, $As(CH_3)Cl_2$, the vapor of which is a powerful irritant to the mucous membranes.

arseno-. Combining form of arsenic or arsenous acid; used as a prefix.

ar'senof'er'ratin. The trade name for sodium arsenoferric-albuminate. It is ob-

tained by introducing arsenic into the ferri-albuminic acid molecule. It has the pharmacological actions of organic compounds of iron and arsenic.

ar'senof'er'ratose. *Liquor ferratini arsenati*; a 5 per cent. solution of arsenoferratin.

arsenophagia, arsenophagy (ar-sen-oh-fa'je-ah, ar-sen-of'aj-e). The practice of eating arsenic. [Gr., *arsenikon*, yellow orpiment, + *phagein*, to eat.]

ar'sentrifer'rin. An iron arsenoparacuculate, containing arsenic in organic combination, containing about 16 per cent. of iron, 0.1 per cent. of arsenic and 2.5 per cent. of phosphorus.

ar'sin. AsH_3 , a very poisonous gas, having a most disagreeable odor. It is easily decomposed into its elements by heat, of which property advantage is taken in Marsh's test. Also, generically, any substitution compound of this substance in which 1, 2, or 3 atoms of hydrogen are replaced by elements or radicles. The a's in this sense are analogous in structure to the amines and are similarly classed as primary, secondary, and tertiary a's.

arsin'ic. Of, pertaining to, or derived from, an arsin.

arsenvaliza'tion. The employment of electrical currents of rapid interruptions. [*d'Arsonval*, a French physicist, 1851.—.]

arsycodille (ar-sik'o-dil). A certain proprietary cacodyl preparation.

artefact, artifact (ar'te-fakt). An apparent structure produced accidentally by the chemical or the mechanical means employed in preparing a specimen. In histology and pathology an appearance from artificial causes which resembles a normal or a pathologic change. [Lat., *ars*, *artis*, art, + *facere*, to make.]

Artemisia (ar-tem-is'e-ah). Wormwood. A genus of herbs or shrubs of the *Compositae*, tribe *Senecionideae*. [Gr., *artemisia*, from *Artemis*, the goddess *Diana*.]

arteren'ol hydrochlo'rid. Dioxypheylethanolamin hydrochlorid $(OH)_2C_6H_5-CHOH.CH_2.NH_2:HCl$. A proprietary preparation said to possess the same properties as epinephrin.

arte'rial. 1. Pertaining to the arteries or their contents. 2. Pertaining to blood containing a relatively large amount of oxygen and a relatively small amount of carbon dioxid.

arterializa'tion. The transformation of dark red venous into bright red arterial blood during its passage through the lungs, gills, or any respiratory apparatus.

arterialize. To transform dark red venous into bright red arterial blood during its passage through the lungs, gills, or any respiratory apparatus. This transformation consists in the removal of carbon dioxid from the blood and the addition of oxygen.

arteriectasis (ar-te-re-ek'tas-is). Dilatation of an artery. [Gr., *arteria*, artery, + *ektasis*, dilatation.]

arterio-. Combining form of Gr. and Lat.,

arteria, an artery, used in compound words to signify of or pertaining to an artery.

arte'riocap'illary. Pertaining to the arterioles and the capillaries. **a. fibrosis.** See *arteriofibrosis*.

arte'riofibro'sis. Narrowing of the arterial tract by inflammatory fibrosis of the interna.

arte'riogram. Syn.: *sphygmogram*. A graphic delineation of the variations of the pulse; a pulse curve. [Gr., *arteria*, an artery, + *gramma*, a drawing.]

arteriog'raphy. The process of producing graphic representations of the state of the pulse. [Lat., *arteriographia*, from Gr., *arteria*, an artery, + *graphein*, to write.]

arte'riole. A minute artery. [Lat., *arteriola*, dim. of *arteria*.]

arteriolith (ar-te're-o-lith). A calcareous concretion in an artery due to an infiltration of a thrombus. [Gr., *arteria*, artery, + *lithos*, stone.]

arteriol'ogy. The study of that department of anatomy which relates to the arteries. [Gr., *arteria*, + *logos*, understanding.]

arte''riomala'cia. Softening of the coats of an artery. [Gr., *arteria*, artery, + *malakia*, softening.]

arteriopathy (ar-te-re-op'a-the). Any disease of an artery. [Gr., *arteria*, artery, + *pathos*, disease.]

arteriorrhaphy (ar'te-re-or'ra-fe). Suture of the opening by which an artery empties into an aneurism and that by which it leaves it, done through an incision into the sac.

arteriosclerosis (ar-te''re-o-skle-ro'sis). The hardening and thickening of the intima and, to a lessening degree, of the media and adventia of an artery by an increase of connective and elastic tissue, together, frequently, with a deposit of lime salts, following fatty infiltration of the three coats. [Gr., *arteria*, artery, + *sklerynein*, to harden.]

arterios'ity. A condition in which the blood in the systemic veins possesses the characters of arterial blood; the opposite of venosity. [Lat., *arteriositas*.]

arteriostenosis (ar-te''re-o-ste-no'sis). A narrowing of the lumen of an artery. [Gr., *arteria*, artery, + *stenosis*, a narrowing.]

arteriostosis (ar-te-re-os-to'sis). Calcification of an artery or of the arteries. [Gr., *arteria*, artery, + *osteon*, bone.]

arteriot'omy. The operation of opening an artery. [Gr., *arteria*, artery, + *tome*, an incision.]

arte''riove'nous. Pertaining to both an artery and a vein. **a. aneurism.** See under *aneurism*.

arteri'tis. Inflammation of an artery. **a. deformans.** See *endarteritis deformans*. **a. obliterans, a. obliterativa.** See *endarteritis obliterans*. **a. syphilitica.** *Endarteritis deformans* due to syphilis. **a. umbilicalis.** Inflammation and thrombosis of the umbilical arteries in the new-born. **cerebral a.** Inflammation of the cerebral arteries. **obliterat-**

ing a. See *endarteritis obliterans*. [Gr., *arteria*, artery, + *itis*, inflammation.]

artery (ar'ter-e). A vessel conveying blood from the heart to the different organs and tissues of the body. For the individual arteries, see *table of arteries*. [Gr. and Lat., *arteria*, from Gr., *aer*, air, + *terein*, to keep, because the arteries were supposed by the ancients to contain air.]

arthral'gia. Articular pain or neuralgia. Especially, one not obviously due to inflammation. [Gr., *arthron*, a joint, + *algos*, pain.]

arthrec'tomy. The operation of opening a joint and removing diseased structures by a process of scraping, gouging, or cutting; also excision of a joint. [Gr., *arthron*, joint, + *ektome*, excision.]

arthrede'ma. Edema of a joint. [Gr., *arthron*, a joint, + *oidema*, from *oidein*, to swell.]

arthrit'ic. Of or pertaining to diseased joints; gouty; a person subject to gout. [Gr., *arthritikos*, from *arthron*, joint.]

arthritis (ar-thri'tis), pl., *arthritides*. 1.

Inflammation of a joint. **acute a.** Any acute inflammation of a joint. **acute**

rheumatic a. See *acute articular rheumatism*. **acute serous a.** acute synovitis. **a. deformans.** Characterized

by atrophy of the bone and soft parts, wearing away of cartilage, deformity, pain, and stiffening. Generally, many joints are affected. It is a chronic process. See *osteo-arthritis*. **a. fungosa.** See *white swelling*. **a. nodosa.** Gout attended with the formation of lumps of chalky deposit about the joints. Other varieties of a. are: *gonorrhoeal a.*; *infectious a.*; *purulent a.*; *tubercular a.*; *wilious a.*

fungous a. White swelling; a chronic strumous or tuberculous inflammation of a joint. **gonorrhoeal a.** See *gonorrhoeal rheumatism*. **gouty a.** Articular a. due to gout. **intervertebral a.** See *spondylarthritis*. **osteo-a.** A form of a.

where the inflammatory process is followed by a deposition of bone in or about the joint, often causing deformity or limiting motion. **rheumatic a., rheumatoid a.** A form of a., usually chronic,

occurring in persons out of health, where atrophy takes place about the joints and an inflammatory exudate takes the place of the healthy tissues, causing stiffness and distortion. [Gr., *arthron*, joint, + *itis*, inflammation.]

arthritism. The gouty or rheumatic diathesis.

arthro- Combining form of Gr., *arthron*, joint; used as a prefix to denote of or pertaining to a joint.

arthrobacterium (ar-thro-bak-te'ri-um). A bacterium in which endogenous spore formation has not been observed. See *Bacterium*.

arthrocacologia, arthrocaology (ar'thro-kak-ol-o'ge-ah, ar'thro-kak-ol'o-je). That branch of pathology which deals with diseases of the joints. [Gr., *arthron*,

TABLE OF ARTERIES

NAME OF A.	ORIGIN	DISTRIBUTION	BRANCHES
Acromial.....	Acromiothoracic.	Deltoid muscle.	
Acromiothoracic.....	Axillary.	Side of thorax and part of arm.	Acromial, clavicular, pectoral.
Adipose.....	Capsular arteries, small branches of thoracic aorta.	Adipose tissue of heart.	
Afferent.....	Interlobular of kidneys.	Glomeruli.	
Alar thoracic.....	Axillary.	Glands and tissue of the axilla.	
Alveolar.....	Internal maxillary.	Molar and bicuspid teeth.	
Anastomatic, of the arm.....	Brachial.	Elbow.	Anterior and posterior.
Anastomatic, of the sciatic.....	Sciatic.	External rotator muscles of thigh.	Branches of gluteal artery.
Anastomatic, of the thigh.....	Femoral.	Knee.	Superficial and deep.
Angular.....	Facial.	Lacrimal sac.	Infra-orbital.
Aorta. See <i>aorta</i> , in vocabulary.	Ileocolic.	Mesentery of the vermiform appendix.	
Appendicular.....			
Articular, middle, of knee.....	Popliteal.	Crucial ligaments and joint.	
Articular, superior, external of knee.....	Popliteal.	Femur and knee-joint.	
Articular, superior, internal.....	Popliteal.	Knee-joint. Vasti.	
Ascending.....	External circumflex.	Gluteal muscles and hip-joint.	
Auditory, external.....	Internal maxillary.	Tympanum.	
Auditory, internal.....	Basilar.	Internal ear.	
Auricular.....	Occipital.	Auricle.	
Auricular, anterior, inferior.....	Temporal.	Auricle.	
Auricular, deep.....	Internal maxillary.	Tympanum and external auditory meatus.	
Auricular, left.....	Left coronary artery.	Left auricle; pulmonary artery.	
Auricular, posterior.....	Fifth branch of external carotid.	Back of auricle and part of neck.	Parotid, muscular, stylo mastoid, auricular, and mastoid.

TABLE OF ARTERIES—Continued

NAME OF A.	ORIGIN	DISTRIBUTION	BRANCHES
Auricular, right..... Axillary.....	Right coronary artery. Subclavian.	Right auricle, septum, and aorta. Brachial and seven branches.	Superior thoracic, acromiothoracic, long thoracic, alar thoracic, subscapular, ant. and post. circumflex.
Azygos (of knee)..... Azygos..... Azygos.....	Popliteal. External plantar. Internal plantar.	Crucial ligament, knee-joint. Articulations of tarsus. Joints on inner side of foot.	Into branches of external plantar.
Azygos (of elbow)..... Azygos (of shoulder).....	Superior profunda. Suprascapular.	Posterior part of elbow-joint. Shoulder-joint.	Anastomotica magna and interosseous recurrent.
Basilar.....	Right and left vertebral.	Brain.	Transverse, internal auditory, anterior cerebellar, superior cerebellar, posterior cerebral.
Bicipital..... Brachial.....	Anterior circumflex. Axillary.	Long tendon of biceps and shoulder-joint. Arm and forearm.	Superior and inferior profunda, anastomotica magna, nutrient, muscular, radial, and ulnar.
Brachiocephalic..... Bronchial, inferior..... Bronchial, superior.....	See <i>Innominate a.</i> Thoracic aorta. Arch of aorta.	Bronchi and lungs. Bronchi.	
Buccal..... Bulb, artery of.....	Internal maxillary. Internal pudic.	Muscles and integument of the cheek. Erectile tissue of the corpus spongiosum.	
Calcanean, external..... Calcanean, inferior..... Calcanean, internal..... Calcanean, middle.....	Posterior peroneal. External plantar. Posterior tibial and peroneal. Posterior tibial.	Outer side of foot and heel. External plantar muscles. Inner side of heel and sole. Outer and back surface of os calcis.	Anastomosing with external malleolar, external plantar and tarsal arteries.

NAME OF A	ORIGIN	DISTRIBUTION	BRANCHES
Capsular Carotid, common.....	See <i>Suprarenal</i> . Innominate (right); arch of aorta (left).	External and internal carotid.	
Carotid, external.....	Common carotid.	Front and back of neck, face, side of head, meninges, middle ear, thyroid, tongue, tonsils.	Internal maxillary, superior thyroid, lingual, facial, occipital, posterior auricular, super- ficial temporal.
Carotid, internal.....	Common carotid.	Brain, nose, orbit, internal ear, and forehead.	Anterior and middle cerebral, ophthalmic, tympanic, vidian, pituitary, gasserian, meningeal, communicating, anterior cho- roid.
Carpal..... Carpal.....	Radial. Ulnar.	Lower radius and wrist. Carpus.	Anterior carpal rete. Posterior carpal rete.
Cecal, anterior..... Cecal, posterior..... Celiac axis.....	Inferior mesenteric. Posterior mesenteric. Abdominal aorta.	Front part of cecum. Back part of cecum. Esophagus, stomach, duodenum, gall-bladder, liver, pancreas, spleen.	Gastric, hepatic, splenic.
Cerebellar (three)..... Cerebral, anterior and middle..... Cerebral, posterior..... Cervical, ascending..... Cervical, deep.....	Basilar and vertebral. Internal carotid. Basilar. Inferior thyroid. Superior intercostal.	Cerebellum. Cerebrum. Cerebrum, Neck. Neck.	Inferior and superior vermiform and hemi- spherical. Muscular, spinal. Muscular, spinal.
Cervical, superficial..... Cervical, transverse..... Circumflex, anterior..... Circumflex, posterior.....	Transverse cervical. Thyroid axis. Axillary. Axillary.	Muscles of back of neck. Posterior cervical and scapular regions. Pectoralis major, biceps, shoul- der-joint. Deltoid, teres minor, triceps, shoulder-joint.	Bicipital and pectoral. Acromial, articular, muscular, nutrient.
Coronary, left..... Coronary, right.....	Left anterior sinus of Valsalva. Right anterior sinus of Valsalva.	Heart. Heart.	Left auricular, anterior interventricular, left marginal, terminal. Right auricular, preventricular, right mar- ginal, posterior interventricular, transverse.

TABLE OF ARTERIES—Continued

NAME OF A.	ORIGIN	DISTRIBUTION	BRANCHES
Digital	External plantar.	Outer side and to 5th toes.	Tarsal, metatarsal, dorsalis hallucis, communicating.
Digital, palmar	Superficial palmar arch.	Sides of fingers.	Cremasteric, pubic, muscular, and terminal branches.
Dorsalis pedis	Anterior tibial.	Foot.	
Epigastric	External iliac.	Abdominal wall, femoral ring and cremaster.	Inferior palatine, tonsillar, glandular, muscular, submental, mesenteric, buccal, inferior labial, coronary of lips, lateralis nasi, angular.
Facial	External carotid.	Pharynx and face.	
Femoral	External iliac.	Lower part of abdominal wall, genitals, upper thigh.	
Gastric	Celiac axis.	Liver, esophagus, stomach.	Cardiac, esophageal, gastric and hepatic.
Gastrooduodenal	Hepatic.	Gluteal muscles.	Gastro-epiploic, pancreaticoduodenal, pyloric.
Gluteal	Internal iliac.		Deep and superficial gluteal.
Hepatic	Celiac axis.	Duodenum, liver, pancreas, stomach.	Gastrooduodenal, pancreatic, subpyloric, terminal.
Iliac, common	Abdominal aorta.	Peritoneum.	Peritoneal, ureteric, external and internal iliac.
Iliac, external	Common iliac.	Lower limb.	Deep epigastric, circumflex, femoral.
Iliac, internal	Common iliac.	Pelvic and generative organs, inner thigh.	Anterior and posterior trunk.
Iliac, interior (anterior trunk)	Internal iliac.	Pelvic and generative organs and thigh.	Vesical, uterine, vaginal, obturator, sciatic, internal pudic, middle hemorrhoidal.
Iliac, interior (posterior trunk)	Internal iliac.	Muscles of hip and sacrum.	Gluteal, iliofemoral and lateral sacral.
Innominate	Arch of aorta.	Right side of head and right arm.	Right common carotid, right subclavian.
Intercostal, superior	Subclavian.	Neck and upper thorax.	Deep cervical, first intercostal, arterial aberrans.
Interosseous	Ulnar.	Deep muscles of the forearm.	Anterior and posterior interosseous.
Laryngeal, superior	Superior thyroid.	Muscles and mucous membrane of larynx.	
Lingual	External carotid.	Tongue.	Hyoid, dorsalis linguae, sublingual, ranine.
Mammary, internal	Subclavian.	Thorax.	Superior phrenic, mediastinal, pericardiac, sternal, anterior intercostal, perforating, lateral intercostal, superior epigastric.

NAME OF A.	ORIGIN	DISTRIBUTION	BRANCHES
Maxillary, internal.....	External carotid.	Structures indicated in names of branches.	Middle and small meningeal, inferior dental, deep temporal, tympanic, pterygoid, masseteric, buccal, posterior palatine, vidian, pterygopalatine, sphenopalatine, alveolar, infra-orbital.
Mediastinal, anterior.....	Internal mammary.	Superior and anterior mediastinum, thymus gland.	
Meningeal (four).....	Ascending pharyngeal and posterior ethmoid.	Dura mater.	
Mesenteric, inferior.....	Abdominal aorta.	Descending colon, sigmoid flexure, rectum.	Colica sinistra, sigmoid, superior hemorrhoidal.
Mesenteric, superior.....	Abdominal aorta.	Small intestine, colon, cecum, ileum.	Inferior pancreaticoduodenal, colica media, colica dextra, ileocolic, vasa intestinala tenuis.
Musculophrenic.....	Internal mammary.	Diaphragm, 5th and 6th intercostal spaces, muscles of abdomen.	Phrenic, anterior intercostals, muscular.
Nasal.....	Ophthalmic.	Lacrimal sac, integuments of nose.	Lacrimal and transverse nasal.
Obturator.....	Internal iliac.	Pelvis and thigh.	Iliac, vesical, pubic, external and internal pelvic.
Occipital.....	External carotid.	Muscles of neck and scalp, meninges.	Muscular, auricular, meningeal, cranial branches, princeps cervicis.
Ophthalmic.....	Internal carotid.	Eye, adjacent structures, part of face.	Lacrimal, supra-orbital, central of retina, ciliary, muscular, posterior and anterior ethmoid, palpebral, nasal, frontal.
Palmar arch (deep).....	Radial.	Palm and fingers.	Perforating, palmar interosseous, recurrent.
Palmar arch (superficial).....	Ulnar.	Palm and fingers.	Digital, cutaneous, muscular.
Pharyngeal, ascending.....	External carotid.	Pharynx, soft palate, tympanum, meninges.	Meningeal, palatine, pharyngeal, prevertebral, tympanic.
Phrenic, superior.....	Internal mammary.	Diaphragm, pericardium pleura.	
Plantar arch.....	External plantar.	Anterior part of foot and toes.	

TABLE OF ARTERIES—Continued

NAME OF A.	ORIGIN	DISTRIBUTION	BRANCHES
Plantar, external.....	Posterior tibial.	Sole and toes.	Anastomotic, calcaneal, cutaneous, posterior perforating, plantar arch.
Plantar, internal.....	Posterior tibial.	Inner side of foot.	Anastomotic, articular, cutaneous, muscular, superficial digital.
Popliteal.....	Femoral.	Knee and leg.	Cutaneous, superior and inferior muscular, superior external and internal articular, inferior external and inferior articular, azygous articular, anterior and posterior tibial.
Profunda (deep femoral).....	Femoral.	Thigh.	External and internal circumflex, three perforating.
Profunda, inferior.....	Brachial.	Triceps, elbow-joint.	Articular, ascending, cutaneous, muscular, nutrient.
Profunda, superior.....	Brachial.	Humerus, muscles and skin of arm.	Eustachian, pharyngeal, sphenoid.
Pterygopalatine.....	Internal maxillary.	Pharynx, eustachian tubes, sphenoidal cells.	
Pudic, external.....	Common femoral.	Skin and integument above pubes and external genitalia.	
Pudic, internal.....	Internal iliac, anterior trunk.	Generative organs.	Inferior hemorrhoidal, superficial and transverse perineal, muscular, artery of the bulb, of the corpus cavernosum, dorsalis penis.
Pulmonary.....	Right ventricle.	Lungs.	Right and left pulmonary.
Pyloic, superior.....	Hepatic.	Pyloic end of stomach.	
Radial.....	Brachial.	Forearm, wrist, hand.	Radial recurrent, muscular, anterior and posterior carpal, superficial volar, metacarpal, dorsalis pollicis, dorsalis indicis, deep palmar arch.
Renal.....	Abdominal aorta.	Kidney.	Inferior suprarenal, capsular, ureteral.
Scapular, dorsal.....	Subscapular.	Muscles of infraspinous fossa.	Infrascapular.
Scapular, posterior.....	Transverse cervical.	Muscles of scapular region.	Supraspinous and infraspinous, muscular, subscapular.
Sciatic.....	Internal iliac, anterior trunk.	Muscles and viscera of pelvis.	Coccygeal, inferior gluteal, muscular, anastomotic, articular cutaneous, vesical, rectal, etc.
Spermatic.....	Abdominal aorta.	Scrotum and testis.	Cremasteric, epididymal, testicular, ureteral.

NAME OF A.	ORIGIN	DISTRIBUTION	BRANCHES
Sphenopalatine.....	Internal maxillary.	Pharynx, nose and sphenoid cells.	Nasal, pharyngeal, ascending septal, sphenoid.
Spinal, anterior.....	Vertebral.	Spinal cord.	
Spinal, lateral.....	Vertebral.	Vertebrae and spinal canal.	
Spinal, posterior.....	Vertebral.	Spine.	
Splenic.....	Celiac axis.	Pancreas, great curvature of stomach, spleen.	Gastric, left gastro-epiploic, splenic branches, small and large pancreatic.
Subclavian.....	Right—Innominate. } Left—Arch of aorta. }	Neck, thorax, arms, brain, meninges.	Vertebral, internal mammary, superior intercostal, thyroid axis.
Subscapular.....	Axillary.	Subscapularis, teres major, latissimus dorsi, serratus magnus, axillary glands.	Dorsal and infrascapular.
Suprarenal, inferior.....	Renal.	Suprarenal body.	
Suprarenal, middle.....	Aorta.	Suprarenal bodies.	
Suprarenal, superior.....	Phrenic.	Suprarenal bodies.	
Suprascapular.....	Thyroid axis.	Muscles of shoulder.	Inferior sternomastoid, nutrient, suprascapular, acromial, articular, supraspinous, and infraspinous.
Temporal.....	External carotid.	Forehead, parotid gland, masseter muscle, ear.	Anterior auricular, middle, anterior and posterior temporal, transverse facial.
Thoracic, acromial.....	Axillary.	Muscles of shoulder, chest and arm.	Acromial, clavicular, humeral, pectoral.
Thoracic, alar.....	Axillary.	Axillary glands.	
Thoracic, long.....	Axillary.	Pectoral muscles, mammary and axillary glands.	
Thyroid axis.....	Subclavian.	Shoulder, neck, thorax, spine, cord.	Inferior thyroid, suprascapular, transverse cervical.
Thyroid, inferior.....	Thyroid axis.	Esophagus, larynx, muscles of neck.	Ascending cervical, esophageal, inferior laryngeal, muscular, tracheal.
Thyroid, superior.....	External carotid.	Omohyoid, sternohyoid, sternothyroid, thyroid gland.	Hyoid, sternomastoid, superior laryngeal, cricothyroid.
Tibial, anterior.....	Popliteal.	Leg.	Posterior and anterior tibial, recurrent, muscular, internal and external malleolar.

TABLE OF ARTERIES—Continued

NAME OF A.	ORIGIN	DISTRIBUTION	BRANCHES
Tibial, posterior.....	Popliteal.	Leg, heel and foot.	Communicating, cutaneous, calcanean, internal and external plantar, malleolar, medullary, muscular, peroneal.
Ulnar.....	Brachial.	Forearm, wrist and hand.	Anterior and posterior ulnar, recurrent, common interosseous, muscular, nutrient, carpal, palmar arch.
Uterine.....	Branch of internal iliac.	Uterus.	Azygos, cervical, vaginal.
Vertebral.....	Subclavian.	Neck and cerebrum.	Anastomotic, lateral spinal, muscular, posterior cerebellar, posterior meningeal, posterior and anterior spinal.
Vesical, inferior.....	Internal iliac, anterior trunk.	Bladder, prostate, seminal vesicles, vagina.	
Vesical, superior.....	Internal iliac, anterior trunk.	Bladder.	Deferentia, ureteric.
Vidian.....	Internal maxillary.	Roof of pharynx, eustachian tube, tympanum.	Eustachian, pharyngeal, tympanic.

a joint, + *kakos*, evil, + *logos*, understanding.]

arthrocele (ar'thro-sēl). 1. A swelling of a joint, especially in gonorrhoeal rheumatism. 2. Hernia of the synovial membrane through the capsule of a joint. [Gr., *arthron*, joint, + *kele*, tumor.]

arthrochondritis (ar'thro-kon-dri'tis). Inflammation of the cartilage of a joint. [Gr., *arthron*, joint, + *chondritis*.]

arthroclasia. The forcible breaking up of adhesions in a joint. [Gr., *arthron*, joint, + *klasis*, a breaking.]

arthrodiesis. The artificial establishment of ankylosis of a joint, as by partial resection. [Gr., *arthron*, joint, + *desis*, a binding together.]

arthrodia (ar-thro'de-ah). That variety of diarthrosis in which an articular head plays upon a shallow cavity, as in the mandibular articulation; differing from enarthrosis in that both the convexity and the concavity of the opposed surfaces are less marked, so as to admit of some gliding motion. [Gr., *arthrodia*.]

arthrodial, **arthrodic**. Pertaining to a joint of the variety termed arthrodia.

arthrodynia. 1. Pain in a joint. 2. Chronic articular rheumatism. [Gr., *arthron*, a joint, + *odyne*, pain.]

arthrogenous (ar-throj'en-us). Originating in a joint; forming a joint. [Gr., *arthron*, joint, + *gennan*, to produce.]

arthrogryposis (ar-thro-grip-o'sis). Syn.: *pseudotetanus*. The continuous toxic rigidity of the muscles seen in children, and probably due to real tetany. [Gr., *arthron*, a joint, + *grypos*, curved.]

arthrolith (ar'thro-lith). A chalk-stone or gouty deposit in a joint. [Gr., *arthron*, joint, + *lithos*, stone.]

arthrology. The study or science of the joints and their diseases. [Gr., *arthron*, joint, + *logos*, understanding.]

arthropathology. The pathology of diseases of the joints.

arthropathy (ar-throp'ath-e). Any joint disease, as a. of the knee-joint in tabes dorsalis. [Gr., *arthron*, joint, + *pathos*, suffering.]

arthrophyte. 1. A free body within a joint, originating in the synovial membrane. See *floating cartilage*, under *cartilage*. 2. Any outgrowth from the proper structure of a joint projecting into its cavity. [Gr., *arthron*, joint, + *phyton*, growth.]

arthroplasty. The formation of an artificial joint in the case of ankylosis. [Gr., *arthron*, joint, + *plassein*, to form.]

arthropoid. An invertebrate animal having jointed limbs. [Gr., *arthron*, joint, + *pous*, *podos*, foot.]

arthrospore. A spore which is produced by the segmentation of a parent cell, as opposed to one produced by endogenous development within the latter, an endospore. [Gr., *arthron*, a joint, + *sporos*, a seed.]

arthrotomy. Properly, the operation of cutting into a joint; often used in the sense of arthrectomy. [Gr., *arthron*, joint, + *temnein*, to cut.]

arthrox'esis. The abrasion of fungous growths from an articular surface. [Gr., *arthron*, joint, + *xesis*, a scraping.]

artic'ular. Pertaining to an articulation. **a. artery**. See *table of arteries* under *artery*.

articularis (articular'is). See *table of muscles*, under *muscle*.

artic'ulate, **artic'ulated**. 1. Jointed, provided with articulations. 2. Having the separate bones properly joined together (said of a prepared skeleton).

articulation (ar-tik-u-la'shun). 1. A joint whether movable or not; the union of any two segments of an animal body through the intervention of a structure or structures different from both; most commonly limited to the connection existing between contiguous bones or cartilages. 2. The act of putting the bones of a skeleton together properly. 3. Distinct connected speech. **acromioclavicular a.** The a. between the outer edge of the clavicle and the upper edge of the acromion. **carpometacarpal a's.** The a's between the carpal and metacarpal bones. **chondrocostal a's.** The a's between the ribs and the costal cartilages. **chondrosternal a.** See *costosternal a.* **coccygeal a's.** The a's between the coccygeal vertebrae. **coracoclavicular a.** A term applied to the union between the outer end of the clavicle and the coracoid process of the scapula by the coracoid ligament. **costoclavicular a.** An a. formed by a small facet on the inferior surface of the sternal end of the clavicle and the upper border of the first rib. **costosternal a.** The a. between a costal cartilage and a fossa on the margin of the sternum. **costotransverse a's.** The a's between the transverse processes of the vertebrae and the neck and tubercles of the ribs. **costovertebral a.** The a. between the head of a rib and the bodies of two adjacent vertebrae; occasionally the rib is attached to one vertebra only. **coxfemoral a.** The hip joint. **crico-arytenoid a's.** The a's between the convex surfaces on the upper border of the cricoid cartilage and the concave depressions on the bases of the arytenoid cartilages. **cricothyroid a's.** The a's between the lesser cornua of the thyroid cartilage and the sides of the cricoid cartilage. **cubocuneiform a.** The a. between the cuboid and the external cuneiform bones. **cuneiform a's.** The a's between the cuneiform bones. **cup-and-ball a.** See *enarthrosis*. **false a.** A sort of joint formed between the fragments of a broken bone; or with a dislocated bone. **femorotibial a.** The knee-joint. **humercubital a.** The elbow-joint. **humero-radial a.** The a. between the lower end of the os brachii and the upper end of the radius. **humero-ulnar a.** The a. between the lower end of the os brachii and the upper end of the ulna. **incudostapedial a.** The a. between the lenticular process of the incus and the head of the stapes. **inferior radio-ulnar a.** A lateral ginglymoid a. between the sigmoid cavity of the radius and the lower end of the ulna.

inferior tibiofibular a. The a. between the articular surfaces of the lower end of the tibia and that of the fibula. **intermetacarpal a's.** A term applied to the a's of the metacarpal bones with each other. **intermetatarsal a's.** The a's between the proximal and distal ends of the metatarsal bones. **intertarsal a's.** The a's of the tarsal bones with each other. **intervertebral a's.** A term applied to the a's between the bodies and the transverse and spinous processes of the vertebrae. **ischio-pubic a.** A term applied to the union between the ischium and the pubic bone, which in many young and in some adult animals is a true amphiarthrodial joint. **malleo-incudal a.** The a. between the posterior surface of the head of the malleus and the body of the incus. **mandibular a.** The a. formed by the condyle of the lower jaw and the glenoid fossa of the temporal bone. **mediocarpal a.** The a. between the adjacent surfaces of the two rows of carpal bones. **mediotarsal a.** A term applied to the articulation of the os calcis and the astragalus with the scaphoid and cuboid bones. **metatarsophalangeal a's.** The a's between the heads of the metatarsal bones and the corresponding phalanges. **middle radio-ulnar a.** A term applied to the union between the radius and the ulna formed by the interosseous membrane and the oblique ligament. **middle tibiofibular a.** The connection between the tibia and the fibula formed by the interosseous membrane. **radiocarpal a.** The a. formed by the lower end of the radius and the cuneiform, scaphoid, and semilunar bones. **sacro-coccygeal a.** The a. between the sacrum and the coccyx. **sacro-iliac a.** The a. between the sacrum and the ilium. **acrovertebral a.** The a. between the sacrum and the last lumbar vertebra. **scapulohumeral a.** The shoulder-joint. **stapediovestibular a.** The a. between the stapes and the margin of the fenestra ovalis. **sternoclavicular a.** The a. between the sternum and the clavicle. **superior radio-ulnar a.** The a. formed by the head of the radius and the sigmoid fossa of the upper end of the ulnar. **superior tibiofibular a.** The a. formed by the upper end of the fibula and an articular surface on the tibia, just below the outer side of the knee-joint. **synovial a.** An a. which is lubricated by synovial fluid. **thyrohyoid a.** The connection between the thyroid cartilage and the hyoid bone, formed by the thyrohyoid ligaments and membranes. **tibiotarsal a.** The ankle-joint. **trochoid a.** A form of a. in which rotation alone is possible. [Lat., *articulatio*, a joint.]

articulator (ar-tik'u-lā-tor). In dentistry an apparatus for matching the upper and lower dentures.

artic'ulus. 1. A joint. 2. A segment of an animal. **articuli of the lenticular nucleus.** The three (sometimes four) divisions of the lenticular nucleus, applied

against each other like concavo-convex vertebrae, the outer one being known as the *putamen*, and the two (or three) others as the *globus pallidus*. [Lat., dim. of *artus*, joint.]

artific'ial. Made by man (opposed to *natural*); in natural history, an a. system is a system of classification and nomenclature founded upon distinctions selected arbitrarily. [Lat., *ars*, art, + *facere*, to make.]

aryl (ar'il). Any univalent radicle derived from an aromatic hydrocarbon by the extraction of one atom of hydrogen.

aryteno-. Combining form of Gr., *arytaino*, from *arytaina*, funnel, pitcher. Used as a prefix to denote funnel-shaped or of pertaining to the arytenoid cartilages.

arytenoid, arytenoides (ar-it-e'noid, ar-it-en-oid'es). 1. Shaped like the mouth of a pitcher. 2. Pertaining to the a. cartilages. **a. muscle.** See *table of muscles under muscle*. [Gr., *arytaina*, pitcher, + *eidos* form.]

As. 1. Symbol of arsenic. 2. Abbreviation for astigmatism or astigmatic, as *As. H.* hyperopic astigmatism.

asafet'ida. Syn.: *asa fetida*. A gum-resin extracted from the root of *Ferula narthex* and *Ferula scorodosma*, Persian umbelliferous plants [U. S. Ph.]. **emulsum asafetidae** [U. S. Ph.], or **mistura asafetidae**. A mixture, a milk of a.; an emulsion made by rubbing a. with water and straining. **pilulae asafetidae**. Pills containing 3 grs. of a. and 1 gr. of soap [U. S. Ph.]. **tinctura asafetidae** [U. S. Ph., Br. Ph.]. Tincture of a.; made by macerating a. in alcohol and filtering; 100 parts contain about 20 parts [Br. Ph.] of a. [Lat., *asa*, from Pers. *asa*, a gum, + Lat., *foetida*, fetid.]

asaphia (a-sa'fe-ah). Indistinctness of speech, especially from cleft palate. [Gr., *asapheia*, indistinctness, uncertainty.]

as'aprol. The β -naphthol compound (C₁₀H₆.OH.SO₂)₂Ca; used in rheumatism, arthritis, and various infectious diseases. [Gr., *a*, priv., + *sapros*, putrid.]

as'arol. A body allied to the camphors, C₁₀H₁₆O, having the chemical constitution of an alcohol. The acetic and probably the valerianic ethers of this body exist in the rhizome of *Asarum canadense*.

As'arum. Wild ginger; a genus of perennial herbs of the *Aristolochiaceae*. The root of *A. canadense* or Canada snake-root. [Gr., *asaron*, from *aseros*, causing nausea.]

asbes'tos. A name given to several fibrous varieties of double silicate of magnesium and calcium, remarkable for their resistance to the action of heat. A soft, fibrous substance, made up of flexible or elastic filaments sometimes closely resembling those of flax or silk. It surpasses all other substances as a non-conductor of heat. Used as a covering to steam pipes and as a filter material. Later applied to the substance that cannot be burned. [Gr., *asbestos*, unquenchable.]

ascari'asis. Disease due to *Ascaris*.

ascaricide (as-kar'is-id). A remedy capable of destroying ascarides.

ascaridiasis (as-kar-id-i'as-is). The presence of ascarides in the intestinal canal.

Ascaris (as'kar-is), pl., *ascarides*. A nematode worm belonging to the family *Ascaridae*, with three long papillae around the oral cavity. They vary from 15 to 25 cm. in length, and their eggs are 40 to 75 μ long, barrel-shaped, with many warty excrescences in the shell. **A. lumbricoides**. This parasite infests the small intestine, especially of children, and is universal in its distribution, though more prevalent in the tropics. It often wanders into the stomach, the pharynx, and esophagus, and occasionally into the trachea or the eustachian tube. It may perforate the intestine or enter the appendix. The ova pass out with the feces, develop in moist earth, and infection takes place from the entrance of the embryos through the mouth. [Gr., *askaris*.]

ascites (as-si'těz). Dropsy of the peritoneum; a collection of serous fluid in the peritoneal cavity, especially one not due to inflammation of the peritoneum. **mechanical a.**, **passive a.** A. due to disease of the heart, liver, spleen, or kidneys leading to retardation of the blood current in the vena portae. [Gr., *askites*, from *askos*, bag.]

ascitic. Pertaining to or affected with ascites. **a. fluid, examination of.** See in appendix, page 911.

asclepiadin. A yellow, amorphous, bitter glucosid obtained from various species of *Asclepias* and *Cynanchum*. It is emetic, diaphoretic, and purgative, and is poisonous.

Asclepias (as-kle'pe-as). 1. The milk-weed, butterfly-weed, or orange swallow-wort; a genus of perennial herbs. The juice is milky white and somewhat acid. 2. The root of *A. tuberosa*. **A. cornuti**. Syn.: *A. syriaca*. Milk-weed, Virginian swallow-wort, Virginian silk, common silk-weed, wild cotton; a species found throughout the United States. **A. incarnata**. Flesh-colored a., swamp milk-weed; growing in the United States and Canada. Its rhizome has been used as an emetic, cathartic, and expectorant. **A. obovata**. See *A. cornuti*. **A. syriaca**. See *A. cornuti*. **A. tuberosa**. Pleurisy root, wind root, butterfly-weed; indigenous to the United States and Canada. Its root is emetic, purgative, diaphoretic, expectorant, and carminative. **Flesh-colored a.** See *A. incarnata*. [Gr., *Asklepios*, a Thessalian prince famous as a physician.]

Ascocoe'cus. A genus of *Schizomycetes* established by Billroth and adopted by Cohn, consisting of very small round cells arranged in several layers and united into colonies by a thick, glairy intercellular substance, each family containing a great number of individuals. [Gr., *askos*, a pouch or bottle, + *kokkos*, a kernel.]

Ascomyces (as-kom-e-se'těz). One of the three classes of the fungi having spe-

cial sacs or asci containing spores. [Gr., *askos*, a pouch, + *mykes*, a fungus.]

ascospore (as'ko-spór). One of the spores in a sac or ascus. [Gr., *askos*, bag, + *sporos*, a spore.]

asc'us. The spore sac found in the lower orders of plants, such as ferns.

-ase. A suffix from the Gr. *asis*, slime, used to denote an enzyme, being attached to the name of the substance upon which the enzyme exerts its special action.

asel'in. An alkaloid, $C_{25}H_{32}N_4$, said to occur in cod-liver oil. [Lat., *aselus*, the cod.]

ase'mia. A general term suggested by Steintal, indicating an inability to comprehend signs or tokens as well as articulate speech. [Gr., *asemos*, unintelligible.]

asep'sin. See *antiseptin*.

asepsis (a-sep'sis). The absence of putrefaction, septic material or pathogenic bacteria, especially the pyogenic bacteria. [Gr., *a*, priv., *sepsis*, putrefaction.]

asep'tic. Free from putrefaction and its germs. [Gr., *aseptos*, not liable to decay.]

asep'tol. A brown, syrupy, aromatic liquid, $C_6H_6SO_4$, having an odor of carbolic acid and the chemical constitution of sulphocarboic (orthophenolsulphonic) acid, soluble in 10 parts of water; an antiseptic.

asep'tolin. A proprietary solution of phenol containing pilocarpin.

asex'ual. Without sex.

ash. The incombustible residue left after a substance has been burned with free access of air.

asia'lia. Lack of salivary secretion.

Asi'lus. A genus of the *Arthropoda* of the family of *Asilidae* or wolf-flies, which sometimes bite human beings in the tropics.

asitia (a-sish'e-ah). A phobia or compulsive idea relative to the taking of food, often causing mental anorexia, or even starvation, as in certain psychoses. [Gr., *a*, without, *sitos*, food.]

as'kolin. Glycerin supersaturated with sulphurous acid.

aspalaso'ma. A monstrosity characterized by an evagination at the lower part of the body, so that the rectum, the urethra, and the genital apparatus open by three distinct orifices, as in the moles. [Gr., *aspalax*, the mole, + *soma*, the body.]

asparagin. Syn.: *asparamid*, *amidocinamic acid*, *althein*. An alkaloid, $C_8H_8N_2O_3.H_2O$, found in asparagus and various other plants; said to be a circulatory depressant. [Lat., *asparagina*, *asparaginum*.]

Asparagus officinalis. Ordinary garden a. The juice contains asparagin. The plant is diuretic, and imparts a peculiar disagreeable odor to the urine. [Gr., *asparagos*.]

as'parol. A proprietary preparation, said to consist of a fluid extract of *Asparagus officinalis*.

aspergillo'sis. Any diseased condition caused by the presence of an aspergillus. This condition may develop in the bron-

chi, lungs, mucous membranes of the eye, nose, or urethra, the aural canal, or the skin. It may even extend through the various viscera, producing mycotic nodules in the lungs, liver, kidney, and other organs.

Aspergillus (as-per-jil'us). A plant belonging to the sub-kingdom of *Fungi*, the class of *Ascomycetes*, and the family *Aspergillaceae*. It possesses a thick mycelium with a bulbous swelling at the end, containing small conidia. It also has sexual filaments. **A. Bouffardi**. Found in a case of black mycetoma. **A. bronchialis**. Found in the bronchii of a diabetic patient. **A. fumigatus**. This fungus forms a greenish growth on all culture media and produces a pseudotuberculosis or abscess formation in the viscera of birds, cattle, and, very rarely, in human beings. **A. indulans**. The cause of white mycetoma observed in Tunis and of otomycosis. **A. niger**. Found in mycotic affections of the lung. [Lat., *aspergere*, to scatter.]

aspermatism, asper'mia. A deficiency of seminal fluid. It may be absolute or relative, or permanent or temporary. [Gr., *a*, priv., + *sperma*, a seed.]

asper'sion. Irrigation or sprinkling of the body or of a part with water. A form of hydrotherapy. [Lat., *aspersio*, from *aspergere*, to sprinkle.]

asphalt (as'falt). Compact bitumen, mineral pitch, Jew's pitch; a smooth, hard, brittle, black or brownish-black, resinous mineral, of conchoidal texture and bituminous odor, which takes fire easily and burns with a bright but very smoky flame. It consists of carbon, hydrogen, oxygen, and nitrogen in varying proportions, with a variable amount of ash. It was used by the ancient Egyptians for embalming. **a. cement**. See *a. varnish*. **a. oil**. A yellow or dark brown oil obtained by the dry distillation of *a*. It has been used medicinally. **a. varnish**. Brunswick black, a varnish made by dissolving India rubber in mineral naphtha; used for making cells on microscope slides. [Gr., *asphaltos*.]

asphyxia (as-fix'e-ah). A state of suspended animation caused by impeded respiration, as by strangulation, smothering, submersion, or the inhalation of an irrespirable gas. **a. localis cum gangrena symmetrica**. See *symmetrical gangrene*, under *gangrene*. **a. neonatorum**. Suspended animation of the newborn. **a. pallida**. That form or stage of suspended animation in which the surface is cold and pallid, and the reflex contractility of muscles is lost. [Gr., *a*, priv., + *sphyzein*, to pulsate.]

asphyxi'ated. In a state of asphyxia.

aspidin. An active substance, obtained from *Aspidium filix mas* or *Aspidium spinulosum*. It is a toxic when introduced into the blood stream.

aspid'inol. A substance obtained from *Aspidium filix mas*. It has not been determined whether it is one of the active constituents of male fern or not.

Aspid'ium. Syn.: *filix mas* [Br. Ph.]

(2nd def.). 1. The shield fern; a genus of polypodiaceous ferns. 2. In the U. S. Ph., the rhizome of *Dryopteris filix mas* (Linné) Sebolt, or of *Dryopteris marginalis* (Linné) Asa Gray. *Aspidium* [U. S. Ph.] contains a number of principles, upon which the activity is supposed to depend; these are found in the oleoresin of aspidium. They include aspidinin, flavospidic acid, albaspidin, filmarone, and flavospielinin, all of which are derived from phloroglucin and butyric acid. **A. filix femina**. *Asplenium filix femina*. **A. filix mas**. Syn.: *Polypodium* (seu *Nephrodium*) *filix mas*. The male fern common in Europe, and found also in Africa, eastern India, and tropical America, but rare in the United States, where it has been found only in the neighborhood of Lake Superior. The rhizome is used as a remedy for tapeworm. **A. marginale**. The marginal shield fern; a large fern found in the United States and Canada. Its rhizome is the aspidium of the U. S. Ph.; employed for the same purpose as that of *A. filix mas*. **A. schimperianum**. A variety of *A. filix mas*. **oleoresina aspidii**. Syn.: *extractum filices liquidum*. [Br. Ph.]. An oleoresin obtained by exhausting aspidium with acetone and removing the latter by spontaneous evaporation. [U. S. Ph.] [Gr., *aspidion*, dim. of *aspis*, a shield, from the shape of the indusium.]

aspidol. A substance, $C_{26}H_{34}O$, obtained from *Aspidium filix mas*, giving the reactions of cholesterolin.

aspidosa'min. An alkaloid, $(C_{22}H_{28}-N_2O_2)$, found in quebracho bark. It has emetic properties.

Aspidosper'ma. A genus of apocynaceous trees. **A. quebracho**. A large evergreen tree of South America, furnishing quebracho bark. [Gr., *aspis*, a shield, + *sperma*, a seed.]

aspidosper'min. A weak crystalline levogyrous alkaloid, $C_{22}H_{30}N_2O_2$, found in the bark of *Aspidosperma quebracho*. Its physiological action closely resembles that of quebracho bark.

aspira'tion. 1. In chemistry and pharmacy, the process of sucking a gas or a liquid from one receptacle into another, as by means of a siphon. 2. The act of drawing in the breath; inspiration. 3. The sucking action exerted upon the circulatory system during inspiration, so that the movement of the blood in the systemic veins toward the heart is accelerated, while the peripheral, or outward, movement of the blood in the systemic arteries is retarded. 4. Pronunciation with a full emission of the breath, giving a rough h-sound. 5. The removal of fluid from a cavity of the body by means of suction, especially with the aspirator. [Lat., *aspiratio*, n. of action, from *aspirare*, to breathe or blow upon.]

aspirator. 1. In chemistry, an apparatus for sucking a stream of air or liquid through a tube or other vessel; generally a modification of the siphon. 2. An apparatus for removing liquids from a nat-

ural or pathological cavity of the body by suction. [Lat., *aspirare*, to breathe toward.]

as'pirin. Acetylsalicylic acid. The acetic acid ester of salicylic acid, introduced as a substitute for sodium salicylate. Said to exert less unpleasant effects on the stomach than sodium salicylate.

Asple'nion, Asple'nium. A genus of polypodiaceous ferns formerly used in medicine. [Gr., *asplenion*, spleenwort.]

aspo'rous. Having no spores. [Gr., *a*, priv., + *sporos*, a seed.]

as'quirol. A proprietary preparation of mercury dimethylate, containing 56 per cent. of mercury.

assay (as-ā'). To subject a substance, especially a metallic compound, to analysis; to test it with the special purpose of ascertaining the proportion in which a particular constituent is contained in it. [Old Fr.]

assimilabil'ity. The property of being assimilated, that is, of being converted into the living substance of the body.

assimila'tion. The process by which nutritive material, having been prepared by digestion, and having been brought into molecular contact with the organism, is appropriated by the latter and becomes a part of it. **destructive a.** Disassimilation, destructive metamorphosis; the molecular separation of any of the constituents of an organism and its reduction to the excrementitious state. [Lat., *assimilatio*.]

assimilative. Assimilating; having the power to assimilate.

associa'tion. 1. A functional or structural connection (said chiefly of the structure and functions of the brain). **a. anoci.** See *anoci-a*, under separate heading. **a. areas.** Those areas in the cortex of the cerebrum in which the higher mental processes are mediated. Physiologists distinguish between a posterior a. a. in the temporoparietal region and an anterior a. a. in the frontal lobe. **a. fibers.** Nerve fibers in the cerebrum which serve to unite one portion of the cortex with another. **a. of ideas.** That operation of the mind by which an idea or a mental impression evokes the memory of other ideas or mental impressions that at some previous time have coexisted with one similar to the former. **a. method.** Devised by Jung of Zurich to study association of ideas, of value in psychiatry. [Lat., *associatio*, from *ad*, to, + *socius*, a fellow.]

as'sonance. A morbid propensity to employ alliteration. [Lat., *assonare*, to respond to.]

astasia (as-ta'ze-ah). Inability to stand because of muscular incoördination. [Gr., *a*, priv., + *stasis*, stand.]

asta'sia-aba'sia. Inability either to walk or to stand because of muscular incoördination usually of psychogenic origin. [Astasia, + Gr., *a*, priv., + *basis*, stepping.]

asteatosis (as'te-ah-to'sis). A dry condition of the skin due to the deficient secretion of fat. It is associated with anhi-

drosis. See *anhidrosis*. [Gr., *a*, priv., + *stear*, tallow.]

as'ter. One of the two figures in the form of rays that result from the division of the centrosome in the initial stages of mitosis. [Gr., *aster*, star.]

astereognosis (a-ste're-og-no'sis). Inability to recognize objects by sense of touch. [Gr., *a*, priv., + *stereos*, solid, + *gnosis*, recognition.]

aste'riion. The point of junction of the occipital, parietal, and temporal bones at the lower extremity of the lambdoid suture. [Gr., *asterio*, starry.]

aste'ri'nal. Not attached to the sternum. [Gr., *a*, priv., + *sternon*, the chest.]

aste'ri'nia. A developmental defect characterized by absence of the sternum. [Gr., *a*, priv., + *sternon*, sternum.]

as'terol. A mixture of mercury parasulphocarbolate and ammonium tartrate. It is an antiseptic used in place of corrosive sublimate.

asthenia (as-the'ne-ah). Weakness. Debility. [Gr., *a*, priv., + *sthenos*, strength.]

asthen'ic. Of the nature of, depending on, characterized by, or causing, asthenia.

asthenopia (as-then-o'pe-ah). Impaired vision, weak-sightedness. **accommodative a.** A. of accommodation; a. dependent on either an inherent weakness or an overworked condition of the ciliary muscle (muscle of accommodation), due in the latter case to an uncorrected error of refraction, almost always hypermetropia. **muscular a.** A. dependent on inherent weakness of the muscles of the eyes (insufficiency of the internal or external recti), alone or in connection with weakness of the ciliary muscle. [Gr., *asthenes*, weak, + *opsis*, the power of sight.]

asthenop'ic. Characterized by impaired vision.

asthma (ast'mah). A disease syndrome characterized by recurring attacks of excessive dyspnea caused by spasmodic contraction of the diaphragm and by some change in the smaller bronchial tubes.

bronchial a. See *catarrhal a.* **cardiac a.** A term applied to sudden attacks of pain and distress, with dyspnea, occurring in subjects of advanced heart disease.

catarrhal a. A. attended with increased bronchial secretion. **hay-a.** The asthmatic form of hay fever. **infantile a.** Spasm of the glottis or laryngismus stridulus. **marine a.** Beriberi. **renal a.** A. seen in advanced renal disease. **rheumatic a.** A. dependent upon the rheumatic diathesis. **saturnine a.** The dyspnea that sometimes attends lead poisoning. **uremic a.** A. occurring in connection with Bright's disease, often due to chronic pulmonary edema. [Gr., *asthma*, panting.]

asthma'tic. Pertaining to, affected with, or proceeding from asthma or dyspnea; as a n., one who suffers with asthma.

astigmat'ic. 1. Pertaining to, caused by, or affected with astigmatism. 2. Used for defining or correcting degrees of astigmatism (e. g., a lens).

astig'matism. A state of irregular refraction of an eye, usually congenital, in which the rays of light diverging from a single point can not be brought to a focus at a point on the retina; an asymmetrical condition of refraction of the different meridians of the eye. **acquired a.** A. dependent on flattening of the cornea from inflammatory changes, on irregular apposition of the flaps after a cataract extraction, or on dislocation of the crystalline lens. **compound hypermetropic a.** That state of refraction in which an unequal hypermetropia exists in the two principal meridians. **compound myopic a.** That state of refraction in which an unequal myopia exists in the two principal meridians. **corneal a.** A. due to causes residing in the cornea. **hypermetropic a.** See *simple* and *compound hypermetropic a.* **irregular a.** A. in which there is an irregularity in curvature along some one meridian or group of meridians of the refractive surfaces. **lenticular a.** A. due to causes residing in the crystalline lens. **mixed a.** A form of a. in which myopia exists in one principal meridian and hypermetropia in the other. **myopic a.** See *simple* and *compound myopic a.* **regular a.** That error of refraction in which the meridians vary regularly from a maximum curvature in one principal meridian to a minimum curvature in the second principal meridian at right angles to the first. Usually the defect is in the cornea. **simple hypermetropic a.** A. with emmetropia in one of the principal meridians of the eye and hypermetropia in the other. **simple myopic a.** A. with emmetropia in one of the principal meridians of the eye and myopia in the other. [Lat., *astigmaticus*, from Gr., *a*, priv., + *stigma*, a spot.]

astigmom'eter. An instrument for measuring the degree of astigmatism by determining the difference in refraction between the meridians of the cornea. [Gr., *a*, priv., + *stigma*, a spot, + *metron*, a measure.]

as'tomatous. 1. Without a mouth. 2. Without pores or apertures. [Gr., *a*, priv., + *stoma*, mouth.]

asto'mia. The state of having no mouth.

astragalec'tomy. Excision of the astragalus. [Gr., *astragalos*, the astragalus, + *ektome*, excision.]

astragalo-. Comb. form of Gr., *astragalos*, the astragalus bone.

astrag'aloid. Resembling an astragalus. [Gr., *astragalos*, astragalus, + *eidōs*, form.]

astragalus (as-trag'al-us). The ankle bone, the sling bone, the huckle bone, the first bone of the tarsus. An irregularly cubical bone, articulating above with the tibia and fibula, anteriorly with the scaphoid bone and inferiorly with the os calcis. The convex portion, which articulates with the scaphoid bone, is termed the *head*, the constricted portion behind it, the *neck*, and the remainder of the bone, the *body*. [B.

N. A., *talus*.] [Gr., *astragalos*, ankle bone.]

astrin'gent. 1. Causing contraction of the tissues. 2. Arresting hemorrhage; styptic. 3. Arresting secretion. An agent that does these things. [Lat., *as-tringere*, to contract.]

as'trosphere. One of the mitotic figures. See *mitosis*.

asylum (as-i'lum). A place of refuge for those who are sick or afflicted in any way calling for special care and protection. **insane a., lunatic a.** An a. for the care and treatment of the insane. In the United States the public insane asylums are now generally called State Hospitals. [Gr., *asylōs*, safe from violence.]

asymbolia (ah-sim-bo'le-ah). A term proposed by Finkelnburg for the phenomena of aphasia (*q. v.*). [Gr., *a*, priv., + *symbolon*, a sign.]

asymmetrical (as-im-et'rik-al). Lacking in symmetry, not developed alike on both sides; of organs, existing on only one side of the body.

asymmetry (ah-sim'et-re). A deviation from equality of development of the two sides of the body, of an organ, or of the two members of a pair of organs; the existence of an organ on one side of the body without that of a corresponding organ on the other side. [Gr., *a*, priv., + *symmetria*, symmetry.]

asynergy (ah-sin'er-je). A lack of due proportion in the simultaneous action of two or more organs or parts. See *incoördination*. **cerebellar a.** Specific type of incoördination seen in cerebellar disease. **progressive locomotor (or motorial) a.** See *locomotor ataxia* under *ataxia*. **verbal a.** Incoördination of speech, as in aphasia. **vocal a.** Choreic incoördination of the phonatory muscles of the larynx. [Lat., *asynergia*, from Gr., *a*, priv., + *synergia*, concerted action.]

asynesia (ah-sin-e'se-a). Stupidity. [Gr., *asynesia*.]

asyno'dia. Lack of coincidence of the orgasm in both man and woman during sexual intercourse. [Gr., *a*, priv., + *syn*, with, + *odos*, way.]

asystole (ah-sis'to-le). An abnormal action of the heart characterized by defective contraction and emptying of one or both of the ventricles, particularly in cardiac affections in the stage of compensatory disturbance. [Gr., *a*, priv., + *systole*, a contraction.]

asystol'ic. Pertaining to or affected with asystole.

atavism (at'ah-vizm). 1. Resemblance to one's ancestors. 2. The reappearance of one of the primitive types in the descendants of parents of different races. 3. That manifestation of ancestral influence which consists in bodily or mental peculiarities inherited from an ancestor more remote than the father and mother; the reappearance of family traits after they have been in abeyance for one or more generations. **indirect a.** Of Sedgwick, phenomenon of the transmission of peculiari-

ties not presented by, or prevailing in, the family of either parent but possessed by a male by whom the mother had previously been impregnated; the transmission of the peculiarities of a woman's first husband to her children by a succeeding husband. [Lat., *atavismus*, from *atavus*, a great, great, grandfather.]

ataxaphasia (a''tak-sa-fa'ze-ah). Inability to make sentences, though knowing and speaking words. [Gr., *ataxia*, lack of order, + *phasis*, speech.]

ataxia (a-tak'se-ah). Incoördination of muscular action. **abortive a.** The neuralgic form of locomotor a. **alcoholic a.** A form of muscular incoördination observed in drunkards due to peripheral neuritis. **Briquet's a.** Hysterical a. **bulbar a.** Occasioned by a lesion of the pons Varolii or of the medulla oblongata. **cerebellar a.** A. depending on disease of the cerebellum; usually to be distinguished by the patient's staggering from side to side like a drunken man and often falling to one side. **cerebral a.** A. due to a lesion of the cerebrum. **choric a.** The muscular incoördination that accompanies the voluntary movements of patients with chorea. **family a.,**

Friedreich's a., **hereditary a.** Friedreich's disease; a rare and peculiar disease somewhat resembling tabes, but occurring as a familial disease; possibly a congenital syphilitic disease. **hysterical a.** An assemblage of hysterical phenomena resembling those of locomotor a., but usually without the darting pains. **locomotor a.** A syphilitic disease of the nervous system, involving the posterior roots, occurring in middle-age and characterized by trophic, paretic and sensory disturbances as well as muscular incoördination. See *tabes*. **paralytic a. of the heart.** A condition observed in bulbar affections, without organic disease of the heart; characterized by palpitation, dyspnea, weakness of the cardiac sounds, edema, and dropsy. **spinal a.** A. due to disease of the spinal cord. **static a.** A term for the unsteadiness of locomotor a. observed when the patient attempts to stand erect with eyes closed and feet side by side; also for the uncertain movements of upper limbs in later stages of the disease. [Gr., *ataxia*, want of order.]

ataxiamesic (a-tax''e-am-ne'sic). Pertaining to a combination of muscular incoördination with loss of memory. **ataxic, atactic.** A person showing muscular incoördination either from sensory or motor defect. Seen in neuritis, tabes, multiple sclerosis, cerebellar disease, brain tumor, etc. **atelectasis** (at-el-ek'tas-is). Collapse of the lung bronchioles preventing the entrance of air into the vesicles. **acquired a.** A. developing after birth from obstruction of the bronchi from tuberculous growths, cicatricial bands or tenaceous secretions, with absorption of the air behind the obstruction. **a. pulmonum.** Imperfect expansion of the lungs with consequent persistence of their fetal condition after

birth. **fetal a.** A. from failure of the lung to become inflated at birth. [Gr., *ateles*, imperfect, + *ektasis*, expansion.]

ateiosis (ah-tel-i-o'sis). Defective development; infantilism. [Gr., *a*, priv., + *teleios*, complete.]

atelo- Combining form of Gr., *ateles*, imperfect; used as a prefix in physiological terms to signify imperfection. As **atelocardia**, incomplete development of the heart; **atelomyelia**, incomplete development of the spinal cord.

athelia (ah-the'le-ah). Absence of the nipple or nipples. [Gr., *a*, priv., + *thelē*, nipple.]

athermal (ah-ther'mal). Cool; said of springs of which the water is of the temperature between 0° and 15° C. (= 32° and 59° F.). [Gr., *a*, priv., + *therme*, heat.]

athermancy (ah-ther'man-se). Inability to transmit radiant heat. [Gr., *a*, priv., + *therme*, heat.]

athermic (ah-ther'mic). Unaccompanied by fever; apyretic. [Gr., *a*, priv., + *therme*, heat.]

atheroma (ath-er-o'mah). 1. Properly, a wen (a sebaceous cyst); so called from the porridgelike character of the contents. 2. A degeneration of the intima and media of the aorta or of other arteries, of a yellowish color and of a pulsatious consistence produced by fatty and calcareous degeneration in the later stages of arteriosclerosis. **a. cutis.** See 1st def. **blepharo a.** An atheromatous cystic tumor of the lid with semifluid gruellike contents. **capillary a.** The formation in the walls of the capillaries of fatty granules like those of the early stage of arterial a. [Gr., *athērē*, porridge, + *oma*, tumor.]

Atherosper'ma. A genus of trees. **A. moschatum.** The Tasmanian or Australian sassafras; a large tree growing in New Holland. The bark (sassafras bark) yields a volatile oil which is said to act as a diuretic; it also contains an alkaloid called atherospermin. [Gr., *athērē*, a beard, + *sperma*, a seed.]

ath'etoid. Resembling athetosis. [Gr., *athetos*, without fixed position, + *eidōs*, resemblance.]

athetosis (ath-et-o'sis). Involuntary muscular spasm, somewhat rhythmical in character, and often persisting during sleep, causing incessant movement of the fingers and toes due to cerebral disease. [Gr., *athetos*, without fixed position.]

athymia (ah-thim'e-ah). 1. Mental dejection. 2. Absence of the thymus gland. [Gr., *a*, priv., + *thymos*, animation.]

athyreo'ses. Disorders due to defect of, or absence of thyroid substance activities; cretinism and myxedema being types.

athyroidism (a-thi'roid-ism). Absence of the thyroid gland. [Gr., *a*, priv., + *thyroid*.]

atlan'tal,atlan'tan. Pertaining to, connected with, or directed toward, the atlas; hence, superior (in this sense, said of the upper limbs).

atlan'to-, alto- A prefix used to signify pertaining to the atlas.

at'las. The first cervical vertebra, consisting of an anterior and a posterior arch and two lateral masses. The body, instead of being consolidated with it, constitutes the odontoid process [B. N. A., dens] of the second vertebra upon which it turns in rotation of the head. The a. articulates above with the condyles of the occipital bone, allowing the nodding movements of the head. [B. N. A., same.] [Gr., *Atlas*, the name of the god, supposed to bear up the pillars of heaven, hence any prop or support.]

atlodidymus, atlodimus (at-lo-did'im-us, at-lod'im-us). A monster having two separate but contiguous heads on a single neck. [Gr., *atlas*, the atlas, + *didymos*, double.]

atmiatrics (at-me-at'riks). 1. Pneumotherapy. Medical treatment by means of vapors or gases. 2. The treatment of pulmonary diseases with inhalations of medicated vapors. [Gr., *atmis*, *atmidos*, vapor, + *iatrikos*, medical.]

atmocausis (at-mo-kaw'sis). Cauterization with steam. [Gr., *atmos*, vapor, + *kausis*, cauterization.]

atmograph. An instrument for registering the movement of the chest in respiration. [Gr., *atmos*, vapor, + *graphein*, to write.]

atmolysis (at-mol'is-is). The process of the separation of mixed gases, in which they are passed through a porous plate, when those which diffuse most easily will pass through first. [Gr., *atmos*, vapor, + *lysis*, loosening.]

atmo'meter. An instrument for measuring the amount of aqueous vapor in the air by determining the rate of evaporation from a moist surface. [Gr., *atmos*, vapor, + *metron*, a measure.]

at'mosphere. 1. As usually employed, the gaseous envelope (air) surrounding the earth. 2. In chemistry, any special gaseous medium surrounding a solid or liquid body. 3. The normal pressure that the air exerts at sea level, equivalent to the pressure of a column of mercury 760 mm. high, i. e., about 15 lbs. to the square inch. [Gr., *atmos*, vapor, + *sphaira*, a sphere.]

ato'cia. Sterility. [Gr., *a*, priv., + *tokos*, birth.]

at'om. In recent chemistry, the smallest conceivable portion of an elementary body which can preserve the chemical properties of the body and go into and out of combination. **physical a.** The supposed ultimate particle of matter. **symmetrical carbon a's.** Of a trisubstituted benzene compound, having all three of the replacing radicles attached to alternate atoms of carbon. [Gr., *atomos*, uncut, indivisible.]

atom'ic. Pertaining to atoms. **a. heat.** The product of the a. weight and the specific heat of an element. **a. theory.** See under *theory*. **a. volume.** The volume which a gram atom of an element takes up in the gaseous form. **a. weight.** The relative weight of an atom of an element with oxygen, 16, as a unit.

atom'icity. Syn.: *combining capacity* (or *power*), *quantivalence*, *valence*, *valency*. The combining power of an element as compared with that of hydrogen; a number representing the greatest number of atoms of hydrogen which it will replace in a compound, or with which it is capable of combining, or twice the number of oxygen atoms with which one of its atoms can combine. The degrees of a. are expressed by the terms *univalence*, or the a. of a *monad* element, which replaces one atom of hydrogen; *bivalence*, or the a. of a *diad* element, replacing two atoms of hydrogen; *trivalence*, or the a. of a *triad* element; *quadrivalence*, or the a. of a *tetrad* element; *quinquivalence*, or the a. of a *pentad* element; *sexivalence*, or the a. of a *hexad* element; etc.

atomiza'tion. The act or process of reducing a body to a state of very fine subdivision, especially that of converting a liquid into the form of spray.

at'omizer. Syn.: *spray producer* (or *ap-paratus*), *nebulizer*. An apparatus for throwing a jet of liquid in the form of a very fine spray.

at'om'ic. Pertaining to, caused by, causing, or affected with atony. [Gr., *atonia*.]

at'ony. Weakness, relaxation, lack of tone or of normal contractile power (said of muscles and of hollow muscular organs). [Gr., *atonia*, from *a*, priv., + *tonos*, exertion of strength.]

atophan (ah-tof'an). Phenylquinolincarboxylic acid; C₉H₉N. A slightly bitter, insoluble crystalline substance, having the property of stimulating the kidneys to an increased secretion of urine and an increased output of uric acid, even on a purin-free diet; hence used in gout.

atop'ic. Out of place, strange, paradoxical; said of symptoms. [Gr., *atopos*.]

atox'ic. Not poisonous or caused by a poison. [Gr., *a*, priv., + *toxikon*, an arrow-poison.]

atox'yl. The anilid of metarsenic acid. The sodium salt is a white powder; used in skin diseases and hypodermically in trypanosomiasis.

atremia (ah-tre'me-ah). Absence of tremor. [Gr., *a*, priv., + *tremein*, to tremble.]

atrep'sy (at'rep-se). Ehrlich's term for immunity to tumor cells due to the absence of the special food required for tumor growth. [Gr., *a*, priv., + *threpsis*, nutrition.]

atresia (ah-tre'se-ah). The absence or occlusion of one of the natural openings or the channels of the body. [Gr., *a*, priv., + *tresis*, a perforation.]

atreto-. A prefix from the Gr., *atretos*, imperforate, denoting imperforation.

Atricha (a'trik-ah). 1. The group of bacteria which includes forms without flagella. 2. Absence of hair. [Gr., *a*, priv., + *thrix*, hair.]

atrium (a'tre-um). 1. A dilatation, pouch, sinus, or ampulla. 2. An auricle of the heart, especially the main portion as distinguished from the auricular appendix. 3. The lower or main portion of the

cavity of the tympanum, as distinguished from the attic. **a. antierius, a. cordis dextrum.** The right auricle of the heart. **a. cordis sinistrum, a. posterius.** The left auricle of the heart. **a. meatus medii.** A depression on the outer wall of the nasal fossa, anterior to the middle meatus of the nose, into which it leads from the vestibules. **a. vaginae.** The vestibule of the vulva. [Lat., *atrium*, court, hall.]

Atropa. A genus of herbs of the *Solanaceae*. **A. belladonna.** The belladonna, deadly nightshade, common dwale; a perennial European herb. The root and leaves are official as belladonna. [Gr., *Atropos*, one of the Parcae.]

atroph'ic. Pertaining to, affected with, due to, characterized by, or causing atrophy.

atrophied. Affected with or in a state of atrophy.

atrophoderma (at-ro-fo-der'mah). Atrophy of the skin in which there may be either simply diminution in the number or size of its component elements or a degenerative alteration in those elements. Varieties are: **a. albidum, a. maculatum, a. neuriticum, a. pigmentosa, a. senile, a. striatum.** Gr., *atrophos*, ill-fed, + *derma*, skin.]

atrophy. Diminution in the size of an organ or tissue, with lessening in the size and function of the specific functioning cells. In cytopathology, a decrease in the size of a cell as distinguished from hypoplasia, a decrease in the number of cells as compared to the normal body. **acute yellow atrophy of the liver.** Extensive necrosis of the liver cells and consequent decrease in size of the liver accompanied with jaundice and marked cerebral and constitutional symptoms. **brown a.** A form of a. of the heart muscle characterized by an accumulation of brown pigment granules around the nucleus. **Cruvelhier's a.** See *progressive muscular a.* **degenerative a.** A decrease in the size of the cells of a tissue or organ, usually accompanied by an increase in the connective tissue. **disease a.** Atrophy due to disease of a part. **facial a.** See *progressive facial a.* **gray a. of the optic papilla.** A degenerative change in the optic disk in which the disk presents a distinctly grayish hue. **hemi-a.** A. limited to one lateral half of the body. See *progressive facial a.* **hereditary muscular a.** A form of pseudohypertrophic spinal paralysis (*q. v.*) described by Erb. **individual a.** Charcot's term for a. of single muscles in different parts, the adjacent muscles remaining intact; said to be pathognomonic of progressive muscular a. **infantile a.** See *tabes mesenterica.* **juvenile muscular a.** See *pseudohypertrophic spinal paralysis.* **myopathic muscular a.** Muscular a. due to disease of the muscles themselves, and not to a spinal lesion. **neuritic a.** A. of a part due to neuritis. **neurotic a.** A. of a part from disorder of its trophic nerves or from lack of use, e. g., the "glossy

skin" produced by injury of a nerve trunk. **passive a.** A general term for various forms of a., especially such as are due to pressure, want of nourishment, digestive and various other visceral diseases, exhausting evacuations, and certain forms of concussion. **pressure a.** A decrease in the size of a cell produced by undue pressure, as in chronic passive congestion of the liver. **progressive facial a.** An uncommon disease characterized by progressive wasting of one side of the face, generally the left side, most commonly occurring in middle-aged persons, especially women. **progressive muscular a.** A chronic disease characterized by progressive paralysis and wasting of the muscles, usually beginning with those of the extremities and finally producing death by implicating those of respiration. **progressive nervous a.** Jaccoud's term for a. of the spinal nerve roots caused by minute plates of fibrous material deposited on the spinal arachnoid. Other varieties of a. are: **arthritic a.; compression a.; consecutive a.; correlated a.; crossed a.; dental a.; general a.; interstitial a.; linear a.; neuropathic a.; physiological a.; pigmented a.; qualitative a.; quantitative a.; red a.; rheumatic a.; rigid a.; senile a.; serous a.; simple a.; trophoneurotic a.; unilateral a.; white a.** [Gr., *atrophia*, from *a*, priv., + *trophain*, to nourish.]

atro'pia. See *atropin*.

atrop'ic. Of or pertaining to the genus *Atropa* or to *atropin*.

atrop'idin. The so-called light atropin (hyoscyamin).

at'ropin. Lat., *atropina* [U. S. Ph., Br. Ph.]. An alkaloid, $C_{17}H_{23}NO_3$, obtained from *Atropa belladonna* and other solanaceous plants. There are many salts of atropin, the sulphate being the one most commonly used. [For deriv. see *Atropa*.]

atropina (at-ro-pe'nah). See *atropin*.

lamellae atropinae. Disks of atropin; $\frac{1}{500}$ grain gelatin disks, containing each $\frac{1}{5000}$ of a grain of atropin sulphate.

liquor atropinae sulphatis. An aqueous solution containing 1 per cent. of atropin sulphate [Br. Ph.].

unguentum atropinae. An ointment containing about 2 per cent. of atropin [Br. Ph.].

at'ropism, atro'pinism. Poisoning with atropin or belladonna.

atrosin (at'ros-sin). A name applied to the optically inactive form of hyoscin.

attack'. The onset of a disease; an individual illness; a paroxysm or outbreak of a constitutional or recurrent disease. [Fr., *attaquer*.]

at'tar of rose. The essential oil of roses. [Attar is from an Arab word, meaning perfume.]

atten'uant. 1. Having the effect of thinning the blood or the other fluids. 2. Diminishing the effects of an agent. 3. As a n., an agent producing either of those effects. [Lat., *attenuans*, pres. ppl. of *attenuare*, to make thin.]

atten'uated. 1. Reduced in potency; said

particularly of bacteria and viruses. 2. Lean, spare.

attenuation. 1. The state of being lean, or the process of losing flesh. 2. In bacteriology, the process of weakening the virulence of pathogenic bacteria by various artificial methods, such as cultivation at an increased temperature, prolonged cultivation, drying, and by the addition of various chemicals. [Lat., *attenuare*, to make thin.]

at'tic. Syn.: *epitympanum*. A pyramidal recess above the tympanum and the inner extremity of the external auditory meatus. It communicates with the mastoid antrum by the petromastoid canal. It is partially occupied by the malleus and the incus. [Gr., *attikos*.]

attico'tomy. Opening of the labyrinthine attic.

at'titude. The form of a body (as of the person or an organ) as determined by the state of its movable parts. [Lat., *attitudo*, posture.]

attolens aurem (at-ol'enz). See *table of muscles*, under *muscle*.

attrac'tion. The act or force by which bodies are drawn toward each other. **a. of gravitation.** See *gravitation*. **capillary a.** The a. exerted upon the particles of a liquid by those of a solid body with which it is in contact, causing an elevation of the surface of the liquid at the line of contact; so called because it is best observed in capillary tubes, where the elevation becomes considerable. [Lat., *attractio*, from *attrahere*, to draw toward.]

attri'tion. The friction of bodies upon each other, also the effects, as chafing and abrasion, of such friction. [Lat., *attritio*, from *atterere*, to rub against.]

atypical (ah-tip'ik-al). Erratic, irregular, not conforming to any definite type. [Gr., *a*, priv., + *typos*, a type.]

Au. The chemical symbol of the element gold. [Lat., *aurum*.]

audiometer (aw-de-om'et-er). An instrument for measuring the sensibility of the ear for sounds of small intensity. [Lat., *audire*, to hear, + Gr., *metron*, a measure.]

audiphone (aw'di-fone). Improperly formed from both Lat. and Gr. words. An instrument which, when pressed against the teeth, enables some deaf persons to hear by the bone conduction of sound. [Lat., *audire*, to hear, + Gr., *phone*, sound.]

audition (aw-dish'un). The act, sense, or function of hearing. **colored a.** See *color hearing*. **mental a.** The remembrance of a sound, or the formation of an idea or a mental image founded on past auditory impressions. **verbal mental a.** The same as mental a., the sounds remembered being those of words. [Lat., *auditus*, *auditio*, from *audire*, to hear.]

auditory (aw'dit-o-re). Syn.: *acoustic*, *auricular*. Relating to the sense of hearing or to the ear. See *table of nerves* under *nerve*.

Auerbach's ganglia. Minute nerve gan-

glia in A's plexus of the sympathetic system. **A's plexus.** A gangliated nervous plexus between the circular and longitudinal muscular coats of the intestine. [Leopold Auerbach, German anatomist, 1828-1897.]

augnathus (awg-nā'thus). A monster having a supplementary lower jaw (the rudiment of a second head). See *diprosopus*. [Gr., *au*, cumulative, + *gnathos*, the jaw.]

aula (aw'lah). The anterior portion of the third cerebral ventricle. [Gr., *aule*, hall, court yard.]

aura (aw'rah). 1. A gentle current of air, a subtle vapor, an emanation. 2. A vague subjective sensation in any part of the body, often like that caused by a gentle current of air, which precedes an epileptic paroxysm. It may consist of a sensation of cold or pain felt in the extremities and creeping upward. [Lat., *breeze*, air.]

aural (aw'ral). 1. Pertaining to an aura. 2. Pertaining to the ear or to the sense of hearing. [Lat., *auralis*, from *aura*, air, or *auris*, the ear.]

auramin. Yellow pyocyanin.

auran'tia (aw-ran'te-ah). A crystalline yellowish red powder, $N[CaH_2(NO_2)_2]_2NH_4$, being the ammonium salt of hexanitrodiphenylamin.

Aurantium (aw-ran'te-um). 1. The orange; also the specific name of the orange tree. 2. A genus of plants, in part the *Citrus* of Linnaeus. **A. amarum.** The bitter orange. **A. dulce.** The sweet orange. **aurantii amari cortex.** Bitter orange peel. The fluid extract is official in the U. S. Ph. **aurantii dulcis cortex.** Sweet orange peel [U. S. Ph.]. **aurantii flores.** Orange flowers [U. S. Ph., 1880]. **aqua aurantii floris.** Stronger orange flower water; a water distilled from orange flowers [Br. Ph.]. **aqua aurantii florum.** A mixture of equal volumes of stronger orange flower water and distilled water [U. S. Ph.]. **aqua aurantii florum fortior** [U. S. Ph.]; **infusum aurantii compositum.** Compound infusion of orange peel [Br. Ph.]. **oleum aurantii corticis.** The volatile oil obtained from the peel of *Citrus Aurantium* [U. S. Ph., Br. Ph.]. **spiritus aurantii compositus.** Compound spirit of orange, consisting of the volatile oil of orange, lemon, coriander, and anise, dissolved in alcohol; used for flavoring [U. S. Ph.]. **succus aurantiorum.** The clarified juice of ripe oranges; official in several pharmacopeias. **syrupus aurantii.** Syrup of orange peel. **tinctura aurantii** [Br. Ph.], **tinctura aurantii amari.** Tincture of bitter orange peel [U. S. Ph.]. **tinctura aurantii dulcis.** Tincture of sweet orange peel [U. S. Ph.]. [Lat.]

au'ric. 1. Of, or pertaining to gold; caused by gold. 2. Containing gold as a trivalent radicle. **a. acid.** See under *acid*. **a. chlorid.** See *chloraurid*. **a. oxid.** Au_2O_3 .

auricle (aw'rik-l). 1. The external ear,

the pinna. 2. One of the upper chambers of the heart. **left a. of the heart.** The left upper chamber of the heart. It receives the arterial blood from the pulmonary veins and discharges it into the left ventricle. **right a. of the heart.** The right upper chamber of the heart. It receives venous blood from the venae cavae and discharges it into the right ventricle. [Lat., *auricula*, dim. of *auris*, ear.]

auric'ular. 1. Relating to the external ear. 2. Relating to an auricle of the heart. See *table of arteries, muscles, and of nerves, under artery, muscle, and nerve.* [Lat., *auricularis*.]

auric'ulate. Provided with ears or ear-shaped appendages. Used as descriptive of the shape of colonies in bacteriology.

auric'ulo-. Combining form of Lat., *auriculus*, used in compound words to signify of, or pertaining to, the ear.

aur'in. Quinolin sulphocyanid, said to be antiseptic and astringent.

auris (aw'ris). The ear. **a. externa.** See *external ear, under ear.* **a. interna, a. intima.** See *internal ear, under ear.* **a. media.** See *tympanum.* [Lat., *auris*, ear.]

auriscope. See *otoscope.* [Lat., *auris*, ear, + Gr., *skopein*, explore.]

aur'ist. One who treats diseases of the ear or whose practice is confined to such diseases.

Aurococcus. A genus of parasitic cocci occurring in groups, packets, or short chains, and including the group *Staphylococcus aureus*, as well as several other types. They stain by Gram's method, produce an orange color on agar, usually liquefy gelatin, and vary greatly in virulence [Winslow]. **A. auranticus.** A species of *A.* not liquefying gelatin. **A. aureus.** A species liquefying gelatin. **A. mollis.** A species usually liquefying gelatin, and frequently non-pathogenic.

aurosul'phid. A compound of sulphur with gold (acting as a univalent radicle) and another radicle or element.

aur'ous. 1. Belonging to or containing gold or of a golden color. 2. In chemistry containing gold as a univalent radicle, Au. **a. chlorid.** AuCl; used in photography. **a. cyanid.** AuCN; gold monocyanid.

aurum. Gold. Chemical symbol, Au. There are many different salts of gold and numerous pharmaceutical preparations of them, the chlorid of gold and sodium being one of the few which has attained any degree of popularity in modern therapeutics. [Latin for gold.]

auscult', aus'cultate. To examine by auscultation; to practice auscultation.

auscultation (aws-kul-tā'shun). The art, process, or method of listening to the sounds produced within the body, for the purpose of ascertaining the condition of the organs or parts so examined as to health or disease. **a., how to determine systolic and diastolic pressure by;** see in *appendix, page 0000.* **immediate a.** A. by the direct application of

the ear, without the aid of a stethoscope or any other instrument. **mediate a.** A. with the aid of a stethoscope. **obstetric a.** A. in pregnancy in regard to the fetal heart. [Lat., *auscultare*, to listen to.]

auscultatory. Pertaining to or ascertained by auscultation. **a. percussion.** See under *percussion.*

autecic, autecious (aw-te'sik, aw-te'shus). Going through all the stages of development on the same host (said of parasites). [Gr., *autos*, the same, + *oikia*, a dwelling.]

auto-. Combining form of Gr., *auto*, from *autos*, self, one's own; used as a prefix to denote having to do with self.

auto-antitox'in. Antitoxin developing in the tissues which protect the body from disease. [Gr., *autos*, self, + *antitoxin*.]

auto-au'dible. Audible to the patient himself (said of cardiac murmurs). [Gr., *autos*, of oneself, + Lat., *audire*, to hear.]

autoblast (aw'to-blast). An independent cell. [Gr., *autos*, self, + *blastos*, germ, cell.]

autochthonic, autochthonous (aw-tok-thon'ik, aw-tok'thon-us). Native, indigenous, aboriginal; in pathology, formed at the situation where it is found, and not carried there after its formation; said of a thrombus. In psychiatry, an idea or word suddenly projected from the unconscious. [Gr., *autochthon*, native.]

autocine'sis. See *autokinesis.*

autocinet'ic. See *autokinetic.*

autoclave (aw'to-klāv). An apparatus for sterilizing or killing extraneous bacteria in culture media by means of steam under pressure. A steam gauge indicates the pressure and only one sterilization is necessary as the method destroys spores as well as bacteria. [Gr., *autos*, of itself, + Lat., *clavis*, a key.]

au'tocoid substances. Term proposed for the active substances in internal secretions which act as chemical stimuli to excite or inhibit the activity of other tissues. [Gr., *autos*, self, + *akos*, a remedy.]

autocytotoxin (aw'to-si-to-toks'in). A cytotoxin formed in the body by the absorption of the products of degenerated cells. [Gr., *autos*, self, + *cytotoxin*.]

au'todigest'ion. The name applied to the self-digestion of tissues in consequence of the activity of the intrinsic proteolytic enzymes.

auto-e'rotism. A broad term signifying all those forms of erotic phantasy which find conscious or unconscious satisfaction within the patient's own body. They become pathological only when sought after as ends in themselves and as refuges from purposeful activity.

autogen'esis. 1. The formation of a structure or an entire organism independently of any preëxisting structure or organism of the same kind; spontaneous generation. 2. Development independent of intrinsic objects. [Gr., *autos*, itself, + *genesis*, generation.]

autogenetic (aw-to-jen-et'ik). Self pro-

- ducing; self-produced. [Gr., *autos*, self, + *genesis*, production.]
- autogenous** (aw-toj'en-us). 1. Autogenetic. 2. Pertaining to diseases produced within the body and not from external sources, as *a. vaccines*, vaccines made from the organism which has been isolated from the patient.
- autogram**. The mark left on the skin by pressure from a blunt instrument or constricting band. [Gr., *autos*, self, + *gramma*, letter.]
- autograph'ic**. Self-registering. [Gr., *autographos*, from *autos*, self, + *graphein*, to write.]
- au''to-immuniza'tion**. Immunization produced by natural means within the body.
- au''to-infec'tion**. Infection of the organism with a poison or a parasite present within itself.
- au''to-inoc'utable**. Susceptible of auto-inoculation.
- au''to-inocula'tion**. Transmission of infection from one part to another of the same individual, as in the case of a chancre or even a chancre.
- au''to-intoxica'tion**. Poisoning of an organism with matter produced within itself.
- auto-isolysin** (aw-to-i-sol'is-in). A serum which will dissolve the red blood corpuscles of the same individual from whom the serum is taken. [Gr., *autos*, self, + *isos*, like, + *lysis*, solution.]
- autokinesis** (aw-to-ki-ne'sis). 1. Voluntary movement. 2. Movement of living matter accomplished without the action of any apparent contractile fibers like that of spermatozoa and white blood corpuscles, the segmentation of the ovum, etc. [Gr., *autokinesis*.]
- autokinet'ic**. Endowed with the power of voluntary movement. [Gr., *autos*, self, + *kinesis*, motion.]
- autolysin** (aw-to-lis-in). An enzyme or lysin present in cells or tissues which produces softening and self-digestion. [Gr., *autos*, self, + *lysin*.]
- autolysis** (aw-to-lis-is). The solution of plant or animal tissue by means of its own enzymes. [Gr., *autos*, self, + *lysis*, solution.]
- automat'ic**. Self-acting, i. e., without the intervention of the will (said of physiological acts and of the mechanisms by which they are performed). The term is applied to acts which, although voluntary at first, become habitual and continue to be performed without any further attention being bestowed on them and also to designate those physiological activities, such as those of the heart and respiratory center which are due to intrinsic changes within the structure itself. [Gr., *automatos*, of his own accord.]
- automat'ism**. Automatic action. **rhythmical a.** Rhythmical automatic action, like that of the heart. **tonic a.** A constant automatic action, like that of the sphincters. [Gr., *automatismos*, from *automatizein*, to happen by itself.]
- automime'sis**. The continued reproduction of mental impressions, sometimes resulting in the morbid conviction of being affected with a certain disease. [Gr., *autos*, self, + *mimēsthai*, to mimic.]
- automysophobia** (aw''to-mis-o-fo'be-ah). A form of phobia characterized by a dread of personal uncleanness. [Gr., *autos*, self, + *misos*, dirt, + *phobos*, fear.]
- autonom'ic, auton'omous**. 1. Acting spontaneously. 2. Governed by its own laws independent of other organisms, of other parts of the organism, and of external influences. 3. Name applied in general to the system of nerve fibers innervating the glands and plain muscles of the body. The fibers of the autonomic system consist of a preganglionic fiber arising in the brain or cord and a postganglionic fiber arising in a sympathetic nerve-cell. [Gr., *autonomos*, from *autos*, of itself, + *nomos*, a law.]
- autonomy**. Independence in function; the condition of being governed by its own laws, without reference to other tissues, organs, or systems; said of parts of an organism. [Gr., *autonomia*.]
- autonosographia** (aw''to-no-so-graf'e-ah). A description of one's own disease. [Gr., *autos*, self, + *nosos*, sickness, + *graphein*, to write.]
- autopath'ic**. See *idiopathic*. [Gr., *autos*, self, + *pathos*, a disease.]
- autopep'sia**. Self-digestion; post-mortem digestion of the stomach. [Gr., *autos*, itself, + *pepein*, to digest.]
- autophilia** (aw-to-fil'e-ah). Immoderate self-love, narcissism. [Gr., *autos*, self, + *philein*, to love.]
- autophony** (aw-to'fo-ne). The altered resonance of one's own voice, noted in cases of diseases of the middle ear. [Gr., *autos*, self, + *phone*, voice.]
- au'topsy**. As now employed, a post-mortem examination. [Gr., *autopsia*, seeing with one's own eyes.]
- autos'copy**. The examination of one's own person for diagnostic purposes.
- au'tosite**. 1. A monster capable of carrying on an independent existence for a few hours after its separation from the maternal organism, and in some instances indefinitely; possessing, therefore, a perfect circulatory system, lungs, digestive organs, and at least part of a head. In cases of double monstrosity, both individuals are a's when they both contribute to the common vitality, or each maintains its own. 2. An organism or a double monstrosity in or on which another organism lives as a parasite. [Gr., *autositos*, one who provides his own food.]
- autosugges'tion**. Suggestion (in the psychological sense) founded on an awakening or reproduction of previous sensory impressions. [Gr., *autos*, self, + *suggestion*.]
- autotherapy**. 1. Self-treatment. 2. Spontaneous cure. [Gr., *autos*, self, + *therapeia*, medical treatment.]
- au''totoxe'mia**. Poisoning by the absorp-

tion of some material formed within the organism itself.

autotoxin (aw-to-toks'in). A poison that gives rise to autotoxemia.

au'totransfu'sion. The expedient of transferring a great portion of the blood contained in the distal parts of the body to the central portions and especially the brain, by bandaging the limbs tightly and raising hips; resorted to in cases of severe hemorrhage and during operations on persons who are very weak.

au'tovaccina'tion. The accidental or intentional reinoculation of an individual with vaccine produced in his own person.

auxesis (awks-e'sis). Growth, augmentation, increase in size or power or in the severity of a disease. [Gr., *auxesis*.]

auxiliary (awx-il'e-a-re). Assisting, supplementary; as a n., an adjuvant. **auxiliaries of respiration**. The muscles brought into action in labored breathing. [Lat., *auxilium*, assistance, from *augere*, to increase.]

auximeter, auxometer (awx-e-om'e-ter, awx-om'e-ter). An instrument for measuring the magnifying power of an optical apparatus, the growth of a part, or the power of a muscular contraction. [Lat., *auxometrum*, from Gr., *auxesis*, increase, + *metron*, a measure.]

auxocardia (awx-o-kar'de-ah). 1. An increase in the heart's volume when its cavities are distended to their greatest extent. 2. Diastole of the heart. [Gr., *auxesis*, increase, + *kardia*, the heart.]

Ave'na. 1. A Linnaean genus of gramineous plants. 2. In pharmacy, oats. **A. sativa**. The common oat. It has been regarded as a tonic. [Lat., *avena*, oats.]

avenein (av-e'nèn). A substance obtained from oats; by oxidation, it forms vanillin.

avenin, avenain (av-e'nin, av-e'nàn). A nitrogenous principle, resembling casein, found in oats.

avirulent (ah-vir'u-lent). A term used to describe bacteria that are without virulent qualities. [Gr., *a*, priv., + Lat., *virus*, poison.]

Avoga'dro's law. The l. that, if the temperature and external pressure remain the same, all gases contain the same number of molecules in equal volumes.

avoidupoles (av'war-du-poy-s). The standard system of weights used in Great Britain and the United States for all goods except precious stones and precious metals and medicines. See *table of weights and measures in appendix*. [Old Fr., *avoir*, to have, + *du*, of the, + *pois*, weight, goods of weight.]

avul'sion. The accidental or intentional tearing away of a part. [Lat., *avulsio*, from *avellere*, to tear away.]

ax'ial. Pertaining to an axis.

axifugal (ak-sif'u-gal). Centrifugal. [Lat., *axis*, axis, + *fugere*, to flee.]

axilem'ma. The sheath of an axis cylinder. [Gr., *axon*, axis, + *lemma*, rind.]

axil'la. The armpit; the pyramidal space formed between the arm and the thorax at their junction, bounded by the pectoral

muscles in front and the large dorsal muscles behind. [B. N. A., same.] [Lat., *axilla*, dim. of *axis*, pole.]

ax'illar, ax'illary. Pertaining to the armpit. See *table of arteries under artery*.

ax'ion. The cerebrospinal axis.

axis (aks'is). Pl. *axes*. 1. A fixed line, actual or imaginary, about which anything revolves. 2. The central part of anything; hence a line occupying the center of anything or about which other parts are symmetrically disposed (a. of symmetry). 3. Any particular diameter of an object, especially its long diameter. 4. In optics, the name given to the lines passing through the optical center. 5. [B. N. A., *epistropheus*.] The second cervical vertebra, so-called because the atlas and the cranium turn upon its odontoid process (dens) as upon a pivot. **a. cord**. See *primitive streak under streak*. **a. cylinder**. Syn.: *axial fiber, neuraxon*. The central and essential part of every nerve fiber, its size varying directly with that of the whole fiber. **a. cylinder process**. See *under process, a. fiber*. See *a. cylinder, a. fibrillae*. See *primitive fibrillae, under fibrilla, a. of the cochlea*. See *modiolus, a. of crystallization*. A line about which the particles of a crystal are more or less symmetrically disposed. [Lat., *axis*, axle, pivot, pole.]

ax'oid. Pertaining to the second cervical vertebra. [Gr., *axon*, axis, + *idos*, form.]

axon. Syn.: *neuraxis, neurite*. The single, unbranched process of a neuron. It may be short or long, and usually extends to form the axis-cylinder of a nerve fiber. [Gr., *axon*, axle, pivot.]

axungia (ax-un'je-ah). Lit., axle grease; as now used, any animal fat, particularly lard. **a. anserina, a. anseris**. Goose-grease, official in several old formularies and still used as a remedy, especially in skin diseases. **a. balsamica, a. benzoata, a. benzoinata**. Benzoinated lard. **a. mineralis**. Petrolatum. **a. pedum tauri**. Neat's foot oil. **a. porci**. Hog's lard. **a. scrofae, a. suilla**. Hog's lard. [Lat., *axis*, an axle, + *ungere*, to smear.]

ayapana, ayapano. The *Eupatorium a.*; an aromatic plant indigenous to Brazil and cultivated in the Isle of France, whence the leaves, which are yellowish, of a bitter, astringent taste, and of an agreeable odor, find their way into commerce. It resembles tea in its properties, and was formerly vaunted in various diseases.

azedarach (az-ed'ar-ak). China-tree. The bark of the root is used as an anthelmintic.

azo-. A prefix used to denote a substance derived from a hydrocarbon by the replacement of part of the hydrogen by nitrogen.

azobenzene (az-o-ben'zèn). A compound of nitrogen and benzene, C₆H₅.N:N.C₆H₅, having yellowish red laminae or tabular

crystals. Many of its derivatives make up the azo dyes.

azo-compounds. Derivatives of azobenzene.

azoic (ah-zo'ik). 1. Destitute of organic life. 2. Pertaining to nitrogen. [Lat., *azoicus*, from Gr., *a*, priv., + *zoe*, life.]

azolitim (az-o-lit'min). A coloring principle, $C_7H_7NO_4$, obtained from litmus and used as an indicator of the reaction in many culture media after the growth of bacteria.

azoögenia (ah'zo-o-jen'e-ah). 1. The generation of an organism of defective vitality. 2. The regeneration of such an organism. [Gr., *a*, priv., + *zoe*, life, + *gennan*, to produce.]

azoöperm'atism. Sterility in the male; a condition in which spermatozooids are either absent from the semen or wanting in functional activity. [Gr., *a*, priv., + *zoe*, life, + *sperma*, a seed.]

azote (ah'zöt). Nitrogen; so called because by itself it is irrespirable. [Gr., *a*, priv., + *zoe*, life.]

azote'mia. A general term indicating the presence of products of proteid catabolism within the blood; also a term denoting a disease of cattle. [Azote, + Gr., *aima*, blood.]

az'otize. To nitrogenize; to cause to combine with nitrogen.

azotom'eter. An apparatus invented by Knop for estimating the amount of nitrogen present in ammonium salts or in organic compounds that contain the ammonium residue NH_2 . Based upon the decomposition of these compounds with sodium hypobromid, $NaBrO$, into elementary nitrogen. Seldom used, as it has been replaced by better methods. [Azote, nitrogen, + *metron*, a measure.]

azotom'etry. The process of determining the amount of nitrogen present in a body.

azoturia (ah-zo-tu're-ah). A condition in which the urine contains an excess of nitrogenous constituents. [Azote, nitrogen, + *ouron*, urine.]

azygos (az'i-gos). Single, not paired; said of structures which are single, not in pairs. See *table of muscles*, under *muscle*, and *table of arteries*, under *artery*; also *table of veins*, under *vein*. [Gr., *azygos*; unwedded, not paired.]

azymia (ah-zim'e-ah). Absence of a ferment. [Gr., *a*, priv., + *zyme*, ferment.]

azymic (ah-sim'ik). Not caused by a ferment. Without a ferment.

B

Ba. Chemical symbol for barium.

Babbitt metal. An alloy containing zinc, lead, antimony and copper. Used in the bearings of machines to prevent friction, and in dentistry. [Isaac Babbitt of Massachusetts.]

Babe'sia bigem'ina. Same as *Piroplasma bigeminum*. A species of the *Protozoa*, belonging to the class *Mastigophora* and to the order *Monadidea*, which infests the red blood corpuscles of cattle, causing Texan cattle fever. **B. hominis.** A doubtful parasite infesting the red blood corpuscles in cases of Rocky Mountain fever.

babesiosis (ba-be-se-o'sis). Infection with *Babesia*. Same as *piroplasinosis*.

Babinski's method. A method of producing the reflex contraction of the Achilles tendon by tapping the tendon while the patient kneels on a chair. **B's reflex.** Extension instead of flexion of the toes following tickling of the sole; usually associated with disease of the pyramidal tracts. **B's sign.** A pathological modification of the plantar reflex characterized by extension and separation of the toes. [J. Babinski, Parisian neurologist, b. 1857-.]

ba'by-farm'ing. The practice of taking infants to rear. Usually a term of reproach as so many die of neglect and starvation.

bacca (bak'ah). A berry.

bacillac (bas'il-ak). A preparation of lactic acid bacteria producing acid fermentation of milk.

ba'cillar, ba'cillary. 1. Rod-shaped; having the form of a slender straight rod. Also consisting of slender rods, as the b. layer of the retina. 2. Of, or pertaining to, or derived from, or caused by a *bacillus*, bacillary. [Lat., *bacillus*, a rod.]

bacille'mia. The presence of bacilli in the blood. [Lat., *bacillus*, + Gr., *aima*, blood.]

bacilli-carrier. A person in apparent health, whose tissues or secretions contain pathogenic bacilli, such as the bacillus of typhoid fever.

bacil'licide. A destroyer of bacilli. [Lat., *bacillus*, + *caedere*, to kill.]

bacil'liferm. Rod-shaped. [Lat., *bacillus*, a rod, + *forma*, form.]

bacilluria (bas-il-u're-ah). The presence of bacilli in freshly passed urine. [Lat., *bacillus*, + Gr., *ouron*, urine.]

Bacillus (bas-il'us), pl., *bacilli*. 1. Cohn's name for a genus of *Schizomyces* belonging to the family *Bacteriaceae*. 2. In anatomy one of the rods of the retina, also any rodlike body. 3. In pharmacy, a medicated bougie or candle (*candela fumalis*). **anthrax b.** See *B. anthracis in table*. **B. abortus.** The cause of contagious abortion in cattle. **B. aceti.** A long cylindrical cell of varying size found in vinegar manufactories; probably *Bacterium aceti*. **B. acidi lactici.** A term formerly applied to a number of bacilli which give rise to the lactic acid fermentation in milk. See *Bacilli of lactic acid fermentation*. It is, however, now re-

stricted to the species described by Hüppe, which is one of the four subdivisions of the *B. coli* group. **B. acidophilus.** A facultative anaërobic b. found in the stools of artificially fed infants. **B. acnes.** A short, thick b. found by Gilchrist in comedones, thought to be the cause of acne vulgaris. **B. aërogenes (capsulatus).** See table of *B. B. albicans pateriformis.* A species found in seborrhea. **B. alcaligenes.** See table of *B. B. alvei.* See *B. Preussii.* **B. amylobacter.** An organism fermenting cellulose. **B. anthracis.** See table of *B. B. anthracis symptomatici.* See table of *B. B. avisepticus.* **B. of chicken cholera.** See *B. bovisepiticus.* **b. of Bang.** The b. of infectious abortion in cattle. **B. bifidus.** See table of *B. b. of blue milk.* See *B. cyanogenus.* **b. of blue pus.** See *B. pyocyaneus.* **B. botulinus.** See table of *B. B. bovisepiticus.* The name given to the group known as the b. of hemorrhagic septicemia, being pathogenic for cattle, swine, fowls, rabbits, and many other animals. **B. of bubonic plague.** See table of *B. B. bulgaricus.* See table of *B. b. of butter.* An acid-fast organism found in butter, which is pathogenic for guinea pigs. It grows more rapidly as media at 20° C. than the tubercle b. See table of *B. bacilli of butyric acid fermentation.* Bacilli which convert into butyric acid, starch, dextrin, inulin, cane sugar, dextrose, and hydrated milk sugar. **B. butyricus.** An organism producing butyric acid from carbohydrates, butter fat, and some proteins. **B. (mucosus) capsulatus.** See table of *B. B. caucasicus.* An organism producing kefir. **B. Chauvaei.** See *B. anthracis symptomatici*, under table of *B. b. of chicken cholera.* See *B. avisepticus.* **B. cholerae gallinarum.** Syn.: *B. avisepticus.* **B. cholerae suis.** See *b. of hog cholera.* **b. of chyluria.** A b. found in the coagulum of chylous urine. **B. cloacae.** A gas-producing b. found in feces, water and sewage. **B. coli (communis).** See table of *B. b. of conjunctival catarrh.* See *b. of Koch-Weeks*, under table of *B. B. cuniculicida.* The b. of the septicemia of rabbits; a species found in impure river water and decayed meat brine, and closely resembling the *B. cholerae gallinarum.* Inoculated in rabbits, mice, and birds, it produces septicemia and death. See also *b. of Wildseuche* and *B. bovisepiticus.* **B. cyanogenus.** Syn.: *Bacterium syncyanum* (seu *cyanogenum*), *Vibrio cyanogenus* (seu *syncyanus*). A b. producing in milk a grayish color which in the presence of free acids becomes a bright blue. This diseased condition of milk, which is inoculable, is due to the conversion of the casein into a blue coloring matter. It does not liquefy gelatin. **b. of Danysz.** See *B. typhi murium.* **b. of diphtheria in man.** See *B. diphtheriae*, under table of *B. B. diph-*

theriae, B. diphtheritidis, B. diphtheris. See *B. diphtheriae*, under table of *B. B. diphtheriae columbarum.* A b. found in the epidemic diphtheria of doves, forming slender rods over 1.5 μ long and 0.3 to 0.4 μ thick. Inoculated upon doves, it produces the original disease. **b. of Ducrey.** See table of *B. dysenteriae.* **B. of dysentery.** See table of *B. b. of Eberth.* See *B. typhosus*, under table of *B. B. enteritidis.* An aërobic, non-liquefying, motile b., obtained by Gärtner from the tissues of a cow affected with mucous diarrhea and from the spleen of a man who died after eating the cow's flesh. It is pathogenic in mice and several other animals, causing intense enteritis. This organism is frequently found in the meat and intestines, blood and viscera of persons poisoned by decomposing meat. It resembles the type of the *B. paratyphosus* in its cultural characteristics. **B. enteritidis sporogenes.** An anaërobic b. found in feces, sewage, and soil. **B. equisepticus.** The b. of equine influenza. **B. erysipelatus suis.** The cause of erysipelas in swine. **B. erythrogenes.** A b. producing red milk. **B. Feseri.** See *B. Chauvaei.* **B. fluorescens liquefaciens.** A species of b. frequently found in water containing putrefying substances. It occurs as short motile rods arranged in pairs and resembles the *B. pyocyaneus*, or *b. of green pus* in most of its characteristics. **b. of Friedländer.** See *B. (mucosus) capsulatus* (table). **B. fusiformis.** A bacillus with pointed ends, found in Vincent's angina. **B. gallinarum.** See *B. cholerae gallinarum.* **B. gastrophilus.** See *B. Oppler-Boas.* **B. geniculatus, B. gasoformans.** A gas-forming b. found in water (de Bary). A species of b. found in the contents of the stomach. **b. of Gärtner.** See *B. enteritidis.* **B. gingivae pyogenes.** An aërobic and facultative anaërobic liquefying b. found in the mouth and decaying teeth. **b. of glands.** See table of *B. b. of green pus.* See *B. pyocyaneus.* **b. of Hansen.** See *B. leprae*, in table of *B. b. of hay infusion.* See *B. subtilis.* **B. Hoffmanni.** A non-pathogenic member of the diphtheria group, also known as the *pseudodiphtheria b. b. of hog cholera.* A b. resembling the paratyphoid b. in its cultural characteristics but not agglutinating with high dilutions of patients suffering from paratyphoid infection. The organism producing the ulceration and fibrinous inflammation of the intestines in hog cholera. **B. icteroides.** A facultative aërobic, non-liquefying, motile b., pathogenic in most mammals and asserted by Sanerelli, its discoverer, to be the specific organism of yellow fever. The organism is now regarded as an intestinal saprophyte, resembling the b. of hog cholera in its cultural characteristics. It does not produce this disease in hogs and will not agglutinate in high dilutions with the blood from cases of hog cholera. **b. of infectious abortion.** See *B. abortus.* **B.**

influenzae. See *table of B. B. influenza in sputum, how to recognize, see in appendix, page 903.* **b. of Klebs-Löffler.** See *B. of diphtheriae.* **b. of Koch-Weeks.** See *table of B. b. of Koubasoff.* An aerobic and facultative anaerobic, non-liquefying, motile b. found by Koubasoff in 1889 in a person who died from cancer of the stomach. It is pathogenic by subcutaneous injections in rabbits, cats, dogs, and guinea pigs. **bacilli of lactic acid fermentation.** Bacilli which convert milk sugar into lactic acid. Several have this property, including the *B. acidi lactici*, which is now regarded as a member of the *B. coli* group, and the *B. bulgaricus.* **B. lactimorbi.** The b. of milk sickness or trembles in cattle and sheep. **B. lactis aërogenes.** Syn.: *Bacterium lactis aërogenes.* A species found along with the *Bacterium coli commune* in the feces of infants fed with milk. It coagulates milk with the production of lactic acid and causes in glucose solutions an active fermentation, which can be maintained apart from the presence of air, although otherwise the b. is aerobic. In animals it produces effects similar to those caused by the *Bacterium coli commune*, but it differs from this organism in possessing a capsule and in never showing any motility. **b. of leprosy.** See *B. leprae (table of B.).* **B. of malignant edema.** See *table of B. B. mallei.* See *B. of glanders (table of B.).* **B. megaterium.** A species of b. observed in cooked cabbage. Cultures liquefy gelatin and form yellowish white colonies on potatoes. It is prevalent in dust, earth, and water, and often contaminates culture material. **B. merismopodioides.** See *Bacterium merismopodioides.* **B. mesentericus fuscus.** A species of b. found on potatoes, in the air, and other places, forming small, short, actively motile rods. **B. mesentericus rubiginosus.** See *Leptothrix epidemidis.* **B. mesentericus vulgaris.** The potato b., motile and reproducing by spores. It acts as a diastatic ferment, coagulates casein, liquefies gelatin, and resembles *B. megaterium.* **B. Moëleri.** An acid-fast b. found in grass, hay, and dung, which can be distinguished by its more rapid growth at 20° C. from the tubercle b. **b. of Morax-Axenfeld.** A b. found in epidemic conjunctivitis. **bacilli of the mouth.** Bacilli found in the buccal cavity. Various forms have been described by Miller. **B. mucosae ozenae.** See *B. (mucosus) capsulatus, in table of B. B. murisepticus.* A species belonging to the hemorrhagic septicemia group, and found in various putrefying liquids. It occurs as non-motile rods 0.8 to 1 μ long and 0.1 to 0.2 μ thick, frequently arranged in groups or rows of 2 or 4. Injected into the circulation of common mice, they accumulate in the white blood corpuscles, destroy the latter, and give rise to a fatal variety of septicemia. Birds and rabbits are also affected, inoculation in the case of the latter producing either

a general septicemia, as in mice, or a local inflammation from which the animals recover and which secures immunity against a subsequent attack of the disease. **B. mycoides.** A species of b. found constantly in the soil. It resembles the other spore-bearing dust bacilli, such as *B. subtilis.* **B. neapolitanus.** See *B. coli, in table of B. B. necrophobus.* The b. of diphtheria in calves. **B. nitro-bacter.** A b. found in the soil, which changes nitrites to nitrates. **B. oedematis.** An anaerobic b. causing malignant edema in man, sheep, cattle, and swine. See *B. of malignant edema.* **B. oedematis maligni.** See *B. of malignant edema, in table of B. b. of Oppler-Boas.* A b. found in the stomach in cancer. **B. ozena.** The cause of ozena, or fetid catarrh. **B. paratyphosus.** See under *table of B. B. pertussis.* The b. of whooping-cough. **B. pestis bubonicae.** See *B. of bubonic plague, under table of B. B. phlegmonis capsulatus emphysematosae.* See *B. aërogenes capsulatus, in table of B. B. pleurosepticus.* Syn.: *B. bovissepticus.* A general name for the various members of the hemorrhagic septicemia group. **B. pneumoniae.** See *B. (mucosus) capsulatus.* **B. polymyxa.** Syn.: *Clostridium polymyxa* [Prazmowski]. A species resembling closely in form, development, and spore production the *B. amylobacter.* Ordinarily it does not excite fermentation, but if the access of oxygen is prevented, it produces a peculiar fermentation in dextrin solutions, and in infusions of potatoes and lupine seeds, and dissolves cellulose and starch. **B. polyipiformis.** A b. found along with the *B. oedematis maligni.* It is anaerobic, does not liquefy gelatin, and forms small yellow colonies with bent and serpentine processes. Its cultivations do not develop gas. **B. Preussii** [Ciesielski]. A b. found in the larvae of bees and believed to cause the disease called foul brood. Perhaps the same as *B. alvei.* **B. prodigiosus.** A species, perhaps more properly referred to *Bacterium*, found upon starchy food stuffs (bread, rice, potatoes, etc.), and also in milk. It is not pathogenic, and has been recently employed in bacteriotherapy as an antagonist to the *B. anthracis.* It produces a brilliant red pigment in agar, blood serum, potato, gelatin, and the surface of bouillon, and has a proteolytic enzyme which liquefies gelatin, blood serum, and the casein of milk. **B. proteus vulgaris.** See *B. proteus, in table of B. B. pseudodiphtheriae.* See *B. Hoffmanni.* **B. pseudotuberculosis.** An aerobic, non-liquefying, non-motile b. found in 1889 by Pfeiffer in a horse that was killed because of the suspicion of glanders. It is pathogenic in guinea pigs, house mice, white mice, hares, and rabbits. **B. pseudotuberculosis murium.** An aerobic and facultative anaerobic, non-liquefying, non-motile b. found by Kutscher in 1894 in a dead mouse. It is pathogenic in mice, but not

in rabbits or guinea pigs. **B. psittacosis.** A b. isolated from a parrot, and resembling *B. enteritidis*. **B. pulpae pyogenes.** An aerobic and facultative anaerobic, liquefying b. found by Miller in the pulp of a gangrenous tooth. A pure culture introduced into the abdomen of white mice will prove fatal in from eighteen to thirty hours. **B. pyocyaneus.** See *b. of blue-green pus* in table of *B.* **B. pyogenes fetidus.** A short, slowly motile b., with rounded ends, found in fetid pus. Injected into mice and guinea pigs it produces local suppuration and systemic effects and is often fatal. It liquefies gelatin, but does not form gas in sugar bouillon. **b. of rabbit septicemia.** See *B. bovisepiticus*. **B. radicola.** A bacillus, found in the nodules on the roots of leguminous plants, which aids in abstracting nitrogen from the atmosphere. **Bacilli retinae.** The rods of the retina. **b. of rhinoscleroma.** Produces lesions resembling granulomata in the nose. **B. rhusiopathiae suis.** A b. resembling *B. murisepticus* and causing swine erysipelas. **B. Salmonii.** See *B. of hog cholera*. **b. of Sanarelli.** See *B. icteroides*. **b. of seborrhea.** A b. found in the hair and scalp in seborrhea. **B. septicemiae hemorrhagicae.** See *B. bovisepiticus*. **b. of the septicemia of mice.** See *B. murisepticus*. **b. of the septicemia of rabbits.** See *B. cuniculicida*. **b. of Shiga.** See *B. dysentericae*, in table of *B.* **b. of the smegma.** A b. found in the smegma of the prepuce and the vulva, closely resembling in morphological characters and behavior to coloring agents the *B. tuberculosis*. It differs from this organism, however, in being shorter and thicker and in rapidly decolorizing when stained by carbol fuchsin and then washed with alcohol. It is not pathogenic. **B. subtilis.** A b. found in the air, in dust, in vegetable infusions, especially an infusion of hay, as a white efflorescence on the dung of herbivora, and in many other situations. On agar-agar it forms a thick, wrinkled, readily separable coating, and on potatoes a moist, granular, whitish layer. The *B. subtilis* resembles strongly in morphological characters the *B. anthracis*, differing from it chiefly in that its rods are motile, somewhat slenderer, and have rounded ends, and its spores germinate transversely and not in an axial direction. It liquefies gelatin, blood serum, and casein, and renders milk alkaline. Indol is negative. It has no pathogenic properties. **B. suipestifer.** See *b. of hog cholera*. **B. suisepiticus.** The b. of swine plague or Schweineseuche, an organism belonging to the hemorrhagic septicemia group. **b. of swine erysipelas.** See *B. erysipelatus suis*. **B. tetani traumatici.** See *B. tetani*, in table of *B.* **B. tuberculosis.** See under table of *B.* **B. tuberculosis, how to stain, Ziehl Neelsen method;** see in appendix, page 903. **B. typhi exanthematici.** The anaerobic b. isolated from the blood by Plotz

in cases of typhus fever. **B. typhimurium.** A b. belonging to the hog cholera group, and destructive to mice. **b. of typhoid fever.** See *B. typhosus*, in table of *B.* **B. typhosus.** See in table of *B.* **B. vaginalis.** The acid-fast b. of the vagina and vulva. **b. of Vincent's angina.** See *B. fusiformis*. **B. violaceus.** The chromogenic b. of water. **B. Welchii.** See *B. aërogenes (capsulatus)*, in table of *B.* **b. of Wildseuche.** A very small ovoid b., or *Bacterium*, closely resembling *B. cuniculicida*, found by Löffler in the disease called *Schweineseuche* (European hog plague) and in *Wildseuche* (multiple gangrenous bronchopneumonia of cattle, hogs, and horses). According to Hueppe, *Schweineseuche*, *Wildseuche*, and probably also chicken cholera and rabbits' septicemia are modifications of a single disease, septicemia hemorrhagica; and hence this microorganism would be identical with *B. cuniculicida* and *B. cholerae gallinarum*. **b. of whooping-cough.** A short ellipsoid or centrally contracted b., found in the sputum of whooping-cough. It resembles the *B. influenzae*. **B. xerosis conjunctivae.** A non-pathogenic organism, found on the conjunctiva which resembles *B. diphtheriae*, but differs from it by acidulating 10 per cent. of saccharose bouillon. **Bordet's b.** The b. of pertussis. **cholera b.** See *Spirillum cholerae asiaticae*, under *Spirillum*. **chromogenous bacilli.** Bacilli which produce pigments. Such are the *B. prodigiosus*, *B. indicus*, and *B. ruber*, producing a red pigment; the *B. pyocyaneus*, *B. fluorescens putidus*, *B. fluorescens liquefaciens*, *B. erythrosporus*, and others, producing a green pigment; the *B. cyanogenus*, producing a blue pigment; the *B. fuscus* and *B. mesentericus fuscus*, producing a brown pigment; and the *B. luteus*, *B. luteus suis*, and others, producing a yellow pigment. **comma b.** See *Spirillum cholerae asiaticae*, under *Spirillum*. **Ducrey's b.** The supposed b. of chancreoid. **Eberth's b.** See *B. typhosus* (table). **Emmerich's b.** See *Bacillus coli*, in table of *B.* **epsilon b.**, of Miller, a slender, straight or curved, non-motile rod form found in carious teeth. **Escherich's b.** The *B. coli*. **fluorescent bacilli.** Bacilli which in the cultures give rise to fluorescent phenomena. **Friedländer's pneumobacillus.** See *B. capsulatus*, in table of *B.* **grass b.** See *B. Moëlleri*. **Hansen's b.** See *B. leprae*, in table of *B.* **Hueppe's b.** See *B. of butyric acid fermentation*. **Klebs-Löffler b.** See *B. diphtheriae*, in table of *B.* **Koch's b.** See *B. tuberculosis*, in table of *B.* **Pfeiffer's b.** See *B. influenzae*, in table of *B.* **plague b.** See *B. of bubonic plague*, in table of *B.* **tubercle b.** See *B. tuberculosis*. **Yersin's b.** See *b. of bubonic plague*, in table. [Lat., dim. of baculum, a rod.] **bactere-mia.** See bacteriemia. **bactéria.** Often used to signify the *Schizomycetes*. **bacteria in examination**

TABLE SHOWING IMPORTANT BACILLI PATHOGENIC FOR OR PRESENT IN HUMAN BEINGS

	HABITAT	MORPHOLOGY AND STAINING CHARACTERISTICS	APPEARANCE OF COLONIES ON PLATE CULTURES OR SPECIAL MEDIA	IMPORTANT CULTURAL CHARACTERISTICS
Bacillus aërogenes (capsulatus). Syn. B. Welchii, B. perringsens. Walch, 1892.....	Blood vessels and viscera of early decomposition with gas bubbles. Also found in the soil and intestinal contents.	Straight or slightly curved thick rods like anthrax bacillus, often showing a capsule. Stains by anilin dyes and Gram's stain, capsule stains positive.	Anaërobic agar colonies 1 to 2 mm. in diameter like flattened spheres with hair-like projections.	Gelatin not liquefied, a firm characteristic retracted coagulum with many gas bubbles in milk, numerous gas bubbles in all solid media such as agar, containing glucose.
Bacillus alcaligenes.....	Intestines and polluted water.	Stains by anilin dyes, negative to Gram's method.	Similar to the typhoid bacillus.	Similar to the typhoid bacillus with the exception of the production of a marked alkaline reaction in milk.
Bacillus anthracis. Syn. Anthrax bacillus. Pollender, 1849. Davaine, 1863. Koch and Pasteur, 1877.....	Blood and viscera of sheep and cattle with splenic fever, malignant carbuncle of man, infected hair and hides, and contaminated pastures.	Long thick rods with square ends, often in chains. The bacilli stain by the anilin dyes and are positive to Gram's method and spore stains.	In gelatin or agar plates the colonies form wavy masses like curled hair. A circle of liquefaction later develops around the colony in gelatin.	In gelatin stab and agar stroke cultures a white line with delicate side arborescent branches develops, the gelatin is later liquefied. Milk is acidulated, the casein coagulated and a scum forms on the surface, clouded and blood serum liquefied. The growth on solid media is always profuse and dry.
Bacillus anthracis (symptomatiçi). Syn. Bacillus of symptomatic anthrax. Bollinger and Feser, 1878.....	The subcutaneous pustules and diseased muscles of cattle suffering from "Kauschbrand" or "quarter evil," or "black leg."	A long, thick bacillus with rounded ends without chain formation. It stains by the anilin dyes, but is negative to Gram's method.	Anaërobic agar plate cultures show colonies which are club-shaped, with a tangled mass of projecting filaments.	Gelatin is liquefied and gas bubbles form in this medium and sugar agar, milk is acidulated and gas bubbles and sediment form in glucose bouillon.
Bacillus bifidus. Tissier, 1900. B. acidophilus. Same, excepting no bifurcated ends.....	Stools of breast-fed infants and superficial ducts of mammary glands of mother.	A diplobacillus with swollen ends adjacent and pointed ends free. In old cultures, ends are bifurcated. Gram's stain positive.	Glucose agar plates show fine, oval colonies.	Grows on glucose and beerwort agar, and glucose bouillon.
Bacillus botulinus. U. Ermengem, 1897.....	Improperly prepared ham, canned goods or sausage.	A long, broad bacillus with rounded ends, which is positive to Gram's stain.	On anaërobic plate cultures in glucose gelatin the young colonies are round, translucent and light yellow. Older colonies become brown and opaque, and show irregular finger-like projections around the periphery, and are surrounded by a zone of liquefaction.	The stick cultures in glucose gelatin or agar contain much gas, and have a rancid odor. The organism will not develop in an acid medium, but is favored by an alkaline medium.

	SPORE FORMATION AND MOTILITY	AÉROBIC AND ANAÉROBIC GROWTH	BIOCHEMICAL FEATURES	PATHOGENICITY
Bacillus œrogenes (capsulatus). Syn. B. Weichii, B. perrirringens. Weich. 1892.....	Endospores formed on blood serum, motility not present.	Strict anaërobo.	Produces hydrogen in solid media and bouillon fermentation tubes containing dextrose.	Produces bacteremia in pigeons, and emphysematous gangrene and gaseous infection of the uterus, fetus and placenta in human beings.
Bacillus alcaligenes.....	Spore formation negative, motility quite active.	Aërobic and facultative anaërobic growth.	Marked alkaline reaction in milk, no gas formation.	Intraperitoneal injections cause purulent peritonitis in guinea pigs. Produces no disease of human beings.
Bacillus anthracis. Syn. Anthrax bacillus. Pollender. 1849. Davaine. 1863. Koch and Pasteur. 1877.....	Endospores are formed which later become free, motility is negative.	Aërobic and facultative anaërobic growth.	Liquefies proteids, indol and gas formation negative.	The bacillus causes bacteremia with enlargement of the spleen in cattle, sheep, horses, swine, mice and other laboratory animals. In human beings it produces a local infection known as a malignant pustule, but it may cause bacteremia by extension, or through the respiratory or intestinal tract.
Bacillus anthracis (symptomatic). Syn. Bacillus of symptomatic anthrax. Bollinger and Feser. 1878.....	Endospores are formed in the middle of the bacillus causing a spindle shape, and the organism is motile.	Strict anaërobic organism.	Forms gas in glucose media, and liquefies gelatin.	The bacillus produces a dark red or black edematous infection of the subcutaneous tissues of guinea pigs and cattle.
Bacillus bifidus. Tissier. 1900. B. acidophilus. Same, excepting no bifurcated ends.....	Spore formation and motility negative.	Strict anaërobo.		Non-pathogenic for guinea pigs, and probably inhibits the harmful bacteria in the intestines of infants.
Bacillus botulinus. U. Ermengem. 1897.....	Spore formation and motility positive.	Strict anaërobo.	Forms gas in sugar media, and liquefies gelatin. It also produces a powerful soluble toxin in bouillon.	A soluble toxin is formed in the infected meat which produces severe nervous symptoms ending in general motor paralysis, dyspnea, and death. The toxin affects man, guinea pigs, cats, mice, and monkeys. The bacilli do not invade the tissues or produce a toxin after the food enters the intestine.
Bacillus of blue-green pus. Syn. B. pyocyanus. Pseudomonas aeruginosa. Schroeter. 1872....	Spore formation negative, motility very active.	Aërobo and facultative anaërobo.	Produces indol in peptone solution and a fluorescent pigment as well as a second one called pyocyanin which is soluble in chloroform and forms long blue needles.	It produces bacteremia in rabbits and guinea pigs when injected, and in human beings it infects abscesses and ulcers, imparting to the pus a greenish color. It may also produce bacteremia, inflammation of the serous membranes, dysentery and tonsillitis.

TABLE SHOWING IMPORTANT BACILLI PATHOGENIC FOR OR PRESENT IN HUMAN BEINGS—Continued

	HABITAT	MORPHOLOGY AND STAINING CHARACTERISTICS	APPEARANCE OF COLONIES ON SPECIAL CULTURES OR MEDIA	IMPORTANT CULTURAL CHARACTERISTICS
Bacillus of blue-green pus. Syn. <i>B. pycocyaneus</i> . <i>Pseudomonas aeruginosa</i> . Schroeter. 1872....	The bluish or greenish pus of certain abscesses and ulcers. Infected water and feces of certain forms of epidemic dysentery.	Slender rods with rounded ends, often in pairs. Negative to Gram's method.	The colonies on gelatin or agar plates form large, round green colonies, and a green color is also imparted to the entire medium.	Gelatin is rapidly liquefied, and the medium becomes green, agar growth is moist and the entire medium turns green, bouillon is clouded and green, and milk is coagulated and the casein precipitated and dissolved, the milk turning a yellowish green. Potato shows a brown growth, which turns green when the surface is scraped.
Bacillus of bubonic plague. Syn. <i>B. pestis</i> . Kitasato. 1894.....	Purulent fluid from lymphatic buboes; sputum, lungs, and blood of cases of bubonic plague. Gram's stain negative.	Short rods or diplobacilli with rounded ends, often showing bizarre involution forms on 2% salt agar.	Forms round, elevated, moist colonies on gelatin and agar plate cultures.	Gelatin is not liquefied, forms a grayish white growth on glycerin-agar, forms a scum with downward stalactite formation on bouillon.
Bacillus bulgaricus.....	Present in maadzoun, yoghurt, zoolak and other sour milks of southeastern Europe.	Long, thick bacilli, often in chains and varying greatly in length. Positive to Gram's stain.	Colonies of whey-agar grayish white with filamentous periphery.	Gelatin not liquefied, milk coagulated, and acidulated grows best on whey media, milk, or bouillon containing a small block of sterile marble.
Bacillus, butter.....	Present in butter.	Resembles tubercle bacillus in size and acid-fast properties.	Forms moist, round, large colonies on agar in 24 to 48 hrs.	
Bacillus (mucosus) capsulatus. Syn. <i>B. of Friedländer</i> . <i>Bacterium pneumoniae</i> . Capsule <i>B. Friedländer</i> . 1883.....	Present in normal saliva, and in catarrhal and purulent inflammation of the upper air passages.	Short bacillus with rounded capsule, staining by capsule stains, and is negative to Gram's method.	On gelatin and agar plates, large, moist, gray colonies form which at times are very viscid.	Gelatin is not liquefied, milk is acidulated, a moist, viscid growth forms on agar and potato slants, and bouillon is clouded.
Bacillus coli (communis). Syn. <i>B. neapolitanus</i> , <i>B. cavicida</i> , and <i>B. pyogenes</i> . <i>Lebidus</i> . <i>Colon bacillus</i> . <i>B. of Escherich</i>	Intestines of all warm-blooded animals, polluted water, soil, and milk, and sewage.	Short, plump bacillus with rounded ends. Negative to Gram's stain.	Forms moist, gray elevated round colonies on gelatin and agar plates, black colonies on esculin bile agar, and red metallic colonies on Endo's agar.	Gelatin is not liquefied, but bubbles of gas often appear, milk is acidulated and coagulated, it forms a moist grayish growth on agar and potato, and bouillon is clouded.
Bacillus diphtheriae. Syn. <i>B. of diphtheria</i> . <i>Klebs</i> . 1883. <i>Löffler</i> . 1884.....	Respiratory tract of persons suffering from diphtheria.	Rather thin, long bacilli positive to Gram's stain. When stained by Löffler's or Neisser's stain the bipolar bodies, or meta-chromatic bodies stain a dark blue, the rest of the protoplasm staining a lighter color. It is thus recognized in diagnosis.	The colonies are flat and apronlike, and under the microscope are coarsely granular. On blood serum they are pearl-gray with the edges flattened and uneven.	Gelatin is not liquefied, growth in stab culture is beaded, on agar fine pin-point colonies, potato invisible growth. Milk is rendered faintly alkaline and then acid, the growth in bouillon is like fine grains, and not cloudy, and glucose bouillon is acidulated, thus differing from the pseudodiphtheria bacillus.

	SPORE FORMATION AND MOTILITY	AÉROBIC AND ANAÉROBIC GROWTH	BIOCHEMICAL FEATURES	PATHOGENICITY
Bacillus of bubonic plague, Syn. <i>B. pestis</i> , Kitasato, Yersin, 1894.....	Spore formation and motility negative.	Aérobe and facultative anaérobe.	Gas formation and indol negative.	Mice, rats, guinea pigs, rabbits, monkeys, dogs and cats develop purulent adenitis and bacteremia from subcutaneous injections. Human beings suffer in a similar manner, the infection being carried from the rat to the human being by means of the bites of fleas from the infected rats.
<i>Bacillus bulgaricus</i>	Spore formation and motility negative.	Aérobe and facultative anaérobe.	Forms about 3% of inactive or levorotatory lactic acid in milk.	Non-pathogenic. Is one of the organisms producing buttermilk.
Bacillus, butter.....	Spore formation and motility negative.	Aérobe.		Forms non-progressive local lesions resembling tubercles in guinea pigs. Not pathogenic for human beings.
Bacillus (mucosus) capsulatus, Syn. <i>B. of Friedländer</i> , Bacterium pneumoniae, Capsule <i>B. Friedländer</i> , 1883.....	Spore formation and motility negative.	Aérobe and facultative anaérobe.	Produces indol, and forms from 30% to 90% of gas in dextrose, and saccharose bouillon in the fermentation tube but no gas in lactose bouillon.	Produces a bacteremia in mice, and purulent inflammation of the upper air passages and occasionally otitis media, and meningitis in human beings.
Bacillus coli (communis), Syn. <i>B. neapolitanus</i> , <i>B. cavicola</i> , and <i>B. pyrogenes foetidus</i> , Colon bacillus, <i>B. of Escherich</i>	Spore formation negative, and some forms are sluggishly motile.	Aérobe and facultative anaérobe.	Forms about 50% of gas in dextrose, lactose, and saccharose bouillon, and produces indol in peptone solution.	Non-pathogenic for animals and men unless it escapes into the abdominal cavity, where it produces peritonitis. Also produces inflammation of the urinary passages, such as cystitis or pyelitis.
Bacillus diptheriae, Syn. <i>B. of diptheria</i> , Klebs, 1883, Löffler, 1884.....	Spore formation and motility negative.	Aérobe and facultative anaérobe.	Produces no indol, gas, or proteolytic enzymes, but forms a powerful soluble poison or toxin in such fluids as bouillon.	Pathogenic for rabbits, guinea pigs, horses and human beings. It produces a powerful soluble poison or toxin at the seat of local inoculation which causes all of the visceral lesions and general symptoms, the organisms remaining mainly at the seat of local infection.
Bacillus of Ducrey, Syn. <i>B. of soft chancre</i> , <i>B. chancræ molliis</i> , Ducrey, 1889.....	Spore formation and motility negative.	Aérobe.		Produces the soft chancre, or chancroid of venereal infection in man, and pure cultures produce similar lesions in monkeys and cats.

TABLE SHOWING IMPORTANT BACILLI PATHOGENIC FOR OR PRESENT IN HUMAN BEINGS—Continued

	HABITAT	MORPHOLOGY AND STAINING CHARACTERISTICS	APPEARANCE OF COLONIES ON PLATE CULTURES OR SPECIAL MEDIA	IMPORTANT CULTURAL CHARACTERISTICS
Bacillus of Ducrey. Syn. <i>B.</i> of soft chancre. <i>B.</i> chanceri mollis. Ducrey, 1889.....	Seropurulent exudate and tissues of the chancroid, or soft chancre.	Short, thick bacilli often occurring in chains.	Shining gray colonies about 1 mm. in diameter on blood agar.	
Bacillus dysenteriae. <i>B.</i> of dysentery. <i>B.</i> Flexneri. <i>B.</i> Shigae. Shiga, 1897.....	Stools and intestines of patients suffering from acute dysentery.	Short, plump bacillus with rounded ends. Gram's stain negative.	Gray, moist colonies resembling those of the typhoid bacillus.	Gelatin is not liquefied, agar shows moist grayish growth, milk slightly acidulated, potato delicate or distinctly brown growth, bouillon clouded.
Bacillus of glanders. Syn. <i>B.</i> mallei. Löffler, 1886.....	The chronic inflammatory nodules or infectious granulomata of "farcy" or glanders in horses and man.	Small bacilli with rounded or pointed ends. Stains poorly with anilin dyes, and best with methylene blue. Gram's stain negative.	Whitish transparent colonies on glycerin agar plates.	Gelatin is not liquefied, on blood-serum a moist, opaque, slimy growth develops, on potato a moist, yellow transparent growth later becoming reddish brown is characteristic. Milk is coagulated and acidulated, and bouillon clouded.
Bacillus influenzae. Syn. <i>B.</i> of influenza. Pfeiffer, 1892.....	The mucopurulent secretion from the respiratory tract in influenza.	Very small bacilli occurring singly or in pairs. Stains faintly with the anilin dyes, and is negative to Gram's method.	The colonies on blood agar form small, shining masses of a transparent appearance.	The organism does not grow on the usual culture media, but will develop on plain agar, glycerin agar, or serum thinly streaked with blood, as it requires hemoglobin.
Bacillus of Koch-Weeks. <i>B.</i> of epidemic conjunctivitis. Koch, 1883. Weeks, 1887.....	Conjunctiva and pus from epidemic conjunctivitis.	Similar to influenza bacillus.		Grows on serum agar or glycerin ascitic agar as moist, transparent, shining drops or points. Will not grow on usual media.
Bacillus leprae. <i>B.</i> of leprosy. Hansen, 1879.....	Leprous nodules of skin, nose, and nerve cells of leprosy.	Small, slender rods, positive to Gram's stain, and staining even after an acid. Acid-fast like tubercle bacillus.		
Bacillus of malignant edema. <i>B.</i> edematis maligni. Pasteur, 1877.	Present in the soil, polluted water, and subcutaneous edema of animals and man with malignant edema.	Long, thick bacilli staining by Gram's method with spores at end of rod.	Small transparent colonies on anaerobic plates of gelatin or glucose agar.	Gelatin is liquefied, and gas bubbles are formed.
Bacillus paratyphosus. Syn. Paratyphoid bacillus.	The intestines and blood of patients with paratyphoid infection.	Short bacillus with rounded ends resembling the typhoid bacillus. Gram's stain negative.	Large, moist, convex gray colonies resembling the typhoid bacillus.	Gelatin is not liquefied, bouillon is clouded, potato slight growth, agar moist filiform stroke culture.

	SPORE FORMATION AND MOTILITY	AÉROBIC AND ANAÉROBIC GROWTH	BIOCHEMICAL FEATURES	PATHOGENICITY
Bacillus dysenteriae. B. of dysentery. B. Flexneri. B. Shigae. Shiga. 1897.....	Spore formation and motility negative.	Aérobe and facultative anaérobe.	Indol and gas formation negative. The American type or B. Flexneri acidulates in an indole bouillotte, the Japanese or B. Shigae does not.	Animals can not be infected by the elementary tract but die from intravenous, intraperitoneal, and large subcutaneous infections. Is found in dysenteric inflammation of intestines of man.
Bacillus of glanders. Syn. B. mallei. Löffler. 1886.....	Spore formation and motility negative.	Aérobe.		In guinea pigs, horses, and human beings it produces small nodules which first infect the nasal mucous membrane forming ulcers, but later spread to the viscera. It is conveyed from horses to man and is usually fatal.
Bacillus influenzae. Syn. B. of influenza. Pfeiffer. 1892.....	Spore formation and motility negative.	Aérobe and facultative anaérobe.		Injected intravenously into rabbits it produces fever and dyspnea and in large doses death. Monkeys are also susceptible. In man it produces mucopurulent inflammation of the respiratory tract, pleurisy and pneumonia.
Bacillus of Koch-Weeks. B. of epidemic conjunctivitis. Koch. 1883. Weeks. 1887.....	Spore formation and motility negative.	Aérobe.		Non-pathogenic for animals. Produces a very infectious conjunctivitis in man.
Bacillus leprae. B. of leprosy. Hansen. 1879.....	Spore formation and motility negative.	Aérobe.		Is the cause of leprosy in man, being found in the tubercles of the skin, the conjunctiva, cornea, mouth, nose, larynx, and in the nerves and viscera.
Bacillus of malignant edema. B. edematis maligni. Pasteur. 1877.	Spore formation in end of rod. Motility active.	Anaérobe.	Forms gas in glucose bouillotte, and has a proteolytic ferment.	It produces a subcutaneous edema in mice, guinea pigs, rabbits, horses, sheep, cattle, pigs, chickens, pigeons, dogs and man.
Bacillus paratyphosus. Syn. Paratyphoid bacillus.	Spore formation negative, motility active.	Aérobic and facultative anaérobic.	Glucose positive for gas formation, lactose and saccharose negative. No indol.	The organism produces erosions of the intestine, or at times a bacteremia. The symptoms resemble typhoid fever, but the diluted serum agglutinates the paratyphoid bacillus.
Bacillus proteus. Syn. Proteus vulgaris. Hansen. 1885.....	Spore formation negative, motility positive.	Aérobic and facultative anaérobic.	Gas is formed in glucose and saccharose, but not lactose. Indol is formed in peptone solution.	The bacillus will produce bacteremia in the laboratory animals, and is a secondary invader in the dysenteries of children, and in the genito-urinary tract, sometimes producing bacteremia.

TABLE SHOWING IMPORTANT BACILLI PATHOGENIC FOR OR PRESENT IN HUMAN BEINGS—Continued

	HABITAT	MORPHOLOGY AND STAINING CHARACTERISTICS	APPEARANCE OF COLONIES ON PLATE CULTURES OR SPECIAL MEDIA	IMPORTANT CULTURAL CHARACTERISTICS
<i>Bacillus proteus</i> . Syn. <i>Proteus vulgaris</i> . Hansen, 1885.	Putrefying material, the intestines, water and secondary invader in dysentery and inflammations of the urinary tract.	Bacilli varying greatly in length and often showing twisted filaments. Gram's stain negative.	On gelatin and agar plates large spreading colonies of a moist gray color form, and the gelatin colonies rapidly liquefy the gelatin.	Gelatin is rapidly liquefied, milk is rendered alkaline and the casein is dissolved, bouillon is clouded, and the agar growth is gray, moist, and profuse.
<i>Bacillus tetani</i> . Syn. <i>Bacillus of tetanus</i> . Kitasato, 1889.	In the soil and the deep, penetrating wounds of patients suffering from tetanus.	Long, slender rods with rounded ends, which later form round spores at one extremity giving a drum-stick appearance. Gram's stain positive.	In anaerobic agar plate cultures a dense, central opaque mass with a transparent periphery.	Gelatin is slowly liquefied, and the stab in gelatin or agar is arborescent, bouillon is clouded. The cultures give off a disagreeable characteristic odor.
<i>Bacillus tuberculosis</i> . Syn. <i>Bacillus of tuberculosis</i> , tubercle bacillus. Koch, 1882.	Present in the sputum and feces of tuberculous patients and in the tuberculous lesions of the lungs, bones, joints, viscera, mucous and serous membranes and skin.	Slender, long rods with rounded ends, and often beaded. Stains by Gram's method, and is acid-fast, retaining a red dye after treatment by an acid, as in Ziehl-Gabbett stain.		The organism does not grow on the ordinary culture media, but on dog serum or Dorset's egg medium it forms an irregular, tenacious, yellowish growth. It forms a thick, white layer on 5% glycerin agar, and a thick irregular pellicle in glycerin broth. It will also grow on 5% glycerin potato.
<i>Bacillus typhosus</i> . Syn. <i>Bacillus typhi abdominalis</i> . Typhoid bacillus.	The intestines and blood of patients suffering from typhoid fever.	Short bacillus with rounded ends, rather plump, and often growing into long forms. It is negative to Gram's method.	The colonies on gelatin and agar are grayish, moist, convex round, large growths. They remain uncolored on Endo's medium, and form concentric rings on Hesse's semisolid agar.	Gelatin is not liquefied, milk is faintly acidulated, bouillon is clouded, on agar a moist, gray growth is formed and an invisible growth forms on potato. The organism does not reduce neutral red to a yellow color, but glycerin lactose agar is acidulated.

	SPORE FORMATION AND MOTILITY	AÉROBIC AND ANAÉROBIC GROWTH	BIOCHEMICAL FEATURES	PATHOGENICITY
Bacillus tetani. Syn. Bacillus of tetanus. Kitasato, 1889.	Spore formation and motility positive.	Anaerobic.	Gas is produced in sugar bouillon.	The organism is pathogenic for mice, rats, guinea pigs, rabbits, horses, goats, and human beings. It forms a powerful toxin at the seat of inoculation which produces the nervous symptoms and lesions.
Bacillus tuberculosis. Syn. Bacillus of tuberculosis, tubercle bacillus, Koch, 1882.	Spore formation and motility negative.	Aerobic.	The human type acidulates 5% glycerin bouillon, the bovine type does not.	The organism produces tuberculosis in cattle, hogs, and man, as well as the various laboratory animals. The usual lesion is a small granule called a tubercle, which later undergoes softening called caseation, which may cause the formation of cavities in the lungs. Any of the viscera may be affected.
Bacillus typhosus. Syn. Bacillus typhi abdominalis. Typhoid bacillus.	Spore formation negative, motility very active.	Aerobic and facultative anaerobic.	The bacillus does not produce gas in sugar bouillon or agar, and no indol is formed.	The organism produces ulcerations of the Peyer's patches usually in the ileum, and usually enters the circulating blood during the first week of typhoid fever. It may remain in the urine and feces during convalescence and rarely for years after an attack. Gives the agglutination test with the diluted serum of the patient.

- of stomach contents, see in appendix, page 904.
- Bacteriaceae** (bak'te-re-a'se-e). Migula's classification of the *Schizomycetes*, a group of fungi, comprising the genera, *Bacterium*, *Bacillus*, and *Pseudomonas*, or rods without flagella or organs of motion, rods with flagella distributed over the entire body, and polar flagella. They increase by transverse fission and spore formation.
- bacte'rial**, **bacte'rian**, **bacter'ic**. Of or pertaining to the bacteria or to the *Schizomycetes* of a group of fungi.
- bactericide** (bak-ter'is-id). Any agent destructive to bacteria, but usually applied to chemical agents. [Gr., *bakterion*, bacterium, + Lat., *caedere*, to kill.]
- bacteriemia** (bak-ter-i-e'me-ah). Syn.: *blood poisoning*, *septicemia*. The presence of bacteria in the blood. [Gr., *bakterion*, bacterium, + *aima*, blood.]
- bacter'iform**. See *bacteroid*.
- bacterin** (bak'te-rin). Same as bacterial vaccine.
- bacterina'tion**. Treatment by means of bacterins or bacterial vaccines.
- bacterin'ia**. The unfavorable action that occasionally follows the use of bacterial vaccines.
- bacte'rio-agglu'tinin**. See *bacteriohemagglutinin*.
- bacteriogenic** (bak-te're-o-jen'ik). Produced by bacteria. [Gr., *bakterion*, bacterium, + *genesis*, generation.]
- bacte'riohemagglu'tinin**. A hemagglutinin formed by the action of bacteria.
- bacteriohemolysin** (bak-te're-o-he-mo'lis-in). A hemolysin formed by bacteria.
- bacte'riolog'ic**, **bacte'riolog'ical**. Of or pertaining to bacteriology.
- bacteriol'ogist**. Anyone making a special study of bacteriology. The specialty is now subdivided among clinical, hygienic, surgical, milk, water, and other specialistic bacteriologists.
- bacteriol'ogy**. The science of bacteria. [Gr., *bakterion*, bacterium, + *logos*, understanding.]
- bacteriolysin** (bak-te-re-ol'is-in). A material produced in blood serum by the injection of such bacteria as the typhoid bacillus, which acts by dissolving and destroying the bacilli. This reaction is specific and is the result of the interaction of the amboceptor or immune body and the complement. [Gr., *bakterion*, bacterium, + *lysis*, solution.]
- bacteriolysis** (bak-te-re-ol'is-is). The dissolution or dissolving of bacteria by immune or normal sera, being caused by the joint action of the amboceptor and complement. [Gr., *bakterion*, bacterium, + *lysis*, solution.]
- bacteriolyt'ic**. Pertaining to the solution of bacteria.
- bacte'riopathol'ogy**. The study of bacteria in their relation to disease.
- bacterioplasm'in** (bak-te're-o-plas'min). Any of the toxalbumins or endotoxins, obtained from the tissue of the pathogenic bacteria by extraction.
- bacte'rioprecip'itin**. A precipitin pro-
- duced in the body by action of bacteria.
- bacte'riopro'tein**. The protein found as a constituent of bacteria, which often produces various symptoms and tissue changes characteristic of the particular bacterial infection, as tuberculin, from the *B. tuberculosis*. The endotoxins of the pyogenic bacteria and the typhoid bacillus are also of this description.
- bacte'riopur'in**. A pigment obtained from certain bacteria that is soluble in absolute alcohol. [Gr., *bakterion*, bacterium, + Lat., *purpur*, purple.]
- bacterioscopy** (bak'te-ri-os'kop-e). The microscopic study of bacteria. [Gr., *bakterion*, bacterium, + *skopein*, to inspect.]
- bacterio'sis**. A generalized bacterial infection.
- bacteriotherapy** (bak-te're-o-ther'a-pe). The treatment of infectious diseases by means of the injection of bacteria destroyed by heat, or various chemical agents. Its most successful application is made in the treatment of localized inflammation by means of carefully measured doses of dead pyogenic organisms, such as *Staphylococcus albus* or *aureus*. This is called the vaccine treatment. [Gr., *bakterion*, bacterium, + *therapeia*, medical treatment.]
- bacte'riotox'in**. 1. A toxin destructive to bacteria. 2. A toxin produced by bacteria.
- bacte'riotrop'ic**. A term used to describe the action of substances in the serum antagonistic to bacteria such as agglutinin, opsonins, and bacteriolyins. [Gr., *bakterion*, bacterium, + *tropos*, turning.]
- bacteriotro'pin**. A term introduced by Wright to describe such substances as agglutinins, opsonins, and bacteriolyins, which show an antagonistic action towards bacteria. [Gr., *bakterion*, bacterium, + *trepein*, to turn.]
- Bacte'rium**, pl., *ia*. A genus of microscopic fungi belonging to the class *Schizomycetes*, order *Bacteriaceae*. It includes all the forms with straight, inflexible, linear body and without flagella. Migula's classification into families is: *Coccaceae*, *Bacteriaceae*, *Spirillaceae*, *Chlamydobacteriaceae*, *Beggiatoaceae*. The so-called non-motile bacilli, such as *B. anthracis*, according to the classification of Migula, should each be called "bacterium", as *B. anthracis*. [Gr., *bakterion*, dim. of *bakteria*, a staff.]
- bacteriuria** (bak'te-re-u're-ah). The presence of bacteria in the urine, as typhoid bacilli in the urine during the attack and convalescence from typhoid fever. [Gr., *bakterion*, bacterium, + *ouron*, urine.]
- bacte'roid**. Resembling a bacterium; belonging to the bacteria or *Schizomycetes*. [Gr., *bakterion*, bacterium, + *eidos*, form.]
- von Baer's law of development**. The 1. that the progress of development is from the general to the special.
- bag**. Any saclike structure. **b. of waters**. That portion of the amniotic sac with its fluid which presents in the cervix uteri during the first stage of labor.
- Barnes' bag**. See under *Barnes*.
- ink bag**. A pyriform gland in certain mol-

luses, lying in or near the liver. It secretes a dark-colored fluid which the animal ejects when alarmed. [Early mid. Engl., *bagge*, bag, from old Fr., *bague*, sack.]

Bag'dad boil. See *Oriental sore*.

bal'ance. 1. An instrument for weighing. 2. Harmony in the performance of function. **b. experiment.** A term used in physiology to indicate those experiments in nutrition in which, by quantitative examination of the food, on the one hand, and the excretions or the heat given off, on the other, an attempt is made to draw a balance between the income to the body in matter or energy and the output of matter or energy, during the same period of time. [Lat., *bilanx*, *bi-*, twice, + *lanx*, scale.]

balan'itis. Superficial inflammation of the glans penis, generally associated with gonorrhea in cases where the prepuce is long. The prepuce is commonly affected also, therefore the term balanoposthitis is usually applied to this condition. [Gr., *balanos*, glans penis, + *itis*, inflammation.]

bal'anoid. Shaped like an acorn. [Gr., *balanos*, an acorn, + *eidōs*, resemblance.]

ba'lanoposthi'tis. Inflammation affecting both the glans penis and the prepuce. The varieties are: *diabetic b.*, *diphtheritic b.*, and *gonorrhoeal b.* [Gr., *balanos*, glans penis, + *posthe*, the prepuce, + *itis*, inflammation.]

Balantidium (bal-an-tid'i-um). A genus of *Protozoa* of the phylum *Ciliata* and the order *Heterotricha*, having an egg-shaped body, with the ventral and dorsal surfaces almost equally arched. **B. coli.** Syn.: *Paramecium coli*. A species with an oval body and cilia; found frequently in the large intestine of the pig and occasionally in the dejecta of man in cases of diarrhea, dysentery, and ulcer of the rectum. When present in large numbers, it may cause severe chronic diarrhea. **B. giganteum.** Syn.: *Nyctotherus giganteus*. A species found in the dejecta of typhoid fever patients. **B. minutum.** A species associated with diarrhea. [Gr., *balantidion*, a little bag.]

ball. 1. In anatomy, any rounded part, like the globe of the eye, the thickening of the palm at the root of the thumb or of the sole at the base of the great toe, etc. 2. A globular mass, as of cotton, etc., used for making applications, for supporting parts, etc. 3. In veterinary medicine, a bolus. **b. and socket joint.** See *enarthrosis*. [Old Fr., *balle*.]

balloon'ing. The filling of a cavity of the body with air or gas. [It., *ballone*, great ball.]

Ballo'ta, Ballo'te. 1. A Linnaean genus of labiate plants. 2. *Quercus b. Bal-lota nigra.* The stinking (or black) horehound; a perennial European herb. It was formerly employed in hysteria and as a substitute for the white horehound (*Marrubium vulgare*), also as a panacea for diseases of cattle. [Gr., *bal-lote*.]

ballotement (bal-lot-mon'). The rebound of the fetus, suspended in its amniotic fluid, to a push from the examiner's fingers. **external b.** is available in the later months of pregnancy and is practiced by imparting a sudden motion to the abdominal wall covering the uterus and feeling the rebound of the fetus or one of its extremities. **internal b.** can be practiced from the beginning of the fourth month. The patient is in the erect position. The physician inserts two fingers into the vagina and gives a sudden upward push to the lower uterine segment. The sensation imparted to the ends of the fingers by the fetus settling back after its upward excursion has been likened to that produced by a piece of ice rising out of a glass of water into which it has been suddenly driven. [Fr., *balloter*, to toss about (said of the action of the waves).]

balm. 1. *Melissa officinalis*. 2. See *balsam*. 3. Any costly, highly aromatic, or healing ointment. 4. An anodyne or soothing drug. **b. of Gilead.** Mecca balsam. [Lat., *balsamum*.]

balneol'ogy. The science of baths and bathing; also that of mineral springs. [Lat., *balneum*, bath, + Gr., *logos*, understanding.]

bal'neophysiol'ogy. The science of the influence of baths on the system; the physiology of bathing.

bal'neotech'nics. The art of preparing and administering baths.

bal'neotherapeu'tics. The treatment of disease by means of baths. [Lat., *balneum*, a bath, + Gr., *therapeia*, medical treatment.]

bal'sam. 1. A term originally applied only to balm of Gilead, but now extended to a number of substances more or less resembling that body, all of them being viscid, aromatic liquids which exude from growing plants, and which consist of a mixture of resin and a volatile oil. They are insoluble in water, partially soluble in ether, and wholly soluble in alcohol. On exposure to the air, they harden from oxidation and from the evaporation of the volatile oil. They are divided into two groups: (a) Those of a purely oleoresinous character, such as copaiba b., Mecca b., etc., commonly designated as oleo-resins in the U. S. Ph. (b) Those that contain cinnamic acid, such as b. of Peru, b. of Tolu, etc.; these alone are designated as balsams in the U. S. Ph. 2. A medicinal preparation resembling a natural b. in physical properties, especially one containing an oily ingredient. 3. A name applied to the *Impatiens balsamina*, the *Abies balsamea*, and other plants. **b. of Canada.** See *Canadian turpentine*, under *turpentine*. **b. of capivi.** See *copaiba*. **b. of Fioravanti.** See *balsamum Fioravanti*, under *balsamum*. **b. of fir.** See *Canadian turpentine*, under *turpentine*. **b. of Peru.** Peruvian b.; a b. obtained from *Toluifera* (*Myroxylon perei*), and perhaps also from the related species, *Myroxylon peruiferum*, growing in San

Salvador, Central America. It is sometimes used internally in affections of the respiratory and intestinal tracts, but is oftener employed externally as a stimulant and antiseptic dressing for ulcers and wounds and to cure scabies. **b. of storax.** See *storax*. **b. of Tolu.** A b. obtained from *Toluifera balsamum* (*Myrospermum toluiferum*), a tree growing in Venezuela, New Granada, and Peru. It is used like b. of Peru, and especially as an internal remedy in catarrhal affections of the respiratory tract, in the form of Syrup of Tolu [U. S. Ph.] and occasionally in the form of the tincture. **b. weed.** *Gnaphalium polycephalum*, also *Impatiens balsamina*. **b. wood.** The genus *Myroxylon* (*Myrospermum*). **Brazilian b.** See *copaiba*. **Cairo b.** See *Mecca b.* **Canada b., Canadian b.** See *Canada turpentine*, under *turpentine*. **Carthage b.** See *b. of Tolu*. **cicatrizing and antiseptic b.** Of J. Felix, a mixture of 4 parts of pure liquefied carbolic acid, 1 part of morphin hydrochlorid, 10 parts each of tincture of arnica and tincture of aconite, 25 of balsam of Peru, and 50 of glycerin; applied to malignant ulcers. **Egyptian b.** See *Mecca b. fir b.* See *Canada turpentine*, under *turpentine*. **friars' b.** See *tinctura benzoini composita*, under *benzoinum*. **gurjun b.** Wood oil, an oleoresin from *Dipterocarpus turbinatus*. It is said to be employed occasionally for adulterating *copaiba*. **Jesuits' b.** See *tinctura benzoini composita*, under *benzoinum*. **Jews' b.** See *Mecca b.* **Mecca b.** Syn.: *balm of Gilead* (or of *Mecca*, or of *Judea*). A balsam derived from the *Balsamodendron gileadense* (*Amyris gileadensis*) of Arabia Felix. It is still used as a tonic in the East. Probably the myrrh of the Bible. **Mexican b.** See *b. of Peru*. [Lat., *balsamum*, the balsam tree or its resin. Gr., *balsamon*.]

balsam'ic. Containing, resembling, or of the nature of balsam.

Balsamodendron. The balm tree, balsam tree. **B. ehrenbergianum.** A species closely related to *B. myrrha*, which was regarded by Berg as the true source of myrrh. According to Oliver and Hildebrandt, however, it is identical with *B. gileadense*. **B. gileadense.** The balsam tree of Arabia, from which Mecca balsam is obtained. **B. myrrha.** Liquid myrrh or *stacte*. **B. opobalsamum.** A variety of *B. gileadense*. [Gr., *balsamon*, balsam, + *dendron*, a tree.]

bal'samum. See *balsam*. **b. Fioravanti.** A synonym for the alcoolat de Fioravanti, preparations similar to which were formerly official under this title in a number of formularies. **b. peruvianum.** See *balsam of Peru*. [U. S. Ph.]. **b. toluatum.** See *balsam of Tolu*. [U. S. Ph.]. **b. traumaticum.** This may be substituted for the official compound tincture of benzoin. It consists of benzoin 40, storax 12.8, balsam of Tolu 12.8, balsam of Peru 64, aloes 3.2, myrrh

3.2, angelica root 1.6, alcohol to make 400. [N. F.]

band. 1. Any appliance or structure that encircles or constricts the body or a limb. 2. Any ribbon-shaped or cordlike structure that constricts, binds, or connects two or more portions of the anatomy. **amniotic b's.** B's of false membrane, sometimes formed on the inner surface of the amnion, and extending to or encircling certain portions of the fetus. By their contraction they may give rise to malformations. **anogenital b.** A transverse b. of integument, the rudiment of the perineum, which completes the division of the cloaca in the embryo. **axis b.** The primitive streak of Von Baer. **b. of Reil.** Syn.: *lateral internal fasciculus*. A triangular space on the lateral face of the crus cerebri, below the testes. **constricting b.** The intersegmental or intercellular substance at the nodes of Ranvier. **epithelial b.** A band in the embryo composed at first of a central band of polygonal cells, covered by a layer of columnar epithelium, extending the whole length of the jaws, from which the teeth are formed. **furrowed b.** A small b. or ridge of gray matter, connecting the uvula of the cerebellum with the amygdalae. **iliotibial b.** A thickening of the fascia running down the outer side of the thigh. **inferior vocal b's.** Syn.: *true vocal b's* (or *cords*). Two anteroposterior folds, one on each side of the internal surface of the larynx, at the lower extremity of the glottis, which by their varying degree of approximation and tension, govern the pitch of the voice. **inner b. of the colon.** A thick b. formed by the muscular coat extending along the inner aspect of the ascending and descending colon and the lower aspect of the transverse colon. **mesoblastic b.** A row of mesoblastic cells extending the whole length of the embryo. **moderator b's.** The columnae carnae of the ventricles of the heart in mammals, extending from the inner to the outer side of the cavity. **posterior b. of the colon.** Syn.: *posterior ligament of the colon*. A bandlike thickening of the muscular coat of the colon running along its attached border. **superior vocal b's.** Syn.: *false vocal b's* (or *cords*). Two lateral folds, one within each side of the larynx, at the upper extremity of the glottis. **supra-orbital b's.** The thickenings above and to the outer side of the eyes in the embryo. **vocal b's.** See *inferior vocal b's* and *superior vocal b's*. [Mid. Eng., *band*, a band.]

band'age. An appliance consisting wholly or in great part of muslin, linen, flannel, or other analogous fabric, employed for restraining, suspending, supporting, or compressing a part, or for retaining other applications in position. **b. of separate strips.** See *many-tailed b.* **Esmarch's elastic b.** A broad strip of rubber shirring or sheet rubber from 3 to 5 yards long, in the form of a roller b., together with a stout solid rubber cord

or strap having a chain at one end and a hook at the other; used for expelling the blood from a limb and as a tourniquet in bloodless amputations. **figure of eight b.** Any b. so applied that turns are made alternately around two different parts (e. g., the two shoulders), or at two different parts of a limb or the trunk, in the form of a figure of eight. **many-tailed b.** Syn.: *Scultetus's b.*, *b. of separate strips*. A b. consisting of a number of strips passed transversely under a limb or the trunk, one somewhat overlapping the one above or below it, according as the b. is to be applied from below upward or from above downward. Sometimes they are stitched to a longitudinal strip. The ends are brought together in front somewhat spirally, one overlapping the other, and the appearance when the application is completed is that of a spiral reversed roller. **plaster b.**, **plaster of Paris b.** An immovable b. in which the stiffening material is plaster of Paris. A roller b. of loose texture is prepared by rubbing dry plaster into its meshes; when it is to be applied, it is soaked in water; after its application, it is strengthened by applying a mixture of plaster and water of the consistence of cream. **reverse b.** A spiral b. in which with each turn the bandage is turned back on itself so as to aid adjustment to a larger or smaller portion of a limb. **roller b.** A strip of muslin, flannel, or other like material, wound from one or both ends in the form of a firm roll. The roll is called the *head*, and the free end the *tail*. **Scultetus' b.** See *many-tailed b.* **spica b.** A form of the figure of eight b., in which the turns of the two loops of the 8 encircle dissimilar or asymmetrical parts (such as the pelvis and the thigh) and are usually of unequal size. It derives its name from the fancied resemblance of its intersections to a spike of barley. **suspensory b.** A b. for suspending a part, especially the scrotum and testicles or the breast. **T-b.** A b. consisting of two separate strips fastened together in the form of the letter T, one for encircling a part (generally the waist or the hips) and the other to be secured by its free end to the former (generally after passing beneath the perineum); used for holding dressings in place.

Bandeloux's bed. An air b. with a vessel beneath for the collection of urine, the whole surmounted by a cradle covered with gauze.

banc. 1. Anything poisonous or destructive. 2. A name given to the "rot," a disease of sheep, in Somersetshire, England. [Ang.-Sax., *bana*.]

ban'ting cure, **ban'tingism.** A dietetic method of reducing corpulence, called after Mr. Banting, a London merchant, who followed it in his own case, under the direction of a surgeon, and published an account of it.

Ban'ti's disease. An affection characterized by chronically enlarged spleen with anemia, becoming complicated near the

end with cirrhosis of the liver and ascites.

[*Guido Banti*, Italian physician, living.]

Baptisia. A genus of leguminous herbs.

B. tinctoria. Syn.: *Sophora* (seu *Podalyria tinctoria*). Wild indigo, growing in dry places throughout the United States and Canada. All parts of the full grown plant, but especially the root and the bark, have emetic and cathartic properties. [Gr., *baptain*, to dye.]

bap'tisin. A glucosid obtained from *Baptisia tinctoria*. It has no special medicinal value.

baptitoxin (bap-ti-tox'in). A highly poisonous alkaloid obtained from *Baptisia tinctoria*. In small doses, it is tonic; poisonous doses cause death by asphyxia.

bar. 1. An inward prominence of the symphysis pubis, encroaching on the pelvic cavity. 2. Skeletal elements of a branchial arch. 3. When qualified by an adjective denoting a bone, the cartilaginous rod from which that bone is developed.

articulo-meckelian b. The cartilaginous structure from which the lower jaw is developed.

b. of the neck of bladder. See *interureteric b.*

hyoid b's. Reichert's cartilages, the skeletal elements of the hyoid branchial arch, the rudiments of the styloid processes.

interureteric b. A muscular ridge on the floor of the bladder, running between the orifices of the ureters. When made prominent by muscular contraction it may cause an impediment to urination. [Old Eng., *barre*, a rod.]

baranilin (bar-an'il-in). Any anilin boiling between 200° and 260°. [Gr., *barus*, heavy, + *anilin*.]

Barba'dos fever. See *yellow fever*, under *fever*.

barbaloin (bar-ba'lo-in). Aloin obtained from Barbados aloes. [*Barbados* + *aloes*.]

barba'ria, **barba'ricum.** Rhubarb.

bar'berry. See *Berberis*.

barber's itch. See *sycosis*.

barbiers (bar'be-ä). A nervous disease met with on the island of Réunion. [Arab., *bahr-bari*.]

Barcelona fever. See *yellow fever*, under *fever*.

baresthesiometer (bar''es-the-ze-om'et-er). An instrument for testing the sense of pressure in different parts of the body. It consists of a button at the end of a spiral spring which, as it is pressed upon, turns a registering needle on an index.

[Gr., *barus*, heavy, + *aisthesis*, perception, + *metron*, measure.]

baril'la. An impure sodium carbonate obtained by the incineration of various seashore plants. It occurs in hard, porous masses of grayish-blue color.

barite. See *barium sulphate*, under *barium*.

ba'rium. Syn.: *baryum*, *barytium*. A metallic element found widely distributed through the vegetable kingdom, usually under the form of the sulphate or carbonate. It is readily decomposed by water. Atomic weight 137.4. Symbol

Ba. **b. carbonate.** BaCO₃, used as a

- rat poison. **b. chlorid.** BaCl_2 , used in the test for sulphuric acid. It has been suggested for use, like digitalis, in veterinary practice. **b. hydrate.** Syn.: *b. hydroxid.* $\text{Ba}(\text{OH})_2$ + aqua, used in the test for carbon dioxide. **b. iodid.** Has been used like potassium iodid. **b. oxid.** BaO , a dehydrating agent. **b. peroxid.** BaO_2 , used in the preparation of hydrogen peroxid. **b. sulphate.** Syn.: *barite.* BaSO_4 , the characteristic insoluble b. compound employed to identify b. **test solution of nitrate of b.** A solution used for chemical testing, consisting of b. nitrate, 1 part dissolved in 20 parts of water [U. S. Ph.]. [Gr., *baris*, heavy, on account of the high specific gravity of barium sulphate.]
- bark.** The external tissue in trees, sheathing the woody cylinder of which the stem and root are composed. The word is often used without qualification to denote Peruvian b. or cinchona b. **Jesuits' b.** A name given to cinchona b. because introduced generally throughout Europe by the Jesuits. **peruvian b.** A synonym for cinchona b., frequently used by older writers. **peruvian calasaya b.** See *Cinchona*. **quilled b.** Cinchona b. rolled into the form of a quill. **red b.** Red cinchona b. **royal b.** See *Cinchona*. **rusty b.** See *pale cinchona b.*, under *Cinchona*. **white b.** An inferior quality of cinchona b., with soft white epidermis, found on the Pacific coast of South America. [Dan. & Swe., *bark*.]
- barley.** The genus *Hordeum*; also the grain derived from plants of that genus.
- b. water, decoction of b.** See *decoction hordei*, under *hordeum*. **patent b.** B. meal made from pearl b. **pearl b., pearly b.** [U. S. Ph., 1870; Br. Ph., 1885.] B. deprived of its coverings and made round and smooth by grinding. [Ang.-Sax., *baeric*, from *bere*.]
- Barlow's disease.** Infantile scurvy. See *scurvy*. [Sir Thomas Barlow, London physician, born 1845.]
- barm.** Yeast. [Ang.-Sax., *beorma*.]
- Barnes' balloons, bags, or dilators.** Fiddle-shaped rubber bags, with reinforced walls fitted with a tube and stop-cock. They may be introduced into the os of the pregnant uterus and gradually filled with water to dilate the cervix. **B's curve.** A segment of a circle whose center is the promontory of the sacrum. [Robert Barnes, London obstetrician, 1817-1907.]
- barograph** (bar'o-graf). An instrument which registers the atmospheric pressure. [Gr., *baros*, weight, + *graphein*, to record.]
- barometer** (bar-om'et-er). A term (first used by Boyle, in 1664 or 1665) applied to any instrument for ascertaining the pressure of the atmosphere, i. e., the weight with which it presses upon the earth's surface at any given point. There are two chief sorts of b's. [Gr., *baros*, weight, + *metron*, a measure.]
- bar'oscope.** 1. A barometer. 2. An instrument for demonstrating the upward pressure of liquid and gaseous media upon solid bodies suspended in them. [Gr., *baros*, weight, + *skopein*, to view.]
- Baros'ma, Baryos'ma.** A genus of rutaceous plants. **B. betulina.** A South African shrub furnishing buchu. **B. crenata.** Syn.: *Diosma crenulata*, seu *odorata*. The buchu bush, growing at the Cape of Good Hope. It furnishes the short buchu of commerce. **B. serratifolia.** Syn.: *Diosma serratifolia*. A South African shrub. It furnishes the so-called long buchu. [Gr., *baryosmos*, having an oppressive odor.]
- baros'min dios'min.** A bitter glucosid occurring in buchu.
- bar'ren.** Said of a woman bearing no children; without issue; of male animals, sterile. Of trees or plants, without fruit or seed. [Old Fr., *barain*, fem., *baraine*.]
- Bartholin's duct.** An occasional large duct of the sublingual salivary gland, running beside Wharton's duct and opening with it. **B's gland.** 1. The vulvo-vaginal gland. 2. A subdivision of the sublingual gland. [Kaspar Bartholin, Danish anatomist, 1585-1629.]
- Bartonella bacilliformis.** The parasite found in the blood and viscera of cases of oroya fever.
- baryglos'sia.** Slow, thick speech. [Gr., *barys*, heavy, + *glossa*, tongue.]
- baryla'lia.** Indistinct speech. [Gr., *barys*, heavy, + *lalia*, speech.]
- baryta** (ba-re'tah). Barium oxid. List of poisons and their antidotes, see in appendix, page 938. [Gr., *barytes*, heaviness.]
- barytium.** See *barium*.
- bar'ium.** See *barium*.
- ba'sad.** Toward the basal aspect.
- ba'sal.** Pertaining to, situated at, or forming the base; fundamental, underlying. In dentistry, a term used to express the floor of cavities in the grinding surfaces of the molar and bicuspid teeth. **b. plate.** A term used in embryology to signify the superficial portion of the decidua. [Lat., *basilis*, fr. Gr., *basis*, base.]
- basculation** (bas-ku-la'shun). Swinging a retroverted uterus into its place. [Fr., *basculer*, to swing.]
- base.** 1. In general the underlying, fundamental, or lower part of a structure. 2. In chemistry, any chemical element or substance which has the property of forming a salt with an acid. 3. In dentistry, that portion of an artificial denture that covers the roof of the mouth or upper jaw to which the artificial teeth are attached. **animal b.** A ptomain or leuko-main. **hexone b's.** The three ammoniacs, lysin, hestidin, and arginin, which have marked basic properties. [Gr., *basis*, foundation.]
- Ba'sedow's disease.** Exophthalmic goiter. Hyperthyroidism. [Karl A. von Basedow, German physician, 1799-1854.]
- base'ment mem'brane.** A thin membrane, situated beneath the secreting glands of a mucous membrane.
- Bash'am's mixture.** Liquor ferri et am-

monii acetatis. [*William Richard Basham*, English physician, 1804-1877.]

basi- or **basio-**. Combining form of *Gr.*, *basis*, a base, used to signify of or pertaining to the base or body of any organ.

ba'sic. Relating to a base of any kind. In chemistry, pertaining to, or having the properties of a base; of salts, containing an excess of the b. constituent. **b. acetates**. See under the names of the *acetates*. The most important b. acetates are those of aluminium, iron, and lead.

basichromatin (ba-sik-ro'mat-in). The name given to the chromatin in the nucleus to indicate its special affinity for basic dyes.

basicity (ba-sis'it-e). 1. The quality of being a base. 2. The combining power of an acid. The degree of basicity is expressed by a number indicating the number of hydrogen atoms replaceable by a base. Acids and salts of a b. of one, two, three, and four are called respectively monobasic, dibasic, tribasic and tetrabasic.

bas'ilad. Toward the base or the "basilar aspect."

bas'ilar, bas'ilary. Pertaining to, or constituting, or springing from the base of anything: The prominent median anterior process of the occiput, articulating with the sphenoid. See *table of arteries under artery*. [*Lat.*, *basilaris*.]

basilem'ma. A basement membrane. [*Gr.*, *basis*, a base, + *lemma*, peel.]

basil'ic. Royal (applied to certain veins, to denote their supposed importance). [*Gr.*, *basileus*, king.]

basil'ysis. The operation of breaking or cutting up the bones forming the base of the fetal skull as a final step in craniotomy. [*Gr.*, *basis*, base, + *lysis*, a breaking up into pieces.]

bas'ylst. An instrument devised by A. R. Simpson for performing basilysis. It bears a general resemblance to Thomas's perforator, but the shaft is split to the end of the screw, forming two blades of equal size and shape.

bas'in. 1. A shallow vessel wider than deep and with sloping sides. 2. The pelvis. 3. The third ventricle of the brain. [*Old Fr.*, *basin*.]

ba'sion. A point situated in the median line of the base of the skull at the anterior border of the foramen magnum. [*Gr.*, *basis*, base.]

ba'siotribe. An instrument devised by Tarnier for breaking up the base of the fetal cranium in cephalotripsy; consisting of a heavy perforator with a conical-screw point, and of two blades like those of a cephalotribe, either or both of which may be attached to a pivot on the perforator after the latter has been engaged in the base of the skull. [*Gr.*, *basis*, base, + *tribein*, to crush.]

ba'siotripsy. Basilysis.

basiphobia (bas-i-fo'be-ah). A phobia of walking. [*Gr.*, *basis*, a stepping, + *phobos*, fear.]

ba'sis. In pharmacy, that ingredient

which either is the most important medicinally or determines the consistence and other general characters of the product.

b. cerebri. The inferior surface of the brain. **b. cordis**. The base of the heart; the broad upper part of the organ. **b. coronae radiatae**. The upper portion of the crus cerebri at the point where the radiation of fibers termed the corona radiata begins. **b. corporis striati**. A term applied by Berenger to the anterior extremity of the corpus striatum. **b. cranii**. The lower portion of the skull. **b. cranii externa**. The exterior of the base of the skull. **b. cranii interna**. The inner surface of the base of the skull, comprising the anterior, middle, and posterior fossae. **b. linguae**. The base of the tongue; the broad lower portion which is attached to the hyoid bone and the thyroid cartilage. **b. mandibulae**, **b. maxillae inferioris**. The body, or horizontal portion, of the inferior maxilla. **b. nasi**. The base of the nose. **b. orbitae**. The anterior aperture of the orbit. **b. patellae**. The upper edge of the patella. **b. pedis**. The sole of the foot. **b. pedunculi cerebri**, **b. pedunculorum**. See *crura cerebri*, under *crura*. **b. prostatae**, **b. prostatica**. The base of the prostate gland; that portion which rests upon the rectum. **b. sacri**. The thick upper portion of the sacrum. **b. scapulae**. The inner (vertebral) border of the scapula. **b. vesicae urinariae**. The base or floor, of the bladder. [*Gr.*, *basis*, foundation, base.]

bas'ket cell. A type of multipolar ganglion cell, found in the outermost gray or molecular layer of the cerebellum, whose long nerve process gives off at intervals towards the interior delicate branches which form a basketlike network around the bodies of Purkinje's cells. [*Lat.*, *bascauda*.]

Basle anatomical nomenclature. A list of Latin terms in anatomy adopted by the German Anatomical Society at its meeting in Basle, Switzerland, in 1895. The terms are inserted in this dictionary after the sign [B. N. A.].

basophil (ba'so-fil). 1. A basophilic element. 2. Basophilic.

basophilic (ba-so-fil'ik). Stainable by basic dyes rather than acid, a term applied to various cells designating their mode of staining. [*Gr.*, *basis*, a base, + *philein*, to love.]

Bassi'ni's operation. An o. for the cure of hernia by effecting firm union of the walls of the canal through which the hernia passed, and then making a new canal by uniting the edges of the rectus and the internal oblique muscles and joining thereto the transversalis fascia and Poupart's ligament. The cord is covered by the external oblique, when it is sutured to Poupart's ligament. [*Eduardo Bassini*, Italian surgeon, living.]

bas'sorin. 1. A substance belonging to the class of vegetable mucilages, derived from Bassora gum tragacanth and other sorts of gum. 2. A generic name for all

vegetable mucilages. [From *Bassora*, whence the gum contained is exported.]

bast. The fibrous portion of the bark of various trees. [Ang.-Sax., *baest*, lime tree.]
bas'tard. 1. Illegitimate child. 2. Inferior in quality or grade. [Old Fr.]

bata'tas. See *Ipomea*.

bath. 1. The act or process of bathing; the entire or partial immersion of the body in a semisolid, liquid, or gaseous medium, for cleansing, refreshing, or medicinal purposes. 2. A tub or other reservoir used for the purpose of bathing. 3. In pharmacy, a preparation designed for medicinal application by bathing, consisting generally of certain designated ingredients to be mixed with water at the time of using. When no other ingredient is mentioned, water is intended. 4. In chemistry, a medium, such as sand, water, oil, etc., by which a substance to be heated is surrounded, either immediately or in a proper receptacle. **air b.** A b. in which the body is exposed to air of any desired density, temperature, etc. **alcohol vapor b.** A b. consisting of the vapor arising from alcohol. **alternating b.** The bathing of a person alternately with water of a temperature above 98° F. and cold water. **artificial Nauheim b.** A b. in imitation of the natural waters of Nauheim, prepared by adding substances that will generate free carbonic acid, such as sodium carbonate and a mineral acid. **blanket b.** A b. used in nephritis to induce perspiration. **bog b.** A b. containing a mixture of bog earth and warm water. **Brand b.** The systematic giving of baths at the temperature of the room every three hours, so long as the rectal temperature is 103° F. or over, as in typhoid fever [Ernst Brand, German physician, 1827-1897]. **carbonic acid b.** **carbonic b.** A b., natural or artificial, containing free carbonic acid. **cold air b.** Exposure of the body to cold air. **cold b.** A bath of water at a temperature between 10° and 21° C. (50° and 70° F.). **cool bath.** A b. of a temperature between 20° and 25° C. (68° and 77° F.). **douche b.** See *douche*. **drip b.** See *sheet b.* **dry air b.** See *hot air b.* and *Turkish b.* **eastern b.** See *Turkish b.* and *Egyptian b.* **Egyptian b.** A variety of the Turkish b., in which the temperature is gradually raised and then gradually lowered to the initial point. **electric b.** 1. A b. in which the water, or other material of the b., and the patient's body are included in the circuit of a galvanic current. 2. A b. in which an electric current is generated by the chemical decomposition of the constituents of the b. **electric light b.** A b. in which the body is subjected to the direct rays of electric light from incandescent lamps arranged in a cabinet. **emollient b.** A b. which exerts an emollient action on the skin, such as an herb b., starch b., malt b., or bran b. **Finnish b.** A b. resembling the Russian b., but of higher temperature. **foot b.** A b. for the feet only. **galvanic b.**

See *electric b.* **gas b.** A b. in which a gas is applied to the surface of the whole or part of the body, or to a mucous tract. **half b.** A b. for the hips and lower extremities. **hip b.** See *sitz b.* **hot air b.** A b. consisting of air heated to any desired temperature and confined in a suitable cabinet or beneath the bed coverings. **hot b.** A b. of a temperature exceeding 37° C. (98.6° F.). **hydrostatic b.** A form of the permanent b. **Indian b.** A Turkish b. in which massage is combined with the action of heated vapor. **irritant b.** A b. which causes irritation of the surface, e. g., the mustard b. **marine mud b.** A b. in the mud from sea beaches, collected and applied with friction; used especially in Scandinavia. **Mexican steam b.** A form of vapor b. used in Mexico. **mud b.** The application of mud precipitated from certain mineral springs, containing the salts of the latter, as well as various minute animal and vegetable organisms, or else mud from peat-like deposits. **Nauheim b's.** B's of the natural gaseous waters of Nauheim. The term is often used of any CO₂ baths for the treatment of heart disease. **oxygen b.** A gas b. consisting of oxygen; used in place of CO₂ in the treatment of heart disease. Also a water b. charged with oxygen gas. **permanent b.** A b. intended for application for an indefinite time. **reducing b.** A b. for reducing the temperature of the body. **Roman b.** The systematic succession of warm, hot, and cold baths with passive exercise, in use among the ancient Romans. **Russian b.** A form of vapor b. consisting of exposure to hot steam, accompanied by friction with soap, massage, etc.; then a cold b., after which the patient returns to the steam. This alternation is repeated several times. **sand b.** 1. A b. of sand, usually heated to 118.4°-122° F. for a general b., and to 122°-132.8° F. for a partial b.; used as a diaphoretic. 2. In chemistry, a b. consisting of fine dry sand, used for immersing retorts, etc., which are to be heated gradually to a comparatively high temperature. **sheet b.** Cold affusion with the body wrapped in a sheet. **shower b.** A form of b. in which water is projected or made to fall on the body in a shower of drops. **sitz b.** Syn.: *hip b.* A partial b. in which the hips are immersed. **sponge b.** A b. applied with a sponge, combining the effects of muscular effort and friction with those of water. **steam b.** 1. See *vapor b.*, *Russian b.* and *Mexican steam b.* 2. In chemistry, a bath for heating substances by suspending them in steam. **stimulating b.** A b. containing aromatic, astringent, or tonic ingredients, supposed to stimulate the part immersed. **sulphureted mud b.** A b. consisting of mud deposited from sulphurous springs which contain sulphur compounds. **sun b.** Exposure of the naked body to the more or less prolonged action of the rays of the sun. **sweat b.** Any

b. designed to produce sweating, especially the Turkish and Russian b's. **tank b.** A b. taken in a large tank or basin, in which a number of persons bathe at once. **temperate b.** A b. of a temperature between 77° and 86° F. **tepid b.** A b. of a temperature of 86° to 91.4° or 95° F.; intermediate between the warm b. and the temperate b. The two terms, temperate b. and tepid b. are often applied indiscriminately to b's of any temperature from 77° to 95° F. **tub b.** A b. taken in a tub of suitable size to receive the whole body or a part of it to be bathed. **Turkish b.** One of the modern forms of the ancient Roman b. The bather passes through gradually increasing temperatures, accompanied by massage, until he reaches 176° F., where he sweats profusely. After this he passes through gradually decreasing temperatures, accompanied with douching and rubbing until 70° F. is reached, when he is dried and reclines for a time on a couch. **vacuum b.** The treatment of a portion of the body by subjecting it to the action of a partial vacuum. **vapor b.** A b. in air charged with vapor and usually of a very high temperature. **warm b.** A b. of a temperature of 33°-40° C. (91.4°-104° F.). **water b.** 1. A b. composed of water only. 2. In chemistry, a b. consisting of water for immersing bodies to be heated to a temperature not above the boiling point of water. [Ang-Sax., *baeth.*]

bathmism. The vital energy leading to growth. [Gr., *bathmos*, a step.]

bathmotropic (bath-mo-tro'pic). The term applied by Engelmann to a hypothetical variety of nerve fiber going to the heart, which is supposed to affect the irritability of the cardiac muscle in the way of an increase (positive bathmotropic action) or a decrease (negative bathmotropic action). [Gr., *bathmos*, threshold, + *trepein*, to turn.]

bathoph'bia. A fear of high objects. [Gr., *bathos*, height, + *phobos*, fear.]

bathyanesthesia (bath'e-an-es-the'ze-ah). Loss of deep pressure sensibility. [Gr., *bathys*, deep, + *anesthesia*.]

batracoplasty (bat'rak-o-plas-tee). An operation for the cure of ranula. [Gr., *batrachos*, frog, + *plassein*, to mold.]

bat'arism, battarismus (bat'ar-ism, bat-ar-is'mus). Stuttering with inability to pronounce the aspirated *r*. [Gr., *battarismos*, a stuttering.]

bat'tery. Galvanic or faradic battery. An apparatus for generating voltaic electricity, consisting of a pile or series of plates of copper and zinc or of any materials susceptible of galvanic action. **dry b.** One in which the plates or elements are in a dry medium such as chlorid of silver. **faradic b.** One in which the current of electricity is passed through an induction coil made of insulated copper wire. **storage b.** Syn.: *secondary* or *galvanic accumulator*. A galvanic b. with lead plates as electrodes and dilute sulphuric acid as the electrolyte. It must

first be charged by passing an electric current through it for a number of hours. Lead oxid collects on one plate and spongy lead on the other. It can then be used at any time to give a current of 2+ volts until the stored electricity is all given off, when it must be charged again. **wet b.** One in which the elements are immersed in a fluid such as weak sulphuric acid.

Batthey's operation. Removal of the normal ovaries to induce an artificial menopause. Formerly used in the treatment of fibroid tumors of the uterus. [Robert Batthey, American surgeon, 1828-1895.]

bat'tledore placen'ta. A placenta in which the umbilical cord is inserted in the margin.

Baudelocque's diameter (böd-loks'). The external conjugate diameter of the female pelvis. [Jean Louis Baudelocque, Paris obstetrician, 1745-1810.]

Baumé (bo-mä'). A chemist, who constructed a hydrometer named after him.

B. hydrometer. A hydrometer which has its scale graduated so that the zero point indicates the density of pure water and the 10 point of the scale indicates the density of a 10 per cent. salt solution. Upon this basis the point 666 of the scale indicates the density of 100 per cent. sulphuric acid.

bav'arol. A certain proprietary tarry disinfectant.

bay rum. A perfumed spirit containing oil of bay. See *spiritus myrciæ* under *Myrciæ*.

ba'zin. Molluscum contagiosum.

bdellium (del'le-um). A myrrhlike exudation from several buseraceous plants; also, from *Dioscorides*, the plant itself. B. is occasionally used as an ingredient of plasters. **African b.** An exudation from *Balsamodendron africanum*. **Arabian b.** A variety of Indian b. brought from Arabia. [Gr., *bdellion*.]

bead. A small ball, drop, or bubble; in blowpipe analysis, a globule of molten matter. **Lovi's b's, specific gravity b's.** Small hollow glass spheres of different degrees of buoyancy; used to ascertain the specific gravity of liquids. Each b. is numbered, and the number marked on the heaviest b. that floats in the liquid examined indicates its specific gravity.

beak. 1. The bill, or nib, of a bird, also any analogous structure in an animal. 2. Any pointed end resembling a bird's. 3. The tube or spout of a retort or other similar vessel. **b. of the calamus scriptorius.** Its lower extremity, or re-entrant angle. **b. of the corpus callosum, b. of the encephalon.** The splenium, or posterior end, of the corpus callosum. **b. of the sphenoid bone.** See *rostrum sphenoidale*. **coracoid b.** The b. of the coracoid process of the scapula. [Old Eng., *becke*.]

Beale's spiral fiber. See *spiral f.* under *fiber*.

bean. The common name for the genus *Faba*, its fruit (pod), and the seed of the

fruit; also applied generically to any seed resembling that of *Faba*. **buck-b.** *Menyanthes trifoliata*. **calabar b.** *Physostigma venenosum*. **castor b.** The seed of *Ricinus communis*. **chocolate b.** *Theobroma cacao* and its seed. **ordeal b. of Old Calabar.** *Physostigma venenosum*. **Saint Ignatius's b.** The seed of *Strychnos ignatia*. It contains strychnin [U. S. Ph., 1880]. [Ang.-Sax., *bean*.]

beat (bêt). A stroke, a pulsation, as of the heart or an artery. **apex b.** The impulse of the apex of the heart against the wall of the chest.

beebe'erin. An alkaloid, $C_{19}H_{21}NO_3$, found in the bark of *Nectandra rodioei*; once suggested as a substitute for quinin. [Lat., *beberina*.]

Beck's treatment of sinuses with bismuth vaselin paste. E. G. Beck dries a sinus or an abscess cavity with a strip of gauze and injects into the cavity with a syringe a paste made of one part bismuth subnitrate (free from arsenic) and two parts of boiled sterilized vaselin, which has been cooled to $110^{\circ} F.$, or less. The method has been used successfully, both in diagnosis with the x-ray and in treatment.

Bequerel's disk (bek-rels'). An apparatus composed of two thin plates of copper, soldered to a rod of bismuth contained in a small tube of hard rubber. **B's rays.** R's of light given out by uranium salts after exposure to the sun. [*Antoine Henri Bequerel*, French physicist, 1852-1908.]

bed. 1. An article of furniture for sleeping on. 2. A structure on which another structure rests (e. g., the matrix of the nail) or in which it is imbedded (e. g., the parts immediately surrounding a tumor). **air b.** A b. similar to the water b., but distended with air instead of water. **Bandeloux's b.** An air b. with a vessel beneath for the collection of urine, the whole surmounted by a cradle covered with gauze. **b. swing.** An apparatus resembling a hammock for swinging a patient clear of the b. **hydrostatic b.** See *water b.* **protection b.** A crib for confining maniacs in the recumbent posture. **stomach b.** The hollow on which the stomach lies, composed of the left border of the diaphragm, the left suprarenal capsule, the greater surface of the spleen, the anterosuperior surface of the pancreas and the transverse mesocolon and colon. **water b.** A b. consisting of a rubber sac filled with water; designed to equalize the pressure due to the weight of the body. [Ang.-Sax., *bedd*.]

bedbug. *Cimex lectularius*. A parasitic insect about 3 mm. long, oval in shape, of a white or brown color and giving off a peculiar odor when crushed. Its bite produces a wheal with a central hemorrhagic point and great itching.

bed'lam. A noisy place, as in an asylum. [A colloquial contraction of "Bethlehem" Insane Asylum in London.]

bedsore. Decubitus. An ulceration oc-

curring on a part of the body exposed to pressure as in a patient confined to bed in one position for a long period of time.

beef-es'sence. See *b.-tea*. **b.-extract.** A brown extract-like mass, readily soluble in water; made, according to Liebig, by boiling minced lean meat with water, removing the fat and gelatin, and evaporating on a water-bath to the consistence of an extract. **b.-tea.** A seasoned decoction of beef.

beer. A fermented alcoholic beverage, made from an infusion of malt, generally barley malt, and hops. The fermentation is generally brought about by the addition of brewer's yeast. It contains about 4 per cent. alcohol, 1 per cent. sugar, 3 per cent. dextrin, 0.7 per cent. proteins, with small amounts of glycerin, lactic acid, and inorganic salts.

Beer's operation. 1. An o. for artificial pupil, in which an incision was made in the cornea with a narrow lance knife, the iris was seized with a sharp hook, drawn out of the wound, and cut off close to the cornea with curved scissors. In cases of closed pupil Beer made a flap incision in the cornea, pulled out the iris with a hook, and cut off the apex of the pouch, thus leaving a round pupil. 2. Iridotomy by introducing a narrow lance knife or Beer's cataract knife through the margin of the cornea into the anterior chamber, and dividing the iris transversely for a distance of 3 or 4 mm. The divided radial fibers cause a gaping of the wound, and thus an elongated pupil is formed.

bees'wax. A wax derived from honey-comb, composed of a mixture of ceratinic acid ($C_{25}H_{51}-COOH$) and the myricylic ester of palmitic acid ($C_{15}H_{31}-CO.O.-C_{30}H_{61}$).

Beggiatoa (bej-e-ah-to'ah). A genus of the *Schizomyces* and of the family *Beggiatoaceae*, consisting of long, straight, unbranched filaments, which in the swarming stage are sometimes spiral, thicker than in the allied genus, *Leptothrix*, and are also distinguished by their containing sulphur in the form of strongly refracting granules and by not being surrounded by an enclosing sheath. They are motile by means of an undulating membrane. The *Beggiatoae* possess the property of decomposing sulphur compounds with the evolution of hydrogen sulphid. They occur in both running and stagnant water which receives sewage or other refuse, in sulphur springs, upon mud, and upon animal and vegetable bodies. **B. alba.** 1. A species found in the waste water from sugar manufactories, tanneries, etc., and in sulphur waters, forming a white or yellowish white layer (the *barégine* or *glairine* of the French); in the adult state also found upon decomposing water plants and dead insects. The filaments vary in thickness from 1 to 5 μ . They increase by division. 2. Var. *marina*. Syn.: *B. Oerstedtii*. A variety of *B. alba* distinguished from the ordi-

nary kind by its occurrence in sea water, and by its smaller size (thickness only 2μ). **B. arachnoidea**. A species occurring in swamp and sulphur waters forming thick jointed motile rods. **B. mirabilis** [Cohn]. A species occurring as a white layer in sea water, in sea mud, and on marine plants and decomposing animal substances, distinguished by its very great size. By septation, it is converted into almost isodiametric particles. **B. roseopersicina**. A species found frequently in excavations and pools, forming a red or violet covering. The filamentous form is like that of *B. alba*, and is distinguished from it only by its red color, due to the presence of bacteriopurpurin. [From the name of *F. S. Beggiano*, an Italian botanist.]

Behring's law. The blood and serum of an immunized subject will confer immunity when injected into another.

be'la. Syn.: *Aegle marmelos*, *belaefructus*. Bael fruit; the half-dried unripe fruit of the *Aegle marmelos*; used as a remedy for dysentery and diarrhea.

belladonna. Deadly nightshade (*Atropa b.*). List of poisons and their antidotes, see in appendix, page 938. **b. folia** [U. S. Ph., Br. Ph.]. The leaves of *Atropa b.*, collected before or during the time of flowering; they contain much atropin, though not so much as the root. **b. fruit**. The berries of *Atropa b.* They resemble cherries in appearance and color, and are highly poisonous. **belladonnae radix** [U. S. Ph., Br. Ph.]. B. root. **b. root**. [U. S. Ph., Br. Ph.]. The root of *Atropa b.* It contains varying amounts of atropin. **emplastrum belladonnae** [U. S. Ph., Br. Ph.]. B. plaster. That of the U. S. Ph. is prepared from extract of belladonna leaves. **extractum belladonnae foliorum** [U. S. Ph.]. Must contain 1.4 per cent. of the mydriatic alkaloids. **extractum belladonnae liquidum** [Br. Ph.]. An extract of belladonna root containing 0.75 per cent. of belladonna alkaloids. **extractum belladonnae viride** [Br. Ph.]. An extract prepared from the fresh leaves and young branches of belladonna. **fluid extractum belladonnae radicis**. [U. S. Ph.]. Should contain 0.5 per cent. of the mydriatic alkaloids. See *extractum belladonnae liquidum* [Br. Ph.]. **linimentum belladonnae** [U. S. Ph., Br. Ph.]. B. liniment made by dissolving 5 parts of camphor in 95 of fluid extract of b. root [U. S. Ph.]. The belladonna liniment of the Br. Ph. contains somewhat less b. than the U. S. Ph. preparation. **tinctura belladonnae** [Br. Ph.]. **tinctura belladonnae foliorum** [U. S. Ph.]. A tincture of belladonna leaves which must assay 0.035 per cent. of mydriatic alkaloids. **unguentum belladonnae** [U. S. Ph., Br. Ph.]. An ointment made by mixing 10 parts of alcoholic extract of b. with 5 of diluted alcohol and incorporating with benzoated lard and hydrous wool-fat [U. S. Ph.], or by mixing liquid extract of belladonna with benzoat-

ed lard [Br. Ph.]. [Ital., *bella*, beautiful, + *donna*, lady.]

belladonnin. An uncrystallizable alkaloid obtained from belladonna root; a resinous substance of a bitter, acrid taste. The term has also been applied to atropin.

bell-crowned. In dentistry, applied to a tooth-crown which is widest at the grinding surface and tapers toward the cervix.

Bellini's ducts (bel-lee'ne). The straight tubules of the kidney. [Lorenzo Bellini, Italian anatomist, 1643-1704.]

Bell-Magendie's law. The l. that in the spinal nerves the anterior roots contain only motor fibers and the posterior roots sensory fibers. [Sir Charles Bell, Scotch physiologist, 1774-1842; François Magendie, French physiologist, 1783-1855.]

Belloc's cannula. A curved tube containing a spring, used for passing a thread through the nostril and out of the mouth by way of the posterior nares for plugging in case of profuse epistaxis. [Jean Jacques Belloc, French surgeon, 1732-1807.]

Bell's disease. Acute periencephalitis. [Luther V. Bell, American physician, 1806-1862.]

Bell's spasm. Convulsive tic of the face. [Sir Charles Bell, Scotch physiologist, 1774-1842.]

bel'ly. 1. The abdomen. 2. Any belly-like enlargement, e. g., the fleshy part of a muscle. [Ang.-Sax., *belg*, *baelg*, bag; mid. Eng., *bely*, *beli*, stomach, womb, belly.]

Bence-Jones albumin. A form of albumin which gives no precipitate with an excess of nitric acid unless left to stand or unless heated and left to cool, when it forms a solid coagulum, which redissolves on heating, and coagulates again on cooling. Found in the urine in false albuminuria.

bends. A name for caisson disease.

benedic'tine. A cordial or liqueur, flavored with herbs, prepared at Fécamp, France, formerly made by the order of Benedictine monks.

Benedict's test for sugar in urine, see in appendix, page 894.

benign, benignant (be-nine', be-nig'nant). A term applied to tumors which represent normal tissues, do not return when removed, form no metastases, and do not infiltrate tissue or produce cachexia, as opposed to malignant tumors. Example, fibroma, lipoma, etc. [Lat., *benignus*, mild.]

ben'jamin. 1. The *Styrax benzoin*. 2. Benzoin. [Corrupted from benzoin.]

benza'cetin. Acetamido-ethylsalicylic acid. It has been used in neuralgia.

benzaldehyd (ben-zal'de-hid). Benzaldehydum, C_6H_5COH . Of the U. S. Ph., synthetic oil of bitter almond free from hydrocyanic acid. See *oleum amygdalae amarae*, under *amygdala*.

ben'zamid. The amid of benzoic acid, $C_6H_5.CO.NH_2$, forming shining laminar or tabular crystals.

benzan'ilid. Syn.: *benzoic anilid*. An anilid, $C_6H_5.N(C_6H_5.CO)H$, of benzoic acid. An antipyretic.

ben'zene. Written also benzol. A color-

less liquid, C_6H_6 , derived from coal-tar. It has a peculiar odor and is readily inflammable and volatile. It is a solvent of iodine, sulphur, phosphorus, fatty and resinous bodies, caoutchouc, etc. It is the starting point of the so-called aromatic series of compounds, which may be regarded as derived from it by successive processes of substitution. **b. compounds or derivatives.** Syn.: *aromatic compounds*. That group of organic compounds which may be considered as derivatives of the hydrocarbon benzene. In the nomenclature of the b. derivatives various isomeric compounds are named according as the different hydrocarbons are substituted. The hydrogen atoms are numbered as follows:

In the disubstitution products there are three possible isomeric products: the 1-3, or the *ortho-position*; the 1-3, or the *meta-position*; and the 1-4, or the *para-position*. The three possible

trisubstitution products are: the 1-2-3, or the *adjacent*; the 1-3-4, or the *asymmetrical*; and the 1-3-5, or the *symmetrical position*. [Lat., *benzinum*.]

ben'zidin. A base, $NH_2.C_6H_5.C_6H_5.NH_2$, forming silvery laminar crystals readily soluble in hot water and alcohol.

ben'zin. Syn.: *petroleum b.* A clear, colorless liquid, prepared from crude petroleum, either by distillation or filtration through fullers' earth; of a peculiar, powerful odor, insoluble in water. It is inflammable, and its vapor is explosive when mixed with air. It boils between 50° and 90° C. Chemically, it consists of a mixture of different hydrocarbons, of the aliphatic series [U. S. Ph.]. [Lat., *benzinum*.]

benzi'num. 1. Of the U. S. Ph., *benzin*. 2. Of the Ger. Ph., *benzene*. **b. purificatum** [U. S. Ph.]. So-called deodorized benzine, prepared by treating petroleum benzine with potassium permanganate, caustic soda, water, and sulphuric acid.

ben'zoate. A salt of benzoic acid.

benzo'ic. Pertaining to or derived from benzoine. **b. acid.** See under *acid*. **b. aldehyd.** See *benzaldehyd*.

ben'zoin. A resinous substance that exudes from incisions into the bark of *Syrax b.*; employed as an antiseptic and vulnerary and in pulmonary affections, especially by inhalation and in skin diseases. 2. A genus of lauraceous shrubs and trees. 3. A substance, $C_6H_5.CO.CHOH.C_6H_5$. Flowers of b. Benzoic acid obtained by the sublimation of b. [Lat., *benzoinum*.]

benzo'num. See *benzoin* (1st def.). **tinctura benzoini.** A filtered solution of benzoine alcohol [U. S. Ph.]. **tinctura benzoini composita.** Syn.: *tinctura balsamica, essentia balsamica*. Friars' balsam; a preparation of benzoine, purified aloes, storax, balsam of Tolu and Socotrine aloes dissolved in rectified spirit [U. S. Ph., Br. Ph.]. It is a reddish, acid liquid, much employed as an application to ulcers, bed-sores, cracked nipples,

excoriations, etc., and used externally and by inhalation in respiratory and urinary disorders. **unguentum benzoini.** See *adeps benzoatus*, under *adeps*. [U. S. Ph.; Br. Ph.]

ben'zo-iodohy'drin. A compound obtained by mixing benzoyl iodid and epichlorhydrin. Put forward as a substitute for potassium iodid.

ben'zol. See *benzene*.

benzoni'tril. Phenyl cyanid, $C_6H_5.CN$. An oil with an odor similar to that of bitter almonds.

ben'zoparacre'sol. $CH_3.C_6H_4.CO.C_6H_5$, a colorless powder; used as an antiseptic.

ben'zoquin'one. See *quinone*.

benzosal'icin. Syn.: *populin*. Benzoyl salicin.

benzosa'lin. Methylbenzoylsalicylate $C_6H_4-O(CH_3).COO(C_6H_5.CO)$. Said to pass into the duodenum unchanged, where its constituents, benzoic and salicylic acids, are liberated, thereby acting as an intestinal antiseptic.

ben'zosal. Guaiacol benzoate, $C_{14}H_{12}O_2$. Decomposed slowly in the intestinal tract with the liberation of benzoic acid and guaiacol.

benzosal'phimid. See *benzosalphimidum*.

benzosalphini'dum [U. S. Ph.]. Saccharin; the anhydrid of orthosulphamidbenzoic acid. It is several hundred times sweeter than sugar. Among the trade names for saccharin or closely related products, particularly the sodium salts, are the following: dulcitol; glusidum [Br. Ph.]; glucosimida; crystallose; saccharinose; saccharol; saxin. See *sodium benzosalphimidum*.

benzoyl (ben-zo'il). The radical, C_6H_5-CO . **b. acetic acid, b. anilid.** See *benzanilid*. **b. glycin, b. glycocoll.** See *hippuric acid, under acid*. **b. peroxid, C₆H₅.COO.OH.** [Lat., *benzoylinum*.]

ben'zoynaph'thol. A product obtained by treating b. naphthol with very pure benzoyl chlorid and purifying the product by crystallization. Used as an intestinal antiseptic.

benzoylpseudotropin. Hydrochlorid.

benzyl (ben'zil). A univalent radical, $C_6H_5.CH_2$. **b. alcohol.** Syn.: *phenylcarbinol, phenylmethyl alcohol*. A colorless oily liquid, $C_6H_5.CH_2.OH$, found in balsam of Peru, balsam of Tolu, and styrax, and obtainable by the action of alcoholic potash on oil of bitter almonds.

ber'berin. An alkaloid, $C_{20}H_{12}NO_4 + 4\frac{1}{2}H_2O$, occurring in several species of *Berberis*, and in many other plants. Its physiological action is uncertain. It has been recommended as an antiperiodic. [Lat., *berberina, berberinum, berberia*.]

Berberis. 1. A genus of shrubs. 2. Of the U. S. Ph., the rhizome and roots of *Berberis aquifolium*. The fluid extract of b. is official in the U. S. Ph. 3. In the pl., *berberes*, the fruit of *B. vulgaris*.

ber'gamot, bergamium. The *citrus bergamia*. essence of b., oil of b. A yellowish or greenish volatile oil, of agreeable odor and bitter taste, obtained from b. peel by expression, or more rarely

- by distillation. It is used mainly as a perfume. **b. campha**. See *bergapten*.
- wild b.** An American name for *Monarda fistulosa*.
- bergap'ten**. Syn.: *bergamot camphor*. A substance, $C_9H_8O_3$, deposited from oil of bergamot upon standing.
- ber'genin**. A bitter crystalline substance, $C_6H_8O_4$, found in various species of *Saxifraga*.
- beriberi** (ber'i-ber-i). A form of multiple neuritis endemic in many tropical and subtropical countries, notably China. It may appear in large epidemics and is characterized by motor and sensory paralysis and anasarca. It is probably caused by eating polished rice. [A Singhalese word from *beri*, weakness, the reduplication being intensive.]
- Berkefeld filter**. A filter made of diatomaceous earth, through which ordinary sized bacteria cannot pass.
- bernar'din**. Glycogen; so called in honor of *Claude Bernard*, the French physiologist, 1813-1878.
- Berthollet's laws**. 1. A l. that when two salts are caused "to react by means of a solvent, if, in the course of double decomposition, a new salt can be produced less soluble than those already mixed, this salt will be produced." 2. A l. that when dry heat is applied to "two salts, if, by double decomposition, a new salt can be produced more volatile than the salts previously mixed, this salt will be produced."
- beryllium** (ber-il'eum). A bivalent metal (symbol Be), occurring in the beryl, the emerald, and other minerals. [Gr., *beryllos*, emerald.]
- bestial'ity**. In legal medicine, an attempt at copulation with a lower animal. [Lat., *bestia*, a beast.]
- be'ta**. The second letter of the Greek alphabet. Written out or expressed by the character β , it is used as a prefix to chemical terms to denote an isomeric variety, or to denote the position of substituted groups in compounds. [Gr., *beta*.]
- be'ta-euca'in**. Benzoyl-vinyl-diaceton-alkamin hydrochlorid, $C_{15}H_{21}O_2NHCl + H_2O$. It occurs in colorless crystals, and is used as a local anesthetic.
- be'ta-naph'thol**. A buff-colored powder, or yellowish scales, of a sharp, stinging taste, a phenol occurring in coal-tar and also prepared from naphthalin. Used as an intestinal antiseptic. [U. S. Ph. and Br. Ph.]
- bet'el**. The *Piper betle* (*Piper b.*); also the substance consisting of the leaves of this plant combined with lime and some astringent material like the areca nut (b. nut) or catechu. It is chewed by the East Indians for the stimulant and narcotic effect. **b. nut**. The areca nut.
- bet'ol**. Naphthalol, salinaphthol, $C_{17}H_{12}O_2$; the salicylic ester of beta-naphthol. It is decomposed only on reaching the intestine, where it exerts the actions of its constituents.
- Bet'ula**. The birch. **B. alba**. The inner bark, which contains betulin, is aromatic and somewhat astringent. **B. lenta**. Sweet birch. The bark yields oil of sweet b. and a principle which, by combination with water, forms a colorless, volatile oil, of syrupy consistency, apparently identical with oil of gaultheria, consisting almost wholly of methyl salicylate. **oleum betulae** [U. S. Ph.]. Oil of sweet b. A volatile oil, distilled from the bark of sweet birch (*Betula lenta*). It is practically identical with oil of wintergreen.
- bet'ulin**. Birch camphor, birch resin; a resinlike substance found in the inner bark of *Betula alba*.
- bet'ulol**. A proprietary preparation composed of methyl salicylate. Used as an external application in rheumatism.
- be'zoar**. 1. A concretion found in the hollow viscera of various animals, formerly highly valued as a remedy against poisons, the plague, etc. 2. By extension, any powerful antidote or prophylactic. [Arab., *bezard*, an antidote.]
- bh'ang** (bang). A narcotic mixture, containing Indian cannabis and other ingredients, used in Persia as a beverage.
- bi-**; before a vowel **bin-**. Prefix from the Lat., *bis*, twice, used in compound words to signify twice, doubly, having two.
- bib**. A fragment of a red blood cell often seen attached to the crescent bodies of the blood of estivo-autumnal fever.
- bibas'ic**. See *diabasic*.
- bibliographic references**. See in *appendix*, page 910.
- bib'ulous**. Absorbent. [Lat., *bibulus*, from *bibere*, to drink.]
- bicar'bonate**. An acid carbonate; so called because, with reference to the base with which the carbonic acid is united, it contains twice as much of the carbonic acid radicle as the corresponding normal carbonates.
- bicaudal, bicaudate** (bi-kaw'dal, bi-kaw'dat). Having two tails or taillike appendages (said of a muscle). [Lat., *bis*, doubly, + *cauda*, tail.]
- bi'ceps**. Having two heads or origins, said of a muscle. See *table of muscles*, under *muscle*. [Lat., *bis*, twice, + *caput*, head.]
- bichlo'rid**. That one of a series of similar chlorids which contains twice as much chlorin in proportion to the combining radicle as the protochlorid or first member of the series. **b. of mercury**. See *mercury bichlorid*. [Lat., *bichloridum*.]
- bichromate** (bi-kro'mat). Syn.: *dichromate*. A salt of bichromic acid. [Lat., *bichromas*.]
- bicip'ital**. 1. Double-headed. 2. Pertaining to a biceps muscle. See *table of arteries under artery*. [Lat., *biceps*.]
- bicolorin** (bi-kol'or-in). A white powder, $C_{16}H_8O_{10}$, insoluble in alcohol and in ether, obtained from the bark of *Esculus hippocastanum*.
- bicon'cave**. Doubly concave; concave on two sides. [Lat., *bis*, twice, + *concavus*, concave.]
- bicor'nate, bicor'nute**. See *bicornis*.
- bicor'nis**. Having or consisting of two horns or hornlike eminences. In the case of the uterus, a uterus having one

cervix but two separate bodies, due to defective union of the Müller's ducts in their upper portions in the process of development. [Lat., *bis*, twice, + *cornu*, horn.]

bicor'por, bicor'porate. Having or consisting of two bodies. [Lat., *bis*, twice, + *corpus*, body.]

bicuspid (bi-kus'pid). A tooth with two points. The premolar of man. [Lat., *bis*, twice, + *cuspid*, point.]

bicus'pis. A bicuspoid tooth.

Bidder's ganglia. The two groups of nerve cells at the termination of the two cardiac branches of the vagi in the auricular septum of the frog's heart.

bid'uous. Lasting for two days. [Lat., *bis*, doubly, + *dies*, a day.]

Bier's treatment. Artificial hyperemia of a portion of the body induced by extracting the air with an air pump or, in the case of a limb, by constriction of the proximal portion. [August Karl Gustav Bier, Berlin surgeon, living.]

bi'fid. Divided into two parts by a deep cleft or notch. [Lat., *bifidus*, from *bi*, two, + *fid*, stem of *findere*, to cleave.]

bifo'cal. Having two foci (said of lenses).

bifur'cate. Forked, i. e., terminating in two diverging arms; sometimes in the sense of doubly forked, i. e., terminating in two pairs of diverging arms. [Lat., *bis*, doubly, + *furca*, fork.]

bifurcation (bi-fur-ka'shun). A dividing into two, as, in dentistry, the roots of the superior first bicuspoid. [Lat., *bis*, twice, + *furca*, fork.]

Bigelow's operation. See *litholaplasty*.

bigeminy (bi-jem'in-e). The condition in which an extra systole is interpolated into the normal cardiac rhythm in such a manner that the pulse beats come in pairs. [Lat., *bigeminum*, twin.]

bilat'eral. Pertaining to or affecting both sides. [Lat., *bis*, doubly, + *latus*, the side.]

bile. Gall; the secretion of the liver; a liquid varying from dark yellowish-green to reddish brown in color; semitransparent except when very dark; somewhat viscid as it comes directly from the liver, still more viscid after passing into the gall-bladder; of a disagreeable, bitter taste; almost inodorous when perfectly fresh; of a sp. gr. ranging from 1.01-1.04; usually alkaline in reaction. Its specific constituents are: bile salts, bile pigments, and small quantities of lecithin phosphited, cholesterolin, soaps, and inorganic salts. **b. acids.** Taurocholic acid and glycocholic acid. **b. concrements.** Syn.: *gall-stones*. Solid masses of various sizes, found in the gall-bladder or the bile duct and made up of the solid constituents of the bile. **b. ducts.** See under *duct*. **b. in examination of stomach contents,** see in *appendix*, page 904. **b. in urine, test for,** see in *appendix*, page 894. **b. pigments.** Bilirubin, biliverdin, urobilin and other bodies. **b. salts.** Syn.: *Plattner's salts*. The alkali salts of the bile acids. **cystic b.** Bile which has been

stored for some time in the gall-bladder. [Lat., *bilis*, bile.]

bil'ein. A trade name for a preparation consisting of the essential salts of the bile.

Bilharzia (bil-har'ze-ah). A genus of distomatidous parasites, of the class of *Trematoda* and order *Malacocotylea*, established by Cobbold to include the *Distoma haematobium* of Bilharz. **B. haematobium.** Syn.: *Distoma haematobia*, *Schistosomium haematobium*, *Distoma capense*. A cylindrical worm of the class *Trematoda*. The male is about half an inch long and the female somewhat longer, but more slender. During copulation the female is lodged in the gynecophoric canal of the male. It is found in the portal vessels and in the veins of the mesentery and of the urinary tract, causing a severe disease, characterized by hematuria, anemia, and diarrhea, endemic in parts of Africa and in the Mauritius. The eggs finally reach the bladder, from which they are voided in the urine and, when supplied with fresh water, the free-swimming larva develops.

bilharziasis (bil-har-zi'as-is). The disease due to infection with *Bilharzia haematobia*. Endemic in Egypt and other parts of Africa.

bili- Combining form of Lat., *bilis*, bile. A prefix used in compound words and derivatives to mean of or combined with bile.

biliary (bil'e-a-re). Of, or pertaining to, bile.

bilicyanin (bil-e-si'an-in). A blue substance, formed by the oxidation of bilirubin. It has been found in gall-stones. [Lat., *bilis*, bile, + Gr., *kyaneos*, dark blue.]

bilifuscin (bil-e-fu'sin). A pigment found in gall-stones. [Lat., *bilis*, bile, + *fuscus*, brown.]

bilihumin (bil-e-hu'min). A pigment found in gall-stones. [Lat., *bilis*, bile, + *humus*, earth.]

biliousness. A popular and now nearly obsolete term for a digestive derangement, characterized by constipation, intellectual sluggishness, a feeling of general discomfort, offensiveness of the breath, and a furred state of the tongue, with or without headache, vomiting of bile, and abdominal pain; popularly and erroneously attributed to a defective secretion or outflow of bile.

biliprasin (bil-i-pra'sin). A green pigment found in gall-stones. [Lat., *bilis*, bile, + *prasinus*, leek-green.]

bilipurpin, bilipurpurin (bil-e-pur'pin, bil-e-pur'pu-rin). A bile pigment. [Lat., *bilis*, bile, + *purpureus*, purple.]

bilirubin (bil-e-ru'bin). An orange colored crystalline biliary pigment, $C_{42}H_{64}N_2O_6$ or $C_{42}H_{56}N_4O_6$, allied to hematin and hematoidin; a weak acid found in the urine in cases of jaundice and, in combination with calcium, in the nuclei of gall-stones. The color reactions of the Gmelin test for bile pigments are due to the

- presence of *b.* [Lat., *bilis*, bile, + *ruber*, red.]
- bil'lis.** See *bile*. **b. aquosa.** Thin watery bile. **b. bovina.** See *fel bovis*. **b. cystica.** See *cystic bile*, under *bile*. **b. fellea.** See *cystic bile*, under *bile*. **b. flava.** Yellow bile. **b. fusca.** Brown bile. **b. glutinosa.** See *b. spissa*. **b. humida.** See *b. aquosa*. **b. pallida.** Bile more or less deficient in pigment. **b. porcina.** The bile of the hog. **b. rubra.** Red bile. **b. russa.** Flame-colored bile. **b. spissa.** Inspissated bile. **b. vitellina.** Bile resembling the yolk of a raw egg in color and consistence.
- bil'uria** (bil-e-u're-ah). Bile in the urine. [L., *bilis*, bile, + Gr., *ouron*, urine.]
- biliverdin** (bil-e-ver'din). A green pigment, $C_{12}H_{13}N_2O_4$ or $C_{22}H_{25}N_3O_8$, formed in the oxidation of bilirubin; found in the bile of many animals and sometimes in small quantities in gall-stones. [Lat., *bilis*, bile, + *viridis*, green.]
- bil'o'bate.** Having two lobes. [Lat., *bis*, doubly, + Gr., *lobos*, lobe.]
- bilob'ular, bilob'ulated.** Having two lobules.
- biloc'ular.** Divided into two compartments. [Lat., *bis*, doubly, + *loculus*, compartment.]
- biman'ual.** Performed with both hands.
- b. examination.** In gynecology, the diagnosis of pelvic diseases by the two hands, the finger or fingers of one hand in the vagina and the other hand on the abdomen. [Lat., *bi*, two, + *manus*, hand.]
- bi'nary.** 1. Composed of two parts or things. 2. In chemistry, containing only two different elements. [Lat., *binarius*, of two.]
- bin'aural** (bin-aw'ral). Pertaining to or adapted to use with both ears, as a b. stethoscope. [Lat., *bis*, doubly, + *auris*, the ear.]
- binder** (bine'der). A broad bandage. **obstetric b.** The bandage of unbleached muslin encircling the abdomen, that is applied to women after delivery, reaching from the lower ribs to the space between the crests of the ilium and the trochanters.
- bi'nodid.** Syn.: *biiodid*, *diiodid*. That one of a series of iodids of the same element or radicle that contains twice as much iodine as the first member of the series.
- bin'ocle.** A telescope fitted with two tubes, one for each eye.
- binoc'ular.** Pertaining to, affecting, or fitted for use with, both eyes; as an optical instrument to be used with both eyes. **b. perspective.** The vision of solidity or perspective obtained when both eyes are used; due to the fact that the image of the object on the right retina is slightly different according to the law of projection from that on the left retina. **b. vision.** Vision with two eyes as distinguished from monocular vision. [Lat., *binii*, two by two, + *oculus*, an eye.]
- binox'alate.** An acid oxalate. See *bioxalate*.
- binu'clear, binu'cleate.** Having two nuclei.
- Binucleata** (bi-nu-kle-ah'tah). A group of the class *Flagellata*, in which are placed the *Trypanosomata*, *Spirochaetae*, and *Haemosporidia*. [Lat., *binii*, two by two, + *nucleus*, nut.]
- bi'o-.** Combining form of Gr., *bios*, life.
- biochem'istry.** The chemistry of living organisms or tissues; a term properly including both animal and vegetable chemistry, but denoting especially the chemistry of living as distinguished from dead matter, or chemistry in its relations to the phenomena of life and the vital processes. [Gr., *bios*, life, + *chemeia*, chemistry.]
- biodynamics** (bi''o-di-nam'iks). The study of dynamic or genetic forces in biological processes. [Gr., *bios*, life, + *dynamis*, force.]
- bioferrin** (bi-o-fer'in). A proprietary preparation consisting of a solution of hemoglobin.
- biogen'esis.** The doctrine of the generation or evolution of organisms from pre-existing organisms, as opposed to abiogenesis. [Gr., *bios*, life, + *genesis*, production.]
- biogenous** (bi-oj'e-nus). Growing or living; used to describe organisms.
- biokinetics** (bi''o-kin-et'iks). The study of internal movements in development. [Gr., *bios*, life, + *kinesis*, motion.]
- biolog'ical.** Pertaining to biology.
- biol'ogy.** The science of living organisms; of the phenomena which they manifest or are capable of manifesting, of the conditions of their origin, and of their relations to their surroundings. **dynamic b.** The science of the activities of living organisms, including physiology and the reciprocal action of organisms and their surroundings. **static b.** The science of the structure or potentialities of living organisms, including their anatomy, their classification, their physical properties, and, in general, all descriptive data not pertaining to activity. [Gr., *bios*, life, + *logos*, understanding.]
- biolysis** (bi-ol'is-is). The destruction of life. [Gr., *bios*, life, + *lysis*, dissolution.]
- biomag'netism.** See *animal magnetism*, under *magnetism*.
- biom'etry.** 1. The art of observing, measuring, and recording vital phenomena, particularly as regards growth. 2. The art of estimating the probable duration of life in life insurance. [Gr., *bios*, life, + *metrein*, to measure.]
- bionom'ics, bion'omy.** The study of the laws of organic or vital phenomena. [Gr., *bios*, life, + *nomos*, a law.]
- biono'sis.** A disease caused by living parasites. [Gr., *bios*, life, + *nosos*, disease.]
- biophagous** (bi-of'a-gus). Subsisting on living tissue. [Gr., *bios*, life, + *phagein*, to eat.]
- biophore** (bi'o-fōr). The hypothetical unit of a living organism. [Gr., *bios*, life, + *phoros*, bearing.]
- bioplasm.** The living substance. Same as protoplasm. [Gr., *bios*, life, + *plasma*, formed matter.]

bi'oplast. Of Beale "a very minute living particle."
biocopy (bi-os'ko-pe). Determination of death either of the adult or of the fetus in the uterus. [Gr., *bios*, life, + *skopein*, to inspect.]
bi'ose. A compound carbohydrate, made up of two simple hexoses in combination with each other.
bio'sis. Life in general. [Gr., *biosis*.]
biostat'ics. See *static biology*, under *biology*. [Gr., *bios*, life, + *statikos*, at a standstill.]
bi'otaxy. Classification of living forms. [Gr., *bios*, life, + *taxis*, arrangement.]
biot'omy. See *vivisection*. [Gr., *bios*, life, + *temnein*, to cut.]
biotripsis. (bi-o-trip'sis). Atrophy of skin in the aged. [Gr., *bios*, life, + *tripsis*, rubbing.]
biox'alate. An acid oxalate. One that contains twice as much oxalic acid as a normal oxalate.
biparasit'ic. Doubly parasitic; living as a parasite on another parasite. [Lat., *bis*, doubly, + Gr., *parasitos*, a parasite.]
bipari'etal. Of or pertaining to both parietal bones or extending from one to the other. [Lat., *bis*, doubly, + *paries*, wall.]
biparous (bip'a-rus). Bearing two young at a birth. [Lat., *bi*, two, + *parere*, to produce.]
bipar'tite. Two-parted; almost completely divided into two parts. [Lat., *bis*, twice, + *partire*, to divide.]
bi'ped. 1. Two-footed. 2. An animal having but two feet. [Lat., *bi*, two, + *pes*, *pedis*, foot.]
bipen'nate. Like a double feather, as b. muscle, a muscle in which the fibers converge toward a central tendon. [Lat., *bi*, two, + *penna*, feather.]
biphos'phate. An acid phosphate.
biphos'phid. That one of a series of phosphids that contains twice as much phosphorus as the first member.
biphos'phite. An acid phosphite; one that contains twice as much phosphorus acid as a normal phosphite.
bipo'lar. 1. Pertaining to the two poles of an elongated body. 2. Having only two processes; said of nerve cells. **b. version.** Turning child in uterus by means of one hand in vagina and the other on the mother's abdomen, so that the head will engage in the superior strait. A variety of cephalic version. **b. stain.** Staining at either pole, as the diphtheria bacillus, which stains at either end with methylene blue. [Lat., *bi*, two, + *polus*, pole.]
bi'ra. See *cerevisia*.
biram'ose, bira'mous. Having two branches. [Lat., *bis*, twice, + *ramus*, branch.]
Birch-Hirschfeld's method of staining (berkh-hersh'felt). A method of staining for amyloid degeneration. See *staining*. [Felix Victor Birch-Hirschfeld, German pathologist, contemporary.]
Bir'kett's hernia. See *hernia into the vaginal process of the peritoneum*, under

hernia. [John Birkett, English surgeon of the nineteenth century.]
birth. 1. The act of coming into life; the being born. 2. Descent, family, origin.
b. canal. Syn.: *parturient canal*. The lesser cavity of the female pelvis.
b. mark. A congenital nevus. **b. palsy, or paralysis.** Paralysis due to an injury of a nerve trunk during delivery, generally of the arm from injury of the brachial plexus. **cross b.** Transverse presentation of the fetus. [Early mid. Eng., *byrthe*, a birth.]
birth certificate, revised United States standard of. see in *appendix*, page 933.
bi'salt. See *acid salt*, under *salt*.
biscuit (bis'kit). 1. Anciently, bread cooked twice; toasted bread. 2. Bread, leavened or unleavened, baked rapidly in small separate portions. 3. A cracker.
bisec'tion. Cutting in two. [Lat., *bis*, twice, + *secare*, to cut.]
bisep'tate. Having two partitions. [Lat., *bis*, twice, + *septum*, a wall.]
bisexual (bi-sex'shu-al). Partaking of both male and female. Having reproductive organs of both sexes. Hermaphrodite. [L., *bis*, twice, + *sexus*, sex.]
bisil'i'ac. Extending from one ilium to the other. [Lat., *bis*, twice, + *ilium*.]
bisil'icate. A silicate containing twice as much silicic acid as a normal silicate.
Bis'kra but'ton. A disease observed in Biskra, Algeria. See also *Oriental sore*.
bis'mal. Bismuth methylenedigallate; an astringent.
bis'mon. A trade name for colloidal bismuth oxid.
bis'mutan. A mixture of a bismuth compound with resorcin and tannin, used in intestinal catarrh.
bismuth (biz'muth). A metallic element of a reddish white color, unaffected by air. Symbol, Bi; atomic weight, 208. It is a constituent of many valuable alloys. Its salts are used in diseases of the stomach and intestine. **betanaphthol b.** See *orphol*. List of poisons and their antidotes, see in *appendix*, page —. **b. albuminate.** A whitish insoluble powder, used for colic. **b. and ammonium citrate.** A body occurring under the form of pearly or translucent scales, without odor and of a slightly acidulous metallic taste; soluble in water; prepared by dissolving citrate of b. in a mixture of ammonia and water. Constitution uncertain. **b. benzoate.** Used topically for sluggish and specific ulcers. **b. borate.** Used like the subnitrate. **b. borophenate.** Markasol; used like iodoform. **b. carbolate.** An antiseptic. **b. carbonate.** See *b. subcarbonate*. The carbonate of b. of the Br. Ph. is b. subcarbonate. **b. chrysophanate.** Dermol; used in pityriasis and herpes. **b. citrate.** A compound of b. and citric acid. The *normal citrate of b.* (Lat. *bismuthi citras* [U. S. Ph.]). It is a white amorphous powder devoid of taste and odor and insoluble in water and in alcohol. **b. cresolate.** A gravis

- white powder used as an external and internal antiseptic. **b. dithiosalicylate.** See *thioform.* **b. hydrated oxid.** This preparation is used for making the so-called cream of bismuth by trituration with water. Its actions and uses are similar to those of the subnitrate. [N. F.] **b. naphthoglycerate.** A compound used in gonorrhœa. **b. naphtholate.** A brownish powder used as an intestinal antiseptic. **b. oleate.** A bland dusting powder. **b. oxid.** B_2O_3 , a slightly brownish yellow powder. It is used like *b. subnitrate.* **b. salicylate.** A granular pulverulent neutral substance, of a pinkish hue, which has been used for various gastro-intestinal affections. **b. subcarbonate.** A basic carbonate of *b.*, $Bi_2O_3 \cdot CO_3 + H_2O$. A white or yellowish white powder devoid of taste and soluble in water and alcohol. Used like the subnitrate. Bismuthi subcarbonas [U. S. Ph.]; seu *carbonas* [Br. Ph.]. **b. subchlorid.** A name given to the chlorid, Bi_2Cl_3 , formed by the action of chlorin upon *b. trichlorid* and in other ways; said to have an action similar to that of *b. subnitrate.* **b. subgallate.** $C_6H_5(OH)_3 \cdot COOBi$; employed topically to check morbid discharges as in leukorrhœa and fetid sweating, coryza and ozena. Internally it is given in diarrhea and dysentery. **b. subnitrate.** A white, insoluble powder, $BiONO_3 + H_2O$; used mainly in gastric disorders. **b. sulphocarbonate.** An internal antiseptic. **b. tribromcarbolate.** Xeroform, an antiseptic. [Lat., *bismuthum.*]
- bis'muthal.** A complex proprietary preparation said to contain bismuth citrate, pepsin, glycerin, lactic acid, and other ingredients.
- bis'muthol.** Bismutal, an antiseptic mixture of bismuth phosphate and sodium salicylate.
- bis'muthous.** Containing bismuth as a trivalent radical.
- bismuthum** (biz-mu'thum). Bismuth.
- bismuthi citras.** See *bismuth citrate*, under *bismuth* [U. S. Ph.]. **bismuthi et ammonii citras.** See *bismuth and ammonium citrate*, under *bismuth* [U. S. Ph.]. **bismuthi oxidum.** Oxid (trioxid) of bismuth [Br. Ph.]. **bismuthi subcarbonas.** Bismuth subcarbonate [U. S. Ph.]. **bismuthi subgallas.** See *bismuth subgallate* [U. S. Ph.]. **bismuthi subnitras.** Bismuth subnitrate [U. S. Ph., Br. Ph.]. **bismuthi subsalicylas.** Bismuth salicylate [U. S. Ph.]. **liquor bismuthi et ammonii citras.** Solution of citrate of bismuth and ammonium [Br. Ph.]. **trochiscus bismuthi compositus.** Compound bismuth lozenges; troches of bismuth, each containing bismuth subnitrate, magnesium carbonate, and calcium carbonate [Br. Ph.].
- bismutose** (biz' mu-tôs). A proprietary preparation consisting of bismuth and albumin; said to contain about 21 per cent. of metallic bismuth. Used as an antiseptic.
- bi'sol.** A soluble bismuth phosphate, used in intestinal catarrh.
- bis'tort, bistor'ta.** *Polygonum bistorta.* Snakewort, an astringent. [Lat., *bis*, twice, + *tortus*, twisted.]
- bistoury** (bis'too-ree). A small curved knife for surgical operations, said to be named for the town of Pistori in France, where there was a celebrated factory for these knives. [Fr., *bistouri.*]
- bisul'cate, bisul'cous.** Having two furrows. 2. Divided into two parts by a furrow; cloven. [Lat., *bis*, twice, + *sulcus*, a furrow.]
- bisul'phate.** An acid sulphate; so-called because it contains twice as much of the sulphuric acid radicle as a normal sulphate. [Lat., *bisulphas.*]
- bisul'phid.** A term used partly in the sense of disulphid (as in *b. of carbon*), and partly, after the analogy of bichlorid, binoxid, etc., to denote a compound of sulphur with an element or radicle that contains twice as much sulphur, relatively to that element or radicle, as a sulphid. [Lat., *bisulphidum.*]
- bisul'phite.** An acid sulphite. [Lat., *bisulphis.*]
- bitar'tras.** See *bitartrate.* **b. kalicus, b. potassicus.** See *potassium bitartrate.*
- bitar'trate.** An acid, or hydric tartrate; so-called because it contains twice as much of the tartaric acid radicle in proportion to the base as the corresponding normal tartrate. [Lat., *bitartras.*]
- bitem'poral.** Extending from one temporal bone or region to the other.
- bitrochanter'ic.** Extending from one trochanter major to the other.
- bit'ter.** Having a taste like that of quinin or strychnin. **b. water.** A purgative mineral water, which contains magnesium sulphate. **b. wood.** Quassia. [Ang.-Sax., *biter.*]
- bit'ters.** Pl. 1. A bitter, vegetable liquid preparation designed as a tonic or appetizer. 2. An alcoholic liquor in which bitter vegetable substances have been steeped, as gentian or wormwood. 3. A group of plant principles chiefly marked by their bitter taste.
- bittersweet.** The *Solanum dulcamara*; also more frequently a climbing plant with bright red berry fruits, *Celastrus scandeus.*
- biuret** (bi'u-ret). A decomposition derivative of urea, $H_2NCO(NH) \cdot CO \cdot NH_2$, which may be regarded as consisting of 2 molecules of urea less 1 molecule of ammonia. It gives the characteristic *b. color* reaction. **b. reaction.** See under *reaction.* [Lat., *bis*, double, + *urea.*]
- biv'alence.** The property or condition of being bivalent.
- bivalent** (biv'al-ent). Syn.: *divalent.* Being capable of replacing two atoms of hydrogen in a compound. [Lat., *bis*, twice, + *valere*, to be worth.]
- bi'valve, bival'vular, bival'vus.** Having two valves. [Lat., *bis*, twice, + *valva*, door.]
- biventer** (bi'ven-ter). See *table of muscles*, under *muscle.*

- Bix'a orel'lana.** The annotto tree, growing in South America, Mexico, the West Indies, the East Indies, Ceylon, and Senegal, the seeds of which yield annotto, an orange-red dye.
- black.** Reflecting no light, colorless, opposite to white. **b. draught.** *Mistura sennae composita.* **b. drop.** *Acetum opii.* **b. head.** Comedo. **b. wash.** *Lotio hydrargyri nigra.* [Ang.-Sax., *blaec.*]
- black-eye.** An ecchymosis of the eyelids and surrounding parts due to trauma.
- blackleg.** Anthrax in cattle.
- blackwater fever.** A severe form of malarial fever, so-called from the dark-colored urine due to disintegration of the blood corpuscles.
- blad'der.** Any thin-walled sac capable of inflation or having the appearance of being inflated. Used alone, the word is usually understood to denote the urinary b. **caudal b.** The vesicular portion of a *Cysticercus.* **daughter b's.** Secondary hydatids; cysts arising from the outer or inner surface of the mother b. and giving origin in their interior to heads, brood capsules, or granddaughter b's. **gall-b.** An egg-shaped or pear-shaped sac, about four inches long, in the human subject, situated in a fossa on the lower surface of the liver, to which it is attached; it serves as a receptacle for the bile, to which it adds a mucous secretion of its own, and then discharges it into the ductus choledochus communis. **granddaughter b's.** Hydatid cysts, springing from daughter b's. **mother b.** A hydatid cyst from the inner or outer surface of which spring secondary cysts. **urinary b.** A hollow muscular organ serving as a reservoir for the urine; situated in the pelvis between the pubic bones in front and the rectum (or, in women, the uterus) behind. During fetal and infantile life it lies mainly above the pubes. It is flattened and more or less horizontal when empty, but when distended it becomes an oval bag and rises towards the hypogastrium. It has a muscular wall, lined with mucous membrane and covered, except in its lower portion, with a loosely attached peritoneal coat. Into its lower and posterior portion the ureters empty and from its neck the urethra arises. When not over distended, it holds about 8 ounces. [Ang.-Sax., *blaedre.*]
- blad'der-wrack.** A widely distributed salt water alga, mostly *Fucus vesiculosus.*
- Blan'card's pills.** *Pilulae ferri iodidi.* [Stephen Blacard, Dutch physician, 1650-1702.]
- blanchinin** (blan'shin-in). See *aricin.*
- blancolin** (blan'ko-lin). A mineral fat analogous to white petrolatum.
- blast.** 1. A forcible stream of air, as from a blowpipe. 2. The blight (in animals and plants). 3. Laboratory expression for a nucleated red blood corpuscle. **b. lamp.** See *blowpipe.* [Ang.-Sax., *blaest.*]
- blaste'ma.** The bioplasm of the developing embryo. [Gr., *blastema*, bud, from *blastein*, to sprout.]
- blas'ticle.** See *vitelline nucleus* under *nucleus.*
- blas'tid.** A small clear space in a segment of a fecundated ovum, the precursor of the nucleus.
- blasto-.** Combining form of Gr., *blastos*, sprout, germ; used as a prefix in compound words to signify of, or pertaining to, a germ or bud.
- blas'tocele.** The central cavity of a blastula. [Gr., *blastos*, sprout, + *koile*, hollow.]
- blas'tochyle.** The clear or shiny liquid of the blastodermic vesicle. [Gr., *blastos*, sprout, + *chylos*, juice.]
- blas'tocyst.** The germinal vesicle. [Gr., *blastos*, sprout, + *kystis*, bag, from *kyein*, to contain.]
- blas'toderm.** The germinal, or blastodermic membrane, or vesicle; a membranous bag formed in the fecundated ovum, consisting of segmentation spherules (blastomeres) pressed away from the center by the accumulation of blastochyle; the rudimentary structure from which the embryo is formed. At first it is a simple layer; after the formation of the primitive streak, it consists of two layers, the epiblast (ectoderm) externally and the hypoblast (entoderm) internally; after the formation of the medullary plates and the notochord, a third layer, the mesoblast (mesoderm), forms between the two. See *epiblast*, *hypoblast*, and *mesoblast.* **bilaminar b.** The b. at that stage in which it consists of two layers, before the formation of the mesoblast. **discoid b.** See *discogastrula.* **trilaminar b.** The b. at that stage in which it consists of three layers, the epiblast, the hypoblast, and the mesoblast. [Gr., *blastos*, sprout, + *derma*, skin.]
- blasto'ma.** Pl. *blastomata.* A term for tumors, denoting growths which are formed by a single type of tissue and derived from an aberrant, autonomous growth of tissue cells of an individual. These include such tumors as the fibroma, chondroma, and even the atypical malignant tumors. [Gr., *blastos*, germ, + *oma*, tumor.]
- blas'tomato'sis.** The process of formation of blastomata.
- Blastomycetes** (blas-to-mi-se'tes). Syn.: *Saccharomycetes.* The family of *Saccharomycetaceae* includes the *Blastomycetes*, or yeasts, fungi which increase by budding and which induce alcoholic fermentation. **B. dermatitis.** A species causing blastomycetic dermatitis and general infection in man. [Gr., *blastos*, a germ, + *mykes*, a fungus.]
- blastomycosis** (blas-to-mi-ko'sis). A specific infectious disease of the skin, caused by a yeast fungus. It is characterized by the formation of elevated warty suppurating lesions, with abruptly sloping, purplish red bodies, which are studded with pin-point sized, deep-seated epidermal abscesses, from the pus of which pure cul-

tures of the organism may usually be obtained. [Gr., *blastos*, germ, + *mykes*, fungus.]

blastophore (blas'to-fōr). That portion of a spermatospore which does not become converted into spermatozooids. [Gr., *blastos*, sprout, + *phorein*, to carry.]

blastophylla (blas-to-fil'ah). The primitive germ layers (ectoderm and endoderm) of the ovum. [Gr., *blastos*, sprout, + *phyllon*, a leaf.]

blastophyly (blas-tof'il-e). The tribal history of persons. [Gr., *blastos*, a germ, + *phyle*, a tribe.]

blastopore. The opening into the archenteron, or cavity within the entoblast of a gastrula, formed by invagination of the blastula. [Gr., *blastos*, sprout, + *poros*, passage.]

blastosphere. See *blastula*. [Gr., *blastos*, sprout, + *sphaira*, sphere.]

blastula. The fecundated ovum in the stage immediately succeeding that of the morula, when it is a hollow sphere filled with liquid or a gelatinous substance, and its walls consist of a single layer of cells. [Gr., *blastos*, bud, sprout.]

blastulation. The process of the formation of the blastula from the morula.

Blat'ta orientalis. The cockroach. The dried insect has been used as a diuretic, and the active principle, *antihydropin*, is said to have been isolated in a crystalline form. [Lat.]

blear-eye. Marginal blepharitis.

bleb. A blister or small swelling on the skin. [Probably phonetic, like *blob* and *blubber*.]

Blécard's sign. A diagnostic sign of the maturity of the fetus, first described by Blécard in 1826, consisting of a center of ossification, half a centimeter in diameter, in the lower epiphysis of the femur.

bleed'er. A person who is subject to excessive bleeding. [Ang.-Sax., *bledan*, to bleed.]

blennadenitis (blen-ad-en-i'tis). Inflammation of the mucous glands and follicles. [Gr., *blennos*, mucus, + *aden*, gland, + *itis*, inflammation.]

blennemesis (blen-em'es-is). Mucus vomiting. [Gr., *blennos*, mucus, + *emesis*, vomiting.]

blennorrh'a'gia, **blennorrh'e'a**. An old name for gonorrhoea. [Gr., *blennos*, mucus, + *regnusthai*, to break forth.]

blennostasin (blen-os'tas-in). A preparation said to consist essentially of cinchonidin dihydrobromid; used to check oversecretion of mucus, especially in the nose.

blennos'tasis. The checking, suppression, or stagnation of a mucous secretion. [Gr., *blennos*, mucus, + *stasis*, halt.]

blepharadenitis (blef'ar-ad-en-i'tis). Inflammation of the meibomian glands. [Gr., *blepharon*, eyelid, + *aden*, gland, + *itis*, inflammation.]

blepharism. Spasmodic twitching of the eyelids. [Gr., *blepharon*, eyelid.]

blepharismus (blef-ar-is'mus). Nictation; rapid involuntary winking.

blephari'tis. Inflammation of the margin

of the eyelid. **b. glandularis**, **b. glandulosa**. Inflammation of the meibomian glands; chalazion. **b. intermarginalis**. Irritation and excoriation of the intermarginal portion of the lids. **b. scrofulosa**, **b. simplex**, or **b. squamulosa**. A mild inflammation of the borders of the eyelids. **b. ulcerosa**. A violent form of *b. simplex*, in which pustules form on the edge of the lid, at the mouths of the hair follicles. [Gr., *blepharon*, eyelid, + *itis*, inflammation.]

blepharo-. Combining form of Gr., *blepharon*, eyelid.

blepharochalasis (blef'ar-o-kal'as-is). Atrophy with relaxation of skin of eyelid. [Gr., *blepharon*, eyelid, + *chalasis*, relaxation.]

blepharochromidrosis (blef'ar-o-krom-id-ro'sis). Colored sweat from eyelids.

blepharoclonus (blef-ar-ok'lo-nus). Spasm of the palpebral muscles.

blepharopachynsis (blef'ar-o-pak-in'sis). Hypertrophy of the eyelid. [Gr., *blepharon*, the eyelid, + *pachynsis*, thickening.]

bleph'aroplasty. Any plastic operation on the eyelid, especially for restoring a part or the whole of the lid. [Gr., *blepharon*, eyelid, + *plassein*, to mold.]

blepharople'gia. Paralysis of the eyelid. [Gr., *blepharon*, the eyelid, + *plege*, a stroke.]

blepharoptosis (blef-ar-op-to'sis). A falling or dropping, partial or complete, of the upper eyelid. [Gr., *blepharon*, the eyelid, + *ptosis*, a falling.]

blepharor'r'haphy. The operation of stitching together a portion of the two eyelids, chiefly for the correction of ectropion. [Gr., *blepharon*, eyelid, + *raphe*, seam.]

bleph'arospasm. Spasm of the orbicular muscles of the eye, either tonic or clonic. [Gr., *blepharon*, the eyelid, + *spasmos*, spasm.]

blight (blit). A withering, or anything producing it, in an animal or a vegetable organism. **sandy b.** A popular term for a form of ophthalmia.

blind. 1. Destitute of the faculty of sight. 2. Terminating without any open communication (e. g., the cecum). **b. gut**. The cecum. **b. spot**. The optic disk, a region of the retina of oval shape, into which the optic nerve centers. This spot is destitute of sight. [Ang.-Sax., *blind*.]

blind'ness. The state of being blind. **absolute b.** 1. Complete *b.* 2. See *cortical b.* **blue-b.**, **blue-yellow b.** That form of color-*b.* in which there is inability to recognize either blue, bluish green, or violet, or the complementary yellow. **color-b.** Syn.: *daltonism*. A partial or complete incapability of distinguishing colors. **cortical b.** Permanent loss of vision resulting from complete destruction of the visual center in the cortical portion of the occipital lobe. **green-b.** That form of color-*b.* in which there is inability to recognize either pure green or its complementary color, purplish red. **intellectual b.**, **mental b.**

A state in which the power of sight is retained, but there is inability to interpret visual impressions correctly. **nervous b.** See *amaurosis*. **red-b., red-green b.** Syn.: *anerythroptia*. That form of color-b. in which there is inability to recognize either red or its complementary color, bluish green. **snow-b.** B. produced by exposure of the eyes to the long continued reflection of sunlight from the surface of snow. **word-b.** Inability to understand anything that is written, though ability to write and speak exists; due to the unilateral destruction of the nervous center of sight.

blind-spot. That portion of the retina insensitive to light, because it is the point of entry of the optic nerve fibers. The optic disk.

blister. 1. A collection of serous, watery, or bloody fluid beneath the epidermis. 2. A vesicant. **b. beetle, b. fly.** See *Cantharis*. **b. plant.** *Ranunculus acris*. **b. plaster.** See *ceratum cantharidis*. **blistering liquid** [Br. Ph.]. See *liquor epispasticus*, under *liquor*. **blood b.** A b. containing blood. **fly b.** A vesicant consisting of a preparation of cantharides (usually the *ceratum cantharidis*), as distinguished from other vesicants. **flying b.** 1. A b. which is punctured and allowed to heal at once. 2. A b. which is applied to different portions of a given region of the body successively. **water b.** A b. containing watery contents. [Perhaps from Ang.-Sax., *blaestan*, to blast or puff.]

blood. A liquid which, in man and all the higher animals, circulates through the system, being propelled into the arteries by the heart and received back by that organ through the veins. Histologically considered, b. is a tissue, with solid or semisolid cellular elements and a liquid intercellular substance. In mammalian b., the cellular elements are red blood corpuscles, white blood corpuscles, and the bloodplates. Chemically considered, b. consists principally of proteins, sugar, lecithin, cholesterolin, fat, fatty acids, carbonic acid, hydrochloric acid, and phosphoric acid, as well as the inorganic bases, sodium, potassium, and magnesium in combination with one of the above mentioned acids. Ammonium carbonate, urea, uric acid, amino-acids, and other compounds have been found in normal blood. When drawn from the b. vessels, b. tends to form a semisolid mass (clot, coagulum). It consists of a clear liquid, called plasma, in which the corpuscular elements are suspended. **arterial b.** 1. The bright red or scarlet b. normally contained in the left cavities of the heart, the systemic arteries, and the pulmonary veins, also the umbilical vein of the fetus. It contains a relatively large amount of oxygen and a small amount of carbon dioxide. 2. The blood contained in the arteries without regard to its qualities. **b. agar.** Agar mixed with sterile b. and used as a favorable culture medium for such bacteria as the *gonococcus* and *pneumococcus*.

b. cells. See *b. corpuscles*, under separate heading. **b. clot.** See *clot*. **b. count.** A count of the absolute and relative numbers of the red and white cells in a given quantity of blood. See also *data in appendix*, page 898. **b. crystals.** Hematoidin. **b. examination, how to make;** see *in appendix*, page 898. **b. in examination of stomach contents,** see *in appendix*, page 904. **b., how to determine the color index of;** see *in appendix*, page 899. **b. iron,** Oxyhemoglobin. **b. islands.** Collections of greatly enlarged hollow cells in which red b. corpuscles are being developed; these cells also unite to form b. vessels. **b. mole.** See *carneous mole*, under *mole*. **b., occult, Weber's guaiac turpentine test for;** see *in appendix*, page 907. **b. pigments.** See under *pigment*. **b. plaques, b. platelets.** Circular or oval protoplasmic disks much smaller than the red corpuscles, constant in the blood of *Mammalia*, and probably in that of all vertebrates. In man their size varies from 1.5 to 3.5 μ in diameter, while their number, as compared with the red corpuscles, is about 1 to 18 or 20. **b. plasma.** See under *plasma*. **b. poisoning.** See *bacteriemia*. **b. pressure.** The pressure or tension of the blood, within the arteries. It is determined by the force of contraction of the left ventricle, the resistance of the arterioles and capillaries, the elasticity of the walls of the arteries and the fluidity of the blood. **b. pressure, how to determine;** see *in appendix*, page 908. **b'root.** The *Sanguinaria canadensis* and the *Geum canadense*, so-called from the red color of its root. **b'shot.** Red and inflamed looking from a turgid and dilated state of the b. vessels (said of the eyes). **b. smears, how to make;** see *in appendix*, page 900. **b. sounds.** See *b. murmurs*, under *murmur*. **b. stains, how to make; a film;** see *in appendix*, page 900. **chylous b.** See *parhemia*. **defibrinated b.** B. from which the fibrin has been removed by beating with a bundle of rods. **inflammatory b.** B. which, when withdrawn from the vessels, shows certain peculiarities in the arrangement of the corpuscles, the amount of fibrin present, the phenomena of its coagulation, etc., interpreted as indicating the existence of inflammation. See *buffy coat*, under *coat*. **lake-colored b., laky b.** B. in which the red corpuscles are dissolved and hemoglobin is free in the serum. **menstrual b.** The b. which flows from the uterus during menstruation; arterial b. mingled with uterine and vaginal epithelium and secretions. **red b.** See *arterial b.* **venous b.** 1. Dark-red or purple b. containing a relatively small amount of oxygen and a large amount of carbon dioxide. It is contained in the right cavities of the heart, in the systemic veins, and in the pulmonary artery of the adult; in the fetus, all the b. is venous or mixed, except that in the umbilical vein (see *arterial b.*). As com-

pared with arterial b., venous b. contains from 8 to 12 per cent. less oxygen and 6 per cent. more carbon dioxide. 2. The b. contained in the veins, without regard to its quality. [Ang.-Sax., *blôd.*]

blood corpuscles. Syn.: *blood cells.* A

general term for the solid or cellular elements in the blood. **red b. c.** Minute circular or oval bodies in the blood which contain the hemoglobin and serve as carriers of oxygen. When massed they have the characteristic color of blood, but singly or in a thin layer and viewed by transmitted light, they are of a reddish yellow or yellowish green tint. In all *Mammalia* they are non-nucleated, and their shape is that of circular, biconcave, or ovoid disks. In man their diameter varies from 7 to 8 μ . In birds, reptiles, the *Amphibia*, and fishes they are nucleated and elliptical in shape. **white b. c.** Syn.: *leukocytes.* Minute nucleated cells found in various tissues, especially in the circulating blood and lymph, having the power of amoeboid movement. When at rest, they are rounded or spheroidal in form and, in man, about 10 μ in diameter. In number, their proportion to the red b. c. is about as 1 to 600 to 800.

blood-letting. Withdrawal of blood from the body for therapeutic purposes.

blood vessel. Any tubular structure (artery, vein, or capillary) the function of which is to carry blood.

bloody sweat. See *hematidrosis.*

blow-pipe. 1. A straight or bent tube, terminating in a small opening, for producing intense heat by blowing the flame of a lamp or candle upon an object in the form of a cone. This cone of flame is white without and blue within. **oxy-hydrogen b.** A device by which hydrogen is burned at the moment of its being allowed to mix with oxygen, an intense heat being thus obtained.

blue (blu). A color more or less like the clear sky. **aldehyd b.** The b. coloring matter produced by the action of aldehyd on a solution of rosanilin in sulphuric acid. **alizarin b.** A blue dyestuff derived from anthracene.

Berlin b. See *Prussian b.* **b. baby.** A newborn infant with cyanosis, usually due to a persistence of the foramen ovale of the heart. **b. mass.** *Massa hydrargyri.* **b. ointment.** *Unguentum hydrargyri.* **b. pill.** Same as *b. mass.* **b. stone.** Copper sulphate crystal.

indigo b. See *indigo.* **methylene b.** See under *methylene.* **Prussian b.** Ferric ferrocyanid, $\text{Fe}_3\text{Fe}(\text{CN})_6$. P. b. is produced by the addition of potassium ferrocyanid in excess to a solution of a ferric salt.

blunt hook. A large stout hook with a rounded end, used in obstetrics to make traction in the fold of the groin in extracting a breech presentation in the case of a dead child.

B.N.A. An abbreviation for *Basle Nomina Anatomica* (see *Basle*).

Bochdalek's ganglion. See *supramaxillary plexus*, under *plexus*. [Anatomist in Prague, died 1883.]

Bockhart's impetigo. A i. in which the lesions occur around hairs.

bo'cyl. A solution of cinnamic and boric acids.

Bo'do. Syn.: *Herpetomona* and *Prowazekia*. A genus of the phylum *Mastigophora* and family *Herpetomonida* of the *Protozoa*, being elongated, wedge-shaped, flagellated organisms, sometimes parasitic in the intestine of domestic flies. **B. urinarius.** A species found rarely in decomposing urine.

bod'y. The physical or material frame of man; the main portion of the frame. The trunk as opposed to the limbs. A compact organized collection of units. In dentistry, the entire tooth crown. In prosthetic dentistry, the silicious basis of porcelain that is overlaid with enamel.

adenoid b. 1. An old term for the prostate. 2. A melanotic tumor. **adrenal b's.** See *suprarenal capsules*, under *capsule*. **amylaceous b's, amyloid b's.** See *amylaceous corpuscle*, under *corpuscle*.

antibodies. A collective term for antitoxins and similar products of immunity. **bigeminal b's.** See *corpora quadrigenina*, under *corpora*.

b. cavity. See *celoma* (3d def.). **catalytic b's.** The ferments. **cavernous b's.** See *corpora cavernosa*, under *corpora*.

cell b., cellular b. See under *cell*. **chromatin b's.** B's variously described as spherules and as tube-shaped disks found in the network of a cell undergoing karyokinesis.

ciliary b. The middle segment of the second or uveal coat of the eye, comprising the ciliary muscle, the ciliary ligament, and the ciliary processes. **colostrom b's.** See *colostrum corpuscles*, under *corpuscle*.

crystalline b. See *crystalline lens*, under *lens*. **external accessory olivary b.** The external mass of gray matter in the accessory olivary nucleus.

external geniculate b. A projection at the posterior part of the optic thalamus to the outer side of the pulvinar, consisting of alternate layers of white and gray matter. **fimbriated b.** See *corpus fimbriatum*, under *corpus*.

foreign b. A b. which has gained entrance into the organism from without, or, having been originally a constituent portion of the organism, has ceased to be so; one that can answer no good purpose in the organism, but is likely to prove a source of irritation. **fuchsin b's.** See *Russell's fuchsin b's*.

ganglionic b's. See *nerve cells*, under *cell*. **geniculate b.** See *external geniculate b.* and *internal geniculate b.* **hyaloid b.** See *corpus vitreum*.

immune b. See *amboceptor*. **inferior olivary b.** The olivary b. of the medulla oblongata, as distinguished from the small group of cells in the pons Varolii having the same name.

intermediary b. 1. Situated centrally or in the middle; situated between two bodies. 2. See *amboceptor*. **internal accessory olivary b.** The internal mass of gray matter in the ac-

cessory olivary nucleus. **internal geniculate b.** A prominent mass of gray and white matter at the lower and outer part of the optic thalamus, with which its gray matter is continuous. **internal olivary b.** See *median internal accessory olivary nucleus*, under *nucleus*. **intravertebral b.** The centrum of a vertebra. **laminated amyloid b's.** See *amylaceous corpuscles*, under *corpuscle*. **lower olivary b.** See *inferior olivary b.* **malpighian b's.** See *malpighian corpuscles*, under *corpuscle*. **muriform b.** The morula (the vitellus of a fecundated ovum in the stage of segmentation); so called from its resemblance to a mulberry. **nuclear b.** The nuclear disk of a maturing ovum after it has assumed an ellipsoidal form. **nucleoplasmic b.** The definite mass formed in a maturing ovum by a collection of the plasma of the nucleus (germinal vesicle) after the membrane of the vesicle has disappeared. **olivary b.** An oval projection at the upper portion of the medulla oblongata, just above the extremity of the lateral column. It is separated from the lower edge of the pons Varolii by a well marked groove. **optostriate b.** The conjoined thalamus opticus and corpus striatum. **organic b's.** Chemical compounds peculiar to the animal or the vegetable kingdom. **pachionian b's.** The small granulations, or granular growths, seen on the surface of the dura mater along the longitudinal sinus and extending into the sinus itself. **pituitary b.** The hypophysis cerebri; a small two-lobed b. at the base of the brain lying in the pituitary fossa of the sphenoid bone. **Plimmer's b's.** B's found in the cells of carcinoma and described as protozoa by Plimmer in 1892, and previously by Ruffer and Walker. They are rounded, measure 6 to 16 μ in diameter, and exhibit a nucleus, radial striae running from border to nucleus and fainter striae running from nucleus to cell border. They lie within the tumor cells near the nuclei, are surrounded by a vacuole, and occur principally in the growing edges of the tumor and in adjacent lymph nodes. [James Ewing.] **polar b.** See *extrusion globule*, under *globule*. **postpyramidal b.** See *posterior pyramids*, under *pyramid*. **prepyramidal b.** See *anterior pyramids*, under *pyramid*. **restiform b.** A rounded mass of nerve fibers at the posterior part of the medulla oblongata, which results from the union of the lateral cerebellar tract with the cuneate funiculus and the funiculus of Rolando, and terminates in the cerebellar hemisphere. **rodlike b's.** See *intracellular rods*, under *rod*. **Russell's fuchsin b's.** Structures found in carcinoma, and described as fungi by Russell in 1890. They are rounded, measure 4 to 12 μ in diameter, and are structureless. They occur in the outlying cells of growing carcinomata, lying singly or in groups in the tumor cells, and surrounded by a vacuole and apparently by a membrane. The forma-

tion of buds and spores has been described. The method of demonstration is by staining by iodine green and fuchsin after various hardening methods. The b's take the fuchsin strongly, hence their name. They are now regarded simply as degeneration products of the cell. [James Ewing.] **superior olivary b.** Syn.: *superior olivary nucleus*. A group of nerve cells near the central region of the pons Varolii, which gives origin to some of the fibers of the trapezium. **suprarenal b.** See *suprarenal capsule*, under *capsule*. **thyroid b.** See *thyroid gland*, under *gland*. **trapezoid b.** The trapezium of the pons varolii. **vitreous b.** See *corpus vitreum*, under *corpus*. **wolffian b.** See *mesonephros*. [Old Eng., *bodig*.]

body cavity. The general cavity of the body, consisting of the thorax, abdomen, and pelvis.

bod'y equilib'rium. A term used to express that condition in which the weight of the food, water, and oxygen taken in is just balanced by the total weight of the excretion, so that the body remains constant in weight.

body louse. *Pediculus corporis*.

bog'head. A variety of bituminous schist. The residue, which does not distil upon heating, is used as a disinfectant.

bo'hon, bo'honupas. The *Antiaris toxicaria*.

boil. A circumscribed, acute, suppurative inflammation of the skin, or of the subcutaneous tissue, forming a hard, rounded or conical, sensitive, and painful swelling, usually attended with the formation and discharge of a central slough called the "core." See also *furuncle*. **Aleppo b.** See *Oriental sore*. **blind b.** A popular term for an abortive b., i. e., one of brief duration and not attended with the formation of a core. **Delhi b.** See *Oriental sore*. [Old Eng., *byl*, mid. Eng., *bile*.]

bole. A form of argillaceous earth or clay occasionally employed in medicine; consisting chiefly of aluminium silicate, often colored more or less red by the presence of iron oxid or hydrat. **Armenian b.** A fine, unctuous, reddish variety originally brought from Armenia. [Lat., *bolus*.]

Bole'tus. A genus of hymenomycetous fungi, many of which are edible and a few of which are poisonous. [Lat., *boletus*, the best kind of mushroom.]

bo'tus. A mass ready to be swallowed; in pharmacy, a large sized pill. **alimentary b.** The rounded mass of food after it has been masticated and impregnated with saliva and is about to be swallowed, or similar masses as they lie in the small or large intestine. **hysterical b.** See *globus hystericus*.

Bond-Ultzmann's test. The use of phenylhydrazin hydrochlorid as a test for glucose.

bone. The general name for the distinct parts which unitedly make up the skeleton of the body. The matrix or substance consists of an organized mass of

fibers of collagen, impregnated with mineral matter, chiefly calcium phosphate and calcium carbonate. **asymmetrical b's.** B's which lie on one side of the median plane of the body and which are not divided by it into two equal parts. **back b.** See *vertebral column*, under *column*. **basioccipital b.** The basilar portion of the occipital b. before it has united with the other elements. In many of the lower vertebrates it persists as a distinct b. through life. **basisphenoid b.** That portion of the sphenoid b. from which the posterior portion of its body and the sella turcica are formed. **breast b.** See *sternum*. **cancellated b., cancellous b.** B. which consists largely of cancellated or spongy tissue. **carpal b's.** The b's which make up the carpus. **check b.** See *malar b.* **collar b.** See *clavicle*. **cotyloid b.** A small b. in the acetabulum of certain of the lower vertebrates which lies adjacent to the os pubis. **crazy b.** See *funny b.* **cribriform b.** See *ethmoid b.* **cuboid b.** A b. which lies on the outer side of the foot, between the os calcis and the fourth and fifth metatarsal b's, with which it articulates. **cuneiform b.** See *pyramidal b.* **endochondral b's.** True b's formed by osteoblastic tissue, which for the most part replaces the calcified cartilage matrix, and is finally itself partly or wholly replaced by adult or periosteal b. **epiotic b.** In human anatomy, an embryonic cartilage b. which corresponds to the lower part of the mastoid process of the temporal b. **ethmoid b.** A cuboid-shaped b., containing within its interior a large number of cells, which assists in forming the cranium, the orbits, and the nasal fossae. It consists of a central vertical plate and of two lateral masses (the ethmoturbinals), which unite above to form the cribriform plate. **exoccipital b.** A fetal cartilage b. which forms the side of the foramen magnum and the occipital condyle of the occipital b. **external cuneiform b.** A wedge-shaped b. of the foot. **flat b's.** B's, the length and breadth of which greatly exceed their thickness. **frontal b.** A single bone which forms the greater part of the upper roof of the orbits. **funny b.** A popular term for the internal condyle of the humerus where the ulnar nerve passes over it. **haunch b.** See *innominate b.* **heel b.** See *calcaneus*. **hip b.** See *innominate b.* **hyoid b.** A U-shaped b., consisting of a body and the greater and lesser cornua, situated at the base of the tongue. **inferior spongy b., inferior turbinated b.** A thin plate of b. attached by its upper margin to the lateral wall of the nose and separating the middle from the inferior meatus. It articulates with the maxilla, and with the lacrimal, ethmoid, and palate b's. **innominate b.** A b. which, with its fellow of the opposite side and the sacrum and coccyx, forms the bony pelvis. [B. N. A., *os coxae*.] **intermaxillary b.** A fetal b. which lies behind the fore part of the superior maxilla, with which it be-

comes fused. **internal cuneiform b.** The largest of the cuneiform b's of the foot. To it is attached in part the tibialis anticus muscle. **interparietal b.** In the human fetus, the tabular portion of the occipital b., which sometimes persists through life as a distinct b. **irregular b's.** Those b's which are of such irregular shape that they cannot be classed as *long*, *short*, or *flat b's.* **lacrimal b.** A thin scale of b. situated at the anterior and inner part of the orbit. **long b's.** B's the length of which greatly exceeds their thickness. **lower jaw b., lower maxillary b.** See *mandible*. **malar b.** A quadrangular b. which forms the most prominent part of the face. It enters into the formation of the orbit and the anterior part of the zygoma. **mandible b., mandibular b.** See *mandible*. **mastoid b.** The mastoid process of the temporal b. **maxillary b.** See *superior maxilla*, under *maxilla*. **metacarpal b's.** The five b's of the hand which articulate proximally with the carpus and distally with the phalanges. **metatarsal b's.** The five b's of the foot which articulate proximally with the tarsus and distally with the phalanges. **middle cuneiform b.** A short, wedge-shaped b. which lies with its base upward and its apex downward between the second metatarsal, the scaphoid, and internal and external cuneiform b's of the foot. **middle spongy b., middle turbinated b.** A term sometimes applied to the inferior turbinated process of the ethmoid b. It forms the lower portion of the superior meatus of the nose and overhangs the middle meatus. **nasal b.** An irregularly shaped b. which with its fellow of the opposite side forms the bridge of the nose. **navicular b.** See *scaphoid b.* **occipital b.** A rhomboidal b. situated at the lower and back part of the cranium. At birth this b. consists of five pieces, the basi-occipital, the two exoccipitals, the supra-occipital, and the interparietal, all of which are fused into one piece at about the sixth year. **orbicular b.** The extremity of a small tubercle on the long process of the incus, which forms the articulation with the capitulum of the stapes. **palatal b., palate b., palatine b.** A b. which forms the posterior portion of the hard palate and the lateral wall of the nose between the internal pterygoid plate of the sphenoid b. and the superior maxilla. **parietal b.** A quadrilateral b., having an internal concave and an external convex surface. It forms the larger portion of the lateral surface of the skull. **pelvic b's.** The b's which constitute the pelvis. **periosteal b.** A b. formed by the osteogenetic layer of the periosteum. It is the principal, if not the sole form of adult b., and occurs both in b's having an intracartilaginous and in those having an intramembranous ossification. **pisiform b.** A small pea-shaped b. lying on the ulnar side of the pyramidal b. of the carpus. **pneumatic b's.** B's which con-

tain a large number of air cells, or, as in birds, air sacs. **premaxillary b.** See *intermaxillary b.* **pyramidal b.** Syn.: *cuneiform b.* A wedge-shaped b, situated at the outer side of the carpus, with its apex directed downward and outward, and articulating with the semilunar, pisiform, and unciform b's. **rickety b's.** B's which are deficient in earthy matter as the result of rickets. **scaphoid b.** 1. A b. of the tarsus lying on the outer side of the foot. 2. The most external b. of the first row of the carpus. **semilunar b.** A b. of the first row of the carpus lying between the scaphoid and pyramidal b's. **sesamoid b's.** Small b's which lie within the substance of the tendons of various muscles. **short b's.** B's of which the length is greater than the breadth or thickness, but in no marked degree. **sphenoid b., sphenoidal b.** A b. which lies across the base of the skull near its middle, and assists in forming the orbits and the nasal fossae. **sphenoidal turbinate b's.** See *sphenoidal cornua*, under *cornu*. **supermaxillary b.** See *superior maxilla*, under *maxilla*. **symmetrical b's.** B's divided into two equal halves, by the median plane of the body (e. g., the sternum). **tarsal b's.** The bones which form the tarsus, or instep, viz., the calcaneum, the astragalus, the scaphoid b., the cuboid b., and the internal, middle, and external cuneiform b's. **temporal b.** A b. of irregular shape situated at the side of the skull. It is divided into the squamous, petromastoid, and tympanic portions. **thigh b.** See *femur*. **trapezoid b.** A b. of the second row of the carpus. **turbinate b.** Any one of the b's on the outside of the nasal fossa. They are the *superior* and *middle* (part of the ethmoid b.), the *inferior*, and *sphenoid*. **unciform b.** The innermost b. of the second row of the carpus. It is somewhat triangular and has a hook-shaped process upon its anterior surface. **upper jaw b.** See *maxilla*. **wormian b's.** The small b's often found within the cranial sutures. [Old Eng., *ban*.]

bone-ash. See *carbo animalis*.

bone-cell. Bone corpuscle; osteoblast.

bone-conduction. Osteophony; transmission of sound waves through the bones of the head.

bone-earth. The mineral residue obtained by burning bones.

bone-oil. Bone spirit; the volatile products of the dry distillation of bone in the preparation of animal charcoal. See also *Dippel's animal oil*, under *oil*.

bone'set. See *Eupatorium*.

bone-wax. See *Moorhof's b.-w.*

Boujean's ergota. See *extractum ergotae purificatum* under *ergota*.

bony. 1. Consisting of bone. 2. Having large or prominent bones. 3. Resembling bone.

boo-boo. Written also *bouhou* and *boohoo*. A name formerly applied in the Sandwich Islands to a kind of fever which attacks only newcomers, characterized by great depression of spirits and moaning

(whence the name); probably a subacute gastritis.

Boophilus (bo-of'il-us). A genus of cattle ticks. See *Margaropus*. **B. bovis.** The tick which is the medium of transmission for Texas cattle fever. [Gr., *bous*, ox, + *philein*, to love.]

boracic (bo-ras'ik). Containing or derived from borax. **b. acid.** See *boric acid*, under *acid*.

bor'age. Burrage, bee-bread. *Bor'd'go officinal'is*. A species of *B.* indigenous to Asia now common in Europe. The leaves and flowers were formerly employed as a tonic and diaphoretic.

bo'ral. Aluminum borotartrate (proprietary).

bo'ralid. A proprietary mixture of boric acid and acetanilid. Antiseptic; used for eczema.

bo'rate. A salt of pyroboric or tetraboric acid.

bo'rated. Containing or impregnated with boric acid or borax.

bo'rax. Sodium tetraborate, $\text{Na}_2\text{B}_4\text{O}_7 + \text{H}_2\text{O}$. A mild antiseptic, soluble in water, alcohol, and glycerin. **glycerinum boracis.** See *glycerinum sodii boracis*, under *sodium* [Br. Ph.]. **mel boracis.** See *mel sodii boratis*, under *sodium* [Br. Ph.].

borborygmus (bor-bor-ig'mus). Pl. *borborygmi*. A rumbling noise made by the movement of gas in the bowels.

Bordet-Gengou (Bor-da'-Zhaw-goo') **phenomenon.** The fixation of complement by means of an amoceptor after the latter has combined with its antigen. [*J. Bordet*, Belgian bacteriologist; *O. Gengou*, French bacteriologist; contemporaries.]

Bordet's theory (bor-das'). The theory which holds that bacteriolytic and other cytolytic sera owe their action to two distinct substances. The first is specific and is called the *sensitizer*, *preventive substance*, or *antibody*, the second occurs in normal as well as immune serum and is called the *alexin*. The *antigens*, such as bacteria and other foreign cells, form a complex with their specific antibodies which is now endowed with properties of alexin absorption, which neither single constituent possessed. He attributes this action more to a physical, than to a chemical process. Bordet insists upon the unity of the cytolytic substance, it being the same for bacteria, red blood corpuscles, and other cells of a foreign nature, and thus differs from Ehrlich, who believes in a multiplicity of complements.

boricin (bo'ris-in). A mixture of borax and boric acid.

bo'rin. 1. A compound analogous to an amin, of 1 atom of boron and 3 atoms of a univalent element or 3 molecules of a univalent radicle. 2. A proprietary preparation of boric acid.

bor'neol. Syn.: *Borneo-camphor*. $\text{C}_{10}\text{H}_{17}\text{OH}$, the aldehyd which corresponds to Japanese camphor, which is an aldehyd.

bornyyal (bor'ne-val). A trade name applied to borneol isovalerate ($\text{C}_{10}\text{H}_{17}\text{O} \cdot \text{C}_3\text{H}_5\text{O}$) in the form of capsules of 4

minims each. Its action is similar to that of valerian.

boro-. Combining form of boron, used as a prefix in compound words to signify of or pertaining to boric acid.

boroborax. A crystalline mass which separates on cooling from a solution of equal parts of boric acid and borax in boiling water. It is of neutral reaction, and more soluble than boric acid.

borogen (bo'ro-jen). The ethyl ester of boric acid; used by inhalation in coryza and bronchitis.

borogly'cerid, borogly'cerin, borogly'ceri'num. A preparation made by gradually dissolving boric acid in hot glycerin; a pasty mass dissolving in water in all proportions; used as an antiseptic [N. F.].

bo'rol. A mixture of sodium, or potassium sulphate and borate. An antiseptic.

borolyptol (bo-ro-lip'tol). A proprietary antiseptic solution containing boric acid, formaldehyd, and other substances.

borosalicylate. A mixture of boric acid and sodium salicylate. An antiseptic.

borosal'yl. Same as *borosalicylate*.

borover'tin. A trade name for hexamethylenamin triborate; used like hexamethylenamin.

bor'sil (bor'sil). A proprietary mixture composed of borax, boric acid and estyl alcohol; used against hyperhidrosis.

Bostock's catarrh. See *hay fever*.

Boswel'lia Car'teri or Carterii. A species of tree constituting one of the most important sources of oilbanum.

bot. The larva of the *Oestrus equi*, which infests the stomach of horses and occasionally that of man.

botan'ic, botan'ical. Pertaining to botany or to the vegetable kingdom. Certain medical practitioners, professing to use only vegetable drugs, call themselves botanic physicians.

bot'any. The science of the structure, physiology, distribution, and classification of plants. **medical b**. The study of medicinal plants and those that furnish articles of food. [Lat., *botanica*, from Gr., *botane*, herb.]

Bothriocephalus (both-re-o-sef'al-us). A genus of the class *Cestoida* and the order *Pseudophilidea*. The scolex is unarmed and has flat suckers. This genus is a form of tapeworm. **B. cordatus**. A species found in Greenland and Iceland, which infests dogs, seals, and men. It is shorter and more compressed than *B. latus* and the shape of the head is short, broad, and cordiform with lateral projecting borders. **B. cristatus**. See *B. latus*. **B. latus**. Syn.: *Taenia vulgaris*, *Taenia lata*, *Taenia grisea*, and *Dibothriocephalus*. The Swiss tapeworm; a species sometimes attaining a length of 25 feet and a breadth of nearly an inch, and having as many as 4,000 joints. The head has no hooks, but two lateral grooves, by means of which the worm attaches itself to the intestine. It is bluish white, and is most commonly found in Switzerland and neighboring countries, rarely

out of Europe. Its larval form probably exists in fishes. It infests dogs, cats, and man. **B. liguloides**. Syn.: *Ligula Mansoni*. A variety the larval form of which has been found in the subperitoneal connective tissue of man in China and Japan. It may attain a length of 8 inches; posteriorly it is narrowed, and anteriorly it is widened for a short distance into a sort of disk. The head is somewhat compressed and usually more or less invaginated, and lies on a papilliform elevation in the middle of the anterior end. Both surfaces of the body are alike. **B. Mansoni**. See *B. liguloides*. [Gr., *bothrion*, pit, + *kephale*, head.]

botryoid, botryoidal (bot're-oid, bot-re-oid'al). Resembling a bunch of grapes; racemose. [Gr., *botryoeide*, from *botrys*, bunch, cluster, + *eidos*, resemblance.]

Botryomyces (bot-re-o'mi-ses). The generic name of the pathogenic organism of botryomycosis. **B. ascoformans**. The spherical bodies ranging from 0.8 to 12 μ in size, found in the granulomatous lesions of botryomycosis hominis. This organism has not been cultivated. [Gr., *botrys*, a bunch of grapes, + *mykes*, a fungus.]

botryomycosis hominis (bot-re-o-mi-ko'sis hom'i-nis). A rare skin disease, characterized by the development of infectious granulomata in the skin, grapelike or mulberrylike groups of cocci being formed in the tissue. A similar disease is common in horses. [Gr., *botrys*, bunch of grapes, + *mykes*, fungus.]

Botrytis (bot-re'tis). A genus of fungi of the class *Ascomycetes* and order *Pyrenomyces*, which, as vegetable organisms or fungi are parasitic on decaying vegetables and on insects. **B. bassiana**, **B. Bassii**. The fungus that produces the disease of silkworms, known as muscardin. The spores developing in the bodies of dead animals, infect other animals by penetrating the skin by means of hyphae. **B. infestans**. A species parasitic on the potato plant, causing the disease called murrain.

bots. A diseased condition in horses and oxen, thought to be due to the larvae of the *Oestrus equi*, or botfly. Various morbid conditions, such as colic, convulsions, and staggers, have been ascribed to their presence, but as a rule they are innocuous. [Origin doubtful.]

Böttger-Almén-Nylander sugar test. Also called Nylander's test. Based upon the reduction of an alkaline solution of bismuth subnitrate, which contains Rochelle salts, by glucose, black bismuth being formed. Some sulphur compounds, at times present in the urine, also give the reaction (BiS_3) so that a positive test is not always conclusive evidence of sugar. [Böttger, German chemist; Almén, Swedish physiologist; Nylander, Swedish chemist; contemporaries.]

Bottini's operation (bot-e'nēs). The cauterization of the enlarged prostate by means of a galvanocautery introduced

- through the urethra in order to cause shrinkage by subsequent contracture of the prostate. [*Enrico Bottini*, Italian surgeon, 1837-1903.]
- bottle**. A vessel, usually of glass and having a more or less narrow neck, for holding liquids. **b. fed.** Fed by means of a nursing **b.** **nursing b.** A **b.** from which milk or some mixture containing milk is to be sucked by an infant; preferably a **b.** with a rubber nipple slipped over its mouth. **specific gravity b.** A **b.** containing a known weight of water, used for ascertaining the specific gravity of other liquids. **wash b.** A **b.** partly filled with water and having two tubes which enter it through the stopper, one dipping below the surface of the water and the other terminating above it; used for washing gases, which are forced in through the tube with the submerged end, rise through the water, and escape by the other tube. With the tubes suitably bent, it is also used for washing precipitates, etc., by directing a stream of water on to them blown through the tube which terminates just below the stopper. [Lat., *buticula*.]
- botuliform**. Sausage-shaped. [Lat., *botulus*, a sausage, + *forma*, form.]
- botulin**. See *botulismotoxin*.
- botulism**. Poisoning from sausage or other meat, thought to be produced by the *Bacillus botulinus*. [Lat., *botulus*, sausage.]
- botulismotoxin**. A soluble toxin produced in meat and sausages by *Bacillus botulinus*.
- Bouchardet's reagent** (boo-shar-däs'). A solution of 1 part of iodine and 2 parts of potassium iodid in 50 of water.
- Boudin's law** (boo-dahs'). The l. of the antagonism of malarial and tuberculous disease.
- bougie** (boo-jhee'). 1. In surgery, a cylindrical instrument, generally flexible, designed for insertion into the urethra or some other canal of the body. Varieties are: **acorn-tipped**; **bulbous**; **conical**; **esophageal**; **filiform**; **medicated**; **metallic**; **b. à boule** (ā-bool), one with a bulbous extremity; **olive-pointed**; **rectal**. 2. In pharmacy, a solid preparation in the form of a cylinder for introduction into the urethra or other orifices of the body. [Fr., *bougie*, a candle.]
- bouillon** (bu-e-yan'). 1. A clear beef-tea. 2. A culture medium much used in the bacteriological laboratory, consisting of 3 grms. of beef, 5 grms. of salt, 10 grms. of peptones (Witte) and 1 liter of water dissolved by boiling and then filtered. It forms the basis of many other media. [Fr.]
- boukne'mia**. See *elephantiasis*.
- Boulton's solution**. The *liquor iodi carbolatus* of the Nat. Form.
- bovine**. Pertaining to, or derived from an ox, bull, cow, or calf. [Lat., *bovinus*.]
- bovinin** (bo'vin-in). A proprietary preparation said to consist of ox blood, brandy, and glycerin. It contains approximately 8 per cent. of alcohol and 2.38 per cent. of nitrogen.
- bow'el**. See *intestine*. **lower b.** See *rectum*.
- bow'-legs**. An outward situation of one or both knees, due to the bending of the tibia, the femur, or both.
- Bowman's cell**. Syn.: *c. of a glomerulus*, *malpighian c.*, *Müller's capsule*. The hyaline membrana propria forming the wall of the spherical cecal enlargement at the origin of the uriniferous tubules. It is connected with the surrounding parts by a limited amount of connective tissue and is lined by epithelium which is reflected over the contained glomerulus.
- Bowman's disk**. The disklike masses into which a striated muscular fiber breaks.
- Bowman's layer**, **B's layer of the cornea**. The anterior l. of the cornea situated immediately beneath the epithelial layer.
- Bowman's membrane**. See *Bowman's layer*, under *Bowman*.
- Boyle's law**. The l. that the volume occupied by a fixed quantity of every gas is inversely proportional, and the density is directly proportional to the pressure applied to the gas.
- Boze'man's operation**. An operation, performed in the knee-breast posture, for the relief of ureterovaginal fistula.
- B's catheter**. A double-current catheter for intra-uterine irrigation. **B's dressing forceps**. A forceps made on the scissors plan with a curve on the flat, serrations at the ends of the blades, and a catch. **B's irrigator**. A uterine irrigator with curve conforming to the uterine canal. Also known as *Bozeman-Fritsch irrigator*. [*Nathan Bozeman*, New York gynecologist, 1825-1905.]
- B. P.**, **Br. Ph.** British Pharmacopœia.
- Br.** Symbol for the element bromine.
- brace**. An apparatus for supporting some part of the body or for strengthening some other part of an apparatus.
- bra'chial**. Pertaining to the arm. See *table of arteries under artery*, and of *muscles under muscle*. [Gr., *brachion*, arm.]
- brachialgia** (bra-ke-al'je-ah). Pain located in one or more of the branches of the brachial plexus. [Gr., *brachion*, the arm, + *algos*, pain.]
- brachialis** (bra-ke-al'is). See *table of muscles*, under *muscle*.
- brachinin** (brak'in-in). An irritant substance said to be an extract of the bombardier beetle, *Brachinus crepitans*. It has been recommended as a counterirritant in chronic joint affections.
- brachioradialis** (brak'e-o-ra-di-al'is). See *table of muscles*, under *muscle*.
- brachium** (bra'ke-um). The arm (from the shoulder to the elbow); also any armlike structure or object. **anterior b.** A tract of white nerve substance which extends from the anterior corpus quadrigeminum upward and forward between the external and internal geniculate bodies to the optic tract, with which it is continuous. **b. cerebelli**. The peduncle of the cerebellum. **b. conjunctivum**, **b. conjuntorium**. Two white tracts in the brain. **b. copulativum**. The superior peduncle of the cerebellum. **brachia**

fornicis. See *pillars of the fornix*. **b. inferius.** See *posterior b. brachia lateralia*. The brachia of the corpora quadrigemina. **b. opticum.** A central prolongation of the optic tracts, along with fibers from the cerebral cortex. **b. pontis.** The middle peduncle of the cerebellum. **b. quadrigeminum.** See *b. opticum*. **posterior b.** A tract of white substance extending from the posterior corpus quadrigeminum forward and outward to dip beneath the inner geniculate body. [Gr., *brachion*, arm.]

brachy-. Combining form of Gr., *brachys*, short; used as a prefix in compound words to signify short.

brachycephalia (bra-ke-sef-al'e-ah). A type of cranial formation in which the anteroposterior diameter is short, the cephalic index being greater than 80°. [Gr., *brachys*, short, + *kephale*, head.]

brady-. Combining form of Gr., *bradys*, slow; used as a prefix in compound words to indicate slowness.

bradyarthria (brad-e-ar'thre-ah). Slow speech. [Gr., *bradys*, slow, + *arthron*, articulation.]

bradycardia (bra-de-kar'de-ah). Slowness of cardiac action. [Gr., *bradys*, slow, + *kardia*, heart.]

bradyhalia (brad-il-a'le-ah). See *baryhalia*.

brain. The encephalon; all that part of the central nervous system which is contained within the skull, comprising the cerebrum and the cerebellum, the pons Varolii, and the medulla oblongata. See *cerebrum* and *cerebellum*. **afterb'**. See *metencephalon*. **b. bladders.** The cerebral vesicles. **b. case, b. chamber.** That part of the skull which incloses the b. **b'like.** See *encephaloid*. **b. pan.** See *b. case*. **foreb.** See *prosencephalon*. **great b.** See *cerebrum*. **hind-b.** See *epencephalon*. **interb.** See *thalamencephalon*. **little b.** See *cerebellum*. **midb.** See *mesencephalon*. **wet b.** The cerebral edema of chronic alcoholism. [Old Eng., *braegen*, from low Eng., *brägen*.]

brain-fever. Meningitis.

brain-sand. The calcareous matter found in the follicles of the epiphysis cerebri and sometimes also in the choroid plexuses. *Acervulus*.

brain-storm. A passing violent outburst of mental excitement seen in various psychoses. A purely popular term.

bran. The epidermic scales separated from grain by bolting. In the form of unbolted flour, b. is made into bread, which is eaten as a corrective of constipation and for the additional nutriment contained in the b.; by itself, in hot infusion (b. tea) it is used as a demulcent. It is also used for making poultices. [Of doubtful etymology.]

branch. An outgrowth or prolongation from a main trunk or structure; one of two or more divisions of a main stem, as of a plant, an artery, a nerve, a bronchial tube, etc.

branchia. A gill. Usually used in pl., *branchiae*, the bronchial fissures, or gill-

clefts, three in number, occurring on each side of the neck of the human embryo, and entering into the development of the ear, tonsils, and jaws. [Gr., *bragchia*, gills.]

branchial (bran'ke-al). Pertaining to the branchiae or to the b. arches or fissures.

branchiomere (bran'ke-o-mere). An embryonic segment corresponding to one of the branchial clefts.

Brand's meth'od. The treatment of typhoid fever by cold baths. [Ernest Brand, Ger. physician, 1827-1897.]

bran'dy. A spirituous liquor distilled from wine. It has a peculiar flavor and odor, and varies in color from pale amber to dark reddish brown. The color is due to principles derived from the wood of the cask, and usually deepens with age, but that of the highly colored liquors is due to an admixture of caramel. B. should contain about 50 per cent. of alcohol by volume [U. S. Ph.]. [Lat., *spiritus vini gallici*; Dut., *brandwijn*, brandy.]

brash. Called also *water brash*. See *pyrosis*. [Gael., *brais*, a fit.]

Bras'sica. 1. The cabbage. 2. A genus of cruciferous plants of the tribe *Brassicaceae*, including the cabbages, turnips, and (according to Bentham and Hooker) the mustards.

Brayera (brah-ye'rah). 1. Of Kunth, a genus of rosaceous plants. 2. The female inflorescence of *B. anthelmintica*, the *cusso* of the U. S. Ph., and Br. Ph. It is used against tapeworm in the form of an infusion. *Kusso*.

bra'yerin. See *kosin*.

bread. An article of food made by baking a mixture of some ground cereal with water and usually some sort of leaven. **diabetic b.** B. made of flour containing a minimum of carbohydrates; among the varieties of it are: gluten b., almond b., and protein b. in which casein is used. [Ang.-Sax.]

breakbone fever. See *dengue*.

breast (brest). 1. The chest, especially its upper and anterior portion. 2. The mammary gland. **b. bone.** See *sternum*. **b. pang.** See *angina pectoris*. **broken b.** Abscess of the mammary gland. **chicken b.** Deformity of the chest in which the sternum is prominent as in fowls. [Ang.-Sax., *breost*.]

breas'tings. See *colostrum*.

breath (brëth). 1. The process of breathing; also an individual act of inspiration or expiration. 2. The air breathed, especially the expired air. See also *tidal air*, *under air*.

breath'ing. See *respiration*. **b. air.** See *tidal air*, *under air*. **b. capacity.** Syn.: *vital*, or *extreme breathing capacity*. The amount of air that can be forced from the lungs voluntarily, after the fullest possible inspiration, representing the sum of the tidal, complemental, and supplemental air. **b. volume.** See *tidal air*, *under air*. **bronchial b.** See *bronchial respiration*, *under respiration*. **mouth b.** habitual b. through the m., especially during sleep.

breech. The buttocks; the gluteal prominences forming the lower and posterior portion of the trunk. **b. presentation.** In obstetrics, the position of the buttocks of the child at the inlet of the true pelvis of the mother. [Ang.-Sax., *brēc.*]

breg'ma. The upper and fore part of the head; more exactly, the point of junction of the coronal and sagittal sutures, corresponding to the anterior fontanel in infants. See *occiput*. [Gr., *bregna*, the front part of the head.]

brenzcain (brents-ka'in). Guaiacolbenzyl ester of Merck, $C_{14}H_{14}O_2$; said to act much like guaiacol.

brenzcat'echin. See *catechol*.

Breschet's si'nus (bres-shāz'). A s. extending from the superior longitudinal s. to the cavernous s.; in many instances the middle meningeal vein enlarged. [Gilbert Breschet, Fr. anatomist, 1784-1845.]

Brew'ster's law. Syn.: *tangential l.* The l. which declares that for any substance the polarizing angle is equal to that angle of incidence at which the portion of light that is reflected is at right angles to the portion that is refracted.

Brew'ster's prismatic stereoscope. A s. consisting of two prisms with convex surfaces, having their refracting angles turned inward, one before each eye, though which the person being examined must look with parallel visual lines. In the median plane between the two prisms is placed a blackened screen, which reaches nearly to the points of fixation. The eyes are correctly accommodated by the convexity of the prismatic surface, and the images of the two objects of fixation are fused into one by the action of the prisms.

bridge. A structure spanning a gap or interval between two parts, which it thus connects. In dentistry, the adaptation of artificial crowns of teeth to adjacent teeth to fill the vacant space made by the loss of natural teeth. Bridges are fixed or immovable and are made of porcelain, gold, or gold with porcelain facing.

b. of the nosc. The prominent upper portion of the external nose, formed by the nasal bones. **b. of Varolius.** See *pons Varolii*. **intercellular b's.** Slender processes of cell substance connecting neighboring cells. **Wheatstone's b.** An apparatus for determining the resistance encountered by a galvanic current by comparing or balancing it with a known resistance. [Ang.-Sax., *brycg.*]

bridle. A band or filament stretching from one part to another, whether normal or pathological. See also *frenum*. [Ang.-Sax., *bridel.*]

Bright's disease. Syn.: *albuminuria renalis*. See *nephritis*. [Richard Bright, Eng. physician, 1789-1858.]

brim. A shore, border, or rim; the superior strait of the pelvis formed by the upper edge of the symphysis and the body of the pubic bone and the ileopectineal line in front and on the sides, and

by the promontory of the sacrum behind. [Ang.-Sax., *brim*, seashore.]

brim'stone. Sulphur. Specifically sublimed sulphur remelted and cast in cylindrical molds. [Old Eng., *brynston*, *brendston*, from Ang.-Sax., *bryne*, a burning.]

Briquet's ataxia (bri-kāz'). Hysterical ataxia.

broach. A fine, smooth, or barbed instrument for enlarging or dressing the canal of a tooth or for removing the pulp. [Mid. Eng., *broche.*]

Broad'bent's sign. Systolic retraction of the interspace near the apex of the 11th and 12th ribs in the back as a sign of adherent pericardium. [Sir William Broadbent, Eng. physician, 1835-1907.]

Bro'ca's angle. The angle formed by the intersection of lines coming from the nasal spine and the nasal point. **B's center.** See under *center*. **B's convolution.** The third left frontal convolution of the brain. [Paul Broca, Parisian surgeon, 1824-1880.]

Bro'die's abscess. Syn.: *quiet bone abscess.* A cavity formed in the shaft of the femur in the course of osteomyelitis without suppuration. Its walls are thickened and it contains fluids that may be sterile. [Sir Benjamin Collins Brodie, Eng. surgeon, 1783-1862.]

bro'ma. 1. Solid food. 2. An easily digested form of cocoa from which the oil has been extracted. [Gr., *broma*, food.]

bro'mal. Tribromaldehyd, $Br_3C.CHO$. A colorless, oily liquid, of a burning taste and penetrating odor; used as a hypnotic. See *chloral*. **b. hydrate.** A crystalline substance, $CBr_3.CH(OH)_2$, analogous to chloral hydrate, formed by the union of b. with water; decomposed by alkalis with the production of bromoform. It has been used in epilepsy, chorea, and the pains of tabes dorsalis. [Bromin + aldehyd.]

bromalbu'min. A proprietary compound known as bromosin, containing 10 per cent. of bromin in combination with egg-albumin.

bromal'dehyd. A compound of bromin with aldehyd. *Dibromaldehyd* has the composition $CHBr_2.CHO$, with a polymeric form, *paradibromaldehyd*, $3C_2H_2Br_2O$, used as a hypnotic.

brom'alin. Ethyl bromid plus utropropin. **brom'amid.** A bromin compound, $C_6H_2Br_3NH.HBr$, of the anilid group; used as an antipyretic and antineuralgic.

bro'mate. A salt of bromic acid combined with a base. [Lat., *bromas.*]

bromatotoxicon (bro-ma-to-toks'i-kon). A general term for poison forming in spoiled food.

bromatotoxin (bro-ma-to-toks'in). A basic poison or ptomain generated in food by bacteria. [Gr., *broma*, food, + *toxikon*, poison.]

bromatotoxism, bromatotoxismus (bro-mat-o-toks'ism, bro-ma-to-toks-is'mus). Food poisoning of animal or vegetable origin. [Gr., *broma*, food, + *toxikon*, poison.]

bromcam'phor. See *camphora monobromata*.

bromc'e lin. A ferment, acting like trypsin, obtained from the pineapple. [Lat., *bromelia*, pineapple.]

brometh'ylene. A substitution product of bromin and ethylene, including *monobromethylene* (which is meant when the word is used without a prefix) and *tribromethylene*.

bromhy'drate, bromhy'dras. See *hydrobromid*.

bro'mic. Containing or combined with bromin (usually restricted to compounds containing bromin united with oxygen and combined with a greater relative amount of that element than is present in the supposititious bromous compounds).

b. acid. See under *acid*. [Lat., *bromicus*.]

bro'mid. A compound formed by the replacement of the hydrogen in hydrobromic acid by a metallic or an organic radical. The official bromids in the U. S. Ph. are ammonium, calcium, lithium, potassium, sodium, strontium and zinc. [Lat., *bromidum*.]

bromidia (bro-mid'e-ah). A proprietary preparation containing in each fluid dram 15 grains each of chloral hydrate and potassium bromid and $\frac{1}{8}$ grain each of extract of *Cannabis indica* and extract of *hyoscyamus*.

bro'midin. A hypnotic preparation said to consist of chloral hydrate, extract of *Cannabis indica*, and extract of *hyoscyamus*.

bro'min. A non-metallic element, which is a dark brown liquid, giving off highly irritant fumes of a disagreeable suffocating odor, and a burning taste; caustic and corrosive. Symbol, Br. Atomic weight 80. **liquor bromi** [N. F.]. Smith's solution of bromin, containing 25 per cent. of bromin held in aqueous solution with the aid of potassium bromid. [U. S. Ph., Br. Ph.] [Lat., *bromum*, from Gr., *bromos*, a stench.]

bromi'odid. A compound consisting of the bromid and iodid of the same base.

bro'mipin. A solution of bromin in oil of sesame, containing 10 per cent. or $33\frac{1}{3}$ per cent. of bromin. It is a proprietary preparation and is supplied in either of the two strengths. Used as a sedative. [U. S. Dispensatory.]

bro'mism. Poisoning with bromin, usually from the excessive use of the bromids; characterized by drowsiness, physical and intellectual weakness, and various skin lesions, often increased reflexes and mild delirium.

bromo-; before a vowel, **brom-**. Combining form of bromin, used as a prefix in compound words to indicate of or pertaining to bromin.

bro'mo-albu'min. Same as *bromalbumin*.

bro'mocaff'cin. A proprietary preparation that contains caffein and potassium bromid; used for sick headache.

bro'mochloral'um. A proprietary disinfectant and antiseptic preparation con-

taining aluminum chlorid and alkaline salts.

bro'mocoll. A condensation product of bromin, tannic acid, and gelatin; it contains 20 per cent. of bromin. Used as a hypnotic.

bro'moform, bromofor'mum. An oily liquid, CH.Br₃, resembling chloroform in its reactions; an anesthetic and hypnotic, and used in whooping-cough. [U. S. Ph.]

bromohy'drate. See *hydrobromid*.

bromohy'dric. See *hydrobromic*.

bro'mol. A proprietary name for tribromophenol, Br₃C₆H₂CH₃.

bro'moma'nia. A mental disturbance caused by bromid toxemia, from large single or continuous small doses.

bro'mopan. A bromin compound intended for the administration of bromin with bread.

bromophen'ol. Any one of the isomeric monobromophenols, Br.C₆H₄OH.

bromophen'yacetamid. Syn.: *acetobromanilid*. A general name for a series of crystalline bromin substitution products of phenylacetamid, including *monobromophenylacetamid* (acetomonobromanilid), C₆H₄Br.NH.C₂H₅O, three isomeric forms of which are known, termed respectively ortho-, meta-, and paramonobromophenylacetamid; *dibromophenylacetamid* (acetodibromanilid), and *tribromophenylacetamid* (acetotribromanilid).

bromopyrin (bro-mo-pi'rin). 1. The compound C₁₁H₁₁BrN₂O; an antipyretic. 2. A mixture of antipyrin, caffein, and sodium bromid.

brom'osin. See *bromalbumin*.

bro'mural. 2-Monobromisovalerylurea (C₆H₁₁H₂O₂Br). A hypnotic.

bron'chial. Pertaining to the bronchi or the b. tubes. **b. tubes.** See under *tube*.

b. artery. See *table of arteries under artery*.

bronchiectasis (bron-ke-ek'tas-is). Dilatation of one or more of the bronchial tubes. [Gr., *brogchia*, the bronchial tubes, + *ektasis*, expansion.]

bronchiloquy (brong-kil'o-kwe). A high pitched chest sound due to consolidation of the lung. [Lat., *bronchus*, bronchus, + *liqui*, to speak.]

bronchio-; before a vowel, **bronchi-**. Combining form of bronchia, the ramified portion of the windpipe; used as a prefix in compound words to signify of or concerning the windpipe.

bronchiocele (bron'ke-o-sel). A swelling or dilatation of a bronchiole. [Lat., *bronchiolus*, a little air passage, + Gr., *kele*, tumor.]

bronchioles (bron'ke-ols). Pl. The ultimate branches of the bronchial tubes, to which the alveoli are connected.

bronchitis (bron-ki'tis). Catarrhal inflammation of the bronchial tubes, especially the larger ones, within the lungs. The term is popularly applied to catarrhal affections of the larynx, trachea, and bronchi. **b. diffusa sicc.** Diffuse dry b. **b. exsudativa, b. fibrinosa.** See *croupous b. b. putrida*. See *fetid b. b.*

- suffocans.** See *capillary b.* **capillary b.** An acute catarrhal inflammation of the finer bronchial tubes; a severe and often fatal affection, commonly thought to attack children especially, usually localized; often not to be distinguished from bronchopneumonia. **chronic b., chronic catarrhal b.** A form of *b.* characterized by attacks occurring every winter, and at last becoming continuous. **convulsive b.** Whooping-cough. **croupous b.** An acute or chronic *b.* in which casts of the bronchial tubes are formed by fibrinous exudation. **eosinophilous b.** A form of chronic *b.* characterized by numerous eosinophilous cells in the sputum. **exudative b., fibrinous b.** See *croupous b.* **fetid b.** *B.* with fetid expectoration. **mechanical b.** *B.* due to mechanical irritation, as by the habitual inhalation of dust of various kinds. **senile b.** Chronic *b.* in aged persons. **summer b.** Hay fever. [Gr., *brogchia*, the bronchial tubes, + *itis*, inflammation.]
- broncho-;** before a vowel, **bronch-.** Combining form of bronchus.
- bronchocele** (bron'ko-sēl). Another name for goiter. [Gr., *brogchos*, trachea, + *kele*, tumor.]
- bronchoconstrictor** (brong'ko-kon-strik'tor). The name applied to the nerve fibers which cause constriction of the bronchioles by contraction of the circular layer of muscle.
- bronchodilator** (brong'ko-di-la'tor). The name applied to the nerve fibers which cause dilatation of the bronchioles by inhibition of the tone of the circular layer of muscle.
- bron'cholith.** A concrement formed in a bronchial tube. [Gr., *brogchia*, the bronchial tubes, + *lithos*, a stone.]
- bronchophony** (bron-kof'o-ne). The natural sound of the voice, heard when one auscults over the trachea or the bronchi. A similar sound is heard over consolidated lung. **whispering b.** A high-pitched, tubular sound heard on auscultation when the patient whispers. [Gr., *brogchos*, a bronchus, + *phone*, the voice.]
- bronchopneumonia** (bron'ko-nu-mo'ne-ah). Areas of pneumonic exudate, surrounding the smaller bronchi, where the inflammatory process usually originates. Also called *lobular pneumonia*. [Gr., *brogchia*, the bronchial tubes, + *pneumonia*.]
- bronchorrhagia** (bron-ko-ra'je-ah). Hemorrhage from or into the bronchi or the bronchial tubes. [Gr., *brogchos*, a bronchus, + *regmuthai*, to break forth.]
- bronchorrhea** (bron-kor-re'ah). Bronchial catarrh, usually chronic, with profuse expectoration. **b. serosa.** *B.* in which the expectoration is serous. [Gr., *brogchia*, the bronchial tubes, + *rein*, to flow.]
- bronchoscope** (brong'ko-sko-pe). An instrument for inspecting the interior of the bronchi for the detection of the loca-
- tion of foreign bodies. [Gr., *brogchos*, windpipe, + *skopein*, to view.]
- bronchotomy** (bron-kot'o-me). A general term for the operations of making an opening into the air passages. [Gr., *brogchos*, trachea, + *temnein*, to cut.]
- bron'chovesic'ular.** Pertaining to the bronchial tubes and the pulmonary air vesicles; of an auscultatory sound, having the features of both bronchial breathing and the vesicular murmur.
- bronchus** (bron'kus). Pl. *bronchi*. 1. Either one of the two main branches of the trachea. 2. The trachea. **eparterial b.** The first division of the right bronchus. **hyparterial b.** The left *b.*, together with the right *b.*, below the first division. [Gr., *brogchos*, windpipe.]
- bronzed.** Rendered like bronze in color. **b. skin.** See *Addison's disease*.
- broom.** See *scoparius*.
- brousnika** (broos'ne-kah). A preparation made from the berries of *Vaccinium vitis idaea*.
- broth.** Liquid in which flesh (and sometimes other substances, as rice or barley) has been boiled; thin soup.
- bro'valol.** Bromyl bromvalerate (C₁₅H₂₅O₂Br). Antispasmodic and nervine.
- brow.** The superciliary ridge, the forehead over one eye or the entire forehead. **b. ache.** Supra-orbital neuralgia. **b. presentation.** In obstetrics, the position of the forehead of the child at the brim of the true pelvis of the mother. [Old Eng., *brú*.]
- brown'ian movements.** The dancing movements shown by minute particles suspended in a liquid or in the liquid material of a living cell. First described by the English botanist, Brown, and supposed to be due to the constant bombardment of the molecules of the liquid. [Robert Brown, English botanist, 1773-1858.]
- brown-tailed moth.** A European moth, *Euproctis chysorrhæa*, which has been introduced into the United States. The caterpillar has barbed nettlelike hairs which become detached and penetrate the human skin causing dermatitis.
- bru'cia, bru'cin, bru'cina, bru'cinum, bru'cium.** A crystalline alkaloid, C₂₈H₂₀N₂O₄ + 4H₂O, derived from *Strychnos nux vomica* and other species of *Strychnos*.
- Bruck's membrane.** The external layer of the choroid.
- Brücke's bismuth iodid test** (bre'kez). A *t.* by which the presence of glucose is shown by the brown or black coloration it causes in a solution made by boiling for ten minutes 5½ grams of freshly precipitated bismuth subnitrate and 30 of potassium iodid with 150 c.c. of water, and adding 5 grams of a 25 per cent. solution of hydrochloric acid.
- bruit** (bru'e). A murmur or other sound heard on auscultation over the heart or blood vessels. **anemic b.** See *anemic murmur*, under *murmur*. **b. de diable.** The venous hum of anemia, so-called from its resemblance to the toy called *diable*. Also the subjective tinnitus of

chlorotic patients and a humming hallucination of hearing in the insane. **placental b.** See *uterine soufflé*, under *soufflé*. [Fr.]

Brunner's glands. Minute acinotubular or racemose g's in the submucosa of the duodenum. They open by a special duct in the lumen of the intestine, at the base of the villi. The structure is quite similar to that of the pyloric g's of the stomach. The secretion digests starch and uncoagulated albumin. [Johann Conrad Brunner, Swiss anatomist, 1653-1727.]

brush. A collection of bristles or other similar flexible, shaftlike objects properly set in the form of an implement for rubbing articles or for applying liquids. **acid b.** A b. made of fine threads of glass, used for applying acids. **electric b., faradic b.** A wire b. to be used as an electrode. [Ang.-Sax., *byrst*.]

Bryonia. 1. Bryony; a genus of cucurbitaceous plants. 2. The root of *B. alba* and of *B. dioica*. Bryony is an active purgative. [Gr., *bryonia*.]

bryonin. A glucosid, $C_{48}H_{80}O_{16}$, obtained from *Bryonia alba* and *Bryonia dioica*; an amorphous powder, intensely bitter, and in large doses poisonous.

bryony. See *Bryonia*.

bu'bo. Pl. *buboes*. An inflammatory swelling of a lymphatic gland, usually an inguinal gland, seen most frequently after gonococcus infection. The term has been displaced largely by adenitis. **bullet b.** A hard, small b. as from an enlarged individual gland in syphilis. **chancroidal b.** Accompanying chancroid and generally suppurative. **gonorrhoeal b.** Accompanying gonococcus infection. **indolent b.** Hard, little, and tender, and showing no tendency to suppuration. **malignant b.** That characteristic of bubonic plague. **pestilential b.** See *malignant b.* **syphilitic b.** One or more separate glands, showing no tendency to suppuration. **tuberculous b.** One due to tuberculous infection of the gland. **venereal b.** One due to the infectious agents of gonorrhoea or syphilis. [Gr., *boubon*, groin.]

bubonic. Relating in any way to a bubo. **b. plague.** The most common form of the plague characterized by the occurrence of buboes in the groin or axilla. See *plague*.

buccal (buk'al). Pertaining to or directed towards the cheeks. In dentistry, the surface of the side teeth of either jaw lying next to the cheek. **b. angle.** In dentistry, the angle between the surface of the crown and the buccal surface. **b. artery.** See *table of arteries* under *artery*. **b. cleft.** Syn.: *macrostoma*. A variety of harelip, in which the deformity involves the cheeks, the fissure extending from the angles of the mouth outward, causing an enlargement of the natural opening.

buccal glands. Small mucous glands, between the mucous membrane and the buccinator muscle.

buccinator (buk'sin-a-tor). See *table of muscles*, under *muscle*.

buc'co. Combining form of Lat., *bucca*, mouth, cheek; used to denote having to do with the mouth or inner surface of the cheek.

buccocervical ridge. In dentistry, the ridge near the cervix on the buccal surface of the deciduous molars.

buc'cula. A fleshy prominence or fulness beneath the chin, forming a "double chin." [Lat., dim. of *bucca*, the mouth, the cheek.]

bu'chu, buc'co, buc'cu. The leaves of the *Barosma betulina* [U. S. Ph.], a shrub growing in South Africa; *Barosma crenulata*; and *Barosma serratifolia*; used chiefly in catarrhal affections of the urinary tract. The fluidextract [U. S. Ph.], and several elixirs of the N. F., as well as the infusion [Br. Ph.], are used. [An adaptation of the native name.]

buck'bean. Written also bogbean. See *Menyanthes trifoliata*.

buck'eye. Hippocastanum or horse-chestnut.

Buck'ingham's reagent. A solution of 1 part of ammonium molybdate in 16 parts of concentrated sulphuric acid, to be warmed for use.

Buck's extension. An apparatus for making extension of the lower limb in fracture of the thigh, by means of adhesive strips applied to the leg and a cord and a weight at the foot of the bed, which is raised. [Gordon Buck, New York surgeon, 1807-1877.]

buck'thorn. The genus *Rhamnus*, particularly *R. frangula*.

bud. In botany, a prominence consisting of an aggregation of rudimentary structures destined to develop into a leaf or a flower. **taste b's.** Ovoid or flask-shaped bodies situated around the circumvallate papillae of the tongue, with their apices projecting between the epithelial cells in the form of filaments. They have been thought to be organs of taste, but they occur where there is no sense of taste.

Budge's center. See under *center*.

buffy coat. See under *coat*.

Bufo. A genus of toads. From one or more species, bufonin and bufotalin are obtained; *B. aqua* yields a venom from which bufagin and a substance identical with epinephrin have been extracted. Bufagin, bufonin and bufotalin have actions much like those of digitalis.

bug'gery. Sexual intercourse through the anus. Sodomy. [Old Fr., *bougre*, heretic.]

Bühl'mann's fibers. Lines found in the carious parts of the teeth.

bulb. 1. In general, any rounded, more or less spherical, or ovoid body, whether solid or hollow. 2. In botany, an abbreviated, more or less globular plant axis, enveloped above by an aggregation of fleshy leaves (a leaf bud) and bearing roots below, also a swollen portion of the pedicle of certain fungi. **aortic b.** The expanded initial portion of the aorta;

in embryology, the aortic (or primitive arterial) stem (see *arterial b.*); in comparative anatomy, a bulbous enlargement of the cardiac aorta which contains striped muscular fibers and contracts rhythmically. **arterial b.** Of the embryonic heart, the anterior portion, which by division gives rise to the aortic and pulmonary stems. **b. of the corpus cavernosum.** An enlargement of the crus of the corpus cavernosum at the root of the penis. **b. of the corpus spongiosum.** See *b. of the urethra.* **b. of the eye.** The eyeball. **b. of the fornix.** See *splenium.* **b. of the olfactory nerve.** See *olfactory b.* **b. of the spinal cord.** See *medulla oblongata.* **b. of the urethra.** A bulbous expansion of the proximal end of the corpus spongiosum urethrae. **b's of the vagina, b's of the vestibule.** See *bulbi vestibuli vaginae*, under *bulbus.* **central b.** The core of a terminal nerve corpuscle. **cylindrical end b.** See *end bud*, under *separate heading.* **fornix b's.** See *splenium.* **four b's.** See *corpora quadrigemina*, under *corpora.* **gustatory b's.** See *taste buds*, under *bud.* **naked b.** A b. (in the botanical sense) with loose, separable scales. **olfactory b.** An oblong body, consisting almost entirely of gray matter, resting on the cribriform plate of the ethmoid bone, through the perforations of which it sends down nerve filaments from its lower surface to enter the nose. **proximal b.** Of a cilium of a ciliated cell, that portion which is next the cell and connected with it by the intermediate segment. **taste b's.** See *taste buds*, under *bud.* **terminal nerve b.** See *end bud*, under *separate heading.* [Lat., *bulbus*, a bulbous root.]

bulbar. 1. Relating to a bulb. 2. Relating to the medulla oblongata.

bulbocavernosus (bul''bo-kav-er-no'sus). See *table of muscles*, under *muscle.*

bul'bus. Pl. *bulbi.* A bulb. **b. aortae, b. aorticus.** See *aortic bulb*, under *bulb.* **b. arteriosus.** See *arterial bulb*, under *bulb.* **b. corporis cavernosus penis.** See *bulb of the corpus cavernosum*, under *bulb.* **b. fornicis.** See *splenium.* **b. medullae oblongatae.** See *medulla oblongata.* **b. oculi.** The globe of the eye. **b. olfactorius.** See *olfactory bulb*, under *bulb.* **bulbi priorum crurum fornicis.** The corpora albicantia. **bulbi tonsillares.** The lobules of the cerebellum. **b. urethrae.** See *bulb of the urethra*, under *bulb.* **b. venae jugularis internae inferior.** An egg-shaped dilatation of the internal jugular vein just above its junction with the subclavian vein. **b. venae jugularis internae superior.** An expansion of the internal jugular vein at its exit from the jugular foramen. **bulbi vestibuli vaginae.** The bulbs of the vestibule of the vagina; each is a network of veins situated behind the labium minus, representing the bulb of the urethra of the male. [Lat., *bulbus*, a bulbous root.]

bule, bulesis (bu'lē, bu-le'sis). The will;

will power. [Gr., *boule, boulesis*, a willing.] **bulimia** or **boulimia** (bu-lim'e-ah). Bulimic; an inordinate craving for food; faintness relieved only by eating. **b. verminosa.** B. attributed to intestinal worms. **epileptic b.** B. occurring before an epileptic fit. [Gr., *bou*, a particle used to express large size, + *limos*, hunger.]

bul'la. 1. An elevation of the skin, containing free fluid, greater in size than a split pea; and sometimes called *bleb* or *blister.* 2. A stud-shaped bony projection. **b. ethmoidalis.** A globular swelling on the medial surface of the lateral mass of the ethmoid bone, behind the uncinat process. [Lat., *bulia*, pl. *bullae*, bubble.]

bul'late. A term used in descriptive bacteriology to denote a growth which is blistered; one rising in convex prominences. [Lat., *bullatus.*]

bullet forceps. A two-pronged vulsellum forceps with a catch on the handles.

bun'dle. A collection of fibers having the same general direction; in vegetable morphology, the essential anatomical element of the fascicular system. **association b's.** The association fibers of the cerebrum. See under *fiber.* **auriculoventricular b.** The bundle of modified heart muscles forming the conducting system between auricles and ventricles. **bicollateral b.** A fibrovascular b. in which a single strand of xylem is interposed between two strands of phloem, or *vice versa.* **b. sheath.** The cylindrical mass of parenchyma which surrounds a fibrovascular b. **dorsal crossed b.** See *dorsal crossed fasciculus*, under *fasciculus.* **dorsal direct b.** See *dorsal direct fasciculus*, under *fasciculus.* **primitive b.** A muscular fiber. [Etymology doubtful.]

bunion (bun'yon). A hard, painful tumor situated near a joint of the foot, especially the metatarsophalangeal joint of the great toe, consisting at first of an enlarged bursa and finally leading to enlargement and distortion of the bones. [Perhaps Gr., *bounion*, earthenut.]

Bunsen burner. A gas burner providing a blue flame by mixing the air with the gas by means of openings in the tube near the point at which the gas issues. Thus heat is generated instead of illumination. **B's laws.** Chemical principles governing the reactions occurring between compound bodies when one of the compounds is present in considerable excess. [Robert Wilhelm Bunsen, German chemist, 1811-1899.]

bur. 1. The burdock, *Arctium lappa*, or its prickly head, also any similar prickly structure on a plant. 2. A dental drill with a serrated head larger than the shank, usually operated by a dental engine. [Old Eng., *burre.*]

Burckhardt's corpuscles. Yellow bodies in trachoma.

Burdach's column. See *cuneate funiculus* under *funiculus.* **B's nucleus.** See *cuneate n.*, under *nucleus.*

buret (bu-ret'). A glass vessel for the

accurate measurement of liquids used in analysis. It has the general form of a tube from 16 to 18 mm. in diameter and 30 cm. long, open at the top, with a small stop-cock at the bottom.

bur'gamot. See *bergamot*.

bur'king, burk'ism. Murder, especially by suffocation, committed for the purpose of obtaining material for dissection; so-called from the practice of one Burke, of Dublin.

burn. A lesion produced by heat. To consume with fire or caustic. [Old Eng., *brinnan, beornan*, to burn.]

Bur'nett's disinfectant, B's disinfecting fluid. A mixture of 3 parts of hydrochloric acid and 100 of zinc chlorid in 200 of water. **B's solution.** A solution of zinc chlorid. [Sir W. Burnett, Eng. surgeon, 1779-1861.]

Burow's solution. Solution of crude aluminum acetate. The solution of aluminum acetate of the N. F. is usually dispensed when Burow's solution is ordered. [Karl August von Burow, surgeon, Königsberg, 1809-1874.]

bur'sa. Pl. *bursae*. A closed pouch, especially a synovial sac. See *b. mucosa*. **accidental b.** A b. resembling a b. mucosa, but containing a less viscid liquid, formed under the skin of a part subjected to habitual friction or pressure. **anconal b.** A b. situated between the olecranon and the tendon of the triceps extensor cubiti. **b. glutei medii anterior.** A b. situated between the trochanter major and the fore part of the tendon of the gluteus medius. **b. glutei minimi.** A b. situated between the tendon of the gluteus minimus and the trochanter major. **b. intratendinea olecrani.** A b. found within the tendon of the triceps extensor cubiti. **b. malleoli lateralis.** A subcutaneous b. over the lateral malleolus. **b. malleoli medialis.** A subcutaneous b. over the medial malleolus. **bursae massetericae.** Several bursae situated beneath the masseter muscle. **b. mucosa.** A sac lined with a membrane which secretes a synovial fluid, interposed between parts which are subjected to frequent motion upon each other, or developed accidentally beneath the skin of a part subjected to habitual friction or pressure. **b. obturatoris externi.** A b. situated between the obturator externus muscle and the capsule of the hip joint. **b. omentalis.** A large cavity formed by the peritoneum behind the stomach and in the great omentum. **b. patellae, b. patellaris.** A b. situated between the patella and the skin. **b. of the pharynx.** A recess in the mucous membrane of the back part of the pharynx, in the median line, extending up to the tubercle. **b. poplitea.** A b. situated beneath the popliteus muscle and on the capsule of the knee joint and the lateral tuberosity of the tibia. **b. of the quadratus femoris.** A b. situated between the quadratus femoris and the trochanter minor. **b. subcutanea olecrani.** A b. situated between the skin and the periosteum of the olecranon. **b. subdeltoidea.** A b. situated at the side of the shoulder joint, beneath the deltoid muscle. **humero-bicipital b.** A b. lining the bicipital groove of the humerus. **iliac b.** A b. situated between the tendon of the iliacus muscle and the trochanter minor. **obturatory b.** A b. situated between the obturator internus and gemelli muscles and the capsular ligament of the hip joint. **pectineal b.** A b. situated between the pectineus muscle and the femur. **pharyngeal b.** See *b. of the pharynx*. **popliteal b.** A b. situated between the tendon of the popliteus muscle and the subjacent structures. **radiobicipital b.** A b. situated between the tendons of the biceps flexor cubiti and brachialis anticus muscles and the anterior tubercle of the radius. **subclavian b.** A b. situated between the tendon of the subclavius muscle and the first rib. **synovial b.** 1. The synovial sheath of a tendon. 2. The synovial sac of a joint. **tubero-ischiadic b.** A b. situated between the obturator internus and the posterior spine and tuberosity of the ischium. [Lat., *bursa*, a purse.]

bur'sal. Pertaining to or resembling a bursa. **bur'si'tis.** Inflammation of a bursa. [Lat., *bursa*, purse, from Gr., *byrsa*, hide, + *itis*, inflammation.]

bu'tane. Tetrane; a hydrocarbon of the paraffin series, C_4H_{10} . There are two isomeric forms: 1. *Normal b.* $CH_3-CH_2-CH_2-CH_3$, a colorless gas. 2. *Isobutane* (trimethylmethane), $CH_3-C(CH_3)_2H-CH_3$, a colorless gas.

buthalmia (bu-thal'me-ah). Syn.: *hydrophthalmia*. A rare form of dropsy of the anterior chamber of the eye characterized by a uniform spherical bulging of the whole eye. True b. is always congenital. [Gr., *bous*, an ox, + *ophthalmos*, the eye.]

Bütschli's granules. Certain swellings which form on the bipolar rays of the amphiaser in the ovum.

but'ter. The semisolid mass obtained from cream by churning. Its chemical constituents are, olein, palmitin, stearin, small amounts of the fatty acids of butyric, caproic, and other fatty acids, lecithin, cholesterolin and inorganic salts. [Gr., *bouturon*, butter.]

but'terine. A commercial name for a variety of artificial butter.

buttermilk. The fluid containing casein and lactic acid left after the process of making butter; also an artificial product obtained by the cultivation of lactic acid bacilli in cow's milk.

butternut bark. See *Juglans*.

buttocks. See *breech*.

button. A small knob. **Aleppo b.** See *Oriental sore*. **belly b.** A popular name for the navel. **Biskra b.** See under *Biskra*. [Fr., *bouton*.]

bu'tyl. The univalent radicle, C_4H_9 of b. alcohol. **b. alcohol.** $CH_3.CH_2.CH_2.CH_2-OH$, a monobasic alcohol, formed by substituting a hydroxyl radicle for an atom of hydrogen in butane. **b. bromid.** A

compound of b. and bromin, C_4H_9Br . Two isomeric varieties exist. **b. butyrate**. The butyl ester of butyric acid. [Gr., *bouturon*, butter, + *yle*, material.] **butylamin** (bu-til-am'in). A primary amin, $CH_3.CH_2.CH_2.CH_2.NH_2$. **bu'tylchlor'al**. A substitution compound of butyl aldehyd and chlorin, $C_4H_9Cl_3O = CH_3.CHCl.CCl_2.CO.H$. **b. hydrate**. The compound $C_4H_9Cl_3O + H_2O = CH_3.CHCl.CCl_2.C(OH)_2$, a sedative to the central nervous system. Its action resembles that of hydrated chloral, but it is a less depressing agent and said to be especially useful in facial neuralgia [Br. Ph.]. **butyr-**. A formative of the name of chemical compounds belonging to, or derived from, the butyric series. **butyraceous** (bu-tir-a'se-us). Buttery; resembling or producing butter. **butyramid** (bu-tir'am-id). The amid of butyric acid, $CH_3.CH_2.CH_2.CONH_2$. **butyrate** (bu'tir-ät). A salt of butyric acid. **butyric** (bu-ti'ric). Derived from or contained in butter. **b. acid**. See under *acid*. **b. aldehyd**. $CH_3.CH_2.CH_2.CHO$. The aldehyd of butyric acid. **b. chloral**. Butyl trichloraldehyd, a chlorin substitution product of b. aldehyd. **b. chlorid**. A liquid, $CH_3.CH_2.CH_2.COCl$, boiling at $101^\circ C$. **butyrin** (bu'ti-rin). A butyric acid ester of glycerin, formed by the substitution of the radicle of butyric acid for one or more hydroxyl groups of glycerin. **butyrolein** (bu-ti-ro'le-in). A principle found in butter, differing from ordinary olein by not yielding sebacic acid on distillation. **butyromel** (bu-tir'o-mel). A mixture of

fresh butter and honey; designed as a substitute for cod liver oil. [Gr., *bouturon*, butter, + *meli*, honey.] **butyrometer** (bu-tir-om'et-er). An instrument for determining the proportion of fat contained in milk. [Gr., *bouturon*, butter, + *metron*, a measure.] **butyron** (bu'tir-on). Dipropyl ketone. **butyroscope** (bu'tir-o-sköp). An instrument for ascertaining the proportion of fat in milk. [Gr., *bouturon*, butter, + *skopein*, to examine.] **butyrous** (bu'ter-us). A term used in descriptive bacteriology, meaning translucent or yellow like butter. **butyryl** (bu'tir-il). A univalent hypothetical radicle, derived from butyric acid by the extraction of an OH group, $CH_3.CH_2.CH_2.CO$. **bux'ein, bux'in**. An alkaloid derived from the bark and leaves of *Buxus sempervirens*; identical with bebeerin. It has been used as a febrifuge. [Lat., *buxina*, *buxinum*.] **by'ne**. Barley malt. [Gr., *byne*.] **by'nin**. An English proprietary liquid extract of malt. [Gr., *byne*, malt.] **by'rolin**. A mixture of lanolin, glycerin, and boric acid. **bys'sin**. Cottony, silky, filamentous. [Gr., *byssinos*.] **byssinosis**. A diseased condition of the lungs due to the inhalation of dust in cotton factories. [Gr., *byssos*, cotton, lint.] **bys'sus**. 1. A genus of fungi under which were formerly grouped a number of imperfectly known forms now referred elsewhere. 2. Cotton, fine flax, silk, charpie. [Gr., *byssos*, cotton, lint.]

C

C. 1. Chemical symbol for *carbon*. 2. Abbreviation for *centigrade*, for *cylinder* or *cylindrical lens*, for *closure* and *contraction*, and for *congius* (gallon). **Ca**. 1. Chemical symbol for *calcium*. 2. Abbreviation for *cathode*. **cab'alline**. See *aloes caballina*, under *aloes*. **cab'inet**. A small chamber; also a museum. **pathological c**. A c. arranged with a series of flat drawers for storing glass slides containing stained sections from pathological tissues. **pneumatic c**. A closed chamber provided with valves, a pump, etc., for compressing or rarefying the air contained within it; used in the treatment of respiratory diseases. **cacao** (kä-kah'o). The seeds of *Theobroma cacao*. The source of chocolate. [A Mexican word.] **c. butter**. Cocoa butter, so called, or oil of theobroma. Used in making suppositories. **CaCC**. Abbreviation for *cathodal* (negative pole) *closure contraction*.

cachet (kah-sha'). A lens-shaped capsule for enclosing medicinal powders. [Fr.] **cachexia** (kak-ek'se-ah). A deteriorated state of the general health, occurring as the result of some organic disease, as cancer, syphilis, malaria, etc., and characterized by debility and change of the face which has a yellowish, waxy look. **African c**. A disease observed in negroes, perhaps identical with miners' anemia (*q. v.*) **alcoholic c**. See *drunkards' c.* **alkaline c**. A c. induced by the long continued internal use of alkalis. **arsenical c**. Chronic arsenical poisoning. **c. saturnina**. See *lead c.* **c. splenica**. **c. splenica et lymphatica**, **c. splenicolympatica**. A c. due to splenic disease (pseudoleukocythemia). **c. strumipriva**. Kocher's term for a form of c. observed after removal of the thyroid gland; amounting in well-marked cases to cretinism. **cancerous c.**, **carcinomatous c.** **C**. due to cancerous disease. **cardiac c.**

A condition of the subjects of chronic heart-disease. **chlorotic c.** See *chlorosis*. **drunkard's c.** The peculiar condition of ill health caused by the abuse of alcohol. **lead c.** A state of ill health due to chronic lead poisoning; characterized by emaciation and a pallid, lusterless complexion. **malarial c., malarious c., marsh c.** C. due to chronic malarial poisoning. **mercurial c.** A c. due to chronic mercurial poisoning, resembling scurvy; characterized by anemia, emaciation, loss of hair, pains in the bones and joints, edema, diarrhea, etc. **suprarenal c.** C. due to disease of the suprarenal capsules. **syphilitic c.** The anemia, etc., of syphilitics. **tuberculous c.** The state of ill health due to tuberculous disease, or tending to its development. **verminous c.** The anemia, discoloration of the skin, etc., produced by intestinal worms. [Gr., *kakos*, bad, + *exis*, habit.]

cachination (kak-in-a'shun). Loud and uncontrollable laughter. [Lat., *cachinare*, to laugh aloud.]

caco- Combining form of Gr., *kakos*, bad; used as a prefix in compound words to signify ill or bad.

cadodyl (kak'od-il). 1. Arsendimethyl, $(\text{CH}_3)_2 = \text{As.As}:(\text{CH}_3)_2$. A colorless, inflammable, poisonous gas of a very disagreeable odor. 2. The univalent radicle, $(\text{CH}_3)_2\text{As}$; sometimes denoted by the symbol, Kd. **c. oxid.** $(\text{CH}_3)_2\text{As}_2\text{O}$. A poisonous liquid of an unpleasant odor. [Gr., *kakodes*, of an offensive odor, + *yle*, material.]

cadodylate (kak-od'il-ät). A salt of cadodylic acid.

cacogenesis (kak-o-jen'es-is). A general term for deviations of organized bodies from the normal structure, applied by some to monstrosities and by others to formations of pathological tissue. [Gr., *kakos*, bad, + *genesis*, formation.]

cacomorphosis (kak-o-mor-fo'sis). A malformation. [Gr., *kakos*, bad, + *morphe*, form.]

cacoplastic (kak-ko-aris'tik). Pertaining to, affected with, arising from, causing, or fitted for defective formation or organization; the opposite of euplastic. [Gr., *kakos*, bad, + *plastikos*, fit for molding.]

cactin. A proprietary extract of *Cactus grandiflorus*.

cadaver (kad-a'ver). Pl. *cadavera*. A dead body; corpse. [Lat., *cadere*, to fall.]

cadaver'ic. Pertaining to a cadaver (e. g., c. rigidity); occurring after death.

cadav'erin. Pentamethylendiamin, $\text{NH}_2\text{-CH}_2(\text{CH}_2)_3\text{CH}_2\text{NH}_2$. A ptomain found in putrefied animal tissues. Formed in the putrefaction of proteins. [Lat., *cadaver*, corpse.]

cadaverous (kad-av'er-us). Corpse-like, ghastly.

cade (käd'). The *Juniperus oxycedrus* and *Juniperus communis*. **oil of c.** Emphyreumatic oil of juniper; a liquid like tar in appearance and properties, ob-

tained by distilling the inner wood of *Juniperus oxycedrus*.

cadmium (kad'me-um). A white, metallic, divalent element, found alone, or associated with zinc, in various minerals; not affected by air. Symbol Cd. Atomic weight, 112.41. **c. iodid.** CdI_2 , a powder used as an ointment in skin diseases. **c. salicylate.** The c. salt of salicylic acid; a white powder. **c. sulphate.** $3\text{CdSO}_4 \cdot 8\text{H}_2\text{O}$, an astringent. **c. sulphid.** **c. yellow.** CdS , a bright yellow substance used as a pigment. It is the characteristic compound by which c. is identified. It has been used as a local astringent.

cae. For words thus spelled see Ce.

caff'ea. The seeds of *Coffea arabica* [U. S. Ph., 1870].

caff'eidin. A non-crystallizable alkaloid, $\text{C}_7\text{H}_7\text{N}_2\text{O}$, obtained by decomposing caffeine with potash or baryta.

caffein, **caff'eina** (kaf'fe-in, kaf-fe-e'nah). An alkaloid, $\text{C}_8\text{H}_{10}\text{N}_4\text{O}_2 + \text{H}_2\text{O}$, found in coffee, tea, maté, cola nuts, and guarana. Used as a heart stimulant and in neuralgia. Different names were given to the caffein found in different plants, thus that found in tea was called thein, before its identity with caffein was fully established. **caff'eina citrata.** A mixture, not a true salt, of c. and citric acid; used, especially in the form of effervescent granules, as a remedy for migraine [U. S. Ph.]. **caff'eina citrata effervescens.** An effervescent salt containing about 4 per cent. of caffein [U. S. Ph.]. **caff'eina sodiobenzoas.** A soluble preparation, consisting of equal parts of caffein and sodium benzoate [N. F.]. **caff'eina sodiosalicylas.** A soluble preparation consisting of equal parts of caffein and sodium salicylate [N. F.]. [Lat., *caff'eina*, U. S. Ph., Br. Ph.]

caffeinism (kaf'e-in-ism). Chronic poisoning with coffee, characterized by palpitation, dyspepsia, irritability, and insomnia.

caff'eone, **caff'feol.** The aromatic principle of roasted coffee. Said to increase the frequency of the cardiac pulsations in small doses and to reduce it in large doses; also to cause drowsiness and sleep in mammals.

cailedrin (kal-sed'r'in). A bitter resinous principle obtained from *Khaya senegalensis*.

caisson disease (käs'on). An affection of the spinal cord produced by either anemia or passive congestion, due to a sudden transition from a condensed to a comparatively rarefied atmosphere, and supposed to be due to the liberation of nitrogen gas in the blood, forming gas emboli. It occurs in persons who have worked in caissons, tunnels, or diving appliances. [*Caïsson*, fr. Fr., *caisse*, a box; a water-tight frame or cylinder containing air under high pressure; used to sink piers for bridges.]

cajeput, **cajuput** (kaj'e-put, kaj'u-put). *Melaleuca cajeputi* (seu *minor*) or the *Melaleuca leucadendron*. **c. oil**, **oil of c.**

A volatile oil derived from the leaves of *Melaleuca cajuputi* (or *Melaleuca leucadendron*) [U. S. Ph., Br. Ph.].

cajuputene (kaj'ep-ut-en). A liquid, $C_{10}H_{16}$, of hyacinthine odor, obtained by distilling oil of cajuput over phosphoric anhydrid.

cajuputol (kaj'e-pu-tol). A colorless, oily liquid, $C_{10}H_{16} \cdot H_2O = C_{10}H_{15}O$, forming the chief part of oil of cajuput, and also found in the oils of *Melaleuca hypericifolia*, *Melaleuca linarifolia*, and *Eucalyptus oleosa*. It is identical with cineol and eucalytol.

Cal'abar bean. See *Physostigma*. [Calabar in West Africa.]

Cal'abar swell'ings. The presence of numerous rounded protuberances of the skin, observed in tropical West Africa and caused by the *Filaria loa* in the subcutaneous tissues. They are accompanied by itching and soreness and recur at irregular intervals for months or years.

calab'arin. An alkaloid said to have been found in small quantities in the *Physostigma venenosum*. It has not yet been obtained pure and its existence is doubtful.

cal'amin, calami'na. Native zinc carbonate, *calamina preparata*. Calamin purified by calcination and freed from gritty particles. It is used much like zinc carbonate.

cal'amus. The dried unpeeled rhizome of *Acorus calamus*, sweet flag [U. S. Ph.]; aromatic, stomachic. **c. scriptorius.** The lower extremity of the fourth ventricle of the brain, terminating in a point resembling that of a pen; bounded laterally by the diverging posterior pyramids. [Lat., *calamus*, a reed.]

calca'neo. Pertaining to the calcaneus or heel bone; from the Lat., *calcaneus*, relating to the calx or heel.

calcaneus (kal-ka'ne-us). 1. Syn.: *os calcis*. The heel bone; the largest bone of the tarsus, forming the posterior extremity of the tarsal arch, articulating with the astragalus above and the cuboid bone in front. 2. Talipes calcaneus, see *talipes*. [Lat., *calcaneus*.]

calcar (kal'kar). A spur or any spurlike structure. **c. avis.** The hippocampus minor; the lower of the two elevations on the inner wall of the posterior horn of the lateral ventricle of the brain. **c. femorale.** A bony spur springing from the under side of the neck of the femur, above and anterior to the lesser trochanter, adding to the strength of the bone in this situation. [Lat., *calcar*, a spur.]

calcarea (kal-ka're-ah). Lime.

calcareous (kal-ka're-us). 1. Containing lime or calcium. 2. Chalky in appearance or consistence. 3. Growing in chalk or in chalky localities. [Lat., *calx*, lime.]

cal'carine. Pertaining to a spur or to the hippocampus minor.

calcicosis (kal-sik-o'sis). Marble-workers' phtthisis. Inflammation or irritation of the lung, due to marble dust. [Lat., *calx*, *calc-*, lime.]

calcification (kal-si-fi-ka'shun). 1. The deposit of calcareous material in a tissue, blood vessel, gland, or organ. 2. The precipitation of calcium in the secretions and excretions, resulting in the formation of concretions. These lime salts consist of magnesium and calcium phosphate and calcium carbonate, and are deposited in tubercles, thrombi, tumors, and thickened arteries. [Lat., *calx*, lime, + *facere*, to make.]

calcigerous (kal-sig'er-us). Containing lime, calcium or chalk. [Lat., *calx*, lime, + *gerere*, to bear.]

calcination (kal-si-na'shun). The process of subjecting an incombustible compound to great heat, in order to drive off its vaporizable constituents, such as water, carbonic acid, etc. [Lat., *calcinare*, to make lime.]

cal'cined. Having been subjected to calcination.

calcium (kal'se-um). A silvery white metallic element; of the sp. gr. of 1.8; decomposing water when brought in contact with it; bivalent. Symbol, Ca. Atomic weight 40.1. Its salts are widely distributed in mineral deposits and in plant and animal life. Among the more common salts of calcium are: **calcii bromid** [U. S. Ph.]; **calcii carbonas precipitatis** [U. S. Ph., Br. Ph.]; **calcii chloridum** [U. S. Ph., Br. Ph.]; **calcii hydras** [Br. Ph.]; **calcii hypophosphis** [U. S. Ph., Br. Ph.]; **calcii phosphas precipitatis** [U. S. Ph.]; **calcii sulphas exsiccatus** [U. S. Ph.], commonly known as plaster of Paris. There are numerous preparations of these salts, none of which are important therapeutically. **c. carbid.** Of commercial importance as the source of acetylene. **c. cresylate.** A compound of c. and cresol; a disinfectant. **c. glycoborate.** An antiseptic substance obtained by melting equal parts of c. borate and glycerin. **c. glycoposphate.** The compound, $CaCaH_7PO_6$, used in nervous affections. **c. hydrate or hydroxid.** Slaked lime; soluble in 700 or 800 parts of water and deposited in a crystalline form from its aqueous solution [Br. Ph.]. **c. hypochlorite.** A salt, $Ca(OCl)_2$, forming one of the constituents of the so-called chlorid of lime. **c. iodid.** A compound, CaI_2 , used as an irritant, deodorizer, and antiseptic. **c. iodobromid.** A compound of c. with iodid and bromid; said to be efficacious in exophthalmic goiter. **c. lactate.** A compound of c. and lactic acid. It is less irritating than the chlorid and may be given subcutaneously. It is used in scrofula and rickets. **c. sulphate.** A compound, $CaSO_4$. Combined with 2 molecules of water of crystallization, it forms native c. sulphate or gypsum. It is largely used in making casts and plaster splints and bandages. **c. sulphid.** A compound, CaS , *calx sulphurata*. **c. sulphocarbonate, c. sulphophenate.** A compound of c. and sulphocarbonic acid; antiseptic and astringent. **precipitated c. carbonate.** C. carbonate obtained as

- an impalpable powder by precipitating *c.* chlorid with sodium carbonate or an extemporaneously prepared *c.* nitrate with ammonium carbonate [U. S. Ph.]. **precipitated *c.* phosphate.** An insoluble white powder much used in pharmacy in the preparation of waters [U. S. Ph., Br. Ph.]. **syrupus calcii lactophosphatis.** A syrup containing calcium lactophosphate flavored with orange flower water [U. S. Ph., Br. Ph.]. [Lat., from *calx*, lime.]
- calcoglobulin.** A calcium salt combined with an albuminate; supposed to be the form in which lime salts are deposited in the bones and in regions of calcareous degeneration.
- calculus** (kal'cu-lus). Pl. *calculi*. An aggregation (generally pathological) of matter forming a concretion, more or less resembling a pebble or a particle of gravel, in a canal or a hollow organ of the body. The varieties commonly met with are: **urinary and biliary calculi**, stones formed in the kidney, ureters, or urinary bladder or in the bile ducts or gall-bladder. Other varieties are: **arthritic; bronchial; dental; hepatic; intestinal** (see *enterolith*); **mammary; nasal** (see *rhinolith*); **ovarian; paucercatic; prostatic; salivary; spermatic; stomacic; uterine.** Differences in form are indicated by the terms **coral c.**; as in the calculus which is fitted into the calices of the kidney; **hemp seed c.**, and **mulberry c.** Differences in composition are indicated by the terms **blood c.**; **fusible c.**; **oxalate of lime c.**; **serumal c.**; **stercoraceous c.**; **struvit c.**; **submorphous c.**; **xanthic c.** **salivary c.** 1. A *c.* formed in the substance or the duct of a salivary gland. 2. The calcareous deposit ("tartar") forming an incrustation on the teeth. [Lat., *calculus*, a small stone.]
- caleariacent** (kal-e-fa'si-ent). Causing a sensation of heat. [Lat., *caleariacere*, to make warm.]
- Calen'dula.** 1. The marigold; a genus of composite plants. 2. Of the U. S. Ph., the flowers of *C. officinalis*. [Said to be from Lat., *Calendae*, the first day of the month, from its being fabled to be capable of flowering on the first day of the month.]
- calen'dulin.** An amorphous principle extracted from the leaves and flowers of *Calendula officinalis*.
- cali.** Pl. *calves*. The muscular prominence at the back of the leg, formed for the most part by the bellies of the gastrocnemius and soleus muscles. [B. N. A., *sura*.] [Mid. Eng., *calfe*.]
- calibrator** (kal'ib-rā-tor). An instrument for measuring the diameter of a tube or canal. **meatus c.** A conical instrument with a scale marked on it for measuring the caliber of the urinary meatus or for dilating it. [Fr., *calibre*, bore, diameter.]
- calices, calyces** (ka'lis-es). Pl. of *calix*. **calipers, callipers** (kal'ip-ers). An instrument, usually in the form of a pair of compasses with curved legs for measuring the diameter of a round body. *Baudelocque's c.* are used in pelvimetry. See *pelvimeter*.
- calisaya, calasaya** (kal-is-a'yah). A name applied to several species of *Cinchona* furnishing yellow bark and also to the bark itself; usually, and more properly, restricted to *Cinchona c.*
- callisthenics, callisthenics** (kal-is-then'iks). The art or practise of exercising the muscles for the purpose of gaining health, strength or grace of form and movement. Light gymnastics. [Gr., *kalos*, beautiful, + *sthenos*, strength.]
- calix, calyx** (ka'licks). Pl. *calices, calyces*. 1. The outermost of the whorls of leaflets forming a flower. 2. A cup-shaped organ or depression; hence (*a*) the depression in the corallum which lodges the gastric sac, (*b*) a *c.* of the kidney (*q. v.*, *infra*), and (*c*) the cavity left on the surface of the ovary by the rupture of a graafian vesicle. **calices majores.** The larger, primary calices of the kidney, connecting directly with its pelvis. **calices minores.** The lesser, secondary calices of the kidney, receiving the papillae. **calices of the kidney.** The cuplike prolongations of the pelvis of the kidney which surround the papillae and receive the urine discharged from the orifices of the latter. [Lat., *calyx*, from Gr., *kalix*, the cup of a flower.]
- Calliphora** (kal-lif'o-rah). A genus of bluebottle or blow flies that deposits eggs on refuse or excrete. See *Chrysomyia macellaria*. **C. erythrocephala, C. limeus.** The cause of nasal myiasis. **C. vomitoria.** Species of the above, whose larvae are found in the human intestine.
- callo'sal.** Of or pertaining to the corpus callosum (said of a cerebral convolution). [Lat., *callus*, tough substance.]
- callos'itas.** 1. The state of being indurated. 2. A callous lump or excrescence. [Lat., *callositas*.]
- callosity** (kal'os-it-e). See *callus*.
- callo'somar'ginal.** Pertaining to the callosal and marginal convolutions of the cerebrum.
- callus** (kal'us). 1. A hardened and thickened portion of skin. 2. A spindle-shaped swelling which surrounds the ends of a fractured bone during the first weeks following the injury; the agent in the process of repair. [Lat., *callus*, thick skin.]
- calm'ative.** See *sedative*.
- Calmette's' serum.** An antitoxic serum used in the treatment of snake bites. **C's test.** The conjunctivitis produced in tuberculous patients by instilling a few drops of diluted tuberculin into the conjunctival sac. [Albert Calmette, French bacteriologist, contemporary.]
- cal'min.** A proprietary mixture of heroin and antipyrin; used in whooping cough.
- calo-.** Combining form of Gr., *kalos*, beautiful.
- calolactose** (kal-o-lak'tōs). An intestinal

antiseptic, said to consist of calomel, bismuth subnitrate, and lactose.

cal'omel. Mercurous chlorid, Hg_2Cl_2 . See *mercury chlorid*, under *mercury*. List of poisons and their antidotes, see in *appendix*, page 938. **colloidal c.** See *calomelol*. **vegetable c.** See *podophyllin*. [Gr., *kalos*, beautiful, + *melas*, black, because, though white, it is made from a dark mixture.]

calomelol (kal'o-mel-ol). Colloidal calomel. A soluble colloidal combination of calomel and albuminoids. It is said to be non-irritant and non-toxic.

calor (ka'lor). Heat. **c. animalis.** Animal heat. **c. fervens.** Boiling heat ($212^\circ F.$). **c. lenis.** A gentle heat (from 90° to $100^\circ F.$). **c. mordax**, **c. mordicans.** Lit., a biting heat; a pungent heat of the skin. [Lat., *heat*.]

calorescence (kal-or-es'ens). The process of transformation of rays of low refrangibility (non-luminous rays) into those of higher refrangibility (luminous rays) by the interposition of a body to be heated, such as a piece of platinum or carbon.

caloric (kal-or'ik). 1. Relating to a calory. 2. Pertaining to or dependent on heat. 3. Heat.

calorie. See *calory*.

calorificant, **calorificient** (kal-or-if-a'si-ent, kal-or-if-ish'ent). Heat-producing; said of certain non-nitrogenous foods. [Lat., *calor*, heat, + *facere*, to make.]

calorimeter (kal-or-im'et-er). An apparatus for measuring quantities of heat or for determining the specific heat of bodies. In physiology, an apparatus for determining the heat-production of an animal, or a part of an animal, during a given time. **air c.** A c. in which the heat given off is measured by the expansion which it causes in a known volume of air. **water c.** A c. in which the heat given off is measured by the temperature to which it raises a given body of water, contained usually in a non-conducting case surrounding the animal. [Lat., *calor*, heat, + Gr., *metron*, measure.]

calorimetry (kal-or-im'et-re). The determination of quantities of heat or of specific heat, especially by the use of a calorimeter. **direct c.** The method of ascertaining the relation of the production and loss of heat in an animal by direct measurement with a calorimeter. **indirect c.** A method of computing the heat produced in an animal from the known quantity and heat-producing value of the food-stuffs ingested by it in a given time. [Lat., *calor*, heat, + Gr., *metron*, measure.]

calory (kal'o-re). The unit of heat; the amount required to raise the temperature of a gram of water $1^\circ C.$ This amount of heat is sometimes designated as a *small c.* or *gram-c.*, to distinguish it from the *kilo-c.*, that is the amount of heat necessary to raise the kilogram of water $1^\circ C.$ [Lat., *calor*, heat.]

calum'ba, **calom'ba.** The root of *Jateor-*

rhiza palmata [U. S. Ph.]. Used as a bitter tonic. The fluidextract and the tincture are official in the U. S. Ph. C. and its preparations are free from tannin, hence they do not cause inky mixtures with iron salts. **calumbae radix.** See *calumba* [Br. Ph.]. **liquor calumbae concentrata.** A 50 per cent. tincture of c. [Br. Ph.]. [From *kalumb*, the African name.]

calum'bin. A bitter principle, $C_{22}H_{24}O_7$, found in calumba.

calvaria, **calvarium** (kal-va're-ah, kal-va're-um). The vault of the cranium. [Lat., *calvaria*, the skull of man.]

calvities (kal-vish'e-eez). Another name for *alopecia*. [Lat., *calvus*, bald.]

calx (kalx). Syn.: *calcere*. 1. Lime; of the U. S. Ph. and Br. Ph., purified quick lime (calcium monoxid), obtained by heating calcium carbonate. In chemical nomenclature the word was formerly used to denote the salts of calcium. For the salts of c., see under *calcium*. **c. chlorinata** [U. S. Ph.]. Chlorinated lime; chlorinated calcium; calx chlorata [U. S. Ph., 1890]. So-called chlorid of lime. It yields 30 per cent. of chlorin. **c. sulphurata.** Sulphuretted lime. It consists of calcium sulphid (at least 55 per cent.), calcium sulphate, and carbon [U. S. Ph., Br. Ph.]. **liquor calcis.** Commonly called lime water. A solution containing about 0.14 per cent. of calcium hydroxid [U. S. Ph., Br. Ph.]. **liquor calcis chlorinata.** A liquid containing not less than 2 per cent. of available chlorin [Br. Ph.]. **liquor calcis saccharata.** A syrup containing about 2 per cent. of lime in solution [Br. Ph.]. **liquor calcis sulphurata.** Vlemminck's solution or lotion. Made by adding a mixture of slaked lime and sulphur to boiling water [N. F.]. **syrupus calcis.** A preparation containing about 6.5 per cent. of calcium hydroxid, in syrupy solution [U. S. Ph.]. [Lat., *calx*, *calcis*, lime.]

camara (ka'mara). 1. In general, an arched or vaulted chamber. See *camera*. 2. The fornix of the brain. 3. The hollow of the external ear. [Gr., *kamara*, a chamber.]

cambium (kam'be-um). Of the old writers, a nutritive substance serving for the growth of the organs of the body. **c. layer**, **c. zone.** In botany, a layer of thin-walled cells in the stem, separating the bark from the interior woody substance. [Lat., *cambire*, to change.]

cambugia (kam-bo'je-ah). Of the U. S. Ph. and Br. Ph., gamboge.

camera (kam'er-ah). A chamber. See also *camara*. **c. lucida.** An apparatus for drawing microscopic objects by projecting their images upon a sheet of paper and tracing the outlines thus depicted with a pencil. It is attached to the ocular of the microscope and usually consists of a combination of right-angled prisms and a mirror. **c. medullaris.** See *centrum ovale*, under *centrum*. **c. obscura.** An apparatus invented by Porta for obtaining pictures of objects. It consists essentially

of a box with a small opening closed by a convex lens. The rays from the object, striking upon the lens, are brought to a focus on a plate of ground glass, either directly or after reflection from a mirror. Here the image can either be traced by hand, or, if a sensitive plate is introduced, photographed. **cameræ oculi**. See *anterior and posterior chamber of the eye*, under *chamber*. **c. oculi tertia**. See *canal of Petit*, under *canal*. **c. septi lucidi**. The fifth ventricle of the brain. **photographic c.** A c. obscura especially adapted to photography. It consists of a box fitted for the introduction of a sensitive plate designed to receive the image, and provided with a telescopic slide for bringing the rays passing through the lens to a focus on the plate. [Lat., "a chamber."]

camisole (kam'is-ōl). A jacket, used to restrain violent patients, made of canvas, fastening in the back, with sleeves closed up at the outer ends, and provided with straps for securing the arms. [Fr., *camisole*, from Sp., *camisola*, dim. of *camisa*, shirt.]

Cam'omile. See *Chamomile*.

Campani's solution. A mixture of a concentrated s. of lead acetate with a dilute s. of copper acetate; used in testing for glucose, which reduces the copper salt, while cane sugar has no effect upon it.

campanulate. Bell-shaped; cup-shaped. [Lat., *campanula*, dim. of *campana*, bell.]

camphene (kam'fēn). A solid hydrocarbon of the formula, $C_{10}H_{16}$, belonging to the terpene compounds. Formed by heating borneol with dilute sulphuric acid. [Lat., *camphenum*.]

camphenol (kam'fe-nol). A disinfectant containing camphor, cresols, and phenols.

camphoid (kam'foyd). A solution of soluble gun cotton and camphor in absolute alcohol; used like collodion.

camphol (kam'fol). See *borneol*.

camphor (kam'for). 1. Stearopten, $C_{10}H_{16}O$, obtained from the wood of *Cinnamomum camphora* by distillation with water. It is stimulant, antispasmodic, and anodyne. Taken in excess, it acts as an irritant poison, producing epigastric pain, nausea, vomiting, maniacal delirium, and convulsions. 2. A name applied to a series of solid, volatile principles obtained by distillation from vegetable substances, having the constitution of oxygenated hydrocarbons and in many ways acting as alcohols. List of poisons and their antidotes, see in *appendix*, page 938. **artificial c.** A terpene hydrochlorid, $C_{10}H_{16}HCl$, formed by the action of hydrochloric acid on oil of turpentine; a solid closely resembling ordinary c. **bornean c.** Syn.: *borneol*. A substance, $C_{10}H_{16}O = C_6 [H_2, H (C_3H_7), H_2, H, CH_3, H, OH]$, derived from *Dryobalanops aromatica* and obtained from ordinary c. by heating with an alcoholic solution of caustic potash. **c. balls**. A commercial name for naphthalene. **c. chloral**. A liquid resulting from the mixture of camphor and hydrated chloral. **c. ice**. A cosmetic

preparation made by melting together white wax and benzoated lard and adding c. and oil of lavender. **c. menthol**. A liquid preparation produced by mixing equal parts of camphor and menthol. [N. F.] [Lat., *camphora*.]

camphora. 1. Camphor. 2. A genus of plants equivalent to *Cinnamomum*; of Meissner, a section of that genus. [U. S. Ph., Br. Ph.] **aqua camphoræ**. A solution containing about 0.8 per cent. of camphor [U. S. Ph.] and 0.1 per cent. [Br. Ph.]. **c. monobromata**. Syn.: *bromcamphor*. A compound, $C_{10}H_{15}BrO$, formed by the action of bromin on camphor heated upon the water bath; a colorless, crystalline substance of camphoraceous odor and taste, insoluble in water, soluble in alcohol, used as a sedative in delirium tremens and related conditions [U. S. Ph.]. **c. purificata**, **c. raffinata**. Refined camphor. **c. salicylata**. Salicylated camphor; a colorless, oily liquid made by heating together on a water bath camphor and salicylic acid; used as an application for weak and phagedenic ulcers. **ceratum camphoræ** [U. S. Ph.]. Camphor cerate; a mixture of camphor liniment and a cerate [U. S. Ph.]. **linimentum camphoræ**. Camphor liniment; camphorated oil; consisting of camphor dissolved in cotton seed oil [U. S. Ph.]; or camphor dissolved in olive oil [Br. Ph.]. **linimentum camphoricum ammoniatum**. Compound liniment of camphor; made by dissolving camphor and oil of lavender in rectified spirit and adding a strong solution of ammonia [Br. Ph.]. **oleum camphoræ**. A volatile oil obtained from the camphor tree. **oleum camphoratum**. A synonym for liniment of camphor. **syrupus camphoræ**. Spirit of camphor; made by dissolving camphor in alcohol [U. S. Ph., Br. Ph.]. **tinctura camphoræ composita**. See *tinctura opii camphorata*, under *opium* [Br. Ph.]. **unguentum camphoræ**. Much like cerate of camphor, but softer. [N. F.] [Lat.]

camphoræceous. Of the nature of, containing, or resembling camphor.

camphoram'id. The amid of camphoric acid.

camphoran'il. The anil of camphoric acid.

cam'phorated. Containing camphor.

camphores'in. A non-volatile substance produced by the action of iodid on camphor.

camphor'ic. Of or pertaining to camphor. **c. acid**. See under *acid*. **c. anhydrid**, **c. oxid**. The anhydrid of c. acid.

cam'phoroid, **camphoroi'dal**. Camphoraceous; resembling camphor, as in odor.

camphoroxal (kam-fo-rocks'al). A solution of hydrogen dioxide containing camphor and alcohol.

cam'phosan. A proprietary preparation consisting of capsules of a 15 per cent. solution of camphoric methyl-ester in santalol. Astringent and antiseptic.

campim'eter. See *perimeter*. [Lat., *campus*, a field, + Gr., *metron*, measure.]

Can'ada bal'sam. *Terebinthina canadensis*. Used in histology and pathology for mounting stained sections on glass slides.

can'adol. One of the more volatile products of the fractional distillation of petroleum. It has been used with success as a local anesthetic in the form of spray.

canal (ka-nal'). A channel, tube, duct; a long narrow passage. In dentistry, the tubal cavity, extending the length of the roots of the teeth and containing the branches of the dental pulp. **accessory posterior palatine c's.** One or two small c's often found in the horizontal plate of the palate bone near the groove entering into the formation of the posterior palatine c. **alimentary c.** The whole digestive tube, from the mouth to the anus. **anal c.** The c. leading from the rectum to the external opening of the anus, corresponding in length to the thickness of the pelvic floor. **anterior dental c.** A c. of the superior maxilla, which runs down into the facial portion of the bone and conveys the anterior dental vessels and nerves. **anterior ethmoidal c., anterior internal orbital c.** A c. formed between the ethmoid and frontal bones, transmitting the nasal branch of the ophthalmic nerve and the anterior ethmoidal vessels. **arachnoid c.** A space formed beneath the arachnoid membrane of the brain, as it crosses the transverse and longitudinal fissures; it lodges the venae magnae Galeni. **c. of the cervix uteri.** That portion of the uterine c. which extends from the os externum to the os internum. **c. of the epididymis.** A convoluted tube, constituting the epididymis and continued as the vas deferens. **c. of Huguier.** See *canalis chordae tympani*, under *canalis*. **c. of Nuck.** A pouch of peritoneum, which, in the female fetus, descends for a short distance along the round ligament of the uterus into the inguinal c.; the analogue to the processus vaginalis in the male. It sometimes persists after birth. **c. of Petit.** A supposed c. (properly a space intersected by numerous fine interlacing fibers) existing between the anterior and posterior laminae of the suspensory ligament of the crystalline lens. **c's of Rivinus.** The ducts of the sublingual glands. **c. of Schlemm.** Syn.: *sinus venosus*. An irregular space, or plexiform series of spaces, occupying the sclerocorneal region of the eye, regarded by some authorities as a venous sinus, by others as a lymph channel. **carotid c.** The c. in the petrous portion of the temporal bone for the transmission of the internal carotid artery. **cartilage c's.** The c's, or channels, formed in cartilage during its ossification, to receive prolongations of the osteogenetic layer of the periosteum. **central c. of the modiolus.** A c. running from the base to the apex of the modiolus of the cochlea. **central c. of the spinal**

cord. The small c. which extends through the center of the spinal cord from the conus medullaris to the lower part of the fourth ventricle, where it expands at the calamus scriptorius. **cervical c.** See *c. of the cervix uteri*. **cochlear c.** The spiral cavity or c. of the cochlea, the base of which is turned inward toward the internal auditory meatus and the apex outward toward the tympanum. **connecting c.** The arched, often coiled, part of a uriniferous tubule joining with a collecting tubule. **convoluted c.** See *convoluted tubule*, under *tubule*. **Corti's c.** The triangular c. or tunnel formed by the pillars or arches of Corti. **crural c.** See *femoral c.* **deferent c.** The vas deferens or any c. representing it. **dental c.** The minute c's, or tubules, in dentin, extending from the pulp cavity to the surface of the tooth. **descending palatine c.** See *palatomaxillary c.* **eustachian c.** A c. in the petrous portion of the temporal bone, containing a portion of the eustachian tube. **external auditory c.** Syn.: *external auditory meatus*. The passage leading from the auricle to the drum membrane of the ear. **external semicircular c.** That one of the semicircular c's of the labyrinth which has its plane horizontal and its convexity directed backward. **external small palatine c.** A small c. in the pyramidal process of the palate bone, close to its connection with the horizontal plate, transmitting the external palatine nerve. **facial c.** See *aqueduct of Fallopius*. **femoral c.** The medial compartment of the sheath of the femoral vessels, behind Poupart's ligament, into which a femoral hernia descends. **galactophorous c's.** The lactiferous tubules of the mammary gland. **Gartner's c.** In the female, a relic of the main, or middle, portion of the Wolffian duct of the embryo, a tube running down from the broad ligament of the uterus to be incorporated with the wall of the uterus and vagina and to be lost on the latter. **genital c.** Any channel or c. designed for copulation or for the discharge of ova. **haversian c's.** C's in the compact substance of bone which form a wide-meshed network and establish communication between the medullary cavity and the surface of the bone, giving passage to the blood vessels, lymph vessels, and nerves supplying the bone. **hemal c.** A c. on the ventral surface of the vertebral column enclosed by the hemal arches. **hepatic c.** The excretory duct of the liver or its analogue. **hepatic c's.** The radicles of the hepatic duct. **hernial c.** A c. through which a hernia passes. **Hunter's c.** A triangular c. running through the adductor magnus muscle of the thigh, giving passage to the femoral artery and vein and the internal saphenous nerve. [B. N. A., *adductor c.*] **hyaloid c.** An irregularly cylindrical c., running anteroposteriorly through the vitreous body through which the hyaloid artery passes in the fetus.

incisive c., incisor c. A canal which opens into the mouth just behind the upper incisor teeth. **inferior dental c.** The dental c. of the mandible, which lodges the inferior alveolar nerve and vessels. [B. N. A., *inferior alveolar c.*] **infra-orbital c.** A small canal, running obliquely through the bony floor of the orbit and transmitting the infra-orbital vessels and nerves. **inguinal c.** A c. about an inch and a half long, running obliquely downward and inward from the internal abdominal ring to the external abdominal ring. It transmits the spermatic cord in the male and the round ligament in the female, and constitutes the channel by which an inguinal hernia descends. **interlobular c's.** C's situated between the acini of the liver, and containing small branches of the portal vein. **internal auditory c.** Syn.: *internal auditory meatus*. A c. situated in the petrous portion of the temporal bone and transmitting the auditory and facial nerves and the auditory artery. **intestinal c.** That portion of the alimentary tract which is included between the pylorus and the anus. **intralobular biliary c's.** Syn.: *capillary bile ducts*. The radicles of the bile ducts. **lacrimal c.** The bony c. which lodges the nasal duct. **malar c.** A c. in the malar bone which transmits the malar division of the temporomalar branch of the superior maxillary nerve. **medullary c.** The hollow of a long bone, containing the marrow. **membranous c. of the cochlea.** A c. in the cochlea which follows the turns of the lamina spiralis. **nasal c.** An occasional c., usually a groove, found in the posterior portion of the nasal bone, transmitting the nasal nerve. **neurenteric c.** In the embryo, a passage leading from the posterior part of the medullary tube into the archenteron. **nutritive c.** See *haversian c's* and *nutrient foramen, under foramen*. [B. N. A., *canalis nutritivus*.] **oburator c.** A c. in the ilium, transmitting the obturator nerve and vein. **omphalomesenteric c.** In the embryo a cavity which connects the cavity of the intestine with the umbilical vesicle. **palatomaxillary c.** A c. formed by the outer surface of the palate bone and the adjoining surface of the maxilla. It transmits the large palatine nerve and blood vessels. **parturient c.** See *birth c.*, under *birth*. **pelvic c.** The c. of the pelvis, from the superior to the inferior strait. **perivascular c's.** The circumvascular lymph spaces. **petromastoid c.** A small c., not always present, at the angle of union between the mastoid and petrous bones, transmitting a small vein from the middle fossa of the skull to the transverse sinus. **posterior dental c's.** Two c's in the maxilla which transmit the superior posterior dental vessels and nerves. **posterior ethmoidal c., posterior internal orbital c.** The posterior of two c's formed by the ethmoid bone and the orbital plate of the frontal, transmitting the posterior eth-

moidal vessels. **posterior palatine c.** See *palatomaxillary c.* **posterior semicircular c., posterior vertical semicircular c.** That one of the semicircular c's (*q. v.*) which has its convexity directed backward and its plane nearly parallel to the posterior wall of the pyramid. **pterygopalatine c.** A c. in the sphenoid bone, transmitting the pterygopalatine artery. **sacral c.** The continuation of the vertebral c. in the sacrum [B. N. A., *canalis sacralis*]. **semicircular c's.** The long c's, forming the second division of the osseous labyrinth. **spermatic c.** 1. The vas deferens. 2. The inguinal c. in the male, transmitting the spermatic cord. **spinal c.** See *vertebral c.* [B. N. A., *canalis spinalis*]. **spiral c. of the cochlea.** A c. which runs spirally around the modiolus. **spiral c. of the modiolus.** A small c. winding round the modiolus in the base of the lamina spiralis. **superior palatine c.** A c. formed by the palate bone and the maxilla, transmitting the inferior palatine nerve and blood vessels. **superior semicircular c.** That one of the semicircular c's which has its convexity turned toward the upper surface of the pyramid. **supra-orbital c.** A c. at the upper margin of the orbit, transmitting the supra-orbital vessels and nerve. **tympanic c.** A c. which opens on the lower surface of the petrous bone, between the carotid c. and the groove for the internal jugular vein; containing Jacobson's nerve. **urinary c.** The urethra. **uterine c.** The c. of the uterus, including that of its body and that of its neck. **utercervical c.** The cavity of the cervix uteri at the time of labor. **vertebral c.** The c. which lodges the spinal cord, formed by the vertebrae [B. N. A., *canalis vertebralis*]. **vertebrarterial c.** The osseous c. through which the vertebral artery runs. **vidian c.** A c. of the sphenoid bone, at the base of the internal pterygoid plate, transmitting the vidian nerve and vessels [B. N. A., *pterygoid c.*]. **vulvar c.** The vestibule of the vagina. **vulvovaginal c.** 1. The vagina and the vulva considered as a single c. 2. The orifice of the hymen. [Lat., *canalis, groove, channel*.]

canalic'ular. Permeated with channels. [Lat., *canalicularis*.]

canalic'ulate. Channeled or furrowed, having a longitudinal furrow. [Lat., *canaliculatus*.]

canaliculiza'tion. The formation in calcified cartilage of the canals into which the periosteal processes extend.

canalic'ulus. A small channel. **bile canaliculi, biliary canaliculi.** See *intralobular biliary canals, under canal, canaliculi accessori*. Inconstant canals for the transmission of veins at the outer edge of the canalis condyloideus anterior. **c. arteriosus.** See *ductus arteriosus, canaliculi biliferi*. See *intralobular biliary canals, under canal*. **c. communicans.** Syn.: *aqueductus communicationis*. A small canal at the margin of the

temporal bone. **canaliculi lacrimales.** Two small excretory channels for the tears, one in the inner third of each eyelid. **canaliculi medullares.** See *haversian canals*, under *canal*. **canaliculi of bone.** Minute canals in bone, connecting the lacunae with one another and with the haversian canals. **c. pharyngeus.** A canal formed between the body of the sphenoid bone, the sphenoid process of the palate bone, and the ala vomeris. **canaliculi pterygoidei.** Certain canals in front of the lingula of the sphenoid bone. **canaliculi seminales recti.** The straight tubules of the testicles. **collecting c.** A collecting tube in the kidney. **juice canaliculi, lymphatic canaliculi, sap canaliculi, serous canaliculi.** Minute channels in the connective tissue, supposed to be filled with lymph and connected with the lymph vessels. See also *intercellular spaces*, under *space*. [Lat., dim. of *canalis*, a canal.]

canaliform. Canal-shaped. [Lat., *canalis*, a canal, + *forma*, form.]

canalis. Pl. *canales.* A canal. **c. auricularis.** The channel produced by a constriction between the auricular and ventricular portions of the fetal heart at the time of its division into a single auricle and ventricle. **c. chordae tympani.** A c. in the outer wall of the tympanum, transmitting the chorda tympani. **canales condyloidei antici.** One or two canals sometimes found near the anterior condylar foramen. **c. condyloideus posticus inferior.** A canal sometimes found in the occipital bone between the condyle and the jugular foramen. **c. craniopharyngeus.** A canal perforating the posterior portion of the body of the sphenoid bone in the fetus, containing a prolongation of the dura mater; sometimes persistent in infancy. **c. excretorius linguae.** An occasional blind canal running backward into the substance of the tongue from the foramen cecum. **c. fibrosus vasorum tibiarum anticorum.** A canal formed by the tibiofibular interosseous ligament behind and by the connective tissue in front, containing the anterior tibial artery and its venae comites. **c. innominatus.** An occasional canal situated between the foramen ovale and the foramen rotundum, transmitting the superficial petrosal nerve. **c. mastoideus.** The canal for Arnold's nerve; opening just above the stylomastoid foramen and transmitting the auricular branch of the pneumogastric nerve. **c. musculo-peroneus.** The space between the origins of the flexor longus hallucis and the tibialis posticus, for the lower portion of the peroneal artery. **c. musculotubarius.** A canal in the petrous bone, containing a portion of the stapedius muscle. **c. nervi petrosi profundi minoris.** A canal in the petrous bone, transmitting the small deep petrosal nerve. **c. nervi petrosi superficialis majoris.** A canal opening into the aqueduct of Fallopius, transmitting the large super-

ficial petrosal nerve. **c. pharyngotympanicus.** A canal of the embryo which is developed into the eustachian tube and the tympanum. **c. pro tensore tympani.** A rounded canal lying in the anterior wall of the tympanum, close to the hiatus Fallopii. Its tympanic end forms a conical eminence which is prolonged backward into the tympanum and perforated at its summit by an aperture transmitting the tendon of the tensor tympani. **c. vomeris.** A canal situated between the lower surface of the sphenoid bone and the vomer, transmitting blood vessels to the nose. **canales vomerobasilares, canales vomerosphenoidales laterales.** Several small lateral canals situated between the sphenoid bone and the vomer, transmitting small blood vessels. **c. zygomaticotemporalis.** The temporal canal of the malar bone, running from its orbital (sometimes by a common opening with the malar canal) to its temporal surface, transmitting a branch of the maxillary nerve.

canaliza'tion. The process of the formation of channels, as in the development of blood vessels; the hollowing out of cells (vasifactive cells) which subsequently unite to form the capillaries and smallest vessels; also the formation of tubes in the solid cords of cells representing the larger vessels by the liberation of the central cells, the latter in many instances becoming blood corpuscles. In pathology, the formation of canals in tissues or a thrombus, thus reestablishing a partial communication through the latter.

cancellated, cancellous (kan'sel-la-ted, kan'sel-lus). Having a latticelike structure.

cancellus (kan-sel'lus). An individual bar or element of a latticelike structure. The cancelli of bone are the columns or plates making up the framework of its spongy substance, so arranged in arches as to combine great strength with lightness and elasticity. [Lat., *cancellus*, a grating.]

cancer (kan'ser). 1. Popular term for malignant tumors, infiltrations, and ulcers: (*carcinoma*) restricted by Virchow to those that are wholly or partly of epithelial origin. 2. All tumors in which there is infiltration and apparently independent growth of epithelial or gland cells, whether slightly or markedly atypical, into the surrounding tissue. **c. bodies.** Degenerative bodies staining intensely with fuchsin, either intracellular or intercellular, about the average size of a red blood corpuscle, which are found in cancers and in inflammatory tissues. They are not now regarded as parasitic, but they may be due to hyaline degeneration of certain cellular elements. See *Russell's fuchsin bodies*, under *body*. **c. parasites.** Various stages of the c. bodies not now regarded as an etiological factor in c. **c. root.** A popular name for various plants that are applied to cancerous ulcers. **chimney-sweep's c.** A form of epithelioma of the scrotum, so-called from its having been generally observed in the

- chimney-sweeps of London. **melanotic c.** Black cancer; a malignant growth in which there is a deposit of melanin.
- scirrhous c.** Hard c., scirrhus; a form of carcinoma in which induration is a prominent feature, forming a tumor of a hard feel which creaks under the knife on section and presents a bluish white or grayish white appearance. Its characteristics are those of texture, not of essential structure, being due to an abundance of fibrous tissue in the stroma. [Lat., *cancer*, crab.]
- can'cerin.** A ptomain which has been found in the urine in cases of cancer.
- cancroid** (kan'kroyd). Resembling cancer; as a noun, epithelioma.
- cancroin** (kan'kro-in). A toxin found by Adamkiewicz in carcinomatous tissues; used subcutaneously by him for the cure of cancer.
- cancrum** (kan'krum). Canker; any spreading ulceration. **c. oris.** A rare disease, affecting poorly nourished infants, characterized by severe ulceration and gangrene of the mouth. Noma. [Lat., *cancer*, cancer.]
- Cane'l'ia.** 1. A genus of shrubs or trees indigenous to tropical America. 2. The bark of the *C. alba*. **C. alba.** 1. *Winterana c.*, white wood, wild cinnamon tree. The bark contains a bitter principle, a volatile oil, and a resin, and is used as a tonic and stimulant, chiefly as an adjunct to stomachic tonics and to purgatives. 2. *C. laurifolia.* 3. The bark of *C. alba*. **C. laurifolia.** A tropical American tree very similar to *C. alba*, with which, by some, it is identified. Its bark is employed like that of *C. alba*. [Lat., dim. of *canna*, a reed; more properly written *cannella*.]
- canescent** (kan-es'sent). A term used in descriptive bacteriology, meaning hoary or gray. [Lat., *canis*, gray.]
- cane-sug'ar.** Syn.: *saccharose*. Ordinary commercial granulated sugar. A disaccharid, consisting of one molecule of glucose and one molecule of fructose united by the elimination of one molecule of water. An important food. Prepared from sugar cane or sugar beet by pressing the cane and by boiling the juice thus obtained.
- ca'nine teeth'.** Called also *cuspidati*, because they have one point. They are four in number, two in the upper jaw and two in the lower jaw, one being placed distal to each lateral incisor. They are larger and stronger than the incisors, especially in the roots. [Lat., *canis*, dog.]
- canin'iform.** Resembling a canine tooth. [Lat., *caninus*, canine, + *forma*, form.]
- caninus** (ka-ni'nus). See *table of muscles*, under *muscle*.
- canities** (kan-ish'e-ëz). Grayness or whiteness of the hair. It may be *congenital*, *premature*, or *senile*. [Lat., *canities*, gray hair.]
- canker.** 1. Ulceration of the mouth. 2. That which corrodes or corrupts. A term seldom used in medicine at the present time [Mid. Eng., *canker*.]
- can'nabene.** A liquid, $C_{18}H_{20}$, found in the volatile oil of *Cannabis indica*.
- c. hydrid.** The compound, $C_{18}H_{22}$, found in the volatile oil of *Cannabis indica*. It is a thin, golden yellow liquid of repulsive odor, and is highly irritant and poisonous.
- can'nabin.** A brown amorphous resinous substance obtained from *Cannabis indica*, containing the active principle.
- cannab'inol.** An oil obtained from *Cannabis indica*, thought by some to be the active principle; said to be a phenol aldehyd of the formula $OH.C_{20}H_{28}COH$, hence more accurately called *cannabinolal*.
- Can'nabis.** 1. Hemp; a genus of annual urticaceous herbs. The fruit of *C. sativa*. **American c.** *C. americana*. The American variety of *C. sativa*. **C. indica.** 1. *C. sativa*. 2. The flowering tops of *C. sativa*. The extract, fluid-extract, and tincture are official in the U. S. Ph. **C. sativa.** The common hemp, indigenous to Asia and cultivated throughout Europe and America. The herb of Indian hemp is extensively used in the East as an ingredient in intoxicants, producing peculiar delusions in which the perception of the proper relations of things in time and space is decidedly perverted. **extractum c. indicæ.** An extract of pilular consistence made by exhausting the herb of *C. indica* with strong alcohol and evaporating the tincture. [U. S. Ph., Br. Ph.] **extractum c. indicæ fluidum.** A fluid extract made by exhausting the herb of *C. indica* in alcohol. [U. S. Ph.] **tinctura c. indicæ.** A 10 per cent. tincture [U. S. Ph.] or 5 per cent. [Br. Ph.] [Lat., *cannabis*, hemp.]
- can'nula.** A tube carrying in its lumen an obturator with a sharp-pointed end, generally used for introduction into some cavity of the body to draw off fluid or for introduction into a vein or artery for performing transfusion or infusion. In physiology, a glass or metal tube with a neck for insertion into a blood vessel or a duct. **washout c.** A special form of c., with a double chamber, used in blood pressure experiments. When inserted into an artery, it, and the connecting tube, can be flushed at intervals, and the coagulation of the blood be prevented in long experiments. [Lat., dim. of *canna*, reed.]
- can-poisoning.** Poisoning due to eating faultily preserved foods put up in cans.
- Canquoin's paste.** A p. compounded of zinc oxid and wheat flour.
- canthar'idal.** Pertaining to cantharides.
- canthar'ides.** Pl. of *cantharis*.
- canthar'idin.** The active principle of cantharides. It occurs in crystalline form, is of bitter taste and produces blisters of the skin. It is the anhydrid of cantharidic acid. The formula is $C_{10}H_{12}O_4$.
- cantharidism** (kan-thar'id-ism). Poisoning with cantharides, either by their ingestion by the mouth or by absorption from a cantharidal blister. The chief

symptoms are strangury, burning pain in the urethra, swelling or even gangrene of the genitals, and the passage of bloody and albuminous urine, together with the usual gastro-intestinal signs of irritant poisoning if the drug has been taken by the mouth. The lesions are inflammatory conditions of the kidneys and bladder.

Cantharis (kan'thar-is). Pl. *cantharides*. Syn.: *blister beetle*. 1. A genus of coleopterous insects, now referred to *Lytta*. 2. Of the U. S. Ph. and Br. Ph., the Spanish fly *Cantharis vesicatoria*. In English it is usually written in the plural, *cantharides*. For its poisonous effects, see *cantharidism*. The official preparations of c. in the U. S. Ph. are: the cerate, cantharidal collodion, and the tincture. The cerate is commonly employed in the form of a plaster. List of poisons and their antidotes, see in *appendix*, page 938. **Cantharis vesicatoria**. The Spanish fly, or blister beetle of southern and central Europe. It constitutes the drug c. or *cantharides*. **ceratum cantharidis**. Blistering cerate, blister plaster (when spread) made by adding powdered cantharides to liquid petrolatum and, after macerating, adding yellow wax, rosin, and lard. [U. S. Ph.] **charta cantharidis**. Cantharides, or blistering paper; paper spread with a preparation of cantharides. [U. S. Ph., Br. Ph.] **collodium cum cantharide**. See under *collodium*. [U. S. Ph.] **emplastrum cantharidis**. See *ceratum cantharidis*. **tinctura cantharidis**. A tincture containing 10 per cent. [U. S. Ph.] of cantharides. **unguentum cantharidis**. An ointment made by mixing yellow wax with a strained infusion of cantharides in olive oil [Br. Ph.]. [Gr., *kantharos*, beetle.]

canthitis (kan-thi'sis). Inflammation of the angle of the eye. [Gr., *kanthos*, canthus, + *itis*, inflammation.]

canthoplasty (kan'tho-plas-te). 1. The operation of lengthening the palpebral fissure at the external canthus. 2. The operation of reforming a canthus in the case of defect. [Gr., *kanthos*, the corner of the eye, + *plassein*, to form.]

canthus (kan'thus). The palpebral commissure, the angle formed by the junction of the upper and lower lids. c. **externus**. See *outer c.* c. **internus**, c. **major**. See *inner c.* c. **minor**. See *outer c.* c. **nasalis**. See *inner c.* c. **temporalis**, **external c.** See *outer c.* **greater c.** See *inner c.* **inner c.**, **internal c.** The inner commissure of the lids. **lesser c.** See *outer c.* **nasal c.** See *inner c.* **outer c.**, **temporal c.** The outer commissure of the lids. *Commissura palpebrarum* [B. N. A.]. [Gr., *kanthos*, angle, corner.]

caoutchouc (koo'chook). India rubber. The prepared milky juice of *Hevea brasiliensis* and probably of other species of *Hevea*. **liquor c.** A 5 per cent. solution of India rubber in a mixture of benzol and carbon disulphid [Br. Ph. 1898].

[Said to be from the South American words *cahu*, a tree, and *chu*, juice.]

cap. 1. Of a lymph follicle, the bluntly conical end which projects toward or into the lumen of the part in which it is situated, or the epithelial and adenoid tissue covering the conical end. 2. Of the cerebral peduncle, see *tegmentum*. 3. In dentistry, to cover an exposed pulp with cement to prevent pressure from a filling. **enamel c.** The enamel organ after it has become concave and covers the top of the growing tooth papilla. [Ang.-Sax., *cappe*.]

capacity. Holding-power, cubic content, capability. **breathing c.** See under *breathing*. **calorific c.** See *specific heat*, under *heat*. c. of **saturation**. Of a base, the degree of its capability of combining with an acid to form a neutral salt. **combining c.** See *atomicity*, **electrical c.** The amount of electricity which a body can acquire when placed in contact with another body which charges it to a certain electric potential. **measures of c.** See *appendix*. **specific inductive capacity**. Inductive power; the degree of capability of transmitting electrical induction, air being taken as the standard. **testamentary c.** The degree of soundness of mind requisite for making a valid will. **thermal c.** See *specific heat*, under *heat*. **thoracic c.**, **vital c.** See *breathing capacity*. [Lat., *capacitas*.]

capillarectasia (kap'i'l-ar-ek-ta'se-ah). Dilatation of the capillaries as in chronic passive congestion. [Lat., *capillus*, a hair, + Gr., *ektasis*, distension.]

capillarimeter. An instrument for measuring the capacity of capillaries. [Lat., *capillus*, a hair, + *metron*, a measure.]

capillaryity. 1. The condition of being capillary. 2. Capillary attraction. **coefficient of c.**, **constant of c.** A number indicating the amount of capillary force exerted upon the unit of area of a solid or liquid. **modulus of c.** A number representing the change in the height of a capillary column consisting of a solution of a metallic salt, when either the basic or the acid radicle of the salt is replaced by another radicle. This modulus is constant for any given radicle. [Lat., *capillus*, a hair.]

capillary. 1. (Adj.) Pertaining to the hair or to very thin hairlike filaments. 2. (Adj.) Of hairlike fineness. 3. (N.) A minute vessel, especially a blood vessel of the system connecting the termination of the arteries with the radicles of the veins. **arterial capillaries**. The capillaries immediately terminating in the smallest arteries. **lymphatic capillaries**. The radicles of the lymphatic ducts. **pulmonary capillaries**. The capillaries in the membranous lining of the air cells of the lungs, between the pulmonary arteries and veins. **radial capillaries of the liver**, **branches of the liver**. Branches of the central vein of an acinus of the liver, radiating toward the periphery of the acinus. **venous capillaries**. The capillaries immediately preceding and

- forming the smallest veins. [Lat., *capillaris*, relating to the hair.]
- capillitium** (kap-i-lish'e-um). Protoplasmic threads meshed together, found in the spore capsule of myxomycetes. The threads serve to break up the masses of spores. [Lat., the hair.]
- capillus**, pl. *capilli*. A hair of the head. [B. N. A.] [Lat., hair.]
- cap'ital**. Pertaining to the head; of surgical operations, important, serious (as opposed to minor operations). [Lat., *capitalis*.]
- cap'itate**. Provided with a head; shaped like a head; shaped like a pin or nail (e. g., a stigma). [Lat., *caput*, a head.]
- capitel'ium**. A rounded eminence on the lower end of the humerus (lateral condyle) articulating with the upper surface of the head of the radius. *Capitulum humeri* [B. N. A.]. [Lat., dim. of *caput*, a head.]
- capit'ulum**. 1. A little head; a small process or protuberance fitting into a depression in another bone; also the head of a rib, a metacarpal bone, etc., e. g., c. fibulae, humeri, mandibulae, radii, ulnae. 2. In botany, an inflorescence of sessile flowers crowded together into a common head. [Lat., dim. of *caput*, a head.]
- capotemum** (kah-põt-maw'). A splashing sound heard in dilated stomach. [Fr.]
- cap'ping**. A term used in dentistry to signify the covering of an exposed pulp with a cap composed of an antiseptic paste or with cement. Also the substance forming the covering.
- caprenalin** (kap-re'na-lin). A proprietary preparation containing epinephrin.
- cap'ric**. Pertaining to, derived from, or resembling a goat. **c. acid**. See under *acid*. **c. aldehyd**. The aldehyd of c. acid. [Lat., *capra*, a goat.]
- cap'rin**. A glycerode of capric acid, found in goat's butter. [Lat., *caprinum*.]
- caprizant** (kap're-zant). Postponed and then accomplished precipitately (said of a pulse beat); bounding. [Lat., *caprizans*, from *capra*, a goat.]
- cap'roate, cap'ronate**. A salt of caproic acid.
- cap'roin**. A glycerid of caproic acid, found in goat's milk.
- cap'rone**. Diamyl ketone (C₅H₁₁)₂:CO. A liquid which is the chief constituent of oil of rue.
- caproylamin** (kap-ro-il-am'in). A poisonous ptomain, C₆H₁₅N, obtained from decomposed yeast and cod-liver oil.
- capryl** (kap'ril). 1. Rutil, the radicle C₁₀H₁₉O, found in capric acid. 2. Caprylyl, the radicle C₈H₁₇O, found in caprylic acid. 3. Octyl, the radicle C₈H₁₇, found in c. alcohol.
- caprylate** (kap'ril-ät). A salt of caprylic acid.
- caprylic** (kap-ril'ick). Derived from or containing capryl.
- caprylin** (kap'ril-in). A fatty substance found in goat's butter; a glycerid of caprylic acid.
- capsaicin** (kap-sa'is-in). The sharp burning principle (C₁₈H₁₄O₂) in capsicin.
- capsicin** (kap'si-sin). 1. Any one of several soft resinous extracts of Capsicum. 2. A volatile principle obtained from capsicum. 3. A pungent, camphorlike constituent of capsicum.
- cap'sicol**. A red oily liquid obtained from the oleoresin of capsicum.
- Cap'sicum**. 1. A genus of solanaceous herbs and shrubs found in the East Indies, China, Egypt, South America, and the West Indies. The capsular fruit constitutes the several varieties of red or Cayenne pepper, chillies, etc. 2. Of the U. S. Ph. The fruit of *C. fastigiatum*. **C. annuum**, Guinea, or red, pepper; an annual herb, indigenous to South America. It is employed as a rubefacient and vesicant. **C. baccatum**. Bird pepper, berry-bearing c.; a species found in the East and West Indies. The pods are employed like those of other species of C. **C. fastigiatum**. A small shrub indigenous in the East Indies and cultivated in America and Africa, the fruit of which is official in the U. S. Ph. and the Br. Ph. **capsici fructus**. The dried fruit of *Capsicum minimum*. [Br. Ph.] **C. frutescens**. Syn.: *shrubby c.*, *spur pepper*. A shrub growing in the East Indies and in tropical America. The fruit, the c. of the U. S. Ph., forms Cayenne pepper. **C. longum**. A species resembling *C. annuum*, and probably to be regarded as a variety only. **emplastrum capsici**. Made by applying oleoresin of capsicum to adhesive plaster. [U. S. Ph.] **extractum capsici fluidum**. Fluidextract of c.; made by extracting c. with alcohol. [U. S. Ph.] **oleoresina capsici**. Oleoresin of c.; made by extracting c. with acetone, and removing the acetone by evaporation. [U. S. Ph.] **tinctura capsici**. A 10 per cent. tincture [U. S. Ph.] or 5 per cent. [Br. Ph.] made with alcohol. **unguentum capsici**. An ointment made by digesting c. with spermaceti and olive oil. [Br. Ph.]
- cap'sula**, pl. *capsulae*. 1. A capsule. 2. A pulmonary alveolus. **c. adiposa**. The layer of adipose and connective tissue, surrounding the kidney. **c. articularis**, joint capsule. **c. crystallina**. The capsule of the crystalline lens. **c. externa**. External capsule, a thin lamina of white substance separating the claustrum from the putamen or lateral portion of the lenticular nucleus. **c. fibrosa**. The sclerotic coat of the eye, also the fibrous coat of the kidney. **c. glomeruli**. Bowman's c., malpighian c. **c. incudis tympanica**, **c. interna**. Internal capsule, a layer of white substance separating the caudate nucleus and thalamum from the lenticular nucleus and also the hypothalamus from the lenticular nucleus. **c. operculata**. The form of gelatinous capsule commonly used for the administration of bitter medicine. **c. sequestralis**, **c. sequestri**. The portion of living bone surrounding a sequestrum. **c. stapediolenticularis**. The capsule surrounding the articulation between the

body of the incus and the lenticular process or bone. [Lat., dim. of *capsa*, chest, box, from *capere*, to take.]

capsular. Pertaining to or resembling a capsule. [Lat., *capsularis*.]

capsule (kap'sūl). In general, any enveloping structure containing a body distinct from itself. In anatomy, a membranous sac enveloping other structures. In pharmacy, a hollow pill made of some medicinally inactive substance, such as gelatin, designed to enclose a drug. In bacteriology, a gelatinous envelope surrounding bacteria, at times producing a slimy or viscid growth on culture media. In botany, any hollow organ containing bodies, such as seeds, that subsequently escape. **accessory suprarenal c.** An additional suprarenal c., without a medullary portion, but frequently as large as a pea; sometimes it is attached to the main c. by connective tissue. **adrenal c's.** See *suprarenal c's.* **articular c.** See *capsular ligament* under *ligament*. **atrabiliary c.** See *suprarenal c's.* **auditory c.** See *otic vesicle*, under *vesicle*. **Bonnet's c.** The posterior portion of the sheath of the eyeball up to the passage of the tendon with its muscles. **Bowman's c.** Syn.: *c. of a glomerulus*, *malpighian c.*, *Müller's capsule*. The hyaline membrana propria forming the wall of the spherical cecal enlargement at the origin of the uriniferous tubules. It is connected with the surrounding parts by a limited amount of connective tissue and is lined by epithelium which is reflected over the contained glomerulus. The c. and its epithelium are continuous with the membrana propria and the epithelium of the renal tubules. **brain c.** The structures inclosing the brain. **c. of a cartilage cell.** Syn.: *cartilage c.*, *capsular membrane*, *mother cells*. The multiple or single concentric areas of chondrogenous substance surrounding a cartilage cell or groups of such cells and forming part or all of the ground substance or matrix of the tissue. They are classed as *primary* (those immediately surrounding the cells) and *secondary* (those outside the primary). **c. of a cell.** See *cell membrane*. **c. of a glomerulus, c. of a uriniferous tubule.** See *Bowman's c.* **c. of the kidney.** The connective tissue containing fat surrounding the kidney. **c. of the lens.** The transparent elastic envelope of the crystalline lens. **c. of a malpighian body.** See *Bowman's c.* **c. of a nerve cell.** The transparent sheath inclosing the nerve cells of the peripheral nervous system (the spinal ganglia and sympathetic system). They are continuous with the primitive sheath, or neurilemma, and, like it, have nuclei on their inner surface. **dental c.** A connective tissue capsule surrounding a rudimentary tooth of the fetus. **external c.** A layer of white matter situated externally to the lenticular nucleus and separating that ganglion from the island of Reil; composed of association fibers. **folding c.** A very thin sheet of gelatin in which are in-

folded dry medicines which it is desired to make easy of administration. **gelatin c.** A c. made of melted gelatin which is either cast upon a mold in the form of a sphere or spheroid in two parts which fit together after being filled, or is rolled into sheets from which pieces are cut to make the folding c. **Glisson's c.** A strong sheath of connective tissue which loosely envelops the hepatic vessels, and accompanies their distribution in the substance of the liver, becoming an exceedingly delicate investment to their smaller branches. **internal c.** A broad, angular tract of white fibers passing through the ganglia at the base of the cerebrum. **malpighian c., Müller's c.** See *Bowman's c.* **nasal c.** See *olfactory c.* **notochordal c.** The sheath of the notochord. **olfactory c.** In comparative anatomy, an osseous or cartilaginous structure containing the olfactory organs. **optic c.** In comparative anatomy, a cartilaginous or osseous structure, which represents the sclerotic coat of the human eye. **periotic c.** The structure enclosing the internal ear. **sense c's.** Structures which lodge the higher organs of sense. **suprarenal c's.** Adrenal bodies. Syn.: *adrenal c's*, *suprarenal bodies*. Two flattened bodies, that rest upon the kidneys. They are ductless glands, having a fibrous investment and cortical and medullary portions. **synovial c.** See *synovial membrane*. **Tenon's c.** The sheath of the eyeball anterior to the place where it is pierced by the muscles of the eyeball. Some anatomists apply the term to the entire sheath. **terminal gland c.** A simple kind of pacinian corpuscle. [B. N. A., *capsula*.] [Lat., *capsula*, a little box.] **capsulitis** (kap-su-lī'tis). Inflammation of a capsule, especially that of the crystalline lens. **c. ocularis.** Inflammation of the fibrous capsule of the eyeball. **capsulotomy** (kap-su-lot'o-me). Incision of the capsule of the crystalline lens of the eye. [Lat., *capsula*, a small case or box, + Gr., *temnein*, to cut.] **captation** (kap-ta'tion). Of Descourtis, the first stage (*fascination*) of hypnotism. [Lat., *captatio*, seizure.] **cap'tion, capta'tion.** The process of confining a mineral water in a receptacle. **caput** (ka'put). Gen. *capitis*, pl. *capita*. 1. The head. 2. Also any rounded, headlike extremity of an organ or structure. **bicipitis c. breve.** The short (middle) head of the biceps flexor cubiti. **bicipitis c. longum.** The long head of the biceps flexor cubiti. **c. argutum.** A head shaped like a sugar loaf. **c. auriculare musculi styloglossi.** An accessory head of the styloglossus muscle arising from the auditory canal. **c. claviculare.** The clavicular origin of the sternocleidomastoid muscle. **c. coli.** See *cecum*. **c. cornu posterioris.** The broad anterior extremity of the gray columns of the spinal cord. **c. galli, c. gallinaceum, c. gallinaginis.** Syn.: *verumontanum*. An oblong eminence on the floor of the urethra of the male, in front of the pros-

tate. **c. gelatinosum**. The collection of gray matter seen on the posterior and inner edge of the posterior gray column of the spinal cord. **c. medullae**. Syn.: *medulla globosa*. The cerebrum as distinguished from the medulla oblongata. **c. medusae**. A dilated state of the small cutaneous veins around the umbilicus in a new-born infant, due to stasis of blood in the portal vein; so-called from the resemblance of the veins to the fabled head of Medusa. **c. obstipum**. See *tortricollis*. **c. progeneum**. A head with the lower incisor teeth in advance of the upper ones. **c. succedaneum**. Syn.: *scalp tumor*. A puffy swollen condition of the presenting part of the head of the fetus, due to that part being free from pressure during labor, while the surrounding parts are subjected to it. [Lat., *caput*, head.]

car'agin. A mucilage contained in carageen, Irish moss, that is not precipitated by tannin.

car'amel. Burnt sugar; in solution a brown, syrupy substance used as a coloring agent for aqueous liquids.

Ca'rapa guianensis. A tree of Guiana, having very bitter bark which has been used as an antispasmodic and is said to contain an alkaloid, *carapin*.

caraway (kar'a-wā). *Carum carui* and its fruit. See under *carui* and *Carum* for preparations of c. [Old Eng., *carwey*, *carvi*, *carvy*, from Gr., *karon*, through Arab., *karwiya*.]

car'bamate. A salt of carbamic acid.

carbam'ic. Of, or derived from carbamid.

c. acid. See under *acid*. **c. acid ester**. See *urethane*.

carbam'id. Urea, because it may be regarded as an amid of carboxyl; also, as a generic term, a urea or a compound of urea with a radicle.

carban'ilid. The anilid of carbonic acid; diphenyl urea.

carbazonate (kar-baz'ot-āt). Picrate.

car'bid. A compound formed by the union of carbon directly with an element or radical. The name is usually restricted to such compounds formed with the metallic elements. [Lat., *carbidium*.]

car'binol. Methyl alcohol.

carbo-. Combining form of *carbon* used in compound words.

car'bo. Carbon or charcoal. **c. animalis**.

Animal charcoal; bone-black; ivory black. Of the U. S. Ph., animal charcoal prepared by burning bones. **c. animalis**

depuratus (see *preparatus*, *seu purificatus*) [U. S. Ph.]. Purified animal charcoal. **c. ligni** [U. S. Ph., Br. Ph.].

Wood charcoal. **c. pulveratus**. Wood charcoal heated in a closed vessel and reduced to a powder of varying degrees of fineness. **c. purificatus**. Purified animal charcoal. **c. spongiae**. Charcoal

made by burning sponges; a nearly odorless, brownish black powder of a salty taste, containing more or less iodine according to the degree of heat employed in the process. **c. suberis**. Charcoal made by burning cork. **c. vegetabilis**, **c.**

vegetalis. See *wood charcoal*, under *charcoal*. [Lat., *carbo*, coal.]

carbohemia, carbonemia (kar-bo-he'me-ah, kar-bo-ne'me-ah). An excessive presence of carbon compounds in the blood, i. e., imperfect elimination of carbon dioxide from the blood. [Lat., *carbo*, carbon, + *aima*, blood.]

carbohydrate (kar-bo-hi'drāt). As the name implies, a compound of carbon with oxygen and hydrogen, the latter elements being in the same proportion in which they unite to form water, which is not always the case. They are polyhydroxy-aldehyds and ketones. They are divided into the *simple* and the *compound c's*. The *simple c's*, also called the *monosaccharids*, are, in their turn, divided into trioses, tetroses, pentoses, hexoses, etc., according to the number of carbon atoms contained. *Simple c's* are known which contain 3 to 9 carbon atoms. Those containing 5 and 6, the pentoses and hexoses, are the most important. The hexoses are divided into two groups: those containing a keto group, e. g., fructose, the *keto-hexoses*; and those containing an aldehyd group, e. g., glucose, the *aldo-hexoses*. The *compound c's* are classified according to the number of simple *c* groups they contain. If they contain two hexose groups, they are called *hexobioses, dioses, or disaccharids*, e. g., cane-sugar or saccharose. If they contain three hexose groups, they are called *hexotrioses* or *trisaccharids*, e. g., raffinose. If they contain more than three hexose groups, they are called *hexopolyoses*, e. g., starch, cellulose.

car'bolate. Syn.: *phenolate*. A salt of carbolic acid. [Lat., *carbolas*.]

carbolfuchsin (kar'bol-fooks'in). A staining fluid used to stain tubercle bacilli, called also Ziehl's solution.

carbolic. Contained in, or derived from, coal tar oil. **c. acid**. See *phenol*, also under *acid*. [Lat., *carbolicus*, from *carbo*, coal, + *oleum*, oil.]

carb'olism. The state of being poisoned with carbolic acid or phenol.

car'bolize. To mix or bring into contact with carbolic acid; to treat a substance with carbolic acid in order to render it antiseptic.

carb'oluria (kar-bo-lu're-ah). The presence of carbolic acid in the urine. [*Carbolic* + Gr., *ouron*, urine.]

car'bon. A non-metallic element occurring in nature uncombined, in the form of anthracite, the diamond, and graphite. Wood charcoal, lampblack, and animal charcoal consist almost entirely of elementary c. Combined with oxygen, it occurs to a small extent in the atmosphere, and in the form of organic compounds it is found in all animal and vegetable tissues. It is also found as a relic of extinct animal and vegetable organisms in the form of carbonates (chalk, coral, limestone) and of coal, and its occurrence in petroleum is probably of like origin. It is also produced (in the form of lampblack, gas c., or charcoal)

by the incomplete combustion of animal or vegetable tissue. Chemical symbol C. Atomic weight, 12. **c. binoxid.** See *c. dioxide*. **c. bisulphid, c. bisulphuret.** See *c. disulphid*. **c. dioxide.** Syn.: *carbonic anhydrid*. A colorless gas, CO_2 , of a rather pungent acid odor and acid taste, often erroneously called carbonic acid or carbonic acid gas; found as a constant constituent of the atmosphere, of which it forms about 3 parts by volume ($4\frac{1}{2}$ by weight) in 10,000. It also occurs dissolved in considerable quantities in certain mineral waters, giving them their effervescence; and in some volcanic districts it is given off from clefts in the ground, from caves, and from volcanic craters. Its presence in the atmosphere or elsewhere is due to its production by the combustion of organic matter (coal, wood, etc.), by the respiration of animals, or by the decay of dead organic matter in the soil. Its accumulation in the atmosphere is prevented by the continual decomposition which it undergoes in the processes of vegetable assimilation. The chlorophyll of plants has the property of decomposing it, the oxygen being set free and the c. taken up by the plant cells. C. dioxide is very stable, parting with its oxygen only at a very high temperature, so that it is unfit to support respiration or combustion, although it does not seem to be directly poisonous when inhaled. Its sp. gr. is 1.53. It can readily be liquefied, and even obtained solid, by the combined use of cold and pressure. It dissolves in its own volume of water at ordinary temperatures and under a pressure of 1 atmosphere; by increased pressure several volumes may be dissolved in 1 volume of water, constituting the so-called soda water, or carbonic acid water. Such an aqueous solution contains true carbonic acid. **c. disulphid.** A colorless, mobile liquid, CS_2 , having when pure a sweetish, ethereal odor, but usually containing adventitious sulphur compounds which give it a very repulsive odor. It is highly volatile and inflammable, and its vapor, mixed with air, is very explosive. It is an excellent organic solvent. [Lat., *carbonei bisulphidum*.] [U. S. Ph.] **c. monoxid.** A highly poisonous substance, CO, produced by the incomplete combustion of charcoal and other carbonaceous matter. A colorless, tasteless gas of a peculiar odor, readily inflammable, and burning with a bluish flame. It acts as an energetic respiratory poison when inhaled, combining with hemoglobin of the blood to form carbon monoxid hemoglobin, which will no longer take up oxygen. **c. oxid.** See *c. dioxide, c. monoxid*, and *c. suboxid*. **c. suboxid.** C_3O_2 . A third oxid of c. A gas of very penetrating odor. **c. sulphid.** See *c. disulphid*. **c. tetrachlorid.** Tetrachloromethane, CCl_4 , a liquid, which is an excellent organic solvent. [Lat., *carbo, carboneum, carbonium, carbonum*.]

car'bon at'om. The c. a. has been termed

primary, secondary, tertiary, or quaternary, according as it is combined with one, two, three, or four other a's. **asymmetrical c. a.** A c. a. which is connected to four different elements and radicles.

carbon diox'id. See under *carbon*. **c. d. hemoglobin.** The compound of c. d. and hemoglobin found in venous blood. It carries part of the c. d. to the lungs, where it is expelled and the carbon is converted into oxyhemoglobin.

carbon monox'id. See under *carbon*. **c. m. hemoglobin.** A chemical combination of hemoglobin and carbon monoxid, present in the blood after c. poisoning, when it can be detected by means of spectrum analysis. The combination of the two substances is so strong that c. is not again converted into oxyhemoglobin (the oxygen carrier of the lungs), while passing through the lungs.

car'bonate. A salt of carbonic acid.

car'bonated. Combined with or containing carbonic acid; converted into a carbonate.

carbon'ic. Containing carbon. **c. acid.** See under *acid*. List of poisons and their antidotes, see in *appendix, page 938*. **c. acid gas.** See *carbon dioxide, c. anhydrid*. The anhydrid of c. acid; carbon dioxide. **c. dioxide.** See *carbon dioxide*, under *carbon*. **c. ester.** An ethereal salt of c. acid, especially ethyl carbonate.

carboniza'tion. 1. A charring, a conversion into charcoal. 2. The process of covering with a layer of charcoal by the action of heat or of strong sulphuric acid.

carbonom'eter. An apparatus for determining amounts of carbon dioxide in the air of an enclosed space by the precipitation of calcium carbonate from lime water. [Lat., *carbo, carbon, + Gr., metron, a measure*.]

car'bonyl. A bivalent radicle, $(\text{C}=\text{O})''$, which appears in the free state as carbon monoxid.

carborandum (kar-bo-run'dum). A compound of carbon and silicon (SiC), ranking next to the diamond in hardness; used in dentistry to polish and to wear down rough surfaces.

car'bosant. Santalyl carbonate ($\text{C}_{31}\text{H}_{46}\text{O}_3$). It is broken up in the intestine, the action being thus identical with that of santalol or oil of sandalwood.

carbosap'ol. A disinfectant mixture of carbolic acid and soap.

carboxyhemoglobin (kar-box'e-hem-oglo'bin). A compound of hemoglobin with carbon monoxid. It gives the blood a bright cherry-red color, paralyzes the respiratory function of the red corpuscles, and causes suffocation. See *carbon dioxide and carbon monoxid hemoglobin*.

carboxyl (kar-box'il). The characteristic acid group, CO.OH , of the organic acids.

carbuncle (kar'bun-kl). A multiple furuncle of severe grade with necrosis of tissue, resulting from infection, most often with the *Staphylococcus aureus*.

Its most common sites are: the back of the neck, the back, and the lip. The disease occurs generally in poorly nourished individuals, especially the old, and in diabetics. The constitutional symptoms are marked. [Lat., *carbunculus*, a small coal.]

carburetted. Combined with, or containing carbon.

carbyl (kar'bil). A name often applied to carbon, regarded as a radicle, in compound chemical names.

carbylamin (kar-bil-am'in). Hydrocyanic acid or one of its derivatives, formed by substitution of some element or radical for its hydrogen atom.

carcinoma (kar-sin-o'mah). Pl. *carcinomata*. A cancer, especially of the forms composed of an alveolar network of fibroid tissue, the interspaces containing epithelial cells and that usually spread by the lymphatics instead of by the blood vessels. **adenoc.** See *adenocarcinoma*. **basal-celled c.** An epithelioma or skin c., consisting of basal cells resembling the cells of the rete Malpighii. **c. acinosum.** A c. composed of grapelike acini. **c. colloides.** See *colloid c. c. cutanum, c. cutis*. Cancer of the skin; epithelioma. **c. cysticum papillare psammomum.** A cystic c. bearing papillomatous growths in which some or all of the cellular elements have been transformed into calcareous concretions. It has been found in the ovarian region. **c. durum.** See *scirrhus c. c. epitheliodes*. See *epithelioma, c. fibrosum*. See *scirrhus c. c. folliculare*. A c. composed of follicles, as in cancer of the thyroid. **c. glandulare.** See *adenocarcinoma, c. hematodes*. A c. containing enlarged blood vessels. **c. hyalinum.** See *colloid c. c. molle*. See *medullary c. c. ossificans*. A c. undergoing metaplastic ossification. **c. psammomum.** A c. in which the epithelial elements have been transformed into stratified calcareous concretions differing from those found in true psammoma. **c. sarcomatodes.** A malignant tumor of the testicle, ovary, or kidney, one part of which shows the glandular or epithelial structure, while another may show a gradual transition to the connective tissue type of the sarcoma. **c. simplex.** See *scirrhus c. c. syncyti-ale*. See *syncytioma malignum*, under *syncytioma, c. tubulare*. A c. composed of tubular alveoli. **colloid c.** A c. showing colloid degeneration. **colloid-celled c.** A c. of a mucous membrane, in which the cells have undergone colloid degeneration. **columnar-celled c., cylindrical-celled c.** A c. arising from the mucous membrane of the alimentary tract, consisting of columnar or cylindrical cells. **cystic c., cystoid c.** A c. containing one or more cysts or cystlike spaces. **duct c.** A c. arising from ducts, such as the bile ducts. **encephaloid c.** A c. consisting of a soft brainlike tissue, due to a preponderance of epithelial cells. **epithelial c.** See *epithelioma, fibrosomedullary c. A*

c. consisting of cells and stroma in about equal amounts. **glandular-celled c.** See *adenocarcinoma* and *cylindrical epithelioma*. **hard c.** See *scirrhus c. medullary c.* Soft cancer; a variety in which the cells exceed the stroma in amount and do not resemble acini or columnar or squamous epithelia. So-called from its resemblance to brain tissue. **mucoid c.** A c. that has undergone mucoid degeneration. **sarcomatous c.** See *c. sarcomatodes*. **scirrhus c. C.** In which the fibrous stroma predominates over the alveoli of epithelial cells, causing a firm, hard structure. **soft c.** See *medullary c. squamous-celled c., squamous epithelial c.* A c. consisting of flat cells, usually growing from the squamous epithelium of the skin, esophagus, or other epiblastic structures. **telangiectatic c.** See *c. hematodes*. **tubular c.** See *cylindroma*. [Gr., *karkinos*, from *karkinos*, crab cancer, + *oma*, tumor.]

carcinomatous (kar-sin-om'at-us). Pertaining to or of the nature of carcinoma. **carcino'sis.** A generalization of cancerous growths; the occurrence of multiple carcinomata in different organs of the body, or in different situations in the same organ.

car'damom, car'damon. The dried, nearly ripe fruit of *Elettaria repens*. C. contains about 4 per cent. of an aromatic volatile oil; it is used in the preparation of the aromatic powder, tincture of c., and compound tincture of c. of the U. S. Ph. It is aromatic and carminative. **long c.** The fruit of *Elettaria major*, obtained from Ceylon, rarely found in commerce; and of a less agreeable aroma. **round c.** The fruit of *Amomum cardamomum*, from Siam, Java, and the neighboring islands; containing seeds of a somewhat camphoraceous taste; not commonly met with. [Lat., *cardamomum*; Gr., *kardamomon*.]

cardamom'm. Cardamom [U. S. Ph.]. **cardamomi semina.** Cardamom seeds [Br. Ph.]. **tinctura cardamomi.** A 20 per cent. tincture of c. made with diluted alcohol [U. S. Ph.]. **tinctura cardamomi composita.** An aromatic tincture made from cardamom, cinnamon, and caraway, with diluted alcohol, sweetened with glycerin, and colored with cochineal [U. S. Ph., Br. Ph.] [Gr., *kardamomon*.]

cardia (kar'de-ah). The point at which the esophagus enters the stomach. The opening is called the *cardiac orifice* or *esophageal opening*. [Gr., *kardia*, heart.]

cardiac (kar'de-ak). Pertaining to the heart or to the cardia. **c. orifice.** The opening of the esophagus into the stomach. [Gr., *kardiakos*.]

cardialgia (kar-de-al'je-ah). Heartburn; pain or uneasiness in the stomach or lower end of the esophagus. [Gr., *kardia*, heart, + *algos*, pain.]

cardiectasis (kar-de-ek'ta-sis). Dilatation of the heart. [Gr., *kardia*, heart, + *ektasis*, dilatation.]

- car'din.** A glycerin extract of the ox's heart.
- cardio-.** Combining form of Gr., *kardia*, heart, used as a prefix in compound words to signify of, or pertaining to, the heart.
- cardiocele** (kar'de-o-sēl). A hernial protrusion of the heart, usually through an opening in the diaphragm. [Gr., *kardia*, heart + *kele*, tumor.]
- cardiocentesis** (kar-de-o-sen-te'sis). Puncture of a chamber of the heart. [Gr., *kardia*, heart, + *kentesis*, puncture.]
- cardiodynia** (kar-de-o-din'e-ah). Pain in the heart or in its vicinity. **c. spasmodica intermittens.** Angina pectoris. [Gr., *kardia*, heart, + *odyne*, pain.]
- cardiogram.** A curve or graphic representation of the beat of the heart, obtained by means of a cardiograph of any kind. [Gr., *kardia*, heart, + *gramma*, a writing.]
- cardiograph.** An instrument for registering the form of the heart beat by direct registration of the contraction of the musculature, or by measuring the change in volume of the organ or by measuring the change in pressure in the ventricles during the beat. [Gr., *kardia*, heart, + *graphein*, to write.]
- cardio-inhib'itory.** Arresting or slowing the action of the heart. Applied usually to the cardio-inhibitory center in the medulla. [Gr., *kardia*, heart + Lat., *inhibere*, to check.]
- cardiolith** (kar'de-o-lith). A concretion or area of calcareous degeneration in the walls or valves of the heart. [Gr., *kardia*, heart + *lithos*, a stone.]
- cardiol'ysis.** The operation of breaking up adhesions about the heart in chronic mediastinopericarditis by resection of the sternum and costal cartilages. [Gr., *kardia*, heart, + *lysis*, a loosening.]
- cardiomalacia** (kar'de-o-mal-a'se-ah). Softening of the substance of the heart due to fatty infiltration or other degeneration changes. [Gr., *kardia*, heart + *malakia*, softness.]
- cardiom'eter.** An instrument for measuring the force of the heart beat in the area of the heart. [Gr., *kardia*, heart + *metron*, a measure.]
- cardiomyoliposis** (kar'de-o-mi-o-lip-o'sis). Fatty degeneration of the heart muscle. [Gr., *kardia*, heart + *mys*, muscle + *lipos*, fat.]
- cardio'pathy.** Any heart disease. [Gr., *kardia*, heart + *pathos*, suffering.]
- car'diopneumat'ic.** Relating to the heart and the lungs, especially to the action of the heart in producing a slight compression and expansion of the lungs at each beat. [Gr., *kardia*, heart, + *pneuma*, breath.]
- car'diopneu'mograph.** An instrument devised by Landois for estimating the effect of the systole and diastole of the heart upon the volume of air in the lungs. [Gr., *kardia*, heart + *pneuma*, a breath, + *graphein*, to write.]
- cardioptosis** (kar-de-op'to-sis). Downward displacement of the heart. [Gr., *kardia*, heart + *ptosis*, a falling.]
- cardiorrhaphy** (kar-de-or'af-e). Suturing of the heart muscle. [Gr., *kardia*, heart + *raphe*, suture.]
- cardiosclerosis** (kar'de-o-skle-ro'sis). Induration of the muscular substance of the heart from an increase of connective tissue as in chronic interstitial myocarditis. [Gr., *kardia*, heart + *sklerosis*, hardness.]
- car'diospasm.** 1. Spasmodic action of the heart. 2. Spasmodic contraction of the cardiac end of the stomach.
- car'diosphygmograph.** See *cardiograph*. [Gr., *kardia*, heart + *sphygmos*, a throb + *graphein*, to write.]
- car'diovascular.** Pertaining to the heart and the blood vessels; belonging to the vascular system. [Gr., *kardia*, heart + Lat., *vasculum*, a small vessel.]
- carditis** (kar-di'tis). Inflammation of the heart, especially of its muscular tissue. [Gr., *kardia*, heart + *itis*, inflammation.]
- car'dol.** An acrid oil derived from the pericarp of the fruit of *Anacardium occidentale* (the cashew nut), $C_2H_3O_2$. [Lat., *cardoleum*, *cardolum*.]
- argentos** (kar-jen'tos). A proprietary preparation said to be colloidal silver oxid. It is used as a germicid in various pharmaceutical forms.
- Carigile membrane.** A delicate sterilized animal membrane, used to interpose between traumatic surfaces to prevent their union.
- Carica** (kar'ik-ah). Syn.: *Papaya communis* (seu *vulgaris*, seu *c.*). The papaw tree, or melon tree, indigenous to South America, and cultivated throughout the tropics. The fruit contains papain or papayotin.
- caricin** (kar'is-in). A green amorphous substance obtained by precipitating the juice of *Carica papaya* with alcohol; thought by its discoverer, Moncorvo, to be the active digestive principle of the plant.
- caricous** (kar'ik-us). Resembling a fig. [Lat., *carica*, a fig.]
- caries** (ka're-éz). A chronic inflammation of bone followed by molecular disintegration and pus formation. [Lat., *caries*, rottenness.]
- carina** (kar-e'nah). A keellike process. In anatomy, a median ridge on the lower surface of the fornix cerebri. [Lat., *carina*, keel of a boat.]
- carinate** (kar'in-ät). Shaped like a keel; also provided with a keellike process. [Lat., *carinatus*.]
- caris'sin.** A glucosid obtained from a species of *Carissa*. Said to be a cardiac stimulant.
- Carlsbad waters.** Alkaline-saline waters from springs in Carlsbad which are at temperatures from 48° to 162.5° F. [Carlsbad, Bohemia.]
- car'min.** 1. The red coloring matter of cochineal, especially the red pigment produced by precipitating a decoction of cochineal with alum, cream of tartar, or acid potassium oxalate; a mixture of carminic acid, *c. red*, and other substances; used as a staining reagent in microscopy.

2. A brilliant shade of red like that of cochineal. **ammonia c.** A solution of c. in ammonia water; used as a staining reagent in microscopy. **blue c.** See *indigo carmin*, under *indigo*. **borax c.** A staining solution containing c. and borax. **c. lake.** A compound of c. and alumina, made by treating cochineal with alum and an alkaline carbonate. **c. red.** A purplish red, lustrous substance, $C_{11}H_{12}O_7$, produced by the decomposition of carminic acid; probably a derivative of phthalic acid. **Thiersch's c. reagent.** A staining solution containing c., oxalic acid, etc. [Fr., *carmin*.]

carmin'ative. Having the power of expelling flatus and thus mitigating colicky pain. [Lat., *carminare*, to cleanse.]

carmin'ophil, carminophilous (kar'-min-of'il-us). Having an affinity for carmin; readily stained with it. [Fr., *carmin*, carmin + Gr., *philein*, to love.]

carnauba wax (kar-nah-oo'bah). The product of the wax palm, *Copernicia cerifera*. It is used but little in pharmacy.

carneous (kar'ne-us). Pertaining to, consisting of, or resembling flesh, especially muscle. In descriptive bacteriology, the term is used as meaning flesh colored or pale red. **c. mole.** Syn.: *blood mole*. A fleshy mass developing in the uterus, in the case of an abortion which has occurred slowly. It consists of the ovum, surrounded by a capsule filled with clotted blood and degenerated chorionic villi. [Lat., *caro, carnis*, flesh.]

carnicification (kar-nif-ik-a'shun). Conversion into flesh, or a fleshlike substance, by the action of some pathological process in a tissue. See *splenization*. **c. of the bone.** See *osteosarcosis*. **c. of the lungs, pulmonary c.** A conversion of the pulmonary parenchyma into a dusky red material resembling muscle as in atelectasis, or from the pressure of an exudate in the pleural cavity. **congestive c. of the lung.** Brown induration of the lung, caused by the pigmentation and hyperplasia of long-continued chronic passive congestion. [Lat., *caro, carnis*, flesh + *facere*, to make.]

car'nin. A crystalline base, $C_7H_8N_4O_8$, obtained from extract of meat. [Lat., *caro, flesh*.]

carniv'orous. Flesh eating as applied to animals. In surgery, escharotic. [Lat., *caro, carnis*, flesh + *vorare*, to eat.]

ca'ro. Flesh; the red part or belly of muscle. **c. quadrata** Sylvii. *Musculus quadratus plantae*, an accessory muscle of the flexor longus digitorum. [Lat., *caro, carnis*, flesh.]

caroba (kar-o'bah). The leaflets of *Jacaranda procera*, a tree of Brazil.

ca'robin. A natural alkaloid found in the leaves of *Jacaranda procera*.

caroid (ka'royd). A trade name for papain. [Lat., *caro, flesh*.]

carot'ic. 1. Producing sleep, stupefying. 2. Relating to stupor. 3. Relating to the carotids. [Gr., *karoun*, to stupefy.]

carotid (kar-ot'id). Pertaining to the two

large arteries of the neck, supplying the head and running near the ear; the carotid arteries. See *table of arteries*, under *artery*. **c. triangle.** See under *triangle*. [Gr., *karotides*, from *karos*, heavy with sleep, because the ancient Greeks believed that the carotid arteries caused sleep.]

car'pain. An alkaloid, $C_{14}H_{25}NO_2$, found in the leaves of *Carica papaya*. It has been used as a substitute for digitalis.

carpal (kar'pal). Pertaining to the carpus or to the region of the carpus. **c. arteries.** See *table of arteries*, under *artery*. [Gr., *karpos*, the wrist.]

carphology (kar-fol'o-je). Picking at the bedclothes or grasping at imaginary things in the air, observed in low forms of fever. [Gr., *karphos*, a filament or mote + *legein*, to pluck.]

carpo-. Combining form of Gr., *karpos*, carpus, wrist; used as a prefix in compound words.

carpocarp'pal. Pertaining to different parts of the carpus in their relations to each other (said especially of the articulation between the two rows of carpal bones). See *mediocarpal*.

car'pomel. The uncrystallizable sugar of fruit. [Gr., *karpos*, a fruit + *meli*, honey.]

carpus (kar'pus). The wrist; that portion of the upper or anterior limb that lies between the forearm and the hand. In man the skeletal portion is composed of eight bones: the scaphoid, semilunar, cuneiform and pisiform bones, and the trapezium, trapezoid, os magnum, and unciform, arranged in two transverse rows. [Gr., *karpos*, wrist.]

carrageen, carragaheen, carragahen (kar-rah-ghen'). Irish moss; the thallus of *Chondrus crispus*. **gelatina c.** Syn.: *gelatina caragaheen* (seu *caragheen*). A preparation made by boiling c. with from 30 to 60 parts of water, and adding sugar.

carrageen'in. Mucilage of carrageen.

carrastase (kar'ras-tas). A proprietary preparation consisting of a mixture of papain and malt diastase. **liquor c.** C. in a liquid form.

Carrel's method. End to end suture of blood vessels in the transplantation of organs or segments of limbs. [Alexis Carrel, New York pathologist, living.]

car'rier. A person who harbors virulent bacteria or protozoa long after his apparent recovery from the disease, or even without having developed the special disease. **acute c.** One who harbors the organism a few weeks after convalescence.

chronic c. A person harboring pathogenic organisms for months or years.

temporary c. A healthy person who harbors pathogenic organisms without having had the disease.

Car'ron's disease. See *Verruga peruana*.

Car'ron oil. Lime liniment; so named from the fact that it was largely used at the Carron iron works in Scotland in the treatment of burns.

carsickness. Nausea and even vomiting brought on by the motion of the cars. A condition resembling seasickness.

car'thamus. Safflower, or American saf-

fron; the herb has been regarded as a medicine. C. is sometimes used to adulterate saffron.

cartilage (kar'til-ēj). Syn.: *gristle, cartilaginous* (or *chondrogenous*) *tissue*. A tough elastic tissue composed of characteristic cells and an abundant intercellular substance or matrix, found in various parts of the body, and forming the primordial skeleton (*temporary c.*) or persisting throughout life (*permanent c.*). It presents three varieties, according to the matrix: 1. *Hyaline*, or *true c.*, with a translucent, nearly or quite homogeneous matrix. 2. *White fibroc.*, in which the matrix is composed mostly of white fibrous tissue. 3. *Elastic c.*, in which the matrix is made up of a dense network of elastic tissue. The chemical constituents, beside inorganic salts, are chondromucoid, chondrorbin, sulphuric acid, collagen, and albuminoid. The nutrition of c. is by imbibition. **alar c's**. Two c's, one on each side, situated below the upper lateral c's of the nose, forming the anterior part of the framework of the nostril. **annular c.** 1. A ring-shaped c., especially one lying between the conchal c. and the external auditory meatus. **aortic c.** The right second costal c., from its situation in front of the arch of the aorta. **arthrodial c., articular c.** A thin layer of permanent c. covering the articular surface of a bone. **arytenoid c's**. Two three-sided pyramidal c's, one on each side, resting on the thyroid c. **asternal c's**. Those of the costal c's which are not attached to the sternum. **bronchial c's**. Semicircular cartilaginous plates found in the bronchial tubes; in the smallest tubes they are mere specks. **calcified c.** C. in which the matrix contains a deposit of calcareous salts. **c. capsule**. See *capsule of cartilage cell*, under *capsule*. **c. of the ear**. The cartilaginous framework of the auricle and the outer portion of the external auditory canal. **c. of the septum of the nose**. A quadrilateral cartilaginous plate forming the anterior portion of the septum. **c's of Wrisberg**. See *cuneiform c's*. **circumferential c.** The glenoid ligament of the shoulder. **conchal c.** Auricular c. [B. N. A., *cartilago auriculae*.] **costal c's**. The c's that connect the ribs with the sternum. **cricoid c.** A ring-shaped c. forming the lower portion of the cartilaginous framework of the larynx. **cuneiform c's**. Syn.: *c's of Wrisberg*. Two small elastic c's, one on each side, in the folds of mucous membrane extending from the arytenoid c's to the epiglottis. **ensiform c.** An elongated cartilaginous appendage extending downward from the lower end of the sternum. [B. N. A., *processus xiphoideus*.] **elastic c.** C. in which the matrix is mostly composed of a feltlike mass of elastic fibers. The chondrin yielding hyaline substance immediately surrounds the cells and is comparatively small in amount. **epactal c.** Nodules of c. on the alar c's of the nose. **epiglottic c.** The elastic cartilaginous frame-

work of the epiglottis; rounded at its free upper border, pointed below. **floating c.** A cartilaginous body lying free in the cavity of a joint. **hyaline c., hyaloid c.** C. composed of nucleated cells and a transparent or translucent, apparently homogeneous matrix that yields chondrin on boiling; **interarticular c's, interarticular fibroc's**. Flat fibroc's. interposed between the articular surfaces in some of the joints. [B. N. A., *discus interarticularis*.] **intervertebral c's**. The discs of fibroc. interposed between the bodies of the vertebrae [B. N. A., *fibrocartilago intervertebralis*]. **parachordal c's**. Cartilaginous masses formed from the tissue in which the cranial portion of the notochord is imbedded in early embryonic life, forming the principal matrix of the succeeding bony walls of the base of the skull as far forward as the sella turcica. **parenchymatous c.** C. in which the amount of ground substance is very small, the cells forming the greater part of the tissue. **periotic c.** The cartilaginous rudiment of the petromastoid portion of the temporal bone. **permanent c.** C. that retains its cartilaginous character in the fully developed body, as distinguished from temporary c. **semilunar c.** One of the interarticular cartilages of the knee joint [B. N. A., *meniscus lateralis*]. **septal c.** The c. of the septum of the nose. **sesamoid c., sesamoid fibroc.** A small isolated cartilaginous mass sometimes found entirely inclosed in a tendon, etc. **supra-arytenoid c.** Corniculum laryngis [B. N. A., *cartilago corniculata*]. **synarthrodial c's**. The c's of immovable or slightly movable articulations. **tarsal c's**. Thin elongated plates of dense connective tissue (formerly thought to be fibroc.) forming the framework of the eyelids. **temporary c.** The hyaline c. representing nearly the entire skeleton in developing animals, ultimately replaced by bone. **thyroid c.** A c. forming the greater portion of the framework of the larynx, situated above the cricoid c., consisting of two lateral wings joined in front at an acute angle forming the *pomum Adami*. **tracheal c's**. The cartilaginous rings of the trachea. **tubal c.** A triangular plate of c., curled upon itself, extending from the osseous portion of the eustachian tube to the pharynx. **upper lateral c's of the nose**. Two triangular c's, one on either side, forming the upper part of the framework of the nose, immediately below the nasal bones. **vomerine c.** A hyaline c. supporting Jacobson's organ. **white fibroc.** A tissue made up of c. and white fibrous connective tissue. **xiphoid c.** See *ensiform c.* [Lat., *cartilago, gristle*.]

cartilaginitica'tion. See *chondrogenesis*. The conversion of a tissue into one resembling cartilage.

cartilaginoïd (kar-til-aj'in-oyd). Resembling cartilage, chondroid. [Lat., *cartilago, cartilage, gristle* + Gr., *eidōs, resemblance*.]

carui. See *Carum*. **aqua c.** Syn.: *aqua carvi*. Caraway water; made by distilling caraway fruit with water [Br. Ph.]. **c. fructus.** Caraway fruit [Br. Ph.]. **c. oleum c.** Oil of caraway. See *oleum carvi*, under *Carum* [Br. Ph.].

Carum. 1. Of Linnaeus, a genus of umbelliferous plants of the tribe *Annimineae*, subtribe *Eucannineae*. 2. of the U. S. Ph., the fruit of *C. carui*. **C. ajowan.** The ajowan, or bishop's weed; a small annual herb cultivated in India, said to furnish most of the thymol of commerce. **C. carui**, **C. carvi.** Caraway; a biennial species growing throughout Europe, bearing an aromatic fruit. **C. petroselinum.** Parsley. The root, herb, and fruit have been official. The root was formerly employed as a diuretic and laxative in dropsy and gonorrhoea, and was included among the "five greater aperient roots." See *apiol*. **oleum cari.** The volatile oil of *C. carui*; used as an aromatic [U. S. Ph.]. [Gr., *karon*, caraway.]

caruncula. See *caruncle*. **carunculae cuticulares.** The nymphae. **carunculae hymenales.** See *carunculae myrtiformes*. **c. lacrimalis.** See *lacrimal caruncle*, under *caruncle*. **c. major.** A papilla marking the common orifice of the ductus choledochus communis and the pancreatic duct. **c. mammillaris.** 1. A small elevation of gray nervous matter at the base of the brain, giving rise to the middle root of the olfactory nerve. 2. The dilated extremities of the galactophorous ducts in the nipple. **c. minor.** A papilla in the duodenum, in the center of which an occasional supplementary pancreatic duct opens. **carunculae myrtiformes.** Irregular tongue-like projections of the mucous membrane of the ostium vaginae, the remains of the ruptured hymen. **c. oculi.** See *lacrimal caruncle*, under *caruncle*. **carunculae papillares.** Little nipplelike projections at the hilum of the kidney marking the orifices of the uriniferous tubules. **c. salivalis.** See *c. sublingualis*. **c. seminalis.** See *caput galli*. **c. sublingualis.** A papilla marking the opening of Wharton's duct. **c. urethrae.** See *urethral caruncle*. **c. urethrae virilis.** See *caput gallinaginis*. **carunculae vaginales.** See *carunculae myrtiformes*. [B. N. A., same.] [Lat., dim. of *caro*, flesh.]

caruncular. Of, or of the nature of, or pertaining to, a caruncle.

caruncle. A small fleshy excrescence, normal or pathological. **hymenal c's.** See *carunculae myrtiformes*, under *caruncula*. **lacrimal c.** A small oval or triangular reddish body lying at the bottom of the inner canthus of the eye. **urethral c.** A vascular tumor projecting from the mouth of the female urethra. Histologically, it is a granuloma or angioma. It is attended by painful urination and sensitiveness of the vulva. [Lat., *caruncula*, dim. of *caro*, flesh.]

carvacrol. Methylisopropylphenol, C_9H_8O . $CaH_5.OH.C_3H_7$. Isomeric with thymol. Prepared from oil of caraway.

car'vene. A terpene, $C_{10}H_{14}O$, present in oil of anise, from which carvacrol is prepared.

caryocinesis (ka-ry-o-kin-e-'sis). See *karyokinesis*. [Gr., *karyon*, nut, nucleus, + *kinesis*, movement.]

caryophyllin (ka-re-o-fil'lin). A substance, $C_{10}H_{16}O$, or $C_{20}H_{32}O_{22}$, precipitated from concentrated tincture of cloves; readily soluble in warm alcohol and in ether.

caryophyllus (ka-ry-o-fil'us). The dried flower buds of *Eugenia aromatica*. **oleum caryophylli.** Oil of cloves. A volatile oil distilled from caryophyllus. It is carminative and mildly antiseptic. **Caryophyllum** [Br. Ph.]. Cloves [Gr., *karyon*, nut + *phyllon*, leaf.]

casca (kas'kah). Spanish bark, also *Rhamnus alaternus*. **c. bark.** The bark of *Erythrophloeum guineense*. [Span., Port.] The poisonous principle of the *hayab* is said to be identical with the alkaloid erythrophlein.

casgara (kas-ka'ah). Bark. **c. amarga.** Honduras bark, a very bitter, odorless bark. It contains an amorphous alkaloid, picrammin, which has been used in syphilis. **c. sagrada.** Lit., sacred bark. The bark of *Rhamnus purshiana* [U. S. Ph.]. **extractum cascarae sagradae.** An extract made by exhausting the bark of *Rhamnus purshiana* with alcohol, and evaporated on a water-bath to a suitable consistence [Br. Ph.]. **extractum cascarae sagradae liquidum.** Liquid extract of *c. sagradae*. This is practically identical with the fluidextract [U. S. Ph.]. Other pharmaceutical preparations are the *elixir* and the *symp.* [Br. Ph.] [Sp., *casgara*, bark.]

cascarilla (kas-ka-ri'llah). 1. A name applied to various barks, especially *Cinchona* and its allies. 2. The genus *Croton*. 3. A genus of rubiaceous trees. 4. Of the Br. Ph., the dried bark of *Croton eluteria*. **infusum cascarillae.** A 5 per cent. infusion made with boiling water [Br. Ph.]. **tinctura cascarillae.** A 20 per cent. tincture of cascarilla [Br. Ph.]. [Span., dim. of *casgara*, bark.]

cas'carin. A purgative principle obtained from casgara sagrada.

case. 1. An individual having a disease. 2. A box, chest, covering, receptacle. **brain c.** The parts that include the brain. **c. book.** A physician's clinical notebook. **c. taking.** The business of recording data concerning any given patient. **dissecting c.** A c. of dissecting instruments. **heart c.** See *pericardium*. **muscle c.** Syn.: *muscle casket*. The elements forming a striated muscle fiber. **operating c.** A case of surgical instruments in general. **trial c.** A c. of lenses, prisms, etc., for testing the refraction, accommodation, etc., of the eye. [Lat., *casus*, from *cadere*, to happen.]

casease (ka'se-'as). A ferment, produced by bacteria, which dissolves albumin and the casein of milk. [Lat., *caseus*, cheese.]

caseation (ka-se-a'shun). A process by

which the exudate in chronic infectious granulomata, such as tubercles, undergoes coagulative necrosis and fatty degeneration, the result being a granular, cheese-like debris. [Lat., *caseus*, cheese.]

ca'sein (ka'se-in). A protein occurring in the milk of the *Mammalia*, in the proportion of 2 to 6 per cent. It is a weak acid, almost insoluble in water. Its calcium salt, which is soluble in water, is present in milk. C. is one of the chief nutritive principles of milk, and in the form of cheese, is used directly as food. **c. ointment**. A thick emulsion consisting of c., potassium and sodium hydrates, glycerin, petrolatum, salicylic acid, or borax, and water. **c. silver**. See *argonin*. **vegetable c.** A nitrogenous substance resembling milk, c. forming 7.5 to 19.5 per cent. of the gluten of milk. [Lat., *caseus*, cheese.]

ca'seinate. A salt of casein. Calcium c. is present in milk.

caseinogen (ka-se-in'o-jen). A milk proteid converted into casein by ferments. [*Casein* + Gr., *gemma*, to produce.]

ca'seous. Cheesy; of the consistence or appearance of cheese.

ca'soid flour. A gluten flour, containing not more than traces of starch; used for making bread for diabetic patients.

cassava (kas-sah'vah). The *Manihot utilisima* and *M. palmata*; also the starchy substance obtained from the roots of these plants. **c. starch**. A starch contained in c.; c. starch moistened with water and dried on hot plates, or dried in the sun after boiling in steam, forms tapioca (*q. v.*).

casserian. Relating to, or described by, Casserio. **casserian ganglion**. Term erroneously used for gasserian ganglion. [*Giulio Casserio*, Italian anatomist, 1545-1616.]

Cassia (kash'e-ah). 1. A genus of leguminous plants. 2. An old name for several sweet-smelling trees, particularly *Cinnamomum c.*; hence now applied to the coarser varieties of cinnamon bark, especially those derived from China and eastern Asia. 3. The fruit of *C. fistula*. **C. acuminata**. *C. marylandica*. **C. acutifolia**. Syn.: *C. senna*, *Senna acutifolia*. 1. The senna plant. The leaflets constitute Alexandrian senna. 2. *C. angustifolia*. **C. angustifolia**. Syn.: *Senna officinalis*. Indian senna, the Tinnevely senna plant; an annual species growing in southern Arabia, Scinde, and the Punjab, and cultivated in some parts of India; closely resembling *C. acutifolia*. The leaves of the wild Arabian plant constitute Bombay (Moka, Arabian, or East Indian) senna; those of the cultivated Indian plant, Tinnevely senna (*senna indica* [Br. Ph.]). **c. buds**. The small immature buds of various species of *Cinnamomum*. **C. ethiopica**. An African species sometimes identified with *C. acutifolia*, said to furnish Tripoli senna. **C. fistula**. The pudding pipe tree, purging c.; indigenous to the East Indies and naturalized in various parts of Asia,

Egypt, and in tropical America. The pods are sometimes used as a laxative, the seeds are ground and used for poultices, and the bark, which is very astringent, is employed in tanning and in the preparation of a sort of catechu. 3. Of the U. S. Ph., the fruit of *C. fistula*. **c. lignea**. A name formerly applied probably to the twigs and branches of some species of *Cinnamomum*; afterward to the bark now known as Chinese cinnamon. **C. marylandica**. American (or wild). The leaflets have a faint odor and nauseous taste, contain a principle resembling cathartin, and are used like senna leaves, but are somewhat less active. **C. obovata**, **C. obtusa**, **C. obtusata**. Syn.: *Senna obtusa*. The Aleppo (or Italian) senna plant, indigenous to Egypt, Abyssinia, Tripoli, Senegal, and other parts of Africa, also to Arabia and Syria, and cultivated in Italy, Spain, and the West Indies. It furnishes a variety of Alexandrian senna, being the *senna baladi* (wild senna) of the Arabs, is now very rarely found in commerce and is regarded as inferior to the senna furnished by *C. acutifolia*. **cassia pulpa**. C. pulp; the sweetish mucilaginous pulp surrounding the seeds in the pods of *C. fistula*, forming the active cathartic principle of the latter [Br. Ph.]. **China c.**, **Chinese c.**, **cinnamon c.** See *Chinese cinnamon*. oil of c. Chinese oil of cinnamon, a volatile oil distilled from the bark of Chinese cinnamon; darker and somewhat heavier than oil of Ceylon cinnamon and of a less agreeable taste and odor. [U. S. Ph.] [Lat., *casia* and *cassia*, wild cinnamon.]

cast. To shed, get rid of, expel (e. g., the hair, the teeth, the contents of the stomach or the uterus); to throw (an animal) into a suitable posture for examination or operation. [Dan., *caste*.]

cast. 1. A substance showing the form of some body to which it has been applied, or some cavity, as a hollow viscus, a duct or a tubule, in which it has been contained, while in a plastic state. The renal c's are voided in the urine and can be detected by microscopic examination of a urinary sediment. 2. Applied to the eye, a popular name for strabismus or squint. **albuminofatty c.** A urinary c. consisting of fatty and albuminous matter; found after phosphorus poisoning and other degenerative processes in the kidney. **blood c.** A renal c., made up of coagulated blood plasma and blood corpuscles, which appears in the urine in acute hemorrhagic nephritis. **bronchial c.** A c. of a bronchus or a bronchial tube. **orkscrew c.** See *spiral c.* **epithelial c.** A renal c. containing or made up of epithelium. **false c.** Syn.: *cylindroid*. A castlike substance, such as a shred of mucus, found in urine, frequently mistaken for a true renal cast. **fatty c.** A renal c. containing oil drops, free or contained in epithelial cells. **fibrinous c.** A c. consisting of fibrinous matter. **granular c.** A renal c. having

a granular appearance, generally from granular degeneration of epithelium, blood, etc. **hyaline c.** A renal or testicular c. of a structureless, translucent appearance, probably due to the coagulation of an albuminous body. **icteric hyaline c.** A hyaline c. found in the urine of jaundiced patients when it contains little or no albumin. **mucoid c., mucous c.** A false c. consisting of mucus or mucin. **oil c.** See *fatty c.* **pus c.** A renal c. containing pus cells. **renal c.** A c. of a uriniferous tubule. **spiral c.** A urinary c., generally hyaline, twisted or convoluted upon itself, presumably by its passage from Henle's loops into the larger collecting tubes. **testicular c.** A hyaline c. found in the urine occasionally in spermatorrhea, sometimes a little broader than renal hyaline c's, but otherwise not distinguishable from them. **transparent c.** See *hyaline c.* and *waxy c.* **tube c.** See *renal c.* **uric acid c.** A renal c. consisting of uric acid; found in the urine of newborn infants. **urinary c.** A c. of some portion of the urinary passages, especially of a uriniferous tubule. **waxy c.** A form of renal c. resembling melted wax; distinguished from the hyaline c. by its high refractive power.

Castanea (kas-ta'ne-ah). 1. The chestnut tree. 2. Of the U. S., Ph., 1890, the leaves of *C. vulgaris*. **C. vesca americana.** The American variety of *C. vulgaris*. **C. vulgaris.** The chestnut tree. The infusion and fluidextract have been used in whooping-cough. [Gr., *kastanon*, chestnut.]

Castellani's absorption test. The absorption of group agglutinins from an agglutinating serum by saturating the serum with the bacilli which agglutinate with the lower dilution. This leaves the specific agglutinin, and the serum will then only agglutinate the organism used for injecting the animal.

Cas'tor. 1. The beaver, a genus of amphibious rodents. 2. Hence the substance, also called castoreum, consisting of the dried preputial follicles and their contents derived from several species of c. C. is a stimulant and antispasmodic employed in hysteria. **American c., Canadian c.** C. (2d def.) obtained from the American beaver (*C. americanus*). It is the variety of c. ordinarily met with in commerce. **C. americanus.** The American beaver, usually regarded as only a variety of *C. fiber*. **c. beans.** See *c. seeds*. **C. canadensis.** *C. americanus*. **C. fiber.** The beaver. **c. oil.** Lat., *oleum ricini* [U. S. Ph., Br. Ph.]. A fixed oil obtained by expression from the seeds of *Ricinus communis*. It forms a viscid, transparent, pale yellowish liquid of faint odor and oily taste. It is a mild and efficient purgative, with a tendency to produce subsequent constipation. **c. seeds.** The seeds of *Ricinus communis*. **oil of c.** A pale yellow volatile oil obtained by distillation from c., and having its odor and taste. Said to be gradually converted

into salicylic aldehyd. [Lat., *castor*, beaver.]

casto'ria. A proprietary purgative preparation said to be made from senna, sodium bicarbonate, sodium and potassium tartrate, and various carminatives.

castration (kas-trá'shun). The removal of the testicles or ovaries. [Lat., *castrare*, to deprive of generative power.]

cas'ual. Accidental (said of a case of infectious disease occurring accidentally, as distinguished from one due to known inoculation). Also, occasional, incidental, unconcerned, cursory. [Lat., *casualis*, accidental.]

casuistics (kas-u-is'tiks). The study or narration of histories of individual cases of disease with a view to throwing light on the general history of the disease. [Lat., *casus*, case.]

cata-. A prefix from the Gr., *kata*, down; used in compound words to signify down, away, entirely, mis-, inferior, subsidiary, down upon, against.

catabol'ic. Relating to catabolism.

catabolism (kat-ab'ol-ism). The name given to the destructive metabolism (dissimilation) occurring in the body, the processes by which complex substances are reduced to simpler ones, usually as the result of hydrolysis and oxidation. The converse of anabolism. [Gr., *katabole*, a casting down.]

catacrotism (kat-ak'ro-tism). An undulation of the descending curve of a sphygmographic pulse tracing. [Gr., *kata*, down + *krotos*, beat.]

catadicrotism (kat-a-dik'ro-tism). Dicrotism of the descending curve of a sphygmographic tracing. [Gr., *kata*, down + *dis*, twice + *krotos*, beat.]

catadidymus (kat-a-did'i-mus). A twin monster joined above but double below. [Gr., *kata*, down + *didymos*, twin.]

catadioptric (kat-a-di-op'trik). Reflecting and refracting light at the same time; said of certain optical instruments. [Gr., *kata*, opposite to + *diopsesthai*, to see through.]

catalase (kat'al-ase). An enzyme, supposed to be present in many animal and plant tissues, which have the property of converting hydrogen peroxid into water and molecular oxygen.

catalepsy (kat'al-ep-se). A nervous phenomenon characterized by peculiar paroxysms and accompanied by more or less suspension of consciousness and sensibility and by muscular rigidity. Present in a variety of disorders as hysteria, dementia precox, paresis, etc. [Gr., *kata*, down + *lepsis*, a seizure.]

catalep'tic. Pertaining to, of the nature of, or affected with catalepsy.

cataleptoid (kat-al-ep'toyd). Resembling catalepsy. **c. state.** A sort of catalepsy due to neuromuscular over-excitability. [Gr., *katalepsis*, catalepsy + *eidos*, resemblance.]

catalpa (kat'al'pah). The bark or fruit of a genus of North American, West Indian, and Asiatic bignoniaceous trees. **C. bignonioides.** Cigar or bean tree.

The *c.* tree or catawba tree, indigenous to the Southern United States, where its seeds are used in asthma.

cat·alysis (kat-al'is-is). Catalytic action, contact action; a chemical action in which one body produces changes in one or more other bodies, without itself undergoing any change. Some examples of so-called *c.*, however, which have been most thoroughly investigated, have proved to be instances of double decomposition, the body to which the catalytic action had been ascribed really undergoing decomposition and immediately reforming, in order to be again decomposed. By a constant repetition of this process, a minute portion of the body so acting may cause chemical changes in a large bulk of other substances. The prevailing idea is that the substances which cause the *c.* has only the property of accelerating a reaction which would take place under any circumstances, but in a much longer time. [Gr., *katalyein*, to dissolve.]

ca'talyst. A substance capable of producing catalysis.

catalytic (kat-al-it'ick). Pertaining to catalysis.

catalyzer (kat'al-i-zer). A substance causing or producing catalysis.

catamenia (kat-ah-me'ne-ah). The monthly discharge of blood from the uterus; menstruation; the menses. [Gr., *kata-menios*, monthly, fr. *kata*, according to + *men*, month.]

cat'apasm. A dusting powder. [Gr., *katapasma*, a powder.]

cataphasia (kat-a-fa'se-ah). A tendency to constant repetition of words or phrases in an aphasic disorder. [Gr., *kata*, over + *phasis*, speech.]

cataphora (kat-a'fo-rah). A kind of coma attended with short remissions or intervals of imperfect waking, sensation and speech. [Gr., *kataphora*, a bringing down.]

cataphoresis (kat'a-fa-o'e-sis). Syn.: *anodal diffusion*. The action by which a substance in solution is made to penetrate the tissues and organs with the aid of the galvanic current, the positive electrode being applied bathed in the solution. [Gr., *kata*, down + *phoresis*, a conveying.]

cataphoria (kat-af-o're-ah). Downward inclination of the visual axis. [Gr., *kata*, down + *pherein*, to bear.]

cataphoric (kat-a-for'ik). 1. Pertaining to cataphora. 2. Conducting from the anode to the cathode (said of a galvanic current when, if applied to a porous body, it causes a movement of the liquids in the body from the point of application of the anode to that of the cathode).

cataplasia (kat-ap-la'se-ah). Syn.: *kataplasia*. A form of reversionary metamorphosis or atrophy in which the cells or tissues revert to an embryonic condition. [Gr., *kata*, down + *plassein*, to form.]

cataplasma (kat-ah-plaz'ma). Pl. *cataplasmata*. A poultice preparation of semi-solid consistence, made of absorbent sub-

stances, intended to retain heat or moisture. *C. kaolini* is the only official poultice. [Gr., *kataplassein*, to spread over.]

cataract (kat'ar-act). An opacity of the crystalline lens, or its capsule, or both.

adherent c. A *c.* that has formed adhesions to surrounding parts.

after c. An opacity of the lens capsule existing or developing after removal of the lens.

anterior central (or polar) c. An opacity of the central point or region of the anterior capsule and of the anterior layers of the lens immediately beneath it. It may be congenital, but is frequently formed in early childhood as the result of a perforating ulcer of the cornea.

aridosiliculose c. An overmature *c.*, perfectly dry and with a dense, wrinkled, calcareous capsule.

axial c. See *nuclear c.*

barred c. Syn.: *trabecular fibrinous c.* A spurious *c.* in which the pupil is angular and narrowed and has behind it a capsulolenticular *c.* in front of which there is a stripe or bar of lymph, of varying consistence, which runs across the pupil.

black c. A nuclear *c.*, very dark in color from the imbibition of hematin, and not infrequently complicated with inflammatory lesions of the deeper tunics of the eye and a fluid condition of the vitreous.

capsular c. An opacity of the lenticular capsule, partial or complete, without opacity of the lens itself.

con·cussion c. A soft *c.* produced by concussion, as from an explosion.

cortical c. An opacity of the lens mainly or entirely centered in the cortex, the nucleus, the capsule, and sometimes the subcapsular layer of the lens remaining transparent until the end.

diabetic c. *C.* occurring in the course of diabetes. It is milky white in appearance, soft, and usually involves the entire lens except the capsule.

dotted c. See *punctated c.*

fibrinous c. A spurious form of *c.* consisting in an effusion of plastic lymph into the field of the pupil and on the capsule.

glycosuric c. See *diabetic c.*

gyp·seous c. An overmature, degenerated capsular or capsulolenticular *c.*; so called from its white appearance.

hard c. A *c.* involving the entire lens, varying in color from gray to yellowish gray, and of hard resistant consistence. It occurs usually in persons beyond middle life.

hemorrhagic c. A form of *c.* in which hemorrhage is apt to occur at the time of the operation for its extraction, with precipitate escape of the lens, with or without the vitreous.

hyper·mature c. See *overripe c.*

im·mature c. An unripe *c.* A term usually applied to the early stages of senile hard *c.*

incipient c. The first stages of any *c.*

inflammatory c. A secondary *c.* resulting from an intra-ocular inflammation of some kind.

interstitial c. See *lenticular c.*

juvenile c. The *c.* of young persons.

lamellar c., lam·inar c., laminated c. A *c.* partial in character, involving one or more zones or laminae of the lens between the nucleus and the capsule, the remainder of the lens being transparent. It is generally congen-

ital. **lenticular c.** A c. in which the opacity is confined to the lens, the capsule remaining transparent. **mature c.** A c. involving the entire lens, so far advanced and so homogeneous as to be ready for extraction. **membranous c.** See *after c.* **milky c.** A soft c. in which the opacity resembles milk. **mixed c.** A c. in which the opacity begins as lines, streaks, or triangular patches in the layers of the lens and then affects the nucleus, the whole lens becoming ultimately opaque. **morgagnian c.** An overmature c. in which the degenerative changes soften and liquefy the cortical portion. **myeline c.** A shrunken disk-shaped c., the chief constituent of which is a half transparent, yellowish or brownish, dry and friable substance. **naphthalinic c.** A c. due to the action of naphthalin. **nuclear c.** An opacity of the lens which begins in the nucleus. It is of moderate extent and is surrounded by more or less transparent lens substance. **osseous c.** An incorrect term to denote a very hard calcareous c. **overripe c.** A c. in which degenerative changes have occurred. **partial c.** An incomplete, immature c.; an opacity which does not involve the entire lens. **perinuclear c.** See *zonular c.* **pigmented c., pigmentous c.** A false c., usually produced by a violent concussion or blow on the eye, which has detached the pigment from the posterior surface of the iris, whence results a sort of arborescent appearance. **polar c.** See *anterior polar c.* and *posterior polar c.* **posterior polar c.** An opacity of the lens in the form either of centripetal stripes or of circumscribed spots or patches beginning at the posterior pole just beneath the capsule. **primary c., primitive c.** A c. developed without any known connection with other disease of the eye. **progressive c.** Any opacity of the lens which shows a tendency to increase. **pseudomembranous c.** A condition in which there are white spots on the lens due to iritis. **punctated c.** A cortical c. in which there is a large number of very small dots or very small streaks. **pyramidal c.** A form of c. resulting from central perforating ulceration of the cornea in early life. See *capsular c.* **regressive c.** A c. that tends to disappear; usually appearing in young persons as a symptom of interference with the nutrition of the lens. **ripe c.** See *mature c.* **secondary c.** A c. which is the result of local disease of the eye, such as iridocyclitis, glaucoma, etc. **senile c.** The hard mature ripe c. of advancing years. **stellate c.** An immature cataract in which the opacity has a starlike or radiate character. **striated c.** A cortical c. in which there are many fine streaks or stripes. **trabecular fibrinous c.** See *barred c.* **traumatic c.** An opacity of the lens resulting from injury to the eye. **tremulous c.** A c. complicated with laceration of the zonule of Zinn, so that movements of the eyeball cause trembling of the iris

and of the c. **unripe c.** An immature c.; one not yet fit for operation. **zonular c.** Syn.: *lamellar c.* A peculiar form of c., in which the superficial laminae and the nucleus of the lens are transparent, a layer or shell of opacity being present between them. [Gr., *katarraktes*, down-rushing.]

cataria (kat-a're-ah). Catnip or catmint. The dried flowering tops of *Nepeta c.*; employed as a tea, as an antispasmodic.

catarrh (kat-ahr'). A simple inflammation of any mucous membrane, attended by a discharge of mucus or mucopus. As commonly used, the term, without qualification, is understood to mean a c. of the nose, or of the nose and pharynx, especially one of a chronic character. **atrophic nasal c.** A chronic nasal c. in which, from loss of the glands or interference with their function by pressure of the enlarged stroma, dryness and atrophy of the membrane are caused. **autumnal c.** Of Wyman, the hay-fever occurring in early autumn. **Bostock's c.** See *hay-fever*, under *fever*. **bronchial c.** A "cold in the chest"; an edematous and infiltrated condition of the mucous membrane of more or fewer of the bronchial tubes, with increased mucous secretion which subsequently becomes more or less purulent. **gastric c.** Catarrhal inflammation of the stomach. **hemorrhagic c.** C. with exudation of blood along with the other secretions; seen in smallpox, erysipelas, and pyemia. **hyperplastic nasopharyngeal c., hypertrophic nasal c.** A chronic c. accompanied by hypertrophy of the mucous membrane involved and of the glands at the vault of the pharynx. **intestinal c.** See *diarrhea*. **Laennec's suffocative c.** See *capillary bronchitis*, under *bronchitis*. **membranous nasal c.** A form of nasal c. in which a thin grayish-white false membrane forms, consisting of exudation cells imbedded in an unorganized matrix. The false membrane forms again quickly, if removed mechanically. **mycotic c.** C. due to invasion by a fungus. **purulent c.** A c. in which the secretion is purulent or semipurulent. **rose c.** See *hay-fever*, under *fever*. **Russian c.** See *influenza*. **serous c.** A c. in which the secretion consists mainly of an exudation from the blood vessels of a colorless, or, in some cases, a blood-stained serous fluid. **suffocative c.** A severe laryngitis or bronchitis producing symptoms of suffocation. See *capillary bronchitis*, under *bronchitis*. **summer c.** See *hay-fever*, under *fever*. **uterine c.** Endometritis with a uterine leukorrhea. **vesical c.** Cystitis with a discharge of mucus. [Gr., *kata*, down + *rein*, to flow.]

catarrhal. Of the nature of or pertaining to catarrh.

catato'nia, catat'ony. One of Kraepelin's clinical sub-groups of dementia precox when motor symptoms, stereotypies, violence, are prominent. [Gr., *kata*, intense + *tonos*, tension.]

catechin (kat'e-kin). An amorphous yellow powder, $C_{21}H_{20}O_9 + 5H_2O$, derived from the different kinds of catechu, kino, mahogany wood, etc.

catechol (kat'e-koh). Syn.: *benzocatechin*, *pyrocatechol*, *pyrocatechin*. 1. 2, dihydroxybenzene, $(HO)_2C_6H_4$.

catechu (kat'e-ku). An extract obtained from the leaves and young shoots of *Ouroouparia gambire*. C. is used as an astringent in diarrhea. c. **tannic acid**. A reddish, gummy substance contained in c. and readily forming an acid, astringent solution in water. It is said to be the anhydrid of catechuic acid and to have a formula, $C_{38}H_{34}O_{15}$. **pulvis c. compositus**. Compound powder of c., consisting of c., kino, rhatany root, cinnamon bark, and nutmeg. [Br. Ph.] **tinctura catechu**. A 20 per cent. tincture of c. with cinnamon. See *tinctura gambir composita*, under *tinctura*. [Br. Ph.] **trochiscus c.** Troches, each containing 1 grain of c. [Br. Ph.] [Hind., from *kate*, the tree which furnishes c.]

catectrotonus (kat'el-ek-trot'o-nus). The state of increased conductivity and irritability produced at the cathode when a constant galvanic current is passed through a nerve. [Gr., *kata*, down + *elektron*, amber, + *ionos*, tension.]

catgut (kat'gut). Sheep's intestine, cleansed, made aseptic, and prepared for ligature or for suture material in surgery by twisting into cords.

catharsis (kath-ar'sis). 1. Purging as by the bowels. 2. The discharging through psycho-analysis of the original affect-memory which causes neurotic symptoms. [Gr., *katharein*, to purge.]

cathartin. 1. A nauseous substance obtained from senna by Lassaigne and Feneulle, supposed to be the purgative principle of senna, but now known to be a mixture without marked purgative properties. 2. Of Winckler, a principle contained in the ripe fruit of *Rhamnus cathartica*.

catheter (kath'et-er). A tube designed for insertion into a canal, especially through the urethra into the urinary bladder; of the French, a lithotomy staff. **Bozeman's c.** See under *Bozeman*. **bulb-ended c.** A very flexible urethral c. having a long tapering extremity ending in a bulbous point. **double c.**, **double-channeled c.**, **double-current c.** A catheter divided into two channels by a longitudinal partition, one for injecting liquid and the other for its escape. For obstetrical and gynecological purposes, such c's have been made in several pieces, so that they may be taken apart and thoroughly cleansed. **elbowed c.** A urethral c. having a soft flexible stem, but stiffer toward the point, where it makes a sharp turn, forming a short beak; used for passing obstructions on the floor of the urethra. **eustachian c.** A tube of metal or hard rubber, 6 to 7 in. long and from 1 to 3.5 mm. in diameter, slightly curved at one end; the curved part (beak) is from 2 to 2.5 cm. long. The other end is funnel-shaped to receive

the nozzle of an inflating bag. It is passed into the eustachian tube through the nose, or occasionally through the mouth. **female c.** A short c. with the beak only slightly curved, for passage into the bladder of the female. **flexible c.** A c. made of some flexible material, such as soft rubber, or silk or other woven fabric varnished with a mixture of linseed oil and litharge. **olivary c.** A c. with tapering olive-shaped point. **renal c.** A long flexible, gum-elastic c. for introduction into the pelvis of the kidney from the bladder, through the ureter. **self-retaining c.** A urethral c., which from some peculiarity of its curve or by reason of being furnished with elastic winglike processes, will remain in the bladder without the use of any supplementary appliance. **silver c.** A c. made out of silver. **soft rubber c.** A flexible c. made out of soft red rubber. **ureteral c.** A catheter for use in catheterizing the ureter. It is made either of metal or woven linen coated with varnish, has a slightly bulbous end and an opening about one inch from its tip. The metal catheter has a slight curve in the distal two inches. **velvet-eye c.** A soft rubber c., in which the edges of the fenestra are made smooth by being molded before vulcanization, instead of being cut with a punch afterwards. [Gr., *katheter*, from *kathēnai*, to let down into.]

catheterism, catheteriza'tion. The introduction of a catheter. [Gr., *katheterismos*, a putting in of the catheter.]

cathodal (kath'o-dal). Of, pertaining to, or situated at the cathode.

cathode (kath'od). The negative pole or electrode of a galvanic battery.

cation (kat'e-on). In electrolysis, an electropositive element or radicle, one that tends to accumulate at the negative pole. [Gr., *kata*, down + *ienai*, to go.]

cat'lin, cat'ling. A long, narrow, double-edged, pointed knife, used to divide the tissues between the bones in amputations of the forearm or the leg.

catmint. See *cataria*.

catnep, catnip. See *cataria*.

catophoria (kat-of-o're-ah). Downward inclination of the eyeball. [Gr., *kata*, downward + *phorein*, to carry.]

catoptric (kat-op'tric). Pertaining to reflected light or to catoptrics. [Gr., *katoptrikos*.]

cat'tle plague. See *rinderpest*.

cauda (kaw'dah). 1. A tail or a taillike appendage; of the older writers, the penis, the clitoris, or the coccyx. c. **cerebelli**. See *vermiform processes*, under *process*. c. **coccygea**. See *coccyx*. c. **cornu posterioris**. A solid appendage to the posterior horn of the lateral ventricle of the brain. c. **corporis striati**. Syn.: *c. caudati*, *c. striati*, *surcingle*. The pointed posterior extremity of the corpus striatum. c. **epididymidis**. Syn.: *globus minor*. The lower extremity of the epididymis. c. **equina**. 1. The inferior segment of the spinal cord below the level of the second lumbar vertebra, together with the numer-

ous large (lumbar and sacral) nerves arising from the lumbar enlargement and continuing downward in a parallel direction until they diverge through the intervertebral foramina. They give the termination of the cord the appearance of a horse's tail, whence the name. 2. The genus *Equisetum*. **c. helicis**. A small process of the cartilage of the ear at the junction of the helix and anthelix. **c. lienis**. The lower end of the spleen. **c. pancreatis**. The left extremity of the pancreas, which tapers to a small size. **c. superciliaris**. The external portion of the eyebrow. [B. N. A., *cauda*.] [Lat., *cauda*, tail.]

caudad. Same as *caudal*.

caudal (kaw'dal). Pertaining to, resembling, or situated near the tail. [B. N. A., *caudalis*.]

caudate (kaw'dāt). Shaped like a tail, or having a tail or taillike appendage.

caudex (kaw'decks). A stalk or trunk.

c. cerebri. That part of the encephalon that is situated between the pons Varolii and the optic thalami, consisting of the crura cerebri and the tegmentum. **c. dorsalis**. 1. The spinal cord. 2. The medulla oblongata. **c. encephali**. The cerebral peduncle. [Lat., *caudex*, stem.]

caudle (kaw'dl). A warm drink, containing wine, eggs, sugar, and spices. [Old Fr., *caudel*.]

caul (kawl). 1. A piece of the amnion that sometimes covers the child's head at birth. 2. The great omentum. [Old Fr., *cale*, a kind of small cap.]

cauliflower growth (kaw'l'e-flow-er). A form of epithelioma of the cervix uteri or of veruca acuminata that grows like a cauliflower. [Old Fr., *col*, cabbage + flower.]

caulophyllin (kaw-lo-fil'lin). A resinoid obtained from caulophyllum.

Caulophyllum (kaw-fo-fil'lum). 1. A genus of North American berberidaceous plants. 2. Of the U. S. Ph., the rhizome and rootlets of *C. thalictroides*. **C. thalictroides**. Syn.: *Leontice thalictroides*. Blue cohosh, blueberry root, pappoose root, squaw root. The only species; a perennial herb growing throughout the United States. The rhizome with its matted rootlets contains saponin or a similar principle and two resins. It has been considered emmenagogic, ecbolic, and diaphoretic. [Gr., *kaulos*, a stem + *phylon*, a leaf.]

cau'sal. Pertaining to or founded on the cause of a disease.

causalgia (kaw-sal'ge-ah). Neuralgia with a sense of severe burning. [Gr., *kauasis*, burning heat + *algos*, pain.]

causa'tion. The process by which a cause produces an effect. See *etiology*. [Lat., *causatio*.]

cause (kaws). Any act or state of things that produces a certain effect. **accessory c.** A c. that contributes to the production of an effect mainly due to another c. **accidental c.** See *determining c.* **antecedent c.** A remote or predisposing c. **common c.** 1. A c. that most usually gives rise to the result under consid-

eration. 2. A c. that produces two or more effects, any one of which may erroneously be attributed to one of the others. **determining c.** A c. that gives efficiency to other c's, precipitating their action. **efficient c.** A c. that gives rise to the effect alone, independently of the action of other c's. **essential c.** See *efficient c.* **exciting c.** See *proximate c.* **exopathic c.**, **external c.** A c. that operates from without the organism. **hidden c.** A c. that is inappreciable. **immediate c.** See *proximate c.* **internal c.** A c. that exists within the organism, as in self-infection. **mechanical c.** A c. that operates mechanically. **negative c.** A c. consisting in the absence of some condition necessary to the prevention of the effect. **physical c.** A c. acting in conformity to physical laws. **physiological c.** A c. that acts only with the coöperation of some physiological act or process. **predisponent c.**, **predisposing c.** A c. that acts upon the organism in such a manner as to make it more readily susceptible to the action of an exciting c. **proximate c.** That one of two or more c's that comes into play last and produces its effect with comparative rapidity. **remote c.**, **secondary c.** See *ultimate c.* **specific c.** A c. of a specific nature (e. g., a pathogenic micro-organism). **ultimate c.** A c. that eventually proves operative with the coöperation of a proximate c. [Lat., *causa*.]

caustic (kaws'tik). 1. Destructive of living tissue; corrosive. 2. An agent that destroys tissues by decomposing them. **c. potash**. Potassium hydroxid. **c. soda**. Sodium hydroxid. **Landolphi's c.** See under *Landolphi*. **Lugol's c.** See under *Lugol*. **lunar c.** Fused nitrate of silver, so-called because the symbol of *luna* (moon) was given by the alchemists to silver. **mercurial c.** A preparation made by mixing mercury and nitric acid. **milder common c.** See *potassa cum calce*. **mitigated c.** See *argenti nitras mitigatus*. **Récamier's c.** See under *Récamier*. **Vienna c.** Potassa with lime. [Gr., *kaustikos*, capable of burning.]

cauteriza'tion. The act of cauterizing, of destroying living tissue by means of heat or some other caustic. [Gr., *kauasis*, burning.]

cautery (kaw'ter-e). Any cauterizing agent, particularly the actual cautery. **actual c.** A heated iron or other apparatus for cauterization by means of actual heat, as opposed to the potential c. **button c.** A c. iron with a disk-shaped end. **electric c.**, **galvanic c.**, **galvanoc.** A c. apparatus in which a loop of wire or an instrument fashioned somewhat like a knife, made of platinum (selected on account of its being a comparatively poor conductor of electricity), is interposed in a galvanic circuit and heated. **Paque-lin's c.** The so-called thermoc.; an apparatus founded on the property possessed by platinum, when heated red hot, of remaining incandescent as long as the vapor of a hydrocarbon is projected upon it.

A hollow piece of platinum, varying in shape according to the purpose in view, is attached to a tube connected with a reservoir of benzine, the vapor of which is pumped into the hollow of the piece of platinum (previously heated in the flame of a spirit-lamp) by means of a hand bulb.

potential c. A general term for all other cauterizing agents than actual heat.

solar c. A lens ("burning glass") used for concentrating the rays of the sun upon a part so as to cauterize it.

thermoc. Properly, any form of actual c.; as commonly used, Paquelin's c. (*q. v.*)

virtual c. See *potential c.* [Gr., *kauter*, a burner. *kauterion*, a branding iron.]

cava (kah'vah). Any cavity or hollow on the exterior of the body (e. g., the orbit, the vulva, the hollow of the hand, etc.). See *cavity* and *inferior* and *superior vena c.*, under *vena*. [Lat., fem. of *cavus*, hollow.]

cavernitis. Inflammation of the corpora cavernosa or of all three of the erectile bodies of the penis.

cavernoma (kav-er-no'mah). Pl. *cavernomata*. See *cavernous angioma*, under *angioma*. [Lat., *caverna*, cavern.]

cavernous. Of the nature of or pertaining to a cavity; containing cavities, spongy; giving out a hollow sound. **c. resonance.** Amphoric resonance. **c. respiration.** A blowing sound heard in both inspiration and expiration on auscultation over a cavity in the lung. **c. voice sound.** The hollow note heard on a lung cavity when the patient speaks.

Cavité fever. A disease endemic in the Philippines, characterized by a sudden onset, high temperature, severe muscular pain, and extreme pain and tenderness of the eyeballs.

cavity (kav'it-e). A hollow space or cavity.

abdominal c. The cavity of the abdomen. [B. N. A., *cavum abdominis*.]

air c. See *air cell*, under *cell*.

ancyroid c. The posterior cornu of the lateral ventricle of the brain.

arachnoid c. See *subdural space*, under *space*.

articular c. A hollow on a bone for receiving the articular head or tuberosity of another bone.

body c. See *celoma* (3d def.); also *intermesoblastic spaces*, under *space*.

buccal c. That portion of the cavity of the mouth which is bounded by the cheeks.

cartilage cavities. The cavities (lacunae) in the matrix of cartilage, containing its cells.

cavities of reserve. The follicles beneath the deciduous teeth, from which the permanent teeth are developed.

c. of the great omentum. The lower and larger of the two portions into which the bursa omentalis is divided by the gastropancreatic ligament.

c. of the lesser omentum. The upper and smaller of the two portions into which the bursa omentalis is divided by the gastropancreatic ligament.

c. of von Baer. See *segmentation c.*

cerebral cavities. The ventricles of the brain.

cleavage c. See *blastocoele*.

closed cavities. The serous sacs.

cotyloid c. Any cup-shaped articular c., especially

the acetabulum.

cranial c. The c. of the skull.

craniovertebral c. In the embryo, the upper of the two main tubular cavities, below the notochord, enclosing the great nervous centers.

decidual c. The space between the decidua vera and the decidua reflexa before they have coalesced.

dental c. 1. See *pulp c. 2.* An excavation in a tooth resulting from caries.

glenoid c. A shallow articular cavity in a bone, particularly in the head of the scapula. [B. N. A., *cavitas glenoidalis*.]

greater sigmoid c. A large articular c. in the superior extremity of the ulna. [B. N. A., *incisura semilunaris*.]

guttural c. The c. of the pharynx.

head intestinal c. The anterior blind extremity of the alimentary canal in the embryo.

lesser sigmoid c. A narrow oblong articular depression on the outer side of the base of the coronoid process of the ulna, which receives the cylindrical part of the head of the radius. [B. N. A., *incisura radialis*.]

marrow c. See *medullary c.*

mastoid c. The cavity of the horizontal portion of the mastoid process of the temporal bone. A large empty space, sometimes containing connective tissue membranes and bands, communicating with the tympanum by an opening in its posterior wall.

medullary c. A c. or space in a bone containing marrow. The c. may be large, as in the shaft of long bones, or many small cavities may exist in the framework of cancellated bone. [B. N. A., *cavum medullare*.]

nasal cavities. The cavities of the nose; one on each side of the median vertical septum, opening in front by the anterior nasal apertures, and behind by the posterior nares. [B. N. A., *cavum nasi*.]

oral c. The cavity of the mouth. [B. N. A., *cavum oris*.]

pelvic c. The part of the general abdominal c. which is below the iliopectineal line and the promontory of the sacrum. [B. N. A., *cavum pelvis*.]

pericardial c. The space between the heart and the pericardium.

peritoneal c. The closed space included between the visceral and parietal layers of the peritoneum.

pleural c. The closed space between the visceral and parietal layers of the pleura.

pleuroperitoneal c. 1. See *intermesoblastic spaces*, under *space*. **2.** In comparative anatomy, the common c. containing both the abdominal and thoracic viscera.

primary marrow cavities. See *primary areolae*, under *areola*.

pulmonary c. 1. A pathological c. in the lung. **2.** See *cavum pulmonale*.

pulp c. The cavity within a tooth, containing the dental pulp.

respiratory cavities. The round passages terminating the smallest bronchi which divide to form the infundibula.

Rosenmüller's c. A depression in the posterolateral wall of the pharynx, between the posterior lip of the eustachian tube and the posterior pharyngeal wall.

segmentation c. A shallow c. that forms between the white vitellus and the blastoderm.

sigmoid cavities of the ulna. See *greater sigmoid c.* and

lesser sigmoid c. splanchnic cavities. The cavities containing the important organs of the body; the cranial, the thoracic, and the abdominal cavities. **synovial c.** The space within a joint, lined by duplications of synovial membrane and containing synovia. **thoracic c.** The cavity of the thorax. [B. N. A., *cavum thoracis*]. **tympanic c.** The cavity of the tympanum. [B. N. A., *cavum tympani*]. **uterine c.** The cavity of the body of the uterus. **visceral c.** The cavity containing the viscera. **yolk c.** The open space within the yolk. [Lat., *cavitas*, from *cavus*, hollow.]

ca'vum. See *cavity*. **c. abdominis.** The abdominal cavity. **c. cervicis uteri.** Syn.: *c. colli uteri*. The cavity of the neck of the uterus; the cervical canal. **c. Douglasi laterale.** Syn.: *fossa pararectalis*. A space at each side of the cavity of the true pelvis behind the broad ligament of the uterus. **c. oris externum.** Syn.: *vestibulum oris*. That portion of the oral cavity situated between the lips and the maxillae. **c. pelvis.** See *pelvic cavity*, under *cavity*. **c. pericardii.** See *pericardial cavity*, under *cavity*. **c. perilymphaticum.** The space between the membranous and osseous labyrinths. **c. peritonei.** See *peritoneal cavity*, under *cavity*. **c. pharyngis.** The pharyngeal cavity. **c. pulmonale, c. pulmonis.** The common cavity of the lower air passages. **c. Retzii.** See *prevesical space*, under *space*. **C. thoracis.** See *thoracic cavity*, under *cavity*. [Lat., *cavus*, hollow.]

ca'vus. A condition of exaggerated height of the arch of the foot, so that the weight is borne only on the heel and the ball of the foot. [Lat., abbrev. for *pēs cavus*, hollow foot.]

c. c., Cc. An abbreviation for cubic centimeter.

CCC. See *CaCC*. Abbreviation of cathodal closure contraction.

c. cm., Ccm. An abbreviation for cubic centimeter. C. c. is more frequently used in the U. S. Ph.

Cd. Chemical symbol for the element *cadmium*.

Ce. Chemical symbol for the element, *cerium*.

ceanothin (se-an'o-thin). An alkaloid found in *Ceanothus americanus*.

cearin (se'ar-in). An ointment base consisting of 1 part carnauba wax and 3 parts of paraffin, capable of taking up a large proportion of water.

cebocephalus (se-bo-sef'al-us). A monkey-headed monster; one with the eyes very close together, the nose being almost wanting and the anterior lobes of the brain sometimes malformed. [Gr., *kebos*, a monkey, + *kephale*, the head.]

cecal (se'kal). 1. Blind, terminating in a closed extremity. 2. Pertaining to the cecum.

cecum (se'kum). The blind gut, the *caput coli*; the pouchlike initial portion of the large intestine, so called because it is prolonged downward in the form of a cul-

de-sac. It is situated in the right iliac fossa, and merges insensibly into the ascending colon. [Lat., *caecus*, blind.]

cedar (see'dar). A general term applied to many coniferous trees of the genera *Cedrus*, *Juniperus*, etc. **c. oil.** Cedarwood oil, a volatile oil distilled from the wood of Spanish cedar. [Lat., *cedrus*, cedar.]

cedr-. A prefix representing Lat., *cedrus*, Gr., *kedros*, cedar; used in chemical terms to signify of or pertaining to cedar.

Ced'rela. A genus of tropical cedrelaceous trees. **C. febrifuga.** A tree growing throughout the East Indies, where its bark has been used as a substitute for cinchona. [Gr., *kedros*, the cedar tree.]

ced'ron seeds. See *Simaba cedron*.

celation (se-la'shun). In forensic medicine, the concealment of pregnancy, parturition, or a disease. [Lat., *celare*, to conceal.]

-cele (sēl). A suffix denoting a tumor or swelling. [Gr., *kele*, hernia, tumor.]

celery. See *Apium*. [Gr., *selinon*, parsley.]

celiac, coeliac (sel'e-ak). Relating to the abdominal cavity. [Gr., *koilia*, belly.]

celiadelpus (sel-e-ad-el'fus). A double monster, consisting of two bodies united at the abdomen. [Gr., *koilia*, the belly + *adelphos*, brother.]

celio-. Combining form of Gr., *koilia*, belly.

cell. 1. Originally one of the compartments in a honeycomb; hence any chamber or enclosed hollow space; an areola, or loculus; in this sense comprising the following subordinate meanings: (A), any small completely closed space, such as the small cavities in the mastoid and other bones, the alveoli of the lungs, and the cleftlike spaces or areolae of connective tissue. (B), a cavity opening upon a free surface, such as the crypts in the stomach of the camel and other ruminants, the cavities in the nests of wasps and bees, the depression or loculus in the anther, which contains the pollen, and, by a slight extension of meaning, the spaces or areolae upon the wings of insects, circumscribed by the nervures. (C), in microscopical technology, a chamber, open or closed, used for the examination and preservation of objects. (D), one of the similar elements or open chambers which constitute a galvanic battery or a battery of Leyden jars. 2. The elementary structural unit of living tissue, consisting of cytoplasm and nucleus. **acid c.** A c. secreting an acid. **adelomorphous c.** Syn.: *central c.*, *chief c.*, *peptic c.*, *principal c.* One of the epithelial cells forming the greater part of the lining membrane of the stomach, especially those of the pyloric region. They are supposed to secrete the pepsinogen. See *delomorphous c.* **adipose c.** See *fat c.* **air c.** Syn.: *air cavity* (or *sac*, or *receptacle*, or *space*), *pneumatic c.* 1. A pulmonary air vesicle or alveolus; one of the ultimate sacculles into which the lungs are divided. 2. An empty space in the body, communicating directly or indirectly with the lungs

or air passages. In man the chief air c's are the mastoid and ethmoid c's and the frontal, maxillary, and sphenoidal sinuses. **akinetik c. division.** See *direct c. division*. **alveolar c.** One of the c's lining the acini of glands. **alveolar c's in sputum, how to recognize;** see in *appendix, page 902*. **ameboid blood c.** See *white blood corpuscle*, under *corpuscle*. **ameboid c.** A c. such as a leukocyte, having its power of changing its shape like an ameba. **amitotic c. division.** See *direct c. division*. **annular c.** A vegetable c. in which there are one or more annular thickenings of the c. wall upon its inner surface. These and other markings, such as scaliform and porous, belong rather to vessels than to single cells, vessels being made up of a number of c's which have lost their individual markings. **anterior ethmoid c's.** The air cells in the ethmoid bone, closed in by the lacrymal bone and the frontal process of the maxilla. **apolar c.** A nerve c., especially of the sympathetic system, described as possessing no nerve processes. **asexual reproductive c.** A c. which reproduces itself (i. e., forms new c's) without the stimulus of contact or conjugation with any other c.; e. g., a c. which produces new c's by fission or by spore formation. **basal c., basilar c.** 1. In the pl., *basal c's*, a term used to designate in a general sense the deepest layer of an epithelium. 2. A single modified spermatocyte at the base of a spermatogen. **beaker c.** See *goblet c.* **binary nerve c.** A pair of pear-shaped sympathetic nerve c's contained in a single sheath and provided each with a single nerve fiber attached to its pointed end. The two nerve fibers extending in opposite directions give to the two c's the appearance of a single bipolar c. **bipolar c.** A c. having two poles or processes; a term used mostly with reference to nerve c's. **blood c.** See *blood corpuscle*. **bone c.** Syn.: *osteal c.* One of the branched nucleated c's situated in the lacunae of bone. **border c.** See *marginal c.* **brush c.** C's of the neuroglia which have processes. **bud c.** A c. which is developed from a parent c. by budding. **bulb c.** One of the flattened, originally nucleated c's forming the inner bulb or cone of a compound terminal corpuscle. These c's belong to the thickened neurilemma of the nerves which end in the terminal corpuscle. **cannulated c.** A c. perforated by a duct. **cardiac muscular fiber c.** One of the quadrangular or fusiform striated c's joined end to end to form the cardiac muscular fibers. **carrier c.** A name sometimes given to a leukocyte or wandering c. on account of its action in taking up and removing foreign or pathological material from the tissues. See *phagocyte*. **cartilage c.** One of the nucleated c's found in cartilage. **c. body.** That part of a c. outside of the nucleus. It may or may not be inclosed by a c. membrane, and may contain various non-

protoplasmic substances, such as fat and glycogen. **c. complex.** An aggregation of c's connected together by community of origin or of function or structurally united so as to constitute a distinct tissue or a multicellular organism. **c. contents.** The entire contents of a c., including c. body and nucleus, and, if no c. wall is present, comprising the entire c. **c. derivative.** A substance or a tissue derived from c's or constituted of transformed c's; also a substance, such as starch, etc., secreted within the substance of a c. **c. development.** See *c. genesis*. **c. division.** The formation of two or more c's (daughter c's) by the separation of a mother c. into two or more nearly equal parts. There are two principal forms of c. division: 1, *direct c. division*, in which the c. divides without any apparent change of structure, and 2, *indirect c. division*, in which the c., especially the nucleus, appears to undergo marked structural changes. (See *karyokinesis*). **c. doctrine.** See *c. theory*. **c. element.** The scanty hyaline substance between epithelial or endothelial cells. **c. envelope.** See *c. membrane*. **c. fiber.** See *fiber c.* **c. fission.** See *c. division*. **c. fluid.** The fluid part of a c. as distinguished from its solid or semi-solid part. It is supposed to fill the vacuoles in c's. **c. fusion.** The union of two or more c's in such a manner that the adjacent c. walls are absorbed and the separate c. bodies united into one. **c. genesis.** The development or formation of c's. Two forms of c. genesis are distinguished: 1, *asexual c. development*, comprising all cases in which a parent c. without previous conjugation with another c. develops into new c's; 2, *c. union, c. conjugation, sexual c. development*, in which two c's, which are sometimes similar but are usually dissimilar in size, shape, or both, coalesce and form a single c. which then develops into new c's. C. genesis of either form may take place in two principal ways: 1, by *c. division* and, 2, by *internal c. formation*. The former includes, as a special variety, *c. budding or gemmation*, which comprises many of the processes of spore formation. *Internal c. formation (q. v.)*, which is a still more specialized variety of *c. division*, comprises free c. formation and rejuvenescence. **c. histology.** The science which treats of the minute structure of c's in contradistinction to histology proper, which deals rather with the structure of the tissues. **c. layer.** A layer or stratum of c's, such as a simple epithelium or part of a stratified epithelium. **c. life.** See under *life*. **c. membrane.** 1. An envelope or capsule incasing a c. It is produced by a condensation or chemical change in the substance of the c. at its periphery. **c. multiplication.** An increase in the number of c's by c. division. See also *c. genesis*. **c. nest.** A collection of c's, more or less separated from surrounding c's by intervening tissue. **c. network.** Syn.: *c. reticulation*. A col-

lection of ramified or stellate c's forming a network by the union of their branches. This arrangement is especially well seen in branched pigment c's and also in adenoid tissue. **c. nucleus.** The n. of a cell. See n. (1st def.). **c's of Corti.** See *external hair c's of the organ of Corti*. **c's of Purkinje.** Large fusiform or pear-shaped nerve c's forming a layer, one c. deep, between the ectal (outer) and the nuclear (or granular) layer of the cerebellar cortex. Each c. sends a slender axis cylinder process into the medullary layer, and a large process, which soon subdivides like the antlers of a deer, toward the surface of the cerebellum. **c. of Schultz.** See *olfactory c. C. plate*. 1. Any c. of a flattened or platelike form. 2. The platelike mass of chromatin in the equator of a dividing cell, indicating the plane of division. **c. process.** A conical or threadlike extension of the substance of c's. **c. proliferation.** See *c. division* and *c. genesis*. **c. protoplasm.** The substance of the c. outside of the nucleus, the c. body; often designated simply as the protoplasm in contradistinction to the nucleus. **c. receptor.** See *receptor*. **c. rejuvenescence.** That form of c. genesis in which the entire mass of protoplasm of a c. contracts so as to become separated from the c. wall, is then extruded through an opening in the latter, and, after a longer or shorter period of existence as a motile naked c., secretes a new c. wall. The new c. so formed grows in an axis perpendicular to the growth of the old c. and forms new c's by division. **c. reticulations.** See *c. network*. **c. space.** 1. A white space left in tissues stained by silver nitrate, such a space corresponding to a c. and its processes, which remain unstained by the silver. 2. A space in the ground substance (matrix) of various tissues occupied by a c. **c. stroma.** The clear transparent matrix of a c., in which are imbedded the granules, etc. **c. substance.** The substance of the c. body in contradistinction to that of the nucleus. **c. theory.** Syn.: *c. doctrine*. The theory which regards the c. as the essential anatomical and physiological element of animal and vegetable structures. **c. union.** The fusion of two c's to form a single new c. This is the essential process in the sexual reproduction of plant and animal c's. The two uniting c's may be of about the same size and appearance (in which case the process is usually called *c. conjugation*), or may be different in size and other characteristics. In the latter case, the smaller c. is usually the more actively motile, and seems to act by stimulating the larger and more stable c. to development, and is hence regarded as homologous with the similarly acting spermatozoid of the higher animals, and is called the *male reproductive c.* **central c's.** Of the stomach cells. See *adelmorphous c.* **centro-acinar c., centro-acinous c.** One of the c's found in the center of the acini of the

pancreas and other racemose glands. **cerebral c.** A nerve c. of the cerebrum. **cerebrospinal nerve c.** A c. belonging to the central nervous system, either brain or spinal cord. **chalice c.** See *goblet c.* **chief c.** See *adelmorphous c.* **chlorid of silver c.** The elements of a chlorid of silver battery. **ciliary c., ciliated c., ciliated epithelial c.** A cell having one or more cilia upon its free surface. **circumvascular c's.** Syn.: *perivascular c's*. The plasma of c's or leukocytes, found in the tissue near blood-vessels. **colossal c.** See *giant c.* **colostrum c's.** See *colostrum corpuscles*, under *corpuscle*. **columnar c., columnar epithelial c.** Syn.: *cylindrical c., cylinder c., columnar corpuscle*. An elongated, tapering c., a number of which, side by side, form columnar epithelium. **connective (tissue) c.** A connective tissue corpuscle; a term used to comprise with the ordinary connective tissue corpuscle the plasmatic c's and the fat c's. **contractile c.** A general term to designate the c's forming a contractile tissue, such as white blood corpuscles and other ameboid c's, ciliated epithelium, and muscular tissue. **corneous c.** See *horny c.* **cortical c.** A c. belonging to the cortex of an organ. **Corti's c's.** See *external hair c's of the organ of Corti*. **cuboidal c.** A c. of cuboidal shape; i. e., a parallelepipedon with rectangular section, such as forms the adelmorphous c's of the stomach. **cup c.** See *goblet c.* **cylinder c., cylindrical c., cylindrical epithelial c.** An elongated c. with circular section, and its ends at right angles to its axis. Such are many plant c's and the columnar c's (*q. v.*). **cystogenous c.** A c. the secretion of which forms a cyst; applied to c's which secrete the substance in which a larva (e. g., of a *Distoma*) encysts itself. **daughter c.** One of the c's formed by the division of a single c. (called the mother c.). The term is especially applied to one of a number of c's which are still contained within a common envelope or within the substance of a mother c. as in internal c. formation. The several daughter c's formed simultaneously from the same mother c. are called in relation to each other *sister c's*. **dead c.** A c. which no longer contains protoplasm, and hence performs none of the vital functions of growth, assimilation, and reproduction. Such c's serve a purely mechanical and protective office, like the cork c's of plants and the horn c's of the animal body. **decidua c's, decidial c's.** The proper c's of the uterine mucosa, enlarged and multiplied as the result of impregnation, so as to constitute the predominant element of the decidua. See also *giant multinuclear c's of the decidua*. **delomorphous c.** Syn.: *oxyntic c., overlying c., superadded c.* A name given by Rollet (1870) to the granular, deeply staining c's found in the glands in the cardiac region of the stomach; next the basement membrane.

Formerly these c's were called peptic c's, as they were supposed to secrete the pepsinogen, but now they are supposed to secrete acid, and are therefore often called acid c's. **dentinal c.**, **dentine c.** An odontoblast. **devouring c.** See *phagocyte*. **digestive c.** A c. producing a digestive ferment. **direct c.** **division.** The separation of a c. into two or more nearly equal parts or daughter c's, without any apparent structural change in either c. body or nucleus. See *c. division* and *karyokinesis*. **ectodermal c.** A c. derived from the ectoderm of the embryo. **elementary c.** See *embryonic c.* **embryonal c.**, **embryonic c.** Syn.: *elementary c.*, *formative c.*, *primary c.*, *primitive c.*, *primordial c.* 1. One of the c's which arise from the division of the ovum; a term especially employed when the process of segmentation has advanced so far that the c's are very small. These c's are so called because they give rise to the various tissues and organs of the embryo. **embryoplastic c's.** Syn.: *embryoplastic bodies*, *fibroplastic bodies* (or *c's*). C's originally from the mesoblast which are at first similar to lymph corpuscles. They become fusiform or stellate, and in developing connective tissue form the so-called fixed connective tissue corpuscles. **enamel c.** Syn.: *enamel body*, *adamantoblast*. One of the columnar c's forming the layer of the enamel organ next the dentin papilla. **endogenous c.** **formation.** **endogenous c.** **multiplication.** See *internal c. formation*. **endothelial c.**, **endothelial c. plate.** **endothelioid c.** Syn.: *endothelium*, *endothelial element* (or *plate*), *pavement corpuscle*. 1. One of the c's which in a single layer line the lumen of the various parts of the vascular system and the membranes of the serous cavities generally such as the pleura and peritoneum. The typical form of c. is flat and plate-like, with an irregular, often sinuous outline. **entodermal c.** A c. derived from the entoderm of the embryo. **epidermal c.**, **epidermic c.**, **epidermis c.** Syn.: *epidermic scale*. One of the c's forming the epidermis. The c's next the true skin are rounded or approximately columnar, while those near the surface are flat and scalelike. **epithelial c.** Syn.: *epithelium c.*, *epithelium*, *epithelial corpuscle*. One of the c's forming an epithelium. They are of various shapes and form a covering, one or more c's deep, for free surfaces. See *epithelium*. **epithelioid c.** A flattened connective tissue corpuscle which with similar c's forms an epitheliallike (or endotheliallike) covering in many forms of membranous connective tissue. **ethmoidal c's.** **ethmoid c's.** Irregular-shaped cavities in the ethmoid bone; in the disarticulated bone, apparent, for the most part, as depressions, which are converted into c's by the adjacent bones. **excretory c.** A c. performing the function of excretion. See *gland c.* **external ciliated c's.** **external hair c's** of the organ of Corti. Syn.: *c's*

of Corti. C's external to the outer rods of Corti. **fat c.** Syn.: *adipose c.* (or *vesicle*), *fat corpuscle*, *fat vesicle*, *unicellular gland*. A c. situated in various parts of the body, especially in areolar tissue, which contains a greater or less amount of fat. Fat c's seem to be reservoirs for nutrient matter. They are formed by a deposit of fat in connective tissue corpuscles, in wandering c's, sometimes in pigment c's, and in the c's of almost any tissue, as a pathological condition. **female (reproductive) c.** The c. (ovum, oösphere) in plants or animals which, after fertilization by another c. (the male c.), develops into an embryo. **ferment c.** A c. which secretes a ferment, especially one of the digestive ferments. **fiber c.** Any c. which becomes elongated so as to form a fiber; e. g., the muscle fiber c's. **floor c.** One of those auditory c's in the organ of Corti which are found at the angle which the base of each rod makes with the membrana basilaris. **follicular c's.** 1. C's forming the membrana granulosa of a graafian follicle. 2. C's in the seminal tubules associated with the seminal c's and sometimes inclosing them, but which do not themselves develop into spermatozooids. They are supposed to be homologous with the follicular c's of the ovary. **formative c.** A c. which, by a greater or less metamorphosis, gives rise to a tissue at any time during the life of the individual. See *embryonic c.* **fundamental c.** A typical c. or one which has not undergone great change in character; in plants, a parenchyma c. (in its widest sense). **fusiform c.** See *spindle c.* **galvanic c.** The element of a galvanic battery. **gastric c.** A c. which has the power of assimilating food materials. **generative c.** See *germinal c.* **germ c.** 1. See *female c.* 2. The germinal vesicle of a non-fertilized ovum; an expression used by Carpenter and Thomson on the supposition that the germinal vesicle is the anatomical equivalent of a somatic c. **germinal c.** 1. A sexually reproductive or sexual c., a gonoblast; a c. which develops into an ovum (female c.) or into a spermatozoid (male c.). See *seminal c.* 2. One of the c's of a developing ovum; a term employed to indicate that from these c's all the tissues arise. 3. A fertilized ovum or one capable of developing parthenogenetically. **germinating c.** A c. which is developing into new c's by division or otherwise or which is forming new tissues or a new individual. **germinating endothelial c.** Syn.: *germinating endothelium*. One of the polyhedral or short columnar c's occurring especially in the pleura, the omentum, and the synovial membranes, where they are in a state of active division, producing lymphoid c's or lymph corpuscles which ultimately become white blood corpuscles. **giant c.** Syn.: *colossal c.*, *giant corpuscle*. A c. in any tissue or part which is considerably larger than the other tissue elements with which it is associated. It

is often multinucleated. This is a general and very indefinite term. **giant blood c.** Syn.: *macrocyte*. A blood corpuscle, very much larger than the normal size for the individual or animal. They are especially abundant in anemic and hydremic conditions. **giant marrow c.**, **giant medulla c.** Large cells with large lobulated nucleus (megalokaryocyte) found in the red marrow of bone. **giant multinuclear c's of the decidua.** Certain large multinucleated c's developed in the decidua of man, as well as in many of the lower animals, especially in the outer layer of the decidua serotina. **gland c.**, **glandular c.** A c. the function of which is to separate certain constituents from the blood and elaborate them, thereby producing special secretions. **gluten c.** A plant c. containing gluten. **glycogenous c.** A c. producing glycogen, like the c's of the vertebrate liver. **goblet c.** Syn.: *beaker c.*, *chalice c.*, *cup c.*, *unicellular gland*, *Leydig's c.* A goblet- or beaker-shaped epithelial cell containing mucus in its free end, and found in surfaces which secrete mucus, as the mucous membrane of the large intestine and the skin of some of the lower vertebrates. **Golgi's c's.** Association neurons, with a short axis cylinder, which subdivide into terminal ramifications without leaving the gray substance. **granular c.**, **granulated c.** Syn.: *granular corpuscles*, *plasma c's*. 1. A c. of varying shape, possessing many shining granules, the appearance being due (a) to vacuoles, (b) to particles of a fatty substance, or (c) to the nodal or crossing points of the fibrils of the intracellular or intranuclear network. 2. One of the c's forming the tunica granulosa of a graafian follicle. **granulation c.** The fibroblast or connective tissue cell, which forms the new tissue in the regeneration after inflammation. **gustatory c.** See *taste buds*, under *bud*. **hair c.** One of a number of epithelial or ganglionic auditory c's, which probably contain the terminal filaments of the cochlear nerve. Both the roof c's and the floor c's are hair c's. **hepatic c.** See *liver c.* **horn c.**, **horny c.** Syn.: *corneous c.* One of the c's of the free surface of the skin; or strictly of the stratum corneum of the epidermis. These c's contain keratin, and may be greatly modified or condensed, so as to form hairs, nails, hoofs, etc. **imbricated c's.** C's overlapping each other like the tiles of a roof. **indifferent c.** A c. without any characteristic structural features, especially a c. contained in a tissue but forming no essential part in the structure of the latter and not concerned in the special functions of the tissue; such as white blood corpuscles or wandering c's. **indirect c. division.** See *c. division* and *karyokinesis*. **internal c. formation.** The formation of new c's within the substance of the mother c. by the division of the protoplasm of the latter. **keratogenous c.** A c. contain-

ing keratin, e. g., a c. of the stratum corneum of the epidermis, or a c. of horn. **kidney c.** See *renal c.* **Kölliker's c's.** Grouped c's proceeding from the spermatocytes and destined to be transformed into spermatoblasts. **Leydig's c.** See *goblet c.* **liver c.** Syn.: *hepatic c.* One of the spheroidal or polyhedral c's, which form the proper granular substance of the liver and constitute the lobules of the latter. **locomotive c.** Any c. capable of independent movement; especially a c. bearing cilia which serve for locomotion. **lymph c.** See *lymph corpuscle*, under *corpuscle*. **lymphoid c.** A lymph corpuscle. **male c.**, **male reproductive c.** Syn.: *sperm c.* Any c., animal or vegetable, which, by conjugation with another c. (female c.), causes the latter to develop into a new c. or c's. The male c. is usually actively motile, being often ciliated or flagellate, and is usually much smaller than the female c. It includes the spermatozoid of animals and the spermatozoid and pollen grain of plants. **marginal c.** Syn.: *border c.*, *parietal c.* One of the small granular c's found next the basement membrane of mucous glands. **marrow c's.** The c's found in the marrow of bones. **mast c's.** C's found in the blood and in tissues. In the blood they are uninuclear or multinuclear and exhibit large basophilous granules. In the tissues they are numerous when the circulation and nutrition of the part are chronically disturbed. **mastoid c's.** Cellular spaces in the inside of the mastoid process, communicating with each other, through the mastoid antrum with the tympanic cavity, and through the latter and the eustachian tube with the nasopharynx, and lined with mucous membrane continuous with that of the respiratory tract. They are developed after puberty and their size and number vary in individuals. **middle ethmoid c's.** Bony cellular spaces on the upper surface of the ethmoid bone, closed in by the frontal bone. **motor c.**, **motor ganglion c.**, **motor nerve c.** A nerve cell, usually of large size, concerned with the control of muscular and secretory functions of organs. **mucous c.** A c. which contains or secretes mucus. **muscle c.** One of the cellular elements of muscular tissue characterized by possessing the power of contractility. Muscle c's are of three varieties: the skeletal or voluntary cell, which is striated longitudinally and transversely, and is multinuclear; the cardiac c., which is similarly striated, but is involuntary and mononuclear; the smooth or involuntary muscle cell. **muscular fiber c's.** The name given by Kölliker (1848) to the contractile c's of an elongated spindle shape, forming fasciculi or continuous membranes, and found in the alimentary canal, genito-urinary organs, blood vessels, and, in general, the organs of vegetative life. The contractile fiber c's contain one or more nuclei, are inclosed in a delicate sheath, and are connected one

to another by an intercellular cement similar to that uniting epithelial c's. Sometimes they are forked or very irregular in outline, and under some circumstances the c. body shows a faint longitudinal striation, and the c. membrane a transverse folding. In action they are slow and wholly involuntary. **nail c.** One of the horny, irregularly polygonal or flattened, mostly nucleated c's forming the nails (ungues); they are modified epidermal c's, and, while hard and flattened on the surface of the nail, are soft and rounded next the corium. **naked c.** A c. without a c. membrane, as the white blood corpuscles. **needle c's.** The acuminate c's of the deep layer of the decidua c's. **nerve c's.** Syn.: *ganglion body, ganglion corpuscle, nerve corpuscle.* A c. belonging to the nervous system. In shape nerve c's are globular, pyramidal, fusiform, or stellate, with one or more processes. One of these processes (sometimes more) is connected with a nerve fiber and is called the axis-cylinder process. The remaining, protoplasmic, processes either end blindly or form communications with similar processes from other c's. **neuroglia c.** Syn.: *spider c., neuroglia corpuscle.* One of the c's belonging to the neuroglia or supporting tissue of the central nervous system. **neuromuscular c.** The name given by Kleinburg (1872) to c's in the ectoderm and endoderm of *Hydra* and other ctenolates, which consist of a large celllike portion on the free surface of the body or the body cavity, and a fibrous, smooth, or striated contractile part in the body wall. The c. has a triple function: (a) that of an epithelial c.; (b) of a nerve c., in so far as it receives stimuli and transmits them to the muscular portion; and (c) of a muscle c. in so far as it responds to a stimulus by contracting along its long axis. **notochordal c's.** The c's forming the notochord in the embryo. **nuclear c. division.** See *karyokinesis.* **nucleated c.** A c. which contains one or more nuclei. **nutritive c's of the tubuli seminiferi.** A mass of c's in the tubuli seminiferi, internal to the proliferating c's, and probably derived from them. **odontoblastic c.** See *odontoblast.* **olfactory c.** Syn.: *olfactory epithelium, c. of Schultze.* One of sensory c's of the organ of smell. **osteal c.** See *bone c.* **overlying c.** See *delamorphous c.* **oxyntic c.** See *delamorphous c.* **parenchyma c's, parenchymatous c's.** The c's forming the parenchyma of an organ, especially of a ductless gland, as the spleen or liver. **parietal c's.** A term used to denote the c's of a gland next the basement membrane. **pavement c.** One of the flat c's which form pavement epithelium. **pepsin c., peptic c.** A c. of the gastric glands, which secretes pepsin. See *delamorphous c.* **periosteal c., periosteum c.** A c. of the periosteum. These c's are of two kinds—those of the ectal (outer) layer, consisting of fat c's and other c's common to con-

nective tissue, and those of the ental layer, or layer next the bone. The latter in adult bones are flattened, but in growing bone they are mostly rounded. **peritoneal c.** One of the endothelial c's forming the peritoneum. **perivascular c's.** See *circumvascular c's.* **pigmented c., pigmented c.** A c. in which the c. body (but not the nucleus) contains minute masses or crystals of pigment. Pigment c's may be in the form of an epithelium, as in the pigment layer of the retina. In man, pigment c's are found in the eye, ear, nose, spleen, skin, and several other situations. **plasma c.** See *granular c.* **pneumatic c.** See *air c.* **posterior ethmoid c's.** Spaces in the posterior part of the ethmoid bone, closed in by the palate bone. **prickle c.** An epidermic or epithelial c., which is connected with another similar c. by delicate threads of protoplasm (intercellular bridges) and which, when isolated, appear as if covered with spines. **primary c., primitive c., primordial c.** 1. An embryonic c. 2. Any simple or undifferentiated c. 3. A c. which is not formed by the coalescence of other c's. **principal c.** See *adelomorphous c.* **prismatic c.** A c. of prismatic form. **proliferating c.** A c. undergoing the process of division. Cf. *c. division.* **propagative c.** See *reproductive c.* **prop c's of Hensen.** Cylindrical epithelial c's beneath the outer hair c's of the organ of Corti, which, as they descend, become shorter and finally pass into cubical c's in the zona pectinata. **pseudostomatous c.** A c. in the subepithelial layer of a mucous or serous membrane which sends processes between the epithelial c's proper to the free surface. The exposed ends of these processes stain deeply with silver and form the so-called pseudostomata. **pulmonary c.** See *air c.* (1st def.). **Purkinje's c's.** See *c's of Purkinje.* **pus c.** Syn.: *pus corpuscle, pus globule, pyoid corpuscle.* One of the c's which constitute the solid portion of pus, and which are also found in the substance of inflamed tissues. They are leukocytes derived from the blood by a migration of the white corpuscles through the capillary walls. **pyramidal ganglion c., pyramidal nerve c., pyramid c.** A multipolar c. of the cerebral cortex, having a pyramidal form with the apex of the pyramid directed toward the free surface of the brain. **red blood c., red c.** See *red blood corpuscle.* See also in *appendix, page 901.* **renal c.** One of the c's of the proper glandular portion or tubules of the kidney. **rennet c.** See *peptic c.* **reproductive c.** A c. which develops into one or more new c's. It comprises the asexual reproductive c. and the sexual reproductive c. (germinal c.), the latter including the male and the female c. It is sometimes restricted, however, to mean only the sexual reproductive c. **resting c.** Syn.: *resting spore.* A unicellular organism (usually a spore) which has

become dormant, so as to exhibit neither motion nor other functional activity. **rete c's.** The c's of the rete mucosum of the skin. **roof c.** One of the c's in the organ of Corti, found on the convex side of the roof formed by the union of the two rows of arches. **salivary c.** One of the epithelial or glandular c's lining the alveoli of the salivary glands. See *salivary corpuscle*, under *corpuscle*. **sarcogenic c.** An embryonic muscular fiber; a c. which develops into a muscular fiber. **sebaceous c.** One of the c's of a sebaceous gland. **secondary c.** A c. formed by the coalescence of several c's. See *syncytium*. **secreting c.** A c. which forms and throws off some secretion. See also *gland c.* **segmentation c.** One of the segments formed by the division of the ovum which develop into the blastoderm and ultimately into the embryo. **seminal c., seminiferous c.** One of the c's lining the seminal tubules and giving rise to the spermatozooids. By Sertoli and Renson, the term seminal c's is limited to the proliferating c's of the tubuli seminiferi. See also *spermatoblasts*. **sense c., sensory c.** 1. In general, any c. which performs sensory functions; i. e., which is adapted to receive, transmit, or appreciate sensory impressions. 2. In particular, a modified epithelial c. in an organ of special sense, connected directly or indirectly by its central end with fibrils of the nerves of the sense organ. Such c's are named from their supposed function as olfactory c., taste c., etc. **sensory epithelial c.** See *sensory c.* (2d def.). **sensory nerve c.** A nerve c. whose axis cylinder process is continued as a sensory nerve. **sister c.** One of two or more c's formed simultaneously by the division of a mother c. **solitary c.** A c. (especially in the cerebral cortex) found by itself and not forming part of a group. **somatic c.** One of the c's which compose the body, characterize the individual, protect and nourish the reproductive c's, and finally die, being thus distinguished from the reproductive c's, which perpetuate the species. **spermatic c., sperm c.** 1. A c. which ultimately develops into spermatozooids. 2. A spermatozoid. See *seminal c., male c., and spermatozoid*. **sphenoid c's.** Irregular c.-like cavities in the sphenoid bone. **spider c.** See *neuroglia c.* **spindle c.** A c. of fusiform shape. **squamous c.** See *pavement c.* **superadded c.** See *delomorphous c.* **supporting c., sustentacular c.** Any c. which supports or isolates another c. having a special function. **sympathetic c. (or ganglion c., or nerve c.)** A nerve c. belonging to the sympathetic nervous system in contradistinction to one belonging to the cerebrospinal system. **tactile c's.** A name given to single c's or groups of c's (modified nerve c's) in each of which is supposed to terminate part or all of the axis cylinder of a medullated nerve fiber, the sheath of the nerve forming a capsule for

the c. or group of c's. They are present in considerable numbers in the rete mucosum and form the terminal part of the axis cylinders in the tactile corpuscles and in the corpuscles of Grandry. One of the highly refractive, spindle-shaped c's situated in the interior of the taste buds and supposed to be the true sensory element of the latter. **taste c's.** See *taste buds*, under *bud*. **tendon c.** A connective tissue corpuscle found in tendon. Such c's are arranged in rows and are usually flattened and possess leaflike processes. **tissue c.** A c. which, combined with other similar c's and intercellular substance, forms a tissue. **touch c's.** See *tactile c's.* **transition c.** A c. which is intermediate in character between c's of two well-marked types and which is supposed to be changing from one type to the other, like the transition c's of red marrow. **twin c.** A single c. which results from the fusion of two c's. **typical c.** A c. which retains more or less closely its original character. **unipolar c.** A c. (especially a nerve c.) having but one pole or process. **vacuolated c.** A c. containing one or more vacuoles. **vascular c.** A c. belonging to a vessel, especially to the endothelium. **vegetative c.** One of the c's situated at the vegetative pole of a segmenting ovum and destined ultimately to form the endoderm. **wandering c.** An expression applied by Recklinghausen to the c's apparently identical with white blood corpuscles, found in various tissues, especially in areolar tissue, near blood vessels and in situations where inflammatory or reparative processes are taking place. Their function appears to be to act as agents (a) in removing some part, such as the tails or gills of transforming amphibian larvae; (b) in the active degeneration of nerve and muscle; (c) in removing any dead substance or irritant, such as bacteria or dead c's, thus playing the part of phagocytes. **white blood c., white c.** See *white blood corpuscles*, under *blood corpuscles*. **yolk c.** A yolk corpuscle. **yolk-containing c.** A c. which contains a considerable quantity of nutritive yolk. **young c.** An embryonic or immature c., before it shows any characteristic cell differentiation. [Lat., *cella*, chamber, cell.] **cel'la.** Gen. and pl., *cellae*. See *cell c.* **media.** The middle cornu of the lateral ventricle. [Lat., *cella*, a cell, compartment.] **cellip'etal.** Of nerve impulses, directed toward a particular nerve cell. [Lat., *cella*, a cell, + *petere*, to seek.] **celloidin** (sel-oyd'in). Gun cotton purified by solution in ether and alcohol; used for embedding histological specimens. **cel'lula.** A small cell or crypt. **c. adiposa.** See *fat cell*, under *cell*. **cellulae coli.** Syn.: *haustra coli*. Small pouches or sacculations in the colon produced by constricting bands. **c. lactifera.** An acinus of the mammary gland. **c. pulmonalis.** See *alveolus pulmoneus*. **cel-**

- lulae sanguinis.** See *blood corpuscles*.
- cellulae tympanicae.** The bony cells in the tympanic portion of the tympanic cavity. [Lat., *cellula*, dim. of *cella*, chamber.]
- cel'lular.** Pertaining to a cell or to a tissue or object composed of cells. [Lat., *cellularis*.]
- cellulase** (sel'u-lās). An enzyme found in barley and many fungi, which has the property of dissolving cellulose.
- cel'lule.** A little cell. [Lat., *cellula*, a little cell.]
- cellulicidal** (sel-u-lis'i-dal). Destructive to cells. [Lat., *cellula*, a cell, + *caedere*, to kill.]
- cellulif'erous.** Producing little cells or cavities (cellules), or producing cells in the anatomical sense (*cellulae*); containing little cells or hollows. [Lat., *cellula*, dim. of *cell*, chamber, + *ferre*, to bear.]
- cellulif'ugal.** Of nervous impulses, directed away from a particular nerve cell. [Lat., *cella*, a cell, + *fugere*, to flee.]
- cel'lulin.** See *cellulose*.
- cellulitis** (sel-lu-li'tis). Inflammation of the areolar or connective tissue. Often caused by the *Streptococcus pyogenes*. [Lat., *cellula*, a little cell, + Gr., *itis*, inflammation.]
- celulo-.** Prefix used as a combining form of *cellule*, from Lat., *cellula*, a little cell, mostly in physiological terms.
- cel'luloid.** A substance prepared by mixing finely divided nitrocellulose with camphor, and other ingredients, of which zinc oxid is usually one, and molding the mixture into solid form by hydraulic pressure. It is very elastic and, as first prepared, highly inflammable. But it has been rendered much less inflammable by the addition of ammonium phosphate, sodium phosphate, and other ingredients.
- cellulose** (sel'lu-lōs). A carbohydrate forming the walls of all vegetable cells and found almost pure in elder pith, in absorbent cotton, and in pure unsized paper (filter paper); a colorless, transparent mass, showing on microscopical examination the shape of the vegetable tissue from which it was derived; insoluble in water, in alcohol, or in ether, but soluble in cuprammonia. Sulphuric acid converts it into *amylloid*.
- celo-;** before a vowel, **cel-.** Combining form of Gr., *koinos*, hollow; used as a prefix in compound words.
- celoma** (se-lō'mah). Syn.: *body cavity*. 1. A hollow or excavation. 2. A round, superficial ulcer of the cornea. 3. The space between the viscera and the body walls. 4. In embryology, the space between the entoderm and the ectoderm. [Gr., *koiloma*, from *koinos*, a hollow.]
- celozotic** (se-lo-zo'ik). Inhabiting the intestinal cavities of the body, e. g., parasites. [Gr., *koinos*, hollow, belly, + *zoon*, animal.]
- Cel'sius thermometer.** A thermometer in which the scale is arranged so that zero registers the freezing point of water and 100° the boiling point. Same as centigrade. Originally the Celsius scale was marked in the reverse direction. [Anders Celsius, Swedish astronomer, 1701-1774.]
- cement** (se-ment'). The substance that unites two bodies together, or two parts of a broken thing. In dentistry, a plastic material used for filling cavities in teeth. [Lat., *caementum*.]
- cementoblasts** (se-ment'o-blasts). The osteoblasts concerned in the formation of the cement of the teeth; the cement corpuscles of the fully formed teeth. [Lat., *caementum*, + Gr., *blastos*, sprout.]
- cementoma** (se-men-to'mah). A tumor composed of cement substance similar to that of the teeth.
- cementosis** (se-men-to'sis). The development of a cementoma.
- caementum** (se-ment'um). 1. A plastic material capable of hardening so as to form a medium for uniting two or more objects; in dentistry, such a material used for filling tooth cavities. 2. The bony substance which forms a thin coating over the root of the tooth, from the termination of the enamel to the opening in the apex of the fang. Sometimes called *tooth bone*. **alveolar c.** An osseous substance that in certain animals joins the teeth to the jaws and binds them to each other. **cell c.** The scanty hyaline substance between epithelial or endothelial cells. It stains black with nitrate of silver. When the substance between the cells is more abundant it is called ground substance, matrix, etc. **coronal c.**, **crown c.** The special coating of c. that invests the crown of the teeth in many mammals. **radical c.** The layer of c. covering the fangs of the teeth. **tissue c.** See *cell c.* [Lat., *caementum*, a quarry stone.]
- cenadelphus** (sen-a-del'fus). A double monster with the two divisions equally developed or having one or more organs in common. [Gr., *koinos*, common, + *adelphos*, brother.]
- cenesthesia, cenesthesia** (sen-es-the'sis, sen-es-the'se-ah). Common sensation or sensibility; also the vague sensation of consciousness of bodily existence which is independent of the evidence of the special senses; of Axenfeld, the perception of the existence of the various organs of the body and their relations, attention to which is first aroused when any irregularity or interruption of the sensitive currents which proceed from the nervous centers occurs. [Gr., *koinos*, common, + *aisthesis*, perception by the senses.]
- cenotype** (sen'o-tip). A type common to all forms; the original form from which others have arisen. [Gr., *koinos*, common, + *typos*, a type.]
- Centaurea benedictus** (sen-taw're-ah ben-e-dick'tus). The blessed thistle; indigenous to Europe and sparingly naturalized in the United States. It was formerly used in a great variety of disorders, but is now chiefly employed as a stomachic

tonic. [Gr., *kentauros*, a centaur, because the drug is said to have cured a wound in a centaur.]

centaurium (sen-taw're-um). See *Erythraea*. [Gr., *kentaursion*.]

centaurium (sen'taw-re). The herb of *Erythraea centaurium*. It is of little therapeutic use.

center, centre (sen'ter). 1. A point that is perfectly or approximately equidistant from all parts of the periphery of a surface or of the superficies of a solid. 2. Any collection of cells in the central nervous system with a common function. **accelerating c. of the heart**. See *cardio-acceleratory c.* **acoustic c's.** 1. The c's of origin of the acoustic nerve. See *auditory nuclei*. 2. The cortical c. of the acoustic nerve; a region situated in the posterior two thirds of the superior temporal convolution (Wernicke's convolution). Lesions of the gray substance, or the underlying white substance in this region, produce the condition called psychical deafness. **anospinal c.** A nervous c. in the lumbar portion of the spinal cord, presiding over the contractions of the sphincter ani. **anovesical c.** The c. in the spinal cord, supposed to be situated near the lumbar enlargement, which regulates the tonicity of the sphincter ani and of the sphincter of the bladder. **arm c.** That one of the cortical c's that is supposed to govern the movements of the arm; an area of the cortex occupying the middle third of the anterior central convolution. Excitation of this c. produces movements in the arm of the opposite side. **association c's.** The areas in the cortex in which the higher psychical processes are mediated. Not provided with projection fibers. The posterior a. c. lies in the temporoparietal region; the anterior a. c. in the frontal lobe anteriorly. **auditory c.** A region in the cerebrum to which auditory impulses are transmitted. See *acoustic c.* **Broca's c.** The region supposed to be concerned in the use of articulate speech and located by Broca in the posterior part of the third frontal convolution. **Budge's center.** See *genitospinal c.* **cardiac c.** The intrinsic nerve cells within the heart. **cardio-accelerating c., cardio-acceleratory c.** An area in the medulla oblongata from which fibers pass down to the cervical portion of the spinal cord, emerge in the upper thoracic nerves, and proceed to the sympathetic chain, and thence to the cardiac plexus. Their action causes a quickening (and augmentation) of the heart-beat. **cardio-inhibitory c.** A c. in the medulla oblongata from which arise the inhibitory fibers to the heart, passing by way of the vagus nerves. **c. for the lower extremity.** A nerve c. presiding over the movements of the lower limb, situated in the upper third of the ascending central convolution. **c. of arrest.** See *moderator c.* **c. of gravity, c. of mass.** The point of application of the resultant of the parallel forces which are conceived to act upon

the molecules of a body under the influence of gravity. **c. of ossification.** A point in a cartilage about to be replaced by bone at which the calcific changes in the interior of the bone begin. **c. of rotation.** The point of rectangular intersection of the sagittal, frontal, and vertical axes of the eye. **cerebral inspiratory c.** A c. which Christiani describes as existing in the optic thalamus. When directly stimulated, it causes deeper and more rapid inspirations. A similar c. has been described as situated in the posterior quadrigeminal bodies. **cerebrospinal c.** The cerebrospinal axis, or central nervous system, including the encephalon and the spinal cord. **cilio-spinal c.** A c. in the lower cervical region of the spinal cord which gives rise to the nerve fibers, causing dilatation of the pupil. **cortical c's.** Regions of the cerebral cortex endowed with special functions, motor, sensory, or psychical. **defecation c.** A c. in the lumbar portion of the spinal cord, supposed to keep the sphincter ani in a state of tonic contraction and to control reflexly the normal movements of defecation. **deglutition c.** A c. in the gray matter in the floor of the fourth ventricle, which presides over the reflex act of swallowing. **diabetic c.** An area in the median line of the anterior half of the floor of the fourth ventricle. C. Bernard discovered that a puncture in this region caused glycosuria. **expiratory c.** That portion of the general respiratory c. in the medulla which controls the expiratory movements. **facial movement c's.** The cortical c's for the movements of the muscles about the face, situated in the lower third of the ascending frontal convolution. **general sensibility c.** Cortical regions in which the perception and representation of contact, pain, the position of the body and temperature are produced. They overlap the posterior central convolution. **genitospinal c.** A reflex c. in the spinal cord at the level of the fourth lumbar vertebra of the dog. It presides over the sexual functions in the male and female, and also the muscular action of the bladder. **genito-urinary c.** A c. in the lumbar portion of the spinal cord which is concerned in the erection of the penis and the emission of semen. **glandular c's.** The urinary c's. **glycogenic c.** See *diabetic c.* **gustatory c.** See *taste c.* **head and neck movement c.** A c. presiding over the movements of the head and neck; situated in the posterior extremity of the second frontal convolution and the lower part of the corresponding region of the first frontal convolution. **inhibitory c's.** See *moderator c's.* **inspiratory c.** The principal inspiratory c. is situated in the medulla oblongata, forming part of the respiratory c. **intracardiac c's.** The small nerve ganglia found in the substance of the heart. **laryngeal cortical c.** A c. situated in the posterior end of the inferior frontal convolution, near the

sulcus separating it from the ascending frontal gyrus. **leg c.** See *c. for the lower extremity*. **mastication c.** A reflex c. in the medulla oblongata presiding over the movements of mastication. **median c. of Luys.** The second of a series of four c's described by Luys as situated in the optic thalamus; considered by Luys as a visual c. Its existence has been denied. **micturition c.** A c. in the lumbar portion of the spinal cord which presides over the act of urination. **moderator c's.** Nerve c's which exercise an inhibitory action, generally reflex, on various functions of the body. **motor c.** A c. which distributes motor impulses along the appropriate nerve paths. The motor c's of the brain lie in the anterior central convolution. **olfactory c.** A c. for the sense of smell, located in the foot of the gyrus hippocampi in the gyrus uncinatus. **psychogeusic c.** The cerebral c. for the sense of taste, located by Ferrier (in the dog's brain) in the gyrus uncinatus. **psychomotor c's.** The regions of the cerebral cortex from which motor impulses originate; the same as the cortical motor c's, but the term takes into account the psychological components of a voluntary act. **psycho-optic c.** See *visual c.* **psycho-osmic c.** A cerebral c. for the sense of smell, located by Ferrier in the subiculum cornu Ammonis. See *olfactory c.* **psychosensorial c.** See *sensory cortical c.* **psychovisive c.** See *visual c.* **pupil dilating c.** 1. See *cilio-spinal c.* 2. A c. situated in the posterior extremity of the first and second frontal convolutions. **reflex c.** Any nerve cell or group of nerve cells in the encephalon, spinal cord, or ganglionic system which receives an impression through centripetal nerve fibers from end organs in the periphery, and transforms it into an impulse, either motor or secretory, which is sent out through centrifugal nerve fibers. This may take place without conscious sensation or volition being superadded. **respiratory c.** A region in the medulla oblongata from which the respiratory muscles are innervated by rhythmic discharges. These cells are stimulated chiefly by the carbon dioxide of the blood. It lies in the floor of the fourth ventricle, near the apparent origin of the vagus. Both inspiration and expiration seemed to be represented in it. **salivary c., salivation c.** A reflex c., situated in the floor of the fourth ventricle, which presides over the secretion of saliva. **sensory cortical c.** A supposed area in the cerebral cortex which is concerned in sensory perception. **sneezing c.** A reflex nerve c. in the medulla oblongata; the afferent branches are the nasal branches of the trifacial. The efferent impulses are transmitted along the nerves supplying the expiratory muscles. **sucking c.** A reflex c. which regulates the movements of sucking. **sudoral c's.** Spinal c's, regulating the secretion of sweat. **sweat c's.** See *sudoral c's.* **tactile c.** A cortical c. for

the sense of touch, which lies in the general body sense area in the posterior central convolution. **taste c.** A c. for gustatory sensations, in the gyrus uncinatus. **temperature regulating c's.** See *thermotaxic c's.* **thermal cortical c.** An area in the cortex of the dog's brain, near the end of the sulcus cruciatus, stimulation of which produces a change in the temperature of the opposite limbs. **thermo-excito c's.** A supposed c. in the spinal cord or brain which presides over the body temperature. **thermogenic c's.** Supposed c's in the spinal cord which preside over the body temperature, particularly in the sense of causing a heat production in the peripheral tissues. **thermopolypneic c.** A nerve c. situated in the gray matter about the third ventricle at its anterior part. It excites the respiratory c. to increased activity. **thermotaxic c's.** Supposed cerebral c's for maintaining the balance between the production and the dissipation of heat. Of the four basal thermotaxic c's, one is situated in the caudate nucleus, one in the gray matter beneath it, one in the gray matter about the most anterior part of the third ventricle (see *thermopolypneic c.*), and one at the anterior inner end of the optic thalamus. **trophic c.** The cells giving rise to so-called trophic fibers which control the nutritive processes of the body. **vascular c's.** See *vasomotor c's.* **vasoconstrictor c's.** C's in the spinal cord, excitation of which causes constriction of the smaller blood vessels. The principal vasoconstrictor c. is a bilateral group of cells, situated in the medulla oblongata and the pons Varolii, from just below the corpus quadrigemina to 3 to 4 mm. above the point of the calamus scriptorius. **vasodilator c's.** C's in the spinal cord or the medulla, excitation of which causes dilatation of the smaller blood vessels. **vasomotor c's.** Usually synonymous with vasoconstrictor c's, but the term may be used to include both it and the vasodilator c's. **vesicospinal c.** See *micturition c.* **visual c.** An area in the cerebral cortex for visual perceptions. It occupies the occipital cortex, particularly the area on its mesial surface surrounding the calcarine fissure. **visuopsychic c.** An area in the occipital cortex and neighboring region, supposed to be concerned in synthesis and intellectual perception of visual sensations. **visuosensory c.** An area in the occipital cortex, round the calcarine fissure, in which the visual paths terminate, but which is supposed to mediate the primary visual sensations. **vomiting c.** A region in the medulla oblongata which presides over the act of vomiting. **winking c.** The reflex c. for winking; situated in the medulla oblongata. [Lat., *centrum*.]

centes'imal (sen-tes'im-al). Of or pertaining to a division or dilution by hundreds or into a hundred or a multiple of a hundred parts; containing a hundred

- divisions or parts. [Lat., *centesimus*, hundredth.]
- centi-**. Combining form of Lat., *centum*, a hundred; used as a prefix in compound words.
- centigrade** (sen'te-grād). Containing a hundred degrees; of or pertaining to a division into a hundred degrees. **c. thermometer**. One in which zero is at the freezing and 100° at the boiling point of water. [Lat., *centum*, hundred, + *gradus*, a step.]
- centigram** (sen'te-gram). In the metric system of weights, a hundredth part of a gram (0.1543 Troy grain). [Lat., *centum*, hundred, + *gramma*, a gram.]
- centiliter** (sen'ti-le-ter). In the metric system of measures, the one hundredth part of a liter (.61028 cubic inches or 2.7053 fluid drams).
- centimeter** (sen'te-me-ter). In the metric system of measures, the one hundredth part of a meter, a length of .39370 inch. [Fr., *centimètre*.]
- centinormal**. One one-hundredth of the normal or standard strength. See *normal solution*, under *solution*.
- centrad** (sen'trad). Toward the center of the body; proximally.
- central** (sen'tral). Situated in or originating from a lesion of the central nervous system. **c. field of vision**. The field of vision corresponding to the projection of the fovea centralis.
- centri-, centro-**. Combining forms of Lat., *centrum*, or Gr., *kentron*, center; used as a prefix in compound words.
- centric**. Central; specifically, pertaining to the central nervous system.
- centrifugal** (sen-trif'u-gal). Tending outward from the center. [Lat., *centrum*, center, + *fugere*, to flee.]
- centrifuge** (sen'tre-fij). 1. A device for separating admixed solids from a liquid, also for accelerating the subsidence of such substances in test tubes, by centrifugal force. 2. To submit to centrifugal force in a c.
- centripetal** (sen-trip'et-al). Tending or moving toward the center; afferent. [Lat., *centrum*, center, + *petere*, to seek.]
- centrosclerosis** (sen-tro-skle-ro'sis). The condition in which the medullary cavity of a bone is filled with osseous tissue.
- centrosome** (sen'tro-sōm). Syn.: *central granule*. A point or granule in the cytoplasm of the cell, the center of the attraction sphere and assumed to be the organ concerned in initiating the division of the cell by mitosis. [Gr., *kentron*, center, + *soma*, body.]
- centrum** (sen'trum). Syn.: *camera medullaris*. 1. A center. 2. In anatomy, the middle of a part. 3. The body of a vertebra. **c. commune**. The common center as the *plexus celiacus*. **c. medullare**. Medullary center. **c. ovale**. Same as *c. semiovale*. **c. semiovale** [B. N. A.]. The great mass of white matter at the center of each cerebral hemisphere as seen on horizontal section at the level of the corpus callosum. **c. tendineum diaphragmatis**. Central tendon of the diaphragm. [Lat., from Gr., *kentron*.]
- Cenurus, Coenurus** (se-nu'rus). The larval form of a *Tenia*, being a bladder worm with numerous heads, but without brood capsules.
- cephalin** (sef-a'el-in). An amorphous yellowish alkaloid, C₁₄H₂₀NO₂, obtained from ipecac, of which it is the principal emetic constituent.
- Cephaëlis ipecacuanha** (sef-a-él'is ip'e-kak-u-an'ah). An undershrub or herb indigenous to Brazil and frequently cultivated there. The root is the official ipecacuanha. [Gr., *kephale*, head, + *eilein*, to compress.]
- cephalad** (sef'al-ad). Toward the head. [Gr., *kephale*, head.]
- cephalalgia** (sef-al'al'je-ah). Headache. **ocular c.** Headache due to any ocular defect. [Gr., *kephale*, head, + *algos*, pain.]
- cephalhematoma** (sef'al-he-mat-o'mah). A collection of blood in the subcutaneous tissues of the scalp of the newborn child, caused by the rupture of blood vessels from pressure on the head during delivery. [Gr., *kephale*, head, + *hematoma*.]
- cephalic** (sef-al'ik). Pertaining to the head; as a n., a remedy for headache or other disorder of the head. **c. cry**. A loud scream often given by children with tuberculous meningitis. **c. index**. The relation of the length to the breadth of the calvarium. [Gr., *kephale*, the head.]
- cephalin** (sef'al-in). An organic extract derived from brain substance.
- cephalitis** (sef-al-it'is). See *encephalitis*. [Gr., *kephale*, head, + *itis*, inflammation.]
- cephalo-**. Combining form of Gr., *kephale*, the head; used in compound words to signify of or pertaining to the head.
- cephalocoele** (sef'al-o-sēl). A congenital or acquired hernial protrusion of a portion of the contents of the cranium. [Gr., *kephale*, head, + *kele*, tumor.]
- cephalocentesis** (sef'al-o-sen-te'sis). The operation of puncturing the head, as in hydrocephalus. [Gr., *kephale*, head, + *kentesis*, puncture.]
- cephalology** (sef-al-ol'o-gy). The anatomy, etc., of the head. [Gr., *kephale*, head, + *logos*, discourse.]
- cephaloma** (sef-al-o'mah). An old term for soft cancer. [Gr., *kephale*, the head, + *oma*, tumor.]
- cephalomelus** (sef-al-om'el-us). A monster with an excrescence resembling an arm or leg attached to the head. [Gr., *kephale*, head, + *melos*, a member.]
- cephalometer** (sef-al-om'et-er). An instrument for measuring the head. Craniometer. [Gr., *kephale*, head, + *metron*, a measure.]
- cephalometry**. The art or act of measuring the head. [Gr., *kephale*, head, + *metron*, measure.]

Cephalomyia (sef-al-om-i-e'ah). A genus of the *Brachycera* and of the order *Diptera*. *C. ovis*. A species of which the larvae are found in the maxillary and frontal sinuses of sheep and occasionally in those of man. The egg is laid in the cavity and the larvae remain there until they become pupae. These larvae are known as *bots*. [Gr., *kephale*, head, + *myia*, a fly.]

cephalopathy (sef-al-op'ath-e). Disease of the head. [Gr., *kephale*, head, + *pathos*, disease.]

cephalopharyngeus (sef-al-o-fa-rin'je-us). See *table of muscles*, under *muscle*.

cephaloplegia (sef'al-o-ple'ge-ah). Paralysis of the muscles of the head and face. [Gr., *kephale*, head + *plege*, stroke.]

cephalotome (sef'al-o-töm). An instrument for cutting the fetal head in the operation of craniotomy. Same as *craniotome*. [Gr., *kephale*, head + *temnein*, to cut.]

cephalotomy. The cutting of the fetal head to facilitate delivery. Craniotomy.

cephalotribe. A heavy forceps with narrow blades for crushing the fetal head by screw power. [Gr., *kephale*, head + *tribein*, to crush.]

cephalotripsy (sef'al-o-trip-se). The operation of crushing the head of the fetus to facilitate delivery. [Gr., *kephale*, head, + *tribein*, to crush.]

cera (se'rah). Wax; beeswax; the official title in many pharmacopeias. **c. alba**. Beeswax bleached by exposure to the air. [U. S. Ph., Br. Ph.]. **c. amyлата**. Pulverulent wax; an excipient for pills containing oils or substances difficult to mix with water. [Lat., *ceraceus*, from *cera*, wax.]

cera'ceous. A term used in descriptive bacteriology meaning waxlike in appearance. [Lat., *cera*, wax.]

cerate (se'rät). 1. Generically, a pharmaceutical preparation consisting of a mixture of oil or lard with wax, and used either alone or as a basis for the application of medicines. For the wax, resin or spermaceti is frequently substituted, although, properly, the term *c.* embraces only preparations made with wax. 2. Specifically, of the U. S. Ph., simple *c.* The medicated cerates are mentioned under their respective medicating heads. [Lat., *ceratum*, from *cera*, wax.]

cer'atin. See *keratin*.

kerato-. Combining form of Gr., *keras*, *keras*, horn; used as a prefix to denote relation to a horn, as of the hyoid bone, or to the cornea. See also *kerato-*.

ceratocricoides (ser'at-o-kri-koi'de-us). See *table of muscles*, under *muscle*.

ceratopharyngeus (ser'at-o-far-in'je-us). See *table of muscles*, under *muscle*.

ceratum (se-ra'tum). 1. A cerate. 2. In the U. S. Ph., simple cerate; a preparation consisting of white wax and lard melted together. [Lat., *ceratum*, from *cera*, wax.]

cerberin (ser'ber-in). A glucosid discovered in *Cerbera odollam* and in seeds of *Thevetia nerifolia*. It acts like digitalin.

cercaria (ser-ka're-ah). As now used, the

larva of the *Trematoda* in the state in which it is provided with a taillike process. [Gr., *kerkos*, a tail.]

Cercomonas (ser-kom'on-as). A genus of the *Mastigophora* and the order *Protozoanadina*, having a long or an oval body, sharp-pointed at one end and provided with one flagellum at the pointed end. **C. hominis**. A species found in the intestinal discharges in cholera, in chronic diarrhea, and even in feces of healthy persons. It probably acts as a local irritant. **C. vaginalis**. A pear-shaped parasite found in the human vagina. [Gr., *kerkos*, a tail + *monas*, a unit.]

cerealin (se-re'al-in). An albuminous principle found in cereals.

cerebellar, cerebellic (ser-e-bel'lar, ser-e-bel'ik). Relating to the cerebellum.

cerebello (ser-è-bèl'lo). Combining form of cerebellum.

cerebellum (ser-e-bel'um). The little brain or hinder brain; that portion of the encephalon which occupies the posterior fossa of the skull. It is a symmetrical, cordiform mass separated from the cerebrum proper by a process of the dura mater (the tentorium). The functions of automatic motor activities are largely subserved in the cerebellar connections. [Lat., dim. of *cerebrum*, the brain.]

cerebrasthenia (ser'e-bras-the'ne-ah). An old term to designate mental weakness due to general weakness of the nervous system.

cerebration (se-re-bra'shun). A mental act consequent on a perception. **unconscious c.** Unconscious or subconscious mental action.

cerebrifugal (ser-e-brif'u-gal). Said of a nerve, meaning cerebral in origin and efferent in function. [Lat., *cerebrum*, + *fugere*, to fly.]

cerebrin (ser'e-brin). A substance obtained from brain tissue by boiling with a saturated solution of baryta, washing the precipitate with water, and boiling again with absolute alcohol. It is a snow-white, microcrystalline powder containing carbon, hydrogen, oxygen, and nitrogen, insoluble in water, but soluble in boiling alcohol. [Lat., *cerebrinum*.]

cerebripetal (ser-e-brip'et-al). Of a nerve, cerebral in origin and afferent in function. [Lat., *cerebrum*, + *petere*, to seek.]

cerebritis (ser-e-bri'tis). See *encephalitis*.

cerebro-. Combining form of Lat., *cerebrum*, brain, used as a prefix to compound words.

cerebromalacia. Softening of the brain substance.

cerebron (ser'e-bron). A substance resembling cerebrin, which has been isolated from brain tissue, that has not been hydrolyzed with baryta.

cerebrophathy (ser-e-brop'ath-e). See *encephalopathy*. [Lat., *cerebrum*, brain, + Gr., *pathos*, disease.]

cerebrophysiology (ser'e-bro-fiz-e-ol'o-je). Physiology of the cerebrum.

cerebro sclerosis (ser'e-bro-skle-ro'sis). Induration of the brain substance. [Lat., *cerebrum*, brain, + *skleroun*, to harden.]

cerebroscopy (ser-e-bros'kop-e). See *encephaloscopy*.

cerebrose (ser'e-brōs). Syn.: *cerebrogalactose*. Brain-sugar, $C_6H_{12}O_6$: a principle derivable from the brain substance; sometimes found in diabetic sugar.

cerebrosids (ser'e-bro-sids). A class of substances, containing carbon, hydrogen, oxygen, and nitrogen, and free from phosphorus. Prepared from nerve tissue by the gentle action of an alkali. Upon boiling with dilute mineral acids, they yield, along with other substances, a carbohydrate, *galactose*.

cer'ebrospi'nal. 1. Pertaining to both the brain and the spinal cord. 2. An agent that acts upon the brain and the spinal cord. **c. fever**. Spotted fever. Epidemic cerebrospinal meningitis, an acute infectious disease caused by the meningococcus, *diplococcus intracellularis meningitidis*, marked by fever and severe nervous symptoms. Inflammation of the meninges of the brain and spine are the pathological lesions of the disease. **c. fluid**. A fluid found in the ventricles of the brain and the subarachnoid cavities of the brain and spinal cord. It is secreted for the most part by the choroid plexuses of the lateral ventricles and is composed of salts and water, with traces of protein.

c. fluid, chemical examination of; see in *appendix*, page —. **c. fluid, how to examine**; see in *appendix*, page —. **c. fluid, how to test for globulin in**; see in *appendix*, page —.

cerebrosuria (ser-e-bro-su're-ah). A morbid condition characterized by the presence of cerebrose in the urine.

cerebrum (ser'e-brum). The larger, superior part of the brain, consisting of two hemispheres (with the third and the lateral ventricles), occupying the vault of the cranium and the anterior and middle fossae of its base. It consists of central white and cortical gray matter with special collections of gray matter (ganglia). It is continuous posteriorly with the cerebellum and the medulla oblongata by a constricted portion called the isthmus. [Lat., *cerebrum*, brain.]

cerecloth (ser'kloth). Cloth imbued with wax; used, when made antiseptic, as a dressing for wounds. [Lat., *cera*, wax.]

ceresin (ser'es-in). A mineral wax, a substitute for wax, made by treating ozokerite (earth wax) with sulphuric acid, decolorizing with charcoal, and filtering.

Cereus (se're-us). A genus of cactaceous plants. **C. grandiflorus**. Night-blooming cereus; indigenous to the West Indies and growing in Mexico. Sometimes used in cardiac disease. [Lat., waxen, containing wax.]

cerevisia (ser-e-vis'e-ah). The ferment obtained in brewing beer, the cells and spores of *Saccharomyces cerevisiae*. It is given internally in acne and furunculosis and is applied locally in vaginitis and in sloughing wounds. [Lat., beer.]

cerium (se're-um). A metallic element. It is a hard malleable substance resembling iron in appearance. Symbol Ce.

Atomic weight 140. **cerii oxylas, c. oxylate**. A compound of ceric and oxalic acid. Cerous oxylate, $Ce_2(C_2O_4) + 9H_2O$, is a granular powder, devoid of taste and odor and insoluble in water and alcohol. It has been used to relieve nausea and vomiting. [Lat., *Ceres*, the planet.]

cerolin (se'ro-len). A mixture of the fats, cholesterin, lecithin and ethereal oil extracted from yeast by alcohol. It is used in the treatment of various affections of the skin.

cerotic (se-rot'ick). Contained in or derived from wax. **c. acid**. See under *acid*. [Lat., *cera*, wax.]

cerous (se'rus). Containing cerium as a trivalent radicle. See *cerium*.

ceroxylin (se-rox'il-in). A crystalline substance forming the chief part of the waxy secretion of the *Ceroxyylon* or wax palm.

cerumen (se-ru'men). Ear-wax; an adhesive brownish yellow secretion from the ceruminous glands of the external auditory canal. **c. inspissatum**. Dried ear-wax plugging the external auditory canal. [Lat., *cera*, wax.]

ceruse. White lead, basic lead carbonate. **c. acetata**. Lead acetate. [Lat., *cerussa*.]

cervical (ser'vick-al). Pertaining to the neck or to any necklike part. [Lat., *cervicalis*, from *cervix*, neck.]

cervicalis ascendens (ser-vik-a'lis). See *table of muscles*, under *muscle*.

cervicitis. Inflammation of the cervix uteri. [Lat., *cervix*, neck, + Gr., *itis*, inflammation.]

cervico-. Assumed combining form of Lat., *cervix*, *cervicis*, neck; used as a prefix in compound words.

cervicodynia (ser'vik-o-din'e-ah). Muscular rheumatism of the neck.

cervix (ser'vicks), pl., *cervices*. 1. Properly, the back of the neck. 2. The neck as a whole. 3. Any constricted necklike part. 4. In dentistry, the neck of the tooth; the portion between the crown and the root, surrounded by the gum. **c. cornu posterioris**. The constricted portion of the posterior horn of the spinal cord. **c. corporis restiformis**. See *c. pedunculorum*.

c. femoris. The neck of the femur. **c. glandis**. The constricted portion of the penis, behind the corona glandis. **c., how to prepare smears from**, see in *appendix*, page 911. **c. mandibulae**. The neck of the mandible. **c. pedunculorum**. The constricted portion of the restiform bodies at the point where they come downward and backward to enter the cerebellum. **c. penis**. See *c. glandis*. **c. uteri**. Syn.: *collum uteri*. The neck of the uterus, the constricted portion extending from the isthmus to the os uteri externum. **c. vesicae**. The neck of the urinary bladder. **c. vesicae felleae**. The neck of the gall-bladder. [Lat., *cervix*, neck.]

ceryl (se'ril). A univalent hydrocarbon radicle of the fatty series of the constituent C_nH_{2n} . **c. alcohol**. A monatomic alcohol, $C_{26}H_{52}OH$, obtained by the decomposition of Chinese wax. **c. cerotate**. A compound, $C_{26}H_{52}O.O.C_{26}H_{52}O$, of **c.**

and cerotic acid; a crystalline substance forming the main portion of Chinese wax. [Lat., *cera*, wax.]

cesarian operation. The operation of cutting open the gravid uterus through an incision in the abdominal wall and removing its contents; so called from the tradition that Julius Caesar had the surname given him from his having been cut out from his mother's womb.

cesium (see'se-um). A soft silvery metal closely resembling rubidium and potassium. Symbol Cs. Atomic weight 132.81. It is the most electropositive of all the metals. Its salts are said to increase blood pressure but have been little used. [Lat., *caesius*, bluish gray, because there are two blue lines in its spectrum.]

cestode, cestoid (ses'töd, ses'toyd). Having to do with one of the class *Cestoidea*, or subclass *Cestoda*; a tapeworm. [Gr., *kestos*, embroidered, festooned, + *eidōs*, resemblance.]

Cestoda, Cestoidea (ses-to'da, ses-toid'e-ah). A class and subclass of the phylum *Platyhelminia*, without an alimentary canal and with a flat segmented body. The adult form inhabits the intestine, and the larval form other parts of the body, often of another host.

cet-. Combining form of Gr., *ketos*, Lat., *cetus*, whale; used either as a prefix or as a suffix in chemical terms to denote substances derived from spermaceti.

ceta'cum. Syn.: *spermaceti*, or *sperma ceti*. A white crystalline mass obtained from cavities in the cranium of the spermaceti whale (*Physeter macrocephalus*), consisting chiefly of cetyl palmitate. It is used in medicine as a basis of cerates and ointments, being devoid of any irritant or other marked properties. [U. S. Ph., Br. Ph.].

ceratum cetacei. Spermaceti cerate; made by melting spermaceti with white wax and olive oil [U. S. Ph., 1890, Br. Ph.].

unguentum cetacei. Spermaceti ointment; made by melting together spermaceti, white wax, and almond oil. It is used for the same purpose as the ceratum cetacei [Br. Ph.].

unguentum cetacei album. See *ceratum cetacei*. [Gr., *ketos*, a huge fish.]

Cetraria (se-tra're-ah). 1. A genus of lichens. 2. Of the U. S. Ph., 1890, the thallus of *C. islandica* or Iceland moss. It contains the bitter tonic principle *cetrarin* or *cetraric acid*, or starchlike *lichenin*.

cetyl (se'til). A univalent alcohol radicle (alkyl) $C_{16}H_{33}$, occurring in the compounds derived from spermaceti. **c. alcohol**, $C_{16}H_{33}OH$, a crystalline substance. Its water of palmitic acid is the main constituent of spermaceti.

cevadin (sev'ad-in). An alkaloid, $C_{32}H_{49}NO_6$, found in cevadilla, identical with the veratrin of Merck.

Ceylon moss. An East Indian edible moss from *Sphaerococcus lichenoides*.

Chagres fever (shag'res fe'ver). A severe malarial fever, contracted in the neighborhood of the Chagres river, on the Isthmus of Panama.

chain. A series of links joined together in a line; also any linear arrangement of similar parts. **sympathetic c.** Name given to the double row of sympathetic ganglia extending along the spinal column. In chemistry, a series of atoms held together by one or more affinities. [Fr., *chaîne*, from Lat., *catena*, chain.]

chalaza (kal-a'zah). 1. The point in seeds where the nucellus, coats, and apex of the funiculus separate. 2. In birds' eggs the suspensory ligament of the yolk. [Gr., *chalaza*, hailstone.]

chalazion (kal-ä'ze-on). A small tumor in the substance of the tarsus of the eyelid due to obstruction in the excretory duct of one or more meibomian glands. [Gr., *chalazion*, dim. of *chalaza*, hailstone.]

chalcosis (kal-ko'sis). 1. The presence of particles of deposits of copper in the tissue of the lungs. 2. Chronic poisoning from copper. [Gr., *chalkos*, copper.]

chalicosis (kal-e-ko'sis). Infiltration of the lungs with siliceous particles. See *fibroid phthisis* and *stonecutters phthisis*, under *phthisis*. [Gr., *chalis*, limestone.]

chalk. A native carbonate of calcium containing slight traces of the oxids of iron and aluminum and other impurities. The purified form (*creta præparata*) is employed in medicine. **compound c. powder**. Consists of prepared c., acacia, and sugar; used for preparing c. mixture. [U. S. Ph.] **French c.** A silicate of magnesia, harder than the official talc. [Ang.-Sax., *cealc*.]

chalone. The name proposed for the group of hormones or autocoid substances in the internal secretions whose effect is to inhibit activity; inhibiting hormones. [Gr., *chalaō*, I relax.]

chalybeate (ka-lib'e-ate). Containing steel; as used in medicine, also iron or a preparation of iron. [Lat., *chalybs*, from Gr., *chalybs*, steel.]

Chamaelirium (kam-el-ir'e-um). A genus of liliaceous plants. **C. carolinianum**, **C. luteum**. The only species; starwort, growing in Canada and in the United States east of the Mississippi. Its rhizome contains *chamelirin* and has been used as an antelmintic and in various uterine disorders. [Gr., *chamai*, on the ground + *leirion*, the lily.]

chamber (chäm'ber). An enclosed space. **anterior c. of the eye**. The anterior portion of the aqueous c. of the eye, bounded behind by the iris and the central portion of the crystallin lens. **aqueous c. of the eye**. The space or c. in the eye bounded by the cornea in front and the ciliary processes, suspensory ligament, and lens behind. **barometric c.** The space above the mercurial column of a barometer. **posterior c. of the eye**. That portion of the aqueous c. of the eye that lies behind the iris and, in the fetus before the seventh month, the pupillary membrane. **vitreous c.** The large cavity behind the lens in the eye containing the vitreous humor. [Lat., *camera*, from Gr., *kamara*, a vault.]

Chamberland filter (sham-ber-lah'). A filter of unglazed porcelain through which water can be forced under pressure. All microorganisms not ultramicroscopic are intercepted on the filter. [*Charles Edouard Chamberland*, French scientist, contemporary.]

Chamomilla, Camomile (kam'o-mil). The genus *Anthemis*, especially *Anthemis nobilis*, the flowers of which yield a bluish volatile oil and a bitter infusion. *Chamomilla corruptea*. [Gr., *chamaimelon*, earth apple, so called from the smell of its flowers.]

champagne (cham-payn'). A white wine made effervescent by being fermented in the bottle, usually containing about 11 per cent. of alcohol. The well-known c. of commerce is made in the neighborhood of Rheims, France, but much c. is made in the United States. [Fr.]

chancre (shank'er). The primary lesion of syphilis. The types of chancere are: *eroded, ulcerated, indurated*. In situation, they are usually *genital*; infrequently they are *extragenital*, when situated elsewhere on the body than on the genital organs.

hunterian c. A syphilitic c. when attended with marked induration and ulceration; the only form of syphilitic c. described by John Hunter. **syphilitic c.** The local manifestation of syphilitic infection at the site of its inoculation, characterized by a circumscribed induration. [Fr., *chancere*, anything that consumes.]

chancroid (shank'roid). A specific, local, contagious, auto-infectious, venereal ulcer, or that form of contagious venereal ulcer which is not accompanied by constitutional syphilitic infection. [Fr., *chancere*, primary lesion, + Gr., *eidos*, appearance.]

chan'nel. 1. That through which anything flows. 2. A long narrow groove or furrow. [Mid. Eng., *chanel*, fr. Lat., *canalis*, groove, trench, pipe.]

chap. 1. To crack open. 2. A rift or crack in the skin or lips generally due to cold.

characteristic (kar-ak-ter-is'tik). 1. Serving to distinguish or mark as distinct. 2. As a n., a distinguishing mark, a part or attribute of a thing which distinguishes it from other things. **secondary sexual c's.** Those features which, while not reproductive organs, are presumptive signs of sex. [Lat., *characteristicus*.]

charas (kar'as). The native name for the resinous exudation from *Indian cannabis*.

charbon (shar-bon'). Another name for *anthrax*. See *anthrax*. [Fr., *charbon*, coal.]

char'coal. The residual matter left after heating organic material (wood or bone) to a high temperature with access to air. It consists chiefly of elementary carbon. Used as a decolorizing agent. **wood c.** A form of elementary carbon prepared by heating wood in the absence of air. It contains, beside the carbon, some inorganic salts.

Charcot-Leyden crystals in sputum, how to recognize; see in *appendix*, page 902.

Charcot's disease (shar'ko). Amyotrophic lateral sclerosis. [*Jean Martin Charcot*, French neurologist, 1825-1893.]

charlatan (shar'lat-an). One who practises either medicine or pharmacy illegally, or, being a legally qualified practitioner, resorts to vulgar devices for obtaining practice, as by advertisements, public exhibitions, etc. A quack. [Said to be from It., *ciarlare*, to prate.]

char'latanism, char'latany. A collective term for the practices of a charlatan, also the condition of being a charlatan.

Charles's law. A l. which states that when the pressure is constant the volume of a gas varies as the absolute temperature. [*Charles*, Fr. physicist, eighteenth century.]

charpie (shar'pē or shar-pē'). Raveled or scraped linen or cotton for dressing wounds. [Fr., *charpie*.]

charta (kar'tah), pl. *chartae*. 1. A class of preparations official in the U. S. Ph. and Br. Ph., consisting of paper imbued or spread with medicinal substances, intended either for external application or for purposes of fumigation. Mustard paper is the only member of this class official in the U. S. Ph. or the Br. Ph. 2. A folded paper containing a medicinal powder. [Lat., *charta*, a sheet of paper.]

chartaceous (char-ta'shus). A term employed in descriptive bacteriology to denote a texture like that of paper.

chartreuse (char-trews'). A liqueur made formerly by the Carthusian monks at La Grande Chartreuse, now at Tarragona, Spain. Its composition is not generally known but it is thought to contain brandy, orange peel, peppermint and other herbs. There are three varieties, green, yellow and white. [Fr.]

char'tula. A little paper; in prescriptions, a powder, i. e., a paper containing a medicine in the form of powder, usually a single dose. **c. cerata**. A powder wrapped in wax paper. [Lat. dim. of *charta*.]

chasma (kaz'mah). Spasmodic yawning. [Gr., *chasma*, from *chainein*, to yawn.]

Chaulmoogra (chawl-moo'grah). 1. *Gynocardia odorata*. 2. Of Roxburgh, a genus now referred to *Gynocardia*. **C. odorata**.

c. oil. An oil obtained from the seeds of *Gynocardia odorata*; a yellow, oily, acid liquid, of repulsive odor and taste, containing palmitic and gynecardic acids. It has been used internally in leprosy and other cutaneous affections.

chavicin (chav'is-in). An amorphous alkaloid obtained from black pepper.

chebula (cheb'u-lah). The fruit of *Terminalia chebula*. See *myrobalan*.

check. 1. A means of stopping or limiting an action or a process, e. g., a hemorrhage, a diarrhea. 2. To verify an experiment by a repetition.

check'erberry. A synonym for *Gaultheria procumbens*.

check (chēk). The side of the face below the eye. [B. N. A., *bucca*.] [Ang.-Sax., *ceāce*, from *ceōwan*, to chew.]

cheese. A foodstuff prepared from milk; consists mainly of casein and some fat which may be altered chemically by the action of enzymes. [Lat., *caseus*.]

cheilitis (ki-li'tis). Inflammation of lip. [Gr., *cheilos*, lip + *itis*, inflammation.]

cheioplasty (ki'lo-plas-te). Correction by surgical operation of deformities of lips. [Gr., *cheilos*, lip + *plassein*, to mold.]

Cheiracanthus siamensis (ki-ra-kan'thus si-am-en'sis). See *Gnathostoma Spinigerum*.

cheirology (ki-ro'l'o-je). A method of conversing with the hands used by the deaf and dumb; to be distinguished from dactylogy. [Gr., *cheir*, hand, + *logos*, understanding.]

cheiropodist. See *chiropodist*.

cheiropompholyx (ki'ro-pom'fo-lix). Another name for *pompholyx*.

chelen (ke'len). A name for ethyl chlorid.

chelidonin (ke-lid'on-in). An alkaloid, $C_{10}H_{17}N_3O_3 + H_2O$, or $C_{20}H_{16}NO_5$, or $C_{19}H_{17}NO_4$, obtained from *Chelidonium majus*; not poisonous.

Chelidonium (ke-le-do'ne-um). 1. A name applied to several plants, e. g., *C. majus*, *Bryonia alba*, and *Ranunculus ficaria*. 2. Of the U. S. Ph., 1890, the herb of *C. majus*. *C. majus*. Greater celandine; a perennial herb growing throughout Europe and introduced in America. The herb has been employed for various conditions. It is a cathartic, a strong local irritant, and a narcotic.

cheloid (ke'loyd). See *keloid*. [Gr., *chele*, claw + *eidos*, resemblance.]

chelone (ke'lone). Balmony; dried herb of *Chelone glabra*. Of little value.

chemical. Of or pertaining to chemistry; as a n., a substance used in chemistry.

c. examination of cerebrospinal fluid, see in *appendix*, page 909. **c. examination of stomach contents,** see in *appendix*, page 904.

chemist (kem'ist). 1. One skilled in chemistry; one who makes chemical researches. 2. In England, also an apothecary.

chemistry (kem'is-try). Science which treats of composition of bodies and of such of their properties as depend upon their composition and upon character and arrangement of their ultimate elementary parts (atoms), and of transformation of one substance into another. There are two main divisions of c.: **inorganic**, and **organic** (of carbon derivatives). There is also a division based upon its application to certain special purposes, as an **agricultural c.**; **analytical c.**; **biological c.**; **electro-c.**; **industrial c.**, or **technical c.**; **micro-c.**; **pathological c.**; **pharmaceutical c.**; **physical c.**; **physiological c.**; and **symbolical c.** [Gr., *chemeia*, alchemy, chemistry.]

chemoceptor (kem-o-sep'tor). One of the side chains or receptors in a living cell, having an affinity for and fixing the chemical substances or drugs.

chemolysis (kem-ol'is-is). Chemical decomposition. [Gr., *chemeia*, chemistry + *lysis*, a solution.]

chemosis (ke-mo'sis). Edema of ocular

conjunctiva with or without inflammation. [Gr., from *cheme*, a cockleshell.]

chemotaxis (kem-o-tack'sis). The property of cellular attraction or repulsion due to the effect of certain chemical agents. Bacteria or their dead protein products will attract the leukocyte, and will even cause it to emigrate from the vessel into the tissues. **negative c.** The force which repels cells, as when lactic acid or quinin in capillary tubes will repel leukocytes. **positive c.** The force which attracts certain cells to other substances, as bacteria. [Gr., *chemeia*, chemistry, + *taxis*, an arranging.]

chemotherapy (kem-ö-ther'ä-pi). Treatment based upon effect of various chemicals upon tissues of body and organisms that infect it.

chemotropism (kem-ot'ro-pizm). Chemotaxis between bacteria and phagocytes resulting in the destruction of the bacteria or the phagocyte. [Gr., *chemeia*, chemistry + *trope*, a turn.]

chenopodin (ken-op'o-din). A neutral bitter principle obtained from *Chenopodium album*.

Chenopodium (ken-o-po'de-um). 1. The goose foot, a genus of chenopodiaceous plants. 2. The fruit of *C. ambrosioides*, var. *anthelminticum*. **C. ambrosioides.** An annual herb growing through the United States. **oil of c., oleum chenopodii.** Oil of American wormseed; a volatile oil obtained by distilling the fruit of *C. ambrosioides*, var. *anthelminticum*, employed chiefly as a vermifuge, being used especially for lumbricoid worms. [U. S. Ph.] [Gr., *chen*, a goose + *podion*, a little foot.]

chest. See *thorax*. **barrel c.** A peculiar shape of the c., observed in old cases of pulmonary emphysema, in which the c. becomes barrel-shaped and moves up and down as if made of one piece, instead of expanding laterally. [Ang.-Sax., *cest*, a box.]

Cheyne-Stokes respiration. A condition in which the respirations increase in rapidity and intensity to a climax and then fall off to a complete cessation, giving therefore a form of periodic respiration in which there are periods of apnea alternating with periods of dyspnea. [John Cheyne, Scotch physician, 1777-1836; William Stokes, Irish physician, 1804-1878.]

Chian turpentine (ki'an). An exudation from *Pistacia terebinthus*, a tree growing in Asia Minor. [Chios, an island off the coast of Asia Minor, near Smyrna.]

chiasm (ki'azm). A crossing or decussation of two tracts as of tendons or nerves. **optic c.** The optic commissure, consisting of a decussation of the two optic tracts in front of the tuber cinereum. The decussation is said to be complete in most animals, but in man some of the fibers of each tract do not cross over to be continuous with the opposite optic nerve, but either pass across to enter the opposite tract or are continuous with the nerve of the same side. [Gr., *chiasma*, from *chiazein*, to mark with the letter X.]

- chiasma** (ki-as'mah). A crossing or discussion. **c. nervi optici, c. nervorum opticozum, c. opticum.** See *chiasm*. [Gr., *chiasma*, the letter X.]
- chlastom'eter** (ki-as-tom'et-er). An instrument devised by Landolt for determining the distance between the two eyes during the act of convergence. [Gr., *chastos*, arranged diagonally + *metron*, a measure.]
- chick'en.** The young of the domestic fowl (*Gallus domesticus*). **c.-breasted.** Affected with a deformity of the chest characterized by prominence of the sternum with lateral flattening. **c. broth.** A broth made by boiling the flesh and bones of a fowl. **c. pox.** See *varicella*.
- chicle** (che'kla). A substance somewhat resembling gutta percha, obtained from *Achras sapota*, and used largely in the manufacture of chewing gum. [Span.]
- chig'ger.** See *chigoe*. **c. button.** The papule produced by the bite of the chigger.
- chigoe, chigre** (che'go, che'gre). Syn.: *Dermatophilus penetrans, Pulex penetrans*. A blood-sucking insect of the class *Diptera*, the family *Sarcophsyllidae*, and the genus *Dermatophilus*. The species is *Dermatophilus penetrans*, which is prevalent in the tropics and lives, as fleas, on sandy soil. They burrow beneath the skin of human beings, producing pus formation, ulceration, and various secondary infections.
- chil'blains.** Another name for *pernio*. Persistent patches of erythema with tenderness and burning and itching on the heels and borders of the feet, also, less frequently, on the nose and ears, due to exposure to cold. [Ang.-Sax., *cele*, cold + *blægen*, a boil.]
- child'bed.** The state of lying-in; the confinement incident to parturition.
- child-crowing.** See *laryngismus stridulus*.
- child'hood.** The state of being a child, of not having arrived at puberty, as distinguished from infancy; the period between the completion of the first dentition and the establishment of puberty. **second c.** The period of the childishness of old age.
- chill.** A paroxysm of shivering with a sensation of coldness accompanied by a rise of internal temperature and followed by a period of sweating. **ague c., c's and fever.** See *intermittent fever*, under *fever*. **congestive c.** A term loosely applied to any malarial fever of unusual severity. **dumb c.** See *latent ague*, under *ague*. [Ang.-Sax., *cyle, cele*.]
- chiloplasty** (ki'lo-plas-ti). Operative repair of defects or malformations of the lip. [Gr., *cheilos*, lip + *plassein*, to mold.]
- Chimaphila** (chim-af'il-ah). 1. A genus of ericaceous herbs indigenous to Europe, North America, Japan, and Korea. 2. Of the U. S. Ph., the leaves of *C. umbellata*. **C. umbellata.** Prince's pine, pipissewa, growing in Canada and the United States. The leaves are employed as a diuretic, especially in chronic cystitis, and as an alternative. The fluidextract is official. [Gr., *cheima*, winter, + *philein*, to love.]
- chimaph'ilin.** A crystalline principle obtained from the leaves of *Chimaphila umbellata*.
- chin.** The point of the mandible below the mouth. [B. N. A., *mentum*.] [Ang.-Sax., *cin*, jaw.]
- chin-.** For words beginning with *chin-*, see also those words spelled with the prefix *quin-*.
- chi'na** (ki'nah). 1. Of Sydenham, the *Smilax c.* of Linnaeus. 2. Cinchona; a term used especially by German authors.
- chinaphenin** (kin-af-en'in). Phenetidid quinain carbonate, $C_{20}H_{33}N_3O_4$. It combines the analgesic and antipyretic actions of its constituents.
- chi'na root.** The rhizome of *Smilax china*, resembling sarsaparilla.
- chinaseptol** (kin-as-ep'tol). See *diaphthol*.
- chin-cough.** Formerly written *kink-cough*, from Scottish *kink*, a violent paroxysm of coughing. A popular term for whooping-cough, especially in Scotland.
- chinin** (ki'nin). See *quinin*.
- chinium** (kin'e-um). The crude quinin of the German market.
- chinoidin** (kin-oid'in). A mixture of impure alkaloids left after the crystallization of quinin from the extract of cinchona, now rarely used therapeutically.
- chinosol** (kin'o-sol). Normal oxychinolin sulphate, $(C_6H_7ON)_2H_2SO_4$, a proprietary antiseptic, but not markedly germicidal.
- chinovin** (kin'o-vin). Quinovin.
- Chionanthus** (ki-o-nan'thus). A genus of oleaceous plants. **C. trifida, C. virginiana, C. virginica.** The fringe tree, poison ash, mist tree, Virginia snow flower; a shrub or small tree of the southern United States. The bark has been used as an aperient and diuretic. [Gr., *chion*, snow + *anthos*, a flower.]
- Chionyphe Carteri** (ki-on'if-e kar'ter-i). A fungus which is said to cause madura foot.
- chirata, chiretta** (ki-ra'tah, ki-ret'tah). 1. *Swertia chirayita*; in the U. S. Ph., and Br. Ph., the herb of this plant. 2. The genus *Chirita*. The fluidextract of c. is official in the U. S. Ph. [Hind. *chirraeta*.]
- chirathodendron** (ki-ra-tho-den'dron). An American species of gentian used as an antipyretic.
- chiratin, chirettin** (ki-ra'tin, ki-ret'tin). A principle, $C_{26}H_{48}O_{15}$, found in *Ophelia* (*Swertia*) *chirayita*.
- chiro-, chir-**. Combining form of Gr., *cheir*, hand, coming through the Lat.; used as a prefix in compound words to denote of or pertaining to the hand.
- chiropodist** (ki-rop'o-dist). A non-medical person who treats corns, bunions, ingrowing toe nails, and trims and polishes the toe nails. Technically, one who treats both the hands and the feet. [Gr., *cheir*, hand, + *pous, podos*, foot.]
- chiropody** (ki-rop'o-de). The occupation of a chiropodist.
- chiropactic** (ki-ro-prak'tik). A system of medicine founded upon hypotheses concerning the reaction of the nervous sys-

- tem to manipulation at the spinal roots.
- c. thrust.** The special manipulation of the c. practitioner. [Gr., *cheir*, hand, + *prassein*, to act.]
- chitenidin** (ki-ten'id-in). An alkaloid, $C_{10}H_{22}N_2O + 2H_2O$, formed by the oxidation of quininin.
- chitin** (ki'tin). The chief organic constituent of the shell of invertebrates. Of complicated structure; upon being boiled with acids, it yields, mainly, glucosannin and acetic acid. [Gr., *chiton*, tunic.]
- chitonitis** (ki-ton-i'tis). Inflammation of an investing membrane. [Gr., *chiton*, a tunic + *itis*, inflammation.]
- chitosamin** (ki-to-sam'in). See *glucosamin*.
- chitose** (ki'tös). A carbohydrate prepared from glucosamin (chitosamin), by the action of nitrous acid.
- chittin bark.** See *Rhamnus purshiana*.
- Chlamydbacteriaceae** (klam'id-o-bak-ter'i-a'se-e). The fourth subdivision or family of the bacteria, according to Migula, including cells in a sheath with or without branches or sulphur granules. [Gr., *chlamys*, cloak + *bacteria*.]
- chlamydospore** (klam'id-o-spör). Asexual globular spores covered by a thick membrane being found on many fungi either terminal or intramycelial. [Gr., *chlamys*, cloak + *spore*.]
- chloasma** (klo-az'mah). Patches of excessive pigmentation of the skin. The condition is (a) *idiopathic*, when due to external agencies as exposure to heat, sunlight, x-rays, irritating drugs, or mechanical irritation or (b) *symptomatic*, when it occurs in the course of certain diseases, as Addison's disease, secondary syphilis, utero-ovarian disease, malaria, and cancer.
- c. uterinum.** C. due to pregnancy or to disease of the genital apparatus in women. [Gr., *chloazein*, to be green.]
- chlor-, chloro-.** Combining form of chlorin, also of the Gr., *chloros*, green, pale green; used as a prefix in compound words.
- chloracetic** (klor-as-e'tik). Acetic and containing chlorin. **c. acid.** See under *acid*.
- chloracetone** (klor-as'e-tön). A compound formed from acetone by the substitution of chlorin for hydrogen.
- chloral** (klo'ral). Trichloroacetic aldehyd, $Cl_3C.CHO$. A colorless liquid of penetrating odor, boils at 97° C. Prepared by the action of chlorin upon ethyl alcohol. Soluble in water, in alcohol, in ether, and in chloroform. It also forms many substitution products by the replacement of its oxygen. The *hydrate*, formed by replacing the oxygen by two molecules of hydroxyl, is the compound used in medicine and is the c. hydrate of the U. S. Ph. and the Br. Ph. This is commonly, though erroneously, called "chloral." List of poisons and their antidotes, see in *appendix*, page 938. **amylenic c.** A compound known by the trade name of "dormiol," a hypnotic. **anhydrous c.** Ordinary c., as distinguished from c. hydrate. **camphorated c., camphor c.** (*chloral camphoratum*, N. F.) A mixture of c. hydrate and camphor; a clear liquid used internally and topically as a sedative and anodyne. **c. alcoholate.** A substance formed by the union of absolute alcohol and c. It is nearly insoluble in water and in this respect differs from c. hydrate. Its therapeutic properties are analogous to those of the hydrate; but on the whole it is inferior. **c. ammonia.** A body produced by the action of ammonia on strongly cooled c. **c. cyanhydrin.** See *c. hydrocyanid*. **c. hydras** [Br. Ph.]. **chloralum hydratum** [U. S. Ph.]. Hydrated c., hydrate of c. A compound $C_2H_3Cl_3O_2 = CCl_3.CH(OH_2)$, of c. and hydroxyl; formed by mixing c. with water. It occurs as distinct acicular crystals or crystalline plates, white in color, with a pungent odor and an acrid taste; very soluble in water, soluble also in absolute alcohol. When treated with alkalis, it is decomposed into chloroform and formic acid. It is a reliable hypnotic, but a weak sedative. In large doses it is poisonous by its paralytic action upon the heart and vasomotor centers. Locally, it is an irritant; hence it should be given largely diluted. **c. hydrocyanid.** Syn.: *c. cyanhydrin*. A crystalline substance, $C_2H_3Cl_3NO = CCl_3.CH(OH)CN$, formed by the action of hydrocyanic acid upon hydrate of c. On account of its stability and constancy of composition, it has been recommended as a substitute for hydrocyanic acid in medicine. **croton c.** See *butylchloral*. **syrup of c., syrupus c.** A preparation containing about 20 per cent. of hydrated chloral in syrup. [Br. Ph.] [*Chloro-* + *alcohol*.]
- chloralamid** (klo-ral-am'id). A trade name applied to the official *chloralformamidum*.
- chloralantipyrin** (klo'ral-an-te-pi'rin). A hypnotic compound of chloral and antipyrin.
- chloralbin** (klo-ral'bin). A crystalline substance, $C_8H_6Cl_2$, contained in trichlorophenol, prepared by passing chlorin through coal tar.
- chloralcarbamid** (klo-ral-kar-bam'id). A hypnotic mixture of hydrate of trichloraldehyd and carbamid.
- chloraldehyd** (klor-al'de-hid). A chlorin substitution compound of aldehyd.
- chloralformamid** (klo-ral-form-am'id). Chloralformamidum [U. S. Ph.]. A compound of chloral and formamid. It is analgetic and hypnotic.
- chlo'ralism.** 1. The state of being under the influence of chloral. 2. Chronic poisoning with chloral; a morbid state produced by the prolonged or habitual use of moderate doses of chloral.
- chloralose** (klo'ral-ös). A compound prepared by the chemical condensation of chloral and glucose.
- chloraloxim.** A compound of chloral with an oxim.
- chloral'um.** A commercial term for impure aluminum chlorid mixed with various sodium and calcium salts; used as a disinfectant.

chloranilin (klor-an'il-in). Syn.: *chlora-midobenzene*. A chlorin substitution compound of anilin.

chlorate (klo'rât). A salt of chloric acid.

chlorated (klo'ra-ted). Containing or combined with chlorin; chlorinated.

chloraurid (klor-au'rid). Gold chlorid.

chloraazol (klo'rah-zol). An acrid and pungent fluid obtained by the solution of substances containing protein in fuming nitric acid, and then distilling with concentrated hydrochloric acid. It is very volatile, attacks the sight and operates as a poison. Empirical formula: $C_4H_3Cl_3-N_2O_4$.

chlorbenzene (klor-ben'zēn). A chlorin substitution product of benzene. The c's are *monochlorbenzene*, *dichlorbenzene*, *trichlorbenzene*, *tetrachlorbenzene*, *pentachlorbenzene*, and *hexachlorbenzene*.

chlorbenzoyl (klor-ben'zoyl). A univalent radicle, $Cl.C_6H_5.CO$.

chlorbromid (klor-bro'mid). A compound of a radicle with chlorin and bromin.

chlorbutanol. Trichlortertiary butylalcohol ($C_4H_7OCl_3$), chloritone. White crystals of a camphorlike odor and taste, volatile and soluble in water. It is said to be absorbed unchanged from the alimentary tract and to be decomposed in the body. It is a local anesthetic, the action being weaker than that of cocain. Used internally it acts on the central nervous system like chloral.

chlorcaffein (klor-kaf'fe-in). A chlorin substitution product of caffein, $C_8H_9ClN_4O_2$.

chlorcamphor (klor-kam'for). Syn.: *monochlorcamphor*, *monochlorated camphor*. A substitution product of camphor and chlorin, $C_{10}H_{16}ClO$.

chlorephidrosis (klo'ref-id-ro'sis). A condition in which the perspiration is green. [Gr., *chloros*, green + *ephidrosis*, perspiration.]

chlorethane (klor-eth'ân). 1. A chlorin substitution compound of ethane. 2. Monochloroethane, $ClCH_2.CH_3$.

chlor ether (klor-e'ther). A chlorin substitution compound of ethyl ether.

chlor ethyl (klor-eth'il). A radicle consisting of ethyl in which chlorin replaces hydrogen.

chlor ethylene (klor-eth'il-ēn). A substitution compound of ethylene in which one or more atoms of hydrogen are replaced by chlorin.

chlor'etone. A trade name given to chlorbutanol.

chlorhydrate (klor-hi'drât). A hydrochlorid.

chlorhydric (klor-hi'drick). Hydrochloric.

chloric (klor'ik). Containing or combined with chlorin (usually restricted to compounds containing chlorin united with oxygen, and to those which are combined with a greater amount of that element than occurs in chlorous compounds). c. **acid**. See under *acid*. [Lat., *chloricus*.]

chlorid (klo'rid). A compound consisting of an element or radicle combined directly with chlorin.

chlorimetry (klor-im'et-re). Syn.: *chlorometry*. The determination of the bleaching power of a chlorin compound; the estimation of the amount of available chlorin in such a compound. [Chlorin + Gr., *metron*, a measure.]

chlorin (klo'r'in). A non-metallic element, discovered by Scheele in 1774. It is a greenish yellow transparent gas, having an intensely irritant, disagreeable, suffocating odor. It is heavier than air, soluble in about one-half its volume of water. Many compounds containing c. are known. Symbol Cl. Atomic weight 35.46. Free c. is available as c. water, as chlorinated lime, and in the form of a solution of hypochlorites. List of poisons and their antidotes, see in *appendix*, page 0000. c. **water**. A saturated solution of chlorin in water. [Gr., *chloros*, green.]

chlorinated (klor'in-a-ted). Also written *chlorated*. Containing or combined with chlorin.

chlorite (klo'rit). A salt of chlorous acid. **chloromethane** (klor-meth'ân). 1. A substitution compound of methane and chlorin. 2. Monochloromethane, $Cl.CH_3$, a gas formed by treating methane with chlorin.

chlor methyl (klor-meth'il). A univalent radicle, $Cl.CH_2$.

chloro-. Comb. form of Gr., *chloros*, green, used in compound words to signify of a green color, also as the stem of chlorin in compound words.

chloro-acetate (klo-ro-as'et-ât). A salt of chloracetic acid.

chlorobrom. A hypnotic solution of chloralimid and potassium bromid in water.

chlorodyne (klo'ro-din). Apparently a contraction for *chloroform anodyne*. An English proprietary anodyne preparation said to consist of morphin, chloroform, cannabis indica, hydrocyanic acid, and one or more volatile flavoring and carminative principles, together with syrup or molasses.

chloroform (klo'ro-form). Syn.: *trichloromethane*; *trichlorid of methyl*. C_3HCl_3 , a clear, colorless liquid of peculiar pleasant odor and sweetish burning taste. Almost insoluble in water; soluble in alcohol and ether. Boiling point $61.5^\circ C$. An excellent organic solvent. Specific gravity at $15^\circ C$. varies between 1.485 and 1.500, according to the amount of alcohol it contains. It is widely used as an anesthetic. List of poisons and their antidotes, see in *appendix*, page 938. [Lat., *chloroformum*, U. S. Ph., Br. Ph.]

chlor'ol. A disinfectant and antiseptic solution of corrosive sublimate, sodium chlorid, hydrochloric acid, and copper sulphate.

chlor'olin. An antiseptic solution containing trichlorphenol.

chloronaph'thol. A disinfectant preparation said to contain creosote.

chloropercha (klo-ro-per'chah). A solution of gutta-percha in chloroform; used in dentistry as a waterproof, transparent, and non-conducting medium.

chlorophenylacetamid (klo''ro-fe''nil-as-et-am'id). A substitution compound of phenylacetamid and chlorin in which one or more atoms of the latter replace hydrogen in the former.

chlorophyll (klo''ro-fil). The green coloring matter in the leaves of plants. [Gr., *chloros*, green, + *phyllon*, leaf.]

chloroplas'tid. A granule in which the chlorophyll of plants is contained.

chloropsia (klo-rop'se-ah). Green vision; observed generally in neurasthenic conditions. [Gr., *chloros*, green, + *opsis*, vision.]

chlo'rosarco'ma. Green cancer.

chlorosin (klo''ro-sin). A chlorin compound of albumin.

chlorosis (klo-ro'sis). Green-sickness; a form of anemia observed usually in girls from 12 to 20 years of age. The blood picture is that of secondary anemia, but often no cause whatever can be discovered and therefore it has been regarded as a mild primary anemia. The hemoglobin of the blood is reduced in amount out of proportion to the diminution of the red blood cells. **c. tropicae**. See *ankylostomiasis*. [Gr., *chlorizein*, to be of a pale-green or yellow color.]

chloro'tic. Pertaining to or affected with chlorosis.

chlorous (klo'rus). Containing or combined with chlorin; usually restricted to compounds which contain chlorin united with oxygen, and combined with less of the latter element than is the case with the chloric compounds. **c. acid**. See under *acid*.

chlorozone (klo''ro-zōn). A substance of unknown chemical constitution formed by passing nascent chlorin mixed with air into a solution of caustic soda; a clear, yellowish liquid of a peculiar odor, acting as a marked disinfectant and bleaching agent.

chlorphenol (klor-fe'nol). 1. A generic term for any of the chloro substitution products of phenol. 2. Monochlorophenol, $\text{ClC}_6\text{H}_4\text{OH}$. An antiseptic; used also as an inhalent in respiratory diseases.

chlorpicrin (klor-pick'rīn). Nitrochloroform, NO_2CCl_3 . A colorless liquid, produced by the action of nitric acid on chloral.

chlorquinone (klor-quin'ōn). A chlorin substitution compound of quinone.

chlortoluene (klor-to'l'u-ēn). A chlorin substitution product of toluene.

chlo'rum. Chlorin. *aqua chlori*. See *chlorin water* under *chlorin*. *vapor chlori*. A preparation made of 2 oz. of chlorinated lime and a sufficiency of cold water, by putting the powder into a suitable apparatus, moistening it with the water, and letting the vapor that arises be inhaled.

chloryl (klo'rīl). A mixture of methyl chlorid and ethyl chlorid, used as a local anesthetic.

choana (ko-ah'nah). Pl. *choanae*. 1. A funnel or any funnel-shaped cavity (the infundibulum of the brain, the orbit, the

pelvis, etc.) 2. In the pl. *choanae* [B. N. A.] see *posterior nares*, under *nares*. [Lat. from Gr., *choale*, funnel, from *chein*, to pour.]

choc'olate. A preparation made by grinding the roasted seeds of cacao, mixing the powder while warm with its own weight of sugar, and, as a rule, flavoring the mass with cinnamon, vanilla, or some other aromatic. Occasionally various amylaceous or mucilaginous substances are added. [Span. fr. Mex., *choco*, cacao + *lall*, water.]

choked. Obstructed, stifled, engorged. **c. disk**. See under *disk*.

chol-, chole-. Combining form of Gr., *chole*, bile; used as a prefix in compound words.

chola (ko'lah). See *bile*. [Gr., *chole*.]
cholagogue (ko'lah-gog). A medicine which produces a flow of bile. [Gr., *chole*, bile, + *agein*, to lead.]

cholangiostomy (ko-lan-je-os'to-me). The formation of a fistula between the biliary passages and the skin of the abdomen. [Gr., *chole*, bile, + *ageion*, vessel, + *stoma*, opening.]

cholangiostomy (ko-lan-je-o'to-me). Incision into a bile duct for the removal of stone. [Gr., *chole*, bile, + *ageion*, vessel, + *temnein*, to cut.]

cholangitis (ko-lan-ji'tis). Inflammation of the bile ducts. [Gr., *chole*, bile, + *ageion*, a vessel, + *itis*, inflammation.]

cholate (ko'le-āt). A salt of cholic acid.
cholecyst (ko'le-sist). The gall-bladder. [Gr., *chole*, bile, + *kystis*, cyst.]

cholecystectasia (kol''e-sis-tek-ta'se-ah). Distention or dilatation of the gall-bladder. [Gr., *chole*, bile, + *kystis*, cyst, + *ektasis*, extension.]

cholecystectomy (ko'le-sis-tek'to-me). Partial or complete removal of the gall-bladder. [Gr., *chole*, bile, + *kystis*, bladder, + *ektome*, excision.]

cholecystenterostomy (ko'le-sist-en-ter-os'to-me). The operation of establishing a communication between the gall-bladder and the intestine for the relief of obstruction of the common bile duct. [Gr., *chole*, bile, + *kystis*, bladder, + *enteron*, bowel, + *stoma*, aperture.]

cholecystitis (ko-le-sis-ti'tis). Inflammation of the gall-bladder. [Gr., *chole*, bile, + *kystis*, bladder, + *itis*, inflammation.]

cholecystorrhaphy (ko-le-sis-tor'ra-fe). Cholecystostomy with subsequent suture of the gall-bladder. [Gr., *chole*, bile, + *kystis*, bladder, + *raphe*, suture.]

cholecystostomy (ko-le-sis-tos'to-me). The operation of making a permanent opening into the gall-bladder through the wall of the abdomen. [Gr., *chole*, bile, + *kystis*, bladder, + *stoma*, aperture.]

cholecystotomy (ko-le-sis-tot'o-me). Incision of the gall-bladder through the abdominal walls for the removal of stone or for drainage. [Gr., *chole*, bile, + *kystis*, bladder, + *temnein*, to cut.]

choledochitis (ko-led-o-ki'tis). Inflammation of the ductus communis choledochus.

choledochus (ko-led'o-kus). Receiving

bile. See *ductus communis* under *ductus*. [Gr., *choledochos*, from *chole*, bile, + *dechesthai*, to receive.]

cholelith (ko'le-lith). A biliary calculus. [Gr., *chole*, bile, + *lithos*, a stone.]

cholelithiasis (kol-e-lith-i'as-is). The presence of a calculus or a concretion of inspissated bile in the gall-bladder or gall-duct. [Gr., *chole*, bile, + *lithiasis*.]

cholelithotomy. Operative removal of a gall-stone. [Gr., *chole*, bile, + *lithos*, stone, + *tome*, incision.]

cholemia (ko-le'me-ah). A condition in which bile or some of its elements have accumulated in the blood, especially icterus gravis. **hematogenous c.** See *hematogenous jaundice*. **hepatogenous c.** See *hepatogenous jaundice*. [Gr., *chole*, bile, + *aima*, blood.]

cholepoiesis (ko-le-poi-e'sis). The process or function of the making of bile. [Gr., *chole*, bile, + *poiesis*, a making.]

cholepyrrhin (ko-le-pir'in). See *bilirubin*.

cholera (kol'er-ah). Any condition characterized by repeated simultaneous purging and vomiting, with painful spasms of the stomach and bowels and occasional cramps of the external muscles. As commonly used, the term means Asiatic c. **algid c.** See *Asiatic c.* **Asiatic c.** An acute infectious disease, indigenous to India, China, or eastern Asia, whence it is sometimes conveyed to other places in the form of destructive epidemics, due to the ingestion of the specific microorganism *Spirillum cholerae asiaticae*, or comma bacillus. The disease is characterized by vomiting and purging, the discharges resembling rice water; by painful cramps; and by the early occurrence of collapse with suppression of urine and a peculiar coldness of the breath. **bilious c.** A form of simple c. (*q. v.*) characterized by purging, vomiting of bile, and spasms of the lower extremities. **chicken c.** A disease affecting chickens, resembling Asiatic c. in its symptoms; according to Hueppe, a variety of septicemia identical with rabbit's septicemia. **c. bacillus.** See *Spirillum cholerae asiaticae*, under *Spirillum*. **c. cells.** Various fungi found in choleraic dejecta. **c. gallinarum.** See *chicken c.* **c. infantum.** An American name for an acute gastro-intestinal disease of infants, characterized by profuse watery diarrhea with vomiting and tending to end speedily in death by collapse. **c. morbus.** Syn. *European c.*, *simple c.* The term in common use for severe purging and vomiting from any cause. **c. nostras.** See *c. morbus*. **c. red.** A reaction consisting of a red or pink color, appearing when 5 drops of pure sulphuric acid are added to a 24-hour culture of the *Spirillum cholerae*. **c. torpida.** Asiatic c. in which muscular weakness is marked. **c. typhoid.** The secondary fever of Asiatic c.; a condition resembling typhus. **European c.** See *c. morbus*. **hog c.** Syn.: *swine plague*. A disease of hogs which first appeared in the United States in 1860. Its symp-

toms are a macular and papular eruption of the skin, high fever, drooping of the ears and head, coughing, with accelerated respiration and dyspnea, and a staggering gait. There is usually constipation, but sometimes diarrhea, with abdominal tenderness, rapid emaciation, and progressive debility. The excrement has a peculiar color and a peculiar, offensive odor. **simple c.** See *c. morbus*. [Gr., *chole*, bile, + *rein*, to flow.]

chol'eric. 1. Abounding in cholera or bile. 2. Easily excited to anger.

cholérine (kól'ér-én). 1. A mild form of cholera, closely resembling Asiatic cholera. 2. Earliest stage of epidemic cholera.

choleroïd (kol'er-oyd). Resembling cholera. [Gr., *cholera*, cholera, + *eidōs*, resemblance.]

cholero-phobia (kol'er-o-fo'be-ah). An exaggerated dread of cholera. [Gr., *cholera*, cholera, + *phobos*, fear.]

cholestearilin (ko-les'te-ar'il-in). A gaseous compound, formed by the action of strong sulphuric acid on cholesterolin.

cholesteatoma (ko-les-te-a-to'mah). Pl, *cholesteatomata*. A form of cystic tumor, containing small hairs and crystals of cholesterolin. It occurs most frequently in the pia mater of the brain and sometimes in the subcutaneous areolar tissue. Under the microscope the contents show a laminated layer of flat, round, or polygonal cells, generally non-nuclear. [Gr., *chole*, bile, + *steatoma*, a sebaceous tumor.]

cholesteremia (kol-es-ter-e'me-ah). A morbid condition attributed to the accumulation of cholesterolin in the blood; hematogenous jaundice. [Gr., *chole*, bile, + *stear*, stiff fat, + *aima*, blood.]

cholesterin (ko-les'ter-in). $C_{27}H_{48}O$, a fatlike substance occurring in the form of square, scaly crystals with notched corners insoluble in water, soluble in alcohol, found regularly in the blood, the brain and nerves, the crystalline lens, and the liver and spleen. It is excreted by liver with bile, forming from 0.1 to 0.2 per cent. of the latter secretion and also forming a large part of gall-stones. [Gr., *chole*, bile, + *stereos*, stiff, solid.]

cholesteritis (ko-les-ter-i'tis). A variety of synchysis attributed to crystals of cholesterolin detached from the crystalline lens and floating in the aqueous or vitreous humor.

choletelin (ko-let'e-lin). A final product in the process of oxidation of bilirubin. [Gr., *chole*, bile, + *telos*, end.]

choletin (ko-let'in). Final product in the process of exudation of bilirubin.

cholic (ko'lick). Of, or pertaining to, bile. [Gr., *chole*, bile.]

cholin (ko'lin). A ptomain present in normal cells as the nitrogenous portion of the lecithin molecule. It is slightly toxic, but by being converted into neurin in the intestinal tract it may cause food intoxication.

cholochrome (ko'lo-krôm). Any biliary pigment.

choluria (ko-lu're-ah). The presence of

- elements of bile in the urine. [Gr., *chole*, bile, + *ouron*, urine.]
- chondral** (kon'dral). Cartilaginous.
- Chondria** (kon'dre-ah). A genus of *Algae*. *C. articulata*. A species furnishing a rich jelly used as a demulcent in pulmonary disease. *C. obtusa*. An edible species found in most seas. It furnishes a gelatin like that of carrageen.
- chondrification** (kon-dri-fi-ka'shon). See *chondrogenesis*. [Gr., *chondros*, cartilage, + Lat., *facere*, to make.]
- chondrigen**, **chondrogen** (kon'dri-jen, kon'dro-jen). The substance present in the hyaline matrix of cartilaginous tissue. [Gr., *chondros*, cartilage, + *gennan*, to engender.]
- chondrin** (kon'drin). A transparent gelatinous substance obtained by boiling cartilage from 12 to 24 hours in water and washing the solution, when cooled, with alcohol. [Gr., *chondros*, cartilage.]
- chondritis** (kon-dri'tis). Inflammation of cartilage. [Gr., *chondros*, cartilage, + *itis*, inflammation.]
- chondro-**. Combining form of Gr., *chondros*, cartilage; used as a prefix in compound words.
- chondroblast** (kon'dro-blast). A cell which forms cartilage. [Gr., *chondros*, cartilage, + *blastos*, sprout.]
- chondroclasts** (kon'dro-klasts). Cells that are supposed to bring about the absorption of cartilage. [Gr., *chondros*, cartilage, + *klastos*, broken to pieces.]
- chon''drocos'tal**. Relating to the ribs and the costal cartilages.
- chondrocra'nium**. The cartilaginous skull before ossification. [Gr., *chondros*, cartilage, + *kranion*, skull.]
- chon''drocyte**. A cartilage cell. [Gr., *chondros*, cartilage, + *kytos*, cell.]
- chondrodynia** (kon-dro-din'e-ah). Pain in a cartilage. [Gr., *chondros*, cartilage, + *odyne*, pain.]
- chondrodystrophia** (kon''dro-dis-tro'fe-ah). A congenital hypoplasia of the skeleton. See *achondroplasia*. *c. fetalis*. A form of *c.* affecting the fetus or infant, characterized by shortness of the extremities, but normal development of the soft parts. This condition often lasts into adult life, causing one variety of dwarf. [Gr., *chondros*, cartilage, + *dys*, ill, + *trophe*, nutrition.]
- chon''drofibro'ma**. A chondroma containing an abundance of vascular connective tissue.
- chondrogen**. See *chondrogen*.
- chondrogenesis** (kon-dro-jen'is-is). Syn.: *cartilagification*. The formation or development of cartilage. [Gr., *chondros*, cartilage, + *genesis*, development.]
- chondroglossus** (kon-dro-glos'sus). See *table of muscles*, under *muscle*.
- chondroitin** (kon-dro'i-tin). $C_{18}H_{37}NO_{14}$, a nitrogenous substance formed by the hydrolysis of chondroitin-sulphuric acid.
- chondroma** (kon-dro'mah). A tumor composed of cartilage. Such a tumor originating in a region where cartilage is not normally present is called *enchondroma*. [Gr., *chondros*, cartilage, + *oma*, tumor.]
- chondromalacia** (kon''dro-mal-a'se-ah). Softness or softening of the cartilages. [Gr., *chondros*, cartilage, + *malakia*, softness.]
- chondromucoid** (kon-dro-mu'koyd). A compound proteid found in all cartilaginous tissue. By mild hydrolysis it is converted into acid albumin, peptones, and chondroitin-sulphuric acid.
- chon''dromyo'ma**. Myoma containing cartilage.
- chon''dromyxo'ma**. See *enchondroma mucosum*.
- chondropharyngeus** (kon''dro-far-in'je-us). See *table of muscles*, under *muscle*.
- chondrophyte** (kon'dro-fit). A fungous outgrowth from a cartilage. [Gr., *chondros*, cartilage, + *phyton*, a growth.]
- chondroproteids** (kon-dro-pro'te-ids). These are glycoproteins, which, upon cleavage, yield chondroitin-sulphuric acid.
- chon''drosarco'ma**. A variety of sarcoma classed by some among the chondromata. Between the nodules of cartilage imbedded in the sarcomatous tissue round and spindle cells are found. It is distinguished from typical chondroma by a progressive formation of cells that constantly differ more and more from normal cartilage cells, gradually showing a transition to the large round cells of a typical sarcoma.
- chondrosin** (kon'dro-sin). A hydrolytic cleavage product of chondroitin, which, upon further hydrolysis, yields a carbohydrate and an organic acid.
- chondrosis** (kon-dro'sis). The formation of cartilage. [Gr., *chondros*, cartilage.]
- chon''droster'nal**. Pertaining to the sternum and the costal cartilages.
- chon''droxiph'oid**. Pertaining to the costal cartilages or the ribs and to the xiphoid process of the sternum.
- Chondrus** (kon'drus). 1. A genus of the *Algae*. 2. Of the U. S. Ph., see *carrageen*. *C. crispus*, *C. mammosus*. Irish moss, found on the European seacoasts, especially on the coast of Ireland. It is also found on the coasts of the United States, and is thrown up in large quantities on the shores of Massachusetts during storms. See *carrageen*. **mucilago chondri** [N. F.]. Represents 3 per cent. of chondros. [Gr., *chondros*, gristle.]
- Chopart's amputation** (sho'parz). Disarticulation at the midtarsal joint, leaving only the astragalus and the calcaneum, with the soft parts of the sole to cover the stump. [*François Chopart*, Paris surgeon, 1743-1795.]
- chorda** (kor'dah). Pl. *chordae*. A collection of fibers, a cord; also a tendon. *c. Achillis*. See *tendo Achillis*, under *tendo*. **chordae acusticae**. See *acoustic striae*, under *stria*. The striae medullares in the brain. **chordae arteriarum umbilicalium**. The lateral ligaments of the bladder. *c. dorsalis*. See *notochord*. *c. ductus arteriosi*. See *ligamentum arteriosum*, under *ligamentum*. *c. ductus venosi*. A slender cord, the remains of the ductus venosus of the fetus, lodged in the fis-

sure of the ductus venosus in the liver. **c. obliqua.** Oblique or round ligament of the elbow joint. **c. spermatica.** The spermatic chord. **c. spinalis.** The spinal cord [B. N. A.]. **chordae tendineae.** Small tendinous cords, which connect the ends of the muscoli papillares of the heart with the segments of the auriculoventricular valves, being attached to the free margins and ventricular surfaces of the latter and serving to bring them into more complete coaptation and prevent inversion during systole. **c. tympani.** A branch from the facial nerve, given off as the latter passes vertically downward at the back of the tympanum, which traverses the cavity of the tympanum and the canalis chordae tympani to join the gustatory nerve. **c. umbilicalis.** See *umbilical cord*, under *cord*. **c. venae umbilicalis.** The round ligament of the liver. **c. vertebralis.** See *spinal cord*, under *cord*. **chordae vocales.** See *vocal bands*, under *band*. [Gr., *korde*, cord.]

chordal (kor'dal). Pertaining to the notochord or to any chorda.

chordee (kor-dé'). Painful erection of the penis occurring in urethritis. In severe cases the penis is bent downward owing to the inelastic condition of the inflamed urethra. [Fr., *cordé*, *cordée*, twisted, from Gr., *chorde*, a cord.]

chorditis (kor-di'tis). Inflammation of a cordlike structure, especially the vocal bands. [Gr., *chorde*, a cord, + *itis*, inflammation.]

chordoma (kor-do'mah). 1. The upper portion of the notochord, when it persists through life. 2. A tumor consisting of notochordal tissue, found chiefly in the intervertebral disks, and consisting of large vesicular cells separated by a homogeneous interstitial substance.

chorea (ko-re'ah). Syn.: *St. Vitus's dance*, *infectious myoclonia*. A subacute disease characterized by irregular jerkings and incoördinate movements in diverse groups of muscles. The disease forms about one-fifth of the nervous diseases of children. The term chorea is often incorrectly applied to spasmodic tic, including mental, habit, hysterical, local, general, and endermic tics. **c. insaniens.** Severe c. in which attacks of mental excitement and even delirium come on for several successive nights. **c. scrip-torium.** Writers' cramp. **c. senilis.** C. in old men. **electric c.** is a name sometimes wrongly given to very violent forms of Sydenham's c. **epidemic c.** A neurosis prevalent in various parts of Europe in the 14th century as a manifestation of intense religious emotion; manifested by an uncontrollable desire to dance. **Huntington's c.** See under *Huntington*. **major c.** C. with violent action of the muscles; not a disease in itself. **maniacal c.** C. insaniens. [Gr., *choreia*, a dance.]

chore'ic. Pertaining to, or of the nature of, chorea.

choreiform (ko-re'if-orm). Resembling

chorea; choreoid. [Gr., *choreia*, chorea, + Lat., *forma*, form.]

cho''rio-angioph'agus. See *acardiacus*.

cho''rio-epithelio'ma malign'um. Syn.: *syncytionoma malignum*, *deciduoma malignum*, *chorioma malignum*. A malignant tumor formed from the cells of the outer layer and inner layer of Langhan's cells, or syncytium, covering the villi. By their erosive and phagocytic properties these cells invade the uterine wall and vagina during and following pregnancy, especially after hydatidiform mole, and may even form metastatic growths in other organs.

chorioma (ko-re-o'mah). A neoplasm or a tumor developed from the chorion.

c. malignum. See *chorio-epithelioma malignum*. [Gr., *chorion* + *oma*, tumor.]

chorion (ko're-on). 1. The external layer of the blastoderm; the outer enveloping membrane of the fecundated ovum, most characteristically developed in the human subject, being observed as soon as the ovum has entered the cavity of the uterus, and persisting through the whole period of gestation. A part of it takes a share in the development of the fetal portion of the placenta, and the remainder constitutes the outermost of the fetal envelopes. **c. glabrum**, **c. laeve.** See *false c.* **c. pellucidum**, **c. primitivum.** See *primitive c.* **c. reticulatum**, **c. reticulosum.** See *shaggy c.* **c. secundarium.** See *secondary c.* **c. verum.** See *secondary c.* **false c.** That portion of the c. which is left bare of villi after the formation of the placenta has begun in the remaining portion. **primitive c.**

1. The rudimentary c.; a membranous product of the epithelial cells of the ovary and the oviduct deposited around the mature and fecundated ovum; a transformation of the vitelline membrane which becomes shaggy soon after its entrance into the uterus. 2. The discus proligerus.

secondary c. The true outer envelope of the embryo, by means of which the ovum is attached to the uterine wall, appearing (in man) in the second week of gestation and consisting of the single layer of basement epithelial cells which constitute the external layer of the blastoderm. **shaggy c.** A term applied to the c. during the period (two months in the human subject) that its entire outer surface (the vitelline membrane) is covered with villus outgrowths. **smooth c.** See *false c.* **spongy c.** The decidua. **truo c.** The external layer of the allantois. **vascular c.** The secondary c. when it has united with the external surface of the allantois and become vascular. [Gr., *chorion*, skin, membrane.]

chorionic (ko-re-on'ik). Relating to the chorion. **c. villi.** See under *villus*.

choroid, **chorioid** (ko'royd, ko'ri-oyd). Resembling the chorion, pertaining to the c. coat of the eye; the middle coat of the posterior portion of the eyeball; so called from its resemblance to the chorion in vascularity. It is a dark-brown, highly vascular tunic lying between the sclera externally and the retina internally, and

- extending from the opening for the entrance of the optic nerve forward to the ciliary body, into which it is insensibly merged. It is connected with the sclera by a loose connective tissue with large meshes more or less filled with pigment. [Gr., *chorioeides*, from *chorion*, skin, membrane, + *eidos*, resemblance.]
- choroidal** (ko-royd'al). Relating to the choroid. **c. fissure**. A cleft in the secondary optic vesicle in the embryo.
- choroiditis, chorioiditis**. Inflammation of the vascular tunic or choroid membrane of the eye. **areolar c.** A form in which the inflammation spreads concentrically from the region of the macula lutea. Other varieties are: central, serous, diffuse, disseminated and myopic. [Choroid + Gr., *itis*, inflammation.]
- choronosologia** (kro-no-so-lo'je-ah). The science of the geographical distribution of diseases or of the endemic diseases of a particular region. [Gr., *chora*, a region, + *nosos*, a disease, + *logos*, understanding.]
- Christison's formula**. A formula for finding the amount of solids per 1000 parts of urine. Multiply the last two figures of the specific gravity by 2.33. [Sir Robert Christison, Scotch physician, 1797-1882.]
- chromaffin system, chromaffin tissue**. The tissue composing the medulla of the adrenal glands. It is characterized by giving a yellow or brown reaction with chromates. Similar tissue is found outside the adrenal glands, along the abdominal aorta and in the sympathetic glands. [Gr., *chroma*, color, + Lat., *affinis*, akin.]
- chromasia** (kro-ma'se-ah). 1. The coloring produced by chromatic aberration in the images made by lenses. 2. A term used to designate the color sense; used chiefly in negative form, as *achromasia*.
- chromat-**. Combining form of Gr., *chroma*, *chromatos*, complexion, color; used in compound words to signify of or pertaining to color.
- chromate** (kro'mat). A salt of chromic acid.
- chromatic** (kro-mat'ik). Pertaining to colors or to chromatin; capable of being stained. [Gr., *chromatikos*.]
- chromatics**. Physics in its relation to colors.
- chromatin** (kro'mat-in). The reticulate material found in the nuclei of cells; so called because it is deeply stained by coloring agents. See *achromatin*. [Gr., *chroma*, color.]
- chromatism** (kro'mat-izm). An abnormal coloration of a tissue, a part, or a secretion.
- chromato-**. Combining form of Gr., *chroma*, color; used in compound words.
- chromatogenous** (kro-mat-oj'en-us). Producing color or pigment. [Gr., *chroma*, color, + *gennan*, to beget.]
- chromatolysis** (kro-mat-ol'is-is). The solution and disappearing of the chromatin of a nucleus or of special particles in the cytoplasm of cells, such as the Nissl bodies of nerve cells. [Gr., *chroma*, color, + *lysis*, loosening.]
- chromatometry** (kro-mat-om'et-re). The art or process of determining the coloring power of a substance. [Gr., *chroma*, color, + *metron*, a measure.]
- chromatophobia** (kro'mat-o-fo'be-ah). Abnormal sensitiveness of the eye to certain colors of the spectrum. [Gr., *chroma*, color, + *phobos*, dread.]
- chromatophore** (kro-mat'o-for). 1. Any pigment-bearing cell, such as those of the rete Malphigii. 2. A colored plastid due to the presence of chlorophyll, found in certain forms of the *Protozoa*. [Gr., *chroma*, color, + *pherein*, to bear.]
- chromatophoroma** (kro-mat'o-fo-ro-mah). A tumor composed of chromatophores.
- chromatopsia** (kro-mat-op'se-ah). Chromatic vision; a condition in which all objects appear to be of a certain color. [Gr., *chroma*, color, + *opsis*, sight.]
- chromatometry** (kro'mat-op-tom'et-re). Measurement of the degree of color perception. [Gr., *chroma*, color, + *metron*, a measure.]
- chromatoscope** (kro'mat-o-skop). An instrument for determining the refractive index of the colored rays of light. [Gr., *chroma*, color, + *skopein*, to examine.]
- chromatosis** (kro-mat-o'sis). A pathological deposit of pigment either in excessive amount or in unusual tissues. [Gr., *chroma*, color.]
- chromic** (kro'mik). Containing chromium. **c. acid**. See under *acid*. [Lat., *chromicus*.]
- chromic catgut**. Sheep's intestine that has been cleansed, sterilized, dried, and then soaked in a watery solution of bi-chromate of potash or chromic acid for from 24 to 48 hours. Thus prepared, the catgut does not disintegrate for several days (10-20) according to the size of the cord and the strength of the chromicizing solution.
- chromidrosis** (kro-mi-dro'sis). Syn.: *ephidrosis tinctoria*. A condition in which the perspiration is colored. [Gr., *chroma*, color, + *idrosis*, perspiration.]
- chromiferous** (kro-mif'er-us). Containing chromium. [Chromium + Lat., *ferre*, to bear.]
- chromium** (kro'me-um). A metallic element found in various minerals combined with lead or iron. Symbol Cr. Atomic weight 52.1 A very resistant metal, not affected by the atmosphere or by acids. It melts at a higher temperature than platinum. [Gr., *chroma*, color, from the variety of color exhibited by its compounds.]
- chromo-**. Combining form of *chromium*; used as a prefix to signify combinations of chromium or as an abbreviation for *chromato-*.
- chromocyte** (kro'mo-sit). A red blood corpuscle. [Gr., *chroma*, color, + *kytos*, cell.]
- chromocytometer** (kro'mo-si-tom'et-er). An instrument devised by Bizzozero for measuring the amount of hemoglobin pres-

ent in the red blood corpuscles by comparing the tint of a layer of blood on a plain glass with that of a similar layer viewed through colored glass, transmitted light being used. [Gr., *chroma*, color, + *kytos*, a cell, + *metron*, a measure.]

chromocytometry (kro''mo-si-tom'et-re). The process of measuring the hemoglobin or counting the red corpuscles in a specimen of blood.

chromogen (kro'mo-jen). Producing a coloring matter.

chromophage (krom'o-fāj). The mononuclear phagocytes which digest the normal pigments of the hair, causing the white hair of old age.

chromophil (kro'mo-fil). Any easily stainable cell, structure, or tissue; also used as an adjective. **c. substance**. The name given to the chromatin or stainable granules and masses (Nissl's granules) occurring in nerve cells. **c. tissue**. See *chromaffin tissue under tissue*. [Gr., *chroma*, color, + *philein*, to love.]

chromophilous, chromatophilous (kromofil-us, kro-ma-tofil-us). Capable of being stained; said especially of the cell nucleus as in tissues prepared and stained for microscopic study.

chromophore (kro'mo-for). A color-carrying radicle in chemical compounds.

chromophoric (kro-mo-for'ik). Bearing color when the pigment is a component part of the cell, as with certain bacteria. [Gr., *chroma*, color, + *pherein*, to bear.]

chromophytosis (kro''mo-fi-to'sis). Pigmentation of the skin due to a vegetable parasite. Another name for *tinea versicolor*. [Gr., *chroma*, color, + *phyton*, plant.]

chromoptometer (kro-mop-tom'et-er). Of A. Weber, a contrivance for testing the acuity of the sense of color. [Gr., *chroma*, color, + *optein*, to see, + *metron*, a measure.]

chromosomes (kro'mo-sōms). The V-shaped filaments into which the skein of chromatin in the nucleus breaks up during the process of mitotic division. The number of chromosomes is constant for each animal. In the human species, it is 47 in each cell for males and 48 for females. [Gr., *chroma*, color, + *soma*, body.]

chromosote (kro'mo-sōt). A disinfectant said to consist chiefly of sodium sulphate and sulphite.

chronic (kron'ik). Lingering, of long duration; lasting a long time, in opposition to acute. [Gr., *chronos*, duration.]

chronicity (kron-is'it-e). The state or condition of being chronic.

chronograph (kron'o-graf). An instrument for registering minute periods of time in physiological experiments. [Gr., *chronos*, time, + *graphein*, to write.]

chronoscope (kron'o-skōp). See *chronograph*. [Gr., *chronos*, time, + *skopein*, to examine.]

chronotaxis (kron-o-tacks'is). A directive influence or movement, a tropism, due to some influence dependent on chemical affinity, as, for example, in the direction of growth of a regenerating nerve.

chronothermal (kron-o-ther'mal). Pertaining to changes of the bodily temperature considered in their relations to health and disease. [Gr., *chronos*, time, + *therme*, heat.]

chronotropic (kron-o-trop'ik). Affecting time or speed, especially the rate of contraction. **c. nerve-fibers**. Nerve-fibers going to the heart in the inhibitory and accelerator nerves and supposed to regulate the rate of contraction. [Gr., *chronos*, time, + *trepein*, to turn.]

chryso-, chryso-. Combining form of Gr., *chrysos*, gold; used as a prefix chiefly in chemical terms.

chrysalis (kris'a-lis). An insect in the second (caterpillar) stage of its development. [Gr., *chrysalis*, from *chryseos*, golden.]

chrysanilin (kris-an'il-in). Syn.: *diamidophenylaminidin*. A yellow coloring matter derived from anilin.

Chrysanthemum (kris-an'the-mum). A genus of composite plants. **C. parthenium**. Feverfew; a plant common in Europe and the southern United States. The herbs and flowers have been used for a variety of conditions. [Gr., *chryseos*, golden, + *antheon*, a flower.]

chrysarobin (kris-ar-o'bin). A crystalline powder, erroneously called chrysofanic acid, $C_{33}H_{22}O_7$, obtained from Goa powder. It is a gastro-intestinal irritant and is used externally in the form of an ointment in skin diseases, being often employed in psoriasis and chronic eczema. [U. S. Ph., Br. Ph.] **unguentum chrysarobini**. An ointment containing 5 per cent. of **c.** [Gr., *chryseos*, golden + *arabos*, the bark of a tropical tree.]

chrysoidin (kri-so'id-in). 1. A yellow substance, $C_7H_{12}O_4$, said to exist in asparagus berries. 2. An orange-yellow dyestuff, $C_{12}H_{16}N_4Cl$ = $C_6H_6N - N.C_6H_5(NH_2)_2 - HCl$, a disinfectant.

Chrysonyia macellarla (kris-o-mi-e'ah mas-el-a're-ah). Syn.: *screw-worm*. A fly belonging to the *Diptera* and to the family *Muscidae*, whose larvae invade wounds and even penetrate the frontal sinuses in man.

chrysophan, chrysophanin (kris'o-fan, kris-of'an-in). A glucosid obtained from rhubarb and senna.

chrysopicrin (kris-o-pick'rin). A yellow acid extracted from *Parmelia parietina*; identical with vulpic acid. [Gr., *chrysos*, gold, + *pikros*, bitter.]

Chrysops (kris'ops). The golden-eyed fly; a genus of insects of the order *Diptera* and the family *Tabanidae*. There are many species in Africa and India, and *C. dimidiatus* or the *mango-fly* may be the intermediate host of the *Filaria loa*. **C. ceutiens**. A species which attacks man and the larger animals in the region of the eyes, inflicting painful bites. [Gr., *chrysos*, gold, + *ops*, eye.]

Chrysopsis (kri-sop'sis). A genus of North American composite herbs. **C. graminifolia**. Fever grass used in the southern United States as a poultice in sprains. [Gr., *chrysos*, gold, + *opsis*, appearance.]

chrysoresin, chrysoresin (kri-so-re'-tin). A yellow coloring matter obtained from senna; according to Martius, the same as chrysoresin. [Gr., *chrysores*, gold, + *resin*, resin.]

chrysoresin. A name formerly applied to a mixture of ergotoxin and the inert ergochrysin obtained from ergot. [Gr., *chrysores*, gold, + *toxikon*, poison.]

chur'rus. A resin obtained from the leaves, stem, and flowers of *Cannabis sativa*; used as a narcotic and antispasmodic. See *haschisch*.

Chvostek's sign. Twitching of the facial muscles about the corners of the face and the eyes on striking gently below the zygoma or on the malar bone, observed in tetany.

chylangioma (ki-lan-je-o'mah). A tumor composed of dilated lymphatic vessels filled with chyle. [Gr., *chylos*, chyle, + *angioma*.]

chyle (kil). The liquid found in the lymphatics (lacteals) of the small intestine during digestion, being the lymph of the intestine mixed with the granules of emulsified fat; a milky, alkaline liquid. **granular** (or **molecular**) **base of c.** Of Gulliver, the minute fatty particles in c. which give it a milky appearance. [Gr., *chylos*, juice.]

chylifacient (ki-li-fa'se-ent). That which forms chyle. [Gr., *chylos*, juice, + *Lat.*, *facere*, to make.]

chylification, chylification (ki-le-fak'-shun, ki-le-fi-ka'shun). See *chylopoiesis*.

chylify (ki'le-fi). To convert into chyle.

chylo-. Combining form of Gr., *chylos*, chyle; used as a prefix in compound words.

chylocele (ki'lo-sel). An effusion of chyle into the tunica vaginalis. **c. parasitica**. C. due to obstruction of the large lymph vessels of the inguinal region by the adult organisms of *Filaria sanguinis hominis*. [Gr., *chylos*, chyle, + *kele*, tumor.]

chylology (ki-lol'o-je). The physiology of chyle. [Gr., *chylos*, chyle, + *logos*, understanding.]

chylopoiesis, chylopoiesis (ki-lo-poi-e'sis, ki-lo-po-e'sis). The process of the formation of chyle. [Gr., *chylos*, chyle, + *poiesis*, production.]

chylorrhoea (ki-lor-re'ah). 1. An unnatural flow of chyle, as from a wound. 2. Diarrhea characterized by evacuations of a mucous or mucoid material, which resembles chyle. [Gr., *chylos*, juice, + *rein*, to flow.]

chylolysis (ki-lo'sis). The formation of chyle.

chylous (ki'lus). Pertaining to, of the nature of, resembling, or impregnated with, chyle.

chyluria (ki-lu're-ah). A condition in which the urine is chylous or milky. **parasitic c.**, **tropical c.** A disease due to the presence of *Filaria sanguinis hominis* in the blood. [Gr., *chylos*, juice, chyle, + *ouron*, urine.]

chyme (kim). A thick grayish or brownish liquid, consisting of the partly digested food as it is discharged from the stomach into the intestine. [Gr., *chymos*,

a juice flowing spontaneously, as distinguished from *chylos*, a juice obtained by expression.]

chymification (ki-mi-fi-ka'shun). See *chymosis*.

chymosepsis (ki-mo-sep'sis). Putrefaction of the chyme. [Gr., *chymos*, chyme, + *sepsis*, putrefaction.]

chymosin (ki'mo-sin). Syn.: *rennin*. The enzyme which has the property of precipitating casein from milk.

chymosis (ki-mo'sis). The formation of chyme. [Gr., *chymosis*.]

chymous (ki'mus). Pertaining to, consisting of, or resembling chyme.

chymus (ki'mus). 1. Chyme. 2. Of the ancients, any vegetable or animal juice, especially, in the case of plants, one that flowed spontaneously, as distinguished from one obtained by expression. [Gr., *chymos*.]

cibarian (sib-a're-an). Pertaining to food, also to the organs of mastication and deglutition. [Lat., *cibus*, food.]

cibophobia (si-bo-fo'be-ah). Loathing of food. [Lat., *cibus*, food, + Gr., *phobos*, fear.]

cicatricial (sik-a-trish'e-al). Pertaining to, resembling, forming, or produced by, a cicatrix or cicatrization.

cicatricine (sic-at'ris-en). A mixture of thiosinamin and antipyrin.

cicatricula (sik-at-rik'u-lah). The germinating point in the embryo of a seed or in the yolk of a fecundated ovum, called the "tread" from its resemblance to a scar. See *archiblast*. [Lat., dim. of *cicatrix*, scar.]

cicatrix (sik-ä'triks, sik'a-triks). A scar; the new tissue formed in the healing of an injury involving a solution of continuity of a soft part. (In scientific use it takes the place of cicatrice.) [Lat., *cicatrix*, a scar.]

cicatrization (sik'a-tri-za'shon). The formation of a cicatrix in the healing of a wound.

cicuta (si-ku'tah). 1. A name applied to various umbelliferous plants of the genera *C.*, *Conium*, and *Ethusa*. 2. A genus of umbelliferous plants. **C. fetida**. Stinking hemlock; possibly *Conium maculatum*. **C. maculata**. Musquash root, spotted cowbane; a species common throughout the United States and Canada. In medicinal properties it resembles *C. virosa* and *Conium maculatum*. **C. virosa**. The cowbane; an umbelliferous, poisonous species growing in northern Europe. It contains cicutoxin and is extremely poisonous to man and beast. It is never used internally, but has been employed externally in rheumatism. **C. vulgaris**. The *Conium maculatum* of Linnaeus. [Lat.]

cicutin (si-ku'tin). 1. See *conium*. 2. A volatile alkaloid said to have been obtained from *Cicuta virosa*.

cicutoxin (si-ku-tocks'in). A very poisonous substance obtained by Böhm from *Cicuta virosa*. It produces convulsions, general paralysis and death, the action closely resembling that of picrotoxin. [Cicuta + Gr., *toxikon*, an arrow-poison.]

-cide. A suffix from the Fr., *cide*, from Lat., *cida*, cutter, killer, slayer; used in compound words as in *germicide*, to denote killing.

cilia (sil'e-ah). 1. The eyelashes, also the free margins of the eyelids. 2. Vibratile, hairlike projections from the free surface of certain epithelial cells, especially in the ductus deferens, the oviduct, and parts of the respiratory system. **inverted c.** A condition in which the eyelashes or the free margins of the lids are turned in upon the eyeball so as to irritate it. [Lat., *cilium*, *cilia*, fr. Gr., *kyla*, eyelids.]

ciliaris (si-li-ar'is). See *table of muscles*, under *muscle*.

ciliary (sil'e-ar-e). Relating to or possessing cilia; hairlike or pertaining to a hairlike structure; pertaining to the free border of the eyelid. See *tables of nerves* and of *muscles*. [Lat., *ciliaris*.]

Ciliata (sil'e-a'tah). A phylum of Protozoa of the division *Stereokaryota* with cilia.

ciliate (sil'e-ät). A term used in descriptive bacteriology to describe the fine hairlike edge of certain colonies.

ciliated (sil'e-ät-ed). Possessing cilia; bristly, furnished with bristles or small bristlelike feathers; fringed. [Lat., *ciliatus*.]

ciliation (sil'e-a'shun). The condition of being provided with cilia.

cil'iospi'nal. Relating to the center in the lower cervical cord which controls the dilatation of the pupil.

cilium (sil'e-um). An eyelash. Generally used in the pl., *cilia*. [Lat., *cilium*, eyelash, from Gr., *kyla*, eyelids.]

ciliosis (sil-lo'sis). A spasmodic affection in which the eyelids are in a constant state of tremor.

Cimex (si'mecks). Syn.: *Clinocoris*. A genus of insects of the order *Hemiptera* and the family *Cimicidae*, which infests beds, furniture, and walls, where the female lays her eggs. It sucks blood from human beings. The common name is the *bedbug*. **C. lectularius**. The universal bedbug, brownish in color and having a proboscis with cutting stylets up which the blood runs into the mouth. They may convey the *Spirochaeta Obermeiri*, the germ of relapsing fever. **C. rotundatus**. The bedbug of India, said to convey the *Leishmania Donovanii*, the germ of kala-azar. [Lat., "bug."]]

Cimicifuga (sim-is-if'u-gah). 1. A genus of ranunculaceous plants. 2. Of the U. S. Ph., the rhizome and rootlets of *C. racemosa*. **C. racemosa**, **C. ser-pentaria**. A species found in the United States and Canada. The root [U. S. Ph.], cimicifugae rhizoma [Br. Ph.], has been used in various diseases, but is now employed chiefly in the treatment of rheumatism and chorea in the form of the official tincture, the fluidextract, or the extract. [Lat., *cimex*, bug, + *fuga*, flight.]

cimicifugin (sim-is-if'u-gin). Syn.: *macrocin*. A resinoid obtained from cimicifuga.

cina (si'nah). 1. *Artemisia santonica* and

other varieties of *Artemisia*, the unexpanded flower heads of which (wormseed, santonica) are used as an anthelmintic.

2. *Smilax china*.

cinchamidin (sin-kam'id-in). An alkaloid, $C_{19}H_{21}N_2O$ (or $C_{20}H_{23}N_2O$), found in the mother liquor from which cinchonidin has been extracted.

Cinchona (sin-ko'nah). 1. A genus of rubaceous trees yielding peruvian bark. 2. In the U. S. Ph. the bark of any one of several species of c. containing at least 4 per cent. of ether-soluble alkaloids.

cinchonae cortex. c. bark; a term embracing the yellow, red, and pale c. barks.

c. rubra. The U. S. Ph. recognizes the bark of *C. succinbra* under this special heading. It is required to contain 5 per cent. of anhydrous c. alkaloids [U. S. Ph.].

cinchonae rubra cortex. Red c. bark, obtained from cultivated plants of *C. succinbra* [Br. Ph.].

extract of c., extractum cinchonae [U. S. Ph.], **extractum cinchonae calisayae.** An extract made by exhausting yellow c. with a mixture of alcohol and water.

extractum cinchonae fluidum. Fluid-extract of c. [U. S. Ph.].

extractum cinchonae liquidum. Liquid extract of c. containing 5 per cent. of the alkaloids of red c. in a solution of alcohol, water, and glycerin [Br. Ph.].

infusion cinchonae [U. S. Ph., 1890], **infusion cinchonae acidum** [Br. Ph.]. Infusion of c. The Br. Ph. directs 5 per cent. of red c. and water acidulated with aromatic sulphuric acid.

pale c. bark. The brownish or grayish barks derived from the younger branches and twigs of various species of c. **tinctura cinchonae.**

A 20 per cent. tincture of *C. calisaya* [U. S. Ph.] or of red c. [Br. Ph.].

tinctura cinchonae composita. Huxham's tincture; made by macerating red c., bitter orange peel, and serpentaria in a menstruum composed of glycerin, alcohol, and water [U. S. Ph.].

The Br. Ph. preparation is made by diluting the simple tincture of cinchona, flavoring with orange and serpentaria, and coloring with saffron [U. S. Ph., Br. Ph.].

[Span., from the Countess of Cinchon (in Peru), to whom the remedy was administered in 1638.]

cinchonaceous (sin-kon-a'se-us). Typified by the genus *Cinchona*.

cinchonamin (sin-kon-am'in). An alkaloid, $C_{19}H_{21}N_2O$ (or $C_{20}H_{23}N_2O$), obtained from the bark of *Remijia purdieana*; said to be toxic.

cinchonetin (sin-ko-net'in). A substance obtained by the action of iron peroxid on cinchonin sulphate.

cinchonidin (sin-kon'id-in). An amorphous alkaloid, $C_{19}H_{22}N_2O$, isomeric with cinchonin and cinchonidin and formed from either of these substances by heating.

cinchonidin (sin-kon'id-in). An alkaloid, $C_{19}H_{22}N_2O$, obtained from cinchona, especially from the cultivated East Indian varieties; isomeric with cinchonin and bearing the same relation to the latter

that quinidin does to quinin. **c. sulphate.** A compound of c. and sulphuric acid. The ordinary sulphate of c.—basic c. sulphate, *c. monosulphate*, $(C_{19}H_{22}N_2O)_2H_2SO_4$ —occurs, combined with 3 molecules of water of crystallization as hard prismatic crystals [U. S. Ph.]. Its action resembles that of quinin somewhat, but it is much less effective against the malarial fever organism.

cinchonin (sin'kon-in). An alkaloid, $C_{19}H_{22}N_2O$, isomeric with cinchonidin, occurring in various cinchona barks, especially in the pale cinchona. Its salts are employed like those of quinin, but are slower and less certain in action. [Of the U. S. Ph., 1890.] **c. sulphate.** Ordinary (or neutral, or basic) c. sulphate, the c. sulphate of the pharmacopeias, $(C_{19}H_{22}N_2O)_2 \cdot H_2SO_4 + 2H_2O$, formed by neutralizing a dilute sulphuric acid with c. [U. S. Ph.]. **c. sulphoidate.** See *antiseptol*.

cinchonism (sin'kon-ism). Poisoning with cinchona or one of its constituents (usually quinin).

cinematograph. See *kinematograph*.

cinene (si'nēn). Syn.: (*d+l*) *limonene*. A liquid, $C_{10}H_{16}$, present in the oil of wormseed; a terpene.

cincol (sin'e-ol). A liquid, $C_{10}H_{18}O$, identical with cajeputol and eucalyptol, found in different volatile oils.

Cineraria (sin-er-a're-ah). 1. A genus of the order of the *Compositae*, closely allied to *Senecio*. 2. *Senecio palmensis*. **C. maritima.** Ragwort. The claim is made without sufficient evidence that the juice is useful in the treatment of cataract.

cinera'tion. See *incineration*.

cinerea (sin-e're-a). The gray matter of the nervous system. [Fem. of Lat., *cinereus*, ashy.]

cinnabar (sin'nah-bar). Red sulphid of mercury, HgS; used as a pigment.

cinnamic (sin-nam'ik). Pertaining to, or derived from, cinnamon. **c. acid.** See under *acid*. **c. alcohol.** A monohydric alcohol, $C_6H_5 \cdot CH : CH \cdot CH_2 \cdot OH$, obtained by heating styracin with a caustic alkali. **c. aldehyd.** A colorless oil, $C_6H_5 \cdot CH : CH \cdot CHO$, forming the essential ingredient of oil of cinnamon and obtained by the oxidation of c. alcohol. **c. ether.** A cinnamate, especially of ethyl.

Cinnamo'mum. 1. A genus of lauraceous plants. 2. Cinnamon. **agua cinnamomi.** A preparation made by percolating a mixture of 2 parts of oil of c. and a sufficient quantity of water to produce 1,000 parts [U. S. Ph.]; by distilling 2 gallons (imperial) of c. water from 1 lb. of bruised Ceylon c. [Br. Ph.]. **cinnamomi cortex.** The bark of Ceylon cinnamon [Br. Ph.]. **C. kiamis.** A tree found in Java. **C. saigonicum.** The bark of an undetermined species of cinnamon [U. S. Ph.]. **C. zeylanicum.** A species indigenous to Ceylon and also, it is said, to the Malabar coast, and cultivated in various places in the East and

in South America. Its bark is one of the chief sources of the cinnamon of the U. S. and other pharmacopeias. It possesses a more delicate flavor than that of Saigon cinnamon. **oleum cinnamomi.** Oil of cassia. The volatile oil obtained from cassia cinnamon [U. S. Ph.]. **pulvis cinnamomi compositus.** See *pulvis aromaticus*. **spiritus cinnamomi.** A preparation containing 10 per cent. of oil of cinnamon in alcohol. **syrupus cinnamomi.** [U. S. Ph.] A syrup made by digesting Chinese cinnamon with aqua cinnamomi spirituousa and adding sugar to the strained liquid. **tinctura cinnamomi.** Tincture of Saigon cinnamon; 10 parts of cinnamon and sufficient alcohol and water to make 100 parts [U. S. Ph.]; or 20 per cent. of Ceylon cinnamon [Br. Ph.]. [Gr., *kinnamomon*.]

cinnamon (sin'am-on). The inner bark of various species of *Cinnamomum*, especially of *Cinnamomum zeylanicum* and *Cinnamomum cassia*. **black c.** *Pimenta acris*. **Ceylon c.** *Cinnamomum zeylanicum*; also its inner bark. **China c.** **Chinese c.** The bark of the shoots of one or more undetermined species of *Cinnamomum*. [Heb., *quinnamon*.]

cinnamyleugenol (sin''nam-il-u'je-nol). A crystalline antiseptic, used subcutaneously in place of eugenol.

ciöse (si'ös). A dry soluble product of beef containing 83 to 85 per cent. of protein.

circinate (sir'sin-ät). Round, ring-shaped (said of the arrangement of cutaneous lesions). [Lat., *circinatus*, from Gr., *kirkos*, circle.]

circle (ser'kl). 1. A continuous curved line in the shape of a ring, every point of which is equidistant from a common center. For mathematical purposes, a c. is supposed to be divided into 360 equal parts (degrees). 2. Any curved line, structure, or appliance more or less resembling a c. (1st def.). 3. A series of similar or related objects, events, etc., so connected as to maintain a common action or produce a common result. 4. See *circuit*. **c. of sensation, c. of sensibility.** A circular or oval area of the skin within the limits of which two tactile impressions are referred to the same point. **c. of Willis.** A roughly circular channel of communication between the arteries of the base of the brain, formed by the anterior, middle, and posterior cerebral and the anterior and posterior communicating arteries. **color c.** An instrument for testing color blindness adapted to Holmgren's method. **diffusion c.** See under *diffusion*. **dispersion c.** See under *dispersion*. **galvanic c.** A galvanic circuit. **polar c.** A more or less decided circular groove on the surface of a cell during karyokinesis, indicating the termination of the striae of the antipodal cone. **voltaic c.** A galvanic circuit. [B. N. A., *circulus*.] [Gr., *kirkos*, *kyklos*, circle.]

circuit (sir'kit). 1. The act of moving around continuously in a more or less

circular course. 2. The course taken in such a motion. Of an electrical current, the chain of objects through which it passes. If the course is continuous it is a *closed c.*; if incomplete it is an *interrupted c.*, *open* or *broken*. **short-c.** To short-c. is to make the path of the electrical current shorter than originally intended. [Lat., *circuire*, to go around.]

circular (sir'ku-lar). 1. Having the form of a circle. 2. Characterized by alternations of depression and excitement. [Lat., *circularis*.]

circulating proteins. The name given by Voit to that portion of the protein absorbed during digestion which is not constructed into tissue, but remains in the circulating liquids of the body.

circulation (sir-ku-la'shun). 1. Continuous motion, as of air; especially such motion in a definite circuit. 2. The motion of the blood through the vessels of the animal body (from the left ventricle of the heart through the arteries, capillaries, and veins, to the right auricle, thence to the right ventricle, and from there through the pulmonary vessels, to the left auricle and then the left ventricle again). 3. The transit of blood through the vessels of any single tissue, region, or organ of the body (see *subheadings*). 4. The movements in or through organic bodies of fluids or substances other than blood—e. g., the contents of the stomach, or the non-excrementitious elements of bile. **adult c.** The c. (2d def.) which is established after birth, succeeding to the fetal c. **allantoic c.**, **allantoid c.** The c. (2d def.) through the vessels of the allantois. **arterial c.** The c. (2d def.) through the arteries. **artificial c.** The c. (2d def.) maintained artificially in cases of sudden impairment of the heart's action, as by placing the person in the recumbent posture, rubbing the limbs, etc. **capillary c.** The c. (2d def.) through the capillary vessels. The rate of this movement is variable, and not always in proportion to the number or force of the heart beats. **cardiacopulmonary c.** The adult c. **c. of the blood.** See c. (2d def.). **c. of protoplasm.** 1. The movement, in a steady current from place to place within the cell, of the granules imbedded in the threads of protoplasm. 2. The rotation of protoplasm. **collateral c.**, **compensatory c.** The c. of blood through vessels which, being ordinarily small and of comparatively little importance, become enlarged to compensate for the complete or partial closure of the main vessels of a part, with which they communicate on both the proximal and the distal side of the obstruction. **derivative c.** A c. of the blood of certain parts (such as the nose, the ears, the fingers, the intestine, the parotid gland, the liver, etc.) from the arteries to the veins by means of small communicating vessels that are larger than capillaries. **fetal c.** The circulation in the fetus and the umbilical cord and placenta. **greater c.** See *systemic c.* **lacunar c.**

A c. of blood or of a nutrient fluid through vessels whose continuity is interrupted by cavities in which, in many instances, organs are situated. **lesser c.** See *pulmonary c.* **nutrient c.** The c. of blood in an organ for the purpose of nourishing the organ, as distinguished from the c. of blood in the same organ to be subjected to the physiological action of the organ. **parietal compensatory c.** The venous compensatory c. observed in the abdominal parietes in cases of obstruction to the hepatic. **placental c.**, **placetary c.** The c. (2d def.) of the fetal blood through the umbilical arteries, the capillaries of the villi, and, in the reverse direction, the fetal veins, on the one hand; on the other hand, the c. of the maternal blood through the uterine arteries, the intervillous lacunae, the uteroplacental sinuses, and back into the uterine veins. **portal c.** The c. through the portal vein and its capillaries. **primary c.**, **primitive c.** See *vitelline c.* **pulmonary c.**, **pulmonic c.** The c. of blood through the pulmonary vessels from the right ventricle to the lungs and back to the left auricle. **return c.** The backward motion of the blood to the heart in the systemic c. **second c.** See *fetal c.* **systemic c.** The c. of blood through the entire body except the lungs. **third c.** See *adult c.* **uteroplacental c.** The placental c. (*q. v.*) and that of the maternal blood in the uterine sinuses, considered as a whole. **venous c.** The c. of blood through the veins. **vitelline c.** The c. of blood through the vessels ramifying upon the surface of the vitelline sac. [Lat., *circulatio*.]

circulatory. Relating to the circulation.

circulus (sir'ku-lus). An object or structure of a circular form. **c. arteriosus Halleri.** A vascular plexus upon the surface of the sclerotic at the point of entrance of the optic nerve, formed by branches of the short ciliary arteries. **c. arteriosus iridis.** An arterial plexus which encircles the outer edge of the iris. **c. arteriosus iridis minor.** A circular arterial plexus in the pupillary region of the iris. **c. arteriosus musculi ciliaris.** A circular arrangement of the arterioles in the center of the ciliary muscle. **c. arteriosus nervi optici.** A circular arterial plexus in the sclera around the entrance of the optic nerve, formed by branches of the short posterior ciliary arteries. **c. arteriosus umbilicalis.** An anastomosis of the arteries of the anterior abdominal wall, the bladder, and the liver, in the form of a circle surrounding the umbilicus. **c. arteriosus Willisii.** See *circle of Willis*, under *circle*. **c. articuli vasculosus.** A circle formed around articular cartilages by blood vessels in the adjoining synovial membrane. **c. gangliosus ciliaris.** A circular nervous plexus in the ciliary muscle. **c. Halleri.** See *c. arteriosus Halleri*, *c. venosus mammae*. **c. major.** See *systemic circulation*. **c. Mascagnii.** A circular arrangement of the small capil

lary branches of the blood vessels in the region of the zonule of Zinn in the fetus. **c. membranaceus**, **c. membranosus**. The hymen. **c. minor**. See *pulmonary circulation*. **c. nervosus foraminis ceci**. A plexus formed by branches of the glossopharyngeal nerve around the external border of the foramen cecum. **c. tonsillaris**. A plexus formed over the tonsil by filaments of the tonsillar branches of the glossopharyngeal nerve. **c. umbilicalis**. See *c. arteriosus umbilicalis*. **c. venosus**. An arrangement of veins more or less in the form of a circle. **c. venosus Halleri**. See *c. venosus mammae*. **c. venosus Hovii**. A ring-like anastomosis of the venae vorticosae in the choroid. **c. venosus ischiadicus**. A venous anastomosis between the vena circumflexa medialis and the vena ischiadica. **c. venosus mammae**. An anastomosis of veins around the nipple. **c. venosus obturatorius**. A venous anastomosis, beneath the obturator muscles, between the vena circumflexa femoris medialis and the obturator vein. **c. venosus trachealis**. A venous anastomosis surrounding the trachea at about the level of the lower border of the thyroid gland. **c. venosus umbilicalis**. A circular venous anastomosis around the navel. [Lat., dim. of *circus*, ring, from Gr., *kuklos*.]

circum-. Combining form of Lat., *circum*, around, round about; used in composition with verbs to form compound nouns and adjectives.

circumcis'ion. The operation of cutting off the end of the prepuce by a circular incision. The term is sometimes made to include the operation of slitting the prepuce so as to enlarge its orifice. [Lat., *circumcisio*, from *circum*, around + *cadere*, to cut.]

circumcorneal (sir-kum-kor'ne-al). Around the cornea. [Lat., *circum*, round, + *cornea*.]

circumduc'tion. The act of sweeping a limb about in such a manner as to cause it to describe a cone with the apex at its articulation with the trunk. [Lat., *circumductio*, from *circum*, around, + *ducere*, to lead.]

circumference (sir-kum'fer-ense). The outline of a more or less circular or spherical figure or body; the distance around it. **anteroposterior c. of the skull**. The c. of a plane touching the nasal point and the opisthion. **frontal c.** The distance, measured on the surface of the skull, between the nasal and coronal sutures. **horizontal c. of the skull**. The c. of the skull where it is cut by a horizontal plane passing through the external occipital protuberance and the upper border of the orbits. **larger c. of the fetal head**. That c. which touches the two extremities of the greatest anteroposterior diameter. **lesser (or obstetrical) c. of the fetal head**. That c. which touches the two extremities of the suboccipitobregmatic diameter. **occipital c.** The distance, measured on the

surface of the skull, between the lambda and the posterior border of the foramen magnum. **transverse c. of the skull**. The c. of a plane passing through a point between the bregma and vertex and the two supra-auricular points. [Lat., *circum*, round, + *ferre*, to bear.]

circumferentia (sir-kum-fer-en'te-ah). See *circumference*. **c. articularis radii**. The portion of the head of the radius which articulates with the ulna. **c. articularis ulnae**. The articular facet on the lower end of the ulna with which the interarticular fibrocartilage and the lower end of the radius articulate.

circumflex (sir'kum-flecks). Winding around. See *table of nerves*, under *nerve*, and *table of arteries*, under *artery*, and *c. vein*, under *vein*. [Lat., *circum*, round, + *flectere*, to bend.]

cir'cumpolariza'tion. Polarization of light in a plane that is made to revolve around the direction of the ray as an axis.

circumvallate (sir-kum-val'lät). Surrounded by a rampart and a moat. **c. papillae**. See under *papilla*. [Lat., *circum*, round, + *vallum*, wall.]

cir'cus. Circular movement.

cirrhosis (sir-ro'sis). 1. A pathological change in various organs, characterized by induration due to hyperplasia of connective tissue and shrinking with atrophy of the parenchyma of the organ. 2. Chronic interstitial inflammation of any organ.

alcoholic c. C. due to the excessive use of alcohol; atrophic c. Contraction of the liver with atrophy in consequence of interstitial hepatitis, frequently found in alcoholics. **biliary c.** C. of the liver involving the tissue around the bile ducts and showing great proliferation of the latter. **c. hepatitis**. See *interstitial hepatitis*, under *hepatitis*. **c. hypertrophica adiposa**. Interstitial hepatitis with fatty degeneration of the hepatic cells. **c. of the kidney**. See *interstitial nephritis*, under *nephritis*. **c. of the liver**. Interstitial hepatitis. **c. of the lung**. Interstitial pneumonia. **c. of the ovary**. Chronic interstitial oöphoritis. **c. of the spleen**. Chronic enlargement and induration of the spleen with thickening of the capsule and of the trabeculae. **c. of the stomach**. Chronic interstitial gastritis. **c. peritonei**. See *peritonitis deformans*, under *peritonitis*. **fatty c.** Interstitial hepatitis with fatty degeneration. **glissonian c.** See *perihepatitis*. **Hanot's c.** Hypertrophic c. **hypertrophic c., hypertrophic c.** A variety of interstitial hepatitis in which the newly formed connective tissue invades the lobule, thus increasing the size of the liver. **irritative c.** Interstitial hepatitis caused by the irritation of some poisonous material, such as alcohol or the poisonous elements of syphilis or malaria, brought to the liver by the hepatic artery or portal vein. **Laennec's c., periportal c.** Atrophic c. of the liver. **obstructive c.** Interstitial hepatitis due to some impediment to the flow of bile or blood from the liver. **pulmonary c.** Interstitial

pneumonia. **renal c.** See *interstitial nephritis*, under *nephritis*. **syphilitic c.** C. due to syphilis. **turbinated c.** A rudimentary condition of the nasal turbinated bodies, due to more or less complete disappearance of the erectile structure in cases of atrophic rhinitis. [Gr., *kirros*, yellowish.]

cirrhotic (sir-ot'ik). Pertaining to, affected with, or of the nature of, cirrhosis.

cirro-. Combining form of Lat., *cirrus*, curly, used in botanical or zoological terms.

cirrus (sir'us). The sexual orifice present in the segment of a tapeworm.

cirsoid (sir'soyd). Resembling a varix; varicose. [Gr., *kirsodes*, from *kirsos*, a varix, + *eidos*, resemblance.]

cirsotomy (sir-sot'om-i). The cutting out of varices. [Gr., *kirsos*, a varix, + *temnein*, to cut.]

Cissampelos (sis-sam'pe-los). A genus of menispermaceous plants. **C. pareira**. False pareira brava; a species found in Brazil, Mexico, and the West Indies. It is tonic, aperient, and diuretic. [Gr., *kissos*, ivy, + *ampelos*, a vine.]

cisterna (sis-ter'nah). A vessel, a receptacle, a cistern; an old term for the fourth ventricle of the brain. **c. chiasmatis**. See *interpuncular space*. **c. chiasmatis et laminae cinereae terminalis**. That portion of the subarachnoid space that is situated between the optic chiasm and the rostrum of the corpus callosum. **c. chyli**. See *receptaculum chyli*. **c. fossae Sylvii**. That portion of the subarachnoid space which lies immediately above the fissure of Sylvius. **c. intercruialis**. The anterior subarachnoid space at the base of the brain. **c. intercruialis profunda**. That portion of the subarachnoid space lying above the space on the base of the brain between the cerebral peduncles. **c. intercruialis superficialis**. That portion of the subarachnoid space which is situated between the pons Varolii and the optic chiasm.

c. laminae cinereae terminalis. A subarachnoid space corresponding to the region of the optic chiasm. **c. lateralis pontis**. A small subarachnoid space lying along the outer edge of the pons Varolii. **c. magna**. That portion of the subarachnoid space immediately above the transverse fissure of the cerebellum. **c. magna cerebellomedullaris**. The large subarachnoid space between the posterior and lower surface of the cerebellum and the medulla oblongata. **c. pontis media**. A small subarachnoid space around the basal sulcus of the pons Varolii. **c. subarachnoidalis**. See *subarachnoid lymph space*. [B. N. A., *cisterna*.] [Lat., *cisterna*, a cistern.]

Cistus. A genus of plants allied to *Helianthemum*. **C. creticus**. The rock rose; indigenous to Crete and other regions of the Mediterranean; one of the chief sources of ladanum. **C. ladaniferus**. The bog, or ladanum gum c.; a species found in Spain, Portugal, southern France, northern Africa, and the Grecian archipelago,

which yields ladanum. **ladanum gum c.** *C. ladaniferus*.

citar (sit'ar). Sodium anhydromethylene citrate ($\text{Na}_2\text{C}_7\text{H}_6\text{O}_7$). A proprietary preparation claimed to be useful for gout and rheumatism.

citr-, citro-. Combining form of Lat., *citrus*, citron; used as a prefix in compound words.

citral (sit'ral). An unsaturated aliphatic aldehyd ($(\text{CH}_3)_2\text{C}:\text{CH}(\text{CH}_2):\text{CH}\text{-CHO}$, present in lemon oil.

citrate (sit'rät). A salt of citric acid.

citrean (sit're-an). Resembling the citron.

cit'ric. Derived from fruits of the genus

Citrus, such as the lemon and the lime.

c. acid. See under *acid*. **syrup of c. acid**. See *syrupus acidi citrici*, under *syrupus* [U. S. Ph.]. [Lat., *citricus*.]

cit'rine. Lemon-colored; as a citrate of glyceryl. **c. ointment**. See *unguentum hydrargyri nitratis*, under *hydrargyrum*.

citromel (sit'ro-mel). A solution of citric acid in honey, slightly diluted with water. [Lat., *citrus*, the lemon tree, + *mel*, honey.]

cit'ron. 1. The ripe fruit of *Citrus medica*. 2. A popular name for candied lemon peel and for candied melon peel. **acid of c.** Citric acid. [Gr., *kitron*, *kitrion*, *kitromelon*.]

Citronella (sit-ron-el'lah). 1. Of Don, a genus of plants of the order *Ullacineae*, corresponding to the genus *Villaresia* of Ruiz and Pavón. 2. Lemon grass, the name of several plants furnishing c. oil, or similar oils (such as those obtained from *Andropogon nardus*, *Andropogon schaeenanthus*. **c. oil**. The essential oil of several species of *Andropogon*. It has an aromatic odor and pungent taste. It is applied to the skin to repel mosquito bites.

cit'ronin. A yellowish coloring matter having the constitution of dinitrodiphenylamin.

Citrus (sit'rus). A genus of aurantiaceous trees having a pulpy fruit with a spongy rind, such as the orange, lemon, lime, citron, shaddock, and other similar fruits. **C. aurantium**. 1. The orange tree. It has the following varieties: *amara*, *dulcis*, and *bergamia*. 2. The sweet orange tree; *C. aurantium*, var. *dulcis*, of Linnaeus; *C. dulcis* of Lamarck. **C. bergamia**. The leaves yield an oil used to adulterate oil of bergamot, and the juice of the fruit constitutes a portion of the commercial concentrated lime juice used in making citric acid. **C. limonium**. The lemon tree. The peel of the fruit is aromatic and yields an oil much used in perfumery. The fruit contains citric acid, and on this account the fresh juice is much used in scurvy. The essential oil of lemon is made from the unripe or green fruit. **C. vulgaris**. The Seville orange. The flowers yield the *essence de n'roli bigarade* and orange flower water. The peel or rind of the fruit (*aurantii amari cortex* [U. S. Ph.], *aurantii cortex* [Br. Ph.]) yields an oil used to flavor

tinctures and elixirs. The ripe fruit is too bitter to eat. Its peel is a tonic, carminative, and stomachic, and is used in the manufacture of essences, etc.

citryl (sit'ril). Oil of lemon.

civet (siv'et). Syn.: *civet cat*. A substance obtained from *Viverra civetta*, the c. cat of the East Indies. It is a semiliquid, unctuous material of a strong, musklike odor, and bitter, unpleasant, fatty taste, which is secreted into a cavity opening between the anus and the external genitals. It contains a volatile oil, fat, and ammonia, and was formerly employed medicinally as a stimulant and antispasmodic; now used only in perfumery. [Lat., *civetta*.]

Cl. The chemical symbol of chlorine.

Cladonia. A genus of lichens. **C. pyxidata**. A species common in woods and hedge banks. It was formerly used in intermittent fevers and in whooping-cough.

Cladorchis Watsoni. An intestinal fluke.

Cladothrix (klad'o-thrix). A genus of the *Schizomycetes*, and of the higher family of bacteria known as the *Chlamydoacteriaceae*, having a clearly visible sheath and the cell threads showing a pseudo-branching. **C. asteroides**. Incorrect name for *Actinomyces asteroides*. **C. Foersteri**. A species of c. forming felted masses in the human lacrimal passages. **C. liquefaciens**. A form found by Gaster in a case of clinically typical actinomycosis. [Gr., *klados*, a branch, + *thrix*, a hair.]

clairvoyance (klâr-voy'âns). The pretended power of being able to discern the nature of cases of sickness, and other things not perceptible to the senses, when in a mesmeric state or trance. [Fr., *clair*, clear, + *voir*, to see.]

clairvoyant (klâr-voy'ont). Possessing, or of the nature of, clairvoyance; as a n., a practitioner of clairvoyance.

clamp. 1. A mechanism for holding a part (such as an artery, the pedicle of a tumor, etc.) fast by pressure. 2. That portion of the obstetrical forceps which grasps the fetal head. 3. In dentistry, an instrument having jaws for grasping the neck of a tooth to retain rubber dams of napkins in place. **hemorrhoidal c.** A forceps with set-screw for holding a hemorrhoid while it is seared with the cautery. [Dan., *klamp*.]

clap. Another name for *gonorrhœa*.

clapotage (klap-o-tahzh'). Splashing of stomach contents on suction.

clar'et. A general term for the light red wines of France and others resembling them. [Lat., *claretum*.]

clar'idat. A solution of lead acetate in which precipitated sulphur is suspended; used for deepening the color of the hair.

clarification. The process of clarifying liquid substances from their impurities. [Lat., *clarus*, clear, + *facere*, to make.]

clarify (klar'if-i). To free from turbidity or from suspended matter.

Clarke's column. A column of nerve cells situated at the inner angle of the base of the posterior gray cornu of the cord. It is mostly limited to the thoracic

region, although traces of it are found in the cervical and lumbar regions. It is found also in the medulla oblongata, and forms the nucleus of the pneumogastric. [Joseph Lockhart Clarke, Eng. physician, 1817-1880.]

Clark's rule. See under *dosage*.

clasis (kla'sis). A fracture. [Gr., *klasis*.]

clasmatocyte (klas-mat'o-sit). A large cell derived from a connective tissue cell or lymphocyte, possibly the source of most cells and plasma cells in inflammation. [Gr., *klasma*, a fragment, + *kytos*, a cell.]

clasp. In dentistry, a piece of spring metal adjusted to three sides of a tooth, with one or both ends free, designed to support partial dentures or other apparatus worn in the mouth.

classical (klas'sik-al). Of, or according to, the best authority; typically characterized. [Lat., *classicus*.]

claudication (klaw-de-ka'shun). Lameness. **intermittent c.** Arterial spasm, causing pain and cramp in the legs and consequent lameness. [Lat., *claudicatio*.]

claustrophobia (klaws-tro-fo'be-ah). A form of mental derangement characterized by fear of closed spaces. [Lat., *claustrum*, a closed space, + Gr., *phobos*, fear.]

claustrum (klaws'trum). A narrow tract of gray cerebral substance which intervenes between the external capsule and the white matter of the island of Reil. **c. gutturis**. The opening of the pharynx. [Lat., *claustrum*, bolt, from *claudere*, to shut.]

clavate (kla'vât). Club-shaped or becoming gradually thicker toward one end. Used in descriptive bacteriology to denote club-shaped. [Lat., *clavatus*, from *clava*, club.]

clavelization (klav-el-i-za'shun). The inoculation of sheep with the virus of sheep pox, pure or attenuated. [Fr., *clavelée*, ovine variola.]

Claviceps (klav'is-eps). A parasitic fungus infesting various plants. **C. purpurea**. Ergot. [Lat., *clava*, club, + *caput*, head.]

clav'icle. The collar bone, articulating with the sternum and the scapula, and serving as an anterior support for the latter. [Lat., *clavicula*, dim. of *clavis*, a key.]

clav'in. A nearly inert mixture of leucin and aspartic acid, isolated from ergot by Vahlen, who supposed it to be the active principle of that drug.

clav'us. 1. A corn. A small circumscribed callus, which, from external pressure, is forced downward as a conical plug. 2. The morbid condition in cereals produced by parasitic fungi; so called because the young grain affected takes the form of a nail or club. **c. cerealis**. See *ergot*. **c. secalinus**, **c. siliginis**. See *ergot*. [Lat., *clavus*, a nail.]

claw-foot. Arching of the foot combined with hyperextension of the proximal and flexion of the other segments of the toes.

The interossei and lumbrical muscles are generally paralyzed.

claw-hand'. Muscular atrophy of the hand and fingers.

clay (klā). A soft, plastic earth, chiefly aluminous in composition, formed by the decomposition of feldspar and other minerals containing alumina.

-cle, -cule. A suffix corresponding to Fr., *-cule* and Lat., *-culus*; a diminutive giving the meaning of smallness, as *corpuscle*.

cleavage (kle'vaj). The splitting up in a direction different to the plane of stratification. In chemistry, the breaking down at definite points in the molecule of a more complex compound into a simpler one. In dentistry, the splitting of the enamel in a definite direction. [Ang.-Sax., *clūfan*, to split, to cleave.]

cleft. A fissure. **anal c.**, **c. of the nates**. The space between the nates [B. N. A., *creva ani*]. **c. of the vulva**. The c. between the labia majora. **hyomandibular c.** The first, or uppermost, of the visceral c's of the embryo. It takes part in the development of the ear and lies between the mandibular and hyoid arches. **maxillo-intermaxillary c.** A fissure between the maxillary and intermaxillary matrices (the frontonasal and maxillary plates) in the fetus. If by arrest of development it persists, it gives rise to cleft palate. **ocular c.** A fissure between the frontonasal process and the superior maxillary plate, leading from the mouth up to the eye in the embryo.

pharyngeal c's. See *visceral c's*. **primitive cerebral c.** In the embryo, a decided sinking of the cerebral roof separating the prosencephalon from the thalamencephalon. **protovertebral c's**. Fissures between the protovertebral segments or somites. **sclerotic c.** A c. in the lower part of the fetal sclerotic, into which a process of the ectoderm projects to form the vitreous. **tympano-eustachian c.** See *hyomandibular c.* **visceral c's**. C's situated between the postoral visceral arches, one on each side, running through the wall of the body from the external surface into the cavity of the pharynx. [Mid. Eng., *clyft*, crevice, chink.]

cleft-palate. A congenital defect of the hard palate, the soft palate, or both, due to the failure of the palate bones to unite in the median line during the process of development.

cleido-epitrochlearis (kli'do-epi-tro-klear'is). See *table of muscles*, under *muscle*.

cleidomastoideus (kli-do-mas-toid'e-us). See *table of muscles*, under *muscle*.

cleido-occipitalis (kli'do-ok-sip-i-tal'is). See *table of muscles*, under *muscle*.

clem'atis. 1. Virgin's bower. The species are well-known climbing plants. [Gr., *klematis*, dim. of *klema*, vine-branch.]

clergyman's sore throat. See *angina follicularis*, under *angina*.

climacteric (kli-mak-ter'ik). A critical stage in human life. According to some, all the years denoted by multiples of seven

were climacterics and $7 \times 9 = 63$, the *grand c.* Used to signify the menopause in the case of women. [Gr., *klimakter*, a round of a ladder.]

climate (kli'mät). The meteorological conditions that generally prevail in a given region of the earth's surface. [Gr., *klima*.]

climatic. Belonging to or connected with peculiarities of climate.

climatology (kli-mat-ol'o-je). The science of climates and of their influence on health. [Gr., *klima*, climate, + *logos*, understanding.]

climax (kli'macks). The highest point, the greatest degree. The stage of greatest intensity. [Gr., *klimax*.]

clinic (klin'ik). 1. Teaching of medical subjects at the bedside or with the presence of patients. 2. The gathering of sick persons at a hospital or dispensary from whom some may be selected for teaching purposes. 3. Said of any such gathering, even if the physician is not a teacher. [Gr., *kline*, a bed.]

clin'ical. 1. Pertaining to, founded on, or illustrated by bedside observation and treatment, or the actual observation and treatment of patients, as distinguished from theoretical considerations and experimental or logical conclusions. 2. Pertaining to a clinic. [Gr., *kline*, a bed.]

clin'ically. In a clinical manner, or from a clinical (as opposed to a theoretical or other) point of view.

clinician (klin-ish'an). One whose observations, inferences, and methods of treatment are based on clinical work—i. e., on experience in the care of living subjects, as distinguished from the study of morbid specimens or the writings of others.

clinoid (kli'noid). Resembling a couch. [Gr., *kline*, bed, + *eidōs*, form.]

clinoscope (klin'oscōp). An instrument, used in ophthalmology, for ascertaining the presence and extent of declination. [Gr., *klinein*, to incline down, + *skopein*, to examine.]

clitoridean (klit-o-ri'de-an). Relating to the clitoris.

clitoridectomy (kli-tor-id-ek'to-me). The operation of removing the clitoris. [Gr., *kleitōris*, clitoris, + *ektēmnōis*, to cut off.]

clitoris (kli'tor-is). A small erectile organ situated in the vulva, near its anterior commissure; the analogue of the penis, which it resembles in being attached by crura to the ischia and in having a prepuce. In all animals the c. is imperforate, except in the *Lemuridae*, in which it is traversed by the urethra. [Gr., *kleitōris*, from *kleio*, to close.]

cloaca (klo-a'kah). 1. A sewer. 2. The common opening of the intestinal and urogenital passages at the caudal extremity of the embryo; in birds, the enlargement at the lower end of the straight gut forming a receptacle for the products of the genito-urinary and digestive systems. **c. congenitalis**. The malformation in which the rectum opens into some part

- of the genito-urinary tract. **urogenital c.** In a pathological sense, a common opening of the vagina and the urethra, due to congenital deficiency or destruction of the urethrovaginal septum. **vesicorectovaginal c.** An abnormal common aperture of the bladder, the vagina, the rectum, due to injury or malformation.
- cloacal** (klo-a'kal). Relating to the cloaca (said also of any aperture or canal which serves to carry off excrementitious matters from an organism).
- clon'ic.** Characterized by recurring contraction and relaxation, as opposed to continuous contraction. [Lat., *clonicus*, from Gr., *klonos*, a violent confused motion.]
- clonism'us.** The period in a severe hysterical attack when there are contortions and grand movements.
- Clonorchis** (klon-or'kis). A member of the class *Trematoda* and the family *Fasciolidae*, being hermaphrodite fluke-worms. **C. endemicus** and **C. sinensis**. Syn.: *Distoma japonicum* and *Distoma sinense*. Two species which invade the bile-ducts of man in China and Japan.
- clonordino'sis.** Invasion of the bile-ducts by *Clonorchis endemicus* or *Clonorchis sinensis*.
- clonospasm** (klon'o-spazm). Clonic spasm. [Gr., *klonos*, a violent confused motion, + *spasmos*, spasm.]
- clonus** (klo'nus). A sudden, jerky muscular contraction, also a succession of such contractions. **ankle c.** A phenomenon consisting of a number of rhythmical contractions of the muscles of the calf of the leg when the foot is suddenly flexed by pressure on the sole, the leg being extended; most marked in cerebral or cord affections. **cathodal closure c.** A clonic contraction taking place under the cathode on closure of a galvanic circuit. **cathodal opening c.** A clonic contraction taking place under the cathode upon opening the galvanic circuit. **knee c.** See *patellar reflex*, under *reflex*.
- wrist c.** A convulsive motion of the wrist joint. It may be induced in the late rigidity of hemiplegia by pressing the hand backward and securing extreme extension at the wrist. [Gr., *klonos*, a violent, confused motion.]
- Clostridium** (klos-trid'e-um). An anaërobic, spore-forming bacillus, found in earth of plants which fixes the nitrogen for the plants. **C. americanum**. A species of same. **C. polymyxa**. See *Bacillus polymyxa*.
- closure.** The act of closing (an opening), of completing (an electrical circuit). **anodal c.** See under *anodal*. **cathodal c.** The closure of a galvanic circuit with the cathode placed in relation to a part desired to be affected, such as a muscle or nerve.
- clot.** A jellylike mass formed by coagulation, especially of blood. To coagulate. [Old Eng., *clott*.]
- clove.** 1. The unexpanded and dried flower bud of *Eugenia aromatica*; a strong aromatic stimulant, chiefly used to modify the action of other medicines. 2. One of the bulblets of which the compound bulb of the garlic and similar herbs is made up. **oil of c's.** *Oleum caryophylli* [U. S. Ph., Br. Ph.]. An oil obtained from c's by distillation with water. It is very fluid, clear, and colorless if recently prepared, has the hot aromatic taste of cloves, and is slightly acid. It contains caryophyllin, and may be separated into two oils of different sp. gr. (*Heavy oil of c's* and *light oil of c's*). It is used as a corrigent, as an application to painful dental cavities, and for rendering microscopical preparations transparent. [Ang.-Sax., *clufe*.]
- club foot.** A congenital distortion of the foot. See *talipes*.
- club hand.** A rare congenital distortion of the hand.
- clupein** (klu'pe-in). A leukomatin known as protomin, found in the spermatozoa of herring. [Lat., *clupeus*, herring.]
- clysis** (kli'sis). A washing, cleansing, especially by means of an enema. [Gr., *klyzein*, to administer a clyster.]
- clyisma, clyster** (klis'mah, klis'ter). See *enema*. [Gr., *klyzein*, to cleanse.]
- cm.** An abbreviation for centimeter.
- Cnicorum** (ne'o-rum). The widow wail; a genus of simarubaceous plants, small shrubs indigenous to the Mediterranean region and the Canary Islands. **C. tricoccum.** The spurge olive; found in southern Europe and Africa. The leaves and sap are purgative.
- cnicin** (ni'sin). A crystallizable substance, $C_{20}H_{30}O_{15}$, obtained from *Centaurea benedicta* (*Cnicus benedictus*). It is sometimes used in intermittent fevers.
- Cnidian** (nid'e-an). Pertaining to *Cnidus* or to a system of medicine that flourished there up to the time of Hippocrates. [Gr., *Knidos*, a city of Caria.]
- Co.** The chemical symbol for the element *cobalt*.
- coagulabil'ity.** Capability of being coagulated.
- coagulable.** Capable of coagulation.
- coagulant.** Causing, or capable of causing, coagulation; as a n., a substance causing precipitation of proteins from their solutions or favoring the coagulation of blood.
- coagulate** (ko-ag'u-lät). To cause the formation of a precipitate, or clot, in a solution of proteids. See *coagulum*.
- coagulation** (ko-ag-u-lah'te-o). See *coagulation*. **c. calida.** Coagulation by heat. **c. frigida.** Coagulation by cold. **c. per comprehensionem.** The uniform coagulation of a liquid. **c. per segregatorem.** Coagulation in which a portion of a liquid separates in the form of a clot.
- coagulation** (ko-ag-u-la'shun). The conversion of the whole or a part of a liquid into a jellylike mass. It may occur by spontaneous chemical change from the action of ferments, or by the action of heat, alcohol, acids, etc. **intravascular c.** See *thrombosis*. **thermic c.** Produced by heat. [Lat., *coagulatio*.]
- coag'ulin.** The name given by Loeb to hypothetical enzyme bodies contained in

the tissues and capable of acting like fibrin ferment (thrombin) in converting fibrinogen into fibrin.

coagulum (ko-ag'u-lum). The precipitate formed in a solution of proteins brought about by boiling in a neutral or partly acid solution. The precipitate contains a part or all of the proteins present and is insoluble in water and in salt solution. Many solutions of colloidal substances have this property of coagulating. [Lat., *coagulum*, a clot.]

coal (kōl). 1. The charred or incandescent mass left after the incomplete combustion of any material, such as wood, consisting largely of carbon. 2. A black or brownish, amorphous, combustible substance, consisting chiefly of carbon, but generally harder and more compact, and containing bitumen and earthy impurities. It is the result of the transformation of vegetable matter, mainly woody fiber, into a substance richer in carbon by the partial elimination of oxygen and hydrogen. **c. gas**. The gaseous products of the destructive distillation of c.; consisting chiefly of methane and hydrogen with small amounts of carbon dioxide, nitrogen and vapors of hydrocarbons. **c. tar**. One of the distillation products of coal; a dark viscous mass from which many organic compounds are prepared which are used in making many dyes and medical preparations. [Ang.-Sax., *col*, *coll*.]

coalescence (ko-al-es'sens). Growing together, adhesion, union. [Lat., *coalescere*, to grow together.]

coaptation (ko-ap-tā'shun). The fitting together or adjusting of two parts, as the ends of a broken bone. [Lat., *coaptare*, to fit together.]

coarticulation. See *synarthrosis*. [Lat., *conarticulatio*, from *con*, together, + *articulare*, to join.]

coat'. A membrane, forming, or assisting in forming, the wall or investment of an organ. **adventitial c.** See *adventitia*. **areolar c.** A c. of areolar tissue, e. g., the submucous c. of the alimentary canal or the fibrous investment of the liver.

buffy c. The upper layer of the clot that forms in blood from an individual affected with acute inflammation. Its buff color is owing to the absence of red corpuscles, they having sunk to the lower portions before coagulation began. A more or less marked buffy c. often forms in any blood that coagulates tardily. **dermic c. of a hair follicle**. The outer layer, which consists itself of three layers. The most external of them is of longitudinal fibers of connective tissue without elastic fibers; it is continuous above with the corium of the skin. The internal layer is transparent and homogeneous, corresponding to a *membrana propria*. The middle layer is made up of fibrous matrix composed of transverse connective tissue corpuscles with oblong nuclei. It is continuous with the papillary part of the cutis vera. **external c.** See *adventitia*. **external elastic c.** Syn.: *external elastic tunic*. The innermost layer of

the adventitia, found in most of the larger and medium-sized arteries. **internal c.** See *intima*. **internal elastic c.** Syn.: *internal elastic tunic*, *elastic longitudinal fiber-layer*. The outermost layer of the internal c. of arteries. **mucous c.** A c. consisting of mucous membrane. **muscular c.** A c. consisting of or containing muscular fibers. **peritoneal c.** A c. consisting of peritoneum. **serous c.** A c. consisting of serous membrane. **submucous c.** A c. situated beneath a mucous c. **uveal c.** See *uvea*. **vaginal c.** Of the eyeball, its fibrous capsule. Of the testicle; see *tunica vaginalis testis*, under *tunica*. [Old Fr., *cole*.]

coat'ed. Covered with a coat, layer, or envelope; especially covered with one that is adventitious, as a c. pill, a c. tongue.

coat'ing. 1. The act of covering with an envelope or pellicle. 2. The envelope or layer with which a body is covered. **pill c.** A substance used to cover pills in order to disguise the taste or odor. It consists either of some light powder (such as lycopodium) dusted over the pill surface, of sugar, gelatin, balsam of Tolu, French chalk, or a thin pellicle of metal, such as silver or gold.

cobalt (ko'balt). A metallic element, which occurs in various forms of combination. It is very tough, hard, slightly malleable, with a pink color and a high lustre. Symbol Co. Atomic weight 59. [Ger., *Kobalt*, from *Kobold*, a goblin, supposed to haunt the c. mines.]

cobaltic. Belonging to or containing cobalt as a trivalent radicle.

co'balite. A mineral, CoAs₂.

cobaltous. Belonging to or containing cobalt as a bivalent substance.

cobaltum. Cobalt.

cobralec'ithin. The compound formed between the venom toxin of the cobra and lecithin. It is effective in causing hemolysis.

cob'web. The web of the spider (*Aranea*). It has been used as a hemostatic and as a moxa.

coca (ko'ka). Of the U. S. Ph., the leaves of *Erythroxylon coca*, or of *E. truxillense*, which contain cocaine, upon which the action mainly depends, and certain other bases which have not been studied. The fluidextract and the wine are official in the U. S. Ph. and the N. F. has several elixirs containing coca. **cocac foliae**. The dried leaves of different varieties of *Erythroxylon c.* [Br. Ph.]. **huannes c.** The commercial name of coca leaves obtained from *Erythroxylon c.* **truxillo c.** The commercial name of c. leaves obtained from *Erythroxylon truxillense*. [Peruv., *khoka*, the tree, i. e., the specially favored one.]

cocain (ko'ka-in). An alkaloid, C₁₇H₂₁NO₄, extracted from the leaves of *Erythroxylon coca* or *E. truxillense*, the coca plant. It acts locally on sensory peripheral nerve endings and in toxic doses produces nausea, vomiting, delirium, asphyxia, and fatal collapse. Death results from paralysis of the respiratory centers. Its

- chief value is as a local anesthetic when applied to mucous surfaces, or injected into the part to be affected, or into the spinal canal. It is used successfully in minor surgical operations. The hydrochlorid is the official salt commonly employed, but the oleate is sometimes used topically. **c. hydrochlorate**, **c. hydrochlorid**, **c. muriate**. A compound of **c.** and hydrochloric acid; a white crystalline granular powder. It is the salt commonly used in medicine [U. S. Ph., Br. Ph.]. **c. ointment**. Lat., *unguentum cocainae* [Br. Ph.]. A mixture of 20 grains of **c.**, 80 of oleic acid, and 400 of lard. **c. oleate**. A compound of **c.** and oleic acid. The pharmaceutical oleates of alkaloids consist of a solution of the oleate in an excess of oleic acid. **c. salicylate**. A compound of **c.** and salicylic acid; used but little. **hypodermic injection of c.**, **injection cocaine hypodermica**. A solution containing 5 per cent. of **c. hydrochlorid**, preserved with salicylic acid. The salicylic acid is added as an antiseptic [Br. Ph.]. **stylus cocaine dilubilis**. A pencil made of paste containing 5 per cent. of the hydrochlorid of **c.** [N. F.]. [Lat., *cocaina*, U. S. Ph., Br. Ph.]
- cocainization** (ko-ka'in-iz-a'shun). The process of bringing the organism or a part of it under the influence of cocain. **spinal c.** The induction of surgical anesthesia of the lower part of the body by injecting cocain within the spinal meninges by means of a puncture with a stout needle through the fourth or fifth lumbar interspace.
- coca'inomania**. The habitual and excessive use of cocain. [Lat., *cocaina*, cocaine, + *Gr.*, *mania*, madness.]
- cocapryrin** (ko-kap-ir'in). A mixture of 100 parts of antipyrin and 1 part of cocain.
- Coccaceae** (kok-ka'se-e). A family of the *Schizomycetes*, including the *Streptococci*, *Planococci*, and other micrococci.
- Coccioides** (kok-sid-e-oid'es). A genus of the phylum *Neosporidia*. **C. immitis**, **C. pyogenes**. An uncertain species parasitic on man, primarily in the skin, giving rise to pseudotuberculosis.
- coccidiosis** (kok-sid-e-oid'is). An infection caused by coccidia.
- Coccidium** (kok-sid'e-um). A genus of the *Telosporidia* or *Sporozoa*, and the order *Coccidiea*, which are parasitic in epithelial cells of many vertebrates and invertebrates. **C. hominis**. Syn.: *Eimeria hominis*. A species of **C.** found in liver and intestines of man. **C. oviforme**. Syn.: *Eimeria stiedae*. A species of **c.**, frequent in rabbits, which has been found in man. It exists in the liver and intestines as an egg-shaped body with granular contents. The sporozoites enter the bile-ducts and propagate, causing proliferation of the epithelium and connective tissue of the ducts. [Gr., dim. of *kokkos*, grain, berry.]
- cocciferous** (kok-sif'er-ous). 1. Having red spots or specks. 2. Bearing berries, or having *cocci* (the cochineal insects). 3. Having small round globules or grains. [Gr., *kokkos*, a berry, + Lat., *ferre*, to bear.]
- coccionella** (kok-si-o-nel'lah). Cochineal. **c. mestica**. Syn.: *grana fina*. A fine variety of cochineal of a silvery color on the outside and dark red within. **grana coccionellae**. Cochineal.
- coc'code**. A globular granule. [Gr., *kokkos*, a berry, + *eidōs*, resemblance.]
- coc'cogenous** (kok-ko'je-nus). Due to the presence of pus cocci. [Gr., *kokkos*, a berry, + *gennan*, to engender.]
- coccomelasma**. Granular melanosis of the skin. [Gr., *kokkos*, a grain, + *melasma*, blackness.]
- coc'con**. The seed of the pomegranate, also of the mistletoe berry. [Gr., *kokkos*.]
- coc'culin**. See *picROTOXIN*.
- Cocculus** (kok'ku-lus). A genus of menispermaceous plants. **c. indicus**, **cocculi indici**. The fruit of *Anamirta c.* It contains picrotoxin, upon which its action depends. [Lat., dim. of *coccus*, a berry.]
- coc'cum**. The coccus cacti insect.
- coccus** (kok'us). 1. A berry or a berry-like fruit; also a kernel of grain. 2. A spherical bacterium, a micrococcus. 3. A shell or separate carpel of a dried fruit. 4. Of the U. S. Ph. and Br. Ph., cochineal, the dried female insect, *Pseudococcus cacti*. **cocci grani**. See *kernes*. [Gr., *kokkos*, grain, berry.]
- coccy'algia** (kok-se-al'je-ah). See *coccygodynia*. [Gr., *kokkyx*, coccyx, + *algos*, pain.]
- coccy'geal** (kok-se'ge-al). Pertaining to the coccyx. See *table of muscles under muscle*, and of *nerves*, under *nerve*. [Lat., *coccygeus*.]
- coccy'gectomy** (kok-se-jek'to-me). Excision of the coccyx. [Gr., *kokkyx*, coccyx, + *ektēmein*, to cut out.]
- coccy'geus** (kok-sij'e-us). See *table of muscles*, under *muscle*.
- coccygodynia** (kok-se-go-din'e-ah). Chronic pain in the region of the coccyx; a symptom almost peculiar to women, but sometimes produced in persons of either sex by injury or disease of the coccyx. The pain is aggravated by pressure, as in sitting, and sometimes radiates to the perineum, the bladder, or the hips. [Gr., *kokkyx*, coccyx, + *odyne*, pain.]
- coccyx** (kok'six). *Os coccygis* [B. N. A.], The distal bone of the vertebral column, formed by the coalescence of four rudimentary vertebrae. It is triangular, with its base articulated to the sacrum, to which it generally becomes ankylosed late in life, and with its free extremity curved toward the pubic arch. [Gr., *kokkyx*, cuckoo, whose beak it is supposed to resemble.]
- cochineal** (ko-chin-ēl'). The dried female insect, *Pseudococcus cacti*. It is used chiefly to color tinctures and has no medicinal value. See *carminic acid*. **cake c.** An inferior variety from the Argen-

- tine Republic. [Lat., *coccus*, U. S. Ph., Br. Ph.]
- cochini'tin, cochcnil'in.** The coloring principle of cochineal, now known as carminic acid.
- cochlca** (kok'le-ah). The third division of the osseous labyrinth of the internal ear. It presents a canal between 28 and 30 mm. long, gradually tapering toward its upper end, turning $2\frac{1}{2}$ times round on its axis, and showing on cross section the form of a garden snail. It communicates with the vestibule by a spacious opening and with the tympanic cavity by means of the fenestra rotunda. **aqueeduct of the c.** See *cochlea*. [Gr., *kochlias*, a spiral.]
- cochlear** (kok'le-ar). Of or pertaining to the cochlea.
- cochleare** (kok-le-ah're). A spoon; among various medical authors, a measure varying from $\frac{1}{2}$ dr. to $\frac{1}{2}$ fl. oz. **c. magnum.** A tablespoon, holding about 16 c.c. **c. minimum.** A teaspoon, holding about 5 c.c. [Gr., *kochliarion*.]
- Cochlearia** (kok-le-ah're-ah). A genus of cruciferous plants. **C. armoracia.** The horse radish. **C. officinalis.** Common scurvy grass. It is stimulant, aperient, and diuretic.
- cochleariformis** (kok'le-ar-i-for'mis). Shaped like a cochlea. **processus c.** See under *processus*. [Gr., *kochlias*, spiral, + Lat., *forma*, shape.]
- cochleate** (kok'le-ät). A term used in descriptive bacteriology meaning shaped like a spiral shell.
- cocillana** (ko-se-yah'na). The bark of *Guarea Swartzii*. It is used much like ipecac. [Span.]
- cock.** A short tube for drawing off liquid or gas from a reservoir, furnished with a key for stopping or moderating the flow; also the key itself.
- cockroach.** See *Blatta orientalis*.
- cocles** (ko'kles). Having one eye. [Gr., *kyklops*.]
- cocoa** (ko'ko). The seeds of *Theobroma cacao*, deprived of a part of their fixed oil; also a beverage made from powdered cocoa. Cocoa contains theobromin and caffeine.
- co'coanut.** The fruit of *Cocos nucifera*.
- c. oil.** The fixed oil obtained by expression or decoction from the fruit of *Cocos nucifera*, coco-olein.
- coco-olein** (ko'ko-o'le-in). A medicinal preparation said to be the liquid part of coconut oil; used as a substitute for cod-liver oil.
- co'damin.** An opium alkaloid, $C_{20}H_{25}O_4$, isomeric with laudanin, but readily distinguished from it by turning to a deep green color when treated with ferric chlorid or with nitric acid.
- codeia** (ko-de'ah). See *codein*.
- codein** (ko-de'in). Of the U. S. Ph. and Br. Ph. an alkaloid, $C_{18}H_{21}NO_3 \cdot H_2O$, occurring in opium but commonly prepared synthetically from morphin. It is much weaker in action than morphin. Used as a mild analgesic and hypnotic and for cough. **c. phosphate.** A very soluble salt of c. and phosphoric acid; used like
- codein [U. S. Ph., Br. Ph.]. **c. sulphate.** A soluble salt of c. used like c. [U. S. Ph.]. **syrupus codeinac.** A syrup containing 1 per cent. of c. sulphate [N. F.]. [Lat., *codina*.]
- codethylin** (ko-deth'el-in). Morphin ethyle, $C_{17}H_{19}NO_2 \cdot OC_2H_5$.
- codex** (ko'decks). A book. **c. medicamentarius.** A pharmacopeia, especially that of France.
- cod-liver oil.** A fixed oil from the fresh livers of *Gadus morrhua* and other species of *Gadus*. The three commercial varieties are named, respectively, white or pale yellow, brownish yellow, and dark brown. They are essentially alike, except in the mode of preparation. The purest has the least fishy smell. It contains gaduin, oleic, palmitic and stearic acids with glycerin. The amount of iodine is so small as not to be detected by ordinary tests. Its therapeutic value depends upon the oil alone. [Lat., *oleum morrhuae*.] [U. S. Ph., Br. Ph.]
- co'dol.** See *retinol*.
- codrenin** (kõd-re'nin). A solution of cocaine hydrochlorid and epinephrin used in dentistry.
- coefficient** (ko-ef-fish'ent). A numerical quantity indicative of the rate at which a body undergoes some mechanical, physical, or chemical alteration. **c. of absorption.** See under *absorption*. [Lat., *con*, together, + *efficere*, to produce.]
- coelia** (se'le-ah). 1. The abdomen; also the stomach and different parts of the whole digestive system. [Gr., *koilia*, belly, from *koilos*, hollow.]
- coe'liac.** For this and other words beginning with *coe*, see those beginning with *ce*.
- coelom** (se'lom). The space between the somatopleure and the splanchnopleure in the developing ovum; the beginning of the body cavity.
- coercible** (co-cr'si-bl). Capable of liquefaction by compression, abstraction of heat, or both (said of gases).
- coercive** (co-er'siv). Capable of becoming and continuing magnetic (said of metals).
- Coff'ea.** The coffee tree. A genus of rubiaceous plants of tropical Asia, Africa, and the Mascarene Islands. **C. arabica.** The coffee plant, the original source of most of the coffee in cultivation. [Arab., *gahwah*, *k'ahawa*.]
- co'fee.** The seed of *Coffea arabica*, also an infusion of the same. C. contains caffeine and a volatile oil; roasted c. also contains caffeine, an aromatic principle, which contributes to its pharmacological action. [Lat., *caffea*.]
- coffin birth.** A very rare form of delivery after death and burial, supposed to be due to the increase of intra-abdominal pressure from putrefactive changes in pregnant women who have relaxed vaginal outlets.
- cognac** (kõn'yahk). Properly, brandy made in the C. district, France, from grapes grown there; as commonly used, any grape brandy. [Fr.]

cognition (kog-nish'un). Associative mental process of perception grouping. [Lat., *cognoscere*, to know.]

cohabitation. The maintenance of sexual relations, lawful or unlawful, between a man and a woman. [Lat., *cohabitare*, to dwell together.]

cohesion (ko-he'zhun). The physical force holding unorganized bodies together. [Lat., *co*, together, + *habitare*, to dwell.]

cohibition. See *inhibition*.

Cohnheim's areas. The polygonal areas, surrounded by clear lines, seen in transverse section of a muscular fiber.

coil (koyl). A winding or spiral structure; anything wound (e. g., wire), a loop.

cold water c. A device by means of which cold may be applied to a part continuously by a coil of tubing (of rubber or flexible metal) laid on it, through which a stream of cold water is kept running.

hot water c. The same mechanism as the cold water c., the water being used hot instead of cold.

ice c., ice water c., Leiter's c. See *cold water c.*

induction c. Properly, the secondary c. of an apparatus for the development of induced currents of electricity; as commonly used, the whole apparatus. See *induced electricity*.

primary c. The inner c. of an induction apparatus, through which the battery current passes.

resistance c. A c. or series of c's of doubled wire of known resistance; interposed in a galvanic circuit to diminish the strength of the current or to test the resistance offered by an object by comparison.

Ruhmkorff's c. See under *Ruhmkorff*. [Old Eng., *coile*, *coyle*.]

coinosite (koi'no-sit). An animal parasite that has the power of detaching itself from its host at will. See *ekosite*. [Gr., *koinos*, common, + *sistein*, to subsist.]

co'ital. Pertaining to coitus.

coitus, coition (ko'it-us, ko-ish'un). Sexual intercourse; copulation. [Lat., *coitus*, a uniting, from *coire*, to come together.]

Co'ix. A genus of grasses. **C. lacrima**. Job's tears, growwell reed. The fruits were formerly used for dropsy and pulmonary diseases.

Co'la. A genus of sterculiaceae plants. **C. acuminata**. A tree indigenous to the west coast of Africa, and naturalized in other tropical countries. The seeds are used in Africa and India as a masticatory, aphrodisiac, digestive tonic and a stimulant. [From *Kola*, the native name of *C. acuminata*.]

colalgia (ko-lal'je-ah). Pain in the colon, especially neuralgic pain in the left hypochondriac region, associated sometimes with constipation and other phenomena. [Gr., *kolon*, the colon, + *algos*, pain.]

colalin (ko-lal'in). A proprietary preparation, consisting essentially of a mixture of hyoglycocholic and hyotaurocholic acids obtained from bile. It is used like ox bile. **c. laxative**. A proprietary compound of c. and extract of cascara sagrada, sold in the form of tablets.

colato'rium. Literally, a strainer.

col'ature. A liquid or other sub-

stance purified by straining; that which has been subjected to straining. [Lat., *colatura*.]

colchicine (kol-chis-e'in). A substance, $C_{17}H_{21}NO_5 + 2H_2O$, obtained by the decomposition of an aqueous solution of colchicin, and found in the acetic extract of colchicum. Its medicinal properties are like those of colchicin.

colchicin (kol'chis-in). The active principle of colchicum; an alkaloid, $C_{17}H_{19}NO_5$.

Colchicum (kol'chi-kum). 1. A genus of liliaceae plants. 2. **C. autumnale**. List of poisons and their antidotes, see in *appendix*, page 938.

bulbus colchici, colchici cormus. See *c. corm* [U. S. Ph., Br. Ph.]. 3. **C. autumnale**. Common meadow saffron. The ordinary corm (bulb or root), seeds, and flowers are used medicinally. See *c. corm* and *c. seeds*.

The plant is the c. of the pharmacopias and is chiefly used in gout and rheumatism. **C. communis**. See *C. autumnale*.

c. corm. It contains a larger proportion of colchicin than the other parts of the plant and hence is more active medicinally [U. S. Ph., Br. Ph.].

c. root. See *c. corm*. **c. seed** [U. S. Ph.]. **c. seeds** [Br. Ph.]. The seeds of *C. autumnale*. They contain but a small amount of colchicin and hence are inferior medicinally to the bulb of the plant.

extractum colchici cormi [U. S. Ph.]. Syn.: *extractum colchici* [Br. Ph.]. Acetic extract of c., extract of c. corm, having 1.4 per cent. of alkaloids [U. S. Ph.].

extractum colchici radices fluidum. Fluidextract of c. corm [U. S. Ph., 1890].

extractum colchici seminis fluidum. Fluidextract of c. seed [U. S. Ph., 1890].

tinctura colchici seminis [U. S. Ph., 1890]. Syn.: *tinctura colchici* [Br. Ph.]. Tincture of c. (or of c. seeds). A preparation containing 0.04 per cent. of c. corm or 10 per cent. of c. seed. [Gr., *kolchikon*.]

colchisal (kol'chi-sal). A trade name for colchicin salicylate.

colcothar (kol'ko-thar). Ferric peroxid, Fe_2O_3 , red oxid of iron: tonic and styptic. [Lat.]

cold. 1. A state of comparatively low temperature. 2. A popular term for an acute transitory disorder attributed to exposure to a low temperature; especially for an acute infection of any portion of the respiratory apparatus. A c. is popularly supposed to constitute the starting point of most acute inflammations, particularly those of the respiratory organs.

cream. A name given to various white scented ointments, used chiefly as cosmetics and as an application to chapped hands, slight excoriations of the face, herpes labialis, etc. **c. in the chest**. A popular name for bronchial catarrh.

c. in the eye. Catarrhal conjunctivitis.

c. in the head. Coryza. **c. sore**. See *herpes facialis*. **c. spots**. The name given to the spots, or small areas on the skin, which alone are sensitive to cold, that is, to temperatures below that of the

skin. The configuration of these spots varies for different parts of the skin.

colectomy (ko-lek'to-me). Excision of a portion of the colon. [Gr., *kolon*, the colon, + *ektemnein*, to cut out.]

Colley's fluid. A product of *Streptococcus pyogenes* and *Bacillus prodigiosus*, used in the treatment of sarcoma and carcinoma.

colibacillosis (ko''le-bas-il-o'sis). Infection with the *Bacillus coli*.

colic (kol'ik). Pertaining to the colon. [Gr., *kolikos*.]

colic (kol'ik). Severe paroxysmal pain in the abdomen, especially that due to spasm or distension of the intestines. **biliary c.**, **bilious c.** C. dependent on some morbid condition of the liver or the passage of a gall-stone. **calculus c.** C. due to calculi, hepatic or renal. **catarrhal c.** C. attributed to an excess of intestinal mucus. **c. of Surinam.** See *lead c. c. of the stomach*. Severe pain in the stomach, when distended with gas. **c. root.** *Aletris farinosa* and *Dioscorea villosa*, also, in some parts of the United States, *Latris spicata*. **cystic c.** Colicky pain in the urinary bladder. **dry c.** See *lead c. flatulent c.* C. caused by an accumulation of intestinal gases. **gall-stone c.** A paroxysm of severe abdominal pain caused by the passage of a gall stone through the bile ducts. **hepatic c.** See *biliary c.* **hysterical c.** See *nervous c.* **idiopathic c.** Intestinal c. due to causes affecting the seat of pain primarily, as distinguished from symptomatic c. **inflammatory c.** The severe pain which accompanies inflammation of the intestines. **lead c.** A form of intestinal neuralgia produced by chronic lead poisoning. **meconial c.** A form of c. peculiar to the newly born in which the meconium is supposed to be the exciting cause. **menstrual c.** Colicky pain in the uterus during menstruation. **mucus c.** Membranous catarrh of the intestines (Da Costa). **nephritic c.** See *renal c.* **nervous c.** Intestinal neuralgia, also any c. dependent upon a disordered state of the nervous system. **pancreatic c.** Colicky pain in the region of the pancreas. **renal c.** The pain due to the passage of the calculus through the ureter or to its presence in the intestine. **stercoraceous c.**, **stercoral c.** C. caused by retained fecal masses. [Gr., *kolikos*, relating to the colon.]

colicystitis (ko''le-sis-ti'tis). A colon bacillus cystitis.

coli-group. A group of closely related bacilli of which the *Bacillus coli* is the type. Others are the bacillus of typhoid, paratyphoid, etc.

Coliparamecium. See *Balantidium*.

colitis (ko-li'tis). Inflammation of the mucous membrane of the colon. **chronic c.** C. of long standing. **follicular c.** C. in which the follicles are noticeably involved; one of the forms of inflammatory diarrhea. **mucus c.** A condition in which large amounts of mucus are discharged from the bowels, with much col-

icky pain. [Gr., *kolon*, the colon + *itis*, inflammation.]

col'la. Glue; also a resin obtained from *Carlina acaulis* and *Chondrilla juncea*. **c. animalis.** See *glue and gelatin. c. piscium.* See *ichthyocolla. c. taurina.* See *gelatin*. [Gr., *kolla*, glue.]

col'laform, cal'liform. A preparation of formaldehyd and gelatin, used as a vulnerary.

collagen (kol'la-jen). Syn.: *ossein*. A substance yielding gelatin on boiling; it forms the organic portion of bones and the hyaline intracellular mass of the connective tissue, etc. [Gr., *kolla*, glue, + *geman*, to engender.]

collag'enous. Yielding gelatin on being boiled.

collapse (kol-aps'). 1. A falling together of parts that are nominally separate, as of the walls of a hollow structure. 2. The rapid occurrence of decided impairment of all the vital powers in consequence of sudden weakness of the heart's action, especially as the precursor of death from severe injuries or exhausting disease. See *shock. pulmonary c.* See *atelectasis pulmonum*, under *atelectasis*. [Lat., *collapsus*, fallen to pieces.]

collapsules (kol-ap'süs). Pl. A trade name given to collapsible tubes of ointment.

collar-crown. Syn. *Richmond crown*. In dentistry, the name given to an artificial tooth crown mounted upon and attached to a base composed of a metal ferule and cap and designed to cover and rest upon a natural root.

collar'gol. Credé's soluble silver, a colloidal form of silver.

Col'les' fracture. Fracture of the lower inch or inch and a half of the radius. **C's law.** A syphilitic father may beget a syphilitic child without apparently infecting the mother; yet this mother cannot be infected with syphilis by nursing the child. [*Abraham Colles*, Irish surgeon, 1773-1843.]

colleti'na. A proprietary adhesive plaster said to be made of lanolin and rubber.

collic'ulus. A little elevation. **colliculi anteriores.** The anterior corpora quadrigemina. **c. bulbi, c. bulbi intermedius.** A layer of erectile tissue which surrounds the male urethra just as it enters the bulb. **c. cervicalis.** A longitudinal fold of mucous membrane extending posteriorly from the apex of the trigonum vesicae. **colliculi glandis.** The two prominences of the lower surface of the corona of the glans penis, between which the frenum is attached. **colliculi inferiores.** The inferior corpora quadrigemina. **colliculi posteriores.** The posterior corpora quadrigemina. **c. rotundus anterior.** The anterior division of the eminentia teres. **c. rotundus posterior.** The posterior division of the eminentia teres. **colliculi superiores.** The anterior corpora quadrigemina. [Lat., dim. of *collis*, hill.]

collidin (kol'id-in). 1. A ptomain, $C_8H_{11}N$, obtained from decomposing animal matter. 2. An alkaloid derived from the oils distilled from organic matter, e. g., from coal tar, and also formed in other ways; a colorless liquid. **ethyl c.** A compound of the constitution $C_{10}H_{15}N$. [Gr., *kolla*, glue.]

Collinso'nia. Collinson's flower, horse balm. **C. canadensis**, **C. decussata**. Canadian horsemint. The leaves are used as a cataplasma.

colli'quative. Having a tendency to consume the tissues by excessive transudation of serum (said of diarrhea, etc.). [Lat., *con*, together, + *liquare*, to melt.]

colliqua'tion. Dissolution of the solids of the body as the c. or softening of the tissues when an abscess advances or spreads. [Lat., *con*, together, + *liquare*, to melt.]

collodion (kol-lo'de-on). See *collodium*. **caustic c.** See *collodium corrosivum*. **compound salicylated c.**, **corn c.** See *collodium salicylatum compositum*. **croton c.** A mixture of equal parts of flexible c. and croton oil. **elastic c.** See *collodium flexile*. **ferruginous c.** An astringent preparation consisting of c. to which iron has been added. **flexible c.** See *collodium flexile*. **Hill's styptic c.** See *collodium stypticum*. **iodinized c.**, **iodized c.** An irritating and stimulating c. made by mixing a solution of iodine with c.; of Fleming, a mixture of 10 or 20 grains of iodine with a fluidounce of c. **iodoform c.** An irritating and stimulating preparation made by dissolving iodoform in flexible c.; or by mixing iodoform, balsam of Peru, powdered soap, and c.; or, according to Moleschott, by dissolving 1 part of iodoform in 15 parts of c. **mercurial c.** See *collodium corrosivum*. **Pavesi's styptic c.**, **Richardson's styptic c.** See *collodium stypticum*. **ricinated c.** See *collodium flexile*. **salicylic c.** See *collodium salicylatum compositum*. **silk c.** A preparation made by dissolving silk fiber in a solution of zinc chlorid and then separating the latter by dialysis, when the silk material is left behind in a soft colloid condition. **styptic c.** See *collodium stypticum*. **terebinthinated c.** See *collodium flexile*. **vesicating c.** See *collodium epispasticum*. [Gr., *kollodes*, sticky, glue-like.]

collodium (kol-lo'de-um). Of the U. S. Ph. and Br. Ph., a solution of dinitrocellulose (pyroxylin, gun-cotton) in ether and alcohol. It is used for sealing wounds, for causing dressings to adhere firmly to the skin, for protecting surfaces from the air, as a vehicle for various medicaments to be applied locally, and for the compression of parts to which it is applied by means of its subsequent contraction. **caustic c.** See *c. causticum*. **c. cantharidale**, **c. cantharidatum**. See *c. cum cantharide* [U. S. Ph.]. **c. causticum**, **c. corrosivum**. Syn.: *c. escharoticum*. Caustic or mercurial collodion; made by mixing cor-

rosive sublimate with collodium flexile. **c. creosoticum**. Creosote collodion; a caustic preparation consisting of collodion containing creosote. **c. cum cantharide**, **c. cantharidatum**. Flexible collodion with cantharides; used as a vesicant [U. S. Ph.]. **c. elasticum**. See *c. flexile*. **c. epispasticum**. Syn.: *c. sinapinatum*. Epispastic collodion; of Techbourn, a vesicating collodion made by mixing together volatile oil of mustard, glacial acetic acid, and collodion. **c. escharoticum**. See *c. causticum*. **c. flexile**. Flexible collodion; made by the addition of Canada turpentine and castor oil to collodion [U. S. Ph., Br. Ph.]. **c. hemostaticum**. See *c. stypticum*. **c. salicylatum compositum**. Compound salicylated collodion, corn collodion, salicylic collodion; made by mixing the extract of *Cannabis indica*, dissolved in 10 parts of alcohol, with salicylic acid, dissolved in flexible collodion [N. F.]. **c. sinapinatum**. See *c. epispasticum*. **c. stypticum**. Syn.: *collodium hemostaticum*. Styptic collodion, styptic colloid; a preparation containing 20 per cent. of tannin in collodion [U. S. Ph.]. **c. tigllii**. Contains 10 per cent. of croton oil with flexible collodion [N. F.]. **c. vesicans**. A mixture consisting of blistering liquid to which 2.5 per cent. of pyroxylin has been added [Br. Ph.]. In addition, to the above modifications, numerous other substances, including iodoform, ferric chlorid, glycerin, phenol, lead, etc., may be added. [Gr., *kollodes*, sticky, glue-like.]

colloid (kol'oyd). A glue-like substance; in pathology, a liquid or jellylike material, distinguished from albumin by its insolubility in acetic acid, from mucus by the extent of its coagulability with acetic acid, and from lardaceous substances by its failing to respond to the iodine color test. It occurs pathologically in cystic tumors and enlarged thyroid glands. **c. degeneration**. The degenerative process which produces the colloid material. [Gr., *kolla*, glue, + *eidōs*, resemblance.]

colloid'al sil'on. See *collargol*.

colloid'in. An albuminoid principle, $C_8H_{15}NO_8$, found in colloid tumors.

colloids (kol'loids). A class of substances which seem to go into solution when boiled or to remain in solution when formed in water. Careful investigation has shown that they are not in solution, as in the case of the crystalline salts, but are in a very fine suspension, which, however, cannot be detected as such by the eye. The condition of a colloid in water seems to be an intermediate stage between a mere mechanical suspension and a solution of a crystalloid. Gelatin and many proteins, as silic acid and iron hydroxid, belong to this group. [Gr., *kolla*, glue, + *eidōs*, resemblance.]

collo'ma. A cystic tumor with gelatinous contents. [Gr., *kolla*, glue, + *oma*, tumor.]

collone'ma. See *myxoma*. [Gr., *kolla*, glue, + *nema*, tissue.]

colloplexia (kol-o-pek'se-ah). Fixation of the neck of the uterus. [Lat., *collum*, neck, + Gr., *pexis*, fixing.]

collotu'rin. An alkaloid obtained from the bark of *Symplocos racemosa*.

col'lum. The neck; also any constricted necklike part. [B. N. A., *collum*.] [Lat., *collum*, neck.]

col'tutory. A mouth wash. [Lat., *collytorium*.]

collyrium (kol-li're-um). A liquid preparation to be applied to the eyes. [Gr., *collyrion*, cake, eye-salve.]

coloboma (kol-o-bo'mah). A mutilation or defect; particularly a congenital deficiency or fissure in some portion of the eye.

bridge c. A form of c. of the iris in which the pupillary ends of the fissure margins are connected with each other by a membrane or a narrow transverse band of fibers. **c. choroideae**, **c. choroïdis**. A defect of development in the choroid, usually involving its entire thickness, and accompanied by a c. of the iris and ciliary body also, though it may exist alone. It may exist in any part of the choroid, though it is generally in the line of the fetal fissure. **c. iridis**. A fissure in the iris, of varying size and shape, due to arrest of development. It may affect one or both eyes and is usually accompanied by a c. of the ciliary body and choroid. **c. oculi**. Properly speaking, a defect in all the coats of the eyeball, and including also the vitreous or lens, or optic disk, according to its location. It is a defect of development. **c. palati**. See *cleft palate*, under *palate*.

c. palpebrae, **c. palpebrarum**. A rare form of congenital defect in which there is a split or fissure of the eyelid, usually triangular in shape with the base at the ciliary margin and the apex upward or downward. The fissure may be of varying width or length, and may exist in either lid, though it is usually met with in the upper lid. **c. retinae**. A congenital fissure of the retina corresponding in situation to the fetal fissure of the eyeball; always associated with c. of the choroid and very often with c. of the iris. **c. superficiale**. See *bridge c.* [Gr., *koloboma*, from *koloboun*, to mutilate.]

colocynth (kol'o-sinth). The fruit of *Citrullus colocynthis*, an annual plant of Turkey, but growing in various parts of Asia and Africa. The pulp alone (the *colocynthis pulpa* of the Br. Ph., the *colocynthis* of the U. S. Ph.) is employed medicinally. Its bitter principle is colocynthin, of which it contains 14 per cent., besides extractives. C. is a powerful drastic purgative and hydragogue. It enters largely into the composition of various pills and extracts, and, when modified by other ingredients, forms a very efficient and mild purgative. C. is used in the form of the extract, or compound extract, usually in combination with other cathartics. List of poisons and their antidotes, see in *appendix*, page 938. **c. pulp**. See *colocynthis* [Br. Ph.]. [Gr., *kolokynthis*.]

colocynthein (kol-o-sin'the-in). A resin, $C_{44}H_{64}O_{13}$, obtained by the action of sulphuric acid on colocynthin.

colocyn'thin. A bitter principle obtained from the pulp of colocynth.

colocynthis (kol-o-sin'this). In the U. S. Ph., the decorticated fruit of the *Citrullus colocynthis*; the *colocynthis pulpa* of the Br. Ph. **colocynthis pulpa**. The dried pulp of the fruit of *Citrullus colocynthis* [Br. Ph.]. **extractum colocynthis**. Syn.: *extractum colocynthis alcoholicum*. Extract of colocynth, made with diluted alcohol [U. S. Ph.]. **extractum colocynthis alcoholicum**. See *extractum colocynthis*. **extractum colocynthis aquosum**. Aqueous extract of colocynth. **extractum colocynthis compositum**. Compound extract of colocynth. It consists of extract of colocynth, purified aloes, cardamom, and resin of scammony. It is a drastic cathartic [U. S. Ph., Br. Ph.]. **massa pilularum colocynthis compositarum**. See *pilulae colocynthis*. **pilulae aloes cum colocynthide**. See *extractum colocynthis compositum*. **pilulae colocynthis**, **pilulae colocynthis compositae**. Syn.: *massa pilularum colocynthis compositarum*, *pilulae colocynthis compositae*. Compound pills of colocynth, made by mixing colocynth pulp in powder, Barbados aloes, powdered scammony, potassium sulphate, and oil of cloves [Br. Ph.]. **pilulae colocynthis et hyoscyami**. Pills of colocynth made by adding extract of hyoscyamus to compound pill of colocynth [Br. Ph.]. [Gr., *kolokynthis*.]

co'llo-enteri'tis. See *colitis*.

cologne. See *spiritus odoratus*.

colon (ko'lon). That part of the large intestine which extends from the lower end of the cecum to the rectum. It is divided into the ascending, the transverse, and the descending c., and the sigmoid flexure of the c. **arch of the c.** See *transverse c.* **ascending c.** The first portion of the c., situated in the right lumbar and hypochondriac regions. It begins at the cecum, ascends vertically to the under surface of the liver, then passes forward, and turns abruptly to the left, to form the hepatic flexure. **c. cecum**. See *cecum*. **c. descendens**. See *descending c.* **c. dextrum**. See *ascending c.* **c. sinistrum**. See *descending c.* **c. transversum**. See *transverse c.* **descending c.** The last portion of the c. It continues from the left extremity of the transverse colon and descends almost perpendicularly to the sigmoid flexure. **inner band of c.** See *under band*. **left lumbar c.** See *descending c.* **right lumbar c.** See *ascending c.* **transverse c.** Syn.: *arch of the c.* An arched part of the c. which passes across from the right hypochondrium through the upper part of the umbilical region to the left hypochondrium, and connects the ascending with the descending c. [Gr., *kolon*, large intestine.]

colonial (kol-o'-ne-al). Pertaining to a colony; living in colonies. Said of the *Polysoa*, etc.

colonic (ko-lon'ik). Relating to the colon.

colonometer (kol-on-om'et-er). An apparatus for counting colonies of bacteria on a plate culture. [Colony + Gr., *metron*, measure.]

colony (kol'o-ne). In descriptive bacteriology, a term used to denote a macroscopic collection of bacteria on or beneath the surface of a solid culture medium, which has developed from a single organism.

colopexia (ko-lo-pek'se-ah). Suture of the sigmoid to the abdominal wall. [Gr., *kolon*, colon, + *pexis*, fixation.]

col'ophony, **colophonia**. Rosin; the residue left after the distillation of oil of turpentine. [Gr., *kolophonia*.]

coloptosis (ko-lop-to'is). Downward displacement of the colon. [Gr., *kolon*, colon, + *ptosis*, fall.]

color (kul'or). Color, tint, the complexion; also a coloring matter; in botany, any tint except green. **c.-blindness**. See under *blindness*. **c. contrast**. See under *contrast*. **c.-hearing**. The subjective perception of color produced in some persons by objective perception of sound. **c. induction**. An optical process, related to c. contrast, of such a nature that when one part of the visual field is stimulated by a color, the sensation spreads to contiguous fields, usually as a complementary c. **c. sense**. That sense by which we recognize the different c's and their shades from each other. **c.-top**. A top with different c's arranged so that when spun, it gives the effect of the fusion of these colors on the retina. **complementary c's**. Any two c's which, when combined together, produce white light; each of the two is then said to be complementary, "opposite," "harmonic," or "in contrast" to the other. **compound c.** A c. made up of a mixture of two or more primary c's. **confusion c's**. See under *confusion*. **Exner's c. figures**. Figures which are formed by homogeneous red, green and blue light falling interruptedly upon the retina. **harmonic c's**. See *complementary c's*. **opposite c's**. See *complementary c's*. **primary c's**. C's that can not be resolved into two or more other c's. Of Newton, red, orange, yellow, green, blue, indigo, and violet; of Wollaston, red, green, blue, and violet; of Brewster, red, yellow, and blue; of modern oculists red, green, and violet. **simple c's**. See *primary c's*. [Lat., *color*.]

colorific. Making or producing colors (said of luminous light rays). [Lat., *color*, color, + *facere*, to make.]

colorimeter (kol-or-im'et-er). An instrument for determining the intensity of coloration or the amount of coloring matter present in a substance. More especially an instrument for quantitative analysis of substances giving colored solutions by comparison with a standard color, representing a given concentration. This principle is used clinically in determining the

amount of hemoglobin. [Lat., *color*, color, + Gr., *metron*, a measure.]

colorimetric (kol-or-e-met'rik). Color-measuring (said of methods in which the amount of a colored substance [e. g., blood] present in a given fluid is determined by comparing its color with that of a solution of the same substance which is of a known strength).

colostomy. The operation of making a permanent opening from the outside skin of the abdomen into the large intestine to serve as an artificial anus. **ileoc.** The operation of connecting the colon with the ileum by means of an artificial opening. [Gr., *kolon*, colon, + *stoma*, an aperture.]

colostrum. Syn.: *breastings*. 1. The first secretion of the mammary glands after delivery. 2. An emulsion made by dissolving turpentine with an egg yolk. **c. of cow's milk**. A thick, shiny, yellowish or reddish fluid with a taste more salty than that of ordinary milk. It has a sp. gr. of 1.046 to 1.080. The chemical composition is similar to that of milk. The amount of solid matter is greater and the quantity of globulin is so large that c. will coagulate on heating.

colotomy. The operation of making an artificial anus by opening into the colon and securing the intestinal wound to the external incision in the skin of the abdomen or flank. The varieties are: **abdominal**, **iliac**, **inguinal**, **lateral**, **lumbar**, according to the situation of the opening. [Gr., *kolon*, colon, + *temnein*, to cut.]

colpeurynter (kol'pu-rin-ter). A rubber bag for distending the vagina. [Gr., *kolpos*, vagina, + *eurynein*, to dilate.]

colpitis (kol-pi'tis). Inflammation of the vagina. Another name for vaginitis. [Gr., *kolpos*, vagina, + *itis*, inflammation.]

colpo- (kol'po). Combining form of Gr., *kolpos*, vagina.

colpocleisis (kol-po-kl'i'sis). The operation of occluding the vagina. [Gr., *kolpos*, vagina, + *kleisis*, a shutting up.]

colts'foot. See *Tussilago*.

co'lum. A strainer for liquids.

columella (kol-um-el'lah). 1. The uvula. 2. The clitoris. 3. The epipterygoid bone. 4. The pillar of the fornix. **c. auris**. An osseous and cartilaginous rod extending between the fenestra ovalis and the inner surface of the tympanic membrane. **c. cochleae**. See *modiolus*. **c. nasi**. The septum of the nose. [Lat., dim. of *columna*, column.]

column (kol'um). A pillar or any pillar-like structure [B. N. A., *columna*]. **anterior c's of the medulla oblongata**. See *anterior pyramids of the medulla oblongata*, under *pyramid*. **anterior c's of the spinal cord**. That part of the white substance of the spinal cord situated between the anterior median fissure and the anterior roots of the spinal nerves. **anterior c. of the vagina**. A ridge which runs in the middle line upon the anterior surface of the vagina, from which

the rugae vaginae pass out at right angles. **anterior gray c.** See *anterior gray cornu*. **anterior lateral c.**, **anterolateral c.** That portion or segment of the white matter of the spinal cord included between the anterior median fissure and the posterior nerve roots. It is subdivided into the anterior and lateral columns. **Burdach's c.** See *cuneate funiculus*, under *funiculus*. **central c's.** The olives of the medulla oblongata. **Clarke's c.** See under *Clarke*. **c's of Bertin.** The septula of the kidney. **c. of Goll.** A small wedge-shaped tract of white matter in the spinal cord extending from the medulla oblongata to the lumbar region, in which it is very small, and hidden by the overfolding columns of Burdach. **c's of Morgagni.** The larger of the longitudinal folds in the lower end of the mucous membrane of the rectum. **c. of Rolando.** A columnar eminence on the lateral periphery of the medulla oblongata, formed by a mass of the gelatinous substance seen on transverse section of the tubercle of Rolando. **c. of the intermediolateral tract.** A column of ganglion cells in the intermediolateral tract of the spinal cord which is most distinct in the dorsal region. A similar cell group in the cervical region gives origin to the roots of the spinal accessory nerve. **c's of the spinal cord.** The separate segments of the spinal cord, into which it is divided by its natural fissures or grooves; they are generally described as six in number (i. e., an anterior, a posterior, and a lateral c. in each half of the cord being recognized). **c's of the vagina.** See *anterior c. of the vagina* and *posterior c. of the vagina*. **c. of Türk.** See *anterolateral c.* **commissural c.** A commissure of nerve substance at the bottom of the horizontal fissure of the cerebellum which connects the anterior and posterior superior lobes. **cuneiform c.** See *fasciculus cuneatus*, under *fasciculus*. **fat c's.** Syn.: *fat canals*. Cylindrical masses of fat extending obliquely upward in certain situations, particularly in the back of the neck, from the cutaneous adipose tissue into the corium till they reach the base of the hair follicle. **ganglionic c.** A general term applied to the longitudinal columns (or tracts) of ganglion cells in the spinal cord. See *Clarke's c.* **hepatic c's.** Syn.: *hepatic cords*. Portions of the hepatic cell network which are formed by the union of cells in rows. **lateral c.** The longitudinal tract of white matter situated between the line of the anterior nerve roots and that of the posterior nerve roots on each side. **mamillary c's.** Those of the columnnae carneaе of the heart which assume the shape of conical projections. **muscle c's.** 1. Of Kölliker (1867), the fibrils of a voluntary muscle. They are apparently composed of several ultimate fibrillae. See *muscular fiber*, under *fiber*. 2. Striated muscular fibers in which the peripheral part is differentiated into striated muscular substance, while the central or axial part remains granular, often contains nuclei, and is not stri-

ated. This condition is not uncommon in adult invertebrates. In vertebrates it is found in developing muscle and in the fibers of Purkinje. **nuclear c.** A tract of gray matter situated in the medulla oblongata on the outer side of the hypoglossal nucleus. **olivary c.** See *olivary body*, under *body*. **posterior c.** See *posterior white c's*. **posterior c. of the vagina.** A ridge which runs up in the middle line upon the posterior surface of the vagina and from which the rugae vaginae pass out at right angles. **posterior gray c.** The posterior cornu of the spinal cord. **posterior internal c.** See *c. of Goll*. **posterior median c.** See *funiculi graciles cerebelli*, under *funiculus*. **posterior nuclear c. of the central gray substance,** **posterior vesicular c.** See *Clarke's c.* **posterior white c.** A segment of white substance in the posterior portion of the cord, bounded internally by the posterior median fissure, externally by the posterior nerve roots. This is further divided into the postero-internal and postero-external c. **postero-external c.**, **posterolateral c.** See *fasciculus cuneatus*, under *fasciculus*. See *c. of Goll*. **protovertebral c's.** The inner, thick, longitudinal columns, one on each side, formed from the inner layer of the mesoblast (*q. v.*) early in the development of the embryo, and which by transverse cleavage give rise to the protovertebral somites. **restiform c.** See *restiform body*, under *body*. **spinal c.** See *vertebral c.* **vertebral c.** Syn.: *backbone*. The c. formed by the vertebrae joined together in their natural relations. [B. N. A., *columnnae vertebrales*.] **vesicular c.** A mass of ganglion cells at the inner edge of the posterior gray column of the spinal cord, near the posterior commissure. [Lat., *columnna*, pillar.] **columnna** (ko-lum'na), pl. *columnnae*. Same as *columnn*. **columnnae adiposae.** See *fat columns*. **c. anterior ligamenti coracohumeralis.** A bundle of fibers of the coracohumeral ligament, which are inserted into the upper margin of the bicipital groove. **columnnae carneaе.** Rounded muscular columns which project from the inner surface of the ventricles of the heart. In the right ventricle they are smaller, more numerous, and more thickly interlaced than in the left. **c. cerebralis.** The anterior or cerebral tract of fibers in the spinal cord. **columnnae papillares.** See *columnnae carneaе*. **c. plicarum.** See *c. rugarum*. **columnnae rugarum.** 1. The papillae foliatae of the tongue. 2. See *columns of the vagina*. **c. rugarum anterior cervicis.** A longitudinal fold upon the posterior surface of the cervical canal of the uterus, from which transverse folds radiate laterally. **c. rugarum posterior cervicis.** A longitudinal elevation upon the posterior surface of the cervical canal, from which transverse folds radiate laterally. **columnnae rugarum vaginae.** See *columns of the vagina*.

colum'nar. Having the form of a column.
colytic (kol-it'ik). Inhibitory, a preventive to bacterial growth, antiseptic. [Gr., *kol-lyein*, to hinder.]

coma (ko'mah). A condition of insensibility, following disease or trauma, from which the patient can be roused but partially or not at all. **alcoholic c.** C. occurring as a symptom of acute alcoholism; characterized by profound stupor, complete muscular relaxation, loss of corneal and faucial reflexes, irresponsive pupils, stertorous breathing, and a slow, feeble pulse. **apoplectic c.** C. due to apoplexy. **c. vigil.** Unconsciousness accompanied by sleeplessness. **diabetic c.** A form of c. often observed toward the end of diabetes mellitus, and usually terminating in death. It is due to an acid intoxication, β -oxybutyric acid being always present in the blood in large quantities. **dyspnoic c.** Deep and noisy c. seen in the late stages of diabetic c. **epileptic c.** The condition of unconsciousness which follows an epileptic seizure. **hysterical c.** One of the rarer manifestations of hysteria. During the attack the patient lies motionless and exhibiting just as many of the symptoms of profound c. as may be within her knowledge or conveniently simulated. **uremic c.** The c. which attends an attack of uremia. [Gr., *koma*, deep sleep.]

comatose (ko'mat-ōs). In a state of coma.

combination. 1. A joining or mixing of two or more things together, also the product of such junction or the state of being joined. 2. In chemistry, the act of union of two or more bodies to form a new body; the process which effects such a union or the result of such a union (i. e., the new compound body).

combustion. 1. Intense chemical change, attended by the development of heat and light and, sometimes, of flame. 2. A chemical operation in which the carbon and hydrogen content of a substance is determined. It consists of oxidizing the substance, with air or oxygen, to carbon dioxide and water, each of which is absorbed in specially constructed tubes. [Lat., *combustio*.]

comedo (kom-e'do). A plug of dried sebaceous matter filling the opening of a sebaceous follicle. [Lat., *comedo*, *comedonis*, glutton.]

co'mes. A companion; in anatomy, an accompanying structure. **venae comites.** Two or more veins accompanying an artery. [Lat., *con*, with, + *meare*, to go.]

com'ma bacil'ius. Syn.: *Spirillum of Asiatic cholera*. See *Spirillum*.

comma-tract. In the spinal cord a tract of fibers resembling a comma in cross section.

commen'sal. The state in which one organism lives in or on another without showing any harmful antagonism. [Lat., *com*, together, + *mensa*, table.]

commen'salism. Association of parasites so that one of them is benefited and the other neither benefited nor harmed.

com'minuted. Broken into a number of

pieces. **c. fracture.** See under *fracture*.
comminu'tion. The reduction of a solid body to small fragments; especially the fracture of a bone into several small pieces. [Lat., *comminutio*, from *comminuere*, to crumble.]

commissura (kom-is-su'ra). See *commissure*.
c. alba anterior. The anterior white commissure of the spinal cord. **c. ansa.** The outermost layer of the optic chiasm, consisting of fibers which descend from the lamina terminalis cinerea, pass superficially over the anterior and inferior surface of the chiasm, and continue their course backward to be lost in the tuber cinereum. **c. arcuata anterior.** The anterior fibrae arcuatae orbitales of the optic chiasm. **c. arcuata posterior** (seu *postica*). The posterior fibrae arcuatae cerebrales of the optic chiasm. **c. crassioris nervi acmula.** The middle part of the anterior cerebral commissure of the brain. **c. cruciata.** That portion of the optic chiasm in which the fibers are seen to actually decussate. **c. labiorum.** A point of junction of the lips (of the mouth, the vulva, or the cervix uteri). **c. labiorum dextra.** The union of the upper and lower lips on the right side of the face. **c. labiorum sinistra.** The union of the upper and lower lips upon the left side of the face. **c. peduncolorum conarii.** The point of union of the two peduncles of the pineal gland. **c. serratilis.** Union of bones by suture. [Lat., *con*, with, + *mittere*, to send.]

commissure (kom'is-sūr). 1. The point of union between any two parts or organs of the body, such as the angles of the lips, eyes, etc. 2. A collection of transverse fibers connecting parts in the brain or spinal marrow. **anterior arcuate c.** The anterior arcuate fibres of the optic chiasm. **anterior cerebral c.** A bundle of white nerve fibers at the anterior extremity of the third ventricle in front of the anterior pillars of the fornix. **anterior c. of the vulva.** The point of union of the labia majora below the mons Veneris. **anterior gray c.** Those nerve fibers in the gray columns of the cord which cross to the opposite side in front of the central canal. This c. is most distinctly marked in the upper cervical and lumbar regions. **anterior medullary c.** See *anterior cerebral c.* **anterior white c. of the brain.** An oval bundle of medullated fibers extending transversely from one cerebral hemisphere to the other, in front of the frontal extremity of the third ventricle, at the level of and near the rostrum of the corpus callosum. **anterior white c. of the spinal cord.** See *white c. of the spinal cord*. **canal c.** The sinus superior formed by the fusion of the anterior and posterior semicircular canals. **cerebrocerebellar c.** See *superior peduncles of cerebellum*, under *peduncle*. **c. of the eyelids.** The external or internal angle of the eyelids. **c. of the pineal gland.** See *peduncles of the pineal gland*, under *peduncle*. **c's of the**

vulva. See *anterior c. of the vulva* and *posterior c. of the vulva.* **gray c.** See *middle c.* **great c.** See *corpus callosum.* **Gudden's c.** The posterior fibers of the optic chiasm and the adjoining optic tract, inseparable by dissection. **horseshoe c.** See *Werneck's c.* **inferior c.** A band of nerve fibers, at the posterior end of the optic tract, which connect the opposite internal geniculate bodies. **inferior c. of the infundibulum.** See *lamina cinerea, under lamina.* **inferior c. of the vulva.** See *posterior c. of the vulva.* **median c.** See *corpus callosum.* **Meynert's c.** A small c. of white fibres imbedded in the gray matter behind the optic chiasm, separated from the latter and from the optic tracts by a layer of gray substance, and passing backward to penetrate the ventral surface of the cerebral peduncles. **middle c. of the brain,** **middle gray c.** A flattened band, composed chiefly of gray substance, connecting the two optic thalami. **optic c.** See *under chiasm.* **perineal c.** See *posterior c. of the vulva.* **posterior c.** Syn.: *posterior gray c., nervus thalamus conjugans.* A small band of grayish white nerve matter which is situated in the posterior wall of the third ventricle. **posterior c. of the vulva.** The point of union of the labia majora at the perineum. **posterior gray c.** That portion of the gray c. of the spinal cord that is situated behind the central canal. **posterior medullary c., posterior white c.** See *posterior c. superior c. of the vulva.* See *anterior c. of the vulva.* **terminal c.** A c. uniting the posterior extremities of the longitudinal nervous cords lying on each side of the body. **Wernekink's c.** A decussation of fibers within the pons Varolii. **white c. of the spinal cord.** A thin band of medullated nerve fibers extending the whole length of the spinal cord, lying at the bottom of the anterior median fissure and confounded behind with the gray c. [Lat., *con*, with, + *mittere*, to send.]

commotio (kom-o'she-o). A violent shaking.

commu'nicans. 1. Communicating, connecting. **communicans noni.** Filaments from the second and third cervical nerves, which descend upon the outer side of the internal jugular vein, and with the descendens noni form the ansa hypoglossi. [Lat., *communicare*, from *con*, with, + *munis*, bound.]

communica'tio. Communicating, connecting. **c. receptaculorum.** See *circular sinus, under sinus.* **c. scalarum cochlearae.** See *infundibulum cochlearae* under *infundibulum.* [Lat., *communicans*, to impart, share.]

commutator (kom'mu-tā-tor). The key in an electrical circuit by means of which the current can be severed. [Lat., *commutare*, to change.]

compat'ible. Of a drug, capable of being mixed with another without impairing the efficacy of the latter or the eligibility of the product.

compensa'tion. Compensatory action. See *compensatory.* [Lat., *compensatio.*]

compensa'tory. Making amends for a defect, as compensatory hypertrophy of the heart in valvular disease. **c. pause.** The lengthened diastole observed in the beat of the ventricle after an extra systole, due to the fact that the next auricular beat fails to stimulate the ventricle since it is then in the refractory phase. [Lat. *compensare*, to make good again.]

complaint (kom-plānt'). See *disease* and *symptom.* **bowel c.** See *diarrhea.* **summer c.** Summer diarrhea. [Lat., *complangere*, to bewail.]

complement (kom'ple-ment). One of the two active principles concerned in hemolysis, bacteriolysis, and other forms of cytotoxicity. It is present in fresh serum, but disappears after standing for several days or on heating at 56° C. for thirty minutes. It is attached to the cell by means of the amboceptor and acts as a ferment. **c. deflection, c. deviation.** The complement is fixed by the antigen-antibody combination and is made unavailable for a second antigen-antibody combination in a hemolytic or bacteriolytic fluid. **c. fixation.** See *c. deviation.* [Lat., *complere*, to complete.]

complemen'tal, complemen'tary. Filling up, supplying a deficiency, supplying the part of another. See *c. colors* under *color.* [Lat., *complere*, to complete.]

complemen'tal air. The amount of air that can be breathed in over and above the tidal air by the deepest possible inspiration. It is estimated at 1600 c.c.

complementoid (kom-ple-men'toyd). A modified complement in which the zymotaxic or cell-dissolving group is destroyed. They are formed at about 56° C., and still retain the binding or combining group for the amboceptor. [Lat., *complere*, to complete, + Gr., *eidos*, resemblance.]

complemen'tophil. Possessing an affinity for a complement, being the group in the amboceptor combining with the complement. [Complement + Gr., *philein*, to love.]

com'plementophil'ic group. The group of the amboceptor which anchors the complement and remains inactive until the cytophilic group of the amboceptor joins to the receptor of the cell, when cytotoxicity ensues.

complex (kom'plex). In psycho-analysis, a group of ideas bound together by some common feeling tone.

complex'ion. 1. As commonly used, the general appearance of the face, especially as to the tints of the skin, hair, and eyes. 2. The entire appearance of an individual in its relation to his health. [Lat., *complexio*, from *complecti*, to represent.]

complexus (kom-plek'sus). See *table of muscles*, under *muscle.*

complica'tion. 1. Lit., a folding together, the state of being complex. 2. A disease, a symptom, or the like, coexistent with and modifying the essential disease without being necessarily connected with it. [Lat., *complicatio.*]

- compo'nent.** 1. In mechanics, one of the primitive forces into which a single force can be resolved. 2. An ingredient. [Lat., *componere*, to put together.]
- composi'tion.** 1. The act of making up a finished product by the proper arrangement of its component parts, also the product itself. 2. The constitution of a compound substance, with reference to the elementary bodies and intermediate combinations that make it up and their relative quantities, arrangement, etc. 3. A compound. **structural c.** See *constitutional formula*, under *formula*. [Lat., *componere*, to put together.]
- com'pound.** 1. A mixture. 2. In chemistry, a substance, the molecule of which is made up of two or more dissimilar atoms. **aromatic c's.** See *benzene c's*, under *benzene*. [Lat., *compositum*.]
- com'press.** A folded piece of lint, cloth, or other material, so arranged as to make pressure on a part. [Lat., *compressus*, squeezed together.]
- compres'sion.** The act of compressing or state of being compressed. **c. of the brain.** That condition of the brain in which it is unduly pressed upon by any substance, such as a splinter of bone, a tumor, or a blood clot; also state of individual produced by such pressure. [Lat., *compressio*, from *comprimere*, to compress.]
- compressor** (kom-pres'sor). See *table of muscles*, under *muscle*.
- compromise** (kom'pro-mize). In psychoanalysis an incomplete adjustment of a mental conflict.
- compulsion** (kom-pul'shun). A forced action giving relief of psychical tension. **c. neurosis.** A group of nervous disorders characterized by compulsive thinking or actions.
- conalbu'min.** A proteid isolated from the whites of eggs.
- conam'arin.** A very bitter neutral resin obtained from the root of *Conium maculatum*. [Conium, + Lat., *amarus*, bitter.]
- conar'ium.** 1. A little cone. 2. The pineal gland. [Gr., *konarion*, dim. of *konos*, cone.]
- conation** (ko-na'shun). Effort, tendency, desire.
- concavitas** (kon-kav'it-as). A cavity. **c. chocularis (cerebri).** The infundibulum of the brain. **c. ossis petrosi.** The cavity of the tympanum. **c. uteri.** The cavity of the uterus. [Lat., *con*, with, + *cavus*, hollow.]
- con'centrated.** 1. Drawn to a single point or within narrow bounds. 2. Condensed, made strong in essential ingredients.
- concentra'tion.** 1. The process of increasing the amount of a dissolved substance relatively to the liquid without adding more of the substance; effected by evaporation, by distillation, or by freezing out the water in the solution. 2. A gathering together of anything that is diffused. [Lat., *concentratio*.]
- conception** (kon-sep'shun). 1. The act of conceiving or being conceived. The impregnation of the ovum; the first stage of generation on the part of the female. 2. An idea; an hypothesis. **false c.** Abnormal generation, as of a mole or an abnormal fetus. **imperative c.** In psychiatry, a general term for a class of ideas which may appear absurd or improper, but which can not be driven out, and may come into consciousness with compelling force; compulsive ideas. [Lat., *concipere*, to conceive.]
- concha** (kon'kah). Anything shaped like a shell, e. g., any shelllike cavity in the body, such as the hollow of the ear. **c. auriculae, c. auris.** The depression of the external ear between the anthelix, the tragus, and the antitragus. **c. bullosa.** Bullous enlargement of the middle turbinated bone. **c. cerebri.** See *infundibulum*. **c. of the ear.** See *c. auriculae*. [Lat., *concha*, shell.]
- conchiform** (kon'ke-form). Shaped like a shell or like one valve of a bivalve shell. [Lat., *concha*, shell, + *forma*, form.]
- conchiolin** (kon-ki'o-lin). An organic substance found in shells of mollusks, resembling keratin. [Lat., *concha*, shell.]
- conchitis** (kon-ki'tis). Inflammation of the concha of the ear.
- conchoid, conchoidal** (kon'koyd, kon-koyd'al). Like a shell. [Gr., *kogche*, shell, + *eidōs*, resemblance.]
- concocted** (kon-kok'ted). Digested, elaborated, perfected (formerly said of food and of the animal juices).
- concrema'tion.** Calcination. [Lat., *concremare*, to burn up.]
- con'crement.** A mass formed by the union of particles. **bile c's.** See under *bile*. [Lat., *concrecere*, to grow together.]
- concre'tion.** 1. A growing together of separate parts, also the formation of a concrement. 2. A concrement formed upon a nucleus of desquamated cells, clumped bacteria, mucus, or precipitated albumen or a foreign body and consisting of cholesterolin, bilirubin, uric acid, urates, phosphates, cystin, or other rarer materials. The forms are: *urinary, biliary*, and the *pancreatic*. They are found in the gall-bladder and bile ducts, the urinary tract, the pancreatic duct, and, more rarely, in the salivary duct and intestines. [Lat., *concretio*, from *cum*, together, + *crecere*, to grow.]
- concubitus** (kon-ku'bit-us). Sexual intercourse. [Lat., *concumbere*, to lie together.]
- concus'sion.** Condition induced by action of force in the shape of a blow or a fall not violent enough to cause demonstrable changes in the tissues, e. g., *c. of the brain, labyrinth*, or *spine*. [Lat., *concussus*, from *concutere*, to shake violently.]
- condensa'tion.** 1. The union of two chemical compounds to form a more complex one, usually attended by the elimination of heat. 2. The successive direct union of the molecules of a chemical compound with themselves, once or several times, resulting in the formation of polymers. 3. The formation of a pencil of parallel or convergent rays of light from divergent rays by means of a lens or mirror. 4.

In pathology, the solidification of a spongy structure, like that of the lung. See *carnification* and *hepatization*. 5. In psycho-analysis the fusion of events, thoughts and mental images. [Lat., *condensare*, to thicken.]

condens'er. An apparatus for effecting condensation of vapor, light, etc.; of Volta, an electrical accumulator. **Abbé's c.** See under *Abbé*. **achromatic c.** A c. in which the lens used has been rendered achromatic, that is, free from chromatic aberration. **bull's-eye c.** A planoconvex or a biconvex lens, which acts by concentrating the light in illuminating an opaque object under examination. **electrical c.** An instrument for the accumulation or storing of electricity by its conduction from a non-insulated surface to an insulated one, as in the Leyden jar. **Lieberkühn's c.** See under *Lieberkühn*. **Liebig's c.** See under *Liebig*. [Lat., *condensare*, to thicken.]

conditu'ra. A preserving, seasoning, flavoring. **c. cadaverum.** The embalming of the dead.

cond'om. A thin bag (formerly consisting of the prepared cecum of the sheep, or made of gold beaters' skin, now made of rubber) to be worn as a covering for the penis during coitus, to prevent impregnation or infection. [A corruption of *Condon*, the name of the inventor.]

condriglucose (kon-dri-glu'kōs). See *chondroitin acid*, under *acid*. [Gr., *chondros*, cartilage; + *glykys*, sweet.]

conduc'tion. The property or the process of giving passage to anything, especially heat, sound, and electricity. **aërial c., air c.** C., as of sound, to the ear through air. **bone c.** The c. of sound to the air through the bones of the skull. **contralateral c.** The name given to the conduction of nerve impulses in the central nervous system when the impulse passes to the opposite side from that in which it arose. **double c.** The transmission of an impulse in two directions, both to and from a nerve center, when a stimulus is applied to the middle portion of a pure sensory or motor nerve. [Lat., *conductio*.]

conductiv'ity. Conducting power. **coefficient of c. of electricity.** A number expressing the electrical c. of a body, estimated in a manner similar to that of the coefficient of c. of heat. **coefficient of c. of heat.** A number expressing the absolute or relative quantity of heat which passes in a unit of time through a plate of that substance of unit thickness and unit area whose surfaces are maintained in constant temperatures differing from one another by one degree. This applies equally to the c. of electricity. **specific c.** The relative capacity which some special substance exhibits for the transmission of heat, electricity, or nerve force.

conductor (kon-duk'tor). Any medium of transmission of force. **prime c.** That part of a frictional electrical machine which receives, and by its insulation re-

tains, the electricity developed. It is generally a metallic cylinder, but often of other and various forms. [Lat., *conductio*.]

conduran'go. A vine growing in Colombia, in South America. **c. bark.** The bark of *C. blanco*. It was introduced into Europe in 1871 as a remedy for cancer, and attained some reputation as such in the United States, but has now fallen into disuse. **C. blanco** (Sp.). A species which is the source of *c. bark*. [From the native name, *cundur-angu*. Lit., *condor-vine*.]

condylar (kon'dil-ar). Pertaining to a condyle. [Gr., *kondylos*, knuckle.]

condylarthrosis (kon'dil-ar-thro'sis). A variety of diarthrosis in which a condyle moves in a shallow elliptical articular cavity, allowing of angular movements and circumduction. [Gr., *kondylos*, knuckle, + *arthron*, to articulate.]

condyle (kon'dil). 1. A rounded protuberance or eminence upon a bone for articulation with an articular surface of another bone. 2. Loosely, any eminence on a bone. **c. of the mandible.** A process which projects upward from the posterior portion of each ramus of the mandible to articulate with the anterior portion of the glenoid fossa of the temporal bone. **external c. of the femur.** A rounded eminence on the outer side of the lower extremity of the femur. **external c. of the humerus.** The tubercular eminence on the outer side of the lower end of the humerus. **internal c. of the femur.** A rounded eminence upon the inner side of the lower extremity of the femur. Upon its inner surface is the internal tuberosity. **internal c. of the humerus.** A tubercular eminence upon the inner side of the lower extremity of the humerus. **occipital c's.** The two articular processes, one on each side of the occipital bone. They lie close to the anterior half of the foramen magnum, and articulate with the atlas. [Gr., *kondylos*, knuckle.]

condyloid (kon'dil-oid). Shaped like, associated with, or supporting a condyle. **anterior and posterior c. foramina.** See under *foramen*. [Gr., *kondylos*, knuckle, + *eidōs*, resemblance.]

condyloma (kon-dil-o'mah), pl. *condylomata*. A wartlike excrescence on the skin, of two sorts: **c. acuminata.** Vegetating, wartlike growths upon the skin surfaces exposed to moisture and infection, especially on the mucocutaneous juncture of the genitals, attended by an offensive discharge and known as *verruca acuminata* and moist or venereal warts. They have nothing to do with syphilis. **c. lata.** A symptom of secondary syphilis, consisting of flat, slightly raised, wartlike papules of the size of a pea to a five-cent piece, commonly coalesced, occurring about genitals and anus. [Gr., *kondyloma*, knob or hard lump.]

Condy's fluid. A proprietary preparation consisting of a solution of sodium permanganate, for which potassium permanganate solution is commonly used. [Henry

Bollmann Condy, Eng. physician of the nineteenth century.]

cone (kōn). 1. A pyramid with a circular base. 2. An aggregated fruit composed of a conical or oval mass of imbricated scales, as in the pine and in gymnosperms generally. **c. body**. The inner segment of a retinal c. **c. fibers**. The prolongations outward (toward the sclerotic) of the retinal c's. They enlarge to form the c. granules, and terminate, in pyramidal bases, upon the surfaces of the outer molecular layer of the retina, from the edges of which are given off fine processes. **c. granules**. Nucleated enlargements of the c. fibers situated between the *membrana externa limitans* and the intergranular layer of the retina. **c. of attraction**. An elevation of the outer layers of the vitelline membrane at the place where the spermatozooids are to enter it. **c's of the retina**. See *retinal c's*. **c. rod**. The outer segment of a retinal c. **crystalline c's**. In compound eyes, transparent c's which lie between the corneal lens and the retinulae, one for each lens. **fibrous c**. See *corona radiata*, under *corona*. **primitive c's**. The c'-like appearance formed by the collecting tubules, arising from single principal tubes in the medulla of the kidney, extending to the surface of the cortex in the same medullary radius, and there dividing into numerous uriferous tubules. **retinal c's**. Bulbous bodies in the layer of the rods and cones of the retina. They are divided into two segments, an inner, the c. body, and an outer, the c. rod, which is usually the shorter. [Gr., *konos*, cone.]

coneph'rin. A trade name for a solution of cocaine and epinephrin.

cones'si bark. A bark obtained from *Holarrhena antidysenterica*, yielding conessin.

conessin (kon-es'sin). An alkaloid found in the bark of *Wrightii antidysenterica* or *Holarrhena antidysenterica*.

confabulation. In psychiatry, a syndrome in which occurrences are unconsciously fabricated. Frequently seen in paresis, Korsakow's syndrome, and in hysteria.

confec'tion. A preparation of soft, solid consistence, composed of one or more medicinal substances, made up with some saccharine excipient, sugar, honey, or syrup. See also *conserve* and *electuary*. Among the more common c's are c. of opium; c. of rose; c. of senna. [Lat., *con*, together, + *facere*, to make.]

configura'tion. The general form of an object. In phrenology, the faculty of appreciating form. In chemistry, the arrangement of atoms in the molecule of a chemical compound, generally applied to those compounds which have one or more symmetrical carbon atoms. [Lat., *configurare*, to give form to.]

confine'ment. Restraint by sickness, therefore childbed. **estimation of probable date of c**. Add seven days to the date of the beginning of the last menstruation and count back three months.

[Fr., *confiner*, to restrain within a place.]

conflict (kon'flikt). In psycho-analysis the mental disturbance which represents the opposing of unconscious strivings by conscious ideals.

confluent. Mixed together; not separate. [Lat., *confluens*, running together.]

confric'tion. The rubbing or chafing of two or more things together; in pharmacy, reduction to powder by attrition, the squeezing of a juice from fruit and the expression of juice through a filter. [Lat., *confricare*, to rub together.]

confronta'tion. The expedient of confronting a patient with the person from whom his disease was contracted, so as to determine the nature of the latter's disease and thus aid in the diagnosis.

confu'sion. A blending, disordering, confounding. **c. colors**. Certain compound colors used in examination for color-blindness; they are usually gray, buff, etc., which more or less resemble the primary color to be matched, and, if selected by the patient in matching the sample, they indicate color-blindness. **mental c**. Disturbance in orderly association of ideas, seen in dementia praecox and a variety of psychoses, psychoneuroses, toxic states, etc. [Lat., *confusio*.]

congelation (kon-je-la'shun). 1. Freezing, the solidification of a liquid in consequence of a reduction of temperature; as sometimes used, coagulation. 2. The freezing of an animal body or member, so as to destroy the vitality of the tissues. [Lat., *congelare*, to congeal.]

congenital (kon-je'n'i-tal). Existing from birth or born within one. [Lat., *congenitus*, born or produced together with; Fr., *congenital*, existing at time of birth.]

congest'ed. In a state of congestion.

congestion (kon-je'st'shun). An abnormal accumulation of blood in a part; hyperemia. **active c**. A state of hyperemia in which too much blood is propelled into the affected part. It often constitutes the first manifestation of inflammation. **cerebral c**. C. of the brain; described as occurring under three forms—the light, the severe, and the apoplectic. **collateral c**. See under *circulation*. **general venous c**. Overloading of the veins of the systemic circulation, as in certain forms of valvular disease of the heart. **hepatic c**. C. of the liver. The condition may be active, such as is induced by excesses in eating or malarial disease and in typhus or typhoid fever. Passive hepatic c. may arise in the course of any disorder disturbing the systemic circulation. **hypostatic c**. Gravitation of blood to the lower parts of the body or of certain organs, as in the dead body and in persons with an enfeebled heart. **mechanical c**. Passive c. due to any mechanical cause, such as an impediment to venous circulation, as in Bins' treatment. **passive c**. See *venous c*. **plethoric c**. See *plethora*. **pulmonary c**. C. of lungs; active pulmonary c. is associated with dilated capillaries, increased supply of blood to the part, and an accelerated

- current. **renal c.** C. of the kidneys. In active renal c. the symptoms are pain, frequent and urgent desire to micturate, hematuria, and renal casts. The symptoms of passive renal c. follow long-standing cardiac disease. **spinal c.** An acute or chronic condition of the spinal cord in which the characteristic symptoms are pain of an aching variety and palsy. **splenic c.** C. of the spleen in cardiac disease. It is to be distinguished from the structural enlargement to which its continuance gives rise. **venous c.** Engorgement of the veins from any cause which interferes with the freedom of the circulation. [Lat., *congerere*, to accumulate.]
- conges'tive.** Pertaining to, of the nature of, or due to congestion.
- conglobate** (kon'glo-bāt). A term in descriptive bacteriology meaning clustered together.
- conglomerate** (kon-glom'er-āt). A term in descriptive bacteriology meaning clustered together. [Lat., *con*, together, + *glomerare*, to heap.]
- conglu'tin.** The alkali albuminate obtained from almonds, the kernels of stone fruit, and lupins.
- conglutination** (kon-glu-tin-a'shun). 1. The union of two contiguous bodies by the interposition of a third, as of two fingers each deprived of its integuments, or of the pleurae to the lungs by effused matter. 2. In pathology, the special agglutination of sensitized bovine blood corpuscles, produced by bovine serum. [Lat., *conglutinatio*.]
- conglutinin** (kon-glu'tin-in). The special agglutinating substance in bovine serum producing conglutination.
- Con'go-red.** A dye used in the analysis of the acidity of stomach contents.
- con'gress.** An assembling. **sexual c.** Coition. [Lat., *congressus*, from *congregi*, to come together.]
- conhy'drin.** A natural alkaloid found in *Conium maculatum*.
- conidiophore** (ko-nid'e-o-fōr). The branch of the mycelium of a fungus which bears spores, or conidia. [Lat., *conidium*, + Gr., *phoros*, bearing.]
- conidiospore** (ko-nid'e-o-spōr). A spore developing in certain molds on special branches termed conidiophores. [*Conidium* + *spore*.]
- conidium** (ko-nid'e-um). The asexual spores of certain fungi. [Gr., *konidion*, a particle of dust.]
- conif'erin.** A glucosid, $C_{16}H_{22}O_8$, obtained from the cambium of coniferous woods.
- conif'erous.** Having or bearing cones.
- coniin** (ko'ne-in). An alkaloid with the chemical composition $C_8H_{17}N$.
- coniopsidal** (ko-ne-op'si-dal). Ground for the purpose of correcting all spherical aberration; said of lenses.
- Coniosel'inum.** A genus of umbelliferous plants allied to *Ligusticum*. **C. canadense.** Hemlock parsley, found from Maine to Wisconsin; used sometimes in dysentery. [Gr., *koneion*, hemlock, + *selimon*, parsley.]
- Conium** (ko-ne'um). 1. Poison hemlock; a genus of the *Umbelliferae*. 2. Of the U. S. Ph. and Br. Ph., the full grown fruit of *C. maculatum* gathered while yet green, and carefully dried. List of poisons and their antidotes, see in *appendix*, page 938. **conii folia.** The leaves of *C. maculatum* [Br. Ph.]. **conii frustus, conii semen.** See C. (2d def.) [Br. Ph.]. **C. maculatum** [Linnaeus]. Spotted hemlock. This plant was formerly in high repute as a resolvent and anodyne. The extract, fluidextract, and tincture are employed. **extractum fluidum conii alcoholicium.** Fluidextract of c., fluidextract of hemlock fruit, fluidextract of c. seed [U. S. Ph.]. **succus conii.** The juice of *C. maculatum*, made by bruising fresh c. leaves, expressing the juice and adding alcohol [Br. Ph.]. **tinctura conii.** Tincture of c., representing 20 per cent. of conium fruit [Br. Ph.]. [Gr., *koneion*, *konion*.]
- conjoined', conjoint'.** 1. Combined. 2. Concomitant; said of diseases.
- conjugal** (kon'ju-gal). Pertaining to married life; in pathology, affecting both husband and wife or conveyed from the one to the other. See *conjugal diabetes*, under *diabetes*. [Lat., *conjux*, a spouse.]
- conjugate** (kon'ju-gāt). 1. In chemistry, consisting of two or more acids, united to form an acid. 2. In botany, paired; having the leaflets disposed in a single pair on the opposite sides. **anatomical c.** See *c. diameter*. **c. diameter.** The antero-posterior diameter of the superior strait of the pelvis. Also called *c. vera*. **c. focus.** The focus of an object lying farther away than the principal focus of a lens, but not so far as to give parallel rays. The c. focus and the object are interchangeable in the sense that if the object is placed at the conjugate focus, its focus will then be found where the object was formerly situated. **c. vera.** See *c. diameter*. **diagonal c.** The distance between the promontory of the sacrum and the lower border of the symphysis pubis. **external c.** The distance between the posterior surface of the upper part of the sacrum and the anterior surface of the symphysis pubis with the overlying soft parts, as measured by the pelvimeter. Also called *Baudelocque's diameter*. **oblique c.** See *diagonal c.* **obstetrical c.** The distance from the promontory of the sacrum to a point on the posterior border of the symphysis pubis, a few mm. from its upper margin. **true c.** The distance between the promontory of the sacrum and the pubic symphysis. [Lat., *conjugata*, from *con*, with, + *jugum*, yoke.]
- conjugation** (kon-ju-ga'shun). In biology, the union of two or more individuals into one. **multiple c.** The coalescence of a number (more than two) of similar cells. [Lat., *conjugatio*.]
- conjunctiva** (kon-junk-te'vah). The thin mucous membrane covering the inner surface of the eyelids and a portion of the sclera. **bulbar c., c. bulbi.** The mu-

cous membrane covering the anterior third of the eyeball, from the fold of transmission or retrotarsal fold to the corneal margin. It is loosely connected with the sclerotic, is much thinner than the conjunctiva covering the retrotarsal fold, and loses its papillary structure. **c. corneae**. The layer of epithelial cells covering the anterior surface of the cornea. **c. palpebrae, c. palpebrarum**. See *palpebral c. c. sclerae, c. scleroticae*. See *bulbar c. c. tarsi*. See *palpebral c. c. testiculi*. The internal layer of the tunica vaginalis of the testicle. **palpebral c., tarsal c.** The mucous membrane lining the inner surface of the eyelids, which at the ciliary margin passes insensibly into the cutis of the eyelids. It extends as a lining membrane into the ducts of the meibomian glands, the lacrimal canaliculi, and the sac. [Lat., *con*, with, + *jungere*, to join.]

conjunctivitis (kon-junk-tiv-'it'is). Inflammation of the mucous membrane covering the conjunctiva. It varies in intensity from a slight injection to extensive pathological changes. **acute c.** A form of c. of rapid onset due to trauma. **acute catarrhal c., acute contagious c.** A form due to infection with various organisms. Commonly known as *pink-eye*. **apthous c.** See *pustular ophthalmia*, under *ophthalmia*. **atropin c.** A reddened, thickened, and granular condition of the conjunctiva produced by the local instillation of atropin. It occurs usually after long-continued use of the drug. **autumnal c.** An aggravated type of catarrhal c. coming on during the middle or latter part of August. See *hay-fever*, under *fever*. **blennorrhagic c., blennorrhoeal c., acute catarrhal c., c. neonatorum**. See under *ophthalmia*. **c. nodosa**. Conjunctival nodules due to the hairs of the brown-tailed moth and other caterpillars. See *ophthalmia nodosa*. **c. pelrificans**. White opaque spots in the conjunctiva due to lime salts. **c. phlyctenulosa**. A form of c. characterized by the appearance of one or more vesicular elevations in the conjunctiva, usually near the corneal margin and accompanied by a network of vessels extending outward. **c. phlyctenulosa maligna**. A form of c. in which the vesicles are distinctly larger than in the simple form of the disease, and involve the cornea from the start. **c. phlyctenulosa miliaris**. A form of c. in which the vesicles are multiple and very small, like little sandy prominences, extending all round the corneal margin, and even upon the cornea itself. **croupous c.** That variety of c. which is characterized by the formation of a more or less extensive membrane upon the surface of the conjunctiva of the lids. **diphtheritic c.** A disease characterized by a rapid and very marked swelling of the lids, due to a more or less extensive infiltration, not only of the conjunctiva, but also of the other tissues of the lids. **drug c.** See *atropin c.* **eczematous c.** C. with lesions resem-

bling those of eczema or due to an extension of eczema to the eye. **erysipelatous c.** The inflammation of the palpebral and sometimes of the ocular conjunctiva which accompanies erysipelas of the face. **exanthematous c.** C. occurring in the course of an exanthematous fever or accompanied by an eruption about the eye (e. g., measles, zoster or eczema). **follicular c.** A form of c. in which there are small round translucent elevations in the conjunctiva, situated mostly in the fornix and generally parallel to the margin of the lid. **gonorrhoeal c.** A purulent c. due to contact with the purulent discharge from a specific urethritis. **granular c.** An acute contagious and inflammatory c. causing thickening and vascularity of the palpebral conjunctiva and the formation of granular elevations or lymphoid infiltrations which ulcerate and cicatrize. See *trachoma*. **gummatous c.** A localized c. of plastic type, occasioned by the development of a syphilitic tumor in the conjunctiva or subconjunctival tissue. **hypertrophic c.** Chronic catarrhal c. with hypertrophy of the conjunctival papillae. **lacrimal c.** Inflammation of the conjunctiva through the lacrimal tract, usually unilateral. **lymphatic c.** A form of c. considered by some authorities identical with phlyctenular c.; by Herz as a herpes ciliaris due to reflex irritation of pediculi capitis through the branches of the fifth nerve to the conjunctiva. **membranous c.** See *croupous c.* **metastatic (gonorrhoeal) c.** Infection of the conjunctiva through the general circulation. **Parinaud's c.** See under *Parinaud*. **phlyctenular c.** See *c. phlyctenulosa*. **plastic c.** See *croupous c.* **pseudomembranous c.** See *croupous c.* **purulent c.** An acute inflammation of the conjunctiva with pus formation; nearly always due to infection with gonococci. **scrofulous c.** A form of chronic c. characterized by phlyctenulae, by miliary nodules in the region of the cornea, or by serpiginous ulceration of the cornea, and attributed to scrofula. **toxic c.** C. due to the application of too stimulating remedies, e. g., calomel. **trachomatous c.** See *granular c.* **tuberculous c.** C. due to tuberculous infection. **vernal c.** A hyperplastic form of c. occurring in the spring and summer.

connate'. 1. Congenital. 2. Born or produced together, originally united. 3. In anatomy, ossifying from the same center. [Lat., *con*, together with, + *nasci*, to be born.]

connective. Pertaining to a tissue that unites, supports, or binds together. See *c. tissue*, under *tissue*. [Lat., *connectivus*.]

connivens. 1. Folding in upon each other. 2. Arranged in circular folds, e. g., *valvulae conniventes*. [Lat., *connivere*, to wink, from *con*, with, + *nivere*, to close.]

conoid (ko'noyd). Cone-shaped. **c. ligament**. See under *ligament*. [Gr., *konos*, cone, + *eidōs*, resemblance.]

consanguinity. Blood relationship.

consciousness (kon'shus-ness). The mental state caused by obstruction to automatic activity. The function of the cerebral mechanism to use experience for purposeful activity. **double c.** The state of a person (a somnambulist, a hypnotic, or the like) who leads two alternating courses of life, one during his ordinary condition, and the other when in a state of somnambulism, etc., having no remembrance of the real or supposed events of the one while in the other. **muscular c.** See *muscular sense*. [Lat., *conscientia*.]

consecutive (kon-sek'u-tiv). 1. Following each other in uninterrupted sequence. 2. Occurring as a sequel or consequence. [Lat., *consequi*, to occur in sequence.]

conescence, conescency (kon-senes'senz, kon-sen-es'sen-se). Progress toward senility. [Lat., *conescere*, to grow old.]

consensual (kon-sen'su-al). 1. Caused by sensation, and not through an intermediate discriminating will or feeling. 2. Related, sympathetic; said of symptoms. [Lat., *con*, with, + *sensire*, to feel.]

conserva'tion. The preserving of anything against loss or deterioration. **c. of energy.** A principle universal in its application, by virtue of which any form of energy, whether occurring in organized or in unorganized bodies, never suffers loss but is transmuted into some other form of energy of equivalent power. An example of the c. is found in the development of heat by the arrest of a moving body. [Lat., *conservare*, to protect.]

conser'vative. In pharmacy, preservative; in surgery, aiming at the preservation of injured parts as far as possible, together with the interests of the patient, rather than at brilliancy in procedures. [Lat., *servare*, to preserve.]

con'serve. A preparation formerly made by covering fresh drugs with a layer of sugar, and afterward, by beating fresh vegetable substances with sufficient sugar into a uniform mass. [Lat., *conser'va*.]

consis'tence. Thickness, solidity; also the degree of solidity of a body; the degree of closeness of aggregation of the particles which compose a substance. [Lat., *consistere*, to be firm.]

consolida'tion. The act of making or becoming solid; especially the process of solidification of the lungs by engorgement and by exudation into the alveoli.

consommé (kon-sum-à'). A broth so strong as to gelatinize when cold; a clear soup. [Fr.]

con'sonance. The state of being consonant, also the production of consonant or harmonious sounds.

con'sonant, con'sonating. Sounding in unison with another sound caused by vibrations of air within an inclosed space, and strengthened thereby (said of pulmonary sounds heard on auscultation). [Lat., *consonare*, to sound in unison.]

con'stancy. 1. In electrophysics, absence of interruption or of variation in intensity. 2. Of microorganisms, unchange-

ableness under cultivation. [Lat., *constare*, to stand together.]

con'stant. In electrophysics, uninterrupted; not accompanied by marked variations of intensity.

con'stant. In physics, a value which is not subject to variation and which therefore serves as a unit of measurement, or as an unchanged factor in a given equation.

con'stipated. Subject to, or affected with, constipation.

constipation (kon-sti-pa'shun). A condition in which the evacuations from the bowels are infrequent or difficult.

constituent (kon-stit'u-ent). 1. Entering into the composition of a compound; as a n., an ingredient. 2. Giving consistence to a compound. [Lat., *constituere*, to set in order.]

constitution (kon-sti-tu'shun). 1. In chemistry, the structure of a substance; its make-up with reference to the arrangement of its atoms. 2. A kind of physiological basis or predisposition, presenting itself as something constant in the individual. [Lat., *constitutio*.]

constitu'tional. 1. Pertaining to the constitution (said of conditions which affect the entire system). 2. Congenital. 3. Due to some peculiarity of the constitution. 4. Expressive of the order of arrangement of the atoms contained in a molecule. **c. formula.** See under *formula*.

constrict'ed. Tightened or contracted. [Lat., *constrictus*, drawn or bound together.]

constric'tive. Pertaining to or exerting constriction; as a n., an astringent, a styptic.

constrict'or. Anything that exerts constriction, especially a constricting muscle. See *table of muscles*. [Lat., *con*, with, + *stringere*, to draw.]

constrin'gent. Causing constriction; as a n., an astringent.

consult'ant. A medical practitioner called in consultation.

consultation (kon-sul-ta'shun). 1. The act of consulting. 2. A meeting of two or more practitioners to examine into the features of a case of disease or injury and to settle upon the course of treatment to be pursued. [Lat., *consultare*, to deliberate together.]

consumption (kon-sump'shun). 1. A using up (as of food or of a stock of supplies), also the amount used up in a given time. 2. A wasting away of the body, especially as the result of pulmonary tuberculosis, also that disease itself. **acute pulmonary c.** See *acute miliary tuberculosis*. **c. of the bowels.** Intestinal tuberculosis. **c. of the lungs.** Pulmonary phthisis. **galloping c.** See *acute miliary tuberculosis*. **laryngeal c.** See *tuberculous laryngitis*, under *laryngitis*. **miner's c.** Black phthisis, black spittle, the black lung of coal miners; a disease produced by the inhalation of particles of solid matter, such as the dust from coal, iron, glass, stone, etc., which accumulate in the pulmonary alveoli and

are taken up by the lymphatics and deposited in the bronchial glands and eventually in other situations. **pulmonary c.** See *pulmonary phthisis*, under *phthisis*. [Lat., *consumere*, to waste away, to consume.]

consump'tive. Pertaining to, of the nature of, or affected with consumption, especially pulmonary consumption; as a n., an individual having that disease.

con'tact. The state in which two or more bodies touch each other; a close association between two or more individuals. **c.**

action. See *catalysis*. **c. substance.** See *catalyst*. **direct c., immediate c.**

The c. of objects or individuals with each other without the intervention of another object or individual. **indirect c., mediate c.** The c. of a person with another or with anything by the intervention of some one or something. **C.** by means of an interposed substance. In pathology, see *mediate contagion*. **optical c.** A c. between two transparent surfaces (as when two varieties of glass are united to form a single lens), so that there is no change in the direction of rays of light passing through the two media; also the c. of pigments with glass, so that there is no reflection from the painted side. [Lat., *con*, together, + *tangere*, to touch.]

contag'ion. 1. The communication of disease from one individual to another by means of direct or mediate contact. 2. The material cause or virus of a contagious disease. **direct c.** Contact of the living body with any specific morbid material capable of development within or upon that body, and by which disease, similar to that of which the *materies morbi* formed a part, is reproduced. **immediate c.** C. due to actual contact with an affected person. **mediate c.** The acquisition of a contagious disease from an intermediary person rather than directly from one affected with it. **mental c.** The occurrence or causation in neurotic persons of symptoms like those manifested by other persons with whom they are associated; neurotic mimicry. [Lat., *contingere*, to touch.]

contag'ionist. A believer in the contagious origin of a given disease. **contag'ious.** Susceptible of communication by contagion. **c. disease.** A d. susceptible of communication by contagion. **contagium** (kon-ta'je-um). A virus or material having contagious properties. **con'tinence, con'tinent.** Self-restraint, especially abstinence from sexual indulgence. [Lat., *continens*, temperate.] **contin'ued.** Uninterrupted; said of a fever without intermissions. [Lat., *continere*, to hang together.]

continuity (kon-tin-u'it-e). The state of being continuous, unbroken, uninterrupted. [Lat., *continere*, to hang together.]

contor'tion. A twisting or writhing of the body or of a part. [Lat., *contorquere*, to twist.]

contra- A prefix from the Lat., *contra*, against, in opposition; used in compound words.

contrac'ted. Drawn together upon itself, narrowed, shortened; lessened in size; of a muscle, in a state of active contraction. [Lat., *contrahere*, to draw together.]

contracted pelvis. A female pelvis, the diameters of which are less than normal. Tarnier and Budin's classification of contracted pelvis is as follows: 1. Pelvic anomalies due to excess of malleability of pelvic bones, as, rachitic p., flat p., osteomalacic p. 2. Anomalies due to abnormal transmission of the body weight to one side, as lordosis, scoliosis, kyphosis. 3. Anomalies resulting from abnormal articulation of the vertebral column with the sacrum, as, spondylolisthesis, spondylizeme. 4. Anomalies resulting from the abnormal direction of the upward and inward force exerted by the femora, as, unilateral lameness, bilateral lameness. 5. Anomalies resulting from primary defects in the development of pelvic bones, as, excess of development, localized and symmetrical or localized and asymmetrical.

contrac'tile. Capable of contracting; tending to contract.

contract'ility. Capacity for or tendency to contraction; especially capacity for responding to stimulation by movement.

ameboid c. The form of contraction by pseudopods characteristic of amebae.

animal c. See *voluntary c.* **cellular c.** The c. of masses of protoplasm. **ciliary c.** Protoplasmatic movement originating in the substance of the ciliary cellules, and without influence from the nerve centers. **electrical c.** The c. of a muscle on electrical stimulation. **faradic c.** The c. of a muscle on stimulation with a faradic current. **galvanic c.** The c. of a muscle on galvanic stimulation. **involuntary c.** Capacity for movements (such as those in smooth or unstriated muscular fiber) which are not dependent upon or governed by the will. **muscular c.** The contractile power of a muscle. **voluntary c.** That c. which depends upon or is governed by the will of the individual; as that in striated muscle. [Lat., *contractilitas*.]

contrac'tion. 1. The act of contracting. 2. The state of being contracted. 3. In physiology, the sum of the phenomena which accompany a single muscular movement. **anodal closure c.** See under *anodal*. **anodal opening c.** See under *anodal*. **breaking c.** The contraction that takes place in a muscle through which a galvanic current is passing at the moment of breaking the circuit. **cathodal closure c.** See *cathodal closure clonus*, under *clonus*. **cathodal duration c.** A contraction occurring at the cathode and persisting during the entire time of closure of the circuit. The same as cathodal closure tetanus. **cathodal opening c.** See *cathodal opening clonus*. **c. ring.** Syn.: *Bandl's ring*. A circular ridge of tissue in the parturient uterus that separates the upper contractile portion of the uterus from the lower passive

portion. When an obstruction exists to the passage of the child, this ring may be felt as a transverse ridge, extending across the lower portion of the uterus. **Dupuytren's c.** A c. of the fingers and palm. **fibrillar c's, fibrillary c's.** Uncoordinated contractions of simple fibers or groups of fibers in a muscle. The term is especially used to designate a flickering, uncoordinated contraction of the heart-muscle. **front tap c.** A modification of the ankle clonus described by Gowers. It is a reflex extension movement of the foot elicited by tapping the muscles on the front of the leg. **idiomuscular c.** 1. A localized c. observed in a fatigued muscle when struck violently with a percussion hammer; described by Schiff. 2. See *myo-edema*. **idiopathic c. with rigidity.** See *contracture*. **making c.** The c. which takes place in a muscle, through which the galvanic current is passing, at the moment of making the circuit. **overmaximal c.** A further c. (exceeding the previous maximum) which takes place when the strength of a stimulus applied to a muscle is gradually increased until a maximum of c. is obtained, and then, after a short interval, is increased still further; first observed by Fick. **paradoxical c.** 1. A c. of the muscles supplied by both branches of a large nerve (like the sciatic in the frog) observed when an electrical current is applied to one of its two primary divisions. 2. Of Westphal, the c. of a muscle when its points of origin and insertion are suddenly approximated (i. e., when the muscle is suddenly relaxed); usually associated with paresis of the lower extremities. **peristaltic c.** The moving ring of c. of the muscular coat of the intestines by which their contents are propelled downward. **permanent c.** See *contracture*. **pulsatile c's.** Certain c's of the orbicularis palpebrarum muscles which are synchronous with the pulse. **rhythmical c.** A c. (such as that of the heart) which recurs at regular intervals. **secondary c.** A muscular c. corresponding to the cardiac systole observed when the nerve of a muscle nerve preparation is laid upon a living heart; described by Matteucci in 1842. A similar contraction obtained from a therapeutic frog preparation when the nerve of one muscle is stimulated by the action currents set up in another muscle. **spastic c.** Convulsive muscular c. without intervals of relaxation, as in tetanus. **tetanic c.** Firm and prolonged muscular c. such as occurs in tetanus or when rapidly repeated induction shocks are passed through a muscle. **unipolar induced c.** A c. such as is produced in a frog's muscle (not entirely insulated) when a single electrode is applied to it, the other end of the circuit being connected with the ground. **vermicular c.** See *peristaltic c.* [Lat., *contrahere*, to contract.]

contractor. A muscle the action of which is to render a part tense; a tensor.

contracture. The condition of permanent contraction assumed by a muscle after prolonged and excessive stimulation or the similar condition observed after certain lesions of the central nervous system. [Lat., *contractura*.]

contrahens (kon'trah-hens). Contracting; as a n. m., a constricting or puckering muscle, also an astringent.

contra-indicant. Having the force of a contra-indication.

contra-indication (kon'trah-in-di-ka'shun). A symptom or sign indicating that a particular method of treating a disease or the use of a particular remedy is not to be followed. [Lat., *contra*, against, + *indicare*, to point to.]

contralateral conduction. See under *conduction*.

contrast. A comparison of two or more things for the purpose of showing their difference, also the degree of difference so detected. **color c., c. of colors.** A modification of the visual impression that takes place when two or more objects of different color are viewed simultaneously or in quick succession. **c. stain.** A s. used to color unstained tissue, part of which has already been colored with a different stain. **simultaneous c.** A form of c. of colors obtained when two contiguous colors are looked at at the same time. **successive c.** That form of c. of colors in which two colors are looked at in rapid succession, so that the after-image from the first color modifies the sensation that would be produced by the second color.

contrastimulus (kon'trah-stim'u-lus). A hypothetical natural force operating within the body in conjunction with another termed *stimulus*, the two, when exactly balanced, maintaining a state of health.

contravolitional (kon'trah-vo-lish'on-al). Involuntary; done in opposition to the will.

contre-coup (kontr'koo). Lit., a counter-stroke. The shock or effect produced on one side of the skull by a blow on the other. [Fr., *contre-coup*, a back-blow, rebound.]

contri'tus. Bruised; reduced to a coarse powder.

control' experiment. An experiment made to test the correctness of another, particularly one made at the same time as another and with all the conditions alike except one, in order to test the effect of the excepted condition.

contund'ing. Contusing; producing a contusion. [Lat., *contundere*, to bruise.]

contu'sion. A compression and laceration of the tissues by a blow from a blunt instrument; a bruise. In pharmacy, a beating into coarse pieces. [Lat., *contusio*, from *contundere*, to bruise.]

conus (ko'nus). 1. A cone or a cone-shaped body. 2. A posterior staphyloma, so-called, crescentic in shape and seen on one or the other side of the optic disk, usually the temporal. It is a thinning or atrophy of the choroid stroma, including the pigment, which allows the

white sclera to become visible. **c. arteriosus**. The conical prolongation upward of the right ventricle of the heart, from which the pulmonary artery arises. **c. cochleae**. See *modiolus*. **c. corporis striati**. The anterior rounded extremity or the corpus striatum. **coni Malpighii**. See *pyramids of Malpighii*, under *pyramid*. **c. medullaris**. See *c. terminalis*. **coni retinae**. See *retinal cones*, under *cone*. **c. terminalis**. The lower pointed extremity of the spinal cord. **coni tubulosi**. See *pyramids of Malpighii*, under *pyramid*. **coni vasculosi, coni testiculi**. A series of small conical masses, composed of the convolutions of the efferent tubules of the testicle. They form a part of the globus major of the epididymis and their tubules open into a common duct, forming the origin of the vas deferens. [Gr., *konos*, cone.]

convalescence (kon-va-les'ens). The recovery of strength after an illness; the state of the body when recovering from a disease or injury or from the weakness, etc., incident to parturition. [Lat., *convalescere*, to become strong.]

convallamaretin (kon''val-lam-ar-e'tin). A product, $C_{20}H_{30}O_8$, obtained from convallamarin. [Convallaria + Gr., *retine*, resin.]

convallamarin. A glucosid, $C_{22}H_{44}O_{12}$, found in *Convallaria majalis*. It acts on the heart like digitalis. [Convallaria + Lat., *amarus*, bitter.]

convallaretin (kon-vaj-lar-e'tin). A poisonous substance, $C_{28}H_{52}O_6$, resulting from the action of acids on convallarin. [Convallaria + Gr., *retine*, resin.]

Convallaria. 1. Lily-of-the-valley. 2. Genus *Streptopus*. 3. Genus *Dischorsandra*. Of the U. S. Ph., the rhizome and rootlets of *Convallaria majalis*. The fluidextract is official. **C. maialis, C. majalis, C. Mappi**. The flowers and root contain convallarin and convallamarin, upon which the action depends.

convallarin. A glucosid, $C_{34}H_{52}O_{11}$, obtained from *Convallaria majalis*.

convergence (kon-ver'jens). The state of being convergent; also the power of converging or bringing together (said especially of the eyes). [Lat., *convergentia*.]

convergent. Inclining toward each other, coming together at a common point. [Lat., *con*, with, + *vergere*, to turn.]

conversion (kon-vēr'shun). In psychoanalysis the process by which psychical emotions are transformed into physical symptoms.

convoluted (kon'vo-lu-ted). Rolled upon itself. **c. tubules**. See under *tubule*. [Lat., *con*, with, + *volvere*, to roll.]

convolution. 1. The process of winding spirally or irregularly. 2. A coil of intestine, also a raised portion of similar appearance on the surface of the brain. 3. The phase or condition of a nucleus in indirect or karyokinetic division in which the nuclear fibrils become sharply defined, twisted, and convoluted, so as to give somewhat the appearance of an irregularly wound ball of twine. **angular c.** A gyrus, sometimes extremely complex,

which forms the posterior portion of the inferior parietal lobule. **annectant c's**. The four gyri which connect the c's on the upper surface of the occipital lobe with the parietal and temporosphenoidal lobes. **anterior central c.** See *ascending frontal c.* **anterior choroid c.** See *gyrus choroides*, under *gyrus*. **anterior orbital c.** A c. which lies in front of the orbital sulcus. **anteroparietal c.** See *ascending frontal c.* **Arnold's c.** See *gyri posteriores inferiores*, under *gyrus*. **ascending frontal c.** Syn.: *transverse c.*, *anteroparietal gyrus*. A gyrus forming the anterior boundary of the fissure of Rolando, with which it is parallel. **ascending parietal c.** Syn.: *postero-parietal gyrus*. A c. running parallel with the ascending frontal c., but separated from it, by the fissure of Rolando, except at its extremities, where the two are generally united. **Broca's c's**. A term sometimes applied to the operculum, but more properly to the inferior, or third, frontal c. **callosal c.**, **callosomarginal c.** See *gyrus fornicatus*, under *gyrus*. **cerebral c's**. The c's of the cerebrum. **c. of the corpus callosum**. See *gyrus fornicatus*, under *gyrus*. **c. of the sylvian fissure**. The complex c. that bounds the fissure of Sylvius. It is broken up into numerous secondary c's. **cuneate c.** See *gyral isthmus*, under *isthmus*. **dentate c.** A small notched gyrus rudimentary in man, which is situated in the dentate fissure, below the tenia hippocampi. **entorbital c.** A c. on the orbital surface of the frontal lobe of the orang-outang. **external olfactory c.** The small projections forming the outer boundary of the olfactory grooves. **hippocampal c.** See *uncinate gyrus*, under *gyrus*. **inferior frontal c.** The lower and outer part of the frontal lobe. It is of importance, on the left side, as forming an essential part of Broca's "speech center." **inferior occipital c.** A small c. lying between the middle and inferior occipital fissures. **inframarginal c.** See *superior temporosphenoidal c.* **insular c.** One of a group of small c's, which form the island of Reil and are entirely concealed by the operculum. **internal orbital c.** The gyrus next outside of the gyrus rectus. **intestinal c's**. The coils of the intestines. **marginal c.** A c. which begins in front of the locus perforatus anterior and bounds the longitudinal fissure on the mesial aspect of the hemisphere. **middle frontal c.** A c. continuous posteriorly with the ascending frontal c. and extending forward over the anterior end of the hemisphere to its orbital surface, where it is continuous with its middle orbital c. **middle occipital c.** A c. situated between the first and the third occipital c's. **middle temporosphenoidal c.** A small gyrus continuous with the middle occipital or angular gyrus. **occipitotemporal c.** Two small c's on the lower surface of the temporosphenoidal lobe. The name is sometimes given to the fusiform lobule alone. **olfactory**

c. See *olfactory lobe*, under *lobe*. **orbital c's.** The small gyri on the orbital surface of the frontal lobe. **parietal c's.** See *ascending parietal c.* and *superior parietal c.* **posterior orbital c.** A small c. situated on the posterior and outer side of the orbital sulcus, and continuous with the inferior frontal c. **second (or middle) frontal c.** A c. which is continuous posteriorly with the ascending frontal c., runs forward along the medial surface of the lobe, and, curving around its anterior extremity, becomes continuous with the middle orbital gyrus on the inferior surface. **superior frontal c.** A c. which bounds the great longitudinal fissure, arising posteriorly from the upper end of the ascending frontal c., and turning around the anterior extremity of the frontal lobe to appear on its under surface as the internal orbital c. **superior occipital c.** The upper of the three c's on the superior surface of the occipital lobe. **superior parietal c.** The portion of the parietal lobe which is limited anteriorly by the upper part of the fissure of Rolando, posteriorly by the external parieto-occipital fissure, and inferiorly by the intraparietal sulcus. **superior temporosphenoidal c.** The upper of the three c's forming the temporosphenoidal lobe. It lies just below and is parallel with the sylvian fissure. **supramarginal c.** The anterior portion of the inferior parietal lobule, situated behind the inferior extremity of the intraparietal fissure (sulcus), below which it joins the ascending parietal c. **transverse orbital c.** The gyrus occupying the posterior portion of the inferior surface of the frontal lobe, at the anterior extremity of the fissure of Sylvius. Its general direction is transverse. **uncinate c.** A c. extending from near the posterior extremity of the occipital lobe to the apex of the temporosphenoidal; so called from its peculiar hooked anterior end. [Lat., *con*, with, + *volvère*, to roll.]

convol'vulin. A glucosid, $C_{31}H_{50}O_{16}$, which is one of the active principles obtained from jalap root. It is a purgative. See also *jalapin*.

convolvu'linol. The oily crystallizing product, $2C_{13}H_{24}O_3H_2O$ (or $C_{26}H_{50}O_7$), obtained from convolvulin.

Convolvulus (kon-vol'vu-lus). 1. Bindweed; a genus of twining shrubs indigenous to the temperate and subtropical regions of the globe; many of the species are medicinally valuable. 2. *Volvulus*. **C. orizabensis.** Male jalap, light jalap, orizaba root; a species grown near Orizaba, Mexico, where it is called *purgo macho*. It is a feeble purgative (as compared with true jalap), and contains a resin, called by Meyer *jalopin*, whose composition is homologous to that of convallarin, and which resembles scammony chemically and therapeutically. **C. scammonia.** A species indigenous to Syria and certain islands of the Grecian Archipelago, furnishing Aleppo scammony and

Smyrna scammony. [Lat., *convolvere*, to roll up.]

convulsion (kon-vul'shun). A violent involuntary contraction, or series of contractions, of groups of voluntary muscles. See *eclampsia*. **clonic c.** A c. in which more or less pronounced contraction of the muscles affected alternates with more or less complete relaxation. **eclamptic c.** General c's, with more or less impairment of consciousness, e. g., the ordinary c's of infants and those of pregnant, parturient, or lying-in women. The term is now restricted to the c's of pregnancy. **epileptic c.** The c. that characterizes a paroxysm of epilepsy. **epileptiform c.**, **epileptoid c.** A c. resembling an epileptic c. **general c.** A c. affecting all or most of the voluntary muscles. **hysterical c.** A c. due to hysteria, resembling that of epilepsy, but usually without unconsciousness. **hystero-epileptic c.** 1. A c. that begins as an hysterical c. and becomes epileptoid. 2. An epileptic fit in an hysterical person. A c. in which the cause lies in the influences of a disease of some part or organ upon the brain or spinal cord. **puerperal c's.** Eclamptic c's occurring in pregnant, parturient, or lying-in women. **symptomatic c's.** C's due to irritation or inflammation of a given part of the cerebrospinal axis. **tetanoid c.** See *tetany*. **tonic c.** A c. in which the contraction seems to be continuous, as in tetanus. **toxic c.** A c. caused by the action of any poisonous agent upon the nervous system. **uremic c.** A c. due to uremia. [Lat., *convulsio*, from *convellere*, to pull together.]

convul'sive. Pertaining to, resembling, or accompanied by convulsions. **c. tic.** Clonic facial spasm.

Cooper's fascia. See *fascia propria of the scrotum*, under *fascia*. [Sir Astley Paston Cooper, Eng. surgeon, 1768-1841.]

Cooper's gelatin. Probably the dried froth of a solution of pure bone glue; used as a substitute for isinglass.

coör'dinated. In or brought into a state of coördination.

coördina'tion. Harmonious action, as of two or more voluntary muscles in the performance of a movement in obedience to the will. [Lat., *coördinatio*.]

copaiba (ko-pah'e-bah). The oleoresin of various species of *Copaifera*, especially that of *Copaifera officinalis*, *Copaifera guianensis*, *Copaifera coriacea*, and *Copaifera Langsdorffii*. It has been in use as a stimulant of the mucous membranes for more than a century, and employed in gonorrhœa in the subacute stage, gleet, leukorrhœa, and chronic catarrhal affections of the bowels and lungs. Of the U. S. Ph. and Br. Ph., an oleoresin obtained from several species of copaiba. **massa copaibae** [U. S. Ph., 1890], **mass of c.** Syn.: *pilulae copaibae*. A solidified copaiba preparation made by mixing 94 parts of c. with 6 parts of recently prepared magnesia, and allowing the mixture to concreate into a pilular mass. **oil of c.**, **oleum copaibae.** A volatile

oil, $C_{20}H_{32}$, which constitutes one-third to one-half of c. [U. S. Ph., Br. Ph.]. **pilulae copaibae**. See *massa copaibae*. **resina copaiba**, **resin of c.** The residue left after distilling off the volatile oil of c. It is a diuretic and has been used in bladder affections.

Copaifera (ko-pah-if'e-rah). A genus of leguminous trees. **C. guianensis**, **C. gujanensis**. A Guiana species, one of the chief sources of copaiba. **C. Langsdorffii**. A Brazilian species, one of the chief sources of copaiba.

cop'al. A resinous substance brought from the East Indies, South America, and the eastern and western coasts of Africa. It is the concrete juice of different trees.

copalchi (ko-pal'che). A bark obtained from *Hedwigia balsamifera*; used as an adulterant for cascarilla.

cop'allin. The resin of *Liquidambar styraciflua* (sweet-gum of the southern United States). It has been used for the preparation of chewing gum.

copop'sia, **copop'ia**. A weariness or fatigue of the power of acute vision. [Gr., *kopos*, fatigue, + *opsis*, sight.]

cop'per. A bright red metallic element, known from very early times. Symbol Cu. Atomic weight 63.6. It forms salts with various acids but few of them are used medicinally. List of poisons and their antidotes, see in *appendix*, page . **c. acetate**. Normal cupric acetate, $Cu(C_2H_3O_2)_2 + H_2O$; it forms efflorescent green crystals of a disagreeable metallic taste. It is not used internally [U. S. Ph., 1880]. **c. alginate**. A combination of alginic acid, obtained from seaweed and copper; used in the anemias of leprosy, cancer, etc. **c. ammonio-sulphate**. Ammoniated c. sulphate, ammoniated copper; a compound of c. sulphate with ammonia. **c. arsenite**. Syn.: *Scheele's green*. A poisonous pigment, $CuHASO_4$. **c. sulphate**. Syn.: *Blue vitreol*, *blue copper*, *blue stone*, *cupric sulphate*. A blue crystalline substance, $CuSO_4 + 5H_2O$. Soluble in water. It is an efficient emetic. [Lat., *cuprum*.]

cop'peras. A term formerly synonymous with vitriol, now restricted to green vitriol (ferrous sulphate). **blue c.** Copper sulphate. **green c.** Copperas. **white c.** Zinc sulphate.

cop'raol (kop'ra-ol). A substance similar to cacao butter; used in making suppositories.

copremia (kop-re'me-ah). A condition of the system attributed to the prolonged retention of feces and the absorption of some of their constituents into the blood. [Gr., *kopros*, feces, + *aima*, blood.]

coprolalia (kop-ro-la'le-ah). The babble of words relating to the rectum, rectal functions, and anal erotic complexes seen in the extremely vulgar and in psychoses. [Gr., *kopros*, dung, + *lalia*, babble.]

Cop'tis. Goldthread; a genus of ranunculaceous plants. **C. trifolia**. Three-leaved goldthread; indigenous to the northern regions of North America. It resembles quassia in its properties as a

simple bitter, and has been used in aphthae as a detergent.

copula (kop'u-lah). 1. Any bond of union e. g., a ligament, a commissure, an articulation. 2. In pathology, see *amboceptor*. **c. alba cerebri**. The anterior commissure of the brain. **c. magna cerebri**. The corpus callosum. **c. nervorum opticorum**. See *chiasm*. [Lat., *copulare*, to bind together.]

copula'tion. Sexual intercourse. [Lat., *copulatio*.]

cop'ulative. 1. Pertaining to copulation. 2. Serving to connect or couple.

cor (kor). Latin for *heart*. **c. adiposum**. 1. Fatty degeneration of the muscular tissue of the heart. 2. An excessive increase of the subpericardial fat.

coraco-. A prefix from the Gr., *korax*, *korakos*, raven, crow; used in compound words in the sense of beaked, like a crow, having to do with the coracoid process.

cor''acobrachia'lis. See *table of muscles*, under *muscle*.

cor''acohu'meral. Pertaining to the coracoid process of the scapula and to the humerus.

cor''acohy'oid. Pertaining to the coracoid process of the scapula and to the hyoid bone.

cor'acoid. Shaped like the beak of a crow, also pertaining to the c. process of the scapula. [Gr., *korax*, crow, beak, + *eidōs*, appearance.]

cor''acoscap'ular. Pertaining to the coracoid bone or the coracoid process of the scapula and to some other part of the scapula.

Corallorrhiza (kor-al-lo-ri'zah). A genus of orchids. **C. multiflora**, **C. odontorrhiza**. Coralroot; a species growing throughout the United States, east of the Mississippi. It has a strong, peculiar odor and an astringent taste, and is considered a diaphoretic. [Gr., *korallion*, coral, + *rhiza*, a root.]

cord. A stringlike structure; in common parlance, a tendon. **axis c.** See *primitive streak*, under *streak*. **c's of Müller**. See *Müller's ducts*, under *Müller*. **dorsal c.** See *notochord*. **elastic c.** Elastic fiber. **false vocal c's**. See *superior vocal bands*, under *band*. **genital c.** Thiersch's term for a cordlike structure in the embryo, formed by the fusion of the two wolfian ducts and their incorporation with the two müllerian ducts. **great gangliated c.** A nervous c., consisting of a series of ganglia united by short c's. There is one on each side of the spinal column reaching from the base of the skull to the coccyx. They are connected above with nerves which enter the brain, and terminate below in a loop on the sacrum. **gubernacular c.** A fibrous structure that forms a part of the gubernaculum testis, being attached inferiorly to the lower part of the scrotum, and surrounding the processus vaginalis above. **hepatic c's**. See *hepatic columns*, under *column*. **lumbosacral c.** A trunk formed by the anterior branch of the fifth lumbar nerve and a portion of

the fourth lumbar nerve. It joins the sacral plexus and enters into the formation of the superior and inferior gluteal and the great sciatic nerve. **spermatic c.** A cordlike structure made up of the vas deferens, the spermatic and other arteries and veins, with lymphatics, nerves, and connective tissue. It begins at the internal abdominal ring, passes through the inguinal canal, and terminates in the scrotum, at the back part of the testicle, by the distribution of its component parts to the different structures of the testicle and scrotum. **spinal c.** Syn.: *chorda vertebralis*. The myelon, or the portion of the cerebrospinal axis below the medulla oblongata. **testicular c.** See *spermatic c.* **true vocal c's.** See *inferior vocal bands*, under *band*. **tympanic c.** See *chorda tympani*. **umbilical c.** Syn.: *chorda umbilicalis*. The navel string; a thick, flexible c., connecting the fetus, at the umbilicus, with the placenta. It consists of the umbilical arteries and vein and a tough gelatinous mass, Wharton's jelly, which serves to support the vessels and bind them together. **vocal c's.** See *vocal bands*, under *band*. [B. N. A., *frenulum*.] [Gr., *chorde*, gut, string.]

cordate (kor'dāt). Heart-shaped, as a leaf or other flat object. [Lat., *cor*, *cordis*, a heart.]

cordial (kor'de-al). Acting as a stimulant or tonic to the heart and the stomach; warming; exhilarating; as a n., a preparation so acting. **cordiale rubi fructus**. A preparation containing blackberry juice, alcohol, and syrup, flavored with cinnamon, cloves, and nutmeg [N. F.]. [Lat., *cor*, the heart.]

cor'dol. Salol tribromid.

cordon (kor'don). 1. See *cord*. 2. A gir-dle. **sanitary c.** A line of armed men stationed around an infected district; also, a line beyond which persons in an infected area are not allowed to go. [Fr.]

cordyle (kor'dil). 1. An old form of bandage for the head. 2. A furuncle. [Gr., *kordyle*.]

core. 1. The innermost part of anything, hence the axile body or corpuscle; the central part of a terminal corpuscle. 2. The slough at the center of a furuncle. [Lat., *cor*, heart.]

corectasis (kor-ek'tas-is). Dilatation of the pupil. [Gr., *kore*, the pupil, + *ek-tasis*, dilatation.]

corectopia (kor-ek-to'pe-ah). A condition in which the pupil is not in the center of the iris; applied only in marked cases. [Gr., *kore*, the pupil, + *ektos*, displaced.]

corelysis (ko-rel'is-is). The operation of detaching the pupillary margin of the iris from adhesions to the cornea or the lens. [Gr., *kore*, the pupil, + *lysis*, a loosing.]

coreometer (kor-e-om'et-er). An instrument for measuring the diameter of the pupil. [Gr., *kore*, the pupil, + *metron*, a measure.]

coriamyrtin (ko-re-ah-mir'tin). A glucosid, C₂₀H₃₆O₁₀, obtained from *Coriaria*

myrtifolia, having an action resembling that of picrotoxin.

coriander (ko-re-an'der). A plant of the genus *Coriandrum*; the fruit of *Coriandrum sativum*.

Coriandrum (kor-e-an'drum). 1. A genus of umbelliferous plants. 2. Of the U. S. Ph., the fruit of *C. sativum*. **coriandri fructus**. The dried fruit of *Coriandrum sativum* [Br. Ph.]. **C. sativum**. An annual species widely cultivated for the sake of its fruit, coriander, which becomes fragrant when dried (though all parts of the fresh plant are very fetid when bruised), has the ordinary medicinal virtues of the aromatics, and is used to disguise the taste of other medicines, or to correct their griping qualities. The aromatic taste and odor depend on a volatile oil. **oleum coriandri**. An aromatic volatile oil obtained from coriander fruit [U. S. Ph., Br. Ph.] [Gr., *korian-dron*, *kōriannon*, *korianon*.]

Coriaria myrtifolia (ko-re-ah're-ah mir-te-fo'le-ah). A plant, the leaves of which have been used to adulterate senna, but this is now rarely done. The leaves, the berries, and the young shoots contain the poisonous coriamyrtin.

corium (ko're-um). 1. The dense feltlike membranous layer of the skin, covered on the ectal or free surface by the epidermis or cuticle, and on the ental or attached surface insensibly merging into the areolar subcutaneous tissue. It is composed of a dense network of white fibrous tissue with a slight admixture of elastic tissue. 2. The connective tissue framework or membrane, comparable with the c. of the skin. [Gr., *chorion*, skin.]

cork. 1. A variety of tissue found in the hypodermal zone of many trees. The term c. is commonly applied to this tissue only when its cell walls are thin, elastic, and compressible, as in the inner bark of *Quercus suber*, the latter, and, according to some authorities, also the *Quercus occidentalis*, furnishing the c. of commerce. 2. A stopper made from c. (1st def.). 3. In Scotland, *Lecanora tartarea*.

corm. A form of bulb in which the scales are indistinguishable, the whole appearing as a solid organ, as in *Colchicum*. [Gr., *kormos*, a stem.]

corn. 1. A general term for the cereal or grain-producing grasses, particularly (in the United States) maize. 2. In composition (as in *c. lily*, *c. mint*, etc.), used adjectively to indicate that a plant grows wild in the fields.

corn. A horny portion of the epidermis with a hard center, that sometimes penetrates deep into the corium, occurring chiefly on the toes or feet from constant pressure on one spot. [Old Fr., *corn*, from Lat., *cornu*, horn.]

cornea (kor'ne-ah). 1. The anterior transparent segment of the outer coat of the eye, uniting with the sclera at the limbus, or sclerocorneal margin. **conical c.** An abnormal curvature of the cornea in which it becomes the segment of a sphere of smaller diameter. **staphyloma cor-**

naea. A bulging of the cornea from thinning of the membrane, due to injury or to chronic inflammation of the cornea. [Lat., *corneus*, horny, from *cornu*, horn.]

cor'neal. Pertaining to the cornea.

corneo- 1. Combining form of Lat., *corneus*, meaning with a horny admixture. 2. Combining form of *cornea*; used as a prefix.

cornoblepharon (kor''ne-o-blef'ar-on). Adhesion of the eyelid to the cornea. [*Cornea*, + Gr., *blepharon*, the eyelid.]

corneous (kor'ne-us). Having the aspect or consistency of horn.

corniculum (kor-nik'u-lum). A little horn or horn-shaped body. **cornicula interna ossis hyoidei.** See *cornicula of the hyoid bone*. **cornicula laryngis.** The santorinian cartilages; two small conical cartilages which articulate with the tops of the arytenoid cartilages of the larynx; composed of yellow fibrocartilage. **cornicula of the hyoid bone.** The small cornua of the hyoid bone. **cornicula santoriniana.** See *cornicula laryngis*. [Lat., dim. of *cornu*, horn.]

cornifica'tion. Conversion into a hornlike substance. [Lat., *cornu*, a horn, + *facere*, to make.]

corn'ified. Converted into a hornlike substance.

cor'nin. Cornic acid; a bitter principle obtained from the bark of *Cornus florida*.

cor'nu. Pl. *cornua*. 1. A horn-shaped process or appendage. 2. A horn-shaped extension of a cavity, e. g., those of the lateral ventricle of the brain and those of the cavity of the uterus. **anterior gray c. (of the spinal cord).** The anterior projection of the mass of gray matter seen on each half of the spinal cord upon transverse section. This projection, found throughout the whole extent of the cord, forms a continuous structure, called the anterior gray column. **c. Ammonis.** See *hippocampus major*. **c. anterior cerebri.** The anterior c. of the lateral ventricle of the brain. **c. arietis.** See *hippocampus major*. **c. cerebri inferioris.** The descending horn of the lateral ventricle of the brain. **cornua coccygea.** The cornua of the coccyx. **c. cutaneum.** A cutaneous horn, horny excrescence, horny tumor; a morbid corneous excrescence of the epidermis resembling a horn. See *ichthyosis*. **c. descendens.** The descending horn of the lateral ventricle of the brain. **cornua inferiora glandulae thymi.** The lower pointed extremities of the lateral lobes of the thymus gland. **c. internum ventriculi lateralis.** The anterior c. of the lateral ventricle of the brain. **c. laterale.** That part of the lateral ventricle of the brain which extends forward and downward into the medullary portion of the temporosphenoidal lobe. **cornua lateralis ossis hyoidei.** The greater cornua of the hyoid bone. **cornua lateralis thyroides.** The lateral lobes of the thyroid body. **cornua maxillae inferioris.** The rami of the inferior maxilla. **c. medium.** The descending horn

of the lateral ventricle of the brain. **cornua minora ossis hyoidei.** The lesser cornua of the hyoid bone. **c. occipitale.** The posterior horn of the lateral ventricle of the brain. **cornua of the coccyx.** Two small processes which project upward from the posterior surface of the first segment of the coccyx to connect with the cornua of the sacrum. **cornua of the uterus.** The lateral funnel-shaped prolongations of the upper portion of the cavity of the uterus into which the fallopian tubes open. **cornua ossis frontis.** The zygomatic processes of the frontal bone. **cornua ossis hyoidei inferiora.** The greater cornua of the hyoid bone. **cornua ossis hyoidei minora.** The lesser cornua of the hyoid bone. **cornua posteriora medullae spinalis.** The posterior cornua of the spinal cord. **c. posteriori ventriculi lateralis.** The posterior horn of the lateral ventricle of the brain. **cornua superiora glandulae thymi.** The upper pointed extremities of the lateral lobes of the thymus gland. **great cornua of the hyoid bone.** The lower pair of processes which project backward from the sides of the body of the hyoid bone. During early life they are united by synchondrosis with the body of the bone, but in later life they fuse with it. **inferior c. of the thyroid cartilage.** A short, blunt process which extends downward and somewhat forward (one on each side) from the lower end of the posterior margin of the thyroid cartilage. **lesser cornua of the hyoid bone.** Two short conical pieces which project upward and back from the points at which the great cornua unite with the body of the hyoid bone. **posterior c. of the medulla oblongata.** A mass of gray matter in the medulla oblongata which corresponds to the posterior gray c. of the spinal cord. **posterior c. of the spinal cord.** The posterior projection of the mass of gray matter in each half of the spinal cord as seen upon transverse section. The totality of this projection is properly called the posterior gray column. **posterior gray c.** The posterior projection of the mass of gray matter in each half of the spinal cord as seen upon transverse section. **sacral cornua.** Two blunt, somewhat conical processes upon the lower end of the posterior surface of the sacrum, one on each side of the median line, which articulate with the cornua of the coccyx. **sphenoidal cornua.** Triangular-shaped bones situated (one on each side) at the inferior anterior portion of the body of the sphenoid bone. **superior c. of the thyroid cartilage.** A blunt, slender process which extends upward and slightly backward (on each side) from the upper end of the posterior margin of the thyroid cartilage. [B. N. A., *cornu*.] [Lat., *cornu*, horn.]

cornu cervi (kor'nu ser've). Syn.: *cervi cornu*. Hartshorn; the horn of the stag. **c. c. preparatum.** Prepared hartshorn; made by eliminating the calcium phos-

phate from hartshorn. **c. c. ustum.** Burnt hartshorn; made of calcined hartshorn, freed from impurities.

Cornus (kor'nus). 1. A genus of cornaceous trees and shrubs. 2. The root bark of *C. florida*, formerly also of *C. circinata* and *C. sericea*. **C. circinata.** A North American species formerly recognized in the U. S. secondary list. Its uses are similar to those of *C. florida*. **C. florida.** The flowering dogwood of North America. The root bark is used as a stomachic. It is bitter, astringent, and aromatic. **C. sericea.** Swamp dogwood tree; a North American species. It has similar uses to those of *C. florida*. [Lat., *cornu*, horn; from its hornlike bark.]

cornuolin (kor-nu'tin). Of Kobert, an alkaloid resin, containing ergotoxin and some other active substance. Of Keller, an impure mixture of ergotin and ergotoxin.

corolla. The inner floral envelope forming the whorl of petals, often colored, between the calyx and the stamens of a flower. [Lat., dim. of *corona*, a crown.]

coremegin, coremegin (kor-om'e-jin, kor-em'e-jin). Runge's name for atropin, from its dilating the pupil. [Lat., *coromegina, coromeginum*, from Gr., *kore*, the pupil, + *megas*, large.]

corona (kor-o'nah). A crown or any crownlike structure, the uppermost part; in obstetrics, the rim of the os uteri externum stretched around the child's head during parturition. **c. ciliaris.** The ciliary processes taken collectively. **c. conjunctivae.** That portion of the conjunctiva that surrounds the cornea. **c. cordis.** The auricular portion of the heart. **c. dentis.** The crown of a tooth. **c. glandis.** The rounded flangelike projecting border or shoulder of the glans penis. [B. N. A., *corona*.] **c. radiata.** Syn.: *fibrous cone*. The radiating fibers of the cerebral peduncle. [Gr., *korone*, crown, from *koronos*, curved.]

coronal. Pertaining to, or occupying, the place of a crown; pertaining to the crown of the head. In dentistry, pertaining to the crown of a tooth. **c. suture.** See under *suture*. [Lat., *coronalis*.]

coronary. Crown-shaped; pertaining to the arteries of the heart. See *corona cordis*. [Lat., *coronarius*.]

Coronilla (kor-o-ni'lah). The crown vetch; a genus of leguminous plants. **C. scorpioides.** A species found in southern France. The seeds contain a glucosid, *coronillin*. The plant and its glucosid have been recommended as a diuretic and a cardiac tonic.

coronil'in. A glucosid found in the seeds of *Coronilla scorpioides* and other species of coronilla; it acts like digitalin.

cor'onoid. Crownlike; crown-shaped. **c. process.** See under *process*. [Gr., *korone*, crown, + *eidos*, resemblance.]

cor'pora. pl. of Lat., *corpus*. **c. albicantia.** Two small masses situated in front of the anterior perforated space connected with the posterior pillars of the fornix and with each other. **c. amylacea.** Con-

cretions of a proteid nature present in the prostate gland and central nervous system. **c. Arantii.** The small fibrocartilaginous thickenings in the middle of the free edges of the mitral and semilunar valves of the heart. Named after Aranti, an Italian anatomist. **c. bigemina.** See *c. quadrigemina*. **c. cavernosa clitoridis.** Two cylindrical bodies of cavernous tissue, which arise from the rami of the ischium and os pubis and unite to form the clitoris. **c. cavernosa penis.** Two cylindrical erectile bodies, placed side by side and closely blended in their three quarters, which form the greater part of the penis. **c. erectilia.** Erectile tissues, especially those of the penis. **c. oryzoidea.** Syn.: *rice bodies*. Grainlike bodies, offshoots from the synovial membrane or masses of coagulated albumen, resembling grains of rice, sometimes found free or else attached in the sheaths of tendons, in synovial bursae, or in the articular cavities. **c. Pacchioni.** See *pacchionian bodies*, under *body*. **c. pinguia.** Round tough masses of mucus found in the discharges of dysentery. **c. quadrigemina.** Syn.: *four bulbs*. A small portion of the encephalon, derived from the mesencephalon of the embryo, which lies upon the caudex cerebri, behind the third ventricle. A shallow crucial sulcus divides the mass into four rounded eminences, the larger two of which are situated side by side anterior to and above the lower and smaller pair.

corpus (kor'pus). 1. The physical or material frame of man; the main portion of the frame. The trunk, as opposed to the limbs. 2. A compact organized collection of units. **c. adiposum.** Syn.: *median commissure*. A mass of fat or of fatlike material. **c. adventitium.** See *foreign body*, under *body*. **c. albicans.** The c. luteum of the ovary after it has lost its yellow color and most of its vessels and is composed largely of connective tissue. Its general appearance is that of a white cicatrix. **c. callosum.** The great commissure of the brain; a mass of white substance which connects the cerebral hemispheres. It is essentially commissural in its office, its fibers entering all three of the principal cerebral lobes. **c. cameratum.** The fornix cerebri. **c. cavernosum.** Any one of the corpora cavernosa, also any collection of cavernous tissue. See under *corpora*. **c. cinereum.** See *lamina cinerea*, under *lamina*. **c. cinereum medullae oblongatae.** The nuclei of gray matter of the medulla oblongata, now known as the nucleus gracilis and the nucleus cuneatus. **c. corporis callosi.** Syn.: *truncus* (see *pars media corporis callosi*). The body of the c. callosum as distinguished from its prolongations into the hemispheres. **c. dentatum.** 1. See *c. dentatum cerebelli*. 2. A dentate lamina of gray matter found in the olivary bodies. **c. dentatum cerebelli, c. denticulatum.** A thin convoluted or in-

dented lamina of gray matter situated in the center of the white substance of the cerebellum, surrounded by a thin layer of gray substance. **c. dentatum olivae.** A gelatinous, transparent plate of gray matter, containing small round and angular cells, and traversed by nerve fibers, found in the olivary body of the medulla oblongata. **c. epididymidis.** That portion of the epididymis between the tail and the head. **c. externum, c. extranum.** See *foreign body*, under *body*. **c. fimbriatum.** Syn.: *fimbriated body*. A long curvilinear triangle of white nervous substance found in the cornu descendens of the lateral ventricle. **c. fornicis.** The body of the fornix cerebri as distinguished from the pillars. **c. geniculatum cerebri.** See *external geniculate body* and *internal geniculate body*, under *body*. **c. glandulosum.** Of Vesalius, the prostate; of De Graaf, a c. luteum. **c. glandulosum mulierum.** The elevation which marks the meatus urinarius in the female. **c. globosum.** The pons Varolii. **c. habenulae.** A mass of cells situated in the optic thalamus, near the pineal gland. **c. Highmori, c. highmorianum.** The incomplete vertical septum formed by a prolongation of the albuginea testis into the substance of the testicle, which gives off fibrous cords dividing the organ into lobules. **c. hyalinum, c. hyaloideum.** See *c. vitreum*. **c. luteum.** The solid yellow body formed in the ovary during the retrograde metamorphosis of a graafian follicle after the extrusion of the ovum. It has been used in substance, or as an extract, or as *lutein*, expressed from the fresh bodies, for the relief of symptoms caused by artificial menopause following operation. **c. luteum falsum, c. luteum of menstruation.** A c. luteum formed in a graafian vesicle that has discharged an ovule which has not become fecundated. It shows retrogressive changes within a few days, shrinks, and at last disappears. **c. luteum of pregnancy.** A c. luteum formed in a graafian vesicle that has discharged an ovule which has become fecundated. It undergoes a development that lasts during most of the period of gestation. **c. mammae.** The glandular portion of the mamma. **c. mandibulae.** The portion of the inferior maxilla anterior to the rami. **c. nigricans, c. nigrum.** The c. luteum of the ovary when in the course of its retrograde metamorphosis it becomes pigmented by the blood contained in its vessels, which have been cut off from the surrounding circulation. It is a c. albicans containing dark pigment. **c. olivare.** See *olivary body*. **c. olivare posterius.** See *restiform body*. **c. optostriatum.** The optic thalamus and the c. striatum considered together as one body. **c. ossis hyoidel.** The body of the hyoid bone, its central piece. It is somewhat quadrilateral, convex on its anterior surface, and concave posteriorly. **c. pancreatis.** That portion of the

pancreas which is situated between its head and its pointed extremity. **c. penis.** That portion of the penis that is situated between the glands and the coalescence of the crura. **c. pyramidale.** See *pyramid* (3d def.). **c. restiforme.** See *restiform body*. **c. reticulare.** See *rete mucosum*, under *rete*. **c. rubrum.** The c. luteum of the ovary when in the course of its disappearance it becomes reddened by the blood contained in its vessels, which have been cut off from the circulation. It is a c. albicans containing red pigment. **c. spongiosum, c. spongiosum inferius penis, c. spongiosum urethrae.** A spongy structure similar to the corpora cavernosa penis. It is lodged in the groove beneath the junction of the corpora cavernosa. **c. striatum.** A large pyramidal projection on the floor of the lateral ventricle of the brain. **c. striatum externum.** Rolando's name for the nucleus lentiformis. **c. subthalamicum.** See *subthalamian nucleus*, under *nucleus*. **c. uteri.** The body of the uterus; that portion lying between the points of union of the fallopian tubes and the upper end of the cervical canal. **c. ventriculi.** The middle portion of the stomach, between the antrum pylori and the fundus. **c. vesicae.** That portion of the urinary bladder which lies between the base and the fundus. **c. vitreum.** Syn.: *hyaloid body*, *vitreous body*. One of the transparent media, or so-called humors, of the eye lying between the lens, the suspensory ligament, and the retina. It is a flattened spheroid, with a depression in front, called the lenticular fossa. A canal runs through its center from the optic nerve to the lens, which contains the remains of the hyaline artery of the fetal life. **c. wolffianum.** See *mesonephros*. [B. N. A., *corpus*.] [Lat., *corpus*, body.]

corpuscle (kor'pus-sil). A general term for (a) a cell, e. g., a connective tissue c.; (b) some minute particle not equivalent to a cell, e. g., a milk c.; (c) a part composed of many cells or even complex structures, e. g., the malpighian or the tactile c's. **amylaceous c's, amyloid c's.** Syn.: *amylaceous bodies*. Small, round, or oval bodies, concentrically striated, found normally in the central nervous system and some other places. **areal c's.** See *extrusion globule*, under *globule*. **articular nerve c's.** A modification of the tactile c's in the synovial articulation of the human fingers. **assimilation c's.** C's or cells which have the power of converting food into such a state that it is ready for assimilation by the organism. **black c's.** See *osteoblast*. **blood c.** See *separate heading*. **bone c's.** 1. The lacunae of bone with their prolongations, the canaliculi. Used in this sense before the true protoplasmic bone cells occupying the lacunae had been demonstrated. 2. The branched nucleated cells situated in the lacunae of bone. **branched connective c's.** See *fixed connective tissue c's*.

Burckhardt's c's. C's found in trachoma secretion. **calcareous c's.** The lacunae of bone and their processes, the canaliculi, on the supposition that they were the principal seat of calcareous material. **cartilage c's.** See *cartilage cell*, under *cell*. **cement c's.** The bone c's in the cement of teeth. **cephalic c.** A c. formed near the nucleus of the spermatozoid and afterward forming its head. **chyle c's.** See *lymph c's*. **colostrum c's.** Syn.: *colostrum bodies*. Bodies found in colostrum which have ameboid movements and contain fat globules. **compound inflammatory c. of Gluge.** A pus cell that is enlarged and loaded with fat molecules. They are most plentiful in tissues rich in fatty matter, like the brain and the spinal cord. **concentric c. of Hassall.** A body (either simple or composed of an epithelioid envelope and a central mass of one or more granular cells) having the appearance of concentric striation, found in the medullary part of the thymus. **connective tissue c's.** Syn.: *connective tissue cells*. The protoplasmic bodies or cells found in the various kinds of connective tissue. **corneal c's.** A variety of connective tissue c's found in the fibrous groundwork of the cornea. **c's of cornalia.** Syn.: *nosena bombycis*, *microsporidium bombycis*. Ovoid bodies found in the blood, tissues, eggs, etc., of the silkworm; considered to be the cause of the disease termed pebrine. **C's of Donné.** See *colostrum c's*. **C's of Eichhorst.** See *Eichhorst's c's*. **C. of Gluge.** See *compound inflammatory c.* **cytoid c.** See *leukocyte*. **directive c.** See *extrusion globule*, under *globule*. **dust c.** A phagocytic c. found in the lungs and in pulmonary exudates, which contains dust granules. **Eichhorst c's.** See *Eichhorst's c's*. **exudation c's.** The blood c's which pass through the walls of the blood vessels in inflammation. **fat c.** See *fat cell*, under *cell*. **fixed connective tissue c's.** Cells in the different forms of connective tissue, which are supposed to be stationary. **ganglion c., ganglionic c.** See *nerve cell* and *pyramid cell*, under *cell*. **gastric c.** The epithelial cells of the stomach. **genital c's.** See *end bud*, under separate heading. **glandiform c's.** The small lobules of conglomerate glands. **giant c.** See *giant cell*, under *cell*. **Gluge's c.** See *compound inflammatory c. of Gluge*. **Golgi's c.** See under *Golgi*. **granular c.** See *granular cell*, under *cell*. **inflammatory c's.** See *exudation c's*. **Krause's c's.** See under *Krause*. **lymph c's, lymphatic c's.** Syn.: *chyle cells*, *lymph cells*, *leukocytes*. The nucleated ameboid cells found in lymph and chyle. They enter the blood with the lymph and are then called white blood c's. **malpighian c's.** Syn.: *malpighian bodies*, or *glomeruli*. 1. The globular cecal dilatations forming the origin of the urinary tubules. 2. The glomeruli or malpighian tufts of blood

vessels contained in a Bowman's capsule. 3. The globular masses of lymphoid tissue developed in the adventitia of the arteries of the spleen. **medullary c's.** See *marrow cells*, under *cell*, and *odontoblast*. **Meissner's c's.** See *tactile c's*. **milk c's.** Globules of fat found in milk. **muscle c.** Syn.: *muscle nuclei*. Small nucleiform or celllike masses belonging to striated muscular fibers. In mammals they are situated on the surface of the muscular fibers, next to the sarcolemma, but in the lower vertebrates and in the invertebrates part of them are upon and part within the substance of the muscular fiber. They appear like nuclei and are sometimes surrounded by more or less granular protoplasm, which shades off gradually into the substance of the fiber. It is supposed to represent the cell body, which originally, with others, gave rise to the muscular substance, and presides over the nutrition and growth of the fibers. **nerve c.** See *nerve cell*, under *cell*. **neuroglia c.** See *neuroglia cell*, under *cell*. **osseous c.** See *bone c.* **pachionian c's.** See under *pachionian*. **pacinian c's.** See under *pacinian*. **pus c., pyoid c.** See *pus cell*, under *cell*. **red blood c's.** See under *blood corpuscle*. **salivary c.** Syn.: *salivary cell*. A body generally considered normal in saliva resembling a white blood corpuscle. **tactile c's.** Bodies found in the nerve papillae of the skin. They are elongated ellipsoids, consisting of a nucleated envelope and a striated central part or core, containing numerous celllike bodies and one or more medullated nerve fibers. The fibers commonly lose their myelin on entering the c., and, after dividing into several branches, which wind in and around the core, terminate in pyriform or globular enlargements. **taste c's.** See *taste buds*, under *bud*. **terminal c's.** A general term used for all the forms of special bodies or cells in which ordinary sensory medullated nerve fibers terminate. **thymus c's.** The lymphoid cells in the meshes of the adenoid tissue of the thymus. **touch c's.** See *tactile c's*. **Tröltsch's c's.** See under *Tröltsch*. **white blood c's.** See under *blood corpuscle*. [B. N. A., *corpusculum*.] [Lat., *corpusculum*, dim. of *corpus*, body.] **corpus'cular.** Pertaining to, or of the nature of, corpuscles. **correc'tion.** The correcting of abnormality, as of a muscular or refractive defect in the eye, the position of the fragments of a broken bone, etc. [Lat., *corrigerere*, to correct.] **Cor'igan's disease.** A morbid condition resulting from aortic insufficiency and characterized by a pulse visible in any of the large arteries. **C's pulse.** Syn.: *water-hammer pulse*. The pulse of aortic insufficiency or regurgitation. [D. J. Corrigan, Dublin physician, 1802-1880.] **corrigent** (kor'ri-jent). Correcting, modifying favorably; in therapeutics, so modifying a drug as to deprive it of severe or

unpleasant action; as a n., a substance having that effect. [Lat., *corrigenis*.]

corrob'orant. Strengthening, fortifying. See also *tonic*. [Lat., *corroborare*, to strengthen.]

corro'dent. See *corrosive*.

corrosion (kor-ro'shun). Destruction by chemical action. The destruction of animal tissues by a corrosive. In anatomy, the demonstration of important structures by the eating away of the non-essential parts, leaving only the important ones to be seen. [Old Fr., *corrosion*, a slow wearing away.]

corro'sive. Having the property of causing corrosion, acting upon organic or inorganic substances in such a manner as to destroy them to a greater or lesser depth. c. *sublimata*. See *mercury bichlorid*. [Lat., *corrodens*.]

corro'val, corro'wal. An arrow poison of South America.

corrugated (kor'ru-ga-ted). A term used in descriptive bacteriology to denote long folds or wrinkles.

corrugator (kor'u-ga-tor). That which wrinkles. See *table of muscles*, under *muscle*. [Lat., *corrugare*, to wrinkle.]

cortex (kor'tecks). Bark, or any investing structure, e. g., the rind of a fruit, the peridium of certain fungals. **cerebral c.** The external portion of the cerebral hemispheres, consisting of the so-called gray substance. c. **dentium**. The enamel of the teeth. c. **renis**. The outer layer of the kidney, containing the glomeruli. c. **striatus**. See c. *dentium*. [Lat., *cortex*, rind.]

cortical (kor'ti-kal). Belonging to or forming the superficial part, as of the brain, kidneys, teeth. [Lat., *corticalis*, adj. fr. *cortex*, bark.]

corticin (kor'te-sin). A variety of tannin found in woody barks.

Corti's fibers. The rods or pillars of Corti. [Matteo Corti, Italian anatomist, 1495-1564.]

corundum (ko-run'dum). A crystalline mineral of the same species as the ruby; very hard in texture, used for polishing steel. [Hindu, *korund*, ruby.]

corydalin (ko-rid'al-in). An alkaloid, $C_{18}H_{12}HO_4$, obtained from *Corydalis formosa* and *Corydalis tuberosa*. It is supposed to be tonic and diuretic.

Corydalis (ko-rid'al-is). 1. The genus *Cystocapsus* of Boerhaave. 2. A genus of the *Fumariaceae*. c. **formosa**. Turkey corn, turkey pea; indigenous to the middle and western United States. The root contains *corydalin* and is supposed to be tonic and diuretic. [Gr., *korydalis*, the crested lark.]

coryfin (kor'if-in). Menthyl ethylglycolate, $CH_2(O.C_2H_5).COO(C_{10}H_{19})$. When applied to the skin menthol is said to be liberated, hence its local application in headache.

corylinus (kor-il-e'nus). Of, or pertaining to, an oak.

coryza (ko-ri'zah). Catarrh of the nasal passage. Cold in the head. c. **syphilitica**. A chronic catarrhal inflammation of

the nasal mucous membrane, due to syphilis. It is usually observed in infants suffering with inherited syphilis, and is commonly known as "snuffles." [Gr., *koryza*.]

cosaprin (kos'ap-rin). An acetyl compound of sodium sulphanilate; an antipyretic.

cosmesis (kos-me'sis). That department of medicine of which the province is to preserve or improve natural beauty. [Gr., *kosmesis*, from *kosmein*, to adorn.]

cosmet'ic. Restoring or enhancing the beauty of the person (said of medicinal preparations and of surgical operations); a powder, lotion, or the like, used for that purpose.

cos'molin. See *petrolatum*.

cos'sin. See *koussin*.

costa (kos'tah). 1. A rib; in botany, any vein of a leaf, especially the median vein or midrib. 2. The genus *Ticorea*. 3. The genus *Opopanax*. 4. *Hypochaeris radicata*. **costae abdominales, costae asternales**. See *false ribs*. c. **capitis fixa**. The palate bone regarded as the pleuropophysis of the nasal vertebra. **costae fluctuantes**. See *floating ribs*. **costae spuriae**. See *false ribs*. **costae sternales**. See *true ribs*. [Lat., *costa*, rib.]

cos'tal. Pertaining to a rib, also to a costa in any of its meanings.

costalgia (kos-tal'je-ah). Intercostal neuralgia. [Lat., *costa*, rib, + Gr., *algos*, pain.]

cos'tate. Ribbed; furnished with ribs.

cos'tiform. Rib-shaped. [Lat., *costa*, rib, + *forma*, form.]

costiveness (kos'tiv-nes). Constipation (restricted by some writers to a moderate degree of constipation, the dejections being natural in frequency but deficient in quantity and the act of defecation labored).

costo-. Combining form of *costa*, a rib.

cos'tocor'acid. Pertaining to the ribs and to the coracoid process of the scapula.

cos'toster'nal. Pertaining to a rib or the ribs and to the sternum.

costotome (kos'to-töm). A heavy bone-shears for dividing the ribs in autopsies. [Lat., *costa*, rib, + Gr., *temnein*, to cut.]

cot. 1. A narrow bed. 2. The finger of a glove. [Ang.-Sax., *cote*.]

cotar'nin. A monobasic alkaloid, $C_{12}H_{18}NO_3$, formed by the oxidation of narcotin.

c. hydrochlorid. A compound of cotarnin and hydrochloric acid, $C_{12}H_{18}NO_3 \cdot ClH + 2H_2O$, forming long, silky crystals known as *stypticin*, used as a hemostatic, an analgesic, and a uterine sedative. c. **phthalate** ($C_{12}H_{18}O_3N_2$) $C_6H_4(COOH)_2$. Known as *styptol*; its action resembles that of c. hydrochlorid, the mechanism of the action in both cases being obscure. [A word formed by metathesis from *narcotin*.]

co'to bark. A bark obtained from the interior of Bolivia, believed at first to be from a *Cinchona*, though its origin is now in dispute. Its active principle is *cotoin*.

co'toin. A crystalline substance, $C_{22}H_{18}O_8$,

found in coto bark. It has been used in diarrhea, and is said to lessen the excretion of indican. See also *paracotoin*, *oxycotoin*, *leukocotoin*, and *hydrocotoin*.

cotone'tin. Of O. Hesse, dicotoin.
cot'ton. Syn.: *gossypium*. The hairs of the seed of *Gossypium herbaceum* and other species of *Gossypium*, deprived of impurities. **absorbent c.** C. from which oil and other impurities have been removed; made by boiling carded c. with a solution of soda or caustic potash, washing thoroughly, expressing, boiling again in a solution of alkali, washing well, and drying quickly. Absorbent c. may be medicated by immersing it in an alcoholic solution of the agent and allowing the alcohol to evaporate [Br. Ph., *gossypium*; U. S. Ph., *gossypium purificatum*]. **c. lint.** Lint made of c., instead of linen. **c. root bark.** The bark of the root of *Gossypium herbaceum*. It contains a peculiar acid resin, soluble, when pure, in water, and believed to be the active principle of the bark [U. S. Ph., *gossypii cortex*]. **gun c.** See *pyroxylin*. **hemostatic c.** Absorbent c. impregnated with Monse's solution, or with a mixture of ferric chlorid and alum, or with a solution of iron sesquichlorid, applied in the same manner as lint, covered with a compress. **iodized c.** C. impregnated with iodine. **iodoform c.** A preparation made by impregnating cotton with an iodoform. **salicylated c., salicylic c.** A preparation made by impregnating absorbent c. with salicylic acid. **soluble gun c.** See *pyroxylin*. **sublimated c.** Absorbent c. impregnated with a solution of mercuric chlorid in alcohol, distilled water and glycerin. [Arab., *cotin*.]

cot'ton seed. The seed of different species of *Gossypium*. **c. s. oil.** Lat., *oleum gossypii seminis* [U. S. Ph.]. The fixed oil expressed from the seeds of *Gossypium herbaceum*. Medicinally, the purified oil is used chiefly in making certain liniments; a substitute for olive oil.

Cot'ula. 1. A genus of composites of the *Anthemideae*. 2. In the U. S. Ph., 1870, *Anthemis (Maruta) c.*

coty'ledon (kot-il'e'don). One of the seed lobes in the embryo of a flowering plant; one of the primary leaves developed by the embryo. **c's of the decidua.** The cupped, baglike elevations of the uterine surface of the decidua. [Gr., *kotyledon*.]

coty'ledonous (kot-il-ed'on-us). Provided with cotyledons.

cotyloid (kot'e-loyd). Cuplike; pertaining to the acetabulum. [Gr., *kotyle*, cup, + *eidōs*, resemblance.]

cot'ylopu'bic. Relating to, or connected with, the os pubis and the acetabulum.

cot'ylosa'cral. Relating to, or connected with, the sacrum and the acetabulum.

couch-grass. See *Triticum*.

couching (kowch'ing). The removal of the opaque lens of the eye out of the range of vision by means of a needle, in cataract.

cough (kawf). A violent expulsion of

air from the lungs, either voluntary, for the purpose of expelling some substance from the air passages, or involuntary, as the result of a sensation of irritation in the air passages. **barking c.** A c. resembling in sound the barking of a dog. **brassy c.** The harsh metallic c. accompanying aneurism and due to pressure on the bronchi. **bronchial c.** A c. due to bronchial irritation. **chin c.** See *pertussis*. **croupy c.** The hoarse resounding c. that attends croup and other affections in which the opening of the larynx is narrowed. **dry c.** C. without expectation. **hacking c.** A dry c. in which the individual efforts recur frequently and are feeble. **laryngeal c.** C. due to direct or reflex laryngeal irritation. **nervous c.** A c. that is symptomatic of a neurosis, e. g., whooping-c., or dependent on reflex nervous irritation. **spasmodic c.** C. that occurs in paroxysms, e. g., whooping-c. **whooping-c.** See *pertussis*. **winter c.** A c. that comes on every winter and subsides with the advent of warm weather, usually due to chronic bronchitis.

coulomb (koo'lom). The unit of electrical quantity; the quantity of electricity produced by an electromotive force of 1 volt acting for 1 second against 1 ohm of resistance—i. e., the quantity of electricity developed by a current of 1 ampere. In static electricity, the same unit measured by the charge developed in a Leyden jar of the capacity of 1 farad by 1 volt of electromotive force. **C's law.** 1. The l. governing electric attractions and repulsions. It declares that electrified particles attract or repel each other with a force directly proportionate to the quantity of electricity acting, and inversely proportional to the square of the distance between the particles. 2. A l. that the force of torsion is proportional to the angle of torsion. **c. meter.** A galvanometer for the measurement of electrical quantity. [C. A. de Coulomb, French physician, 1736-1806.]

coumarin (ku'mar-in). The anhydrid, C₆H₆O₂, of coumaric acid. It has an odor somewhat resembling that of vanilla.

counter-. Combining form of Lat., *contra*, against, in return; used in this sense in compound words.

counteraction (kown-ter-ak'shun). Action (as of a drug) that opposes the action of another. [Lat., *contra*, against, + *agere*, to act.]

coun'terexten'sion. Traction in a proximal direction while traction is being exerted in a distal direction. [Lat., *contra*, against, + *extendere*, to extend.]

counterir'ritant. Producing counterirritation.

counterirritation (kown'ter-ir-rit-a'shun). Irritation of the surface of the body for the purpose of diminishing morbid action in an internal organ that corresponds to the surface in its vasomotor nerve supply.

coun'terop'ening. An opening made

into an abscess or other pathological collection of liquid, in addition to the original opening, and usually remote from it, for the purpose of facilitating the prompt and thorough escape of the liquid.

counterpoison. See *antidote*.

counterpressure. Pressure against pressure from the opposite direction.

counterstain. See *contrast stain*, under *contrast*.

counterstroke. See *contre-coup*.

couple (kup'l). A pair; especially, in physics, the pair of elements of a galvanic cell. **c. rhythm.** See under *rhythm*.

thermo-electric c. A c. in which the application of heat gives rise to an electrical current. In certain forms of thermo-electric c. the direction of the current varies with the temperature. **voltaic c.** A c. consisting of the two elements of a galvanic battery or of two contiguous disks of a voltaic pile.

court plaster. Isinglass plaster of the U. S. Ph., 1890.

Courvoisier's law. The l. that when the common bile duct is obstructed by a calculus, dilatation of the gall-bladder is rare; when it is otherwise obstructed, such dilatation is common.

couso (kus'so). See *Brayera* (2d def.).

cover-slip. A square of thin glass used for mounting bacteriological and pathological specimens.

cowage, cowhage, cowitch (kow-äje, kow'itch). The hairs of the pods of *Mucuna pruriens* and *Mucuna urens*.

Cowania (kow-ah'ne-ah). A genus of astringent rosaceous shrubs. **C. stansburyana.** A variety found in the neighborhood of Salt Lake; much used as a styptic.

Cowling's rule. See under *dosage*.

cowperitis (kow-per-i'tis). Inflammation of Cowper's glands.

Cowper's cyst. A c. formed in the vulvo-vaginal gland or its duct. **C's glands.** See *Méry's glands*, under *Méry*. [*William Cowper*, Eng. surgeon, 1666-1709.]

cow'pox. A specific contagious disease of bovine animals (chiefly milch cows), communicable to man and to various animals by inoculation; characterized by lesions resembling those of smallpox, usually on the udder in cows. The liquid contents of the pocks (lymph, vaccine) are used in the practice of vaccination. See *vaccinia*.

coxa (kocks'ah). The hip, the hip-joint. **coxae ranarum.** The edible portion of the frog; the upper part of the hind legs of *Rana temporaria* and *Rana esculenta*. [Lat., *coxa*, haunch.]

coxalgia (kocks-al'je-ah). 1. Pain in the region of the hip, especially sciatica. 2. Tuberculous hip disease. [Lat., *coxa*, the hip, + Gr., *algos*, pain.]

cox'a val'ga. A deformity of the neck of the femur in which the angle formed between the axis of the neck of the femur and the axis of the shaft is more than 130°. [Lat., *coxa*, hip, + *valga*, bent outwards.]

cox'a va'ra. A deformity of the neck of the femur in which the angle formed be-

tween the axis of the neck of the femur and the axis of the shaft is less than 130°. [Lat., *coxa*, hip, + *vara*, bent inward.]

coxi'tis. Inflammation of the hip joint. Its varieties are: **c. gonorrhoeica, c. osteo-arthritis, c. senilis, c. suppurativa, c. tuberculosa.** [Lat., *coxa*, hip, + Gr., *itis*, inflammation.]

cox''ofem'oral. Pertaining to the ilium and the femur.

Cox's gelatin. A commercial variety similar to Cooper's g.

C. P. The abbreviation for chemically pure.

Cr. Chemical symbol for the element *cromium*.

crab-louse. The *Pediculus pubis*.

cracked-pot (krakt-pot). A sound heard on percussion over a lung cavity.

Crame'ria. See *Krameria*.

cramp. 1. A spasmodic and painful contraction of a muscle or muscles. 2. A sudden sharp pain, especially applied to gas in the bowels. **c. bark.** The bark of *Viburnum opulus*. **c. bone.** The patella of a sheep; so called because formerly employed as a charm for c.

c. of the jaw. A spasmodic contraction of the anterior belly of the digastric muscle, coming on generally after gaping and preventing the closure of the jaw. **writer's c.** Syn.: *scrivener's palsy*. An affection observed among writers; characterized by pain or difficulty in writing. Writer's c. is the most common example of the c's developed by persons in trades or professions, which require the continuous use of one set of muscles. The other varieties most commonly met with are: **blacksmith's c., cigarttemaker's c., cigarmaker's c., dancer's c., milker's c., musician's c., pianist's c., sawyer's c., swimmer's c., tailor's c., telegrapher's c., watchmaker's c.**

cranial (kra'ne-al). Pertaining to the cranium.

craniectomy (kra-ne-ek'to-me). The operation of removing a part of the cranium. [Gr., *kranion*, skull, + *ektome*, excision.]

cranio- Combining form of Gr., *kranion*, cranium.

craniocèle (kra'ne-o-sël). See *encephalocèle*. [Gr., *kranion*, skull, + *kele*, tumor.]

craniodidymus (kra'ne-o-did'e-mus). 1. See *cephalopagus*. 2. A two-headed monster. [Gr., *kranion*, the skull, + *didymos*, twin.]

cra''niofa'cial. Pertaining to the cranium and to the face.

craniology (kra-ne-ol'o-je). See *cephalology*. [Lat., *craniologia*, from Gr., *kranion*, skull, + *logos*, understanding.]

craniomalacia (kra'ne-o-mal'a-se-ah).

See *craniotabes*.

craniometer (kra-ne-om'et-er). See *cephalometer*. [Gr., *kranion*, skull, + *metron*, a measure.]

craniometry (kra-ne-om'et-re). The science of ascertaining the measurements of the skull. See *cephalometry*.

- craniopharyngeus.** Pertaining to the cranium and the pharynx.
- craniophore** (kra'ne-o-för). An apparatus for holding a skull in certain precise attitudes for the purpose of studying or figuring its conformation. [Gr., *kranion*, the skull, + *pherein*, to bear.]
- craniorachischisis** (kra'ne-o-rak-kis'kis-is). A congenital fissure of the skull and the spinal column exposing the brain and spinal cord. [Gr., *kranion*, skull, + *rachis*, spine, + *schizein*, to split.]
- cranioschisis** (kra-ne-os'kis-is). A congenital fissure of the skull, exposing the brain, a condition analogous to spina bifida. [Gr., *kranion*, skull, + *schisis*, fissure.]
- craniosclerosis** (kra'ne-o-skle-ro'sis). Syn.: *leontiasis ossea*. A rare disease characterized by hypertrophy and ivory-like induration of the bones of the skull and face, somewhat analogous to elephantiasis of the soft parts. [Gr., *kranion*, skull, + *skleroun*, to harden.]
- craniotomy** (kra-ne-ot'o-me). The cutting up of the fetal head to facilitate delivery. [Gr., *kranion*, the skull, + *temnein*, to cut.]
- cranium** (kra'ne-um). The skull; the bony part of the head, which protects the brain.
- cartilaginous c.** See *chondrocranium*.
- membranous c.** The embryonic c. while it is in a membranous condition, ossification not having taken place. [Gr., *kranion*, skull.]
- crapulent, crapulous.** Suffering from excess in eating or drinking. [Lat., *crapula*, excessive drinking, intoxication.]
- crasis** (kra'sis). Of the old writers, a certain constitution of the blood supposed to be peculiar to the individual; also a predisposing temperament. [Gr., from *keran*, to mix.]
- crassamen, crassamentum** (kras-sam'en, kras-sam-en'tum). The thick, clotted portion of coagulated liquid, especially blood. **c. sanguinis.** The thick portion or clot of coagulated blood. [Lat., *crassare*, to make thick.]
- cras'sus.** Of drugs, thick, not readily absorbed and conveyed into delicate parts. [Lat., *crassus*, thick.]
- crategin** (kra-te'jin). A crystallizable substance obtained from the bark of *Crategus oxyacantha*.
- crateriform** (kra-ter'e-form). A term employed in descriptive bacteriology to denote disk-shaped or depressed like a crater. [*Crater* + Lat., *forma*, shape.]
- craw-craw.** Parasitic skin diseases occurring among the natives of the western coast of Africa.
- cray'on.** A stick containing substances for external application. [Fr.]
- cream** (krēm). The fat of milk. The fat of human milk contains the glycerin ester of butyric, caproic, capric, palmitic, stearic, and oleic acids; it is relatively poor in fatty acids. [Lat., *cremor*.]
- creatin** (kre'at-in). A crystallizable substance found in muscle tissue. It is methyl-guanidine-acetic acid $\text{NH}_2\text{C}(\text{NH})\text{N}(\text{CH}_2)\text{CH}_2\text{COOH}$. [Gr., *kreas*, flesh.]
- creatinin** (kre-at'in-in). An anhydrid of creatin, found in urinary substances. Formula: $\text{C}_4\text{H}_7\text{N}_3\text{O}$. [Gr., *kreas*, flesh.]
- creatozoma, creazoma** (kre-ah-to-zo'mah, kre-ah-zo'mah). Meat broth. [Gr., *kreas*, flesh, + *zomas*, broth.]
- crèche** (kraysh). A public nursery for infants. [Fr.]
- Credé's method.** 1. Expression of the placenta by gently rubbing the abdomen over the fundus uteri until the placenta is loosened and then squeezing the fundus until it is expelled. 2. Putting a drop of a 2 per cent. solution of silver nitrate into each eye of a newborn child, to prevent ophthalmia neonatorum. **C's soluble silver.** See *collargol*. [Carl S. F. Credé, German obstetrician, 1819-1892.]
- cremaster** (kre-mas'ter). The suspensory muscle of the testicle. See *table of muscles*, under *muscle*. [Gr., *kriman*, to suspend.]
- cremasteric** (kre-mas-ter'ik). Pertaining to the cremaster muscle. See *table of muscles*.
- cremation** (kre-mā'shun). The reduction of corpses to ashes by burning. [Lat., *crematio*, noun of action from *cremare*, to burn.]
- crematory** (krem'at-or-e). An establishment or apparatus for the performance of cremation.
- cremon'eter.** An instrument for determining richness of milk by measuring percentage of its cream. [Fr., *crème*, cream, + Gr., *metron*, a measure.]
- cre'mor.** Cream, hence used of any creamy liquid. **c. lactis.** Cream of milk. **c. urinae.** A film or pellicle which occasionally forms on the surface of urine, especially after it has undergone alkaline fermentation.
- crena** (kre'nah). 1. A cleft, notch, or indentation. 2. A rounded and flattened toothlike projection. **c. clunium.** The cleft between the nates. **c. cordis.** See *sulcus longitudinalis*, under *sulcus*. [Lat., *crena*, notch.]
- crenate, crenated** (kre'nāt, kre'na-ted). In descriptive bacteriology, a term meaning edged with round teeth.
- crena''toden'tate.** Notched at the edge. [Lat., *crena*, notch, + *dens*, tooth.]
- crena''toser'rate.** Having convex serratures. [Lat., *crena*, notch, + *serra*, saw.]
- Crenothrix** (kren'o-thriks). A genus of *bacteria*, under the subdivision *Chlamydo-bacteriaceae*, which is surrounded by a delicate sheath, and consists of unbranched

threads. [Gr., *krene*, spring, + *thrix*, hair.]

cre'oform. A product of the interaction of creosote and formic aldehyd.

creolin (kre'o-lin). A solution of sodium salt of cresol; used as a disinfectant.

creo'sal. Syn.: *cannosal*. The tannic acid ester of creosote, used as an intestinal antiseptic.

creo'soform. An antiseptic consisting of creosote and formaldehyd.

creo'sol. An antiseptic principle, $C_6H_5-CH_2(OH)(O.CH_3)$, found in beechwood creosote.

creoso'tal. See *creosote carbonate*.

creosote (kre'o-söt). A substance obtained by the distillation of wood tar, consisting chiefly of a mixture of cresol, oxycresol, methylcresol, and phlorone. It is a highly refractive, oily liquid, having, when freshly prepared, a yellowish tinge which changes to red or brown on exposure to the light. It has a peculiar, sharp, empyreumatic odor and a burning taste, and produces a white stain on coming into contact with the skin. It has marked antiseptic properties. Used in carious teeth and in a variety of conditions.

beechwood c. See *creosotum*. **coal tar c.** That portion of the heavy oil of coal tar which distills between 165° and 200° C. It resembles c. in appearance, and is often substituted for it. It differs from c. in containing carbohc acid. It also contains cresol, xyleneol, and other substances of the aromatic group. **c. carbonate.** A mixture of carbonic acid esters, analogous to guaiacol carbonate, prepared from c. Its uses are the same as those of c. Known also as *creosotal*. **c. oil.** A high boiling liquid obtained from coal tar. [Lat., *creosotum*, from Gr., *kreas*, flesh, + *sozein*, to preserve.]

creosotum (kre-o-söt'um). See *creosote*. [U. S. Ph., Br. Ph.] **aqua creosoti.** Creosote water; a solution of 1 part of creosote in 100 parts of distilled water [U. S. Ph.]. **mistura creosoti.** Syn.: *mistura kreosoti*. Creosote mixture; consisting of creosote, syrup, spirit of juniper, and water. **unguentum creosoti.** Ointment of creosote; made by boiling creosote with hard and soft paraffin.

crepitation (krep-it-a'shun). 1. A fine crackling noise like that made by rubbing hair between the fingers, or by the burning of pine foliage, noted in the sound made by the air entering the alveoli of the lungs, when they are inflamed (crepitanr râles). 2. The noise and the sensation imparted by the grating together of the ends of fractured bones. [Lat., *crepitare*, to crackle.]

crepitus (krep'it-us). 1. The sound produced or the sensation felt by the examiner in the chest or in a joint in which there has been an inflammatory exudate. 2. The grating sound or sensation produced by rubbing the fragments of a broken bone together.

eres'alol. A cresol salicylate; used as an antiseptic.

eres'a'min. A germicide and antiseptic mixture of ethylene diamin and tricresol.

eres'aprol. A mixture of cresol in a solution of sodium creosylacetate.

eres'atin. Metacresol acetic acid ester. It is used as an analgesic and antiseptic for the ear, nose and throat.

erescent (kres'ent). Shaped like the moon in its first quarter. **malarial c.** A crescent-shaped form of the malarial parasite found in the blood in estivo-autumnal malaria. [Lat., *creescere*, to grow.]

eres'ol. A substitution compound, $C_6H_4(OH)(CH_3)$, of benzin. It has three isomeric varieties: *orthocresol*; *metacresol*; *paracresol*. C. is a very active antiseptic and disinfectant, but it has the disadvantage of being insoluble in water, hence it is used in combination with soap [U. S. Ph.]. See *liquor cresolis compositus*. **liquor cresolis compositus.** A mixture consisting of 50 per cent. of c. with a potash soap and a little water. It is miscible with water. Antiseptic and disinfectant [U. S. Ph.].

eresolin (kres'o-lin). A solution of the cresols in soap; used as a disinfectant.

crest. A ridgelike structure. **canine c.** An elevation upon the maxilla over the situation at the root of the canine tooth. **c. of the ilium.** The thickened upper border of the ilium. **c. of the pubes, c. of the pubic bone.** A rough ridge upon the upper border of the pubic bone. **c. of the sacrum.** A longitudinal c., situated in the median line, on the posterior surface of the sacrum, consisting of a series of eminences representing the spinous processes of the vertebrae. **c. of the tibia.** The sharp anterior border of the tibia. **dental c.** See *gingival c.* **ethmoidal c.** 1. A transverse ridge upon the inner surface of the nasal process of the superior maxilla against which the anterior portion of the lateral mass of the ethmoid bone fits. 2. See *superior turbinate c.* **external occipital c.** A ridge which extends in the middle line between the posterior margin of the foramen magnum and the external occipital protuberance of the occipital bone. **frontal c.** A ridge upon the cerebral surface of the frontal bone which extends between the foramen cecum and the anterior end of the groove of the longitudinal sinus. **gingival c.** A whitish gray, hard, sharp projection formed by the gingival mucous membrane of the edentulous fetus along the line subsequently to be occupied by the teeth; composed of vascular fibrous tissue. **iliac c.** See *c. of the ilium*. **inferior turbinate c.** A horizontal ridge of the nasal surface of the maxilla for articulation with the inferior turbinal bone. **infratemporal c.** A ridge on the external surface of the greater wing of the sphenoid bone. **internal occipital c.** A ridge on the internal surface of the occipital bone, extending between the posterior margin of the foramen magnum and the internal occipital protuber-

ance. **lacrima** c's. 1. The inner sharp edge of the lacrimal groove of the maxilla. 2. The vertical ridge upon the outer surface of the lacrimal bone which divides it into two unequal parts. **nasal c.** 1. A c. on the palatal process of the maxilla, which receives the lower border of the vomer. 2. The vertical prolongation backward of the internal surface of the nasal bone which forms a portion of the nasal septum. **neural c.** In the embryo, a series of cellular swellings continuous with the medullary plates close to the place of inflection of the epiblast into the involution that forms the primary brain and spinal cord. The posterior roots of the spinal nerves and most of the cranial nerves are formed from them. **orbital c.** The lower rounded margin of the orbital surface of the sphenoid bone. **sphenoidal c.** A thin projecting edge of bone in the middle line of the anterior surface of the body of the sphenoid bone. **superior turbinate c.** A ridge upon the internal surface of the vertical plate of the palate bone which articulates with the middle turbinate bone. **temporal c.** Syn.: *linea frontalis*. A c. on the frontal bone which springs from the external angular process and passes backward to be continuous with the temporal line of the parietal bone, and separates the temporal and frontal portions of the bone. **turbinate c.** See *inferior turbinate c.* and *superior turbinate c.* **zygomatic c.** The anterior edge of the ala magna of the sphenoid bone, which articulates with the malar bone and separates the orbital and temporal surfaces. [B. N. A., *crista*.] [Lat., *crista*, tuft, plume.]

cresylate (kres'il-ät). A compound of cresolate with a metallic radicle. The c's are homologous with the phenolates.

cre'ta. Chalk. **c. cimolia**. Fullers' earth. **c. fullonica**. Fullers' earth. **c. levigata**. See *c. preparata*. **c. precipitata**. Precipitated chalk; calcium carbonate obtained by precipitation. **c. preparata**. Prepared chalk; chalk freed from its gross impurities by elutriation [U. S. Ph., Br. Ph.]. **mistura cretae**, **mistura cretae**. Chalk mixture; made, according to the U. S. Ph., by rubbing compound chalk powder with water and cinnamon water. The British preparation differs but slightly from that of the U. S. Ph. This mixture is much employed in diarrhea with acidity [U. S. Ph., Br. Ph.]. **pulvis cretae aromaticus**. Aromatic powder of chalk, consisting of powdered cinnamon bark, nutmeg, cloves, cardamom seeds, sugar, and prepared chalk intimately mixed and reduced to a fine powder [Br. Ph.]. **pulvis cretae aromaticus cum opii**. Aromatic powder of chalk and opium, consisting of pulvis cretae aromaticus and opium; used in diarrhea [Br. Ph.]. **pulvis cretae compositus**. Compound powder of chalk, made by mixing prepared chalk, acacia, in fine powder, and powdered sugar [U. S. Ph.]. [Gr., *ge kretike*, Cretan earth, from the

island of Crete, whence the ancients derived their chief supply.]

cretaceous (kre-ta'shus). 1. Chalky white. 2. Resembling, containing, or made from chalk. [Lat., *cretaceus*.]

cretifac'tion, **cretification**. See *calcification*.

cretin (kre'tin). A person affected with cretinism. [Fr., *crétin*.]

cretinism (kre'tin-izm). A condition of deformity with dwarfed figure, open mouth, and an expressionless idiotic face. The disease is endemic in the Pyrenees, the Alps, and the Himalayas. It is due to loss of function of the thyroid gland.

sporadic c. A cretinoid condition observed in a person born of parents who are not cretins, and who has not lived in a district where c. prevails. [Lat., *cretinismus*.]

cretinoid (kre'tin-oyd). Resembling a cretin.

cribethmoid (krib-eth'moyd). The cribriform plate of the ethmoid bone.

cribra'tion. The act of sifting. [Lat., *cribrare*, to sift.]

cribrato'rium. A sieve.

crib'riform. Sievelike. **c. plate**. See under *plate*. [Lat., *cribrum*, sieve, + *forma*, form.]

crico-. Combining form of Gr., *krikos*, ring; used in anatomy in the sense pertaining to or connected with the cricoid cartilage.

cricoaryt'naoideus (kri'ko-ar-et-e-noid'-e-us). See *table of muscles*, under *muscle*.

cricoid, **cricoidcan** (kri'koyd, kri-koyd'-e-an). Ring-shaped. **c. cartilage**. See under *cartilage*. [Gr., *krikos*, ring, + *eidos*, resemblance.]

cricopharyngeus (kri-ko-fa-rin'je-us). See *table of muscles*, under *muscle*.

cricothyroideus (kri-ko-thy-re-oid'-e-us). See *table of muscles*, under *muscle*.

cri'cothy'roid, **cri'cothyroid'can**. Pertaining to the cricoid and the thyroid cartilages.

criminology (krim-in-ol'o-je). The scientific study of criminals as connected with anthropology and psychology. [Lat., *crimen*, crime, + Gr., *logos*, understanding.]

cri'nis. Hair, particularly the hair of the head.

crisis (kri'sis). 1. Any decisive occurrence in the course of a disease or of physiological life, such as the supposed turning point of a fever, the advent of puberty, or of the menopause, etc., whether of salutary or of unfavorable import. 2. A paroxysm, usually accompanied with pain, of a certain set of symptoms in the course of a chronic disease, particularly of the nervous system. In this sense the word has been used chiefly by the French writers. **cardiac c.** A c. (2d def.) manifested by cardiac distress or disordered action of the heart. **Dietl's c.** See *nephritic c.* **hepatic c.** A paroxysm of hepatic colic. **nephritic c.** A paroxysm of pain, having the character of an attack of renal colic, occurring (rarely) in *tabes dorsalis* and also in

other conditions, as movable kidney.

tabetic c. In the course of *tabes dorsalis* there are apt to be attacks of sudden severe spasmodic pain, localized in different organs of the body, namely: *enteralgic c.*, spasmodic pain in the lower part of the abdomen, of a peculiarly sudden and violent nature; *gastric c.*, a paroxysm of very severe gastric pain, occurring especially as one of the symptoms of the pre-ataxic stage of *tabes dorsalis*; *laryngeal c.*, a sudden paroxysm of laryngeal spasm, or of other laryngeal symptoms in the pre-ataxic stage of *tabes dorsalis*; *pharyngeal c.*, spasms of swallowing; *rectal c.*, a paroxysm of rectal pain; *urethral c.*, a paroxysm of pain along the course of the urethra or in the *meatus urinarius*; *visceral c.*, violent spasmodic pain, referable to the region of some viscus. [Gr., *krisis*.]

crispation (kris-pa'shun). A very feeble involuntary muscular quivering. [Lat., *crispare*, to throw into tremulous motion.]

crista (kris'tah). See *crest. c. acustica*. An elevation on the inner side of the ampulla of each semicircular canal of the ear, covered with ciliated auditory cells connected with the auditory nerve. **c. capituli**. A horizontal ridge on the head of a rib, which divides its articular surface into two portions, one for one vertebra, and the other for another. **cristae clitoridis**. The bony ridges to which the crura of the clitoris are attached. **c. galli**. A thick process on the vertical plate of the ethmoid bone, which projects upward in the median line into the anterior fossa of the skull. **c. helicis**. The region of the cartilage of the auricle, above the orifice of the external auditory canal, where the helix begins. **c. lili**. See *crest of the ilium*, under *crest. c. iliopectinea*. See *iliopectineal line*, under *line. c. infratemporalis*. See *infratemporal crest*, under *crest. c. mandibulae*. A ridge in the groove on the anterior aspect of the coronoid process of the inferior maxilla. **c. mastoidea**. An elevation upon the mastoid portion of the temporal bone, between the digastric fossa and the furrow for the occipital artery. **c. ossis pubis**. See *crest of the pubic bone*, under *crest. cristae penis*. Rough ridges upon the outer surface of the descending rami of the os pubis, to which the crura of the penis are attached. **c. petrosa**. A ridge on the petrous portion of the temporal bone. **c. sphenoidal**. See *sphenoidal crest*, under *crest. c. spiralis*. See *lamina spiralis. c. stapedis*. A small ridge upon the inferior surface of the stapes, running in its longest diameter, and dividing it into two nearly equal parts. **c. vestibuli**. A nearly vertical bony ridge on the inferior and median walls of the vestibule of the ear. [Lat.]

crith. The unit of weight for gases. It is the weight, *in vacuo*, of 1 liter of hydrogen at 0° C. and with a tension of 76 centimeters (the normal height of

the barometer). It equals .0896 grams. [Gr., *krithe*, barley, a barleycorn.]

Crith'mum mari'num, C. mariti'mum.

The samphire, growing along the coasts of the Mediterranean, the Black Sea, and the Atlantic Ocean. Aromatic and diuretic, and formerly used for diseases of the kidneys and verminous affections.

critical (kri'tik-al). Of, or pertaining to, a crisis, or to a time at which a crisis occurs or is to be expected.

cro'ceous. Saffron-colored. In pharmacy, containing saffron.

cro'cetin. A red powder, $C_{34}H_{46}O_9$, obtained by the decomposition of crocin by lime or baryta water.

cro'cin. The coloring matter obtained from *Crocus sativus*, *Gardenia grandifolia*, and *Fabiana imbricata*.

crocoxanthin (kro-ko-zan'thin). A yellow coloring matter occurring in the flowers of *Crocus luteus*. [Gr., *krokos*, crocus, + *xanthos*, yellow.]

Crocus (kro'kus). 1. A genus of the *Iridaceae*. 2. Of the U. S. Ph., 1890, saffron or the stigmata of *C. sativus*. 3. Any metal calcined to a red or deep yellow color. **C. officinalis, C. sativus**. A species of *C.* (1st def.) supposed to be indigenous to Greece and Asia Minor, where it has long been in cultivation. The stigmata, the saffron of commerce, were formerly considered highly stimulant and antispasmodic, but in Great Britain and the United States they are used only as a coloring agent. See *saffron*. [Gr., *krokos*.]

Crookes' tube. A glass tube with two electrodes between which an electrical discharge takes place in what is practically a vacuum. The source of the x-rays. [Sir William Crookes, English physicist and chemist, born 1832.]

cross-birth. Parturition with the fetus presenting by any other part than one pole, especially by the shoulder or the trunk.

cross-pin teeth. Artificial teeth in which the pins are arranged horizontally. In contradistinction to straight-pin teeth.

Crotalaria (kro-tal-a're-ah). The rattle pod; a genus of leguminous herbs or shrubs. [Gr., *krotalon*, a rattle, from the rattling of the loose seeds in the horny pod.]

crotalin (krot'al-in). The venom of the rattlesnake.

Crotalus (kro'tal-us). A genus of rattlesnakes of the family *Viperidae*. [Gr., *krotalon*, rattle.]

crotchet (krot'shet). A hook used in delivering the fetus after craniotomy.

cro'tin. A vegetable toxin obtained from the seeds of *Croton tiglium*.

Croton (kro'ton). 1. A genus of euphorbiaceous plants. 2. *Ricinus communis*. **C. cascarilla**. A species found in the West Indies. Though formerly a source of the cascarilla of commerce, it yields none now. Its bark is an aromatic bitter. **C. cleuteria**. 1. *C. Sloanei*. 2. *Chytia eleuteria*, which furnishes the true cascarilla bark (cortex cascarillae) of com-

merce; a small tree indigenous to the West Indies, chiefly the Bahamas. See *cascarilla*. **c. oil**. A pale or yellowish brown viscid fixed oil expressed from the seeds of *C. tiglium*, of faint odor and hot and acrid taste. It contains croton oleic oil. It is a drastic purgative and is chiefly used in coma and in chronic constipation. Applied externally it acts as an irritant, causing a pustular eruption [U. S. Ph., *oleum tiglii*; Br. Ph., *oleum crotonis*]. List of poisons and their antidotes, see in *appendix*, page 938. **C. tiglium**. The c. plant, and the source of c. seeds, from which c. oil is expressed. **linimentum crotonis**. A liniment composed of c. oil, oil of cajuput, and rectified spirit [Br. Ph.]. **oleum crotonis**. See *c. oil* [Br. Ph.]. [Gr., *kroton*, shrub.]

croton'ic. Belonging to, or resembling, the genus *Croton*; also derived from a plant of that genus. **c. acid**. See under *acid*.

cro'tonol. According to Schlippe, the vesicating principle of croton oil, $C_6H_{14}O_2$.

croup (kroop). A popular term for any acute laryngeal affection, with or without exudate, accompanied by obstructed breathing or by a hoarse ringing cough, or applied to catarrh of the larynx with edema or spasm. It was formerly applied as a specific disease to diphtheria of the larynx, although the difference between the exudate of croup, which was supposed to be superficial, and that of diphtheria, which involved the deeper layers, showed them to be stages in the same diphtheritic process. The term has gone out of use, except in its popular sense. **membranous c.** See *diphtheria*.

croupous (kroo'pus). Characterized by superficial fibrinous exudation like that of croup. Pertaining to, or resembling, croup.

crow'n. 1. See *corona*. 2. The top of the head, especially the vertex. **ciliary c.** The ciliary zone. **c. of a tooth**. That part of a tooth which projects above the gum. **c. of the glans**. See *corona glandis*. [B. N. A., *vertex*.] [Lat., *corona*, crown.]

crucial (kru'shal). Of the form of the cross. **c. ligaments**. Two ligaments at the knee joint that cross each other in the form of the letter X. [Lat., *crucialis*, from *crux*, *crucis*, cross.]

crucible (kru'si-bl). A metallic or earthen vessel used for fusing or incinerating.

cruor (kru'or). A blood clot containing red cells. [Lat.]

crura (kru'rah). Pl. of *crus*. **c. bifurcata**. Two ridges on the inner surface of the external ear, meeting at the anthelix. **c. cerebelli**. See *superior, middle, and inferior peduncles*, under *peduncle*. **c. cerebri**. Two thick bundles of white substance, extending from the upper border of the pons Varolii and diverging to enter the cerebral hemispheres. Between them is situated the posterior perforated space. **c. clitoridis**. The deep-seated roots of the clitoris, attached, one on each side, to the ascending

rami of the ischia and the descending rami of the ossa pubis. They unite anteriorly to form the body of the organ. **c. of the diaphragm**. See *pillars of the diaphragm*, under *pillar*. **c. of the fornix**. See *pillars of the fornix*, under *pillar*. **c. penis**. Two backward prolongations of the corpora cavernosa penis. **c. posteriora**. The posterior pillars of the fornix cerebri. **c. pyramidis**. The lateral parts of the pyramid of the cerebellum.

crural (kru'ral). Pertaining to the lower limb. [Lat., *cruralis*, from *crus*, leg.]

crureus (kru-re'us). See *table of muscles*, under *muscle*.

cru'rin. Rhodanate of bismuth and quinine; an antiseptic.

crus (krus). Pl. *crura*. 1. The lower limb.

2. That part of the lower limb that extends from the knee to the ankle. 3. Any leglike structure. **anterior c. of the stapes**. The anterior and straighter of the two processes which connect the neck of the stapes with the base. **c. ampullare**. The enlarged or ampullary extremity of each semicircular canal of the internal ear, in contradistinction to c. simplex. **c. canalis semicircularis simplex**. The straight, unexpanded extremity of each semicircular canal. **c. cerebri**. See *crura cerebri*, under *crura*. **c. glandis**. The inferior fold of the nymphae, which passes beneath the clitoris, becomes attached to the glans, and forms the frenum. **c. nymphae externum**. The uppermost part of the two branches into which each of the labia minora divides. It unites with its fellow of the opposite side in the prepuce of the clitoris. **c. nymphae internum**. The lower of the two branches into which each of the labia minora divides. It unites with its fellow of the opposite side to form the frenum of the clitoris. **posterior c. of the stapes**. The posterior and most curved of the two processes of the stapes which unite the neck with the base. [B. N. A., *crus*.] [Lat., *crus*, leg, limb.]

crush'er. See *écraseur* and *lithotrite*.

crust. A dried mass of blood, pus, fibrin, or other exudate on the surface of a wound. A layer on the surface of the clot. [Lat., *crusta*.]

crusta petrosa. An old name for *cementum*.

crutch. A staff for a lame or infirm person to lean upon in walking, long enough to reach from the axilla to the ground and fitted with a cross-piece at the top. [Mid. high Ger., *Kruche*, *Krucke*, and Ger., *Krücke*, a forked stick.]

Cruveilhier's atrophy, disease. See *progressive muscular atrophy*.

cry. 1. The characteristic sound produced in weeping. 2. Any vocal sound other than that of articulate speech or of laughing, sighing, etc., especially a sudden, shrieklike sound. **epileptic c.** A sharp, sudden cry, uttered by epileptics at the beginning of an attack of epilepsy. **hydrocephalic c.** A single violent cry,

heard in cerebral diseases of children especially, such as tuberculous meningitis and acute hydrocephalus.

crymoses (kri-mo'ses). Diseases attributed to the action of cold. [Gr., *krymos*, icy cold.]

cryotherapy (kri'mo-ther'ap-e). The therapeutical use of intense cold. [Gr., *krymos*, icy cold, + *therapeia*, therapeutics.]

cry'ofin. See *kryofin*.

cryogenous (kri-oj'en-us). Giving rise to cold; frigorific. [Gr., *kryos*, frost, + *gennan*, to engender.]

cryohydrate (kri-o-hi'drāt). A crystalline body formed by the union of a salt (ordinarily anhydrous) with a definite proportion of water of combination, under the influence of a very low temperature. [Gr., *kryos*, frost, + *ydor*, water.]

cryometer (kri-om'et-er). An instrument for determining the intensity of cold. [Gr., *kryos*, cold, + *metron*, a measure.]

cryophorous (kri-of'or-us). An instrument invented by Wollaston for the purpose of freezing liquids by reason of the heat absorbed in their own evaporation. [Gr., *kryos*, cold, + *pherein*, to bear.]

cryos (kri'os). Coldness; hardness as from freezing. [Gr., *kryos*.]

cryoscope (kri'os-kōp). An apparatus for ascertaining the freezing point of a liquid (physiological or pathological), consisting of a tube to hold the liquid, a freezer, and a delicate differential thermometer; employed to show the osmotic tension of the liquid and particularly variations in the osmotic pressure of the urine in certain diseases. [Gr., *kryos*, cold, + *skopein*, to examine.]

cryoscopy (kri-os'ko-pe). Examination of fluids according to the law that the greater the molecular concentration, the lower the freezing point of the fluid. Used chiefly in surgery to determine the integrity of kidneys, for in disease of the kidney leaving renal insufficiency, the freezing point of the urine rises, the less the solids excreted, while the freezing point of the blood falls. [Gr., *kryos*, cold, + *skopein*, to examine.]

cryostase (kri'os-tās). An antiseptic mixture of equal parts of carbolic acid, camphor, and saponin, with a little oil of turpentine.

crypt (kript). A small cavity, either entirely closed or opening on a free surface. c's of *Lieberkühn*. See under *Lieberkühn*. c's of the *tongue*. Small depressions in the mucous membrane of the tongue whose walls are studded with spherical projections each of which contains a vascular loop and is provided with lymph follicles. **multilocular c's**. The lobules of an acinous or racemose gland. **sebaceous c's**. See *sebaceous glands* under *gland*. **synovial c's**. See *bursa mucosa*. **synoviparous c's**. Small follicle-like extensions of the synovial membranes which occasionally perforate the capsule of the joints, and sometimes become shut off from the main sac. [Gr., *krypte*, vault, from *kryptein*, to hide.]

cryptitis (krip-ti'tis). Inflammation of a crypt.

crypto-, crypt-. Combining form of Gr., *kryptos*, hidden, concealed, secret; used in compound words in this sense.

cryptobiotic, cryptobiotous (krip-to-bi-ot'ik, krip-to-bi'ot-us). Having latent or dormant life; said of inanimate objects which, like crystals and concrements, increase in size. [Gr., *kryptos*, concealed, + *biotikos*, pertaining to life.]

Cryptococcus (krip-to-kok'us). Syn.: *Blastomyces dermatitidis*. A genus of the family *Saccharomycaceae*, the class *Ascomycetes*, and the phylum *Fungi*. **C. Gilchristi**. A species producing chronic ulceration, dermatitis, and general infection in man. **C. hominis**. A species found in abscesses by Busse. **C. Plimmeri, C. degeherans**. A saprophytic species found in malignant tumors. [Gr., *kryptos*, concealed, + *kokkos*, berry.]

cryptodidymus (krip-to-did'e-mus). A monstrosity in which one fetus is included within the other. [Gr., *kryptos*, concealed, + *didymos*, a twin.]

cryptogam (krip'to-gam). Any flowerless plant. [Lat., *cryptogamia*, from Gr., *kryptos*, concealed, + *gamos*, marriage.]

cryptogamy (krip-tog'am-e). The state of being cryptogamous. 2. Concealed fructification.

cryptogenetic (krip-to-jen-et'ik). 'Of obscure or hidden origin, as with infections in which the atrium of infection has escaped detection. [Gr., *kryptos*, concealed, + *gennan*, to produce.]

cryptomenorrhea (krip''to-men-o-re'ah). Absence of the monthly flow due to atresia of the hymen or of the vagina. Retention of the menses is a more accurate definition. [Gr., *kryptos*, concealed, + *meniaia*, menses, + *rein*, to flow.]

cryptophthalmia (krip''tof-thal'me-ah). A congenital defect in which the globe of the eye is hidden by the skin, which stretches across the orbit without any aperture. In some cases of c. the orbits have been absent or partly developed. [Gr., *kryptos*, concealed, + *ophthalmos*, the eye.]

cryptopin, cryptopianin (krip'to-pin, krip-to-pi'an-in). An alkaloid, $C_{24}H_{28}NO_5$, existing in small amounts in opium. [Gr., *kryptos*, concealed, + *opion*, opium.]

cryptorchis (krip-tor'kis). A male whose testicles are concealed (retained within the abdomen). The condition is normal in some of the lower animals. [Gr., *kryptos*, concealed, + *orchis*, the testicle.]

cryptorchism (krip-tor'kism). Absence of one or both testicles from the scrotum. [Gr., *kryptos*, concealed, + *orchis*, testicle.]

cryptozoous (krip-to-zo'us). Apparently dead; possessed of latent life. [Gr., *kryptos*, concealed, + *zoe*, life.]

crystal (kris'tal). A substance occurring in a definite geometrical form which is essentially constant for that substance, and which the latter always assumes when the conditions for its production are

- present. **arborescent c's.** C's arranged in slender, spreading branches, somewhat plantlike, as in the frost on windows, and in the delineations on rocks, called dendrites. **blood c's.** Blood-red, transparent, doubly refractive, microscopic c's, usually rhomboidal, consisting of oxyhemoglobin. **c's of tartar.** C's of potassium bitartrate. **c's of Venus.** C's of copper sulphate. **ear c's.** See *otoliths*. **hemin c's.** See *Teichmann's c's*. **Teichmann's c's.** Narrow rhombic plates of a nut-brown color, which consists of hematin hydrochlorid. [Lat., *crystallum*.]
- crystalhydration.** The absorption of a definite number of molecules of water by salts on crystallizing.
- crystallin (kris'tal-lin).** A solution of pyroxylin in wood spirit and amyl acetate; used like collodion and said to dry less rapidly.
- cryst'alline.** Perfectly transparent; resembling or belonging to a crystal; occurring under the form of crystals.
- crystallization.** 1. The act of assuming the crystalline form. 2. The body thus formed. 3. The process of rendering crystalline. [Lat., *crystallisatio*.]
- crystallog'enous.** Producing, or capable of producing, crystals. [Gr., *krystallos*, a crystal, + *gennan*, to produce.]
- crystallog'raphy.** The science of the formation and forms of crystals. [Gr., *krystallos*, crystal, + *graphein*, to write.]
- cryst'alloid.** Resembling a crystal in structure or appearance; as a n., of Graham, one of a class of substances distinguished by the rapidity with which their solutions diffuse through a neighboring liquid. See *colloids*. [Gr., *krystallos*, crystal, + *eidōs*, resemblance.]
- crystalloids (kris'tal-loids).** Graham's term for substances, mostly of a crystalline structure, which diffuse readily through membrane. They form true solutions in water.
- crystallo magnet'ic.** Relating to or connected with crystallo magnetism.
- crystallo mag'netism.** The property by virtue of which certain crystals, when suspended horizontally, point to the north, the line of direction being that of the optical axis of the crystal.
- crystallo'metry.** The science of the measurement of the angles of crystals. [Gr., *krystallos*, crystal, + *metron*, a measure.]
- crystallose (kris'tal-lōs).** See *sodium saccharin*, under *saccharin*.
- Cs.** Chemical symbol for the element *cesium*.
- ctetology (te-to'l'o-je).** The study of acquired characters in heredity. [Gr., *ktetos*, acquired, + *logos*, science of.]
- Cu.** Chemical symbol for the element *copper*.
- cubeb (ku'beb).** The unripe fruit of *Piper cubeba*, consisting, as found in commerce, of the dried globose fruits of the plant, of about the size of a small pea, of a grayish brown color, and covered with an ashy gray bloom. C's are generally stimulant, and are much employed in gonorrhoea. **oil of c. (or c's).** The oil obtained from c's by grinding and distillation. When recently distilled, it has the odor and aromatic properties of c's, and a warm camphoraceous taste [U. S. Ph., Br. Ph.]. **oleoresin of c.** See *oleoresinae cubebae*, under *cubeba*. **troches of c.** See *trochisci cubebae*, under *cubeba*. [U. S. Ph., Br. Ph., *cubeba*.] [Arab., *kab abah*.]
- cubeba (ku'be-bah).** 1. Of the U. S. Ph., cubeb. 2. Of Miquel, a genus of piperaceous shrubs, referred by Bentham and Hooker to the genus *Piper*. **cubebae fructus, grana cubebae.** Cubeb [Br. Ph.]. **extractum cubebae fluidum.** Fluidextract of cubeb [U. S. Ph.]. **oleoresinae cubebae.** Oleoresin of cubeb; made by exhausting cubeb with alcohol [U. S. Ph.]. **oleum cubebae** [U. S. Ph., Br. Ph.], **oleum cubebae etherium, oleum cubeborum.** The volatile oil distilled from cubeb. **tinctura cubebae.** Tincture of cubeb; it represents 20 per cent. of cubeb [U. S. Ph., 1890, Br. Ph.]. **trochisci cubebae.** Troches, each containing 0.02 gm. of oleoresin of cubeb [U. S. Ph.].
- cubebene (ku'be-bēn).** A substance, $C_{20}H_{16}$, obtained from cubeb, and contained in essence of cubeb. [Fr., *cubèbene*.]
- cubebin (ku-be'bin).** An odorless substance, $C_{10}H_{16}O_8$, occurring in small acicular or tabular crystals; it forms about 2.5 per cent. of cubeb.
- cu'bit.** 1. The ulna. 2. The forearm. 3. The elbow. [Gr., *kubiton*, from *kuptein*, to bend.]
- cu'boïd.** Resembling a cube; shaped like a cube. **c. bone.** See under *bone*. [Gr., *kubos*, cube, + *eidōs*, resemblance.]
- cucullaris (ku-ku-la'ris).** See *table of muscles*, under *muscle*.
- cucumerina (ku-ku-mer-e'nah).** See *tenia*.
- Cucumis (ku'ku-mis).** The cucumber. A genus of the *Cucurbitaceae*. **C. citrullus.** The watermelon. It is diuretic, and its seeds were once official, though now seldom used, except in domestic practice as a vermifuge. [Gr., *siknos*.]
- Cucurbita (ku-kur'bit-ah).** A genus of the *Cucurbitaceae*, including the gourd, the pumpkin, and the squash. **C. pepo.** The common pumpkin; its seeds are used as a vermifuge.
- culdesac (kul'de-sak).** The bottom of any saclike cavity. **Douglas' c.** See under *Douglas*. [Fr., *cul*, bottom, + *de*, of, + *sac*, bag.]
- Culex (ku'lecks).** The mosquito, a genus of the family *Culicidae*, and the order *Diptera*, of the class *Hexapoda*. Distinguished from *Anopheles* by the short palpi of the female and by the angle formed by the head with the body, giving it a humpbacked appearance. **C. fatigans.** The common brown mosquito of the tropics, which is believed to spread dengue fever. **C. pipiens.** The common brown mosquito of Europe, North Africa, and North America. [Lat., *culex*, a gnat.]

culicicide (ku-lis'is-id). Any agent capable of killing mosquitoes or their larvae. [Lat., *Culex*, a gnat, + *cedere*, to kill.]

Culicidae (ku-lis'id-e). A family of the order *Diptera* embracing many genera of mosquitoes, such as *Culex* and *Anopheles*.

culicifuge (ku-lis'if-ij). 1. Any protective measures against the attacks of mosquitoes. 2. Of S. J. Lyman, a viscid oil containing strong aromatics, and having the property of preventing the attacks of black flies, mosquitoes, etc. [Lat., *Culex* (*culic-*), a gnat, + *fuga*, a means of escape.]

culmen (kul'men). The top or summit of a thing. **c. cerebelli**. The most elevated or prominent part of the vermis superior, situated near its anterior extremity. [Lat., *columnen*, top.]

culmination (kul-mi-na'shun). The attainment to the extreme point or degree (of fever, etc.). [Lat., *culminatio*.]

cultiva'tion. 1. The process of treating vegetable organisms in such a manner as to secure their growth and multiplication away from their natural habitat. 2. The art of growing animal or vegetable parasites in artificial media.

culture. A growth of microorganisms resulting from cultivation. **c. media**. Various preparations made from beef extract, peptone, gelatin, blood-serum, and other substances, upon which bacteria will grow. **c. streaks**. Lines of microphytic implantation on agar, gelatin, or the like.

gelatin c. A c. of bacteria on gelatin.

hanging-block c. A thin slice of agar seeded on its surface with bacteria, and then inverted on a cover-slip and sealed in the concavity of a hollow glass slide. This method is used to study the mode of cell division.

hanging-drop c. A c. accomplished by inoculating the bacterium into a drop on a cover-glass, and mounting it in the depression on a concave side. **negative c.** A c. made from suspected matter which fails to reveal the suspected organism.

physical c. The training of the body by means of gymnastics. **positive c.** A c. which reveals the suspected organism.

pure c. The c. of a single form of microorganism uncontaminated by other organisms.

stab c. A bacterial culture made by thrusting into the culture medium a point inoculated with the matter under examination.

stock c. A permanent c. from which transfers may be made. [Lat., *cultura*.]

Culver's physic, Culver's root. See *Leptandra*.

cumene (ku'men). Isopropylbenzene, $C_6H_5.CH(CH_3)_2$. A liquid existing ready formed in Roman cumin oil, and obtained artificially by the distillation of cumic acid.

cu'mic. Containing or resembling cumen. **c. aldehyd.** Cuminol; an aromatic aldehyd, $C_6H_4(C_6H_7)CHO$, derived from the seeds of *Cuminum cyminum*.

Cumin (ku'min). 1. The genus *Cuminum*. 2. *Cuminum cyminum*. **c. fruit.** The seeds of *Cuminum cyminum*. Medicinally, they resemble the other aromatic fruits

of umbelliferous plants, but are more stimulating. They are chiefly used in veterinary practice.

cu'minol. See *cumic aldehyd*.

cu'mol. Isopropylbenzene, $C_6H_5.CH(CH_3)_2$.

cupellation (ku'mu-la-tiv). Operating somewhat suddenly and excessively after repeated small doses have been taken, as if by having accumulated in the system before producing any effect. **c. resolution.** See under *resolution*. [Lat., *cupellus*, a heap.]

cu'myl (ku'mil). An acid organic radicle, $C_{10}H_{11}O$, of cumin oil homologous with benzoyl. **c. alcohol.** See *cumin alcohol*, under *alcohol*. **c. hydrid.** See *cumic aldehyd*. **c. oxid.** See *cumic acid*, under *acid*.

cuneate (ku'ne-ât). In descriptive bacteriology, a term denoting wedge-shaped. [Lat., *cuneus*, a wedge.]

cuneiform (ku'ne-i-form). Wedge-shaped. [Lat., *cuneus*, wedge, + *forma*, form.]

cuneo-. Combining form of Lat., *cuneus*, a wedge.

cu'neocuboid. Pertaining to the cuneiform bones and to the cuboid bone.

cu'neoscaphoid. Pertaining to the cuneiform bones and to the scaphoid bone.

cuneus (ku'ne-us). A wedge-shaped lobule on the mesial surface of the occipital lobe of the brain, lying between the calcarine and internal parieto-occipital fissures. [Lat., *cuneus*, a wedge.]

Cunila mariana (ku'nil-ah mar-e-ah'na). American dittany. The herb is used in infusion as a febrifuge. The essential oil is rubefacient, carminative, and diaphoretic.

cunnilinguis (kun-il-in'gwis). Erotic stimulation of the female genitals by means of the tongue.

cup. A small drinking vessel; the contents of such a vessel; any structure (e. g., the calyx of a flower) shaped like a drinking vessel. **germ c.** See *gastrula*.

glaucomatous c. The so called "pressure excavation," which refers to the condition of the optic disk in glaucoma. **optic c's.** In comparative anatomy, c-shaped or bell-shaped depressions lined with epithelial cells, usually also provided with pigment cells and connected with a nervous filament; they subserve vision. [Ang.-Sax., *cupp*, Gr., *kupe*, hollow.]

cupel (ku'pel). A flat crucible or disk usually made of bone ash, occasionally of clay, in which the process of cupellation is carried on. [Lat., *cupella*, *copella*, *capella*.]

cupella'tion. The process of separating the silver or gold in alloys of lead and silver or of lead and gold.

cupping. The operation of drawing blood to any given part by the application of rarefied air. **dry c.** A cup-shaped glass is moistened on the inside with alcohol, the alcohol is ignited, and the cup applied to the skin as soon as the flame goes out. **wet c.** The same procedure, except that the skin is scarified so that blood is drawn

out of the skin into the cup. [Old Eng., *cuppe*, drinking vessel.]

cu'pram. A germicidal solution of copper carbonate in ammonia water.

cuprar'gol. A compound of copper and albumin.

cupratin (ku'prat-in). An albuminoid preparation of copper.

cu'prea bark. See *Remijia*.

cu'preous. Containing, derived from, or related to copper.

cupres'cent. Coppery in appearance.

cupres'sin. Oil of cypress; used in whooping-cough.

Cupres'sus. The typical genus of the *Cupressineae*. **C. pyramidalis**, **C. sempervirens.** The common cypress, indigenous to Persia and the Levant. This and other species have been variously used therapeutically. [Gr., *kuparissos*.]

cu'pric. Containing copper as a bivalent element. **c. sulphate.** See *copper sulphate*, under *copper*.

cupro-, cupr-. Combining form of Lat., *cuprum*, copper.

cuprocithol (ku-pro'si-thol). An ointment used in ophthalmic practice, containing 5 per cent. or 10 per cent. of copper citrate.

cuprohe'mol. An organic compound of copper and hemol; used in anemia.

cu'prol. A copper salt of yeast and nucleic acid, which contains about 6 per cent. of copper.

cu'prous. Containing copper as a univalent element.

cu'prum. Copper. **cupri acetate.** See *copper acetate* [U. S. Ph., 1880], under *copper*. **cupri sulphate.** See *copper sulphate*, under *copper*. **c. vitriolatum.** See *copper sulphate*, under *copper* [U. S. Ph., Br. Ph.]. [Lat.]

cu'pula terminal'is. A cuticular formation found in the ampullae of the ear in rather mature embryos.

curaçao (ku-rah-so'). A cordial made by macerating c. orange peel in brandy, adding water and sugar, and coloring with logwood or cochineal.

curare (koo-rah're). Also written *woorari*, *woorara*, *urari*, *ourari*, *wvari*, and *awara*. Several varieties of native extracts, used as arrow poisons, are known under the name *curare*. They are commonly indicated by the kind of container in which they come into commerce. *calabash c.* comes in a kind of gourd; *tube c.* in a bamboo; *pot c.* in jars. *calabash c.* yields the alkaloid *curarin*; *tube c.* yields *tubocurarin* and *curin*; *pot c.* yields *protocurarin* and *protocurin*. There is some confusion concerning the chemistry of curare and the action is variable. C. paralyzes the motor endings of striped muscle, hence it has been used in convulsive conditions, but, owing to the paralysis of respiration which it induces, it is of little therapeutic use. It is used largely in physiological laboratories. [South American.]

curarin (ku-rah'rin). The active principle of *curare*, an alkaloid, $C_{15}H_{24}N_2O$. The c. of commerce is not a pure substance,

hence its action is not uniform. Certain manufacturers give protocurarin as a substitute for c., but protocurarin is much more active.

cu'rarism. The state of being curarized, also the assemblage of phenomena characteristic of that state.

curariza'tion. 1. The process of curarizing. 2. The state of being curarized.

cu'rarized. Brought under the influence of curare; used particularly with reference to the stage of paralysis of motor nerve endings in voluntary muscles.

curative (ku'ra-tiv). Tending to effect a cure, as opposed to palliative.

curator (ku-ra'tor). As anciently employed, a physician; as now used, a custodian, e. g., of a museum.

Curcas (kur'kas). The seeds of *Jatropha curcas*; purging nut; physic nut. It contains an oil, the action of which resembles that of croton oil, and curcin, a toxalbumin resembling crocin in its action on the blood. [Malabar name of the plant.]

curcin (kur'sin). A toxalbumin occurring in *Curcas*.

Curcuma (kur'ku-mah). 1. A genus of the *Zingiberaceae*. 2. Of the U. S. Ph., 1870; turmeric, the rhizome of *C. longa*. **charta curcumae.** Paper impregnated with an alcoholic tincture of turmeric, obtained from turmeric previously extracted with water. It is used as an indicator, boric acid or alkalis causing it to turn brown. See *turmeric paper*.

cur'cumin. A diatomic monobasic acid, $C_{14}H_{14}O_4$, forming the peculiar yellow coloring matter of the rhizome of *Curcuma longa* and other species of *Curcuma*.

curd. The solid portion of milk that has coagulated. It consists of casein and retains most of the fatty globules.

cure (kür). 1. A course of medical or surgical treatment. 2. A remedy or a course of treatment capable of producing recovery. 3. Restoration to health, or the return to a normal state after disease.

gold c. A secret method of treating addiction to alcohol by means of a preparation said to contain gold. **grape c.** A system of treatment consisting of eating grapes before breakfast for a number of weeks in amount sufficient to produce a laxative effect. **Keeley c.** See *gold c.* **Kneipp's water c.** See under *Kneipp*.

movement c. See *medical gymnastics*.

radical c. The c. of a disease by the removal of the affected part or by a surgical operation on the same, as the r. c. of hernia. **Schott c.** See under *Schott*. **Swedish movement c.** The treatment of diseases by Swedish gymnastics. **water cure.** See *hydrotherapy*. [Lat., *cura*, care.]

curct (ku-ret'). An instrument for removing foreign bodies, accumulated secretions, etc., from the surface or from the accessible passages of the body, also for removing morbid outgrowths and neoplastic deposits by scraping. Generally made in the form of the bowl of a spoon or in that of a ring. [Fr., *curette*, from *curer*, to cleanse.]

curet'tage. See *curetting*.

curet'ting. The operation of removing vegetations or portions of tissue by means of a curette. [Fr., *curettage*, *curette-ment*.]

cu'rin. A weak base obtained from tubocurare; it has no curare action on nerve endings, but it depresses the heart.

cu'rrent. A flowing, as of the blood in the vessels, of electricity, etc. **action c.** The c. obtained from a muscle or nerve when in functional activity by connecting any two points with a galvanometer. It is due to the fact that each point as it enters into activity becomes electronegative to resting or less active points. **after c.** A c. produced in a muscle when an electric c. passed through it has ceased. **alternate c., alternating c.** A c. the direction of which is periodically and rapidly reversed, as in the induced c's from an induction coil. **anelectrotonic c.** Of Du Bois-Reymond, the c. observed at the anode on passing a constant c. through a nerve. **ascending c.** An electric c. which passes from the periphery to the center, as from the peripheral portion of a nerve toward the nerve center. **axial c.** The central portion of a c. of blood in a vessel. **battery c.** The direct c. from a galvanic battery. **branch c.** See *derived c.* **catelectrotonic c.** A c. observed at the cathode on passing a constant c. through a nerve. **centrifugal c.** See *descending c.* **centripetal c.** See *ascending c.* **constant c.** 1. A galvanic c. produced by a constant (two-fluid) battery. 2. A galvanic c. in general as distinguished from a faradic c. **constant galvanic c.** An uninterrupted galvanic c. **continuous c.** 1. A c. which flows always in the same direction; especially an uninterrupted galvanic c. 2. As sometimes used, the galvanic c. **c. breaker.** See *rheotome.* **c. changer.** See *rheotrope.* **c. condenser.** An apparatus for collecting the extra c's generated in the operation of an induction machine, which it combines to form a c. of reverse direction to that of the battery c., and which, transmitted to the core, demagnetizes it instantly, thus increasing the rapidity of the interruptions and the intensity of the induced c. **c. electricity.** Galvanism. **c. interrupter.** See *rheotome.* **c. of the pile.** See *galvanic c.* **c. regulator.** See *rheostat.* **c. reverser.** See *rheotrope.* **c. selector.** An arrangement by which any desired number of galvanic elements can be brought into or excluded from the circuit. **cutaneous c.** A natural electric c. supposed by Hermann to be present in the skin, apparently distinguished from the c's which are proper to the muscles. **d'Arsonval c's.** See under *arsonvalization.* **demarcation c.** Of Hermann, the electrical c. developed in a muscle or nerve at a point of injury. This is negative with respect to the uninjured portion of the muscle. **derived c.** That portion of an electric c. which is abstracted or shunted from the

main c. passing through a circuit by connecting two points of a circuit with an additional conductor called a derivation wire. **descending c.** An electric c. which passes from the nerve centers through the periphery. **diffusion c.** 1. The extension of the effect of a galvanic c. beyond the point of application of the electrodes. 2. The c. set up by diffusion between two solutions of different concentrations. **diphasic c.** See *phasic c.* **direct c.** 1. See *descending c.* 2. See *galvanic c.* **electric c.** The transfer of electrical energy from one part of the body to another along a determinate path called the circuit and through a body or series of bodies constituting the conductor. See *galvanic c., faradic c., and static c.* **Electrotonic c.** A c. developed in a nerve in the extrapolar regions, during the passage of a galvanic c. **exciting c.** A c. used for magnetizing the magnet in certain dynamo-electric machines. **extra c.** A faradic c. induced in portions of a coil of wire by the action of the c. passing through other portions of the same coil. **eye c.** An appreciable electric c. which may be observed in a freshly-removed eye, when stimulated by light falling on the retina, if it is placed in a suitable galvanometer circuit. **faradic c., faradaic c.** An electric c. (induced c., secondary c.) induced in a conducting coil by the opening or closure of an electric c. (primary c.) in a neighboring conducting coil. Its direction is always opposite to that of the inducing c. A faradic c. is distinguished from a galvanic c. by being always an interrupted and alternating c. **franklinic c.** See *static c.* **galvanic c.** An electric c. produced by the chemical interaction of two or more substances, which latter constitute a galvanic element. **gland c., glandular c.** A natural electric c. which in closure or opening generates a faradic c. in an adjoining circuit. **induction c., inductive c.** See *faradic c.* **interrupted c.** A c. which is broken and closed again at short intervals; the term is sometimes employed to designate a faradic c. as distinguished from a galvanic c. **magneto-electric c.** A faradic c. generated by the action of a magnet. **monophasic action c.** The action c. obtained when one electrode from the galvanometer is placed on an uninjured surface and one on the injured surface. So-called because the c. has a simple phase. **molecular c.** The electrical c. which exists in an excised muscle, and is demonstrated by placing the poles of a galvanometer, one upon the normal longitudinal surface (electropositive) and one upon the cut surface (electronegative). **partial c.** See *derived c.* **phasic c.** A name given to the diphasic action current, first in one direction and then in the reverse, obtained when the electrodes from the galvanometer are applied to the uninjured muscle and nerve. **polarizing c.** The term given in physiology to the galvanic current passed through a nerve or muscle

- to induce the phenomena of electrotonus. **primary c.** 1. See *induction c.* 2. An incorrect term for a galvanic current. **secondary c.** See *faradic c. secretion c.* An electrical c., observed by Hermann, in the skin of the frog, the direction of which is from without inward. It appears simultaneously with the formation of secretion in the sweat glands. **sinuous c., sinusoidal c.** An electrical c. whose intensity varies after the form of a *sine* curve or pendular vibration. **static c.** An electric c. constituted by the constant abstraction and renewal of a change of frictional electricity. **terrestrial c's.** Thermo-electric c's caused, according to Ampère, by the atmospheric variations due to the position of the sun. They circulate from east to west, and are perpendicular to the magnetic meridian of each place. **undulatory c.** An electric c. whose strength and direction gradually change. **uninterrupted c.** An electric c. which is not broken during its application; a continuous c. **unit of c.** See *ampere. voltaic c.* See *galvanic c.* [Lat., *currere*, to run.]
- Curschmann's spirals.** See *Leyden's spirals*, under *Leyden*. **C. s. in sputum, how to recognize;** see in *appendix*, page 902. [Heinrich Curschmann, German physician, 1846-1910.]
- curvature** (kur'va-tür). A bending; a bend. **catylosacral c.** The curved surface of the sacrum and the ilium, shown in a section of the pelvis made through the cotylosacral arch. **greater c. of the stomach.** The lower convex border of the stomach. **lesser c. of the stomach.** The upper concave border of the stomach. **sacral c.** The sacral c. of the rectum. **sigmoid c.** 1. The c. of the internal carotid artery as it passes through the carotid canal. 2. The sigmoid flexure of the colon. **spinal c.** See under *spinal*. [Lat., *curvatura*, from *curvus*, bent.]
- curve.** A bend; in graphic delineations, the general course of a line formed by a number of straight lines extending between adjacent registry points. **c. of Carus.** The arc of an imaginary parabola having one focus at the symphysis pubis and extending in the median line of the pelvis in women, from the plane of the inlet to that of the outlet; corresponding roughly with the pelvic axis. **dental c.** See under *dental*. **fever c.** See *temperature c.* **graphic c.** The course formed on a graphic chart by a line made up of a number of straight lines passing between the contiguous points registered; also the undulating line registered by the needle of the sphygmograph or other like instrument on a moving surface. **temperature c., thermometric c.** A graphic c. exhibiting the variations of the temperature during a given period. [Lat., *curvus*, a bend, a flexure.]
- curvi-** Combining form of Lat., *curvus*, curved.
- curvilin'cal, curvilin'ear.** Forming a curve; said of contours. [Lat., *curvus*, bent, + *linea*, line.]
- cus'camin.** A crystalline substance found in *Cinchona succirubra*.
- Cuscu'ta.** A genus of convolvulaceous parasitic plants, many species of which are in use in domestic practice.
- cus'co bark.** The bark of *Cinchona pubescens*; it is now used but rarely.
- cus'conin.** An alkaloid, $C_{20}H_{28}N_2O_4 \cdot 2H_2O$, found in cusco bark.
- Cushing's suture.** See *right-angled suture*.
- cuspid.** A projecting point, especially a projection upon the grinding surface of a tooth, and one of the pointed segments of a valve of the heart. [Lat., *cuspis*, a point, a lance.]
- Cusparia** (kus-pah're-ah). The genus *Galipea*. **c. bark, cuspariae cortex** [Br. Ph., 1898], **angustura** [U. S. Ph., 1870]. *Angustura*, angustura bark; bark of *Cusparia angustina*; contains a bitter principle, angusturin, or cusparin, and is, therefore, classed among the simple bitters. **infusum cuspariae** [Br. Ph., 1898]. A 5 per cent. infusion of c. bark. **liquor cuspariae concentratus** [Br. Ph., 1898]. A 50 per cent. tincture of c.
- cus'parin.** See *angusturin*.
- cuspid.** A tooth with one point or cuspid, i. e., the canine tooth.
- cus'so.** See *kusso*.
- cu'tal, cu'tol.** Aluminum borotannate. A proprietary astringent preparation.
- cuta'neous.** Pertaining to or consisting of skin; of a nerve, distributed to the skin; of a muscle, acting to move the skin. [Lat., *cutis*, skin.]
- cuticle** (ku'ti-kl). A thin, transparent, dry membrane devoid of nerves and vessels which covers all the surface of the body, except the parts which correspond to the nails and similar parts; the scarf skin, epidermis. See *epidermis* and *cuticula*. **ligneous c.** The outer covering of a vegetable cell. **liquid c.** See *collodion*. [Lat., *cuticula*, dim. of *cutis*, skin.]
- cuticula** (ku-tik'u-lah). See *cuticle*. **c. adamantina.** See *c. dentis*. **c. dentis.** A thin corneous investment of the teeth which disappears shortly after they have perforated the gums. **c. extina.** See *epidermis*. **c. membranæ tympani.** The external (dermoid) layer of the tympanic membrane. [Lat., dim. of *cutis*, skin.]
- cuticulous** (ku-tik'u-lus). Living under the skin of animals. [Lat., *cuticula*, dim. of *cutis*, the skin.]
- cu'tin.** 1. A modification of cellulose found in the walls of certain cells, chiefly on the exterior of plant organs rendering them impervious to water. 2. A soft material prepared from the intestine of the ox, intended as a substitute for silk or catgut. It is absorbable. [Lat., *cutis*, skin.]
- cutis** (kew'tis). The skin, consisting of the cutis vera, true skin, and the epidermis. **c. anserina.** "Goose skin"; a transitory

state of the skin in which the follicles become prominent and form visible projections; usually from cold. **c. elastica**. See *elastic skin*, under *skin*. **c. laxa**, **c. pendula**. Other names for *dermatolysis*. **c. plicata**. A very rare form of skin disease in which the normal furrows of the skin are exaggerated and the skin is thrown into folds. **c. vera**. The true skin or corium. See *corium*. [Lat., *cutis*, skin.]

cutiza'tion. The skinlike condition of hardness, thickness, and dryness acquired by mucous membrane as the result of continued exposure, as in a state of eversion, inversion, or prolapse.

cuttlefish bone. See *os sepiae*, under *sepia*.

Cu'vier's ducts. Syn.: *sinuses of Cuvier*. Two short transverse venous trunks of the fetus, one on each side, opening into the auricle of the heart. The right one becomes the superior vena cava; the left one disappears. [Frédéric Dagobert, Baron Cuvier, Fr. naturalist, 1769-1832.]

cyanamid (si-an-am'id). Amid of cyanogen, a white, crystalline, poisonous substance, $\text{NH}_2\text{C}\equiv\text{N}$.

cyanate (si'an-ät). A salt of cyanic acid.

cyanhydrate (si-an-hi'drät). Hydrocyanate.

cyanic (si-an'ik). 1. Blue. 2. Containing or pertaining to cyanogen. **c. acid**. See under *acid*. [Lat., *cyanicus*.]

cyanicus. Cyanic; with the name of a base, the cyanate of the base.

cyanid (si'an-id). A salt of prussic acid (hydrocyanic acid). [Lat., *cyanidum*.]

cy'anmethemoglo'bin. A substance produced by sunlight upon a solution of methemoglobin, containing potassium ferricyanid.

cyano-, cyan-. Combining form of Gr., *kyanos* and *kyaneos*, dark blue.

cyanoderma (si-an-o-der'mah). See *cyanosis*. [Gr., *kyanos*, blue, + *derma*, skin.]

cyanogen (si-an'o-jen). Syn.: *dicyan*. A gas, CN_2 , of pungent odor; very poisonous. [Gr., *kyanos*, a bluish color, + *gennan*, to engender.]

cyanohy'dric. Hydrocyanic or prussic.

cyanomycosis (si'an-o-mi-ko'sis). Infection with *Bacillus pyocyaneus*, with formation of green pus. [Gr., *kyanos*, blue, + *mykes*, a fungus.]

cyanophilous (si-an-of'il-us). Having an elective affinity for a blue staining agent. [Gr., *kyanos*, blue, + *philein*, to love.]

cyanopia (si-an-o'pe-ah). That derangement of vision in which objects appear blue. [Gr., *kyanos*, blue, + *opsis*, sight.]

cyanosis (si-an-o'sis). Blueness or bluish discoloration of the skin. [Gr., *kyanos*, dark blue.]

cyanotic (si-an-ot'ik). Pertaining to, or of the nature of, or affected with, cyanosis.

cyanu'rate. A salt of cyanuric acid.

cyanu'ric acid. See under *acid*.

Cyclamen (sik'lam-en). Apple of the earth; a genus of the *Primulaceae*. **C.**

arthanita, **C. europoem**. Common c.;

a species indigenous to southern Europe and naturalized in England. The rhizome has laxative and emmenagogue properties.

[Gr., *kyklaminos*, the plant sow bread.]

cyclamín (sik'lam-in). A saponin obtained from the root of *Cyclamen europoem*. It is actively hemolytic.

Cyclasterion scarlatinale. A certain elongated body staining by methylene blue and described by Mallory as occurring in the epithelial cells of the skin in scarlet fever.

cycle (si'kl). 1. A period of time in which a certain series of events or acts is completed, especially if repeated again and again. 2. A course of diet and exercise arranged in a definite manner, for a certain end. **cardiac c.** The series of the normal phenomena proceeding from the heart and exhibited during one contraction of that organ. It embraces the period comprised between the commencement of one contraction and the commencement of the contraction immediately following it. [Gr., *kyklos*.]

cyelic, cyclical (sik'lik, sik'lik-al). 1. Recurring at regular periods. 2. Arranged in concentric circles. 3. Rolled in the form of a circle or of a series of circles.

cyclitis (si-klit'is). Inflammation of the ciliary muscle. **c. plastica**. Inflammation of the ciliary body with an effusion of plastic lymph, uniting the surfaces of the iris, ciliary processes, and sometimes the suspensory ligament to each other. **c. purulenta**. Inflammation of the ciliary body with an effusion of pus which may cause a hypopyon. **c. serosa**. Inflammation of the ciliary body, in which the effusion is almost entirely serous. **irido-c.** C. where, in addition to iritis, there is neuralgia and tenderness of the ciliary region. **primary c.** C. usually due to traumatism. [Gr., *kyklos*, a circle, + *itis*, inflammation.]

cyclo-. Combining form of Gr., *kyklos*, circle.

cycloclialysis (si'klo-di-al'is-is). An operation for the relief of glaucoma by detachment of the ciliary body, thus effecting a communication between the superchioroidal space and the anterior chamber. [Gr., *kyklos*, circle, + *dialysis*, dissolution.]

cyclocluction (si-klo-duk'shun). The intrinsic power of each oblique muscle of the eye. [Gr., *kyklos*, a circle, + Lat., *ducere*, to lead.]

cyclophoria. Heterophoria caused by lack of equilibrium of the oblique muscles of the eye. [Gr., *kyklos*, a circle, + *phora*, movement.]

cyclophorometer (si-klo-for-om'et-er). An instrument for detecting and measuring cyclophoria. [Gr., *kyklos*, a circle, + *phoros*, bearing, + *metron*, measure.]

cyclopia (si-klo'pe-ah). 1. That defect of development due to fusing of the orbits in fetal life, so that one eye situated at the root of the nose is present at birth. 2. A genus of leguminous shrubs. [Gr., *kyklopia*, round-eyed.]

cycloplegia (si-klo-ple'je-ah). Paralysis

of the ciliary muscle. [Gr., *kyklos*, a circle, + *plege*, a stroke.]

cyctoplegic (si-klo-ple'jik). Causing paralysis of the ciliary muscle or diminution of accommodation; said of certain drugs.

cyctops (si'klops). Round-eyed, one-eyed; as a n. m., a monster having but one eye, placed in the middle of the forehead. See *cyctopia*. **c. quadricornis**. A minute crustacean, serving as the intermediate host of the guinea worm. [Gr., *kyklos*, a circle, + *ops*, the eye.]

cyctothymia (si-klo-thim'e-ah). Mild types of manic-depressive psychoses. [Gr., *kyklos*, a circle, + *thymos*, the mind.]

cyctotome (sik'lo-tóm). An instrument for cutting the ciliary muscle in cyctotomy. [Gr., *kyklos*, a circle, + *temnein*, to cut.]

cyctotomy (sik-lot'o-me). Incision of the ciliary muscle. [Gr., *kyklos*, circle, + *temnein*, to cut.]

cydonia (si-do'ne-ah). Both sing. and pl. 1. (Sing. [*arbor* understood]) the quince tree. 2. (Pl. [*mala* understood]) quinces. **C. europæa.**, **C. vulgaris**. The common quince tree. A syrup prepared from the fruit makes a refreshing drink. The juice is sometimes made into a sort of wine. The mucilage of the seeds is demulcent and has been used in dysentery. **mucilago cydoniae**. See *mucilage of cydonium*, under *cydonium*. **semen cydoniae**. Quince seed; the seeds of *C. vulgaris*.

cydonin (si-do'nin). The mucilaginous principle of quince seeds, C₁₈H₂₈O₁₄.

cydonium (si-do'ne-um). The quince, the fruit of a plant of the genus *Cydonia*; of the U. S. Ph., 1880, the seed of *Cydonia vulgaris*. The seed contains cydonin, a mucilaginous principle, hence they are demulcent. **mucilage of c.** A mucilaginous liquid made by macerating quince seed in distilled water.

cyesiology (si-e-se-o'l'o-je). That branch of medicine which treats of conception. [Gr., *kyesis*, conception, + *logos*, understanding.]

cyesis (si-e'sis). Conception. [Gr., *kyesis*, conception.]

cylinder (sil'in-der). 1. An elongated body of the same transverse diameter throughout and circular on transverse section. 2. See *cast. axis c.* See under *axis*. **cortical c's.** See *cell trabeculae*, under *trabecula*. **c. of mucus**. Mucoid material appearing in the urinary sediment, somewhat resembling hyalin cylinders. **medullary c's.** See *serous canaliculi*, under *canaliculus*. **muscular c.** See *muscular fiber*, under *fiber*. [Gr., *kylindros*, from *kylindein*, to roll.]

cyllindro-. Combining form of Gr., *kylindros*, cylinder.

cylin'dro-adenoma. An adenoma containing cylindrical masses of hyaline material.

cyllindroid (sil-in'droyd). See *false cast*, under *cast*. [Gr., *kylindroides*, cylindrical.]

cyllindroma (sil-in-dro'mah). Syn.: *tubular carcinoma*. A tumor composed of a

collection of cells forming cylinders, cut in various directions, with a dilated capillary in the center surrounded by a zone of hyaline cells. It is a variety of perithelioma. [Gr., *kylindros*, cylinder.]

cyllindromatous. Indicating a hyaline change affecting certain tumors, or organized fibroid areas, or serous surfaces, or in granulomata, capillary walls, and atrophied glomeruli.

cylin'drosarco'ma. A tumor possessing the dual properties of a cylindroma and a sarcoma.

cyllindruria (sil-in-dru're-ah). The presence of cylindroids in the urine. [Gr., *kylindros*, cylinder, + *ouron*, urine.]

cymarin (si'mar-in). A neutral non-glucosidal crystalline principle obtained from *Apocynum cannabinum* and *Apocynum androsœmifolium*. Its actions are much like those of digitalis.

cymatodes (si-ma-to'des). Fluctuating; said anciently of a weak dirotic pulse. [Gr., *kyrna*, a wave, + *eidōs*, resemblance.]

cymene (si'mēn). A liquid derived from various volatile vegetable oils, such as that found in the seeds of *Cuminum cuminum*. In chemical constitution, it is paraprolymethylbenzene.

cy'mic, cy'mol. Of or pertaining to cymene.

Cynanchum (si-nan'chum). A genus of asclepiadaceous plants. **C. acutum**, **C. monspeliacum**. A species growing in southern France, Spain, Italy, and Greece; said to furnish a spurious scammony. **C. vincetoxicum**. White swallowwort. The root was once esteemed as a counterpoison. It is emetic, especially when fresh, and in large doses produces inflammation of the stomach.

cynapin (sin'ap-in). A poisonous alkaloid found in *Ethusa cynapium*.

cyno-. Combining form of Gr., *kyon*, dog; used in compound words as *cynophobia*, fear of dogs; *cynocephalus*, dog-headed.

cynocephalic, cynocephalous. (syn-o-sef-af'ik, sin-o-sef'al-us). Having the head shaped like a dog. [Gr., *kyon*, dog, + *kephale*, head.]

Cynoglossum (sin-o-glos'sum). A genus of boraginaceous herbs of the north temperate zone. **C. majus**, **C. officinale**. Common hound's tongue, a biennial species common in Europe and the United States. The leaves and root, especially the latter, have been employed in a variety of conditions. **C. virginicum**. Wild comfrey; a hairy plant found in woods and thickets from Vermont to Virginia. It has properties similar to those of *C. officinale*. [Gr., *kyon*, a dog, + *glossa*, the tongue.]

Cynomorium coccineum (si-no-mo'rium kok-si-ne'um). The scarlet fungus of Malta, formerly highly valued as a styptic and astringent. [Gr., *kyon*, a dog, + Fr., *morion*, from Sp., *morra*, the crown of the head.]

cyopin (si'o-pin). The pigment present in blue pus. [Gr., *kyanos*, blue, + *pyon*, pus.]

cypripedin (sip-ri-pe'din). Of the eclectics, a resinoid obtained from *Cypripedium*.

Cypripedium (sip-rip-e'di-dum). 1. A genus of orchids. 2. Of the U. S. Ph., the rhizome and rootlets of *C. hirsutum* and *C. parviflorum*. *C.* has been used in hysteria. The fluidextract is official. [Gr., *Kypris*, Venus, + *podion*, a slipper, from the slipperlike form of the lip.]

cyrto-. Combining form of Gr., *kyrtos*, curved, arched.

kyrtosis (sir-to'sis). See *kyphosis*. [Gr., *kyrtosis*, a hump-backed individual.]

cyst (sist). An abnormal collection of fluid in a sharply defined area unprovided with a channel for outflow. *C's* possess a distinct membrane usually lined with cubical, columnar, glandular, ependymal, squamous, or composite epithelium or endothelium. **alveolar c.** A c. connected with the alveolus of a tooth. **apoplectic c.** A false c. formed around a cerebral effusion of blood. **blood c.** A c. formed around effused blood and containing blood or its remains. **branchial c.** A c. of the neck formed by defective closure of an embryonic branchial cleft. **bursal c.** A c-like enlargement of a bursa. **butter c.** A retention c. of the mammary gland containing a butterlike material. **cholesteatomatous c.** See *cholesteatoma*. **coxygeal c.** Any c. growing from or in the tissues about the coccyx. **compound c.** See *multilocular c.* **colloid c.** A c. containing colloid material. **composite c.** A c. whose wall is formed of more than one kind of epithelium and which contains glands secreting the cystic fluid. **conjunctival c.** A rare form of c. usually appearing as a sharply defined, spheroidal or hemispheroidal prominence, about as large as a pea and transparent, occasionally met with near the corneal margin. It is congenital and distinct from the true dermoid c. **Cowper's c., cowperian c.** A c. formed in the vulvovaginal gland or its duct. **cutaneous c., cuticular c.** 1. A c. developed in the skin. 2. See *dermoid c. c. of the broad ligament.* A c. springing from the ovary or the epoöphoron and developed between the layers of the broad ligament of the uterus. **c. of the canal of Nuck.** A c. of the peritoneal pouch accompanying the round ligament of the uterus, or the processus vaginalis in the male. **c. of the corpus luteum.** The blood c. in the earlier stages of pregnancy. **c. of Gärtner's body.** A c. in the broad ligament or vaginal wall from distension of the duct above. **c. of the jaw.** See *dentigerous c. c. of the müllerian duct.* A c. of the distal or anterior end of the above duct in the male, at the globus major of the epididymis, producing the so-called sessile hydatid. **c. of the wolffian body.** A c. forming in the remains of the wolffian body, in the ovary, or in the duct in the broad ligament of the uterus, or in the vagina, or in the free outer tubes, called the paro-

öphoron or organ of Rosenmüller. **daughter c.** A secondary c. developed within another. **degenerative c.** A c. formed by softening and degeneration of tissue, as in large infarcts or cancerous nodules. **dental c., dentigerous c.** A c. of the jaw, either simple or multilocular, caused by aberrant development of the teeth sacs or enamel germ remains. **dermoid c.** A c. the wall of which consists of a skinlike structure, often true skin, and which sometimes contains hair, sebaceous matter, and, when occurring in the ovary, bony and dental formations. **dilatation c.** See *retention c. echinococcus c.* See under *echinococcus*. **ependymal c.** A c. of the cerebral ventricles with accumulation of cerebrospinal fluid and caused by a local closure of some portion of the spinal cord. **gaseous c.** A c. containing gas. **hematic c.** See *sanguineous c. hemorrhagic c.* A c. of the brain, the scalp of the newborn, etc., containing blood or a thin blood-stained fluid. **hydatid.** See under *echinococcus*. **hygromatous c.** See *hygroma*. **implantation c.** A c. beneath the skin of the fingers or hands of those performing rough manual labor. **inclusion c.** A c. resulting from inclusion of a portion of the epiblast within the mesoblast during development or inclusion of a blighted fetus within the body of another fetus. **meibomian c.** See *chalazion*. **milk c.** A cystic dilatation of a galactophorous duct containing milk. **morgagnian c.** See *hydatid of Morgagni*. **mother c.** The original (external) c. of a multilocular cystoma. **mucous c.** A retention c. formed in a mucous follicle or in the duct of a muciparous gland. **multilocular c.** A c. containing several compartments, usually by the formation of secondary c's within a mother c. **nabothian c.** A dilated mucous follicle of the cervix uteri. **neurotic c.** See *degenerative c. neural c.* See *ependymal c. ovarian c.* See *ovarian cystoma*, under *cystoma*. **pancreatic c.** A c. of the pancreas, produced by a dilatation of the duct of Wirsung. **parasitic c.** A c. produced by the *Taeniadae* or other animal parasites, such as *Trichina spiralis*. The former are most frequently found in the liver and the latter in the muscles. **parent c.** See *mother c. paroöphoromic c.* A c. developing from the paroöphoron or hilum of the ovary. **parovarian c.** A c. springing from the epoöphoron. **renal c.** A cystlike dilatation of the kidney. **retention c.** A c. formed by the accumulation of products of secretion in a follicle or a gland or its duct in consequence of obstruction of the outlet. **salivary c.** A retention c. of the duct of a salivary gland. **sanguineous c.** Any c. containing blood, either from hemorrhage from its walls or from the establishment of communication with a neighboring blood vessel. **sebaceous c.** A c. formed from obstruction in a sebaceous gland. **seminal c.** A retention c.

- of a tubulus seminiferus. **serous c.** A c. containing a clear watery liquid.
- spermatic c.** 1. See *seminal c.* 2. A spermatoblast when it is much increased in size and its nuclei have been multiplied by segmentation.
- synovial c.** A cystic enlargement of a synovial sheath or a bursa.
- tarsal c.** See *chalazion*.
- testicular c.** See *seminal c.*
- thyroid c.** A c. connected with the thyroid gland.
- thyrolingual c.** A c. in the median line of the neck and formed from the embryonic remains of the thyrolingual duct.
- umbilical c.** A congenital c. situated at the navel.
- unilocular c.** A c. having only a single cavity.
- urachal c.** A c. of the abdominal region formed from a patent urachus.
- urinary c.** A c. of the kidney, usually thin-walled, projecting beneath the capsule and consisting of the cortical substance, containing a clear, yellowish liquid.
- vitello-intestinal c.** A c. formed from the remains of the omphalomesenteric duct, the embryonic connection between the small intestine and the yolk sac. [Gr., *kystis*, bladder, cyst, sac.]
- cystadenoma** (sis-tad-en-o'mah). An adenoma containing cysts. **c. papilliferum.** A c. with papillary growths on the inner surface of the cyst walls.
- cystalgia** (sis-tal'je-ah). Pain, especially neuralgia of the bladder. [Gr., *kystis*, the bladder, + *algos*, pain.]
- cystamin** (sis-tam'in). A trade name for hexamethylenamin of the U. S. Ph.
- cystectomy** (sis-tek'to-me). Cutting out of the bladder; especially excision of the gall-bladder. [Gr., *kystis*, bladder, + *ektome*, excision.]
- cystein** (sis'te-in). An amino acid derived from cystin. It is alpha-amino-beta-thiolactic acid, $\text{CH}_2(\text{SH})\text{CH}(\text{NH}_2)\text{COOH}$. [Fr., *cystéine*.]
- cystencephalia** (sis'ten-sef-al'e-ah). A monstrosity characterized by a baglike structure in place of the brain. [Gr., *kystis*, the bladder, + *egkephalos*, brain.]
- cysteogenesis** (sis'te-o-jen'e-sis). The formation of a cyst. [Gr., *kystis*, the bladder, + *genesis*, generation.]
- cysti-, cyst-**. Combining forms of Gr., *kystis*, cyst.
- cystic.** 1. Cystlike, consisting of or containing a cyst or cysts. 2. Pertaining to a bladder. 3. As a n., a medicament supposed to be useful in diseases of the urinary bladder. **c. adenosarcoma.** An a. that has undergone cystic degeneration.
- cysticeroid** (sis-t-e-ser'coyd). A cysticerous.
- Cysticerus** (sis-t-e-ser'kus). Syn.: *bladderworm*. The cyst and larval form or scolex of a *tenia*, when it is encysted in the body of its host and consists of a single head provided with hooks and suckers connected with a bladderlike expansion. See *echinococcus*. **C. acanthotriax.** See *C. cellulose*. **C. bovis.** See *C. saginata*. **C. canis.** See *C. cellulose*. **C. cellulose.** The larval stage of *Taenia solium*, found oftenest in the lower animals, as a rule in the pig, but sometimes in man. It has a quadrangular head, a long, cylindrical body, and an elliptical, caudal vesicle, and is from 10 to 15 mm. in length. Its presence is rarely noticed in man except in the eye or the brain; when lodged in the serous cavities of the body it is free, but elsewhere it is found in cysts, sometimes as large as a hazelnut. See *measles* (2d def.). **C. medio-canellata.** See *C. saginata*. **C. saginata.** The larval condition of *Taenia mediocanellata*. **C. tenuicollis.** The scolex of *Taenia marginata*, found in the abdominal organs of man. [Gr., *kystis*, a sac, + *kerkos*, a tail.]
- cystidomyeloma** (sis't'id-o-mi-el-o'mah). A hylc tumorlike substance of the bladder. [Gr., *kystis*, bladder, + *myelos*, marrow.]
- cystin** (sis'tin). One of the amino acids resulting from the hydrolysis of proteins. It is alpha-diamino-beta-dithiodilactylic acid. $[\text{CH}_2(\text{S}-)\text{CH}(\text{NH}_2)\text{COOH}]_n$.
- cystinuria** (sis-tin-u're-ah). That condition of the system in which cystin is voided with the urine. [Gr., *kystis*, cystin, + *ouron*, urine.]
- cystis** (sis'tis). A bladder, especially the urinary bladder. **c. bilis,** **c. chole-docha,** **c. fellea.** The gall-bladder. [Gr., *kystis*, bag, pouch, from *kyein*, to hold.]
- cystitis** (sis-ti'tis). Inflammation of the urinary bladder. The forms of inflammation are classified as: non-bacterial c., including traumatic and chemical causes, and bacterial, comprising acute; chronic acid; chronic alkaline, interstitial; pericystitic; and tuberculous. [Gr., *kystis*, bladder, + *itis*, inflammation.]
- cysto-**. Combining form of Gr., *kystis*, bladder, cyst; used in compound words, usually with reference to the urinary bladder or the gall-bladder.
- cys'to-adenoma.** An adenoma that contains cysts.
- cystoblast** (sis'to-blasta). The layer of cells that lines the amniotic cavity of early embryo on the side of enveloping layer. [Gr., *kystis*, cyst, + *blastos*, germ.]
- cystocele** (sis'to-sel). 1. Hernial protrusion of a portion of the urinary bladder into the lumen of the vagina. 2. Hernia of a portion of the bladder into the inguinal canal, scrotum, crural canal, perineum, abdominal cavity or even through the obturator foramen. [Gr., *kystis*, bladder, + *kele*, tumor.]
- cys'tochoandro'ma.** An enchondroma.
- cystococcus** (sis-to-kok'us). Of Haeckel, the nucleus of a fertilized ovum. [Gr., *kystis*, a sac, + *kokkos*, a kernel.]
- cysto'fibroma.** A fibrous tumor containing cysts.
- cystogen** (sis'to-jen). A trade name for hexamethylenamin of the U. S. Ph.
- cystogenesis** (sis-to-jen'es-is). The formation of a cyst. [Gr., *kystis*, a sac, + *genna*, to engender.]
- cystoid** (sis'toyd). Cystlike. [Gr., *kystis*, a sac, + *eidos*, resemblance.]

cys''tolipo'ma. An encysted lipoma.

cystolith (sis'to-lith). A vesical calculus. [Gr., *kystis*, a sac, + *lithos*, a stone.]

cystoma (sis-to'mah). A cystic tumor unaccompanied by true tissue proliferation. Adami considers this a misnomer. **ovarian c.** A tumor of the ovary consisting of one or more cysts, including the simple, the proliferating, and the dermoid cysts. **papillary c.** A c. in which the papillary growth is very pronounced. [Gr., *kystis*, cyst.]

cys''tomyxo'ma. A myxoma containing cysts.

cystonephro'sis. A cystic dilatation of the kidney.

cystophlegmatic (sis-to-fleg-mat'ik). Pertaining to vesical mucus. [Gr., *kystis*, the bladder, + *plegma*, mucus.]

cys'toplasty. The plastic surgery of the urinary bladder. [Gr., *kystis*, bladder, + *plassein*, to mould.]

cystopyeli'tis. Inflammation of the urinary bladder and of the pelvis of the kidney. [Gr., *kystis*, bladder, + *pyelos*, a basin, + *itis*, inflammation.]

cys''tosarco'ma. A sarcoma containing cysts. **c. phylloides.** See *cystic adenosarcoma*, under *cystic*.

cystoscope (sis'to-sko-pe). An instrument for the ocular examination of the interior of the urinary bladder. [Gr., *kystis*, bladder, + *skopein*, to inspect.]

cystoscopy (sis-tos'ko-pe). Exploration of the bladder by means of the cystoscope.

cys''tosteato'ma. A sebaceous cyst.

cystovarium (sis-to-va're-um). An ovarian cystoma.

cytase (si'tās). See *complement*.

cytidin (si'ti-din). A nucleosid, isolated by partial hydrolysis of yeast nucleic acid.

cytisin (si'tis-in). A poisonous alkaloid, $C_{12}H_{14}N_2O$, found in *Cytisus laburnum* and other species of *Cytisus*. Its action on the central nervous system resembles that of strychnin and it also induces gastro-intestinal irritation.

Cytisus (sit'is-us). 1. Milk (or shrub, or tree) trefoil; of Linnaeus, a genus of leguminous plants of the *Genisteae*, indigenous to Europe, Asia, Africa, and the Canaries. 2. Of Celsus, *C. hirsutus* or *C. nigricans*. **C. laburnum.** The common laburnum. All parts of the plant contain cytisin, hence are poisonous. [Gr., *kytisos*.]

cyto- Combining form of Gr., *kytos*, indicating the cell.

cytoblastema (si-to-blas-te'mah). Syn.: *blastema*. 1. Formative fluid, ground (or intercellular, or hyaline) substance; the fluid, semifluid, or solid intercellular substance in which cells were supposed to be developed by free cell formation. 2. The contents of cells which give rise to young cells. [Gr., *kytos*, cell, + *blastema*, sprout.]

cytochemism (si-to-kem'izm). Internal chemistry of the cell. [Gr., *kytos*, cell, + *chemism*.]

cytochrome (si'to-krōm). A type of

nerve cell described by Nissl resembling large lymphocytes.

cytochylema (si-to-ki-lē'mah). The fluid portion of a cell or distinguished from the nucleus. [Gr., *kytos*, cell, + *chylos*, juice.]

cytoclasis (si-to-klā'sis). Necrosis of cells. [Gr., *kytos*, cell, + *klasis*, destruction.]

cytocyst (si'to-sist). A cystlike structure enclosing a mass of merozoites. [Gr., *kytos*, cell, + *kystis*, cyst.]

cytode (si'tōd). The name given by Verworn to hypothetical living substances consisting of undifferentiated protoplasm not showing the usual cellular structures.

cy''todiagno'sis. The diagnosis of disease by the microscopic examination of the cellular elements in serous exudation with special reference to the variety of cell predominating in the sediment.

cytogenesis (si-to-jen'is-is). Cell formation. [Gr., *kytos*, cell, + *genesis*, generation.]

cytology (si-to'lo-je). The study of the structure of the cell. [Gr., *kytos*, cell, + *logos*, understanding.]

cytolysin (si-to-lis-in). The specific amboceptor and complement in serum which dissolves special cells such as red blood corpuscles, bacteria, or visceral cells. [Gr., *kytos*, cell, + *lysin*.]

cytolysis (si-to'lis-is). Dissolution of cells by specific amboceptors and complements. In the case of the red blood corpuscles the term hemolysis is used, and for bacteria the term bacteriolysis is used.

cytolytic (si-to-lit'ik). A term denoting the solvent action of normal or immune serum on any cell.

cytomicrosomes (si-to-mik'ro-sōms). Minute granules contained in the protoplasm (cytoplasm) of the cell. [Gr., *kytos*, a cell, + *mikros*, small, + *soma*, body.]

cytomorphosis (si-to-mor-fo'sis). The various cellular transformations resulting in senescence or senile changes. [Gr., *kytos*, cell, + *morphosis*, transformation.]

cytopathology. The study of the pathological changes in individual cells.

cytopenia (si-to-pe'ne-ah). Diminution in the cellular elements of the blood. [Gr., *kytos*, cell, + *penes*, poor.]

cytophil'ic group. The atom complex of the amboceptor which combines with the receptor of the cell.

cytoplasm (si'to-plazm). Protoplasm. The substance of the cell body in contradistinction to that of the nucleus, or karyoplasm. [Gr., *kytos*, cell, + *plasma*, formed matter.]

Cytorrhcytes (si-tor-rik'tēs). A name given to intracellular bodies, perhaps protozoan, found in the epithelial cells in vaccinia and variola. **C. scarlatinæ.** A species found in scarlatina. **C. variolæ.** **C. vacciniæ.** A species found in the lesions of smallpox. [Gr., *kytos*, a cell, + *oryssein*, to dig.]

Cytorcytes (si-to-rik'tēs). See *Cytorrhcytes*.

cytoscopy (si-tos'ko-pe). Examination of cells. [Gr., *kytos*, cell, + *skopein*, to examine.]

- cytosin** (si'to-sin). 6 amido 2-oxypyrimidin; one of the constituents of some nucleic acids.
- cytostasis** (si-tos'ta-sis). Stasis of the white blood corpuscles, as in the incipient stage of inflammation. [Gr., *kytos*, a cell, + *stasis*, halt.]
- cytotoxin** (si-to-tox'in). A poison produced by the injections of foreign cells into the tissues of another animal. C's

- have been made from red blood corpuscles, spermatozoa, and various bacterial cells. [Gr., *kytos*, a cell, + *toxikon*, poison.]
- cytozoön** (si-to-zo'on). A cellular parasite, or one inhabiting a cell. [Gr., *kytos*, a cell, + *zoön*, a living being.]
- cyturia** (si-tu're-ah). The presence of any kind of cells in the urine. [Gr., *kytos*, a cell, + *ouron*, urine.]

D

D. For Lat., *dosis*, dose; *da*, give; *detur*, let it be given; *dexter*, right; also for *died*, *density*, *diopter*.

dacryadenalgia (dak're-ad-en-al'je-ah). Pain in the lacrimal gland. [Gr., *dakry*, a tear, + *aden*, a gland, + *algos*, pain.]

dacryadenitis (dak're-ad-en-it'is). Inflammation of the lacrimal gland. [Gr., *dakry*, a tear, + *aden*, a gland, + *itis*, inflammation.]

dacryagogus (dak're-ag-o'gus). Tear-conducting; said of the lacrimal passages. [Gr., *dakry*, a tear, + *agogos*, conducting.]

dacrydium (dak-rid'e-um). A drop (so-called tear) of gum or resin, especially scammony. [Gr., *dakrydion*.]

dacrygelosis (dak-rij-el-o'sis). Alternating laughter and weeping as in hysteria. [Gr., *dakrygelos*, smiling through tears.]

dacryocyst (dak're-o-sist). The lacrimal sac. [Gr., *dakryon*, tear, + *kystis*, sac.]

dacryocystalgia (dak're-o-sis-tal'je-ah). Pain in the lacrimal sac. [Gr., *dakry*, tear, + *kystis*, a sac, + *algos*, pain.]

dacryocystitis (dak-re-o-sis-tit'is). Inflammation of the lacrimal sac. **chronic d.** Long-standing catarrhal d. with purulent exacerbations. **d. blennorrhœica.** Suppurative inflammation of the lacrimal sac.

d. catarrhal. A disease of the lacrimal sac, characterized by a reddened and swollen condition of the mucous membrane lining the sac and canaliculi and by the secretion of an abundant clear or slightly cloudy fluid, mucus or mucopus, which can be pressed out of the puncta by the finger. **d. phlegmonosa.** Severe inflammation with constitutional symptoms and pus formation. **d. purulenta.** See *d. blennorrhœica*. **suppurative d.** D. with pus formation.

dacryocystocele (dak're-o-sis-to-sël). A hernia of the lacrimal sac. [Gr., *dakry*, a tear, + *kystis*, a sac, + *kele*, a tumor.]

dacryocystoptosis (dak're-o-sis-top-to'sis). Prolapse of the lacrimal sac. [Gr., *dakryon*, a tear, + *kystis*, a sac, + *ptosis*, a falling.]

dacryolith (dak're-o-lith). A lacrimal calculus in the duct or conjunctiva. [Gr., *dakryon*, a tear, + *lithos*, stone.]

dacryolithiasis (dak-re-o-lith-i'as-is). The

abnormal condition accompanying a dacryolith.

dacryoma (dak-re-o'mah). 1. Obstruction of inner tear duct. 2. Closure of lacrimal canal. [Gr., *dakry*, a tear, + *oma*, tumor.]

dacryon (dak're-on). The point of junction of the frontonasal and vertical lacrimomaxillary sutures at the inner angle of the orbit. [Gr., *dakryon*.]

dacryops (dak're-ops). The constant presence of tears in the eye due to a narrowing of the punctum lacrimale. [Gr., *dakry*, tear, + *ops*, eye.]

dacryopyosis (dak're-o-pi-o'sis). Suppuration of the lacrimal passages. [Gr., *dakryon*, a tear, + *pyosis*, suppuration.]

dacryostenosis (dak're-o-sten-o'sis). Stenosis or obstruction of the lacrimal duct.

dactylitis (dak'til-it'is). A chronic inflammation of the phalanges and surrounding soft parts, observed in syphilis and in poorly nourished individuals. [Gr., *daktylos*, finger, + *itis*, inflammation.]

dactylograph (dak'til-o-graf). An instrument with a keyboard designed to convey by the touch the signs of speech and words to blind deaf-mutes, or to the blind conversing with deaf-mutes. [Gr., *daktylos*, a finger, + *graphein*, to write.]

dactylology (dak'til-o'lo-je). The art of representing words by signs made with the fingers. [Gr., *daktylos*, a finger, + *logos*, a discourse.]

dactyloscopy (dak'til-os'ko-pe). Fingerprint identification. [Gr., *daktylos*, finger, + *skopein*, to examine.]

dactylospasm (dak'til-o-spasm). Cramp of a finger or toe. [Gr., *daktylos*, a finger, + *spasmos*, spasm.]

dactylosymphysis (dak'til-o-sim'fis-is). See *syndactylism*. [Gr., *daktylos*, a digit, + *sympnosis*, a growing together.]

Dahlia (dahl'yah). A genus of composite plants. The root is said to be diuretic, diaphoretic, and carminative. [Named for the Swedish botanist *Dahl*.]

dahlin (dayh'lin). 1. A reddish purple aniline dye obtained by the action of ethyl iodid on *mauveine*. 2. A white pulverulent substance obtained from several species of *Dahlia*.

dalto'nian. As described by *John Dalton*; as a person affected with color-blindness.

Dalton's law. 1. The l. that the tension of a mixture of several gases or of a gas and a vapor is equal to the sum of the tensions which each would separately possess. 2. A principle determining that the tension and the amount of the vapor which will saturate a given space at a given temperature are the same whether the space is completely empty or filled with a gas. 3. See *l. of multiple proportions*, under *law*. 4. See *l. of reciprocal proportions*, under *law*. [*John Dalton*, Eng. chemist, 1766-1844.]

daltonism (daw'l-ton-izm). See *color-blindness*, under *blindness*.

dam. Thin sheet India rubber, used to confine fluids in draining cavities in the body as in empyema and in dentistry to keep the saliva from the field of operation.

damiana (dam-e-ah'nah). A Mexican plant said to be a nerve tonic and aphrodisiac. It contains an aromatic oil, tannin, two resins, and an extractive.

dam'mar. A resin obtained from *Damara orientalis*, and used in the arts for varnishes and plasters, and also in microscopic section mounting. [Jav. and Malay, *dâmar*.]

dance. A form of exercise or diversion consisting in the execution of a definite series of rhythmical movements of the person or of the lower limbs. **St. Guy's d.** See *chorea*. **St. John's d.** See *epidemic chorea*, under *chorea*. **St. Vitus's d.** See *chorea*.

dancer's bone. A deposit of bone in the muscles of the calf of the leg, due to repeated slight injury and subsequent myositic ossification.

dan'delon. See *Taraxacum*.

dan'druff. Fine brawny scales of epidermis, occurring on the hairy parts of the body, especially the scalp, caused by dermatitis seborrhea. See *pityriasis capitis*. [Origin unknown.]

dandy fever. See *dengue*.

dangle shoulder. Hanging of the arm loose at the shoulder-joint, due to atrophy of the muscles from poliomyelitis and stretching of the capsular ligaments.

dansomania (dan-so-ma'ne-ah). See *dancing mania*, under *mania*. [Fr., *danse*, dance, + Gr., *mania*, madness.]

Danysz's effect. The decrease in the neutralizing effect of antitoxin when the toxin is added in portions with an interval of time between each addition.

Daphne (daf'ne). The bay tree or laurel tree. **D. gnidium.** Flax-leaved *D.*; indigenous to southern Europe, furnishing a portion of the mezereum of commerce. All parts of the plant are poisonous. **D. laureola.** Dwarf bay; formerly recognized in the Br. Ph. as one of the sources of mezereum, though its root is inferior in acrimony. **D. mezereon**, **D. mezereum.** The mezereon; a species cultivated in Europe. The root is the source of mezereum of the U. S. Ph. The berries are

sometimes used as a drastic purgative. [Gr., *daphne*, laurel or bay tree.]

daphnelion (daf-ne-le'on). Laurel oil, bay-tree oil. [Gr., *daphnelaion*.]

daphnetin (daf'net-in). A crystalline product resulting from the action of sulphuric or hydrochloric acid on daphnin.

daphnin (daf'nin). The irritant principle of mezereum.

dark ground examination. See under *examination*.

d'Arsonval's cur'rents. High tension electric currents applied to the body to destroy microorganisms and to promote metabolism. **d'A's galvanometer.** A form of galvanometer in which a coil of delicate wire is suspended between the poles of a fixed magnet. The passage of a current through the suspended coil causes it to turn and the deflection is indicated by a small mirror attached to the coil. The reflection of a scale in this mirror gives the angle of deviation.

dar'tos. Syn.: *tunica darta*. The subcutaneous muscular layer of the scrotum continuous above with the superficial fascia of the abdomen and below with the superficial perineal fascia. [Gr., *dartos*, flayed, from *derein*, to flay.]

Datura (da-tu'rah). Thorn apple, Jimson weed, Jamestown weed; a genus of solanaceous herbs. **D. stramonium.** The common thorn apple. The leaves constitute the stramonium of the U. S. Ph. and the Br. Ph. The plant contains two alkaloids, atropin and hyoscyamin, upon which its action depends. **D. tatula.** A South American species. By some authorities it is considered a variety of *D. stramonium*.

daturin (da-tu'rin). An alkaloid contained in *Datura stramonium*, identical with atropin.

Daucus carota (daw'kus kar-o'ta). The carrot; the root of the cultivated variety is stimulant, and has some reputation as an application to ill-conditioned ulcers, etc. [Gr., *daukon*, *daukos*.]

daugh'ter cell. See under *cell*.

Davainea. See *tenia*. **D. asiatica.** See *Taenia asiatica*. **D. madagascariensis.** See *Taenia madagascariensis*.

day-blindness. See *nyctalopia*.

de-. A Latin particle denoting down or from.

dead (ded). 1. Destitute of life, properly speaking, after having once possessed it.

2. Figuratively, paralyzed, especially as to sensation; said of a part as in the expression *d. fingers*. 3. Dull in appearance. **d. fingers.** Local pallor, coldness, and asphyxia of the fingers; seen usually in nervous young women. **d. house.** A mortuary; a room for the temporary reception of dead bodies. **d. space.** A name given to the volume of air in the trachea and bronchi, because it does not participate in the respiratory exchange between air and blood. [Ang.-Sax.]

dead'ly. 1. Sure or very likely to cause death. 2. Deathlike. **d. nightshade.** See *Atropa belladonna*, under *Atropa*.

deaf. Having the sense of hearing im-

- paired or demolished. **d.-mute.** One who is both deaf and dumb. **d. mutism.** Absence of the power of speech in consequence of congenital or acquired deafness; the condition of being both d. and dumb. [Ang.-Sax.]
- deaf'ness.** The state of being deaf. **hysterical d.** D. occurring suddenly in severe cases of hysteria and independent of any local disease in the ear. **intellectual d.** See *psychical d.* **nervous d.** That form of d. in which the cause lies in a primary affection of the auditory nerve or of the labyrinth or of both. **psychical d.** A condition in which, although sounds are heard, their significance is not recognized; observed in cases of lesion of the gyrus inframarginalis. **speech d.** A condition differing from word d. in that the faculty of repeating and writing after dictation is preserved. **word d.** Syn.: *sensory aphasia.* Of Kussmaul, that variety of psychical d. in which, while impressions of sound can still be perceived, spoken words can not be understood.
- dealcoholization** (de-al'ko-hol-i-za'shun). The removal of alcohol from an object as in microscopic work.
- deamidizing enzymes.** See *enzyme.*
- deammoniated** (de-am-mo'ni-a-ted). Deprived of ammonia. [Lat., *de*, priv., + *ammonia.*]
- Deane's gelatin.** A mixture of gelatin and honey devised by Deane for mounting microscopic objects. It is now replaced by glycerin jelly.
- death** (deth). The cessation of life, also the state of being dead (said of the entire organism or of a part). **apparent d.** See *asphyxia* and *asphyxia pallida.* **black d.** See *bubonic plague.* **d. certificate,** revised United States standard of, see in *appendix*, page 920. **d. rate.** The proportion of d's occurring among a certain population or a given class during a specified time. **d. rattle.** The rattling sound caused by the passage of air through the mucus which usually collects in the throat of the dying or of the semimoribund. In the latter it is popularly regarded as a certain sign of approaching death. **d. struggle.** See *agony* (2d def.). **international list of causes of d.** See in *appendix*, page 920. **local d.** Gangrene, mortification. **natural d.** D. not caused by accident or violence. **pathological d.** D. from pathological changes or injuries to the tissue or viscera. **signs of d.** Cessation of respiration and of the heart-beat, opacity of the cornea, rigor mortis, lividity or pallor, decomposition and putrefaction, relaxation of the sphincters, and loss of tissue elasticity. **somatic d.** D. of the entire organism as opposed to localized d., seen in necrosis or gangrene. [Ang.-Sax., *death.*]
- debil'ity.** Weakness of tonicity in the functions or the organs of the body. **nervous d.** See *neurasthenia.* [Lat., *debilitas.*]
- deca-, dec-.** Prefix for the Gr., *deka*, ten. **decaedral** (dek-e'dral). Having ten sides; said of crystals. [Gr., *deka*, ten, + *edra*, a base.]
- decagram** (dek'ag-ram). A weight of 10 grams, equal to about 154.32 grains. [Gr., *deka*, ten, + *gramma*, a small weight.]
- decalcification** (de-kal-si-fi-ka'shun). The loss of lime salts in bone during inflammation. The artificial removal by a solution of nitric acid in specimens removed for microscopic study in order to soften them for section cutting.
- decalcified** (de-kal'si-fid). Deprived of calcareous matter.
- decalcify** (de-kal'si-fi-). To soften bone specimens for histological or pathological study by a solution of hydrochloric, nitric, or other acids.
- decaliter** (dek'al-e-ter). A measure of 10 liters, equal to about 610.28 cubic inches.
- decameter** (dek'am-e-ter). A measure of 10 meters, equal to about 393.71 inches. [Gr., *deka*, ten, + *metron*, a measure.]
- decane** (dek'an). A hydrocarbon of the paraffins, containing ten atoms of carbon, $C_{10}H_{22}$. [Gr., *deka*, ten.]
- decant'.** To separate a liquid from a deposit by slowly slanting the vessel and allowing the liquid to run out. [Lat., *de*, down, + *canthus*, the tire of a wheel.]
- decantation** (de-kan-ta'shun). The gentle pouring off of a liquid from its sediment. [Lat., *de*, from, + *canthus*, the tire of a wheel.]
- decapitation** (de-kap-it-a'shun). That variety of embryotomy which consists in separating the head of the fetus from the trunk, to facilitate delivery. [Lat., *decapitare*, to behead.]
- decap'itator.** An instrument for decapitating the fetus. [Lat., *de*, from, + *caput*, head.]
- decapsulation** (de-cap-su-la'tion). Removal of more or less of the capsule of an organ.
- decarbonization, decarburization, decarburization** (de-kar-bon-iz-a'shun, de-kar-bu-ra'shun, de-kar-bu-riz-a'shun). The action or process of depriving a substance of carbon.
- decay'.** A decline of the normal condition of a substance or of the whole or a part of an organism, especially putrefactive decomposition; also the condition of having undergone such a decline; figuratively, the gradual failure of health and strength incident to old age.
- decentered** (de-sen'terd). Not having a common focus.
- dechlorization** (de-klo-ri-za'shun). Reduction of the amount of sodium chlorid in the diet.
- deci-.** A prefix from the shortened Lat., *decimus*, tenth.
- decidua** (de-sid'u-ah). An adventitious envelope formed around the fertilized ovum on its entrance into the uterine cavity, consisting of the mucous membrane lining the body of the uterus in a state of heightened development and thickening; so called because it is eventually cast off. **d. protrusa, d. reflexa.** That portion of the d. which, being continuous with the d. vera, covers the ovum as it projects

into the uterine cavity, and finally, coming to lie in contact with the *d. vera*, constitutes the inner layer of the decidual sac taken as a whole. **d. serotina**. The layer or layers of decidual substance which intervene between the developed placenta and the uterine wall. **d. tunica uteri**, **d. uteri**, **d. uterina**, **d. vera**. That portion of the mucous membrane lining the cavity of the uterus, which, when the fecundated ovum comes to be imbedded in the membrane, continues to line the general cavity of the uterus in every part except that occupied by the attachment of the ovum. **placental d.**, **placental d. serotina**. That layer of the *d. serotina* which covers the cotyledons. **uterine d. serotina**. The outer portion of the *d. serotina*. [Lat., *decidua*, from *de*, from, + *cadere*, to fall.]

decid'ual. Pertaining to or resembling the decidua.

decidualitis (de-sid-u-al-'tis). A bacterial infection of the decidua.

deciduoma (de-sid-u-o'mah). See *syncytioma*. **d. malignum**. See *chorio-epithelioma*.

deciduous (de-sid'u-us). Applied to parts that fall off or are shed during life, as the first teeth which are shed in childhood, and the hair. [Lat., *deciduus*, that which falls down or off.]

decigram (des'ig-ram). A weight of one-tenth of a gram, equal to about 1.54 grain. [Gr., *dekate*, a tenth part, + *gramma*, a small weight.]

deciliter (des'i-le-ter). A measure of the tenth of a liter; 6.1 cu. in. [Gr., *dekate*, a tenth part, + *liter*.]

decimeter (des'im-e-ter). A measure of one-tenth of a meter, equal to about 3.93 inches.

decinormal (des-e-nor'mal). Having one-tenth the standard strength; said of solutions. [Lat., *decimus*, tenth, + *normalis*, according to rule.]

decka. See *deca*.

declination (de-kli-na'shun). 1. Deviation, variation. In ophthalmology, normal *d.* of the retinal meridians is a deviation of the vertical or any other meridian of the eye from the corresponding meridian of external space when the line of regard of the eye is directed parallel to the median plane and in the horizontal plane, the head being in the exact primary position. The term is in no sense synonymous with torsion [G. T. Stevens]. 2. The declining period of a disease. [Lat., *declinare*, to decline.]

decline'. 1. A serious deterioration of the bodily powers in consequence of old age or of chronic organic disease. 2. A stage of decrease (as of a fever).

declive (de-kliv'). A portion of the cerebellum. [Fr., *déclive*, down.]

decoction (de-kok'shun). 1. The act or process of boiling. 2. A preparation made by boiling one or more substances in water. The U. S. Ph. directs that the strength of *d.*s shall be 5 per cent., unless otherwise specified. **Zittmann's d.** See *decoctio sarsaparillae compositum*,

under *sarsaparilla*. [Lat., *decoctum*, from *de*, down, + *coquere*, to boil.]

decolorant (de-kol'or-ant). A bleaching or clarifying agent.

decoloratio (de-kol-or-ah'te-o). See *decoloration*. **d. argentea**. See *argyria-sis*.

decoloration (de-kol-or-a'shun). The removal or the absence of color.

decompose (de-kom-pôs'). 1. To reduce a compound body to its simpler constituents. 2. To putrefy from the presence of bacteria.

decomposition (de-kom-po-sish'on). The process of reducing a compound body to its simpler constituents. **double d.** A chemical change in which the molecules of two interacting compounds exchange a portion of their constituents. **hydrolytic d.** 1. The more or less complete dissolution in water. 2. A chemical change in substances, brought about by the addition of one molecule of water. **simple d.** A chemical change by which the molecule of a single compound either breaks up into its simpler constituents, or exchanges one of these constituents for the entire molecule of another body. [Lat., *de*, priv., + *componere*, to compound.]

decortication (de-kor-ti-ka'shun). Removal of the outer envelope of a root, fruit, seed, or organ. [Lat., *de*, from, + *cortex*, bark.]

decrement (dek're-ment). The declining stage of a disease. [Lat., *decrementum*, decrease.]

decubitus (de-ku'bit-us). 1. The manner or the posture of lying in bed. 2. A bed-sore. [Lat., *decumbere*, to lie down.]

decumbent, decubation (de-kum'bent, de-ku-ba'shun). The act of lying down.

decussate (de'kus-ät). To cross, to intersect so as to form a figure like the letter X. In botany, the alternations of position of leaves, whereby a leaf of one whorl stands over the sinus of the one immediately below it. [Lat., *decussatus*, pp. stem of *decussare*, to divide in the form of a cross.]

decussation (de-kus-sa'shun). A crossing of structures in the form of the letter X. See *chiasm*. **d. of the interolivary stratum**. See *sensory d. of the pyramids*. **d. of the optic nerve**. See *chiasm. d. of the pyramids*. The *d.* formed by the anterior pyramids of the medulla oblongata as they separate each into from three to six bundles of fibers which cross obliquely downward to the opposite side of the anterior median fissure, interlacing with similar bundles from the opposite pyramids. Having crossed from one side of the medulla to the other, these bundles become reunited and penetrate more deeply into the spinal cord, where they occupy the posterior part of the lateral columns of the cord. **fountain d.** A *d.* such as that of the nerve fibers in the cortex of the anterior corpora quadrigemina. **piniform d.** See *sensory d. of the pyramids*. **pyramidal d.** See *d. of the pyramids*. **sensory d.**

of the pyramids. The crossing of fibers derived from the funiculi cuneati of the spinal cord which takes place in the upper part of the medulla oblongata. **upper pyramidal d.** See *sensory d. of the pyramids*. [Lat., *decussare*, to place crosswise in the form of an X, from *decem*, ten, + *as*, a coin stamped with the numeral X.]

dededition (de-den-tish'on). The shedding of teeth. [Lat., *de*, priv., + *dens*, tooth.]

defecation (def-e-ka'shun). The discharge of fecal matter from the intestine.

defect'. A failure, a deficiency, a deformity. [Lat., *defectus*, a failure, a lack.]

defective. A person who is deficient in one or more of the physical or mental powers. [Lat., *defectus*, a failure, a lack.]

defemina'tion. Sexual inversion in a woman. A change of character so that her feelings and inclinations become those of a man. [Lat., *de*, priv., + *femina*, woman.]

deferent. Passing or leading down; conveying anything downward. See *vas deferens*. [Lat., *deferens*, from *de*, from, + *ferre*, to bear.]

deferent'ial. Pertaining to or accompanying the vas deferens.

defervescence (de-fer-ves'senz). The decline of a fever. [Lat., *defervescere*, to become calm.]

defibrinated, defibrinized (de-fi-brin-a'ted, de-fi'brin-ized). Deprived of fibrin.

definition (def-in-ish'on). In microscopy, the capability of an object glass of bringing out a sharply defined image of an object. [Lat., *definitio*.]

deflagration (de-flag-ra'shun). A sudden, sharp combustion, usually with a crackling sound; also the setting up of such combustion by friction, etc. [Lat., *deflagrare*, to burn furiously.]

defloration (de-flo-ra'shun). The destruction of physical virginity by coitus. [Lat., *de*, priv., + *flos*, *floris*, flower.]

deflorescence (def-lor-es'senz). The stage of eruption disappearance in the exanthemata.

deformans (de-form'ans). Deforming. **arthritis d.** See *rheumatoid arthritis*, under *arthritis*. [Lat., *deformare*, to deform.]

deforma'tion. The production of deformity. [Lat., *deformatio*.]

deformed pelvis. See *contracted pelvis*, under *pelvis*.

deformity (de-form'it-e). A morbid alteration in the form of a part or organ. [Lat., *deformitas*, from *de*, without, + *forma*, form.]

defunct', defunct'us. Dead. [Lat., *defungi*, to be through with.]

defurfuration (de-fur-fu-ra'shun). The formation and shedding of fine, branlike scales from the skin. [Lat., *de*, from, + *furfur*, bran.]

defuselation (de-fu-sel-a'shun). The process of freeing spirit from fusel oil.

defu'sion. See *decantation*.

degeneracy (de-jen'er-a-se). Degenera-

tion, in the sense of an absence or loss of that degree of development or energy seen in the ancestry of an organism; reversion to a lower type.

degenerate (de-jen'er-ät). One who shows deviation from the normal type in mental attributes; deviate, a better term, since there are high and low deviates, hence superior to or inferior to normal. [Lat., *degeneratus*, departed from its race or kind, from *de*, from, + *genus*, *generis*, race, kind.]

degeneration (de-jen-er-a'shun). 1. Loss of race characteristics. 2. A retrogressive change in molecular structure of the cells of a tissue or organ, producing an impairment of function. **adipose d.** See *fatty d.* **albuminoid d.** A d. in which bodies are formed which are compounds of protein with other substances, as in mucoid degeneration, combining a protein and a carbohydrate. **albuminous d.** Syn.: *cloudy swelling*. A d. characterized by a deposit of fine proteid granules in the cells of the heart muscle, the kidney, and the liver, following chemical poisons and the infectious diseases. **amyloid d.** A d. characterized by the infiltration of the media of arteries and the tissue of the liver, kidney, spleen, and other viscera by a glycoprotein consisting of histon combined with chondroitin-sulphuric acid. **ascending d.** The d. upwards after destructive lesions of centripetal nerve fibers. **calcareous d.** The impregnation of the tissues and the gland secretions with calcium or magnesium salts, especially carbonates and phosphates. **caseous d.** See *caseation*. **cheesy d.** See *caseation*. **cholesterin d.** Waxy d., so called on account of the abundance of cholesterin in the waxy material. **chondroid d.** The proper term for *amyloid d.* **colloid d.** The deposit of an increased amount of a colloid composed of protein, consisting of globulin and iodothyron in tumors of the thyroid gland and pituitary body. **cystic d.** The formation of a number of disseminated cysts in an organ or its enlargement in the form of a cyst, as in the kidney. **descending d.** In neuropathology, the destruction and disintegration of nerve fibers from above downward, i. e., from the central or cerebral extremity of such fibers toward their peripheral extremity. This process is caused by the presence of some lesion (called primary) which interrupts the continuity of the degenerating fibers and marks the upper limit of the degeneration. **earthy d.** See *calcareous d.* and *calcification*. **elastoid d.** A d. of the internal lamina of the arteries during involution of the uterus after delivery. **fascicular d.** An atrophic process in paralyzed muscles due to injury or disease of the motor ganglion cells of the central tube of gray matter of the spinal cord or of the efferent fibers which connect them with the muscles. **fatty d.** The deposit of minute fat granules in the cytoplasm of the cells of the liver, kidney, heart muscle, and endothelial cells

- of blood vessels, accompanied by degenerative changes in the nucleus, and caused by chemical poisons, malnutrition, and bacterial infections. **gelatiniform d.** See *colloid d.* **granular d.** A d. which is usually the result of autolysis of infarctions, thrombi, etc., and the degeneration of the epithelium of the tubules of the kidney, producing leucin, tyrosin, peptones and albuminoids. **gray d.** D. resulting from chronic inflammation in nervous tissue, its peculiarity being the gray color which is apparent. **hemato-hyaloid d.** A d. forming hyaline thrombi in blood vessels from conglutinated red corpuscles, blood platelets, or fibrin fibers. **hyaline d.** The deposit of a hyaline material of a glycoprotein nature in the interstitial tissue of arteries, the kidney, ovary, and myocardium, and also in granulomata and the parenchymatous cells of various organs and malignant tumors. The material differs from amyloid in showing no specific reaction with iodine. **hydropic d.** The formation of vacuoles containing a serous fluid in the cytoplasm of cells, as in the lower layers of the epithelium of the skin in smallpox. **keratoid d.** A pathological change of epithelial cells into keratin. **lardaceous d.** See *amyloid d.* **lipoid d.** A d. characterized by the deposit of doubly refractive globules of cholesterolin oleate in atheroma, cancer cells, and nerve tissue. **mucoïd d.** A variety of d. occurring usually in the connective tissue of senile atrophic organs, myxedema, sarcomata, fibromata, carcinomata, myxomata, and ovarian cysts. **myelinic d.** The breaking down of tissue cells into myelin; a process sometimes occurring coincidentally with fatty d. of the kidney and liver, and, in the normal process, in the adrenal and mammary gland. The material is probably a lipoid body, allied to a soap and containing oleic acid. **myxomatous d.** See *mucoïd d.* **Nissl d.** A d. of a nerve cell with loss of the Nissl bodies. **ossific d.** See *ossification.* **parenchymatous d.** See *albuminoid d.* **pigmentary d.** Pertaining to or containing pigment. **senile d.** The various degenerative changes of old age. **uratic d.** The invasion of the tissues by deposits of uric acid and urates. **Virchow's d.** See *amyloid d.* **vitreous d.** See *Zenker's d.* **wallerian d.** The d. of a nerve fiber severed from its nutritive center. **waxy d.** See *amyloid d.* **Zenker's d.** A waxy d. affecting voluntary muscle and heart muscle. [Lat., *degenerare*, to degenerate.]
- deglutition** (de-glu-tish'un). The act of swallowing; effected by a series of movements, partly automatic, partly under the control of the will, by which a substance is carried from the mouth into the stomach. **d. center.** See under *center.* **difficult d.** See *dysphagia.* [Lat., *deglutitio*.]
- degree**. One of the equal parts into which a circle or a scale, as of a thermometer, is divided.
- degustation** (de-gus-ta'shun). A tasting. [Lat., *degustare*, to taste.]
- degutt**. Birch tar.
- dehiscence** (de-his'senz). The bursting of a follicle, especially a graafian follicle.
- dehumanization** (de-hu-man-i-za'shun). The more or less complete loss of human characteristics, mental or physical. Vaccine lymph is said to be humanized when it has been propagated through one or more human beings and to be dehumanized, i. e., deprived of some supposed modification impressed upon it by the human system, by retrovaccination in animals. [Lat., *de*, priv., + *humanus*, human.]
- dehydration** (de-hi-dra-ta'shun). The process of depriving a compound of its hydrogen by reducing agents, as by the action of strong acids on hydrocarbons or by heating.
- dehydration** (de-hi-dra'shun). The act or process of depriving a chemical compound of water or of the elements of water. [Lat., *de*, priv., + Gr., *ydor*, water.]
- Deiters's nucleus.** A collection of cells situated back of the acoustic nucleus.
- dejecta** (de-jek'tah). Pl. The alvine evacuations.
- dejection**. 1. A condition of mental depression, a cast-down feeling. 2. The act of having a movement from the bowels. 3. The matter which is discharged in an intestinal evacuation. [Lat., *dejacere*, to cast down.]
- delacrimation** (de-lak-ri-ma'shun). See *epiphora*.
- Delboeuf's law.** The l. that if in any species a number of individuals, bearing a ratio not infinitely small to the entire number of births, are in every generation born with a particular variation which is neither beneficial nor injurious, and if it is not counteracted by reversion, the proportion of the new variety to the original form will increase till it approaches indefinitely near to equality.
- del el maia.** A disease prevalent in Egypt; regarded by some as an inflammation of the brain, by others as a pernicious fever.
- deleterion, deleterium** (del-e-te're-on, del-e-te're-um). A deadly poison or any means of destruction. [Gr., *deleterios*.]
- deleterious** (del-e-te're-us). That which does harm; injurious. [Gr., *deleterios*.]
- Delhi boil.** See *Oriental sore*.
- deligation** (del-ig-a'shun). The tying or ligaturing of a blood vessel, especially in continuity. [Lat., *deligare*, to tie up.]
- delimitation** (de-lim-it-a'shun). In physical diagnosis, the determination of the limits of an area, region, or organ, with the view of ascertaining the existence and degree of a morbid state or process.
- delin'iment.** A liniment.
- deliquescence** (del-ik-wes'ens). The condition of becoming liquefied as a result of the absorption of water from the air. [Lat., *deliquescere*, to grow moist.]
- deliquescent** (del-i-ques'ent). In a state of, or prone to undergo, deliquescence.
- delir'ious.** Affected with delirium.

delirium (de-lir'e-um). A state of mental excitement characterized by restlessness, incoherence of speech, and various sensory illusions. It occurs in many psychoses or in consequence of alcoholic or other poisoning, fever, severe injuries, etc. **acute d.** Acute mania, developing rapidly, resulting in a speedy cure or in death. **chronic d.** D. of long duration, unaccompanied by fever. It is the distinctive and essential characteristic of chronic psychoses. **d. constantium.** D. characterized by the continual repetition of the same fixed idea in insane patients having fever. **d. cordis.** Tumultuous action of the heart. **d. epilepticum.** A psychic derangement, either transitory and following an epileptic fit, or periodical and appearing under various epileptic forms instead of such a fit. **d. e potu.** See *d. tremens*. **d. ex inanitione.** D. from inanition, arising in cases of sub-acute and chronic anemia. It is of a very maniacal character and, in fever cases, most frequently breaks out on the decline of the fever. **d. grandiosum.** A form of d. characterized by a morbid exaggeration of everything relating to the personality of the patient. **d. hysterium.** Hysterical excitement. **d. metabolicum.** D. in which the patient believes that the persons and objects about him are not represented in their real characters, that they are placed there to watch him, and that he himself does not bear his real name. This form of d. may occur in maniacal excitement or in depressive d. of persecution. **d. mussitans.** Excitement during which the patient murmurs unintelligible words to himself. **d. nervosum traumaticum.** A condition of high nervous exaltation occurring after an injury or a surgical operation in nervous and hysterical persons. **d. persecutionis.** The delusional state of being persecuted or of being mysteriously affected by some subtle force. **d. tremens.** A morbid condition due to the excessive use of alcoholic liquors, being the expression of their cumulative action. **febrile d.** A condition of d. which is present with certain acute diseases, fevers, and inflammations of internal viscera. It may also follow severe injuries, and poisoning from certain substances. According to its characteristics, it is known as muttering or typhoid d., and violent or furious d. **maniacal d.** Acute excitement. Some of its main characteristics are wealth of conception, rapidity of perception, uncontrollable flow of language, loss of the reflective power, and loss of moral consciousness. **partial d.** D. affecting only a part of the mental faculties. Certain modes of reasoning, certain acts, are unreasonable, while others are reasonable. **toxic d.** D. caused by the presence in the body of some poisonous substance, such as alcohol, belladonna, opium, etc. **typhoid d.** The low, muttering d. of the typhoid state. **violent d.** A form of febrile d. seen in the early stage of fever; accompanied

with great excitement, and often with manifestation of great strength. [Lat., *delirare*, to be out of one's head.]

delitescence (de-lit-es'enz). An unusually complete and speedy resolution of an inflammation. [Lat., *delitescere*, to be hidden.]

deliver (de-liv'er). To disburden a pregnant woman of her child. [Fr., *délivrer*, to set free.]

delivery (de-liv'er-e). 1. The act of bringing forth a fetus. 2. The mode in which a vessel or tube gives exit to a liquid, a gas, or a powder. **premature d.** The occurrence of d. at any time between the earliest period of viability and the maturity of the fetus; in the human subject, between the twenty-eighth and thirty-eighth weeks of gestation. See *abortion* and *miscarriage*. [Fr., *délivrer*, to set free.]

delphinin (del'fin-in). An unstable, crystallizable alkaloid, $C_{21}H_{35}NO_2$, obtained from *Delphinium staphisagria*. It has been used internally as an antipyretic and topically as an analgetic. It is very poisonous. The hydrochlorid has been used in asthma and neuralgia.

Delphinium (del-fin'e-um). A genus of the *Ranunculaceae*. **D. consolida.** Branching larkspur; a European species now naturalized in the United States. Aconitic acid exists in its expressed juice. **D. staphisagria.** Stavesacre.

delphinoidin (del-fin-oy'din). An alkaloid occurring in the seed of *Delphinium staphisagria*.

del'phisin. A principle found in *Delphinium staphisagria*, having an action somewhat resembling that of aconitin.

deltoid (del'toyd). Having a triangular outline like that of the Greek letter Δ ; or pertaining to the d. muscle; as a n., any structure or area of a triangular shape. **d. muscle.** See *table of muscles*, under *muscle*. [Gr., *delta*, the letter D, + *eidos*, resemblance.]

de lunat'ico inquirendo. The process prescribed by law to determine the sanity (legal status only) of an alleged incompetent person. [Lat.]

delu'sion. A false and uncorrectable association of ideas, seen in many psychoses. **d. of persecution.** See *delirium persecutionis*, under *delirium*. **expansive d.** A d. of an expansive nature, e. g., one that pertains to ambitious, erotic, or religious subjects. **persecutory d.** See *delirium persecutionis*. **systematized d.** A d. which resembles a sane conception, in which there may be a correlation to the subject's surroundings, but in which the reasoning is false, the deductions being faulty. **unsystematized d.** A d. in which there is no correlation between the conception and the subject's surroundings. [Lat., *deludere*, to cheat.]

demagnetization (de'mag-net-iz-a'shun). The process of depriving an object of magnetism.

demagnetize (de-mag'net-iz). To deprive of magnetic properties.

demanous (dem'an-us). See *acheirous*. [Lat., *de*, priv., + *manus*, hand.]

demarcation (de-mar-ka'shun). 1. A line of separation or division. 2. The act of setting a line of division. 3. The line of separation between the healthy and the gangrenous tissue. **d. current**. See under *current*. [Lat., *demarcare*, to mark out the bounds of.]

de'mens. Insane. [Lat., *de*, priv., + *mens*, mind.]

dement'ed. Affected with dementia.

dementia (de-men'sha). A general term denoting permanent mental impairment. Many recoverable acute deliria, or acute confusions, should not be termed dementia. **alcoholic d.** D. occurring in the terminal period of chronic alcoholism. **apathetic d.** A mental state in which all psychic life is reduced to a minimum. The memory is almost completely lost. Sensibility is diminished both to pain and to temperature. This form often constitutes the terminal period of the disease in which active d. has been present. **catatonic d.** A sub-group of dementia precox. **chronic d.** D. of considerable duration. It includes the ordinary forms. **d. apoplectica**. Alteration and diminution of the mental faculties due to cerebral lesions, such as hemorrhage, softening, or tumors. **d. congenita**, **d. naturalis**. Natural or congenital d.; in English law, idiocy. **d. paralytica**. Another term for general paresis. **d. paranoides**. A term used by Kraepelin to distinguish a group of dementia precox patients with pronounced paranoid tendencies. **epileptic d.** Mental loss due to epilepsy. **organic d.** D. due to material lesions of the nervous centers, more especially of those parts of the centers that preside over ideation. **postfebrile d.** D. following acute and severe infectious diseases, such as typhoid fever, variola, etc. **d. precox of Kraepelin**. A chronic psychosis of youth with characteristic and bizarre signs. **secondary d.** D. following some primary mental disease, such as melancholia, mania, acute d., etc. **senile d.** A progressive and primary deterioration of the mind resulting from senile deterioration of the brain. **syphilitic d.** A chronic disorder in which, in the majority of cases, lesions of a syphilitic character are demonstrated as a sufficient cause. It is usually accompanied by paralysis of one or more nerves. Cerebral syphilis or general paresis are better terms. [Lat., *de*, priv., + *mens*, mind.]

demi-. A prefix from the Fr. *demi* and the Lat. *dimidius*, half.

demi'facet (dem'e-fas-et). One-half of a facet, into the composition of which two bones enter.

demilune (dem'il-un). A collection of marginal cells, in the form of a crescent or half moon, which is especially observable in the submaxillary gland of the dog. [Lat., *demi*, half, + *luna*, moon.]

demimonstrosity (dem-e-mon-stros'it-e). A congenital deformity that does not

cause noteworthy functional trouble. [Lat., *demi*, half, + *monstruosus*, monstrous.]

demissio (de-mis'se-o). A lowering; an abatement. **d. animi**. Depression of spirits. [Lat., *demittere*, to lower.]

Demodex (dem'od-ecks). A genus of the class *Arachnida* and the order *Acarina*, which includes the mites and the ticks. **D. folliculorum**. The pimple mite; a species that frequently inhabits the hair sacs and sebaceous follicles; especially those of the nose and ears and in persons with greasy skins and such as have acne. In man its presence is associated with no symptoms except occasional comedones and inflammation of the margins of the eyelids; in the dog, fox, cat, sheep, horse, cow, etc., in which it differs slightly from the parasite found in man, it causes irritation and inflammation of the skin and loss of hair. Three other varieties are *D. canis*, *D. phylloides* of the pig, and *D. bovis*. [Gr., *demos*, fat, + *dex*, a wood-worm.]

demography, demology (de-mog'ra-fe, de-mol'o-je). The statistical study of human communities, especially in regard to births, marriages, and deaths, and physical, moral, and intellectual development. [Gr., *demos*, the people, + *graphein*, to write, or + *logos*, understanding.]

demon'ia, demonoma'nia, demo'no-melancho'lia. An old term to denote certain psychotic symptoms with pronounced ideas of being possessed by evil spirits. [Gr., *daemon*, a devil, + *mania*, madness, or + *melancholia*, black bile.]

demoniacal (de-mo-ni'ak-al). Pertaining to evil spirits. See *d. possession*, under *possession*. [Gr., *daemon*, a demon.]

demulcent (de-mul'sent). Lubricating, exerting a soothing local action (said of drugs). [Lat., *demulcere*, to stroke softly.]

de Musset's sign. Rhythmical nutation (with which Alfred de Musset suffered), considered as a s. of some aortic lesion.

denarcotize (de-nar'ko-tiz). Literally, to deprive of narcotic action, but the so-called denarcotized tincture of opium is deprived of its odoriferous principles and is less nauseating than tincture of opium. The process formerly employed also removed the narcotin.

denaturalization (de-nat-u-ral-iz-a'shun). The process of rendering an article unfit to eat or drink, while preserving its value for use in the arts, and for industrial purposes.

denature (de-na'tür). To change the nature of a substance, as alcohol, so that it is unfit for human consumption. [Fr., *dénaturer*.]

dena'tured. Subjected to a process of denaturalization.

den'drite. One of the branched, protoplasmic extensions or processes of a neuron. There are usually several from each neuron; they divide dichotomously, form extensive arborizations, and serve to establish relations with other nerve cells. [Gr., *dendron*, a tree.]

den'dro-, dend-. Combining form of the Gr., *dendron*, tree.

dengue (den'gwé). Syn.: *breakbone fever*, *dandy fever*. Literally, affectation, or the manner of a dandy; dandy fever (from the patient's constrained attitude, due to dread of motion). An acute febrile disease occurring as an epidemic in the East and West Indies and in the southern United States, characterized by severe pains, swelling, and stiffness of the joints, gastric disturbance, and a cutaneous exanthem. D. is often attended with severe itching, and may or may not be followed by desquamation. [Sp.]

denida'tion. The process by which the superficial portion of the mucous membrane of the body of the uterus, after having become tumid and succulent (fit to form a nest for the fertilized ovum) during menstruation, is said to be disintegrated and cast off. [Lat., *de*, priv., + *nidus*, nest.]

dens, pl., *dentes*. A tooth, also a structure in the form of a tooth. The odontoid process [B. N. A.]. **dentes appa- rentes**, **dentes habenulae**. The so-called teeth found in that portion of the habenula perforata of Corti's organ which is called the zona denticulata, and which extends from the crista spiralis to the outer end of Corti's organ. **d. bicuspidatus**, **d. bicuspidis**. A bicuspid tooth. **d. buccalis**. A premolar tooth. **dentes decidui**. See *deciduous teeth*, under *tooth*. **d. epistrophei**, **d. epistropheus**. The odontoid process of the axis. **dentes fibrillarum lentis**. Toothlike processes found upon the lateral faces of the fibers of the crystalline lens. **d. incisivus**, **d. incisor**. An incisor tooth. **dentes infantiles**. See *milk teeth*, under *tooth*. **d. molaris**. A molar tooth. **d. mordens**. A canine tooth. **dentes permanentes**. See *permanent teeth*, under *tooth*. **d. premolaris**. A premolar tooth. **d. sapientiae**. A wisdom tooth. **dentes temporarii**. See *milk teeth*, under *tooth*. [Lat., *dens*, tooth, from Gr., *edein*, to eat.]

densimeter (den-sim'et-er). A hydrometer or other similar instrument for ascertaining the specific gravity of liquids. [Lat., *densus*, dense, + Gr., *metron*, a measure.]

densimet'ric. Pertaining to the use of the densimeter. **d. analysis**. See under *analysis*.

density (den'si-te). 1. In physics and chemistry, the relative weight of a substance as compared with that of some other substance of equal bulk. 2. The quality of being dense. **vapor d.** The specific gravity of a vapor. [Lat., *densus*, dense, thick.]

den'tal. Pertaining to the teeth. **d. curve**. The curve or bow of the line of the teeth in the jaw. The different portions of the curve are described as follows: *alignment c.* The line passing through the center of the teeth from the middle line through the last molar. *buccal c.* The curve extending from the cuspid to

the third molar. *compensating c.* The occlusal line of bicuspid and molars. *labial c.* The curve extending from cuspid to cuspid. **d. disk**. A thin, circular piece of paper, or cloth, or other substance charged with abrasive powder for cutting or polishing teeth and fillings. **d. engine**. A machine operated with foot power, or by an electric or a water motor, to give a swift rotary motion to drills, burs, and burnishers.

dentaphone (den'ta-fōn). An instrument devised for improving the hearing power of the deaf, by means of sound waves conducted through the teeth to the bones of the head, and through them to the labyrinth. [Lat., *dens*, tooth, + Gr., *phone*, a sound of voice.]

dent'ate. Toothed; having short triangular divisions of the margin. [Lat., *dentatus*, toothed.]

den'ti-. Combining form of Lat., *dens*, *dentis*, tooth.

dentic'ulate. Finely toothed. [Lat., *denticulatus*.]

den'tiform. Having the form of a tooth or of teeth. [Lat., *dens*, tooth, + *forma*, form.]

dentifrice (dent'if-ris). A powder or other substance to be used in cleansing the teeth and gums. [Lat., *dens*, tooth, + *fricare*, to polish.]

dentigerous (den-tij'er-us). Bearing or supporting teeth; containing teeth, as in a cyst. [Lat., *dens*, tooth, + *gerere*, to bear.]

den'tin, den'tine. The main body of a tooth. The specialized connective tissue covered by enamel on the crown and cementum on the root. [Lat., *dens*, tooth.]

den'tist. A practitioner of dentistry. [Lat., *dens*, tooth.]

den'tistry. That department of surgery which relates to the treatment of diseased teeth and the restoration of lost teeth by means of artificial substitutes. [Lat., *dens*, tooth.]

dentition (den-tish'un). The eruption of the teeth. See *dentition formula*. **deciduous d., first d., milk d.** The appearance during the first two years of life of the first set of teeth, which are entirely replaced by the second d. **dentition formula**. A formula used to indicate the number and arrangement of teeth. In

adult man it is: incisor $\frac{2-2}{2-2}$; canine $\frac{1-1}{1-1}$;

premolar $\frac{2-2}{2-2}$; molar $\frac{3-3}{3-3}$. **permanent**

d., second d. The appearance of second set of teeth; those which replace the temporary ones or are superadded to them, but which are themselves never replaced. [Lat., *dentitio*.]

dentola (den'to-lah). A proprietary solution of cocaine hydrochlorid and potassium bromid for application to swollen and painful gums.

denture (dent'ure). A single set of either natural or artificial teeth. **full d.** A

double set of natural or artificial teeth, one for each jaw. [Lat., *dens*, tooth.]

denudation (de-nu-da'shun). Laying bare a surface. [Lat., *denudare*, to make bare.]

Denys' theory. A theory of immunity which explains the production of bactericidal substances by means of the leukocytes which impart them to serum, the theory being an attempt to reconcile the phagocytic and general theories. [G. *Denys*, Belgian physician.]

deobstruent (de-ob'strew-ent). Having the property of remedying obstruction (of the various channels of the body). [Lat., *deobstruens*, from *de*, priv., + *obstruere*, to block up.]

deodorant. Having the property of removing odors. [Lat., *de*, from, + *odorare*, to perfume.]

deodorized. Deprived of odors, especially of foul odors, arising from impurities. [Lat., *de*, from, + *odor*, odor.]

deoxygenation (de-ok'sij-en-a'shun). The process of depriving of oxygen.

dependent. Hanging down. [Lat., *de*, from, + *pendere*, to hang.]

depilation (de-pil-a'shun). The operation of removing hairs from the body. [Lat., *depilare*, to pluck out the hair.]

depilatory (de-pil'at-o-re). An agent for removing hairs chemically. [Lat., *de*, priv., + *pilus*, hair.]

deplete (de-plét'). To empty the blood vessels by blood-letting. [Lat., *depletus*, emptied out.]

depletion (de-ple'shun). Lit., an emptying; a withdrawal of an animal fluid, particularly the blood. [Lat., *deplere*, to empty.]

depolarization (de''po-lar-iz-a'shun). The act of destroying or preventing polarization; especially the act of annulling the effects of optical polarization by interposing a depolarizer between the polarizer and analyzer; also the act of preventing or annulling the polarization in a galvanic battery, as by the amalgamation of the zinc plates.

depolarizer (de-po-lar-i-zer). An apparatus consisting of a plate formed from the section of the principal plane of a double refracting prism which, when interposed at any angle between the polarizing surface and the analyzer, refracts and resolves the polarized ray into ordinary and extraordinary rays which attain the analyzer in planes that are neither parallel nor perpendicular to its principal plane, and are therefore again refracted, the sum of the images of like name forming separate images which are individually transmitted.

deposít. 1. Matter which is cast down from a liquid; a sediment. 2. Matter collected in any part of an organism, either normal or abnormal. [Lat., *deponere*, to throw aside.]

deposition (de-po-zish'un). The formation of a deposit.

depravation (de-prav-a'shun). Deterioration, especially of the secretions. [Lat., *depravare*, to impair.]

depression (de-presh'un). 1. A hollow, a low plane or part. 2. The act of depressing a part. 3. The state of being depressed, either physically, e. g., a fragment of the skull, or in the sense of a reduction of strength or of hopefulness. 4. Couching; an operation for cataract, consisting in the removal of the opaque lens out of the axis of vision by means of a needle. **auditory d.** A d. of a thickened part of the epiblast, marking the early stage of formation of the ear. **infranasal d.** A median d. in the upper lip below the termination of the nasal septum. **infrasternal d.** A d. at the lower end of the sternum at the bottom of which lies the ensiform process. **interpeduncular d.** See *interpeduncular space*, under *space*. **mental d.** A state of melancholy. **nervous d.** Nervous debility. **vital d.** A lowered state of the powers of life. [Lat., *de*, down, + *primere*, to press.]

depressomotor (de-pres''so-mo'tor). A pharmacological agent that diminishes motor functions. [Lat., *deprimere*, to depress, + *motor*, mover.]

depressor (de-pres'sor). A term used in physiology for any reflex effect, which lowers the activity of a nerve center. **d. nerve.** A sensory nerve arising in the heart, the stimulation of which causes a reflex fall of general blood pressure. In some animals, e. g., the rabbit and the cat, it exists separately; in others it is combined with the vagus. See *table of muscles*, under *muscle*.

deputation (de-pu-ra'shun). The act or process of freeing from impure matter. [Lat., *depurare*, to purify.]

depurative, depuratory, depurant. Cleansing.

deradelpus (de-rad-el'fus). A monstrosity with two bodies, united at the neck, and with a single head. [Gr., *dere*, the neck, + *adelphos*, a brother.]

deranencephalia (der'an-en-sef-a'le-ah). A monstrosity characterized by absence of a greater or less part of the brain and neck. [Gr., *dere*, the neck, + *an*, neg., + *egkephalos*, the brain.]

derangement (de-ránj'ment). 1. Displacement, disorganization. 2. Disturbance of the mental mechanisms; insanity in law. [Fr., *dérangement*, disorder.]

Dercum's disease. See *adiposis dolorosa*. [Francis Xavier Dercum, Philadelphia neurologist, born 1856.]

derencephalia (der'en-sef-a'le-ah). A monstrosity characterized by minuteness of the brain and by its being enclosed in the cervical vertebrae. [Gr., *dere*, the neck, + *egkephalos*, the brain.]

derivation (der-iv-a'shun). A drawing away or diversion of fluids from one part of the body to another, by irritating the sensory nerves or exciting turgescence in the latter. **d. wire.** A conducting wire connecting two points of a closed galvanic circuit which are already connected by a conducting machine. [Lat., *derivatio*, from *derivare*, to draw off.]

derivative (de-riv'a-tiv). In chemistry:

(a) any body, not itself a simple element, which is obtained from another body by some kind of decomposition, generally by substitution (e. g., chloroform from methane by the replacement of 3 atoms of hydrogen by 3 of chlorine); (b) a compound containing the same radicle as another body, e. g., benzoic acid, which contains the C_6H_5 group, may be looked upon as a benzene (C_6H_6) derivative. [Lat., *derivare*, to draw off.]

der'ma, der'mis. The true skin; the corium. [Gr., *derma*.]

Dermacentor (der-mas-en'tor). A genus of ticks. **D. Andersoni.** An oval reddish brown tick, of the order *Acarina* and the family *Ixodidae*, found in California and other western states, which is the conveyer of Rocky Mountain fever. **D. occidentalis, D. reticularis** and **D. venustus** are also species of this genus.

dermalgia, dermatalgia (der-mal'ge-ah, der-mat-al'ge-ah). Spontaneous pain in the skin, called also neuralgia of the skin and rheumatism of the skin. [Gr., *derma*, skin, + *algos*, pain.]

dermatagra (der-mat-ag'rah). Another name for pellagra. [Gr., *derma*, skin, + *algos*, pain.]

dermathemia (der-math-e'me-ah). A determination of blood to the skin. [Gr., *derma*, the skin, + *aima*, blood.]

der'matin. A mixture of salicylic acid, starch, talc, silicic acid, and kaolin; used as a protective for the skin.

dermatitis (der-mat-i'tis). Inflammations of the skin, due, for the most part, to external irritants. The classification excludes eczema, but includes *d. medicamentosa* in which the skin lesions are caused by the action of drugs, either applied to the skin or taken internally. The principal forms of *d.* are: **d. venenata, erythema ab igne, erythema simplex, erythema solare, intertrigo, x-ray d.** [Gr., *derma*, skin, + *itis*, inflammation.]

dermato-, dermat-. Prefix from the Gr., *derma*, skin.

dermato-autoplasty (der'mat-o-aw'to-plas-te). The operation of grafting skin taken from some portion of the patient's own body. [Gr., *derma*, skin, + *auto*, self, + *plassein*, to mould.]

Dermatobia (der-mat-o-be-ah). Syn.: *Cute-rembia*. A genus of the class *Diptera*, being a fly known in the tropics, whose larva infests the skin, producing boils. **D. cyaniventris.** A species of *D.* prevalent in tropical America. **D. noxialis.** See *D. cyaniventris*. [Gr., *derma*, the skin, + *bios*, life.]

dermatobiasis (der-mat-o-bi'as-is). The presence of *Dermatobia* in the tissues and the diseased condition produced by it.

der'matocelluli'tis. Inflammation of the subcutaneous connective tissue.

der'matocyst. A cyst of the skin.

dermatoid (der'mat-oyd). Resembling skin; having the consistence or thickness of leather or skin. [Gr., *derma*, skin, + *eidōs*, resemblance.]

der'matol. See *bismuth subgallate*.

dermatology (der-mat-ol'o-je). That branch of the science of medicine that treats of the skin and its diseases. [Gr., *derma*, skin, + *logos*, understanding.]

dermatolysis (der-mat-ol'is-is). Syn.: *loose skin, cutis laxa, cutis pendula*. Terms applied to the condition in which the skin and subcutaneous connective tissue become hypertrophied and lax and tend to hang in loose folds. [Gr., *derma*, skin, + *lysis*, loosening.]

dermatomycosis (der'mat-o-mi-ko'sis). Pl. *dermatomycoses*. A disease of the skin, dependent upon the growth of a vegetable parasite. See *linea furfuracea*, and *tinea trichophytina*. [Gr., *derma*, skin, + *mykes*, a fungus.]

der'matomyo'ma. A myoma of the skin.

der'matomyosi'tis. Inflammation of the skin and muscles.

der'matophili'asis. Invasion of the skin by the pregnant female jigger or *Dermatophilus penetrans*. The symptoms are itching, swelling, inflammation, and suppuration.

Dermatophilus (der-mat-of'il-us). A member of the class *Hexopoda* and the order *Siphonaptera*, being a flea, prevalent in the tropics, which penetrates the skin, causing itching and swelling. **D. penetrans.** Syn.: *chigo, jigger, Pulex penetrans*. A species of *D.* causing dermatophiliasis in South America and West Africa. [Gr., *derma*, the skin, + *philein*, to love.]

dermatophyte (der'mat-o-fit). A plant-growing parasite on the skin. [Gr., *derma*, skin, + *phyton*, plant.]

der'matosclero'sis. A rare form of skin disease in which large symmetrical areas of the skin become indurated and stiff. The subcutaneous tissues are generally involved. [Gr., *derma*, skin, + *skleroun*, to harden.]

dermato'sis. Pl. *dermatoses*. Any disease of the skin that cannot be otherwise classified, as *angioneurotic d., neurotic d.*, diseases characterized by lesions which arise from localized vasomotor or trophic disturbances in the skin, of unknown origin. [Gr., *derma*, skin.]

dermatotyposis (der-mat-o-ti-po'sis). Periodically recurring neuralgia of the skin, due to malaria.

dermatozoön (der'mat-o-zo'on). Animal parasites of the skin. [Gr., *derma*, the skin, + *zoön*, an animal.]

dermenchysis (der-men'ki-sis). Subcutaneous injection. [Gr., *derma*, the skin, + *egchysis*, an injection.]

dermo-. A shortened combining form of the Gr., *derma*, skin.

dermogen (der'mo-jen). A trade name for zinc peroxid, ZnO_2 .

dermographia (der-mo-gra'fe-ah). The reaction of the erector pilae muscles and vascular supply of the skin to light scratching. [Gr., *derma*, skin, + *graphein*, to write.]

dermoid (der'moyd). Resembling the skin. [Gr., *derma*, skin, + *eidōs*, form.]

der'mol. Bismuth chrysophanate.

- dermolysis** (der-mol'is-is). A rare destructive disease of the skin. [Gr., *derma*, skin, + *lysis*, a loosening.]
- dermoneurosis** (der''mo-nu-ro'sis). Neurotic disorder of the skin. [Gr., *derma*, skin, + *neuron*, nerve.]
- dermosapol** (der-mo-sa'pol). A superfatted soap, made with 50 per cent. of cod-liver oil and containing pterivian balsam. It is variously medicated.
- derospasmus** (der-o-spas'mus). Cramp of the neck. [Gr., *dere*, the neck, + *spasmos*, spasm.]
- dermosynovitis** (der''mo-si-no-vi'tis). A malignant disease involving the skin of the foot and the synovial sheaths.
- desalination** (de-sa-lin-a'shun). The removal of saline substances, as from the blood in cholera. [Lat., *de*, priv., + *sal*, salt.]
- desamidases** (dez'am-i-dās'es). Enzymes that hydrolyze amino-acids, the (NH₂) group being split off as ammonia.
- descemetitis** (des''e-met-i'tis). Inflammation of the membrane of Descemet. Serous cyclitis.
- descemet'ocle**. Hernia of the membrane of Descemet.
- descendens** (de-sen'dens). Descending; a descending tissue. **d. hypoglossi**, **d. noni**. A branch of the hypoglossal nerve given off at the point where it curves around the occipital artery, which passes down obliquely across the sheath of the carotid vessels (sometimes within it) to form a loop just below the middle of the neck with branches of the second and third cervical nerves. [Lat., *de*, from, + *scandere*, to climb.]
- descent** (des-ent'). 1. The act of moving downward; or the state of having moved downward. 2. Ancestral origin. **d. of the ovaries**. The descent of the ovaries during fetal life from the inner side of the wolffian bodies to their normal position in the abdominal cavity. **d. of the testicles**. The descent of the testicles into the scrotum. **d. of the uterus**. A moderate prolapse of the uterus. [Lat., *de*, from, + *scandere*, to climb.]
- desexualize** (de-seks'u-al-iz). To remove or render inactive the sexual glands. To perform castration or ovariectomy.
- desiccant**. Causing desiccation.
- desiccation** (des-ik-a'shun). The act of drying. The drying up of vegetable drugs is usually designated desiccation, the removal of the water of crystallization from salts is termed exsiccation. [Lat., *desiccare*, to dry up.]
- desiccative** (des'ik-at-iv). Causing to dry up. [Lat., *desiccare*, to dry.]
- desiccator** (des'ik-a-tor). A vessel containing anhydrous sulphuric acid, calcium chloride, or some other strongly water-absorbing substance. Some d's are so constructed that the air may be pumped out through a stop-cock. The drying in such a *vacuum d.* is very rapid. When a body to be dried is placed either above or alongside of the acid, etc., in the d., which is made air-tight, the latter ab-
- stracts water from the former. [Lat., *desiccare*, to dry.]
- desichthol** (des-ik'thol). Deodorized ichthyol.
- designatio** (des-ig-na'te-o). That part of a prescription which enumerates the ingredients and their quantities.
- desmameba** (des-mam-e'bah). A connective tissue cell, regarded as an ameoboid formation. [Gr., *desmos*, a bond, + *amoibe*, alternation.]
- desmectasia** (des-mek-ta'se-ah). The stretching of a tendon. [Gr., *desmos*, ligament, + *ektasis*, stretching.]
- desmitis** (des-mi'tis). Inflammation of a ligament. [Gr., *desmos*, ligament, + *itis*, inflammation.]
- des'mo-**. Combining form of *desmos*, bond, fastening, chain, ligature.
- Desmodium** (des-mo'de-um). The tick trefoil, West Indian honeysuckle; a genus of leguminous plants.
- desmognathous** (des-mog'na-thus). Having the palate bones united.
- desmology** (des-mol'o-je). That branch of anatomy which relates to the tendons and ligaments. [Gr., *desmos*, bond, + *logos*, understanding.]
- desmoma** (des-mo'mah). A tumor formed of connective tissue. [Gr., *desmos*, a bond, + *oma*, tumor.]
- des'mon**. Same as *amboceptor*. [Gr., *desmos*, band, bond.]
- desmoneoplasm** (des-mo-ne'o-plazm). A neoplasm formed from connective tissue. [Gr., *desmos*, band, + *neoplasm*.]
- desmonosology**, **desmopathology** (des''mo-no-sol'o-je, des'mo-path-ol'o-je). The pathology of the ligaments. [Gr., *desmos*, a ligament, + *nosos*, or *pathos*, a disease, + *logos*, understanding.]
- despumatation** (de-spu-ma'shun). The separation of the froth or scum from the surface of a liquor. [Lat., *de*, priv., + *spuma*, froth.]
- desquamation** (des-kwam-a'shun). 1. Exfoliation. The falling off of the surface epithelium of the skin in scales. 2. The operation of removing the covering that envelops certain bulbous roots. [Lat., *de*, priv., + *squama*, a scale.]
- desulphuration**, **desulphurization** (des-sul-fur-a'shun, de-sul-fu-ri-za'shun). The act or process of withdrawing sulphur from a compound.
- detergent** (de-ter'jent). Cleansing, purging; as a n., a substance which cleanses, especially by external application. [Lat., *detergens*.]
- determination** (de-ter-mi-na'shun). 1. A tendency in a definite direction, as of a force to a particular part. 2. In chemistry, a quantitative analysis. [Lat., *determinare*, to bound, to fix.]
- determinism** (de-tér'min-ism). In psycho-analysis the theory that all mental activity is conditioned and determined by unconscious as well as conscious impulses.
- detonation** (de-ton-a'shun). A violent noise caused by a chemical decomposition or combination. [Lat., *detonare*, to thunder severely.]

detoxification (de-tocks-if-i-ka'shun). The act of removing the toxic principle of a substance and rendering it non-toxic.

detritus (de-trit'us). A powdery or granular product of friction or rubbing. [Lat., *deterere*, to wear away.]

detru'sion. A pushing away, dislodgment, or expulsion. [Lat., *detrusio*.]

detrusor (de-trew'sor). A muscle that pushes down as d. urinae, the muscle that expels the urine when it contracts. See *table of muscles*, under *muscle*. [Lat., *detrudere*, to thrust away or down.]

deuteranope (du'ter-an-öp). The term introduced by von Kries to designate the class of color-blind person formerly described as "green blind," on the theory that three color processes are possessed by the normal retina, and in the deuteropes the second of these is deficient or lacking. [Gr., *deuteros*, second, + *an*, priv., + *ops*, eye.]

deu'terano'pia. Green-blindness; so called because green is the second of the primary colors. [Gr., *deuteros*, second, + *anopia*, blindness.]

deutero-. A prefix from the Gr., *deuteros*, second; used to denote second.

deutero-albumose (dew'ter-o-al'bu-mös). Syn.: *deuteroproteose*. An albumose formed in the peptic digestion of proteins, which is precipitated only in a saturated solution of sodium chlorid, although soluble in water and dilute salt solutions.

deutero-elastose (dew'ter-o-e-las'tös). A deutero-albumose formed in the peptic digestion of elastose.

deuterology (du-ter-ol'o-je). The anatomy, physiology, etc., of the placenta. [Gr., *deuterion*, the placenta, + *logos*, understanding.]

deuteropathy (du-ter-op'ath-e). A disease caused by a preceding disease; a pathological sequela. [Gr., *deuteros*, second, + *pathos*, disease.]

deuteropin (dew-ter-op'in). A homologue, $C_{26}H_{42}NO_6$, of cryptopin.

deuteroplasm (du'ter-o-plazm). The non-protoplasmic material such as pigment, fat, globules, yolk, etc., contained in the cytoplasm of cells. [Gr., *deuteros*, second, + *plasma*, something formed.]

deuteroproteose (dew'ter-o-pro'te-ös). See *deutero-albumose*.

deuteropsy (du-ter-os'kop-e). A form of hallucination or deception in which the individual pretends to be endowed with "second sight," i. e., the capability of foreseeing future events. [Gr., *deuteros*, second, + *skopein*, to look at.]

deuterotoxin (du'ter-o-tok'sin). A toxin derivative combining with an antitoxin with less avidity than a prototoxin, but with more avidity than a tritotoxin. [Gr., *deuteros*, second, + *toxin*.]

deuteryl (du'ter-il). Secondary matter arising from primary matter by further development or other action. [Gr., *deuteros*, second, + *yle*, matter.]

deuto-, deut-. Shortened form of *deutero*, from the Gr., *deuteros*, second.

deutomerite (du-to'mer-it). The posterior portion of certain *Gregarine* protozoa.

[Gr., *deuteros*, second, + *meros*, portion.]

deutonephron (du-to-nef'ron). The wolffian body. [Gr., *deuteros*, second, + *nephros*, kidney.]

deutosclerous (du-to-skle'r'us). Becoming indurated secondarily to some antecedent morbid process. [Gr., *deuteros*, second, + *skleros*, hard.]

deutoscolex (du-to-sko'lex). The secondary daughter cysts derived from a primary scolex. [Gr., *deuteros*, second, + *skolex*, an intestinal worm.]

devaporation (de-vap-o-ra'shun). The condensation of vapor into water.

devel'oper. In photography, an agent which renders visible the image upon an exposed plate.

development (de-vel'op-ment). The unfolding more fully, the bringing forth from a latent or elementary condition. In photography, the bringing out of the latent image. [Fr., *développer*, to unwrap, to disentangle.]

deviation (de-vi-a'shun). A going out of the way, as in abnormal curvature of the spine, faulty alignment of the teeth, etc. Also departure from the normal mental state. **conjugate d. of the head and eyes**. In paralytics, a d. of the face and eyes toward the paralyzed side. **d. of complement**. In serology, incapable of hemolysis. [Lat., *de*, from, + *via*, way.]

devirgina'tion. See *defloration*. [Lat., *de*, priv., + *virgo*, virgin.]

devitalization (de-vi-tal-i-za'shun). The impairment or destruction of vitality; in dentistry, the operation of anesthetizing the sensitive pulp of a tooth, popularly known as "killing the nerve." [Lat., *de*, priv., + *vita*, life.]

devitrification, devitrification (de-vit-ri-fak'shun, de-vit-ri-fi-ka'shun). The destruction of vitrification; the removal of the glasslike nature of a substance. [Lat., *de*, priv., + *vitrum*, glass, + *facere*, to make.]

Dewes' carminative mixture. See *mistura magnesia et asafetidae*, under *mistura*.

dexiocardia (dex-e-o-kar'de-ah). Misplacement of the heart upon the right side. [Gr., *dexios*, on the right side, + *kardia*, the heart.]

dexteritas (dexs-ter'it-as). Dexterity, skill. **d. linguae**. Syn.: *volubilitas linguae*. The capability of moving the tongue backward to an extraordinary extent, so that its tip touches the velum palati. [Lat., *dexter*, skillful.]

dex'trin. Syn.: *starch gum*, *British gum*. A compound carbohydrate, or mixture of compound carbohydrates, obtained from starch by the action of dilute acids, of diastase, and also by a dry heat of 200° C., according to some authors. It is an uncrystallizable, insipid, odorless, yellowish white, brittle substance, soluble in water and in dilute alcohol, and precipitated as a hydrate from its solutions by strong alcohol. It is not colored blue by iodine, nor does it ferment by contact with yeast, nor reduce Feh-

ling's solution. By boiling with dilute acids it is transformed into dextrose (or ordinary glucose). There are several varieties of it into which starch is converted by the action of acids and of ferments. In pathology, it is used in culture media for differentiating the intestinal bacteria. [Lat., *dexter*, right, on account of its power of rotating the plane of polarization to the right.]

dextro-. Combining form of the Lat., *dexter*, *dextra*, used in the sense, turning or turned to the right. In chemistry, the term denotes that the compound has the property of turning the plane of polarized light to the right, as *dextroglucose*.

dextroform. A condensation product of dextrin and formaldehyd; used as a source of formaldehyd vapor in disinfection. [Lat., *dexter*, right, + *forma*, shape.]

dextroglucose. See *dextrose*.

dextrogyr (dex'tro-jir). A dextrorotary substance.

dextrogyrate, **dextrogyre**, **dextrogyrous** (dex-tro-ji'rāt, dex'tro-jir, dex-tro-ji'rus). See *dextrorotary*. [Lat., *dexter*, on the right, + Gr., *gyros*, a turn.]

dextrorotary, **dextrorotatory** (dex-tro-ro'ta-re, dex-tro-ro'ta-to-re). Rotating in the plane of polarization to the right. [Lat., *dexter*, to the right, + *rotare*, to turn.]

dextrose (dex'trōs). A sugar of the glucose group, $C_6H_{12}O_6$, used in pathology in bouillon and other culture media for differentiating the intestinal bacteria. See *glucose*. [Lat., *dexter*, right, on account of its dextrorotary power.]

dextrosuria (dex-tro-su're-ah). See *glycosuria*.

dextroversion (decks-tro-ver'shun). Inclination of the long axis of the uterus to the right. [Lat., *dexter*, right, + *vertere*, to turn.]

dhō'bie itch. Syn.: *laundryman's itch*. A term applied in the tropics to a dermatitis of the genitals and the thighs, closely resembling acute tinea cruris.

di-. A prefix representing the Gr., *di* or *dis*, twice.

dia-. A prefix derived from the old Greek phrases in which the preposition, *dia*, through, during, across, was used. Later these phrases were treated as words by Latin physicians, e. g., *diachylaine*, from *diachylon*, a medicament composed of juices.

diabetes (di-ab-e'tez). A morbid condition characterized by the habitual secretion of an excessive amount of urine. When the term is used without qualification, it is usually understood to mean *d. mellitus*.

acute d. A form of *d. mellitus* in which a large quantity of sugar suddenly appears in the urine. The phenomenon has usually a nervous or morbid cause. **arthritic d.** See *gouty d.* **artificial d.** *D.* produced in animals by puncture of the floor of the fourth ventricle or by the administration of phlorizin. **conjugal d.** *D.* occurring simultaneously in a husband and wife. **curare d.** *Glycosuria* due to the toxic action of curare.

d. hepatogenes. *D. mellitus* dependent upon disease of the liver. **d. insipidus.** A disease in which large quantities of pale urine with a low specific gravity are passed by a person otherwise in apparently good health. See *polyuria*. **d. mellitus.** Syn.: *glycosuria mellitura*. A disease characterized by the secretion of an excessive amount of urine containing sugar, causing emaciation, thirst, and dryness of the skin. **d. traumaticus.** *Glycosuria* from traumatism of the nervous system, as in concussion of the brain.

gouty d. A form of *d.* occurring in robust subjects living luxuriously. Such patients are usually obese, and show other signs of having an arthritic diathesis, such as rheumatism, gout, gravel, asthma, etc. **hepatic d.** *D. mellitus* occurring coincidentally with some affection of the liver.

hysterical d. The polyuria of hysteria.

pancreatic d. *D.* with rapid progress, characterized by hyaline degeneration of the islands of Langerhans.

phlorizin d. *Glycosuria* due to the ingestion of phlorizin.

puncture d. Artificial *d.* produced by puncture of the floor of the fourth ventricle. **true d.** See *d. mellitus*. [Gr., *diabainein*, to pass through.]

diabetic (di-ab-e'tik). Pertaining to or of the nature of diabetes. **d. tabes.** Diabetes where there are neuritic pains in the leg and loss of knee-jerks. **d. puncture.** Puncture of the floor of the fourth ventricle of the brain in animals, which is followed by the appearance of sugar in the urine.

diabetin (di-ab-e'tin). A name formerly used for levulose.

diabetometer (di-ab-e-tom'et-er). An instrument for estimating the quantity of sugar in a given specimen of diabetic urine. Polariscopes especially constructed for the purpose have been used upon the principle that a dextrose solution always rotates polarized light and that the amount of rotation is in proportion to the concentration of the solution. See *polarimeter*.

[Gr., *diabetes*, diabetes, + *metron*, a measure.]

diaboleptic (di-ab-o-lep'tik). Of Maudsley, an ecstatic who professes to have supernatural communications. [Gr., *diabolos*, the devil, + *lepsis*, a seizure.]

diacetanilid (di-as-e-tan'il-id). The compound $C_6H_5N(C_2H_5O_2)_2$, similar in medicinal action to acetanilid, but more energetic.

diacetic acid in urine, test for; see in *appendix*, page 894.

diaceturia (di-as-et-u're-ah). The condition in which the urine contains diacetic acid.

diacetyl morphin (di-as-et'il mor'fin). See under *morphin*.

diacetyl tannin (di-as-et'il tan'nin). See *tannigen*.

diachoresis (di-a-ko-re'sis). The excretion of excrementitious matter. [Gr., *diachoresis*.]

diachylon (di-ak'il-on). A term originally applied to plaster made with the juices of plants. **d. ointment.** Lead oint-

ment and olive oil perfumed with oil of lavender [U. S. Ph.]. **d. plaster.** Oleate of lead. **unguentum d.** D. ointment; made by melting together 60 parts of lead plaster, 39 parts of olive oil, and one part of oil of lavender [U. S. Ph.]. [Gr., *diachylos*, made with juice.]

diacid. Having an acidity of two; of an acid or acid salt, containing 2 atoms of replaceable hydrogen; of a base, capable of replacing 2 atoms of hydrogen in an acid. [Gr., *dis*, twice, + Lat., *acidus*, acid.]

diacclasis (di-ak'la-sis). See *refraction*. [Gr., *diaklasis*.]

diacclastic. Pertaining to or dependent upon refraction.

diaclyma (di-ak-lis'mah). A mouth wash or a gargle.

diacoustics (di-ak-oo's'tiks or di-ak-ow'-stiks). That branch of physics which treats of the refraction of sound. [Gr., *dia*, through, + *akouein*, to hear.]

diacrisis (di-ak'ris-is). 1. A change in the character of a secretion. 2. A crisis or a critical evacuation. 3. Diagnosis. **follicular d.** An abnormal change in the secretions of follicular glands (e. g., in those of the intestines during inflammatory diarrhea). [Gr., *diakrinein*, to separate.]

diacritical (di-ah-krit'ik-al). Distinguishing, diagnostic; said of symptoms.

di'ad. An element or radicle having an atomicity of two; a bivalent element. [Gr., *dis*, twice.]

diaderm (di'ad-erm). A blastoderm composed of two layers, the ectoderm and the entoderm, and containing between them the segmentation cavity. [Gr., *dis*, twice, + *derma*, skin.]

diadochokinesis (di-ah-dok'o-ki-ne'sis). Ability to make antagonistic movements as pronation and supination in quick succession. [Gr., *diadochos*, succeeding, + *kinesis*, motion.]

diagnose'. To distinguish or determine a disease by its history, symptoms, and signs.

diagnosis (di-ag-no'sis). 1. The art or process of distinguishing between different diseases. 2. Such knowledge as is gained by post mortem examination. **anatomical d.** 1. A d. based on a knowledge of definite anatomical alterations upon which the phenomena under consideration depend, as well as upon symptoms or upon the phenomena themselves. 2. A post mortem d. **clinical d.** A d. based upon symptoms manifested during life. **d. by exclusion.** A d. reached by deduction, all the affections which present salient points of similarity with the one to be diagnosed being reviewed and eliminated until but one possibility remains which is accepted as the true one. **differential d.** A d. between two allied morbid conditions by comparison of their characteristics. **pathological d.** A d. of the nature of a lesion, without regard to its situation. **physical d.** D. by means of objective signs, irrespective of subjective symptoms, as palpation, aus-

cultation. [Gr., *dia*, through, + *gignoskein*, to know.]

diagnostic (di-ag-nos'tic). Pertaining to or sufficing for a diagnosis; distinctively and exclusively characteristic; as a n., a d. symptom or sign.

diagnosticate (di-ag-nos'tik-ät). To fix upon a certain disease or injury as the one present in a given instance.

diagnostician (di-ag-nos-tish'an). One skilled in diagnosis.

diagnostics (di-ag-nos'tiks). The science or art of diagnosis.

diagometer (di-ag-om'et-er). An apparatus for measuring the conductivity of substances, especially their electrical conductivity. [Gr., *diagoge*, transmission, + *metron*, a measure.]

dialkyl (di-al'kil). Containing two alkyl groups.

dialy-. Prefix from the Gr. stem, *dialo-*, from *dialyein*, to separate.

dialysis (di-al'is-is). The diffusion of substances in solution, through membrane from the side of greater to the side of less concentration. [Gr., *dialysis*, a separation.]

dialytic (di-al-it'ik). Belonging to or resembling the process of dialysis.

dialyzate (di-al'iz-ät). A fluid which has been subjected to dialysis. A medical preparation made by dialysis.

dialyzed (di'al-izd). Subjected to or prepared by dialysis.

dialyzer, dialyser (di'al-i-zer). An apparatus for performing dialysis. It usually consists of a tray floating in a quantity of water, and having its bottom consisting of a tightly stretched diaphragm of parchment paper. Various other forms of d. are known.

diamagnetism. The principle which causes certain bodies to be repelled by magnets, and, when placed between the poles of an electromagnet, to assume a position at right angles to its axis ("equatorial" position). [Gr., *dia*, through, + *magnes*, a magnet.]

diameter (di-am'et-er). The distance from any point on the periphery of a surface, body, or space to the opposite point. **anterior transverse d. of the fetal head.** See *temporal d.* **anteroposterior d. of the pelvic cavity.** The distance between the middle of the symphysis pubis and the upper border of the third sacral vertebra. **anteroposterior d. of the pelvic inlet.** The distance from the upper part of the symphysis pubis to the promontory of the sacrum. **anteroposterior d. of the pelvic outlet.** The distance from the lower part of the symphysis pubis to the tip of the coccyx. **anteroposterior d. of the skull, anteroposterior metopic d. of the skull.** The distance in a straight line between the metopic point and the most remote point upon the external surface of the tabular portion of the occipital bone, or between the most prominent point of the glabella and the most prominent point upon the external surface of the occipital bone. **basilobreg-**

matic d. The distance in a straight line between the basion and the bregma. **Baudelocque's d.** See *external conjugate d. of the pelvis*. **biauricular d.** 1. The distance in a straight line between two points on a line passing over the vertex and uniting the two auricular points, each immediately above the ridge which continues the zygomatic arch backward. 2. The transverse distance between the centers of the external auditory meatuses, or between the middle point of the upper margins of each external auditory meatus. **biglenoid d.** The distance between the center of one glenoid cavity of the temporal bone and that of the other. **bigoniac d.** The distance between the two gonions. **bijugal d.** The horizontal distance between the two malar points. **bijugular d.** The transverse distance between the two jugular points. **bimalar d.** The transverse distance between the two malar points. **bimandibular d.** The transverse distance between the tubercles on the inferior borders of the inferior maxilla. **bimastoid d.** The transverse distance between the two mastoid processes of the temporal bone. **biparietal d.** The transverse distance between the parietal eminences on each side. **bisacromial d.** The transverse distance between the two acromial processes. **bisiliac d.** Syn.: *intercrystal d.* The transverse distance between the most distant points of the crests of the two ilia. **bisischadic d.** See *transverse d. of the pelvis*. **bitemporal d.** The distance between the two most distant points of the coronal suture. **bitrochanteric d.** Syn.: *intertrochanteric d.* The distance between the highest point of one trochanter major and that of the other. **bizygomatic d.** The greatest transverse distance between the most prominent points of the zygomatic arches. **cervicobregmatic d.** The distance between the anterior fontanelle and the junction of the neck with the floor of the mouth. **coccypublic d. of the pelvis.** See *anteroposterior d. of the pelvic outlet*. **conjugate d. of the pelvis.** See under *conjugate*. **diagonal conjugate d. of the pelvis.** The distance from the upper part of the symphysis pubis to the most distant part of the brim of the pelvis. **external biorbital d.** The greatest transverse distance between the outer borders of the external orbital apophyses of the frontal bone. **external conjugate d. of the pelvis.** Syn.: *Baudelocque's d.* The anteroposterior d. of the pelvic inlet measured externally; the distance from the skin over the upper part of the symphysis pubis to the skin over a point corresponding to the promontory of the sacrum. **frontomentorial d.** The distance from the top of the forehead to the point of the chin. **fronto-occipital d.** See *occipitofrontal d.* **inial d.** The distance in a straight line, in the median line of the skull, between the most prominent points of the inion and the glabella. **inter-**

crystal d. See *bisiliac d.* **internal biorbital d.** The greatest transverse distance between the inner borders of the external orbital apophyses of the frontal bone. **interspinous d.** The distance between the two anterior superior spines of the ilia. **intertrochanteric d.** See *bitrochanteric d.* **left oblique d. of the pelvis.** See *oblique d's of the pelvis*. **maximum anteroposterior d. of the skull.** The distance, in the median line between the most prominent part of the glabella and the most prominent point in the middle line upon the tabular portion of the occipital bone. **maximum frontal d.** The distance between the two staphanions. **maximum occipital d.** The distance in a straight line between the two asterions. **maximum transverse d. of the skull.** The longest horizontal transverse line that can be drawn within the cranium. **mento-bregmatic d.** The distance from the chin to the middle of the anterior fontanelle. **minimum frontal d.** The distance between the two extremities of the supra-orbital line. **oblique d's of the pelvis.** The measurement from the upper border of the sacro-iliac synchondrosis of one side to the iliopectineal tubercle of the opposite side. By most American, English, and German writers the *right* oblique d. is understood as that one which extends from the right sacro-iliac joint, while most French writers regard that as the *left* oblique d. The right is sometimes called the *first*, and the left the *second* oblique d. [B. N. A., *diameter obliqua*.] **occipitofrontal d.** The d. extending from the root of the nose to the most distant point of the occiput. **occipitomentorial d.** The greatest distance between the occiput and the chin. **sacro-subpubic d.** The distance between the middle of the promontory of the sacrum and the middle of the lower border of the triangular ligament of the pubic symphysis. **sagittal d.** See *basilobregmatic d.* **sternovertebral d.** The distance from the sternum to the vertebral column, measured externally. **suboccipito-bregmatic d.** The d. extending from the middle of the anterior fontanelle to the lowest accessible point of the occiput. **suboccipitofrontal d.** The greatest distance between the forehead and the junction of the occiput with the neck. **subtemporal d.** The distance between the point upon the sphenotemporal suture which is crossed by the ridge upon the inferior surface on the greater wing of the sphenoid bone of one side and a similar point on the other side. **superior frontal d., superior transverse d. of the skull.** See *maximum frontal d.* **temporal d.** The greatest horizontal distance between two opposite points upon the line passing over the vertex and uniting the two auricular points, on the surface of the temporal bones. **transverse d. of the pelvic cavity, transverse d. of the pelvis.** 1. That of the inlet, the bisiliac d.; being the greatest transverse

distance between the right and left iliopectineal lines. 2. That of the outlet, the bischiadic d.; being the distance between the tuberosities of the ischia. 3. That of the cavity (see *transverse d. of the pelvic cavity*) [B. N. A., *diameter transversa*]. **vertical d. of the fetal head.** The d. extending from the highest point of the head to the anterior margin of the foramen magnum. **vertical d. of the skull.** See *basilobregmatic d.* [Gr., *dia*, through, + *metron*, measure.]

diamid (di'am-id). See *hydrazin*.

diam'in. A chemical compound containing two NH₂ radicles.

dianeologia (di'an-e-ol-o'je-ah). The theory of thought and intuition. [Gr., *dianoia*, thought, + *logos*, understanding.]

dian'ilid. A derivative bearing the same relation to anilin that the neutral amids of dibasic acids bear to ammonia.

dianis'amin. A crystallizable artificial alkaloid made from anisic alcohol.

diapason (di-ah-pa'son). A tuning fork. **normal d., official d.** A tuning fork which vibrates 870 times a second at a temperature of 15° C. [Gr., *dia*, through, + *pason*, all.]

diapedesis (di'ah-pe-de'sis). 1. The passage of blood corpuscles through the walls of the vessels, in contradistinction to the *emigration* of leukocytes. It is a passive, physical filtration process, the result of high blood pressure. 2. The exudation of blood through the pores of the skin. [Gr., *diapedan*, to ooze through.]

diaper (di'a-per). 1. Bird's eye linen, a soft linen cloth used for napkins, etc. 2. A napkin to be folded in a triangular form for application as a T bandage to an infant. [Old Fr., *diapre*.]

diaphanometer (di-af-an-om'er-er). An apparatus devised by Donné for estimating the amount of solids in a fluid by observing the degree of its transparency. [Gr., *dia*, through, + *phainein*, to appear, + *metron*, a measure.]

diaphanoscope (di-af-an'o-sköp). An apparatus for illuminating the internal parts of the body, so as to render the overlying structures diaphanous, for purposes of visual examination. See *polyscope* and *cystoscope*. [Gr., *diaphanes*, transparent, + *skopein*, to examine.]

diaphonics (di-ah-fon'iks). The science of refracted sounds. [Gr., *dia*, through, + *phone*, sound.]

diaphoresis (di'af-o-re'sis). An increase of the natural perspiration. [Gr., *diaphorein*, to dissipate.]

diaphoretic (di'af-o-re'tik). Causing increase of perspiration; as a n., a remedy tending to produce perspiration.

diaphragm (di'af-ram). In general, a partition or septum which more or less completely separates one cavity from another. Specifically, the musculotendinous partition separating the thoracic and abdominal cavities. In microscopy, a disk with an opening which admits light to the lenses of a microscope. **pelvic d.** 1. See *levator ani*. 2. Of Meyer, the leva-

tor ani and the coccygeal muscles together. [Gr., *dia*, apart, + *phrassein*, to fence.]

diaphragma (di-a-frag'ma). See *table of muscles*, under *muscle*.

diaphragmatic (di'af-rag-mat'ik). Pertaining to the diaphragm.

diaphtherin (di-af'ther-in). Oxyquinaseptol; a soluble antiseptic powder.

diaphthol (di-af'thol). Syn.: *chinaseptol*. Quinaseptol, ortho-oxyquinolin-metasulphonic acid, C₈H₅(OH)—(SO₃H)N. It is used as an antiseptic.

diaphysis (di-af'is-is). The body, or main part, of the shaft of a long bone; that which is formed from the primary center of ossification. [Gr., *dia*, through, + *phyein*, to grow.]

diaplasma (di-ah-plas'mah). 1. Any formed structure. 2. An inunction or fomentation.

diaplex (di'ap-leks). Choroid plexus.

diapnea, **diapneusis**, **diapnoe** (di-ap'ne-a, di-ap-nu'sis, di-ap'no-e). Transpiration, especially by the skin.

diarius (di-a're-us). Lasting only a day; as a n., in the f., *diaria* (*febris* understood), ephemeral fever; as a n., in the n., *diarium*, a day's allowance of food. [Lat., *dies*, a day.]

diarrhea (di-ar-e'ah). Syn.: *bowel complaint*, *intestinal catarrh*. The condition in which the alvine evacuations are more frequent and watery than in health. Distinguished from dysentery by the absence of blood and mucus. **acid d.** D. in which the stools are green, of a broken-up appearance, and have a sour smell. **bilious d.** D. with abundance of bile in the stools. **camp d.** The form of chronic d. to which soldiers are peculiarly liable. **catarrhal d.** D. due to abnormal decomposition in the intestines. **choleraic d.**, **choleric d.** The d. of Asiatic cholera, or one resembling it. **chronic d.** A prolonged d. occurring as a manifestation of an intestinal lesion or of a constitutional disease (e. g., scurvy, Bright's disease, and tuberculosis). **Cochin-China d.** A variety of d. occurring in residents of and visitors to Cochin-China and other tropical countries; due to the presence of the *Anguillula stercoralis*. **colliquative d.** Syn.: *d. synthetica*. D. with discharges so frequent and copious as to produce prostration; usually occurring toward the close of a chronic disease. **congestive d.** D. due to congestion of some portion of the alimentary canal, or of an organ, such as the liver, intimately connected with it. **d. alba.** D. with white or colorless evacuations. In a form that sometimes prevails as an epidemic in Barbados the mucous membrane gives off a whitish secretion that gives the stools a milky appearance. **d. pancreatica.** Constant d. with thin viscid passages, supposed, but without sufficient proof, to be a symptom of disease of the pancreas. **d. synthetica.** See *colliquative d.* **dry d.** Of Broussais, a form of d. in which the stools are very rare and small, but may

- yet cause the death of the patient. **dysenteric d.** D. with mucous and bloody stools. **emotional d.** A variety of sympathetic d. caused by emotion. **fat-ty d.** D. consisting largely of the evacuation of undigested fatty substances. **inflammatory d.** A form of d., either acute or chronic, produced by increased vascularity of the entire intestinal mucous membrane, the same cause (e. g., a sudden suppression of perspiration or of menstruation) also acting to obstruct the discharge of fluids through the skin, characterized by febrile reaction and mucous, mucopurulent, or mucosanguineous evacuations. In infants it constitutes a common form of so-called cholera infantum. **intermittent d.** Chronic d. of an intermittent character, due to supposed malarial poisoning. **membranous d.** A chronic or subacute form of d., the peculiar characteristic of which is the presence of shreds of mucus or even membranous casts of the intestines in the passages. **puerperal d.** D. in lying-in women, due either to digestive troubles or to septicemia. **purulent d.** D. in which the stools contain pus, which indicates the presence of an ulceration in some portion of the intestinal tract. **serous d.** D. in which the passages are watery. **simple d.** A form of d. in which the evacuations consist simply of fecal matter. **summer d.** Any form of acute d., due, directly or indirectly, to prolonged summer heat, especially the inflammatory d. of infants; probably caused by decomposition changes in the food. **sympathetic d.** D. which seems to be sympathetic with some morbid or unusual condition from which the patient is suffering. **symptomatic d.** D. occurring as a symptom of some disease affecting the system as a whole, or some organ other than the intestine. **tuberculous d.** Chronic d. dependent upon tuberculous disease of the intestines. **ulcerative d.** A severe form of d. which is due to an ulcerated condition of the mucous membrane of the intestines. [Gr., *dia*, through, + *rein*, to flow.]
- diarthrosis** (di-ar-thro'sis). An articulation which permits of motion in all directions. **d. ambigua.** See *amphiarthrosis*. **d. obliqua.** An occasional articulation between the spinous processes of adjacent lumbar vertebrae. **d. obliqua accessoria.** An occasional articulation, one on each side, formed by the spinous processes of adjacent dorsal or lumbar vertebrae, close to the union of the processes with the bodies of the vertebrae. [Gr., *dia*, thoroughly, + *arthrosis*, a joining.]
- diastasis** (di-as'ta-sis). A term introduced by von Monakow to indicate the fact that injury to one part of the central nervous system may be followed by the alteration in function of some distant part, on the view that a complex of inter-connecting neurons ceases to function in an entirely normal manner, when one or more members of the complex are destroyed.
- diasostic** (di-as-os'tik). Pertaining to the preservation of health. [Gr., *diasosein*, to preserve.]
- diasphyxis** (di-as-ficks'is). Arterial pulsation.
- diaspirin** (di-as'pi-rin). Succinyl disalicylic acid, $\text{CO}(\text{O.C}_6\text{H}_4.\text{COOH}).\text{CH}_2\text{CO}(\text{O.C}_6\text{H}_4.\text{COOH})$. The action and uses are the same as salicylic acid.
- diastalsis** (di-as-tal'sis). The distinguishing of different things from each other. [Gr., *diastellein*, to put asunder, distinguish, expand.]
- diastal'tic.** 1. Serving to distinguish. 2. Of Marshall Hall, performed through the medium of the spinal cord (said of reflex nervous action).
- diastase** (di'as-tās). A starch-digesting enzyme found in plants, particularly in the germinating seeds. It may be identical with ptyalin. It is used for the digestion of starches. **taka-d.** A d. obtained by Takamine by the action of the spores of *Eurotium oryzae* on wheat bran; used in certain disorders of digestion. [Gr., *diastanaí*, to separate.]
- diastasis** (di-as'tas-is). 1. The putting asunder one part from another, as separation of the epiphysis from the shaft of a bone or the separation of the recti abdominales muscles from one another. 2. A term used by Henderson to describe the period of the diastole of the ventricles following the first sudden relaxation. During this period the ventricles receive but little additional venous blood, and it is the period which is shortened most when the heart rate is increased. [Gr., *diastasis*, a separation.]
- diastasum** (di-as-ta'sum). See *diastase*.
- diastat'ic.** Pertaining to, or having the property of, diastase.
- diastema** (di-as-te'mah), pl., *diastemata*. An interval or space between two consecutive teeth or two kinds of teeth, occurring in most mammals. [Gr., *diastema*, space between, interval.]
- dias'ter.** See *amphiaster*. [Gr., *dis*, twice, + *aster*, star.]
- diastole** (di-as'to-le). Dilatation, especially that of the cavities of the heart, which occurs alternately with their systole. **auricular d.** The dilatation of the auricle of the heart by the inflowing blood from the veins; it is almost or entirely a passive act, and comprises four-fifths of the time of an entire cardiac cycle or revolution. **cardiac d.** The expansion of the heart after a contraction by the filling of cavities with blood. **ventricular d.** The dilatation of the ventricles of the heart; this is brought about by the relaxation of the ventricular walls, the inflow of venous blood from the auricles, and, finally, by the auricular systole. While the ventricle is in d., it may be said to be at rest; it comprises three-fifths of the time of an entire cardiac cycle. [Gr., *diastellein*, to expand.]
- diastol'ic.** Pertaining to diastole. **d. pressure.** The pressure in the arteries at the bottom of the pulse-wave. Same as minimum blood pressure.

diastrephia (di-as-tref'e-ah). Syn.: *ve-cordia d.*, *paranoia corrupta* (seu *deprava-ta*). A form of insanity in which the patient takes pleasure in wickedness and in causing suffering in others. [Gr., *diastrephain*, to pervert.]

diateretic (di-at-er-et'ik). Preservative of health. [Gr., *diaterain*, to preserve.]

diathermancy (di-ah-ther-man-se). The capability of transmitting radiant heat. [Gr., *dia*, through, + *thermainein*, to heat.]

diathermamsis (di-ah-ther-man'sis). The passage of heat through a body.

diathermometer (di-ah-ther-mom'et-er). Of Melloni, the thermomultiplier, by means of which the heat-conducting power of substances is measured. [Gr., *dia*, through, + *thermainein*, to heat, + *metron*, a measure.]

diathesin (di-ath'es-in). Ortho-oxybenzyl alcohol, $C_7H_5O_2$. An analgesic and antipyretic.

diathesis (di-ath'e-sis). A congenital or acquired condition of body predisposing to some particular constitutional disease or to certain local manifestations of disease. A term at present but little used. **bilious d.** An old name for a morbid condition of the body characterized by a supposed superabundance of bile. **cancerous d.** See *cancerous cachexia*, under *cachexia*. **catarrhal d.** A morbid condition of the body characterized by an excess of mucous liquids. **diabetic d.** Of Bazin, a condition of the body favoring the production of sugar in the liquids of the body. **d. hemorrhagica.** See *hemophilia*. **gouty d.** A disposition to gouty affections. **hemorrhagic d.** See *hemophilia*. **neuropathic d.** A hereditary predisposition to the development of diffuse or systematic affections of the nervous system, which transmit themselves by way of heredity, either integrally or in transforming themselves. **phthisical d.** A tendency to pulmonary tuberculosis. **psychopathic d.** A tendency to mental disease. **rheumatic d.** A constitutional tendency to rheumatic affections. Still used by English writers. **tuberculous d.** A predisposition to the growth of tubercle. **uric acid d.** A constitutional tendency to the formation of an excess of uric acid within the body. [Gr., *diatithesthai*, to be disposed.]

diatomic (di-at-om'ik). 1. Containing two atoms (said of molecules). 2. Containing two atoms of replaceable hydrogen. [Gr., *dis*, twice, + *atomos*, an atom.]

diazo- (di-az'o). A formative of the names of compounds which are derived from the aromatic hydrocarbons, containing two atoms of nitrogen with phenyl.

diazobenzene (di-az'o-ben'zën). Sulphonic acid, $C_6H_7(SO_3H).N:NOH$. Two isomeric varieties are known. The benzene sulphonic acids have been used as reagents for testing certain conditions of the urine, e. g., glycosuria and the urine of typhoid fever.

diaz'o-react'ion. See Ehrlich's *diazo-reac-tion*.

di'azyme es'sence. A proprietary liquid preparation, said to contain the amolytic enzyme of the pancreas, devoid of trypsin and lipsin, in 18.5 per cent. alcohol.

diba'sic. Containing in each molecule 2 atoms of hydrogen replaceable by a base (said of acids); formed by the replacement of 2 such atoms by a base (said of salts). [Gr., *dis*, twice, + *basis*, a base.]

Dibothriocephalus (di-both're-o-sef'al-us). Syn.: *Bothriocephalus*. A genus of the order *Pseudophyllidea carus*, of the class *Cestoidea*, being flat worms with an unarmed scolex and flat suckers. **D. cordatus.** A species infecting man and the dog in Iceland. **D. latus.** A species producing severe anemia in man, dogs, and cats, and found in N. America, Europe, Asia, and Africa. **D. parous.** A species observed in man in Tasmania.

dibothrium (di-both're-um). See under *sparganum*.

dibrombenzene (di-brom-ben'zën). $C_6H_4Br_2$, a substitution compound of benzene, in which two atoms of bromin have been substituted for two hydrogens.

dibromethane (di-brom-eth'ane). A substitution product of ethane, which contains two atoms of bromin, $C_2H_4Br_2$.

dibromid (di-bro'mid). A compound consisting of an element or radicle united directly with bromin in the proportion of 2 atoms of the latter to a certain definite quantity of the former assumed as the unit of comparison.

dibrommethane (di-brom-meth'an). A substitution product of methane.

dibutyl (di-bu'til). A hydrocarbon, C_8H_{18} , that occurs in mineral oil.

dicalcic (di-kal'sik). Containing 2 atoms of calcium.

dicar'bonate. See *bicarbonate*.

dicephalus (di-sef'al-us). A monster having two heads or with the head more or less completely divided into two parts.

d. dibrachius. A variety having two arms. **d. monauchenos.** A variety in which there is a common neck. **d. tetrabrachius.** A variety having four arms. **d. tribrachius.** A variety having three arms. [Gr., *dis*, twice, + *kephale*, head.]

dichlor-. A formative element in names of compounds formed by the substitution of two atoms of chlorin for hydrogen atoms.

dichlorethane (di-klor-eth'an). A substitution product of ethane, $C_2H_4Cl_2$.

dichlorid (di-klo'rid). A compound consisting of an element or radicle united with chlorin in the proportion of 2 atoms of the latter to a certain definite quantity of the former.

dichlormethane (di-klor-meth'an). A chlorin substitution product of methane, CH_2Cl_2 .

dichotomous (di-ko'to-mus). Dividing into two branches of equal or nearly equal size; bifurcating. In descriptive bacteriology, a term meaning forked or bifurcated. [Gr., *dicha*, in twain, + *temnein*, to cut.]

dichotomy (di-cho'to-me). 1. The state of being dichotomous, the phenomenon of

dichotomous division. 2. Bifurcation of the developing embryo, either at the superior or inferior growing point, producing reduplication or a double monstrosity, but always having a single median axis, at some point of its course. **inferior d.** A d. affecting the inferior part of the body or *katadidymus*. **mesial d.** A d. of the middle portions of the trunk region, or *anakatadidymus*. **superior d.** A d. affecting the upper part of the body or *anadidymus*.

dichroism (di'kro-izm). That property of a substance by which it appears to be of one color by direct light and of another by transmitted light. [Gr., *dis*, doubly, + *chroizein*, to color.]

dichromate (di-kro-māt). A bichromate (also erroneously called an acid chromate); regarded either as made up of 2 molecules of chromium trioxid united with a basic oxid or as a salt of dichromic acid.

dichromatic vision (di-kro-mat'ik vizh'on). Two color visions, that is, a color vision which, unlike the normal, may be supposed to depend upon the presence in the retina of only two fundamental color sensations. This is supposed to be the condition of the red, green, and violet color-blind.

dichromatopsia (di-kro-mat-op'se-ah). A form of color-blindness in which only two of the primary colors can be distinguished. [Gr., *dis*, twice, + *chroma*, a color, + *opsis*, sight.]

dichromic (di-kro'mik). Containing 2 atoms of chromium.

dichromophilism (di-kro-mof'il-izm). In microscopy, capacity for double staining. [Gr., *dis*, twice, + *chroma*, color, + *philein*, to love.]

dichroous (di'kro-ūs). Of two colors; having the property of dichroism.

dichliditis (dik-lid-i'tis). Inflammation of a heart valve. [Gr., *diklides*, valves, + *itis*, inflammation.]

dichlidostosis (di-klid-os-to'sis). Ossification of venous valves. [Gr., *dikleis*, a double door, + *osteon*, a bone.]

dicrocelium (di-kro-se'le-um). See *Distoma*. [Gr., *dikroos*, forked, + *koilia*, a cavity.]

dicrotic (di-krot'ik). Beating doubly, i. e., showing two waves for each cardiac systole; said of the pulse. **d. notch**. The notch or negative wave on the descending limb of the sphygmogram, just preceding the dicrotic wave. **d. pulse**. See under *pulse*. **d. wave**. The conspicuous wave seen about midway on the descending limb of the sphygmogram. [Gr., *dis*, twice, + *krotein*, to beat.]

dicrotism (di'krot-izm). The state of being dicrotic. See *dicrotic pulse*, under *pulse*.

dicyanin. See *cyanogen*.

didac'tic. Instructive; of medical instruction, conveyed by description or precept as distinguished from clinical or experimental demonstration. [Gr., *didaktikos*.]

didactylism (di-dak'til-izm). The congenital condition in which but two of the

digits are preserved. [Gr., *dis*, twice, + *daktylos*, a digit.]

didermiatría (di'der-me-at're-ah). Endermic medication. [Gr., *dia*, through, + *derma*, the skin, + *iatria*, medical treatment.]

diduction (di-duk'shun). Lateral movement of one part upon another (e. g., the grinding movement of the lower jaw). [Lat., *ducere*, to draw aside.]

didymalgia (did-im-al'je-ah). Testicular pain. [Gr., *didymos*, testis, + *algos*, pain.]

didymus (did'e-mus). A twin. A double monstrosity. A testis. [Gr., *didymos*, a twin, a testis.]

dielectric (di-el-ek'trik). Acting as a non-conductor of electricity, but allowing of its transmission by induction. [Gr., *dia*, through, + *elektron*, amber.]

dielectrolysis (di''e-lek-trol'is-is). Brondelet's term for the process of decomposing a medicinal compound by electrolysis with a galvanic circuit, including a diseased or painful part of the body, thus causing one of the elements of the compound to pass into or through the part. [Gr., *dia*, through, + *elektron*, amber, + *lyein*, to dissolve.]

diencephalon (di-en-sef'al-on). Midbrain. Thalamencephalon.

di'es. A day. [Lat.]

di'et. 1. The customary food of an individual. 2. Food restricted as to quality and quantity with reference to the restoration or preservation of health. **accessory articles of d.** Materials, such as the condiments, flavors, and stimulants, which occur in the diet, but are not used as sources of energy. **animal d.** A d. consisting largely of animal food, such as milk, eggs, and meat. **common d.** Of hospitals, the d. of the majority of the patients, for whom no special d. is prescribed. **d. for cold weather**, see in *appendix*, page 914. **d. for hot weather**, see in *appendix*, page 914. **d., purin free**; see in *appendix*, page 914. **d., Schmidt's test**; see in *appendix*, page

d. tables used in private practice by Dr. W. Gilman Thompson, see in *appendix*, page . **d., uric acid free**; see in *appendix*, page 914. **dry d.** A d. in which but little fluid is allowed. **extra d.** Of the hospitals, a d. in which, besides a full allowance of nourishing food, certain palatable articles are included to stimulate the appetite and hasten convalescence. **house d.** See *common d.* **liquid d.** A d. in which no solid food is allowed, but only milk and soups. **rheumatic d.** A d. adapted for rheumatic patients. **Tuffnell's d.** See under *Tuffnell*.

vegetable d. A d. from which meat is excluded and of which fresh vegetables form an important part. [Gr., *diaita*.]

dietary (di'et-a-re). A certain fixed or regulated diet, such as prevails in hospitals, in public institutions, and in military service, or is prescribed for special patients.

dietetic, dietetical (di-et-et'ik, di-et-et'ikal). Pertaining to diet.

dietetics (di-et-et'iks). The science of the regulation of diet in health and disease.

dietetist (di-et-et'ist). 1. One who regulates the diet. 2. A physician who relies entirely upon proper feeding in the treatment of disease.

diethylamin (di'e-thil-am'in). A non-poisonous ptomain, NC_2H_5 , found in decaying fish and sausage.

diethylendiamin (di-eth'el-ën-di-am'in). See *piperazin*.

diethylmalonylurea. Syn.: *veronal*. A valuable hypnotic.

Dietl's crisis. See *nephritic crisis*.

diexodos (di-ecks'od-os). 1. An excretory channel, an outlet. 2. The expulsion of excrementitious material. [Gr., *diexodeuin*, to pass through.]

differential (dif-er-en'shal). Pertaining, or having regard, to the differences between two or more objects, conceptions, processes.

differentiation (dif-er-en-she-a'shun). 1. The assumption of individual characteristics by the several portions of a mass of organized material, by virtue of which some of it is developed into one sort of structure, and other parts into other forms, although originally the whole seemed absolutely alike. 2. See *diagnosis*. **histological d.** D. in the matter of microscopic structure. **physiological d.** The process of d. in the kind of functional activity. **primary d.** In embryology, the d. that results in the formation of the notochord, the medullary plate, and the protovertebrae. **secondary d.** The formation of special parts or organs after the primary d. has taken place.

diffluent (dif'flu-ent). Almost liquefied, softened to such a degree as to spread like a liquid. [Lat., *diffluere*, to flow.]

diffraction (dif-frac'shun). A phenomenon consisting in the bending and dispersion of rays of light when passing near the edge of a body. [Lat., *diffractio*, from *diffringere*, to shatter.]

diffractional. Producing diffraction.

diffusate (dif'fu-sät). In the process of dialysis, that portion of the liquid which passes through the animal membrane, and contains crystalloid matter in solution.

diffuse', **diffused'**. Spread, spreading, scattered.

diffusibility (dif-fu-si-bil'it-e). The quality of being diffusible. **d. of gases**. Of Dalton, the property by which two or more gases, when placed in an inclosed space, expand as if each occupied it alone, the elastic force of the mixture being equal to the sum of the elastic forces of all the contained gases.

diffu'sible. Capable of diffusing or of being diffused; capable of being diffused rapidly through the system, so as to cause a prompt effect.

diffusometer (dif-fu-se-om'et-er). An instrument for measuring the diffusibility of gases. [Lat., *diffusio*, diffusion, + Gr., *metron*, a measure.]

diffusion (dif-fu'shun). The state of being diffused; the act of diffusing; the process by which two liquids or two gases, when

brought into contact with each other, gradually intermix until every part of one is in contact with some portion of the other.

anodal d. See *cataphoresis*. **circles of d.** Circles of d. formed on the retina when a pencil of ray cuts the retina before or after coming to a focus. **d. apparatus**. See under *apparatus*. **d. circles**. See *circles of d.* **d. coefficient**. The amount of dissolved substance which under constant conditions diffuses through a membrane in a unit of time. It varies with the temperature.

d. electrode. See under *electrode*. **d. of heat**. The irregular reflection of heat rays from the surface of bodies. As in the case of light, the different thermal rays are diffused (or irregularly reflected) by certain bodies in different degrees, the thermal rays which are not so diffused being absorbed. **d. of light**. The irregular reflection of light rays from the surface of an unpolished body. Part of the rays falling upon such a body are absorbed, part are reflected in every direction, the wave length of the rays that are so reflected determining the color of the body. The general diffused brightness of daylight is due to the d. of light falling upon clouds, particles floating in the air, and terrestrial objects. **d. stasis**. See under *stasis*. **d. tube**. An instrument intended for the d. of gases. [Lat., *diffusio*.]

diffusive. Diffusing readily, as a diffusible stimulant.

digalen (dij'al-en). A proprietary preparation, said to consist of Cloetta's soluble digitoxin, dissolved in alcohol, glycerin and water; also sold in tablet form. It is used like digitalis.

digastricus. A depressor muscle. See *table of muscles*, under *muscle*.

digeneration (di-jen'es-is). See *alternate generation*, under *generation*. [Gr., *dis*, twice, + *gennan*, to engender.]

digenetic (di-jen-et'ik). Requiring a change of hosts, as with flukes or parasites. [Gr., *dis*, twice, + *genesis*, generation.]

digenia (di-je'ne-ah). Generation due to the union of the two sexes.

digenism (di'jen-izm). 1. Alternate generation. 2. Double causation, the concurrent action of two causes.

digest (di-jest'). To perform or to undergo digestion.

digestant (di-jes'tant). A remedy that aids digestion.

digester (di-jes'ter). 1. A strong metallic kettle with a safety valve, for subjecting bodies to a high temperature. 2. Of Fleury, a condensing apparatus the principle of which is founded upon the condensation of the hot vapors of the menstruum in a digesting glass vessel. **Papin's d.** See under *Papin*.

digestion (di-jes'shun). 1. The physical and chemical changes which nutrient material undergoes under the influence of digestive ferments to render it soluble, diffusible, and assimilable. These changes occur (a) in the digestive apparatus of an

imals; (b) on the leaves of insectivorous plants; (c) in the tissues of animals and plants; (d) outside the living organism. 2. In popular language, the changes that food normally undergoes in the stomach and intestines. 3. The maceration of medicinal or other substances in warm liquids, in order to extract the active principles. **artificial d.** The d. of nutritive material outside the living organism, caused by a digestive ferment, such as pepsin or trypsin. So far as is known, the changes produced by the digestive ferments are the same in artificial as in natural d. **buccal d.** See *oral d.* **cavitary d.** See *extracellular d.* **cecal d.** The digestive process in the cecum. In man and the animals with small ceca, the cecum seems to serve only as a reservoir and for the absorption of liquids. In animals like the horse, which eat bulky food, the cecum is exceedingly large and serves as a reservoir in which the digestive processes, begun in the mouth, stomach, and small intestine, may be completed. It is not certain that in these cases the cecum produces a true digestive ferment, the d. that occurs being largely due to bacteria. **duodenal d.** See *pancreatic d.* **extracellular d.** D. which occurs outside of a cell body. **gastric d.** That part of the process of d. which takes place in the stomach, especially the action. **intestinal d.** The change effected in the chyme by the action of the intestinal secretions; in a broader sense, all the changes which the undigested food undergoes after leaving the stomach. **intracellular d.** The d. or solution of nutrient material by a cell within its own substance. **oral d.** That portion of the process of d. that is accomplished in the mouth, including the comminution of the food and its insalivation. See *salivary d.* **pancreatic d.** That portion of the digestive processes which takes place in the upper part of the small intestine, under the influence of the pancreatic juice, by which the proteids are converted into peptones, starch is changed into sugar, and the fats are emulsified and saponified. **peptic d.** See *gastric d.* **salivary d.** The preliminary d. of starchy food (its conversion into sugar) by the action of the saliva. **self-d.** See *autolysis and autolysis.* **tryptic d.** See *pancreatic d.*

digestive. Causing, promoting, concerned with, or pertaining to, digestion; as a digestant.

digestum. The product of maceration or digestion.

digipoten (dij-ip-o'ten). A purified proprietary extract of digitalis.

digipura'tum. A proprietary preparation consisting of a purified extract of digitalis diluted with sugar of milk.

digistrophan (dij-is'tro-fan). A proprietary preparation, consisting of an evaporated extract of digitalis and strophanthus.

digit (dij'it). A finger or a toe. [Lat., *digitus*.]

digital (dij'it-al). 1. Pertaining to, or resembling, a finger or toe. 2. Resembling a pit made with the tip of a finger (see *l. fossa*). 3. Performed with the fingers. [Lat., *digitus*, finger.]

digitalein (dij-it-al-e'in). One of the active glucosidal principles found in digitalis. As found in commerce, digitalein is impure, consisting of a mixture of digitoxin, digitalin, digitalein with digitonin. It is soluble in water, and has the action of its constituents upon the heart.

digitaligenin (dij-it-al'ij-en-in). A decomposition product of pure digitalin.

digitalin (dij-it-al'in). The term *digitalin* is used generally for all of the digitalis bodies, and, in a more restricted sense, for any one of several substances which differ from each other, more or less. These substances are as follows: **amorphous d.**; also known as *digitalin amorphe* and *digitalin chloroformique* (*Homolle's d.*), the d. of the French codex. This substance is probably a more or less impure form of true d., differing somewhat in its physical properties, owing to the presence of impurities, including digitonin. The amorphous d. of Homolle is used occasionally and mention is frequently made of it in the literature of the subject. It is a very active substance, used like true d. **crystallin d.** Also known as *digitalinum crystallatum*, *digitaline cristallisée*, and *Nativelle's crystallin digitalin*. This substance is probably identical with digitoxin, and they are often given as synonyms, though it is probable that the original product of Nativelle may have contained some slight impurity. **crystallized d.** So-called *Merck's d.* This is not a d. in the more restricted sense of the word, but is really a digitonin, which is without a digitalis action on the heart. **German d.** Also known as *digitalinum Germanicum*, so-called *digitalinum purum*. It consists of a mixture of glucosids, of which digitonin constitutes about 60 per cent. It is prepared from digitalis seed, after the manner of Walz, and is the substance commonly dispensed when d. is ordered without further specification. It is soluble in water and in alcohol. **Merck's d.** See *crystallized d.*

true d. Also known as *digitalinum verum killiani*, the d. of *Schmiedeberg*. It is probably a pure principle, $C_{35}H_{58}O_{14}$, and second in activity only to digitoxin among the principles found in digitalis. It is prepared from the leaves and seeds of *Digitalis*, and, commercially, from German d. It is nearly insoluble in water and quite insoluble in alcohol. All of the d's here enumerated, except the so-called crystallized d. of Merck, have a similar action on the heart, differing mainly, or wholly, in the degree of their activity.

digitalinum. See *digitalin*.

digitalires'in. A toxic decomposition product of digitalein. Its action resembles that of picrotoxin.

Digitalis (dij-it-a'lis). 1. Foxglove; a genus of the scrophulariaceae, indigenous

in Europe and in western and middle Asia. 2. Of the U. S. Ph., the leaves of *D. purpurea*. The chemistry of *d.* is still very obscure, despite a vast amount of study devoted to it. The leaves of *D. purpurea* probably contain: digitoxin, the most active principle of *d.*, in small amount; digitalein, a soluble active glucosid; digitin, inactive; digitonin, a saponin; and a small amount of true digitalin. Alcohol and water both exhaust the leaves, hence the infusion and the tincture differ mainly in degree of activity, contrary to common belief. The tincture also contains all of the digitonin of the leaf since this substance is soluble in dilute alcohol. *D.* is used mainly for its action on the heart, which it stimulates to contract more forcibly, while the rate is slowed. List of poisons and their antidotes, see in appendix, page 938. **d.** **folia.** The dried leaves of *D. purpurea* [Br. Ph.]. **D. purpurea.** The foxglove; a biennial or perennial European species cultivated in the United States. **extractum d.** Made by evaporating the fluidextract to a pilular consistency [U. S. Ph.]. **extractum d. fluidum.** A fluidextract of *d.* leaves [U. S. Ph.]. **folia d., herba d.** The leaves of *D. purpurea.* **infusum d.** An infusion representing 1.5 per cent. [U. S. Ph.] or 0.7 per cent. [Br. Ph.] of *d.* **semen d.** The seeds of *D. purpurea.* **tinctura d.** A 10 per cent. [U. S. Ph.] [Br. Ph.] tincture of *d.* leaves. **tinctura d. etherea.** An ethereal tincture of *d.* leaves [Ger. Ph. 1st ed.] [Lat., from *digitus*, finger, because of its finger-shaped corolla.]

digitalization (dij-it-al-iz-a'shun). The subjection of an organism to the action of digitalis or of digitalin.

digitalone (dij'it-al-ōn). A proprietary preparation said to be a dialysate of digitalis.

digitalose (dig'it-al-ōs). A form of sugar resulting from the decomposition of digitalin.

digitalosmin (dij-it-al-os'min). The odoriferous principle of digitalis. [*Digitalis*, + Gr., *osme*, an odor.]

digitalysatum (dij-it-al-is'at-um). A proprietary preparation, said to be a dialysate of digitalis.

digitasolin (dij-it-as'o-lin). A substance said to have been found in digitalis.

digiti- Combining form of Lat., *digitus*, finger.

digitin (dij'it-in). An inert substance found in digitalis. Also used as a synonym for digitonin.

digitogenin (dij-it-oj'en-in). A crystallizable principle discovered by Schmiedeberg in Nativelle's digitalin; found as a fermentation product in the aqueous solution of digitonin and crystallized from its benzene solution in the form of needles.

digitolein (dij-it-o'le-in). A greenish, bitter fat of disagreeable odor (a combination of glycerin with digitoleic acid) discovered by Kossmann, in *Digitalis purpurea*.

digitonein (dij-it-o-ne'in). An amorphous decomposition product of digitonin, produced by boiling with dilute acids.

digitonin (dij-it-on'in). A saponin, $C_{77}H_{140}O_{34} + 5H_2O$, occurring in digitalis and constituting a large part of German digitalin. Also called *crystallized* digitalin or digitin. It is soluble in water and in dilute alcohol and is said to have the property of rendering digitoxin capable of suspension in the infusion of digitalis. It is a circulatory depressant, when injected into the blood, but is not absorbed from the alimentary tract.

digitophyllin (dij-it-o-fil'in). A substance found in small amounts in digitalis leaves.

digitoresin (dij-it-o-res'in). One of the decomposition products of digitonin and digitalin when treated with dilute acids.

digitoxin (dij-it-ox'in). A crystalline substance, $C_{30}H_{50}O_{14}$, sometimes described as a resin, sometimes as a glucosid, obtained from digitalis, of which it constitutes the most active principle. It is wholly insoluble in water, but soluble in alcohol. It is practically identical with the digitalin of Nativelle. It is the most active of the principles found in digitalis. **amorphous d.** A name given by Cloetta to a substance obtained from digitalis. It is probably a mixture of principles. **soluble d.** See *amorphous d.*

digitoxose (dij-it-ox'ōs). A sugar resulting from the decomposition of digitoxin.

dig'itus. 1. A finger or a toe. 2. The length of the index finger. **d. annularis.** The ring finger. **d. demonstrativus.** The index finger. **d. index, d. indicatorius.** The index finger. **digiti manus.** The fingers. **d. medicus.** The third finger, so called because it was formerly supposed to receive the pulse directly. **d. medius.** The middle finger. **d. minimus.** The little finger or toe. **d. pedis.** A toe. **d. primus.** The first finger. **d. quartus.** The ring or the little finger. **d. quintus.** The little finger or toe. **d. supernumerarius.** A supernumerary finger or toe. **d. tertius.** The middle or the ring finger. [Lat.]

diglossia (di-glos'se-ah). The state of having a double tongue. [Gr., *dis*, double, + *glossa*, the tongue.]

dihalogenized, dihaloid (di-hal'o-jen-īzd, di-hal'oyd). Containing 2 atoms of halogen.

dihydrate (di-hi'drät). 1. A compound containing 2 molecules of hydroxyl. 2. A compound containing two molecules of water. [Gr., *dis*, twice, + *ydor*, water.]

dihydrated (di-hi'dra-ted). Having taken up 2 molecules of water or 2 molecules of hydroxyl.

dihydric (di-hi'drik). Containing in the molecule 2 atoms of hydrogen, which are replaceable by a monad metal, said especially of alcohols.

dihydrobromid (di-hi''dro-bro'mīd). A combination of 2 molecules of hydrobromic acid with a base.

dihydrochlorid (di-hi''dro-klo'rid). A

compound of a base with 2 molecules of hydrochloric acid.

dihydroxybenzene (di-hi''drok-se-ben'-zën). See *catechol*.

dihysteria (di-his-te're-ah). A malformation in which the uterus is double, the vagina being either double or single. [Gr., *dis*, twice, + *ysteria*, the womb.]

diiodid (di-i'o-did). A compound consisting of an element or radicle united directly with iodine in the proportion of 2 atoms of the latter to a certain definite quantity of the former assumed as the unit of comparison.

diiodonaphthol (di-i''o-do-naf'thol). The compound $C_{10}H_6I_2O_2$; a substitute for iodoforn.

diiodoresorcín (di-i''o-do-res-or'sin). An inodorous brown powder, used as an antiseptic.

diiodothioresorcín (di-i''o-do-thi''o-res-or'sin). A brown powder, $C_6H_2O_2I_2S_2$; an antiseptic.

diketone (di-ke'tón). A chemical compound which contains two ketone (CO:) groups.

dilaceration (di''las-er-a'shun). 1. A tearing apart. See *laceration*. 2. In dentistry, displacement of the crown or a portion of the crown of the tooth during its formative stages, giving rise to subsequent deformity of the tooth. [Lat., *dilaceratio*, from *dilacerare*, to tear apart.]

dilatation. 1. The act or process of producing or undergoing enlargement as the result of an expansive force acting from within or of a tractive force acting from without. 2. An expanded portion of a hollow structure. 3. Expansion produced by heat. **bulbar d.** 1. The expansion of the portion of the internal jugular vein at the level of the foramen lacerum posterius basae cranii. 2. The bulb of the urethra. **cardiac d.** Enlargement of one or more of the cavities of the heart. **digital d.** The d. of a cavity or orifice by means of a finger. **saciform d.** Partial or unequal d. of a hollow organ so that a portion of it stands out in the form of a pouch. [Lat., *dilatare*, to dilate.]

dilator (di-la'tor). 1. An instrument used to dilate or distend an opening, a passage, or an organ. 2. A muscle or nerve which dilates or widens apart. See *table of muscles*, under *muscle*. [Lat., *dilatare*, to enlarge.]

dilipoxanthin (di-lip-o-zan'thin). A yellow lipochrome, produced by various bacteria. [Gr., *dis*, two, + *lipos*, fat, + *xanthos*, yellow.]

dill. A plant of the genus *Anethum*, especially *Anethum graveolens*. [Ang.-Sax., *dil*, *dile*.]

diluent (dil'u-ent). 1. Serving to dilute, as a bland liquid, usually water, to be drunk in large quantities for the purpose of diluting the fluids of the body, especially the urine, so as to render them less irritating. 2. Any inert substance which is used to dilute an active drug. Sugar of milk is very commonly used as a diluent powder. [Lat., *diluens*, from *diluerè*, to dilute.]

dilution (dil-u'shun). The act or process

of rendering a substance dilute or attenuated, also the mixture resulting from such a process. **centesimal d.** Of the homeopaths, any one of a series of d's the first of which contains 1 part of a drug and 99 parts of diluent, the second 1 part of the first d. and 99 parts of diluent, etc. **decimal d.** Of the homeopaths, any one of a series of d's the first of which contains 1 part of a drug and 9 parts of diluent, the second 1 part of the first d. and 9 parts of diluent, etc. **high d.** The excessive d. of anything. [Lat., *dilutio*, from *diluerè*, to dilute.]

dimargarin (di-mar'ga-rin). A glycerid containing two molecules of margaric acid in combination with a molecule of glycerin.

dimetallic (di-met-al'ik). Of salts, containing in the molecule 2 atoms of a metallic element.

dimethyl (di-meth'il). A prefix used in chemical nomenclature to signify two methyl (CH₃) radicles. **d. ketone**. See *acetone*.

dimethylamin (di'meth-il-am'in). A secondary amin of methyl (CH₃)₂NH; a liquid having an ammoniacal odor, found in Peruvian guano.

dimethylarsin (di'meth-il-ar'sin). 1. (CH₃)₂AsH, a poisonous gas of very disagreeable odor. 2. A radicle having the composition, As(CH₃)₂. **d. oxid.** Cacodyl oxid; a colorless liquid [As(CH₃)₂]O, giving off exceedingly irritant and stupefying vapors. It is an active poison.

dimorphism (di-mor'fiz'm). The property possessed by certain solid substances to crystallize in two distinct forms. [Gr., *dis*, two, + *morphe*, form.]

dimorphobiosis (di-mor-fo-bi-o'sis). Generation in the same animal in two different ways when subjected to different conditions and environment. [Gr., *dis*, twice, + *morphe*, shape, + *biosis*, life.]

dimorphous (di-mor'fus). Occurring in two different forms.

dinic, dinical (din'ik, din'ikal). Pertaining to giddiness. [Lat., *dinicus*, from Gr., *dinos*, vertigo.]

dinitrate (di-ni'trat). A compound containing two molecules of nitric acid.

dinitrated, dinitric. Containing 2 molecules of nitric acid.

dinners for hot and cold weather. See in *appendix*, page

dinoxid (din-ox'id). See *dioxid*.

Dioctophyme renale. Syn. for *Eustrongylus gigas*.

diolein (di-o'le-in). Dioleate of glyceryl, (C₁₈H₃₅O₂)₂.C₃H₅.OH.

di'oinin. See *ethyl morphin hydrochlorid*, under *morphin*.

diopsimeter (di-op-sim'et-er). An instrument for measuring the extent of the visual field. [Gr., *diopsis*, clear vision, + *metron*, a measure.]

dioptr, dioptré (di-op'ter, di-op'tre). The unit for measuring the refractive power or strength of a lens. This unit is a lens having a focal distance of one meter. [Gr., *dioptron*, something that can be seen through.]

dioptrimeter (di-op-tom'et-er). The de-

- termination of the refraction and accommodation of the eye. [Gr., *dioptron*, something that can be seen through, + *metron*, a measure.]
- dioptrioscopy** (di-op-tos'ko-pe). A method of determining the refraction of the eye by means of the ophthalmoscope.
- diop'tric**. Pertaining to dioptrics; also of or pertaining to a dioptr.
- diop'trics**. That branch of optics which treats of the refraction of light.
- dioscamphor** (di-os-kam'for). A dense, yellowish liquid, $C_8H_{12}O$, having the odor and taste of thymol, regarded as a lower homologue of ordinary camphor.
- Dioscorea villosa** (di-os-ko're-ah vil-lo'-sah). Wild yam root, colic root; sometimes used in domestic practice.
- dioscorein** (di-os-ko're-in). A principle obtained from *Dioscorea villosa*.
- diose** (di'ós). See *biose*.
- Dios'ma cre'nula**. Syn.: *D. serratifolia*, *D. odorata*. A genus of ructaceous plants.
- dios'min**. An active principle obtained from different species of *Barosma* (*Diosma*), or *buchu*.
- diosmo'sis**. See *osmosis*.
- diosphenol** (di-os'fe-nol). A crystalline substance, $C_{14}H_{22}O_8$, found in the essential oil of the leaves of *Barosma betulina*. According to Spica, it has the constitution $C_{10}H_{16}O_8$, or that of an oxycamphor.
- Diospyrus**, **Diospirus** (di-os'pi-ros). A genus including the persimmon tree.
- cortex diospyri**. The bark of the *D. virginiana*. **D. virginiana**. The persimmon tree of the southern United States. The bark is bitter, and has been used medicinally. The unripe fruit is very astringent, containing tannin, pectin, glucose, and a yellow coloring matter; the ripe fruit is palatable. [Lat., *Dios*, or *Jupiter*, + *pyrus*, pear-tree.]
- dioctearoptene** (di-os-te-ar-op'tên). See *diosphenol*.
- dioxid** (di-ox'id). A compound consisting of an element or radicle united directly with oxygen in the proportion of 2 atoms of the latter to a certain definite quantity of the former assumed as the unit of comparison. [Gr., *dis*, twice, + *oxys*, sharp.]
- dioxogen** (di-ox'o-jen). A trade name for solution of hydrogen dioxide.
- dioxybenzene** (di-ok-se-ben'zên). Dihydroxybenzene; a hydroxyl substitution compound of benzene, $C_6H_4(OH)_2$. Three isomeric varieties are known: catechol, guinol, and resorcinol.
- dipalmitin** (di-pal'mit-in). $C_{32}H_{64}O_2$, formed by the substitution of 2 molecules of the radicle of palmitic acid for 2 molecules of hydroxyl in glycerin.
- dipeptid** (di-pep'tid). A class of compounds containing two amino-acids in combination with each other (e. g., alanyl-glycen). Many of the d's are intermediary hydrolytic decomposition products of proteins by the action of pancreatic juice; some are hydrolysed to the amino-acids. Thus far, eight different d's have been isolated from proteins by hydrolyses with acids and alkalis, namely, *glycyl-alanin*, *glycyltyrosin*, *glycylleucin*, *glycyl-*
- glycin*, *leukylglycin*, *alanylleucin*, *leukyl-alanin*, and *leukylglutaminic acid*.
- diphallus** (di-fal'lus). 1. A double penis. 2. A monster having a double penis. [Gr., *dis*, twice, + *phallos*, the penis.]
- diphenylamin** (di-fen-il-am'in). A phenyl substitution compound of ammonia, $(C_6H_5)_2NH$. A crystalline substance; used to test for traces of nitric acid by which it is changed to a dark blue color.
- diphenylmethane** (di-fen-il-meth'an). A hydrocarbon, $(C_6H_5)_2CH_2$, forming prismatic or tabular crystals.
- diphosphate** (di-fos'fat). 1. A compound consisting of 2 molecules of phosphoric acid united with 1 atom of an element or 1 molecule of a radicle. 2. See *pyrophosphate*.
- diphtheria** (dif-the're-ah). Syn.: *membranous croup*. An acute infectious disease, due to the presence of the bacilli of diphtheria (Klebs-Löffler bacillus) and characterized by the formation of a membranous, fibrinous, whitish or grayish deposit at the seat of infection. The lesion generally affects the throat and often nasal passages and the larynx, and the symptoms and visceral lesions are produced by a soluble toxin formed at the local seat of infection by the diphtheria bacillus. **asthenic d.** A condition in which, with the subsidence of the pronounced symptoms of d., there may be gradual failure of the vital forces, due to the action of diphtheritic toxins. **buccal d.** D. of the mucous membrane of the cheeks or gums. **conjunctival d.** See *diphtheritic conjunctivitis*, under *conjunctivitis*. **croupal d.** **croupous d.** D. with the local symptoms of croup. D. of the larynx giving rise to symptoms of croup. **d. carrier**. A person in whose fauces the diphtheria bacilli persist long after return to health. **d. of the vulva**. A variety frequently occurring during the endemic or epidemic prevalence of d. It is usually accompanied by some local adenitis and the whole perineal area may become involved. **d. of wounds**. An appearance of granulations which resembles true d., but is not necessarily due to diphtheritic infection. It is supposed by some to be identical with hospital gangrene. **laryngeal d.** That form of d. which affects the larynx and mechanically causes dangerous stenosis, especially in infants and young children. **laryngotracheal d.** An extension of d. from the pharynx downward. Sometimes the process begins in the trachea and invades the air passages from below upward. **malignant d.** D. characterized by such rapidity and intensity in the development of the local manifestations that the clinical gradations of the disease are unrecognizable. **nasal d.** A severe form of d. which may exist in the nose alone or in connection with d. of the nose and fauces. **puerperal d.** D. of the genital tract in women after labor; formerly included under the term puerperal fever. **urinous d.** Pulpal degeneration of traumatic sur-

- faces due to contact with alkaline urine. [Gr., *diphthera*, a tanned hide, because of the formation of a leathery membrane in the throat.]
- diphtheritic** (dif-ther-it'ik). Pertaining to diphtheria. **d. sore throat**. A euphemism for a mild form of diphtheria.
- diphtheroid**, **diphtheroidal** (dif'ther-oyd, dif-ther-oy'dal). Resembling diphtheria, its cause, or its products. [Gr., *diphthera*, a skin, + *eidōs*, resemblance.]
- diphtherotoxin** (dif-the-ro-toks'in). The specific toxin of the diphtheria bacillus.
- diphthongia** (dif-thon'ge-ah). The simultaneous production of two vocal sounds of different pitch, occurring in certain pathological conditions of the larynx. [Gr., *dis*, twice, + *phthoggos*, a distinct sound.]
- Diplacanthus nan'us**. See *Hymenolepis*.
- diplocusis** (dip-la-ku'sis). Syn.: *diplecoia*. A morbid condition in which two tones are heard when only one is produced. **d. uniauralis**. D. affecting one ear only; also a condition in which a tone appears normal to one ear and higher or lower to the other. [Gr., *diploos*, double, + *akousis*, hearing.]
- diplasmatic** (di-plas-mat'ik). Of Kölliker, a term used to designate cells in which there are two or more substances, chemically or physically distinct.
- diplegia** (dip-le'je-ah). Paralysis of corresponding muscles on the two sides of the body. **d. brachialis**. Paralysis of both upper extremities. **d. cruralis**. Paralysis of both lower extremities. **d. facialis**. Bilateral facial paralysis. [Gr., *dis*, twice, + *plege*, a stroke.]
- diplo-, dipl-**. Combining form of the Gr., *diplos*, *diploos*, double.
- diplococ'cal**, **diplococ'coid**. Pertaining to a diplococcus.
- diplococcus** (dip-lo-kok'kus). A micrococcus or spherical organism joined in sets of two or pairs. **D. gonorrhoea**. Syn.: *gonococcus*. The organism producing gonorrhoea. **D. intracellularis**. Found in blood and pus in cerebrospinal meningitis. **D. pneumoniae**. A species found in the exudation and sputum, and also in the pleuritic and pericardial effusions in croupous pneumonia. [Gr., *diploos*, double, + *kokkos*, a berry, a kernel.]
- diploe** (dip'lo-e). The cancellated tissue situated between the inner and outer tables of a cranial bone. [Gr., *diploe*, a fold.]
- diplogenic** (dip-lo-jen'ik). Partaking of the nature of two bodies; producing two substances. [Gr., *diploos*, double, + *gennan*, to engender.]
- Diplagonop'orus gran'dis**. A large tapeworm which has been found in Japan.
- diploma** (dip-lo'mah). A document granted by a faculty or learned society, showing that the recipient has certain qualifications and is entitled to a certain rank. [Gr., *diploma*.]
- diploimeter** (dip-lom'et-er). An instrument for measuring the distance between the pupils. [Gr., *diploos*, double, + *metron*, measure.]
- diploomyelia** (dip'lo-mi-e'le-ah). A congenital deformity characterized by duplication of the spinal cord. [Gr., *diploos*, double, + *myelos*, marrow.]
- diplopia** (dip-lo'pe-ah). Double vision; the seeing of two images of an object at the same time. It is almost always binocular and the result of squint. **binocular d.** Double vision which takes place when both eyes concur in the visual act and disappears when one eye is covered or excluded. It results from divergence of the axes caused by some muscular affection, usually a paresis. **crossed d.** Binocular d. in which the left-hand image belongs to the right eye, and vice versa. **direct d.** See *homonymous d.* **heteronymous d.** See *crossed d.* **homonymous d.** Binocular double vision in which the left-hand image belongs to the left eye, and the right-hand image to the right eye. **unocular d.** Double sight with one eye. It occurs in incipient cataract, in irregular cornea, and, occasionally, in cases of cerebral tumor. **vertical d.** D. in which one image is higher than the other. [Gr., *diploos*, double, + *opsis*, sight.]
- diplosal** (dip'lo-sal). The salicylic ester of salicylic acid (C₁₄H₁₀O₆). Antirheumatic and antineuralgic.
- diploteratology** (dip'lo-ter-at-ol'o-je). The science or study of double monstrosities. [Gr., *diploos*, double, + *teras*, a monster, + *logos*, understanding.]
- dipotassic** (di-po-tas'ik). Containing 2 atoms of potassium in the molecule.
- Dippel's animal oil**. Syn.: *bone oil*. A very clear, light, inflammable o. of penetrating, disagreeable smell, obtained from crude animal o. with water.
- dipropylamin** (di-pro-pil-am'in). A secondary amin of propyl, (C₃H₇)₂NH.
- diprosopus** (di-pros-o'pus). A monster characterized by two faces or other double parts. **d. dihypogastricus**. A d. with a reduplication of the hypogastric regions and the lower extremities. **d. diophthalmus**. A d. with only two eyes, one for each face. **d. sejunctus**. A d. in which there are two heads, united in the occipital region, upon a single neck. **d. tetrophthalmus**. A d. having four eyes, two for each face. **d. tetrotus**. A d. with four ears, two for each face. **d. triophthalmus**. A d. with three eyes; two (in one orbital cavity) for one face and one for the other, or one for each face and a blended eye at the junction of the two faces. **d. triotus**. A d. with three ears. [Gr., *dis*, twice, + *prosopon*, the face.]
- Dipsacus** (dip'sak-us). The teasel; a genus of prickly plants. [Gr., *dipsa*, thirst, because the leaves of the plant are so shaped as to hold water.]
- dipse'sis**, **dipso'sis**. Excessive thirst. [Gr., *dipsa*, thirst.]
- dipsobiostatica** (dip''so-bi-o-stat'ik-ah). Of F. W. Lippich, a statistical exposition of the injury resulting to the population from the abuse of alcoholic drinks. [Gr., *dipsa*, thirst, + *bios*, life, + *statike*, a weighing.]
- dipsomania** (dip-so-ma'ne-ah). Lit., a

state of frenzy caused by excessive thirst; as commonly used, a periodic irresistible craving for alcoholic drink; a compulsion neurosis, or a cyclothymic illness; at times an epileptic manifestation. [Gr., *dipsa*, thirst, + *mania*, madness.]

dipsomaniac (dip-so-ma'ne-ak). A person affected with dipsomania.

dipsopathy (dip-sop'ath-e). Of H. C. Wood, a morbid, nervous state of which dipsomania is the essential feature. [Gr., *dipsos*, thirst, + *pathos*, disease.]

dipsorexia (dip-so-recks'e-ah). An overpowering appetite for drink; of Thebault, the early stage of chronic alcoholism, before organic lesions have appeared. [Gr., *dipsa*, thirst, + *orexis*, appetite.]

Diptera (dip'ter-ah). An order of the class *Insecta*, or *Hexapoda*, having one pair of wings, and mouth parts for piercing and sucking. This order includes fleas, gnats, mosquitoes, and flies, many of which transmit disease to human beings.

Dipterocarpus (dip'ter-o-kar'pus). A genus of resinous trees, certain species of which yield gurjun balsam. [Gr., *dipteros*, two-winged, + *karpos*, a fruit.]

Dipteryx (dip'ter-icks). A genus of leguminous plants. **D. odorata**. A large tree growing in Guiana; fruit is the Tonka bean of commerce. Its odoriferous principle is coumarin. [Gr., *dipteryx*.]

dipygus (di-pi'gus). A monster having the lower part of the trunk double. **d. dipus**. A d. with two legs. **d. tripus**. A d. with three legs. [Gr., *dis*, twice, + *pyge*, the buttock.]

direct (di-rekt'). 1. Immediate, pursuing an uninterrupted and undeviating course; also made without the intervention of any intermediate substance or apparatus, as d. examination, d. ophthalmoscopy. 2. Occupying the same lateral half of the body as the lesion that produces it (said of paralysis, etc.). 3. Occurring with or produced by the current; opposed to regurgitant; said of cardiac murmurs caused by stenosis of the orifices. [Lat., *directus*, from *dirigere*, to straighten.]

director (di-rek'tor). 1. A guide. 2. A slender instrument, grooved on one side, for guiding the point of a knife. [Lat., *dirigere*, to lay straight.]

dis-. A prefix having the same force as the Fr., *des*, *de*, having a privative sense, or to strip of, free or rid of, to undo or spoil, as disable, disarticulate, dissimulation, disembowel.

disaccharid (dis-ak'kar-id). Any compound carbohydrate made up of two molecules of simple hexoses.

disarticulation (dis'ar-tik-u-la'shun). The procedure of disconnecting two or more bones that are articulated with each other; amputation through a joint. [Lat., *disarticulare*, to dismember.]

dis'assimila'tion, diss'imila'tion. Changing assimilated material into less complex compounds, mainly by hydrolysis and oxidation, whereby the potential energy in the compound is set free and appears in the kinetic energy of heat, etc.

disassociation, dissociation (dis-as-so-se-a'shun, dis-so-se-a'shun). 1. In chemistry, the breaking up of a molecule of a compound body into two simpler molecules under action of heat, which latter molecules reunite to form original body on a reduction of temperature; or breaking up of a compound into its positive and negative ions in an aqueous solution. 2. In histology, isolation of elements of a tissue, during investigation, by physical or chemical agents. 3. Irregularity, partial. Anesthetics of skin which are manifested towards one or more forms of irritation are called "dissociated." 4. In psycho-analysis the isolation of a mental complex from field of consciousness. **d. pressure, d. tension**. When, as in the case of oxy-hemoglobin, one of the products of dissociation is a gas (O₂), this term expresses pressure of that gas in the surrounding medium at which dissociation occurs. **electrolytic d.** Dissociation of electrolytes (salts, acids, and bases), when dissolved in water, into charged ions (ionization). **hydrolytic d.** See *hydrolysis*. **psychic d.** A separation of mental elements into conscious and unconscious components. [Lat., *dis*, apart, + *associare*, to unite with.]

disc. See *disk*.

discharge (dis-charj'). 1. The escape (especially by violence) of pent up or accumulated energy or of explosive material. 2. The flowing away of a secretion or excretion of pus, and the like. 3. The material ejected by a d. (2d def.).

cerebral cortical d. The violent action of a diseased portion of the cerebral cortex that gives rise to an epileptic paroxysm. **disruptive d.** An electrical d. accompanied with the development of light and sound. **electric d.** A slow or instantaneous bringing back to a neutral electric condition, by which every highly electrified body loses its surplus electricity, giving it up to surrounding bodies less highly electrified. **lochial d.** See *lochial*. **paralytic d.** See *paralytic secretion*. **silent d.** The gradual loss of electricity by even isolated bodies, owing to the conductivity of air and its contained vapors, together with that of the isolating bodies themselves.

discharger. An instrument or apparatus consisting of two brass arcs with bulbous extremities joined to a hinge and sometimes provided with insulating glass handles for discharging Leyden jars or other conductors.

discission (dis-sish'un). A cutting or tearing apart. **cataract d.** An operation for cataract consisting in incising the anterior capsule of the lens in one or more directions by means of a needle with cutting edges, inserted through the cornea or through the sclera, without depressing or disturbing the lens. [Lat., *discindere*, to cut or tear apart.]

discogastrula. Syn.: *discoid blastula*. A disk gastrula; the gastrula of a meroblastic ovum when it forms a thin circular disk upon the surface of the nutritive

yolk. [Gr., *diskos*, a disk, + dim. of *gaster*, a belly.]

Discomyces (dis-ko'mi-ses). See *Actinomyces*. [Gr., *diskos*, a disk, + *mykes*, a fungus.]

discrete (dis-kre't). A term used in descriptive bacteriology and pathology meaning separate and not confluent or blended and in colonies or lesions. [Lat., *discrētus*, from *discernere*, to separate.]

dis'cus. See *disk*. **d. proligerus**. Syn.: *embryonic area*, *germinal disk*. In oviparous animals, a granular disk immediately beneath the vitelline membrane, marking the beginning of the formation of the blastoderm. Viewed crosswise, it has the appearance of an umbilicus, whence it has also been termed the *ciatricula*. From the disk it projects inward in the form of a conelike granular accumulation, the *cumulus proligerus*, encroaching on the vitellus.

disease (dis-ēze'). Syn.: *complaint*, *disorder*. A departure from a state of health of the body or a part of the body or the mind; characterized by an alteration of structure, or by a disturbance of function, or both; illness; sickness. For the different forms of disease see the qualifying adjectives, as Basedow's d., see *Basedow*. **acute specific d.** The infectious febrile d's. **amyloid d.** See *amyloid degeneration*, under *degeneration*. **bad d.** Syphilis. **barking d.** Of Sir A. Clark, a dry, barking, guttural cough, generally associated with slight disorder of the nervous system. **colloid d.** See *colloid degeneration*, under *degeneration*. **communicable d's.** See in *appendix*. **confectioner's d.** An affection of the ends of the fingers caused by the immersion of the hands in hot sugar or syrups. The nails are weakened and are generally disorganized by disturbed nutrition. **congenital d.** A d. existing at the time of birth. **constitutional d.** A d. affecting the whole system, as distinguished from one affecting only a part or an organ. **contagious d.** See under *contagious*. **cyclical d.** A d. which follows a fixed course, cycle, or orbit, though possibly with variations. **endemic d.** See *endemic*. **English d.** See *rachitis*. **epidemic d.** See under *epidemic*. **febrile d.** A d. accompanied by fever. **foot and mouth d.** A sub-acute febrile disease of cattle, transmissible to man by contagion or infection; characterized by aphthous stomatitis accompanied by a vesicular cutaneous eruption, the latter being the most constant in the neighborhood of the hoofs. In children, in whom it is due to the use of milk from cows suffering with it, there are present aphthous stomatitis, digestive disorder, and a vesicular eruption on the face and hands, and sometimes between the toes. When the vesicles dry up, they leave brownish scales. **functional d.** D. occurring without any ascertainable structural change. **general d.** See *constitutional d.* **hereditary d.** A d. that is directly inherited or due to an inherited

tendency. **hookworm d.** Syn.: *uncinariasis*, *miners' anemia*, *dochmiasis*, *tropical chlorosis*. See *ankylostomiasis*. **idiopathic d.** Any d. not dependent upon some other d. or upon some direct exciting cause, such as an injury. **infectious d.** See under *infectious*. **inoculated d.** Any d. due to inoculation. **intercurrent d.** A d. that shows itself during the course of another d. without having any essential connection with it. **knife-grinder's d.** A form of mechanical or chronic catarrhal bronchitis, incident to a knife-grinder's occupation. **lace-maker's d.** Lead-poisoning in lace-makers. **latent d.** A d. which remains partly or wholly concealed at its inception or during its entire course. **local d.** A d. restricted to one tissue or organ or to a particular part of the organism. **malignant d.** 1. Any form of tumor, such as cancer, sarcoma, etc., which recurs after extirpation. 2. Any infectious d. that pursues a rapid course and usually terminates fatally. **nervous d.** A d. primarily affecting either the structure or functions of the nervous system. **non-febrile d.** Any pathological condition the presence of which is not indicated by an exacerbation of the general temperature of the body. **organic d.** See *structural d.* **parasitic d.** A d. caused by animal or vegetable parasites, either internal or external. **pearl-workers' d.** A recurrent inflammation of the bones seen in those who work for a long time in the presence of pearl dust. **primary d.** A d. which is not secondary to another. **rag-pickers' d.** Anthrax. **rag-sorter's d.** An acute infectious d. observed in women sorting rags in paper factories. **screw-worm d.** A skin d. caused by the inoculation of the female screw-worm fly as she deposits her eggs in the skin. The larvae developing in the skin with great rapidity cause inflammation. The symptoms subside when the maggots are removed. **secondary d.** A d. occurring as the result of another. **specific d.** 1. A d. produced by a specific poison. 2. Used as a designation of syphilis. **structural d.** D. involving some appreciable change of structure in the part primarily affected, as distinguished from functional d. **symptomatic d.** A d. which occurs as a symptom in the course of another. **typical d.** See *cyclical d.* **vagabond's d.** See *pediculosis*. **vagrants' d.** A d. of filthy people, characterized by a dark discoloration in the superficial layers of the epidermis, sometimes mistaken for Addison's d. **white spot d.** A rare skin d. characterized by round and oval coin-sized or small white spots in the skin of the thorax. Supposed to be a variety of morphea. **wool-sorters' d.** See *anthrax* and *malignant pustule*, under *pustule*. **zymotic d's.** See under *zymotic*. [Ang.-Sax., *disease*, old Fr., *desaise*.]

disengagement. The act of setting free or detaching; in obstetrics, the emergence

of the fetus, or any particular part thereof, from the pelvic canal. [Fr., *dégagement*.]

disgorgement (dis-gorj'ment). 1. Expulsion, especially by vomiting. 2. The subsidence of an engorgement or the process of causing it to subside.

disgrega'tion. Separation, dispersion, as of cells, previously arranged. [Lat., *disgregare*, to separate.]

disinfectant (dis-in-fek'tant). Used to disinfect; as a n., an agent so employed. For the different forms of d's see under the qualifying adjectives, as *Burnett's d.*, see *Burnett*.

disinfect'tin. A certain brown liquid prepared by treating the residue of naphtha distillation with sulphuric acid, and the product with soda; used as a disinfectant.

disinfection (dis-in-fek'shun). The destruction of bacteria by chemical or physical methods. **aërial d.** The saturation of the atmosphere of a room with some disinfecting material. [Lat., *dis*, neg., + *inficere*, to corrupt.]

disinfect'ol. A mixture of certain hydrocarbons and crude creosols; used as a disinfectant.

disk. 1. A roundish, platelike structure. 2. In pharmacy, a small, thin sheet of gelatin imbued with some medicinal substance; generally used by insertion under the eyelid, where it is left to dissolve.

Becquerel's d. See under *Becquerel*.

blood d's. Red blood corpuscles. **Bowman's d's**. See under *Bowman*.

cephalic d. The sucker at the cephalic extremity of a leech. **choked d.** Syn.: *apillitis*. A condition observed in some cases of intracranial tumor, meningitis, and sinus thrombosis, in which the optic papilla projects decidedly above the level of the retina and there is edema, hemorrhage, and exudation of leukocytes, with, at times, acute inflammation. This may be followed by connective tissue hyperplasia with atrophy of the nerve fibers. See also *optic neuritis*.

d. holder. A universal joint attached to a microscope by which the latter is rendered mobile in every direction. **epiphyseal d.** See *epiphyseal plate*, under *plate*.

equatorial d. See *equatorial plate*, under *plate*.

germinal d. See *embryonic area*, under *area*, and *discus proligerus*, under *discus*.

intermediate d. Krause's membrane; the thin, dark d. or membrane passing transversely through and bisecting the clear zone or stria of a striated muscle fiber. **interpubic d.** A d. situated between the pubic bones at their symphysis, consisting of a thin layer of cartilage on each side, closely adherent to the bony surface and an intermediate stratum of fibrous tissue and fibrocartilage. **intervertebral d's**. See *intervertebral cartilages*, under *cartilage*.

optic d. Syn.: *optic nerve entrance*, *optic papilla*, *head of the optic nerve*, *blind spot*. The termination of the optic nerve as it pierces the eyeball and spreads out to form the ental or inner layer of the retina. **Placido's d.** See under *Placido*.

proligerous d.

See *discus proligerus*, under *discus*.

Thorington's d. An instrument used for retinoscopy. [Lat., *discus*.]

dislocation (dis-lo-ka'shun). 1. A dislocation is an abnormal, total or partial displacement of the articular portions of the bones entering into the formation of a joint from each other. Dislocations are classified as *traumatic*, *congenital*, and *pathological*. A *partial* or *incomplete d.* is called *subluxation*. An *habitual d.* is a d. frequently following insignificant trauma or muscular action, voluntary or involuntary. A *compound d.* is one in which there is a wound connecting the d. with the external air. 2. Displacement of an organ from its usual place, e.g., cardiac d. [Lat., *dislocatio*, from *dis*, apart, + *locare*, to place.]

disodic (di-so'dik). Containing two atoms of sodium in the molecule. [Lat., *disodius*, from Gr., *dis*, twice, + Lat., *sodium*.]

disoma, **disomus** (dis-o'mah, dis-o'mus). A monster having two bodies. [Gr., *dis*, twice, + *soma*, the body.]

disorder (dis-or'der). See *disease*.

dis'organiza'tion. A marked alteration in the texture or constitution of an organic part, causing it to lose most or all of its distinctive characters.

disparate (dis'par-at). In the physiology of vision, relating to points on the two retinas which are not corresponding or identical; hence an object seen by d. retinal points appears double. [Lat., *disparatus*, *dispar*, unequal.]

dispensary (dis-pen'sa-re). 1. An apothecary's shop or any place in which medicines are dispensed. 2. As commonly used, an institution which furnishes medical attendance, medicines, and the necessary appliances to the poor gratuitously, but does not receive them as inmates. [Lat., *dispensatorium*.]

dispensatory (dis-pen'sa-tory). A commentary upon the pharmacopeal and unofficial drugs.

dispersion (dis-per'shun). A scattering; in optics, the process of decomposing a ray of white light, also the degree to which its components are thereby caused to diverge; in natural history, the dissemination of species; in medicine, the resolution of an inflammation, swelling, or the like. **abnormal d.** Chromatic d. in which the order of the colors of the spectrum produced is not the same as in normal d. **chromatic d.** Separation of the elementary colors composing white light by means of a prism. **circles of d.** Figures produced by convergent or divergent rays upon the retina of an eye adjusted for parallel rays. In such an eye convergent rays would be brought to a focus in front of the retina, and divergent rays would be brought to a focus behind it. Whether the focus of the rays lies behind the retina or in front of it, each luminous point from the object is no longer represented by a point on the retina, but by a circle, and, as these circles overlap each other, the image is indistinct. The circles

- of d. take the form of the pupil. **epipolic d.** The decomposition of light that takes place at the surface of various substances, producing the phenomenon ordinarily called fluorescence. **normal d.** Chromatic d. in which the colors of the spectrum produced are disposed in the usual order, i. e., in the order orange, yellow, green, blue, indigo, and violet. [Lat., *dispergere*, to scatter.]
- dispersive.** Causing or characterized by dispersion.
- dispirem** (dis-pi'rem). That stage in karyokinesis which succeeds the diaster and immediately precedes the division of the cell body, when the threads of the daughter star are convoluted. [Gr., *dis*, twofold, + *speirema*, coil.]
- displacement** (dis-plás'ment). Removal of a thing from its place; shifting; dislocation. In pharmacy, the same as percolation. In psycho-analysis, the placing of an affect from one situation to another, thus disguising the source.
- disposition** (dis-po-sish'on). A particular order of arrangement of parts. 2. A certain mental tendency, especially as manifested in social relations. 3. A pronounced tendency (e. g., to certain diseases). [Lat., *disponere*, to arrange in order.]
- dissect'**. Lit., to cut apart, to cut to pieces; as now used, to trace out and expose the individual structures of an organism by carefully cutting or tearing away from them such other parts as interfere with their examination. [Lat., *dis*, apart, + *secare*, to cut.]
- dissect'ed.** Having been subjected to or prepared by dissection.
- dissect'ing.** Causing exposure or separation of parts as if they had been dissected (see *d. aneurism*); as a n., dissection.
- dissect'or.** 1. One who practices dissection. 2. An instrument used in dissection.
- disseminated** (dis-sem'i-na-ted). Scattered or distributed over a large area, as with widespread tuberculosis of the lungs. [Lat., *dis*, apart, + *seminare*, to sow.]
- dissemination** (dis-sem-in-a'shun). 1. The natural dispersion of seed for the propagation of the species; the spread of disease from one part of the body to other parts or from one individual to others. 2. The state of being disseminated. [Lat., *disseminare*, to scatter seed.]
- disseminator.** A scatterer; a person, agent, or apparatus by which anything is disseminated.
- dissociate** (dis-so'si-ät). To loosen by dissolving or softening the cell cement between the structural elements or cells, such as the cardiac or unstriated muscle cells. [Lat., *dissociare*, to disjoin.]
- dissolution** (dis-so-lu'shun). 1. The pathological breaking up of the integrity of an anatomical element, e. g., the blood corpuscles; the state of being so broken up. 2. Pathological softening of a tissue, as in necrosis or gangrene. 3. Death. [Lat., *dissolvere*, to dissolve.]
- dissolve'**. 1. (Tr.) to receive into solution (said of the solvent agent). 2. (Tr.) to cause to enter into solution. 3. (Intr.) to enter into solution. 4. To liquefy. [Lat., *dissolvere*.]
- dissol'vent.** Having power to dissolve; as a n., a remedy supposed to be capable of disintegrating and liquefying concretions in the body, such as calculi, etc. [Lat., *dissolvens*.]
- dissonance** (dis'so-nanz). A discord; a compound tone produced by the simultaneous production of two discordant notes. [Lat., *dissonare*, to sound out of harmony.]
- dis'tad.** Toward the distal aspect of the body, away from the center.
- dis'tal.** Situated away from the median line or center of the body or from the point of origin, as of a limb, opposed to proximal. [Lat., *distare*, to be distant.]
- dis'tance.** 1. The state of being remote. 2. The measurement from one point to another. **anterior focal d.** The d. between the center of a lens or mirror and its anterior focus. **focal d.** The d. between the center of a lens or mirror and its focus. **infinite d.** A term frequently employed by ophthalmologists to designate the position of an object the rays of light coming from which are parallel. Practically it is about 20 feet, as the rays emanating from such a point are so slightly divergent as to be regarded as nearly parallel. **posterior focal d.** The d. between the center of a lens or mirror and its posterior focus. [Lat., *distantia*.]
- distantial** (dis-tan'shal). Pertaining to or affected by distance.
- distearin** (di-ste'ar-in). A glycerid, $C_8H_5(OH)(C_{18}H_{35}O_2)_2$, in which 2 molecules of the radicle of stearic acid replace 2 molecules of hydroxyl in glycerin.
- distearyllecithin** (di-ste'ar-il-les'ith-in). Lecithin which contains 2 stearic acid radicles in its molecule. It is found in nerve tissue.
- distemper** (dis-tem'per). 1. A derangement or disturbance of the "temper" or "humour"; ill-health; illness. 2. A disease of dogs, characterized by running at the nose, cough, and loss of strength.
- distichiasis** (dis-tik-i'as-is). A vicious direction of some of the eyelashes, so that they are arranged in two rows, the affected ones lying against the eyeball and causing irritation and inflammation. [Gr., *dis*, twice, + *stichos*, a row.]
- dis'tillate.** That portion of a substance subjected to distillation which passes over in the form of vapor and condenses.
- distillation** (dis-til-la'shun). The process of vaporizing a body by the application of heat, and condensing and collecting the volatilized products. The apparatus for this purpose (d., or distilling, apparatus; still) consists essentially of a closed vessel (retort) containing the substance to be vaporized and communicating by a tube

with a condenser. In the latter the volatilized products which come over from the heated retort are subjected to cold and thus condensed into a liquid or solid form. **destructive d.** D. attended with decomposition, so that the distillate contains bodies essentially different from the substance distilled. **d. in vacuo.** D. accomplished by connecting the receiver of the still with the vacuum chamber of an air pump, so that the d. will proceed at a much lower temperature, thus avoiding decomposition. **dry d.** The d. of solid substances without the admixture of fluids, and conducted in a closed vessel so as to afford an incomplete supply of air and hinder the processes of combustion. **fractional d.** The process of d. applied to a mixture of substances possessing different degrees of volatility, and carried on within certain limits of temperature, so that the more volatile substances, distilling over first, can be separated from the less volatile. [Lat., *destillare*, from *de*, from, + *stillare*, to drop.]

distillatory. Pertaining to distillation.

Distoma (dis'to-mah). Syn.: *Schistosoma*, *Bilharzia*, *Paragonimus*, and *Clonorchis*. A parasitic genus of the class *Trematoda*, the order *Malacocotylea*, and the family *Fasciolidae*, being a flat, leaf-like, small worm, with scales or spines, and characterized by having the large ventral sucker near the oral. Some of the species occasionally infect man, being found in the urinary bladder, the intestines, the lungs, and the liver, where they lay eggs. They also infect cats, sheep, horses and cattle. **D. capense.** See *Bilharzia haematobia*. **D. conjunctum.** A variety found in the livers of the American fox and the pariah dogs of India. In several cases it has been found in large numbers in the bile ducts of man. **D. conus.** A kind found in the bile ducts of cats and in human beings in Siberia. **D. haematobia.** See *Bilharzia haematobia*. **D. hepaticum.** Syn.: *Paragonimus Westermanni*. The liver fluke; a species about 3 mm. long with a conical anterior extremity and a broad body, with a number of spinelike processes on its surface. Its normal habitat is the liver and bile ducts of sheep, causing the disease known as the "liver rot." It has been found in a number of cases in the liver of man. **D. japonicum.** See *Clonorchis endemicus*, under *Clonorchis*. **D. pulmonale.** *D. ringeri*. **D. ringeri.** Syn.: *Paragonimus Westermanni*. A species that infects the lungs of man in Japan and China, giving rise to periodical hemoptysis. **D. sinense** [Cobbold], **D. spatulatum.** Syn.: *Clonorchis sinensis*. A variety found in one instance in the liver of a Chinaman. **D. Westermanni.** See *Paragonimus Westermanni*. [Gr., *distomos*, double-mouthed.]

distomatous. Belonging to, or of the nature of, a distoma.

distomiasis (dis-to-mi'as-is). Infection with *Distoma*.

distortion (dis-taw'r'shun). In psychoanalysis the process by which the true psychic complex is concealed under a disguise, as in the dream picture.

distractio (dis-trak'shun). 1. A drawing or being drawn asunder. 2. The drawing away of the mind; mental disturbance. [Lat., *distractio*, from *distrahere*, to draw apart.]

distribution (dis-trib-u'shun). 1. The manner in which a nerve, an artery, or the like supplies a part by its terminal branches; also the part supplied by a particular vessel or nerve. 2. In botany, zoölogy, etc., the apportionment of any particular plant, animal, etc., throughout the world. [Lat., *dis*, apart, + *tribuere*, to assign.]

disubstituted. In chemistry, having two hydrogen atoms replaced by two other elements or radicles.

disulphate. See *bisulphate* and *pyrosulphate*.

dita (de'tah). *Alstonia scholaris*.

ditain (dit'ah-in). See *ditamin*.

ditamin (dit-am'in). An alkaloid obtained from dita bark and at first called ditain.

dith'eonate. A salt of ditheonic acid.

dithion (dith'e-on). A mixture of two sodium salts of dithiosalicylic acid; an antiseptic.

dithi'osalicylic acid. See *thioform*.

dithy'mol dii'odid, **dithy'mol i'odid.** Thymol iodid; aristol.

dittany (dit'tan-e). *Canila mariana* and *Lepidium latifolium*.

Dittrich's plugs (dit'trick). Small particles in fetid sputum composed of pus, detritus, fat crystals, and bacteria. [Frans *Dittrich*, Ger. pathologist, 1815-1859.]

diuresiethesis (di-u-re'se-es-the'sis). The sensation of a desire to urinate. [Gr., *diourein*, to urinate, + *aisthesis*, sensation.]

diuresis (di-u-re'sis). Originally, urination; as now employed, the passage of a large amount of urine. [Gr., *diuresis*.]

diuret'ic. Causing diuresis.

diuretica (di-u-ret'ik-ah). Pl. *Diuretic medicines*.

diuretin (di-u-re'tin). A proprietary name for salicylate of theobromin and salicylate of sodium. A powerful diuretic.

diurnal (di-ur'nal). 1. Pertaining to daytime, as opposed to night; of plants, blooming during the day; of animals, active during the day. 2. Living only a day (said of plants and of animals). 3. Occurring once a day. [Lat., *diurnus*, from *dies*, a day.]

divalence (di'va-lens). See *bivalence*.

di'valent. See *bivalent*.

divalerin (di-val'er-in). A glycerid, C₁₈H₂₄O₅, obtained by heating valeric acid with glycerin.

divaporation (di-vap-o-ra'shun). Vaporization.

divergence (di-ver'jenz). Separation from a common center; the inclination of two or more organs or the like away from each other; especially, the separation of the eyes from each other by abduction of

one or both. [Lat., *dis*, apart, + *vergere*, to tend.]

diverticulum (di-ver-tik'u-lum). Lit., a by-path. A structure constituting an off-shoot from the main structure, especially a hollow appendage communicating with a canal or cavity. **d. allantoidis**. Of von Baer, a pouchlike prolongation of the sac of the allantois into each horn of the uterus in the pig. **d. cecii**. See *Meckel's d.*, under *Meckel*. **d. urethrae**. A false d. of the urethra. **d. vesicae**. A false d. of the urinary bladder. **dorsal d. of the pharynx**. See *retropharyngeal d.* **ganglion d.** A cyst formed by a hernial protrusion of the synovial membrane from a tendon sheath. **intestinal d.** A hernial protrusion of the mucous membrane of the intestine through the muscular coat. **laryngeal d.** A d. of the mucous membrane of the larynx. **lateral d. of the fourth ventricle**. The lateral recess of the fourth ventricle of the brain. **lateral d. of the pharynx**. A pouch opening on either side of the pharynx at the level of the pharyngopalatine arch. **Meckel's d.** See under *Meckel*. **pituitary d.** A d. formed early in embryonic life from the epiblast at the middle of the upper and posterior part of the buccal cavity, which becomes the anterior lobe of the pituitary body. **retropharyngeal d.** Syn.: *dorsal d. of the pharynx*. A pouch opening into the pharynx posteriorly at the level of the openings of the esophagus and the larynx. Considered to be homologous to the swimming bladder of fishes. **synovial d.** A hernial protrusion of the synovial membrane of joints or of tendon sheaths. [Lat., *dis*, aside, + *vertere*, to turn.]

divis'ion. 1. The process by which anything is separated into a number of parts. 2. Any one of the parts so separated. 3. That which separates one part from another. **direct nuclear d.** The form of nuclear d. in which the nucleus simply divides into two or more parts without any special structural change in the nucleus being apparent. **indirect nuclear d.** See *karyokinesis* and *cell d.*, under *cell*. **nuclear d., nucleus d.** The d. of the nucleus of a cell. This is either *direct*, by a constriction appearing and deepening till the nucleus is divided into two or more parts, no apparent change in the intimate structure taking place; or *indirect*, when a complicated series of changes in the structure of the nucleus precedes and follows its division. In both forms of nuclear d. the d. of the entire cell usually follows that of the nucleus. If, however, cell d. does not follow, the cell becomes multinucleated. [Lat., *dividere*, to divide.]

divulsion (di-vul'shun). The action of tearing, pulling, or plucking apart; a rending asunder, violent separation, laceration. [Lat., *divulsio*, from *divellere*, to pull apart.]

divulsor (di-vul'sor). An instrument for effecting divulsion. A d. for the urethra

consists essentially of a split sound, the two halves of which may be separated widely and suddenly by thrusting a shaft between them.

Dobell's solution. A solution containing carbolic acid, borax, sodium bicarbonate, glycerin, and water. [*Horace Dobell*, Eng. physician, born 1828.]

dochmiasis (dok-mi'as-is). See *ankylostomiasis*.

Dochmius (dok'me-us). See *Ankylostoma*. **D. duodenalis**. See *Ankylostoma duodenale*. [Gr., *dochmios*, oblique.]

Dock's test breakfast in examination of the stomach contents, see in *appendix*, page 903.

docos (do'kos). A beam, or a small beam; of Hippocrates, an instrument for treating fractures. [Gr., *dokos*.]

doc'tor. A teacher, an instructor; any practitioner of medicine. Used as a verb, it signifies to administer medicine or medical treatment. [Old Fr., *doctor*, from the Lat., *doctor*; n. of action from *docere*, to teach.]

doc'torate. The degree or order which is conferred when one becomes a doctor.

doc'tress, doc'toress. A female physician or medical practitioner.

dodecane (do-dek'an). A liquid of the paraffin series, containing 12 atoms of carbon, C₁₂H₂₆. [Gr., *dodeka*, twelve.]

odding time. The time at the menopause during which the menses are irregular before their cessation.

dogma (dog'mah). A firmly stated principle or doctrine.

dogmaticism, dogmatism (dog-mat'is-izm, dog'mat-izm). The state of being dogmatic or a dogmatist—i. e., of insisting on certain doctrines and acting according to them, to the disregard of experimental knowledge. [Gr., *dogmatizein*, to affirm an opinion.]

dog's-bane. See *Apocynum*.

dog'wood bark. See *Cornus*.

doliarin (do-le'ar-in). A crystallizable principle extracted from the juice of *Urostigma doliarium*.

dolichocephalic (dol'ik-o-se-fal'ik). Having a skull with a long anteroposterior diameter as compared with the transverse or having a low cephalic index. [Gr., *dolichos*, long, + *kephale*, the head.]

Dolichos (dol'ik-os). A genus of leguminous plants of the tribe *Phaseoleae*.

dolichi pubes. The hairs of the pods of *Mucuna pruriens*. [Gr., *dolichos*, long.]

dolomol (dol'o-mol). Magnesium stearate (C₁₈H₃₆O₂)₂. Mixed with small amounts of magnesium oleate and palmirate, it is used as a dusting powder.

dom'inant characteris'tic. A term used in connection with the mendelian theory of heredity to express the prevailing characteristic in an antagonistic pair exhibited by the parents. For example, as between brown eyes and blue in parents, brown is dominant and will appear in the progeny. The term is opposed to *recessive characteristic*.

Donders's law. See *Listing's law*, under

- Listing.* [Franz Cornelius Donders, Dutch physician, 1818-1889.]
- Donné's corpuscles.** See *colostrum c's*, under *corpuscle*. [Alfred Donné, Fr. physician, 1801-1878.]
- Donovan's solution.** A solution of arsenous and mercuric iodids. See *liquor arsenii et hydrargyri iodidi*, under *arsenium*. [Edward Donovan, Eng. pharmacist, 1789-1837.]
- dope** (dôp). Any thick liquid or semi-fluid used as an article of food or as a lubricant; a narcotic. [Dut., *doop*, *dipping*, *sauc*.]
- Dore'ma ammoni'acum, D. armeni'acum.** A genus of plants found in the deserts of Persia and Tartary, yielding ammonia.
- dormiol** (dor'me-ol). A trade name for a hypnotic, consisting of a 50 per cent. solution of amylene chloral.
- dor'sad.** Toward the dorsal region.
- dor'sal.** Pertaining to a dorsum, especially to the back of the trunk. [Lat., *dorsum*, the back.]
- dorsi-, dorso-, dors-.** Combining form of the Lat., *dorsum*, back.
- dor'sum.** The back; also that part of an organ which corresponds with the back in position. **d. linguae.** The upper surface of the tongue. **d. manus.** That surface of the hand which is opposed to the palm. **d. pedis.** The upper surface of the foot. [Lat.]
- do'sage.** The act of determining the dose of a medicine. There are three rules in common use for computing doses for children from the adult dose. These are: **Clark's rule.** Multiply the adult dose by the weight of the child in pounds, and divide the result by 150. **Cowling's rule.** Multiply the adult dose by the age of the child in years at the next birthday and divide the quotient by 24. **Young's rule.** Multiply the adult dose by the age of the child in years and divide the result by the age plus twelve. Clark's rule has the advantage of scientific accuracy. **d. forms.** Original packages containing drugs in a convenient form for administering single doses. **electrical d.** The regulation of the strength of an electrical current used for medical purposes.
- dose.** The quantity of a medicinal preparation that is ordered to be taken at one time; as used by some French writers, the quantity to be taken in twenty-four hours. **divided d's.** Fractions of a d., to be taken at short intervals. [Gr., *dosis*.]
- dosimetric** (do-se-met'rik). Pertaining to dosimetry.
- dosimetry** (do-sim'et-re). 1. The measurement of medicinal doses. 2. A so-called system of medicine consisting in the use of granules accurately medicated with definite quantities of active drugs, chiefly alkaloids, as inculcated by Burggraeve. [Gr., *dosis*, a dose, + *metron*, a measure.]
- dosiology, dosology** (do-se-ol'o-je, do-sol'o-je). See *posology*. [Gr., *dosis*, a dose, + *logos*, understanding.]
- do'sis.** See *dose*. **d. lethalis minima.** The smallest dose capable of causing death. In animal experimentation this is commonly abbreviated to M. L. D. **d. toxica.** A dose that produces symptoms of poisoning.
- doublet** (dub'let). A magnifying glass composed of two lenses superposed, the smaller one of which, near the eye, receives the rays refracted by the larger one near the object before they reach their focus.
- douche** (doosh). 1. The direction of a continuous column, stream, or jet of liquid or gas upon the surface of the body or into one of its cavities. 2. An apparatus for accomplishing such direction. **alternating d.** A d. in which a hot current and a cold one are applied alternately. **anal d.** A d. directed upon the anus. **aural d.** A d. adapted to the middle or the external ear. **capillary d.** See *aqua-puncture* (2d def.). **cephalic d.** A d. adapted for application to the head. **compressed air d.** A d. in which the water is projected with great force by means of compressed air; used especially for needle-baths. **intra-uterine d.** A d. applied within the uterine cavity. **lumbar d.** A d. for the loins. **nasal d.** A d. for irrigating the nasal passages. **perineal d.** A d. for the perineum, delivering a simple jet or a shower. **rectal d.** A d. for applications within the rectum, either for irrigating that organ or for the high application of hot water in cases of chronic diarrhea or perimetric or parametric inflammation. **Scotch d., Scottish d.** A d. consisting in the application of successive hot d's of varying duration, immediately followed by a cold d. of short duration. **steam d.** A vapor d. in which steam is employed. **uterine d.** See *intra-uterine d.* **vaginal d.** A d. for application within the vagina. **vapor d.** A d. in which vapor is substituted for water. [Fr.]
- Douglas's culdesac.** See *recto-uterine pouch*, under *pouch*. [James Douglas, Scotch anatomist, 1675-1742.]
- dourine** (doo-rên'). A trypanosome disease of horses spread by coitus, also called *mal de coit*.
- drac'anth.** See *tragacanth*.
- Dracena draco** (dra-se'nah dra'ko). A tree found in the East Indies and in the Canary Islands. It yields, by exudation, a resin known as dragon's blood. [Gr., *drakaina*, a she-dragon.]
- drachm** (drâm). A weight in apothecaries' weight = 60 grains, or $\frac{1}{8}$ ounce; in avoirdupois weight, it = $27\frac{1}{3}$ grains, or $\frac{1}{16}$ ounce. Sometimes spelled *dram*. [Gr., *drachme*, an Attic weight.]
- dra'co.** 1. The *Araneus*. 2. A dragon. 3. Mercuric chlorid. **d. mitigatus.** Of the alchemists, calomel. **draconis sanguis, gummy draconis.** See *dragon's blood*. [Gr., *drakon*, dragon.]
- dra'col.** See *anisol*.
- dra'conin, dra'cin.** One of the resins found in dragon's blood.
- dracontiasis, dracuntiasis** (drak-on-ti'as-

is, drak-un-ti'as-is). The disease caused by infestation with *Filaria medinensis*.

Dracontium (dra-kon'she-um). Of the U. S. Ph., 1870, *Symplocarpus foetidus*, the skunk cabbage. [Gr., *drakontion*.]

draconyl (drak'on-il). 1. A substance, C₁₄H₇, obtained by distilling dragon's blood. 2. Anisyl.

dracunculosis (drak-un-ku-lo'sis). See *dracontiasis*.

Dracunculus (dra-kun'ku-lus). 1. A section of the genus *Artemisia*. 2. A genus of aroideous plants. 3. See *Filaria*. **D. medinensis**. The guinea worm. See *Filaria medinensis*. **D. vulgaris**. Snake-root; European dragon root; a European species of d. having a fetid odor. The whole plant is acrid and poisonous. [Lat., dim. of *draco*, a dragon.]

draft, draught. 1. A mixture or preparation to be taken at once. 2. A mustard paper or poultice intended for local application. **black d.** The compound infusion of senna. Caution! It must not be confused with *black drop*, which is a preparation of opium.

dragée (drah'jā). A small pill, usually sugar-coated. [Fr.]

Dragendorff's reagent. A solution of bismuth iodid in a hot solution of potassium iodid diluted with an equal amount of potassium iodid solution.

drag'on's blood. 1. The resin obtained from several species of *Calamus*, especially *Calamus draco*. It was formerly in repute as an astringent, but is now little used, except as a coloring agent. 2. The resin of *Dracena draco* and other species of *Dracena*.

drain (drän). 1. A waste conduit leading to a cesspool, a sewer, or the like. 2. In surgery, an appliance or substance affording a channel of exit for the discharges from a wound.

drainage (drän'āj). 1. A gradual flowing off of a fluid. 2. The removal of superfluous water and refuse liquids from dwellings, stables, and lands, also a system of conduits arranged for that purpose. 3. In surgery, the employment of means (including posture, counteropenings, tubes, and tents) for securing the free escape of liquids from wounds and cavities.

dram. A phonetic spelling of *drachm*. Also a small draught of stimulant or spirituous liquor.

dras'tic. Acting quickly and violently; as a n., a medicine that acts violently, especially one that causes hypercatharsis. [Gr., *drastikos*, effective.]

draught (draft). The drawing of liquid into the mouth. A drink; the amount swallowed at one pull. [Early mid. Eng., *draht*, draw.]

dream (drēm). Mental activity taking place during sleep, at times present to the foreconscious or conscious, in symbolic dramatic presentations.

dress. To make straight or right. To treat a wound and make suitable application to it. [Old Fr., *dresser*.]

dres'sing. The application of various ma-

terials for the protection of a wound. Also the material so used.

drip'cup. A receptacle for an element removed from a galvanic cell, serving to hold what drips from it.

dromotropic (dro-mo-trop'ik). Engelmann's term for supposed fibers in the cardiac nerves which influence the conductivity of the muscle. [Gr., *dromos*, a running, + *trepein*, to turn.]

drop. 1. The smallest quantity of a liquid that becomes detached and falls in a single drop from a suitable vessel. The volume of the drop varies widely, dependent on many different conditions, hence "drop" should not be confused with "minim" as a measure. 2. The falling of a part, as from paralysis. **black d.** Vinegar of opium. **d. finger**, Syn.: *mallet finger*, *baseball finger*. A hanging down of the terminal phalanx of a finger and inability to extend it, due to rupture of the posterior part of the capsule of the distal joint from a blow. **d. shoulder**. A deformity in which one shoulder is lower than the other. **hot d's**. Tincture of capsicum and myrrh. **knockout d.** Chloral administered by thieves to cause unconsciousness of their victim. **wrist d.** A condition in which the hand hangs from the forearm, due to paralysis of the extensor muscles from chronic lead poisoning. [Ang.-Sax., *dropa*, *drypa*.]

drop'per. A drop bottle, a drop tube, or drop pipet; used for delivering single drops of a liquid. It is a very inexact form of measure.

drop'ping bot'tle. A bottle from which stains are dropped upon slides in order to stain bacterial or other specimens for microscopic examination.

drop'sical. Pertaining to or affected by dropsy.

dropsy (drop'se). An accumulation of a watery fluid in the serous cavities or the areolar tissue of the body. **abdominal d.** See *ascites*. **acute anemic d.** See *beriberi*. **acute renal d.** D. due to acute nephritis. **arachnoid d.** An accumulation of serous fluid in the sac of the arachnoid. **articular d.** See *arthredema* and *hydrarthrosis*. **cardiac d.** D. caused by failure of compensation in disease of the heart. **cerebral d.** See *hydrocephalus*. **chronic d.** The form of d. which lasts for months or years and, if general, usually ends fatally. **d. of a joint**. See *arthredema* and *hydrarthrosis*. **d. of the anterior chamber**. See *keratectasia*. **d. of the brain**. See *hydrocephalus*. **d. of the chest**. See *hydrothorax*. **d. of the lungs**. See *pulmonary edema*, under *edema*. **d. of the optic sheath**. An accumulation of serous fluid between the outer and inner sheath of the optic nerve, usually between the eyeball and the optic foramen, though it may occur between the optic foramen and the chiasm. **d. of the ventricles**. See *internal hydrocephalus*. **d. of the vitreous**. See *hydrophthalmia*. **encysted d.** D. circumscribed by a structure of new formation. **mechanical**

d. D. due to mechanical obstruction of the venous or lymphatic circulation. **omental d.** An encysted ascites limited in extent to the omentum. **renal d.** D. due to kidney disease. [A contraction of *hydropsy*, from the Lat., *hydrops*, from the Gr., *ydor*, water.]

Drosera (dros'e-rah). The sundew; of the pharmacists, *D. rotundifolia*. It yields *droserin*, a digestive ferment. [Gr., *droseros*, covered with dew.]

drug. Any medicinal substance; as formerly employed, a crude product serving for the preparation of a medicament.

drug'gist. One who deals in drugs. See *apothecary*.

drum. 1. The tympanic cavity of the ear. 2. Any closed hollow structure having one or more tense membranous walls. [Mid. Eng., *drumme*.]

drum'min. An alkaloid obtained from the milky juice of *Euphorbia Drummondii*; a local anodyne and anesthetic.

drumstick bacillus. See *B. tetani*, in *table of bacilli*, under *bacillus*.

drunk'ard. One who persistently uses alcohol (or other narcotics) to excess. **d.'s liver.** Cirrhotic liver. **d.'s pneumonia.** Pneumonia with delirium tremens.

drunk'eness. 1. The state of being drunk. 2. A disposition to get drunk habitually.

dry. 1. Free from moisture. 2. Unaccompanied by a flow of liquid or a pathological discharge (as in the expressions *d. asthma*, *d. bellyache*, *d. labor*, *d. tapping*, etc.) 3. Free from an excess of sugar (said of wines). 4. Thirsty. [Ang-Sax., *dryg*.]

dry measure. See in *appendix*, page 942.

Dryobalanops (dri-o-bal'an-ops). A genus of the *Dipterocarpeae*. **D. aromatica**, **D. camphora**. A tree found chiefly in Borneo, Sumatra, and the island of Labuan. It yields Borneo camphor and camphor oil.

dualism (du'al-izm). A theory or system of thought which recognizes two independent principles. [Fr., *dualisme*.]

Duboisia (du-boy-se'ah). 1. A genus of solanaceous plants found in eastern Australia and New Holland. 2. Of Merck, a mixture of alkaloids including duboisin, hyoscin, and other alkaloids. **D. Hopwoodii**. The *D. pituri* of Australia, closely allied to *D. myoporoides*. The leaves are chewed by the natives as a stimulant. **D. myoporoides**. The corkwood of New South Wales. It is the chief and, according to some authors, the only representative of the genus. The leaves contain mydriatic alkaloids.

duboisin (du-boys'in). A mixture of alkaloids, formerly regarded as a single substance, obtained from *Duboisia myoporoides*. Of Merck, said to be identical with the hyoscyamin of Ladenburg.

Du Bois-Reymond's law. The l. that a nerve through which a galvanic current is passed is stimulated by the making or breaking of the current or by any sudden change in its intensity [Emil Hein-

rich Du Bois-Reymond, Ger. physiologist, 1818-1896.]

duct. A canal for conducting the secretion of a gland. In some instances the term is applied to canals that conduct material other than the secretion of a gland. **aberrant bile d's.** Biliary d's not surrounded by lobules, occasionally found in the left lateral ligament of the liver and in the fibrous bands which bridge over the fossa of the vena cava and the umbilical fissure. **accessory pancreatic d.** The excretory d. of the tail of the pancreas, opening into the pancreatic d. or into the duodenum close to the orifice of the common bile d. **alimentary d.** See *thoracic d.* **alveolar d's.** The infundibula of the bronchioles. **archinephric d.** See *mesonephric d.* **bile ducts.** Tubes conveying bile, as the *cystic d.*, *hepatic d.*, *common bile d.*, *interlobular d.* **biliary d's.** The d's situated between the lobules of the liver. **capillary bile d's.** See *intralobular biliary canals*, under *canal*. **cochlear d.** The cochlear canal. **common bile d.** A d. about 3 inches long, formed by the union of the cystic and hepatic d's, which carries the bile to the intestines, and empties, in common with the pancreatic duct, at a point 3 or 4 inches beyond the pylorus in the ampulla of Vater. **common seminal d.** See *ejaculatory d.* **Cuvier's d's.** See under *Cuvier*. **cystic d.** A d. about 1½ inches long, situated on the lower surface of the liver, which unites with the hepatic d. to form the common bile d. **definitive d's.** The straight milk d's in the nipple. **d's of Rivini.** The d's of the sublingual gland. **d. of Santorini.** See *accessory pancreatic d.* **d. of Wirsung.** See *pancreatic d.* **ejaculatory d.** A d., one on each side, through which the semen passes into the urethra. It is formed by the union of the vas deferens and the seminal vesicle, and is a little more than an inch long. It passes through the prostate and opens by a slit on the side of the verumontanum. **excretory d.** The tube or channel through which the secretion of a gland is discharged. **galactophorous d's.** The milk d's of the lobes of the mammary gland. They are from 15 to 20 in number, are composed of an areolar, a muscular, and an epithelial layer, and converge toward the areola, beneath which they are dilated into the ampullae, then pass into the nipple, and terminate upon its surface in small depressions. **gall d's.** See *bile d's*, *hepatic d.*, and *cystic d.* **Gartner's d.** See under *Gartner*. **genital d.** The genital canal. **guttural d.** The eustachian tube. **hepatic d.** A d. about 1½ inches long, which is formed by the union of the right and left hepatic d's and passing downward unites with the cystic d. **hepatocystic d's.** Biliary d's which, in many of the lower animals and occasionally in man, empty directly into the gall-bladder. **intralobular bile d's.** The d's situated between the lobules of the liver. They

unite to form larger d's lying in the portal canals, which, in turn, unite finally into the right and left hepatic ducts. See *intrahepatic biliary canals*, under *canal*. **lacrimal d.** See *nasal d.* **lactiferous d's.** See *galactophorous d's.* **left lymphatic d.** See *thoracic d.* **Leydig's d.** See *mesonephric d.* and *urogenital d.* **mammary d's.** See *galactophorous d's.* **mesonephric d.** Syn.: *wolfian d.* A d. in the embryo, belonging to the mesonephros and developed by the longitudinal fission of a portion of the segmental d. In the male it becomes the vas deferens, while in the female it almost entirely disappears. **metanephric d.** See *ureter*. **milk d's.** See *galactophorous d's.* **müllerian d., Müller's d.** See *Müller's ducts*, under *Müller*. **nasal d., nasolacrimal d.** A d. about ½ an inch long which conveys the tears from the lacrimal sac into the nose, opening on the outer wall of the inferior meatus of the nose. **omphalo-mesenteric d.** See *vitelline d.* **pancreatic d.** A d. which extends through the whole length of the pancreas, giving off lateral branches that begin in the lobules of the pancreas, and empty into the pancreas along with the common bile d. **parotid d.** See *Stenson's d.*, under *Stenson*. **Pecquet's d.** See *thoracic d.* **primitive kidney d., pronephric d.** See *segmental d.* **right lymphatic d.** A vessel which receives the lymph from the absorbent vessels from the right side of the body above the liver and from the upper surface of the liver. It enters the junction of the right subclavian and internal jugular vein. **salivary d's.** Ducts conveying the saliva. There are three of them: *Stenson's d.*, from the parotid gland; *Wharton's d.*, from the submaxillary gland; and *Bartholin's* and *Rivinus's d's*, from the sublingual gland. **Santorini's d.** See *accessory pancreatic d.* **secretory d's.** The smaller d's of a gland; tributaries of the excretory d. **segmental d.** A pair of tubes in the embryo, one of which is situated on each side of the body, between the visceral and parietal layers of the mesoblast. They open anteriorly into the body cavity and posteriorly into the cloaca. **seminal d.** See *ejaculatory d.* **spermatic d.** See *vas deferens*. **Stenson's duct, Steno's d.** See under *Stenson*. **sublingual d.** See *Rivini's d.*, under *Rivini* and *Bartholin's d.*, under *Bartholin*. **submaxillary d.** See *Wharton's d.*, under *Wharton*. **tear d.** See *nasal d.* **testicular d.** See *vas deferens*. **thoracic d.** A d. from 18 to 20 inches long, which receives all the lymph and chyle of the body, except that which comes from the right side of the body above the liver and the upper surface of the liver and empties near the junction of the left subclavian and left internal jugular veins. **thyroglossal d., thyrolingual d.** In the embryo, a d. which terminates upon the tongue as the foramen cecum and leads to the rudiments of the thyroid body. **urogenital d.** In comparative anatomy,

a d. that receives the urine and the genital products. **uroseminal d.** See *urogenital d.* **vitelline d.** The omphalo-mesenteric d., a temporary channel of communication between the alimentary canal of the embryo and the sublingual vesicle. **Wharton's d.** See under *Wharton*. **Wirsung's d.** See *pancreatic d.* **wolfian d.** See *mesonephric d.* [Lat., *ducere*, to lead, to conduct.]

ductile (duk'til). Easily elongated or drawn out, as a metal drawn into wire. [Lat., *ductilis*, from *ducere*, to lead, to draw.]

duc'tus. See *duct*. **d. arteriosus.** A channel of communication between the main pulmonary artery of the fetus and the aorta. **d. communis.** A duct about 3 inches long, formed by the union of the cystic and hepatic d's, which carries the bile to the intestines. **d. hemithoracicus.** An ascending branch of the thoracic duct given off high in the thorax and opening either into the right lymphatic duct or close to the angle of union of the right subclavian and right internal jugular veins. **d. hepaticus dexter.** A duct which issues from the right lobe of the liver and unites with the d. hepaticus sinister to form the hepatic duct. **d. hepaticus medius.** An occasional branch of the hepatic duct which conveys the bile from the quadrate lobe. **d. hepaticus sinister.** A d. which issues from the left lobe of the liver and unites with the d. hepaticus dexter to form the hepatic duct. **d. prostatici.** The ducts through which the secretion of the prostate passes into the urethra. **d. sacculo-utricularis.** A small tube which connects the saccule of the internal ear with the utricle. **d. venosus.** The smaller, shorter, and posterior of the two branches into which the umbilical vein divides after entering the abdomen; it joins the left hepatic vein.

dulcamara (dul-kam'ar-ah). Bittersweet (*Solanum d.*); its young branches were formerly used medicinally. List of poisons and their antidotes, see in *appendix*, page 938. [Lat., *dulcis*, sweet, + *amarus*, bitter.]

dulcamarin (dul-kam'ar-in). A glucosid, $C_{22}H_{34}O_{10}$, obtained from the stems of *Solanum dulcamara*.

dulcamaretin (dul-kam-ar-re'tin). A dark brown, tasteless resinous substance, obtained by treating dulcamarin with dilute acid. [Dulcamara, + Gr., *retine*, a resin.]

dulcamarum (dul-kam'ar-um). A substance that is at the same time sweet and bitter.

dulcedo (dul-se'do). 1. Sweetness. 2. Agreeableness. [Lat., *dulcis*, sweet.]

dul'cin. See *dulcite*.

dulcite, dulcitol (dul'sit, dul'sit-ol). Melampyrite; a hexahydrate alcohol (or hexito), $CH_2OH(CHOH)_4CH_2OH$, isomeric with mannite; derived from the sap of various plants. Employed as a sweetening ingredient in the food of diabetics.

Also used in differentiating various forms of intestinal bacteria.

dull'ness, dul'ness. The state of being dull; a percussion note, high-pitched and with diminished resonance.

Dulong and Petit's law. The l. that the specific heat of any solid elementary body is in inverse ratio to its atomic weight, i. e., that the product of the specific heat and the atomic weight is a constant number for all elementary bodies.

dumb. 1. Unable or unwilling to speak. 2. Latent, not expressed by the ordinary signs (as in the expression *d. ague*). [Ang.-Sax.]

dumb'-bell. A weight to be lifted and swung in the hand, consisting of a shaft of suitable size to be grasped and having a balllike expansion at each end; as an adj., shaped like a d. (said of crystals).

dum'my. A counterfeit object made to resemble the real thing. In dentistry, a tooth in a bridge to supply a missing natural tooth.

duodenal (du-o-de'nal). Pertaining to the duodenum.

duodenitis (du''od-e-ni'tis). Inflammation of the duodenum. [Lat., *duodenum*, + Gr., *itis*, inflammation.]

duodenostomy (du''od-en-os'to-me). The operation of making a permanent opening into the duodenum through the abdominal wall. [Lat., *duodenum*, + Gr., *stoma*, mouth.]

duodenotomy (du''od-en-ot'o-me). The operation of cutting into the duodenum. [Lat., *duodenum*, + Gr., *temnein*, to cut.]

duodenum (du-o-de'num). The upper portion of the small intestine, about 12 fingerbreadths (10 in.) long, extending from the pylorus to the jejunum. The common bile duct, together with the pancreatic duct, opens into its descending portion. [Lat., *duodeni*, twelve by twelve.]

du'otal. Guaiacol carbonate.

duoto'nol. See *tonol*.

duplication (du-plik-a'shun). A doubling or folding, also the state of being doubled or folded. [Lat., *duplicare*, to double.]

du'plicator. An apparatus for collecting very weak currents of electricity.

Dupuytren's contraction (du-pwe-trahnz'). A contraction of the palmar fascia, coming on gradually in persons who are accustomed to work hard holding the handle of a tool in the palm of the hand. **D's operation.** A method of removing the arm at the shoulder joint, also called *Lisfranc's amputation*. [Baron Guillaume Dupuytren, Fr. surgeon, 1777-1835.]

dura (du'rah). The white, shining, and strong fibrous tissue which forms the external covering of the cerebrospinal axis. Its external surface is rough, but the inner one is covered with endothelium.

cerebral d. The d. covering the brain. It is continuous below with the spinal d., forms the periosteum of the inner surface of the cranial cavity, and sends into the brain three folds or processes: the *falx cerebelli*, the *falx cerebri*, and the

tentorium cerebelli. **spinal d.** The d. of the spinal cord. It consists largely of longitudinal fibers, is continuous with that of the cerebrum, is attached to the periosteum of the atlas and of the margin of the foramen magnum. It forms tubular prolongations over the roots of the spinal nerves, with the sheaths of which they blend. [Lat., *durus*, hard.]

du'ral. Pertaining to the dura.

du'ra ma'ter. See *dura*. **d. m. cerebri.** See *cerebral dura*, under *dura*.

d. m. spinalis. See *spinal dura*, under *dura*.

duration (du-ra'shun). Continuance as to time, also the length of time for which anything continues. [Lat., *durare*, to continue existence.]

dust. Any material, especially refuse matter, in the state of a dry, fine powder. **cosmic d.** D. floating in the atmosphere and space, supposed to be derived from extraterrestrial sources, such as meteors.

d. bodies of Müller. Syn.: *hemokontia*. Small round bodies, with active molecular movement, seen in blood, which are the granules that have escaped from the white blood corpuscles.

dwarfism (dwarf'izm). An abnormally short stature in man in which the height falls below 1 meter and 25 centimeters.

dyad (di'ad). In chemistry, a bivalent element.

dyad'ic. Pertaining to, or of the nature of, a dyad.

dyaster (di-as'ter). See *amphiaster*. [Gr., *duo*, two, + *aster*, star.]

dye. A coloring agent. **anilin d.** One of the many anilin stains used for preparing sections for normal or pathological purposes.

dynamictometer (di'nak-tin-om'et-er). An instrument for measuring the intensity of the photogenic rays and computing the power of object glasses. [Gr., *dynamis*, power, + *aktis*, a ray, + *metron*, a measure.]

dynam (di'nam). In physics, a unit of dynamic force, being that which, applied to a unit of matter, communicates to it an acceleration of one centimeter in a second.

dynamia (di-nam'e-ah). Resisting force; ability to hold out against disease or other unfavorable conditions.

dynam'ic, dynam'ical. 1. Pertaining to dynamics or to force exhibited under the form of motion; opposed to static. 2. Pertaining to inherent power.

dynamicity (di-nam-is'i'te-e). The degree to which a substance or an organism possesses inherent power.

dynamics (di-nam'iks). That branch of physics which deals with the forces possessed by bodies in a state of motion.

vital d. The science of the forces of a living organism. [Gr., *dynamis*, power.]

dynamis (din'am-is). Power; vital activity. [Gr., *dynamis*, power.]

dynamism (di'nam-izm). 1. The theory that matter does not exist by itself, but is the resultant of two forces, the one contractile and the other expansive, and that when the equilibrium between these

- two is destroyed, the result is that matter is reduced to the state of a mathematical point. 2. The theory that the vital forces of an organism are superior to its material parts.
- dynamite** (di'nam-it). An explosive mixture of nitroglycerin and infusorial earth or other inert powder which absorbs large amounts of liquid.
- dynamization** (di-nam-i-za'shun). The process of endowing with force; of the homeopaths, the increase of medicinal power with which, as they profess, a substance may be endowed by comminution, agitation, etc.
- dynamo-electric**. (di'nam-o-e-lek'trik). Pertaining to the motor force of electricity.
- dynamogenesis, dynamogeny** (di'nam-o-jen'es-is, di'nam-o-j'en-e). A term used by Brown-Séguard to indicate the capacity to call forth an increased activity in any organ; usually employed in adjective form, as dynamogenic action.
- dynamograph** (di-nam'o-graf). An instrument for recording muscular contractions. [Gr., *dynamis*, power, + *graphein*, to write.]
- dynamography** (di-nam-og'ra-fe). 1. See *dynamics*. 2. The use of the dynamograph.
- dynamometer** (di-nam-om'et-er). 1. An instrument for measuring the power exerted in muscular contractions, particularly for testing the muscular strength of an individual. Special modifications of the d. have been used for measuring the muscular power of the urinary bladder, the uterus, etc. 2. (In this sense, generally written *dynameter*) an apparatus for measuring the magnifying power of telescopes, etc. [Gr., *dynamis*, power, + *metron*, a measure.]
- dynamometry** (di-nam-om'et-re). The measurement of force, the use of the dynamometer. **vital d.** The estimation of the inherent vitality of an individual.
- dyne** (din). A unit of force (sometimes represented by the symbol δ); the force which would propel a mass of the weight of 1 gram with the velocity of 1 cm. in a second. [Gr., *dynamis*, power.]
- dys-**. Prefix representing the Gr., *dys-*, with the sense of hard, bad, unlucky.
- dysalbumose** (dis-al'bu-môs). A heteroalbumose, which has been altered by drying or by remaining in contact with water for a long time, so that it has become insoluble in dilute salt solutions.
- dysarthria** (dis-ar'three-ah). Difficulty in articulation. [Gr., *dys*, ill, bad, + *arthron*, to utter distinctly.]
- dysbasia** (dis-ba'se-ah). Syn.: *angiosclerotica*. Agonizing pain in the calf of the leg, intermittent and combined with arteriosclerosis of the posterior tibial artery. It occurs mostly in middle-aged men, who are excessive smokers. [Gr., *dys*, difficult, + *basis*, step.]
- dyscoria** (dis-ko're-ah). Irregularity in the shape of the pupil. [Gr., *dys*, ill, + *kore*, the pupil.]
- dyscrasia** (dis-kra'se-ah). Lit., an abnormal mixture; a depraved state of the system, due to constitutional disease. [Gr., *dys*, difficult, + *krasis*, a mingling.]
- dysdiadochokinesia** (dis'de-ah-do'ko-kine'se-ah). Disability to substitute quickly antagonistic motor impulses. [Gr., *dys*, with difficulty, + *diadochos*, successive, + *kinesis*, motion.]
- dysenteric**. Pertaining to, accompanied with, or proceeding from, dysentery.
- dysentery** (dis'en-ter-e). An acute or chronic inflammatory disease of the large intestine. The symptoms consist of abdominal pains, frequent desire to evacuate the bowels, the evacuations consisting largely of blood and mucus. It is caused most commonly by infection from the *Bacilli dysenteriae* of the *Amoebae coli*. The term d. is that of the symptoms and not of a specific disease as formerly.
- bacillary d.** D. arising from or caused by *Bacillus dysenteriae*. **bloody d.** Acute d. with excess of bloody discharge. **choleric d., choleroïd d.** A form of acute d. in which the dejections resemble those of cholera and are accompanied by suppression of urine, an algid state, cramps, etc. **chronic d.** A condition in which the dysenteric symptoms have persisted or recurred over a long time. **diphtheritic d.** A form of acute d. characterized by a fibrinous semigangrenous exudation taking the place of the destroyed epithelium of the intestine. **epidemic d.** D., usually acute, occurring as an epidemic due to some common infection, especially of drinking water. **malignant d.** An asthenic form of d. of a severe type, especially apt to occur epidemically in armies and to lead to gangrene. **mucous d.** A mild form of d. in which the stools contain masses of mucus or of feces inclosed in mucus. **secondary d.** D. occurring in the course of other severe constitutional diseases, as typhoid fever, smallpox, measles, etc. The symptoms are the same, but the cause is probably not the *Bacillus dysenteriae*. **sporadic d.** Acute d. not occurring as an epidemic. [Gr., *dys*, difficult, painful, + *enteron*, an intestine.]
- dysergia** (dis-er'je-ah). Motor incoördination due to defect of efferent nerve impulses. [Gr., *dys*, ill, bad, + *ergon*, work.]
- dysesthesia** (dis-es'the'se-ah). Impairment of sensation, especially of the sense of touch. [Gr., *dys*, difficult, + *aisthesehai*, to perceive.]
- dysgalactia** (dis-gal-ak'te-ah). A defective condition of the milk or its secretion. [Gr., *dys*, ill, + *gala* (*galac-*), milk.]
- dysgenesis** (dis-jen'es-is). That variety of hybridity among animals in which the offspring are sterile among themselves, but capable of procreation with individuals of one or the other of the original races.
- dyskeratosis** (dis-ker-a-to'sis). Epithelial alterations in which a certain number of isolated malpighian cells become differentiated from their neighbors and individually undergo special morphological

and chemical modifications. It occurs in *molluscum contagiosum*, in *Paget's disease*, and is occasionally seen in horns and warts. [Gr., *dys*, difficult, + *keras*, horn.]

dyskinesia (dis-kin-e'ze-ah). Defect in voluntary motion. [Gr., *dys*, ill, + *kinesis*, motion.]

dyslysion (dis-li'sin). A resinous hydration product of cholic acid, formed by treating cholic acid with a mineral acid. [Gr., *dys*, hard, + *lyein*, to dissolve.]

dysmenorrhea (dis'men-o-re'ah). Painful or difficult menstruation. The varieties are: **intermenstrual d.**, **membranous d.**, **neurotic d.**, **obstructive d.** [Gr., *dys*, difficult, + *menai*, menses, + *rein*, to flow.]

dysmetria. Same as *dysergia*.

dysmyotonia (dis-mi-o-to'ne-ah). Muscular atony. **d. congenita**, **d. congenitalis**. The congenital muscular atony and obstinately rigid condition of the muscles observed in Thomsen's disease. [Gr., *dys*, difficult, painful, + *mys*, a muscle, + *tonos*, tone.]

dysostosis (dis-os-to'sis). Defective formation of the bones. [Gr., *dys*, ill, + *osteon*, a bone.]

dyspareunia (dis-par-ru'ne-ah). The condition in which sexual intercourse is productive of physical pain in the woman. [Gr., *dyspareunos*, unhappily mated as bedfellows.]

dyspepsia (dis-pep'se-ah). A condition in which the digestion is disturbed or abnormal. **acid d.** D. caused or accompanied by an excess of acid in the gastric juice. **acute d.** D. of short duration, usually attributable to errors of diet. **alcoholic d.** D. due to the immoderate use of alcoholic liquors. **amylaceous d.** A form of d. in which starchy food is especially difficult to digest. **biliary d.**, **bilious d.** A form of intestinal d., caused by defective quality or quantity of the biliary secretion. **cardiac d.** D. occurring in sequence of heart disease. **d. adipsia** [Cullen]. See *adipsia*. **fermentative d.** A form of d. in which the food undergoes fermentation. **gastric d.** D. in which the stomach alone is at fault. **gastro-intestinal d.** D. in which both the stomach and the intestine are at fault. **hepatic d.** D. due to disease of the liver. **hysterical d.** D. of hysterical persons. **intestinal d.** D. which arises from defective digestion while the food is passing through the intestinal tract. **nervous d.** D. occurring in nervous, overworked persons or in those who are worrying. This form of d. ceases when the mental cause is removed. [Gr., *dys*, difficult, + *peptin*, to digest.]

dyspeptone (dis-pep'ton). Of Meissner, an insoluble product of gastric digestion.

dysperistalsis (dis'per-is-tal'sis). Violent contractions of the intestine induced by direct stimulation of the plexus mesentericus.

dysphagia (dis-fa'je-ah). Difficulty in

swallowing. [Gr., *dys*, difficult, + *phagein*, to eat.]

dysphasia (dis-fa'se-ah). Difficulty of speech not dependent on any abnormality of the organs of articulation and phonation, but on brain trouble. [Gr., *dys*, difficult, + *phanai*, to speak.]

dysphonia (dis-fo'ne-ah). Difficulty of phonation. [Gr., *dys*, difficult, + *phone*, the voice.]

dysphrasia (dis-fra'se-ah). Difficulty of speech caused by mental derangement. [Gr., *dys*, difficult, + *phrasein*, to speak.]

dyspituitarism (dis-pit-u'it-ar-izm). Over and under activity of the pituitary gland.

dyspnea, **dyspnoea** (disp-ne'ah). 1. In physiology, a condition marked by a respiratory activity greater than normal and of varying degrees. Due ordinarily to an increase in the pressure of carbon dioxide in the blood supplying the respiratory center, but it may also be caused by a deficiency of oxygen. 2. As commonly used the term means difficult, laborious, or painful breathing. **anemic d.**

The shortness of breath that attacks anemic persons on exertion. **asthmatic d.** The d. of asthma, the breathing being long-drawn, dry, and without cough.

bronchitic d. The d. which accompanies bronchitis. The breathing is short and accompanied with cough.

cardiac d. D. due to heart disease (i. e., to lesion or defective action of the heart causing imperfect circulation in the lungs and consequently deficient hematosis).

diabetic d. A form of d. characterized by deep and frequent inspirations in the last stage of diabetes; possibly resulting from acetoneuria. **emphysematous d.** The d. of pulmonary emphysema; like that of asthma, but continuous and unaccompanied by wheezing. **expiratory d.** Difficulty of expiration, as in emphysema, asthma, and chronic bronchitis. **hysterical(al) d.**

Very rapid breathing, from 60 to 80 respirations a minute, occurring in attacks of hysteria. **inspiratory d.**

A form of d. in which inspiration is difficult as compared with expiration. **mixed d.**

D. on both inspiration and expiration. **pulmonary d.** D. due to any condition in the lungs which interferes with the aëration of the blood. **renal d.**

A neurotic paroxysmal asthma occurring in uremia. **spasmodic d.** D. caused by spasm or occurring in paroxysms. **uremic d.**

D. due to uremia. [Gr., *dys*, ill, + *pein*, to breathe.]

dyspne'al, **dyspne'ic**, **dyspno'ic**. Pertaining to, affected with, or of the nature of, dyspnea.

dyspotismus (dis-po-tis'mus). Difficulty in drinking.

dysteology (dis'te-le-ol'o-je). The doctrine of purposelessness in the creation or development of organs now rudimentary and useless to the organism, as opposed to teleology, which regards them as having been created for a special purpose. See *teleology*. [Gr., *dys*, painful, hard, + *teleos*, complete, + *logos*, understanding.]

dysthyreosis (dis-thi-re-o'sis). Impaired functional activity of the thyroid gland. [Gr., *dys*, ill, bad, + *thyroid*.]
dystrophic (dis-trof'ik). Pertaining to or affected with dystrophy.
dystrophoneurosis (dis'tro-fo-nu-ro'sis). 1. Any functional nervous disease, due to dystrophy. 2. See *neurotic dystrophy*, under *dystrophy*.
dystrophy, **dystrophia** (dis'tro-fe, dis-tro'fe-ah). Defective nutrition. **con-**

nective tissue d. D. of the surfaces of the body, due to localized anomalous outgrowth of connective tissue. **neurotic d.** D. due to disturbance of the trophic nervous mechanism. **progressive muscular d.** A general term for progressive muscular atrophy, pseudohypertrophic paralysis, and some allied affections. [Gr., *dys*, difficult, + *trephēin*, to nourish].
dysuria (dis-u'ri-a). Painful micturition. [Gr., *dys*, difficult, + *ouron*, urine.]

E

ead. Latin abbreviation for *eadem*, the same.

ear. The organ of hearing, which is divided into three parts: the first, the *external e.*, comprises the auricle with the lobe and the external auditory canal; the second, or *middle e.*, consists of the tympanic membrane, the cavity of the tympanum, the eustachian tube, and the mastoid antrum and cells; the third, the *internal e.*, consists of the cochlea, the semicircular canals, and the auditory nerve with its terminal expansion in the labyrinth. **asylum e.** See *hematoma auris*, under *hematoma*. **cat's e.** A defective formation of the external e. consisting in a stunting or shriveling of the cartilage, which causes the auricle to resemble somewhat the e. of a cat. **e. bones.** See *ossicula aucti*, under *ossiculum*. **e. drum.** See *tympanum*. **e. sand.** See *otoliths*. **e. speculum.** See under *speculum*. **e. stones.** See *otoliths*. **e. trumpet.** A tube to be held in the hand for condensing the waves of sound, so as to enable a deaf person to hear; having one end small for insertion into the external auditory meatus, and the other end flaring for collecting waves of sound. **e. vertigo.** See *Ménière's disease*, under *Ménière*. **e. wax.** See *cerumen*. **external e.** See *e. flap e.* A deformity of the auricle consisting in a more or less extensive development of the skin and subcutaneous fat, and sometimes of the cartilage, so that the auricle turns over and is more or less pendulous. **insane e.** See *hematoma auris*. **internal e.** See under *e.* 2. See *labyrinth*. **middle e.** See *tympanum*. **e'ache.** See *otalgia*. [B. N. A., *auris*.] [Ang.-Sax., *earre*.]

earth. 1. The powdery part of the crust of the globe. It is mainly made up of the following elements: 50 per cent. oxygen, 25 per cent. silicon, 7 per cent. aluminium, 5 per cent. iron, 3 per cent. calcium, and 2 per cent. each of magnesium, sodium, and potassium. **alkaline e.** Lime, baryta, strontia, and magnesia; so called on account of their earthy character and alkaline properties. **e. closet.** An apparatus used as a sub-

stitute for a water closet. Instead of being washed away, the excreta are deodorized by being received into and covered with dry e., which absorbs their liquid portions. **fullers' e.** Powdered clay, used as a dusting powder. [Ang.-Sax., *eorthe*.]

earthy. Containing or of the nature of earth.

East'on's syr'up. The syrup of the phosphates of iron, quinin, and strychnin. [J. E. A. Easton, Eng. physician, 1807-1865.]

Eberth's bacillus. See *Bacillus typhosus*, under *table of b.* **E's line.** The lines of junction of the cardiac muscle cells. [Karl Joseph Eberth, pathologist in Halle, born 1835.]

eb'onite. Hard rubber. [Gr., *ebenos*, ebony.]

ebriety (e-bri'et-e). Drunkenness.

ebullition (eb-ul-ish'un). The process of boiling. [Lat., *ebullitio*, from *ebullire*, to bubble.]

e'bur. Ivory.

eburnation (e-bur-na'shun). The act or process of becoming hard and dense like ivory. A process met with sometimes in osteomyelitis, when it is known as *eburnatio ossis*, and also in syphilis of the bone. [Lat., *eburnus*, made of ivory.]

ebur'neous. Ivorylike.

ecaudate (e-kaw'dat). Without a tail.

ecbalin (ek'bal-in). Syn.: *elateric acid*. A resinlike, bitter, acrid substance extracted from the fruit of *Ecballium elaterium*.

Ecballium, Ecballium (ek-bal'le-um). A genus of the *Cucumerineae*. **E. elaterium, E. officinarum.** The wild or squirting cucumber, common to the Mediterranean region and cultivated in England. The juice of the fruit furnishes elaterium. Both it and the root are drastic purgatives.

ecbolic (ek-bol'ik). Promoting the expulsion of the fetus. [Gr., *ekbole*, expulsion.]

ecbolin (ek'bo-lin). A supposed amorphous alkaloid found by Wenzell in ergot of rye, now known to be a mixture of alkaloids and cholin.

eccentric (ek-sen'trik). 1. Situated away

from the center, peripheral; in pathology, due to peripheral rather than centric causes (said of nervous phenomena). 2. See *centrifugal*. 3. Odd in behavior, but not insane. [Gr., *ek*, away from, + *kentron*, a center.]

eccentricity (ek-sen-tris'it-e). The state of being eccentric; and also a particular manifestation of that state.

echondroma, echondrosis (ek-kon-dro'mah, ek-kon-dro'sis). A cartilaginous outgrowth or hypertrophy in a region where cartilage is normally present, as distinguished from a true tumor or echondroma, growing from tissues in which cartilage is not normally present. [Gr., *ek*, out of, + *chondros*, cartilage, + *oma*, tumor.]

echyloama (ek-kil-o'mah). An expressed juice, an extract. [Gr., *ekchylizein*, to press out juice.]

echylosis (ek-il-o'sis). Expression of the juice of a plant.

echymoma (ek-kim-o'mah). 1. An effusion of blood into the subcutaneous tissue in sufficient quantity to cause tumefaction. 2. An echymosis. [Gr., *ekchymoma*, the shedding of blood and leaving it underneath the skin.]

echymosis (ek-kim-o'sis). An extravasation of blood larger than a petechia in the skin or mucous membranes during life. [Gr., *ekchymosis*, the shedding of blood and leaving it under the skin, from *ek*, out, + *chymos*, juice.]

echymotic (ek-kim-o'tik). Of the nature of echymosis.

ecchyliosis (ek-sil-e-o'sis). 1. Evolution. 2. A disease of development. [Gr., *ekchyliein*, to roll out.]

edemic (ek-dem'ik). Arising from a cause foreign to the locality, and not attacking the masses of the people; said of diseases. [Gr., *ekdemos*, foreign.]

ecgonin (ek'go-nin). An artificial alkaloid, $C_8H_{12}NO_3 + H_2O$, produced by the decomposition of cocaine.

echidnin (e-kid'nin). A toxalbumen obtained from viper's venom, which acts locally. [Gr., *echidna*, viper.]

echidnotoxin (e-kid-no-tok'sin). A toxalbumen obtained from viper's venom, which is general in its reaction.

Echinacea (ek-in-a'se-ah). A genus of composite plants. **E. angustifolia**. A species growing on prairies and in marshes throughout the United States. Its medicinal value is not established. [Gr., *echinos*, the hedgehog.]

echino-. Combining form of the Gr., *echinos*, a hedgehog or sea-urchin, denoting something prickly.

Echinococifer (ek'in-o-kok'sif-er). Of Weinland, a division of the genus *Taenia*, including those forms in which "the heads arise in special brood capsules." See *Taenia echinococcus*. [Gr., *echinos*, hedgehog, + *kokkos*, berry, + Lat., *ferre*, to bear.]

echinococcosis (ek-in'o-kok-ko'sis). Infection from the echinococcus.

echinococcus (ek-in-o-kok'us). Syn.: *cysticercus*, *hydatid cyst*. The larval

stage of the *Taenia e.* after it has penetrated into some tissue of its host. **e. cysticus fertilis**. The brood capsules found in domestic animals. **e. cysticus sterilis**. The cyst from the developing *e.* found in the liver of cattle. **e. disease**. The disturbance of the system by the presence of echinococci, especially in the liver. **e. granulosus**. See *Taenia echinococcus*, under *tenia*. **e. hominis**. See *e. granulosus*. **e. hydatidosis**. The daughter cysts which develop from the mother cyst in human beings. **e. multilocularis**. A parasite causing a multilocular hydatid disease with colloid contents in the brain, liver, spleen, and kidneys of man. **e. osteoklaster**. See *e. multilocularis*. [Gr., *echinos*, hedgehog, + *kokkos*, berry.]

Echinops sphaerocephalus (ek-e'nops sfer-o-sef'al-us). The globe thistle; a species growing in dry, stony places in southern and central Europe. The leaves were formerly used as a laxative and diuretic, and the seeds as a diuretic. [Gr., *echinos*, the hedgehog, + *ops*, appearance.]

Echinorhynchus (ek-in-o-rin'kus). A genus of the *Acanthocephala*, family *Echinorhynchidae*. **E. capre**. See *Pentastoma taenioides*. **E. gigas**. A species, sometimes about 50 cm. long, marked with transverse striae, having a globular proboscis with from 6 to 8 hooks and a pointed extremity. It is found in the intestines of swine and occasionally in man. **E. hominis**. A species about 6 mm. long, with a globular proboscis having 12 hooks. It has been found in the small intestines of man and is considered by some to be a sexually immature specimen of *E. gigas* or some other species. [Gr., *echinos*, the hedgehog, + *rygchos*, the snout.]

echinulate (ek-in'u-lat). A term used in bacteriology to describe a colony having a periphery beset with prickles of a small size. [Lat., *echinulus*, a small hedgehog.]

echo (ek'o). A sound repeated by reflection from some obstructing surface. Used as a prefix to indicate repetition or imitation. **e. speech**. See *echolalia*. [Gr., *echo*.]

echolalia (ek-o-lal'e-ah). Syn.: *dysphrasia imitatoria*. Of Romberg, the repetition by imbeciles of questions put to them. [Gr., *echo*, a sound, + *lalia*, prattle.]

echometer (ek-om'et-er). An instrument for measuring the duration, etc., of sounds. [Gr., *echo*, a sound, + *metron*, a measure.]

echopathies (ek-op'ath-ēs). Forms of nervous disease in which the patient spasmodically and quite involuntarily repeats words heard or actions seen by him. [Gr., *echo*, an echo, + *pathos*, disease.]

echophony (ek-of'o-ne). On auscultation of chest an echolike sound after speaking.

echopraxia (ek-o-prak'sia). Same as *echopathies*.

echugin (ek'u-jin). 1. A poisonous mass prepared from the *Adenium boehmianum*

- of southwestern Africa. 2. A crystalline glucosid obtained from *e.* (1st def.). It arrests the heart in systole.
- Eck's fistula.** A f. made between the portal veins and the inferior vena cava, the result being that the blood of the portal vein passes directly to the heart without traversing the liver. [Gottlieb Wilhelm Eck, Prussian physician, 1705-1848.]
- ecclampsia** (ek-lamp'se-ah). An acute toxemia occurring in the pregnant woman, usually characterized by clonic and tonic convulsions, during which there is loss of consciousness followed by more or less prolonged coma. The term was formerly used to signify convulsions occurring in children and in adults irrespective of cerebral disease. Degenerative changes are also found in the liver, kidneys, heart and brain. **albuminuric e.** E. due to or associated with albuminuria. **e. gravidum.** See *puerperal convulsions*, under *convulsion*. **e. parturientium, e. puerperalis.** See *puerperal convulsions*, under *convulsion*. **puerperal e.** See *puerperal convulsions*, under *convulsion*. **uremic e.** E. due to suppression of urine and consequent uremia. [Gr., *eklampein*, to burst forth violently.]
- ecclamptic, eclampsic** (ek-lamp'tik, ek-lamp'sik). Pertaining to, of the nature of, or affected with eclampsia.
- ecclamptism** (ek-lamp'tizm). A morbid condition accompanied by headache and impairment of vision and apt to result in convulsions, attributed to retention of excrementitious matter.
- eclectic** (ek-lek'tik). In therapeutics, professing not to be governed by any general theory or system of practice, but to select from all systems that which most conforms to reason and experience; as a n., a medical practitioner who so professes. [Gr., *eklektikos*, selective, from *eklegein*, to select.]
- ecmetropia** (ek-me-tro'pe-ah). Of Dixon, ametropia. [Gr., *ekmetros*, beyond the normal limit, + *opsis*, sight.]
- ecnesia** (ek-ne'ze-ah). A form of amnesia in which the patient remembers occurrences prior to a certain date, but not what happened for a certain time afterward. [Gr., *ek*, out of, + *mnesis*, remembrance.]
- ecology** (e-kol'o-je). The study of the life, history and surroundings of an organism. [Gr., *oikos*, house, + *logos*, treatise.]
- ecomania** (e-ko-ma'ne-ah). An abnormal family complex reaction seen in extremely irritable and in psychotic, chiefly paranoid, individuals. [Gr., *oikos*, house, + *mania*, madness.]
- economy** (e-kon'o-me). The harmonious working of the component parts of a living organism; as commonly used, the organism itself. **animal e.** The e. of an animal organism. **medical e.** The collection of rules observed in the practice of medicine and surgery. [Gr., *oikos*, a household, + *nemein*, to govern.]
- ecphronia** (ek-fro'ne-ah). Insanity. [Gr., *ekphronein*, to be out of one's mind.]
- ecphyma** (ek-fi'mah). Pl. *ecphymata*. An excrescence, an outgrowth. An obsolete term for a pimple or blister. [Gr., *ekphyma*, an eruption of pimples.]
- ecphysis** (ek-fis'es-is). 1. Panting. 2. Forcible expiration. [Gr., *ekphysisis*.]
- ecphysis** (ek'fi-sis). Germination, sprouting. [Gr., *ekphysisis*.]
- ecplexia, ecplexis** (ek-plex'e-ah, ek-plex'is). Stupor from consternation or a blow. [Gr., *ecplexia, ekplexis*.]
- écraseur** (a-krah-zer'). An instrument for effecting the gradual and bloodless division of tissues by crushing them by means of a loop of chain, wire, or cord which, having been made to encircle them, is slowly tightened by a screw or rack and pinion mechanism in the handle. [Fr., *écraiser*, to crush.]
- ecstasy** (ek'sta-se). A state in which the mind is rapt or carried away beyond the reach of ordinary impressions. The term is often used for the exalted condition of mind which sometimes immediately precedes death. [Gr., *existanai*, to put out of place.]
- ecstrophy** (ek'stro-fe). A turning inside out, as e. of the bladder. [Gr., *ekstrophe*, from *ek*, out of, + *strophein*, to turn.]
- ec'tal.** Pertaining to the exterior, especially of a cell. [Gr., *ektos*, out of.]
- ectasia** (ek-ta'zhe-ah). A local dilatation of a channel containing fluid, as lymph varices, aneurisms, and diverticula. [Gr., *ek*, out, + *teinein*, to stretch.]
- ectasis** (ek'ta-sis). Extension, distension, dilatation, prominence, bulging. **e. annularis.** Annular staphyloema, usually confined to the ciliary region. **e. corneae.** See *staphyloema corneae*, under *cornea*. [Gr., *ektasis*.]
- ectatic** (ek-tat'ik). Distensible.
- ecthol** (ek'thol). A proprietary preparation of *Thuja occidentalis* and *Echinacea angustifolia*, said to be antiseptic and aphrodisiac.
- ecthyma** (ek-thi'mah). An ulcerative pustular lesion of the skin, resulting from infection. It is to be classed as a dermatological process rather than a distinct disease. An infected abrasion of the skin, for example, forms an ecthymatous ulcer. **e. scrofulosum.** Scrofulous e.; the form observed in scrofulous subjects. [Gr., *ekthyma*, from *ekthyein*, to break out.]
- ecthyrosis** (ek-thi-re-o'sis). Loss of thyroid function from absence or disease. [Gr., *ek*, out, + *thyroid*.]
- ecto-** A prefix representing the Gr., *ekto-*, the stem of the adv. *ektos*, outside.
- ectoblast** (ek'to-blast). See *ectoderm*. [Gr., *ektos*, external, + *blastos*, sprout.]
- ectocardia** (ek-to-kar'de-ah). A malformation in which the heart is out of its normal position. [Gr., *ektos*, outward, + *kardia*, the heart.]
- ectocyst** (ek'to-sist). The cuticular structureless layer which lies immediately beneath the outer cyst, derived from the surrounding tissues, of an *echinococcus*. [Gr., *ektos*, outward, + *kystis*, a bag.]
- ectoderm** (ek'to-derm). The epiblast. [Gr., *ektos*, external, + *derma*, skin.]

ectogenous (ek-toj'en-us). Capable of development independently of a host; said of organisms, especially microorganisms, that are usually parasitic. [Gr., *ektos*, outward, + *gennan*, to engender.]

ectomere (ek'to-mēr). One of the ectodermal blastomeres. [Gr., *ektos*, outer, + *meros*, part.]

ectopagus (ek-top'a-gus). A form of monstrosity in which two individuals are fused laterally by the thorax and have but one umbilical cord. [Gr., *ektos*, outward, + *pegunai*, to fix.]

ectoparasite (ek-to-par'as-it). An external parasite, one that lives on the surface of its host. [Gr., *ektos*, outward, + *parasitos*, a parasite.]

ectophylaxination (ek''to-fi-lak-sin-a'-shun). The process of rendering immune by the transference of a protective substance formed in the body of one animal to the body of another.

ectophyte (ek'to-fit). A vegetable ectoparasite. [Gr., *ektos*, outward, + *phyton*, a plant.]

ectopia (ek-to'pe-ah). Dislocation, displacement; a morbid or developmental anomaly of situation of an organ. **e. ani**. 1. Prolapse of the anus. 2. An unnatural situation of the anus. **e. bulbi**. See *e. oculi*. **e. cerebri**. Protrusion of a great portion of the brain from the skull. **e. cordis**. Displacement of the heart. **e. lentis**. Dislocation of the crystalline lens from the lenticular fossa, from rupture or lack of development of the suspensory ligament. It may be congenital or acquired. **e. oculi**. A condition of arrested development in which there is no brain, and in which the vault of the skull is almost entirely wanting, the frontal bone and orbits are stunted, and the greater part of the eyeball projects uncovered. **e. pupillae**. The condition in which the pupil occupies a decidedly eccentric position in the iris. **e. tarsi**. A peculiar form of congenital defect of the lid, described by Blasius and Fleischmann, in which the ectropion is caused by a separation of the tarsus from the rest of the lid, and a second lid is developed between the latter and the eyeball. **e. testis**. A condition in which the testicle occupies any abnormal situation. **e. testis abdominalis**. The condition in which the testicle either remains in the abdominal cavity or has descended more or less into the inguinal canal and been arrested there. **e. testis cruralis**. The condition in which the testicle has descended through the femoral canal. **e. testis inguinalis**. Arrest of the testicle in the inguinal canal. **e. testis perinealis**. Displacement of the testicle beneath the skin of the perineum. **e. vesicae**. Displacement or ectrophy of the urinary bladder. [Gr., *ektōpos*, out of place.]

ectopic (ek-top'ik). Anomalous in situation; out of place, as *e. pregnancy*, pregnancy not in the uterus. [Gr., *ektōpos*, out of place.]

ectoplasm (ek'to-plazm). The exterior, denser portion of a cell. [Gr., *ektos*, without, + *plasma*, a thing formed.]

ectospore (ek'to-spōr). An external spore. [Gr., *ektos*, outward, + *spora*, a seed.]

ectosteal (ek-tos'te-al). Pertaining to the surface of a bone, especially to ossification taking place on the surface. [Gr., *ektos*, external, + *osteon*, a bone.]

ectosteomyces (ek-to-ste-om'is-es). A fungous outgrowth from a bone. [Gr., *ektos*, outward, + *osteon*, a bone, + *mykes*, a fungus.]

ectosuggestion (ek''to-sug-jes'chun). Suggestion from without; the opposite of autosuggestion. [Gr., *ektos*, without, + *suggestion*.]

ectoxemia (ek-tox-e'me-ah). Toxemia originating outside of the original. [Gr., *ektos*, outer, + *toxemia*.]

ectozoön (ek-to-zo'on). A parasitic animal that infests the outer integument of the body. [Gr., *ektos*, outward, + *zoön*, an animal.]

ectrimma (ek-trim'ah). A bedsore, or friction ulceration.

ectrodactylism (ek-tro-dak'til-izm). A congenital malformation consisting in the absence of one or more fingers or toes. [Gr., *ektroma*, an abortion, + *daktylos*, a finger or a toe.]

ectrogeny (ek-troj'en-e). A malformation consisting in a lack or defective development of a part. [Gr., *ektroma*, an abortion, + *gennan*, to engender.]

ectropion, ectropium (ek-tro'pe-on, ek-tro'pe-um). Partial or complete eversion of a part; generally applied to a turning out of the inner surface of the eyelid, more commonly the lower lid. Occasionally, applied to a turning out of the inner surface of the lower lip. [Gr., *ektropion*, from *ektrepein*, to turn out.]

eczema (ek'ze-mah). Syn.: *salt rheum*, *tetter*, *humid tetter*, *scall*, *scald*, *heat eruption*. A non-contagious inflammatory disease of the skin, sometimes acute, more often chronic, attended with itching, with desquamation or loss of the cuticle, and usually with the exudation of a serous or seropurulent fluid, either beneath the cuticle or upon the denuded surface. The lesions vary with the stage and character of the case, and include erythema, papules, vesicles, pustules, erosions, fissures, scales, crusts, and thickening of the skin due to hyperplastic changes. The varieties of *e. are*: *e. craquette*, *e. intertrigo*, *e. madidans*, *e. marginatum*, *e. papillomatousum*, *e. rhagadiforme*, *e. rimosum*, *e. rubrum*, *e. rubrum scrofulosorum*, *e. sclerosum*, *e. seborrheicum*, *e. squamosum*, *e. tuberculatum*, *e. verrucosum*. **e. mercuriale**. A form of *e.* produced by the application of mercury to the skin. [Gr., *ekzein*, to boil out, to boil over.]

Eddyism (ed'e-izm). The cult known also as Christian science, from the name of its founder, *Mary Baker Glover Eddy*, an American religious teacher, 1821-1910.

Ed'ebohl's operation. Decapsulation of the kidney for the mitigation of nephritis. [George M. Edebohl, New York surgeon, 1853-1908.]

edema (e-dē'mah). An effusion of watery fluid into the tissue of a part. **acute circumscribed e.** A disease characterized by the occurrence of circumscribed, isolated, edematous swellings, frequently upon the face but sometimes in other parts. **angioneurotic e.** E. due to vasomotor disturbance. **collateral e.** E. caused by transudation of serum due to increased lateral pressure in the capillaries. **e. bullosum vesicae.** E. of the bladder, characterized by clear vesicles with white particles floating between them. **e. of the glottis.** A serous infiltration into the laryngeal submucosa, that may extend to the epiglottis or the muscles and tissues of the neck. It is accompanied with alteration or loss of voice, dyspnea, cough, and a sense of suffocation. **flying e.** Temporary swellings due to effusion of fluid. **inflammatory e.** A serous exudation into inflamed tissue. **malignant e.** A form of infection affecting the skin, and characterized by great edematous infiltration, being caused by the bacillus of malignant edema. **pulmonary e.** Transudation of serum into the pulmonary air vesicles, accompanied by dyspnea and expectoration. **purulent e.** See *purulent infiltration*, under *infiltration*. **rheumatic e.** E. due to the rheumatic diathesis. **salt e.** E. produced by increase of sodium chlorid in the diet. [Gr., *oidema*, a swelling.]

edematous (e-dem'at-us). Affected with, or pertaining to, edema.

edentate (e-den'tāt). 1. Characterized by the absence of incisor and canine teeth. 2. Belonging to the order *Edentata*. [Lat., *edentatus*, from *edentare*, to render toothless.]

edentulous (e-den'tu-lus). Having no teeth; toothless. [Lat., *edentulus*, toothless.]

editus (ed'it-us). 1. A discharge of excrement. 2. Excrement. [Lat., *edere*, to emit.]

e'duct. A substance extracted from vegetable matter unchanged.

eff'ent (ef'fer-ent). Carrying or leading out of; said of nerves, vessels, or ducts. An efferent nerve is one which conveys its impulses from the nerve centers to a peripheral tissue. [Lat., *eff'rens*, from *eff'erre*, to bring out of.]

effervescence (ef-fer-ves'ens). The frothing of a liquid from the rising of little bubbles of gas. [Lat., *effervescere*, to boil over.]

effl'ation (ef-fla'shun). The act of belching. [Lat., *efflare*, to blow out.]

effleu'rage (ef-lu-rahzh'). Stroking movements in massage. [Fr.]

efflorescence (ef-flo-res'ens). 1. A rash or eruption on the skin. 2. The process of producing flowers or bursting into flowers. The period of flowering. 3. A condition which certain crystalline bodies tend to assume, in which they give off

their water of crystallization spontaneously at ordinary temperatures and are converted into an amorphous mass. [Lat., *efflorescere*, to bloom.]

effluent (ef'flu-ent). That flows forth. [Lat., *effluens*, pr. ppl. of *effluere*, to flow out.]

effluvium (ef-flu've-um). Pl. *effluvia*. An exhalation affecting the sense of smell. In modern use a noxious or disgusting odor. [Lat., *ex*, out, + *fluere*, to flow.]

ef'flux. A flowing out. [Lat., *effluxus*.]

effusion (ef-fu'shun). The escape of blood serum or pus into the tissues. The material which has so escaped. [Lat., *effusio*, a pouring out.]

egesta (e-jes'tah). The natural excretions or evacuations of the body, such as urine and feces. [Lat., *egerere*, to carry out.]

egestion (e-jest'shun). The expulsion of material, especially from the bowels. [Lat., *egerere*, to carry out.]

egg albumin. The albumin of the white of a hen's egg, consisting mainly of two glucoproteids, or albumin and conalbumin. The first of these has been obtained in a crystalline form.

eggshell nails. A condition of the nails in which they are thin with a distinct tendency to upward curving and separation of the nail plate from the matrix at the free border. When separated from the nail bed, the nail has the characteristic purplish-white hue of the inner surface of a hen's egg.

egilops (e'jil-ops). Perforating abscess of the inner canthus.

egomania (e-go-ma'ne-ah). Morbid self centering. [Gr., *ego*, I, + *mania*, madness.]

egophony (e-gof'o-ne). A morbid modification of the sound of the voice as heard on auscultation, of a tremulous character supposed to resemble that of the bleating of a goat; heard in cases of pleurisy with effusion and in certain cases of pneumonia complicated with pleurisy. [Gr., *aix*, (*aig-*), a goat, + *phone*, the sound of the voice.]

Ehrlich's diazo-reaction. Consists of treating the urine with diazobenzene sulphonic acid in solution and then adding a solution of either soda or ammonia. Normal urine gives a yellow or orange color, but certain pathological urines, e. g., typhoid urine, give a primary yellow coloration with a secondary red coloration upon the addition of ammonia. A red colored froth is formed at times which may turn yellow. **E. reaction for diazo-bodies in urine**, see in *appendix*, page 894. **E's side-chain theory.** A t. which embraces the various phenomena of immunity, including the formation of *antitoxins*, *cytolysins*, *agglutinins*, *opsonins*, *precipitins*, and other similar substances. It assumes the presence of complex organic molecules in the body cells, consisting of central groups to which lateral groups or *side-chains* are attached. These lateral chains are called *receptors* and they combine with the haptophore group

of toxins, cytolytins, opsonins, and other such materials. When the receptors are appropriated by the haptophore group of the toxins, cytolytins, etc., other receptors are formed by the central molecular group of cells, and if this stimulation is continuous, these receptors are produced in excessive amounts and are liberated in the blood as antitoxins, agglutinins, opsonins, and cytolytins, or amboceptors. These liberated receptors are called receptors of the first order, if they only possess one combining group, as with the antitoxins; receptors of the second order, if they contain two sets of combining groups, as with agglutinins and precipitins; and receptors of the third order if they contain groups of molecules making three sets of combinations, namely, with the haptophore and zymophore group of the complement and the haptophore group of the bacterial or body cells. The last variety of receptor is represented by the amboceptor, which is concerned in bacteriolysis and general cytolysis. These free receptors are also called haptins or antibodies.

Eichhorst corpuscle. Small spherical bodies, 3-3.5 mm. in diameter, found in the blood of persons suffering from pernicious anemia. [Hermann Eichhorst, Swiss physician, born 1840.]

eidoptometry (i-dop-tom'et-re). The determination of the acuity of vision. The process consists in determining the smallest angle under which the eye is still able to recognize the form of objects. [Gr., *eidos*, form, + *optein*, to see, + *metron*, a measure.]

elgon (i'gon). A chemical compound of iodine and albumin. Three forms have been introduced as remedies: *alpha-e.*, a brown powder containing about 20 per cent. of iodine; the same in combination with sodium; and *beta-e.*, in which the albumin is predigested. They have been used internally instead of potassium iodide and as substitutes for iodoform.

eloid (i'loyd). Having a coillike structure; said of certain animals. [Gr., *eilein*, to coil, + *eidos*, resemblance.]

Eimeria (i-me're-ah). A genus of the order *Coccidea*, of the phylum *Telosporidia*. **E. hominis.** A species found in the pleural exudate in man. See under *Coccidium*. **E. stiedae.** The common species found in the liver of rabbits.

eisodic (is-od'ik). Centripetal; said of the nerve fibers of a reflex arc. [Gr., *eis*, into, + *odos*, a path.]

ejaculation (e-jak-u-la'shun). The act of casting or throwing out forcibly, especially the emission of semen. [Lat., *ejaculari*, to throw out.]

ejaculator (e-jac-u-la'tor). See *table of muscles*, under *muscle*.

ejaculatory, ejaculant (e-jak'u-la-to-re, e-jak'u-lant). Serving for, or pertaining to, ejaculation, especially that of semen.

ejecta (e-jek'tah). Matters cast out from the organism.

eka-iodoform (e''kah-i-o'do-form). Iodoform to which a small amount of para-

formaldehyd has been added; used as a germicid.

elaboration (e-lab-o-ra'shun). The preparation of a product from crude material (as of a secretion, of chyme, etc.). [Lat., *elaborare*, to work out.]

elaidate (e-la'id-at). A salt of elaidic acid. **elaidin** (e-la'id-in). A substance, $C_{17}H_{31}O_2$, isomeric with olein, obtained by treating olive oil or castor oil with nitric acid.

el'ain. See *olein*.

elaiodon (el-a'i-od-in). The fluid part of a volatile oil.

elan'ula. An old name for a very hard form of alum, resembling iron.

elas'tica. Para rubber [U. S. Ph.].

elas'tic band'age. A bandage susceptible of being stretched. The Esmarch e. b. is made of flat rubber tissue, about three inches wide and long enough to cover the foot, leg, and thigh of a large adult when applied in a spiral beginning at the toes.

e. skin. A rare condition in which the skin, without other changes, possesses abnormal elasticity. The ordinary examples of the condition are the "india-rubber" men, who exhibit themselves as freaks. **e. stocking.** A stocking made of webbing of cotton or silk combined with rubber, contrived to fit snugly over the foot, ankle, leg, knee, or thigh, the whole or a part of them, and to exert continuous pressure on the surface. **e. tissue in sputum, how to recognize,** see in *appendix*, page 902.

elas'tin, elas'ticin. The proteid constituent of connective tissue. It occurs most abundantly in the cervical ligament and is quite resistant to the action of chemical agent. **e. peptone.** One of the two chief hydrolytic products obtained in the digestion of e. by pepsin and hydrochloric acid, and also by superheating with water.

elaterin (e-lat'er-in). The purgative principle of elaterium, $C_{20}H_{28}O_5$ [U. S. Ph.]. **pulvis elaterini compositus.** A mixture of 1 part of e. with 40 parts of milksugar [Br. Ph., 1898]. **trituration elaterini.** Consists of 10 per cent. of e. with sugar of milk [U. S. Ph.]. [Lat., *elaterinum*.]

elaterium (e-lat'e-re-on). 1. A purgative. 2. See *Elaterium*.

elaterite (el-at'er-it). Mineral caoutchouc or "mineral resin."

Elaterium (el-at'e-re-um). 1. A genus of cucurbitaceous plants indigenous to tropical America, especially Mexico and Venezuela. 2. The sediment from the juice of the fruit of *Ecballium e.* It is a hydragogue cathartic [Br. Ph.]. **Clut-terbuck's e.** E. obtained from the fruit of *Ecballium e.*, when sliced. It is more active than the commercial e. and a violent purgative. [Gr., *elaterion*.]

elaterometer (el-at'er-om'et-er). An instrument for measuring the elasticity of gases. [Lat., *elaterometrum*.]

el'bow. The joint formed by the arm and the forearm [B. N. A., *cubitus*]. **flail (paralytic) e.** Paralysis of all the muscles that should effect motion at the e.

without necessarily paralysis of those of the hand. [Ang.-Sax., *eln*, forearm, + *boga*, bend.]

el'der. See *Sambucus*.

elecampane (el'e-kam-pān'). See *Inula*.
elective. Optional, brought about by or subject to a choice; in chemistry, showing a preference. [Lat., *electivus*.]

electivity (e-lec-tiv'it-e). The capability of exerting an elective action.

electrical (e-lek'trik-al). Pertaining to, caused by, or resembling electricity; as a n., a body capable of being electrified, a non-conductor of electricity, a substance which exhibits electrical properties on friction. [Lat., *electricus*.]

electricity (e-lek-tris'it-e). A form of energy obtained usually by friction of certain substances (frictional or static e.); or by chemical action, as in the case of the galvanic cell (galvanic or voltaic e.). On the theory that matter is composed, ultimately, of negatively charged electric particles, the *electrons*, a charge of e. is due to the accumulation of an excess of negatively charged electrons or to the loss of electrons leaving a positive charge.

animal e. E. manifested in the physiological action of an animal organism.

atmospheric e. E. resident in the atmosphere. **faradic e.** See *induced e.*

franklinic e. See *static e.* **frictional e.** Static e. generated by friction, as of

glass or some resinous body with flannel, fur, or the like; also static e. in general.

galvanic e. The e. developed by a galvanic cell and due to the chemical action of the electrolyte on the metal forming the positive plate. **induced e.** The e.

induced in a conductor by a charge carried by a neighboring conductor, when the two are separated by a layer of air.

As usually obtained, a galvanic current is sent into a coil of insulated wire, the primary coil, and the appearance or disappearance of the change in this coil induces a charge of high tension in a second coil, the secondary coil, brought near to it. **magnetic e., magneto-e.** The induced e. generated by means of a magneto-electric apparatus. **medical e.** E. generated by an apparatus provided with accessories for regulating its application for medical purposes. **negative e.** The charge of electricity due to accumulation of an excess of negatively charged electrons. **positive e.** The charge of e. due to loss of some of the negative electrons, thereby leaving the substance with a positive charge. **resinous e.** The form of static e. generated by friction of a resinous body. **static e., statical e.** Syn.: *franklinism*. E. in a state of high tension, produced by friction, pressure, or cleavage, and accumulated on the surface of an insulated conductor. Two kinds of static e. are distinguished: *vitreous* (or *positive*) e. and *resinous* (or *negative*) e., both being supposed to reside in equal amounts in non-electrified bodies and to neutralize each other. **thermo-e.** The e. generated by heating a thermo-electric couple. **vitreous e.** The form of e.

generated by friction of glass. **voltaic e.** See *galvanic e.* [Gr., *elektron*, amber, because a manifestation of the rubbing of amber.]

electrifiable (e-lek'tri-fi-able). Capable of being electrified.

electrification (e-lek-tri-fi-ka'shun). The act or process of electrifying.

electrify (e-lek'tri-fi). To charge with electricity, especially with static electricity.

electrization (e-lek-triz-a'shun). 1. See *electrification*. 2. The application of electricity to a body; in medicine, the transmission of an electrical current through the body or any portion of it.

electro- Combining form of Gr., *elektron*, used to mean electricity.

elec'tro-anesthe'sia. Anesthesia produced by electricity.

electrobiology (e-lek'tro-bi-ol'o-je). The science which treats of animal electricity.

electrobioscopy (e-lek'tro-bi-os'ko-pe). An examination with electricity to ascertain whether life is extinct.

electrocardiogram (e-lek'tro-ka'r'de-o-gram). A record of the electromotive changes in the heart in a single cardiac cycle.

electrocardiograph (e-lek'tro-ka'r'de-o-graf). An instrument for registering electrical variations due to cardiac action.

elec'trocaus'tic. See *galvanocaustic*.

elec'trocau'tery. See *galvanic cautery*, under *cautery*.

elec'trochem'ical. Pertaining to electrochemistry; also of or pertaining to the chemical decomposition produced by electricity.

elec'trochemis'mus. The doctrine that all chemical action is due to electricity.

elec'trochem'istry. Electricity in its relations to chemistry. That branch of science which relates to the chemical effects of electricity.

elec'troconductiv'ity. Capacity for conducting electricity.

electrocution (e-lek-tro-ku'shun). A contraction of *electrical execution*. Judicial execution by means of electricity.

electrode (e-lek'tröd). 1. Either pole of an electric battery. 2. In medicine, that terminal of any electrical apparatus which is designed to be applied to the patient's body. **active e.** In electrodiagnosis, that e., small in size, which is applied to the immediate neighborhood of the part to be affected by the electricity. **brush e.** An e. consisting of a wire brush; commonly used with the faradic current.

cataphoric e. An e. specially devised for the use of cataphoresis (anodal diffusion); so constructed as to secure the passage of the electrical current from the positive pole through a medicinal solution as it enters the body. **diffusion e.** An e. devised for the use of cataphoresis, constructed to secure the passage of the electrical current from the positive pole through a medicinal solution as it enters the body. **franklinic e.** A metallic conductor attached to a static electrical machine, and designed for the application of sparks and of other forms of static

discharge. **hairbrush e.** An e. in the form of a hairbrush; designed especially for application to the scalp. **indifferent e.** In electrodiagnosis, that e., of large size, which is applied at some point (indifferent point) remote from the part designed to be affected by the electric current. **non-polarizable e's.** E's designed to prevent the phenomenon of polarization, that is, the accumulation of gas at the electrodes. They consist of a metal immersed in a salt of the metal, e. g., a zinc bar in a saturated solution of zinc sulphate. **normal e.** Of Erb, an e. having a constant cross section of 10 square centimeters; proposed as a suitable standard in applying electrical currents to the body. **roller e.** An e. consisting of a roller, designed to be passed over a surface to be electrized. **unpolarizable e.** See *non-polarizable e.* [Gr., *elektron*, amber, + *odos*, a path.]

elec'trodeposition. Depositing by electrical energy. [Gr., *elektron*, amber, + Lat., *deponere*, to deposit.]

elec'trodiag'nosis. The making of a diagnosis by the study of the nervous, muscular, or secretory electrical reactions.

elec'trodiagnos'tic. Of or pertaining to electrodiagnosis.

elec'trodynam'ic, elec'trodynam'ical. Pertaining to electric force or to electro-dynamics.

electrodynamics, electro-dynamism (e-lek''tro-di-nam'iks, e-lek''tro-di-nam'ism). Of Oersted and Ampère, the science of the reciprocal action of electrical currents, magnets, etc.

electrodynamometer (e-lek''tro-di-nam-om'et-er). An instrument for the electromagnetic measurement of an electric current. [Gr., *elektron*, amber, + *dynamis*, force, + *metron*, a measure.]

elec'trogalvan'ic. See *galvanic*.

electro-galvanism (e-lek''tro-gal'van-ism). See *galvanism*.

electro-galvanometer (e-lek''tro-gal-van-om'et-er). A galvanometer for measuring the amount or intensity of electricity.

electrogenesis (e-lek''tro-jen'es-is). The production of electricity.

electrogenic (e-lek''tro-jen'ik). Productive of electricity (said of animal tissues in general, and particularly of the electrical apparatus of certain fishes).

electrokinetics (e-lek''tro-kin-et'iks). 1. The science or study of current electricity (galvanism). 2. The science or study of electricity as a source of mechanical motion.

elec'trokinet'ik. See *electromotive*.

electroly-sability (e-lek''tro-li-sa-bil'it-e). Capability of electrolysis.

electrolysis (e-lek-trol'is-is). Of Faraday, chemical decomposition accomplished by means of electricity. [Gr., *elektron*, amber, + *lyein*, to resolve.]

electrolyte (e-lek'tro-lit). A body capable of undergoing electrolysis.

electrolyt'ic. Pertaining to electrolysis.

electrolyza'tion. See *electrolysis*.

elec'trolyze, elec'trolyse. To decompose by electricity.

elec'tromag'net. A piece of soft iron rendered magnetic so long as an electrical current is passed through a coil of wire surrounding it.

electromagnetic (e-lek''tro-mag-net'ik). 1. Pertaining to electromagnetism. 2. Rendered magnetic by electricity.

elec'tromagnet'ics. The science dealing with the properties of electromagnets.

electromag'netism. The science of the mutual relations of electricity and magnetism.

elec'tromas'sage. Massage combined with the application of electricity.

elec'tromed'ical. Pertaining to the use of electricity and medicine.

elec'tromedica'tion. 1. Medical treatment with electricity. 2. The introduction of medicines into the organism by means of electricity.

electrometer (e-lek-trom'et-er). An instrument for detecting the presence or measuring the quantity, intensity, etc., of an electrical current or electrical charge.

capillary e. An instrument for measuring the intensity of an electric current by the movement of a heavy column contained in a capillary glass tube. [Gr., *elektron*, amber, + *metron*, a measure.]

elec'tromet'ric, elec'tromet'rical. Pertaining to electrometry.

electromotion (e-lek''tro-mo'shun). Mechanical action produced by electricity.

elec'tromo'tive. Pertaining to or productive of electromotion.

elec'tromo'tor. 1. See *electromotive*. 2. As a n., a machine whose motive power is electricity.

electron (e-lek'tron). Amber. The name given to the ultimate electrical particles of which all matter is supposed to be composed. They are supposed to be negatively charged. The hydrogen atom is estimated to contain 770 e's. [Gr., *elektron*.]

elec'troneg'ative. Possessed of a negative charge of electricity.

elec'tropathol'ogy. The investigation of pathological conditions by ascertaining the electrical reaction of muscles, nerves, etc.

electrophone (e-lek'tro-fôn). See *telephone*. [Gr., *elektron*, amber, + *phone*, sound.]

electrophorus (e-lek-trof'o-rus). An apparatus for collecting static electricity by induction. [Gr., *elektron*, amber, + *phoros*, bearing.]

elec'trophys'ics. The portion of the general science of physics which deals with electricity.

elec'trophysiol'ogy. Of Duchenne, the study of facial expression and of character by the localized faradization of the muscles of the face.

elec'trophysiol'ogy. The study of the electrical phenomena exhibited by living tissues in activity.

elec'tropos'itive. Possessed of a positive charge of electricity.

elec'tropoten'tial. The extent of the potential or charge carried by any surface.

electropyrometer (el-ek''tro-pi-rom'et-er). An apparatus for measuring high degrees

- of temperature by means of a galvanometer. [Gr., *elektron*, amber, + *pyr*, fire, + *metron*, a measure.]
- electroscope** (e-lek'tro-skōp). An apparatus for detecting the presence of static electricity. **gold leaf e.** An e. consisting essentially of two strips of gold leaf suspended from a metallic rod which is inclosed in a glass case. On touching the metallic rod with an electrified body, the strips of gold leaf become electrified and diverge. [Gr., *elektron*, amber, + *skopein*, to view.]
- electroscopy** (e-lek-tros'kop-e). The use of the electroscope. [Gr., *elektron*, amber, + *skopein*, to examine.]
- elec'trosensibility**. The degree of sensitiveness of the body to the application of electricity.
- electrostatic** (e-lek'tro-stat'ik). Pertaining to electrostatics or to static electricity.
- electrostatics** (e-lek'tro-stat'iks). The science of static electricity.
- elec'trosusceptibility**. Susceptibility to electricity.
- elec'trosyn'thesis**. Chemical synthesis produced by electricity.
- electrothanasia**, **electrothanosis** (e-lek'tro-than-a'se-ah, e-lek'tro-than-a-to'sis). Death by electricity. [Gr., *elektron*, amber, + *thanatos*, death.]
- elec'trotherapeu'tical**. Pertaining to electrotherapeutics.
- electrotherapeutics**, **electrotherapy** (e-lek'tro-ther-a-pu'tiks, e-lek'tro-ther-a-pe). The treatment of disease by means of electricity.
- electrothermancy** (e-lek'tro-ther-man-se). The science of the production of heat by means of electricity. [Gr., *elektron*, amber, + *thermāsis*, a heating.]
- elec'trother'mic**. Pertaining to electrothermancy.
- electrothermograph** (e-lek'tro-ther'mo-graf). An instrument to indicate the thermal variations in the different organs of the body, by means of the heat or electrical conductivity. [Gr., *elektron*, amber, + *therme*, heat, + *graphein*, to write.]
- electrotonic** (e-lek-tro-ton'ik). Pertaining to electrotonus.
- electrotonus** (e-lek-trot'o-nus). The condition of the electric potential in a nerve or muscle during the passage of a constant galvanic current through a portion of its extent. Also used to indicate the resulting effect on the irritability and conductivity of the tissue. [Gr., *elektron*, amber, + *tonos*, tension.]
- electrotropism** (e-lek-trot'ro-pizm). The reaction of cells or simple organisms to electrical influences. [Electric, + Gr., *tropē*, turning.]
- electrovagogram** (el-ek'tro-va'go-gram). The protographic record of the electrical changes in the afferent fibers of the vagus nerve. The nerve is cut in the neck and the electrodes from the galvanometer or electrometer are connected, one with the cut end and one with the longitudinal surface. The record shows changes synchronous with the respiratory movements and with the heart beat.
- elec'trum**. A native alloy of silver and gold containing more than 36 per cent. of the former metal. [Gr., *elektron*.]
- electuary** (e-lek'tu-a-re). A preparation of pasty consistency, made of powders or other medicinal substances intimately mixed with a saccharine material (syrup, honey, or the like). [Lat., *electuarium*, from *eligere*, to choose.]
- element** (el'e-ment). 1. In general, a simple ultimate constituent of a compound substance, structure, or organ; also any individual part or group of parts of a structure, process, or series of phenomena. 2. In chemistry, a substance that can not be resolved into dissimilar constituents. Thus far about 80 different chemical elements have been found. They are divided into *metals* and *non-metallic e's*. See *non-metals*, below. They have been arranged into a system according to the size of their atomic weights. See *periodic system*. 3. Of a galvanic battery, the substances immersed in the exciting liquid, or liquids, considered as a couple with the vessel containing them. 4. In the pl., the *e's*, a general term for the meteorological agencies at work upon the earth; of the ancients, fire, water, earth, and air. 5. In the pl., the rudiments of a science. **anatomic e's**. The ultimate structural e's into which the tissues may be resolved by the aid of the microscope, i. e., epithelial cells, connective tissue fibers and corpuscles (including bone cells and cartilage cells), muscular fibers, nerve fibers, nerve cells, and blood corpuscles and lymph corpuscles. See *cell*. **cellular e.** See *cell*. **chemical e.** See *e.* (2nd def.). **chromatic e.** See *chromatin*. **connective tissue e's**. See *connective tissue corpuscles*, under *corpuscle*. **contractile e's**. The fiber cells of muscle. **corpuseular e.** See *corpuscle*. **diad e.** A chemical e. with an atomicity equal to two. **earthly e.** An e. entering into the composition of an earth. **electronegative e.** 1. That e. of a galvanic couple which is decomposed by the exciting fluid and constitutes the negative pole. 2. A chemical e. having electronegative properties. See *electronegative*. **electropositive e.** 1. That e. of a galvanic couple which is the less affected by the exciting fluid and constitutes the positive pole. 2. A chemical e. having electropositive properties. See *electropositive*. **endothelial e's**. See *endothelial cell*, under *cell*. **epithelial e's**. See *epithelial cell*, under *cell*. **formative e's**. See *connective tissue corpuscle*, under *corpuscle*. **ganglionic e's**. See *nerve cells*, under *cell*. **haloid e.** See *halogen*. **hexad e.** A chemical e. having an atomicity of six. **histologic e's**. See *anatomic e's*. **lymph e's**. See *lymph corpuscles*, under *corpuscle*. **metallic e's**. See *metal*. **monad e's**. A chemical e. having an atomicity of one. **morphologic e's**. See *anatomic e's*. **nervous e's**. The anatomic e's composing the nervous system, essentially the nerve cells

and fibers. **non-metallic e.** Syn.: *metalloid*. An elementary body which differs from the metals in both physical and chemical properties. According to most chemists, the non-metallic e's are: *hydrogen, chlorine, bromin, iodin, fluorin, oxygen, sulphur, selenium, tellurium, nitrogen, phosphorus, antimony, arsenic, carbon, silicon, boron, vanadium, tantalum, niobium, tungsten and molybdenum*. **nuclein e.** See *chromatin*. **pentad e.** A chemical e. having an atomicity of five. **red corpuscular e's of the blood.** See *red blood corpuscles*, under *blood corpuscle*. **sarcous e's.** Of Bowman, the minute, anisotropic, quadrangular particles, which, joined side by side, form the dark bands or disks of a striated muscular fiber; they are supposed to be the proper contractile substance. **seminal e.** See *spermatozoid*. **Smee's e.** See *Smee's battery*. **structural e's.** See *anatomic e's*. **tetrad e.** An e. having an atomicity of four. **thermo-electric e.** See *thermo-electric couple*, under *couple*. **tissue e's.** See *anatomic e's* and *tissue cell*, under *cell*. **triad e.** A chemical e. having an atomicity of three. **vegetative e's.** The cells at the vegetative pole of the ovum. **Volta's e.** See *voltaic couple*, under *couple*. **wandering e's.** See *wandering cells*, under *cell*. [Lat., *elementum*.]

elementary. 1. Fundamental. 2. In chemistry, pertaining to the elements or of the nature of an element; in analysis, ultimate.

elementology. The study of elements.

elemi (el'em-e). A soft, yellowish white, aromatic, stimulating resin used as an ingredient of plasters and ointments; the product of the pitch tree (*Canarium commune*) of the Philippines.

eleometer (el-e-om'et-er). An instrument for determining the quality and specific gravity of oils. [Gr., *elaion*, oil, + *metron*, a measure.]

eleosaccharum (e''le-o-sak'ar-um), pl., *eleosacchara*. A preparation made by adding a volatile oil to powdered sugar. [Gr., *elaion*, oil, + *sakcharon*, sugar.]

elephantiasis (el''ef-an-ti'a-sis). Syn.: *e. arabum, pachydermia, Barbados leg, e. indica bouknesia*. A hypertrophy of the skin and subcutaneous tissue, produced by local disturbance of the circulation and confined to one member or region of the body. In tropical countries this disease occurs in connection with *Filaria Bancrofti*, when it is due to the obstruction of the lymph channels by filaria. **e. telangiectodes** is hypertrophy of the parts accompanied by enlargement of the blood vessels. [Gr., *elephas*, (elephant-), the elephant.]

eleva'tion. 1. An increase of altitude; the state of being raised or lifted up. 2. A rise, as of temperature. 3. Anything that projects above the surrounding surface.

elevator (el'e-va-tor). An instrument for raising a part, especially depressed pieces of bone in fracture of the skull. In den-

tristry, an instrument for removing the roots of teeth. [Lat., *elevare*, to raise.]

ellene (el'i-ën). Of Chevreul, liquid fat. [Gr., *elaion*, oil.]

elim'inate. Effecting or promoting elimination.

elimina'tion. The separation or excretion of noxious or waste matters from the system. [Lat., *eliminare*, to expel.]

elinguid (e-lin'gwid). Tongue-tied, incapable of speech. [Lat., *e*, priv., + *lingua*, the tongue.]

eliquation (e-li-qua'shun). The process of separating a fusible substance from one that is less fusible. [Lat., *eliquare*, to liquefy.]

elixir (e-lix'ir). A sweetened and aromatized alcoholic preparation or cordial often containing small amounts of medicinally active ingredients, which are added in the form of tincture or fluidextract, or as a solution in the case of the saline ingredients. The N. F. recognizes numerous unimportant e's. **e. adjuvans.** Aromatic e. with 12 per cent. of glycer-rhiza [U. S. Ph.]. **e. aromaticum.** Simple e.; a mixture of alcohol and syrup, flavored with orange [U. S. Ph.]. **simple e.** E. aromaticum. [Arab., *alexir*.]

elixoid (e-lix'oyd). A preparation resembling an elixir (applied to certain English proprietary preparations). [*Elixir*, + Gr., *eidōs*, resemblance.]

elutriation (e-lu-tre-a'shun). The process of separating a mixture of two solid substances into its constituents by suspending it in water and allowing the heavier constituent to sink to the bottom. [Lat., *elutriare*, to cleanse.]

Ely's operation. Skin grafting for chronic otitis media.

elytrotomy (e-li-trot'o-my). An incision through the wall of the vagina. [Gr., *elytron*, vagina, + *tome*, incision.]

emaculation (em-ak-u-la'shun). The removal of spots, such as freckles, from the skin. [Lat., *emaculare*, to remove spots.]

emanation (em-an-a'shun). 1. Something given off. 2. A disintegration product of radio-active substances. **radium-e.** A radio-active gas produced by radium, also called inton. [Lat., *e*, out, + *manare*, to flow.]

emansio mensium (em-an'se-o men'se-um). That variety of amenorrhea in which menstruation has never taken place. [Lat., the staying away of the menses.]

emasculation (em-as-ku-la'shun). Removal of the testicles. The action or process of depriving of virility. The state of being impotent. [Lat., *emasculare*, to castrate.]

embalming (em-bahm'ing). The process of treating a dead body with preservatives against putrefaction.

embed'. To fix firmly in a surrounding mass of some solid material.

embed'ding. The infiltration of tissues by means of paraffin and celloidin in order to cut sections from them for microscopic study.

Embe'lia in'dica. Syn.: *E. ribes, E. ribesoides*. A species of plant found in the

East Indies. The dried fruit, called *embeli*, is used to adulterate black pepper and as a remedy for tapeworm.

embolemia (em-bo-le'me-ah). The condition in which septic emboli are found in the blood. [Gr., *embolos*, a plug, + *aima*, blood.]

embolic. Pertaining to or caused by embolism.

embolism (em'bo-lizm). The obstruction of an artery or capillary by any undissolved material transported to it by the blood current. This material may consist of a detached portion of a thrombus, of fat cells, air bubbles, tumor cells, or cells from various viscera, such as the liver, the bone-marrow, or the placenta. **air e.** The obstruction to the circulation, often resulting in sudden death, caused by the entrance of bubbles of air into a blood vessel. **anthracolic e.** Blackish deposits of coal particles distributed throughout the viscera. **arterial e.** E. of an artery. **bacillary e.** The obstruction of a vessel by a mass of bacilli. **bland e.** An embolism not containing bacteria. **capillary e.** E. of the capillaries only, or of the capillaries and the smallest arteries. **cardiac e.** 1. E. due to an embolus, generally a fibrous concretion, carried from the heart into an artery. 2. Cardiac thrombosis. **central retinal e.** E. of the central artery of the retina or one of its branches. **cerebral e.** E. of a cerebral artery, often giving rise to apoplectic symptoms and subsequently to those of cerebral degeneration. **crossed e.** E. in which the embolus passed from the right to the left side of the heart through a defective septum. **fat e., fatty e.** A condition sometimes observed as a sequence of fractures, consisting essentially in the passage into the veins of liquefied fat, which is carried into the lungs, brain, etc., blocking up the capillaries of those organs. **infective e.** E. by infective material capable of giving rise to septic or specific disease in its new situation. **metastatic e.** See *infective e.* and *pyemic e.* **multiple e.** E. by a number of emboli situated in different vessels. **oil e.** See *fat e.* **paradoxical e.** See *crossed e.* **pulmonary e., pulmonic e.** E. of the pulmonary artery or one of its branches. When the embolus is large enough to obstruct a branch of great size, it gives rise to cyanosis, distressing dyspnea, and often sudden death; smaller emboli cause limited gangrene, abscesses, infarctions, etc. **pyemic e.** E. by purulent material. **recurrent e.** E. in which emboli float backward in the venous stream. **retinal e.** See *central retinal e.* **retrograde e.** See *recurrent e.* **simple e.** See *bland e.* **venous e.** E. of a vein. Emboli have been supposed to occur in the hepatic veins as the result of regurgitation from the inferior vena cava. [Gr., *emballein*, to throw in.]

emboloid (em'bol-oyd). Resembling or pertaining to an embolus. [Gr., *embolos*, embolus, + *eidōs*, resemblance.]

embolus (em'bo-lus). Any undissolved material, forming an obstruction in a blood vessel, which has been transported by the circulation. [Gr., *embolos*.]

embrocation (em-bro-ka'shun). 1. The process of applying a liquid medicament to the surface, especially by rubbing. 2. Any liquid medicament applied by rubbing, especially a liniment. **Roche's e.** See under *Roche*. [Lat., *embrocatio*, lotion, fomentation.]

embryo (em'bre-o). That portion of a fecundated ovum which is destined to constitute an independent individual. Most writers apply this term to the product of the first two or three months of gestation in the human subject, applying the word fetus after that time. **primitive e.** The collection of blastomeres which constitutes the blastoderm in the higher animals. [Gr., *en*, in, + *bryein*, to be full, to swell.]

embryocardia (em'bre-o-kar'de-ah). Fetal rhythm of the heart beats; of Huchard, a condition of the heart in which the pulsations resemble those of a fetal heart. It comprises three elements: (1) tachycardia, (2) equalization of the length of the two periods of silence in the cardiac cycle, (3) similarity of the tone and of intensity in the two sounds. It indicates a certain degree of degeneration in the myocardium and an enfeeblement of the arterial tension.

embryogenesis (em-bre-o-jen'es-is). The formation of an embryo. [Gr., *embryon*, embryo, + *gennan*, to produce.]

embryology (em-bre-ol'o-je). The study of the origin and development of animal organisms and of their component parts. **comparative e.** The study of e. in different animals. [Gr., *embryon*, the embryo, + *logos*, understanding.]

embryoma (em-bre-o'mah). A tumor developing in the cranium, gill-clefts, thoracic cavity, testicle, or ovary from misplaced germinal cells.

embryomorphous (em-bre-o-mor'fus). Pertaining to abnormal tissue elements supposed to be derived from embryonic development. [Gr., *embryon*, embryo, + *morphe*, form.]

embryonia (em-bre-o'ne-ah). A dermoid cyst. **malignant e.** A dermoid producing secondary nodules in the peritoneum containing cartilage, epithelium, and ganglion cells.

embryonic (em-bre-on'ik). In the condition of, pertaining to, or having the characteristics of an embryo.

embryotome (em'bre-o-tōm). An instrument for performing embryotomy, especially by decapitation. [Gr., *embryon*, an embryo, + *temnein*, to cut.]

embryotomy (em-bre-ot'o-me). The cutting up of a fetus to reduce its bulk and thus aid in delivery. [Gr., *embryon*, an embryo, + *temnein*, to cut.]

embryotoxon (em-bre-o-tox'on). Congenital marginal opacity of the cornea. [Gr., *embryon*, the embryo, + *toxōn*, a bow.]

em'esis. Vomiting. [Gr., *emein*, to vomit.]

emet'ic. Productive of vomiting; as a n., a substance that produces vomiting. **direct e.** An e. that produces its effect by its action upon the gastric nerves. **indirect e., systemic e.** An e. that produces its effect by acting upon the e. center in the medulla. **tartar e.** See *antimony and potassium tartrate*, under *antimony*. [Gr., *emetikos*; Lat., *emeticus*.]

emet'icolax'ans. See *emetocathartic*. [Gr., *emetikos*, emetic, + Lat., *laxare*, to loosen.]

emetin (em'et-in). An alkaloid, $C_{16}H_{21}NO_2$, formerly supposed to be the emetic principle of ipecacuanha, now used in the treatment of amebic dysentery. E. is found in various degrees of purity.

em'etocathar'tic. Producing both vomiting and catharsis. The *émétocathartique* of the French is a solution of sodium sulphate in water.

emetology (em-et-ol'o-je). The study of the physiology of vomiting, of the action of emetics, or of the nature of vomited matter. [Gr., *emein*, to vomit, + *logos*, understanding.]

emetomania (em-et-o-ma'ne-ah). A morbid propensity to use emetics. [Gr., *emein*, to vomit, + *mania*, madness.]

emetophobia (em-et-o-fo'be-ah). A morbid dread of vomiting or of using emetics. [Gr., *emein*, to vomit, + *phobos*, dread.]

E. M. F. An abbreviation for electromotive force.

emict'ory. Pertaining to, or promoting, micturition.

emigration (em-e-gra'shun). The wandering out of the white blood corpuscles from the capillaries and small veins during inflammation.

eminence (em'in-ens). A prominence. **arcuate e.** Syn.: *jugum petrosum*. A rounded eminence on the upper surface of the petrous portion of the temporal bone which indicates the situation of the superior semicircular canal. **articular e. of the temporal bone.** A rounded e. which forms the front boundary of the glenoid fossa. **auditory e.** A collection of gray matter on the floor of the fourth ventricle of the brain at its lower part, forming the deep origin of the auditory nerve. **bicipital e.** A tuberosity on the radius for the insertion of the biceps muscle. **blastodermic e.** The somewhat elevated mass of cells at the animal pole of a developing ovum forming the blastoderm. **canine e.** A vertical ridge on the external surface of the superior maxilla, corresponding to the socket of the canine tooth. **digital e.** See *hippocampus minor*, under *hippocampus*. **e. of the aqueductus Fallopii.** A ridge which traverses the inner wall of the tympanum above the fenestra ovalis, and behind that opening curves nearly vertically downward along the posterior wall. **frontal e.** A rounded prominence on either side of the median line, a little below the center of the frontal bone [B. N. A., *tuber frontale*]. **germinal e.**

The *discus proligerus*. **hypothenar e.** A prominence on the ulnar side of the palm of the hand, formed by the muscles of the little finger. **iliopectineal e., iliopubic e.** An e. on the upper aspect of the pubic bone above the acetabulum, marking the junction of the bone with the ilium [B. N. A., *eminentia iliopectinea*]. **mamillary e's.** See *corpora albicantia*, under *corpora median e.* See *anterior pyramids*. **nasal e.** A prominence on the vertical portion of the frontal bone above the nasal notch and between the two superciliary ridges. **occipital e.** See *external occipital protuberance*, under *protuberance*. **olivary e.** See *olivary body*, under *body*. **parietal e.** The marked convexity on the outer surface of the parietal bone [B. N. A., *tuber parietale*]. **portal e's.** The small median lobes on the lower surface of the liver. **pyramidal e.** The pyramid of the tympanum. **thenar e.** The ball of the thumb. [Lat., *eminencia*, from *e*, out, + *minere*, to hang over.]

eminentia (em-in-en'she-ah). See *eminence*. **eminentiae anteriores.** The anterior pair of the corpora quadrigemina. **e. articularis.** See *articular eminence of the temporal bone*, under *eminence*. **e. capitata.** The head of a bone. **e. capitata humeri.** The lesser or radial head of the humerus. **e. carpi lateralis superior.** The tuberosity of the os naviculare. **e. carpi radialis.** An elevation on the radial side of the palmar surface of the carpus, formed by the tuberosities of the trapezium and trapezoid. **e. carpi ulnaris.** An elevation on the ulnar side of the palmar surface of the carpus formed by the pisiform bone and the processus hamatus of the unciform bone. **e. caudata.** A narrow portion of the liver which connects the lobulus Spigelii with the right lobe. **e. collateralis (Meckelii).** A projection at the junction of the posterior and descending cornua of the lateral ventricle of the brain, between the hippocampi. **e. conchae.** An elevation on the posterior surface of the external ear, corresponding to the concha. **e. costaria.** That portion of the transverse processes of the second to the seventh cervical vertebrae situated anteriorly to the vertebrarterial foramen. **e. cruciata.** The crosslike figure formed by the internal occipital protuberance, the internal occipital crest, and the transverse ridge on the inner surface of the occipital bone. **eminentiae cuneiformes cinercae.** Two gray elevations in the medullary portion of the fourth ventricle of the brain. **e. cunciiformis.** The ridge which separates the two articular facets of the head of a rib. **e. cymbae.** A prominence on the dorsum of the ear corresponding to the upper portion of the concha, which is separated from the lower portion by the termination of the helix. **e. fossae triangulares (seu triquetrae).** An elevation on the posterior surface of the external ear corresponding to the fossa triangularis.

eminentiae inferiores. The posterior pair of the corpora quadrigemina. **e. intercondylea, e. intercondylica, e. intercondyloidea, e. intermedia.** The spine of the tibia. **e. jugularis.** See *jugular process*, under *process*. **eminentiae laterales cartilaginis cricoidei.** The surfaces on the cricoid cartilage which articulate with the thyroid cartilage. **e. media tibiae.** The spine of the tibia. **eminentiae medianae internae.** The anterior pyramids of the medulla oblongata. **e. obliqua.** The tuberosity on the plantar surface of the cuboid bone. **e. occipitalis.** A ridge in the lateral ventricle of the brain, distinct in the fetus, often nearly or quite obliterated in the adult. **eminentiae ossae.** Bony prominences. **e. ossis cuboidel.** Syn.: *tuberculum cuboidel.* A prominence on the lower surface of the cuboid bone, to which the long plantar calcaneocuboid ligament is attached. **e. papillaris (tympani).** The pyramid of the tympanum. **eminentiae posteriores.** The posterior pyramids of the medulla oblongata. **e. scaphae.** An elevation on the posterior surface of the external ear, corresponding to the scapha. **e. supracondyloidea externa.** The prominence produced by the external condyle. **e. supracondyloidea interna.** The prominence produced by the internal condyle. [Lat.]

emissarium (em-is-sa're-um). An outlet. **e. condyloideum arterius.** A vein which accompanies the hypoglossal nerve through the anterior condyloid foramen. **emissaria durae matris.** Prolongations of the dura accompanying the nerves at their emergence from the skull. **e. foraminis lacri antici.** A vein which forms a communication between the cavernous sinus and the pharyngeal veins. **e. foraminis ovalis.** A vein which passes through the foramen ovale and connects the cavernous sinus with the internal maxillary plexus. **e. mastoideum.** A vein which passes through the mastoid foramen to the lateral sinus. **e. occipitale.** A small vein which passes through the foramen condyloideum posterius and unites the transverse sinus with the plexus vertebralis cervicalis. **e. occipitale inferius.** A vein which passes through the foramen condyloideum posterius connecting the transverse sinus with the plexus vertebralis cervicalis. **e. occipitale superius.** A vein of the diploe of the occipital bone which opens into the torcular Herophili by a foramen in the internal occipital protuberance, or into the transverse sinus, or externally into an occipital vein through the external occipital protuberance. **e. parietale.** A small vein which passes through the parietal foramen. **emissaria Santorini.** Communications between the sinuses or veins of the meninges and the veins of the outer surface of the skull. [Lat., *e*, from, + *mittere*, to send.]

emissio (e-mis'se-o). See *emission*. **e. seminis.** The emission of semen.

emission (e-mish'un). A discharging, a

giving out, as of an odor or a secretion.

seminal e. The ejaculation of semen. [Lat., p.pl. of *emittere*, to send forth.]

emis'sive. In physics, capable of radiating heat and light.

emmenagogue (em-men'a-gog). Any agent which increases the menstrual flow. Having power to excite the menstrual discharge. [Gr., *emmena*, the menses, + *agagos*, drawing forth.]

em'metrope. A person endowed with emmetroopia.

emmetropia (em-met-ro'pe-ah). The normal state of the eye as regards refraction, in which parallel rays of light from a distance of six (6) meters are focused on the retina when the eye is at rest. [Gr., *emmetros*, in due measure, + *ops*, the eye.]

emmetrop'ic. Normal in vision respecting refraction and accommodation.

Emmet's operation. 1. Uterine trachelorrhaphy. 2. The procedure of converting a sessile submucous tumor of the uterus into a pediculated tumor by traction, in order to facilitate its removal. 3. An o. for the repair of lacerated perineum. 4. An o. for procidentia uteri, in which the uterus is anteverted, the neck kept out of the way by a sponge probang, and two points are selected about half an inch from the cervix on either side and a little behind the anterior lip. The surfaces of these points are freshened, as well as that of the vaginal surface in front of the uterus, and the three surfaces are brought together with sutures. [Thomas Addis Emmet, New York gynecologist, living.]

emodin (em'od-in). Tri-oxyethyl-anthraquinone, (C₁₄H₄) (CH₃) (OH)₃O₂. The term *e.* is used generically for isomeric, or identical, substances found in a number of purgative drugs, such as rhubarb, senna, and others. It is one of the active principles of the cathartic drugs.

em'ol. A certain impalpable earthy powder containing stearite; used topically in skin diseases.

emollient (em-ol'le-ent). Having a soothing action; said of topical applications. [Lat., *emollire*, to soften.]

em'pasm. A perfumed dusting powder. [Gr., *em*, upon, + *passein*, to sprinkle.]

empathema (em-path-e'mah). A predominating passion that perverts or subverts the judgment and alters the faculties. [Gr., *em*, in, + *pathos*, suffering.]

emphysema (em-fi-se'mah). Distention with air or gas. **alveolar e., atrophic e.** See *vesicular e.* **cellular e.** See *subcutaneous e.* **compensatory e.** Pulmonary *e.* due to defective expansibility of some other portion of the lung, the portion in which the *e.* develops giving way under the influence of atmospheric pressure through the air passages. **e. conjunctivae.** A collection of air beneath the conjunctiva. **e. orbitae.** A collection of air in the meshes of the orbital tissue, almost always accompanied by *e.* of the lids. **e. vagans.** A form of subcutaneous *e.* in which the collection of air shifts from one part to another.

- interlobular e.** That form of pulmonary e. in which, from the rupture of one or more air vesicles, air is forced into the connective tissue between the lobules, generally near the apex of the lung, and forms pouches of various sizes.
- pulmonary e.** E. of the lung. See *interlobular e.* and *vesicular e.*
- senile e.** The pulmonary e. of the aged; usually preceded by diminished mobility of the ribs.
- subcutaneous e.** Distention of the subcutaneous connective tissue with air.
- surgical e., traumatic e.** Subcutaneous e. due to traumatism.
- vesicular e.** Of Laennec, that form of pulmonary e. which consists in abnormal dilatation of the air vesicles and consequent overaccumulation of air. [Gr., *emphysan*, to inflate.]
- emphysematous** (em-fi-sem'at-us). Pertaining to or affected with emphysema.
- emphytic** (em-fit'ik). Inborn. [Gr., *emphytos*.]
- empiric, empirical** (em-pir'ik, em-pir'ikal). Pertaining to or founded on experience or experiment, without regard to a *priori* considerations. **e. formula.** See under *formula*. [Gr., *en*, according to, + *peira*, a trial.]
- empiric** (em-pir'ik). One who relies solely upon observation and experiment. [Gr., *empeirikos*, skilled.]
- empiricism** (em-pir'is-ism). Medical practice founded on experience; in an old and obsolete sense, charlatanism.
- empiricist** (em-pir'is-ist). In pathology and therapeutics, one who tests out hypotheses on the basis of experience rather than upon a *priori* considerations.
- emplastic.** Fit to be applied as a plaster or to be used as a constituent of a plaster. [Gr., *emplastikos*.]
- empyema** (em-pi-e'mah). A collection of pus in a closed cavity of the body, especially the pleura. **e. benignum.** A form of e. in which the general health is fairly good and there is no rise of temperature, but which is usually fatal.
- interlobar e.** E. in which the pus is collected between the lobes of the lung.
- loculated e.** E. in which pus collects in a group of loculi.
- pneumococcal e.** E. caused by the pneumococcus.
- pulsating e.** A form of e. of the thorax in which the cardiac pulsations cause a movement of the chest walls.
- putrid e.** E. in which the pus has undergone greater or less decomposition.
- streptococcal e.** E. caused by the streptococcus of erysipelas.
- tuberculous e.** A rare variety of e. due to the tubercle bacillus. [Gr., *en*, within, + *pyon*, pus.]
- empyema** (em-pi-e'sis). Any diseased condition characterized by vesicles filled with purulent fluid. [Gr., *empeyin*, to suppurate.]
- empyreuma** (em-pi-ru'mah). The process of burning or roasting; also the odor produced by heating an animal or vegetable substance. [Gr., *empyreuma*, covered live coal.]
- empyreumatic** (em-pi-ru-mat'ik). Formed by the destructive distillation of an animal or vegetable structure.
- empyroform** (em-pi'ro-form.) A product of the condensation of birch tar and formaldehyd. It is antipruritic and desiccant; used in eczema, etc.
- emulgent** (e-mul'jent). Lit., filtering off; pertaining to the secretion of urine or to the kidney; said of the renal arteries and veins. [Lat., *emulgere*, to milk off, to drain.]
- emulsifica'tion.** The formation of an emulsion.
- emulsify** (e-mul'se-fi). To form into an emulsion.
- emulsin** (e-mul'sin). An enzyme of bitter and sweet almonds which hydrolyzes many synthetic glucosids as well as amygdalin.
- emul'sio.** See *emulsion*.
- emulsion** (e-mul'shun). 1. A liquid containing fatty or resinous matter in suspension in a state of very fine subdivision, giving to the liquid a uniform, milky whiteness. 2. A pharmaceutical preparation containing fatty matter so subdivided and suspended. 3. The state or condition of being an e. [Lat., *emulgere*, to milk.]
- emul'sive.** 1. Milklike. 2. Capable of forming or being formed into an emulsion. 3. Yielding oil on expression (said of seeds).
- emunda'tion.** In pharmacy, an operation by which useless substances are eliminated.
- emydin** (em'id-in). The protein contained in turtles' eggs. [Gr., *emys*, a tortoise.]
- enamel** (e-nam'el). The hard, dense substance, composed of closely set columns or prisms (e. prisms), forming a protective covering for the crown of the teeth.
- central e.** A ring of e. which surrounds the external dental cavity of the incisor teeth in the solipeds.
- encircling e., external e.** The e. which covers the surface of a tooth.
- internal e.** In horses' teeth, the bands of e. which form projecting ridges upon the grinding surface. [Mid. Eng., *enamaile*, from *en*, on, + *amaile*, ivory.]
- Enanthe, Oenanthe** (en-an'the). 1. *Carum bulbocastanum*. 2. *Spiraea filipendula*. 3. A genus of umbelliferous plants. **Oe. apiifolia.** Parsley water dropwort; a poisonous species growing in France. **Oe. crocata.** Water hemlock, water dropwort, dead tongue; this dangerous English plant occupies a position similar to that of *Cicuta* in the United States, containing enanthotoxin and a picrotoxinlike body. **Oe. phellandrium.** Water-fennel, water-dropwort fennel. The fruit contains a volatile and aromatic oil. The fresh leaves are poisonous, producing a sort of paralysis in cattle, but lose their poisonous properties on drying. [Gr., *oinos*, wine, + *anthe*, the full bloom of a flower.]
- enanthema** (en-an'them-ah). A mucous membrane eruption. [Gr., *en*, in, + *anthena*, blossoming.]
- enanthesis** (en-an'the'sis). Skin eruptions from internal disease. [Gr., *en*, in, + *anthein*, to bloom.]
- enanthin** (en-an'thin). 1. A light-colored viscous substance of doubtful composition, to which the "velvety" quality of Bordeaux wines is due. It is probably formed

- during fermentation. Half a grain has produced in an adult long-continued irritation of the fauces and hoarseness; a grain has caused occasional vomiting. 2. A resinous substance of narcotic odor extracted from the herb of *Oenanthe fistulosa*.
- enantothoxin** (en-an-tho-toks'in). A very poisonous resin, $C_{33}H_{42}O_{10}$, obtained from *Oenanthe crocata*, which closely resembles or is identical with cicutoxin.
- enarthrosis** (en-ar-thro'sis). That variety of diarthrosis which includes joints, like that of the hip, that are freely movable in all directions, and are formed by the play of a rounded bony eminence within a cuplike cavity; a ball and socket joint. [Gr., *en*, in, + *arthrosis*, joint.]
- encanthis**. A small tumor or excrescence growing from the inner angle of the eye. [Gr., *egkanthis*, from *en*, in, + *kanthos*, angle of the eye.]
- encapsulation** (en-kap-sū-lā'tion). Inclosure in a sheath of substance not normal to the part.
- encapsuled**. Inclosed, as in a capsule.
- encephalalgia** (en-sef-al-ā'je-ah). Deep-seated pain in the head. [Gr., *egkephalos*, the brain, + *algos*, pain.]
- encephalomalacia** (en-sef'al-an-al-o'sis). Atrophy of the brain. [Gr., *egkephalos*, brain, + *malacia*, a wasting away.]
- encephalasthenia** (en-sef'al-as-the'ne-ah). Lack of brain power. [Gr., *egkephalos*, the brain, + *astheneia*, debility.]
- encephalemia** (en-sef-al-e'me-ah). Congestion of the brain. [Gr., *egkephalos*, the brain, + *aima*, blood.]
- encephalic** (en-sef-al'ik). Pertaining to the brain, or brain cavity.
- encephalin** (en-sef'al-in). A substance obtained from brain tissue by boiling with a saturated solution of baryta.
- encephalitis** (en'sef-al-i'tis). Syn.: *cephalitis*. Brain fever; inflammation, especially of the substance of the brain. Brain abscess. **acute purulent e.** E. with the formation of abscesses. **meningo-e.** Inflammation of the substance of the brain complicated with meningitis. **pyemic e.** The formation of multiple acute abscesses in the brain, secondary to acute pyemia. **sclerotic e.** Chronic meningitis with formation of patches of sclerosis; observed in old persons, lunatics, etc. [Gr., *egkephalos*, the brain, + *itis*, inflammation.]
- encephalocele** (en-sef'al-o-sel). Syn.: *craniocoele*. A condition, usually congenital, in which a portion of the brain protrudes from the skull in the form of an external tumor. [Gr., *egkephalos*, the brain, + *kele*, a tumor.]
- encephaloid** (en-sef'al-oyd). Resembling the cerebral substance, as in a soft carcinoma where the cellular tissue is present in excess as compared with the fibrous stroma. [Gr., *egkephalos*, the brain, + *eidos*, resemblance.]
- encephalolith** (en-sef'al-o-lith). A cerebral concretion or calculus. [Gr., *egkephalos*, the brain, + *lithos*, a stone.]
- encephalolithiasis** (en-sef'al-o-lith-i'as-is). The formation of calculi in the brain. [Gr., *egkephalos*, the brain, + *lithiasis*, the formation of calculi.]
- encephalology** (en-sef-al-o'l'o-je). The anatomy, physiology, etc., of the brain. [Gr., *egkephalos*, the brain, + *logos*, understanding.]
- encephaloma** (en-sef-al-o'mah). A tumor of the brain.
- encephalomalacia** (en-sef'al-o-mal-a'se-ah). Softening of the brain as in infarction due to embolism. [Gr., *egkephalos*, the brain, + *malakia*, softening.]
- enceph'alomeningi'tis**. See *cerebral meningitis*, under *meningitis*.
- encephalomeningocele** (en-sef'al-o-men-in-go-sel). Hernia of the cerebral membrane and the brain substance. [Gr., *egkephalos*, brain, + *menigx*, (*mening*-), membrane, + *kele*, hernia.]
- encephalometer** (en-sef-al-om'et-er). An instrument for ascertaining that point in the cranium which corresponds to a particular organ of the brain by measurement from the known or assumed situation of another cerebral organ. [Gr., *egkephalos*, the brain, + *metron*, a measure.]
- encephalomyelitis** (en-sef'al-o-mi-el-i'tis). A combination of inflammation of brain and spinal cord.
- encephalon** (en-sef'al-on). The brain. See *brain* and *cerebrum*. **e. trilobare**. A form of monstrosity in which the cerebrum is divided into three portions separated by longitudinal sulci. [Gr., *en*, within, + *kephale*, head.]
- enceph'alonar'cosis**. Stupor.
- encephalopathy** (en-sef-al-op'ath-e). Syn.: *cerebroopathy*. Any affection of the brain, especially disordered cerebral action due to a constitutional disease or to disease in some other part of the organism. **albuminuric e.** Eclampsia associated with albuminuria. **saturnine e.** E. due to lead poisoning. According to Ross, idiocy, imbecility, and epilepsy are frequently observed among the children of those who work in lead. **uremic e.** See *albuminuric e.* [Gr., *egkephalos*, brain, + *pathos*, disease.]
- encephalorhachidian** (en-sef'al-o-rak-kid'e-an). See *cerebrospinal*. [Gr., *egkephalos*, the brain, + *rachis*, the vertebrae.]
- encephalorrhagia** (en-sef'al-or-ra'je-ah). Cerebral hemorrhage. [Gr., *egkephalos*, brain, + *regnumnai*, to burst out.]
- encephaloscopy** (en-sef-al-os'ko-pe). Syn.: *cerebroscopy*. 1. The art or process of examining the brain (as by examining the fundus oculi, by applying a differential calorimeter, etc.). 2. Of some writers, see *cranoscopy*. [Gr., *egkephalos*, the brain, + *skopein*, to examine.]
- encephalothlipsis** (en-sef-al-o-thlip'sis). Compression of the brain. [Gr., *egkephalos*, + *thlipsis*, pressure.]
- enchondroma** (en-kon-dro'mah). A cartilaginous tumor of true independent growth, growing in connection with bones or, in many cases, in glands. **cystic e.** An e. in which some or all of the lobules undergo softening (usually mucoid) and liquefaction, so that cysts are formed,

- which sometimes have cartilaginous walls. **e. molle.** Syn.: *soft e., gelatinous e.* An e. having a gelatinous consistence. It usually contains many large star-shaped cells. **e. mucosum, e. myxomatodes.** Syn.: *chondromyxoma.* An e. containing mucoid tissue, but in which the cartilage predominates. **fibrous e.** An e. composed of fibrocartilage. **gelatinous e.** See *e. molle.* **hyaline e.** An e. that is composed of one or more lobules of hyaline cartilage. **mucoid e.** See *e. mucosum.* **myxo-e.** An e. containing myxomatous tissue. **ossifying e., osteoid e.** A bone tumor in which the proportions of bone and cartilage are nearly equal. **reticulated e.** An e. consisting of reticulated cartilage. [Gr., *en*, in, + *chondros*, cartilage, + *oma*, tumor.]
- enchon'drosarco'ma.** A sarcoma containing cartilaginous tissue.
- enchondrosis** (en-kon-dro'sis). An outgrowth of cartilage from bone or cartilage. **e. spheno-occipitalis.** An enchondroma of clivus Blumenbachii that often perforates the dura. [Gr., *en*, in, + *chondros*, cartilage.]
- enchytis** (en'ki-tus). Dropped in, instilled.
- enclitic** (en-kli'tik). When fetal head and maternal pelvis planes are similarly inclined.
- encysted** (en-sist'ed). Inclosed in a sac or cyst. [Gr., *en*, within, + *kystis*, a sac.]
- encystic** (en-sist'is). An encysted tumor or wen.
- encystment** (en-sist'ment). The state of becoming encysted.
- end.** The point at which anything ceases; an extremity. **e. bud, e. bulb, e. capsule.** See *end bud, end bulb, under separate head.* **e. gut.** See *proctodeum. e. organ.* See *end organ, under separate head.* **e. plate.** See *end plate, under separate head.* **e. plexus.** See *terminal plexus, under plexus.* **intramuscular e.** The end of a striated muscular fiber which does not reach a tendon but tapers gradually to a point and terminates within the body of a muscle. A fiber may have one or both of its endings of this character, and the ends may also be branched. **nerve e.** The termination of a nerve fiber. **tendinous e.** The end of a striated muscular fiber reaching the tendon. It is usually single and bluntly pointed, but may be branched. [Ang.-Sax., *ende*.]
- endangitis** (en-dan-ji'tis). Inflammation of the endangium or intima of a blood vessel.
- endangium** (en-dan'je-um). The internal coat of the arteries and veins; the intima. [Gr., *endon*, within, + *ageion*, a vessel.]
- endaortitis** (end'a-or-ti'tis). Inflammation of the inner coat of the aorta. [Gr., *endon*, within, + *aorte*, the aorta, + *itis*, inflammation.]
- endarteritis** (end'ar-ter-i'tis). Inflammation of the inner coat of an artery. **acute e.** Inflammation of the intima from trauma, infective thrombi, syphilis, and pyogenic bacteria. **aortic e.** See *endaortitis, under separate head.* **chronic e., e. deformans.** E. following a
- slow course and resulting in simple thickening of the intima with connective and elastic tissue, or its replacement in patches by atheromatous or calcareous material, or an implication of the media and the adventitia in extreme cases converting the vessel into a cord of bony stiffness. See *arteriosclerosis.*
- e. obliterans.** A form of chronic e. characterized by progressive thickening of the intima by the formation of connective tissue, leading to stenosis and even complete closure of the lumen. **e. syphilitica.** E. obliterans due to syphilis. **e. tuberculosa.** A specific inflammation of the internal coat of an artery caused by tubercle bacilli. [Gr., *endon*, within, + *arteria*, an artery.]
- end bud, end bulb.** The expanded termination of a sensory nerve; an ovoid or mulberry-shaped body with a central core (composed mostly of nucleated corpuscles and a connective tissue sheath) in which a medullated nerve fiber has a knob-shaped termination. **Krause's e. b.** See *e. b.*
- endeixis** (en-dex'is). See *indication.* [Gr., *endeiknunai*, to indicate.]
- endemic** (en-dem'ik). Prevailing in a certain locality or among a certain class of persons (said of diseases); as a n., a disease so prevailing, also an instance of its prevalence. **e. disease.** One occurring in a special locality. [Lat., *endemius*, *endemius*, from Gr., *endemios* or *endemos*, pertaining to the people.]
- endemicity** (en-dem-is'it-e). The quality of prevailing as an endemic or of being indigenous.
- endemiol'ogy, end'emionosol'ogy.** The science or the study of endemic diseases. [Lat., *endemiologia*, from Gr., *endemios*, endemic, + *logos*, understanding.]
- endematism** (en-der'mat-izm). Endermic medication.
- endermic** (en-der'mik). An obsolete method of applying drugs to the skin after the removal of the cuticle by blistering.
- endermol** (en-der'mol). A proprietary ointment base.
- endinion** (end-in'e-on). A point on the inner surface of the skull corresponding to theinion. [Gr., *endon*, within, + *inion*, theinion.]
- endo-** A prefix from the Gr., *endon*, meaning within.
- en'do-appendic'itis.** Inflammation of the lining membrane of the vermiform appendix.
- endobacillary** (en-do-bas'il-a-re). Contained within a bacillus.
- en'doblast.** See *entoblast.*
- endoblastomere** (en-do-blas'to-mër). A segment formed by the equatorial division of an ovum. [Gr., *endon*, within, + *blastos*, bud, + *meros*, a part.]
- endocardit'ic.** Pertaining to endocarditis.
- endocarditis** (en'do-kar-di'tis). Inflammation of the endocardium or internal lining of the heart. The valves on the left side of the heart are usually affected, and the lesion consists of a deposit of fibrin and leukocytes, leading later to

- fibrosis with deformity of the valves. This condition is caused by the pyogenic bacteria, such as *Streptococcus pyogenes*, *Staphylococcus aureus*, and *Diplococcus pneumoniae*. **chronic e.** See *e. chronica*. **e. acuta.** The inflammatory changes of the valves produced by the pyogenic bacteria. **e. chronica.** The fibrous thickening and deformity following acute endocarditis. **e. ulcerosa.** The ulcerate form of *e.*, in which there is a definite superficial loss of substance of the valves or the surrounding endocardium. **e. verrucosa.** A form of *e.* in which the fibrinopurulent deposit on the valves produces wartlike excrescences called vegetations. **malignant e.** *E.* with ulceration of valves and general infection. **mural e.** *E.* of the chambers of the heart as distinguished from *valvular e. ulcerative e.* See *e. ulcerosa*. **vegetative e.** Verrucose *e.* See *e. verrucosa*. [Gr., *endon*, within, + *kardia*, the heart, + *itis*, inflammation.]
- endocardium** (en-do-kar'de-um). The serous lining membrane of the heart. [Gr., *endon*, within, + *kardia*, heart.]
- endocervix** (en-do-ser'vix). The inner surface of the cervix uteri.
- endochondral** (en-do-kon'dral). Formed in a cartilaginous matrix. See *e. bones*, under *bone*. [Gr., *endon*, within, + *chondros*, cartilage.]
- endocomplement** (en-do-kom'ple-ment). A complement contained within the cells as distinguished from that in the serum.
- endocranitis** (en'do-kra-ni'tis). External pachymeningitis. [Gr., *endon*, within, + *kranion*, the cranium.]
- endocranium** (en-do-kra'ne-um). 1. The inner surface of the skull. 2. The cerebral dura. [Gr., *endon*, within, + *kranion*, skull.]
- endocrinology.** The study of the glands of internal secretion.
- endocrinopathy** (en'do-kri-nop'a-thy). A disease or disarrangement of one or more glands of the internal secretions.
- endocrinous gland** (en-dok'rin-us). See under *gland*. [Gr., *endon*, within, + *krinein*, to separate.]
- endocyme** (en'do-sim). A double monster in which one fetus is contained in the other. [Gr., *endon*, within, + *kyma*, a fetus.]
- endocyst** (en'do-sist). The thin, soft, granulated membrane lining the interior of a hydatid, from which the echinococcus head springs. [Gr., *endon*, within, + *kystis*, a bag.]
- endoderm** (en'do-derm). The hypoblast. [Gr., *endon*, within, + *derma*, skin.]
- Endodermophytan** (en'do-der-mo-fi'tan). A genus of the order *Ascomycetes*, which is characterized by growing between the superficial and deep layers of the epidermis. The organisms do not invade the hair follicles, nor produce suppuration, and have been cultivated. **E. castellani.** A species causing a tropical dermatomycosis called *tinea intersecta*. **E. concentricum.** A species causing *tinea imbricata* and found abundantly in the
- scales. **E. indicum.** A species found in some cases of *tinea imbricata*. [Gr., *endon*, within, + *phyton*, a plant.]
- endodiascopy** (en-do-di-a'sko-pe). X-ray examination of a body, organ or cavity.
- endodontitis** (en'do-don-ti'tis). Inflammation of the dental pulp.
- en'do-enteri'tis.** See *enteritis*.
- endogamy** (en-dog'am-e). Marriage within the family group. [Gr., *endon*, within, + *gamos*, marriage.]
- endogenous** (en-doj'en-us). 1. Spore formation within the bacterial cell. 2. Produced within another body cell or organism. [Gr., *endon*, within, + *gennan*, to produce.]
- endoglobular** (en-do-glob'u-lar). Situated within the blood corpuscles; said of malarial germs. [Gr., *endon*, within, + Lat., *globulus*, a globule.]
- endognathion** (end-og-na'the-on). The median portion of the superior maxilla when it remains ununited after birth, and supports a middle incisor tooth. See *exognathion* and *mesognathion*. [Gr., *endon*, within, + *gnathos*, jaw.]
- endolemma** (en-do-lem'mah). The neurilemma.
- endolymph** (en'do-limf). A pale, limpid fluid which entirely fills the membranous labyrinth of the ear. [Lat., *endolympha*, from Gr., *endon*, within, + Lat., *lymph*, water.]
- endolysin** (en-dol'is-in). A bactericidal substance which ferments within the leukocytes which dissolves and destroys bacteria. [Gr., *endon*, within, + *lysin*.]
- endometritis** (en'do-me-tri'tis). Inflammation of the internal portion or lining membrane of the uterus. Its varieties are: atrophic, decidual, exfoliative, fungous, glandular, gonorrhoeal, hyperplastic, interstitial, polypoid, pseudodiphtheritic, senile, septic, tuberculous. [Gr., *endon*, within, + *metra*, the uterus, + *itis*, inflammation.]
- endometrium** (en-do-me'tre-um). The mucous membrane lining the uterus. [Gr., *endon*, within, + *metra*, womb.]
- Endomyces** (en-dom'is-es). Syn. for genus *Monilia*. A genus of the family *Saccharomycetes* and the order *Ascomycetes* of the *Fungi*, being reproduced by external spores, ascospores, and spores within the mycelial tubes. [Gr., *endon*, within, + *mykes*, fungus.]
- endomyocarditis** (en'do-mi-o-kar-di'tis). Endocarditis complicated with myocarditis. [Gr., *endon*, within, + *mys*, a muscle, + *kardia*, heart.]
- endomysium** (en-do-mis'e-um). The connective tissue which binds the muscular fibers together. [Gr., *endon*, within, + *mys*, muscle.]
- endoneurium** (en-do-nu're-um). The delicate connective tissue support surrounding nerve fibers and the capillaries in a nerve funiculus. It is connected with the sheath of the funiculus (perineurium), and most of its fibers extend in a longitudinal direction. [Gr., *endon*, within, + *neuron*, a nerve.]
- endoparasite** (en-do-par'as-it). An inter-

- nal parasite; an organism living within its host. [Gr., *endon*, within, + *parasitos*, parasite.]
- endoparasitism** (en-do-par'as-it-izm). Parasitism within the interior of an organism.
- endopericarditis** (en''do-per-e-kar-di'tis). Endocarditis complicated with pericarditis. [Gr., *endon*, within, + *pericarditis*.]
- endophlebitis** (en''do-fle-bi'tis). Inflammation of the inner coat of a vein. **e. obliterans**. E. resulting in obliteration of the affected vein. **e. portalis**. See *pylephlebitis*. [Gr., *endon*, within, + *phleps*, (*phleb-*), a vein.]
- endophyte** (en'do-fit). A vegetable endoparasite. [Gr., *endon*, within, + *phyton*, a plant.]
- endoplasm** (en'do-plazm). The inner granular protoplasm of the protozoa or of other cells. [Gr., *endon*, within, + *plasma*, formed matter.]
- end organ**. The special structure in which nerve fibers terminate at the periphery. See *nerve endings*, under *separate head*. **tactile e. o.** See *end bulb*, under *separate head*.
- endosarc** (en'do-sark). See *entosarc*.
- endoscope** (en'do-skōp). An instrument for illumination and visual examination of an internal cavity of the body, especially the urethra and the bladder. The term is a generic one including urethroscope, cystoscope, proctoscope, laryngoscope, sigmoidoscope, and enteroscope. [Gr., *endon*, within, + *skopein*, to examine.]
- endoscopy** (en-dos'ko-pe). Inspection of a cavity of the body by means of an endoscope.
- endosmometer** (en-dos-mom'et-er). An instrument for measuring the rapidity of the osmotic passage of water through a membrane. [Gr., *endon*, within, + *metron*, a measure.]
- endosmosis** (en'dos-mōs). That form of osmosis in which the flow of water is from the outside liquid to the more concentrated solution within a membranous cell. [Gr., *endon*, within, + *osmos*, a thrusting.]
- endospore** (en'do-spōr). A spore developing within sporangia of higher fungi or protoplasm of bacteria. See *spore*. [Gr., *endon*, within, + *sporos*, seed.]
- endosporium** (en-do-spor'e-um). The inner layer of the envelope of a spore.
- endosteal** (en-dos'te-al). Of ossification, beginning within the substance of the primitive hyaline cartilage. [Gr., *endon*, within, + *osteon*, a bone.]
- endosteum** (en-dos'te-um). Internal periosteum lining medullary canal of a bone. [Gr., *endon*, within, + *osteon*, bone.]
- endostoma** (en-dos-to'mah). An osseous tumor within a bone. [Gr., *endon*, within, + *osteon*, a bone, + *oma*, tumor.]
- endothelial** (en-dō-thē'lē-āl). Pertaining to or consisting of endothelium.
- endotheliocytosis** (en-do-thē'le-o-si-to'sis). An abnormal increase in the number of endothelial cells.
- endotheliolysin** (en''do-the-le-ol'is-in). A cytolytic which dissolves endothelial cells, as that found in snake venom.
- endotheliolytic** (en''do-the-le-o-lit'ik). Capable of destroying endothelial cells.
- endothelioma** (en''do-the-le-o'mah). A malignant growth of the lining cells of the vessels. The **hemangio-e.** originates from a blood vessel and the **lymphangio-e.** from a lymph vessel. [Gr., *endon*, within, + *thele*, nipple.]
- endotheliotoxin** (en''do-the-le-o-tox'in). A specific toxin which acts on endothelial cells of capillaries and small veins producing hemorrhage.
- endothelium** (en-do-the'le-um). A single layer of flattened cells joined edge to edge to form a covering for the free surface of serous membranes, for the cavities of the heart and blood vessels, and, in general, for any free surface excluded from contact with air. **germinating e.** See *germinating endothelial cell*, under *cell*. **vascular e.** The e. lining the cavities of the heart and the blood and lymph vessels. [Gr., *endon*, within, + *thele*, nipple.]
- endotoxin** (en-do-tox'in). Intracellular protein toxins within such bacteria as the typhoid bacillus and the pyogenic bacteria. They are only liberated when the cell is dissolved and by entering the blood, they produce the various changes characteristic of the infection produced by the organism. [Gr., *endon*, within, + *toxin*.]
- end plate**. The termination of a motor nerve fiber in a striated muscular fiber. **motor e. p.** **motor nerve e. p.** The special expansion of a motor nerve fiber at its termination in a striated muscular fiber. **reticulated e. p.** A form of ending in which a nerve fiber terminates on a tendon or other structure by a fine network of primitive fibrillae. **secretory e. p.** The terminal part of a nerve ending in a gland. **sensory e. p's.** Somewhat peculiar platelike terminations of nerves in muscle, the nerves being supposed by some to be sensory. They are thought to be motor nerve endings by most authors.
- enema** (en'em-ah), pl. *enemata*. Syn.: *clyster*. A liquid preparation to be injected into the rectum. **e. alimentarium**. See *nutrient e. e. medicatum*. A medicated *e. e. nutrienis*, *nutrient e.*, *nutritious e.*, *nutritive e.* An e. composed of alimentary material, such as eggs, milk, blood, beef juice, etc. [Gr., *enema*.]
- enepidermic** (en-ep-e-der'mik). Relating to remedies brought into contact with the skin without friction. See *inunction*.
- energin** (en'er-jin). A certain nutrient made from rice.
- energy** (en'er-je). The capacity for performing work. In physics, the various forms of activity exhibited by matter. **actual e.** See *kinetic e. conservation of e.* The doctrine according to which energy is indestructible, although capable of transformation from one form to another. **dynamic e.**, **e. of movement**. See *kinetic e. e. of position*. See *po-*

tential e. **kinetic e.** E. manifested in the performance of work and the production of motion or of energy in action. **latent e., potential e., static e.** E. that is not actually employed in the accomplishment of work. [Gr., *energein*, to execute.]

enervation (en-er-va'shun). 1. The production of weakness or languor, especially of nervous action. 2. The state of being weakened in nervous activity. [Lat., *ex*, out, + *nervus*, a nerve.]

enesol (en'es-ol). A synonym for mercury salicylarsenate.

engagement. In obstetrics the entrance of the presenting part into the superior strait of the pelvis. **extramedian e.** In cases where the promontory of the sacrum projects so far forward that the superior strait resembles the figure 8, only one-half of the pelvis is available for the passage of the fetus and when the presenting part has entered one part the engagement is said to be extramedian.

engine (en'jen). See *dental engine*.

engorgement (en-görj'ment). Overdistention, as with blood.

entameba (ent-am-e'bah). Syn.: *ameba merozoitè*. The spore liberated in the blood when the segmentation of the malarial parasite is disrupted. [Gr., *en*, in, + *aima*, blood, + *sporos*, spore.]

enlargement (en-larj'ment). 1. The process of becoming or the state of being larger. 2. A portion of a structure that is larger than the rest. **brachial e., cervical e.** An e. of the spinal cord extending from the third cervical to the first dorsal vertebra, its greatest diameter being transverse. From this region of the cord arise the cervical and brachial nerves. **crural e.** See *lumbar e.* **gangliform e.** The intumescentia gangliformis. **lumbar e.** An e. of the spinal cord which begins at the tenth dorsal vertebra, becomes largest at the twelfth, and then gradually diminishes. From it arise the nerves which supply the lower limbs. [Old Fr., *enlarger*, to increase.]

enophthalmia (en-of-thal'me-ah). Retraction of the globe of the eye. [Gr., *en*, in, + *ophthalmos*, the eye.]

enomania (en-o-so-ma'ne-ah). A psychotic symptom in which the subject believes that he has committed unpardonable sins. [Gr., *enosis*, agitation, + *mania*, madness.]

enostosis (en-os-to'sis). An abnormal bony tumor which has developed into the interior of a bone. [Gr., *en*, in, + *osteon*, bone.]

ensiform (en'se-form). Sword-shaped. [Lat., *ensis*, sword, + *forma*, form.]

entrophe (en'stro-fe). A turning inward, especially of the eyelids. [Gr., *enstrephain*, to turn in.]

entacoustic (ent-ak-oo'stik or ent-ak-ow'stik). Of auditory sensations, subjective and originating within or near the ear. [Gr., *entos*, within, + *akouein*, to hear.]

entad (en'tad). Towards the inside.

entameba (ent-am-e'bah). Syn.: *ameba*. A unicellular animal parasite belonging

to the subkingdom *Protozoa*, the class *Rhizopoda*, the order *Amoebida*, the phylum *Sarcodina*, the section *Gymnoamoebida*, and the genus *Entamoeba*. Four distinct species are found in human beings, namely, *E. buccalis*, *E. coli*, *E. histolytica*, and *E. tetragena*. See table of *Entamoeba*.

entamebiasis (ent-am-e-bi-a'sis). Infestation with entamebae.

entasis (en'ta-sis). An old term for constrictive spasm; spasmodic muscular action. [Gr., *enteinein*, to strain.]

enteral. Pertaining to the intestine as distinguished from parenteral. **e. digestion.** D. within the intestine.

enteralgia (en-ter-al'je-ah). Intestinal pain. [Gr., *enteron*, the intestine, + *algos*, pain.]

enterangiemphraxis (en-ter-an-je-em-fraks'is). Obstruction of the intestinal blood vessels. [Gr., *enteron*, the intestine, + *ageion*, a vessel, + *emphraxis*, obstruction.]

enterectasis (en-ter-ek'tas-is). Dilatation of the small intestine. [Gr., *enteron*, the intestine, + *ektasis*, dilation.]

enterectomy (en-ter-ek'to-me). The resection of a portion of intestine. [Gr., *enteron*, the intestine, + *ektennein*, to cut out.]

enter'ic. Intestinal. [Gr., *enterikos*.]

enter'ica. An order in Good's nosology, comprising diseases of the alimentary canal.

enteritis (en-ter-i'tis). Inflammation of the intestine, especially of its mucous coat. **catarrhal e.** Intestinal catarrh; ordinary e. affecting only the superficial portion of the intestinal mucous membrane, giving rise to mucous diarrhea. **croupous e.** See *membranous e.* **diphtheritic e.** A form of e. occurring in infectious and chronic diseases, in which the mucous membrane is covered with an adherent, filmy or flaky, whitish gray deposit. **e. catarrhalis.** See *catarrhal e.* **e. colica.** See *colitis*. **e. iliaca.** E. limited to the small intestine. **follicular e.** Typhoid fever. **membranous e.** Syn.: *pellicular intestinal inflammation*. A form of e. in which membranefike exudates form on the mucous surface. **mucous e.** See *catarrhal e.* **pellicular e.** Mucous enteritis. **phlegmonous e.** A rare form, affecting chiefly the duodenum, characterized by a tendency to suppuration in the submucous connective tissue. [Gr., *enteron*, the intestine, + *itis*, inflammation.]

entero-. A prefix from Gr., *enteron*, intestine; used in compound words and denoting some relation to the intestine.

enterocele (en'ter-o-sel). A hernia containing intestine. [Gr., *enterokele*, from *enteron*, intestine, + *kele*, tumor.]

enterocleisis (en-ter-o-kl'i'sis). 1. Closing wounds of intestine. 2. Intestinal closure. [Gr., *enteron*, intestine, + *kleisis*, closure.]

enteroclysis (en-ter-ok'li-sis). Introduction of fluid into the intestine for nutrient or therapeutic purposes. [Gr., *enteron*, bowel, + *klysis*, injection.]

TABLE GIVING CHIEF DIFFERENCES CITED BETWEEN MEMBERS OF THE GENUS ENTAMEBA PARASITIC IN MAN

NAME OF SPECIES AND DATE DESCRIBED	SIZE OF AMEBOID FORMS AT REST	PSEUDOPODS AND MOTILITY	CYTOPLASM	NUCLEUS	CYSTS	PROPAGATION	CULTURES	EFFECT ON HOST	OTHER POINTS
<i>Ent. buccalis</i> .	6-32 μ	1 to several, not described. Motion moderate.	Distinct ento- and ectoplasm. Former filled with food vacuoles and some greenish granules. No contractile vacuole.	Small amount of chromatin in center and about periphery. In life shows thick glistering membrane.	Contain many nuclei (not further described).	1. Simple amitotic division. 2. Formation of chromatidia and many daughter nuclei after encysting.	Not made.	None so far as known, though forms described in abscess of jaw may be pathogenic varieties of this species.	
<i>Ent. coli</i> Loesch. Described as species distinct from pathogenic form by Schaudinn in 1903.	8-50 μ majority 10-20 μ	Rounded and small. Motion sluggish.	Ectoplasm not distinct unless in motion, then thin pale gray and only slightly refractive. Entoplasm finely granular with few vacuoles which are never contractile. Red blood cells none or few.	Distinct because of large karyosome, large amount of distributed chromatin and definite membrane.	Contain eight nuclei which show distinctly through the more or less irregularly thickened wall.	1. Simple binary fission (mitotic). 2. Autogamous sexual reproduction within cyst.	Claimed by others.	Non-pathogenic.	Craig differentiates ameboid form by Oliver's modification of Wright's stain: ectoplasm is light blue, entoplasm dark blue, nucleus crimson.
<i>Ent. histolytica</i> , Schaudinn. 1903.	20-70 μ majority 25-35 μ .	Long finger-shaped forms. Highly retractile. Motive lively.	Ecto- and entoplasm distinct. Former homogeneous. Latter granular, and generally contain many vacuoles and red blood cells.	Faint because of small karyosome, small amount of distributed chromatin and delicate membrane.	Tiny with thick wall through which stains do not penetrate, hence structure not known.	1. Simple binary fission (mitotic). 2. Chromidia formation with cysts produced by budding.	Claimed by some, denied by others.	Pathogenic for man, dogs, and cats.	With above stain ectoplasm dark blue or violet, entoplasm light blue, nucleus delicate pink or red.
<i>Ent. tetrasena</i> Viereck. 1907.	Same as <i>Ent. histolytica</i> .	Similar to <i>Ent. histolytica</i> .	Similar to <i>histolytica</i> .	Distinct karyosome surrounded by clear space and thin ring of chromatin.	Four nuclei. Cyst wall similar to that of <i>Ent. coli</i> .	1. Primitive mitosis. 2. Autogamous sexual reproduction within cyst.	Negative results reported.	Pathogenic for man and cats.	

enterocolitis. See *inflammatory diarrhea*, under *diarrhea*.

entero-epiplocele (en'ter-o-e-pip'lo sēl).

Hernia of the small intestine and omentum. [Gr., *enteron*, intestine, + *epiploon*, omentum, + *kele*, tumor.]

enterogastritis (en'ter-o-gas-tri'tis).

An inflammation of the stomach and intestines. [Gr., *enteron*, intestine, + *gaster*, stomach, + *itis*, inflammation.]

enterokinase (en'ter-o-kin'ās). An intestinal enzyme which, converting trypsinogen into trypsin, activates pancreatic proteolytic enzymes.

enterol (en'ter-ol). A preparation of cresols, used as an intestinal antiseptic.

enterolite, enterolith (en'ter-o-lit, en'ter-o-lith). An intestinal concretion or calculus. [Gr., *enteron*, intestine, + *lithos*, a stone.]

en'terolithi'asis. The formation or the existence of intestinal concretions.

enteromyiasis (en'ter-o-me-i'as-is). Presence of flies in the intestine. [Gr., *enteron*, bowel, + *myia*, fly.]

enteron (en'ter-on). The intestine. [Gr.]

en'teroparal'ysis. Intestinal paralysis.

enteropathy (en-ter-op'ath-e). Any intestinal disease. [Gr., *enteron*, the intestine, + *pathos*, disease.]

en'teroperitoni'tis. Inflammation of the peritoneal coat of the intestine. [Gr., *enteron*, the intestine, + *peritonaion*, the peritoneum, + *itis*, inflammation.]

enteropexy (en'ter-o-pecks-e). The operation of stitching an intestine to the abdominal wall to hold it in place. [Gr., *enteron*, intestine, + *pexis*, a pulling together.]

en'terophthi'sis. Intestinal phthisis.

enteroplasty (en'ter-o-plas-te). The plastic surgery of the intestines. [Gr., *enteron*, intestine, + *plassein*, to mould.]

enteroptosis (en'ter-op-to'sis). Prolapse of the intestines, observed in Glénard's disease. Used as the general term to denote prolapse of the abdominal organs. See *splanchnoptosis*. [Gr., *enteron*, intestine, + *ptosis*, a fall.]

enterorrhagia (en-ter-or-a'je-ah). Hemorrhage from the intestine.

enterorrhaphy (en-ter-or'raf-e). The operation of stitching together the lips of an intestinal wound or of stitching an intestine to some other structure. [Gr., *enteron*, intestine, + *raphē*, a suture.]

enterorrhexis (en-ter-or-rek'sis). Rupture of the intestine.

enteroscope (en'ter-o-skōp). An instrument for viewing the inside of the intestine, such as the sigmoidoscope. [Gr., *enteron*, intestine, + *skopein*, to view.]

enterosepsis (en-ter-o-sep'sis). 1. Putrefaction of the intestinal contents. 2. Intestinal toxemia. [Gr., *enteron*, intestine, + *sepsis*, putrefaction.]

enterostenosis (en'ter-o-sten-o'sis). Intestinal narrowing, or stricture. [Gr., *enteron*, intestine, + *stenosis*, constriction.]

enterostomy (en-ter-os'to-me). The operation of making a permanent opening into the small intestine, through the abdominal wall, for the purpose of insert-

ing food. [Gr., *enteron*, intestine, + *stoma*, an aperture.]

enteroteratoma (en'ter-o-ter-at-o'mah).

A tumor of the umbilicus formed from the remains of the omphalic duct. [Gr., *enteron*, intestine, + *teratoma*.]

enterotome (en'ter-o-tōm). A knife or scissors for slitting the intestine. [Gr., *enteron*, intestine, + *temnein*, to cut.]

enterotomy (en-ter-o'tōm-e). The operation of making an opening into the intestine. [Gr., *enteron*, intestine, + *temnein*, to cut.]

en'teroty'phus. Typhus fever.

enterozoön (en-ter-o-zō'on). An intestinal enterozoön or intestinal animal parasite. [Gr., *enteron*, the intestine, + *zoön*, an animal.]

enthelmintha (en-thel-min'thah). Pl. *enthelminthes*. Intestinal worms. [Gr., *entos*, within, + *elminis*, a worm.]

ento-. A prefix representing the Gr., *entos*, within, inside.

entoblast (en'to-blast). The rudimentary hypoblast. [Gr., *entos*, within, + *blastos*, sprout.]

entoderm (en'to-derm). The hypoblast. [Gr., *entos*, within, + *derma*, a skin.]

entomere (en'to-mēr). One of the cells resulting from germ segmentation that are destined to enter into the formation of the hypoblast. [Gr., *entos*, within, + *meros*, a part.]

ento'nia. Rigidity of the voluntary muscles; in Young's classification of diseases, belonging to the *paraneurismi*. [Gr., *enteinein*, to strain tight.]

entoparasite. See *endoparasite*.

entophthalmia (en-tof-thal'me-ah). Inflammation of internal eye parts.

entophyte, entophyton (en'to-fit, en-tof'-it-on). An internal vegetable parasite. [Gr., *entos*, within, + *phyton*, a plant.]

entoplastic (en-to-plas'tik). 1. Forming tissue by metamorphosis of their protoplasm within themselves (said of cells). 2. Resulting from such a process.

entoptical (en-top'ti-kal). Relating to visual sensations aroused by some object or stimulus within the eye itself. [Gr., *entos*, within, + *optikos*, optic.]

entop'tics. Pertaining to visual phenomena caused by the shadows of substances within the media of the eye.

entoptoskopy (en-top-tos'ko-pe). 1. The observation of intra-ocular shadows and objects. 2. The perception of circumscribed shadows of opaque particles in the dioptric media of one's own eye or of the blood vessels of one's own retina. [Gr., *entos*, within, + *ops*, the eye, + *skopein*, to view.]

entosarc (en'to-sark). The inner fluid portion of amebae. [Gr., *entos*, within, + *sarx*, (*sarc-*), flesh.]

entotic (en-to'tik). Pertaining to the interior of the ear or to the perception of sound due to some condition of the auditory apparatus, and not to any cause external to the ear. [Gr., *entos*, within, + *ous*, (*ot-*), the ear.]

entozoögenesis (en'to-zo-o-jen'es-is). The generation of entozoa. [Gr., *entos*, with-

- in, + *zoon*, an animal, + *genman*, to produce.]
- entozoölogy** (en'to-zo-ol'o-je). The natural history of entozoa. [Gr., *entos*, within, + *zoon*, an animal, + *logos*, understanding.]
- entropion, entropium** (en-tro'pe-on, en-tro'pe-um). An inversion or turning in; usually applied to the ciliary margin of the eyelid. **e. cicatriciale**. E. resulting from cicatricial contraction. **e. senile**. E. due to shrinking of the globe of the eye in old age. [Gr., *entrepein*, to turn inward.]
- entropy** (en'tro-pe). The tendency to the dissipation or degeneration of the higher forms of energy to heat.
- enucleation** (e-nu-kle-a'shun). The extraction of a tumor from its capsule or shell. The action of unfolding or explaining. [Lat., *enucleare*, to remove the kernel of.]
- En'ula**. 1. The genus *Inula*. 2. See *Inula helenium*.
- enule** (en'yul). A brand name used for a line of pharmaceutical preparations.
- enuresis** (en-u-re'sis). Involuntary micturition, especially of children. [Gr., *enourain*, to make water in.]
- envelope** (en'vel-öp). An investing membrane, sheet, or layer. **fetal e's**. Syn.: *fetal membranes*. The membranes that envelop the fetus; the chorion and the amnion. **medullary e.** The medullary sheath of a nerve fiber. **nuclear e.** See *nuclear membrane*. [Fr., *enveloppe*, wrapper, cover.]
- environment** (en-vi'ron-ment). External circumstances, influences, or surroundings.
- enzoötic** (en-zo-ot'ik). Prevailing among the lower animals of a certain district.
- enzyme** (en'zim). Syn.: *ferment*. Unorganized active principles found in plants and animals, which bring about chemical changes without themselves being altered or entering into the chemical interchange. Their action seems to be very specific. Thus *zymase*, the fermentation enzyme of yeast cells, will cause a fermentation of *d.-glucose*, but not of the antipode *l.-glucose*. The e's perform not only decomposition of chemical compounds, but also synthesize new ones from simple substances. **amylolytic e.** One which converts starch into sugar, as *ptyalin*. **autolytic e.** An e. producing autolysis or digestion of a cell in which it exists. **bacterial e.** An e. produced by bacteria. **coagulating e's**, **fermentation e's**, **oxidizing e's**. E's which cause a change by the addition of oxygen. To the hydrolyzing e's belong the *esterases*, the *carbohydases*, the *proteases*, the *nucleases*, and the *desamidases*. *Zymase* is the best known fermentation e. Rennin and thrombin are coagulating e's. Urease, xantho-oxydase, aldehydase, and tyrosinase are the best known of the oxidizing e's. **hydrolytic e's**, which cause a decomposition by the addition of the elements of water. **polypeptolytic e's**. E's which have the property of hydrolyzing the polypeptids. They are found widely distributed in plant and animal life. [Gr., *en*, within, + *zyme*, leaven.]
- enzymol** (en'zi-mol). A glycerin-aqueous acid extract of mucous membrane of animal stomach with a trace of added thymol. Used to digest necrotic tissue.
- eon** (e'on). 1. A life-time; one's time of life. 2. The spinal cord.
- eosin** (e'o-sin). Tetrabromfluorescin, $C_{20}H_6Br_4O_5$, a 4-atom bromin substitution product of fluorescin. Used as a staining agent for tissues in histological and pathological studies by means of the microscope. [Gr., *eos*, the dawn.]
- eosinophil** (e-o-sin'o-fil). A cell easily colored by eosin, as a variety of the leukocyte having large eosin-staining granules. See also in *appendix*, page 913. [*Eosin*, + Gr., *philein*, to love.]
- eosinophilia** (e'o-sin-o-fil'e-ah). 1. Presence of an unusual number of eosinophilic cells in the blood. 2. Condition of being eosinophilic. [*Eosin*, + Gr., *philein*, to love.]
- eosinophilic, eosinophilous** (e'o-sin-o-fil'ik, e'o-sin-o-fil'us). Easily staining with eosin as an eosinophilic leukocyte.
- eosote** (e'o-söt). Creosote valerianate, an antiseptic liquid.
- epencephalon** (ep-en-sef'al-on). Those parts of the embryonic brain which develop the pons and cerebellum. [Gr., *epi*, upon, + *egkephalos*, brain.]
- ependyma** (ep-en'dim-ah). Syn.: *hind-brain*. The lining membrane of the cerebral ventricles and of the central canal of the spinal cord. It consists of a single superficial layer of pyramidal, often ciliated cells, underlaid by a layer of neuroglia. **e. medullae spinalis**. The spinal portion of the e. **e. ventriculorum cerebri**. The ventricular portion of the e. [Gr., *ependyma*, outer garment, from *epi*, on, + *en*, in, + *dyein*, to don.]
- ependymitis** (ep'en-dim-i'tis). Inflammation of the ependyma.
- ephebic** (ef-eb'ik). Concerning youth or the period of adolescence. [Gr., *ephebikos*.]
- Ephedra** (ef'ed-rah). A genus of gnetaeous plants. **E. antisiphilitica**, **E. vulgaris**, and others are used in syphilis, rheumatism and diseases of the bladder.
- ephedrin** (ef'ed-rin). An amorphous substance obtained by the decomposition of the glucosid contained in *Ephedra antisiphilitica*.
- epheleis** (ef-e'lis). Pl. *epheleides*. A freckle. A brownish red spot without elevation, somewhat irregular in shape, and from the size of a pinhead to a tackhead, occasionally larger, which occur on exposed portions of body. Lentigo is scientific name for them. [Gr., *epheleis*, *epelis*, freckle.]
- ephemeral** (ef-em'er-al). Beginning and ending in a day. [Gr., *ephemerous*, lasting only a day.]
- epidrosis** (ef-id-ro'sis). Excessive sweating independent of the usual physiological causes. Another name for hyperidrosis.
- e. saccharata**. A form of paridrosis said to occur in diabetes mellitus, in which sugar is present in the sweat. **e. tincta**.

- See *chromidrosis*. [Gr., *ephidrosis*, from *ephidroun*, to sweat.]
- epi-, ep-**. A prefix from the Gr., *epi*, upon, at, in addition.
- epiblast** (ep'e-blast). The outer, neuro-epidermal, or corneous layer of the blastoderm. **neural e.** That part of the e. that gives rise to the nervous system. [Gr., *epi*, on, + *blastos*, sprout.]
- epiblepharon** (ep-e-blef'er-on). See *epicanthis*. [Gr., *epi*, upon, + *blephron*, the eyelid.]
- epicanthis, epicanthus** (ep-e-kan'this, ep-e-kan'thus). A rare deformity, usually congenital and bilateral, in which a fold of loose skin stretches across from the inner end of the brow to the bridge or side of the nose and hides the inner canthus. [Gr., *epi*, upon, + *kanthos*, the canthus.]
- epicardium** (ep-i-kar'de-um). The visceral layer of the pericardium. [Gr., *epi*, upon, + *kardia*, the heart.]
- epicarin** (ep-ik'ar-in). A condensation product, oxynaphthylortho-oxytoluic acid, $C_{18}H_{14}O_4$, a non-toxic antiseptic and parasiticide. Used externally in the form of an ointment.
- epicomus** (ep-ik'o-mus). A monster having two heads, one of which is incompletely developed and inserted at the top of the other head. [Gr., *epi*, upon, + *kome*, the hair of the head.]
- epicondylalgia** (ep''ek-on-dil-al'je-ah). A painful affection seated mainly in the region of the epicondyle; attributed to tenositis.
- epicondyle** (ep-e-kon'dil). The ridge of bone, above a condyle. [Gr., *epi*, upon, + *kondylos*, knuckle.]
- epicranium** (ep-e-kra'ne-um). The soft parts covering the cranium. [Gr., *epi*, upon, + *kranion*, skull.]
- epicranius** (ep-i-cra'ne-us). See *table of muscles*, under *muscle*.
- epicrisis** (ep-ik'ris-is). A secondary critical occurrence. [Gr., *epi*, in addition, + *krisis*, a crisis.]
- epicritic** (ep-ik-rit'ik). Term applied to sensations of pressure and tactile discrimination on the skin, and of small temperature changes. [Gr., *epikrisis*, determination.]
- epidemia, epidemia** (ep-id-em'e-es, ep-id-e-me-ah). The prevalence of an epidemic disease; also the disease itself. [Gr., *epidemein*, to prevail epidemically.]
- epidemic** (ep-id-em'ik). 1. Affecting a great many individuals in rapid succession. 2. A particular instance of the prevalence of such a disease. The disease itself. **e. disease.** Same as *e.*, 3d def. [Gr., *epi*, upon, + *demos*, people.]
- epidemicity** (ep''id-em-is'it-e). The character of being epidemic.
- epidemiography, epidemiology** (ep-id-em-i-og'raf-e, ep-id-em-i-ol'o-je). The study of epidemic diseases. [Gr., *epidemia*, an epidemic, + *graphein*, to record, + *logos*, understanding.]
- epidemiologist.** One who makes a specialty of epidemic diseases.
- epidermata** (ep-e-der'mat-ah). Pl. Abnormal growths of the epidermis.
- Epidermidophyton, Epidermophyton** (ep''id-er-mid-of'it-on, ep''id-er-mof'it-on). A genus of the order *Ascomycetes* of the fungi which grows superficially on the human skin without invading the hair follicles or producing suppuration. **E. cruris.** A species producing *tinea cruris*, or chobie itch. **E. perneti.** A species also found in *tinea cruris*. **E. rubrum.** A species found in *tinea cruris*, which grows on culture media with a red color. [Gr., *epidermis*, epidermis, + *phyton*, a plant.]
- epidermin** (ep-e-der'min). An application for skin diseases composed of glycerin and water, calcium or lead oxid, and beeswax.
- epidermis** (ep-e-der'mis). Syn.: *cuticulis externa*. 1. The epiderm, cuticle, or scarfskin; the epithelial or cellular covering of the corium. Its deep or ental surface is accurately molded upon the corium, while the ectal surface forms the outside of the body. It is composed of several layers of cells differing in character in different layers (see *stratum corneum*, *stratum lucidum*, and *rete mucosum*). [Gr., *epi*, upon, + *derma*, skin.]
- epidermoid** (ep-e-der'moyd). Pertaining to, or resembling, the epidermis; epidermic. [Gr., *epidermis*, the epidermis, + *oidos*, resemblance.]
- ep''idermol'ysis bullo'sa.** An hereditary condition of the skin in which bullae form after the slightest trauma. [Gr., *epidermis*, the epidermis, + *lysis*, a loosening, + Lat., *bulla*, a bubble.]
- epidiascope** (ep-e-di'as-köp). A lantern reflecting the image of opaque objects. [Gr., *epi*, upon, + *dia*, through, + *skopein*, to view.]
- epididymis** (ep-id-id'im-is). A long, narrow body attached to the posterior border of the testicle. Its upper and larger extremity is termed the globus major, its lower the globus minor, and the intervening portion the body. It consists principally of the canal of the e., into which the coni vasculosi empty at the upper end, and which, after being greatly convoluted, is continuous below with the vas deferens. [Gr., *epi*, upon, + *didymos*, testicle.]
- epididymitis.** Inflammation of the epididymis. [Gr., *epididymis*, the epididymis, + *itis*, inflammation.]
- epidrome** (ep-i-dröm). Congestion resulting from constriction. [Gr., *epidrome*, a running upon.]
- Epigaea** (ep-e-je'ah). A genus of ericaceous plants. **E. repens.** Mayflower, trailing arbutus; the leaves are used in much the same way as *uva ursi*, in diseases of the urinary organs. [Gr., *epi*, upon, + *gaia*, the earth.]
- epigaster** (ep-e-gas'ter). The after-gut; the embryonic precursor of the colon. [Gr., *epi*, upon, + *gaster*, belly.]
- epigastralgia** (ep''e-gas-tral'je-ah). Pain in the epigastrum. [Gr., *epigastrion*, the epigastrum, + *algos*, pain.]
- epigastric** (ep-e-gas'trik). Pertaining to the epigastrum. [Gr., *epi*, upon, + *gaster*, stomach.]

epigastrium (ep-e-gas'tre-um). Lit., that which lies upon or over the stomach; the superior central region of the abdomen, containing the middle and pyloric end of the stomach, the left lobe of the liver and the lobus Spigelii, the hepatic vessels, the celiac axis, the semilunar ganglia, the pancreas, and parts of the aorta, vena cava, vena azygos, and thoracic duct. [Gr., *epi*, upon, + *gaster*, stomach.]

epigenesis (ep-e-jen'es-is). The doctrine that the embryo is not reformed in the ovum, but arises gradually by the successive changes of the biophoric substance, which in its growth and distribution to the various cells, is modified by various influences, thus causing the cells governed by it to assume diverse functions and structure.

epiglottis (ep-e-glot'tis). A thin leaf-shaped lamella of yellow fibrocartilage placed behind the tongue and in front of the superior opening of the larynx, which it closes during deglutition. [Gr., *epi*, upon, + *glottis*, glottis.]

epiglottitis, epiglottiditis (ep'e-glot-ti'tis, ep'e-glot-tid'i'tis). Inflammation of the epiglottis.

epigonal (ep-ig'on-al). Situated on the embryonic germ gland. [Gr., *epi*, upon, + *gone*, seed.]

epiguanin (ep-e-gwan'in). One of the alloxuric bases, $C_{10}H_{22}N_2O_2$.

epilation (ep-il-a'shun). The act of plucking out hairs by the roots. [Lat., *epilatio*, from *e*, priv., + *pilus*, a hair.]

epilatory. See *depilatory*.

epilepsia. See *epilepsy*. **e. gravior**. The severe form of epilepsy as opposed to *e. minor*, or the mild form. The paroxysm consists of four stages: loss of consciousness, clonic spasms, return to consciousness, lassitude and stupor.

epilepsy (ep'il-ep-se). The falling sickness; a series of diseased conditions characterized by paroxysms of general tonic and clonic convulsions accompanied by loss of consciousness (*grand mal*); or by attacks in which there is more or less impairment of consciousness, but usually no apparent spasm (*petit mal*); or by seizures varying more or less from these types. In severe and long-continued cases, mental deterioration usually appears. The fits or paroxysms are often called forth by stimuli in distant organs. **acute e.** See *eclampsia*. **central e.** E. due to disease of the brain or the spinal cord. **congestive e.** E. dependent upon hyperemia. **cortical e.** Syn.: *hemiplegic e.*, *partial e.*, *focal e.*, *jacksonian e.*, *hemispasm*. A condition, due to some lesion of the cerebral cortex (generally a central convolution), in which the convulsive movements affect at first only a portion of the muscles (usually those of an upper limb), but may eventually become general. **experimental e.** E. artificially induced for experimental purposes. **feigned e.** The performance by which an impostor seeks to give the impression that he is a sufferer from e.; usually an

imitation of the paroxysm of *epilepsia gravior*. It may be detected by exposing the eye to a strong light, when the pupil will contract, whereas in genuine e. it remains dilated. **focal e.** See *cortical e.* **gastric e.** E. due to gastric irritation. **gastro-intestinal e.** Epileptoid convulsions of gastro-intestinal origin. **hemiplegic e.** See *cortical e.* **hysterical e.** See *hystero-epilepsy*. **idiopathic e.** E. occurring without a definitely known cause. **jacksonian e.** Cortical e.; called jacksonian because its pathology was established by Hughlings Jackson. Here the attack begins by distinctly localized spasms, frequently confined to a single group of muscles. **maniacal e., **masked e.** An abortive or irregular form of e., in which there may be no convulsions, but intellectual derangement or other irregular phenomenon. **menstrual e.** E. in which the seizures are associated with menstruation. **nocturnal e.** E. in which the seizures occur mostly at night. **partial e.** See *cortical e.* **reflex e.** E. in which the convulsions are due to reflex irritation. **retinal e.** See *epileptoid amaurosis*, under *amaurosis*. **saturnine e.** A condition in which, as the result of chronic lead poisoning, epileptoid convulsions occur very suddenly, without an aura, and are followed by coma. **senile e.** E. occurring in advanced life; usually due to cerebral endarteritis. **sensory e.** A form of e. originating in the sensory areas of the brain and associated with amaurosis, hemianesthesia, and certain vague movements of the tongue, face, or limbs, but not always with convulsions. **spinal e.** Spastic paraplegia with tonic and then clonic spasms, due to lateral sclerosis of the spinal cord. **syphilitic e.** E. due to syphilis. The irritative lesion is most frequently a meningo-encephalitis, and the convulsions are monospasmodic. **thalamic e.** Of W. A. Hammond, a form of e. characterized by hallucinations, depending on a lesion of the optic thalamus. **traumatic e.** E. resulting from traumatism, especially of the vertex of the skull. [Gr., *epilambanein*, to seize.]**

epilep'tic. Pertaining to, affected with, or of the nature of epilepsy; as a person affected with it.

epileptiform (ep-il-ep'ti-form). See *epileptoid*. [Gr., *epileptos*, epileptic, + Lat., *forma*.]

epileptogenic, epileptogenous (ep'e-lep-to-jen'ik, ep'e-lep-toj'en-us). Giving rise to epileptoid convulsions when irritated. **e. zone**. See under *zone*. [Gr., *epileptos*, epileptic, + *gennan*, to engender.]

epileptoid (ep-il-ep'toyd). Resembling epilepsy or an epileptic convulsion. As a n., a person of a class who suffer from megrim, vertigo, dyspepsia, syncope, hallucinations, and all kinds of abnormal sensations. These symptoms come on periodically and paroxysmally, and occur in persons who have an hereditary neuro.

pathic disposition. [Gr., *epileptos*, epileptic, + *eidōs*, resemblance.]

Epilobium (ep-e-lo'be-um). The willow herb. **E. angusti folium**, **E. antonianum**. The rose willow or bay. The leaves and the root are said to be demulcent, tonic, and astringent, and are employed by the eclectics.

epimere, **epimerite** (ep'e-mēr, ep-im-e'rit). In embryology, the dorsal part of a metamer giving rise to a myotome. [Gr., *epi*, upon, + *meros*, limb.]

epimerite (ep-e-mer'it). An organ belonging to certain gregarine protozoa by which they attach themselves to epithelial cells. [Gr., *epi*, upon, + *meros*, a part.]

epimorphosis (ep-e-mor-fo'sis). That variety of regeneration of a new part in which the proliferation of new material precedes the development of the new part. [Gr., *epi*, upon, + *morphōōn*, to form.]

epimysium (ep-e-me'se-um). See *sarcolemma*.

epinephrin (ep-e-nef'rin). A name given by J. J. Abel to the feebly basic substance obtained from the suprarenal gland of the sheep or other animal. It stimulates the sympathetic myoneural junctions with vasoconstriction, cardiac stimulation, etc. E. is not effective when given by the mouth, and much less active by subcutaneous than by intravenous injection. It is commonly sold in solution containing one-tenth of one per cent. of the base under a great variety of trade names: Adrenalin, adrin, adnephtrin, suprarenal (or adrenal) alkaloid, suprarenalin, suprapsulin, paranephtrin, etc. E. is also prepared synthetically. See *glandulae suprarenales siccae*, under *glandula*.

epineural (ep-e-nu'ral). Upon a neural arch.

epineurium (ep-e-nu're-um). Syn.: *cellular sheath*. Of Key and Retzius, the general connective tissue sheath of a nerve, exclusive of the perineurium and endoneurium. [Gr., *epi*, upon, + *neurōn*, a nerve.]

epinin (ep'in-in). A base, dihydroxyphenylethylmethylamin, said to be derived from laudanin. It is used in one per cent. solution for the same purposes as epinephrin.

epiosin (ep-e'o-sin). A hypnotic derived from morphigenin.

epiperipheral (ep-e-per-if'er-al). At the periphery, exterior; said of anything, especially a sensation, caused by a stimulus acting on the periphery or exterior of the body. [Gr., *epi*, upon, + *periphēreia*, a periphery.]

Epiphegus (ep-if-e'gus). A genus of orbanchaceous herbs. **E. americana**, **E. virginiana**. Beech drops; parasitic on the roots of *Fagus ferruginea* and *Taxus canadensis*. It has been used in diarrhea. [Gr., *epi*, upon, + *phēgos*, the beech tree.]

epiphomenon (ep-e-phe-nom'en-on). An exceptional and superadded phenomenon; one that is not a necessary part of a train of phenomena. [Gr., *epiphainein*, to show forth.]

epiphora (e-pif'o-rah). Syn.: *delacriation*. The watery eye; a more or less constant overflow of tears upon the cheeks, due to eversion, tumefaction, or narrowing of the puncta lacrimalia, or to stoppage of the nasal duct. [Gr., *epiphora*, downflow.]

epiphyseal (ep-if-iz'e-al). Pertaining to, or of the nature of, an epiphysis.

epiphysis (ep-if'is-is). A portion of a long bone formed at either extremity from a secondary or tertiary center of ossification and united to the shaft during early life by an intervening layer of cartilage which in time ossifies. **e. cerebri**. A small reddish body situated at the posterior part of the third ventricle between the corpora quadrigemina. Its function is unknown. **e. cruris longioris incudis**. See *orbicular bone*, under *bone*. **e. ili anterior**. See *cotyloid bone*, under *bone*. [Gr., *epiphysis*, from *epi*, upon, + *phyein*, to grow.]

epiphysitis (ep'if-is-i'tis). Inflammation of an epiphysis. Generally a disease of infancy, affecting principally the epiphyses at the hip, knee, and shoulder.

epiphyte (ep'if-it). A vegetable ectoparasite. [Gr., *epi*, upon, + *phyein*, to grow.]

epiplocele (ep-ip'lo-sēl). A hernia containing omentum. [Gr., *epiploon*, the omentum, + *kele*, tumor.]

epiploic (ep-e-plō'ik). Of or pertaining to the omentum. [Lat., *epiploicus*, from Gr., *epiploon*, omentum.]

epiploitis (ep'ip-lo-i'tis). Inflammation of the omentum. [Gr., *epiploon*, the omentum, + *itis*, inflammation.]

epiploön (ep-ip'lo-on). Caul; omentum. See *omentum*. **colic e.** See *colic omentum*. **cystocolic e.** An omental prominence sometimes found connecting the gall-bladder with the duodenum, forming the anterior border of the foramen of Winslow. **e. majus**. See *great omentum*. **e. minus**. See *lesser omentum*. **gastrocolic e.** See *great omentum*. **gastrohepatic e.** See *lesser omentum*. **gastrosplenic e.** See *gastrosplenic ligament*, under *ligament*. [Gr., *epiploon*, from *epi*, upon, + *plein*, to float.]

epiploxy (ep-ip'lo-pek-se). Suture of the omentum to the anterior abdominal wall. [Gr., *epiploon*, the omentum, + *pexis*, a fixing.]

epiquanin (ep-e-quan'in). A purin base, C₈H₈N₅O, isolated from urine by Krüger.

episarkin (ep-e-sark'in). An alloxur base, C₈H₈N₅O, which is found in the normal urine and also in that of leukemic patients.

episcope (ep'e-skōp). An instrument for the visual examination of a surface. **electric e.** A form of stereopticon in which the electric light is used for illuminating and projecting opaque objects. [Gr., *epi*, upon, + *skōpein*, to view.]

episiotomy (ep-i-se-ot'o-me). Incision of the perineum downward and backward obliquely during the second stage of labor to facilitate the delivery of the presenting part. [Gr., *episeion*, region of the pubes, + *tome*, a cutting.]

epispadias (ep-i-spa'de-as). A rare congenital defect of the wall of the urethra by which the canal opens on the dorsum of the penis in the male and through an opening made by the separation of the labia minora and a fissure of the clitoris in the female. **e. glandis**. A variety in which the urethra terminates on the dorsum of the glans penis. **e. penis**. A form in which the fissure on the dorsum of the penis extends back of the glans. [Gr., *epi*, above, + *span*, to tear away.]

epispilitis (ep'le-sple-ni'tis). Inflammation of the capsule of the spleen. [Gr., *epi*, upon, + *splen*, the spleen, + *itis*, inflammation.]

epistaxis. Reduction to a paste by pounding. [Lat., *e*, intens, + *pistare*, to pound.]

epistaxis (ep-is-tak'sis). Hemorrhage from the nasal passages; nose-bleed. [Gr., *epistaxein*, to bleed at the nose.]

episternal (ep-e-ster'nal). Situated above the sternum. [Lat., *episternalis*, from Gr., *epi*, upon, + *sternon*, sternum.]

epitarsus (ep-e-tar'sus). A congenital pterygial band.

epithalamus (ep-e-thal'a-mus). The posterior portion of the optic thalamus. [Gr., *epi*, upon, + *thalamos*, chamber.]

epithelial (ep-e-the'le-al). Pertaining to, or composed of, epithelium.

epithelioid (ep-e-the'le-oid). Resembling epithelium; said of epitheliumlike cells in tissues derived from the mesoblast and never having had any connection with the archenteron of the embryo. [Gr., *epi*, upon, + *thele*, nipple, + *eidōs*, resemblance.]

epitheliolysin (ep'e-the-le-ol'is-in). A cytolyisin, formed in the serum when an animal is injected with epithelial cells, which will dissolve these cells when they are mixed with dilutions of the serum.

epithelioma (ep'e-the-le-ō'mah). Syn.: *carcinoma epithelioides*. A carcinoma of the skin or the mucous membrane, consisting of squamous epithelial cells.

basal-celled e. An e. consisting of the lowest or malpighian layer of cells in the epidermis. **calcific e.**, **calcified e.** An epithelioma that has undergone calcareous degeneration. **chorio-e.** See *syncytium*. **corneous e.** An e. the layers of which resemble the outer layer of epidermal cells. **cylindrical e.** A variety of e. in which the epithelial cells resemble ordinary columnar epithelia and the structure itself is quite like ordinary mucous membrane. **diffuse e.** A form of epithelioma characterized by a rapid infiltration of the surrounding connective tissue with epithelial cells, especially between the muscles and along the vessels and nerves. **e. contagiosum**, **e. molluscum**. See *molluscum contagiosum*. **e. myxomatodes psammosum**. A peculiar form of tumor found in the third ventricle of the brain, resembling a very soft myxoma; characterized by milk white granular contents. **flat celled e.** See *squamous e.* **pavement celled e.** A form of e. in which the cells resemble

those of pavement epithelium. **squamous celled e.**, **squamous e.** A variety of e. in which the cells resemble those of squamous epithelium and form masses which are very like the follicles of cutaneous glands. **villous e.** An e. on the inner surface of the bladder, which grows in the shape of branched villi. [Gr., *epi*, upon, + *thele*, nipple, + *oma*, tumor.]

epitheliomatous (ep'ith-e-le-ō'mat-us).

Pertaining to the nature of epithelioma.

epithelium (ep-e-the'le-um). A membrane covering free surfaces of the body or lining cavities that communicate with the surface. It is composed of cells joined at their edges and forming one or more composite layers.

alveolar e. The e. of the alveoli of glands or of the lungs.

amniotic e. An e. composed mostly of cuboid or flattened cells somewhat separated and connected by clearly defined intercellular bridges.

areolar e. The e. of the areola of the mamma.

ciliated e. An e. in which the free ends of the cells composing it bear cilia. It is usually composed of a layer of ciliated columnar cells with broad free ends and slender attached ends, while between the attached ends there are one or more layers of rounder cells.

columnar e. An e. composed of columnar cells (e. g., the e. of the stomach and intestine).

cuboidal e. E. in which the cells composing it are cuboidal.

cylindrical e. See *columnar e.*

ectodermic e. E. derived from the ectoderm (e. g., the epidermis, and the e. of the ciliae of the central nervous system).

enamel e. See *cuticula dentis*, under *cuticula*.

enteric e. Cells in the embryo which form the rudiment of the cellular lining of the enteron; in a general sense, the e. of the alimentary canal and the organs derived from it.

entodermic e. The e. derived from the entoderm, e. g., the e. of the alimentary canal, except the mouth.

e. cell. See *epithelial cell*, under *cell*.

lamellosum. See *pavement e.*

e. micans. See *ciliated e.*

e. of the graafian follicle. See *membrana granulosa*, under *membrana*.

e. pavement in sputum, how to recognize; see in *appendix*, page 902.

e. polyhedricum. See *pavement e.*

e. tabulare. See *pavement e.*

e. vibrans. See *ciliated e.*

fibrillated e. E. in which the component cells appear as if formed of rods or straight lines. It is found in parts of the uriniferous tubules and in the ducts of the salivary glands.

flattened e. See *pavement e.*

follicular e. The epithelium lining the graafian follicle and inclosing the ovum.

germ e., **germinal e.**, **germinative a.**

1. An accumulation of the e. that lines the pleuroperitoneal space of the embryo, being that portion situated at the mesial side of each mesonephros, from which the spermatozooids or the ovarian ova take their origin.

2. The cylindrical cells covering the greater part of the ovary and finally sinking into it to form ova or the *membrana granulosa*.

glandular e. The e. which constitutes the proper secreting substance

- of a gland; generally composed of spheroidal cells. **intestinal e.** See *columnar e.* **lamellar e.** See *pavement e.* **laminar e., laminated e.** See *stratified e.* **maternal e.** The e. of the uterus in contradistinction to that of the developing embryo. **olfactory e.** The e. lining the proper olfactory region of the nasal cavity. It consists of ordinary columnar and the proper olfactory cells. **ovarian e.** See *germinal e.* (2d def.). **palisade e.** See *columnar e.* **pavement e.** An e. composed of flattened or platelike cells. It may be simple, as in the alveoli of the lungs, or stratified, as in the epidermis and in the epithelium of the mouth. In stratified pavement epithelia the deeper cells are usually columnar or rounded. **pigmentary e., pigmented e.** An e. in which the cells composing it contain a greater or less amount of pigment, as in the retina. **polyedral e., polygonal e., polyhedral e.** See *pavement e.* **prismatic e.** See *columnar e.* **protective e.** An e. which serves especially for protection, like the epidermis, in contradistinction to an e. serving for secretion or sensation, like glandular and olfactory epithelia. **pyramidal e.** See *columnar e.* **rod e.** See *fibrillated e.* **scaly e.** See *pavement e.* **secreting e., secretory e.** See *glandular e.* **simple e.** An e. composed of a single layer of cells, like the e. of the intestine and of the alveoli of the lungs. **spheroidal e.** See *glandular e.* **squamous e.** See *pavement e.* **stratified e.** An e. composed of two or more superimposed layers. **surface e.** The e. on the surface of an organ, in contradistinction to that which sinks into its substance to form glands, as in the stomach. **tabular e.** See *pavement e.* **tegumentary e.** See *epidermis.* **tessellated e.** See *pavement e.* **transitional e.** An e. composed of two or more layers of cells which dovetail into each other, not giving a distinctly stratified appearance. It is neither stratified nor simple, but appears as if it were in a stage of transition from one to the other. **vibratile e., vibrating e.** See *ciliated e.* [Gr., *epi*, upon, + *thelē*, nipple.]
- epithem** (ep'e-them). A medicinal preparation for external application, such as a poultice, exclusive, according to some authors, of plasters and ointments. [Gr., *epithēma*.]
- epitonic** (ep-e-ton'ik). Increased tonus. [Gr., *epitonos*, strained.]
- epitoxoid** (ep-e-toks'oyd). Syn.: *toxon*. A substance which has less affinity for an antitoxin than is possessed by the toxin. It is a primary secretory product of the diphtheria bacillus. It does not produce acute symptoms, but causes gradual emaciation and paresis in animals.
- epitrochlea** (ep-e-trok'le-ah). The internal condyle of the humerus. [Gr., *epi*, upon, + *trochilia*, pulley.]
- epitrochlear.** Attached to, or situated near, the epitrochlea.
- epitrochleo-anconeus** (epe-tro''kle-o-an''-
- co-ne'us). See *table of muscles*, under *muscle*.
- epitympanic** (ep-e-tim-pan'ik). Situated upon or above the tympanum or the tympanic region. [Lat., *epitympanicus*, from the Gr., *epi*, upon, + *tympanon*, the tympanum.]
- epitympanium** (ep-e-tim'pan-um). The attic; the space lying above the tympanum and immediately beneath the tegmen tympani. [Gr., *epi*, upon, + *tympanon*, drum.]
- epizoic** (ep-e-zo'ik). Of, or pertaining to, the epizoa.
- epizoicide** (ep-e-zo'is-id). A remedy that destroys epizoa. [Gr., *epi*, upon, + *zoon*, an animal, + Lat., *caedere*, to kill.]
- epizoon** (ep-e-zo'on), pl., *epizoa*. An external animal parasite. [Gr., *epi*, upon, + *zoon*, an animal.]
- epizoötic** (ep-e-zo-ot'ik). Prevailing among the lower animals after the manner of an epidemic in man; a disease so prevailing.
- epoch** (ep'ok). A fixed point in the reckoning of time. A period in the life of an individual. [Gr., *epoche*, stoppage, fixed point of view.]
- eponychium** (ep-o-nik'e-um). 1. The embryonic horny nail structure. 2. Nail skin.
- epoöphorectomy** (ep'o-o-fo-rek'to-me). The operation of removing the epoöphoron. [Gr., *epi*, on, + *oöphoron*, ovary, + *ektome*, excision.]
- epoöphoron** (ep-o-öf'o-ron). Syn.: *parovarium*. A body formed of the tubes of the upper part of the mesonephros in the female embryo. It is known also as the organ of Rosenmüller, and is the analogue of the epididymis of the male. [Gr., *epi*, upon, + *oon*, an egg, + *pherein*, to bear.]
- Ep'som salt.** See *magnesium sulphate*.
- epulis** (ep-u'lis), pl., *epulides*. A tumor springing from the periosteum and edge of the alveolus of the maxillary bones and implicating the osseous walls. It may be composed of fibrous or of sarcomatous tissue. [Gr., *epoulis*, a gum-boil.]
- equation** (e-kwa'shun). In chemistry, the notation of a process of decomposition and recombination in the form of an algebraic formula in which the numbers of atoms of each element are the same on each side of the sign of equality. [Lat., *aequatio*, from *aequare*, to make equal.]
- equa'tor oc'uli.** That circumference of the eyeball which bounds its central transverse vertical plane. [Lat., *aequare*, to make equal.]
- equi-.** A prefix from the Lat., *aequus*, equal.
- equilibrium** (e''kwe-lib're-um). Equipoise; the condition in which contending forces are equal. **nitrogenous e.** A condition of the system in which the amount of nitrogen in the egesta exactly equals that in the ingesta. **physiological e.** The condition of the system in which the ingesta exactly equal the egesta. **unstable e.** That state of a body which determines

an increased deviation from its state of equilibrium after it has been disturbed. [Lat., *aequus*, equal, + *librare*, to balance.]

equimolecular (ek''we-mo-lek'u-lar). Being in proportion to the molecular weight. **equination** (ek-win-a'shun). The process of inoculation with the virus of horse-pest. [Lat., *equinus*, equine.]

equinia (e-quin'e-ah). Another name for glanders. See *glanders*. [Lat., *equinus*, horse.]

equinovarus (e-qui''no-va'rus). A form of clubfoot consisting of a combination of pes equinus and pes varus.

equinus (e-qui'nus). See *talipes equinus*. **equipotential** (e-kwe-po-ten'shal). Having equal power; applied to electrified bodies having equal charges. [Lat., *aequus*, equal, + *potentia*, power.]

equisetum (ek-we-se'tum). The horsetail or scouring rush. **E. arvense**. The field horsetail. The stalks are mildly astringent and diuretic. [Lat., *equus*, the horse, + *seta*, coarse hair.]

equivalence, equivalency (e-kwiv'al-ens, e-kwiv'al-en-se). The combining weight of an element as combined with hydrogen. [Lat., *aequivalentia*.]

equivalent (e-kwiv'al-ent). Of equal value; as a n., an e. number, a term formerly used for the amount by weight of an element which was capable of combining with 1 part by weight of hydrogen. Thus, the e. of oxygen was 8, because 8 parts of this element unite with 1 part of hydrogen to form water. The term, however, is now applied to the amount by weight of any element which can replace 1 part by weight of hydrogen in a compound. It is equal to the atomic weight of the element divided by the number representing its quantivalence. **endosmotic e.** The ratio obtained by dividing the quantity of the replacing liquid in osmotic action by the quantity replaced. **osmotic e.** The ratio between the diffusive powers of liquids or gases. [Lat., *aequivalere*, to be worth the same.]

Er. Chemical symbol for the element *erbium*.

erosion (e-ra'shun). A scraping or a removal by scraping. [Lat., *e*, out, + *radere*, to scrape.]

Erb and Charcot's disease. Spasmodic tabes dorsalis.

erbium (er'be-um). A rare metallic element, acting in compounds as a trivalent element. Chemical symbol, Er. Atomic weight, 166.

Erechthites (er-ek-thi'tes). A section of the genus *Senecio*. **E. hieracifolia**. Fire weed. It has been used as an astringent and antispasmodic. [Gr., *erechthein*, to trouble, because the species are troublesome weeds.]

erectile (e-rek'til). Capable of erection. [Lat., *erectilis*.]

erection (e-rek'shun). The process of becoming or the state of being erect, as observed in the penis, the clitoris, and the nipples under the influence of erotic excitement or some other stimulus. Also

applied to the elevation of the hairs. [Lat., *erectio*, from *erigere*, to erect.]

erector (e-rek'tor). See *table of muscles*, under *muscle*.

eremacausis (er'em-ak-aw'sis). The slow oxidation of organic matter, exposed to the action of heat. [Gr., *erema*, slowly, + *kausis*, a burning.]

eremophobia (er-em-o-fo'be-ah). Morbid dread of solitude. [Gr., *eremos*, solitude, + *phobos*, fear.]

erepsin (e-rep'sin). An enzyme secreted by the mucous membrane of the intestine. It has the property of hydrolyzing the proteoses, peptones, casein, and many synthetic polypeptids with the formation of the amino acids.

erethism (er'e-thizm). (Often misspelled, *erythism*). Excitement of an organ or tissue in an unusual degree, also over-excitement of the passions or mental emotions. [Gr., *erethismos*, irritation.]

erethistic, erethitic (er-e-this'tik, er-e-thit'ik). Causing or pertaining to erethism.

ereuthophobia (er'u-tho-fo'be-ah). Pathological fear of blushing. [Gr., *ereuthos*, blushing, + *phobia*, fear.]

erg. The unit of energy; the amount of work done by a body moving through 1 cm. in opposition to a force equal to 1 dyne. [Gr., *ergon*, work.]

ergasia, ergasm (er-ga'se-ah, er'gasm). Functional action. [Gr., *ergasia*.]

ergin (er'gin). A substance forming allergy or uniting with allergin.

ergo-apiol (er'go-a'pe-ol). A proprietary remedy composed of ergotin and apiol, sold in capsules.

ergochrysin (er-go-kri'sin). An inactive resin found in ergot. It combines with the active ergotoxin, in which form it has been called chrysotoxin.

ergograph (er'go-graf). An instrument for recording muscular work. [Gr., *ergon*, work, + *graphein*, to record.]

er'gone. A proprietary preparation of ergot, intended especially for hypodermic use. It is said to undergo change on keeping under certain conditions.

ergophobia (er-go-fo'be-ah). A morbid propensity to shirk work. [Gr., *ergon*, work, + *phobos*, fear.]

ergophore (er'go-for). The part of a molecule of an antigen or antibody on which the specific properties of the substance depends, as the toxophore in distinction from the haptophore, a combining part of the molecule. [Gr., *ergon*, work, + *pherein*, to bear.]

ergostat (er'go-stat). A machine for measuring the work done by a contracting muscle. [Gr., *ergon*, work, + *istanai*, to stand.]

er'got. The sclerotium of *Claviceps purpurea*, growing on and replacing the grain of rye, *Secale cereale*. The chemistry of e. presents many difficulties, and it has been the subject of much dispute, but it appears that ergot contains at least two alkaloids: amorphous ergotin, having crystalline salts, and crystalline ergotin, having amorphous salts; the lat-

ter alkaloid being concerned in the action of e. on blood pressure. E. also contains tyramin, the action of which resembles that of epinephrin, and another amin which is present in small amount and is probably not concerned in the therapeutic action of the drug. It is impossible to give all the terms which have been applied by different investigators to the various substances found in e., the same name having been given to different substances and the same substances having received different names, owing to the difficulty of isolating the various principles in a fair degree of purity. E. is used therapeutically for its action on the uterus, whereby the organ is thrown into tonic contraction, after the delivery of the placenta, or, less frequently, to induce peristaltic contraction to facilitate the expulsion of the fetus [U. S. Ph., Br. Ph.]. List of poisons and their antidotes, see in appendix, page 938. **e. of maize.** The sclerotium of *Ustilago maidis*, growing on and replacing the grain of *Zea mays*; corn smut. It excites uterine contraction of shorter duration than that caused by e. of rye. It is said to produce abortion in cows. **e. of oats.** A variety, slenderer than e. of rye, occurring in commerce either by itself or mixed with e. of rye. Said to act on the uterus as energetically as e. of rye. **e. of rice.** E. produced on the grains of rice by a fungus identical with *Claviceps purpurea*; used in the East Indies as a substitute for e. of rye. **e. of rye.** See *ergot*. **sugar of e.** See *trehalose*. [Lat., *ergota*.]

ergota (er-go'tah). See *ergot*. **extractum ergotae.** A hydro-alcoholic extract of ergot, obtained after precipitating with hydrochloric acid [U. S. Ph.]. The Br. Ph. directs alcohol for the exhaustion of the drug. This extract represents, probably, only a part of the activities of ergot [U. S. Ph.]. **extractum ergotae fluidum** [U. S. Ph.]. **extractum ergotae liquidum** [Br. Ph.]. A fluidextract of ergot. It undergoes rapid deterioration, especially when exposed to the air. **extractum ergotae purificatum.** Purified extract of ergot. **extractum secalis cornutum, extractum ergoti.** Bonjean's ergotin; an aqueous extract of ergot, purified by alcohol. **infusum ergotae.** An infusion of ergot [Br. Ph.]. **vinum ergotae.** A mixture of 20 per cent. of fluidextract of ergot with 80 per cent. of white wine and alcohol [U. S. Ph.].

er'gotin. 1. A term for different extracts representing more or less of the active principle of ergot. Also for watery extracts of ergot. They are complex, ill-defined, amorphous products, varying in their proportions according to the mode of preparation. 2. Of the Br. Ph., 1898, extractum ergotae. 3. An alkaloid obtained from ergot by Tauret. **Bonjean's e.** See *extractum ergotae purificatum*, under *ergota*. **Wenzell's e.** See under *Wenzell*. **Wernich's e.** See under

Wernich. **Wigger's e.** See under *Wigger*. **Yvon's e.** See under *Yvon*. **ergotin** (er-got'in-in). An alkaloid, $C_{25}H_{39}O_5N_5$, first obtained by Tanret in an impure form from ergot. It is amorphous, but forms crystalline salts. It seems to be capable of conversion into the more active ergotoxin within the animal body.

ergotinol (er-got'in-ol). An ammoniated preparation of ergotin.

ergotism (er'go-tizm). Poisoning with ergot. **acute e.** Poisoning by overdoses of ergot; characterized by eructations, nausea, vomiting, colic, diarrhea, vertigo, headache, and muscular prostration. **chronic e.** E. due to the long continued use of ergot as a drug or of bread made from ergoted grain. See *gangrenous e.* and *spasmodic e.* **gangrenous e., necrotic e.** Chronic e. characterized by gangrene of the extremities due to persistent constriction of the arteries, preceded by itching and cutaneous anesthesia. **spasmodic e.** A form of chronic e. in which either there are general convulsions followed by death, or there are itching sensations, especially in the hands, which may occasionally go on to the gangrenous form, with occasional general convulsions, vomiting, colic, and diarrhea. [Lat., *ergotismus*.]

ergotole (er'go-töl). The trade name of a liquid preparation of ergot.

ergotoxin (er-go-tox'in). A crystalline alkaloid, $C_{25}H_{41}O_6N_5$, which occurs in ergot, of which it is an important active constituent. E. causes active contraction of the uterus.

eridin (er'is-in). See *mesotan*.

ericolin (er-ik'o-lin). A resinous powder, obtained from various ericaceous plants.

erigens (er'e-gens). Causing erection, e. g., *nervus erigens*.

Erigeron (e-rij'er-on). 1. A widely distributed genus of composite plants. 2. Fleabane; the herb of *E. heterophyllus* and *E. philadelphicus*, used in dropsical and nephritic diseases. **E. canadensis.** Canadian fleabane; tonic, diuretic, and astringent. The oil is used in gonorrhea and is popularly supposed to control uterine hemorrhage and quicken uterine contraction. **oil of e.** An oil obtained by distillation of the fresh herb of *E. canadensis*. [Gr., *er*, the spring, + *geron*, an old man, because it soon becomes hoary.]

Eriodictyon (er''e-o-dik'te-on). 1. A genus of the *Hydrophyllaceae*. 2. Of the U. S. Ph., the leaves of *E. californicum*. The fluidextract is official in the U. S. Ph. **E. californicum, E. glutinosum.** Yerba santa, California tarbush, containing resins, a bitter extract, tannic acid, and a volatile oil; much used in a syrup for disguising the taste of quinin. It has been used in the form of a tincture in the treatment of asthma, chronic bronchitis, etc. **elixir eriodictyi aromaticum.** An elixir containing the fluidextract of e. and used for disguising the taste of bitter substances, such as quinin

[N. F.] [Gr., *erion*, wool, + *diktyon*, a net.]

erodents (er-o'dents). Medicines or substances that erode. [Lat., *erodere*, to gnaw away.]

eroma'nia. See *erotomania*.

eroin (e-rō'sin). A golden brown, crystalline substance from *Chadamicum luteum*, used as a tonic, diuretic and vermifuge.

erosion (e-ro'shun). 1. An eating away; the action and the effect of a corrosive substance. 2. A circumscribed superficial loss of substance; as in e. of the cervix uteri or chancrous e. [Lat., *erodere*, to gnaw off.]

erotic (e-ro'tik). Pertaining to actual or phantasy feelings which underly the reproductive instinct.

erotomania (e'ro-to-ma'ne-ah). A form of mental excitement characterized by loss of control over the sexual appetite. See *satyriasis* and *nymphomania*. [Gr., *eros*, sexual passion, + *mania*, madness.]

erpiol (er'pe-ol). A proprietary preparation of apiol and allied drugs.

erratic (er-rat'ik). Of diseases, pain, etc., shifting from one part of the body to another or occurring in irregular paroxysms. [Lat., *errare*, to wander.]

er'ror. A failure, a mischance, a going astray. [Lat., *errare*, to wander.]

erubescence (e-ru-bes'senz). Blushing; reddening of the skin. [Lat., *erubescere*, to blush.]

erucin (er'u-sin). A yellow powder obtained from the bitter extract of white mustard.

eructation (e-ruk-ta'shun). A belching up of gas from the stomach.

eruginous (e-ru'jin-us). Resembling verdigris; green like verdigris.

erugo (e-ru'go). 1. Copper rust; verdigris. 2. Rust of any kind. [Lat., *aes*, copper, brass.]

eruption (e-rup'shun). 1. A breaking forth, as of a pent-up gas or liquid. 2. An emergence, as of a tooth through the gum. 3. The breaking out of a rash, also the rash itself. **creeping e.** An eruption of the skin which traverses the surface; due to the parasitic larva, *Gastrophilus*, which burrows under the skin. [Lat., *eruptio*, a breaking out.]

erysimin (er-is'im-in). A glucosid, (C₁₆H₂₂O₈), obtained from the seeds of a species of *Erysimum*; used like digitalin.

erysipelas (er-is-ip'e-las). An acute specific infection of the lymphatic spaces of the corium and the subcutaneous tissues and sometimes of the mucous membranes, characterized by the formation of red, swollen areas, that tend to spread out at the periphery and have no tendency to the formation of pus, to ulceration, or to gangrene, and end in spontaneous resolution without scarring. It is caused by the *Streptococcus erysipelatis*, which enters the tissues through an abrasion. The disease is attended by the constitutional disturbances of an acute febrile affection, the elevation of temperature preceding the appearance of the lesions in the skin and subsiding when the process is checked,

generally from the fifth to the tenth day. When the disease runs a mild course, it is known as **erythematous e.**, and when this mild form spreads widely, it is called **e. migrans**. The disease was formerly known as *St. Anthony's fire*. [Gr., *erysipelas*, from *erythros*, red, + *pella*, skin.]

erysipelatus (er-is-ip-el'at-us). Pertaining to, or of the nature of, erysipelas.

erysipeloid (er-is-ip-el-oyd). A disease similar to erysipelas, lasting about a week under proper treatment, but not attended by fever nor severe constitutional symptoms. It is due to the absorption of putrid animal matter through cracks in the skin, usually of the hands. It is caused by the *Streptothrix Rosenbachii*. [Gr., *erythros*, red, + *pella*, skin, + *eidos*, form.]

erythema (er-ith-e'mah). An increased redness of the skin from engorged capillaries. [Gr., *erythema*, redness.]

erythemia (er-e-the'me-ah). A disease with persistent increase in red cells and due to excessive formation of erythroblasts in the bone and marrow. [Gr., *erythros*, red, + *aima*, blood.]

erythra (er'ith-rah). A skin eruption.

Erythraea (er-e-thre'ah). Blushwort; a genus of the *Gentianeae*. **E. centaureum**. Common European centaury. Used in domestic practice, particularly among Germans. [Gr., *erythros*, red.]

erythrasma (er-ith-raz'mah). A contagious parasitic disease of the skin occurring especially in the groins and axillae, in the form of sharply defined, brownish red, desquamating patches, bordered by a fringe of broken and partly detached epidermis. According to Bärensprung, it is due to presence of the *Microsporion minutissimum* of Burchardt. Others regard the affection as identical with *eczema marginatum*. [Gr., *erythros*, red.]

erythremia (er-ith-re'me-ah). A pathologic over-production of red blood corpuscles. [Gr., *erythros*, red, + *aima*, blood.]

erythrin (er'e-thrin). A compound, C₂₀H₂₂O₁₀, derived from *Rocella tinctoria*; considered also as erythric acid. **e. bitter**. See *picro-erythrin*.

Erythrina (er-e-thre'na). The coral tree. **E. corallodendron**. The West Indian coral tree. Its root is sudorific, the whole plant is sedative and vermifuge, the flowers are pectoral. [Gr., *erythros*, red, from the color of the flower.]

erythrim (er'ith-rizm). Redness of the hair and beard.

erythrite (er'ith-rit). Syn.: *erythroglucin*. A tetrahydric alcohol, obtained from *Protococcus vulgaris* and by decomposing erythrin obtained from several species of *Rocella*.

erythro-. A prefix from Gr., *erythros*, red.

erythroblast (er-ith'ro-blast). The parent cell in which red corpuscles (erythrocytes) are produced. [Gr., *erythros*, red, + *blastos*, sprout, bud.]

erythrocephalin (er''i-thro-sef-a'el-in). Of Podwyssotzki, the coloring principle of ipecacuanha; so called because it ac-

- quires a deep purple-red color with alkalis.
- erythrocyte** (er-ith'ro-sit). See *red blood corpuscles*, under *blood corpuscle*. [Gr., *erythros*, red, + *kytos*, cell.]
- erythrocytosis** (er''ith-ro-si-to'sis). Production of red blood corpuscles.
- erythrodanum** (er-e-throd'an-um). 1. Of Döbereiner, the coloring principle of madder. 2. The genus *Netera*.
- erythroderma exfolian'te**. Another name for *dermatitis exfoliata*.
- erythro-dextrin** (er''ith-ro-dex'trin). A variety of dextrin, prepared from starch by mild hydrolysis, which gives a red coloration with iodine. It does not reduce Fehling's solution. [Gr., *erythros*, red, + *dextrin*.]
- erythrogen** (er-ith'ro-jen). 1. Of Bizio, an undetermined green compound obtained by treating with alcohol a fatty substance extracted from putrid blood; also a crystalline fatty substance found in diseased bile. 2. The red coloring principle of certain flowers. [Gr., *erythros*, red, + *gennan*, to produce.]
- erythroid** (er'ith-royd). Reddish, ruddy. [Gr., *erythros*, red, + *eidos*, resemblance.]
- erythrokatalysis** (er''ith-ro-kat-al'is-is). Excessive destruction of red blood corpuscles as by phagocytosis or by the malarial organism.
- erythrol** (er'ith-rol). See *erythrite*.
- tetranitrate**. Tetranitrol, $C_4H_6O_{12}N_4$. Its action is like that of the nitrites, the vasodilation being slower and more lasting than that of nitroglycerin.
- erythromelalgia** (er''ith-ro-mel-al'je-ah). A nervous disease characterized by the appearance of a persistent patch of congestion, often on the sole of the foot, with swelling and pain, which is increased by exercise. A condition much like acroparesthesia. [Gr., *erythros*, red, + *melos*, a limb, + *algos*, pain.]
- erythromelia** (er''ith-ro-me'le-ah). A disease characterized by painless progressive redness of the skin of the extensor surface of the legs and arms, the redness extending from the center to the periphery. [Gr., *erythros*, red, + *melos*, limb.]
- Erythro'nium america'num**. Adder's tongue; the bulb is emetic.
- erythrophage** (er'ith-ro-fāj). A phagocyte which absorbs the blood pigments and destroys the red blood corpuscles. [Gr., *erythros*, red, + *phagein*, to eat.]
- erythrophilous** (er-ith-ro'fil-us). Lit., fond of red; in microscopy, combining with red in preference to other coloring matters. [Gr., *erythros*, red, + *philein*, to love.]
- erythroplein** (er-e-throf-le'in). An alkaloid, prepared from the bark of *Erythrophloeum guineense*. It has a digitalis action.
- Erythropleum** (er-e-throf-le'um). A genus of leguminous trees. **E. guineense**, **E. judiciale**. The sassy tree of Sierra Leone, ordeal bark tree. The bark (mancona or sassy bark) is used by the natives as an ordeal poison. It contains erythroplein. [Gr., *erythros*, red, + *phloios*, bark.]
- erythrophlogosis** (er''ith-ro-flo-go'sis). Inflammation with decided redness. [Gr., *erythros*, red, + *phlogosis*, a burning.]
- erythrophobia** (er''ith-ro-fo-be'ah). 1. Intolerance of the red color in the spectrum; an occasional symptom after the extraction of cataract. 2. A morbid propensity to blush on slight provocation. [Gr., *erythros*, red, + *phobos*, fear.]
- erythroptasia** (er-ith-rop'se-ah). A visual disorder which causes all objects to appear red. It often follows after dazzling by light reflected from snow. [Gr., *erythros*, red, + *opsis*, vision.]
- erythropsin** (er-ith-rop'sin). See *visual purple*, under *visual*.
- erythrorretin** (er-e-thror-re'tin). A powder found in rhubarb. [Gr., *erythros*, red, + *retine*, resin.]
- Erythroxyton**, **Erythroxyllum** (er-e-throx'il-on, er-e-throx'il-um). A genus of linaceous trees. **E. coca**. A species indigenous to Peru, which furnishes the official coca leaves [Lat., *coca*, U. S. Ph.]. [Gr., *erythros*, red, + *xylon*, wood.]
- es.** 1. Copper ore; copper. 2. Brass.
- Esbach's method**. A very valuable and simple method for determining, approximately, the amount of albumin in the urine. The albumin is precipitated in the presence of acid with a mixture of citric and picric acid in a graduate tube. The volume of the precipitate being a measure for the amount of albumin. [Georges Hubert Esbach, a physician in Paris, 1843-1890.]
- Esmarch's elastic bandage**. A broad strip of rubber shirring or sheet rubber from 3 to 5 yards long, in the form of a roller b., together with a stout solid rubber cord or strap having a chain at one end and a hook at the other; used for expelling the blood from a limb and as a tourniquet in bloodless amputations.
- escalin** (es'kal-in). A proprietary aluminum-glycerin paste. Used in a variety of conditions, the action being probably mechanical and much like that of bismuth subnitrate.
- eschar** (es'kar). A dry slough; the disorganized matter arising from gangrene or cauterization of a part. [Gr., *eschara*, hearth, hence the mark of a burn.]
- escharotic** (es-ka-ro't'ik). Having active caustic properties; producing an eschar. [Gr., *eschara*, hearth.]
- Escherich's bacillus**. See *Bacillus coli*, in *table of bacilli*, under *bacillus*. [Theodor Escherich, Ger. physician, 1857-1911.]
- Eschscholtzia californica** (esh-skölt'se-ah kal-e-for'ne-kah). California poppy; an extract is made from it which is said to be slightly hypnotic.
- esculapian** (es-ku-la'pe-an). Relating to the god of medicine, Esculapius, hence relating to medicine.
- esculin** (es'ku-lin). A glucosid, $C_{15}H_{16}O_9 + 2H_2O$, obtained from the bark of the horse chestnut and other trees of the

genera *Aesculus* and *Pavia*. It has been used as a remedy in malarial disease.

Esculus, Aesculus (es'ku-lus). 1. As used by the ancients, the Italian oak (*Quercus aë.*), or perhaps the holm oak (*Quercus ilex*) or beech (*Fagus sylvatica*). 2. A genus of trees and shrubs of the *Sapindaceae*, tribe *Hippocastaneae*. **Ac. glabra**. Ohio buckeye; a small tree growing along the banks of the Ohio, said to be useful in portal congestion. **Ac. hippocastanum**. The horse chestnut. Deprived of esculin by treatment with alkalis, it has been used as food. It is of little or no use therapeutically. [Lat., *esca*, food.]

escutcheon (es-kut'shun). The name sometimes given to the crinkly coarse hairs on the mons veneris in the adult. [Old Fr., *escuchon*, shield.]

Esenbeckia febrifuga. A species of plant found in Brazil, which furnishes the Brazilian angostura bark.

es'erin. Physostigmin; a poisonous alkaloid, $C_{15}H_{21}NO_2$, obtained from *Physostigma venenosum*. It contracts the pupil and is employed to relieve blepharospasm, to produce miosis after undue mydriasis, and in incipient glaucoma.

eso-. A rare prefix from the Gr., *eso*, within.

esocatophoria (e-so-kat-af-o're-ah). A condition when the visual axis turns downward and inward. [Gr., *eso*, inward, + *kata*, down, + *pherein*, to bear.]

esodic (es-od'ik). See *afferent*. [Gr., *eso*, within, + *odos*, a way.]

eso-enteritis (es'o-en-ter-i'tis). Inflammation of the mucous membrane of the intestine. [Gr., *eso*, within, + *enteron*, the intestine, + *itis*, inflammation.]

esophalgia (e-sof-ag-al'je-ah). Pain in the esophagus. [Gr., *oisophagos*, the gullet, + *algos*, pain.]

esophageal (e-so-fa'je-al). Belonging to the esophagus.

esophagemesis (e-sof-ag-em'e-sis). Regurgitation of food from the esophagus. [Gr., *oisophagos*, the gullet, + *emesis*, vomiting.]

esophagitis (e-sof-aj-i'tis). Inflammation of the esophagus. **corrosive** *E.* Resulting from the necrosis and destruction of tissues caused by swallowing a corrosive poison. [Gr., *oisophagos*, the gullet, + *itis*, inflammation.]

esophagalacia (e-sof'ag-o-mal-a'she-ah). Softening of the esophagus. [Gr., *oisophagos*, the gullet, + *malakia*, softness.]

esophagopathy (e-sof-ag-op'ath-e). Any disease of the esophagus. [Gr., *oisophagos*, the gullet, + *pathos*, a disease.]

esophagoplegia (e-sof-ag-o-ple'je-ah). Paralysis of the esophagus. [Gr., *oisophagos*, the gullet, + *plege*, a blow.]

esophagorrhagia (e-sof-ag-or-raj'e-ah). Hemorrhage from the esophagus. [Gr., *oisophagos*, the gullet, + *regnumai*, to burst forth.]

esophagoscope (e-so-fag'os-kop). An instrument for inspecting the interior of the esophagus by reflected light. [Gr., *oisophagos*, the gullet, + *skopein*, to examine.]

esophagus (e-sof-ag-us). The gullet; the tube extending between the lower pharynx and the cardiac end of the stomach, lying on the anterior surface of the spinal column. It begins about opposite the sixth cervical vertebra, and curves anteroposteriorly to accommodate itself to the cervical and thoracic curvatures of the spinal column. Near the lower part of the neck it is inclined toward the left, and, after returning to the middle line again, passes in the lower part of the thorax to the left. In the lower third of the thorax it is in front of the aorta, and pierces the diaphragm to blend with the tissues of the stomach. In the neck and upper part of the thorax it lies close behind the trachea, and, except near the diaphragm, is on the right side of the aorta. It consists of circular and longitudinal muscular fibers enveloping a coat of mucous membrane. [Gr., *oisophagos*, from *oiscin*, to carry, + *pherein*, to eat.]

esophoria (es-o-fo're-ah). That condition of the eyes in which the visual axes tend to converge and are maintained parallel only by constant muscular effort. Convergent strabismus. [Gr., *eso*, inward, + *pherein*, to bear.]

esomometer (e-sos-mom-et'rum). An instrument for measuring endosmosis. [Gr., *eis*, into, + *osmos*, a thrusting, + *metron*, a measure.]

esoteric (es-o-ter'ik). 1. Coming from within. 2. Within the inner circle of things.

esotropia (es-o-tro'pe-ah). Convergent strabismus. [Gr., *eso*, inward, + *trepein*, to turn.]

-ess. A suffix from the Fr., *-esse*, denoting female persons or animals.

es'sence. Of the Br. Ph., a solution of a volatile oil in rectified spirit; of the Fr. Cod., a volatile vegetable oil; of the other pharmacopœias, an alcoholic solution of a volatile oil. [Lat., *essentia*.]

essentia (es-sen'shah). See *essence*. **e. panasi**. A proprietary preparation, consisting of a four per cent. glycerin-alcohol-water solution of panase.

essential (es-sen'shal). 1. Of or pertaining to an essence. See *e. oil*, under *oil*. 2. Indispensable. 3. Of diseases, specific in nature, not dependent on a local morbid process. Idiopathic. [Lat., *essentia*.]

essentiality (es-sen-she-al'i-t-e). The essential (specific) nature of a disease, as opposed to its dependence upon a local morbid process.

es'ter. Any organic compound formed from an acid and an alcohol, which is made to unite in such a way that one molecule of water is extracted. The term is often confused with ether.

esterases (es'ter-as-es). Enzymes, which have the property of hydrolyzing the esters of the fatty acids.

esterifica'tion. The process of preparing an ester from an alcohol and an acid. It is usually brought about by boiling an alcoholic solution of the acid with some dehydrating agent, as sulphuric or hydro-

- chloric acid, and then distilling. The process of *e.* is just the reverse of the process of saponification.
- esthematorganon** (es-them-at-or'-gan-on). An organ of sense. [Gr., *aisthema*, sensation, + *organon*, organ.]
- esthesia** (es-the'-ze-ah). Perception, feeling, sensation. [Gr., *aisthesis*, perception by the senses.]
- esthesiometer** (es-the-se-om'-et-er). An instrument for determining the degree of acuteness of tactile discrimination. It consists essentially of two movable points, which, being placed upon the skin, are approximated until the two tactile sensations afforded by them are blended into one, and but a single point is felt. [Gr., *aisthesis*, sensation, + *metron*, a measure.]
- esthesodic** (es-the-so'dik). A term applied to the nerve paths of the central nervous system to designate those which convey sensory impulses. Opposed to *kinesodic*. [Gr., *aisthesis*, feeling, + *odos*, path.]
- esthetic** (es-thet'ik). Relating to the beautiful, in a broad sense. Judgments as to feeling. [Gr., *aisthesis*, sensation.]
- esthiomene, esthiomenus** (es-the-om'-en-e, es-the-om'en-us). An old name for lupus and other rodent skin diseases, or as an adjective denoting devouring, phagedenic. [Gr., *esthiomenos*, from *esthein*, to eat.]
- estivo-autumnal**. Pertaining to summer and to fall; a form of malaria in which the parasites have the crescentic form and the manifestations of the disease, i. e., the chills do not conform to a regular sequence.
- estrual** (es'tru-al). Pertaining to the rutting of animals.
- Es'trus, Oestrus**. The gadfly; a genus of dipterous insects typical of the *Oestridae*. [Gr., *oistros*, a gadfly.]
- e'thal, e'thales**. Soot. [Gr., *aithale*.]
- ethane** (eth'an). A paraffin, C_2H_6 . A gas. See *paraffin*. trichlorid of *e.* See *chloroform*.
- etheogenesis** (e-the-o-jen'es-is). The reproduction of a parasite from a male type without any sexual process.
- ether** (e'ther). 1. Primarily, any medium of extreme tenuity. 2. In physics, a supposititious medium of extreme tenuity pervading all space, whose vibrations serve, according to the undulatory theory, for the transmission of luminous, thermal, and electrical impulses. 3. In chemistry (primarily), the substance called variously ethylic or sulphuric *e.*, $(\text{C}_2\text{H}_5)_2\text{O}$ (see *ethyl e.* under separate heading), which was also, at the time of its discovery, called ethereal spirit of wine, vitriolic *e.*, naphtha, etc. The term has since been extended to all bodies of similar constitution to ethyl *e.* (i. e., to all alkyl and aryl oxids). *E.*'s in this sense consist of two alkyl or aryl radicles united with one atom of oxygen. Their general formula, therefore, is R.O.R. (R. denoting any alkyl radicle). If the two hydrocarbons are the same, the compound is called a *simple e.*; if they are dissimilar,
- the compound is a *mixed e.* The term is sometimes confused with *ester*. 4. A volatile liquid containing not less than 96 per cent. ethyl oxid [U. S. Ph.] or 92 per cent. [Br. Ph.]. **absolute e.** Ethyl ether which does not contain water. It is a colorless, limpid, permanent liquid of a strong refractive power, having a specific gravity of 0.710 at 20° C., a peculiar penetrating odor and a sweetish, pungent taste. It is explosive, easily ignited, and burns with a bright flame. **compound spirit of ether**. Syn.: *Hoffman's anodyne*. A preparation made up of stronger ether 30 parts, alcohol 67 parts, and ethereal oil 3 parts. A colorless liquid of sweetish burning taste and peculiar odor [U. S. Ph.]. **ethyl e.** See under *separate head*. **methyl e.** A colorless, inflammable gas, $(\text{CH}_3)_2\text{O}$, heavier than air, of an ethereal odor and aromatic taste. **mixed e.** An *e.* consisting of 1 atom of oxygen united with two dissimilar alkyl radicles. **simple e.** An *e.* consisting of 1 atom of oxygen united with 2 alkyl radicles of the same kind. **spiritus etheris compositus**. See *compound spirit of e.* **spiritus etheris nitrosi**. Spirit of nitrous ether. **stronger e.** Ethyl *e.* containing little or no alcohol or water. **sulphuric e.** See *ethyl ether*, under *separate heading*. **thio-e.** An alkyl sulphid. A simple *e.* in which sulphur replaces oxygen. [Lat., *aether*.]
- ether aceticus** (e'ther as-et'ik-us). Acetic ether, or ethyl acetate; especially a pharmaceutical preparation consisting of ethyl acetate with small quantities of alcohol and water [U. S. Ph., Br. Ph.].
- e'ther chlora'tus**. Hydrochloric ether; ethyl chlorid.
- ethe'real**. Pertaining to, resembling, or made with, ether.
- etherifica'tion**. The formation of an ether from an alcohol. [Lat., *aether*, ether, + *facere*, to make.]
- etherization** (e-ther-i-za'shun). The administration of ether vapor for the purpose of producing general anesthesia.
- eth'rol, ethero'lium**. A volatile oil.
- etheromania** (e'ther-o-ma'ne-ah). Addiction to the habit of taking ether. [Lat., *aether*, ether, + *mania*, madness.]
- ethidene** (eth'id-ēn). See *ethylidene*.
- eth'in**. See *acetylene*.
- e'thiops mineral'is, e'thiops min'eral**. Mercury with sulphur. A preparation consisting of mercury and sulphur triturated together.
- ethmo-**. A prefix from the Gr., *ethmos*, sieve; used in anatomical terms to denote pertaining to, or connected with, the ethmoid bone.
- ethmoid** (eth'moyd). Sievelike. See *ethmoid bone*, under *bone*. [Gr., *ethmos*, a sieve, + *eidōs*, resemblance.]
- ethmoiditis** (eth-moyd-'it'is). Inflammation of the ethmoid bone or of the soft parts immediately beneath it. [Gr., *ethmos*, a sieve, + *eidōs*, resemblance, + *itis*, inflammation.]
- ethnology** (eth-nol'o-je). Study of racial

questions; descent, relationship, movements of races. [Gr., *ethnos*, race, + *logos*, science.]

ethoxycaffeïn (eth-ox'e-kaff'e-in). A crystalline body, $C_{10}H_{14}ON_4$, obtained by boiling bromocaffeïn with 2 parts of potassium hydrate and 10 parts of alcohol. One of the purin derivatives. It is said to be narcotic and has been used in migraine.

ethyl (eth'il). The hypothetical radicle, $CH_3.CH_2$, of ordinary alcohol. **e. acetate**. The ethyl ester of acetic acid, $CH_3.COOC_2H_5$. A colorless, limpid, volatile liquid, with an agreeable, refreshing, ethereal, and somewhat acetous odor and taste. **e. aceto-acetate**. The ethyl ester of aceto-acetic acid, $CH_3.CO.CH_2.COOC_2H_5$. A liquid with a fruitlike odor. **e. alcohol**. See under *alcohol*. **e.amins**. See *ethylamin*. **e. arsenate**. The ethyl ester of arsenic acid. Triethyl arsenate, $(C_2H_5)_3AsO_4$, is a colorless liquid, boiling at about $35^\circ C$. **e. arsenite**. The ethyl ester of arsenious acid. Triethyl arsenite, $(C_2H_5)_3AsO_3$, is a colorless liquid. **e. benzoate**. The ethyl ester of benzoic acid, $C_6H_5.CO.OC_2H_5$, obtained by heating together ordinary alcohol and benzoic acid. **e. borate**. The ethyl ester of boric acid. Three such compounds are known: *e. orthoborate* (triethyl borate), $(C_2H_5)_3BO_3$, a colorless, aromatic, inflammable fluid of bitter taste; *e. metaborate* $(C_2H_5)_2B_2O_4$, a thick, colorless liquid; *e. triborate*, $C_2H_5B_3O_6$, a gummy substance. **e. bromid**. An inflammable, volatile liquid, C_2H_5Br , having an odor and taste like those of chloroform. It is an anesthetic. **e. butyrate**. The ethyl ester of butyric acid, $CH_3.CH_2.CH_2.COOC_2H_5$, an oily liquid having the odor of anise. **e. carbamate**. Syn.: *urethan*. The ethyl ester of carbamic acid, $NH_2.COOC_2H_5$, a white crystalline substance. **e. carbonate**. The ethyl ester of carbonic acid. Several isomers are known. **e. chlorid**. Monochloroethane, $CH_3.CH_2Cl$, a very volatile, inflammable, colorless liquid, of aromatic alliaceous odor and sweetish taste, prepared from alcohol by the action of hydrochloric acid gas, soluble in 10 parts of water. **e. cyanid**. The ethyl ester of prussic acid, $CH_3.CH_2.CN$, a colorless liquid, of aromatic ethereal odor like that of hydrocyanic acid, almost insoluble in water, and boiling at $97^\circ C$. It is poisonous. **e. ether**. See *ethyl ether*, under separate heading. **e. fluorid**. A colorless, inflammable liquid, $CH_3.CH_2F$, having a peculiar taste and an odor like that of horse-radish. It corrodes glass. **e. formate**. The ethyl ester of formic acid, $HCOOC_2H_5$. A low-boiling liquid with an agreeable odor; used as an antiseptic in pulmonary diseases. **e. hydrate**. E. alcohol. **e. ioddid**. A colorless liquid, $CH_3.CH_2I$, of high refractive power, and a peculiar sweetish and ethereal odor and taste, boiling $72^\circ C$; employed by inhalation in bronchitis and dyspnea. **e. mercaptan**. A colorless liquid, $CH_3.CH_2SH$,

having the odor of garlic, and a disagreeable taste, and boiling at $36^\circ C$. **e. nitrate**. $C_2H_5.O.NO$, a pale yellow, inflammable, mobile liquid, of aromatic, penetrating, and ethereal odor, resembling that of apples, and a peculiar, pungent taste. It is present in spirit of nitrous ether (sweet spirit of niter), and is said to constitute the active ingredient of that preparation. It has been found useful in angina pectoris and cardiac dyspnea. **e. orthophosphate**. See *e. phosphate*. **e. oxid**. See *e. ether*, under separate heading. **e. oxylate**. The ethyl ester of oxylic acid $(COOC_2H_5)_2$, a colorless liquid of slightly aromatic odor. **e. palmitate**. The ethyl ester of palmitic acid, $C_5H_5.COOC_2H_5$, a waxy solid. **e. phosphate**. An ethyl ester of phosphoric acid. The e. phosphates include the three salts of orthophosphoric acid and one of pyrophosphoric acid. **e. propionate**. $CH_3.CH_2.COOC_2H_5$, the ethyl ester of propionic acid, a liquid with an agreeable odor. **e. stearate**. The ethyl ester of stearic acid, $C_{17}H_{35}.COOC_2H_5$, a waxy body. **e. sulphate**. An ethyl ester of sulphuric acid. The e. sulphates are: *acid e. sulphate*, *e. sulphuric acid*, and *normal e. sulphate*, *disulphate*, $(C_2H_5.O)_2SO_2$. Both the e. sulphates are found in the oils of wine, the acid sulphate in the light oils of wine and the normal sulphate, in conjunction with other bodies, in other oils of wine. **e. sulphid**. $(C_2H_5)_2S$, a low-boiling liquid of extremely disagreeable odor. **e. sulphhydrate**. See *e. mercaptan*. **e. urethan**. See *urethan*. **e. valerate**, **e. valerianate**. The ethyl ester of valeric acid, $C_4H_9.COOC_2H_5$, a colorless liquid, having a rennetlike and valerianic odor. [æthyl, U. S. Ph., Br. Ph.] [Lat., *aethyl*, *aethylium*, from the Gr., *aither*, ether, + *yle*, material.]

eth'yl al'cohol. $CH_3.CH_2OH$, ordinary alcohol.

ethylam'in. $CH_3.CH_2.NH_2$, a low-boiling liquid with an ammoniacal odor, readily soluble in water. A strong basic substance. **e. hydrochlorid**. The hydrochloric acid salt of e., $C_2H_5NH_2.HCl$.

eth''ylam''inoben'zoate. $C_6H_5.NH_2.COOC_2H_5$, a proprietary preparation introduced as a substitute for cocaine in local anesthesia. Its action is more prolonged than that of cocaine.

ethylate (eth'il-ät). A substitution compound of ethyl alcohol in which the hydrogen in the hydroxyl of the latter is replaced by a metal.

ethylation (eth-il-a'shun). The process of combining or causing to combine with the ethyl radicle.

eth''ylcar'binol. Primary propyl alcohol.

eth''ylcar'bonate. A salt of ethylcarbonic acid.

ethylendiamin (eth''il-en-di-am'in). A base, $CH_2NH_2.CH_2NH_2$, used as a solvent for the false membrane in diphtheria.

ethylene (eth'il-ën). Olefiant gas, $CH_2=CH_2$, a colorless, inflammable gas of pe-

- cular odor. In compounds, it acts as a bivalent radicle. **e. alcohol.** Syn.: *glycol*, *e. glycol*, *e. dihydrate*. A dihydric alcohol, $\text{CH}_2\text{OH.CH}_2\text{OH}$, a colorless, sweetish, syrupy liquid, boiling at 197° C. **e. bichlorid.** See *e. dichlorid.* **e. bromid.** A colorless liquid, $\text{CH}_2\text{Br.CH}_2\text{Br}$, of agreeable odor and a sweet taste. **e. chlorid.** $\text{CH}_2\text{Cl.CH}_2\text{Cl}$, a liquid with a sweetish taste. **e. dichlorid.** Dutch liquid; a colorless, oily, inflammable liquid, $\text{C}_2\text{H}_4\text{Cl}_2$, of sweetish, ethereal odor and taste; isomeric with ethylidene dichlorid. It has been used as an anesthetic and as a local anodyne. [Lat., *aethylenum*.]
- ethyl ether.** $\text{C}_2\text{H}_5\text{.CH}_2\text{-O-CH}_2\text{.CH}_3$, a compound consisting of an atom of oxygen united with two ethyl radicles, prepared by exposing ethyl alcohol to the action of sulphuric acid, and distilling, subsequently purifying the product by the addition of caustic potash or calcium chlorid, and lastly rectifying by distillation. E. is a mobile, colorless liquid, of burning taste and peculiar odor, quite volatile, and very inflammable. Its vapor is heavier than air. Specific gravity at 0° , 0.736. Its vapor mixed with air forms an explosive compound. It is soluble in ethyl alcohol and slightly soluble in water. It is a ready solvent of fats, oils, and resins. The stronger ether of the U. S. Ph. is nearly pure e. e., containing not more than 6 per cent. of alcohol.
- ethylic** (eth-il'ik). Of, pertaining to, containing, or derived from, ethyl.
- ethylidene** (eth-il'id-ën). A bivalent radicle, $\text{CH}_2\text{.CH}_2$. **e. bichlorid**, **e. chlorid**, **e. dichlorid.** A colorless liquid, $\text{CH}_2\text{.CHCl}_2$, having an odor resembling that of chloroform. Under the names of Aran's ether and Wiggan's ether, it has been used as an anesthetic.
- ethylism** (eth'il-izm). Intoxication from ethyl alcohol.
- ethylmor''phinhydrochlorid.** See under *morphin*.
- ethyl salicylate.** $\text{C}_6\text{H}_5\text{.OH.COO(C}_2\text{H}_5\text{)}$; it is analogous to methyl salicylate, and has the same actions and uses.
- ethyox'y**, **ethylox'y'l-**. The $\text{CH}_3\text{.CH}_2\text{O}$ radicle.
- etiolated** (e'te-o-la-ted). Blanched, especially by exclusion from sunlight. [Fr., *étiole*, to blanch.]
- etiolation** (e'te-o-la'shun). The state of being or becoming, or the process of causing to become, etiolated.
- etiology** (e-te-ol'o-je). 1. A rendering of a cause; showing of a reason; the knowledge of causes. 2. In biology, the science of the causes of biological phenomena and of their relation to general physical laws. 3. In pathology, the study of the various causes of disease. [Gr., *aitia*, cause, + *logos*, knowledge.]
- eucain** (u-ka'in). *Alpha e.* is a synthetic derivative of triacetamin, which is no longer marketed. *Beta e.* is a synthetic derivative of vinylidiacetonalkamin. The hydrochlorid, $\text{C}_8\text{H}_7\text{N(CH}_3\text{)}_2\text{C}_6\text{H}_5\text{.COO.HCl}$, is used as a local anesthetic in place of cocain. It is official in the Swiss pharmacopeia.
- eucaloids** (eu'kal-oyds). A trade name for capsules of oil of eucalyptus.
- eucalypten** (u-ka-lip'ten). Of Pereira, a pectinlike substance obtained from a tincture of Botany Bay kino by treating it with ammonia.
- eucalypt''toresor'cin.** A compound made by heating together eucalyptol and resorcin; used as an antiseptic inhalation.
- Eucalyptus** (u-ka-lip'tus). 1. The Australian gum tree. The trees have been employed to drain marshy soil, because of the large amounts of water taken upward by their roots and evaporated from their leaves. 2. Of the U. S. Ph., the leaves of *E. globulus*. **E. globulus.** Blue gum tree. The leaves [U. S. Ph.] contain an essential oil. See *oil of e. e. gum*. Red gum, Australian kino; a gum collected from incisions made into the trunk of several species of E. See *e. gummi*. **e. gummi.** A ruby-colored exudation (so-called red gum) from the bark of *E. rostrata*. **extractum eucalypti fluidum.** Fluidextract of the leaves of *E. globulus* [U. S. Ph.]. **oil of e.** An essential oil obtained by distilling the leaves of various species of E. It should contain at least 50 per cent. of cineol (eucalyptol) [U. S. Ph., Br. Ph.]. **oleum eucalypti.** See *oil of e.* [U. S. Ph., Br. Ph.]. [Gr., *eu*, well, + *kalyptein*, to cover.]
- eucamul** (u'kam-ul). A proprietary emulsion of oil of Eucalyptus.
- eudermol** (u-der'mol). A trade name for nicotin salicylate; used topically in certain skin diseases.
- eudesmol** (u-des'mol). A crystalline camphor allied to eucalyptol, obtained from eucalyptus oil.
- eudiometer** (u-de-om'et-er). 1. An instrument for determining the volume of a gas which consists of a graduate tube closed at one end. 2. An instrument for exploding gases by means of an electric spark in Bunsen's method of volumetric analysis of gases. [Gr., *eudia*, fair weather, + *metron*, a measure.]
- eudiometry** (u-de-om'et-re). See *gasometric analysis*, under *analysis*.
- eudoxin** (u-dox'in). The trade name of a bismuth compound of nosophen; used in intestinal irritation.
- euesthesia** (u-es-th'e'se-ah). A normal condition of the senses. [Gr., *eu*, well, + *aisthesis*, sensation.]
- euformal** (u-for'mol). A proprietary antiseptic containing formaldehyd and other drugs in tablet form.
- eugallol** (u-gal'lol). Pyrogallol monacetate, $\text{C}_6\text{H}_3(\text{OH})_2(\text{CH}_3\text{COO})$; used in psoriasis.
- Eugenia caryophyllata** (u-je'ne-ah kar-e-o-fil-la'ta). Clove tree; indigenous to the Moluccas. The unexpanded flowers

and dried flower buds are the cloves of the U. S. Ph. and Br. Ph.

eugenics, eugenetics (u-jen'iks, u-jen-et'-iks). Syn.: *aristogenics*. Methods by which the physical and moral qualities of future generations may be improved. [Gr., *eu*, well, + *gennan*, to generate.]

eugenin (u'je-nin). Camphor of cloves, $C_{10}H_{12}O_2$, isomeric with eugenol.

eugenol (u'je-nol). A colorless, oily liquid, $C_{10}H_{12}O_2$, found in oil of cloves, of cinnamon, etc. It has the constitution of a methylic ether of a diatomic phenol. It has been used as an antiseptic and antipyretic. **benzoyle**. E. benzoate, used in phthisis and in neuralgic headache. **cinnamyle**. E. cinnamate, used as a substitute for e. e. **acetamid**. The compound $C_6H_5(C_6H_5)(OCH_3)OCH_2CO-NH_2$, used as an antiseptic and local anesthetic. **iodized e.**, **iodo-e**. The compound $C_6H_5I(C_6H_5)(OCH_3)(OH)$, an antiseptic [U. S. Ph.].

euglobulin (u-glob'u-lin). The name given to the serum globulin precipitated by one-third saturation with ammonium sulphate.

eugoform (u'go-form). Acetylated methylene diguaiaicol; used as an absorbent.

eukinase (u-kin'ās). A preparation from pig's intestine used to further pancreatic digestion.

eukinesia (u-kin-e'se-ah). Normal power of movement. [Gr., *eu*, well, + *kinesis*, movement.]

eulachon (u'lak-on). The candle fish (*Thaleichthys pacificus*) of the northern Pacific. Its oil has been recommended as a substitute for cod liver oil.

eumydrin (u-mid'rin). Atropin methyl nitrate, $C_{13}H_{23}O_6N$. It is used to replace atropin as a mydriatic and antihydrotic.

eunatrol, eunatron (u-na'trol, u-na'tron). Trade names for sodium oleate in the form of pills coated with chocolate; used as a laxative.

eunol (u'nol). A preparation of naphthols and eucalyptol, used topically in skin diseases.

eunuch (u'nuk). A human male rendered impotent by removal or injury of the genitals. [Gr., *eune*, a bed, + *echein*, to hold, keep.]

eunuchism (u'nuk-izm). State of castrated male.

eunuchoid (u'nuk-oid). Resembling in certain features a eunuch, often a pituitary defect state.

eunymyin (u-on'im-in). A bitter substance obtained from the bark of *Euonymus atropurpureus*.

Euonymus (u-on'im-us). 1. A genus of plants of the *Celastrineae*. 2. Of the U. S. Ph., the bark of the root of *E. atropurpureus*, wahoo, burning bush. The extract and the fluidextract are official in the U. S. Ph. e. **cortex**. The dried bark of the root of *Euonymus atropurpureus* [Br. Ph.]. **E. tingens**. A species found in India; employed in ophthalmia. **extractum euonymi siccum**. A dried alcoholic extract of euonymus bark mixed with one-fourth of its weight of

calcium phosphate [Br. Ph., 1898.] [Gr., *eu*, well, + *onoma*, a name.]

eupareunia (u-par-u'ne-ah). Ability to copulate without pain or difficulty. [Gr., *eupareunos*, well-mated as bed fellows.]

eupatorin (u-pat-o'rin). A crystallin glucosid extracted from *Eupatorium cannabinum*.

Eupatorium (u-pa-to're-um). 1. Boneset, a genus of composite plants. 2. Of the U. S. Ph., the leaves and flowering tops of *E. perfoliatum*, boneset, or thoroughwort. It contains a bitter principle. The fluidextract is official.

euperistalsis (u-per-is-tal'sis). Normal, painless peristalsis.

euphonia (u-fo'ne-ah). A condition in which speech is clear and easy. [Gr., *eu*, well, + *phone*, voice.]

Euphorbia (u-for'be-ah). Devil's milk; a genus of plants all species of which have a milky juice. **E. corollata**. White-flowered spurge. The root is purgative, diaphoretic, expectorant, and, when fresh, irritant. **E. ipecacuanha**. American ipecacuanha. The root is purgative, somewhat milder than *E. corollata*, but in overdoses apt to produce nausea and vomiting. It is an unfit substitute for ipecacuanha, because of its tendency in overdoses to produce general prostration and hypercatharsis. **E. pilulifera**. A species found in the Antilles and in Australia. The active principle is an acrid resin. It acts as a cardiac and respiratory stimulant. [Named for *Euphorbus*, physician to King Juba, of Mauretania.]

euphorbin (u-for'bin). A bitter acrid substance obtained from euphorbium.

euphorbium (u-for'be-um). Gum e., the concrete resinous juice of certain species of *Euphorbia*. It is violently emetic and cathartic. It is a vesicant, employed in veterinary practice.

euphoria (u-fo're-ah). Happy mood. [Gr., *euphoria*.]

euphorin (u'for-in). Carbonate of ethyl and phenyl, phenyl ethylic urethane, $C_6H_{11}O_2N$, antipyretic, analgetic, and antiseptic.

euphthalmin hydrochlorid (ūf-thal'min hi-dro-kl'o'rid). $C_5H_5N(CH_3)(C_6H_5.CH-OH.CO)HCl$, a preparatory mydriatic preparation closely related to β -eucain.

euplasia (u-pla'se-ah). Normal formation.

euplastic (u-plas'tik). 1. Readily undergoing organization; the opposite of *cacoplastic*. 2. Promoting euplasia. [Lat., *euplasticus*, from Gr., *eu*, well, + *plassein*, to fashion.]

eupnea (ūp-ne'ah). A condition in which the amounts of oxygen and of carbon dioxide in the blood are normal, and the respiratory center is moderately active, thus producing normal respiratory movements. [Gr., *eu*, well, + *pinein*, to breathe.]

Euproctis crysorrhoea. The brown-tail moth that causes a dermatitis.

eupyrin (u-pi'rin). Vanillin-ethylcarbonate-paraphenetidin, $C_6H_5O_5N_2$, closely related to phenacetin, the vanillin being

- introduced with the view of lessening the toxicity of phenetidin. It is antipyretic.
- euquinin** (u-kwin'in). An ethylcarbonic ester of quinin. The hydrochlorid and the tannate are used like quinin.
- euresol** (u'res-ol). Resorcin monacetate, $C_8H_8O_3$, used topically in skin diseases.
- eurobin** (u-ro'bin). A derivative of chryso-robin, used topically in skin diseases.
- europfen** (u'ro-fen). Iododiisobutyl-orthochresol, $C_{22}H_{38}O_2$; used like iodoform.
- eurythrol** (u'rith-rol). An extract of the spleen of the ox; used in anemia.
- euscopol** (u-sko'pol). A trade name for optically inactive scopolamin hydrobromid.
- eusemin** (u-se'min). A sterile solution of cocain and adrenalin hydrochlorids.
- eusomphalus** (u-som'fa-lus). A double monster of which each individual performs its vital functions independently of the other and has its own umbilicus. [Gr., *eu*, good, + *omphalos*, the navel.]
- eustachian** (u-sta'ke-an). See *e. tube* and *e. valve*, under *tube* and *valve*. [Discovered or described by *Bartolommeo Eustachio*, Italian anatomist, 1500-1574.]
- Eustrongylus** (u-strong'il-us). A nematode worm; a genus of the *Strongylidae*. **E. gigas**. Syn.: *E. visceralis*, *Dioclophyme renale*. A species found in the kidney of many of the lower animals, but rarely in man. The eggs are sometimes present in the urine. [Gr., *eu*, good, + *stroggylos*, round.]
- euthanasia** (u-than-a'se-ah). An easy, peaceful or painless death. [Gr., *eu*, well, + *thanatos*, death.]
- euthenics** (u-then'iks). Race betterment through environmental control.
- euthymol** (u-thi'mol). A certain proprietary antiseptic combination.
- eutocia** (u-to'she-ah). An easy parturition, unattended with any deviation from the natural course of events. [Gr., *eutokia*.]
- eutrophia** (u-trof'e-ah). Good and abundant nutrition. [Gr., *eu*, well, + *trephein*, to nourish.]
- eutroph'ic**. 1. Nutritious. 2. Well-nourished.
- eutropon** (u-tro'pe-on). Inversion.
- euzyodynamia** (u-zo''o-di-nam'e-ah). Of Gilbert, integrity of the vital forces and perfect functional regularity. [Gr., *eu*, well, + *zoon*, a living being, + *dynamis*, power.]
- evacuant** (e-vak'u-ant). Causing evacuation, purgative, or cathartic, as an e. remedy. [Lat., *evacuans*.]
- evacuation** (e-vak-u-a'shun). 1. The act of removal of the contents of a cavity. It is often used to signify the emptying of the rectum and in this sense is synonymous with alvine e. 2. Matter discharged from the rectum.
- evacuator** (e-vak'u-a-tor). A mechanical device for washing calculus *débris* out of the bladder in the operation of lithotomy. See *litholapaxy*.
- evagination** (e-vaj-in-a'shun). Protrusion of a part or organ.
- evaporate** (e-vap'o-rât). 1. To convert from a solid or liquid state into a gaseous, by means of slow artificial or natural heat.
2. To undergo such a conversion. 3. To thicken a mixture by driving off more or less of its volatile constituents by means of heat. [Lat., *evaporare*.]
- evaporation** (e-vap-o-ra'shun). The act or process of evaporating. **e. in vacuo**. A process of evaporating extracts in an exhausted receiver, which may be accomplished more rapidly and at a lower temperature than by the ordinary process. [Lat., *ex*, out of, + *vapor*, steam.]
- evaporatorium** (e-vap''o-ra-to're-um). An evaporating apparatus.
- evaporometer** (e-vap-o-rom'et-er). See *atmometer*. [Lat., *evaporare*, to evaporate, + Gr., *metron*, a measure.]
- eventration** (e-ven-tra'shun). 1. A partial protrusion of the contents of the abdomen between the two recti muscles, in consequence of their separation. 2. A hernia appearing at any point of the anterior or lateral surfaces of the abdomen, outside of the recti muscles. [Lat., *eventratio*, from *e*, out of, + *venter*, the belly.]
- eversion** (e-ver'shun). A turning outward or inside out. [Lat., *eversio*.]
- evert** (e-vert'). To turn inside out. [Lat., *e*, out, + *vertere*, to turn.]
- e'vil**. A popular term for certain diseases.
- Aleppo e.** See *Oriental sore*. **fox e.** Baldness. See *alopecia*. **joint e.** A term used in the West Indies for mutilating leprosy. **king's e.** See *scrofula*.
- evisceration** (e-vis-er-a'shun). The act of taking out the viscera, of disemboweling. [Lat., *ex*, out of, + *viscera*, the viscera.]
- Evodia** (e-vo'de-ah). A genus of the *Rutaceae*. **E. fraxinifolia**. A species furnishing a pale yellow oil said to have the power of masking the odor of iodoform.
- evolution** (ev-o-lu'shun). 1. The gradual development of an organism or of one or more of its parts. 2. Of Darwin and others, the supposed process of gradual change by which new species arise and low organisms are converted into higher ones in the course of long periods of time. 3. Of the uterus, its growth and development during pregnancy (the opposite of *involution*). 4. In chemistry, the gradual liberation of a substance (e. g., a gas) from a compound. 5. In obstetrics, see *spontaneous e. doctrine of e.* 1. The theory of the origin of species by the gradual change of lower forms of life through internal agencies, as distinguished from environment. 2. The theory in embryology which holds that the embryo exists preformed in some way in the ovum. **spontaneous e.** The delivery of a small child from a large pelvis, in spite of an abnormal presentation, e. g., a child in transverse presentation is occasionally delivered by spontaneous e. without spontaneous version, provided the child is very small and the pelvis very large. [Lat., *evolvere*, to unroll.]
- evulsion** (e-vul'shun). forcible extraction. [Lat., *e*, out, + *vellere*, to push.]
- ex-**. A prefix from the Gr. and Lat. *ex*, out of.

exacerbation (ex-as-er-ba'shun). A temporary aggravation of the symptoms of a disease. [Lat., *acerbus*, harsh.]

exalgin (ex-al'jin). Methyl acetanilid, $C_9H_{11}NO$, a derivative of the aromatic series, prepared by the action of methyl iodid on sodium acetanilid. It is closely allied to antipyrin in its physiological action, but is said to be less actively analgetic. [Lat., *ex*, priv., + Gr., *algos*, pain.]

exaltation (ex-awl-ta'shun). A mental excitement with euphoria and phantasy thinking.

examination (ex-am-i-na'shun). The action of investigating the nature, qualities, or condition of any object by means of the senses. **bimanual e.**, **combined e.**, **conjoined e.** The e. of a part, e. g., the uterus, with both hands. In the case of the uterus, one hand is laid on the abdomen and the finger or fingers of the other hand in the vagina. **dark ground e.** An apparatus making visible very minute particles, even one millicor or one millionth of a millimeter ($1/1000$). This is effected by means of an intense lateral illumination, the object refracting the light and showing as dark spots on a dark field. It is used to examine fresh specimens of the serous exudation from syphilitic lesions for the *Spirocheta pallida*. **digital e.** An e. with the finger. **e., blood, how to make, see in appendix, page 898.** **e., chemical, of cerebrospinal fluid, see in appendix, page 909.** **e., chemical, of stomach contents, see in appendix, page 903.** **e., macroscopic, of cerebrospinal fluid, see in appendix, page 909.** **e., macroscopical, of stomach contents, see in appendix, page 903.** **e., macroscopic, of stool, see in appendix, page 905.** **e., microscopical, of cerebrospinal fluid, see in appendix, page 909.** **e., microscopic, of stomach contents, see in appendix, page 904.** **e., microscopic, of stool, see in appendix, page 906.** **e. of pleural and ascitic fluid, see in appendix, page 911.** **e. of sputum, macroscopic, see in appendix, page 901.** **e. of sputum, microscopic, see in appendix, page 902.** **e. of vaginal smears, see in appendix, page 911.** **e., sputum, how to make, see in appendix, page 901.** **e., stool, how to make, see in appendix, page 905.** **external e.** 1. Physical e. from without. 2. See *inspection*. **instrumental e.** An e. by means of instruments. **internal e.** An e. of the interior of a part by means of the finger or an instrument inserted within the body. **manual e.** An e. with the hand. **microscopical e.** E. with the microscope. **oral e.** The e. of a patient by word of mouth as opposed to written examination. **physical e.** E. by means of sight, hearing, smell, touch, as distinguished from interrogation. **post mortem e.** The e. of a dead body, especially with the object of discovering the cause of death. [Lat., *examinatio*, from *examinare*, to examine.]

examination (ex-an-im-a'shun). 1. Swoon-

ing. 2. Death. [Lat., *ex*, priv., + *anima*, soul.]

exanthem, exanthema (ex-an'them, ex-an-the'mah). Pl. *exanthemata*. An efflorescence, eruption, or rash, occurring in the course of a specific infectious disease, such as scarlet fever, measles, or smallpox. *Exanthemata*, the plural, is more chiefly used and signifies the following diseases: scarlet fever, measles, German measles, smallpox, typhus, vaccinia, varicella. [Gr., *exanthena*, from *ex*, out, + *anthein*, to blossom.]

exarteritis (ex-ar-ter-i'tis). Inflammation of the outer coat of an artery.

exhibition (ex-bib-ish'un). The passage of fluids out of a body, as opposed to imbibition. [Lat., *ex*, out, + *bibere*, to drink.]

excavatio (ex-ka-vah'te-o). See *excavation*. **e. Douglasii**. See *recto-uterine pouch*. **e. ischio-rectalis, e. perinei, e. recto-ischiadica**. See *ischio-rectal fossa*, under *fossa*. **e. recto-uterina**. Douglas's pouch in the female. **e. rectovaginalis fasciae pelvis**. The pouch formed by the pelvic fascia in the middle line, between the vagina and the rectum. **e. rectovesicalis**. See *rectovesical pouch*, under *pouch*. **e. vesico-uterina**. See *vesico-uterine pouch*, under *pouch*. **e. vesico-vaginalis fasciae pelvis**. The pouch formed by the pelvic fascia in the middle line, between the bladder and the vagina.

excavation. 1. The act of making a hollow. 2. A hollow. [Lat., *excavare*, to hollow out.]

excavator (ex'kav-a-tor). A hand tool with a delicate blade, used in dentistry for removing carious dentin and for shaping cavities.

excerebration (ex-ser-e-bra'shun). The operation of removing the brain of the fetus, in order to diminish the size of the head, and thus render delivery possible, in cases of great disproportion. [Lat., *ex*, out, + *cerebrum*, the brain.]

excernant (ex-ser'nant). See *excretory*. [Lat., *excernere*, to sift out.]

excipient (ex-sip'i-ent). Any indifferent substance serving to give form, consistence, etc., to a medicinal substance blended with or dissolved in it, particularly a pill mass. [Lat., *excipere*, to receive.]

excision (ex-sish'on). The action or process of cutting off or out of any part of the body. [Lat., *excision*, from *ex*, out, + *cedere*, to cut.]

excitability (ex-si-ta-bil'it-e). Capability of being excited; sensitiveness to stimulation. **independent e.** The power possessed by a muscle of responding to a stimulus applied directly to its substance without the intervention of its motor nerves. **reflex e.** Sensitiveness to reflex irritation. [Lat., *excitabilitas*.]

excitant (ex-si'tant). Stimulating the action of any of the organs, especially that of the nervous system; as a remedy so acting. [Lat., *excitare*, to rouse.]

- excitation** (ex-si-ta'shun). The production of excitement, also a state of excitement, especially of the nervous system.
- excitement** (ex-sit'ment). 1. In general, the state of being excited. 2. Of Cullen, the reestablishment of the normal activity of the brain on waking or on emerging from any pathological state of the cerebral functions.
- exciting** (ex-sit'ing). 1. Causing excitement. 2. Of the causes of disease, acting immediately, as opposed to remotely.
- excit'tomo'tor**, **excit'tomoto'ry**. Exciting muscular action (said of drugs and of particular portions of the nervous system).
- excit'tosecre'tory**. Tending to produce secretions, especially by impressions reflected from some other part of the body, as the secretion of tears excited by mental emotions.
- excit'tovasomo'tor**. Allowing stimuli to reach the vasomotor centers and thus give rise to a constriction of the blood vessels and consequently an increased arterial blood pressure; said especially of an afferent nerve.
- exclave** (ex'klāv). A detached part of an organ. [Lat., *ex*, out, + *clavis*, key.]
- exclusion** (ex-klū'shun). 1. A shutting out, as of germs from a wound. 2. The process of discovering the nature of a disease by disproving successively all the other conceivable hypotheses is called diagnosis by exclusion. [Lat., *excludere*, to shut out.]
- excoriation** (ex-ko-ri-a'shun). An abrasion of a portion of the skin or of the coating of any organ of the body. [Lat., *ex*, out, + *corium*, the skin.]
- excrementitial**, **excrementitious** (ex-kre-men-tish'al, ex-kre-men-tish'us). Of the nature of excrement. [Lat., *excrementitius*.]
- excrementum** (ex-kre-men'tum). Excrement. **excrementa cerebri**. Syn.: *purgamenta cerebri*. The nasal discharge. **menstruum e.**, **menstruum e.** The menstrual discharge.
- excrecence** (ex-kres'ens). A morbid outgrowth from a cutaneous or mucous surface; in botany, a nodule or embryo bud on the surface of a stem, a gall, etc. **cauliflower e.** Soft cancer of the cervix uteri. **fungating e.**, **fungous e. of the umbilicus**. Syn.: *granuloma of the umbilicus*, *warty tumor of the umbilicus*, *vascular polypus of the umbilicus*. An exuberant nipplelike fungous growth springing from the umbilicus after the separation of the umbilical cord. **horny e.** See *cornu cutaneum*. **papillary e's of the membrana tympani**. Light red papillae, of varying size, occurring singly or in groups, or in great numbers spread over the whole surface of the tympanic membrane. They are a somewhat uncommon result of chronic myringitis. **warty e.** See *condyloma*. [Lat., *ex*, out, + *crescere*, to grow.]
- excrement** (ex-kres'cent). Having the form of an excrecence.
- excreta** (ex-kre'tah). Matters voided from the body, especially the urine and feces.
- excretin** (ex'kre-tin). A non-nitrogenous crystalline body, resembling cholesterolin, obtained from human feces, by exhausting with alcohol and precipitating with milk of lime. It is probably impure cholesterolin.
- excretion** (ex-kre'shun). A secretion which is passed to the exterior and contains waste material. [Lat., *excretio*.]
- excretory** (ex'kre-to-re). Pertaining to or performing excretion.
- exencephalia** (ex-en-sef-al'e-ah). A generic term for meningocele, encephalocele, hydrancephalocele, and synencephalocele; a malformation in which a portion of the cranial contents lies outside the skull. **complete e.** That form in which there is no proper tumor, but the skull is wholly or in great part membranous. [Gr., *ex*, without, + *egkephalos*, the brain.]
- exercise** (ex'er-sis). The voluntary use of any power or faculty; as commonly used, systematic muscular exertion for the benefit of the health. **e. bone**. A bone developing in a muscle, a tendon, or fascia as a result of trauma, e. g., an e. b. of the deltoid caused by the rifle coming forcibly in contact with the musket during drill. **passive e.** E. in which the body is subjected to movements imparted from without, the only voluntary exertion made being such as is required to maintain the balance and the posture. [Lat., *exercitatio*.]
- exflagellation** (ex-flaj-el-a'shun). The extrusion from the body of the male malarial parasite of actively motile threads, or flagellated bodies, one of which enters and fertilizes the female form. [Lat., *ex*, out, + *flagellum*, a switch.]
- exfolia'tio area'ta lin'guae**. Syn.: *transitory benign plaques of the tongue*. A disease of the mucous membrane of the tongue characterized by round or gyrate patches of a reddish color denuded of epithelium, and surrounded by a narrow border of yellowish, apparently thickened epithelium. The disease has been most commonly observed in children, but occurs also in adults. It differs from leukoplakia buccalis chiefly in the tendency of patches to change rapidly from place to place and to disappear suddenly.
- exfoliation** (ex-fo-le-a'shun). The separation of dead tissue (e. g., the epidermis or a superficial portion of bone) in the form of flakes or sheets. [Lat., *exfoliare*, to strip off leaves.]
- exhalation** (ex-ha-la'shun). 1. The giving off of finely divided or vaporous substances, as of water and carbon dioxide, from the lungs, from the skin, etc. 2. Expiration. **pulmonary e.** 1. Air expired from the lungs. 2. The watery vapor excreted by the lungs and sent out with the expired air. [Lat., *exhalare*, to breathe out.]
- exhaustion** (ex-hawst'yun). 1. In pharmacy, the process of dissolving out one or more of the constituents of a crude drug by maceration or percolation. 2.

A state of prostration of the vital forces.
heat e., solar e. See *insolation*. [Lat., *ex*, out, + *haurire*, to drain.]
exhibition. The administration or employment of a particular remedy. [Lat., *exhibitio*, from *exhibere*, to display.]
exhibitionism (ex-hib-ish'un-izm). A sexual characteristic to display the genitals in the presence of other persons; normal in infancy, but repressed in later life and showing itself in various sublimated forms in health, and in actual infantile form in disease.
exhilaration (ex-il-ar-a'shun). 1. A condition of moderate exaltation of the mental and bodily powers, accompanied with a feeling of content and often with a tendency to boisterousness; often seen in the first stage of the action of alcohol and after a refreshing bath, etc. 2. The production of such a condition. [Lat., *exhilarere*, to gladden.]
Exner's color figures. Figures which are formed by homogeneous red, green and blue light falling interruptedly upon the retina.
exo-. A prefix from the Gr., *exo*, without, outside of.
exodic (ex-od'ik). See *effluent*. [Lat., *exodicus*, from Gr., *ex*, away from, + *odos*, a path.]
exodin (ek'so-din). A proprietary mixture of derivatives of rufgallic acid. It is said to induce catharsis without causing pain.
exogamy (ex-og'am-e). Marriage outside of the family. Systems of precautions taken to prevent incestuous relationships. [Gr., *ex*, out, + *gamos*, marriage.]
exogenous (ex-oj'en-us). Originating without. In physiology, the converse of endogenous. [Gr., *exo*, without, + *genan*, to produce.]
exognathion (ex-og-na'the-on). The alveolar process of the superior maxilla.
exophoria (ex-o-fo're-ah). A tendency toward an outward deviation of the axis of the eye. [Gr., *exo*, outward, + *pherein*, to bear.]
exophoric. Having exophoria.
exophthalmia. Abnormal protrusion of the eyeball. **e. cachectica.** See *exophthalmic goiter*. **e. fungosa.** A late stage of glioma retinae, after the malignant growth has filled the eyeball and caused a perforation of the cornea or anterior portion of the sclera. The growth then protrudes, proliferates very rapidly, and gives a fungous appearance to the front of the eyeball. [Gr., *ex*, out, + *ophthalmos*, the eye.]
exophthalmic goiter (ex-of-thal'mik goy'ter). A disease characterized by an enlarged thyroid gland accompanied by protrusion of the eyeballs, rapidity of the heart's action, anemia, muscular weakness and tremor.
exophthalmos, exophthalmus (ex-of-thal'mos, ex-of-thal'mus). Abnormal protrusion of the eye. **pulsating e.** A disease of the orbit characterized by protrusion of the eyeball, subjective noises over the region of the orbit and the cranial

bones in the vicinity, and visible pulsation in the eyeball or the anterior portion of the orbital aperture; due either to a disease of the blood vessels in the orbit or in the cranial cavity, or in rare instances to some obstruction to the venous current through the cavernous sinus. [Gr., *ex*, out of, + *ophthalmos*, eye.]
exosmometer (ex-os-mom'et-er). See *endosmometer*.
exosmose (ex'os-mös). In osmosis, the passing of a current outward through a membrane. [Gr., *exo*, outside, + *osmos*, a thrusting.]
exosmotic, exosmic (ex-os-mo'tik, ex-os-mik). Pertaining to exosmosis.
exospore (ek'so-spör). A spore arising from the terminal end of a hypha by budding. See *spore*.
exostosis (ex-os-to'sis). A morbid bony outgrowth or enlargement projecting outward from the surface of a bone or a tooth. [Gr., *ex*, out, + *osteon*, a bone.]
exothermic (ex-o-ther'mik). In chemistry, a chemical reaction with the production of heat. [Gr., *exo*, without, + *thermos*, hot.]
exot'ic. Not indigenous; of foreign origin. [Gr., *exotikos*.]
exotospore (ex-o'to-spör). The needle-shaped form of the spore of the malarial parasite which is introduced by the agency of the mosquito into the human body.
exotoxic (ek-so-toks'ik). Produced by a toxin not a part of the organism itself. [Gr., *exo*, outside, + *toxic*.]
exotoxin (ek-so-toks'in). A soluble bacterial toxin which is excreted into the surrounding fluid or tissues by the bacterium during its life, as the toxin produced by the diphtheria bacillus. [Gr., *exo*, outside, + *toxin*.]
exotropia (ex-o-tro'pe-ah). Outward deviation of the axis of the eye. Divergent strabismus. [Gr., *exo*, outward, + *trope*, turning.]
expansion (ex-pan'shun). A spreading out; increase in volume. **coefficient of e.** The increase in length (linear e.) or in volume (cubical e.) of a substance, when its temperature is raised 1° C. from zero. **linear e.** Elongation by e. **muscle e.** The degree to which a muscle is stretched by an attached weight. [Lat., *expansio*, from *expandere*, to spread out.]
expectant. Characterized by waiting. **e. treatment.** See under *treatment*. [Lat., *expectans*, p. ppl. of *expectare*, to look frequently.]
expectation (ex-pek-ta'shun). The expectant method of creating disease. **e. of life.** In life insurance, the length of time that a person of a given age and in good health may be expected to live.
expectorant (ex-pek'to-rant). Promotive of expectoration.
expectoration (ex-pek-to-ra'shun). 1. The act of expelling from the mouth matter which has been brought to it from the lungs or from the passages which lead to them. 2. See *sputum*. **prune juice e.** The peculiar sputum of pneumonia, es-

- pecially when the disease is hastening to a fatal termination. It is less abundant, less tenacious, and darker in color than the ordinary rusty sputa of pneumonia. [Lat., *ex*, out, + *pectus*, breast.]
- experiment** (ex-per'im-ent). A trial, test; the careful and methodical observation of what takes place under conditions that have been arranged for the purpose of eliminating all sources of error in deduction so far as possible. **check e.**, **control e.** An e. consisting in the repetition of a previous e., the conditions being changed in some particular so as to prove the validity of the inference drawn from the first e. **croaking e.** The production of a croak in a male frog, deprived of its cerebrum, by gently pressing the flanks. [Lat., *experiri*, to try.]
- experimen'tal.** Pertaining to, or derived from, experiment or experience.
- experimenta'tion.** The performance of experiments.
- experimen'tum.** See *experiment*. **e. crucis.** See *crucial test*, under *test*.
- ex'pert.** A person reputed to have special knowledge of a particular subject. [Lat., *expertus*, from *experiri*, to be experienced.]
- expiration** (ex-pi-ra'shun). Breathing out, exhalation. The act of expelling the air from the lungs. In ordinary tranquil breathing, e. is accomplished (*a*) by gravity and the elasticity of the thorax, both of which tend to bring the ribs back to the position occupied before inspiration; (*b*) by the elasticity of the lungs; (*c*) by the elasticity of the abdominal walls and viscera which arch the relaxed diaphragm back into the thorax. In this way the thorax is narrowed in its three diameters and the air is forced from the lungs. **forced e.**, **forcible e.**, **labored e.** Expiratory movements in which the ordinary expiratory efforts due to the elasticity of the lungs, thorax, and abdomen are assisted and increased by the so-called expiratory auxiliaries, i. e., the abdominal and part of the thoracic muscles. If the respiratory movements become excessively labored there is brought into coördinate action every muscle in the body which can either directly, or indirectly, by giving fixed support to other muscles, lessen the cavity of the thorax, and thus force the air from the lungs. [Lat., *ex*, out, + *spirare*, to breathe.]
- expiratory** (ex-pi'ra-to-re). Pertaining to expiration. **e. center.** See under *center*.
- expired** (ex-pi'rd'). Breathed out; given off from the lungs.
- exploration** (ex-plo-ra'shun). The examination of an organ, a wound, or a sinus by the use of some physical appliance, such as the finger, a probe, or a sound. [Lat., *explorare*, to search out.]
- explosion** (ex-plo'shun). 1. A noisy and violent commotion from the bursting of a receptacle containing gas or liquid under pressure or from the sudden evolution of gas in consequence of chemical action precipitated by ignition or concussion. 2.
- In medicine, the sudden occurrence of symptoms (e. g., convulsions). [Lat., *explodere*, to drive away.]
- exposure** (ex-po'siur). 1. A laying bare to view, to the sun, to the action of cold, etc.; a divesting of the ordinary clothing so as to lay a part open to observation. 2. Subjection to the danger of infection. [Lat., *exponere*, to lay bare.]
- expulsion** (ex-pul'shun). The action of expelling or driving out by force. [Lat., *expulsio*, from *expellere*, to expel.]
- expul'sive.** Tending, or having the power, to expel. In obstetrics, serving to expel the uterine contents; said of the pains of labor. In pharmacology, diaphoretic.
- exsanguination** (ex-san-gwin-a'shun). Deprivation of blood (as in the process of squeezing the blood from a limb toward the trunk by bandaging). [Lat., *ex*, out, + *sanguis*, blood.]
- exsan'guine**, **exsanguin'eous.** Deprived of, or destitute of, blood.
- exsanguinity** (ex-san-gwin'it-y). The state of being exsanguine.
- excise** (ex'ik-kät). To dry, to make dry, to remove moisture from. [Lat., ppl. stem of *excicare*, to dry up.]
- excisa'tion.** See *dessiccation*.
- excis'cative.** See *dessicative*.
- excis'icator.** See *dessicator*.
- expirator** (ex-spi-ra'tor). A large flask with a stopcock devised by Vierordt to receive expired air for analysis.
- exstrophy** (ex'stro-fe). 1. That state of a hollow organ in which it is turned inside out. 2. A malformation in which the interior of a hollow organ (e. g., the bladder) is exposed by a defect of the abdominal wall. 3. Of the eyelid, see *ectropion*. [Gr., *ex*, outward, + *strephein*, to turn.]
- exsuccous** (ek-suk'kus). Without juice. [Lat., *ex*, priv., + *succus*, juice.]
- exsuction** (ek-suk'shun). A sucking out, as of a poison, from a wound. [Lat., *exsugere*, to suck out.]
- exsufflatio** (ex-suf-flah'te-o). Forcible expiration.
- extemporaneous** (ex-tem-po-ra'ne-us). Of a prescription, devised for the occasion, and not according to a standing formula. Of a pharmaceutical preparation, one which must be prepared as required, owing to its tendency to deteriorate on standing, e. g., infusions. [Lat., *ex*, without, + *tempus*, time.]
- exten'sion.** 1. A straightening, as of the limbs. 2. A stretching, as of a limb for reducing a fracture or a dislocation. 3. In obstetrics, a backward inclination of the head of the fetus by which the chin is thrown away from the sternum. [Lat., *extensio*, from *extendere*, to stretch out.]
- exten'sor.** A muscle that acts to extend a part. For the different extensor muscles, see *table of muscles*.
- extergent.** See *detergent*.
- exterioration** (ex-te-re-o-ra'shun). 1. The mental faculty by which the image of an object seen is referred to the actual situation of the object. 2. The physiological process by which a painful impression on

a nerve coming from a stump is referred to the amputated part.

exteriority (ex-te-re-or'it-e). The mental perception resulting from exterioriation.

ex'tern, ex'terne. An advanced student or recent graduate, living outside the hospital, who assists in the surgical or medical care of the patients. [Fr., *externe*, outside, a day scholar.]

extinction (ex-tink'shun). 1. The eradication or destruction of anything. 2. The act or process of extinguishing mercury by reducing it by trituration with a suitable substance to such a fine state of subdivision that the globules are no longer visible to the naked eye and have no tendency to run together. 3. Of lime, the process of slaking (unusual). 4. The state or condition of being extinguished. [Lat., *extinctio*, from *extingere*, to extinguish.]

extirpation (ex-tir-pa'shun). Plucking out by the roots. Thorough removal. [Lat., *extirpatio*, n. of action, from *ex*, out, + *stirps*, stock.]

extra-. A prefix from the Lat., *extra*, outside of, lying outside of.

extracellular (ex-trah-sel'lu-lar). Pertaining to a physiological process going on, or a part existing outside the cells of the organism in contradistinction to what goes on within cells or what is composed of cells (e. g., e. digestion, in contradistinction from intracellular digestion).

extract (ex'trakt). A preparation, soft, hard, or dry, obtained by the evaporation of either the natural juice pressed out of fresh herbs or other parts of plants, or of a solution obtained by treating vegetable or animal substances with a liquid, such as water, alcohol, or ether, which can be evaporated. E's are made by maceration, digestion, or infusion with hot or boiling water, and sometimes by boiling in water with repeated stirring, pressing the liquid out between strong tin plates, and then evaporating it, generally over a water bath, to the desired consistence. Sometimes the evaporation is conducted *in vacuo*. E's prepared from plant juices are usually termed inspissated juices.

acetic e. An e. prepared by exhausting the drug with an acetic solution.

alcoholic e. An e. prepared by exhausting the powdered drug with alcohol.

aqueous e. An e. formerly made by boiling the drug with water and expressing, but more recently, according to nearly all the pharmacopœias, by infusing or percolating with water.

ethereal e. See *oleoresin*.

fluide. An e. consisting, according to the U. S. Ph., of a permanent concentrated solution of a vegetable drug made of such a strength that, in the U. S. Ph., 1 cubic centimeter contains the medicinal principles and represents the virtues of 1 gram of the drug. The U. S. Ph. now employs the term "fluid-extract" for this class of preparations; but the term is little used popularly.

green e. An e. prepared from the plant while it is green.

hydro-alcoholic e. An e. made with a mixture of alcohol and

water. **liquid e.** See *fluide*.

saccharated e. Of Hallberg, an e. made by triturating the dry extractive matter of a drug with enough milk sugar to give it the same weight as that of the drug employed. [Lat., *ex*, out, + *trahere*, to draw.]

extractiform (ex-trak'te-form). Resembling, or of the nature of, an extract. [Lat., *extractum*, extract, + *forma*, form.]

extract'ion. A drawing out, as of a tooth, a hair, the crystalline lens, a foreign body, etc.; in obstetrics, the manual or instrumental removal of the fetus, especially by the pelvic pole; in pharmacy, the process of making an extract. [Lat., *ex*, out, + *trahere*, to draw.]

extract'ive. 1. A name given in a chemical analysis of an organic substance to matters present in small quantity and of indeterminate composition which can be extracted or removed by solvents. 2. A substance (also called *extract* and *e. matter*) present in most vegetable extracts, and either occurring already formed in the vegetable tissues, or else produced at the time of preparation of the extract by the interaction of the other ingredients. It is at first soluble in water and alcohol, but by evaporation, and by heating in the presence of air, it becomes insoluble.

extractum (ex-trak'tum). See *extract*.

e. aetherum. Of the Br. Ph., an oleo-resin.

e. aromaticum. An extract made by exhausting aromatic powder with alcohol.

e. fluidum. See *fluidextract*.

e. liquidum. See *fluidextract*.

e. siccum. A dry extract; an extract which can be reduced to a powder.

e. spirituosum. See *alcoholic extract*.

e. spissum. An extract so thick that it will not run [Ger. Ph.].

e. tenue. An extract of the consistence of honey.

extrapolar (ex-trah-po'lar). Situated, in general, outside instead of between poles; in particular, the poles or electrodes of a battery.

extrastomachal (ex-trah-stom'ak-al). Taking place elsewhere than in the stomach (said of digestion).

ex''tra-u'terine preg'nancy. See under *pregnancy*.

extravasated. Having escaped from its proper receptacle; said of liquids, etc., poured out from the blood vessels, etc.

extravasation (ex-trav-as-a'shun). The escape of an organic fluid from its proper vessels into the surrounding tissues. The blood or other substances that have escaped. [Lat., *extra*, without, + *vas*, vessel.]

extremitas (ex-trem'it-as). See *extremity*.

extremitates abdominales. The lower limbs. **extremitates pectorales**, **extremitates superiores**, **extremitates thoracicae**. The upper limbs. [Lat., from *exter*, outer.]

extremity (ex-trem'it-e). 1. The terminal portion of anything. 2. Of the animal organism, a limb. [Lat., *extremitas*.]

extrin'sic. Situated or coming from with-

out; of muscles, attached partly to the trunk and partly to a limb. [Lat., *extrinsecus*, from *extra*, outside, + *secus*, otherwise.]

extrusion (ex-tru'shun). A forcing out, an expulsion. [Lat., *extrudere*, to squeeze out.]

extubation. The removal of an intubation tube.

exudate (ek'su-dāt). Material thrown out by exudation, as a pleural e.

exudation (ek-su-da'shun). An oozing out; in pathology, one of the phenomena of inflammation, in which serum, liquor sanguinis, or corpuscular elements permeate the walls of the blood vessels of the part, without rupture, into the surrounding tissue or upon the free surface of the inflamed structure. [Lat., *ex*, out, + *sudare*, to sweat.]

ex'udative. 1. Having the property of exuding. 2. Accompanied with or giving rise to exudation (said of inflammation).

eye. 1. The organ of vision, situated in the orbit. It consists of the eyeball, bulb or globe of the eye, the prolongation of the optic nerves, and the six extrinsic muscles, four straight and two oblique. It is a spherical body, and consists of three tunics; 1st. cornea and sclera; 2d. iris, ciliary processes, and choroid; 3d. retina. Within these tunics are contained three refracting media, the aqueous humor, lens and capsule, and vitreous humor. The cornea and sclera are fibrous in structure and form the outer coat; the middle coat, formed of iris, ciliary processes, and choroid, is mainly a muscular, vascular, and pigmented coat, while the retina is mainly a nervous structure, being an expansion of the optic nerve fibers [B. N. A., *oculus*]. **amaurotic cat's e**. See *amaurosis*. **artificial e**. An e. usually made of glass or porcelain, but sometimes of hard rubber or celluloid. It is inserted in the orbit from which the eyeball has been removed, or, in cases where the stump still remains, for purely cosmetic

purposes. **compound e's**. The e's of insects, etc., which consist of a large number of simple e's coalesced into one mass. **crab's e**. See *astacolith*. **cylindrical e**. That defective refraction of one or more meridians of the e. which requires correction by cylindrical lenses. **devil's e's**. *Stellaria holostea*. **diagrammatic e**. An ideal e. constructed by Listing for the more convenient calculation of the passage of rays of light. **e'ball**. The eye proper, as distinguished from its accessories [B. N. A., *bulbus oculi*]. **e.-brow**. A fringe of hair growing above the eye [B. N. A., *supercilium*]. **e. current**. See under *current*. **e.-glass**. 1. A lens for improving the vision. 2. A small cup for applying liquids to the open eye. **e.-ground**. See *fundus oculi*, under *fundus*. **e'lash**. See *cilium*. **e'-lid**. The palpebra. See *lid* [B. N. A., *palpebra*]. **e. piece**. See *ocular*. **e'-stone**. A small shelly operculum used in domestic practice to remove foreign particles from the e. It is placed within the lids and allowed to work its way out, carrying the mote with it. **e'strain**. Excessive use of the eyes, especially of the accommodative mechanism, also any morbid condition attributed to it. **e.-winker**. See *cilium*. **luminous e**. A condition occasionally observed in the lower animals and more rarely in man, notably the negro, in which the eyes glow in the dark. **pink-e**. See *pink-eye*, under *separate head*. **reduced e**. An imaginary e. in which the compound dioptric system of the human eye is reduced to a single refracting surface, bounded anteriorly by air and posteriorly by aqueous or vitreous humor. When great accuracy is not required, this reduced eye may be made the basis of a number of considerations and calculations. **schematic e**. The reduced e. of Listing. **tabetic e**. An e. showing changes due to *tabes dorsalis*. **third e**. See *pineal gland*, under *gland*. **watery e**. See *epiphora*. [Ang.-Sax., *éage*.]

F

F. 1. The chemical symbol of the element fluorin. 2. An abbreviation for Fahrenheit. 3. Abbreviation for *fiat*, let there be made, or make.

Fa'ba. 1. A bean. 2. A genus of plants, referred by most authors to *Vicia*. **fabae arabicae**. Coffee beans. **fabae cacao**. Cacao beans, the seeds of *Theobroma cacao*. **f. calabarica**. The calabar bean. See *Physostigma*. **f. cathartica**. The seed of *Jatropha curcas*. **fabae coffeae**. Coffee beans. **fabae de Tonca**. The seeds of *Dipteryx odorato*. **f. Ignatii**. St. Ignatius bean. **f. mexicana**. The seed of *Theobroma Cacao*. **fabella** (fa-bel'ah). A sesamoid fibrocar-

tilage of the gastrocnemius. [Lat., *fabella*, little bean.]

Fabiana (fa-be-an'ah). A genus of South American solanaceous plants. **F. imbricata**. A species indigenous to Chile, known as *pichi*. The branches contain *fabianin*, a volatile oil, as well as a bitter resin; they are used in urinary affections and as a tonic and stomachic.

fabism (fa'bizm). A disease thought to be caused by eating various lentils, chiefly *Vicia faba*, and not infrequent in Italy. [Lat., *fabia*, a bean.]

face (fās). The anterior aspect of the head from forehead to chin; the side shown; facet. [Lat., *facies*, face.]

facet (fas'et). A small flattened surface.

articular f. 1. A small, flat, smooth articular surface for a bone. 2. A particular portion of an articular surface, differing in direction or contour from the rest of the surface. **auricular f.** The superficies auricularis of the sacrum or of the innominate bone. **capitular f's.** The f's on the vertebrae by which they articulate with the ribs. **corneal f's.** Circumscribed, flattened areas on the surface of the cornea where small phlyctenulae or ulcers have existed. **costocentral f's.** The surfaces upon the ribs which articulate with the bodies of two adjoining vertebrae. **jugular f.** A small irregular surface on the petrous portion of the temporal bone, internal to the stylo-mastoid foramen. [Fr., *facette*, dim. of *face*.]

facial (fa'se-al). Pertaining to the face. [Lat., *facialis*.]

facies (fa'se-ēz). 1. The general exterior appearance of anything. 2. The expression of the face, especially as an index of disease. **f. articularis.** An articular surface. **f. auricularis.** See *auricular facet*, under *facet*. **f. hippocratica.** A drawn, pinched, and livid appearance of disease, as seen just before death. So-called from having been first described by Hippocrates. **f. ovariana.** A facial expression seen in the late stages of large ovarian tumors. It consists of an anxious, careworn look, the face is pale and shriveled, there being wrinkles in the cheeks which make it look longer, the nostrils are wide and thin, and the space between the eyelids and the bony margin of the orbits is sunken. **f. tetanica.** A senile appearance of the face, seen in tetanus, due to the wrinkling of the skin of the forehead and the cheeks. **f. uterina.** The uterine surface of the placenta. [Lat.]

factitious (fak-tish'us). Artificial; made by art; not natural. [Lat., *factitius*, made by art.]

facultative (fak'ul-ta-tiv). Voluntary; not under compulsion; in bacteriology, capable of carrying on life in the presence of oxygen, as well as when oxygen is excluded by natural or artificial conditions. **f. aërobie.** An organism growing both with and without oxygen, but more favorably under the former conditions. **f. anaërobie.** An organism growing under both conditions, but more favorably without oxygen.

faculty (fak'ul-te). 1. The inherent quality or power of performing a certain physiological act; in the pl., *faculties*, the senses together with the mental attributes. 2. A collective term for the teachers in a university or in any department of a university; in popular language, the members of a profession. **affective faculties.** Capacity for emotional activities. **germinative f.** The intrinsic power of a germ to develop into a plant. [Lat., *facultas*, from *facere*, to do.]

faex medicinal'is. A synonym for yeast.

fagin (fa'jin). An alkaloid of unknown

composition, discovered by Buchner in the fruit of the beech tree; by some considered identical with pyremetine. [Lat., *fagus*, beech.]

fagopyrism (fag-op'ir-izm). Buckwheat poisoning. [Lat., *fagopyrum*, buckwheat.]

Fa'gus. The beech; a genus of cupuliferous trees. **F. silvatica**, **F. silvestris.** A species found in Europe and South America. The nuts yield a mild, pleasant oil.

Fahrenheit (fah'ren-hīt). Inventor of the first mercury thermometer. The thermometer invented by F. has the melting point of ice placed at 32° and the boiling point of water at 212°. **F's hydrometer.** A glass tube loaded with mercury like Baumé's hydrometer, and having a standard mark on the stem and a scale pan on the top. [G. D. *Fahrenheit*, 1686-1736, a German scientist.]

faint. A sudden temporary loss of consciousness.

faints. The latter portions of the distillate obtained on rectifying crude spirit of wine.

faithcure (fāth'kūr). A cure brought about by faith or emotional influences upon a patient, in contrast to one born of internal knowledge or convictions.

falcate (fal'kāt). Sickle-shaped. [Lat., *falx*, sickle.]

falciform (fal'si-form). Sickle-shaped. **f. ligament.** See under *ligament*. [Lat., *falx*, a scythe, + *forma*, shape.]

fallectomy (fal-ek'to-me). Cutting away a portion of the fallopian tube.

fall'ing. See *prolapse*.

fallopian tubes (fal-o'pe-an). The tubes leading from ovary to uterus.

falx (falks), pl., *falces*. Lit., a sickle or scythe; any structure of that shape. **f. cerebelli.** A vertical partition formed by the duplication of the inner layer of the dura which passes down between the hemispheres of the cerebellum. **f. cerebri.** The falciform process of the dura which separates the hemispheres of the cerebrum. [Lat., "a sickle."]

familial (fam-il'e-al). Relating to the family. [Lat., *familia*, family.]

fang. 1. A sharp-pointed tooth. 2. The root of a tooth. **poison f's.** In venomous serpents, two teeth in the upper jaw, one on each side, usually of considerable length, curved backward, and having their bases over or adjacent to the poison glands. They contain the excretory ducts of these glands, either in canals or longitudinal fissures, which terminate near the f's' points. **reserve f's.** The rudimentary or developed f's' found in the mucous sheath of the poison f's' of serpents, which take the place of the latter when they are shed. **venom f's.** See *poison f's*. [Ang.-Sax., *fōn*, to seize, to catch.]

fan'go (fahn'go). A variety of clay from the hot springs of Battaglio; used topically in rheumatism and gout. [It.]

fantascope (fan'tas-kōp). An apparatus for binocular vision. [*Fantasy*, + Gr., *skopein*, to view.]

farad (far'ad). The unit of electrical capacity. Symbol, Φ .

faradaic, faradic (far'ad-a'ik, far-ad'ik). Discovered by or relating to Faraday; pertaining to the induced electrical current.

Faraday's laws of electrolysis. 1. A 1. that electrolysis can not take place unless the electrolyte is a conductor. 2. That the electrolytic action is the same in all parts of the electrolyte. 3. That the same electric current decomposes quantities of the electrolytes directly proportional to their chemical equivalents. 4. The 1. that the quantity of an electrolyte decomposed is directly proportional to the quantity of electricity that passes through it; i. e., to the product of the strength of the current by the time during which it is acting. [*Michael Faraday*, Eng. physicist, 1791-1867.]

faradimeter (far-ad-im'et-er). An instrument for measuring farads of electricity. [*Faradic*, + Gr., *metron*, a measure.]

faradism, faradism (far'ad-izm, far'ad-izm). 1. The induced electrical current. 2. See *faradization*.

faradization (far'ad-iz-a'shun). The employment of the induced electrical current. **general f.** The methodical f. of the general surface of the body, beginning with the back and ending with the neck and head, one electrode being usually applied to the feet.

far'adopunc'ture. Puncture with a needle included in a faradic current.

farcinoma (far-se-no'mah). A farcy or glanders nodule. [Lat., *farcinium*, farcy, + Gr., *oma*, tumor.]

farcy (far'se). Glanders. **f. bullae.** A nodule in glands produced by the *Bacillus mallei*. [Fr., *farcin*.]

fareol (fa're-ol). A certain antipyretic and analgesic.

farina (far-e'nah). Meal, flour, or any like powder. **calcined f.** See *dextrin*. [Gr., *aliphiton*.]

farinaceous (far-in-a'shus). Consisting of, or made of, flour or meal. Having a mealy appearance; powdery. [Lat., *farinaceus*, from *farina*, flour.]

Farrant's solution. A mixture of equal volumes of thick gum arabic mucilage, glycerin, and cold saturated s. of arsenious acid; used for microscopic mounting.

fascia (fash'e-ah). A sheet of dense connective tissue, especially one serving as an investment for a muscle or a group of muscles. **abdominal fasciae.** The fasciae in the walls of the abdomen. **anal f.** A layer of connective tissue situated upon the levator ani muscle, continuous anteriorly with the posterior layer of the deep perineal f. **antibrachial f.** See *antibrachial aponeurosis*, under *aponeurosis*. **aponeurotic f.** See *deep f.* **axillary f.** A stout, fibrous membrane which commences at the lower border of the pectoralis major muscle and passes outward and backward across the axilla to its posterior border, where it unites with the sheaths of the latissimus dorsi and teres major muscles. **bicipital f.** See *semi-*

lunar f. **brachial f.** The f. about the muscles of the arm. **buccal f.** 1. The buccopharyngeal f. 2. The buccopharyngeal f. and the parotid f. taken as one structure and regarded as forming a deep and a superficial layer. **buccinator f.** That portion of the buccopharyngeal f. which covers the buccinator muscle. **buccopharyngeal f.** A f. which covers the external surface of the buccinator muscle, and is prolonged backward beneath the masseter muscle to the pterygo-maxillary ligament, whence it extends over the lateral wall of the pharynx and then joins with the deep cervical f. **cephalopharyngeal f.** A strong fibro-elastic submucous membrane surrounding the mucous membrane of the pharynx. **cervical f.** The deep and superficial fascia of the neck regarded as one structure; or, in a more restricted sense, the deep cervical f. **clavipectoral f.** A layer of f. continuous above with the superficial cervical f. and below with the pectoral f. **Colles' f.** See *superficial perineal f.* **Cooper's f.** See *f. propria of the scrotum*. **coracoclavicular f., costocoracoid f.** A strong triangular f. forming part of the anterior wall of the axilla. Its base is attached to the first rib, its apex to the coracoid process of the scapula, its superior border to the clavicle, its inferior border to the upper margin of the pectoralis minor muscle. It is continuous with the deep cervical f. and forms the sheath of the subclavius muscle. It is pierced by the cephalic vein, the thoraco-acromial vessels, and the lateral anterior thoracic nerve. **cremasteric f.** The layer of fibrous tissue which unites the loops of the cremasteric muscle. **cribriform f.** The portion of the superficial f. of the thigh which overlies the saphenous opening of the fascia lata. **crural f.** See *aponeurosis of the leg*. **deep cervical f.** The deep layer of the cervical f. or, according to some authorities an independent structure; a strong layer of fibrous tissue which lies beneath the platysma myoides and gives off a number of processes which invest the muscles and fascia of the neck. **deep f.** A membranous covering of muscles, also furnishing sheaths for the deep vessels and surfaces from which other muscles arise. **deep f. of the back.** A dense fibrous layer of f. which covers the superficial muscles of the back, and furnishes sheaths for them. **deep f. of the sole.** See *plantar f.* **deep f. of the thigh.** See *f. lata*. **deep perineal f.** The deep layer of the perineal f., a triangular, two-layered f. (the triangular ligament of the urethra) which fills in the front part of the outlet of the pelvis, lying on the deep surface of the crura of the penis and bulb of the urethra. **dorsal f.** The f. of the back. **dorsal f. of the foot.** A thin f. which passes down upon the dorsum of the foot. **dorsal f. of the hand.** See *dorsal aponeurosis of the metacarpus*, under *aponeurosis*. **epicranial f.** See *epicranial aponeurosis*. **external sper-**

matic f. See *intercolumnar f.*, *abdominalis subcutanea*, *f. abdominalis superficialis*. The subcutaneous cellular tissue on the anterior surface of the abdomen. **f. abdominalis transversalis**. See *f. transversalis*. **f. adiposa renum**. The adipose areolar tissue which surrounds the kidney and holds it in place. **f. clavicularis**. The clavicular portion of the coracoclavicular *f.* **f. coracocostalis**. That portion of the coracoclavicular *f.* covering the pectoralis minor muscle. **f. dentata (hippocampi, seu Tarini)**. A band of gray matter seen on the outer wall of the descending cornu of the lateral ventricle of the brain, beneath the corpus fimbriatum. It corresponds to the edge of the dentate convolution. **f. dentata cinerea**, **f. denticulata**. See *f. dentata*. **f. endothoracica**. The layer of dense connective tissue which unites the costal pleura with the walls of the thorax. **f. epicrania**. See *epicranial aponeurosis*. **f. infraspinata**. A strong, tendonous *f.* which covers the infraspinatus and teres minor muscles where they are not covered by the deltoid muscle. **f. ischioprostatica**. The transverse ligament of the pelvis. See *deep perineal f.* **f. lata (cruris, or femoris)**. The stout fibrous tissue which invests the free surfaces of the muscles of the thigh. The *f. lata* is usually divided into two portions—the iliac, lateral to, and the pubic, medial to, the saphenous opening, below which the two unite. The upper part of the pubic portion passes behind the femoral vessels, and is continuous with the iliopsoas muscle and the capsule of the hip joint. **f. linguae**. The dense connective tissue which unites the muscles of the tongue with the mucous membrane. **f. medullaris**. A pyramid of the medulla oblongata. **f. nuchae**. A thin layer of *f.* immediately underlying the trapezius and rhomboidei muscles. **fasciae of origin**. The fasciae which serve for the origin of muscles. **f. of Scarpa**. A portion of the superficial *f.* which overlies the external abdominal ring. **f. of Tenon**. See *Tenon's capsule*, under *Tenon*. **f. palpebralis**. The subconjunctival tissue of the eyelids. **f. pectinea**. The pubic portion of the *f. lata*. **f. pectoralis profunda**. The deep layer of the pectoral *f.* **f. pectoralis superficialis**. The superficial layer of the pectoral *f.*, from which fibers of the platysma arise. **f. penis**. The layer of fibrous tissue which surrounds the penis. **f. pharyngis**. The pharyngeal portion of the buccopharyngeal *f.* **f. pharyngis interna**. The fibro-elastic layer beneath the mucous membrane of the pharynx. **f. pharyngobasilaris**. The fibrous membrane which fills in, on each side, the space between the superior constrictor of the pharynx and the inferior surface of the basilar portion of the occipital bone. **f. propria of the scrotum**. Syn.: *Cooper's f.* Of Sir Astley Cooper, the infundibuliform *f.*, together with the

areolar tissue immediately underlying it. **f. superficialis abdominis**. The superficial *f.* of the abdominal region. **f. suprahyoidea**. The portion of the superficial cervical *f.* above the hyoid bone. **f. temporalis profunda**. The deep layer of the temporal *f.* **f. temporalis superficialis**. The superficial layer of the temporal *f.* **f. transversalis**. The *f.* situated upon the posterior surface of the transversalis abdominis muscle. **f. transversalis umbilicalis**. A portion of the transversalis *f.* lying immediately behind the umbilicus. **f. triangularis**. See *triangular ligament*. **f. uncinata**. See *f. dentata*. **f. vaginalis bulbi**. See *Tenon's capsule*. **f. volaris**. See *palmar f.* **iliac f.** 1. An aponeurotic layer of *f.* which lines the back part of the abdominal cavity and covers the psoas and iliacus muscles. 2. The iliac portion of the *f. lata*. **iliopectineal f.** See *obturator f. infraspinosus f.* See *f. infraspinata*. **infundibuliform f.** An offshoot of the transversalis *f.* which passes down through the inguinal canal and forms one of the coats of the spermatic cord, lying beneath the cremasteric *f.*, and fused with the tunica vaginalis of the testicle. **intercolumnar f.** A thin *f.* derived from the margins of the external abdominal ring, and prolonged downward. **intercostal f.** A term applied indifferently to a layer of *f.* which covers the outer surface of the external intercostal muscles, to one lining the inner surface of the internal intercostal muscles, or to one separating the same muscles. **intermuscular fasciae**. The processes of fasciae that separate muscles. **ischiorectal f.** See *anal f. lingual f.* See *f. linguae*. **lumbar f.**, **lumbodorsal f.** A dense fibrous structure from which a portion of the transversalis abdominis muscle arises. At the posterior margin of the latter it divides into three layers, the anterior, middle, and posterior. **masseteric f.** A layer of *f.* continuous with the deep cervical, the parotid, and the buccopharyngeal fasciae, and attached above to the zygoma. It lies upon the outer surface of the masseter muscle, with which it is closely united. **obturator f.** The parietal layer of the pelvic *f.* It is attached above to the iliopectineal line, in front to the lower margin of the body of the pubes, behind to the anterior margin of the great sciatic notch and to the great sacrosciatic ligament, and below to the falciiform process of the sacrosciatic ligament. **orbital f.** A fibrous layer covering in part the eyeball and reflected at the junction of the cornea and sclera to the margin of the orbit. **palmar f.** A stout *f.* consisting largely of longitudinal fibers lying beneath the skin of the palm of the hand. **parotid f.** A prolongation backward of the masseteric *f.*, which closely invests the parotid gland. **parotideomasseteric f.** The masseteric and parotid fasciae, regarded as one structure. **pectoral f.** The superficial covering of the pectoral region. **pelvic f.** The

fibrous structure which lines the interior of the pelvic cavity, covering the muscles and supporting the viscera. It divides on each side at the level of a line extending between the lower margin of the symphysis pubis and the spine of the ischium into the obturator and rectovesical fasciae, the line of division being indicated by a thickened white band, the *arcus tendineus fasciae pelveos*. **perineal f.** The deep and superficial perineal fasciae, regarded as one structure. **plantar f.** The deep f. of the sole of the foot. It is a dense, white structure consisting mainly of longitudinal fibers, and is divided into two lateral portions and one central portion. **prevertebral f.** A portion of the deep cervical f., which separates the prevertebral muscles from the esophagus and pharynx. **recto-abdominal f.** See *aponeurosis of the internal oblique muscle*. **rectovesical f.** The visceral layer of the pelvic f. Laterally it forms the lateral true ligaments of the bladder. In the female, the vagina is covered in part by that portion which in the male passes over the bladder and the prostate gland. **renal f.** See *capsule of the kidney*, under *capsule*. **semilunar f.** A flat, fibrous band of f. which passes downward and inward from the inner side of the biceps humeri and its tendon, and unites with the f. covering the antibrachial muscles arising from the inner condyle of the humerus. **spermatic f.** See *intercolumnar f.* **subcutaneous f.** The layer of loose connective tissue lying immediately beneath the skin. **subpubic f.** See *deep perineal f.* **subscapular f.** A thin layer of f. covering the subscapularis muscle. **superficial cervical f.** A thin layer of f. lying immediately beneath the integument of the cervical region. **superficial f. of the abdomen.** A two-layered f. lying beneath the integument of the abdomen, and continuous behind with the dorsal f. **superficial perineal f.** A two-layered f. which lies beneath the integument of the perineal region. **superior pelvic f.** See *pelvic f.* **suprascapular f.** An offshoot from the brachial f. running to the suprascapular region. **supraspinous f.** An offshoot of the brachial f. which covers the infraspinatus and teretes muscles. **tarso-orbital f.** A sheet or membrane of fibrous tissue which connects the lids with the margin of the orbits and shuts off communication between the connective tissue space of the lids and the orbital cavity. **temporal f.** A white and shining f. which overlies the temporal muscle. **transversalis f.** The f. situated upon the posterior surface of the transversalis abdominis muscle. **triangular f.** See *triangular ligament*, under *ligament*. [Lat., *fascia*, fillet, band.]

fasciculus (fas-ik'u-lus). 1. A collection of fibers or fibrillae in a more or less distinct bundle. 2. In pharmacy, a handful. **ascending cerebellar f.** The direct cerebellar tract of the spinal cord.

cerebellar fasciculi. Bundles of fibers originating in the cerebellum. **cuneate f.** See *f. cuneatus*. **direct pyramidal fasciculi.** See *anterolateral column*. **dorsal crossed f.** One of the four components of the *columna fornicis* recognized by Gudden. **dorsal direct f.** See *dorsal crossed f.* **f. arciformis olivae.** Superficial and deep transverse and curved fibers crossing the lower portion of the olivary bodies. **f. arcuatus, f. arcus.** A f. sent from the middle part of the corpus callosum into the cerebral hemisphere of the same side. **f. bigemino-genicularis.** A bundle of fibers which unites the corpus bigeminum and the corpus geniculatum. **f. cerebralis.** The anterolateral column of the spinal cord. **fasciculi corticales.** The bundles of nerve fibers leading to and from the cortical substance. **f. corticobulbaris.** The innermost fibers of the pedunculi cerebri. **f. cuneatus.** Syn.: *funiculus cuneatus*, *Burdach's column*. A prolongation of the posterior lateral column in the medulla oblongata, which expands into a wedgelike form as it ascends. **f. descendens.** A bundle of white fibers in the genu of the corpus callosum which passes downward, describing an arc looking inward and forward, to the inferior lobe, and partly to the intermediate lobe. **f. exilis.** A bundle of muscle fibers which arise from the internal condyle of the humerus or the coronoid process of the ulna and, passing between the ulnar artery and the median nerve, unite with the flexor pollicis longus muscle. **f. fastigialis.** See *f. tegmenti*. **fasciculi frontocaudatothalamici.** Bundles of nerve fibers which extend from the caudate nucleus and optic thalamus to the frontal lobe. **f. gangliosis hypogastricus.** A flattened trunk of nerve fibers which forms the commencement of the lateral hypogastric plexus. **fasciculi graciles.** The posterior pyramids. **fasciculi longitudinales coli.** The longitudinal bands of the colon. **fasciculi marginales aqueductus.** Bundles of fibers which form a convex swelling along the anterior margin of the aqueduct of Sylvius. **fasciculi medullae spinalis.** The columns of the spinal cord. **fasciculi musculares coli.** The bundles of muscular fibers in the walls of the colon. **f. nuclei olivae.** A small bundle of fibers extending backward from the side of the olivary body. **fasciculi occipitohthalmici.** The bundles of nerve fibers which connect the optic thalamus with the occipital lobe of the brain. **f. of Goll.** The column of Goll. **f. of Türck.** The anterolateral column of the spinal cord. **f. retroflexus.** A band of white fibers extending from the ganglion habenulae to the ganglion interpedunculare. **f. solitarius.** See *funiculi gracilis*. **f. tegmenti.** Of Forel, a bundle of longitudinal nerve fibers found in the tegmentum of the dog's brain. **f. temporothalmici.** A bundle of nerve fibers which extends from the optic thal-

amus to the temporal lobe. **f. teres.** An eminence on the floor of the fourth ventricle. It represents the base of the anterior gray cornu of the spinal cord, and is seen on section to contain a number of large ganglion cells, which give origin to the hypoglossal nerve. **f. teres pontis, fasciculi teretes.** A band of white fibers in the floor of the fourth ventricle formed by the middle fibers of the lateral tract, together with fibers from the restiform body. **fasciculi teretes cordis.** See *columnae carnae*, under *columna*. **f. tri-neuralis.** See *solitary f. f. unciniformis, f. uncinatus.* A band of white substance within the fissure of Sylvius, which connects the frontal and temporosphenoidal lobes. **Gratiolet's f.** See *Gratiolet*. **habenal f.** A bundle of fibers extending between the ganglion of the habenula and the interpeduncular ganglion. **inferior longitudinal f.** A set of fibers lying along the outer wall of the lateral ventricle, uniting the temporosphenoidal and occipital lobes. **inferior parietal f.** That portion of the corona radiata which extends into the upper part of the parietal lobe. **inferior pedunculo-parietal f.** Those fibers of the corona radiata which extend from the crus cerebri to the lower portion of the parietal lobe. **internal lateral f.** See *band of Reil*, under *band*. **middle parietal f.** The bundle of nerve fibers which extends in the corona radiata to the middle of the parietal lobe. **middle pedunculo-frontal f.** The portion of the corona radiata which extends from the crus cerebri to the middle of the frontal lobe. **pedolemniscal f.** A bundle of white fibers which connect the pes pedunculi cerebri with the lemniscus. **posterior longitudinal f.** A bundle of nerve fibers originating in the gray matter of the anterior corpora quadrigemina and running beneath the floor of the fourth ventricle to terminate in the cervical cord. **respiratory f.** A sensitive bundle of fibers found in the posterior part of the internal capsule, which curve backward, upon themselves, into the occipital lobe. **solitary f.** Of Meynert and Stilling, a sensitive bundle of fibers found in the posterior part of the internal capsule. **superior parietal f.** That portion of the corona radiata which extends into the upper part of the parietal lobe. **superior pedunculo-frontal fasciculi.** The bundle of nerve fibers in the corona radiata which enter the superior part of the frontal lobe. [Lat., dim. of *fascia*, bundle.]

Fasciola hepatica (fas-i'o-lah hep-at'ik-ah). See *Distoma hepaticum*.

Fasciolopsis (fas-se-o-lop'sis). A trematode worm of the order *Malacocotylea* and the family *Fasciolidae*. **F. Buskii.** A species present in the feces of man in India and China.

fast. Resistant to staining or toxic agents; said of bacteria or certain immunizing substances.

fastigium (fas-tij'e-um). 1. The angle

formed at the point of junction of the velum medullare anterius and the inferior vermiciform process. 2. Of a disease, see *acme*. [Lat., *fastigium*, ridge.]

fat. A solid oil; an oily concrete substance. The fats constitute one of the three chief groups of the organic foods of man. They are mixtures of the glycerin esters of various fatty acids, especially palmitic, stearic, and oleic acids. Rarely other fatty acids are combined with other alcohols as fats. See *spermaceti*. Chemically, pure fats are known as tristearin (or stearin), tripalmitin (or palmitin), triolein (or olein), etc. **f. in stool, how to determine presence of,** see in *appendix*, page 906.

fat embolism. See under *embolism*.

fatigue (fah-têg'). An appreciation of discomfort within the body due to poisoning, overuse or to psychical egotistic phantasy.

fatty acids. The homologue series of the monobasic aliphatic acids. The following belong to the group of the f. a's: formic acid, acetic acid, propionic acid, butyric acid, valeric acid, caproic acid, palmitic acid, stearic acid, etc.

fatty series. The aliphatic, or open-chain series of carbon compounds.

fauces (faw'sêz). The posterior part of the cavity of the mouth, through which it communicates with the pharynx. It is bounded laterally by two crescentic folds, called the anterior and posterior pillars, formed respectively by the glossopalatinus and the pharyngopalatinus muscles, between which are lodged the faucial tonsils. [Lat., *faux*, throat, gullet.]

faucial (faw'se-al). Pertaining to the fauces.

fa'vous. Relating to or belonging to favus. [Lat., *favosus*.]

favus (fa'vus). An infectious disease of the skin, found typically on the scalp. It is due to a specific fungus, the *Achorion Schönleini*, and is characterized by the occurrence of peculiar saucer-shaped sulphur-yellow crusts. [Lat., *favus*, honey-comb.]

Fe. The chemical symbol of the element *ferrum*, iron.

febricula (fe-brik'u-lah). Slight and brief fever. **septic f.** A mild form of septiemia. [Lat., dim. of *febris*, fever.]

febrifacient (feb-re-fa'shent). Causing or producing fever; as a n., an agent or agency so acting. [Lat., *febris*, fever, + *facere*, to make.]

febrifugal. Preventing or reducing fever. **febrifuge** (feb'rif-ûj). 1. See *febrifugal*. 2. A remedy for fever.

febrile (feb'rîl). Pertaining to, affected with, or accompanied by fever.

febrilin (feb'rîl-in). "Tasteless quinin"; a proprietary preparation said to be a solution of quinin in lemon syrup.

febris (feb'ris). See *fever*. [Lat., *ferbis*, from *fervere*, to be hot.]

fecal (fe'kal). Of or pertaining to feces. **feces** (fe'sêz). Intestinal excrement.

Fechner's formula. See *formula of difference, formula of measurement, and*

fundamental formula. F's law. See psychophysical law, under law. [Gustav Theodor Fechner, German physicist, 1801-1887.]

fecula (fek'u-lah). 1. Solid matter suspended in or precipitated from an expressed juice. 2. Starch.

feculence (fek'u-lenz). 1. The condition of being feculent. 2. See *fecula* (1st def.).

feculent (fek'u-lent). 1. Containing or consisting of dregs or sediment. 2. In physiology, fecal, excrementitious.

feculite (fek'u-lit). A generic term for pulverulent, odorless, and tasteless vegetable proximate principles.

feculometer (fek-u-lom'et-er). An instrument for determining the amount of water in commercial starch. [Lat., *fecula*, lees, dregs, + Gr., *metron*, a measure.]

fecund (fe'kund). Fruitful, prolific, susceptible of fecundation.

fecundation (fe-kun-da'shun). The union of the male and female generative cells, whereby the ovum acquires the power of becoming developed into a separate individual. **artificial f.** F. by the artificial application of the seminal fluid to extruded ova or its injection into the uterine canal. [Lat., *fecundatio*.]

federal nomenclature, see in appendix, page 935.

feeding. See *alimentation*.

feeling. The conscious side of nervous activity; one of the states of consciousness produced by the action of the nerve centers. The f's are divided into two great groups: (a) the emotions, or centrally initiated f's; and (b) the sensations, or peripherally initiated f's, arising from the excitation of peripheral nerves (including the nerves and nerve endings of special sense), and comprising the general, auditory, visual, olfactory, gustatory, and tactual f's, etc. **enteroperipheral f's.** Sensations arising from the stimulation or excitation of peripheral nerves distributed to the interior of the body and viscera. **epiperipheral f's.** Sensations arising from excitation or stimulation of peripheral nerves distributed to the surface of the body, including all the nerves of special sense. **presentative f's.** Sensations; primary f's produced by direct excitation. **representative f's.** Revived f's; ideas; f's produced by indirect excitation.

Fehling's solution. A solution used as a test for glucose. It consists of two independent solutions, mixed just before they are used. One is made by dissolving 34.7 grams of pure copper sulphate in water to a volume of 1000 c.c. The other solution contains 173 gms. of Rochelle salt and 50 gms. of sodium hydroxid dissolved in water to 1000 c.c. The mixed solution is used for the qualitative and quantitative estimation of glucose in diabetic urine. **F's test for sugar in urine**, see in appendix, page —. **F's test to determine presence of reducing bodies in spinal fluid**, see in appendix, page —.

fel. The bile. **f. bovinum purificatum.** See *f. bovis purificatum* [Br. Ph.]. **f. bovis.** Syn.: *bilis bovina*. The fresh bile of *Bos taurus*; a somewhat viscid, brownish yellow, or dark green liquid, having a peculiar disagreeable odor and a very bitter, unpleasant taste [U. S. Ph.]. **f. bovis inspissatum.** A preparation made by straining fresh ox bile through muslin, either when taken directly from the gall-bladder or after heating moderately and evaporating. **f. bovis purificatum.** [U. S. Ph.] Syn.: *f. bovinum purificatum* [Br. Ph.]. Purified and inspissated ox bile. **f. tauri.** See *f. bovis*. [Lat., for "bile or gall."]

fel'on. See *paronychia*.

female (fe'mäl). 1. A woman. 2. The sexual receiving element in nature that carries the organ for transmitting the energy of the new birth. 3. Complementary part. [Lat., *femella*, young woman.]

feminism (fem'in-izm). The female character; the inversion of female characteristics found in the male; a social movement for greater female independence.

fem'oral. Pertaining to, or connected with, the femur or the thigh. [Lat., *femoralis*, from *femur*, thigh.]

femur (fe'mur). Syn.: *thigh bone*. The largest, longest, and strongest bone in the body situated between the hip bone and the tibia. [Lat., *femur*, thigh.]

fencer's bone. A deposit of bone in the brachialis anticus muscle.

fenestra (fen-es'trah). A windowlike opening. **f. cochleae, f. cochlearis.** See *f. rotunda*. **f. ovalis.** The oval window of the tympanic cavity; an oval or bean-shaped opening which leads to the vestibule of the labyrinth, and is situated at the extremity of a deep niche on the inner wall of the tympanum. **f. rotunda.** A round aperture situated upon the inner wall of the tympanic cavity. It is the opening between the tympanic cavity and the canal of the cochlea. [Lat., *fenestra*, window.]

Feniculum (fe-nik'u-lum). 1. A genus of umbelliferous herbs. 2. Of the U. S. Ph., fennel. **acqua feniculi.** An aqueous solution of the volatile oil of fennel; used as flavoring [U. S. Ph., Br. Ph.].

F. sativum. A variety of *F. vulgare*. **F. vulgare.** Common fennel; the source of the fennel seed (or fruits) of the pharmacopeias; a species indigenous to Europe and also abundant in Asia. The fruits are aromatic and carminative and are much used as a corrigent, especially with senna and rhubarb. **oleum feniculi.** A volatile oil of fennel [U. S. Ph.]. [Lat., *fenum*, fenugreek.]

fen'nel. 1. *Feniculum vulgare*. 2. Of the U. S. Ph., the fruit of *F. vulgare*. It contains a volatile oil and is stimulant and carminative. [Lat., *feniculum*.]

fenum (fe'num). 1. Hay. 2. See *F. grecum*. **F. grecum.** 1. The genus *Trigonella*. 2. The dried ripe seeds of *Trigonella fenum grecum*. They are used for poultices and a fixed oil from the

seeds is used for burns. [Gr., *phuein*, to produce.]

feraconitin (fer-ak-on'tin). An alkaloid contained in Nepal aconite, at first supposed to be identical with aconitin, but afterwards described under various names—acraconitin, napellin, and nepellin.

fercremol (fer'kre-mol). A proprietary compound of hemoglobin and iron.

Fergusson's speculum. A glass, porcelain, or vulcanite cylinder, having varying diameters silvered so that the interior of it reflects the light. [*William Fergusson*, Scotch surgeon, 1808-1877.]

ferment. Syn.: *enzyme*. The active principle obtained from animal and plant life which has the property of causing chemical changes in compounds when allowed to act at or near the body temperature.

alcoholic f. The enzyme found in yeast and other cells which has the property of forming alcohol and carbon dioxide from sugar. See *zymase*.

amylolytic f. A soluble f. which converts starch and other amyolytic substances into dextrin, sugar, or glucose.

animal f. Of Hoffmann, see *moribific f.*

bacterium f. The f. of bacteria.

butyric f. The f. producing butyric acid fermentation.

diastatic f. The enzymes that convert starch paste into maltose.

fat decomposing f., fat digesting f., fat splitting f. A f. which is capable of splitting up the fats into glycerin and fatty acids. See *esterases* and *lipase*.

f. of carnivorous plants. A f. found in the secretion of the glands of the sundew (*Drosera*), Venus flytrap (*Dionea*), and other insectivorous plants. It converts proteins into proteoses and peptones.

f's of the intestine. See *pancreatic juice*, under *juice*; and *erepsin*.

f's of the pancreas. See *pancreatic juice*, under *juice*.

f. of the saliva. See *ptyalin*.

f's of the stomach. See *gastric juice*, under *juice*.

fibrin f. See under *fibrin*.

hydrolytic f. A f. which acts only in the presence of water, causing the addition of 1 or more molecules of water to the molecule of the substance acted upon.

intestinal f's. See *pancreatic juice*, under *juice* and *erepsin*.

inversive f., inverting f. A f. that converts cane sugar into grape sugar. See *invertase* and *fructose*.

lactic acid f. See *lactic acid fermentation*, under *fermentation*.

milk-curdling f. 1. A f. existing in the gastric and pancreatic juices having the property of coagulating milk. 2. A f. from plant life having the power of coagulating milk, such as that found in the seeds of *Withania coagulans*. See *rennin*.

milk f. See *f. of milk*, under *milk*.

moribific f. Those organized f's that, introduced into the animal organism, produce disease.

organized f. An obsolete term.

pancreatic f's. See *pancreatic juice*, under *juice*.

peptic f., peptone forming f. See *pepsin*.

proteolytic f. A ferment (or enzyme) which hydrolyzes proteins.

rennet f. See *rennin*.

salivary f. See *ptyalin*.

starch transforming f. See *amylase*. [Lat., *fervere*, to ferment.]

fermen'table. Capable of fermentation.

fermen'tal. Having power to cause fermentation.

fermentation (fer-men-ta'shun). 1. Originally applied to the process of decomposition or of conversion effected by a ferment, now generally limited to those chemical reactions brought about, either by microorganisms or by enzymes (ferments), in which there is an evolution of carbon dioxide or a production of certain fatty acids or alcohols.

acetic acid f., acetic f., acetous f. The f. by which alcohol is converted into acetic acid. It consists essentially in a process of oxidation, $\text{CH}_3\text{CH}_2\text{OH} + \text{O}_2 = \text{CH}_3\text{COOH} + \text{H}_2\text{O}$, and is produced by various organisms, especially by the *Bacillus aceti*, the *Bacterium aceti*, and the *Bacterium xylinum*.

alcoholic f. A f. by which carbohydrates are converted into alcohol and carbon dioxide, occurring in the formation of all fermented alcoholic beverages. It consists essentially in a transformation of glucose into alcohol and carbon dioxide, according to the equation $\text{C}_6\text{H}_{12}\text{O}_6 = 2\text{CH}_3\text{CH}_2\text{OH} + 2\text{CO}_2$.

butyric acid f., butyric f., butyrous f. A f. by which butyric acid is developed from the decomposition of starch, dextrin, saccharose, lactose, glucose, and other substances. It is effected by the agency of various microorganisms.

f. of glycerin. A f. by which glycerin is decomposed into certain alcohols or certain acids.

f. tube. A special form of tube used for testing the gas formation caused by various bacteria. It consists of a closed branch and open bulb with a fine curved stem or an inverted test tube within a larger tube.

lactic acid f., lactic f. The f. by which lactic acid is developed from glucose, lactose, etc., effected by the agency of the lactic ferments in the presence of nitrogenous matters. It consists in the decomposition of 1 molecule of glucose (either ready formed or formed from the lactose, etc., by hydration) into 2 molecules of lactic acid.

propionic acid f. A f. by which propionic acid is developed.

succinic acid f. A f. by which succinic acid is developed.

vinous f. See *alcoholic f.* [Lat., *fermentatio*.]

fermentescant (fer-men-tes'ent). Becoming fermented.

fermentescible. Capable of fermentation.

ferment'um. See *ferment*.

cataplasma fermenti. A yeast poultice; made by mixing 6 fl. oz. of beer yeast with 6 fl. oz. of water heated to 100° F., stirring in 14 ounces of flour, and placing the mass near the fire to ferment; applied to unhealthy and gangrenous ulcers.

fern. A general name for plants of the order *Filices*.

male f. See *Aspidium filix mas*, under *Aspidium*. [Ang.-Sax., *fearn*.]

-ferous, -iferous. A suffix from the Lat., *fer*, producing, from *ferre*, to bear, + *-ous*.

ferratin (fer'ra-tin). Of Schmiedeberg, an organic compound obtained from the liver

of the pig. A proprietary compound consisting of sodium ferri-albuminate, containing 6 per cent. of ferric iron in organic combination.

ferric, ferro-. A prefix from Lat., *ferrum*, iron; used in organic chemistry to indicate the presence of iron.

fer'ric. Of, belonging to, or containing iron as a trivalent radicle. When so considered, iron has been given the name *ferricum*, Fe⁺⁺⁺. **f. chlorid**. FeCl₃, a red substance, soluble in water; a valuable hemostatic. **f. hydroxid**. Fe(OH)₃. An insoluble brown powder, used as an antidote in poisoning from arsenious acid. **f. salts**. Salts having the general formula FeR₃, in which R₃ is a trivalent radicle or its equivalent. [Lat., *ferricus*.]

ferrichthyol (fer-rik'the-ol). Ferric ichthyol, a derivative of ichthyol containing about 2.5 per cent. of iron.

fer'ricus. Ferric.

ferricyanid (fer-re-si'an-id). A salt of hydroferricyanic acid.

ferriferous (fer-rif'er-ous). Containing or yielding iron.

ferrinol (fer'rin-ol). See *triferrin*.

ferrisalipyrin (fer're-sal-ip'i'rin). Antipyrin ferrous salicylate.

ferrochincus (fer-ro-kin'ik-us). Containing iron and quinin.

ferrocyanate (fer-ro-si'an-ät). See *ferrocyanid*.

ferrocyanid. A salt of hydroferrocyanic acid.

ferrocyanid and acetic acid test for albumin in urine, see *in appendix*, page —.

ferrhemol (fer-ro-he'mol). A preparation said to contain iron in two states, one of which is that of a stable organic combination.

ferrohydriodas (fer''ro-hi-dre'od-as). Ferrous iodid.

ferromagnetic (fer''ro-mag-net'ik). Containing iron and having magnetic properties.

fer''roman'gan. A proprietary solution of a compound of peptone with iron and manganese.

ferroprussiate (fer-ro-prus'se-ät). See *ferrocyanid*.

ferropyrin, ferripyryn (fer-ro-pi'rin, fer-ri-pi'rin). A hemostatic compound of iron perchlorid and antipyrin.

ferrosaline (fer-ro-sa'lin). Containing a salt of iron.

ferrosoferric (fer-ro''so-fer'ik). Containing iron both as a bivalent (ferrous) and a trivalent (ferric) radicle.

ferrorstyptin (fer-ro-stip'tin). An antiseptic and hemostatic preparation of iron and formaldehyd.

ferro'sus. Ferrous.

ferrotar'trate. Ferrous tartrate.

ferrous (fer'rus). Of, belonging to, or containing, iron as a bivalent radicle. **f. salts**. See under *ferrum*.

ferruginated (fer-ru'jin-a-ted). Containing or having the properties of iron.

ferruginous (fer-ru'jin-us). Containing iron or iron rust.

ferru'go. Iron rust (ferric hydroxid).

ferrule, ferrel (fer'ool, fer'el). A ring of metal put about the end of a staff. In dentistry, a metallic band or ring, applied to the end of the root or the crown of a natural tooth to strengthen it. [Fr., *veriole*, an iron ring, from Mid. Lat., *viriola*, a little circle of metal.]

ferrum (fer'rum). Iron in the massive or metallic state. Of the U. S. Ph. and Br. Ph., iron in the form of wire.

em-plastrum ferri. A preparation consisting of dried ferric hydroxid added to a melted mixture of Canada turpentine, Burgundy pitch, and lead plaster.

extractum ferri pomati, extractum malatis ferri. Impure iron (ferrous and ferric) malate, made by digesting the pulp or the expressed juice of sour apples with varying quantities of iron filings, iron powder, or iron wire, until the reaction has ceased, filtering, and evaporating.

ferris arsenas solubilis. Ferric arsenite, rendered soluble by the addition of ammonium citrate.

ferris carbonas saccharatus. Saccharated iron carbonate, consisting of extemporaneously prepared ferrous carbonate mixed with sugar to preserve it from oxidation [U. S. Ph., Br. Ph.].

ferric chloridum. Ferric chlorid of the U. S. Ph.; the hydrated salt, FeCl₃ + 12H₂O. See also *iron chlorid* (2nd var.) under *iron* [U. S. Ph.].

ferris citras. Iron (ferric) citrate, (C₆H₅O₇)₂Fe₂ + 6H₂O. See also *iron citrate*, under *iron*.

ferris deutoxidum nigrum. Magnetic iron oxid, *ferris et aluminas sulphas*. Aluminium and iron sulphate.

ferris et quiniæ citras solubilis. Iron and quinin citrate in the form of soluble scales [U. S. Ph.].

ferris et sodæ pyrophosphas, ferris et sodii pyrophosphas. Pyrophosphate of iron and sodium, made by adding to a solution of sodium pyrophosphate in water, sufficient ferric chlorid in aqueous chlorid, so that a permanent precipitate is not produced, then adding alcohol and collecting the precipitate.

ferris et sodii citrophosphas. See *ferris phosphas* (2nd def.).

ferris iodium. Ferrous iodid. **ferris iodium saccharatum**. Saccharated iron iodid, consisting of ferrous iodid and milk sugar. The ferrous iodid is prepared extemporaneously by treating iron wire with iodine and distilled water and filtering. The filtrate is mixed with sugar and evaporated [U. S. Ph., 1890].

ferris oxidati citras. Ferric citrate. **ferris oxidum fuscum, ferris hydroxidum**. Syn.: *ferris peroxidum*. Hydrated oxid of iron, freshly prepared by precipitating a solution of ferric sulphate with ammonia. It is a reddish brown magma, formerly used as an antidote to arsenic, for which purpose it should always be freshly prepared [U. S. Ph.].

ferris oxidum magneticum, ferris oxidum nigrum. Magnetic iron oxid, **ferris oxidum rubrum**. Red iron oxid, iron sesquioxid or its hydrate, hydrated iron peroxid. **ferris perchloridum**. Ferric chlorid. **ferris**

pernitras. Ferric nitrate. **ferrī peroxidum.** Iron sesquioxid. **ferrī persulphas.** Ferric sulphate, $Fe_2(SO_4)_3$. **ferrī phosphas, ferrī phosphas solubilis** [U. S. Ph.]. Iron phosphate, soluble ferric, or sodioferric citrophosphate. Of the U. S. Ph., a preparation made by adding sodium phosphate to a solution of ferric citrate in water and evaporating. It forms bright green transparent scales, having an acidulous taste, and dissolving readily in water. It is a mixture of phosphate and citrate of iron with sodium. It is used as a chalybeate. **ferrī pulvis.** See under *Quevenne*. **ferrī sesquichloridi.** Ferric chlorid, Fe_2Cl_6 . **ferrī subcarbonas.** An amorphous, brown, odorless and tasteless powder, consisting mainly of ferric hydroxid. Under a great variety of names this preparation has been official in numerous pharmacopeias. **ferrī sulphas.** Ferrous sulphate, $FeSO_4 + 7H_2O$ [U. S. Ph., Br. Ph.]. **ferrī sulphas calcinatum, ferrī sulphas exsiccatus.** Iron (ferrous) sulphate deprived of all but one of its molecules of water of crystallization and reduced to a white powder [U. S. Ph., Br. Ph.]. **ferrī sulphas granulatus.** Ferrous sulphate, obtained in the form of an efflorescent, green crystalline powder by precipitating it with alcohol from a solution in water acidulated with sulphuric acid [U. S. Ph.]. **ferrī sulphidum.** Ferrous sulphid, ferum sulphuratum, occurs in yellowish black masses; used to generate hydrogen sulphid. **f. candens.** A heated caustery iron. **f. redactum** [Br. Ph.], **f. reductum** [U. S. Ph.]. See under *Quevenne*. **liquor ferrī acetatis.** A reddish brown aqueous solution of neutral ferric acetate [U. S. Ph., 1890]. **liquor ferrī albuminati** [Drees]. A liquid preparation of iron in which all acid is said to be replaced by albumin; neutral, having no metallic or astringent taste, and readily absorbable; recommended in the treatment of round ulcer of the stomach. **liquor ferrī chloridi** [U. S. Ph.]. An aqueous solution of chlorid of iron. **liquor ferrī citratis.** An aqueous solution of ferric citrate, a dark brown liquid of chalybeate taste [U. S. Ph., 1890]. **liquor ferrī dialysatus.** Dialysed iron; solution of dialysed iron. A solution of strongly basic iron oxychlorid from which the greater part of the iron has been removed by dialysis. **liquor ferrī et ammonii acetatis.** Syn.: *Basham's mixture*. A solution of iron and ammonium acetate in water and glycerin [U. S. Ph.]. **liquor ferrī et quinae citratis.** A preparation of citric acid, quinin, and a solution of iron and ammonium citrate in water and alcohol. **liquor ferrī nitratis.** Syn.: *liquor ferrī pernitris*. An aqueous solution of extemporaneously prepared ferric nitrate [U. S. Ph., 1890]. **liquor ferrī perchloridi.** A preparation containing 25 per cent. of the strong solution of ferric perchlorid. It contains the same proportion of iron as the tincture of ferric chlorid [Br. Ph.]. **liquor**

ferrī perchloridi fortis [Br. Ph.]. An aqueous solution containing 29 per cent. of anhydrous ferric chlorid [U. S. Ph.] and about 20 per cent. of iron [Br. Ph.]. **liquor ferrī pernitris.** See *liquor ferrī nitratis*. **liquor ferrī persulphatis.** Syn.: *Monse's solution*. Solution of iron subsulphate, solution of basic ferric sulphate. An aqueous solution of iron subsulphate, often erroneously called the persulphate [Br. Ph.]. **liquor ferrī subsulphatis.** Syn.: *liquor ferrī sulfurici oxydati basici*. Solution of iron subsulphate, solution of basic ferric sulphate, Monse's solution. An aqueous solution of iron subsulphate, often erroneously called the persulphate. The solution is a dark red or brownish liquid, of thick, almost syrupy consistence, having a very styptic taste and an acid reaction. Its sp. gr. is 1.555, and it contains 43.7 per cent. of iron subsulphate. It is much used externally as a styptic [U. S. Ph.]. **liquor ferrī tersulphatis.** Solution of iron tersulphate (persulphate), solution of normal ferric sulphate. A solution of ferric sulphate, made by dissolving ferrous sulphate in water with the addition of sulphuric acid, heating the mixture with nitric acid till nitrous fumes are no longer evolved, and adding water up to the required amount [U. S. Ph.]. **massa ferrī carbonatis.** Mass or pill of iron carbonate, Vallet's mass; a preparation consisting of ferrous carbonate mixed with material to preserve it from oxidation. The process of Vallet is followed in the U. S. Ph. In this process the ferrous carbonate is freshly prepared by precipitating a saccharine aqueous solution of ferrous sulphate with a solution of sodium carbonate [U. S. Ph.]. **mistura ferrī aromatica.** A preparation made by macerating pale cinchona bark, cloves, powdered calumba root, and iron wire in peppermint water, filtering, and adding compound tincture of cardamom and tincture of orange peel [Br. Ph., 1885]. **mistura ferrī composita.** Syn.: *Griffith's mixture*. A mixture of ferrous sulphate, potassium carbonate, sugar, and myrrh in aromatized water [U. S. Ph., Br. Ph.]. **mistura ferrī et ammonii acetatis.** See *liquor ferrī et ammonii acetatis* [U. S. Ph., 1890]. **pilulae ferrī carbonatis.** Syn.: *Griffith's pills*. These pills contain ferrous carbonate so made as to prevent the rapid oxidation of the ferrous salt. This preparation is essentially similar to mass of ferrous carbonate [U. S. Ph.] or iron pill [Br. Ph.], differing from the former in being divided into pills. **pilulae ferrī iodidi.** Syn.: *Blancard's pills*. Pills containing ferrous iodid with an excess of metallic iron and sufficient saccharine matter to act as a preservative against oxidation. They are coated with tolu balsam [U. S. Ph.]. **syrupus ferrī bromidi.** A preparation made by treating iron wire with a mixture of bromin and water. By this process a green aqueous solution of ferrous bromid is formed.

This is then filtered and added to sugar and the whole is brought to the required amount by the addition of water. It contains 10 per cent. of ferrous bromid [U. S. Ph., 1880]. **sympus ferri iodidi**. Syrup of iodid of iron; a preparation consisting of ferrous iodid. The U. S. preparation contains 5 per cent. of ferrous iodid made up with sugar and water. It is a transparent, green solution having a sweet chalybeate taste. The Br. preparation contains about the same amount of ferrous iodid [U. S. Ph.]. **sympus ferri phosphatis**. A preparation consisting of ferrous phosphate, dissolved in dilute phosphoric acid and mixed with syrup. Each fluid dram contains 1 grain of ferrous phosphate [Br. Ph.]. **sympus ferri phosphatis cum quina ina et strychnina** [Br. Ph.], **sympus ferri quinae et strychninae phosphatum** [U. S. Ph.]. A syrup composed of iron, quinin, and strychnin. A teaspoonful of the preparation of the U. S. Ph. contains about 2 grains each of iron and quinin phosphate and about $\frac{1}{80}$ grain of strychnin; that of the Br. Ph. contains about 1 grain each of iron and quinin and $\frac{1}{32}$ grain of strychnin. **tinctura ferri chloridi**. Tincture of chlorid of iron. A preparation made by mixing the liquor ferri chloridi and alcohol [U. S. Ph.]; or by mixing the stronger solution of ferric perchlorid with alcohol and water [Br. Ph.]. **tinctura ferri perchloridi**. See *tinctura ferri chloridi* [Br. Ph.]. **tinctura ferri pomata**. A preparation made of extractum ferri pomatum, cinnamon water, and dilute alcohol. **trochisci ferri**. Troches each containing 5 grains of ferric hydroxid [U. S. Ph., 1890]. **trochisci ferri redacti**. Troches each containing one grain of reduced iron [Br. Ph.]. **vinum ferri**. A solution of iron and ammonium citrate in white wine, sweetened with syrup and flavored with sweet orange peel [U. S. Ph.]; or iron wire macerated in sherry and filtered [Br. Ph.]. It contains an uncertain amount of iron and potassium tartrate, derived from the action of the acid potassium tartrate present in the wine upon the oxidized iron. **vinum ferri amarum**. A preparation made of a solution of iron and quinin citrate, tincture of sweet orange peel syrup, and white wine [U. S. Ph.]. **vinum ferri citratis**. A preparation made by dissolving iron and ammonium citrate in tincture of sweet orange peel syrup, syrup, and stronger white wine [U. S. Ph.]; or by dissolving about 2 parts of iron and ammonium citrate in 98 of orange wine [Br. Ph.]. For other preparations see under *iron*.

ferrureted (fer'ru-ret-ed). Containing or combined with iron.

fersan (fer'san). A food preparation said to be an organic compound of iron and phosphorus with acid albumin from the blood of the ox.

fertile (fer'til). Capable of bearing new life; fruitful, not barren, nor sterile.

fertiliza'tion. See *fecundation*.

Ferula (fer'u-lah). A genus of umbelliferous herbs. **F. foetida**. A species yielding the official asafetida. **F. galbanifera**, **F. galbanifera**. A Persian species; the principal source of galbanum. **F. sumbul**. A species indigenous to the mountains between Russian Turkestan and Bucharía. Its root furnishes sumbul. [Fr., *férule*.]

fer'vin. A certain extract of meat containing iron.

festination (fes-tin-a'shun). A morbid tendency to make haste, symptomatic of certain nervous diseases. [Lat., *festinatio*.]

festoon (fest-oon'). An ornament in the form of a garland. In dentistry, the wreathlike margin of the normal gum around the necks of the teeth. [Fr., *feston*, from Ital., *festone*, a garland.]

Festucaria (fes-tu-ka're-ah). A trematode worm. **F. lentis**. See *Monostomum lentis*.

fe'tal. Pertaining to, or in the state of, a fetus.

fetation (fe-ta'shun). See *gestation*.

feticide (fe'tis-id). The destruction of a fetus before birth. [Lat., *fetus*, fetus, + *caedere*, to kill.]

fet'id. Having a foul odor.

fetishism (fe'tish-izm). The finding of a maladapted sexual aim. The sexual striving manifesting itself in love of objects, the nongenitals, etc.

fe'tor. A stench; an offensive odor. [Lat., *fetor*, a stench.]

fet'ron. An anilid of stearic acid; used in a manner similar to lanolin.

fe'tus. The unborn offspring of any mammal. The child in the uterus after the end of the third month; previous to that time it is called an embryo.

f. compressus. A f. which, having died at an early stage of gestation, has undergone mummification and been compressed into the form of a sheet by the growth of a twin. **f. inclusus**, **f. in fetu**. A form of double monstrosity in which one f. ceases to be developed, and its remains are wholly or partially buried within the substance of the other f. **f. ovaricus**, **f. ovarius**. See *ovarian f.*

f. papyraceus. See *f. compressus*. **f. sanguinolentus**. Of Martin and Ruge, a macerated f.; so called from its reddish brown color. **f. sireniiformis**. A f. with fusion of the lower extremities.

hemiteratic f. See *hemiterata*. **hermaphroditic f.** See *hermaphroditism*.

heterotaxic f. See *heterotaxis*. **mummified f.** See *f. compressus*.

non-viable f. A f. that has not reached a stage of development at which it is capable of surviving apart from the maternal organism. **ovarian f.** The fetus of an ovarian gestation. **tubal f.** The f. of a tubal gestation. **viable f.** A f. far enough advanced in development to be capable of survival apart from the maternal organism. See *viability*. [Lat., *ferre*, to bring forth.]

fe'ver. 1. An increase in the temperature

of the body accompanied by certain changes in the metabolic processes. 2. Any disease accompanied by increased temperature and pulse rate and usually associated with chills or chilly sensations and restlessness and anorexia. **abdominal f.**, **abdominal typhus f.** See *typhoid f.* **African f.** An intermittent, remittent, or pernicious malarial f. occurring on the coast of Africa. **ambulatory typhoid f.** Typhoid f. in which the usual symptoms are slight or absent and the patient is able to walk about through the greater part of the disease. **army f.** Typhus f. epidemic in an army. **aseptic f.** A traumatic f., not due to sepsis. **asthenic f.** A f. with great weakness and depression. **Barbados f.**, **Barcelona f.** See *yellow f.* **benign f.** A f. that pursues a mild course. **biliary f.** Relapsing f. with jaundice. **biliogastroenteric f.** See *typhoid f.* **bilious continued f.** See *typhoid f.* **bilious f.** 1. Remittent f., supposed to be caused by biliary disturbance. 2. Simple gastritis. **black f.** Cerebrospinal meningitis. **blackwater f.** A form of tropical f. attacking persons already suffering from malarial f. It is characterized by a sudden onset of melanuria, vomiting of a clear, green fluid, icterus, and an irregular febrile movement. **brain f.** Any febrile disease accompanied with inflammation of the brain or its membranes with severe febrile disturbance. **breakbone f.** See *dengue.* **camp f.** A general term applied to typhoid and typhomalarial f's occurring during a campaign. **catheter f.** Of Sir A. Clark, a form of urethral f. due to the introduction of a catheter. Sharp elevation of temperature. **cerebrospinal f.** See under *cerebrospinal*, also under *meningitis.* **Chagres f.** See under *Chagres.* **childbed f.** See *puerperal f.* **continued f.** A f. in which the daily variations of temperature are slight and the f. continues seven days or more. **dandy f.** Dengue; so called on account of the stiffness of the joints of the lower limbs, with consequent peculiarity of gait which accompanies it. **enteric f.** 1. The f. of enteritis, also any f. with prominent enteric symptoms. 2. See *typhoid f.* **enteromalarial f.** A f. in which the *Plasmodium malariae* of Laveran is found in the blood, and the typhoid bacillus in the stools. **ephemeral f.** A f. of very brief duration, usually completing its course within twenty-four hours. **eruptive f.** A f. following a period of incubation varying from a few hours to a few days, pursuing a definite course, with an associated eruption on the skin or mucous membrane or both; usually infectious. **essential f.** A f. constituting a disease by itself, as distinguished from a symptomatic f. **gastric f.** Acute dyspepsia. **gastro-enteric f.** A variety of congestive f. prevalent in the southwestern United States, characterized by vomiting, dysentery, thirst, dyspnea, restlessness, burning heat in the stomach, a weak pulse, and cold extremities. **hay**

f. Syn.: *Bostock's catarrh.* A periodical hyperesthetic rhinitis, due to pollen or other exciting agents. It occurs usually in the spring or in the middle of August. **heat f.** See *insolation.* **hectic f.** A type of f. associated with prolonged suppuration or some analogous condition. It is distinguished by intermissions and exacerbations, by excessive wasting of the tissues, and by exhausting sweats that attend the paroxysms. It is generally of long duration. **intermittent f.** Syn.: *ague.* A form of malarial f. in which the symptoms of chill and fever alternate with periods of apyrexia. **jail f.** Typhus f. occurring among the inmates of jails or prisons. **jungle f.** The pernicious malarial fever of the East Indian jungles. **low f.** See *asthenic f.* and *typhoid f.* **lung f.** Acute pneumonia. **malarial f.** A f. due to malarial parasites in the blood which gain entrance by the bite of the mosquito, *Anopheles.* **Malta f.** See under *Malta.* **milk f.** An old term for a febricula sometimes accompanying the establishment of the secretion of milk in lying-in women; now thought to be only a mild form of septic f. **mountain f.** 1. Of Wise, a mild f. with cardiac and respiratory irritability, lasting about a week; it is supposedly due to sudden exposure to diminished atmospheric pressure. 2. Malarial, typhomalarial, or typhoid f. occurring in mountainous regions. **nervous f.** Characterized by symptoms, especially typhus f. and typhoid f. 2. A febricula due to emotional excitement. **oroaya f.** A chronic endemic, specific, irregular f. with severe anemia found in the Peruvian Andes. A parasite, *Bartonella bacilliformis*, is found in the blood and visceral lesions. **paludal f.** See *malarial f.* **Panama f.** See under *Panama.* **paratyphoid f.** A f. with symptoms like typhoid, but due to one of the paratyphoid group of bacilli rather than the true *Bacillus typhosus.* **pernicious malarial f.** A form of malarial f. of great severity, coma, or delirium, frequent hematuria, and high rate mortality. **phthisical f.** The hectic f. produced by tuberculosis. **primary f.** The f. accompanying the onset of an acute disease. **puerperal f.** A f. due to septic infection at the time of or immediately after parturition. **quartan f.** An intermittent f. in which the paroxysms recur every fourth day. **quintan f.** An intermittent f. in which the paroxysms recur every fifth day. **quotidian f.** An intermittent f. in which a paroxysm occurs every day. **recurrent f.** See *relapsing f.* **relapsing f.** An infectious f. produced by the *Spirillum Obermeieri.* Its peculiar course is made up of separate attacks of fever and malaise, lasting from five to eight days, with a similar period of remission of all symptoms. **remittent f.** A form of malarial f. where there are remissions of the symptoms, but no intermissions. It is probably due to multiple infection of the malarial parasites.

This term is, at present, not much in use. **rheumatic f.** Febrile symptoms associated with acute multiple infectious arthritis, often accompanied with symptoms of endocarditis. **Rocky Mountain f.** A continuous f. of one or two weeks' duration, accompanied by eruption. **scarlet f.** Syn.: *scarlatina*. One of the eruptive or exanthematous f's that is contagious, the vitality of the organic ferment having been preserved for several years in packed up clothing or toys. Epidemics often occur through infection of the milk supply of a community. Scarlet f. is characterized by a stormy onset, with fever, vomiting and sore throat, followed by the appearance of the eruption. After that disappears, there is desquamation of the skin, usually in large flakes. Nephritis is a frequent serious sequela. **septic f.** F. due to septicemia. **ship f.** Of Lind, typhus f., formerly very prevalent on board ship. **slow f.** 1. Any f. of long duration. 2. An old term for typhoid. **splenic f.** Contagious anthrax. **spotted f.** See *typhus f.* and *cerebrospinal meningitis*, under *meningitis*. **surgical f.** The pyrexia consequent upon a surgical operation; there may be rigors or chilliness, with the usual signs of f., or simply a slight elevation of temperature. **syphilitic f.** The f. that may precede the appearance of general symptoms. **tertian f.** An intermittent f. in which the paroxysm occurs every third day. **thermic f.** See *insolation*. **Texas f.** See under *Texas*. **typhoid f.** Syn.: *enteric f.*, *follicular enteritis*. A f. due to the presence of the *Bacillus typhosus*, which gains entrance into the organism through food and drink, usually through contamination of the water supply. The points of entrance are usually in the intestines. The chief symptoms are the rise of temperature, abdominal distention and tenderness, and enlarged spleen. Ulceration of the lymph follicles and Peyer's patches may lead to severe and even fatal hemorrhage or to perforation. **typhomalarial f.** A f. due either to infection by both the *Bacillus typhosus* and the malarial parasite or to a malarial infection with typhoidal course of the fever. **typhus f.** Syn.: *abdominal f.*, *spotted f.*, *cerebrospinal meningitis*. A f. due to the *Bacillus Typhi exanthematicus* of Plotz. A contagious, continued f., formerly epidemically prevalent in camps, hospitals, jails, and a crowded population. Though formerly confounded with typhoid f., there are no intestinal lesions nor symptoms. **urethral f.** F. due to instrumentation of the urethra. It is apparently of septic origin in most cases. **walking typhoid f.** See *ambulatory typhoid f.* **yellow f.** An acute, infectious f., of great severity, due to a protozoa in the blood which is transmitted by the bite of the mosquito, *Stegomyia fasciata*. [Lat., *febris*, from *fervere*, to glow.]

fever blister. See *herpes facialis*, under *herpes*.

fe'verish. Suffering from fever; febrile. **fe'verishness.** The state of being febrile. **fexism** (feks'izm). The name given to certain forms of cretinism in parts of Austria.

fi'ber. A filament or a filamentous structure; in particular an anatomical element, greatly elongated and usually having its cellular character or origin obscured. **accelerans** or **accelerating f.** See *augmentor f's.* **accessory f's.** Ligamentous f's which extend from the posterior ligament of the wrist joint to the dorsal surfaces of several of the carpal bones. **anastomosing f's.** F's of any kind (e. g., nerve, muscle, or connective tissue of any kind) which anastomose. **annular f's.** F's forming a ring around an organ or part, such as the annular f's of the heart. **arciform f's.** **arcuate f's.** A collection of nerve f's, occurring in curved bundles, situated at the upper part of the medulla oblongata, and divided into superficial and deep sets. **arcuate f's of the tegmentum.** Certain decussating f's derived from the peduncles of the cerebellum, together with a few from the fillet. **association f's.** White nerve f's connecting adjacent cerebral convolutions; described as situated just beneath the cortical substance. See *longitudinal f's of the cerebrum*. **augmentor f's.** Nerve f's conveying impulses which accelerate the rapidity and augment the force of the heart beat. **autonomic f's.** Those fibers of the vegetative nervous system chiefly distributed in the vagus and pelvic systems acting reciprocally and antagonistically to the sympathetic fibers. **axil f.** See *axis cylinder*. **Beale's spiral f.** See *spiral f.* **Bühlmann's f's.** See under *Bühlmann*. **cardiac muscular f's.** The striated involuntary f's forming the muscular substance of the heart. **cardio-inhibitory f's.** Inhibitory nerve f's from the vagus to the heart. **central f.** In general a f. surrounded by other f's or tissues. 2. The nerve f. within a pacinian corpuscle. **centripetal f's.** 1. Afferent nerve f's. 2. Nerve f's serving to connect ganglia or nerve centers of a lower order with those of a higher order. **cerebral f's.** Nerve f's of the cerebrum. **cerebrospinal f's.** Nerve f's from the brain or spinal cord in contradistinction to those from the sympathetic system. **collateral f's of the cerebrum.** See *association f's* and *longitudinal f's of the cerebrum*. **commissural f's.** Nerve f's in or forming a commissure. **connecting f's.** F's serving to connect other f's or parts. **connective tissue f's.** Syn.: *connective tissue bundle* (or *fasciculus*). The f's forming the principal part of the ordinary soft connective tissues. They may be elastic, as in elastic tissue, or may be glue yielding, and composed of fine fibrillae, as seen especially well in fascia and tendon. See *connective tissue*, under *tissue*. **corticomuscular f's.** Those nerve f's which extend from the cerebral cortex and convey voluntary motor im-

pulses. **Corti's f's.** See under *Corti*. **crystalline f's.** See *lens f's*. **dartoic f's.** The muscular f. cells or plain muscular f's in the dartos. **decussating f's.** Of Sharpey, minute bundles, apparently of the nature of white fibrous tissue, which form a considerable part of the lamellae of bone. **dental f's.** Of Tomes, the minute protoplasmic processes extending into the dental canals from the odontoblasts. **depressor f's.** F's of a depressor nerve whose stimulation has an inhibitory action on the vasomotor nerve center, with a consequent dilatation of some part of the vascular system. **diverging f's.** The radiating f's of the corona radiata. **elastic f's.** Branched and anastomosing f's of elastic tissue, found in nearly every part of the body, forming networks, as between the bundles of white fibrous tissue, in the corium of the skin, and mucous membranes. **elementary f's.** 1. One of the anatomical elements of a tissue composed mainly of f's. 2. Imaginary fibrous elements supposed by the ancients to make up the entire body. **enamel f's.** Syn.: *enamel prisms*. The hexagonal rods of which the dental enamel is composed. **endogenous f's.** Nerve fibers of the spinal cord arising from cells outside of the cord. **exogenous f's.** Those arising from cells within the gray matter of the spinal cord. **external arciform f's.** A set of nerve f's which emerge from the anterior median fissure of the spinal cord, extend outward, crossing the olivary body and anterior pyramid, and finally terminate at the restiform body. **f's, meat, in stool, how to determine;** see in *appendix, page* —. **f's of Purkinje.** See *Purkinje's f's*, under *Purkinje*. **f's of Remak.** See *Remak's f's*, under *Remak*. **f's of Tomes.** See *dental f's*. **fibrillated f's.** F's as in connective tissue, evidently composed of a bundle of fibrils. **figure of eight f's.** F's arranged in the form of the figure eight, like some of the muscular f's or fascicles of the heart. **ganglionic f's.** Non-medullated nerve f's, especially those of the sympathetic nervous system. **gelatiniform (or gelatinous) nerve f's.** Non-medullated nerve f's. **geminal f's.** The pair of f's formed by division of the pyramidal f's of the cord. **hair f's.** Fibrous masses composed of flattened spindle-shaped cells, into which the principal or cortical portion of a hair may be separated. **heterodesmotic f's.** White f's connecting dissimilar gray structures of the nervous system. **homodesmotic f's.** White f's connecting similar gray structures of the nervous system. **inhibitory f's.** Nerve f's which convey inhibitory or depressor impulses (e. g., to the vasomotor or respiratory center or to the heart). **intercellular f's.** The f's between the cells (in connective and other tissues, composed of cells and f's). **intercolumnar f's.** Slender bundles of cross f's on the surface of the aponeurosis of the external oblique muscle of the

abdomen, which bind the pillars of the external abdominal ring together. **internal arcuate f's.** See *arciform f's*. **intracellular f's.** Syn.: *rootlets of cilia*. Double refracting f's traversing the body of a ciliated cell, and connected through intermediate portions with the cilia. They unite toward the attached end to form the originating f. **intraciliary f's.** F's connecting the anterior peduncles of the cerebellum to the dentatum. **involuntary muscular f's.** See *muscular f. cells*, under *cell*. **lamellar f's, laminar f's.** The f's of white fibrous tissue. **lens f's.** Syn.: *crystalline f's*. The greatly elongated, bandlike f's making up the major part of the crystalline lens of the eye. **longitudinal f's of the cerebrum.** Those groups of association f's in the brain which have an anteroposterior direction. **looped f's.** F's forming a loop, such as the muscular f's or fascicles of the heart passing over the entire auricle and becoming attached by both extremities to the auriculoventricular rings. **medullated nerve f's.** See under *nerve f.*, separate head. **motor f.** The f. in a nerve which transmits motor impulses only. **Müller's f's.** See under *Müller*. **muscle f., muscular f.** Any elongated anatomical element composed of muscular substance. See *voluntary muscular f.*, and *muscular f. cells*, under *cell*. **neuroglia f's.** F's of the supporting tissue of the central nervous system. See *neuroglia*. **non-striated muscle f., non-striped muscle f.** See *muscular fiber cells*, under *cell*. **odontogenic f's.** The f's which form the connective tissue of the matrix of a tooth, and surround the pulp. **orbiculo-antero capsular f's.** Those f's having the most posterior and internal position, in close relation to the anterior boundary of the vitreous. **orbiculoposterocapsular f's.** Zonular f's springing from the extension of the hyaloid membrane, investing the ciliary ring. **origin f's.** Of Daae, the minute branches of a nerve f. joining a spinal ganglion, all within the capsule of the cell. **osteogenic f's.** The soft, pliant bundles of fibrils which form the termination of the growing osseous rays in developing periosteal bone. **pale f's.** The variety of muscle f. which contains little pigment, usually characterized by distinct cross-striation and rapid contraction. **penduncular f's of the cerebrum.** The f's which connect the cerebrum with the medulla oblongata and pons Varolii. **penniform f's.** F's arranged in a penniform manner, said especially of the f's of a penniform muscle. **perivascular f's.** F's surrounding a blood vessel, but not forming a part of it, e. g., the network of neuroglia f's surrounding the blood vessels in the central nervous system. **postganglionic f's.** In the autonomic system of nerves that neuron which is constituted by a sympathetic cell and its fiber. **preganglionic f's.** In the autonomic system of nerves that neuron which extends from the central

nervous system to the particular sympathetic cell in which it terminates. **pressor f's.** F's of a pressor nerve. **pressure f's.** The term used in physiology to designate those sensory fibers whose activity stimulates the vasomotor center and thus raises the blood pressure. **primary chromatic f's, primary chromatin f's, primary nuclear f's.** The larger and more persistent chromatin fibrils in the nucleus. **primitive f.** One of the anatomical elements of a tissue composed of f's, as a muscular f. **Prussak's f's.** See under *Prussak*. **recurrent f.** A nerve f. arising from a ganglion, and joining a nerve of a character opposite to its own (e. g., the fourth cranial nerve, which is purely motor, but receives recurrent or sensory twigs from the fifth cranial nerve). **reticulate f., reticulation f.** A f. or fascicle forming, with others, a reticulation or network; one of the f's of a network. **secondary chromatic f's, secondary chromatin f's, secondary nuclear f's.** The smaller anastomosing f's in a nucleus. They connect the primary nuclear f's by a kind of network. **secondary f's.** F's of secondary importance or size in a fibrous structure. **secretory f's.** Those f's of the sympathetic nerve which enter glands, and are supposed to influence secretion. **semicircular f's of the cerebellum.** A semicircular layer of f's, 2 to 3 mm. thick, between the upper border of the nucleus cerebelli and the outer branches of the arbor medullaris. **Sharpey's f's.** See under *Sharpey*. **spiral f.** Syn.: *Beale's spiral f.* 1. The small or thin f. of nervous substance arising in the substance of a sympathetic ganglion cell, and winding spirally around the thicker straight process for a considerable distance. 2. The spiral constriction sometimes seen in bundles of connective tissue. **Stilling's f's.** See under *Stilling*. **striated muscular f., striped muscular f.** See *voluntary muscular f.* **sympathetic f's.** F's of the sympathetic nerve. **terminal f's.** F's at their termination, especially naked axis cylinders at their termination in a nerve end organ. **trophic nerve f's.** See *nerve f's*, under *separate* head. **unstriated muscular f., unstriped muscular f.** See *muscular f. cells*, under *cell*. **vagus f's.** F's of the vagus nerve. **vasoconstrictor f's.** F's of a vasoconstrictor nerve conveying impulses that produce a constriction or narrowing of some part of the vascular channel. See *vasodilator f's*. **vasodilator f's.** Nerve f's of a vasodilator nerve conveying impulses which produce dilatation or widening of some part of the vascular channel. **vasomotor f's.** The f's of a vasomotor nerve conveying impulses from a vasomotor center to the blood vessels and causing either constriction with consequent narrowing, or dilatation with consequent widening of the vascular channel. **voluntary muscular f.** A cylindrical, striated anatomical element, forming the

contractile substance of voluntary or striated muscular tissue. **Weissmann's f's.** See under *Weissmann*. **white f's of connective tissue.** Exceedingly fine, transparent, and apparently homogeneous filaments which run in small waves or bundles through connective tissue. **yellow elastic f.** One of the f's of yellow or elastic tissue. [Lat., *fibra*, a filament.] **fibra** (fi'brah). A fiber. **fibrae arcuatae internae.** Bundles of transverse fibers in the tegmental region of the crus cerebri, which, together with the longitudinal fibers, compose the formatio reticularis. **fibrae arcuatae orbitales nervi optici.** The fibers which lie with their concavity forward in the anterior angle of the chiasm of the optic nerve. **fibrae elasticae longitudinales tracheae.** Fibers of elastic tissue found running longitudinally in and beneath the mucous membrane of the trachea. **fibrae explementoriae.** Fibers which pass from one cerebral lobe to the other. **fibrae pyramidum primitivae.** Those fibers of the pyramids which form the posterior wall of the anterior median fissure of the cord. **fibrae radiatae iridis.** The radiating muscular fibers of the iris. **fibrae rectae.** Fibers which extend directly from one point to another. **fibrae rectae mediales pedunculi.** The middle tract of direct fibers in the crus cerebri. **fibrae rectae of the rhabpe, fibrae rectae rhabpes.** The vertical fibers in the rhabpe of the medulla oblongata. They are continuous posteriorly with the funiculi graciles, and have in their meshes numerous multipolar nerve cells. **fibrae spirales.** Fibers which follow a spiral direction. **fibrae tendineae.** The white shining fibers of which tendons are composed. **fibrae transversae arciformes.** The fibers which form the stratum zonale medulla oblongata. [Lat., *fibra*, filament.]

fi'bril. One of the ultimate fiberlike divisions composing a fiber or bundle; also any very minute fiber. **achromatic f's.** Syn.: *cell threads, interstellate lines.* F's of achromatic nuclear or cell substance, forming lines which extend from pole to pole in a dividing nucleus, in such a way as to form a spindle-shaped or barrel-shaped figure. **chromatic f's, chromatin f's.** See *nuclear f's*. **connective tissue f's.** F's which, being collected in bundles, form the fibers or fasciculi of white fibrous connective tissue. **elementary f's.** See *primitive f's*. **intermuscular f's.** Small branches of the intermediate plexus of nerve fibers in unstriped muscular tissue which run between the muscle cells. **intracellular f's.** The delicate, threadlike masses composing the more solid part of the protoplasm of the cell body. **intranuclear f.** See *nuclear fibrils*. **nuclear f's, nucleoplasmic f's.** The threadlike fibers consisting of the more solid substance or chromatin in a cell nucleus. See *karyokinesis*, *primary chromatic fibers*, and *secondary chromatic fibers*. **primitive f's.** The ultimate or elementary f's of which the axis cylinder

is composed. **protoplasmic f.** A f. or thread of protoplasm. **ultimate f's.** See *primitive f's.* [Lat., *fibrilla*, dim. of *fibra*, filament.]

fibrilla (fi-bril'lah), pl., *fibrillae*. See *fibril*. **axis fibrillae.** See *primitive fibrils*. **elementary fibrillae.** See *primitive fibrils*. **fibrillae adamantinae.** See *enamel fibers*. **fibrillae elasticae.** Fibrils of elastic tissue. **fibrillae musculares.** The fibrils composing a muscular fiber. **fibrillae tendinae.** The connective tissue fibrils forming the fibers or bundles of a tendon. **primitive fibrillae, ultimate fibrillae.** See *primitive fibrils*. **fibrillation** (fib'ril-a'shun). Fibrillary movements either within voluntary or involuntary muscles.

fi'brin. A protein obtained from the blood, lymph, and some of the exudates. It is an insoluble protein, formed from the soluble fibrinogen by the action of thrombin. It is deposited in fine threads which form a jelly or coagulum. It may be obtained from the blood by whipping it with a bundle of twigs. **f. factor.** A term for substances in the blood, supposed to participate in the formation of f. **f. ferment.** The name given to a substance formed in shed blood, which converts the fibrinogen to fibrin. It is usually assumed to be a ferment, otherwise known as *thrombin*. It is formed, or activated, from a substance, *prothrombin*, existing in the circulating blood. **vegetable f.** See *gluten*. [Lat., *fibrinum*.]

fibrinogen (fi-brin'o-jen). A proteid substance existing in blood and serous transudations, which is converted into fibrin by the action of thrombin. [*Fibrin*, + Gr., *gennan*, to produce.]

fibrinogen'ic, fibrinog'enous. Producing fibrin.

fibrinolysin (fi-brin-ol'is-in). A substance, formed in the blood under some circumstances, which causes the solution of the clot by dissolving or digesting the fibrin. [*Fibrin*, + Gr., *lyein*, to dissolve.]

fibrinolysis (fi-brin-ol'is-is). The process by which a blood clot is redissolved owing to a solution of the fibrin. [*Fibrin*, + Gr., *lysis*, solution.]

fi''bro-adenoma. An adenoma containing an excessive amount of fibrous tissue.

fibroblast (fi''bro-blast). A cell or corpuscle, giving rise to connective tissue. [Lat., *fibra*, filament, + Gr., *blastos*, sprout.]

fibroblas'tic. Pertaining to a fibroblast or to tissue containing these cells, especially in excessive amounts as in the regeneration of inflamed tissue.

fi''brobronchi'tis. See *croupous bronchitis*, under *bronchitis*.

fi''brocalca'reous. Fibrous and having undergone calcareous degeneration; said of tumors. [Lat., *fibra*, a fiber, + *calx*, lime.]

fi''brocarcino'ma. A carcinoma in which the trabeculae are thick and resistant, with more or less granular degeneration of the cells in the trabeculae. **f. cysticum.** A f. (scirrhus) with inclosed cysts.

fi''brocar'tilage. Cartilage in which the matrix or intercellular substance contains

a greater or less number of fibers of elastic or white fibrous connective tissue. See *elastic cartilage*, under *cartilage*, and *white f.* **basilar f.** A f. which occupies the larger part of the foramen lacerum medium [B. N. A., *fibrocartilago basalis*]. **external semilunar f.** See *semilunar f's* [B. N. A., *meniscus lateralis*]. **falciform f's.** See *semilunar f's*. **f's of Wrisberg.** See *cuneiform cartilages*, under *cartilage*. **interarticular f.** A ring of f. attached to the joint capsule. **interarticular f. of the temporomaxillary articulation.** A thin oval plate of f. interposed between the condyle of the inferior maxilla and the glenoid cavity of the temporal bone. **interoccygean f.** Ringlike f's between the segments of the coccyx. **internal semilunar f.** See under *semilunar f's* [B. N. A., *meniscus medialis*]. **interpubic f.** A layer of f. or of cartilage attached to the surface of each pubic bone and united by a layer of fibrous tissue and f. **intervertebral f's.** See *intervertebral cartilages*, under *cartilage* [B. N. A., *fibrocartilagines intervertebrales*]. **navicular f.** A fibrocartilaginous structure connected with the inferior calcaneoscaphoid ligament, over which the tendon of the tibialis posticus glides. **pubic f.** See *interpubic f.* **radio-ular f.** A triangular f. attached by its apex at the base of the styloid process of the ulna, by its base to the edge of the radius, its upper surface resting on the head of the ulna, and its lower on the cuneiform bone. **sacroccygeal f.** A f. interposed between the contiguous surfaces of the sacrum and coccyx. **semilunar f's.** Two crescent-shaped interarticular f's interposed between the head of the tibia and the condyles of the femur. **sternoclavicular f.** A flat disk of f. between the sternum and the clavicle. **tarsal f's.** See *tarsal cartilages*. **triangular (interarticular) f.** See *radio-ular f.* **white f.** Cartilage in which the matrix or intercellular substance is composed largely of white fibrous tissue arranged mostly in bundles of parallel fibers. **yellow f.** The variety that constitutes the cartilaginous structure of the ear, the epiglottis, etc., being of a yellow color and very elastic, and having its intercellular substance made up of long, interlacing, wavy fibers [B. N. A., *discus articularis*].

fibrochondritis (fi''bro-kon-dri'tis). Inflammation of fibrocartilage. [Lat., *fibra*, fiber, + *chondros*, cartilage, + *itis*, inflammation.]

fibrocyst (fi''bro-sist). Syn.: *mucoïd fibroma*. A fibrous tumor that has undergone cystic degeneration, or one in which fluid has accumulated in the interspaces.

fi''brocyst'ic. 1. Fibrous, and having undergone cystic degeneration. 2. Consisting of fibrocysts.

fi''brocyst'oid. Having the formation of a fibrocyst.

fi''brocystoma. A fibroma combined with a cystoma.

fi''bro-enchondroma. An enchondroma,

or cartilaginous tumor containing fibrous tissue.

fi''broglío'ma. A tumor of mixed form, partly fibroma and partly glioma.

fibroid (fi'broyd). Resembling fibrous tissue, as a tumor composed of fibrous tissue. **f. heart.** A heart containing bands of connective tissue between the bands of muscle fibers producing chronic interstitial myocarditis. **f. phthisis.** A chronic form of tuberculosis of the lungs in which there is present an increase of connective tissue. **interstitial f.** A f. developing within the parietes of an organ. **mesometric f.** A f. of the mesometrium or broad ligament. **pedunculated f.** A f. attached by a peduncle. **submucous f.** A f. developed beneath a mucous membrane. [Lat., *fibra*, fiber, + Gr., *eidos*, resemblance.]

fibroin (fi-bro'in, fi'bro-in). A nitrogenous substance which constitutes the essential part of silk and of the spider's web. It is a protein substance belonging to the albuminoids.

fibrolipo'ma. A lipoma in which connective tissue is very abundant.

fibrolysin (fi-bro'lis-in). Thiosinamin sodium salicylate solution.

fibroma (fi-bro'mah). Pl. *fibromata*. A generic term for fibrous tumors developed from proliferous connective tissue cells. Hence they are found in the skin, nerves, fasciae, periosteum, and glandular organs. Though multiple, they do not give rise to metastatic tumors. **cystic f.** A f. that has undergone cystic degeneration. **f. cavernosum.** A f. containing greatly dilated blood vessels. **f. cutis.** F. of the skin. **f. endothelioideum.** F. of the dura mater with cells resembling endothelial cells. **f. fungoides.** See *mycosis fungoides*. **f. keloides.** See *keloid*. **f. lipomatodes.** See *xanthoma*. **f. moluscum.** A soft, flaccid, painless tumor of the skin, either sessile or pedunculated, consisting of a loose network of connective tissue containing more or less serous fluid in its meshes, and covered by epidermis of normal appearance. It is most commonly situated on the face, scalp, or scrotum (in females, the labia pudendi), although the tumors may be disseminated over the whole cutaneous surface. The disease is often congenital. **f. myxomatodes.** A myxofibroma. **f. mucinosum.** An edematous, cystic, or mucoid tumor, arising from obstructed lymph channels. **f. teleangiectaticum.** A highly vascular f. with wide and dilated blood vessels. **mucoid f.** See *fibrocyst*. [Lat., *fibra*, fiber, + Gr., *oma*, tumor.]

fibromatosis (fi''bro-ma-to'sis). See *fibrosis*.

fibromatous (fi-bro'mat-us). Pertaining to, or of the nature of, a fibroma.

fibromyitis (fi''bro-mi-i'tis). An inflammation of the muscular system that is followed by atrophy and fibrous degeneration of the muscular fibers, with consequent diminution of motility of the muscle.

fibromyoma (fi-bro-mi-o'mah). Strictly, a tumor (as of the uterus) composed of

fibrous and unstriped muscular tissue; as commonly used, it is synonymous with *fibrous tumor*, *fibroma*, *myoma*, *leiomyoma*, and *fibroid*. **lymphangiectatic f.** A f. with enlargement and free formation of lymphatic vessels. [Lat., *fibra*, a fiber, + Gr., *mys*, a muscle.]

fibromyxoma (fi-bro-mix-o'mah). A fibroma that has partially undergone myxomatous degeneration.

fi''bromyx'osarco'ma. 1. A sarcoma that has undergone mucoid degeneration. 2. A tumor in which sarcomatous and myxoid tissue are found combined.

fi''broneuro'ma. See under *neuroma*.

fi''bropericardi'tis. Fibrous pericarditis.

fi''broplas'tic. Characterized by the formation of fibers; said of neoplasms. [Lat., *fibra*, fiber, + Gr., *plassein*, to mold.]

fi''bropol'ypus. A fibroid polypus.

fi''bropsammo'ma. A tumor containing fibromatous and psammomatous tissue.

fi''brosarco'ma. A spindle-celled sarcoma in which there is a large amount of connective tissue. **f. endothelioideum.** See *fibroma endothelioideum*.

fibro'sis. A general increase of connective tissue in the viscera, replacing the atrophied and degenerated cells of the parenchyma and a prominent feature of such chronic diseases as cirrhosis of the liver and chronic interstitial nephritis. **arteriocapillary f.** A primary and general fibroid degeneration of the arterioles and capillaries that develops about the middle of life; characterized by diminished caliber and elasticity of the diseased vessels, atrophy of the adjacent tissue (especially in the kidneys), and hypertrophy of the heart.

fi''brotuberculo'sis. Fibroid phthisis.

fi''brous. Containing or composed of fibers; in pathology, due to, or characterized by, the formation of adventitious f. tissue. [Lat., *fibrosus*.]

fibula (fib'u-lah). The smaller of the bones of the leg, lying on its outer side and of nearly the same length as the tibia. It articulates above with the tibia, and below with the tibia and talus. [Lat., *fibula*, clasp, pin.]

Fick'er's sign. Agglutination by the serum on the addition of a fluid containing dead typhoid bacilli; said to be diagnostic of typhoid fever. [Philip Martin Ficker, Ger. bacteriologist, born 1868.]

fictitious meal. The name given to the meal taken by a dog with a fistula, or two fistulas, in the esophagus. The food is chewed and swallowed, but does not enter the stomach, escaping through the fistula. It causes an active secretion of gastric juice, however, known as nervous or psychological secretion.

Ficus (fi'kus). 1. Of the U. S. Ph., the fruit of *Ficus carica*, the fig-tree. 2. The genus to which the fig-tree belongs. [Lat., "a fig."]

field. Any definite circumscribed area. **auditory f.** That portion of the space surrounding the ear in every part of which a given sound is audible by the ear. The *binaural auditory f.* is that portion of

space in which a given sound is audible when both ears are used. **binocular f. of vision.** That portion of space in which the f's of vision of the two eyes overlap, i. e., in which binocular vision is possible. **central f. of vision.** See *visual f.* **Cohnheim's f's.** See *Cohnheim's areas*, under *Cohnheim*. **deaf f's of the ear.** Two small triangles, the first of which lies in front and above, the other behind and above the ear. A sonorous object, when entering either of these regions is heard much less distinctly than outside of them. **direct f. of vision.** See *visual f.* **f. of a lens.** The area from which rays coming to a lens are brought to a focus by the latter; the range of surface distinct through a lens. **f. of a microscope.** See *f. of view.* **f. of audition.** See *auditory f.* **f. of fixation, f. of regard.** See *visual f.* **f. of view.** The area visible through the microscope when it is in focus. **f. of vision.** See *visual f.* **indirect f. of vision.** See *visual f.* **magnetic f.** The range of influence of a magnet. **unilateral f. of vision, unioocular f. of vision.** The visual f. taken for one eye only. **visual field.** The entire surface from which, at a given distance, light reaches the retina, the eye being fixed. The ordinary limits of the visual f. for white lights are, internally, 55° to 60°; externally, 90° to 100°; upward, 55°; downward, 60°. The visual f. for colors is smaller than that for white light, that for blue having the widest limits, and for red the narrowest. The direct or central f. of vision comprises that part of the external world of which the projection falls on the fovea. The indirect or peripheral field comprises that part of which the projection falls on the retina outside the fovea.

fifth disease. Watson (Bost. Med. and Surg. Jour., June 17 and 24, 1909) has described from seventy-five cases a disease which he believes to differ from the other exanthemata. The distinction remains to be established.

fighter's ear. A crumpled state of the ear, sometimes seen in boxers and football players, in which a hematoma of the ear, due to a blow, has been infected with resulting perichondritis and loss of portions of the cartilage.

Figuer's gold salt. See *gold and sodium chlorid*, under *gold*.

fig'ure. The outline of an organ or a part. **achromatic f., achromatin f.** A spindle-shaped or cylindrical f. formed by achromatic fibrils in a dividing cell. **bi-stellate f.** See *amphiaster*. **chromatic f., chromatin f.** Any one of the various forms of figures assumed by the chromatic fibrils of a nucleus during karyokinetic division. See *nuclear f.* **division f.** See *nuclear f.* **mitotic f.** See *nuclear f.* **nuclear f.** Syn.: *spindle f., division f.* Any one of the phases which a nucleus assumes during indirect or karyokinetic division. The set of appearances assumed by the achromatic fibrils is

known as the *achromatic f.*, and that assumed by the chromatic fibrils as the *chromatic f.* **polar f.** The points or poles in the dividing cell which are ultimately occupied by daughter nuclei. The achromatic fibrils converge at these poles, and in ova there is often a radiate appearance around them, known as the polar sun. **primary nuclear f.** See *spirem*. **Purkinje's f.** See under *Purkinje*. [Lat., *figura*, from *ingere*, to touch, shape, fashion.]

filament (fil'am-ent). Any threadlike body or slender fiber. **achromatic f's.** See *achromatic fibrils*. **bipolar f's.** Fibrils of achromatic substance extending between the two poles of the nuclear spindle and forming the achromatic figure. **chromatic f's.** See *nuclear fibrils*. **cleft nuclear f's.** The longitudinally divided nuclear fibrils seen in karyokinesis just before the fibrils are arranged into sets to form the daughter nuclei. **olfactory f's.** See *olfactory hairs*, under *hair*. **protoplasmic f.** A f. or fibril of protoplasm; a fibril in the cell body, in contradistinction to one in the nucleus. **seminal f., spermatic f.** See *spermatosoid*. **terminal f.** The delicate process which forms the inferior termination of the spinal cord. **unipolar f's.** Syn.: *polar rays, cytaster*. The radiating, starlike or sunlike rays of achromatin or specialized cell protoplasm, extending from the poles of a nuclear spindle or amphias-ter. [Lat., *filamentum*, from *filum*, a thread.]

filamentous (fil'am-ent'us). A term used in descriptive bacteriology, meaning threadlike or composed of filaments or threads. [Lat., *filamentum*.]

Filaria (fil-a're-ah). A genus of parasitic nematoid worms of the family *Filariidae*. They are long filiform worms, the mouth is unarmed and the female is longer than the male. **F. Bancrofti.** Syn.: *F. sanguinis hominis, F. nocturna, Trichina cystica*. Long, whitish, filiform worms with a smooth cuticle and globular head having an unarmed, lipless mouth. The male measures 38 mm. and the female from 70 to 100 mm. The males and females are found in the lymphatics of the lower and upper extremities. The embryos enter the circulation and appear in the blood at night as small, wriggling filiform bodies from 290 to 320 μ in length. The parasite is transmitted to man by means of various species of the *Culex* mosquito. **F. conjunctivae.** A species found under the conjunctivae of man. **F. Demarquay.** A species found by Manson in the blood of man in the West Indies. It produces no pathologic effects. **F. dracunculus.** See *Dracunculus medinensis, F. immitis*. A viviparous species found frequently in the right ventricle of the dogs of eastern Asia. It passes into the blood, where its development is arrested. **F. labialis.** A threadlike, cylindrical species, 30 mm. long, with four papillae surrounding the mouth in a crucial form, a slender head,

a blunt tail, and the vaginal aperture near the anal. Males are not known. It has been found in one case (in Naples) in a pustule of the upper lip. **F. loa**. A parasite of the subcutaneous tissues of the back, breast, penis, eyelid, and conjunctiva. The embryos enter the blood and appear during the day. They differ from *F. Bancrofti* also in being more irregularly curved. **F. locustae**. See *Gordius aquaticus*, under *Gordius*. **F. lymphatica**. See *Strongylus bronchialis*. **F. medinensis**. See *Dracunculus medinensis*. 1. The guinea worm, an animal parasite indigenous to the western coast of Africa, India, Arabia, Egypt, and elsewhere. The female is from 1 to 12 feet in length, $\frac{2}{10}$ inch in diameter, and cylindrical throughout. It has a flat head, a blunt tail, and an oval aperture, surrounded by four crucially placed papillae. Formerly it was supposed to gain entrance to the skin by boring from without, but, according to the latest authorities, it is introduced probably in impure drinking water containing *Cyclops*, in which the embryos of the *Filaria* pass through the larval stage. The young worm is supposed to make its way from the alimentary canal to the mesentery, where male and female copulate; after which the female makes her way to the subcutaneous cellular tissue, in various parts of the body, most commonly of the feet and legs. The presence of the worm in the skin manifests itself by a painful tumor, blister, or furuncle, sometimes advancing to severe inflammation, with constitutional disturbance. 2. The disease caused by *F. medinensis*; also called *dracontiasis*. **F. papillosa**. Syn.: *Hamularia equi*. A species found in the peritoneum of the horse, donkey, mule, ox, and buffalo, and also in their thoracic cavity and aqueous humor. It sometimes appears in the lymphatic glands of human beings. **F. perstans**, **F. sanguinis hominis perstans**. Syn.: *Acanthocheilonema perstans*. An African variety constantly present in the blood of those infested with it. **F. sanguinis hominis**. See *F. Bancrofti*. **F. Teniguchi**. A species found in the lymphatic glands in a Japanese. [Lat., *filum*, thread.]

fil'ar'ial. Pertaining to, or caused by, *Filaria*.

filariasis (fil-ar-i'as-is). A chronic disease, caused by the presence in the system of the *Filaria Bancrofti*; characterized by soft tumefaction of the inguinal glands, hematuria or chyluria, chylous extravasations in the legs, scrotum, and other portions of the body, and the periodical presence of the parasites in the blood.

Filator's spots. See under *Flindt*.

filicin (fil'is-in). 1. A term applied to various substances, each in turn having been supposed to be the active principle of aspidium. [Lat., *filix*, a fern.]

filiferous (fil-if'er-us). Bearing filaments. [Lat., *filum*, a thread, + *ferre*, to bear.]

filiform (fil'if-orm). Thread-shaped. In descriptive bacteriology, used to mean

threadlike. [Lat., *filum*, thread, + *forma*, shape.]

filix (fí'lix), pl., *filices*. A fern. **extractum filicis ethereum liquidum**. See *oleoresina aspidii*, under *Aspidium*. **F. mas**. See *Aspidium f. mas* [Br. Ph.]. [Lat.]

fil'let. 1. A bandage in the form of a loop. In obstetrics, a noose made of several thicknesses of sterile gauze bandage which is passed over the anterior thigh of the fetus in breech presentations for the purpose of making traction. 2. See *lemniscus*. **f. of the corpus callosum**. The fibers forming the white substance of the gyrus fornicatus. **lateral f.** See *lateral lemniscus*. **lemniscus f.** See *lemniscus*. **mesal f.** See *median internal lemniscus*. [Lat., *filum*, thread.]

fil'ing. The material used to close a tooth cavity permanently, such as gold, amalgam, or cement.

filmaron (fil-mar'on). $C_{47}H_{54}O_{10}$, one of the active anthelmintic constituents obtained from the ethereal extract of aspidium. **f. oil**. A preparation consisting of castor oil containing 10 per cent. of filmaron; used to expel tapeworm.

filmogen (fil'mo-jen). A solution of pyroxylon in acetone; used like collodion.

filovariocosis (fí'lo-var-ik-o'sis). Thickening or dilatation of the axis cylinder of nerves. [Lat., *filum*, thread, + *varix*, a dilated vein.]

fil'ter. An apparatus containing some porous substance (unsized paper, sand, charcoal, etc.) through which a liquid is passed, in order to separate the substances held in suspension, which can not pass through the interspaces of the f., from the dissolved substances which pass through with the liquid. **asbestos f.** 1. Of C. Bovet, a f. consisting of equal parts of powdered asbestos and glass wool. 2. Of K. Trobach, a f. having in the neck or top a perforated cone lined with asbestos. **Berkefeld f.** See under *Berkefeld*. **compressed charcoal f.** A cake of compressed charcoal filling the bottom of a suitable vessel; used to deodorize and clarify. **f. bed**. A f. on a large scale for purifying a water supply, consisting of a bed of sand or porous masonry, either constructed in the bank or bed of a river or in connection with artificial reservoirs. **folded f.** A f. composed of folded paper. It is preferable to the ordinary f. for filtering large masses of liquid, because it has a larger filtering surface, and the liquid must pass through one thickness only. **Pasteur-Chamberland f.** See under *Pasteur-Chamberland*. **porous stone f.** A piece of sandstone, about $\frac{3}{4}$ inch thick, fitted as the bottom of a cylinder. **Purkall f.** See under *Purkall*. **silicated carbon f.** A f. composed of 75 per cent. of charcoal, 22 per cent. of silica, and a little iron oxid and alumina; these materials are compressed in suitable shapes, dried and heated. [Lat., *filtrum*.]

fil'trate (fil'trát). In filtration, that portion of the fluid which passes through the fil-

ter, opposed to the precipitate, which is left behind.

filtration. The process of passing fluids through porous media (filters), to separate the insoluble suspended contents from the substances held in solution. F. implies an excess of pressure on the side of the filter.

fibria (fim'bre-ah). A border, a fringe. **f. cornu Ammonis**, **f. fornicis**. See *corpus fibriatum*. **f. medullaris hippocampi**. See *corpus fibriatum*. **fibriae of the oviduct**. Syn.: *morsus diaboli*. A number of ragged fringelike processes which surround the distal opening of the oviduct. **f. ovarica**. That one of the fibriae of the oviduct which extends along the infundibulo-ovarian ligament to the ovary. **fibriae synovales**. See *synovial fringes*, under *fringe*. **fibriae tubarum**. See *fibriae of the oviduct*. [Lat., *fibria*, fringe.]

fibriate (fim'bre-ät). A term used in descriptive bacteriology meaning fringed, bordered by slender processes larger than hairs. [Lat., *fibriatus*.]

find'er. In microscopy, any device enabling one to find easily some object or part in a microscopical preparation.

fin'ger. Any one of the prehensile members, forming the termination of the hand. **annular f.** See *ring f.* **clubbed f.** A knoblike deformity of the ends of the f's, attended with curvature of the nails and associated usually with pulmonary phthisis or cardiac disease. **contracted f's.** See *Dupuytren's contracture*. **dead f's.** See *symmetrical gangrene*, under *gangrene*. **drop f.** Flexion of the terminal phalanx of a finger due to rupture of the extensor tendon or to paralysis of the extensor muscle. **ear f.** See *little f.* **fifth f.** See *little f.* **f. stall.** A cap or cot to protect an injured f. **first f.** The index f. **fourth f.** The ring f. **hippocratic f.** See *clubbed f.* **index f.** The f. nearest the thumb, so called from its use in pointing [B. N. A., *index*]. **little f.** The fifth f. in five-fingered animals; the f. on the extreme ulnar side of the hand [B. N. A., *digitus minimus*]. **middle f.** The f. on the ulnar side of the index f. [B. N. A., *digitus medius*]. **ring f.** The f. on the ulnar side of the middle f. [B. N. A., *digitus annularis*.] **second f.** The middle f. **trigger f.** **unbending f.** Syn.: *jerk f.*, *snap f.*, *spring f.* A condition characterized by occasional obstruction to the flexion or extension of the f., followed by a sudden, jerky completion of the movement. [B. N. A., *digitus manus*.] [Old Eng., *finger*.]

Finkler-Prior spirillum. See under *Spirillum*.

Finney's operation. A form of posterior gastroduodenostomy in which a large opening is formed between the stomach and the duodenum, thus insuring drainage. [John Miller Turpin Finney, Baltimore surgeon, living.]

fish-skin disease. Another name for ichthyosis. See *ichthyosis*.

fission (fis'shun). A mode of generation or of cell division in which the organism separates into two or more equal parts, each of which becomes developed to the size and form of the original. **binary f.** F. into two parts. **multiple f.** F. into many parts. [Lat., *fissio*, from *findere*, to cleave.]

fissu'ra. See *fissure*. **f. abdominalis.** A congenital deficiency in the abdominal wall through which the contents of the abdomen protrude. **f. abdominalis completa.** A congenital deficiency in the anterior abdominal wall from the thorax to the pelvis. **f. ani.** See *fissure of the anus*, under *fissure*. **f. antitragohelicina.** A f. in the cartilage of the external ear between the processus helices caudatus and the antitragus. **f. cerebelli longitudinalis.** A broad, shallow groove on the inferior surface of the cerebellum separating the hemispheres. **f. cerebri lateralis anterior.** The anterior or ascending branch of the fissure of Sylvius. **f. cerebri lateralis posterior.** The posterior or horizontal branch of the fissure of Sylvius. **f. dorsi mesalis.** In teratology, a fissure in the middle line of the back. **f. genitalis.** 1. The cleft of the vulva. 2. A fissure of the male genitals, producing when complete a form of hermaphroditism. **f. incisiva facialis.** A fissure sometimes found on the outer surface of the superior maxilla, corresponding to the incisor fissure. **fissuræ interlobulares hepatis.** Fissures which separate the lobes of the liver. **f. iridis.** See *coloboma iridis*, under *coloboma*. **f. laryngea pharyngis.** The pharyngeal opening of the larynx. **f. lateralis.** The fissure of Sylvius. **f. mastoidea squamosa.** A small fissure in the line of junction of the mastoid and squamous portions of the temporal bone. **f. oris.** The mouth in its restricted sense. **f. palatina.** See *cleft palate*. **f. palpebrarum.** The cleft between the eyelids. **f. petrobasilaris.** A fissure, partly filled by connective tissue or ossicles, between the petrous portion of the temporal bone and the occipital and sphenoid bones. **f. petroso-angularis.** A fissure between the apex of the pyramidal part of the petrous portion of the temporal bone and the great wing of the sphenoid bone. **f. pterygoidea**, **f. pterygopalatina.** The space between the lower ends of the pterygoid plates of the ethmoid bone, into which the pterygoid process of the palate bone fits. **f. pudendi.** The cleft of the vulva. **f. spinalis.** See *spina bifida*. **f. sterni**, **f. sterni congenita.** See *congenital fissure of the sternum*, under *fissure*. **f. thoracis.** In teratology, a congenital deficiency in the chest wall. **f. tympanico mastoidea.** A small fissure between the mastoid portion of the temporal bone and the posterior margin of the external auditory meatus, in which are the openings of the canalis mastoideus. **f. urethrae completa.** See *epispadias penis*. **f. urethrae incompleta.** See *epispadias glandis*. **f. urethrae supe-**

rior. See *epispadias*. **f. ventralis.** See *anterior median fissure of the spinal cord*, under *fissure*. **f. ventri lateralis.** In teratology, a fissure on the side of the abdomen. **f. ventri mesalis.** In teratology, a fissure in the median line of the belly. **f. vesicae congenita.** See *congenital fissure of the bladder*, under *fissure*. **f. vesicogenitalis.** Fissure of the bladder and genitals. **f. vulvae.** The cleft of the vulva.

fissure (fish'ur). A cleft or narrow slit, made by the parting or division of a structure or by a narrow infolding of its surface. **anterior median f. of the medulla oblongata.** The continuation of the anterior median f. of the spinal cord upward on the anterior surface of the medulla oblongata, where it terminates at the pons Varolii in the foramen cecum. It is partly interrupted below by the decussating bundles of the pyramids. **anterior median f. of the spinal cord.** A deep longitudinal groove which occupies the median line of the ventral aspect of the spinal cord. **anterolateral f.** A slightly marked depression along the ventrolateral column of the spinal cord, which separates it into the ventral and lateral columns. **auricular f.** An opening on the inferior surface of the petrous portion of the temporal bone, situated between the vaginal and mastoid processes, through which passes the auricular branch of the pneumogastric nerve. **branchial f.** See *visceral clefts*, under *cleft*. **calcarine f.** A f. on the mesal aspect of the cerebrum extending from near the occipital end and joining the occipital f. **callosal f. callosomarginal f.** A f. on the mesal surface of the cerebral hemisphere, dividing the area between the callosum and the margin into nearly equal parts, but turning dorsad opposite the splenium. **central f.** A deep and constant f. which crosses the lateral aspect of the cerebrum at about the middle of its length. **cervical f.** A cleft, or fistula, produced by a failure of union of the respiratory or visceral clefts that appears in the cervical region. **collateral f.** A f. on the mesal aspect of the cerebrum, ventrad of the calcarine f., between the subcalcarine (lingual) and subcollateral (fusiform) gyri; it extends upon the temporal lobe. **congenital f.** A defect of development usually manifested by a solution of continuity, or cleft, in an organ or part of the body. **congenital f. of the bladder.** A bladder divided into two pouches, such as is found in large land turtles. **congenital f. of the cheek.** A single or double cleft of the cheek, that may be short or may extend from the orbit to the commissure of the lips. It depends upon a failure of union between that upper portion of the first visceral arch from which the superior maxilla is developed. Operative interference is usually successful in the second or third year. **congenital f. of the sternum.** A congenital defect of ossification, in which the sternum is com-

pletely or partially divided into halves. **constant f.** Any f. of the adult cerebrum that is always present in a given species or group. **dentate f.** See *hippocampal f. dorsal f.* In embryology, the posterior median f. of the spinal cord. **fetal ocular f.** A cleft or interruption in the thick wall, surrounding the lens in the embryonic eye and consisting of the two leaves or laminae of the secondary optic vesicle. When it is not closed during development it gives rise to a coloboma. **f. in the enamel.** A solution of continuity in the enamel of a tooth, that is usually filled with the modification of cementum that constitutes Nasmyth's membrane. **f. of Bichat.** See *rima and transverse cerebral f.* **f. of bone.** A forcible separation of the osseous fibers, which may extend through the entire thickness of bone, to the outer table, or only to the compact and areolar tissues, but not completely through them. **f. of Sylvius.** See *sylvian f.* **f. of the anus.** A painful linear ulcer at the margin of the anus. **f. of the bladder.** A faulty development of the bladder, in which the anterior wall is more or less completely lacking and the posterior wall is continuous with the skin of the abdomen. **f. of the calamus scriptorius.** The termination of the mesal f. of the fourth ventricle, at the point corresponding to the apex of the calamus. **f. of the cerebrum.** Any one of the linear depressions of the surface of the cerebrum circumscribing the convolutions more or less completely. **f. of the choroid.** A congenital cleft of the choroid. **f. of the clitoris.** A cleft of the clitoris, resembling f. of the penis. **f. of the cranium.** A cleft that may involve the skin, cranium, and meninges, exposing the brain in a more or less atrophied condition; or involve the cranial bones alone, forming a hernia cerebri when the cleft is large. **f. of the ductus venosus.** The posterior portion of the longitudinal f. of the liver. **f. of the eyelid.** A congenital cleft of the eyelid. **f. of the helix.** A slit in the helix of the external ear, above the insertion of the *atrahens aurem*. **f. of the iris.** A congenital cleft of the iris. See *coloboma iridis*. **f. of the lip.** See *harelip*. **f's of the liver.** Clefts in the tissue of the liver which divide that organ into lobes. **f's of the lungs.** Clefts which divide the lungs into lobes. **f's of the medulla oblongata.** Continuations of the ventral and dorsal mesal f's of the spinal cord, the former ending at the pons Varolii, and the latter terminating in the fourth ventricle. **f. of the penis.** A more or less complete cleft from that of the glans to that of the entire organ. In the latter case it is called double penis. **f. of the prepuce.** A cleft of the prepuce extending from the corona to the preputial meatus. **f. of the rectum.** See *f. of the anus*. **f. of the scrotum.** A cleft of the scrotum that may divide it into two dis-

tinct pouches, or may extend so far into the perineum as to produce the appearance of labia majora and a vagina or hermaphroditism. **f. of the soft palate.** A cleft of the soft palate; it may be partial or complete, and is usually associated with f. of the hard palate. **f's of the spinal cord.** See *anterior median f. of the spinal cord* and *posterior median f. of the spinal cord.* **f. of the spleen.** See *hilum of the spleen*, under *hilum.* **f. of the thorax.** A defective development in which there is a median cleft of the sternum. **f. of the tongue.** 1. A rare cleft of the tongue resembling that of serpents. 2. A f. of the dorsum or side of the tongue reaching into the tissue of that organ; it may be caused by syphilis. **f. of the urethra.** See *epispadias* and *hypospadias.* **f. of the uterus.** A more or less complete cleft of the uterus. **f. of the uvula.** A cleft of the uvula more or less complete; if the latter, the condition is called double uvula. **f. of the vena cava.** A short f. upon the posterior surface of the liver between the spigelian and right lobes, which contains the inferior vena cava. **f. of the vertebrae.** See *spina bifida*, *glaserian f.*, *glenoid f.* A small f. in the outer wall of the tympanic cavity, opening into the glenoid fossa. **great cerebral f.** See *rima* and *transverse cerebral f.* **great horizontal f. of the brain.** See *calcarine f.* **great horizontal f. of the cerebellum.** See *peduncular sulcus.* **great interlobular f.** See *sylvian f.* **great longitudinal f. of the brain.** The deep mesal f. which divides the cerebrum into two hemispheres. **great transverse f. of the brain.** See *transverse cerebral f.* **hippocampal f.** The cerebral f. which extends from the splenium to near the tip of the temporal lobe and is collocated with the hippocampus major in the middle horn of the lateral ventricle. **horizontal f.** See *calcarine f.* **horizontal f. of the cerebellum.** See *peduncular sulcus.* **hyposylvian f.** An inconstant ventral branch of the sylvian f. **incisor f.** A f. separating the intermaxillary portion from the remainder of the superior maxillary bone. **inconstant f.** Of Wilder, a cerebral f. which is not always present in a given species or group, e. g., the subcentral f. **inferior cerebral f.** See *inferior transverse f.* **inferior frontal f.** The subfrontal f. **inferior temporal f.** The subtemporal f. **inferior transverse f.** A f. between the cerebellum and the oblongata through which a fold of the pia enters the fourth ventricle. **inferolateral f.** See *calcarine f.* **intercerebral f.** Of Wilder, the great longitudinal f. of the brain. **interlamellar f.** One of the sulci which separate the lamellae of the cerebellum. **interlobar f.** One of the f's that demarcate the cerebral lobes: they are the central, sylvian, callosal, hippocampal, occipital, and circuminsular f's. **internal parieto-occipital f.** See

occipital f. **internal perpendicular f.** The portion of the occipital f. which is to be found on the mesal surface of the hemisphere. **interpallebral f.** See *pallebral f.* **interpeduncular f.** The depression between the crura cerebri, including the posterior perforated space. **lateral f. of the spinal cord.** See *anterolateral groove*, under *groove.* **longitudinal f. of the brain.** See *great longitudinal f. of the brain.* **longitudinal f. of the liver.** A deep groove upon the lower surface of the liver, separating its right and left lobes. **maxillary f.** A f. on the internal surface of the superior maxilla which runs from the lower part of the orifice of the antrum obliquely downward and forward, and receives the maxillary process of the palate bone. **occipital f.** 1. Of Owen, an ill-defined and inconstant small f. on the dorsocaudal slope of the occipital lobe. 2. Of Pansch, the deep interlobar f. situated between the occipital and parietal lobes of the cerebrum. **olfactory f.** The linear depression on the ventral aspect of the frontal lobe in which rest the olfactory bulb and its crus. **orbital f.** A triradiate or quadrifurcate f. on the orbital surface of the frontal lobe laterad of the olfactory f. **pallebral f.** The opening between the upper and lower lids extending from the internal to the external canthus. **paracentral f.** The f. on the mesal surface of the cerebrum more or less completely circumscribing the paracentral lobule. **parallel f.** A constant f. of the temporal lobe which has a general direction parallel to the sylvian f. It separates the superior from the middle temporosphenoidal convolution. **partial f's.** The cerebral f's that do not involve the entire thickness of the parietes so as to be collocated with entocellic elevations. **peduncular f.** See *peduncular sulcus.* **peritoneal f.** A f. or cleft, of the lateral mesoblastic plates of the embryo, constituting the rudiment of the great visceral cavity of the abdomen. **permanent f's.** The cerebral f's that persist, as distinguished from the *transitory f's.* **perpendicular f.** See *occipital f.* **petrosquamosal f.**, **petrosquamous f.** A narrow f. between the upper surface of the petrous portion of the temporal bone and the internal surface of its squamous portion. **petrotympanic f.** A groove or f. in the tympanic ring for the reception of the long process, or processus foliaris, of the malleus, and for transmitting various soft parts. **portal f.** See *transverse f. of the liver.* **postcalcarine f.** An inconstant, usually vertical f. at the occipital end of the cerebrum, sometimes joined by the calcarine f. and often branched at each end so as to be a zygous f. **postcentral f.** A f. just caudad of the central f., nearly parallel to it, and often united with the parietal f. **posterior cerebral f.** See *occipital f.* **posterior lateral f. of the spinal cord.** See

posterolateral groove, under *groove*. **posterior longitudinal** (or **median**) **f. of the spinal cord**. An apparently deep, narrow sulcus which extends the whole length of the cord, occupying the middle of its dorsal surface. On cross section it is seen to be not a true f., but merely a connective tissue septum prolonged from the pia mater. **posterior median f. of the medulla oblongata**. The prolongation of the posterior longitudinal f. of the spinal cord upward on the posterior surface of the medulla oblongata. **posterior orbital f.** The sphenoidal f. **posterior transverse f. of the brain**. See *inferior transverse f.* **posterolateral f.** See *posterolateral groove*. **posteromedian f. of the spinal cord**. See *posterior median f. of the spinal cord*. **precentral f.** A f. running parallel with the ventral part of the central f. and often joined by the subfrontal f. **precuneal f.** A f. in the precuneus, consisting usually of one part parallel with the cerebral margin and of a second at right angles to it. **preorbital f.** A transverse f. on the ventral surface of the frontal lobe cephalad of the orbital f. **presylvian f.** The anterior limb of the sylvian f. forming the frontal boundary of the operculum. **pterygomaxillary f.** A vertical slit in the zygomatic fossa. **Rolando's f.** See *central f.* **sagittal f.** See *intercerebral f.* **sphenoidal f.** A triangular f. bounded internally by the body of the sphenoid bone, superiorly by its lesser wing, and inferiorly by the orbital surface of its greater wing. It transmits the two divisions of the third, the fourth, sixth, and the three main branches of the ophthalmic division of the fifth cranial nerves, and the ophthalmic vein. **sphenomaxillary f.** A f. between the lateral margin of the superior maxilla and the orbital plate of the sphenoid bone. It transmits the infra-orbital vessels and nerve. **subcentral f.** An inconstant f. at the ventral end of the postcentral f. **subfrontal f.** A f. between the middle and inferior frontal convolutions. **suborbital f.** A f. in the floor of the orbit in the superior maxillary bone, forming the upper or posterior end of the infra-orbital canal. **subseptal f.** A f. in the cuneus, between the calcarine and collateral f's. **superfrontal f.** The f. on the lateral aspect of the frontal lobe not far from the dorsal margin, parallel therewith, and demarcating the second frontal convolution. **superior collateral f.** In the lower vertebrates, the groove in the spinal cord at the emergence of the dorsal nerve roots corresponding to the posterolateral groove in man. **superior frontal f.** See *superfrontal f.* **superior longitudinal f.** See *intercerebral f.* **superior temporosphenoidal f.** See *superfrontal f.* **superior transverse f.** See *transverse f. of the brain*. **superoccipital f.** An irregular f. in the upper part of the occipital surface of the posterior lobe of the cerebrum. **superseptal f.**

A f. situated in the cuneus, nearly parallel with the occipital f. **supertemporal f.** The constant f. caudad of and parallel with the sylvian f. **sylvian f.** A deep f. of the brain separating the anterior and middle lobes. The f. of Sylvius. **transitory f's.** The cerebral depressions during the earlier months of fetal life which represent corrugations of the entire thickness of the thin parietes, and are supposed to disappear at the sixth or seventh month. **transverse cerebral f., transverse f. of the brain.** The transverse cleft separating the anterior from the posterior and middle portions of the brain, and transmitting the folds of pia which are prolonged into the lateral ventricles and form the choroid plexuses. **transverse f. of the cerebellum.** See *peduncular sulcus*. **transverse f. of the cerebrum.** See *transverse cerebral f.* **transverse f. of the liver.** A f. about two inches in length, which passes transversely across the lower surface of the right lobe of the liver, joining the longitudinal f. at nearly a right angle. In it are found the portal vein, hepatic artery and nerves, and hepatic duct. **umbilical f. of the liver.** The anterior portion of the longitudinal f. of the liver. It is situated between the left lobe and the lobus quadratus, and contains the umbilical vein in the fetus (the round ligament in the adult). **uncinate f.** See *collateral f.* **ventral median f. of the spinal cord.** See *anterior median f. of the spinal cord*. **vertical frontal f.** See *central f.* [Lat., *fissura*, from *findere*, to cleave.] **fistula** (fis'tu-lah). Pl. *fistulae*. A tube-like, narrow passage, formed by disease or injury, between two organs, between an organ and a free surface of the body, or between an abscess and an organ or a free surface. See *sinus*. **abdominal f.** A passage leading from the skin of the abdomen to one of the hollow viscera of the abdomen. **anal f.** See *f. in ano*. **auricular f.** A f. giving passage to the auricular branch of the vagus. **biliary f.** A f. involving the biliary passages. **blind f.** See *incomplete f.* **branchial f.** An unclosed branchial cleft. **bronchial f.** A fistulous opening into a bronchus, especially a fistulous communication between the bronchus and the skin. **cervico-vaginal f.** A f. leading from the vagina into the canal of the cervix uteri. **cicatricial f.** A f. lined with a cicatricial membrane. **coccygeal f.** A f. over the coccyx due to faulty coalescence of the skin covering the back. **complete f.** A f. by which one internal cavity communicates with another or with the external surface. **congenital cervical f.** A branchial f. opening on the neck. **congenital f. of the ear.** A rare form of malformation or arrested development in the ear, consisting of a small fistulous opening close in front of the tragus, which may extend as far as the tympanic cavity. **congenital lumbosacral f.** See *foveola coccygea*. **corneal f.** A small opening through the cornea, usually

the result of a perforating ulcer, that establishes a communication with the anterior chamber. **Eck's f.** See under *Eck*. **entero-umbilical f.** A fistulous communication between the umbilicus and the intestine. **enterovaginal f.** A fistulous communication between the intestine and the vagina. **enterovesical f.** A f. leading from the vagina to the intestine. **esophageal f.** A f. of the esophagus. **external blind f.** See *external incomplete f.* **external complete f.** A f. opening on the external surface of the body. **external incomplete f.** An incomplete opening on the cutaneous surface. **fecal f.** A fistulous communication between the intestinal canal and the outer surface of the body, a hollow organ, or an abscess cavity. **f. antri Highmori.** A fistulous communication between the antrum of Highmore and the mouth, following an operation on the maxillary sinus or in consequence of a diseased tooth. **f. in ano.** A fistulous tract by the side of the rectum. Those cases in which there is an opening of the f. by one or more mouths in the skin only, are called *blind external fistulae*; those in which there is an opening into the cavity of the intestine but none in the skin are called *blind internal fistulae*; those which have an opening both through the skin and into the intestine are called complete fistulae. **gastric f.** A f. of the stomach that opens on the skin of the abdomen. **gastro-intestinal f.** A f. leading from the stomach into an intestine. **gastropulmonary f.** A f. leading from the stomach into the lung. **gastrovaginal f.** A fistulous communication between the vagina, a large abdominal abscess, and the stomach. **genito-urinary f.** See *urogenital f.* **horseshoe f.** An anal f. that has a cutaneous opening on one side of the median line, while the mucous opening is on the opposite side, the passage surrounding the anus. **incomplete f.** Syn.: *blind f.* A f. having only one opening. **internal f.** A f. having no cutaneous opening. **internal blind f.** An incomplete f. opening on an internal surface. **intestinal f.** A f. opening into the intestine. **intestino-uterine f.** A f. leading from the uterus into the intestine. **intestino-vaginal f.** A f. leading from the vagina into the intestine. **intestines vesical f.** A f. leading from the uterine bladder into the intestine. **lacrimal f.** A f. of the lacrimal passage. **laryngeal f.** A f. of the larynx. **lymphatic f.** A f. leading into a lymphatic vessel. **mammary f.** See *milk f.* **mandibular f.** A f. due to non-closure of the mandibular fissure of the embryo. See *macrostoma*. **mastoid f.** A fistulous communication between the skin covering the mastoid process and the cells of the mastoid, which is the result of suppuration and caries of the bone. **milk f.** A f. communicating with a milk duct. **mucocutaneous f.** A f. leading from a mucous to a cutaneous surface. **nepbro-abdominal f.** A f.

of the abdominal wall communicating with the kidney. **non-urinary urethral f.** A recto-urethral f. or a urethrocutaneous f. through which urine does not escape. **omphalo-enteric f.** A f. leading from the navel to the interior of the intestine. **pancreatic f.** A f. of the pancreatic duct. **penile f.** A urethral f. opening on the penis. **perineal f.** A f. leading from the skin of the perineum into the rectum, the anal canal, the vagina, the urethra, or the bladder. **perineovaginal f.** A f. leading from the vagina to the outer surface of the perineum. **peritoneovaginal f.** A fistulous communication between the vagina and the peritoneum. **pharyngeal f.** A f. (usually branchial) leading into the pharynx. **pleurocutaneous f.** A f. leading from the pleural cavity to the external surface. **pulmonary f.** Adhesion of the pulmonary and costal pleura, with fistulous communication between the surface of the chest and the lung. **purulent f.** A f. that discharges pus only. **rectal f.** A f. of the rectum. **recto-labial f.** A f. leading from the rectum to the surface of a labium pudendi. **recto-urethral f.** A f. leading from the rectum into the urethra. **rectovaginal f.** A f. leading from the rectum into the vagina. **rectovesical f.** A f. leading from the rectum into the urinary bladder. **rectovesicovaginal f.** A double f. giving rise to communication between the rectum, the vagina, and the urinary bladder. **rectovestibular f.** A f. leading from the rectum to the vestibule of the vulva. **rectovulvar f.** A rectal f. opening at the vulva. **renal f.** A f. communicating with the pelvis of the kidney. **sacral f.** A congenital f. or fissure occurring in the lumbosacral region. **salivary f.** A f. of a salivary duct. **scrotal f.** A urethral f. opening on the scrotum. **spermatic f.** A sinus resulting from chronic orchitis and discharging semen with the pus. **stercoraceous f.** See *fecal f.* **synovial f.** A f. communicating with a joint. **Thiry's f.** See under *Thiry*. **thoracic f.** A fistulous communication between the cavity and the parietes of the thorax, often spontaneously formed in neglected cases of empyema or remaining after operative measures for relief of that disease. **thyrohyoid f.** A f. extending from the hyoid bone to the skin over the thyroid cartilage. **tracheal f.** A f. between the trachea and the skin. **tracheo-esophageal f.** A fistulous communication between the trachea and the esophagus. **umbilical f.** A fistulous communication having the external opening at the umbilicus; it may be congenital from a patent urachus, or inflammatory from adhesion and suppuration of the abdominal viscera in the retro-umbilical region. **urachal f.** A f. at the umbilicus communicating with an open urachus. The term *incomplete urachal f.* has been applied to a distended state of the umbilicus due to accumulation of urine in the

- urachus, there being no external opening. **ureteral f.** A f. of the ureter. **ureterorectal f.** A fistulous communication between the ureter and the rectum. **uretero-uterine f.** A f. leading from the ureter into the uterus. **uretero-vaginal f.** A fistulous communication between the ureter and the vagina. **urethral f.** An opening between the lumen of the urethra and some surrounding organ or the surface. **urethrocutaneous f. of the penis, urethro-penile f.** A f. leading from the urethra to the skin of the penis. **urethroperineal f.** A f. leading from the urethra to the outer surface of the perineum. **urethrorectal f.** See *recto-urethral f.* **urethroscrotal f.** See *scrotal f.* **urethrovaginal f.** A f. leading from the urethra into the vagina. **urinary f.** A f. of the urinary tract. Some writers apply the term only to those fistulae that actually give passage to urine. See *non-urinary urethral f.* **urogenital f.** A f. leading from the urinary to the genital tract. **uterine f.** A f. of the uterus. **vaginal f.** A f. of the vagina. **vagino-intestinal f.** A f. leading from the vagina into the intestine. **Vella's f.** See under *Vella*. **vesical f.** A f. of the urinary bladder. **vesico-abdominal f.** A f. leading from the exterior of the abdomen into the urinary bladder. **vesico-cervical f., vesicocervico-uterine f.** A f. leading from the urinary bladder into the canal of the cervix uteri. **vesicorectal f.** A fistulous communication between the urinary bladder and the rectum. **vesico-urethrovaginal f.** A f. establishing a communication between the urinary bladder, the urethra, and the vagina. **vesico-uterine f.** A f. leading from the urinary bladder into the uterus. **vesico-uterovaginal f.** A f. involving the urinary bladder, the uterus, and the vagina. **vesicovaginal f.** A f. leading from the urinary bladder into the vagina. **vulvar f.** A f. opening at the vulva. **vulvorectal f.** See *rectovulvar f.* [Lat., *fistula*, a pipe, a tube.]
- fit.** A popular designation for various types of convulsive seizures (coughing).
- fix'ateur, fix'ator.** See *amboceptor*.
- fixation** (fik-sa'shun). 1. The action of fixing. 2. The factor or condition of being fixed. 3. The action of depriving of volatility or fluidity. 4. In psycho-analysis the maintaining of the libido at an infantile level of development. [Lat., *fixatio*, from *figere*, to fasten.]
- fixative** (fix'a-tiv). Fixing; in microscopy and histology, serving to fix tissues in the structural condition and form found in life (said of reagents), or to fasten microscopic sections or preparations to a slide or cover glass so that they will not be disturbed either wholly or in part during washing, staining, mounting, etc.; as a n., a substance serving such purposes.
- fixed.** Fastened, motionless, immovable. [Lat., *fixus*, from *figere*, to fasten.]
- flaccid** (flak'sid). Limp, loose, lax, hypotonic.
- flag'ellated bod'y.** The threadlike body, cast off from the male element of the malarial parasite, which fertilizes the female element.
- flagellation** (flaj-el-la'shun). The action of scourging. A flogging, a whipping. A process formerly used to stimulate nutrition. [Lat., *flagellare*, to scourge.]
- flagellum** (flaj-el'lum). Pl. *flagella*. A whip-like protoplasmic process attached to cells or to bacteria or other motile fungi and serving as an organ of locomotion; especially a long vibratile filament which serves as an organ of locomotion. [Lat., *flagellum*, scourge.]
- flail-elbow.** See under *elbow*.
- flail-joint.** A joint in which there is no anteroposterior lateral stability, as sometimes occurs after following resection.
- flank.** The fleshy or muscular part of the side of an animal or a man, between the lower end of the ribs and the hip. [Fr., *flanc*, side, flank.]
- flap.** A portion of tissue, as skin, muscle, or fascia, separated from the underlying part, but remaining attached at the base. **f. splitting.** Splitting, with a knife, the margin of a fistula all round, so as to form flaps that may be brought together and united. [Dutch, *flappen*, to strike, to clap.]
- flask.** A small bottle, especially one that is larger about the middle than at the bottom. **culture f's.** Sterilized f's used in bacteriological research for the reception of culture liquids, etc. **Pasteur's f.** See under *Pasteur*. **sterilized f.** A glass f., used in bacteriological research, which is rendered free from bacteria by heating at 145° C. for one hour.
- flat-foot.** Syn.: *splay-foot*. A spurious valgus in which there is a depression of the inner half of the plantar arch without turning out of the foot.
- flatness** (flat'nes). A sound quality obtained by percussion over solid organs, as over the liver, over an ascitic abdomen, or fluid in the thoracic cavity.
- flatulence** (flat'u-lens). The state of being flatulent. [Lat., *flatulentia*.]
- flat'ulent.** 1. Affected with or subject to accumulation of gas in the alimentary canal. 2. Tending to cause such a condition (said of food). [Lat., *flatus*.]
- fla'tus.** Gas within the body, especially in the alimentary canal. **f. vaginalis.** Gas in the vagina. [Lat., *flare*, to blow.]
- fla'vo-.** Combining form of Lat., *flavus*, yellow; used in a few scientific terms to signify of a golden tint.
- flax'seed.** The seed of *Linum usitatissimum*; linseed. **f. meal.** See *lini farina*, under *linum*. **f. oil.** See *oleum lini*, under *linum*. **f. poultice.** See *cata-plasma lini*, under *linum*.
- flea** (fle). The order *Siphonaptera* of the class *Insecta*, being insects without wings and jointed, grooved, antennae. It is thought that they may transmit *Trypanosoma Lewisi* and the cysticerci of certain tapeworms to animals and they with certainty convey the bacillus of

plague to human beings. The most important species are: the *Dermatophilus penetrans* or chigger, the *Pulex irritans* or man flea, and the *Pulex cheopis* or rat flea. The two latter species transmit bubonic plague from the infected rat to human beings.

fleabane (fĕ'bān). See *Erigeron*.

flea bite. See *Pulex irritans*.

fleam (flēm). 1. A spring lancet used for venesection. 2. Of the veterinarians, a phlebotome shaped like a gum lancet. [Old Fr., *fieme*.]

Fleitmann's test. The same as Marsh's t., with zinc and caustic soda or potash solution substituted for zinc and sulphuric acid. [*Th. Fleitmann*, Ger. chemist, nineteenth century.]

Fleming's tincture of aconite. An alcoholic tincture of aconite of which 150 c.c. represents 100 gms. of the aconite root.

flesh. Of the animal organism, the bulky soft parts, especially the muscular tissue.

goose f. See *cutis anserina*, under *cutis*.

proud f. A popular term for exuberant granulations in a wound or ulcer. [Old Eng., *flæsc*.]

fletcherism (fletch'er-izm). The fad of taking small amounts of food with excessive mastication of the same. [*Horace Fletcher*, American, living.]

flexibilitas cerea (fleks-i-bil'it-as ce're-ah). A type of muscular reaction to psychical causes in which the limbs of an individual behave as though made of some plastic substances. [Lat., waxy *flexibility*.]

flexion (flek'shun). A bending; also the state of being bent; the opposite of extension. **dorsal f.** The bending backward of the hand at the wrist joint so as to form an angle between the dorsal surfaces of the hand and forearm. **f. of the fetal head**. A forward inclination of the head by which it is approximated to the sternum. **forced f.**, **forcible f.** Extreme f. of a limb at a joint for the purpose of checking the flow of blood through its arteries (to restrain hemorrhage or to promote coagulation in an aneurism), to stretch a nerve on the extensor aspect, or to break up false ankylosis. [Lat., *flexio*, from *flectere*, to bend.]

flex'or. A muscle that by its contraction produces flexion. See *table of muscles*, under *muscle*. [Lat., *flectere*, to bend.]

flexuose (fleks'u-os). A term used in descriptive bacteriology meaning wavy, winding.

flexura (fleks-u'rah). See *flexure*. **f. duodeni prima**. The curve described at the junction of the ascending and descending portions of the duodenum. **f. duodeni secunda**. The curve described at the junction of the descending and transverse portions of the duodenum. **f. duodeni tertia**, **f. duodenojejunalis**. The curve described at the junction of the duodenum and the jejunum.

flexure (fleks'ūr). A bending, a curve. **anterior f. of the corpus callosum**. See *genu of the corpus callosum*. **basiscranial f.** The forward f. of the em-

bryo at the base of the skull. **caudal f.** The forward f. of the embryo at the caudal portion. **cephalic f's**, **cranial f's**, **encephalic f's**. Certain f's of the cranial portion of the embryo which take place at an early period of development, the earliest and most important of which is the one that occurs at the anterior extremity of the notochord. **hepatic f. of the colon**. An abrupt bend in the ascending colon, situated at the under surface of the liver, on the right of the gall-bladder, where it passes inward and to the left, to become the transverse colon. **posterior f. of the corpus callosum**. See *splenium*. **principal cephalic f.** A decided angular flexion of the cranial cavity of the embryo in a ventral, or downward, direction in the region of the midbrain and sella turcica. **sigmoid f. of the colon**. An S-shaped f. of the colon. It begins at the termination of the descending colon, at the margin of the crest of the ilium, and ends at the beginning of the rectum, opposite the left sacro-iliac synchondrosis. This portion of the colon retains its mesentery, and is completely invested with peritoneum.

splenic f. of the descending colon. An abrupt bend connecting the transverse with the descending colon, and situated beneath the lower end of the spleen. [Lat., *flectere*, to bend.]

Flindt's spots. Minute white or bluish-white spots almost invariably to be found on the mucous membrane of the mouth before the occurrence of the rash of measles.

flint disease. A form of chronic pulmonary disease prevalent among quarrymen; ascribed to the habitual inhalation of flinty dust.

Flint's murmur. A rumbling m., limited in area, presystolic, heard at the apex of the heart in some cases of aortic insufficiency; supposed to be caused by extreme dilatation of the ventricles in which the mitral segments remain in the blood current because during diastole they cannot be forced back against the wall. [*Austin Flint*, Amer. physician, 1812-1886.]

floccular (flok'u-lar). 1. See *flocculent*. 2. Pertaining to the flocculus of the cerebellum.

flocculent (flok'ku-lent). Consisting of, or containing, flocculi; flaky. In descriptive bacteriology, used to denote light, feathery particles. [Lat., *floccus*, a flock of wool.]

flocculus (flok'ku-lus). A little tuft of woollike filaments. **flocculi retinae**. The ciliary process of the retina. [Lat., dim. of *floccus*, a tuft of wool.]

flō'ra. Lit., the goddess of flowers (from *flos*, a flower); the botany of a given geographical division. **f. medica**. A f. restricted to medicinal plants.

flor'id. Of a disease, in the stage of full development. [Lat., *floridus*, from *flos*, a flower.]

flow. The action or fact of flowing; said of all liquids. **menstrual f.** The

monthly discharge from the uterus. [Old Eng., *flowan*, to flow.]

flowers. An old term for fine powder obtained by sublimation and still used for f. of sulphur, and occasionally in other cases, as f. of arsenic. **f. of arsenic.** An old name for arsenic trioxide, which is still used occasionally. **f. of sulphur.** Sublimed sulphur.

fluc'tuate. 1. To move in waves. 2. To vary between certain limits. 3. To communicate to an examiner the sensation of fluctuation. [Lat., *fluctuare*, from *fluctus*, a wave.]

fluctuation (fluk-tu-a'shun). A wavelike movement, communicated to pent-up liquid by tapping upon some point of the parts overlying it, felt in the form of an impulse by the fingers held against another point. [Lat., *fluctuatio*, from *fluctuare*, to move in the manner of waves.]

flu'id. Having the property of fluidity; as a n., a body whose molecules move easily among themselves, and change their relative positions so that the mass immediately takes the form of a vessel containing it. **allantoic f.** See under *allantoic*. **amniotic f.** See *liquor amnii*, under *amnion*. **aqueous f.** See *aqueous humor*, under *humor*. **ascitic f., examination of;** see in *appendix*, page —. **battery f.** See *liquor electropolicus* [N. F.]. **Burnett's disinfecting f.** See under *Burnett*. **celian f.** The cerebrospinal f. in the central canal of the spinal cord and the ventricles of the brain. **celomic f.** The f. or lymph in the celomic or pleuroperitoneal space. **cerebrospinal f.** The liquid in the subarachnoid space and in the celes or ventricles and central canal of the central nervous space. **Coley's f.** See under *Coley*. **colostric f.** See *colostrum*. **Condy's f.** See under *Condy*. **electric f.** See *electricity*. **galvanic f.** See under *electricity*. **intestinal f.** See *intestinal juice*, under *juice*. **labyrinthine f.** See *perilymph*. **lacteal f.** Any white fluid of the body, e. g., the milk or the secretion of the prostate gland. **magnetic f.** A supposititious imponderable f. by whose agency the phenomena of magnetism manifest themselves. **Müller's f.** See under *Müller*. **nervous f.** The hypothetical fluid which circulates throughout the nervous system, and is concerned in motion and sensation. **parenchymatous f.** See *tissue lymph*, under *lymph*. **Pasteur's f.** See under *Pasteur*. **periaxial f.** Of Klebs, the f. immediately surrounding the axis cylinder of nerve fibers. **seminal f., spermatic f.** See *semen*. **subarachnoid f.** See *cerebrospinal f.* [Lat., *fluidum*, from *fluere*, to flow.]

fluidextract, fluidum extractum. Of the U. S. Ph., fluid extracts are made of such strength that a cubic centimeter of the preparation represents the activity of 1 gram of the drug.

fluidifiant (flu-id-i-f'e-ant). 1. Causing liquefaction. 2. Producing an eschar

which is soft and moist (said of alkaline caustics, in contradistinction to acids, which are said to be coagulant).

fluidification (flu'id-if-i-ka'shun). The reduction of a substance to a state of fluidity. [Lat., *fluidus*, flowing, + *facere*, to make.]

fluidity (flu-id'it-e). A fluid condition.

fluiduncia (flu-id-un'se-ah). A fluid ounce.

flake. See *Distoma*. **f. worm, liver-worm.** See *Distoma hepaticum*.

flu'or al'bus. Leukorrhœa.

fluoratum (flu-o-ra'tum). See *fluorid*.

fluoratus (flu-o-ra'tus). Combined with or containing fluorin.

fluorescein, fluorescin (flu-or-es'e-in, flu-or-es'in). Dioxylfluoran, $C_{20}H_{14}O_6$, commonly, but inexactly, called resorcinolphthalein. Its sodium salt does not stain normal cornea, but it reveals ulcers or foreign bodies.

fluorescence (flu-or-es'ens). The property possessed by some transparent bodies of giving surface reflections of light differing in color from that of their own mass.

fluorescent (flu-or-es'ent). Having the property of fluorescence.

fluorid (flu'or-id). A compound of fluorin with an element or a radicle. A salt of hydrofluoric acid.

fluorin (flu'or-ën). A non-metallic elementary gas of a pungent odor and a greenish yellow color. It is the most active of all chemical elements. Atomic weight 19. Chemical symbol F. It occurs in nature in composition in the form of fluor spar and other minerals, and is found in the body in minute quantities in the bones, blood, brain, and the enamel of the teeth. [Lat., *fluorinum*.]

fluoroform (flu-or'o-form). A gas, having the formula CHF_3 .

fluorol (flu'or-ol). Sodium fluorid, NaF. A white, crystalline powder with antiseptic properties.

fluoroscope (flu-or'o-sköp). An instrument for making examinations by the aid of Röntgen rays. It is a pyramidal, truncated box, the base of which is formed by a fluorescent screen, i. e., a screen covered with crystals of calcium tungstate; its top has an opening for the eyes, so arranged that the light from the room is excluded. [From *fluorescence*, + Gr., *skopein*, to examine.]

fluosilicate (flu-o-sil'ik-ät). A silicofluorid.

fluosilicic (flu-o-sil-is'ik). Containing both fluorin and silicon in combination. **f. acid.** Hydrofluosilicic acid.

flush. A sudden reddening of the skin due to an increased supply of blood in the vessels of the skin. As a verb, the word means to fill in level with the surface or to inundate. As an adjective, it denotes abundantly full. **hectic f.** The congestion of the capillaries that is seen in protracted disease such as consumption. **hot f's.** Flushes, accompanied with a sensation of heat are common in the neuroses and psychoneuroses.

flux. 1. An old term for a profuse morbid

flow or discharge. 2. An easily fusible substance which, added to an infusible substance or one difficult to melt, renders it easy of fusion. [Lat., *fluxus*.]

fly. This name is properly applied to the members of the 2nd suborder of the order *Diptera*, namely, the *Orthorrhapha* and the *Cyclorrhapha*. They are important as the cause of various diseases from their blood-sucking habits and their property of carrying pathogenic bacteria on their legs or their bodies, or in their intestines. Their larvae also may enter the skin of the alimentary canal, causing irritation and disease. The most important families of f's are: the *Tabanidae*, the *Oestridae*, and the *Muscidae*. **bacilli-carrying f.** One conveying bacilli on the legs, body, or in the intestines. **blow f.** The species *Sarcophaga canaria*, whose larvae in the tropics infest syphilitic ulcers, especially of the nose. **bot f.** This term includes several genera of the family *Oestridae*, of which the larvae become parasitic under the skin, or in the nasal and pharyngeal cavities. The species usually found in man is *Dermatobia cyaniventris*. **eye f.** The genus *Oscinis* and an unknown species that hovers before the eye and is supposed to transmit the infection of the Koch-Weeks bacillus to the eye. **gad f.** See *horse f.* **horse f.** Members of the family *Tabanidae*, being large blood-sucking f's, such as *Tabanus bovis*. They are suspected of transmitting trypanosomes and filariae. **house f.** The *Musca domestica* of the family *Muscidae*. This insect transmits many infectious diseases, such as tuberculosis and typhoid fever, by soiled wings and legs or by fecal deposit on food. **stable f.** The *Stomoxys calcitrans* of the family *Muscidae*, found in houses and stables. It is larger than the house fly, and bites all classes of mammals including man. It is thought to transmit infantile paralysis. **tsetse f.** The *Glossina palpalis*, which transmits trypanosomiasis, causing the African sleeping sickness. **typhoid f.** A name given by Howard to the house fly, owing to its capability for transmitting typhoid fever.

focal. Adj. form of focus.

focus (fo'kus). Pl. *foci*. 1. The point at which rays (especially of light) are collected or converged by a lens or mirror. When used without qualification, the principal f. (*q. v.*) is always meant. 2. A central point, or point of departure; a nucleus; a point at which a process is manifested in great intensity. **acoustic f.** The point of meeting of sound waves reflected from a concave surface. **anterior f.** That point in front of a system of refracting surfaces at which parallel rays impinging upon this system from behind are united; the anterior principal f. of a compound dioptric system. **anterior f. of the eye**. That point in front of the eye at which rays coming from the eye and parallel to the principal axis are united. Light placed at this point sends rays which penetrate the eye

as parallel rays. **calorific f.** The point at which rays of heat (the red and ultrared rays of the spectrum) are collected by a lens or mirror. **conjugate foci**. Two points of such a position that light rays emanating from one are collected by a mirror or lens at the other. Conjugate foci are mutually convertible, i. e., either one may be taken as the point of emanation of the rays or vibrations, and also as the point of collection of the latter. **depth of f.** The distance through which an image formed at the f. of a lens may be shifted without materially impairing the definition of the image. **first f.** See *anterior f.* **f. of a lens, f. of a mirror**. See *principal f.* **f. of the eye**. See *anterior f. of the eye* and *principal f. of the eye*. **imaginary f., negative f.** See *virtual f.* **posterior f.** That point posterior to a system of refracting surfaces at which rays impinging in a parallel direction upon the anterior surface of the system are united. **posterior f. of the eye**. See *principal f. of the eye*. **posterior principal f.** See *posterior f.* **primary f., principal f.** The point at which parallel rays falling on a lens or mirror are collected. The principal f. of a concave lens or of a convex mirror is virtual; of a convex lens or concave mirror, real. According to the laws of conjugate foci, rays emanating from the principal f. are reflected or refracted in parallel directions. **principal f. of the eye, principal posterior f.** That point posterior to the refractive media of the eye at which rays impinging upon the cornea in a direction parallel to the optic axis are united. In emmetropic eyes the principal f. is upon the retina; in myopic eyes, in front of it; in hypermetropic eyes, behind it. **real f.** A point in front of a mirror or behind a lens at which rays made convergent by reflection or refraction meet. **sonorous f.** Point at which vibrations of sound are collected by a mirror or by a lens composed of such material as to refract them. **thermal f.** See *calorific f.* **virtual f.** A point behind a mirror or in front of a lens at which rays made divergent by reflection or refraction would meet if prolonged. [Lat., *focus*, hearth.]

fo'cus. To adjust a lens or a mirror in such a way that the image is most distinctly seen.

fold. A doubling of anything upon itself. **amniotic f.** A folded edge of the double amniotic membrane, where it rises over and finally encloses the embryo. **anterior axillary f.** The f. formed by the pectoralis major in front of the axilla [B. N. A., *plica axillaris anterior*.] **aryteno-epiglottic f., aryteno-epiglottidean f.** Two f's of mucous membrane extending from the tops of the arytenoid cartilages to the lateral margins of the epiglottis. **basirrhinal f.** See *basirrhinal gyrus*. **callosa f.** See *callosal gyrus*. **caudal f.** That f. of the blastoderm which encloses the caudal

and primitive cloacal parts of the alimentary canal in the embryo. **cephalic f.** A f. of all the layers of the blastoderm, including also a part of the alimentary canal and the rudimentary heart. **cerebral f's.** The convolutions of the cerebrum. **choroidal f.** See *rima* and *transverse cerebral fissure*, under *fissure*. **ectorbital f.** See *posterior orbital convolution*, under *convolution*. **entorbital f.** See *internal orbital convolution*, under *convolution*. **entorrhinal f.** See *gyrus rectus*, under *gyrus*. **entosylvian f.** See *insula*. **exoccipital f.** The tip of the occipital lobe. **falcial f.** The portion of the callosal gyrus that lies ventrad of the genu of the callosum. **f's of Douglas.** See *recto-uterine f's*. **f's of the amnion.** See *cephalic f.*, *lateral amniotic f.*, and *caudal f.* **f's of the axilla.** The anterior and posterior walls of the axilla. **f's of the broad ligament.** The layers of the broad ligament of the uterus. **f. of the buttock.** The cutaneous f. marking the junction of the buttock with the thigh. **f. of the groin.** The cutaneous f. marking the junction of the thigh with the trunk in front. **f's of the rectum.** See *Houston's valves*, under *Houston*. **frontal f.** See *ascending frontal convolution*, under *convolution*. **genital f's.** The two f'-like structures of the embryo which are converted into the lateral halves of the scrotum or into the labia pudendi majora. **genito-enteric f.** An anomalous f. of the peritoneum extending between the broad ligament and the base of the mesentery of the sigmoid flexure of the colon. **glosso-epiglottic f's.** Three f's in the mucosa of the tongue which extend from the base of the tongue to the epiglottis. **gluteal f.** See *f. of the buttock*. **head f.** See *cephalic f.* **hippocampal f.** See *hippocampal gyrus*, under *gyrus*. **hypoblastic f.** A fold in the hypoblast, especially the dorsally extending f. which comes in contact with the rudiment of the central nervous system and ultimately gives rise to the notochord. **intestinal f.** See *splanchnopleure*. **lateral amniotic f's.** The f's of somatopleure rising on the sides of the embryo, and, with the cephalic and caudal amniotic f's, finally forming the complete amniotic sac. **marginal f.** See *marginal convolution*. **medial f.** See *postcentral gyrus*. **medilateral f.** The parietal portion of the paroccipital gyrus. **medullary f's.** See *medullary ridges*, under *ridge*. **posterior amniotic f.** The f. of the somatopleure rising at the caudal end of the embryo and with the lateral and cephalic amniotic f's finally completely enclosing the embryo in the amniotic sac. **posterior axillary f.** The f. formed behind the axilla by the tendons of the latissimus dorsi and teres major muscles [B. N. A., *plica axillaris posterior*]. **primary f.** A cerebral convolution formed by primary fissures. **recto-uterine f's.** Syn.: *f's of Douglas*, *uterosacral ligaments*. Two folds of peri-

toneum, one on each side, containing muscular tissue derived from the uterus, passing from the upper part of the cervix uteri to the neighborhood of the second sacral vertebra, and inclosing the rectum between them. **rectovaginal f.** See *recto-uterine pouch*, under *pouch*. **rectovesical f.** A f. formed by the peritoneum as it passes from the anterior wall of the rectum to the posterior wall of the bladder. **umbilical f. of the blastoderm.** The umbilical constriction; a folding in of the blastoderm along the sides of the axile embryo, continuous with the cephalic f. above the caudal below. **vesico-uterine f's.** Two anteroposterior f's, one on each side, containing a few contractile fibers derived from the muscular tissue of the uterus, extending from that organ to the bladder. **vestigial f. of the pericardium.** A small f. of the serous membrane of the pericardium lying in front of the root of the left lung, marking the course of the left duct of Cuvier in the fetus. **visceral f's.** Thick f's in the throat of the embryo separated by the visceral or branchial clefts. [Mid. Eng., *folde*, from *foltan*, to fold.]

folium, folia (fo'le-um, fo'le-ah). Leaf, leaves. [Lat.]

follicle (fol'lik'l). A simple sacciform crypt or gland. **agminate f's**, **agminated f's.** See *Peyer's glands*, under *Peyer*. **dental f's.** 1. The connective tissue, blood, and lymph vessels which surround and give a kind of sac for a developing tooth. 2. An embryonic tooth with all its parts. **f. of de Graaf.** See *graafian vesicle*, under *vesicle*. **f's of Lieberkühn.** See under *Lieberkühn*. **f's of Littré.** See *Littré's glands*, under *Littré*. **f's of Peyer.** See *Peyer's glands*, under *Peyer*. **glandular f's of the urethra.** Clusters of minute openings on the free surface of the mucous surface of the urethra or into the sinuses of Morgagni. **hair f.** A recess or cavity in the skin which contains the root or implanted part of a hair. **lenticular f's.** Isolated or agminate lymphatic f's in the mucous membrane of the stomach, resembling those of the intestine. **Lieberkühn's f's.** See under *Lieberkühn*. **lymphatic f's**, **lymph f's.** See *lymphatic nodes*, under *node*. **malpighian f's.** See *malpighian corpuscles*, under *corpuscle*. **meibomian f's.** See *meibomian glands*, under *gland*. **mucous f's.** Small glands which secrete mucus, situated in mucous membranes. **nabothian f's.** See under *nabothian*. **nail f.** The fold of the matrix which embraces the root of the nail. **ovarian f.** See *graafian vesicle*, under *vesicle*. **palpebral f's.** See *meibomian glands*, under *gland*. **Peyer's f's.** See *Peyer's glands*, under *Peyer*. **sebaceous f's.** See *sebaceous glands*, under *gland*. **secreting f's.** A f. producing a distinct fluid, such as a gastric f., in distinction from one giving rise to some structure, such as the dental or the hair f. **simple f's.** The solitary glands of the sma

- intestine. **solitary f's.** See *solitary lymph nodes*, under *node*. **sudoriparous f's.** See *sudoriparous glands*, under *gland*. **synovial f.** See *bursa mucosa*, under *bursa*. **tooth f's.** See *dental f's.* [Lat., *folliculus*, dim. of *follis*, a bag.]
- folliclis** (fol'ik-lis). An indolent papulonecrotic lesion, occurring especially on the extremities, the hands, feet, forearms, and legs, but the face may also be attacked. For the most part the lesions pursue a more acute course than in acnitis, but they are indolent, inflammatory papules, and the disease as a whole lasts for years.
- folliculitis** (fol-ik-u-li'tis). Inflammation of a follicle or of the follicles of a part. **f. barbae.** See *sycosis*. **f. decalvans.** Inflammation of the hair follicles followed by the formation of punctate scarring and destruction of the follicle, so that in time the process, which is always chronic, produces bald patches. **f. epulcerans.** Another name for folliculitis. **f. of the beard.** See *sycosis*. **f. sebacea.** Acne. [Lat., *folliculus*, a small bag, + *itis*, inflammation.]
- folliculoma** (fol-ik-u-lo'mah). A tumor arising from a follicle, e. g., from the graafian follicle of the ovary.
- Fomentarium** (fo-men-ta're-um). A tribe of the *Lycoperdaceae*, the species of which furnish a kind of amadou. [Lat., *fomentare*, to foment.]
- fomenta'tion.** 1. The application of a liquid, usually warmed, to the surface of the body, either on sponges or on cloths. 2. A liquid designed for application in this way. [Lat., *fomentatio*, from *fomentare*, to foment.]
- fomentum** (fo-ment'um). See *fomentation*. **f. commune, f. discutiens.** Syn.: *liquor discutiens*. A preparation of the old pharmacopeias, containing vinegar, alcohol, camphor, and honey.
- fo'mes**, pl., *fomites*. Any porous substance which absorbs and transmits infectious material. [Lat., *fomes*, tinder.]
- fontanel** (fon-tan-el'). A membranous interspace between the bones of the fetal skull at a point where three or four bones meet. **anterior f.** Syn.: *bregma*. The lozenge-shaped f., situated at the junction of the two parietal with the two frontal bones [B. N. A., *fonticulus frontalis*]. **lateral f's.** Ordinarily the mastoid f's; also the sphenoidal f's. **mastoid f's.** The f. at the point of union of the occipital, temporal, and parietal bones [B. N. A., *fonticulus mastoideus*]. **median f's.** The anterior and posterior f's. **occipital f., posterior f.** Syn.: *small f.* The triangular f. situated at the junction of the occipital with the two parietal bones [B. N. A., *fonticulus occipitalis*]. **sphenoidal f.** The f. at the junction of the parietal, temporal, sphenoid, and frontal bones [B. N. A., *fonticulus sphenoidal*]. [Fr., from Lat., *fons*, fountain.]
- food.** See *aliment*. **accessory f. A.** f. employed in small quantities to supply an element or elements of nutriment wanting in the f. chiefly relied upon. **azotized f.** See *nitrogenous f.* **diabetic f. A f.** destitute of sugar. **dynamogenous f. A f.** which generates power. **f. stuffs.** A name given to the essential constituents found in all foods. It includes water and inorganic salts, proteins, fats, and carbohydrates. **inorganic f.** Any inorganic substance necessary for the composition of the functions of the body. **nitrogenous f. F.** containing nitrogen, such as the proteids. According to Liebig's theory, the function of nitrogenous f. is to build up the tissue, hence it was called plastic f. **non-azotized f., non-nitrogenous f.** Fats and carbohydrates. **organic f.** Any organic substance used for the nutriment of the body. **peptonized f. A f.** in which the proteins are digested or partially digested by pepsin. **plastic f.** See *nitrogenous f.* **respiratory f.** See *non-nitrogenous f.* [Ang.-Sax., *foda*.]
- foot.** That portion of the lower extremity which is situated beyond the ankle. **flat f.** See *flat-foot*, under *separate head*. **Madura f.** A slow and gradual increase in the volume of the f. due to fibrofatty hypertrophy and degeneration of the bones, with a seropurulent discharge. The f. becomes disorganized, and suppuration or gangrene may terminate the life of the patient.
- foot'ling.** In obstetrics, with the feet foremost, as a *f. presentation*.
- foramen** (for-a'men), pl., *foram'ina*. An opening, a perforation. **anterior condylar f., anterior condyloid f. A f.** to the front and to the inner side of each occipital condyle. [B. N. A., *hypoglossal f.*] **anterior ethmoidal f., anterior internal orbital f.** See *anterior ethmoidal canal*, under *canal*. **anterior sacral foramina.** Four foramina on each side of the anterior surface of the sacrum, which transmit the anterior branches of the sacral nerves. **aortic f.** The opening in the diaphragm which transmits the aorta. **carotid f.** The inferior aperture of the carotid canal. **cervical f.** See *vertebro-arterial foramina*. **costotransverse f.** The space between the transverse process of a vertebra and the neck of its corresponding rib. **dental f.** See *inferior dental f.* **ethmoidal foramina.** See *anterior ethmoidal canal* and *posterior ethmoidal canal*, under *canal*. **external carotid f.** The external aperture of the carotid canal. **f. acusticum.** See *internal auditory canal*. **f. anterior canalis cruro-poptel.** An aperture in the upper part of the tibiofibular interosseous membrane which gives passage to the anterior tibial vessels. **f. cecum of the frontal bone.** A small f. situated at the base of the frontal crest of the frontal bone. **f. cecum of the pharynx.** A depression in the mucosa of the posterior wall of the pharynx, in the median line, a little below the level of the orifices of the openings of the eustachian tubes. **f. cecum of the tongue.** A small culdesac about an inch from the base of the dorsum of the tongue, into which a number of small

glands open. **f. lacerum anterius.** See *sphenoidal fissure*, under *fissure*. **f. lacerum inferius.** The sphenomaxillary fissure. **f. lacerum jugulare.** See *f. lacerum posterius*. **f. lacerum medium.** An irregular aperture between the apex of the petrous portion of the temporal bone and the body and great wing of the sphenoid. **f. lacerum orbitale.** The sphenoidal fissure. **f. lacerum posterius.** The space formed by the jugular notches of the occipital and temporal bones. **f. lacerum superius.** See *sphenoidal fissure*, under *fissure*. **f. magnum.** A large oval aperture, centrally placed, in the lower and anterior part of the occipital bone. It transmits the spinal cord and its membranes, the spinal accessory nerves, and the vertebral arteries. **f. of Magendie.** A small opening through the layer of pia mater which forms a portion of the roof of the fourth ventricle. **f. of Monro.** An opening behind the anterior pillars of the fornix, through which the lateral ventricles of the brain communicate with the third ventricle. **foramina of Scarpa.** Bony canals opening into the incisor canal and transmitting the nasopalatine nerves. **f. of Winslow.** An aperture formed by the folds of the peritoneum, and establishing communication between the greater and lesser cavities of the peritoneum. **f. ovale.** An oval opening in the great wing of the sphenoid bone transmitting the third or mandibular division of the fifth cranial nerve. **f. rotundum.** A roundish opening in the great wing of the sphenoid bone, which transmits the second or maxillary division of the fifth cranial nerve. [B. N. A., *epiploic f.*] **f. saphenae.** See *saphenous opening*, under *opening*. **f. scapulare.** The suprascapular notch, when it is converted into a f. by a ligamentous or osseous structure. **f. spinosum.** A small f. piercing the great wing of the sphenoid bone near its posterior angle. It transmits the middle meningeal artery. **foramina Thebesii.** Small depressions in the inner surface of the heart, especially in the right ventricle, some of which are culdesacs, while others are the mouths of the venae minimae cordis. **frontal f.** The supra-orbital notch (*q. v.*) when it is converted into a canal by an overlying process of bone. **fronto-ethmoid f.** The f. cecum in the suture between the frontal and ethmoid bones. **great sacrosciatic f.** The oval space between the lesser sacrosciatic ligament and the innominate bone. It transmits the pyriformis muscle, and the gluteal, sciatic, and pudic vessels and nerves. **incisive f., incisor f.** The oval aperture of the incisor canal. **inferior dental f.** The external aperture of the inferior dental canal. [B. N. A., *inferior alveolar f.*] **infra-orbital f.** The external aperture of the infra-orbital canal. **internal carotid f.** The internal aperture of the carotid canal. **intervertebral foramina.** The aperture formed by the notches opposite to each other in the

laminae of adjacent vertebrae, which transmit the spinal nerves and blood vessels. **jugular f.** See *f. lacerum posterius*. **mastoid f.** A small f. situated behind the mastoid process, which gives passage to a small artery of the dura mater, as well as to a vein which opens into the lateral sinus. **medullary f.** See *nutrient f.* **mental f.** A f. in the inferior maxilla external to the incisor fossa, midway between the upper and lower border of the bone, and under the interval between the two bicuspid teeth. It transmits the mental nerve and vessels. **nutrient f.** Syn.: *nutrient canal*. The canal communicating between the medullary cavity of a bone and its exterior surface, and transmitting the nutrient vessels. **obturator f.** The large ovoid opening in the innominate bone, internal and inferior to the acetabulum. It is closed in by a fibrous membrane, except near its outer and upper edge, where an aperture is left for the passage of the obturator vessels and nerves. **optic f.** The hole at the apex of the orbit, the anterior termination of the optic groove, for the passage, from the cavity of the skull into the orbit, of the optic nerve and ophthalmic artery. **parietal f.** A f. of varying size, and not always constant, near the posterior superior angle of the parietal bone, which contains an emissary vein of the superior longitudinal sinus. **posterior condylar foramina.** Foramina behind the condyles of the occipital bones, giving passage to veins, and opening externally into the occipital fossa. **posterior ethmoidal f.** See *posterior ethmoidal canal*, under *canal*. **posterior palatine foramina.** The external apertures of the palatamaxillary and pterygopalatine canals. **posterior sacral foramina.** Four openings on each side of the posterior surface of the sacrum, which transmit the posterior branches of the sacral nerves. **pterygopalatine f.** The external aperture of the pterygopalatine canal. **small sacrosciatic f.** The space between the greater and lesser sacrosciatic ligaments and the innominate bone, which transmits the internal obturator muscle and the pudic vessels and nerve. **sphenopalatine f.** The space between the sphenoidal and orbital processes of the palate and the sphenoidal spongy bone, which transmits the nasal branch of the internal maxillary artery. **spinal f.** See *vertebral f.* **stylomastoid f.** A f. between the styloid and mastoid processes of the temporal bone, constituting the external aperture of the aqueduct of Fallopius. **suborbital f.** The orifice at the anterior end of the infra-orbital canal, transmitting the infra-orbital artery and nerve. **supra-orbital f.** A notch in the superior orbital margin, at the junction of the middle with the inner third, sometimes converted into a f. by a bony process, or a ligamentous band. It is the orifice of a groove in the upper wall of the orbit, which transmits the supra-orbital artery,

veins, and nerve. **supratrochlear f.** A f. which sometimes perforates the thin plate of bone between the olecranon and the coronoid fossa of the humerus. **thyroid f.** A f. in the ala of the thyroid cartilage, more or less completely covered by perichondrium. **vertebral f.** The space between the body and the arch of a vertebra, which transmits the spinal cord and its appendages. **vertebro-arterial foramina.** The foramina in the transverse processes of the cervical vertebrae which transmit the vertebral artery and vein. [Lat., *forare*, to bore.]

force. 1. Capability of action. 2. Any cause that induces, hinders, or modifies action, movement, growth, etc. 3. Violence. **accelerating f.** A f. which, acting upon a moving body, produces an acceleration of its motion; in particular, a f. of such degree as to produce upon the unit of mass a definite acceleration of velocity in the unit of time. The accelerating f. is measured by the acceleration of velocity thus produced. Any f. which acts continuously (as distinguished from an impulsive f.) is an accelerating f. **active f.** See *kinetic energy*, under *energy*. **adhesive f.** See *adhesion*. **capillary f.** See *capillary attraction*, under *attraction*, and *capillary repulsion*, under *repulsion*. **catalytic f.** See *catalysis*. **centrifugal f.** That f. which impels a body moving in a curve to fly off from the axis of motion in direction tangential to its path. **centripetal f.** That f. which impels a body toward a given central point, especially that f. which keeps a revolving body in its orbit, and resists the action of the centrifugal f. **coercitive f.**, **coercive f.** A f. resident in magnetic bodies, which offers resistance to their magnetization when they are unmagnetized, and to their demagnetization when they are magnetized. **cohesive f.** See *cohesion*. **conservation of f.** See *conservation of energy*, under *energy*. **contractile f.** The f. with which muscle tissue shortens. **dynamic f.** See *kinetic energy*, under *energy*. **elastic f.** See *electricity*. **electromotive f.** The term used to express the potential intensity of an electrical force. **endosmotic f.** The f. of endosmosis. **expansive f.** The f. by which expansion is produced. **formative f.** See *plastic f.* **germ f.** The power of development and reproduction, seated in a germ. **kinetic f.** See *kinetic energy*, under *energy*. **latent f.** See *latent energy*, under *energy*. **living f.** The capacity for work contained in a moving body, measured by one-half the product of its mass by the square of its velocity. **magnetic f.** The f. of magnetism. **mechanical f.** A f. which produces mechanical effects only. The chief mechanical f's are: gravitation, adhesion, cohesion (of which capillary f. and elasticity are special forms) and the centrifugal f. **muscular f.** The f. of muscular contraction. **osmotic f.** The f. of osmosis. **plastic f.** The f. supposed to direct the nutrition of living bodies; the

power of an organism to form its own tissues. **potential f.** See *potential energy*, under *energy*. **psychic f.** A f. by which the mind of one person is thought to influence the mind of another person, or even inanimate objects, without the intervention of bodily functions. **resultant f.** A f. which represents the sum of the action, as regards both intensity and direction, of two or more other f's. **static f.** See *potential energy*, under *energy*. **twisting f.** See *torsion*. [Lat., *fortis*, strong.]

forceps (for'seps). An instrument made of two arms, either hinged at the ends or crossed on the principle of the scissors; used for grasping a part, or for compression or extracting. **f. corporis callosi.** A designation of the fibers which curve backward into the posterior lobes of the brain from the posterior border of the corpus callosum. [Lat., *forceps*, a pair of tongs, from *fores*, the leaves of a door, + *capere*, to seize.]

Forchheimer's sign (for'shi-mur). Presence, in German measles, of a red maculopapular eruption on the soft palate. [Frederick Forchheimer, Cincinnati physician, died 1853.]

forcipressure (for'si-pres-ur). Pressure with a forceps; employed chiefly to control hemorrhage. [Lat., *forceps*, + *pressura*, pressure.]

fore- A prefix from Old Eng., *for*, having the sense of before or in front of.

fore'arm. That portion of the upper limb which extends from the elbow to the wrist [B. N. A., *antibrachium*.]

foreconscious (fôr'kon-shus). In psychoanalysis the state of emergence from the unconscious but not yet into clear consciousness.

fore'gut. The anterior portion of the primitive alimentary canal of the embryo, comprising the rudiments of the pharynx, esophagus, stomach, and duodenum.

fore'milk. See *colostrum*.

forepleasure (fôr'plezh-ür). In psychoanalysis phantasy anticipation of the orgasm or substituted sexual gratification.

forensic (for-en'sik). Pertaining to judicial inquiry. [Lat., *forensis*, from *forum*, a market-place.]

fork. 1. See *bifurcation*. 2. An instrument having two slender, slightly divergent blades. **tuning f.** An instrument, usually of steel, consists of heavy, two-pronged f.; when made to vibrate, emits a musical note of a definite pitch.

-form. A suffix from the Lat., *forma*, form, meaning having the form of.

for'mal. Methylal, methylene dimethylate, $\text{CH}_2(\text{O}.\text{CH}_3)_2$, a colorless liquid; an excellent solvent for organic substances.

formaldehyde (for-mal'de-hid). Syn.: *methylene oxid.* Formic aldehyd, HCHO , a gas of powerful disinfecting properties. Its 40 per cent. aqueous solution is known as formalin. **f. casein.** An antiseptic compound of formaldehyd and casein. **f. tannin albuminate.** A product of action of formic aldehyd on tannin albumin; an intestinal astringent and antiseptic.

for'malin. An antiseptic, which is 40 per

cent. aqueous solution of formic aldehyd. **for'malin gel'atin**. See *glutol*.

form'amid. Amid of formic acid, H.CONH_2 ; a liquid easily soluble in water.

for'man. An oily chlorin compound of methyl ether, used typically in catarrh.

formanilid (for-man'il-id). The compound, $\text{C}_7\text{H}_7\text{NO}$; a local anesthetic.

for'mate. A salt of formic acid.

formatio (for-mah'te-o). A formation. **f. granulosa**. See *membrana granulosa*, under *membrana*. **f. reticularis**. See *reticular formation*, under *formation*. **f. reticularis alba**. A tract of white nerve substance, poor in ganglion cells, situated in the medulla oblongata, between the roots of the hypoglossal nerves. **f. reticularis gangliosa**, **f. reticularis grisea**. A tract of gray matter, situated in the anterior portion of the medulla oblongata, which is rich in multipolar ganglion cells and traversed by numerous capillary vessels. [Lat., *formare*, to form.]

formation. 1. The process by which anything is formed. 2. The thing formed. **cell f.** 1. See *cell genesis*, under *cell*. 2. A tissue or mass composed of cells. **new f.** See *neoplasm*. **reticular f.** The dorsal portion of the medulla oblongata, below the nuclei of the tenth and twelfth cranial nerves, so called from its microscopic appearance, due to the interlacing of numerous transverse and longitudinal white nerve fibers, among which are scattered nerve cells. [Lat., *formatio*, from *formare*, to form.]

formatol (for-mat-ol). A proprietary disinfectant containing formic aldehyd.

formazol (for-maz-ol). A mixture of formic aldehyd solution with iodoform, chloral hydrate, terpene hydrate, and menthol.

for'miate. See *formate*.

Formica (for-mik-ah). The ant, a genus of the *Formicidae*. **spiritus formicarum**. A preparation made by dissolving formic acid in alcohol and water. [Lat., *formica*, ant.]

formication (for-mik-a'shun). A form of paresthesia characterized by a sensation as of insects or worms crawling over the skin. [Lat., *formicatio*, from *formica*, an ant.]

formic (for'mik). 1. Belonging to or derived from ants. 2. Related or pertaining to formic acid. **f. acid**. See under *acid*. **f. aldehyd**. Syn.: *methylene oxid*, *formaldehyd*. H.CHO , a gas of very penetrating odor, soluble in water; prepared by oxidizing methyl alcohol. See *formalin*. [Lat., *formica*, an ant.]

for'min. See *urotropin*.

for'mol. A trade name for a solution of formaldehyd of the U. S. Ph.

formopyrin (for-mo-pi'rin). A compound formed by the action of formic aldehyd on antipyrin.

formose (for'môs). A synthetic sugar which is a mixture of various hexoses, one of which is d+1 fructose.

formula (for'mu-lah). 1. In chemistry, an

expression by symbols of the elementary constitution of the molecule of a substance. It consists essentially of letters, each denoting one atom of one of the elementary substances, with figures appended denoting the number of atoms present. Collections of atoms which constitute a group by themselves (radicle) are often separated by periods or parenthesis from the rest of the f.; and in this case figures prefixed or appended to the parenthesis or placed before an expression contained within periods, are understood to apply to all the symbols embraced by the parenthesis or periods. In all other cases, a figure prefixed to a symbolical expression for a molecule is understood, like a coefficient in an algebraical f., to be a multiplier of all the symbols which follow.

2. An enumeration of the ingredients of a pharmaceutical preparation, with precise directions for making it.

3. In general, a set form for recording observations, etc.

4. A prescription.

chemical f. See *f.* (1st def.).

constitutional f. In chemistry, a rational f. which expresses by chemical symbols the order of arrangement and method of interconnection of the atoms which go to make up a molecule. A complete constitutional f., expressive of the relations of all the atoms in a molecule, is called a *structural f.*

empirical f. A f. which expresses the simplest possible combination of atoms that would represent the percentage composition of the substance.

Fechner's f. See *f. of difference*, *f. of measurement*, and *fundamental f.*

f. of difference. Of Fechner, a f. expressing the difference in magnitude of two sensations, S and S', produced, respectively, by two stimuli, T and T'. The f. is $S - S' = C(\log T - \log T')$, where C is a constant.

f. officialis. See *official f.*

f. of measurement. Of Fechner, a f. expressive of the magnitude of sensation S, produced by a stimulus T, which differs from a second stimulus T_0 by an increment which corresponds to a just observable increase of sensation ΔS , T_0 itself being a stimulus which is just below that adequate to produce any sensation

$$\text{at all. The f. is } S = C \log \frac{T}{T_0} = C (\log T - \log T_0),$$

where C is a constant. This f. is only a special case of the f. of difference.

fundamental f. Of Fechner, a f. expressive of the so-called psychophysical law (*q. v.*). It is $S = C \log T$, where S is the magnitude of sensation produced, C is a constant, and T the magnitude of the stimulus producing the sensation.

glyptic f. See *constitutional f.*

molecular f. In chemistry, an expression which represents the ultimate atomic composition of a molecule (i. e., the kind and number of atoms which it contains) without indicating the way in which these atoms are connected or the manner in which they are arranged. The molecular f. is always some multiple of the empirical f.

official f. A f. (2nd def.)

given in a pharmacopeia or some other official publication. **official f.** A pharmaceutical f. which, although not official, is commonly followed by pharmacists. **Rameau's cardiac f.** See under *Rameau*. **structural f.** *Syn.*: *structural composition*. See *constitutional f.* **vertebral f.** A f. used to indicate the number and position of the vertebra. That of a man would be C. 7; T. 12; L. 5; S. 5; c. 4, denoting, respectively, the cervical, dorsal, lumbar, sacral, and coccygeal (in the lower vertebrae, caudal) vertebra. [*Lat., dim. of forma, form.*]

formulary (form'yū-lā-rē). A book of formulas. **National F.** A f. issued under the direction of the American Pharmaceutical Association. It is recognized officially. Abbreviation for it, N. F.

formyl (for'mil). The univalent radicle, HCO, of formic acid. **f. leucin.** HCO.NH₂CH₂(C₂H₅)COOH, the derivative of leucin. An acid used in the resolution of racemic leucin into its optical antipodes. [*Lat., formylum.*]

for'nix, pl., fornices. An arched body or surface; a concavity or culdesac. **f. ascendens.** The columna fornicis, or ascending root of the f. arising in the corpus albicans and passing dorsocephalad in the wall of the third ventricle. **f. centralis, f. cerebri.** An arched, triangular lamina lying between the corpus callosum and the thalami, being separated from the latter by the velum interpositum. It consists of a body formed by the union of two symmetrical halves, and anterior and posterior crura (see *anterior and posterior pillars of the f.*, under *pillar*). **f. conjunctivae.** The culdesac at the point where the bulbar conjunctiva is reflected upon the lid. **f. cranii.** The vault of the skull. **f. of the vagina.** See *vault of the vagina*, under *vault*. **f. periphericus.** See *gyrus fornicatus*, under *gyrus*. **fornices vasculosi renum.** Arches formed at the bases of the pyramids of Malpighi by the anastomoses of the minute branches of the renal artery. **pillars of the f.** See under *pillar*. [*Lat., fornix, arch, vault.*]

for'toin. Methylene-dicocain. CH₂(C₁₆H₁₉O₂). An antipneumatic and bactericide; used in diarrhea.

fos'sa. A pit or excavation that is widest at its mouth. **acetabular f.** See *f. acetabuli*. **amygdaloid f.** The recess or excavation between the anterior and posterior pillars of the fauces which contains the tonsil. **anconal f.** See *olecranon f.* **anterior f. of the skull.** One of the three fossae on the internal surface of the skull. It supports the frontal lobes of the brain. **anterior iliocecal f.** See *f. iliocecalis anterior*. **axillary f.** See *axilla*. **buccal f.** A f. in the embryo, bounded by the superior and inferior branches of the facial arches and terminating in a culdesac which does not connect with the intestinal canal. **canine f.** A f. on the facial surface of the superior maxilla between the canine and malar processes. **cecal f.** See *f. caecalis*.

cerebellar f. See *inferior occipital f.* **cerebral f.** See *superior occipital f.* **coronal f.** See *anterior f. of the skull*. **coronoid f.** A small f. at the inferior end of the anterior surface of the humerus, which receives the coronoid process of the ulna when the arm is flexed. **costal fossae.** The fossae on the bodies of the vertebrae for articulation with the heads of the ribs. **digastric f.** A deep f. on the inner side of the mastoid process of the temporal bone, from which the digastric muscle arises. **digital f. of the femur.** See *machinatoric f.* **duodenojejunal f.** A pouch of the mesentery common to the union of the duodenum and jejunum and on its right side, which often forms the sac of an internal hernia. **epencephalic f.** In comparative anatomy, a depression upon the internal surface of the skull for the reception of the epencephalon. **external iliac f.** The depression on the outer surface of the innominate bone from which the iliac muscles arise. **f. acetabuli.** The depression in the center of the acetabulum. **f. anomyia.** See *f. anhelicis*. **f. anterior major (humeri).** See *coronoid f.* **f. anterior minima (humeri).** A slight depression upon the anterior surface of the humerus into which the head of the radius enters when the arm is flexed. **f. anhelicis.** The depression at the upper and anterior end of the anhelix, between its crura. **f. arcuata.** See *f. subscapulae*. **f. basilaris.** The depression occupying the superior surface of the basilar process of the occipital bone. **f. capitis (femoris).** The depression in the head of the femur in which the ligamentum teres is attached. **f. capituli radii.** See *f. anterior minima humeri*. **f. caecalis.** A pouch upon the surface of the right iliocecal muscle formed by a fold of the peritoneum and extending to the apex of the cecum. **f. cerebelli.** See *inferior occipital f.* **f. cerebrales.** See *anterior, middle, and posterior fossa of the skull*. **f. cochlea.** See *f. cochlearis*. **f. cochlearis.** A slight excavation in the petrous portion of the temporal bone in which the basis mediae rests. **fossa condyloideae.** Depressions behind the condyloid processes of the occipital bone into which the posterior condylar canals open. **fossa costotransversaria.** Depressions on each side, usually three in number, upon the posterior surface of the three upper segments of the sacrum. **f. ctyloideae.** See *acetabulum*. **f. crurum anhelicis superior.** A depression on the dorsum of the articulation of the ear which corresponds to the upper crus of the anhelix. **f. cubiti.** The depression in the arm on the palmar side of the elbow joint. **f. iliocecalis anterior.** An anomalous pouch of the peritoneum upon the upper margin of the ileocecal valve. **f. incisiva.** An incisor f. **f. incudis.** A depression in the posterior wall of the upper part of the tympanic cavity which receives the short process of the incus. **f.**

infratemporalis. See *zygomatic f.* **f. intercondyloidea (femoris) anterior.** Syn.: *sinus condylorum anterior.* A slight depression upon the anterior surface of the femur just above the articular surface. **f. intercondyloidea (femoris) posterior.** A deep depression upon the posterior surface of the femur separating the condyles. **f. intercondyloidea tibia anterior.** A depression upon the upper extremity of the tibia in front of the crucial spine. **f. intercondyloidea tibia posterior.** A depression upon the upper surface of the tibia behind the crucial spine. **f. jugularis inferior.** The depression immediately below either clavicle. **f. jugularis superior.** The depression immediately above either clavicle. **f. laryngo pharyngea.** A depression, one on each side, external to the aryteno-epiglottic fold. **f. muscularis major.** A depression on the inner wall of the tympanum above the promontory in which the tensor tympani muscle rises. **f. navicularis.** A depression of the soft parts at the posterior extremity of the vulva, between the posterior commissure and the orifice of the vagina; so called from its fancied resemblance to the cavity of a boat. **f. navicularis Morgagni.** The dilated portion of the urethra, $\frac{1}{3}$ to $\frac{1}{2}$ inch in length, situated in the glans penis. **f. navicularis urethrae.** The dilated portion of the urethra $\frac{1}{3}$ to $\frac{1}{2}$ inch in length, situated in the glans penis. **f. of the circumvallate papillae of the tongue.** A depression in the mucous membrane of the tongue, which surrounds the papillae. **f. of the fourth ventricle.** See *superior fovea* and *inferior fovea*. **f. ovarii.** A shallow depression just below the brim of the pelvis for the reception of the ovary. **f. palatina.** A depression in the palatine process of the superior maxilla at the mouth of the anterior palatine canal. **f. pararectalis.** See *cavum Douglasii laterale*. **f. para-uterina.** The space between the posterior surface of the broad ligament of the uterus and the surface of the true pelvis. **f. paravesicalis.** A pouch of the peritoneum in front of the broad ligament of the uterus. **f. patella, f. patellaris.** See *f. intercondyloidea anterior*. **f. phrenicohepatica.** A pouch of the peritoneum between the left lateral ligament of the liver and the end of the left lobe. **f. preauricularis.** Syn.: *sulcus preauricularis.* A depression occasionally found, especially in Japanese women, in front of the sacro-iliac articulation, indicating the position of the anterior sacro-iliac articulation. **f. pubovesicalis.** The space between the levatores vesicae, the pubes, and the anterior surface of the urinary bladder. **f. recto-uterina.** See *Douglas's pouch*. **f. sagittalis dextra.** The right longitudinal fissure of the liver. **f. sagittalis sinistra.** The left longitudinal fissure of the liver. **f. semilunaris.** A transverse depression at the anterior part of the superior vermiform process. **f. sig-**

moidea ossis temporalis. A depression upon the inner surface of the mastoid portion of the temporal bone in which the mastoid foramina open. **f. subarcuata.** Of von Tröltzsch, a deep depression found under the eminentia arcuata, and produced in the embryonic cartilago petrosa by the upper semicircular canal. **f. subauricularis.** The depression immediately beneath the external ear. **f. subcecalis.** A pouch of the peritoneum between the lower end of the ileum, the cecum, and the vermiform appendix. **f. superior cerebelli.** The fissure which separates the anterior and posterior lobes of the cerebellum. **f. supraclavicularis minor.** The space between the sternal and clavicular origins of the sternocleidomastoid muscle. **f. supracondyloidea (femoris).** A depression made upon the posterior surface of the femur just above the internal condyle and a little to the middle line of the bone. **f. suprascapularis.** See *supraspinous f.* **f. tensoris palati.** The depression in which the tensor palati arises. **f. tonsillar.** See *amygdaloid f.* **f. glenoid f.** A f. on the temporal bone, between the two roots of the zygoma, for articulation with the head of the inferior maxilla; also a f. on the head of the scapula for articulation with the humerus. **hyaloid f.** See *lenticular f.* **iliac fossae.** See *external iliac f.* and *internal iliac f.* **incisor f. of the inferior maxilla.** A shallow depression on the outer surface of the inferior maxilla. **incisor f. of the superior maxilla.** See *myrtiform f.* **inferior costal f.** The facet on the lower portion of the body of a vertebra for articulation with the rib. **inferior occipital f.** The broad, shallow depression on the central aspect of the occipital bone which lodges either lateral lobe of the cerebellum. **infraclavicular f.** A flattened triangular depression just beneath the clavicle, between it and the mamma. **infraspinous f.** The posterior surface of the scapula below its spine. **infratemporal f.** See *zygomatic f.* **internal iliac f.** The anterior portion of the internal surface of the ilium occupied largely by the iliacus muscle. **ischiorectal f.** Syn.: *excavatio ischiorectalis.* The space between the obturator fascia, gluteus maximus muscle and the great sacrosacrotic ligament, and the rectovesical fascia. **jugular f.** A deep, smooth depression in the petrous portion of the temporal bone, anterior to the jugular facet. It forms with the jugular notch of the occipital bone the jugular foramen. **lacrimal f.** A slight depression in the upper and outer part of the root of the orbit, just beneath and behind the superior orbital margin, in which lies the lacrimal gland. **lenticular f.** An indentation or depression in the anterior surface of the vitreous formed by the membrana hyaloidea, for the reception of the crystalline lens. **mastoid f.** A depression on the inner surface of the mastoid process of the temporal bone, which forms part of the lat-

eral sinus. **maxillary f.** See *canine f.* **mental fossa.** Two flat depressions, one on each side, of the mental protuberance of the mandible. **middle f. of the skull.** One of the three fossae into which the internal base of the skull is divided. It lodges the temporal lobes of the brain. **Mohrenheim's f.** See *infraclavicular f.* **Morgagni's f.** See *f. navicularis urethrae.* **myrtiform f.** A slight depression in the facial surface of the superior maxilla, just to the inner side of the canine eminence. **nasal fossae.** See *nasal cavities*, under *cavity.* **navicular f.** A slight depression at the base of the internal pterygoid plate of the sphenoid bone. **olecranon f.** A large deep pit in the humerus above the trochlea which receives the olecranon process of the ulna. **orbital f.** That surface of the frontal bone, which forms part of the orbit. **pachionian fossae.** See under *pachionian.* **parietal f.** The most concave part of the inner surface of the parietal bone, opposite the parietal eminence. **pituitary f.** See *sella turcica.* **popliteal f.** The depression behind the knee lying behind the hamstring tendons and the heads of the gastrocnemius muscle. **posterior f. of the skull.** The depression at the base of the skull, which lodges the cerebellum and the medulla oblongata. **pterygoid f.** The cavity bounded by the pterygoid plates of the sphenoid bone. **pterygomaxillary f., pterygopalatine f.** See *sphenomaxillary f.* **rectovesical f.** See *Douglas's pouch.* **scaphoid f.** 1. The narrow, curved depression in the cartilage of the auricle, between the helix and the anthelix. 2. A small, oval, shallow depression at the base of the internal pterygoid plate, from which the tensor palati arises. **sphenomaxillary f., sphenopalatine f.** The space, immediately below the apex of the orbit, which lies in the angle between the pterygomaxillary and the sphenomaxillary fissures. It contains Meckel's ganglion, branches of the second division of the trigeminal nerve, and terminal branches of the internal maxillary artery. **subclavicular f.** See *infraclavicular f.* **subolivary f.** A small groove below the olivary body. **suborbital f.** See *canine f.* **subpyramidal f.** A depression just below the pyramid and behind the fenestra rotunda of the middle ear. **subscapular f.** The concave portion of the costal surface of the scapula occupied by the subscapular muscle. **superior costal f.** The facet for articulation with a rib on the upper portion of the body of a vertebra. **superior occipital f.** A depression in the superior part of the interior of the occipital bone. It lodges the occipital end of the cerebrium. **supraclavicular f.** A f. just above the clavicle, between the sternocleidomastoid and trapezius muscles. **supraspinous f.** That portion of the dorsal surface of the scapular superior to the spine. **suprasternal f.** The space included between the ventral margins of

the sternocleidomastoid muscles, the interscapular ligament, the lower margin of the mandible, and lines extending between the angles of the jaw and the mastoid processes of the temporal bones. **temporal f.** The f. occupied by the temporal muscle. The squamous part of the temporal, and the parietal, frontal, sphenoid, and malar bones take part in its formation. **trochanteric f.** A f. in the femur behind its neck for the insertion of the obturator externus muscle. **trochlear f.** A small depression in the frontal bone, beneath the internal angular process. It affords attachment to the pulley of the superior oblique muscle. **urachal f.** See *prevesical space*, under *space.* **vesico-uterine f.** The space between the posterior surface of the uterus and the rectum. **zygomatic f.** Syn.: *f. infratemporalis.* An irregular hollow in the side of the skull, covered in part by the ramus of the lower jaw. [Lat., *fossa*, ditch, from *fodere*, to dig.]

fossula (fos'su-lah). A little fossa. **f. fenestrae ovalis.** A depression in the inner wall of the tympanum above the promontory, in which is situated the oval window for the reception of the foot plate of the stapes. **f. fenestrae rotundae.** A funnel-shaped depression on the inner wall of the tympanum, having the fenestra rotunda at its bottom. **f. inferior.** A depression at the bottom of the internal auditory meatus below the crista falciformis. It presents in its anterior part the lamina cribrosa anterior inferior, and posteriorly the foramen singulare. **f. petrosa.** A slight depression upon the temporal bone in which is situated the inferior aperture of the tympanic canal. **f. sulciformis.** A slight furrow on the posterior border of the hemi-elliptical fossa which leads from the inner opening of the aqueductus vestibuli directly toward the crista vestibuli. **f. superior.** A depression in the petrous portion of the temporal bone in which is situated the internal aperture of the aqueduct of Fallopius. [Lat., dim. of *fossa*, a ditch.]

fowlbrood (fowl'brüd). A disease of the honeycomb and the larvae, due to infection. **fourchet** (foor-shet'). A forklike structure; of the vulva, a band of membrane that stretches across its cleft, behind the ostium vaginae; of the sternum, its semilunar notch, also the notch of the ensiform cartilage when it is cleft; of a horse's foot, the frog. [Fr., *fourchette*, a fork.]

fourth disease. Dukes (Lancet, July 14, 1900) has described under this name an exanthem which he thinks has been confused with German measles. Probably it was an aberrant form of some other exanthem.

fovea (fo've-ah), pl., *foveae*. A slight depression or pit. See *fossa.* **f. acustica inferior.** The interval between the pons and the olive and pyramid, in which lie the filaments of the auditory nerve. **f. articularis condyli.** A shallow triangular depression on the posterior surface

of the condyle of the inferior maxilla. **f. aspera.** A depression on the sphenoid bone between the posterior border of the inner wing of the pterygoid process and the vaginal process. **f. centralis laryngis.** A slight depression upon the ventral surface of the larynx at the basal end of the epiglottis. **f. centralis retinae.** A small red disk in the center of the macula lutea on the fundus of the eye, the center of which often appears as a whitish, round, or hook-shaped spot. The red color is due to the blood of the choroid. **f. commissurae mollis posterior.** A slight depression in the third ventricle of the brain just behind the commissura mollis. **f. cotyloidea.** A depression at the bottom of the acetabulum for the attachment of the round ligament. **f. cribrosa inferior et posterior.** The posterior portion of the fossula inferior which presents the opening of the passage of the ramus ampullae posterioris of the auditory nerve. **f. cruralis.** A depression in, or slight pouch of, the peritoneum over Gimbernat's ligament and the crural ring. **f. limbica.** A f. separating the olfactory region of the brain from the mantle. **f. malleoli lateralis.** A slight depression upon the distal end of the fibula just in front of the groove for the peroneal tendons. **f. nervi olfactorii.** A depression on the surface of the anterior lobe of the brain in which the optic nerve lies. **f. nuchae.** A slight mesal depression which begins just below the external occipital protuberance, and descends over the ligamentum nuchae between the prominences formed by the complexus and trapezius muscles of the two sides. **f. of the right auricle of the heart.** An oval depression at the lower part of the septum auriculorum and to the left of the orifice of the inferior vena cava. It represents the foramen ovale of the fetal heart. **f. pharyngis.** A depression at the opening of the eustachian tube into the pharynx. **f. processus condyloidei.** A shallow excavation upon the anterior surface of the neck of the condyloid process of the mandible. **f. retromaxillaris.** A depression in the retromaxillary cavity for the reception of the parotid gland. **inferior f., posterior f.** Syn.: *inferior fossa of fourth ventricle.* A small depression in the floor of the fourth ventricle, near its apex, at either side of the mesal groove. **superior f.** Syn.: *superior fossa of fourth ventricle.* A depression in either lateral half of the floor of the fourth ventricle, at its upper part. [Lat., *fovea*, a pit, from *fodere*, to dig.]

foveola (fo-ve'o-lah). A little fovea. **f. coccygea.** Syn.: *pilonidal sinus, congenital lumbosacral fistula.* A little depression or pit, due to a defect of development, sometimes found at a point about half to two-thirds of an inch behind the anus, and just at the apex of the coccyx. **foveolae of the kidney, foveolae papillarum renalium.** Depressions in the ends of the renal papillae, into which

several uriferous tubules empty. **f. radialis.** The "anatomist's snuffbox"; a hollow formed on the radial border of the wrist between the tendons of the extensors of the thumb when those muscles are contracted. **f. retina.** A very small, dark spot in the f. centralis retinae where the hexagonal pigment shows, owing to the thinness of the retina at this point. **f. retro-analis.** See *f. coccygea*. **f. triangularis seriata.** Of Bergman, the triangular recess between the columns of the fornix just dorsad of the anterior commissure. [Lat., dim. of *fovea*, a pit.]

Fowler's position. A p. obtained by raising the foot of the bed from 24 to 30 inches. **F's solution.** See *liquor potassii arsenitis*, under *potassium*. [George Ryerson Fowler, Amer. surgeon, 1848-1906.]

fowl mite. Another name for chicken louse.

foxglove (fox'gluv). See *Digitalis*.

Foxia Mansoni (fox'e-ah man-so'ni). Syn.: *Cladosporium Mansoni.* A species of fungi of the order *Hypophymycetes* having a black mycelial growth. It is the cause of *tinea nigra*.

fractional (frak'shun-al). Divided; said of doses and of distillations. See *f. distillation*, under *distillation*.

fracture (frakt'ür). A solution of continuity of one or more bones. A fracture is termed transverse, longitudinal, or oblique, according to the direction of the break to the long axis of the bone. **comminuted f.** A f. in which the bone is broken into several pieces. **complete f.** A f. in which the entire thickness of a long bone has been divided. **complicated f.** When some other injury is added to the f., as rupture of an artery or dislocation of a joint. **compound f.** A fracture accompanied with laceration of the skin. **depressed f.** One in which a portion of the outer layer of a flat bone or the spongy portion of a long bone is driven inward by direct violence. **impacted f.** When two main fragments of a f. are held firmly together in their new relation. **incomplete f.** When the continuity of the bone has not been completely lost or a fragment has not been completely detached. This form of f. varies from: (a) *fissured*, in which there is a crack in the bone, to (b) *greenstick*, in which only a portion of the thickness of a long bone is involved with bending of the bone at the seat of fracture. **intra-articular f.** A f. in which the main line of fracture or a subsidiary one extends into a joint. **multiple f.** This variety comprises f's of two or more adjacent bones or two or more f's of the same bone. **spontaneous f.** One due to muscular action and not to external violence. [Lat., *fractura*, from *frangere*, to break.]

Fragaria silvestris, Fragaria vesca. The common strawberry plant. Its fruit and leaves have been employed in medicine.

fragilitas crinium (fraj-il'it-as cre'ne-

um). A disease of the hair in which the shaft becomes extremely brittle so that the hair tends to break off or to split.

frambesia, framboesia (fram-be'ze-ah). Another name for yaws. See *yaws*. [Fr., *framboise*, raspberry.]

Frangula (fran'gu-lah). 1. The genus *Rhamnus*. 2. Of the U. S. Ph., the bark of *Rhamnus f. extractum frangulae fluidum* [U. S. Ph.]. Syn.: *extractum rhamni frangulae liquidum*. A fluid extract of the bark of *Rhamnus f.*

fran'gulin. Rhamnoxanthin, $C_{22}H_{34}O_8$, the active yellow principle of frangula, which yields emodin on decomposition.

frankincense (frank'in-sens). See *olibanum*.

Frank'lin glasses. Bifocal glasses, the upper part of the lens being for distant vision and the lower for near vision.

franklin'ic. Of electricity, statical.

frank'linism. See *static electricity*. (Named for Benjamin Franklin.)

frankliniza'tion. The use of static electricity for medical purposes; especially the act of charging an organism with static electricity.

Fraseria (fra'ser-ah). 1. A genus of North American gentianaceous herbs. 2. American calumba; of the U. S. Ph., 1870, the root of *F. Walteri*. **F. verticillata**, **F. Walteri**. American calumba, growing in the western and southern United States, especially in Arkansas and Missouri. The dried root has tonic properties and is sometimes used as a substitute for calumba. The fresh root is said to be emetic and cathartic. [Named for John Fraser, an American cultivator of exotics.]

Fraunhofer's lines. The absorption lines as noticed in the spectrum of the sun.

Fraxinus (frax'in-us). 1. The ash; a genus of the *Oleaceae*. 2. The inner bark of *F. excelsior*, formerly used in malarial fevers. **F. americana**. The white ash; a North American species. **F. mannifera**. *F. rotundifolia*. **F. ornus**. The flowering or manna ash; a species found in southern and middle Europe. It is the chief source of manna.

freckle (frek'le). A yellowish or light-brown spot in the skin. See *lentigo*. [Old Norse, *frecken*, a freckle.]

frem'itus. A thrill; a vibration. In physical diagnosis, the sensation appreciated through the hand or the ear when placed over a part in vibration. **tactile f.** See *fremitus*. **vocal f.** The sensation or vibration communicated to the ear when it, or a stethoscope, is placed upon the chest of the person talking. [Lat.]

frenator (fre-na'tor). One of the muscles that move the head on the atlas and axis. [Lat., *frenare*, to curb.]

frenulum (fren'u-lum), pl., *frenula*. 1. A little bridlelike restraining band or fold. 2. A small ridge on the dorsal surface of the valve of Viussens, connected superiorly, on each side, with the corpora quadrigemina. **frenula aryepiglottica**. The aryteno-epiglottidean folds. **f. glan-**

dis clitoridis dextrum. The right half of the frenum clitoridis. **f. glandis clitoridis sinistrum**. The left half of the frenum clitoridis. **f. labii inferioris**. The fold of mucous membrane that attaches the lower lip to the gum in the median line. **f. labii superioris**. A similar, but longer, fold for the upper lip. **frenula laborum oris**. See *f. labii inferioris* and *f. labii superioris*. **f. labiorum pudendi**. The fourchet of the vulva. **frenula of the lip**. See *f. labii inferioris* and *f. labii superioris*. **f. pudendi**. See *f. labiorum pudendi*. **f. vulvae**. See *f. labiorum pudendi*. [Lat., dim. of *frenum*, bridle.]

frenum (fre'num). Pl. *frena*. Syn.: *bridle*. A bridlelike fold connecting parts and restricting their separation. **f. clitoridis**. A stringlike structure formed by the convergence of the two labia minora at the lower border of the two layers forming the preputium clitoridis; inserted along the lower portion of the clitoris as far forward as the border of the glans. **f. epiglottidis**. See *f. of the epiglottis*. **f. glandis**. The median folds which connect the lower surface of the glans penis with the skin of the body of the organ. **f. linguae**. See *f. of the tongue*. **f. linguae posterioris**. See *f. of the epiglottis*. **f. of the clitoris**. See *f. clitoridis*. **f. of the epiglottis**. The largest of the three glosso-epiglottic folds which pass from the base of the tongue to the epiglottis. **frena of the ileocecal valve**. The ridges upon the ental surface of the colon formed by the coalescence of the two folds which form the ileocecal valve. **f. of the tongue**. A fold in the median line of the mucous membrane of the lower side of the tongue which attaches it to the gum. [Lat., *frenum*, curb, bridle.]

fren'zy. 1. Furious mental agitation. 2. See *phrenitis*. [Gr., *phrenesis*.]

frequency (fre'kwen-se). 1. The degree of rapidity with which an occurrence is repeated. 2. The state of recurring in rapid succession. As applied to the pulse and the breathing, *f.* is rapid recurrence as distinguished from quickness of each individual pulsation or breath. [Lat., *frequentia*, from *frequens*, assembled in great numbers.]

Freud's theory. A theory that hysteria is due to a psychic trauma which was not adequately reacted to when received, and persists as an affect-memory. [*Sigmund Freud*, Viennese neurologist, born 1856.]

friction (frik'shun). The act of rubbing while exerting more or less pressure. **dry f.** *F.* without the use of a liquid, as with the dry hand, a brush, etc. **moist f.** *F.* with a liquid or oily substance. [Lat., *fricatio*, from *fricare*, to rub.]

fric'tion sound. The sound produced by the rubbing of two inflamed serous surfaces together. **creaking f. s.** The *f. s.* of pleuritis when the sounds are harsh.

Friedländer's bacillus. See *Bacterium*

pneumoniae, under table of *B.* [Carl Friedländer, German pathologist, 1847-1887.]

Friedreich's ataxia. Syn.: *Friedreich's disease*, *family ataxia*, *hereditary ataxia*. A rare and peculiar disease, somewhat resembling locomotor ataxia, but almost always occurring in several children of a family, especially the girls, between the ages of twelve and eighteen years. [Nikolaus Friedreich, German physician, 1825-1882.]

fright. Nervous agitation with loss of mental balance, caused by sudden danger or fear.

frigorific, frigoric (frig-or-if'ik, frig'or-ik). Having the power to make cold, especially to cause freezing. [Lat., *frigorificus*, from *frigus*, cold, + *facere*, to make.]

fringe (frinj). An irregular or filamentous border; a marginal membrane; a fibria. **synovial f's.** Syn.: *fibrae synoviae*. Highly vascular f'like processes projecting from a synovial membrane into the cavity of a joint. They consist of connective tissue covered with epithelium, and contain some fat cells and sometimes isolated cartilage cells.

Frohn's reagent. A reagent for alkaloids made by boiling 1.5 gram of freshly precipitated bismuth subnitrate with 20 grams of water, and adding successively 7 grams of potassium iodid and 20 drops of hydrochloric acid. [Damianus Frohn, Ger. physician, b. 1843.]

Frohmann's lines. Transverse lines or striae appearing in the axis cylinder of medullated nerve fibers near the nodes of Ranvier after the fibers have been stained in silver nitrate. [Carl Frohmann, Ger. anatomist, 1831-1892.]

frontal (fron'tal). Relating to the forehead. **frontalis** (fron'ta'lis). See table of muscles, under muscle.

frost-bite. Local freezing, affecting most frequently those parts which are not protected by clothing or those in which the circulation of the blood is impeded by constricting articles of wearing apparel, such as gloves and boots. It is of three degrees, according to its severity. The first is characterized by transitory hyperemia following numbness; the second by the formation of vesicles in the skin; and the third by gangrene.

fructification (fruk-tif-e-ka'shun). The series of changes by which an ovule becomes developed into an independent being. [Lat., *fructificare*, to bear fruit.]

fructose (fruk'tös). Syn.: *levulose*, *fruit sugar*, *inversive ferment*. $C_6H_{12}O_6$, a ketohexose present in the juices of many fruits. One of the two constituents of cane sugar.

fruit sugar. See *fructose*.

frumentum (fru-ment'um). Corn, grain; in the pl., *frumenta*, the small seeds or grains of figs. **spiritus frumenti.** Whisky [U. S. Ph.]. [Lat., *frui*, to enjoy.]

ft. Abbreviation for Lat., *fiat*, let it be made.

fuchsin, fuchsiamin (fook'sin, fooks-e-

am'in). A commercial name for any monacid salt of rosanilin, especially a mixture of rosanilin hydrochlorid and pararosanilin hydrochlorid. It is used in solution in various liquids as a dye for microscopical sections, especially for staining bacteria. Therapeutically it has been employed in albuminuria. **acid f.** A coloring matter consisting of a mixture of rosanilin-disulphonic and rosanilin-trisulphonic acids. It has been used for coloring sections in order to demonstrate nerve fibers. **English f.** Syn.: *rosein*. Rosanilin acetate, $C_{20}H_{19}N_3.C_2H_3O_2$. **f. bodies.** Certain bodies observed by Russell in carcinomata, which are probably due to nuclear changes. **German f.** Rosanilin hydrochlorid, $C_{20}H_{19}N_3.HCl$. [L. *Fuchs*, German botanist, 1501-1566.]

fucin (fu'sin). A mucilaginous substance derived from plants of the genus *Fucus*. [Lat., *fucus*, a rock lichen.]

Fucus (fu'kus). Seaweed. **F. vesiculosus.** Sea, or bladder wrack; a species found on the rocky shores of Europe and America, of peculiar odor and taste, and containing iodine and sodium. The charcoal (*Ethiops vegetabilis*) has been employed in various countries. The whole plant is also given in decoction and extract. [Gr., *phukos*.]

fucosol (fu'kus-ol). An oily liquid, $C_8H_{16}O_2$, isomeric with furfurool, and resembling the latter in many of its properties, obtained by distilling algae of the genus *Fucus*, peat moss (*Sphagnum*), and lichens (*Usnea*, *Cetraria*), with sulphuric acid.

-fuge. A suffix from the Lat., *fugare*, to expel, denoting a substance which expels another substance, as a vermifuge, an anthelmintic or remedy that expels worms.

fugue (füg). A psychogenic flight reaction, usually accompanied by loss of memory for the event.

fuguismus (fu'gu-is-mus). Poisoning from fish of the genus *Tetrodon*, prevalent in Japan. The poison is a normal constituent of the ovaries and testicles, being present as a crystalline base, called tetrodin, and tetrodonic acid. [Jap., *fugu*, a certain fish.]

fulguration (ful-gu-ra'shun). Treatment by long, high frequency sparks. [Lat., *fulgur*, lightning.]

fuligo (fu-lig'o). 1. Soot. 2. Sordes. [Lat., *fuligo*, soot.]

fuller's earth. See under *earth*.

fulminate. A salt of fulminic acid.

fulminating, fulminant. Of diseases, developing very suddenly and running on very rapidly to a fatal issue. [Lat., *fulminare*, to strike with lightning.]

Fumaria (fu-ma're-ah). 1. Fumitory. 2. Of the pharmacopeias, *F. officinalis*. **F. officinalis.** Common fumitory, a small European species naturalized in the United States. It is sedative, gently tonic and alterative, and in large doses laxative and diuretic. [Lat., *fumus*, smoke.]

fumigation (fu-mi-ga'shun). The act or process of filling a closed space with gas or vapors, either with the purpose of destroying disease germs or as a means of applying volatile medicines to the surface

of the body. [Lat., *fumigatio*, from *fumigare*, to fumigate.]

fu'ming. Giving off fumes. **f. nitric acid.** Concentrated acid, containing a large amount of oxids of nitrogen. [Lat., *fumare*, to smoke.]

fu'mus. Smoke. **f. virosus.** A volatile virus.

function (funk'shun). The special act, work, or office of any organ. **animal f's.** The f's of animal life. **correlative f's.** The f's by virtue of which one part of an organism exerts a direct influence on another part. **vegetative f's.** The f's of vegetative life, that is, of the unconscious processes of nutrition and growth. **vital f's.** The f's essential to the continuance of life. [Lat., *functio*, from *fungi*, to be busy.]

func'tional. Pertaining to function, hypothetically opposed to organic. **f. disease.** Disease occurring without any ascertainable structural change. [Lat., *functionalis*, from *functio*, a performing.]
