Orinoco, river of the first rank in S. America. It rises in the mountains of Guiana, and flows 300 ms. to the S., it thence turns W. 150 ms. and receives the Cassiquari from the SW. It then later communicates with the Rio Negro, a branch of the Amazon. Below the mouth of the Cassiquari, the Orinoco turns to the NW. to St. Antonio, where it unites with Guaviari an immense stream, little, if any, inferior to the Orinoco.

The united streams assume a N. course, to the mouth of the Vichada, another large western tributary. Immediately below its junction with the Vichada the Orinoco pours its waters down the declivity of Atures, 760 ms. below its source, and above its discharge into the Atlantic ocean. The cataracts are in lon. W. C. 8 55 E., and lat. 5 1 N. About 100 ms. below the cataracts the basin of the Orinoco is enlarged by the Meta, a river, flowing from the Andes 500 ms. by

comparative courses. Below its junction with the Meta 150 ms., the Orinoco is again swelled by the Apure, a very considerable branch flowing from NW. and W. about 500 ms., and drawing its sources from the mountains of Varinas and Venezuela. From the cataracts the Orinoco gradually turns more to the E., and, below the discharge of the Apure, assumes a course a little N. of E., and falls into the Atlantic ocean by a wide delta, between 14° and 17° E. from Washington, and from lat. 8 30 to 10° N. The entire comparative course of the Orinoco is about 1,500 ms., and the area of the basin it drains 400,000 sq. ms. About 100 ms. above its mouth it receives the Paraguay or Oarom, the only large tributary which augments its volume from the S.—See *Oarom* and *Paraguay* of *Orinoco*.

Only the S. or main channel of Orinoco is navigable for large vessels. For boats few rivers of the world afford a more extended and less interrupted navigation. The entire basin of this great river is in what was the republic of Colombia.

Orkney Islands, or *Orkneys*, ancient Orcades, a cluster of islands to the N. of Scotland, from which they are separated by Pentland fieth. They lie between 57 35 and 59 16 N. lat., and are 26 in number, of which one greatly exceeds the others in extent. This, like the principal one of Shetland, is sometimes dignified with the appellation of Mainland, but is more frequently called *Pomona*. Beyond this island, to the NE., are seen, among others, Rowsa, Eglissha, and Westra, Shappinsha and Eda, Stronsa, Sanda, and North Ronaldsha, and to the S. appear Hoy and S. Ronaldsha, with others of inferior note. The currents and tides which flow between these islands are rapid and dangerous; and near the small isle of Swinna are two whirlpools, very dangerous to mariners, especially in calms. Springs of pure

water are found in all the mountainous parts of these islands, and there are numerous lakes and rivulets abounding in fish. The climate of these islands in summer is moist and cold, but in winter there is never much snow, and that lies only a short time. Preceding the autumnal equinox, they are visited by dreadful storms of wind, rain, and thunder. The coast affords numerous bays and harbors for the fisheries. The chief exports are linen and woolen yarn, stockings, butter, dried fish, herrings, oil, feathers, and skins of various kinds, and kelp. The English language prevails in all these islands, although there are many words in the Norse, or Norwegian, still in use. The inhabitants have the general character of being frugal, sagacious, circumspect, religious, and hospitable.

Otaheite, one of the Society islands in the South Pacific ocean, lying in 18° S. lat. and 150° W. lon., and first discovered by Capt. Wallis in 1770. It consists of two peninsulas, great part of which is covered with woods, consisting partly of breadfruit trees, palms, cocoa-nut trees, plantains, bananas, mulberries, sugar canes, and others peculiar to the climate, particularly a kind of pine-apple, and the

on tree. The people have mild features and a pleasing countenance. They are about the ordinariness of Europeans, of a pale mahogany brown, fine black hair and eyes.

The following are extracts from a letter written in Rome, on the 24th of September, 1839, by Lieutenant Charles Wilkes, commanding the exploring expedition :

The harbor of Paperte, on the NW. side of the island, is in lat. 17 31 S., lon. 149 35 W. of London and is the only harbor of the island visited by vessels engaged in the whale fishery for supply and one of the principal resorts for the commerce engaged in the Pacific ocean. There is some difficulty in getting in and out of the harbor, some delay occasionally owing to head winds; the anchorage is perfectly safe from all gales. The vessel, appointed by the Queen, attends vessels entering the harbor

The winds, from March to November, are almost constantly from the eastward, or the Trades. In November to March variables are experienced, and sometimes blow from N. and NW.

I annex a statement of the number and tonnage of American vessels which have visited this during the years—

Oxford, city of Eng., and capital of Oxfordshire. It is seated at the conflux of the Cherwell with the Thames, and has a canal to Brunston, in Northamptonshire. The city, with the suburbs, is of a circular form, 3 ms. in circumference, and was anciently surrounded by walls, of which considerable remains are yet to be seen, as also of its extensive castle, the tower of which now serves for a county jail. In 1811, the number of inhabitants was 12,931. It has, beside the cathedral, 13 parish churches, a famous university, a noble market place, and a magnificent bridge. The university is generally supposed to have been a seminary for learning before the time of Alfred, although it owed its revival and consequence to his liberal patronage. Here are 20 colleges and 5 halls, several of which stand in the streets, and give the city an air of magnificence. The colleges are provided with sufficient revenues for the

maintenance of a master, fellow, and students. In the halls, the students live either wholly or in part at their own expense. The colleges are: University, Balliol, Merton, Exeter, Oriel, Queen's, New, Lincoln, All Souls, Magdalen, Brazen Nose, Corpus Christi, Christ Church, Trinity, St John Baptist's, Jesus, Wadham, Pembroke, Worcester, and Hertford. Of these the most ancient is University College, founded before the year 872; and to Christ Church College, begun by Cardinal Wolsey and finished by Henry VIII., belongs the cathedral. The halls are: Alban, Edmund, St. Mary's, New Inn, and St. Mary Magdalene. Among the libraries in the University, the most distinguished is the Bodleian, founded by Sir Thomas Bodley, those of All Souls College, Christ Church, Queen's, New, St. John's, Exeter, and Corpus Christi. Among other public buildings are the Ashmolean Museum, the Clarendon Printing House, Radcliff Infirmary, and an Observatory. Magdalen bridge, besides the beauty of its architecture, has this singularity, that more than half of it is on dry ground, and the rest covers two small strips of the Cherwell. This bridge is 526 feet long. The theatre is more magnificent than any thing of the kind in the world. The physic garden, of above 5 acres, is walled round, with fine gates, one of which cost £600.

Oxford, co. of Eng., bounded on the E. by Buckinghamshire, W. by Gloucestershire, S. by Berkshire, and N. by Warwickshire and Northamptonshire. The extreme length is 48 ms., and breadth 26, but its form is very irregular. It contains 450,000 acres, is divided into 14 hundreds and 207 parishes, has one city and 12 market towns, and sends 9 members to Parliament. The soil, though various, is fertile in corn and grass. The south part, especially on the borders of Buckinghamshire, is hilly and woody, having a continuation of the Chiltern Hills running through it. The NW. part is also elevated and stony. The middle is in general a rich country, watered by numerous streams running from N. to S., and terminating in the Thames. Of these the most considerable are the Windrush, Evenlode, Cherwell, and Thames; the latter, although an inconsiderable rivulet, has obtained some importance from having been supposed to give name to the Thames. The products of Oxfordshire are chiefly those common to the midland farming counties. Its hills yield ochre, pipe clay, and other earths, useful for various purposes. Corn and malt are conveyed from it by the Thames to the metropolis. Pop. in 1801, 109,620; in 1811, 119,191; and in 1821, 134,327.

It is 100 ms. NNE. of Mexico. Lon. 100 4 W., lat. 20 32 N.

Pachsu, small island in the Mediterranean, on the coast of Epirus, S. of Corfu, and W. of the Gulf of Arta.

Pacific ocean, that vast ocean which separates the continent of America from Asia and Australasia. It received the term Pacific from the moderate weather the first mariners who discovered it met with between the tropics; and it is called South sea, because the Spaniards crossed the isthmus of Darien from N. to S., when they discovered it, though it is properly the West-Indian ocean with regard to America. The Pacific, an adjective name, applies only with correctness to the tropical section of the great expanse of water between America and Asia and Australasia. In high latitudes, either N. or S., storms and variable winds prevail over the Pacific.—See article *Pacific*. The preceding character of the Pacific is therefore correct, when applied to different parts of that immense basin. Within and for distance above the tropics, it is truly pacific, and in high latitudes, and particularly near the poles, it is liable to all the meteorological changes arising from difference of temperature, and boisterous winds, as other oceans and seas in like latitudes.—See article *Earth*.

Paltz, New, tp., Ulster county, New York, on the W. side of Hudson river, 40 miles S. of Poughkeepsie and 83 S. of Albany. Pop. in 1810, 3,612; in 1820, 4,612.

Pamelia, tp., Jefferson county, N. Y. Pop. in 1820, 1,342.

Pamiers, town of France, in the department of Arriege, and late territory of Foix, with a bishopric. It is not so considerable as formerly, nor so populous in proportion to its extent. Near it is a mineral spring, said to cure the gout and obstructed urine. Pamiers is seated on the Arriege, 8 miles N. of Foix and 30 S. of Toulouse. Lon. 1 32 E., lat. 43 8 N.

Pamlico Sound, inland sea, N. C., 100 miles long, and from 10 to 20 broad. It is separated in its whole length from the sea by a beach of sand bars, a mile wide, generally covered by small trees and bushes. Through this bank it has several inlets, but that of Ocracoke is the only one that will admit vessels of burden.

Pampas, name given in South America to extensive grassy plains. The Pampas extend over an immense surface S. of the Plate river, and stretch into Patagonia.—See *Prairie*.

The Pampas del Sacramento spread between the Amazon and Ucayale from 5° to 6° S. lat.

Pampelonne, town of France, in the department of Tarn, and late province of Languedoc, 15 miles N. by E. of Alby. Longitude 2 17 E., lat. 43 10 N.

Pampeluna, town of Spain, capital of the Kingdom of Navarre, with a very strong citadel, and a bishopric. Its squares are handsome, and adorned with shops full of rich merchandise. It is seated in a very fertile plain, on the Arga, 42 miles S. of Bayonne and 167 NE. of Madrid. Lon. 1 33 E., lat. 42 47 N.—Town of S. America, in the Kingdom of Granada, famous for its mines of gold and numerous flocks of sheep. It is 150 miles N. by W. of St. Fe-de-Bogota. Lon. 71 30 W., lat. 6 42 N.

Pampliega, town of Spain, in the province of Old Castile, 12 ms. S. of Burgos. Lon. 3 33 W., lat. 42 14 N.

Pamunky, navigable river of Virginia, which is formed by the junction of N. and S. Annam, and other lesser streams, and falls into York river in Delaware.

Par, or *Pahang*, town of Asia, on the E. side of the peninsula of Malacca. It is the capital of a kingdom of the same name, remarkable for the great number of elephants, and for the plenty of

per it produces. Pan is 140 ms. NE. of Ma-
a. Lon. 103 20 E., lat. 3 55 N.

Panagia, handsome town of Turkey, in Eu-
e, in the province of Romania. Lon. 27 2 E.,
40 40 N.

Panama, village, Chautauque co., N. Y.—
y of North America, the capital of Terra Firma
per, on a bay of the same name, 70 ms. S. of
to Bello. Lon. 80 35 W., lat. 8 48 N.

Panama, or *Darien*, *Isthmus of*. No very de-
e idea has been conveyed by the term Isthmus
Darien, or Panama. The narrow strip of land
ween the gulf of Panama of the Pacific and the
ibbean sea, an arm of the Atlantic, presents the
est approach of the waters of those vast oceans;
with very unequal width, extending from SE.
NW. upwards of 1,500 miles, the immense
nus affords several points where the distance
to the Atlantic to the Pacific is evidently within
scope of canal enterprise, without any very
ous expense. This will be more clearly under-
d from the following geographical view.

we extend the great American isthmus on the
to the mouth of the Atrato river, and on the W.
e gulf of Tehuantepec and rivers Chimalapa
Guasacualco, it reaches from $\frac{1}{2}^{\circ}$ E. to 18° W.
W. C. The bottom of the gulf of Darien and
th of the Atrato is in N. lat. 8 30, the gulf of
hantepec in N. lat. 16 20, and the mouth of
Guasacualco river in N. lat. 17 30.

Within these geographical limits spread two vast
nsulas, containing together more than 350,000
re miles, and discharging into the gulf of Mex-
nd Caribbean sea numerous rivers, many of
h are of considerable magnitude and length of
se.

may be premised that in the present, as in al-
every other instance, the geography of the
ains is most defective. In all our maps of
h America, the great central chain of Anahu-
n Mexico, is extended to the SE., and con-
d with the chains of the Andes, in South
rica. I have been, for upwards of 20 years,
pinion that this arrangement was radically
g, and almost the reverse of fact. One very
ral law of construction seems to prevail in the
tain systems of America; the chains extend
eral ridges in one general direction. This I
already shown is strikingly apparent in the
lachian system. As far as we possess correct
nation, the same regularity of structure pre-
in the great chains W. of the basin of the
Mississippi and in those of the Brazils and Andes
outh America. In all these chains their range
s uninfluenced by the contiguous oceans or
y. If my hypotheses respecting the mountains
Guatemala be correct, their range is nearly NW.
E., leaving deep intervening valleys. Also,
similar to other American mountains, those
Guatemala are of very unequal elevation, ad-
g passages, not very elevated, from ocean to

other very important element in the investi-
ation of this subject, is that of the respective le-
of the Atlantic and Pacific oceans. The
winds and current of rotation, it is well
known, produce that immense whirlpool in the
Atlantic ocean, to a part of which, opposite the
E. coast of N. America, has been given the

name of Gulf Stream. Between S. America and
Africa, and within the tropics, the surface of the
Atlantic ocean flows regularly westward, separated
by Cape St. Roque, S. lat. 5° , this vast ocean
current is divided: the N. section, inclined to the
NW. by the coast of S. America, is carried into
the Caribbean sea. Again urged forward in the
same direction by the general range of the Isth-
mus, the accumulated flood pours into the Gulf
of Mexico between Yucatan and Cuba, and again
escapes into the Atlantic between Cuba and
Florida.

Water in an ocean flows from a similar cause
as in a river, that is, difference of level. The
Gulf Stream continues with considerable velocity
more than 1,500 ms. To admit water to flow
with perceptible velocity, demands a difference of
level or descent of at least half an inch per mile.
With this very moderate allowance, the surface of
the Gulf of Mexico is above 60 feet more elevated
than that of the Atlantic ocean. The very same
causes which, in accumulating water on the SE.
coast of N. America, forms the Gulf Stream,
forces the water from the opposing coast and con-
tributes very much to augment the inequality of
level in the surfaces of the Atlantic and Pacific
oceans. The retreat of water from the SW.
American coast, within the tropics, is, no doubt,
the principal cause of the very few deep harbors
existing along that part of the Pacific ocean.

Commencing our survey at the Gulf of Te-
huantepec, and advancing SE., we first meet
with the Chimalapa, a mountain torrent flowing
from the N. about 70 ms. into the Gulf of Te-
huantepec. This insignificant stream rises in the
mountains of Oaxaca, heading with the sources of
the Guasacualco. The latter is also a mere moun-
tain torrent, not above 100 ms. in entire length.
The direct distance from the Gulf of Mexico, at
the mouth of the Guasacualco, to the Pacific, at
the entrance of the Chimalapa into the Gulf of Te-
huantepec, is about 100 ms.

From the great elevation of the intervening
mountains, it is not probable that a canal com-
munication by this route is practicable. The
limit between Mexico and Guatamala, intersects
the Pacific ocean 50 ms. SW. from the mouth of
the Chimalapa. The province of Guatamala is a
long narrow strip, skirting the Pacific upwards of
500 ms., and, at a mean distance of about 50 ms.
inland, bounded by a lofty mountain chain. SE.
from the central chain, Guatamala is bounded NE.
by Chiapa and SE. by Vesapaz. Chiapa is
drained by 3 rivers flowing northward into the
Gulf of Mexico; the Tobasco, the St. Pedro, and
Sumasinta.

By the name of Grijalva, the Tobasco rises in
the mountains of Guatamala, within less than
50 ms. from the Pacific ocean. Assuming a NE.
course, continues that direction 100 ms., ap-
proaches the intendency of Vera Cruz in Mexico,
but, before entering that province, winds to the
E. 50 ms., enters Tobasco, and, turning to SE
about 120 ms., falls into the Gulf of Mexico.
The San Pedro is, in some measure, a tributary
stream of the Tobasco, both entering the same
estuary W. from W. C. 15° . How far the To-
basco is navigable, or the existing impediments to
the construction of canals, has never been ascer-

tained; but, from the elevation of the mountains of Guatamala, we may entertain reasonable doubts, whether any water communication between the two great oceans is practicable by the Tobasco.

The Gulf of Mexico is terminated at the bottom of the Bay of Campeachy, by a sheet of water, very appropriately named "*Gulf of Terminos.*" The Sumasinta river, flowing from the mountains of Guatamala, in the extreme southern angle of Chiapa, pursues a N. course of 200 ms. into the Gulf of Terminos. The small river Suchitepec has its source in the opposite side of the mountains from those of the Sumasinta. How well the stream of the Sumasinta is calculated for navigation is yet to be ascertained; from the position of its channel, a very direct route from the Atlantic to the Pacific is presented, but it is to be apprehended, that here again the intervening mountains oppose an insuperable barrier. By the valleys of the Suchitepec and Sumasinta, the direct distance from ocean to ocean is within a trifle of 250 ms. This is the third route noticed by Humboldt in his Political Essay on New Spain, under the head of general considerations on the possibility of uniting the South sea and Atlantic ocean. This illustrious traveller, to the regret of the whole civilized world, did not examine, personally, any part of the Isthmus of N. America, but, from such information as he possessed, doubts the practicability of a canal in this region.

The Sumasinta is the last stream of Guatamala which carries its waters into the Gulf of Mexico; but the same elevated tract from which this river draws its sources, gives origin to two other Atlantic rivers of considerable magnitude, the Balize, Main, and Acasabastlan. The Balize flows NE, upwards of 300 ms. over Yucatan, and is discharged by 2 mouths into the Bay of Honduras; the Acasabastlan or Guatamala, flows about 200 ms. nearly due E. into the Gulf of Amatique, the extreme western angle of the Bay of Honduras.

That immense bay, bounded on the W. by the eastern shore of Yucatan, and S. by the northern shore of the peninsula of Honduras, is that part of the Caribbean sea spreading between the continent of N. America, and the islands of Cuba and Jamaica. The name of the "*Bay of Honduras,*" is, however, more particularly applied to that great triangle bounded by Yucatan, Peninsula of Honduras, and a line drawn from Cape Gracias à Dios to Cape Catoche. Gradually contracted by the continent, this bay terminates in the Gulf of Amatique. The latter opens again inland into the Gulf of Dulce. The Acasabastlan river is discharged into the latter, within 100 ms. from the port of Acazulta, or Trinidad of the Pacific.

The Amatique gulf is the estuary of several rivers beside the Acasabastlan. One, the Guanacos rises in the SE. part of Guatamala, and curving ENE., and finally N., enters the SE. angle of the Amatique, after a course of 250 ms. If the quantity of water corresponds to their length of course, the rivers of Amatique offer one of the most direct routes between the Atlantic and Pacific oceans. The sources of the Acasabastlan are within less than 50. ms. NE. from the city of Guatamala. The depth of water in the harbors of

either coast is, however, defectively known, the intermediate country but partially explored. SE. from the Acasabastlan, the isthmus gradually widens into the immense peninsula containing the provinces of Honduras, Nicaragua and Costa Rica. The mouth of the Acasabastlan, into the Gulf of Dulce, is at N. lat. 15°, at 12° W. lon., from W. C. Cape Gracias Dios is at N. lat. 15°, and at 4° W., lon. f. W. C. Between these two geographical points the peninsula of Honduras extends upward 500 ms. from W. to E. In form of a triangle this part of America presents a port of 600 ms. to the Pacific ocean, 500 to the Caribbean sea, and 500 to the Bay of Honduras. Connected on NW. to Vera Paz and Guatamala, by a neck land less than 100 ms. wide, and on the SE. to Veragua by another of not more than 50 ms. from ocean to ocean, this interesting region contains superficies of more than 100,000 sq. ms. A narrow slip along the Pacific is well peopled, but the interior in great part unexplored.

Leaving Guatamala, the mountains incline to the eastward, and leave, in the NW. part of caragua, a wider slope to the rivers flowing to the Pacific than exists in the former province. The slope towards the Atlantic is, however, usual, comparatively much more extensive so that towards the Pacific; the former giving so a course to numerous rivers, two of which, the Gold river and Bluefield's river, exceed 400 ms. in length. Though but imperfectly known, we may safely exclude either of those rivers from the list of those offering a convenient connexion between the waters of the Atlantic and Pacific oceans, and proceed to examine, perhaps, the most remarkable feature in American geography, particularly so in the present inquiry.

The valley formed by the lakes of Leon and Nicaragua, and by the river St. Juan, or St. J. is to the eye, when surveying a map of that part of America, the most natural route offered to man industry to unite the two great American oceans. It is the 4th route from ocean to ocean indicated by Humboldt. This author observes that "perhaps the communication of the Lakes of Nicaragua with the Pacific ocean could be carried on by the Lake of Leon, by means of the river Tasta, which, on the road from Leon to Real, descends from the volcano of Telico. In fact the ground there appears very little elevated.

More recent surveys, and particularly those published by Mr. Stephens, have contributed to establish the practicability of rendering this a navigable route from ocean to ocean. But whether the route which could be constructed through this part of America time will determine.

Panari, one of the Lipari islands, in the Mediterranean, between Lipari and Strombolo. It is a barren inconsiderable island, and only 5 ms. in circumference. Lon. 15 41 E., lat. 38 38 N.

Panay, one of the Philippine islands, between those of Paragoa and Negro. It is 250 ms. in circumference, and the most populous and fertile of them all. It is watered by a great number of rivers and brooks, and produces a great quantity of rice. Iloila is the capital.

PANDECT, from the Gr., *all*, and *to compare*. The Pandects made up by order of the Emperor

Justinian comprised the formerly scattered works of Roman Jurisconsults, to which, when collected into a body, that Emperor gave the force of law.—*S. Digest.*

Pancras, St., village of England, in Middlesex, 6 miles to the N.W. of London. At a public house near the church is a medicinal spring. Here is an hospital for inoculation, and the veterinary college, established in 1791, under the patronage of the Duke of Devonshire, for the improvement of the first rank and fortune, for the improvement of farriery and the treatment of cattle in general.

Panga, town of Africa, in the kingdom of Congo, capital of the province of Bamba. Lon. 14 25 E., lat. 6 30 S.

Panglang, town of Pegu, in the Birman empire, situated on the river Rangoon. Lon. 17 4 E., lat. 95 54 S.

Paniput, town of Hindoostan, in Delhi. Lon. 76 30 E., lat. 29 23 N., 72 miles N.W. from Delhi.

Panjab, country of Hindoostan proper, being bounded by the 5 eastern branches of the Indus.

It was the scene of Alexander's last campaign, and the *ne plus ultra* of his conquests. It is a square of 250 ms., and includes the whole of the shore and a great part of Moultan proper. To the lower part of Moultan it is flat and marshy, and is watered by the periodical rains which fall between August and October.—See *Asia*, p. 102.

Pannanach Wells, village of Scotland, in Aberdeenshire, noted for the mineral waters discovered in 1566; and a lodge has been erected for the accommodation of the company that frequent them in summer.

Paniput, town of Hindoostan proper, situated on an extensive plain between the cities of Delhi and Sirhind, 72 ms. N.W. of Delhi. Lon. 76 15 E., 29 15 N.

Panomi, village of Turkey, in the province of Thessalonica, 16 ms. S. of Salonichi. Lon. 23 10 E., lat. 40 25 N.

Panormo, small town of Turkey in Europe, in Sicily, on a gulf of the Mediterranean, opposite the island of Corfu, 45 ms. SSE. of Valona. Lon. 23 10 E., lat. 40 0 N.

Pantalaria, island in the Mediterranean, between Sicily and the coast of Tunis, about 17 ms. from the latter. It abounds in cotton, fruits, wheat, and corn, and is subject to the King of Naples. Lon. 12 31 E., lat. 36 55 N.

Panther Creek, post office, Surry county, N. Carolina, 143 miles Northwest by West from Raleigh.

Pantika, town of Turkey, in Natolia, on the coast of the sea of Marmora, 12 ms. SE. of Constantinople.

Panton, village, Addison co., Vt., between Otter Lake and Lake Champlain, 10 ms. N.W. from Burlington.

Panuco, river of Mexico, rises near San Luis Potosi, and flowing E., over the State of San Luis Potosi, falls into the Moctezuma.

Panuso, city of Mexico, in the State of Vera Cruz, on the river Panuco, near the Gulf of Mexico, 170 ms. N. by E. of the city of Mexico. Lon. 97 21 30 W., lat. 23 13 N.

Panther, village and seat of justice for Orange co., N. Carolina, 63 ms. SSW. from Indianapolis. It is situated

on Salt creek, branch of Little White river. Lat. 38 34 N., lon. W. C. 9 22 W.

Pa oom, one of the New Hebrides, in the South Pacific ocean, to the S. of Malicollo. Lon. 168 28 W., lat. 16 30 S.

Pao-ting-fou, town of China, in the province of Pe-tcheli, where the viceroy resides, and the most considerable city in the province next to Peking. It has 20 others under its jurisdiction: 3 of the 2d and 17 of the 3d class. The country around it is pleasant, and inferior in fertility to no part of China.

PAPA, father, in numerous languages. It is in fact a natural term, and from which comes Pope, or Father of the Catholic Church.

Papa, small but strong town of Lower Hungary, in the co. of Esperin. It was taken from the Turks in 1683, after the raising of the siege of Vienna. It is seated on a mountain, near the river Marchaltz, 45 ms. W. of Buda. Lon. 18 20 E., lat. 47 26 N.

Papagayo, Gulf of, on the Pacific coast of N. America, and between Costa Rica and Nicaragua. Lon. W. C. 8 30 W., lat. 11 10 N. The distance from the eastern extremity of Papagayo gulf to Lake Nicaragua is only about 22 ms.

Papantla, town of Mexico, in the State of Puebla, about 130 ms. NE. from the city of Mexico. Lon. W. C. 20 40 W., lat. 20 30 N. This place is very remarkable for the magnitude and extent of antiquities found within its vicinity.—See *Pyramids of America*.

Papasquiaro, village of Mexico, in the SW. part of the State of Durango. Lat. 24 58 N., lon. W. C. 27 40 W., about 70 ms. NW. by W. from Durango.

Paperte, town and seaport of Otaheite.—See *Otaheite*.

Paperville, village, Sullivan county, Tennessee, by post road 278 ms. NE. by E. from Murfreesborough.

Papouii, St., late episcopal town of France, in the dep. of Aude, and late province of Languedoc, seated on the Lembe, 8 ms. E. of Castelnau-dary, and 35 E. of Toulouse. Lon. 2 10 E., lat. 43 21 N.

Pappenheim, town of Germany, in the circle of Franconia, capital of a county of the same name, with a castle, where the count resides. It is seated near the Altmal, 17 ms. NW. of Neuburg, and 32 S. of Nuremberg, Lon. 10 51 E., lat. 48 58 N.

Para, river, or rather strait, separating the island of Joannes from the continent of South America. It extends from the mouth of the Amazon to that of Tocantinas.

Papua, or New Guinea, island of Oceania, or Austral Asia, lying to the N. of New Holland.—See *New Guinea*.

Para, Gran, one of the captain generalships of the Brazils, bounded N. by the Amazon river, NE. by the Atlantic ocean, SE. by Maranham and Goias, S. by Mattagrosso, SW. by Peru, and NW. by Colombia. It is an immense country, extending from E. to W. 1,600 ms., with a mean width of about 400, and an area of 640,000 sq. ms. Lying between the equator and lat 12° S. It is perhaps that extent of the whole habitable world which, in a continuous body, presents the greatest facility

of inland navigation. Washed for nearly 200 ms. by the Amazon, and traversed by innumerable other streams of great magnitude, the principal of which are, Jutay Madeira, Tapajoz, Xingu, and Tocantinas. Chief town, Gran Para.

Para, Gran, city of Brazil, and capital of the captain generalship of Gran Para, situated on the Tocantinas, 60 ms. above its mouth. Lon. W. C. 28 27 East, latitude 1 30 S. Population about 10,000.

Paradise, village, Lancaster co., Pa.—Village, York co., Pa., 15 ms. SSW. from York. Pop. in 1820, 1837.

Paracels, vast number of small islands and rocks, lying on the China sea, and forming a long cluster, near 400 ms. in length, off the coast of Cochin China.

Parachim, town of Lower Saxony, in the duchy or Mecklenburg, seated on a small river which falls into the Elbe. It is 20 ms. SE. of Schwerin: Lon. 12° E., lat. 53 34 N.

Paradella, town of Portugal, in the province of Beira. Lon. 7 23 W., lat. 41 4 N.

Paramithi.—See *Parga*.

Paragouana, peninsula of Colombia, in Venezuela, containing the city of Boro. It forms the eastern side of the entrance into the Gulf of Maracaibo, and is terminated by a cape of the same name. Lat. 11 52 N.

Parago, or *Palawan*, large island in the Indian ocean, between the Philippine and Borneo, which has a king, tributary to Borneo. The Spaniards have a fort here.

Paragua, the most westerly of the Philippine islands, extending about 180 ms. in length, and 20 in breadth. Longitude 117 44 East, latitude 10 North.

Paraguay river, large branch of Orinoco, rises in the mountains of Guiana, its source interlocking with those of Essequibo, the Rio Branco, branch of Rio Negro, and those of the Orinoco. The entire course of the Paraguay is about 300 ms. from S. to N. It falls into the Orinoco about 80 ms. below St. Tomé and Angostura.

Paraguay, large country of S. America, bounded on the N. by Amazonia, on the E. by Brazil, on the S. by Patagonia, on the W. by Chili and Peru.

Paraguay, river of South America, the great northern branch of the Rio de la Plata, rises by very numerous sources at S. lat. 13°, in the captain generalship of Mattagrosso of Brazil. Flowing thence by a general course nearly due S. about 1,000 ms., it receives from the NW. the large volume of the Pilcomayo, and 150 ms. still lower the now noble stream is again augmented by the Rio Grande, also from the NW. The already vast volume of the Paraguay continues its southern course 50 ms. below the mouth of the Rio Grande, to where it encounters and mingles its waves with an almost equal rival, the Parana, from the NE. The name of the united waters below their junction is given to the inferior branch, the Parana.—See *Parana*.

Paramaribo, the capital of Surinam, in Guiana, and the chief place of the Dutch colonies in South America. It has a strong citadel and a noble road for shipping. Exports, sugar, cotton, and indigo. The streets are perfectly straight, and lined with

orange, shaddock, tamarind, and lemon trees everlasting bloom. It is situated on the E. of the river Surinam, 16 ms. from its mouth. Lon. 55 25 W., lat. 5 48 N.

Paramatta, town of New Holland, in the Dutch colony of Botany Bay.

Paramousie, one of the Kurile islands, lying of that of Shoonska.—See *Kuriles*.

Parana, river of South America, the eastern branch of the Rio de la Plata, rises in the mountains of St. Paul's, Minas Geraes, and Goias, Brazil. It is very remarkable that the southern sources of the Parana are within 50 ms. of the Atlantic ocean, and flow NW. towards the centre of the continent, and pursue that direct course 500 ms., where they unite, and abruptly turn SSW. The latter course is maintained 700 to where the Parana approaches to within less than 50 miles from the Uruguay, but again by an abrupt bend to the W., leaves Uruguay, and, after continuing W. 100 ms., mingles with the Paraguay at the city of Assumption. Hence, as is the case with the Missouri and Mississippi, the name of the largest is superseded by that of the smaller stream, and the Parana prevails over its superior rival, the Paraguay. Below Assumption the Parana inclines a little W. of S. 450 ms. receiving in that distance from the NW. the Rio Iguazu, and from the W. the Terzero, at Rosario. Turning to the SE. below Rosario, the Parana flows 150 ms., and, receiving its last great tributary, the Uruguay, from the NNE., is lost in the general name of Rio de la Plata. The Parana is the most extensive secondary river of the earth, draining more surface than does the Missouri.

Parana, province of Paraguay, so called from the large river, which, uniting with the Paraguay, afterward with the Uruguay, forms the Rio de la Plata.

Paranaiba, northeastern confluent of the Parana river, South America. The Paranaiba rises about S. lat. 16°, heading with the Tocantinas, and flowing SW. by comparative courses 400 ms. falls into the Parana.

Paranatinga, river of S. America, rises in the Brazilian province of Matta Grosso, S. lat. 12°, and flowing thence a little E. of N., between the Tocantinos and Tapajos, joins the Amazon at latitude 1 30, after a comparative course of 1,000 miles.

Parchwitz, town of Germany, in Silesia, in the principality of Lignitz, subject to the king of Prussia. It has a considerable manufacture of cloth. It is 12 ms. W. of Wohlau, and 10 NE. of Lignitz. Longitude 16 42 East, latitude 51 10 North.

Pardiba, town of S. America, in Brazil, at the mouth of a river of the same name. The soil is pretty fertile, and produces sugar canes and a great number of trees of Brazil wood. Lon. 49 53 W., lat. 6 50 S.

Pardobitz, town of Bohemia, in the circle of Chrudim, subject to the house of Austria, with a manufacture of knives and sword blades. It is a fortified town, and is 55 ms. E. of Prague. Lon. 15 45 E., lat. 49 55 N.

Parella, town of Italy, in Piedmont, in the province of Canaveze, 20 ms. N. of Turin.

Parenzo, strong town of Istria, with a great

bor, on the Gulf of Venice, 65 ms. E. of Venice. Longitude 13 56 E., latitude 45 24 N.

Parga, town of European Turkey, in Albania, on the S. side of the Gulf of Glykyslemon, or *Port of Sweet Waters*, surrounded by groves of olive, orange, and lemon trees. It spreads along the southern corner of the gulf, at N. lat. 39 30, E. lon. 20 30, 15 ms. NW. from Prevesa, and occupies the northern extremity of the island of Cephalonia. It is the capital of the district called *Partha*; pop. about 8,000. The inhabitants are chiefly Christians, who are, according to Hobbes, the very worst of the Albanians. This town was given up in 1819 by the British to Ali Pasha, and, to avoid their certain fate from such a master, abandoned by the citizens. They degraded their character if they deserved their fate.

Paria, or *New Andalusia*, province of Terra Firma, on the banks of the Orinoco, near its mouth.

Paria, Gulf of, in S. America, between the province of Cumana, the island of Trinidad, and the estuary of the Orinoco. It is about 75 ms. long, and 45 wide, with a depth of from 8 to 30 fathoms, with good anchorage over its entire extent.

Paria, Cape, eastern extremity of the province of Cumana. Longitude W. C. 15° E., lat. 9 12 N.

Parilla, or *St. Parilla*, town of Peru, in the province of Lima, seated at the mouth of the river Parilla, 50 ms. SE. of Truxilla, and 230 NW. of Lima. Lon. 77 50 W., lat. 8 36 S.

Parima, or *Branco*, river of South America, a branch of the Rio Negro, rises in the mountains of Guiana, its sources interlocking with those of the Guibo and Paraguay of Orinoco. It flows chiefly S., and enters the Rio Negro.

Parima Cocha, province of Peru, lying N. from Huancayo.

Parima, lake of S. America, near the borders of Guiana and Guiana, of a sq. form, 80 ms. long, and 20 broad. It seems to be a kind of inundation formed by the Orinoco, for that river enters the N., and issues on the W. side of the lake, at a right angle. From the SE. of this lake flows the White river, called also the Parima, and flows S. to the Rio Negro. To the W. of this lake, before the main stream of the Orinoco enters to the N., there are two other branches that flow from it to the Black river. Hence there are communications between those two great rivers, the Orinoco and the Amazon. This description is accordant with Spanish authorities, but the existence of Lake Parima are not yet ascertained.

Paris, capital of France, one of the largest, and most populous cities in Europe. The Seine, which crosses it, forms two small islands called *Isle du Palais* and *Isle Notre Dame*; the first is the ancient city of Paris, and had its origin from a building which was formerly the residence of the kings, and afterwards resigned to the present government. Paris has 16 gates, and is 15 ms. in circumference, including the suburbs. That part which is called the *ville* is situated to the N., and the *university* to the S., and the city in the centre. Parys, mountain of England, in the Isle of Anglesey, famous for a copper mine, probably the largest bed of ore of that metal hitherto discovered in the world. "It is not wrought (says Dr. Kin) in the common manner of subterranean mines, but, like a stone quarry, open to day; the quantities of ore raised are prodigious. The ore is poor in quality, and very abundant in sulphur. The purest part is exported raw to smelting works at Swansea and other places, more impure is first calcined and deprived of its sulphur on the spot. Quantities of pure copper are obtained from the waters located beneath the bed of ore, by the intervention of iron. A lead ore, rich in silver, is also found in this mountain. The wealth and population of Anglesey have received a great increase from the discovery of this copper mine.

Pascagoula, river of Mississippi, about N. 32 40, and, flowing nearly S., falls into the Sound between Horn island and the main shore at N. 30 20; consequently this stream flows through 20 of lat., or upwards of 130 miles. A bar at the mouth prevents the entrance of vessels drawing more than 5 feet water, but any vessel which carries a cargo, can go as high as the mouth of Leaf river. The name of Pascagoula is more correctly applied to the united streams of Leaf and *Chickasawhay*; which see.

The pine forests, out of which flow the Chickasawhay and Leaf river, are continued down to Pascagoula to the mouth, and reach on both sides of the bay to the very margin of the sound.

PASHA, **PACHA**, &c. This is only comparatively a recent barbarism in our language, to write and pronounce this title with P, in place of B: in my early reading, I found this term Bashaw. A Turk can pronounce not only no word commencing with P, but no syllable in a word commencing with that letter. This is shown in every original name of places in that empire which terminated with P, which they are compelled to pronounce *boli*. Many truly absurd etymologies have been given by I-

writers to account for the Turkish name *Is-boul*, whilst the real change was produced by the inability to pronounce the Greek or Latin name. *Paso del Norte*, town of Mexico, in New Mexico on the Rio Grande del Norte. Lon. W. C. 23 W., lat. 30 40 N.

Patrana.—See *Pastrana*.

Patras, ancient Patræa. The name of Patras is an Italian corruption of that of Patræa. This town stands on a small bay, at the extreme NW. angle of the Morea, and about 20 ms. SE. from Messalngi, on the opposite shore of the gulf, or strait of Lepanto. The town is situated on the declivity of the mountain Vodi. The higher part is a mile and a half from the port, and in that quarter are all the best houses, surrounded, as usual, with gardens. "Nothing, certainly," says Hobhouse, "can be more pleasant than the immediate vicinity of the town, which is one blooming garden of orange and lemon plantations, of olive groves, vineyards, and currant grounds. The fruit trees and the vine clothe the sides of the hill behind the town to a considerable height; the currants are on the flats below, and run along the line of coast to the S. as far as the eye can reach. Both on the plain and on the sides of the hills, there is a great quantity of the small shrub called glykorizzo by the Greeks, and which is our liquorice."

Like every part of maritime Greece, Patras is liable to be visited by contagious autumnal fevers and agues.

Pearlington, village, Hancock co., Miss., 56 ms. SE. from Jackson.

Pearl Islands, islands lying in the bay of Panama, in S. America.

Pearl river, of La. and Miss., rises in the latter as high as N. lat. 33°, from whence it flows SW. about 80 ms., and S. 80, where it turns to SSE., flowing in that direction 40 ms., crossing the 31° N. lat. and enters Lou., having an entire course in Miss., of 200 ms. In La., it continues SSE. 70 ms., to its junction with the Rigolets, after an entire comparative course of 270 ms. Below N. lat. 31° Pearl river is part of the boundary between Miss. and La. The general character of the country watered by the Pearl river, is unfavorable to agriculture or navigation. With partial exceptions, pine covers the surface, with, as usual, a thin sterile soil. Schooners cannot enter the Pearl in consequence of a raft of timber.

Pearlton, village, Hancock co., Miss., 50 ms. SE. from Jackson.

Pease, NE. tp. Belmont co., O. Pop. 1820, 2,019.

Peconic, bay and river of Suffolk co., Long Island, N. Y. Peconic river, rises in the tp. of Brookhaven, and flows a little N. of E. 20 ms. into Peconic bay. Great Peconic bay is the bottom of the gulf which extends E. and W. between the two eastern peninsulas of Long Island, and lies between Southampton and Southold, having River-head to the W.

Peckatonokee, river, extreme NW. branch of Rock river, rises in the angle between the Mississippi and Wisconsin rivers, S. of the latter, and E. of the former. After a course of about 50 ms. in Iowa and Green cos. of Wisconsin, to the southeastward, it enters Ill., winds to the eastward, and after flowing in that direction about 40 ms. over Stephenson and Winnebago cos., falls into Rock river near the NE. angle of the latter county.

Pecquencour, town of Fr., in the dep. of the N., and late province of Hainault, seated on the Scarpe, 5 ms. E. of Douay. Lon. 3 16 E., lat. 50 23 N.

Pedee, river which rises in N. C., and is here called Yadkin river, and entering S. C., it takes the name of Pedee, and flows into the Atlantic ocean, 12 ms. below Georgetown. The mouth is called Winyaw bay. The Pedee is navigable for vessels of 60 or 70 tons, upwards of 200 ms.

Pedena, town of Italy, in Istria, 25 ms. SE. of Capo d'Istria. Lon. 14 30 E., lat. 45 34 N.

Pederneira, seaport town of Portugal, in the province of Estramadura, 18 ms. NE. of Peniche. Lon. 8 6 W., lat. 39 51 N.

Plegrino, Mount, promontory on the N. coast
 of the island of Sicily nearly 2 ms. W. of Pa-
 ro. The prospect from this mount is beautiful
 and extensive; most of the Lipari Islands are dis-
 covered in a clear day, and also a large portion of
 Mount Ætna, although at a short distance of al-
 most the whole length of Sicily.

Plevo Islands, were, in all probability, first dis-
 covered by the Spaniards of the Philippines, and
 are called the Paloo islands from the tall palm
 trees that grow there in great number, and which,
 at a distance, have the appearance of masts of
 ships. The word palos, in the Spanish language,
 sometimes signifying a mast.

 ton district, S. C.

PENDULUM. This most simple of all instru-
 ments of art or science, loses its immense power
 in the modesty of its appearance. Who, if the
 operation came before them for the first time,
 would suppose that a weight suspended to the end of
 a cord and set in motion contained the elements of
 the most perfect measurer of time, and also the
 most powerful of all mechanic forces? Such is,
 however, the pendulum. When the mason raises

a stone of many tons weight to the required height by means of a crane, and then adjusts it by the means of a weight being suspended to the end of a cord, he is really using that mechanic power by which the greatest weight is moved by the least force. Though never ranked as such, the pendulum is, we see, a most efficient mechanic power. By the pendulum also is proven increase of weight advancing from the equator towards the poles of the earth, as it has to be lengthened in order to preserve equal measure of time, or shortened in the opposite direction.

Pennsylvania. This name is derived from the surname of William Penn, and Sylvan, and means literally Penn's woods. Though at the epoch when the name was imposed the features of the country it was in future to designate were in great part unknown to those were its authors, no term could be more appropriate. Few, if any, regions of equal extent, in one continuous body, ever bore, in a state of nature, a more dense forest. Pennsylvania was an expanse of woods, in the strictest acceptation of the word.

As now limited, Pennsylvania extends from lat. 39 43 to N. lat. 42 16, and from 2 20 3 36 W. from W. C.

Pennsylvania is bounded, in common with Delaware, from the Delaware river, by a circular line around Newcastle co., to the NE. limits of Cecil co., Md. - - - - - 2
Due N. to NE. angle of Md. - - - - - 10
Along the northern limit of Md. - - - - - 5
In common with Va., from the NW. angle of Md. to the SW. angle of Greene co. - - - - - 8
Due N., in common with Ohio and Brooke cos., Va., to the Ohio river - - - - - 9
Continuing the last noted limit, in common with Ohio, to Lake Erie - - - - - 3
Along the SE. shore of Lake Erie to the western limit of N. Y. - - - - - 23
Due S., along Chautauqua co., N. Y., to N. lat. 42° - - - - - 23
Thence due E., in common with N. Y., to the right bank of Delaware river - - - - - 23
Down the Delaware, to the NE. angle of the State of Delaware - - - - - 96

Having an entire outline of - - - - -

The greatest length of Pennsylvania is due W. in Bristol, on the Delaware river, to the eastern border of Ohio co., Va., through 356' of lon., and N. lat. 40 9. This distance, on that line of lon. is equal to 315 American statute ms.

The greatest breadth 176 ms., from the Va. line to the extreme northern angle on Lake Erie. General breadth, 188 ms.

The area of Pennsylvania has been variously ascertained, but probably never accurately determined. Both Morse's and Worcester's Gazetteers, the superficies are given at 46,000 sq. ms. Other authorities vary, but I find, from comparing the maps and from calculating the rhombs and squares occupied by the State, that Pennsylvania includes above 47,000 sq. ms. Rejecting the fractional excess, and using that curve superficies, the State will contain thirty million and eighty thousand statute acres.

The following general view of the mountain river systems of Pa. is apparently more in detail than compatible with the general brevity of this treatise, but I have chosen the central position of Pa. in order to give a connected perspective of the geographical structure of that part of the State, through which a line of canal and railroad communication from Chesapeake bay to the Ohio river is traced.

The mountains of Pa. obtrude themselves at the glance on a map as the most prominent of its natural features. No even tolerably good survey has ever been made of the mountains of this State, and many important chains having been wholly omitted, a lucid classification is attended with great difficulty. Some of the collateral chains which I have overlooked I have supplied from personal observation, but no doubt much remains to be ascertained and rectified by future research.

The structure and position of its mountains has given to Pa. an aspect peculiar to itself. The Appalachian system in the U. S. generally extends in a direction deviating not very essentially from N. to NE.; but in Pa. the whole system is inclined from that course, and passes the State in a westerly direction. Towards the S. boundary, the mountains lie about NNE., gradually inclining westwardly as they penetrate northwards; and the central counties many of the chains lie between E. and W., but, as they extend towards the northern border of the State, they again impossibly incline to the NE., and enter N. Y. in nearly that direction.

The influence of the mountains in modifying the general features is very obvious, far beyond what any chains or ridges are sufficiently elevated to be classed as parts of the Appalachian system. It will be, however, shown in the progress of this review that the mountain system is very much more greatly restricted, not alone in Pa., but in Md., Va., N. Y., and N. J.

Without attending to minor chains, the mountain system of Pa., advancing from the SE. to NW., are as follows;

1. Though omitted in most maps, a chain enters the southern boundary of York co., and, cut by the Susquehanna river, rises in and traverses Lancaster co. between Pequea and Octorara creeks, and separates the sources of the Conestoga and Brandywine rivers for a short distance Lancaster and

Chester cos. Continuing between Berks and Chester, it is interrupted by the Schuylkill above Pottstown. Rising again, and stretching NE., it forms, 1st, the boundary between Montgomery and Berks; thence between Lehigh and Bucks, and, separating Northampton from Bucks, reaches the Delaware. Pursuing a NE. course through N. J., separating Sussex from Huntingdon, Morris, and Bergen cos., enters N. Y. between the sources of the Wallkill and Passaic rivers, and, extending in broken ridges through the SE. part of Orange co., forms the highlands near West Point.

The almost uniform neglect of professed geographers, respecting this strongly marked feature, attests the infancy of the science in the U. S. After having formed the celebrated masses on both sides of the Hudson, between Newburg and West Point, the ridge continues NE., separating Putnam from Dutchess county. Inflecting to the N., and forming the separating ridge between the waters of the Hudson and Housatonic rivers, stretches through the eastern part of Dutchess, Columbia, and Rensselaer cos. Along the two latter, however, the ridge under review forms, in reality, the separating boundary between N. Y. and Mass.; and, entering the SW. angle of Vermont, continues through that State, by the name of Green mountains, into L. C. Thus prominent and continuous, from the Susquehannah to the NE., this part of the Appalachian system is equally so through Maryland, Virginia, and North Carolina. Passing over Harford, Baltimore, Anne Arundel, and Montgomery cos., in Maryland, it falls into the Potomac 12 ms. above Georgetown, and extends into Virginia, in Fairfax co. Varying in distance from 20 to 30 ms., the Great Kittatinny or Blue Ridge, and the ridge we have been tracing, traverses Virginia, into North Carolina. Leaving Virginia in Henry, and entering North Carolina in Stokes co., with its farther range I am unacquainted, but have no doubt but that it is distinctly continued over the Carolinas and Georgia, into Alabama. Though the structure of the Atlantic slope decidedly evinces a conformity to the Appalachian system, far below the SE. mountain, it is the terminating continuous ridge towards the Atlantic ocean.

Northwest from, and nearly parallel to the South Mountain, another very remarkable ridge traverses New Jersey and Pennsylvania, and similar to the former, the latter is unknown in either of these States by any general name. Its continuation in New York is designated by the Shawangunk. Between the Susquehannah and Potomac it is termed, relatively, the South mountain; and in Virginia and the Carolinas it forms the Blue Ridge, and entering the NW. part of Georgia, is gradually lost amongst the sources of Chatahoocche river.

To preserve perspicuity, I have adopted, or rather extended the name Blue Ridge into Pennsylvania and New Jersey. This very remarkable chain of the Appalachian system enters Pennsylvania on its southern line, and, stretching N. between Adams and Franklin counties, reaches the southern angle of Cumberland, where it turns to NE., and extending towards the Susquehannah, separates Cumberland from Adams and York cos. About 6 ms. below Harrisburg, the Blue Ridge is pierced or broken by the Susquehannah, and again rising below the mouth of Swatara, crosses the

outhern angle of Dauphin; thence known as the Conewago hills, separates Lebanon from Lancaster co., enters Berks, and reaches the Schuylkill at Reading. Continuing through Berks, Lehigh, and Northampton cos., the Blue Ridge passes Allentown, Bethlehem, and Easton, and is again interrupted by the Delaware below the latter town. Extending through Sussex co., the Blue Ridge enters New York, and is finally terminated in the Shawangunk, on the W. side of Hudson river, and amongst the branches of the Walkill.

In one respect, the Southeast mountain and Blue Ridge, in Pennsylvania and New Jersey, differ from other sections of the Appalachian system. The two chains we have noticed, are formed of links more detached than are those more remote from the Atlantic ocean; but otherwise, in respect to component matter, range and vegetation are in every place well marked sections of the general system. The very unequal elevation of their various parts, may perhaps be also adduced as a characteristic of the Southeast mountain and Blue Ridge. The former does not, it is probable, in any part of Pennsylvania or New Jersey, rise to 1,000 feet above the level of the Atlantic ocean, whilst, in New York, at the Highlands, some of the peaks, particularly Butterhill, exceeds 1,500 feet elevation above tide water, and in Massachusetts and Vermont, towers to near 3,000 feet. If taken generally, the Blue Ridge, in Pennsylvania and New Jersey, is more elevated than the Southeast mountain, yet no particular part of the former rises to an equal elevation with the Highlands, on either bank of the Hudson.

In Maryland the Blue Ridge assumes a very distinctive aspect, and, separating Frederick and Washington cos., is broken by the Potomac at Harper's Ferry, below the mouth of Shenandoah. This fine chain crosses and adorns Virginia and N. and S. Carolina. In one remarkable circumstance, the Blue Ridge stands alone amongst the mountain chains of the U. S. From the Susquehannah to the N. W. angle of S. C., in a distance of upwards of 500 ms., it every where forms a county demarcation.

The third, and in some respects the most remarkable chain of Pennsylvania, is the Kittatinny. Known by divers local names, the Kittatinny, in a survey advancing from SW. to NE., first rises distinctively in Franklin co., and, like other chains in the southern margin of Pennsylvania, ranges a little E. of N; but, inflecting more to the NE., extends to the Susquehannah, separating Cumberland and Perry cos. Five miles above Harrisburg, the Kittatinny is interrupted by the Susquehannah. Broken, also, by the Swatara, the Schuylkill, the Lehigh, and Delaware, the Kittatinny enters New Jersey, through which it passes into New York and forms, by its continuation, the Catsbergs. The general aspect of the Kittatinny is much more continuous than any other mountain chain of Pennsylvania. It is, however, very far from being uniform in elevation, varying from 800 to perhaps 1,500 feet above tide water.

Northwest from the Kittatinny, though more elevated, the chains are much less distinctly defined. Between the Kittatinny mountain and the N. branch of Susquehannah river, the intermediate country is in a great part composed of high rugged

mountains, and narrow, deep, and precipitous leys. This is the most sterile and least improvable part of Pennsylvania; but it is the region producing the most extensive masses of Anthracite coal known on the globe.

The confusion in the natural arrangement of anthracite section of Pennsylvania is more parent than real. The Kittatinny mountain and Susquehannah river lie nearly parallel upward 70 ms.; distant from each other about 35 ms. intervening space is filled by lateral chains, rising in many places far above any part of the Kittatinny. Amongst these chains two are worthy of particular notice, and serve pre-eminently to elucidate the very peculiar topography of interior Pennsylvania.

Bedford and Franklin cos. are separated by a chain, there known as Cove mountain. With a change of name, to Tuscarora mountain, the chain separates Franklin from Huntingdon, and Perry from Mifflin, and reaches the Susquehannah nearly opposite the southern extremity of Northumberland co. Rising again below the Mingo river, and broken into vast links, the chain divides, into nearly equal parts, the space between the Kittatinny mountains and the main branch of the Susquehannah river. Broad mountain, passing the road from Easton and Bethlehem to Berks, is one of the great links of this central chain. With its extension NE., towards the Delaware, I am acquainted.

More accurate surveys would, it is more probable, identify Sideling Hill, of Bedford, Jack's mountain, of Huntingdon, and Mifflin, as the central chains of Union, Columbia, and Berks cos. The chain which rises on both banks of the Susquehannah, in Luzerne, is amongst the most interesting features, not only in the U. S., but in the world. The very peculiar structure of this valley will be noticed more appropriately in treating of the rivers of that part of Pennsylvania. In the present instance, it is the mountain range have before us, and to which our attention is directed. Below Sunbury, a chain commences, if my supposition is correct, is continued up the Susquehannah, along its left shore; this chain is crossed by the river above Danville, and terminates above Catawissa. From the latter place, the chain stretches to the NE., through Columbia, and Luzerne by the name of Nescopeck mountain, and mingles ultimately with other chains, and is terminated towards the southern angle of Wayne co. Nearly parallel to the Nescopeck, and with a comparatively narrow intervening valley, another chain leaves the Susquehannah above the borough of Northumberland, and, traversing Northumberland and Columbia cos., enters Luzerne, and is broken by the Susquehannah 16 ms. below Wilkesbarre. Skirting the left bank about 8 ms., it is again crossed by the river, and continuing its course NE., passes about 2½ ms from and opposite Wilkesbarre. Preserving its course NE., it for the third and last time crossed by the Susquehannah, above the mouth of Lackawannock creek 10 ms. above Wilkesbarre, and stretching towards the Delaware, is lost in Wayne co. Beyond the N. branch of Susquehannah, to the N. W., the chains lie nearly parallel to those SE. from that river. The structure of the country on both sides of the Susquehannah is nearly the same. The yellow

red mines of anthracite coal, advancing from SE to NW., cease in the chain immediately opposite Wilkesbarre.

To the eye, the region included between the W. branch of Susquehannah and the Potomac bears a striking analogy to that between the W. and N. branches of Susquehannah, but a minute scrutiny reveals a great change advancing SW. towards the borders of Maryland. Soil and vegetation both materially. The beech, hemlock, and sugar-maple forests are succeeded, in the valleys, by oak, cherry, and elm. Thus far, the entire drain of Pennsylvania is into the Atlantic ocean. The Alleghany forms, in the southern part of Pennsylvania, the dividing ridge between the Atlantic slope and the valley of Ohio.

The Alleghany mountain has, no doubt, from this circumstance, received its pre-eminence among the mountain chains of Pennsylvania, Maryland, and Virginia. Only about 60 miles of its range in the latter State, however, does separate the sources of the streams of the two great natural sections—the Atlantic slope and Ohio valley. The Alleghany, leaving Alleghany county, Maryland, separates Bedford and Somerset counties, and, extending to a northerly direction, also separates the NW. part of Bedford from the SE. part of Cambria co. At the extreme northern angle of Bedford, the Alleghany turns to NE., and is thence drained on both sides by the tributary streams of the Susquehanna. Discharging the waters of the W. branch into the NW., and those of the Juniata and Bald rivers to the SE., the Alleghany reaches the mouth of Susquehannah at the mouth of Bald river.

It is, once more, the defects of our maps are very apparent. Lycoming co. is delineated as if no mountain chains traversed its surface. It is not the fact, though too little is known of the northern part of Pennsylvania to admit a classification of its mountains. If I were to hazard a conjecture, I would make the chain which crosses the Susquehanna in Bradford county, near Towanda, and below Towanda, the continuation of the Alleghany. It is remarked, that it is only in a few places, and those immediately in its spurs, that bituminous coal has been hitherto discovered in Pennsylvania on the Atlantic slope; whilst this mineral is found north-west from the Alleghany chain. The locality of the bituminous coal prevails across the whole State, and is found from near Towanda, Pennsylvania, into Maryland.

Thus far, and to what extent, the bituminous coal of Pennsylvania spreads into Virginia, I am unable to determine. The Alleghany chain may, in the existing state of our mineralogical knowledge, be viewed as the limit between the two species of coal in Pennsylvania. Whatever may be the elevation of its summit, the W. branch of the Alleghany chain between Bedford, Somerset, and Cambria counties, constitutes the dividing line of land between the Ohio and Atlantic slopes, and forms also a similar demarcation in Maryland. This circumstance is entitled to our serious consideration from this region being the intended route of the Chesapeake and Ohio canal. The summit of the Alleghany, near Cumberland road, as given by Mr. Schrieber, is 2,825 feet.

The Alleghany mountain chain, the Alleghany yields in its beauty of scenery, and in elevation above its

base, to not only the Broad mountain, but to many other chains of the Appalachian system.

Chestnut Ridge is the next chain W. of the Alleghany; the two chains extending nearly parallel, and about 20 miles asunder. Though comparatively humble in respect to elevation, Chestnut Ridge is one of the most extended chains of the system to which it appertains; reaching by various local names over Virginia into Tennessee, and most probably into Alabama. As placed on our maps, Chestnut Ridge enters Pennsylvania at the NW. angle of Maryland, and, ranging a little E. of N., forms the boundary between Union and Somerset; thence between Westmoreland and Somerset, and finally between the NE. angle of Westmoreland and the SW. of Cambria county. At the extreme NE. angle of Westmoreland, the Chestnut Ridge reaches the Kiskiminitas river, and, as delineated, its termination. So far, however, from being so in nature, this chain preserves its identity through the State further north than any other chain of the Appalachian system.

Laurel Hill is the last chain of the system in Pennsylvania. What has been already observed respecting the comparatively depressed chains nearest the Atlantic ocean may be repeated respecting the Chestnut Ridge and the Laurel Hill, that, though not very elevated, they nevertheless exist as well defined mountain chains. The latter is a very extended branch of the system, reaching from the northern part of Pennsylvania into Alabama. This chain traverses Virginia by various names; separates Virginia from Kentucky, as Cumberland mountain; traverses Tennessee, and penetrates Alabama under the latter term, and, interrupted by Tennessee river, it forms the Muscle Shoals, and is imperceptibly merged into the central hills of Alabama. Like many others, this very lengthened chain is delineated defectively in every map of Pennsylvania I have seen. Similar to Chestnut Ridge, Laurel Hill is terminated on our maps near Kiskiminitas, though, in reality, extending to near the S. boundary of New York.

In addition to the great chains we have been surveying, many of minor importance might be noted, but we have deemed a view of the most striking parts sufficient.

If engrouped into one view, the mountains of Pennsylvania exhibit many very interesting points of observation. The Appalachian system is here upwards of 150 miles wide, whilst the particular chains do not average more than 3 ms., if so much, in breadth.

Before proceeding further in our review, I may be permitted to observe, that mountains are considered as the superlative of hills. In not only Pennsylvania, but in the Appalachian system generally, hills and mountains are not only specifically, but generically distinct features of nature. If this was not the case, the slope would, in most cases, gradually rise from the mouths to the sources of rivers, and no regular ranges of elevated ground could be found crossing the streams obliquely. According to common opinion, the mountains of the United States form the dividing ridge between the waters of the Atlantic slope and those of the Mississippi and St. Lawrence basins. So far, however, are the mountains from constituting the separating line of the waters, that the real dividing

ridge, if it can be so called, crosses the mountains diagonally.

The Appalachian system is formed, as we have seen, by a number of collateral chains, lying nearly parallel; each chain is again formed by ridges, which interlocking, or interrupted by rivers, extend generally in a similar direction with the chain to which they particularly appertain. The chains differ materially from each other in elevation and in continuity. In some of the chains at each side of the system, the parts are of very unequal height above their bases, and of tide water. The Southeast mountain and Blue Ridge are prominent examples.

In the correct solution of any question arising out of the advance or distribution of population, the determination of the real surface covered with mountains, would afford extremely satisfactory element. As far as my own personal observation and the present state of our geographical knowledge afford data, I have estimated the extent of mountain base in Pennsylvania, and on the best maps, carefully measuring every chain, the entire length produced amounts to a small excess above 2,250 miles. If the latter sum is, however, taken, and 3 miles allowed for the mean breadth of the chains, the mountain area will be 6,750 square miles, or very nearly one-seventh part of the superficies of the State.

Before examining the formations, the component soils and rocks, we proceed to view the river valley of Pennsylvania. The State is drained by the Delaware, Susquehannah, Ohio, Potomac, and Genessee rivers, and at the extreme NW. angle by Lake Erie.

The respective river basins, or rather the sections included in Pennsylvania, are of very unequal extent. Delaware, Susquehannah, and Ohio include an immense proportion of the whole State, and subdivided it naturally into the eastern, middle, and western river sections.

The following tables give the respective area of each, and also the smaller sections of Potomac, Genessee, and Erie:

Without reference to the comparatively small river sections of Potomac, Genessee, and Ohio, the surface of Pennsylvania is subdivided into three river valleys, Delaware, Susquehannah, and Ohio.

The range of the rivers of Pennsylvania is one of the most interesting subjects in all physical geography. It may be assumed as a general principle that the mountain streams particularly flow NE. or SW. along the mountain valleys directly at right angles to that course through the mountain chains. The conformity of the valleys to courses to that of the mountains is, in a striking

ner, obvious in the Delaware and Susquehanna.

The Delaware rises by two branches in the western spurs of the Catsbergs; the Cookquago to the NW., and the Popachton to the SE., flow from their sources SW. about 50 ms., draining Delaware co., N. Y. Reaching within about 5 ms. from the NE. angle of Pennsylvania, the Cookquago turns to SE., and, continuing that course 5 or 6 ms., receives the Popachton. The two streams maintain a SE. course 50 ms., to the mouth of the Nevisink, and northern extremity of N. J. The Delaware here touches and crosses the NW. foot of the Kittatinny chain, which it turns to the SW., 35 ms., to the mouth of Broadhead's creek, from Pike and Northampton cos. Winding to the S., the Delaware, at the entrance of Broadhead's creek, breaks through the Kittatinny, and enters the fine valley between that chain and the Blue ridge. At the base of the latter, at Easton, the river again crosses a mountain pass, and 5 ms. further down enters through the SE. mountain. At the SE. end of the latter chain this river once more assumes a SE. course after having meandered through the Kittatinny valley about 30 ms.

At Trenton, 35 ms. below the SE. mountain, the Delaware passes the primitive ledge and meets the Hudson; and 5 ms. below, near Bristol and Bordentown, again turns to SW. Passing along over the primitive rock this now widening stream continues about 40 ms., receiving near Philadelphia the Schuylkill from the NW. Forming its great bend 5 or 6 ms. below Newcastle, the Delaware opens into the Atlantic ocean in the same direction.

The entire length of the Delaware is, by comparative courses, from the Catsbergs to the Atlantic about 310 ms., not quite one-half being tide water. Although rolling over numerous rapids, no cataracts, in the proper meaning of the term, interrupt the uniformity of the Delaware, which, at times of unusually high water, reach, by both constituent branches, into N. Y. The general course is, with a slight deviation, to the W., S., and N., the sources of the Cookquago and Popachton being nearly in similar longitude with Cape May. As viewed on a map, the various sections of the river have the appearance of having been arranged artificially, the two lower bends strongly suggesting the geological influence of the mountain chain. Though but little elevated above the general surface of the country through which it flows, the great primitive ledge pursues a direction remarkably similar to that of the Appalachian chain. From Bristol to its terminating bend between Newcastle, the Delaware river flows down the margin of the primitive, separating the sandy soil of N. J., from the micaceous soil of Pennsylvania.

Like every other primary stream of the Atlantic coast, the navigation of the Delaware is less facile than in the early stage of settlement, but admits of considerable draught to the foot of its rapids; and ships of the largest class to the mouth of the Schuylkill.

Similar to the Susquehanna and the Potomac, the Delaware receives nearly all its large tributary streams from the NW. Of these confluent

only two, the Lehigh and Schuylkill, are of a considerable magnitude.

From the position of their valleys as channels of intercommunication, and from the mineral treasures found along their mountain sources, the Schuylkill and Lehigh have already become of great importance. The Lehigh rises by various mountain branches of Northampton, Pike, Wayne, and Luzerne cos., uniting below Stoddartsville, and forming a small but precipitous river current, which pouring first to the SW., gradually turns S. and SE., passes Mauchchunk village, and winding between mountain masses, finally breaks through Kittatinny, and continuing to the SE. meets the NW. base of the Blue Ridge at Allentown. Here it turns to the NE. along the base of the latter chain, and passing Bethlehem joins Delaware at Easton. The Lehigh is truly a mountain torrent. There is no other stream of equal length in the U. S. which presents so great a difference of level between the points of source and discharge.

In a comparative course, it is about 25 ms. from Stoddartsville to Mauchchunk, and the fall in the intermediate distance 845 feet. Ten ms. in a direct line below Mauchchunk, the Lehigh passes the Kittatinny, and falls 245 feet in that short space. From the Lehigh water gap, or passage through the Kittatinny, to its junction with the Delaware, it falls 205 feet, in a comparative course of 35 ms. The entire fall from Stoddartsville to Easton, 1,210 feet; comparative course 70 ms. From the junction of its constituent branches below Stoddartsville to its extreme source, about 15 or 20 ms., giving an entire comparative length to the Lehigh, of near 100 ms. The fall above Stoddartsville, probably amounts to 500 feet; and if so, this rapid river falls upwards of 1,700 feet in 100 ms.; and what may be considered in a peculiar manner remarkable, no actual cataract worthy notice, exists in all its course. Above the water gap, the bed of the Lehigh lies at the base of steep or precipitous mountains, rising in most places from the margin of the stream. The scenery is in a peculiar manner wild, bold, picturesque, and romantic. Below the Kittatinny, the features of nature are less grand along the banks, but still follow, in a rich succession of strongly contrasted and elegant landscape. The varied character of its shores is preserved to its final egress into its recipient at Easton, and at all future time this river will afford an ample reward to the traveller.

The Lehigh is now rendered navigable by dams and falling locks for some distance above the Mauchchunk. This very useful and arduous work has been effected by the Lehigh Coal and Navigation Company, under the direction of Messrs. White and Hazard, the superintending engineers. The discovery of anthracite coal, made in the vicinity, led to the improvement of the river navigation. By reference to the maps, it will be seen, that the coal strata between the Lehigh and Schuylkill, are in the transition or inclined region of rocks. It may be observed that rivers flowing over transition rocks, are, in most instances, very much impeded by rapids, but very seldom have perpendicular falls. Real cataracts almost uniformly exist in secondary formation.

The Schuylkill rises in and drains about the

five-eighths of Schuylkill co. Formed by two branches, which unite immediately above and pass through the Kittatinny mountains 7 ms. SE. from Orwicksburg. Below the water gap, or passage through the Kittatinny, the Schuylkill turns to nearly S., in which direction it continues through the Blue Ridge at Reading, after having received Maiden creek from the NE., and the Tulpehocken above that town, from the NW. Below the Blue Ridge this river again winds to SE., passes the Southeast mountain above Pottstown, and receiving the Perkiomen and some lesser creeks from the N., crosses the primitive ledge above, and joins the Delaware below Philadelphia.

The entire length of the Schuylkill, by comparative courses, is about 100 ms., 20 above and 80 below the Kittatinny mountains.

A strong resemblance is perceivable between the Schuylkill and the Lehigh, though the scenery around the former is less rugged than that which skirts the latter stream. Flowing from the same mountain valley, the soil and mineral productions are in a great measure similar on the two rivers. I may here observe, that in the distribution of the anthracite coal, very great diversity exists between the situation of the mass on the Mauch chunk mountain, and any other with which I have been made acquainted, in either the basins of the Delaware or Susquehanna. That on the Mauch chunk lies in an immense body on the ridge of the mountain, with little if any inclination to the horizon, and with a very thin stratum of incumbent earth. The mines on the Schuylkill, and those near Wilkesbarre, dip like the other accompanying incumbent and decumbent strata.

The Schuylkill is now navigable by canals and locks to the coal mines, 10 ms. above Orwicksburg. The Union Canal Company is employed also in completing a connexion between the Susquehanna and Schuylkill, by the Swatara and Tulpehocken valleys.

The Susquehanna, in many other other respects remarkable, is peculiarly so as rising on the central secondary formation, and piercing the mountain obliquely, and reaching the Atlantic tides, after having passed all the intermediate formations. This immense stream enters Pa., by two great branches, the Susquehanna proper, and the Chemung or Tioga. I have often had occasion to observe that every river had its own individual physiognomy. This observation applies, in a very striking manner, to the Susquehanna. The general bends of the latter stream conform, in an astonishing degree, to those of the Delaware; and a comparative view on a map must convince every mind that some general structure of the country through which they flow must have modified and directed the respective courses of those two rivers. Below their junction at Tioga point, the united streams of the Susquehanna and Chemung flow a little S. of E., 15 ms. to the foot of the Appalachian system, below Towanda. Leaving the secondary and entering on the transition, the now considerable stream turns to SE., and, following that general course 50 ms., breaks through several chains, and finally, at the mouth of the Lackawannock, 9 ms. above Wilkesbarre, enters the Wyoming valley, and turns to SW., continuing

the latter course near 70 ms. down the mountain valleys, to Northumberland and Sunbury, at the mouth of the west branch. In the entire distance from Tioga point to Sunbury, the Susquehanna receives no tributary stream of 40 ms. direct length. The Towanda, Wyalusing, Tioga, Lackawannock, Fishing creek, and some lesser branches, are mere mountain creeks, rather but not more than from 25 to 35 ms. general course.

Including all its higher NE. branches, the Susquehanna is peculiar in the structure of its valleys. Wide bottoms of two and sometimes three stages spread along the convex side of the belt, whilst mountains of more or less elevation rise on both sides of these spreading vales. Exuberant fertility is, at a single step, followed by rocky sterile steeps. The natural timber of the bottom is in a great measure different from that on the mountains. In the former, sugar maple, beech, walnut, elm, birch, and other trees, indicative of a productive soil, abound; on the slopes of the mountains, pine, oak, and chestnut, and also the Lawahannock hemlock, are the prevalent timber trees. As a navigable stream, the Susquehanna is much less interrupted by rapids or dangerous shoals than, from the tortuous course it pursues through an extensive mountain system, could be expected. It is also remarkable that where various branches of this river pass the respective chains, rapids seldom, and perpendicular falls where, exist.

The western branch is, in all its extent, a part of Pennsylvania. Rising far within the secondary formation, its extreme western source in Indiana reaches within less than 35 ms. from the Allegheny river, at Kittanning. Flowing NE. about 60 ms. across Clearfield, it receives the Sinnamoning from the NW., in the SW. angle of Lycoming co. Below its junction with the Sinnamoning, the west branch continues NE. 15 ms., thence to SE. 20 ms., to the mouth of Bald Eagle creek, from Centre co. Below Bald Eagle, the course is a little N. of E., 35 ms., to Pennsylvania, receiving in the intermediate distance the N. Pine creek, Lycoming, and Loyola. From Pennsylvania the course is nearly S. 35 ms., to the mouth of the NE. branch, and 35 ms. thence to that of the Juniata. It may be observed that this long southern reach of the Susquehanna has its counterpart in the Delaware. About 100 ms. below the entrance of Juniata, the Susquehanna, having again assumed a SE. course, passes the Kittatinny mountains, and 10 ms. below enters the chain the Blue Ridge. Maintaining the latter course 60 ms. below the Blue Ridge, this part of the river is lost in the tides of Chesapeake bay.

Juniata, the SW. branch of Susquehanna, rises in and drains the northern part of Bedford co. The sources of the Juniata are in the eastern side of the Allegheny chain, and, flowing 20 ms. north, passes Bedford, and, breaking through several mountain chains, turns abruptly to a course a little E. of N. 40 ms., and receives the Franks branch below and near the borough of Huntingdon, in Huntingdon co. The general course of the Frankstown branch is from the NW. to SE., and below their junction the united streams follow a course 15 ms., breaking through Jack's mountain.

inflected to NE., the Juniata leaves Hunt-
 on, and enters Mifflin co., and, pursuing that
 direction near 30 ms., passes Lewistown, and,
 winding to the SE., breaks through Shade
 mountain into Tuscarora valley. Crossing that
 mountain in a course of 10 ms., it reaches the NW.
 base of Tuscarora mountain, down which it flows
 about 10 ms., where, near Millerstown, it pierces
 Scatter mountain, and, once more turning to
 SE., enters on Perry co., over which it flows 15
 ms. where it finally mingles with the Susque-
 hanna.

Every other branch of the Susquehanna,
 the Juniata is as remarkable for its rapids as for
 its exemption from perpendicular falls. Though
 winding in and having its entire course amongst
 mountains, it is navigable at high water to
 Bedford. In speculative opinions on the
 best and most suitable route to form a water
 communication between the Chesapeake basin and
 the valley of Ohio, the Juniata has been conspicu-
 ously held in view. In such investigations, rela-
 tive height above the ocean is a most important
 element. The close of this article will show the
 great difference of level between the sources and
 mouths of the Pennsylvania rivers, as far as they
 have been ascertained with any adequate precision.
 The Potomac, though drawing but a very trivial
 portion of its waters from Pennsylvania, demands
 attention in this sketch, from the probability that
 its channel may be chosen by the General Govern-
 ment as a canal route between the Atlantic slope
 and the Ohio valley. The Potomac is a real mount-
 ain river, deriving its sources from nearly the
 highest table land of the Appalachian system. The
 true western fountain of the N. branch of Po-
 tomac is in the SE. slopes of the Alleghany or
 the one chain, N. lat. 39 10. Flowing NE.
 from the foot of Alleghany to the mouth of Sav-
 anna creek, or rather river, 35 ms., the Potomac
 turns to SE. through Will's mountain into Cum-
 berland valley, which it crosses about 10 ms.,
 where it is again turned to NE. by another lateral
 ridge. Continuing NE. 25 ms., it reaches the
 foot of Cumberland. At the latter place occurs
 an abrupt bend, through a mountain pass,
 into the South Branch valley. The latter stream
 has much greater magnitude than that of the Po-
 tomac proper, rising by numerous creeks in Pen-
 nsylvania, Va., as far S. as N. lat. 38 20. In
 general comparative course of 100 ms., the S.
 branch becomes a fine navigable river. Below the
 mouth of the S. branch, the Potomac gradually
 turns to a NE. direction, which it preserves about
 10 ms. to Hancock's town, where it turns to SE.
 and pierces Sideling Hill chain, and in a few ms.
 descends down the Kittatinny, entering the Great
 Chesapeake valley. From Hancock's town
 to the entrance of Conococheague creek, the course
 of the Potomac is a little S. of E. 25 ms. Below
 the latter creek, the river inclines to SE. by S.,
 and, to the NW. base of the Blue Ridge and
 the Shenandoah.

Flowing in and draining Augusta co., Va., the
 North Branch of Shenandoah rises below N. lat. 38°.
 It is girted by innumerable mountain streams, it
 flows from Augusta, over Rockingham and Shen-
 andoah, into Frederick co., where, joined by the
 South Branch, and continuing a general course of

NE., over Frederick and Jefferson cos., unites
 with the Potomac at Harper's Ferry, after a com-
 parative course of about 150 ms. At their junc-
 tion, the volume of the Shenandoah yields very
 little in magnitude to that of the Potomac. The
 united waters immediately break through the Blue
 Ridge, and, continuing SE. about 50 ms., ming-
 le with the Chesapeake tides at Georgetown,
 within the D. C. The general comparative course
 of the Potomac, above tide water, is, by the South
 branch, about 200, by the Potomac proper 150,
 and by the Shenandoah 160 ms.

Like those of the Delaware and Susquehanna,
 the great confluent of the Potomac are from the
 right bank. Savage river and Will's creek from
 Alleghany, Conococheague from Washington, and
 Monocacy from Frederick co., Md., are compara-
 tively trivial, when compared with the branches
 of Potomac derived from Va.

At Cumberland, the Potomac reaches within 5
 and at Hancock's town within 2 ms. of the S.
 boundary of Pa. The extent of the Potomac
 valley included, in that State, is given in the table.

Leaving the Atlantic slope, and viewing a gen-
 eral map of the U. S., we at once perceive a great
 river valley, stretching from Pocahontas co., Va.,
 over western Pa., into N. Y. This valley ex-
 tends nearly due N. and S., at an angle of about
 45°, to the range of the Appalachian mountains,
 and reaches from N. lat. 38 30 to N. lat. 42 20.
 The extremes give source to two rivers—that of the
 N. to the Alleghany, and that of the S. to the
 Monongahela. These two streams, flowing di-
 rectly towards each other, meet at Pittsburg, very
 nearly at the middle point of the valley. Their
 united water, taking the name of Ohio, turns to
 the W., or rather NW., as far as the entrance of
 Big Beaver river. With a very partial exception,
 western Pa. is drained by the Alleghany and Mo-
 nongahela.—See articles *Ohio*, *Alleghany*, and
Monongahela.

Though the lower part of its course is but little
 inclined W. of S., the general bends of the Alle-
 ghany conform, in a very striking manner, to the
 structure of the Delaware, Susquehanna, and
 Potomac, and gives another conclusive proof of
 the extension of the Appalachian system far be-
 yond where it protrudes elevated mountain chains.
 Having its source in Potter co., Pa., and inter-
 locking with the head branches of the Susquehanna
 and Genessee, the Alleghany flows NW.
 about 50 ms., into Cattaraugus co., N. Y. Ab-
 ruptly turning to SW., and preserving that gen-
 eral course nearly 100 ms., and receiving French
 creek from the NW., it thence bends to SE. 40
 ms., to the mouth of the Mahoning. About the
 middle of the latter course, Clarion river and Red
 Bank creek, two large branches, enter from the
 NE. From Mahoning to Pittsburg, the general
 course is again SW. about 50 ms.

Kiskiminitas, a very considerable accessory
 stream of the Alleghany river, rises in the mount-
 ain valley between the Alleghany and Chestnut
 Ridge chains, and, flowing NW., breaks through
 Chestnut Ridge and Laurel Hill, and, after a com-
 parative course of 75 ms., unites with the Alle-
 ghany near midway between the mouth of Maho-
 ning and Pittsburg.

Mahoning and Red Bank creeks have their

sources in Chestnut Ridge, and with each a course of about 35 ms., the former NW. and the latter SW., join the Alleghany in Armstrong co. Clarion river has interlocking sources with those of Sinnemahoning and the Alleghany river. The Red Bank rises in the same region with Clarion river and Sinnemahoning, and Mahoning with Red Bank and the W. branch of Susquehannah.

In point of surface drained, Kiskiminitas is the largest confluent of the Alleghany, and, having interlocking sources with those of the west branch of the Susquehannah, Juniata, and Youghiogany, seems to offer to the eye the most facile link of intercommunication between the valleys of the Ohio and Susquehannah N. of the Potomac.

Alleghany river receives but two confluent sources of moment from the right: those are French and Conewango creeks. The latter rises in Chautauque co., N. Y., by three branches—the Chautauque, Casadauga, and Conewango. These unite in N. Y., and, forming a navigable stream, assumes a S. course, enters Warren co., Pa., and falls into Alleghany at the town of Warren, after a comparative course of 40 ms.

French creek has its source in the extreme SW. angle of N. Y., and, increased by numerous branches from Erie and Crawford cos., Pa., forms a navigable river at Meadville. Flowing to the SE. from Meadville, 25 ms., French creek is lost in Alleghany river, at Franklin, Venango co. The entire comparative course of French creek is about 80 ms.

There is no other feature in the hydrography of the U. S. more remarkable than the country from which Chautauque and French creek have their sources. The extreme NW. waters of the former flow from within three and those of the latter from within five ms. of the margin of Lake Erie.

Taken as in a state of nature, the Alleghany and its branches are the recipients of the northern part of the great western basin of Pa., and are but little impeded by falls, though rapid as to current, from the declivity of their plane of motion.

The Monongahela, formed by two branches, the Monongahela proper and Cheat river, rising in Pocahontas, Randolph, Harrison, Lewis, Monongahela, and Preston cos., Va., unite 2 ms. within the S. boundary of Pa. The general length, above Pa., about 100 ms. in nearly a N. course. Preserving the latter direction 60 ms. in Pa., and receiving the Youghiogany from the SE., the Monongahela mingles with the Alleghany at Pittsburg, and forms the Ohio.

The various branches of the Monongahela, which derive their sources from the western chains of the Appalachian system, similar to the Potomac, claim a more than ordinary share of attention, as presenting the connecting links of a proposed line of canal improvement. Cheat river flows from the northwestern slope of Alleghany mountain, and, draining the eastern part of Randolph co., passes Chestnut ridge, enters Preston co., and there a navigable stream continues N. to within 5 ms. from the S. boundary of Pa. Turning to the W., through Laurel Hill, and thence NW., crosses the S. line of Pa., and unites with the Monongahela.

Youghiogany rises in the extreme southwestern angle of Md., between the sources of Potomac and

Cheat rivers. Pursuing a northern course Md into Pa., and augmented by Castleman's river its northern branch, the Youghiogany turns NW., and, breaking through Chestnut Ridge Laurel Hill, joins the Monongahela at McKport, 18 ms. above Pittsburg. This is a mountain stream, which, in all seasons, except periods of long drought, contains more than sufficient water for a supply of the most capacious canal; general comparative course about 100-30 in Md. and 70 in Pa. The Youghiogany heads with the Cheat branch of Monongahela, the N. branch of Potomac, and by Castleman river with Juniata and Kiskiminitas. Should Chesapeake and Ohio canal be seriously undertaken, the channel of the Youghiogany, from its present position, presents the most direct route to the waters of the Potomac with those of Monongahela.

At Pittsburg the Ohio is formed, as we have seen, by the confluent waters of Alleghany and Monongahela. The former is the principal stream flowing with a more rapid current than its tributaries. From Pittsburg to Beaver river the Ohio pursues a NW. course 25 ms., thence winding to the SE. 20 ms., in which it leaves Pa. and enters Ohio. Within the latter State, the Ohio river inflects a course a little W. of S. 70 ms., reaching the S. boundary of Pa. The peculiar courses of the Monongahela and Ohio form one of the most remarkable intermediate peninsulas presented by the topography of the U. S. The two streams flow in nearly opposite directions; the intervening distance from 30 to 40 ms. wide, and with a mean length of 60 ms. Though hilly rather than mountainous, this peninsula is elevated to from 600 to 1,000 feet in the dividing line of its waters, above the adjacent rivers. A number of creeks, none of which can exceed a comparative course of 25 ms. are poured from the interior spine into the respective recipients. The dividing ridge is evidently continued north of Ohio river, broken by a stream a few ms. below Pittsburg. The northern extension is continued, inflecting between the western sources of Alleghany and the eastern sources of Big Beaver river, and is finally lost on the southeastern shores of Lake Erie; the southern, stretching between the confluents of Ohio and Monongahela rivers, mingles with the Appalachian chains between the sources of the latter and Little Kenawha. This ridge is the western extremity of the upper basin of Ohio, and affords a striking example of the real difference between a chain of hills and one of mountains.

The descent from the rivers to the western coast of Pa. is so gradual, and the hills scattered in such promiscuous winding, through the sources of the streams, that an ascent of 600 or 700 feet in a few ms., is imperceptible; on the contrary, the mountain chains extend in regular lines, and are inclined in their direction by the water courses; they are abrupt and steep in their declivities. The mountains seem to have existed previous to the rivers, whilst the hills appear to have been formed by the abrasion of water.

Big Beaver, the first river which enters Ohio, pours its current from the N., and falls into

ent 25 ms. below the confluence of the Alleghany and Monongahela. Big Beaver is formed by the Mahoning, Shenango, Nesbanock, and Conequenessing creeks. The Shenango rises in Atabula co., Ohio, and Crawford co, Pa., in 12 ms. from the SE. shore of Lake Erie, interlocking sources with those of Grand river, Cheat, and French creek, and, pursuing a nearly easterly course over Mercer, receives the Conequenessing from the NE., and, entering Beaver co., joins with the Mahoning, and forms Big Beaver. The Mahoning is in reality the main branch, rising in Columbiana, Stark, Trumbull, and Portage co., Ohio; its course is first nearly N. 30 ms., near Warren, in Trumbull. Winding to SE., it pursues that course nearly 35 ms., entering Pa. at the SW. angle of Mercer, and joining the Shenango at N. lat. 41°, about 2 ms. within Beaver co. Below the junction of the Mahoning and Shenango, Big Beaver flows a little E. of S. 20 ms. into Ohio river. Conequenessing is the eastern constituent stream of Beaver, draining the peninsula between the Alleghany, Ohio, Big Beaver, and Shenango rivers. The valley of Big Beaver is nearly circular, and is about 70 ms. diameter; area 3,850 sq. ms. It is worthy of remark, that the general courses are nearly on a direct NW. line; of the Youghioga below the mouth of Castleman's river, Monongahela, and Ohio, from the mouth of Youghioga to that of Big Beaver, and the latter and Mahoning to about 3 ms. above Warren. This range of navigable water is upwards of 130 ms. direct, and from 180 to 200 ms. following the sinuosities of the streams. The sources of the Mahoning interlock with those of the Tuscarawas branch of Muskingum, and Mahayoga and Grand river, of Lake Erie. See tables of level under the heads of Columbia, Newton, and Virginia. Now proceed to a review of Pa., as it respects political and moral features. Taken as a whole, Pa. is divisible into three great sections, of unequal extent. The smallest but much best of the sections, lies SE. from the Kittatinny or Blue mountain, and contains about one-third of the State, comprising all Lehigh, Bucks, Berks, Montgomery, Philadelphia, Del., Chester, Lancaster, Lebanon, and nearly all Dauphin, all York, Adams, Cumberland, and nearly all Franklin co. The mountainous or middle section extends over the counties of Wayne, Pike, two-thirds of Northampton, Susquehannah, Bradford, Luzerne, Tioga, Potter, Lycoming, Columbia, Northumberland, Union, and Clearfield, Cambria, Huntingdon, Mifflin, and one-half of Dauphin, all Schuylkill, Bedford and Somerset, with the eastern part of Westmoreland and Fayette. The western hilly section includes the cos. of Luzerne, Warren, Jefferson, Indiana, Armstrong, York, Ford, Venango, Erie, Mercer, Beaver, Butler, Alleghany, Washington, Green, and the western parts of Fayette and Westmoreland. Before proceeding to give the geographical details of the State in general, the reader is presented with the following tables, exhibiting the relative area and population of each of the foregoing sections, the pop. stood in 1820.

The relative density of population in Pennsylvania has followed the quality of the soil, perhaps, less than in any State of the United States. The above table exhibits a singular inequality in the different counties, independent of either soil or commercial facility. It is seen that more than one-half of the population exists on a small fraction above one-sixth part of the entire area.

The following table exhibits the classified population of this State, agreeable to the census of 1810 and 1820.

<i>Population in 1810.</i>	
Free white males	401,566
Free white females	385,238

The foregoing tables, giving the results of the census of 1840, will serve to exhibit the progress and changes of population relatively in the respective parts of Pennsylvania in the previous period of 20 years.

Wheat and wheat flour are the most valuable of the vegetable staples of Pa., but large quantities of wrought articles, and also rye, oats, salted provisions, fruits, whiskey, live stock, iron in all forms of bar iron and hollow ware, flaxseed, &c., are exported.

Pennytown, village, Hunterdon co., N. J., 10 ms. NNW. from Trenton.

Peno, town, Pike co., Mo.

Penobscot river, falls into the Atlantic ocean 30 ms. NE. from the mouth of the Kennebec. The basin of the Penobscot is 150 ms. in length, with a mean width of 55 ms. The sources reach above N. lat. 46°, and interlock with those of Chaudiere, branch of St. Lawrence, those of St. John's river, of New Brunswick and Maine, and those of Kennebec. This basin extends over an area of 8,000 sq. ms. The tide ascends to the town of Bangor, 50 ms. above the entrance of the bay. Though draining less surface than the Kennebec and Androscoggin, the Penobscot is more navigable than either, and is considered as the principal stream of Maine. Falls do not immediately occur on the Penobscot at the head of the tide. Boat navigation remains uninterrupted 20 ms. further inland. Timber and fish are the chief staples exported from this fine river, the former in immense quantities.

From Penobscot bay to that of Passamaquoddy, in a distance of about 100 ms., a number of small rivers enter the Atlantic ocean, the principal of which are, Union river, Narraguagus river, Pleasant river, Chandler's river, Machias, and East rivers.

Union river falls into the Blackhill bay, the Narraguagus into Pigeonhill, or Narraguagus bay, Pleasant river into the bay of the same name, Chandler's river into English bay, and Machias and East rivers into Machias bay. None of those streams have sources 60 ms. inland, and though in a very remarkable manner supplied with convenient harbors, the inland commerce of the country is very confined.

Penobscot, co. of Me., bounded by Washington E., Hancock S., Kennebec SW., Somerset W., and Lower Canada N. This county embraces the central parts of the State on Penobscot and St. John's rivers. Its extent cannot be very accurately determined. Most of its area remains an unsettled wilderness. Staple, lumber. Chief town, Bangor. Pop. in 1820, 13,870; and in 1840, 45,705. N. lat. 45°, and lon. W. C. 8° E. intersect in the southern part of this county.

Penobscot, bay of Me., at the mouth of the river Penobscot. It is long and capacious, and its E. side is lined with a cluster of small islands.

Penobscot, seaport and town, Hancock co., Me., on the right side of Penobscot bay, 10 ms. above Castine, and 30 below Bangor. It is a place of considerable commerce, and in 1818 the shipping owned there exceeded 24,000 tons.

Penrise, seaport of Wales, in Glamorganshire, on the Bristol channel, 20 ms. SE. of Carmarthen, and 219 W. of London. Lon. 4 12 W., lat. 51 37 N.

Penryn, borough of Eng., in Cornwall, on a creek of Falmouth Haven, has a great trade in Pilchard and Newfoundland fisheries, 3 ms. N. of Falmouth, and 266 W. by S. of London. Lon. 4 59 W., lat. 50 10 N.

Pensa.—See *Penza*.

Pensacola, capital of West Florida, seated on a bay of the Gulf of Mexico, which forms a commodious harbor, where vessels may ride safe from every wind. The harbor of Pensacola is spacious, commodious, and good anchorage. It is the best haven of the United States on the north shore of the Gulf of Mexico, admitting vessels 20 feet draught; the depth, however, gradually shallows towards the shore. This city was founded by the Spaniards in 1699 by Don Andre de Riola, and stands at N. lat. 30 23, lon. 1 19 of W. C.—See article *Mississippi river*, see *Pensacola*.

The town of Pensacola is built along the N. side of the bay, on a sandy plain. Pop. about 2,000. Lon. W. C. 9 50 W., lat. 30 25 N.

Pensance, or *Penzance*, seaport of Eng., in Cornwall, on a creek of Mountsbay, carries on a considerable traffic in shipping. It is one of the tin-coinage towns, 12 ms. E. of the Land's End, and 28 1/2 W. by S. of London. Lon. 5 35 W., lat. 50 11 N.

Pensford, town of Eng., in Somersetshire, noted for its hats and bread, and seated on the Cheyney ms. W. of Bath, and 117 W. by S. of London. Lon. 2 30 W., lat. 51 23 N.

PENTATEUCH, Gr., *Penté*, five and *teuchos*, books, and is literally "five books."

Perturbation, term in astronomy serving to designate deviations of planetary paths, from the form of regular ellipses, occasioned by the mutual attractions of the planets, when approaching and receding.

Peru, late province of Spain, in S. America. It lies between lat. 1 30 N., and 25 10 S., being nearly 2,000 ms. long from N. to S., and 350 in breadth. It is bounded on the N. by Popayan, on the E. by the country of the Amazons and Paraguay, on the S. by Chili and La Plata, and on the W. by the Pacific ocean. Lima is the capital.—See *America*, p. 53.

Peru, is now, (1826,) completely independent of Spain; part has been incorporated with Colombia, part with La Plata, and the residue forms the Republic of Bolivia. The staple commodities of this great country, include nearly all that is valuable in the vegetable and mineral kingdoms.—Town, Bennington co., Vt., 30 ms. NE. from Bennington.—Town, Berkshire co., Mass. Pop. in 1820, 748.—Town, Clinton co., N. Y., on Lake Champlain, nearly opposite Burlington, and on the Riviere aux Sables in the SW. corner of the co.—Village, Huron co., O., by postroad 130 ms. N. from Columbus.

Perugia, city of Italy, capital of Perugia, with a university, on a hill, 75 ms. N. of Rome. Lon. 12 20 E., lat. 43 6 N.

Perugia, lake of Italy, of a circular form, almost 5 ms. in diameter. It is 8 ms. from the city of that name, in the province of Perugia.

Perugino, province of Italy, in the Ecclesiastical State, bounded on the W. by Tuscany, on the S. by Orvietano, on the E., by the duchies of Spoleto and Urbino, and on the N. by the city of Citta Castellana. It is 25 ms. in length, and near as much in breadth. The air is pure, and the soil fertile in corn and good wine. The capital is Perugia.

Pesaro, town of Italy, in the duchy of Urbino, the harbor is excellent; the environs are remarkable for producing good figs, of which large quantities are sent to Venice. It is seated on an eminence, at the mouth of the Foglia, on the Gulf of Venice, 17 ms. ENE. of Urbino, and 130 of Rome. Lon. 13 2 E., lat. 43 52 N.

Pescara, town of Naples, in Abruzzo Citeriore,

at the mouth of a river of the same name, on the gulf of Venice, 8 ms. E. by S. of Civitadi-Penna, and 106 NE. Naples. Lon. 15 2 E., lat. 42 27 North.

Peschiera, town of Italy, in the Veronese, on Mincio, which proceeds from the Garda, 16 miles W. of Verona. Longitude 11 4 E., latitude 45 26 North.

Pescia, town of Tuscany, noted for the excellent oil it produces. It is 10 ms. SW. of Pistola. Lon. 11 22 E., lat. 43 47 N.

Pesenas, town of Fr., in the dep. of Herault, and late province of Languedoc, delightfully seated on the river Pein, 12 ms. NE. of Beziers. Lon. 3 34 E., lat. 43 28 N.

Peshawer, river of Afghanistan, often named, also, river of Cabool, rises in the mountain gorges near the city of Ghiznee, and interlocking sources with those of the Helmund, and, flowing eastward about 150 miles to Jellalabad, having passed the city of Cabool, receives the Koma river from the N., inflects to SE. by E., and in that direction through about 100 miles, falls into the W. side of the Indus nearly opposite Attock.

Peshawer, city of Afghanistan, from which the river of that name is so called, is not, however, situated on, but at some distance from its southern shore. Lat 34 8 N., lon. 71 32 E. of London, about NW. by W. from Attock.

Pe-tcheli, *Tcheli*, or *Li-pa-fou*, the principal province of China, bounded on the N. by the great wall and part of Tartary, on the E. by the Yellow sea, on the S. by Chang-tong and Honan, and on the W. by the mountains of Chansi. It contains nine cities of the first class, which have several others under their jurisdiction. The temperature of the air in this province does not seem to agree with its latitude; for, although Pe-tcheli extends no further than 42° N., yet all its rivers are so much frozen during four months in the year that wagons with the heaviest loads may safely pass them. The soil is sandy, and produces very little rice, but it abounds with all other kinds of grain, and with the greater part of the fruit trees we have in Europe. Peking is the capital.

Peter and Paul, *St. Petropawloskoi*, seaport of Kamtschatka, in the Russian government of Irkutsk. The town consists of some miserable log-houses and a few conical huts. Lon. 158 43 E., lat. 53° N.

Peterhead, town of Scotland, in Aberdeen near the mouth of the Ogie, on the most eastern point of Scotland. It has an excellent harbor defended by a pier, which can contain 40 or 50 vessels in perfect safety. A considerable trade is carried on directly to the Baltic for iron, hemp, and other articles. It has likewise a manufacture of sewing thread. It is a little to the W. of Inverannes, and 34 ms. NE. of Aberdeen. Lon. 57 28 W., lat. 57 28 N.

Petersburg, metropolis of the Russian empire, in the government of the same name, is situated on the river Neva, near the gulf of Finland, is built partly upon some islands in the mouth of that river, and partly upon the continent. Since the beginning of the last century, the ground which Petersburg now stands on was only a vast marsh, occupied by a few fishermen's huts. Peter the Great first began this city in 1703. He built a hut for himself, and some wretched wooden houses. In 1710, the Count Golovkin built the first house of brick, and the next year, the emperor, with his own hand, laid the foundation of a house of the same materials. From these small beginnings the imperial city of Petersburg; and, in less than nine years after the wooden hovels were first erected, the seat of empire was transferred from Moscow to this place. The streets in general are broad and spacious, and three of the principal ones, which meet in a point at the admiralty, are at least two miles in length. Most of the streets are paved, but a few are still suffered to remain unpaved with planks.

The views upon the banks of the Neva are the grandest and most lively scenes imaginable. That river is in many places as broad as the Thames at London; it is also deep, rapid, and transparent as crystal; and its banks are lined each side with a continued range of grand buildings. On the N. the fortress, the Academy of Sciences, and the Academy of Arts, are the most striking objects. On the opposite side are the imperial palace, the admiralty, the mansions of many Russian nobles, and the English line, so called, because it is mostly occupied by English merchants. In the front of these buildings, on the south side, is a quay, which extends three miles, except where it is interrupted by the admiralty; and the Neva, during the whole of that space, has been embanked by order of the late empress, by a wall, pavement and pavement of hewn granite. Petersburg, though more compact than the other Russian cities, bears a resemblance to the towns of that country being built in a very straggling manner. From its low and marshy situation, it is subject to inundations, which have sometimes risen so high as to threaten the town with a total submersion. The

posite divisions of Petersburg, situated on each side of the Neva, are connected by a bridge of iron chains, which, on account of the large masses of ice driven down the stream from Ladoga, is usually removed when they first make their appearance; and, for a few days, till the river is frozen hard enough to bear carriages, there is no communication between the opposite parts of the town. Among the noblest ornaments of Petersburg, is an equestrian statue of Peter the Great, erected by Catherine II., in 1782. It is of colossal size, and rests on a huge pedestal of rock, brought there at great expense. Within the walls of the fortress is the cathedral of St. Peter and St. Paul, in which are deposited the remains of Peter the Great, and of the successive sovereigns, except Peter II., who is buried at Moscow. Petersburg is 355 miles N. of Moscow, 750 N.E. of Vienna, 525 N.E. of Copenhagen, and 300 N.E. of Stockholm. Lon. 29° E., lat. 69° 30' N.

Petersburg, port of entry and village, in Dinwiddie co., Va., situated on the S. side of Appomattox river, in lat. 37° 12' N., and lon. 78° 8' W. 12 miles S. of Richmond, and 79 W. of the mouth of Norfolk. This is a place of considerable trade in cotton, grain, flour, and tobacco; the exports of one year having amounted to 1,390,000 lbs. Being in the centre of one of the earliest settled parts of the State, it is surrounded by a fertile and populous country.

The situation of Petersburg is peculiarly well adapted to both commerce and manufactures. The fertile Appomattox present excellent sites for many manufactures, whilst a canal cut around them obviates the natural impediment to navigation. It occupies the site of three counties. The body of the place is in Dinwiddie, but it also comprises the village of Appomattox, in Prince George co., and Powhatan, in Chesterfield co. This town, from some local causes, is in a remarkable manner exposed to fires.

Philadelphia, city of Asiatic Turkey, in Natolie, seated on the foot of the mountain Timolus, in an extensive plain. The Greeks retain its ancient name, but the Turks call it Allahijah. It contains 11,000 inhabitants, among whom are 2,000 Christians. It is 40 ms. ESE. of Smyrna. Lon. 28 15 E., lat. 38 28 N.

Philadelphia, co., Pa., bounded by Delaware river SE., Delaware co. SW., Montgomery co. NW., and Bucks co. NE. Length 18, mean width 7 ms., area about 120 sq. ms., exclusive of the space occupied by Philadelphia and its suburbs.

The distinction made in the returns of the census of 1820, between the city and co. of Philadelphia, gives a very inadequate representation of the respective population of each. To all commercial and moral purposes, Philadelphia embraces the city, properly so called, Southwark, Spring Garden, the incorporated Northern Liberties, and Kensington. With the aggregate pop. of these sections, the city contained in 1820, 108,809 inhabitants, and the co. proper, separate from the city, 28,288.

With all this deduction, Philadelphia co. is one of the most densely populated cos. in the U. S. Besides the city of Philadelphia and its suburbs, the co. contains the borough of Frankford and villages of West Philadelphia, Hamilton, Mantua, Germantown, Holmesburg, Bustletown, and some others of lesser note.

Philadelphia, the second largest city in the U. S., in Philadelphia co., Pa., between the Delaware and Schuylkill rivers, 5 ms. above their junction. The original city was a parallelogram, extending W. from the Delaware to a little W. of Schuylkill about 12,000 feet, or a small fraction above 2 ms., and N. and S. 5,700 feet, or a little more than a mile. In the advance of commerce and other business, the buildings were naturally extended along the main stream, the Delaware, and now reach from the lower part of Southwark to Gunner's run, the upper part of Kensington, near 4 ms., and along Market street from one river to the other. The N. and S. streets amount to 23, those from E. to W. 14, in the city proper. Except Dock street, those of the city cross at right angles. That regularity is not, however, extended to the Liberties. In the latter the streets inter-

sect in most instances with more or less obliquity. Besides the main or principal streets, the city Liberties are diversified by a great number of narrow streets, lanes, and alleys. The streets much in width. Broad street is 113, High Market 100, Mulberry or Arch street 60 feet, the others of various widths.

The site of Philadelphia was originally but diversified by elevations. The lower part level, and the upper waving; the whole composed of an alluvial deposit of sand and gravel, over a thin stratum of vegetable earth. Common sewers have been formed under most of the streets, which carry the filth into the Delaware, and preserve the health and contribute to the convenience of the inhabitants. No city in the U. S. is so well supplied with excellent water. Works erected on the Schuylkill to elevate the water into a reservoir and the reservoir itself into works which would do honor to any city. An enormous dam has been erected in the river, which wheels are set in motion, which raise the water into a reservoir. This depository of filth placed on an eminence above every other part of the site of the city. Pipes are thence continued, which convey the water to every part of the proper.

As a commercial port, Philadelphia, from peculiar features of the Delaware river, is more liable to be impeded by ice than is either New York or Baltimore; but independent of that circumstance, the former possesses, perhaps, as many natural advantages as either of the others.

As a manufacturing city, Philadelphia is first in the Union. It would be useless to specify the number or value of each article; it may suffice to say that, in the city, Liberties, and environs, almost every object of necessity, and some of ornament and luxury are produced. According to Coxe's View, the value of manufactured articles produced here in 1810 exceeded \$16,000,000. Printing is very extensively carried into operation, both in the production of books and public papers.

The inland trade of Pennsylvania is very extensive. This city competes with New York, New Orleans, and Baltimore, in the supply of the inhabitants in the basin of Mississippi. Under the articles Lehigh, Delaware, Schuylkill, and Susquehanna, may be seen the various natural facilities of external and internal water communication open to Philadelphia; and under the same other articles are noticed the artificial operations, either performed, in progress, or designed, to improve the natural facilities, or remove the impediments to intercommunication.

The U. S. navy yard at Philadelphia comes as a part of Southwark. The depth of water is sufficient for launching vessels of the first class, without not of floating them with their guns, crews, and other necessary lading. Before being prepared for sea, ships of the line have to be removed down the Delaware.

The environs of Philadelphia have been long admired for soft, and yet varied scenery. The banks of the Schuylkill are much more picturesque than those of the Delaware, and the former is much more extensively and tastefully improved. Pratt's gardens above, and Barton's below the city, are indeed elegant and rich additions to a picture.

ered more seductive by contrast with the two villages of Hamilton and Mantua, and two useful and noble bridges which connect those to the city; the whole intermingled with various detached seats, and crowned by the arid cascade, locks, water works, and reservoir in Mount.

ken together, if we engroup its advantages and disadvantages, if we consider the order of its streets, the cleanliness and regularity of its streets, its well cultivated and abundant neighborhood, it may be doubted whether more is concentrated in any other place to minister to human comfort and prosperity.

Philippi, ancient town of Macedonia. It was near this place, commonly called the plains of Philippi, where Cassius and Brutus, two of the assassins of Cæsar, were defeated by Augustus

and Mark Antony, in 42 B. C. It is 67 ms. E. of Salonichi. Lon. 24 25 E., lat. 40° N.

Philippina.—See *Samar*.

Philippine, town of Flanders, on an arm of the Scheldt, 12 ms. SE. of Flushing. Lon. 3 51 E., lat. 51 16 N.

Philippine Islands, islands in the Indian ocean, discovered by Magellan in 1521. They are said to be about 1,200 in number, of which 400 are considerable. The principal are Luconia, Mindanao, Samar, Matsbate, Mindoro Luban, Panay, Leyte, Bohol, Zebu, Negros St. John's Xolo, and Abo. The air is very hot and moist, and the soil fertile in rice and many other useful vegetables and fruits. Lon. 117 13 to 120 50 E., lat. 6 30 to 18 15 N.

Philippines, *New*, otherwise called *Palaos* and *Carolinas*, islands in the N. Pacific ocean, to the E. of the most southern of the Philippine islands. There are about 32 in all, between the equator and the Ladrões; but they are very little known to the Europeans.

Philippoli, town of European Turkey, on the Marizza river, 82 ms. NW. from Adrianople. Lat. 42 15 N., lon. 24 50 E.

Phillips, co., Ark., bounded by Monroe W., St. Francis co. N., and on E., SE., and S. by the Mississippi river. As laid down on Tanner's improved map of the United States, the outlines approach very nearly to a right angled triangle; base a N. and S. line, 54 ms.; perpendicular E. and W., 32; the hypotenuse being the general course of the Mississippi river; area 864 sq. ms. Cent. lat. 34 30, lon. W. C. 13 45 W. With but little exception, it is flat and liable to annual submersion. Chief town, Helena. Pop. 1830, 1,152; and in 1840, 3,547.

PIAST, a term in Polish history, derived from the personal name of a peasant of Cujavia, on whose head the crown was placed at the death of Popiel A. D. 830. Piast was the founder of a dynasty which terminated, in the direct line, in John Cassimir, 1668, or endured 838 years. This dynasty, indeed, twice passed by females to foreign houses; and in Hediviga, daughter of Louis, king of Hungary and Poland, and wife of Jagellon, or Wladislaus V, the blood of Piast ceased to exist, as Hediviga died childless; but it was in consequence of their intermarriage that Jagellon possessed and transmitted the crown to his descendants. Therefore, though his blood failed, the authority of Piast was perpetuated in the Jagellon family. Again, in 1587, the crown passed to the Swedish family of Wasa, through Catherine, daughter of Sigismund I, and sister of Sigismund II, Augustus, who intermarried with John, king of Sweden. They were succeeded on the

throne of Poland by their son Sigismund, and he again by two of his sons, Wladislaus and John Cassimir. The latter abdicated in and terminated the last shadow of the Piastory. Long, however, before the extinction of Piast line of succession, the royal authority in land had become elective and worse than non. John Cassimir predicted the dissolution of his nation, and named the partitioning Powers.

Pickaway, co., O., bounded by Ross S., Fayette W., Madison NW., Delaware N., Fairfield E., and Hocking SE. Length 22, width 21, area about 470 sq. ms. A considerable portion of the land, especially on the eastern side of the river, is of a very superior quality, and produces immense quantities of the different kinds of grain. It has the four varieties of woodland, barren, and prairie. The plain land equals, and perhaps excels, any other land in the western country in the production of wheat, generally producing 40 to 45 bushels per acre of the first quality. The prairies are best for corn and grass, and the best produce excellent pastures. These three kinds of lands probably compose one-fifth part of the area of the co.; the other four-fifths being now, not long since, heavily timbered." Scioto river flows from N. to S., through nearly the middle of the co. The other principal streams are Lower and Upper Darby, and Deer creeks. Pop. in 1830, 13,149. Cent. lat. 39 48 N., lon. W. C. 6 45 W.

Pittsburg, city of Pa., and seat of justice for Alleghany co., on the point above the confluence of Monongahela and Alleghany rivers, 230 ms. from Baltimore, 282 from Philadelphia, and 1,935 ms. by water above New Orleans. Lat. 40 27 N., lon. W. C. 3 2 W.

Pittsburg occupies an alluvial plain and part of the adjacent hill, and lies in the form of a triangle. It is admirably situated for trade and manufactures. The two fine streams, which unite before its salient point, open to its citizens an immense surface, comprising part of west N. Y. and Va., and all west Pa., whilst the Ohio connects it with the wide basin below. The adjacent hills abound with mineral coal, lying upwards of 300 feet above the streets of the city. It has already become the theatre of great manufacturing establishments. In Pittsburg and the adjacent villages of Alleghany and Birmingham, there are in operation numerous steam mills, glass houses, air furnaces, breweries, a number of distilleries, with an indefinite number of blacksmith's shops, slitting mills, woolen and cotton cloth factories, rolling and slitting mills, fulling mills, potteries, blast furnaces, flour mills, boat yards, &c. Glass of every description is made in this place, from window glass and porter bottles to the finest cut crystal glass. Steamboat building is carried on here very extensively and skilfully.

In a commercial point of view, this city is composed of Pittsburg, properly so called, the Northern Liberties, extending from the city up the Alleghany, the village of Alleghany, on the opposite side of Alleghany river, a street extending up Monongahela from the city, and another directly opposite on the W. side of that stream, and lastly Birmingham, also, on the W. side of the Monon-

gabela, about half a mile above the city. The various manufactories and workshops are scattered promiscuously through these several places.

The progressive population has been during this current century rather rapid than otherwise, though unequal in the decennial periods.

1800	-	-	1,000
1822	-	-	10,000 city and environs
1826	-	-	10,515 city
1830	-	-	12,568 do.
1840	-	-	33,625

This latter number is the aggregate of Pittsburg city, Alleghany city, and the boroughs of Lawrenceville and Birmingham.

Three fine bridges connect Pittsburg with the adjacent country, one over each river. Except in very clear and moderately windy weather, the view of Pittsburg is far from pleasing, as the atmosphere is generally surcharged with a heavy load of smoke; but when the air is rendered clear by wind, few places can present a series of views more interesting. The two rivers, their bridges, numerous manufactories, the varied hills, and other objects, are engroped with great variety of effect. Here also terminates, on the western side, the canal part of the Pennsylvania line of internal improvement, by an aqueduct over the Alleghany river, leading into a large reservoir situated in the northern part of the city. Pittsburg is and must remain an immense entrepôt between the Atlantic border and wide spread interior.

SW. from Chicago, where it joins to SW 50 ms. to its junction with Kankakee form the Illinois river.

PLANET, from Greek root *planê*, wandering an age beyond our records, it was no doubt observed that some stars changed their relative places whilst the greatest number remained fixed, or other words, maintained the same relative positions amongst themselves. Thus the term "wandering" was given to the planets before it was known that they shifted their places relatively.

Plaquemine, outlet of the Mississippi, 11 ms. above New Orleans, 36 above the efflux of the fourche, and 96 below that of Atchafalaya. This is the principal channel of water communication between Attacapas and Opelousas, and the bank of the Mississippi. It is, however, only at seasons of high flood that water is discharged into the Atchafalaya. It joins Atchafalaya after a winding course of 15 ms.

Plaquemine Brulé, small river of Louisiana in Opelousas. It is the eastern branch of Mermentau

and the drain of the central prairies of Opelousa.

Plaquemine Bend, remarkable bend of the Mississippi river, 70 ms. below New Orleans. Fort Philip stands on this bend, on the left bank of the river.

Plaquemine, S.E. parish of Louisiana, bounded by the Gulf of Mexico N.E. and S., and by the Mississippi W. and N.W. Length from the mouth Turn to the mouth of the Mississippi 75, width 13 ms.; area about 2,355 sq. ms. It lies along the margin of the Mississippi river, the Plaquemine bend, along Bayou Terre au Cochon and a few other confined slips, the surface of the parish is an immense grassy morass, naked and utterly unfit for cultivation. The soil here arable, is exuberantly fertile. Staples, cotton, and rice. The orange tree flourishes here than in any other part of Louisiana. At the Plaquemine bend, the arable margin of the Mississippi terminates. The Mississippi means through it from N.W. to S.E. Pop. in 1820, 18, and in 1840, 5,060. Central lat. 29 30 N. W. C. 12 30 W.

Plaquemines, or *Fort St. Philip*, fort and post on the left bank of the Mississippi river, 70 miles below New Orleans. Lat. 29 22 N., lon. W. 83 3 W.

Plains of, in Bengal, about 30 ms. from Moorshedabad, and 70 from Calcutta. This is memorable for the great victory gained by Clive, in 1757, over the nabob Surajah; by which was laid the foundation of the extensive British empire in Hindoostan.

Plata, island of Peru, on the coast of Quito, bounded by inaccessible rocks, and about 5 ms. long and 4 broad.—Rich and populous town of the capital of the audience of Los Charcos, with bishop's see. It is seated on the Chimao, N. E. of Cusco. Lon. 63 40 W., lat. 19 38 S.

Plata, or *Rio de la Plata*, large river of South America, formed by the union of the three great rivers, Paraguay, Uruguay, and Parana. It crosses the bay, and enters the Atlantic ocean in lat. 35° S. It is 150 ms. broad at its mouth. At Monte Video fort, above 100 ms. up the river, the land can be discerned on either shore, when a vessel is in the middle of the channel; and at Buenos Aires 200 ms. higher, the opposite shore is not to be discerned from that town. The Rio de la Plata is the largest bay of the first rank, and peculiar in the structure of its basin. The Parana rises within less than 100 ms. from the Atlantic ocean, and the Uruguay still nearer the Pacific. Those sources at a distance of 20° are distant from each other 1,700 ms. and flowing towards each other, and directly into the respective oceans, into the interior of the bay, where they ultimately unite with many other streams, to form that immense assemblage of waters named Rio de la Plata. The space drained by the numerous confluent rivers of the La Plata extends to 300,000 sq. ms., and very nearly equals the basin of the Mississippi. The bay below Buenos Aires is rather a wide estuary than a river.—

Plata, or *Paraguay*.

PLATEAU, table land. This term, though not introduced into the English language, is used so with propriety and convenience, as it

expresses in one word what demands, without its aid, circumlocution. A plateau, or table land, in physical geography, means extensive elevated regions, such as Central Asia, but applies to other tracts of similar nature, though much less in extent, such as Bohemia, central Spain, and many intervening valleys between mountain chains in America and other parts of the earth.

PLATINA, Spanish root, *plata*, silver. A metal white like silver, whence the name. The heaviest of all known substances; in hardness scarce yielding to iron; tenacity between copper and silver, and the most difficult of fusion of all metals. Alloyed with copper, it takes an admirable polish, and not being subject to rust, renders it invaluable as reflectors in telescopes.

Plymouth, seaport of Eng., in Devonshire, between the mouths of the Plym and Tamar; and next to Portsmouth, is the most considerable harbor in Eng., for men-of-war. There are, properly speaking, three harbors, called Catwater, Sutton Pool, and Harmouze. The first is the mouth of the Plym, and affords a safe and commodious harbor the merchant ships, but is seldom entered by ships of war. The second is frequented by merchant ships only, is almost surrounded by the houses of the town, and has lately been further secured by an extensive pier. The third is near the mouth of the Tamar, and is the harbor for the reception of the British navy, being fitted with moorings for about 100 sail, and having good anchorage for a much greater number. Adjoining to it, are docks, arsenals, and other conveniences for the building and fitting out of ships of war. It carries on a considerable foreign and domestic trade; and is 43 ms. SW. of Exeter, and 216 W. by S. of London. Lon. 4 10 W., lat. 50 22 N.—Town, Grafton co., N. H., 33 ms. SE. from Haverhill, and 79 NW. from Portsmouth. Pop. in 1820, 983.

Poland, formerly an independent State of Europe, but now absorbed by Russia, Prussia, and Austria. Notwithstanding the entire annihilation of this kingdom, the name of Poland is retained

in our books as one of the great subdivisions of Europe. That part of Poland subject to Russia, it is true, is still known by that name, but is as effectually a province as is any other fragment of that empire.

Poland, as it stood before its dismemberment, was an extensive, fertile, but generally badly cultivated country. The towns of Poland are for the most part built of wood, and the villages consist of mean cottages, or huts. The country is so fertile in corn in many places that it supplies Sweden and Holland with large quantities, and it has extensive pastures. Peat, ochre, chalk, belemnites, agate, chalcedony, cornelians, onyxes, jasper, rock crystal, amethysts, garnets, topazes, sapphires, and even rubies and diamonds, are found in Poland; also, talc, spar, lapis calaminaris, coal, iron, lead, and quicksilver. Here is much leather, fur, hemp, flax, saltpetre, alum, manna, honey, and wax; and there are mines of salt of a great depth, out of which is dug rocksalt. Horses are numerous, very strong, swift, and beautiful; and horned cattle are bred in such numbers that above 80,000 are driven every year out of the country. The principal rivers are the Dneiper, Vistula, Bug, Niemen, Dniester, and Bog.

Poland, recent kingdom of Europe. The central provinces of Poland were recently formed into a kingdom, of which the emperor of Russia was king. Some considerable share of the ancient liberties of Poland were preserved. Though subject to the same monarch with Russia, Poland enjoys, if no more, at least nominally, a much more liberal form of government than the other parts of Russia. Very liberal principles of religious toleration prevail. This State is subdivided into the palatinates of Cracow, Sandomir, Kalish, Lublin, Plock, Masovia, Podlachia, and Augustow. Area 47,060 sq. miles. Pop. 2,800,000.—See *Gallacia, Prussia, &c.*

Poland, or *Minot*, town, Cumberland co., Me., on the W. side of the Androscoggin river, 26 ms. N. of Portland.

Poland, SE. town, Trumbull co., Ohio, on Mahoning river, and upon the road from Pittsburg to Warren. Distance from the latter place 18 miles, 65 from the former, and 175 NE. from Columbus. Pop. in 1820, 990.

Polar Regions. From the discoveries made by Captain Parry in 1819, it is now determined that the Polar sea to the N. from America, is filled with islands and inlets. That really great naviga-

tor wintered in 1819 and 1820, at lon. 114° W. from London, 37° W. from W. C., and at lat. 74° N. Since his return to Europe in 1820, Captain Parry has made another voyage to the Polar seas, and again wintered in those regions, but was unable to penetrate as far west as he did in the previous voyage. It is now generally admitted, that if a passage between the Atlantic and Pacific oceans exists, it can only be explored, if at all practicable, by proceeding from W. to E.—See *Earth*.

POLEMARCH, pronounced *polemark*, from the Greek, and means literally *commander in chief of the army*. They were the third in rank of the nine Archons. As generalissimo of the army, Callimachus, then polemarch, generously and wisely surrendered his command, and induced the other generals to follow his example, to Miltiades on the invasion of Attica by the Persians under Datis and Artaphernes, and the ever glorious victory at Marathon was one of the consequences, and another was the equally glorious death of Callimachus on that memorable day and field. In aftertimes the office of polemarch became purely civil.

POLE, Greek, root *poles*, to turn, or turn round. The star we now call the North Pole star, is Alruccaba in the tail of the Lesser Bear. In common opinion, this star is really in that point of the heavens around which the other northern stars appear to revolve; such is not, however, the fact. Alruccaba is upwards of a degree from the real vanishing point of the earth's axis.

Poleron.—See *Pooloroon*.

Polesia, name given to the palatinate of Brzescia, in Lithuania.

Polesino-di-Rovigo, province of Italy, bounded on the N. by the Paduan, on the S. by the Ferrarese, on the E. by the Dogado, and on the W. by the Verone. It is 42 miles long and 17 broad, and is fertile in corn and pastures. Rovigo is the capital.

Policandro, an island in the Archipelago, one of the Cyclades, 20 ms. in circumference. Here are a few villages, a castle, and a harbor; but it consists in general of nothing but barren rocks and mountains. It lies between Milo and Paros. Lon. 25 31 E., lat. 36 32 N.

Polieastro, town of Naples, in Principato Citeriore, on a gulf of the same name, 68 ms. SE. of Naples. Lon. 15 40 E., lat. 40 15 N.

Polignano, town of Naples, in Terra di Bari, on a craggy rock, near the sea, 16 miles E. of Bari. Lon. 17 24 E., lat. 41 25 N.

Polina, town of Albania, 12 ms. S. of Durazzo. Lon. 19 20 E., lat. 42 42 N.

Poligni, town of France, in the dep. of Jura, and late province of Franche Compte, seated on a rivulet, 52 ms. SW. of Besançon. Lon. 5 55 E., 46 50 N.

POLIS, original meaning probably concentration, enters as a suffix to an immense number of existing names of cities, towns, villages, &c., and from which comes metropolis, principal city. The Turks, who cannot pronounce *polis*, change it to *boli*.

Polito, or **Polizzi**, town of Sicily, in the Val-

di-Demona, at the foot of the mountain Maddalena, 30 ms. SE. of Palermo. Lon. 13 53 E., lat. 4 N.

Pollockshaws, considerable manufacturing town of Scotland, in Renfrewshire, seated on the White Cart.

Polotsk, government of the Russian empire formed of part of a palatinate of Lithuania, membered from Poland by the treaty of partition 1772. Its products are chiefly grain, hemp, and pasture; and the forests furnish great quantities of masts, planks, oak for ship-building, pitch, tar, &c., which are chiefly sent down the Dwina to Riga.—Strong town of Russia, capital of a government of the same name, seated on the Dwina, at the mouth of the small river Polotsk, 50 ms. SW. of Vitepsk. Lon. 27 50 E., lat. 53 43 N.

Polsley's Mills, post office, Monongahela county, Virginia.

Poltten, St., town of Lower Austria, seated on the Drasam, which falls into the Danube at Holnesburgh, 8 ms. from Vienna.

Polynesia, distinctive name given to the merous islands of the Pacific ocean, E. from the continent of Asia. The term Polynesia, or "*Marian Islands*," was adopted by the Portuguese author of the earliest period of European discovery in the western Pacific, and then applied to the Moluccas, Philippines, and indefinitely E. and NE. to Java. The president de Brosse afterwards extended the name, and applied it to designate all the innumerable islands from the Marians to Owhyhee and Easter island. By Malte Brun, the classification of de Brosse is adopted, and in the elaboration of the former, Polynesia forms the eastern grand section of Oceanica. Thus delineated, Polynesia comprises Pelew islands, Marian islands, Mulgrave's group, Feejee islands, Friendly islands, Navigator's islands, Society islands, (better known by its principal island Otaheite,) Easter islands, Marquesas Archipelago, and many others delineated and of various superficies.

Polynesia extends from W. to E. through one-fourth part of the earth, and embracing a content of 6,200 ms. North and south, these numerous groups spread beyond each tropic, and consequently through near 50° of lat., or over 3,450 miles. This space exceeds that of Asia, but the islands of Polynesia are mere dots on an immense surface. Over upwards of 20,000,000 sq. miles it is doubtful whether much more than the one thousandth part is land. Those spots, are, however, the abodes of eternal spring, summer and autumn united. Every thing but man, smiles. The natural picture is never-fading bloom; the moral is brightness rendered visible. In the advancing position of the two Americas, we have a vista opened to view, though dimly, the future destination of Polynesia. It is not prophecy, but induction from past events, to say that the Pacific islands will become resting places and marts of intercommunication between America, and Asia, and western Oceanica.

When first discovered, though so widely distant from each other, the islands from Asia to America were found inhabited by a race of men who spoke the same general language, broken into various dialects.

s. This language was also found evidently to have a common origin with the Malay; and again the Malay dialects have been traced to Madagascar. To what an undefined field of conjecture are we led, on a review of this broken volume of human history! The Oceanian negro is found also in the southwestern Polynesia, but inferior in number, and far below the Malay in intellectual improvement.

This great section of the earth remains but imperfectly explored, large spaces on the Pacific have not been traversed by any civilized discoverer, who has made his researches known to the public. Similar to central Africa, and in some parts central Asia, and to the western parts of North America, Polynesia has been discovered, but imperfectly surveyed.—See article *Australia, Austral Asia, &c.*

Pompey, island in the Mediterranean, near Sicily.

Pomerania, duchy of Prussian Germany, in the north of Upper Saxony, bounded on the N. by the Baltic, on the E. by western Prussia and Poland, on the S. by Brandenburg, and on the W. by Silesia. It is watered by several rivers, of which the Oder, Brecknitz, Pene, Ucker, Rega, Netze, Wipper, Ihna, Stolphen, and Lebo, are the most considerable. The air is pretty cold, but compensated by the fertility of the soil, which produces in pastures and corn, of which a great quantity is exported. It is a flat country, containing many lakes, woods, and forests, and has several good harbors, particularly Stettin and Stralsund. It is 250 miles long, and 75 broad, and divides into Hither and Further Pomerania. Both, and the island of Rugen, belong to the kingdom of Prussia. Stettin is the capital.

If the following extract from the National Intelligencer of September 19, 1825, was much more diffusive, I would still give it insertion under the head of Portland, Maine; no liberal reader will ask why.

The *School System* of the Eastern States deserves to be admired and imitated by the rest of the Union. It is the only system by which the benefits of education can be made as diffusive as they should be in this country. The following statement strikingly exemplifies how generally the people of that part of the Union are induced by the system to avail themselves of its advantages. The town of Portland, in Maine, embracing a pop. of 9,000 or 10,000, contains, by a late report, the following public schools, in which, at the annual examination, the number of pupils were found which is annexed to each. These are exclusive of the private seminaries of instruction.

Portland, Sept. 6.—Portland Public Schools.—On Thursday and Friday last week was the annual examination of the public schools in this town. The school committee, together with several gentlemen of the town and some strangers, visited the several public schools, and went through a minute and patient examination of the pupils in the va-

rious branches of instruction to which they had attended. The state of the schools generally was such as to give a high degree of satisfaction to all who visited them, and a most cheering promise of their future usefulness. The number of pupils in the several schools on the day of examination were as follows :

Port Tobacco, vill. and seat of justice, Charles co., Md., on a small river of the same name, emptying by a comparatively wide mouth into the Chesapeake river. N. lat. 38 20, lon. W. C. 3' E. Distance by postroad 34 ms. S. from W. C., and 50 ms. S. from Annapolis. Pop. 500.

Port William, village and seat of justice, Gal-

latin co., Ky., on the point of confluences of Kentucky and Ohio rivers. Lat. 38 40 N., lon. W. C. 8 5 W., and distant 44 ms. NW. from Frankfort.

Portugal, the most western country on the continent of Europe, about 310 ms. in length and 150 in breadth. The principal rivers are the Duero, the Tajo, or Douro, the Guadiana, the Minho, and the Munda, or Mondego. It is bounded on the W. and S. by the Atlantic ocean, and E. and N. by Spain. Though Spain and Portugal are in the same climate, yet the air of the latter is much more temperate than that of the former on account of the neighborhood of the sea, and being less elevated. The mountain chains of the peninsula generally extend E. and W., and most of those of Spain reach into Portugal. The vegetable productions are very much varied, consisting of wheat, oats, barley, olives, apples, peaches, oranges, lemons, wines, &c. Silk is made in abundance, and of excellent quality. Wine is the chief article of export, but salt and wool are also produced and exported, in ordinary years, to the amount of one million and a half of dollars.

The recent revolutions in Europe and the Brazils have very materially affected the foreign and domestic relations of Portugal.—See *Brazil*.

The Portuguese monarchy comprises in Europe Portugal, divided into six provinces:

Entre Douero e-Minho, extreme NW. Chief city, Oporto. Pop. 883,000.

Tras-os-Montes, extreme NE. Chief city, Miranda. Pop. 310,000.

Beira, between Entre Douero-e-Minho, Trasos-Montes, and Estramadura and Alem-Tejo: Chief city, Coimbra. Pop. 1,024,000.

Estramadura, bounded by Beira NE., Alem-Tejo E. and SE., and the Atlantic ocean W. Chief city, Lisbon. Pop. 811,000.

Alem-Tejo, bounded by Beira N., Estramadura NW., Spain E., Algarva S., and Atlantic ocean SW. Chief city, Evora. Pop. 359,000.

Algarva, bounded by Alem-Tejo N., Spain E., and the Atlantic ocean S. and W. Chief city, Faro. Pop. 113,000.

Posen, fortified city of Great Poland, capital of a palatinate of the same name, with a university. It is seated in a pleasant plain, 27 ms. W. by S. of Gnesna. Lon. 17° W., lat. 52 24 N.—Government of Prussian Poland, of which Posen is the capital.

Posey, SW. co., Ia., occupying the peninsula between the Ohio and Wabash rivers, and bounded by Gibson N. and Vandenburg E. Length 30 ms., mean width 14; area about 430 sq. ms. Chief town, Mount Vernon. Pop. 1820, 4,061. Lat. 38° N., lon. W. C. 10 44 W.

Post Mill, village and post office, Orange co., Vt., 54 ms. N. from Montpelier.

Post Oak, springs and post office, Roane co., Tenn.

Poti, or *Potik*, town and seaport of Russia, on the left bank and near the mouth of the Phasis or Rioni river, on the extreme eastern shore of the Black sea, N. lat. 42 20. It is the mart of Mingrelia, Imireti, Guria, and Georgia, and amongst the cessions made by Turkey to Russia in the treaty of September, 1829.

Potomac, river of Va., Md., and Pa., is a stream of incalculable importance in the interior or inland navigation of the U. S. If we turn our eye to a map of Va., we perceive the extreme northwestern sources of James river flowing to the SW., along the mountain valleys; and, extending our view to the headwaters of Potomac, we behold them flowing parallel to each other NE., also down the mountain valleys; and in the latter case we are struck with the very remarkable fact, that the Potomac rises W. of all the ridges of the Appalachian system, except that denominated Laurel Hill—the SW. angle of Md., or extreme western source of the Potomac, having the residue of the collateral ridges to pierce in its progress towards its recipient, the Chesapeake bay. This peculiar structure of the river valleys of the U. S. yields an unequalled facility of forming inland water communication through a very broad chain of mountains. Before proceeding to describe the Potomac, it may be remarked that the Appalachian or Alleghany system of mountains does not form the dividing ridge which separates the waters flowing into the Atlantic ocean from those which enter the Missis-

sippi basin, but that the separating river line the mountains obliquely.

The Potomac, draining the valleys of the palachian mountains from N. lat 38 25 to unites its various branches before piercing the Ridge, which it finally effects at Harper's F. 60 ms. NW. from W. C. Below its passage through the Blue Ridge to its egress into Chesapeake bay is about 200 ms., following the windings of the stream. The tide ascends to Georgetown, 3 ms. above the capitol in Washington where it is arrested by the gneiss range of the Shipls of the largest class are navigated to the yard, one mile below the capitol. Like all tributaries of Chesapeake bay, the Potomac low the head of tide water, opens gradually into a long narrow bay. By a singular caprice of nature, the Sesquehannah is considered as terminating at the head of tide water, whilst, in what is known by the name of Chesapeake Bay, merely the continuation of that noble river; in strictness, James river, York river, Rappahannock river, and Potomac, are its tributaries.

The sources of Cheat river branch of the nongahela, rise in Randolph co., Va., in the valley with the Potomac and those of the Yonogany, with a single intervening ridge separating them from those of the Potomac, partly in Randolph and Monongahela cos., in Va., and partly in Alleghany co., Md. Thus here again is the second instance of advancing from the N., of the origin of waters flowing into the opposite systems of the Mexican gulf and the Atlantic ocean, without an intervening mountain and yet amidst the Appalachian ridges. The peculiar features we have noticed in this section of country has drawn the attention of persons interesting into the subject of canal connection between the two river systems.

The SE. and main source of the Potomac in Pendleton co., Va., at lat. 31 25 N., and the next considerable stream of the valley, the Shenandoah, rises in Augusta co., as far S. as N. lat. 38°. The latter overtops the sources of the Rappahannock rivers, and interlocks with the sources of James river; the middle ridge of the Appalachian, or the mountain properly called the Kittatinny, ranges between the Potomac and the Shenandoah. Both rivers and all their branches flow to the NE., down the mountain valleys. The Potomac continues in that direction as far as N. lat. 39 41, within 2 ms. of the boundary of Pa., whence it turns at right angles, pierces the Kittatinny mountain, and flows to the SE. Forty ms. by comparative courses, below its passage through the Kittatinny, the Potomac receives the Shenandoah from the SW., and the united waters here pierce the Blue Ridge. The latter passage of the Potomac, through another of the Appalachian ridges, is known as the ceiling at Harper's Ferry. At their junction the Potomac has flowed by comparative courses 160, and the Shenandoah 120 ms.

From Harper's Ferry to the head of tide water, or to where the Potomac quits the primitive and enters the alluvial sea border formation, is 50 ms., and thence continuing by a general course to the N. and by comparative courses 100 ms., that river is lost in the Chesapeake bay at N. lat. 38°, being

ined exactly the lat. of the sources of Shenandoah. The entire length of the Potomac valley is 1,000 ms., presenting a very remarkable channel. Many of its minor valleys are composed of very fertile soil, and already an immense amount of produce is reared within it, and transported to the Atlantic ports.

It may be remarked that tobacco, as a staple commodity in large quantities, may be considered admitted by this valley, whilst wheat, rye, and apples, as staples, may be viewed as commenced.

From the peculiar form of the valley, and the very great difference of elevation of its banks, it presents a greater variety of climate than can be, upon a first glance upon its extent and position on a map, believed probable. If climate and the features of nature are both taken into consideration, the Potomac presents the most favorable varieties of any river in the Susquehanna basin to effect a water communication between the Atlantic ocean and the valley of Ohio.

The Potomac, in its natural state, is the most navigable branch of the Susquehanna. Ships of burden can be brought up to the navy yard at Washington, 5 ms. below the extreme head of tide.

Washington is upwards of 100 ms. in a straight line, and following the Chesapeake bay and the Potomac river, about 200 ms. distant from the Atlantic ocean. Washington is, therefore, the point nearest to U. S. to which the largest vessels can be transported the furthest into the interior of the continent.

Potosi, town of Peru, capital of a jurisdiction to the west of Charcos. Here are some of the best silviculture in all America, in a mountain in the form of a sugar loaf. Silver was formerly very abundant in this place, but the mines were much exhausted, or at least little is got in comparison of what was formerly. The country is so naked and barren that the inhabitants derive their provisions from the neighboring provinces. Situated at the bottom of the mountain of Potosi, 60 ms. WNW. of Africa. Lon. W. C. 9 1/2. Lat. 19 50 S.

Potosi, or *Mine-au-Burton*, town and seat of justice, Washington co., Mo., 70 ms. WSW. from St. Louis, and 55 W. from St. Genevieve. A schoolcraft, who visited this town, states that, at the epoch of his visit, (1818,) it contained 80 inhabitants, a court-house, jail, and academy, 3 stores, 2 breweries, 2 flour mills, 9 lead furnaces, 1 saw mill, and a post office. This traveller describes it as a handsome eminence, a little N. of the principal mines, and separated from Mine à Burton by Mine creek. It is environed by about 40 hills, within a radius of 20 ms. Lat. 37 56 N. W. C. 13 24.

Potosi San Louis, formerly an intendency, now a province of Mexico, bounded S. by Queretaro and Aguascalientes, W. by Zacatecas, N. by New Leon, Tamaulipas and the Gulf of Mexico, and E. by Vera Cruz. Length from N. to S. 200 ms. Mean width about 95, area 19,000 sq. ms. Situated between lat. 21 40 and 24 20 N., and from 100 10 to 102 10 W. C. 21 10 to 24° W.

The new independent State of San Louis Potosi comprises the former province of San Louis in its entire intendency of much greater extent. Though the principal area, San Louis presents a very great

inequality of climate, seasons, and of vegetable and mineral production. The western part commences on the elevated table land of Anahuac, at, perhaps, from 5,000 to 8,000 feet above the Gulf of Mexico. Falling from this aerial height to the bar of Tampico, the traveller, in a few days, experiences a change of temperature equal to 15° of latitude.

Crossed almost centrally by the northern tropic, and its parts differing so much in relative height, the air of this small State exhibits all the meteorological phenomena, usually found from the tropics to lat. 39°. Humboldt, speaking of the intendency, observes: "Of the whole intendency of San Louis Potosi, only that part which adjoins the province of Zacatecas, in which are the rich mines of Charcas, Guadalcázar, and Catorce, is a cold and mountainous country." The mountain region, reverted to by this acute observer, is the western part of the new State, and contains its capital. San Louis is very deficient in rivers or harbors, but rich in soil and mineral wealth. Upon Tanner's map, the pop. is stated at 174,957. This would yield a distributive pop. of a fraction above 10 to the sq. m.

Potosi, San Louis, city of Mexico, and seat of government for the State of San Louis Potosi. It is situated on the high table land of Anahuac, near the source of the river Panuco, 264 ms. NNW. from the city of Mexico. Lat. 22 3 N., lon. W. C. 23 25 W. Pop. 15,000.

Potsdam, city of Prussia, in the middle marche of Brandenburg, with a palace belonging to the king of Prussia. It is the most elegant and singular city in Europe, on an island 10 ms in circumference, formed by the rivers Spree and Havel, 12 ms. W. of Berlin. Lon. 13 46 E., lat. 51 52 N. — Province of German Prussia, comprehending the Ucker mark, the mark of Preignitz, and the greatest part of the Middle mark. It lies between Pomerania, West Prussia, and Saxony. — Town, St. Lawrence co., New York, on Racket river, about 90 ms. W. from Plattsburg. Pop. in 1820, 1,911.

Potter, co., Pa., bounded by Alleghany co., N. Y., N., Steuben, N. Y., NE., Tioga co., Pa., E., Lycoming SE. and S., and McKean W. Length 37, breadth 30 ms., area 1,100 sq. ms. This co. extends over an extensive table land, from which the rivers flow like radii from a common centre; Alleghany flows NW. into N. Y., the extreme SW. sources of Tioga river flow NE. also into N. Y., whilst in the intermediate space Genesee rises, and, flowing N., pursues its course towards Lake Ontario. Pine creek, Kettle creek, the Sinamahoning, and Driftwood branches of the W. branch of the Susquehanna, all rise in the southern section of this co., and flows S. All these streams rise near Coudersport, and very near the centre of the co. Pop. in 1820, 4,836; and in 1840, 3,371. Central lat. 41 45 N., lon. W. C. 1° W.

Potter, SE. tp. of Centre co., Pa. Pop. 1820, 1,810.

Potter's Hollow, village, Albany co., N. Y.

Potterstown, village, Hunterdon co., N. Y., 12 ms NW. by W. from Somerville.

Pottiesville, village, Louisa co., Va., about 60 ms. from Richmond.

Potton, town of Eng., in Bedfordshire, 12 ms. E. of Bedford, and 48 N. by W. of London. Lon. 18' W., lat. 52 11 N.

Pottsgrove, upper tp., of Montgomery co., Pa. on the Schuylkill. Pop. in 1820, 1,822.

Pottstown, village, Montgomery co., Pa., in Pottsgrove tp., on the Schuylkill, 16 ms. below Reading.

Pottsville, village, Schuylkill co., Pa.

Poughkeepsie, town, the capital of Dutchess co., N. Y., situated on the E. bank of Hudson river, 47 ms. S. of the city of Hudson, and 85 N. of the city of N. Y. The village of Poughkeepsie is on an elevated plain, and has a neat and even romantic appearance. It is a place of considerable manufactures, and has, in addition to the ordinary co. buildings, an academy and five or six places of public worship. Pop. in 1810, 4,670; in 1820, 5,726; and in 1840, 10,006.

Poundridge, village, West Chester co., N. Y.

Powell's River, the NW. branch of Tennessee, rises in Scott and Lee cos., flows SW., and enters Claiborne co., Tenn., and joins Clinch river at Grantsborough, in the southern part of Campbell co.

Powell's Valley, partly in Va., and partly in Tenn., spreads between Powell's and Cumberland mountains.

Powelton, town, Hancock co., Ga., on the right side of the Ogeechee, near its source, 35 ms. NNE. from Milledgeville. It is the seat of an academy.

Powhatan, or *Pohatan*, co. of Va., on James river, bounded by Chesterfield SE., Appomattox river or Amelia S., Cumberland W., and James river or Goochland N. Length 20, mean width 16 ms.; area 320 sq. ms. Its chief town, Scottsville, is about 25 ms. nearly W. from Richmond. Pop. in 1820, 8,292; in 1840, 7,924.

PRAGMATIC, Greek root *prasso*, to do, or to practise. From this source comes *pragmatic sanction*. In France, during the three first races of its kings, this title was given to royal acts made in concert with the grantees. In Germany, pragmatic sanctions were the resolutions made by the general diet of the empire.

The title of **PRAGMATIC SANCTION** has been, at a much more recent date, made remarkable from that constitution or settlement made in 1772 by the emperor Charles VI, in favor of his daughter Maria Theresa, securing to her and heirs the succession, he having no sons. This pragmatic sanction was confirmed by the imperial diet, and guaranteed by many of the other Powers of Europe.

The Council of Basil, which terminated its sittings in 1449, made, during its session, several decrees in regard to the church. These decrees were in part adopted by the French nation, and served as base to the famous **PRAGMATIC SANCTION** which Charles VII caused to be drawn up at Bourges in 1438, and whose stipulations formed the constitution, in great part, of what has been called "*The Liberties of the Gallican Church.*" The

example of the French was speedily followed the Germans, who acceded to those decrees at diet of Mayence, 1439.

Prague, capital city of Bohemia, on both of the Muldau, 5 ms. below the mouth of the raun. It is the military headquarters, seat of highest courts of justice, and the general rendezvous of the nobility and gentry of Bohemia. The climate, though cold, is healthy. The university of Prague was instituted in 1348 by Ch IV., and is the most ancient in Germany. still a very flourishing institution. Lat. 50 5 lon. 14 25 E.; 160 ms. English NW. from enna, 70 SSE. from Dresden, and 170 a full of S. from Berlin.

Prairie, tp., Wayne co., O., 6 ms S. Wooster. Pop. 1820, 706.—Tp. in the eastern limits of Franklin co., O. Pop. 1820,

Prairie Creek, village, Vigo co., Ia., 95 SW. by W. from Indianapolis.

Prairie du Chien, settlement on the left of the Mississippi river, Crawford co., Mich. above the mouth of Wisconsin river. It is an ancient settlement, made by French traders. U. S. Fort Crawford stands in this settlement.

Prairie du Roche, village, Randolph co., N. C. It is the same village named often *Prairie du Rocher*.—See *Prairie du Rocher*.

Prairie Mound, village, Lillard co., Mo.

Prairie du Rocher, tp., Randolph co., Ill. 12 ms. from Kaskaskias.

Prallsville, village, Hunterdon co., N. J.

Prattsburg, town, Steuben co., N. Y. 1820, 1,377.

Prattsville, village, Alleghany co., Md., on road from Hancockstown to Cumberland, and nearly midway between those places, and by road 115 ms. NW. from W. C.

Praya—See *Portu Praya*.

Preble, co. of O., bounded by Ia. W., Ia. N., Montgomery E., and Butler S. Length, breadth 18 ms.; area 432 sq. ms. Surface generally level, and soil productive in grain, and pasturage. Chief town, Eaton.—T. Cortland co., N. Y. Pop. 1840, 19,482.

PRECESSION, or, far more correctly, **RECESSION**, of the equinoxes. This term is used to express an annual change of place of equinoctial point arising from a slow but constant deflexion of the earth's axis from its parallelism of 50". 1 annu. The solar year is 365 days, 5 hours, 48 minutes, and 52 seconds; the sidereal year is 365 days, 5 hours, 9 minutes, and 12 seconds; difference of time 20 minutes and 20 seconds, which the sidereal year exceeds the solar; or the earth comes to equinox to equinox 1,220 seconds sooner than from star to star; and hence the *recession* or *ward* of the equinoctial points.

Precep, or *Percep*, town and fortress of Asia, in the government of Catharinenslaf, and province of Taurida, seated on the isthmus that divides the Crimea to the continent. A deep trench 4 ms. in length, is cut across the isthmus, over which is a bridge, and upon that a vaulted gate, called the Golden Gate of the Tartars. Lon. 35 3 lat. 46 8 N.

Prosa, town of European Turkey, in Albania, at the ruins of the ancient Nicopolis, built by the Emperor Augustus, in memory of his vicar, St. Anthony. It is seated on a mountain, about 70 ms. NW. of Lepanto. Lon. $21^{\circ} 15'$ E., lat. $39^{\circ} 14'$ N.

Proffit's Knob, village, Barren co., Ky., 144 ms. SW. from Frankfort.

Price's Tavern, and post office, Louisa co., Va., 60 ms. NW. from Richmond.

Priestford, village, Hartford county, Maryland.

Prince Edward, co. of U. C., occupying a peninsula between Lake Ontario and the bay of Quinte.

Prince Edward, co., Va., bounded by Lunenburg SE., Charlotte S. and SW., Buckingham NW., Cumberland or Appomattox river N., Amelia NE., and Nottaway E. Length 25, mean width 10 ms.; area 250 sq. ms. It is drained by the sources of Appomattox. Chief town, Farmville. Pop. 1820, 12,557; and in 1840, 14,069. Cent. lat. $37^{\circ} 12'$ N., lon. W. C. $1^{\circ} 30'$ W.

The following additional information respecting this co. was forwarded to the publishers of the former edition, and continued in this from the importance of its contents.

The co. derives great advantage from the navigation of the Appomattox. A large part is fertile, well watered, and highly cultivated. Industry and economy characterize the inhabitants. The most numerous religious denominations are the Methodist and Baptist; there are 3 Presbyterian churches. An English school is kept in every neighborhood; 6 or 8 valuable classic schools are maintained; and great attention is given by the more wealthy citizens to female education. Various benevolent associations are formed for the distribution of bibles and tracts, for the support of Sabbath schools, and for educating indigent and promising youth.

Hampden Sydney College, in this co., has an elevated, dry, and remarkably healthy situation, 80 ms. SW. from Richmond, and central to the southern section of Va. The college was founded in 1775.

The charter is as liberal and ample as that of any college in the U. S. The corporation consists of 27 men, most of whom are graduates of other colleges. The laws of the corporation, which relate to the instruction and to the internal government of the college, are committed to the faculty, consisting of the president, professors, and tutors.

The following professorships have been established; the president is the professor of Mental Philosophy, Rhetoric, Moral Philosophy, and Natural Law. The professor of Chemistry and Natural Philosophy, of Mathematics, and of the Learned Languages.

The apparatus is adequate to a very liberal course of experiments in chemistry and natural philosophy. A collection of valuable specimens is the commencement of a mineralogical cabinet. The college library, with those belonging to the Philanthropic, the Union, and Philosophical societies, exceed 2,000 select volumes. The permanent funds of the college consist in land, and bank stock. By a provision of the Legislature, it will receive more ample endowment.

There is also a valuable academy, under the direction of the faculty, in which those studies only are taught that are required for the admission into the lowest college class. The college year has two sessions; the winter session, six months, commences with November and ends with April. The summer session commences with June, and ends

with the college commencement, on the last Thursday in September.

The expenses are—

For board,	\$10	a month,	\$100	for the year.
For tuition,	4	do	40	do
For room rent and servants	1	do	10	do

Amount \$15 \$150

There is no town or village in the vicinity of the college, and the students are distinguished for virtue and order.

NE. of Trenton, and 100 ms. Philadelphia, in lat. 40 22 N., and lon. 74 15 W. The college erected here, called Nassau Hall, founded in 1738, is a handsome stone building, 180 feet wide by 54 deep, placed on an eminence that commands a pleasing view of the adjacent country. The presidents have been distinguished for learning and piety, and the institution has produced men of extensive usefulness in Church and State.

The college library contains about 8,000 volumes, with a fine philosophical apparatus, and a museum of science; an orrery constructed by the celebrated David Rittenhouse; and a valuable cabinet of mineralogy and natural history in general. The faculty consists of a president, vice president, who is professor of languages and belles lettres, a professor of mathematics and mechanical philosophy, and a professor of chemistry, experimental philosophy, and natural history; with three students about 120.

According to Dr. Morse, the number of persons educated in this college from its foundation were 1,023, of whom 1,023 were living in 1815. An amount of collegiate and other expenses for a student at this college, \$225.

A theological seminary was formed here in 1812, under the General Assembly of the Presbyterian Church.

The edifice for this institution is a spacious stone building, standing to the E. of the town of Princeton, to Trenton, a little S. of the town.

The foundation has two professors, one in logic and polemic theology, and the other of ecclesiastical history. Students about 70.

PROLEGOMENA, nearly synonymous with *preface*, or preparatory remarks, to explain what is to follow.

PROLETAIRE, *proletarius*, Latin, used by the Romans as a term of contempt for the mass of poor persons who furnished to the republic only children—*proles*. This term, now adopted with an acceptance, meaning the common people, and respectfully, also, into the French language, has not, however, until recently, been introduced into their Lexicons. It is not found in the Dictionary of the Academy, (edition 1814,) but is in that of Landais, 1834. It is introduced in this our Dictionary from the evidence it affords of the estimation in which were held, not the slaves, but even the mass of free but poor people by the Romans, and how much the import of a word depends on the tone of thinking, and, finally, from the proof it gives in its modern acceptance of the increased value set on human life, independent of externals.

Pron, town of the kingdom of Burmah, seated on the Menan, 200 ms. NW. of Pegu. Lon. 94° E., lat. 17 50 N.

PROPAGANDE. Thus abridged is the general title given to the congregation DE PROPAGANDA FIDE, established at Rome in 1622, by Gregory, XV., for the propagation of the Faith. There was, in 1649, established in England a society with the same title and for like purpose. Indeed, any missionary society established with a view to propa-

gate the Christian religion, is really a society *de propagande fide*.

Prospect, town, Hancock co., Me., on the W. side of Penobscot river, 8 ms. NE. of Belfast and 7 S. of Frankfort, all lying on the same river. Pop. in 1810, 1,300; and in 1820, 1,771.—Town, Prince Edward co., Va., by post road 105 miles SW. from Richmond.

Prospect Hill, village, Rensselaer co., N. Y., 23 ms. from Albany.—Post office, Fairfax co., Va., 14 miles N. by W. from W. C.—Village, Caswell co., N. C., by post road 88 miles NW. from Raleigh.

Provence, late province of France, 138 miles long, and 100 broad, bounded on the N. by Dauphiny, on the S. by the Mediterranean, on the W. by the river Rhone, which separates it from Languedoc, and on the E. by the Alps and the river Var. The air near the Alps and Dauphiny is cold, on the seacoast hot, and in the middle, temperate. In that which was called Upper Provence, the soil is fertile in corn and pastures, but in Lower Provence dry and sandy. It produces, however, wine, oil, figs, almonds, prunes, and pomegranates, along the seacoast from Toulon to Nice. There are orange and citron trees in the open fields, and many medicinal plants, mineral waters, and mines of several kinds. Provence now forms the departments of Var, the Lower Alps, and the Mouths of the Rhone.

Providence, capital of the State of Rhode Island, a town and port of entry, situate in Providence county, and on Providence river, near the head of Naragansett bay, and in lat. 41 49 N., and lon. 71 23 W. It lies 30 ms. N. by W. of Newport, and 45 SW. of Boston. The harbor is safe and commodious, though inferior to that of Newport. This is one of the most flourishing towns, compared to its extent, in the United States, and the most manufacturing in proportion to population. The manufactures of cotton cloths employ in Providence and vicinity above 100 factories—the mass of the business and capital of which centre in that city.

The manufacturing and commercial prosperity of Providence have advanced together. The amount of shipping approaches 20,000 tons, a considerable part of which is engaged in the cotton trade.

Brown University, in Providence, was originally established in Warren in 1764, and, in 1770, removed to Providence. It possesses a president and eight professors, in mathematics, natural philosophy, of law, of moral philosophy and metaphysics, of oratory, belles lettres, of anatomy and surgery, of materia medica and botany, of the theory and practice of physic, and of chemistry. The library exceeds 5,000 volumes. The philosophical apparatus is extensive. The whole institution is highly respectable and flourishing. Number of students usually about 120.

Prussia, Kingdom of. The Kingdom of Prussia, situated, like Austria, nearly in the centre of Europe, and, like it, is composed of various countries, provinces, and districts, inhabited by people of different nations and languages, and who have a stronger bond of union than that of being united in one sovereignty. Exclusive of Neuchâtel and of some small isolated districts in Saxony,

the kingdom is formed of two large, unequal, and distinct tracts of country, separated from each other by the German States of Hanover, Brunswick, Hesse, Nassau, and the Kingdom and Duchies of Saxony. Outline very irregular; of course no definite mean length or breadth can be given. Distance from the southwestern to the northeastern extremes something above 700 Eng. ms. The aggregate area in English sq. ms., 93,603.

The kingdom is divided, exclusive of Neuchâtel, into eight provinces, and those subdivided into twenty five governments, (Regierungs bezerhe,) and still further portioned into 328 circles.

Prussia comprises a part of that great plain which, extending in France, extends to the extreme eastern angle of Europe with a general N.W.

Advancing from W. to E. Prussia is traversed by the rivers Rhine, Ems, Weser, Oder, Vistula, Pregel, and Niemen. With a few partial exceptions the surface is level, with a few sterile, though cultivated by a population above 150 to the English sq. m. Were the zone of the U. S. from ocean to ocean populated thus peopled, they would exceed a hundred millions. Prussia, from Upper Silesia, lat. 49 50, extends to Polangen on the Baltic, lat. 54, or a small space above 5° of N. lat. The northern inclination and exposure of its mountains in the winters of Prussia are colder than in Southern Sweden and the Danish islands. The Vistula, river of Poland which rises in Red Russia, the mountain of Crapach, crosses part of the province of Lemburg, runs through all Moldavia and falls into the Danube.

Novgorod, formerly comprised in the government of Novgorod.

Pskof, or *Pleskof*, an archiepiscopal town of Russia, capital of a government of the same name, on the river Velika, 80 ms. S. of Narva, and 150 S. by W. of Petersburg. Lon. 27 52 E., lat. 57 58 N.

Pskof Pleskof, lake of Russia, in a government of the same name.

Puckhohi, town of Hindoostan proper, in the province of Lahore. Lon. 72 5 E., lat. 33 45 N.

Pudder, river of Hindoostan proper, which rises in the SW. part of Agimere, divides the provinces of Cutch and Guzerat, and falls into the gulf of Cutch.

Pudoga, town of Russia, in the government of Olonetz. It lies on the E. coast of the lake Onexkoe, 108 ms. E. of Olenetz. Lon. 36 30 E., lat. 61 36 N.

Puebla, town of Spain, in Estramadura, seated near the Guadiana, 15 ms. W. of Meridad. Lon. 6 23 W, lat. 38 42 N.

Puebla-de-los-Angeles, formerly an intendency, now a State of Mexico, bounded by the Pacific ocean S., Mexico W., Querataro NW., Vera Cruz NE., and Oaxaca E. and SE. Length 350 ms., mean breadth 53, area 18,441 sq. ms. This State extends from 16 57 W., lon. to 20 40 N. lat., and is entirely within the tropics. Above lat. 18° Puebla spreads into an immense plain from 5,900 to 6,560 feet elevation, and highly productive in wheat, maize, agave, and fruit trees. Puebla may properly, like Oaxaca, Mexico, and Mechoacan, be divided into the mountains and oceanic regions. Below N. lat 18°, along the small river Yopez, to the Pacific, the country falls from 5,000 feet to the level of that ocean. The population is concentrated upon the elevated and salubrious table land, and though well adapted to the cultivation of sugar, indigo, cotton, and great variety of tropical productions, the southeastern slope is left in great part a wilderness. The population given on Tanner's map (1825) is 1,212,495. This mass, or at least one million, exists upon about 10,000 sq. ms., affording a distributive population to the northern part of the State of 100 to the sq. m. Under the head of *Pyramids of America*, the reader will see a condensed view of the immense remains of antiquity found in Puebla.—See also *Popocatepetl*.

This State, rich in manufactures and vegetable produce, has little metallic wealth in its bowels, or if the precious ores exist they have not been discovered. Salt and marble abound. External commerce inconsiderable. The most remarkable cities and towns are Puebla-de-los-Angeles, Tlascalala, Cholula, Atlixco, Tehucande-los-Grenadas, Tepeyaca or Tepeyacac, and Huajocinco or Huezotzinco. The small territory of Tlascalala is enclosed within the State of Pluebla.

Puebla-de-los Angeles, city of Mexico and capital of the State of the same name. This fine city was founded by the Spaniards in 1531, on the plain of Acaxete or Cuitlaxoapan. It is the fourth city of Spanish America according to Humboldt, who states that it is only exceeded by Mexico, Guanaxuato, and Havannah. Pop. in 1803, from Humboldt, 67,800; and in 1825, by Tanner's map, 100,000. Lat. 19° N., lon. W. C. 21° W., 87 ms. SE. by E. from Mexico, and 160 ms. WNW. from Vera Cruz.

Puent-del-arcobispo, town of Spain, in Estramadura, on the river Tajo, over which is a handsome bridge, 40 ms. SW. of Teledo. Lon. 4 15 W., lat 39 38 N.

Puente-de-lo-Keyne, town of Spain, in Navarre, seated on the river Agra, 10 ms. SW. of Pampeluna. Lon. 4 39 W., lat. 42 41 N.

Puerto Pello, Puerto Rico, &c.—See *Porto Bello, Porto Rico, &c.*

Pughtown, town, Chester co., Pa., on French creek, 35 ms. NW. from Philadelphia.

Puglia, modern name of the ancient Apulia, containing the three provinces of Capatanata, Bari, and Otranto, on the E. side of the kingdom of Naples.

Pulaon, island in the Indian ocean, lying on the W. side of the Philippines. It is very fertile, and subject to its own king, who is tributary to that of Borneo. Lon. 129 12 E., lat. 9 30 N.

Pulaski, co. of Ga., bounded by Telfair SE.,

Houston SW., Monroe NW., Twiggs N., Laurens NE. Length 35 ms., mean width and area 490 sq. ms. Little Oakmulgee river in the NE. angle, and traverses the entire length of this county, and the main Oakmulgee also passes through its SW. side. Chief town, Hartford. In 1820, 5,223; and in 1840, 5,389. Centra 32 18 N., lon. W. C. 6 16 W.

Pulaski, co. of Ky., bounded by Cumberland river, or Wayne, S., Adair W., Casey and coln NW., Rockcastle NE., and Rockcastle or White, E. Length 35 ms., mean width and area about 800 sq. ms. Chief town, Somerset. Pop. in 1820, 7,597; and in 1840, 9,000.

Pulaski, village and seat of justice for Jackson co., Ten., on Richland branch of Elk river, 6 miles NW. from Huntsville, and 80 miles S. from Nashville.

Pulaski, co. of Mo., on the head branch of the Gasconade river. Under the name of Pulaski a space of more than 2,000 sq. ms. are included, and which, in the advance of settlement, were divided into several counties. The NE. corner, bounding on Crawford, Gasconade, and Monroe cos., will, it is probable, retain the original name.—See *Waynesville*, Pulaski co. Pop. in 1840, 6,529.

Pulaski, co. of Ark., bounded S. by Jefferson by Saline SW., Conway NW., White NE., and Monroe and Arkansas cos. E. It is traversed by the Arkansas river; the area exceeding 1,600 sq. ms. N. lat. 35°, and lon. 15° W. of W. C. intersect in the northern part of this county. Pop. in 1840, 5,350.

panjaub, *Punjnud*, or *Five Rivers*, a general name indefinite name used in our books for that of Indostan drained by the various branches of the great southeastern confluent of the Indus. Mr. observes, that "the name of Punjnud, or Rivers, is unknown to the natives," and we entitle the united stream the Accessines of the rivers, Gurrak, or Chenaub, the name of the Five being lost in that of the great stream. It is to be observed that this fact is expressly mentioned by Arrian: "The Accessines (Chenaub) receive its name till it falls at last into the Indus, but has received three other rivers." The Sutler or Hesudrus, is not mentioned by Alexander's historians. These united rivers form a noble stream, and the banks of the Chenaub are free from sick tamarisk jungles of the Indus.—See *Cheriver*.

Puy, town of Fr., in the dep. of Upper Loire, and late province of Velay, seated on the mountain Anis, near the river Loire. Puy has manufactures of lace and silk stuffs, and is 45 ms. NE. of Mende.

Puycerda, town of Spain, in Catalonia, and capital of Cerdagna, between the Carol and Segra, at the foot of the Pyrenees, 53 ms. W. of Perpignan, and 67 NW. of Barcelona. Lon. 1 50 E., lat. 42 36 N.

Puy-de-Dome, dep. of Fr., containing part of the late province of Auvergne. This department includes almost all Limagne, a territory about 12 leagues long, by 6 broad, one of the most pleasant

and fertile in Fr.; in which are seen, under the same point of view, orchards, meadows, vineyards, arable land, in a word, every kind of cultivation imaginable. The borders of this basin, or circular plain, are mountains now covered with habitations, herbs, and flocks, but once so many volcanoes, which exhibited to the inspection of the learned, the most extraordinary phenomena. Clermont is the capital of this department.

Puy-en-Anjou, town of Fr., in the dep. of Maine and Loire, and late province of Anjou, 10 ms. SW. of Saumur, and 260 of Paris. Lon. 0 13 W., lat. 47 6 N.

PYRAMID, *Greek pur*, as the Pyramid ends in a point like flame. The Pyramid differs from the cone as the sides of the former are triangles, that of the latter (for strictly speaking it has but one side) is curvilinear. The pyramid may rest upon or have for a base, a triangle, square, or any polygon, and from which comes the name of any pyramid in particular, triangular, quadrangular, polygonal, &c.

Pyramids of Egypt, structures formerly counted one of the seven wonders of the world. They are built upon a rock, at the foot of the high mountains which accompany the Nile in its course, and separate Egypt from Lybia. Various have been the conjectures how and when they were built, yet no two authors agree, exactly about them; however, this is certain, that they are extremely ancient, and that there is no account, in any author of credit, when or for what reason they were founded.

Pyramids, Teocalli, and other ruins of North America. The stupendous magnitude of those monuments of antiquity on some parts of this continent is very little known. They are spread over an immense space of country in the empire of Mexico. They consist of:

Cholula, situated in the intendency of Puebla, N. lat. 19 2 W., lon. W. C. 21 13. This pyramid consists of four stages, perpendicular elevation 177 feet, and the horizontal breadth of the base 1,423 feet. Its sides are exactly parallel to the meridians and parallels of lat., and constructed of alternate strata of brick and clay. It is matter of real astonishment to find the similarity of form and constituent material between this Mexican monument, and that of the temple of Belus, at Babylon, and the pyramids of Muischich, Dasher, near Sahara, in Egypt.

The immense platform of this truncated pyramid has an area of 45,208 sq. feet, whose sides

exceed 212.5 feet. From this platform is seen clear weather, the volcanoes of Puebla, Pe Orizaba, and the mountains of Matlacueye.

The pyramid of Cholula, and that of Teotihuacan, are very nearly of equal height, about 10 feet higher than the Mycerinus, or in elevation of the group of Ghize. Its length base exceeds that of all similar monuments by travellers on either continent; and is a double that of Cheops. It has been supposed that this vast edifice was formed by an incrustation of clay and brick around a natural hill; road cut through part of the first, or lower part, favors the supposition, that it is entirely artificial. Though dilapidated by time, and no doubt depressed, yet its height, and the length of its base are still 8 to 1, while that of Ghize is nearly. It has long been observed, that a gradation of symmetrical pyramids surround the larger of those of Egypt. Mr. Grobert has published a drawing of the regular disposition of the small pyramids, which environ the Cheop Mycerinus at Ghize. The Teocalli at Cholula and Teotihuacan, are in an analogous manner rounded by lesser monuments. To the W. of the former, stand two prismatical masses, now Alcosac, and Cerro de la Cruz.

To the NE. of the city of Mexico, and in the Lake of Tezcuco, in the Mexican valley, are remains of the Teocalli, or temple of the sun, moon, or pyramids of Teotihuacan, consisting of two truncated pyramids, called in the Aztec language Tonatiuh Ytzaqual, house of the sun, and Metzli Ytzaqual, house of the moon. According to the admeasurement made by a Mexican Doctor, Orteyza, the house of the sun, which is in its southern, has in its present state, a base of 320 feet, and 171 feet perpendicular elevation. The house of the moon has a lesser base, and a perpendicular height of 135 feet. Those monuments from their form would seem to have been models from which the other Teocallies of Mexico were constructed. The Aztec nation formerly the Spaniards in New Spain, attributed the pyramids of Teotihuacan to the Toultecs, consequently they must have been created above 1,000 years. Siguenza believes them to be the production of the Omecs; if so, they are three or four centuries still more ancient, than if constructed by the Toultecs.

The faces of these edifices are within 52' of exact conformity to the meridians and parallels. Their interior is clay mixed with small stones encrusted by a shell of porous amygdaloid. The surface of a bed of lime covering the stones are still visible. Time, the inroads of vegetation, and human curiosity, are here, as in all similar cases, concealing the pyramidal to the conical figure, by effacing the features of the outer crust. The original was composed of four stages, again subdivided into steps of a little more than three feet. A winding staircase of a large hewn stones formerly led to the top. The Tonatiuh Ytzaqual has, according to Orteyza, a cubic mass of 32,743,201 cubic feet. To pierce such enormous bodies is a very difficult undertaking; it is therefore not easy to determine the problem, whether they are natural elevations modified by the hand of man, or entirely artificial. M. Humboldt inclines to the latter supposition.

ecting those of Mexico, and supports his opinion by their isolated position on plains. That of Teotihuacan are the products of art, is red almost certain by the circumstance of a of smaller pyramids surrounding the larger. The lesser monuments of about 30 feet elevation, stand from the four faces of the larger pyramids in streets in exact conformity to the meridians parallels. They amount to many hundreds, are more abundant S. of the temple of the sun, than towards the temple of the sun. According to the traditions of the natives, these pyramids were dedicated to the stars. It is little doubt but that they served as sepulchres to the chiefs of tribes. The whole plain was formerly in the Azteca, and Toulteca languages, the name of Micoatl, or *road of the dead*. "What analogies," says Humboldt, "with the monuments of the ancient continent! This Toulteca (or Olmec,) nation, arriving on the Mexican coast in the 7th century, (or more early,) conceived on a uniform plan, several of these monuments, those truncated pyramids, built by layers, like the temple of Belus at Babylon. Whence did they derive the model of edifices? Were they of Mogul race? Did they descend from the common stock with the Chinese, the Hiongnu, and the Japanese?" Or probably, were they not a race whose civilization was indigenous? The pyramidal form of the Chinese, and their N. and S. and E. and W. position, the result of obvious natural causes, applicable to all mankind.

Another ancient monument is the military monument of Xochicalco, situated to the SSW. of Texcoco, near Tetzama. It is an insulated pyramid of 330 feet elevation, surrounded with trenches, and divided into 5 stages or terraces, covered with masonry the whole forming a truncated pyramid, the four faces correspond to the cardinal points. The walls are of basaltic and porphyry stones are covered with hieroglyphics, the most striking of which are the figures of men spouting water and men sitting in the seated position of Asiatics. The platform of the monument contains more than 96,825 feet. M. de Humboldt calls this a fortress, it seems, from its form, to have had an analogy with the pyramids of Cholula and Teotihuacan. Edifices, however, answering the double purpose of forts and temples, have been found in various parts of the earth, in very distant ages.

The most remarkable monument of antiquity in Mexico, for the elegance and symmetry of its ornaments, is the ruins of the palace or temple of the Sun at Oaxaca. The walls of Mitla are decorated with Grecques, and labyrinths, in Mosaic, of porphyry stones. Mitla was called by the Aztecs, *Miquitlan*, or *place of sadness*. It appears from its form, and from tradition, to have been a palace erected over the tombs of the kings. It is a house of mourning, to which the monarch used to deposit and weep over the remains of a relative, and where he himself was one day deposited with the ashes of his fathers. It is in the earliest stages of civilization that these colossal monuments are erected for the dead. In India, in America, the founders are buried in the fragments of their own mausoleums. The palace tombs of Mitla form three edifices

symmetrically arranged, and in a very romantic situation. The principal and best preserved edifice is about 130 feet in length; a stairway leads to a subterranean vault, 88 by 26 feet. This gloomy recess is also ornamented with Grecques.

But what particularly distinguishes the ruins of Mitla from every other remain of Aztec architecture is 6 porphyry columns, which are placed in and support the ceiling of an immense hall. The columns, the only ones yet found in America, evince the infancy of art, having neither base nor capital. Each is composed of a single block of amphibolous porphyry. They are 16.4 feet in height, and their proportions, 12 modules or 6 diameters, consequently would be higher than the Tuscan, if the inferior diameter of the columns of Mitla were not in the proportion of three to two to their upper diameter.

A striking analogy has been observed in the distribution of the interior apartments of Mitla, and in the monuments of upper Egypt, drawn by Denon. In the ruins of Mitla have been found paintings representing warlike trophies and trophies.

In the northern part of the intendency of Vera Cruz, W. from the mouth of the river Tecolutla, two leagues distant from the great Indian village of Papantla, we meet with a pyramidal edifice of great antiquity. This singular remain is of late discovery, not being known to the Spaniards above 60 years. The pyramid of Papantla is not composed of clay and bricks, mixed with basaltic stones, and faced with a wall of amygdaloid, like those of Cholula and Teotihuacan; the materials employed in the construction of those of Papantla are enormous stones very regularly cut. Mortar is still distinguishable in the seams. The stones are carved full of hieroglyphics.

The base of this pyramid is an exact square, each side having 82 feet; its perpendicular height is about 60 feet. The pyramid of Papantla is not so remarkable for its mass as for its symmetry, the fine polish of the stones, and their very regular cut. It is like all the other Mexican Tocali, erected in stages, six remain distinguishable, and a seventh appears to be concealed by the vegetation which covers its outside to its summit. A great stair of 57 steps conducts to the truncated top or platform. On each side of the great stair is a small stair; on each side are hieroglyphics, in which the figures of serpents and crocodiles in relief are visible. Each story contains a great number of square niches symmetrically distributed. In the first story is 24 on each side, in the second 20, and in the third 16.

At an immense distance from the monuments of Mexico, near the Rio Gila, are found very extensive ruins of an ancient Aztec city, in the midst of which is the edifice, called by pre-eminence, *la Casa Grande*, laid out in exact conformity to the four cardinal points. The ruins spread over more than a square league of ground. The Casa Grande is 445 by 276 feet, constructed with clay. The walls are 3 feet 11 inches in thickness. It is still perceptible that this edifice had three stories and a terrace. The stair was on the outside. A similar construction is still preserved in all the villages of the independent Indians of the Moqui, NW. from New Mexico. The ruins are on a plain, where the remains of a canal are yet visible which serv-

ed to conduct the waters of the Rio Gila to the city. The whole plain is covered with broken pitchers and pots, painted blue, red, and white. Amongst these fragments are found pieces of obsidian, (iltzli,) from which the Mexicans formed their knives and razors. The Indians of the Rio Gila yet retain a great share of their ancient civilization, and in their architecture and household furniture much of the perfection of their ancient arts.

To these ruins, in Mexico and the internal province, may be added the remains found in the basin of the Mississippi. The latter are indeed much more diminutive than the former, and built on an entirely different plan. A connexion between the remains in Mexico and those in Mississippi basin has been supposed, but seems unsupported by any conclusive testimony arising from analogy. Obsidian is entirely wanting in the fragments of domestic utensils and military weapons found in the Mississippi ruins. The pottery is also different in the two regions. But the most decisive circumstance, evincing an entire disconnection, is that in the intermediate countries no remains similar to either are found. The solidity, extent, and hieroglyphic sculpture, found on so large a scale in the Mexican monuments, evince a state of science, art, and civilization, at least as far advanced as that of Egypt at the period when the pyramids were constructed, whilst the rudeness, simplicity, and absence of all mental representation in their structures, prove that the ancient inhabitants of Ohio and Mississippi were not more, if as far advanced in the arts of civilized life as the present tribes of South Sea islanders. These expressions I am induced to modify. On a careful examination of the remains at Marietta, in the State of O., there is no doubt of their construction being founded on the same principles, and for like purposes, with those at Mexico. Remains of Teocali, of no small magnitude, exist at Marietta, and evince, with other remains there and elsewhere in the West, a very considerable advance in the arts.

The most remarkable circumstance, however, respecting the North American ruins, is their almost entire non-existence, on the Atlantic slope, E. of the Alleghany mountains, the aboriginal nations seem to have been at all times purely savage, whilst traces of agricultural life are frequent and striking W. of the Alleghany ridge, in all the intermediate stages, from the barrow of Ohio to the superb vast edifices of Puebla, Oaxaca, Mexico, and the Rio Gila.

It may be observed, respecting all the pyramidal structures yet known, from the temple of Belus to the most rude barrow, that they are on alluvial soil, in most instances on plains, and that the founders, and the real purposes for which erected, are alike lost in the darkness of past time.

Pyramids of Teotihuacan, in Mexico.—At a recent meeting of the London Geographical Society, a communication was read from Lieutenant Glennie, descriptive of these interesting memorials.

The village of Teotihuacan is in lat. 19 43 N., and in lon. 98 51 W., variation of the magnetic needle, 9 49 E. The village is elevated 7,492 feet above the level of the sea. The pyramids are distant about a mile and a half from it. The largest is 727 feet sq. at its base, and 221 feet high, with two of its sides parallel to the meridian.

A rampart of about 30 feet in height surmounts this pyramid at the distance of 350 feet from base, or the north side of which are the remains of a flight of steps, with a road leading from in a northerly direction, covered with a whitement. The remains of steps are also found in the pyramids, which were covered with the sort of white cement, as well as broad terraces extending across the sides. The number of pyramids surrounding the large one, was estimated by Mr. Glennie, at above 200, varying in their dimensions. They are all constructed with volcanic stones, and plaster from the adjacent country, coated with white cement, and the ground between their bases seems formerly to have been occupied as streets, being also covered with the sort of cement. One of the smaller pyramids is covered with a kind of broken pottery, ornamented with curious figures and devices; and in the neighborhood of these edifices an abundance of figures were found, such as heads, arms, legs, moulded in clay, and hardened in fire.—*National Gazette, Aug. 23, 1831.*

Pyrenean mountains, or Pyrenees, a chain of mountains, the principal of which is in the kingdom of Spain, which they divide from France; the general range equals the Alps in height, and extends from the Mediterranean to the Atlantic ocean, 200 ms. in length, and 100 in breadth. They begin near the harbor of Perpignan, and run as far as Fontarabia. From Perpignan they divide into two principal branches, one of which separates Rousillon from Languedoc, and is called Antipyrene, and the other, which runs to Catalonia, is denominated Pertuis. Over them are many passages, some extremely difficult, and between them several fertile valleys. The first and greatest is by Bayona to St. Sebastian's. This road, for about 22 leagues, lies through the Pyrenees. The second is from Perpignan to Barcelona, a distance of 100 leagues, through the mountains, where, in many places, 100 armed peasants may arrest the march of an army, and where neither houses, provisions, or accommodations, can be found. The third is from Bayonne to Pampeluna, the capital of Navarre; this difficult defile is only passable between the months of May and October. The fourth road is that which leads from Tarbes, in the province of Languedoc, to Saragossa. It is a tract merely passable to muleteers during the summer, but in winter the snows and winds render it totally impassable.

There are nearly 60 other narrow passes, the openings, most of which are rugged, intricate, and hardly passable for laden beasts, and even for men, frequently blocked up with snow.—See *Maladetta and Mountains.*

Pyrenees, Eastern, dep. of Fr., contains the late province of Rousillon. Although a great part of the country is mountainous, it is fertile, producing corn, excellent wines, olives, oranges, and leather, of a superior quality. Perpignan is the capital.

Pyrenees, Lower, dep. of Fr., contains the late provinces of Basques and Bearn. Pau is the capital.—See *Navarre.*

Pyrenees, Upper, dep. of Fr., contains the late provinces of Bigorre. Here are excellent pastures, and good pasturage. The valleys are very fertile.

ring rye, millet, Spanish corn, and flax. The mountains have mines of lead, iron, and copper, and quarries of slate, marble, and jasper. Tarbes is the capital.

Ermont, town of Westphalia, in a county of the same name, subject to the prince of Waldeck, with a castle, the residence of the governor. Near the mineral waters, well known to all Europe, and often frequented by persons of the highest rank, is preferred to those of Spa. It is 40 ms. SW. of Paderborn. Lon. 9 20 E., lat. 52 0 N.

Freya, town of Germany, in the kingdom of Prussia, in Misnia. It has a castle, on a mountain called Sonnenstein, which has been used sometimes as a State prison. Near it is a fine quarry of granite, which is transported to different places on the river Elbe. Pyna is seated on the Elbe, 12 ms. SE. of Dresden. Lon. 13 56 E., lat. 51 61 N.

Prack, town of Bohemia, in the circle of Prague, seated on the Atto way, near the Muldaw, 50 ms. W. of Prague. Lon. 14 46 E., lat. 49 16 N.

Roswell, village, Steuben co., N. Y., 20 ms. NE. from Elmira. Pop. in 1820, 3,009.—Borough and

capital of Berks co., Pa., on the NE. bank of the river Schuylkill, 54 ms. NW. of Philadelphia, and 53 E. of Harrisburg. This town is conveniently situated for internal commerce, being the entrepôt of vast quantities of grain and lumber that are brought hither, and rafted or conveyed in long boats to Philadelphia and its vicinity. Reading is a regularly laid out, and very nearly built town, situated in a fertile and well cultivated country. A majority of the inhabitants are Germans, and justly distinguished for industrious habits. The improvements in the navigation of the Schuylkill and Union canals conduce in a high degree to the prosperity of Reading, and renders it one of the most flourishing interior towns of the State.

Red river, branch of Assiniboin, rises near the sources of Mississippi, flows N. about 300 ms., and joins the Assiniboin 70 ms. above Lake Winnipeg. Lord Selkirk's settlement is near their junction.

Red river, branch of the Mississippi river. This stream rises in the mountainous prairies E. of Santa Fe of New Mexico, between N. lat. 32° and 35°, W. lon. W. C. 28°, flows in nearly an eastern direction, over 11° of lon., 640 ms. in a direct line, but at least 800 in a comparative course, to where it turns to the SE. and enters Louisiana, and thence continuing the latter course 300 ms., it joins the Mississippi at N. lat. 31 1 W., lon. W. C. 14 45.

Red river is formed by a number of tributary streams, the principal of which are False Ouachitta, Blue River, Kimitchie, and Vasseux. All these streams unite near the former Panis Villages, about 350 ms. below the sources of Red river. The Vasseux rises in the Great Prairie, about N. lat. 34°, and W. lon. W. C. 20°. The Kimitchie and Vasseux rise in the same ridge, and pursue very nearly a similar course, each joining Red river, after a course of about 200 ms. Little river of the north falls into Red river, a short distance above the NW. angle of Louisiana. It rises in the Maserne mountains, is a clear, beautiful, and pure stream of water, of about 150 ms. in length. From the source of Red river to the mouth of Little river of the N., is about 600 ms. in a direct line, but much farther by comparative course. Little river of the S. rises in the prairies S. of Red river, and about 40 ms. SE. off the Panis Villages, it runs nearly E. 150 ms., and falls into Red river in Louisiana. The distance from the source of Red river to the mouth of Little river of the S., is about the same as to Little river of the N., 600 ms. in a direct line; but estimating the distance along the meanders of either False Ouachitta, Blue river, or Red river proper, and it must exceed a thousand miles. The Red river winds along the great in-

clined plain, dividing it into two parts, forming limits between the waters which flow into that of Mexico, and those entering the Mississippi country from whence Red river draws its waters. A vast prairie, except along the banks of the river and even there, the very little timber is dwarfed. The most abundant species is a variety of the red or black locust, called by the hunters muswood. The range of low mountains is extremely naked of timber.

After the junction of Blue river, Red river is navigable for boats of large size during the floods; timber becomes more frequent, and of a larger size. At the mouth of Vasseux, pine flourishes on the S. side; the banks are elevated by inundation, and the land of good quality. The river here is much wider than near the Mouth of From the Panis villages to near the Avoyell banks of Red river will admit settlement, and many of its tributary streams will, in some future period, be the abode of civilized man. They are alternately either woodland or prairie within 20 ms. above the mouth of Little river to the S. Many spots along the river are covered with strong cane. The waters coming into Red river from Mount Cerne are pure and limpid, but those of Red river and its southern branches are turbid. Below the mouth of Little river to the S., Red river assumes a S. course upwards in a direct line.

The immense volume of water brought down by Red river cannot be contained within its banks during the season of flood, and about N. lat. 31 1 alluvial overflow commences. Here the river divides into a number of channels; the surface of the water changes, the shores become low, the timber, such as are generally found upon the banks of the Mississippi in corresponding latitude, except where the winding of the stream a little approaches the river. The river is now filled with islands and interlocking channels. A chain of lakes also commences on each side, which, during the river, occupies the interval between the banks on each side. These lakes serve as a natural deposit to the accumulating mass of water which flows down from the higher branches of the river. The most remarkable of these lakes are Bodcau, Bodcau, and Black lakes, on the left, and Natchitoches, Spanish lake, and Cado lake on the right side of Red river.

On reviewing this part of Red river, between Grand Ecor, 4 ms. above Natchitoches, and Bodcau, it appears that the intermediate space is once a lake, which has been gradually filled up by the accumulation of earth from the abrasion of the river on the banks of Red river and its numerous tributaries. The lakes which now exist are the valleys of considerable streams contiguous with Red river, whose mouths have been increased by the alluvion of Red river, and naturally formed from hill to hill. The beds of these lakes are much lower than the surface of the river at high water, though higher than the channels of the rivers. In autumn and the early part of winter, when the waters have been drained by the depression of the river, much of the ground is exposed by the spring floods in those lakes becomes land, and exhibits meadows of succulent vegetation. In the channels of most, there is consequently

flux and reflux, as the water in the river is preponderate in height. When Red river reaches its annual rise, the currents are set into the lakes, which, gradually filling, their flood into the river with equal velocity, the depression of the river by the summer begins to take place. This flux and reflux is natural. The connecting channels are never most of the lakes have the pine woods on one of them, from which issue fine clear creeks, whose pellucid currents compensate to the inhabitants for the unpalatable waters of Red river. Were it not for those spacious depositories of Natchitoches, the fine alluvial border of Red river below that territory, would be much more extensive in extent, and the cultivation of the whole more precarious. From the upper part of the river to the lower settlement on Red river, opposite Avoyelles, or even to the mouth of the river, the lands are sufficiently high and fertile for cultivation on both banks, and in every direction on one side. The high lands, or pine forests, on each side nearly the same course with the river. On the right bank the pine bluffs reach to the river for the first place below the alluvial border; 4 ms. lower down, the pine hills again reach the river at the town of Natchitoches, and at three other places still lower down, the hills again reach the river, with a rocky base; at the Bayou Rapide, the high grounds on the right bank reach the river entirely, and continue SE. to the mouth of the river, and continue SE. to the mouth of the river below the alluvial tract at Campt, above Natchitoches, but follow the bank of the river for 4 ms., when they retire, and do not again reach the bank until nearly opposite the rapids, which some few bluffs lie along the banks, one of which is the Ecor à Cheniere, opposite the mouth of the river. From Ecor à Cheniere to the mouth, the river flows over an alluvial flat, annually over-

grown is generally, though very erroneously called the delta of Red river, is merely what I have named the maze of islands and channels, through which, though difficult, boats of any requisite size can be conducted at high water. The raft, as it is called, is not so great an impediment to the navigation of Red river as is the rapids at Louisville, the Ohio, much less the Muscle shoals in the Ohio.

The rapids of Red river have been so far removed from the river that that part of the river is navigable. The following description, from the New Orleans Bulletin, and which appeared in the National Intelligencer October 16, 1843, contains new information of no ordinary value as regards Red river and its main northern affluent, the Washitau:

The Red River country.

The New Orleans Bulletin gives the following description of the fertility of the Red river country. The amount of cotton shipped to this city out of the Red river and its tributaries last season could not have been less than 200,000 bales, which, at the low prices for which the last crop was sold, would amount to about \$5,000,000. This amount, unless the crop be indeed very short, the amount will be still greater, and if the navigation

of the stream were improved, and the communication between it and the Mississippi placed beyond contingency, every year would add immensely to the population, and of course to the exports of the valley.

"But the sale and shipment of this large amount of cotton, near one-tenth of the whole product of the United States, is not all the advantage which this city derives from the trade of Red river. A very large part of the money obtained for the exports of the river is expended here for return supplies, so that directly and indirectly the commerce of the river with New Orleans cannot fall short of \$10,000,000. This trade, however, is in its infancy; for the valley contains most excellent cotton lands to a sufficient extent to produce more of that staple than is now raised in the Union; and it has, besides, a climate and soil adapted to the culture of every article the growth of a temperate zone. Red river alone has a navigation of about 1,500 miles, running through 5 degrees of latitude and 12 of longitude. Besides this, Black river, Wachita, and the Tensas, are important rivers, navigable by steamboats several months in the year; connecting with them and with the main stream are innumerable smaller rivers, lakes, and bayous, many of them navigable. All these streams deposit an alluvion of incomparable richness; they form, in the aggregate, a steamboat navigation of at least 2,500 miles, and embrace a surface of country capable of sustaining at a moderate estimate 5,000,000 inhabitants.

"The lower parts of Red river and the entire valleys of Black river and the Wachita are peculiarly adapted to the cotton culture, and will produce more bales to the acre probably than any other extensive districts. The upper parts of Red river, however, are suitable for wheat and the other small grains, and for nearly all the articles which are produced in the valley of the Ohio and the Upper Mississippi, and not for these alone, but for many others which, from the severity of the climate in those regions, cannot be made to advantage. The upper part of Red river is indeed preferable in all respects, particularly for the mildness of the climate, the greater convenience of the markets, and the greater ease with which farms can be opened and improved, to the wild lands of the Northwest. As soon as the difficulties are settled between Texas and Mexico, and assurance of peace is given, these advantages will attract the attention they deserve, and draw off a large part of the tide of emigration now setting towards the Upper Mississippi and Missouri. This emigration consists in the main of hardy and enterprising farmers—young men of small means but strong energies from the Middle and Western States—a kind of population which will form the strength of the country, and along our frontiers be better than a line of garrisons. The whole of these vast and fertile regions which we have mentioned are still in large part solitudes, but they invite the hand of industry and enterprise, and can only be prevented from teeming with human life, and swelling the avenues of commerce with the richest products of agriculture, by a degree of blindness and fatuity not to be supposed."—See *Washitau river*.

Red Sea, extending 1,300 ms. from N. to S., and 200 in the widest part from E. to W. It divides Arabia from Africa, and is separated from the Mediterranean sea on the N., by the isthmus of Suez, and communicates by the straits of Babelmandeb on the S. with the Arabian sea and the Indian ocean. The Red sea is the most extensive known sheet of water which receives no river of considerable magnitude. The general course of the Nile is very nearly parallel to the Red sea, but the intervening space, varying from 50 to 200 miles is mountainous. On the African side the mountains rise in most places from the immediate shores; on that of Arabia a mountainous chain extends parallel to the Red sea, but about 80 ms. inland.

The bottom and shores of the Red sea, so far from being red, "are covered," says Malte Brun, "with a carpet of greenish coral; in calm weather the bottom, when it comes into view, is not unlike a series of verdant submarine forests or meadows." The shores of the Red sea and Persian gulf are composed in great part of shell limestone rocks. The Red sea was called by the Hebrews *Bahr-Soooph*, i. e. *the sea of Algae*, seaweed.

From its range and position, viewed on a map of the world, the Red sea appears to present the most natural opening between the Indian and Mediterranean seas; but many causes, natural and political, combine to withdraw the civilized nations of Europe and Asia from this the most ancient channel of intercommunication. The Red sea and Persian Gulfs are obstructed by small and numerous isles, sunk rocks, and sand banks; and the entire shores of the former are in an unequalled manner barren and barbarous. The regular monsoons, and also changing winds, render the tides unequal and very uncertain in their revolutions. But the most powerful of all causes, which have operated to change the commercial route of nations, are the magnetic needle and improvements in ship manufacture. The circuitous but open route by the Atlantic and Indian oceans, with the safe and commodious modern vessels supplied with instruments which demand only a taper's light to direct the mariner amid surrounding darkness and storm, will be, perhaps, forever preferred to a more direct but obstructed passage.

REFRACTION, applied to air, means to bend the rays of light. Hence we cannot be said to see in its actual position any distant object if it is not directly in either the zenith or nadir; and, again, it is by means of refraction that the sun and moon some time before rising appear to rise, and enjoy more light than we could directly see actually pass along right lines.

Rhine, great and remarkable river of Europe

which rises in Switzerland, in the canton of Grisons. It is formed of three streams, the Further Rhine from the head of the valley of Disentis, the Middle Rhine from the valley of Medelo, an appendage of St. Gothard, and the Hither or Upper Rhine from the mount Avicula. The first two points united is called the Lower Rhine, which crosses the Upper Rhine at Richinau; and the height is here about 6,180 feet above the sea. Passing by Coire, at the distance of a mile, the river here becomes navigable for rafts. It is soon at the boundary between the Rheinthal and the territory of Austria, and passes through the lake of Constance from E. to W. Leaving this lake it becomes the boundary between Switzerland and Austria, flowing by Schaffhausen (below which it is a celebrated cataract) to Basil. At Basil the river turns to the N., and flows thence to Holland, in part which course it becomes the barrier between France and Germany, gives name to the German circles of the Upper and Lower Rhine, waters many considerable cities and towns, and receives some large rivers. Below Emmerick, in the duchy of Cleves, it divides into two streams. The one which bends to the W., and flows by Nimegue, is called the Waal, but loses that name on junction with the Meuse, at Gorcum. Below Gorcum it divides into four principal branches, irrigating the isles of Ysselmonde, Voorn, and Oostslackee; the most northern branch is called the Merwe, and, passing by Rotterdam and Schiedam, is joined by the branch from the S. side of Ysselmonde, and enters the German ocean below Rotterdam; the other two branches make their exit at the islands of Goetsluys and Goree. The other stream, which is branched off to the N.W., below Emmerick, retains its name; but below Huessen another branch is taken off to the N. takes the name of Yssel, and enters the Zuider Zee below Campen. The river proceeds W. by Arnheim to Duerstede, where it again divides into two streams; that to the left is called the Leck, and enters the Merwe near Rotterdam. The branch to the right, which retains its name, passes on to Utrecht, where it divides once more into two streams, the smaller is called the Vecht, which runs N. into the Zuider Zee, at Muyden; and the other, the remains of the noble Rhine, flows W. by Woerden to Arnhem, where it divides into several channels, and the river is lost among hills of sand near the village of Catwyck.

The basin of the Rhine is about 400 ms. long from S. to N., with a mean width of about 200; and contains 80,000 sq. ms. Lying between lat. 46° and 53° N., this basin slopes from the high valleys of Switzerland into the Zuider Zee, and falls about 1,000 feet in 7° of lat. Advancing upwards, on the right shore the Rhine receives from Germany the Lippe, Rhur, Lahn, Mayn, and Neckar. On the left or western side the confluent are less numerous, but of much greater magnitude. The great streams of the Reuss and Aar from Switzerland, the Moselle and the Maese from France and the Netherlands, are large streams, particularly the two latter.

Below Basle the Rhine, though at low water impeded by shallows in some places, is, however, navigable to its confluence with the Maese. Small boats ascend to Basle, and the large Dutch

boats 120 by 12 feet, with 6 feet draught and 150 tons burden, are navigated to Strasburg. Cologne is the great mart of the Rhine, goods being here transhipped into large vessels called Cologne ships, which proceed to and from Holland. The Moselle is navigable from Coblentz to Metz, in Lorraine, with large and with small boats to Nancy. The Maese is the most important confluent of the Rhine is upwards of 300 ms. comparative course, and navigable in nearly its length. The Rhine is, in brief, a noble line of entrance into the central and best cultivated regions of Europe, and contains upon its basin the most dense population of any river of the earth of equal superficies. It is difficult to fix the aggregate population of this highly cultivated tract; but it may be safely assumed at a minimum of 15,000,000. The Rhine and its branches drain a great part of Switzerland and Wirtemberg, Western Germany, and Eastern France, and more than two-thirds of the kingdoms of Holland and Belgium.

Rhinebeck, village, Dutchess co., N. Y., 16 ms. W. from Poughkeepsie, and 26 S. from Hudson.

Rhinebeck.—See *Rhynebeck*.

Rhine, Lower, formerly a circle of Germany. It extended on both sides of the Rhine, from the circle of Suabia on the S., to that of Westphalia on the N., containing the late electorates of Mentz, Treves, and Cologne, the palatinate of the Rhine, the duchy of Westphalia, and the co. of Lower Isenburg. It now belongs to Bavaria.—Department of Fr., containing the late province of Lower Alsace. Strasburg is the capital.

RHINEGRAVE, from the old German name of the *Rhein* and *Graaf*, count, or *guard of the Rhine*, formerly applied to the governors of cities along that river. The title is still retained by some of the Rhenane princes.

Rhine, Upper, department of France, containing the late province of Upper Alsace. Colmar is the capital.—Formerly a circle of Germany. It extended across the Rhine, from the province of Lorraine, in France, on the S., to the circle of Lower Saxony on the N., and was nearly intersected by the palatinate of the Rhine. It included the landgrate of Hesse, Wetteravia, the cos. of Catzenellenbogen and Waldec, the imperial town of Frankfort, the bishoprics of Fulda, Spire, and Worms, and the duchy of Deux Ponts.

Rhine, Palatinate of the, late electorate of Germany, in the circle of Lower Rhine, bounded on the N. by the archbishoprics of Mentz and Treves, E. by Franconia, S. by Suabia, and W. by France.

Rhode Island, island of the U. States, a part of Rhode Island State, and from which that small member of our confederacy takes its name. It is 15 ms. long, with a mean width of 2½ ms., and is included in Newport co. The name of this island was imposed by the Dutch, and, contrary to common opinion, means *Red Island*.

Rhode Island, State of the U. S., bounded by the Atlantic ocean S. and SE., Connecticut W., and Massachusetts N., NE., and E.

	Miles.
Having an outline on the Atlantic ocean	40
Along Connecticut	50
Along Massachusetts	70

Having an outline of - - - 160
Extending from lat. 41 18 to 42 1 N.

Area, exclusive of water, 1,200 sq. ms., equal to 768,000 acres.

It is, for its extent, a very diversified State. The NW. part is hilly and broken, but gradually subsiding to level land advancing towards the Atlantic ocean. The islands are most delightfully variegated by gentle slopes and swells. The State is composed of three sections: that part W. of Narragansett bay bordering on Connecticut, the islands of Rhode Island, Conanicut, Prudence, and a few of lesser note, and two small slips on the E. side of Narragansett bay. The soil of this State is as various as are the features of its geography, thin and rocky to the NW., level and in part marshy SE., but in the islands and in many of the capes jutting into Narragansett bay, exuberantly fertile.

Rhode Island is the most manufacturing section of the U. S. in proportion to its population. Cotton is the chief subject of manufacture. Including those on Massachusetts, near Providence, and owned in that city, more than 100 cotton factories are in operation in that vicinity. The commercial prosperity of this State has kept pace with its manufacturing industry. The amount of tonnage exceeds 40,000, and more than half the amount of exports of domestic produce. The exports in 1820 amounted to more than \$1,072,000.

In no part of the U. S. has banking been carried to such an extent. There are in Providence 5 banking institutions, Newport 5, Bristol 5, Smithfield 3, Westerly 2, and at Warren, Pawtucket, Patuxet, Cranston, Gloucester, Burrillville, Scituate, Coventry, Greenwich, Wickford, and S. Kingston, 1 each; 33 in all.

Common schools have met with no legislative support in Rhode Island, though the interests of education have not been neglected. See *Providence*. Academies exist in most of the towns, and private day schools are scattered over the State in almost every neighborhood. The number of Baptist congregations 57, Friends 18, Congregationalists 11, Episcopalians 5, Moravians 1, and Jews 1.

Rhodes, island of the Archipelago, at the entrance of the Gulf of Maeri, 40 ms. long, and 15 ms. broad.

The soil is pretty fertile, but badly cultivated. This island is much celebrated in ancient and modern history. It was taken by the Turks, after an obstinate resistance, 1523, and the small number of knights that remained afterwards retreated to Malta. A pacha is the governor general of the island, who presides over civil justice and military discipline.

Rhodes, capital of the island of Rhodes, was formerly 9 ms. in circumference, but the present city occupies only a quarter of the extent of the old city. It has a good harbor, with a narrow entrance between two rocks, on which are 2 towers to defend the passage. It is inhabited by Greeks and Jews, for the Christians are obliged to live in the suburbs, they not being suffered to be shut out of the walls in the night time. Lon. 28 25 N. Lat. 36 24 N.

Rodez. See Rodez.

Rhone, large river of Europe, which rises in the mountains of the glacier of Furca, between the rocky mountains of Glechterberg and the Alps. Crossing the Vallais, it runs through the lake and city of Geneva, and there reaches the river Arve. After which, it widens, and becomes navigable near Seissel, then running into Lyons, and receiving several other streams, the river Saone, continues its course northward, and passing by Orange, Avignon, and Nimes, it falls, to the westward of Marseilles, into the Mediterranean, by three mouths. The Rhone receives interlocking with those of the Po, the Saone, and Loire. By its most northern mouth, the Saone, the basin of the Rhone extends N. lat. 48°, and extends to 43 20; the length 350 ms., mean width about 150, area 15,000 sq. ms. The reverse of the Rhine, the basin of the Rhone basin is to the S. This difference of direction and slope affords means to account for the very unequal inundations of these rivers. The floods of the Rhine are frequently excessive, those of the Rhone generally moderate, because, though both flow from the

Alps, the rise of the former commences near its source, whilst that of the latter commences near its estuary. As a navigable channel, the Rhone is very defective. Shifting sands at its mouths render the entrance shallow and uncertain. The depth is sometimes reduced to 4 feet. About 10 ms. below Geneva, the Rhone proper passes under a natural bridge. Its fall in 7 1/2 ms. 207 feet. The level of the lake of Geneva, according to De Luc, is 1,202 feet above that of the Mediterranean; where the river disappears, 954, and 538 at Lyons. The Soane, and the main stream below their junction, are more navigable than the Rhone proper. Various projects of uniting the waters of the Rhone to those of the Rhine, Seine, and Loire, have been conceived, but in no instance fully executed, if we except that of the Loire from the Saone. The latter canal line is called the "Canal of the Centre," or Charolois. It rises from the Loire, 240 feet to the summit level. The descent from the summit level is 400 feet to the Saone. There are 30 locks on the Loire slope, and 50 on that of the Saone. The whole length of the canal is 71 English ms., the length of each lock 100, breadth 16, and the canal itself 30 feet wide at bottom, 48 at the water surface, and 5 1/2 deep. The chief trade is wine, timber, coals, corn, and promiscuous merchandise, in 4,000 boats annually. The basin of the Rhone, below lat. 45° N., is the true southern climate of Fr., the region of the olive, pomegranate, and most abundant vines. Though the departments W. of the Rhone, towards the Pyrenean mountains, are placed much farther S., the temperature is much lower than near the Lower Rhone. A glance on the map of Fr. exhibits the cause.

 State Government is not considerable, and
 ts of higher jurisdiction, which for a few
 in the capital, have since been branched
 uch a manner that their sessions are held
 b places, other causes must be sought for to
 for the whole effect produced in the pe-
 mentioned. The very fruitful country
 ng on James river, above its falls, was par-
 id imperfectly cultivated, and the impossi-
 obtaining a navigation through the rapids
 ately above Richmond had deprived the in-
 as of a free use of the river for the transpor-
 the products of the State. In the year

 A bar of sand, about 350 feet in width,
 e only obstruction to the mouth of the
 hich forms a safe harbor for more than 300
 essels, drawing 12 feet water, in the cen-
 e city. As to her exports, Richmond is
 orably situated for enjoying a monopoly
 al business; is the first port in the United
 well for quality as quantity of tobacco;
 is not much behind any other city in the arti-

cle of flour, which, from a variety of circumstan-
 ces attached to her local situation, is always ready
 for market there some months sooner than in other
 places.

The natural situation of Richmond is beautiful
 and even romantic. Shokoe and Richmond Hills
 stand opposite to each other, with Shokoe creek,
 a bold and lively stream, between them. The city
 is spread over those hills, and along the margin of
 the river the hills have been thrown into various
 undulations, and present a great many points from
 which different views may be taken, highly pic-
 turesque and beautiful. The falls of the river,
 which descends more than 6 ms.; the island; the
 town of Manchester, connected by two bridges
 with Richmond; the rich plantations adjoining the
 town; the river, winding and stretching below to
 a great extent; the waving hills on the N. side,
 and the valley through which Shokoe creek pass-
 es—are the principal objects on which the eye
 fixes; and from every eminence they are seen in
 some new form, and under some new coloring of
 light and shade, the whole presenting the three
 great requisites of landscape, viz: grandeur, beau-
 ty, and variety. Besides, Richmond is one of
 the healthiest cities in the United States, or per-
 haps in the world. The annual amount of deaths
 on an average is *one in eighty-five*. It has never
 been visited by yellow fever or any violent and
 desolating disease.

Rideau, river of Canada, a southern branch of Ottawas. This stream has given name to the Rideau canal, and its channel forms part of that very important improvement. The Rideau river issues from a lake of the same name, in the western part of Johnstown district, U. C. This lake extends in a direction from SW. to NE., 25 ms., then contracts into a river, which, maintaining the same general direction about 60 ms., falls into the Ottawa river about 90 ms. above the mouth of the latter into the St. Lawrence.

The higher part of the canal leaves the head of St. Lawrence at Kingston, and in a NE. direction of about 30 ms. enters the Rideau Lake. I have inserted the following from the Providence Journal, and by reprint from the National Intelligencer, as I regard the canal routes of Welland and Rideau as little, if any, less channels of commerce to the United States than to the British provinces:

“The Rideau canal connects the St. Lawrence

with the Ottawa, terminating a few miles below King-ton. It strikes the Ottawa at the foot of Chaudiere falls. Its length is 135 ms.; its breadth is without limit. The construction of this canal, if it may be so called, is peculiar to itself, and the only instance within my knowledge of a communication on the same plan. It is effected by connecting a chain of lakes by locks and dams, instead of making excavations. Neither a tow-path nor road is necessary, as the navigation is performed exclusively by steamboats, and is towed by them, similar to those on the Niagara river. On the summit level of the canal is Rideau lake, about 25 ms. in length. It is 283 feet above the Ottawa, where it enters the river, and 154 above the St. Lawrence at Kingston, where the water is on a level with Lake Ontario. For seven locks are required for the ascent and descent, which are built on a scale sufficiently large for large steamboats to pass. Their length 142 feet, breadth 33 feet. They are built of large blocks of stone in the most substantial manner. In order to reach the necessary levels, twenty dams are required of great strength and durability, which throw the water to a great distance, converting some of the dried thousand acres of forest lands into lakes. This great change has consequently been productive of the natural appearance of the country. In several instances, says Mr. Taggart, the engineer, a dam is not more than 24 feet high and 180 feet wide, and throws the rapids and rivers into a still sheet of water for a distance of more than 20 ms. The canal also back the waters up creeks, ravines, and hills; and, instead of making one canal, they have numerous canals of various ramifications, which will all tend greatly to the improvement of a fertile country. Much of the land drowned by the raising of the dams is of little value—far less than the cost of making excavations. The Rideau canal was made by the British Government, at an expense of about two and a half millions of dollars. One important object which the British Government had in view in making so great an outlay was to complete an inland communication of the greatest importance in time of war. Without a canal, all intercourse by water would be cut off, and supplies could not be sent from one part of the province to the other.

“The St. Lawrence canal is another great work, built by the province. Like the Rideau, it is adapted to ship and steamboat navigation. But, from all I can learn, it has proved a bad speculation and of very little use, as steamboats cannot pass down the rapids alongside of it, with perfect safety, in one-tenth the time it would take to go through the canal. In returning, they pass up the Ottawa river, and through the Rideau canal to Lake Ontario.

“The British can now send their steamboats and schooners from the sea by means of the Rideau and Welland canals to Lake Michigan. I have seen several vessels on the St. Lawrence, loaded with the produce of Illinois and Michigan, on their way to Montreal and Quebec, and, if necessary, they might proceed to England.”

Roanoke, island on the coast of N. C., in Albemarle co. Lon. 76 0 W., lat. 35 50 N.

Roanoke, one of the Atlantic rivers of the U. S., in Va. and N. C. It is formed principally by the Roanoke and Dan rivers; but as Albemarle sound is merely the continuation of Roanoke, Chowan and Pamlico should also be considered one of its branches.

It is, therefore, Albemarle sound and Chowan sound the basin of Roanoke extends about 250 miles in length from NW. by W. to SE. by E., with a breadth of 60 ms., embracing an area of 15,000 sq. ms. Geographic position between lat. 36 and 37° N. Interlocking sources with the Roanoke river, Great Kenawha, and Pedee rivers, and the mountain branches of Roanoke rise on the highest elevated valleys of the U. S. The difference in level between the higher navigable sections of the Roanoke and Dan rivers and the tide in Albemarle sound exceeds, it is probable, 1,200 feet.

The elevation rises as high as Halifax, but the Roanoke is in any part of its course, navigable in proportion to its volume. Sloops and shallops ascend about 70 ms., above which boats are used. Measures, however, in progress to render this fine bay more subservient to the commercial prosperity of the inhabitants of the country it drains.

The basin of the Roanoke commences the cotton culture of the Atlantic slope of the U. S. That the Roanoke may be, indeed, and is actually cultivated in the basin of the Susquehanna, but it is only in the basin of the Roanoke that the temperature and length of the growing season renders cotton a valuable crop.

Rochester, very flourishing city in Monroe co., N. Y., on Genesee river, at its lower falls, and where the Erie canal crosses that stream, NW. from Canandaigua, and NE. from Batavia, about 32 ms. from each.

The growth and rapid increase of this place is beyond a parallel in our country. Its situation is so eminently adapted for concentrating the commerce of our Western country, by means of the canal, that we might have expected in time it would become a flourishing town. But, from the last census, it appears that the increase for the past year is upwards of 3,000, and that, although 352 new dwellings were erected during the season, still they cannot supply the continued demand; made

by families who settle in the village. The population is 10,818, that of the last year 7,

The preceding was written and published several years since, and so true to the then future the census of 1840 gave for Rochester a population of 20,191. In 1812, there were but two or three ordinary buildings on the site of this remarkable and flourishing city. The entire length of the Genesee, at Rochester, is 92 feet, which, the mass of water in the river, gives a power beyond calculation. This power has been made available on mills and other factories to an extent which gives, with the active commerce induced by the Great canal, an appearance founded on reality to Rochester of being, the amount of its population, amongst the most productive cities in existence. The following quaint notice deserves a place,
more than one home truth it contains:

Rock Island City. At the mouth of Rock river,
it is the healthiest stream in Illinois, and
through one of the most beautiful countries
of the world, is an islet upon which the U. S. post
ort Armstrong has been many years establish-
ed. Opposite this island, at the point where Rock
river intersects the Mississippi, is the peninsula
described below, where a new town is springing
under the absurd name of "Rock Island City."
We should think that the Saukee or Ottagamie di-
vinity might have supplied a better epithet to those
who appear, have the good taste and the good
taste to treasure at least some mementos of the
United Nations that once held the seat of their pow-
er on this celebrated spot.—*N. Y. American*.

the Rev. Enc., the aggregate was then 147,383.
Population of Rome.—According to the late
census, the population of Rome is now 144,541,
an increase in one of year of 2,221. There
are in the "Eternal city" 33,689 families, 35
bishops, 1,490 priests, 1,984 monks and friars,
and 1,090 nuns. The Catholic inhabitants are
176,000 the remainder consists of Protestants.—
Sat. Evening Post, July 10, 1830—467.
Some of the principal streets are of considerable
length, and perfectly straight. That called the
Via Sacra is most frequented. The shops on each
side are three or four feet higher than the street;
and there is a path for foot passengers on a level
with the shops. The palaces, of which there are
many in this street, range in a line with the
shops, have no courts before them. The Strada
Nuova, and the Strada di Porta Pia, are also very
wide and noble streets. There are no lamps
used in the streets at night; and all Rome would
be in utter darkness, were it not for the candles
used in the devotion of individuals sometimes place
before the statues of the Virgin; these appear glim-
mering, at vast intervals, like stars in a cloudy
sky. Rome exhibits a strange mixture of mag-
nificence and interesting and of common objects;
the former consists of palaces, churches, fountains,
and the remains of antiquity; the latter compre-
hends the rest of the city. The church of St.
Peter, in the opinion of many, surpasses, in size
and magnificence, the finest monuments of ancient
architecture. It was begun to be built in 1506,
and finished in 1621, and is entirely covered both
within and without with marble. Its length is
1,100 feet, the breadth 520, and the height, from
the pavement to the top of the cross, which crowns
the cupola, 450. The high altar under the cupo-
la is 100 feet in height, and of an extraordinary
magnificence. A complete description of this
church, and of its statues, basso-relievos, columns,
and various other ornaments, would fill volumes.
The cathedral of St. John Lateran, the Romans
regard as the most ancient of all the churches of
Rome, and the mother of all the churches in
Italy. It contains the Scala Santa, of
white marble steps, brought from Jerusalem,
with which Christ is said to have ascended to the
throne of Caiaphas. To this church every new
pontiff constantly goes first, in a magnificent pro-
cession, to take possession of the holy see. The
temple which is the most perfect of the Roman tem-
ples, and which now remain, and notwithstanding the
destruction it has sustained from Goths, Vandals,
and Saracens, is still a beautiful monument of Roman
architecture. The pavilion of the great altar of St.
Peter, and the four wreathed pillars of Corinthian
order which supports it, were formed out of the
spoils of the Pantheon, which, after 1,900 years,

has still a probability of outliving its proud capa-
cious rival. The Pantheon, originally erected to
the honor of all the gods, is now become a Chris-
tian temple, dedicated to the Virgin, and has
obtained, from its circular form, the name of the
Rotondo. Its height is 150 feet, and its width
nearly the same. There are no pillars to support
the roof, which is constructed in the manner of a
cupola; neither has it any windows, a sufficiency
of light being admitted through a central open-
ing in the dome. As the Pantheon is the most
entire, the Amphitheatre of Vespasian is the most
stupendous monument of antiquity in Rome.
About one-half of the external circuit still remains;
from which a pretty exact idea may be formed of
the original structure and by computation it
could contain 85,000 spectators. But the anti-
quities of Rome are too numerous to be minutely
described; and the ancient Forum, now a *cow-*
market, and the beautiful column of Trajan, &c.,
must be passed over. The Campidoglio, built by
Michael Angelo, is a beautiful structure, standing
on the site of the ancient Capitol, so long the
centre of the empire of the world. The body of
this place is the residence of the Senators of Rome,
and the wings are inhabited by the *conservatores*
of the city. The Pope has three superb palaces,
of which the principal is the Vatican, near St.
Peter's church. The library of this palace is the
largest and most complete in the world, rich es-
pecially in manuscripts, in all languages, and of
all ages. In Rome, the connoisseur will meet with
innumerable paintings by the greatest masters,
and with the finest works of sculpture, &c. Be-
side the university, which consists of several
noble colleges, there are numerous academies and
literary societies. The castle of St. Angelo serves
more to keep the city in awe, than to repel any
foreign attack. Rome was formerly the metro-
polis of one of the greatest empires that has ever
existed, and may be regarded as the parent of all
the cities, the arts, and States of modern Europe.
The ancient Romans were governed by seven
kings, for about 230 years. During the next
488 years, they were governed by consuls, tri-
bunes, decemvirs, and dictators, in their turn.
They were afterwards governed by 60 emperors,
for the space of 518 years. Their wars with the
Carthaginians, Spaniards, Gauls, Mithridates of
Pontus, Parthians, and Jews, were the most
noted. The Roman empire was afterwards much
distracted by various commotions, and, in 410,
Rome was taken and burnt. In May, 1527,
Rome was invested by the army of the Emperor
Charles V.; and the general, to prevent a mutiny,
promised to enrich them with the spoils of this
opulent city. The general, however, was himself
killed, as he was planting a scaling ladder against
the walls; but his soldiers, not discouraged by his
death, mounted to the assault with the utmost
valor, and, entering the city, exercised all those
brutalities that may be expected from ferocity ag-
gravated by resistance. In the wars which attend-
ed the French revolution, Rome was again a con-
siderable sufferer. Large contributions, and se-
vere military exactions, were drawn from the in-
habitants; and a great number of the most valu-
able statues and paintings were sent off to Paris.

Rotterdam, city of Holland, with one of the finest harbors in the Netherlands. It is the most considerable place in Holland for size, beauty of its buildings, and trade, next to Amsterdam. It is a large and populous city, of a triangular figure, handsomely built of brick, the streets wide and well

paved. Its port is very commodious; for the canals, which run through most parts of the city, bring the ships, some of 200 or 300 tons, up to merchant's door; a conveniency for loading and unloading which is not to be found in other places. A great advantage they have here for commerce, that the Mease is open, and the passage free of ice, much sooner in the spring than in the Y Zuyder Zee, which leads to Amsterdam. It is seated on the Merwe, (the most northern branch of the Maese,) 13 ms. SE. of Hague, and 5 SSW. of Amsterdam. Russia, vast empire, partly in Asia and partly in Europe, bounded on the N. by the Frozen ocean, on the Pacific ocean, S. by Great Tartary, the Black sea, Persia, Turkey in Asia, and the Mediterranean sea, and W. by Turkey in Europe, Poland, Prussia, the Baltic sea, and Sweden. There were three principal parts that had the name of Russia, namely: White Russia, which formed the S. part of Poland; Little Russia, which comprehended the E. part of Poland; and Black Russia, which included the provinces of Kaluga, Moscow, Tula, Rezan, Smolensk, and Yaroslaf; and hence his Imperial Majesty takes the title of "Emperor of all the Rus-

sian Empire." The country of such vast extent must lie in different climates, and the soil and products must be as various. The most fertile part is near the frontiers of Poland, insomuch that the inhabitants are able to supply their neighbors with corn. The climate usually breaks up between the 18th and 26th of May, most frequently about the 18th, or ten days of a century. Latest known, 12th of May—about a hundred years. The same river generally begins to rise in the winter towards the end of November, and generally on the 20th—i. e. nine times in one hundred years. In 1826, closed 26th December; and on the 28th October. The N. part is not so fertile, but very marshy, and overrun with swamps, inhabited chiefly by wild beasts. The climate affords a variety of commodities, which, of great use to foreigners, produce a considerable annual balance of trade in favor of Russia. The home commodities are chiefly furs, such as skins of black and white foxes, ermine, sables, lynxes, bears, panthers, wolves, white hares, &c., red and black juchte, or leather, which for color, smell, and softness, are not equalled in the world; copper, iron, wax, honey, potash, tar, linseed and castor, isinglass, hemp, flax, thread, sadalwood, alimanco, Siberian musk, soap, feathers, &c. To these commodities may also be added most all the merchandise of China, India, Turkey, and some European countries.

Land communication between Europe and China.

"According to accounts from Moscow, the proprietors of the diligences and wagons in that city intend to extend their communications to Warsaw, and, in the course of next year, to the governments of Tamboff, Kasan, Peren, Tobolsk, Irkutsk, Yakutzk, to Kiackta, on the frontiers of China. Thus there will be direct communication by land from the frontiers of China, to Petersburg, Moscow, Warsaw, and perhaps to Paris, with which view, M. Muller, the head of the Moscow establishment, intends to treat with the messageries of Paris."—*German paper.*

Some idea of the extent of the internal commerce may be formed from the fact, that the merchandise transported by *inland navigation*, in Russia, amounted in 1830 to 240,880,155 rubles, or nearly £11,000,000 sterling.

In 1724, the first university was founded that ever was in Russia, and there is now an academy of sciences at St. Petersburg, supplied with eminent professors. The rising generation are modernizing their antique vestments; the stiff embroidered napkin is supplanted by one of flowing silk, the jacket and petticoat are of muslin, or other fine stuffs, and the plaid is exchanged for a silk or satin cloak, in the cold season, lined with fur. The richer class of females wear velvet boots. The dress of the higher ranks is after the French and English fashion. The principal rivers are the Dnieper, Volga, Don, Kuma, Terek, Kur, Duna, or Dwina, Oby, Jeniessey, Lena, Kavoma, Anader, &c. The sovereigns of Russia are absolute. They were formerly called grand dukes, which is still the title of the heir apparent. They afterwards assumed the title of *czar*, and, in the sequel, that of emperor. The natives pronounce the word *czar* like *tsar*, or *zaar*.—See *Czar*, p. 260. The first who bore the title of *czar* was Basil, son of John Basilides, who freed his country from its subjection to the Tartars, about the year 1470. The title of *emperor* was first assumed by Peter I., who, by his illustrious actions, justly acquired the surname of Great. He died in 1725, and perhaps no country ever exhibited, in so short a time, the wonders that may be effected by the genius and exertions of one man.

It appears, from recent documents, that in Russia the number of persons who can read are 4,175,995.—*Not. Int.*, July 27, 1843.

The principal seaports of the empire, are in Europe, Archangel, at the mouth of the northern Dwina; Cronstadt, Revel, and Riga, in the Baltic; and Sevastopol and Odessa, in the Black sea. In Asia, Astracan, near the mouth of the Volga; Ochotsk, in the sea of Ochotska; St. Peter and Paul, in Kamtschatea; with some forts and factories in America.

Like every other object of human pursuit in this gigantic empire, literature is making a progress, of which the inhabitants of other countries have but very inadequate ideas. In brief, if we can form any safe anticipation of the future from the past, we may consider the greatness of this colossal political mass as only in embryo. It is a singular, and perhaps a solitary fact, that whilst the real strength of Russia was daily augmenting, more than a century has now passed since it was ruled by a man of military ambition and genius—a cir-

cumstance alone wanting to prostrate the other Governments of Europe and Asia in broken and scattered fragments. The Government, as to internal police and external policy, is a despotism, controlled and directed by the force of public opinion and a most powerful aristocracy. The following extract, from the *Revue Encyclopædique*, contains, in my opinion, the best brief commentary on Russian history and policy I ever had the good fortune to peruse:

“That which merits the deepest attention in the policy of the Russian Government is exhibited in the art of assimilating conquered nations with the empire. Since the times of Rome, whose laws seem to have been planned for the conquest of the world, no country has been constituted, like Russia, for the extension and the preservation of its acquisitions. Russia, like Rome, having perceived it necessary to form her empire of a crowd of nations, differing in religion, manners, and language, has established a rule allowing to each all those things which are held dearer than political existence. Thus, all religions are equally tolerated; nay, more—they are equally protected. Their exercise is public and peaceable, even in those parts of the empire inhabited by people of different faiths. Each religion has its own temples, altars, and ministers. In Petersburg, for example, are erected places of worship for Greeks, Jews, Roman Catholics, and Protestants, in all their varieties of Lutherans, Calvinists, &c. In the southern provinces Islamism is freely professed by those who obeyed the laws of Mahomet before they were reduced to the Russian Government. In the east, there are still idolaters, and the Government does not persecute their idolatry, well knowing that, in the course of time, by the progress of improvement, men will rise of themselves to a purer belief, to a system better fitted to our nature, and less opposed to the majesty of the Creator.

“Russia never attempts, by violent measures, to make conquered nations forget the language of their ancestors, that intellectual inheritance, with which are always connected so many delightful recollections and hereditary virtues; but the Government trusts to the insensible but efficacious operation of those relative circumstances which render it for the interest of every man to learn the language of his conqueror, particularly when that conqueror is advancing, with bold strides, along the path of civilization. With these circumstances, also, are combined all those which flow from the intercourse of men drawn from different nations, and assembled in the same camps under the same standards; and, finally, all the motives of ambition and the hope of private or public fortune, which, sooner or later, induce the conquered to acquire and to employ alone the language of the conqueror.

“It is further permitted to every people to preserve its own customs and manners. The Tartars are allowed to fight, as they have done ever since the times of the Parthians and Scythians; the Government having contented itself with forming chosen bodies of this irregular cavalry, to place them in the ranks of the imperial guard, to offer them as a model to the barbarous bands which, by degrees, have learnt all that was necessary to increase their force in discipline and exercise. Al-

ready 40,000 Cossacs, on the borders of the and Danube, are organized into regular mounted and well managed light troops, with immense body of cavalry, ready at the first to march in a body, lives encamped in a territory which furnishes them with the necessities of assistance.

“Military enthusiasm is the ruling passion at these tribes, who have heretofore never known other path to renown than that of battle. When the French army had penetrated into the interior of Russia in 1812, this body of Tartar cavalry like one man, took up their line of march in a terrible winter, hungry for their prey, and without pity the victims of a devouring climate. ‘Companions!’ they would cry to each other, enraged at the valor of our soldiers, even in the midst of their misery and nakedness—‘Courage, what a shame it will be to us if we leave skeletons to rise from their grave and escape! And, so saying, they would throw themselves the remains of our phalanxes with redoubled vigor. This is the support which Russia may rely on obtaining, in time of need, from the most unimpaired part of her population.

“We must, therefore, acknowledge this agreeable but incontestable truth, which is forced upon us by an examination into the state of things that from the Baltic to the Adriatic, from the mouths of the Catarro to that of the Vistula, an unhappy system adopted by the great German Powers irresistibly urges the inhabitants of an immense zone of provinces to stretch out their hands towards the Muscovite dominion. Germany has but one way to escape the danger which threatens her; and that is, to imitate Russia in the depth of her views, and the generosity of her measures towards her subjects.”

Russian Empire.—This vast empire extends along the arctic regions of Europe and Asia to seven thousand six hundred English miles. This immense extent of country is divided by the Bering’s straits into two distinct portions, the smaller of which forms the N.W. extremity of America. Of the larger, or European and Asiatic portion, the breadth varies from 1,900 English miles at the N. and S. line, extending each way 300 miles from Moscow, to 460 Eng. miles in northeastern Asia, an area coming so near that we may give the total sum of 4,000,000 sq. English miles. The aggregate population has been estimated at 56,641,900, which would yield a mean population of between 14 and 15 to the square mile.

Sabi.—See *Xavier*.

Sabine, river, North America, rises in the public of Texas, in a prairie country, about lat. 40 N., lon. W. C. 18° W. It pursues a S. and S. course, interlocking with the sources of the Trinity and Little river of the S., a branch of Red river. At N. lat. 32°, and W. lon. W. C. 17 25, the Sabine becomes the boundary between Louisiana and Texas, and of course between the U. States and Texas. It is at this point a considerable stream, 40 or 50 yards wide, and at high water navigable for boats of considerable size. Though rising in a prairie country, its banks at lat. 32°, are covered by a dense forest, composed of pine, oak, hickory, &c.

bet gum, black gum, ash, and many other genera and species of trees. From this point to the prairies on the sea coast, the mixture of timber countries nearly similar; the W. or right bank is higher than E. or left, in general. High bluffs are frequent, and in some places rocky precipices occur on the former bank, but no place on the latter; the left banks near the border of the stream are mostly liable to inundation at high water; the soil near the stream is uniformly thin and sterile. Many creeks of clear pure water flow into the Sabine below lat. 32°, the most remarkable from the left are Dugan's, Darby's, Toney's, Lafitte's bayou, bayou Lenau, Negritta, bayou Taureau, and bayou Concou. From the right, the Nadaco, Pat Barregas, and Waukahatcha, are the principal. Below lat. 32°, the Sabine continues SE. nearly lat. 31°, reaches its extreme E. bend; here the river turns to SSW., and at N. lat. 29 55 expands into a lake of the same name; about 20 ms. above the head of Sabine Lake the timber ceases, though abruptly; but 10 miles below the head of the lake very little timber is to be seen. The banks on both sides are low and flat before emerging into the prairies. At the mouth of the river is a high bank, on which are a few dwarf trees; along the bayoues that intersect the marsh or prairie, a few trees are scattered, but the residue is an open prairie expanse. Though many ledges of rocks rise in the stream on the right bank, no indications of minerals are visible. At the point where the road between Nacogdoches and Natchitoches crosses the Sabine, there is a salt spring on the Louisiana side, but where the salt water issues the land is liable to be overflowed when the river is much swelled by rains. The whole length of the river is 70 miles above, and 250 below North latitude 32°.

Sabine Lake is the estuary of the Sabine and Neches rivers; it is about 30 ms. long, and 8 or 10 miles wide, communicating with the gulf of Mexico by a narrow channel of 4 or 5 ms. in length, about 400 yards wide. This channel, commonly known as the mouth of Sabine river, is at N. lat. 29 24 N., lon. W. C. 17 4 W. This lake is very shallow, generally about 5 or 6 feet, but near the shores not more than 2 or 3. The adjacent prairie on the lake and outlet is one wide waste prairie, much of it marsh, cut by innumerable large and small ponds or lakes. Four ms. SW. from the mouth of the Sabine, the Natchez enters the lake from the NW. A bar crosses the mouth of the Sabine outlet, on which, at ordinary tides, is about 3 feet water. The tide ascends the Sabine and river above the prairies.

Sina, province of Italy, in the Ecclesiastical State, bounded on the N. by Umbria, on the E. by the Apennines, on the S. by Campagna di Roma, and on the W. by the patrimony of St. Peter. St. Genevieve, village and seat of justice, St. Genevieve co., Missouri, stands on a high plain or second bank of the Mississippi, about a mile from its bank, on Gabara creek, 82 ms. below St. Louis, and 109 above the mouth of Ohio. It is the second town in the State in point of size and importance, containing an academy, 12 or 15 stores, and near 400 dwelling-houses. It has gained great advantages from becoming the principal depot of lead, and the mart of supply to the miners. The town and district of St. Genevieve contained in 1840 a pop. of 1,607. St. George, tp., Lincoln co., Maine. Pop. in 1820, 1,325.

St. George's, village, Newcastle co., Delaware, 12 ms. SSW. from Wilmington.

St. Germain.—See *Germain, St.*

Saint Helena, island of.—See *Africa*, p. 31.

Saint Helena, island on the coast of S. C., 13 ms. long and 3 broad, forming a part of Beaufort district, between St. Helena and Port Royal sounds.

St. Helena, parish of La., bounded by lakes Pontchartrain and Maurepas, and Amite river S., Amite river or East Baton Rouge, and New Feliciana W., State of Mississippi N., and Tangipaw river, or Washington, and St. Tammany E. Length 46, mean width 28 ms., area about 1,300

sq. ms. With very partial exceptions this extensive parish is covered with pine, with a sterile soil. Beside the Amite and Tangipoo, it is drained by the Tickfoha river. Chief town, St. Helena. Pop. in 1820, 3,026; and in 1840, 3,525. For cl. lat. see *St. Helena*, village.

St. Helena, village and seat of justice, St. Helena parish, La., on the Tickfoha river, about 35 ms. NE. by E. from Baton Rouge. Lat. 30 35, lon. W. C. 13 41 W.

Saint Illa, Great, river of Ga., rises in Tatnall, Telfair, and Irwin cos. by a number of branches which enter Appling. In the latter they form two streams, Great and Little Saint Illa, which cross Appling and unite in Wayne, turn S., enter Camden, and, winding to the E., fall into St. Andrew's sound, after a comparative course of 140 miles.

St. Inigoes, village in the lower part of St. Mary's co., Md., on a small bay of St. Mary's river, 93 ms. SE. from W. C.

St. James's Church, post office, Bedford co., Va., by post road 145 ms. SW. by W. from Richmond.

St. James, parish of La., on both sides of the Mississippi, bounded by St. John E., Amite river N., Ascension W., and Assumption SW. Area 300 sq. ms. For general features and staples see *St. Bernard*. Pop. in 1820, 5,660; and in 1840, 8,548. Lat. 30° N., and lon. W. C. 14° W., intersect in this parish about 7 ms. SE. from Donaldsonville.

Saint John, or *Prince Edward's island*, island in the gulf of St. Lawrence, W. from Cape Breton. Chief town, Charlottetown.

St. John, one of the Philippine islands, E. of Mindanao. Lon. 126 39 E., lat. 9 30 N. — One of the Virgin islands, in the West Indies, belonging to the Danes. It is 12 ms. in circumference, and has a town and spacious harbor. Lon. 65 10 W., lat. 18 10 N.

St. Johns, co. of New Brunswick.

St. John's, the only river of considerable magnitude which enters the bay of Fundy. This noble stream rises in Maine, its extreme northern and northwestern sources reaching to within 20 ms. of the St. Lawrence. Flowing first to the NE., then E., and finally SE. and S., falls into the bay of Fundy after an entire comparative course of 350 ms., forming the largest stream on the Atlantic coast, between the basin of the Susquehannah and that of the St. Lawrence. The tide flows up this stream upwards of 80 ms., its mouth between St. John and Castleton is narrow, and impeded by a ledge of rocks, on which there is only 17 feet of water at low tide. The St. John is very difficult of entrance from the violence and eddying of the tide, and the incumbent mass of fresh water from the river.

The basin of St. John is about 250 ms. in length, with a mean width of 100 ms., comprising an area of 25,000 sq. ms. In its natural state the St. John is one of the most navigable rivers in the Atlantic system, being much less impeded by falls than any other of the streams entering that ocean between the Hudson and gulf of St. Lawrence. The land watered by either the main river or branches are also more fertile than that contained in the other river basins NE. of the Connecticut.

In point of climate the St. John's basin reach the 48th° of N. lat., and terminates in the Atlantic coast at N. lat. 45 10, extending through 3° of latitude.—See *Walloostook River*.

St. John's, city of New Brunswick, at mouth of St. John's river. It is situated on elevated ground, regularly laid out and well built and contains 5 churches. From the excesses at the mouth of St. John's river the harbor is open throughout the year.

St. John's, lake of La., in Concordia, on the bend of the Mississippi. Bayou L'Argent is outlet from the river to the lake, and leaves former opposite Fairchild's islands, 15 ms. at Natchez.

St. John's, capital of the island of Newfoundland, on the SE. coast of the island. Lat. 55 N. Resident pop. about 12,000.

St. John's, river of Florida, rises between 26° and 27° N., and following first NE. about 60 ms., approaches within 6 ms. of the Atlantic ocean about 60 ms. nearly S. from Cape Canaveral thence turns NW., but curves generally with opposite coast, and finally falls into the Atlantic ocean at lat. 30 12, after an entire comparative course of 300 ms. It is navigable nearly to source.

St. John Baptiste, parish, La., on both sides of the Mississippi river, above St. Charles and between St. James. Area about 150 sq. ms. For general features and staples see *St. Bernard*. Pop. in 1820, 3,854; and in 1840, 5,776. Cl. 30 4 N., lon. W. C. 13 44 W.

St. Johnsbury, town, Caledonia co., Vt., ms. NE. from Montpelier. Pop. in 1820, 1,300. — Village, Caledonia co., Vt., on Passampscott river, 35 ms. NE. by E. from Montpelier.

St. Johnsville, town, Montgomery co., Va., ms. NW. by W. from Albany.

Saint Joseph's, lake, La., in Concordia, on the bend of the Mississippi, nearly opposite the mouth of Big Black river.—One of the islands in the straits of St. Mary, between Lakes Superior and Huron.—Small island on the coast of Mississippi, near the mouth of Pearl river.—River in Michigan, rising on the same plain with Maumee but flowing NW. into Lake Michigan.

St. Juan de Ulua, island and very strong fortress off the harbor of Vera Cruz.

St. Landre, or *Opelousas*, town of La., seat of justice for the parish of the same name situated in a prairie between two bodies of water about a half a mile asunder, on a small stream which forms part of the sources of both Teche and Vermillion rivers; the Bayou Fusillier entering Teche, and the other Bayou Bourbé, forming the head of Vermillion. St. Landré is distant 15 ms. SW. of its port, Bayou Carron. The country though level is very pleasant and healthy. Water is generally found only in wells; springs are rare, but the water is excellent, cool, and light. The streets are laid out at right angles. It contains a court-house, jail, a few public houses and stores, 50 or 60 houses, and about 200 inhabitants. Lat. 30 32 N., lon. W. C. 15 12 W.

We thus find the extreme summit level between
 Lake Superior and Sandy Lake to be 550.6 feet
 above the surface of the former, in a direct dis-
 tance of about 70 ms. If this estimate is correct,
 the country W. of Lake Superior has a rise, in
 70 ms., of within 90 4 feet, as much as from tide
 water in the Hudson to the head of that lake.

Thence to the level of Sandy Lake -	4.6 23.6

This depression taken from 550.6 feet leaves
 527 feet as the elevation of the surface of Sandy
 Lake over that of Lake Superior. Mr. School-
 craft (page 261) estimates the entire fall from
 the summit level, through Sandy Lake, into the Mis-
 sissippi, at 60 feet, and the elevation of the sour-
 ces of that river, above that of the mouth of Sandy
 Lake river, at 162 feet.

From these elements we have 36.4 feet fall from
 Sandy Lake into the Mississippi, yielding an ele-
 vation of that stream at the mouth of Sandy Lake
 river, above the surface of Lake Superior, of 490.6
 feet. If to the latter sum we add 162 feet, we
 have 652.6 feet, as the elevation of the sources of
 Mississippi river above the surface of Lake Supe-
 rior. We have already found that the latter lake
 was elevated 641 feet above the Atlantic tides,
 which sum, added to 652.6, produces 1,293.6,
 say in round numbers 1,300 feet, as the elevation
 of the sources of the Mississippi over the Atlantic
 tides.—See article *Mississippi*. In that place it
 will be seen that Mr. Schoolcraft's deduction does
 not agree with his elements. He there deduces
 1,330 feet as the elevation of the Mississippi
 sources. But, by adding together 611 feet, the
 elevation of Lake Superior, 550.6 feet, rise to the
 intermediate summit level between Lake Superior
 and the mouth of Sandy Lake river, and 162 feet
 as the rise of the Mississippi river from Sandy

Lake river to its sources, we have 1,353.6 feet ; and this sum, less 60 feet, the fall from the summit level before noticed, to the mouth of the Sandy Lake river, leaves, as before, 1,293.6 feet as the real elevation of the sources of the Mississippi.

By the river of the Grand Portage, which enters Lake Superior nearly opposite to the SW. end of Isle Royal, a route is opened with the wide uncultivated expanse upon the sources of the Winnepeg, Assiniboin, Red, and other branches of Saskatchewan. This is the great thoroughfare of the fur trade.

The enormous surplus mass of the waters of Lake Superior are discharged at the falls of St. Mary, N. lat. 46 31, by a fall of 22 feet 10 inches, according to the admeasurement made by Col. Gratiot. The river or strait of St. Mary's is about 40 ms. in length, and connects the upper secondary basin of St. Lawrence with that of Lake Huron, Michigan, Erie, and their confluent waters. The latter basin, depressed below the former 76 feet, spreads over a parallelogram of 500 by 400 ms., or embracing a superficies of 200,000 sq. ms. Of this extent, Lake Huron occupies 20,000 sq. ms, Michigan 13,500, and Erie 15,000, or over an aggregate of 48,500 sq. ms. If to this we add 1,500 sq. ms. for Lake St. Clair and Nipissing, other smaller lakes, and the rivers, we have, in round numbers, in the second or middle basin of St. Lawrence, fifty thousand square ms. of water, or one-fourth part of the entire surface.

The middle is the most valuable of the three minor basins of St. Lawrence. In point of climate, it reaches from N. lat. 40 20 to N. lat. 47°. The arable surface is unequally divided, as near two-thirds of the whole is on the right or U. S. side of the chain of lakes. It would be needless to enumerate the great number of rivers which every where flow from the adjacent country into the lakes ; we will therefore particularly notice only those which, from their position, have already or may become noted channels of inland navigation.

Of the latter, proceeding from W. to E., the first which demands attention is Fox river, flowing into Green bay, or the northwestern arm of Lake Michigan. The entire length of this river is 260 ms., 50 of which consist of lakes. It is formed by two branches, the Vaseux and Portage rivers, which unite 15 ms. from Portage from the latter to the Ouisconsin branch of Mississippi. The Vaseux flows in from the NW., and from its junction with the Portage river to Winnebago Lake is 190 ms., following the windings of the stream. In this distance, Fox river in most places resembles a canal or strait more than river, its current is gentle, and often expanded into lakes of considerable extent. The river here appears to wind across a valley, which is terminated by a ridge of hills crossing between Green bay and Winnebago Lake. The latter opens above the ridge we have noticed, and extends with a width of 5 or 6 ms., or about 24 in length. The adjacent country has been described as in a peculiar degree fertile and agreeable to the eye.

At the bottom of the Winnebago Lake, the river changes its character: the shores become rocky and precipitous, and the bottom of the stream

much embarrassed with falls, rapids, and straits. By a very circuitous channel of 40 ms., through this mountain pass, the navigation is obstructed by the Winnebago, Little Kakalin, Grand Kakalin, and the Rock Rapids. From the foot of the latter to the head of Green bay is about 6 ms. of smooth water. At low water, late in the summer and early in autumn, the navigation of the mountain pass of Fox river is extremely dangerous, difficult, and fatiguing, but during the spring freshets it may be ascended and descended with ease and safety.

Green bay extends 120 ms. in length, in a direction of NNE., nearly parallel to Lake Michigan, with which it communicates by a wide strait about 75 ms. W. from the straits of Michilimackinac. It was through this channel that the discovery was made of the Mississippi river in Canada, and it has long continued and still remains the principal route from the Canadian lakes to the upper waters of the Mississippi. The distance, by comparative courses, from the mouth of Green bay to the portage from the Fox to the Ouisconsin rivers, is 250 ms., and down the latter stream, to its junction with the Mississippi, is 100 ms. ; but the distance, following the winding of the stream, is probably one-third more than the comparative courses, or from Lake Michigan to the Mississippi about 530 ms.

The portage from the Fox to the Ouisconsin river is one of those singular situations which the interior of America affords, where nature seems to have made preparation for the operation of intercourse. Both rivers originate about 100 ms. to the N. of the portage, but at the latter they approach to within one mile and a half of each other, the intervening ground level prairie, over which high floods loaded canoes are navigated from stream to the other. This circumstance establishes the fact of the facility of completing the communication by a short canal, perhaps without locks.

The next point of contact between the navigation of the Canadian sea and Mississippi river is near the SW. extremity of Lake Michigan. The small river Chicago, entering Lake Michigan, heads with the Theakiki branch of Illinois, and from the nature of the intermediate country, at high water a natural uninterrupted route is formed between those two great sections of the United States.

It will be at once seen, by an inspection of this table, that the difference in distance by the two routes is trifling; and, all things considered, no diversity exists naturally in the facility offered, and no impediments opposed to mercantile transportation; but, with the grand canal from Albany to St. Louis, the advantages are obviously in favor of the northern route.

The observations upon the St. Lawrence basin may be indefinitely enlarged, but we must close our general view of that subject with a few brief remarks.

The Coteau or Grand river is a great northern branch of the St. Lawrence, rising in the imperfectly known mountains N. from Lake Huron, and, flowing SE. by various courses 600 ms., falls into the Coteau at 25 ms. nearly W. from the city of Montreal.

The Ottawa, often called the Grand river, is one of the routes pursued by the Canadian traders who ascend that river, and, by a short portage, enter Lake Nipissing, and from the latter into Lake Huron. The distance from Montreal into Lake Superior is one-third longer through the St. Lawrence and great lakes than by the Ottawa river. The navigation of the latter is much encumbered by rapids and shoals, but is nevertheless much preferred, from its superior safety, and from being much shorter.

Montreal is extremely well situated to become the centre of a very extensive inland commerce. It is already such, as far as the advance of population is concerned. Standing at the head of ship navigation, this city is on the St. Lawrence, the point of contact between the foreign and interior commerce of this immense expanse of country. In 1831, the population was estimated at 27,300; at present, it is probably that it falls little, if any, under 100,000.

La Chine is the upper port of Montreal, and situated on the same island with that city, and at the western extremity of Lake St. Louis. La Chine is the centre of shipment between the Upper and Lower provinces, and the North country. In May and November, boats, to and from various parts of Canada, are continually arriving and departing from this place. They are from 35 to 40 feet in length, with about 6 feet beam; their usual cargo from 4 to 4½ tons. They are worked by a single mast, and sail, drag-ropes for towing, and rollers for setting them through the strong current rapids. Four men manage them in summer. They bring down wheat, flour, salt provis-

ions, pot and pearl ashes, and peltries. They are usually navigated in squadrons of from 4 to 15 boats, in order to enable the crews to aid each other in passing the rapids.

From La Chine, the bark canoes employed by the Northwest Company in the fur trade take their departure. Of all the contrivances for transporting heavy burdens by water, these vessels are perhaps the most extraordinary. They are formed by a slight frame, to which the bark of the white birch tree (*betula alba*) in slips is attached. These canoes are the lightest of all navigable vessels to their capacity. It is the latter circumstance which enables the Canadian boatmen to perform so many long and fatiguing portages with their vessels and cargo.

With these light canoes the traders proceed up the Grand, or Ottawa river, to the SW. branch, by which, and a chain of small lakes, they reach Nipissing; through it, and down the French river, into Lake Huron; along its southern coast, up the narrows of St. Mercy, into Lake Superior; and then, by its northern side, to the Grand Portage, a distance of about 1,100 ms. from the place of their departure. From the Grand Portage, which is 9 ms. across, there is a continuation of similar toils and bark canoes of smaller size, through chains of lakes and streams that run from the height of land westward, to the Lake of the Woods and Lake Winnipeg, to the more distant establishments of the company in the remote regions of the north-west country.

From the city of Montreal to the eastward, the shores are from 15 to 20 feet above the level of the St. Lawrence; but, in the opposite direction, towards La Chine, they are low. Between the Coteau St. Pierre and the river the land is so flat, and particularly near the small Lake St. Pierre, so marshy as to induce a conjecture that it was once covered with water. Over this place it is intended to cut a canal, by which a direct communication would be formed between La Chine and the city, and the rapid St. Louis (intervening) avoided.

Near the head of Lake St. Louis extends the Point des Cascades, and in the river lies the island des Cascades, which, with one or two other smaller ones, break the current of the river at its entrance into Lake St. Louis, and present nearly the same effect that would be produced by the most violent tempest. To avoid these, a canal, usually called the Military canal, has been constructed across the point of land, and through which the boats pass to the locks at Le Buiessen; it is 500 yards in length. At a place near Lorgueil's mill, the boats going up the St. Lawrence are unloaded, and their freights transported in carts to the village, while the empty boats are towed through the rapid du Coteau des Coches. At Coteau du Cac, just above the river de Lisle, ascending boats again enter locks to avoid a very strong rapid.

We may now take a brief view of those rivers by which a water communication is had from the U. S. to the St. Lawrence. Of these, the most important is the river Richelieu, which flows from the Lake Champlain, in a northerly course, and unites with the river St. Lawrence at the town of William Henry. The navigation is carried on by boats, canoes, and rafes. From its junction with the St. Lawrence, decked vessels of 150 tons may

ascend 12 or 14 ms.; its mouth is about 250 yards in width, and this continues nearly to the basin of Chamblly; from thence to the Island du Portage, it is 500 yards; beyond this, it is double that extent to St. John's, from whence there is a ship navigation 160 ms. along Lake Champlain. From the basin down to the St. Lawrence the current is gentle, notwithstanding the shoals and flats; but, from Lake Champlain, the stream is in some places broken by rapids. There is much trade upon this important navigation, and its importance is unequivocal.

The river St. Francis is also an important line of communication, only it is obstructed by a number of violent rapids; its source is a large lake of the same name, in the tps. of Garthley and Coleraine; it flows in a SW. direction for 30 ms., then nearly NW. for about 80 ms., and falls into the Lake St. Peter; a branch connects with Lake Memphremagog, from which several streams descend into the State of Vt. Notwithstanding the imperfection of this navigation, much trade is thereby sent to the St. Lawrence.—See *Rideau Canal*.

St. Louis, town and capital, St. Louis co., Mo., on the right bank of Mississippi, 18 ms. below the mouth of Missouri. The site of this town is a gentle acclivity, terminating in a plain in the rear of the buildings. The whole resting on a limestone base. The houses are ranged in three parallel streets, rising above each other and extending along the river about 2 ms. St. Louis possesses some pre-eminent advantages of local position. It is already, and must continue, the principal depot for the immense regions drained by those numerous rivers, the congregated waters of which are here collected into one great stream. The population of this place has very rapidly advanced. In 1803, when transferred to the U. S., the inhabitants fell short of 1,000; in 1816, they amounted to 2,000; and in 1820, to 4,598. In 1840, the city of St. Louis, and the township in which it is situated, contained an aggregate population of 35,979, of whom 13,126 were white males, and 8,379 white females; total whites, 21,505; residue, 14,474, were persons of color. Savannah, river, forms a part of the divisional line which separates Georgia from South Carolina. Its course is nearly from NW. to SE. It is formed principally of two branches, the Tugaloo and Ogeechee, which spring from the mountains. It is

navigable for large vessels up to Savannah, and for boats of 100 feet keel as far as Augusta. It falls into the ocean at Tybee bar, in latitude 31 57 N., where it has 16 feet water at half tide. The Savannah river has its most remote sources in the Appalachian slopes, opposite to those of Tennessee, and interlocking with those of Chattahoochee and Alatamaha to the southward and those of Saluda northward.

Savannah, city of Georgia, and formerly the seat of government. It is situated on the SW. side of Savannah river, in Chatham county, in lat. 32 5 N., lon. 81 24 W., and about 15 ms. from the ocean. The town is accounted healthy for so hot a climate, being seated on a bluff in a bend of the river, and elevated considerably above the surrounding plantations. The wet mode of cultivating rice, it is supposed, contributed much to the insalubrity of the summer and autumn seasons in Savannah. In 1817, the citizens of that town voted \$70,000 to induce the proprietors of rice farms in the vicinity to abandon the wet, and adopt the dry, mode of culture. Vessels of large burden can moor close to the town, but, from its vicinity to the ocean, they are often exposed to tremendous floods.

Saxe-Altenberg, *Saxe-Cobourg-Gotha*, *Saxe-Meiningen*, and *Saxe-Weimar*, all derive their names from the same radix, and stand sovereign States of Germany. We insert these States in their alphabetical order.

Saxe-Altenberg, enclosed between the kingdoms of Prussia and Saxony, comprises 510 English sq. ms., with a population of 104,000, with three cities of some note—Altenburg, the capital, pop. 10,000, Ronnebourg 4,000, and Eisenburg 4,000.

Saxe-Cobourg-Gotha is one of those scattered German States, the geography of which is so very difficult to comprehend. Besides the main body of the duchy, enclosed between Meiningen and Weimar, it possesses other detached but small territories, such as Lichtenburg, Volkerode, and Sonnenberg. The whole duchy comprises 930 English sq. ms. and a pop of 145,000, with its two capitals Gotha and Cobourg, from which combined comes the name of the duchy. Gotha, with a pop.

of 11,000, is regarded as one of the most beautiful cities of Germany, whilst the varieties of manufactures and activity of its commerce made it a point of reunion in central Germany. Cobourg, with a pop. of 8,000, is in other respects of less importance than Gotha, but still, how ranks amongst the flourishing German cities.

Saxe-Meiningen, southward from the preceding and bounded by Saxe-Cobourg, the Hessian, and Smalcalde, and northern Bavaria, comprises 950 English sq. ms. and a pop. of 130,000, the capital, Meiningen, pop. 5,000, Hildeshausen 4,000, and Saalfeld 3,000.

Saxe-Weimar, though last in alphabetical order is in every respect the principal State of Germany with *Saxe* as pre nomen. The grand duchy of Saxe-Weimar is divided into two provinces, Weimar and Eisnach. Weimar is separated into two parts by a part of Saxe-Altenburg, and bordered by the latter, the Prussian province of Saxe-Reuss, Saxe-Meiningen, and Schwartzbourg-Oldstadt. Eisnach is situated between some portions of Prussia, electoral Hesse, Saxe-Meiningen and Bavaria.

The entire surface of the grand duchy of Saxe-Weimar comprises 1,370 English sq. ms. 212,000. Government since 1816 a representative monarchy. Legislature meeting every year. The people are active, industrious and prosperous.

In the grand duchy there are, beside manor-lages, four towns of note—Weimar, Jena, Eisenach, and Apolda. Weimar, situated almost N. lat. 51°, and on one of the higher branches of the Saale, with a pop. of 10,000, holds, perhaps, the highest literary rank of any city of Europe of equal population. In regard to industry and commerce, this fine little city also maintains the character we have already given to other German cities under the Saxon princes. Jena, with a pop. of 5,000, is more generally known than Weimar, from the celebrity of its university; is situated on the Schwarzsa, a higher branch of the Saale, and 12 Eng. ms. a little S. of E. from Weimar. Eisenach, situated on the Werra, a higher branch of the Weser, about 50 English miles almost due W. from Weimar, with a pop. of 8,000 and a celebrated seat of learning, and Apolda, celebrated for its manufactures, closes our general view of Saxe-Weimar.

Saxony, once a general name for most of northern Germany, is now, as such, in great part obsolete, but, with the exception of a small but very respectable monarchy, having Prussia on the NE. N., several small States of Germany W., Bavaria SW., and the Erze Geberg mountains, separating it from Bohemia, S. The slope of Saxony is northward, and, with but little exception, is crossed by various confluent of the Elbe, the principal volume of which latter, issuing from Bohemia, traverses Saxony. The kingdom lies between 50 10 and 51 50; and lon. 13° E. of London crosses it between Dresden and Leipsic. The name of Saxony, as given by Lârenaudiere, Balbi, Huot, is about 5,570 English sq. ms., and contains 1,400,000, which yields a distributive population of 250 to the Eng. sq. m. Admirably watered by rivers, and with a soil generally fertile and climate dry and temperate, the people of Saxony are at once industrious and intelligent, and have availed themselves of the natural advantages of their country. Of these advantages, next to agriculture and manufactures, are the inexhaustible mineral resources and operations. Of mineral resources found in the mines of Saxony may be named iron, silver, copper, lead, tin, arsenic, &c. Manufactures are in an advanced state in this kingdom, and embrace cloths of linen, woolen, silk and cotton; also hardware, and that to a great extent embracing a large part of the various objects of human want, whether formed from earths or metals.

Principal city, *Dresden*, which the reader will understand its own head, as also *Leipsic*, *Chemnitz*,

Scala, episcopal town of Naples, in Principato Citeriore. It was a large city formerly, but is now greatly decayed. It is 6 ms. N. of Amalfi. Lon. 14 44 E., lat. 40 34 N.

Scala Nova, *Gulf of*, modern name of that bay of Asia Minor spreading W. from the city of Ephesus, and bounded S. by the island of Samos, and N. by the peninsula of Chisme.

Salva Nova, small maritime village of Asia Minor, 8 ms. SW. from Aisaluck, or the ruins of Ephesus. *Scala Nova* gives name to the gulf on which it stands, which, in its widest extent, is limited NW. by Cape Masticco, the southern point of the island of Scio, and on the SW. by the island of Nicaria.

Scalitz, or *Scala*, town of Upper Hungary, in the co. of Poson. There is a very advantageous passage by it from Moravia to Hungary, and it is seated on the Marck, 50 ms. N. of Presburg. Lon. 17 17 E., lat. 49 4 N.

Scamachie, city of Russia, in Schirvan, about 24 ms. from the Caspian Sea. It is inhabited by Armenians and Georgians, 360 ms. S. from Astrachan. Lat. 40 27 N.

Scanderoon, or *Alexandretta*, town and seaport of Asiatic Turkey, in the Pachalic of Aleppo. It is situated on the eastern side of the gulf of the same name, 75 ms. NW. by W. from Aleppo. From position the harbor of this place is much frequented, though the climate is peculiarly unhealthy. From the lowness of the plain on which this town stands, it seems incapable of being rendered healthy, and in the hands of its present possessors hopeless. N. lat. 36 15, lon. 36 15 E. of London.

Scandinavia, a general, though somewhat vague name for that European peninsula lying between the Atlantic ocean, and Baltic sea, and gulf of Bothnia. This region, comprises Norway, Sweden, and Lapland, and extends in lat. from the extreme S. of Sweden 55° to the North Cape, 72° N., or through 17° of lat., stretching far into the Arctic regions. As I have observed in regard to Lapland, I may here repeat with addition. Scandinavia has been compared in regard to climate with Central Europe, whilst the real comparison ought to have been made with Northeastern Asia, including the whole of Kamschatka with Greenland, Labrador, and all North America above

N. lat. 55°. Scandinavia has a length of about 1,200 ms., and at most a mean breadth of 260 ms.; area 240,000 sq. ms.. On this surface subsists 3,850,000 inhabitants.

To render these comparative estimates the more explicit and satisfactory, we here subjoin a table of Scandinavia, and such other parts of Northern Russia in particular as come under the influence, more or less intense, of the same laws of climate.

Countries.	Population.
Scandinavia - - -	3,850,000
Northern Denmark - - -	991,000
Northern Russia - - -	12,427,000
Scotland and its islands - - -	2,092,000
Iceland - - -	51,000
Total - - -	19,411,000

The combined area on which exist this mass of upwards of 19 millions of civilized people exceeds but little, if any, one million of sq. ms., yielding a distributive population of near 19½ to the sq. m. This space contains Edinburgh, in Scotland; Copenhagen, in Denmark; Stockholm, in Sweden; St. Petersburg and Moscow, in Russia; besides innumerable other flourishing cities, ports, marts, seats of science of the first order; and, in fine, all that can embellish and sweeten human life. If the reader will turn to page 294 of this work, he may satisfy himself by the use of the table on the area of the zones and rhumbs, that the whole land area of the earth above lat. 55° amounts to a large fraction above 18 millions of sq. ms. From these data we are taught that on less than one tenth of this space exist 19,411,000 civilized human beings. It may be doubted whether there exists on the remaining 17 millions of sq. ms. comprised in the northern regions a soul to a sq. m. Two millions of population would be an adequate estimate; and the far greatest number of these rude savages, or barbarians little above the savage.

It must be perfectly obvious from these elements that the true method to reach the causes of phenomena so remarkable as those, which give so much real superiority to one region of the earth over others of so much greater extent and similar position on the sphere, must be to compare these spaces with each other. China, Corea, and Japan, have been for unknown ages relatively to Northeast Asia, placed as Southern is to Northern Europe; yet Northeastern Asia has remained, as indeed has all Asia, comparatively N. of the Altaian mountains and E. of the Urals, desolate and barbarous. The polar regions of North America are still more stern, cold, and uninhabitable than those of Asia. Asia and Europe physically are only parts of one whole. That part of North America towards Behring's strait is relatively to that continent what Northern Europe is to Asia. But beyond Behring's strait westward, in place of a perennially open ocean, similar to the Atlantic, spreads an almost perennially frozen continent. It is true that, from very good authority, Northwestern America has a climate far more mild and genial than that of Northeastern North America. This is in perfect accordance with the now well-known effect of the greatly prevailing western winds. Effects uniformly following their cause, and in excess or

defect, in proportion to the excess or defect cause, Northwestern Europe exhibits the melting effects in excess, and Northeastern America, Greenland, and Northeastern Asia, the opposite excess. These are causes and effects arising from the permanent features and laws of nature, must remain to determine the relative density, moral and intellectual condition of mankind those features and laws are changed.

Scanio.—See *Schonen*.

Scaro, or *Scaren*, town of Sweden, in Gothland, seated on the Lake Wenner, 66 ms. of Gottenburg. Lon. 12 42 E., lat. 58 16 N.

Scarborough, seaport and borough of England the N. Riding of Yorkshire. It has of late greatly frequented on account of its mineral waters, called the Scarborough Spa, and also bathing. It has a good harbor, possesses considerable trade, and is much engaged in the fishery. It is 36 ms. NE. of York, and 237 N. of London. Lon. 15' W., lat. 54 18 N.—Town and fort on the island of Tobago.—Town, Cumberland Maine, on the S. side of Saco river, 14 ms. W. of Portland, and 9 NE. of Biddeford. In 1810, 2,100; in 1820, 2,232.

Scarlino, town of Tuscany, on the sea coast, 5 ms. S. of Massa, and 10 ENE. of Pistoia. Lon. 10 57 E., lat. 42 58 N.

Scaro, town of the island of Santorini. Lon. 25 58 E., lat. 36 10 N.

Scarpanto, ancient Carpathus, island of the Archipelago, 22 ms. long and 18 broad, SW. of Rhodes, and NE. of Candia. There are several high mountains; but it abounds in marble and game, and has mines of iron, quarries of marble, and several good harbors. The Turkish masters of it, but the inhabitants are Greeks. Lon. 27 40 E., lat. 35 45 N.

Scarpe, river of Fr. which has its source in the tois, and, flowing past Arras, Douay, and Amand, falls into the Scheldt.

Scarsdale, fertile tract of Eng., in the NE. of Derbyshire, surrounded by barren rocks and mountains.

SCEPTRE, Greek, *skeptron*, from *skepto*, to support. It is evident from ancient authors, that sceptre originally meant a staff, but gradually became a symbol of power. Under the first Merovingian race of French kings, the sceptre was a golden rod, surmounted with a cross. The *Baton* of French marshals comes thus.

Schaafstadt, town of Germany, in the circle of Upper Saxony, 8 ms. W. of Mersburg, and 10 W. of Leipsic. Lon. 11 36 E., lat. 51 10 N.

Schaffhausen, smallest canton of Switzerland, bounded on the N. and W. by Suabia, on the E. by the canton of Zurich and the bishopric of Constance, and on the S. by the same and Thurgau. It is but 5 leagues in length and 3 in breadth, and contains 30,000 inhabitants. It produces all the necessaries, as wine, fish, wood, flax, hemp, sheep, wool, black cattle, and deer. The principal article of trade is wine, the country abounds in vineyards; and as the canton affords but little corn, it is procured from Suabia, in exchange for wine.

Schaffhausen, town of Switzerland, capital of a canton of the same name. It is seated on the Rhine, and owes its origin to the interruption of the navigation of that river by the cataract of the Jen. It is remarkable for one of the most curious bridges in Europe, over the Rhine, connecting it with the other parts of Switzerland. Schaffhausen contains about 6,000 inhabitants, and is 21 1/2 ms. N. by E. of Zurich, and 39 E. of Basil. Lon. 8 41 E., lat. 47 39 N.

Schaghticoke, town, Rensselaer co., N. Y., on the west bank of the Hudson, 11 ms. above Troy. Lon. 73 18 W., lat. 42 52 N.

Shah, or *SHACH*, or *SHAH*, Persian title, equivalent to Khan.—See *Khan*.

Shalholt, episcopal town of Iceland, with a population of 1,000. Lon. 22 20 W., lat. 64 40 N.

Shamachie, formerly a town of Persia, capital of Shirvan.—See *Scamachie*.

Shamunish or *Theomorphism*, the religion of the Hindoos. This system is now subdivided into two great branches, Shamanism proper, in Tartary, Mongolia, and Siberia; Fo, in Thibet, China, and Japan; and Buddhism, in Indostan, China, and many of the East India islands. Shamanism is the most extensive and probably most ancient religious system.

Shantz Sterney, fortress in the Russian Government of Wiburg, seated on the Neva, a little above Petersburg. Lon. 31 15 E., lat. 60° N.

Sharanpour, or *Scharunpour*, town of northern Hindoostan, about 100 ms. a little W. of N. Delhi. Lat. 30° N., and lon. 77° E. of London. Here the British E. India Company have established a Botanic garden. It is stated, in the Encyclopædia of Geography, that this place is elevated 1,100 feet above the ocean. Mean annual temperature, 73° Fahrenheit. Schemnitz, town of Upper Hungary, one of the seven mountain towns, with three castles. It is famous for mines of silver and other metals; as also for its hot baths. Near it is a high rock of shining blue stone, mixed with green and some spots of yellow. It is 50 ms. NE. of Presburg.

Schenck, fortress of Dutch Guelderland, on the point where the Rhine divides into two branches, forming the Rhine proper and Waal. It is the centre of communication between Holland and Germany. Schenk is the ancient Burginatum, and the Quadriburgium of Amminianus Marcellinus. Lon. 5 26 E., lat. 51 55 N. On the ground of Quadriburgium the Dutch have constructed the fort of Schenk, a name so offensive (*pourquo*) to the fastidious delicacy of Boileau.—This place is named from its founder General Martin Schenck.

Schenectady, co., N. Y., bounded by Saratoga co. and Mohawk river NE., Albany co. S., Schoharie co. SW., and Montgomery NW. Length 20, mean width 12 ms., area 240 sq. ms. The Mohawk river flows obliquely through it, and affords much excellent alluvial soil near its banks. Other parts of the co. are hilly and broken with a mixed soil. Chief town, Schenectady. Pop. in 1820, 13,081. Central lat. 42 41 N., lon. W. C. 3° E.

Schenectady, city and seat of justice, Schenectady co., N. Y., on the right bank of the Mohawk, 15 1/2 ms. by land NW. from Albany. It is one of the oldest towns in the State, being built nearly coeval with Albany. Many of the buildings are elegant, but, like all the ancient towns of N. Y., the old and new edifices are contrasts, exhibiting the advance in elegance and convenience effected in the course of upwards of a century. A fine and very substantial wooden bridge here crosses the Mohawk. Union college stands a little to the NE. from the city. This institution was incorporated in 1794, and is now a very respectable

and prosperous institution. The college buildings are spacious, and calculated to accommodate 200 students. The site is pleasantly elevated, and near the Mohawk. The library contains above 500 volumes. In 1820 it was under the direction of a president, and four professors, one for moral philosophy, one for mathematics, one for the Greek and Latin languages, and one of modern languages, and two tutors. In 1820, the students amounted to 245. Pop. of the city of Schenectady, in 1810, 2,909; and in 1820, 3,939. This city contains a bank, 4 places of public worship, and near 600 dwelling-houses. Its position for commercial operations is very advantageous, which will be much enhanced by the canals now completed.

Sciglio, or *Scilla*.—See *Scylla*.

Scylla, cluster of islands and rocks, lying almost 10 leagues W. of Land's End, in Cornwall, and are easily discerned from it. Of these, only 5 or 6 are inhabited. The inhabitants principally subsist by fishing, burning kelp, and acting as pilots. The chief of the islands is St. Mary's, which has a good port, is the best cultivated, and contains more inhabitants than all the rest put together. In this island and two or three others are various antiquities, particularly the remains of a temple of the Druids, and ancient sepulchres; but the greatest ornament is the light-house, which, with the gallery, is 51 feet high, and is a very fine column. The Scilly rocks have been fatal to numbers of ships entering the English channel. One of the most disastrous events of this kind happened in 1707, when Admiral Sir Cloudesly Shovel, with three men of war, perished, with all their crews. These islands are called Solingues by the French. Lon. 6 46 W., lat. 49 56 N.

Silly, group of islands in the S. Pacific ocean, discovered by Captain Wallis, in 1767. Lon. 153 30 W., lat. 16 28 S.

Scimitar, village of Greece, in Livadia, about 7 ms. from Negropont, and 12 from Thebes. It contains about 80 houses, inhabited by Greeks.

Scind.—See *Sindy*.

Scio, anciently called Chios, celebrated island of the Archipelago, near the coast of Natolia, NW. of Samos. It is 32 ms. long, and 15 broad, and a mountainous country, yet fruits of various kinds grow in the fields, such as oranges, citrons, olives, mulberries, and pomegranates, interspersed with myrtles and jessamines. The wine of Scio, so celebrated by the ancients, is still in great esteem, but the island is now principally distinguished by the profitable culture of the mastich; it has also some trade in silk, wool, cheese, and figs. Scio has recently become the scene of some disastrous events. In the summer of 1822, the Turks landed a force on the island, and massacred, or led into slavery, it is supposed, at least 30,000 persons, of both sexes, and all ages, and reduced most of the towns and villages to ruin. See *Chisme*. Before this sanguinary invasion, Scio was computed to contain 110,000 inhabitants.

Scio, seaport, the capital of an island of the same name. It is the best built town in the Archipelago, the houses being commodious, some of them terraced, and others covered with tiles. The castle is an old citadel, built by the Genoese. The harbor is a rendezvous for ships that go to or come from Constantinople; it will contain 80 vessels, and is protected by a low mole and two light-houses. It is seated on the E. side of the island, 47 ms. W. of Smyrna, and 210 SW. of Constantinople.

Scioto, river, the second in magnitude of those flowing entirely within the State of Ohio. It rises in Hardin, Marion, and Richland cos., runs first NE. 10 ms., thence SE. 30 ms., where it receives Little Scioto from the NE., and there it gradually

turns to S. by E., and finally into a general direction, 150 ms. further, to the Ohio river, between Portsmouth and Alexandria, by a main stream 150 yards wide. It is navigable 130 ms.

The stream has its higher sources in Hardin, Marion, and Crawford cos., and its valley spreads between those of Miami on the W., and Muskingum on the E. The general course of Scioto is remarkably due S., and also nearly on lon. 6° W. of W. The great central canal of Ohio follows the shore of the Scioto about 70 ms. direct, though sometimes turning more following the inflections of the stream. Columbus, Circleville, Chillicothe, Piketon, Portsmouth, are on the banks of Scioto.

Scioto, salt works, near the centre of Jackson co., Ohio, reserved by the U. S., about 28 ms. SE. from Chillicothe.—One of the central canals of the State of Ohio, containing the town of Chillicothe.—Tp., Delaware co., Ohio, on the side of Scioto river.—Tp., Pickaway co., Ohio.—Tp., Jackson co., O.—Co., O., bounded by Ohio river S., Adams W., Pike N., Jackson NE., and Lawrence E. Length 30 ms., width about 19, area 575 sq. ms. Surface broken and soil of middling quality. Scioto river crosses it from N. to S. Chief town, Portsmouth. Pop. 1820, 5,749. Central lat. 38 50 N., W. C. 6° W.

Scipio, village, Cayuga co., N. Y., on the N. side of Cayuga lake, 18 ms. NW. of Milton, 30 ms. SW. of Marcellus, 30 ms. W. of Tully, and in the neighborhood of Pompey, Sempronius, and many other tps. designated by great names of antiquity. Pop. in 1820, 8,105.—Northern part of Meigs co., Ohio.

Scituate, town, Plymouth co., Mass., 8 ms. W. of Marshfield, and 28 SE. of Boston. Pop. in 1820, 3,305.—Tp., Providence co., R. I., on the N. branch of Patuxet river, between Gloucester and Coventry. Pop. in 1820, 2,834.

Sciro, or *Sciros*, island of the Archipelago, near Mytelene. It is 15 ms. long, and 8 broad, and a mountainous country, but has no mines. The vines make the beauty of the island, and the wine is excellent; nor do the natives want wood. It contains only the village and convent of St. George, both built on a conical rock, 10 ms. from the harbor of St. George. The superior of the convent exercises despotic sway over the inhabitants, whose superstition is more excessive than that of the other Greeks in the Archipelago. The inhabitants are all Greeks, but the Cadi is a Turk.

Scenectady.—See *Schenectady*.

Sclavonia, country of Europe, between the rivers Save, Drave, and Danube. It is divided into several cos., and belongs to Austria; it was formerly a kingdom, and is not above 75 ms. in breadth; it is 300 in length, from the frontiers of Austria to Belgrade. The eastern part is called Rascia, and the inhabitants Rascians. These form a particular nation, and are of the Greek church. The language of Sclavonia is the mother of four others, namely: those of Hungary, Bohemia, Poland, and Russia.

Scone, or *Scoone*, village of Scot., in Perthshire, on the E. side of the river Tay, N. by W. of Perth. It is 30 ms. N. of Edinburgh.

Schonondoa, village, Oneida co., N. Y.

Scopelo, island of the Archipelago, 5 ms. N. of

Sti, and 17 N. of Negropont. It lies at the entrance of the Gulf of Salonica, and is 10 ms. long and 5 broad. It is very fertile, produces plenty of wine, and contains 12,000 inhabitants, who are almost all Greeks.

Scopia, or *Uscapia*, archiepiscopal town of Turkey in Europe, in Bulgaria, seated on the Vardar, which is a bridge of 12 arches, 67 ms. WSW. of Sofia. Lon. 22 25 E., lat. 42 10 N.

Scotch Plains, village in the southwestern part of Essex co., N. J., 15 ms. SW. by W. from Newark, and 42 NNE. from Trenton.

Scotland, or *North Britain*, the northern of the kingdoms into which the island of Great Britain was formerly divided. It is bounded on the west by the Atlantic ocean, N. by the North sea, E. by the German ocean, SE. by England, and S. by the Irish sea. To Scotland also appertain the islands on its western coast, called the Hebrides or Western islands, and those to the NE., called the Orkney and Shetland islands. From N. to S. it extends 270 ms., and its greatest breadth is 150, and in some places not above 30, and no part is more than above 40 ms. from the coast. Scotland is divided into two districts, the Highlands and the Lowlands; the former is applied to the mountainous part to the N. and NW., the latter to the more level district on the E. and SE. But nature seems to have pointed out three grand divisions in Scotland.

The first, or N. division, is formed by a chain of lakes, which cross the country from the north of Murray, to the island of Mull, in a SW. direction; the second, or middle division, is bounded to the S. by the Friths of Forth and Clyde, and a great canal by which they are united; on the north of this boundary is the third or S. division. The N. division is chiefly an assemblage of vast rocky mountains; not, however, without some fertile valleys on the northern and eastern shores. The middle division is traversed in different directions by several ranges of mountains; and, though cultivation here is also found chiefly on the eastern side, yet of this division, as well as of the former, the fertile land bears a small proportion to the mountainous and barren tracts. The S. division has a great resemblance to England, and, with respect both to the general aspect of the country, and to the progress of cultivation, exhibits every kind of natural variety. Scotland will be found connected with the article *Great Britain*, at pp. 365 and 6, in regard to its political divisions and population.

Scotland Neck, post office, Halifax co., N. C. The village is so named from a bend of Roanoke, forming the extreme eastern angle of the co., about 10 ms. by water below Halifax, and by post road 10 ms. NE. from Raleigh.

The capital, called by the Swedes Schlarberg, is named Zmeiewskaia-Gora by the Russians.

Semlin, town of Slavonia, on the W. side of the Danube and Save, opposite Belgrade, 40 ms. SE. of Esseck. Lon. 21° E., lat. 47° N.

Sempach, lake of Switzerland, in Lucerne, 3 ms. in length and 1 in breadth. The bank each side slope gently to the edge of the water, are checkered with wood.—Town of Switzerland in the canton of Lucerne, celebrated for the battle on the 9th of July, 1386, which established the authority of the Swiss, and in which Leopold, duke of Austria, was defeated and slain. It is seated on a small lake of the same name, 7 ms. NW. of Lucerne.

Sempronius, town, Cayuga co., N. Y., between Owasco and Skeneateles lakes.

Semur, town of Fr., in the dep. of Cote d'Or, and late province of Burgundy. It has a manufacture of cloth, and is seated on the Armanche, over which are two bridges, 37 miles from Arras, and 135 SE. of Paris. Lon. 4 19 E., lat. 48 14 N.—Ancient town of Fr., in the dep. of Saône and Loire, and late province of Burgundy, 40 miles NW. of Lyons, and 175 S. of Paris. Lon. 4 14 E., lat. 46 14 N.

SENATE, from Latin, *senatus*, from *senex*, old man. The original and literal meaning of Senate is, therefore, "a council of the aged;" which meaning is in great part applicable to the United States Senate, which arises from its being an elective body. An hereditary Senate is an absurdity, unless the age of the members is stipulated in advanced life when admissible. The British House of Lords is, therefore, not a Senate, in the true meaning of the term, though frequently called so by latitude of expression.

Seneca, lake of New York, 38 miles long, and from 2 to 4 wide, extending from the N. boundary of Tioga co. to Geneva, receiving from the West the discharge of Crooked lake, and, together with the discharge of Cayuga lake, falling into Seneca near Montezuma.—Tp., Ontario co., N. Y., on the W. side of Seneca lake. Pop. in 1810, 3,000, and in 1820, 4,802.—Tp., Morgan co., Co.—Tp., Monroe county, Ohio.

Seneca, river, New York, is the outlet of Seneca lake. After flowing to the NE. by E. about 4 miles, it receives the outlet of Cayuga lake, and turns to the N. 4 ms., is again augmented by another considerable confluent (the Clyde) from the W. Continuing N. 2 miles below the influence of the Clyde, at the village of Montezuma, the Seneca is crossed by the Erie canal, and, still flowing N. 4 ms., turns abruptly to the E., but gradually declines to SE., and joins the Oneida, after a comparative course of 50 miles. The fall in the Seneca river, from its outlet at Geneva to Montezuma, is about 75 feet.—See *Clyde*.

Seneca, county, New York, bounded by Ontario N., Cayuga county and Cayuga lake E., Tompkins S., and Seneca lake and Seneca county W.; length 50, mean width 10 ms., area 500 sq. ms. Southern part between Cayuga and Seneca lakes hilly, middle section tolerably level, and, in part, towards Lake Ontario, again hilly; the whole with a very highly fertile soil. The Erie canal traverses it, by the valley of Mud creek. Population

160, 23,619; and in 1840, 24,874. Central lat. 30° N., lon. W. C. 10' E.

Seneca, county, Ohio, bounded N. by Sandusky, E. by Crawford S., and W. by Hancock and Wood; length 30, breadth 18 ms.; area 540 sq. ms. Sandusky river flows across this county N. to S. It was formed out of the recent Indiana purchase, and is yet unsettled. Central lat. 41° N., lon. W. C. 6 12 W. Population in 1840, 28,874.

Seneca, river of South Carolina, which, with the Tugaloo, uniting at Andersonville, forms the Savannah river. This stream rises by numerous branches in the Blue Ridge; and, flowing by a general S. course over Pickens district, which it in part drains, enters Anderson, over which it joins its junction with Tugaloo. The entire length of Seneca does not much exceed 40 ms., but the valley being nearly circular, it is an uncommonly large stream for its length.

Seneca Falls, village, Seneca county, N. Y., on the outlet of Seneca lake, 10 miles below Geneva, and 2 ms. below Waterloo, and 2 ms. W. from Cayuga bridge.

Senecaville, village, Guernsey co., Ohio, by post 59 ms. E. from Columbus.

Seneffe, town of Brabant, 4 ms. S. of Nivelles.

Senegal, one of the three principal rivers of Africa, formerly supposed to be one of the branches of the Niger, but determined by Mr. Park to have its source 80 geographical miles W. of that river, and to flow in an opposite direction: the Niger E. to the Senegal W. The Senegal, as laid down in Rowland Smith's map, rises in the mountains of Kong, N. lat. 11 30, W. lon. 7°. Pursuing a NW. course about 250 miles, it receives from the S. the Fouta Djallon, and, about 150 miles still further the Fouta Djallon. Below the mouth of the latter the Senegal does not appear to receive any further augmentation worthy of notice. Continuing about 200 ms., having the great desert within 60 ms. to the NE., it turns W. 200, and thence about 100, falls into the Atlantic ocean, N. lat. 15 15, W. lon. 15 50, after an entire comparative length of 900 miles. The sources of the Senegal coincide with those of the Niger. It may be remarked that the general course of the Senegal, from the Kong mountains, 600 ms., is almost exactly parallel to the coast of the Atlantic ocean, from Cape Verde to Sierra Leone; the intermediate distance about 400 ms. in width.

Senegal, country of Africa between the Gambia and Senegal rivers. Towards the Atlantic ocean it is liable to annual inundation.

Sera, town of the peninsula of Hindoostan, in the Mysore country, 55 ms. N. of Seringapatam. Lon. 75 54 E., lat. 13 28 N.

SERAGLIO, pronounced *seral-yo*, appears on an examination to be derived from an original root, meaning to close or shut. The Persian word *serai*, a palace, no doubt means the same as the English word castle, or place closed up for defence as well as residence. The French verb *serre*, to lock or close up, little doubt comes from the same root. With a more general sense comes caravan-serai, a resting place in the African and Asiatic deserts. Query, is not circle and circus spaces enclosed, also from the same root?

Seville, province of Spain.—See *Spain*.

Seville, city of Spain, capital of Andalusia, and archbishop's see, seated on the Guadalquivir. It was the capital of the kingdom till Philip II established his court at Madrid, as a more central position. Seville is of a round form, fortified with high walls flanked with high towers, and takes up more ground than Madrid, although it now has above 70,000 inhabitants. The Phœnicians called it Hispatis, and it is the Julia of the Romans, who embellished it with many magnificent buildings. The Moors built an aqueduct, still to be seen, 6 ms. in length. The situation of Seville renders it one of the most commercial towns of Spain. All the trade of that kingdom with the whole World centered originally in its port; but that of Cadiz having been found more commodious, the galleons have sailed from that place since 1720. A vast employment did the American trade give in a period, that in Seville alone there were no more than 16,000 looms in silk or woollen work; before the end of the reign of Philip III they were reduced to 400. The country around is extremely fertile in corn, wine, &c.; and there is an abundance of oil, for the W. of the river is a soil of olive trees, 30 ms. in length. Seville is 120 ms. from the Atlantic, and 212 SSW. of Madrid. Lon. 5 59 W., lat. 37 14 N.—A village in the southwestern part of Medina co., Ohio, in the dep. of Guilford, 9 ms. SHOA, province of Abyssinia, in N. lat. This very imperfectly known country occupies the eastern slope of the Nile basin, about 100 ms. southwardly from and below Gondar. The Nile, or, as called in the extreme higher part of its course, the Amhara, issues from one of the mountain basins, of which Mexico is an example, and, flowing southwardly, receives numerous tributants from the mountainous rim by which it is encircled. Two of those mountain torrents, flowing westward, drain Shoa, and fall into the Nile, which below their influx cross N. lat. 10°, and rapidly curving to the W. and NW. quit Upper Abyssinia, and, after a comparative course of about 500 ms., join White river, to form the proper Nile. See *Nile and Africa*, pages 11, 12, &c. The whole of Upper Abyssinia is very elevated.

Shoals, Isles of, on the coast of New Hampshire and Maine. They lie convenient for the cod fishery, which was formerly carried on here to great advantage.

Shutesbury, tp. and post office, Franklin co., Mass., 15 ms. NE. from Greenfield.

SHYANS, SHANS, or LAOS, loosely applied names used to designate the civilized people who inhabit the imperfectly known countries between the Bay of Bengal and China. "*Shyan* is a Burman name, and *Low* or *Lao* the Chinese. They call themselves *Tay*. They seem to be the parent stock of both Asamese and Siamese. Bengalese always put a vowel before every word, and make *m* and *n* convertible, so that *Shyan* becomes with them *A-syam*, which the English further altered to *Asam*. *Syam*, or *Siam*, is but another form of the same word.—*Malcom*, vol 2, page 198.

Siam, kingdom of Asia, bounded on the N. by China, on the E. by Laos and Cambodia, on the S. by the Gulf of Siam, and on the W. by the Bay of Bengal and Pegu. It is 550 ms. in length, and 250 in breadth, though in some places not above 50. It is divided into the Higher and Lower, and the soil produces plenty of rice, cotton, and fruits. They have abundance of wild beasts in the woods, as elephants, rhinoceroses, leopards, and tigers. Their tame cattle are beeves, buffaloes, and hogs, of which they have plenty about their farms. Besides which, there are large and dangerous crocodiles, and serpents 20 feet long. There reigns a lamentable ignorance in our books on the wide tracts and numerous civilized nations between Hindoostan and China. It would appear, from Howard, Malcom, and some other authors, that Siam, Asam, Asyam, Shyan, &c., are mere inflexions of the same term. Yoodroo-Shan, or one of the names we use for Annam, is no doubt from the same root, and all about as definite as Asiatic or European. Malcom says: "The Shyans are divided into many tribes, and the language has a corresponding number of dialects." "It is impossible to enumerate the different tribes. Their chief designations seem to be from the regions they inhabit." These are instructive sentences, as they show a frequently visited fountain of error. Mere local names of places are made to create tribes, which, nationally speaking, have no separate existence.—See *Shyan*.

Siam, or *Juthia*, capital of a kingdom of the same name, seated on the Menan, near its mouth, in the Gulf of Siam, 400 ms. SE. of Pegu. Lon. 101 20 E., lat. 14 20 N.

Siara, captain-generalship of Brazil, bounded by Pornaiba river or Maranham NW., Atlantic ocean NE., Pernambuco and Bahia SE., and Goias SW. Length 700, breadth 200 ms; area 140,000 sq. ms.—Town of South America, in Brazil, capital of a captain-generalship of the same name. Lon. W. C. 37 10 E., lat. 3 15 S.

Siaskoi, town of Russia, in the government of Petersburg. It is seated not far from the Lake Ladoga, 24 ms. NE. of New Ladoga. Lon. 30 47 E., lat. 60 16 N.

Siberia, from Sibir, its ancient capital, is the general name of Asiatic Russia. It is bounded N. by the Frozen ocean, W. by the Uralian mountains, which separate it from Europe, on the SW. the Algydin-Shalo mountains separate it from Independent Tartary, on the S. the Altaian and

Daorian mountains form the line of demarkation between the Russian and Chinese empires, and on the E. the Pacific and its extension northward divides Siberia from North America. This immense tract is about 4,000 ms. from W. to E., and varies in width from 1,000 to near 2,000 ms. The area rather exceeds 5,000,000 sq. ms., or about one-eighth part of the terraqueous earth. In general terms, Siberia may be described as mountainous on the W., S., and E., and gradually sinking into vast plains towards the Arctic ocean. Viewed on a map, this part of Asia appears evidently as a section of a basin having the Arctic ocean as its lowest point of depression. Into this recipient are discharged a series of rivers, most of which draw their remote sources from the interior table land or plateau of Asia. From its slope, and having its highest side to the southward, the phenomenon of the excessive cold of Siberia arises. The Oby, Jenisey, and Lena, flow from an elevation of at least 3,000 feet. The plains, called in Asia steppes, are in every respect similar to the prairies or natural meadows of N. America.—See *Steppes*.

Extending from N. lat. 50° to nearly 80°, and having, as we have seen, a great northern inclination and southern elevation, Siberia has the most intense winter climate of the earth in proportion to comparative lat. From this asperity of temperature, and also from general sterility of soil, the northern part of Siberia is thinly peopled. It is a region where the reindeer and the dog are the beasts of burden and draught, and where furs and ivory are the most valuable staple commodities. Advancing southward into interior Asia, the climate meliorates, and the grain and fruits of Europe are cultivated to advantage; but every where on these elevated regions the climate is much more severe than in similar latitudes in Europe. A part of the large government of Kolywan, and the country round the Baikal, are on the latitudes of London, Hamburg, Berlin, and the N. of France and Germany. The winter is 9 or 10 months long in almost all Siberia, and the summers of its most southern sections are not either so long or warm as those of Norway. Similar to North America, in high northern latitudes, the soil of Siberia above 55° or 60°, remains perpetually frozen at a very small depth, and renders the digging of wells impracticable. The air, however, though severe, is generally healthy, but the population must, from the causes stated, be always comparatively thin.

Siberia is rich in metallic wealth, so much so as to have received and deserve the name of the Russian Peru. Gold mines exist, and are extensively worked, at Barezof. Silver is found near to Kolywan and Nertchinsk, and in many other places. Iron and copper abound, particularly in the Uralian mountains, but are also found in lesser quantities in many other locations.

The vegetable kingdom, however, affords the true test of climate. The pine of Norway rises as high as N. lat. 70°; the same tree yields to the intense frost of Siberia, at N. lat. 60°. On the Oby, at lat. 60°, agriculture ceases, and, similar to N. America, the line of vegetation inclines southward, proceeding eastward towards the Pacific ocean. At Oodskvi, in 55°, nor in Kamtschatka, at 51°, grain has not been found to ripen.

The severity of Siberian air is again shown by

the animal kingdom. The reindeer, which, northern Europe exists only above 60°, was seen in large flocks, by Pallas and Sokolof, on the borders of Mongol Tartary, as low as 49° or 50°. “Thus the countries of the reindeer and camels,” says Malte Brun, “which are separated by an interval of 20° or 30°, in the western part of the continent, touch one another, and are, perhaps mingled in the countries of the East.”

In those gloomy regions the dog follows the reindeer as the servant of man; the former is used as a beast of draught, but abounds chiefly amongst the Kamtschatkades, Tongoses, moïdes, and Ostiaks. In Southern Siberia the horse abounds, as do cattle and sheep. In animals producing fur, northern Siberia exceeds every other part of the earth. In brief, this large section of the habitable earth, now under Russian government, is slowly recovering from the ravages of the Tartars and Mongols of the middle ages. See the various parts, under their respective heads. Tobolsk is the capital.

SIBYLLE, women who, in many countries, are yet regarded as endowed with the gift of prophecy. The mountaineer, in Upper Albania, believes, as do the Servian, and probably all the barbarous nations of congenerate race, in supernatural prophecies, called, in their language, *Vyles*. *Vyles* is of the same class as *Sibylla*, or, according to the Greek pronunciation, *Sivylla*. *Si* is an abbreviation of an Eolic word, which has the same signification as *Theo*—*Sibylle* is, then, a divine or god-like *Vyle*. *Wyll*, or *Gwyll*, is a Welch word, a spectre or sorceress, from whence comes the English word *wile*, to deceive. *Vala*, of which the genitive is *vocla*, means, in Icelandic, a supernatural being, with the gift of prophecy.

SIBYL, Gr. *siballa*, according to some, a proper personal name, but by others derived from the *God*, and *boulè*, a council. There is, however, nothing contradictory of each other in the two etymologies. They were females who pretended to the power of foretelling events.

Sichem, town of the kingdom of Belgium, Brabant, to the S. of which is a celebrated monastery. It is seated on the Demer, 18 miles S. of Mechim. Lon. 5° E., lat. 51 6 N.

Sicily, island of the Mediterranean sea, appears in the form of a triangle, terminating in three points or capes; that which is nearest Italy is called Cape Faro; that which regards the Morea Cape Passaro; and the third, which points to Africa, Capo di Boco. Sicily is naturally divided into three valleys, to which the political names of provinces have been given; they are Val di Mazara, Val di Demona, and Val di Noto. See the articles, in their places. It is separated from Italy by the straits of Messina, 15 ms. broad where narrowest. The climate is delicious, and soil exuberantly fruitful. In ancient times it had the aspect of a garden, but in modern times badly cultivated. Pop. 1820, 1,600,000. Religion, Roman Catholic. It forms a part of the kingdom of Naples, of the Two Sicilies. Length 165 ms., and breadth where widest 112.

Sicques.—See *Seiks*.

Silesia, duchy of Germany, 274 ms. long, and 100 broad, bounded on the N. by Brandenburg and Poland, on the S. by Moravia and Hungary, on the E. by Poland, on the W. by Lower Lusatia and Bohemia. The principal rivers are the Oder, the Vistula, the Neisse, the Bober, the Queis, the Oppa, and the Else. There is a long chain of mountains which separates Silesia from Bohemia. The most considerable silver mines are at Reitstein, in the principality of Breig. There are also mines of lead, copper, and iron, and quarries of various stones, besides antimony, saltpetre, sulphur, alum, vitriol, quicksilver, sealed earth, and other minerals. The principal manufactory is linen cloth, and they have also some woolen manufactories and glass houses; it contains about 2,000,000 of inhabitants. The greatest part of this country was ceded to the king of Prussia, in 1742, by the treaty of Breslaw. The much larger sections of Silesia were claimed, sword in hand, by Frederick II, almost at the moment of succeeding his father, (May 31, 1740,) but his claims were only revivals of what Prussia had long before claimed. Austria, it is true, had been long in possession, and no more regarded Silesia as part of Poland than she did Moravia or Bohemia, or we might say Hungary or Transylvania.

Silesia, province of the Austrian empire, being the southern extremity of ancient Silesia. Pop. 300,000; capital, Techen. This Austrian part of Silesia is more usually called the principality of Techen.

Silhet, town of Hindoostan, in the East Indies, 100 ms. NE. of Dacca, and 200 ENE. of Moorshedabad. Longitude 91 57 East, latitude 24 52 North.

SILK, Fr. *soie*, supposed to be derived from *Serica*, the country from which it was first brought to Europe. In southeastern Asia, continental and insular, the production and use of silk was known from time immemorial. In the western side of the eastern continent it was known to and mentioned by Aristotle and Pliny, but was so scarce and dear, however, as to sell for its weight in gold, as late as the reign of Aurelian A. D. 270. It was only in A. D. 555, in the reign of Justinian, that the silk worm was brought from the east. The production of silk stuffs was slow, and for several succeeding centuries confined to Athens, Thebes, and Corinth, or other cities of the Greek empire. In 1130 Athens was taken by Roger, King of Sicily, and silk workers brought into that island, and the manufacture spread thence over Italy and Spain. Silk manufacture was not introduced into France until in the reign of Francis I, 1515-17, but not until Henry IV, 1589, 1610, did that species of manufacture become of much importance. There is little or no doubt of the natural facilities for the production of silk being much greater on the eastern than on the western sides of both great continents.

Sinai, mountain of Arabia Petræa, in the peninsula formed by the two arms of the Red Sea. What is called Sinai in the singular is really an isolated group rising near the southern angle of the peninsula between the gulf of Suez on the

est and Akaba on the east, the two northern arms of the Red sea. N. lat. $29\frac{1}{2}^{\circ}$ and lon. E. of London 34° intersect in the group. The peak particularly called Sinai rises 55 English miles a very little W. of N. from Cape Ras Abou Mommmed, and about 200 ms. SE. of Grand Cairo.

Sincapour, or *Sincapore*, or *Singapore*, island and town at the most southern extremity of the peninsula of Malacca, opposite the island of Sumatra, which, with the Malacca coast, form the strait Sincapour. The island of that name is one of a group of small islands lying in the China sea, off the extreme point of Malacca, to the northeast coast of Sumatra. Cent. lat. of the group 1° S., lon. 104° E. of the royal observatory, Greenwich. Sincapore, the town and port, is at N. lat. 23 , lon. $103\ 52$ E. When, but a few years since, the English, under Sir Stamford Raffles, took possession of this place, it was almost uninhabited, but has been most rapidly on the increase ever since. The port is open to the vessels of the United States, and a consul from our government resident at that port.

Sinde.—See *Indus* and *Tutta*.

Sindelfingen, town of Germany, in the grand duchy of Baden, 6 ms. SW. of Stutgard. Lon. 9 E., lat. $48\ 45$ N.

Sindy, or *Scind*, province of Hindoostan Proper, bounded on the W. by Persia, on the N. by the territory of the king of Candahar, on the NE. by those of the Seiks, on the E. by a sandy desert, and on the SE. by Cutch. It extends along the course of the Indus, from the mouth to the frontiers of Moultan, 300 ms.; and its breadth, the widest part, is 160. In many particulars soil and climate, and the general appearance of surface, it resembles Egypt—the lower part being composed of rich vegetable mould, and extended into a wide delta, while the upper part is a narrow slip of country, confined on the Persian side by a ridge of mountains, and on the other by a sandy desert; the Indus, equal at least to the Nile, winding through the midst of this level valley, and usually overflowing it. During great part of the W. monsoon, or at least in July, August, and part September, (which is the rainy season in most other parts of India,) the atmosphere is here generally clouded, but no rain falls except near the coast. Indeed, very few showers fall during the whole year. Owing to this, and the neighborhood of the sandy deserts on the E. and on the NW., the heats are so violent, and the winds from those quarters so pernicious, that the houses are contrived so as to be occasionally ventilated by apertures at the top, resembling the funnels of small chimneys. The inland parts of Sindy produce saltpetre, sal ammoniac, borax, bezoar, lapis-lazuli, and raw silk. They have also manufactures of cotton and silk of various kinds, and they make fine cabinets, inlaid with ivory, and finely lacquered.

Sinepuxen, long narrow bay of the U. States, which lies between Worcester co., Md., and a small island called Assatigue. It communicates with the ocean by Sinepuxen inlet. Lat. of the inlet $38\ 9$ N., lon. W. C. $1\ 51$ E.

Sir Charles Hardy's Island, island in the Pacific ocean, discovered by Captain Carteret. Lon. 154 20 E., lat. 4 41 S.

Sir Charles Saunder's Island, in the Pacific ocean, discovered by Captain Wallis. Lon. 151 4 W., lat. 17 28 S.

Sir James Lancaster's Sound opens from Baffin's bay, lat. 74 47 N., and immediately W. from the meridian of W. C. This great inlet has been recently explored by Captain Parry, of the British navy, who entered it in 1820, and wintered 1820-21 as far as 111° W. from London, and decided the geography of these regions to 117° W. This very important voyage has shown the separation of Greenland from North America, upwards of 2000 ms. NW. from Cape Farewell. The Northern ocean, as found by Hearn, and contemporaneously with Parry's voyages, by Captain Franklin, bounds North America at N. lat. 68°, directly S. from Melville island. The same ocean is again determined at the mouth of the Unjiga, lat. 69° N. and lon. 56° W. from W. C. The Russians and English have explored the North American coast from Behring's strait to within 500 ms. of the mouth of the Unjiga. These combined operations have placed beyond a doubt the existence of a polar continent or archipelago detached from, or but very slightly united to, North America or Asia.—See *Earth*.

Sirik, town of Fr., in the dep. of Moselle. It is seated on the Moselle, 25 ms. N. of Metz. Lon. 6 38 E., lat. 49 36 N.

Smoland.—See *Smaland*.

Smolensk, government of Russia, on the frontiers of Lithuania. After having been an ob-

contention, and reciprocally possessed by Poland and Russia, it was conquered by Alexay Michaelitch in 1654, and ceded to Russia by the peace of Moscow, in 1664. It now forms one of the Russian governments.

Smolensk, city of Russia, capital of a government of the same name. It is situate on the Dnieper, and extends over two mountains and the valley between them. Notwithstanding its extent, it contains only about 10,000 inhabitants, and has manufactures, but carries on with Dantzig, Riga, and the Ukraine, a petty traffic in linen, hemp, tallow, wax, leather, furs, &c. It is 197 ms. NE. of Novogrodeck, and 230 N. of Kiof. Lon. 32 E., lat 24 50 N.

Smyrna, seaport of Asiatic Turkey, in Natolia, one of the largest and richest cities of the Levant. The goodness of the harbor has caused it to be rebuilt several times, after having been destroyed by earthquakes. It is the rendezvous of merchants from almost all parts of the world, and a magazine of their merchandise. The Turks have 19 mosques, the Greeks 2 churches, the Jews synagogues, the Armenians 1 church, and the Latins 3 convents. There are three bishops—one Greek, the other Latin, and the third Armenian.

The population is computed at 120,000 persons. The streets are more open, better paved, and the houses better built, than in other towns on the continent. The street of the Franks is the finest in Smyrna, and lies all along the harbor. It is 8 days' journey from Constantinople by land, 25 days from Aleppo by caravans, 6 from Cogni, 7 from Catania, and 6 from Satalia. The imports from England consist of woolen cloths, camlets, lead, tin, and hardware; these are exchanged for cotton, coffee, hair, drugs, galls, raisins, figs, &c. The English and Dutch factors have Protestant chapels, and taverns are as open here as in Europe. The fortifications consist of a fort, a castle, a mountain, and an old citadel. It is seated at the head of a large bay, 190 ms. SSW. of Constantinople. Lon. 27 E., lat. 38 28 N.

Smyrna is called by the Turks *Ismeer*, and, as respects commerce, is the most considerable city of the Turkish empire; and, notwithstanding the frequent calamities of plagues and earthquakes, continues to increase, and is now (1810) supposed to contain 150,000 inhabitants. Previously to 1750 it had been partially destroyed six several times by earthquakes. Another and most destructive calamity of this kind, attended with its usual consequence, an extensive fire, occurred in 1688. Repeated shocks and also almost annual pestilence have been unable to counterbalance a convenient harbor and a very productive adjacent territory. With such advantages and disadvantages, Smyrna has been the most frequented port of Asia Minor, for upwards of 2,000 years.

The city is built partly on a hill, once called *Gus*, whose summit is crowned by a castle, and partly on a plain, extending to the N. of the eminence. The mercantile establishments have for more than two centuries drawn together so many banks to Smyrna, that the part of the town which lies along the edge of the water to the northern extremity has been long allotted to them, and distinguished by the name of Frank street. Before the French revolution, the Frankpart of Smyrna was

playfully and not unjustly called *Petite Paris*; and yet, with all the changes superinduced by war and national rivalry, Smyrna continues to be the most agreeable residence for Europeans in the Ottoman empire.

Though so high as N. lat. 38 30, the climate of Smyrna must be tropical in its effects on human beings accustomed to the air of the northern parts of Europe or the U. S. Figs, lemons, oranges, and vines, are the common growth of the neighborhood, productions which mark a mean temperature above 65° of Fahrenheit.

Smyrna, one of the northern towns of Chenango co., N. Y., 12 ms. NNW. from Norwich, and by post road 105 W. from Albany.—Formerly Duck Creek Cross Roads, vill., Kent co., Del. Soane, river of Hindoostan proper, which rises on the S. confines of Allahabad, issuing from the same lake which is the source of the Nerbudda; and, flowing in an opposite direction to that river 1,500 ms., it falls into the Ganges above Patna. This river, in conjunction with the Nerbudda and the Ganges, makes, as it were, an island of the southern part of Hindoostan.

Society Isles, islands in the Pacific ocean, discovered by Captain Cook in 1769, situated between 150 57 and 152° W. lon., and 16 10 and 16 55 S. lat. They are very numerous, but the principal islands are Otaheite, Huaheine, Ulitea, Otaha, Balabola, Mourooa, Toobaee, and Tabooyamanoo, or Saunders's island, which is here included, as being subject to Huaheine. The soil, the productions, the people, their language, religion, customs, and manners, are so nearly the same as of Otaheite, that little need be added here on that subject. Nature has been equally bountiful in uncultivated plenty, and the inhabitants are as luxurious as indolent.

Society Island, tp., Hillsborough co., N. H., 25 ms. SW. Concord.

Soconusco, province of Guatemala, NW. from the city of Guatemala, 88 ms. long, and nearly as much broad, bounded on the N. by the Chiapi, on the E. by Guatemala, on the S. by the Pacific ocean, and on the W. by Guaxaca.

Soconusco, or *Guevellan*, town of New Spain, capital of a province of the same name, 440 miles SE. of Mexico. Lon. W. C. 15 50 W., lat. 15 12 N.

Socotora, island of Asia, between Arabia Felix and Africa, about 50 ms. long and 22 broad. It abounds in fruit and cattle, and is particularly noted for its fine aloes, known by the name of Socotrine aloes. The natives are Mahometans, with a mixture of Paganism, and they have a king who depends on Arabia.—See *Africa*, pp. 31, 32.

Soleure, or **Solothurn**, canton of Switzerland, which holds the eleventh rank in the Helvetic confederacy, into which it was admitted in 1481. It stretches partly through the plain, and partly along the chains of the Jura, 36 ms. in length and 135 in breadth, and contains 50,000 inhabitants. The soil, for the most part, is fertile in corn, and the districts within the Jura abound in excellent pastures.

Soleure, or **Solothurn**, ancient town of Switzerland, capital of a canton of the same name. It contains 4,000 inhabitants, and is seated on the Rhodan, which here expands into a noble river. Soleure is surrounded by regular stone fortifications, and is 20 ms. N. by E. of Bern, and 27 SSW. of Soleure. Lon. 7 20 E., lat. 47 15 N.

Solfatara, lake of Italy, in the Campagna of Naples, near Tivoli, which empties itself, by a whitish muddy stream, into the Teverone, the nearest Anio; a vapour of a sulphureous smell arising from it as it flows. In the middle are several floating islands, formed of matted sedge and herbage, springing from a soil of dust and sand blown from the adjacent ground, and glued together by the bitumen which swims on the surface of the lake, and the sulphur with which its waters are impregnated. Some of those islands are 15 yards long, and will bear five or six people, and by a pole, may move to different parts of the lake. From this lake issues a whitish muddy stream, which emits vapor of a sulphureous smell, till it reaches the Teverone.

Solfaterra, mountain of Italy, in the kingdom of Naples, and Terra di Lavoro. This mountain appears evidently to have been a volcano in ancient times, and the soil is yet so hot that the workmen employed there in making alum need nothing else besides the heat of the ground for evaporating their waters. Near it is a small lake full of black sulphur water, which seems to be always boiling.

This co. includes a space of 180 ms. long, by upwards of 50 wide, or between 7,000 and 8,000 sq. ms. Only the southern part, however, on Kennebec river, is yet inhabited. This cultivated space amounts to about 2,000 sq. ms. Chief town, Norridgewock. Pop. in 1820, 21,787; and in 1840, 33,912. Central lat. 45° N., and 7° E. lon. from W. C. intersect in this co.—Tp., Windham co., Vt., 42 ms. SW. from Windsor.—Town, Bristol co., Mass., on Taunton river, 13 ms. S. from Taunton. Pop. in 1810, 1,200; in 1820, 1,116.

Somerset, co., N. J., bounded by Essex E., Middlesex SE., Hunterdon SW. and W., and Morris N. Length 30 ms., mean width 12, area 360 sq. ms. It is entirely drained by the different branches of Raritan river. Surface pleasantly diversified by hill and dale. Soil generally productive in grain, pasturage, and fruit. The upper part of New Brunswick is in this co. Other principal towns, Boundbrook, Somerville, and Middleburg. Pop. in 1820, 16,506; and in 1840, 17,455. Central lat. 40 35 N., lon. 2 22 E. of W. C.

Somerset co., Pa., bounded by Alleghany co. in Md. S., Fayette co., in Pa., W., Westmoreland NW., Cambria N., and Bedford E. Length 38 ms., mean width 28, area 1,066 sq. ms. Though enclosed on two sides by mountains, this co. is not even very hilly, and contains much good soil, particularly for the production of grain and meadow grasses. It is drained by the Youghiogany and Conemaugh rivers. Chief town, Somerset. Pop. in 1820, 13,374; and in 1840, 19,650. Lat. 40° N., and lon. W. C. 2° W. intersect near the centre of this co.

Somerset, village, borough, and seat of justice, Somerset co., Pa., on a branch of Youghiogany river, 37 ms. W. from Bedford. Pop. of the tp. in 1810, 1,548; and of the borough in 1820, 442; and in 1840, 638. Lat. 40° N., lon. W. C. 2 5 W.—Tp., Somerset co., Pa., around the borough of Somerset. Pop. in 1820, 1,954.—Tp., Washington co., Pa., between the eastern branch of Chartier's creek and Pigeon creek, 10 ms. E. from W. C.

Somerset, co., Md., bounded by Sussex co., in Delaware NE., Worcester co., in Md., E., Pocomoke bay S., Chesapeake bay SW., and Nanticoke river, or Dorchester co., NW. Length 35 ms., mean width 15; and exclusive of water, area about 500 sq. ms. It is bounded by Pocomoke SE., and by Nanticoke river NW., and drained by Manokin and Wicomico rivers. Surface generally level, and though sandy, the soil tolerably productive. Chief town, Princess Ann. Pop. in 1820, 19,579; and in 1840, 19,508. Central lat. 38 16 N., lon. W. C. 1 18 E.—Village and seat of justice, Perry co., O., on the road from Zanesville to Lancaster, 18 ms. from each. Lon. W. C. 5 20 W., lat. 39 52 N.—Tp., Belmont co., O. Pop. in 1820, 863.—Village, Franklin co., Ia., by post road 81 ms. SE. by E. from Indianapolis.—Village and seat of justice, Pulaski co., Ky., on Pitman's creek 85 ms. S. from Frankfort, and 80 ms. E. from Glasgow. Lat. 37 6 N., lon. W. C. 7 25 W.

Somersetshire, co., of Eng., 65 ms. long and 45 broad, bounded on the NW. by the Bristol channel, on the N. by Gloucestershire, on the E. by Wiltshire, on the SE. by Dorsetshire, on the SW. by Devonshire. It lies in the dioceses of Bristol, and of Bath and Wells. The air in the lower grounds is universally mild, and generally wholesome. The soil in the NE. quarter is in general stony, and possesses a lofty mineral tract called the Mentrip Hills. Towards the centre, where its principal rivers unite, are fens and marshy moors of great extent. On the W. side are the Quantock Hills, with many downs and open heaths, and in the NW. corner is the black

sterile region of Exmoor. Pop. in 1801, 273,7 in 1811, 303,110; and in 1821, 355,314.

Somersworth, tp., Strafford co., N. H., 'on] cataqua river, 12 ms. above Portsmouth. P in 1820, 841.

Somerton, town of Eng., in Somersetsh from which the city took its name, 13 ms. S Wells. Lon. 2 40 W., lat. 51 22 N.—Village near the southern boundary of Nansemond co., Va., 40 ms. SW. from Norfolk, and by road 124 SE. from Richmond.

Somerville, village and seat of justice, Somerset co., N. J., on Raritan river, 16 ms. at New Brunswick, and 38 ms. a little E. of N. f Trenton. It is a well-built and very neat village in a fertile and highly cultivated vicinity. Lat. 40 35 N., lon. W. C. 2 22 E.—Village, Fauquier co., Va., 56 ms. from W. C., and post road 133 a little W. of N. from Richmond.—Village, Fayette co., Pa.

Sommerville, village and seat of justice on the east fork of Black Warrior or Tuscaloosa river, Morgan co., Ala., about 50 ms. a little E. of from Huntsville. Lat. 34 6 N., lon. W. C. 35 W.

Somma, town of Italy, in Naples. In its vicinity between 7,000 and 8,000 pounds weight of silk the best quality are annually made. It is 10 E. of Naples.

Somme, dep. of Fr., including the late province of Picardy. It takes its name from a river which rises in the dep. of Alsace, and watering St. Quentin, Peronne, Amiens, and Abbeville, enters the English channel. Amiens is the capital.

Sommerfeld, town of Germany, in Upper Saxony, 72 ms. distant from Berlin.

Sommieres, town of Fr., in the dep. of G. and late province of Languedoc, which carries on a manufacture of serges. It is seated on the dourse, 10 ms. W. of Nismes. Lon. 4 11 lat. 43 48 N.

Soncino, strong town of Italy, in the Cremona, seated on the Oglio, 20 ms. NW. of Cremona. Lon. 9 44 E., lat. 45 24 N.

Sonderborg, town of Denmark, in the island of Alsens. Its harbor is said to be the best in Denmark. It is 16 ms. ENE. of Flensburgh. Lon. 9 49 E., lat. 54 57 N.

Sondershausen, town of Germany, in the circle of Upper Saxony, on the small river Wipper. It is the capital of the principality of Schwartzsunderhausen. Lon. 11 5 E., lat. 48 25 N.—*Sewartzbourg Sondershausen*.

Sondrio, town in the country of the Grisons, and capital of the Valveline, built on both sides of the Malenco, a furious torrent. It is 34 ms. E. of Como. Lon. 9 40 E., lat. 46 11 N.

Sonergon, or *Sunnergaun*, village of Hindustan proper, once a large city, the provincial capital of the eastern division of Bengal, before Dacca was built, and famous for a manufacture of fine cotton cloths. It is seated on a branch of the Burrpooter, 13 ms. SE. of Dacca.

Songaria, country of central Asia. It is an elevated plateau, or table land, bounded on three sides by mountains; on the N. by the Ulugh-Tag, on the S. by the Alak, and on the W. by a part of the Imaus or Belur-Tag. Within this basin spreads to the eastward an immense plain, in-

ersed by lakes of different extent. This country, lying in N. lat. 45°, is supposed to be the Organum Rubriquis. The rivers of this region have no outlet to the ocean, but are discharged into interior lakes.

Songars, a tribe of Kalmucs who inhabit and give name to the basin of the Palcati, or Ili. The people of Songaria are emphatically pastoral. They keep immense droves of horses, and fat-tailed sheep; their horned cattle and camels are not so numerous. *Song Kiang*, city of China, in the province of Kiang-nan. It is built close to the water; the prodigious quantity of cotton cloth with which it supplies not only the empire, but also foreign countries, renders it very celebrated, and causes it to be much frequented.

Sonmeane, town of the province of Luz, in the eastern Beloochistan, situated on a bay of the same name, 50 ms. a little W. of N. from Cape Monze, and about 140 nearly due W. from Hyderabad, on the Indus. Sonmeane bay is enclosed on the land side by a curve of the Indian ocean, to the N. of Cape Monze. The town of Sonmeane stands on the northern shore of the bay, at N. lat. 30, lon. 66 45 E. of London.

SONNA, *Arab.*, second law. This work, containing the traditional accounts of the acts and words of Mohammed, is by some Mahometan sects regarded next to the Koran. Those who have been noted as sacred the *Sonna*, take their sectarian name from it, and are called *Sonnites*, or *Sunnites*. *Sonneberg*.—See *Lunenberg*.

Sonora y Sinaloa, State of Mexico, bounded E. by the States of Chihuahua and Durango, SE. and by Jalisco, Gulf of California W. and SW., and by the river Gila and the native Indian regions of Acheira N. Beside those limits, may be also added in Sonora y Sinaloa the very extensive and almost unknown tracts drained by the Colorado and Buenaventura rivers as high as N. lat. 42°, the line of demarkation between the U. S. and Mexico. Taken with such an extension, Sonora y Sinaloa reaches from lat. 22 40 to 42° N., or upwards of 19° of lat. Length from N. to S., 300 ms., mean width about 200; area, 268,000 sq. ms. The existing white and civilized population of this very extensive country amounts, it is not probable, to less than 200,000, or less than a single person to the sq. m.

Sonora y Sinaloa is in many respects a very interesting part of the habitable earth, as through it all human probability will be followed, in future years, one of those commercial routes which influence the moral condition of nations; and, from the central section, there exists strong historical data to prove that civilization found native amongst the Americans, by their more warlike but less polished conquerors in the 16th century.

The principal rivers of this State are the Hiaqui, Colorado, and the uncertain streams of Buenaventura, and Timpanogos. Under the head of *American Pyramids*, the reader will find a brief sketch of the massive ruins found on the Gila—ruins which attest former civilization; and under the head of *New Mexico* it is shown that this civilization is not entirely extinct. The scarcity of water will retard the population of the tropical section, but in the temperate region of 33° this feature is reversed. Here, at 37° W. from W. C.,

the junction of the Gila and Colorado is followed by the great opening of the American Red sea, or Gulf of California. The Rio Colorado, rising in the central mountains of North America, on the same plateau from which flow the Rio Grande del Norte, the Multnomah, and the enormous western arms of the Mississippi, becomes a navigable stream at lat. 39° N., lon. W. C. 34° W. Continuing thence SW., by comparative courses, 600 ms., it receives from the E. the Gila. The Californian Gulf is, in geographical strictness, only the continuation of the Colorado. Considered as such, that fine river extends from the mouth of the Gila SSE. 800 ms., to where, between the Bay of Mazatlan and Cape Palmas, it is merged in the Pacific ocean at lat. 23° N.

It is impossible to view a map of North America, and carefully examine the course of its great rivers, without appreciating the prodigious commercial and political advantages of the Colorado route. By it, the Pacific ocean is entered 23° of lat. further S. than by the Columbia; and by the former, also, the ship channel is much deeper into the body of the continent than by the latter. An approximation towards the tropical regions of Polynesia, India, and China, decides the preference in favor of the southern route. In this great line of civilized intercourse, St. Louis, in the U. S., will, we may suppose, assume the rank of an immense entrepôt, whilst another must arise on the side of the Pacific.

In its actual state, the population of Sonora y Sinaloa is confined to the civilized inhabitants of the southern part, and to the native tribes of the northern sections. The former exhibit similar traits of character with other inhabitants of Mexico descended from Spanish colonists. "The Indians who live on the plains adjoining the Casas Grande of the Rio Gila," says Humboldt, "and who have never had the smallest communication with the inhabitants of Sonora, deserve by no means the appellation of savages, (*Indios bravos*.) Their social civilization forms a singular contrast with the state of the savages who wander along the banks of the Missouri and in Canada". The Spanish missionaries, and more recently American travellers, have found the tribes of these countries clothed, residing in houses, and extensively engaged in agriculture and domestic manufactures.

Sonora y Sinaloa contains one city, Arispe. Sonora proper contains the villages of Sonora and Hostimuri. Sinaloa contains the villages of Culiacan, Sinaloa, el Rosario, el Fuerte, and los Alamos.

Arispe, the most northern large town of the State, stands near a small chain of mountains to the S. and W. of the presidios of Bacuachi and Bavispe. Pop. 7,600. Lat. 30 36 N., lon. W. C. 31 50 W., upwards of 1,000 ms. NNW. from the city of Mexico.

Sonora, the present capital of Sonora proper, stands about 50 ms. S. from Arispe. Pop. 6,400.

Hostimuri is a mine town of considerable consequence, capital of a district of the same name, on the Gulf of California. Lat. 27° N.

Culiacan, celebrated in Mexican history under the name of Hueicolhuican. Pop. 11,000.

Sinaloa, or Cinaloa, capital of the whole State, called otherwise *Villa de san Felipe y Santiago*, E. from the port of Santa Maria d'Aome. Pop. 13,000. Lat. 25 58 N., lon. W. C. 30 52 W.

El Rosario, near the rich mine of Copala. It is situated near the southern extremity of the State, and very nearly under the tropic of Cancer. Population, 6,000.

Del Fuerte, or Montesclaros, on the river De la Fuerte, 70 or 80 ms. NNW. from Cinaloa, has a population of 8,000.

Los Alamos, between the Rio del Fuerte and the Rio Mayo, is a mine town, with a pop. of 8,000.

The mines of Sonora y Sinaloa are principally of gold. The chief washing of that precious metal is in the large district of Pimeria Alta. "Fragments of pure gold," says Humboldt, "from 5 lb. 2 oz. 2 dr., to 8 lb. 0 oz. 4 dr. troy, have been found; but these washings are by no means diligently pursued, on account of the frequent incursions of the independent Indians, and especially on account of the high price of provisions, which must be brought from a great distance in this uncultivated country."

Sooloo, island of the Eastern ocean, situated SW. of Mindanao, almost midway between that island and Borneo. It is 30 ms. long and 12 broad, and contains about 60,000 inhabitants; the natives are Malays and Mahometans. The populousness of this little spot is caused by its advantageous situation, which renders it a great mart. The English East India Company have a resident here. Lon. 121 25 E., lat. 5 58 N.

Sooy's Inn, and post office, Burlington co., N. J., 67 ms. from Trenton.

Sophia.—See *Soffa*.

Sophiana, town of Persia, in Aderbeitzan, seated in a valley, 25 ms. NW. of Tauris. Lon. 47 25 E., lat. 38 35 N.

Sopienburg, town of the island of Zealand, in Denmark. Lon. 12 40 E., lat. 55 54 N.

Sopra Selva, valley of Switzerland, in the country of the Grisons.

Sypron, strong town of Lower Hungary, capital of a co. of the same name, seated on a small river, 27 ms. SW. of Presburg, and 30 SE. of Vienna. Lon. 17° E., lat. 47 46 N.

Sora, town of Naples, in Terra di Lavoro, on the Garigliano, 65 ms. NW. of Naples. Lon. 14 4 E., lat. 41 54 N.

Sora, town of Denmark, in Zealand, with a college for the nobility, 9 ms. W. of Ringsted. Lon. 11 53 E., lat. 55 26 N.

Soraw, town of Germany, in Lusatia, seated near the Bober, 25 miles south of Crossen, and 32 NE. of Gorbitz. Lon. 15 48 E., lat. 51 40 N.

SORBONNE, from the personal name of the confessor of St. Louis, or Louis IX., king of France. This so celebrated theological seminary was founded in A. D. 1250, by Robert of Sorbonne in the diocese of Rheims, who, following the custom of learned men of that age, took the name of his native town.

Sorel, or William Henry, town, Lower Canada, on St. Lawrence river, immediately below the mouth of Sorel river. It is a regularly built town, containing 150 houses, and about 1,500 inhabitants.

Sorel, river, Lower Canada, the outlet of Lake Champlain. It admits ship navigation to St. John's. From thence to the basin of Chambly the current is strong, and impeded by shoals and rapids; but from Chambly to the mouth, gentle. The distance from Lake Champlain to St. John's

is about 20 ms., and from thence to the mouth ms., by comparative courses. It is the channel of an extensive down-stream trade in flour, luppot and pearl ashes.

Sorento, town of Italy, in Naples, with a harbor at the foot of the mountain Sorento, in the bay of Naples, 17 ms. SE. of Naples. Lon. 14 24 lat. 40 36 N.

Soria, town of Spain, in Old Castile, built on the ruins of ancient Numantia, near the source of the Duero, 74 ms. SE. of Burdos. Lon. 2 2 lat. 41 48 N.

Soriano, town of Italy, in Naples.

Sorlingues.—See *Scilly Islands*.

Sorock, town of Poland, on the Dniester.

Soroe, town of Denmark, in the island of Funen. It is encompassed by three fresh-water lakes, and is 25 ms. SW. of Copenhagen. Lon. 1 5 E., lat. 55 5 N.

Sospello, town of Piedmont, in the county of Nice. It has a trade in dried fruits, particularly figs, and is seated at the foot of three very high mountains, on the river Bevera, 15 miles N. of Nice. Lon. 7 34 E., lat. 43 52 N.

Sovana, town of Italy, in Tuscany, in the Apennines, 25 ms. W. of Orvietto. Lon. 11 48 E. lat. 42 42 N.

Soubise, town of Fr., in the dep. of Lower Normandy, and late territory of Saintonge, on an island in the river Charente, 22 miles S. of Rochelle. Lon. 1 2 W., lat. 45 57 E.

Souillac, town of Fr., in the dep. of Lot, in the late territory of Querci, on the Borese, 32 ms. S. of Cahors. Lon. 1 21 E., lat. 44 55 N.

Soujouc-kale, town and port of Russia, in Asia, and on the SE. side of the Black sea, 50 ms. SSE. of Anapa. N. lat. 44 20, lon. 37 10 E.

Soukgoum-kale, town and port of Russia, on the SE. side of the Black sea, and in the province of Abasia, about 250 ms. SE. of Soujouc-kale. Lon. 43 50, lon. 41 0 E. of London.

Sound, passage or strait lying between the island of Zealand, in Denmark, and the coast of Schonen, in Sweden, through which vessels pass from the ocean into the Baltic. On the Danish side stands the Elsinour and the strong fortress of Cronenburg, near which is a tolerable good harbor, and on the side of Sweden stands the town of Helsingburg, with only one old tower remaining of a demolished castle. The Danes take toll of all ships that pass through the strait, which is about 4 ms. over.—See *Elsinore*.

The breadth of the Sound, from shore to shore, is about 1½ mile, but the ship channel, immediately between Cronenburg and Helsingburg, is less than one mile, with 10 fathoms water. This breadth increases to 18 fathoms between the island of Runen and Tegalgaard, in Sweden. Between Runen and Landscrona, the depth is from 9 to 20 fathoms. Between Copenhagen and Malmo, in Sweden, the Sound is divided into three channels by the islands of Amag and Saltholm. The eastern and widest is along the Swedish coast. The middle or Casper channel stretches by Copenhagen, between Amag and Saltholm. Both merge into one SE. of Amag, with 4 fathoms water. This is the deepest outlet of the Baltic, about 10 ms. SE. of Copenhagen. The western channel passes through by Copenhagen, but with only 1½ fathoms water.

Sour or *Sur*, seaport of Turkey in Asia, or Syria. Here stood the famous city of Tyre, of which there is now nothing remaining but ruins. Lon. 50 E., lat. 33 18 N.—See *Tyre*.

Sour, or *Sur*, river of the Netherlands, which flows from W. to E. through Luxemburg, and falls into Moselle a little above Treve.

Souri, town of Persia, in the province of Laristan. Lon. 50 30 E., lat. 26 18 N.

Sousa, or *Susa*, strong town of the kingdom of Persia, in Africa, capital of a province of the same name, with a castle and a good harbor. It is a place of some trade, and seated on a high rock, near the sea, 65 ms. SE. of Tunis. Lon. 11 15 E., lat. 38 52 N.

Sou-tcheou, city of China, the second in the province of Kiang-nan, and one of the most agreeable in China. Europeans who have seen it, compare it to Venice, with this difference: that the former is built in the sea, and Sou-tcheou-fou is intersected by canals of fresh water. The brocades and embroideries made here are in great request throughout the whole empire. Lon. 112 20 E., lat. 38 40 N.

Southeraine, town of France, in the department of Creuse, and late province of Marche, 24 miles from Limoges.

South Sea.—See *Pacific Ocean*.

Southam, town of Eng., in Warwickshire, noted for its cider. It is 13 ms. S. of Coventry, and 83 NW. of London. Lon. 1 23 W., lat. 52 28 N.

South Amboy, tp., Middlesex co., N. J. Pop. 3,406.

South America, town on the eastern border of Dutchess co., N. Y., on Oblong creek, about 20 ms. E. from Poughkeepsie.

Southampton, seaport and borough of Eng., in Hampshire. It is commodiously situated between the Itchen and Test, which here flow into an inlet of the sea called Southampton water, which is so deep that ships of 1,500 tons have been launched here; and it is navigable almost to the head for vessels of considerable burden. Two ms. from the town is Woodmills, where is a very curious manufacture of ship blocks, from which all the King's yards are supplied. Southampton is 12 ms. by W. of Winchester, and 75 WSW. of London. Lon. 1 26 W., lat. 50 55 N.—Tp., Buckingham co., N. H., 18 ms. SW. from Portsmouth.—Town, Hampshire co., Mass., 10 ms. S. from Northampton. In this tp. there is a lead mine.—Town, Suffolk co., Long Island, 9 ms. E. from the city of New York.—Tp., N. Y., on Long island, containing the preceding village, and Westhampton, and Sag harbor, each retaining its separate post office.—Tp., Bucks co., Pa., opposite the NW. angle of Philadelphia co. and the NE. angle of Montgomery co. P. in 1814, 739; in 1820, 907.—SW. tp., Berksland co. Pa. This tp. includes Shippensburg.—Tp., Franklin co., Pa., adjacent to the preceding.—One of the southern tps. of Bedford co., Pa., 8 ms. S. from the borough of Bedford. Pop. in 1810, 952; in 1820, 1,158.—C. Va., bounded by N. Car. S., Greensville S., Sussex NW., Surry N., and Blackwater N. of Isle of Wight, and Nansemond E.; length 28 ms., breadth 30, area 570 sq. ms. It is washed

SW. by the Meherrin, and E. by Blackwater river, and traversed by the Nottaway. Chief town, Jerusalem. Pop. in 1820, 10,494; and in 1840, 10,795. Ctl. lat. 36 40 N. The meridian of W. C. passes over this co.

South Bainbridge, SE. town, Chenango co., N. Y., on Susquehanna river, 17 ms. S. from Norwich.

South Beaver tp., Beaver co., Pa., adjoining the State of Ohio, and N. from Ohio river.

South Berwick, town, York co., Maine, on Salmon-fall river, 8 ms. W. from York, and 45 SSW. from Portland.

Southborough, town, Worcester co., Mass., 10 ms. E. from Worcester. Pop. in 1810, 926; in 1820, 1,030.

South Branch, post office, Hardy co., Va., by post road 111 ms. W. from W. C.

South Bridge, town of the southern part of Worcester co., Mass., by post road 54 ms. SW. from Boston.

South Bridgewater, town in the northwestern part of Plymouth co., Mass., 36 ms. SSE. from Boston.

South Brimfield, town, Hampden co., Mass. Pop. in 1810, 845; in 1820, 683.

South Brookfield, village in the SE. angle of Madison co., N. Y., 25 ms. a little W. of S. from Utica.

Southbury, town, New Haven co., Conn., on the left side of Housatonic river, 40 ms. SW. from Hartford.

South Canaan, town, Litchfield co., Conn., on Housatonic river, 20 ms. NNW. from Litchfield, and by post road 44 NW. by W. from Hartford.

South Carolina, one of the original States of the U. S. of N. America, bounded SE. by the Atlantic ocean, SW. by Georgia, and N. and NE. by N. C. S. C. has an ocean border from Little inlet to the mouth of Savannah river - 185 ms. Along Savannah river, in common with

Georgia	-	-	-	200	"
Along North Carolina	-	-	-	300	"

Having an entire outline of - 685

The greatest length of this State is, from SE. to NW., 240 ms.; its mean width about 115 ms.; and area 28,000 sq. ms.; lying between N. lat. 32° and 35 12.

S. Carolina, like N. Carolina, is naturally divided into three sections; those of the sea sand alluvion, hilly above the river falls and mountainous. The former extends from the coast about 100 ms., and is intersected by a number of rivers, winding in sluggish channels towards the sea coast. None of the rivers in this State are navigable to any considerable distance inland. The Santee is united to the harbor of Charleston by a canal 22 ms. in length. This artificial channel opens to Charleston the commerce of the interior of both North Carolina and South Carolina. The ridge of hills give rise to the appropriate distinction of lower and upper country, differing from each other in every essential respect. The lower country, with a soil flat and sandy, covered with pine, is in general sterile, interspersed with marshes, and in summer and autumn more or less unhealthy. The hilly region is ushered in advancing from the sea

coast by the sand hills or hillocks which extend for 20 or 30 ms., and gradually merge into other and more elevated hills, which lead into a finely diversified, fertile, well-watered, and healthy country. This latter region is terminated by the mountains, which are confined to the extreme NW. angle of the State. On the lower or sandy track the banks of the streams are in many places composed of excellent soil, upon which rice and cotton are extensively cultivated. The middle or sand hill zone partakes of the general character of the sea-land alluvion; with the exceptions noted, both have an arid and barren aspect. The soil of the upper country is most productive; cotton is there also the common staple.

The following tables exhibit the relative sections of South Carolina, with the classified and aggregate population agreeably to the census of 1820:

The preceding summary gives to S. Carolina aggregate population of upwards of 17 to the m. The colored classes exceeding the whites 26 to 23 nearly; this being the only State of U. S. where the former are in excess. The distribution of classes are, however, very unequal the respective natural sections. On the alluvial section the colored classes exceed the whites about three to one. In the central or middle section whites exceed as 10 to 9, very nearly; in mountain section are nearly three to one in excess.

The aggregate population on the alluvial section is about 20 to the sq. m.; on the central section not quite 15 to the sq. m. The best population section of the Southern States is the western mountainous section of this State, amounting upwards of 21 to the sq. m.

The general observations respecting the natural sections of N. Carolina may be repeated, with the variation or addition, and applied to S. Carolina, with the exception that a nearer approach the tropics is visible on vegetation, advanced from the former into the latter State. Under the head of Georgia the reader will find a more ample notice of the climate of that section and that the southern States generally.

As a commercial State, S. Carolina has so great advantages in its numerous bays or rather inlets. Charleston harbor is one of the most convenient on the Atlantic coast, for vessels under 16 feet draught. Georgetown and Beaufort are also ports affording entrance into the most productive districts of the State. With N. Carolina terminate those deep bays and sounds which penetrate the U. States from that State to the NE. The rivers of S. Carolina and Georgia enter the ocean by narrow and generally shallow outlets. The water crosses in most of the larger streams the alluvial, and is arrested by the line of falls, which terminate that species of soil, and commence the hilly tracts. The Savannah, Santee, and Pedee all rise beyond the northwestern limits of S. Carolina, and give to this State a river navigation in its extent. Many minor streams rise and enter the ocean between those great rivers, amongst which may be mentioned as pre-eminent Ashly and Cooper's, forming the harbor of Charleston.

In proportion to extent of surface, S. Carolina is a very productive State. In 1818 its exports placed it in the third rank of agricultural value. The principal staples are cotton, rice, lumber, pitch, turpentine, maize, and other minor articles. Charleston is the most extensive seaport of the States on the Atlantic border S. of Baltimore. Columbia is the seat of government.

Schools are numerous in S. C. ; and at Columbia, Beaufort, Abbeville, and Williamsburg, colleges have been erected. Collegiate establishments are, however, in most cases languishing in the southern sections of the U. States. Thirty thousand dollars have been appropriated in South Carolina, by legislative benefactions, to support free schools.

amous for its mineral waters. It is situated on the end of a deep valley, on the banks of a small rulet, and is surrounded on all sides by high ountains. The sides of these mountains next to ba are rude and uncultivated, presenting a rug- d appearance, as if shattered by the convulsions earthquakes; but as they are strewed with tall ks and abundance of shrubs, the country around rms a wild, romantic, and beautiful landscape. s only source of wealth is its mineral waters. he names of the five principal wells are Pouhour, eronfler, Savinere, Watpotz, and Tunnelet. The habitants are employed in making toys for stran- ers. Spa was taken by the French in 1794. It seated in a valley, surrounded by mountains, ms. SE. of Liege. Lon. 5 50 E., lat. 50 N.

According to the ancient divisions, contained the provinces of Old and New Cas- e, Andalusia, Arragon, Estramadura, Galicia, on, Catalonia, Granada, Valencia, Biscay, sturias, Murcia, and Upper Navarre, some of hich have been separate kingdoms. The incipal rivers are the Douero, Tagus, Gua- ana, Guadalquivir, and Ebro. The soil is fer- e, but there are large tracts of uncultivated ound, and the superior attention paid to the ge flocks of sheep greatly impedes the progress agriculture. The produce of the country is eat, barley, saffron, honey, silk, saltpetre, mp, barilla, and even sugar canes, with the best and most delicious fruits that are to be nd in France and Italy, and its wines are in gh esteem.

Few countries have undergone more interesting olutions than Spain, and the history of no nan is perhaps so instructive. After a recent but oritive struggle, that naturally great nation has wed to ecclesiastical and civil slavery, and pre- ts a singular phenomenon—retrogradation amid neral intellectual advance. If, however, the anish nation has declined in Europe, the merican part has risen with gigantic force. ven or eight independent Spanish nations now nd forth to sustain the majesty of their origin. is amongst the rational subjects of anticipation consider the Spanish nation as destined in future es to be amongst the most influential sections of a human species. Of all her once immense pire in every quarter of the earth, Spain still ains her European territories, some trifling ces on the coast of Africa, the Canary Islands, uba, and Porto Rico, with some other less valua- possessions in the West Indies and in the Pa- cific ocean, the Philippine and Ladrona Islands.

The following table exhibits the subdivisions of ain made by the Cortes, during the recent revo- utionary struggle. I have retained it, as affording estimate of the distributive population of that ldom.

This table was formed about 1820.

Very inadequate ideas prevail in the minds of those who speak or think on the subject of Spain, without having paid more than a passing notice of its actual extent. We here allude to the whole Pyrenean peninsula, including the two kingdoms of Spain and Portugal.

A line drawn in a northeasterly direction from Cape St. Vincent to Cape de Creus, near Rosas, in Catalonia, is, in length, 760 ms. The longest N. and S. line is 530 ms. from Tarifa, on the Straits of Gibraltar, to Cape Penas, in Asturias, and on the Bay of Biscay.

The annexed table, founded on the river basins

and rhombs, includes the whole peninsula, of which Spain proper contains 173,600 English sq ms., and Portugal 35,400 English sq. ms.

Politically, or rather more correctly speaking, nationally, consecrated as they are by time, custom, and, in fact, by languages, the old provincial subdivisions of Spain continue, and long must continue, to be the popular geography of that country, even supposing, what was not, however, the case, that the divisions made by the Cortes had been legally sanctioned.

Spezzia, pronounced *Spetzia*, small island of Greece, in the Gulf of Argos. This important spot is situated 1½ ms. from the ancient promontory of Hermione, in the Morea, about 32 miles SE. from Napoli di Romania, and 12 SW. from the island of Hydra. Spezzia contains a small but convenient harbor, opposite to the Morea; entrance from the NW., with anchorage on a sandy bottom. The town, of the same name, stands on a flat part of the shore. Pop. 3,000. Lat. 37 18 N., lon. 23 13 E.

SPHERE, the most simple of all solids, as it is generated by the revolution of a semicircle round its diameter; and all lines drawn from its centre are equal.

SPHEROID differs from a sphere in being a solid formed by the revolution of an ellipse round one of its axes. There are of course two species of spheroids: one *prolate*, or formed by the revolution of a semi ellipse round its longer axis; the other *oblate*, or formed by the revolution of a semi-ellipse round its shorter axis. The latter is the form resulting from a revolution round an axis of the earth, and of all other planets as far as known.

SPHORADES, Greek, *speiro*, scattered like seed sown from the hand. This title has been applied to scattered islands in the Archipelago, which seem unconnected, to distinguish them from the Cyclades or islands apparently the culminating parts of subaqueous chain or mountainous ridge. Though applied, as above stated, specifically to islands in the Mediterranean, the term may with correctness

be made generic, and used for any group of islands of the same nature as those to which the adjective term was originally given.

Spree, river of Germany, which rises in the mountains of Bohemia, and, passing through Prussia into the marquisate of Brandenburg, runs between Berlin and falls into the Havel, opposite Spandau. The sources of the Spree are between the mouth of the Elbe and the Neisse, branch of the Oder. It flows about 100 ms. in a northerly direction to where it is united to the Oder by the canal of Mulrose. This fine little canal was the first artificial navigation, of any extent worthy of notice made in the Prussian dominions. It was completed under the direction of Philip Chiesse, in 1661, with 10 wooden locks. The locks were subsequently rebuilt of stone, and reduced to 8 in number. The whole channel is 23 ms. long, ascending from the Spree by one 10-feet lock to the summit level, from which it again falls 64 feet by 5 locks, and joins the Oder 5 ms. above Frankfurt. Below the canal of Mulrose, the Spree turns NW. by W., passes Berlin, and joins the Havel at Spandau, after an entire comparative course of 150 ms. between lat. 50 50 and 52 1/2° N.

Springborough, village, Warren co., O., SW. of Columbus.

Spring Creek, tp., Miami co., O.—Post office, Madison co., Tenn., about 150 ms. SW. by road from Nashville.

Springfield, town, Cheshire co., N. H., 30 m. N.W. from Concord.—Town, Windsor co., Vt., on Connecticut river, 13 ms. below Windham.—Town, Hampden co., Mass., on the E. bank of Connecticut river, 29 ms. SW. from Southfield, and 24° N. by E. from Hartford. The town or village is the seat of justice for the co., and stands on the bank of the Connecticut river, directly opposite the mouth of Westfield river. In the vicinity are a very extensive paper manufactory and a manufactory of hollow ware.

Here is also the site of the principal armory of the United States. The arsenal is within the village, consisting of extensive buildings devoted to various objects embraced by the establishment, and a hall devoted to public worship. The water works are placed on Mill river, about one mile north from the arsenal, and are erected on three separate sites—upper, lower, and middle, containing 5 shops, 28 forges, 10 trip hammers, 18 water wheels, &c., presenting one of the most extensive emblems of wheels, and other machinery put in motion by water, to be found in the U. States. From 240 to 250 workmen are employed, who complete on an average 45 muskets daily. So great is the water power at the disposal of the United States at this place, that the works may be increased to any assignable extent that the exigencies of Government may demand. Since its first formation, this armory has produced about 130,000 muskets and 1,500 carbines; and nearly 50,000 muskets have been repaired. From 1795 to 1817, including the first cost, that of the whole establishment amounted to \$1,820,120.

Springfield is the seat of a very extensive commerce, and in the vicinity we have noticed only the most prominent of its manufacturing establishments. Opposite this village, the Connecticut river is crossed by a bridge 30 feet wide and 1,234 feet in length. Pop. in 1810, 2,812; and in 1820, 70.

Stafarda, town of Piedmont, in the marquise of Saluzzo, seated on the Po, with a rich abbey. It is famous for a victory gained by the French, in 1690, over the duke of Savoy. Lon. 7 25 E., lat. 44 34 N.

Staffa, island of Scotland, one of the Hebrides, a little to the W. of Mull. It is one mile long and half a mile broad. The whole SW. end is supported by ranges of natural pillars, mostly above 50 feet high, standing in colonnades, according as the bays or points of land form themselves upon a firm basis of solid unformed rock. This is every where supported by basaltic rocks and pillars, superior in beauty and grandeur to those which form the Giant's Causeway in Ireland.

Swaffelstein, town of Germany, in Franconia, and bishopric of Bamberg, situated on the Lauter, 16 ms. NNE. of Bamberg. Lon. 11 12 E., lat. 50 15 N.

Stafford, county of England, 55 miles long and 42 broad. This is a long and narrow tract of country, ending in a point at the N. and S. extremities, having to the W. the counties of Chester and Salop, to the E. those of Derby and Warwick, and to the S. Worcestershire. The rivers Dove and Trent form a natural boundary on the Derbyshire side; on the other sides it has no remarkable limits. The S. extremity of the county is enlivened by various branches of the hardware manufacture, in which it participates with the neighboring Birmingham. The trade of this county is in a peculiar manner assisted by the grand system of canal navigation, of which it is, as it were, the centre, and which is carried through its whole length. The *grand trunk*, as it has been ingeniously termed, enters the N. of the county from Cheshire, and

after piercing Harecastle-hill by a subterranean passage of 1½ mile in length, passes through potteries, and thence southward across the Trent almost to Litchfield, from whence it turns sh over the Trent again, and over the Dove, in way to mix with the Trent at Wilden ford. From the neighborhood of Stafford it sends of branch which runs directly southward by Pp ridge, and near Wolverhampton, to join the S ern near Kidderminster. With this a canal fr Birmingham and another from Stourbridge co municate. Thus the great ports of Bristol, Liv pool, and Hull, are all accessible to the vari products and manufactures of Staffordshire. T principal rivers are the Trent, Dove, Sow, Ch ner, Stour, Peak, and Manyfold. Pop. in 18 239,153; and in 1811, 295,153; and in 18 341,824.

Stockholm, the capital of Sweden, in a situation remarkable for its romantic scenery. This capital, which is very long and irregular, occupies, besides 2 peninsulas, 7 small rocky islands, seated on the Maeler, in the streams which issue from that lake, and in a bay of the Baltic. A variety of contrasted views are formed by numerous rocks of granite, rising boldly from the surface of the water, partly bare and craggy, and partly dotted with houses or feathered with wood. The harbor is an inlet of the Baltic; the water is as clear as crystal, and of such depth that ships of the largest burden can approach the quay, which is very large and lined with spacious buildings. Towards the sea, about 2 or 3 ms. from the town, the harbor is contracted into a narrow strait, and, winding among high rocks, disappears from the sight; and the prospect is terminated by distant hills overspread with forest. It is far beyond the power of words or of pencil to delineate these singular views. The central island, from which the city derives its name, and the Ritterholm, are the handsomest parts of

the town. At the extremity of the harbor several streets rise, one above another, in the form of amphitheatre; and a royal palace, a magnificent building, crowns the summit. Except in the burbs, where several houses are of wood, painted, the generality of the buildings are of brick. There are here an academy of sciences and an arsenal. Stockholm is 200 ms. Strelitz, town of Germany, in Upper Saxony, seated on the Elbe, 14 ms. NW. of Meissen, and 18 NW. of Dresden. Lon. 23 15 E., lat. 51 30 N.

STRELITZ, plural *STRELITZY*, from a Russian word signifying a *dart* or *arrow*. They were an ancient standing body of troops, who served on foot, and whose title proves two things: first, their principal arms the bow and arrow; secondly, from such arms, that their institution preceded the introduction of fire arms into Russia. Their numbers were about 20,000. Similar to the Prætorian bands at Rome, and Janisaries at Constantinople, the Strelitz became a disorderly burden, more dangerous to the State to which they belonged than to foreign enemies. Their revolt in 1698 was only one of frequent outbreaks; but it decided their fate, as they had now to contend with Peter Alexiowitz, and were defeated—their leaders and most culpable members who survived battle brought to the scaffold, those spared placed in the new regiments, and the Strelitz utterly abolished.

Sudoree, one of the Faro islands, in the North Atlantic ocean, remarkable for a dangerous whirlpool near it, which is occasioned by a crater, 61 fathoms deep in the centre. The danger, especially in storms, is very great, but at the reflux, and in very calm weather, the inhabitants venture in boats for the sake of fishing.

Suenborg, seaport of Denmark, in the island of Funen, with the best harbor in the island. Here are manufactures of woolen and linen. It is 22 ms. S. of Odensee. Lon. 10 37 E., lat. 55 9 N.

Suez, seaport of Egypt, with a castle, seated at the N. end of the W. gulf of the Red sea, called the Gulf of Suez. This gulf is separated from the Mediterranean by an isthmus, 125 ms. over, which joins Asia to Africa. The town is surrounded by a sandy country, and is without water. It is 65 miles E. of Cairo. Lon. 32 45 E., lat. 30 2 N.

SUFFETES, Hebrew, *schofet*—a judge. In Carthage, the two principal magistrates, elected annually from the body of the Senators, were called *suffetes*. Unlike the Roman Consuls, the jurisdiction of the *suffetes* was merely civil, though in some instances they commanded armies while holding the civil office, as, for examples, Hannibal, Hamilcar, and Magon.

Suffield, town, Hartford co., Connecticut, on the W. bank of Connecticut river, 18 miles N. of Hartford, and 55 N. by E. of New Haven. Pop. in 1810, 2,686; and in 1820, 2,681.—Southampton p., Portage co., Ohio.

Suffolk, county of England, 58 miles long and 22 broad, bounded on the W. by Cambridgeshire, on the N. by Norfolk, on the S. by Essex, and on the E. by the German ocean. It lies in the diocese of Norwich, contains 22 hundreds, 28 market towns, and 575 parishes, and sends 16 members to Parliament. Suffolk is in general a level country, without any considerable eminences. The principal rivers are the Stour, Waveny, Little Ouse, Great Ouse, Deben, Gipping, and Orwell. Ipswich is the principal town, but the assizes are held at Bury and St Edmund's. Pop. in 1801, 210,431; in 1811, 211,431; and in 1821, 270,542.

Suffolk, county, Massachusetts, comprising only the townships of Boston and Chelsea.—See those articles. This county comprises only a very small

spot on the continent—Boston peninsula and the islands in the harbor. Pop. in 1820, 43,941. For geographical position, see *Boston*.

Suffolk, county, New York, comprising the E. part of Long Island, bounded by Queen's W., Long Island sound N., and the Atlantic ocean NE., E., and S.; length 80 miles, mean width 8, area 640 sq. ms. The same range of hills which has been noticed as passing through the N. side of King's and Queen's counties is continued in Suffolk, in which latter county they expire near Poconic bay. The S. side of Suffolk county is an alluvial plain. Soil of the whole county rather sterile. Chief towns, River Head, Sag Harbor, and Southampton. Pop. in 1820, 24,272. Central lat. 40 45 N., lon. W. C. 4 10 E.

Suffolk, village and the principal seat of justice, in Nansemond co., Va., lying on the SE. side of Nansemond river, 28 ms. SW. of Norfolk, and 65 SE. of Petersburg, on the Appomattox.

Suffolk C. H., Suffolk co., N. Y.—See *River Head*.

SUGAR, Persian and Arabic, *sukkar*; Sanscrit, *sharkara*; Spanish, *azucar*—hence the various names in different languages, all evidently from some original root, signifying to suck or draw with the mouth. The general use of sugar over the earth is not one of the least important additions made to the sum of human comforts in modern times. The Chinese and congregate nations cultivated sugar cane, and manufactured sugar at least two thousand years before it was even known as a substance on the western side of the eastern continent. It was unknown to the ancient Arabians, Egyptians, Phœnicians, Jews, Greeks, and Romans. It was brought into Arabia about the end of the thirteenth century, and thence passed to Nubia, Ethiopia, and Egypt. About a century later, it was cultivated in Syria, Cyprus, and Sicily. Don Henry, son of John II., king of Portugal, having discovered Madeira in 1420, colonized that group, and transplanted to these islands sugar cane from Sicily. During the four centuries which have passed since the complete introduction of this noble plant into the west, its culture and the use of its delicious and nutritive substance has increased, until it has become a real *sweetener* of life, from the cabin to the palace.

Sugar Creek, SW. tp. of Stark co., Ohio.—Tp., Tuscarawas co., Ohio, in which is laid out the town of Shanesville. Pop. in 1820, 938.—Tp., Green co., Ohio. Pop. in 1820, 1,881.—Tp., Wayne co., Ohio. Pop. in 1820, 642.

Sugelmessa, or *Segilmessa*, province of Barbary, bounded on the S. by the kingdom of Taflet, and on the N. by Mount Atlas. It is about 100 miles in length, abounds in corn, dates, and other fruits, and has mines of iron, lead, and antimony. The government is a republic. The capital, of the same name, is seated on the Zig, 150 ms. NNE. of Taflet. Lon. 5 5 W., lat. 29 40 N.

Suggsville, village, Clark co., Alabama, 24 ms. from Cahaba.

Sulli, town and district of European Turkey, in

Albania, which have become interesting from the spirited resistance of its inhabitants against Ali Pacha. The mountains of Sulli extend 30 miles from N. to S., and about an equal distance transversely. Towards the E. they have the district of Arta, and to the SE. and S. that of Loru. The town of Sulli, or Kako-Sulli, is about midway between Parga and Arta, and about 15 miles distant from these two places and from Prevesa. After a struggle of 13 years, the Sullistes were subdued or slain, except 4,000, who, by agreement, retired to Parga and Corfu. Sulli submitted and received the troops of Ali Pacha in 1803.

Sullivan, county, New York, bounded by Delaware river, or Pennsylvania, SW. and W., Delaware co., in New York, NW., Ulster NE., and Orange SE.; length 33, mean width 25 ms., area 825 sq. miles. Surface broken, hilly, and in part mountainous. It is watered by numerous creeks flowing into the Delaware, particularly Neversink and Beaver creeks. Soil of middling quality. Chief towns, Monticello and Rome. Population in 1840, 15,629. Central lat. 41 42 N., lon. W. C. 2 18 E.

Sullivan, county, Indiana, bounded by Wabash river W., Vigo N., Martin E., and Davies and Knox S.; length 26, mean width 25 miles, area 630 sq. miles. It is drained by various creeks of the Wabash. Chief town, Merom. Pop. in 1840, 3,498. Central lat. 33 7 N., lon. W. C. 10 18 W.

Sullivan, NE. county of Tennessee, bounded by Scott and Washington cos., Va., N., Ashe co., N. C., E., Carter co., in Tenn., SE., Washington S., and Hawkins W.; length 50, mean width 12 miles, area 600 sq. ms. Holston river flows through the entire length of this county from E. to W., receiving the Wantauga river from the SE. about two-thirds down the county. Surface generally hilly, and in part mountainous. Good river soil. Chief town, Blountville. Pop. in 1840, 10,736. Central lat. 36 25 N., lon. W. C. 5 24 W.

Sullivan, county, New Hampshire.

Sumasinta River.—See Mexico.

Sumatra, island in the Indian ocean, the most western of the Sunda islands. Its general direction is nearly NW. and SE. The equator divides it into almost equal parts; the one extremity being in 5 33 N., the other in 5 56 S. lat., and Ache Head, its N. extremity, is in lon. 95 34 E. It is 950 ms. in length, and from 150 to 200 in breadth, separated from Malacca by the strait of that name, and from Java by the strait of Sunda. This island is surpassed by few in the beautiful indulgences of nature. A chain of mountains runs through the whole extent; the ranges, in many parts, being double and treble; yet their altitude is not sufficient to occasion their being covered with snow during any part of the year. Between these ridges are extensive plains, considerably elevated above the surface of the maritime lands. In these, the air is cool; and, from this advantage, they are esteemed the most eligible portion of the country, are the best inhabited, and the most cleared from wood, which elsewhere, in general, cover both hills and valleys with an eternal shade. Here too are found many lakes and rivers that facilitate the communication between the different parts. The inhabitants consist of Malayas, Achenses, Battas, Lepoons, and Rejangs; the latter are taken as a standard of description, with respect to the personal manners, and customs of the Sumatrans. They are rather below the middle stature; their bulk is in proportion; their limbs, for the most part, slight, but well shaped, and particularly small at the wrists and ankles. Their hair is strong, and shining black. Rice is the only grain that grows in the country. Here are sugar canes, beans, peas, radishes, yams, potatoes, pumpkins, and several kinds of pot herbs unknown to Europe, and also most of the fruits to be met with in other parts of the East Indies in the greatest perfection. Indigo, saltpetre, sulphur, arsenic, Brazil wood, two species of the bread-fruit tree, pepper, cassia, camphor, benjamin, coffee, and cotton, are li-

the produce of this island. Here also are the bage tree and silk cotton tree; and the forests contain a great variety of valuable species of wood, ebony, pine, sandal, eagle, or aloes, teak, manneel, and iron wood, and also the banyan tree. Reswax is a commodity of great importance here; and there are likewise edible birds' nests. Gold, iron, copper, and lead are found in the country; and the former is as plentiful here as in any part of Asia. Sumatra is divided into many petty kingdoms, the chief of which are Acheen, Indrague, Palimban, and Jambi. The English and Dutch have factories on this island; the principal of the former being Fort Marlborough, at Ben- cien.

Sumbul, town of Hindoostan proper, in the province of Oude, 45 ms. WNW. of Bereilly, and E. of Delhi. Lon. 78 55 E., lat. 21 25 N.

Sumbulpour, or *Semilpour*, town of the peninsula of Hindoostan, in the province of Orissa, 280 W. of Calcutta. Lon. 83 40 E., lat. 21 25 N.

Sumerein, town of Lower Hungary, seated in an island of Schut, made by the river Danube. It is 6 ms. S. of Presburg. Lon. 17 23 E., lat. 44 N.

Summanytown, Montgomery co., Pa., 35 ms. NW. from Philadelphia.

Summerfield, village, Guilford co., N. C., 51 NW. by W. from Raleigh.

Summit, town in the southern part of Schoharie co. N. Y., 33 ms. SW. by W. from Albany. Pop. in 1820, 1,468.

Summit Bridge, village, Newcastle co., Del.

Summitsville, village, Sullivan co., N. Y.

Sumner, town, Oxford co., Me., 6 ms. NE. from Paris. Pop. in 1820, 1,055.

Sumner, co., Tenn., bounded by Kentucky N., S. E., Cumberland river or Wilson S., Davidson SW., and Robertson NW. Length 30, and width 16 ms.; area, 450 sq. ms. It is washed on the S. by Cumberland river, and drained by various creeks of that stream. Chief town, Glatin. Pop. in 1820, 19,211; and in 1840, 24,445. Central latitude 36 27 N., lon. W. C. 95 West.

Sumter, district of S. C., bounded by Santee river or Charleston district S., Santee river or Orangeburg SW., Wateree river or Richland W., Keshaw NW., Lynch's Creek river or Darlington NE., and Williamsburg N. Length 50, and width 30 ms.; area, 1,500 sq. ms. The principal part of this district is drained by Black river, branch of Great Pedee. Soil generally sandy. Surface level. The canal connecting Santee river with Charleston harbor leaves the Santee nearly opposite to the SE. angle of Sumner. Chief town, Motterville. Pop. in 1820, 25,369; and in 1840, 27,892.—For geographic position, see next article.

Sumterville, village and seat of justice, Sumter district, S. C., on the dividing ground between the two main branches of Black river, about 100 m. a little W. of N. from Charleston. Lat. 33 5 N., lon. 3 22 W.

Sunapee, lake of N. H., on the western border of Hillsborough, and eastern of Cheshire co., discharging through Sugar river into Connecticut

river. It is through this lake that a channel of water communication is designed to unite Merrimac and Connecticut rivers.

Sunart, district of Scot., in Argyleshire, in the peninsula at the NW. end of that co. It is remarkable for numerous veins of lead, which, however, are not very productive.

Sunart Loch, Scot., an inlet of the sea, in Argyleshire, which divides the island of Mull from the district of Morven.

Sunbury, co. of New Brunswick.

Sunbury, town, borough, and seat of justice, Northumberland co., Pa., on the E. side of Susquehanna river, 2 ms. below Northumberland, 56 N. of Harrisburg, and 164 NW. of Philadelphia. Pop. about 700; and in 1840, 1,100.—Town and port of entry, Liberty co., Ga., lying on the S. side of N. Newport river, 45 ms. S. by W. of Savannah, in lat. 31 43 N., and lon. 81 18 W. The harbor is formed and defended from the weather by the interposition of Catherine island, which lies off its entrance. An academy was erected here in 1788, which has become a very flourishing institution.—Flourishing town in the eastern part of Delaware co., Ohio. Pop. in 1820, 875.—Town, Gates co., N. C., about 40 ms. SW. from Norfolk, Va.

Sunk Island, island of Eng., within the mouth of the Humber, about 9 ms. in circuit, separated from Yorkshire by a channel near 2 ms. broad.

Sunning, village of Eng., in Berkshire, situated on the Thames, 2 ms. NE. of Reading. It was once an episcopal see.

Sunning Hill, village of Eng., in Berkshire, in Windsor Forest. It is noted for its medicinal wells, which are efficacious in paralytic cases, and is 6 ms. SSW. of Windsor.

Sunda Islands, group in the Indian ocean. This term is, by Malte Brun, supposed to be Sanscrit, and, bearing so strong an analogy to words found in several European languages, signifying exactly the same meaning, affords one of the many coincidences in the original languages of the earth. The Sunda Islands are Borneo, Sumatra, and Java, with many of smaller size. Borneo and Sumatra are both crossed by the equator. The whole group, however, extends from lat. 8° S. to 6° N.

Sunda, Straits of, separate Sumatra from Java. This great inlet from the Indian ocean into the Chinese sea lies in lat. 6 36 S., and lon. 105 15 E. from London.

Sunderbunds, or *The Woods*, a tract of country consisting of that part of the delta of the Ganges, in Hindoostan proper, and in the soubah of Bengal, which borders on the sea. The delta of the Ganges and Bramapootra, united, is perhaps the most dreary, and, except by water, the most impenetrable region of the earth. It is formed by innumerable creeks and rivers, interlocking with each other, with intervening islands covered with a most dense forest, uninhabited except by wild beasts, or a solitary fakere or Mahometan devotee. The navigation to Calcutta is by two passages, more than 200 ms. through a maze of forest and river scenery. At one time the channel is so narrow as to scarcely admit the passage of vessels, and again opening into a spacious basin. The whole surface is flat, and composed of alternate strata of sand and black mould, a recent alluvion. Some spots might be

cultivated, whilst the greater part is liable to annual submersion; but the whole is claimed as public property, and serves to supply Calcutta with timber and fuel. The two deltas of the Ganges and Mississippi are very nearly 180° asunder.

Sunderburg, town of Denmark, in the island of Alsén. It is seated on a strait, called Sunderburg Sound, 12 ms. E. of Flensburg. Lon. 10° E., lat. $54^{\circ} 51'$ N.

Sunderdoe, or *Melundy*, fortified island and seaport of the Deccan, on the Concan coast, reduced by Commodore James, in 1756. It is about 10 ms. NE. of Vingorla Rocks, and 36 NNW. of Goa. Lon. $73^{\circ} 20'$ E., lat. $16^{\circ} 3'$ N.

Sunderland, town, Bennington co., Vt., 15 ms. NE. from Bennington.—Town, Franklin co., Mass., on the left bank of Connecticut river, 8 ms. below Greenfield.—Seaport of Eng., in the bishopric of Durham. It is a large and thriving town, which, for the exportation of coals, is next in consequence, this side of the kingdom, to Newcastle. Its port, on the mouth of the Were, though improved from its former state, will not admit the largest ships. There are several glass-houses at Sunderland; and it also exports grindstones and other articles. It is 13 ms. NE. of Durham, and 264 N. by W. of London. Lon. $1^{\circ} 14'$ W., lat. $54^{\circ} 56'$ N.

Sundswall, seaport of Sweden, in the province of Medelpadia. It carries on a trade in tar, bark of birch trees, deals, and linen, and is seated near the Gulf of Bothnia. Lon. $18^{\circ} 5'$ E., lat. $62^{\circ} 45'$ N.

Sunfish, tp., Pike co., Ohio.

Sunneberg, or *Sonneberg*, town of Germany, in the circle of Saxony, and territory of Sternburg, with a castle, seated on the Darta, 50 ms. E. by N. of Berlin. Lon. $15^{\circ} 10'$ E., lat. $52^{\circ} 41'$ N.

Superior, lake, the most extensive and highest of the great fresh-water reservoirs which constitute the sea of Canada, and the greatest mass of fresh water on the earth. Before, however, proceeding to a notice of its features, we beg leave to observe, that there prevails a very great exaggeration respecting the relative extent of the Caspian and that of Lake Superior. Carefully measured on several maps, English, French, and American, the Caspian is found 700 ms. in length from the coast of Mazanderan, in Persia, to that between the mouths of the Walga and Ural rivers, in Russia, and, with all its bays included, will fully average 200 ms. wide; area 140,000 sq. ms. This demands a square of very nearly 375 ms. each side.

The longest line that can be drawn over Lake Superior is from Montreal point to the bottom of Fond du Lac, nearly along N. lat. 47° , and in length 380 ms. The widest part is about along the line of lon. W. C. 10° W. 165 ms., but the mean width fully estimated at 80 ms., consequently the area comes out 30,400 sq. ms., or very little exceeding an equality to a square of 174 ms. each way. When compared from their actual elements, the Caspian is rather more than $4\frac{1}{2}$ times more extensive than Lake Superior; it is, however, probable that, from the shallowness of the Caspian, and great depth of Lake Superior, the latter contains little, if any, less water than the former. Lying between N. lat. $46\frac{1}{2}^{\circ}$ and 49° , and being elevated 640 feet above the mean level of the Atlantic ocean, the winter climate over Lake Su-

perior is very severe; and the shores being in many parts rock bound, and in others shallow, navigation is suspended full half the year.

Beside the sea-like surface of Lake Superior, drains a land area of about 60,000 sq. ms. The part comprised in the United States of this basin curving from the straits of St. Mary to Grand Portage river, 600 ms., with a mean width of 70, contains an area of 42,000 sq. ms. The great mass of water flowing from this vast reservoir is poured down the straits of St. Mary into Lake Huron. From the aspect of its shores, it is evident that the surface of Lake Superior is depressing, though it is impossible for it to ever actually drain out, the bottom is, where deepest, below the surface of the Atlantic ocean.—See *St. Lawrence basin* and *St. Mary's straits*.

Supino, ancient town of Naples, in Molise, with a castle. It is seated at the source of the Tama at the foot of the Appennines, 17 ms. N. by W. of Benevento.

Sur.—See *Sour*.

Sura, town of Sweden, in the province of Westmanland.

Surat, city and seaport of the deccan of Hindoostan. It is said to have 200,000 inhabitants and its trade is very considerable. Surat is situated on the confines of Guzerat, 20 ms. up the river Tapti, and 177 N. of Bombay. Lon. $72^{\circ} 48'$ E. lat. $21^{\circ} 10'$ N.

Sure, river of Ireland, in Tipperary, which flows into St. George's channel.

Surgooja, town of the peninsula of Hindoostan, 180 ms. SSW. of Patna.

Surguinsville, village, Hawkins co., Ten., post road 240 miles NE. by E. from Murfreesboro.

Surinam, country of South America, in Guiana, extending 75 ms. along a river of the same name. It abounds with game and singular animals of different kinds; the toad, in particular, being remarkable for its enormous size and ugly form. It produces fruits, indigo, sugar, cotton, tobacco, gums, and wood for dyeing. The woods are full of monkey and it is said there are serpents 30 feet long. The capital is Paramaribo.

Suringia, commercial town of Japan, in the island of Nippon, capital of a province of the same name, with a castle, where the emperors formerly resided. Lon. $139^{\circ} 5'$ E., lat. $39^{\circ} 30'$ N.

Surry, co. of Eng., 37 ms. long and 27 broad, bounded on the N. by Middlesex, on the E. by Kent, on the S. by Sussex, and on the W. by Hampshire and Berks. It lies in the diocese of Winchester; contains 13 hundreds, 11 market towns, (including Southwark,) and 140 parishes, and sends 14 members to Parliament. The air generally temperate and healthy. Surry has been compared to a piece of coarse cloth with a fine border; its circumference being in general fertile but its middle parts barren. On the banks of the Thames, it has a range of beautiful meadows, interspersed with numerous villas and pleasurable grounds. Pop. in 1801, 269,043; in 1811, 323,851; and in 1821, 398,658.

Surry, co. of Lower Canada.

Surry, co. of Va., bounded by James river, opposite Charles City co., N., James river, opposite James City co., NE., Isle of Wight SE., Sussex

W. and W., and Prince George NW. The sources of Black river branch of Nottaway, in Surry. Length 22 ms. mean width 15; area 330 sq. ms. Chief town, Cobham. Pop. in 1820, 6,594; and in 1840, 6,480. N. lat. 37° 20'. The meridian of W. C. intersect in this county.

Surry, co. of N. C., bounded by Va. N., Stokes in N. C. E., Rowan and Iredell S., and Wilkes and Ashe W.; area 726 sq. ms. It is drained by the extreme northern sources of the Yadkin. Surry is hilly, and in part mountainous. Chief towns, Rockford and Huntsville. Pop. in 1820, 12,320; and in 1840, 15,079. Central lat. 36 16 N., lon. W. C. 3 44 W.

Surry, town, Hancock co., Me., 18 ms. NE. of Castine.—Town, Cheshire co., N. H., 40 ms. SW. from Concord. Pop. in 1810, 564; and in 1820, 570.—C. H. and post office, Surry co., Va., 64 ms. SE. by E. from Richmond.

Sursee, town of Switzerland, in the canton of Berne, near the Lake of Sempach, 5 ms. S. from Berne.

Sursooty, town of Hindoostan proper, 114 ms. N. of Delhi.

Sus, river of Morocco, which forms the southern boundary of the empire of Morocco, and enters the Atlantic at Mezza. It fertilizes its banks by annual inundations.

Susa, seaport of Tunis.—See *Sousa*.

Susa, strong town of the kingdom of Sardinia, in Piedmont, capital of a marquisate of the same name. It is seated on the Doria, among pleasant mountains, and is called the key of Italy, being the principal passage out of France into Italy. It is 25 miles NW. of Turin. Lon. 7 24 E., lat. 45 28 N.

Susannah, village, Clermont co., Ohio, on Ohio river.

Susdal, town of Russia, in the government of Vladimir, capital of a duchy of the same name. It is built of wood, and seated on the Khasma, 10 ms. NE. of Moscow. Lon. 40 25 E., lat. 56 28 N.

Susquehannah, river of the United States. This noble stream, from the caprice of geographical nomenclature, loses its name at its junction with the Chesapeake water; an error now beyond remedy.

Under the general head of the confluent of the Chesapeake bay is included a basin of navigation, in form of an immense triangle, having 450 ms. from the extreme southern sources of Nansemond river, lat. 36 40 N., to those of the Chenango branch of Susquehannah, lat. 42 55 N., and 100 ms. perpendicular from Cape Henry, N. lat. 37 20, E. lon. from W. C. 1 10, to the extreme northern sources of James river, N. lat. 37 15, W. lon. from W. C. 3 20, with an area of 65,000 sq. ms.

This is by far the most extensive and peculiar basin of the Atlantic slope of the United States. The bay of Chesapeake penetrates it from N. to S. 100 ms. Into the western side of this great bay, rather gulf, flow a number of tributary branches, of which the principal are—James river, York river, Rappahannock, Potomac, Patuxent, Patapsco and Susquehannah.

The Susquehannah loses its name at the foot of the falls, at N. lat. 39 33, exactly 1° E. from the meridian of W. C. From its magnitude, and from the western origin of its sources, the Susquehannah seems

to form a natural chain of water communication between the Atlantic ocean and Ohio valley; and the curious fact that all its great tributaries flow from the right, and completely pierce the Appalachian chain, renders this observation still more striking. If we turn our attention to the general physiognomy of the Susquehannah, we find its extreme northern source in Madison co., N. Y., within 16 ms. of Oneida lake, and 15 from the line of the Great canal, and in the angle between the sources of the Mohawk and Seneca rivers. This is the Chenango river, afterwards augmented by the E. branch. The latter originates in the northern spine of the Catsbergs, in the angle between the heads of the Coquago branch of Delaware, the Chenango, and opposite to the Mohawk river, reaching within less than 10 ms. from the line of the Great canal of N. Y. The E. branch is correctly so called, as its sources are in fact the most eastern tributary waters of the Susquehannah. The E. branch and Chenango unite in Broome co., in N. Y.; the former having, by an abrupt curve, entered and retreated from Pa. Below their junction, the united waters flow a little S. of W., enter Tioga co., in N. Y., and, turning nearly S. into Bradford co., in Pa., receive the Tioga branch from the NW., at Tioga point.

The Tioga river rises in the angle between the sources of the Genesee and Seneca rivers, in Steuben, Alleghany, and Ontario counties, in N. Y., and within 30 ms. from the line of the Great canal.

The general course of the Tioga river is from NW. to SE., by comparative courses about 80 ms. The general course of the Susquehannah proper, already noticed, is from NE. to SW., by comparative courses 120 ms.

What in a particular manner renders remarkable the two great northern constituents of the Susquehannah, is their enclosing the two long and navigable lakes Seneca and Cayuga; the latter stretching, in an almost direct line, from the Great canal, to within 20 ms. of the Tioga river, at the mouth of the Newtown creek, about 20 ms., by comparative course, above Tioga point; and the latter, or Cayuga, stretching also from the line of the Great canal to within 30 ms. from the Susquehannah, at the mouth of the Oswego, about 20 ms. above Tioga point. Nature, in this section of country, seems to have advanced half way to aid the efforts of man in forming channels of communication between the basins of the Susquehannah and St. Lawrence. The two fine lakes of Seneca and Cayuga are each respectively upwards of 35 ms. in length, and, occupying the angle between the two main northern constituents of the Susquehannah, would appear to have been placed in their actual position, as if to give, in their utmost extent, the greatest navigable facility.

From the Tioga point, the Susquehannah flows by comparative courses 60 ms., to the mouth of the Lawahannoc creek, in the centre of Luzerne co. In this range, the river flows nearly due S., 10 ms. to the western, or, more correctly, to the north-western verge of the Appalachian mountains. Hitherto, the entire tributary waters of this stream have originated and flown NW. of the Appalachian chain, and on the secondary formation. At the mouths of the Towanda and Wysaukin creeks, the

river curves to SE., and enters the mountains nearly at right angles to their general range. Continuing about 10 ms. still further upon the secondary, the river enters on the great central transition formation, near the mouth of the Tunkhannoc, where it passes the main ridge of the Appalachian chain, and issues into the fine valley of Wyoming, across which it maintains a SE. course to the mouth of Lawahannoc. Here the now noble stream of the Susquehannah again turns at nearly right angles, and flows down the remarkable Wyoming valley, by comparative courses, 70 ms., to its junction with the W. branch, at Northumberland and Sunbury.

The W. branch rises entirely in Pa., and within the Appalachian valleys, though upon the secondary formation. Its general course is nearly from W. to E., by comparative courses 150 ms., to where it passes the main ridge of the Appalachian chain, and enters on the transition formation, 20 ms. below Williamsport. Here the river pierces the mountain, flows into the great valley, and turns to nearly due S. 25 ms., to its junction with the Susquehannah.

Below the mouth of the W. branch, the Susquehannah pursues a general direction, a little W. of S., 40 ms. to the mouth of Juniata. The latter is literally a mountain stream, and has its whole valley on the central transition formation. Its general course is nearly from W. to E., parallel to the W. branch. Similar to the other secondary rivers of the basin of the Susquehannah, the Juniata traverses the Appalachian ridges in several places, and flows in either a parallel direction or at right angles to those ridges.

Below the mouth of Juniata the Susquehannah assumes a SE. direction of 80 ms. by comparative courses, and, being precipitated from the primitive on the sea sand formation, loses its name and rank as a river in Chesapeake bay.

Between the head of the latter bay and the mouth of the Juniata the Susquehannah passes three mountain ridges: the Kittatinny above and the Blue Ridge below Harrisburg, and what may correctly be called the SE. mountain, below the mouth of the Conestoga and Pequea creeks.

The valley of the Susquehannah proper presents an area of inland navigation of about 20,000 sq. miles.

If we turn our eye to the whole basin of the Susquehannah, and consider it geographically, we have before us a mighty link, which connects the three great river systems of North America—those of the Gulf of Mexico, St. Lawrence, and Atlantic ocean proper. The natural facilities it presents to channels of inland navigation will be shown in the sequel, with the relative elevation of its mountain valleys, and the obstructions opposed to artificial water routes.

If we examine this basin geologically, we find its general physiognomy in a very remarkable manner commanding our attention. We have in this basin all the formations which the world affords, from the highest class of primitive rocks to the most recent alluvion; and we have all those formations on an immense scale. But the circumstance arising out of this geological structure most worthy of our attentive observation is, that the courses of the waters, or their fitness or unfitness

for navigation, appears to be totally independent of the rock formations. It appears, also, that though the mere windings of the streams are influenced by the mountain ridges, their general courses towards the recipient, into which the waters are discharged, have no dependence upon either the mountains or rock formation. The latter character the Susquehannah basin partakes, common with its three contiguous Atlantic basins, those of Roanoke, Delaware, and Hudson.

These very important facts prove how little are advanced in a correct view of any of these rivers, in a navigable point of view, by the most minute knowledge of the relative position of mountains, the extent and relative position of different formations, or, more, that of the courses of the rivers themselves. Falls, in the proper sense of the term, are rare in any of the Atlantic rivers. What are usually denominated falls in reality rapids, but those, in respect to either their position or magnitude, have but an incidental connexion with the mountain ridges. In most instances, where the rivers do pass the mountain rapids occur; but this coincidence is by no means universal. The rivers, in a number of the mountain gaps, present an intervening smooth sheet of water. This is remarkably the case with the Juniata below Bedford, and with the Lehigh a passage through the Kittatinny range. The fall of the water, in its descent from the mountain valleys to the level of the tides, can in no instance be even tolerably correctly estimated by a comparison with its course through the mountains. Every stream, to be well understood, must be viewed separately, and considered a whole in itself.

Before quitting the general review of the basin of the Susquehannah, we may remark, that the main volume of that river, from its source to the Atlantic, receives all its large tributary streams from the right, and serves as a common recipient, by along the base of an inclined plane, extending from the 37th to the 42d deg. of N. lat. It will be seen, by inspection, that this feature is also prominent in the physiognomy of the Potomac, Delaware, and the Hudson.—See *James river, York river, Potomac, Patuxent, Patapsco, Pennsylvania.*

Susquehannah, village, Broome co., N. Y.
Susquehannah, co. of Pa., bounded by Broome co., N. Y., N., Wayne co., Pa., E., Luzerne and Bradford W. Length 34 ms., width 23, a 800 sq. ms. Surface hilly, and soil generally of middling quality. The local features of this co. are very peculiar. The Susquehannah river enters and again retires from its northern border, thence, after an immense sweep through Broome and Tioga cos., N. Y., and Bradford co., Pa., again reaches, in the NW. angle of Luzerne, within less than 5 ms. from the SW. angle of Susquehannah. From this singular position, the centre of the latter co. flow from its centre like radii in a circle, and yet nearly all enter Susquehannah. Chief town of this co., Montrose. Pop. 10, 9,960. Central lat. 41 50 N., lon. W. 76 10 E.

Sussex, co. of Eng., 70 ms. in length, and where broadest, bounded on the N. by Surrey, the NE. and E. by Kent, on the S. by the English channel, and on the W. by Hampshire. Th.

t of Sussex, a tract continued from the Weald of Kent, and of the same nature with it, was formerly entirely covered with forests; and, though many of these have been cut down, it is still well finished with timber both of large and small growth. The middle line of the co. is a rich tract of arable and meadow. To it succeed the Downs, a range of green open hills of a chalky soil. Towards the sea the land in general declines, and in some parts is marshy. This co. was formerly famous for iron works, in which great quantities of charcoal were used for smelting the ore, and thus the woods came to be gradually wasted. The works are now almost or entirely abandoned; this business, from the late improvements made in melting iron with pit coal, having migrated to the co. which abound in that cheaper article, as well as in iron ore. The products for which Sussex is present distinguished, are chiefly corn, hops, wool, cattle, and timber. It is not distinguished for any manufacture but that of gunpowder at Batsford and of needles at Chichester. The principal rivers are the Arun, Adur, Ouse, and Rother. Chichester is the capital. Pop. 1801, 159,311; 1811, 190,083; and in 1821, 232,927.

Sussex, NW. co., N. J., bounded by Delaware to the N., opposite Pike co., Pa., NW., by Orange co., N. Y., NE., Passaic and Morris, N. J., SE., and Warren SW. Length 25 miles, mean width 18, area 450 sq. ms. It is generally hilly, and in part mountainous, though in the NE. section the flat and marshy bottoms of the Walkkill occupy a considerable space. From superior elevation, the climate of Sussex differs more from that of the immediately adjacent cos. of Morris and Bergen than could be expected from difference of elevation.

The extreme western sources of the Passaic are in this co. From it also flow SW. towards the Delaware, the Musconegung, Pequest, Flatkill, and Pawling's creeks, and those of the Walkkill flow towards the Hudson. It is a co. of great variety of soil, from very barren mountain to the most fertile alluvion. The valleys of some of the creeks, particularly those flowing towards the Delaware, afford very fine meadow, orchard, and grain land. Pop. 1820 was included in the co. of Sussex as it then extended, including what is now 26) Warren co. The area now in Sussex, it is probable, then (1820) contained about 16,000, and the population of the whole co. was 32,752; in 1840, pop. 21,770. Central lat. 41 10 N. lon. W. C. 2 22 E.

Sussex, southern co. of Del., bounded by Delaware bay NE., Atlantic ocean E., Worcester co., Va., S., Somerset co., Md., SW., Dorchester and Caroline cos., Md., W., and Kent co., Del., N. Length 32 ms., mean width 30, area 960 sq. ms. Surface generally level, and in part marshy. Sandy in part, and of middling quality. Its waters flow from its centre in opposite directions; Pocomoke drains its western side. Pocomoke river has its source near its southern limits; Indian river interlocking sources with both the preceding, flows into the Atlantic ocean, and Cold Spring, Badkill, Prunehook, Slaughter, Cedar, and Missipan creeks, enter the bay of Delaware. Chief towns, Georgetown and Lewistown. Pop. 1820, 2057; and in 1840, 25,093. Central lat. 38 4 N., lon. W. C. 1 40 E.

Sussex, co., Va., bounded by Southampton SE., Greenville SW., Dinwiddie and Prince George NW., and Surry NE. Length 38 ms., mean width 20, area 760 sq. ms. More than four-fifths of its entire surface is drained by the Nottaway river and its confluent. Black Water river, however, also contributes to water the NE. section. Chief town, Hunting. Pop. 1820, 11,884. Central lat. 36 50 N., lon. W. C. 20' W.

Sussex C. H., or *Hunting Quarter*, village, Sussex co., Va., on a small branch of Nottaway river, by post road 64 ms. SSE. from Richmond. Lat. 36 51 N., lon. W. C. 0 21 W.

Sutherland, in Scotland, includes the divisions of Sutherland and Strathnavershire. It is bounded on the N. and part of the W. by the Northern ocean, on the SW. by Ross-shire, on the S. and SE. by the Frith of Dornock, and on the E. by Caithness-shire. It is about 50 ms. long from N. to S., and 46 in its broadest part from E. to W., terminating at the S. to not more than 12 miles broad. It is mountainous, but the valleys are fertile, abounding with black cattle and wild fowl. Dornock is the co. town. Pop. 1801, 23,117; in 1811, 23,629; and in 1821, 23,840.

Sutri, town of Italy, in the patrimony of St. Peter, seated on the Puzzulo, 22 ms. NW. of Rome.

Sutton, town, Merrimack co., N. H., 20 ms. NW. from Concord.

Sutton Village, village in Sutton tp., Merrimack co., N. H. The two preceding post offices are different, though in the same tp.

Sutton, town, Worcester co., Mass., 10 ms. S. from Worcester. — Village, Caledonia co., Vt., by post road 89 ms. from Montpelier.

Sutton Colefield, corporate town of Eng., in Warwickshire, 24 ms. NNW. of Warwick, and 110 NW. of London.

Sutton, *East*, town on the Pawtucket river, Worcester co., Mass., 15 ms. SE. from Worcester, and 45 SW. by W. from Boston.

Suza, city of Italy. — See *Susa*.

Suzanne, *St.*, town of Fr., in the dep. of Mayenne, with a considerable paper manufacture, 24 ms. W. of Mans.

Swaffham, town of Eng., in Norfolk, on a hill, 28 ms. W. of Norwich, and 93 NE. of London.

Swainesborough, village, Emanuel co., Ga., by post road 80 ms. SE. from Milledgeville.

Swale, river of Eng., in Yorkshire, which rises on the confines of Westmoreland, flows E. by Richmond, and then SE. to its junction with the Ure, a little below Aldborough, where their united streams form the Ouse.

Swally, town of Hindoostan, in Guzerat, with a harbor, where ships receive and deliver their cargoes, for the merchants of Surat. It is seated near the gulf of Cambay, 15 ms. W. of Surat. Lon. 72 33 E., lat. 21 10 N.

Swallowwell, village of Eng., in the co. of Durham, seated on the Derwent, near its junction with the Tyne, 13 ms. WNW. of Sunderland. Here are famous iron works, originally established by a blacksmith about the year 1691.

Swamp Churches, village, Montgomery co., Pa., about 35 ms. NW. from Philadelphia.

Swan, island of Maine, at the mouth of Kennebec river.—Tp., Hancock co., Maine, 15 ms. NW. from Castine.

Swannanoe, creek and post office in the eastern part of Buncombe co., N. C. The post office is 10 ms. NE. from Ashville, 40 SW. by W. from Morganton, and by post road 218 ms. W. from Raleigh. Swannanoe creek is a confluent of French Broad river.

Swansborough, village, Onslow co., N. C., on White Oak river, near its mouth, into the Atlantic ocean, about 40 ms. SSW. from Newbern. Lat. 34 40 N., lon. W. C. 12' W.

Swansea, town of Wales, in Glamorganshire on the Bristol channel, 205 ms. W. from London.

Swansey, town of Cheshire co., N. H., 44 ms. SW. from Concord. Pop. in 1810, 1,400; in 1820, 1,716.—Town, Bristol co., Mass., 16 ms. S. from Taunton. Pop. in 1810, 1,839; in 1820, 1,833.

Swansville, town, Hancock co., Maine, on the right bank of Penobscot river. Pop. 1820, 503.

Swanzy.—See *Swansey*.

Swatara, river of Penn., rises in Schuylkill co., about 15 ms. SW. from Orwiesburg. It flows thence SE., enters the NE. angle of Lebanon, through which and Dauphin it meanders into the Susquehannah at Middletown, with an entire comparative course of about 50 ms. The valley of this stream, as far as the mouth of Quitapahilla branch, about 2 ms. above the limit between Dauphin and Lebanon cos., forms part of the channel of canal and river communication between Susquehannah and Schuylkill rivers.—Tp., Dauphin co., Pa., Penn., along the Susquehannah river, between Middletown and Harrisburg.

Sweasysville, village, Adams co., Miss.

Sweden, kingdom of Europe, extending 800 ms. from N. to S., and 450 from E. to W., bounded on the N. by the Arctic ocean, E. by Russia, S. by the gulf of Finland and the Baltic, and W. by the Sound, the Cattegat and Norway. It is divided into four general parts, Sweden proper, Gothland, Nordland, and Lapland; and each of these is subdivided into provinces. Sweden proper contains Upland, Sudermania, Nericia, Westmania, and Dalecarlia. Gothland contains East Gothland, Smoland, West Gothland, Wermeland, Bahus, Dalia, Schonen, Halland, Blekingen, and the isles of Gothland and Oeland. Nordland includes Gestricia, Helsingia, Medelpadia, Jemptia, Angermania; and West Bothnia. Swedish Lapland comprises Uma, Pithia, Lula, Tornea, and Kemi; these have no towns, and take their names from rivers that rise near the borders of Norway and flow into gulf of Bothnia. The greater part of Finland was ceded to Russia in 1808; and in 1814 Norway was ceded to Sweden, with near a million of inhabitants. The whole monarchy now contains 350,000 sq. ms., with a pop of about 3,500,000. It extends from lat. 55° to 70° N. The whole country is well watered by rivers (though not a single navigable one worth mentioning) and numerous lakes and inland pieces of water, on the banks of which the palaces and villas are usually built. At Stockholm, spring and autumn are

scarcely to be perceived, for winter continues 1 months and summer during the remaining 7. In winter the cold is excessive, and in summer heat is considerable, the air being serene all time.

As observed, however, in the articles *Lapland* and *Scandinavia*, the temperature of Sweden is severely cold in winter, only as compared with more southern part of Europe, as, if compared with similar latitudes of eastern Asia or eastern America, the climate of Sweden is extremely mild. Sweden produces crystals, amethysts, topazes, phry, lapis lazuli, agate, cornelian, marble, and other fossils. The chief wealth of the country however, arises from her mines of silver, copper, lead, and iron. The last-mentioned metal employs not fewer than 450 forges, hammering mills, and smelting houses. The first gallery of one silver mine is 100 fathoms below the surface of the earth; the roof is supported by prodigious oaken beams, and from thence the miners descend about 50 fathoms to the lowest vein. The articles of export are boards, gunpowder, leather, iron, copper, tallow, skins, pitch, rosin, and masts; and imports salt, brandy, wine, linen, cloth, stuffs, bacco, sugar, spice, and paper.

Sweden, town, Oxford co., Me., 20 ms. S. from Paris, and 52 NW. from Portland.—One of the western towns of Monroe co., N. Y., 10 ms. W. from Rochester. Pop. 1820, 2,761. The Erie canal passes over the northern part of this town.

Swedesborough, village, Gloucester co., N. C., on the south side of Raccoon creek, 8 ms. S. from Woodbury, and 16 SW. from Philadelphia.

Sweet Springs, village, Monroe co., Va., 10 ms. SW. of Bath court-house, and 93 in the same course from Staunton. These waters have long been famous for their medicinal virtues, and attract a numerous company of valetudinarians yearly.

Sweetsville, village, Marion district, S. C.

Sweet Water Valley, and post office, Marion co., Tenn.; by post road 148 ms. SE. from Newfreesborough.

Sweetzer's Ferry, and post office, Anne Arundel co., Md.

Switzerland, country of Europe, bounded the N. by Suabia, E. by Tyrol, S. by Savoy, Italy, and W. by France. It is 220 ms. long, and 130 broad. Switzerland was divided into 13 cantons, exclusive of their allies and bailiwicks, Lucerne, Uri, Schweiz, Unterwalden, Zug, Schwyz, Soleure, Zurich, Bern, Basel, Schaffhausen, Glarus, and Appenzel. The first seven are Catholics, the next four are Calvinists, and the other two contain both religions.

The principal lakes are those of Constance, Geneva, Lucerne, Zurich, and Neufchatel. The most considerable rivers are the Rhine, Rhone, Aar, Thur, Reuss, and Limmat. Switzerland exceeds every country in the world in diversity of appearance; the vast chain of Alps, with enormous precipices, extensive regions of perpetual snow, and glaciers that resemble seas of ice, are contrasted with the vineyard and cultivated field, the richly wooded brow and the verdant valley, with its crystal stream. Agriculture cannot, of course, be carried to great extent, but the grain produced is sufficient for domestic consumption. The chief riches consist of excellent pastures, in which many cattle

and fattened, and the goats and chamois feed on the mountains and in the woods. The men are generally strong and robust, for which reason they are preferred by several nations for the military service. The women are tolerably handsome, and many good qualities, and are in general very industrious. The peasants retain their old manner of dress, and are content to live upon milk, butter, cheese, and there are some of the mountaineers who never have any bread. In 1797 the partisans of France, having excited disturbances in Switzerland, the French entered the country, and after defeating the troops and peasants who opposed them in several battles, they abolished the constitutions of the principal cantons, erected what was termed the Helvetic republic, and vested the government in two councils and a directory. This constitution was abolished in 1802 by the first consul of France, and another was presented for their acceptance, but rejected; and he offered them a third one in 1803, which they consented to accept. Under the new constitution, exclusive of the territory of Valais and Neuchatel, the country is divided into 22 cantons: the six new ones are—Pays de Vaud, Tessin, Argau, Grisons, St. Gall, and Argau, of which the first two are Catholic, and the other four contain both Catholics and Protestants. Each canton has its distinct internal government.

Table of the superficies and population of the Swiss cantons, commencing on the extreme southwest.

Switzerland, co. of Indiana, bounded by Ohio to the E. SE. and S., Jefferson W., Ripley NW., Dearborn N. Length 4 ms., mean width 13, area 312 sq. ms.; surface hilly, and soil productive. Chief town, Vevay. Pop. in 1820, 3,934; in 1840, 9,920. Ctl. lat. 38 55 N., lon. W. 83° W.

Wobestown, village, Lancaster co., Pa., on Chestoga creek, 15 ms. NNE. from Lancaster.
Syva, town of Sweden, in West Gothland, 13 ms. SW. of Lindkoping.
Sycamore, tp. in the NE. quarter of Hamilton co. Ohio. The soil of the land is generally fertile and well irrigated by Mill creek and several of

its branches. Montgomery, Reading, and Sharon villages are laid out in this tp.

Sycamore Alley, post office, Halifax co., N. C., 108 ms. northeasterly from Raleigh.

Sycamore's, post office, Caroline co., Va.

Sydenham, village of Eng., in Kent, on the declivity of a hill, 8 ms. S. by E. of London. It is noted for medicinal wells.

Sydney, tp., Kennebeck co., Maine, on the W. side of Kennebeck river.

—village Shelby co., Ohio, on Solomon's fork of Loramie's creek, 35 ms. N. from Dayton, and 85 a little E. of N. from Cincinnati.

Sydney Bay, bay on the S. side of Norfolk island, in the Pacific ocean, formed by Point Hunter and Point Ross, which are near 2 ms. asunder. On this bay a settlement of convicts is formed from Eng. Lon. 168 12 E., lat. 29 4 S.—See p. 112, 2d col.

Sydney Cove, town or settlement of convicts, founded at Port Jackson, in New S. Wales, in February 1788.

Symmes, tp., Lawrence co., Ohio, on Symmes creek.

SYNAGOGUE, Gr., *sun*, together, and *ago*, to conduct; literally, an assembly. Among the Jews the place of public worship. The Presbyterian term "*meeting-house*" is precisely equivalent to the Jewish "*synagogue*," both relate to the people and their object in coming together, and not to the house.

Synchronism.—See *Isochronous*.

SYNCHRONOUS, Gr., *sun*, together, and *chronos*, time, existing, being, or happening at the same time.

SYNOD, from Gr. *sun*, together, and *hodos*, way, path, road; literally an assembly coming together from all sides. In the Presbyterian churches the synod is the highest convocation of their members.

SYNODICAL, from same roots as *synod*, and literally meaning "*coming together*." As an astronomical term, the most familiar example is afforded by the moon. This satellite inclines to the ecliptic 5° 9', of course passes the ecliptic twice in every revolution from change to change or full to full. Synodic month is, therefore, the time comprised in a full lunation, or 29 days 12 hours 48 minutes and 48 seconds at a mean. All other planets have their orbits more or less inclined, therefore the term "*synodic revolution*" applies to all of them.—See art. *Nodes*.

Sylvania, village, Bradford co., Pa., 197 ms. a little E. of N. from Harrisburg.

Syracuse, strong city of Sicily, in Val di Noto, with a fine harbor. It is seated near the sea, 72 ms. S. by W. of Messina, and 110 SE. of Palermo. Lon. 15 30 E., lat. 37 5 N.—Fine flourishing village, Onondaga co., N. Y., 10 ms., NW. by W. from Manlius Square, and 25 NE. by E. from Auburn. Syracuse stands on the Erie canal, at the point where the Salina side canal leaves the main trunk. The Salina flats extend between Syracuse and the village of Salina. In a state of nature these flats are low, in part marshy, and subject to annual inundation; but extensive drains have been formed in order to dry the surface, which is an exuberantly rich alluvial deposit. The outlet of Salina lake into Seneca river being artificially lowered several feet, contributes

also desiccate the flats. Upon the open space between Syracuse and Salina numerous platforms, or rather shallow cisterns, have been erected in order to make salt by solar evaporation.

The side canal of Salina is carried by a series of locks, from the main trunk down to the level of the Salina lake, thus opening an aquatic communication past Salina, from the Erie canal to the Seneca river. Pop. of Salina tp. in 1840, 11,013.

Syria, or *Suristan*, province of Turkey in Asia, bounded on the N. by Diarbeck and Natio-
lia, on the E. by Diarbeck and the deserts of Arabia, on the S. by the same deserts and Judea, and on the W. by the Mediterranean. Under the general name of Syria were included the ancient Phœnicia, lying S. of Syria proper.—See *Asia*, page 80.

Syrian, town of Pegu, seated near the bay of Bengal, on a river of the same name, which is one of the extreme branches of the Ava. Lon. 96 40 E., lat. 16 50 N.

Syrtes.—See *Africa*, p. 16.

Szeben, town of Hungary, situated on the river Tareza, 30 ms. N. of Cassovia. Lon. 21 25 E., lat. 44 20 N.

Tagumadert, town of the kingdom of Tafilet, in Africa, with a strong castle on a mountain, seated on the river Dras. Lon. 6 43 W., lat. 21 10 N.

Tagus, river which has its source on the confines of Arragon, in Spain, runs through New Castile, by Toledo and Talavera, whence it proceeds to Alcantara, in Estramadura; when, entering Portugal, it washes Santarem, below which it flows the harbor of Lisbon, and then falls into the Atlantic ocean. This river was formerly famous for its golden sands, and is called *Tejo* by the Portuguese. The basin of the Tagus is about 400 ms. long from E. to W., with a mean width of 60, area 24,000 sq. ms. It is the longest by no means the largest stream of the Spanish

peninsula; but, like all the rivers of that elevated plateau, non navigable for sea vessels to a distance inland in comparison with length of course. The Tagus, at its mouth, forms the harbor of Lisbon, one of the finest havens on earth, but the tides do not rise more than about 30 ms. from the Atlantic ocean. This river falls from the high table land of Aragon and Castile to its efflux into the Atlantic tides, upwards of 1,800.—See the table of river basins in the art. *Spain*.

Pop. 1840, 12,587.

Tallahassee, village and seat of government for Florida, is situated on Tugabona or Wackahulla river, Leon co. Lat. 30 27 N., lon. W. C. 7 13 W. The following account of Tallahassee is mostly extracted from the Alexandria (D. C.) Gazette of April 6th, 1826. The notice of Tallahassee is thus prefaced in the Gazette: "It is from the pen of a gentleman whose statements are entitled to implicit confidence, and whose opportunities of correct information have been ample."

"The city of Tallahassee (for so it is called in the charter, perhaps in reference to its anticipated greatness) is beautifully situated on an elevation, commanding a fine view of the surrounding country. It is yet (1826) in an infant state, the first house having been built only about 18 months ago; it, however, has, at present, a number of good houses, and contains from 600 to 700 inhabitants; it is rapidly increasing in pop., as is also the adjacent country.

The country around Tallahassee, in almost every direction, from the variety of hill and dale and crystal lakes, is extremely beautiful and romantic; and, when the hand of art has seconded nature, it will bear a comparison with any other country. The lakes abound with fish of the most delicious flavor, and the large extent of country, which will never be cultivated, will always afford a variety of game. In a few years the orange, the fig, and numerous other fruits, will be added to the sum of domestic luxuries; nor are the roads to be left out of the class of comforts; they are almost always excellent; the hills are seldom abrupt, and from the nature of the soil the roads are dry in 24 hours after the longest rains; they are never dusty.

"The climate is delightful; the thermometer seldom rises above 95°. The 1st of March it rose to 85° in the shade, but the atmosphere was so meliorated by the sea breeze that it would not have been supposed to above 60°. The woods at that time were fragrant with the perfume of a thousand flowers; and had the English bar ever visited those regions, he might have exclaimed with great truth—

"Here smiling Spring her earliest visit pays,
And parting Summer's lingering bloom delays."

Tallahassee was selected, by the Governor and commissioners of Florida, as the site of the metropolis, on account of its central position, fertility of soil, and the reputation it had acquired, in the estimation of the Indians, for health and purity of air. The location was confirmed by the legislative council on the 12th of December, 1824.

The precincts of the town encircle a tract beautifully undulating country, elevated near 5 feet above tide water. It has been made an incorporate city. Pop. 1826, about 1,200.

The soil around this new city is a mixture of loam, sand, and clay. Highland growth principally oak, hickory, and pine; in moist lowland, beech, wild cherry, ash, gum, magnolia, mahogany, and dogwood. The country abounds in springs of good water, and, by sinking wells a moderate distance, that element can be obtained in almost any desired situation.

From what I know of the climate of La. Flor., I should consider that of the country adjacent to Tallahassee as very near a mean between the temperature of New Orleans and St. Augustine. It will be seen, by reference to several places in this treatise, that cold increases along given line of latitude westward from the Atlantic coast.

Tallahassee is 220 ms. E. from Pensacola, 320 NW. by W. from St. Augustine, and 232 a W. of S. from Milledgeville.

Tallano, seaport of Corsica, situated on the Gulf of Tallano, 30 ms. SSW. of Cortes. Lon. 18 E., lat. 51 20 N. Pop. 1840, 1,616.

Tallapoosa, eastern branch of Alabama rises in Ga., in the same ridge of mountains, between the sources of the Coosa and Chattahoochee rivers; its general course is nearly parallel to the former, 200 ms. to where they unite and flow into the Alabama. The Tallapoosa is navigable about 30 ms.

Tallard, town of France, in the department of the Upper Alps, and late province of Dauphiny, situated on the Durance, 47 ms. S. of Grenoble. Lon. 6 20 E., lat. 44 28 N.

Tallmadge, village and tp., Portage co., Ohio, containing a furnace, forge, and an academy.

Tallulah, or *Tobulah*, one of the extreme higher constituents of Savannah river, rises in the Chatahoochee Ridge, western part of Rabun co., Ga., and flows thence about 20 ms., unites with the Chatahoochee, and flows into the Savannah river, between Rabun and Hartsville cos., Ga.

The subjoined notices of the remarkable scenery of this vicinity were extracted from the American Journal of Science, and supplied to that paper by A. Foster.

The rapids of Tallulah are in Ga., 10 ms. above the union of the Tallulah and Chatoochee rivers, which form the Tugaloo, five ms. from S. C., and about 20 ms. from the line of N. C. The river, which is 40 yards wide above the rapids, is forced for a mile and a quarter through a range of mountains, into a channel scarcely 20 feet broad. The mountain receives the water into a broad basin, surrounded by solid rock 100 feet in height. The stream pauses, in anticipation of the awful fall, then rushes down a cataract 40 feet; then, hurrying through a narrow winding passage, dashed from side to side against the precipice, and suddenly turning at right angles, is precipitated 100 feet, and in a moment after 50 feet more, and making many short turns, it rushes down through four falls of 20 and 10 feet. The sum of the fall in the distance of a mile is estimated at 350 feet.

The rapids, however splendid, apart from the sublimity with which they are surrounded

an appendage to the stupendous banks of the rock, descending almost perpendicularly to the water on both sides of the river, and varying the distance of a mile from 700 to 1,000 feet in height, so that the stream literally passes that distance *through* the mountain, or rather through the chasms that connect two mountains.

The most magnificent general view is from a point of the precipice which projects over the abyss 15 feet, and which is gained by a descent of 15 feet. This is half way between the commencement and termination of the rapids, near the highest part of the mountain through which they pass, and not more than 1,000 feet above the water, and affords the best view of the second and third falls, one of which is almost under the projection.

The Tockoa fall is in a small creek of the same name, before it runs into the Tugaloo, 150 ms. above Augusta, and about 10 or 12 ms. southeastward from Clarkesville, the co. seat of Habersham co., Ga. The perpendicular fall is 186 feet, measured by a line. It is surrounded by no wild scenery. The rivulet, disturbed by no rapids, moves with a gentle current, and drops without warning into a beautiful basin below, expanding into fine rain before it reaches the bottom, and the breeze which always plays there spreads a thick spray around, and ornaments the falling water, the rock, and the shubbery, with rainbows. A carriage road is within a stone's throw of the fall, and our party descended to the base and to the summit of the precipice.

The Tockoa produces a sensation rather of the beautiful than the sublime; it pleases, but does not terrify; it satisfies, but does not overwhelm the exultation. It is a fine preparation for the tremendous scenery which awaits the traveller 16 miles southward.

The distance between those two splendid scenes of the sublime and beautiful in nature is about 20 miles, and Tallulah being to the northward of Tockoa.

Talmont, seaport of France, in the department of Lower Charente, and late territory of Saintonge, situated on a peninsula of Gironde, 20 miles SE. of La Rochelle, and 260 SW. of Paris. Lon. 0 50 W., lat. 45 32 N.

Tar, or *Pamlico*, river of North Carolina, rises in Person county, and flowing thence SE., through Granville, Franklin, and Nash counties, turns NE., and, entering Edgecomb, receives a large accessory stream, Fishing river, from the NW. The junction of Tar and Fishing rivers is about 5 miles N. from Tarborough. Below the latter place the Tar river again assumes a general course SE. to Washington, where it opens into Pamlico river, rather bay. It is navigable for vessels drawing 10 feet water to Washington, and for common river craft to Tarborough, 50 miles higher. The entire length of this stream, by comparative courses, is about 150 miles, and draining a basin of about 3,000 square miles. Tar river flows between and in the same general direction with Roanoke and Neuse rivers.

Tartars, or more correctly *Tatars*, a very widely disseminated nation of Europe and Asia. In our common geographical works, and in some treatises of more precision, the term Tartar has received an absurd latitude, and is made to comprise nations having neither language, manners, nor personal appearance, in common with the Tartars. "The Tartars," says Malte Brun, "differ as much from the Mongols, in their features, physical constitution, and language, as the Moors do from the negroes. A slender figure, an European visage, though somewhat yellow in complexion, curled hair, and a long and abundant beard, distinguish the Tartar from the squat, shapeless monster, with a flat nose, prominent cheeks, almost beardless chin, and lank hair, who inhabits the deserts of Mongolia. The countries of these two races of men constitute two distinct physical regions. The Mongols, of whom the Kalmucs are a branch, occupy all the central plateau of Asia, from the Beloor mountains and Lake Palcati, to the great wall of China, and to the Siolk mountains, which separate them from the Mantchoos, a tribe of the great race of the Tonggooses. The Tartars are the possessors of that extensive country which lies between the Beloor mountains on one side, and the Lake Aral and the Caspian sea on the other." — See *Turks*; as also Abkhas, Circassia, Crimea, Cossacks, Georgia, Imeritia, Kalmucks, Kisti, Leaguies, Mandshurs, Mingrelia, Monguls, Ossi, Samoides, Turcomans, and Usbecs; also, *Asia*, pp. 86, 87, &c.

Tartary, country of Asia. The term Tartary, if ethnographically considered, that is, if so extended as to include all places inhabited by Tartars, would comprise the immense regions between Afghanistan and Russia, and the southeastern parts of the latter, with a large space on the Oby; but the independent Tartar nations are limited to the physical region bounded on the N. by the Algydim-Shalo mountains, or the course of the Irtysh; on the W., by the course of the Ural river and Caspian sea; on the S. by Khorasin and the Gaour mountains (the ancient Paropamisus,) and on the E. by the chain of Beloor. Thus restricted, Independent Tartary extends over 460,000 sq. ms. The population over this wide space is generally pastoral, and does not, it is probable, amount to 6,000,000. It extends in lat. from 38° to 50° N.

Tarvas, town of Fr., in the dep. of Landes, and late province of Gascony. The Midouse runs through it; and on one side of this river it rises in the form of an amphitheatre; the other is seated on a plain. It is 12 ms. NE. of Dax. Lon. 48' E., lat. 43 50 N.

Taurus, general name of that immense Asiatic system of mountains, stretching from the Dardanelles to India. This great physical feature rises gradually from the Archipelago, and, winding through Asia Minor, rises into a vast table land in Armenia. Caucasus branches from it, and extending N. between the Euxine and Caspian, finally merged in the plains of the Don and Volga. Persia seems, like Armenia, to be an elevated table land, having Taurus as a base. The chain in many places rises to the region of perpetual snow, evincing an elevation from 9 to 10,000 feet. It is probable that the most elevated mountains of Europe are equalled, if not excelled, in height by many of the peaks of Taurus. In all extent, from the Dardanelles to the Hindoo Coos, the Taurus chains stretch in unequal but unbroken links upwards of 3,000 ms. It is, however, on an embanchment of the still more considerable system of central Asia. From northern Hindostan, mountain chains extend in various directions

of which gigantic arms is Mount Taurus.—

ayhad, lake, a newly discovered body of water in the interior of Africa. In the Nat. Intelligencer of the 1st August, 1826, it is stated that Mr Denham and his co-travellers have reached and examined an immense lake in Africa, 2,000 ms. long and 150 broad. The location of this lake is given at lat. 13½° N., and lon. E. from London 16°. "It occupies," says the notice in

the Intelligencer, "the precise position of Wangara, as laid down in Arrowsmith's map; in which swamp the Joliba or Niger is supposed to terminate. It covers a surface about as large as the two American Lakes, Erie and Ontario, both together.

The existence of any such lake, with even the limited extent of Erie and Ontario, is at least doubtful, and with a length of 2,000 ms. utterly irreconcilable with what we actually know of central Africa. Much of that continent it is true is defectively known, but sufficient discovery has been made to render it extremely improbable that it contains an inland sea more than double the length of the Caspian. The united length of Lakes Erie and Ontario is about 450 ms., with a mean width of 60 at most. The entire water surface of all the great lakes of Canada, taken together, is about 100,000 sq. ms. Lake Tchad, according to the dimensions given from Major Denham, would cover 300,000 sq. ms., and equal one-half the area of the Mediterranean. Such a sheet of water would so far surpass the combined superficies of Lakes Erie and Ontario, that it would reach from the mouth to the utmost sources of St. Lawrence, and equal three-fifths of the entire basin of that great river. A distance of 2,000 ms. from the geographical point noticed in this article would reach either the Atlantic ocean, the Mediterranean, the Red sea, or approach the Indian ocean.—See *Wangara*.

Chauhtepec, the *gulf of*, is a semi-elliptical indenting of that part of the Pacific ocean stretching between Guatemala and the state of Oaxaca.

Teign, river of Eng., in Devonshire, composed of two branches, which rise in the centre of the county, and, uniting, enter the English channel at Plymouth.

Teignmouth, seaport of Eng., in Devonshire, has a considerable coasting trade, especially to Liverpool. It is seated at the mouth of the Teign, 100 ms. S. of Exeter, and 280 W. by S. of London. Lon. 3 29 W., lat. 50 32 N.

Teisendorf, town of Germany, in the circle of Bohemia, 12 ms. WNW. of Saltzburg.

Teisse, river of Hungary, which rises in the Carpathian mountains, passes by Tockay and Segedin, falls into the Danube near Titul. The Teisse is the largest branch of the Danube. Its extreme source is in the Carpathian mountains, between Hungary and Bucovina, in Poland. From these sources, it flows to the NW. by W. 250 ms., by great branches, the Teisse proper and Zaposch.

At their junction, the united waters turn to the NW. by W. 100 ms., receiving the Bodrog from the NE. and the Bodra from the NW. The source of all these confluent, at N. lat. 48°, is remarkable for the commencement of the extensive alluvial plains of Hungary and the great bend of the Teisse to the S. Directly opposite also to the source of the Teisse southwardly, the Danube, between Gran, assumes a similar course, the 2 streams being nearly 200 ms. in a parallel direction, each dividing into innumerable channels and islands.

The Teisse, below its southern bend at Polgar, receives numerous large branches from Transylvania, and in particular the Marosch, a river of 250 ms. length of course. The entire valley of the Teisse embraces an area of 62,500 sq. ms. The river is navigable to Szegedin, where it receives the Marosch, above which it is too much dispersed into small channels. It is united to the Danube at Oradea by a canal of about 50 ms.—See *Temeswar*.

Teikin.—See *Bender*.

Temona, town of Italy, in Tuscany, with a harbor and a strong fort. It is seated at the mouth of the Ossa, at the extremity of a point of rocky rock, 10 ms. from Orbitello. Lon. 11 20 E., lat. 42 28 N.

Temula.—See *Cervito*.

Temes, seaport of Fez, in Africa, 120 ms. ESE. of Algiers.

Temelgen, or *Telga*, trading town of Sweden, in the province of Norrmania, seated on the S. bank of the Lake Wener, 12 ms. SW. of Stockholm. Lon. 17 24 E., lat. 59 18 N.

TELEGRAPH, from two Greek words—*tele*, at a distance, and *grapho*, to write or describe; but, colloquially, the telegraph is an instrument to read distance.

TELESCOPE, from two Greek words—*tele*, at a distance, and *skopeo*, to see; or the name literally signifies to see at a distance beyond that of ordinary unaided vision. Great disputes have arisen on the original invention of the telescope; but much controversy would have been spared by reference to the gradual progress of all discovery and invention.

Telfair, co. of Ga., bounded by Appling S., Dooley SW., Pulaski NW., Little Oakmulgee river or Montgomery co. NE., and Tatnall E. Length 50 ms., mean width 25; area 1,250 sq. ms. The Oakmulgee river enters the NW. side of this co., and, after an immense curve to the SE., E., and NE., joins the Oconee at its NE. angle. Chief town, Jacksonville. Pop. 1820, 2,104; and in 1840, 2,763. Cent. lat. 32° N., lon. W. C. 6° West.

Tell, extreme western tp., Huntingdon county, Pa., 23 miles SE. from Huntingdon. Pop in 1820, 686.

Tellicherry, seaport of Hindoostan, on the coast of Malabar, where there is an English factory. It is 30 ms. NNW. of Calicut. Lon. 75 50 E., lat. 11 48 N.

Tellico, small river, Monroe co., Tenn., which, after a comparative course of 25 ms., falls into the Tennessee river 10 ms. NE. from Athens.—Village, formerly Tellico Block House, at the mouth of Tellico river; by post road 162 ms. a little S. of E. from Murfreesborough.

Tellico Plains, post office, Monroe co., Tenn., on Tellico river; by post road 160 ms. a little S. of E. from Murfreesborough.

Teltsh, town of Germany, in Moravia, seated on the frontiers of Bohemia, at the source of the river Teya, 36 ms. WNW. of Znaim. Lon. 16° E., lat. 49° N.

Temendefust, town of the kingdom of Algiers, seated on the Mediterranean, 10 miles E. of Algiers.

Temes, river of Hungary, in the bannat of Temeswar, which it drains, and falls into the Danube with the Teisse.—See *Temeswar*.

Temeswar, town of Hungary, capital of a territory called the bannat of Temeswar. It is seated in a morass, 60 ms. NE. of Belgrade, and 150 SE. of Buda. Lon. 22 20 E., lat. 45 57 North. The bannat of Temeswar is in general a low alluvial country, but the Temes river is too much broken by channels to be naturally navigable. This stream in 1750 was, however, made passable with boats, by the Bega canals, from the Theiss to Temeswar, and up the Temes river.

Temissa, large town of the kingdom of Fezzan. Here the caravan of pilgrims from Bornou and Nigritia, which takes its departure from Mourzook, and travels by way of Cairo to Mecca, usually provides the stores of corn and dates, and dried meat, requisite for its dreary passage. It is 120 miles ENE. of Mourzook.

Temple, tp., Kennebec co., Me., 40 ms. NW. from Augusta. Pop. in 1820, 615.—Town, Hillsborough co., N. H., 30 ms. S. from Concord. Pop. in 1810, 941; in 1820, 752.

Templeton, town, Worcester co., Mass., lying between Athol and Petersham, 28 ms. NW. of Worcester, and 63 W. by N. of Boston. Pop. in 1810, 1,205; in 1820, 1,331.

Templin, town of Germany, in Upper Saxony, and the Ucker Marche of Brandenburg, which has a great trade in timber. It is 15 ms. SW. of Prenzlau, and 34 N. of Berlin. Lon. 13 25 E., lat. 53 5 N.

Temrock, seaport of Cuban, seated on the sea of Asoph, 20 ms. E. of the straits of Caffa. Lon. 37 20 E., lat. 45 27 N.

Tenaserim, town of Siam, capital of a province. It is situated on a river of the same name, which falls into the Bay of Bengal. Lon. 98 8 W., lat. 12 12 N.

Tenbury, town of Eng., in Worcestershire, on the Teme, 15 ms. W. by N. of Worcester, and 130 WNW. of London. Lon. 2 13 W., lat. 52 16 N.

Tenby, seaport of Eng., in Pembrokeshire. Its trade is inconsiderable. It is 10 ms. E. of Pembroke, and 233 W. of London. Lon. 5 5 W., lat. 51 42 N.

Tench's island, island in the Pacific ocean, 2 ms. in circumference, discovered by Lieut. Ball, in 1760. Lon. 151 31 E., lat. 1 39 S.

Tend.—See *Tame*, river of Eng.

Tenda, town of Italy, in Piedmont, capital of a county of the same name. It is seated at the foot of a mountain, on the river Boga, 52 ms. S. of Turin. Lon. 7 45 E., lat. 44 10 N.

Tenedos, celebrated island in the Archipelago, on the coast of Natolia, and 10 ms. SW. of the Straits of Gallipoli. This island still retains its ancient name, and is one of the smallest islands of the Archipelago, situated near the coast of Lesser Asia, near the ruins of Troy. It is chiefly rocky, but fertile, being remarkable for producing the best Muscadine in the Levant; and its position, thus near the mouth of the Hellespont, has given it importance in all ages—vessels bound towards Constantinople finding shelter in its port, or safe anchorage in the road during the Etesian or contrary winds, or in foul weather. It is 11 ms. long and 7 broad, inhabited almost wholly by Greeks. According to Hobhouse, the size of Tenedos has been underrated. His words are: "The size of Tenedos has been differently stated by different writers. Sandys, following Strabo, makes it only 10 ms. in circumference; but, according to Tournefort, it is at least 18; *I should think it more extensive*. Its breadth is about 6 ms. It appeared to us from the sea to be rocky and barren, but when we walked to the top of a considerable eminence above the town, we saw that it presented a pleasing variety of hill and dale, well cultivated, although scarcely sheltered by a single tree. The highest hill, called the Peak of Tenedos, is seen at some distance, from all the positions, both at land and sea, to the N." The ruins of the city of Alexandria Troas stand on the main land, nearly opposite the S. end of Tenedos.—See *Eskistamboul*. Tenedos is 50 miles NW. from the town of Mytelene, 25 N. from Cape Sigri, about 5 from the opposite Asiatic coast, and 12½ SW. from the mouth of the Hellespont. On the E. side is a large town, seated at the foot of a mountain, with a fine harbor, commanded by a castle. On the 5th of June, 1794, after some severe shocks of an earthquake, a small volcanic island was discovered to have emerged from the sea, between this town and the Asiatic shore.

Tenin, or *Knin*, episcopal town of Venice, in Dalmatia, on the borders of Bosnia. It is 48 ms. S. of Bihacz. Lon. 16 30 E., lat. 44 5 N.

Teneriffe, one of the Canary Islands, the most considerable of them for riches, trade, and population. It lies W. of the Grand Canary, is 70 ms. long and 22 broad, and abounds in wine, different sorts of fruits, cattle, and game. One part of this island is surrounded by inaccessible mountains,

and one in particular, the Peak of Teneriffe 12,236 feet above the level of the sea, and the distance of the Peak from the port of Oratava is at 11 ms. The principal dependence of the inhabitants is on their wine, (their staple commodity), oil, corn, and every kind of stock for shipping. With these the island abounds; and, in their season, produces not only the tropical plants, but vegetable productions of the European garden, the greatest plenty. Teneriffe enjoys an agreeable and healthful mediocrity of climate. St. Christophe de Laguna is the capital, but the governor resides at Santa Cruz.

Teneriffe, town of Terra Firma, in the government of St. Martha, seated on the Rio-de-la-Mulena, 100 ms. S. by W. of St. Martha. Lon. 15 W., lat. 9 47 N.

Tenez, town of Algiers, in Africa, in the province of Tremesen, capital of a district of the same name, with a strong fort. It is seated on the foot of a mountain, 4 ms. from the sea. Lon. 1 0 lat. 39 30 N.

Tengnan, rich, populous, and commercial city of China, in the province of Houquang, with 6 cities dependent on it. It is 200 ms. W. by S. of Ningking. Lon. 112 21 E., lat. 31 0 N.

Teng-fog-hein, city of China, under the jurisdiction of Ho-nan, in the province of Ho-nan. It is famous on account of the tower, erected for an observatory by the celebrated astronomer Tchekoug, who, according to the Chinese, invented the mariner's compass.

Tennessee river.—See next article.

Tennessee, State of the U. S., is bounded on S. by N. lat. 35°, and along that latitude has SE, Ala. in the centre, and Miss. SW. Tennessee ought to have been bounded on the N. side N. lat. 36½°; but from Cumberland gap, or southern western angle of Va., the separating line encloses on Ky.; and when reaching Tennessee river a distance of about 250 ms., the deviation amounts upwards of 10 ms. From Tennessee to the Mississippi the error was corrected, and the line tended along N. lat. 36½°.

The area of Tennessee has been generally estimated. The mean breadth is very near 110 miles, and mean length fully estimated at 400 ms., which gives an aggregate of 44,000 sq. ms. The longest line that can be drawn over this State would extend from the northeastern to the southwestern angle, 500 ms.

Tennessee is an interior State, having a boundary on Ky., commencing at the SW. angle of that State, on the left bank of the Mississippi river, and running thence E. along the S. boundary of Ky. Thence up the middle of Tennessee river. Thence by a line a little S. of due E., along the S. boundary of Ky., to the extreme SW. angle of Va. Thence continuing the last-noted line, along the S. boundary of Va., to the extreme NE. angle of the State Thence SW., along the NW. boundary of N. C., to the N. boundary of Ga. Thence due W. along N. lat. 35°, the N. boundary of Ga., to the NE. angle of Ala.

The longest line that can be drawn in Ten. is from its SW. to NE. angles, 465 ms., and is the longest line that can be extended in any State of U. S. The mean width about 100 ms.

Extreme S., N. lat. 35°. Extreme N., N. lat. 40°.

Tennessee is naturally divided into two distinct regions by Cumberland mountains. These sections have given the designating terms of East and West Tennessee. In relation to the rivers, higher and lower Tennessee would be equally appropriate. This State has features which, in a remarkable manner, distinguish it from any other section of U. S. Its difference of lat. is but little, being only 1° and 40', and yet few States in our Union present, on an equal surface, more marked change of climate and vegetable production than does Tennessee. Nor do any two contiguous sections of equal extent and similar lat. in the U. S. differ so much in general physiognomy than do East and West, or lower and higher Tennessee. The latter presents a comparative alpine region, the former descends to within a little more than 300 feet above the level of the Gulf of Mexico. Thus, in addition to the mere declivity necessary for the descent of the streams, Tennessee has a slope from the summit of the Alleghany mountains to the surface of the Mississippi river. The length of the State between 500 ms. from E. to W., embraces all the various soils and geological formations, from transition to recent alluvion. The extreme NE. angle almost touches the primitive mass which prevails, and forms the substrata of the western part of N. Carolina.

We have before remarked the singular coincidence between the courses of Kentucky, Greene, Cumberland, and Tennessee rivers. It would appear to be a plain, having an inclination to the SW., commenced in the SW. part of Va., and in the NW. part of Ky. and NE. part of Ten. Down this line the rivers have their courses. Let a curved line be drawn from the great bend of Kentucky river, between Jessamine and Garrard cos., to the bend in Salt river between Washington and Harlan cos., thence to the junction of Greene and Big Green rivers, in Butler co., thence to the great bend in Cumberland river near Nashville, and thence in a direct line to the Muscle shoals, in Va. This curve would describe a very remarkable inflection of the plain we have noticed. Thus from their sources the rivers we have noticed pursue nearly a parallel course SW., inflecting to the NW. in ascending the curve from Tennessee to Kentucky rivers. Between the designated curve and the Ohio river, the plain inclines towards the NW., and the courses of the rivers conform to the change of surface, all turning to a little W. of N., and continues that direction to Ohio river.

From the peculiar inflections of the surface of the part the Ohio valley, Tennessee has taken its

singular natural structure. The range of the Alleghany mountains, we have seen, pursues, from the Hudson river to the SW. part of Va., very nearly a SW. and NE. direction. At the latter point the lateral ridges of the chain commence a gradual curve more to the W. The two ridges which contribute most, however, to characterize Tenn. are the Alleghany, properly so called, and Cumberland mountain. The former bounds the State, and in a great degree the sources of Tennessee river; the latter enters Tenn. between Cumberland and Tennessee rivers, and by a very distinctive ridge crosses the whole State obliquely, and is the mountain which divides East from West Tenn. After leaving the latter State, Cumberland mountain passes into Ala., extends SW., and crosses Tennessee river near Fort Deposit, and is imperceptibly merged into the hills of Ala. The Alleghany ridge, also, after entering Ga., continues over the NW. angle of that State into Ala., and gradually subsides into hills to the peninsula between Alabama and Tombigbee rivers. Between those two ridges, in the SW. angle of Va., at N. lat. 37°, Tennessee river takes its source. Under the various names of Holston, Clinch, French Broad, and Tennessee, the different confluent of this river are united above, at Kingston, in Roane co. Continuing a SW. course out of Tenn. into Ala., the Tennessee reaches as low as N. lat. 34 25, the extreme southern extension of the Ohio valley. Here the Tennessee is turned to the W. by opposing high land. The inclined plane, however down which the Tennessee had thus far flowed, extends still further SW., as is demonstrated by the courses of Tallapoosa, Coosa, and Black Warrior rivers. Even the higher branches of the Chatahoochee and Oakmulgee rivers indicate an extension of the slope of Tenn., as far as their sources. After its turn to the westward, Tennessee river inflects a little to the N., and at the point of re-entrance into Tenn. abruptly turns a little E. of N., in which direction it continues through the State. Where it enters Ky., this river again turns SW. by N., and finally enters Ohio after an entire comparative course of 680 ms. This stream is by far the largest confluent of Ohio.

Cumberland river rises NW. of Cumberland mountain, N. lat. 37°, and flows nearly W. through Ky., a little N. of Tenn. line, 200 ms., enters Tenn. in Jackson co., and continuing nearly parallel to Tenn. river, as far as the town of Nashville, there again, corresponding with its counter stream, assumes a NW. course, and, flowing nearly parallel to Tenn., enters the Ohio river 11 ms. above the latter, after an entire comparative course of 440 ms. These two rivers, and particularly the latter, are amongst the most remarkable objects in the hydrography and topography, of the U. S. Rising on the primitive, the French Broad branch of Tennessee, crosses the transition to the secondary or flat formation. When entering on the latter, we have already seen the entire stream turned SW. between the lateral ridges of the Appalachian system, and carried in that direction upwards of 300 ms. Following all the laws of analogy, this river ought to have continued down the slope on which it originated, and have entered the Gulf of Mexico by the channel of Mobile. On the

contrary, the river turns, and actually passes a ridge of the same system of mountains which would have seemed to determine its course.

Tenn. is divided into three portions, whose soil, productions, and climate, have marked distinction. East Tenn., as it is commonly called, though taken either geographically or relatively, is the southeastern part of the State; this section is composed of a part of the valley of Tennessee river, and lies in a direction SW. and NE. containing about one-third of the State. The higher valley of Tenn. is in form of an oval or ellipsis, whose longest diameter, from the NW. angle of Ga. to the SW. of Va., is about 200 ms., its greatest breadth from the sources of Tennessee and French Broad to those of Cumberland river 150, or embracing an area of more than 10,000 sq. ms., the much greater part in Tennessee. This fine vale has a secondary calcareous base, is well watered and wooded. The soil along the streams is excellent, though in the intervals poor, and covered with pine and other timber indicative of sterility. This region is, however, pre-eminently distinguished by the softness of the climate and salubrity of the air. It is no doubt, as far as health is concerned, the most desirable section of the U. S. The face of the country is variegated by hill and dale, and except on its extremities not mountainous. The real elevation above the ocean has never been well ascertained. Adopting a similar rule, pursued with the Ohio and other streams, and giving due allowance for the much greater comparative fall in Tenn., would give for the sources of the latter at least 1,500 feet above the level of the Gulf of Mexico. From its elevation, and also from the mass of the Appalachian mountains interposing between its surface and the warm air of the Atlantic ocean, the climate of Upper Tenn. is too severe to admit the profitable culture of the cotton plant. The cereal gramina, particularly maize, is produced in abundance, as is fruit of various kinds. Upon the whole it is the country of the U. S. where a due mean is best preserved between heat and cold, and between an Alpine height and an alluvial depression.

The Tennessee river, on issuing from the higher basin we have surveyed, passes through some of the lateral spurs of the Appalachian mountains, its valley is here contracted to 30 to 40 ms. wide. The scenery is wild and picturesque, the banks rocky and precipitous, and the stream confined and extremely rapid. It is through this mountain breach that the stream issues from Tenn. into Ala., and commences its second basin or dilatation of its valley. This second basin is more extensive than the first, or higher, though not more than one-half the former is in Tenn. Opposite to the second basin of the Tenn., lies the elliptical valley of Cumberland. These regions, together with the space between the Tennessee and Mississippi rivers, forms W., or Lower Tenn., embracing about two-thirds of the whole area of the State.

The less comparative elevation and exposure to mountain influence superinduces, in West Tenn. a more temperate climate than in the Eastern section. The common features, such as hills, valleys, or mountains, of the former, are less bold and prominent than in those of the latter. Ap-

proaching the Mississippi, the varied scenery common along the Ohio is no more seen. The country, though broken into small hills, is comparatively level. The soil of West Tennessee superior to that of East Tennessee, having more river alluvion in the former. The substrata are calcareous, and composed of secondary limestones. The rivers, though not flowing in such profound chasms as do those of Ky., have, nevertheless, deep channels and precipitous banks. It is the calcareous base which imparts such exuberant fertility to all soils where stone prevails. It is the fossil which enables us to solve a problem, otherwise of difficult solution; that is, the very extremes of fertility often perceived in contiguous districts. In West Tennessee, as elsewhere, the beneficial quality of the calcareous admixture to its soil, produces the best effects on its agricultural Cotton, the most valuable staple of the State, here cultivated in great quantity.

A remark made in our view of Kentucky, applies with equal force to West Tennessee; that is the fact that the best land is distant from the water courses. Bottom land, of similar specific quality with that on Ohio, and some of its co-fluents on the higher parts of the basin, is very rare on either the waters of Tennessee or Cumberland. The sharp abrupt ridges of the eastern and southeastern part of Ky., are succeeded in Lower Tennessee, by bills of a more conical form and more gentle inclination.

Though less diversified in its exterior, than either Kentucky or East Tennessee, W. Tennessee is far from exhibiting a monotonous aspect and very far from enjoying a uniform temperature. A very marked difference of seasons is perceptible between the valleys of Tennessee and Cumberland rivers, even where but little change of latitude exists. The winters near Nashville are so much more rigorous than those upon the waters of Duane and Buffalo rivers as to excite much surprise in minds unaccustomed to connect prominent effects with their more latent causes. Those causes, in the present instance, are, however, sufficiently obvious. The ridge of hills which separates the two valleys, and shelters that of Tennessee from winds and leaves that of Cumberland exposed to the winds. As far as vegetable criteria can be produced, the fact is established; the cotton plant succeeds much better on the waters of Lower Tennessee river, than on those of Cumberland where soil and other circumstances are equal.

As in every instance which has reached our knowledge in the United States, the advantages of productive soil and lengthened summer, is purchased in Tennessee by a sacrifice to health. The immense slope of this State comprises, as I before observed, all the varieties of formation, from the most ancient transition to the most recent alluvion; it also presents every change of position, from the most salubrious to those equally exposed to the deleterious, combined effects of heat and moisture to any comprised in the United States. It may also be noted amongst the most remarkable features of Tennessee, that its greatest comparative length is from E. and W., and that it occupies the longest valley in that direction which exists E. of the Mississippi in the United States.

The civil and political subdivisions of Tennessee were the following, with the result of the census in 1820 annexed.

To the above aggregate amount of square miles included in the inhabited and appropriated parts of Tennessee may be added 1,260 sq. ms. yet unpurchased from the Cherokee Indians, and lying S. from the counties of Hamilton, McMinn, and Monroe, and N. from the N. boundary of Georgia. This will produce 37,800 square miles as the superficies of Tennessee, which falls about one-twelfth part below the actual area, but, deducting water surface, yields very nearly the arable land of the State.

Of the existing population of Tennessee, 2,737 are free blacks, and 79,157 are slaves; leaving a white population of 340,919.

The large counties of Henry, Carroll, Henderson, Madison, and Shelby, lie between the Tennessee and Mississippi rivers, and remain, Shelby

excepted, either entirely uninhabited, or but very thinly settled.

Tensaw, river of Alabama.—See Mississippi basin.

Tensaw, river of La.; it is the drain of the inundated lands W. of the Mississippi river, in the parishes of Concordia and Washitau. It flows a little W. of S., and unites with Washitau, to form Black river, after a comparative course of about 120 ms.—Village, Baldwin co., Ala.

Ten-tcheou-fou, city of China, in the province of Chang-tong, with a good port. It is seated on the N. side of a peninsula of the Yellow sea, 200 ms. SE. of Peking. Lon. 115 50 E., lat. 35 20 N.

Tennesdadt, town of Upper Saxony, in Thuringia, near the rivers of Seltenlein and Schambach, 5 ms. from Erfurt.

Tennis, town of Egypt, on an island in a lake of the same name, 28 ms. SE. of Damietta. Lon. 32 15 E., lat. 31 2 N.

Tenterden, corporate town of Eng., in Kent 24 ms. SW. of Canterbury, and 56 E. by S. of London. Lon. 0 35 E., lat. 51 12 N.

Tentugal, town of Portugal, in Beira, 8 ms. WNW. of Coimbra. Lon. 8 20 W. lat., 0 17 N.

Tepellene, a town of European Turkey, in Albania, situated on a river of the same name, which falls into the Adriatic nearly opposite Otranto, in Italy. The town stands on a rocky knoll, near the river, and is a large but mean village of about 500 ordinary houses, 100 ms. from Joanina. Tepelene was the birthplace of Ali Pasha.

Tepic, town of Mexico, in the intendancy of Guadalupe, 500 ms., NW. of the city of Mexico.

Teplitz, town of Bohemia, in the circle of Leitmeritz, celebrated for its warm baths, 14 ms. WNW. of Leitmeritz.

Tequendama, Cataract of, near the city of Santa Fe de Bogota, in New Granada. This very remarkable fall occurs in a mountain stream of the chain between the two great branches of the Magdalena river. A plan of these falls, and ad measurement of its descent in feet, was sent, in 1790, to the king of Spain, by the Col. Com mandant, Don Domingo Esquiaqui. The results, reduced to English feet, were:

Teusera, town of Barbary, in Biledulgerid, divided into two parts by a river. It stands on the confines of Tunis, in a country abounding in dates. Lon. 10 16 E., lat. 31 29 N.

TEUTONIC KNIGHTS, a celebrated military order, formed in 1190, near St. John d'Acre, in Palestine. This order was not, indeed, purely military in its origin. Some merchants of Bremen and Lubec, who were with the army of Teutonic Crusaders compassionating the wretched condition of the sick and wounded soldiers, formed themselves into a charitable society, which was confirmed by a bull of Pope Celestin III., February 12th, 1191, under the title of "*Freres-Hospitaliers Teutoniques*," which might be rendered in English, the *Teutonic Charitable Brotherhood*. It soon became military, and, after expulsion from Palestine, turned their arms against the Pagans of Europe, conquered, and long possessed in full sovereignty Prussia, Livonia, Courland, Senigalia, and other provinces along the southern shore of the Baltic. The order still exists, but with little or no political power. The seat of the order is at Mariendel, in Franconia.

Tewkesbury, borough of Eng., in Gloucestershire, with a manufactory of cotton stockings, 102 ms. WNW. of London. Lon. 2 13 W., lat. 52° North.

Tewksbury, town, Middlesex co., Mass., on the S. side of the Merrimack, 20 ms. NW. from Boston. Pop. in 1820, 1,008.—Town, Hunterdon co., N. J. Pop. in 1820, 1,490.

Texas, former province of Mexico, in the Provincias Internas, bounded SW. by the Rio Grande del Norte, on the NE. by the United States, from the sources of Rio Grande to the mouth of Sabine, and SE. by the Gulf of Mexico. Length from the mouth of the Rio Grande del Norte to its source, 1,200 ms. The breadth is very unequal, the province ending in a point to the NW., whilst from the mouth of Rio Grande to the NW. angle of

Louisiana it is more than 550 ms. The whole may be considered an immense triangle, whose base is the general course of Rio Grande, whose perpendicular would be a line drawn from the mouth of that river to the NW. angle of Louisiana; area, 240,000 sq. ms., extending from lat. 26° to 40° N. Texas exhibits a very great variety of climate; it is, however, comparatively a cold and dry country. Though intersected by a number of rivers, and checkered by some mountains, the general surface is level, and, except near the streams, in most part sterile.

The preceding description applies rather to physical than political Texas. In the latter point of view, Texas, as laid down in Bradford's Atlas, bounded on the S. by the Gulf of Mexico, SW. by Rio Grande del Norte, separating it from the Mexican provinces, NW. and W. by an indefinite limit, N. and NE. by Red river, and E. by Louisiana, from which it is separated by the Sabine river.

In latitude, it extends from the mouth of Rio Grande, 26° N., to Red river, flowing along the mean latitude of 34°. In longitude it extends from 16° to 24° W. of W. C., embracing 8° of lat. and 8° of lon. In its utmost extent, the area would embrace at least 160,000 sq. ms. The whole of Texas is comprised in the southwestern part of the vast inclined plain of North America which is terminated S. by the Gulf of Mexico. Though a dry country, comparatively, Texas is very well supplied by rivers. Commencing on the E., by the Sabine that stream is followed in sequence by the Trinity, Brasos, Colorado, Vaca, Guadalupe, Saint Antonio, Nueces, and Rio Grande del Norte. The coast, into which these rivers are discharged in a distance of about 350 ms., is indented by Sabine lake or bay, Matagorda bay, Aransas, and numerous lesser bays and inlets, beside the mouths of the rivers, yet does not present a single haven admitting vessels of great draught.

For its extent, Texas, though possessing considerable tracts of good land, cannot be regarded as a fertile country; but, in regard to health, there is a few if any other equal extents of the earth to which it can be compared. For its latitude and slight elevation above the ocean, it is a cold region—the effect produced by the almost constantly prevailing western winds, and from the dry, indeed arid surface, including much of Texas, New Mexico, and still wider spaces to the northward, and in the direction from which the aerial currents flow.

Of the existing population, political subdivision or towns of Texas, there is too scanty data extended to enable us to give even a general view. As placed on Bradford's Map of Texas, the principal towns stand:

Nacogdoches, between the Angeline and Atoly branches of Natchez river, at N. lat. 31 48 and lon. 17 50 W. of W. C., and about 50 ms. westward of the crossing of Sabine, on the road from Nacogdoches, in Louisiana.

Franklin, between the Novosota branch of main stream of Rio Brasos, about 140 ms. SW. of W. from Nacogdoches. N. lat. 30 48, lon. 1 24 W. of W. C.

Houston, between the Brasos and Trinity rivers, about 150 ms. southwestward of Nacogdoches, and 100 ms. a little E. of S. from Franklin, is the capital.

tal. Lat. 29 46 N., lon. 18 40 W. of Washington City.

Saint Antonio de Behar, on a branch of a river bearing the same name, 150 ms. SW. by W. from Franklin. N. lat. 29 20, and lon. 21 30 W. of Washington City.

Goliad, on St. Antonio river, 120 ms. below and SE. from the town of St. Antonio, at N. lat. 8 28, and lon. 20 5 W. W. C.

Other towns deserving notice may have risen, but our information is too scanty to justify even the insertion of their names. The settlements of any considerable extent are limited to about 150 ms, air easure, from the coast.

Texel, island of the kingdom of Holland, in N. Holland, separated from the continent by a narrow channel. It lies at the mouth of the Zuyder see, and is 11 ms. long by 2 wide.

Teya, river of Germany, which has its source near Teltsh, in Moravia, flows E. by Znaim, on the borders of Austria, and enters the Morava on the confines of Hungary.

Teyse.—See *Teisse*.

Teyn, town of Bohemia, belonging to the archbishop of Prague, 52 ms. SW. of that city. Lon. 40 E., lat. 49 38 N.

Tezar, town of the kingdom of Fez, capital of the province of Cuzi, seated on a small river, 45 ms. E. of Fez. Lon. 4 15 W., lat. 33 40 N.

Tezcuco, city of Mexico, in the intendency of Mexico, formerly remarkable for its extensive cotton factories, which, from the rivalry of Queretara, have greatly declined. It stands on the E. side of Lake Tezcuco, 20 ms. NE. from Mexico. Lon. 99 51 W., lat. 19 30 N. Pop. 5,000.

Tezcuco Lake.—See *Mexico, the city*.

Tezela, town of the kingdom of Algiers, in Oran, with a castle, 15 ms. from Oran. Lon. 10 25 W., lat. 35 25 N.

Tezote, town of the kingdom of Fez, seated on the point of a rock, 8 ms. from Melilla. Lon. 10 40 W., lat. 44 40 N.

Thainee, town of Africa, in the kingdom of Tunis, near the mouth of a river of the same name, 10 ms. S. of Tunis. Lon. 10 13 E., lat. 34 50 N.

Thala, town of Northern Africa, which, says Addison, signifies "a covered fountain." There are in the mountains of Booejah, a village called Tharin, or Thala of the mountains, from either the number or peculiar character of its fountains.—See *Addison*.

Thames, the finest river in Great Britain, which takes its rise from a copious spring, called Thames Head, 2 ms. SW. of Cirencester, in Gloucestershire. At Oxford (in whose academic groves its original name of Isis has been so often invoked) it is joined by the Charwell, and, proceeding by Abingdon to Dorchester, it receives the Thames, passing by Wallingford to Reading, and forming the boundary between Berkshire, Buckinghamshire, Surrey, and Middlesex, it waters Henley, Marlow, Maidenhead, Windsor, Staines, Chertsey, Kingston, and Brentwood, in its course to London; during which it receives the Kennet, Loddon, Coln, Wey, Great Ouse, Brent, and Wandle. From London the river proceeds to Greenwich, Woolwich, Grays, Thurrock, Gravesend, and Leigh, into the German Ocean, in which course it parts Essex from

Kent, and receives the Lea, Roding, Darent, and Medway. The tide flows up the Thames as high as Kingston, which, following the winding of the river, is 70 ms. from the ocean, a greater distance than the tide is carried by any other river in Europe. Though the Thames is said to be navigable 138 ms. above London Bridge, there are so many flats that in summer the navigation westward would be stopped were it not for a number of locks; but the first lock is 52 ms. above that bridge. The plan of new cuts has been adopted, in some places, to shorten the navigation; there is one near Lechlade, and another a mile from Abingdon. A still more important undertaking was effected in 1789—the junction of this river with the Severn. A canal has been made from the Severn to Stroud, which canal is now continued to Lechlade, where it joins the Thames, a distance of above 30 miles. A communication between this river and the Trent and Mersey has likewise been effected, by a canal from Oxford to Coventry, and another canal extends from this, at Braunston, to the Thames at Brentford, called the grand junction canal.

Thames, river of Ct., formed of two principal branches, the Shetucket and the Norwich, or Little river, which have their junction at Norwich. From this place the Thames is navigable 15 miles to Long Island sound, which it enters below New London.

Thames, river of U. Canada, formerly called La Tranche, rises in the Chippewa country, and, running SW., washes the cos. of York, Norfolk, Suffolk, and Kent, and disembogues itself into Lake St. Clair, above Detroit; it is a river of considerable extent, without falls. From its upper branches it communicates by small portages with Lake Huron and Grand river; the site of Oxford is on its upper fork, and that intended for Dorchester on its middle fork; London on the main, and Chatham on its lower fork. It is a fine inland canal, and capable of being highly improved. The lands on its banks are extremely fertile. About the mouth of this river are large extensive marshes, or natural meadows, which, with the exception of small tracts of woodland on the banks of the river, and a few woody islands, extend about 12 ms. up the country, and about 4 or 5 ms. in depth, affording hay sufficient for a numerous settlement.

Thamsbruck, town of Upper Saxony, in Thuringia, on the river Unstrut, 3 ms. N. of Langensalza.

Thanet, island of Eng., comprising the E. angle of Kent, being separated from the main land by the two branches of the Stour. It produces much corn, and the S. part is a rich tract of marsh land. It contains the towns of Margate and Ramsgate, and several villages.

Thanhausen, town of Suabia, on the river Mindel, 14 ms. N. of Mindelheim.

Thasos, island of the Archipelago, on the coast of Macedonia, at the entrance of the Gulf of Contessa. It is 12 ms. long and 8 broad, and abounds in all the necessaries of life. The fruits and wine are very delicate, and there are mines of gold and silver, beside quarries of fine marble. The chief town, of the same name, has a harbor frequented by merchants. Lon. 24 32 E., lat. 40 59 N.

Thavlia, ancient *Thebes*, as the modern Greeks

pronounce the name of this place. Few places have undergone more vicissitudes than Thebes. In the flourishing ages of Greece it was the counterpoise between Athens and Sparta, and under Epaminondas become for a short period arbitress of Greece. Destroyed by the Macedonians, Thebes, gradually recovered, but experienced the effects of Roman vengeance from Sylla. This misfortune completed its ruin, having never since recovered any considerable magnitude. It is now a poor village of 500 houses, mostly of wood, and principally inhabited by Turks. The vicinity of Thebes is thus described by Hobhouse: "A person standing on a small hill, which is a few paces to the south of the modern city of Thebes, has the following view of the surrounding country: from immediately beyond the town, to the east, the ground rises into bare, rugged inequalities, not high enough to be called hills, beyond which there is a plain, well cultivated, called the plain of Scimitari, (anciently that of Tanagra,) bounded by the strait of Negropont to the E. and to the S. by the Attic mountains, now called Ozea, and a ridge of mount Elatias or Cithæron. To the S. the ground rises by a gentle ascent, and then falls into another large plain bounded by Cithæron, and, stretching to the SW. through this plain, as well as that of Scimitari, runs a river, now without a name, but formerly the Æsopus. The ruins of Platæa are to be seen about 6 ms. to the SW. of Thebes, near a village called Cocli. To the W. is the flat plain of Thebes, and far off beyond Livadia, to the SW., is seen the mountain Zagari, the ancient Helicon. To the NW. the Theban plain is separated from the flats overflowed by the lake by a stony hill, not very high, at 7 or 8 miles from the town. In this direction the river is terminated by the snowy summits of Parnassus. To the N. and to the NE., in which direction there is a road to the town of Negropont, there is an uneven plain, washed by a river which flows not far from Thebes. This is terminated by mountains once called Plous and Messapius. The eastern extremity of the latter is bounded by the strait to the N. of Euripus. Besides some others of note, Thebes gave birth to Pindar, Pelópidas, and Epaminondas. Bœotia was not, however, considered as prolific in genius by the ancient Greeks.

Thaxted, town of Eng., in Essex, near the source of the Chelmsford, 20 ms. N. by W. of Chelmsford, and 44 NNE. of London.

Theaki, island in the Mediterranean sea, 24 ms. long and 7 broad, separated from the NE. part of that of Cefalonia by a narrow channel. It is the ancient Ithaca, celebrated as the birth-place and kingdom of Ulysses. The chief town is Valthi, which has a spacious harbor. Lon. 20 40 E., lat. 38 25 N.

Theakiki.—See *Kankehee*.

Thebaid, country of Upper Egypt, now called *Said*. It is the least fertile and the thinnest of people of any province in Egypt, being full of deserts; now inhabited by Arabs, who are robbers by profession.

Thebes, ancient name of a city of Upper Egypt. It was celebrated for having 100 gates; and there are many tombs and magnificent remains of antiquity. Three villages, named Carnack, Luxor, and Gournou, are seated among its ruins, which

are hence called the antiquities of Carnack and Luxor.

THERES, THEBAIS. Hodgson derives these names from the Berber, or rather regards the Berber and ancient Egyptian languages as identical. "In that idiom (Berber) thebais, or thebaish signifies the breast of a woman *manma*."

THEGARTHY, THEGERH, TEGART, TUGGART, all, according to Hodgson, signifying in the Berber language a garden or cultivated ground, is certainly, if correctly, derived a most curious instance of similarity with both the words earth and garden in the English language.

Themar, town of Franconia, in the co. of Henneberg, near the river Werra, 10 ms. SE. of Meiningen.

THERNA, OR THENAE, (*Plin., Strabo, Ptol., &c.*) appears evidently derived from the Berber word *tene*, dates; it is well known that this fruit abounds in N. Africa.

Thengen, town of Suabia, capital of a princely co. of the same name, in the landgrate of Nellenburg. It is situated on the Hegan, 8 ms. N. of Schaffhausen.

Theodocia.—See *Caffa*.

Theomorphism.—See *Schamanism*.

Theresa, village, Jefferson co., N. Y., on Black river branch of Oswegatchie, on the road from Sackett's Harbor to Ogdensburg, 25 ms. NE. from the former, and 40 SW. from the latter place.

Thermia, island of the Archipelago, S. of the island of Zia, and near the Gulf of Engia, 12 ms. long and 5 broad. The soil is good and well cultivated; and it has a great deal of silk. The principal town, of the same name, is the residence of a Greek bishop. Lon. 24 50 E., lat. 37 31 N.

Thessalon, river of U. C., runs into Lake Huron a little to the eastward of Muddy lake on the N. shore.

Thessaly.—See *Janna*.

Thetford, borough of Eng., in Norfolk. It has a considerable manufacture of woolen cloth and paper. The spring assizes for the co. are held here. It is 50 ms. NE. of London. Lon. 50' E., lat. 52 28 N.—Village, Orange co., Vt., on Connecticut river, 12 ms. N. from Dartmouth, in N. H. Pop. about 2,000.

Theux, village, 3 ms. NW. of Spa, in the bishopric of Liege.

Thian-Chan-Pelou.—See *Asia*, p. 88.

THIBET, THEBET, OR TOBBAT, a name known to the Arabians and Persians is unknown in the country itself. It is supposed to be a corruption of the Thibetian words *Ten-boot*, "kingdom of Boot." The Chinese call it *Dshan*; the Mongols, *Baran-Tala*, "the country on the right."

Under the name of Thibet, European geographers comprehend those elevated and wide-spread regions which lie N. from Hindoostan, E. of Great Bucharia, S. from Little Bucharia, SW. from Tangoot, to the W. of China, and SW. from the Birman empire. Thibet extends from lat. 26° to 38° N. The southern boundary is generally formed by the Himmalaya, and the northern by the Moo's-Tag chain. The interior is very imperfectly known, and really the outlines are indefinite. The whole country, as far as we

know of its topography, is a congeries of mountains with intervening valleys or very elevated table lands.

The Hoan-Ho and the Kian-Ku, rise on the eastern border of Thibet, and, flowing eastward, enter the Pacific ocean after an immense course through China. The great river of Cambodia derives its sources from southeastern Thibet, from whence, pursuing a SSE. course of upwards of 2,000 ms., it falls into the Chinese sea N. lat. 10°. The Irrawaddy, the May-Kian of Laos, and the Noo-Kian are also amongst the vast streams which roll their volumes from the cold plateau of Thibet, but the most remarkable river of Thibet, is the Burhampooter or Bramapootra, "the river Brahma." Rising in the same frozen and rocky region with the Indus and Ganges the Sanpoo, or higher Bramapootra, pursues a SE. course of 1,000 ms., through Thibet and Assam, passing Lassa, the capital of the former, and turning in the latter to SW., finally joins the Ganges and enters the Bay of Bengal.

Of the known lakes of Thibet, those of Terkirri and Yambro are the principal.

The seasons of Thibet are peculiarly regular. The spring, from March to May, is changeable; the rainy season lasts from June to September, during this period the rains are incessant and copious, the rivers are swelled, and carry their inundations to the far distant countries of China, Cambodia, Siam, Burmah, and Bengal. The rainy is followed by the winter season. The latter continues from October to March clear and serene, with cold exceeding that of any part of Europe. The air is dry and piercing, and as low as 26° vies in intensity of cold with that of the Alps in the parallel of 46°. As might be expected, where every other circumstance is alike, the climate becomes more mild advancing S.; but, from its great elevation, Thibet may be viewed as a country virtually extending from lat. 45° to 58°. Travellers represent the vegetable productions as much the same with Europe; and a similar remark may be made in respect to animals, though some species of the latter are found in Thibet not known in Europe; such are the musk animal, and the yak or grunting ox. Iron and copper are its most abundant minerals, though gold, lead, quicksilver, and rock salt, are found in various situations.

Without including kingdoms and provinces little known, and rendered doubly uncertain from a mixture of Chinese, Mongolian, and Thibetian names, we may consider Thibet as subdivided into three natural sections—Great Thibet, Little Thibet, and Bootan. Little Thibet, lying to the west from Great Thibet, is drained by the NE. branches of the Indus, and not, as was formerly supposed, by those of the Ganges.

In general terms, the features of all Thibet may be described as rude, but if it is poor in the productions of nature, it is rich in superstition. It is the "Sacred Land" of central Asia. Near Lassa resides the earthly vicegerent, the Dalai-Lama. The superstitions of central Asia are divided into three sub-systems—Schamanism, Braminism, and Lamaism. The Schaman is probably the most ancient, and certainly the most extensively professed of any religious system ever known on this planet. Though expelled from and supplanted by the Bra-

mins in Hindoostan, the Schaman priests are spiritual leaders or drivers from Malacca to the Frozen ocean. The empire of China is now politically at the head of this religious system, and, possessing Thibet, is master of the person of its Hierarchy, the Dalai-Lama. In fact, the present emperors of China stand in a similar relation to the Lama of Thibet which the German emperors of the middle ages did and really continue to do with the Roman pontiffs.

Tigre.—See *Africa*, p. 10.

Tigris, river of Turkey, in Asia, which has its source near that of the Euphrates, in the mountain of Tchilder, in Turcomania; afterwards, it separates Diarbeck from Erzerum, and Khuisistan from Irac Arabia, and, uniting the Euphrates, falls into the gulf of Persia, under the name of Schat-al-Arab. This river passes by Diarbekar, Gezira, Mousal, Bagdad, and Bussorah. The Tigris derives its name from the rapidity of its current; it was called Tigo in the Median language, *Diglito* in Arabic, and Hiddekel in Hebrew—all of which terms signify "the flight of an arrow." Though the Euphrates has the longest course, some travellers seem to suppose that in volume the Tigris equals or excels its rival. Taken together, these two rivers would, to a civilized and commercial nation, afford noble and extensive lines of intercourse.

Toula, river of Chinese Mongolia, one of the eastern branches of the Selenga, which takes its course from E. to W., and is a broad, deep, and rapid river, and its banks are surrounded with woods and beautiful meadows. The mountains which hang over it on the northern side are covered with forests of aged firs, and have the same effect upon the eyes as an immense amphitheatre. This river, after having received the waters of the Selingue, loses itself in the Baikal.

Toulomea, or *Tulmabine*, town and fortress of Hindoostan, in Lahore, seated on the Rauve, 70 ms. ENE. of Moultan.

Toulon, city and seaport of France, capital of the department of Var, and late province of Provence. The inhabitants are computed at 80,000. The harbor is distinguished by the names of the Old Port, or Merchant's Port, and the New Port, or King's Port. The new haven was constructed by Louis XIV., as were the fortifications of the city. In the front of this haven is an arsenal, containing all the places necessary for the construction and fitting out of vessels; the first object that appears is a ropewalk, entirely arched, extending as far as the eye can reach, and built after the designs of Vauban; here cables are made, and above is a place for the preparation of hemp. Here, likewise, is the armory for muskets, pistols, halberts, &c. In the park of artillery are cannons placed in piles, bombs, grenades, mortars, and balls of various kinds, ranged in wonderful order. The long sail room, the foundry for cannon, the dock yards, the basin, &c., are all worthy of observation. In a word, the basins, docks, and arsenal, at Toulon, warranted the remark of a foreigner who visited them, that the king of France was greater there than at Versailles. Toulon is the only mart in the Mediterranean for the re-exportation of the products of the East Indies. Toulon is seated on a bay of the Mediterranean, 37 miles SE. of Marseilles and 317 SSE. of Paris. Lon. 5 56 E., lat. 43 7 N.

Toulouse, city of France, in the department of Upper Garonne, and late province of Languedoc. It contains 56,000 inhabitants, although its population bears no proportion to its extent. Here are many monuments of antiquity, and it was one of the most flourishing cities of the old Gauls, and a Roman colony; in process of time, it became the metropolis of the Visigoths, afterwards of Aquitain, and, at length, one of the most considerable governments of France, and the seat of a parliament. Communicating with the Atlantic on one

side by the river Garonne, and with the Mediterranean on the other by the canal of Languedoc, Toulouse might have been a very commercial city; but the taste of the inhabitants has been principally for the sciences and belles-lettres. Of course, there are two colleges, two public libraries, and three academies. The little commerce they have consists in leather, drapery, blankets, mignonets, oil, iron, mercery, hardware, and books. The bridge over the Garonne is at least equal to those of Tours and Orleans; it forms the communication between the city and suburb of St. Cyprien. Toulouse is 37 ms. E. of Auch, 125 SE. of Bordeaux, and 350 S. by W. of Paris. Lon. 1 21 E., lat. 43 35 N.

Trelo-Vouni, ancient Hymettus, mountain of Greece, in Attica. Trelo-Vouni is more particularly that ridge which rises from the plains of Athens, and so much celebrated in classic writings. SE. from Athens, and distant from that city 3 ms., the country is intersected by Mount Hymettus, and divided into two ranges; the first running from ENE. to WSW, and the second forming an obtuse angle with the first, and having a direction from WNW. to ESE. The first range next to Athens, Hymettus proper, ends about 4 ms. from the promontory Zoster, now Halikes; but the hills on the other side of a gap, through which runs the road leading to the Sunian promontory, seeming like a continuation of the same mountain, has been named the lesser Hymettus. The great range is now called Trelo-Vouni; that on the SE. side of the gap Lambro-Vouni, from the ruins of one of the ancient villages called Lampros.

Hymettus is neither a high nor a picturesque mountain, being a flat ridge of bare rocks. The sides of it, about half way up, are covered with shrubs and heath, whose flowers scent the air with a delicious perfume. The wild thyme is still in great abundance, though very little of the once so much celebrated honey is now to be procured though still retaining its reputation for flavor and aromat e odor.—*Hobhouse*.

Tremesan, or *Tlemsan*, city of Algiers, in the province of Mascara. It is surrounded by strong walls, and inhabited by poor Arabs, Moors, and Jews. In the time of the Arabs, it was the residence of powerful princes, but is now dwindled to scarce a fifth part of the ancient city. Its once flourishing manufactures of carpets and woollen coverlets are in a state of decay; and the former masterpieces of architecture have disappeared, so there is not a single building of excellence now to be seen. It is 100 ms. SSW. of Oran. Lon. 2 W., lat. 34 56 N.

Tries.—See *Treves*.

Trieste, town of the empire of Austria, in Carniola. It is a strong place; the harbor is spacious, but not good, being open to the W. and SW. winds. The inhabitants have a good trade in salt, oil, almonds, iron, &c., brought from Laubach; and they make good wines. It is seated on the side of a hill, on the Gulf of Venice, 8 ms. N. of Capo d'Istria, and 80 NE. of Venice. Lon. 14 4 E., lat. 45 56 N. Trieste, in some degree, has taken the place of Venice in regard to commerce. In his statistics of Italy, Professor William Spalding, at page 308, New York edition, observes: "Notwithstanding the attempt to save Venice by erecting it into a free port, the returns for its rival, Trieste, prove that there is a great and increasing balance of trade in favor of the latter."

Trieste is liable to destructive inundations from the casual swell by winds of the waters of the Gulf of Venice. This catastrophe occurred on October 8th, 1829, when the waves reached the highest part of the ground on which the city stands, and produced ruinous consequences in cellars and magazines.

Trigg, co. of Ky., bounded by Ten. SE., Tennessee river SW., Livingston co. NW., and Caldwell and Christian NE. Length 45 ms., mean width 10; area 450 sq. ms. Cumberland river winds obliquely through this county to the NW. Surface low and flat in general. Pop. in 1820, 3,874.

TUARICKS. "Tuaricks, of northern Africa, are white people, of the Berber race, and are Mohammedans of the sect of Malek. The Tuaricks habit that extensive portion of the Sahara circumscribed on the E. by Fezzan and Tibboo, S. by the negro nations of Bournoo, Haoussa, Gouar, and Tombuctoo, and on the W. by the oases of Teedeekles and Twat. The country of the Mobis, Engoussah, and Ghadames, are their northern limits, beyond which they never proceed."—*Hodgson*. These limits would give to the Tuaricks a country exceeding a million of sq. miles. Like most of the other African tribes, they are a commercial people; their kafilas or caravans carry on the commerce of Fezzan, Ghadames, Twat, and Sudan. Amongst the most valuable of Tuarick staples are slaves. "As Nomadic tribes, they are found in the vicinity of all the negro population, from Tibboo to Tombuctoo. The number of slaves sold in the northern markets of Mourtzouk, An-Lalal, Ghadames, and Mozab, by these Anropoklepts must be very great. This word, Tuarick, in the Berber language, signifies *tribes*. To one man *tergi* is applied, and *Tuarick* to the nation.

Tucuman, extensive province of S. America, lying between Chili and Paraguay, to the E. of the Andes, and W. of Rio de la Plata. This province, with the country S. of the river Plata, forms an extensive plain, almost without a tree. The soil is a deep fertile mould, watered by many streams from the Andes, and clothed in perpetual verdure. In this rich pasturage the horses and cattle imported from Europe have multiplied to an almost incredible degree. This has enabled the inhabitants not only to open a lucrative trade with Peru, by supplying it with cattle, horses, and mules, but to carry on a commerce equally beneficial, by the exportation of hides to Europe; notwithstanding which, the towns in this country are no better than paltry villages, to which the Spaniards have endeavored to add some dignity, by erecting them into bishoprics.

Tudela, town of Spain, in Navarre, with a castle. It is seated in a country that produces good wine, on the river Ebro, 44 ms. S. of Pamplona, and 100 E. of Burgos. Lon. 1 38 W., lat. 41 12 N.

Tver, government of Russia, formerly a province in the government of Novogorod. It was the first province modelled according to the code of laws of Catharine II. The country produces abundantly all kinds of corn and vegetables. Its forests yield the most valuable timber. The quadrupeds and the feathered race are the same as in all the N. of Europe. Besides the fish common to most lakes and rivers, there is one peculiar to the waters of these northern regions, called the sterlet, the *acipenser ruthenus* of Linnæus, and is a species of sturgeon, highly esteemed for the flavor of its flesh and for its roe, of which the finest caviar is made.

Tver, city of Russia, capital of a government of the same name. It is a place of considerable commerce, being seated at the conflux of the Tverza and Volga, along which is conveyed all the merchandise sent by water from Siberia and the S. provinces, towards Petersburg. It is divided into the old and new town; the former, situate on the opposite side of the Volga, consists almost entirely of wooden cottages. Catharine II, at her own expense, raised the governor's house, the episcopal palace, the courts of justice, the exchange, the prison, and some other public edifices; and to every person who engaged to build a house of brick, she offered a loan of £300 for 12 years, without interest. The streets are broad and long, extending in straight lines, from an octagon in the cen-

tre; the houses of this octagon and of the principal streets are of brick, stuccoed white, and make a magnificent appearance. Here is an ecclesiastical seminary, which admits 600 students. In 1776, the empress founded a school for the instruction of 200 burghers' children; and in 1779 an academy for the education of 120 of the young nobility of the province. Tver is 99 ms. NNW. of Moscow. Lon. 36 5 E., lat. 56 7 N.

Tunbridge, town, Orange county, Vt., between Stafford and Randolph, and joining Windham co. in the S.

Tunkhannock, a mountain ridge of Pa., in the northern part of Luzerne. It rises from the Susquehannah river, at the mouth of Tunkhannock creek, and extends to the northeastward, toward the SE. angle of Susquehannah co.

Tunkhannock, small river, Penn., rising in Susquehannah, and, flowing SW. into Luzerne co., falls into Susquehannah river 55 ms. above Wilkesbarre.—Tp., Luzerne co., Pa., on the E. branch of Susquehannah, and waters the Tunkhannock creek.

Tunkinskoi, town of Russia, situated on the Irkut, 80 ms. SW. of Irkutsk. Lon. 103 15 E. lat. 51 18 N.

Tunja, town of New Granada, in S. America capital of a district of the same name. It is seated on a high mountain, in a country where there are gold and emeralds, 30 ms. SW. of Trujillo. Lon. 73 5 E., lat. 5° N.

Tunis.—See *Africa*, p. 17.

Tunis, city of northern Africa, occupying the site of ancient Carthage. Hodgson renders it probable that the name or term Tunis preceded that of Carthage, and that the former was the ancient as it is the modern name of the city by the aboriginal inhabitants of the country. *Tunis* says Hodgson, signifies "a foreigner in peace and safety."

Tunkerstown.—See *Ephrata*.

Tura, town of Germany, in the country of Trent, 24 ms. SW. of Trent.

Turbot, northern tp., Northumberland county, Pennsylvania, on the Susquehannah river. Pop. in 1820, 2,752.

Turckheim, town of France, in the department of Upper Rhine, and late province of Alsace. It is seated near the river Colmar, 1 mi. NW. of Colmar.

Turcoin, town of France, in the dep. of Nord, 6 ms. NNE. of Lille.

Turcomania, general name for the eastern

ores of the Caspian sea, from the Trukmenes or Circassians, who are its inhabitants.

Turcomania, ancient *Armenia major*. The modern Tartar name was imposed by the Turcomans, a Tartar nation from the eastern shores of the Caspian sea.

TURCOMANS, inhabitants of Turcomania. They are a pastoral, ignorant, and contented wanderers. They have adopted the Turkish language, and a false form of Mahometanism. They support themselves on the produce of their flocks, and live under tents of felt. The careless indifference of European geographers confound the free nomads, but in many respects a respectable nation of Asia. The Turcomans and Koords have been thus mistaken and blended, though radically distinct. They are both shepherds and wanderers, and both occupy parts of Armenia, but the Turcomans speak the Turkish, the Koords the Persian language. The Turcomans are recent emigrants; the Koords are the Carduchi, Gordyaei, or Kyrti of the ancients, and have occupied their present residence on the waters of the Tigris since, and no doubt ages before the age of Xenophon. The Turcomans give marriage portions with their daughters; the Koords receive a high price from their bridegroom. The Turcomans pay no respect to distinctions of birth; the Koords set a high value on extraction. The Turcomans are addicted to thieving; the Koords are robbers. See *Asia*, p. 6.

Turenne, town of Fr., in the dep. of Correze, 12 ms. SSW. of Tulle.

Turin, fortified city of Piedmont, capital of the duchy of Savoy. It stands in a fertile plain at the confluence of the Doria with the Po. Here is a citadel deemed the strongest in Europe, and a university, founded in 1405 by Charles, duke of Savoy. Most of the streets are well built, uniform, straight, and terminate on a very agreeable object. The Strada di Po, the widest and the largest leads to the royal palace, and is adorned with piazzas filled shops, as are various others of the best streets, all of which are kept open by means of a canal from the Doria, with branches that flow through them into the Po. The inhabitants are computed to be 80,000. The citadel is a regular pentagon, and comprehends an extensive and well furnished arsenal, a cannon foundry, a chemical laboratory, &c. There are fine walks on the ramparts and walls of the city, fine gardens on the side of the river Po, and a charming public place called the Corfo, where many people assemble in an evening to exhibit themselves with their equipage. Near this city, on the banks of the Po, is the beautiful castle of Valentia, the garden of which is applied to botanical studies. In 1714 it was restored to the king of Sardinia. *Turin* is 68 ms. NW. of Genoa, and 80 SW. of Milan. Lon. 7 40 E., lat. 45 4 N.

Puringe, town of Sweden, in the province of Södermanland, 24 ms. WSW. of Stockholm.

Turinsk, town of Russia, in the government of Tobolsk, with a port, 190 us. W. by S. of Tobolsk. Lon. 63 44 E., lat. 58 5 N.

Turivacary, town of Hindoostan, in Mysore, consisting of an outer and inner fort, strongly defended by a ditch and mud wall, and an open suburb at a little distance. Here are two small tem-

ples of curious workmanship. It is 34 ms. S. of Sera, and 50 N. of Seringapatam.

TURK, this very ancient, important, and ethnographical term, has been strangely confounded with the term Tartar. The country to E. and SE. of the Caspian sea is named Tyrkland, in the Ynglinga-Saga of Snorre Sturlesson, an Icelandic historian who flourished from A. D. 1213 to 1241. Those nations which we with any propriety call Tartars call themselves Turks. The Byzantine writers called the Huns Turks. It is now amongst historical established facts that the Huns, Finns, and Turks, are branches of one great family of nations. During the middle ages of the countries now called independent Tartary, and the southeastern part of European Russia, beyond the Volga and Karro, were called Tyrkland by the Icelandic writers, Jounouria by Russian writers, and Great Hungary by Rubriquis and other writers of western Europe. *Turkestan*, a Persian term, meaning "country of the Turks," has superseded the former. It was not until in the 12th century of our era that the term Tartar or Tatar became famous in Europe. The Turkish author Abul Ghazi, informs us that the Tartars were, in fact, only part of the Turks. The Chinese, it appears, give the name Tata to the nomadic nations of central Asia. It is, therefore, doubtful whether the original term applies most correctly to the Turks or Mongols; but it is certainly improper if applied nationally to both, as the Turkish nations west of the Belur (ancient Imaus) differ as much from the Mongol as the Moors do from the Negroes. The probability is, that the Chinese term Tata applies to the Nomadic mode of life, and not to any particular nation, which is not the case with the primitive term Turk.

Turkestan, country of western Tartary, bounded on the N. and E. by the country of the Kalmucks, S. by Bokharia, and W. by the lake Aral. The chief of this country is generally called the khan of the Karakalpahs. The capital is Taraz. The name *Turkestan* has been known to European writers since the 5th century, and simply means "the country of the Turks or Tartars." Its extent has varied with the political revolutions of central Asia.

Turkey, large empire extended over part of Europe, Asia, and Africa. Turkey in Europe is bounded on the N. by Croatia, Slavonia, Hungary, Transylvania, and Poland, E. by New Russia, the Black sea, the sea of Marmora, and the Archipelago, S. by the Mediterranean, and W. by that sea and the Venetian and Austrian territories. It contains Moldavia, Bessarabia, Walachia, Bulgaria, Servia, Bosnia, part of Croatia, and Dalmatia, Romania, Macedonia, Albania, Janna, Livadia, and the Morea. These countries lie between 17° and 40° E. lon., and 36° and 49° N. lat. Turkey in Asia is bounded on the N. by the Black sea and Circassia, E. by Persia, S. by Arabia, and W. by the Mediterranean and the sea of Marmora. It lies between 27° and 46° E. lon., and 28 and 45 N. lat., and contains the countries of Irac-Arabi, Diarbeck, Kordistan, Armenia, Caramania, Natolia, and Syria, with Palestine. In Africa the Turks have Egypt, part of Nubia, and Barca; and the States of Tripoli, Tunis, and Algiers are under their protection.

The following table exhibits a synoptic view of the Turkish empire at the beginning of the present century, and, nominally, at the present epocha :

Turkey in Europe.

Turkey in Africa, exclusive of Barbary	152,300
Total in Europe and Asia	662,800
Total area of the Ottoman empire	815,100

This vast empire may, in general terms, be considered as extending from the northern tropic in Africa, to the Carpathian mountains in Europe, and in Asia from the Mediterranean to the Elwend mountains from W. to E., and from S. to N., from the sands of Arabia to the mountains of Caucasus. A single glance upon a map of the world is sufficient to carry conviction to any mind, that no other empire of the eastern continent ever possessed so pre-eminent a position as that of the Ottoman Turks; and a very slight acquaintance with their history exhibits an unequalled disregard of every advantage afforded by nature to secure commercial, scientific, and political aggrandizement. "It is well for them," says Montesquieu, "that God permitted the Turks and Spaniards to exist; the two nations who have most uselessly possessed a great empire." There was, indeed, no material dissimilarity between the various tribes which, for nearly 1,000 years successively, poured on Europe and southwestern Asia, from the regions of the N. and E. Rude, ferociously warlike, and unacquainted with the arts of civil policy, the Goths, Hungs, and Turks were, in the first instance, destroyers. The latter, in the Romano-Greek empire, found no great civilized community to mix with and soften their manners. On the contrary, what little of science remained amongst the Greeks, was lost to the Turks from religious and political animosity. The Turks are, however, it is probable, as far advanced as were the European nations previous to the promulgation of the art of printing; and the Pachaliks of the Ottoman empire not worse governed at this moment than were the provinces of France, Germany, Poland, and Russia during the middle ages. This empire has always

been rather an assemblage of nations, violent and nominally formed into one State, than a regulated sovereignty united by law and policy. The recent revolt of the Greeks is only one of a series of revolts almost coexistent with the empire itself, but in the present condition of Europe it is very improbable that the wounds of Turkey can be healed by the slow operations of nature as in former instances.

Turks.—In the ignorant admixture of nations, religion, and language, too common in our books, Turk and Mahometan are used as synonymous correlative terms; and, with the same precision might Christian and French, English or German be confounded. The Turks are a Mahometan nation, but they are only one of the many nations who profess that system of religious credence. The Turks, from the best authorities, were a Tartar tribe. The former is, however, more ancient in our literature, than the latter. The name Turk occurs in Pomponius Mela and in Pliny, whilst it was not until the twelfth century that the Tartar became famous in Europe. All the Tartar nations acknowledge the appellation of Turks as belonging to them in common. Those nations called Turks by Abul-Ghazi-Khan, according to that author, contained one sub-tribe, designated Tartars. The progress of migration and conquest, two great branches of the Turks or Tartars have reached a permanent settlement in Europe. They are the Hungarians and Ottoman Turks.

Though inhabiting, it is probable, from very remote antiquity, the great central slope of Asia, the Turks did not become formidable as conquerors known to European writers, until the middle of the sixth century, though their name had been introduced some centuries previous to that era. In 562, in the reign of Justinian, an embassy from the Turks reached Constantinople; and in 582 the embassy was returned, and, for the first time, the silks of China reached Europe by the N. side of the Caspian. At that period, the Turks or Tartars were dominant in central Asia, under the name of the kingdom of Touran. On the SW. they pressed on Persia, and were known as the Turks of Transoxiana, or Turks beyond the Oxus. The white Huns, or Ephthalites, so called by the Persians from *Afthal*, their name for the Oxus, were also, it is probable, merely the Turks resident on that river. What is generally, in our books, called Independent Tartary, was then, and by the Turkish nations still called Turkestan, or country of the Turks, Taraz and Otrar were successively capitals of Touran or Turkestan. This first Turkish empire gradually declined, but the nation continued numerous and migrated to the W. Naturally divided by the Caspian sea, this tide of nations was broken. One wave rolled northwards and thence westward, first ravaged and finally settled in Pannonia, which, under the name of *Ugri*, *Ungri*, or *Igou*, they imposed the name of Hungary. The Hungarians adopted the Christian religion, and many ages were the guards of Europe against their Mahometan countrymen. It is a very singular instance of the mutations of national appellations, that two names so different as Hungarian and Turk should have sprung from the same root.

At the same period in which the Turks, w

grated north from the Caspian sea, were mingling with the Christian nations of Europe, and were adopting the Christian religion, their brethren, who had passed westward between the Caspian and Indian ocean, became the disciples of Mahomet. Their agency produced the most extensive revolutions. The empire of the Khalifs sunk before them. Early in the eleventh century Mahoud, of Gazna, founded an empire, embracing that part of Hindoostan and Persia. The empire of the Gaznavides was followed by that of the Seljuian Turks in Persia. This was a most important era in human affairs. In their various revolutions, the Mahometan nations had hitherto made but little impression on the Romano Greek provinces in Asia Minor; but, in 1050, the Turks rushed in a destructive torrent into the Greek provinces. At various subsequent advances and partial regressions, this fierce horde gradually overran the fine regions of Asia Minor and Greece, and in 1453 gained possession of Constantinople. Greece, Bulgaria, Bosnia, Servia, Wallachia, Moldavia, the Crimea, Greece, and her islands in Europe, became subject to their arms. Most of these provinces they yet retain, and present to the statesman and philosopher, the singular spectacle of a nation of strangers, who, after a residence five centuries, continue hostile aliens in Europe. Suffered to hang a portentous cloud on the borders of Christendom, from the conflicting interests of Christian nations, the Turks remain Asiatics in manners and appearance. Admixed with Caucasian blood, this darker race has, in person, the majestic attitude of the European, with the agile movements of their Scythian ancestors. The Turks are generally robust, well-shaped, and of good mien. They shave their heads, but wear long beards, except those in the seraglio or palace, and military men, who wear long whiskers. The turban worn by the men is white, and consists of long pieces of thin linen made up together in several folds.

The very existence of such an empire as that of the Mahometan Turks, on the verge and within the reach of the powerful Christian States, may be viewed as a paradox, and so may be considered any of the interior regulations of the Turks. "Nothing," says Hobhouse, "attracts the attention of a traveller in the Levant more than the condition of establishments, which the Turks, so haughty and despotic, so averse to every thing Christian, have long suffered, and still suffer to exist, in almost all the principal towns of their empire. At Smyrna, the Frank town, no inconsiderable place itself, may be said to be under the complete jurisdiction of the foreign Powers. The consuls display the standards of their respective nations; they have their prisons, and their soldiers who wait at their gates, and precede them when they walk or ride; and their houses are sanctuaries which not even the Turk attempts to penetrate."—*Hobhouse*, p. 2, p. 73.

The first residents, under the name of consuls, or mercantile representatives, were, it is supposed, appointed by the republic of Florence in the time of the first Cosmo de Medicis, and called consules mercatorum, and were permitted to exercise their jurisdiction in Turkey, from the pride and indolence of the natives rather than from any consideration of their utility to the minds of the Turks. It was, however, a

fortunate circumstance for the Christian part of the empire that a body of privileged Europeans were admitted, as by that means a communication, though limited in its extent, was preserved with the civilized part of the world. Severe and reserved even to one another, mutual intercourse is very defective in Turkey, but between Mahometans and Christians all association is closed. "A stranger at Constantinople, says Hobhouse," "would naturally wish to live among the Turks as he would amongst the French at Paris and the Austrians at Vienna; but the difference of manner, custom, and language, render it *absolutely impossible to become domesticated in a Mahometan family*, or, at a short residence, even to join in the very little social intercourse enjoyed amongst the natives themselves."

These obstacles are more numerous and formidable over every other part of the Ottoman empire, and have left the Turks a barbarous horde of strangers, without the smallest tie of sentiment, kindred, or cultivated association with the European nations; and what renders the situation of this people in a peculiar manner striking, is, that they are ever still more inveterately set apart from their Mahometan than from their Christian neighbors. If their political power was broken, the very nation would seem to vanish from the earth.

The government of Turkey is like the people, foreign to Europe, and undefinable by any general terms used amongst Christians. It may be assumed as a postulate, that in the very nature of man, no actually unlimited despotism can exist. That of the Grand Sultan, though nominally absolute, is in reality restricted by religious institutions, by the indispensable distribution of power, but, more than all, in Turkey, by the mental imbecility superinduced by secluded education. The administration of government and justice in that empire retains all the rude simplicity and consequent anarchy of a nomadic military band. Though 12 centuries have elapsed since their original removal from the central plains of Asia, they have profited little by their contact with civilized nations. The Goths first trampled on, and then adopted, the Roman jurisprudence. The Mandchurs followed a similar routine in China. But the inflexible Turk surrounded by and actually visited commercially by the most enlightened and active nations of the earth, remains a Scythian.

These notes on Turkey were written upwards of 20 years past, since which some important changes have been effected; the janisaries have been suppressed; Greece has been severed from Turkey, and formed into a kingdom, &c.—See page 374. The body of the article is, however, retained, as historical. Turkey, as an independent nation, cannot be regarded as in existence, as, without the consent of the great Christian Powers, the Turkish nation cannot perform an act evincing national sovereignty.

Tursi, town of Italy, in Naples, seated on the river Sino, 50 ms. of SW. Bari. Lon. 16 50 E., lat. 40 36 N.

Turtle Creek, creek of Alleghany county, Pa., falls into the Monongahela 12 miles above Pittsburgh.—Tp., Shelby county, Ohio, containing the village of Sydney.—Tp., Warren co., Ohio, containing the village of Lebanon.

Turtle Island, island in the Pacific ocean. Lon. 177 5 W., lat. 19 48 S.

Tuscaloosa, or *Black Warrior*, the principal branch of Tombigbee, rises in the spurs of Alleghany mountains, 20 or 25 miles S. of the great bend of Tennessee, about 34° N. lat. It is formed by the union of the Big and Little Warrior rivers, having a general course to the SW. 230 ms., falls into the Tombigbee. The Tuscaloosa is navigable for boats of requisite tonnage 160 miles from its mouth.

Tuscaloosa, county, Alabama, bounded S. by Perry and Greene, W. by Pickens, N. by Jefferson, and E. by Shelby and Bibb; length 40 miles, mean width 30, area 1,200 sq. miles. Tuscaloosa river winds across this county from N. to S. Chief town, Tuscaloosa. Pop. in 1820, 8,229; and in 1840, 16,583. Central latitude—see *Tuscaloosa village*.

Tuscaloosa, village and seat of justice for Tuscaloosa county, Alabama, and seat of government in that State, is situated on the bank of Tuscaloosa river, about 60 ms. above its mouth, 120 SSW. from Huntsville, and 200 a little E. of N. from Mobile. Lat. 33 13 N., lon. W. C. 10 37 W.

Tuscany, sovereign State of Italy, with the title of a grand duchy, bounded on the N. by Romagna, the Bolognese, the Modenese, and the Parmesan, on the S. by the Mediterranean, on the E. by the duchy of Urbino, the Perugino, the Orvietano, the patrimony of St. Peter, and the duchy of Castro, and on the W. by the Mediterranean, the territory of Lucca, and that of Genoa. It is 150 ms. long and 100 broad, and watered by several rivers, of

which the Arno is the chief. There are several mountains, in which are mines of iron, alum, and vitriol; also, quarries of marble, alabaster, and porphyry, besides hot baths and mineral waters. Many parts of it are fruitful in corn and wine, and produce plenty of citrons, oranges, pomegranates, and other fruits. The inhabitants are distinguished by their attachment to commerce, and have established various manufactures, particularly of silks, stuffs, earthenware, and gilt leather. They are much visited by foreigners, on account of their politeness and because the Italian language is here spoken in its greatest purity. This duchy is divided into three parts, namely, the Florentino, the Pisano and the Sienese. It is now an independent duchy, governed by an Austrian prince. Chief cities, Florence, Leghorn, and Pisa. According to Mr. Bowring, the grand duchy of Tuscany, in 1836, contained a population of 1,436,785, and an area of 7,686 sq. ms. Eng. This would give a distributive population to the sq. m. of 186.

Tuscarawas, river, Ohio, rises in Wayne, Medina, Portage, and Stark cos., and forming a large navigable creek in the latter, flows SSE. 30 ms., receives Sandy creek from the E., and 12 ms. still lower Sugar creek from the W., near New Philadelphia. Below the latter place, the Tuscarawas curves gradually SE. and SW., and finally W., flows 50 ms. to its junction with Whitewoman's river at the town of Coshocton. The two rivers at their confluence are nearly of equal size, and are both lost in the general name of the Muskingum. Assuming a southern course of 10 ms., Wills creek enters from the SE., and winding more to the W., 30 ms. further, receives Licking creek, a large tributary branch, at the town of Zanesville, in Muskingum co. Here the river is precipitated over its only falls, or rather rapid, 30 or 40 feet entire depression. Below the falls, Muskingum turns to the SE. 80 ms., to its junction with Ohio river, at Marietta, in Washington co.

From this sketch, we find this inland channel lying in nearly a N. and S. direction. Advancing from Cleveland, on Lake Erie, up the Cuyahoga 40 ms., we reach the portage from the stream to the Tuscarawas; thence, 10 ms. over that portage, and again down the Tuscarawas and Muskingum 212 ms. to Marietta, exhibits an entire line of 262 ms. A canal extends now from Zanesville, up the Muskingum valley, to Dresden, where it unites with the central trunk. Below Zanesville, the Muskingum has been made navigable by dams and locks to its influx into Ohio.

Tuscarawas, co., Ohio, bounded N. by Stark, E. by Harrison, S. by Harrison and Guernsey, and W. by Coshocton cos. It is 30 by 29 ms. in extent, containing 680 sq. ms. The principal waters are the Tuscarawas, Sandy, Conoten, Stillwater, and Sugar creeks. Chief town, New Philadelphia. Pop. in 1820, 8,328; and in 1840, 25,631. Central lat. 40 28 N., lon. W. C. 4 30 W.

Tuscarawas, tp. in the western borders of Stark co., Ohio. Pop. in 1820, 735.—Small village on the W. bank of the Tuscarawas river, and in the co. of the same name, Ohio, 9 ms. southerly from New Philadelphia.

United Provinces of the Netherlands, formerly a republic of Europe, consisting of seven provinces, which extended 150 ms. from N. to S., and 100 from E. to W. They were bounded on the W. and N. by the German ocean, on the S. by Brabant and the bishopric of Liege, and on the E. by Germany. They were ranked in the following order: Guelderland, Holland, Zealand, Utrecht, Friesland, Overijssel, and Groningen. They now form the two kingdoms of Belgium and Holland; which see, under their proper heads.

United States, country of North America, bounded by the Atlantic ocean E. and SE., Gulf of Mexico S., the Spanish or Mexican provinces SW.,

Pacific ocean W., and N. by the Russian and British territories in North America. This extensive region has the following limits:

	[Miles.
Commencing on Passamaquoddy bay, at the mouth of St. Croix river, and thence along the Atlantic ocean to Florida point - - - - -	1,800
Thence along the Gulf of Mexico to the mouth of the Sabine - - - - -	1,100
From the mouth of the Sabine, in common with the Spanish or Mexican provinces, to the Pacific ocean - - - - -	2,300
Along the Pacific ocean from lat. 42° to 49° N., or about - - - - -	500
Due E. from the Pacific ocean, on lat. 49° N., on the Russian territories to the Rocky or Chippewayan mountains - - - - -	600
Thence, in common with Cabotia, or British North America, to the mouth of St. Croix - - - - -	3,000
Having an entire outline of - - - - -	9,300

The longest direct line which can be drawn over this great region stretches from Cape Canaveral, in East Florida, to the Northern cape of Queen Charlotte's island, on Dixon's entrance, 3,214 statute miles. Assuming this line as base, the mean breadth is about seven hundred miles, and area in square statute miles, in round numbers, two millions two hundred and fifty thousand.

The whole territory of the United States is divided into three natural sections. Eastern section, the Atlantic slope, or surface drained into the Atlantic ocean; Central section, between the Appalachian and Chippewayan systems of mountains, and drained generally into the Gulf of Mexico, though a minor northern section inclines towards and is drained into the Canadian lakes, or the Red river source of Saskatchewan; and the Western Oregon, or Pacific section, watered by the numerous confluent of Columbia river, and by a few streams of minor importance, chiefly towards the northwestern angle.

As to the relative extent of these three sections, and also the aggregate extent compared with other parts of the earth, and particularly with that of Europe, very erroneous statements have been made by several writers in the United States. By a line slightly curving, the greatest length of Atlantic slope is 1,750 ms. from Cape Sable, in Florida, to the northeasternmost angle of Maine. Including with the Atlantic slope all Florida and the basins of the Appalachicola and Connecuh rivers, I find, on careful remeasurement, that the eastern section of the United States contains 293,500 sq. ms., and a mean breadth of 170, very nearly. Assuming, however, 300,000 sq. ms. for this section, we proceed to that of the centre, what may be called the Mississippi region. The following are the already organized States of the centre, and such fractions of those of the Atlantic border as extend into the central section:

	Sq. ms.
New York (one-half) - - - - -	23,180
Pennsylvania (one-third) - - - - -	15,666
Virginia (one-half) - - - - -	35,000

REMARKS.—It is not the least remarkable circumstance in our statistics, that the entire territory of the United States, from ocean to ocean, is divided into two not very unequal great sections by a line drawn as follows: commencing on the Gulf of Mexico, at the mouth of the Sabine river, and thence along the western border of the States of Louisiana, Arkansas, Missouri, what probably will be Iowa, to the mouth of the Yaneton Sioux river, and thence due north along lon. 20 0 W. of Washington to our northern border. Limiting the western section to 1,000,000 sq. ms., would leave a territory of 640,000,000 acres. In regard to soil, the western is not equal to the eastern, but there is no space of the former which would not support five or six more than the mean population of the eastern, as shown by our general summary. If we assume so high a mean as 60,000 sq. ms. for each State, still 16 or 17 States may, no doubt will, be formed westward of the dividing line we have delineated. By actual calculation, it is N. 76° W., and within a very small fraction of 1,700 statute miles from the mouth of the Kansas, on the western border of the State of Missouri, to the mouth of Columbia river.

As another illustration of the immensity of the territory of the United States, taken in its utmost extent, we may observe that the bearing of the mouth of the Columbia river from Washington is a very little above N. 80° W., and distance 2,500 ms.; and the mid distance is near the great bend of Missouri river, and by air distance 550 ms. above St. Louis.

In order to show the real extent of the central section, we have above stated the aggregate space already organized—to which we now add:

To close this condensed view of the territory of the United States from ocean to ocean, we have now to add the great extreme western or Columbian territory, bounded by treaty on the south side by N. lat. 42°, and on that of the north by N. lat. 54°, and including all between those latitudes and between the Chippewyan mountains and Pacific ocean - - - - -	560,000

The reader will note a discrepancy in these tabular views between the aggregate assumed at the commencement and that deduced from the different parts; but an excuse must be valid from the extreme difficulty of measuring to exactness, with the best maps, spaces so intricate in outline. Combining the two aggregates, the mean comes out so near 2,200,000 square miles that we adopt it as sufficiently near for all general purposes—supposing that the discrepancies will fall nearly in equal proportions on the parts, leaving comparative extent not essentially affected.

With our element we find the surface of the Atlantic section not quite the one-seventh of the whole area; the central valley or basin occupying nearly fifty-nine parts in one hundred; and the western the Pacific; or Oregon comprising near the one-fourth of the entire area. A very interesting question here arises—that is, what proportion does the whole United States territory bear to the other natural and political sections of the earth?

When making up the matter for the article EARTH, in my Geographical Dictionary, I found that, rejecting the irreclaimable deserts of the old continent, as also the polar extremes of Asia, Eu-

ope, and America, the surfaces admitting any serious density of population would be fully estimated at 30,000,000 square miles. The zone of North America embraced by the domain of the United States lying altogether in temperate latitudes, and reaching neither extreme of the northern temperate zone, having no irreclaimable tracts, may be confidently considered fully equal in habitable facility to its comparative extent. These data admitted, the United States comprise within an indifferent fraction one-fourteenth part of the really habitable earth.

Such natural and decided facts, it might be supposed, would preclude exaggeration; but such has been the uniform result. To say that the United States central region contains nearly as many square miles as continental Europe, is a too common but gross error. The excellent Atlas of Adam and Charles Black, by Sydney Hall, of Edinburgh, now under my hand, and under the tabular head of "Europe" the extent in square statute miles, reduced from the geographic miles, comes at 3,042,739. Malte Brun gives to Europe 10,000,000 square leagues of twenty-five to an equatorial degree; an exaggeration, no doubt, though in the Compendium of Laenaudiere, Balbi, and DuRoi, the aggregate area of Europe is very little less; and all authorities give an area to that part of the earth above *three millions* of square English miles. I have long since regarded Europe and the United States as bearing very closely the relations of three to two. It must be granted, unless we disregard all accredited data, that, so far as the central valley of the United States nearly

equaling Europe, the entire territory of the former, from ocean to ocean, does not much exceed the two-thirds of the latter. There is again a still more mischievous error, which too many persons in the United States labor under in regard to Europe. "*Worn out*" is worse than misplaced. Neither in soul nor soil is Europe worn out; but the reverse. In no former stage of human progress in that quarter of the world has an approach been made to the moral and physical improvements now advancing in Europe. That fine region possesses one advantage, in common with the United States, in having no deserts to break the continuity of civilized society; whilst the possession of a common language will secure to the United States an advantage ages alone, if even time itself, can bestow on Europe.

The articles Germany, Russia, Prussia, Great Britain, and many others in the Geographical Dictionary, will serve to show how unfounded is the idea that Europe is worn out. It is, it may be added, a very destructive error to suppose that such regions as Europe and that of the United States can be worn out. On the contrary every part of both, when under the action of even moderately well-conducted industry must improve, and the resources of life increase. In making the matter for many European articles, I was anxious to procure and careful to insert all well-authenticated documents in regard to the very important fact of human increase. In order to afford material for comparison, and to illustrate the history of population in the United States, the following tables are inserted:

No. 3.—CIVIL DIVISIONS AND POPULATION.

The Confederacy originally consisted of 13 members; but by the formation of new States the number is now increased to 24; the names, extent, and population of which are given in the following table. The 13 original States are N. H., Mass., R. I., Ct., N. Y., N. J., Pa., Del., Md., Va., N. C., S. C., and Ga.

By the census of 1840, the proportion of the sexes appears to be as follows:

Whites (males) about 44 in 1,000 excess over females; on the contrary, in the colored caste, free and slaves, females exceed something above 50 in 1,000.

By turning to the general tables under the head of whites, we discover that beyond 70 years of age longevity is in favor of females; and it would appear as a standing law of life in the United States. The sexes in aggregate beyond 70 stood thus:

	Males.	Females.
1830	75,920	78,531
1840	104,712	108,072

From the manner of taking the respective enumerations of the races, the census tables do not admit decided comparisons of age except those beyond 100 years; but beyond that age the law of life above stated holds with the free and is reversed amongst the slave colored:

NOTE.—It appears from the two preceding table that from 1810 to 1840, inclusive, every 1,000 whites had increased to 2,418 7.10; whilst in the same period of 30 years the colored race, free and slaves, had increased only as 1,000 to 2,085.

The increase of the whole aggregate population in the above stated period of 30 years was as 1,000 to 2,357.

Assuming the whole aggregates at the two extremes of 50 years from 1790, when the first census was taken, to 1840, when by the last enumeration a population of 17,068,666 was found the ratio of increase comes out 4.343. Applying this latter ratio to 17,068,666, the aggregate for the next period of 50 years, terminating in 1790 comes out 74,149,216. There is every concomitant principle to support the conclusion that the people of the United States will considerably exceed 70,000,000 in 1890. Again: if in 1890 we only suppose 70,000,000, and apply the preceding ratio 4.343, at the end of a century, or in 1940, the aggregate will exceed 300,000,000.

-----------------------	-------------

In order to show that this enormously greater number in proportion of colored persons over 100 years than white persons of similar age is no alone supported by the census of 1840, the following table was constructed, including under the head of colored persons, both free and slaves:

100 years and upwards.

	Whites.	Colored
1830	539	2,07
1840	791	1,98

From this tabular view it appears that in 1830 when the whites amounted to 10,530,044, those

above 100 years of age were as 1 in 17,681, whilst the colored amounted only to 1,328,626, and those of that caste above 100 were as 1 to 539.

These very remarkable effects, as has been remarked by Mr. Knapp and others, may in part be accounted for from mere uncertainty in the case of the colored; but the general results are too steady to be resisted, and a very great superiority in longevity must be conceded to the colored over the white race.

There are some very remarkable phenomena attending the increase of population in the United States. If we take 3,929,827, the amount by the census of 1790, and divide by three, and add the quotient to the dividend, we have the subjoined results;

		By the census.
1800 - - -	5,239,802	5,305,925
1810 - - -	6,986,402	7,230,314
1820 - - -	9,315,902	9,638,131
1830 - - -	12,420,269	12,856,407
1840 - - -	16,560,359	17,068,666

This method gives only 508,307 less on five operations than the actual returns of the respective enumerations; and, commencing with the amount

for 1800, the final result yields only a deficiency of 296,650. This rule is evidently safe, applied to the future, as it differs from actual enumerations by giving a less aggregate. Let us, therefore, assume the result, 16,560,359, as deduced by dividing by 3, commencing with 3,929,827, and carry on the synthesis to 1890, and we have for—

1850 - - -	-	-	-	22,080,478
1860 - - -	-	-	-	29,107,304
1870 - - -	-	-	-	38,809,739
1880 - - -	-	-	-	51,846,319
1890 - - -	-	-	-	69,128,425

The ratio of increase for the whole mass, deduced from 3,929,827 in 1790, and 17,068,666 in 1840, comes out 4.34, and, applied to 17,068,666, yields an aggregate of 74,149,986 at the fifth census from 1840. We may therefore, with full confidence, regard the conclusion safe that the intermediate numbers and final results will rather exceed the real enumerations.

The distribution of the fractions of the mass of population is again a matter of intense interest. The relative extent of the three physical sections—the Atlantic slope, Central basin, and Pacific slope.

The elements of this table are in a peculiar manner interesting, as by them we find: 1st. That between the 11th and 12th part of the white pop. of the U. S. could not, in 1840, either read or write. If we were to allow of any excess in the estimates, which, however, we do not, such excess would be compensated amply by the number of those who can read and write, and altogether neglect to use the former art. 2dly. The enormous disproportion of the sections of the U. S., in regard to reading and writing, must excite very serious reflections in the mind of every one whose thoughts are awakened on the subject. 3dly. We are disposed to regard the age of 20 as too far advanced to yield entirely conclusive data. In the present instance the distinction was made intellectually, and as, in that respect, many are more advanced at 18, or even earlier in life, than others long years their elders. 4thly. There are very important facts disclosed in the table, in regard to human life. If we assume birth and 80 years as the extremes of man's period of life, and divide these 80 years into four sub-periods, we find more than one-half in the first 20 years.

The following table, taken from the late census, exhibits the number of the insane and idiots, the deaf and dumb, and also the number of blind, in each State and Territory. It is believed, however, to fall short of the real number of each.

By this table it will be seen that there were in 1840 in the U. S. 8,272 insane and idiots; of these, 2,926 were colored, and 5,346 were white persons; that the average proportion of insane and idiots to the whole population of the U. S. was 1 to 2,062; that there were 4,329 white insane and idiots at public charge, and 10,179 at private charge. There were 2,093 colored insane and idiots at private charge, and 833 at public charge. There were 5,024 white blind persons, and 1,892 blind colored persons; and the average proportion of blind to the general population of the U. S. was 1 to 2,467. There were 7,659 deaf and dumb persons in the U. S.: of these, 6,682 were white, and 977 colored; of the white deaf and dumb, 1,919 were under 14 years of age, 2,056 over 14 and under 25, and 2,707 over 25 years of age; and the average proportion of the deaf and dumb to the general population of the U. S. was 1 to 2,227.

Uppingham, town of Eng., in Rutlandshire on an eminence, 6 ms. S. of Oakham, and 90 N. by W. of London. Lon. 45' W., lat. 52 36 N.

Upsal, town of Sweden, in Upland, with a famous university. It stands in an open plain, fertile in grain and pasture, is a small but very neat town, containing, exclusive of the students, about 3,000 inhabitants. The university is the most ancient in Sweden, and the 1st seminary in the N. for academical education. The Royal Society here is likewise the oldest literary academy in the N. Here is an observatory, planned by the celebrated Celsius, from which the Swedish geographers compute the longitude; also, a botanical garden, of which the famous Linnæus was superintendent. Upsal is 35 ms. NNW. of Stockholm. Lon. 59 39 E., lat. 59 52 N.

Upson, co., Ga.—C. H. and town, Upson co., Georgia.

Upton, town of Eng., in Worcestershire, on the Severn, 11 ms. S. of Worcester, and 111 WNW. of London.—Town, Worcester county, Massachusetts.

Urach, town of Suabia, in the kingdom of Wirtemberg. It has a great trade in paper, damasks and linen, and is 21 ms. SSE. of Stuttgart.

Uruguay, province of Paraguay, so named from a large river, which unites with the Parana 70 ms. above Buenos Ayres, and forms the famous river Plata.—See *Parana*.

Ural, river of Russia, which rises in Mount Caucasus, flows by Orenburg, Ural-sk, and Gurief, and enters the Caspian sea by 3 mouths.

Ural, formerly the *Saik*, river has its extreme source in that nucleus of the main Ural mountains from which flow to the SW. the higher mountains of the Bielaia, eastward the Uis branch of the To

ol, and southward the Ural itself, which, pursuing southern course 250 ms., inflects thence westward 50 ms. to the influx from the N. of the Sakmara, to the town of Orenburg, where inflecting, though lightly, to the southward, flows on 200 ms. to the town of Uralsk, and thence, by a general southern course of 300 ms., to its influx into the Caspian, having a comparative course of 900 miles.—See *Sourif*.

Ural, or *Uralian*, mountains, separating, by common consent of geographers and politicians, Europe from Asia, between latitudes 50° and 66 30 N., and following the inflections of the system 200 ms. The breadth varies across the chains from 50 to 100 ms. At the extreme northern elevation, or where this system rises from the flat and marshy plains towards the Frozen ocean, the mountains are of moderate height. Extending thence 50 ms. to the SW., giving source on one side to the Oby, and on the other to the Ura, or main constituent of the Petchora. At the southern termination of this range, the Urals approach within 60 ms. of the main stream of the Petchora, but, inflecting at an angle of about 100°, the system assumes a direction of a little E. of S., which it preserves to its bifurcation at the sources of the Tobol, a branch of the Oby, those of the Ural flowing into the Caspian sea, and those of the Bielaia into the Wolga river. About from the 5th to the 60th degree of lat., near Solikamsk and Vertchoturia, these chains rise to considerable height, but depress near Ekaterinburg, though rising again in the Baskeis country, N. lat. 54° and 55°. The Pawdinskoi Kamen was found by geometrical measurement to be 6,819 feet above the Caspian. Several summits of the Vertchoturian part of the system, about N. lat. 60°, are covered with perpetual snow. Taken as a whole, the Ural forms a long plateau, 4,000 or 5,000 feet in height, and on which stand peaks of 1,000 to 1,600 feet elevation above their bases on the plateau. The principal part of the system is divided by the Russians into the ranges of Wertchoturia, Ekaterinburg, and Boshkeer. The Urals are remarkably metaliferous, producing iron, copper, platinum, gold, and lead, with several kinds of precious stones, marbles, serpentine, &c. About N. lat. 53° the great mass of the Urals becomes broken, and bifurcations protrude themselves in different directions; the Obstchei-Syrt, westward into Europe, between the Ural and Bielaia rivers; the Su-perlinski, embracing from the Boshkeer mountains, and joining on the eastern side the mountains of Ulu-Tan; and Algydim Shalo, separating the steppes of Issim on the north from that of Kirguis south, and forming a connecting chain between the Urals and the Altaian of central Asia.

Uralian Cossacs, a tribe that inhabit the Russian province of Orenburg, on the S. of the river Ural. These Cossacs are descended from those of the Don, and were formerly called the Cossacs of the Yaik; but the name of the river and people was changed in 1771, on the suppression of the rebellion of Pugatchef. The river Yaik was from thence called the Ural; the Yaik Cossacs were designated Uralian Cossacs; and the town of Yaitsk was named Uralsk.

Uralsk, town of Russia, in the government of Caucasus, and province of Orenburg. It was for-

merly called Yaitsk, and is seated on the river Ural, 375 ms. NNE. of Astracan. The city of Uralsk, pronounced Ooralsk, is a fine city, presenting European features, on the borders of Asia. Lon. 50 10 E., lat. 52° N.

Uraniburg, once a magnificent castle of Denmark, in the island of Huen. It was built by Tycho Brahe, the celebrated astronomer, who called it Uraniburg, or Castle of the Heavens, and here made his observations. It is now in ruins. Lon. 12 43 E., lat. 55 55 N.

Urbania, town of Italy, in the duchy of Urbino, built by Urban VIII., on the Metro, 7 ms. SSW. of Urbino.

Urbanna, village, Steuben co., N. Y., by post road 227 ms. westward from Albany.—Seaport and village in Middlesex co., Va., on the SE. side of Rappahannock river, 12 ms. SW. of Lancaster, and 47 N. of York, and 60 N. by W. of Williamsburg. Lat. 37 38 N., lon. W. C. 21° E.

Urbano, village and seat of justice, Champaign co., Ohio, containing a printing office, a courthouse and a jail, a bank, a Methodist meeting house, a market house, and 644 inhabitants. Distance 43 ms. W. by N. from Columbus. Lat. 40 3 N., lon. W. C. 6 4 W. Pop. in 1840, 1,070.—The name of a tp. in which is situated the above-described village.

Urbino, duchy of Italy, in the Ecclesiastical State, 55 ms. long and 43 broad, bounded on the N. by the Gulf of Venice, on the S. by Perugino and Spoleto, on the E. by Ancona, and on the W. by Tuscany and Romagna. The air is not very wholesome, nor is the soil fertile.—Town of Italy, capital of the duchy of Urbino, between the rivers Metro and Foglia, 18 ms. S. of Rimini, 58 E. of Florence, and 20 NE. of Rome. Lon. 12 40 E., lat. 46 46 N.

Ureden, town of Germany, in the circle of Westphalia. Lon. 7 8 E., lat. 52 8 N.

Urgantz, or *Jurgantz*, town of the country of the Turcomans, formerly a considerable place, 4 ms. in circumference, but now in ruins. It is 240 ms. E. of the Caspian sea, and 70 S. of the Lake Aral. Lon. 60 25 E., lat. 40 55 N.—See *Andorra*.

Urgel, ancient town of Spain, in Catalonia, capital of a co. of the same name, on the river Sagra, in a fertile plain, surrounded by mountains, planted with vineyards, 60 ms. W. of Perpignan, and 75 N. by W. of Barcelona. Lon. 1 44 E., lat. 42 32 N.

Uri, the most southern canton of Switzerland, and the fourth in rank. It is bounded on the N. by the canton of Schwitz and the Lake of the Four Cantons, on the E. by the country of the Grisons and the canton of Glarus, on the S. by the bailiwicks of Italy, and on the W. by the cantons of Underwalden and Bern. It is 30 ms. long and 12 broad.—See *Schweitz*.

Uri, *Lake of*.—See *Waldstätter Sea*.

Urmund, town of Germany, in the circle of Westphalia.

Urquhart's Store, and post office, Southampton co., Virginia.

Ursel, town of Germany, in the circle of Upper Rhine, 18 ms. NE. of Mentz. Lon. 8 28 E., lat. 50 9 North.

Urseren, town of Switzerland. Lon. 11 20 E., lat. 49 8 N.

Ursitz, St., town of Switzerland, in the bishopric of Basle, seated on the Doubs, over which is a stone bridge, 7 ms. S. of Porentru.

Urutia, (ancient Spanta,) lake of Persia, in Aderbajian, which, similar to many others in Asia, has no visible outlet. Urutia lies between Zab, branch of the Tigris, and the Kizil Ozein. Lat. 37° N.

Usbeck Tartars, a grand division of the vast Turkish race, possess a large region of western Asia, forming once the kingdoms of Bukharia, Khoaresm, and Ferganna. The Usbecks are generally short and stout men, with broad foreheads, high cheek bones, thin beards, small eyes, clear and ruddy complexions, and generally black hair. They speak the Zagatayan language. Religion, Mahometan. Government, despotic.

Usbeck Tartary, kingdom or rather region of Asia, inhabited by the Usbecks. The limits of this naturally fine country are indefinite, but generally considered as limited on the N. by Asiatic Russia, E. by the Beloor mountains, S. by Afghanistan, SW. by Persia, and W. by the Caspian sea. Usbeck Tartary is a very diversified country. The eastern part is mountainous, the northern and western level, and in part sandy plains, but the central regions, watered by the numerous branches of the Oxus and Iaxartes, are in a peculiar manner fertile, well watered, and salubrious, and when inhabited by a civilized race of men equal to any portion of the eastern continent. The country peculiarly called Usbeck Tartary is the southern part of what is usually called Tartary. Central lat. 40° N. Chief cities, Bucharia, Samarcand, Khiva, and Badakshan. The government is a pure and unqualified despotism. Pop. in the aggregate uncertain; in detail, the country is thinly peopled, and 5,000,000 would probably be too large an estimate.

Uscapia.—See *Scopia*.

Usedom, island of Prussian Pomerania, at the mouth of the river Oder, in the Baltic sea, between which and the island of Wollin is a passage called the Swin. It had formerly a considerable town of the same name, which was almost reduced to ashes in 1473. Lon. 14 11 E., lat. 54 6 N.

Userche, town of Fr., in the dep. of Correze, and late province of Lorraine, seated on a craggy rock, at the foot of which flows the Vezere, 37 ms. SE. of Limoges, and 217 S. of Paris. Lon. 1 37 E., lat. 5 27 N.

Ushant, island of France, on the coast of the dep. of Finisterre, and late province of Brittany, opposite to Conquet. It is 8 ms. in circumference, and contains several hamlets and a castle. Lon. 5 4 W., lat. 48 28 N.

Usingen, town of Germany, in the circle of Upper Rhine, and principality of Nassau Weiburg, 22 miles NE. of Mentz. Longitude 8 25 E., latitude 50 10 N.

Usk, town of England, in Monmouthshire, on the river Usk, 12 miles SW. of Monmouth, and 140 W. by N. of London. Lon. 2 36 W., lat. 51 41 N.—River of South Wales, which rises on the W. side of Brecknockshire, divides Monmouthshire into unequal portions, and falls into the Bristol channel.

Vecht, river that has its source in Westphalia near Munster, crosses the cos. of Stenford and Bentheim, and, entering Overyssel, passes by Ommen, Haffelt, and Swartsluys, below which it fall into the Zuyder Zee, under the name of Swartwater—that is, Blackwater.—River of the Netherlands, which branches off from the old channel of the Rhine, at Utrecht, and enters the Zuyder Zee at Muyden.

Vecht, fortified town of Germany, in the circle of Westphalia, and bishopric of Munster, 30 ms. N. of Osnaburg. Lon. 8 24 E., lat. 52 54 N.

VECTOR RADIUS, line supposed to be drawn from the centre of the sun to that of any planet revolving round that luminary. It is from Latin *veho* or *vectum*, to carry, as, apparently, this line attaches the planet to the sun, and by which it is carried round as a stone in a sling.

VEDAS, or **GREAT SHASTRAS**, the Hindoo sacred books, consisting of one class, called "*The Four Vedas*." These are regarded as not revelations to inspired men, and by them communicated to mankind generally, but as proceeding direct out of the mouth of the Creator. Second class, "*The Four Upa Vedas*," given to mankind by Brahma these and the following are revelations. Third class, "*The Six Ved-Angas*." Fourth class "*Up-Angas*," which is the most copious, and contains the Puranas, or sacred poems. After stating the above, the Foreign Missionary Chronicle for November, 1840, contains the following observations:

"These works are in great part composed in kind of blank verse or measured phrase. The number and bulk are not easily described. The Four Vedas form eleven large folio volumes. The Puranas and two other poems contain two and half millions of lines, whilst an octavo bible, in large print, contains less than one hundred thousand lines, and these are but a small part of the whole. The longest life would not suffice for

single perusal of the books claiming to be a divine revelation to direct man in the worship of his Creator, and his duty to his fellow-man.

Vedenskoï, town of Russia, in the government of Archangel, on the Vokscha, 200 ms. ESE. of Archangel. Lon. 46 44 E., lat. 58 45 N.

Veere.—See *Tervere*.

Veglia, island in the Gulf of Venice, on the coast of Dalmatia, with a good harbor. It is the most populous island on this coast; it abounds in vine and silk. The only town, of the same name, is seated on the sea, on a hill, commanded by two mountains, 17 ms. NW. of Arbe, and 110 E. of Venice. Lon. 14 64 E., 45 22 N.

Velika, town of Sclavonia, seated on the river Bakawa, 10 ms. E. of Cruetz, and 60 NW. of Posega. Lon. 16 50, lat. 46 18 N.

Velino, small river of Italy, flows past Terni, and near that town falls over a precipice 300 feet. This is the cataract so poetically described by Byron.—See *Terni*.

Velore, town of Hindoostan, in the Carnatic. It is a post of great importance, commanding the

great road from Mysore into the Carnatic. It consists of three strong forts, on as many hills, and is deemed impregnable to an Indian army. It is 90 miles W. of Madras, and 214 from Seringapatam.

Veltzen.—See *Ultzen*.

Vena, or *Monti-della-Vena*, mountains of Carniola, on the confines of Istria, on the S. of the Lake Czernic.

Venafro, town of Italy, in Naples, in Terra-di-Lavora, with a bishop's see, seated near the Voltorno, 27 ms. W. of Capua, and 43 N. of Naples. Lon. 14 19 E., lat. 43 32 N.

Venaissin, small but fertile territory of France, lately depending on the Pope, but now decreed a part of France, and included in the department of Vaucluse. It is of small extent, but pleasant and fertile.

Venango, co. of Pa., bounded by Armstrong SE., Butler SW., Mercer W., Crawford NW., Warren NE., and Jefferson E. Length 38 ms., width 29; area 1,114 sq. ms. Surface generally broken, though much good soil lies along the water-courses. Alleghany river winds through and receives French creek in this county. Chief town, Franklin. Pop. in 1820, 4,915; and in 1840, 17,900. Central lat. 41 24 N., lon. W. C. 2 40 W.

Venango, NE. tp., Butler co., Pa.—One of the northern tps. of Crawford co., Pa., NW. from French creek, 6 ms. N. from Meadville. Pop. in 1820, 630.

Venant, *St.*, town of Fr., in the dep. of the Straits of Calais, and late province of Artois. It can be laid under water at any time, which is its chief defence, and is 27 miles SE. of Dunkirk, and 23 NW. of Arras. Lon. 2 39 E., lat. 50 38 N.

Venasque, town of Spain, in Arragon, in a valley of the same name, with a strong castle. It is seated on the Essara, in a country producing good wine, 35 ms. E. of Balbastro. Lon. 0 25 E., lat. 41 58 N.

Venetighery, town of the peninsula of Hindoostan, 51 ms. E. of Bangalora, and 54 W. of Arcot. Lon. 78 38 E., lat. 13 5 N.

Vence, town of Fr., in the dep. of Var, and late province of Provence, 8 ms. from the Mediterranean, and 10 W. of Nice.

Vendrell, town of Spain, in Catalonia, 25 ms. WSW. of Barcelona. Lon. 1 50 E., lat. 41 12 N.

Venezuela, province of Colombia, bounded on the N. by the Caribbean sea, on the E. by Caracas, on the S. by New Granada, and on the W. by St. Martha. When the Spaniards landed here in 1499, they observed some huts built upon piles, in an Indian village, in order to raise them above the stagnated water that covered the plain, and

this induced them to give it the name of *Venezuela*, or *Little Venice*. Near the sea coast are high mountains, the tops of which are barren, but the lower parts in the valley are fertile, producing plenty of corn, rich pastures, sugar, tobacco, and fruits. There are also plantations of cocoa nuts, which are exceedingly good; and gold is found in the sands of rivers.

Venezuela, or *Coro*, capital of the province of the same name, in Colombia, seated on a peninsula, on the Gulf of Venezuela, 70 ms. NE. of Maracaybo. Lon. 70 15 W., lat. 10 43 N.

Venezuela, gulf on the N. coast of Terra Firma, which communicates with the Lake of Maracaybo by a narrow strait.

Venice, late celebrated republic of Italy, which comprehended the Dogado, Paduano, Vicentino, Veronese, Bresciano, Bergamo, Cremasco, Polesinodi Rovigo, Trevisano, Feltrino, Bellunese, Cadorino, and part of Friuli and Istria. The Venetian territories on the continent, enumerated above, (and which, by way of distinction, are sometimes called the *Terra Firma*;) are described in their respective places. This once powerful State, since 1814, has formed one of the great sections of Austrian Italy; area 9,950 sq. ms. Pop. 1,930,000.

Venice, city of Italy, one of the most celebrated in the world, and capital of a republic of the same name, with a patriarchate and a university. It stands on 72 little islands, in the Gulf of Venice. The approach to the city is marked by rows of stakes on each side, which direct vessels of a certain burden to avoid the shallows. These shallows are a better defence than the strongest fortifications. Venice is included in the province called the Dogado, and is 72 ms. E. by N. of Mantua, 115 NE. of Florence, 140 E. of Milan, 212 N. of Rome, and 300 N. by W. of Naples. Lon. 12 10 E., lat. 45 26 N. The trade, opulence, and population of Venice are still respectable. The inhabitants amount to about 140,000.

Venice, Gulf of, sea between Italy and part of Turkey in Europe. It is the ancient Adriaticum Mare, and is still sometimes called the Adriatic. It extends from SE. to NW., between Italy to the SW., and Albania, Herzigowina, Dalmatia, and Illyria, NE., reaching from lat. 40° to 46° N.

Venice, village between Genoa and Scipio, Cayuga co., N. Y., 20 ms. N. from Ithaca, and 15 S. from Auburn.

Venlo, strong town of the kingdom of the Netherlands, in Guelderland, formerly in alliance with the Hanseatic Towns, 19 ms. N. of Ruremonde, and 35 NW. of Juliers. Lon. 5 50 E., lat. 51 20 N.

Venosa, town of Italy, in Naples, on Basilicata, a fertile plain at the foot of the Appennines, 13 ms. NW. of Acerenza, and 72 NE. of Naples. Lon. 15 52 E., lat. 40 54 N.

Venta-de-Cruz, town of Colombia, in Darien, on the river Chagre. Here the Spaniards used to embark the merchandise of Peru on that river for Porto Bello. Lon. 79 0 W., lat. 9 20 N.

Venzone, town of Italy, in Friuli, 32 ms. ENE. of Belluno. Lon. 13 40 E., lat. 46 22 N.

Vera, town of Spain, in Granada, with a harbor. It is 43 ms. NE. of Almeria, and 32 SW. of Carthagena. Lon. 1 30 W., lat. 37 15 N.

o *Vera Cruz*, formerly an intendency, now a

State of the republic of Mexico. It is a long, narrow slip extending on the Gulf of Mexico 450 ms. with a mean width inland of 60 ms.; area 27,000 sq. ms.; lying between N. lat. 17° and 22° 20' lon. W. C. 17 5 to 22 0 W. In all its great line of sea coast, not one really good harbor exists. *Vera Cruz* itself is a mere roadstead. There are few if any other regions of the world where transition of soil, elevation, and vegetable life, are more rapid and striking. The western part rises on the declivity of Anahuac. In one day the traveller ascends from the parched plains near the Mexican gulf to the region of perpetual snow. Ascending from the city of *Vera Cruz* to the table land of Perote, we see the physiognomy of the country, the aspect of the sky, the form of plants, the figure of animals, the manners of the inhabitants, and their modes of cultivation, assume a different aspect at every step. Staples, vanilla, cocoa, tobacco, cotton, sugar, and rice. This intendency contains the two great volcanic summits of Orizaba and *Cofre de Perote*. In it, near *Papantla*, are found very well preserved remains of ancient monuments.—See *Pyramids of Mexico*. Its cities are *Vera Cruz*, *Xalapa*, *Perote*, *Cordoba*, *Orizaba*, and *Tlaotalpan*. It is drained by the *Sumasinta*, *Gua sacualco*, *Alvarado*, and some streams of lesser consequence.

Vera Cruz, city of Mexico, and capital of the State of the same name. This city, beautiful and wealthy from art, owes nothing to nature. It stands on the low, sandy, and insalubrious coast of the Gulf of Mexico. The harbor, if it ought to be so called, is in some measure protected by the small island of *St. Jean d'Uloa*, but is in reality very insecure. The winter population of *Vera Cruz* is about 17,000, but in summer the yellow fever drives the wealthy to *Xalapa*, and other places of the interior. Arid sands environ this city, which depends on foreign commerce for its very existence. Lat. 19 11 N., lon. W. C. 19 9 W.

Vera Paz, province of Guatemala, bounded on the N. by Yucatan, E. by the bay and province of Honduras, S. by Guatemala proper, and W. by Chiapa. It is full of mountains and forests, but there are many fertile valleys, which feed a great number of horses and mules. There are also many towns and villages of the native Americans. The capital, of the same name, or *Coban*, is a bishop's see, but is inconsiderable. It is 120 ms. NE. of Guatemala. Lon. 90 55 W., lat. 15 30 N.

Veragua, province of Colombia, on the isthmus of Darien, bounded on the N. by the Caribbean sea, E. by the province and bay of Panama, S. by the Pacific ocean, and W. by Costa Rica. It is 125 ms. long and 40 broad, and is a mountainous and barren country, but abounds in gold and silver. *St. Jago* is the capital.

Verberie, town of Fr., in the dep. of Oise, on the river Oise, 10 ms. NE. of Senlis.

Vercelli, city of Piedmont, capital of a lordship of the same name, and a bishop's see. The inhabitants are estimated at 20,000. It is seated at the conflux of the *Cerva* with the *Sesia*, 40 ms. NE. of Turin. Lon. 8 24 E., lat. 45 31 N.

Verschulensk, town of Russia, in the government of Irkutsk, seated on the *Lena*, 120 ms. N. of Irkutsk. Lon. 105 35 E., lat. 54 0 N.

Verchotura, town of Russia, in the govern

ent of Perm This was the first town the Russians built in Siberia. It is situated near the river Ura, 120 ms. N. of Catharinburg. Lon. 60 15, lat. 58 45 N.

Verd, Cape, promontory on the W. coast of Africa, 145 ms. N.W. of the mouth of the Gambia. Lon. 17 31 W., lat. 14 44 N.

Verd Islands, Cape, islands in the Atlantic, over 300 ms. W. of the coast of Africa, between 10° and 19° N. lat. They are said to have been known to the ancients under the name of Gorgades, but not visited by the moderns till they were discovered, in 1446, by Anthony Noel, a Genoese, the service of Portugal, and received their general name from their situation opposite Cape Verd. They are ten in number, lying in a semicircle. The names are St. Antonio, St. Vincent, St. Lucia, St. Nicholas, Sal Bonavista, Mayo, St. Jago, Diego, and Brava. St. Jago is the principal.

Verden, duchy of Germany, in the kingdom of Hanover, 28 ms. long and nearly as much broad, bounded on the W. and N. by the duchy of Bremen, and E. and S. by the duchy of Lunenburg. It consists chiefly of heaths and high dry lands, but there are good marshes on the rivers Weser and Aller. It now forms part of the kingdom of Hanover.

Verden, town of Hanover, capital of a duchy of the same name. It contains four churches, and is seated on a branch of the Aller, 18 ms. ESE. of Bremen. Longitude 9 20 East, latitude 52 58 North.

Verdon, village, Hanover co., Va., 32 ms. from Richmond.

Verdun, town of France, in the dep. of Meuse. It is the citadel, which is a regular fortification, was constructed by Vauban, who was a native of this place. It is seated on the Meuse, 28 ms. N. by E. of Bar le Duc, and 140 E. by N. of Paris. Lon. 5 23 E., lat. 49 9 N.

Verdun, town of France, in the department of Meuse and Loire, seated on the Saone, at the inlet of the Doubs, 80 miles East by South of Autun.

Verdun, town of France, in the dep. of Upper Garonne, seated on the Garonne, 20 ms. NNW. of Toulouse.

Verea, town of European Turkey, in Macedonia, 48 ms. W. of Salonica.

Vergennes, town of Vt., in Addison co., seated on Otter creek, 6 ms. from its mouth in Lake Champlain, and 10 N. of Middlebury.

Verina, town of Colombia, in the province of Cumana, celebrated for its tobacco. It is situated on a gulf the Atlantic, 45 ms. E. of Cumana. Lon. 63 44 W., lat. 10 8 N.

Vernandois, territory of France, in Picardy, which, with the late Territory of Soissonnois, is now included in the department of Aisne. It abounds in corn and excellent flax.

Vermejo, or *Rio Grande*, river of South America, rising from the eastern valleys of the Andes, in the province of Salto, and falling into the Paraguay from the W., a little above the mouth of the Parana.—See *Rio Grande*.

Vermillion, small river of Ohio, rises near the northern boundary of Richland, and, flowing N. over Huron co., falls into Lake Erie, after a comparative course of 30 ms.—Town, Huron co.,

Ohio, on Vermillion river.—Tp., Richland co., Ohio.—River of Illinois and Indiana, rises in the former, and, flowing SE. by comparative courses 50 ms., enters the latter State and falls into the Wabash at lat. 39 58 N., in Vermillion co.—River of Illinois, heading with the Vermillion branch of Wabash, but, flowing NW. by comparative course 60 ms., falls into Illinois river at Vermillion rapids.—River and branch of the Mississippi, entering that stream above the falls of Pegagama.—C. H. and post office, Vermillion co., Illinois, about 120 ms. NE. from Vandalia, and 100 a little N. of W. from Indianapolis, in Indiana.

Vermillion, co. of Indiana, and Vermillion co., Illinois, bound on each other, and are both crossed by the river of the same name and by N. lat 40°. Newport is the co. seat of that of Indiana, and Danville of that of Illinois. Pop. of Vermillion, Indiana, in 1840, 8,274; pop. of Vermillion, Illinois, in 1840, 9,303.—Co., Illinois, on Vermillion of Wabash, and N. from Edgar co. It is traversed by lat. 40° N.

Vermillion, river of La., rises 3 ms. NW. from the town of St. Landré, in Opelousas, by Bayou Bourbée. After continuing to flow to the S. a little E. 12 ms., an interlocking stream, the Fusilier, unites the Vermillion and Teche, forming the limit between Opelousas and Attacapas at that place. The Vermillion continues through St. Martin's, the upper parish of Attacapas, in nearly a S. direction 60 ms., having an entire course of a little more than 70 ms. The arable lands along the Vermillion are extremely fertile, and, as the stream flows S. of lat. 30°, sugar can be cultivated on its banks; considerable forests clothe the banks of the Vermillion near the limits of the Opelousas and Attacapas; but in proceeding towards the sea trees gradually diminish, and near the bay, except a few clumps of cypress, live oak, &c., the prairie or sea marsh extends on all sides. The tide rises in the Vermillion 15 or 20 ms.; but the bar at the mouth only admits vessels drawing 4 or 5 feet of water.

Vermillion, and *Côte Blanche Bays*, Louisiana, are only parts of the same sheet of water indented by Point Cyprière Mort, and limited on the S. by a chain of low marshy islands. The depth of water over the two bays is 10 or 12 feet, though no vessels drawing more than 5 feet can enter. The coast along the shores is low and marshy, except the two small elevated spots of Côte Blanche and Grand Côte. Small clumps of trees are scattered along the lagunes, but the general surface grassy marsh.

The grand or western pass into Vermillion bay is the main outlet of Vermillion river, and is about one mile wide and three long. Morrison's cut or eastern pass is merely a strait between two small islands, each pass having about 5 feet water.

Vermillion Bridge, and post office, St. Martin's parish, La., 15 ms. NW. from St. Martin's, and 25 a little E. of S. from St. Landre, in Opelousas.

Vermillion Sea.—See *Gulf of California*.

 Length from N. to S. 160 ms., mean width 52; area, 8,000 sq. ms; lying between lat. 42 44 and 45° N. A chain of high mountains, running N. and S., divides the State nearly in the centre, between the river Connecticut and Lake Champlain. The natural growth upon this chain is hemlock, pine, spruce, and other evergreens; hence they are called the Green mountains, and give name to the State. The country is generally hilly, but not rocky, and the soil is fertile. It has numerous streams and rivers, which all rise in the Green mountains; the largest are on the W. side, and the chief are Otter creek, Onion river, La Moelle, and Mischiscou; the most numerous are on the E. side, and the largest are West river, White river, and Passumpsic.

The principal products of Vermont are small grain, pot and pearl ashes, beef, pork, &c. The opening of the Champlain canal must be of incalculable advantage to the western section of Vermont, in opening to the inhabitants the markets of the Hudson.

There are two colleges in Vermont, located at Burlington and Middlebury.

Vienna, city of Germany, capital of the Empire of Austria. It stands in a fertile plain, on the right bank of the Danube, at the influx of the little river Vien. The city itself is not of great extent, nor can it be enlarged, being limited by fortifications; but it is populous, and contains 78,000 inhabitants. The streets in general are narrow, and the houses high; but there are several fine squares, and in that called Joseph square is a colossal equestrian statue in bronze of Joseph II. Some of the public buildings are magnificent; the chief of them are the imperial palace, the palaces of the princes Lichtenstein, Eugene, &c., the imperial chancery, the extensive imperial arsenal, the city arsenal, the mint, the general hospital, the town house, the custom-house, the bank, the library, and the museum. No houses within

the walls are allowed to be built nearer to the glacis than 600 yards; so that there is a circular field of that breadth all around the city, which has a beautiful and salutary effect. The eight suburbs are said to contain 220,000 inhabitants; but they are not populous in proportion to their size, for many houses have extensive gardens. The circumference of the city and suburbs is upwards of 18 ms. Many families who live during the winter within the fortifications spend the summer in the suburbs. The cathedral is built of freestone, and the steeple contains a bell of uncommon magnitude. The archducal (now imperial) library is much frequented by foreigners, as it contains above 290,000 printed books and 10,000 manuscripts. The archducal treasury, and a cabinet of curiosities of the house of Austria, are great rarities. The Danube is here very wide, and contains several woody isles, one of which is the prater, or imperial park; it also forms a sort of harbor, where are magazines of naval stores, and ships have been fitted out to serve on that river against the Turks. The trade of Vienna is in a flourishing state, and it has manufactures of silk stuffs, gold and silver lace, tapestry, looking-glasses, &c. It is 50 ms. W. of Presburg, 350 NNE. of Rome, and 570 E. of Paris. Lon. 16 16 E., lat. 48 13 N.—See art. *Germany*, p. 349.

Breadth from N. C. to Pa. 233 ms. Between lat. 36 30 and 40 37 N. From its great extent, and from being so much intersected by mountains, Va. presents a very marked diversity of soil and climate. It possesses the main southern nucleus of the Appalachian system, spreading also into the widest base upon which that system rests.—See art. *United States*.

In point of soil, Va., like Md., presents three distinct tracts. The first, that of the alluvial sea sand, inland to the falls of the rivers, and generally to the head of tide water. This region is flat, and in part marshy along the sea coast, but rising imperceptibly, inland, into the second or hilly tract. The latter again merges gradually into the third or mountain section. The subjoined tables will exhibit the relative density of pop. on the respective sections. The middle section of Va. is remarkable for its rich scenery, and generally for good soil and the production of excellent grain. The narrow zone between the Blue Ridge and Alleghany mountain is generally considered as the most productive region of Va.

In order to give the reader means of estimating correctly the present locality of population in Virginia, the counties in the respective zones, as far as their outlines would admit, are given separately.

No. 3.—The surface of West Virginia is still more broken than that of West Pa. In one respect the two sections are equal; the air and water of both are pure and healthful. Strenuous exertions are making by the Legislature and people of Va. to open an uninterrupted water communication from James river to the Great Kanawha, and down that stream to the Ohio. Should such an undertaking be carried into effect, and nature appears to have opposed no obstacle insuperable to genius, wealth, and industry, to remove, then will a new and most important commercial line be added to connect and cement the two opposing slopes of the Ohio river and Atlantic ocean.

We perceive, by the foregoing table, that a very scattered population of a little more than 5 to the q. m. spreads over a surface, in West Virginia, of 8,130 sq. ms. This includes also the two extremes, and comparatively thickly populated cos. of brooke and Ohio, W. from Pennsylvania, the two Monongalias, on Monongahela river, S. from Pa., and Washington, on the waters of Tennessee. The superficies and population of these cos. are, if taken together, 2,100 sq. ms., and 39,297 inhabitants; leaving for the residue 26,030 sq. ms., and 107,817 inhabitants. This presents a surface, in West Virginia exceeding, 26,000 sq. ms.; upon which here exists a population of within a trifling fraction of 4 persons to the sq. mile.

We here behold the interesting results, that although the large towns of Richmond, Petersburg, and Lynchburg are all included in the middle section, and though comparatively inferior in soil, that the alluvial portion of Virginia contains the most dense population of any of the great sections of that State.

The following table exhibits the entire population at the respective censuses of 1810 and 1820.

In the alluvial and middle counties enumerated in sections Nos. I. and II. there were, by the census of 1820, free whites 452,930, and slaves and free colored persons 424,370.

In the cos. of West Virginia there were, by the census of 1820, 6,728 male and 6,568 female slaves, amounting to 13,296. There were free persons of color, 551 males, 487 females, amounting to 1,028. The slaves and free persons of color, united, making an aggregate of 13,296, and leaving free whites 132,790.

The interests of education have received ample consideration from the Legislature of Virginia. The University of Virginia is located at Charlottesville. The most ancient college of that State, William and Mary, is at Williamsburg.—See *Williamsburg*. Washington college at Lexington.—See *Lexington*. Hampden Sydney college stands in Prince Edward county.—See *Prince Edward*.

The funds appropriated by the Legislature of Virginia for literary purposes are about 1,200,000 dollars, received from the United States for military services, and other sums arising from escheats, fines, &c.—the whole estimated to yield annually \$90,000; of which, about one-half is appropriated to primary schools, and \$15,000 to the State university.

The actual commercial relations of Virginia may be seen by reference to the articles Alexandria, Norfolk, Petersburg, and Richmond, its four principal ports. The most valuable staples of this State are wheat and tobacco, but a considerable quantity of cotton is cultivated in the SE. counties. Small grain, fruit, and pasturage, abound, where due attention has been paid to agriculture. Iron, lead, gypsum, salt, and mineral coal, are its most valuable and abundant metallic productions.

Virnenberg, town of Germany, in the circle of Westphalia. It is 20 ms. W. of Coblenz. Lon. 7 5 E., lat. 60 27 N.

Vischma, town of Russia, in the government of Tobolsk. Lon. 61 22 E., lat. 62 36 N.

Viset, town of the Netherlands, in the bishopric of Liege, seated on the Maese, 7 ms. N. of Liege. Lon. 5° E., lat. 50 44 N.

Vishnei-Volotchok, town of Russia, in the government of Tver. Lon. 35° E., lat. 57 23 N. This place is situated on the canal which unites the Masta to the Tver, and takes its name from the Russian noun Volok, signifying the space between two navigable rivers.

Visiapour, or *Bejapour*, considerable city of the Deccan of Hindoostan, formerly the capital of a large kingdom of the same name, now subject to the Poonah Mahrattas. It is 136 ms. E. of Poonah, and 234 SE. of Bombay. Lon. 75 19 E., lat. 17 26 N.

Visorogod, town of Poland, in Masovia, with a castle, seated on the Vistula, 50 ms. NW. of Warsaw.

Vistula, large river which rises in Mount Crapach, on the confines of Silesia and Hungary, crosses Poland and Prussia, and falls by three mouths into the Baltic, below Dantzic. It is formed by the Vistula proper, the Bug, and Narew, and passes Cracow, Sandomir, Warsaw, Culm, Marienberg, and Dantzic. The Vistula is a very important river in the general commercial connexion of Europe; its basin, 400 by 180, extends over 72,000 sq. ms. Canals of considerable magnitude unite the Vistula with the basins of the Dnieper and Oder. That of Thorn joins the Warta to the Vistula, and that of Pinsk unites the Bug and Prypec. The Vistula is navigable from Austrian Galicia to the Baltic at Dantzic, nearly 400 ms.; its branch, the Bug, nearly 400 ms., and as much by the Narew. By these the produce of Poland passes down to Dantzic in sloops and flat-bottomed barges of from 30 to 60 tons. Below Marienwerder the river divides into various channels. That to the NW. passes Dantzic, and enters the Baltic at Weichelmunde by an artificial cut. The main body enters the Friche Haff, by

which the inland navigation is prolonged to K nigsberg, on the Pregel. The delta of the Vistula as high as Marienwerder, is an embanked country.

VITENA-GEMOT, "Meeting of the wise men" Anglo-Saxon, Legislature, parent of the British Parliament. This council was otherwise called "Mycel-getheath," GREAT THOUGHT.

Viterbo, episcopal town of Italy, in the patrimony of St. Peter, containing 10,000 inhabitants, seated at the foot of a mountain, from the top of which the city of Rome and the Mediterranean sea may be seen; the latter at a distance of near 40 ms. It is 20 ms. SE. of Orvieto, and 35 N. W. of Rome.

Vitre, town of Fr., in the dep. of Isle and Vaine, and late province of Brittany, with a trade in linen cloth and knit stockings and gloves. It is seated on the Vilaine, 20 ms. NE. of Rennes.

Vitri-le-Brule, village of France, in the dep. of Maine, and late province of Champagne.

Vitri-le-Francois, town of France, in the dep. of Marne, and late province of Champagne. It has a great trade, particularly in grain, and is seated on the Marne, 15 ms. SE. of Chalons, and 10 E. of Paris. Lon. 4 38 E., lat. 48 44 N.

Vitring, town of Germany, in Austria, on Lal Wordstee, 4 ms. SW. from Clagenfurt.

Vitteaux, town of Fr., in the dep. of Cote d'Or and late province of Burgundy, on the river Brain where there are quarries of marble, 12 ms. SE. Semur, and 27 W. of Dijon.

Vitoria, or *Victoria*, town of Spain, in Biscaya, capital of the province of Alaba. It has a great trade in hardware, particularly in sword blades which are made here in great quantities. It is seated on an eminence, at the end of a plain fertile in corn and grapes, 32 miles SE. of Bilbao and 155 N. of Madrid. Lon. 2 56 W., lat. 42 55 N.

Vivarais, late small province of Fr., and now included in the dep. of Ardeche.

Vivero, town of Spain, in Galicia, seated at the foot of a steep mountain, near the river Landrove, whose mouth forms a large harbor in the Atlantic, 30 ms. NW. of Mondonnedo. Lon. 7 34 W., lat. 43 50 N.

Viviers, town of Fr., in the dep. of Ardeche and late province of Languedoc. It is seated among rocks, (on one of which the cathedral is built,) on the river Rhone, 20 ms. N. of Orange and 70 NE. of Montpelier. Lon. 4 46 E., lat. 44 20 N.

Viza, town of Turkey in Europe, in Romanic at the foot of a mountain, at the source of the river Glicenero.

VIZIR, from Arabic, *wazara*, or *wazir*, to sustain, carry, bear the burden, or perform the duty of another. The Grand *Vizir* in Turkey represents the Sultan, and is the highest dignity under that monarch. *Vizir-Azem*, or Grand *Vizir* was created by Amurath I., in A. D. 1370.

Voerden, town of the kingdom of Holland. It is seated on the Rhine, 10 miles W. of Utrecht and 20 S. of Amsterdam. Lon. 4 58 E., lat. 52 6 N.

Voghera, fortified town of Italy, in the duchy of Milan, and territory of Pavia. It is pleasantly seated on the Staffora, 14 ms. SSW. of Pavia, and 30 S. by W. of Milan. Lon. 9 10 E., lat. 44 59 N.

Voglabruck, town of Germany, in the archduchy of Austria. Lon. 13 40 E., lat. 58 1 N.

Vogouls, people in Asia, subject to Russia, who have established their habitations in the forests, on the N. side of Mount Oural, extending themselves to the W., and still further on the plains to the E. of this chain of mountains. Here they have dwelt from time immemorial, and are possessed of traditions which have a great conformity with history. Some authors pretend that they are the brethren of the ancient Ougrians, or of the present Hungarians, and found their conjecture on the situation of the Vogoul territory, and the striking resemblance there is between the language of the two nations.

Void, town of Fr., in the dep. of Meurthe, and a province of Lorraine.

Voigt, or *Voer*, German, and having the same signification as *præfectus*, Latin, president of a district. The ancient family of Hunelstein retains the honorary title. The eldest male heir is styled Voigt Von Hunelstein.

Voightland, territory of Germany, in Upper Saxony, on the four circles of the marquisate of Misnia. It is bounded on the E. by Bohemia, on the N. by the duchy of Altenburg, and on the W. by Thuringia and Franconia. Plawen is the capital. This, like many other terms in German geography, is in a great part obsolete.

Voigtsberg, town of Germany, in the circle of Upper Saxony, with a citadel.

Vokelmark, or *Wolickmark*, town of Germany, in the circle of Austria. Lon. 14 56 E., lat. 46 5 N.

Vollano, seaport of Italy, in the Ferrarese, seated on the Gulf of Venice, at one of the mouths of the Po, 40 ms. E. of Ferrara. Lon. 12 36 E., lat. 45 2 N.

VOLCANO, in geography and geology, a fiery eruption from the bowels of the earth. Of the matter ejected, *lava* and *scoria* have been reduced to their respective conditions by the action of excessive heat; lava is the matter which has been completely fused, and scoria the same, though less acted upon by heat; and pozzolana, or puzzolana, is the ashes or earth thrown out of volcanoes. Mud and water have been also ejected from some American volcanoes. Mountains are almost invariably associated with volcanoes, and all known volcanoes are in mountain systems; but when we carefully analyse the phenomena of those furnaces, we are justified to regard volcanic cones, at least, as the effect of the internal force, whatever may be its cause. Into the theory of volcanoes we cannot enter in this treatise, and may only observe, that most active volcanoes are near the sea. The number of active volcanoes amount to some hundreds, but are few, however, when compared with those the fires of which are extinct.

Volcano, one of the Lipari islands, in the Mediterranean, 12 ms. in circumference. It is a volcano, in the form of a broken cone, but now emits smoke only.

Volcanello, small volcanic island in the Mediterranean, between that of Lipari and Volcano.

Volga, largest river in Europe, which has its source in two small lakes, in the government of Pleskof, in Russia, about 80 ms. W. of Tver. It begins to be navigable a few miles above that town, and is considerably augmented here by the junction of the Tverza, which is a broader, deeper, and

more rapid river. By means of the Tverza, a communication is made between the Volga and the Neva, or, in other words, between the Caspian and the Baltic. This river waters some of the finest provinces in the Russian empire, passes by Yaroslaf, Kostroma, Nisnei-Novogorod, Kasan, Simbirsk, and Saratof, entering the Caspian sea, by several mouths, below Astracan. The Volga is formed by two immense branches, the Volga proper flowing from the W., and the Kama from the E. These two great streams unite at lat. 55 10 N., lon. 50 0 E. from London. Below their junction, the united waters assume a general course a little W. of S. 800 ms. to the Caspian. Estimating by comparative courses, and following the Volga proper, the entire length is about 1,600 ms.; by the Kama, 1,300 ms. Below Saratov, the Volga receives no branches of any consequence in a distance of 400 ms. Rejecting, therefore, this prolongation, the basin of this fine river is in length, from the Ural mountains to the sources of the Oka, 1,100 ms., and in breadth from N. to S. 500 ms. Area 550,000 sq. ms., or about the one-sixth part of all Europe. The usual fertility of the deltas of large rivers has an exception in that of the Volga, which river does not bring with it a rich alluvial deposit. The adjacent country to the mouth of, and not inundated by the waters of the Volga, consists chiefly of heaths and downs, which, though not entirely sterile, are ill adapted to agriculture. As it seldom rains in that part of Russia, the people are obliged to water artificially every field that is cultivated on the banks of the river. The summer heat over the Volga delta is most oppressive; the thermometer of Fahrenheit rises at times to 103°. The winter cold is equally oppressive; the north winds often sink the mercury to 22° below zero. This stream, taken in extenso, however, includes the most expanded uninterrupted navigable basin on the eastern continent, and is, in nearly all its parts, exempt from falls, or even rapids. On the northern side, the Valday hills separate the basin of the Volga from the great slope, inclining towards the Baltic and White seas.

Through the Valday hills three passes have been examined for canal erection. One to the SW., by the Emsta, Lake Ilmen, and river Volchoff; the fall to the Gulf of Finland is about 570 feet, and to the Caspian about 890 feet. The second route is by the Lake Ladoga and rivers Sars and Fifin; the fall towards the Gulf of Finland is about 920 feet, and into the Caspian 1,240. The third, or NE. route, is the lowest depression between the Caspian and Baltic seas. It rises from the latter by the river Neva, Lake Ladoga, river Swire, Lake Onega, and the river Whitegra, about 460 feet, and falls in the opposite direction 780 feet. For the cause the different descents towards the Caspian and Baltic seas, see art. *Caspian*. Through the southwestern route, a navigable canal has been in operation above a century.

Washington City, capital of the United States and of the D. C. The following description is from the pen of Mr. John Sessford, and extracted from the National Intelligencer:

Washington city, in the District of Columbia, the metropolis of the U. S. is situated on the left bank of the Potomac and the right bank of the Anacostia, in lat. 38 53, lon. 0°, being intended for a first meridian. The Tyber runs through the middle of the city, and may be conveyed to the high ground on which the Capitol stands, and the water of the Tyber and Reedy branch may be conveyed to the Capitol and the President's house.

The buildings belonging to the United States are—

The Capitol, a large and massy building of the Corinthian order, of freestone, composed of a central edifice and two wings; the whole front of the building is about 360 feet; the wings were nearly completed when the British army, under General Ross, (who was afterwards slain in a battle near Baltimore,) in August, 1814, made a sudden incursion, gained possession of the city, setting fire to the Capitol, President's house, public offices, &c., not connected with the operations of war, reducing the whole to ashes, together with a valuable and extensive library belonging to Congress; the wings are rebuilt, and the centre nearly completed. The foundation of the north wing was laid in the presence of President Washington, on the 16th of September, 1793, and that of the centre on the 24th of August, 1818, being the anniversary of its destruction by the British.

The President's house, built of freestone, 2 stories high, of the Ionic order, and covered with copper, and distant from the Capitol about one mile and a half.

Four buildings, erected in a line E. and W. of the President's house, for the accommodation of the principal departments of Government and subordinate offices; the whole were of brick, two stories high, with freestone basements, and covered with slate.

Of the four original buildings erected E. and W. of the President's house, the two western or Navy and War offices remain, as also does the northeastern or State house; but that placed at the SE. angle, the Treasury, having been consumed by the fire, was replaced by an edifice of stone and fire proof. It is about 300 feet in length, 3 stories above the basement.

The General Post Office and Patent Offices have been replaced for a like reason with the Treasury edifice, with edifices fire-proof. The Treasury building is on 15th street W., with its centre and main entrance opposite F street. The General Post Office faces E and 7th street W., and between 7th and 8th and E and F.

The Patent Office stands between 7th and 9th streets W., and between F and G.

Those three buildings are as architectural specimens ornamental to the city, but their material being fire proof is of infinitely more importance than their elegance as mere structures.

A very extensive navy yard, completely en-

closed with a lofty brick wall, with a handsome gate-way, with guard rooms, a neat dwelling for the commandant, and others for different officers of the yard, extensive warehouses, shops for blacksmiths, &c.

A comfortable marine barrack sufficient for 1,500 men, well enclosed, having a handsome parade, and a neat and commodious residence for the commandant of the corps, and good houses for the subaltern officers, an armory, and shops for the repair of arms, &c.

A substantial navy magazine, with a house for the keeper.

A fort at the extreme southern point of the land in the city, commands the channel of the Potomac and the Eastern branch. The improvements at this place are extensive and substantial, with storehouses, an armory, shops in which are made gun carriages, fixed ammunition, &c., with an extensive open space, belonging to the garden.

The Capitol square is enclosed by a strong and handsome iron railing, and in part planted with trees and shrubbery, and will, in a short time, afford a delightful promenade. Similar improvements are making at the President's house and public offices.

An extensive window glass manufactory, which supplies the market, and exports to a considerable amount, five very extensive taverns, with accommodations equal to any of a similar nature, three banks, a branch of the U. States Bank, a fire insurance company, nine printing offices, two daily papers, two tri-weekly and two weekly. A steamboat runs regularly to Aquia creek, one to Alexandria, and another from Norfolk to the city. Five stages depart daily to Baltimore, and several others to other places.

The seat of Government was removed here in the year 1800, during the Presidency of John Adams.

The city was incorporated by an act of Congress passed on the 3d of May, 1802, by which act the appointment of mayor was vested in the President, yearly; and the two branches of the council elected by the people in a general ticket. In a supplementary act passed May 4, 1812, the corporation was made to consist of a mayor, a board of aldermen, and a board of common council; the board of aldermen to consist of eight members, elected for two years, two to be residents of and chosen from each ward; the board of common council to consist of twelve, three from each ward; the may, by the joint ballot of the two boards, to serve for one year. By a new charter, granted by Congress on the 15th May, 1820, it is provided that the mayor shall be elected by the people, to serve two years from the 2d Monday in June; the board of aldermen to consist of two members from each ward, elected for two years, and are ex-officio justices of the peace for the whole county; the board of common council to consist of three members from each ward, to serve one year; and every free white male citizen of the U. States of lawful age, having resided in the city one year previous to the election, being a resident of the ward in which he offers to vote, and shall have been assessed on the books of the corporation for the year ending on the 31st day of December preceding the election, and shall have paid all taxes legally as-

essed and due on the personal property, when legally required to pay the same, shall be entitled to vote at any election for a mayor or members of the two boards.

The city is, by an act of the council, divided into six wards. The number of inhabitants were at different periods, as follows, ascertained by the official enumeration, viz :

In 1800 -	-	-	-	3,211
1803 -	-	-	-	4,351
1807 -	-	-	-	5,651
1810 -	-	-	-	8,201
1817 -	-	-	-	11,291
1820 -	-	-	-	13,241

The number of dwellings, exclusive of public buildings and shops, was, on the 1st of January, 1822, 2,229, of which 1,035 were brick, and 1,184 wood; and the assessed valuation of real and personal property, on the 1st of January, 1821, was \$6,568,726, affording a revenue of \$32,842 63 in addition to which there is a revenue of \$10,000 arising from the licenses of taverns, hackney coaches, &c., which is appropriated to the support of the poor, of public schools, and markets, and to pay the officers of the corporation.

The classified population of Washington is exhibited in the following table :

The following matter was published in one of the public prints of Philadelphia, December 20th, 1822, as a communication from the editor of this gazetteer to the editor of that print. It is here subjoined to the article Washington city, as it may give some aid to the future disquisition on the question by which it was produced; that is, the occupation of the mouth of the Columbia river by a colony from the U. States :

Washington is situated at N. lat. 38 54 N. and 7° W. from London.

The mouth of Columbia river is situated at lat. 6 15 N., and within a trifling fraction of 48° W. from W. C., 125° W. from London. The difference of lat., therefore, 7 21, and difference of lon. 8 0. By a calculation on Mercator's plan, the two places bear from each other N. 78 15 W., and S. 78 15 E., distant in geographical miles 1,162, and in English ms. 2,486. From Washington city to St. Louis, by Pittsburg and the Ohio and Mississippi rivers, 1,396 ms. From St. Louis to the mouth of Columbia, by the Missouri and Columbia rivers, 3,548 ms. Entire distance from Washington to the mouth of the Columbia, 4,944 ms. The distance from St. Louis to Washington, by Shawanetown and Knoxville, 1,029 ms. By Lexington, Ky., 1,005 ms. By Vincennes, Cincinnati, and Pittsburg, 1,011 ms.

St. Louis is 38 36 N. lat., 12 58 W. longitude. Mouth of Columbia, 46 15 N. lat., 47 57 W. lon. These two places bear from each other at an angle from the meridian 73 28, are consequently 73 28 W., and 73 28 SE., respectively; distant 1,714 geographical, and 1,861 English ms.

The several distances, as given by Messrs. Lewis and Clark, are no doubt over calculated; their aggregate distance exceeds the direct line almost two to one, an excess hardly credible. In most instances, where the lengths of rivers have been estimated by persons ascending their currents, the space passed through has been overrated, and the error has in most instances borne some proportion to the violence of the stream.

Washington, NW. co. of the D. C., bounded SE. by the city of Washington and Georgetown, SW. by Potomac river, W. and N. by Md., and E. by East Branch, or Anacostia river. It approaches to the form of a right angled triangle, 7 ms. base, by 6 perpendicular, and with an area of 21 sq. ms. Surface hilly, and soil of middling quality. Pop. 1820, 2,729; and in 1840, including the city of Washington, 23,745. Central lat. 38 56 N., lon. W. C. 3 1/2° W.

Washington, village at the SE. foot of the Blue Ridge, and at the head of Thornton's river, in the NW. part of Culpeper co., Va., 65 ms. WSW. from W. C.

Washington co., Va., bounded S by Tenn., W. by Scott co., Va., NW. by Russel N. by Fawcett, NE. by Wythe, and SE. by Grayson. Length 50 ms., mean width 17, area 850 sq. ms. This co. lies in the various valleys of the two great branches of Holston river, and is drained by those streams and their numerous confluent. Though generally hilly, the soil is fertile. Chief town, Abingdon. Pop. 1820, 12,444; and in 1840, 28,850. Central lat. 36 40 N., lon. W. C. 5° West.

Washington, co., N. C., bounded by Hyde and Beaufort S., Martin W., Roanoke river and Albemarle sound N., and Tyrrell co. E. Length 20 ms., width 18, area 360 sq. ms. Surface level, and in part marshy. Soil generally thin and sterile. Chief town, Plymouth. Pop. 1820, 3,986; and in 1840, 4,525. Ctl. lat. 35 46 N., lon. W. C. 22° E.

Washington, village, Beaufort co., N. C., on the left bank of Pamlico or Tar river, about 50 ms.

below Tarborough. This is a place of considerable commercial importance.

Washington, co., Ga., bounded by Oconee river, of Wilkinson co., SW., Hancock NW., Ogeechee river, or Warren, NE., Jefferson E., and Emanuel and Laurens SE. Length 30 ms., width 23, area 690 sq. ms. Chief town, Sandersville. Pop. 1820, 10,627; and in 1840, 10,865. Central lat. 32 56 N., lon. W. C. 5 48 W.

Washington, village and seat of justice, Wilkes co., Ga., containing, beside the ordinary co. buildings, an academy, and about 700 inhabitants. About 50 ms. WNW. from Augusta, and by post road 70 ms. NE. from Milledgeville. Lat. 33 41 N., lon. W. C. 5 41 W.

Washington, co., Ohio, bounded by Ohio river SE. and S., Athens co. SW. and W., and Morgan and Monroe cos. N. Length 43 ms., mean width 14, area 600 sq. ms. Except near the Ohio and Muskingum rivers, the surface of this co. is hilly, and the soil sterile. Muskingum river enters the Ohio nearly at equal distance from its NE. and SW. angles. Chief town, Marietta. Pop. 1820, 10,425; and in 1840, 20,823. Ctl. lat. 39 30 N., lon. W. C. 4 30 W.

Washington, tp., Columbiana co., O. — Village and seat of justice for Fayette co., Ohio, 40 ms. SW. from Columbus. Lat. 39 33 N. — One of the NW. tps., Franklin co., O. — One of the western tps., Dark co., O. — Tp., Clermont co., O., on Ohio river.

Washington, co., Ia., bounded by Floyd SE., Harrison S., Orange and Lawrence W., White river or Jackson N., and Scott E. Length 24 ms., width 20, area 480 sq. ms. Big Blue river rises in this co., and flows S. into Ohio river. Chief town, Salem. Pop. 1820, 9,039; and in 1840, 15,269. Central lat. 38 36 N., lon. W. C. 9° W.

Washington, co., Ill., bounded by Randolph S., St. Clair W., Madison and Bond N., and Jefferson E. It is 30 ms. square, consequently, area 900 sq. ms. Kaskaskias river passes obliquely through it. Chief town, Covington. Pop. 1820, 1,517; in 1840, 4,810. Of these there were engaged in agriculture 77, in manufactures 39, and in commerce 18. Pop. to the sq. m., 1 1/2. Ctl. lat. 38 32 N., lon. W. C. 12 22 W.

Washington, co., Mo., S. from Franklin, and SW. from Jefferson and St. Genevieve. It lies on the heads of Big Black, Gasconade, Merrimac, and St. Francis rivers. It includes a great part of the lead mines of Mo., but is too vaguely defined to admit the insertion of its area or comparative pop. The surface is mountainous, hilly, and broken, though much very fertile soil lies in detached places within its limits, particularly along the banks of the Merrimac, Big river, and Fourche à Cosurtois. The mine tract in the northern part of this co. is traversed by lat 38° N., and lon. W. C. 13 50 W., and lies SSW. about 50 ms. from St. Louis. Pop. 1840, 7,212.

Washington, co., Ky., bounded by Green S., Nelson W. and NW., Salt river, or Franklin, N., Mercer E., and Casey SE. Length 32, mean width 17 ms., area 550 sq. ms. It is drained by the various sources of Salt river. Chief town, Springfield. Pop. 1820, 15,947. Ctl. lat. 37 40 N., lon. W. C. 8 15 W.

Washington, co., Tenn., bounded by N. C. S., Greene co., Tenn., W., Sullivan N., and Carter E. Length 22, mean width 17 ms., area 540 sq. ms. Its southern part is drained by Nolachucky river, and the northern by Holston. Surface hilly and broken. Chief town, Jonesborough. Pop. 1820, 9,557; and in 1840, 11,751. Ctl. lat. 36 11 N., lon. W. C. 5 33 W.

Washington, co., Ala., bounded by Miss. W., Choctaw country N., Tombigbee river E., and Baldwin co., Ala., S. Length 50, mean width 20 ms., area 1,000 sq. ms. Surface moderately hilly, and soil, except in a few places near the streams, sterile, and covered generally with pine. Chief town, St. Stephen's. Central lat. 31 40 N., lon. W. C. 11 20 W. Pop. 1840, 5,300.

Washington, village, Mason co., Ky., 4 miles NE. from Maysville, containing an academy, two churches, and a printing office. Lat. 38 40 N., lon. W. C. 6 45 W.—Village and seat of justice, Rhea co., Tenn., on the right bank of Tennessee river, about 100 ms. below Knoxville, and 80 ms. SE. by E. from Murfreesborough. Lat. 35 38 N., lon. W. C. 7 48 W.—Village and seat of justice, Autauga co. tp., Ala., on the right bank of Alabama river, at the mouth of Autauga creek, 23 ms. above Cahaba. Lat. 32 24 N., lon. W. C. 9 33 W.

Washington, parish of La., bounded by Miss. N., Pearl river E., parish of St. Tammany S., and Tangipao river, or St. Helena, W. Length 45, mean width 22 ms., area about 1,000 sq. miles. Surface moderately hilly, and soil generally sterile, and covered with pine timber. It is principally watered by the Bogue Chitto and Chifuncte rivers. Pop. 1820, 2,517; and in 1840, 2,649. Central lat. 30 50 N., lon. W. C. 13 10 W.

Washington, village, and recently the seat of government of the State of Miss., stands on a high, dry, and healthy site, on the left bank of St. Catharine creek, 6 ms. E. from Natchez. Pop. about 1,000. Jefferson college was incorporated in 1802, and located in this town. A large frame building, capable of accommodating about 70 students, was erected, but it has not flourished as a literary institution beyond the ordinary effects of an academy. Lat. 31 35 N., lon. W. C. 14 15 W.

Washington, court house and post office, on the small river Sinta Bogue, Washington co., Ala., 12 ms. NW. from Fort St. Stephens, and 75 N. from Mobile. Lat. 31 39 N., lon. 11 18 W.

Washington Hollow, village, Dutchess co., N. Y., on Wappinger's creek, 12 ms. NE. from Poughkeepsie.

Washington Point, cape formed by the two branches of Elizabeth river, about one mile above Norfolk, Va. Here the United States have a marine hospital.

Washitau, or *Ouachitau*, NE. parish of La., bounded by the Mississippi river NE., the parish of Concordia and Ocatahoola SE., Rapides S., Natchitoches W., and the territory of Arkansas N. Length 85, mean width 50 ms.; area 4,000 sq. ms. That part W. from Washitau river is hilly, with a sterile soil covered with pine timber. A similar characteristic is continued E. of that stream, in the northern section of the parish, to within 10 or 12 ms. from Mississippi river, E. from Washitau river, and in the S. and SE. part

of the parish, except along the margins of the streams, the surface is liable to annual submersion. The only arable land of considerable extent is found along the Washitau, Bartholomew, Bayou Siard, and the rivers Bon Idee and Bœuf. There are, however, distant from the watercourses two small but very productive prairies, Mer Rouge and Jefferson. Except those, and a few other small prairies, the whole not amounting to 25 sq. ms. the whole parish of Washitau, in a state of nature was covered with a very heavy forest—pine W. and NW., and a mixed mass S., SE., and E. The arable river alluvion very productive. Staples, cotton and lumber. Pop. in 1820, 2,890. Cent. lat. 32 35 N., lon. W. C. 15° W.

Washitau, river of Ark. and La., great NE. branch of Red river. This stream rises by three large branches between Arkansas and Red river about 15° W. from Washington, and at lat. 30 30 N. It thence flows nearly E., the three branches uniting above the Hot Springs. Opposite the latter place the Washitau turns S., enters La. at lat. 33° N., and continues in that direction to lat. 31 39 N., where it receives the Tenassee from the SE., and Ocatahoola from the NW., and takes the name of Black river.—See *Black river*, *Ocatahoola*, and *Tensaw*. The Washitau is navigable, during spring floods, as high as the Hot Springs, and, except in very dry seasons, at a times to the upper settlements in La. Below the springs, it is augmented from the W. by the Caddo fork, Little Missouri, Saluter, and Derbane and from the E. by the Saline, Barthelony, and Bœuf rivers.

Wassana, city of Africa, on the Niger, lying according to the best information, at lat. 11° N. and lon. 17° E. from London. This is probably the same place mentioned by Ptolemy under the name of Gano, and marked on the various maps of Africa as Gano, Gana, Wangara, and Gangara.—See *Africa*.

Wassenburg, town of Germany, in Westphalia. *Wasserburg*, town of Germany, in the circle of Bavaria, with a castle. Lon. 12 13 E., lat. 48 North.

Watauga, SE. branch of Holston river, rises by two sub-branches: one, the main and northern rises in Smith co., Va., and, flowing southwesterly through Washington co., enters Tennessee, and, flowing across Sullivan county, receives the Watauga proper from the SE.; the latter rises on the high table land of Ashe county, N. C., and pursuing a NW. course, passes through the Iron mountain into Carter co., Tenn., unites with the North branch, and below their junction continues westerly to join the main Holston at Boatworskingport, on the border between Sullivan and Hawkins cos.

Watchet, town of Eng., in Somersetshire, on the Bristol channel, at the mouth of a good harbor, much frequented by coal ships, which are freighted hence with limestone and various other articles. It is 14 ms. NW. of Bridgewater, and 153 W. by S. of London. Lon. 3 25 W., lat. 51 12 N.

Wateewo, island in the South sea, discovered by Captain Cook. It is about 6 leagues in circuit, is a beautiful spot, with a surface covered with verdure, and composed of hills and plains. From

very circumstance, it may be considered as indubitable, that the inhabitants of Wateoo derive their descent from the same stock which has so remarkably diffused itself over the immense extent of the Southern ocean. Lon. 158 15 W., lat. 21 S.

Waterborough, town, York co., Me., on the E. side of the river Mousin, 15 ms. NW. of Kennebunk, 41 N. by E. of Portsmouth, in N. H., and 47 W. of Portland. Pop. 1820, 1,762.

Waterbury, town on Onion river, Washington co., Vt., 12 ms. NW. from Montpelier.—Town on Naugatuck river, New Haven co., Ct., 19 ms. NW. from New Haven, and 25 SW. from Hartford. Pop. 1820, 2,882.

Waterree, river, S. C., NE. constituent of Santee.—See *Catawba river*. The Waterree enters S. C. in York district, flows SSE. by comparative courses 120 ms., and joins the Congaree 40 ms. SE. from Columbia.

Waterford, co. of Ireland, 46 ms. long and 25 broad, bounded on the S. by St. George's channel, on the W. by Cork, on the N. and NE. by the river Sure, which separates it from Tipperary and Kilkenny, and on the E. by Waterford Haven, which parts it from Wexford.—City and port of Ireland, in a co. of the same name. It is the second place in the kingdom, and has an excellent harbor, where ships of the greatest burthen may ride at the quay. It stands on the river Sure, 8 ms. N. of St. George's channel, 26 S. of Kilkenny, and 75 S. by W. of Dublin. Lon. 6 4 W., lat. 52 18 N.—Town of Eng., in Hertfordshire, on the river Coln, 7 ms. S. by W. of St. Albans, and 14 NW. of London. Lon. 0 17 W., lat. 51 41 N.—Town, Oxford co., Me., 2 ms. SW. from Paris.—Town, Caledonia co., Vt., on Connecticut river, 22 ms. E. from Montpelier.—Town, New London co., Ct., between the Thames and Nautick rivers, adjoining New London to the NW.—Town, Saratoga co., N. Y., lying on the W. side of Hudson and E. side of Mohawk river, opposite to Lansingburg, 6 ms. above Troy, and 11 above Albany.

It is joined to Lansingburg by a fine wooden ridge, is regularly laid out; the site rises by a gradual acclivity from the Mohawk, and the buildings have generally a neat and some an elegant appearance. Pop. 1820, 1,184.—Tp., Gloucester co., N. J. Pop. 1810, 2,105; in 1820, 3,447.—Formerly Le Bœuf, village, Erie co., Pa., between Le Bœuf creek and lake, 15 miles SSE. from Erie. At high water, the Le Bœuf creek is navigable to this place.—Township, Erie co., Pa., including the foregoing village.—Village at the NW. foot of Tuscarora mountain, and in Tuscarora creek, Mifflin co., Pa., 20 miles a little S. of W. from Lewistown; and by post road 32 ms. NW. by W. from Harrisburg.—Village in the northern part of Loudon co., Va., 10 ms. N. from Leesburg, and by post road 42 ms. NW. from W. C.—Two tps., Washington co., O., on Muskingum river, opposite to each other, 10 ms. above Marietta.

Waterloo, village of the kingdom of Belgium, in Brabant, 12 ms. S. from Brussels, about midway between the two small rivers Dyle and Senne, and on the road from Brussels to Namur.—Village and seat of justice, Seneca county, N. Y., on Seneca river, at its falls, 5 ms. NE. of and below Geneva. It is a thriving village. Lat. 42 55 N., lon. W. C. 0 6 E.—Post office, in the extreme SW. angle of Mifflin co., Pa.; by post road 105 ms. W. from Harrisburg.—Tavern and post office, Anne Arundel co., Md., on the road from Baltimore to W. C., 25 ms. from the latter.—Village, Laurens district, S. C., 12 ms. S. from Laurensville, and by post road 86 miles NW. by W. from Columbia.—Village, Fayette co., Ia.—Post office, Lauderdale co., Ala.

Watersay, one of the western isles of Scotland, separated from S. Uist by Chisamel bay.

Watertown, town, Middlesex bay, Mass., on Charles river, 8 ms. N. by W. of Boston. It is the seat of several extensive manufactures.—Town, Litchfield co., Ct., on the E. side of Naugatuck river, 10 ms. SE. of Litchfield.—Village and seat of justice, Jefferson co., N. Y., on the left bank of Black river, 81 ms. NNW. from Utica, and 8 ms. E. from Sackett's Harbor. It is a fine flourishing village, built on a swelling eminence, in a broken but fertile country. It is the seat of a State arsenal, printing office, &c. In 1810, pop. of the tp. 1,841; in 1820, 2,766; and in 1840, 5,027.

Waterville, town Kennebec co., Me., on the right bank of Kennebec river, 20 ms. above Hallowell. The principal village is at Teconick falls, at the head of boat navigation, and is the seat of several mills and manufacturing establishments, and also a theological Baptist seminary. Pop. in 1810, 1,314; in 1820, 1,719; and 1840, 2,971.—Village, Sangerfield, Oneida co., N. Y., 18 ms. SW. from Utica.—Village, Delaware co., N. Y., about 50 ms. W. from Hudson.

Welland canal.—The Welland canal (says a correspondent of the New York Commercial) has now about 1,000 men employed in the construction of the new locks and making the enlargement. During the past winter some 4,000 were employed, and as soon as the navigation ceases it is expected 6,000 men will find occupation. A greater number than is now employed cannot work to advantage without stopping navigation. The entire work will probably be completed in 1846, but in 1845 it will be navigable on the enlarged plan.

At the present time there are 32 locks; when the enlarged work is finished, there will be only 22, with a lift of from 12½ to 14 feet. The locks on the old canal are made of wood; the new ones are of granite, made in the best manner. Those at each entrance from the lakes are to be 185 feet long, and 45 feet wide; the other twenty, 150 feet long and 26½ feet wide. The length of the canal will be 28 miles. The vessels which will pass through the canal are to be 146 feet long and 26 wide, including all projections. The schooners will generally be of the burden of 450 tons. It is expected that the chief portion of the trade will be done by the new-fashioned steamers called "propellers."—See *Rideau river and canal*, p. 768.

White river, Ia., is the great SE. branch of the Wabash. It is formed by two branches, both rising about lat. 40° N., and lon. W. C. 8° W. and near the W. boundary of the State of Ohio. Flowing by a general course SW. about 70 miles the two branches unite, and, continuing below their junction 30 ms., joins the Wabash, between Knox and Gibson cos., at lat. 38 27 N. The valley of White river is a real curiosity in the hydrography of the U. S. The extreme eastern sources of Croghan's Fork rise within one mile from the bank of Ohio river, opposite Gallatin, Ky. A ridge of hills winds at no great distance from its banks, and nearly parallel to the Ohio from the Great Miami to the Wabash. The northern western streams of this ridge are discharged in either the White river or Wabash. The valley of White river is in form of an ellipsis, 180 miles long, with a mean width of 60, embracing an area of 10,800 sq. ms., and comprising about one-third part of the State of Ia. There are but few, if any, equal sections of the U. S. exceeding natural advantages this tract. In fertility of soil and mildness of climate it is a really desirable region. The streams without falls are, except seasons of drought, navigable almost to their sources.

White river, river of Ark. and Mo., rises in the southern part of the latter and northern part of the former by two large branches—White river proper or NW. branch, and Black river, or NE. branch. Both these rivers are navigable in seasons of high water, far above their junction. They unite at Ark., N. lat. 35 30, and the united streams thence nearly S., by comparative courses, about 120 ms., and fall into Mississippi river 30 miles above the mouth of Arkansas. White river is all seasons navigable below the mouth of Black river. The entire length of this stream, following either branch, is, by comparative courses, about 350 ms. ●

Wilkesbarre, town, borough, and seat of justice, Luzerne co., Pa., stands upon a level plain on the eastern bank of the Susquehanna river. It was laid out about the year 1775, by Colonel John Durkee, from whom it received its name, in compliment to Wilkes and Barre, two celebrated members of the British Parliament, favorable to the American cause during the Revolution. The streets are laid out at right angles, having a square of about four acres in the centre of the plot, the sides of which form an angle of 45° with the streets, so that the four principal streets enter the public square at its corner. The public buildings are within the square. From the main street, a bridge crosses Susquehanna, connecting Wilkesbarre and Wyoming, or Kingston. Pop. of Wilkesbarre borough in 1840, 1,718. Lat. 41 13 N. lon. W. C. 1 7 E.: 120 ms. NNW. from Philadelphia, and by post road 117 NE. from Harrisburg.

Wilkesbarre, valley of, commonly called the valley of Wyoming, is a real natural curiosity. The Susquehanna river enters the Appalachian system of mountains at Towanda, by breaking the western chain. Pursuing a SE. course of 50 ms. from Towanda, the great volume of waters in its rocky bed rolls through several chains in rapid succession, and finally enters the Wyoming valley, by a very marked mountain pass, above the mouth of Lackawannock creek. Here the river turns at right angles, and flows SW. 70 ms. to where the two great branches unite between Northumberland and Sunbury. The particular valley of Wyoming is a continuation of that of Lackawannock, and commences about 25 ms. NE. from Wilkesbarre, extending 7 or 8 ms. SW. of that village. It is therefore something above 32 ms. long, with a mean width of 2½. After winding down this vale 9 ms., the Susquehanna passes Wilkesbarre, and below the village 6 ms., again breaks through the same ridge by which it entered. The latter pass, or gap, has been evidently first formed, and gradually lowered by abrasion. Above and below Wilkesbarre, extensive alluvial flats, of different elevations, extend, having every appearance of once forming the bottom of standing water. Wilkesbarre itself stands on one of these alluvial plains, 18 or 20 feet above the ordinary level of the adjacent stream. The plains indeed, here, as every where else along the upper Susquehanna, though differing in elevation, are generally in two stages. The lower, and more recent, is still exposed to occasional submersion, and is composed of soil but

little admixed with rounded pebble. The second ledge is elevated above any rise that can now take place of the waters of the Susquehanna, and is formed by a congeries of rounded and amorphous tones and sand.

From these plains the mountains rise abruptly, though very seldom in precipices, and are mostly clothed with timber to their summits. Bald peaks and precipices, though not frequent, do, however, resent themselves, and give variety to this truly picturesque region.

Appalachian scenery, every where richly deserving more attention than it has received, presents in the Wyoming valley an assemblage of natural beauties that cannot be viewed without the most intense interest. Here, at one *coup-de-œil*, are combined, the river winding its fine volume through meadows and fields; alluvial plains relieved by wells of all forms, and on all sides mountains raising their broken and steep sides to the clouds.

The mineral wealth of this mountain valley is as remarkable as its natural attractions. Iron and mineral coal abound. The formation is secondary; and the rocks inclining to the SE. The species of coal (anthracite) lies imbedded in inclined strata, from two or three to twenty feet in thickness, and no doubt but very imperfectly and partially explored.

Wilkesboro', or *Wilkesville*, village and seat of justice, Wilkes co., N. C., on the Upper Yadkin river, 50 ms. N. from Lincolnton, and by post road 204 ms. NW. by W. from Raleigh. Lat. 36° N., lon. W. C. 4 12 W.

Wirtemberg, kingdom of Europe in Germany, bounded on the E. by Bavaria, and nearly on all other sides by the Grand Duchy of Baden. The two small duchies of Hohenzollern are nearly embraced by Wirtemberg. This kingdom, about the middle of the 11th century, formed a county in the circle of Suabia; it was erected into a duchy in 1495, but, contrary to most duchies of Germany, possessed a free representative government, which was destroyed when erected into a kingdom by Napoleon, but subsequently restored; and Wirtemberg now proudly boast of having one of the very best organized governments of the earth. There secured liberty of conscience and of the press, equality in rights of religious sects, and individual property founded on protection in property and in the performance of duty and restraint from injury to others.

The extreme southern part is drained into the lake of Constance by two small rivers, Aach and Regen. The Danube rising in Baden, and, flowing across Hohenzollern, traverses Wirtemberg in NE. by E. direction to Ulm. The central and northern parts, indeed more than two-thirds of the kingdom, are drained by the confluent of the Neckar. On the southwestern and western borders, Wirtemberg is mountainous, but the body of the country is agreeably diversified and generally fertile. In lat. Wirtemberg lies between 47 and 49 35 N. Politically it is divided into the following circles:

Circles	Pop.	Chief towns.	Pop.
Neckar	427,000	Stutgard	32,000
Stutgard	343,000	Elwangen	2,500
Heuberg	360,000	Ulm	15,000
Black Forest	392,000	Reutlingen	10,000
Total	1,522,000		

The entire territorial surface of the kingdom of Wirtemberg is only about 7,600 sq. ms.; it is consequently one of the best peopled countries of Europe. Two-thirds of the people follow the reformed doctrines in religion, but all sects are free to pursue their religious rites, if done peaceably. It is a fine country, happy in its government and society, and abounding in vegetable and mineral wealth. It is, in fine, a model to show what the world might be.

Wisbaden, town of Germany, in the principality of Nassau, capital of a lordship of the same name, subject to the prince of Nassau Saarbruck. It is famous for its warm baths and mineral waters, and is 5 ms. N. of Mentz. Lon. 8 20 E., lat. 49 56 N.

Wisbeach, town of Eng., in Cambridgeshire, in a fenny country, in the lakes of Bly, between two rivers, and possesses a considerable trade in the export of corn and of oil pressed from seeds at mills in its neighborhood. Barges only can come up its river, large vessels stopping 6 ms. below. It is 89 ms. N. by E. of London. Lon. 6' E., lat. 52 38 N.

Wisby, seaport of Sweden, in the isle of Gothland. It is seated on the side of a rock on the Baltic, 88 ms. SE. of Stockholm. Lon. 18 41 E., lat. 57 36 N.

Wiscasset, port of entry and post town, in Lincoln co., Maine, lying on the E. side of Sheepscot river, 13 ms. NE. of Bath, 18 S. of Pittston, and 55 NE. of Portland, in lat. 43 28 N., and lon. 69 22 W. It contains a bank, and annual exports amount to \$23,000. Pop. in 1810, 2,083; in 1820, 2,138; and in 1840, 2,314.

Wisconsin, Territory of the U. S., if taken *in extenso*, is bounded on the N. by the British territories, by Miss. river W., Illinois S., and by Lake Michigan, the northwestern part of the State of Michigan, and Lake Superior, E. In lat. it extends from 42 30 to 49 0 N., and in lon. from 100 to 18 30 W. W. C. Measured by the rhombs, the area comes out so near that we may assume 80,000 sq. ms. This region comprises the northwestern part of the original U. S. domain by the treaty of 1783. From SE. to NW., by a diagonal line, the length falls but little short of 600 ms. The breadth varies from 200 to 60 or 70 ms.: mean breadth about 130. The interior features of the unorganized part are in fact too little known to admit any specific description deserving insertion.

Wisconsin, organized and subdivided into cos., is bounded E. by Lake Michigan, NW. by Green Bay, Fox, and Wisconsin rivers, W., or rather SW., by Mississippi river, and S. by the State of Illinois. In lat. it extends from 42 30 to 45 20, and in lon. from 100 to 14 5 W. W. C. From the SW. angle, on Mississippi river, to the NE. point between Green Bay and Lake Michigan, the length is 280 ms. The breadth varies from near 100 to a mere point; area about 11,500 sq. ms. The face of the country rather waving than either hilly or flat, though both extremes exist. It is a territory in a remarkable manner supplied with navigable streams. Fox river, flowing into Green Bay, and Wisconsin into Mississippi river, approach each other so near as to leave but a short portage between their channels. The higher

branches of Rock river rise in Wisconsin, and flow into the State of Illinois. It has a coast of about 200 ms. on Lake Michigan, over which flow some small streams, but the shallowness of the water of the lake precludes any harbor admitting vessels of more than very moderate draught. The rivers afford much more extensive navigable facilities than does the lake. The town of Madison, on what is called the Four Lakes, is the capital of the Territory. This town is situated at N. lat. 43 5, and lon. 12 12 W. of W. C., and almost directly S. of the portage between Wisconsin and Fox rivers; distance about 40 ms., and about 140 ms. a little N. of NNW. from Chicago, Cook co., Ill.

Woolthorpe, a village of Eng., in Lincolnshire, about 6 ms. S. of Grantham, and about 12 E. from Melton Mowbray. In this obscure village, not marked on the map of Eng. published in Rees's *Cyclopædia* on 25th December, 1642, was born Isaac Newton. The birthplace of this ornament of human nature was indeed rather a manor house than a village, his father, John Newton, was lord of the manor of Woolthorpe.

Newton procured the first rudiments of his education at Grantham school, and on 5th of June 1660, was admitted into Trinity college, Cambridge, in his 18th year. The mind of Newton must have received an early and unconquerable bias for analytical mathematics, which led him to neglect the ancient geometry. This neglect was subsequently severely regretted by himself. In 1664, he procured a prism, and with its aid made such discoveries in optics as almost to have first raised that subject to the rank of a science. In 1666, Newton was elected a fellow of Trinity College, and in the same year took his degree of Master of Arts. On the 11th of January, 1672 the Royal Society did itself the honor to enrol the name of Newton as one of its members.

Dr. Brewster, in his eagerness to do honor to Newton, ascribes to him the discovery of the first and second laws of Kepler. The proposition containing those laws had been in print before Newton was born; this illustrious English astronomer demonstrated their principles, but it is barefaced imposition to make him their discoverer. According to Brewster himself, in the art. Astron

my p. 560, Kepler's Rudolphine tables were published in 1626, and states expressly, that these tables were founded on the true laws of planetary motion; that the planets moved in elliptic orbits, with the sun in one of the foci; and that the radius Vector described equal areas in equal portions of time.

In 1687, Newton's Principia were published by the Royal Society, under the protection of Dr. Halley, and placed the name of its author amongst the greatest of those who have contributed to exalt human nature. In 1699, he was made warden of the mint; and on the resignation of John Lord Somers, president of the Royal Society, 30th Nov., 1703. Both these offices he held until his death. Many of his important works were published after his Principia, but rather involved him in controversy than added to his fame. The evening of the life of Newton was not so tranquil as is too commonly supposed, nor did his own temper always remain unmoved by attack or contradiction, though he attained the great age of 84 years and some months. He died 20th March, 1727. With great inconsistent pageantry, his remains were laid in Westminster Abbey. His fame demanded more dignified and less showy mausoleum. His name alone would have been the most sublime of all epitaphs.

Yellow River, or *Hoang-Ho*, large river of Asia which, after a course of nearly 600 leagues across Tartary and China, enters the Eastern sea to the N. of the mouth of Yan-tse-kiang. It is very broad and rapid, and so shallow that it is scarce navigable. It is called the Yellow river because the clay and sand which it washes down, especially in time of rain, makes its water appear of yellow color. This is amongst the greatest rivers in Asia. Rising on the high table land of Mongolia, interlocking sources with those of the Bl. river and May-kiang. Fed by numerous confluent streams, and, by a very winding course, eastward at least 2,000 ms. along about the mean latitude 35° N.

Yellow Water, river which rises in Alabama runs nearly S. into Florida, falls into Pensacola bay, after a course of about 70 ms. It is a fine, clear, and beautiful stream, rising in pine woods.

Yenisei, or *Jenisa*, river of Siberia, which running from S. to N. enters the Frozen ocean to the E. of the Bay of Oby. The Yenisei is a river of the first class, rising on the vast plateau of Asia. It is composed of three great branches the Yenisei proper, Upper Tongouska, and Lower Tongouska. The former by the name of Sziakit, rises about lat. 50° N., pierces the Altaia and, flowing northwardly, joins the Upper Tongouska at lat. 57° N. The Upper Tongouska in reality the main stream; its higher source, the Selenga, rises in the country of the Kalkas Mongols, N. lat. 49°. Composed of numerous branches, and taking the name of Selenga, the elevated river falls into the Aral sea, from which it is again precipitated in the Angara. As mentioned by innumerable smaller streams, and changing its name to Tongouska, this main arm of the Yenisei reaches above N. lat. 60°, where it abruptly turns SW. 300 ms., and receives from the S., near Kemska, the Yenisci proper. The

ow immense volume rolls northwardly to above 60° , where it receives from the SE. Lower Angouska, and inclining to NNW., the Yenisei, lat 66° , is finally augmented by its last great tributary, the Ingouska. Crossing the Arctic circle, and advancing into the regions of perpetual frost, this great river reaches lat. 72° N., after a comparative course, from the sources of the Senega of 2,100 ms. Without estimating the solitary prolongation below the Ingouska, the basin of the Yenisei is 1,400 ms. long, with a mean width of 600 ms., area 840,000 sq. ms. This basin is remarkable for its great difference of level. It is probable that the country of the Kalkas Angols is at least 5,000 feet above the level of the ocean.—See *Angura, Tartary, Mongolia, Siberia, &c.*

York, city of Eng., the capital of Yorkshire. It is the Eboracum of the Romans, and many of their coffins, urns, coins, &c., have been found here. It has always been considered as the capital of the north, and, in point of rank, as the second city in the kingdom. York is 70 ms. S. by E. of Durham, and 198 N. by W. of London. Lon. 1° 1 W., lat. 53° 59 N.

York, co. of Eng., double in size to any of the others, bounded on the N. by Durham and Westmoreland, on the E. by the German ocean, on the W. by Westmoreland and Lancashire, and on the S. by the cos. of Chester, Derby, Nottingham and Lincoln. Its most remarkable natural boundaries are, the river Tees to the N., the ridge of hills called the English Appennines to

the W., and the arm of the sea named the Humber to the SW. This county is 100 ms. in length, and above 80 in breadth. From its great extent it has been distributed into three main divisions, called Ridings. The seacoast, except the southern part of it, is in general naked and dreary, consisting of wide extended moors and barren hills. This co. is extremely well watered, and its rivers are disposed in a singularly beautiful manner. They rise, in general, in the mountainous skirts of the co., from the NE. around to the SW.; and, uniting as they proceed towards its centre, like the veins of a spreading leaf, at length terminate in one main trunk, which issues in the Humber. The principal branches are the Ouse, Don, Derwent, Calder, Aire, Warf, Nidd, Ure, and Hull, all which terminate in the Humber, which falls into the German ocean between Yorkshire and Lincolnshire. Pop. in 1801, 858,892; in 1811, 973,113; and in 1821, 1,175,241.

York, city of U. C., is in about 43° 35 N. lat., and is the present seat of the government of U. C. Youghiogany, river of Pa., and Md., rises in the extreme southwestern angle of Md., between the sources of the Potomac and Cheat rivers. Pursuing a northern course over Md., into Pa., and augmented by Castleman's river, its northern branch the Youghiogany, turns to NW., and breaking through Chesnut Ridge and Laurel Hill, joins the Monongahela at McKeesport, 18 ms. above Pittsburg. This is a fine mountain stream, which in all seasons, except in periods of long draught, contains more than sufficient water for a supply of the most capacious canal; general comparative course, about 100 ms., 30 in Md., and 70 in Pa. The Youghiogany heads with the Cheat branch of Monongahela, with the N. branch of the Potomac, and by Castleman's river with Juniata and Kiskiminitas. Should the Chesapeake and Ohio canal be seriously undertaken, the channel of the Youghiogany, from relative position, presents the most direct route to unite the waters of the Potomac with those of Monongahela.

Across the river, adjoining the town, are built two bridges, within a half mile of each other, the lower connecting this town with Putnam, 80 miles W. from Wheeling, in Virginia. Latitude 40 0 N., longitude 5 2 W. By the census of 1840, the population of Zanesville is set down at 4,766, but which was certainly too low, as, from the houses and compactness of the place, there could not then have been less than 6,000, and

with Putnam on the W. side of the falls, and W. and S. Zanesville, there are now no doubt between 6,000 and 7,000 inhabitants.

Zanfara, kingdom of Negroland, to the W. of the kingdom of Zegzeg. The inhabitants are tall in stature, of a very black complexion, with broad faces and savage dispositions. It is very little known to Europeans.

Zanguibar, country on the E. coast of Africa, between 3° N. and 18 S. lat. It includes several petty kingdoms, in which the Portuguese have settlements. The principal territories are Mombaza, Lamo, Melinda, Quiola, Mosambique, and Sofala. The productions are much the same as in other parts of Africa, between the tropics.—See *Africa*, page 28.

Zante, island of the Mediterranean, near the coast of the Morea, 17 miles southeast of the island of Cephalonia. It is 24 miles long and 12 broad, and very fertile. There are about 50 villages, but no other large town than Zante, which is seated on the E. side of the island, and has a good harbor. It contains near 20,000 inhabitants. All the houses are low, on account of the frequent earthquakes. The English and Dutch have each a factory and consul here. Longitude 21 3 E., latitude 37 53 N.

Zanzibar, island of Africa, on the coast of Zanguibar, between the islands of Pemba and Mombasa, with the title of a kingdom, tributary to Portugal. It abounds in sugar canes and citrons. The inhabitants are Mahometans. Lon. 38 25 E., lat. 6 0 S.—See *Africa*, page 28.

Zara, strong city of Dalmatia, (it is the ancient Jadessa,) now capital of a county of the same name, with a citadel and a harbor, on a small peninsula, in the gulf of Venice, 80 ms. SW. of Jaicza and 150 SE. of Venice. Lon. 16 6 E., lat. 44 30 N.

Zarnate, town of Turkey in Europe, in the Morea, agreeably seated on an eminence, 20 miles W. of Misitra.

Zarnaw, town of Little Poland, in the palatinate of Sandomir, 63 ms. N. of Cracow. Lon. 19 56 E., lat. 65 13 N.

Zaslav, town of Poland, in Volhinia, seated on the Horin, 15 miles SE. of Ostrog. Lon. 27 11 E., lat. 50 20 N.

Zatmar, town of Upper Hungary, capital of a county of the same name. It is seated on a small lake formed by the river Samos, 50 miles E. by S. of Tockay and 130 E. of Buda. Lon. 22 34 E., lat. 47 50 N.

Zator, town of Poland, capital of a starosty of the same name, in the palatinate of Cracow. It is seated on an eminence, near the river Vistula, 20 miles SW. of Cracow and 50 SE. of Ratisbon. Lon. 19 42 E., lat. 49 54 N.

Zaweh, town of Persia, situated 20 miles from the Caspian sea.

Zawil.—See *Zueela*.

Zbaraz, town of Poland, in Podolia, 70 miles N. by W. of Kaminiack.

Zborow, town of Austrian Poland, in the palatinate of Lemburg, 25 miles W. of Zbaraz and 52 E. by S. of Lemburg. Lon. 25 46 E., lat. 49 46 N.

Zealand, island of Denmark, almost of a round form, 700 miles in circumference, and the largest,

except Iceland, of the isles belonging to the king of Denmark. It lies at the entrance of the Baltic, having the Cattegat sea on the N., the Sound on the E., the Baltic on the S., and the Great Belt on the W. It is exceedingly fertile, producing grain of all sorts, and in great plenty, and abounding with excellent pasture. Copenhagen is not only the capital of this island, but of the whole kingdom.

Zealand, one of the provinces of the kingdom of Holland, bounded on the N. by the isles of Holland, on the E. by Dutch Brabant, on the S. by Dutch Flanders, and on the W. and NW. by the German ocean. It is composed of several islands, the principal of which are Walcheren, Schowen, North and South Beveland, Tolen, Duyveland, and Wolfersdyke. The inhabitants are at a great expense to defend themselves from the encroachments of the sea, and in keeping up their dikes. The river Scheldt forms most of these islands; and the soil of them is fruitful, but the air is unhealthy, especially for strangers. The inhabitants are excellent seamen. The principal towns are Middleburg and Flushing.

Zealand, New, island in the Pacific ocean, discovered by Tasman in 1642. Lon. 181° to 194° W., lat. 34° to 58° S.—See art. *Australia*.

Zebid, city of Arabia. Lon. 43 16 E., lat. 14 13 N.

Zebu, or *Cubu*, one of the Philippines, 140 ms. long and 30 broad.

Zedic, town of the kingdom of Barbary.

Zegedin, or *Seged*, town of Hungary, 68 miles N. of Belgrade. Lon. 21 5 E., lat. 46 8 N.

Zeighenheim, town of Germany, in the landgrave of Hesse Cassel, 30 ms. S. of Cassel. Lon. 9 19 E., lat. 50 52 N.

Zeil, town of Germany, in the circle of Suabia, 70 ms. S. of Ulm.

Zeitgu, town of Turkey in Europe, in Janna. It is a small place, and seated on a hill, by the gulf of the same name, near the river Ealayda, 60 ms. SE. of Larissa.

Zeitun, or *Zeitoun*, is the ancient gulf of Lamacus. This sheet of water extends between the NW. part of Negroponte and the continent of Greece. It has two outlets: one, the celebrated Euripus, now Negroponte; and the other, the ancient Artemisium, into the Archipelago.

Zeitun, village of Greece, on the Gulf of Zeitun, near the mouth of the Sperchius, and north from the straits of Thermopylæ.

Zeitz, town of Upper Saxony, in the duchy of Naumburg, with a well-frequented college. It is seated on the Ester, 25 ms. SW. of Leipsic, and 45 E. of Erfurt. Lon. 12 8 E., lat. 50 59 N.

Zell, town of Germany, in the kingdom of Hanover, capital of a duchy of the same name, seated on the Aller, 31 ms. NW. of Brunswick, and 47 S. by W. of Lunenburg. Lon. 10 12 E., lat. 52 49 N.—Imperial town of Germany, in the circle of Suabia. Lon. 8 8 E., lat. 48 12 N.

Zellany.—See *Jeso*.

Zellerfeld, town of Germany, in the circle of Lower Saxony, in the Hartz forest, 6 ms. SSW. of Goslar.

Zembla, Nova, large island in the Northern ocean, to the N. of Russia, from which it is separated by the strait of Waigate. It is a desert,

rozen, and uninhabited country, visited in summer by fishermen and hunters.

Zemlin, or *Zemplin*, town of Upper Hungary, capital of a co. of the same name. It is seated on the Bodrog, 25 ms. SE. of Cassovia, and 27 NE. of Tockay. Lon. 21 35 E., lat. 48 36 N.

Zengua, town of Turkey in Asia. Lon. 37 30 E., lat. 36 25 N.

ZENITH, from Arab., *semt*, or *semtarras*, vertical. The zenith is the point in the heavens directly over our heads, and is the line of the nadir produced upwards; it is also the pole of the horizon.

Zenta, town of Hungary, where the Turks, under Mustapha II, were defeated by Prince Eugene. Lon. 21 30 E., lat. 46 5 N.

Zerbi.—See *Gerbes*.

Zerbst, town of Germany, in the circle of Upper Saxony, capital of a district of that name, in the principality of Anhalt, with a castle, where the princes commonly reside. The inhabitants are partly Lutherans and partly Calvinists, and are famous for brewing good beer. It is 27 ms. NW. of Wittemberg. Longitude 12 13 E., lat. 52° North.

Zeriga, town of Persia, in Irac-Arabia, seated in a narrow plain, between mountains. It has produced several very famous Arabian authors.

Zia, island of the Archipelago, one of the Cyclades, to the SW. of Negroponte. It is 15 ms. long and 8 broad, and well cultivated. It is the ancient Ceos.

Zibit, territory in Arabia Felix, extending from the principality of Mecca to that of Mocha, being bounded on the E. by the principality of Tehama, and on the W. by the Red sea. The Turks were formerly masters of this country, but it now belongs to an Arabian prince.—Trading town of Arabia Felix, capital of a territory of the same name. It is seated on the Zibit, 150 ms. NW. of Aden.

Ziget, town of Hungary. It has been often taken and retaken by the Turks and imperialists. Lon. 17 42 E., lat. 46 21 N.

Ziriczee, town of the kingdom of Holland, in Zealand, and the principal of the isle of Schowen, 12 ms. NE. of Middleburg, and 18 SW. of Briel. Lon. 4 10 E., lat. 51 36 N.

Zittaw, town of Germany, in Lusatia, subject to the king of Saxony. It is seated on the Neisle, 17 ms. SW. of Gorlitz, and 25 SE. of Dresden. Lon. 15 5 E., lat. 50 59 N.

Zitza, village of European Turkey, in Albania, 14 ms. NW. of Ionia. According to Hobhouse, the natural scenery and the condition of its people are complete and melancholy contrasts. The scenery is truly grand and delightful, whilst, amid these charming landscapes, the poor peasants, under Turkish oppression, employed in the cultivation of a fertile soil and superintendence of numerous flocks, have, to raise an exorbitant tax, to sell their wine, their oil, corn, their fleeces, and even milk. Surrounded by the benefactions of nature, the wretched human being is degraded and starving.

Znaim, strong town of Austrian Germany, in Moravia. It is seated on the river Teya, 24 ms. SW. of Brinn, and 32 N. of Vienna. Lon. 16 40 E., lat. 48 38 N.

Zouara, fortified town on the coast of Barbary, with a good harbor, 60 ms. W. of Tripoli. Lon. 11 55 E., lat. 32 45 N.

Zoblitz, town of Germany, in the circle of Upper Saxony. The chief subsistence of the inhabitants is working the serpent stone which is found in the neighborhood into tea and coffee cups, &c. A red species of this stone is also found here, which is considered as the finest, and therefore claimed by the sovereign as his property. It is 17 ms. S. of Freyburg.

ZODIAC, Gr. root, *zoon*, an animal, because most of the signs in the zodiac are under the fanciful names and figures of animated beings. It is that zone of the heavens, of about 18° in breadth, which contains the paths of the planets, except the four small ones between Mars and Jupiter.

Zoffingen, town of Switzerland, in the canton of Bern, with an elegant church, and a public library, containing several curious manuscripts. It is seated near a large forest, which contains the best pine trees in all Switzerland, 3 ms. from Arburg. Lon. 7 6 E., lat. 47 5 N.

Zoll Verein, or *Zoll Verbanele*, (Toll Association,) or, as frequently expressed in English, Customs Union; similar to most leagues, for it is one. This one rose from small and isolated beginnings. It is called by the more unassuming title of Commercial Union; but the effect, if not the aim, of such an association will be to realize, what was long a fondly cherished theory in Germany, the political cement of a people the same, from all known ages, in language and name, into a real nation. The Zoll Verein has already brought the sentiment of German nationality out of the regions of hope and fancy into those of positive and material interests. Representing, as it does, the popular feeling of Germany, it may become, under enlightened guidance, a bond of union at home, and of peaceable and profitable foreign intercourse. It was not hostile foreign tariffs which originated the Zoll Verein, but the former, particularly the timber and corn laws of Great Britain, which raised the latter from local and detached conventions between minor States to a great national combination. "Mr. Robinson's resolutions in 1815," says Karke, a German writer, "had, in fact, excluded our corn from the ports of Great Britain; she told us we were to buy, but not to sell. We were not willing to adopt reprisals; we vainly hoped that a sense of her own interest would lead to reciprocity. But we were disappointed, and we were compelled to take care of ourselves."

The Zoll Verein produced two effects: first, defence against the hostile legislation of other nations; and, in the second place, opened unrestricted internal communication between the States of the Union.

In a brief sketch of the history of the Customs Union, it will be found that the first steps were not taken by Prussia alone. Formed, as that monarchy has been, of different smaller States, there did not, until recently, exist, even within its own limits, a regular system of imposts. During 1816 and 1817, steps were taken to introduce a more simple and uniform system of custom-house legislation. On the 26th of May, 1818, a new tariff was published, which formed the groundwork to the Zoll Verein. Before this time, provincial dif-

ferences existed in the Prussian monarchy, both as to the mode of levy and amount. The tendency of Germany was towards union. On the 28th of July, 1824, a commercial league was formed between Bavaria, Wurtemberg, Hohenzollern-Sigmaringen, and Hohenzollern-Heckingen.

The Government of Prussia, appreciating and following its course, directed public opinion, by entering into various treaties, from 1819 to 1830, with Grand Ducal Hesse, Lippe Detmold, and other smaller States. On March 3, 1833, a treaty was concluded between Prussia, Bavaria, Wurtemberg, Electoral and Ducal Hesse. On the 30th of March, same year, the kingdom of Saxony joined the Association; on the 11th of May, Anhalt and Ducal Saxony united themselves. The Zoll Verein might now be regarded as formed; and it may be remarked that Germany has been and remains in progress to acquire, as far as uniform customs are concerned, what the United States of North America obtained by the Federal Constitution half a century past.

The preceding observations were excited by and the facts obtained from John Bowring's report on the Prussian Commercial Union. That statist, with an apology, introduces the following reflections; and I will borrow his excuse for re-introducing them here:

"It will ill become me in this report," says Mr. Bowring, "to discuss, though I cannot pass over in absolute silence, the probable political consequences of the establishment of the Zoll Verein. They certainly were not lost sight of by its founders. The intimate connexion between commercial and political interests is obvious; and the advocates of the League did not fail to perceive that no political alliance would be so strong as that based upon a community of pecuniary and social interests. The jarring of differently constituted institutions, the local jealousies which still exert their influence, the clashing of personal and privileged interests with the public weal, have prevented, to a certain extent, the fusion which would otherwise have taken place; so that the political and commercial policy are not always identified. But it cannot be denied that, under a wise direction, the machinery of the Zoll Verein would become a very mighty political engine, which would be brought to bear with great power on the future concerns of Europe and the world at large."—*View Bowring's Report, p. 7.*

Mr. Bowring writes as a Briton, but with the tone and candor of a man of sense, who did not suffer his national feelings to cloud his judgment or distort his facts. Long, however, before Mr. Bowring wrote, or could write, on such a subject, (because years before the Zoll Verein had existence,) the writer of this article expressed his conviction that the union, politically, sooner or later, of the Teutonic nations was the most important of all the coming revolutions, which was to change the destinies of Europe; and that amongst the curious changes in human affairs were the coalescing in the southwest of the mingled Celtic and scattered German tribes, and in the northeast the similar union of the Slavons, whilst the Teutons remained divided.

But we must for the present close with briefly noticing the new coinage of the Customs Union.

It has been decided that from the 1st of January 1841, at latest, there shall be no other legal standard than that of 14 thalers (9 dollars 74 cents, very nearly, Federal money) in the Prussian States Saxe Royal, electorate of Hesse, grand duchy of Saxony, the duchies of Saxe Altenberg, Saxe Cobourg and Gotha, the seigniory of Schwartzburg Rudoldstadt, the signoral States of Schwartzburg Sonderhausen, the States of both branches of Reuss; and of 24½ florins (same in amount as 14 Prussian thalers) in the kingdoms of Bavaria and Wurtemberg, grand duchies of Baden and Hesse duchy of Saxe Meiningen, ducal principality of Saxe Cobourg and Gotha, duchy of Nassau, principality of Schwartzburg-Rudoldstadt, and Frankfort-on-the-Maine.

There may have been many important additions and changes effected in the Zoll Verein since Mr. Bowring wrote; but we have introduced the article into our Dictionary on such authority as we regarded the most authentic.

The following table shows the component States and extent and population, respectively, of "the Customs Union," 1840:

Designation of the States.	Extent of area in sq. statute miles.	Pop. according to the census agreed upon	
		1834.	1837.
Prussia, and the States which have come to an agreement with her	108,297	13,692,829	14,316,253
Bavaria	31,017	4,251,118	4,319,861
Saxony, the kingdom	5,691	1,595,668	1,652,111
Wurtemberg	8,085	1,627,122	1,667,300
Grand duchy of Baden	5,860	1,231,657	1,264,611
Electorate of Hesse (Cassel)	3,822	640,674	652,76
Grand duchy of Hesse, (Darmstadt)	3,759	769,691	791,73
Thuringian States	5,943	908,478	931,24
Duchy of Nassau	1,750	373,601	383,73

	174,242	25,154,374	26,046,33

Zolnock, town in Upper Hungary, capital of a county of the same name. It is seated on the Teyesse, where the Sagelia falls into it, 62 miles NE. of Colocza and 62 E. of Buda. Lon. 20 50 E., lat. 47 10 N.

ZONE, Greek, *zônê*, a *band*. Geographically speaking, the surface of the earth is divided into three zones and two spherical circles. First, the torrid zone, about 47 degrees in breadth, or double the inclination of the earth's axis, and having the equator as middle circle. Secondly, the two temperate zones, between the tropic and polar circles. Usually, but very erroneously, those two portions of the spheroid beyond the temperate zones and around the poles are called the frigid zones.

Zore, village, Erie co., New York.
Zorndorf, village of Prussian Germany, in the new marche of Brandenburg, famous for a battle between the king of Prussia and the Russians, in 1758.

Zug, small canton of Switzerland, bounded on the E. by that of Zuric, on the W. by that of Lucern and the Free Provinces, and on the S. by that of Schweitz. It is rich in pasturage, and has plenty of various kinds of stone fruit.—Town of

witzerland, capital of a canton of the same name, and the only walled town of all the popular ones, stands delightfully upon the edge of a beautiful lake, in a fertile valley, abounding in corn, pasture ground, and fruit trees. Zug is 12 ms. NE. of Lucern and 42 SE. of Basil. Lon. 8 16 E., lat. 47 10 N.

Zuider-Zee, great bay of the German ocean, which extends from S. to N. in the kingdom of Holland, between Friesland, Overijssel, Guelderland, and Holland.

Zullichau, town of Prussia, in Brandenburg, on a plain near the Oder, 37 ms. SE. from Frankfurt-on-the-Oder.

Zulpha, town of Persia, almost close to Ispahan, which it is a sort of a suburb, and separated from by the river Zanderoud. It is peopled by a colony of Armenians, who were brought into Persia by Shah Abbas.

Zulpitch, or *Zulch*, town of Prussian Germany, in the duchy of Juliers. It is seated on the Nasel, 20 miles S. of Juliers and 20 W. of Bonn. Lon. 6 40 W., lat. 50 46 N.

Zuric, canton of Switzerland, 50 miles long and 10 broad, bounded on the N. by the Rhine, which separates it from the canton of Schaffhausen, on the S. by that of Schweiz, on the E. by Thurgau and the county of Tockenbourg, and on the W. by the canton of Zug and the Free Provinces. It was admitted a member of the Swiss confederacy in 1351.

Zuric, considerable city of Switzerland, capital of a canton of the same name. It stands at the west end of Lake Zuric, and occupies both sides of the rapid and transparent Limmat, which issues from the lake, and divides the town into two unequal parts, which communicate by three bridges. There are several manufactures, particularly muslins, cottons; linens, and handkerchiefs. Zuric is 5 miles SW. of Constance, 40 SE. of Basle, and 5 NE. of Bern. Longitude 8 30 E., latitude 47 20 N.

Zuric, lake of Switzerland, near ten leagues in length and one in breadth. In the vicinity of Zuric, the edges of the lake are skirted with a continued range of valleys, which, being intermixed among vineyards and pasture grounds, produce a most pleasing effect. The adjacent country is finely cultivated and well peopled; and the southern part of the lake appears at some little distance bounded with the high stupendous mountains of Schweiz and Glarus; the scenery altogether is pic-

turesque, lively, and diversified. The river Limmat runs through the whole length of this lake to the city of Zuric.

Zurita, town of Spain, in Old Castile, with a castle, seated on the Tajo, very near Toledo. Lon. 3 17 W., lat. 39 50 N.

Zurzach, town of Switzerland, in the county of Baden, seated on the Rhine.

Zulphen, strong and considerable town of Dutch Guelderland, capital of a county of the same name. It is seated at the confluence of the Berkel and Yssel, 9 miles S. by E. of Derventer and 55 E. by S. of Amsterdam. Longitude 6 0 E., latitude 52 10 N.

Zuyst, village of the kingdom of the Netherlands, 5 ms. from Utrecht. The Moravian brethren are employed here in various kinds of manufacture, and their workmanship far excels that of any other part of Holland.

Zwickau, town of Germany, in the circle of Upper Saxony, formerly imperial, but now subject to the king of Saxony. The place where the inhabitants are buried is in Voigtland; and therefore it is commonly said that they are Misnians while alive, but Voigtlanders after they are dead. Zwickau is seated on the Muidaw, 15 miles S. of Altenburg and 20 NE. of Plawen. Lon. 12 26 E., lat. 50 45 N.

Zwingenbourg, town of Germany, in the landgraviate of Hesse Darmstadt, 8 miles S. of Darmstadt and 12 N. of Worms.

Zwoll, town of Overijssel, and in the district of Zailant. It is defended by some fortifications; and the canal, which begins near this place and extends to the river Yssel, is defended by several forts. Near it is the mountain of St. Agnes, where there was formerly an Augustine convent, in which Thomas Kempis lived seventy-one years, and died in 1471. It was formerly an imperial and Hanseatic town, and is seated on an eminence, on the rivers Aa and Yssel, 5 miles S. of Hasselt and 8 SE. of Campen. Longitude 6 10 E., latitude 52 33 N.

Zygeth, strong town of Lower Hungary, capital of a county of the same name, with a citadel. It is seated in a morass, made by the river Alma, 50 miles NW. of Esseck. Longitude 18 58 E., latitude 46 17 N.

Zytomierz, town of Poland, in Volhinia, seated on the Ciecirief, 70 miles W. of Kiof and 120 E. of Lucko. Longitude 29 22 E., latitude 50 35 North.

WEIGHTS AND MEASURES.

The weights and measures of the United States are the same as those of Great Britain.

Avoirdupois.

16 drams	1 ounce.
16 ounces	1 pound.
28 pounds	1 quarter.
4 quarters	100 weight—112 lbs.
20 hundred weight	1 ton.
8 bushels (Winchester)	1 quarter of grain.

Troy.

24 grains	1 pennyweight.
20 dwts.	1 ounce.
12 ounces	1 lb.

[The lb. avoirdupois contains 7,000 grs. troy and apothecaries weight. But the lb. troy being composed of 12 ounces, and the avoirdupois lb. of 16 ounces, the relations of the ounces are—437.5 avoirdupois, 583.333 troy. Consequently, the ounce troy is considerably heavier than the ounce avoirdupois, though the reverse is the case with the pounds, respectively.—Stated thus: $\frac{5,760}{2880} = \frac{144}{75}$ or $\frac{8,228}{3500} = \frac{175}{1000}$ Practically, therefore, 8,228 lbs. avoirdupois are equal to 10,000 lbs. troy. The ounce avoirdupois is to the ounce troy very near as 75 to 100, or $\frac{3}{4}$ to 1.

FRANCE.

AN ASTRONOMICAL OBSERVATORY, a brick edifice, is now in progress of erection. The site on the beautiful swelling height rising from the left bank of the Potomac, below the mouth of Rock creek, and a small fraction above 2 ms. a little N. of W. from the Capitol. Such a structure has been far too long delayed. Scarce a small duchy or principality of Germany or Italy is without a building dedicated to the observance of the starry heavens, much less are States of the first order destitute of such structures. In America, the U. S., as a nation, relatively holds a rank far above what any State of Europe can claim above others in the same great section of the earth. It is time that the highest claims of science should be heard and granted in a country rapidly rising with giant force in wealth and numbers, of course, in power.

Another observatory to the west of Washington, the property of Georgetown College, is to be placed on a very respectable footing, competent to the observation of all astronomical data. Most of the instruments, we have heard, are to be of German construction, and the principal telescope, if we mistake not, is to be a veritable *Frauenhofer*. The building is not so forward as that of the National Observatory, but it is going on briskly, and will be completed perhaps as soon. Too much praise cannot be awarded the learned and liberal faculty of the college for the spirit they have displayed in this undertaking.

Liberia, a district of western Africa, so named from being formed into a colony for the settlement of free colored persons from the U. S., and liberated blacks of Africa. As laid down by Tanner, in his map of Africa, it extends from N. lat. 4 40 to 6 30; the southeastern angle being about 70 ms. NW. of Cape Palmas. The colony extending thence northwesterly about 200 ms., and bounded NW. by St. Paul's river. Monrovia, the capital, is laid down at 6 28 N., lon. 10 50 W. of London, and about 200 ms. SE. of Sierra Leone. This colony was founded in 1822 by the U. States Colonization Society, from the most exalted principles of humanity. Under circumstances adverse to a rapid advance, the Liberian colony has, however, progressed, and as early as 1830 might be regarded as fixed. Monrovia has become a mart of no small importance; and, according to respectable authority, in buildings, public and private, has the aspect of a civilized city. Mechanics of nearly every trade necessary to cultivated society carry on their respective trades. As yet, the chief exports are rice, palm oil, ivory, tortoise shell, dye woods, gold dust, and some miscellaneous articles. The climate, so near the equator, being tropical, of course all those vegetable products to which the soil and temperature are adapted may be cultivated. The soil is described as exuberantly fertile. The amount of existing pop. we cannot state, but may close our brief notice by expressing a wish, which must, indeed, be responded to by the whole civilized world, that the noble views of its founders may be realized.

ing, but also to the world entire, we notice here some particulars not introduced into either the articles Asia or China. Under the treaty, five ports are opened to British commerce, namely: Canton, Amoy, Foucheoufoo, Ningpo, and Chang-hai. Canton, Chang-hai, Foucheoufoo, and Ning-po-

fou, or Ningpo, will be found under their proper heads, in the Dictionary. Amoy is also named, but not sufficiently described in regard to position. Amoy is on an island, in a large bay of the province of Fuhkeen, and about 350 ms. a little N. of E. from the city of Canton.
