Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc., occur from time to time.

(a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time.

(b) Averages include prices for cuts with bone-in.

**TABLE F-2.—INDEX NUMBERS OF THE COST OF LIVING FOR EIGHT CITIES OF CANADA AT THE BEGINNING OF JANUARY, 1950**

(BASE:—August 1939 = 100)

	Total			Food	Rent	Fuel	Clothing	Home Furnishings and Services	Miscellaneous
	Jan. 3, 1949	Dec. 1, 1949	Jan. 3, 1950						
Halifax.....	152.3	153.6	152.7	196.3	111.0	132.6	193.3	156.1	122.6
St. John.....	156.2	153.0	157.1	190.8	118.0	134.4	192.8	159.9	130.0
Montreal.....	162.3	164.1	163.8	207.0	120.5	133.2	176.8	172.0	130.0
Toronto.....	155.0	157.4	156.9	192.3	124.6	153.2	182.0	162.5	129.7
Winnipeg.....	153.4	155.7	155.0	197.3	119.5	121.5	176.6	170.3	125.2
Saskatoon.....	162.0	162.7	162.2	207.6	125.3	140.4	188.7	172.2	122.3
Edmonton.....	154.5	156.4	156.9	206.3	113.1	114.6	187.6	162.0	128.4
Vancouver.....	160.8	161.9	161.9	205.6	115.6	139.8	191.9	160.5	134.2

N.B.—Indexes above measure percentage changes in living costs for each city, but should not be used to compare actual levels of living costs as between cities.

## G—Strikes and Lockouts

**TABLE G-1.—STRIKES AND LOCKOUTS IN CANADA, JANUARY, 1950, JANUARY AND DECEMBER, 1949†**

Date	Number of Strikes and Lockouts		Number of Workers Involved		Time Loss	
	Com-mencing During Month	In Existence	Com-mencing During Month	In Existence	In Man-Working Days	Per Cent of Estimated Working Time
January, 1950*.....	9†	9	2,456†	2,456	39,488	0.05
December, 1949*.....	5	13	611	3,041	23,667	0.03
January, 1949*.....	10†	10	1,811†	1,811	9,700	0.01

\* Preliminary figures.

† Strikes un-terminated at the end of the previous year are included in these totals.

‡ The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, JANUARY, 1950 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
<b>Strikes and Lockouts in Progress Prior to January, 1950</b>				
FISHING AND TRAPPING— Fishermen, Burin, Nfld.	4	(3) 70	1,540	Commenced December 27, 1949; for increased prices for fish; terminated January 21; return of workers; in favour of employer.
MANUFACTURING— Textiles, Clothing, etc.— Worsted textile factory workers, Trenton, Ont.	1	117	2,450	Commenced December 28, 1949; for a new agreement providing for increased wages and reduced hours; untermiated.
TRADE— Department store clerks, New Westminster, B.C.	1	50	1,000	Commenced August 27, 1949; for a union agreement providing for increased wages and other changes, as recommended by majority report of conciliation board; untermiated.
<b>Strikes and Lockouts Commencing During January, 1950</b>				
MINING— Iron ore miners, Bell Island, Nfld.	4	1,450	24,650	Commenced January 3; dispute over duration of new agreement; terminated January 21; conciliation, provincial; indefinite, work resumed for 30 days pending further negotiations.
Firebosses Bellevue, Blairmore, Cadomin, Canmore, Coleman, Gregg River, Luscar, Alta.	10	180	2,160	Commenced January 16; for implementation of majority report of arbitration board for welfare fund and continuance of monthly wage rates, instead of welfare fund and daily rates proposed by operators; untermiated.
MANUFACTURING— Textiles, Clothing, etc.— Ladies' dress factory workers, Montreal, P.Q.	1	17	30	Commenced January 12; for increased wages, piece rates, for cutters, terminated January 13; return of workers pending further negotiations; indefinite.
Men's work clothing factory workers, Bedford, P.Q.	1	36	18	Commenced January 30; for dismissal of foreman for disciplining two female workers; terminated January 30; return of workers and replacement; in favour of employer.
CONSTRUCTION— Buildings and Structures— Plumbers, steamfitters and helpers, Ottawa, Ont.	37	375	7,000	Commenced January 3; for a new agreement providing for increased wages, two weeks' vacations with pay, double time on Saturdays, check-off, etc.; untermiated.
TRADE— Grocery store employees, Montreal, P.Q.	17	161	640	Commenced January 27; for a new agreement providing for increased wages and reduced hours from 47 to 40 per week, following reference to arbitration board; untermiated.

(1) Preliminary data, based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(3) 170 indirectly affected.

# CURRENT LABOUR CONDITIONS

*This article summarizes the latest employment and labour information available at April 10, as the LABOUR GAZETTE went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

**T**HE NEW program of paying supplementary unemployment insurance benefits during the winter months came into effect this year on February 28. Although it is too early yet to assess the effectiveness of the plan in detail, the response to date indicates that it is meeting much of the need for which it was designed. By the end of March, about 80,000 persons had applied for supplementary benefits: of this number, about 56,500 were persons who had not been registered with National Employment Service Offices when the plan began.

About one-half of the applications for supplementary benefits during March came from persons living in the province of Quebec, and a very large proportion of these claimants were loggers. This is to be expected in view of the fact that the logging industry accounted for much of the unemployment in that province this winter. During March, the completion of hauling in the woods increased the number of loggers looking for work, and jobs in agriculture and other industries will not be available for several weeks. Since unemployment insurance was extended to the logging industry only at the end of February, loggers have not had time to build up sufficient contributions to qualify for regular unemployment insurance benefits. The new program enables them to obtain supplementary benefits this year if they have had at least 90 days work in logging or other insurable employment within the previous twelve months.

Another group which is being assisted by the new program consists of unskilled workers who have exhausted their rights to regular benefits. In Canada, many of these workers move from one seasonal industry to another, finding perhaps several weeks' employment in agriculture at the height of the season, and then working for several months in an industry such as construction. By the end of October, construction employment has passed its peak, and layoffs begin. The unskilled men are usually the first to be released; the skilled men are more likely to be retained for finishing work inside the buildings.

In the war and early post-war years, a good many of these unskilled seasonal workers were re-employed during the winter months in other industries where the labour shortage was acute. This winter, labour demand has been low, particularly for the unskilled worker, and many of them have found it difficult to obtain jobs. Many of these workers would have exhausted their benefit rights by the end of February, with a month or so to wait before active spring hiring begins in agriculture, construction and transportation. These are the industries which provide most of the job openings for this type of unskilled worker.

The casual unskilled worker is not likely to benefit a great deal from the spring increase of employment in manufacturing, under way by

early February, in industries such as those producing agricultural implements, clothing, rubber footwear, and some consumer durable goods.

In many of these plants, employers follow the practice of re-hiring experienced workers laid off during the slack season. Many of them operate under collective agreements which usually require hirings and layoffs to be conducted on the basis of seniority provisions.

In general, the employment situation improved slightly during March. This improvement is reflected in the number of persons registered with the National Employment Service during the month when allowance is made for additional registrations due to the new supplementary benefit program. Excluding the 56,500 workers claiming supplementary benefits on March 30 who were not registered when the program began on February 28, persons seeking jobs through Employment Service Offices at the end of March numbered 371,700. This was a decline of 1,200 from the comparable figure at March 2. When all claimants for supplementary benefits are included, registrations at the National Employment Service totalled 428,200 on March 30.

This small change over the whole month reflects the fact that March is a transition period between the winter slack season and the rapid spring increase in employment. With the exception of the logging industry, most of the heavy seasonal layoffs are ended. At the same time, spring hiring is not yet underway on a large scale in construction, agriculture and transportation, although advance preparations in these industries have created some job openings. Employment prospects for the next month are excellent, particularly in the construction industry. By the time the supplementary benefit program is terminated on April 15, the seasonal increases in employment should be well under way.

Because of their different economic structure, there is a considerable variation in the employment situation in each of the five regions in Canada at this time of year. In the Pacific region, improved weather, and

(Continued on page 520.)

**The chart below illustrates the increase in the number of unplaced applicants registered at Employment Offices following the inception of the supplementary benefits program. (Latest figure is for March 16, 1950.)**

- (a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.
- (b) Some of these "unplaced applicants" registered at the National Employment Service Offices are persons with a job who are seeking other work. On the other hand, there are persons without jobs and seeking work who do not come to the N.E.S. offices.
- (c) These percentages calculated on basis of 1949 figures excluding Newfoundland.
- (d) These percentages compare the cumulative total to date from first of current year with total for same period previous year.
- (e) All industrial production figures are preliminary.
- \* These figures include persons not registered with N.E.S. on February 28, and now applying for supplementary benefits, as follows: Canada, 56,500; Atlantic, 10,800; Quebec, 37,000; Ontario, 3,500; Prairies, 3,200; Pacific, 2,000. Percentage changes from previous periods are not given, as the inclusion of claimants for supplementary benefits makes the figures not comparable.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Mines and Resources, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the LABOUR GAZETTE.

# NOTES OF CURRENT INTEREST

**Joint Committee of Parliament on old age security**

On motion of the Hon. Paul Martin, Minister of National Health and Welfare, the House of Commons during March agreed to the appointment of a Joint Committee of both Houses of Parliament on Old Age Security.

The terms of reference of the Committee are:—

to examine and study the operation and effects of existing legislation of the Parliament of Canada and of the several provincial legislatures with respect to old age security; similar legislation in other countries; possible alternative measures of old age security for Canada, with or without a means test for beneficiaries, including plans based on contributory insurance principles; the probable cost thereof and possible methods of providing therefor; the constitutional and financial adjustments, if any, required for the effective operations of such plans and other related matters.

Speaking on his motion, Mr. Martin said that the Committee would represent both Houses and all political parties.

"It will provide an opportunity," he continued, "to representatives of labour, industry, agriculture and social welfare organizations, as well as other interested groups, to make their views known on this vital social question."

Noting that the Committee would study the question of the division of constitutional authority Mr. Martin said: "In this connection I should like to stress again that we must view this problem as one in which we are associated in a close working partnership with ten provincial governments. It is important, therefore, that we should seek the solution of this problem in joint consultation with the provinces, since the jurisdiction for contributory old age insurance is clearly in their hands at the present time, and since the only way that financial responsibility can be properly apportioned is as a result of discussion and agreement with them. This procedure of consultation was begun when we called the provinces together in January of this year to discuss important conditions precedent to the discussion of social welfare matters in the fall." The Minister added that further negotiations would take place later in the year.

Mr. Martin gave a brief outline of the development of Canadian pension legislation and of old age security schemes in

certain other countries. He dwelt on some of the financial implications of the different types of schemes.

In conclusion, he said: "In effect, we will be giving this Committee the opportunity of assessing the alternative plans in Canada which, among others, are at least four.

"First, do we want an extension and improvement of the present system, based on joint Dominion-provincial co-operation, or a means tested program, such as Australia has? Undoubtedly, much could be done to improve this.

"Second, do we want an orthodox contributory system as in the United States, limited as to its coverage, and gradual in its approach to full benefit rates?

"Third, do we want a universal superannuation scheme as in New Zealand, gradual in its approach to full benefit rates, gradually designed to eliminate the means test for all the aged, but requiring 30 to 40 years to do so? Do we want to levy a special social security tax to finance the cost of this?

"Fourth, do we want a universal pension scheme, with full benefits to commence immediately at a stated age, as proposed by the Dominion in 1945 in its proposals to the provinces?

"These are but four of the alternatives the committee will want to consider. I submit to you, Mr. Speaker, for the reasons I have stated, this resolution should commend itself to the House."

**Conference on handicapped to be held in May**

The date for a proposed Dominion-Provincial Conference on the Rehabilitation of Handicapped Persons was announced in the House of Commons recently by the Hon. Paul Martin, Minister of National Health and Welfare.

In reply to a question by Mr. Jean François Pouliot, member for Temiscouata, Mr. Martin said: "The Minister of Labour, acting in collaboration with the Minister of Veterans Affairs and the Minister of National Health and Welfare, has issued invitations to provincial authorities to send representatives to a conference on the rehabilitation of handicapped persons. The date has been fixed as May 25. This conference of course will be of an exploratory nature, and will be held on the technical level. It is expected that representatives of some voluntary organizations will be present. The discussions will cover the entire field of rehabilitation."

**Labour bills introduced in Alberta and Ontario** Late in February important bills to amend existing labour laws were introduced in the Legislatures of Alberta and Ontario.

The Ontario bill is intended to replace the Labour Relations Act of 1948. It provides for changes in certification and conciliation procedure.

Changes in labour relations legislation are also proposed in the bill to amend the Alberta Labour Act of 1947, as well as modifications of other sections of the Act dealing with holidays with pay and child labour.

More detailed summaries of both bills appear on page 528 of this issue; and the legislation as finally enacted will be summarized in the *LABOUR GAZETTE* in due course.

**Changes in conditions of prevailing rate employes** Hon. Humphrey Mitchell, Minister of Labour, announced in February that some changes had been made in the new Government policy concerning prevailing rate employees which was announced last September.

In the policy announced last September, the Government had provided for prevailing rate employees, a uniform plan of annual vacations with pay, and pay for statutory holidays not worked that was reasonably in accord so far as possible with the practice of the better private employers (L.G., Dec., 1949, p. 1571). The changes provide for a broadening of this policy to include casual employees—prevailing rate employees of short term employment.

Although the changes do not provide for sick leave, the amended regulations grant recognition to sick leave credits accumulated prior to April 1, 1949, under former regulations. Such former regulations were, in many cases, departmental in nature and did not provide uniformity throughout the service.

Prevailing rate employees who do not complete six months of service will not be entitled to vacations with pay, but will be entitled to a gratuity in lieu of vacation. This gratuity is to be composed of two per cent of normal pay plus pay for vacation credits accrued for work done in the specified holidays.

**Administration of federal compensation legislation** Administration of two Acts of Parliament has recently been transferred from the Department of Transport to the Department of Labour.

The first of these Acts, the Government Employees' Compensation Act, provides

for compensation, including medical and hospital expenses and other benefits and allowances provided by the Workmen's Compensation Acts of the provinces, to be paid to employees in the service of His Majesty.

The Merchant Seamen Compensation Act provides medical and hospital expenses and other benefits to be paid for partial or permanent disability to seamen employed or engaged on a ship registered in Canada. Compensation is also provided under the Act to dependents where death of a seaman results from an injury in line of duty. The Act applies to accidents happening within or without Canada.

**Collective agreements reached in asbestos industry** Summaries of three collective agreements in the asbestos industry are given on pp. 511-12 of this issue. The 1950 contracts cover workers employed by the Asbestos Corporation, Limited, the Canadian Johns-Manville Co., Limited, both of Asbestos, and the Johnson's Company, Limited, Thetford Mines, P.Q.

A prolonged strike of some 4,650 asbestos miners and mill workers in various centres in Quebec commenced on February 14, 1949. The strike was caused by certain issues in connection with renewals of agreements. However, the major demand of the workers was for a general increase of 15 cents per hour (see supplement to this issue, *Strikes and Lockouts in Canada During 1949*).

Following provincial conciliation, work was resumed between June 24 and July 4, 1949, pending reference to provincial arbitration. On December 16, 1949, the majority report of the arbitration board recommended an increase of 10 cents per hour retroactive to the first of January, 1949. The workers accepted this award for the year 1949 but no agreements were signed. A dispute arose over wage rates for the 1950 contracts. Further provincial conciliation resulted in the signing of the new agreements for 1950, providing, among other changes, for the payment of a cost-of-living bonus.

**Plan to co-ordinate civic and national youth agencies** Special importance was attached to the Annual Meeting of the Ottawa Recreation Association, held in the Chateau Laurier, Ottawa, on February 11, 1950. The agenda of the meeting was drawn up in consultation with officials of the Canadian Welfare Council and of the National

Employment Service and was designed to form a pattern for similar meetings of youth organizations, to be held in other centres across Canada during the winter and early spring.

The purpose of the meetings was to launch a practical program for Canadian youth based on their varied interests and activities, as well as their employment needs and interests at the community level. This plan was a culmination of the recommendations of the Canadian Youth Commission (which was dissolved in 1946) and its continuing organization, the Canadian Committee on Youth Services. The latter includes in its membership representatives of youth organizations in all the provinces, the National Employment Service and the Canadian Welfare Council. (See review of *Youth and Jobs in Canada*, L.G., 1946, p. 9.)

Early in 1950, a booklet entitled *Youth in Your Town* was distributed to the mayors and other civic officials in every principal community in Canada. This booklet was designed to arouse civic interest in the need for co-operative action of all youth agencies and organizations, civic and national, in assessing and seeking solutions for the social and economic problems that confront Canadian youth at the community level.

The afternoon session of the meeting of the Ottawa Recreation Association was devoted to a study of reports presented by youth organizations in 14 local civic centres which have a combined membership of several thousand teen-aged youth. Characteristically, these reports were packed with suggestions for "doing something." Many of the questions raised indicated that the teen-agers were aware of and concerned about national and civic affairs, scarcely less purposefully than were older citizens.

The setting up of a youth guidance and placement council was urged, to include representatives of the city Board of Control, youth organizations, the National Employment Service and high school students. It was suggested that the employment counselling service should be expanded in the schools to the primary level.

In the matter of education it was recommended that the salaries of teachers be increased and that the teaching of civics be expanded in the secondary schools. It was held that the school buildings should serve as centres for community activities as well as for class room instruction.

Turning to civic problems the teen-agers declared that without work and homes, family and home life would break down.

To remedy this, extensive housing and works programs should be developed, it was asserted.

The several reports from the civic centres were analysed and briefs prepared which were formally presented to Mayor Bourque and the Board of Control at the evening session. The Mayor praised the work of the several youth centres in Ottawa and declared that they were a major factor in achieving unity in the city. He drew attention to the fact that the city was caught between a mounting tax rate and the demands of various worthy boards and commissions for more money. He gave assurance, however, that the brief, which he considered "worthy of much older people," would receive careful study and consideration.

### **High average of production in 1949**

During 1949 the monthly average of the Dominion Bureau of Statistics general index of production, based on 1935-39 equals 100, was 184.2, an advance of 1.5 per cent over the 1948 average of 181.5, states the Canadian Statistical Review. The 1948 figure, in turn, was 3.4 per cent above the mark of 175.5 for 1947.

This index fluctuated rather widely during 1949, reaching 190.4 in June, the highest point ever attained under peacetime conditions, and dropping to a low of 178.2 in July when factory closing for holiday purposes resulted in lowered production. From this level the index moved up to 188.5 for September and stood at 186.8 for the closing month of the year.

### **Canada-UNESCO fellowships**

An account of the Canada-UNESCO fellowships project has been told in the January issue of *External Affairs*, the monthly bulletin of the Department of External Affairs.

In 1948 the Canadian Council for Reconstruction through UNESCO allotted the sum of \$182,000 to provide six months of advanced study and travel in Canada for university professors, leaders in the mass media, government administrators, teachers, engineers, scientists and other individuals with responsible positions in countries seriously affected by the war.

Sixty-four fellowships are now offered by the Council to members of fourteen countries: Austria, Belgium, Czechoslovakia, Denmark, Ethiopia, France, Greece, Italy, Luxembourg, the Netherlands, Norway, the Philippines, Poland and British Colonial Territories.

Although entirely financed by the CCRU the Canada-UNESCO fellowships project

is a co-operative effort in which UNESCO carries a substantial part of the responsibility, the article states. The Department for the Exchange of Persons of the United Nations handles the recruitment and preliminary screening of the candidates and all successful Canada-UNESCO fellows are sponsored by UNESCO.

Direction of the Canada-UNESCO fellowship program is the responsibility of a panel of Canadian experts in the educational, scientific and cultural fields in Canada.

The study programs prepared for the fellows embrace such varied fields as education, science, technology, the creative arts, the social sciences, the humanities and mass media. By January, forty-eight fellowships had been awarded and sixteen were still pending. Of the forty-eight two were for study in the creative arts, fourteen in education, eight in mass media, nineteen in science and technology and five in the social sciences and the humanities.

Additional information on educational exchange programs may be obtained from the second volume of *Study Abroad, International Handbook of Fellowships, Scholarships and Educational Exchange*. This book contains 350 pages and is published by the Ryerson Press, Toronto.

#### **Death of former official of Department of Labour**

A former Industrial Disputes Inquiry Commissioner and Assistant Director of the Industrial Relations Branch of the Federal Department of Labour, John Slater McCullagh, died at Oshawa, Ontario, on February 13, 1950.

Mr. McCullagh was born in England and came to Canada in 1928. In addition to giving valuable service in conciliation work, he represented the Government of Canada at meetings of the International Labour Organization in Mexico City in 1946 and in Stockholm, Sweden, in 1947. He was the personnel director for an industrial firm at the time of his death.

#### **TUC bans communists as trades council delegates**

The General Council, after a meeting on January 25, announced that trades council delegates who are members of proscribed organizations, among which is the Communist Party, will not in future be eligible for membership of the Trades Councils

Joint Consultative Committee, nor as delegates to attend the annual conference of trades councils.

The General Council's announcement follows several warnings which were issued in the early part of last year (L.G., Jan., 1949, p. 14).

The new ruling will apply to this year's annual conference to be held in Nottingham in May.

#### **Welfare for British workers outside work premises**

Welfare facilities which are provided in the United Kingdom to workpeople outside their employment but in relation to it are described in an article in the British *Ministry of Labour Gazette* for August, 1949. The welfare work is carried on by Regional and District Welfare Officers appointed under the Safety, Health and Welfare Department of the Ministry of Labour and National Service.

The main purpose of the plan is to provide satisfactory conditions, especially in regard to accommodation, travel and eating facilities for British workers who are transferred from one area of employment to another through the machinery of the Ministry or with its approval. The scheme arose with the arrangements for regulating labour in wartime, when it became necessary for the Ministry to take special steps with regard to the welfare of persons directed to employment away from their homes. However, since the transfer of British workers was continued after the war due to the labour demands of the export and basic industries, the work of the welfare organization was extended. In addition to the British transferred workers, groups of foreign workers including European Volunteer Workers from the Displaced Persons Camps in Europe and members of the Polish Resettlement Corps are benefiting from the plan.

Provision of hostel accommodation for British transferred workers and foreign workers has been the most important work of the welfare organization. In July, 1949, there were 102 hostels providing 37,000 places for industrial workers. These hostels are operated by a non-profiting making body, the National Service Hostels' Corporation Limited which is subsidized by the Government.

Accommodation is normally provided on a "single" basis only, but in some cases special provision has been made for married couples, both at work, to live together at a hostel. The standard cost is 35 shillings a week for men and 30 shillings a week for women including two full meals a day.

lodging, recreational and general welfare facilities. The welfare officials encourage European Volunteer Workers to find private lodgings if at all possible, not only to make more room in the hostels, but because they will thereby have greater opportunities of becoming assimilated into the life of the community. Accommodation for dependants of workers is limited; there are three special hostels in operation for dependants of DP's. In these dependants' hostels, the National Service Hostels' Corporation has undertaken to provide for education, feeding, child supervision, and periodic visits to his family by the worker who may be employed at a distance.

In respect to foreign workers, the Ministry makes itself responsible for sea transport, accommodation at reception hostels, travel allowances, medical examination, registration, the issuance of ration books and, where necessary, essential clothing. It brings to the attention of the proper Government authorities any worker's need for social services, such as hospital treatment. Through co-operation from various voluntary societies, the Ministry has been able to solve many of the personal day-to-day problems of the foreign workers and arrangements have been made to provide religious and educational facilities.

In several cases, the Ministry, through the Regional Welfare Officers, acts in an advisory capacity to other Government departments and local authorities, informing them of the need of child-care facilities in certain local areas for the children of mothers who wish to work and of the need for civic restaurants where employees, unable to go home for the mid-day meal, may eat.

The Ministry is concerned with publicizing the need for a staggering of workers' holidays from June to September. A report of the Catering Wages Commission emphasized the ills which result because nearly all employees choose July or August for holidays—inadequate accommodation, too high prices and lowered standards of service. This concentration of holidays in peak periods places a heavy burden on transport authorities and the catering and holiday industries as a whole. Consequently, Committees have been set up which include representatives of employers' and workers' organizations, local authorities and the road and rail transport industry, to attempt to secure a spreading of holidays by voluntary means. School regulations now permit a child's absence for two weeks in order to accompany his parents on holidays. It is planned that all school examinations should be completed by May of each year. Further, a September week-end

holiday is proposed as a substitute for the August Bank Holiday which encourages many people to take holidays to include the extra day.

### **Safety in U.K. cotton weaving factories**

Rules to promote safety of workers in cotton weaving factories are set out in a reprint of the Cotton Weaving Agreement, 1929, as amended, issued by the British Ministry of Labour and National Service. As pointed out in the Introduction, the terms of the Agreement do not take the place of legislation. However, they are of great value to occupiers and officials of cotton weaving factories, and particularly to manufacturers of machines for these factories, since they indicate parts of the machinery on which accidents frequently happen and the methods by which such accidents may be guarded against. The Agreement was signed on February 8, 1929, by representatives of the Federation of Master Cotton Spinners' Associations Limited, the Northern Counties Textile Trades' Federation, the Cotton Spinners' and Manufacturers' Association, and the Factory Department of the Home Office which is now the Ministry of Labour and National Service.

The first Cotton Weaving Agreement was signed in 1913 and was considerably revised between 1926 and 1929. Some of the clauses were affected by the Factories Act, 1937, which extended the safety requirements for factories. In addition, the recent meetings of the Joint Advisory Committee of the Cotton Industry, set up by the Chief Factory Inspector in 1944 to report on methods of improving conditions, have resulted in recommendations which go considerably further than the Agreement, particularly in regard to spacing.

By the 1929 amendment, a Joint Standing Committee was formed to meet in April and October of each year with a view to making recommendations concerning any amendment which appeared desirable in the light of accident returns and special inquiries. This Committee consists of five representatives from the Cotton Spinners' and Manufacturers' Association, three representatives of the Federation of Master Cotton Spinners' Associations Limited, eight representatives of the Northern Counties Textile Trades' Federation and four representatives of the Ministry of Labour and National Service. Amendments by the Committee have considerably strengthened the Agreement regarding the fencing of drag rollers of taping machines, the weighting of looms and protection from flying shuttles.

The Joint Standing Committee's report on the weighting of looms is reproduced as an Appendix to the reprint, together with the report of the Subcommittee appointed to look into the number of weight-lifting accidents, particularly to women. The Committee was agreed that heavy weights in the weaving process should be abolished and recommended that a limit of 28 pounds be put on individual weights. Consequently, the pertinent clause in the Agreement was amended as from June, 1948.

The text of the Agreement consists of six main sections which are concerned with fencing and safeguards; cleaning machinery; lifting of heavy weights; lighting of dark passages and stairways; first aid; and the Joint Standing Committee. Particulars of approved guards and diagrams of guards for nips between drag or cloth rollers and measuring rollers of cotton taping machines are included.

"There is no doubt", the Introduction states in regard to the Agreement, "that by this means a substantial improvement in protection has been obtained".

#### **Report of H.M. Chief Inspector of Mines for 1947**

In 1947 Great Britain had 1,768 mines at work, including coal, stratified ironstone, shale and fireclay, with a total working force of 728,841.

Accidents occurring in the year totalled 3,064, an increase of 86 over 1946. Of this number, 618 were fatal—75 more than in the previous year. Two-thirds of the fatalities were caused by falls of ground and explosions underground.

The incidence of mining industrial diseases showed an improvement, with a decline in the number of cases of almost eight per cent. The most serious of the diseases, and the one responsible for the biggest wastage of manpower, it is reported, is pneumoconiosis, or fibrosis of the lungs due to airborne dust. In this connection the report observes: "The problem of (i) preventing, suppressing or rendering harmless the dust—and especially airborne dust—in coal mines, and (ii) determining the cause and mechanism of the production and development of pneumoconiosis in coal miners, involving as it does the very life of the coal mining industry and the prosperity of the country by the wastage effect of that disease on manpower and its adverse effect on recruitment, must be considered among the most vital problems awaiting solution. Neither effort nor expense must be spared in an endeavour to solve them."

The Coal Mines (Training) General Regulations, 1945, came into full operation

on January 1, 1947. Under the regulations, all new entrants are required to be given preliminary training. During the year some 35,200 persons received such training. Of these about 6,600 were juveniles and about 6,700 were Polish or other foreign adult workers.

The first attempt in the Inspectorate to provide systematic training to newly appointed inspectors on entry was given effect in the latter part of the year. The scheme extends over six months and provides for (1) a one-week residential course at headquarters to acquaint the new inspector with a proper understanding of his duties and responsibilities, and with the organization and work of the Ministry in general, and, in particular, the Health, Safety and Training Division, and to bring him into immediate personal contact with the heads of the service; (2) a five-month course of training in the field; and (3) a follow-up residential course of two weeks in the provinces—preferably at a university, to review and consolidate the knowledge acquired in the field.

Inspections carried out by H.M. Inspectors of Mines number 31,736, in addition to which 4,921 were made by examiners appointed by the workmen under Section 16 of the Coal Mines Act, 1911, and over 3,000 by full-time examiners of District Safety Boards. Inspections made by workmen's examiners, whether statutory or otherwise, are welcomed, the report states, "for not infrequently they bring to light defects which might otherwise have remained undetected and unremedied and which might well have seriously affected the safety of the mines".

#### **Safety in British building industry**

A new code regulating the safety, health and welfare of British workers in building operations, issued by the British Ministry of Labour and National Service pursuant to the Factories Act, 1937 came into effect on October 1, 1948. The previous building regulations of 1926 and 1931 are repealed.

The number of building operations to which the regulations apply has been increased and many thousands of builders are protected for the first time. Coverage of the new safety rules includes the construction, structural alteration, repair or maintenance of a building (including re-pointing, re-decoration and external cleaning), the demolition, preparation and laying of the foundation of a building and the machinery or plant used in such operations.

The former regulations were limited in application to the construction of or addi-

tion to buildings where mechanical, water or steam power were used and to hoisting apparatus outside a building. Until 1937, the Factories Acts restricted regulations for building operations to those sites where mechanical power was used. The 1937 Factories Act, by removing the reference to mechanical power, made it possible to extend the application of these new regulations. During 1947, 60 per cent of fatal accidents and 38 per cent of all accidents on building work reported to the Factory Inspectorate occurred on jobs not covered by the old regulations.

The safety provisions deal with proper scaffolding and means of access, means of raising and lowering with lifting appliances (including cranes), chains, ropes, lifting gear and hoists. Safety precautions which must be taken during excavations and demolition operations have been added. For the first time, regulations now cover the working on, passing over or near, fragile roofing. (The fatality rate in 1948 for asbestos roofs was 1 in 4, the highest rate for any cause of accidents in any premises under the Factories Acts.)

A new health and welfare section provides for first aid, ambulances and ambulance rooms, shelters, accommodation for clothing, and facilities for meals to workers in building operations.

The preparation of the regulations involved discussions with all the main groups interested in or connected with the building industry. The preliminary draft code was published in 1945. As a result of subsequent discussions, a revised draft was issued which was, in turn, discussed by interested groups at a Public Inquiry in December, 1947. The regulations were then issued in final form in accordance with the recommendation of the Commissioner of the Public Inquiry.

It was stated in the preliminary draft regulations that the new rules would be prepared with three things particularly in mind: (1) the International Labour Convention and Recommendations of 1937 relating to safety in the building industry; (2) the accident experience gained from the past, and the change in building construction methods since 1926; (3) the extended scope of the Factories Act of 1937.

**Report of  
British  
Productivity  
Team's visit  
to U.S.A.**

Under the auspices of the Anglo-American Council on Productivity, the First British Productivity Team, representing the steel founding industry, visited the United States in the spring of 1949, to study factory administration, organization, layout, methods and operating

conditions. The Team's findings and recommendations are incorporated in a report, entitled *Steel Founding*, published recently by the Council.

Throughout the six weeks' tour the team was "aware of a widespread degree of productivity-consciousness," it is first observed. "Productivity-consciousness is to be found among all grades of employees, from executives to shop-level." The report examines the fundamental causes and states them to be "mainly psychological"—recognition that high productivity is a benefit to all concerned, and "the compulsions of fear and competitiveness, against the background of constant endeavours to attain higher standards of living."

Incentives are in evidence at all levels, it is further observed, "and monetary incentives are truly effective for the double reason that taxation is not so severe as to nullify, or nearly nullify, the extra reward for extra effort, and that consumer goods are in supply to absorb the extra wages earnable by high rate producers."

Productivity in terms of man-hours per ton is "undoubtedly higher" in the United States than it is in Britain, the report states, "by something between 50 and 90 per cent."

The means through which "the causes of high productivity find expression" are analyzed as: (1) Good factory layout and tidiness of working; (2) Use of power and widespread acceptance of machines to replace manpower; (3) Standardization of output; (4) Application of the results of research. Other contributory factors cited are: supply of power as required; quick delivery of machinery, free interchange of ideas and information within the trade; emphasis on safety; and some technical differences.

Since labour is expensive, the best possible use is made of it, it is observed. "Jobs are organized in such a way that men are kept at a steady pace of production throughout the working day, skilled men being serviced by lower grade men. Similarly, skill is taken away from the operators of machines who are required instead to develop deftness."

Discussing the effect on productivity of labour unions, the report states: "There appears to be little tendency to press any policy which would act in restriction of production. Membership is open to all who sell their labour for wages, and the main objects of the unions are to see that their members get a good price for their labour, and work in good conditions and with the maximum security possible in the circumstances of keen competition."

Safety measures are reviewed and the conclusion reached that "in some respects the American foundries are in advance of British, but in others they are behind." Devices employed for the protection of the eyes, and the measures taken to combat silicosis receive special mention, and the adoption of similar safeguards in British foundries is recommended.

The publication of the report is being followed up by visits of team members in Britain to individual steel foundries, and centres where steel founders can meet for personal discussion.

**New mental approach necessary to greater production**

While new factories, more labour-saving machinery and a greater application of scientific research are vital factors in Britain's campaign for higher productivity, a new mental

approach to this problem is gaining increasing attention in that country, according to *Labour and Industry in Britain*. This publication, which is issued by the U.K. Information Office, dealt at length in the June issue of last year with the physical approach to higher industrial production. A complementary article in the December issue discussed the significance of the psychological factor.

The task of educating management and labour to a greater awareness of productivity is being launched on both the national level where it is given expression in general terms and on the local level where it takes specific shape in each factory. On both levels, the educational drive illustrates the close connection between higher productivity and the well-being of the individual and his family.

Through the media of radio, films, cartoons, pamphlets and exhibitions the Government is stressing the point that "there will be more for everybody only when more is produced."

Instances which reflect a changing attitude on the parts of both management and labour are cited in the article. Long-established firms which could manage without adopting new techniques; companies unwilling to share ideas with competitors; trade associations which allegedly helped to keep inefficient firms in business and gave efficient firms undue profits: all these organizations are reported to be making progress towards discarding the outmoded features of their industrial policy in the face of present-day conditions.

Management's growing awareness of the value of technological training is a reflection of its desire to adopt the United States' advanced technical knowledge in

those cases where American experience is relevant to Britain. Invaluable benefits are expected to accrue from the Anglo-American Council on Productivity which is promoting co-operation in this matter between the two countries.

The defensive attitude of labour in the past is also undergoing transformation, the article states. Trade union leaders who have studied American industrial methods are now assisting management with production problems and endeavouring to banish the belief that increased production leads to loss of employment.

The successful application of changes in individual factories requires the development of a team spirit, the article states. Such a feeling of co-operation is usually brought about through the establishment of labour-management committees. These joint committees are only advisory in function and do not discuss wages and conditions of employment. However, they do provide a common ground for discussing of problems and new ideas on production.

**Ministry of Labour issues resumé of dock strikes**

The British Ministry of Labour has issued a White Paper, *Review of the British Dock Strikes 1949*, summarizing the activities of the Canadian Seamen's Union and the resulting strikes in British docks during the spring and summer of 1949 (L.G., Sept., 1949, p. 1101).

The pamphlet includes a preface by the Rt. Hon. G. A. Isaacs, Minister of Labour and National Service and appendices carrying reproductions of pamphlets issued by the CSU expounding the case of that union, a chart showing the events of the strikes in chronological order, and other relevant material.

In his preface, Mr. Isaacs points out that as a result of the docking strikes over 400,000 working days were lost, resulting in a severe setback to the British recovery program.

"Yet there was no difference between the British dockers and their employers as to the terms and conditions of their employment. . . . The evidence shows that there was throughout a cold and deliberate plan, and that the unofficial leaders were completely indifferent to the loss and suffering that might result. They had one aim and one aim only—to restore the fortunes of the Communist-dominated Canadian Seamen's Union. In the course of the strikes they engaged in misrepresentation and violence and it was inevitable that when the trade union leaders in this country, mindful of the interests of their members,

opposed the strikes and tried to bring out the true facts, they were in turn assailed and abused by the Communists in this country who were supporting the strikes.

"There is a lesson to be drawn from this unfortunate experience," Mr. Isaacs continues.

"The men owe it to themselves, their families and their fellow trade unionists to give loyal support to their trade union leaders. Nothing can be more damaging to the trade union movement than a refusal on the part of the men to honour the agreements entered into on their behalf by their trade union and to refuse to use the joint machinery of the industry for the discussion and settlement of any difference they may feel they have with the employers."

### **Labour unity in U.S.A.**

Recent reports appearing in the United States press have pointed to the possibility of further attempts by the American Federation of Labour and the Congress of Industrial Organizations to achieve labour unity.

The two organizations had discussed the problem in 1947 and 1948 (L.G., Aug., 1948, p. 826), but had disagreed on the issue of membership in the World Federation of Trade Unions. The CIO subsequently withdrew from the WFTU, and joined with the AFL in participating in the founding of the International Confederation of Free Trade Unions last year (L.G., Feb., 1950, p. 172).

Press reports of a meeting of the AFL Executive in February indicated that the AFL would explore the possibility of further discussions with the CIO. There have also been developments in regard to co-operation between certain affiliates of the two organizations; in January, for example, a joint AFL-CIO committee was established in New York City under the title United Labour Committee, to co-ordinate the political activities of the two groups in New York.

At its February Executive meeting the AFL also decided to invite the International Association of Machinists (independent) to reaffiliate with the Federation. Commenting on this invitation, Mr. A. J. Hayes, President of the Machinists, expressed the hope that his union would return to the AFL, and also that some day the AFL and CIO would "unite on the economic field as they are co-operating on the political field."

A recent "no-raiding" agreement between the Machinists and the UAW-CIO is described below.

**"No-raiding" agreement between Machinists and UAW in U.S.A.** A "no-raiding" agreement was negotiated recently between two of the largest United States labour unions, the International Association of Machinists (independent) and the United Automobile Workers (CIO).

In its preamble the agreement cites the objective of "maximum labour solidarity, organization of the unorganized and the ultimate achievement of a united labour movement."

Its main features are as follows:—

"1. Where one of the named organizations has established a contractual relationship with an employer in the U.S.A., or has been certified as the collective bargaining agency by the National Labour Relations Board, the other organization shall not in any way interfere with this relationship by having its officers, representatives, or members solicit or accept membership applications or authorization cards, or cause or promote campaigns of any nature designed to disturb such relationship.

"2. In any unorganized plants, both organizations are free to conduct organizational campaigns in order to enroll the workers in such unorganized plants within their union and gain recognition as the collective bargaining agency. In the conduct of such organizational campaigns, it is agreed that both organizations will conduct themselves in a manner so as to be able to build up trade union loyalty on the part of these workers, and not seek to gain an organizational advantage by tactics and methods which in the long run are detrimental to the over-all interests of the labour movement.

"3. It is further understood and agreed that the two organizations shall strive to achieve maximum co-operation in the promotion of programs and policies designed to advance the best interests of our members and our nation."

The agreement applies to all plants in the United States except a few which are specifically listed.

It is stated that "in the event of any problem or dispute arising out of this agreement, the top officers of both organizations shall meet for the purpose of working out such problems or dispute in the spirit of this agreement."

The agreement is to "continue indefinitely unless modified or cancelled by at least sixty days' written notice . . . and then only after a conference has been held between the accredited representatives of the two organizations."

**Settlement  
of coal  
strike  
in U.S.A.**

Settlement of an eight-month dispute between the United Mine Workers of America and United States soft coal operators was reached on March 5.

Shortly after the President had requested Congressional legislation to seize the mines, an agreement was reached between John L. Lewis, president of the union, and representatives of the operators. Main features of the contract were an increase in wages and in the payments made by the operators to the miners' welfare fund.

The previous contract had expired on June 30, 1949; and since that time the miners had at various stages worked a three-day week, held a general walkout, returned to work for a limited period, and finally, on February 6, conducted a full-scale "wildcat" strike, taken against the instructions of union leaders.

An 80-day injunction under the Taft-Hartley Act was not obeyed by the miners, in spite of an appeal by Mr. Lewis that they return to work. Subsequent contempt-of-court charges against the union and Mr. Lewis were dismissed for lack of evidence.

On March 3 after the full scale strike had lasted 25 days President Truman proposed to Congress that the Government should take over the mines until a settlement had been agreed upon. In his address the President stated: "The danger to the national health and safety is real and immediate. . . . Neither side has bargained freely and effectively on the essential issues in dispute. . . . During the period of government possession of the mines, the owners should receive fair and just compensation for the use of their property and the miners should receive fair and just compensation for their work. . . . We have arrived at the present impasse because both the operators and the union have failed, month after month, to make the efforts in genuine bargaining which could result in a mutually satisfactory settlement. They have been unwilling or unable to lay aside their charges and counter-charges, moderate their fixed positions and undertake serious negotiation in a spirit of accommodation and mutual understanding. We can hope to work toward real solutions of the unstable relations between labour and management in the coal mines only if we come to grips with the problems which foster instability."

Mr. Truman further proposed setting up a Congressional committee "to determine what kinds of actions and what sorts of policies on the part of government, management and labour, will restore the coal industry to economic health and provide a

stable environment for constructive relationships between the operators and their employees.

"The coal industry is a sick industry. Temporary seizure by the Government, though it may be necessary under present circumstances, cannot produce a cure. I am recommending seizure authority because I believe we now have no alternative. But I urge that it be accompanied by a positive and constructive effort to get at the root of the trouble."

The President's decisive action came only after the manifestation of what he termed a "national emergency". Throughout the course of the strike he had hoped the dispute could be settled between the parties concerned. "The law places the responsibility for settling management-labour disputes on the parties, not the Federal Government. The Government can give them mediation assistance; but in the final analysis the parties themselves must write their own collective bargaining agreement."

Following the President's address to Congress an agreement was reached between the union and the soft coal operators in accordance with the following terms:—

- (1) Increase of basic wage from \$14.00 to \$14.75 a day;
- (2) Operators to pay 30 cents a ton instead of 20 cents a ton into the miners' welfare and retirement fund;
- (3) The union shop to be continued but only "to the extent and in the manner permitted by law";
- (4) The clause saying the miners will work only when "able and willing" to be replaced with one declaring the good faith and "mutual understanding" of the parties;
- (5) The memorial period clause of the previous agreement, which permitted Mr. Lewis to call strikes for any duration to mark mine disasters, changed to allow a maximum of five days a year;
- (6) The contract to end on June 30, 1952, subject to reopening for wage conferences after April 1, 1951;
- (7) Payments withheld from the welfare fund to be repaid by March 15.

The sections of the contract, concerning the welfare fund, were made to apply to all employees of the coal industry rather than being restricted to members of the union as in the former contract.

A similar agreement was signed March 9 between the union and the anthracite coal operators.

At the height of the dispute an estimated 600,000 workers were idle in the

United States as a result of the coal strike, including those indirectly affected, with an additional 200,000 employed only part time. Railway train schedules had been cut by as much as 65 per cent and over 250,000 children were reported to have been kept out of school. "Brownouts" in cities and complete shutdowns in industry dependent on coal were felt across the nation for lack of fuel.

In Canada, the Canadian National Railways announced a 25 per cent cutback in train schedules. Consumers' coal supplies became critical and threatened a possible shutdown in the auto industry. One beneficial feature of the strike was an added, although short, impetus given to production in the Maritime coal industry which up to the time of the shortage in Canada had been working on a part-time basis.

#### **CIO expels four unions as Communist-dominated**

The Executive Board of the Congress of Industrial Organizations, meeting in Washington in mid-February, expelled four unions on the grounds that they were Communist-dominated.

The unions concerned are the International Union of Mine, Mill and Smelter Workers; the United Office and Professional Workers of America; the United Public Workers of America; and the Food, Tobacco, Agricultural and Allied Workers Union of America.

The Convention of the CIO had authorized the Executive last November to take action against pro-Communist unions (L.G., Jan., 1950, p. 49). Two unions (the United Electrical, Radio and Machine Workers of America, and the United Farm Equipment and Metal Workers of America) were expelled last November. Charges against six unions are pending. The *CIO News* of February 20 states that one of these unions, the United Furniture Workers of America, is "making an effort to 'clean house.'"

The United Electrical Workers, and the Mine, Mill and Smelter Workers unions have already been expelled by the Canadian Congress of Labour (L.G., Jan., 1950, p. 8; Nov., 1949, p. 1374).

The United Office and Professional Workers of America and the Food, Tobacco, Agricultural and Allied Workers' Union of America have small memberships in Canada, but the Canadian locals are not affiliated with the Canadian Congress of Labour. The United Public Workers of America, the United Farm Equipment and Metal Workers of America and United Furniture Workers of America are not active in Canada.

#### **Further case study into causes of industrial peace**

A 15-year record of peaceful labour relations in a plant where management deals separately with seven AFL unions is analyzed by the National Planning Association of Washington, D.C.,

in a published report made available in February.

The seventh in a series of case studies into the causes of industrial peace under collective bargaining (L.G., June, 1949, p. 703; March, 1950, p. 306) the report deals with the Nashua Gummed and Coated Paper Company, of Nashua, N.H., which has a 15-year record of no strikes or lockouts. The company, it is explained, produces a "diversified line in the highly competitive converted paper products industry," where profits "depend heavily on ability to maintain a high volume of production and sales." Employee productivity is reported as high.

A principal difference between this case study and the earlier studies, it is pointed out, is that more unions are involved. The seven unions, listed in order of size, are:—

Local No. 270, International Brotherhood of Pulp, Sulphite and Paper Mill Workers;

Local No. 33, International Brotherhood of Bookbinders;

Local No. 359, International Printing Pressmen and Assistants' Union of North America;

The Stereotypers' Union of Nashua, New Hampshire, a subsidiary of the International Stereotypers' and Electrotypers' Union of North America;

Local No. 3, International Photo-Engravers' Union of North America;

Local No. 352, International Union of Operating Engineers;

Local No. 14, International Brotherhood of Firemen and Oilers.

Together these unions represent some 700 hourly-rated employees.

Industrial peace, the report says, has been won by good will and hard work by both management and union leadership—local and international. The relationship is based on patience rather than pressure, "day in and day out, not just during annual negotiations." Force is looked upon as a last resort because each party to the bargaining understands and accepts the needs of the other for security and growth, economic gains and profits. Neither party has argued for the inflexible application of broad principles such as management's "prerogatives" or union's "rights." There is no sharp distinction between making and administering contracts. When need arises

issues are negotiated and changes to the contracts are frequent. Only two arbitration cases have occurred during this history of collective bargaining.

Jurisdictional problems, it was found, have been worked out amicably by the seven unions, and the international unions of each have encouraged a high degree of local autonomy. There have been no rivalries created by attempts of other unions to organize the plant along different jurisdictional lines. The locals are set up on normal craft lines, with membership ranging from four in the smallest union to 257 in the largest, and with skilled, semi-skilled, and unskilled workers represented.

The unions have secured steady gains in wage rates and in other economic benefits, it is stated, which compare favourably to the wage structures of both the community and the industry—although wages are still below craft rates in publishing concerns. The unions, like the company, are said to have outstanding reputations in their community, attributable substantially to the quality of their labour-management relations.

Two types of factors have made this relation peaceful and constructive, it is shown:—

(1) environmental factors, which relate to the characteristics of the industry and the organization of the company; to the company's policies and procedures, which are conducive to steady employment and good working conditions; to the company's sound financial position and ability to pay for wage increases and "fringe" benefits; to the democratic and autonomous nature of the several locals; and to the place of the company and union in the community.

(2) Approaches of the parties to immediate problems. "Even with a favourable environment," the reports states, "an air of tension and hostility could make the relationship unstable and unsatisfactory. In this case, however, face-to-face dealings have been amicable."

Questioned as to the possibility of the relationship surviving in the event of a serious decline in business, both sides expressed confidence that they could continue to settle any problems by "full discussion and patient negotiations."

Despite the special problems involved in dealing with seven unions, the report states, "the causes of industrial peace found in this case study are parallel in significant degree to some of those in the six previous reports." Summarized, they are:—

Management's full acceptance of unionism and its belief that strong unions are an asset to management;

The unions' full acceptance of private ownership and operation of the business for profit;

Strong, responsible and democratic unions;

The company's policy of staying out of the unions' internal affairs, and not coming between the unions and their members;

The existence of mutual trust and confidence; the absence of ideological incompatibilities;

The lack of a legalistic approach to bargaining;

Concentration of negotiations on day-to-day problems instead of abstract principles;

Widespread union-management consultation and highly developed information-sharing.

#### **Wage rates reduced under cost-of-living agreement**

A further decline in the official United States cost-of-living index caused the U.S. General Motors Corporation to announce a wage reduction of 2 cents an hour, effective March 1.

The pay cut was effected under terms of an agreement between the corporation and the United Automobile Workers of America (CIO) whereby wages are linked with fluctuations in the cost-of-living index (L.G., July, 1948, p. 701). The reduction is the third such action instituted by the company in the past twelve months and affects 362,000 eligible hourly-rated and salaried employees. Salaried employees affected by the agreement received a \$10 quarterly reduction.

Walter P. Reuther, president of the UAW indicated he would endeavour to abolish the "escalator clause" when a new contract between the company and UAW was negotiated in April.

T. A. Johnstone, director of the UAW General Motors Department said the union had asked the company to waive the reduction, in view of its favourable profit position. (On March 13 General Motors announced a profit for 1949 of \$545,434,232, an increase of 49 per cent over its 1948 total, the previous peak.)

Simultaneously, a price lowering was announced of \$10 to \$40 on passenger vehicles and trucks.

Under the cost-of-living contract wages are adjusted quarterly in line with increases or decreases in the Consumers Price Index. The index for January 15 was 166.9 compared with 168.5 for October 15, 1949.

General Motors has been adding voluntarily .8 to the BLS figure for what is considered an under-statement in the rent

component of the index and the resultant 167.7 was the basis on which the 2 cent reduction was calculated.

The agreement also grants an annual increase of 3 cents an hour by the company based on estimated average annual gains in productive efficiency, regardless of what happens to the cost-of-living index, designed to "increase the standard of living of workmen."

A similar contract is in effect between General Motors of Canada and its employees at Oshawa and Windsor. No wage changes have resulted so far from this agreement, as in Canada increases apply only after the cost-of-living index reaches a level of 164. The Canadian cost-of-living index, December, 1949, was 161.5.

### **Survey of household workers in N.Y. State**

Approximately nine per cent of all women employed in New York State in March, 1948, were engaged in domestic service, according to an estimate of the New York State Department of Labour. In 1940 the ratio was 15 per cent, and in 1910 it was 24 per cent.

The Department, through its Division of Research and Statistics, conducted a survey of household workers in the spring of 1948. The Division's findings are reported in the Department's official publication, *Industrial Bulletin*.

Problems of domestic employment differ greatly from those confronting other workers, it is observed, and it is felt that the study should contribute to a better approach toward possible solutions. Throughout the survey the need for regulation of wages, hours and other working conditions, and the need for improved employment standards and training in the occupation, were constantly stressed.

"Household employment lags far behind the times with respect to labour or social legislation," the report states. "Domestic workers generally do not enjoy the benefits of minimum wage and maximum hours laws, social security, health insurance, and other benefits that are taken for granted in many industries. Instead, characteristic of the occupation are long hours without overtime pay, few opportunities for training, lack of opportunity for advancement regardless of years of service or ability, little economic security for periods of illness or old age, and the social stigma attached to the work."

There appears to be a gradual easing of the acute shortage of most types of household workers, it is reported, particularly for the non-resident jobs. One of the reasons

given for the changing situation is increased living costs. Women who were not previously in the labour force have been forced to seek employment in order to supplement family incomes and, conversely, housewives have been compelled to economize on hired household assistance. As a result, housework jobs can be filled more readily.

A study made by the State Department of Labour in the first post-war year of 1946 disclosed that wages of household workers had risen more sharply during the war years than had the wages of women in other occupations. As a result, the wide gap which formerly existed between the earnings of domestics and the earnings of other women workers narrowed considerably or disappeared entirely. Information collected in the spring of 1948 indicates that wages have changed only slightly. The median weekly wage of \$35, plus food and lodging, for full-time workers in New York City metropolitan area was approximately the same as in 1946, but with relatively fewer offers below this amount. In upstate cities, wages were considerably lower for comparable work, with \$20 the median.

Wages of full-time non-resident workers were practically the same. These wages, however, must be evaluated in relation to hours of work, it is pointed out, which in the case of resident workers are often long and irregular, with no compensation for overtime work.

The absence of legal minimum safeguards in household employment has led to voluntary efforts on the part of non-governmental agencies to meet the problem, the report states. A few states have attempted to provide some minimum safeguards but such protection is usually restricted to a small proportion of the workers.

"For many years, various women's social, civic, and trade union organizations, YWCA's, community groups, and public and private employment agencies have been actively engaged in local campaigns aimed at improving conditions for both the household employer and the household worker. The primary concern of these activities has been to establish standards of work performance and working conditions for the occupation, and to obtain the voluntary co-operation of both employer and employee in effectuating these standards. Improvement in the methods of placing houseworkers, and promotion of training programs have been additional objectives."

As an example of recent activities in this field, the report describes in some detail a community program which was

developed in the city of Cleveland. A committee, composed of representatives of many groups in the community, formulated a set of suggested minimum standards, which were incorporated in an attractive pamphlet for public distribution. The committee's recommendations deal with hours of work, time off, vacations and holidays, wages, living conditions, privileges, health, job description, and trial period. The "desirable" employer and employee are defined, and also the role of the employment agency.

There have been few training programs for household employment, the report states, although it is generally accepted that trained, skilled houseworkers would be of great help in achieving higher standards, and in raising the status of domestic workers.

#### **Jobless insurance for farm workers in Italy**

Unemployment insurance in Italy was extended last year to include unemployment in agriculture. The scheme is now applicable to agricultural workers who are employed under contract of service. The extension applies also to a limited extent to agricultural workers who carry out remunerated work besides work on their own property. Members of this category are entitled to unemployment allowance only if they have been employed for less than 180 days in the course of the current year, including work on their own property. (*Industry and Labour*, International Labour Office, February 1, 1950.)

#### **Encouragement of free collective bargaining in Japan**

Legislation adopted last year in Japan has for its purpose the encouragement of collective bargaining. The amended Japanese Trade Union Act protects the freedom of association of workers and their rights to organize and select representatives for collective bargaining.

Its definition of trade unions excludes those which receive financial support from employers. Unions are required to show non-discrimination in membership, to hold annual general meetings, to submit financial reports to members, and to have secret ballot authorization for strike action. Unions are protected from suits of damages arising through strikes or other proper acts of a union, but may acquire legal personality by registering in accordance with regulations to be laid down by cabinet order, and thereby be exempt from various restrictive measures, including income and other tax measures.

There is provision for the legislative extension of the terms of a collective agreement to workers and employers in the locality who are not parties to the agreement.

National and local "labour relations committees" are to help administer the Act. These committees are tripartite in structure. They may determine whether or not organizations are trade unions within the meaning of the Act and issue certifications thereof, perform conciliation, mediation and arbitration of labour disputes, and determine charges of unfair labour practices.

The Act enumerates a series of unfair labour practices of employers, and establishes procedures for the investigation of charges, and the issuing of orders by labour relations committees.

Amendments to the Japanese Labour Relations Adjustment Act provide for the establishment of conciliation, mediation and voluntary arbitration services by labour relations committees. (*Industry and Labour*, International Labour Office, February 1, 1950.)

#### **Right to bargain on wages restored in France**

The French National Assembly on January 5 voted a return to free collective bargaining between labour and employers. Approved by 351 votes to 185, the bill restores free collective bargaining on wages for the first time since 1939. It also provides for compulsory conciliation and voluntary arbitration.

(An article on collective bargaining in France appeared in the January LABOUR GAZETTE, p. 36.)

#### **Report of Committee on Fair Wages in India**

The tripartite Central Advisory Council for Labour, constituted in 1948 "to ensure the fullest co-operation between labour and management" in India, set up a Committee on Fair Wages in November, 1948. The Report of this Committee has been published, and is summarized in the July issue of the *Indian Labour Gazette*.

The Report sets out the following principles:—

The *living wage* represents a standard of living which provides not merely for a bare physical subsistence but for the maintenance of health and decency, a measure of frugal comfort and some insurance against misfortune.

The *minimum wage* must provide not merely for the bare sustenance of life but for the preservation of the efficiency

of workers by providing some measure of education, medical requirements and amenities.

The minimum wage is the lower limit of the *fair wage*; the upper limit is set by the capacity of industry to pay. Between the two, actual wages will depend on the productivity of labour, the prevailing rates of wages, the level of the national income and its distribution, and the place of the industry in the economy of the country.

The Report recognizes that collective bargaining alone in its present stage of development cannot ensure that prevailing wages will everywhere approximate fair wages. It therefore recommends the adoption of legislation to establish wage fixing machinery to take the form of a central appellate wage board, and a provincial wage board in each province, with provision for setting up regional wage boards for each industry as required. India already has a Minimum Wage Act passed in 1948 (L.G., 1949, p. 283).

#### **Statement of Indonesia's economic policy**

The Government of Indonesia, which in December, 1949 became a sovereign republic following agreement with the Kingdom of the Netherlands, recently issued a statement of its economic policy. "The underlying principle of economic policy is to raise the living standards of the population, whilst at the same time increasing the nation's economic potential," the statement declares, as quoted in *Merdeka*, a publication of the Indonesian Information Service.

To implement this policy a program has been drafted, which calls for increased agricultural production, increased industrial output, and large-scale migration from overpopulated to thinly populated areas of the Archipelago.

"Steps will also be taken to ensure that Indonesian workers receive reasonable payment for their labour, and reasonable care of their welfare, in line with wages and welfare of the workers in the democracies abroad."

Indonesia, to reach its economic objective, "must rely on foreign assistance," the statement declares. "The need for foreign capital investment is obvious; furthermore, foreign technicians and experts in specialized trades and professions will be welcomed." Such capital and other assistance, it is stipulated, will only be acceptable where it will be of real benefit to the Indonesian people. "This does not mean, however, that Indonesia will expect to

receive all the benefits of foreign assistance," the report continues. "Foreign investors and technicians will be expected to take reasonable profits, and indeed they will be justified to do so as just payment for their assistance."

#### **Review of Industrial Safety Survey**

The *Industrial Safety Survey*, a quarterly publication of the International Labour Office contains several interesting articles on the latest developments in accident prevention in a number of countries.

The July-September, 1949, issue of this periodical presents a feature article on "Electricity in Factories under Conditions of Special Flammability" which pertains to British industry. In its discussion of this type of fire hazard, the article mentions such aspects as the history of precautions against the risk of electrical ignition of flammable gas, the degree of risk in factory processes and the necessary precautions. These precautions include (1) ventilation of the process area; (2) flameproof enclosure of electrical equipment; (3) intrinsically safe electrical circuits; (4) segregation of electrical equipment; and (5) pressurization of enclosures.

A regular section entitled "Safety Institutions, Associations and Museums" contains a review of international meetings and conferences on industrial safety, the activities of the Belgian Mining Health Institute, the French National Safety Institute, the new French Association for Industrial Medicine, the volume of papers read during National Safety Week held in Paris in June, 1948, and a report of the Conference on Laboratory Accidents in London.

"Laws and Regulations, Safety Codes", another regular feature in the *Safety Survey* presents the salient features of new legislation in various ILO countries. The countries affected are Argentina, Cuba, France, Germany, India, The Netherlands, Sweden, the United Kingdom and the United States. A considerable portion of the article is devoted to the new Swedish Workers' Protection Act passed on January 3, 1949. This Act replaces the Workers' Protection Act of June 29, 1912 as amended, and comprises 75 sections grouped in 10 chapters.

The 120-page magazine concludes with official reports from numerous countries on such topics as accidents resulting in injuries and deaths, research centres and state social insurance, and reviews of recent periodicals on industrial safety.

# PENSION PLANS

## *in Canadian Industry\**

\* Prepared by the Economics and Research Branch of the Department of Labour.

*At present approximately one million workers in Canada, or about one in every four wage and salary workers, are covered by group pension plans. The number of these organized group plans is estimated to be close to four thousand. Under these plans provisions are made for workers to receive a regular income after retirement. Almost all of the plans now in existence have been inaugurated since 1900; more than three-quarters in fact since 1939.*

*The present article makes some reference to the growth of these industrial pension plans over the past fifty years and analyses the main features of existing plans. The article also deals briefly with some of the advantages and limitations of these plans. Finally, reference is made to the relation of these plans to the broad problem of old age security for all Canadians.*

### GROWTH OF INDUSTRIAL PENSION PLANS

No information is readily available as to the number of group pension plans in existence at the beginning of the present century, but it is known that at least four of the current plans were inaugurated prior to that date. The earliest of these four plans was introduced in 1874 by the Grand

Trunk Railway, now part of the Canadian National Railways, and is known as the Superannuation and Provident Fund Association.<sup>1</sup> Of the other three plans in effect

<sup>1</sup> An earlier Federal Civil Service retirement plan was introduced in 1870. The present Civil Service Superannuation Act, was passed in 1924.

in 1900, two were in financial firms and the third was in a manufacturing concern.

The period since 1900 can be dealt with conveniently in two sections: from 1900 up to the beginning of World War II in 1939 and the decade of the forties. In the earlier period the growth in the number of pension plans was slow—in the latter the number increased rapidly.

### Period from 1900-1939

Over the first four decades of the present century there was a gradual extension in the number of workers covered by industrial pension plans. As the general interest in the problem of old age security increased more firms developed both informal and formal arrangements for helping to provide assistance to retired employees. Most of these early plans were initiated by employers and were usually of a non-contributory nature as far as the employees were concerned. Evidence of the widening interest in old age security during this earlier period is seen in the increasing frequency of parliamentary debates on the subject following the first World War culminating in the passage of the Old Age Pension Act in 1927.<sup>2</sup> This Act inaugurated an over-all federal-provincial program of limited financial assistance to persons over seventy years of age in need of such aid.

Most of the pension plans introduced during this forty-year period were in financial institutions and in manufacturing plants. A recent survey reveals that about 350 of the current industrial pension plans, which were inaugurated prior to World War II, are in finance, while some 300 are in manufacturing.<sup>3</sup> Another 175 plans currently in effect and introduced in the period up to 1939 are in wholesale and retail trade establishments. The number of current plans introduced during these earlier years in the other industry groups is much smaller, about seventy-five in all.

The growth in the size of many financial, trade and manufacturing concerns during these years is no doubt one factor explaining the more rapid introduction of pension plans in these industries than in some others. Besides, manufacturing during these

<sup>2</sup> The assistance provided to older persons under this Act is not based on any previous financial contributions to an established fund but is paid on the basis of need. The assistance given is paid on a different basis from that provided under most industrial plans.

<sup>3</sup> An article outlining the results of a survey conducted by the Dominion Bureau of Statistics in co-operation with the Departments of Labour and National Health and Welfare entitled "Survey of Industrial Pension and Welfare Plans, 1947", was printed in the *LABOUR GAZETTE*, June, 1949, pp. 694-700.

years experienced some important changes in organization. With the rapid increase in the size of establishments and the introduction of mechanization on a large scale, accompanied by greater division of labour and job specialization, the work performed by independent craftsmen diminished in importance. It was during this period, for example, that many of the rural artisans, including blacksmiths, harness makers and wheelwrights, largely disappeared, and the proportion of urban wage-earners increased rapidly. Those workers who formerly continued at their independent crafts now, under the changed conditions, were retired at age sixty-five or seventy because it was found more economic to have their places in the plant taken by younger persons.

These changes in industrial organization in Canada, as well as elsewhere, tended to focus more attention on the problems of workers laid off in their declining years. More firms, sometimes on the urging of unions, recognized some responsibility for the continued security of former employees in return for services previously rendered. Not much is known on the extent to which workers themselves during these years were encouraged by unions, employers and other agencies to set aside savings for their old age. It is significant, however, that relatively early in this period, in 1907, the Annuities Act was passed, "for the encouragement of thrift and the affording of greater facilities for making provision for old age", by the Federal Government.

### Period from 1940-1949

Although the growth in the number of pension plans was slow up to 1940, some foundation was laid for a rapid expansion. During the past decade the number of industrial pension plans has increased by approximately three thousand. The largest group of wage-earners covered by these plans is in manufacturing in which total employment is greater than in any other industry. It is estimated that approximately 25 per cent of all workers in this industry are covered. In transportation about 94 per cent of the 194,000 employees of Canadian railway companies are covered. On the other hand coverage is much smaller in industrial groups such as services, construction and forestry. In these industries there is considerable seasonal and casual employment, a fact which militates against the establishment of pension plans.

There are several factors responsible for the rapid increase in the number and in the coverage of pension plans during recent years. The marked expansion of manufacturing during the war years has given

added importance to the trends noted earlier in industrial organization. Added to this, many establishments have had at their disposal the funds required to inaugurate pension plans. Whether their reasons for desiring to set up such schemes, were based on economic or humanitarian considerations, or both, the state of business during the period was favourable for their establishment.

Under pressure of wartime production needs, employers gave increasing attention to personnel problems. With labour at a premium it was necessary to take every possible step to increase the efficiency of labour.

During the war, the ceiling on wages together with the shortage of labour resulted in a tendency on the part of employers to increase the emphasis placed upon working conditions and to provide benefits in lieu of wage increases. By establishing pension plans, employers were able to increase the over-all economic returns to their employees without increasing their wages.

Another consideration, from the employer's standpoint, has been the desirability of establishing a systematic retirement policy. Under a pension plan employees can be retired without partiality when they have reached the age selected as most suitable. There is less tendency to retain in employment those whose industrial efficiency has declined due to the effects of increasing age, since their retirement will not result in destitution.

Employers' decisions in regard to the establishment of pension plans have also been influenced by the action of the federal government in making contributions paid into approved pension funds, deductible

from income as computed for purposes of corporation income and excess profits taxes.

Employees, on their part, have taken advantage of their stronger bargaining position, resulting both from labour shortages and from larger union membership, to press for welfare plans. This pressure has become particularly noticeable recently as efforts to secure direct wage increases have become a somewhat less active issue in collective bargaining.

Perhaps the most important single reason, however, for the increase in pension plans during recent years has been the growing interest in all forms of social security. Aside from this general interest the position of the older members of the community has been underlined by the higher proportion of older people in the population, due mainly to declining birth rates and to increased longevity.<sup>4</sup>

Actions taken by the government during the decade in regard to older persons, are indicative of this increasing concern of the nation as a whole in social security. The amount of old age assistance set initially

---

<sup>4</sup>In 1949 the number of persons 65 and over represented over 7 per cent of the population, in 1900 it was 5 per cent. It has been estimated that the proportion of the population 65 and over may gradually approach a level of from 10 to 15 per cent of the total population. See LABOUR GAZETTE, January, 1950, page 26.

---

**At present approximately one million workers in Canada, or about one in every four wage and salary workers, are covered by group pension plans.**

at \$20 per month in 1927 was increased on three occasions during the past decade.<sup>5</sup> The federal government also introduced, beginning in 1949, an additional exemption of \$500 for income tax purposes in the case of persons 65 years of age and over.

## LEADING FEATURES OF PENSION PLANS

While most industrial pension plans in Canada show a broad similarity, they may vary as to detail.<sup>6</sup> This is due partly to the differing needs of the groups covered. Large and small firms are likely to establish pension plans of different types. A firm with a stable business and a small labour turnover will have less difficulty in setting up pension and welfare plans than a firm in a less fortunate position. The kinds of benefits provided, and their amounts, depend on such factors as the financial strength of the company, the method by which the plan is financed, whether the plan is contributory or non-contributory, and the presence or absence of other welfare plans for the employees. The leading features of pension plans may be discussed under four headings:—

How is the plan administered?

How is the plan financed?

What benefits does the plan provide, and under what circumstances?

Who are eligible for these benefits?

The Table on pages 448 and 449 gives a brief analysis, under these four headings, of seven Canadian pension plans. Each of these plans has been selected either because it is typical of plans of a certain kind, or because it is important in itself, like that of the federal Civil Service. This table provides examples to illustrate the discussion which follows.

### How is the Plan Administered?

In this respect, nearly all Canadian plans fall into two types: some are organized under contracts with insurance companies or with the Government Annuities Branch of the Federal Department of Labour; some are administered by a board of trustees.

When a plan is underwritten by an insurance company or by the Government Annuities Branch, this underwriting organ-

All of these factors have given rise to much current discussion of old age security problems and in turn serve as an added impetus to industrial pension plans. For this reason it is timely to consider some of the main characteristics of existing plans.

ization accepts the responsibility for paying each employee the pension or other benefit due him under the contract, and in return receives annual sums representing the contributions made by the employee and his employer, or the employer alone, during that employee's working career. The contributions must be adequate actuarially to provide the benefits promised. This form of organization offers the greatest security to both the employer and the employee. Such plans, however, are rather rigid in their requirements, and other types may be found less expensive in some cases.

Under a trustee plan, the annual contributions are deposited with a trustee who administers the funds, paying pensions or purchasing annuities for employees as they retire. The trustees are usually selected by the employer, and are sometimes directors or officials of the company. In some cases, both employer and employees are represented on the board of trustees.

This type of administration permits greater flexibility in the organization of the plan than is allowed by an insurance company. Regulations have been established, however, by the Pensions Fund Branch of the Department of National Revenue, which must be observed in organizing any pension plan if the contributions to the fund by the employer or the employees are to be allowed as exemptions for income tax purposes. Perhaps the most important of these regulations is the requirement that the employer's contributions to the pension fund must be irrevocable.<sup>7</sup> In other words, if the plan is not insured, the contributions must form a trust fund, which the employer cannot recover for his own purposes, but which must be devoted solely to the payment of pensions or other related benefits to the employees covered by the plan.

When pensions are paid from an independent trust fund, instead of being insured, it is evident that all the risks of the plan such as exceptional longevity among the pensioners, must be borne by the established fund alone, instead of being merged in the larger pool of risks carried by the Annuities Branch or by an insurance company. When the trust fund is used to buy annuities for employees as they retire, the fund is protected from the risk of high longevity among the pensioners after

<sup>5</sup> The monthly maximum rate was increased to \$25 in 1943; to \$30 in 1947; and to \$40 in 1949. In addition to paying their share of one-quarter of these amounts some provinces introduced "cost of living" bonuses up to \$10 per month which are still being paid.

<sup>6</sup> See "Types of Pension and Retirement Plans in Canadian Industry", *LABOUR GAZETTE*, February, 1950, pp. 191-192.

<sup>7</sup> Further regulations of the Department of National Revenue are referred to below.

retirement, but some uncertainties remain, due to variations in the mortality rate of employees before retirement, or in the rate of labour turnover. For these reasons, such independent plans are best suited to companies with sufficiently large numbers of employees to make risks reasonably predictable. The cost of administering a trusteed plan is also likely to be excessive for a small company.

### How is the Plan Financed?

The method of financing adopted greatly affects all the other features of the plan, including the types of benefit provided and the vested rights of the employee. Most of all it affects the security of the prospective pensioner, who has an interest not only in the size of his future pension, but in the certainty that it will be paid.

In the case of a plan financed and administered by the employer, it is possible theoretically at least, to operate upon a "pay-as-you-go" basis. The pensions due each year are then paid directly by the employer from current revenues or from his general cash reserves. Under such a plan there is no accumulated pension fund specifically earmarked for the payment of pensions. The continuance of pension payments depends upon the continuance of the prosperity of the business and its ability to carry the plan through a period of recession. In case of bankruptcy the employees would have no claim against the assets of the company. To balance this lack of security, the advantage of such a plan is that it does not require an initial outlay to establish a fund.

There are practically no pure "pay-as-you-go" plans in Canada at present, due in part to the requirements of the Department of National Revenue. As stated above, nearly all plans are either insured or trusteed. Either of these types of plan involves the actuarial calculation of the yearly payments which must be made on behalf of each employee throughout his working career, to provide him on retirement with a pension of the chosen size.<sup>8</sup> The fund formed by the accumulated contributions will be preserved in the hands either of trustees or of an insuring agency, and even should contributions cease, the fund will continue to provide pensions to those employees who have retired, and a certain sum of money for those employees who have not yet reached the retirement age.

It is evident that the pension which the employee ultimately receives will be deter-

mined by, among other things, the number of years during which contributions to the fund are made by him, or on his behalf. In this calculation no account has yet been taken, however, of the past years during which the employee may have worked for the same employer before the pension plan was established. This is a serious matter for those employees who, at the beginning of the plan, are already close to the age of retirement, as they will have only a few years of contributions to their credit when they retire. If their pensions are to be set at rates which take account of their years of service before the plan began, an adequate amount of money must be provided in addition to the normal contributions.

This amount of money is known as the "past service liability" of the pension plan. It is, of course, gradually reduced as the older employees successively retire, receive their pensions, and die. That portion of a pension paid for years which the employee worked before the pension plan began is called the "past service benefit". That portion of the pension paid for years worked after the pension plan began, and during which normal contributions were paid to the pension fund, is called the "future service benefit".

Since it is difficult for employees to contribute toward their past service benefits in addition to their normal contributions toward their future service benefits, the past service benefits are usually financed entirely by the employer. This can be done on a "pay-as-you-go" basis even if the future service benefits are funded. The Department of National Revenue, however, requires the past service liability to be liquidated according to a definite plan, by payment of a lump sum into the pension fund, or of instalments over a pre-determined period, or of premiums during the remaining years of service of the employees concerned.

The maximum deduction for income tax purposes, in any one year, allowed under this heading is one-tenth of the total past service liability. It is usual, therefore, for employers to plan to fund the whole sum by regular contributions over a period of ten years or somewhat longer.

Pension benefits for past service, under the same regulations, may not exceed those for future service. In fact, as the table shows, the rates of past service benefits are usually lower, in proportion to length of service and the earnings of the employee. This is most likely to be true of contributory plans, due to the difficulty of obtaining additional contributions from employees.

Within the general category of funded plans, two further types must be distin-

<sup>8</sup>In the case of "money purchase" plans, the annual contribution is fixed as a percentage of the employee's earnings, and the pension paid is calculated actuarially from the contributions.

# SELECTED CANADIAN

Main Features of Pension Plan	Montreal Star	National Carbon Limited	Great Lakes Paper
<b>Administration</b> Underwriting agency	Annuities Branch, Canadian Department of Labour, and Insurance Company	Annuities Branch, Canadian Department of Labour, and Insurance Company	Insurance Company
<b>Contributions</b>			
(a) Employee contributions	4% of basic earnings	3% of annual earnings under \$3000—4% of excess over \$3000	4% of earnings
(b) Employer contributions	4% of basic earnings of each member, plus cost of past-service benefits	Balance of cost of plan	Balance of cost of plan (about 60% of total including past service benefits)
<b>Benefits</b>			
(a) Annual Pension Formula			
(i) Future Service	Amount determined by future service contributions given above (Money purchase plan)	1½% of total straight time earnings as a member of plan under \$3000 per year 2% of earnings over \$3000 per year.	1½% of total earnings as member of plan
(ii) Past Service	1% of basic annual earnings as at effective date of plan, for each year of past service after age 35	1½% of annual rate of earnings at effective date of plan, for each year of past service	1% of annual earnings as at effective date of plan multiplied by years of past service minus 5.
(b) Vested rights on termination of employment before retirement age	Paid-up annuity based on employee contributions, plus a percentage of employer contributions if service over 11 years	Over 15 years service: paid-up annuity based on past and future service benefits accrued. Under 15 years: future service benefits resulting from 3% contributions only	Refund of employee contributions as cash annuity; percentage of employer contribution if service over 5 years
(c) Survivors' Benefits			
(i) Death before retirement	Lump sum equal to employee contributions plus interest, plus a percentage of employer contributions if service over 11 years, and if the employee's death occurred after 20 years' service and after age 50, a further lump sum equal to all the employer's past service contributions plus interest	If age at death over 55 for men, over 50 for women, beneficiary receives reduced pension for 10 years. Under such age, total employee contributions refunded, with interest only on 3% contributions	Refund of employee contributions
(ii) Death after normal retirement	5 years payments guaranteed, or other options	10 years payments guaranteed, or other options	5 years payments guaranteed
<b>Eligibility Requirements</b>			
(a) Eligibility to join plan	Regular employees with 2 years service, aged 25-59 men, 25-54 women. Employees past age limit receive pension of 1% of final salary for each year of service after age 35	Regular employees with one year's service, men under 65, women under 60	Regular employees, aged 21 or over, one year service for men, 3 years service for women
(b) Normal age of retirement with pension	Men 65, women 60, earlier or later in special circumstances	Men 65, women 60, earlier in special circumstances	Men 65, women 60 but under 10 years service men retire at 70, women 65
<b>Effective Date</b>	March 31, 1948	July 1, 1939	April 30, 1947

# GROUP PENSION PLANS

George Weston Ltd.	Canadian National Railways	Canadian Industries Limited	Federal Civil Service
Trustees selected by Board of Directors	Canadian National Railway Company as trustee	Future service liabilities funded under trustees selected by Company	Canadian Government
3½% of earnings for future service pension	Zero to 10% of earnings at option of employee, toward supplemental pension	None	5% of salary \$1,200 or less yearly. 5½% of salary \$1,200-\$1,500 yearly. 6% of salary over \$1,500. All females 5% of salary
Balance of cost of future service pensions (4.7%) and entire cost of past service pensions	Matches employee contribution up to 5% of earnings, plus total cost of basic pensions and past service pensions	Total cost of plan; periodic contributions to trust fund to cover future service liabilities	Balance of cost of plan
1½% of aggregate earnings while contributor to plan unless minimum pension (below) applies	Basic pension \$300 annually, plus supplemental pension determined by above contributions	1% of average annual earnings during final ten years, multiplied by number of years service	2% of average earnings during last ten years, for each year of service up to 35 years
For employees with 5 years or more past service, prior to 1946 minimum pension is 30% of 1946 earnings	If over 10 years past service, service pension replaces basic pension unless basic pension is greater. Service pension—1% average annual earnings for best 10 years multiplied by years of past service (1)	Same formula as future service	Same basis as future service, if employee elects to make contributions for past service. Includes overseas service in forces, employment as temporary civil servant, or other pensionable employment.
Paid-up pension based on own contributions, also on a percentage of employer's contributions if service over 10 years; or cash refund of own contributions without interest	Employee contributions refunded with compound interest; no interest on contributions during first 10 years service	None	Retiring allowance on leaving before retirement age, after ten years or more service, due to disability or abolition of position. Under other circumstances, adjusted retiring allowance, or gratuity, or return of contributions without interest
Refund of employee's contributions plus interest	Refund of employee's contributions plus interest	Life Insurance Benefit Plan separate from pension plan, provides \$1,500 to named beneficiary if close relative, otherwise \$300	If 15 years' or more service, allowance to widow equal to one-half of allowance payable if contributor had reached retirement age at date of death. Small allowance for children. If service under 10 years, small allowance or gratuity
5 years payments guaranteed	Dependent on type of annuity selected by employee	See above item	Allowance to widow equal to one-half of pension received. Small allowances for children
2 years continuous service, men under 50, women under 45	Basic pension: begin service before age 45, continue to age 65. Supplemental pensions: 10 years continuous service before employer contributions begin; employee contributions may begin on entering service if under 55	All regular employees from date of employment	All permanent civil servants appointed after effective date of plan, having passed medical examination; those appointed earlier who elect to join
5 for men, 60 for women, earlier under special circumstances	Normal: 65, after 20 years Disability: 60, after 20 years Voluntary: 60, after 35 years, or after 30 years at reduced pension	Compulsory at 65 after 15 years' service. Voluntary at 60 after 30 years' service Disability, any time after 15 years' service	Retirement permitted at 60 Retirement compulsory at 65, with few exceptions
December 1, 1946	January 1, 1935	September 26, 1919	July 19, 1924

) C.N.R.—When past service exceeds 10 years, if service pension, plus supplemental pension purchasable by a 5% matched contribution, does not equal 1% of average earnings of last ten years, for each year of service, the difference is made up by the Company.

guished: the contributory and the non-contributory. Under a contributory plan, the employee as well as the employer contributes to the pension fund. Under a non-contributory plan, the employer pays the total cost of the pension. Plans under which the employee contributes, but not the employer, are nowadays rare, except as a voluntary supplement to the company's basic pension plan; as basic plans, they would not be approved by the Department of National Revenue.

The table shows several examples both of contributory and non-contributory plans. The survey of pension plans made by the Dominion Bureau of Statistics in 1947 showed nearly 250,000 workers covered by non-contributory plans, and about 380,000 by the contributory type. The latter group includes the large railway pension plans. Excluding the railways, the survey showed that the non-contributory plans were, on the average, much larger than the contributory ones, since they covered an average of about 400 workers apiece, while the average contributory plan covered only about 70 persons.<sup>9</sup>

Since pension plans in Canada have only recently become an object of collective bargaining, it is evident that many of the existing non-contributory plans have been set up on the initiative of employers. Employers may often favour the non-contributory type of plan, because of its greater economy in administration, because the employer is likely to have more control of its management, and because it increases his influence with his employees.

The contributory type of plan, however, also has advantages. From the point of view of management, it has the advantage of making employees conscious of the cost of their pensions. From the point of view of labour, it increases the financial independence of the employee, and is likely to provide him with a larger pension and greater vested rights in the pension fund.

### What Benefits Does the Plan Provide?

The principal benefit is obviously the pension itself. Every pension plan contains a formula by which the rate of pension for each employee is accurately determined. As the table shows, there is wide variety in the formulae used, although the majority of them show a general similarity. In nearly all cases, the annual pension is calculated as a certain small percentage of the employee's average annual earnings, multiplied by the number of years of service.

<sup>9</sup> Cf. "Pension and Welfare Plans in Canadian Industry", in *LABOUR GAZETTE*, June, 1949, pp. 694-700.

If average earnings are computed from the employee's years of highest earnings, or from the last five or ten years of employment, rather than from his total period of service, the rate of pension is usually increased. In such a case the percentage of such earnings used in the calculation of the pension may be reduced, for example, from  $1\frac{1}{2}$  to 1 per cent, or the contributions may be higher, or other benefits from the plan may be reduced.

Supplementary pension plans are sometimes provided in addition to the basic pension plans, for the use of employees who wish to increase their rate of pension by additional voluntary saving of their own. Such supplementary plans are intended especially to serve employees who began to work for the firm at a relatively advanced age, and whose pension rates would therefore otherwise be low.

The vesting policy of a plan is a feature which any employee must consider, in estimating the prospective benefit of the plan to himself, in addition to the expected rate of pension. If the plan grants vested rights to the employee, this means that he has a claim to a certain part of the accumulated pension fund. If his employment should terminate, after a certain number of years of service, he is entitled either to a cash payment from the fund, or to a part pension at a future date, the amount of which will depend on the length of his service with the company.

Most Canadian private pension plans now grant the employee vested rights. The employer's contributions to the fund are irrevocable, and the whole fund at any time is therefore vested in the employees. If the plan is wound up, the fund must be divided among the employees, in the form of pensions, part pensions, or cash refunds, depending upon their length of service and other circumstances. Such provisions are required if the plan is to qualify for income tax exemption.

This does not mean that an employee who leaves a firm after only one or two years' service will enjoy full vested rights. If he has himself made contributions to the fund, he is always entitled to have them returned to him, with or without interest, either as cash or as a future annuity. But in most cases, he will have no claim to the sum contributed by his employer on his behalf, unless he has been with the company for a considerable number of years. Partly as a result of Canadian income tax regulations, the most common practice at present is to vest part of the employer's contributions in the employee after ten years' service, and to grant full

vesting after twenty years. Other variations are shown in the table.

This does not mean that the employee, after twenty years' service, can withdraw from the pension fund in cash the total sum represented by his own and the employer's contributions. Even if he is leaving the company, it may be that the greatest cash refund he can obtain is the total of his own contributions with or without interest. To enjoy his vested right to his employer's contribution, it is likely that he will have to leave the whole sum, including his own contribution, in the pension fund until he can receive it as an annuity at the normal retirement age.

Vesting helps to some extent the older worker who finds it necessary to change jobs, since it provides him at least with a part pension, proportioned to the time he has spent with the company. It does not greatly help a worker, however, who changes jobs every five or ten years, since this period is not usually long enough for him to gain full vested rights.

### Who are Eligible for Benefits?

This problem may be broken down into two sets of more detailed questions:—

(1) Which employees are permitted to join the plan? How many years of service are required before joining? Is there a maximum age after which the employee cannot join?

(2) What is the normal retirement age for male and female employees respectively? What is the minimum number of years of service required to qualify for a pension?

The table gives brief answers to these questions for the seven plans analyzed. It is evident that these questions are closely interdependent.

Not all of the questions are applicable to all plans. The question, which employees are permitted to join the plan, and at what date, applies chiefly to contributory plans, since the employee on joining begins to pay contributions. Joining the plan is often compulsory, except for employees hired before the plan was inaugurated.

In a non-contributory plan, all permanent employees are usually included automatically, but a certain minimum length of service is usually required before retirement to qualify for a pension.

The normal retirement age is most often 65 for men and 60 for women. Most plans allow earlier retirement on reduced pension in cases of disability or under other special circumstances.<sup>10</sup> Many plans permit later retirement, in approved cases. Two of the plans shown in the table set forth, instead

<sup>10</sup> A system of pensions payable only in case of disability has been established for members of the United Mine Workers, District 18, in Alberta, Saskatchewan, and British Columbia. These pensions are paid from the "Welfare Fund" a trust fund established as a result of collective bargaining, to which the employers pay the sum of fifteen cents (three cents in Saskatchewan) for every ton of coal sold or used. A pension of \$60 per month or less is paid to union members "mentally or physically disabled as the result of long service in the coal-mining industry" to such an extent as to be partially or wholly unemployable.

Pension plans have contributed to the trend of recent years towards earlier retirement of industrial workers.

of a fixed retirement age, a schedule of ages at which retirement is permitted, decreasing as length of service increases.

It is evident that the earlier the age of retirement on pension, the greater the cost to the plan of a pension of given size. For this and other reasons, many people now consider that retirement at 65 may be unduly early.

Discrimination between different classes of employees in granting pension rights is forbidden by the Canadian income tax regulations, especially discrimination between high and low salary classes. The coverage of the plan may be restricted to certain well-defined classes of employees. Part-time, temporary, or seasonal workers are practically always excluded. There may be different eligibility requirements for males and females.

### Cost of a Pension Plan

In concluding this section, it may be appropriate to mention the principal factors affecting the cost of a pension plan, some

## CURRENT ISSUES

The increased interest in old age pensions during recent years, referred to earlier in this article, implies much discussion of the advantages and disadvantages of industrial group plans and of their relation to an over-all security program for older workers. These more active discussions of industrial pension plans spring, to a large extent, from a greater emphasis placed on the need for pensions for older workers by Canadian trade unions.

Until the last year or two pension plans had not been an important factor in collective bargaining within Canadian industry. The recent bargaining on plans in the United States<sup>11</sup> and the great concern about social security problems shown by Canadians of all ages, have led some Canadian unions to press for pensions, especially in

<sup>11</sup> The collective bargaining activity concerning pension plans in the United States has centred about three industries—coal, steel and automobile. In these industries the unions have bargained for regular employer contributions to a pension fund. The resulting plans are employer financed, but it is to be noted that the plans are devised as supplements to the Government Social Security program which is employee-employer financed. In Canada, no over-all pension scheme exists, and the unions which have bargained on this issue have urged a full pension as compared with the partial pension requested by the American unions. Almost all of the unions which have carried on these negotiations for industrial pension plans have been industrial unions and represent large bodies of employees of a single employer.

of which have now been discussed. The most obvious factor is, of course, whether the pensions are large or small. There is also the degree of security provided, a fully-funded plan being more secure and more costly than one partially funded, and a pay-as-you-go plan being the cheapest at the beginning, but in the long run the least secure. A generous vesting policy is more costly than a parsimonious one. Costs are also affected by the age distribution of present and future employees, the expected mortality rates of employees before and after retirement, and of course the retirement age. Among the numerous other factors which might be mentioned are the rate of labour turnover and the type of administration selected for the plan.

Of external economic factors affecting the cost of the plan, the most important is the prevailing rate of interest, which must determine the rate of interest assumed by the actuaries in calculating contributions and benefits. The decline in interest rates since 1929 has greatly increased the cost of a pension.

industries where no plans are already in effect. The establishment of pension plans was listed as an issue in a number of strikes which took place in Canada during 1949. Moreover, a recent conciliation board recommended the establishment of a plan in the automotive industry.

More detailed information on individual industrial pension plans is required to assess their contribution towards a solution of the general problem of economic security for Canadian workers. However, some broader aspects of group pension plans and of national social security measures for older workers might be mentioned briefly in this final section.

One of the principal limitations of many industrial pension plans is lack of provision for the worker to transfer his full pension credits should he change employers. Even if the second firm also has a pension plan it seldom recognizes the previous experience of the worker. The worker's vested rights usually depend to an important extent on the length of employment with a company. Thus if he is to receive an adequate pension he must usually remain at least twenty years with a single employer.

This constitutes a restriction of the workers' mobility and often will tie him to a given firm even though it may be in the interests of the worker and of the economy that he move elsewhere. From the point of

view of the employer also, the credit of the employee in a pension plan may deter the employer from discharging him even though he may be less productive than the average or redundant to the activities of the firm.

The inability of the worker to retain his credit toward a pension when transferring from job to job may react to the disadvantage of older workers seeking employment. Firms may be hesitant to hire workers who are relatively close to retirement age as it may require retiring the worker at a low pension. Such a problem is not easily overcome. The basic need appears to be for the coverage of all workers or at least for the extension of vested rights which the worker can carry with him.

One further result of a pension plan is the necessity of setting a definite age for retirement, usually sixty-five years for men and sixty for women. Against the advantage of such a retirement policy, must be balanced certain disadvantages in the encouragement of retirement from the standpoint of the individual and the industry. In some cases workers on reaching the retirement age are still capable of a valuable contribution. Medical advances which have lengthened life have also probably lengthened man's potential working career. Too early retirement, therefore, may be wasteful and may even shorten the life of the individual concerned. Besides there is an increasing number of jobs requiring light manual labour which might be performed by older workers who would otherwise retire into inactivity.

The initial cost of a pension plan, depending on the nature of the plan, is often high and once embarked on, the current expenses must be paid as an annual charge. The total cost of a pension plan must also be considered in the light of other cost items.<sup>12</sup> In some industries where labour costs are already relatively high, the effect of an additional expense may have a more important effect on the competitive position of the industry than where labour costs are relatively small.

The main over-all limitation of the system of industrial plans today, from the point of view of the worker, as has been stated above, is its restricted coverage. Three-quarters of the wage and salary workers in Canada today are not covered, in addition to most of the "own account" and other members of our labour force not earning wages and salaries.<sup>13</sup> Many of the workers who are not covered could not readily be included in industrial pension plans. This is one of the factors which

has led to a demand for a national pension program. Representatives of management and of labour have recently advocated the setting up of such a plan.

It is evident that the establishment of an over-all public program would assist in overcoming some of the difficulties mentioned above. But the introduction of such a plan by the federal government presents certain other difficulties. First, there must be agreement between the federal and provincial governments on financial arrangements. A second consideration is the magnitude of the cost involved in an over-all pension plan. Pension plans at the levels now advocated in various quarters would require the increase of government social security payments to from one-and-a-half to four times their present level.<sup>14</sup> An expenditure of this size on one section of the population requires a willingness on the part of the remaining sections to meet the cost. These are two of the problems which the recently established Joint Committee on Old Age Security of the Senate and the House of Commons has under consideration.<sup>15</sup> They are also expected to be discussed at the Federal-Provincial Conference later this year.

With the introduction of an over-all old age security program, there would still appear to be a place for industrial pension plans. While a broader plan might establish a higher minimum of old age security for a large part, or perhaps all, of the population, there would be room for supplemental pensions, provided by the group plans of individual industries. In the meantime these industrial pension plans are making a substantial contribution to the income security of many older persons.

<sup>12</sup> Under the Canadian Government Annuity Plan the total cost of an annuity of \$50 monthly purchased at age 65 with monthly payments to start immediately would be \$7,150 and a \$100 annuity would be \$14,300. Annual payments from age 35 to give similar annuities would be \$145 and \$290 respectively.

<sup>13</sup> Out of a total of 5,100,000 in the labour force, 950,000 are "own account" workers; 250,000 are employers with their own business or profession; 3,600,000 are paid workers; and 300,000 are unpaid family workers.

<sup>14</sup> Estimates of total cost made by the Department of Health and Welfare show a monthly pension of \$40 for all persons over 70 years of age would cost \$323 million in 1951, \$417 million in 1961 and \$500 million in 1971. A \$100 monthly pension for all persons over 60 years would cost between \$2 and \$2.5 billion. Some conception of the magnitude of this expenditure is gained when it is realized that all present social security payments by the federal government total approximately \$700 million. (Hansard, March 10, 1950, p. 640.)

# CONCILIATION BOARD RECOMMENDS NON-CONTRIBUTORY PENSION PLAN AT FORD MOTOR COMPANY OF CANADA

*On February 27 the Department of Labour of the Province of Ontario made public the Report of a Board of Conciliation, established under provincial legislation, dealing with a dispute between the Ford Motor Company of Canada, and its employees, members of Local 200, United Automobile Workers of America (CIO).*

*While this Report covers a number of issues, considerable general interest attaches to the sections dealing with the union's request for a pension plan and health program. These sections are reprinted below.*

*The Report is in two parts: a majority report, signed by C. P. McTague, Chairman, and J. C. Adams, company's nominee; and a minority report, signed by Drummond Wren, employees' member. Both reports recommend the establishment of a non-contributory pension plan, but are at considerable variance in their proposals as to pension benefit rates and other matters.*

## Majority Report

*In the matter of the Labour Relations Act, 1948, and Regulations made thereunder and of a dispute between:*

FORD MOTOR COMPANY OF CANADA, LIMITED,  
WINDSOR, ONTARIO, *Employer,*  
and

LOCAL 200, UNITED AUTOMOBILE WORKERS  
OF AMERICA (CIO), *Employees.*

The Honourable  
The Minister of Labour for the  
Province of Ontario  
Parliament Buildings  
Toronto.

SIR:—

The Board of Conciliation established by you under date of November 14, 1949, reports as follows:—

The Board met with the parties at the City of Windsor on December 14, 15, and 16, 1949. The parties were represented as follows:

For the Company: Mr. Wallace H. Clark;  
Mr. Gregory Kew.

For the Union: Mr. George Burt; Mr. Joseph H. Daoust; Mr. Kunio Hidaka.

The issues upon which the parties were unable to agree, and which were presented to this Board for consideration, fell into two main divisions—

1. Changes in the text of the former collective agreement.

2. The request of the union for old age retirement income and health security program.

It will be convenient to deal with these issues in the order in which they were presented by the union, but before entering into a detailed discussion of the items in dispute and indicating our recommendations to the parties we think it appropriate to comment generally as follows:

The union seems to regard the matters in issue here as being of special importance because from their point of view the collective agreement with Ford Motor Company of Canada, Limited, will establish a pattern for negotiations with other companies.

While it cannot be denied that the collective agreement between a large industrial organization and a union representing upwards of 10,000 employees must be of considerable significance we do not consider that any particular clause of the collective agreement between these parties should necessarily be regarded as a pattern in other negotiations, which must always be resolved in relation to the particular facts and circumstances applicable to the parties in those negotiations.

Nevertheless because the Union in these proceedings is desirous of establishing herein patterns for future negotiations, that seems to us to give the Board of Conciliation greater scope in expressing their views and in making recommendations than would otherwise be the case.

*(The sections of the Majority Report dealing with contract changes are omitted.)*

We come now to the more difficult questions of pension and welfare programs.

It is first to be noted that there is no issue before us as a Conciliation Board between a contributory pension plan and a non-contributory one. The simple fact is that the Union in the normal process of collective bargaining has demanded a non-contributory pension plan of \$100 per month at age 65 after twenty-five years of service and the Company has conceded the principle of a non-contributory plan but at the rate of \$55 per month at age 65 after thirty years of service. Our duty as a Conciliation Board is to try to bring the parties into agreement on the principle already accepted by both and on a basis which in the circumstances represents our view of how equity and cost can best be reconciled. In that connection we must keep in mind that the cost will be borne in the last analysis by the purchasers of the products manufactured. The cost of pension plans like any other cost including wages must be reflected in the price of the product and be borne generally by the purchasing public.

It is clearly apparent that the pension agreement arrived at between the same Union and Ford Motor Company of Detroit is a most important factor in its bearing upon the present case. It becomes necessary to analyse that agreement. No matter how that contract may have been described in press references, it is clearly not a contract to establish at the expense of the Ford Motor Company pensions of \$100 per month at age 65 after thirty years of service. It can be fairly described as a contract by which the Ford Motor Car Company obligates itself to pay an amount equal to the difference between general social security benefits and \$100 a month—quite a different proposition.

The agreement as to pensions obviously is based upon a premise or forecast that United States Social Security payments will be increased during the term of the pension plan and that consequently the contribution of the Company to a pension of \$100 a month derived from both Social Security and straight Ford pension will decrease. It might be described with some degree of accuracy as an agreement to underwrite the difference between \$100 a month and what is provided or will be provided by general Social Security payments under social security legislation in the United States.

It is quite obvious that in Canada there is no parallel at the present time with United States Social Security. While we have Old Age Pensions they are subject

to the means test and as presently administered the pensioner who receives a pension from other sources would likely be disqualified. The pension plan offered by the Ford Motor Company of Canada, Limited, appears to be based upon a premise or forecast that during the period of the pension agreement there will be brought into force legislation by which the means test will be abolished in Canada. In the result the plan offered by Canadian Ford may be described as a firm commitment to pay pensions to those eligible under the plan at the rate of \$55 per month at age 65 after thirty years of service until such legislation is brought into force and if the benefits from future legislation plus the benefits of the Company plan together exceed \$100 a month then the Company's contribution may be reduced by an amount equivalent to the excess.

Both plans are founded upon premises that may never come about. Nevertheless it would be far from prudent on the part of either Company from point of view of cost, which as we have said, must eventually be borne by the public, to enter into an agreement and ignore pending legislation in the United States on the one hand and a powerful movement to bring about abolishment of the means test and increase in Old Age Pensions in Canada on the other.

It seems quite evident that Ford of Canada in devising its particular plan has tried to follow the lines, as closely as possible in the somewhat different circumstances which prevail in Canada, of the pension plan reached in the collective bargaining process between American Ford and the same Union. In addition, it has quite evidently also made a sincere attempt to equate the benefits to its employees to the benefits received under the Detroit Plan. Having in mind that wages in the Canadian plant on the average are about 78 per cent of those paid in the Michigan Plant, we believe that the plan offered, subject to some modifications, is fair by comparison.

Since this is the first time the question of non-contributory pensions has been made the subject of collective bargaining in Canada the case before us assumes unusual importance from point of view of a pattern in the immediate future. We do not express any opinion as to the desirability of contributory pensions as against non-contributory pensions. In view of the position taken by the Company that becomes unnecessary and irrelevant as far as we are concerned as a Conciliation Board. We have no doubt that the principle of pensions is a desirable one but it must be con-

sidered in relation to what may be done in respect to general Social Security through Governmental action and it must be considered as well in relation to cost. There can be no doubt that the public generally must bear the cost of pension plans as it can only be recovered in the price of the product. Generally speaking the overall result will be exactly what must accompany high wages—namely, high prices. It does seem generally somewhat inequitable that because a man happens to be fortunate enough to be employed by a large and strong organization like Ford, he should enjoy advantages which have to be paid for to some extent at least by the less fortunate members of the community who have no opportunity to enjoy the benefits of any pension plan whatsoever. One can readily understand that there should be some equitable relationship between what an industry does for its employees in the way of pensions and what the country in general does for its citizens along similar lines if it proposes to do anything.

There can be no doubt whatever that the initiation of any new pension plan in these days must necessarily involve inequities as far as particular individuals are concerned. The Ford of Canada Plan bases past service credits on seniority as defined in the collective bargaining agreement. Much objection is taken and will be taken as to that. The pension plan of course has to do mainly with the future and too great concessions to present employees in equity will necessarily result in too high costs in the future. All in all, we are of the opinion that the commencement of past service credits on the basis proposed by the Company is reasonable. It must be kept in mind that this industry has been comparatively a high wage industry and at least over the last few years the thrifty employee has had an opportunity to build up savings.

Generally speaking we recommend acceptance of the Company's Proposed Retirement Plan as outlined in Schedule I of its submission concerning pensions and insurance. We suggest, however, that in the last line of paragraph (a) under "Benefits" ten years should be substituted for fifteen years. In paragraph (a) under "Crediting of Service" we think there should be added the following sentence—"Past Service shall be credited for years beyond age 65 but not so as to increase the total years of credited service beyond thirty". Under "Retirement Age" we think the words—"but there shall be no increase in benefits after age 65", could well be struck out. We also suggest that under "Commencement of Payments and Benefits" the date November 16, 1949, should be substituted for January 1, 1950.

We recommend that the Company's proposal with such modifications as we have suggested should be accepted.

Before parting with the subject of pensions we should like to emphasize that our recommendations in connection with the plan before us are based to a large extent upon the unusual circumstance that the American Company had only very recently agreed upon a plan with the same Union which very much closely approximates the plan we are endorsing. Much different conditions are likely to apply in respect of future applications. There are a number of features of the plan of which we are not too enamoured. In the case of smaller industries it is difficult to see much practical benefit in the principle of joint administration when the same thing might be accomplished through insurance. What we really want to emphasize is that we specifically refrain from attempting to set any particular pattern. Each case shall be left to be dealt with in the light of its own particular circumstances.

The demands of the Union with regard to Health Security and Death Benefits should be withdrawn in view of our recommendation as to retirement benefits particularly since the Company's employees are presently covered under a Group Life and Disability Insurance program to a somewhat comparable extent as that asked by the Union.

We wish to extend to both parties our appreciation of the dignified manner in which they presented their viewpoints on the matters dealt with.

All of which is respectfully submitted.

Dated at Toronto, this 15th day of February, 1950.

(Sgd.) C. P. McTAGUE,  
Chairman.

(Sgd.) J. C. ADAMS,  
Company's Nominee.

## Minority Report

DEAR SIR:—

Before submitting my views on the above matter I wish to draw your attention to the most astonishing situation that occurred relative to it. Following the hearings before this Board in Windsor the chairman and members of the Board met in Toronto on January 19. The Retirement Pension Plan was discussed at that meeting. It was agreed, however, that in view of the many changes in the text of the current collective agreement the Company nominee and the Union nominee would in writing exchange their points of view on these matters and submit them to the Chairman.

A few days later I received such material from Mr. Adams, the Company nominee, and conveyed mine to both him and the Chairman. Several futile attempts to contact the Chairman by telephone were made. I had expected that there would have been some discussion of the parties' respective presentations as there are several issues, vital to them, contained in the proposed contract changes. However on phoning Mr. Adams on February 14 he informed me that as the Chairman was agreeing with his submission he thought the complete report would be forwarded to you that day. On February 17 I received from the Chairman a copy of the complete majority report dated February 15 with an accompanying letter dated February 16.

It has been my firm belief that the Province of Ontario's conciliation procedure has played an important part in resolving many labour relations problems, in spite of its many inadequacies and labour's protests. But if such methods are to be employed as in this case the attacks on the Province's conciliation services will be justified. Finally even the provocative submission of the Company nominee pertaining to changes in the text of the collective agreement have been included *in toto* as part of the recommendation of the majority and this in spite of comments to the effect that many of the changes requested by the Union were overdue.

Before dealing with the issues I wish to make some general comments.

The matters in issue here, exclusive of the Retirement Pension and Health and Security proposals, are of vital concern because of the peculiar circumstances surrounding their initial inclusion in the collective agreement and of the importance that is alleged to be attached to the conclusion of these negotiations.

It will be recalled that Windsor was an "open shop" area where terrific resistance to the inception of labour unions was evident in the early stages of organization. It is equally evident that the present good labour management relationship grew out of struggle between the parties. One needs only to recall the costly strikes for the union to obtain recognition and later for a measure of union security. It is only natural, therefore, that other industries in the area, many of them suppliers of, and therefore dependent upon the Ford Company, followed in some measure the pattern established by the Ford negotiations. To that extent the Union statement that the conclusions arrived at with Ford would become a pattern is undoubtedly correct. It is nevertheless true that out of such an environment fraught with antagonism the

conclusions were not the result of sound purposeful negotiations, but were compromises of manoeuvring.

It now appearing that a sound labour management relationship has been established between the parties, the time has arrived for the frustrative words and phrases to be removed from the agreement in acknowledgment of this newer and better relationship. It is with such a view in mind that I beg to report to you on them as follows:—

*(The minority recommendations on contract changes are omitted.)*

### **Retirement Pension Proposals**

As the details of the Union's proposal were numerous, supported by detailed data, I will confine my comments on this question to its salient features, to examine and appraise the proposals of both parties. Before proceeding to that point, however, I would comment generally on the principle of pension payment<sup>2</sup>.

Before arriving at its net profit figure an industry will make provision for a multiplicity of items among which are depreciation and contingencies. While contingencies are usually another form of "earned surplus", depreciation has for its purpose providing for the replacement of physical equipment. In addition to such a provision there is also one for repair and upkeep of physical equipment. It would appear, therefore, that provision for the proper maintenance and replacement of equipment and building is adequately taken care of. As was shown by the evidence of the Union, Depreciation Reserve stands at 75 per cent of the cost of the assets, and recent Income Tax amendments allow a higher rate of depreciation than was in effect formerly.

While the "wearing out" or replacement of equipment and building has, apparently, been amply provided for, and while a huge earned surplus has accumulated from the profits of the Ford Motor Company in Canada, no arrangement had been suggested until 1947 for the "depreciation" of the human element in this industry. However, through the efforts of the Union another proposal is now before it.

A. The Union requested a Retirement Pension Plan, set out in every detail, of \$100 monthly after 25 years of service with the Company. The Company countered with an offer of a plan which would provide \$55 monthly after 30 years of seniority with the Company. The importance of the difference between seniority and service with the Company is considerable. The Company's limitation to seniority would deprive any employee of any benefit for

any year or years of service with the Company prior to his being re-employed after having left the employ of the Company for any length of time, or for any reason.

**B.** The Company says, in its supplementary brief, that—

First of all I want to emphasize that the offer we have made is substantially the same as the agreement concluded by the same Union just a few short weeks ago with Ford Motor Company in the United States.

A most able actuary, representing the Union, examined the Ford offer and proved that the Ford Motor Company in the United States was paying for an average monthly Pension of approximately \$82.

As the majority report in this case states, the Ford Motor Company agreement with the Union does not provide for a \$100 a month pension but "it can be fairly described as a contract by which the Ford Motor Company obligates itself to pay an amount equal to the difference between general social security benefits and \$100 a month—quite a different proposition."

Indeed, it is quite a different proposition. First, because it is not an obligation to \$55 a month, as the Company offers in Canada. It is actually an offer to pay an average minimum of \$64 monthly, direct from the Pension Fund, because the estimated amount the Ford Workers, retiring in the next few years, will receive from social security will be \$36. For this \$36 the Company contributes at least half the cost. In the final analysis the Company, therefore, is in reality contributing sufficient to make an \$82 monthly pension available.

It is evident from these facts that the Company is not making an offer to the employees in Canada which is substantially the same as that agreed upon in the United States.

**C.** It is obvious that the offer is inadequate. As the Union pointed out in support of its claim that \$55 a month was inadequate the Department of National Revenue, of the Dominion of Canada, in its Tax Ruling No. 2, states—

For example, a pension of 50 per cent of the average salary for the five-year period prior to retirement is deemed reasonable and anything over 70 per cent of such average salary will be deemed excessive.

The Company offer of \$55 monthly is only 24 per cent of the average wage. The \$100 monthly would be 44 per cent of the average wage, still well within the "reasonable" amount determined by the National Revenue Department.

**D.** The requirement in the Company's offer of thirty years seniority with the Company practically makes the pension offer meaningless. It would mean that of all employees age 55 and older, 76 per cent cannot qualify and of the remaining 24 per cent, many would not qualify for the full monthly benefit.

**E.** The question might well centre around "Ability to Pay" but that apparently was not a factor. The principal relevant factor was the period over which the Company would be required to pay, including past service benefits. The Company's proposal will cost it 10.7 cents per hour per employee, while the Union proposal of its adequate plan would cost the Company 12½ cents per hour.

The slight difference in estimated hourly cost results from the difference in the period over which the past service benefits would be funded. The Company's proposal is to fund such benefits over a period of ten years, which is the minimum permissible for tax deduction purposes. The Union proposes funding the amount over a period of 40 years, permitting its request for adequate benefits to be paid with a slight hourly cost greater than what it will cost the Company to fund its proposals over the ten-year period.

**F.** Whether one looks at pension benefits as a deferred wage, or as a measure of "depreciation", it must be conceded that the employees, through their Union, are dropping other economic demands in favour of their pension proposals. It would not be anticipated that other economic gains would be for a period of ten years, but for an indefinite period, that is their view regarding the cost attributed to a Pension Plan. The actual difference, in hourly cost, irrespective over what period it is to be paid, is less than 2 cents. However, the difference between the benefits of both plans is vast; and it is the benefits that are of vital concern to the employees.

**G.** The purpose of the Government's "Old Age Pension" scheme is to provide for the indigent at relief standards; whether or not that is the conscious purpose, it is its effect. There is no reason for the question of "Old Age Pensions" to become confused with the Union's request for a proper Retirement Pension Plan. While one is relief for the needy, the latter is the deferred payment of an economic demand and gain. It is conceivable that if and when Old Age Pensions are replaced by adequate Retirement Pensions by Legislation that some measure to amalgamate the two, or to have one supplement the other, would be arrived at. There is no

justification for beclouding the issue with the matter of "Old Age Pensions" at this time.

II. \$100 monthly, or 44 per cent of the average wage, cannot, by any stretch of the imagination, be considered sufficient to provide even a "minimum of health and decency". It is on that basis the amount must be considered, not on the basis of a percentage of a pension benefit in the United States because of some difference in wage rates. There is no relationship between a comparison of wage rates and a comparison of minimum pension benefits. When a minimum is arrived at it must not be reduced further because of some other consideration.

I. I have not herein dealt with the many differences in the detail of the Company's offer and the Union's request. I am of the opinion that the main difference is the hourly cost necessary to provide either of the proposed plans, and if this were resolved, these differences would be resolved. In the final analysis, therefore, it is a question of whether the Company will pay 10·7 cents for ten years and then continue the payment necessary for future benefits, or whether it will pay 12·12 cents for forty years and then only the amount necessary for future benefits. For the reasons I have expressed above, in (F) I come to the conclusion that the 12·12 cents should be paid by the Company and that the Union's request should be granted.

In the U.S.A. the Steel Fact Finding Board gave the Matter of Pensions and Medical Benefits thorough and proper consideration and it reported as follows:—

... we think that all industry, in the absence of adequate Government programs, owes an obligation to workers to provide for maintenance of the human body in the form of medical and similar benefits and full depreciation in the form of Old Age Retirement—in the same way as it does now for plant and machinery.

If the Ford Retirement Pension Plan were to be based on this well considered finding, the minimum requirement would be that which the Union has suggested.

### Health Security

Under this heading, the Union requests that "all workers covered by the Collective Bargaining Agreement will be covered under the Health Security Program". The worker's family (spouse and dependent children) will be included in his coverage for hospital, medical and surgical services.

At present there is a Health Security Program in effect in the Ford plant on a

contributory basis. However, as the Union points out in its supplementary brief, that while the Company represents to the employees that it pays 31·4 per cent of the premium payments, because it retains all rebates and dividend payments pertaining to the plant, the Union estimates that the Company's contribution is less than 7 per cent of the cost of this Health Insurance.

In addition to requesting that the total cost of an adequate Health Insurance Program be paid by the Company, which is estimated at a cost of 9 cents per hour, the Union requests that any dividend returns be allocated to building up reserves, or in purchasing extra benefits.

It is probable that the inequities that exist under the present Health Insurance arise from the fact that it is administered solely by the Company. I say inequities because with the employees paying the major part of the Health Insurance cost, the Company retains the dividend payments to reduce its portion of the cost, which might well, with good experience, result in the total cost actually being met by the employees.

I would recommend that full consideration of an adequate Health Insurance Program, with a Joint Board of Trustees responsible for its administration, be given proper consideration by both parties.

In view of my recommendation regarding Pensions and the cost pertaining thereto, I hesitate to make any further recommendation on this matter at this time, although in principle I accept the expressed opinion of the U.S.A. Steel Board that industry owes an "obligation to workers to provide for maintenance of the human body in the form of medical and similar benefits".

All of which is respectfully submitted.

DRUMMOND WREN,  
*Member.*

Dated this Twenty-first day of February, 1950, at Toronto.

### Ford Pension Agreement

As the LABOUR GAZETTE went to press, word was received that the Union and the Ford Motor Company had reached agreement on a company-financed pension plan providing for payment of a pension of \$55 a month for workers retiring at age 65 after 30 years' service. Details of this agreement will be published in a future issue of the LABOUR GAZETTE.

# LEGISLATIVE PROPOSALS OF LABOUR ORGANIZATIONS

*Early in March the Trades and Labour Congress of Canada and the Canadian and Catholic Confederation of Labour held their annual interviews with the Federal Cabinet, and submitted proposals in regard to labour legislation and its administration. Both organizations laid stress on the problem of unemployment. The presentation of the Canadian Congress of Labour, which was made on March 31, will be summarized in next month's LABOUR GAZETTE.*

## Trades and Labour Congress of Canada

Emphasizing the problem of unemployment and urging a program of needed public works, the Executive Council of the Trades and Labour Congress supported by some 60 leading officers of the organization, presented its annual brief on labour and related matters to the Federal Cabinet on the ninth of March. The memorandum, read by President Percy R. Bengough, set out in abbreviated manner the Congress' support of certain Government policies and its legislative aspirations for 1950.

In its introductory remarks, the Congress commended the Government upon its activities in international affairs, particularly in its support of the United Nations and the International Labour Organization and in its completion of the North Atlantic Security Pact.

The Government's abolition of appeals to the Privy Council and the transfer of power to the Supreme Court of Canada as the final court of appeal also received the endorsement of the Congress.

In reiterating its opposition to Communism the Congress stated that it was "diametrically opposed" to Communist policies. "We believe that the most effective way of preventing the growth of Communism is by making democracy work effectively in the best interests of the people, by eliminating as much as is humanly possible the causes of dissatisfaction and the fear of want and insecurity. We note with a considerable degree of optimism the attitude of your Government to this menace abroad but we cannot escape the feeling that certain powerful groups on this continent, bent upon their own selfish enterprises, fail to appreciate the true seriousness of the problem. It is our hope that the pressure of such groups be resisted in the interests of the preservation of our democratic way of life and the continued advancement of the

standards of living of the mass of the people. In this connection we note with some alarm the failure of our financial institutions to modernize their thinking and operations to suit the needs of present day economic situations, both national and international."

### Unemployment

On the subject of unemployment the Congress expressed itself as follows: "Throughout its history the Trades and Labour Congress of Canada has advocated that finance be the servant and not the master of the people. We strongly urge your Government to take steps to revamp our financial operations. We note the continued existence of hungry people in many parts of the world and their needs for food and essentials of life. In Canada our producers are losing their markets rather than expanding them, only because our financial bottlenecks prevent the necessary adjustments whereby the growing chasm between our producers and the vast potential markets for their goods could be bridged. When we see such a situation we urge your Government to find an effective solution to this problem of financing our home and Overseas business. We are not prepared to remain as quiet bystanders watching the failure of our financial operations which, if allowed to continue, in effect will definitely assist in the spread of Communism. This failure already has had unfortunate influences upon our national economy. Unemployment is rising and has reached the critical point.

"At more than twelve per cent of the working force it has reached the condition of a national emergency. Important markets for our forest products have been either lost or greatly diminished. Markets for our agricultural products have been cut

off or severely curtailed. We believe the remedy for this undesirable economic condition is in the hands of this Government. Markets for our products being available, it is our opinion the financial obstacles to the flow of our products to these markets could be removed. We urge your Government to inaugurate the necessary financial policy changes in order to stimulate our forest and agricultural industries, that will tend to establish and maintain sound employment conditions. However, there is the immediate problem of more than 390,000 unemployed workers, many of whom have no immediate prospect of a job.

"We urge your Government to take immediate action to provide employment for these people. We would remind your Government that needed public works projects were to be ready for such an emergency."

Dealing with amendments to the British North America Act, the Congress considered that the "working people of Canada have suffered very serious and unnecessary hardships because our Governments have failed to attack this major problem. It is our earnest hope that the formula finding process will not be unreasonably delayed and that amendments urgently needed and long overdue will be made quickly. Among these amendments we request that all jurisdiction over matters of health, social welfare and labour relations be placed under the Federal Government and the Parliament of Canada."

### **National Labour Code**

In its brief the Congress reiterated that the Industrial Relations and Disputes Investigation Act was a good start in the right direction. However, the Congress did not feel entirely satisfied with all interpretations of it by responsible officials. "In particular," the executive stated, "we are greatly concerned with the interpretation being placed on the definition of 'confidential employee.' This definition is quite plain in the Act, being 'one who is employed in a confidential capacity in matters relating to labour relations.' This definition was never intended to be the same thing or have the same diffused meaning as the expression, 'hire and fire.' We request that your Government consult with the National Labour Relations Board concerning the interpretation of the status of confidential employees in relation to the definition as laid down in the Act with a view to having this definition interpreted by the Board in conformity with the provision of the Act as passed.

"We again wish to emphasize that this Act is too limited in its scope. We urge the Government to extend its provisions to cover all employees of the Government including those on hourly rates. We also wish to see its provisions broadened to cover all municipal employees.

"In regard to Government employees, we urge that any group of these who so desire be permitted to determine their own bargaining agent quite independent of any overall or currently existing body of employees to which they may belong.

"We urge that provisions for check-off of union dues be included in the Act, and that such provisions make the check-off mandatory upon the employer when and if the recognized bargaining agency properly authorizes it.

"We reiterate that effective Labour Relations legislation will be achieved only when the provisions of the Federal Act are applicable to the entire country."

The Congress again urged prohibition of the use of injunctions in labour disputes until both disputants are allowed to present their cases. It pointed out that "illness still accounts for more lost time than any other factor," and that while "every organ of news and opinion controlled by management continually urges the need for greater production as a solution for our economic difficulties at home and abroad, little is done to remove the greatest cause of lost time." The brief again called upon the Government to "establish without delay a comprehensive National Insurance Act."

### **Old Age Pensions**

In dealing with what the brief termed "the plight of our elder citizens," it considered that the "puny pension allowed under the Old Age Pension law is far from adequate and sadly needs adjustment." Continuing, the Congress brief referred to another problem viz. the growth of private pension plans, which have provided protection for some but have nonetheless created great difficulties.

These plans have tended to immobilize the labour force and to reduce the freedom of economic movement of the individual. They have created the condition in which old age can now begin at forty years. The solution to the problem of the old age pensions themselves requires the removal of the means test, raising of the monthly allowances and a reduction in the age at which older men and women can become eligible for the pensions. The solution to the problem of industrial pensions and the freeing of the labour force from the financial

restrictions imposed by private pension plans requires the implementation of a national scheme of full social security."

The following recommendation was therefore laid before the Cabinet: Old age pensions of \$60 a month payable at 65 for men and 60 for women without the means test, and with the Federal Government taking full responsibility for old age and blind pensions. The Congress also asked for substantial increases in mothers' and widows' allowances.

### **Unemployment Insurance**

With regard to this subject, the memorandum requested the following:—

- (1) Increase in weekly benefits.
- (2) Coverage of all workers regardless of income or type of employment.
- (3) Payment of benefits for all statutory holidays.
- (4) Clearer definition of the phrase "suitable employment."
- (5) An increase in the time limit for registration and substantial decrease in the waiting period for the payment of benefits.
- (6) Where claims have been established, the claimant to have the right to draw benefits until the amounts to his credit are exhausted.
- (7) All employees, full or part-time, to be required to deposit their insurance books with their employer.
- (8) Payment of benefits in respect of dependent persons to be made whether or not the dependent shares the same domicile.
- (9) Reduction of contributions by long-shoremen from 450 to 300 days and in dead seasons from 50 to 35 days.

### **Immigration**

While satisfied that Canada can continue to welcome new citizens, the Trades and Labour Congress stated that it was not prepared "to endorse large scale immigration that is out of balance with our economy." Again the Congress was convinced that immigration should be the sole responsibility of the Department of Labour and at the same time advocated the establishment of an Immigration Commission with equal representation for Government, labour and management.

### **Government employees**

The principle of the forty-hour week for all employees in Government corporations and undertakings and full recognition of their right to organize and bargain collectively were again urged by the Congress. Two other requests were the restoration of overtime payment at time and a half for Postal Department employees and a reduction in overtime for employees in the Unemployment Insurance Commission.

Attention was also called to what the Congress termed "unwarranted delays" in dealing with the matter of working conditions in certain departments, particularly the Department of Transport.

### **Price Control**

As on previous occasions, the TLC expressed the opinion that there should be a return to price control. It recommended legislation to establish a Prices and Trade Board to reimpose price controls; subsidization of staple foods for the benefit of the medium and lower income groups; reimposition of the 100 per cent excess profits tax; and price increases only on application to the Prices Board, on which board there would be labour representation.

The Congress then drew attention to the "improvement in the stability of our economy resulting from the extension of the negotiated wage contract to large numbers of industries and employed persons. We believe that stability is the greatest factor tending to promote initiative as well as long range development of agricultural, industrial and commercial production and distribution programs. We are therefore urging your Government to extend the stability of our economy by applying the principle of the wage contract to prices."

### **Rent Control**

Once again the Congress expressed its disapproval of the recent increase of 20 to 25 per cent in rentals, adding that it was opposed to the Government relinquishing its control of rent until the housing situation has improved.

### **Housing**

In regard to the "critical" housing shortage the Congress made two major recommendations. It requested "the Dominion Government to undertake, in co-operation with provincial and municipal governments, a nation-wide low rental home building program financed by national credit and designed to house, under decent conditions, ex-service personnel and those in low income brackets."

The Congress considered that the 4½ per cent interest on first mortgages, as stipulated in the National Housing Act, is "excessive and uneconomical."

In concluding this section, the TLC said: "We also note the new provisions of the Act through which the Federal Government will assume 75 per cent of the capital cost and the profits or losses incurred in connection with the construction of low cost or low rental housing, the individual provinces assuming the remaining 25 per cent

of such responsibilities. However, this is only enabling legislation and the initiative must come from the provinces or lower levels of government. We urge further amendment of this Act at this session of Parliament so that the initiative for such imperative projects will come from the Dominion Government as it rightly should."

### Taxation

The Congress questioned "the justification of taxing people in the lower income brackets," and requested that the present income tax exemption be raised to \$2,400 per year for married persons and \$1,200 per year for single persons, that the exemption for each child be \$400 and that no portion of family allowance be taxable, irrespective of income.

At the same time, the Congress reaffirmed its request for the removal of all sales taxes and requested the exemption of union dues from income tax.

### Other Recommendations

- (1) Revision of Cost-of-Living Index.
- (2) Greater Federal responsibility in aiding education in all its aspects. The Congress endorsed the Canadian Teachers' Federation in their request for Federal aid for education on a per capita basis.
- (3) A Canadian Bill of Rights assuring every individual "freedom of speech, freedom of assembly and association, freedom of worship, freedom of the Press, freedom from arbitrary arrest and detention and equal opportunity for all, regardless of race or national origin, colour or creed.
- (4) The Federal Government to appoint a non-partisan board or commission to formulate and implement a nationwide program of education on Canadian citizenship with the aim of eliminating racial and religious discrimination.
- (5) Continued maintenance of the Canadian Broadcasting Corporation as a government-owned utility, but with increased Labour representation on its directorate.
- (6) Railway repair shops at car repair points for all Canadian railways.
- (7) The use of the Allied Printing Trades Label on all Government and parliamentary printing.
- (8) Extension of all rights, privileges and recognition, enjoyed by other volunteer service men, to the Canadian Corps of Overseas Fire Fighters.
- (9) Establishment of a Canadian coast guard service.
- (10) (a) Abolition of the practice of combining duties of radio officer with other classifications.

(b) Adoption and implementation of radio section of International Convention for the Safety of Life at Sea, 1948.

(c) Application of same requirements regarding radio to ships on domestic voyages on the West Coast as those governing Canadian ships on International voyages.

(11) Extension of the franchise to all citizens over the age of 18 years.

In its concluding remarks the Congress made the following statement:—

We would reiterate that these views and requests are being made at a critical time for all our people. The outlook for trade and employment is far from what it was a year ago. We strongly urge that more effective efforts be made to expand our export trade as a means of stimulating our economy and the demand for the services of our working people. We again request that public works projects be started immediately to absorb those already without work. This is the greatest challenge of the moment. How it is met by your Government can influence the entire development of our social and political life in the future. With the ever present threat to our Canadian ways, both from without and within our country, none of us, including your Government, can afford to trifle with the situation.

### Government's Reply

The delegation was received by the Rt. Hon. Louis St. Laurent, Prime Minister, and the following members of the Cabinet: Rt. Hon. C. D. Howe, Minister of Trade and Commerce; Hon. L. B. Pearson, Secretary of State for External Affairs; Hon. J. D. Abbott, Minister of Finance; Hon. J. J. McCann, Minister of National Revenue and Minister of Mines and Technical Surveys; Hon. Paul Martin, Minister of National Health and Welfare; Hon. L. Chevrier, Minister of Transport; Hon. Stuart Garson, Minister of Justice; Hon. E. Rinfret, Postmaster General; Hon. G. Bradley, Secretary of State; Hon. W. Harris, Minister of Citizenship and Immigration; Hon. H. Lapointe, Solicitor General; and Mr. Paul E. Côté, Parliamentary Assistant to the Minister of Labour.

In commencing his reply, the Prime Minister, Rt. Hon. Louis St. Laurent stated: "We all regret that the Minister of Labour is not with us. But I am happy to say he has had a restful and healthful holiday and expects to be back on duty early next week and he is now quite as well as at any time since he became a member of this government."

He considered that the submission while it represented quite a proportion of organized workers also was indicative of the aspirations of a large unorganized group of workers.

He disagreed that the general conditions were such as those pictured in the gloomy parts of the brief.

Dealing with the trade picture, he pointed out that dollars and sterling are only symbols of what can be obtained in goods and services. Trade difficulties, he attributed to the inadequacy of distribution of goods and services, rather than a shortage of dollars.

"There would be markets for our products," he asserted, "if those who take our services could give us something we could take and use. It is something about which all Government Departments are doing their best, but it also requires something which requires action by the people themselves."

He emphasized his point by referring to the "gentlemen adventurers of England" who organized the fur trade and added: "We have got to have gentlemen traders to go out and organize this interchange of goods and services. We have got along fairly well on our system of private enterprise, and I do not know that government trading is the cause of our present difficulties. Government trading is not the answer to restoring multilateral trading throughout the world.

"Take the profit motive out of trade and you haven't any trade. We must still be adventuring in trade."

Dealing with unemployment, the Prime Minister, while stating that it had been larger than usual, attributed it mainly to two major factors—climatic conditions and reduction of inventories. On this point he said: "The cause is not altogether seasonal but has been contributed to by a spirit of fear. There was a diminution of trade to the South and it was considered risky to have big inventories. Consequently, in some cases, inventories are low but they are going to be rebuilt and will be a factor in the optimistic outlook for the immediate future."

The Prime Minister challenged the Trades and Labour Congress statement of 12 per cent of the working force unemployed, pointing out that that would represent about 600,000 unemployed. He disagreed that such was the case. "While it is not a matter of exact information to the decimal," he suggested it was closer to 350,000. He considered that "the trend since February 9 had been downward and is set in that direction."

He doubted the efficacy of large scale projects at this time and considered that it would not add to the total of construction in this country—a point which the Finance Minister carried further in his remarks later.

"Our business surveys," the Prime Minister observed, "indicate projected construction to the extent of three billion six hundred million."

Continuing, the Prime Minister pointed to the increase in capital investment in this country. "No nation in the world has done so much in capital investment as Canada. An increase of 10 per cent is considered normal, but we are up to 22 per cent."

Several recommendations in the Congress brief involved constitutional amendments. In this respect the Prime Minister told the delegation that "you can do more to bring about constitutional changes than we can. They have got to come by the pressure of public opinion. No government is going to take the lead in giving away its jurisdiction. But we are all of the same Canadian nation and when enough of us get together on something it gets done."

This development of public opinion, he stressed, in the brief's recommended amendments to the Unemployment Insurance Act, Old Age Pensions and other social security measures.

Of unemployment insurance, he noted that the built-up fund of 600 million dollars gave a good measure of guaranteed security to the labour force of the country, and he hoped it would remain a stabilizing feature of the national economy.

As regards a requested abolishing of the means test for old age pensions the Prime Minister asserted that "we cannot impose direct taxation for such social services without an amendment to the constitution."

Mr. St. Laurent then referred to a statement in the brief which stated that in the view of some experts on Commonwealth defence a "broad and extensive education of our people is of greater importance than the existence of large military forces."

The Prime Minister answered that without military outlay Canada could not maintain its share as a signatory to the North Atlantic Pact, which he declared was "a premium against war. It won't do us any good just to sign a pact. All those in it must make any potential aggressor feel that it would be unhealthy to start anything against us," he asserted. Referring to the 425 million dollars in the Budget for preparedness he said that the Government would like to use that for other purposes, but under the circumstances it could not.

He pointed out that the total budget of 2 billion, 300 million, included something in the order of 700 million for social measures. "None of us contemplate any reduction in that, for it all represents money well spent," but, he added, that "the amount susceptible of being varied" (out of the total budget) is of small proportion."

On price control he said it was not possible within a general contract, "and neither you or we want wage control." He considered that the less government interference with collective bargaining, the better, and he doubted "if we attempted to have collective bargaining between producers and consumers" if prices would come down. Referring to the Congress advocacy of the principle of wage contracts being applied to prices, he considered that since, in the past, wage contracts had worked toward higher wages, it could be expected to have the same effect on prices.

With rent control the Government had tried to strike a happy medium. It had, he thought, "avoided much more serious hardship than had the controls lapsed entirely."

On the whole field of legislation he observed: "We look upon government as a trust which we are trying to operate for the whole nation. We have never attempted to make the police force the enforcing agency of legislation. It must be accepted by a majority of reasonable-minded people."

Regarding the recommendations of the Congress on taxation and excess profits, the Prime Minister stated that excess profits taxes could not be continued on the same basis as during the war because the conditions of war are different from those of today.

On the question of "collecting most of the taxes from those least able to pay them," Mr. St. Laurent said that the majority of people in this country are in the lower income brackets and if we taxed only those with \$25,000 or more the revenue collected would be puny. He said he did not know of any country where the level of income is so uniform, i.e. where income is so evenly distributed, as in Canada.

He pointed out that in the past year there had been a substantial reduction in the income tax together with an increase in exemptions. He intimated that the Finance Minister might not have the balance he desired if there were any further reductions in the income tax structure.

Criticism of the cost-of-living index was countered by the Prime Minister's statement that "while it may be that the basis is not truly representative, and that its mathematical accuracy may at times be questioned, yet it does indicate the trend in rising and lowering costs."

Under the heading of "National Labour Code" the Congress brief made a number of recommendations among which was its extension to municipal employees. On this section of the brief the Prime Minister expressed himself as follows. "I would suggest you foster that idea (that the Code

cover municipal employees) and get public opinion to the point that it is the right thing to do, and then the provincial administrations will agree with you."

As regards the prohibition of injunctions in labour disputes, the Prime Minister could not recall the utilization of the injunction in any recent industrial disputes to which the Federal Labour Code applies.

The Minister of Trade and Commerce, the Rt. Hon. C. D. Howe, told the delegates that the brief was "unduly pessimistic." On his recent visit to Europe he had seen nothing to indicate pessimism in our markets abroad. "I came back feeling that the continent was in a better position to resume normal trading than at any time since 1947, and when Marshall Aid ends we need not fear about getting rid of our surplus," he said.

Hon. Lionel Chevrier, Minister of Transport, replied to the representations affecting that Department. In regard to establishing of a Canadian coast-guard, he said this matter was under study by a committee, and he thought it would favour the co-ordination of East and West coast services.

Regarding the complaint that radio officers had their duties combined with other functions, he said an amendment to the Canada Shipping Act would rectify this.

The Minister indicated that the Government favoured the implementation of the Safety of Life at Sea Convention and that it would be done by amendment to the Canada Shipping Act. He regretted the delays in reclassification of employees at Gander, and instanced the difficulties in the situation there.

Referring to the recommendation of Congress that all ships be compelled to install modern fire fighting equipment, Mr. Chevrier stated it was the intention to bring into effect some of the recommendations of the Kellogg Commission investigating the *Noronic* disaster.

Hon. Paul Martin, Minister of Health and Welfare, who was representing the Minister of Labour, stated at the outset: "No one is happier than myself in regard to the Prime Minister's announcement that the Hon. Mr. Mitchell is returning, restored in health. During my association with the Department of Labour I have learned something of the great responsibilities which Mr. Mitchell has carried."

After pointing to the increased coverage by recent amendments to the Unemployment Insurance Act, the Minister dealt with the request of Congress for an all-embracing social security Act on a contributory basis.

He first pointed out that it was not within the competence of the Federal Parliament and that the Prime Minister

had already indicated how it was necessary to have public support. Every country had adopted its program step by step, "and that is what we have been doing," he said, adding that "it is by no means insignificant." He quoted one billion dollars as the amount spent on health and welfare benefits in this country.

He noted that in California they are retracing some of their social security benefits. They are also talking along the same line in New Zealand and in France they had to do the same thing. There is retrenchment in Britain's health program.

"We are setting up a Committee now, not for delay, but to give Parliament and Labour the facts.

"Our old age pension system, even with its inadequacies will compare with any country in the world. Our means test is less rigid than in New Zealand and more generous than Great Britain's.

"I have been told that what we need is an orthodox old age retirement plan such as in the United States. If that is what Labour wants I would not hesitate to

recommend it because, while it is comprised of employer and employee contributions, there is no contribution whatsoever from the State. It would relieve our Federal Government of an expenditure of about 130 million dollars.

"The important point to note is that it is a two-way contribution only, but in our country it comes out of the general tax fund.

"We are spending a billion dollars in Canada on social welfare of which 800 million comes from only one source—from our people.

"I ask are we now ready to add for old age pensions alone another \$850,000,000?

"Then you ask for health insurance. We can only do things within our capacity."

The Finance Minister, Hon. Douglas Abbott, referring to the proposal for a public works program to relieve unemployment stated "there was no financial problem at all, but that the construction industry was pretty well taken up and any further public construction would not add to the over-all volume.

## Canadian and Catholic Confederation of Labour

The Canadian and Catholic Confederation of Labour representing close to 95,000 members, submitted its annual memorandum to the Federal Cabinet on March 10, 1950.

The large delegation under the direction of Gérard Picard and Jean Marchand, respectively President and Secretary of the Canadian and Catholic Confederation of Labour, was received by the Prime Minister, the Rt. Hon. Louis St. Laurent assisted by the following: Hon. Alphonse Fournier, Minister of Public Works; Hon. D. C. Abbott, Finance; Hon. Brooke Claxton, National Defence; Hon. J. J. McCann, Mines and National Revenue; Hon. Milton Gregg, Veterans Affairs; Hon. Lester B. Pearson, External Affairs; Hon. Hugues Lapointe, Solicitor General; Hon. Edouard Rinfret, Postmaster General; and Mr. Paul Emile Côté, Parliamentary Assistant to the Minister of Labour.

Following the preliminary remarks made by Gérard Picard who thanked the Government for having appointed a French editor to the *LABOUR GAZETTE* "the standard of which has been improved and the delivery accelerated", the Secretary-General of the CCCL, Jean Marchand, read the memorandum. He set it aside for a moment in order to plead more specifically the case of

the unemployed of the town of Lauzon where the main industry is shipbuilding.

### Unemployment

After stressing that unemployment is already affecting the Canadian working class and stating that the unemployed are not responsible for the confused situation into which they have been thrown, the CCCL memorandum went on to state precisely that unemployment is not a political phenomenon but an economic one and that it is on the latter plane that efforts must be made to check it.

"The first responsibility of unemployment therefore rests with those who direct economic activity. In a free enterprise economy, this responsibility is very divided. The CCCL notes that the majority of those responsible for economic activity, act too often without thinking, being content to benefit from the advantages of the system while putting aside the responsibilities.

"They will surely not be able to maintain their influence on the national economy if the people are not convinced, by some action, that private enterprise is not interested only in profits, but equally in the welfare of the nation and its security. The example of the principal European countries should impel it to avoid the errors which caused its downfall in those

countries. The favourable declarations of public men will not suffice to hold it in place.

"As the Canadian economy depends to a great extent on export markets, it would be unjust to place on those who direct it, all the responsibility of the situation we deplore. The CCCL, however, is convinced that they could interest themselves more in the problem and not throw the task of settling it to governments alone.

"The governments can lessen partially the consequences of unemployment by relief or public works; they may also try to diversify our export markets in order to stabilize our economy; but their action will always be subordinated to the efforts that private enterprise will make to solve the problem of unemployment."

The CCCL submitted the following suggestions to solve or lessen the unemployment crisis:—

- (a) That the Federal Government, through its trade commissioners, try to diversify as much as possible, our export markets;
- (b) That the Federal Government, with the help of the other public authorities, undertake without delay public works to stimulate economic activity;
- (c) That the Federal Government create an Economic Council, on which would be represented public bodies, employers and labour unions, to study the true causes of unemployment and submit adequate solutions;
- (d) That the Federal Government urge employers to furnish as much work as possible, taking into consideration existing collective agreements, and that Government publicity state its responsibility in this domain.

In its memorandum, the CCCL congratulated the Government on the improvements it has just made in the Unemployment Insurance Act in order to meet the present crisis. The CCCL undertook to meet the Unemployment Insurance Commission later to submit to it other propositions.

## Housing

In connection with housing, the memorandum included the same recommendations as were contained in the memorandum submitted to the provincial authorities in Quebec, on March 2 (see below).

The CCCL repeated that it approves the propositions made by the Federation of Housing Co-operatives of the Province of Quebec (La Fédération des Coopératives d'Habitation de la Province de Québec) to the effect that a system of contributions be instituted by the authorities concerned (25 per cent from the municipalities, 37½

per cent from the Provincial Government and 37½ per cent from the Federal Government).

The CCCL believed that it would be an opportune time to form a Central Housing Committee for each of the Provinces on which public bodies, labour unions and employers would be represented, in order to better co-ordinate the efforts and facilitate the application of the different housing laws.

## Income Tax

The CCCL expressed the opinion that, provided certain slight changes are made in the income tax set-up, the Government could maintain its revenues and at the same time reduce taxes for wage-earners who fall in the lower taxable brackets. The fact that under the present law, "capital profits are not taxable," was said to constitute an injustice to the workers.

The CCCL contended that the subtle distinction that the law makes between income and capital profits is only an encouragement to evade, and that the Government could no doubt recover far more appropriately, through taxation on profits, the revenues that it would lose by an increase in individual exemptions.

The CCCL made the following suggestions in the matter of individual exemptions which would have as a result the reduction of the burden on heads of families.

"Under the present system, when a married man and his wife work, they are considered, for taxation purposes, as single, and each benefit from the individual exemption for the single person.

"If the husband is the only wage-earner or if his wife's income is less than \$250 a year, he benefits by an individual exemption double that of the single person.

"Now, because of the progressive rate of income tax, it happens that the husband who is the only wage-earner, is often in an inferior position compared with a family in which the man and the woman work. In other words, if in both cases the taxable family income is \$4,000 (other conditions being comparable), the former pays more income tax than the two others together.

"This appears to be an anomaly and shows a lack of appreciation for the merit of the mother who stays at home to raise the children. We do not wish to infer by this that women who work are deserting their homes; many are obliged for various reasons to increase the family income. But we do not see why the Income Tax Act considers on a different basis these two cases and gives a definite advantage to the second.

"The CCCL therefore suggests that the taxable family income could be considered by the law as having been earned equally by the husband and the wife and that both could produce their income tax report as though they were single and benefit from the exemptions provided for this latter class. Obviously, the father would continue to profit from the exemptions allowed for dependents.

"This formula would apply not only in the case where the man alone works but equally in cases where both parties receive an income over the minimum required. It would only be necessary to add the two incomes, divide them by two and consider the answer to this calculation as the individual income of both the husband and the wife."

The CCCL proposed that the people affected by this suggestion could choose either the existing method or the method outlined above.

### **Independence of Canada**

The CCCL commented that the abolition of appeals to the Privy Council and the right that Canada now has to amend her constitution, "make our country a sovereign nation to which we have new reasons for being proud to belong" and expressed the hope that the present Government would proclaim the complete independence of Canada in order to make it an autonomous republic.

The Confederation believed also that the time was ripe to give Canada the "attributes of a sovereign nation" such as a flag and a national anthem. It suggested that the Canadian flag should not include any "foreign emblem" and should be truly a symbol of independence. As to the national anthem, the CCCL proposed that the song "O Canada", be designated as the official national anthem.

### **Vatican Representation**

On the occasion of the Holy Year, the CCCL suggested to the Federal Government that an Ambassador be named to the Vatican.

### **Religious Persecutions**

The CCCL said that it deplored, "along with the Canadian Government," the religious persecutions which continue to take place in the sphere of Russian influence. It urged the Government to continue its protest and to support the United Nations in all the procedures that it takes to restore religious liberty in the countries that have suppressed it.

### **Internationalization of Jerusalem**

The CCCL following the request formulated by His Holiness Pope Pius XII, expressed itself as favouring the internationalization of Jerusalem. It inquired as to the reasons motivating Canada's attitude on this question.

### **Protection of Canadian Industry**

The Confederation hoped that the Government would continue to protect Canadian industries against foreign competition, as long and as much as the stability and prosperity of these industries require it.

### **Old Age Pensions**

The CCCL suggested increasing to \$50 per month the old age pension, and lowering the pensionable age to 65 years for men and 60 years for women. This last suggestion was in conformity with a recommendation of the International Labour Office.

The memorandum suggests also that the pension should be left intact when the annual income does not exceed \$500. Moreover, when a wage-earner receives an income of less than \$1,000 yearly from a contributory pension fund, the CCCL asked that he be not deprived of the advantages of his old age pension.

### **Military Training and Immigration**

The CCCL stated again that it is against compulsory military training in time of peace. It requested the Government to reduce to a strict minimum the entry of immigrants into the country, in view of the unemployment situation which prevails in Canada.

### **Labour Gazette**

The CCCL thanked the Government for having appointed a French editor to the *LABOUR GAZETTE* and expressed its satisfaction for the improvements made to and the rapid delivery of, this monthly publication of the Department of Labour.

Mr. Gérard Picard, president of the CCCL interrupted the reading of the memorandum to congratulate the Prime Minister and the Government on the happy results of the Federal-Provincial Conference held in Ottawa last January.

### **Prime Minister's Statement**

In his reply, the Rt. Hon. Louis St. Laurent dwelt on each of the points brought up in the memorandum of the CCCL. The Prime Minister took advantage of the opportunity to outline the basic principles which motivate the Government's

action and its policy to maintain balance and stability between the different classes of society, to seek the most acceptable middle course between conflicting interests and to avoid everything which may jeopardize national unity.

## Unemployment

The Prime Minister stated that pessimism should be done away with and that fear of an economic crisis was enough in itself to slow up activity and give rise to a depression. He advised the leaders of the Canadian and Catholic Confederation of Labour to work towards the maintaining of confidence amongst all ranks of the population.

"The unusually high level of unemployment this winter," pointed out the Prime Minister, "has already begun to ease during the past two weeks. And the Government expects that in the next month or two, the Unemployment Insurance Fund which, for the first time in close to ten years, had given out more money than it had received in February, will start increasing again. If we yield to fear and pessimism, if we are afraid of the future and if our industries are content merely to take means to prevent losses, we will only hasten an economic depression."

Mr. St. Laurent recalled that since the end of the war, Canada had spent over \$14,000,000,000 for industrial improvements representing investments of capital. The estimated total for expenses of this kind this year equalled at least \$3,600,000,000.

For that reason, the Government still believed it advisable to delay further the large program of public works planned even before the end of the war and held up in order to leave workers and materials at the disposal of private enterprise. Mr. St. Laurent stated his conviction that government interference would not add to the total volume of construction and that the Government would be well advised not to undertake this year any but the works considered necessary and urgent.

When the abnormal unemployment situation developed this winter, the Federal Government tried to speed up its own works but it was already too late to correct the situation in this way. Supplementary benefits now available to 100,000 unemployed workers, would be of great help "because conditions in our country are such that we will always have unemployment during the months of January, February and March."

The Prime Minister mentioned as an example, the pessimism of the pulp companies which feared a decrease in the demand for newsprint and which decided

to cut their inventories with the result that, this winter, the number of jobs available in logging, was lower than that of last year, by 25,000. Yet those fears were so unfounded that the sale of newsprint was higher in 1949 than ever before and there now existed a demand for all the wood pulp available.

Mr. St. Laurent added that this was not the only case of its kind. "The Liberal Government is not a socialist government and therefore, it is private enterprise and not the State which must undertake works which will help maintain a high level of employment. But industry must not give in to unfounded fears because the economic outlook is still bright."

## Foreign Trade

In answer to the recommendations contained in the memorandum of the CCCL to the effect that the Federal Government should do everything in its power to diversify our foreign trade and thus maintain full employment, the Prime Minister assured the delegates that that was already being done and that our Trade Commissions were working without respite in order to multiply and diversify our export markets. Nevertheless, he reminded the CCCL delegates that "if we wish to export we must realize that we shall have to accept imported products in return. The exchange of bank notes is not enough, these bank notes must be exchangeable for goods."

## The Housing Problem

The CCCL memorandum claimed that the initial payment is too high for the lower-paid workers who wish to become property-owners. In this matter, Mr. St. Laurent pointed out that at the last session of the Federal Government, the initial payment had been reduced by half. According to the newspapers, Mr. Leslie Frost, Prime Minister of Ontario was thinking of reducing the initial payment to nothing. "If Mr. Frost succeeds, this will be an example which you will be able to recommend to other provincial administrators."

## Rent Control

The memorandum criticized the 18 to 22 per cent increase which landlords are authorized to make. On this point, Mr. St. Laurent stated that, at any rate, rent control must sometime disappear and that it must disappear gradually. The increase authorized last fall was superior to any which would have resulted from the suppression altogether of the control. At any rate, the Government is not infallible "but the

mistakes that it does make are not the result of ill will, nor are they caused because the Government does not feel, like the next fellow, the proper concern for the maintenance of balance and stability between the conflicting interests within the nation." The Government showed the same concern in the income tax set-up.

### National Unity

As regards the ticklish question of the appointment of an ambassador to the Vatican, Mr. St. Laurent stated that there would certainly be advantages for Canada in having a representative at the Vatican. But to benefit by these advantages, the appointment must not be made at a time when it would stir up a religious controversy in our country. It would be preferable to wait for more auspicious circumstances.

The same line of thought applied in connection with the choice of a national flag and the adoption of a national anthem.

It was better to delay some more in order to choose a flag which would be a symbol of unity and not a fire-brand.

In connection with the internationalization of Jerusalem, Mr. St. Laurent made it clear that the Government was in favour of it, in principle. Those who supported the resolution towards that purpose at the United Nations were not ready to raise an army to enforce it. Considering the situation, the Canadian Government had deemed it advisable to temporize in order to obtain

suitable conditions which would allow Christians to enter the Holy Land in all security.

### Imposition of a Tax on Capital Profits

As for the above, Mr. St. Laurent stated that if the Government adopted the measure, it would also have to grant deductions for losses of capital and it was doubtful whether on the whole the Treasury would profit by the operation.

### Compulsory Military Training

There is no danger that the Government will inaugurate compulsory military training in peacetime, Mr. St. Laurent said. "We already have to spend \$425,000,000 per year for defence purposes and it would certainly be impossible to start compulsory military training with that amount."

### Immigration

Mr. St. Laurent believed that immigration into Canada would continue. He said that the Labour Department is presently studying a new plan of selective immigration, and hoped that amongst the immigrants, an adequate number would be assimilated into our group.

In closing, the Rt. Hon. Louis St. Laurent recommended that the CCCL do its share so that the public will remain optimistic. "If confidence is maintained in all ranks of the population, economic activity will continue at a high enough level to assure the continued prosperity of the country."

## Views of Provincial Labour Organizations

*Summarized below are the legislative proposals of labour organizations in British Columbia, Manitoba, and Quebec, as submitted to their respective provincial governments.*

### British Columbia Executive (TLC)

The British Columbia Executive of the Trades and Labour Congress of Canada submitted legislative proposals to the Premier of the Province, Hon. Byron Johnson, and members of his Cabinet on January 31, 1950.

Before presenting specific legislative requests, the Executive expressed its concern with the unemployment situation. While recognizing that this problem was primarily "one that should be met by the Federal Government," it was hoped that the Provincial Government would "urge immediate action in assistance to the unemployed and long range planning to avoid this condition in future." However, it was the opinion of the Executive that there were many projects that could be undertaken by the

Provincial Government "which would bring immediate relief."

**Industrial Conciliation and Arbitration Act.**—Early in January the Executive presented a special brief to the provincial government which embodied specific suggestions for amending this Act. (A synopsis of this brief was published in the March issue of the *LABOUR GAZETTE*, p. 327.)

**Old Age Pension Act.**—In the opinion of the Executive, "the glaring inadequacy of the Old Age Pension Act to meet even the basic needs of our senior citizens has too long gone unheeded." The following amendments were urged:—

(1) raising the minimum payment to \$60 per month; (2) reducing the eligible age

to 60 years for women and 65 for men; (3) abolition of the means test; (4) lowering of residential qualifications to 15 years in Canada; (5) making the Act contributory and applicable to all senior citizens and, in addition, to the blind or totally disabled over 18 years of age; (6) discontinuing the practice of combining the Old Age Pension Act with the Parents Maintenance Act; (7) elimination of the practice of placing liens on the homes of pensioners; (8) establishment of community homes for the aged with adequate provision for married couples to live together; such homes to be under the supervision of the federal government and to provide hospitalization and full medical care.

**Automobile Insurance.**—It was submitted that since automobile insurance was in effect compulsory, to leave the fixing of rates to private business, was to make possible the charging of excessive rates. The Executive, therefore urged that "the provincial government assume the administration and control of automobile insurance, with special reference to the 'Proof of Financial Responsibility' section in the British Columbia Motor Vehicles Act."

**Hours of Work and Minimum Wages.**—The Executive requested that horticultural and domestic workers and ambulance drivers be included under the Hours of Work Act and also under the Minimum Wage Act. It was recommended that the maximum work-week be set at 40 hours with no reduction in take-home pay and that a basic minimum wage of 75 cents an hour be provided.

**Annual Holidays Act.**—The Executive asked for the inauguration of a system requiring employers to contribute four per cent of their employees' wages to provide for two weeks' annual vacation with pay for all workers in the province.

**Hospital Insurance Act.**—It was urged that the Hospital Insurance Act be amended to include all persons in receipt of pensions that do not exceed \$100 a month. This suggestion was designed to benefit particularly, those pensioners for whom the government does not pay the mandatory premiums required by the Act. In addition, it was asked that the practice of charging hospital patients private and semi-private rates when they could not be accommodated in public wards be discontinued. It was suggested further, that a Commission be set up to administer the Hospital Insurance Act; and that the cost of anaesthetic treatments and the cost of transportation to centres where specialized treatment could be obtained be paid by the government under the terms of the Act.

The Executive expressed concern with regard to the pay received by student nurses, which it was held, was barely sufficient to maintain a decent standard of living. To correct this, the suggestion was made that student nurses should be included under the provisions of the Apprenticeship Act.

**Other Recommendations.**—Among other requests made by the Executive were: (1) the reduction of the voting age to 18 years; (2) the discontinuance of the tax on meals served in bunk-houses; (3) the establishment of a British Columbia plumbing code; and (4) government supervision of existing company towns and the prohibition of the establishment of additional ones.

## CCL Unions in Manitoba

A delegation from the Winnipeg Labour Council, Brandon Labour Council and the Canadian Congress of Labour waited upon the Premier of Manitoba, Hon. D. L. Campbell and members of his cabinet recently, to suggest amendments in existing legislation affecting labour.

In a preliminary statement, the delegation declared that unemployment problems in Manitoba were "serious" and warranted immediate action by the Provincial Government at the forthcoming session of the legislature. One method suggested to relieve unemployment was a public works program.

**Labour Relations Code.**—The delegation recommended that the following amendments be made to the Labour Relations Code:—

- (1) that provincial civil servants be given collective bargaining privileges;
- (2) that policemen be permitted to organize;
- (3) that the government should put a controller in charge of the business of an employer who wilfully disregards an order of the labour board;
- (4) that the check-off and union security be defined and explicitly provided for in the code;
- (5) that employers be forbidden to change wage rates or conditions after an application for certification has been filed with the labour board, unless the certified bargaining agency gives its consent;
- (6) that the voting procedure for selecting a bargaining agency by a group of employees be clearly outlined and provide specifically that the choice be determined by the majority of the votes cast and not by the majority of those eligible to vote.

**Workmen's Compensation Act.**—Suggested changes in the Workmen's Compensation Act included:—

- (1) compulsory coverage for all working people in the province;
- (2) compensation to an injured workman to the extent of 100 per cent of his earnings;
- (3) the designation of dermatitis as an occupational disease.

**Vacations-With-Pay Act.**—The following amendments to the Vacations-With-Pay Act were recommended:—

- (1) that the present regulation establishing one week's vacation with pay for workers be changed to provide for a minimum of two weeks' vacation with pay;
- (2) that an employee, upon separation from his employment receive, in addition to pay for his services, a *pro rata* vacation payment corresponding to the portion of the year he has worked;
- (3) that legislation be enacted at the next session of the legislature to provide for eight statutory holidays with pay for all workers in Manitoba.

**Other Recommendations.**—Among other suggestions and recommendations made by the delegation were the following:—

- (1) social security legislation to provide protection against unemployment, sickness, accident, disability, old age and family risks and free medical, surgical, dental and hospital services;
- (2) that more inspectors be employed to enforce the provisions of the Minimum Wage Act, the Factories Act and the Hours of Work Act;
- (3) that education be provided free, from the nursery up to, and including the university;
- (4) that a provincial department of co-operatives be created;
- (5) that a Bill of Rights be enacted for the province of Manitoba;
- (6) that the government take over rent controls and co-operate with the municipalities in a housing program;
- (7) that a permanent commission be appointed to conduct a continuing study of seasonal unemployment in Manitoba.

## Manitoba Executive Committee (TLC)

A joint deputation from the Manitoba Executive of the Trades and Labour Congress of Canada, the Winnipeg District Trades and Labour Council, the city of Brandon Trades and Labour Council and the Flin Flon Trades and Labour Council,

presented to the government of Manitoba, in January, suggestions designed to improve labour and social legislation.

**Social Security.**—The deputation urged the Provincial Government "to redouble its efforts to impress upon the Dominion Government the dire need for early implementation" for overall social security legislation on a contributory basis. It was claimed that in the interest of efficiency and economy, such legislation should be under a single administration. It should "guarantee to every citizen a satisfactory retirement pension without any 'means test'; adequate income and medical care during illness; 100 per cent compensation for injury from accidents, whether in industry, the home or on the highways; adequate insurance against unemployment; allowances for children; and proper maintenance for widows, blind persons, and others who are so handicapped that the earning of a decent livelihood is impossible."

In order to facilitate the provision of these benefits, it was urged that "greater assistance be given to municipalities for the construction and maintenance of hospitals; the integration of curative and preventive medical services, the education and training of sufficient skilled personnel to guarantee to every citizen the medical, surgical, dental and nursing care he may require."

**Labour Relations.**—It was contended that:—

- (1) seniority and pension rights of workers should be protected under the Manitoba Labour Act in the same way that such rights are protected by federal legislation;
- (2) the section in the Act which prevents the affiliation of police organizations should be repealed;
- (3) "extra-provincial" companies whose Boards of Directors do not meet in Manitoba, should appoint Manitoba representatives clothed with authority to bargain collectively and enter into collective agreements that would be binding on the companies;
- (4) provision should be made in the Act for the check-off of union dues;
- (5) a member of the provincial legislature should be permitted to accept an allowance for expenses incurred while acting as a member of a Conciliation Board, without endangering his rights as a member of the legislature;
- (6) the Labour Relations Board should be given the responsibility for the prosecution of persons violating the Act;
- (7) government employees, including employees of government commissions and boards, should be given the right to organize and to bargain collectively;
- (8) the issue of injunctions during the course of a labour dispute should be prohibited;

- (9) fifty-one per cent of the votes actually cast in a vote to select a bargaining agency should determine the organization to be certified;
- (10) conciliation procedure should be speeded up and penalties provided for employers who deliberately cause delays in order to defeat the intention of the Act.

**Workmen's Compensation.**—The delegation re-stated former submissions asking that accident prevention services be administered by the Workmen's Compensation Board.

A request was made that the Workmen's Compensation Act be revised to provide for the filing of claims after 12 months have elapsed, when it can be proven to the satisfaction of the Board that the claim is a *bona fide* result of an accident treated previously by a physician who failed to file a report thereon to the Board.

Upward revision in the pensions paid to widows or invalid widowers from \$50 to \$60 per month was urged, and \$25 per month be paid for each child under 18 years of age, or each child who is completing a high school education, university, or technical school training.

Other changes suggested in the Act included (1) increasing the maximum amount in calculating average earnings and earning capacity of a workman to \$3,000 per year; (2) making available chiropractic treatment to workers in industry who come under the Act; (3) bringing under the Act occupational hazards such as skin diseases and diseases causing irritation to the lungs; (4) coverage for farm labour.

**Minimum Wages.**—The deputation expressed appreciation of the improvements made in the Minimum Wage Regulations during the past year, but requested that more inspectors be employed to enforce present rates and conditions. It was again urged that the Act be amended to provide for a minimum wage of 75 cents an hour with equal pay for equal work and that a 15 per cent higher rate be established for the Flin Flon area, inasmuch as living costs were higher in that district. The opinion was expressed that workers in hospitals and charitable institutions should be included under the Minimum Wage Regulations.

**Fair Wage Act and Hours of Work Act.**—It was asked that all Manitoba industries be brought under the terms of the Fair Wage Act.

It was held that the Hours of Work Act and regulations thereunder should be amended to give the Manitoba Labour Board power to collect wages due to a workman who had not been paid overtime in accordance with the terms of the Act.

**Vacations with Pay.**—Inasmuch as labour was dissatisfied with present vacations with pay legislation and did not consider one week's vacation adequate, the delegation asked for an extension to provide for two weeks with pay, the equivalent of four per cent of earnings. It was suggested further, that the stamp credit system used in the city of Winnipeg be extended to cover the entire province.

**Old Age Pensions.**—Pending the enactment of legislation on a national basis, the provincial government was asked to increase present pensions by ten dollars per month; this to be applicable also to blind and disabled persons.

**Unemployment.**—Asserting that there was serious unemployment throughout Canada, the deputation requested immediate governmental action on a federal and provincial basis. The Provincial Government was asked to assist municipalities to institute public works projects.

**Housing.**—The Provincial Government was urged to undertake, in co-operation with federal and municipal authorities, a low-rental home building program to provide adequate housing for ex-service personnel and those in the low income brackets, together with strict control of rents. In addition, the provincial government was asked to require the federal government to re-instate the home-improvement plan and to institute a system that would enable persons with small incomes to purchase homes on a long term basis at low interest.

**Apprenticeship.**—The government was requested to amend the Apprenticeship Act so as to make it necessary for an employer to pay the apprentice attending technical or vocational classes the difference between the \$11 per week now stipulated in the Act and the amount the apprentice would receive if working during the school period.

**Other Requests.**—Among other matters dealt with by the deputation were:—

- (1) amendments to the Manitoba Election Act designed to improve methods of enumeration and granting workers three hours off on election days without loss of pay, to exercise their franchise;
- (2) the adoption of measures to assure that wiring of farm homes be done only by qualified, licensed electricians;
- (3) that the provincial government urge the federal government to raise the minimum exemptions for personal income tax to \$1,200 for single persons, \$2,400 for married persons, with exemptions of \$400 for each dependent; that no portion of family allowances be refundable to the government; and that trade union dues be allowed as a deduction

from income; (4) amendments to the Highway Traffic Act to provide stricter regulations in the granting of drivers' licences, and the installation of danger signals at all railway crossings; (5) amendments to the Automobile Insurance Act to place the issuance of all automobile insurance in the province under the government; and (6) suggesting that the Federal Government be urged to enact a National Bill of Rights.

## **Quebec Provincial Federation of Labour (TLC)**

The Quebec Provincial Federation of Labour, which includes affiliates of the American Federation of Labour and of the Trades and Labour Congress of Canada, submitted its annual brief to the provincial authorities on March 1, 1950. The delegation was received by the Prime Minister, Hon. Maurice Duplessis, and members of his Cabinet, and was headed by Mr. Marcel Franco, president of the Provincial Federation. The brief dealt with the Federal-Provincial Conference, unemployment, public works, labour legislation, and contained a declaration in connection with a proposed Labour Code for the Province of Quebec.

### **Industrial Peace**

In the opening remarks of its brief, the Federation energetically protested against certain public declarations alleging that one of the most alarming and dangerous problems of the hour is that of employer-employee relations, that the labour movement is a source of confusion in the provincial economy and that it is a menace to industrial peace.

We declare, and this the Department of Labour is in a position to confirm, that our affiliated unions peacefully conclude hundreds of collective agreements each year and that only in a very small percentage of cases is it necessary to resort to conciliation or arbitration. As in the past, our movement continues to act within the bounds of discipline and respect of the laws. This attitude is all the more deserving since it is maintained even in cases where we feel that the present labour laws are defective and contrary to the best interests of the working class.

As regards the Federal-Provincial Conference held at Ottawa last January, the Federation expressed its satisfaction in the following manner:—

Our political leaders have placed the welfare of Canada above their political interests. We were also pleased to note that the Quebec political leaders have proved themselves to be well-informed

statesmen and to be primarily seeking the interests and welfare of the Canadian people.

### **Unemployment**

The brief declared that unemployment seems to be taking an alarming turn following a decade of relatively plentiful employment, and requested the Provincial Government to do all in its power to alleviate the situation before it gets worse.

It was urged that if private enterprise is unable to provide full employment, governments should do everything within their power to create employment by means of public works. The Federation noted that the Provincial Government had undertaken a huge program of road building and repairing, but it also requested the Government to undertake public works in order to provide work for the unemployed workers in the cities.

### **Labour Relations Act and Labour Relations Board**

The Federation claimed that since its inception the above law has been a source of disappointment for the workers of Quebec and that its administration and interpretation by the Board have been deplorable. However, it was acknowledged that the fundamental principles and the provisions of this law are sound.

"Employers and employees were not given the quality of treatment they should have received under the law," declared the brief. "Employers guilty of infractions of the law and of anti-union practices have avoided prosecution. On the other hand, some labour unions have been ill-used and have been refused certification or have had their certification cancelled through the action of certain employers. Finally, company unions have unfortunately become too numerous in spite of the fact that they are forbidden by law."

The delegation congratulated the Provincial Government for having appointed two experienced and competent labour representatives to the Labour Relations Board; these appointments should eliminate the great number of complaints regarding the administration and interpretation of the Labour Relations Act, it was asserted.

### **Rent Controls**

The brief recalled that a large part of the workman's budget goes towards paying rent, and since rentals have greatly and constantly increased, the workman has been placed in an unbearable and urgent situation. The Federation stated that this state of affairs must be remedied through rent

controls, otherwise labour will be forced to raise its wage claims considerably in order to balance its budget. The brief added that the lack of balance in the budget due to prohibitive rentals is a menace to the general industrial peace of the Province of Quebec.

## Labour Legislation

The Federation brief suggested a number of amendments to certain labour laws. The main recommendations made by the Federation are given below.

### Law Concerning Fire Departments.—

The brief declared that Bill 60 or 13 has considerably modified the firemen's situation in connection with arbitration and that under pretence of safeguarding the autonomy of municipal corporations, the firemen's right of association and affiliation, their right to union security and to grievance procedure should not in any way be attacked or minimized.

It was requested that arbitration awards be made absolutely binding and that the necessary measures be taken by the Provincial Government in order that municipalities may be compelled to comply with the awards as soon as they are rendered. The brief requested that appeals to the Board of Municipal Affairs be abolished since this body is an interested party.

A survey of a law concerning Fire Departments should be immediately undertaken, as is done in other provinces. Pension funds, civil service commissions and shorter working hours are the main improvements we are requesting on behalf of firemen.

**Notice of dismissal.**—The Federation asked the Government to request, through the medium of the Minimum Wage Act, the passing of an order along the line of Order No. 3 concerning paid vacations, stipulating that all employers must serve a notice of dismissal based on the employee's pay period, in order to avoid all possible injustice and eliminate the growing number of dismissals and lay-offs in industry, without previous notice.

**Law concerning municipal and school corporations and their employees.**—The Federation recognized that municipal and school corporations must safeguard their autonomy, but it did not admit that it should be possible for a legislative text to forbid any procedure tending to rectify injustice caused by a municipal or school corporation through dismissal or suspension.

We must not lose sight of the fact that municipal and school authorities are human beings, and as such liable to error, and that their employees cannot go on strike.

The Federation requested the repeal of Paragraph 2 of Section 13 of the law concerning municipal and school corporations and their employees.

It also suggested the amending of Order in Council No. 35 of January 4, 1950, so that procedure concerning allowances and expenses in connection with municipal and school arbitration will be the same as for industrial arbitration.

The Federation claimed that this Order in Council, which stipulates that expenses, costs and travel allowances are to be borne by the parties, causes great prejudice to municipal and school corporation employees since they are forced to bear expenses which in many cases are too heavy, and since this condition prevents them from freely choosing competent arbitrators on account of their lack of funds and the lack of interest which competent persons will show in accepting the office of arbitrator, and finally because the said order constitutes an unfair distinction between employees of municipal and school corporations and those of industry in the matter of government services.

**Workmen's Compensation Act.**—The Federation declared that it has always been in favour of the fundamental principles of the present Workmen's Compensation Act. However, it was the opinion of the Federation that this Act should be amended in certain ways so as to render its application "fairer and more conformable to present-day needs and to fill in certain gaps which experience has revealed." The following are some of these suggestions:—

1. That your Government, through inter-provincial agreements, make every effort to have a uniform rate of compensation of 100 per cent of the injured workman's earnings established throughout Canada.

2. That the Act apply to all trades and services, for all accidents attributable to the nature of the employment.

3. That compensation be paid from date of accident or incapacity, without waiting period.

4. That accident prevention measures be supervised by the Workmen's Compensation Board and that the mechanism necessary to ensure its proper functioning be established.

5. That all industrial diseases or diseases attributable to employment be covered, no matter what the disease or the employment.

The Federation requested that strong action be taken by the Provincial Government to ensure safety and health in plants. It proposed that the Workmen's Compensation Commission services and the

Industrial and Commercial Establishments Inspection Division be re-organized, and recommended that the inspectors of the Industrial and Commercial Establishments Inspection Division come under the jurisdiction of the Workmen's Compensation Commission, and that heavy penalties be imposed upon establishments guilty of infringement or omission with regard to orders from the Commission.

**Minimum Wage Act.**—Dealing with the Minimum Wage Act, the memorandum recognized that this legislation has rendered enormous services to the workers of the Province of Quebec, but that it must follow the rapid progress and the constant evolution of trade and commerce. The Federation suggested that Minimum Wage Commission Orders be adapted to new conditions and amended to meet future requirements:—

It is clear that if Order No. 4, which covered trade and all industries, and both men and women, was satisfactory a few years ago, it is no longer adequate. A glance at the American Wage and Hour Law reveals that each individual industry should now be examined and governed by a specific Order so as to cover each of the new and complex aspects of that industry. A General Order is too indefinite and becomes inoperative.

If it is also considered that almost all collective agreements, separate or based on extending decrees, stipulate the 48-hour week or less, it must be admitted that the Minimum Wage Act is obsolete in this respect. As to wage minima, conditions have changed to such an extent in recent years that the rates specified in Order No. 4 are absolutely useless and childish.

Employees and employers realize this, and all agreements reach far beyond those rates. So much so that at a recent Conference held at Granby our affiliated unions resolved to request a minimum wage rate of 75 cents an hour. Basic rates should be considerably increased if the Minimum Wage Act is to play a part really consistent with its purpose, that of fixing floors reflecting the true condition of industry.

The Federation suggested that special premiums be paid for overtime and night work. It also requested that home-work be abolished and urged the disappearance of sweat-shops "waging unfair competition against manufacturers respectful of the laws of our Province."

The memorandum concluded with a statement of fundamental principles which the Provincial Labour Federation believed should be included in any Labour Code the Government of the Province of Quebec might eventually adopt. This proposal was adopted by the Federation's annual Conference held at Granby in June, 1949.

## Canadian and Catholic Confederation of Labour

The Canadian and Catholic Confederation of Labour (CCCL) presented its annual brief to the Government of the Province of Quebec on March 2, 1950.

The delegation included Messrs. Gérard Picard and Jean Marchand, President and Secretary respectively of the CCCL, and about twenty officers of the General Council and the various affiliated federations. A general outline of the principal requests contained in the memorandum was given the Premier, the Hon. Maurice Duplessis, by Mr. Marchand.

In addition to the questions of general interest dealt with in the main brief, the Canadian and Catholic Confederation of Labour presented a supplementary memorandum, of a more technical nature, intended to bring before the provincial authorities various resolutions adopted, for the most part, at the CCCL's last convention (L.G., Nov., 1949, pp. 1379-87).

### Dominion-Provincial Relations

The CCCL congratulated the provincial delegation on the important part it had played at the last Dominion-Provincial Conference, stating that it was in agreement with the Government of the Province of Quebec in connection with the latter's request for clarification of tax matters. The brief adopted a definite position in favour of provincial autonomy. In it the CCCL asserted that

on no consideration must the constitutional independence of Canada, which we approve, mark the beginning of an encroachment on the rights of French-Canadians . . .

and added that, where this question is concerned, there is more at stake for the Province of Quebec

because of its ethnical, linguistic and religious characteristics, than for the other provinces,

and that

it is therefore natural for its resistance to be greater and its attitude firmer.

The brief laid emphasis on the fact that

if, however, the CCCL favours the maintenance of the rights of the Province of Quebec as guaranteed in the Canadian constitution, it cannot on the other hand disregard other rights—such as the right to life, the right to an adequate wage, the right to participate in the prosperity of the country, etc.—the recognition of which is of prime importance if we wish to ensure social peace.

No greater mistake could be made than that of making it possible for the secular rights of French-Canadians to be set in opposition to their economic and social well-being.

## Housing

The main theme of the memorandum was the housing problem. The CCCL gave its support to a plan put forward by the "Fédération des coopératives d'habitation du Québec" in which it was suggested that a provincial loan, and even a municipal loan, should be added to the federal loan in order to facilitate the initial outlay for small wage-earners and thus enable them to avail themselves of existing laws.

"Those concerned must at all costs co-operate closely to improve the lot of tenants and to increase the number of small property owners.

"Right now, we must prevent landlords from taking advantage of their tenants because of the housing shortage. Certain controls must be maintained until a balance is struck.

"The real solution, however, can be found only in a generous and progressive policy with regard to family dwellings.

"The Provincial Government has already passed a number of laws, for which we are grateful, favouring the building of houses. A great many workers have taken advantage of them. The Federal Government, for its part, has legislation favouring the acquiring of property. The municipalities are authorized to grant certain privileges to future property owners, such as commutation of taxes, lots at a low price, etc. . . .

"The greatest difficulty encountered is the problem of the small wage-earners who are unable to pay the initial amount either for the purchase of a lot or to begin the work up to a point which would permit them to profit by existing legislation.

"The 'Fédération des coopératives d'habitation de la province de Québec' has suggested a plan to which the CCCL gave its complete approval at its last convention."

Here is a brief outline of the said plan:—

1. At the time of the loan, the Provincial Government would provide a contribution equal to that of the Federal Government;

2. However, it would pay only the amount over 3 per cent, instead of 2 per cent as at present, which would make up for its initial contribution;

The amount of the contributions would be set as follows:

1. For loans not exceeding \$6,000 the contribution would be \$1,200;

2. For loans over \$6,000 but not exceeding \$10,000 the contribution would be \$8,000.

This contribution would be distributed among the three public authorities (federal, provincial and municipal) in accordance with the following percentage:

25 per cent would come from the municipality,

37½ per cent from the Provincial Government,

37½ per cent from the Federal Government.

(The reason for the municipality's making a smaller contribution than the other governments is that it has to provide the public services, such as sewers, drains, etc.)

The CCCL brief suggested the setting up of an organization with sufficient funds to enable it, if need be, to rediscount mortgages, so that the People's Banks and other loan institutions might be able to place the necessary funds at the disposal of future property owners.

## Labour Legislation

The CCCL brief stressed the fact that the Superior Labour Council of the Province of Quebec is fully qualified to carry out its role, and assured the latter of its entire co-operation in the consideration of provincial labour legislation.

## Unemployment

The CCCL showed anxiety in its brief over the increase in unemployment, and called on private enterprise and the municipalities, as well as the governments, to co-operate closely in order to solve this problem, especially in the centres affected most by unemployment:—

"Private enterprise itself must leave no stone unturned in order to correct the present situation. If it wants to preserve its freedom of action and maintain its prominent influence over the national economy, it must not content itself with profiting by the advantages of the system and simply thrust aside the responsibilities. Let us not forget that industry exists for men, and not men for industry.

"There is urgent need for the governments to fight down the first onslaught of the crisis by stimulating economic activity through public works and, in order to remedy the situation, to inquire into the causes of the slowing down of production in certain industrial sectors. Those who really have it at heart to fight subversive ideologies will not allow conditions to be created here which favour the development of such ideologies."

## Freedom of Association

The CCCL again asked the Government this year to restore recourse to arbitration in favour of men and women teachers practising their profession in rural municipalities. It believed that the present restrictions amount to denying freedom of association to these wage-earners who, nevertheless, are badly in need of it.

The memorandum also reminded the Government that the CCCL is still opposed to recourse to the Municipal Board set up in defiance of the awards made in public services.

## **Social Security**

The CCCL emphasized the fact that social security is the order of the day, and that the workers are looking for protection against the risks to which they might be subject in their personal and family life. According to the CCCL, it should also be possible for the various plans for social security to be carried out on the level of labour and industrial production, right from the collective agreements:—

“In this way plans for health insurance and hospitalization, as well as pension funds, are drawn up. These are most praiseworthy efforts, and the CCCL requests the Government to encourage them by clearly indicating in the Labour Relations Act and the Trades Disputes Act that they can form the subject of collective bargaining.”

## **Supplementary Brief**

In its supplementary memorandum, which was more technical in scope, the CCCL submitted to the Provincial authorities, suggested and recommended amendments or modifications to the Provincial Acts respecting professional syndicates, collective agreements, labour relations, trades disputes and disputes between public services and their employees, as well as minimum wages, workmen's compensation, housing and industrial establishments. This second CCCL brief also contained various recommendations concerning matters of health and of public and industrial safety.

## **Professional Syndicates Act**

Among other amendments, the CCCL suggested that the incorporation of workers' syndicates under the Professional Syndicates Act should be compulsory so that they might benefit by existing legislation and enjoy the privilege of representation on public bodies, that the Professional Syndicates Act be amended so as to facilitate the incorporation of all professional syndicates of workers, and that the administration of the Act be entrusted to the Minister of Labour.

## **Collective Agreement Act**

The CCCL suggested, among other changes, that all public and political bodies be subject to the Collective Agreement Act, and that the Cities and Towns Act, the Municipal Code, the Education Act and the Factories Act be amended so as to indicate clearly that the corporations existing by virtue of these Acts have power to sign collective agreements with unions, and that they can be brought under the legal exten-

sion of a collective agreement made by an Order, if they are not signatories to this agreement.

The CCCL asked the Department of Labour to carry on a campaign of suitable propaganda in order to let the public know what distinctions must be drawn between syndicates and parity committees.

With regard to trade qualifications cards, the CCCL brief suggested that, in case of appeal against the decision of a parity committee, the Department of Labour should proceed in the same way as a parity committee, that is it should have candidates try examinations before issuing trade qualifications cards.

The CCCL requested higher fines for employers who break the law by employing too many apprentices with respect to the number of journeymen.

## **Minimum Wage Act**

The most important recommendations made by the CCCL with regard to the Minimum Wage Act and its main ordinances suggested that it should be a matter of public policy that no order adopted under the authority of the Collective Agreement Act might contain wage scales or working conditions less favourable than those set forth in the Minimum Wage Commission orders, and that the Act should be amended so that any workers' syndicate or any federation of syndicates might call upon the Minimum Wage Commission to set up a Conciliation Board when there is occasion to renew an order or to prepare a special one.

The CCCL requested that the Commission be allowed to exercise not only the recourses arising from orders in favour of wage-earners, but all those arising from the Act itself.

## **Workmen's Compensation Act**

Among other amendments to the Workmen's Compensation Act, the CCCL suggested that the decisions of the Workmen's Compensation Commission should not be final and without appeal, but that the victims of accidents should have the right to appeal, without cost, to the Superior Labour Council.

The CCCL also submitted

that the provisions of Section 51 be made applicable to workers affected by industrial diseases, and that the word “can” in the first line of this section be replaced by the word “must”, so that the rehabilitation of the victims of accidents and of workers affected by industrial diseases might become an obligation for the Commission;

that provision be made in the Act that in the case of dermatosis, silicosis, asbestosis and other similar industrial diseases,

the Commission should see that the workers affected are placed in other employment and should pay compensation if the wage for the new employment is less;

that the provisions of Section 21 of the Act be amended so as to oblige employers to report all industrial accidents, no matter how slight, and all symptoms of industrial illnesses, in order to ensure a better administration of the Act and effective protection for workers.

With regard to the asbestos industry, the CCCL asked for the establishment of industrial clinics at Thetford Mines and Asbestos, at the expense of the Workmen's Compensation Commission, as authorized by Section 109 of the Act; and that an investigation be made by the Department of Health in the asbestos district in order to determine the percentage of tuberculosis there and to find the relationship between tuberculosis and the asbestos dust saturating the air in the mines and mining towns.

The CCCL suggested that the Provincial Government should make special grants to the Faculties of Medicine of the universities of the Province to enable them to carry on scientific studies with regard to this industrial disease and to give the medical world definite information concerning asbestosis, the possibilities of certain diagnosis and the methods of curing it.

### **Municipal and School Corporations and their Employees Act**

Among other amendments, the CCCL asked that the administration of the Act should be entrusted to the Minister of Labour, and that the latter should appoint as members of the arbitration board the qualified persons recommended to him within ten days following their recommendation by the employer and by the association.

The CCCL asked the Government to establish urban credit, make automobile insurance compulsory, abolish the municipal 4 per cent sales tax on all articles, and suggested that allowances to indigent mothers and blind persons be increased by at least \$10 a month. It objected to the establishment of closed towns and suggested the adoption of various measures concerning public safety, health and immigration.

The CCCL suggested that the Government create a Provincial Bureau of Statistics with a view to determining the increase in the cost of living, that such surveys be made by zones and that the average family in the Province of Quebec be considered, and also that the Provincial Department of Labour publish a *LABOUR GAZETTE*.

With regard to immigration, the CCCL urged the Provincial Government to assist by an annual grant, private organizations

which concern themselves with immigrants regarded as sympathetic to the French-Canadian cause, so as to help such organizations to achieve their goal.

### **The Premier's Remarks**

The Provincial Premier, Hon. Maurice Duplessis, told the delegates of the Canadian and Catholic Confederation of Labour that the Government was thinking of setting up a financial body which would rediscount the housing loans granted by the People's Banks.

Mr. Duplessis also approved of the CCCL's statement to the effect that private enterprise, if it wants to retain its prerogatives, must likewise contribute to the fight against unemployment by carrying out all the public works possible in time of crisis.

The Premier did not promise to agree to the CCCL's suggestion with regard to contributions from the municipalities and the two governments in order to obtain the initial amount needed by the majority of workers who want to build a house. This plan, as mentioned above, involved a contribution of 25 per cent from the municipalities.

With regard to pension funds, Mr. Duplessis stated that we must build if we want it to last. "Because actuaries were not consulted," he pointed out, "trade unions and companies are in conflict because the funds accumulated are not sufficient to meet the needs of the employees when the time comes for them to retire."

At the conclusion of the interview the Hon. Maurice Duplessis recalled the strike at Asbestos.

"When you came to see me about Asbestos," he said, "I settled the problem to your advantage. I had the satisfaction of doing my duty there, and I do not regret anything I did. Trade unionism is legitimate and worthy of commendation. It is necessary. However, law and authority must be respected by all—employers and workers. Sabotage of civilian authority leads, beyond all question, to sabotage of religious authority."

---

### **Correction**

On page 172 of the February issue of the *LABOUR GAZETTE*, reference is made to the number of workers represented by delegates to the Conference of the International Confederation of Free Trade Unions. The total given was 500,000,000; this should have been 50,000,000.

# STRIKES AND LOCKOUTS

## IN CANADA, 1949

There were fewer strikes and lockouts in Canada during 1949 than in any year since 1939, according to a supplement\* to this issue of the *LABOUR GAZETTE*. The number of workers involved in work stoppages during 1949 and the time loss were somewhat greater than in 1948. However, improvement in industrial relations is shown by strike statistics for the last two years as compared with the preceding two-year period, the time loss for 1948-1949 being less than one-third of that in 1946-1947. The small number of work stoppages in existence during 1949 also reflects the progress made in collective bargaining without resort to strike action. The latest figures available show that in 1948 collective agreements in effect covered more than 1,200,000 workers (L.G., Dec., 1949, p. 1521). The great majority of these contracts have been renewed by peaceful negotiations between workers and employers.

In 1949, the demand for higher wages, frequently accompanied by other issues affecting unionism and working conditions, was the central cause of 63 per cent of the work stoppages, affected 56 per cent of the workers and caused 84 per cent of the total

time loss. For the past four years the question of increased wages has been the major cause of strikes and lockouts as workers sought to maintain their purchasing power and offset rising prices with higher wage rates. In 1948, 83 per cent of the time loss resulted from disputes over wage increases, 91 per cent in 1947, and 96 per cent in 1946. Pension and welfare plans were not an important cause of work stoppages in 1949.

The greatest amount of time lost in 1949 was in the mining industry, caused by the strike of asbestos miners and mill workers in various centres in Quebec. This strike alone accounted for almost half the total time lost during the year. Strikes in the coal mining industry were few and caused little time loss. In 1947, the largest amount of time loss was also in the mining industry, because of a prolonged strike of coal miners in Nova Scotia and New Brunswick. With the exception of 1949 and 1947, during the last eight years the time loss in manufacturing, with the largest working force of any industry, has been greater than in all other industries combined.

## WORKING-DAYS LOST THROUGH STRIKES AND LOCKOUTS

By Months 1946-1949

# INTERNATIONAL STUDY OF INDUSTRIAL RELATIONS

*Collective agreements, conciliation and arbitration, and co-operation between public authorities and employers' and workers' organizations are to be among the subjects for consideration at the forthcoming International Labour Conference in June. In preparation for the discussion, several reports have been issued by the International Labour Office which set out the law and practice in the different countries, and, under the heading "Proposed Conclusions", indicate the points considered suitable for inclusion in international regulations.\**

Forming part of the general problem of Freedom of Association and Industrial Relations which has been studied by the ILO at three successive annual Conferences with a view to the adoption of a series of international regulations, the questions of collective agreements, conciliation and arbitration, and co-operation between public authorities and employers' and workers' organizations have been placed on the agenda of the 1950 Conference which is to be held in Geneva in June. It is expected that the Conference will hold a "first discussion" of these subjects under its "double discussion" procedure.

The question of Freedom of Association and Industrial Relations was first placed on the agenda of the Conference in 1947 at the request of the Economic and Social Council of the United Nations which in turn had been asked to consider it by the World Federation of Trade Unions and the American Federation of Labour. It was decided that the questions should be dealt with under the following heads:—

1. Freedom of association and protection of the right to organize;

2. (a) The application of the principles of right to organize and to bargain collectively; (b) collective agreements; (c) conciliation and arbitration; and (d) co-operation between the public authorities and employers' and workers' organizations.

Questions 1 and 2 (a) have been dealt with and disposed of by the Conferences of 1947, 1948 and 1949. Questions 2 (b) (c) and (d) are on the agenda of this year's Conference.

The 1947 Conference unanimously passed a Resolution defining the fundamental

principles on which freedom of association should be based and which should form the basis for international regulation, and laid plans for further examination of the problem in 1948. Following this initial action, the Conference at its 31st session in San Francisco adopted a Convention (No. 87) concerning freedom of association and protection of the right to organize (L.G., 1948, p. 974). At Geneva, in June, 1949, a second Convention (No. 98) was adopted concerning the right to organize and bargain collectively (L.G., 1949, p. 1090). The latter is an extension of the principles set out in the Freedom of Association Convention.

At the same time, as a means of establishing international machinery for safeguarding freedom of association, the Governing Body of the ILO approved in principle the establishment of a conciliation and fact-finding commission to investigate charges of violation of trade union rights (L.G., 1949, p. 1091). Since the 1949 Conference, it has been decided to set up an international nine-member fact-finding commission.

In accordance with ILO procedures, the International Labour Office in 1947 circulated to the Governments a preliminary Report on the law and practice in the different countries relating to Industrial Relations, together with a questionnaire on each of the main aspects of the problem. A further Report contains the replies of Governments to the questionnaires, a short analysis of the replies, and Proposed Conclusions to be submitted to the Conference as a basis for discussion. The Office was also able to prepare for the 1949 Conference a supplementary Report setting out the developments in legislation and practice which have arisen since the two earlier Reports were published.

\* In dealing with Canada, the Report, with one or two exceptions, examines federal legislation only. Laws regulating labour relations in the Provinces follow the general pattern of federal legislation.

These Reports of the ILO are reviewed in the present article, with particular emphasis on the Proposed Conclusions which are likely to be examined at the

forthcoming Conference. The question of co-operation between public authorities and employers' and workers' organizations is only briefly dealt with.

## COLLECTIVE AGREEMENTS

### The Development of Collective Bargaining

Although collective bargaining had been in practice in many countries before 1914, it was not until after the First World War that the principle of collective bargaining gained general acceptance. By 1939, a large percentage of workers in nearly all industrially advanced countries were covered by collective agreements. In the United Kingdom in 1945, 12,500,000 workers were employed under collective agreements and in the United States, 14,800,000 were covered in 1946.<sup>1</sup> Also, in the countries where industrialization is fairly recent, collective agreements have begun to replace the traditional individual contract of employment between worker and employer.

According to the ILO Report, there are at the present time three particular trends in collective bargaining:—

1. Free collective bargaining as a means of fixing wages and other conditions of

employment. The practice and law of Canada, the United States, the United Kingdom, Switzerland, Italy, etc., reflect this principle;

2. Collective bargaining partially restricted by wages legislation. France,<sup>2</sup> the Netherlands, Norway and Austria are examples of countries following this trend;

3. Collective bargaining as part of a general system of state regulation of wages and other conditions of employment. This trend may be observed in Albania, Bulgaria, Poland, Yugoslavia, Hungary and Czechoslovakia. In the USSR, too, collective bargaining serves as a means of giving effect to State regulations.

<sup>1</sup> In Canada, 1,212,964 workers were employed under collective agreements in 1948. This represented approximately 35 per cent of the total number of Canadian wage and salary workers (3,441,000) in November, 1948. (L.G. 1949, p. 1521).

<sup>2</sup> In January, 1950, however, the French Government passed an Act providing for a return to free collective bargaining between labour and employers.

## World Trends in Collective Bargaining

There are at present three main world trends in collective bargaining, according to the ILO:—

1. Free collective bargaining;
2. Collective bargaining partially restricted by wages legislation;
3. Collective bargaining as part of a general system of state control.

This year, the International Labour Conference will seek to formulate a Recommendation on Collective Agreements.

The ILO proposes that the Recommendation contain the following main points:—

1. Governments should establish, where necessary, machinery to assist the parties in making agreements;
2. Agreements should apply to all workers in the service of the contracting employer;
3. National regulations should make it possible for an agreement to be extended to cover all employers and workers in a given area or industry;
4. An agreement should provide procedure for settlement of any dispute arising out of its interpretation or application. If this breaks down, the dispute should be referred to compulsory procedure.

In discussing the first trend, the Report points out that even the countries which have a long tradition of free collective bargaining recognized the necessity of maintaining some reasonable stabilization or relationship of wages and prices to guard against inflation in the war and immediate post-war periods. This position has been taken by Canada, the United States and the United Kingdom.

[In Canada, the purpose of the Industrial Relations and Disputes Investigation Act, 1948 (L.G., 1948, p. 1255) is "to create conditions favourable to the free exercise of collective bargaining between employers and employees."<sup>3</sup> Government intervention is limited, in the main, to those situations where the parties have reached an impasse. This Act, however, is restricted in application to industries and undertakings under federal jurisdiction. Nine Canadian provinces have collective bargaining legislation applying the free collective bargaining principle to industries and undertakings within provincial jurisdiction. During the war period, it was the federal Government's policy to stabilize or freeze wages. No change could be made in a collective agreement with respect to wage provisions without authorization from the National War Labour Board.]

In the United Kingdom, it is the Government's policy to rely, even in nationalized industries, on free collective bargaining to achieve a reasonable and voluntary stabilization of wages and prices, subject to wage increases justified in special cases or by increased production. The 1948 amendment to the Wages Councils Act strengthened voluntary negotiating. The amendment extended the establishment of wages councils and central co-ordinating committees for the purpose of regulating minimum wages in those industries in which collective bargaining has not so far developed as to be able to guarantee the full protection of the workers. At the same time, the amendment facilitated further the establishing of joint collective bargaining machinery and the abolition of wages councils in those industries where the parties can be entrusted with full control over the collective regulation of wages.

The second major trend in collective bargaining may be seen in the Collective Agreements Act, 1946 in France (L.G., 1950, p. 37) and the Employment Relations Decree of 1945 in the Netherlands. Such partially-restrictive legislation, while encouraging collective bargaining in principle, empowers the Governments to fix wages or to lay down a general wages policy with

which collective agreements must conform. These States "while entertaining hopes of returning in the future to their pre-war traditions of free collective bargaining, have taken the view that voluntary negotiation alone cannot be relied upon entirely at the present time to achieve the necessary stabilization". In Norway and Austria, stabilization is being secured by legislation and collective agreements jointly. Employers' and workers' organizations are asked to co-operate in preparing the necessary legislation and to supplement it by collective bargaining.

Among the countries where the third major trend is reflected is Poland, where, under a planned economy and a system of nationalized industries, collective agreements are concluded between the central trade union federations and the public administrations, and when approved are made binding throughout the industries to which they refer. Collective agreements thus fulfill the same role as State regulations issued by Decree. In Czechoslovakia, wages and other conditions of employment are fixed by the Government and agreements have been almost completely abandoned as being unnecessary in view of the regulations issued by Decree.

### **Examination of the Law and Practice Concerning Collective Agreements**

An examination of the law and practice of the different countries shows that, although most countries now have collective agreement legislation of one sort or another, the provisions vary considerably. The degree of regulation ranges from the United Kingdom system where the parties to a collective agreement are left entirely free to determine as they please the contents, scope, and duration of the agreements to the Czechoslovak or USSR systems where collective agreements serve as a channel, in respect to conditions of work, for enforcement of a general economic plan. Any international regulation on the subject should, according to the Report, provide a maximum of flexibility and leave wide scope for the initiative of the parties. The first question, therefore, which the ILO Report asked the member countries was what form the international regulations on collective agreements should take, a Recommendation or a Convention. The Proposed Conclusion of the Report is:—

International regulations concerning collective agreements to be adopted in the form of a Recommendation.

The Report deals with five main aspects of collective agreements: (1) collective

## CANADA LABOUR RELATIONS BOARD

Photo taken following swearing-in ceremony August 26, 1948: From left to right, W. L. Best, A. R. Mosher, A. Deschamps, A. J. Hills, members; A. H. Brown, vice-chairman; Bernard Willson, secretary; Hon. Mr. Justice G. B. O'Connor, chairman; A. M. Hill, Assistant Clerk of the Privy Council, who swore in the members of the Board; M. M. Maclean, chief executive officer; E. R. Complin, Harry Taylor, J. A. D'Aoust, Gérard Picard, members.

bargaining machinery; (2) the regulation by law of collective agreements; (3) the extension of collective agreements; (4) the methods of enforcing the agreements and the responsibilities of the parties; (5) the various means by which the application of collective agreements may be supervised.

### Collective Bargaining Machinery

The Report studies first the methods of determining the organizations which are competent to be parties to collective agreements. They may be determined either by voluntary agreement between the parties or by law.

The United Kingdom, for example, leaves employers' and workers' organizations entirely free to recognize each other voluntarily as the appropriate bargaining agency. This is due to the fact that employers and workers have been able to organize themselves into strongly unified associations whose representative character is never questioned. The Scandinavian states also leave the determining of the competent party to voluntary agreement.

In Canada, the United States, Argentina, Australia, Mexico, New Zealand, and the Union of South Africa, the competent bargaining group is determined by law. In such of these countries where the trade union movement is divided, jurisdictional disputes often arise between rival unions, each claiming the right to represent the workers concerned; the legislature, in most cases, has found it necessary to intervene in order to determine which of the unions is sufficiently representative of the workers to conduct collective bargaining. Such intervention usually takes one of the four following forms: (1) *ad hoc* intervention to bring about a decision in each particular case (as in the USA and Canada); (2) only one organization may be recognized as being representative for the purposes of concluding collective agreements for a particular industry or region (as in Argentina, Australia, Mexico, New Zealand, the Union of South Africa); (3) only one single organization may be recognized as representing all workers for all purposes (as in Czechoslovakia, Poland, Roumania and Yugoslavia); or may even have been established with that object as part of the economic system (as in USSR); or (4) the law may lay down certain criteria or conditions and those organizations which fulfil these conditions are recognized as being representative (as in Belgium and France).

In the USA, the National Labour Relations Board uses the *ad hoc* method of determining the representative character of a trade union. The Board first decides whether the particular unit to be certified

for collective bargaining purposes shall be the employer unit, the craft unit, the plant unit, or a subdivision of one of these units. There are procedures for hearings through regional offices, elections by secret ballot and subsequent certification of the union obtaining a majority of the votes. However, no union may be certified if it has failed to submit certain annual returns regarding finances, etc., and affidavits that officers of the union are not members or affiliates of the Communist party or any subversive organization.

In Canada, under the Industrial Relations and Disputes Investigation Act, the Canada Labour Relations Board may certify trade unions as exclusive bargaining agents for employees in units appropriate for collective bargaining. The Board must be satisfied that a majority of the employees are members in good standing of the union. The Board may grant separate certification where the majority of a distinguishable craft or technical group are members of a union pertaining to such craft or group. If the Board finds it necessary to order a vote in order to dispose of an application, it may certify the union obtaining the votes of the majority of employees in the bargaining unit. No trade union which is influenced or dominated by an employer may be certified.

Under the laws in the United States and Canada, there is actually nothing to prevent an employer from voluntarily recognizing a union and bargaining with it collectively without invoking the certification procedures under the Acts. In the USA, however, only a certified union could negotiate a collective agreement which contained a union shop clause, and only a certified union can become entitled to the protection of the Act against unfair labour practices.

Recognition of one organization for a given industry or region is the method used in Australia and New Zealand for determining the competent bargaining agent. The organization is registered and obtains the exclusive right of representation. The competent authority is bound to refuse registration to an association if there already exists an organization to which the members of the new association might conveniently belong. Very similar regulations are in effect in the Union of South Africa where the employers, employers' associations and trade unions constitute industrial councils. These councils are agencies for negotiation and conciliation and are recognized only if they are sufficiently representative.

In Czechoslovakia and Poland, since the war, a single trade union is recognized exclusively for all purposes.

In Belgium, France and Luxembourg, the law has laid down certain criteria for determining the representative character of a trade union. In France, the criteria are: the numbers of members regularly paying contributions, the independence of the organization in relation to the employers, the age and experience of the organization, the patriotic attitude of the organization during the Second World War, etc.

The joint collective bargaining machinery which is actually in operation in the various countries is dealt with next. Again, the Report distinguishes between the machinery created by mutual agreement and the machinery recognized by legislation or created by law. In the United Kingdom, collective bargaining machinery, such as joint committees, has been gradually set up in several industries by mutual agreement of the employer and worker organizations and now forms an integrated network of local, regional and national agencies. These are competent to undertake collective bargaining and to settle all disputes which may arise as to the conclusion, renewal, and revision of collective agreements or as to their interpretation or application.

In certain countries, collective bargaining machinery such as joint boards or committees, national and regional, composed of representatives of most employer and worker organizations, has been established by law. The joint committees in Belgium and France and the industrial councils in the Union of South Africa fall into this category. Most collective agreements in these countries are concluded under the auspices of such bodies.

It is pointed out that in some countries minimum wage-fixing machinery is instituted to aid indirectly the conclusion of collective agreements. It fortifies the normal machinery created by agreement between the parties. The Wages Councils in the United Kingdom, for example, were first set up in those industries where wages were comparatively low and workers poorly organized as a preliminary to the establishment of voluntary joint bargaining machinery. The Industrial Standards Acts in the Canadian provinces of Nova Scotia, New Brunswick, Ontario, and Saskatchewan and similar legislation in Alberta and Manitoba provide for the fixing of minimum wages in industries by conferences of employees' and employers' representatives called by a government authority upon petition.

Under the heading of collective bargaining machinery, mention is made, too, of the Labour Relations Boards of the United States and Canada whose functions of

certifying bargaining agents have already been described. Under some other systems, the conciliation and arbitration authorities perform a similar task. The machinery noted above has made a great contribution to the progress of the movement towards collective bargaining without encroaching on the independence of the contracting parties.

Thus, the Report, recognizing the diversity of the machinery in effect, proposed the following Conclusion for the international regulations:—

1. (a) Appropriate machinery corresponding to the particular conditions existing in each country to be established, if necessary, which would be available to assist the parties in the conclusion, revision and renewal of collective agreements.

(b) The organization, methods of operation and functions of such machinery to be determined by national regulations.

### **Regulation of Collective Agreements**

Collective agreements are regulated by law in one aspect or another in nearly all countries except the United Kingdom. In the United Kingdom, the law leaves the associations entirely free to determine the contents, form, and duration of the agreements and the rights and obligations which they involve.

In other countries, however, the legal regulation of collective agreements may relate to (1) the definition; (2) the conditions of validity; (3) the contents; and (4) the compulsory effects.

The Report finds that the law in an increasing number of countries defines those agreements which it will consider to be collective agreements, stipulating that the workers who are a party to the agreement must be organized.

The Proposed Conclusion of the Report with respect to a definition of collective agreement is:—

2. For the purposes of applying the international regulations "collective agreements" to be understood to mean all agreements regarding terms and conditions of employment concluded between an employer, a group of employers or an employers' organization on the one hand, and a workers' organization on the other.

All the laws which regulate collective agreements require that certain conditions be fulfilled before the agreements are valid. For example, it may be that the agreement must be drawn up in writing, the duration must be specified, and the rights and obligations of the parties stated clearly. Collective agreements must be lodged and generally registered in Costa Rica, Cuba,

Ecuador, Mexico, Norway, Chile, Venezuela, and Australia. Although registration is mainly intended as a publicity measure, the laws in certain countries provide that registration may be refused and the agreements will become non-applicable if statutory conditions are not fulfilled. Under the 1946 Act in France, agreements require the approval of the Minister of Labour.

Collective agreements which are declared binding on employers and workers other than members of the contracting organizations must be published in an official publication in Quebec, France, Brazil, the United Kingdom (cotton industry). This applies as well to arbitration awards in Australia.

In respect to contents there are two kinds of clauses which are usually included in collective agreements: clauses governing conditions of employment, such as the employers' and workers' obligations; and clauses dealing with the contractual relations between the parties to the agreement. Instances of the first type are: wages, allowances, rights, overtime, holidays with pay, the workers' undertaking to perform work at specified hours, etc. The second type, the "contractual" clauses, include such matters as the enforcement of agreements, the organization of collective relations and the establishment of joint bodies.

A recent National Labour Relations Board decision in the United States broadened the potential terms of collective agreements when it ruled that employers must bargain with their employees on pension and retirement plans if the employees so request; the payment of benefits, according to the Board, falls within the category of "wages" in the Act.

In some countries including the United Kingdom, Sweden, the United States and Canada, the parties are left to settle the contents of the agreement by purely voluntary negotiations. Usually there is a general reservation that the agreements shall not be contrary to existing legislation, and in Canada, with the express intention of avoiding future disputes, all collective agreements must contain clauses providing for a settlement of a dispute concerning the meaning or violation of the agreement without a work stoppage.

In other countries, such as France, Australia, New Zealand, Costa Rica, Colombia, Brazil, Ecuador, etc., the law prescribes certain terms which must be inserted in agreements and generally leaves the parties to add such other clauses as they may agree on. In France, the 1946 Act stipulated that every national collective agreement must contain terms regarding

freedom of association, freedom of opinion for employees, rights of remuneration, etc. In Australia and New Zealand, the contents of arbitration awards which replace collective agreements are laid down as part of a general system of regulation. For example, the Australian Arbitration Court may deal with hours, work, wages, privileges, rights and duties of employees, etc. In Poland and Czechoslovakia, the contents of agreements must be in conformity with and in furtherance of the over-all economic plan for production.

In discussing their compulsory effects the Report points out that the object of collective agreements is to establish working conditions for the benefit of the workers who are members of the contracting trade union and employed by the contracting employer. Where a collective agreement is not legally recognized, as in the United Kingdom, there may be nothing but the economic strength of the unions or the good will of the employers to prevent workers and employers from entering individual contracts of employment containing terms which conflict with the collective agreement. In countries where agreements are regulated by law, it is generally provided that if such individual contracts are concluded between employers and workers, the conflicting provisions shall be null and void and automatically replaced by the corresponding provisions in the agreement. The Report states that this is a standard clause intended to establish the precedence of collective agreements over individual contracts. Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Ecuador, Finland, France, Greece, Iran, Mexico, Netherlands, Nicaragua, Norway, Sweden, Switzerland and Venezuela are some of the countries with this regulation in force. In Australia, regulations reinforce this provision by declaring illegal any voluntary waiver of the terms of an arbitration award or a collective agreement.

In regard to the contents and compulsory effects of agreements, the following Provisions and Conclusions are set forth:—

3. (a) Employers and workers bound by a collective agreement or who are members of the contracting organizations not to be able to agree to include in individual contracts of employment stipulations contrary to those contained in the collective agreement.

(b) Stipulations in individual contracts which are contrary to the collective agreement to be null and void and automatically replaced by the corresponding stipulations of the collective agreement.

(c) However, stipulations in individual contracts which are more favourable to the workers than those prescribed by a collective agreement not to be deemed contrary to the collective agreement.

### **Determination of the Scope of Collective Agreements**

The Report deals first with the scope of agreements as determined by the parties voluntarily. In the USA and Canada, agreements are usually concluded by an individual employer and in such cases cover the establishments under his control. If several employers are parties to an agreement, their respective undertakings are covered. If an agreement is concluded by an employers' association, as in the United Kingdom and the Scandinavian countries, all the undertakings of the employers in the association are included within the scope of the agreement.

In regard to the coverage of workers, a collective agreement is entered into by a trade union and will generally cover all the categories of wage-earners which it represents. In the case of an industrial union, all the workers who are organized and working in the industry will be covered, but in a craft union, or a union limited to certain occupations, the agreement will only cover the particular occupational category represented by the trade union. In the latter case, there may be as many agreements in one undertaking as there are trade unions represented.

In the United Kingdom, the parties specify whether the agreement shall cover all the undertakings in a given area, and in Sweden, whether it shall cover all the undertakings through the national territory. In the United Kingdom, however, the practice of nation-wide bargaining has gradually increased and workers in many industries are now under national agreements and national wage scales.

In certain cases, the law determines the scope of collective agreements. For instance, the United States National Labour Relations Board, and the Canada Labour Relations Board, in certifying the organization which is the exclusive bargaining agent, determine the occupational scope of the agreement.

### **Extension of Collective Agreements**

One of the most important problems raised by the regulation of collective agreements is the extension of the terms of the agreement, *first* to workers who, though not members of the organized party to the agreement, are in the employ of an employer or employers bound thereby and *secondly*, to all employers and workers in

a given industry who, though not members of the contracting organizations, nevertheless operate within the industrial and territorial scope of the agreement. In each case, third parties not participating in the agreement are made subject to its terms.

In dealing with the extension of the scope of agreements first to all the work-people, whether organized or not, in the undertaking or undertakings covered by the agreement, the Report states that this is now an accepted principle of most national legislation because it has been impossible to distinguish, as regards remuneration or conditions of work, between organized and unorganized workers employed in the same establishments. This principle is prescribed by law in Brazil, Luxembourg, Sweden, etc., and is the view taken by the courts in the United Kingdom. In United States and Canada, such an extension of an agreement may be accomplished as a result of the representative bargaining union being certified as competent to conclude a collective agreement on behalf of all the workers employed in the unit whether they are organized or not. The Report proposes the following clause on this method of extending application:—

4. The stipulations of a collective agreement concluded between one or several employers on the one hand, and a workers' organization representing the majority of the workers concerned on the other hand, to apply to all the workers in the service of the employer or employers bound by the collective agreement.

Secondly, collective agreements can also be extended to make the terms of the agreement generally binding on all employees and employers in a given industry or trade covered by the agreement.

One of the reasons for such an extension of an agreement is that any employer who has not signed a collective agreement, or who does not belong to the contracting employers' association, may employ his workers under less advantageous conditions than those laid down by the agreement and so may jeopardize collective bargaining by competition.

Such extension can only be effected by law, as it is a matter entirely beyond the contractual authority of the parties. This legal intervention may be either by legislation which provides for extension to non-parties or which provides *ab initio* that any agreement which is concluded shall be generally binding. The first method is the one most generally adopted, for example, in Australia, Belgium, Brazil, the Province of Quebec, Colombia, Costa Rica, Ecuador,

Greece, Hungary, Ireland, Luxembourg, Mexico, Netherlands, New Zealand, Poland, Portugal, Switzerland, Union of South Africa, the United Kingdom, etc.

In most countries, there are a number of conditions attached to the extension. For instance, an agreement cannot be extended unless it has acquired outstanding importance in the industry by reason of it being concluded by a majority of employers and workers engaged in that industry. In six Canadian provinces, industrial standards legislation provides that an agreement may be declared binding throughout the industries and areas concerned if the authority considers that it has been agreed to by a proper and sufficient representation of employers and workers concerned. In Latin-American countries, it is generally provided that a collective agreement must be concluded by two-thirds of the employers and two-thirds of the employees in a particular branch of industry of a specified area before it can be made generally binding on that industry and area.

The decision decreeing the extension of a collective agreement is generally taken only after investigation. In Quebec, for example, and in Mexico, New Zealand, and the Union of South Africa, the agreement is published and all concerned, including those to whom it might be applicable by an extension, are asked to submit observations and objections. If the objections are accepted, the competent authority might refuse to extend the application of the agreement.

Under the French Collective Agreements Act, 1946, a second method of effecting an extension is used. Here, agreements concluded between workers' and employers' organizations apply *ab initio* to a whole industry or trade throughout France as soon as they have been approved.

The Report points out that its proposal does not aim at extending the territorial or industrial scope of the agreement as freely determined by the parties, but simply seeks to include in that scope a minority of persons—employers or workers who are not members of the contracting bodies. The Proposed Conclusion on this point is:—

5. National regulations, taking account of the particular conditions existing in each country, to prescribe appropriate measures to enable the benefit of collective agreements, concluded by employers' and workers' organizations representing respectively a majority of the employers and workers to be extended to all the employers and workers engaged within the industrial and territorial scope of such agreements.

## Enforcement of Collective Agreements

The ILO Report examined the different methods of enforcing collective agreements, that is, of settling disputes as to their interpretation and application. The questionnaire, on this point, asked whether the member countries considered that disputes should be submitted to a procedure for settlement agreed to by the parties and, if this breaks down, whether they should be referred to compulsory arbitration or an appropriate judicial procedure.

Those countries where agreements are enforced without recourse to court procedure are discussed first. Organizations of workers and employers in many countries admit that disputes regarding interpretation of agreements should be settled by negotiation and provision is made within the collective agreements themselves for a settlement procedure. In the United Kingdom, the observance of agreements rests mainly on the good faith of the parties and on the economic power of the organizations concerned to secure their observance. It is lawful in the United Kingdom to resort to direct action to enforce a collective agreement subject to certain temporary strike restrictions. In Canada, the United States and the United Kingdom, it is usual for the parties to include arbitration clauses in the agreements providing for a permanent or an *ad hoc* procedure. In Canada, under federal legislation, each collective agreement is required to contain a provision for settlement, by arbitration or otherwise, of all disputes concerning the meaning or violation of the provisions of such agreement, without a work stoppage. When such a provision is omitted, the Canada Labour Relations Board must prescribe it on the request of either party. In Mexico and certain other Latin-American countries, strikes may lawfully be called for the purpose of obtaining compliance with a collective agreement.

Some legislation, as in France and the Netherlands, provides that disputes regarding the interpretation of collective agreements should be taken to the regular courts of the country concerned as an action for damages. The Report comments that many countries have considered it inappropriate to give jurisdiction to the ordinary courts in such matters, since the procedure is comparatively lengthy and expensive, and in a labour dispute, delay should be avoided at all costs. Further, a regular judiciary may not be fully acquainted with the particular problems relating to collective agreements.

A third group of countries, Norway, Sweden, Denmark and Ireland, have set up special labour courts to ensure a prompt settlement of disputes. The Report states

that these special judicial systems are composed of judges who are expert on labour matters, recruited from the occupational circles concerned or appointed on the basis of proposals by the occupational organizations.

The Report, in summary, states that workers' organizations are apprehensive of the intervention of the ordinary courts because of their slow procedure and their lack of experience. On the basis of answers to the question, the Proposed Conclusion of the Office reads as follows:—

6. Disputes arising out of the interpretation or application of a collective agreement to be submitted to a procedure for settlement agreed to by the parties and, if this breaks down, to be referred to an appropriate compulsory procedure.

The responsibility of the parties to collective agreements is one of the most important problems to be considered in relation to the question of enforcement. In the questionnaire, the ILO asked whether the responsibility of the parties should be determined by agreement or, failing that, should be determined by legislation. A distinction is made between the responsibilities of the individual members of an organization and the responsibility of the contracting organization itself.

In most cases, the individual member of an organization is not made directly responsible for observing the agreement as a matter of civil law. However, he does become liable for a breach of any of the provisions which become, expressly or by implication, terms of his own contract of service, just as he would be liable for a breach of any other contract he concludes. On the other hand, in Sweden, by statutory provision, and in France, where collective agreements are made generally binding, an individual is made answerable in varying degrees for his own acts of contravention as distinct from those of other members of the organization. However, this means an observance of the law in force rather than a responsibility for observing the contract.

The responsibility of the contracting organization gives rise to more complicated problems. Legally speaking, an occupational organization is neither a "contractor" nor a "sub-contractor". Although the contracting organizations determine the rights and obligations of the terms of employment of their members, they cannot always undertake to put them into application. Their responsibility can only be involved if it is possible to prove that they have deliberately provoked the violation of an agreement. This means that an organization cannot be held responsible for any dispute

which occurs without its knowledge or for reasons other than an application of the agreement. Further, an organization cannot be answerable if its officers have exceeded their powers as defined in the group's constitution. Finally, in some countries, proceedings can only be taken against an organization if it is incorporated, that is, if it has a legal capacity to assume obligation.

Thus, in general, because of the practical difficulties involved, many legislatures have not ruled explicitly on this question of responsibility. The United Kingdom has formally freed occupational organizations of any liability to be sued for a breach of a collective agreement and any action against an individual who contemplates or furthers a trade dispute is limited. Further, since collective agreements are not as such enforceable by law, the responsibility of the parties to collective agreements cannot be referred to in a legal sense. In the United Kingdom, collective agreements themselves frequently contain provisions relating to the responsibility of the parties. Many countries have restricted the unions' responsibility because an application of common law principles regarding contractual liability would lead to the material ruin of the unions if they had to make good in full all loss caused by an illegal strike. Other countries impose fines or penalties merely as a matter of principle. In Quebec, France, the Netherlands and Sweden, damages are required to be paid but the amount of such damages is limited. France protects certain assets from distraint. In the United States, unions are liable to damages but there is no limit on the amount or on the responsibility of the organization. The United States law provides that any money judgment against a labour organization shall be enforceable against it as an entity and against its assets but not against an individual member or his assets.

Thus, in view of the wide diversity of opinion in regard to responsibility of the parties, the Report recommends the following clauses to be inserted in the international regulations:—

7. (a) Employers' and workers' organizations, parties to collective agreements, to undertake to determine by agreement their respective obligations resulting from the application of such collective agreements.

(b) The legal regulation of such responsibility to be contemplated only in the absence of its regulation by agreement.

(c) National regulations to provide that such movable or immovable assets as are indispensable to the normal functioning of employers' and workers' organizations shall not be liable to distraint.

## Supervision of the Application of Collective Agreements

The member countries were asked in the questionnaire whether they considered that labour inspectors should be used to supervise or police the application of collective agreements.

At present, in most countries, such supervision is undertaken either by the employers' and workers' organizations themselves or by representatives of the personnel acting in the establishments. Such supervision is frequently provided for in the collective agreement itself. In the United Kingdom and Sweden, the joint committees in the various industries undertake this task.

Legislation in a number of countries provides for authorized persons or bodies such as labour inspectorates to supervise the application of collective agreements. These inspectorates have been established especially in cases where agreements have been declared generally binding because the administrative authority which extended the application of the agreement to third parties must be the authority to intervene in a supervisory capacity.

In France, labour inspectors act as supervisors assisted by staff delegates. In several other countries, the staff representatives have the right to supervise and to inform

the labour inspectorates of any breaches of the agreements. In Australia and the Union of South Africa, the conciliation and arbitration boards and tribunals and industrial councils control the application of agreements and arbitral awards through their own inspectorates or with the co-operation of labour inspectorates.

In summary, the Report comments that the system of union supervision such as exists in many countries can only relate successfully to members of the participating organizations to the agreement and not to the third parties to whom the agreement may have been extended. In the latter case, legislators have taken the view that application of collective agreements should be ensured in the same way as that of social legislation. The Report proposes that the following clauses should deal with the question of supervision:—

8. (a) Employers' and workers' organizations, parties to collective agreements, to ensure supervision of the application of such collective agreements.

(b) In the absence of adequate supervision by the organizations concerned, labour inspectors or an inspectorate established *ad hoc* to be empowered to supervise the application of collective agreements.

## CONCILIATION AND ARBITRATION

Practically all countries have established some form of conciliation and arbitration for the settlement of industrial disputes. Where agreement cannot be reached by negotiation or with the help of such voluntary joint machinery as may be set up by the parties themselves, some other means of settling disputes must be found if industrial strife is to be avoided. The Report points out that national systems may be roughly divided into two fundamental types:—

(1) Voluntary systems, which merely make official machinery available to the parties when collective bargaining has broken down; and

(2) Compulsory systems, under which a settlement may be imposed on the parties and which takes the place of an agreement.

The system adopted in each country is to some degree dependent on the nature of the national economy. In countries with a free economy, where the normal method of regulating wages and other working conditions is free collective bargaining between employer and workers, backed in case of need by such means of direct economic pressure as the strike and lockout, voluntary systems of conciliation and arbi-

tration are the general rule. In countries where the economy is wholly or partly planned, or during periods of emergency, the State tends to determine wages and conditions of employment in relation to the whole economy. Under compulsory systems, strikes and lockouts are prohibited, or, if not specifically forbidden, are considered as being incompatible with the achievement of an economic plan.

The legislation of certain countries, e.g. the United Kingdom, imposes no restrictions on the right of the parties to engage in strikes or lockouts during the procedure.

In Mexico and other Latin-American countries, the right to strike or lockout is guaranteed by law, subject to certain statutory provisions prescribing the conditions under which strikes or lockouts may be considered lawful. If a strike or lockout is declared legal, the parties are free to resort to it.

Under the prevailing systems in a large number of countries, the right to resort to strike or lockout is temporarily suspended, either for a specified period or during the entire conciliation and arbitration procedure.

In some instances (Denmark, Ecuador, Mexico, Sweden), the only restriction

imposed is that the party which is contemplating a work stoppage must notify the conciliation authorities and the other party a specified period in advance. In the United States, the parties are required to give 60 days' notice of intention to modify or terminate an agreement, and during such period the contract provisions must be maintained in force and no strike or lockout may legally take place. An employee striking during the 60-day period forfeits his status as an employee under the Act.

The more general rule, however, is a temporary restriction during conciliation and arbitration procedure. In Canada, the Union of South Africa, India, Venezuela, Panama, Haiti, Guatemala, China, Syria and Iran, strikes and lockouts are illegal until the prescribed procedure has been complied with. In Canada, this includes the collective bargaining and conciliation procedures prescribed in the Industrial Relations and Disputes Investigation Act, under which the parties must enter upon negotiations for the conclusion of a collective agreement, and, if such negotiations fail, a strike or lockout is forbidden until seven days have elapsed after a Conciliation Board has reported on the dispute to the Minister of Labour. In India, strikes and lockouts are forbidden during the period of conciliation and arbitration proceedings and for fixed periods thereafter, or during the time in which a settlement or award is in operation.

In most of these countries, the law seeks to compensate the parties to some extent for their loss of freedom to resort to direct action by laying down rules regarding the reinstatement or protection of workers or

by forbidding any change in the conditions giving rise to the dispute until the parties resume freedom of action following the failure of conciliation. Such provision is made in the law of Canada, China, Ecuador, India, Mexico, Union of South Africa and the United States. In some countries, the parties may resort to strike or lockout if the procedure is not strictly followed or an award not observed. In Mexico, if a strike has been declared lawful, it only suspends the labour contract so that workers must, on resuming work, be reinstated in their former employment.

In Canada, the employer must not, without the consent of the employees, decrease wage rates or alter other existing conditions of employment, pending conclusion of a collective agreement or until conciliation procedure has been exhausted.

To prevent or lessen the effects of strikes and lockouts in the public services or in public utility undertakings which would work hardship on the community and affect public health and safety, special provisions have been enacted in a number of countries. Such services include those which furnish power, light, heat, water, sanitation, public transport and the like. Some countries such as Mexico, Ecuador, and India, require a specified period of notice to be given before a strike or lockout is called; others, such as the United States, prohibit work stoppages during conciliation and arbitration proceedings or for a specified period in consequence of the granting of an injunction; still others, such as certain Latin-American countries (Colombia, Salvador, Costa Rica, Nicaragua, Panama and Chile), prohibit entirely all strikes and lockouts in the industries concerned.

## Conciliation and Arbitration

Delegates to the International Labour Conference will consider the following basic principles for inclusion in a Recommendation on Conciliation and Arbitration:—

1. Official conciliation machinery should be established on a permanent basis so as to be immediately available to employers and workers in case of disputes, and should be supplemented by a voluntary system of arbitration to which the parties might have recourse when conciliation fails.
2. If a dispute has been submitted to conciliation, with the consent of the parties, they should not strike or lockout until conciliation procedures have been exhausted.
3. When the parties mutually agree to resort to arbitration for final settlement, they should be required to accept the arbitration award.

## Compulsory Conciliation and Arbitration

Compulsory systems of conciliation and arbitration are surveyed briefly. In this section of the Report, compulsory systems which have been in effect in Australia and New Zealand for many years are described, and some mention is made of the methods of settling disputes in countries where wages and other conditions are determined primarily through economic and social planning, e.g., the USSR, Poland and Czechoslovakia.

Under wartime legislation, compulsory conciliation and arbitration under one form or another were imposed in Canada, the United Kingdom and the United States. Compulsory arbitration has been temporarily retained in the United Kingdom under the Conditions of Employment and National Arbitration Order, 1940.

The Australian and New Zealand systems of compulsory conciliation and arbitration are based on the principle that, in compensation for the voluntary surrender of the right to strike or lockout by their associations, workers shall be guaranteed by

law a certain standard of living. Under such systems, the establishment of a minimum living wage has long been one of the principal functions of the system of conciliation and arbitration. The competent authority fixes a minimum wage calculated to guarantee a proper standard of living. The minimum varies in accordance with fluctuations in the cost of living. Above the level of the guaranteed minimum, wage rates are established by collective agreement. If the parties are unable to conclude a collective agreement, the competent authority determines wages and other conditions of employment by an award which takes into account general economic conditions as well as the interests of the parties. The award binds the parties and may be declared binding on the whole industry. The authority may also make the provisions of a collective agreement generally binding. Strikes and lockouts are forbidden, disputes having to be submitted to the courts of arbitration, and awards and collective agreements are enforced under penalties.

It might be added that in several countries, compulsory procedure is provided for the settlement of disputes involving public utility services, or agriculture (Chile, Argentina) and, as in Canada, in disputes of a legal character, i.e. those arising out of the interpretation or application of collective agreements. In these cases, strikes and lockouts are forbidden.

An examination of the widely varying law and practice in the different countries led to the conclusion that the voluntary system of conciliation and arbitration was most likely to afford at least a minimum of agreement by the Conference, since this method is very generally accepted as a first stage in the settlement of disputes even in those countries which have recourse to compulsory arbitration as a final stage.

In considering what form could be given at this time to international regulations on the subject, the Report comments that the method of a Convention does not appear to be the appropriate one, but that, on the other hand, it would be possible to put together a number of general principles in the form of a Recommendation.

Accordingly, the questionnaire sent out by the ILO dealt only with Voluntary Conciliation and Arbitration. The first question asked whether the Conference should adopt international regulations concerning voluntary conciliation and arbitration in the form of a Recommendation. Of the 24 replies received, all but one was in favour of regulations in the form of a Recommendation.

In Canada, federal labour relations legislation dates back to the year 1900 when the Conciliation Act was adopted by Parliament. Mr. M. M. Maclean (above) is the present Director of the Industrial Relations Branch of the Department of Labour.

## Voluntary Conciliation and Arbitration

### Conciliation Machinery

Voluntary conciliation, it is pointed out, is in effect a continuation of the collective bargaining process, whereby the parties resume negotiations under the guidance of an independent agency and endeavour to reach an agreement for the regulation of working conditions without any infringement of their right to accept or reject the recommendations of the conciliation authorities.

In most countries, the Minister of Labour or some other competent authority with regard to labour relations may intervene directly in labour disputes, either by offering his own services or by delegating authority to qualified persons.

In the United Kingdom, the Minister of Labour may intervene on his own motion either under the Conciliation Act, 1896, or under the Industrial Courts Act, 1919. He does not normally do so, however, unless the ordinary negotiating machinery of the parties has failed. If the Minister considers that the dispute concerns matters of major importance affecting wider interests than those of the immediate parties, he may constitute a Court of Inquiry under the Industrial Courts Act or a less formal Committee of Investigation under the Conciliation Act.

In some countries *ad hoc* bodies are set up when a dispute arises or threatens to arise. Such a body is temporary in character and constituted for a particular dispute. These bodies are usually composed of representatives of the parties with an independent chairman, often a Government official who has no voting power. *Ad hoc* bodies of this kind are constituted in a number of Latin-American countries, and in India.

[The Conciliation Boards appointed under Canadian legislation, both federal and provincial, are *ad hoc* boards. These three-man boards consist of a nominee of each party and a chairman appointed on the joint nomination of the other two members.]

More frequently, however, national legislation provides for the establishment of permanent agencies which are immediately available to undertake their duties and which since their members are independent of the parties and familiar with industrial problems, are qualified to give an objective opinion on the questions at issue. Legislation establishing permanent agencies may provide for the appointment either of individual conciliators or mediators as in the United States, Canada, the Scandinavian countries and the Netherlands, or of joint agencies including equal numbers of

representatives of employers and workers and appointed as a rule, on the recommendation of their most representative organizations.

In the United States, the Director of the Federal Mediation and Conciliation Service or any authorized subordinate official, may intervene by proffering his services in any dispute which threatens to cause a substantial interruption of commerce and may convene the parties which, however, are free to accept or reject any suggested procedure. If unsuccessful, he must seek to persuade the parties to find other means of peaceful settlement.

An example of a joint agency is found in the bipartite permanent industrial councils set up under the 1937 Industrial Conciliation Act of the Union of South Africa. Equally representative of employers and workers, these councils merely assist the parties to negotiate an agreement and, if unsuccessful, must report to the competent authorities.

Alternatively, the permanent conciliation agencies may be tripartite as in Chile, Mexico, and other Latin-American countries, in which case conciliation boards are composed of employers' and workers' representatives under the chairmanship of a Government or public official.

### Conciliation Procedure

Since the longer a dispute continues, the harder it becomes to reconcile conflicting views, it is important to provide a rapid and informal procedure by which the parties may continue their negotiations. Many laws, such as those of Canada and Australia, provide that the formal legal rules of procedure or evidence are not binding on conciliation agencies. Some, by failing to make any provision on the subject, leave the conciliation agencies free to follow such procedure as is deemed desirable, as in the United Kingdom and the United States. Some systems, such as those of Australia, India and Mexico, prohibit the appearance of legal counsel in the presentation of disputes before the conciliation authorities.

Under several systems, the conciliator is empowered to intervene on his own initiative to convene the disputing parties for negotiation as in the Scandinavian countries, or by a proffer of his services, as in the United States. In several Latin-American countries, the initiative must be taken by one or both of the parties who must submit a statement of their demands to the conciliation authority, as well as to the other, within a specified time. In China and India, the procedure must be initiated at the request of the parties, or *ex officio* by the competent authority.

In Canada, under the federal Industrial Relations and Disputes Investigation Act, where a notice to commence collective bargaining has been given, either party may, upon submitting a statement of the difficulties encountered, request the Minister of Labour to instruct a Conciliation Officer to confer with the parties. The Minister may grant such request as he sees fit. He is also empowered to name a Conciliation Officer on his own initiative.

To prevent delays, laws frequently impose time-limits for the various stages of the procedure. In the United States, if the conciliation attempt of the Director of the Federal Mediation and Conciliation Service is not successful "within a reasonable time", he must urge the parties to find other means of settlement. Under the Labour Code of Chile, the conciliation procedure must be completed within 15 days. In Canada, a Conciliation Officer must report to the Minister normally within 14 days. A Conciliation Board must report its findings to the Minister within the same period. However, in each case a longer time may be allowed by the Minister or by the joint consent of the parties.

Conciliation agencies may be empowered to summon witnesses, to make investigations on the spot and call for the production of relevant documents, and the law sometimes prescribes definite periods within which such action must be taken. Under many legal systems, e.g. that of Canada, the investigation constitutes the essential part of the conciliation procedure.

If the parties reach an agreement, either by means of independent negotiation during the procedure or as a result of the recommendations of the conciliation authority, the agreement, in so far as it relates to wages or other working conditions, is considered to have the status and effect of a collective agreement. This has been provided for by law in Mexico and India.

If conciliation fails, the parties resume their full freedom of action. Frequently, the law provides that the conciliation agency shall publish a report of the dispute together with its recommendations for settlement in order that the parties may, under the pressure of public opinion, be led to settle the dispute in spite of the failure of conciliation. In Canada, the Minister has authority to publish the report of a Conciliation Board in such manner as he sees fit. The Act thus places some reliance on public opinion to induce the parties to effect a settlement.

Mention is made in the Report of the reference of various matters connected with disputes to a court or board of inquiry,

in order that Governments may obtain an independent judgment of the facts involved, as in India, Mexico, the United Kingdom and the United States. It is pointed out that while such a procedure has no direct relationship to conciliation and arbitration, the public examination of the factors giving rise to the dispute may provide a basis for further negotiations leading to a settlement. In the United Kingdom, in major disputes the Minister of Labour may constitute a court of inquiry under the Industrial Courts Act, consisting of one or more persons appointed by the Minister. It may include employers and workers outside the industry concerned and an independent chairman. The consent of the parties is not required for the appointment of a court whose primary purpose is to inform Parliament and the public on the facts and underlying causes of the dispute. It may make recommendations for settlement but neither party is bound to accept such recommendations. In the United States, the President may appoint a fact-finding board consisting of such members as he shall determine, to look into the causes of a dispute and report to him. The report may not include recommendations for settlement.

Mention might be made too, of the power given to the federal Minister of Labour of Canada to appoint Industrial Inquiry Commissions of one or more persons, either on application or on his own initiative, for the purpose of making "any inquiries he thinks fit regarding industrial matters" or of investigating complaints of alleged violations of the Act. Such a commission reports its findings to the Minister who publishes them as he sees fit.

### Arbitration Machinery

Voluntary arbitration, used either as a substitute for or after the failure of conciliation, provides a method by which the parties may compose their differences through an award given by one or more independent persons or arbitrators. The effectiveness of voluntary arbitration procedure is increased if the parties, having consented to submit the dispute to arbitration, agree in advance to accept the award.

Agreement to arbitrate may include the appointment of the arbitrator. A number of countries have found it desirable to provide either *ad hoc* or permanent voluntary arbitration facilities.

In Venezuela, for example, on the failure of a conciliation board to achieve a settlement, the board may unanimously recommend reference of the dispute to voluntary arbitration. It may then set up an arbitra-

tion board consisting of an independent chairman and three representatives of each party, who are not connected with the industry concerned and who are selected from panels submitted by trade associations. The decisions of the board must be adopted by a majority vote, and are binding on the parties for a specified period.

In the Union of South Africa, an industrial council or conciliation board may, on the failure of conciliation, refer the dispute to a single arbitrator or to an arbitration board sitting under an umpire. The arbitrator or board and umpire are selected by representatives of the employers and employees and their award is legally binding on both parties.

Legal systems establishing permanent machinery for voluntary arbitration may make permanent arbitrators available to the parties as in the United States, Sweden, and the United Kingdom, or may provide for the appointment of permanent arbitration commissions or tribunals, including employers' and workers' representatives appointed on the recommendation of the most representative organizations, e.g. the Industrial Court in the United Kingdom and permanent agencies in Switzerland, Mexico and other Latin-American countries. As a part of the facilities offered by the United States Federal Mediation and Conciliation Service, a list is kept of arbitrators whose services are available, on application by the parties.

The permanent Industrial Court of the United Kingdom, set up under the Industrial Courts Act in order that there might be a Standing Arbitration Council to which disputes affecting whole industries or parts of industries might be referred, consists of persons appointed by the Minister of Labour, of whom some are independent, some represent employers and some represent workers. The general practice is for the Court to sit as a panel of three. Its decisions are not legally binding. In France, the Economic Council which is the advisory body of Parliament and the Government, and on which employers' and workers' organizations are represented, may be called upon to arbitrate in industrial disputes, provided that the parties so request and the Ministers concerned agree.

[In Canada, legislation provides for arbitration of disputes which arise over the interpretation or an alleged violation of a collective agreement. In this type of dispute, strikes and lockouts are forbidden during the life of the agreement since the Industrial Relations and Disputes Investigation Act requires every collective agreement to contain a provision for final settle-

ment of such differences, by arbitration or otherwise, without stoppage of work. When such provision is not included, the Labour Relations Board must, on the application of either party, insert it in the agreement. Most agreements provide for "grievance procedure" which usually involves a series of stages of conferences between, on the one hand, the aggrieved employee, union representatives and committees, augmented by international union officials, and, on the other, supervisors and successive levels of management. The agreement may provide that any dispute which has properly been carried through the various steps of the grievance procedure and which has not been amicably settled will, at the request of either party, be referred to a board of arbitration appointed by the disputants themselves.

As regards disputes concerning the negotiation, renewal or revision of an agreement, the Industrial Relations and Disputes Investigation Act does not provide for arbitration facilities. Conciliation facilities, however, are provided for, as has been noted above, and the recommendations of a Conciliation Board for the settlement of a dispute are binding on the parties if they so agree in writing.

Another federal statute, the Conciliation and Labour Act, 1906, provides for arbitration. Normally intervention under this Act is restricted to industries under federal jurisdiction but conciliation or arbitration facilities are provided in industries within provincial jurisdiction upon the joint request of the parties and upon the express request or consent of the provincial authorities concerned.

The Act provides that, upon the application of both parties, the Minister of Labour may appoint an arbitrator. The part of this Act most commonly used, however, is that empowering the Minister to appoint a Conciliation Officer to inquire into a dispute.]

### Arbitration Procedure

Arbitration agencies, particularly the *ad hoc* agencies, are usually allowed the greatest possible freedom regarding procedure.

### Nature and Effect of Arbitration Award

Awards of an arbitration board may be binding, with the same force as that of a freely concluded collective agreement, or they may merely take the form of a recommendation. Awards of the permanent Industrial Court of the United Kingdom

and of arbitration boards in Sweden have no legally binding force. In practice, however, awards of this character are usually accepted by the parties.

In most cases, however, an award is binding on both parties by virtue of the agreement to arbitrate or by virtue of express statutory provisions establishing the procedure.

## **Proposed Conclusions for a Recommendation**

### **I. Voluntary Conciliation**

It is the opinion of a majority of the Governments who replied to the questionnaire that voluntary conciliation authorities, having regard to the particular conditions existing in each country, should be established on a permanent basis and in sufficient number to enable them to offer their assistance to the parties in the prevention and settlement of collective industrial disputes. It is felt that conciliation facilities should be of a permanent character in order that they may be quickly put into operation when disputes arise.

Voluntary conciliation authorities of a multilateral character should, it is considered, include equal numbers of representatives of organizations of employers and workers. Participation of employers' and workers' associations in the conciliation procedure is necessary if the disputing parties are to have confidence in the procedure. Organizations of employers and workers concerned in a dispute should be associated in all stages of the procedure.

Practically all Governments accept the principle that the conciliation procedure should be free of charge and expeditious but consider that international regulations should be flexible enough to permit each Government freedom to regulate details of the procedure. The periods prescribed by national regulations for examination of the dispute should be fixed in advance and kept to a minimum.

To offset delays in bringing the machinery into motion and to take account of the possibility that for varying reasons no party will initiate the conciliation procedure, the international regulations should provide for the setting in motion of the procedure *ex officio* by the voluntary conciliation authority, as well as on the initiative of any of the parties to the dispute.

If a dispute has been submitted to a conciliation authority with the consent of all parties concerned, they should be required to abstain from strikes and lock-outs while conciliation is in process. It was pointed out that, where the parties mutually agree to substitute conciliation for direct action, they should, if acting in good faith, refrain from resorting to strike or lockout during conciliation proceedings.

A majority of the replies received support the principle that any agreement which the parties may reach during conciliation procedure, whether or not as a result of accepting the recommendations of the conciliation authorities, should be drawn up in writing and should be treated as freely concluded collective agreements.

### **II. Voluntary Arbitration**

As regards voluntary arbitration, Governments were asked: (1) if they considered that a system of voluntary arbitration should be established to which the parties might have recourse either at the outset or after breakdown of the conciliation procedure, and (2) whether it should be provided that, once a dispute has been submitted to arbitration with the consent of all parties concerned, they should be required to accept the arbitration award.

The principle of voluntary arbitration is supported by a majority of the replies. As with voluntary conciliation, it is considered that a permanent system of voluntary arbitration should be established which has the advantage of being immediately available to the disputing parties. The form of the facilities and the procedure to be followed are largely matters to be determined by Governments in the light of experience within each country.

With respect to the second question, it is noted that the mere fact that the parties mutually agree to have recourse to voluntary arbitration carries an implied intent to abide by the result and as a rule the terms of submission contain an express provision that the parties agree to be bound thereby. In the absence of such an agreement, the arbitration procedure could result in nothing more than an advisory opinion which the parties might either accept or reject. The Proposed Conclusion, therefore, is that if a dispute has been submitted to arbitration for final settlement with the consent of all parties concerned, the parties should be required to accept the arbitration award.

## CO-OPERATION BETWEEN PUBLIC AUTHORITIES AND EMPLOYERS' AND WORKERS' ORGANIZATIONS

In order that Governments may increase production and labour efficiency and raise the standard of living of workers, the question of co-operation between the State, management and workers has become an important one.

The Report surveys the recent experience of the different countries in co-operation between the public authorities and employers' and workers' organizations at three levels: the level of the undertaking, the level of the industry, and the national level.

In a very large number of countries some machinery for such co-operation has been established at the level of the undertaking, either by agreement between the parties or by legislative action. The agencies for co-operation in the undertaking are, for the most part, joint production committees, work committees or councils, staff delegations, etc. These committees perform both social functions, on the one hand, and technical and economic functions on the other. For the most part, the committees deal with matters concerning the welfare of the workers, e.g. safety and health, vocational training, apprenticeship and amenities. In the technical or economic field, their functions are usually of an exclusively advisory kind. The committees study production methods, employment problems, etc., and make suggestions with the object

of increasing production, and rendering the undertaking more efficient.

The Report finds that experience with such machinery is sufficiently general as to make appropriate the drafting of international regulations on this subject, either in the form of a Convention or a Recommendation.

As regards co-operation at the industrial level, the Report finds a wide variation in the extent to which such co-operation is being effected in the different countries. An example of co-operation at the industrial level is found in the Working Parties set up in the United Kingdom in about 20 major industries, for instance, in the cotton, boot and shoe, pottery and hosiery industries. Working Parties represent employers, trade unions and the general public.

Machinery for co-operation at the national level also varies widely. It may take the form of economic councils, planning councils, national labour councils, etc. In some countries, these bodies have purely advisory powers; in others, they may initiate action and even make decisions.

The Report comments that the problem of Government-employer-worker-co-operation is a vast one which will probably occupy the attention of the ILO for several years.

## Quebec Roman Catholic Bishops Issue Pastoral Letter on Labour

The Roman Catholic Episcopate of the Province of Quebec issued a pastoral letter on March 19, on the "problem of the worker in the light of the social doctrine of the Church." The 35,000-word document, signed by heads of 25 archdioceses and dioceses, advocates social action toward a reform of enterprise which would "gradually lead organized workers to participate in management, profits, and ownership, according to a just conception of the nature of private property and of the legitimate rights of proprietors over productive property."

The pastoral letter also recommends establishment of an "organization of labour based on a workable statute to protect the right of association—employers' as well as workers'—which will normally lead the associations of employers and employees towards the guild system (*organization corporative*)."

Among the main recommendations in the letter, which was read in all Roman

Catholic churches in the Province of Quebec, are:—

1. Support of the Canadian and Catholic Confederation of Labour.
2. Legislation to give the labouring class the means to take its place in the community and to "share in the benefits of progress and contemporary culture." "Legislation concerning the right of association," states the episcopal document, "should constantly be improved so as to permit a sound unionism to fulfil its necessary role as an agent of order and social peace."
3. Support of state measures to combat Communism. "Above all," says the pastoral letter, "it is necessary to favour a better distribution of riches, a state of security for all honest and conscientious workers, and a system of labour which respects the human dignity of the worker."
4. Support of priests active in social action, based on the church's social doctrine, and in labour and employer organizations.
5. Endorsement of the work of the Sacerdotal Commission on Social Studies, an organization of the clergy with power to pronounce itself on social questions.

# INTERNATIONAL LABOUR ORGANIZATION

## Vocational Training of Adults Including Disabled Persons To be Studied at ILO Conference

*Proposals for international regulations on the training of adults, including disabled persons, were drafted recently at an ILO technical meeting, and will be studied by the International Labour Conference in June.*

The question of the vocational training of adults, including disabled persons, is to be one of the items on the agenda<sup>1</sup> of the International Labour Conference at its 33rd Session, to be held at Geneva this June.

In preparation for the Conference, a preliminary meeting was held at Geneva from January 23 to February 3, which gave study to the question and drew up a draft text for submission to the June Conference.

The text sets forth in detail the principles which should apply in the training of adults, and makes recommendations for the organization and administration of vocational training. It notes among other things, the possibilities of training as a means of facilitating the upgrading of employees, and of aiding in the re-employment of jobless workers.

It proposes that disabled workers be trained so far as possible in accordance with the same conditions as other adults, but that special facilities be provided for them where necessary.

The Preparatory Technical Tripartite Conference was attended by representatives of seventeen governments.

The following ten countries sent tripartite delegations, consisting of government, employers' and workers' delegates: Belgium, Canada, Denmark, Finland, France, United States, Netherlands, United Kingdom, Sweden, and Switzerland. The other countries which were represented at the Conference were Austria, Brazil, Chile, India, Iran, Italy, Norway.

The Canadian Delegation consisted of the following:—

*Government Delegate:* Brigadier J. E. Lyon, Assistant Director, Training Branch, Department of Labour, Ottawa.

*Employers' Delegate:* Mr. Roy L. Campbell, Secretary, International Paper Company Limited, Montreal, Quebec.

*Workers' Delegate:* Mr. William H. Burnell, First Vice-President, International Brotherhood of Pulp, Sulphite, and Paper-mill Workers, Cornwall, Ontario.

Both Mr. Campbell and Mr. Burnell were selected as group substitutes on the Steering Committee. Mr. Burnell was also a member of the working party which carried out preliminary study of the points dealing with the training of disabled persons. Brigadier Lyon and Mr. Campbell both served on the Drafting Committee, the job of which was to study carefully all the final recommendations of the Conference and ensure that the French version coincided with the English version.

In his opening address to the Conference, the Secretary-General emphasized the importance of the question on the agenda. He recalled that, even though the training of adults had been subject to precise and manifold regulation during periods in the past, it had been neglected somewhat at the beginning of the contemporary industrial age. The question of vocational training, and in particular the training of adults, had been considered by all Regional Conferences and by the great majority of industrial committees of the ILO which had met since the war and was, therefore, one to be dealt with appropriately on an international level. The Assistant Secretary-General described briefly the purpose of the Conference and reminded delegates that its task was to provide an international basis for national action which would produce the desired economic and social results.

Throughout the Conference, although discussions were lengthy and at times heated, it was evident that there was not a great deal of real conflict about the principles which were being discussed. Many of the countries which were represented are well advanced in their thinking about vocational training and in their plans for carrying it out.

<sup>1</sup> The full agenda was published in last month's LABOUR GAZETTE (p. 318).

## Summary of Proposed Text

The text which was approved recommends the adoption of international regulations on the vocational training of adults, including disabled persons, in the form of a Recommendation. It also sets forth the scope of the training envisaged, including the provision of training facilities, and the persons for whom training should be provided. It lists those for whom special training or retraining measures should be taken. Priorities in admission to training facilities are recommended, as are training facilities for production workers and supervisors.

The principles of training are set forth as follows:—

- (a) Vocational training of adults to be developed in collaboration with employers' and workers' organizations according to the situation and trend of the employment market and the efforts to increase national production, and to the possibilities of absorbing trainees into suitable employment.
- (b) Vocational training also, as far as possible, to enable adults to obtain background knowledge related to the occupations they are learning and to

the industries in which they may be employed in particular to facilitate upgrading of workers.

- (c) Vocational training of unemployed adults not to be used as a substitute for unemployment insurance or assistance schemes but, in this connection, to be used to facilitate the re-employment of unemployed workers who require training in order to find suitable employment.

Methods of training, which include selection, preparation of training programs and supervision measures, are outlined and practices recommended both for in-plant training and also for training outside the undertakings. Three paragraphs are devoted to the training of supervisors and two to the recruitment and training of instructors.

The training of disabled persons comprises a separate section of the Recommendations and the first principle laid down is that the principles, measures and methods of training set forth for adults should be applied to all disabled persons in so far as medical and educational conditions permit. In this connection, the general feeling seemed to be that, if suitable training

Canadian Government, Worker, and Employer representatives at the ILO preparatory conference on training of adults and disabled persons: R. L. Campbell, Secretary of the Canadian International Paper Co. Ltd., Brigadier J. E. Lyon, Assistant Director of the Canadian Vocational Training Branch of the Department of Labour, and W. H. Burnell, First Vice-President of the International Brotherhood of Pulp, Sulphite and Papermill Workers.

facilities are provided for adults, the training of disabled persons follows naturally. However, attention is drawn to the necessity for medical supervision of most disabled persons under training and for special facilities in cases where disabled persons, by reason of the nature of their disabilities, cannot be trained in company with able-bodied persons.

The recommendations for the organization and administration of vocational training are set forth in some detail and are quite comprehensive. A final paragraph deals with international co-operation in the training of adults. It is recommended that States' Members should co-operate where necessary and practicable, and where desired with the help of the International

Labour Office, in measures to promote the training of adults. Suggestions as to how that co-operation might be carried out are given.

The adoption of the text was unanimous, although the Employers' Group requested that their reservation be recorded to a paragraph which dealt with the provision of remuneration or allowances to adults under training, having regard for any unemployment benefit or any other allowance they might be receiving and other factors, such as age, family responsibilities, cost of living in the district concerned, and special personal expenses connected with the training, such as those for transport or housing.

## Third Session of Iron and Steel Committee

*Resolutions on the guaranteed wage and on the social effects of technological improvements were adopted by the ILO Iron and Steel Committee during the course of its third session.*

The Iron and Steel Committee of the International Labour Organization, at its Third Session during November-December, 1949, in Geneva, Switzerland, recommended that the attention of employers' and workers' organizations and wage-fixing authorities be drawn to the need for study of the possible values of a guaranteed wage for the iron and steel industry in the light of relevant economic and social conditions.

Another important resolution concerned the need for study of the social effects of technological improvements in the industry, especially the effects on employment, and the need for co-operation between employers and workers to prepare in advance plans to meet the effects of the resulting displacement of workers.

The Committee also reviewed action taken by member nations and the International Labour Office in the light of the conclusions of its Second Session, and recent developments in the industry.

### Canadian Delegation

The Canadian Delegation to the Iron and Steel Committee Session was as follows:—

*Government delegates.*—J. E. Matthews, M.P., of Brandon, Manitoba, and F. J. Ainsborough, Industrial Relations Officer of the Federal Department of Labour.

*Employers' delegates.*—A. L. Lott, Manager of Industrial Relations for the Steel Company of Canada, Hamilton, Ontario, and P. J. Power, Superintendent of Industrial Relations for the Dominion Steel and Coal Corporation, Sydney, Nova Scotia.

*Workers' delegates.*—G. P. Schollie, Canadian Vice-President of the International Association of Machinists, and L. Lavallee, President of the Montreal Machine Shop Workers' Union.

The honour of opening the general debate of the Committee was given to Mr. Matthews, and Mr. Ainsborough was elected a member of the Steering Committee for the Session.

### Agenda

The first item on the agenda was the General Report prepared by the International Labour Office, outlining action taken in various countries to implement the conclusions of the Second Session, steps taken by the Office to follow up the studies and inquiries proposed at that Session, and recent events and developments in the iron and steel industry. The second item on the agenda was the subject of guaranteed wages in the iron and steel industry, and the third was a consideration of technological improvements in the industry and their effects on employment, which are matters of growing concern to both employers and workers. These two latter items were referred to subcommittees for study.

### General Discussion

The Chairman, J. J. Ricard of the Ministry of Social Affairs of Denmark, opened the first of seven plenary sittings of the Committee by welcoming the delegates of 13 countries: Belgium, Canada,

China, France, India, Italy, Luxembourg, Mexico, Netherlands, Sweden, Union of South Africa, United Kingdom, and United States, to this Third Session of the Committee, and referring to the accomplishments of the First Session, Cleveland, Ohio, 1946, and the Second Session, Stockholm, Sweden, 1947. He also welcomed the observers present from the United Nations, from the International Federation of Trades Unions of Salaried Employees, Professional Workers and Supervisors, from the International Federation of Christian Metal Workers' Trades Unions, and from the World Federation of Trade Unions.

J. E. Matthews, M.P., of Canada, opened general discussions at the second plenary sitting, with a brief résumé of the situation in the primary iron and steel industry of Canada. He said that wartime advances in new equipment and modernization have resulted in a 60 per cent increase in production, which has continued at capacity since the war to meet a growing demand for steel in peacetime industries. In the last ten years, workers in the industry increased from 15,000 to 35,000, while average weekly earnings went up approximately 68 per cent and yearly income was even higher because of steady year-round employment. The wide dispersal of coal and iron deposits and markets in Canada has imposed peculiar problems on the industry which have been approached realistically; new iron ore deposits on the Quebec-Labrador boundary are being developed which will help to facilitate the stabilization and expansion of the industry in Canada.

After the general debate, John Price, the Secretary-General, summarized the discussion and replied to certain criticisms which had been expressed by delegates. Some difficulty had been encountered because of the lack of standard definitions and classifications for occupations and processes in the industry, making it hard to correlate the available data on the industry in various countries, but this would be overcome as statistics were improved, in accuracy and uniformity. The Industrial Committees after some initial delays were proving themselves extremely useful in promoting an understanding of problems in the different countries and providing the basis for international co-operation and assistance. The real problem of the Iron and Steel Committee was how to awaken the consciousness in member countries that its work could be of value to the industry, and to make more widely known the assistance which the International Labour Organization could afford to the development of the industry.

## Guaranteed Wages in the Iron and Steel Industry

The discussions of the Subcommittee set up to deal with this item were based principally upon a Report prepared by the International Labour Office entitled *Guaranteed Wages in the Iron and Steel Industry*, as well as on previous ILO Reports on Wages. Workers' members emphasized that guaranteed wages would help to remove the causes of the misery of unemployment. They were almost unanimous in urging that the whole financial responsibility for a guaranteed wage scheme should be borne by the employers as a result of collective bargaining between the employers' and workers' organizations in the industry, rather than as a result of legislation, except in countries where wage-fixing authorities determined the conditions of employment of workers in the iron and steel industry. It was hoped that appropriate studies would be made to reduce so far as possible cyclical fluctuations and seasonal variations in production and employment.

The United States Government member drew attention to the fact that if any scheme for guaranteed wages was introduced, existing legislation in such fields as unemployment insurance, premium overtime payments and taxation might have to be amended to prevent duplication and other obstacles. The Chairman, who was the United Kingdom Government member, indicated that the basis for the acceptance of the principle of the guaranteed wage in the United Kingdom was, in his opinion, recognition of the fact that industry had some responsibility for protecting workers against a stoppage of wages due to factors outside their control. He felt that industry did have an obligation to protect workers who were under-employed or unemployed due to circumstances existing within the industry.

There was some difficulty in agreeing upon an exact definition of a guaranteed wage, and whether it should cover such circumstances as sickness, bad weather, fires in the plant, and strikes. Most members felt that the guaranteed wage scheme should only be stated in general terms and that the details in each country should be worked out between employers' and workers' organizations to cover the local situation. For example, in some countries unemployment insurance and other legislation made provision for matters like sickness which were not within the control of the employer. So far as the International Labour Office knew,

the guaranteed wage scheme in Australia was the only one in which the guaranteed wage applied during sickness.

Employers' members pointed out that the employers had opposed the Resolution concerning the guaranteed wage which was adopted by the 31st Session of the International Labour Conference, but nevertheless they recognized that the demand for a guaranteed wage arose from a legitimate aspiration of the workers, security of employment, and they were willing to discuss the question in good faith. A scheme of guaranteed wages would increase production costs in the industry, and in a period of serious depression this might ruin the industry. Stability of employment was closely linked to stability of production.

A draft memorandum was submitted by the Drafting Committee, which, after some modifications, was adopted by the Subcommittee in the form of a Resolution, the operative part of which is as follows:—

### **Resolution concerning Guaranteed Wages in the Iron and Steel Industry.<sup>1</sup>**

The Governing Body of the International Labour Office is invited to request the Governments of States Members of the International Labour Organization to draw the attention of employers' and workers' organizations in the iron and steel industry, and, where considered appropriate, the wage-fixing authorities concerned, to the following points agreed by the Iron and Steel Committee concerning the guaranteed wage in the iron and steel industry:—

#### *1. Experience of Guaranteed Wage Schemes to date.*

Practical experience with guaranteed wage schemes at the present time, both in iron and steel and in other industries is extremely limited. Such schemes have been established in very few countries, and in general even in those countries these schemes have been in force for a limited period. Those schemes inaugurated during recent years have operated in general under conditions of full employment and a high level of activity for the industry, and the effectiveness and practicability of the schemes in different economic conditions cannot yet be assessed. For this and other reasons the application of guaranteed wage schemes is in an experimental stage of development and must be regarded as subject to reconsideration and review.

#### *2. Description of the Guaranteed Wage.*

A guaranteed wage scheme may be defined as an arrangement whereby an employer, having undertaken to provide employment at the ordinary rates of pay for a specified number of hours, days or weeks, pays a specified amount of wages if, the worker being available, neither his customary work nor reasonably alternative work can be provided. An arrangement similar to the above,

but under which the wages are paid not directly by the employer but by an organization taking his place, would fall within the definition of a guaranteed wage. The requirement to provide for a guaranteed wage is normally subject to certain limitations and conditions as defined in collective agreements, legislation or orders of wage-fixing authorities.

#### *3. Purpose and Objects.*

The main purpose of a guaranteed wage scheme is to provide security of wages for the workers in the industry. Insecurity of wages, following from unemployment or under-employment in any industry, may be caused by a variety of circumstances, and it is difficult to define precisely the field which can appropriately and effectively be covered by a guaranteed wage scheme. Variations in the level of employment affecting the security of income and employment of workers are of four main types:

- (a) Long period and permanent changes resulting, for example, from changes in demand or from technical developments.
- (b) Cyclical fluctuations in production arising from general economic conditions.
- (c) Seasonal variations.
- (d) Occasional fluctuations which may arise from the economic policy of undertakings or Governments or from other causes.

Because of these variations and fluctuations, workers in this industry have experienced fluctuations in employment and income. The extent of such fluctuations and the amount of unemployment experienced by workers varies, of course, from country to country.

The extent to which a guaranteed wage scheme can meet the circumstances described above and secure an increased security of workers' incomes will vary according to the social and industrial conditions in different countries. In general, however, it would seem an appropriate means of affording protection against the consequences of temporary interruption or dislocation of work which will arise from time to time, but would not seem to provide appropriate or fully effective protection against the consequences of long-term and other unemployment of the kind likely to arise under types (a) and (b) above. Certain of the problems which arise in these circumstances are not appropriate for consideration in detail in relation to the guaranteed wage, and are, in part, under consideration by the Subcommittee on Technological Changes. It should be noted, however, that the increased security of income provided by the application of a guaranteed wage scheme may, in some countries, contribute to reducing the fluctuations in industrial activity due to changes in demand.

#### *4. The Appropriate Method of Application of the Principle of a Guaranteed Wage for the Iron and Steel Industry.*

It would appear that the most appropriate method of applying guaranteed wage schemes in the iron and steel industry would be for these schemes (and particularly the period of the guarantee and the limitations on their application) to be negotiated by collective bargaining between the employers' and workers' organizations particularly concerned. In some countries, however, where

<sup>1</sup> This resolution was adopted by 36 votes to 1, with 11 abstentions, at a Plenary Sitting of the Committee.

the conditions of employment of workers in the iron and steel industry are normally determined by wage-fixing authorities or by legislation, such schemes may be determined or approved by these means.

##### 5. *Some Economic Considerations to be taken into account in applying the Guaranteed Wage in the Iron and Steel Industry.*

The cost of a guaranteed wage scheme is of fundamental importance in determining the feasibility of such a guarantee in the industry. Its introduction will generally involve some increase in production costs. The size of the increase will depend on the details of the scheme and on a number of other considerations including the effectiveness of policies at the national level designed to maintain a high and stable level of employment. Within the industry itself, an important economic consideration will be the relative proportion of labour cost to total production cost which varies in different countries and in different processes.

The application of the guaranteed wage should accordingly be considered in relation to its effects on costs of production and prices ruling in the industry and more particularly in relation to other provisions in respect of wages and conditions of employment which in part determine the labour costs. These considerations will vary widely in different countries.

The question of the guaranteed wage will also have to be examined in relation to other provisions for securing increased security of incomes which may already exist on a national or industrial scale and which may be financed in part or in whole by the industry and therefore represent an addition to its costs.

##### 6. *Conclusions.*

(a) The application of a guaranteed wage may be of real value to the workers in the iron and steel industry in providing increased security of income, but each particular guaranteed wage scheme must be determined in the light of the relevant economic and social conditions affecting the iron and steel industry in each country, failing which the economic effects may be of such a character as to render a scheme incompatible with the satisfactory operation of the industry and thereby make the scheme ineffective.

(b) All questions related to any such schemes are matters for the customary machinery for determining wages in the country in question. Guaranteed wage schemes should secure the objectives set out in point 3 above, having regard to the major economic considerations set out in point 5 above.

### **Technological Improvements and their Effects on Employment**

This Subcommittee began by discussing the Report prepared by the International Labour Office on *Technological Improvements in the Iron and Steel Industry and Their Effects on Employment* which reviewed modernization and development plans in the industry in 18 major industrial countries.

After analysing some effects of technological advances on employment, and measures to combat "technological unemployment" in individual countries, the Report posed twelve questions for general discussions by the Subcommittee, which aroused considerable debate. Employers' members maintained that the social effects of technological improvements often materialized very slowly and with a minimum of disturbance to the workers concerned, but Workers' members declared that it was the short-run temporary employment which caused great hardship to individual workers.

One of the questions arousing most discussion was whether employers could reasonably be expected to make financial provision in their budgets for the social costs as well as for the financial costs of technological improvements. The Workers' members suggested a national redundancy and rehabilitation fund in each country to compensate iron and steel workers whose jobs became redundant as a result of technological improvements, from which they might either be trained for re-employment or if elderly given retirement pensions. The Employers' members thought that this scheme would add to the costs of production and indirectly increase unemployment, but were prepared to agree, in the event of technological improvements leading to a reduction in the number of workers, that redundant workers should be either fitted into other jobs in the plant or retrained for new jobs. The United States Government member felt that such a levy on finished products might overlap and conflict with existing Government programs in some countries for retraining workers, with collective bargaining provisions, and with old age pensions and unemployment insurance. Several compromise proposals were put forward, from which the Drafting Committee was able to arrive at the text of the final Resolution.

Another subject arousing differences of opinion was the problem of the extent to which major schemes for reorganization or modernization of the industry should be submitted for approval either to the Government or to a public board including independent members and workers' as well as employers' representatives. The Workers' members supported such a plan, while the Employers' members considered the question was not within the competence of the International Labour Organization. The Drafting Committee omitted any reference to this point in the Resolution, in view of the wide divergence of viewpoints.

The Resolution finally passed by the Subcommittee follows:—

### **Resolution concerning Technological Improvements in the Iron and Steel Industry and their Effects on Employment.<sup>1</sup>**

The Iron and Steel Committee of the International Labour Organization,

Having been convened by the Governing Body of the International Labour Office, and

Having met at Geneva for its Third Session from November 22 to December 2, 1949;

Recognizing that technological improvements in the iron and steel industry are of the utmost importance because they

- (a) may enable the products of the industry to be produced more cheaply, and
- (b) may lead in the long run to a higher standard of living for the workers in the form, for example, of shorter hours of work, higher wages, or lower prices for consumption goods of which iron and steel form constituent parts;

Considering, however, that technological improvements may cause in some cases displacement of workers in the industry with the result that these workers are threatened with a period of unemployment until they can be reabsorbed either into the iron and steel industry itself or into another industry;

Noting moreover that measures to deal with this situation will be much more effective if the general employment situation is favourable than if there is general unemployment due to the fluctuations of the business cycle, and that consequently measures aimed at ensuring full employment are essential to the successful solution of the problem of technological unemployment in the iron and steel industry; and

Being convinced that special consideration should be given to preventing if possible or to minimizing such unemployment,

Adopts this 2nd day of December, 1949 the following Resolution:—

1. Careful study and attention should be devoted by Governments, employers and workers in the various countries concerned to the social effects of technological improvements in the iron and steel industry and especially to the effects on employment.

2. There should be co-operation between the employers' and workers' organizations concerned with respect to:

- (a) the preparation in advance of plans to deal with the effects of technological improvements;
- (b) advance notification to the workers and their representatives and to the public employment service of expected displacements of workers;
- (c) the granting within the industry of a preference to displaced iron and steel workers in filling vacancies;
- (d) vocational guidance of displaced workers within the industry; and
- (e) the action to be taken when workers become redundant as a result of technological improvements and are threatened with unemployment.

<sup>1</sup> This Resolution was adopted by 50 votes to 1 at the Seventh Plenary Sitting of the Committee.

3. (1) Provision should be made so far as practicable for the re-training of displaced workers, to enable them to find new employment.

(2) This provision should be made:

- (a) by the iron and steel industry in so far as new openings are available within the industry;
- (b) by the public authorities in cases in which transfer to another industry becomes necessary, and adequate re-training facilities are not available in the industry to which the workers are transferred.

4. (1) Arrangements should be made as far as possible by agreement between the employers and the workers to enable displaced workers to accept employment within the industry and whenever possible accrued advantages of seniority should be continued.

(2) Arrangements should be considered in the light of agreements existing between employers and workers in the various countries to deal with other accrued benefits, for example holiday credits and pension rights.

5. (1) Steps should be taken to promote and facilitate the movement of workers in the industry, and their families, from places where employment opportunities are contracting or may be expected to contract to places where employment opportunities are expanding.

(2) For this purpose special attention should be given to the provision of adequate accommodation both for workers transferred within a particular country and for immigrants who are to be employed in the industry.

6. (1) In view of the fact that technological improvements may cause hardship to some workers in the industry, consideration should be given in accordance with the normal negotiating machinery existing in individual countries to the possibility of financial provision being made to mitigate such hardship.

(2) The Governing Body of the International Labour Office is invited to authorize the Office to study this question further and to report thereon to a future session of the Iron and Steel Committee.

7. The public employment service and the Workers' organizations should do everything in their power to give workers an intelligent understanding of the social implications of technological improvements and to assist them to adjust themselves to changed conditions resulting from such improvements.

### **Other Resolutions**

Four other resolutions were adopted by the Committee after some discussion:—

(1) A Resolution prepared by the Working Party on Statistics, asking the Governing Body to request all member countries to provide the Office with complete lists of official sources of statistics relating to the iron and steel industry and to keep the Office informed of new statistics issued for the industry concerning such matters as productive capacity, total production, distribution to consumers, employment and unemployment, earnings, hours of work, industrial disputes, accidents and labour turnover.

(2) A Resolution urging the Governing Body to do all in its power to fulfil requests for technical assistance made by the iron and steel industry in the under-developed countries, to ensure a progressive increase in their volume and efficiency of production.

(3) A Resolution requesting the Governing Body to suggest to Governments of member countries that they call together representatives of the organizations concerned in the iron and steel industry, to

discuss the Resolutions adopted by the Iron and Steel Committee and consider what action should be taken to give effect to them.

(4) A Resolution inviting the Governing Body to ensure that the Office completes its inquiry into vocational training and promotion in the iron and steel industry, in order that this subject may be placed on the agenda of the Committee at its Fourth Session.

---

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

## INDUSTRIAL RELATIONS AND CONCILIATION

*Chief interest during February in the field of industrial relations under Dominion jurisdiction centred on disputes affecting Canadian railways and Polymer Corporation, Limited, and an application for certification involving employees of the Canadian Press.*

### Introduction

Late in February hearings were resumed in Montreal by the two Boards of Conciliation under the chairmanship of Hon. Mr. Justice J. O. Wilson, of Vancouver, which are dealing with the current dispute between the principal Canadian railways and groups of railway labour unions over demands for higher wage rates and shorter working hours made by the employees and proposals concerning changes in rules and working conditions made by the carriers. These cases constitute the only dispute of any real magnitude presently existing in the field of industrial relations which comes within the jurisdiction of the federal Department of Labour.

The February sittings of the Canada Labour Relations Board attracted considerable attention because of a public hearing in connection with an application for certification made by the American Newspaper Guild on behalf of editorial employees employed within Canada by the Canadian Press, the nation-wide news gathering and distribution agency of Canadian daily newspapers. The Board deferred its decision in the matter. At its March session the Board decided that it had jurisdiction in the matter, determined the scope of the bargaining unit and ordered the taking of a secret representation vote. (The Board's Reasons for Judgment will be printed in next month's LABOUR GAZETTE.)

Early in March the Minister of Labour announced the receipt of a unanimous report of the Board of Conciliation which, in sittings extending from late November, 1949, to February, 1950, dealt with a dispute between the Polymer Corporation, Limited, of Sarnia, Ont., and its employees represented by Local 14, United Gas, Coke and Chemical Workers of America, CIO. This dispute arose out of demands which had been made for a general wage increase of ten cents per hour and for the establishment of shift differentials in wages of five and ten cents per hour. After considering concessions offered by the management of the crown company and modified demands proposed by the union, the Board recommended the establishment of shift differentials of three cents and six cents per hour and wage increases of six and seven cents per hour for lower-paid and higher-paid employees respectively, effective as from January 1, 1950.

Although, in the opinion of the Conciliation Board, its recommendations met in great part the Union's request that any increases should be uniform in size without too seriously affecting the relative rates of pay in percentages of all classes of employees, it was reported in mid-March that the members of the union had rejected the Board's proposals and voted in favour of strike action unless their demands were met.

(The text of this report will be printed in next month's LABOUR GAZETTE.)

**The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.**

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to admin-

ister provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

## **Certification and Other Proceedings Before The Canada Labour Relations Board**

The Canada Labour Relations Board met for two days and held five hearings during the month of February. The Board issued three certificates designating bargaining agents, ordered one representation vote, and allowed the withdrawal of one application. During the month the Board received fourteen applications for certification.

### **Applications for Certification Granted**

1. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for a unit of employees of the Canadian Pacific Railway

Company comprising clerical employees under the jurisdiction of the District Accountant, Windsor Street Station, Montreal, P.Q. (L.G., Feb., 1950, p. 202).

2. The Brotherhood of Maintenance of Way Employees for a unit of employees of the Canadian Pacific Railway Company, comprising employees of its Maintenance of Way Department employed in shops located at Saint John, N.B., Montreal, P.Q., Toronto and North Bay, Ont., classified as gas engine maintainer, gas and diesel engine maintainer, mechanic's helper, truck driver-clerk, and carpenter (L.G., Feb., 1950, p. 202).

3. Radio and Cables Department, Local No. 6, Canadian Communications Association, for a unit of clerical employees of the Pacific Cable Board, associated with Cable and Wireless Ltd., and the Halifax and Bermuda Cable Company (L.G., March, 1950, p. 339).

### **Representation Vote Ordered**

The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the Canadian Pacific Railway Company (Office of the Auditor of Passenger Receipts, Montreal) (L.G., Feb., 1950, p. 202). Following an investigation of the application and a public hearing of the parties concerned, the Board ordered a representation vote of the employees affected (Returning Officer: L. Pepin).

### **Applications for Certification Received**

1. The Brotherhood of Locomotive Firemen and Enginemen on behalf of locomotive firemen, helpers, hostlers, and hostler helpers employed by the Dominion Atlantic Railway, Kentville, N.S. (Investigating Officer: L. Pepin).

2. The Brotherhood of Locomotive Firemen and Enginemen on behalf of locomotive engineers employed by the Dominion Atlantic Railway, Kentville, N.S. (Investigating Officer: L. Pepin).

3. The West Coast Seamen's Union (Canada) on behalf of unlicensed personnel employed on vessels operated by Vancouver Barge Transportation Limited, Vancouver (Investigating Officer: G. R. Currie).

4. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of the Eastern Canada Stevedoring Company, Limited, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

5. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of the Economic Stevedoring Corporation of Montreal, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

6. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of the Empire Stevedoring Company, Limited, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

7. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of J. C. Malone and Company, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

8. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of the Montreal and St. John Stevedoring Company, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

9. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of North American Elevators Limited, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

10. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of the Sorel Dock and Stevedoring Company, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

11. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of J. C. A. Turcotte, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

12. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of Wolfe Stevedores, Limited, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

13. The National Catholic Longshoremen's Syndicate of Sorel, Inc., on behalf of employees of Brown and Ryan Limited, employed as longshoremen at Sorel, P.Q. (Investigating Officer: L. Pepin).

14. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on behalf of one clerk employed by the Canadian National Railways in its freight office at Ogden Point Docks, Victoria, B.C. (Investigating Officer: G. R. Currie). This application was withdrawn later in the month.

## **Conciliation and Other Proceedings Before the Minister of Labour**

### **Settlement Facilitated by Conciliation Officer**

On February 4, 1950, the Minister of Labour received a report from H. Perkins, Conciliation Officer, indicating the settlement of matters in dispute between De Luxe Transportation Limited, North Bay, Ont., and the Canadian Brotherhood of

Railway Employees and Other Transport Workers (L.G., March, 1950, p. 339).

### **Conciliation Officer Appointed**

On February 4, 1950, the Minister of Labour appointed a Conciliation Officer to deal with a dispute between Hull City Transport Limited, Hull, P.Q., and the Hull City Transport Employees' Syndicate (Conciliation Officer: L. Pepin).

# COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

## Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc., are summarized in separate articles following this.

### Logging

#### BRIITAIN COLUMBIA COASTAL REGION— CERTAIN LOGGING AND WOODWORKING FIRMS AND INTERNATIONAL WOOD- WORKERS OF AMERICA.

Agreements to be in effect from June 15, 1949, to June 15, 1950, and thereafter from year to year, subject to 60 days' notice. The companies recognize the union as the sole collective bargaining agency for all eligible employees and agree that the only certification that they will recognize during the term of this agreement is that of the above union, unless ordered by due process of law to recognize some other bargaining authority. The provisions of this agreement regarding check-off, hours of work, overtime, vacations with pay and night shift premium are the same as in the agreement previously in effect and summarized in the *LABOUR GAZETTE*, February, 1949. The present agreement further provides that the 1948 wage scale shall apply for the duration of the agreement; it may, subject to mutual consent of both parties, be revised once annually. The minimum rate for common labour (men) is \$1.08 per hour. The rate for board and lodging in logging camp boarding-houses shall not exceed \$2.25 per day, effective September 15, 1949. Where a lesser rate is in effect that rate shall prevail.

Provision is also made for *seniority rights* and *grievance procedure*.

#### SOUTHEASTERN INTERIOR (CRANBROOK) AREA, B.C.—CERTAIN LOGGING FIRMS AND LUMBER AND OTHER WOOD PRODUCTS MANUFACTURERS AND INTERNATIONAL WOODWORKERS OF AMERICA.

Agreements to be in effect from September 1, 1949, to August 31, 1950, and thereafter from year to year, subject to 60 days' notice. The companies agree to recognize and to bargain with the union as the sole bargaining agency on behalf of all eligible employees. During the term of this agreement the bargaining authority of the union shall not be impaired and the only certification the companies will recognize is that of the union, unless otherwise ordered by due process of law.

A weekly cost-of-living bonus based on the Cost-of-Living Index of the Dominion Bureau of Statistics, to be calculated on a daily basis, is a feature of the agreements between three asbestos mining companies and Le Syndicat National des Travailleurs de L'Amiante summarized below. The agreements provide for both an upward and a downward adjustment, the latter to be made only in the event that the index figure exceeds 165.6.

*Check-off:* the companies agree to deduct union dues and assessments from the pay of employees who so authorize and to remit same to the union. Such authorization shall be revokable, but an employee may waive his right to revoke.

*Hours:* subject to Hours of Work Act, 8 per day 5½ days, a 44-hour week, except for stationary engineers, firemen, and oilers (whose hours shall not exceed 9 in any one day or 48 in any one week, where plant is operated on a one-shift basis), and for cook and bunkhouse employees in unorganized territories, fire fighters, boatmen and employees engaged exclusively in the transportation of men and supplies; for persons employed in booming operations, transporting logs by horse or river driving a maximum of 48 hours per week. *Overtime* at time and one-half shall be paid for work in excess of the regular daily and/or weekly hours and for work on 7 specified holidays.

*Vacations with pay* will be granted in accordance with the Annual Holidays Act of British Columbia. Cooks and bunkhouse employees shall be entitled to one week's vacation with pay after 6 months' continuous service, provided that they shall not be entitled to more than 2 weeks' vacation with pay in any one year.

The rate for board and lodging shall be \$2 per day; where a lesser rate is being charged as of September 1, 1949, that lesser rate shall prevail for the term of the agreement.

*Hourly wage rates* for certain classes in the Cranbrook area: mill operations—boomman, cut-off saw, deckman, dogger, planer feeder, planer tailer (where he grades), piler (dry), resaw feeder, sawyer tailer, trimmerman 97½ cents to \$1.00½; canter \$1.02½ to \$1.10½; car loader 97½ cents to \$1.02½; edgerman, tie packer \$1.00½ to \$1.10½; edger tailer (where he grades) 97½ cents to \$1.10½; engineer, second class \$1.20½ to \$1.30½, third class \$1.10½ to \$1.20½, fourth class \$1.05½; filer, head \$1.30½ to \$1.40½, second \$1.10½ to \$1.20½; fireman 98 cents to \$1.00½; first aid man \$1.00½ (or job rate plus 50 cents per day); gangsaw helper, green chain (mill), edger tailer, jacker to edger, jackladder, labourer, planer tailer, resaw tailer, slasher

sawyer, truck swamper 97½ cents; grader (lumber) \$1.00½ to \$1.05½; millwright, head \$1.15½ to \$1.20½, helper \$1.00½; planer set-up \$1.10½ to \$1.20½; piler (green) \$1.05½ (or 44 cents per M plus 30½ cents per hour); sawyer, head \$1.10½ to \$1.40½, gang \$1.05½; scaler (government licensed) 97½ cents to \$1.07½; truck drivers 97½ cents to \$1.05½; boys (16-18 years) 71 cents increasing gradually until job rate is reached after 6 months; bush operations—blacksmith \$105 to \$120 per month; clerk \$95 to \$105 per month; cook, 10-20 men \$104 to \$144 per month, 21 to 30 men \$144 to \$184 per month, over 30 men \$184 to \$228 per month; bull-cook, flunkey \$84 to \$104 per month (in addition, above monthly paid employees get board and 20½ cents per hour); dumpman, bull ropeman, barnboss, swampers and common bush labour 97½ cents; cat driver \$1.10½ to \$1.30½; cat chokerman \$1.00½, cross-cut saw filer 97½ cents to \$1.10½; decker, hoist operator 97½ cents to \$1.00½; hoist engineer \$1.15½; chokerman \$1.05½; river driver \$1.00½; scaler \$1.10½. Where only a single rate is quoted the employer may pay up to 5 cents per hour less for not more than 60 days.

Provision is made for *grievance procedure, seniority rights and the health and safety of employees.*

**SOUTHERN INTERIOR (KAMLOOPS AND KELOWNA) AREA, B.C.—CERTAIN LOGGING FIRMS AND LUMBER AND OTHER WOOD PRODUCTS MANUFACTURERS AND INTERNATIONAL WOODWORKERS OF AMERICA.**

Agreements to be in effect from September 1, 1949, to August 31, 1950, and thereafter from year to year, subject to 60 days' notice. The agreements are similar to those for the Cranbrook area for the same industries, summarized above, the only exception being the wage scale: while the rates are in most cases the same as in the Cranbrook area, where they do differ they are, with a few exceptions, slightly lower. The following are additional rates for this area: box factories—box cutoff, veneer lathe operator 97½ cents to \$1.05½; filer \$1.20½ to \$1.30½; first aid man \$6.50 per day plus board or job rate plus 50 cents per day; head planer \$1.05½ to \$1.20½; core sawyer clipper operator, trucker, bundler tie-up, drag saw 97½ cents; ripsaw 90 cents to \$1.00½; splicer operator (hopper fed), barking machine operator 97½ cents to \$1.00½. Boys and females in box factory and veneer plant: woman inspector 76½ to 87 cents; all others from 65½ to 72, 74 or 76½ cents.

**NORTHERN INTERIOR AREA, B.C.—CERTAIN LOGGING FIRMS AND LUMBER AND OTHER WOOD PRODUCTS MANUFACTURERS AND INTERNATIONAL WOODWORKERS OF AMERICA.**

Agreements to be in effect from September 1, 1949, to August 31, 1950, and thereafter from year to year, subject to 60 days' notice. The agreements are similar to those for the Cranbrook area for the same industries, summarized above, except for the wage scale and with the following addition:—

*Vacations with pay:* employees with 5 or more years' continuous service (1,250 working days) will receive one week in addition to the period provided under the Annual Holiday Act.

*Hourly wage rates* for certain classes: boomman, car-loaders, fireman, gang saw

helper, cant setter, jitney drivers, pilers (dry), unpiler, resaw feeder, shop handyman \$1.02½; jackladder, deckman, labourer, resaw taylor, slasher saw man 97½ cents; blacksmith \$1.17½; canter, carrier driver, shipper \$1.10½; cut-off saw, dry kiln operator, oiler, planer feeder and set up man, pilers (green), tallyman, trimmerman \$1.05½; carpenter \$1.30½; dogger, edger taylor, gang saw taylor, jacker to edger \$1.00½; engineer, second class \$1.30½, third class \$1.20½, fourth class \$1.10½; edgerman \$1.07½ to \$1.17½; filer, head \$1.57½, second \$1.22½; gang mill sawyer, round log \$1.57½, cant \$1.15½; millwright, head \$1.35½, helper \$1.02½; planer taylor 97½ cents and \$1.05½ (where he grades); sawyer head \$1.42½ and \$1.57½; setter \$1.20½; scaler, government licensed \$1.12½; truck drivers \$1.02½ and \$1.05½; electrician \$1.22½; welder, machinist, truckmotor mechanic \$1.32½. Logging—blacksmith \$1.17½, bullock, barnboss, cat helper, labourers and swampers 97½ cents; cat chokerman, cross cut saw filer, fallers and buckers, 10 wheel truck driver, power saw filers, self-loading truck driver \$1.20½; cat operators \$1.32½ and \$1.42½; dumpman, greaser, hookman \$1.05½; hoist operator, truck driver, river drivers \$1.17½; cooks \$173.20 to \$277.20 per month and board; camp clerk \$187.20 per month and board. Where hourly rates are given employers may pay up to 5 cents per hour less for a period not exceeding 60 days.

## Mining

### *Non-metallic Mineral Mining*

**THETFORD MINES, P.Q.—ASBESTOS CORPORATION LIMITED AND LE SYNDICAT NATIONAL DES TRAVAILLEURS DE L'AMIANTE DE L'ASBESTOS CORPORATION LIMITED INC. (NATIONAL SYNDICAT OF ASBESTOS WORKERS).**

Agreement, which was made following provincial conciliation, to be in effect from January 1, 1950, to December 31, 1950, and thereafter from year to year, subject to notice. The company agrees to notify each new employee at the time of his engagement of the existence of the present collective labour agreement and that the union is the sole bargaining agent for all eligible employees. There shall be no discrimination, intimidation or coercion because of membership or non-membership in the union.

*Check-off:* the company will deduct union fees monthly from the pay of union members who so authorize and remit same to the union. The authorization shall be irrevocable for the duration of this agreement.

*Hours:* 8 per day Monday through Saturday, a 48-hour week (except for watchmen, stablemen, etc.). *Overtime* at time and one-half will be paid for work in excess of the regular daily hours, for work on Sundays and on 5 specified holidays. An additional 4 specified holidays are *paid holidays* (an increase of 2 from previous agreement) and work on these will be paid for at double time and one-half. If an employee is recalled to work after 15 or more minutes have elapsed since leaving his work, he shall be paid either a minimum of 4 hours at straight time or time and one-half for the exact time worked, whichever is the greater.

*Vacations with pay:* employees with less than one year's service shall be entitled to half a day for each 25 days worked,

employees with one year's service to 6 days; after 2 years' service they shall be entitled to an additional day per year of service, after 5 years to a total of 12 days and after 25 years to 18 days. The provisions for an additional day per year of service after 2 years' service and for 18 days after 25 years' service are new. Unless otherwise agreed, paid vacations shall be taken between May 1, and October 31, and shall be of continuous duration. (The previous agreement provided that the second 6 days vacation were to be taken during the New Year holiday period.) Vacation pay for hourly paid employees is to be based on their average earnings during the 3 months preceding June 1 and for piece or contract workers on their average earnings during the 13 weeks preceding June 1.

*Apprentices* shall be limited to the following trades: machinists—mechanics, welders, pipefitters, carpenters, tinsmiths and electricians. There shall not be more than one apprentice for each 5 tradesmen or fraction thereof. New apprentices shall not be under 16 nor over 23 years of age.

*Hourly wage rates* for certain classes: mining—raiseman \$1.20; driftman, skip loader, shute blaster \$1.15; diamond core driller \$1.13, helper \$1.02; muck machine operator \$1.10; grizzlyman \$1.20; timberman \$1.09 and \$1.15; pumppman \$1.01; underground labourer and mucker 98 cents; pit labourer 95 cents; pit driller \$1.09; helper \$1.01; pit blockhole driller \$1.04; shovel operator \$1.16; shovel oiler \$1.01; drill carrier 95 cents. Hoisting and transportation—shaft cage hoistman \$1.15; shaft cage hoistman and compressor operator \$1.08; electric loco. driver, underground \$1.15, surface 99 cents, pit \$1.03, raises \$1.05; steam loco. engineer \$1.09, fireman \$1.01; trackman 95 cents to \$1.05; brakeman 97 to 99 cents; brakeman and car loader \$1.03; cable inspector \$1.10; Euclid truck driver, road grader operator \$1.04; general labourer, dumpman on dump 95 cents. Crushing and drying—millwright "A" \$1.09, jaw crusher feeder \$1 and \$1.01; jaw crusher oiler 98 cents; cone crusher man, conveyor man, waste rock and granite picker man, general labourer 95 cents. Milling—millwright \$1 to \$1.09; fibre controlman \$1.12; tester and fibre controlman \$1.09 and \$1.10; tester \$1.04 and \$1.07; grader \$1.02 and \$1.10; fibre spreader 95 cents; sewing machine operator \$1.02; mill control operator \$1.01 to \$1.06; mill carpenter 97 cents to \$1.09, helper 95 cents. Miscellaneous labour—bulldozer operator \$1.09; compressor operator \$1 and \$1.02; powder house man 98 cents; dryer furnace mason \$1.36; loader and piler \$1 and \$1.01. Shops—carpenters, tinsmiths 97 cents to \$1.09; electricians 99 cents to \$1.14 (underground electricians in King Mine get 3 cents more); machinists, mechanics 97 cents to \$1.12; blacksmiths 99 cents to \$1.09; drill steel sharpener 98 cents to \$1.09; electric welders 99 cents to \$1.12; pipefitters \$1.03; shop helpers 95 cents. A class "A" tradesman required to supervise 4 or more employees of his trade shall receive 3 cents per hour extra. Apprentice rates: starting at age 16 or 17—first year 76 cents, increased by 5 cents per hour each year until minimum wage rate of trade is reached in fifth year; starting at age 18 or 19—first year 81 cents, increased by 5 cents per hour each year until minimum trade rate is reached in fourth year; starting at age 20 to 23—first year 83 cents, second year 88 cents, third year 93 cents, fourth year

minimum rate of trade. The above rates are 10 cents per hour higher than the rates for 1948; no collective agreement was signed for 1949. For the duration of the present agreement, to the above rates will be added a *cost-of-living bonus* of 40 cents per week for every increase of one full point in the Bureau of Statistics' "Cost-of-Living Index" above 159.6 (index figure for January, 1949); in the event that the index should exceed 165.6 the cost-of-living bonus is to be adjusted downward on the same basis. The bonus shall be calculated on a daily basis and shall apply only to normal working days (not less than 4 hours) and to paid holidays.

Provision is made for *grievance procedure, seniority rights* and *safety* of employees.

THETFORD MINES, P.Q.—JOHNSON'S COMPANY LIMITED AND LE SYNDICAT NATIONAL DES TRAVAILLEURS DE L'AMIANTE DE JOHNSON'S COMPANY INC. (NATIONAL SYNDICATE OF ASBESTOS WORKERS).

Agreement to be in effect from January 1, 1950, to December 31, 1950, and thereafter from year to year, subject to notice. This agreement is similar to the one between Asbestos Corporation Limited and Le Syndicat National des Travailleurs de L'Amiante de L'Asbestos Corporation Limited Inc., summarized above.

ASBESTOS, P.Q.—CANADIAN JOHNS-MANVILLE COMPANY LIMITED AND JOINTLY THE SYNDICAT NATIONAL DE L'AMIANTE D'ASBESTOS INC., AND THE FEDERATION NATIONALE DES EMPLOYES DE L'INDUSTRIE MINIERE, INC.

Agreement, following provincial conciliation, to be in effect from February 1, 1950, to January 31, 1951, and thereafter from year to year, subject to notice. Each new employee at time of employment will be notified of the existence of this agreement and that the union is the exclusive bargaining agent. There shall be no discrimination, intimidation, interference, restraint or coercion against any employee because of membership or non-membership in the union.

*Check-off*: the company shall, for the duration of this agreement, deduct union dues monthly from the wages of all employees who so authorize and remit same to the union.

*Hours*: 8 per day, 48 per week. *Overtime* at time and one-half will be paid for work in excess of 8 hours in any 24-hour period, or 48 hours in any work-week, whichever results in greater pay, provided that, when a shift of more than 8 hours is established by agreement in order to permit completion of a 48-hour work-week in less than 6 full working days, the overtime rate will be paid only for hours worked in excess of such longer shift. Time and one-half will also be paid for work on Sundays and on 5 specified holidays; an additional 4 specified holidays are *paid holidays* (The 1948 agreement did not provide for any paid holidays), and work on these will be paid for at double time and one-half: If an employee is called back to work or reports on call-duty on a Sunday or holiday he shall receive a minimum of 4 hours at straight time or pay for the hours worked at the appropriate rate, whichever is greater.

*Vacations with pay*: after 1 year's continuous service 1 week, after 3 years' continuous service 2 weeks and after 25 years' continuous service 3 weeks (The 1948 agree-

ment provided for 1 week after 1 year's and 2 weeks after 5 years' continuous service). There will be a general plant shutdown in June or July, 1950, and it is intended that all vacations will be taken during this period.

**Hourly wage rates for certain classes:** Mining department, open pit—electric shovel operator \$1.33; gas shovel operator \$1.20; grader operator \$1.09; haulage truck operator, blaster \$1.10; connector, tamper \$1.07; jack bit grinder, powder magazine man, primary driller, primary loader \$1.02; blacksmith \$1.04; bulldozer operator \$1.09 and \$1.13; pumpman 99 cents; yard labour, starting 95 cents, after 6 months 96 cents; shovel fitter \$1.14; shovel repairmen \$1.05 and \$1.09; welder \$1.18. Railway department—freight conductor \$1.17; electric loco. engineer \$1.26, freight engineer \$1.29, brakemen \$1.02 to \$1.05; freight fireman \$1.13; other firemen \$1.09; car repairmen \$1.02 and \$1.07; locomotive fitter \$1.13; carpenter \$1.11; motor mechanic \$1.29; weighmaster, dumper \$1.02; trackmen 96 to 99 cents. Milling department—baggers 95 cents; sewers, shippers 99 cents; belt conveyor attendant 98 cents; cone crusher attendant, fiberizer attendant, inventory checker \$1.01; cottrell operator \$1.06; dryer fireman, fibre storage attendant \$1; feeder 96 cents and \$1; fibre picker janitor 95 cents; lift truck operator, pay loader operator \$1.09; crushermen 99 cents and \$1; XZ mill operator \$1.03; millwright \$1.05 to \$1.11; tinsmiths \$1.05 and \$1.10; bricklayer \$1.20. Mine department, underground—blaster \$1.16; brakeman, crusherman \$1.11; diamond driller \$1.21; deckman \$1; drill fitter, hoistman (surface) \$1.13; dryman, labourer (surface) 95 cents; rigger, loader operator, mobile crane operator \$1.15; mucker \$1.02; nipper, scoop-mobile operator \$1.05; powderman, tippelman \$1.09; pumpman \$1.06; steel worker \$1.12 and \$1.17, helper \$1.03; skip tender topman \$1.17; trackman \$1.03. Apprentices—first year 81 cents, second year 87 cents, third year 94 cents, fourth year \$1, thereafter trade rate. The above rates represent a 10 cents per hour increase over the 1948 rates; no collective agreement was signed for the period February 1, 1949, to January 31, 1950. To the above rates will be added, for the duration of the present agreement, a *cost-of-living bonus* of 40 cents per week for every increase of one full point above 159.6 (index figure for January, 1949) in the Bureau of Statistics' "Cost-of-Living Index"; in the event that the index should exceed 165.6, the cost-of-living bonus is to be adjusted downward on the same basis. The bonus shall be calculated on a daily basis and shall apply only to normal working days and to paid holidays.

Provision is made for *seniority rights, grievance procedure, apprenticeship plan* and *safety* of employees.

## Manufacturing

### Vegetable Foods

WINNIPEG, MAN.—CHRISTIE, BROWN AND COMPANY LIMITED AND UNITED BAKERY AND CONFECTIONERY WORKERS, LOCAL 476.

Agreement to be in effect from November 1, 1949, to October 16, 1950, and thereafter from year to year, subject to 30 days' notice. This agreement is similar to the one pre-

viously in effect (L.G., May, 1949, p. 598), with the following changes:—

**Hours of work** for production staff are reduced from 45 to 44 hours per week—9 hours per day Monday through Thursday, 8 hours on Friday. *Overtime* is paid at time and one-half for work in excess of above hours.

**Hourly wage rates for certain classes:** females—machine operator 87 cents; general operator 60 to 76 cents; males—machine captain, ovenman \$1.07; assemblyman \$1.02; assistant mixers 97 cents to \$1.07; mechanics \$1.10 to \$1.25; day engineer \$1.05, engineer watchman 95 cents, general 77 to 97 cents; shipper \$45.80 per week, assistant shipper \$30.80 to \$40 per week, deliveryman \$44.80 per week. Starting and step-up rates: for females and boys under 18 years 60 cents, increased to 62 cents after one month, to 64 cents after 2 months and to 68 cents after 4 months; for males 77 cents, increased to 80 cents after one month, to 83 cents after 2 months and to 87 cents after 4 months; for agency and shipping branch \$30.80 per week, increased to \$32 per week after one month, to \$33.20 after 2 months and to \$35.40 after 4 months. Additional raises based on merit will be granted. At the end of 12 months actually worked time for the company employees shall reach the maximum of their classification. The above rates represent a general increase of 5 cents per hour over the previous rates.

## Textiles and Clothing

KINGSTON, ONT.—CANADIAN INDUSTRIES LTD. (NYLON DIVISION) AND UNITED MINE WORKERS OF AMERICA, DISTRICT 50, CANADIAN CHEMICAL DIVISION, LOCAL 13160.

Agreement to be in effect from December 12, 1949, to December 11, 1950. Either party may, on 10 clear days' notice in writing, require the other party to enter into negotiations for the renewal of the agreement within 2 months prior to the expiry date and both parties shall thereupon enter into such negotiations in good faith. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, March, 1948, p. 188, with the following changes:—

**Check-off:** both parties agree to a voluntary irrevocable check-off of union dues.

**Paid holidays:** the 8 statutory holidays observed are now paid holidays provided that an employee does not refuse to work on such holidays when required or scheduled to do so and that he is not absent without good cause on the scheduled working day immediately preceding or succeeding such holiday. If an employee is required to work on a paid holiday he shall be paid double time provided he is entitled to the paid holiday; otherwise he shall be paid time and one-half.

**Hourly wage rates for certain classes:** Production department—package preparation and winding service operator 65 cents; doubling operator, sizing operator, scale clerk, uptwist inspector and spooling operator, 77 cents; coning operator and final inspector 81 cents; operator instructor, winding, 86 cents, spinning and twisting \$1.09; upgrader and reinspector 86 cents; carton preparation, inspection service, package preparation service and staple service operators and shipping trucker 88 cents; drawtwist service and shipping operators and

baler 92 cents; staple creel and uptwist operators 96 cents; solution operator \$1; drawtwist and staple operators \$1.04; spinning operators and spinning day man \$1.09; Dowtherm and Inert gas, polymer casting and polymer preparation operators \$1.16. Technical department—77 cents to \$1.16. Works engineering department—carpenter, electrician, instrument mechanic, mechanic, pipefitter: first class \$1.28, second class \$1.14, third class \$1.01; bulldozer operator and textile guide inspector \$1.07; cement finisher \$1.14; gardener, labourer, textile machine cleaner 92 cents; janitor 88 cents; insulation mechanic \$1.22; machinist, first class \$1.28, second class \$1.14; oiler, first class \$1.07, second class 96 cents; painter, first class \$1.22, second class \$1.07; sheet metal worker \$1.22; shops helper 96 cents; stationary engineer 96 cents to \$1.31; textile mechanic, first class \$1.22, second class \$1.14, third class \$1.01; welder, first class \$1.28, second class \$1.14. Personnel department—chef, first class \$1.16, second class \$1.04; cook 86 cents, assistant cook 81 cents; cafeteria night man 96 cents; cafeteria server, days 68 cents, shift 72 cents, shift helper 68 cents. Office department—station wagon driver and stores attendant \$1; truck driver and stores receiver \$1.04; stores material handler 88 cents.

### Wood Products

PEMBROKE, ONT.—PEMBROKE SHOOK MILLS LIMITED AND THE NATIONAL UNION OF WOODWORKERS, LOCAL 13.

Agreement to be in effect from January 9, 1950, to October 27, 1950. Either party may begin negotiations for a new agreement 30 days before the expiry date. The company recognizes the union as the certified bargaining representative for all eligible employees. There shall be no discrimination, coercion, restraint or intimidation because of membership or non-membership in any lawful association or union.

**Union security:** all employees presently members of the union in good standing will remain members in good standing during the life of this agreement. Each member shall have 2 weeks immediately following the expiry date of this agreement to withdraw his membership if he so desires. No employee shall be considered a member of the union until he has had 3 months' continuous service with the company.

**Check-off:** the company agrees to deduct union dues monthly, for the duration of this agreement, from the pay of all eligible employees who so authorize and to remit same to the union.

**Hours:** the regular working week shall be 48 hours with such additional hours as may be mutually agreed upon within the regulations of the Department of Labour. On request of the company the union agrees to consider extending working hours of any one or more departments up to 55 hours per week at standard rates, if such action will benefit plant production, customer requirements and the employees as a whole. A decision by the union so to increase hours or to work on a legal holiday shall be considered binding on all employees concerned. **Overtime** at time and one-half shall be paid for all work (except emergency repairs) required to be done in excess of the 48-hours or the standard working week and for work done on Sundays and on 7 specified

holidays. Overtime rates are not applicable to employees engaged in maintenance, power and service departments, and whose work hours are governed by conditions over which the company cannot exercise control, such as log handling. The opportunity of sharing overtime work shall be made equally available to all those normally performing that work. Employees will be granted one 10-minute rest period each day except Saturday.

**Vacations with pay:** after 1 year of continuous service 1 week, after 5 years 1 week and 1 day, after 10 years 1 week and 2 days, after 15 years 1 week and 3 days, after 20 years 1 week and 4 days and after 25 years 2 weeks. Matters pertaining to computation of pay for one week vacations shall be as per government regulations.

**Wage rates:** the existing schedule of job classifications and wage rates shall be a part of this agreement and is to be maintained during the life of this agreement. Where females are employed on jobs heretofore performed by men and they can perform same unassisted they shall receive equal pay for equal work. The existing schedule of job ratings and incentives shall remain effective during the life of this agreement subject to change as changes in equipment and manufacturing procedures warrant.

Provision is made for *seniority rights, grievance procedure* and the *safety and health* of employees.

BRITISH COLUMBIA COAST REGION—CERTAIN FIRMS ENGAGED IN MANUFACTURING OF ROUGH AND DRESSED LUMBER, PLYWOOD, VENEER, BOXES, SHINGLES, DOORS, ETC. AND INTERNATIONAL WOODWORKERS OF AMERICA.

The agreements summarized above under "Logging" apply also to a number of companies engaged in manufacturing above products.

SOUTHEASTERN INTERIOR (CRANBROOK) AREA, B.C.—CERTAIN LUMBER AND OTHER WOOD PRODUCTS MANUFACTURERS AND INTERNATIONAL WOODWORKERS OF AMERICA.

The agreements summarized above under "Logging" apply also to a number of companies engaged in the above operations.

SOUTHERN INTERIOR (KAMLOOPS AND KELOWNA) AREA, B.C.—CERTAIN LUMBER AND OTHER WOOD PRODUCTS MANUFACTURERS AND INTERNATIONAL WOODWORKERS OF AMERICA.

The agreements summarized above under "Logging" apply also to a number of companies engaged in the above operations.

NORTHERN INTERIOR AREA, B.C.—CERTAIN LUMBER AND OTHER WOOD PRODUCTS MANUFACTURERS AND INTERNATIONAL WOODWORKERS OF AMERICA.

The agreements summarized above under "Logging" apply also to a number of companies engaged in the above operations.

### Metal Products

HAMILTON, ONT.—ROBERTSON-IRWIN LIMITED AND UNITED STEELWORKERS OF AMERICA, LOCAL 4166.

Agreement to be in effect from December 7, 1949, to December 7, 1950. The company recognizes the union as the sole bargaining agent for all eligible employees.

**Check-off:** the company agrees to deduct monthly from the earnings of employees who so authorize union dues and to remit same to the union. The authorization shall be irrevocable for the duration of this agreement.

**Hours:** 8 per day Monday through Friday, a 40-hour week. **Overtime** at time and one-half shall be paid for the first 4 hours worked in excess of any regular working shift and for the first 8 hours worked on Saturdays (except where a shift ends or starts on Saturday), double time thereafter and for work on Sundays and on 8 specified *paid holidays* (previously only 6 holidays were paid for), except where a shift ends or starts on a Sunday or a statutory holiday and involves working 4 or fewer hours on such day.

**Vacations with pay:** one week in accordance with the Hours of Work and Vacations with Pay Act 1944 as amended and the regulations established thereunder to all employees covered by this agreement; in addition, employees with 2 years' continuous service will be granted one day's, employees with 3 years' service 2 days' and employees with 4 years' service 3 days' vacation pay. Employees with 5 or more years' service will be granted 2 weeks' vacation with pay.

**Hourly wage rates:** power shear operators \$1.02 to \$1.22; press brake operators \$1.07 to \$1.27; punch press operators 97 cents to \$1.17; powerroll operator, circular shear and flange operator, angle roll operator, roll corrugator operator, burner, spotwelder, painter, handyman \$1.07 to \$1.17; welders 97 cents to \$1.27; culvert operator \$1.05 to \$1.25; assembler and fitter \$1.02 to \$1.12, helper 97 cents to \$1.07; general factory help 92 cents to \$1.02; warehouseman, shipping and receiving helpers, truck drivers 97 cents to \$1.07; master maintenance mechanic \$1.27 to \$1.37; maintenance mechanics, maintenance electricians \$1.07 to \$1.27; die setters \$1.25 to \$1.45; Ford truck operator \$1.04 to \$1.14; tank tester \$1.02 to \$1.12. In practically all cases the above rates represent an increase of 5 cents per hour over the rates previously in effect.

Provision is made for *seniority rights, grievance procedure* and *safety* of employees.

### **Non-metallic Minerals and Chemicals**

ASBESTOS, P.Q.—CANADIAN JOHNS-MANVILLE COMPANY LIMITED AND JOINTLY THE SYNDICAT NATIONAL DE L'AMIANTE D'ASBESTOS INC. AND THE FEDERATION NATIONALE DES EMPLOYES DE L'INDUSTRIE MINIERE INC.

The agreement summarized above under "Mining" applies also to the "Canadian Products Division" except for wage rates.

**Hourly wage rates** for certain classes: Paper department—back tender \$1.11, third hand \$1.02, fourth hand 99 cents, baler operator, rag cutter 95 cents; beater engineer \$1.13; beater 97 cents to \$1.04; machine tender \$1.24; oiler \$1.01; wood chipper operator \$1. Roofing department—coaters \$1.03 and \$1.05; drum man, packer and tier, take-off man \$1.01; filler man, trucker (hand) 95 cents; Merrill process man \$1.03; saturator \$1.06; shingle chopper operator \$1.10; silo man \$1.04; splicer 99 cents; winder operator \$1.02; wrapper 98 cents. Pipe covering department—band saw operator \$1.01; corrugator cutter, liner cutter

99 cents, corrugator operator \$1.05; packer \$1.01 and \$1.03; sawmen 99 cents to \$1.04; stitcher 96 cents; trucker and miscellaneous helper 95 cents. Rigid shingles department—bundler (automatic) \$1.02; die man \$1.07; dry mix operator \$1.06, helper \$1; ground scrap operator 99 cents; punch press operators \$1.04 and \$1.06; punch press racker \$1.03 and \$1.04; sorter, veneer man \$1.03. Maintenance department—boiler fireman \$1.06; carpenters \$1.03 and \$1.11; crate maker, painter \$1.02; electricians \$1.13 and \$1.22; machinists \$1.10 and \$1.18; ribbon die maker \$1.07; saw filer \$1.10; steam fitters, tinsmiths \$1.05 and \$1.10; welders \$1.14 and \$1.18. Textile department—card operator, oiler \$1.01; set up man \$1.05; weavers (M) 98 cents and \$1.01. Factory general—labourer 95 cents; girls 82 cents; textile trainees (girls), first 4 weeks 74 cents, after 4 weeks 82 cents.

TORONTO, ONT.—REXALL DRUG COMPANY LIMITED AND INTERNATIONAL CHEMICAL WORKERS' UNION, LOCAL 279.

Agreement to be in effect from December 10, 1949, to December 9, 1950, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees.

**Union security:** both parties agree that it is desirable that all employees take advantage of the privilege of membership in the union. All future employees shall, as a condition of their employment, become members of the union upon completion of three months of continuous service and together with all present employees who are now, or who may later become members of the union shall remain members in good standing during the life of the agreement as a condition of employment.

**Check-off:** the company agrees to deduct, upon voluntary authorization, from the pay of each new employee after three months of continuous service his union initiation fee and thereafter monthly his union dues and to remit same to the union; the authorization is irrevocable.

**Hours:** 8 per day 5 days a week, a 40-hour week. **Overtime:** time and one-half shall be paid for work performed in excess of 8 hours on any standard work day or on the sixth and seventh days of an employee's work week. There will be *rest periods* in the morning and afternoon of 10 minutes each. Employees will be granted 8 specified *paid statutory holidays*, provided they are not absent from work on the work day immediately preceding or the day immediately following the holiday; if requested to work on any of the paid holidays employees shall be given equivalent time off with pay.

**Vacation with pay:** one week after one year's service, 2 weeks after 4 years' service and 3 weeks after 25 years' service.

**Wages:** the wage rates in effect prior to December 10, 1949, are increased (except for beginners) by 7 cents per hour in the case of all males and by 3 cents in the case of all girls; in the case of piece work 3 cents per hour are added to the base rate of 74 cents and an equivalent of 3 cents per hour to the piece rates.

Provision is made for *grievance procedure* and *seniority rights*.

## Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,\* include the extension of one new agreement, the repeal of one, and the amendment of ten others. These include, in addition to those summarized below, the amendment of the agreement for barbers and hairdressers at Sherbrooke, published in the *Quebec Official Gazette*, issue of January 21; the amendment of the agreements for barbers and hairdressers at Quebec, for the fine glove and the work glove industries in the province, published January 28; for garage and service station employees at Quebec in the issue of February 4; the amendment of the agreement for the building trades at Sherbrooke in the issue of February 11, and the amendment of the agreement for jewellers and clockmakers in the counties of Drummond, Arthabaska, etc. published February 18.

A request for a new agreement for the building materials industry in the province and requests for the amendment of the agreements for the corrugated paper box industry in the province, for the printing trades at Quebec and for trade and office employees at Arvida were published January 28. Requests for amendments to the agreements for retail stores at Chicoutimi, for the uncorrugated paper box industry at Quebec, for the building trades, and for truck drivers at Montreal were published in the *Quebec Official Gazette*, issue of February 18.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties.

\* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Reference to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

## Manufacturing

### Pulp, Paper and Paper Products

#### UNCORRUGATED PAPER BOX INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated January 25, and gazetted February 4, amends the previous Orders in Council for this industry (L.G., Dec., 1947, p. 1802; Aug., 1948, p. 871; March, 1949, p. 301; Oct., p. 1246).

The number of firms comprising the contracting parties of the first part is decreased by 2 firms which have discontinued the fabrication of paper boxes.

New Year's Day, provided employees work the regular working day preceding and the regular working day following, shall be observed as a paid holiday.

*Minimum hourly wage rates in zone 1 (Montreal district) for female employees: set-up department—hand worker (first class) 57 cents; hand worker (second class), covering machine operator, staying machine operator, Stoke & Smith machine operator, top-piece machine operator 51 cents; hand-fed machine table gummer, feeder (four-corner machine) 49 cents; folding department—stitcher operator 51 cents; feeder (automatic gluing machine), feeder (Brightwood machine), stripper, folder 49 cents; general—forelady 61 cents; tier 51 cents; operators of machines not classified above, division assembler, packer 49 cents. (The above rates are an increase of 4 cents per hour.) Basic hourly wage rates for female employees are from 40 cents during the first 6 months to 48 cents per hour during the fourth 3 months.*

*Minimum hourly wage rates in zone 1 for male employees: set-up department—circular saw operator, splitter operator 72 cents, end-piece operator (single) 77 cents (double) 80 cents; four-corner stayer operator 84 cents; punch operator, feeder (four-corner machine) 71 cents; scorer 88 cents; folding department—automatic gluing machine operator 91 cents; Brightwood machine operator 84 cents; Colt press operator 81 cents; cylinder box press operator 86 cents; die maker 98 cents (assistant) 72 cents; feeder (Brightwood machine), feeder (Colt press), feeder (cylinder box press) 71 cents; stripper 68 cents; general—foreman \$1.10 (assistant) 96 cents; bale press operator 70 cents; cutter on knife (first class) 84 cents; cutter on knife (second class), truck driver 74 cents; foreman (machinist) \$1.06; machinist 88 cents; maintenance and repairman 76 cents; shipper 83 cents; boiler fireman 67 cents. (The above rates represent in most cases an increase of 6 cents per hour.) Minimum hourly rate for stationary engineman remains unchanged at 78 cents. Minimum weekly wage rate for chief engineman (second class) is increased by 55 cents per week to \$43.50; chief engineman (third class) \$37.25 (an increase of 30 cents per week). Basic hourly wage rates for male employees are from 50 cents per hour during the first 3 months to 65 cents per hour during the fourth 3 months.*

*Vacation in zone 1 (Montreal district): employees with 4 months of service or more for the same employer are entitled to a continued paid vacation of one-half day for each month of service up to one complete working week. Previously the minimum length of service was fixed at 6 months or more.*

## Metal Products

### GARAGES AND SERVICE STATIONS, MONTREAL.

An Order in Council, dated February 8, and gazetted February 18, makes obligatory the terms of a new agreement between The Montreal Automobile Trade Association Limited, The Automobile Section of the Retail Mercants Association of Canada, Inc., The Canadian Automotive Wholesalers Association, Eastern Division, Montreal, "L'Association canadienne des Distributeurs d'Essence, inc.", and "L'Union independante des Employés de Garage." Agreement to be in effect from February 18, 1950, to February 17, 1951, and thereafter from year to year, subject to notice.

The agreement governs employers, artisans and wage-earners in garages, gasoline stations, service stations, parking grounds, scrapping yards and machine shops. It does not apply to commercial and industrial establishments, to establishments manufacturing motor vehicles or engaged in the assembling of parts used on new motor vehicles nor to public bus or truck transport concerns, inasmuch as they limit their services exclusively to their own needs and do not work for public customers.

*Territorial jurisdiction* is the Island of Montreal.

*Hours:* for day and night journeymen and apprentices, 9 per day, 4 on Saturday, a 49-hour week; for garage day service men, 60 hours per week distributed between 7 a.m. and 7 p.m.; garage night service men, 72 hours per week distributed between 7 p.m. and 7 a.m. Service men in gasoline and service stations, 10 per day, 60 in a week. Night watchmen 72 per week. The weekly duration of work of service men (day or night) in garages, gasoline and service stations shall not exceed 72 hours including overtime. (Hours for garage day service men and service men in gasoline or service stations are increased by 6 weekly; for garage night service men by 12 per week; other classifications unchanged.)

*Overtime:* for day journeymen and apprentices, time and one-half for all work in excess of 49 hours per week and for work between 7 p.m. and 11 p.m. from Monday to Friday inclusively and between 12 noon and 5 p.m. on Saturday; double time between 11 p.m. and 7 a.m. from Monday to Saturday morning inclusively and after 5 p.m. on Saturday; for night journeymen and apprentices: time and one-half for work in excess of 49 hours per week and after 7 a.m. from Monday to Friday inclusively, double time between 11 a.m. and 7 p.m. Monday to Saturday inclusively. For garage day service men: time and one-half for work in excess of 60 hours per week and for all work performed after 7 p.m.; service men in gasoline and service stations: time and one-half for hours worked in excess of 60 per week between 7 a.m. and 7 p.m. and from 7 p.m. to 10 p.m., thereafter, double time to 7 a.m. Double time is paid for work on Sundays and 6 specified holidays, 3 of which are paid holidays, to all employees except garage service men.

*Minimum hourly wage rates:* blacksmiths, wheelwrights, bodymen, electricians, machinists, mechanics, carpenters, upholstery cleaners, upholstery makers, painters, lettering painters, radiator repairers, gas welders, electric welders, dyers, sheet metal workers, testers, glaziers and vulcanizers, etc. (day

journeymen)—first class \$1.05 per hour, second class 90 cents, third class 75 cents; night journeymen—first class \$1.15 per hour, second class \$1, third class 85 cents; apprentices (day) from 40 cents per hour during the first 6 months to 65 cents in the third year; apprentices (night) from 45 cents per hour during the first 6 months to 75 cents in the third year. (Apprenticeship previously completed only after 4 years.) Demolishers (less than 4 months' experience in the automobile industry) 55 cents; all others 65 cents; garage day service men 55 cents; garage day service men (less than 4 months' experience) 40 cents; garage night service men 60 cents; garage night service men (less than 4 months' experience) 50 cents; service men in gasoline and service stations 60 cents per hour. (In most cases the above rates are similar to those previously in effect excepting day journeymen (first class) whose rates are increased 5 cents per hour, and demolishers whose rates are decreased 15 cents per hour). Night watchmen class A \$36 per week and class B \$43.20 per week are added classifications. Certain changes have been made in the above classifications where more than one class of employee is concerned.

*Guaranteed weekly pay:* journeymen, tradesmen and apprentices are guaranteed a minimum of 40 hours' pay every week with the total hours of voluntary absence and for loss of time for being late to be deducted from this 40 hours' guarantee. If, during a regular working week, there should be a holiday or holidays, other than the 6 already specified, the employer may, if he chooses, close his establishment and reduce the 40 hours' guarantee to 35 hours' salary. All journeymen and apprentices called to work less than the regular day are entitled to 4 hours' pay at the regular rate.

*Vacation:* 6 working days with pay annually after one year's service, one half-day for each calendar month of service to those employed less than one year; 2 continuous weeks with pay for employees with 5 or more years' service. Vacation pay shall be equal to the wages an employee would have earned during his vacation period (if he is paid on a time basis) or 2 per cent of the wages earned during the period of service entitling him to his vacation (May 1-April 30), if he is paid on any other basis.

Provision is made for apprenticeship regulations and uniforms.

### RAILWAY CAR AND BUS MANUFACTURING, MONTREAL.

An Order in Council, dated January 18, and gazetted January 28, repeals the Order in Council making this agreement obligatory and later amendments (L.G., Nov., 1948, p. 1246; Feb., 1950, p. 209).

## Construction

### BUILDING TRADES, HULL.

An Order in Council, dated January 25, and gazetted February 4, amends the previous Order in Council for this industry (L.G., Jan., 1950, p. 78) by providing that the territorial jurisdiction now comprises the counties of Hull, Gatineau, Papineau, Pontiac, Labelle and Temiscamingue. This area is divided into 2 zones: zone 1, the city of Hull and territory included in a radius of 10 miles from its limits; zone 2,

the county of Hull (with the exception of the city of Hull and territory included in a radius of 10 miles of its limits) and the counties of Gatineau, Papineau, Pontiac, Labelle and Temiscamingue.

However, outside the cities and towns of zone 2, the decree applies only to construction contracts amounting to \$75,000 or more, wages and material included.

## Service

### *Business and Personal*

#### TAVERN EMPLOYEES, QUEBEC.

An Order in Council, dated February 8, and gazetted February 18, amends the previous Orders in Council for this industry (L.G., Dec., 1946, p. 1774; Nov., 1948, p. 1249 and previous issues). Agreement to be in effect from December 1, 1949 to December 1, 1950, and thereafter from year to year, subject to notice.

This amendment provides for 7 specified paid holidays (unless such holiday falls on Sunday). In addition Ash Wednesday and polling day in the constituency where any

Federal, Provincial or Municipal election is being held shall be considered as holidays with pay but an employer may require his employees to do the usual cleaning work in the tavern. (No holidays provided for previously.)

**Minimum wage rates:** employees paid by the week—barman \$35; waiter \$27; apprentice or beginner \$20; employees paid by the hour—barman 65 cents; waiter 50 cents; apprentice or beginner 40 cents. (The rates shown above represent increases ranging from \$2 to \$5 per week for weekly rated employees and for hourly rated employees from 6 to 10 cents per hour). Barmen (assistant) \$32 per week or in the case of employment by the hour 60 cents is an added classification. Occasional employees are entitled to a minimum of 2 hours' pay per call according to the wage scale determined for his category of employment or a minimum of 45 cents per hour.

**Guaranteed weekly wage:** in the case of employment by the hour, the wages for 50 hours of work per week is guaranteed and shall be paid to regular employees of either category even if such employees worked less than 50 hours during the week.

## Industrial Standards Acts, Etc.

### Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Nova Scotia, Ontario, Saskatchewan and Alberta.

Recent proceedings under the Industrial Standards Acts, etc.\* include, in addition to those summarized below: a new schedule for the beauty culture industry at Swift Current, published in *The Saskatchewan Gazette*, issue of December 10, and the amendment of the schedule for the baking industry in the Prince Albert zone, published December 31. New schedules for the barbering industry in the Aurora and Newmarket zones; in the Bracebridge, Gravenhurst and Huntsville zones; in the Carleton Place and Perth zones; in the Brampton zone; in the Elora and Fergus zones; in the Midland, Penetanguishene, Port McNicoll and Victoria Harbour zones and in the North Bay zone were published in *The Ontario Gazette*, issue of January 28. The amendment of the schedule for the barbering industry in Saskatchewan was published in *The Saskatchewan Gazette*, issue of February 4, 1950.

## NOVA SCOTIA

### Construction

#### CARPENTERS, SYDNEY.

An Order in Council, dated January 5, and gazetted January 25, makes binding the terms of a new schedule for carpenters at Sydney to be in effect until May 31, 1950, and thereafter from year to year, subject to notice.

\* In six provinces—Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations.

Summaries of these Acts and amendments have been published in the *LABOUR GAZETTE*, as follows: Nova Scotia—Industrial Standards Act, in issues of July, 1936, p. 604, August, 1937, p. 861, July, 1939, page 671, August, 1946, p. 1102, July, 1948, p. 749; New Brunswick—Industrial Standards Act, in issues of October, 1939, p. 996, August, 1941, p. 156, December, 1944, p. 1551, December, 1948, p. 1434; Ontario—Industrial Standards Act, in issues of June, 1935, p. 534, May, 1936, p. 410, May, 1937, p. 505, May, 1938, p. 501, June 1939 p. 574 August, 1948, p. 890, August, 1949, p. 999; Manitoba—Fair Wages Act, Part II, in the issues of May, 1938, p. 499, June, 1939, p. 570, February, 1941, p. 137, June, 1942, p. 696, June, 1946, p. 826; Saskatchewan—Industrial Standards Act, in the issues of June, 1937, p. 635, May, 1938, p. 507, June, 1939, p. 581, June, 1940, p. 559, June, 1948, p. 627; Alberta—Industrial Standards Act in issues of June, 1935, p. 534, June, 1936, p. 501, June, 1937, p. 640, June, 1938, p. 633, June, 1939, p. 567. (This Act was changed to Alberta Labour Act in 1947), June, 1947, p. 837.

*Hours:* 8 per day, Monday through Friday, a 40-hour week.

*Overtime:* time and one-half for all work performed in excess of 8 hours per day and for all time worked in excess of 7 hours on shift work; double time for work on Saturday, Sunday and 8 specified holidays. The vacation pay of 2 cents per hour is not included in calculating overtime pay.

*Minimum hourly wage rates* for journey-men carpenters are increased by 5 cents to \$1.35 per hour. As noted below an additional 2 cents per hour is paid as vacation pay. Apprentices shall receive 68½ cents per hour during the first 500 hours to \$1.23 during the eighth 1,000 hours. When necessary to work 2 or more shifts in 24 hours, workers employed between 5 p.m. and 8 a.m. shall receive 8 hours' pay for 7 hours' work. The advisory committee may fix a lower rate of wages for handicapped workers.

*Vacation:* 2 cents per hour is added to the minimum hourly rate in lieu of vacation with pay.

Apprentices are governed in regard to hours, overtime and holidays the same as journeymen.

## ONTARIO

### Manufacturing

#### Textiles and Clothing

##### MEN'S AND BOYS' CLOTHING INDUSTRY, PROVINCE OF ONTARIO.

An Order in Council, dated January 13, and published in *The Ontario Gazette*, January 28, makes binding throughout the Province of Ontario the terms of a new schedule governing the men's and boys' clothing industry from February 7, 1950, "during pleasure".

*Hours:* 8 per day, a 40-hour week in the counties of Halton, Ontario, Peel, Wentworth and York; 8 per day, 4 on Saturdays, or 9 per day Monday through Thursday, 8 on Fridays, a 44-hour week in either case, in all other parts of Ontario.

*Overtime* and work on 8 specified holidays (an increase of one) is payable at the rates shown in the accompanying table.

*Minimum hourly wage rates:* see table on page 521.

The advisory committee is authorized to fix a lower minimum rate for persons only partly subject to the provisions of this schedule or who are handicapped.

##### MEN'S AND BOYS' HAT AND CAP INDUSTRY, PROVINCE OF ONTARIO.

An Order in Council, dated January 26, and gazetted February 11, makes binding the terms of a first schedule for the men's and boys' hat and cap industry in the province of Ontario, to be in effect from February 21, 1950, "during pleasure".

*Hours:* 8 per day, Monday through Friday, a 40-hour week.

*Overtime:* work performed at any time other than during the regular working periods is payable at the rate of time and one-quarter; double time on Good Friday and Labour Day. Except for one hour Monday to Thursday inclusive no overtime work shall be done without a permit from the advisory committee.

*Minimum hourly wage rates:* class A (cutter) 83½ cents; class B (operator, machine) 77½ cents; class C (blocker) 61 cents; class D (lining maker, machine) 51 cents; class E (hand finisher) 43 cents; class F (general hand) 42 cents.

The advisory committee is authorized to fix a lower minimum rate of wages for employees whose work is only partly subject to the terms of the schedule, who perform work included in more than one classification of employees or who are handicapped.

## SASKATCHEWAN

### Manufacturing

#### Fur and Leather Products

##### SHOE REPAIRERS, REGINA.

An Order in Council, dated December 13, and gazetted December 24, amends the previous Order in Council for this industry (L.G., Oct., 1947, p. 1476). This amendment to come into force January 2, 1950.

*Minimum weekly wage rates* for inexperienced employees are increased by \$2.50 per week and their rates are now \$21 per week during first 6 months to \$25 during the third 6 months, thereafter \$27.50 per week.

## ALBERTA

### Manufacturing

#### Vegetable Foods

##### BAKERS, CALGARY.

An Order in Council, dated December 23, and gazetted January 14, makes binding the terms of a new schedule for bakers in Calgary, to be in effect from January 24, 1950, to January 23, 1951, or thereafter, "during pleasure".

*Hours:* 8 per day, 43 in a week for all employees (male or female). Weekly hours are reduced by 2.

*Overtime:* time and one-half for all time worked in excess of the maximum standard hours and for work on 9 specified paid holidays (an increase of 1) provided one day off in lieu thereof is not allowed within 7 days of such holiday. Holidays with pay shall only be granted provided employees work the full working day preceding and the full working day following said holiday. No overtime work shall be performed without the permission of the advisory committee.

*Minimum weekly wage rates* for male and female employees: ovenmen, doughmen, cake bakers \$44.50; dividermen, moulder men, bench hands \$42; assistant doughmen, assistant ovenmen, assistant moulder men, assistant dividermen \$34.50 per week plus \$1 per week increase every 6 months to \$38.50; bread racker \$30.50 per week plus \$1 per week increase every 6 months to \$34.50 per week; head shipper \$37.50; assistant \$32.50; wrapping machine operator (in charge) \$34.50; assistant \$32.50; mechanics \$39.50; maintenance men \$36.50; janitors, cleaners and pan washers \$31.50 per week plus \$1 per week increase every 6 months to \$34.50; apprentices \$24.50 during the first 6 months to \$38.50 during the eighth 6 months, thereafter \$42 per week.

Minimum wage rates for female employees: female help in bread shop—rackers, bread

wrappers, cake machine wrappers \$26.50 per week during the first 3 months, thereafter \$29.50; female help in cake shop on bench work—cookie and doughnut machine operators \$24.50 during the first 6 months to \$28.50 during the second 6 months, thereafter \$32.50; cake depositor operator \$27.50 during the first 6 months to \$31.50 during the second 6 months, thereafter \$35.50; female help in cake shop—wrappers, finishers, packers, box makers and liners \$24.50 per week plus \$1 per week increase every 6 months to \$31.50. The foregoing rates, except those for female employees (whose rates remain unchanged), represent an increase of \$6.50 per week (L.G., Jan., 1949, p. 68). The following new classifications are added: checkers and packers (female) \$28 per week during the first 3 months, thereafter \$31; receiver \$36.50; machine pan greaser \$36.50. Employees performing work between the hours of 9 p.m. and 6 a.m. are entitled to extra compensation of 5 cents per hour. The minimum rate of wages for temporary or part-time employees (male or female) employed on an hourly or daily basis shall be 10 cents per hour over the single hourly rate of weekly employees. If consecutive hours worked are less than 4, employees shall be paid for 4 hours at the above rate. The rate of wages for foremen to exceed that of ovenmen or doughmen.

Graduated wage increases shall be determined as of the original date of employment with the company.

*Vacations:* 2 weeks with pay (to be computed in accordance with existing Provincial Government Legislation) for employees who have one or more years of continuous service with their employers. In the event of termination of services the employees shall receive wages in lieu of vacation as governed by the above legislation.

Uniforms, if required by the company, shall be supplied to employees free of cost.

Apprenticeship regulations are set forth in this schedule.

#### BAKERY SALESMEN, CALGARY.

An Order in Council, dated December 23, and gazetted January 14, makes binding the terms of a new schedule for bakery salesmen, service men and stablemen at Calgary, to be in effect from January 24, 1950, to January 23, 1951, thereafter, "during pleasure".

*Hours:* 8 per day, 48 in a week for salesmen, service men and stablemen. For bakery salesmen hours shall not extend beyond 7 p.m. on week days and 2 p.m. on Wednesdays except in the case of certain special delivery services.

*Overtime:* time and one-half for all work performed in excess of the regular working hours and for 8 specified paid holidays when one day in lieu thereof is not allowed within 30 days of such holiday.

*Minimum weekly wage rates:* experienced salesmen a minimum guarantee of \$42 per week; service men, stablemen \$41.50; assistant stableman, inexperienced salesmen (first 2 months) \$38. (The rate for experienced salesmen remains unchanged; for other classifications the rates represent increases ranging from \$2.50 to \$3 per week.)

*Vacation:* 2 weeks' vacation for all employees who have completed one or more years of continuous service with their employers. Vacation pay shall be computed in accordance with existing Provincial Government Legislation. In the event of termination of services the employees shall receive wages in lieu of vacation as governed by the above legislation.

Uniforms shall be supplied at the employer's expense but must be cleaned and kept in repair by the employee.

(Continued from page 426.)

continued excellent markets for lumber and pulp and paper, have meant a steady and substantial decline in the number of job seekers; since the middle of February, about 20,000 have returned to work. In Quebec and the Maritime provinces, the end of hauling has meant a net increase in the number of job seekers, exclusive of those claiming supplementary benefits. In Newfoundland, March is the month of heaviest unemployment. The provincial government's winter works program has been terminated, other construction work is at a standstill, and fishing does not begin until the end of April. In Ontario, the increase in production in many manufacturing industries has created new job openings, but these have not been sufficient to offset the decline of employment in the logging industry, and the layoffs in the Windsor area in the automobile and parts industry resulting from a strike in the United States. The Prairie region shows little net change, although some hiring is being done on the farms in preparation for spring planting, and work on the pipe line in Alberta is beginning.

Employment in Canada has not been adversely affected by any large scale Canadian strikes, although early in April a major one was threatening in the automobile industry. On April 2, the workers in the Ford Motor Company plant in Windsor took a preliminary strike vote, and a strike scheduled for April 12 was averted only at the last moment. The union voted to accept the company's offer of a \$55 a month pension, which was also the amount recommended by the Ontario conciliation board.

# FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

## Schedules Prepared and Contracts Awarded During January

### (1) *Works of Construction, Remodelling, Repair or Demolition.*

During the month of January the Department of Labour prepared 112 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 84 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

### (2) *Contracts for the Manufacture of Supplies and Equipment.*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Canadian Commercial Corporation. . . . .	6,798	\$16,537,255.39
Post Office. . . . .	16	143,028.91
Public Works. . . . .	4	94,740.00
R.C.M.P. . . . .	2	1,132.65

**Department of Transport**

\* The labour conditions of these contracts contain the General Fair Wages Clauses providing for the observance of current or fair and reasonable rates of wages and hours of labour, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

# LABOUR LAW

## Recent Regulations Under Provincial Legislation

*In British Columbia, a new minimum wage order has been issued covering the undertaking business in certain urban districts for which a minimum of \$33 a week is set. ¶Manitoba has revised the apprenticeship rules for another trade, that of automobile repair and internal combustion engine mechanics, to provide for pre-apprenticeship training and to raise minimum rates of pay during the apprenticeship period.*

### **British Columbia Hospital Insurance Act**

Effective from March 1, two new sections added to the general regulations under this Act by an Order in Council of January 3, gazetted February 9, provide that when an overdue premium is paid, unless the Hospital Insurance Commissioner orders otherwise, eligibility for benefits commences one month after payment. Similarly, persons formerly exempted from the payment of a premium, who elect to come under the Act, are not eligible for benefits until one month after the date on which they pay the hospital premium.

### **British Columbia Male Minimum Wage Act**

From February 5, male workers in undertaking establishments, including funeral attendants and chauffeurs, in Vancouver and its environs, Victoria, Oak Bay, Saanich, Esquimalt and New Westminster must be paid \$33 a week if they work 40 hours or more. Workers who work less than 40 hours in a week must receive at least 80 cents an hour. These minima were fixed by a new Order (No. 15) which was made on December 9, 1949 and gazetted February 2. Musicians, vocalists and persons employed in a supervisory, managerial or confidential capacity are excluded.

Except when authorized in writing by the Board, hours of work are not to exceed eight in a day and 44 in a week. If, under permit from the Board, hours in excess of eight and 44 are worked, time and one-half the regular rate must be paid. When a split shift is worked, working hours must be confined within the 12-hour period immediately following commencement of work.

Where employees reside on the employer's premises, an arrangement may be made for such employees to deal with emergency

calls, subject to the written approval of the Board, but the time spent answering emergency calls is not to be considered in calculating hours of work, overtime or hours worked on a split shift.

A weekly rest of 32 consecutive hours must be granted unless, in exceptional cases, the Board, on the joint application of employer and employees, approves a different arrangement.

An employee who reports for work on the call of the employer and for whom there is no work must be paid for the entire period spent at the place of work, with a guarantee of at least two hours' pay. If the employee commences work, he must receive four hours' pay at the regular rate. The daily guarantee provision may be varied by the written permission of the Board.

### **British Columbia Trade-Schools Regulation Act**

The maximum charges which may be made to the public for the services of any student in barbering and hairdressing schools, as set out in regulations made under the Trade-Schools Regulation Act, have been raised by Orders in Council made on January 31 and gazetted February 9. The Act, which is designed to regulate the operation of trade schools by requiring them to be registered and inspected, provides for the making of regulations prescribing hours of instruction, course of study, fees, charges for materials used or services rendered by students or employees, and other matters.

Before a student may begin a course in barber school, he must enter into a contract, approved by the Minister of Labour, with the trade school operator, and obtain a medical certificate certifying that he is free from a communicable disease. A complete course of study in barbering consists of 1,000 hours' instruction. The hours of instruction are limited to 44 a week.

## Manitoba Apprenticeship Act

The apprenticeship rules for the automobile repair and internal combustion engine mechanics' trades were revised by an Order in Council (Reg. 4/50) filed on January 26, gazetted January 28, chiefly to provide for pre-apprenticeship training. A similar revision has already been made in the rules for the building trades (L.G., 1949, p. 1574; 1950, p. 225).

An employer must report immediately to the Director of Apprenticeship when he employs any person eligible to be an apprentice.

Applicants for apprenticeship in the automobile repair and internal combustion engine mechanics' trades may be recommended by the trade advisory committee for a six to eight months' pre-employment course, terminating in the spring following its commencement.

Each apprentice in these trades must now attend full-time technical school classes for at least six weeks a year during the entire apprenticeship period of five years, but if he has completed at least six months in a pre-employment course, he may be excused from attendance during the second year of apprenticeship. Added to the list of courses which must be given to apprentices is one on the basic principles of diesel-operated vehicles. The classes must also include courses in the subjects which are listed in the schedule of basic training, and in business ethics and salesmanship. There has been no change in the requirements for the practical training given by the employer.

The Minister of Labour, in conjunction with the Minister of Education, may now make any necessary provision for conducting evening classes for these trades in addition to, or as a substitute for, full-time classes.

The normal working hours for apprentices in these trades are those set by the Hours of Work Act, 1949 (which limits hours of male workers to eight and 48 unless time and one-half is paid).

Wage rates are the same percentages of the mechanics' rate as heretofore, but the minimum wage which must be paid has been raised. Fifteen dollars must be paid for a 48-hour week during the first year, the rate to be increased by \$3 in each successive year, so that the minimum wage payable for the fifth year is \$27. Formerly, the apprentice had to be paid \$10 for a 48-hour week during the first year, increased by \$2 in each successive year.

The age qualification and the ratio of the number of apprentices an employer is

permitted for each mechanic remain unchanged.

An employer must make an annual progress report to the trade advisory committee on each of his apprentices. If the employer's final report recommends the granting of a certificate of qualification to an apprentice, and if on examination the apprentice reaches or exceeds the pass mark set on the recommendation of the trade advisory committee, a certificate is to be granted. If the employer's report and the examination results are in disagreement, they must be reviewed by the trade advisory committee.

A person who has been employed in the trade for at least five years before January 28, 1950, may be issued a certificate of qualification after passing such trade tests and examinations as may be agreed upon by the Apprenticeship Board on the recommendation of the trade advisory committee. If he has been engaged in the trade for at least seven years, and if the trade advisory committee so recommends, a certificate may be issued without examination, but no certificate may be issued without examination after March 31, 1950.

Certificates must be renewed annually, after March 31, on payment of a fee of \$1. Failing renewal, an applicant may be required to pass an examination to obtain a new certificate.

## Nova Scotia Public Health Act

Revised regulations under the above Act were issued on January 28, and gazetted February 1, laying down minimum standards of sanitation for hotels, tourist camps and overnight cabins. The former regulations issued in 1941 are rescinded.

Employees who prepare, cook or serve food must be cleanly in their habits and wear clean, washable clothing. Hair nets or other head dresses must be worn by women. Separate hand towels for each employee must be provided. Persons suffering from a communicable disease or who are likely to be carriers of disease are forbidden to prepare, cook or serve food, unless permission is obtained from the Medical Health Officer. The operator of an establishment, under direction of the Medical Health Officer, must furnish temporary accommodation or isolation for any employee found to suffer from a communicable disease until his removal to a suitable place is safe and feasible. Any operator who fails to comply with the regulations will be liable to a fine of from \$10 to \$100.

## Ontario Public Commercial Vehicles Act

New general regulations under this Act (9/50) were made on January 13 and gazetted January 28. As previously, drivers of public commercial vehicles must be at least 18 years of age, of good moral character and fully competent to operate the vehicles under their charge. A record of the hours of labour of drivers of public commercial vehicles must be kept both by the driver himself and also by the person holding an operating licence. The records must be produced when required for inspection by a member of the Provincial Police Force or an officer of the department.

An applicant for an operating licence must file with the Department of Highways a certificate of the Workmen's Compensation Board certifying that he has provisionally complied with the Workmen's Compensation Act.

## Quebec Stationary Enginemen Act

A new section added to the regulations under the Stationary Enginemen Act sets

out the qualifications required of an acting pressure vessel inspector. The amendments were made by an Order in Council (No. 145) on February 1 and gazetted February 11. To serve as an acting pressure vessel inspector, a candidate must have held a second-class stationary engineman's certificate for at least six months, and must be able to make any calculations requested by the Board of Examiners. He must also prove that he has sufficient knowledge of the codes and regulations used by the Board and be able to draw any required plans of steam boilers and accessories.

The qualifications for a pressure vessel inspector's certificate as set out in the 1942 regulations are considerably higher. A candidate for such certificate must (a) hold a first-class stationary engineman's certificate; and (b) be able to make any calculations requested by the Examiners, prove that he has a thorough knowledge of the codes used, speak French and English fluently, and make any scale drawing of steam boilers, steam engines and their auxiliaries.

## Labour Bills Introduced In Ontario and Alberta

*Bills to amend existing labour relations legislation, which were introduced recently in the Legislatures of Ontario and Alberta, are summarized below.*

### New Labour Relations Bill Introduced in Ontario

The Labour Relations Bill, which was introduced in the Ontario Legislature on February 28, is intended to replace the 1948 Act which was patterned on the federal industrial relations legislation. According to the press, some changes were expected before the Bill became law. The following summary is based on the Bill as introduced.

The proposed Act provides for the continuance of the Ontario Labour Relations Board. The Board, which must be equally representative of employers and employees, may be composed of a chairman and either two or four members, instead of four members and a chairman as under the 1948 Act. The Bill would also give the Board new powers, including authority to institute the conciliation procedure and to permit prosecutions in the courts, powers which under the present Act are vested in the Minister of Labour.

Several important changes are made regarding certification of bargaining agents. In cases where a trade union applying for certification has a membership of between 45 and 55 per cent of the employees in

the bargaining unit, the Labour Relations Board must direct that a representation vote be taken. Under the present legislation, a vote can be taken at the discretion of the Board if the union shows that it has as members a majority of the employees. The Board is given discretion to grant certification without a vote if it is satisfied that more than 50 per cent of the employees are members of the union and that the true wishes of the employees are not likely to be disclosed by a vote.

As under the 1948 Act, the Board must certify the trade union as bargaining agent if it obtains more than 50 per cent of the ballots of all those eligible to vote. However, under the proposed Act, in a representation vote absentee employees will no longer be counted as eligible voters.

As regards "company-dominated" unions, the Bill provides that the Board must not certify a trade union if an employer or employers' organization has participated in its formation or administration or has contributed to it financial or other support.

An agreement concluded with such a union will not be deemed a collective agreement under the Act.

The Bill sets out specific provisions under which unions may be decertified. These specify the times at which applications for decertification may be made, depending on the term of the agreement, and the procedure to be followed by the Board, including the taking of a representation vote. The 1948 Act merely provided for decertification when the Board was of the opinion that a bargaining agent no longer represented a majority of employees in the unit. The Bill further provides that the certification of a trade union may be revoked if the union fails to conclude a collective agreement with the employer within one year after certification; if certification has been obtained fraudulently; if a union fails to give the employer notice within 60 days following certification of its desire to bargain with a view to making a collective agreement; or if the union has given notice but fails to commence bargaining within 60 days.

The procedure for negotiation of a collective agreement is in general the same as under the present Act. However, under the proposed Bill, the trade union must be represented during the bargaining by a bargaining committee consisting of employees in the bargaining unit, and they may be accompanied and assisted by one or more officers or representatives of the trade union. It was reported that this section would be amended.

A collective agreement will be deemed invalid if it includes provisions which discriminate against any person because of his race or creed.

The Bill provides that every collective agreement must contain a clause setting up arbitration machinery to settle, without stoppage of work, all differences between the parties arising from the interpretation, application, administration or alleged violation of the agreement. A clause is set out in the Bill which will automatically become part of every agreement which does not contain such a provision, providing for an arbitration board whose decision is final and binding on the parties. Under the 1948 Act, if a clause providing for final settlement of differences was lacking, the Board, on the application of either party, could prescribe one.

A new provision states that an agreement made between an employers' organization and a trade union is binding on each of

the employers individually, and if any one of the group of employers ceases to be a member of the association he will continue to be bound by the agreement until its term expires.

Under the proposed Bill, every publication dealing with the relations between employers or employers' organizations and trade unions or employees must bear the names and addresses of its printer and publisher.

A new provision has been inserted regarding unlawful strikes. If a union authorizes a strike which the employer alleges to be unlawful, he may apply to the Board for a declaration that the strike is unlawful. If the Board makes this declaration, it may withdraw its services from the trade union, or from its parent organization or subordinate branches so long as the strike continues. Similar measures may be taken against an employer, or against an employers' organization, one of whose members has engaged in an illegal lockout. This section aroused controversy and the Minister of Labour was reported to have told the Legislature that it would be withdrawn.

The Minister may appoint a conciliation officer to inquire into any complaint that a person has been refused employment, discharged, discriminated against or otherwise dealt with contrary to the Act. If the conciliation officer fails to settle the matter, the Minister may then appoint a commissioner with powers similar to those of conciliation boards to summon witnesses and enter and inspect premises. The commissioner must make recommendations as to the course that should be taken, which may include a recommendation for reinstatement with or without compensation for loss of earnings and other benefits. After the commissioner makes his recommendations, the Minister must issue whatever order he deems necessary to carry the recommendations into effect and the order is final and must be complied with.

As under the 1948 legislation, offences are punishable by fines on summary conviction. The fines set out in the Bill have been greatly increased. However, fines are not provided for each specific offence. For failure to comply with any provision of the Act or a decision, order, declaration or ruling made under the Act, a fine of not more than \$500 a day may be imposed on an individual, and not more than \$5,000 a day on a corporation, trade union or employers' organization.

## Bill to Amend Alberta Labour Act

The Alberta Labour Act, 1947, which consolidated in one statute provisions regarding hours of work, minimum wages, labour welfare, holidays with pay, industrial standards and conciliation and arbitration, is likely to be amended in a number of important particulars at the present session of the Legislature. Changes in the Act were discussed at a four-day conference of labour and management representatives and government officials which was held in June, 1949.

A Bill to amend the Act was introduced and had first reading on February 24. Changes are proposed in all five Parts of the Act but those dealing with conciliation and arbitration are of most consequence. One amendment, if passed by the Legislature, will have the effect of banning "company" unions. The definition of "trade union" was amended to exclude an employer-dominated organization, and by striking out the words "or organization or association of employees" the Bill stipulates that the "bargaining agent" must be a recognized trade union that acts on behalf of employees in collective bargaining or as a party to a collective agreement with their employer. At the same time, the Bill adds a new section similar to that in the federal Industrial Relations and Disputes Investigation Act which prohibits the certification of any trade union or organization of employees, the administration, management or policy of which is, in the opinion of the Board of Industrial Relations, influenced or dominated by an employer.

Also added is a new definition of "employee". As in the federal Act, "employee" does not include "a manager or superintendent or any other person who, in the opinion of the Board, exercises managerial functions, or is employed in a confidential capacity in matters relating to labour relations" nor persons in the medical, dental, architectural, engineering and legal professions.

The Act presently requires an application for certification of a bargaining agent to be submitted to the Minister of Labour who refers it to the Board of Industrial Relations for inquiry and report. The Bill provides that applications for certification will be received and dealt with by the Board. The Board, instead of the Minister, is to certify the bargaining agent.

As before, a dispute may, on application of either party, be referred by the Minister to a Conciliation Commissioner who is required to report within 14 days or such longer time as may be agreed to by

all parties. This report is to be transmitted to the Board instead of the Minister. A Conciliation Commissioner is required to set out in his report the matters on which the parties have agreed and those on which they cannot agree and he is given authority in the Bill to make recommendations both as to the latter and as to the advisability of appointing a Board of Arbitration.

The Act now provides that, failing settlement by the Conciliation Commissioner, the Minister must forthwith refer the dispute to a three-man Board of Arbitration (which might as appropriately be called a Board of Conciliation), one the nominee of the employer concerned, a second the nominee of the union, and a chairman, the nominee of the other two.

The procedure set out in the Bill is somewhat different. It provides that where a Conciliation Commissioner is unable to bring about a settlement, the Board is to consider his report and may recommend to the Minister that he appoint a Board of Arbitration. If, in the Minister's opinion, a further endeavour should be made to bring about agreement, he may appoint a Board of Arbitration.

Under the present provisions of the Act, no report of a Board of Arbitration is binding. It merely contains recommendations for settlement which must be voted on by the employees.

In addition to providing, as at present, for a separate vote by secret ballot on the question of acceptance or rejection of an Arbitration Board award by the employees directly affected and by the employers, respectively, the Bill contains new provisions which state that if, before an award is made, the parties agree in writing to accept the Board's decision, the award will be binding on the parties who must give effect to it without submitting it to a vote, and must include the terms of the award in a collective agreement. Similarly, the award binds the parties in any case where the award has been accepted by a vote of both parties and where it is accepted in writing by the employer and the employees have voted in favour of it.

A further new section permits the employer to give effect to a proposed change in wages or hours during the time that a strike or lockout is prohibited if he has the consent of the bargaining agent.

Another amendment would provide that an extra-provincial company whose board of directors does not meet in the Province must appoint a person resident in Alberta

with authority to bargain collectively and to conclude a collective agreement on its behalf.

A further new section provides that where a business is sold the purchaser is bound by all proceedings under the Act relating to collective bargaining, conciliation and arbitration. If a bargaining agent was certified, the certification remains in effect and if a collective agreement was in force, the agreement continues to bind the purchaser as if it had been signed by him. Further, the employment of the employees is to be deemed to be continuous for the purpose of computing the holidays with pay to which they are entitled.

Another new provision forbids an employer to deprive an employee of any pension rights or benefits to which he would otherwise be entitled by reason only of his participating in a legal strike or lockout or by reason only of dismissal contrary to the Act.

Two new provisions are concerned with the check-off of union dues which is presently provided for in the Act. An employee must revoke a check-off in writing. The employer at least once a month is

obliged to remit the dues deducted to the trade union, together with a written statement of the name of the employee and the amount of the deduction until such time as a revocation signed by the employee is delivered to the employer. The employer is required to send a copy of such revocation immediately to the trade union concerned.

Of the changes made in other Parts of the Act a few might be noted. Holidays with pay are now included among the subjects to be negotiated at a conference between employers and employees and in the terms of the industrial standards schedule drawn up by such a conference. Penalties for violation of an order of the Board of Industrial Relations requiring employers to grant holidays with pay are also laid down in the Bill.

Another amendment has to do with child labour. At present the Act prohibits the employment of a child under 15 in or about the premises of a factory, shop or office building. To this the Bill would add the provision that a child under 15 may not be employed in any other employment without the consent of the Board.

## New Child Labour Regulations in United States

The Secretary of Labour has revised Child Labour Regulation No. 3 pursuant to the section of the Fair Labour Standards Act, 1938, which reads as follows:—

The Secretary of Labour shall provide by regulation or by order that the employment of employees between the ages of fourteen and sixteen years in occupations other than manufacturing and mining shall not be deemed to constitute oppressive child labour if and to the extent that the Secretary of Labour determines that such employment is confined to periods which will not interfere with their schooling and to conditions which will not interfere with their health and well-being.

The minimum age for employment under the Fair Labour Standards Act is 16 years. The Secretary of Labour may raise the minimum age to 18 in any occupation which he deems to be particularly hazardous. The occupations which have been so designated are: coal mining; manufacture of explosives; operation of power-driven hoisting apparatus; certain occupations in logging and sawmilling; the occupation of motor-vehicle driver and helper; and occupations involving exposure to radio-active substances.

Under the authority of the section of the Act quoted above, the Secretary may lower the minimum age to 14 years, permitting employment of 14- and 15-year-olds only

under conditions which will not interfere with their schooling or impair their health.

In permitted occupations, children 14 and 15 years of age may be employed outside school hours for no more than 3 hours a day, 18 hours a week when school is in session, and 8 hours a day, 40 hours a week when school is not in session. All work must be performed between 7 a.m. and 7 p.m.

“Permitted occupations” are all occupations except manufacturing, mining, operation of hoisting apparatus or power-driven machinery other than office machines, public-messenger services, or occupations declared by the Secretary of Labour to be hazardous for the employment of minors between 16 and 18.

Transportation, warehousing and storage, communications and public utilities and construction were brought under the child labour provisions of the Fair Labour Standards Act by the 1949 Amendment (L.G., 1949, p. 1577), thus making 16 the minimum age, unless the Secretary permitted otherwise. The new regulations, which were effective January 25, provide that office or sales work for 14- and 15-year-olds is permissible in these new fields if it does not involve any duties on trains, motor vehicles, aircraft, vessels or other media of transportation, or at the actual site of construction operations.

# UNEMPLOYMENT INSURANCE

## Recent Amendments to Unemployment Insurance Act

*The most important of the recent amendments provided for the payment of supplementary unemployment insurance benefit during the winter months to persons who had exhausted their benefit right, or who for certain other reasons were not eligible for ordinary benefit.*

*During the first half of March there were 59,000 applications for supplementary benefit, of which 35,000 were from persons who had not been registered at local offices at the time the program was inaugurated.*

Legislation to amend the Unemployment Insurance Act, 1940, was introduced in the House of Commons by Hon. Paul Martin, Acting Minister of Labour, on February 21. It was passed by both Houses of Parliament and received Royal Assent on February 28, 1950.

The main reason for the speedy enactment of this legislation was to provide immediately for the payment of supplementary benefit to persons who had lost their employment during the winter months. The payment of supplementary benefit commenced on March 1, and could be paid up to April 15, 1950. In future years it will be payable only between January 1 and March 31.

### Persons Eligible to Receive Supplementary Benefit

The classes entitled to supplementary benefit include:—

(1) persons who normally work in insurable employment but have exhausted their benefit;

(2) persons who have worked in insurable employment for too short a time to qualify for benefit;

(3) persons who have worked in lumbering and logging (except in British Columbia) for at least 90 days in any 12 consecutive month period falling within 18 months prior to February 28, 1950;

(4) persons who have been working in employments that have been brought under the Act too recently for the employees to have accumulated sufficient contribution credits to qualify for ordinary benefit.

In more detail, the classes eligible for supplementary benefit may be defined as follows:—

*Class 1.*—Persons whose benefit rights under the other provisions of the Act have

become exhausted since the 31st March preceding claim shall be entitled to supplementary benefits during the period January 1 to March 31 in any year for the same number of days to which they were entitled under their last regular benefit year, but not exceeding the number of days in the said period January 1 to March 31.

*Class 2.*—Persons who do not meet the first statutory condition but who during the period subsequent to the 31st of March in the year previous to making a claim for a supplementary benefit who have made a minimum of 90 daily contributions shall be paid a supplementary benefit for the benefit days arrived at by dividing the number of contribution days by five.

*Class 3.*—A person who satisfies the Commission that he has worked in lumbering or logging in Canada other than in the British Columbia region within the period of eighteen months preceding the claim, and who has worked in such employment, or other insurable employment for a minimum period of ninety days in any period of twelve months within eighteen months preceding claim, shall be paid supplementary benefit upon the basis of one benefit for every five days so worked, but no benefit will be paid under this provision after March 31, 1951.

*Class 4.*—A person who satisfies the Commission that he has worked since the 31st of March preceding the claim in an industry which has been made insurable employment in the year preceding the claim, and who has worked in such employment or other insurable employment for a minimum period of ninety days in the period between the preceding 31st of March and the date of claim, shall be paid supplementary benefit upon the basis of one benefit for every five days so worked.

## Supplementary Contribution Rates

The supplementary benefit will be financed in part by an additional contribution of one cent per day paid by each employee working in insurable industry and a similar contribution paid by his employer, with the government contributing one-fifth of the total. The rate of payment of the supplementary benefit will be approximately 80 per cent of regular benefit, and is set out by categories in the amending bill. While the supplementary benefit will become payable immediately to qualified unemployed persons, the new contribution rates will not come into effect until proclaimed, and not before July 1, 1950.

## Changes in Coverage

Amendments to the Act provide for bringing additional workers under unemployment insurance coverage. As the Act formerly stood salaried workers on weekly or monthly rates were insured if their earnings were \$3,120 or less per annum. An amendment which will come into effect on proclamation (probably about July 1, 1950), raises the insurable limit for salaried employees from \$3,120 to \$4,800 a year.

Employees paid by the hour, by the day, or by the piece will continue to be insured irrespective of the amount of their earnings, in the same manner as formerly. The Acting Minister informed the House that it was estimated an additional 90,000 persons would be brought under insurance coverage by this amendment.

By Order in Council the government also extended the provisions of the Act to lumbering and logging in all parts of Canada as from April 1, 1950 (P.C. 474, dated February 23, 1950). Authority for this extension was provided some years ago, but it was stipulated that contributions should become payable in particular areas only as the Unemployment Insurance Commission found it feasible to apply unem-

ployment insurance in each area. Hitherto loggers have been insured only in British Columbia, and in the remainder of Canada employees in saw mills and planing mills have been insured only when the mills operated throughout the greater part of the year. From April 1, 1950, the whole lumbering and logging industry will be insured irrespective of the duration of operations.

## Changes in Contribution and Benefit Rates

The number of contribution classes has been reduced from nine to six, and payments by employees and by their employers have been equalized throughout all classes. An additional higher class has been created in line with the raising of the ceiling for insurability.

The creation of the new class will, however, not result in payment of higher benefit to persons in that category until July 1, 1951. Maximum benefit payable at present is \$14.40 a week for a single person and \$18.30 a week for a person with a dependant. After July 1, 1951, the maximum for a single person will be \$16.20 a week and for a person with a dependant \$21 a week.

Following are the new rates of contributions and benefits. The contribution table includes the additional cent per day for supplementary benefit. As already stated the new rates of contribution and benefit will become effective on proclamation probably on July 1, 1950. Supplementary benefit became payable March 1, 1950.

## Other Changes

### Earnings While Drawing Benefit

A further amendment increased the amount which a person receiving unemployment insurance benefit is allowed to earn without losing any benefit. Heretofore the amount could not exceed a daily average of \$1.50. The amendment raised this to \$2, subject to other provisions of the section.

Range of Weekly Earnings	Rate of Contribution		Rate of Benefit	
	Employer	Employee	Person without Dependant	Person with Dependant
	cents	cents	\$ cts.	\$ cts.
Less than \$9.00.....	18	18	4 20	4 80
\$ 9.00 to \$14.99.....	24	24	6 00	7 50
\$15.00 to \$20.99.....	30	30	8 10	10 20
\$21.00 to \$26.99.....	36	36	10 20	12 90
\$27.00 to \$33.99.....	42	42	12 30	15 60
\$34.00 to \$47.99.....	48	48	14 40	18 30
\$48.00 or more.....	54	54	14 40	18 30
	(After July 1, 1951)		16 20	21 00

### **Non-compensable Days**

Another amendment changed the non-compensable day rule. Under the Act as formerly the first day of unemployment in any week was non-compensable unless it followed, or was in a complete week of unemployment. The amendment provides that the first day of unemployment in any period of unemployment will be non-compensable unless it follows a period of employment of three days or less. If a person is working short time the first day of unemployment in any period of unemployment is non-compensable in every case.

### **Persons Under 16 Years of Age**

Prior to amendment the Act made provision for workers under 16 years of age, the entire contribution being made by the employer. Under the Act as amended there will be no such special class and persons under 16 years will pay their own contributions and, after July 1, 1950, will be eligible for benefit.

### **Contributions Required for Benefit**

Still another amendment changed the first statutory condition for receipt of benefit as set forth in Section 28 (1) of the Act. Under the old Act, this condition required that the applicant must have made 180

contributions during the previous two years. This condition remains under the Act as amended; and a new condition is added: that 60 contributions must have been made in the year preceding claim or 45 contributions in the six months preceding claim. These two periods may be extended for the same reasons as the two-year period may be extended under the Act.

### **Married Women**

An amendment to Section 38 of the Act authorizes the Commission to make regulations in regard to the determination of benefit for married women.

### **Unemployment Insurance Advisory Committee**

An increase in the number of members of the Unemployment Insurance Advisory Committee from six to eight has been provided for. It was explained that this amendment was made in order to give added representation to labour. As representation is on a 50-50 basis it would also give another representative to employers. This Committee is charged with the responsibility of reviewing the status of the fund from time to time and recommending to the government any action with respect thereto which it considers appropriate.

## **Selected Decisions of Umpire Under the Unemployment Insurance Act**

*The Decision of the Umpire in this Appeal was considered to be of sufficient importance and general interest to warrant its publication in the LABOUR GAZETTE practically in full.*

***Held that the stoppage of work due to the labour dispute between the East and West Coast Canadian Ship Owners and the Canadian Seamen's Union ceased to exist for the purpose of the Unemployment Insurance Act on August 18, 1949, and that when the claimant filed his renewal application for benefit on June 17, 1949, he proved that he was not subject to disqualification under Section 39 of the Act.—Case No. CU-B. 531 (December 30, 1949).***

#### **DECISION:**

The claimant, was employed by the Saguenay Terminals Company Limited, Montreal, P.Q., as an oiler on the ss. *Sunvell* from May 19, 1948 to April 19, 1949. Upon termination, his rate of pay was \$175 a month.

On April 22, 1949, he filed an initial application for benefit and stated therein

that he had lost his employment due to "Seamen's strike". In the separation questionnaire, the employer indicated that the claimant had lost his employment because the crew of the ship was on strike.

According to the facts and submissions, the "East and West Coast Canadian Ship Owners", of which the Saguenay Terminals Company Limited is a member, and the Canadian Seamen's Union had a collective agreement which was due to expire on October 15, 1948. This collective agreement applied to all unlicensed personnel with the exception of Cadet Officers, Junior Engineers, Sanitary Engineers, Junior Officers, Electricians and Pursers. The ship owners and the Canadian Seamen's Union started negotiations for a renewal of this agreement but were unable to arrive at a settlement.

A conciliation officer was appointed by the Federal Minister of Labour but he

was unsuccessful in reconciling the differences between the parties concerned. The Minister then appointed a board of conciliation and investigation under the chairmanship of Mr. Justice J. O. Wilson of the Supreme Court of British Columbia which was also unable to effect a settlement. The board's report to the Minister, however, which was made some time in February, 1949, was accompanied by a draft agreement which the board recommended for execution by the ship owners and the union. The draft agreement was acceptable to the ship owners but not to the Canadian Seamen's Union which on March 21, 1949, after the lapse of time prescribed by the law, called a "sit-in" strike on some of the vessels in the port of Halifax in an attempt to prevent the engagement of new crews.

The ship owners took court action and the members of the crews participating in the "sit-in" strike were served with a court order to leave the ships. The ship owners then made an arrangement with the Seafarers International Union (AFL) to man the ships whereupon the Canadian Seamen's Union called a general strike to affect all vessels, at home and abroad, which came within its jurisdiction under the terms of the 1947 bargaining agreement, to be effective at midnight on March 31, 1949.

The ss. *Sunvell* was tied up at the port of Quebec on April 20, 1949, due to the labour dispute and the crew members thereof were served with a court order to leave the ship.

The Insurance Officer disqualified the claimant from the receipt of benefit under Section 39 (1) of the Act, because in his opinion, he had lost his employment by reason of a stoppage of work due to a labour dispute at the premises at which he was employed, said disqualification to remain in effect for as long as the stoppage of work continued.

On June 17, 1949, the claimant filed a renewal application for benefit and stated therein:—

I have left definitely navigation and the Seamen's Union which is still on strike. I am now registered in my former employment as press operator. I went to two newspapers of Quebec: *l'Appel de Sillery* and *l'Action Catholique* to get employment, and I was told that there was no vacancy. I am free and available for that kind of work.

Irrespective of that statement, the Insurance Officer decided that the disqualification previously imposed upon the claimant was to remain in effect.

From this decision of the Insurance Officer, the claimant, on July 18, 1949,

appealed to a Court of Referees. The Court of Referees heard the case in the City of Quebec, P.Q., on August 8, 1949. The majority of the Court upheld the decision of the Insurance Officer. The dissenting member was of the opinion that the claimant should be considered as having lost all interest in the "strike" as of June 17, 1949, the date on which he stated that he was "ready to work in his former employment as a pressman".

From the decision of the Court of Referees, the claimant on August 16, 1949, appealed to the Umpire.

The claimant's solicitor, Mr. Jean Lesage, M.P., requested an oral hearing which was granted. Mr. Lesage and the Commission's representatives Lt.-Col. H. S. Relph, K.C., Chief Claims Officer and Mr. J. D. Durocher, Insurance Officer, appeared before me in the City of Ottawa, on December 21, 1949.

Both parties submitted ably prepared memoranda supported by oral representations.

I shall deal with the arguments presented in favour of the claimant in the order in which they were submitted to me.

The section of the Act under which this case comes reads as follows:—

- 39 (1) "An insured person shall be disqualified from receiving benefit if he has lost his employment by reason of a stoppage of work due to a labour dispute at the factory, workshop or other premises at which he was employed unless he has, during the stoppage of work, become *bona fide* employed elsewhere in the occupation which he usually follows, or has become regularly engaged in some other occupation; but this disqualification shall last only so long as the stoppage of work continues.
- (2) An insured person shall not be disqualified under this section if he proves
- (a) that he is not participating in, or financing or directly interested in the labour dispute which caused the stoppage of work; and
  - (b) that he does not belong to a grade or class of workers of which immediately before the commencement of the stoppage there were members employed at the premises at which the stoppage is taking place any of whom are participating in, financing or directly interested in the dispute.
- (3) Where separate branches of work which are commonly carried on as separate businesses in separate premises are carried on in separate departments on the same premises, each department shall, for the purpose of this section, be deemed to be a separate factory or workshop."

It is not disputed that the claimant on April 20, 1949, lost his employment by reason of a stoppage of work due to a labour dispute at the premises at which he was employed.

It was first argued, however, by Mr. Lesage, that in view of the terminology of subsections (1) and (3) of Section 39 there was no justification for the Insurance Officer or the Court of Referees to consider the "situation" outside the limits of the "premises at which the claimant was employed", that is, the ss. *Sunrell*; that it is immaterial to the issue whether on June 17, 1949, the date on which the claimant filed his claim for benefit, there was on other ships, i.e., at other premises, a stoppage of work due to a labour dispute; that in order to determine cases such as the present one, each ship should be considered as a separate entity and as the ss. *Sunrell* returned to sea shortly after April 20, 1949, there was no longer a stoppage of work, on June 17, 1949, "at the premises at which the claimant was employed", and that therefore, on the latter date he was not subject to disqualification under Section 39 (1) of the Act.

I cannot agree with this contention.

As pointed out by the Commission's representatives, we are confronted with a labour dispute between two collective entities, the Canadian Shipping Federation and the Canadian Seamen's Union. The labour dispute was no more between a captain and his crew than it was between each individual company and the crews of its ships. The stoppage of work therefore, resulting from such a dispute must be considered as a whole and the sailing of a single ship has no bearing on the general "situation".

"The action of the Union executive was that of all members of the Union who have delegated authority and the world-wide strike against an operating company is a world-wide strike of the Union members both individually and collectively."

If a restrictive interpretation as that suggested by the counsel for the claimant were to be placed on Section 39, it would mean that because a ship, which has been tied up due to a strike in the shipping industry, is back to sea with a new crew, the ex-members of the crew are to be relieved from disqualification under Section 39 although they might still perform activities in furtherance of the strike, such as picketing other ships, etc. It is my opinion that Section 39 must be applied in keeping with the intent of the Legislator which was certainly not that a strike be financed by the unemployment insurance fund.

Alternatively the claimant's solicitor contended that, if the "separate premises" argument failed in this case and the whole issue of the labour dispute and the general stoppage of work resulting therefrom must be taken into consideration, the said stoppage of work must be deemed to have ceased immediately the strike was considered ineffective.

Mr. Lesage submitted that according to the figures supplied by the Chief Claims Officer, there were 600 seamen on strike on April 2, 1949 and only 120 on August 13, 1949. Furthermore, he referred to the edition of the *LABOUR GAZETTE*, dated September, 1949, which contains the information that, for all practical purposes, the seamen's strike had collapsed "during July, 1949, when the dockworkers of London, England, voted overwhelmingly to resume work on Canadian flag vessels", and "had ceased to be effective in Canada many weeks before". Consequently, in the opinion of Mr. Lesage, the general stoppage of work had ceased by the time the claimant filed his renewal claim for benefit.

The Chief Claims Officer submitted a letter, dated August 18, 1949, from the Montreal Office of the Commission wherein it is indicated that the Shipping Federation of Canada had informed the said office that there were at that time two ships out of a total of 80 tied up due to the labour dispute. The Chief Claims Officer further submitted a letter from Mr. Harry Davis, President of the Canadian Seamen's Union, in which it is stated that the strike was officially terminated on October 20, 1949.

The question of determining the date on which a stoppage of work is deemed to have ceased to exist is usually not an easy one. However, after having considered the arguments advanced and the various written submissions placed before me, I consider that for the purpose of the Unemployment Insurance Act, it is reasonable to conclude that, in spite of the fact that the dispute was still in existence, there was, on August 18, 1949, such a substantial resumption of work that a termination of the stoppage of work can be deemed to have taken place on that date.

The counsel for the claimant finally contended that as subsection (2) of Section 39 of the Act is written in the present tense, the claimant's status should have been considered as of the date he filed his renewal claim for benefit and not as of the date he lost his employment due to the stoppage of work.

According to Mr. Lesage, the claimant, on June 17, 1949, was in a position to establish that he had lost all interest, if he ever

had any, in the labour dispute which caused his unemployment and that therefore, he was entitled to benefit. In support of this contention, he quoted a decision of the British Empire (Case No. 1884/1926—(BU-662)). He pointed out that the claimant, who is only 22 years of age, is a qualified pressman and had worked in that trade for at least three years prior to 1948. In 1948, he was laid off due to a recession in the trade. Being unemployed, he decided to take work on a ship and after ten months at sea, lost that employment due to the labour dispute. On June 17, he registered in his trade as a pressman, stating emphatically that he had severed all ties with the CSU, had left "navigation for good" and wanted now to obtain work in this trade.

In substantiation of the claimant's good faith, the solicitor submitted a letter from the claimant to the effect that he had found work in his trade, in a printing office in Montreal, at the beginning of October, 1949.

After having carefully considered the solicitor's last contention, I agree with the interpretation he places on subsection (2) of Section 39 of the Act. However, it must be borne in mind that the requirements of both paragraphs (a) and (b) of that subsection must be met before there can be relief from the indefinite disqualification prescribed in subsection (1) of the said section.

Not only must a claimant show that he is not participating in, or financing or directly interested in the labour dispute which caused the stoppage of work but he must also show that he does not belong to any grade or class of workers "of which

immediately before the commencement of the stoppage there were members employed at the premises at which the stoppage is taking place any of whom are participating in, financing or directly interested in the dispute". In order to fulfil those three last conditions, he must establish that the employment he lost on account of the stoppage of work had only been taken by him, outside of his own grade or class, as a temporary measure, that he has no intention of resuming that temporary employment at the conclusion of the stoppage of work but that he definitely intends to return to his regular grade or class. There is no doubt that the statutory authorities have to be particularly careful when applying the present interpretation of subsection (2) of Section 39 and that they must be satisfied that the claimant is acting in good faith.

On the evidence before me, I consider that in this case, the claimant meets the requirements stated in the preceding paragraph and that therefore, he was not subject to disqualification under Section 39 of the Act on June 17, 1949, the date on which he filed his claim for benefit.

The decision I have herein rendered on the general issue of the case, that is, as to the general character of the labour dispute and the stoppage of work resulting therefrom as well as to the date of the cessation of that stoppage, will apply to other cases which are before me, pertaining to the same dispute.

ALFRED SAVARD,  
*Umpire.*

Dated at Ottawa, Ont., this 30th day of December, 1949.

## Unemployment Insurance Statistics January, 1950

The monthly report issued by the Dominion Bureau of Statistics on operations under the Unemployment Insurance Act stated that during the month of January, 1950, 196,624 (196,230 excluding Newfoundland) claims for Unemployment Insurance benefit were filed in local offices of the Unemployment Insurance Commission, as compared to 140,305 in January, 1949 and 150,480 (150,358 excluding Newfoundland) for December, 1949. Initial and renewal claims which provide a measure of new cases of unemployment rose from 126,649 in January, 1949 and 139,406 (139,295 excluding Newfoundland) in December, 1949 to 182,053 (181,686 excluding Newfoundland) in January, 1950. The increase in new cases of unemployment between January, 1950 and the same period in 1949 in percentage terms amounted to almost 43 per cent.

The number of persons on the live unemployment register on the last working day of the month provides an indication of the volume of unemployment among insured persons at a particular time. On the last working day of January, 1950 ordinary claimants on the live unemployment register numbered 297,238 (296,992 excluding Newfoundland) as compared to 197,675 for January, 1949 and 222,064 (221,961 excluding Newfoundland) for December, 1949. Other claimants, that is, mainly claimants working on short time numbered 15,935 on the last day of January, 1950, 20,846, on the last working day of December, 1949 and 5,742 on the last working day of January, 1949. No claimants of this type were registered in Newfoundland.

Persons on the live unemployment register by number of days continuously on the

register indicates duration of unemployment among benefit claimants. Further, the number signing the register for seven days or more provides a rough measure of beneficiaries during the month. For example, of a total of 313,173 persons on the live register as at January 31, 1950, 241,292 or 77 per cent were on the register for seven days or more.

The disposition of claims and reasons for non-entitlement to benefit are shown in Tables E-4 and E-5 respectively. During January, 190,544 claims were handled at adjudicating centres; 157,483 were allowed, 31,039 were disallowed and disqualified, 1,108 special requests were refused and in addition 914 claims were referred to Courts of Referees and the Umpire. Chief reasons for non-entitlement to benefit in order of number of cases were: "insufficient contributions while in insurable employment" 18,524 cases; "voluntarily left without just cause" 3,570 cases; "not unemployed" 3,483 cases; "discharged for misconduct" 914 cases.

In Table E-6 is shown the number of persons commencing the receipt of benefit on initial and renewal claims. For January, 1950 persons in this category totalled 132,619 (132,546 excluding Newfoundland) as compared to 92,713 in January, 1949.

Table E-6 shows also the number of days' benefit paid and the amount of benefit paid. In January, 1950, in respect of 4,925,381

days, \$11,781,142 were paid (4,922,520 days and \$11,773,540 excluding Newfoundland) as compared to 3,056,418 and \$6,727,221 in January, 1949.

The number of persons receiving benefit by province for the week of January 28 to February 3 inclusive is shown in Table E-6. This Table shows that during this period 218,963 persons received benefit for 1,334,062 days in respect of which \$3,204,118 were paid as compared to 125,225 persons, 716,194 days and \$1,681,780 for the week of December 10 to 16 inclusive. The average amount and duration of benefit paid for the week of January 28 to February 3 was \$14.63 and 6.1 days respectively as compared to \$13.43 and 5.7 days respectively for the week ending December 10 to December 16, 1949.

### Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending January 31, 1950, showed 3,764,042 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1949, an increase of 44,799 since December 31, 1949.

As at January 31, 1950, 225,345 employers were registered representing an increase of 446 since December 31, 1949.

# WAGE RATES, HOURS AND WORKING CONDITIONS IN THE RUBBER PRODUCTS INDUSTRY, OCTOBER, 1948\*

*Thirty-five establishments employing 16,500 plant workers were used in this analysis of the Rubber Products Industry. Average hourly wage rates increased 12.4 per cent in 1948. The five-day week was reported by 21 establishments employing 65 per cent of the workers. Most of the workers were covered by written collective agreements. Time and one-half was the most common overtime rate, except for work on statutory holidays when double time was predominant. All workers received an initial paid vacation of one week after a year or less of employment and most received a second week after five years. All establishments observed at least four statutory holidays. The common wage differential for shift work was three cents an hour for those on the second shift and five cents an hour for those on the third shift.*

The rubber industry of Canada, which is engaged in the manufacture of rubber tires and tubes, rubber footwear and other rubber goods, is of considerable importance in the industrial structure of the country. Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. The industry contributes materially to the export trade of Canada.

The rubber industry is practically confined to the Provinces of Ontario and Quebec. The General Manufacturers Section of the Dominion Bureau of Statistics reports<sup>1</sup> that in 1947 the plants in Ontario employed almost 72 per cent of the persons engaged in this industry and produced over 82 per cent of the entire output, while 28 per cent of total employment and 17 per cent of production was in the Province of Quebec. Employment in the eight plants in the other provinces was relatively small.

The 35 establishments used in this analysis of the Rubber Products Industry do not include the few plants primarily engaged in the manufacture of synthetic rubber. The 35 establishments, located in Ontario and Quebec, employed some 16,500 plant and 2,800 office workers during the last pay period preceding October 1, 1948 (Table I). The 22 plants in Ontario employed 72 per cent of the plant workers covered in this survey. The Dominion Bureau of Statistics report referred to indicates that there were about 19,500 wage-earners in the rubber industry in 1947. The index number of employment<sup>2</sup> for 1948, however, shows a decline of 6.6 per cent from 1947.

Seven of the 35 plants for which returns were analysed, employing more than 1,000 workers each, accounted for 56 per cent of the total number of plant workers, while 22 plants, employing not more than 500 workers, accounted for just 18 per cent of the plant workers. Twenty-seven per cent of the plant employees were women.

**Wage Rates.**—The index number of wage rates in the Rubber Products Industry increased 12.4 per cent in 1948 to a high of 113.7 per cent over the base year, 1939. The largest annual increase occurred in 1946 following the relaxation of wartime controls over wages.

\* The information in this article was prepared from data obtained in the general annual survey of wage rates and hours of labour for 1948 made by the Economics and Research Branch of the Department of Labour. Employers were asked to report their straight-time wage or salary rates or the average straight-time earnings for workers on piece work for the last pay period preceding October 1, as well as certain working conditions within their establishments.

Information on wage rates for 1948 in Logging and Construction was published in the *LABOUR GAZETTE* for April, 1949, and for Civic Employees in the May issue. Information on other industries for 1948 along the line of this present article has been published monthly since June, 1949.

For a summary of provincial legislation on working conditions see *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

<sup>1</sup> *Report on the Rubber Industry in Canada, 1947*, Dominion Bureau of Statistics, Ottawa, 1949.

<sup>2</sup> *Annual Review of Employment and Payrolls in Canada, 1948*, Dominion Bureau of Statistics, Ottawa, 1949.

Year	Wage Rate Index	Annual Percentage Increase
1939	100.0	—
1940	102.1	2.1
1941	117.1	14.7
1942	127.1	8.5
1943	134.4	5.7
1944	139.8	4.0
1945	143.4	2.6
1946	167.7	16.9
1947	190.1	13.4
1948	213.7	12.4

The average hourly wage rates of 31 selected occupations in the three divisions of the Rubber Products Industry ranged from \$1.39 per hour for Curers in the Rubber Tires and Tubes Industry to 69 cents per hour for Female Inspectors in the manufacture of Other Rubber Products. Detailed information on wage rates for representative occupations in each of the divisions of the rubber industry can be obtained from the *Annual Report on Wage Rates and Hours of Labour in Canada, October, 1948*, issued by the Department as a supplement to the *LABOUR GAZETTE*, November, 1949.

Although there have been substantial increases in wage rates over the past few years, there have been no significant changes in the hours and working conditions since the last report for the industry was published for the year 1946.<sup>3</sup> There was, however, a slight decrease in the standard hours and an increase in the number of establishments on a five-day week. There was also some improvement in the length of vacation with pay.

**Standard Weekly Hours, Table II.**—Standard hours of work in this industry varied from 40 to 55 per week, with the largest number of employees working 45 hours. In Quebec the standard weekly hours ranged from 45 to 55, mainly 45 and 50, while in Ontario the standard hours ranged from 40 to 50 per week, with most of the employees working 45 and 48 hours.

The five-day week was reported by 21 establishments employing 10,780 plant workers. Thirteen of these establishments,

<sup>3</sup> "Wage Rates, Hours and Working Conditions in the Rubber Products Industry" for 1946, the *LABOUR GAZETTE*, August, 1947.

The manufacture of tires and tubes, and rubber footwear comprise two of the major divisions of the rubber products industry in Canada. Wage rates for inspectors in these divisions of the industry (shown at left) averaged \$1.28 and \$1 respectively in 1948.

## INDEX NUMBERS OF WAGE RATES

(Base: 1939 = 100)

having 6,900 workers, were located in Ontario, while the remainder, employing some 3,880 workers, were situated in Quebec. The largest number of these workers were on a 45-hour week.

Most of the establishments reporting work on the sixth day were operating only half-day on Saturday. In Quebec, those establishments reporting a six-day week had a standard work week of from 48 to 55 hours, while in Ontario the plants reporting work on the sixth day had a work week ranging from 44 to 50 hours.

Since 1946, the average standard hours decreased from 48.6 to 45.1 per week, a reduction of 7.2 per cent. A larger proportion of establishments reported operating on a five-day week in 1948 than in 1946.

**Collective Agreements.**—Twenty-four of the plants reported having a total of 13,770 workers covered by written collective agreements. The United Rubber, Cork, Linoleum and Plastic Workers of America (CIO-CCL) represented some 9,000 of these workers and local unions directly chartered by the Trades and Labour Congress represented about 3,000. The remaining workers under collective agreement were represented by other unions and associations of employees.

**Overtime Rates of Pay, Table III.**—Time and one-half was the predominant rate of pay for overtime work in the rubber industry, except for work on statutory holidays. Twenty-eight establishments, employing about 15,800 plant workers, reported paying this rate after either specified daily

or weekly hours had been worked, and all but three of these reported paying time and one-half for work on Sundays.

Double time for work on statutory holidays was reported by 15 establishments employing some 11,500 workers.

There was little change from 1946 in the overtime rates of pay, although there was a tendency for more establishments to pay double time for work on statutory holidays.

**Vacations with Pay, Table IV.**—Annual holidays with pay for most workers are provided by statute in Ontario and under statutory authority in the Province of Quebec. A worker is entitled to one week's holiday with pay after a year of employment. If a worker has worked less than a year, he is entitled, in Quebec, to a half-

day for each calendar month of employment. If he terminates his employment during a working year, he is entitled to holiday pay at the rate of two per cent of earnings. In Ontario the worker must have been employed for upwards of three months before becoming eligible for holiday pay.

Nine establishments did not report granting more than one week's vacation with pay. The remainder, employing almost 16,000 workers, paid for two weeks' vacation, mainly after five years of employment. Of this latter group, three establishments having 2,940 employees, reported paying for three weeks' vacation after 20 years of employment.

Since 1946 the trend has been for more establishments to give a maximum vacation

Total.....	35	16, 482	9	507	26	15, 975

(1) Includes three plants (2,940 workers) providing for three weeks' vacation after 20 years of service.

with pay of two weeks, and for the length of employment required for the second week to be reduced.

**Statutory Holidays, Table V.**—All establishments included in this analysis of the Rubber Products Industry reported observing from four to fourteen statutory holidays. Only three plants, employing about 300 workers, did not report paying for some of the observed holidays.

Most of the establishments in Quebec observed ten or eleven statutory holidays and paid for three, while most establishments in Ontario observed eight holidays and paid for seven or eight.

**Shift Work, Table VI.**—Four thousand of the 16,500 plant workers covered in this

study were reported to be on a second or third shift. In two-shift operations, about 730 employees were working the second shift. In three-shift operations, 1,680 employees were reported working the second shift and 1,600 the third.

The most common wage differentials for shift work were three cents per hour for workers on the second shift and five cents per hour for those on the third shift. There was no substantial change in the amounts of the shift differentials from those reported in 1946.

**Sick Leave with Pay.**—Some form of sick leave with pay for plant employees was reported by only six establishments employing about 4,300 workers.

# WAGE RATES IN THE CONSTRUCTION INDUSTRY, 1949

The index of wage rates in the construction industry is 184.2 as of October 1, 1949, using average rates in 1939 as a base of 100. This is an average rise of approximately 4.5 per cent over the rates in effect on the same date in 1948 and, as indicated by the index, an increase of 84.2 per cent since 1939.

The information given in Tables 2 and 3, showing index numbers of wage rates since 1939, is based on data from 29 of the principal industrial cities. In Table 1, average hourly wage rates for 13 additional cities are shown for the year 1949 but index numbers for these cities have not been calculated.

On an area basis, the greatest increases in construction wage rates since 1939 have occurred in New Brunswick and British Columbia, where changes have slightly exceeded 90 per cent. Rates in Manitoba, on the other hand, have risen less than 65 per cent. Increases of roughly 75 per cent have taken place in Alberta, Nova Scotia and Prince Edward Island, while the overall increases in Saskatchewan, Ontario and Quebec have amounted to approximately 85 per cent.

During the year following October 1, 1948, construction wage rates rose from 4 to 6 per cent in all the provinces with the exception of Quebec, Nova Scotia and Prince Edward Island, where the increases were somewhat less.

Wider variations are found in the percentage increases since 1939 in the cities which are used in the calculation of the index of wage rates. Port Arthur, Fort William and Belleville rates all increased roughly 105 per cent during this period while those for Ottawa, Winnipeg, Edmonton and Kingston rose only about 60 to 65 per cent.

In comparing these percentage increases it should be kept in mind that they are to a large extent dependent on the level of wage rates in 1939. The cities which experienced the greatest percentage increases had, on the whole, the lowest construction wage rates while those cities in which the smallest percentage increases were recorded had, on the average, the highest construction wage rates in 1939.

The percentage increases that have occurred during the past year do not bear the same relationship to one another as do the longer run increases since 1939. The largest increases occurred in Brandon and Victoria with advances of about 11 per cent, followed closely by Port Arthur, Fort William and Peterborough with increases of approximately 9 per cent over 1948 rates. Several other cities, on the other hand, maintained fairly stable rates. In Charlottetown, Halifax, Moncton, and Kingston the changes amounted to less than 1 per cent and in Montreal, Ottawa, Brantford and Vancouver the increases were less than 3 per cent.

For the decade from 1939 to 1949 the percentage increases in wage rates for the skilled trades were similar, averaging about 80 per cent. In comparison with the skilled trades, labourers, although having a lower average wage rate, obtained increases of slightly over 100 per cent.

Although the increases over the decade since 1939 have been strikingly uniform for the various occupations, differences have occurred in the year to year changes in wage rates. During 1949, the wage rates for most trades increased from 3 to 4 per cent while painters and plumbers received increases ranging between 6 and 7 per cent. In contrast to the more rapid increase over the ten-year period, the rates for labourers advanced only 3 per cent during 1949.

For the skilled construction trades, wage rates in Canada for the year 1939 ranged from a low of 40 to 50 cents an hour for painters in Peterborough to \$1.15 an hour for bricklayers and electricians in Windsor. By 1948 the lowest rate reported was 75 cents an hour for sheet metal workers in Charlottetown with a high of \$1.80 an hour for plasterers in Toronto. The figures for 1949 shown in Table 1 show a range of from 75 cents an hour to \$1.90 an hour for the same two occupations and cities.

For labourers in 1939 the range was from 30 to 35 cents an hour in Charlottetown and Moncton to 55 cents an hour in Windsor. By 1948, the range was from 55 cents an hour in Charlottetown to \$1 an hour in Vancouver, Victoria and Windsor and in 1949 the 1948 range applied but with the low in Charlottetown and the high in Vancouver, Victoria and Prince Rupert.

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

## EMPLOYMENT CONDITIONS DURING FEBRUARY, 1950

*Unemployment began to decline during the latter part of February. The fishing industry reported poor catches this winter and consequently reduced earnings for fishermen. Wages in manufacturing continued to rise but farm help was being offered lower pay this year. British Columbia showed rapid gains in employment but improvement was slow in the Maritimes. Supplementary benefits will now be paid to various classes of workers who are not in receipt of unemployment insurance benefits.*

Employment conditions throughout most of Canada showed improvement by the end of February. Applicants at employment offices had fallen from the peak of 380,900 at February 9 to 375,900 at March 2. A slight increase had occurred in the last week but this was entirely due to new registrations for supplementary benefits. About 3,000 of these new applicants were registered at March 2.

The decline in unemployment began in British Columbia. As the unusual snow conditions disappeared, large numbers resumed work in the logging, construction and sawmill industries. With the gradual increase in manufacturing activity, employment conditions in the Ontario region started to improve. Heavy snowfalls, too, tended to open up jobs in Eastern Canada, although mostly of a casual nature.

Most of the seasonal expansion, however, will not be under way until later in March and early April. By that time, farmers, contractors and other employers will be getting ready for spring and summer work. Employment in construction is expected to equal last year's level and this should enable most of the unemployed workers to obtain jobs quickly when the weather changes. It is probable, however, that some unemployment may remain in a few areas during the coming year.

### Industrial Analysis

Wages offered *agricultural* workers this winter have been below 1949 levels, according to the Dominion Bureau of Statistics quarterly report on farm wage rates at January 15. This downward movement continued a trend which became apparent

in some areas last summer and which was now common to all provinces. Wage rates continued to be highest in British Columbia. The Canada average stood at \$98.55 at January 15, 1950 as compared with \$104.45 one year before.

It is estimated that there are approximately 100,000 persons working as paid workers in agriculture in the slack winter season. Labour market activity in this group was very light, although there has been some demand for experienced hands for dairy farms this winter.

The main problem in the *fishing* industry at present is the possible loss of export markets, in which 65 per cent of total production is sold. So far, there has been no major drop in sales, but the immediate future is uncertain in view of international trade restrictions and currency revisions. The Federal government, in conjunction

with the industry, is therefore endeavouring to improve marketing opportunities, both at home and abroad.

During February, reports from the Maritimes indicate that this year's smelt catch was below normal but markets and prices remained steady. Better landings were reported by the fresh fishing fleet during February but competition with Scandinavian countries in the United States market may force prices down. Stocks of salt dry fish have not been moving as fast this year as previously. In the past five years, inventories have been cleared out by March; this year, sales are not expected to be completed until April.

The Newfoundland herring fishing, which normally provides considerable employment and income during the winter and spring months, has been very poor this year. The market for salt fish improved, however, with contracts from Spain and Portugal, although some concern was felt about the price. Commercial fisheries in Labrador were feeling the effect of competition with Iceland and Norway and earnings were small as trading is done with Mediterranean and West Indies countries where prices are low.

In the British Columbia herring fishery, good catches were reported in southern waters but weather conditions made harvesting difficult in the north. The final record for the season was 182,880 tons which was a good average. In the Victoria area, salmon fishing traps were being readied for the seasonal run, with some demand for help for upcoast operations.

In Eastern Canada **logging**, hauling operations, which were delayed by lack of snow and mild weather early in 1950, got under way during February. With heavy snowfalls, trucks, tractors and teams were able to start moving the logs to the mills and dumps. There was an increase in labour requirements for teamsters and loaders for this type of work, with a few vacancies for cutters and peelers still reported. Generally, the supply of labour available exceeded demand, as has been true of the entire logging season. However, a few areas, such as Timmins and The Pas, reported labour shortages of skilled men.

Workers in the logging industry were among those benefiting by the recent amendments to the Unemployment Insurance Act. Employees in lumbering and logging in all provinces except British Columbia, where loggers were already insured, are to be covered by unemployment insurance as of April 1, 1950. In addition, provision is made for these workers to immediately qualify for supplementary benefits if they have worked a

total of 90 days in logging or other insured employment during any continuous twelve-month period in the previous year and a half.

In British Columbia, moderation in weather conditions made possible the gradual resumption of work in the west coast logging industry during February, after snow and cold weather had forced an almost complete shutdown. Low-level camps, benefiting from coastal rains, were first to re-open. In eastern and southern interior points, the majority of operators remained closed because of snow conditions which blocked roads. It will be some time before conditions return to normal in the industry but continuous improvement in the employment situation was expected until the seasonal slump in the Fall.

New collective bargaining agreements were signed in two important sections of the **mining** industry in the first two months of 1950. In the western coal mining industry, a two-year agreement affecting some 5,000 miners was signed by the United Mine Workers (CCL) and the Western Canada Bituminous Coal Operators Association. Under the new contract, wages will remain at approximately the same level as last year. Miners were currently paid a wage varying from \$10.07 per day for labour, motormen and other classifications, to \$11.27 for power house engineers. Contract miners, who work on a tonnage basis, were guaranteed a daily minimum of \$10.95.

In the asbestos mining industry in Quebec, a new agreement was reached in January after a bitter four-month strike in 1949 and several months reference to provincial arbitration. The miners will continue to receive 10 cents an hour more than the pre-strike wage level and, in addition, will receive a cost-of-living bonus, 40 cents weekly for each point rise in the cost-of-living index, retroactive to January 1, 1949.

A review of **manufacturing** employment during 1949 shows that, on the average, the number of paid workers remained at about the same level as in the previous year. An estimate based on data published by the Dominion Bureau of Statistics places the 1949 index of employment at 122.1 (June 1, 1941=100), compared to the 1948 figure of 122.0. Employment was generally higher than 1948 in the first part of the year but fell off in the latter months. Wages, however, continued to rise during 1949, the average being \$44 per week, about \$3 more than the comparable figure for 1948.

Although wages and employment are high, job opportunities have been decreasing and short-time work and lay-offs are more

# EMPLOYMENT TRENDS IN CANADIAN INDUSTRIES

Average: 1939 = 100

Seasonally Adjusted

evident. There has been a resultant increase in unemployment in manufacturing occupations, of whom some 75,000 were seeking work through the National Employment Service at the beginning of March. About 39,000 of these were classified as skilled and semi-skilled workers, with heavy concentrations in the metalworking, lumber products and textile occupations. Hiring was, however, picking up in several manufacturing industries during February. Many textile, boot and shoe, and rubber plants increased their work force during the month.

Unemployment among **construction** workers in the winter of 1949-50 was considerably larger than in previous post-war years, accounting for about 20 per cent of the total number of persons registered for work. In part, this was due to the fact that more workers were employed in the industry, in the active season, a peak of 360,000 being reached last year, but the winter carryover of work was relatively smaller.

This increase in unemployment was reflected in the number of construction workers seeking jobs through the National Employment Service during February. At the end of the month, the total number registered in offices all across Canada was 68,000. At the same date in 1949, the figure was 46,000.

Although the rate of increase as between skilled and unskilled has been about the same, the increase has been numerically greater among skilled workers, since they constitute about 70 per cent of the labour force in the building trades. The increase in both groups over February, 1949, has been about 50 per cent.

### Regional Analysis

Employment levels in the **Atlantic** region have been sustained at last year's level, but this region was the only one where unemployment, as measured by applicants registered at employment offices, had not shown a decline prior to the implementation of supplementary benefits. Nearly all of the continued increase, however, was due to conditions in Newfoundland—in other areas, stability or slight improvement was evident. Emphasis in most reports from these areas was shifting to the outlook for spring and summer, and once the river drive was under way and construction started on a large scale, the unemployed were expected to be readily absorbed.

In Newfoundland, weather conditions were forcing curtailment of the provincial work program; loss of overseas markets caused lay-offs in iron mining affecting 1,000 men; and secondary industries have been

forced to reduce or cease operations because of competition from the mainland. No improvement was expected until navigation opened in the spring.

Lumbering activity has increased sharply in recent weeks as snow enabled woods operations to proceed more effectively. Contrary to expectations, this season's cut may now equal last year's since farmers and sub-contractors all cut more than scheduled; sawmill employment should therefore be sustained this summer at a normal level.

Employment in the **Quebec** region has risen slightly in the past month, since manufacturing industries have resumed production following the winter slack period, and heavy snowfalls have enabled the resumption of normal winter employment in log hauling, winter resort activity, and civic snow removal. The employment level has been slightly below that of last year, however, because of reduction in logging this winter, and re-adjustment of manufacturing to a declining market.

Unemployment now has passed its peak in this region, and should decline rapidly when seasonal expansion gets under way in April. A heavy construction program was indicated, and substantial mining development and exploration work will be carried out.

Among manufacturing industries, seasonal expansion in clothing production has been evident, especially in the Montreal, Quebec and Lévis areas, although some firms are finding orders more difficult to obtain than usual. The leather industry has also shown some improvement, and furniture manufacturing was being maintained at a fairly high level. Heavy manufacturing industries were operating steadily; the settlement of the United States coal strike prevented stockpiles from completely running out.

The recent amendment of the Unemployment Insurance Act will greatly benefit logging areas, where operations have been below normal and unemployment heavy, and areas where industrial lay-offs have been prolonged, such as Quebec City and Chicoutimi. The benefits will serve to relieve the financial strain in such areas, until seasonal expansion advances sufficiently to absorb the unemployed.

Unemployment has passed its peak in the **Ontario** region and employment conditions were beginning to improve as manufacturing started its seasonal rise. The fluctuations in employment in Ontario have been wider this winter than in the past few years since manufacturing, the dominant industry, has been forced to adjust to more competitive market conditions and there were heavy

seasonal lay-offs in many instances. As a result, the level of winter employment in Ontario has been slightly below that of last year.

The automobile industry was operating at capacity despite the strike of Chrysler employees in progress in the United States. Towards the end of February, however, shortages of parts forced a major lay-off in the Windsor plant of the Chrysler Corporation, which involved 3,500 men. Cut-backs in supplying firms affected the employment of another 1,500 workers. At Oshawa, however, capacity operations were continuing. In Toronto, a new automobile plant has reached the production stage and will open shortly. The clothing industry showed renewed activity and re-hiring has been brisk.

Construction work was still at its low winter level but activity was expected to increase rapidly in the next month. Mining employment has not yet started its seasonal upswing, but prospects were excellent for the coming season.

Employment in the *Prairie* region has shown the greatest gain of all regions over the level of last year. The rural electrification program with its induced demand for electrical consumer equipment, as well as its direct effect on producers goods industries, has stimulated manufacturing employment; oil exploration projects in the west have had a widespread and buoyant influence on the economy; and the high level of farm income contributed to the further expansion of production and employment.

Currently, the seasonal peak of unemployment has passed but the upswing in regional employment has not yet gained momentum. Another record year was expected in construction, mining and oil development, however. Farm revenues for 1949 crops were expected to show a shrinkage as compared with 1948, which will result in reduced purchases of machinery and other goods and services. It is unlikely that farm labour demand will be adversely affected, however, as production plans for field crops are approximately equal to those of 1949.

Orders for farm labour have followed the usual seasonal pattern. There have been a few jobs for choremen, with numerous deferred orders for help in March. A sharp rise in demand for general farm workers was expected by mid-March, and orders for skilled workers to handle mechanized equipment will probably be reported early in April.

The abnormally heavy unemployment in the *Pacific* region has declined sharply with the improvement in weather conditions.

Heavy rains in coastal areas melted the deep snows and ice which had disrupted logging, sawmill and construction employment, and several thousand men have returned to work. The employment level through the winter has shown a slight gain over last year, when similar severe conditions prevailed, and this gain may be expected to continue since the market outlook for most industries is bright.

The milder weather first brought improvement to the sawmill and shingle industries—nearly all mills from Vancouver, New Westminster, Nanaimo, and Port Alberni to Prince George and Prince Rupert have now re-opened, although some are not yet operating at capacity because of log shortages. The lumber industry will probably continue at capacity production during the rest of the year as there is a strong possibility of a \$12 million order from the United Kingdom in addition to the current \$5 million contract. Confirmation of this order and continuance of exports to the United States will keep even the smaller mills in full operation and will sustain employment in the logging industry.

The re-opening of logging camps has been progressing steadily, but only low-level camps in coastal areas were in full operation. In some areas in the interior, deep snow and bad road conditions have held up activity. By the end of March, however, most camps should be in full production.

### Employment Service Activities

During the first week of March, some 20,000 persons applied for supplementary benefits in accordance with the recent amendments to the Unemployment Insurance Act. Many of these workers had previously exhausted their regular benefit rights or did not have sufficient contributions to claim. Others had been employed in industries not previously covered by unemployment insurance. The latter group includes persons employed in lumbering and logging in Central and Eastern Canada.

Each winter, this supplementary aid will be available from January 31 to March 31; this year, it will extend from February 28 to April 15. Payments will amount to 80 per cent of the regular benefits and will be paid for a period which is based upon each workers' employment record.

The trend in unemployment appears to be fairly well defined in the week to week report on applicants registering at employment offices. January, as usual, has been the month when most of the unemployed lost their jobs. Of the approximately 375,000 persons registered at the end of

February, about 100,000 were added during January. Unplaced applicants had increased by about the same number during the previous three months. This steady increase in unemployment began to reverse in February. This year, the downtrend started earlier than last because of improved weather conditions in British Columbia. However, there were also signs of a general improvement in employment conditions. Job-orders on file at employment offices have been consistently increasing, if only slightly, ever since the middle of January. By February, placements were increasing for men and women in almost all regions, and by the end of the month were higher than in both the earlier weeks in 1950 and for the same period in 1949.

Most workers have experienced a longer period of unemployment this year than last. The increase of from 40 to 45 per cent in unplaced applicants over the year indicated not so much more persons looking for work

as the usual seasonal help remaining unemployed for longer periods. Proportionately more this year had been claiming benefits for more than three months. In other years, they would be found in the group registered for two weeks to two months. Despite this change, at the beginning of February, most claimants had been unemployed for less than a month.

There has also been a wider variety of workers displaced this year. The proportion of workers registered who are skilled or semi-skilled is higher than in recent years. More of the applicants are in the age group 20 to 44 years than in previous years. Clerical and trade workers and others not usually seasonally affected have been released this winter. Women workers also were seasonally displaced to a greater extent than usual. In addition, many married women whose husbands were unemployed were registering for jobs.

## Unemployment in Canada as Reported by Trade Unions, 1949

Unemployment in trade unions in 1949 rose to an average of 3.0 per cent from 2.2 per cent in the previous year. This was the highest yearly figure recorded since 1942. In December, 1949, the percentage was 4.8.

The yearly average was obtained from quarterly reports received by the Depart-

ment of Labour from local trade union branches throughout the country. These reports show the number of members in good standing excluding retired or pensioned members, and the number of members totally unemployed at the end of each quarter. A person is recorded as unemployed only when he is idle because of

### PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY INDUSTRIES

	Logging	Mining	Manufacturing	Construction	Transportation	Communication	Trade	Service	All Industries
1933.....	25.4	12.5	24.5	66.7	13.2	12.8	1.5	11.0	22.3

December.....	18.7	1.0	4.4	15.0	2.2	.7	1.3	2.3	4.8

economic causes. Union members idle because of illness, a strike or a lockout, are not considered as unemployed. Reviews of trade union unemployment at the end of each quarter have appeared in the *LABOUR GAZETTE* for March, June, September and December respectively. The statement for the last quarter of 1949, with comparative

figures for earlier years was included in the March, 1950, issue.

During 1949, quarterly reports were received from an average of 2,614 locals with an average combined membership of 510,845. In the previous year an average of 2,558 locals reported and the average combined membership was 512,925.

## PRICES AND THE COST OF LIVING\*

### Cost-of-Living Index

The Dominion urban cost-of-living index advanced from 161·6 for February 1, 1950 to 163·7 for March 1 for a gain of 2·1 points. This marked a new post-war peak, exceeding the previous high point of 162·8 for August 1, 1949. Group indexes for rents, fuel and light, and miscellaneous items are now at their highest post-war levels, while foods, clothing and home furnishings are appreciably below 1949 post-war highs.

The increase in the index during February was due principally to higher levels for rents and firmer prices for certain foods. The results of the March quarterly survey of rents were reflected in an increase in the rent index from 125·0 to 132·7; this advance takes account of all rent changes since last November. The food index rose 2·7 points to 204·0 during February when strength in prices for beef, lamb, eggs, coffee and fresh vegetables outweighed narrow declines for canned vegetables.

Fuel and light, the only other group to register an increase, moved up 0·4 to 136·3. The clothing index receded from 133·0 to 131·4 when lower prices were quoted for men's and women's topcoats and men's suits, while home furnishings and services declined 0·1 point to 166·3. The index for miscellaneous items remained unchanged at 132·1.

### Cost of Living in Eight Cities

Cost-of-living indexes for the eight regional cities moved higher during January. Firmer prices for foods were mainly responsible. Beef, lamb, eggs, oranges, coffee and sugar were generally stronger at most centres, while pork items were easier. Indexes for clothing and home furnishings and services registered fractional declines while fuel costs were unchanged except at Saint John and Montreal where narrow advances occurred. Rents were not surveyed in February and, consequently, the indexes remained steady.

Composite city index increases between January 3 and February 1, 1950 were as

follows:—Vancouver 1·5 to 163·4; Saskatoon 1·4 to 163·6; Winnipeg 1·3 to 156·3; Edmonton 1·2 to 158·1; Toronto 0·7 to 157·6; Saint John 0·7 to 157·8; Halifax 0·6 to 153·3 and Montreal 0·4 to 164·2. In the same interval, the Dominion index rose 0·6 to 160·3.

### Wholesale Prices, January, 1950

Between December, 1949 and January, 1950 the general index of wholesale prices advanced 0·3 point to 157·1. Five of the eight major groups recorded increases in this period. The most substantial of these was registered by the Textiles Products group, which rose 2·5 points to 162·2. Other group increases were considerably smaller: Vegetable Products moved up 0·9 point to 143·4; Iron Products, 0·9 point to 174·8; Wood Products, 0·5 point to 189·1; Non-metallic Minerals 0·3 point to 139·3. Animal Products registered the largest downward movement with a loss of 2·3 points to 160·7. Chemical Products followed with a drop of 1·3 points to 118·0, while Non-ferrous Metals receded 0·1 point to 139·7. Among commodities to show price increases between December and January were the following: worsted yarn 20·9 per cent, oranges 19·7 per cent, haddock 15·8 per cent, salt 14·5 per cent, raw wool 11·5 per cent, worsted suiting 11·1 per cent, beef carcass (Montreal) 10·2 per cent, cocoa beans (African) 10·1 per cent, crushed stone 9·9 per cent, coconut oil 8·9 per cent, rice 8·6 per cent. In the same period, price decreases were shown for the following: eggs, grade A large, 15·6 per cent, fowl 9·7 per cent, hogs 9·4 per cent, lard 8·9 per cent, auromine O dye 8·5 per cent, barley, No. 1 feed, western, 7·6 per cent, canned cherries 7·0 per cent, bacon 6·7 per cent, nylon hosiery 6·5 per cent, rosin 6·1 per cent, soap 5·9 per cent.

The Canadian Farm Products Index of wholesale prices moved down 0·3 point to 144·1 between December and January. Animal Products declined 2·7 points to 178·0, reflecting a sharp drop in eggs coupled with decreases in fowl and hogs. Field Products increased 1·1 points to 123·8.

\* See Tables F-1 to F-6.

# COST OF LIVING IN CANADA FROM JANUARY, 1946

(Base 1935-1939 = 100)

# STRIKES AND LOCKOUTS\*

## Canada, February, 1950

Strike idleness was down as compared with the previous month, and was little more than one-third of the loss in February, 1949. The number of work stoppages and the workers involved showed a slight increase over January, 1950, but were still few in number. Strikes and lockouts which caused the largest amount of time loss were: plumbers, steamfitters and helpers at Ottawa, Ont., firebosses at various coal mines in Alberta, and beverage room tapmen, waiters and glass washers at Calgary, Alta.

Preliminary figures for February, 1950, show 15 strikes and lockouts in existence, involving 3,764 workers, with a time loss of 26,300 man-working days, as compared with nine strikes and lockouts in January, 1950, with 2,456 workers involved and a loss of 39,488 days. In February, 1949, there were 10 strikes and lockouts, involving 7,245 workers, with a loss of 71,652 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in February was 0.03 per cent of the estimated working time, as compared with 0.05 per cent in January, 1950; 0.09

per cent in February, 1949; 0.04 per cent for the first two months of 1950; and 0.05 per cent for the first two months of 1949.

Of the 15 strikes and lockouts in existence during February, 1950, one was settled in favour of the workers, three in favour of the employer, one was a compromise settlement, and one was indefinite in result, work being resumed pending final settlement. At the end of the month nine work stoppages were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: composers, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and textile products factory workers at St. Lambert, P.Q., August 29, 1949.

\* See Tables G-1 and G-2.

## Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review issued as a supplement to the *LABOUR GAZETTE* for April, 1950, and in this article are taken, as far as possible, from the government publications of the countries concerned.

### Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in December, 1949, was 72 and 15 were still in progress from the previous month, making a total of 87 during the month. In all stoppages of work in progress in the period there were 14,700 workers involved and a time loss of 69,000 working days was caused.

Of the 72 disputes leading to stoppages of work which began in December, two, directly involving 100 workers, arose out of demands for advances in wages, and 26, directly involving 3,300 workers, on other

wage questions; six, directly involving 700 workers, on questions as to working hours; 11, directly involving 1,500 workers, on questions respecting the employment of particular classes or persons; and 26, directly involving 1,400 workers, on other questions respecting working arrangements. One stoppage, directly involving 1,600 workers, was in support of workers involved in another dispute.

For 1949, preliminary figures show a total of 1,423 work stoppages beginning in the year, 434,000 workers directly and indirectly involved in all stoppages in progress during the year and a time loss of 1,808,000 working days. Comparable figures for 1948 are, 1,759 stoppages, 426,000 workers and a time loss of 1,944,000 working days.

### United States

Preliminary figures for January, 1950, show 225 strikes and lockouts beginning in the month, in which 280,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 2,600,000 man-days. Corresponding figures for December, 1949, are 150 strikes and lockouts, involving 40,000 workers, with a time loss of 1,200,000 days.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA, 1949\*

Industrial fatalities in Canada during the calendar year 1949, were 1,344. The final figure for 1948 includes 37 not previously reported. The total number of fatal and non-fatal accidents reported by provincial Workmen's Compensation Boards decreased from 417,426 in 1948 to 413,132 in 1949.

The accidents recorded are those occurring to persons gainfully employed, during the course of or arising from their employment. Also included are fatalities from industrial diseases reported by Provincial Workmen's Compensation Boards. Reviews of industrial accidents appear in the *LABOUR GAZETTE* quarterly.

The annual totals were compiled from reports received from provincial Workmen's Compensation Boards, the Board of Transport Commissioners, and the Ontario Chief Factory Inspector. Also included were the reports submitted by *LABOUR GAZETTE* correspondents in several Canadian industrial centres.

Press reports served mainly to supplement official information and were included only after careful inquiry to avoid duplication. The record on accidents in agriculture was compiled from such reports. Although it is not known to what extent agricultural accidents are covered, the record is considered fairly complete.

Nine industrial accidents which caused the death of three or more persons in each case were reported to the Department during 1949. A pilot, a mining engineer, and a prospector were killed near Yellowknife, Northwest Territories on or about January 22, when an aircraft in which they were flying crashed. On April 1, at Britannia Beach, British Columbia, three miners were crushed to death under a load of drill steel in an underground accident in a copper mine. The engineer, fireman and conductor of a train were killed on May 9, when it was derailed near Wetaskiwin, Alberta.

On August 10, three slashers engaged in hydro-electric maintenance work at Pine Portage, Ontario, were drowned when a tow rope, which was attached to a boat in which they were travelling, broke, causing the boat to capsize. Four members of the Meteorological Service of the Department of Transport and a nurse on duty were killed near Norway House, Manitoba on August 23, when the aircraft in which they

were travelling crashed. On September 9, an explosion in, and subsequent crash of, an aeroplane near St. Joachim, Quebec, resulted in the death of four members of the crew, and two paper plant employees who were travelling in connection with their work. While there were a number of other passengers killed as a result of this crash it is not known that their deaths were incidental to their employment and hence their deaths are not classed as industrial fatalities.

Three workers engaged in metal refining at Arvida, Quebec were overcome by carbonyl gas poisoning on September 19, and died early in October. Three construction workers were burned to death in a construction project at Sydney, Nova Scotia on November 9. On November 26, six members of the crew of a fishing craft were drowned when their vessel was shipwrecked during a storm off Trial Island, near Victoria, British Columbia.

## Fatalities by Causes

Classification of accidents according to cause (Table H-1) indicates that the largest number, 422, came under the category of "moving trains, vehicles, etc." Automobiles and other power vehicles and implements caused 220 of these fatalities.

Industrial diseases, strain, etc., were responsible for 132 of the 251 industrial deaths recorded in the group, "other causes." Falls of persons resulted in 204 fatalities, while falling objects caused 159, of which 53 occurred in the logging industry. Dangerous substances caused 148 deaths including 44 resulting from electrocution.

## Fatalities by Provinces

The largest number of industrial fatalities recorded in any province in 1949, was 505 in Ontario. Of these 115 occurred in manufacturing, 97 in transportation, and 63 in the service industries. In Quebec, 268 fatalities were recorded including 74 in manufacturing and 56 in transportation. The third largest number, 227, occurred in British Columbia. Logging accounted for 71 of these fatalities.

## Fatalities by Industries

Table H-4 includes an analysis of fatalities by industries and months, and the number of fatalities in each industry is expressed as a percentage of the grand total. The latest

\* See Tables H-1 to H-5.

available census figures of persons employed in the various industries are also given, although they are not, in any case, for the year under review, they are included to provide an approximate indication of the relative frequency of accidents from industry to industry.

The highest percentage of the 1,344 industrial fatalities in 1949 was in transportation with 18.9; the percentage was 17.9 in the

previous year. Manufacturing accounted for 18.2 per cent in comparison to 19.3 in 1948.

The percentage in mining, non-ferrous smelting and quarrying decreased from 14.0 per cent in 1948 to 13.7 in 1949. In construction it declined from 13.1 in 1948 to 11.0 in 1949. The percentage in the logging industry also declined, from 12.3 per cent in 1948 to 10.5 in 1949.

## SELECTED PUBLICATIONS RECEIVED RECENTLY IN LIBRARY OF DEPARTMENT OF LABOUR\*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

NOTE.—Many of the statistical data in this table are included in the *Canadian Statistical Review* issued by the Dominion Bureau of Statistics.

†Comparable statistics are not available. (1) Labour Force survey figures given are as of Oct. 29, 1949, Nov. 20, 1948 and Nov. 8, 1947. (2) Base 1926 = 100. (3) Figures are as at end of quarter ending Dec. 31, 1949, 1948, 1944 and 1939 respectively. (4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946 = 100. (5) First of month. (6) Base 1935-1939 = 100. (7) Figures are for four week periods. (8) Annual figures; monthly not available. (9) Year-end figures. (10) Annual index.

<sup>1</sup> This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, as listed in Table C-4, with the exception of electric light and power.

<sup>2</sup> Mainly hotels and restaurants and laundry and dry-cleaning plants.

\* Includes Welland, Thorold and Merriton.

**TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING**

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operative firms.

Week Preceding	Average Hours Worked			Average Hourly Earnings

<sup>1</sup> Industries classed in the durable manufactured goods industries.

<sup>2</sup> Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows:—Nov. 1, 1949, 231-1; Dec. 1, 1949, 231-5; Jan. 1, 1950, 233-6; at Jan. 1, 1949 the index was 224-9.

<sup>3</sup> Chiefly street and electric railways.

<sup>4</sup> For information respecting the sex distribution of the persons in recorded employment, see Table C-5.

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc., occur from time to time. (a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time. (b) Averages include prices for cuts with bone-in. (c) Hock-on. (d) Mixed hock-off and hock-on. (e) Mixed carton and loose. (f) Loose. (g) Estimate. (h) Fancy. (i) Mixed California and Australia. (j) California. (k) Pure.

**TABLE F-2.—INDEX NUMBERS OF THE COST OF LIVING FOR EIGHT CITIES OF CANADA AT THE BEGINNING OF FEBRUARY, 1950**

(BASE: Aug. 1939 = 100)

	Total			Food	Rent	Fuel	Clothing	Home Furnishings and Services	Miscellaneous
	Feb. 1, 1949	Jan. 3, 1950	Feb. 1, 1950						
Halifax .....	152.1	152.7	153.3	198.1	111.0	132.6	193.4	155.8	123.0
Saint John .....	156.2	157.1	157.8	192.8	118.0	134.8	191.8	159.6	130.4
Montreal .....	162.4	163.8	164.2	208.4	120.5	133.6	176.7	171.2	130.3
Toronto .....	154.7	156.9	157.6	194.2	124.6	153.2	181.3	161.3	130.7
Winnipeg .....	153.8	155.0	156.3	201.8	119.5	121.5	176.0	169.7	125.2
Saskatoon .....	162.0	162.2	163.6	212.0	125.3	140.4	188.4	171.8	122.8
Edmonton .....	154.4	156.9	158.1	209.5	113.1	114.6	187.9	161.4	129.2
Vancouver .....	160.8	161.9	163.4	210.5	115.6	139.8	192.1	160.3	134.2

N.B.—Indexes above measure percentage changes in living costs for each city, but should not be used to compare actual levels of living costs as between cities.

## G—Strikes and Lockouts

**TABLE G-1.—STRIKES AND LOCKOUTS IN CANADA, JANUARY-FEBRUARY, 1949-1950†**

Date	Number of Strikes and Lockouts		Number of Workers Involved		Time Loss	
	Com-mencing During Month	In Existence	Com-mencing During Month	In Existence	In Man-Working Days	Per Cent of Estimated Working Time
<b>1950*</b>						
January.....	9‡	9	2,456‡	2,456	39,488	0.05
February.....	10	15	2,881	3,764	26,300	0.03
Cumulative totals.....	19		5,337		65,788	0.04
<b>1949</b>						
January.....	10‡	10	1,811‡	1,811	9,710	0.01
February.....	7	10	6,721	7,245	71,652	0.09
Cumulative totals.....	17		8,532		81,362	0.05

\* Preliminary figures.

‡ Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

**TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, FEBRUARY, 1950 (1)**

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
<b>Strikes and Lockouts in Progress Prior to February, 1950</b>				
<b>MINING—</b> Firebosses, Bellevue, Blairmore, Cadomin, Canmore, Coleman, Gregg River, Luscar, Alta.	10	180	3,600	Commenced January 16; for implementation of majority report of arbitration board for welfare fund and continuance of monthly wage rates, instead of welfare fund and daily rates proposed by operators; terminated.
<b>MANUFACTURING—</b> <i>Textiles, Clothing, etc.—</i> Worsted textile factory workers, Trenton, Ont.	1	117	2,300	Commenced December 28, 1949; for a new agreement providing for increased wages and reduced hours; terminated.
<b>CONSTRUCTION—</b> <i>Buildings and Structures—</i> Plumbers, steamfitters and helpers, Ottawa, Ont.	37	375	6,000	Commenced January 3; for a new agreement providing for increased wages, two weeks vacations with pay, double time on Saturdays, check-off, etc.; partial return of workers Feb. 21; terminated.
<b>TRADE—</b> Department store clerks, New Westminster, B.C.	1	50	1,000	Commenced August 27, 1949; for a union agreement providing for increased wages and other changes, as recommended by majority report of conciliation board; terminated.
Grocery store employees, Montreal, P.Q.	17	161	2,000	Commenced January 27, for a new agreement providing for increased wages and reduced hours from 47 to 40 per week, following reference to arbitration board; terminated February 16; conciliation, provincial; compromise, no increase in wages, hours reduced to 45½ per week.
<b>Strikes and Lockouts Commencing During February, 1950</b>				
<b>MINING—</b> Coal miners, Glace Bay, N.S.	1	850	1,700	Commenced February 2; protest against proposed change to dotal pay for tracklayers and pipe fitters, and increase in number of employees; terminated February 3; return of workers; in favour of employer.
Coal miners, Sydney Mines, N.S.	1	700	1,400	Commenced February 7; re payment for loading coal left at wall on previous day due to power shortage; terminated February 8; return of workers pending further negotiations; indefinite.
Coal miners, Cambria, Alta.	1	100	200	Commenced February 24; protesting dismissal of a miner following argument with mine official; terminated February 28; negotiations; in favour of workers, miner reinstated.

**TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, FEBRUARY, 1950 (1)**

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars(2)
	Establish- ments	Workers		
<b>Strikes and Lockouts Commencing During February, 1950</b>				
<b>MANUFACTURING—</b>				
<i>Boots and Shoes (Leather)—</i> Shoe factory workers, Richmond, P.Q.	2	195	2,500	Commenced February 15; for union recognition and agreement providing for increased wages and other changes; unterminated.
<i>Textiles, Clothing, etc.—</i> Sportswear factory workers, Toronto, Ont.	1	11	200	Commenced February 3; alleged discrimination in dismissal of three workers; unterminated.
Cotton factory workers, Welland, Ont.	1	300	500	Commenced February 1; refusal to join union by one worker previously not eligible for union membership because of job rating; terminated February 10; return of workers; in favour of employer.
Hosiery and clothing factory workers, Guelph, Ont.	1	59	700	Commenced February 13; refusal of union to accept clause that wage increases in lower brackets be negotiated in recommendations of conciliation board providing for certain wage increases, reduced hours, hospitalization plan, etc., in union agreement under negotiations; unterminated.
Men's clothing factory workers, Montreal, P.Q.	1	31	200	Commenced February 20; against dismissal of a foreman; unterminated.
<i>Metal Products—</i> Electrical apparatus factory workers, Peterborough, Ont.	1	435	200	Commenced February 2 and 6; protest against alleged delay in negotiations for a new agreement; terminated February 2 and 6; return of workers; in favour of employer.
<b>SERVICE—</b>				
<i>Business and Personal—</i> Beverage room tapmen, waiters and glass washers, Calgary, Alta.	20	200	3,800	Commenced February 4; for implementation of award of arbitration board for increased wages in new agreement under negotiations; unterminated.

(1) Preliminary data, based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(1) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces. (2) Preliminary figures. (3) For the period April 1 to December 31, 1949. (4) For the period July 1 to December 31, 1949.

# FUNCTIONS OF THE DEPARTMENT OF LABOUR

The Department of Labour of Canada has functioned for almost fifty years as the agency of the Federal Government charged with the administration of labour legislation. During the war the Department's activities were widely expanded. The functions of the principal branches of the Department and agencies associated with it are—

**Industrial Relations.**—This Branch of the Department is charged with the administration of (1) The Industrial Relations and Disputes Investigation Act providing for appointment of Conciliation Officers, Conciliation Boards and Industrial Inquiry Commissions by the Minister of Labour; (2) The Conciliation and Labour Act, empowering the Minister to inquire into the causes and circumstances of disputes and take measures toward their settlement; and (3) The Fair Wages and Hours of Labour Act, 1935, governing the application of minimum and prevailing rates of pay to all employees of Government contractors and subcontractors. The Branch also makes recommendations concerning the wage rates of prevailing rates employees of the Dominion Government.

This Branch has also assumed from the Industrial Production Co-operation Board the responsibility of developing closer co-operation between labour and management through the establishment of joint production committees and by the dissemination of informational material in visual and printed form.

In addition, the Industrial Relations Branch supplies the offices and staff employed by the Canada Labour Relations Board in administering the Industrial Relations and Disputes Investigation Act with respect to the functions described below.

The office of the Director of Industrial Relations is located in Ottawa and Branch Offices and staff are located at Vancouver, Winnipeg, Toronto, Montreal, Fredericton and St. John's, Newfoundland. Labour-Management Co-operation offices and staff are located at Vancouver, B.C., Winnipeg, Man., Hamilton, London, Windsor, St. Catharines, Kitchener, Toronto, Ont., Montreal, Three Rivers, Que., and Fredericton, N.B.

**Canada Labour Relations Board.**—The Board, upon which labour and management are represented equally, administers the provisions of the Industrial Relations and Disputes Investigation Act concerning certification of bargaining representatives, establishment of procedures for the final settlement of disputes concerning the meaning or violation of collective agreements, and complaints that there has been a failure to bargain collectively under the Act.

**Economics and Research.**—The collection, compilation and publication of statistics of employment, wages, hours, strikes and lockouts, industrial accidents, collective agreements, and labour organization; the conduct of investigational and research work bearing on industrial relations and labour conditions; the publication of bulletins of information on these subjects.

**Labour Gazette.**—The monthly publication of the LABOUR GAZETTE provides a review of the labour-industrial situation throughout Canada.

**Legislation.**—Analysis and publication of information concerning all aspects of labour laws in Canada and abroad.

**Canadian Vocational Training.**—The types of training carried on under Dominion-Provincial co-operation include: training of apprentices; retraining of workers released from employment; training of foremen and supervisors; training of young people and assistance to students.

**Dominion Government Annuities.**—The administration of the Government Annuities Act, Chap. 7, R.S.C., 1927, whereby provision may be made for old age by the purchase of annuities by individuals, or associations on behalf of their members or by employers on behalf of their employees.

**Unemployment Insurance Commission.**—The Commission administers the Unemployment Insurance Act, 1940, which provides for a national unemployment insurance system and employment service.

**National Employment Service.**—Authorized by the Unemployment Insurance Act, 1940, and operated by the Unemployment Insurance Commission, under the direction of the Minister of Labour.

**Bureau of Technical Personnel.**—The bureau organizes the placement of scientific and technical engineering personnel for industries and the government service.

**Library.**—The maintenance of a library of publications on labour and economic subjects.

**International Labour Organization.**—The collection and transmission of information in connection with the work of the International Labour Conference and Office, including related correspondence with Federal and Provincial Government Departments and with organizations of employers and employees.

# STRIKES AND LOCKOUTS IN CANADA, 1949

*There were no significant changes in the 1949 record of industrial disputes between workers and employers which resulted in work stoppages (strikes and lockouts) as compared with the previous year. The number of strikes and lockouts declined, being the lowest recorded for any year since 1939. The number of workers involved showed an increase of 8,500 over 1948, and the time loss was greater by 178,000 days. Strike statistics of the last two years indicate a marked improvement in industrial relations as compared with the preceding two-year period, the time loss for 1948-1949 being less than one-third of that in 1946-1947. The small number of work stoppages in existence during 1949, 137 strikes and lockouts, involving 50,000 workers, reflects the progress made in collective bargaining without resort to strike action. The latest figures available show that in 1948 collective agreements in effect covered more than 1,200,000 workers (LABOUR GAZETTE, December, 1949, p. 1521). The great majority of these contracts have been renewed by peaceful negotiations. In 1949, only 58 work stoppages, involving some 20,000 workers, arose out of disputes over renewals of existing contracts.*

*In 1949, almost half the idleness was caused by one strike in the asbestos industry. Seventy per cent of the total loss resulted from four work stoppages, involving asbestos miners and mill workers in various centres in Quebec, railway car factory workers at Hamilton, Ont., lithographers in various centres in Ontario and Quebec, and motor vehicle factory workers at Oshawa, Ont.*

During the year there were 137 strikes and lockouts in existence, as compared with 14 in 1948, 236 in 1947, and 228 in 1946. In 1949, 51,437 workers were involved in work stoppages, 42,820 in 1948, 104,120 in 1947, and 139,474 in 1946. The time loss in 1949 amounted to 1,063,667 man-working days, 885,793 days in 1948, 2,397,340 days in 1947, and 4,516,393 days in 1946, the peak

based on the number of wage and salary workers in Canada, the total amount of time lost was about one-tenth of one per cent of the estimated working time, approximately the same percentage as in 1948, one-tenth of one per cent in 1947, and one-tenth of one per cent in 1946. The total time loss in 1949 was equivalent to an average of about one-third of a day, one-tenth of a day in 1948, three-quarters of a day in 1947, and one and one-half days in 1946. The average loss of time for each worker involved in work stoppages in 1949

was about 21 days, the same as in 1948, 23 days in 1947, 32 days in 1946, 15 days in 1945, less than eight days in each of the preceding seven years, and 41 days in 1925, the highest on record.

For the past four years the demand for increased wages has been the predominant cause of strikes and lockouts as workers sought to maintain their purchasing power and offset rising prices with increased wage rates. In 1949, this demand for higher wages, frequently accompanied by other issues affecting unionism and working conditions, was the central cause of 63 per cent of the work stoppages, affected 56 per cent of the workers and caused 84 per cent of the total time loss. In the same comparison, the figures for 1948 were: 68 per cent of the strikes, 71 per cent of the workers and 83 per cent of the loss; in 1947, 66 per cent of the strikes, 79 per cent of the workers and 91 per cent of the loss; and in 1946, 48 per cent of the strikes, 76 per cent of the workers, and 96 per cent of the loss.

# RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBER OF WORKERS INVOLVED EACH YEAR 1914—1949

# LOSS IN MAN-WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR 1914—1949

Pension and welfare plans were not an important cause of strikes and lockouts in 1949. While accident and hospitalization, pension and welfare funds were listed as issues in some six work stoppages they appeared to be less important in all cases than the question of increased wages, which was the major demand. Settlements of three of these six stoppages included in the signed contracts clauses covering welfare,

accident or hospitalization plans. No pension plan was provided for in any strike settlement.

The great variety and complexity of causes leading to strikes and lockout present difficulties in classification for statistical purposes as there are usually several issues in dispute in each case. There was only one small sympathy strike in 1949 and none in 1948.

TABLE I.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1949

\* In this table figures for strikes and lockouts extending over the end of the year are counted more than once.

Of the 137 strikes and lockouts during the year, about one-sixth were settled in favour of the workers and more than one-quarter in favour of the employers. Almost 40 per cent of the total resulted in a compromise or partial gain to the workers, about the same proportion as in the last two years. Many of the larger work stoppages, involving 50 per cent of the total workers and

causing 80 per cent of the time loss, were settled on a compromise basis. Protracted negotiations in a number of important disputes were continuing at the end of the year and settlements had not been reported in time for this article.

The greatest amount of time lost in 1949 was in the mining industry, caused by the strike of asbestos miners and mill workers

\* In this table, figures for strikes and lockouts extending over the end of year are counted more than once.

† Two groups in which few strikes occurred are not shown in this table; they are: Finance—1929, one strike; 1942, one strike; 1948, one strike; Miscellaneous—1907, one strike; 1918, 2 strikes; 1919, 14 strikes, (general strike); 1920, one strike.

‡ In this table the manufacturing group now includes shipbuilding since 1901; prior to 1942 shipbuilding had been in construction group.

§ In 1943 two strikes involved workers in five industries; in 1946, one strike involved workers in two industries.

in various centres in Quebec. Strikes in the coal mining industry were few and caused little time loss. In 1947, the largest amount of time loss was also in the mining industry, because of a prolonged strike of coal miners in Nova Scotia and New Brunswick. With the exception of 1949 and 1947, during the last eight years the time loss

in manufacturing, with the largest working force of any industry, has been greater than all other industries combined. In 1949, the loss in manufacturing amounted to 41 per cent of the total, with idleness in the metal industry causing about half of this percentage. The time loss in fishing and trapping was 2.5 per cent of the total;

\* In this table figures for strikes and lockouts extending over the end of the year are counted more than once.

† Two groups in which few strikes occurred are not shown in this table; they are: Finance—1929, 11 workers; 1942 224 workers; 1948, 110 workers; Miscellaneous—1907, 6 workers; 1918, 157 workers; 1919, 44,399 workers (general strike); 1920, 119 workers.

‡ In this table the manufacturing group now includes shipbuilding since 1901; prior to 1942 shipbuilding had been in the construction group.

mining, 47.7 per cent; manufacturing, 40.7 per cent; construction, 3.9 per cent; transportation, 4.3 per cent; trade, 0.5 per cent; and service, 0.4 per cent.

Settlement of 62 of the 137 strikes and lockouts in 1949 was brought about by direct negotiations, in some cases with provincial conciliators acting in an advisory capacity at some stage of the negotiations. Provincial conciliation brought about settle-

ment in 18 cases, nine were referred to labour boards, commissioners, etc., 11 were settled by arbitration, and 27 by return of workers and replacement, the latter being a factor in five work stoppages. At the end of the year three strikes and lockouts were reported as unterminated, namely: fishermen at Burin, Newfoundland, worsted textile factory workers at Trenton, Ont.,

(Continued on page 37)

<b>Total (2)</b> .....															

(1) The figures for the group "Increase in wages and other changes" under "Union Questions—Collective Agreements" are included in these totals and are therefore shown twice in the table but counted only once in the final total, see footnote 2; in addition to increase in wages, "other changes" may include union security, reduced hours, changes in working conditions, vacations with pay, sick leave, pension plan, payment for statutory holidays, overtime rates, shift differential, etc.

(2) These totals are not the sum of the above group totals, see footnote 1.

(3) Inter-union dispute caused one strike, involving 199 workers with a time loss of 1,300 days.

(4) Union jurisdiction refers to disputes between unions as to the character or class of work which their respective members should perform, not to disputes re bargaining agency.

(5) Other than in connection with union questions.

(6) Including suspension and refusal to reinstate.

† Number of employers or establishments.

‡ Workers involved in Ontario, 569, time loss 63, 400 days; workers involved in Quebec, 290, time loss 25,600 days; work resumed by: Montreal and Hamilton, Dec. 7; London, Dec. 8 and Dec. 12; Ottawa, Dec. 14; Toronto, Dec. 7, at all but five establishments, and all but one by Dec. 31; employment conditions considered to be no longer affected by the end of the year.

§ Employment conditions no longer affected.

|| Listed as employment conditions no longer affected at end of year; work resumed on January 23, 1950, a union agreement having been signed.

\*\* Estimated only because of difficulty in securing precise details.

†† During the year the total time loss in all strikes listed due to workers indirectly affected, that is workers in the plant made idle because of the strike, amounted to about 134,600 days. Workers in other plants who may have been indirectly affected are not included. The following list shows the number of workers indirectly affected in each case.

1	820	7	600	13	94	19	25
2	200	8	1, 400	14	215	20	15
3	1, 600	9	2, 000	15	120	21	170
4	958	10	1, 800	16	3, 000	22	38
5	839	11	2, 000	17	28		
6	846	12	94	18	370		

and department store clerks at New Westminster, B.C. The fishermen at Burin resumed work on January 23, 1950, without settlement having been reached.

More than 87 per cent of the total time loss was caused by 22 strikes and lockouts which involved more than 500 workers in each case. Fifty-three work stoppages each involved between 100 and 500 workers and caused more than eight per cent of the idleness. Sixty-two disputes involved less than 100 workers in each case, causing only four per cent of the total loss.

Female workers were involved in 60 of the 137 strikes and lockouts during 1949, slightly more than 4,400, or about nine per cent of the total workers, being women and girls. The ten-year average, 1939-1948, of females in work stoppages was 66 strikes and 9,000 women and girls, or about nine per cent of the total of all workers involved in strikes.

About 58 per cent of the strikes and lockouts were settled within 10 days. These involved 58 per cent of the workers, but, being of short duration, caused less than nine per cent of the total loss. Sixteen per cent of the disputes, involving more than 17 per cent of the workers and causing about 15 per cent of the total loss, lasted between 10 and 25 days. Seventeen per cent, with nine per cent of the workers and more than 16 per cent of the total loss, lasted between 25 and 100 days. Four work stoppages, which lasted more than 100 days in each case, involved 14 per cent of the workers and caused 59 per cent of the total loss.

## Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the *LABOUR GAZETTE* each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each strike. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the *LABOUR GAZETTE* are necessarily of a preliminary nature, the annual review constitutes the revised record for the year.

The annual review for 1930, appearing in the *LABOUR GAZETTE*, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government depart-

ments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were made.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. In this discussion the word "strikes" is frequently used for convenience in place of "strikes and lockouts".

A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting one working day or more. Strikes of less than one day's duration and those involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such minor strikes is maintained in the Department. During 1949 there were six such strikes, involving 98 workers and causing a time loss of 27 man-days. In 1948, three were recorded, involving 81 workers, with a time loss of 16 days.

In tables I and XVI the number of employers involved is given. In strikes which involve large numbers of shops or factories, such as clothing, fur, furniture, etc., or building construction jobs, logging and fishing operations, etc., only the approximate number of employers is usually reported.

The figures in this report are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is not always possible to secure exact information but the estimates made in such cases are the result of painstaking methods in the collection of data, and it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees directly involved from time to time, so far as known. The number of employees recorded for each strike is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In

recent years, when the information was available, the numbers indirectly affected, if important, have been shown in footnotes to the table listing in detail the strikes and lockouts during the year. The workers indirectly affected in each strike are those in the establishment who are unable to continue work because of the stoppage but not participating in the strike. Data as to workers or idleness in other plants which

may have been indirectly affected are not included in any of the statistics owing to the difficulty of securing exact information.

### Charts

The accompanying charts show the results of strikes according to the number of workers involved and the time loss in man-working days by groups of industries each year, for the period 1914 to 1949.

## CANADA AND OTHER COUNTRIES

The accompanying tables give information as to industrial disputes resulting in work stoppages (strikes and lockouts) in certain countries since 1919, including Canada, showing the number of strikes and lockouts, the number of workers involved and the time loss in man-working days.

During the war years, and the dislocation following the war, statistics for many countries were not available and our yearly strike review from 1941 to 1948 was confined to seven countries, *see* Supplement to the LABOUR GAZETTE, April, 1948, p. 32. In 1940, tables were given for Canada and 31 other countries, *see* LABOUR GAZETTE, March, 1940, p. 234. The review for this year includes data for such countries as have resumed publication of statistical tables on strikes and lockouts and for which information has been received in the Department. Throughout the year figures for the different countries are given in the monthly articles in the LABOUR GAZETTE as they are received in the Department.

In the different countries variations occur in the definition of strikes and lockouts and in the methods of compilation of statistics. In nearly all countries no distinction is made between strikes and lockouts but in a few cases the figures are for strikes only. In some cases the number of strikes and lockouts shown for the year is the number commencing during the year

and in other cases it is the number in existence during the year, including those carried over from the previous year.

The figures published by some countries as to the number of workers involved show not only the number of workers directly involved but also the number of those indirectly affected, that is thrown out of work by strikes and lockouts to which they were not parties, but exact information on this point is not always given. In the tables herewith, the column showing the number of workers involved includes figures for the numbers directly involved or the total number directly and indirectly involved, according to the method adopted by the country concerned. Footnotes to the tables indicate the nature of the statistics with reference to the above points.

For these reasons the figures for strike and lockouts for the various countries are not exactly comparable.

Many countries publish statistics dealing with disputes resulting in work stoppage only once each year or even less frequently the figures being issued in some cases after an interval of great length. Most countries revise their figures when additional facts are brought to light, even though such revisions may necessitate changes in statistics published a considerable time previously. In nearly all cases statistics dealing with strikes and lockouts in other countries published in the LABOUR GAZETTE are obtained from official publications of the countries concerned.

(1) Strikes and lockouts in existence in the period.

(2) Strikes of less than one day's duration and those involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused.

(3) Directly involved only. In 1949, time loss due to workers indirectly affected, that is workers in the plant made idle because of the strike, amounted to about 134,600 days. Workers and idleness in other plants which may have been indirectly affected are not included in any of the statistics.

(1) Work stoppages due to labour-management disputes beginning in the period.

(2) Work stoppages due to labour-management disputes which involve as many as six workers and last as long as all day or shift are included.

(3) All workers in the plant made idle because of the dispute, but not workers or idleness in other plants indirectly affected, are included.

## CURRENT LABOUR CONDITIONS

• • • • •

*This article summarizes the latest employment and labour information available at May 10, as the LABOUR GAZETTE went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

**A**FTER a winter of the heaviest unemployment since the end of the war, the employment situation in most sections of the country was beginning to improve rapidly by the first of May. A slow improvement had been evident for more than a month, but it was not until towards the end of April that construction, transportation, the service industries and agriculture began to provide a large number of jobs for many of those who have been seeking work through National Employment Service offices.

The supplementary unemployment insurance benefit program, which ended this year on April 15, brought to the employment offices many job seekers who had not previously registered for work. As a result, total registrations at the National Employment Service reached a peak of 434,700 on April 6, even though there had been considerable improvement in the employment situation by that time. After this date, registrations began to decline, at first slowly and then more rapidly as the month advanced. In the last week of April alone, total registrations dropped by over 19,000, and by May 4, there was a further decline to 387,600, 47,100 below the April 6 peak.

At this time of year, when there are many new job openings, the official figures on registrations at National Employment Service offices tend to understate the extent of the decline in the numbers seeking work. Any application for work remains on file at the local employment office for 30 days after the date of the last registration. Should a worker find a job before the 30 days has elapsed, neither he nor his employer is under obligation to notify the local offices.

In addition to the job openings in construction, agriculture and transportation, other seasonal increases of employment continue to take place in manufacturing industries such as those producing household furniture, electrical apparatus, and in sawmills, heavy metal industries and some sections of the clothing industry. In some of these plants, employment has been increasing at a somewhat slower rate than is usual at this time of year. Not all manufacturing groups share in this improvement: a certain amount of short time work still exists in such industries as primary textiles and foundries.

In themselves, seasonal increases in employment give little indication of the economic conditions of the country; employment in Canada has always increased during April and May whether there has been a boom or a depression. Of more significance is the level of employment likely to be reached throughout the rest of the year.

It is anticipated that employment in almost all major industry groups during 1950 will reach a level slightly above that of last year. Employment prospects in the construction industry are particularly good, and in agriculture it is unlikely that reduced farm income will decrease the demand for workers, assuming a normal crop year.

The most important exception to the general upward trend is the manufacturing industry, where the level of employment is expected to be slightly below that of last year. The outlook for the different industries within the manufacturing group varies considerably. In the automobile industry, for example, employment is expected to increase as the industry produces at or near capacity to fill the continuing strong demand for cars. In the primary iron and steel industry, most plants expect to produce at high levels throughout most of the year. Uncertain supplies from the United States for some types of steel and the fact that the Canadian steel prices are below the American will result in a steady demand for the Canadian products for some months to come. In contrast, firms producing railroad equipment will probably continue to reduce their staffs, as orders from the railroads decrease.

A program of capital investment which will reach an estimated \$3.6 billion, favourable markets for our exports in the United States, and a continuing strong consumer demand are among the important basic factors on employment in Canadian industries. A large portion of the capital investment will be concentrated in housing and public utilities, and the development of natural resources, such as oil in Alberta, and iron ore in Ungava. While the dollar shortages are reducing British and European demand for Canadian goods, alternative markets for many of these products are being found in the United States, which has already become our single most important export market. During March, when total value of exports was 5 per cent above that of March, 1949, two-thirds of our exports were shipped across the border, a proportion of sales to the United States unprecedented in Canadian history. The American demand is particularly strong for pulp and paper, mineral products and lumber. In the domestic market, increases in wage rates and weekly earnings, and a continued high level of employment will

(Concluded on page 694)

- (a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.
- (b) Some of these "unplaced applicants" registered at the National Employment Service Offices are persons with a job who are seeking other work. On the other hand, there are persons without jobs and seeking work who do not come to the N.E.S. offices.
- (c) These percentages calculated on basis of 1949 figures excluding Newfoundland.
- (d) These percentages compare the cumulative total to date from first of current year with total for same period previous year.
- (e) Percentage change from previous year is not given, as the inclusion of claimants for supplementary benefits makes the figures not comparable.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Citizenship and Immigration, and the Economic and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the LABOUR GAZETTE.

# NOTES OF CURRENT INTEREST

## **Dominion-provincial farm labour agreements renewed**

Renewal of the annual Farm Labour Agreements between the Dominion and the several provinces was ratified by Order in Council, P.C. 1317, dated March 14, 1950, which was tabled in

the House of Commons by Mr. Paul Côté, Parliamentary Assistant to the Hon. Humphrey Mitchell, Minister of Labour, on March 27, 1950.

The Order gave authority to the Minister of Labour to enter into an agreement on behalf of the Federal government with each of the provinces for the movement and placement of persons in employment in agriculture and related industries on substantially the same terms and conditions as in former years (L.G., 1948, p. 418).

The agreements were first entered into in 1943 (L.G., 1943, p. 568) and have been renewed annually with slight modifications from time to time. This co-operative arrangement between the Dominion and the several provinces proved its worth in wartime and has continued to be a valuable factor in the efficient placement of farm labour in the post-war period.

The scheme was approved in principle at the conference of farm labour officials held in Ottawa last December, subject to ratification by the responsible provincial administrative officials (L.G., Feb., 1950, p. 192). Copies of the agreements covering the 1950 crop season were sent to the provincial governments by the Immigration and Farm Placements Branch of the Federal Department of Labour on March 30. It was expected that they would be returned duly executed by most, if not all of the provinces, by the end of April.

Mr. Mitchell stated recently that a major objective of the agreements was to provide farm help when and where it was most needed. Largely as a result of movements of agricultural workers under the provisions of the agreements, no crop losses were reported in 1949 due to shortage of farm help. He pointed out that considerable satisfaction had been expressed in connection with the joint efforts of Dominion and Provincial officials to solve farm labour problems during the past few years. He cited as an example a resolution recently passed by the B.C. Fruit Growers' Association to the effect that the program had been of great benefit to the fruit growing areas of British Columbia and requested that the service be continued this year.

Approximately 3,500 agricultural workers were involved in movements within Canadian borders during 1949, organized under these Dominion-provincial agreements. The largest movement was the reciprocal swing of harvesters from West to East and from East to West which involved approximately 1,700 workers. Other important movements were: potato pickers from New Brunswick and Nova Scotia to Prince Edward Island; fruit pickers from the Prairies to British Columbia; and hay harvesters from Nova Scotia to Prince Edward Island.

In addition to the movements of workers within Canadian borders there were three large international movements between Canada and United States. These included 1,350 potato pickers from New Brunswick and Quebec to Maine, and 350 sugar beet workers from Saskatchewan to Montana. A third international movement was of 2,150 tobacco workers from United States to Ontario.

## **Rent controls continued until 1951**

Speaking in the House of Commons on March 24, 1950, the Hon. Douglas Abbott, Minister of Finance, announced the Government's intention to continue rent controls until April 30, 1951, but no longer. He said that in the meantime "no further adjustments will be made in rental ceilings or in the conditions affecting security of tenure, except in individual cases as permitted under the regulations as they now stand, or minor amendments to the regulations that may be found necessary. In short, there will be a standstill in rent control."

Mr. Abbott referred to the unanimous decision of the Supreme Court (summarized elsewhere in this issue, on page 710) that the federal Wartime Leasehold Regulations are valid during the continuance of the emergency they were adopted to meet.

"The Government considers," he said, "that it should not ask Parliament to continue its emergency authority any longer than is absolutely necessary. These are extraordinary powers and they should be exercised with great discretion. As the Chief Justice has said, 'There is no doubt that under normal conditions the subject matter of rents belongs to the provincial jurisdiction under the head of property and civil rights, in Section 92 of the British North America Act.' The Federal Government has never disputed this, and has in fact, over the past two years, offered to

vacate the field to any province that desired to assume responsibility; and one province, Saskatchewan, has already arranged to take over on April 1, 1950.

"For these reasons, the Government does not intend to ask for a further extension of the Continuation of Transitional Measures Act beyond April 30, 1951. It is the government's view that over the next thirteen months the operation of the relaxations now in effect, combined with additions to the housing supply, will have permitted enough adjustment to take place so that any problem which may remain can be dealt with adequately—and with closer regard to local conditions and needs—on a provincial basis."

On March 30, the Royal Assent was given to legislation extending the Continuation of Transitional Measures Act.

**Minister of Finance on employment problems**

In his annual Budget address, delivered in the House of Commons on March 28, the Hon. Douglas Abbott, Minister of Finance, made reference to employment in Canada and Government policy in regard to regional problems.

"Total unemployment," he said, "even at its seasonal peak, has not been large, judged by normal and usual conditions in this country. It has, however, been uneven in its regional incidence.

"The largest single element in the past winter's unemployment has been the sharp decline in woods operations associated with the policy of the principal pulp and paper companies in reducing their heavy pulpwood inventories. Other pools of unemployment have been created by decline of particular export markets.

"The marketing prospects for our pulp and paper industry appear to be good, and if these are maintained I would expect the woods operations next winter to be at a normal level. We shall continue to give all the help we can in finding markets for such other commodities as may from time to time find their markets upset.

"I want to make it clear, however, that the central government cannot and should not attempt to assume responsibility for all these regional problems. In my mind the proper role of the central government in our federal state is fourfold. First, through its fiscal and general policies it should endeavour to create a favourable climate for healthy economic expansion and development. Second, it should have careful regard in planning its own operations for the best timing and the best placing of its capital and developmental

expenditures. Third, it should recognize a special responsibility for the promotion and development of our basic primary industries and other industries of a national significance. Fourth, it should be ready to co-operate actively with provincial governments, and through the provincial governments with municipalities, in meeting regional problems that threaten nation-wide economic repercussions. . . .

"The consensus of informed views about the outlook for 1950," said Mr. Abbott, "is that employment output and price levels in both Canada and the United States will show no great change from 1949. The balance of probabilities for Canada indicates a moderate increase in the domestic and United States demand for our products, offset in part by a reduction in overseas demands, with prices tending slightly downward, and employment slightly upward."

**Canadian safety film wins competition**

Hon. Humphrey Mitchell, Minister of Labour, announced recently that a Department of Labour safety film produced by the National Film Board in co-operation with the Information Branch of the Department of Labour had been judged the outstanding non-theatrical motion picture in the occupational safety field produced in Canada and the United States in 1949. The award was made by the National Committee on Films for Safety, with headquarters at Chicago.

The picture, which was circulated throughout Canada during 1949, dealing with safe clothing in industry, is the fifth in the series of industrial safety films, "Accidents Don't Happen—They're Caused", produced for the Department of Labour.

The picture demonstrates with humour, sometimes grim, the chances a machinist takes when he wears the wrong clothes on the job. Brogan thought Foreman McCardle had gone crazy when he had him, Brogan, carried away from his machine to hospital on a stretcher. When the industrial nurse started to operate, Brogan, who was feeling perfectly healthy, was terrified. But it was Brogan's clothes that got the surgery—his trailing necktie, his baggy-sleeved sweater, his cuffed pants and his thin-soled shoes.

The other four films in the series deal with the organization of safety committees, safe practice in machine operation, proper handling of heavy objects and accidents due to falls. All films were produced in both French and English versions.

A total of 3,446 showings of these films have been made in Canada since they were

issued in 1946, reaching an audience in this country of about 266,000. Estimated audience reached by the prints of the films which were sold in Canada and abroad is well over one million. A total of 216 prints of the film have been sold in Canada and 960 abroad, in the United States, Great Britain, France and in countries as far away as Turkey and New Zealand.

**Monograph on sheet metal trade**

A new publication in the "Canadian Occupations" series, entitled *Sheet Metal Worker* was released for distribution on March 14 by Hon. Humphrey Mitchell, Minister of Labour.

Like the five earlier publications on trades in the construction group, this is issued both as a monograph dealing with the occupations in considerable detail, and as a shorter, simplified pamphlet.

These Department of Labour monographs are designed to fill a need for specific and accurate information on careers in the various Canadian occupations. Each monograph covers a particular trade from such standpoints as the qualifications required, duties, training, earnings, advantages and disadvantages. The co-operation of labour and management officials in receiving manuscripts and suggesting improvements had been of the greatest assistance to the Department in assembling accurate material.

There has been an increasing demand for these publications, the Division points out, not only from young people who were planning their careers, but from teachers, youth counsellors, employment officers and union officials. Industry and the trades are expected to benefit from the wide distribution of this type of information by receiving young entrants alive to the possibilities and requirements of their chosen professions.

Further publications in the "Canadian Occupations" series are now being prepared.

**Silicosis, TB X-ray services to be expanded**

An extension of chest X-ray services for industrial workers exposed to silica dust is to be financed from Ontario's share in the federal health grants, Hon.

Paul Martin, Minister of National Health and Welfare announced on March 7.

Large X-ray units operated by the Ontario health department's division of industrial hygiene give periodical chest X-rays to workers in foundries, quarries, mines, potteries and other industries where there is danger of pulmonary ailments developing through exposure to silica dust, Mr. Martin explained. Because of the extensive territory to be covered, the large

X-ray units cannot visit an industry more often than once in about 18 months.

With a \$7,000 grant from federal health funds, the Minister of Health said a smaller mobile X-ray unit will be bought to provide follow-up examinations for men who are found to have chest conditions requiring observation or review more frequently than the regular examinations permit.

"Silicosis ranks well up among the health hazards of modern industry," Mr. Martin stated. "Both industry and government are anxious to see that every possible measure is taken to prevent the development of this disease among men whose work exposes them to it. . . ."

On March 10 Mr. Martin revealed that Ontario's tuberculosis services will be expanded with the purchase of four more mobile X-ray units. The new units will be stationed at the sanatoria in London, Weston, St. Catharines and Fort William.

Expansion of clinical facilities has been a co-operative enterprise with the Ontario Department of Health and the sanatoria providing clinical supervision and local, voluntary tuberculosis committees paying the costs of operation from Christmas seal funds, Mr. Martin explained. Since the local groups cannot assume the full cost of expanded services in their districts the Federal Government will provide the necessary equipment and meet the salaries of the clinic physician and the X-ray technician needed to operate it. The voluntary associations will still be responsible for equipment upkeep, supplies and travelling expenses.

**Health plan to meet hazards of radioactive materials**

The Industrial Health Division of the Department of National Health and Welfare has formed a new section to develop a radiological health program to meet potential health

hazards created by the increased use of radioactive materials and radiation-producing apparatus.

This was announced on March 22 by the Minister of National Health and Welfare, Hon. Paul Martin, who said that the Civil Service Commission had approved the appointment of Dr. G. H. Guest, Chalk River, Ont., to take charge of this work. Dr. Guest was formerly head of the health radiation branch in the National Research Council's atomic energy project at Chalk River.

According to Dr. K. C. Charron, chief of the Industrial Health Division, more and more radioactive materials are being distributed in Canada. Many of the

universities are now receiving them for medical and biological research as are a few of the larger hospitals. Industry has also begun to use radioactive substance, particularly radium and radioactive cobalt. Their uses include, detection of flaws in metal castings and as static eliminators. The health radiation section will deal with radiological health problems referred to the federal health department, act as a source of information on radiological health for other departments of the federal government, and assist provincial and local health agencies in health radiation problems.

Experience has shown, Dr. Guest stated, that persons can work with radioactive substances with safety, provided proper care is taken. However, industry and laboratories must be properly equipped to handle these potentially dangerous materials. Health precautions include use of electronic equipment such as a Geiger counter for checking hands, clothing and furniture for radioactive contamination; use of specially sensitized film to ensure that no one is receiving a dangerous amount of radiation; special laboratory clothing and special cleaning and disposal services.

### **Production higher in Canada in 1949**

Preliminary estimates by the Dominion Bureau of Statistics indicate that Canada had a gross national product and expenditure of more than \$15.9 million in 1949, an increase of three per cent from the revised estimate of nearly \$15.5 billion for 1948. In volume terms, the Bureau estimates the gain last year over 1948 at two per cent.

The Bureau has published its findings in a report entitled *National Accounts, Income and Expenditure, Preliminary, 1949*. The report contains a series of tables showing figures for such matters as salaries and wages, corporation profits, spending and investment, and taxes.

National income increased in 1949 to \$13.0 billion from the revised estimate of \$12.5 billion in 1948, the Bureau states. This gain of four per cent is fully accounted for by a rise of seven per cent in salaries, wages and supplementary labour income, placed at \$7.630 million as against \$7.113 million in the previous year. Agricultural income, which showed a sharp increase in 1948, was down four per cent, from \$1,660 to \$1,587 million, despite higher wheat adjustment payments, while net income of other unincorporated business advanced to \$1,272 from \$1,252 million. Investment income also rose slightly to \$2,373 from \$2,348 million, a decline in corporation

profits—largest component of investment income—being more than offset by increases in other components.

The most striking change shown in the components of gross national expenditure was a marked decline in the rate of inventory accumulation. There was no noticeable increase in inventories at the end of 1949 over 12 months earlier, whereas there was an increase of \$646 million or four per cent of gross national expenditure in 1948. In physical terms, an actual reduction of inventories last year is indicated.

Gross home investment increased in housing to \$753 million from \$647 million the previous year, and in plant and equipment to \$2,076 from \$2,016 million. However, housing alone showed an increase in volume.

Consumer spending rose seven per cent from \$10.1 to \$10.8 billion, representing—after allowance for price increases—an advance of two per cent in real consumption. The largest volume increase in consumer spending was on durable goods, such as automobiles and furniture, amounting to 10 per cent. On the other hand, spending on semi-durable goods, although slightly higher in value, actually declined in physical terms.

Government expenditure on goods and services increased to \$2,108 million in 1949 from \$1,787 million in 1948, accounting for 13 per cent of gross national expenditure as compared with 12 per cent. Increased federal spending on national defence and on inventories in connection with price support programs, and increased capital expenditure at provincial and municipal levels accounted for most of the change.

Exports of goods and services last year remained at approximately the 1948 level of \$4.0 billion, but imports increased from \$3.6 billion to \$3.8 billion. Thus net foreign investment declined substantially.

### **Ford pension plan settlement**

It was announced in the press on April 11 that settlement had been reached in the dispute between the United Automobile Workers (CIO-CCL) and the Ford Motor Company of Canada Limited concerning the adoption of a company-financed pension plan for employees. The dispute commenced about a year ago and was followed by the handing down of a decision by a Conciliation Board which recommended the establishment of a \$55 a month pension (L.G., April, 1950, pp. 454-9).

The new pension plan is the major innovation in the revised Ford contract, although other changes will be included in the contract which will be signed on September 1 of this year according to the statement. Preliminary reports indicate that the plan provides for payment of a \$55 a month pension as was suggested by the Conciliation Board. This will be financed by the company and it is estimated that the cost will be \$1,000,000 annually for future funded pensions and \$1,460,000 additional each year for a 10-year period to finance past service credits.

The plan, as presently constituted, will be administered jointly by the Company and the Union. Its terms will not be subject to further negotiations for a period of five years. The pension provisions will go into effect 4 months after the agreement is signed. Although the retirement age is set at 65 years after 30 years of service, the Company has agreed not to force any worker to retire until his 68th birthday after May 1, 1951.

**Joint consultation in industry enters new stage**

The practice of joint consultation between management and labour which received great impetus in Britain during wartime, then became less important in the period immediately following, has entered a new stage of its development, according to the British *Ministry of Labour Gazette* of February.

The necessity of resuming activities became apparent soon after the end of the war with the growing awareness of the "country's serious economic position," the article states. Early in 1947 the National Joint Advisory Council of the Ministry of Labour and National Service, with a view to increasing production, initiated a fresh campaign to get the consultation principle accepted by management and labour alike and put into effect throughout the whole field of industry.

The Council adopted a resolution recommending its constituent organizations on both sides to set up joint consultative machinery where it did not already exist, on lines best suited to the needs of the industry involved. The recommendation clearly stressed that the machinery would be voluntary and advisory and that it would not deal with terms and conditions of employment normally dealt with through machinery of joint negotiation.

As a result of the campaign, states the article, many industries which previously had not arrived at any national agreement about joint consultation have now formally

accepted the principle. Other industries have revised and brought up to date their existing agreements.

In the Acts which provided for the socialization of the coal, transport, civil aviation, electricity and gas industries, there is a clause obligating management "to seek consultation with the appropriate trade unions . . . for the promotion and encouragement of the workers, and for the discussion of other matters of mutual interest, including efficiency in the operation of services provided by the industry."

In recent months the British Labour Ministry has sponsored conferences of firms with and without formal methods of consultation. Through its Personnel Management Advisory Service the Ministry has also given help to firms on this subject.

**Guaranteed wage for New York laundry workers**

A guarantee of forty hours' work every week is contained in a two-year agreement recently negotiated between the Laundry Workers' Joint Board, affiliated with the Amalgamated Clothing Workers (CIO), and four major employer associations in the New York City area, according to the *New York Times*.

Inasmuch as the laundry industry operates year-round and is not seasonal, these conditions of employment mean that under normal conditions employees can look forward to what amounts to a guaranteed annual wage, in the view of the union.

**High construction activity in U.S.A.**

Construction activity in the United States is described officially as having been "unusually high" throughout the winter months of 1950.

A summary for the first quarter of 1950 shows new construction work valued at \$4.4 billion, 18 per cent above the total for the first quarter of last year and the largest first quarter total on record. Private construction was up 17 per cent and public construction 21 per cent. Non-farm home-building, at \$1.9 billion, accounted for about 44 per cent of the first quarter total, compared with about 35 per cent for the first quarter of 1949.

**European industrial teams study U.S. methods**

Nearly 500 technicians and workers from 15 Marshall Plan countries visited the United States during 1949 to study American production techniques in fields ranging from wood research to fertilizer production, the Economic Co-operation Administration announced recently.

The studies included tours of large and small manufacturing plants, visits to private, university and government research stations and institutions, conferences with leading industrial, labour and agricultural authorities and actual experience in working with American technicians and workmen.

The projects sponsored under the program include visits of experts, technicians, and workers. All the participants agree to make the knowledge they gain available throughout industry in their own country.

Industrial teams from Denmark, France, and the United Kingdom have participated in the program. Other groups of technicians or individual experts from Austria, Belgium, Germany, Ireland, Italy, Luxembourg, The Netherlands, Sweden, Switzerland, Norway and Turkey have also visited the United States. An even greater volume of visits is anticipated in 1950.

### **CCL appoints committee on co-operatives**

Appointment of a committee to investigate the possibilities of establishing consumer co-operatives and credit unions, was announced by the Executive Council of the Canadian Congress of Labour on March 29. The committee is composed of Roy England, United Automobile Workers, Windsor; Tom MacLaughlin, Retail Wholesale and Department Store Workers' Union, Toronto; and Pat Conroy, Canadian Congress of Labour, Ottawa.

### **Housing construction in Canada 1949**

Dwelling units completed in Canada in 1949 reached a total of 90,955 (87,533 new constructions and 3,422 conversions) according to estimates of the Dominion Bureau of Statistics. This figure compares with 81,243 units completed in 1948 and brings the total number of dwelling units completed in the last five years to 367,471.

The carry-over of dwellings under construction at the end of this year was only slightly higher than at the end of 1948, "indicating that activity in the construction field may be levelling off," the Bureau reported. At the end of December, 1949, the number of unfinished dwellings (excluding conversions) reached 58,169 compared with 56,456 dwellings uncompleted at the end of December, 1948.

An average of 7.0 months was required to build each dwelling unit completed in Canada in 1949, compared with a 1948 average of 6.5 months. The monthly averages show a definite seasonal pattern, dwellings completed during the first half of the year taking longer than the average for the year and those completed during

the last half of the year taking slightly less time than the average for the year.

Most of the new dwelling units completed in 1949 were of the one-family detached type. These numbered 68,422, the remainder comprising 7,250 two-family detached, 480 in rows or terraces, 10,962 apartments or flats, and 419 other types.

Completions of newly constructed units by provinces in 1949 (compared with 1948 figures) were as follows: Prince Edward Island 258 (230); Nova Scotia 3,056 (2,588); New Brunswick 1,801 (1,991); Quebec 22,912 (20,171); Ontario 31,440 (26,391); Manitoba 4,807 (4,561); Saskatchewan 3,576 (3,211); Alberta 9,411 (6,223); British Columbia 10,272 (10,731).

From the types of dwelling constructed, an estimated 26 per cent of those completed in 1949 are for rental purposes compared with 25 per cent in 1948. The remainder will be owner-occupied.

### **End of manpower controls in Britain**

Early in March the United Kingdom Government announced the end of controls on the movement of labour, with the revocation of the Control of Engagement Order, 1947.

The Order, which was a modified form of the manpower controls used in wartime, made compulsory the use of Employment Exchanges. It also gave the Minister of Labour power to direct people into jobs regarded as essential.

The Rt. Hon. George Isaacs, Minister of Labour, said in Parliament on March 9 that there had been progressive relaxations in the administration of the Order; and that its application to coal mining and agriculture had ended at the end of 1949.

The Employment Exchanges, he said, "will remain freely at the service of employers and workers."

Although the duration of the visits varies according to the subject being studied, most of the projects provide for about six weeks of observations in the United States. The projects are not completed, however, when the visitors leave the United States as each delegation is committed to a full program of spreading the information they learn about American techniques.

Information is disseminated in the participating countries through such means as the distribution of reports and articles in technical publications and special meetings and lectures for those who could benefit.

The participating countries bear more than 50 per cent of the total costs of the projects. ECA meets the dollar costs of

the trips including travel and living expenses of the visitors while in this country. All other costs, such as ocean transportation, salaries of the experts and expenses involved in printing of reports, etc., are met by the sponsoring country.

**New York law to aid older workers under study**

The possibility of introducing legislation to prevent employment discrimination against older workers has been under study by a committee on Problems of the Ageing of the New York State Legislature.

The Committee decided to postpone introducing the legislation until the 1951 Session of the Legislature, in order to give business an opportunity to improve the situation voluntarily, according to the *New York Times*.

**Safety code for manlifts**

*A Safety Code for Manlifts* which has been approved by the American Standards Association as an American Standard (ASA A90.1-1949), was recently published by the American Society of Mechanical Engineers.

The Code is intended as a guide to state and municipal authorities in the drafting of their regulations, and also for the voluntary use of manufacturers, architects, plant designers, and consulting engineers, and for users of equipment. It is applicable to the safe construction, maintenance, inspection and operation of lifts used for the conveyance of plant personnel, and does not cover moving stairways, elevators with enclosed platforms, gravity lifts or conveyors of materials.

The Code is divided into four parts. The rules in Part I deal with general requirements for the safe construction and maintenance of floor openings, landings, entrances and exits, emergency exit ladders and for the control of illumination.

Part II—Mechanical Requirements—recommends safe types of machinery and brakes and gives considerable space to the construction of belts, their proper width, strength and fastenings. Other rules in this section deal with maximum speed, construction of platforms or steps, handholds, emergency stops, electrical requirements and warning signs.

Parts III and IV include recommendations concerning operating rules, tests and inspection. All manlifts, the Code states, should be inspected by a competent, designated person at intervals of not more than 30 days, and a written record kept of each inspection. This record should be made available to qualified inspectors.

A page of safety diagrams illustrates the application of the Code Rules.

**Further progress towards U.S. labour unity**

Last month's *LABOUR GAZETTE* (p. 436) made reference to recent events indicating a trend towards labour unity in the United States.

Early in April a further important development occurred when Philip Murray, President of the Congress of Industrial Organizations sent a letter proposing "unity of action" to William Green, President of the American Federation of Labour.

Mr. Murray also wrote in the same terms to John L. Lewis, President of the United Mine Workers; A. J. Hayes, President of the International Association of Machinists; W. P. Kennedy, President of the Brotherhood of Railroad Trainmen; Alvanley Johnston, Grand Chief Engineer of the Brotherhood of Locomotive Engineers, and H. W. Fraser, Chairman of the Railway Labour Executives Association.

In his letter, Mr. Murray spoke of an "imperative need for common action on the part of organized labour to meet the present critical situation facing labour and the nation."

Referring to "widespread unemployment" and other problems on which legislative action was sought by labour, Mr. Murray stressed the importance of "effective unity of action" to obtain satisfactory results in the 1950 Congressional elections.

"The economic situation, the legislative impasse, and political realities, call for common action on our part—now," Mr. Murray's letter said.

"The ideal way to meet the challenge would be organic unity of all of labour. This is the desirable goal to which, I am sure, we all aspire.

"Pending organic unity, we must find the means, within the framework of our existing organizational structures, to marshal our resources, strength, and membership, in order to overcome the forces of reaction. In this way we can best preserve and advance the interests of our members and of the nation at large.

"I therefore propose that we establish a joint committee consisting of duly accredited representatives of our various organizations with authority to embark upon and pursue a common program. This committee should be given a double mandate. Immediately, it should be empowered to co-ordinate our efforts in the economic, legislative, and political spheres. It should also seek to achieve the organic unity of all of American labour."

Replying to the CIO proposal, the AFL President, William Green, wrote as follows:—

"The conclusions which you express in your letter make it clear that time and experience have shown that labour and labour's friends, united, can successfully deal with the forces of reaction through united action and united effort. That means that one plan and one purpose should be formulated by one strong, well-established labour organization.

"When several plans and policies are formulated, inspired as they may be by the same purpose on the part of those who compose and make up different labour organizations, it is difficult to unite and blend the conflicting plans into unity of purpose.

"I was pleased to note your statement that 'the ideal way to meet the challenge (of reactionary forces of the nation) would be organic unity of all labour. This is the desirable goal of which, I am sure, we all aspire.'

"You supplement this statement by a proposal to establish a joint committee consisting of duly accredited representatives of various organizations 'with authority to embark upon and pursue a common program' and that 'it should be empowered to co-ordinate our efforts in the economic, legislative and political spheres,' and 'it should also seek to achieve the organic unity of all of American labour.'

"Because your proposal deals with plans and policies to be pursued by the organizations to which your letter was addressed, it becomes imperatively necessary to submit your communication to the Executive Council for consideration and official action. I will submit your communication to the Executive Council when it meets on May 8 and will advise you as quickly as possible of such action as the Executive Council may take."

The leaders of the Mine Workers' and Machinists' unions expressed approval of Mr. Murray's proposal.

Mr. Lewis said that the Executive officers of the United Mine Workers would recommend to the UMW Board that it "authorize participation in your suggested Joint Committee."

Mr. Hayes said: "We stand ready to co-operate in any movement toward closer co-operative action. We also stand ready at all times to help bring about a completely united labour movement. . . ."

Replies from two of the railway organizations were to the effect that the proposals would be discussed in the early future.

### **AFL seeks formation of community employment committees**

The American Federation of Labour has urged its local unions to foster community full employment committees to help find jobs for unemployed workers.

According to an AFL publication, *Labour's Monthly Survey*, such committees, representing labour, management and other groups, have already been founded in a number of communities.

Working in conjunction with the Employment Service, their functions are to examine local needs and resources; develop resources to meet needs; get new customers, new products, new uses for old products; bring in new industries; get financing for new equipment, working capital, plant expansion, new business; develop jobs, find needed skills, offer job training; start needed public works and service including slum clearance, schools, roads, medical care, teaching.

Stating that "business in general in our country is healthy," and that "the outlook is for continued high levels of business activity, but not for enough business expansion," the AFL declares: "This is the moment to start local activity to increase employment."

### **ICFTU plans training college for Asian trade unionists**

At a dinner given in his honour at Washington recently by the AFL and CIO, J. H. Oldenbroek, discussed the work of the International Confederation of Free Trade Unions, of which he is Secretary-General (L.G., Feb., 1950, p. 172).

In addition to the task of fighting Communist groups, which is necessary but "somewhat negative," Mr. Oldenbroek said that the Confederation must have a "positive" program, and is now working one out.

"We must help improve the conditions of workers all over the world by providing them with advice, technical know-how and other aid," Mr. Oldenbroek said, as quoted in the *CIO News*.

He announced that the ICFTU plans to establish a training college for trade unionists in Asia "to teach them about such things as collective bargaining and playing a bigger role in public life."

The college, he said, would be operated for at least three years "on an experimental basis."

The International Confederation of Free Trade Unions was recently granted consultative status by the Economic and Social Council of the United Nations and by the International Labour Organization (see p. 668).

*The first important collective agreement in the primary textile industry in Canada was signed in 1937. Today, after more than a decade of collective bargaining, some 175 agreements, covering approximately sixty-five per cent of the wage-earners in the industry, are in effect. Besides an increase in the number of agreements, there has been a significant broadening of their scope since 1937, with the result that the agreements now in force include clauses applying to many aspects of labour-management relations.*

*The current agreements affecting production workers in the primary textile industry are analysed in the present article. Following a brief description of the industry, its workers and their organizations, the main features of 155 collective agreements are dealt with individually.\* The agreements studied apply to almost ninety-seven per cent of the workers in the industry covered by collective agreements, while those excluded apply to small groups of specialized workers, for example engineers, textile printers and textile engravers.*

## THE PRIMARY TEXTILE INDUSTRY

The primary textile industry is that section of textile manufacturing which is devoted to the production of basic yarns and fabrics. Any further processing of these materials into garments and other derived products takes place in the secondary textile industry. Consequently, the operations carried out in the primary industry are limited to the spinning of yarns, the weaving of fabrics, and the bleaching, dyeing and finishing of these. The products of the industry take the form of cotton goods, hosiery and knitted goods, woollen goods, silk and artificial silk goods, and miscellaneous textile products.

In terms of gross value of production, and of the number of persons employed, cotton goods manufacturing is the most important section of the industry. The major products of this section are cotton yarn and cloth, but other products, including thread, batting and wadding, gauze and bandages, also bulk large in its output. In addition to hosiery, the products of the hosiery and knitted goods division include knitted outerwear and underwear. The woollen goods division is engaged in the manufacture of woollen cloth, yarn, and miscellaneous goods such as felts, of which woollen cloth production ranks first in importance. Yarns, threads and fabrics of silk, rayon and nylon make up the output

of the silk and artificial silk section of primary textiles. Finally the manufacture of miscellaneous textile products, including carpets, mats and rugs, linen fabrics, cordage, rope and twine and cotton and jute bags, comprises the remaining and smallest section of the industry.

Primary textiles as a whole, occupy an important position in Canadian manufacturing. Since the end of the Second World War the value of its products has exceeded five hundred million dollars annually. In the same years, more workers have been employed in the manufacture of primary textiles than in any single manufacturing industry. Approximately one out of every fifteen Canadian workers employed in manufacturing is engaged in the production of primary textiles.

The mills are almost all in the provinces of Ontario and Quebec, ninety per cent of them being located in these two provinces. A relatively small number of firms is in the Maritimes and a few are scattered throughout the western provinces. Most of these establishments have a relatively small capacity, but the situation varies among the major sections of the industry. The woollen and hosiery sections account for a large proportion of the small mills, since the average mill in these two divisions

\* This article is number 10 in the series *Collective Agreement Studies* prepared in the Economics and Research Branch of the Department of Labour. The agreements analysed were those in effect at January 1, 1950.

employs from 95 to 100 workers and produces goods valued at approximately half a million dollars annually. On the other hand, in the cotton and silk industries, production is centralized in larger establishments. The average cotton mill employs

upwards of 500 persons and the gross value of its products is approximately two and one-half million dollars annually. Comparable figures for silk and artificial silk mills are 375 workers and one and three-quarters million dollars, respectively.

## EMPLOYEES IN THE INDUSTRY

Over 90,000 men and women are presently employed in the industry of whom approximately 80,000 are wage-earners. Although many of the jobs performed by these workers do not demand a high degree of skill, attentiveness and considerable manipulative ability are required with the result that most of the industry's employees can be classified as semi-skilled workers. Unskilled labourers comprise the second largest group, while only a small proportion are classified as skilled workers. One other characteristic of the labour force in the textile industry deserving mention here is the relatively large proportions of women and of young persons. At the present time, the wage-earners are almost equally divided between male and female workers, while for manufacturing as a whole, only about one-fifth of the workers are women. It is also estimated that approximately one out of

every five non-salaried employees engaged in primary textile manufacture is nineteen years of age or under and approximately two of every five workers are twenty-four years of age or under. In comparison, similar figures for all Canadian industry are one in eight, and one in four, respectively.

The large proportion of women and young persons in the working force is an important factor contributing to the relatively low average wages of textile workers. Wage rates and earnings in the industry have remained below the average for manufacturing generally. The available statistics indicate that the average weekly earnings of employees in the over-all primary textile industry are approximately \$35.50. This compares with the figure of \$42.50 for manufacturing generally. The rise in textile wage rates, however, over the past ten years has been more rapid than in manufacturing as a whole.

## UNIONS IN PRIMARY TEXTILES

The majority of organized workers in primary textiles are included in three unions: the United Textile Workers of America (TLC-AFL), the Textile Workers' Union of America (CCL-CIO), and the National Catholic Federation of Textile Workers (CCCL). Contracts negotiated by these three unions apply to eighty per cent of the workers covered by collective agreements. Another fourteen per cent of the contracts covering twelve per cent of the employees in organized mills are held by independent unions; the remaining contracts are divided among a number of national and international unions including the International Ladies' Garment Workers Union, the Amalgamated Clothing Workers of America, the Canadian Textile Workers Union and District 50 of the United Mine Workers of America as well as a few local unions directly affiliated with the central labour congresses. According to major divisions of the industry, the three principal unions hold four out of every five contracts covering workers engaged in the manufacture of cotton products, hosiery and knitted goods, and silk products, and three out of every five agreements effective in the woollen yarn and cloth industry.

The present character of unionization among primary textile workers reflects developments over almost half a century of organizing efforts on the part of textile employees. The first local unions in the industry were organized in 1905 and to

combine these, a national union, the Federation of Textile Workers of Canada, was formed. Soon after its formation, however, this union, as a result of difficulties encountered in its organizing efforts, became associated with the United Textile Workers of America. The UTWA, therefore, is the oldest of the three principal unions presently active in the field, having had its beginnings in the earliest labour unions organized in the industry. During the early years of its operation in Canada the UTWA was successful in organizing several locals of textile workers and by 1920 its membership had reached some 2,500. Membership in the union, however, declined rapidly after that year and it was not until the late 1930's that this union again became active in organizing Canadian textile workers.

The National Catholic Federation of Textile Workers is the older of the other two major unions in the industry, having been formed in 1926 to unite several Catholic syndicates which had been organized in the Province of Quebec over the period 1920-26. Like the UTWA, the National Catholic Federation was at first successful in increasing its membership, but soon met with reverses and its earlier success was not repeated for approximately ten years.

The organization of textile employees was undertaken with renewed vigour in 1936 and 1937 with the result that both the UTWA,

## EMPLOYEES AND UNION MEMBERS IN PRIMARY TEXTILES FOR SELECTED YEARS

and the Catholic Federation increased their memberships. A number of strikes occurred during these years out of which the first collective bargaining contract emerged. With the advent of collective bargaining, organizing efforts became more aggressive and by 1944 total union members numbered over 27,000. In that year the bulk of the membership was divided among the UTWA, the National Catholic union and three additional unions, the United Textile Workers of Canada, the National Union of Textile Workers, and the Textile Workers' Organizing Committee (CCL), which had come into existence between 1937 and 1944. The latter three organizations were almost entirely absorbed during 1945 and 1946 by the Textile Workers' Union of America (CCL-CIO), the third major union in

textiles, which had commenced organizing in Canada in 1945.<sup>1</sup>

The three large unions which today represent the majority of the workers in the primary textile industry reported membership figures totalling almost 50,000 for the year 1948.<sup>2</sup>

<sup>1</sup> The Textile Workers' Organizing Committee was created by the Canadian Congress of Labour, and was not a part of the Textile Workers' Organizing Committee (CIO) in the United States. The United Textile Workers of Canada was formed in 1941 to unite several textile locals which had previously seceded from the United Textile Workers of America. The locals of the National Union of Textile Workers were originally a part of the Textile Workers' Organizing Committee (CCL). See H. A. Logan, *Trade Unions in Canada*, p. 228.

## PRINCIPAL FEATURES OF COLLECTIVE AGREEMENTS IN PRIMARY TEXTILES

So far, this article has outlined briefly the setting for collective agreements in the primary textile industry. The major purpose of this study, however, is to analyse the contents of the current agreements. This information is set forth below under the following main headings: coverage; union-management relationships (including union security and management rights); working conditions (wages, hours, overtime, etc.); and administration of the agreements (including the formal means by which day to day interpretation and application of contract clauses are made).

### Coverage of the Collective Bargaining Agreements Analysed

As has been previously noted, the textile industry is concentrated in the provinces of Ontario and Quebec. Accordingly, a large percentage of the labour-management agreements now in force apply to mills located in these two provinces. The provincial distribution of the mills affected by the contracts analysed, and of the workers covered by them, is as follows:—

	Mills covered	Workers covered
Ontario .....	86	20,060
Quebec .....	65	25,515
All other provinces.	18	3,025
Total .....	169	48,600

Only seven of the agreements are multi-plant in scope. These agreements, however, take in one-third of the total number of workers dealt with in this study. The

majority of the workers covered in this manner are employees of three large cotton firms, each of which has signed an agreement applying to all its plants. The agreements analysed are classified by bargaining units in Table I.

**Table I.—Agreements Classified According to Single and Multiple Establishment Coverage by Size Groups of the Bargaining Units**

Bargaining Unit Size Groups	Number of Agreements Covering		Total Agreements
	One Establishment	More than one Establishment	
Under 100 workers....	49	1	50
100-500 workers.....	84	3	87
500-1,000 workers.....	11	.....	11
1,000 workers or over..	4	3	7
Total.....	148 (1)	7 (2)	155

(1) These agreements cover 34,700 employees.

(2) These agreements cover 13,900 employees.

The signatories of the single plant agreements are in most cases the local managements and the executives of the local unions. The agreements applicable to each of seven silk firms in Quebec, however, have been bargained on their behalf by an employers' association.

The extent of coverage within the plants is mentioned in 146 agreements. With the

exception of three, these contracts state that all workers other than supervisory and office employees are covered by the terms. The coverage in the three remaining contracts is limited to permit the signing of other agreements by the firms with small groups of craft workers within the same plant.

## **Union-Management Relationships**

Collective agreements in primary textiles, following the pattern of collective contracts generally, include clauses of particular importance to the union and to management. These clauses deal with particular aspects of the relationship between the two and indicate agreed upon principles respecting the status of each of the two parties. The clauses of this type are discussed in the following three subsections.

### **(a) Union Status**

Provisions in the primary textile agreements which establish and define the status of unions as the representatives of the employees deal with such matters as union recognition, union-management consultation, union security and check-off clauses. These are found in varying degrees throughout the agreements.

The union is specified as the recognized bargaining agent of the workers in all but fourteen of the primary textile agreements analysed, and in these, recognition is of course implied. A large percentage of contracts, however, in addition to recognition, provide some form of security for the union either through compulsory union membership clauses, dues check-off arrangements or a combination of the two.

Compulsory membership provisions are contained in almost one-half (48 per cent) of the agreements examined, the most common clause specifying a union shop or a modified union shop (Table II). Under the union shop arrangement, all present and future employees must join the union and retain their membership during the term of the present contract as a condition of employment. Under the modified union shop, present employees who are not union members are not required to join. The time allowed the designated workers to become union members under both types of union-shop clauses varies from thirty to ninety days.

Among the remaining agreements containing compulsory union membership provisions, the most commonly found clause provides for maintenance of membership.

Such clauses state that present employees who are union members, and workers who later become union members, must retain their membership during the life of the contract.

The third type of union status clause contained in the textile agreements is the check-off provision, under which union dues are deducted from wage payments by the company on behalf of the union. Check-off provisions are commonly found in the same agreements as compulsory membership clauses in the primary textile contracts, sixty-seven of the seventy-four compulsory membership clauses being supplemented by check-off provisions. In addition, sixty-three contracts which do not provide for compulsory membership contain check-off provisions. In total, then, eighty-four per cent of the contracts call for the check-off of union dues (Table III).

Although the majority of agreements make provision for the check-off of union dues, it is, in most cases, left to the discretion of the employee as to whether his dues shall be paid in this manner. In almost two-thirds of the agreements the employee must give written authorization before the deduction can be made. Once this authority is given, however, it is only in the minority of cases that the employee is entitled to cancel it during the term of the agreement. In the bulk of the contracts it is stated that such authorizations may not be revoked.

In a relatively small proportion of the 155 agreements the check-off of union dues is made compulsory for all employees. Under this type of provision all employees in the bargaining unit are subject to the check-off. While the compulsory check-off in nine of the contracts is associated with a union shop clause, in an equal number of contracts this method of dues payment applies to all of the workers regardless of whether or not they are union members. In the latter cases the provision is designed after the fashion of the "Rand Formula".<sup>3</sup>

The primary textile contracts frequently include two other kinds of clauses relating to union status. The first of these governs the use of plant bulletin boards for union notices. Under 121 (78 per cent) of the primary textile agreements analysed, the union is permitted to use company bulletin boards for the posting of notices relative to union business. These clauses usually restrict the notices which can be posted to those of a routine business nature such as

<sup>3</sup> See *LABOUR GAZETTE*, Jan. 1946, p. 123.

notices of and reports of union meetings. Such notices must usually be approved by management before being posted.

The remaining group of clauses in this section stipulate that there will be joint consultation on such matters as hours, job time rates, piece rates, vacation arrangements and promotions. Clauses of this nature are found in approximately one-third of the agreements.

The numbers of employees affected by contracts containing the clauses discussed in this section are listed in Table IV. It will be noted that with the exception of the items dealing with joint union-management consultation, the percentage of the workers covered by each type of provision does not differ widely from the percentage of contracts containing these clauses. This results from the tendency of the clauses discussed to be included in agreements covering bargaining units of all sizes. On the other hand, union-management consultation clauses, although contained in a relatively small number of agreements, are found in some of the agreements covering the largest numbers of workers.

#### (b) Management Status

A substantial number of the primary textile agreements include specific "manage-

ment rights" clauses. These refer to the exclusive jurisdiction of management in matters relating to production, efficiency, and general order and discipline in the plant. They include such matters as the determination of the products to be manufactured, the methods of production and the assignment of employees to jobs. Moreover, clauses dealing specifically with disciplinary measures and their application are contained in ninety-one of the agreements. As indicated in the previous section, decisions on matters such as changes in job time rates, piece rates, hours and vacation arrangements are frequently listed in the agreements as subjects for joint consultation. It is also to be noted under the section on arbitration that changes in tasks, work loads and wage rates are subject to arbitration after an initial trial period.

#### (c) Duration and Renewal of the Agreements

Clauses are included in almost all of the agreements defining their duration, the manner in which future agreements are to be negotiated, and prohibiting strikes and lockouts during their terms. Ninety-five per cent of the agreements analysed are effective for a period of one year. The great majority of these (131), however, are auto-

**Table II.—Agreements Classified According to Types of Compulsory Membership Provision by Size Groups of the Bargaining Units**

Bargaining Unit Size Groups	Number of Agreements Specifying				Total Agreements
	Closed Shop	Union Shop	Modified Union Shop	Maintenance of Membership	
Under 100 workers.....	2	12	5	6	25
100-500 workers.....		13	13	14	40

500-1,000 workers.....	3	5	2	1	11
1,000 workers or over.....		6		1	7
Total.....	17	70	21	22 (1)	130

(1) This category includes nine agreements with clauses designed after the "Rand Formula."

matically renewable and remain in force from year to year unless terminated by either party. If either the union or the company desires to negotiate a new agreement, or modify the existing agreement, it must serve notice of this intention within a specified period before the annual expiry date of the contract. Most commonly, such notice must be served thirty to sixty days before that date.<sup>4</sup>

It is permissible, however, to revise wage rates under a number of agreements during their terms. Approximately one-third of the contracts permit adjustment of the wage scale during the life of the agreement. Two methods for making such revisions are found. The first, and most common of these, is an "open-end" wage clause which allows renegotiation of wage scales during the life of the contract.<sup>5</sup> In most of these contracts, however, the wage provisions can only be renegotiated under certain conditions, usually after the elapse of a given period of time or after a stated rise in the cost-of-living index. The second and less frequent type of general wage revision allows for the automatic adjustment of wages according to changes in the cost-of-living index (escalator clauses).<sup>6</sup>

Clauses prohibiting strikes and lockouts during the life of the agreement are found in all except twenty-one of the 155 agreements. These clauses are qualified in a small number of the agreements (thirteen) to the extent that the parties agree to exhaust the grievance and arbitration procedures before any strike or lockout will take place.

## Working Conditions

The primary textile agreements include a variety of clauses establishing standards of working conditions. In each of the agreements studied these standards occupy a position of major importance. The clauses deal with such matters as wages, hours, seniority and employee benefits including vacations, holidays and health and welfare plans. These are discussed individually in the following subsections.

### Wage Rates

Provisions relating to basic wage rates deal with such subjects as actual hourly and piece rates, wage adjustments for

<sup>4</sup> Of the remaining agreements, five state that they are to remain in force until notice of termination is given by either party and twelve are effective for a definite length of time, but have no formal provision respecting renewal or renegotiation. Seven of the textile contracts contain no provision relating to duration.

<sup>5</sup> Thirty-eight contracts covering 8,000 workers.

<sup>6</sup> Fourteen contracts covering 2,100 workers.

individual employees and differentials between the rates for male and for female employees. In thirty-one of the agreements analysed, however, definite information on these matters is not available. Consequently, the information in this section is limited to the contents of 124 contracts covering 40,800 workers.

Since wage rates in the primary textile industry are computed on either an hourly or a piece work basis depending on the job, the wage schedules in the contracts list the hourly or piece work rate applying to each particular job. As a result, most contracts, as indicated in Table V, include both hourly rated jobs and piece rated jobs, and set forth the rates for each. It is only in a small minority of the agreements that all the jobs are paid either on an hourly or on a piece-work basis.

There is no common practice set out in the agreements for adjusting individual wage rates. In fact, as will be seen in Table VI, formal arrangements for adjustments of wages are included in only forty-seven of the 124 agreements covered. Of these, upward adjustments in the majority are based on length of service. In other contracts adjustments are based on merit or a combination of length of service and merit.

Lower wage rates for beginners than for experienced employees are established in approximately forty per cent of the 124 contracts. Many of these provide for automatic increases after stated periods until the regular job rate is reached.

More than one-third of the agreements studied make special provisions for the wage rates of female workers. Under about

## METHOD OF ADJUSTING WAGE SCALES IN PRIMARY TEXTILE AGREEMENTS

twenty per cent of the agreements special job classifications are listed for women employees. Among the remaining agreements only two state that women performing the same work as men must be paid at the same rate, but, on the other hand, twelve contracts prescribe lower rates for women. In addition, beginners rates in approximately one out of every five contracts are lower for female than for male employees.

### Overtime Rates

It was found that almost all of the contracts in the primary textile industry provide premium rates of pay for overtime work. Less than two per cent of the workers, as indicated by the agreements analysed, do not receive this concession. Overtime rates are normally one and one-half times the regular job rates and are based on the excess working hours over standard daily or weekly hours or both (See Table VII).

### Weekend Premium Rates

Wage premiums for work performed on Saturdays or Sundays receive special consideration in almost two-thirds of the contracts studied. Work on Saturdays is specifically dealt with in only a small number of contracts and in these the regular overtime rate of time and one-half applies (10 contracts—4,200 workers). Sunday work, however, is a subject of the majority of agreements, seventy-one covering 22,800 workers stipulating a rate of

**Table IV.—Numbers of Workers Covered in Collective Agreements Classified According to Types of Union Status Clauses Provided in the Agreements**

	Workers Covered	Percentage of all Workers Under 155 Agreements
Compulsory Union Membership.....	20,800	43

Merit.....	4	900
Length of service and merit	2	350
Indefinite.....	11	1,350
No provision.....	97	27,200
Total.....	155	48,600

**Table VII.—Agreements and Numbers of Workers Covered Classified According to Basis on which Overtime Rates are Paid<sup>(1)</sup>**

Basis of Overtime	Number of Agreements	Workers Covered
After standard hours per day or per week <sup>(2)</sup> .....	63	20,600
After standard hours per week only.....	51	21,400
After standard hours per day only.....	21	4,100
After designated hours (day or week).....	13	1,850
No provision.....	7	650
Total.....	155	48,600

(1) Time and one-half is the overtime rate in all but two of the agreements. These two, covering 230 workers, provide for time and one-quarter.

(2) Under these provisions a worker will be paid overtime rates for all hours worked in excess of standard weekly hours and for hours worked in excess of standard daily hours until the standard weekly hours have been worked.

time and one-half and twenty-two agreements covering 6,400 employees calling for double time.

### Minimum Call Pay

Employees reporting for work must be provided with a minimum number of hours of work, or be paid for that number of hours if no work is available, under 102 of the 155 agreements. Three or four hours are the common minima established for this purpose in the textile agreements. Minimum call pay provisions apply to 38,000 workers.

### Severance Pay

Payment of a sum of money to an employee, on leaving the service of a company, in addition to any outstanding wages,

commonly known as severance pay, is infrequently a subject of the textile agreements. Only seven of the contracts analysed include such provisions. Four of these specify that should technological changes result in staff reductions the employees laid off are entitled to one week's pay for each year of employment with the company and state further that, if an employee who has accepted severance pay is rehired, his previous seniority with the company will not be recognized. Two agreements call for approximately one week's pay for employees who leave the service of the company regardless of their length of service and one contract leaves the details of a severance pay plan to be worked out between the company and the union.

**Table VIII.—Agreements and Numbers of Workers Covered Classified According to Number of Days and Hours in the Standard Work Week**

Standard Weekly Hours	Number of Agreements				Total Agreements	Workers Covered
	Five-Day Week	Five and One-half Day Week	Six-Day Week	Indefinite or not Stated

(1) The number of workers covered according to days worked per week is as follows:

Five days.....	17,800
Five and one-half days.....	6,000
Six days.....	700
Indefinite or not stated.....	24,100

**Table IX.—Agreements and Numbers of Workers Covered Classified According to Number of Shifts Operated and Wage Bonus Provisions for Shift Work**

Shift Bonus Provision	Number of Agreements Indicating			Total agreements	Workers Covered
	Three Shift System	Two Shift System	Shift System (number not stated)		
Standard bonus for other than day shift.....	9	19	32	60	24,050
Higher bonus for third than second shift.....	23			23	5,500
Bonus third shift only.....	8			8	400
No shift bonus provision.....	3	4	5	12	2,950
Total <sup>(1)</sup> .....	43	23	37	103 <sup>(2)</sup>	32,900 <sup>(2)</sup>

(1) The numbers of workers covered according to number of shifts operated is as follows:

Three-shift system.....	9,200
Two-shift system.....	4,900
Shift system indicated but number not stated.....	18,800

(2) Fifty-two agreements covering 15,700 workers made no reference to shift work.

## Hours of Work

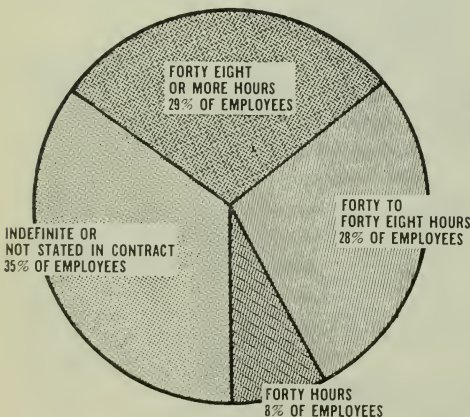

There is wide variation in the hours of work as shown in the agreements and, in addition, many of the contracts are indefinite in regard to hours or contain no reference to the subject. From the agreements which indicate standard weekly hours of work it is evident that the majority of employees covered by them have scheduled weekly hours of forty-five or more, the greatest number of these being subject to a work week of forty-eight hours or longer (Table VIII).

A still lesser number of agreements indicate the work days in the week and those which provide this information cover less than one-half of the workers subject to collective bargaining agreements. Among the workers covered by such clauses, however, two out of every three work a five-day week.

From the information available in the agreements it is not possible to draw reliable conclusions respecting hours of work in the industry. Daily and weekly hours as shown in the agreements, however, indicate that scheduled hours for employees in primary textiles are relatively long in comparison with many other manufacturing industries.

Although shift work is common in the primary textile industry, the agreements do not deal extensively with shift operations. Consequently, the majority of contracts mention shift work, but a substantial proportion of them do not specify the number of shifts to be operated. On the other hand, practically all of the agreements which refer to shift operations stipulate that a worker must be paid a wage bonus when working on other than the day shift (Table IX).

### LENGTH OF WORK WEEK IN PRIMARY TEXTILE AGREEMENTS

In addition to requiring the payment of shift bonuses, the amounts to be paid are set forth in these agreements. Most frequently five cents per hour is added to the regular job rate and where an additional bonus is provided for the third shift, it normally exceeds the second shift bonus by from two to five cents.

Rest periods during shifts are provided under the terms of fifty-six agreements covering thirty per cent of the employees included in this study. Two rest periods on each shift are allowed workers covered by forty-seven agreements. Of these, forty-five provide ten minute periods and two lengthen the rest periods to fifteen minutes. One period of fifteen minutes in each shift is specified in five agreements and in the remaining four, their length and frequency is not detailed.

### Seniority

Clauses relating to seniority are contained in 139 agreements, covering 46,600 workers. Broadly speaking, these contain definitions of the groups within which seniority lists are to be set up, a statement of the eligibility requirements for inclusion in any of these groups, and a list of the issues in which seniority is to be considered.

Three criteria are employed in establishing seniority groups—the department, the plant, and the occupation in which the individual works. From Table X it can be seen that the criterion most frequently used is the department and in more than one-half of these cases experience in a given department is the only basis for compiling seniority lists. The latter groups provide that a seniority list be prepared for each department, but if it is necessary to transfer an employee to another department, a means is usually available for a similar transfer of his accumulated seniority. In an almost equal number of agreements departmental seniority is conditioned either by occupational or plant seniority. Under such arrangements two seniority lists are prepared, the first for the department and the second either for the plant as a whole or for the occupations within the department concerned. Normally, promotions are based on seniority within the smaller group while layoffs are governed by seniority within the broader category.

### Textile Workers in Action

Top: A twister machine in operation. Middle: The ends of threads from each of these spools of cotton are drawn together in manufacturing the fabric. Bottom: One of nine different machines which wool passes through to make yarn.

tion  
each  
traw  
abrie  
chine  
varn

In the majority of contracts examined, seniority rights are acquired after an employee has served a probationary period ranging from two to six months. Seniority, however, is computed from the original date of employment once an employee has completed the probationary period.

All of the contracts containing seniority provisions specify the issues in which it is to be one of the deciding factors, as presented in Table XI. Consideration must be given to seniority in making layoffs, in rehiring after layoffs and in promotions according to more than two-thirds of the contracts. Moreover, under fifteen of these, special privileges including choice of vacation periods or choice of shifts are additional matters in which seniority is to be considered.

As a part of the seniority clauses there are references to the role played by individual skills and abilities in applying the seniority principles. Typical clauses dealing with layoffs, rehiring and promotions state that, where skill and ability are relatively equal, seniority will be the deciding factor. Most agreements, however, exclude promotions to supervisory positions from the seniority regulations.

"Super-seniority" provisions are encountered infrequently in the textile agreements. Only five of the 155 agreements analysed place union officials at the top of seniority lists for purposes of layoff, regardless of their length of service.

Many of the contracts also list reasons for loss of seniority rights. Among the conditions under which an employee will lose his seniority status the most frequently mentioned in the agreements are:—

- (1) Voluntary severance of employment.
- (2) Discharge for cause.
- (3) Layoff for more than a specified period, usually six months to one year.
- (4) Failure, upon notice, to report for work within a specified number of days, commonly three to eight, after a layoff.
- (5) Absence without authority for a specified number of days. The number of days ranges from three to ten.
- (6) Working elsewhere, without permission, during a leave of absence.

### Statutory Holidays

Practically all of the workers covered by collective bargaining contracts in the primary textile industry are entitled to statutory holidays. Under a large percentage of the contracts, however, not all of the holidays observed are paid (see Table

XII), and a substantial number do not state that employees will receive pay for any of the observed days:

Although holidays may not be paid, the large majority of agreements make provision for premium rates of pay if an employee is required to work on a statutory holiday. Of the 30,700 workers under 114 agreements entitled to holidays with pay, somewhat less than one-half receive straight time and one-half if required to work on a paid holiday. An almost equal division between double time and double time and one-half occurs for the remaining workers. Employees who are entitled to unpaid holidays are normally paid at the rate of time and one-half their regular rates when required to work on such days. In a small minority of cases the rate is double time.

NUMBER OF WORKERS COVERED

### Vacations

Paid vacations are extended to employees in all but six of the agreements analysed, although in an additional eight contracts the type of vacation plan is not detailed. Fifty-six per cent of the agreements provide a graduated vacation plan and thirty-three per cent a uniform plan (Table XIII).

Under the graduated plans the length of the vacation period varies according to the employee's length of service with the company. One week's vacation is normally granted to employees with one year's service. Longer service employees receive two weeks of vacation annually, three to five years service being required to qualify for a second week. Eleven of the agreements covering 2,800 workers provide a third week of vacation annually for workers who have completed a long term of employment, ten to twenty-five years.

Of the fifty-five contracts granting uniform vacations, thirty-nine provide a

vacation period of one week annually (15,500 employees), and sixteen, two weeks annually (9,500 employees). The vacations are normally granted to employees having one year's service or more.

### Leaves of Absence

Clauses referring to unpaid leave of absence are contained in close to three-quarters of the contracts studied. Under 108 agreements, employers may grant leaves of absence for "personal reasons" and in fifty-six, it is provided that employees may obtain leave of absence to attend to union matters.

### Health and Welfare Insurance

Since collective bargaining on the subject of group sickness and accident insurance is a recent development, and one which has received considerable attention during the past year, it is interesting to note that twenty-four of the textile agreements con-

**Table XI.—Agreements and Numbers of Workers Covered Classified According to Condition of Employment Affected by Seniority**

Condition of Employment	Number of Agreements	Workers Covered
Layoffs, rehiring, promotions.....	101	31,900
Layoffs, rehiring, promotions, choice of vacations and/or work.....	15	10,700
Layoffs and rehiring only..	10	1,400
Layoffs and promotions only.....	9	1,100
Promotions only.....	4	1,500
No provision.....	16	2,000
Total.....	155	48,600

Number not stated.....	4	210	.....	.....
No provision.....	3	370	41	11,400
Total.....	155	48,600	155	48,600

tain group insurance provisions applying to 13,300 workers. Of these agreements, nineteen outline the arrangements in some detail while five state merely that employees are covered by a group insurance plan.

The most complete group insurance plans provide for life insurance, weekly sickness and accident benefits, daily hospitalization allowances, an allowance for special hospital expenses and allowances for medical and surgical fees. The insurance plans outlined in twelve of the textile agreements provide for all or most of the above-mentioned benefits. A number of the agreements set forth the amounts that will be paid under the various benefits. Life insurance to the extent of \$1,000, weekly sickness and accident benefits of \$10 or \$12, a daily hospital allowance of \$3 and a sum of \$15 for special hospital services, \$150 for each of medical and surgical fees, are frequent provisions. Very few of the agreements stipulate the period over which sickness and hospitalization will be paid but those which do, limit the weekly payments of sickness and accident benefits to thirteen weeks per disability and the daily hospital benefits to thirty-one days. All but two of the twelve contracts extend the hospitalization, and where provided, the medical and surgical benefits, to cover the dependents of employees as well as the employees themselves.

Under the remaining seven agreements which provide some detailed information on group insurance plans, the benefits are restricted to one or two of the above discussed insurance provisions. Only one of this number extended the benefits to the dependents of employees.

Financing and administration of the group insurance plans is referred to in sixteen of the agreements. Employers bear the entire cost of twelve of these and the remaining four are financed by employer-employee contributions. The amounts are usually paid directly to insurance companies which administer the plans. Under two of the contributory type plans, however, a joint union-management administered trust fund is established, a board of trustees being charged with authority to arrange and administer the insurance program.

### **Safety**

The safety of the employees during working hours is considered in seventy-three (47 per cent) of the agreements. Sixty-three contain a general safety provision by which the managements agree to adopt all reasonable measures to insure safety in the plant. Only seven contracts list safety rules for the employees. In the same number of agreements, provision is

made for the setting up of joint union-management committees to supervise the application of safety rules or to advise management on safety problems.

### **Administration of the Agreements**

Up to this point this study has dealt with the parties to the agreements and the principles agreed upon with respect to working conditions, duration of the contracts and renewal provisions. It now remains to discuss the methods designed to secure day-to-day interpretation and application of these principles during the life of the agreements.

Two methods for administering contract terms are found in practically all of the textile contracts. The first of these involves negotiation by which the parties attempt to resolve differences themselves. For this purpose a formal grievance procedure is outlined in the agreements to facilitate the handling of any disputes which arise under the contracts. The second method established for settling contract interpretation disputes is through arbitration by which the parties agree to allow an appointed arbitrator or arbitration board to make final and binding decisions regarding matters in dispute.

The vast majority (143) of the textile agreements outline a step-by-step procedure for the negotiation of grievances. All but ten of these provide for arbitration also. In all cases, however, arbitration is invoked only after a grievance has been carried through all steps of the negotiation process without a settlement having been reached. Arbitration, then, is in reality the final step in the grievance procedure.

The first company official to handle a grievance is usually the immediate supervisor of a complaining employee. An employee having a grievance must present it to his supervisor under 110 of the contracts, but the appropriate union steward or other designated union representative may be present at this stage of the procedure. The procedure outlined in seventeen agreements requires that an employee first present his grievance to the appropriate union representative for action and in sixteen contracts an employee has the choice of first complaining to his supervisor or his union representative.

Grievances not settled in the first stage of the procedure are invariably carried through a number of steps before arbitration is invoked. Under a common procedure a grievance is carried from the foreman to the departmental supervisor, to the plant supervisor, to the highest company officials, and finally, to arbitration if settlement is

not reached at a previous stage. In many smaller plants, however, the second or third steps, or both, are omitted.

The first union official engaged in processing grievances is a shop steward or equivalent officer. In the majority of contracts (139) a union grievance committee acts on behalf of employees in the later stages. In addition, the help of outside union officials may be obtained under the procedure set forth in many agreements. The presence of an international or a national union officer may be requested at the step preceding arbitration in one out of every three agreements and other agreements provide that local union officials may be called upon in the later stages of the process.

Arbitration in the majority of contracts is placed in the hands of a three-member board. The company and the union each appoint a representative and these two representatives select a chairman. In all except five of the agreements which provide for arbitration a method of selecting a chairman is established should the two representatives fail to agree on this matter. In the great majority of agreements the appropriate Provincial Department of Labour or the Federal Department of Labour performs this function.

Almost one-quarter of the agreements examined do not define the jurisdiction of arbitration boards or arbitrators. On the other hand, in 107 contracts arbitration decisions are limited to matters concerning the interpretation or application of agreement clauses.

## Clauses in Primary Textile Agreements

In this article little reference has been made to the actual wording of the various clauses found in the primary textile contracts. For those especially interested in the actual clauses contained in the agreements, a number of sample clauses have been brought together in this final section. This list contains examples

Under thirty-seven contracts the companies reserve the right to institute changes in tasks and work loads as well as wage rates resulting from these changes. Such changes may, however, be the subject of grievance which can be carried through the various steps of the grievance procedure. A special arbitration clause covering these changes requires that the arbitration chairman be a recognized textile engineer. Before instituting new tasks, work loads or wage rates, a company is required to notify the union, most frequently ten to twelve days before the new working conditions are put into effect and only after a trial period, usually thirty days, may the change become the subject of a grievance.

Two contracts call for the arbitration of any differences between the company and its employees which cannot be settled by negotiation. Both specify, however, that neither party is obligated to accept any decision which adds to or alters the agreement in force.

Approximately sixty per cent of the agreements analysed allow for the speeding up of the grievance machinery in cases of discharges alleged to be in violation of the agreement. Most commonly these grievances may be initiated at the second step of the procedure.

It is not stated in more than one-half of the agreements whether or not employees will be paid for time spent in processing grievances. The remaining contracts state that employee representatives will be paid at their regular job rates for the handling of contract disputes during working hours.

of each type of clause discussed above arranged in an order corresponding to the more general analysis. Although the examples listed are excerpts from specific collective bargaining agreements, they illustrate the general situation. These examples contain only the essential parts of the clauses.

# EXAMPLES OF CLAUSES FOUND IN COLLECTIVE BARGAINING AGREEMENTS IN THE PRIMARY TEXTILE INDUSTRY

## Coverage

### Occupational Coverage

Agreement applies to all hourly rated and piecework employees in the mill and does not apply to members of the office staff, foremen and employees above that rank.

## Union Status

### Recognition

The company recognizes the union as the exclusive bargaining agent for all employees in the bargaining unit.

### Compulsory Union

#### Membership

#### Union Shop

The company agrees that all present employees subject to the agreement shall become and remain members of the union in good standing throughout the period of the agreement as a condition of employment. New employees shall, upon the completion of the probationary period, become and remain members of the union in good standing throughout the period of the agreement.

#### Modified Union Shop

Union members and employees who, during the term of the agreement become members of the union shall, as a condition of their continued employment, remain members for the term of the agreement. New employees shall become union members, and remain members for the term of the agreement, within sixty (60) days after the date of their employment.

### Maintenance of Membership

Employees who are, or become, union members during the term of the agreement shall, as a condition of employment, remain members of the union in good standing during the term of the agreement. This provision shall become effective immediately after the union furnishes the company with a list of employees who are union members in good standing or who may join the union. Employees will not be required to join the union as a condition of employment.

## Check-off

### Voluntary—Irrevocable

The company agrees, upon receipt of a properly authenticated authorization card, to deduct from the first pay of an employee in each calendar month, the regular assessments and dues of the union, and to remit the amount deducted to the union before the last day of the month in which the deduction is made. The company will supply the union with a list containing the names of each employee from whom such deduction has been made at the time of making each remittance. An employee is not required to pay union dues or to sign a dues deduction authorization card as a condition of employment, but an employee who has voluntarily signed such an authorization may not cancel same during the term of the agreement.

### Voluntary—Revocable

During the term of the agreement the company will deduct from the pay of all union members who in writing authorize the company to do so, their monthly union dues, the deduction to be made from the first pay in each month. An employee may, by written notice to the company, revoke such authorization at any time.

### Voluntary (Revocation not covered)

The company for the duration of the agreement, agrees to deduct union dues from the pay of employees who authorize the company, in writing, to do so.

### Compulsory

The company will, for the duration of the agreement, deduct from the pay of all eligible employees monthly union dues and remit same to the union together with the names of employees from whose pay deductions have been made.

## Union-Management

### Consultation

The company agrees to consult with the union before making any changes in tasks or work loads or wage rates. In the event that a considerable lay-off becomes necessary the company agrees to notify the union, and the union and the management will jointly decide whether employees will be laid-off or the available work will be divided amongst all employees. The plant will be closed during the annual vacation period. The time of closing will be decided by joint consultation between the management and the union.

Bulletin Boards	The company will provide bulletin boards in various locations in the plant for the posting of union notices. Such notices must be signed by the proper official of the union and be approved by the plant superintendent.
<b>Management Status</b> Management Rights	The union recognizes that it is the exclusive function of the company to hire, promote, demote, transfer, dismiss or otherwise discipline employees; to maintain order and efficiency providing that a claim that an employee has been unjustly dealt with may be the subject of a grievance; to generally manage the business, and without restricting the generality of the foregoing, to determine the number and location of plants, the products to be manufactured, methods of manufacturing, schedules of production, tools to be used, and the control of materials and parts to be incorporated in the products.
Union-Management Consultation	(See Above).
Disciplinary Measures	The company and the union agree to the adoption of the following procedure to effect and maintain discipline: (1) Reprimand by the immediate supervisor; (2) In the case of a second offence, suspension without pay for a period of from one to five days; (3) For a third offence, dismissal; (4) In the case of a serious offence the above procedure may be dispensed with and the company may take whatever action it deems necessary including dismissal; (5) The company, shall within five days of taking disciplinary measures, notify the union in writing; (6) A dismissal under this section may be the subject of a grievance if the complaint is made within six days of the date of dismissal.
Changes in Tasks, Work Loads and Wage Rates	(See Arbitration).
<b>Term of the Agreements</b> Duration and Renegotiation	The agreement shall continue in effect for one year from . . . . . and shall continue in force automatically thereafter for annual periods of one year unless either party notifies the other in writing not less than thirty days and not more than sixty days prior to the annual expiration date that it desires to amend or terminate the agreement.
Open-End Wage Clause	If at any time, during the term of the agreement, there is an increase or decrease of more than . . . . . points from the present figure of . . . . . in the official cost of living index published by the Dominion Bureau of Statistics, either party may open the wage provisions of the contract for the purpose of negotiating a new wage schedule.
Strikes and Lockouts	The company agrees that it will not engage in any lockout, and the union agrees that it will not cause a strike or otherwise interfere with production during the lifetime of the contract. An employee engaging in a strike, slowdown or other stoppage of work contrary to this provision shall be subject to discipline by the company including dismissal.
<b>Working Conditions</b> Overtime	Authorized work performed in excess of . . . <i>hours per week</i> shall constitute overtime and shall be paid at one and one-half times the employee's regular rate if a time worker and at one and one-half the employee's average hourly earnings, excluding overtime, for the current pay period if a piece worker.  Authorized work performed in excess of . . . <i>hours per day</i> shall constitute overtime and shall be paid at the rate of time and one-half of the regular rate for hourly paid workers and time and one-half the employee's average hourly earnings for the current pay period in the case of piece workers.  Authorized work performed in excess of the <i>normal daily shift hours, or the normal work week</i> shall constitute overtime and shall be paid at the rate of time and one-half the employee's regular hourly rate, or time and one-half the employee's average hourly earnings for the current pay period, excluding overtime, in the case of piece workers.

Week-end Premium Rates	Overtime at time and one-half will be paid for all work done on Saturdays except in those cases where Saturday forms part of an employee's regular work week.
	Overtime at time and one-half will be paid for all hours worked on Sunday.
	All work performed on Sundays will be paid at double the employee's regular rate of pay.
Minimum Call Pay	An employee who reports for work at his regular time shall be entitled to a minimum of four hours pay at not less than his regular rate, unless previously notified by the company to the contrary, provided that, if requested, the employee shall perform such available work as the company may assign.
Severance Pay	In cases of technological unemployment arising from increasing the man-hour output of machines by installation of new equipment, redesigning existing equipment, or displacement of hand work by machine, severance shall take place in accordance with the seniority provisions. Employees displaced will be eligible for a severance allowance on the basis of one week for every full year of service. An employee who receives severance pay shall lose all seniority rights, and in the event of his being re-employed at a later date, shall be regarded as a new employee.
Hours of Work	Standard working hours shall be 45 hours per week made up of five nine-hour days. This shall not be interpreted as a guarantee by the company of the number of hours per day or week or the number of days per week.
	The standard working hours shall consist of fifty hours per week to be worked in five days.
	Forty-eight hours shall be the normal work week for employees.
Shift Work	A bonus of 5 cents per hour shall be paid for work on night shifts.
	The company will pay an off-shift premium of 5 cents per hour with respect to shifts ending before midnight and an off-shift premium of 10 cents per hour respecting shifts ending after midnight.
Rest Periods	Employees shall receive two rest periods of ten minutes each during each full shift.
Seniority	Seniority shall be established on a (departmental) (mill) (departmental and mill) basis and seniority lists based upon the date on which employees commence to work for the company shall be established. These shall be posted on the plant bulletin boards and shall be revised quarterly.
	All employees shall be considered temporary for the first .. months and shall not be subject to the seniority provisions during this probationary period. After the probationary period they shall be considered regular employees and their seniority shall date back to the day on which their employment commenced.
	Provided that a senior employee possesses the necessary skill and ability, the last employee hired shall be the first laid off where a layoff becomes necessary and, similarly, the last employee laid off shall be the first re-hired.
	Subject to the same conditions respecting skill and ability, employees with the longest service shall be given preference in promotions. Promotions to supervisory positions shall not be subject to the seniority provisions.
Statutory Holidays	The following holidays will be granted to all employees without loss of pay provided the employee was not absent on the work day immediately preceding the holiday or the work day immediately following the holiday unless with permission of the company (up to eight days listed).
	The following holidays shall be observed as statutory holidays: (up to ten days listed). An employee shall be paid for each of (less than the number or statutory holidays listed) days at his regular rate of pay multiplied by his standard daily hours, provided he is at work on the work day immediately preceding the holiday and the work day immediately following the holiday.

Pay Rates for Work  
on Paid Holidays

Double time will be paid for all work performed on the listed statutory holidays.

Overtime will be paid for work performed on any of the listed holidays. This overtime pay will be in addition to the regular holiday pay.

Any employee required to work on any of the listed holidays shall receive his regular rate of pay plus a premium of fifty per cent.

Pay Rates for Work  
on Unpaid Holidays

All work done on the above listed days will be paid for at double the employee's regular hourly rate or current average hourly earnings, exclusive of overtime, for piece workers.

All authorized work performed on any of the above listed holidays shall be paid for at the rate of time and one-half.

Vacations with Pay  
Graduated (two weeks  
maximum)

Employees with less than 5 years of continuous service shall be entitled to one week's vacation with pay at the rate of 2 per cent of their gross earnings during the twelve months immediately preceding.

Employees with five or more years of continuous service shall be entitled to two weeks' vacation with pay at the rate of 4 per cent of their gross earnings during the twelve months immediately preceding.

Vacation pay shall be distributed on the pay day immediately preceding the vacation period.

Graduated (three weeks  
maximum)

Employees with less than four years of continuous service with the company shall be granted one week's vacation with pay on the basis of 2 per cent of the gross earnings for the year involved.

Employees with four or more than four years of continuous service with the company shall be granted two weeks' vacation with pay on the basis of 4 per cent of the gross earnings for the year involved.

Employees with fifteen or more than fifteen years of continuous service with the company shall be granted three weeks' vacation with three weeks' pay.

Uniform (one week)

Each employee of the company will be granted one week's vacation. The mill will be closed for one week between June 1, and September 30. Employees having less than five years of continuous service with the company shall be paid 2 per cent of the employee's total earnings during the 12-month period preceding the vacation; employees with five years' but less than twenty-five years' service, 4 per cent; employees with twenty-five years of service or more, 6 per cent.

Uniform (two weeks)

Two weeks' vacation shall be granted to all employees on the following basis:

Employees with less than five years' service shall receive 2 per cent of their gross earnings during the immediately preceding 12-month period.

Employees with five years' service or more, 4 per cent.

Employees with twenty years' service or more, 6 per cent.

Leave of Absence

Delegates of the local union, not exceeding . . . . . in number, shall be granted leave of absence without pay and without loss of seniority for a period or periods not exceeding a total of . . . weeks in one year, upon written notice by the union . . . days before the commencement of the leave.

An employee may be granted leave of absence without pay for legitimate personal reasons, seniority to accumulate during the leave of absence.

Safety

The company agrees to make all reasonable provisions for the safety of its employees while at work and the union agrees to co-operate with the company in accident prevention and the maintenance of safety.

## Administration of the Contracts

### Grievance Procedure

(Statement of the step-by-step procedure in individual plants not included)

The union will appoint one Steward for each department to assist employees in processing grievances.

The union shall notify the company the names of the Stewards and the department each represents and the company will furnish a list of supervisory employees to the union.

In order to maintain production, grievances should be discussed outside of working hours wherever possible. If it becomes necessary for a Steward to take time off from work to deal with a grievance he must first secure permission from his immediate supervisor and report back to the supervisor before again commencing work. The company shall pay an employee for time spent in processing a grievance during working hours where the company requests or agrees that discussions be held during working hours.

The union shall appoint a grievance committee made up of ..... of the Stewards. The same provisions regarding pay for grievance work as in the above paragraph shall apply.

Decisions reached between the company and the representatives of the union respecting grievances shall be final and binding upon the company, the union and the employee or employees concerned.

The agreement does not prevent an employee from taking a grievance directly to the company without the intervention or assistance of the union or its representatives.

### Arbitration

Any matter which has been properly carried through the grievance procedure may be submitted to arbitration upon the written request of one party. Within five full working days thereafter both parties shall nominate an arbitrator. The two arbitrators so nominated shall select a Chairman. If they fail to agree upon a Chairman within three full working days either party may then request the Minister of Labour for the Province of ..... to appoint a Chairman of the Arbitration Board.

An Arbitration Board shall have jurisdiction over matters concerning the meaning or violation of the agreement, but shall have no jurisdiction to make any decision inconsistent with the provisions of the agreement or to alter or amend any of the provisions of the agreement.

A unanimous or majority opinion of an Arbitration Board concerning matters within its jurisdiction shall be final and binding upon the parties to the agreement.

### Productivity

The union recognizes the right of the company to fix and institute changes in tasks or work assignments or changes in wage rates arising from changes in tasks or work assignments. Notice of any such change will be given by the company to the union ..... working days or more before such change is put into effect.

If there is any question as to the feasibility of the change in task or the suitability of the new rates, a trial period not exceeding ..... days shall be instituted in order to give a fair trial to said wage rates and/or tasks or work assignments. During this trial period employees will be paid the wage rates for the task established by the company, but their average hourly earnings shall not be less than their average hourly earnings during the previous quarter.

If the union is dissatisfied it may, within ..... days following the trial period, take the question up as a grievance.

Wage rates, tasks or work assignments in force during the trial period may be submitted to arbitration and a decision of the Arbitration Board involving a change in wage rates shall be retroactive to the time of the inauguration of the trial period.

In any matter submitted to arbitration pursuant to the above the Chairman of the Arbitration Board agreed upon by the first two named arbitrators or appointed by the Minister of Labour for the Province of ..... shall be a textile engineer.

# LEGISLATIVE PROPOSALS OF LABOUR ORGANIZATIONS

*On March 31 a delegation from the Canadian Congress of Labour presented to the Government of Canada the annual proposals of the Congress in regard to labour and social questions. On the same day representatives of the Railway Transportation Brotherhoods also submitted a memorandum to the Cabinet. The legislative proposals of the Trades and Labour Congress of Canada and the Canadian and Catholic Confederation of Labour, which had been presented earlier in the month, were reviewed in the April LABOUR GAZETTE (pp. 460-70).*

## Canadian Congress of Labour

Appearing before the Prime Minister, Rt. Hon. Louis S. St. Laurent, and members of his Cabinet on March 31, officers of the Canadian Congress of Labour presented their annual proposals in regard to labour legislation. The Congress emphasized in particular the subjects of unemployment, housing and social security.

The President of the CCL, Mr. A. R. Mosher, in opening the presentation, called attention to the fact that the Congress was supplementing its memorandum with a separate paper on unemployment, in view of the special importance of this subject. He then introduced the Secretary-Treasurer, Mr. Pat Conroy, who read the two briefs.

### External Affairs

In renewing the approval which it had expressed in previous years, in general, of the Government's foreign policy, the Congress expressed its support of the United Nations and of international economic agencies such as the ILO, support of the North Atlantic Defence Pact and the Marshall Plan, and endorsement of the inspection and control of armaments, including atomic weapons. However, the Congress urged that the Government increase its contribution to the United Nations International Children's Emergency Fund.

On the subject of foreign trade and home markets, the Congress expressed the view that Canada's prosperity no longer "depends wholly or mainly on foreign trade," and stressed the importance of maintaining domestic purchasing power and developing the home market.

Nevertheless, "foreign trade is still vitally important," since "we are still far from self-sufficient. . . . The loss of foreign markets has made unemployment worse. It is essential that these markets be regained

or replaced. The Congress recognizes that this will involve Canada's accepting more foreign goods in exchange. But special care should be taken to protect Canadian industry against dumping of surplus commodities, or the admission of goods manufactured under sweat-shop conditions."

The brief suggested that "with properly-planned development, Canada can produce and distribute a great many essentials of life, and even luxuries, which large numbers of our people are denied for no other reason than lack of purchasing power."

### Unemployment

"Since the beginning of this year," the memorandum stated, "unemployment has reached higher levels than at any period since before the war, and the Congress wishes to say frankly that it has been amazed to find that the Government not only has no policy to deal with unemployment, so far as we are aware, but has endeavoured to minimize the seriousness of the situation, with a view to justifying its own failure to anticipate wide-scale unemployment. Apparently, the Government believes that there is no possibility of widespread unemployment in Canada, and that the demand for goods and services which had been maintained during the post-war period would continue indefinitely. The workers and the people of Canada were told on numerous occasions that the Government had a public works program ready for immediate adoption. Now, however, it would appear that the shelf of Government projects which had been envisaged is bare, and Government spokesmen quite calmly dismiss the unemployment of between 400,000 and 500,000 workers as negligible or as seasonal, and therefore bound to disappear with the advent of warmer weather.

"We should like to point out that there is no diversity of opinion or attitude in this respect so far as the Trades and Labour Congress of Canada, the Canadian and Catholic Confederation of Labour, and the Canadian Congress of Labour are concerned."

In its separate memorandum on unemployment, the Congress dealt in detail with unemployment statistics. Comparing figures for 1949 with those of a year earlier in a number of towns and regions, the Congress noted that substantial increases had taken place, and asserted that these increases could not be accounted for by "normal" seasonal factors, nor by "the peculiar quirks of the present winter."

The Congress urged also that "with proper planning, much of the so-called 'normal' seasonal unemployment can be taken care of, as it was during the war."

The memorandum cited production statistics as evidence that "production has been increasing faster than employment, though not a great deal, and in the last few months . . . there has been a tendency for employment to fall off while production rose slightly.

"More important, however, is the increase in the number of salary and wage-earners plus those seeking work at salaries and wages: the 'labour force' in the sense which is relevant to any discussion of unemployment. . . .

"In short, our labour force is constantly increasing, and our industry is becoming steadily more efficient, so that it needs fewer workers to produce a given quantity of goods. . . . Unless we can raise our standard of living far enough and fast enough to keep pace with the growth in the labour force and in productivity per man, unemployment will continue to grow, though of course, with seasonal fluctuations."

The CCL advanced the following nine proposals to meet the situation:—

- (a) The Government should use monetary and fiscal policy to keep the nation's total expenditure (public and private) high enough to provide effective demand for all we can produce;
- (b) It should use fiscal policy to place and keep as large a proportion of purchasing power as possible in the hands of the lower income groups, who make up the great mass of consumers;
- (c) It should help to keep up consumer income by a comprehensive social security program;
- (d) It should encourage mobility of labour, preferably by bringing industry to labour (as the British Govern-

ment has done in its "Development Areas"). Where an area depends almost exclusively on one or two industries, diversification of industry should be encouraged. The Maritime Provinces are a case in point, and the Dawson Report on Nova Scotia offers valuable and detailed suggestions. Where an area has no real economic possibilities, the Government should help mobility of labour by providing free transportation and assistance in placing people in their new homes. It has already done so to some extent in the Maritimes, but the policy could be extended. A greatly expanded housing program will, of course, be necessary for any considerable transfers of population.

- (e) The Government should do all it can to help industries which are subject to seasonal fluctuations to plan their production to level out the hills and valleys. Where seasonality cannot be ended, the Government should take steps to dovetail the operations of summer and winter industries, so that, as far as possible, workers laid off by the summer industries will be taken on by the winter ones.
- (f) The Government's own White Paper of 1945 affirmed the policy of a "shelf" of public works, ready for execution when occasion demanded. Occasion now demands, urgently. There is plenty of unskilled labour available (over 100,000 at the end of December, according to the *LABOUR GAZETTE*, with a further 100,000 or so described as "skilled and semi-skilled"). Such projects as are ready for execution should be put in hand without delay and the promised "advance planning" of others proceeded with at top speed. Public works are not a cure-all. But they are one useful measure in dealing with the problem. They will not directly provide work for white collar unemployed or others unfitted for construction jobs. But they provide indirect employment for a wide variety of people who help make the materials used, the food the construction workers eat, the clothes they wear, and so forth;
- (g) The Government should seriously consider new methods of keeping and expanding our foreign markets, such as the plan recently advocated by the Minister of Fisheries;
- (h) The Government should do all it can to encourage the adoption of the 40-hour week. For most industries, legislation on this subject comes under the provinces. But the Dominion Government could legislate for the industries within its jurisdiction; it could inform Dominion Boards of Conciliation that it favoured the 40-hour week; it could adopt it for those of its own employees now working longer hours; it could issue favourable publicity;
- (i) The Government should renew its efforts to get the provinces, and through them the municipalities, to plan their public works programs to provide employment when employment in private industry is insufficient.

## Unemployment Insurance

Concerning the recent amendments to the Unemployment Insurance Act the Congress took objection to "the extreme and unwarranted haste shown by the Government" in amending the Act "without either consultation with labour or adequate discussion in the House of Commons. The Government did not even consult the Unemployment Insurance Advisory Committee which was established in accordance with the provisions of the Act."

The Congress recognized that some of the amendments were in line with its own recommendations. For example: the increase in spare-time earnings to unemployed workers; modifications in waiting period and non-compensable days; widening of coverage and provision of supplementary benefits to workers who have exhausted their benefit rights.

The Congress regretted that other recommendations were not translated into amendments. Among these were: the increase of benefit payments to workers with or without dependents, without increase in the contribution rate; the extension of coverage to employees of hospitals and charitable institutions and other classes of workers still excluded; complete elimination of non-compensable days; the reduction of the waiting period by at least three days or its complete elimination; and the payment of benefits to workers laid off without pay during a plant shut-down for vacation purposes.

## Housing

Charging that the housing shortage is "worse than ever before in Canada," particularly in regard to rental accommodation, and that even the cheapest house is beyond the reach of the average worker's purchasing power, the Congress urged the "lowering of interest charges, the encouragement of group or co-operative projects, and a greater development of subsidized low-rent housing."

As on previous occasions the Congress urged the Government to "maintain strict control of rents" until ample housing is available. The recent increase of 18 per cent to 22 per cent in rents was declared to be "wholly inexcusable."

With regard to price controls, the brief stated that the cost of living is higher than it would have been if the Government had continued price controls "along the lines followed during the war."

## National Labour Code

Once again the Congress urged the adoption of a National Labour Code which

would establish "uniformity in the legislation governing labour relations, particularly with respect to industries of national scope and importance."

Repeating the objections previously made to the present federal labour relations legislation, the memorandum stated: "The Act fails to outlaw company unions; the requirement that legal proceedings be taken by unions against unfair employers is costly and ineffective, and the permission given to employers to apply to the Labour Relations Board to have certification revoked is a possible source of irritation and unrest. The legislation is unsatisfactory in other respects, notably in its failure to provide even for a voluntary check-off, which had actually been recommended by the Industrial Relations Committee, but was rejected by the House of Commons. The Congress believes that the Government should amend the Act at the earliest possible opportunity, with a view to meeting the objections of the Congress and other labour organizations to the Act as it now stands."

## Social Security

Stressing in particular the importance of old-age pensions, the CCL again urged the Government to adopt a national social security program. The time has arrived, declared the brief, when the Government's promise to abolish the means test should be kept.

## Immigration

Regarding immigration, the memorandum read as follows: "The Congress is naturally concerned with the question of immigration, and commends the action of the Government in establishing a new Department of Citizenship and Immigration. The Congress wishes to make it clear that it is not opposed to immigration, and it believes that special provision should be made for the immigration of displaced persons. However, in view of the present unemployment situation and the lack of housing, to which reference has already been made, any mass-immigration at the present time would not, in our opinion, be in the best interests of the workers and the people of Canada. The Congress also proposes the establishment of an immigration commission, with equal representation from Government, Labour and Industry, for the purpose of advising the Government with regard to a long-range immigration policy, under which living standards might be protected and employment assured to immigrants at adequate wages."

## Other Recommendations

Other recommendations made by the Congress were:—

(1) Continuance of the Government's present policy on radio broadcasting.

(2) Corporate status to be given to the National Film Board and provision of sufficient funds for it to carry out an effective program. Furthermore, the Congress recommended that such topics as the history and functions of labour unions and collective bargaining be made subjects of documentary films.

(3) Federal financial aid to education.

(4) Federal and provincial legislation to "prevent discrimination on grounds of race, creed and colour." The Congress urged that a Bill of Rights be incorporated in the Constitution.

(5) Appointment of workers' delegates and advisers to annual sessions of the International Labour Conference be made in accordance with the Labour section of the Treaty of Versailles. The Congress confirmed its position of last year that it would not nominate a technical adviser to the workers' delegate to the Conference.

(6) Income tax exemption for a single person to be set at \$1,500 per year and for married persons at \$2,500.

(7) Legislation to provide that all statutory holidays, apart from Good Friday, Christmas and New Year's Day, be observed on Mondays.

(8) Revision of the cost-of-living index to provide "a true picture of the cost of living in Canada."

(9) Assistance by the Federal Government to provide additional Canadian markets for coal mined in Canada.

(10) Amendment of the Election Act to provide a statutory half-holiday with pay on a federal election day, for all workers.

(11) A system of proportional representation for federal elections.

(12) The enactment of legislation outlawing injunctions obtained for the purpose of preventing peaceful picketing, or other interference with the rights of labour.

## Government Replies

The Congress delegation was received by the following members of the Cabinet, in addition to the Prime Minister: Hon. Humphrey Mitchell, Minister of Labour; Hon. Lionel Chevrier, Minister of Transport; Hon. Paul Martin, Minister of National Health and Welfare; Hon. Douglas Abbott, Minister of Finance; Hon. James J. McCann, Minister of National Revenue and Minister of Mines and Tech-

nical Surveys; Hon. Milton Gregg, Minister of Veterans Affairs; Hon. Stuart Garson, Minister of Justice; Hon. Hugues Lapointe, Solicitor-General of Canada.

## Mr. St. Laurent

Following the reading of the memorandum, the Prime Minister, Rt. Hon. Louis S. St. Laurent, said he was glad to have the Congress' views, and that there was very little in the statement of their objectives with which he did not wholeheartedly agree. He expressed the hope that these objectives could be achieved through "continual betterment" instead of "replacement" of "our economic institutions."

Mr. St. Laurent welcomed the stress the Congress had laid on the desirability of developing domestic markets, and of promoting a rising standard of living. Regarding foreign trade, he said that a year ago the lumber industry did suffer "a scare" but since that time conditions in the industry have been encouraging. While he did not think that the country would return to the kind of trading that existed before the war, this did not mean that future trade would not be as good.

Dealing with the employment situation, the Prime Minister pointed out that there had been a high level of employment, but that job opportunities had not kept pace with the growth of the population, thus causing an increase in unemployment.

Regarding public works projects he denied that the Government had a "bare shelf". There were still a "great many" projects ready to be launched in the construction industry. But recent surveys had led the Government to believe that at the present time such projects would not increase the over-all activity of the building industries. The Congress' proposals for coping with unemployment were "all along lines we have been considering," the Prime Minister said.

Replying to the criticism in the brief regarding the haste with which the amendments to the Unemployment Insurance Act had been adopted, Mr. St. Laurent pointed out that haste had been necessary to make the new supplementary benefits available at the earliest possible moment. He felt that the other amendments to the Act would also prove to be satisfactory.

The possibility of increasing benefit rates without a rise in the rate of contributions had been under study; and he hoped that this could be done without risk to the Fund.

The Prime Minister then turned to the subject of housing, and urged that all governments should be regarded as having

responsibilities in this field. He said that the Federal Government was willing to go "a very long way," but he did not feel that it should become "the landlord of too many Canadians."

He pointed out that the increase in rentals had been authorized at a time when the Government was not sure of its continued jurisdiction in this field, and that the requirement that landlords extend leases to May, 1951, had ensured security of tenancy in case the Supreme Court decision went the wrong way. The Government was preparing to withdraw from the rent control field; and in the meantime any province was free to enter.

Regarding the possibility of establishing a National Labour Code he observed that the provinces were not likely to give up their jurisdiction in regard to labour relations without pressure from within the province. He suggested that the Congress could play an important part in organizing public opinion; but declared that the Government could not take from the provinces, without their consent, their rights under the British North America Act. He noted that the recent Dominion-Provincial Conference had shown a "genuine desire" to achieve something that would have the approval of the Canadian public generally.

With regard to old age pensions, the Prime Minister said he did not think that people meant an entire abolition when they spoke of doing away with the means test, but rather that a person should have some other source of income and still receive the old age pension. It was not necessary that the well-to-do should get a pension; the objective was that everyone should have old age security.

Regarding the cost of pensions, and of social security generally, Mr. St. Laurent observed: "We can have all we—the Canadian people—are willing to pay for." The principle of financing such measures was to take from those who were working in order to support those who were not. "We can transfer from those who are producing to those who are not, just as much as the productive workers feel is proper." Mr. St. Laurent expressed the belief that a satisfactory system could be developed for Canada, and he hoped that the joint committee of both Houses on old age security would collect valuable objective data for the Dominion-Provincial conference in the fall.

He noted that a Royal Commission had been requested to make recommendations in regard to radio, and said that the CBC deficit was "more apparent than real." He

agreed with the Congress that films on the evolution of employer-labour relations could be "very helpful."

The subject of education, he pointed out, came within provincial jurisdiction, and he felt that it should remain so in regard to such aspects as curriculum. But "there is nobody who does not want to see our facilities maintained and expanded." He believed that this subject would come up at the Dominion-Provincial Conference.

Concluding his remarks, the Prime Minister declared that within the past three or four years more had been accomplished for labour by collective bargaining than could possibly have been provided "from the top through legislation." The further we accept collective bargaining, he said, the better instrument we forge for improving the conditions of the working people.

He assured the delegation that their various recommendations would all receive very careful consideration, particularly since "we recognize your objectives as being for improvements for your members by means of improvements for the public generally."

#### **Hon. Humphrey Mitchell**

In a brief reply to the delegates, the Hon. Humphrey Mitchell, Minister of Labour, noted the Congress' views that the Government had moved too quickly in putting through the unemployment insurance amendments, and remarked that the "criticism usually comes in the other direction." He thought, however, that the changes in the Act would prove beneficial to labour, but reminded the delegates of the difficulties involved in administering an unemployment insurance system, and said that in no nation was the system altogether satisfactory. Mr. Mitchell said further, in regard to the Congress charges that they had not been consulted on the changes, that there was now much more consultation than there had been ten years ago, and that during his term of office he had continually endeavoured to take all large bodies into consultation.

He asserted his belief in freedom and his dislike of a planned economy. He urged the responsibility of both sides in industry to conduct themselves in the public interest, and cited the "magnificent job" that unions had done in the clothing industry in the City of New York and elsewhere, including Canada, in changing conditions from which this industry had suffered.

He warned also that both sides in industry must be careful "not to price themselves out of the market."

Concluding, he said: "You can rest assured my department will do everything

possible to meet your problems, based on recognition of the principles of human rights."

### **Hon. Paul Martin**

Referring to the setting up of a Parliamentary Committee on Old Age Security, the Hon. Paul Martin, Minister of National Health and Welfare, said that this would give to labour and other organizations what they have asked—the right to be consulted and to have their views known before far-reaching decisions are taken. The Government was anxious, he said, to "develop within our capacity" a system of old age security; and discussions would later be held with the provinces. Even with its present old age pension system, he said, Canada can compare favourably with any other country except three states

in the United States, and we should therefore not underestimate what we have already accomplished in the field of old age security.

### **A. R. Mosher**

The CCL President, Mr. A. R. Mosher, thanked the Prime Minister for his remarks, and assured him that the Congress sought "improvements" in the economic system rather than "an entire change."

Regarding price controls, he recognized the justice of incorporating wage controls in any such system, but added that labour had complained in the past about certain aspects of wage control.

He stressed the desire of his organization for an "immediate change" in the means test system, in order to relieve those who were hit hardest by the existing procedure.

## **Railway Transportation Brotherhoods**

The Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods, on March 31, 1950, presented a memorandum of proposed legislation to the Prime Minister, Rt. Hon. Louis S. St. Laurent, who was accompanied by the Hon. Humphrey Mitchell, Minister of Labour, Hon. Lionel Chevrier, Minister of Transport, and other Members of the Cabinet.

Representing the Brotherhoods were: A. J. Kelly, Chairman of Committee, Brotherhood of Railroad Trainmen; W. H. Phillips, Vice-Chairman of Committee, Order of Railroad Telegraphers; J. B. Ward, Secretary of Committee, Brotherhood of Locomotive Engineers; J. L. D. Ives, Order of Railway Conductors; J. G. McLean, Brotherhood of Locomotive Firemen and Enginemen; and J. J. O'Grady, Brotherhood of Maintenance of Way Employees.

### **The Railway Act**

Referring to proposed amendments to the Railway Act, the memorandum drew attention to previous annual submissions made by the Brotherhoods. This, in addition to recommendations that had been made to the Royal Commission on Transportation, was deemed to be a sufficient statement of the Brotherhoods' point of view, pending the report of the Royal Commission.

### **Customs Act Amendments**

The Minister of Transport, Hon. Lionel Chevrier, was commended for the active interest he had taken in the installation of automatic block signals at highway-railway crossings and other protective warning

devices on Canadian National Railways. But inasmuch as such devices were not made in Canada, it was requested that they be admitted free of duty from the United States.

### **National Transportation Policy**

It was claimed that a review of the recommendations of former Royal Commissions and Dominion-Provincial Conferences revealed that the basic question of division of legislative competence and lack of co-operation by governments in the matter of a Transport Planning Commission remained to be solved. It was held that this basic problem required due consideration by all governments if practical allocations and controls of the various types of transport were to be found and applied.

### **St. Lawrence Waterways**

The memorandum re-affirmed the Brotherhoods' opposition to the St. Lawrence Waterways project, especially for transportation purposes, on the ground that it is not justified by economic or national necessity. Nor could the burden which it would place upon Canadian taxpayers be justified, inasmuch as the project would serve and benefit only "very restricted special interests," it was asserted.

### **Social Security**

The Government was commended for "the expressed interest, studies undertaken and practical action taken on certain phases for a broad social security plan." At the same time it was urged that the Government should assume leadership and direction in any adequate and comprehen-

sive social security program, so that possible confusion and delays would be avoided.

The memorandum urged that in any pension plan that might be developed, "railway employees who have for years built up pension plans (of their own) by service and monetary contributions" should have their equity therein "considered and preserved." Further, it was asked that the Brotherhoods be given opportunity to review any contemplated enactment on social security which the Government may be considering, so that such representations as may appear to be warranted may be made.

### **Old Age Pensions**

While expressing approval of government action in "liberalizing the means test and the provisions governing the blind," the belief was expressed that experience with children's allowances warranted "a somewhat similar plan governing benefits to those at the opposite end of the span of life." It was urged, therefore, "that federal legislation be enacted, uniform in application, to provide a minimum monthly benefit of \$50 per month to Canadian citizens . . . who have attained age 65," but that provision be made to "recapture by taxation all such benefits paid which brought annual income in excess of \$3,000."

### **Railway-Highway Crossings**

It was recommended that in the construction of the Trans-Canada highway "no new level crossings be permitted where engineering possibilities permit constructing the highway under or over the railway." The Government was asked also to consider the elimination of many dangerous crossings on other highways as an important public work.

### **Unemployment Insurance Act**

The memorandum announced the Brotherhoods' desire to arrange a conference with the Minister of Labour, Hon. Humphrey Mitchell, and the administrative officers of the Unemployment Insurance Commission to seek clarification of some of the recent amendments to the Unemployment Insurance Act. Efforts will be made also to have corrected "existing anomalies and injustices" affecting employees of the National Harbours Board Railway.

### **Education**

It was claimed that the federal government "should recognize and accept a share of the responsibility for the education of our citizens and lend assistance where the need can be shown to be beyond the reasonable capacity of those on whom the burden now falls."

### **Income Tax**

The memorandum expressed appreciation of "the relief afforded by increased statutory exemptions," but held that the exemption for single taxpayers be increased to \$1,200; for taxpayers with dependents to \$2,400 and that the exemption for each dependent be \$500. It was suggested too, that reconsideration be given to the present exclusion of union dues from allowable deductions for income tax purposes.

### **Price and Rental Control**

It was submitted that the general problem of decontrols should be given further careful consideration in respect to prices of all essential commodities for the home, including housing, and relaxation made to conform with any improvement in the relationships between supply and demand.

### **Immigration**

In the opinion of the Brotherhoods, Canada's unpopulated areas and undeveloped natural resources should provide a haven for "selected immigrants who are in need of an opportunity to become useful citizens." They held, too, "that with proper selection, supervision and encouragement those whom we befriend will assist in improving our national economy." However, it was stressed that such a policy of selected immigration demanded "extreme care in selection," provision for education in language and citizenship and machinery for "appropriate action to deal with those found to be unworthy."

### **Housing**

The Government was commended for endeavouring "to provide shelter and homes to meet the unprecedented demand." The belief was expressed that continued consideration of regulations and assistance in building average priced permanent homes was warranted and it was recommended that the control of allocation and prices of construction materials should be continued.

### **Radio Broadcasting**

The memorandum re-affirmed former recommendations of the Brotherhoods that radio broadcasting should be publicly owned and controlled, under the trusteeship of the Canadian Broadcasting Corporation.

### **Labour and Public Bodies**

Appreciation was expressed for the Government's policy of placing representatives of labour on public bodies, boards and commissions. It was urged that this policy should be extended to include appointments to the Senate.

# LEGISLATIVE PROPOSALS OF PROVINCIAL LABOUR ORGANIZATIONS

*Provincial branches of the Canadian Congress of Labour (CCL) and the Trades and Labour Congress (TLC) recently have presented their annual legislative memoranda to their respective provincial governments asking for improvements and amendments with respect to labour problems.*

*Although the submissions incorporated a wide variety of subjects the unions sought common objectives in matters concerning social security, unemployment, workmen's compensation, education, housing, cost of living, public works projects, wages and hours of work, vacations and a Bill of Rights.*

*Listed below is a summary of the memoranda submitted by the Manitoba Provincial Executive (TLC), the New Brunswick Federation of Labour (CCL), the Newfoundland Federation of Labour (TLC), the Nova Scotia Federation of Labour (CCL), the Nova Scotia Provincial Executive of the TLC, the Ontario Federation of Labour (CCL), and the Ontario Provincial Federation (TLC). The proposals of other organizations have been described in previous issues.*

## Manitoba Executive Committee (TLC)

Members of the Manitoba Provincial Cabinet, headed by Premier D. Campbell, received legislative proposals submitted by the Manitoba Provincial Executive Committee of the Trades and Labour Congress and representatives of the Manitoba Trades and Labour Councils, and International and National Unions on February 6. The Committee was led by its chairman, Andy Murphy of Winnipeg.

### Social Security

In the brief the committee regretted the Federal Government's failure to take speedy action in enacting appropriate legislation for an over-all social security plan and urged the Provincial Government to impress on the Federal Government the "dire need" for early consideration of this problem.

The Committee offered the opinion that the social security plan, on a contributory basis, should include a "satisfactory retirement pension" without any means test, adequate family allowances, unemployment insurance, workmen's compensation, adequate income and medical care during illness, and increased allowances for widows, blind persons and handicapped persons. In addition, a general plan to improve medical services and facilities in the province was advocated.

### Labour Relations Act

Under this section the Committee contended that seniority and pension rights should be protected under the Manitoba Labour Act as they were under Federal legislation.

The brief called for repeal of a section of the Act preventing the affiliation of police organizations. It asked that a company whose board of directors does not meet in Manitoba should be required to appoint a Manitoba resident to represent the company in collective bargaining. A resident of Manitoba thus selected should have the authority of binding the company to an agreement, stated the brief.

The brief also requested amendments to provide for: the check-off of dues; permission for Legislative Assembly members to accept expense allowances whilst on a Conciliation Board; assumption by the Labour Relations Board of responsibility for prosecuting violations; Government employees' right to organize and bargain; prohibition of injunctions against labour; 51 per cent of votes actually cast to determine the organization to be certified; speeding-up of conciliation procedures; and penalties for employers who deliberately cause delays.

## Workmen's Compensation

The Committee requested that accident prevention service be brought under the Workmen's Compensation Board. They asked for a revision of the Act to provide for the filing of claims after 12 months have elapsed, when it can be proved to the Board's satisfaction that the claim is a *bona fide* result of an accident treated previously by a physician who failed to file a report thereon with the Board.

Increased amounts for widows or invalided widowers were asked for, as well as increased benefits for children.

It was also asked that the maximum amount in calculating average earnings and earning capacity of the workman be increased to \$3,000 per year; that chiropractic treatment be made available; that occupational hazards, such as skin and lung diseases be brought under the Act, and that farm labour be included.

## Unemployment

Noting that there was serious unemployment in Canada, the delegation urged both Federal and Provincial action to alleviate the plight of the unemployed with public works projects.

## Housing

Co-operation between the three levels of government was urged to provide a low-

rental housing program. The delegates requested strict rental control, re-instatement of the home improvement plan, slum clearance and low interest on housing loans.

## Education

Educational standards were declining in Manitoba, charged the brief, which asked for improved conditions and increased salaries for teachers, larger municipal grants, more effective supervision of trade schools and a minimum school leaving age of 16 with a further raise to 18 in the near future. The Government was asked to adopt proposals made by educational organizations to have principles of marketing and manufacturing taught in the schools.

## Other Proposals

Among other matters, the brief also asked for: a 75-cent minimum hourly wage; inclusion of all Manitoba industries under the Fair Wages Act; collection of overtime wages by the Manitoba Labour Board; two weeks' vacations with pay; \$10 monthly increases in old age pensions; labour representation on government boards; northern development of the Province; an increased apprenticeship grant; amendments to the Manitoba Election Act; and the enactment of a National Bill of Rights.

## New Brunswick Federation of Labour (CCL)

The New Brunswick Federation of Labour, led by President James A. Whitebone, MBE, met on February 16 with Premier J. B. McNair and members of the Provincial Cabinet to present their annual legislative brief.

Although the delegation expressed regret that many previous proposals had been ignored, the government was complimented for its attitude in the Dominion-Provincial Conference in setting forth the "legitimate claims of the province".

## Labour Relations Act

It was pointed out by the Federation that there was dissatisfaction amongst government and municipal employees because of their exclusion from provisions of the Labour Relations Act. The delegates contended that New Brunswick and Ontario were the only provinces which excluded municipal employees from the right to organize and bargain collectively with their employers. They declared that in Ontario such employees may be brought under the provisions of the Ontario Labour Relations Act upon application of the employing

body. The brief urged that the necessary legislation be passed forthwith to remedy this situation in order that all workers, regardless of who their employer may be, will be able to enjoy the full rights of trade union organization as free citizens.

## Social Security

The delegation reiterated former requests for the immediate implementation of a nation-wide social security plan on a contributory basis for all citizens. Health insurance, hospitalization benefits, old age pensions, mothers' allowances, widows' allowances and maximum medical benefits should be included in such a plan, the Federation declared.

## Housing

Proposals put forth by the delegation suggested that the Government take advantage of Federal financial assistance to clear slums and build homes. Until ample low-rental homes have been built the delegates requested the prohibiting of building projects.

## Unemployment

Unemployment had reached "alarming proportions" asserted the Federation. Lumber and pulpwood operations had decreased badly in the province, they stated, which, coupled with manufacturing and building declines as well as the decreased activity in railway services, had created wide-spread idleness.

The brief called for early and effective action to provide work for the unemployed and recommended immediate commencement on a public works program. Such a program, stated the brief, in addition to the proposals recommended with regard to the housing situation, should include projects for the Chignecto Canal, the Trans-Canada Highway, the Passamaquoddy Power Project and a general increase in all Provincial works projects.

## Education

The representatives commended the Government for new school construction and improved teachers' salaries. They advocated a critical investigation into the schools' curriculum and the educational system of the province. It was urged that financial assistance be given to children to enable them to continue high school and college.

## Cost of Living

The Government was urged to influence the Federal authorities in re-imposing price controls to maintain a better relation

between wages and prices. The brief protested against the imposition of a Provincial sales tax.

Other proposals of the Federation dealt with the following:—

- an eight-hour work day and a 40-hour week;
- payment of wages weekly;
- vacations with pay;
- unemployment insurance;
- workmen's compensation;
- family allowances payable into an educational fund for orphans, etc.;
- increased mothers' allowances;
- medical inspection of restaurant employees;
- highway safety regulations;
- the Electrical Energy Act;
- scaffold inspection;
- the Stationary Engineers and Boilers Act;
- licensing of tradesmen;
- the Industrial Standards Act;
- the Minimum Wage Act;
- shifts for fire fighters;
- a fair wage clause in Provincial Government contracts;
- increased witness and jury fees;
- improved conditions for student nurses;
- union patronization by the Government;
- supervision of trade schools;
- forest conservation;
- a uniform ballot;
- fatal accident inquests;
- property and liability insurance;
- labour representation on public boards;
- overtime.

## Newfoundland Federation of Labour

On March 7, representatives of the Newfoundland Federation of Labour met a select committee of the Legislative Assembly to present a memorandum on legislation of interest to labour. The previous month the Federation presented a brief to the Royal Commission on the Cost of Living.

In its memorandum to the Government, the delegation stated that progress in making improvements in labour and social legislation prior to 1949 had been very slow and the hope was expressed that more speedy action would be taken by the Government in future to eliminate fear of want and insecurity for all citizens of Newfoundland.

## Labour Relations Act

While giving a large measure of approval to the existing Labour Relations Act, the deputation requested that the following amendments be made:—

(1) Making it mandatory to grant the union shop, when the union could prove to the Board that it had a membership of at least 75 per cent of the eligible employees. It was not asked that the other 25 per cent should be forced to become members of the union, but the deputation was of the opinion that the members of the union should be compelled to maintain their membership and that it be made a condition of employment for new employees to become members.

(2) The Federation asked that a clause be inserted or added to the Act to prevent the employment of legal counsel in bargaining negotiations, or in representations before the Labour Relations Board, unless mutually agreed to by both parties in such cases.

## Trade Union Act

It was asked that three sections of the Trade Union Act be deleted. These sec-

tions require that unions make available for publication and distribution detailed financial statements, a restriction, it was stated, that was not required of either the employer or employer organizations.

## **Cost-of-Living Brief Presented to Royal Commission**

Third Vice-President C. W. Strong and Secretary W. J. May of the Newfoundland Federation of Labour (TLC), presented a brief to the Royal Commission on the Cost of Living, on February 13.

At the outset, the brief expressed gratification that the Commission had been set up to study the causes and possible remedies for the high cost of living, which, it was claimed had reached "astronomical proportions," in Newfoundland.

### **Cost-of-Living Index**

The present Newfoundland cost-of-living index was held to be inferior to similar indexes in use on the mainland of Canada and in the United States, in that it omitted numerous consumer items and services that were important factors in the over-all cost of living. It was urged that no time should be lost in bringing the new province's index into line with that compiled by the Dominion Bureau of Statistics at Ottawa.

### **Distribution of Consumer Goods**

The brief suggested that one of the causes for the high cost of living was to be found in inefficient and out-of-date facilities for distributing consumer goods. Special reference was made to the need for modernizing the waterfront facilities at St. John's, the island's chief distribution centre. It was proposed too, that the Commission investigate possible ways and means of centralizing population with a view to making economies in distribution to the 1,300 settlements scattered along the sparsely settled coast-line.

Full approval was given to the provincial government's policy of road building, but it was felt that a system of "feeder roads"

and better communications in general should be provided, especially for the more remote communities that at present were dependent almost solely on sea communication.

### **Sales Tax on Consumer Goods**

The federation expressed its concern over the Government's declared intention to levy a sales tax on certain goods as a means of increasing provincial revenue. The Commission was asked to recommend to the Government that it should not impose such a tax on essential consumer goods.

### **Land Development**

While the delegation recognized that there was not a great deal of underdeveloped arable land in the province, nevertheless, it was of the opinion that a campaign of education and assistance would enable the province to be nearly self-sufficient in the production of the common varieties of vegetables. In addition, it was held that much could be done to reduce living costs by encouraging the greater production of cattle, sheep, hogs, goats and poultry.

### **Co-operatives**

The Government was commended for its interest in co-operatives. The hope was expressed that an intensive campaign of education would be launched on the island to arouse greater interest in co-operative efforts in the settlement of many common problems, including the current high cost of living.

### **Housing**

The provincial Government was praised for its declared intention of embarking on a low cost housing scheme in co-operation with the federal Government. At the same time it was felt that there was a great need for stronger rent control legislation and its rigid enforcement. The Commission was urged to investigate rental costs and in cases found to be exorbitant, to recommend to the Government that corrective measures be taken as soon as possible.

## **Nova Scotia Federation of Labour (CCL)**

The Nova Scotia Federation of Labour asked for government action to alleviate the unemployment situation when they presented their annual legislative brief to the Provincial Government on March 2.

It was contended that unemployment was the paramount problem facing the Government. Development of the steel industry at Sydney and New Glasgow was

termed "the most basic requirement of all to the solution of chronic unemployment in Nova Scotia," and the brief urged the Government to expand and operate the steel industry as a public utility.

The brief petitioned the provincial authorities to undertake public works projects such as road building, community recreation centres and school replacement.

Concerning housing, the government was asked to initiate subsidized low-rental housing in co-operation with municipal authorities even if funds were unavailable.

Government support was urged by the Federation to create a merchant marine fleet to lessen unemployment in shipbuilding industries.

An experimental plant to encourage research into uses of coal was requested and the Federation included a suggestion that public-owned heating plants burn Nova Scotia coal.

Changes were asked in the Trade Union Act to halt employer influence in union operation. The Federation also asked for a 40-hour week, a minimum wage for men and women, two weeks paid vacation, and compulsory pay on statutory holidays.

The Federation advocated social security legislation to provide a three-way pension

plan with contributions from workers, management and government.

Dealing with workmen's compensation, the Federation suggested a minimum rate of industrial contribution. It also called for increased compensation rates for the partially disabled (from two-thirds to 75 per cent of lost earnings with a maximum of \$3,000 instead of \$2,500); and advocated an adjustment for totally disabled men, to base their compensation on present-day rates of earnings.

Various other recommendations in the brief included re-opening of the Acadia Sugar Refinery, year round usability of Halifax port, a Halifax-Dartmouth bridge, and extension of rural electrification.

Finally, the brief called for a Bill of Rights for Canadians "to guarantee explicitly the rights its people have won."

## Nova Scotia Provincial Executive (TLC)

The provincial government of Nova Scotia heard representations made on behalf of the Nova Scotia Provincial Executive of the Trades and Labour Congress of Canada when the latter submitted their annual brief on labour legislation early in March.

### Trade Union Act

It was requested that such bodies as the Power Commission and the Liquor Commission be included under the Trade Union Act and that all provincial government employees be given bargaining rights under the Act.

The delegation also requested that the Board be empowered to apply to the courts to seek enforcement of its orders, providing that it must first obtain the approval of the Minister.

Full collective rights were requested for fishermen under the Trade Union Act.

### Working Conditions

The brief asked for legislation for a 40-hour week, a minimum wage rate of 75 cents an hour, an annual two weeks' vacation with pay, and one complete day's rest in each 7-day period.

The executive urged a series of regulations for the lumber industry, to be enforced through inspection. Rigid enforcement of the Nova Scotia Labour Act was requested.

Electrical wiring installations and electrical supplies should be government inspected and approved, urged the executive. It was also requested that all skilled tradesmen be requested to qualify under the Trades Standards Act.

### Workmen's Compensation Act

The following amendments to the Act were advocated:—

- permission for the attending doctor to appoint a nurse to attend an injured employee;
- coverage of employees under the Act whilst on the employers' premises;
- the duration of hernia treatment to be established by the attending doctor;
- the Board be empowered to direct workers to suitable employment within the same company after workers have been on compensation and compulsion of employers to re-employ the workers;
- establishment of a compensation office in Sydney;
- full compensation for both injuries should a worker already receiving disability benefits suffer another injury;
- compensation for disability to be computed on 100 per cent of the worker's earnings up to a maximum of \$3,000;
- weekly payments to permanent partially disabled workmen of 100 per cent of the difference between former average earnings and the present average earnings ability, to be payable during his lifetime;
- monthly payments of \$65 to widows and invalid widowers, with \$20 allowance monthly for each child under 16 up to a maximum of \$120 for a widow with children and minimum compensation benefits be increased to \$18 a week.

## Social Security

The Executive asked that: old age pensions begin at 60; residence of 15 years in Canada be considered sufficient qualification for pensions; pensions be increased; equal pensions apply to the blind; the Parents' Maintenance Act with the Old Age Pension be discontinued; free medical care to pensioners and payments to widows or widowers be provided.

Recommendations were also put forth regarding industrial pensions, a Maternity Hospitalization Act, health insurance, milk

subsidies, repeal of the Poor Relief Act and free school books.

Concerning public works, industrial development and employment in Nova Scotia, the Government was urged to initiate public works projects to combat unemployment, and to re-open the Acadia Sugar Refinery. Low-cost housing was requested as well as a program to ensure slum clearance.

The brief included also suggestions dealing with safety legislation, service station attendants, racial discrimination, jury service and town planning.

## Ontario Federation of Labour (CCL)

The Ontario Federation of Labour (CCL) presented its annual brief on labour legislation to the Ontario Government early in March.

### Various Recommendations

The Government was asked to institute the 40-hour week for workers in Ontario; to make mandatory eight statutory holidays and two weeks' vacation with pay and to undertake immediately works projects to provide work for the unemployed.

Dissatisfaction was expressed in the brief with the present alleged inadequate system of factory inspection.

Attention was drawn to the alleged need in many metropolitan areas for some form of unification of services to provide the necessary educational and other facilities for workers living in suburban areas and the provincial Government was urged to cooperate with the federal Government in an effort to get an over-all social security scheme established. The latter should, it was asserted, include health insurance and an old-age pension plan without a means test.

The Federation endorsed the Bill of Rights presented to the Legislature by the Civil Liberties Association and made a strong protest against the discontinuance of the printing of *Hansard*, as well as the

refusal of the Clerk of the Legislature to supply the Research Department of the Federation with mimeographed copies of debates in the Legislature.

### Labour Code

The provincial Government's new labour code was criticized for "its failure to include any union security provisions," and for excluding municipal employees and others from the provisions of the law. It was asked that the Government define "a member of the union" and stipulate in the Act that a simple majority vote would be sufficient for certification.

The brief also demanded speedier conciliation procedure and cheaper arbitration procedure. It was urged too, that independent unions be required to show their sources of revenue to the Labour Relations Board, so that the Board could ascertain how they expected to pay legal fees, etc.

### Workmen's Compensation

The Federation renewed previous demands that 100 per cent compensation be paid injured workers; that coverage be provided for all workers; that ceilings and waiting periods be eliminated and that some relief be given those who are receiving inadequate compensation benefits under the old legislation.

## Ontario Provincial Federation (TLC)

On March 15 the Ontario Provincial Federation of the Trades and Labour Congress of Canada appeared before Premier Leslie M. Frost and members of his Cabinet to present their annual legislative memorandum.

The Officers of the Federation headed by President A. F. MacArthur noted in the brief that many proposals which had been requested repeatedly over past years had

not been adopted and it was hoped the government would give careful attention to them this year.

### Labour Relations Board

Expressing dissatisfaction with the above, the Federation urged the following amendments:—

- (1) provision for revocation of certification should be deleted;

- (2) the Board to have the right to grant conciliation rather than the Minister of Labour;
- (3) prosecution cases to be handled by the Board instead of the Minister;
- (4) a clearer definition of company unions and prohibition of certification of such organizations;
- (5) right to be granted to apply for certification and to obtain a vote when 25 per cent of the employees in the proposed bargaining unit authorize a *bona fide* union to make such application;
- (6) authorization cards signed by the workers to be sufficient evidence of the desire for a vote on certification.
- (7) fifty-one per cent of those actually voting to decide certification;
- (8) a simple majority vote to decide the issue of a union shop and the compulsory check-off of union dues; and
- (9) that employees of municipal corporations, and their boards and commissions be included in the Act.

### Unemployment

Pointing to recent increases in unemployment, the Federation urged the Ontario Government to take steps to ensure every willing worker of a job at trade union rates. In addition, the Delegation also urged the Government to try to extend foreign trade opportunities, with a view to maintaining full employment. It asked that an agreement be made with the Federal Government to provide support to unemployed persons during the whole period of unemployment.

### Hours of Work and Vacations with Pay

A number of amendments were requested to this Act, included in which were the following:—

- (1) that maximum standard working hours for an employee in any industrial undertaking shall not exceed eight hours in the day and forty hours in the week, this provision to be granted without loss of take-home pay and at wages which are adequate to maintain comfort and decency;
- (2) that except where agreements provide overtime pay after a regular work day, a minimum requirement

that all time worked on the sixth day of the week shall be paid for at the rate of time and one-half and on the seventh day at double time;

- (3) abolition of the split shift;
- (4) repeal of the provision which allows employers to work employees for one hundred hours of overtime in one year, this to be limited to a maximum of fifty hours in the summer resort business and then only upon application to the Board for permission;
- (5) extension of the basic vacation period to two weeks in each year with the pay to be based on weekly earnings, with credits for any time lost through illness, injury or lay-offs.

A tightening up of regulations governing the vacation with pay stamp book system for workers in seasonal occupations was also requested.

### Old Age Pensions

The Ontario Government was urged to conclude an agreement with the Dominion Government to bring about the following provisions:—

- (1) reduction of pension age to sixty years for women and sixty-five for men;
- (2) that the Act be made applicable to all;
- (3) that no deduction be made on account of other income;
- (4) that the same pension be made applicable to blind persons;
- (5) that the practice of combining the Old Age Pensions Act and the Parents' Maintenance Act be discontinued;
- (6) that the practice of placing liens on the homes of recipients be discontinued;
- (7) that the amount of the pension be increased to \$65;
- (8) that the means test be abolished; and
- (9) that proof of age and fifteen years' residence in Canada be the only qualifications required.

Accommodation for married couples in community homes, with hospital and medical care was requested. A compulsory pension paid by the industry to workers incapable of continuing after 20 years was asked for also.

## Workmen's Compensation Act

Commending the Ontario Government for previous amendments adopted, the Federation requested these additional provisions:—

- (1) one hundred per cent compensation;
- (2) blanket coverage of all occupational diseases or diseases attributable to the nature of the employment regardless of the disease or the occupation of the worker;
- (3) supervision of preventive measures to be placed under the Compensation Board;
- (4) compensation to be paid from the date of injury or disability without waiting period;
- (5) uniform coverage of all occupations and diseases and injuries attributable to the nature of such occupations;
- (6) speeding up of investigations and the making of payments;
- (7) increases in payments to widows, invalid husbands and orphans;
- (8) increase in burial expenses; and
- (9) increase in maximum earnings on which compensation is payable from \$3,000 to \$3,600.

A number of other items such as referring injured workmen to light work, provision of more medical examiners for unorganized territories, etc., were also dealt with in the brief.

## Education

The brief urged presentation of the report of the Royal Commission on Education so that action could be taken to improve educational standards and facilities, which should be made available to persons at a reasonable cost. The Cabinet was also asked to implement a promise made in 1943 that at least 50 per cent of school taxes charged against real estate would be assumed by the province.

## Price Control

Under this heading the Government was asked to urge the Federal authorities to reinstitute the policy of granting subsidies on basic food commodities and to enforce a reduction in consumer prices. Such subsidization could be met by reimposing the excess profits tax and eliminating profiteering, it was pointed out.

The delegates also favoured the setting up of a Federal Price Control Board to which all applications for price increases should be submitted. Such a Board should

be given the authority to force a reduction in prices where basic foods and materials, through their increased cost, are creating an impediment to the good health of the Canadian people as a whole, and in particular the health of the children.

## Housing

The Federation expressed the opinion that the "deplorable housing situation which exists in Ontario" had become complicated further by recent rent increases allowed by the Dominion Government and urged the Ontario Government to accept joint responsibility with other levels of government in providing adequate low-rental housing accommodation.

A plan to allow workers to purchase homes with interest-free money was solicited and action asked to ban rent increases.

## Other Recommendations

Other recommendations contained in the brief concerned:—

- legislation covering fire fighters, drivers of buses and commercial vehicles, barbers, civic employees, plumbers, hoisting engineers and steam fitters;
- proper enforcement of the Apprenticeship Act;
- reforestation, improved methods of production and research in forestry, and improved social conditions for workers in the forest industry;
- extension of the franchise to all persons over 18 years of age;
- implementation of a highway improvement and construction program;
- enactment of an Ontario Bill of Rights;
- greater development of Canadian industry;
- abolition of company towns;
- abolition of home work;
- repeal of the theatre amusement tax;
- labour representation on all Government boards, commissions and committees;
- establishment of \$1 per hour minimum wage;
- inclusion of a fair wage clause in all contracts;
- an Ontario Health Insurance Bill;
- setting up a permanent Truck Transportation Board;
- barring of racial and religious discrimination;
- fire safety;
- rights of civic employees;
- Dominion-Provincial Relations; and
- police activity in strikes.

# PASTORAL LETTER OF ROMAN CATHOLIC EPISCOPATE DEALS WITH WORKERS' PROBLEMS IN PROVINCE OF QUEBEC

*Based on an official translation, the following article summarizes a Pastoral Letter issued in March by the Roman Catholic Episcopate of the Province of Quebec, dealing with workers' problems in the light of Church social doctrine.*

The Roman Catholic Episcopate of the Province of Quebec issued, in March, a pastoral letter entitled "The Problem of the Worker in the Light of the Social Doctrine of the Church". A résumé of the 35,000-word episcopal document, which insists strongly "on the primary need for seeing clearly the actual conditions of the worker's life", was released to the Canadian Press on March 20 and an abridged version was read the next Sunday in all Roman Catholic parish churches and chapels of religious orders in the Province of Quebec.

The pastoral letter, which quotes extensively from Church statements on social doctrine such as the encyclicals *Rerum Novarum* and *Quadragesimo Anno*, is signed by heads of 25 archdioceses and dioceses of the Province of Quebec and of dioceses outside of Quebec which for purposes of church administration are considered part of Quebec.

The prelates recommend structural reforms in industry which would "gradually" bring organized labour into participation in management, profits and property of the enterprise, and advocate establishment of a "corporative organization" which would include both workers and employers. The letter recommends achievement of these objectives with prudence and respect for the "legitimate right of the owners of the means of production", but points out that they are urgently necessary.

The letter is divided into three parts. The first part sets forth the authority and the duty of the Roman Catholic Church to recall the social teaching of the Church concerning the workers and studies the actual conditions of the worker's life. In the second part of the letter, the Quebec prelates indicate the ways to a Christian restoration of the worker's life by the restoration of Christian spirit in his personal and family life, by a better organization of leisure and by the inauguration of a better regime of work. The third part of the letter points out the task of the

workers, the public contribution, the State's responsibility and the Church's task in restoring the Christian concept of work and in improving the lot of the workers and their families.

## Actual Conditions of Worker's Life

At the beginning of their collective letter the Quebec Bishops declare that

in the face of the profound changes which have occurred in economic life, in the face of social agitation which continues to mark these post-war years, in the face of the confusion of mind which threatens to trouble our people and to retard their social progress, and conscious of our pastoral office, we wish to recall to your mind the teachings of the Church concerning the problems of our workers.

The prelates say they are assured that their words will be received with faith and insist on "the primary need for seeing clearly the actual conditions of the worker's life." They acknowledge that the economic situation of our country compares favourably with that of most countries in the world, and that our working class has profited from this situation and on the whole has enjoyed a fairly good standard of living.

The pastoral letter observes that this general affirmation should not cause it to be forgotten that there exists numerous regional and professional groups whose revenues are not sufficient:—

No one could maintain that the national wealth is equitably divided. And no more among us than elsewhere has the fundamental problem of the worker's life been resolved, the problem of the economic and social security of the worker.

Industrialization is not a new phenomenon in our country; but in the course of the last decade it has expanded considerably. Work by women has developed at an accelerated rhythm. The population of the cities has been augmented notably. Industrial progress has even accentuated the abandonment of our rural districts. In this manner the situation in our urban centres has been complicated.

A rural person no longer finds his traditions and habits in the city. The institutions which used to protect him no longer have the same character, and some of them have lost their vigour.

The bishops add that this problem of adaptation is at the root of many difficulties, and sometimes of great miseries, for individuals; and constitutes for the urban community an obstacle to the establishment of its equilibrium and to the organization of its religious, social, and economic progress.

The prelates deplore the fact that the rapid increase in urban population has created a housing problem with "all its evil consequences", and the fact that, due to the rapid industrial development, many workers have entered new industries without having been able to acquire sufficient preparation. Their presence in plants has further complicated the problems of industrial life, they add, and has spread the deplorable effects with which the economic regime can be reproached:—

One knows, for example, the place occupied by mass production (*travail en série*) in modern industry. But in the present state of his organization, this does not satisfy the cultural and psychological needs of the worker. As a consequence the factory labourer is not interested in his work. Only too often he enters the shop anxious to leave it as quickly as possible to seek elsewhere the distraction which corresponds to his needs for development.

Conditions of industrial hygiene, states the pastoral letter, have not been improved to the point of attenuating as much as possible the dangers which threaten the health of workers.

### **Collective Rights**

After noting that during the war the workers were better able to understand the importance of their role in the national economy, the prelates say that a greater independence with regard to their work enabled them to express requests which had hitherto been rejected:—

Freed from fear, they have entered in greater numbers the workers' associations by means of which they have made their claims known. The working class thus acquires more and more a collective realization of its rights and of its strength: it intends to defend its rights and to make them respected. Here is a phenomenon which disturbs some, and which others regard with confidence.

It is our duty to show the way toward a healthy restoration of this life of the workers.

Every work of restoration should be based on religion, on God. "For unless God buildeth the house, they labour in vain who build it."

## **Religion and the Worker**

The Quebec Bishops warn against the thought that religion lulls the worker, or that the Church is the ally of the powerful:—

The Church preaches the eminent nobility of the worker; she shows to each a clear view of his respective function in society and of the necessary collaboration of all for the common good; and she gives men the supernatural strength to fulfil their duties.

Those who have at heart the restoration of the life of the worker should envisage all the problems which it poses and the reforms which it demands in connection with the family, that primary cell of the social organism. Sufficient income, family housing, measures of social security, reduction in taxes, a moral atmosphere.

Here are enough factors to permit the worker to provide his family with a living worthy of their humanity, and, together with his wife, to look after the education and instruction of their children.

The pastoral letter expresses satisfaction that one of the happy effects of modern mechanization has been to lessen the hours of labour:—

This progress will be a true gain for the working class and for society, if the workers know how to draw profit from their more abundant leisure.

Leisure is not the end of life. However, when it is well used, it renders family life stronger, develops a sense of responsibility, and contributes to the full flowering of the individual by the maintenance of his physical strength and by the development of his intellectual faculties and his moral virtues.

Modern technique, the prelates note, has led to a more marked separation between capital and labour and has caused many misunderstandings and conflicts. They declare that a rediscovered understanding of work and of its ends will correct this deplorable situation and re-establish order in professional relations:—

It is therefore necessary that economic life should be so ordered as to recognize the Christian concept of work. An evil system of work will compromise all effort at restoration because it leads to an abject materialism. There exists, in effect, a direct connection between the lack of satisfaction which the working classes derive from their accomplishment of their labour and the decline in private and public morals, and the consequent decline of the Christian spirit.

### **Enterprise Reforms**

The Quebec Roman Catholic hierarchy declares that the inauguration of a better regime of work is intimately bound up with the true spiritual values which the Church recognizes in work and in the man who executes it, and that economic reforms should take into account the exigencies

which derive from the moral nobility of work and from the primacy of man over matter:—

As well as a just, living, family and human remuneration, these exigencies also include, on the one hand, the adaptation of work to man: duration, rhythm, methods, hygiene, apprenticeship, professional milieu; and, on the other hand, an organization of labour based on a statute which protects efficaciously the right of association—employers' as well as workers'—which will normally lead the associations of employers and employees toward the vocational order (*organization corporative*).

The vocational organizations should recognize judicially and in practice by means of permanent institutions the common responsibility of all those who take part in production.

The Roman Catholic prelates also recommend that in the enterprise, cell of economic life and sphere of daily action, industrial work—characterized by mechanization, standardization, and the specialization of tasks—should be organized more humanely, and that structural reforms should endeavour more and more to interest the workers in the very life of the enterprise in such a way that all those who participate therein, management and workers, may realize their “community of activity and of interest”.

One must readily admit that in an economy permeated with economic liberalism, the regime of the simple wage contract tends to favour class-war, to widen the gap which separates capital and labour, to lead proprietors to seek exorbitant profits, and to lessen care for honest and skilful work among workers by not integrating them sufficiently into the life of the enterprise.

We believe it to be our duty to direct social action towards a reform of enterprise which will gradually lead organized workers to participate in management, profits, and ownership, according to a just conception of the private nature of the enterprise and of the legitimate rights of proprietors over productive property.

The letter recommends achievement of proposed reforms with prudence but said they are urgently necessary.

The leaders of enterprise, who in the name of an absolutist conception of ownership, do not believe in sharing certain of their responsibilities with their workers are in error, an error which could be fatal.

The Bishops add that the restoration of the conditions of the workers cannot be brought about unless the workers themselves have a truly noble and Christian appreciation of one another, and unless they are fundamentally disposed to co-operate and to aid one another. They should realize the grandeur of their work, the importance of their function, and the nobility of the working class.

## Co-operative Institutions

The pastoral letter asks the workers to join their collective efforts to render the soul of the working class more Christian, and, to that end, to create around it a favourable atmosphere by restoring the institutions and the milieu which frame its life:—

Workers should also unite their efforts and their resources in co-operative enterprises with a view to their economic prosperity and their social advancement. Immeasurable services can be rendered them by their co-operatives—particularly for the solution of the housing problem. Therefore they should busy themselves in promoting and developing such works.

Individual efforts by workers, and their collective efforts by means of Catholic Action, professional associations, and the co-operative movement, are therefore the indispensable conditions for the restoration of the life of the worker.

The letter stresses the importance of the good conduct of personal and family life, as well as the exercise of the responsibilities called for by their associations, to produce within the working class an ever more numerous and apostolic elite which will think it a very great honour to stay in the working class, in order to serve it better and to help it to attain the highest possible level of moral and religious, professional and cultural life.

## Employer Responsibility

To the employers, the letter points out that they can and should make an important contribution to the personal, family and social advancement of the workers, by not forgetting that upon them in great part rests the responsibility of making this regime conform to the prescriptions of the natural and the divine law, even at the cost of certain sacrifices:—

Firmly attached to the right of private property, the Church asks employers neither to forget the social aspect of this right, nor to neglect their obligation to subordinate its exercise to the exigencies of the common good, and to the limits imposed by the rights of employees, consumers, and other employers—especially those in small or medium-sized industry.

The letter tells the employers they have the primary responsibility for the economic life of their enterprise, that their right and duty is to ensure its material prosperity and its financial stability, and that, in order to attain this end, they should use the most appropriate means.

But if they value their employees as men and as Christians, if they constantly give the example of a truly Christian life,

if they endeavour to develop an atmosphere of cordial collaboration, if they pay just salaries and ceaselessly strive to improve working conditions, if they agree loyally to collaborate with their employees' union, they will favour social peace and a harmonious understanding between capital and labour, and they will personally obtain temporal successes which others will try in vain to realize by the exclusive use of technical and financial means.

### Professional Associations

The pastoral letter notes that quite a few employers complain with reason of the impediments to the practice of justice caused by unbridled competition in existing life. The Quebec prelates suggest that they unite in professional associations which draw their inspiration from the social doctrine of the Church:—

By a more profound study of Catholic doctrine, by a union of their skills and knowledge, they will be able more easily to perfect the technique of their enterprises, to bring about an improvement of the laws which concern work, industry, and commerce, to develop their social sense, to collaborate with workers' associations, and to find the means to fulfil their obligations of justice and charity.

The Bishops observe that the efforts of workers and employers to restore the life of the worker should be sustained and completed by the well-intentioned aid of all citizens, particularly professional persons and educators.

All those who have the advantage of benefiting from a superior intellectual and moral training which has enabled them to build a brilliant career and to number themselves among the elite of society, have thereby an added reason for fulfilling their social duty.

Representatives of the liberal professions should always show a great moderation in the fees they charge for their services. They fulfil a social function which they ought to accomplish with disinterestedness, without unhappy conniving with the power of money, and without paltry scheming—political or otherwise.

### The State's Responsibility

The episcopal document points out that the State can and should exercise its helpful influence to improve the lot of workers and their families. It carries the heavy responsibility of promoting the temporal welfare of all its citizens without exception, while according particular care to the weakest. And the prelates assure that the Church, beyond and above all political parties, offers its loyal collaboration to all who exercise civil authority.

What is to be asked of government is a grouping of laws and institutions which will cause public and private prosperity, and peace and social order, to flourish.

- Above all, it should aid citizens, families and associations to fulfil those functions which they are capable of undertaking themselves.

### The Right of Association

The letter says that the State is under a special obligation to help to improve the condition of the worker. By legislation ceaselessly adapted to new needs, by an adequate enforcement and application of the laws, it should effectively safeguard the right of workers to a just salary, and to healthy conditions of work from both the physical and moral points of view.

Legislation concerning the right of association should constantly be improved so as to permit a sound unionism to fulfil its necessary role as an agent of order and social peace. Consequently laws on industrial relations, on collective agreements, and on the prevention of conflicts by conciliation and arbitration, should be such as to protect all the legitimate interests of workers.

### Communism

"Measures of repression are necessary," observe the Bishops, stating that those governments are well advised which, by appropriate measures or by laws, seek to check the activities of Communism and other movements subversive of Christian social order. But they believe that these measures will only be effective if they are accompanied by sincere efforts to create a social order based on justice and charity.

Above all it is necessary to favour a better distribution of riches, a state of security for all honest and conscientious workers and a system of labour which respects the human dignity of the worker.

### The Church's Task

Among the main recommendations in the episcopal letter are support of the Canadian and Catholic Confederation of Labour, support of priests active in social action, based on the Church's social doctrine, and in labour and employer organizations, and endorsement of the work of the Sacerdotal Commission on Social Studies, an organization of the clergy with power to pronounce itself on social questions.

In concluding the letter, the Roman Catholic Bishops of the Province of Quebec ask the clerical and lay social apostles to redouble their zeal, and urge the laity, in the light of the teaching of the Church, to build economic and social structures by means of which society may obtain for all its citizens a more just participation in the goods of the country.

# FACTORY INSPECTION IN THE UNITED KINGDOM

*The Annual Report for 1948 of the Chief Inspector of Factories in the United Kingdom describes the progress that is being made in improving the safety and health of workers and their conditions of employment. Fewer accidents occurred in workplaces in 1948 but there was a slight increase in fatalities. New building regulations apply a safety code to all types of building and repairing operations. Progress is reported in improvements to premises and provision of welfare facilities. The normal work week was 44 to 45 hours spread over 5 days.*

Two important events for the Factory Department in the year 1948 emphasized by the Chief Inspector in his Annual Report were the passing of the Factories Act, 1948 and the coming into force of the Building (Safety, Health and Welfare) Regulations.\*

One of the important results of the changes in the Factories Act is to extend the requirements as to medical examinations of young persons with regard to their fitness for employment in factories (L.G., 1949, p. 15). Such examinations are now required for young persons up to the age of 18 instead of 16 as formerly, and not only for employment in factories but employment in docks and construction work.

The new Building Regulations have much wider application than the previous codes of 1926 and 1931, and consequently when these Regulations came into force October 1 many thousand builders became subject to statutory provisions relating to safety, health and welfare in their daily jobs for the first time. Before the effective date, the Factory Department staff made every effort to bring a knowledge of these new Regulations to those concerned. Besides distributing a guide to the code and visiting work places, Inspectors gave about fifty lectures at special meetings called by employers' and workers' organizations.

The time has been too short to know accurately the measure of compliance, but the signs on the whole are encouraging, the Report states. Some firms have shown interest, willingness and keenness to make themselves fully familiar with legal requirements. There have also been those contractors, their agents, foremen and men, who have never heard of the Regulations, new or old, and "who have clearly thought the new requirements unnecessary and some reflection on their own natural ability,

experience and skill." In between is every degree of interest and knowledge, but it is apparent that in general many of the new safety provisions were considered to be overdue.

The advisory side of the Inspectors' work, as distinct from the inspection duties and investigations required in administering factory legislation, has continued to develop. It is becoming habitual for industrial management to invite suggestions from the Department on designs for factories or plants before they begin construction. This is one important aspect of consultation between industry and the Department, and while it takes up a good deal of the Inspectors' time, it yields dividends of safety and health.

The microscopic examination of dusts is a service increasingly used. The Report describes a rather unusual investigation of this type. Owing to a badly designed air filtration and air recirculation system, fine dust was finding its way into an atomic energy factory from outside sources and being spread throughout the building. Specimens being irradiated with neutrons in the plant were contaminated with extraneous dust which itself was rendered radio-active, and further, the functioning of many sensitive control instruments was being interfered with by dust deposition on vital parts from the air.

The counts and photomicrographs made on the samples obtained, together with X-ray diffraction data obtained for the Department by the Government Laboratory from samples of dust, provided useful clues as to the sources of the dust contaminations and gave guidance as to appropriate methods for redesigning the air filtration system to obviate the trouble.

With rapid development in the field of radiology, radiological hazards in industry are becoming increasingly important. The power and scope of industrial X-ray

\* L.G., April, 1950, p. 433.

apparatus are gradually increasing and radio-active materials are finding new uses. In the printing and textile trades, radio-active materials are beginning to be used as ionizers to disperse static electricity. Flat bars faced with thin gold or platinum foils containing a radium salt in solid solution, across the parts of the machine worst affected, serve to ionize the air in

the immediate vicinity of the strip and so dissipate the static charges on the material running through the machine. So far the radio-active strengths are small and the strips can be placed so as to radiate into the machines and away from the operatives, but if large numbers are to be installed in workrooms and if stronger sources begin to be used, the hazards would increase.

**There has been an annual report by the inspectors responsible for the enforcement of factory legislation in the United Kingdom since 1834. . . .**

The first factory legislation which was enacted in 1802 did not provide for paid inspectors. The first factory inspectors were appointed following the passage of the Factory Act of 1833. There were four inspectors and each was responsible for his own area and reported separately to the Home Office. At first they had a staff of eight inspectors (then described as superintendents) to assist them in inspecting between three and four thousand textile factories. Their report for 1835 showed 3,154 textile factories employing 10,119 children under 11, and 150,025 children between 11 and 18.

By 1837 the staff consisted of fifteen superintendents and the four inspectors. "Continue the practice of visiting the interior of factories, unless admittance be refused," stated the instructions of one inspector to his superintendents in 1837.

In making a plea for higher salaries for superintendents, the four inspectors had the previous year written to Lord John Russell of the Home Office as follows: "The duty is an arduous one; they are exposed to considerable bodily fatigue in going through the retired parts of the country over bad roads in all weathers; they must be away from home nearly the whole year, and they are exposed to considerable obloquy (Mr. Trimmer was last month mobbed by the Factory people in a country situation near Oldham); so that the employment is attended with many disadvantages."

The first safety provisions were included in the Factory Act of 1844. They related to cleaning of transmission machinery while it was in motion, and to the fencing of dangerous parts. The 1937 Act is in itself an extensive safety code, and more specific Regulations may be and have been issued under it.

The reporting and investigating of accidents, too, dates back to 1844. Employers are now required to report an accident which is either fatal or disables the workman for more than three days from earning full wages at his usual work, as well as specified "dangerous occurrences," whether or not they result in personal injury.

The first Chief Inspector, Alexander Redgrave, was appointed in 1878. Mr. G. P. Barnett, who submitted the 1948 Report, has been Chief Inspector since 1947. There were 328 inspectors on his staff at the end of 1948. The Act now applies not only to factories employing some six and a half million people, but to docks and warehouses and building operations and works of engineering construction. In 1940 the Factories Department was transferred from the Home Office to the Ministry of Labour and National Service.

Other interesting developments are the large scale projection of television images in public cinemas, and automatic luminizing machines to replace hand painting methods in some industrial plants. Television calls for manufacture and use of cathode-ray tubes of a power that emit X-rays in quantities that would be dangerous if uncontrolled.

In the handling of radio-active materials, there are often present a combination of dangers of radiation and of dangerous dust or gas. In such cases the gas or dust risk is met by the usual methods of working in totally enclosed plant or in plant enclosed as far as possible and equipped with exhaust ventilation, and the dangers of radiation are met by putting suitable screens round the plant. Great ingenuity is being shown in the design of such plant, in the erection of suitable screens of metal bricks that key into each other, and in methods of remote control, watched if necessary through periscopes. The Atomic Research Station at Harwell has described some of these methods in illustrated reports in the technical press.

The first Mechanical Handling Exhibition on a national scale in the United Kingdom was held in July, 1948. The Department took advantage of the opportunity to emphasize the loss occasioned by accidents due to handling goods and materials and to point out that these accidents, which exceed one-quarter of all reported accidents, could be reduced by mechanical handling appliances. Mechanical handling devices have their own hazards, but specific methods of controlling these hazards may be developed more easily than is the case with manual handling. In the rubber industry mechanization now achieves continuous flow production where in the past there has been a considerable handling of material between machines. Progress in mechanization is also noted in the development of automatic controls for effecting a series of operations on individual machines. In the vulcanizing of tires, for example, the worker now handles the tires or tubes and nothing else. He feeds the work to the machine, and initiates the cycle by pressing a button. The use of these machines has eliminated many accidents occasioned by the handling of heavy moulds. In the building trades there has been some development of mobile types of builders' hoists to ensure easy and speedy supply of building materials to the tradesman at his working position constructing the house.

Old and slum factories continue to be a serious problem, but some improvement has occurred during the year, for the first time since the war. By various means firms have been persuaded or forced to vacate the worst of these premises. Other firms have been prevented or persuaded from

occupying premises that were not suitable and could never have been made suitable with any reasonable expenditure of money and materials. The Factories Act, 1948, gave Inspectors additional powers to seek closing down orders from Courts of Summary Jurisdiction where premises do not permit of the conduct of work or processes with due regard to the safety, health and welfare of the workers; but this authority has been sparingly used because where there are no vacant premises in better condition, eviction would mean the end of the firm and the dismissal of the workers. In one London borough there are 2,714 factories the majority of which are in premises built for residential purposes. Some of them meet the requirements of the Act but none can be as satisfactory and suitable as if built for factory purposes. In three other London boroughs there are at least 357 underground factories or work-rooms of factories.

All these are not wholly bad, but they can never be as satisfactory from the point of view of safety, health and welfare as similar rooms at or above ground level.

Interest in personnel management continued to develop during the year, and was found by the Department's Personnel Management Advisers to be less superficial than it was a year or so ago. Development during the year took the form of growth of plans started in previous years rather than the initiation of new plans and ideas. In the national field, the Human Relations Panel of the Committee on Industrial Productivity (L.G., 1948, p. 1095) undertook long-term research into several problems of industrial relationships including methods of disseminating knowledge; better selection and training of foremen; effect of production on the size of the unit of work; method of joint consultation in industry generally. This work is proceeding.

New personnel departments were established during the year in a variety of industries, and expansion has taken place in the scope of some existing departments. Specialist officers have been appointed and new responsibilities have been assumed in addition to the employment and welfare functions. Considerable interest was shown in setting up joint consultative committees in individual establishments. The scope of discussion at these committees has been gradually widening and there is a growing tendency to include all matters of interest to management and workers except questions covered by joint negotiating machinery. The emphasis in training, an important aspect of personnel management, tended to be on supervisory or managerial training, although apprenticeship schemes started in

1947 progressed. Schemes covering industries or groups of firms, such as the Foundry Industry Schools and the training schemes in the Boot and Shoe, Printing and Glass Industries, have continued to grow. In summing up, the Chief Factory Inspector says:—

The progress which took place during the year was encouraging but much more is possible. A large proportion of the firms employing over 250 workers still have no Personnel Officer and while this does not necessarily imply that the attention they pay to personnel management is seriously inadequate, it is usually found that there is room for improvement . . . There is still a need for a much greater appreciation of the fact that Personnel Management is not something which can be done by instinct, both skill and knowledge are required.

During the year Inspectors carried out a special survey of the cotton industry. This survey was undertaken because of the necessity for improved conditions to attract workers in view of the importance of the cotton industry in the export drive. The reports showed that steady progress was being made with sanitary accommodation, lockers, first aid, feeding facilities, decoration, lighting and loom spacing. An important contribution to solving the problem of dust in card room air is a new technique for the oiling of cotton. As a result of application of an aqueous emulsion of a technical white oil to the raw cotton, dust in card room air has been greatly reduced. Dust counts which have been taken have shown that the reduction in the visible fraction in card room air is about 45 per cent, and in the invisible fraction, that is, the fraction dangerous to health, about 55 per cent.

Iron foundries were also specially checked to see what progress was being made in putting into effect the recommendations of the Joint Advisory Committee. The survey disclosed that most firms welcomed the Committee's Report (L.G., 1947, p. 1780) and intend to make a definite effort to improve working conditions, and, in particular, to raise the standard of welfare amenities. The Chief Inspector gives a brief summary of the conditions found and the improvements effected or contemplated. The Committee recommended vacuum cleaning as a suitable method for cleaning down of walls, etc., but only in a few foundries is this method used. Portable vacuum cleaners are not entirely satisfactory because they discharge "filtered air" back into the room and this air may contain small particles of dust containing silica. What is needed is a fixed vacuum plant with pipe-lines and a discharge point so arranged that the "filtered air" cannot

re-enter any occupied room. Sanded floors common in foundries cannot be cleaned like other floors and in most cases could be replaced by concrete floors. Very few firms have yet provided washing facilities equivalent to one wash-basin for every ten persons employed at any one time, as recommended in the Report, but most firms have proposals in hand for extension of sanitary facilities.

### Accidents

During 1948, 201,086 notifiable accidents were reported at premises subject to the Factories Act. Of these 861 were fatal. The total number of accidents reported is 2,150 less than in 1947, but the number of fatal accidents was greater by 22.

The Chief Inspector points out again, as he has in previous Reports, that a comparison of bulk accident figures of one year with previous years does not always give a sound basis for judging progress in safety conditions. The number of notifiable accidents per 1,000 employees gives a better basis for comparison, and this number fell from 40 in 1944 to 28 in 1948. An increasing number of firms are calculating frequency rates based on the international definition in which the rate equals the number of accidents causing loss of time beyond the day or shift per 100,000 man-hours worked. These firms make their frequency figures available to the Factories Department, but they still do not constitute a sufficiently representative group to give a fair sample of all premises subject to the Act. This frequency rate in the firms for which it is available fell from 2.52 in 1944 to 1.88 in 1948.

The 201,086 accidents reported in 1948 occurred as follows, fatal accidents being given in parentheses:—

Factories—182,838 (552, a proportion of 1 to 331).

Docks and warehouses—7,067 (52, a proportion of 1 to 136).

Building operations and works of engineering construction—11,181 (257, a proportion of 1 to 43).

### Machinery Accidents

Power driven machinery in factories accounted for 27,812 accidents, a decrease as compared with 1946 and 1947, but certain types of machinery accidents are increasing. Prime mover accidents increased in 1948 and five of them were fatal. The Chief Inspector points out that the law concerning the secure fencing of moving parts of prime movers is quite definite and absolute and has been in existence since the very early days of factory legislation.

He emphasizes, too, that it is important to ensure that prime movers are of good construction and design and properly maintained, and describes how two men were killed because a mechanical defect caused the cover of a steam chest to blow off. Accidents due to shafting and other transmission machinery were less numerous than in 1946 and 1947 but still too frequent. Examples are given of shafting accidents during the year which follow "what can only be described with the greatest regret as the usual pattern." Transmission machinery which under normal circumstances would be considered out of reach is one source of these accidents, and another is shafting within reach and not securely fenced. Everyone needs to realize that all transmission machinery is dangerous no matter its size or at what speed it moves.

Woodworking machinery is still a frequent cause of accidents and these are often due to lack of care on the part of the worker. "One cannot imagine that the danger of a circular saw would ever be seriously disputed," the Report says, but there are operators who seem to consider the use of safety devices a sign of weakness. While the whole of a circular saw cannot usually be securely fenced, the safety devices prescribed under the Woodworking Machinery Regulations afford considerable protection. Several fatal accidents caused by timber flying back from circular saws might have been prevented by the use of riving knives.

Young men, as well as women and girls, have been the victims of clothes and hair entanglement accidents. The Chief Inspector again points out that the cure for these accidents does not rest with hair styles, hair nets or caps. The obligation in law is to fence the machinery securely.

There was a reduction in the power press accidents in 1948, but there is room for improvement. An examination of a number of interlock guards, chosen at random, showed that 14 out of 29 were defective in one way or another. Even when there is periodic inspection by an outside agency, there should be daily and weekly inspection by the user's own staff.

In the printing and allied trades there were 732 accidents during the year, a reduction from 1947 but still more than 50 per cent in excess of the number in 1945. The Engineering Branch have had a number of meetings with principal representatives of manufacturers of printing machinery with a view to more effective guarding of various dangerous parts.

Laundry machinery accounted for 156 accidents and half the total occurred on garment presses. Practically all the accidents on the hand and foot operated presses

could have been eliminated by greater care on the part of the operator, encouraged by better supervision. In many cases reports of accidents showed that the operator's attention was distracted by another worker who had no particular business in the vicinity.

Hoist manufacturers have been able to give much more reasonable delivery of new hoists and safety equipment of old hoists, thus reducing the number still in use which do not fully comply with the Factories Act requirements. Bad slinging and inefficient signalling caused the greatest number of accidents in connection with the use of cranes.

Accidents due to transport in factories have increased and the fatality rate is very high. A very high proportion of moving-vehicle accidents is caused when the vehicles are reversing. The Chief Inspector comments as follows:—

All too often the driver of a heavy vehicle who may be partially unsighted has no one to guide him when reversing, whilst drivers of factory trucks sometimes reverse with apparent abandon without as much as a glance behind. In the case of the lorry the driver may not always be able to find someone who will guide him but there appears to be little or no excuse for the driver of the factory truck who has unobstructed vision all round his vehicle. There is, however, considerable evidence, that many occupiers do not arrange for the proper training of truck drivers, do not insist on any proficiency test and in some instances do not even control effectively the driving of trucks by unauthorized persons. It is gratifying, therefore, to know that the more enlightened occupiers are holding Training Schools and Qualifying Tests and some firms have made arrangements substantially to ensure that none but an authorized driver shall drive within factory premises.

### *Non-machinery Accidents*

The main types of non-machinery accidents—handling goods, falls of articles and falls of persons—have not varied much from the previous year. To prevent injury from falling objects, safety boots are being used more and more in the heavy industries, but the abolition of clothes rationing has removed one incentive to the purchase of these boots and in general less safe types of footwear are being worn. Accidents due to falls of persons are sometimes but not often attributable to the condition of plant, floors, stairs or appliances, and the human factor must be held responsible in many cases.

Be a fall caused by impetuosity, keenness, clumsiness, mental lapse, vanity or merely a desire to catch a bus before the rest of the workers from the factory, the "human factor" element can be controlled only by training and supervision.

### **Accidents to Young Persons**

There were 14,443 accidents to young persons reported in 1948, a reduction from 1947 both in the number reported and the percentage of all factory accidents. While there was an increase of approximately 300,000 in the number of men and women employed in factories in 1948, there were approximately 200,000 less young persons, largely due to the raising of the school leaving age to 15. The Chief Inspector is of the opinion that over the last five years better supervision, training and instruction have been indicated in the reduced accident rate. The rates for young persons have followed very closely the rates for adults, the 1948 figures per thousand employed for men and for boys being 36 and 34, and those for women and for girls 12 and 14 respectively.

### **Accident Prevention Schemes**

Although some new Safety Committees were set up during the year, and Safety Officers appointed, other Committees became less active and the general gain has not been up to expectations. One difficulty has been that firms when appointing Safety Officers, fail to provide a sufficiently high salary or give the necessary prestige and authority to the position. Training courses for Safety Officers organized by the Royal Society for the Prevention of Accidents have served a useful purpose.

One factor which hinders progress in accident prevention is the common idea that attention to safety detracts from the production drive. Factory managers are being urged to produce more and to produce it quickly and they tend to assume that safety measures will not only slow down production but entail the employment of what seems to them to be unproductive labour. Accident statistics prove otherwise. The equivalent of 25,000 workers were lost to industry during the year through accidents, and there is also the fact that it has often been found that greater attention to safe methods of working results in more efficient production.

### **Accidents in Building Operations**

The number of accidents on building operations in 1948 was 9,649 (218 fatal) compared with 8,469 (218 fatal) in 1947. Twenty-eight per cent of all accidents and 74 per cent of fatal accidents were due to falls of persons.

This class of accident has a fatality rate of 1 in 17 which is indeed alarming when one realizes that the class includes falls from low levels and even falls on the flat. There are still diehards in the industry who look upon the avoidance of falls as just a matter of skill and consider that

a nine-inch plank with no handhold or protective rail is quite adequate as a working platform at any height. Even some of the more enlightened builders, although prepared to provide a wider platform, consider guard rails and toe boards as unnecessary pampering to a hardy breed of men. Apart from the legal requirements, these employers, their agents and foremen, should consider the circumstances surrounding accidents in which men fall from working platforms. Men do not fall deliberately. They are not intentionally pushed by workmates. Most of them do not suffer from vertigo. And yet 43 men were killed and 507 were injured when they fell from working platforms in 1948. The reasons for such falls have been many: The tipping of planks, slipping, tripping due to obstructions on platforms or bad footwear, accidental pushes by workmates, suspended loads or pieces of scaffolding carried by others, temporary feeling of faintness or, even among the most skilled, inexplicable errors of judgment. In other cases, particularly with suspended scaffolds, there have been serious failures of the equipment . . . The Building (Safety, Health and Welfare) Regulations, 1948 specify in considerable detail the safety precautions as regards construction, erection, provision of safeguards for and inspection of scaffolds, and it is hoped that these regulations will have an effect of substantially reducing the numbers of accidents.

Special attention is drawn to accidents due to fragile roofing materials. Thirty-one men lost their lives falling through roofing materials and 130 other men were injured.

For the first time regulations now cover the working on, or passing over or near, fragile roofing and it is fervently hoped that this new legislation will play its part in eradicating this blot on the record of building accidents. But regulations in themselves will be of no avail unless both employers and employees are convinced that, unless and until no man is ever allowed, intentionally or accidentally, to step directly on fragile roofing material, accidents will continue to happen.

### **Fires and Explosions**

A section of the Report on fires and explosions analyses the notifications received by the Department of "dangerous occurrences". It is a requirement of the Factories Act that notice of certain such occurrences, whether personal injury or disablement is caused or not, shall be given to an Inspector. These notifiable fires and explosions have been divided into three main groups: those involving inflammable gases; those involving inflammable liquids; and those arising from inflammable and explosive solids and dusts.

Fires and explosions involving inflammable gases numbered 412, and two gases responsible for the majority of these were acetylene, 119, and carbon monoxide, 238. The case of a man who repaired a small steam boiler and tested for leaks with an acetylene supply line illustrates that testing

for leaks with acetylene or a compressed gas of any kind is dangerous. He found a leak and after he had left the boiler to "air out" for about an hour he applied a blowpipe to the boiler which immediately exploded. A suitable hydraulic test should precede any test involving air or other gas under pressure. The explosions which occurred in the manufacture of commercial gases containing carbon monoxide arose either from the admission of air to the gas contained in the plant or from the escape of gas into places of work, so that an explosive mixture was formed. A proper procedure in shutting down, and all practicable steps to prevent the escape of gas, together with adequate ventilation, would help to avoid such explosions.

Fires and explosions from inflammable liquids totalled 478. Twenty-five explosions, involving the death of four people and injury to 35, occurred when heat was applied to vessels for purposes of repair or dismantling before the vessels had been satisfactorily cleared of the inflammable substance they contained. The Report warns that a vessel which has contained an inflammable liquid cannot be regarded as safe unless it has been completely drained and steamed out until the distillate is free from inflammable liquid.

A disastrous explosion in which 12 persons were killed and 29 injured occurred as a result of an escape of petrol from a process vessel. A leak developed and the escaping petrol spread throughout the building. A method of restricting spread of highly inflammable liquids escaping from containers is advocated by the Factories Department. Floors of rooms housing such containers should be constructed so as to be impermeable and sills provided at openings such as doorways of sufficient height to prevent the outflow of the liquid from the room.

Inflammable and explosive solids and dusts accounted for 484 "dangerous occurrences." There were 23 dust explosions notified during the year; one of them, caused by the ignition of malt dust during grinding operations in a distillery, was catastrophic. The Report describes this in detail.

The ignition may have occurred in the mill or at the top of the bucket elevator carrying the ground material, where a bucket was found to have come off the chain and jammed in the spout. An explosion inside the plant bulged the bolted and riveted metal sheet of the elevator, forced open the inspection doors from which blast and flame were emitted, and thus broke out from the plant into the mill building. Thereafter the explosion took a violent course. It blew up and ignited a cloud of dust outside the plant

and a secondary explosion filled the building. Part of the roof was blown off, the upper ten feet of the outside brick wall was blown down, windows were shattered and a door was blown off. One very fortunate feature of this explosion (a most unusual one for an explosion of this type) was that no one was in the mill building at the time, and in consequence no one was killed or even injured by the flame and blast. Generally an explosion that breaks out of the plant and spreads through the building causes many injuries.

The Departments' experimental work at Buxton on explosion reliefs described in previous Reports is being continued.

## Industrial Diseases

The section of the Report dealing with industrial diseases contains a table giving comparative figures for the years 1945 to 1948 and some earlier years. Forty-nine cases of lead poisoning occurred in 1948, with two deaths. In 1900 there were 1,058 cases and 38 deaths. Cases of compressed air illness have occurred infrequently in recent years, but there were 28 cases in 1948. Twenty-two cases occurred in driving a tunnel in London. A new code to safeguard the health of persons who work in compressed air is under discussion.

The Pottery (Health) Special Regulations, 1947 (L.G., 1947, p. 1752) sought to control the two main health risks in the pottery industry, the risk of lead poisoning arising from the use of dangerous lead compounds for glazing the ware, and the risk of silicosis arising from the use of flint mixed in the earthenware body or for polishing or other purposes. This part of the Regulations became operative in 1948, prohibiting the use of lead glazes except those of low solubility, and the use of powdered flint (or quartz) for bedding, polishing, as a sagger wash or as a separating or dusting powder, and, finally, prohibiting the introduction (except under very special circumstances) of dry powdered flint (or quartz) into any pottery factory. The transition to use of low solubility glazes had been a gradual process, and there was little difficulty in achieving compliance. The Regulations allowed the glazed tile works until October, 1949 to make the transition, and it was expected that they would be able to effect compliance in good time. Except where flint is used as an actual constituent of the ware, its use has now completely ceased throughout the country, having been replaced by alumina. Where flint is used in the mixing of ware it is now generally used in "slop" or paste form, and only in a few special cases is the use of dry flint permitted, with proper safeguards.

## Improvement of Premises

Repairs and redecoration have gone on apace during the year, but high costs have caused many small firms to lag behind the general standard. Post-war developments in industrial lighting have played a part in stimulating the desire to redecorate, as good lighting "discloses dirt to a disturbing degree." As regards development in lighting, the Report states that "there is some ebb and flow in the popularity of the fluorescent method but no sign of real change." Resurfacing of floors is again being undertaken, but it is still not uncommon to find floors of earth, of rubber, and of bricks, with deep crevices which cannot effectively be cleaned.

Progress in the use of colour in factories continued throughout the year. The most popular colour scheme seems to be cream and green, and one Inspector remarked that it was to be hoped this combination would not become too much of a standard substitute for whitewashing. Cool colour schemes used in workrooms where hot processes are carried on have proved popular. The high standards of cleanliness necessary to maintain maximum effectiveness of colour schemes are not easy to attain. The best examples of the use and maintenance of colour are to be found in the engine rooms of the older Lancashire and Yorkshire cotton and woollen mills "where the care and attention of two or three generations of engineers have resulted in shining woodwork, polished metalwork and gleaming and spotless paintwork."

The Chief Inspector also commends the way in which some firms surround their works with gardens, and describes one example where a small area of ground within the precincts of a factory in an urban area has been put to good use.

The factory consists of a medium size concrete building, standing in a large yard against a background of a high railway embankment and a long arched railway bridge, and all round it lies badly blitzed property and the rather mean streets of the poorer parts of the metropolis. On one side of the yard giving access to the works is laid out a very beautiful small garden, full of seasonal flowers, with green houses and a good sized very green lawn with seats.

Progress in the provision of washing facilities is reported, but much remains to be done. Warm water is frequently not provided. Improvement of facilities in industries hitherto backward has been noted, as for instance at ship-building yards, docks and at some railway establishments. Some progress was made towards providing suitable cloakroom accommodation, particularly in new factories or

in trades, such as foundries, which have been under special survey, but lack of space still prevents many firms from providing good accommodation.

The 1948 amendment to the Factories Act extends the seating requirement to cover all employed persons, but this section does not come into force until October, 1950. The Act requires that, "where a substantial proportion of any work can be done sitting, there shall be provided and maintained, for any employed person doing that work, a seat of a design, construction and dimensions suitable for him and the work, together with a foot-rest on which he can readily and comfortably support his feet if he cannot do so without a foot-rest." The mere purchase of some sort of seats will not represent compliance, and Inspectors are of the opinion that much attention will have to be given to the problems raised, and are encouraging firms to start surveys and consultations.

Many new canteens were opened during the year, particularly in the textile, boot and shoe, hosiery and laundry trades, and very few were closed. "It appears to be more and more accepted by employers that it is necessary to have a canteen in order to attract workers," the Chief Inspector concludes. At the end of the year 4,835 factories employing over 250 persons had hot meal canteens. Satisfactory kitchen hygiene has not yet been generally achieved, but progress has been noted in many canteens in improvements to premises, equipment and staff training.

## Hours of Employment

The average length of the normal working week remained at 44 to 45 hours spread over 5 days for the great majority of industries, but there were some new tendencies in the pattern of daily hours arrangements. Women, particularly in the North, often demand that overtime be concentrated into two relatively long days rather than spread more evenly over the week. Employers are accordingly finding some difficulty in meeting the legal requirements of the Factories Act in regard to the "spread out" of overtime. The five-day week is now almost universal, and if extra hours have to be worked at pressure periods it is almost impossible to persuade workers to do them on Saturday morning. Women would prefer to work on Sunday. Employers and workers alike are expressing dissatisfaction with the restrictions which the Acts impose on the hours of adult women, in particular the bar on night work and Sunday work. The number of cases of illegal employment was somewhat higher than in 1947, and mostly the workers con-

cerned were women and were usually acquiescent. Export industries tended to use up their legal allowance of overtime, and overtime, within the meaning of that term in the Factories Act, increased slightly over 1947.

### Enforcement

Charges laid during the year under the Act totalled 891 against 565 firms or persons. These resulted in 737 convictions, 104 charges withdrawn and 50 dismissed. Failure to comply with safety regulations accounted for 490 charges. Total fines imposed amounted to £7,886.

The total number of Inspectors on the staff at the end of the year was 328. This included 48 new Inspectors who were in training for the most part of their time during the year. As the authorized staff at the end of the year was 378, 50 vacancies remained unfilled. A further competition was held at the end of the year but of 369 candidates only 18 were found suitable and offered appointments. A change in organization took place November 1 when the Personnel Management Branch was transferred from the Factories Department to the Industrial Relations Department of the Ministry.

---

## INTERNATIONAL LABOUR ORGANIZATION

### ILO Director-General Offers Proposals on Labour Productivity

*Stressing the contribution that higher living standards can make towards world peace, the Director-General of the ILO, David A. Morse, has invited delegates to the 1950 International Labour Conference to discuss the question of labour productivity.*

A major section of the Annual Report of the Director-General of the ILO has this year been devoted to the subject of labour productivity.

Mr. Morse has proposed a world-wide sharing of techniques to increase productivity, calling attention to the contribution such a program might make toward reducing the risk of war. He has invited the worker, employer and government delegates to the forthcoming International Labour Conference to give this subject special consideration during the course of the debate which will take place on his Report. (The Conference will open its 33rd Session at Geneva on June 7. Canada is among the 60 ILO member countries which are expected to participate.)

Mr. Morse declared that higher living standards resulting from greater productivity were needed in the highly-industrialized countries as well as in the world's less developed regions.

"It is broadly true," he stated, "that only if the average man produces more wealth can he enjoy a substantially higher standard of living."

However, "to say that the average man must produce more wealth is not the same thing as to say that he must work harder," according to Mr. Morse.

"Harder and more regular work may be—and often is—one of the things that is required; but in very many jobs a worker's output depends more upon tools, methods of operation, managerial performance, plant morale and operating conditions than upon his own personal application.

"Nor does higher productivity mean increased production at any cost. Higher productivity means, in the most general terms, an increase in the ratio of the output of wealth (goods and services) to the corresponding input of labour—an increase in the production of wealth per unit of labour."

### Fair Distribution of Fruits of Labour

"I know that measures aimed merely at increasing production may mean little to those who labour throughout the world, and may even in some countries arouse their active and legitimate suspicions unless these measures are closely linked to efforts to ensure the fair distribution of their fruits," Mr. Morse continued.

"They must also be continually balanced and harmonized with the ultimate goal of full employment in an expanding economy.

"However, those considerations, fundamental as they may be, must not blind us to the basic need for increased productivity. Certainly increased production is the need of the teeming half-starved millions of people who constitute the vast majority of the people of the world."

Warning that poverty, disease and other miserable conditions no longer can be hidden from view, Mr. Morse declared:—

"The rapid improvement of these conditions is essential to the elimination of international strains, to the easing of international tension, and to the promotion of world peace.

"I cannot see how the leaders of nations and public opinion can be at peace with their conscience or their deepest convictions if they do not wholeheartedly accept and vigorously pursue this policy."

Mr. Morse urged that the ILO continue to keep "its forums free of political opportunism and digression, and its eyes on its main constitutional and humanitarian mission." He said:—

"Nineteen-fifty has brought no real improvement in the world political scene. . . . The world constituency of little people are in a state of bewilderment and apprehension and look with fervent hope to statesmen for formulae of peace."

Mr. Morse, who has visited 20 countries in recent months, said:—

"I find that people everywhere feel that they are on a careening toboggan going down hill at breakneck speed.

"It is for the ILO, which has always inspired the best in member States, to make an extraordinary effort at this stage of world history so that we may continue to maintain an atmosphere conducive to building the broad new highways which will enable the world to avoid what may otherwise be a catastrophic crash."

### **Six Points Related to Increased Productivity**

He suggested in his report that the delegates discuss, among others, the following points related to higher earnings and increased productivity of labour:

1. *Migration.* "It is widely recognized that migration and technical training go hand in hand."

2. *Foreign investment.* "International movements of capital may serve, in some measure, as alternatives to international movements of population."

3. *Vocational guidance.* "Recorded experiences have shown increases from 10 to over 40 per cent in productivity as a result of selection of workers."

4. *Two shifts a day.* "If night work is ruled out, it might still often help efficiency if two shifts of eight or perhaps seven hours were introduced."

5. *Trade barriers.* "Freer trade between the different European countries should give European producers access to wider markets, would encourage greater specialization, and would be an important means of promoting greater productivity."

6. *Health and general education.* "The capacity of workers is often impaired by low standards of health and nutrition, of general education and of technical training."

Mr. Morse expressed hope that the work of the ILO Conference of Labour Statisticians would "lead to international agreement on the methods by which labour productivity can best be measured."

### **Need for Studies**

He suggested various studies which the ILO technical services were best equipped to undertake on an international basis, including the following:—

1. A factual and analytical study of factors affecting the productivity of labour in under-developed countries.

2. A study of possible ways and means of extending systems of payment by results.

3. An examination of the scientific basis of methods of work simplification based on time and motion studies, and their effects on output.

4. A study of the conditions for and advantages of greater standardization of production.

5. A study of ways of organizing double shifts and their advantages and disadvantages.

6. A study of ways and means of promoting the rapid spread of improvements in techniques of production and management.

Mr. Morse said:—

"If economic welfare requires that productivity-raising changes in production and managerial techniques should not be resisted, it requires also that they should be introduced in such a way as to involve a minimum of hardship for individuals. This, too, might form the subject of a comprehensive study."

### **Problem of Raising Standards In Less Developed Countries**

Mr. Morse's conclusions included the following:—

"The possibilities of large-scale emigration from the Asiatic countries are limited by the limited demand in other countries for unskilled labour, and by the difficulties of assimilating large numbers of immigrants with foreign culture and low standards of living. It may be, nevertheless, that this is a problem to which the world will have to give more thought in years to come.

"More hopeful are the possibilities of relieving the pressure of population in such countries as Italy and the Netherlands by

promoting emigration to countries which are short of skilled labour—notably perhaps to the countries of Latin America.”

He said that a vigorous public health policy in the less developed regions resulting in a falling death rate “will probably not favour productivity where the population already presses heavily on the means of subsistence” but “this is no reason for failing to save human lives which could be saved.”

“It means, however,” he added “that measures to improve public health in such countries must be accompanied by measures to raise productivity even more rapidly than population increases.” He continued:—

“Productivity may, of course, be impaired not only by shortages of fixed capital equipment but also by shortages of working capital—materials and fuel. Abnormal shortages of this character have been a serious handicap to industry in many countries since the war.

“Changes in the habits and attitudes of private savers and improvements in the machinery for directing savings into productive investment are very desirable in poor countries.

“Government financing of development schemes may, within limits, impose collective saving on the community. Government financing of itself, however, affords no way out of the basic dilemma that a larger proportion of resources directed to capital formation means a smaller proportion of resources to provide for current needs.

“It seems probable that many of the world’s poorest territories will be condemned to a vicious cycle of lasting poverty unless large amounts of capital can be made available to them from abroad.

“The dearth of soundly conceived development schemes ready for financing is often a more serious limitation than lack of capital.

## Productivity and Full Employment Policy

“In some respects full employment, and above all an expectation of a continuance of full employment, tends to increase productivity”, Mr. Morse continued.

“First, it eliminates the waste of unwanted idleness.

“Secondly, in so far as continued full employment eliminates cyclical fluctuations in demand, it makes possible the maintenance of a relatively steady rate of output.

“Thirdly, fear of unemployment in the past has been the fertile source and justification of resistance to technical change and of restrictions on output, open or covert.

“A full employment policy may need to be accompanied by measures to ensure that practices which impede the effective use of incentives, and inhibit ready response to incentives, are discontinued.

“Even more important, perhaps, the effects of full employment on productivity will depend largely upon how far workers and their leaders are able to substitute self-discipline and a sense of responsibility for the discipline of fear.

“Efficient management has much to contribute to the growth of productivity.”

Mr. Morse warned:—

“A united determination to increase productivity can be created and maintained only through the fullest understanding by employers and workers of each others’ points of view; it can be carried into effect only by the closest co-operation between them.

“To the extent that greater productivity leads to lower prices, the advantages it brings are shared among all members of the community.”

## ILO Governing Body Approves Nominations to Commission on Trade Union Rights

*Seven of the nine members who will form the ILO’s new Fact-Finding and Conciliation Commission on Freedom of Association were appointed by the Governing Body in March.*

Previous issues of the *LABOUR GAZETTE* have described the proposals for establishing an international commission to consider alleged infringements of trade union rights.

Plans for such a commission were approved by the Governing Body of the

ILO during January (L.G., March, 1950, p. 317). The commission is to be “essentially a fact-finding body,” but it is also authorized to discuss complaints with the governments concerned “with a view to securing the adjustment of difficulties by agreement.”

Complaints are to be referred to the Commission through the ILO Governing Body. However it was considered that the Commission should also have power to consider complaints involving countries which are not members of the ILO. This problem was studied by the Economic and Social Council of the United Nations during February, and a procedure was agreed to. It was further decided that the Commission, although established by the ILO, could also act on behalf of the United Nations.

The Canadian spokesman during the discussion of trade union rights at the Economic and Social Council was Dr. George Davidson, Deputy Minister of Welfare. Dr. Davidson praised the progress made by the ILO towards establishing the Commission, and spoke of the genuine concern of governments that effective machinery be devised for hearing under competent and responsible international auspices alleged grievances in respect of violation of trade union rights. Dr. Davidson also took an active part in the discussions as to the procedures that were to apply to the Commission's work.

### **Members of Commission Named**

During March, the ILO Governing Body held its 111th Session, and in the course of this meeting seven of the nine members who will form the Fact-Finding and Conciliation Commission on Freedom of Association were named.

The members are:—

Carl V. Bramsnaes, Governor of the National Bank of Denmark;

Mahmoud Hassan Pasha, former Egyptian Ambassador to the United States;

The Hon. Mr. Justice J. N. Majumdar, member of the All-India Industrial Tribunal;

François de Menthon, member of the French National Assembly;

Hon. Arsenio Roldan, presiding judge in the Philippines Court of Industrial Relations;

Oscar Schnake, representative of Chile in the United Nations Economic and Social Council;

The Hon. Mr. Justice Arthur Tyndall, judge of the New Zealand Court of Arbitration;

Director-General David A. Morse of the ILO informed the Governing Body that he would propose two additional names as soon as possible to complete the panel.

### **Procedure of Commission**

The procedure that will guide the Commission's work is as follows:—

Under the Commission's terms of reference, it is open to the Governing Body to refer to the Commission for impartial examination any allegations of infringements of trade union rights which the Governing Body or the ILO's general Conference consider appropriate for investigation.

The procedure also makes provision for the United Nations to refer cases to the Commission through the Governing Body.

It is also open to any Government against which an allegation of the infringement of trade union rights is made to refer such an allegation to the Commission.

### **Canadian Representation at Governing Body**

Canada was represented at the Governing Body meeting by Dr. Paul E. Renaud, Charge d'Affaires, Canadian Legation, Berne. Dr. Renaud acted as substitute for Dr. A. MacNamara, Deputy Minister of Labour; while Mr. J. F. MacKinnon, head of the Department of Labour office in London, England, served as alternate. The session was held at Geneva, Switzerland.

### **Other Decisions of Governing Body**

A further important decision of the Governing Body was to establish consultative relationships with the International Confederation of Free Trade Unions (see below).

The Governing Body decided on the dates of a number of future ILO meetings, and authorized the International Labour Office to undertake various studies.

At its final sitting the Governing Body voted by 18 to 8 with one abstention to adjourn until its autumn meeting consideration of a proposal that the Governing Body, without waiting for further consideration of the question by the United Nations Economic and Social Council, establish an ILO commission to carry out an impartial enquiry into the nature and extent of forced labour. This proposal was advanced by a majority of the Governing Body's committee on relations with other international organizations. In the debate on it, favourable action was strongly urged by George Delaney of the United States, speaking on behalf of the worker members. In voting to defer action on the recommendation at this time, the Governing

Body decided that Trygve Lie, Secretary-General of the United Nations, should be requested to submit a record of the debate to the Economic and Social Council at its next meeting in July.

The Governing Body voted to recommend that the General Conference of the ILO in June approve a budget of \$5,922,515 to finance the Organization's operations in 1951.

## Confederation of Free Trade Unions Wins Consultative Status

The Governing Body of the ILO decided in March to establish consultative relationships with the recently-formed International Confederation of Free Trade Unions.

The decision was approved by a vote of 29 to 1. The representative of the Czechoslovak Government voted against, and two of the 32 members were absent when the vote was taken.

The ICFTU is the fifth international organization to be accorded consultative relationships with the ILO. The others are the Inter-American Confederation of Workers, the International Co-operative

Alliance, the World Federation of Trade Unions, and the International Confederation of Christian Trade Unions.

The ICFTU has also been accorded consultative status by the Economic and Social Council of the United Nations. It was granted "Category A" status by the Council in March, thus gaining the right to submit items for the Council's agenda.

The Council took this action on the understanding that the American Federation of Labour, which had previously held "Category A" status, would withdraw, since it is a member of the Confederation.

## ILO Plans to Formulate Standards of Social Security

A recent meeting in New Zealand of the Committee of Social Security Experts of the International Labour Organization had as its principal purpose to prepare the way for a revision of the 40 existing Conventions and Recommendations of the ILO which deal with social security.

The meeting brought together 17 social security administrators from 14 countries.

Canada was represented by Mr. C. A. L. Murchison, Commissioner, Unemployment Insurance Commission, Ottawa.

The report drawn up by the Committee looks to the adoption by the ILO's general Conference of a new type of social security Convention which would be within the reach of countries of slight economic and social development, but which would at the same time set objectives appropriate to countries that are more highly developed.

(The proposals contained in the report were subsequently approved by the ILO's Governing Body at its 111th session at Geneva.)

As regards the persons to be protected by social security schemes and the benefits they are to receive, the Committee's proposals provide accordingly for two distinct standards—a minimum standard and an advanced standard. On the subjects of administration and financial resources, only a single standard would be set, leaving room for wide variation in method in different countries.

The minimum standards for persons protected and for benefits would follow in general the standards set in existing ILO Conventions, but would permit some temporary exceptions for countries that are only slightly developed.

The advanced standard would be set at a high level. It would be a composite, based on what has been achieved in one branch or another of social security by a certain number of industrialized countries. No country, however, has yet attained this standard in all branches.

The method proposed for ratification of the Convention is new, and designed to encourage countries in all stages of economic development to progress in social security. A country ratifying the Convention would have to comply with the standards set by it in respect of at least three of the more important branches of social security. There would also be two superior grades of ratification, one covering the minimum standard for all branches, and the other the advanced standard in three branches. Whichever grade of ratification a country elected, it would have to report each year to the ILO on the progress it had made in any branches in respect of which it had not yet ratified.

The Convention is to be considered by the 1951 Session of the International Labour Conference.

## International Labour Conventions and the Western Union Countries

The five countries which are party to the Brussels Treaty of economic, social and cultural collaboration and collective self-defence, viz., Belgium, France, Luxembourg, the Netherlands and the United Kingdom, bound themselves under the Treaty to make every effort in common, both by direct consultation and in specialized agencies, to promote the attainment of a higher standard of living by their peoples and to develop on corresponding lines the social and other related services of their countries.

To further these objectives, the Consultative Council of the Brussels Treaty Organization established a Committee of experts—the Committee on Conditions of Work and Social Policy—and gave them as their first task a study of the implications of the Conventions adopted by the International Labour Conference, as well as of means to hasten the ratification of those Conventions.

The Committee have now concluded an examination of the 90 Conventions adopted by the International Labour Conference, up to and including the 31st Session. The examination, which was conducted by representatives of the five countries familiar with the technical questions involved, was a comprehensive one extending over a series of meetings at which a detailed study was undertaken of the respective attitudes of the countries to all the Conventions and the extent to which they had given or proposed to give effect to them. The International Labour Conventions deal with matters normally enforced by legislation and, in general, fundamental to the social organization of the countries concerned. For example, the minimum age Conventions raise the whole question of the school-leaving age and the Conventions relating to the length of the working week raise the question of the method of regulation of the hours of employment.

The study undertaken by the Committee has brought clearly to light the important fact that in matters of fundamental social policy the Western Union countries have achieved a similarity of approach and a substantial measure of harmony in their attitudes towards and their implementation of the International Labour Conventions. This is not clearly shown by the simple record of ratifications, since there are cases in which ratification is hindered by technical considerations which do not affect the substantial implementation of the Convention in question.

In addition, the examination has had certain important and valuable practical results:—

(a) Each national administration has had to carry out a full and comprehensive review of its attitude towards all the International Labour Conventions adopted from the beginning. Some of these have now ceased to conform with modern conditions, but the examination has in fact resulted in the ratification of certain Conventions and expedited the consideration and ratification of others. This process is not yet complete and a further substantial number of ratifications can be expected over the next few months.

(b) In cases where particular countries have had difficulties over the interpretation or the application of particular Conventions, helpful advice has been forthcoming or offered by other Governments.

(c) The Governments have been able to exchange views, and, in some cases, to formulate a common attitude on the problem of revising Conventions which are now largely out-of-date.

(d) The representatives have been able, over a wide field, to get information on the legislation, facilities, and services existing in each other's countries. This has indicated certain fields in which more detailed studies may prove helpful and on which work has already begun.

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

## INDUSTRIAL RELATIONS AND CONCILIATION

*Conciliation Boards in railway dispute concluded public hearings in March and submitted reports to the Minister of Labour early in April. The Canada Labour Relations Board certified the American Newspaper Guild as bargaining agent for a unit of editorial employees of The Canadian Press.*

### Introduction

The two Boards of Conciliation dealing with the dispute between various Canadian railways and two groups of railway labour organizations, representing the non-operating employees of the railway companies, resumed their sittings in Montreal on February 27 and held public hearings until March 10. The members of the Boards, both of which were under the Chairmanship of Hon. Mr. Justice J. O. Wilson, of Vancouver, then continued to meet in private almost daily until the early part of April, when they presented their reports to the Minister of Labour. In the case of each Board, a majority report signed by the Chairman and by the member nominated by the railway companies was submitted, while the nominee of the employees presented a minority report. (These reports will be published in full in next month's LABOUR GAZETTE.)

The majority reports were of particular interest, not only because of their forthright recommendations in respect of the demands of the labour organizations, and because under the provisions of the Industrial Relations and Disputes Investigation Act majority reports constitute the report of a Conciliation Board, but also because they emphasized the lack of genuine collective bargaining in the proceedings which the Boards were called upon to conduct and upon the formidable difficulties attending the negotiation of "mass demands" between a national group of unions and a national group of railways.

\* \* \*

The first Board dealt with the dispute between the Canadian National Railways, Canadian Pacific Railway Company, Ontario Northland Railway and the Toronto, Hamilton and Buffalo Railway Company and fifteen standard international labour organizations, affiliated with the American Federation of Labour, over

demands for an increase of 7 cents an hour in basic rates of pay and for the establishment of a 5-day 40-hour week with the same take-home pay as for the existing work week. This Board recognized that the existing hours of work for railworkers are out of line with those generally prevailing in Canadian industry, and that the difficulty of instituting a shorter work week must not be allowed to result in an indefinite prolongation of this condition. After outlining a formula which it considered to be capable of general application, the Board recommended that the work week of the non-operating employees represented by the fifteen organizations, except hotel and water transport employees, should be reduced to 44 hours, and that such employees should be paid for those 44 hours at the rate of 106.63 per cent of their present hourly rates of pay. Recognizing that it would be necessary for the parties to conduct negotiations as to the way in which the formula should be applied generally and for the adjustment of some 86 separate collective agreements, the Board suggested August 1, 1950 as the effective date of the new work week. The Board also stated that the parties should agree on necessary modifications of existing rules to keep the cost of replacements at a minimum and to enable existing positions to be filled where possible on a five-and-a-half day basis without replacement. The Board did not recommend any change in existing provisions relating to pay for holidays when an established statutory holiday falls on an employee's assigned day off.

With regard to a large number of individual changes in collective agreements which the railways proposed, the Board expressed the view that the public interest demanded that the railways and their employees should consider most seriously such modifications of the agreements as, without working a hardship on the employees, would contribute to increased

efficiency or eliminate expense not necessary or justified. If, therefore, the parties to the dispute accepted the proposition of the Board in regard to a 44-hour week, the Board recommended that during the ensuing negotiations the proposals of the railways as to changes in the agreement should also be considered. If, on the other hand, the parties did not come to any agreement in regard to the shorter work week, then the proposals of the railways should be considered on their merits in due course by all the parties concerned.

The Board pointed out that, as the result of a direction from the Minister of Labour based on a recent decision of the Judicial Committee of the Privy Council, it had been instructed to deal with the wages and hours of work of employees in the hotels of the Canadian National Railways, but not with those of employees in the hotels of the Canadian Pacific Railway Company. In the result, labour relations affecting workers in CNR hotels are under Dominion jurisdiction, while in the CPR hotels they come under the jurisdiction of the various provinces in which they are located. The Board stated that the result, while it might be legally unavoidable, was an awkward one because of the similarity of the hotels and of the problems involved, and the identity of the unions concerned.

The Board upheld the argument of the Canadian National Railways that the wages and working conditions of hotel employees should be considered separately from those of employees engaged in actual railway work. It appeared to the Board that there was a wage differential of about 30 per cent between the average rate of pay in CNR hotels and in non-railway hotels. The Board recommended in regard to CNR hotel employees that their claim to a 7-cent per hour wage increase and to a 5-day 40-hour week be rejected. The Board went on to state that it considered that the level of wages in CNR hotels is so high that, if a 44-hour work week is to be introduced, the take-home pay of the employees should be reduced accordingly.

With regard to water transportation employees, the Board agreed with the contention of the railways that the wages and working conditions of this group had no relation to the general railway picture and ought to be considered separately, with reference being made to the wages and working conditions of other seafaring personnel rather than to railway labour conditions. It did not, therefore, make any recommendation in regard to the wages and hours of work of water transport employees.

\* \* \*

The second Board dealt with a dispute between the Canadian National Railways, Canadian Pacific Railway Company and the Ontario Northland Railway and the Canadian Brotherhood of Railway Employees and Other Transport Workers and the Brotherhood of Express Employees over demands for a general wage increase of 10 cents per hour, the establishment of a 5-day 40-hour work week with a 20 per cent increase in wage rates, and the institution of the check-off of union dues from all employees covered by the unions' agreements, whether or not the employees are union members. The recommendations of the Board in this case were similar to those outlined above, except for a separate recommendation that the guaranteed hours of dining and sleeping car employees, which they can be required to work per month, be reduced from 240 to 224 hours per month and that they should be paid for these 224 hours per month at the rate of 106.63 per cent of their present hourly earnings. Considering the impossibility in many cases of reducing hours of dining and sleeping car employees to the standard of 224 hours per month, the Board expressed the view that penalty overtime should be payable for hours worked in excess of 448 in a 2-month period and not greater than 490 hours. A further separate recommendation was made in regard to express messengers to the effect that their hours of work and rate of pay should be the subject of negotiations between the parties with a view to giving them, so far as practicable, the same general advantage on the same general terms recommended for other employees.

The recommendation of the second Board in regard to a general wage increase and shorter work week for CNR hotel employees was the same as in the case described above.

The Board rejected the demand of the Brotherhoods for the institution of the check-off of monthly union dues from all employees covered by their agreements, stating that there were three large union groups covering railway employees and that none of these groups has, or ever has had a closed shop, union shop, check-off or any other type of restrictive agreement with the companies. Under those conditions the three union groups have thrived and cared well for their members. There was nothing to suggest that a check-off or any other form of compulsion was necessary to the continued health of these labour organizations. There was between the Canadian Brotherhoods and another group a healthy competition which must, in the opinion of the Board, result in general benefit to the employees, and which would be affected by granting a check-off to one group and not to the other.

Both Boards pointed out that in the proceedings before them there was no collective bargaining in the true sense of that phrase. There was a great deal of very effective argument, and a thorough and careful marshalling of facts. But the parties remained protagonists and never assumed the role of negotiators. There was an obvious reluctance on both sides to concede any point for the purpose of arriving at a settlement. No middle ground was even discussed before the Board. The Board was treated as a forum and did not succeed in performing its function of conciliation.

The Boards then went on to describe at some length the practical and perhaps unavoidable difficulties created by the attempt to negotiate "mass demands" between national groups of unions and national groups of railways. Mentioning that these remarks were not to be construed as a criticism of the organization of labour unions into large groups, the Board pointed out that since by the terms in which the problem is presented real negotiation and bargaining is made difficult, if not impossible, there is no elasticity to the field in which a Conciliation Board can operate, and the proceedings tend to result in a stalemate. The tendency was to resolve by Government action the stalemate created by the failure of the bargaining process.

The minority report submitted by the employees' nominee in the case affecting the standard international labour organizations recommended the granting of the equivalent of a 7-cents per hour increase, as requested, but with some adjustments in its application in order not to throw the lower wage rates out of balance, the details to be worked out by the parties at the time of negotiations upon the proposals of the companies for contract changes. The minority report also recommended the institution of the 5-day 40-hour week with 48 hours' pay and with two consecutive days off applicable to all the classes of employees concerned, effective June 1, 1950. The report further recommended that the employees of railway steamship lines and CNR hotels be included in such adjustments.

The minority report submitted by the employees' nominee in the case affecting the two national unions recommended with respect to railroad employees that no general increase of pay be granted but that the parties be encouraged to negotiate regarding the lower-paid classifications with a view to their improvement; that the 208-hour month for roadmen be granted and that all others whose contractual hours are

now 48 per week be reduced to 40 hours per week, with the same take-home pay in both cases. With regard to water transport employees, the report recommended that the railways and the unions concerned be advised to negotiate further with the object of making working conditions in respect of days off, holidays, etc., the same for all classifications among the crews. With regard to employees of the CNR hotels, the minority report recommended that the working week be reduced to 44 hours with the same weekly take-home pay. It also recommended that the request for the check-off be granted.

\* \* \*

At its March sessions the Canada Labour Relations Board approved Reasons for Judgment in connection with the application for certification made by the American Newspaper Guild affecting editorial employees of The Canadian Press. The Reasons for Judgment incorporated a decision that a vote should be taken among the employees affected, the bargaining unit to consist of editorial employees of The Canadian Press within Canada, including office boys, but excluding the general manager, general superintendent, general news editor, chief of Ontario services, general night editor, bureau chiefs and news editors.

The vote resulted in a majority in favour of the Guild and at its next meeting on April 5 the Canada Labour Relations Board granted certification to the Guild for the bargaining unit indicated above.

At its March sittings the Canada Labour Relations Board also granted an application made by the National Catholic Brotherhood of Quebec Transport Employees, Inc., for the Board to prescribe a provision for the final settlement or violation of the collective agreement between the union and the Quebec Railway, Light and Power Company. Reasons for Judgment embodying the Board's decision were adopted, and are reproduced elsewhere in this chapter of the LABOUR GAZETTE.

\* \* \*

On March 28, 1950, an Order in Council was adopted amending the Rules of Procedure of the Canada Labour Relations Board by the granting of authority to issue a summons to require any person to appear before the Board to give evidence or to produce documents in his possession relating to matters before the Board. A form of Summons was laid down. The text of the amendment is printed below.

**The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.**

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification

of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

## **Amendment to Rules of Procedure of the Canada Labour Relations Board**

The Rules of Procedure of the Canada Labour Relations Board were published in the January, 1949 issue of the *LABOUR GAZETTE* (pp. 57-60).

At its meeting on March 15, 1950, the Board amended its Rules of Procedure by adding thereto a new section relating to the issuance of summonses to persons required to appear before the Board. In accordance with the provisions of Section 60 of the Industrial Relations and Disputes Investigation Act, the amendment was approved by the Governor General in

Council on March 28, 1950 (Order in Council P.C. 1547) and went into effect upon publication in the April 12, 1950, edition of the *Canada Gazette*.

The text of the new section added to the Rules of Procedure is as follows:—

18. A summons to require any person to appear before the Board to give evidence or to give evidence and bring with him any documents in his possession or under his control in the form attached to these Rules, varied to suit the case, shall be deemed good and sufficient for that purpose and may be given by the Chairman or the Chief

Executive Officer, and service thereof may be effected by personal service on the person to whom it is directed.

SUMMONS

Before the CANADA LABOUR RELATIONS BOARD To: In the matter of the Industrial Relations and Disputes Investigation Act and of affecting and (Applicant) and (Respondent) and (Intervener)

Whereas it has been made to appear that you are likely to give material evidence respecting the above-cited matter, you are

hereby summoned and required to appear before the Canada Labour Relations Board at a hearing to be held at in the City of on the day of 19, at the hour of in the noon, and so from day to day until the matter is heard, to give evidence touching the matter in question (and to bring with you at the time and place aforesaid and produce before the said Board and any other books, papers or documents in your custody or under your control in any way relating to the said matter).

Given under my hand this day of 19, (Name and title of signing officer) Canada Labour Relations Board.

Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of March. The Board issued 7 certificates designating bargaining agents, rejected 6 applications for certification, ordered 2 representation votes, and granted one application for the prescription of a provision for the final settlement of all differences concerning the meaning or violation of a collective agreement. During the month the Board received 10 applications for certification.

Applications for Certification Granted

- 1. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for a unit of employees of the Canadian Pacific Railway Company employed in the office of Auditor of Passenger Receipts, Windsor Street Station, Montreal (L.G., Feb., 1950, p. 509).
2. The Brotherhood of Locomotive Firemen and Enginemen, for a unit of employees of the Dominion Atlantic Railway, Kentville, N.S., comprising locomotive firemen, locomotive firemen's helpers, hostlers, and hostlers' helpers (L.G., April, 1950, p. 509).
3. The National Catholic Longshoremen's Syndicate of Sorel, Inc., for a unit of longshoremen employed by Empire Stevedoring Company Limited at Sorel, P.Q. (L.G., April, 1950, p. 509).
4. The National Catholic Longshoremen's Syndicate of Sorel, Inc., for a unit of longshoremen employed by North-American Elevators Limited at Sorel, P.Q. (L.G., April, 1950, p. 509).
5. The National Catholic Longshoremen's Syndicate of Sorel, Inc., for a unit of long-

shoremen employed by Sorel Dock and Stevedoring Company Limited at Sorel, P.Q. (L.G., April, 1950, p. 509).

6. The National Catholic Longshoremen's Syndicate of Sorel, Inc., for a unit of longshoremen employed by J. C. A. Turcotte at Sorel, P.Q. (L.G., April, 1950, p. 509).

7. The National Catholic Longshoremen's Syndicate of Sorel, Inc., for a unit of longshoremen employed by Wolfe Stevedores Limited at Sorel, P.Q. (L.G., April, 1950, p. 509).

Applications for Certification Rejected

- 1. The West Coast Seamen's Union (Canada) and Vancouver Barge Transportation Limited, Vancouver, B.C. (L.G., April, 1950, p. 509). The application was rejected for the reason that there was no satisfactory evidence that the applicant had the status of a trade union within the meaning of Section 2 (1) (r) of the Industrial Relations and Disputes Investigation Act.
2. The National Catholic Longshoremen's Syndicate of Sorel, Inc., and Brown and Ryan Limited (L.G., April, 1950, p. 509). The application was rejected for the reason that the respondent company was not an employer of longshoremen at Sorel during the 1949 navigation season.
3. The National Catholic Longshoremen's Syndicate of Sorel, Inc., and Eastern Canada Stevedoring Company Limited (L.G., April, 1950, p. 509). The application was rejected for the reason that the respondent company was not an employer of longshoremen at Sorel during the 1949 navigation season.

4. The National Catholic Longshoremen's Syndicate of Sorel, Inc., and J. C. Malone and Company Limited (L.G., April, 1950, p. 509). The application was rejected for the reason that the respondent company was not an employer of longshoremen at Sorel during the 1949 navigation season.

5. The National Catholic Longshoremen's Syndicate of Sorel, Inc., and The Montreal and Saint John Stevedore Company Limited (L.G., April, 1950, p. 509). The application was rejected for the reason that the respondent company was not an employer of longshoremen at Sorel during the 1949 navigation season.

6. The National Catholic Longshoremen's Syndicate of Sorel, Inc., and the Economic Stevedoring Corporation of Montreal, Limited (L.G., April, 1950, p. 509). The application was rejected for the reason that the respondent company was not an employer of longshoremen at Sorel during the 1949 navigation season.

### **Representation Vote Ordered**

1. The American Newspaper Guild and the Canadian Press (L.G., March, 1950, p. 339). Following an investigation of the application and a public hearing of the parties concerned, the Board ordered a representation vote of the employees affected (see Reasons for Judgment below) (Returning Officer: H. Perkins).

2. The Brotherhood of Locomotive Firemen and Enginemen and the Dominion Atlantic Railway, Kentville, N.S. (L.G., April, 1950, p. 509). Following an investigation of the application and a public hearing of the parties concerned, the Board ordered a representation vote of the employees affected (Returning Officer: H. R. Pettigrove).

### **Applications for Certification Received**

1. Lodge 1040, Brotherhood of Railroad Trainmen, on behalf of yardmasters and assistant yardmasters employed by the National Harbours Board at Vancouver (Investigating Officer: G. R. Currie).

2. The Brotherhood of Railroad Trainmen, on behalf of conductors employed in the train and yard service of the Quebec Central Railway Company, Sherbrooke, P.Q. (Investigating Officer: R. Trépanier).

3. Local 106, Transport Drivers, Warehousemen and Helpers' Union, on behalf of

chauffeurs, chauffers' helpers, dockmen, and checkers employed by Carwil Transport Limited, Montreal (Investigating Officer: R. Trépanier).

4. The Flin Flon Transportation Workers' Federal Union No. 272, on behalf of employees of Northern Bus Lines Limited, Flin Flon, Man. (Investigating Officer: R. H. Hooper).

5. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on behalf of second stewards employed by the Canadian Pacific Railway Company (British Columbia Coast Steamship Service) (Investigating Officer: D. S. Tysoe).

6. Local No. 1598, International Brotherhood of Electrical Workers, on behalf of employees of the Hudson Bay Mining and Smelting Company, Limited, Flin Flon, Man., employed in the operation of rolling stock on out-of-doors railways (Investigating Officer: J. S. Gunn).

7. The Order of Railway Conductors, on behalf of train conductors employed by the Quebec Central Railway Company, Sherbrooke, P.Q. (Investigating Officer: R. Trépanier).

8. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on behalf of employees of the Canadian Pacific Railway Company employed in the Office of the Auditor of Agencies, Windsor Street Station, Montreal (Investigating Officer: L. Pepin).

9. The Canadian Brotherhood of Seamen, on behalf of unlicensed personnel employed by the Western Union Telegraph Company on board the *c.s. Lord Kelvin* and the *c.s. Cyrus Field* operating out of Halifax, N.S. (Investigating Officer: H. R. Pettigrove).

10. The American Newspaper Guild, on behalf of editorial employees of Press News Limited employed in Canada (Investigating Officer: R. L. O'Neill).

### **Application under Section 19 Granted**

The Board granted an application, submitted by the National Catholic Brotherhood of Quebec Transport Employees, Inc., for the prescription of a provision for the final settlement of all differences concerning the meaning or violation of the collective agreement between the Brotherhood and the Quebec Railway, Light & Power Company, Quebec, P.Q. (L.G., March, 1950, p. 339. See also Reasons for Judgment below).

## REASONS FOR JUDGMENT in dispute between

**American Newspaper Guild, with headquarters in the City of New York, U.S.A., Applicant,**  
**and**  
**The Canadian Press, with Head Office at Toronto, Ont., Respondent.**

This is an application made under the Industrial Relations and Disputes Investigation Act for the certification of the Applicant as the bargaining agent of a unit of employees consisting of all editorial employees of the Respondent within Canada, exclusive of telegraphers, teletype operators, wire maintenance staff, accounting office employees, and stenographic employees, and excluding also the General Manager, General Superintendent, General News Editor, Chief of Ontario Service, General Night Editor, bureau chiefs and Press News General Manager. The existing payroll classifications of employees included in the bargaining unit thus described comprise: news editors, editors, junior editors, rewrite learners, staff correspondents and office boys in all offices of The Canadian Press in Canada. The Applicant also seeks to include in the bargaining unit for whom it requests certification, employees carried on the payroll of Press News Limited, a subsidiary company in which The Canadian Press is the principal shareholder. The Applicant contends that these employees are in fact employees of the Respondent.

The application is contested by the Respondent on a number of grounds.

The Canadian Press, an incorporated company, was incorporated in its present form by special Act of the Parliament of Canada passed in 1923. It is described as a co-operative, non-profit organization of Canadian daily newspapers, and is empowered under its Act of incorporation to carry on the business of a news agency in all its branches, and for that purpose to collect and gather news by cable, telegraph, telephone, wireless or any other means, and to distribute such news on a co-operative basis among and for the use of its members for publication in newspapers owned or represented by them, and is further authorized to purchase, install, lease, own and operate means for transmission of news, including telephones, telegraph instruments, wireless instruments, and other apparatus for long distance communication. In summary, the Respondent carries on a news-gathering and distribution business across Canada, and operates in connection therewith communication services across Canada.

The Board consisted of Mr. A. H. Brown, Vice-Chairman and Acting Chairman, and Messrs. W. L. Best, E. R. Complin, J. A. D'Aoust, A. Deschamps, A. J. Hills, A. R. Mosher, G. Picard and H. Taylor. The Judgment of the Board was delivered by the Vice-Chairman.

The Board is satisfied that, in view of the nature and scope of its operations, the provisions of the Industrial Relations and Disputes Investigation Act apply to the Respondent and its employees in Canada.

Press News Limited is a company incorporated under letters patent issued in 1941 under the provisions of the Dominion Companies Act. The objectives of this Company are those of a news agency, to gather and distribute news on its own account, and by exchange to obtain Canadian Press news for the purpose of serving institutions outside the Canadian Press membership. One of its principal activities is to edit and provide news for radio presentation in Canada. The Canadian Press holds all shares in Press News Limited, except qualifying shares, and according to the information furnished to the Board at the hearing, all of its directors are also directors of The Canadian Press. The Board of Directors of The Canadian Press, however, is larger than that of Press News Limited. There is evidently a very close operational relationship between the two companies, to wit: there is no physical separation between offices, there is a considerable informal interchange of duties and personnel of staff of the two organizations, maintenance employees of The Canadian Press also provide maintenance services for Press News equipment. The Applicant claims that the working conditions of the two staffs are identical. The Applicant relies on these facts, as brought out at the hearing, in support of its contention that the Board should find that employees of Press News Limited are not distinguishable from employees of The Canadian Press, and should be included in one bargaining unit with employees on The Canadian Press payroll as Canadian Press employees.

On the other hand, the Respondent, while conceding that there is a close working

relationship between the two organizations and staffs of the two organizations, nevertheless points out that the two organizations are separate corporate entities, that Press News Limited is a different type of company established to serve a different news medium, that employees of Press News Limited operate under the direction of their own General Manager, who is not an employee of Canadian Press, and are hired and paid by Press News Limited, and carried on the Press News Limited payroll, and are subject in all respects to discipline by this employer. Counsel for the Respondent refers to the provisions of subsection three of section nine of the Act, which provides that where a trade union seeks to include employees of two or more employers in a single bargaining unit, the consent of all such employers is required as condition precedent to certification. He advised the Board that the Respondent did not consent to the inclusion of its employees in a bargaining unit with employees of Press News Limited. On the facts presented to it, the Applicant has not satisfied the Board that employees of Press News Limited are employees of the Respondent. As the two employers do not agree to the inclusion of their respective employees in one bargaining unit, the Board has no authority to order such inclusion. The application, therefore, in so far as it seeks to include employees of Press News Limited in a bargaining unit with employees of The Canadian Press, is rejected.

Counsel for the Respondent, while conceding that the provisions of the Industrial Relations and Disputes Investigation Act may apply to the undertaking of the Respondent, contends that editorial staff employed by the Respondent, whom the Applicant seeks to have included in the bargaining unit, are not employees within the meaning of that Act, and in consequence its provisions do not apply to such editorial employees. In paragraph (i) of subsection one of section two of the Act, the term "employee" is defined to mean: "a person employed to do skilled or unskilled manual, clerical or technical work, but does not include

(i) a manager or superintendent, or any other person who, in the opinion of the Board, exercises management functions or is employed in a confidential capacity in matters relating to labour relations;

(ii) a member of the medical, dental, architectural, engineering or legal profession qualified to practice under the laws of a province and employed in that capacity;"

Counsel for the Respondent contends that the work of Respondent's editorial staff involves the application of a high degree of personal judgment and intelligence on the part of the individual reporter, rewrite editor or filing editor, as the case may be. He submits that these employees are not manual or clerical workers, and contends that neither can they be regarded as technical workers. His submission is supported by reference to the more restricted definition of the term "technical" contained in the Shorter Oxford English Dictionary, Second Edition, as meaning:—

"of or pertaining to the mechanical arts and applied sciences generally, as in 'technical education', 'technical school'";

and to the definition of the term "technical" contained in the National Selective Service Regulations which were enacted by the Governor General in Council under The War Measures Act and were in effect during the period of the recent war, wherein the use of the term was restricted to engineering and scientific personnel; and by reference also to the word "Industrial" appearing in the title to the Act as indicating the intent of Parliament to restrict the application of the Act to industrial workers.

While no doubt the work of editorial employees of The Canadian Press may require the exercise of discretion, intelligence and good judgment, nevertheless the Board is of opinion that the necessity for the exercise of such qualities or qualifications does not serve to distinguish such employees from other skilled occupations which call for the exercise of technical skills, nor does the exercise thereof necessarily exclude such persons from the application of the Act. In addition to the dictionary meaning quoted by Counsel for the Respondent, the Oxford English Dictionary defines the term "technical" as meaning:—

1. of a person: skilled in or practically conversant with some particular art or subject;
2. of a work: skilfully done or made;
3. belonging or relating to an art or arts: appropriate or peculiar to or characteristic of a particular art, science, profession or occupation.

The Board accepts and adopts this broader meaning of the term, rather than the more restricted meaning of the term upon which Counsel for the Respondent relies, as being more consistent with the intent of Parliament as to the application of the Act. That Parliament intended the term "employee"

to have a wider application than the interpretation which the Respondent seeks to place on the same is also borne out by the nature of the exceptions to the definition of "employee" contained in subparagraphs (i) and (ii) of paragraph (i) of subsection one of section two of the Act. It will be noted that these exceptions include members of the medical, dental, architectural, engineering and legal professions, employed in that capacity, as well as managers and superintendents and other persons who in the opinion of the Board exercise management functions or are employed in a confidential capacity in matters relating to labour relations.

These exceptions cover a wide range of occupations and skilled employment, involving not only the application of purely mechanical skills, but also the exercise of higher skills, and of judgment, discretion and intellect in the performance of work not less exacting than that required of its editorial employees by the Respondent. Had it been the intent of Parliament to also exclude persons in journalistic occupations, such as news editorial personnel, one would have thought that, in view of the nature of the other exclusions, the same legislative pattern would have been followed, namely by specific reference thereto.

The Board finds, accordingly, that editorial employees of the Respondent are, subject to exceptions based upon the performance of managerial and confidential duties, employees for the purposes of the Act.

In its submission, Respondent points out that in its operations it services Canadian newspapers of every political faith, who expect from it accurate and unbiased reports. It submits that, in the interests of maintaining an unbiased national news service, the actions and loyalties of its editorial staff should not be subject to external influences "beyond the control of those responsible for the impartiality and conduct of its news service". To summarize the Respondent's further argument on this point, Respondent claims that the policies of the Applicant union originate in and its controls are exercised from the union headquarters in the United States, and contends that in view of this outside influence and in view of the extension of activities of unions in the field of politics in recent years, there is grave danger that recognition of the Applicant as the bargaining agent for Respondent's editorial staff would in the result operate to destroy the unbiased nature of Respondent's news service which is essential to its continued effective operation.

The Board does not consider this contention to be pertinent to the merits of

the application or its disposition. In view, however, of the apparent weight given to this feature in the Respondent's submission, it seems advisable to deal with it.

Parliament has provided the answer to this contention of Respondent in the provisions of the Industrial Relations and Disputes Investigation Act. Section three of the Act reads:—

3. (1) Every employee has the right to be a member of a trade union and to participate in the activities thereof.

(2) Every employer has the right to be a member of an employers' organization and to participate in the activities thereof.

The subsequent provisions of the Act protecting the rights of employees and employers to organize, for recognition by the employer of the trade union representing the majority of his employees in a bargaining unit as the bargaining agent of employees in such unit and so on, are based upon and follow from this statement of the right of an employee to belong to the union of his choice, and of an employer to belong to an employers' organization of his choice.

Parliament has, in the definition of the term "employee", also taken cognizance of the possibilities of conflict of interest in the case of an employee arising out of the necessity of discharging his duties to his employer on the one hand and his obligations to his union on the other hand. It was the apparent intent to take care of the cases where such conflict or incompatibility of interests might normally be expected to arise, by excepting from the provisions of the Act "a manager, superintendent or any other person who, in the opinion of the Board, exercises management functions or is employed in a confidential capacity in matters relating to labour relations".

The Board wishes to make it clear that employees of the Respondent to whom the Act applies are by the Act accorded the right to belong to a union of their choice, to participate in the activities thereof, and to organize for collective bargaining purposes without interference or pressure by their employer.

Turning now to the consideration of the appropriateness of the proposed bargaining unit, it will be observed that, taking into account both the general description of the unit as defined by the Applicant and the exclusions therefrom proposed by the Applicant, the unit consists of news editors, editors, junior editors, learners, office boys and staff correspondents.

Respondent contends that office boys should not be included in the unit because, while office boys work closely with editorial

staff, their principal and primary duties are to take and deliver news copy. Respondent says that this work is in effect of the same nature as, and is an extension of, the work of the operating-mechanical staff group of Respondent's employees who operate telegraphic, teletype and other communications services utilized by the Respondent in its operations. It is also pointed out that the General Traffic Chief who is head of the mechanical staff division of the Respondent is responsible for the hiring, discharge, discipline and general direction of office boy staff attached to the Toronto office and in other offices his advice has guided the terms of hiring and duties of office boy staff. On the other hand, Applicant points out that, in practice, office boys have been afforded the opportunity to move up into editorial staff ranks as learners, and that many of the present editorial staff have been recruited from this source. The Board was advised at the hearing that, while there is no bar to doing so, very few, if any, office boy staff have been recruited for or promoted to mechanical staff classifications. The operating-mechanical staff include the classifications of operator and mechanic.

As it appears to the Board, there are reasonable grounds for inclusion of office boys in either the editorial staff unit or the operating-mechanical staff unit. The Board regards it as significant that the existing collective agreement between Respondent and the Commercial Telegraphers' Union covering operating staff does not cover office boy staff.

In the circumstances, in view of the close working relationship of office boy staff with editorial staff, and as it appears that the line of advancement of office boy staff who remain in the employ of the Respondent is within the editorial group, the Board is of opinion that the classification of office boy is appropriate for inclusion in the bargaining unit.

The Board finds the appropriate unit in this case to be one consisting of all editorial employees of the Respondent within Canada, including office boys, but excluding the General Manager, General Superintendent, General News Editor, Chief of Ontario Services, General Night Editor, bureau chiefs and news editors. In doing so, the Board gives effect to the contention of the Respondent that news editors should be excluded from the unit on account of the nature and extent of their supervisory duties. The unit as thus found to be appropriate does not include telegraphers, teletype operators, wire maintenance staff, accounting office employees, or stenographic employees.

Counsel for Respondent drew attention to the provisions of Article IV, section one, of the constitution of the Applicant organization, which provides that the membership of the Guild shall function through local guilds, and to the fact that the present application is for certification of the parent Guild, not a local. He also drew attention to Article X, section eight, of the constitution, which provides that applications for membership in the Guild shall be submitted to the designated agency of the shop unit where the Applicant is employed, and to the provision therein to the effect that an applicant for membership shall not become a member of the Guild until the local or its executive committee or other governing body shall have approved the application in respect of eligibility. Counsel contended that, in view of there being locals of the Guild in existence in Toronto and Ottawa, employees of the Respondent in these areas at least, could not be regarded as members in good standing of the Guild unless their applications had been approved by such locals.

Mr. Cressey, an International Representative of the Applicant, in his evidence stated that the existing locals in Toronto and Ottawa had by resolution of their governing bodies waived jurisdiction over those Canadian Press employees enrolled in the Guild in their particular areas, and that Canadian Press employees who have made application for membership in the Guild and paid the necessary fees have been accepted by the headquarters of the parent Guild and enrolled as members at large of the Guild. There has not been brought to the attention of the Board any provision in the constitution giving authority for such waiver of the provisions of the constitution. It may be that this would be regarded as a matter requiring ratification at the union convention. The International Representative also stated that it is proposed to issue a charter for a local comprising employees of The Canadian Press across Canada, but this has not yet been done.

The Board observes that, under the provisions of the Guild constitution as furnished to the Board, Article XVIII, section five, provides that the power and duty to bargain collectively for members of the Guild who are employees of press associations of national scope shall rest exclusively with the International Executive Board, but no agreement shall be signed unless ratified by the employees. It would appear to follow therefrom that, unless other provision is approved by the convention of the Guild, the bargaining agent of the proposed

unit of Canadian Press employees must be in any event the parent Guild, which is the Applicant in the present case.

The Board is of opinion that, as there is some uncertainty or confusion as to the effect of the procedure followed in this case in the light of the provisions of the union constitution, a vote should be taken of employees in the unit defined by the Board, under the direction of the Chief Executive Officer of this Board, and does so order. The Chief Executive Officer will settle the list of those eligible to vote after consultation with representatives of the parties, will make the necessary arrangements for the taking of the vote, and will report back to the Board the results thereof in the usual manner.

## REASONS FOR JUDGMENT in dispute between

### **La Fraternité Nationale et Catholique des Employés de Transport de Québec Incorporée, Applicant, and The Quebec Railway, Light and Power Company, Respondent.**

The Applicant and Respondent are parties to a collective agreement which by its terms is expressed to run for a period from June 1, 1949, to May 31, 1950, inclusive.

The applicant alleges that this agreement does not contain, as is required by subsection one of section nineteen of the Industrial Relations and Disputes Investigation Act, a provision for final settlement without stoppage of work, by arbitration or otherwise, of all differences between the parties to or persons bound by the agreement or on whose behalf it was entered into concerning its meaning or violation.

The Applicant further alleges that, arising out of the dismissal of certain employees of the Respondent, there are differences between the parties to the agreement concerning its meaning and alleged violation which have not been disposed of and are still pending.

The Applicant accordingly makes application to this Board under the provisions of subsection two of section nineteen of the Act, requesting the Board to prescribe a provision for final settlement, by arbitration or otherwise, of all differences between the parties to or persons bound by the agreement, or on whose behalf it was entered into concerning its meaning or violation.

The existing grievance procedure provisions of the collective agreement, which is in the French language, are contained in

The Board consisted of Mr. A. H. Brown, Vice-Chairman and Acting Chairman, and Messrs. W. L. Best, E. R. Complin, J. A. D'Aoust, A. Deschamps, A. J. Hills, A. R. Mosher, G. Picard and H. Taylor. The Judgment of the Board was delivered by the Vice-Chairman.

Clause VIII thereof, and in the English translation read as follows:—

#### CLAUSE VIII *Relations Committee*

A Relations Committee shall be set up to consider any complaint concerning the violation of the present agreement or any part thereof, as well as any injustice or dispute which may have been brought to its knowledge.

This committee shall be made up of two representatives of the Brotherhood, preferably with at least five (5) years' service in the transport division as bus drivers or conductors, and two representatives of the Company.

This committee shall meet about once a month or within twenty-four (24) hours following any serious dispute.

#### *Grievance Procedure*

If an employee governed by this agreement believes that he has been unfairly

treated, or that part of the agreement has been violated, he shall lodge a complaint with the representatives of the Relations Committee, who shall consider the case with the assistant superintendent.

Failing to reach agreement within a reasonable length of time, the Committee shall be entitled to appeal to the superintendent, who shall institute an inquiry within forty-eight (48) hours following the appeal. If the results are still unsatisfactory, the Committee may discuss the matter with the general superintendent and then with the general manager or with their respective representatives. Any interview with the latter must be granted within a reasonable length of time.

Every grievance which has not been settled at this stage shall be submitted to conciliation and arbitration in conformity with the law which applies, and the parties agree in advance to accept the ruling.

#### *Inquiry*

Whenever a grievance necessitates an inquiry, it is understood that the committee will receive a copy of the report.

#### *Rehabilitation*

If a grievance has been brought up following a dismissal or suspension proven unjust, it is understood that the employee will be rehabilitated and that he will draw his wages as though he had been at work.

#### *Interview*

Any interview between the officers of the Company and those of the Brotherhood to discuss problems concerning the service shall be held, in so far as possible, during regular working hours, and not more than two representatives of the Brotherhood shall receive their wages as though they had been at work. For any interview held outside of the respective working hours, not more than two representatives of the Brotherhood shall receive their wages at the current rate, i.e. without overtime and without minimum hours. The representatives of the Brotherhood shall not receive any wages for any interview of less than half an hour outside of regular working hours."

The Board has had difficulty in understanding the meaning and application of what under this Clause purports to be the provision for final settlement of differences between the parties, viz.:—

Every grievance which has not been settled at this stage shall be submitted to conciliation and arbitration in conformity with the law which applies, and the parties agree in advance to accept this ruling.

Counsel for the Respondent, who contends this provision complies with subsec-

tion one of section nineteen of the Act, stated that the meaning and intent of this provision is that the Minister of Labour would be asked to establish a Conciliation Board under the provisions of the Act to consider the unsettled grievances, and the parties to the agreement would be bound in advance to accept the findings of that Board as final and binding upon them.

The Board has reached the conclusion that this provision does not satisfy the provisions of subsection one of section nineteen of the Act. A reading of the provisions of the Act relating to the establishment of Conciliation Boards makes it clear that the decision to establish a Conciliation Board is a matter which rests wholly in the discretion of the Minister of Labour. This Board does not consider that the provision for arbitration contained in this agreement which is dependent for its operation wholly upon the exercise of a discretion vested in a person who is not a party to the agreement is a provision which complies with the Act.

It is clear from a reading of section nineteen of the Act and of the provisions of the Act relating to Conciliation Boards that the intent of Parliament in enacting the legislation was that disputes or differences relating to the meaning or alleged violations of collective agreements are matters which would not be subject to referral to Conciliation Boards established under the Act, but would be taken care of and disposed of in accordance with provisions for final settlement which the parties to the agreement would include in the agreement. It appears to the Board that the parties to the agreement in the drafting of the agreement have not fully complied with the provisions of section nineteen of the Act.

The Board finds accordingly that the collective agreement to which the Applicant and Respondent are parties does not contain a provision for final settlement of differences concerning its meaning or violation as required by subsection one of section nineteen of the Act. The Board does hereby prescribe the following provision for this purpose as a term of the collective agreement under the heading "Arbitration".

#### *Arbitration*

Any grievance which is not settled to the satisfaction of either the Brotherhood or the Company by conference or negotiation or otherwise in accordance with the provisions of this Agreement shall, upon the written request of either party, be submitted to an Arbitration Board, provided

the grievance involves the interpretation or alleged violation of any provision of this Agreement.

Grievances shall not be subject to arbitration which involve:—

- (a) Any request for a modification of this Agreement;
- (b) Any matter not covered by this Agreement;
- (c) Any matter which by the terms of this Agreement is exclusively vested in the Company.

The Arbitration Board shall be established within thirty days from the date the application for same is filed, and shall consist of three members, one of whom shall be selected by the Brotherhood and one of whom shall be selected by the Company and a Chairman selected by the two first-mentioned members of the Board. In the event of the failure of the two members of the Board so selected to agree upon the selection of a Chairman, the matter may be referred by either member to the Minister of Labour for Canada, who shall select and designate the Chairman.

In the event of any vacancy on the Board occurring by reason of death, incapacity or resignation, or for any other reason, such vacancy shall be filled in the same manner as is provided herein for the establishment in the first instance.

A statement of the dispute or question to be arbitrated shall be submitted by both parties, either jointly or separately, to all members of the Board within five days of appointment of the Chairman. The Board of Arbitration shall convene within 15 days after the appointment of the Chairman, unless otherwise mutually agreed by the parties, and render its decision as soon thereafter as possible.

The decision of the Board shall be limited to the dispute or question contained in the statement or statements submitted to it by the party or parties. The decision of the Arbitration Board shall not change, add to, vary or disregard any provision of this Agreement.

Decisions of the majority of the members of the Arbitration Board, which are made under the authority of this arbitration clause, shall be final and binding upon the Company, the Brotherhood and all persons concerned.

The expenses, if any, of the members of the Arbitration Board shall be paid as follows: The Brotherhood shall pay the fees and expenses of the member chosen by it; the Company shall pay the fees and expenses of the member chosen by it; and the fees and expenses of the Chairman shall be divided equally between the Company and the Brotherhood.

The provision so prescribed shall be in place of the provision in Article VIII of the agreement, reading in the English translation as follows:—

Every grievance which has not been settled at this stage shall be submitted to conciliation and arbitration in conformity with the law which applies, and the parties agree in advance to accept the ruling.

One other matter was raised by the Respondent in the course of the hearing on which some clarification appears desirable. Counsel for Respondent stated that the Respondent had refused to have the cases of the discharged employees handled under the grievance procedure in the agreement because in the opinion of the Respondent these discharges were for breaches of duty on the part of the employees which in their nature were matters which should be dealt with by the Courts rather than under the provisions of the grievance procedure in the agreement.

The Respondent has by the terms of the collective agreement agreed that:—

“If an employee governed by this agreement believes he has been unfairly treated . . . he shall lodge a complaint . . .”, which will then be dealt with under the provisions of the grievance procedures.

There are apparently no reservations in the agreement with respect to the application of this provision.

According to the statement of the Applicant, the employees discharged believe they have been unjustly treated and have sought to invoke the provisions of the grievance procedure in accordance with the above-recited provision.

It is not the duty or function of this Board to express any opinion as to the merits of the complaints of the employees or as to whether or not the complaints are matters which are in fact subject to arbitration under the provisions of the agreement. The question as to whether or not the grievances which have given rise to this application are matters which may be arbitrated is itself subject to arbitration pursuant to the provision which has been prescribed.

# Conciliation and Other Proceedings Before the Minister of Labour

## Conciliation Officers Appointed

During the month of March, the Minister of Labour appointed Conciliation Officers under Section 16 of the Industrial Relations and Disputes Investigation Act to confer with the parties in the following industrial disputes:—

1. Local No. 333, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, applicant, and the Alberta Wheat Pool, Vancouver, respondent (Conciliation Officer: G. R. Currie).

2. The Canada Coach Lines Independent Employees' Union, applicant, and Canada Coach Lines Limited, Hamilton, respondent (Conciliation Officer: F. J. Ainsborough).

3. Division Nos. 224 and 231, Canadian Brotherhood of Railway Employees and Other Transport Workers, applicant, and the National Harbours Board (employees at Halifax, N.S.), respondent (Conciliation Officer: H. R. Pettigrove).

4. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, applicant, and various terminal elevator companies at Fort William and Port Arthur, represented by the Lakehead Terminal Elevator Association, respondent (Conciliation Officer: R. H. Hooper).

5. Yellowknife District Miners' Union (Local 802, International Union of Mine, Mill and Smelter Workers), applicant, and the Consolidated Mining and Smelting Company of Canada, Limited, Trail, B.C., respondent (Conciliation Officer: G. R. Currie).

6. Yellowknife District Miners' Union (Local 802, International Union of Mine, Mill and Smelter Workers), applicant, and Giant Yellowknife Gold Mines Limited, Yellowknife, N.W.T., respondent (Conciliation Officer: G. R. Currie).

7. Division No. 279, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, applicant, and the Ottawa Transportation Commission, respondent (Conciliation Officer: F. J. Ainsborough).

## Settlements Facilitated by Conciliation Officers

1. On March 2, 1950, the Minister of Labour received a report from Liguori Pepin, Conciliation Officer, indicating the settlement of matters in dispute between Hull City Transport Limited, Hull, P.Q.,

and the Hull City Transport Employees' Syndicate (L.G., April, 1950, p. 509).

2. On March 27, 1950, the Minister of Labour received a report from G. R. Currie, Conciliation Officer, indicating the settlement of matters in dispute between the Alberta Wheat Pool, Vancouver, and Local No. 333, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (see above).

## Conciliation Boards Appointed

1. On March 20, 1950, the Minister of Labour appointed a Board of Conciliation and Investigation to deal with a dispute between Canadian Pacific Air Lines, Limited, and the Canadian Air Line Pilots Association. The Board was appointed following receipt of the report of R. H. Hooper, Conciliation Officer (L.G., Feb., 1950, p. 202). Constitution of the Board had not been completed at the end of the month.

2. On March 29, 1950, the Minister of Labour appointed a Board of Conciliation and Investigation to deal with a dispute between various terminal elevator companies at Fort William and Port Arthur, represented by the Lakehead Terminal Elevator Association, and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was appointed following receipt of the report of R. H. Hooper, Conciliation Officer (see above). Constitution of the Board had not been completed at the end of the month.

## Conciliation Board Reports Received

1. During the month of March, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between Polymer Corporation Limited, Sarnia, Ontario, and Local 14, United Gas, Coke and Chemical Workers of America (L.G., Nov., 1949, p. 1402). The text of the report of the Board is reproduced below.

2. During the month of March, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between the National Harbours Board (General Maintenance Forces and Grain Elevator System, Quebec, P.Q.), and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (L.G., Jan., 1950, p. 67). The text of the report of the Board is reproduced below.

## REPORT OF BOARD in dispute between

**Polymer Corporation Limited, Sarnia, Ontario,  
and**

**Local 14, United Gas, Coke and Chemical Workers of America.**

To:

The HON. HUMPHREY MITCHELL,  
Minister of Labour,  
Ottawa.

The Board of Conciliation appointed by you, the members of which are: Mr. G. C. Richardes, Mr. Gordon H. Bates, and Judge M. A. Miller, Chairman, report as follows:—

The Board met with the parties at Sarnia on November 28, 1949. The Union was represented by Messrs. A. F. Bruyca, Regional Director; J. A. Soper, Plant Chairman; P. J. Jones, Douglas Robertson, Charles Carr and R. H. Atkins, members of the committee, and the Company by Messrs. E. R. Rowzee, General Manager; L. D. Dougan, Assistant Manager, and J. W. Henley, Personnel Manager. Mr. J. R. Nicholson, Executive Vice-President of the Company, also appeared before the Board.

The position immediately prior to the meeting was that the Union, on behalf of the employees, had asked for the establishment of a 5 cent and 10 cent shift differential and an increase in wages of 10 cents an hour across the board. The Company had offered a shift differential of 3 cents and 6 cents, on condition that the demand for an increase in wages be dropped. The Union members apparently would have accepted the proposed 3 cent and 6 cent shift differential, but not subject to the condition of dropping the application for an increase in wages.

At the meeting on the 28th of November the Board heard the evidence and representations of the parties, but were unable to bring them any closer together. The Company declined to offer any increase in wages and the Union declined to consider any reduction from its demand of 10 cents an hour.

The Board met again after its members had had an opportunity of digesting the evidence submitted and unanimously suggested that the parties negotiate further on the question of a wage increase. That suggestion was acted upon, with the result that the Company submitted a proposal for the establishment of a 3 cent and 6 cent shift differential and a general wage increase of what, in discussions before this Board, was referred to as being five per cent. The offer proposed that the increase become effective as of January 1, 1950, and remain in effect for the duration of the Agreement.

On February 28, 1950, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between Polymer Corporation Limited, Sarnia, Ontario, and Local 14, United Gas, Coke and Chemical Workers of America (L.G., Nov., 1949, p. 1402).

The Board was composed of His Honour Judge M. A. Miller, Cobourg, Ontario, Chairman, G. C. Richardes, Windsor, member appointed on the nomination of the employer, and Gordon H. Bates, Niagara Falls, Ontario, member appointed on the nomination of the employees.

The text of the Board's report is reproduced herewith.

The actual proposal as to increase in wage rates was set out in a schedule, specifying the present and the proposed hourly rate for wage classification.

This proposal was submitted by the Union representatives to the members and on a vote was rejected.

The Board met again with the parties at Sarnia on the 14th of February, 1950. At that meeting the Union representatives pressed very hard for a uniform increase for all employees of the same number of cents per hour, rather than a percentage increase. Under the proposal made by the Company the lower paid workers would have received an increase of 5 cents an hour, the next in the scale 6 cents, the next 7 cents and the highest paid workers 8 cents. The Union representatives were particularly anxious that each employee should receive the same number of cents per hour increase. The Company, on the other hand, insisted on maintaining the presently existing percentage relationship of pay among the various classes of employees.

The Company refused to improve on this offer. The Union representatives finally, and with considerable reluctance, suggested a general increase of 6 per cent, and the establishment of a 3 cent and 6 cent shift differential, both to become effective on the date the Collective Agreement between the parties was signed, namely, August 4, 1949, and to remain in effect to the termination of the Agreement, namely, February 1, 1951.

It was then brought out that the offer made by the Company, while it had been referred to as a 5 per cent increase, in fact amounted to an increase of 5.44 per cent.

To understand the situation certain further facts must be considered.

The Polymer Corporation carries on its own operations with its own employees and it is the wages between that Corporation and its employees that are now being negotiated. In addition, an independent Company, The Canadian Synthetic Rubber Co., carries on certain operations for the Polymer Corporation on a management fee basis, and deals directly with its own employees, although the pay of these employees in fact comes from the Polymer Corporation. The Dow Chemical Co., also an independent company, carries on a business of its own, and in addition conducts certain operations for the Polymer Corporation on a management fee basis and the pay of those employees carrying on the work for the Polymer Corporation in fact comes from that Company. The employees of each of the three Corporations are represented by a different Union as bargaining agent. The work of the employees of the three Companies is similar in general character and the classification of jobs in the three Companies is similar. The pay of the employees in the three Corporations has been to all intents and purposes uniform.

Between the meetings of this Board with the parties on the 28th of November, 1949, and the 14th of February, 1950, The Canadian Synthetic Rubber Co. has made to its employees an offer as to wages, the same as, or virtually the same as, that now offered by The Polymer Corporation to its employees, and that offer has been accepted,

to become effective January 1, 1950. The Dow Chemical Co. and its employees have been negotiating, and, the Board are informed, the employees have asked for conciliation proceedings.

This Board are of the opinion that, in recommending what wages should be paid by The Polymer Corporation to its employees, they should not be bound by any agreement that has been reached between The Canadian Synthetic Rubber Co. and its employees. On the other hand, they are of the opinion that the difference between the 5.44 per cent increase, that the Company offers, and the 6 per cent suggested by the Union representatives, is not of sufficient import to warrant the dissatisfaction that would be created by establishing a lack of uniformity in wages between the two concerns, the employees of which are in fact paid by The Polymer Corporation, for the same type of work. In any event, the Board are of the opinion that, having regard to wages paid in industry generally in the area and, in so far as any such exists, in comparable industry in the Province generally, the scale of wages now offered by the Company is, generally speaking, a reasonable one. Including the shift differential the increase offered amounts, in cost to the Company, to approximately eight cents an hour across the board.

The Board are of the opinion, however, that consideration should be given to the Union's desire for uniformity in cents per hour to the different classifications of employees in any increase that be granted, and they recommend that for the schedule of wages proposed by the Company there be substituted the following:—

<i>Process</i>	<i>Classification</i>	<i>Mechanical</i>	<i>Present Rates</i>	<i>New Rates</i>
Operator		Group Leader	\$1.46	\$1.53
Special Assistant		Special Mechanic	1.39	1.46
1st Assistant		Class 1 Mechanic	1.32	1.39
2nd Assistant		Class 2 Mechanic	1.26	1.33
3rd Assistant		Class 3 Mechanic	1.19	1.25
4th Assistant		Junior Mechanic	1.12	1.18
Handyman		Mechanic Helper	1.05	1.11
Utility Man		Utility Man	.98	1.04
Regular Labour		Regular Labour	.92	.98

Such a schedule meets in great part the Union's request that any increase be uniform in cents per hour to all classes of employees without too seriously affecting their relative rates of pay in percentages. The cost to the Company is somewhat, but not very substantially, greater.

As to the time when the increase should become effective some further facts must

be considered. The Company and the Union entered into a Collective Agreement, dated and effective the 4th day of August, 1949. That Agreement contains as paragraph 8.01 the following:—

Wages and hours of work presently being observed by the Company shall be altered during the term of this Agreement only if, and to the extent, mutually agreed upon by the parties hereto.

It has, however, been the practice between this Company and its employees to enter into annual collective agreements, without regard to the question of wages, and to negotiate wages at any time. The last wage increase was one of 5 cents an hour, and became effective, as the result of negotiations, several months after the Collective Agreement was signed. In this case, therefore, the argument that any increase should take effect as from the date of expiry of the last agreement has not the same force as it has in ordinary cases.

The Board, therefore, recommend that the parties agree upon the scale of wages set

out in the above schedule, together with a shift differential of three cents and six cents an hour, both to be effective from the first day of January, 1950, and to continue to the termination of the present agreement, namely, the first day of February, 1951.

All of which is respectfully submitted.

Dated the twentieth day of February, A.D. 1950.

(Sgd.) G. C. RICHARDES,  
(Sgd.) GORDON H. BATES,  
(Sgd.) M. A. MILLER,  
Chairman.

## REPORT OF BOARD in dispute between

### National Harbours Board (General Maintenance Forces and Grain Elevator System, Quebec, P.Q.), and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

(Translation)

The Hon. HUMPHREY MITCHELL,  
Minister of Labour,  
Ottawa.

The Board, composed of Paul Lebel, K.C., employer's nominee, Marcel Francoq, bargaining agent's nominee, and Judge Edouard Tellier, chairman of the Board, appointed by the Hon. the Minister of Labour, begs to report as follows:—

#### The Dispute

The matter concerns the renewal of two different agreements between two groups of employees working for the employer, but represented by the same bargaining agent. Some questions are common to both agreements and they will be considered together; others are different and they will be considered separately.

#### Brief History of Both Agreements

##### (a) Maintenance Staff

A first agreement was concluded with this group, then represented by The Quebec Federal Employees Association Inc., and The National Harbours Board, to be in effect from May 1, 1947 to April 30, 1948.

Another agreement was concluded between the same parties, to be in effect for one year, from May 1, 1948.

On December 2, 1948, the present bargaining agent applied for certification as such to replace the Association, which was a party to the agreement, but the application was rejected.

On March 27, 1950, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with a dispute between the National Harbours Board (General Maintenance Forces and Grain Elevator System, Quebec, P.Q.) (L.G., Jan., 1950, p. 67).

The Board was composed of His Honour Judge Edouard Tellier, Montreal, Chairman, Paul Lebel, Quebec, P.Q., member appointed on the nomination of the employer, and Marcel E. Francoq, Montreal, member appointed on the nomination of the employees.

The text of the Board's report is reproduced herewith.

In the meantime, that is on March 14, 1949, another agreement was concluded between the National Harbours Board and the Association establishing a new rate of pay, and this new agreement was to be in effect until November 1, 1949.

However, on May 19, 1949, the present bargaining agent was certified as such and, on May 27, 1949, served notice to commence collective bargaining with a view to the conclusion of a new agreement.

The National Harbours Board admits that after June 15, 1949, they commenced to bargain collectively with a view to the conclusion of a new agreement with the Union. It is following said negotiations that a Conciliation Officer was appointed and, subsequently, that the present Board of Conciliation was appointed.

(b) *Grain Elevator Personnel*

The agreement between the parties with respect to this group of employees is dated September 5, 1947, to be in effect for one year, from November 1, 1946. It is to be noted that this agreement was concluded between The National Harbours Board and the present bargaining agent, and not with the Association, as in the case of the Maintenance Staff.

Although the agreement was to be in effect from November 1, 1946, as stated above, it was agreed that the new wage rates would apply only from January 1, 1947.

It was also agreed between the parties that bargaining would commence not later than February 15, 1948, with a view to the conclusion of a new agreement to take effect on April 1, 1948.

As collective bargaining between the parties did not bring any results, the dispute was referred to a Conciliation Officer of the Department and, subsequently, to the present Conciliation Board.

As it appears from the memorandum submitted by each of the two parties, they were agreed on all clauses of the two agreements, except on the three following points:—

- (1) the term of the agreements;
- (2) the number of holidays with pay;
- (3) the date on which wage increases were to take effect.

The discussion and arguments concerning points 1 and 2 are common to both agreements and, consequently, the same comments and recommendations will apply in both cases:—

### **In Relation to Point 1**

All previous agreements between the parties have always been valid for a period of one year. The employer did not bring up any good reasons for a change. His only argument was that nothing in the Act prevents the establishment of a term longer than one year.

On this point, the Conciliation Board recommends that the agreements be valid for a period of one year.

### **In Relation to Point 2**

Both parties brought out arguments in their favour in this connection during the lengthy discussions which took place.

In this matter, the Board feels justified in quoting the clause contained in the agreements concluded between the same parties on behalf of the employees at the Montreal Harbour.

The said clause reads as follows:—

#### *Section 12 (b) (ii)*

That in the event of any changes being made in the general rules and regulations governing prevailing rate employees of the Dominion Government service in respect of payment for statutory holidays not worked, annual vacation with pay and sick leave with pay, then either party to this agreement may give to the other party at any time during the currency of this agreement (including the first year thereof) the notice contemplated by such clause (a) with a view to entry by the two parties hereto into negotiations on the question of adoption (by way of revised or new agreement) of such of the aforesaid changes as may be reasonably applicable to employees coming under this agreement.

Subsequently, on September 20, 1949, Order in Council, P.C. 4840 was adopted by the Governor General in Council, as follows:—

#### *"Holidays With Pay"*

14. (1) The days to be allowed employees as holidays with pay in accordance with this section shall be—

New Year's Day  
Good Friday  
Dominion Day  
Labour Day  
Thanksgiving Day  
Christmas Day

and one other holiday to be selected by the deputy head from among the remaining holidays observed in the area of employment.

(2) In addition to the holidays specified in subsection one, the Minister may give to employees not more than two holidays with pay having regard to the practice generally prevailing in the area in which they are employed for persons employed by private employers on similar classes of work.

It would seem rather unwonted to ask employees to relinquish rights to which the law entitles them.

Consequently, the Conciliation Board recommends that paid holidays as decreed or as may be decreed in the future by the authority concerned under the provisions of the above-mentioned Order in Council, be the holidays by which the employees may benefit.

### **In Relation to Point 3**

#### *(a) Maintenance Staff*

Since 1947, bargaining, mainly on wage rates, has in many instances taken place between the parties, in spite of agreements between them in force at the time. The last notice to commence bargaining was given by the Union to the employer on

May 27, 1949, and the employer admits having commenced bargaining as early as June 15. It appears from the file that this bargaining, although interrupted, was never given up. Under such circumstances, the Conciliation Board recommends that an increase of 5 cents per hour, agreed to by the employer and the employees, be put into effect from June 1, 1949, as the same employees have already been granted an increase of 5 cents an hour from November 1, 1948.

(b) *Grain Elevator Personnel*

Generally speaking, the agreement for this group of employees expired on April 1, 1948, although previous agreements mentioned that bargaining should take place, in the matter of wage revisions only, on April 1, 1948; November 1, 1948; April 1, 1949; and November 1, 1949. On the other hand, the agreement stipulated that bargaining with a view to the conclusion of a new agreement on all points should commence on or before April 1, 1948, and notice to commence bargaining was duly given by the Union to the employer. It appears from the facts stated that the parties were bound by agreement to bargain collectively on wage revisions after the agreement had expired and, at the same time, to bargain collectively with a view to the conclusion of a new agreement

covering every point before the dates set for the various wage revisions.

The Conciliation Board believes that it is justified in pointing out here that it deems it necessary and desirable that, in agreements such as the one in dispute at the present time, the parties should, for their own advantage, give careful attention to the drafting and application of their agreements and avoid unnecessary delays which are apt to cause all sorts of complications very difficult to clear up, such as the ones that we have had to face in the present case.

Under the circumstances, the Conciliation Board recommends, with respect to this group of employees, an increase of 5 cents per hour from May 1, 1948, and a supplementary increase of 5 cents per hour, from May 1, 1949.

The increases will be payable to those employees of the two above-mentioned groups who have in fact been working for the employer during the periods covered by the increases recommended above.

All of which is respectfully submitted.

(Sgd.) EDOUARD TELLIER,  
*Chairman.*

(Sgd.) PAUL LEBEL,  
*Member.*

(Sgd.) MARCEL FRANCO,  
*Member.*

## COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

### Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

#### Mining

##### *Metal Mining*

**SHERRIDON, MAN.—SHERRITT GORDON MINES LIMITED AND SHERRITT BASE METAL WORKERS' FEDERAL UNION 287 (TLC).**

Agreement to be in effect from November 19, 1949, to November 18, 1950. The company recognizes the union as the exclusive representative for the purpose of collective bar-

gaining for all eligible employees. There will be no discrimination, intimidation or coercion because of membership or non-membership in the union.

**Check-off:** the company shall during the life of this agreement deduct, as a condition of each employee's continued employment, monthly dues not to exceed \$2 from the pay of each union member and \$1 from the pay of each non-union member and remit same to the union. In addition, the payment of dues to the Sherridon Club shall be a condition of employment and such dues, amounting to \$1 per month, shall be deducted from each employee's pay cheque.

**Hours:** 8 per day, 6 days a week, a 48-hour week. **Overtime:** time and one-half shall be paid for all work in excess of the above hours and double time for work on 6 specified *paid holidays*.

**Vacations with pay:** 6 days to employees with one year's continuous service, each additional year's service shall entitle an employee to one additional day until a maximum of 14 days has been reached. Foremen shall be entitled to 12 days on completion of one

year's continuous service in that capacity and to one additional day for each additional year's service, until a maximum of 20 days has been reached.

**Hourly wage rates:** Mine—miner, motorman, chute blasters, pipefitters, scraper operators, salvage man, bitmen, powdermen, trackmen, nipper, diamond drill runner \$1.19; timberman, sanitarians \$1.19 to \$1.29, mucker, deckman, helper, trammer \$1.10, cager and skiptender \$1.14 to \$1.24, shaftmen \$1.19 to \$1.32, hoistmen \$1.19 to \$1.24, drymen 99 cents to \$1.05, crushermen \$1.10 to \$1.20. Crushing plant—crusher operator \$1.23, conveyorman \$1.14, helper \$1.06. Mill—flotation operator \$1.19 to \$1.23, ball mill and filter operator \$1.19, mechanics, carpenter \$1.19 to \$1.29, millwright \$1.24, sampler \$1.10, dryerman \$1.06, helper \$1.04. Shops and mechanical—machinist \$1.24 to \$1.37, mechanics \$1.19 to \$1.32, welders \$1.19 to \$1.34, plumbers, electricians, carpenters, painters \$1.19 to \$1.29, blacksmiths \$1.19 to \$1.24, lampman (9 hours) \$10.62, steel sharpener \$1.19, bit temperer \$1.24, drill doctor (9 hours) \$10.71 to \$11.16, compressorman \$1.10 to \$1.19, fireman \$1.04 to \$1.10, helper \$1.04 to \$1.14, apprentices 84 to 99 cents. Surface—garageman \$1.19 to \$1.29, dragline operator \$1.24 to \$1.34, truck and tractor driver \$1.10 to \$1.19, labourers 99 cents, bullock (8 hours) \$6.92 to \$7.92. Outside exploration—diamond drill runner \$1.24, helper \$1.10. The above rates are based on the Dominion Bureau of Statistics Cost-of-Living Index at 155, they are subject to an increase or decrease of one cent per hour for each point of rise or fall in the index above 155. Such revisions, if necessary will be made every six months, on January 1 and July 1.

A *shift differential* shall be paid on the following basis: afternoon shift 4 cents per hour, night shift 6 cents per hour, graveyard shift 8 cents per hour.

The company will continue a *Group Life and Group Sickness and Accident Insurance* for the duration of the agreement.

Provision is made for *seniority rights, grievance procedure, a labour-management production committee* and the *safety and health* of the employees.

## Manufacturing

### Vegetable Foods

SAINT JOHN, N.B.—ATLANTIC SUGAR REFINERIES LIMITED AND SUGAR REFINERY WORKERS' FEDERAL UNION, LOCAL 20 (TLC).

Agreement to be in effect from September 1, 1949, to August 31, 1950, and thereafter until 2 months' notice has been given by either party to the other. The company recognizes the union as the sole bargaining agent for all eligible employees. There shall be no intimidation or coercion because of membership or non-membership in the union.

**Hours of work:** 8 or 9 per day depending on the station or the department where an employee works, 6 days a week. **Overtime:** hourly paid employees will be paid time and one-half for all work in excess of the regular daily hours and, with some exceptions, for work on Sundays and on 7 specified holidays; employees on continuous operations will be paid at regular rates for work on Sundays and on holidays if they are given another day off during the week; weekly paid employees, represented by the union, will be

paid overtime at the regular hourly rate, the calculation of such rate being based on a 48 or a 54-hour week, as the case may be.

**Rest periods:** foremen may permit men under their direction a rest period of 6 minutes, or a little longer in some cases, once each half shift, when such absence can be arranged without serious interference with the work. Women workers will be allowed regularly scheduled 10-minute rest periods once each half shift.

**Vacations with pay:** one week to hourly paid employees who have worked 294 days (with certain specified time lost included as if worked) during the previous calendar year; an additional week shall be granted to employees who had been continuously employed for 10 years or more on January 1 of the previous year, provided that they worked 300 days in the previous year (with certain specified time lost included as if worked). Weekly paid employees will be granted one week after 6 months' continuous service and 2 weeks after 10 years' service.

**Wage rates** shall be as agreed upon by the parties; they are not subject to change during the life of the agreement.

A *night differential* of 5 cents per hour above day rates will be paid to all employees represented by the union.

The company agreed to establish a contributory *Retirement Income Plan for Employees* prior to December 31, 1949. The company's *Group Life Assurance Plan* will be placed on a contributory basis in May, 1950.

Provision is made for *seniority rights*.

LONDON, ONT.—KELLOGG COMPANY OF CANADA LIMITED AND AMERICAN FEDERATION OF GRAIN MILLERS, LOCAL 154.

Agreement to be in effect from November 7, 1949, to April 15, 1951, and thereafter from year to year, subject to 60 days' notice. The company recognizes the union as the exclusive bargaining agency for all eligible employees.

**Union security:** all employees covered by this agreement who have completed their probationary period will be required to become members of the union and to maintain their membership for the life of the agreement. The union agrees to accept as members all employees whom the company may hire when they have acquired seniority. The company shall not be required to discharge any employee to whom membership has been denied or terminated on some ground other than the refusal to pay the initiation fee or the dues uniformly required unless the company agrees, or a board of arbitration decides, that the grounds were sufficient to justify the discharge of the employee.

**Check-off:** the company agrees to deduct the regular monthly dues from the pay of each member and to remit same to the union; it will be furnished with a card signed by each member authorizing such deduction.

**Hours of work:** 8 per day, 40 or 48 per week, depending on sales requirements and material supplies. Employees will work extra shifts on extra days when needed, but no employee shall be required to work more than 12 hours in one work day or to work on Sunday if he has worked all his scheduled hours in the preceding week. During the slack periods of the year available work

will be distributed among employees with 3 or more years' service before laying off such employees. Before the hours in a department are reduced below 32 hours per week employees in the department with less than 5 years' service will be temporarily laid off. *Overtime*: time and one-half for all work in excess of 8 hours in one day from Monday through Friday and for work on Saturday, double time for work on Sunday and on 6 specified *paid holidays*; provided, however, that where an employee has not worked the equivalent of his regularly scheduled payroll week the time so lost by him (except where loss is due to employee working more than 12 hours on any one day) shall first be made up at straight time before either Saturday or Sunday premium rates shall apply except that an employee shall receive a minimum of time and one-half for any work performed on a Sunday.

*Vacations with pay*: one week after one year's continuous service, 2 weeks after 3 years' service and 3 weeks after 15 years' service.

*Hourly wage rates* for certain classes: Processing—bag pick-up man 70 to 75½ cents; rice oven feeder, baggers (rice cereal feed), helpers (cookers, rolls, shredders) 75½ to 81 cents; wheat tempering, rice picker and grinder, rice oven operator 81 to 86½ cents; corn tempering, rice vat operator and cooker helper, tank man, dutch oven operator 86½ to 92 cents; flavour maker, shredder operators, corn flakes oven operators, flaking roll operators, drier operators, cooker operator 92 to 97½ cents. Corn mill—oilier and helper, sweeper and helper, bagger, feed mixer helper 75½ to 81 cents; packer 81 to 86½ cents; wheat unloader, feed mixer, heavy bran miller 86½ to 92 cents; miller 92 cents to \$1.03. Packing: men—packing supply man 86½ to 97½ cents, helper 75½ to 81 cents; packing machine operators 86½ cents to \$1.08½, helper 75½ to 81 cents; women and boys—packing line operators 50½ to 61½ cents. Shipping—70 to 97½ cents. Quality control—men 70 to 81 cents, women and boys 50½ to 67 cents. Mechanical—package machine mechanics, millwrights, electricians, press maintenance men, steamfitters, painters, draftsmen 86½ cents to \$1.08½; engineers 75½ cents to \$1.08½; carpenter, welder, machinist 92 cents to \$1.08½; head stores keeper, shift maintenance man 86½ to 97½ cents; stores keeper 81 to 86½ cents; oilier, maintenance helper 75½ to 81 cents. In addition to the above rates the company agrees to pay a *cost-of-living bonus*, the latter to be on a sliding scale, based on the Dominion Bureau of Statistics' Cost-of-Living Index and to be adjusted every 3 months in accordance with an attached schedule: starting with a 1 cent per hour increase for an index number between 134.8 and 136.4 (inclusive) the bonus is increased (or decreased) 1 cent for every increase (or decrease) in the index of 1.6 or 1.7 points (an average of 3 cents for every variation of 5 points). However, during the life of this agreement the bonus shall not decrease below 16 cents nor shall it increase to more than 21 cents above the basic rate even though the Cost-of-Living Index should decrease below 159.8 or increase above 169.7.

*Shift premiums* of 4 cents per hour will be paid for work on second and third shifts respectively.

Provision is made for *seniority rights* and *grievance procedure*.

## Rubber Products

HAMILTON, ONT.—FIRESTONE TIRE AND RUBBER CO. OF CANADA LIMITED AND UNITED RUBBER, CORK, LINOLEUM AND PLASTIC WORKERS OF AMERICA, LOCAL 113.

Agreement following strike (L.G., Sept., 1949, p. 1194) and later conciliation, to be in effect from February 17, 1950, to February 17, 1951, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees. There shall be no discrimination, interference, intimidation, restraint or coercion because of membership or non-membership in the union.

*Check-off*: the company agrees to deduct from the pay of employees who so authorize union fees and dues and to remit same to the union; the check-off shall be voluntary but irrevocable during the expressed term of the agreement.

*Hours*: 8 per day and 40 per week. *Overtime*: time and one-half for work in excess of 8 hours in any 24-hour period (except in the case of a change of shift) or 40 hours in a week and for all work on Sundays; double time for 8 specified *paid holidays* provided employee is entitled to same (i.e. he has worked his regular shifts immediately preceding and following such holiday), otherwise he will be paid at time and one-half.

*Vacations with pay*: one week to employees with one year's service, 2 weeks to employees with 5 years' service and 3 weeks to employees with 15 years' service. (The previous agreement did not provide for a third week to employees with 15 years' service.) Employees with more than 3 months but less than one year of continuous service shall receive 2 per cent of their earnings up to July 1.

*Wage rates*: the present hourly rates, base rates and differentials shall remain in effect during the term of this agreement. Authorized day work rates used by piece workers shall be 80 per cent of piece work base rates. There shall be no differential in job classification rates solely by reason of an employee's age or sex.

*Off-shift-differential*: employees on shift operations shall be granted premium payments as follows: between 3 p.m. and 11 p.m. 3 cents per hour, between 11 p.m. and 7 a.m. 5 cents per hour.

Provision is made for *seniority rights*, *grievance procedure* and the *safety* and *health* of employees.

## Textiles and Clothing

HAMILTON, ONT.—INTERNATIONAL HARVESTER COMPANY OF CANADA LIMITED (HAMILTON TWINE MILLS) AND UNITED STEELWORKERS OF AMERICA, LOCAL 3697.

Agreement to be in effect from December 5, 1949, to December 5, 1950, and thereafter until notice. This agreement is similar to the agreement between Hamilton Harvester Works of the same company and United Steelworkers of America, Local 2868, summarized below, except that there is no provision in this agreement for a review of the rates of day work employees every 6 months.

## Printing and Publishing

ONTARIO, QUEBEC AND THE MARITIMES—  
CANADIAN LITHOGRAPHERS' ASSOCIATION  
AND AMALGAMATED LITHOGRAPHERS OF  
AMERICA.

Agreement following strike (L.G., Aug., 1949, p. 1073) to be in effect from December 1, 1949, to December 31, 1950, and thereafter from year to year, subject to notice in the month of October. This agreement is similar to the one previously in effect (L.G., May, 1948, p. 483) with the following changes and additions:—

*Minimum hourly wage rates* have been increased 22 cents per hour in most cases, bringing the rates for certain classes up to the following: Art department—artists (reproducers only) commercial, general, letterers and engravers \$1.80, engravers and letterers on drug label work \$1.44, poster (crayon) \$1.91, poster (letterers) \$1.64, process (colour correctors) \$2.04. Camera department—camera operators (line work) \$1.36, camera operators (half-tone and colour separation), projection machine operators \$1.80. Plate making department—commercial transfers \$1.64, colour transfers, provers, photo composograph and step and repeat operators, vacuum frame and contact negative operators, negative assemblers and layouters, opaques and strippers \$1.80, stove polishers \$1.32. Plate grainers (up to plate size 44 x 64)—operating a single plate machine \$1.32, operating 2 single or one double plate machine \$1.49, operating triple plate machine \$1.67. Press department—multicopying machine operator first year \$1.23, thereafter \$1.38; journeymen pressmen \$1.38 to \$2.39, depending on the size and type of the presses and on the number of colours; feeder and feeder operators from 97 cents to \$1.06 during first year, from \$1.05 to \$1.23 during second year and from \$1.13 to \$1.41 thereafter, on 4-colour, sheet fed presses 36 x 48 or over first feeder operator \$1.57, second feeder operator \$1.46. Lithographic press helpers—first 6 months 78 cents, second 6 months 83 cents, thereafter 89 cents. For new employees engaged as apprentices the minimum starting rate is 78 cents with an increase every 6 months; in departments other than press this increase is one-tenth of difference between appropriate journeymen rate and the starting rate, in the press department an apprentice must serve as feeder before taking charge of a press; his apprenticeship commences when he takes charge of a press and his wage rate is then increased one-ninth of the difference between his feeder's rate and the journeyman pressman's rate for that press, with equal increases every six months.

The present agreement does not provide for a cost-of-living wage adjustment.

*Welfare plan:* the employer shall establish for the benefit of all eligible employees a non-occupational accident and sickness insurance plan providing the following benefits: weekly disability, benefit for employees only; hospitalization, medical and surgical benefits for employees and their dependents. The costs of the plan are to be shared between the employees and the employer, the former contributing 63 cents per week, regardless of age, earnings or marital status, and the latter paying the balance of the total premium for the plan.

## Metal Products

NEW TORONTO, ONT.—ANACONDA AMERICAN BRASS LIMITED AND ANACONDA BRASS AND COPPER WORKERS' UNION, LOCAL 110 (CCL).

Agreement to be in effect from December 19, 1949, to December 18, 1950, and thereafter until the execution of a new agreement or until either party gives two months' written notice to the other terminating this agreement. The company recognizes the union as the sole collective bargaining agency for all eligible employees. Both parties will maintain a policy of non-discrimination toward all employees with respect to race, colour, creed, political affiliation, union membership, national origin or citizenship status.

*Check-off:* The company shall deduct monthly from the pay of each union member within the bargaining unit a sum not exceeding \$2.50 for union dues, provided that the first deduction may amount to \$5 if it includes an initiation or re-instatement fee. From and after December 31, 1949, the above check-off provisions shall apply only to such employees who have signed an authorization to deduct union dues, the authorization to remain in effect for the duration of the agreement.

*Hours of work and overtime:* time and one-half rate shall be paid employees within the bargaining unit (except boiler room employees) for all time worked in excess of 8 hours in any one day, except where such excess time is due to regular shift changes, for all time worked on Saturday after 12 noon and for all time worked on Sunday. Boiler room employees shall receive the overtime rate only for hours worked in excess of 8 hours in any one day or on any seventh consecutive day worked in a calendar week. Employees on the third shift who receive 8 hours' pay for 6½ hours worked shall not be paid overtime except for hours worked in excess of 8 in any one day.

*Statutory holidays:* if any of 7 specified holidays fall on a regularly scheduled working day all employees (except probationary employees) shall be reimbursed at their regular rate of pay for time lost, provided they work the regularly scheduled shifts immediately preceding and following the holiday. If the company requests work to be done on these holidays, and the majority of the employees concerned agree to this, then all employees concerned shall forego such holiday and work, the work to be paid for at regular rate in addition to the holiday pay.

*Vacations with pay:* effective for the year 1950 one week with pay equal to 2 per cent of employee's total wages paid during previous 12 months shall be granted all hourly rated employees covered by the agreement with at least 3 months' service. However, any employee who is on the active payroll and has one year's seniority shall receive an amount not less than 40 hours' pay at his payroll hourly rate. Employees with 5 or more years' seniority shall be granted an additional week with pay as above.

*Hourly wage rates:* a general increase of 5 cents per hour shall be granted, retroactive to December 4, 1949. This increase shall be applied by adding to the earnings of each employee the amount of the hourly increase multiplied by the number of hours paid for, and shall not become a part of the basic

hourly wage for the determination of piece-work and incentive payment. The minimum and maximum hourly rates for the following classifications are: class A \$1.06 to \$1.12, class B \$1.08 to \$1.15, class C \$1.11 to \$1.19, class D \$1.13 to \$1.22, class E \$1.15 to \$1.26, class F \$1.17 to \$1.29, class G \$1.21 to \$1.36, class H \$1.25 to \$1.44, class I \$1.31 to \$1.56; provided that the company may increase the maximum for class I. This hourly wage classification scale shall not be subject to change or modification for the duration of this agreement.

*Off-shift bonus:* a differential of 5 cents per hour will be paid all employees assigned to and working on the second shift and also to all employees on continuous operations on the third shift; it does not apply to third shift employees receiving 8 hours' pay for 6½ hours' work.

Provision is made for *seniority rights and grievance procedure.*

TORONTO, BRANTFORD AND WOODSTOCK, ONT.—MASSEY-HARRIS COMPANY LIMITED AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCALS 439, 458 AND 636.

Agreement following strike in Toronto and Brantford and provincial conciliation and arbitration in Toronto (L.G., Sept., 1949, p. 1195) to be in effect from December 20, 1949, to December 20, 1950, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect (L.G., May, 1949, p. 601) with the following changes:—

*Hours of work* are reduced from 9 per day and 45 per week to 8 per day and 40 per week.

*Hourly wage rates* for day workers are increased 10 cents per hour, effective October 7, 1949. The minimum starting rates for day workers shall be \$1.01 per hour, increased to \$1.03 after 30 days and to \$1.06 after 90 days; foundry labour shall start at \$1.06 with no automatic increases.

A *Group Insurance Plan* has been provided by the company; its costs are to be shared between the company and the employees on a 50-50 basis. The plan includes: life insurance for employees, accidental death or dismemberment benefit for employees, weekly indemnity for accident and sickness for employees, hospital expense benefits for employees and their dependents, medical expense benefits for employees and surgical expense benefits for employees and their dependents.

Provision is made for *seniority rights and grievance procedure.*

HAMILTON, ONT.—INTERNATIONAL HARVESTER COMPANY OF CANADA LIMITED (HAMILTON HARVESTER WORKS) AND UNITED STEELWORKERS OF AMERICA, LOCAL 2868.

Agreement to be in effect from November 18, 1949, to November 18, 1950, and thereafter until notice. The parties reserve the right to amend and supplement this contract by mutual agreement at any time during the duration thereof. The company recognizes the union as the sole representative of all eligible employees for the purpose of collective bargaining. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, November, 1948, p. 1244, with the following changes and additions:—

*Hours of work* have been reduced from 9 per day and 45 per week to 8 per day and 40 per week.

*Wage rates* presently in effect shall continue until either party proposes an increase or decrease, when a sincere effort will be made through collective bargaining to arrive at a satisfactory conclusion. The company agrees to review the rates of all day work employees every 6 months (May and November) and give merit increases where justified.

*Night shift bonus:* a premium of 5 cents per hour will be paid to all employees covered by the agreement for all work performed during hours outside regular day shift hours, except where such hours are overtime hours in connection with a regular day shift.

### *Non-metallic Minerals and Chemicals*

MEDICINE HAT, ALTA.—MEDALTA POTTERIES LIMITED AND INTERNATIONAL UNION OF MINE, MILL AND SMELTER WORKERS, LOCAL 895.

Agreement to be in effect from December 14, 1949, to December 13, 1950. The company recognizes the union as the sole and exclusive bargaining agent for all eligible employees. There shall be no discrimination, interference, intimidation, restraint or coercion because of membership or non-membership in the union.

*Hours of work:* 48 per week, the daily hours to be arranged between the employees and the company by mutual consent. *Overtime:* time and one-half shall be paid for work in excess of 9 hours in any one day or 48 hours in one week and for work on Sunday (or the alternative day off), on Dominion Day, New Year's Day and two other holidays, the dates to be decided by the employees; double time for work on Labour Day and on Christmas Day. The above 6 holidays are all *paid holidays*; provided, however, that only employees with 3 or more months of continuous service shall be entitled to benefit from these statutory holidays.

A *rest period* as already voluntarily established shall be maintained for the life of this agreement.

*Wages:* minimum hourly base rate (after 6 weeks probation) for female employees 50 cents, for male employees 70 cents, for boys under 19 years of age 60 cents. Hourly wage rates for experienced help: clay making (day shift), machine jiggerer 75 cents; batters 72½ cents; mould runners, clay carriers 70 cents; girl helpers 55 cents; trimming, finishing and sponging (all girls) 55 cents; sprayers, dippers and glazers (all girls) 60 cents; kiln operators (day or night shift) 80 cents; bisque checkers, assorters, back stampers and ware removers—females 55 cents, males (removers) 70 cents; general mechanics 75 cents; female checkers and packers 55 cents, male packers on cartons 70 cents; male packers and loaders on crates 75 cents, on saw 80 cents; floor sweepers, sewer cleaners 70 cents; machine cleaners 65 cents; stone-ware glazer (male) 75 cents; mould runner for crocks, etc., 72½ cents; machine-spinner 55 and 60 cents; pugging clay (day shift) 75 cents; jiggerman (hand) 80 cents; sticking up handles and spouts (all girls) 60 cents; loading and unloading all kilns (must be a setter) 75 cents; tumblers and washer—males 70 cents, females 55 cents; round banders 60 cents, oval banders 65 cents;

mould makers (male), sagger makers, watchmen, stoneware pounder large crocks 75 cents; pinner (female) 60 cents; trimmers and spongers for crocks (male) 70 cents.

*Night shift differential:* workers on night shift between midnight and 6 a.m. shall be paid if employed in a supervisory or responsible capacity 10 cents and others 8 cents

## Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,\* include the extension of one first agreement and the amendment of six others. These include, in addition to those summarized below, the extension of a first agreement for retail stores at Asbestos and amendments to the agreements for retail food stores at Quebec, and for barbers and hairdressers at Joliette, published in the *Quebec Official Gazette*, issue of March 4.

Requests for amendments to the agreements for the fashion accessories industry and for barbers and hairdressers at Montreal, for municipal employees at Kenogami, for hospital and charitable institutions at St. Hyacinthe and for barbers and hairdressers at Quebec were published in the issue of February 25. A request for a new agreement for the building trades at Montreal and requests for the amendment of the agreements for barbers and hairdressers at Valleyfield and at Chicoutimi, and for the building trades at Joliette were published in the issue of March 4. Requests for the amendment of the agreements for barbers and hairdressers at Three Rivers, and for clockmakers and jewellers in the counties of Drummond, Arthabaska, etc. in the issue of March 11, and a request for the amendment of the agreement for the building trades at Quebec was published in the *Quebec Official Gazette*, issue of March 18.

Orders in Council were also published

In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concerns wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

per hour above the rate for similar work during the day.

The company agrees to supply one pint of milk per day free to any employee working with free lead glazes.

Provision is made for *seniority rights*, *grievance procedure*, and a *Plant Safety Committee*.

approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties.

### Manufacturing

#### Fur and Leather Products

##### FUR MANUFACTURING INDUSTRY, QUEBEC.

An Order in Council, dated February 22, and gazetted March 4, amends the previous Orders in Council for this industry (L.G., Nov., 1946, p. 1583, Dec., p. 1772 July, 1947, p. 1002; Sept., 1948, p. 992, and previous issues).

*Territorial jurisdiction* comprises the cities of Quebec, Lévis and Sillery, the towns of Quebec-West, Ste.Foy, Beauport, Lauzon and Loretteville and the municipalities of Giffard, Ste-Anne-de-Beaupré; and Ancienne Lorette.

*Hours* during the 8 weeks' period starting from the Monday which will be or will immediately follow June 15 are reduced by 4 per week to 40 per week Monday through Friday. Hours for shop clerks and clerks of the hide department during a regular working week are reduced from 48 to 44. Pattern-makers now work 44 hours per week during the period from August 1 to January 31 instead of 48 as previously in effect.

*Overtime* is payable at regular rates up to 44 hours during the 8 weeks' period starting from the Monday which will be or will immediately follow June 15. Shop foremen earning \$60 per week or more and pattern-makers (male and female) earning \$44 per week or more shall not be entitled to remuneration for overtime or additional work.

*Minimum weekly wage rates* (to be in effect from October 1, 1949): shop foremen \$54; cutters and tailors from \$35.50 to \$50; patternmakers (male and female) from \$38 during the first year to \$56 per week during the third year; blocker \$35.50; hide sorter \$32.50; operator (male) \$24.50 and \$27.50, operator and finisher (female) \$24.50 and \$27.50; shop clerk (male) \$12, shop clerk (female) \$11; messenger \$12; apprentices (male and female) from \$12 during the first year to \$18 per week during the third year; apprentices (male only) \$21 during the fourth year to \$29 during the sixth year. (The above rates represent increases ranging from \$2 to \$3.50 per week). Special minimum wage rates for handicapped workers (male) are increased (by \$5) to \$20 per week; female workers under the same circumstances are increased (by \$7) to \$15 per week. Employees who at October 1, 1949, received a higher salary than that provided for in the agreement then in force are entitled to an increase in wages equal to the minimum wage increase provided for his category in the present amendment. The above rates, during the 8 weeks' period start-

ing from the Monday which will be or will immediately follow June 15, shall be proportionate to the number of hours worked.

*Vacation:* employees with less than one year of continuous service for the same employer, or in the same establishment, at June 15 of each year are entitled to a vacation of as many half days as he has months of continuous service.

Regulations affecting apprentices and the distribution of journeymen tailors and cutters are included in this amendment.

### **Metal Products**

#### **GARAGES AND SERVICE STATIONS, MONTREAL.**

An Order in Council, dated February 22, and gazetted March 4, amends the previous Order in Council, for this industry (L.G., April, 1950, p. 517) by providing for the addition of "L'Association canadienne des Travailleurs de l'Automobile de Montréal" as contracting party of the second part.

#### **SHEET METAL FABRICATING INDUSTRY, MONTREAL.**

An Order in Council, dated February 22, and gazetted March 4, extends the term of the previous Order in Council for this indus-

try (L.G., Aug., 1949, p. 987) to May 1, 1950. Another amendment to this agreement affecting industrial jurisdiction was published in the *Quebec Official Gazette*, issue of December 3, 1949.

### **Construction**

#### **BUILDING TRADES, ST. JÉRÔME.**

An Order in Council, dated February 22, and gazetted March 4, amends the previous Orders in Council for this industry (L.G., Aug., 1948, p. 873; Dec., 1949, p. 1559) by providing that notwithstanding any other provisions, the cities and towns and the municipal and school corporations are not governed by the provisions of the present agreement inasmuch as repair or maintenance work on their own buildings are concerned: inasmuch, also, as construction, rebuilding or maintenance works on aqueducts, sewers, pavings, sidewalks and other similar operations performed under their immediate control are concerned. The exemption does not apply to contractors or subcontractors carrying on the same operations on their behalf or by the job for the said cities, towns, etc.

---

(Continued from page 606)

help to maintain consumer demand close to last years levels, in spite of the decline in farm income. By March 1 of this year, average weekly salaries and wages continued upward to a new high of \$44.69.

While the development of iron ore deposits in Ungava and oil in Alberta is already providing considerable direct employment, its future possibilities are perhaps more important than the labour demand at present created. It is possible that the development of these Canadian resources may parallel that of the forest and mineral resources of Northern Ontario and Quebec, which played such an important part in the prosperity of the 1920's.

Although employment levels of many industries in the coming months will probably be above those of last year, it is unlikely that employment will increase sufficiently in the immediate future to absorb the continued increase in the labour force. The resultant unemployment will probably be concentrated in those industries and areas which cannot adjust easily to changes in foreign markets, or shifts in domestic demand. The Maritime provinces, for example, may find it more difficult than British Columbia to adjust to the decline in overseas markets by shifting to alternative markets in the United States.

Concern with the problem of unemployment is being reflected in this year's contract negotiations between unions and employers which are now taking place in many important industries. Some unions are pressing for the forty-hour week, with no reduction in take-home pay. This issue is one of the most important in the current railroad dispute. On April 15, the two Conciliation Boards recommended a 44-hour week and some increase in wage rates. Both union groups concerned have rejected the Boards' recommendations on the basis that, for a good many workers, the recommendations mean a decrease in the weekly pay envelope. The introduction of the 40-hour week is also an important issue in the negotiations now under way in the primary iron and steel firms. The Steel Company of Canada agreed in principle on May 2 to a reduction in hours from 44 to 40, with a 13 cent an hour increase in pay.

# FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

## Schedules Prepared and Contracts Awarded during February

### (1) *Works of Construction, Remodelling, Repair or Demolition*

During the month of February the Department of Labour prepared 108 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 73 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

### (2) *Contracts for the Manufacture of Supplies and Equipment*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Canadian Commercial Corporation. . . . .	7,521	\$10,348,477.81
Post Office. . . . .	15	54,983.08
Public Works. . . . .	4	28,441.34
R.C.M.P. . . . .	5	30,891.52

# LABOUR LAW

## Recent Regulations Under Provincial Legislation

*In Quebec, the Minimum Wage Order which provides for a stamp system of holiday-with-pay credits for construction workers in Montreal and vicinity has been extended to cover the Hull area. ¶In Saskatchewan, new regulations have been made governing the welding of boilers, pressure vessels and pressure piping. ¶British Columbia has extended the types of employment in which two industrial diseases may be compensated. ¶The first regulations have been issued under the Newfoundland Mothers' Allowances Act.*

### **British Columbia Hospital Insurance Act**

By an Order in Council of February 4, gazetted March 2, a regulation was made under Section 27 of the above Act, which permits regulations to be made to enable the Hospital Insurance Commissioner and the Workmen's Compensation Board to enter into an agreement for the purpose of co-ordinating the benefits available under the Workmen's Compensation Act with the general hospital services provided under the Hospital Insurance Act, thus preventing the duplication of services.

The Order permits an agreement providing for the payment for in-patient hospital care rendered to injured workmen during 1949. The Workmen's Compensation Board or other agency approved by it is required to pay to the Commissioner \$8.50 a day for the care of an injured workman for such time as he requires hospitalization. On receipt of this payment, the Commissioner must pay to the hospital an amount computed for the same number of days at the daily rate which is paid to the hospital on behalf of a beneficiary under the Act.

The Workmen's Compensation Board is liable for payment to the hospital for any medicine, treatment or services which are not included in the benefits provided under the Hospital Insurance Act.

By another Order in Council made on February 4, and gazetted on the same day as the above, the Commissioner, at the end of any period, may make adjustments in the daily rates paid to hospitals throughout the period as he considers necessary to reimburse the hospitals for the cost of providing the general hospital services rendered to beneficiaries.

### **British Columbia Workmen's Compensation Act**

Two changes, effective from March 1, have been made in the schedule of industrial diseases under the Workmen's Compensation Act.

Pulmonary tuberculosis contracted in employment in any branch of the Victorian Order of Nurses will be compensated, as the result of a regulation of the Workmen's Compensation Board of February 16, gazetted February 23. The employee, however, must have been free from evidence of tuberculosis before engaging in this employment. Under previous Board regulations, pulmonary tuberculosis is compensatable when it is contracted in any employment in a hospital, sanatorium or clinic under the Act.

The industrial disease described as "cutaneous, circulatory or blood-cell lesions or physiological endocrine change" will be compensated when it is contracted in any operation where radium is used in a hospital under the Act by an Order of the Board of March 20, gazetted March 23. This disease is also compensatable, as formerly, when contracted from any X-ray apparatus operated in an industry or in a hospital under the Act.

### **Newfoundland Mothers' Allowances Act**

General regulations, effective from February 1, have been made under the Mothers' Allowances Act, 1949, by an Order in Council of February 11, gazetted February 21.

The Act provides for the payment of a monthly allowance to a mother who has in her care one or more children under 16 years of age and who is a widow; a woman

who has been deserted by her husband, or divorced or separated from him for at least two years and from whom she can obtain no support; or a woman whose husband is unable to support her because he is incapacitated or an inmate of a hospital or penitentiary. Under similar circumstances, an allowance may also be paid to an incapacitated father who is left with the care of his children. Where a mother is eligible for an allowance and her husband is incapacitated, the Act permits an allowance to be granted with respect to her husband as if he were a dependent child, until the youngest child becomes 16. A foster-mother caring for orphan children is also eligible for an allowance.

"Child" is defined in the regulations to mean a dependant under 16 and also an incapacitated child under 21.

Every applicant for an allowance must complete application forms approved by the Director of Mothers' Allowances and furnish evidence and proof of her claim as are required by the Director or by the Mothers' Allowances Board.

The regulations provide for a maximum allowance of \$300 a year for a mother and one child and \$60 a year for each additional child. The maximum annual allowance payable is the allowance in respect of a mother and family of seven children (\$660 a year) but the Board may grant an additional allowance not exceeding \$20 a month if, because of housing conditions, special diets, needs connected with education or other necessitous circumstances, the Board decides that the additional allowance is necessary for the proper maintenance of the family.

The maximum annual outside income allowed is \$440. If outside income is in excess of \$440, the maximum annual allowance will be reduced by the amount of the excess. To determine the maximum amount of outside income, the Board must take into account all resources of the recipient, including wages, alimony, court orders for maintenance, income except family allowances, and the reasonable value of free board and lodging.

An allowance will not be paid to a mother, father or dependent child if their combined real or personal property exceeds a net value of \$2,500 if in a rural community or \$5,000 if in an urban district. Similarly, no allowance will be paid if their combined liquid assets are in excess of \$750. The Board may reduce, suspend or cancel the allowance payable in respect of a child who fails to attend school to the satisfaction of the Board and the Director may require a recipient to provide him with a school report signed by the teacher.

Special provisions are set out regarding payment of an allowance to an incapacitated father. Before the allowance is paid, he must undergo a medical examination by a competent medical practitioner and his incapacity must be established to the satisfaction of a medical referee appointed by the Board. However, for a period not exceeding six months the Board may accept the certificate of a qualified nurse. The Board may require an incapacitated father to be re-examined from time to time.

When a mother who is receiving an allowance re-marries, the allowance will not be continued beyond the end of the month in which the marriage takes place. An allowance will also be discontinued at the end of the month during which a child reaches 16 years, unless the child is attending school, in which case the allowance is to be paid until the end of the school year. When a child or incapacitated husband in respect of whom an allowance is paid dies, payment will not be continued after the last day of the month in which the death occurs.

If the Board considers that a mother or father of a child in respect of whom an allowance is to be paid is not a fit person to care for him, it may pay the allowance to a guardian or other person chosen by the Board.

The recipient must promptly inform the Director in writing of any changed circumstances which might disqualify her from receiving an allowance or alter the amount which she would be entitled to receive.

### **Ontario Public Vehicle Act**

General regulations under the 1949 Act (O. Reg. 45/50) were made on March 2, and gazetted March 18. As before, a driver of a public vehicle must be at least 18 years of age, of good moral character and competent to operate the vehicle under his charge. An applicant for an operating licence must file with the Department of Highways a certificate of the Workmen's Compensation Board certifying that he has provisionally complied with the Workmen's Compensation Act. The holder of a licence is required to keep a record of the hours of labour of all drivers.

### **Quebec Minimum Wage Act**

The coverage of Order 3A (L.G., 1950, p. 87), which provided for a stamp system of holiday-with-pay credits for workers in the building construction industry on the Island of Montreal and vicinity, has been extended to cover construction workers in the city of Salaberry-de-Valleyfield and in

the city of Hull and surrounding district by an Order in Council (No. 256) of March 2, gazetted March 11.

The Order, as amended, covers Hull and the territory within a 10-mile radius, municipalities partly included within the 10-mile radius, and the cities and towns of the electoral districts of Hull, Gatineau, Papineau, Pontiac and Temiscamingue. Other municipalities in these electoral districts, except those totally or partially included within a radius of 10 miles of Hull, are also covered wherever construction contracts amounting to \$75,000 or more are carried out.

As before, the Montreal zone includes the Island of Montreal and a fifteen-mile radius, excluding the counties of St. John and Iberville. The city of Salaberry-de-Valleyfield has now been added to this zone.

The Order provides that in the Montreal and Hull zones a workman whose employment is not continuous with one employer throughout the vacation-with-pay credit period, that is, from May 1 to April 30, is entitled to a vacation-with-pay credit of 2 per cent of his earnings from each employer. The employer is required to affix credit stamps on each pay day in the workman's vacation-with-pay stamp book.

### **Saskatchewan Boiler and Pressure Vessel Act**

New regulations designed to ensure greater safety in the welding of boilers, pressure vessels and pressure piping were made on February 24, 1950, gazetted March 4 (O.C. 353/50).

The regulations apply to all welding done in connection with the construction, alteration or repair of any boiler, pressure vessel or pressure piping which is subject to inspection under the Boiler and Pressure Vessel Act, 1948.

These regulations provide for the annual registration of all persons engaged in welding boilers, pressure vessels or pressure piping, and set out in detail the responsibilities of manufacturers and welders for the quality of the welding done. Other provisions deal with inspections, welders' qualification tests and fees. Requirements are laid down for repairs to high pressure boilers and pressure vessels and low pressure heating boilers.

Every manufacturer, contractor, or other person who welds or employs any person to do welding is required to apply to the Boiler Inspection Branch of the Department of Labour for registration of every welder, giving full particulars as to the class and position of welding for which he has been qualified. Such registration is to be

renewed annually. Upon registration, every qualified welder is allotted a symbol which he must stamp upon all work done by him.

A welding shop operator or a person who welds or employs welders must be responsible for the quality of the welding done. Before any welding operations are commenced, he must conduct approved welding procedure tests in accordance with the requirements of the code of the American Society of Mechanical Engineers pertaining to boilers and pressure vessels and of the code of the American Standards Association for pressure piping. Proof of these tests must be submitted to the Department for recording. He must arrange with the Boiler Inspection Branch for a welders' qualification test or obtain approval for an equivalent test witnessed by an inspector and meeting the requirements of the ASME and ASA codes. If the work to be done is on new construction, he must ascertain that the design of the vessel has been approved and registered by the Department.

No person may be registered as a welder unless he has passed a welders' qualification test. A welder is forbidden to do welding of a class or position for which he has not been qualified by test and for which he has not been registered.

Welders' tests must be prescribed by the Chief Inspector in accordance with the ASME and ASA codes as far as practicable and witnessed by an authorized inspector. If a welder fails in the test, he may undergo an immediate re-test consisting of two separate tests welds of any position on which he failed. If he again fails, he may take further tests after he has had additional training or experience satisfactory to the Chief Inspector. A welders' qualification test will be effective for 12 months, or for longer if approved by the Chief Inspector. However, a re-test may be required at any time if a welder is suspected of losing his proficiency. The Chief Inspector is empowered to determine whether or not an applicant has sufficient experience and knowledge to warrant a qualification test.

No welded repair may be made on a boiler or pressure vessel having a working pressure of more than 15 pounds to the square inch unless permission is first obtained from an inspector and, in the case of a boiler, the repair is witnessed by an inspector. Except with the inspector's permission, no welded repair may be made by other than the electric arc method. Regarding low pressure heating boilers, no welded repair may be made on any boiler having a working pressure of 15 pounds or less to the square inch except by a registered welder. However, the welder

need not be qualified by test unless required by an inspector. The welding of all pressure piping must be in accordance with the ASA code and must be done by a registered welder. All pipe welds, unless otherwise approved by an inspector, must be hydrostatically tested to twice the working pressure in accordance with the code. Except with the permission of an inspector, repairs made to any boiler or pressure vessel or piping must be left exposed until after inspection.

An inspector may inspect or re-inspect any welding job and may subject it to

hydrostatic or other tests which he considers necessary. On his recommendation, the Department may refuse to issue a certificate authorizing the operation of any boiler, pressure vessel or pressure piping, or the Minister may cancel a certificate already issued where it is found that welding has not been done in a proper manner, or where it has been done by a welder not qualified and registered in accordance with the regulations.

Fees are set for the registration of welding procedures and for welders' qualification and other tests.

## Legal Decisions Affecting Labour

*In two decisions, B.C. Supreme Court interprets labour relations legislation regarding second strike vote and authority of Board to define "members in good standing". ¶Saskatchewan Appeal Court, in a rehearing of the John East Iron Works case, quashes Labour Relations Board's orders on the grounds of an error in law on the face of the order. In a second Saskatchewan case the Court of King's Bench overrules a Board order directing a Regina firm to bargain collectively. ¶U.S. Federal District Court finds United Mine Workers Union not guilty of contempt charges.*

### **B.C. Court prohibits second strike vote until after further conciliation procedure.**

On January 24, 1949, Mr. Justice Wood of the Supreme Court of British Columbia awarded the plaintiff, a mercantile company, an injunction restraining the Retail Clerks Union, Local 279, and the British Columbia Labour Relations Board from taking or supervising, respectively, a second strike vote. The judgment made permanent the interim injunction granted to the company at an earlier hearing by Mr. Justice MacFarlane. In his ruling, Mr. Justice Wood held that a further effort to adjust differences through conciliation procedure must be made before a second strike vote may be taken.

In February, 1948 the defendant union, which is the certified bargaining agent for the company's employees in the Victoria store, requested the manager of the store to begin negotiations for a new collective agreement. Representatives of the company and the union met but were unable to come to terms. The union then requested a conciliation officer who was subsequently appointed but who failed to effect an agreement. On the recommendation of the conciliation officer, the Labour Relations Board appointed a conciliation board. The conciliation board filed a majority report with the Labour Relations Board on July 3, 1948. The report was accepted by the union and rejected by the

company which put into effect for the Victoria store certain retroactive increases in pay which had been granted to employees in others of its stores during the negotiations. These increases did not meet the findings of the majority of the Board whose report covered other matters as well. On August 20, the union took a strike vote which was supervised by the Board as required by Section 72 of the Industrial Conciliation and Arbitration Act. A majority of the employees voted not to strike.

On September 13, the union announced that a new vote would be taken on September 15, to decide whether the employees affected were prepared to take strike action if necessary to compel the company to accept the award handed down by the conciliation board. The Labour Relations Board was asked to supervise this vote. The Board took the view that Section 72 (1) of the Act required them to supervise the vote and they prepared to do so. The company sought an injunction restraining the union from taking the second strike vote and the Labour Relations Board from supervising it, on the grounds that one vote having been taken and having been against strike action, another strike vote could not be taken by the bargaining agent until the requirements of the Act had been again complied with as upon a fresh dispute.

On September 14, an interim injunction was granted by the Supreme Court with Mr. Justice MacFarlane presiding. In a judgment given on October 8, 1948, Mr. Justice MacFarlane ruled that the injunction be continued until the trial of the action. Stating that he was in no way dealing with the merits of the action, His Lordship observed:—

This is a new statute and there is nothing in the statute which expressly says that, when one strike vote is taken, a subsequent vote shall not be taken. If there is any doubt, the point should be settled, not only as a matter of deciding the issue here, but so that for the public generally there will be no doubt as to what the Legislature meant. The contention of the plaintiff company is one which relies for its force on one view of the interpretation of a statute, which not only outlines a public policy of handling industrial disputes and methods of conciliation but a statute which both interests and affects a large proportion of the population of the province.

In the trial of the action, Mr. Justice Wood reviewed Sections 29, 31A, 31B and 72 of the Industrial Conciliation and Arbitration Act, 1947 as being relevant to the case. These sections provide that collective bargaining negotiations and a report of a conciliation board must precede a strike or lockout. Further, Section 31A provides that “. . . no person shall declare or authorize a strike and no employee shall strike until after a vote of the employees in the unit affected as to whether to strike or not to strike has been taken and the majority of such employees who vote have voted in favour of a strike”. Section 31B has similar provisions for lockouts.

Section 72 (1) reads:—

In the case of a vote under Section 31A or 31B, the vote shall be by secret ballot, and the Labour Relations Board or a person appointed by it shall supervise the taking and counting of the vote; and in the case of any other vote under the provisions of this Act, the Labour Relations Board may direct that the vote shall be by secret ballot, and the Labour Relations Board or a person appointed by it may thereupon supervise the taking and counting of the vote.

There is nothing in the statute which prohibits employees and employers from voting as often as they wish either with regard to strikes or otherwise, His Lordship stated.

It was urged by the union's counsel that the proposed vote was not to be taken under the Act, that Sections 31A and 31B had nothing to do with the delay procedure provided for in the Act and that Section 31A was merely to prevent a union calling out members when they do not wish to strike.

In considering this point, Mr. Justice Wood stated:—

In my view, however, the proposed vote, if taken, will be taken as a supervised vote under the provisions of the statute. A supervised vote in favour of a strike is by virtue of Section 31A a condition precedent to a strike and, if this vote can now be taken and is favourable, a strike may then legally be called. It is to be noted that the same applies to a lockout.

His Lordship continued:—

The Labour Relations Board is authorized to do merely those things which are contained in the statute. That statute does not authorize it to supervise one vote after another whether of the employees or of the employers until the party wishing such a vote finally obtains one that satisfies him. The Act was passed for the purpose of securing industrial peace. . . . Such successive voting is not conducive thereto but rather to continuous disturbance.

The Court pointed out that conditions may have changed since the original bargaining commenced. A new conciliation board might make a finding which would be acceptable to both parties or the matter might be adjusted by agreement. In concluding, Mr. Justice Wood stated:—

In my view, the Act contemplates that, before a second supervised strike vote be taken, a further effort be made to adjust the differences in this way.

*F. W. Woolworth Co. Ltd. v. Retail Clerks Union, Local No. 279 and the Labour Relations Board* (1948) 2 W.W.R. 883 and (1949) 1 W.W.R. 958.

***Court holds that B.C. Labour Relations Board has authority to determine whether members of a union applying for certification as bargaining agent are “members in good standing” under the union’s constitution.***

The Supreme Court of British Columbia on August 22, 1949, dismissed the application of Local Union 468, Bakery and Confectionery Workers International Union of America for a court order to require the British Columbia Labour Relations Board to certify Local 468 as the bargaining authority of the employees of a Vancouver firm said to be engaged in the manufacture of bakery and confectionery products.

Mr. Justice Whittaker in giving judgment outlined the events leading up to the application for a court order. On June 8, 1949, Local 468 filed an application for certification with the Board. On June 21 the Board rejected the application and in a letter of July 27 advised the Local that “should the employer resume manufacturing and employ persons who may, pursuant to the constitution of the Union, be accept-

able into membership, then the Board will be willing to receive and consider a new application for such employees”.

On July 27 the Board certified another union, Local 31 of the General Truck Drivers and Helpers Union, as bargaining authority for the firm's employees. Notwithstanding this, Local 468 claimed the right to be certified, urging that it had, as members in good standing, a majority of all employees, and contending that the Board exceeded its authority in presuming to determine jurisdiction as between rival unions.

His Lordship then examined the obligations placed on the Labour Relations Board by the Industrial Conciliation and Arbitration Act in respect to certification of a bargaining agent. The Act provides that when a labour organization applies for certification, the Board shall first determine whether the unit is appropriate for collective bargaining, and then decide whether the majority of the employees in the unit are members in good standing of the applicant organization. If the Board is satisfied on both these points, it must certify the union as the bargaining authority; if not, it must reject the application, and may designate the length of time, not exceeding 90 days, that must elapse before a new application by the same applicant will be considered. The Act further provides that if a question arises as to whether a person is a member in good standing of a trade union, the Board shall decide the question, and the Board's decision is final. The Board is authorized by another section of the Act to direct an applicant union to file with the Board a copy of its constitution and by-laws.

In the case of Local 468, the Board's reasons for rejecting the application were set out in a letter to the union dated June 20. The letter stated that the Board after studying the investigator's report and after having heard the representations of all interested parties, rejected the application because it was not satisfied that a majority of the employees were members in good standing of the union. The reason it was not satisfied that the employees were “in good standing” was that the local union had failed to show it had jurisdiction. The Board reached this conclusion after examining the union's constitution.

Article 2, Section 1 of the constitution of the Union reads as follows:—

The Bakery and Confectionery Workers' International Union of America shall exercise and maintain jurisdiction over all workers employed in the manufacture of (1) all bakery products, such as bread, rolls, cake, pie, biscuit, crackers, pretzels, pastries and matzos; (2) confectionery products, such as ice cream, candies and

sweets of every description, including candied fruits and preserves; (3) all macaroni and paste products; (4) kindred products. Jurisdiction begins with the loading platform and extends into the plant or shop.

By Article 20, Section 1, membership is restricted to those employed or seeking employment in an industry under the trade and geographical jurisdiction of the International Union.

Mr. Justice Whittaker found that the Board in this case was acting within its authority. He upheld the Board's contention that it may investigate the type of business carried on by the employer, and may examine the constitution of the applicant union and may decide whether the employees in a particular unit in view of the type of work in which they are engaged are competent to be members in good standing of the applicant union, taking into consideration the limited trade jurisdiction of the union as set out in the constitution. He concluded:—

It is obvious that an employee can only become a member in good standing of a union if the constitution permits him to become a member. Mere acceptance of an application for membership and payment of dues do not constitute membership if the employee is not eligible for membership under the constitution. . . .

It is, of course, not open to me to inquire as to the merits of the Board's decision.

***Labour Relations Board's reinstatement order quashed in Saskatchewan Appeal Court on grounds that Board did not properly assess monetary loss suffered by dismissed employees.***

Upon the direction of the Judicial Committee of the Privy Council, the John East Iron Works case which has been reviewed from time to time in the LABOUR GAZETTE was returned to the Saskatchewan Court of Appeal for a rehearing.

On April 4, 1949, the Appeal Court quashed the orders of the Saskatchewan Labour Relations Board requiring the company to reinstate five employees in their employment and to pay each of them \$200.80, the monetary loss suffered by reason of their dismissal. In delivering the judgment, Mr. Justice MacDonald held that the Court could set aside the Board's order as there was an error in law in the Board's assessment of the monetary loss suffered by the employees.

The Labour Relations Board's orders for reinstatement were made after the United

Steel Workers of America, Local 3493, complained that the company had been guilty of unfair labour practices under the Saskatchewan Trade Union Act. The Board found that the company had discriminated against each of the five employees in regard to the tenure of their employment with a view to discouraging membership in or activity for the trade union. The company applied for a writ of *certiorari* to remove or quash the Board's orders.

His Lordship briefly reviewed the two previous decisions given on this case, by the Saskatchewan Court of Appeal (L.G., 1948, p. 60) and by the Judicial Committee of the Privy Council (L.G., 1948, p. 1441). On December 15, 1947, the Court of Appeal quashed the Board's orders, holding that Section 5 (e) of the Trade Union Act which purported to give the Board power to make orders for reinstatement was *ultra vires* of the Legislature of Saskatchewan since it was

legislation setting up a Supreme, District or County Court or a tribunal analogous thereto, the judges and members of which are not appointed by the Governor General of Canada in Council, and as purporting to confer judicial power on a body not so appointed.

The Judicial Committee of the Privy Council, in reversing this decision, on October 13, 1948, held that such jurisdiction exercised by the Board was not *ultra vires* of the Saskatchewan Legislature. The question of the constitutionality of the Act having been established, the case was, as noted above, returned to the Saskatchewan Court of Appeal for a rehearing on the other grounds raised by the company.

The case remained to be tried on the grounds (1) that there was a fundamental error in law in the Board's assessment of the monetary loss suffered by the discharged employees; and (2) that the Chairman of the Board acted with bias in the proceedings.

In dealing with the first point, the Court noted that the Board, in giving the reasons for the issuance of its orders, stated that each employee, had he been employed continuously by the company at the regular rate of wages from May 23, 1947, when he ceased receiving wages, until the date of the decision, would have received the sum of \$200.80. "Therefore", the Board stated, "that sum represents the monetary loss suffered by each employee by reason of his discharge".

Mr. Justice MacDonald pointed out that the Board had assumed that the only question for its determination of the monetary loss suffered was the amount of wages the employee would have earned between the relevant dates, irrespective of any other consideration. This, in the Judge's opinion, clearly ignored the principle of law appli-

cable in such cases that it is the duty of a discharged employee to minimize his loss as far as reasonably possible. For all that appeared in the Board's reasons for judgment, each employee may have been otherwise employed during the period in question or might have been so employed if he had looked for employment.

After reviewing previous decisions in which the question had arisen, Mr. Justice MacDonald stated that he was of the opinion that, where an employee sought damages for wrongful dismissal, the onus of proving that the employee took reasonable efforts to obtain other employment and failed to do so, was upon the employee, and not upon the company, as the Board contended. However, he stated that the question of onus of proof did not arise in this case.

In proceedings before the Board, His Lordship considered that it was the duty of the Board to find all the material facts. Unlike proceedings in a court, in Board hearings there is no plaintiff, no defendant, or no pleadings. The Board and each of its members have the powers of a commissioner under *The Public Inquiries Act*. The Court found that the Board did not say that no evidence of other employment or of neglect to seek other employment was given or available; the Board merely applied "its self-made formula" for determining the monetary loss. Mr. Justice MacDonald said that since, under the Act, the Court "is bound absolutely by the findings of the Board", it was the duty of the Board not only to find the necessary facts but also to record them. The courts would then be in a position to determine whether the facts so justified the Board's conclusion. In this case the Board should have considered all questions that might affect the quantum of the monetary loss.

The Board contended that the Court was bound by the findings, both as to law and fact, of the Board. The company argued that the Court is bound by the findings of fact, but not by the findings of law. His Lordship reviewed many previous decisions in which a similar point was at issue, and concluded:—

I am therefore clearly of opinion that this Court can set aside the order in question herein, as there is an error in law apparent on its face.

This conclusion of the Court was based on the assumption that the Board had jurisdiction to find the amount of the monetary loss suffered by the discharged employee. Mr. Justice MacDonald questioned this assumption. He pointed out that although the Board is empowered to make an order requiring an employer to pay a discharged employee the monetary

loss suffered by him, it is not expressly stated in the Act that the Board can fix or determine the amount of such loss. In the Privy Council decision, it was stated that the jurisdiction of the Board under Section 5 (e) of the Act "is not invoked by the employee for the enforcement of his contractual rights; those whatever they may be, he can assert elsewhere". Mr. Justice MacDonald continued:—

It seems to me that this means that while the Board may require an employer to pay the monetary loss suffered by a discharged employee, yet, in order to fix, determine, or recover the amount thereof, the employee must have recourse to the Courts.

This interpretation, he considered, was consistent with the Privy Council's view that the Board's jurisdiction does not conform to that possessed by a superior, district or county court.

The Court then dealt with the second ground on which the company based its application for quashing the Board's orders, namely the alleged bias of the Chairman of the Board. Mr. Justice MacDonald found that the facts stated did not, in his opinion, show any bias on the part of the Chairman. With respect to the company's contention that the Chairman had shown bias in producing certain evidence at the hearing before the Labour Relations Board, the Court was of the opinion that it was the duty of the Board to inquire into and find all the facts necessary to the determination of the questions before it.

Mr. Justice MacDonald made mention of the third ground raised by the company in its application to the Court; namely the question of the jurisdiction of the Board to make an order. His Lordship stated that there is no provision in the Act forbidding an employer to discharge an employee. He pointed out that from certain provisions in the Act regarding unfair labour practices and powers of the Board to order reinstatement and payment of wages it might be argued that by necessary implication the discharge of an employee is contrary to the Act. At common law, however, if rights cannot be conferred by implication, neither can they be taken away. His Lordship gave no decision on this point because he had already found the orders of the Board bad for other reasons.

In quashing the orders without the actual issue of a writ of *certiorari*, His Lordship awarded the Board costs except the costs of the constitutional issue which, by the Privy Council decision, were awarded to the company. *In re the Trade Union Act, 1944, John East Iron Works Ltd., v. Labour Relations Board of Saskatchewan, et al.* (No. 3) (1949) 1 W.W.R., 842.

\* \* \*

On May 19, 1949, the Labour Relations Board applied to the Saskatchewan Court of Appeal for leave to appeal this decision to the Supreme Court of Canada. The Board contended that leave to appeal should be granted because the judgment dealt with matters "of great public importance".

Chief Justice Martin, however, recalled that the Chairman of the Board in a statement for publication had previously referred to the two points of the case on which the Court of Appeal ruled as of "decidedly minor consequence". Further, His Lordship stated he could not agree with the Board's argument that the Court should assume that other matters, in addition to the wages each employee would have received, had been considered by the Board. No notice had been taken by the Board of the evidence concerning at least one employee that he had earned certain wages during the period of dismissal. The Judge affirmed that the Board's orders were bad on the face of them, and dismissed the application to appeal with costs. *In re Trade Union Act, 1944, John East Iron Works Ltd. v. Labour Relations Board of Saskatchewan (No. 4)* (1949) 2 W.W.R., 39.

\* \* \*

On June 24, 1949, the Supreme Court of Canada dismissed an application by the Saskatchewan Labour Relations Board for leave to appeal the Court of Appeal's decision.

***Court finds that Saskatchewan Labour Relations Board failed to take proper steps to determine majority support of union seeking certification—Board order quashed.***

The Saskatchewan Court of King's Bench, on July 20, 1949, quashed an order of the Saskatchewan Labour Relations Board directing an employer to bargain collectively with a certified bargaining agent. The Court's ruling was based on the manner in which the Board conducted a hearing in reaching its decision.

A taxi-cab company in Regina brought the issue before the Court on the grounds that the Board did not allow them a fair opportunity to contradict the evidence on which the Board based its certification of the union as the bargaining agent of the company's employees, and that the Board was biased in favour of the union.

Mr. Justice Brown in his judgment referred first to The Saskatchewan Trade Union Act, 1944, Section 15, which provides that:—

There shall be no appeal from an order or decision of the board under this Act, and the board shall have full power to determine any question of fact necessary

to its jurisdiction, and its proceedings, orders and decisions shall not be reviewable by any court of law or by an *certiorari*, *mandamus*, prohibition, injunction or other proceeding whatsoever.

He pointed out that while the Board in the performance of its duties, even those of a judicial character, is free to proceed informally and may adopt a system of procedure which does not conform to the usual practice of the courts of law, there is an obligation on the Board "to act strictly within the ambit of its jurisdiction and to see that in the conduct of its work within the ambit of its jurisdiction it acts in fairness to all parties concerned, free from bias and partiality". Notwithstanding the section of the Act quoted above, the courts may interfere where the Board in the conduct of its work fails to act fairly, impartially and without bias. In support of this view, His Lordship cited several prior judgments and quoted Lord Loreburn in *Bd. of Education v. Rice* (1911), A.C. 179:—

Comparatively recent statutes have extended, if they have not originated, the practice of imposing upon departments or officers of State the duty of deciding or determining questions of various kinds. In the present instance as in many others, what comes for determination is sometimes a matter to be settled by discretion, involving no law. It will, I suppose, usually be of an administrative kind; but sometimes it will involve matter of law as well as matter of fact, or even depend upon matter of law alone. In such cases the Board of Education will have to ascertain the law and also to ascertain the facts. I need not add that in doing either they must act in good faith and fairly listen to both sides, for that is a duty lying upon every one who decides anything. But I do not think they are bound to treat such a question as though it were a trial. . . . They can obtain information in any way they think best, always giving a fair opportunity to those who are parties in the controversy for correcting or contradicting any relevant statement prejudicial to their view. Provided this is done, there is no appeal from the determination of the Board. . . . The Board is in the nature of an arbitral tribunal, and a Court of law has no jurisdiction to hear appeals from the determination either upon law or upon fact. But if the Court is satisfied either that the Board have not acted judicially in the way I have described, or have not determined the question which they are required by the Act to determine, then there is a remedy by *mandamus* and *certiorari*.

There was no lack of jurisdiction in the present case, since the Board clearly has authority under the Act (s. 5 (b)) to make an order "determining what trade union, if any, represents a majority of employees in an appropriate unit of employees". The complaint related to the conduct of the inquiry, which the Board was called on to make in deciding whether the union applying for certification represented a majority of the employees of the company.

According to the affidavits filed by the company, and the union (the latter being a statement made by the Vice-Chairman of the Board in support of the Board order and describing the Board's practice and procedure), the steps leading up to certification of the union were found to be as follows: On July 26, 1948, the union applied to the Board for certification, claiming that it represented a majority of the employees. The company filed a reply with the Board, stating that the majority of these employees did not desire the applicant to be certified, and had signed union cards under false representations. The Board held a hearing on August 13, 1948, at which 12 of the 19 employees of the company testified. They stated

that they had been approached individually and one at a time, out of the hearing and presence of any of their fellow drivers employed by the firm, by one Jones, acting on behalf of the union, who tried to persuade them to join the union by telling each one of them that all the rest of the drivers had already joined up and by threatening them individually that if they didn't also join, then they would lose their employment . . .

The result of the hearing was that the union withdrew its application at the suggestion of the Board.

On January 26, 1949, the union made a further application to the Board claiming a majority of employees and filing "dues authorization cards" in support. The company filed a reply recalling the circumstances surrounding the previous application and stating further "The company now has some evidence that this union has, through its agents, renewed their activities along the same lines, using threats that the men would lose their jobs if they didn't sign up with the union, in addition to the tactics already sworn to before the Board". The application came before the Board for hearing February 16, 1949. The Chairman of the Board stated that the union's case was already before the Board by reason of the material (union cards) which had been filed by the union.

It is the practice of the Board, according to the statement of its Vice-Chairman, that the names of the initial applicants authorizing the union to act in any application for certification of a union requested on their behalf be not disclosed to the employer or the public and are a confidential record of the Board, but in those cases where some question has been raised by an interested party on an application for certification it is the practice of the Board to hear such representation and any reply that any other interested party might wish to make to it in public. The company was accordingly given no opportunity of knowing what the

evidence filed by the union was, but had the privilege of making representations to the Board at the hearing and of bringing witnesses or filing affidavits.

The company's counsel asked that all the drivers be called before the Board to tell their own story, or, in the alternative, that the Board conduct a vote under The Trade Union Act. The Board was not prepared to take either of these steps, but indicated that it was ready to hear any evidence the counsel could produce that there had been duress and misrepresentation by the union's agents. The counsel obtained an affidavit from one of the company's employees to be filed with the Board on condition that the identity of the employee be revealed only to the Board. The counsel claimed that the Board should accept this affidavit in the same way as it had accepted evidence from the union. The Board would not accept the affidavit as evidence unless it was made available to the union so that any issue raised might be answered, and voted unanimously for the certification of the union. The order to the company to negotiate automatically followed.

In discussing the manner in which the Board conducted the hearing, Mr. Justice Brown said:—

The Board, under the circumstances of this case, was called upon "to have a hearing" for the purpose of "determining" whether or not a majority of the employees of the company wished to have this union certified as their bargaining agent. In reality there was no hearing within the meaning of the word. There was an argument but that was all. The burden of proof was on the union to establish the fact that a majority of the men desired to be unionized but no evidence of any kind was given at the so-called hearing.

To treat union cards as confidential and as evidence in the case, and to reject the affidavit brought forward by the company, savoured too much of bias and partisanship, His Lordship said. Furthermore, since there was some evidence that the union cards did not truly represent the wishes of those signing them this was a case where the ballot should have been used as the simplest, fairest and safest way of settling the matter.

I find myself compelled to say that in the light of the material before me the Board, throughout this so-called hearing, utterly failed to display evidence of good faith and fairness and impartiality to either the company or its employees. The Board appeared to act as if it were in league with the union and was determined to unionize the employees whether or not the company or a majority of the employees desired such a result.

The court accordingly quashed the Board's order directing the company to negotiate

with the union. The company was awarded the costs of the action. *Capital Cab Ltd. v. Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 186.* [1950] 1 D.L.R., 184.

\* \* \*

An application of the Saskatchewan Labour Relations Board for an extension of time to appeal this decision was dismissed on September 7, 1949.

***U.S. United Mine Workers Union not guilty of contempt charges. Government's contention that union did not take appropriate action to stop the strike held unproved.***

On March 2, 1950, Judge R. B. Keech in the Federal District Court, Washington, D.C., ruled that the international union, the United Mine Workers of America, was not guilty of civil or criminal contempt of court. The Court found that the United States Government had failed to prove its charge that the union had "knowingly, wilfully, wrongfully and deliberately disobeyed and violated" a temporary restraining order issued by Judge Keech on February 11, 1950, enjoining the UMW from continuing the coal strike.

[On February 9, the Federal District Court, on the petition of the National Labour Relations Board for an injunction, held that certain demands of the union constituted unfair labour practices. These demands were: (1) a closed or union shop before the union has won a union-shop authorization election in accordance with Taft-Hartley Act requirements; (2) a welfare fund whose benefits are payable to union members only; (3) that union members have to work only when they are "willing and able" to do so and need not work during "memorial periods". On February 11, Judge Keech accordingly issued an injunction, under the Labour-Management Relations Act of 1947, restraining the union from insisting on these demands by strike action and directing the union "to take all appropriate action . . . to ensure that . . . all members of the said union . . . cease the said strike to return to their employment. . . ." The union sent telegrams and letters and other communications to its district and local branches and members, instructing the miners to return to work. When the miners failed to return to the coal pits, the Government started contempt of court action against the union. On February 20, on petition from the Government, Judge Keech issued a "show cause" order directed at the union, giving it until February 24 to clear itself of the

contempt charge by getting the striking miners back to work. However, the miners remained away from work, refusing to return without a contract. The injunction which was issued for a ten-day period was extended for a further 10 days, until March 3.]

The Court reviewed the Government's specific charges against the union; (1) that after the restraining order, the union did not bring the strike in the bituminous coal mines to an end, nor did the union cease from engaging in, permitting or encouraging the strike; (2) that the union, acting through its officers, agents, servants and employees did not take all appropriate action to stop the strike; (3) that the union caused and engaged in the strike, interfered with and affected the orderly continuance of work and was engaging in a course of action which was interfering with the court's jurisdiction and which would obstruct the determination of this case by the court; (4) that the strike, which began on February 6, continued uninterrupted until the time of the petition; and (5) the union violated the temporary restraining order of February 11 and is, for this reason, in contempt of court.

The Judge pointed out that the defendant in a criminal contempt proceeding has the same protection as the defendant in any other criminal case. He is presumed innocent until proved guilty and the party seeking to convict him must prove him guilty beyond a reasonable doubt. In civil contempt cases, proof need not be beyond a reasonable doubt but guilt must be proved *by clear and convincing evidence* and not by a mere preponderance of evidence.

The court concluded, after applying these principles, that the Government had failed to prove its charges that the union had knowingly, wilfully, wrongfully, and deliberately disobeyed and violated the temporary restraining order.

The Judge said the record showed that approximately 370,000 members of the union were on strike and continued to strike up to the time of the Court hearing. He referred to the 1948 contempt case against the UMW in which the union was found guilty on the theory that "as long as a union is functioning as a union it must be held responsible for the mass action of its members" (L.G., 1948, p. 554). However, in the present case, the judgment stated,

the facts disclosed by the record in this case do not prove—either beyond a reasonable doubt or by clear and convincing evidence—that there has been wilful contempt of this court's order on the part of the union, by the action which it has taken or by the action which it has failed to take.

He pointed out that the difference between the 1948 contempt case and the present proceedings is that, in the former case, it was shown that the union "had made no attempt to restore normal production". He cited a statement of the United States Court of Appeals for the District of Columbia that the union would not have been found guilty of contempt in the 1948 case had its president sent back-to-work telegrams earlier than he did.

The judgment stated that, in the present case, after the Court's order, telegrams, letters and other communications had been sent out by the union to its district and local branches and members instructing the miners to return to work. If such communications are to be ruled as constituting only a token compliance with the Court's order for action on the part of the union, then clear and convincing evidence must be presented to controvert the apparent good faith of such communications. Mere suspicion based on failure to obtain results is not enough. Further, there was no attempt made in this case to disprove the testimony that was made on behalf of the union that no union funds were used to aid striking miners since the restraining order was issued.

The Judge pointed out that the record showed only one affirmative action that the union might have taken, but omitted to take—namely the revocation of the charters of local unions which notified union headquarters that they had voted not to comply with the back-to-work order. Such a sanction was authorized by the union's constitution. In the Judge's opinion, however, this omission was not sufficient proof of either criminal or civil contempt nor did the record show that such action by the union would have been "appropriate" within the meaning of the injunction.

Judge Keech stated that it was possible that the strike had been "ordered, encouraged, recommended, instructed, induced or in some wise permitted" by methods not appearing on the record. However,

the Court may not convict by conjecture, being bound to act only on the evidence before it, which is insufficient to support a finding of either criminal or civil contempt.

*U.S. v. International Union, United Mine Workers of America, et al. U.S. District Court, District of Columbia.*

\* \* \*

It is reported that the Attorney-General will appeal the civil contempt decision of the District Court to the Court of Appeals.

## Supreme Court Judgment on Rentals Reference

The question, "Are the Wartime Leasehold Regulations *ultra vires* either in whole or in part and, if so, in what particulars or to what extent?" was referred by the Governor in Council to the Supreme Court of Canada under Section 55 of the Supreme Court Act. The Court held hearings from January 30 to February 3 and gave its answer on March 1. All seven judges were unanimous in giving the answer "no". Each judge prepared a written statement of his reasons for decision. This report summarizes briefly the Chief Justice's decision and brings out some additional points raised by the other judges.

The Chief Justice pointed out that the answer given by the Court is not a judgment binding on the Government, on Parliament or on individuals, but it is an opinion given on the material which appears in the Order of Reference—an opinion which would, however, be likely to be followed in a contested case where the same questions arose. The Court is not expected to look to outside evidence, but may take into consideration any fact which is of common or public knowledge.

He accordingly limited himself to the situation disclosed in the Order of Reference and the different declarations which appear in the successive Acts adopted by Parliament. He found that there is no doubt that under normal conditions the subject matter of rents belongs to provincial jurisdiction. There is equally no doubt that under abnormal conditions, such as the existence of war, Parliament may competently assume jurisdiction over rents. Notwithstanding the cessation of hostilities, Parliament has authority to continue such control as it finds necessary to ensure the orderly transition from war to peace. The Leasehold Regulations are, therefore, not *ultra vires*. This opinion is in line with precedents established by the Privy Council in the *Fort Frances* case (1923) A.C. 695 and the *Japanese Reference* (1947) A.C. 87, and the Supreme Court of Canada in the *Chemicals Reference* (1943) S.C.R. 1. He quoted Viscount Haldane, in the *Fort Frances* case, as follows:—

No authority other than the central Government is in a position to deal with a problem which is essentially one of statesmanship. It may be that it has become clear that the crisis which arose is wholly at an end and that there is no justification for the continued exercise of an exceptional interference which becomes *ultra vires* when it is no longer called for. In such a case the law as laid down for distribution of powers in the ruling instrument would have to be invoked. But very clear evidence that the crisis had wholly

passed away would be required to justify the judiciary, even when the question raised was one of *ultra vires* which it had to decide, in overruling the decision of the Government that exceptional measures were still requisite.

Mr. Justice Taschereau reached the same conclusion that the problem of whether an emergency still exists is essentially one of statesmanship. He held that the door to all judicial investigations is not closed, but that it is only with great caution that the courts will intervene. In summing up, he said:—

In the present instance, no evidence of any kind has been submitted to show that the emergency has disappeared and that normal conditions are now prevailing. On the contrary, common knowledge, to which it is surely permissible to appeal in a case of this kind, and the very valuable exhibits in the record which I have usefully consulted, to test the accuracy of the statements, lead me to the irresistible conclusion that an emergency still exists as an aftermath of the war.

Mr. Justice Kerwin traced the rental control regulations from the first order made on November 21, 1941 under the War Measures Act to the most recent orders of the Wartime Prices and Trade Board made in December, 1949 under authority of The Continuation of Transitional Measures Act, as amended in 1949. He concluded that "where a war emergency has existed and Parliament has enacted legislation declaring that the national emergency arising out of war, in certain aspects, has continued and is continuing, the subject matter of the legislation must be left to Parliament if it decides that the interests of the Dominion are to be protected."

Mr. Justice Rand pointed out that in considering the situation at the end of the war, it must be kept in mind that the Regulations themselves have played an effective part in producing it. He quoted from the Australian judgment in *Dawson v. The Commonwealth of Australia* (1946):—

The fact that the Regulations have been in operation itself creates an economic condition which may reasonably be thought to require their continued operation for some further period in order to bring about a gradual return to what might be called more normal conditions, instead of exposing the community to the consequences of a sudden and abrupt creation of what may be a legislative vacuum.

The people who would be exposed to the consequences of this "legislative vacuum" would naturally look to the Government originally responsible to take or continue reasonable measures.

Mr. Justice Estey emphasized that Parliament has clearly indicated that the legislation is of a temporary character. The Dominion has been pursuing a course of gradual decontrol and when the emergency no longer exists the legislation will be completely repealed. The temporary nature of the rentals legislation, together with the fact that it deals with conditions initially connected with the war, serves to differentiate it from the two statutes (The Board of Commerce Act and The Combines and Fair Prices Act) which were held to be invalid by the Privy Council in the *Board of Commerce* case (1922), 1 A.C. 191.

"The kind of evidence necessary to establish that the emergency calling for the exercise of the federal power has 'entirely' passed away is wholly lacking," Mr. Justice Kellock stated. It had been argued by one of the respondents that such evidence was provided by the statement in the Order of Reference that on October 23, 1948 the Minister of Finance had advised the premiers of each of the provincial governments that the Dominion Government was prepared to vacate the field to any province which might decide to undertake rent control. This offer did not constitute any admission that the need for Dominion-wide control of rentals had passed. If it had developed that the problem could have been dealt with by common action agreed upon by the provinces, it might have been that any further justification for the exercise of federal legislative jurisdiction would have

ceased. It did not so develop. Had one or more of the provinces undertaken to exercise rent control within their respective limits so as adequately to form the necessary links with Dominion legislation elsewhere in Canada the powers of the Dominion Government to maintain its legislation would not have been affected, in Mr. Justice Kellock's opinion.

The contention that the rental Regulations were outside of the powers vested in the Governor in Council by the War Measures Act was dealt with by Mr. Justice Locke. The contention was based on the grounds that the rental Regulations trench upon the powers of the legislatures of the provinces to exclusively make laws in relation to property and civil rights within their boundaries. He found the Regulations clearly within the language of the Act dealing with the appropriation, disposition and use of property. He found no suggestion in the present case that the legislation is colourable in the sense that Parliament might be said under the guise of legislation to authorize measures deemed necessary for the peace, order and good government of Canada as a whole, to be attempting to usurp provincial powers in respect of property and civil rights, or in the sense that the regulations are continued in force with any such object. *In the matter of a reference to determine the validity of The Wartime Leasehold Regulations*, Supreme Court of Canada, March 1, 1950.

# UNEMPLOYMENT INSURANCE

## Annual Summary of Decisions of Umpire Under Unemployment Insurance Act

The Hon. Mr. Justice Lucien Cannon, formerly a judge of the Superior Court of Quebec, was the first Umpire under the Unemployment Insurance Act, 1940. He resigned on account of illness at the end of February, 1949, and died in the City of Quebec, on February 14, 1950. During his term of office, he rendered 438 decisions on appeals and performed his duties with great distinction.

The late Judge Cannon was succeeded by the Hon. Mr. Justice Alfred Savard, also a judge of the Superior Court of the Province of Quebec, on April 12, 1949.

For the fiscal year ending March 31, 1950, the Umpire handed down 129 decisions (126 benefit cases and 3 coverage cases). Benefit cases appeals were from disqualification under the following sections of the Act:—

Voluntary leaving employment (Section 41 (1)).....	24
Refusal to apply for or accept employment (Section 40 (1)).....	23
Not deemed to be unemployed (Section 27 (1) (a)).....	17
Labour dispute (Section 39).....	16
Not available for work (Section 27 (1) (b)).....	14
Misconduct (Section 41 (1)).....	8

Not capable of work (Section 27 (1) (b)).....	3
The remainder (Sections 28, 29, 31, 36 (6) of the Act and seasonal regulations).....	21

Most of these cases were from the Provinces of Ontario and Quebec. Two were from the Province of Newfoundland.

Throughout the year, a number of oral hearings were presided over by the Umpire at which officers of various interested unions and officials of the Commission as well as claimants and their legal counsels were present. One important hearing was in connection with the case (CU-B 531) of a claimant who had lost his employment by reason of a stoppage of work due to a labour dispute between the Canadian Seamen's Union and the East and West Coast Canadian Ship Owners (L.G., April, 1950, p. 534). It served as a test case for a large number of seamen who had lost their employment by reason of the stoppage of work.

Another important case was that of Carmelle Ainsley and Florence Baron, *et al.* (CU-B 540) arising out of a labour dispute at the Paton Manufacturing Co. of Sherbrooke, P.Q. This case is given in this month's LABOUR GAZETTE, below.

## Selected Decisions of Umpire Under the Unemployment Insurance Act

*The following case, involving claims for benefit during a labour dispute, is considered to be of sufficient general interest to warrant the publication of the decision practically in full.*

**Held that in a labour dispute at the Paton Manufacturing Co. of Sherbrooke, P.Q., all the employees, other than the members of the weave room, who lost their employment between August 16, 1948, and September 1, 1948, by reason of a partial stoppage of work due to the said dispute, were entitled to benefit from the date of their claim to September 1, 1948, the date on which the partial stoppage of work became a total one; that as of September 1, 1948, all the employees covered by the bargaining agreement were subject to disqualification under Section 39 of the Act, for the duration of the stoppage of work.**

### DECISION:

The claimant filed a claim for benefit on September 1, 1948. She reported therein that she worked as a spinner in the spinning department of the Paton Manufacturing Company, Sherbrooke, P.Q., from December, 1944 to August 31, 1948, and that she had lost her employment on account of "lack of work due to strike in weave room department."

According to the submissions, the Paton Manufacturing Company in August, 1948, had in its employ 468 persons, 368 of whom were members of the "Association Nationale des employes de la Paton de Sherbrooke."

\* Of these cases, 52 were Benefit Cases and 3 were Coverage Cases. An additional 2 cases were referred back to Courts of Referees for rehearing.

The factory is divided into 26 departments, one of which is the weave room. In the weave room there were 88 employees, 42 of whom were weavers and 12 others loom fixers.

The company and the Association on September 22, 1947, entered into an agreement which provided, *inter alia*, for the prompt establishment, of a production bonus plan in certain departments of the company where such plan was not already in operation. This agreement covered all the employees, except those paid by the week or by the month, the overseers, heads of departments, office staff and permanent guards, and was to expire one year later.

Irrespective of the dissatisfaction expressed by the weavers, the company decided to put the bonus plan into effect in the weave room, on a trial basis, as from August 16, 1948. As a result thereof, the weavers, on that date, refused to work under the new system and all but one walked out.

Following the weavers' action and in consequence thereof, a partial stoppage of work took place and from August 16 to September 1, 1948, the company was forced, due to the interdependence of the different departments, to lay off about a fifth of its employees. On September 1, 1948, a picket line was established and a full stoppage of work took place.

Upon the evidence before him, the Insurance Officer disqualified the claimant from the receipt of benefit under Section 39 (1) of the Act.

From this decision of the Insurance Officer, the claimant, on September 30, 1948, appealed to a Court of Referees, which heard the case in Sherbrooke, P.Q., on November 5, 12 and 13, 1948. A certain number of employees associated with the claimant in this appeal, as well as representatives of the company and officials of the union, attended the hearings. The

Court, except in the case of four claimants, unanimously reversed the decision of the Insurance Officer . . .

From the Court of Referees' decision whereby they removed the disqualification previously imposed upon the claimant and others, the Insurance Officer appealed to the Umpire on November 26, 1948.

From the decision of the Court of Referees disqualifying four claimants, the union also appealed to the Umpire on December 7, 1948.

Verbal representations were made to me, at an oral hearing held in Sherbrooke, P.Q., on June 20, 1949, by Mr. T. L'Esperance, solicitor for "l'Association nationale des employes de la Paton" and by the Commission's representatives, Lt.-Col. H. S. Relph, K.C., Chief Claims Officer and J. D. Durocher, one of his assistants.

Extensive briefs were submitted by Lt.-Col. Relph (July 11, 1949) and Mr. L'Esperance (December 20, 1949). The Canadian Congress of Labour, under the signature of Mr. N. S. Dowd, also made written representations (August 16, 1949), pointing out that it was refraining "from specific references to the appeal under review as it wished merely to urge that the Umpire's decision be limited to the case immediately involved, rather than be made a matter of general application."

The relevant section of the Act reads as follows:—

39 (1) "An insured person shall be disqualified from receiving benefit if he has lost his employment by reason of a stoppage of work due to a labour dispute at the factory, workshop or other premises at which he was employed unless he has, during the stoppage of work, become *bona fide* employed elsewhere in the occupation which he usually follows, or has become regularly engaged in some other occupation; but this disqualification shall last only so long as the stoppage of work continues.

(2) An insured person shall not be disqualified under this section if he proves

(a) that he is not participating in, or financing or directly interested in the labour dispute which caused the stoppage of work; and

(b) that he does not belong to a grade or class of workers of which immediately before the commencement of the stoppage there were members employed at the premises at which the stoppage is taking place any of whom are participating in, financing or directly interested in the dispute.

(3) Where separate branches of work which are commonly carried on as separate businesses in separate premises are carried on in separate departments on the same premises, each department shall, for the purpose of this section, be deemed to be a separate factory or workshop."

It is not disputed that the employees of the Paton Manufacturing Company whose cases are before me "lost their employment by reason of a stoppage of work due to a labour dispute at the factory at which they were employed", in the course of the events which took place at that Company in the latter part of the summer 1948, namely:—

(a) The employees, covered by the bargaining agreement, who were laid off between August 16 and September 1, 1948, as a consequence of the weavers' action on August 16, 1948, when the latter refused to work under the new conditions as set up by the employer thereby "appreciably interrupting both in substance and duration an operation which otherwise would have continued to be carried out;"

(b) The employees, covered by the bargaining agreement, who were not laid off before September 1 but did not return to work on that date due to the establishment of a picket line.

In order to determine the merit of these appeals, the character of the labour dispute which existed at the Company during the summer and fall of 1948, has first to be considered.

It is contended by the Insurance Officer that, from the start, the labour dispute was not merely the result of a disagreement between the employer and the weavers as to the introduction of the bonus plan in the weave room, but was the result of a disagreement between the employer and the bargaining agent, "l'Association Nationale des employes de la Paton", representing all the employees covered by the agreement, whether they were members of the union or not, as to the very existence of the bonus plan as a whole at the plant. In his opinion, the weavers' strike was only one aspect of the labour dispute, it being a strategic move on the part of the Association which, "if it wanted to bring the employer to its point of view, without too

much inconvenience to its members and to the workers, had everything to gain by not insisting on certain aspects of the labour dispute, especially those which could have established the interest and the participation of all the employees."

In support of his contention the Insurance Officer points out that the agreement which was to expire on September 22, 1948, was denounced by the employees at a general meeting held on August 1, 1948, and that clause 12 of that agreement, dealing with the establishment of the bonus plan in various departments, was excluded from the new agreement proposed by the Association.

He further draws attention to a statement of the employer which appeared in the press on August 18, 1948, that "facing the failure of the bonus plan as a whole the company was forced to put the plan in operation in the weave room."

This contention of the Insurance Officer is not without interest.

However all the documents on file pertaining to the negotiations carried on before August 16, between the employer on the one part and the weavers and the officials of the Association on their behalf on the other part, concern a conflict between the weavers and the company only as to the introduction of the bonus plan in the weave room. Furthermore the following letter, dated August 25, 1948, addressed by Mr. Goddard manager of the company to Mr. Fortier, president of the Association appears on record:—

"Dear Sir:

We had decided to hold our first meeting on Thursday, the 26, in order to negotiate a renewal of our agreement which expires on September 22 next.

In view of the present circumstances which are due to the stoppage of work and the weavers' strike, we find it impossible to meet you on the 26; but we are ready to meet you as soon as the present difficulty is settled and the mill is again in full operation."

It would seem therefore that the employer, as late as August 25, 1948, drew a line of demarcation between his conflict with the weavers and future negotiations to be carried on for the purpose of the renewal of the agreement which had been denounced on August 1.

A short time later, that is on August 31, 1948, Mr. Fortier informed Mr. Goddard that he had been requested by some of the weavers to call a general meeting on that date of all the members of the Association and that in his opinion a general strike was to take place the following day. A general

meeting in fact took place on the night of August 31, but the evidence is not too clear as to who attended that meeting and as to whether or not a strike vote was taken; in any event, early the next morning a picket line was established and no one except a few officials of the company was admitted to the premises.

The evidence also shows that on September 3, 1948, Mr. Fortier as president of the Association and Mr. Gervais as spokesman for the weavers each signed a separate document guaranteeing that no member of the Association or "picketeers" would prevent the operation of the office of the company and that all the members of the administrative staff would have free access to the offices for "the duration of the picketing in relation to the existing conflict between the company and the employees of the said company." (Underlining added.)

It is further indicated that the two following resolutions were unanimously adopted on September 28, 1948, "at a special meeting of the employees of the Paton Manufacturing Company, which had been called at the request of the Provincial Conciliator":—

- (a) "That the bonus plan existing at the mill of the Paton Mfg. Co. Ltd. of Sherbrooke, as well as the new plan submitted to the weavers be refused as actually denounced in the renewal of the agreement;"
- (b) "That the government conciliator Mr. Ubald Brunet, here present be asked to transmit the following proposal to the Paton Mfg. Co. Ltd. of Sherbrooke:

The employees of Paton are ready to return to work on the two following conditions:

- (1) return to work with the previous conditions;
- (2) negotiate the renewal of the agreement and, failing an understanding, that the established procedure of the Quebec Legislation be followed."

Finally according to clause (1) of the arrangement made between the Association and the employer on November 2, 1948, the Association undertook on that date "to end the strike" as soon as the company accepted certain propositions affecting all the employees.

On November 3, 1948, the company resumed operations.

After having carefully considered all the foregoing evidence, much of which was not apparently, before the Court of Referees, I do not feel that I can subscribe to the

Insurance Officer's contention that the labour dispute, from the start, had assumed the character which he suggests. However, if it is to be presumed that the labour dispute had during its initial stage involved the weavers and the employer only, there can be no doubt that as of August 31, the said labour dispute was of such breadth that it involved all the employees covered by the bargaining agreement and that the question of the bonus plan as a whole which apparently had not, prior to August 31, 1948, been a cause for dispute became on that date part and parcel of the existing conflict at the Paton Manufacturing Company.

It now remains to be determined in the light of the above, what is the position under the Act of all the claimants whose cases are before me.

I shall deal first with the case of the employees who lost their employment, due to the weavers' action, between August 16, 1948 and September 1, 1948. These employees can be classified into two groups: (1) The members of the weave rooms, other than the weavers; and (2) The members of other departments.

In relation to the first group, the employer has emphatically stated that their conditions of work stood to be affected by the introduction of the bonus plan in their department. Furthermore, it would appear that in all the other departments where the bonus plan had been introduced the tasks of the so-called "indirect employees" had to be redistributed and their wages increased accordingly. Under the circumstances, I consider that all the employees of the weave room were directly interested in the labour dispute between the weavers and the employer and that, therefore, they were subject to disqualification under subsection 1 of Section 39 of the Act.

In so far as the employees of the second group are concerned, their position under the Act has to be studied in relation to the aspect of the labour dispute and the stoppage of work resulting therefrom before and on September 1, 1948.

Before September 1, there is no evidence that "they participated in or financed the labour dispute or belonged to a grade or class of workers some of whom participated in or financed the labour dispute." Furthermore, having come to the conclusion that the stoppage of work before that date, was due to a labour dispute which at that stage was between the weavers and the employer on the question of the introduction of the bonus plan in the weave room only, it follows that the employees of this second group cannot be considered as either having been directly interested or having belonged

to a class of workers some of whom were directly interested in the dispute as then existed.

On September 1, 1948, their case was the same as that of the other employees, covered by the bargaining agreement, who had not already been laid off and who did not return to work on that date due to the establishment of a picket line. The partial stoppage of work became on that date a total one due to the change in character of the labour dispute and all the employees covered by the bargaining agreement, other than the members of the weave room, who had until then, only, to use an expression of the union's solicitor, a "negative interest" in the labour dispute, had on that date, irrespective of the fact that they might or might not have participated in the picket line and regardless of any finding which

might be given on the theories and fine distinctions drawn in the different briefs as to the interpretation of the terms "grade" or "class", a positive and direct interest as the question of the bonus plan became on August 31, the main feature of the labour dispute.

Under the circumstances, the appeal of the Insurance Officer is allowed and the appeal of the union is dismissed with the exception that the employees, other than the members of the weave room, who were laid off between August 16 and September 1, 1948, are entitled to benefit for that period, provided they met all the other requirements of the Act.

ALFRED SAVARD,  
*Umpire.*

Dated at Ottawa, Ont., this 1st day of February, 1950.

## Seasonal Regulations During Supplementary Benefit Periods

The Unemployment Insurance Act as amended February 28, 1950, provides for the payment of supplementary benefit to specified classes of insured persons during the winter months (February 28 to April 15, 1950; January 1 to March 31 in subsequent years). These classes include those who have exhausted or have insufficient contributions to qualify for ordinary benefit. Supplementary benefit is payable provided all the other conditions for entitlement to ordinary benefit are fulfilled, for example, as to availability and capability, and provided no disqualification applies.

Seasonal regulations impose a seasonal disqualification on claimants who carry on seasonal occupations in certain industries, including inland navigation and stevedoring and lumbering and logging east of the Rocky Mountains. The application of such

seasonal disqualification would nullify the effect of supplementary benefit in the case of workers laid off from these industries. P.C. 1178 has, therefore, amended the seasonal regulations by providing

- (1) that a worker otherwise classed as seasonal will not be subject to disqualification during a supplementary benefit period, if he is in any of the specified classes eligible for supplementary benefit;
- (2) that for any days on which the seasonal disqualification is lifted, and on which he is entitled to benefit, such benefit shall be paid only at the rate applicable for supplementary benefit, which is approximately 80 per cent of the rate for ordinary benefit.

## MEETING OF NATIONAL EMPLOYMENT COMMITTEE

The National Employment Committee held its regular quarterly meeting in Ottawa on January 19 and 20, 1950. The most important item under discussion at this session was the increase in the number of unemployed throughout the country.

This problem was studied at great length by the National Committee and it was recommended that the Government be urged to undertake immediately such public works programs as would engage the

largest number of unemployed and also that sufficient funds be provided to take care of the distressed sections of the country which it believed should have immediate assistance to pull through the winter.

It was brought out by the Committee that Unemployment Insurance was now proving its value as over 200,000 of those who were unemployed were receiving assistance from the Unemployment Insurance Fund. The Committee, however, was also

concerned with the situation of those people who were not in receipt of such assistance and recommended works projects or some alternate subsidy payments for these persons.

The Chairman, Judge W. J. Lindal of Winnipeg, stressed the fact that seasonal unemployment in Canada caused undue hardships to thousands of families every year and recommended that the National Committee devote considerable time and study to this problem and endeavour to arrive at some concrete solution for alleviating it to some extent.

Many resolutions emanating from the five Regional and eighty Local Employment Committees throughout the country were dealt with. These resolutions pertained to various employment and unemployment problems in various sections of Canada, such as unemployed employables who cannot find work, the increasing problem of finding employment for Canada's older workers, seasonal regulations relating to certain industries, hardships imposed by reason of the non-compensable day, the lack of suitable vocational training programs for unemployed young men in Ontario, also several from various Local Committees recommending public works programs to assist in the alleviation of serious unemployment situations in their own areas, and others.

It was also recommended that all Departments of Government should notify the National Employment Service of all employment matters and vacancies under their jurisdiction, other than those filled through the Civil Service Commission. This was directed particularly to those Departments, such as Public Works, Transport, and National Defence, which were doing considerable building and construction.

Increased publicity for the Unemployment Insurance Commission and National Employment Service was also recommended particularly in the releasing of figures showing the number of unemployed registered and the amount of money paid out by Local Offices in Unemployment Insurance Claims in their own communities, etc.

In addition to Judge W. J. Lindal of Winnipeg, the Chairman, the other members in attendance were:—

T. D. Anderson, Vice-Chairman, General Secretary, Canadian Legion, Ottawa.

J. B. White, Vice-President, The Aluminium Co. of Canada Ltd., Montreal.

Aubrey L. Lott, Manager, Industrial Relations, The Steel Co. of Canada, Hamilton.

A. R. Mosher, President, Canadian Congress of Labour, Ottawa.

Carl E. Berg, Vice-President, The Trades and Labour Congress, Edmonton, Alta.

Geo. S. Hougham, General Manager, Canadian Retail Federation, Toronto.

R. A. Stewart, Canadian Federation of Agriculture, Almonte.

R. E. G. Davis, Executive Director, The Canadian Welfare Council, Ottawa.

Mrs. G. D. Finlayson, Corresponding Secretary, National Council of Women, Ottawa.

E. Norman Mitchell, Secretary, UIC, Ottawa.

The meeting was attended also by Mr. J. G. Bisson, Chief Commissioner, Mr. R. J. Tallon, Commissioner, Mr. W. K. Rutherford, Director of Employment Service, Unemployment Insurance Commission, Ottawa, and Col. P. J. Philpott, Special Adviser, Department of Veterans Affairs.

It was agreed that the next meeting be held in Ottawa, April 27, 28, 1950.

## Unemployment Insurance Statistics, February, 1950

The monthly report prepared by the Dominion Bureau of Statistics on operations under the Unemployment Insurance Act states that during the month of February, 1950, 125,511 (125,300 excluding Newfoundland) claims were filed at local offices of the Unemployment Insurance Commission. While this number is greater than the total filed in February, 1949 (108,759), it represents a considerable decline from the level of 196,624 (196,230 excluding Newfoundland) claims filed in January, 1950.

\* See Tables E-1 to E-7.

Of the total claims filed in February, 1950, 109,282 (109,094 excluding Newfoundland) were initial and renewal claims representing mainly new cases of unemployment among insured persons. This represents a slight increase over the February, 1949 figure of 93,463 but a very considerable decline from the January, 1950 total of 182,053 (181,686 excluding Newfoundland).

Ordinary claimants on the live unemployment register on the last working day of February, 1950, totalled 286,163 (285,708 excluding Newfoundland) as compared to 297,238 (296,992 excluding Newfoundland) for the last working day of January, 1950

and 208,818 for the last working day of February, 1949. As a measure of the volume of unemployment on the last working day of the month the above data indicate an improvement in the current situation but some increase as compared with the same point of time last year.

Persons on the live unemployment register by number of days continuously on the register indicates duration of unemployment among those claiming benefit and reflects the changing circumstances affecting claimants. Thus in February, 1950, although the total number of persons in the live register declined to 304,023 from 313,173 in January, 1950, the number on the live register more than 6 days (that is, the group consisting mainly of beneficiaries) rose from 241,292 persons to 251,603 persons.

Claims handled at adjudicating centres and Courts of Referees in February, 1950, totalled 150,327. Of the 149,230 claims adjudicated 121,878 were allowed, 25,767 were disallowed and disqualified, and 1,585 represented special requests not granted. Claims handled by Courts of Referees numbered 1,097.

Chief reasons for non-entitlement to benefit in February, 1950, were: "insufficient contributions while in insurable employment" 14,566 cases; "voluntarily leaving employment without just cause" 3,707 cases; "not unemployed" 2,959 cases and "discharged for misconduct" 928 cases.

Persons commencing receipt of benefit in February, 1950, numbered 112,745 (112,552 excluding Newfoundland) as compared to 132,619 (132,546 excluding Newfoundland) in January, 1950, and 83,110 in February, 1949. Thus although the number of persons commencing benefit in February is less than

in January this has not yet resulted in a decline in the number of beneficiaries as measured roughly by persons on the live unemployment register more than 6 days mentioned above.

The lag in the reduction in the number of those commencing receipt of benefit, that is, representing additions to the beneficiary group, and benefit payments is evidenced by the fact that in February \$13,605,340 was paid in respect of 5,585,337 days (\$13,589,191 in respect of 5,579,452 days excluding Newfoundland) as compared to \$11,781,142 for 4,925,381 days (\$11,773,540 and 4,922,520 days excluding Newfoundland) in January. In February, 1949, \$8,158,903 was paid in respect of 3,734,487 days.

During the week of February 25 to March 3, 1950, inclusive, 232,359 persons received \$3,351,289 in respect of 1,376,174 days as compared to 218,963 persons, \$3,204,118 and 1,334,062 days for the week of January 28 to February 3 inclusive. Average duration and amount of benefit for the week of February 25 to March 3, was 5.9 days and \$14.42 as compared to 6.1 days and \$14.63 for the week of January 28 to February 3.

### Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending February 28, 1950 showed 3,799,707 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1949, an increase of 35,665 since January 31, 1950.

As at February 28, 1950, 226,000 employers were registered representing an increase of 665 since January 31, 1950.

# WAGES, HOURS AND WORKING CONDITIONS IN THE PRIMARY TEXTILES INDUSTRY, OCTOBER 1949\*

*Average hourly wages in the Primary Textiles Industry increased 7.4 per cent in 1949. Most mill workers were on a normal work week of 45 or 48 hours. Time and one-half was the predominant overtime rate. One week's vacation with pay after a year or less of employment was reported by most mills, with many giving an additional week with pay after five years. Over eighty per cent of the workers were paid for some of the observed statutory holidays. Sick leave with pay was provided for about half the workers in the industry. Two-thirds of all the workers were reported to be under written collective agreement.*

Average hourly wages in the Primary Textiles Industry increased 7.4 per cent during the year preceding October 1, 1949, according to preliminary calculations by the Economics and Research Branch of the Department of Labour. This raised the index of wage rates in the industry to a high of 240.7 over the base year 1939 as 100. The wage increase in 1949 was less than half that during 1948 when average hourly wages rose 17.9 per cent, the largest annual percentage increase in the ten years covered by the Department of Labour's industry indexes.

Final index numbers and detailed wage rates for selected occupations in the four major divisions of the industry will be available shortly in the seventh annual

\* This is the third in a series of annual articles, prepared by the Economics and Research Branch of the Department of Labour, presenting information on wages, hours and working conditions in the Primary Textiles Industry. The previous articles for 1947 and 1948 were published in the November, 1948 and the October 1949 issues of the *LABOUR GAZETTE*.

Detailed information on average wages and hours for selected occupations in the four major divisions of the industry will be published shortly in the seventh annual report on *Wages and Hours in the Primary Textiles Industry in Canada, October 1949*. This publication will be available on request.

Information in this article was prepared from data obtained in the annual survey of wage rates and working conditions for 1949 by the Economics and Research Branch of the Department of Labour. Employers were asked to report on certain conditions of work as well as to give, by occupation, the wage or salary rates, or straight-time earnings of employees on piece work, during the last pay period preceding October 1, 1949.

For a summary of provincial legislation on working conditions see *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

report on wages and hours in the Primary Textiles Industry for October, 1949. The four divisions of the industry represented in the above report and in the present article include the manufacture of Cotton Yarn and Cloth, Woollen Yarn and Cloth, Knitted Goods (hosiery, underwear and outerwear), and Rayon Yarn and Fabric.

Table I gives a geographical distribution of the 303 mills and 63,305 mill workers included in this analysis of the Primary Textiles Industry. The industry is predominantly located in Quebec and Ontario, with but a few mills scattered throughout the Maritime and Western Provinces. One-half of the mills surveyed were in Ontario, although more than half of the workers were in the Quebec mills. Compared with other manufacturing industries, the Primary Textiles Industry has a relatively large proportion of female workers.

One-half of the mills in this industry employed less than 100 workers each, but accounted for under ten per cent of the total mill workers. Over one-quarter of the workers were employed in ten large mills having more than 1,000 workers each.

**Collective Agreements.**—Since the first article in this series was published for the year 1947, there has been a slight increase in the proportion of workers covered by written collective agreements. Two-thirds of all the mill workers in the industry were reported to be under written agreements with 147 of the 303 textile mills. Most of these workers are represented by the Textile Workers Union of America (CIO-CCL), the National Catholic Federation of Textile Workers (CCCL) and the United Textile Workers of America (AFL-TLC). A detailed analysis of the agreements covering a large proportion of workers in the

Primary Textiles Industry is contained in another article in this issue of the *LABOUR GAZETTE* (p. 616).

**Normal Weekly Hours. Tables II and III.**—In Alberta, British Columbia, Manitoba, Ontario and Saskatchewan, there are special statutes limiting hours of work in

factories. In New Brunswick and Quebec, factories legislation places some restrictions on hours of work but these apply only to women and boys under 18, except for special restrictions by Orders in Council under the Quebec Collective Agreement Act. Under all Hours of Work Acts the

(1) Includes one mill (10 male workers) operating 47½ hours per week.

administrative authority has power to permit exceptions. In New Brunswick and Quebec the legal maximum for females and boys under 18 is 54 and 55 hours per week respectively. In Ontario the maximum is 48 hours per week, and where exemption has been granted the maximum permitted for women and boys under 16 is 60 hours. In Manitoba the maximum is 44 hours for women and 48 hours for men unless time and one-half is paid. In Saskatchewan the maximum hours of work is 44 unless time and one-half is paid. In Alberta and British Columbia the maximum is 48 and 44 hours respectively.

There has been no substantial change in the normal weekly hours of mill workers in the Primary Textiles Industry. Large numbers of male workers were on a 45-hour

5- or 5½-day week and on a 48-hour 6-day week. More than one-third of the female workers were on a 45-hour week, with the largest proportion working 5 days.

The five-day week was reported by about two-thirds of the mills employing almost one-half of the workers, and 67 mills employing about one-third of the workers reported operating on a 5½-day week.

**Overtime Rates of Pay, Table IV.—**

Time and one-half was the most common overtime rate for work after standard daily or weekly hours. For work on Sunday, time and one-half was the predominant overtime rate although there has been an increasing tendency to pay double time.

Thirty-seven per cent of the mill workers were employed in 85 mills that paid time and one-half for work on observed statutory

holidays. Eighteen per cent of the workers were in mills paying double time and twenty-five per cent were in mills paying double time and one-half for work on observed holidays. The main change in the overtime rates of pay during the past two years has been the increase in the number of mills paying double time and one-half for work on observed statutory holidays, for in 1947 none of the establishments reported this premium rate.

**Vacations with Pay, Table V.**—Annual holidays with pay for most workers are provided by statute or under statutory authority in Alberta, British Columbia, Manitoba, Ontario, Quebec and Saskatchewan. In all these provinces except Saskatchewan, a worker is entitled to one week's vacation with pay after one year of employment. In Saskatchewan he is entitled to two weeks' vacation after a year of employment. The rate of pay for this vacation is 2 per cent of earnings or regular weekly pay, if on time basis, in

Quebec, 2 per cent of earnings in Ontario, regular pay in Manitoba, Alberta and British Columbia and one-twenty-sixth of annual earnings in Saskatchewan. If a worker has worked less than a year, he is entitled, in Quebec, to a half-day for each calendar month of employment and, in Saskatchewan, one day for each month. If he terminates his employment during a working year he is entitled to holiday pay in all provinces but Manitoba for the time he has been employed.

All but four of the responding mills reported giving at least one week's vacation with pay, or its equivalent of 2 per cent of earnings or one-half day per month, after a year or less of employment. In 186 mills, employing 80 per cent of the workers, the length of vacation varied in accordance with the length of employment. In most cases the maximum allowance was two weeks, or four per cent of earnings, after five years of employment. Forty-three mills employing 23,000 workers gave

a maximum vacation of three weeks, or its equivalent 6 per cent of earnings, generally after 15 years or more of employment. This indicates a considerable increase over the thirteen mills reporting a three weeks' maximum vacation in 1948.

In addition to the initial and maximum vacation periods shown in Table V, 51 mills employing over 24,000 workers give intermediate vacation periods. These consisted, mainly, of a two weeks' vacation with pay after five years of employment, although in many cases a graduated percentage-of-earnings payment was reported.

Most of the mills reported that they shut down for a summer vacation period: 130 mills, employing some 34,500 workers, shutting down for one week and 120 mills, employing about 23,300 workers, shutting down for two weeks.

**Statutory Holidays, Table VI.**—Some statutory provision concerning public holidays is made in Alberta, British Columbia, Manitoba, Nova Scotia, Quebec and Saskatchewan. Factories in British Columbia and Manitoba must be closed on public holidays unless permission is given for employment. Wages in relation to public

(<sup>1</sup>) Normally, 2 per cent of earnings is about equivalent to one week's vacation with pay, 4 per cent about two weeks with pay and 6 percent about three weeks with pay.

(<sup>2</sup>) This mill reported giving an additional 12 hours' vacation with pay to employees with "long service".

holidays are dealt with under minimum wage laws in Alberta, Manitoba, Nova Scotia, Quebec and Saskatchewan. Quebec General Minimum Wage Order 4 has no provision for public holidays but some special Orders require holidays to be observed or a punitive rate paid. For example, in the cotton textiles industry, four legal holidays are to be observed, or payment at time and one-tenth the regular rate is required; and in the silk textiles industry, six holidays are specified, although time lost for the observance of holidays (except Christmas and New Year's) may be made up by working at regular rates on the two Saturday mornings either before or after such holiday.

During the past two years there has been a growing tendency for workers to be paid for observed statutory holidays. In 1947, less than one-half of the workers were in mills paying for observed holidays, while in 1949 about 83 per cent were in the 202 mills paying for some or all of the observed statutory holidays.

The largest groups of workers were in mills observing eight statutory holidays and in mills paying for six.

**Sick Leave with Pay.**—Approximately one-half of the workers in the Primary Textiles Industry were reported to be covered by some arrangement for payment during periods of illness. The usual provision was through a group insurance plan.

### The Cotton Yarn and Cloth Industry

Preliminary calculations of average hourly wages in the Cotton Yarn and Cloth Industry indicate that wage rates have increased 6.9 per cent during the year preceding October 1, 1949. This increase is much less than the 22 per cent rise in average rates during 1948.

Returns from 38 mills employing 20,000 mill workers have been used in the analysis of this industry (Table VII). Sixty-five per cent of the workers were in 17 mills located in Quebec, 32 per cent in Ontario

**TABLE VI.—STATUTORY HOLIDAYS OBSERVED AND PAID FOR IN THE PRIMARY TEXTILES INDUSTRY, OCTOBER, 1949**

NOTE: One mill did not report information on statutory holidays.

(1) Two mills observed 7½ statutory holidays.

(2) One mill observed 9½ statutory holidays.

**TABLE VII.—DISTRIBUTION OF MILLS AND MILL WORKERS IN THE COTTON YARN AND CLOTH INDUSTRY, OCTOBER, 1949**

	Canada	Maritime Provinces	Quebec	Ontario
Number of Mills.....	38	2	17	19
Number of Mill Workers:				
Male.....	12,519	402	8,542	3,575
Female.....	7,600	276	4,541	2,783
Total.....	20,119	678	13,083	6,358

mills, and the remainder in the Maritime Provinces.

Nineteen mills, employing under 300 workers each, covered just over 10 per cent of the workers in the industry, while 7 mills, employing over 1,000 workers each, covered half of the workers in the industry.

**Collective Agreements.**—All but 5 of the mills reported written collective agreements. These collective agreements covered about 90 per cent of the mill workers. Most of the workers were represented by the National Catholic Federation of Textile Workers (CCCL), the United Textile Workers of America (AFL-TLC) and the Textile Workers Union of America (CIO-CCL). One independent union and two employees' associations were the only other organizations reported.

**Normal Weekly Hours, Table VIII.**—Twenty-one mills, employing more than half of the workers in this industry, reported a normal work week of 45 hours, most of whom were on a 5½-day week. The 5-day week was reported by 15 mills employing 31 per cent of the workers and the 5½-day week was reported by 16 mills employing half the workers in the industry.

**Overtime Rates of Pay, Table IX.**—During the past two years there has been

no significant change in the overtime rates of pay for work after standard daily or weekly hours or for work on Sunday. Practically all of the mills reported a rate of time and one-half for any overtime.

There has, however, been a tendency to give higher rates of pay for work on observed statutory holidays. Six mills, employing 2,400 workers, reported paying double time for work on holidays and 15 mills, employing about 44 per cent of the workers, reported a rate of double time and one-half. In 1947, of the 35 mills surveyed, only 4 paid overtime at a rate higher than time and one-half.

**Vacations with Pay, Table X.**—All the mills reported giving at least one week's vacation with pay, or its equivalent, after a year or less of employment. This is in accordance with various statutory regulations by most of the provinces.

Twenty-nine of the mills, employing 81 per cent of the workers, reported giving longer vacations with pay as the period of employment increased. Eleven of these, employing 3,600 workers, gave a maximum vacation of two weeks with pay after five years of employment, and another eleven, employing 7,700 workers, paid 6 per cent of earnings after 25 years. Three weeks with

Total.....	38	20,119	2	678	17	13,083	19	6,358

pay was given by 5 mills, employing 4,500 workers, after 20 to 25 years of employment.

**Statutory Holidays, Table XI.**—All the mills in the Cotton Yarn and Cloth Industry reported observing six or more statutory holidays. Thirty mills, employing 85 per cent of the workers, paid for from two to eight of these. Most establishments observed eight days while most paid for six. This information indicates a considerable increase in the number of workers being paid for statutory holidays over the past year.

**Sick Leave with Pay.**—Twenty of the establishments, employing over half the workers, reported having a policy covering sick leave with pay. In most instances this was handled through a group insurance or sick benefit plan.

## The Woollen Yarn and Cloth Industry

Average hourly wages in the Woollen Yarn and Cloth Industry increased 7.6 per cent during 1949 to reach a high of 259.6 over the base year 1939 as 100, according

to preliminary calculations for this industry. This is the smallest annual increase in wages since the removal of wage controls following the war.

In this industry, 81 mills employing 10,533 workers, were covered in the annual survey. Sixty-seven per cent of the workers were in 45 mills located in Ontario, 26 per cent were in 23 mills in Quebec, and the remainder were in mills scattered throughout the Maritime and Western Provinces. As with most of the primary textile industries, a large proportion of the workers were female (Table XII).

Forty-two of the mills, employing under 100 workers each, covered 17 per cent of the workers in the industry. Thirty-four mills, employing between 100 and 300 workers each, covered 59 per cent of the workers, and the remaining mills, employing more than 300 workers each, covered 24 per cent of the workers.

**Collective Agreements.**—One-half of the mills in the Woollen Yarn and Cloth Industry reported having written collective agreements covering over two-thirds of the mill workers. Most of the workers were

(1) One mill (744 employees) paid time and one-half for work on unpaid statutory holidays.

represented by the Textile Workers Union of America (CIO-CCL), the United Textile Workers of America (AFL-TLC) and the National Catholic Federation of Textile Workers (CCCL). The remainder were represented by independent unions or employees' associations.

**Normal Weekly Hours, Tables XIII and XIV.**—More than half the mills, employing 57 per cent of the mill workers, reported working either a 45- or 48-hour week. This information indicates a lessening of the number of hours per week worked by the mills. The 5-day week was reported by 51 mills employing almost three-quarters of the workers. Most of the mills operating on a 5-day week reported normal hours of 45 or 48 per week. Twelve mills, employing a small number of workers, operated on a 5½-day week and 18 mills, employing 1,500 workers, reported operating 6 days per week.

**Overtime Rates of Pay, Table XV.**—Time and one-half was the most common

rate paid for work after standard daily or weekly hours in this industry. For work on Sunday, 11 mills, employing 1,750 workers, reported paying double time while 35 mills, employing over 60 per cent of the workers, reported paying the more general time and one-half rate.

The predominant overtime rate for work on observed statutory holidays was double time. This was reported by 20 establishments employing almost 3,000 mill workers. Seventeen mills, employing 2,400 workers, reported time and one-half for work on observed holidays and 12 mills, employing 2,900 workers, reported a rate of double time and one-half. As in the other divisions of the Primary Textiles Industry, there is a definite trend towards higher overtime rates for work on statutory holidays. In 1947, just 13 per cent of the workers received overtime pay at a rate higher than time and one-half for work on observed statutory holidays. In 1949, this proportion had increased to 56 per cent.

**TABLE X.—VACATIONS WITH PAY IN THE COTTON YARN AND CLOTH INDUSTRY, OCTOBER, 1949**

Total.....	38	20,119	2	678	17	13,083	19	6,358

(1) Normally, 2 per cent of earnings is about equivalent to one week's vacation with pay, 4 per cent about two weeks with pay and 6 per cent about three weeks with pay.

**Vacations with Pay, Table XVI.**—All but three mills in the Maritime Provinces reported information on vacations with pay. Most of the mills gave an initial vacation of one week after one year of employment or paid two per cent of earnings.

Fifty mills, employing 80 per cent of the workers, reported increased vacations with pay after longer periods of employment. Most of these mills gave two weeks after five years of employment, although nine, employing 24 per cent of the workers, gave a maximum vacation of three weeks after at least 15 years.

**Statutory Holidays, Table XVII.**—All of the mills reported observing statutory holidays, with most of them observing eight days. Fifty-nine of the mills, employing 85 per cent of the workers, paid for one or more of the observed holidays. Twenty-two mills, employing one-quarter of the workers, paid for six days, and 15 mills, employing almost one-third of the workers, paid for the eight statutory holidays which were observed.

**Sick Leave with Pay.**—Most of the mills in this industry did not report having a provision for payment during illness. Of the 24 which did report some provision, most indicated a group insurance or sick benefit plan.

## The Knitting Industry

Average hourly wages in the Knitting Industry increased 7.9 per cent during the year preceding October, 1949. Preliminary calculations by the Economics and Research Branch of the Department of Labour indicated that the index of wage rates in this industry had risen to 230.7 over the base year 1939 as 100.

As shown in Table XVIII, returns from 150 mills employing 18,660 mill workers were used to represent the Knitting Industry. More than half the workers were in 78 mills situated in Ontario, and 40 per cent were in 62 mills located in Quebec. Almost two-thirds of the mill workers were female.

Ninety of the mills employed less than 100 workers each, but these represented only 18 per cent of the mill workers. Sixty-one per cent of the workers were in 55 mills employing from 100 to 500 workers each, and the remaining 21 per cent of the workers were in mills having more than 500 workers each.

**Collective Agreements.**—Fifty-one of the mills reported having written collective agreements covering almost one-half the workers in the industry. The largest group of workers was covered by collective

**TABLE XI.—STATUTORY HOLIDAYS OBSERVED AND PAID FOR IN THE COTTON YARN AND CLOTH INDUSTRY, OCTOBER, 1949**

**TABLE XII.—DISTRIBUTION OF MILLS AND MILL WORKERS IN THE WOOLLEN YARN AND CLOTH INDUSTRY, OCTOBER, 1949**

	Canada	Maritime Provinces	Quebec	Ontario	Western Provinces
Number of Mills.....	81	7	23	45	6
Number of Mill Workers:					
Male.....	5,928	90	1,792	3,826	220
Female.....	4,625	108	945	3,261	311
Total.....	10,553	198	2,737	7,087	531

agreements negotiated through the Textile Workers Union of America (CIO-CCCL). Other unions prominent in the Knitting Industry were: the National Federation of Clothing Industry Workers (CCCL), the National Catholic Federation of Textile Workers (CCCL), the United Textile Workers of America (AFL-TLC) and the National Federation of Full-Fashioned and Circular Hosiery Workers (CCCL).

**Normal Weekly Hours, Tables XIX and XX.**—Most of the mill employees in the Knitting Industry worked from 40 to 48 hours per week, with the largest single group working 45 hours. Over three-quarters of the workers were in 112 mills which reported operating on a 5-day week, while just a small proportion were in the nine mills which reported operating six days. In a few mills the female workers normally worked less weekly hours than the male workers. During the past two years there has been no significant change in the normal weekly hours of work.

**Overtime Rates of Pay, Table XXI.**—Almost all of the mills which reported premium pay for work after standard daily or weekly hours indicated a rate of time and one-half. Time and one-half was also

the predominant rate for work on Sunday, although eleven mills employing 2,600 workers reported a rate of double time.

Forty-two mills, employing about one-third of the workers, reported a rate of time and one-half for work on observed statutory holidays. Twenty mills reported paying a rate of double time and five reported a rate of double time and one-half for work on observed holidays. A large number of mills reported paying regular rates for work on statutory holidays.

**Vacations with Pay, Table XXII.**—A vacation period of one week with pay after a year of employment, or an equivalent 2 per cent of earnings, was reported as the initial vacation in most of the mills in this industry. In seven mills an initial vacation of two weeks was given.

Eighty-five of the mills, employing 79 per cent of the workers, reported giving longer vacation periods as the worker's term of employment increased. Most of these mills reported a two-weeks vacation, or 4 per cent of earnings, after 5 years of employment. Twelve mills reported giving a maximum vacation of three weeks, or 6 per cent of earnings, after 15 or more years of employment.

**Statutory Holidays, Table XXIII.**—All but one of the mills reported observing at least four statutory holidays, and three-quarters of the workers were in 86 mills which paid for two or more of the holidays observed. Most of the mills observed eight statutory holidays and paid for six or all of them.

**Sick Leave with Pay.**—Forty of the mills, employing about 7,300 workers, reported providing for sick leave with pay. Generally, all the workers were covered by a group insurance or sick benefit plan, but in some cases it was limited to salaried employees only or given at the discretion of the management.

### The Rayon Yarn and Fabric Industry

The preliminary wage index calculated for the Rayon Yarn and Fabric Industry as at October 1, 1949, showed an increase of 6.8 per cent over the preceding year. This raised the index to 233.1 over the base year 1939 as 100.

In analysing this industry, returns from 34 mills employing almost 14,000 workers

were used (Table XXIV). Seventy-four per cent of the workers were employed in the 24 mills located in the Province of Quebec and 21 per cent of the workers were in mills located in Ontario. In this industry, as with the others in the primary textile group, a large proportion of the workers were female.

Twenty-five mills, each employing under 300 workers, only covered one-fifth of the workers in the industry, while 4 mills, employing more than 900 workers each, covered 56 per cent of the workers.

**Collective Agreements.**—Twenty-two mills in the Rayon Yarn and Fabric Industry reported having written collective agreements covering about one-half of the total workers. The majority of the workers were represented either by the National Catholic Federation of Textile Workers (CCCL) or by the Textile Workers Union of America (CIO-CCL).

**Normal Weekly Hours, Table XXV.**—Eight mills employing almost one-half of the workers in the industry reported a normal work week of 48 hours. The 5-day week was reported by 18 of the mills in

this industry employing 13 per cent of the workers and the 5½-day week was reported by 11 mills employing over 40 per cent of the workers.

**Overtime Rates of Pay, Table XXVI.**—Practically all of the mills paid a rate of time and one-half for work after standard daily or weekly hours. Of the 19 mills reporting an overtime policy for work on Sunday, 14 employing 8,200 workers reported time and one-half and five employing 2,900 workers, a rate of double time.

As in the other divisions of the textile industry, the tendency over the past two years has been to give higher rates of pay for work on observed statutory holidays. Ten of the mills reported paying a rate of double time and three mills, employing 2,800 workers, paid double time and one-half.

**Vacations with Pay, Table XXVII.**—All the mills in the industry reported an initial vacation of at least one week, or its equivalent, after a year or less of employment.

Twenty-two mills, employing over 80 per cent of the workers, reported increasing the vacation as the period of employment increased. Thirteen of these, employing 5,200 workers, gave a maximum vacation of two weeks, or 4 per cent of earnings, after 5 years. Six mills, employing more than 5,000 workers, gave three weeks' vacation with pay after a service requirement of at least 15 years.

**Statutory Holidays, Table XXVIII.**—All of the 34 mills surveyed in this industry reported observing statutory holidays. Twenty-seven of them, employing almost 90 per cent of the workers, paid for from 2 to 9 days. Two-thirds of the workers were in 15 mills paying for 2, 3 or 4 statutory holidays.

**Sick Leave with Pay.**—Sixteen mills, employing 68 per cent of the workers, reported having some policy covering sick leave. All but one of these mills reported a group insurance plan.

(1) This mill observed 7½ statutory holidays.

(2) This mill observed 9½ statutory holidays.

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

## EMPLOYMENT CONDITIONS DURING MARCH, 1950

*Seasonal expansion in employment was evident during March. The greatest improvement took place in British Columbia; in the Atlantic and Quebec regions, the end of hauling operations in the woods added to the labour surplus. In these latter regions, also, registrations for supplementary benefits under the Unemployment Insurance Act were heaviest. Marked improvement during April was expected in most areas.*

Employment conditions responded to seasonal influences during March. Expansion was slower than usual, however, since adverse weather delayed construction activity in many areas; this industry is usually the chief source of new employment during March. In addition, the ending of the Provincial Government's works program in Newfoundland, the close of hauling operations in the woods, and the major lay-off in the automobile industry of Ontario, contributed to the number of unplaced applicants registered with the National Employment Service.

Excluding those persons applying for supplementary benefits who were not registered on February 28 when this new program began, applicants at employment offices declined slightly during March to a level of 371,700 at the end of the month. Some 56,500 of these "new" registrants were added during the month as a result of the supplementary benefit program. Loggers formed by far the largest group of these additional claimants and, consequently, registrations were concentrated in the Quebec and Atlantic regions.

Further expansion in manufacturing, and the opening of new work in construction and agriculture, should bring about sharp improvement during April.

### Industrial Analysis

Employment in *logging* in eastern Canada declined rapidly during March, as cutting and hauling operations were completed. The demand for labour in this industry would remain light until river driving got under way with the spring break-up, when a secondary employment peak would occur.

A considerable proportion of the workers released from the industry are farmers or farm workers and many of these have

returned to agricultural work. Large numbers of the remainder, however, were unable to find alternative employment immediately and registered at Unemployment Insurance Commission offices to collect supplementary benefits. Claimants in this category were particularly heavy in the province of Quebec, where about 15,000 loggers were registered as unplaced applicants at the end of March, and in the Atlantic Region where 7,500 were on record.

Logging activity in British Columbia was slowly getting back to normal in March after unusually heavy winter lay-offs. This

Eastern Canada including Manitoba as reported by Canadian Pulp and Paper Association.

general improvement in the employment situation was reflected in a drop from 7,000 to 2,000 in the number of persons registered for work in logging with the National Employment Service. Operations in camps at higher levels were still closed in most cases, however, and poor road conditions limited work in some areas. The employment situation was not expected to be completely back to normal until at least mid-April.

Labour market conditions in the *mining* industry were generally stable during March, with little labour demand and only a slight surplus of workers evident. Labour turnover and absenteeism, formerly serious problems in the industry, now are negligible. Short time has appeared in some sections of the coal mining industry, however, as a means of bringing production into line with demand.

Mining employment was well sustained during the first part of 1950, as export markets for the principal producers remained firm. Employment statistics issued by the Dominion Bureau of Statistics, which relate to February 1, show that employment among reporting mining companies was 85,000 in total. This was an increase of 1 per cent over the figure twelve months previously. This total was divided among the main divisions in the industry as shown below:—

Industry:	February 1, 1950	February 1, 1949	Per Cent Change
Coal .....	24,948	25,627	down 2.4
Metallic ores .....	43,977	42,649	up 3.1
Non-metallic minerals .....	15,964	15,689	up 1.8
Total .....	84,889	83,965	up 1.1

Wage rates in the industry continue to show a slight upward trend, but the rate of increase is not as rapid as in previous post-war years. Average hourly earnings in the industry were reported at \$1.20 at January 1, 1950, as against \$1.17 in January, 1949. Coal miners' earnings, at \$1.31 on the average, were highest among the three groups. New wage agreements arrived at in this industry during March, however, do not provide for any further wage increases. In Nova Scotia, a new contract was signed by some 7,000 miners of District 26 of the United Mine Workers (CCL) without any increase in wages. Some 1,200 Vancouver Island coal miners were asked to take a 75-cent-a-day wage cut, but refused to accept these terms.

With the opening of the 1950 *construction* season, wage negotiations were in progress during March between contractors and the building trades' unions.

In general, activity in the industry was just beginning to gain momentum. An indication of this pick-up was the increase in the value of contracts awarded from \$65,000,000 in February to \$75,000,000 in March. The total for the first three months of 1950, at \$216,000,000, was \$7,000,000 below that of the first quarter of 1949. With the industry only partially active, many construction workers were still unemployed at the end of March.

Divergent trends were apparent in the labour market in the *manufacturing* industries during March. Some industries were already beginning to feel the effect of the spring break-up, while in others short-time work and lay-offs remained prevalent. The following summarizes the salient features in some of the major divisions of the industry as a whole.

The beginning of the seasonal uptrend in *sawmill* employment was accelerated during March by the return to work in British Columbia of several thousand mill-workers who had been laid off by bad weather. The labour force throughout the sawmill industry will continue to expand until late summer, at which time it is expected to be about 25 per cent above

the mid-winter low. Those employed in the industry in the winter of 1949-50 amounted to about 43,000, slightly less than the number at work in the previous year, but a strong demand for lumber now is exerting a buoyant effect on employment in all regions except the Maritimes.

The annual peak of activity in the *primary textile* industry is usually reached in February and a slight slackening occurs during March. During the first quarter of 1950, with expansion in the cotton and silk manufacturing groups more than offset by reductions in staff among woollen and hosiery manufacturers, the industry has been operating with lower employment levels than in 1949. Unskilled labour is reported as plentiful in the industry but

skilled labour is still in demand, since turnover is high as many workers leave before their training period is completed.

The *clothing* industry was in its most active period during March, as the spring peak is reached slightly later than in the primary textile industry. Year-to-year comparisons show production and employment in the industry are expanding, chiefly because of strong domestic demand. The D.B.S. index of employment, at February 1, was 130.4 (June 1, 1941=100), compared to 126.4 at the same date in the previous year.

Lay-offs in the Canadian *automobile* industry resulting from a strike in the United States interrupted the steady upward trend of employment during March. Some 5,000 workers were affected in total, of whom 3,800 were employed in one plant in Windsor. Some 550 of these were re-hired on March 13 but laid off again on April 14. The remaining twelve hundred workers laid off were employed in eleven parts plants in six Ontario cities.

Strengthening demand for *aluminum*, especially in the United States which is reported to require two and one-half times the amount produced there, has placed this industry in a more favourable position.

In the *transportation* industry, lake shipping was one of the first areas of the labour market to show signs of a spring pick-up in activity. Although the first boats received their sailing orders at the end of March, this was nearly a month behind the all-time record opening date established last year on March 4. This spring, most of the ships did not start moving until April 15 and St. Lawrence navigation was held off until the opening of the Lachine canal on April 22. All lake ports report that no difficulty was experienced in manning their ships and owners predict a normally active season.

## Regional Analysis

Employment in the *Atlantic* region reached the lowest point of the year during March, with the end of most log hauling activity in Nova Scotia and New Brunswick, and with the termination of the Provincial Government's winter works program in Newfoundland. These circumstances brought continuing increases in the number of persons registered with the National Employment Service. The supplementary benefit program also brought to NES offices many who are not usually registered at this time of year. While no significant improvements took place, and employment generally was slightly below last year's level, plans for 1950 were being

finalized, preparations were under way and more optimism toward the future was apparent.

In Newfoundland, after having employed a peak of about 9,000 workers and helping many to qualify for unemployment assistance, the Provincial Government's winter works program ended on March 15, with some 5,000 still employed at that date. Those unable to find work or to qualify for assistance will be paid regular relief rates under a relief work scheme that began March 16. Construction planned for 1950 in Newfoundland includes a \$3 million slum clearance project in St. John's, a variety of Federal Government work and extensive track and roadbed maintenance and other construction to be undertaken by the Canadian National Railway. A proposed union-sponsored transfer of unemployed miners to mainland mining jobs drew applications from about 200 experienced workers.

Greatly increased woods activity this summer and fall is foreseen for Northern New Brunswick areas, but in March the beginning of the thaw brought to a close log hauling throughout both Nova Scotia and New Brunswick; loggers were awaiting the stream drive and the beginning of pulpwood peeling operations. Greatly increased purchases of coal by the Canadian National Railways should sustain current high activity in the coal mines. The outlook for construction is encouraging. Port activity, however, will decline further as St. Lawrence navigation opens.

The predominant feature of the general March employment picture in the *Quebec* region was the effect of supplementary benefits in bringing to National Employment Service offices many who would not otherwise be registered. Registrations continued to increase throughout the month as a result, and the general level of employment was slightly below that of March, 1949.

Throughout the region, some construction activity began in March, particularly on projects started before the winter shut-down; but the weather remained unfavourable to any general start on the extensive construction planned for the coming season. A few hirings of farm labour were reported from some centres, largely for sugar-bush operations, but general activity in agriculture is not expected to pick up until late April or May. Many of the loggers released from woods employment with the end of cutting and hauling in most areas will soon be employed on the river drive. In the Saguenay district, however, some cutters were hired during March as firms

increased their cutting quotas; and truck hauling of pulpwood was very active due to the lack of snow.

Retail trade was steadily active in the larger centres, although increasing buyer resistance was being met in some lines. Manufacturing continued at a slightly lower level than a year ago, but some gains were apparent in the men's clothing and electrical apparatus industries. Employment in primary textiles manufacturing increased, and newsprint production was expanding. However, further lay-offs occurred in foundries and machine shops producing heavy machinery, road-building and transportation equipment; and extensive short-time work continued throughout most secondary textiles and footwear plants.

Shipping firms were readying ships and crews for the opening of navigation on the St. Lawrence in April, and longshoremen will shortly be absorbed as port activity commences.

Employment conditions in the *Ontario* region showed a slight seasonal improvement in most areas during March, but the upswing was less marked than usual. The persistence of stormy wintry weather throughout most of the month delayed the start of many construction projects which usually form the chief source of increased employment at this time of year. In addition, expanding activity in regional manufacturing, particularly in iron and steel industries, was offset by a large lay-off in the automobile industry.

This latter development boosted the level of unplaced applicants for the region during the month. Additional persons registering as unplaced applicants in order to claim supplementary benefits were relatively few during March, however, thus indicating that in Ontario the National Employment Service operations were already covering a very high proportion of the unemployed.

The volume of production and employment in general manufacturing increased during the month, but the improvement was generally concentrated in heavy metal industries. The upswing has been slower this year since many firms have been carrying large inventories and are proceeding with caution. This factor has applied particularly to textiles, food and consumer goods industries, and in some cases short-time operations and small lay-offs were occurring. The automobile industry has been at capacity production except in Windsor, where as a result of the prolonged strike in the U.S. industry, a heavy lay-off has been in effect at an affiliated Canadian company throughout March.

March was chiefly a month of preparation throughout the *Prairie* region, and general employment remained fairly level. A sharp upswing in activity was imminent, and particularly in the western section, a season of record activity was expected.

Unplaced applicants, excluding new applicants claiming supplementary benefits, declined slightly despite the completion of hauling operations in the woods and seasonal lay-offs in coal mining, which released workers into the labour market. Persons claiming supplementary benefits were relatively few. Farm labour demand was increasing, in both current and deferred orders. Greater activity will occur in late April and early May, at which time some local shortages may develop as men are not inclined to take farm work if other employment is available.

In logging areas, hauling operations were completed and bushmen were returning to their farms or seeking other employment. Many will be absorbed in different types of work once navigation opens in April, and the spring river drive in May will employ others. Planer mills were in full operation, producing higher grades of lumber which find a ready demand in U.S. and domestic markets. Mining also will be active shortly, except for coal mines in Alberta fields, which have been working on reduced schedules because of the usual seasonal shortage of orders. Oil drilling operations in Alberta have continued despite the cold weather of the past few months, and a record number of geophysical parties have been engaged in exploration. Work on the pipeline project has already begun; right-of-way has been arranged and building of the pump station and storage tanks at Edmonton was under way.

Employment expansion during March was most rapid in the *Pacific* region as work was resumed in logging and construction, and the decline in unplaced applicants was accordingly sharp. The registration of new applicants to claim supplementary benefits was also the lightest of any region. Market conditions for all the major industries other than food production were excellent and the seasonal upswing would have been greater but for unusually rainy weather which delayed the opening up of new work in outside operations.

Logging camps throughout the region were returning to full operations in the coastal and Vancouver Island areas, but snow and bad road conditions still impeded production in southern interior districts. At Prince George, however, camps were in full swing again, and logs were being hauled to the mills throughout the night, since road

conditions restricted trucking during the daytime. Shingle mills and sawmills were working at capacity except where log shortages were causing some difficulties—on the coast, adverse towing conditions were holding up the log supply. Rapidly rising prices for logs were the result of this condition.

Construction activity was well under way. Contractors expected a very busy year, although it was felt that domestic building might decline somewhat because of the sharp increase in lumber prices. In the interior, the industry was booming; work on the Pacific Great Eastern Railway has commenced and a new million dollar bridge was to be built across the Fraser at Prince George; work would resume on the major dam projects as soon as weather permitted, and building construction was expected to reach the highest level on record in the district.

### Employment Service Activities

The first month of operation of the supplementary benefit program has brought to light some interesting developments in this winter's unemployment problem. First is the fact that some 56,500 persons were brought to employment offices through the

program who were not previously registered for employment at the beginning of this month. About 85 per cent of these people came from the Atlantic and Quebec regions. Quebec alone accounted for 65 per cent of the new registrants.

For the most part, these new registrants were from the rural areas. The major cities throughout Canada have reported very small registrations proportionate to their size, with Montreal showing the highest total of 2,700 reported at March 30.

It is evident that the majority of persons seeking benefits under the scheme are persons who work some part of each year in the logging industry. In the summer, most of these workers are employed in agriculture and construction, but there is usually an interval of several weeks in the late winter and early spring when they are unemployed. The provision of supplementary benefits up to April 15 will assist them considerably during this period.

Apart from workers in the logging industry, it is probable that the supplementary program is of most assistance to workers who have been unemployed for a considerable length of time. For most jobless persons, the period of unemployment has been longer than usual this winter. At the beginning of March, 55 per cent of all persons claiming unemployment

## UNPLACED APPLICANTS REGISTERED AT EMPLOYMENT OFFICES CLAIMANTS FOR UNEMPLOYMENT INSURANCE BENEFIT CLAIMANTS FOR SUPPLEMENTARY BENEFIT

insurance benefits had been registered for more than a month with 30 per cent on file for more than two months. Thus, under the provisions of the supplementary benefits program, many persons who had exhausted their benefit rights were able to qualify. For example, in the Prairie region, where logging is not a major industry, a tally of those claiming supplementary benefits in March showed that 75 per cent were claiming because of exhausted benefit rights.

Claimants for supplementary benefits are registered in almost all occupations, although aside from the loggers, which far exceeds other groups, registrations are largely among casual unskilled labour.

Because of the registration for supplementary benefits, the number of persons registered at employment offices reached a total of 428,000 at March 30. Apart from persons claiming supplementary benefits who were not registered for employment

at February 28, the number unplaced would total 371,500 or about 1,200 less than at the beginning of March.

Employers have been increasing their orders for help steadily during March and, as a result, more workers were being placed by the Employment Service each week. However, apart from this pick-up which was mostly for skilled help, lay-offs in logging, in the provincial works program in Newfoundland, and in the automobile industry in Windsor threw others out of work, so that the net improvement was small during the month.

Generally, however, local employment officers were optimistic about the summer employment situation. By the time the supplementary benefit program concludes on April 15 fairly large numbers of jobs are expected to open up in construction and agriculture, as well as in other industries.

## PRICES AND THE COST OF LIVING\*

### Cost of Living

The Dominion Bureau of Statistics cost-of-living index advanced from 163·7 at March 1 to 164·0 at April 1. Food contributed approximately one-half of the increase of 0·3 point, while the fuel and light index gain was next in importance. A rise in the food index from 204·0 to 204·5 was mainly attributable to higher prices for beef, eggs and coffee. Butter prices were down slightly. Higher quotations in Ontario and Quebec for anthracite coal were largely responsible for the rise in the fuel and light index from 136·3 to 138·0. The advance of 0·1 point to 166·4 in the index of home furnishings and services was due mostly to a slight increase in floor coverings. The miscellaneous index rose from 132·1 to 132·3, reflecting an increase in motor operating costs and drug prices. The clothing index continued to decline, moving from 181·4 to 181·2. Rents were not surveyed at April 1 and the index remained unchanged at 132·7.

From August, 1939 to April, 1950, the increase in the cost-of-living index was 62·7 per cent.

### Cost of Living in Eight Cities

Cost-of-living indexes for the eight regional cities were all higher between February 1 and March 1, 1950. Higher levels for rents and foods were mainly

responsible although narrow increases were registered for fuel and home furnishings and services at a few centres. Among food prices, increases were recorded for beef, eggs, coffee and fresh vegetables. Rents, which were surveyed in March, reflected all the accumulated changes since November. Other sub-group indexes were unchanged to lower.

Composite city index advances between February 1 and March 1, 1950 were as follows:—Toronto 3·1 to 160·7; Winnipeg 2·5 to 158·8; Montreal 2·4 to 166·6; Vancouver 1·8 to 165·2; Halifax 1·7 to 155·0; Saint John 1·7 to 159·5; Edmonton 1·4 to 159·5 and Saskatoon 0·9 to 164·5. During the same period the Dominion urban index rose 2·1 points to 162·4.

### Wholesale Prices, February, 1950

The general index of wholesale prices moved up 0·9 point to 158·0 between January and February, 1950. Five of the eight major groups contributed to this increase. Animal Products led in the advance with an increase of 2·7 points to 163·4. Iron and its Products rose 2·4 points to 177·2, Wood Products 1·5 points to 190·6, Textile Products 0·6 point to 162·8 and Non-metallic Minerals 0·6 point to 139·9. Of the three groups to record declines, Vegetable Products registered the largest recession, with a drop of 0·5 point to 142·9. Chemical Products eased 0·4 to 117·6 and Non-ferrous Metals 0·3 point to 139·4. The following commodities

\* See Tables F-1 to F-6.

## COST OF LIVING 1935-1939 = 100

showed important price increases between January and February, 1950: wool cloth 19·4 per cent, pepper 19·4 per cent, cocoa beans (Jamaican) 16·0 per cent, beef carcass 14·3 per cent, eggs, Grade "A", large 12·3 per cent, worsted yarn 12·0 per cent, steel sheets 12·0 per cent, cottonseed oil 9·5 per cent, crude asbestos 9·4 per cent, gluten feed 8·0 per cent, steel billets 7·7 per cent. Among commodities to show price declines were the following: lemons 17·8 per cent, canned corn 14·3 per cent, cheese, new, Toronto 11·0 per cent, fowl 10·7 per cent,

corn meal 9·4 per cent, canned peas 9·1 per cent, acetate of lime 8·0 per cent, cocoa beans (African) 7·4 per cent, shellac 7·0 per cent, men's woollen hosiery 6·8 per cent.

The Canadian farm products index of wholesale prices advanced 1·1 points to 145·2 between January and February. This was due to an increase in Animal Products which rose 3·5 points to 181·5 reflecting higher prices for livestock and eggs. Field Products moved down 0·3 point to 123·5 in the same interval.

# STRIKES AND LOCKOUTS\*

## Canada, March, 1950

There was little change in the record of strikes and lockouts from the low level of the previous month. The number of work stoppages and the workers involved increased slightly but the time loss declined. As compared with March, 1949, with a time loss of 136,000 days, the current month showed a loss of only 25,000 days.

Preliminary figures for March, 1950, show 21 strikes and lockouts, involving 5,659 workers, with a time loss of 25,118 man-working days, as compared with 15 strikes and lockouts in February, 1950, with 3,764 workers involved and a loss of 26,300 days. In March, 1949, there were 11 strikes and lockouts, involving 6,601 workers, with a loss of 136,317 days.

For the first three months of this year there were 32 strikes and lockouts, involving 9,941 workers, with a time loss of 90,906 man-working days. In the similar period in 1949 there were 26 strikes and lockouts, with 10,483 workers involved and a loss of 217,679 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in March was 0.03 per cent of the estimated working time, the same per-

centage as in the previous month; 0.16 per cent in March, 1949; 0.04 per cent for the first three months of 1950; and 0.09 per cent for the first three months of 1949.

Of the 21 strikes and lockouts in existence during March, 1950, one was settled in favour of the workers, six in favour of the employers, two were compromise settlements and two were indefinite in result, work being resumed pending final settlement. At the end of the month 10 work stoppages were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: composers, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and textile products factory workers at St. Lambert, P.Q., August 29, 1949.

\* See Tables G-1 and G-2.

## Great Britain and other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review issued as a supplement to the *LABOUR GAZETTE* for April, 1950, and in this article are taken, as far as possible, from the government publications of the countries concerned.

### Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in January, 1950, was 125 and five were still in progress from the previous month, making a total of 130 during the month. In all stoppages of work in progress in the period there were 22,600 workers involved and a time loss of 66,000 working days was caused.

Of the 125 disputes leading to stoppages of work which began in January, eight,

directly involving 1,100 workers, arose out of demands for advances in wages, and 39, directly involving 5,100 workers, on other wage questions; 15, directly involving 4,700 workers, on questions respecting the employment of particular classes or persons; 54, directly involving 4,500 workers, on other questions respecting working arrangements; and three directly involving 100 workers, on questions of trade union principle. Six stoppages, directly involving 2,200 workers, were in support of workers involved in other disputes.

### United States

Preliminary figures for February, 1950, show 210 strikes and lockouts beginning in the month, in which 75,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 7,850,000 man-days. Corresponding figures for January, 1950, are 225 strikes and lockouts, involving 185,000 workers, with a time loss of 2,600,000 days.

# SELECTED LIST OF PUBLICATIONS RECEIVED IN LIBRARY OF DEPARTMENT OF LABOUR, OTTAWA\*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*.

NOTE.—Many of the statistical data in this table are included in the *Canadian Statistical Review* issued by the Dominion Bureau of Statistics.

†Comparable statistics are not available. (1) Labour Force survey figures given are as of Oct. 29, 1949, Nov. 20, 1948 and Feb. 21, 1948. (2) Base 1926 = 100. (3) Figures are as at end of quarter ending Dec. 31, 1949, 1948, 1944 and 1939 respectively. (4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946 = 100. (5) First of month. (6) Base 1935-1939 = 100. (7) Figures are for four week periods. (8) Annual figures; monthly not available. (9) Year-end figures. (10) Annual index.

(1) This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, as listed in Table C-4, with the exception of electric light and power.

(2) Mainly hotels and restaurants and laundry and dry-cleaning plants.

\* Includes Welland, Thorold and Merriton.

**TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING**

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operating firms.

Week Preceding	Average Hours Worked			Average Hourly Earnings		
	All Manufactures	Durable Goods	Non-Durable Goods	All Manufactures	Durable Goods	Non-Durable Goods
	no.	no.	no.	cts.	cts.	cts.

\* Industries classed in the durable manufactured goods industries.

<sup>1</sup> Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows:—Dec. 1, 1949, 231.5; Jan. 1, 1950, 233.6; Feb. 1, 1950, 238.9; at Feb. 1, 1949, the index was 224.9.

<sup>2</sup> Chiefly street and electric railways.

<sup>3</sup> For information respecting the sex distribution of the persons in recorded employment, see Table C-5.

**TABLE C-10.—EARNINGS, HOURS AND REAL EARNINGS FOR WAGE EARNERS IN MANUFACTURING INDUSTRIES IN CANADA**

(SOURCE: Hours Worked and Hourly and Weekly Wages, D.B.S. Real Wages Computed by the Economics and Research Branch, Department of Labour)

Date	Average Hours Worked Per Week	Average Hourly Earnings	Average Weekly Earnings	Index Numbers (AV 1946=100)		
				Average Weekly Earnings	Cost of Living	Average Real Weekly Earnings
Week preceding—		cts.	\$

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc., occur from time to time.

(a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time. (b) Averages include prices for cuts with bone-in. (c) Hock-on. (d) Mixed-hock-on, hock-off. (e) Mixed-loose & carton. (f) Loose. (g) Estimate (h) Fancy. (i) California. (k) Pure. (m) 360's. (n) Mixed-package & bulk. (p) Package (s) Mixed-choice & fancy. (t) Tin.

**TABLE F-2.—INDEX NUMBERS OF THE COST OF LIVING FOR EIGHT CITIES OF CANADA AT THE BEGINNING OF MARCH, 1950**

(Base:—August 1939 = 100)

—	Total			Food	Rent	Fuel	Clothing	Home Furnishings Services	Miscellaneous
	Mar. 1, 1949	Feb. 1, 1950	Mar. 1, 1950						
Halifax.....	152.3	153.3	155.0	200.4	116.5	132.6	192.8	155.2	123.0
St. John.....	155.8	157.8	159.5	196.0	121.5	134.8	191.2	159.1	130.6
Montreal.....	162.0	164.2	166.6	210.8	131.8	133.9	173.6	170.8	130.3
Toronto.....	154.6	157.6	160.7	198.2	134.2	153.2	181.3	161.6	130.7
Winnipeg.....	153.8	156.3	158.8	204.2	128.8	121.5	176.1	169.5	125.2
Saskatoon.....	161.6	163.6	164.5	215.0	126.1	140.4	186.9	171.7	122.9
Edmonton.....	154.2	158.1	159.5	211.1	118.9	114.6	187.2	161.1	129.2
Vancouver.....	160.7	163.4	165.2	212.2	122.9	139.8	190.2	160.5	134.2

N.B.—Indexes above measure percentage changes in living costs for each city, but should not be used to compare actual levels of living costs as between cities.

March.....	9	11	1,951	6,601	136,317	0.16
Cumulative totals.....	26		10,483		217,679	0.09

\* Preliminary figures.

† Strikes un-terminated at the end of the previous year are included in these totals.

‡ The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, MARCH, 1950 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
<b>Strikes and Lockouts in Progress Prior to March, 1950</b>				
<b>MINING—</b> Firebosses, Bellevue, Blairmore, Cadomin, Canmore, Coleman, Gregg River, Luscar, Alta.	10	180	500	Commenced January 16; for implementation of majority report of arbitration board for welfare fund and continuance of monthly wage rates, instead of welfare fund and daily rates proposed by operators; terminated March 3; return of workers under terms of previous agreement; in favour of employers.
<b>MANUFACTURING—</b> <i>Boots and Shoes (Leather)—</i> Shoe factory workers, Richmond, P.Q.	2	195	5,000	Commenced February 14; for union recognition and agreement providing for increased wages and other changes; unterminated.

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars <sup>(2)</sup>
	Establishments	Workers		
<b>Strikes and Lockouts Commencing During March, 1950</b>				
<b>TRADE—</b>				
Junk yard workers, Vancouver, B.C.	1	16	400	Commenced March 1; for a new agreement providing for increased wages, extension of vacations with pay, payment for statutory holidays, as recommended by conciliation board; unterminated.
Wholesale grocery workers, Calgary, Alta.	1	29	275	Commenced March 21; for a new agreement providing for incorporation of cost-of-living bonus in basic wage, plus increase in wages, following reference to conciliation and arbitration boards; unterminated.
Building supplies workers, Victoria, B.C.	1	67	134	Commenced March 30; for a new agreement providing for increased wages, payment for statutory holidays, contributory hospitalization and annuity plan, etc., following reference to conciliation board; unterminated.
<b>SERVICE—</b>				
<i>Business and Personal—</i>				
Garage mechanics, greasers, etc., Toronto, Ont.	1	12	200	Commenced March 8; for a union agreement providing for guaranteed weekly wage and other changes, following reference to conciliation board; partial return of workers; unterminated.
Hotel employees, Cornwall, Ont.	3	15	250	Commenced March 9; for a union agreement providing for increased wages, reduced hours, overtime rates, vacations with pay, following reference to conciliation board; unterminated.

(1) Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(3) Workers involved in Ontario—1,983, with a time loss of 500 days; workers involved in Quebec—500, with a time loss of 100 days.

(4) 72 indirectly affected.

## CURRENT LABOUR CONDITIONS

*This article summarizes the latest employment and labour information available at June 10, as the LABOUR GAZETTE went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

**A** RAPID increase in spring hirings in agriculture, construction, transportation and service industries was the main factor in the sharp drop in the number of registered job seekers at National Employment Service offices during the month of May. Between May 4 and June 1, the number registered declined by 133,000, to total 254,500, in comparison with a decline of only 47,100 in the previous month. The cold weather in April accounts for the fact that the sharp increase in employment was delayed until May; in most previous years it occurred in April.

The decline in the registrations at local employment offices was not spread evenly throughout the month, but concentrated in the week between May 11 and May 18, when there was a drop of 58,900. In large part, this sudden decline during one week was due to the removal from the list of registered job seekers of all those who had come to the employment offices to claim supplementary benefits and who had not renewed their applications for work.

This does not necessarily mean that over the period of a month the official figures exaggerate the extent of the return to work. Many of those who were still on the official lists of job seekers at the beginning of May would have found jobs without reporting to the local office; others who may still have been unemployed at May 18 would be finding work in the latter part of the month. It seems all the more probable that the decline in registrations at employment offices over the month reflects the true situation when the nature of the job openings at present being provided is compared with the type of worker who received the largest share of the supplementary benefit payments.

Of a total of 130,000 persons who filed claims for supplementary benefits during March and April this year, about 71,000 have already received payments, amounting to a total of \$3,305,700, or an average of \$47 per claimant. It is these supplementary benefit payments which account in large part for the excess of monthly outlay over income of the Unemployment Insurance fund this spring.

About 64 per cent of the money paid out in supplementary benefits, or slightly over \$2 million, was paid to persons who had exhausted their benefit rights. A large proportion of these people were the unskilled or semi-skilled workers who normally find employment in highly seasonal industries.

About 24 per cent of the money went to loggers. Since a large number of loggers are among the 30,000 persons who have not received their money although their claims have been authorized, the proportion of payments to loggers to total payments will probably be higher when the final figures on this year's supplementary benefit program are compiled.

The industries which are increasing their employment rapidly at this time of year are providing most of the job openings for the type of workers who were claiming supplementary benefits. In the spring and summer, agriculture employs a large proportion of those who work as loggers in the winter. Both construction and transportation employ a great number of unskilled and semi-skilled workers. While employment is still increasing slowly in manufacturing, hiring is not on a scale sufficient to account for any large number of the new job openings at present being created. Further, the demand in manufacturing plants for the unskilled worker who finds most of his employment in the seasonal outdoor industries of agriculture and construction is not very strong. A good many of them tend to rehire members of their regular staff who have been laid off in the winter.

Both agriculture and construction industries will probably absorb a good proportion of the workers who were without jobs during the winter months. Construction employment in practically all regions is expected to equal last year's record level, and the prospects are for a high level of employment in agriculture. Although the general shortage of agricultural workers which was characteristic of the first few post-war years will not recur, there will undoubtedly be areas, particularly in the Prairie region, in which there will be a shortage of experienced farm workers. No great demand is anticipated this year for Displaced Persons as farm workers.

Although a great many plants are in the process of negotiating their annual collective agreements, there have been no major strikes to disrupt employment in Canada. Shortly after the employees of the Canadian

(a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.

(b) Some of these "unplaced applicants" registered at the National Employment Service Offices are persons with a job who are seeking other work. On the other hand, there are persons without jobs and seeking work who do not come to the N.E.S. offices.

(c) These percentages calculated on basis of 1949 figures excluding Newfoundland.

(d) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department Citizenship and Immigration, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the Labour Gazette.

# NOTES OF CURRENT INTEREST

## Increase in wage rates in 1949

Wage rates in 1949 showed an increase of 4.7 per cent over 1948, according to preliminary calculations of the Economics and Research Branch of the Department of Labour.

The general average index number on the base 1939=100 stood at 205.1, at October 1, 1949. By main industrial groups the largest percentage increases took place in manufacturing and service, each of which showed a rise of 6.4 per cent. Rates in construction were 4.5 per cent higher than in 1948, and mining rates increased by 2.1 per cent. In transportation and communication the increase was less than 1 per cent, with this group being heavily influenced by the fact that no change occurred in the rates in steam railways in 1949.

The slight decrease shown in the logging index is due to lower average earnings of piece workers rather than to a decrease in actual rates.

About \$895,000 was paid out in benefits during the month, with the payments averaging \$1.89 a day. During the same month, regular insurance benefits averaged \$2.44 a day. The daily rate for supplementary benefit is set at about 80 per cent of the rate for regular benefits.

About one in nine of the claimants for supplementary benefits was a woman. Women generally account for about one in five of the claimants for ordinary insurance benefits.

At the end of the month, about 70 per cent of the claims filed had been adjudicated, and of those, 92 per cent were found to be eligible for benefit. Of the 5,000 claimants not eligible for benefit, 2,300 were unable to meet the requirement that they must have made unemployment insurance contributions for not less than 90 days in the fiscal year. Another 2,000 were persons employed in lumbering and logging who had not worked the required 90 days in

## Operation of supplementary benefits program in March

The Hon. Humphrey Mitchell, Minister of Labour, recently released detailed figures on the first month of operation of the supplementary unemployment benefit program. This year, supplementary benefits were in effect from February 28 to April 15. The figures cover the month of March. In future years, supplementary benefits will be in effect from January 1 to March 31.

During March, 93,000 persons filed claims for supplementary benefit, and benefit payments were begun on 35,000 of these claims. About 48 per cent of the claims were filed in Quebec.

that employment necessary to qualify for supplementary benefits.

Information on the occupations followed by claimants for supplementary benefits is at present available only for those who were not registered with the National Employment Service previous to the date supplementary benefits came into effect. At April 13, about 40 per cent of claimants were registered for jobs in lumbering or logging, 25 per cent were unskilled labourers, many of whom were probably casual workers, and slightly more than 10 per cent were construction workers, mostly unskilled.

The following table shows, for the month of March, the claims filed, the number of persons commencing to receive benefit, and the amount of money paid out, by province.

	Claims for Supplementary Benefits	Persons Commencing Benefit	Amount of Benefit Paid
Newfoundland .....	400	100	1,300
Prince Edward Island.....	700	300	6,300
Nova Scotia .....	4,900	2,200	50,600

**National  
Committee  
asks study  
of seasonal  
unemploy-  
ment**

climatic and other seasonal factors.

It was reported to the National Employment Committee at a two-day session in Ottawa late in April, that a great deal had been done during the winter months just passed by community co-operation with the National Employment Service in providing part-time work for those unemployed due to the weather. A "Do it Now" campaign, which encouraged industry and householders to arrange for their inside construction, repair, or decorating, during the winter months had provided a great many jobs. Mr. Justice W. J. Lindal, of Winnipeg, who was Chairman of the meeting, pointed out that some Local and Regional Committees had already recognized the long-term importance of this idea and had begun planning for next winter. Judge Lindal said it was obvious that industrial foresight and planning could do much to level out employment throughout the year.

(An analysis of seasonality of employment in Canada was published in last October's *LABOUR GAZETTE*, pp. 1210-16.)

The meeting passed a resolution that seasonal unemployment be placed on the agenda of Local and Regional Committee meetings in the near future with a view to appropriate action being taken.

Members of the Committee in attendance were: T. D. Anderson, General Secretary of the Canadian Legion, Ottawa; J. B. White, Director of Personnel, Aluminum Company of Canada, Montreal; R. A. Stewart, B.S.A., Canadian

Federation of Agriculture, Almonte; George F. Hougham, Canadian Retail Federation, Toronto; Mrs. G. D. Finlayson, Corresponding Secretary, National Council of Women, Ottawa; A. R. Mosher, President, Canadian Congress of Labour, Ottawa; Carl Berg, Vice-President, Canadian Trades and Labour Congress, Edmonton; R. E. G. Davis, Canadian Welfare Council, Ottawa; and Norman Mitchell, Secretary, Unemployment Insurance Commission.

Chief Commissioner J. G. Bisson, Commissioners R. J. Tallon and C. A. L. Murchison, of the Unemployment Insurance Commission, attended the meeting. Others of the Commission in attendance were W. K. Rutherford, Director of Employment Service, and H. C. Hudson, Chief of the Special Placements Division. G. H. Parliament, Director-General of Rehabilitation, DVA, represented the Department of Veterans Affairs.

**Effective  
date for  
unemploy-  
ment  
insurance  
changes**

Certain of the amendments to the Unemployment Insurance Act, adopted by Parliament on February 28, 1950, will come into effect on July 3.

The provisions of the Act which will become effective on that date have all been announced previously (*L.G.*, April, 1950, p. 532). They include new rates of unemployment insurance contributions by employers and employees, and new weekly rates of benefit payable to unemployed persons. The only provision still to go into effect is one dealing with the new maximum benefit rate for insured persons in the highest earnings class. This new rate will not be payable until July 1, 1951. The contribution and benefit classes into which employees are grouped on the basis of their earnings are reduced in

number, and the weekly contributions by employers and employees for each class are made equal.

At the same time, the ceiling on insurability for salaried employees is raised from \$3,120 to \$4,800 a year.

In announcing the proclamation of these sections of the Act, the Hon. Humphrey Mitchell, Minister of Labour, pointed out that most of the other sections of the new Act were already in effect. Among these is the provision for supplementary benefits, designed to give additional assistance to unemployed workers during the winter months.

#### **Appointment of new members to advisory committee**

On May 3, Mr. Paul E. Côté, Parliamentary Assistant to the Minister of Labour, announced the appointment of two new members to the Unemployment Insurance Advisory Committee.

The new members are Mr. T. H. Cooper of Montreal, representing the railway companies, and Mr. A. J. Kelly, of Ottawa, representing the railway brotherhoods.

The appointments were made by Order in Council, in accordance with a recent amendment to the Unemployment Insurance Act providing for two additional members of the Committee.

#### **Publication of new monograph on electrician's trade**

Hon. Humphrey Mitchell, Minister of Labour, recently made a further announcement on the "Canadian Occupations" series of booklets and pamphlets. The final number in the construction trades group, entitled *Electrician* is now being issued.

The Minister stated that several others, dealing with professions, trades, and industrial groups of occupations, are in an advanced stage of production.

Mr. Mitchell said that a lively interest in these publications by persons and organizations representing a wide cross-section of the Canadian public has continued, and the circulation is growing rapidly. It was clear that the ready co-operation of labour and management with the Department had resulted in a product useful and acceptable to those desiring specific and authentic information on occupations.

The Minister expressed himself as confident that such information would be instrumental in assisting to procure a suitable type of applicant for entry to the occupations, and in giving many young Canadians an opportunity of finding out

for themselves the nature and possibilities of careers about which they formerly had difficulty in obtaining adequate details.

#### **Statistics based on family allowance payments**

During the month of March, 1950, family allowances were paid in respect of 4,202,263 children in Canada, as compared with 3,335,582 for June, 1946, the month corresponding with the end of the first year of operations.

The average allowance being paid per family at March, 1950 was \$13.64, as compared with \$13.97 at the earlier date, reflecting a reduction in the average number of children per family from 2.34 to 2.27.

Newfoundland and Quebec families averaged the highest payments at \$16.48 and \$16 respectively. Ontario families averaged \$12.01, while British Columbia families were lowest at \$11.44.

#### **Taxing of profit sharing schemes**

In a proposed amendment to the Income Tax Act, which was given second reading in the House of Commons on May 18, 1950, there is a new section entitled "Employee Profit Sharing Plan" to provide for the method of taxing such plans. Employee profit sharing plans are defined as those where an employer undertakes to make payments to his employees based on the profits of his business, where such payments are made through a trustee, and where all payments received by the trustee during the year plus profits from the trust property are allocated either contingently or absolutely to individual officers and employees in the enterprise. Under the section, the amount so allocated under the plan is to be included in computing the beneficiaries' income for tax purposes. The payments will not, therefore, be taxable on receipt by the employees unless it can be shown that they were not previously taxed. The employer may claim deductions for payments made into such a plan.

Explaining this section of the Act in the House of Commons, the Hon. Douglas Abbott, Minister of Finance, said: "We are in effect here confirming what has been the practice with respect to (profit sharing) plans.

"Under the so-called profit sharing plans, the employer has been entitled to deduct from his gross income the amount of profits which he contributes to the plan. The employee who is in receipt of a credit for those profits takes his proportion into

his own personal income as well as any earnings from the fund. When he receives out at the end his share of the funds accumulated in the plan, then that is free of tax. The committee will appreciate the fact that that is exactly the reverse of the rule in a pension plan, where the pension payments are deductible by the employee and the pension when received out is taxed. These profit sharing plans operate on the exact reverse of the principle which is applied with respect to pensions."

**Increase in Canada's population** Canada's population at the first of March this year was 13,766,000, an increase of 59,000 over the figure for December 1, 1949, according to the quarterly estimate by the Dominion Bureau of Statistics. The gain in the latest quarter compares with estimated increases of 71,000 in the quarter from September 1 to December 1 last year and 87,000 from June 1 to September 1 when there were larger net increases from immigration added to the gains from natural increase. The annual estimate for June 1, 1949 was 13,549,000, the estimated nine-month increase to March 1 this year being 217,000.

**Conference on handicapped postponed** A Dominion-Provincial Conference on Rehabilitation of the Handicapped, which had been scheduled to be held on May 25-27 in Ottawa, was postponed because of the Manitoba flood upon the suggestion of the Premier of Saskatchewan and after consultation with the health authorities of Manitoba and Alberta.

In announcing the postponement, Mr. Arthur MacNamara, Deputy Minister of Labour, explained that many of the delegates from Manitoba, Saskatchewan and Alberta, were busily engaged looking after evacuees from the flood areas, making the postponement advisable.

The Interdepartmental Committee in Ottawa, made up of representatives of the Departments of Labour, Health and Welfare and Veterans Affairs, which had been preparing for the Conference, was unable to suggest a suitable time in June for the Conference because of the difficulty of getting accommodation. However, the Deputy Minister stated that it should be clearly understood that the Conference would be held as soon as circumstances permitted.

All ten provinces, national voluntary agencies, and individuals with special experience in this field, had been invited

to join federal authorities in studying some of the rehabilitation programs in Canada and abroad and to consider where such work might be extended in this country to provide more adequate protection for the disabled.

The Conference had been expected to deal with such aspects of the rehabilitation process as registration, medical diagnosis, medical treatment (including physio, recreational and diversional therapy), vocational guidance and training, special placement, social welfare and follow-up, as well as disability benefits.

**Briefs presented by labour congresses** During April and May, the major central labour organizations in Canada appeared before three official bodies and presented briefs, summaries of which will be published in next month's *LABOUR GAZETTE*.

The briefs set forth the position of the labour congresses on the matters being dealt with by the Royal Commission on National Development in the Arts, Letters and Sciences, the Joint Committee of the Senate and House of Commons on Old Age Security, and the Senate Committee on Human Rights and Fundamental Freedoms.

**Rise in imports from Britain** Canada had a debit balance in commodity trade with the United Kingdom in March instead of the traditional export surplus, due to a sharp rise to a new peak total in the value of imports and a fall in the value of exports, according to the Bureau of Statistics. There was also an extraordinary debit balance from trade with the other countries of the Commonwealth. At the same time the debit balance with the United States continued the downward trend of recent months, imports falling below a year earlier for the fifth successive month and exports again moving to a higher level. These were only slightly offset by a small export surplus to all other foreign countries.

The adverse balance with the United Kingdom amounted to \$2,400,000 as compared with credit balances of \$5,300,000 in February and \$11,300,000 in March, 1949. In the quarter, the favourable balance was \$25,700,000, less than half last year's first-quarter total of \$63,200,000.

In trade with the United States there was a marked decline in the debit balance in the month to \$3,700,000 from \$44,900,000 in the corresponding month last year. In

the first quarter, the debit balance was \$38,100,000, sharply below last year's debit of \$132,800,000 in the same period.

Merchandise imports from the United Kingdom in March rose to \$32,700,000 from \$28,300,000 a year earlier, while domestic exports fell to \$30,100,000 from \$39,500,000. This is the highest value yet reached by imports from the United Kingdom and indicates a much larger volume than in any month last year. In the first quarter of the year, imports were up to \$84,200,000 from \$76,700,000, while the domestic exports were down to \$109,100,000 from \$139,400,000.

Increased purchases of iron and steel products, non-ferrous metals and products, and chemicals and allied products were chiefly responsible for the rise in March in imports from the United Kingdom as compared with March last year. Largest gain was in the value of iron and products which rose to \$12,081,000 from \$6,597,000. Imports of fibres and textiles, on the other hand, fell to \$9,912,000 from \$13,015,000. Since the devaluation of the pound sterling would have some tendency to reduce prices of imports in terms of dollars, it may be assumed that in terms of volume, increases were greater and decreases smaller than the value figures for imports from the United Kingdom indicate.

Imports from the United States in March fell to \$160,900,000 from \$169,000,000 in the corresponding month last year, while domestic exports rose to \$154,300,000 from \$122,400,000. In the quarter, imports totalled \$458,500,000 as against \$482,600,000, while domestic exports aggregated \$414,000,000 compared with \$345,200,000.

Imports from all countries in the month were valued at \$237,400,000 as compared with \$200,200,000 in the preceding month and \$235,900,000 in the corresponding month last year, bringing the total for the first quarter of the year to \$649,500,000 as against \$665,700,000 in the similar period of 1949.

Domestic exports to all countries in the month—as published earlier by the Bureau—were valued at \$228,200,000 as against \$199,500,000 in February and \$216,600,000 a year earlier, and in the first quarter at \$648,900,000 compared with \$658,800,000.

#### **Functions of CCL union of unemployed workers**

The Canadian Congress of Labour announced recently that units of the National Federation of Unemployed Workers, founded by the CCL last January (L.G., Feb., 1950, p. 163), have been established in 25 centres across Canada.

The announcement states that the "main target of the Federation is full employment and the program is primarily directed to efforts to find jobs."

The various units are being asked to formulate programs designed to meet their local conditions. "The organization has already provided extensive service to the unemployed through aiding them in obtaining the assistance of various local welfare agencies and, in some instances, in locating jobs," according to the announcement.

#### **Labour conference on racial intolerance**

A report has been published of the first labour conference on relations between Canadians, held at Montreal in February under the auspices of the Labour Committee for Racial Tolerance. This conference was endorsed by the racial tolerance committees of the Trades and Labour Congress of Canada and the Canadian Congress of Labour.

Seventy-two delegates chosen by thirty locals affiliated with one or other of these two labour groups, as well as representatives of organizations devoted to popular education, took part in the four sessions of this labour conference, the first to be held in Canada in the French language for the consideration of such a problem.

In his opening address Mr. Claude Jodoin, Vice-President of the TLC and chairman of the conference, drew the attention of the delegates to the importance of that unity and good understanding which must exist among all races in order to guard against the unrest and the danger of friction which often seem to predominate in labour organizations during periods of unemployment. He stressed the fact that only through mutual understanding and an adequate knowledge of the different Canadian cultures will members of the trade union movement be able to preserve their unity and assure their minorities of the union security they need and the right to subsistence which every individual requires.

The conference dealt with the various aspects of racial intolerance, the origin and consequences of certain race prejudices and ways of doing away with them.

These subjects were dealt with by Messrs. Jacques Perreault, barrister, Gérard Pelletier, journalist, Michael Rubinstein, Chairman of the Jewish Labour Committee, and Roméo Girard, Secretary of the Labour Committee for Racial Tolerance.

Mr. Jacques Perreault pointed out that one of the causes of the usual dissension

between the various cultural groups in a nation is, in a good many cases, personal frustration, which, "if we are not careful, can lead us to a general attack on a whole race." He added that in order to attain a high economic, intellectual and moral standard of living, and to win for the working classes the respect, understanding and co-operation of the different groups about them, workers must be very careful to safeguard their unity.

After describing the sources of certain race prejudices and the grave consequences of malicious propaganda, Mr. Gérard Pelletier stated that the best way to eliminate racial or religious intolerance is to encourage the different groups to know each other better and thus increase their esteem and affection for one another.

"Prejudice being an opinion we form of something before we are acquainted with it, it remains to be seen whether it is true or false. Caused by fear, frustration or ignorance, prejudice soon shows itself in discriminatory attitudes towards such and such a minority; it can only result in discord and division."

Mr. Michael Rubinstein enumerated the different legal means which might be used to assure each minority group of the privilege of enjoying all the advantages offered by our democratic system. "It is through education, however," Mr. Rubinstein specified, "that we shall be most successful in combating racial prejudice."

Mr. Roméo Girard dealt at greater length with one of the most delicate aspects of the question of race relations: personal contact. He stressed the fact that parents have a very important part to play in developing in their children a spirit of understanding and impartiality towards all cultural groups. "Violence can lead only to violence," he stated, "and peace lies in unity and love for one's fellow-creature. Division can sow nothing but hatred, ambition and a trail of death. If it is the duty of every man to defend his country when attacked, to defend his language, his religion and his rights, it is also his duty to love his neighbour as himself. This is God's second great commandment."

The delegates recommended the adoption of the following resolutions:—

1. The passing of laws guaranteeing that the language, belief and rights of every individual be safeguarded.
2. The recommendation that the present committee protest against any attack directed against the democratic rights and privileges of any minority group.

3. To continue to carry out the task undertaken by the committee, that is the education, by all the means at its disposal, of the thousands of organized workers in the labour movement, thus preparing the way for the good understanding and comprehension from which will emerge a movement of such unity that no prejudice, however subtle, can destroy it.

#### **Teachers' salaries in eight provinces**

Annual average salary rates for teachers in the publicly-controlled schools of eight provinces—Quebec excepted—showed an average increase of \$243 between 1947 and 1948, bringing the cumulative average rise since 1939 to \$835, according to the annual report on teachers' salaries and qualifications by the Dominion Bureau of Statistics. About 53,300 teachers were included in the 1948 record, of whom 39,200 were women and 14,100 were men.

Salary rates for all publicly-controlled schools averaged \$1,689 as compared with \$1,446 in 1947, and \$854 in 1939. Teachers in city schools had the highest average of \$2,324 as compared with \$2,120 in 1947 and \$1,613 in 1939, while teachers in one-room rural schools had the lowest average at \$1,383 against \$1,207 in 1947, and \$607 in 1939.

British Columbia had the highest average salary in 1948 for teachers in all publicly-controlled schools at \$2,249 (\$2,042 in 1947), followed by Alberta with \$1,896 (\$1,546), Ontario \$1,797 (\$1,514), Nova Scotia \$1,447 (\$1,241), Manitoba \$1,418 (\$1,304), Saskatchewan \$1,404 (\$1,265), New Brunswick \$1,185 (\$977), and Prince Edward Island \$1,011 (\$816).

The total number of teachers has been increasing since 1944, in keeping with enrolments. In that year there were 49,022 teachers in the eight provinces. This had risen 11 per cent to 53,572 in 1948. It is estimated that the total may reach 65,000 by 1953 and that by 1960 the total for these provinces plus Quebec may be 118,000 an increase of 58 per cent over 1944. So far the increase in staff has been least in Prince Edward Island, Saskatchewan and Alberta, the greatest in British Columbia where there has been a rise of 25 per cent in four years.

In 1944 and 1945 the proportion of men teaching in the public schools was at the low point of 20 per cent. Since then there has been a steady advance to 27 per cent in 1948, which is not far from the high level of 30 per cent in 1940. This trend is most marked in Saskatchewan where the percentage of men has risen by 10 since

1944, and least marked in Nova Scotia and New Brunswick where the increase was four per cent.

As women replaced men during the war their number increased 3,769 between 1939 and 1944. From then through 1947 the number decreased 487, then rose by 612 in 1948. Available data indicate that 25 per cent of the women teachers in the eight provinces are married. This is exclusive of the Roman Catholic separate schools of Ontario where many teachers are from religious orders.

The proportion of teachers who are university graduates increased from 17 per cent in 1939 to 19 per cent in 1948 due to small increases in four provinces. Elsewhere the proportion decreased slightly.

### **Services to industries in Canada**

The Department of Trade and Commerce has issued two illustrated pamphlets entitled *Expand with Canada* and *Canadian Industrial Development Manual*, designed to acquaint business firms with the opportunities for investment in Canada and the services and facilities made available to new industries by government departments and outside agencies. Particular attention is given to the research and administrative services rendered by the Dominion Government Departments.

The manual is intended for foreign distribution, particularly in the United States and the United Kingdom. It was distributed for the first time at the British Industries Trade Fair in May and was given wide circulation through overseas Trade Commissioners and at the International Trade Fair held in Toronto from May 29 to June 9.

Copies of the booklets may be obtained from the Director, Industrial Development Division, Department of Trade and Commerce, Ottawa, or from overseas Trade Commissioners.

### **Increased investment in Canada by non-residents**

Investments in Canada held by non-residents rose more than \$300 million in 1948 over the 1947 level, according to the Dominion Bureau of Statistics. The increases occurred entirely in holdings in the United States.

Meanwhile Canadian direct investments in business outside of Canada declined moderately and the value of Canadian portfolio holdings of foreign securities rose.

Total value of non-resident investments in Canada amounted in 1948 to \$7,513 million (Canadian) as compared with a

revised total of \$7,192 million in 1947, and \$7,178 million in 1946, according to preliminary figures issued by the Dominion Bureau of Statistics. While showing a marked gain over the two preceding years, the 1948 total is below the 1930 dollar value, which stood at \$7,613.8 million. Since that year there has been a large decline in holdings in the United Kingdom, while holdings in the United States and in other countries have risen.

Investments in Canada held in the United States rose to \$5,588 million in 1948 from \$5,218 million the previous year and \$5,157 million in 1946. In 1930 they amounted to \$4,659.5 million. Investments held in the United Kingdom continued in 1948 the downward trend of the two previous years and the wartime period, declining to \$1,593 million as against \$1,631 million in 1947 and \$1,668 million in 1946. In 1949 United Kingdom holdings stood at \$2,475.9 million and in 1930 at \$2,766.3 million. Investments held in other countries than the United Kingdom and United States also declined last year to \$332 million from \$343 million and \$353 million in 1947 and 1946, respectively; these totals comparing with \$286 million in 1939 and \$188 million in 1930.

American direct investments in Canada in companies controlled in the United States increased in aggregate value to \$2,829 million in 1948 from a revised total of \$2,565 million in 1947, making an increase of more than \$500 million from \$2,304 million in 1945.

Canadian direct investments in businesses outside of Canada are placed at \$788 million in 1948, down from \$822 million in 1947 but still above the 1946 figure of \$772 million. Portfolio holdings of foreign securities by Canadians increased to \$605 from \$579 million. Both items are exclusive of investments of insurance companies.

**Incorporation of co-ops in Canada** An article in the April issue of *The Economic Annalist*, published by the Department of Agriculture, Ottawa, gives information on the incorporation of co-operatives in Canada.

In the course of preparation of a new and revised Directory of Co-operative Associations in Canada each known association was asked to report the date of its incorporation or registration. Over 3,500 co-operatives are listed in the directory and of this number 3,229 reported they were incorporated. Only 28 associations reported that they were not incorporated.

Citing the advantages of legal incorporation, the article states:—

“Although slight differences exist in the various provincial Acts which allow incorporation of co-operatives they all provide for limited liability which is a very worthwhile protection to shareholders and members in respect to the debts of the corporation. Also, continuity of corporate existence is assured by incorporation since the co-operative association as a corporate body can carry on even if shareholders die or move away since shares can be transferred to new members. Instances of unincorporated co-operatives are few since the use of the word ‘co-operative’ in the title of an association is usually restricted to those which are incorporated by authority of the appropriate legislation.”

According to the article, the greatest period of activity in co-operative organization in Canada has been since 1936. Since then, and until 1948, a total of 2,439 co-operatives were incorporated or registered which is over 75 per cent of all co-operatives reporting. “The most active years during this period were from 1941 to 1945 when 976 co-operatives were organized. This rush of organization and incorporation coincided with the re-organization of the Co-operative Union of Canada and with it the establishment of provincial co-operative unions to promote and protect co-operative associations. During this time interest in co-operatives was undoubtedly stimulated by the public hearings of the Royal Commission on Co-operatives which were held in every province. In Quebec over 400 new co-operatives were incorporated, many with the active assistance of the Superior Council of Co-operation. . . .

“Very few co-operatives which were incorporated before the turn of the century are in existence today,” the article states. “There are, however, 58 on record as having been in existence before 1900. These are practically all in Ontario and are mainly cheese and butter manufacturing companies which were organized under special or joint-stock companies acts. . . .

“Towards the end of the First World War and extending to about 1925 there was a flurry of organization and today there remain in existence almost 200 co-operatives organized during that period. Best known of these are the great wheat pools of Western Canada. The Alberta pool marked its 25th anniversary in 1948 and in 1949 both the Saskatchewan and

Manitoba pools reached their 25th year of continued successful operation.

“There is record of only one co-operative in the Yukon Territory and it was organized only in 1947. Newfoundland has 45 registered business co-operatives. Data on their years of incorporation are not yet available but it is known that very few of these were organized prior to 1935.”

**Farm income in 1949 below record level of 1948**

Net income of Canadian farmers from farming operations last year declined for all Canada (excluding Newfoundland) from the record level attained in 1948, but was still substantially above all other years. In contrast with the overall decrease, net income for five provinces was above 1948.

Preliminary estimates by the Dominion Bureau of Statistics place farm net income for the year at \$1,537,387,000, about four per cent below the revised all-time high of \$1,600,336,000 for 1948. This compares also with the revised estimates of \$1,128,600,000 for 1947 and \$1,161,395,000 for 1946.

Net farm income was higher in the three Maritime Provinces, Quebec and Saskatchewan, the gains ranging from less than one per cent in Quebec to nearly 25 per cent in Nova Scotia. The declines in the other provinces varied from less than two per cent in Ontario—the province of largest net income—to over 20 per cent in British Columbia.

Cash income from the sale of farm products for the year is estimated for all Canada at \$2,456,871,000, down slightly from \$2,459,393,000 in 1948, and income in kind at \$350,610,000 compared with \$377,465,000; while inventories were down \$72,698,000 as against \$65,059,000. The result was a drop in gross income to \$2,734,783,000 from \$2,771,799,000. Supplementary payments were down to \$17,628,000 from \$20,748,000.

Farm operating expenses and depreciation charges during 1949 continued to move upward, although at a somewhat lower rate than in the previous year, the increase amounting to about two per cent as compared with about 12 per cent in 1948. Total for the year is estimated at \$1,215,024,000 as against \$1,192,211,000 for the previous year and \$1,067,168,000 for 1947. Hired labour and purchases of feed and seed were lower last year, but most of the other main component items were above 1948.

**AFL and  
CIO agree  
to discuss  
labour unity**

Meetings of committees representing the American Federation of Labour and the Congress of Industrial Organizations, to discuss labour unity, were arranged

to be held in June.

The meetings followed from an invitation of the CIO (L.G., May, 1950, p. 613) which was accepted by the AFL Executive Council in May. The Federation's reply to the CIO proposal said in part:—

"We find ourselves in complete accord with the necessity of unity in all fields of organized labour's activities and would direct attention to the several appeals previously addressed to your organization in the past number of years for unity not merely upon a tentative and co-operative basis, but upon a permanent and organic basis. Our Executive Council would direct your further attention to the unanimous decision of our most recent convention urging the necessity and furtherance of unity in the forces of organized labour in spirit as in substance, not merely on a conference level, but upon a permanent and organic basis."

**Pension  
plan for  
bricklayers  
in New  
York City**

What is described by the *New York Times* as the "first pension plan ever established by building contractors in any part of the country," will come into effect in January, 1951

according to an agreement reached in April between the Building Contractors and Mason Builders Association and seven locals of the Bricklayers, Masons and Plasterers International Union of America (AFL). Under the plan, the contractors will pay ten cents an hour per worker into a pension fund, with details of the plan to be worked out by representatives of the two groups.

**Management  
and labour  
co-operate  
on job modi-  
fications**

A report examining the joint experience of companies and unions in handling job modifications made necessary by changes in production methods has been prepared by the Industrial Relations Division of Princeton

University, New Jersey.

While making no claim to be completely representative of manufacturing industry in the United States, the material included in the study does attempt to shed some light on the question whether "technological change will be retarded under conditions of collective bargaining."

"Job Modifications under Collective Bargaining" is the title of this report which consists of a survey of 20 companies and a series of four case studies. Attention was focussed on small-scale, frequent changes that alter only a part of the job and that affect not more than a fraction of the workers in a plant when the change is taking or has taken place.

Material for each case study was secured by a series of interviews with persons representing both management and labour. When possible, the reactions and attitudes of the workers directly affected by the changes were obtained also.

A foreword, written by the director of the industrial relations section, points out that "the inclination to resist change is far deeper in human nature than the acceptance of any group-made restrictions. Opposition arises out of ignorance and fear of the consequences of change, and from lack of participation or control in determining how change shall occur. It is fortunate for the American consumer that the same institution—the trade union—which can translate the workers' fear of the adverse consequences of technological change into a powerful brake, can also as an instrument of communication and participation, aid greatly in assuring willing and understanding adjustment.

"Under collective bargaining, job modifications are no longer the private preserve of the engineer and the time-study man. A blunt presentation of engineering data may transmit facts, but at the same time create such a fog of sudden fear and frustration that a reasonable adjustment may be delayed for months and attended by burdensome wage costs. From the cases studied in the following report, successful change occurs when, by far-sighted planning, advance knowledge and discussion, and a willingness to compromise *ex parte* judgments, the change is treated as a readjustment of minds as much as a readjustment of technical methods."

**U.S. bureau  
conducts  
survey of  
night work  
for women**

In a recent survey on night work for women conducted by the Women's Bureau of the U.S. Department of Labour, about as many new questions as answers to old ones resulted, according to the *New York Times* of February 6.

While some women find night employment more convenient, for others it poses serious problems. The Department still remains concerned about these problems but just what shape remedial legislation should take "if, indeed, any is desirable, is not yet clear," the article states.

In the preparation of a sound public policy on this matter, the report contends that "the development of better community services for their (women workers) convenience would provide greater freedom to accept day-time employment".

For its study, the Bureau selected restaurants and hotels because night work is "a more or less permanent feature" in these two industries. In addition, they employ considerable numbers of women. "Surprisingly," night work did not constitute an important segment of women's total employment. More than half of the employees of hotels were women but only very few were employed after 10 p.m. Restaurants tended to employ women at later hours, but usually not later than one a.m., the report pointed out.

Evidence accumulated during the survey tended to corroborate the claim established some time ago that women on night work suffer more from fatigue than men, since domestic responsibilities make sufficient sleep during the day impossible.

Night work was preferred by some women because it suited their "personal needs and desires," the article continues. Others worked at nights because "tips were higher" and the pace less rigorous than during the day or because no other employment was available. One woman preferred night work because she wanted to avoid "lonely" evenings.

The bureau stated that while the study did not attempt to be completely comprehensive, it did indicate that "some of the bases underlying long concern about night work are still present".

#### **Maritime hiring halls illegal in U.S.A.**

During the early months of 1950 the United States Supreme Court twice refused to rule on the legality of maritime union hiring halls. This action had the effect of affirming a lower court opinion that the National Maritime Union (CIO) hiring halls in the Great Lakes area are illegal under the Taft-Hartley Act.

#### **High trade union membership in Australia**

Trade union membership in Australia rose to a total of 1,423,150 for the year 1948, according to the Commonwealth Bureau of Census and Statistics.

In 1947 the total was 1,339,457; and in 1939 it was 915,470. The number of separate unions has shown a decline since 1939, from 380 to 318. The number of branches rose slightly over the same period, from 2,199 to 2,238.

Population of Australia at the end of 1948 was estimated at 7,711,034; and the total number employed in industry (wage and salary earners excluding rural, household domestic and defence forces) was about 2,409,300.

#### **Indian labour officers train in U.K.**

Arrangements have been made by the Government of India with the United Kingdom Ministry of Labour and National Service to give a six-months' training course in the United Kingdom to Indian labour officers and nominees of recognized employers' and workers' organizations. About 20 persons will be trained at a time. The first course will commence in July this year, according to the India Information Services.

#### **Heat sickness and preventive care**

During the summer months, persons working in very hot environments, such as stokers, bakers and foundry workers, become more subject to illness as a result of such exposure, reports the *Industrial Health Bulletin*. Other people may be affected also by high temperatures and it is therefore advisable to keep a few health rules in mind.

The human body has several mechanisms for regulating its temperature which is usually maintained at a steady level given off at a controlled rate. When this mechanism fails to give off sufficient heat, sickness results.

According to the Bulletin, there are three common types of heat sickness—heat cramps, heat exhaustion and heat stroke. *Heat cramps* occur in persons sweating profusely during heavy physical work under high temperature. Occurring in the extremities or abdomen, they tend to repeat themselves at short intervals and although lasting only a few minutes are painful, frequently producing nausea and vomiting. Cramps are brought on by loss of water and salt in the system and can be eliminated by replacing this loss, either by drinking salt and water solutions or by taking salt tablets.

Of the three types of sickness, *heat exhaustion* is the most common, varying in severity from a sensation of fatigue to complete unconsciousness. A feeling of dizziness, fatigue and headache, sometimes accompanied by nausea are the usual symptoms.

*Heat stroke*, or sun stroke, which usually occurs suddenly without warning and produces unconsciousness, is the most serious

type of heat sickness. Avoidance of direct sun rays and high temperatures prevents this occurrence.

At the first indication of these symptoms, the patient should be immediately removed to the open air or the coolest place available. Any tight-fitting clothing should be removed and the patient allowed to rest until completely recovered.

Observance of sound health habits helps to keep our bodies cool. Moderate food consumption and light physical exertion reduce the amount of heat produced by the body. Light foods such as salads, cold meats, refreshing desserts and beverages are the wisest choice.

"For hot weather comfort," the Bulletin concludes, "practise these simple health rules:—

"Get plenty of sleep.

"Wear light, loose clothing to allow for adequate ventilation of the skin.

"Drink plenty of cool water (cold fluids should be avoided).

"Take salt in tablet form or in solution when perspiration is excessive.

"Keep the skin clean. A daily bath or shower is advisable.

"Eat moderately and choose a well-balanced light diet.

"The use of alcohol in any form should be moderate."

**Puerto Rico  
labour  
federation  
affiliates  
with CIO**

The affiliation of the General Confederation of Workers of Puerto Rico with the Congress of Industrial Organizations was announced recently.

Mr. Tomas Mendez Mejias, President of the Confederation, which claims 100,000 members, pledged that the CGT stands firm in the fight against totalitarianism. One of three officials representing the CIO at Puerto Rico for the occasion, Mr. Jacob Potofsky, Amalgamated Clothing Workers' President, expressed confidence that the affiliation with the CIO would promote the welfare of the Puerto Rican people and would implement the good neighbour policy of the United States in promoting democracy, good will and prosperity for all throughout Latin America.

*Continued from Page 788*

Chrysler plant returned to work following a settlement of the dispute in the parent plant in the United States, negotiations began for an agreement involving pension plans. A strike was narrowly averted when the workers voted to accept a settlement, on June 5, deferring pension talks for five years, in exchange for an 11 cent an hour "package" wage increase. Six cents of this was a straight wage increase, four cents was for social insurance, and one cent for improved vacation pay.

## **IN BRIEF**

Claims for unemployment insurance benefits in April totalled 90,123, a decrease of 32 per cent from the preceding month, but an increase of 31 per cent over the total for April last year. Between April and May, the cost-of-living index remained unchanged at 164.0. A slight increase in foods was counterbalanced by decreases in the fuel, and light and clothing indexes. . . . Carloadings on Canadian railways during the week ending May 27 were up 10 per cent over the corresponding week last year. . . . The Anglo-Canadian wheat agreement will not be renewed after the present contract expires in July of this year.

Youth applying for their first job need counselling, not only to relate their training to occupations, but often in matters of personal appearance and business world etiquette. Before this young man has left the National Employment Office counsellor, he will have been tactfully advised to dress in his "Sunday best" and not to slouch on the prospective employer's desk.

## SPECIAL FUNCTIONS OF NATIONAL EMPLOYMENT SERVICE

*To the Special Placements Division of the National Employment Service has been assigned the task of finding suitable employment for "first jobbers" and handicapped persons. Specialized techniques, based on experience, have been evolved so that the actual and potential skills of workers can be utilized to the greatest possible advantage of the workers themselves, their employers and to society in general.*

During the five years since it was established, the Special Placements Division of the National Employment Service has expanded steadily. There are now 32 National Employment offices that have sections assigned exclusively to special placement work. Of these, three are in the Maritime region, five are in Quebec, fourteen in Ontario, seven in the Prairie region and three are in British Columbia. In all other NES offices there are officers who devote such portions of their time as may be necessary to special placement work.

Broadly speaking, all persons who present a special problem in placement in employment are sent to "Special Placements" for

advice and practical assistance. They may be divided into three main classes:—

- (1) The "first jobbers" include school graduates and others who are seeking permanent employment for the first time. Those who are in this class, in the main, have little or no appreciation of the value of their training or work capacity in relation to actual job requirements in the world of work.
- (2) The handicapped, those persons who by reason of some physical or mental incapacity, are no longer able to follow their previous occupations, or who are unable to find suitable employment without assistance. This group includes those who are handicapped in their search for employment by reason of infirmity due to age.

(3) Those with more personal problems, such as ex-convicts, graduates from the industrial schools or Borstal home, ex-inmates of mental hospitals, ex-alcoholics, etc.

The question may be asked—"Why are three such different classes handled by one branch of the Employment Service?" The answer is quite simple. They all have a problem in common, the need for counselling.

The type of counselling available in the Special Placements Division is mainly designed to assist the applicant in discovering his work capacity, either present or latent, and to help in relating his interests and abilities to existing job requirements. In order to achieve a

desired goal, it is often necessary to help in formulating a suitable vocational plan, which may entail further training or preparation.

The main and final function of the service is, of course, to provide specialized assistance in locating suitable employment and the use of an efficient follow-up service.

### First Jobbers

The first type of applicant to be considered is the "first jobber", the boy or girl fresh from school who is entering the field of work for the first time. Every June, the graduates come pouring in their thousands out of the schools all across Canada, adding their numbers to the "drop-outs" and others who have, for a variety of reasons, not completed their high school education. Many of these young people, including a proportion of the graduates, have only the remotest idea as to what kind of work they desire or are fitted for, and it is part of the task of the Employment Office to help them to arrive at some satisfactory answer to their problem.

It is surprising how often, when the question is asked the applicant—"What can you do?," the answer is "anything!" Too often, the counsellor has to interpret this answer as "nothing." True, most persons can work more or less successfully in a number of occupations—many have—

**Above:** This Fort William, World War II veteran, who is a double amputee and paralyzed from the hips down, efficiently carries out his duties in an office of the Ontario Department of Highways. **Below:** Artistically inclined, but a victim of spastic paralysis who spent most of his time from childhood in and out of hospital, this man is happy in his new job with a Toronto firm making figurines.

but it is equally true that the great majority can excel in the one for which they are best fitted. Many older men have engaged in as many as eight or ten different fields of endeavour before settling down to their life's work, thereby wasting precious years of their lives. It is to avoid this wastage that modern school and employment counselling is directed.

There is no great premium on higher education in this country. The boy or girl who graduates from high school, or even those who, through force of circumstances, are unable to complete their education, have ample opportunity for advancement. However, employers are becoming more and more education conscious, and are setting their educational standards for new junior employees on a higher level than ever before. It is, therefore, fundamental that vocational guidance and education in the school are of paramount importance for those who aim at skilled or clerical careers.

With the present tendency for industry to become more and more mechanized, machines have been simplified to the extent that relatively inexperienced and unskilled operators can run the majority of them. There are many opportunities for unskilled labour, often at high wages, but jobs of this type do not usually give much promise for future advancement and are particularly susceptible to seasonal and other fluctuations, with consequent instability.

There has been in recent years a definite shortage of young people qualified by

Above: Permanently paralyzed in both legs as a result of poliomyelitis, this young man operates a machine which puts metal edges on paper boxes in a Vancouver plant. Sometimes a slight modification in working conditions aids in the placement of physically handicapped workers. In this case, a stool is provided which in no way detracts from efficiency in production but is the key which opens employment to a handicapped person and obtains for the plant a steady employee.

Left: Expertly handling his loading machine in a woodworking plant at Moncton, N.B., despite the loss of his right hand on Active Service, this World War II veteran is proving that the physically handicapped, properly placed, are not vocationally handicapped.

education to become apprentices in the skilled trades, junior clerks in banks and wholesale houses, stenographers, etc. Competent vocational guidance in the schools is of value in correcting this deficiency. In fact it is generally admitted that the main responsibility of the school counsellor is to direct youth into vocations that will enable them to make the best possible use of their natural skills and of their acquired knowledge.

Counselling in the schools is making rapid strides and many well qualified men and women are making this their life's work. School teachers as a class, however, are busy people and have few opportunities of familiarizing themselves with the details of the thousands of jobs that are open to their pupils. In the nature of their work, it is necessary to confine their main efforts to teaching and guiding their students along the broader lines of occupations, leaving the fitting of the individual to the available job to the National Employment Service.

On the other hand, employers know intimately the requirements of the various jobs in their own organizations but, naturally, lack knowledge of the attainments and potentialities of the young people who may apply for these jobs. They realize that it is very difficult, if not impossible, to ascertain within the confines of a short interview whether the applicant has what it takes to become a carpenter or a welder or a book-keeper, as the case may be. It is even difficult to gauge the fundamentals, whether the job-seeker is the steady type, dependable, honest and hardworking. Under such circumstances, therefore, an employer has to rely solely on his own judgment in his selection of young workers and an error of judgment may prove to be costly, as he has to pay for services rendered during the period of probation.

Many employers are hiring young people primarily to develop and train them for executive positions. It is thus of especial importance that they have more information about an applicant's past record and potentialities than has hitherto been available.

The school counsellor has the necessary knowledge of the boy or girl who has passed through his hands, while the employer has the intimate knowledge of the jobs that the counsellor lacks. What the Employment Service has been gradually developing is a means of making possible the interchange of specialized knowledge between the employer and the counsellor through the medium of Youth Sections.

Among the innovations introduced during recent years are the following:—

- (1) the careful selection of a staff of Youth Units, which not only have wide and detailed experience of the requirements for entry into various fields of endeavour but keep closely in touch with the local employers of labour and also maintain direct contact with the educational authorities and the teachers and counsellors in the schools;
- (2) the systematic dissemination of job information to scholars direct by means of carefully arranged addresses by the Youth Officers during guidance periods in the schools;
- (3) the organization of "Junior Employment Advisory Councils" in the larger centres. These Councils are made up of representatives from industry, labour, the educational authorities, personnel organizations, the National Employment Service, and many other groups interested in Youth Welfare, such as community councils functioning on behalf of the community.

### Handicapped Workers

The next group with which the Special Placements Division is concerned is that of the physically or mentally disabled person. Here a different type of specialized service becomes necessary as each applicant presents a new problem. It must be realized that not all physically disabled persons are regarded as "Special Placements" as many of them are in no way "occupationally handicapped" and are able to carry on their regular employment without difficulty. "Special Placements," in employment vernacular, are those persons who through reason of injury or disease of a character likely to last more than six months, or of some physical disability, are substantially handicapped in obtaining or keeping employment of a kind suited to their age, previous experience and qualifications. This group includes those who are seriously handicapped through infirmity due to age and those who are mentally maladjusted.

These applicants are, as a rule, in special need of occupational adjustments or readjustment and, of course, of special assistance in their search for suitable employment. In the majority of cases, it is found that it is necessary for the Special Placements Division to persevere until satisfactory placement in employment is effected.

In some instances, as for example, when an applicant is being considered for a specific job, counselling is all that is necessary. An intelligent discussion of the qualifications required for the work, as these are related to the physical and mental capacities of the prospective applicant, and the best method of approach to the employer, will serve the purpose. The

latter factor relates mainly to persons who have some physical impairment that is not an occupational handicap, but detracts from their personal appearance.

Applicants with disabilities that are not obvious may be reluctant to disclose their handicap, and tactful questioning must be resorted to in order to arrive at a correct evaluation of their work capacity. Discussion should minimize the cause or the past history of a disablement and interest concentrated on the remaining powers and past experience and training, as these are the significant factors in the search for work. The applicant is brought to realize that what he has left, not what is gone, is the important consideration.

An "Appraisal of Physical Capacities" form which has space for the evaluation of the forty-three physical activities needed for the performance of various types of work and thirty working conditions which cover practically every type of employment simplifies the work of the employment officers. Provision is made in the form for assessing the individual capacities under the classifications "Full Capacity," "Partial Capacity," and "No Capacity."

Where possible, these details are obtained, either from DVA records in the case of a veteran, or from the applicant's physician in the case of a civilian. Failing these sources of information, experienced employment officers can obtain a very complete picture from careful interrogation of the applicant himself. This gives a reasonably complete idea of the possibilities of the individual and something definite upon which to base the search for suitable employment for him.

While the applicant's powers are being evaluated, other employment officers are seeking job opportunities that are suitable for handicapped persons. In this work, employment officials avoid appealing for patriotic or sympathetic consideration on the part of the employers as it is felt that these are not firm bases for the selection of new employees. It has been found that workers who were hired mainly for these reasons are usually the first to be laid off when hard times come and layoffs are in prospect. The Employment Service is in the business of providing workers who will hold their jobs on merit, and who are fully capable of performing their daily tasks.

Comprehensive surveys, conducted in the United States and Canada for the purpose of comparing the work efficiency of the handicapped person who has been properly

placed in employment with that of the non-handicapped person, show that:—

1. They can do well the work required of them;
2. Their attitude towards their job is satisfactory;
3. Their morale is higher;
4. Their record in the matter of output, accidents, and attendance, is on the whole, superior to that of normal employees;
5. That, as a class, physically handicapped workers are highly regarded by their employers.

Employment officers, who have been trained in job analysis, make a comprehensive survey of the selected jobs, breaking down attributes necessary for the performance of the work into the same language that was used in evaluating the work capacity of the applicant for employment. The "Job Analysis" form lists the same physical requirements and working conditions as are shown on the "Physical Appraisal" forms so that it is possible, by a comparison of the two, to determine whether or not an individual is physically able and has the necessary training or experience to perform the specified task.

This procedure sounds somewhat complicated but, in practice, it has been found to be quite simple and satisfactory. By using this method during the five years that the Special Placements Division has been functioning, thousands of handicapped workers have been placed in employment in Canada, a very large proportion of whom are still in the original jobs found for them.

In the furtherance of the work, the NES co-operates to the fullest extent with other organizations interested in the welfare of handicapped citizens, both veteran and civilian. "Special Placements" works very closely with the Casualty Rehabilitation Branch of the Department of Veterans Affairs and the Workmen's Compensation Board. All pertinent information obtained by these three agencies is pooled.

Close contact is also maintained with the social agencies, both provincial and civic; the hospitals, including the mental hospitals; veteran organizations; labour groups; and handicapped groups.

Probably the most difficult class of applicants for employment with whom the Special Placements Division has to deal are the men in the older age groups who through infirmity due to age or some additional disability are badly handicapped in their search for work.

## Assistance on the Road Back

Another major responsibility of the Special Placements Division is that of finding employment for ex-convicts and graduates from the Borstal Home and industrial schools, as well as many youthful offenders against the law who have been referred to the Division by the Juvenile Courts and Probation Officers, both provincial and civic. This is a task that calls for the utmost in effort and fine discrimination.

When a man is released from a reformatory or penitentiary, his first, urgent need is a job. The days just after his release may well be the crucial period in his rehabilitation. If he passes the first hurdle, that of getting a job, he is well on his way to becoming a useful citizen—his self-respect and his standing in the community have been restored. If, however, he meets with discouragement and hostility in his search for work, his good resolutions may vanish, and he may take the easier course of returning to his old life.

These men and women need advice and assistance. For some years, such organizations as the John Howard Society and the Salvation Army, co-operating with federal and provincial authorities, have done excellent work in helping newly-released men and women to find their feet. However, the need for further organization of this work is becoming more and more evident and the Special Placements Division of the National Employment Service, during the past year, expanded its facilities to offer special services on behalf of these men and women. Making difficult job placements is the particular task of this Division, and through its contacts with employers and its country-wide clearance system, it has had an encouraging measure of success.

Special Placements Officers of the National Employment Service in all provinces work with the penitentiary authorities. When several men are due to be released, the Special Placements Officer goes over their files with the penitentiary Classification Officer and then interviews the men individually. He confers with penitentiary officials on the men's aptitudes and habits, and determines where they intend to go when they are released. The National Employment Office at that place is notified, and receives the information necessary to help him find a job when he reports.

Little can be accomplished, however, without the co-operation and sympathy of employers, and the placement of ex-inmates involves, even more than ordinary placements, the close matching of individual workers and employers. The Employment Office often must not only find an employer willing to take on the released man with a complete knowledge of his past history, but must also, in many cases, convince the man himself that he has a real chance of making a fresh start. Most of these men are anxious to make this new start, but they are often doubtful of their chances in the outside world. Before a satisfactory placement can be made, the employer must be convinced of the man's sincerity, and the man of the employer's good-will.

In placements of this type, it is generally considered desirable that a prospective employer be given the history of the applicant's case, and this is done when the applicant is willing to give his permission in writing. Placements made in this way are more satisfactory, since the man is relieved of the need of concealing his record, and of the constant anxiety that his past will catch up with him and that he will lose his job. If he is not willing to have his past revealed, any placement made is on the basis of the protection of the interests of his employer. His record, and the knowledge of his character gained by the penitentiary authorities, are used to ensure that he will not be given a job where there is a danger of him repeating his offence.

A man trained in a trade has a much better chance of finding a job on his release, but a large proportion of the inmates of penal institutions have no such training. In the last few years, vocational training for the inmates of reformatories and penitentiaries has become increasingly important, and is becoming increasingly sought after by the inmates themselves. Actual training on the job in the prison workshops is being given in such trades as bricklaying, construction, carpentry, plumbing and steamfitting and engineering draughting. At the present time, the federal penitentiary authorities are seeking a means of having trainees individually trade-tested by recognized educational or trade bodies, so that they may avoid any stigma there may be in having acquired their training in a penal institution.

# HIGHER CAPITAL INVESTMENT FORECAST FOR 1950

*Two reports, presented to Parliament recently by the Rt. Hon. C. D. Howe, Minister of Trade and Commerce, forecast an increase in capital spending in 1950, and an improved ability on the part of the construction industry to meet demands for expansion of facilities.*

The Department of Trade and Commerce has forecast an increase in capital expenditure in Canada for 1950 of about 5 per cent above the record level of 1949.

Presented in a report entitled *Private and Public Investment in Canada: Outlook, 1950*, the forecast for 1950 is of a total capital expenditure program of \$3.6 billion, as compared with \$3.4 billion in 1949.

"Within this total, construction and machinery and equipment follow different trends," the report states. "Construction, dependent mainly on domestic sources of supply, is estimated at \$2.3 billion, about 12 per cent above the previous high of \$2.1 billion in 1949, while machinery and equipment, having a much higher import content, is estimated at \$1.28 billion, about 5 per cent below the peak of \$1.35 billion also reached in 1949.

"Assuming on the average little change in prices between 1949 and 1950, changes in physical volume should about correspond with those in dollar value," according to the report.

## Capital Investment Compared with Total Expenditure

On the basis of present expectations for 1950 the overall capital program accounts for about 22 per cent of total national expenditure on goods and services. "This is an unusually high proportion," the report points out, "and emphasizes the continuing importance of investment requirements as a strong supporting influence in the economy at a time when some other demand elements are showing signs of slackening. Expenditures in all the main categories are above last year with the exception of agriculture, forestry and manufacturing, and even among this group, outlay is continuing at a very high level in spite of the uncertainty of overseas markets for lumber, agricultural products and some manufactured goods. The largest gains over last year are in utilities, the commercial, merchandising and service groups (particularly institutional services) and governments, all of these being segments of the economy where activity is dependent largely on domestic demand.

Residential housing remains about the same as in 1949.

"In general, it would seem that both from the standpoint of physical capabilities and prospective market conditions there is good reason to expect that, in aggregate, the investment program should be fully realized. It should, however, be kept in mind that with a large part of the post-war backlog made up, there is less likelihood this year of substitute programs taking the place of those that might be cancelled or deferred."

## New Venture Capital

Discussing the significance of the findings, the report points out that part of the capital expenditure is for the replacement of worn out or obsolete assets and the remainder constitutes a net addition to the stock of capital goods. "It is the 'net addition' that is really indicative of the growth and development of the economy but since no separate estimates of this portion of the program are available only general assumptions, based on the overall level of capital outlay, can be made regarding its magnitude. However, there is little doubt that a large proportion of the heavy investment program in the post-war period is accounted for by the 'net addition' element. It is this new venture capital that is probably the most sensitive to the economic outlook, although replacement outlay also fluctuates with business conditions, though to a lesser degree. Because capital expenditures fluctuate in this way and because they constitute a large proportion of Gross National Expenditure, they, therefore, have an important bearing on the current use of labour and other productive facilities and on the general level of economic activity. It is largely as a result of changes in the general outlook indicated by these fluctuations in the capital program and its various components that advance knowledge of its probable level is of value to both business and government in planning future policy."

Repair and Maintenance expenditures on structures and machinery and equipment are also given in the report. These are

estimated at \$1.5 billion, about the same level as last year. "They are properly considered as current and not capital charges and consequently are given separately. They are included in the report principally because of their similarity in some respects to capital expenditures and also because they draw on virtually the same pool of labour and materials. Normally, they do not fluctuate to the same extent nor are they as representative of the business outlook."

### Higher Government Spending

The report states that "higher expenditures in the public sector of the economy account for nearly all of the increase in the 1950 investment program. Public investment in 1950 is expected to be about \$175 million or 19 per cent higher than last year. This growth is a direct reflection of the heavy demand for services, such as those supplied by public utilities, and educational and hospital facilities. Increased military expenditures account for most of the remainder. Although anticipated public investment in 1950 constitutes 31 per cent of total capital outlays, this does not represent an abnormally high level compared with the latter part of the 1930's."

Public investment of different levels of government is shown in the report. The percentage distribution of public investment in 1950 is: federal 38 per cent, provincial 37 per cent and municipal 25 per cent. This is about the same as in 1949.

"The important role of the provincial governments and municipalities in the public investment field is obviously a factor which must be taken into account in considering the possibilities of using public investment as a stimulant to the economy when activity in the private sector is declining," the report comments. "In 1950 such governments are expected to account for 62 per cent of investment in the public sector and for 19 per cent of the total capital program."

### Survey of Business

The report is based on surveys of some 17,500 business establishments of all kinds including mines, manufacturing plants, utilities and retail stores; on surveys of housing, institutions and governments; and on estimates of expenditure in agriculture and other smaller groups. "These surveys and estimates cover all types of construction projects. Building construction is only part, although a large part, of the total. Other structures such as dams, highways, sidewalks, sewers, bridges, mines, railway lines, transmission lines, etc., are also included. Machinery and equipment outlays cover such categories as railway rolling stock, motor vehicles used in business, manufacturing and mining machinery, construction machinery, equipment for power plants, office and hospital equipment, and a wide variety of other capital goods. Broadly speaking, the expenditures given in the report are those made for the purchase and repair of structures and machinery and equipment used either to produce goods or to provide services."

Dealing with the accuracy of the findings, the report states: "In the past the investment forecast, in total, has proven to be reasonably accurate. Nevertheless, within the total some changes in the composition of the program have taken place. These changes occur for a variety of reasons. Chief among these are changes in the outlook for individual firms, and lack of sufficient cost data, etc., to make an accurate forecast. Because of the resulting changes it should be kept in mind, in making use of the material, that the margin of error is likely to be considerably greater in the detailed industrial or regional summaries than in the overall totals."

### Supply of Building Materials

A second report, *Supply of Building Materials in Canada*, indicates a "gradually improving" supply situation to meet this year's vast investment program.

## CAPITAL EXPENDITURES IN CANADA, 1945 - 1950

Year	Construction (\$ Millions)	Machinery and Equipment (\$ Millions)	Total (\$ Millions)
1945.....	706	442	1,148
1946.....	1,014	606	1,620
1947.....	1,420	1,036	2,456
1948.....	1,873	1,278	3,151
1949.....	2,078	1,349	3,427
1950.....	2,319	1,277	3,596

N.B.: Actual expenditures 1948, preliminary actual 1949, forecast 1950. Figures for 1949 and 1950 include estimates for Newfoundland.

Since 1945, the report states, "each year production has increased and has now reached levels far above those attained during any war or pre-war year. As a result, fewer investment projects are currently being delayed due to building material shortages.

"The current supply-demand position is such that all investment projects planned for 1950 by industry, institutions, government and individuals should be carried out

with comparatively few supply difficulties. Certain building materials such as cement, clay, and gypsum products are still in short supply and are expected to remain so during the current year. Items made from steel, such as pipe and galvanized sheet, are also difficult to obtain but may be provided from increased imports. Other commodities which are still in short supply but on which deliveries may be expected to improve, are sanitary ware and vitrified clay products."

## LABOUR-MANAGEMENT CO-OPERATION AT WESTERN PACKINGHOUSE

A convincing story of successful labour-management co-operation has been written at the Winnipeg plant of Burns and Co., Ltd., where employer-employee teamwork has resulted in greater efficiency in plant operation, and increased productivity.

Behind these healthy relations is a Labour-Management Production Committee whose functions and accomplishments have been described in *Co-operation Works Here*, the fourth in a series of booklets prepared by the Labour-Management Co-operation Service of the Labour Department Industrial Relations Branch.

Briefly referred to as LMPC, a Labour-Management Production Committee does not attempt to be a cure-all for every industrial ill. It is, however, a proven method for pooling the ideas and experiences of employers and employees in order to better the workings of our industrial system through the medium of frank and friendly discussion.

As the booklet graphically illustrates, the LMPC at Burns and Co., Ltd. is an excellent example of what labour-management co-operation, properly approached and skilfully practised, can accomplish.

Of all the units in the Burns nation-wide packinghouse chain, the Winnipeg plant is the largest. Its 700 employees are organized in the United Packinghouse Workers' of America (CCL-CIO), Local 224.

Shortly after the local signed its first agreement with the plant in 1943, union and management agreed to form a Labour-Management Production Committee. Since the committee's inception, two permanent sub-committees, dealing with suggestions and safety, have been established.

Membership on the LMPC includes eleven employees, representing an equivalent number of plant departments, with the president of the local union and the chief steward as *ex officio* members. Six management representatives are also members, with the personnel manager serving as permanent secretary.

The plant superintendents attend all meetings; the foremen, while not members, are called upon to give advice on problems which deal with their particular departments.

By a system of rotation, one-half of the committee members are replaced each year. This allows many employees to obtain a first-hand knowledge of LMPC work. There is no permanent chairman. The chair alternates between management and labour representatives until all have presided over a meeting. The process then begins over again.

In order to maintain an informal atmosphere at the monthly meetings, there is no written agenda. The representative rarely fails, however, to bring with him notes of items that fellow employees have referred to him since the previous meeting. In addition to problems, management usually presents a report on business trends, the employment situation and market conditions for the committee's consideration.

After a meeting, each employee representative reports the highlights of the proceedings to his fellow workers. The informal discussion which follows often brings out good ideas for subsequent meetings and increases the interest of all employees in committee activities.

Through co-operative effort, management and labour have succeeded in keeping absenteeism at a minimum.

Except for the brief period of the Canada-wide packinghouse strike in 1947, relations between the local and management have always been cordial.

What co-operation has accomplished at the Burns and Co. of Winnipeg it can accomplish elsewhere, the booklet concludes. All that is required is that both parties sincerely desire to work together to achieve that efficient, profitable operation of the business upon which the future welfare and security of both depends.

# INDUSTRIAL RELATIONS IN THE PULP AND PAPER INDUSTRY

*Reports received from various parts of the country indicate that employers and unions in Canada's pulp and paper industry have successfully continued this year their long tradition of peacefully renegotiating their collective bargaining agreements.*

*In view of the excellent labour-management relations that have obtained in this industry, which is of such vital importance in the Canadian economy, readers of the LABOUR GAZETTE will be interested in a paper discussing the influences affecting this relationship, which was delivered last winter at McGill University under the sponsorship of the Pulp and Paper Research Institute of Canada.*

[Partial text of Industrial Relations in the Pulp and Paper Industry by T. H. Robinson, Ph.D., Manager Industrial Relations, Canadian International Paper Company.]

The pulp and paper industry in Canada is composed of 89 companies employing more than 335,000 persons. The industry's resources include thousands of square miles of forest land, 120 pulp and paper mills, a great variety of equipment, and many other assets—all to the value of more than a billion dollars. As an industry, these 89 companies employ more persons, pay more in wages, and have more capital invested than any other industry in Canada. There is no industry in whose continued and efficient operation Canadians have a greater stake.

[Mr. Robinson stressed the value to companies in the industry of having an industrial relations program. He then continued as follows:]—

In the opening lecture in this series, Mr. F. L. Mitchell remarked, with respect to the pulp and paper industry, that "no industry has been freer of strikes, neither has there been a Canadian industry with a better history of relations between management and labour." Both management and labour are proud of this history.

Something of the secret of this success in the field of industrial relations might be revealed in a discussion of the special techniques which various companies have adopted to locate and hire labour; to place, transfer, promote, demote and separate their employees; to train their employees; and otherwise to ensure that the employees

can give the most efficient service to the companies that employ them. Such a discussion would be on the arts of personnel management. However, in these days of generally uneasy management-labour relations, it has seemed much more worthwhile to examine some of the more fundamental factors that have contributed to the industry's enviable record of industrial peace. By the same token, it has seemed equally worthwhile to note any conditions which, if allowed to develop, could mar this record. These more fundamental factors are continuing influences with which all companies have to cope and with which prospective employees, particularly those who are ambitious for promotion, will do well to become familiar.

For this discussion of some of the major influences affecting industrial relations in the pulp and paper industry, the following have been chosen:—

1. Heavy capital investment
2. High degree of unionization.
3. Achievement of security.
4. Existence of opportunity.

These influences have been chosen because of their special relevance to the manufacturing branch of the industry. A list of major influences affecting industrial relations in woods operations would vary from the one for manufacturing.

## Heavy Capital Investment

Reference has already been made to the very considerable investment in the pulp and paper industry. Estimates of investment are approximate at best; but, when taken in conjunction with the number of

employees, these estimates give a rough idea of the quantity of capital goods, such as buildings, machines, tools and other equipment, that must be provided to keep a worker employed. In 1947, the *Financial Post* reported an investment of \$1,100,000,000 in the pulp and paper industry, or almost \$25,000 for each of the nearly 45,000 mill employees. The 1939 figure, obtained from data issued by the Dominion Bureau of Statistics, was just under \$20,000 per employee. Even so, this figure is three and one-half times the 1939 figure of \$5,500 invested per employee in all manufacturing, and is twice the figure of \$10,000 invested per employee in the mining industry.

Data regarding power employed provide another indication of heavy capital investment. Where power is employed, there must be equipment to use it. Within limits, the more power employed, the more equipment and the heavier the investment required. In 1944, the pulp and paper industry employed 52 h.p. per employee, or nine times the 5.8 h.p. per employee employed in the manufacturing and mining industries combined. It does not seem necessary to labour this point with additional data. Suffice it to say that the pulp and paper industry has to provide far more capital per employee than industry generally.

The heavy investment of capital per employee has exerted, and continues to exert, a profound influence on industrial relations in the pulp and paper industry. This high proportion of capital to labour is reflected in each company's accounts in the form of heavy fixed costs such as interest, depreciation, and taxes, that mount up, day in and day out, regardless of whether the company's mills operate or not. Since an idle plant earns no income and pays none of its costs, there is a premium upon uninterrupted mill operation.

The uninterrupted operation of a paper mill does not depend only on management's technical proficiency, or on management's skill in solving the complex chemical, mechanical, and physical problems involved in making pulp and paper out of wood; it depends also on management's ability to find and to keep customers who will be satisfied with the mill's product. In addition, uninterrupted operation depends as well upon management's ability to create the conditions that will evoke the greatest co-operative response from labour, upon management's ability to deal with the industry's human problems. It did not take the industry long to discover that practices that resulted in work stoppages could not

be tolerated, and that failure to elicit the wholehearted co-operation of the employees is comparable to the wasteful use of wood and other productive resources.

Largely because of the heavy investment per employee—for every person employed, management has to find or to have available capital to the value of \$25,000—management in the pulp and paper industry is composed of persons who are as skilled in dealing with men as with raw materials and equipment. The possession of the one skill has become as important as the possession of the other in determining whether a person will succeed to, and become a success in, a managerial post. Management in the pulp and paper industry has a keen appreciation of the need to deal fairly, understandingly, and even generously with the employees in order to ensure the continued operation of the mills and the prosperity of the industry.

### High Degree of Unionization

The pulp and paper industry is highly unionized. In a recent survey covering 87 mills, including virtually all the big producing units, not a single mill was reported without a labour agreement. Thirteen different unions are represented in these mills. Of the thirteen, ten are affiliated with the Trades and Labour Congress, one with the Canadian Congress of Labour, one with the Canadian and Catholic Confederation of Labour, and one is independent. The dominant unions, by all odds, are the International Brotherhood of Pulp, Sulphite and Paper Mill Workers with agreements in 56 mills, and the International Brotherhood of Paper Makers with agreements in 51 mills. The National Federation of Pulp and Paper Mill Workers, Incorporated, usually referred to as the "syndicate", is affiliated with the Canadian and Catholic Confederation of Labour and has agreements with 17 mills, all in the Province of Quebec.

Unions in the industry have attained a large measure of security. None of the mills reported a closed shop agreement, that is an agreement to hire and retain in the company's employ only union members in good standing. However, 61 mills, including most of the largest, reported a union shop agreement, that is a provision a new employee will become a union member within a specified number of days, usually fifteen, and will remain a member in good standing as a condition of continued employment. Forty mills give preference to union members in hiring new employees, while twenty-three mills have provision for the check-off of union dues.

The fact is that unions are a fairly established integral part of the industry. As far as management is concerned, they are accepted.

The high degree of unionization and the firmly established position of the unions have had very significant consequences. In the first place, the high degree of unionization, coupled with the importance of continued mill operation, have put the unions in an exceptionally strong bargaining position vis-à-vis the companies. In the second place, the acceptance of unions as an integral part of the industry has meant that they no longer have to fight for status. In their relations with the companies, the union leaders do not have to protect their organizations from threats to their existence. Instead the leaders can direct their energies toward the procurement of benefits for their members. Such a set of circumstances places a premium upon labour statesmanship and business ability at the bargaining table rather than upon belligerent labourism and picket line violence.

It would be unrealistic, of course, not to recognize that heavy investment and the high degree of unionization are possible sources of weakness as well as strength in relations between the companies and the unions. Heavy investment exerts a pressure upon management to agree to conditions that will ensure uninterrupted mill operation. A high degree of unionization gives unions power to squeeze all, and sometimes more, than the traffic will bear with very little risk of a work stoppage.

So far there has been no evidence that these basic factors have worked to weaken management-labour relations. The last few years have been relatively prosperous years for the industry, and the companies have been far from niggardly in sharing this prosperity with their employees. Should the time ever come when the prospects of the industry are not as good as the experience of the past few years, management will have to exert the greatest care not to purchase uninterrupted operation today at the expense of financial instability tomorrow. In turn, labour leaders will have to exert to the full all their qualities of labour statesmanship and all their abilities of leadership to avoid pushing management to agree to rates and other working conditions beyond the limits of wise business stewardship.

Fortunately the experience of the past augurs well for the future. Both management and labour have acquired the habit of settling their problems around the bargaining table. The increasing apprecia-

tion of each other's problems gives a real expectation that the wise counsel and moderation that have prevailed among both groups in the past will prevail also in the future when the going may be tougher.

### Achievement of Security

Some years ago, the late Professor W. I. Thomas of Yale University, pointed out that men have four fundamental wishes, namely, the wish for security; the wish for recognition; the wish for new experience; and the wish for affectionate response. Whoever does not have these wishes satisfied, Thomas said, becomes a discontented, frustrated individual.

It would be an impossible task to catalogue all, or even a considerable portion of the sources of frustration in our economy. One, however, is outstanding, namely, the threat of economic insecurity. This threat is ever-present. However, it is less of a threat to employees in the pulp and paper industry than to the employees in any other industry.

To begin with, there is good reason to think that the employees' jobs are secure. This form of security is based upon the industry's future in the Canadian and world economy, and not upon the relations between each employee and his company.

Today the pulp and paper industry is responsibly prosperous, but it is natural to ask "Will this prosperity last?" It is the general opinion that the increase in the world's demand for pulp and paper products during the past few years is permanent. For instance, the greatly increased use of rayon has added greatly to the need for dissolving pulp; multi-wall paper sacks are replacing jute and cotton sacks; and newsprint and book paper requirements have risen steadily with rising educational standards and a growing interest in public affairs.

While the industry's position has improved absolutely, its relative position has become even more satisfactory. Before the war, three out of every eight newspaper pages printed throughout the world were made in Canada. Today Canada supplies three out of five. In comparison with the pre-war situation, Canada's pulp exports have trebled in volume and constitute a much larger share of the world's pulp supply.

Naturally, Canada and Canada's pulp and paper industry have not been unaffected by the currency maladjustments which are afflicting world trade at the present time. However these monetary crises are a cause of inconvenience rather than permanent

damage and while they warrant caution do not justify pessimism about the future. Barring another world war or a world wide depression, there is plenty of reason to view the future of the industry with confidence. There certainly should be jobs for pulp and paper workers.

It is one thing for the job to be secure, but is another for an employee to have assurance of security in his job. The fact is each employee has a considerable measure of such security. He is assured, under the terms of his union's agreement with his company, that his years of service will be taken into consideration in the event of a layoff. He is also assured that he will not be dismissed without cause and without an opportunity to be heard in his defence. The employee's right to a fair hearing in the event of discharge is set forth specifically in the provisions of the agreement between his union and his company.

Not only is his job secure and he secure in his job, but the fact is also that the employee in the pulp and paper industry is as well able as if not better able than the employee in any other industry to provide for his needs.

The latest report issued by the Dominion Bureau of Statistics reveals that the average hourly rate in the industry\* is \$1.143, a rate that is exceeded in very few other industries. When it comes to actual earnings, pulp and paper employees top all others in Canada. As of December 1, 1949, weekly earnings in the industry averaged \$57.70. In the steam railway industry, weekly earnings averaged \$57.49, a close second. The weekly average for all manufacturing was \$45.36.

High earnings mean that pulp and paper employees as a whole have a high standard of living, the highest of any industrial group in the country. Moreover, their present standard is well above their pre-war standard. A study made not long ago shows that, in 1939, the average pulp and paper employee had almost exactly \$100 per month to spend on food; rent or shelter; fuel and light; clothing; home furnishings; and miscellaneous items, such as health, personal care, transportation, recreation, and life insurance, etc. For the same quantities of the same items for which he paid \$100 in 1939, this same employee would have had to pay \$161.02 on January 1, 1950. However, this same average employee's monthly income as of January 1, 1950, was at least \$230. As a result, he had approximately \$70 with which to supplement his 1939 budget

\* Before the 1950 contract renegotiations.

of goods and services and thereby to improve his standard of living. A contributory factor in this improved standard of living is the fact that most employees now enjoy a vacation with pay and statutory holidays with pay. One week after one year's service, two weeks after five years (after three years in a few cases), and three weeks after twenty years (after fifteen in a number of companies) is the prevailing pattern for vacations with pay. In the case of statutory holidays, most employees receive at least four with pay while a good many receive six.

Much of the talk these days about security is in terms of protection against many of the emergencies that confront employees in dismaying and often unpredictable fashion. Sickness, accident, hospitalization, retirement and death are problems which most workers are ill-prepared to meet financially without some special arrangement. The adoption of insurance plans to meet these conditions has been the subject of management-union discussions and the cause of bitter strikes in recent months. Happily there is little need for such action in the pulp and paper industry. It is true that the details of the arrangements that exist vary considerably, but it is also true that many, in fact most, of the companies help their employees in greater or lesser degree to make provision, through insurance plans, for sickness, non-occupational accidents, hospitalization and surgical services, retirement, and death for themselves and in some instances for their dependents.

All in all, in a world full of uncertainties, the pulp and paper employees are in as favoured and secure a position as their brothers in any other industry.

### Existence of Opportunity

Somebody once remarked that anybody who is really interested in security should be sent to jail. There he would have the maximum security—but no future. The pulp and paper industry offers not only a large measure of security but also an attractive future.

The industry is still comparatively young. It still provides plenty of opportunity for able, aggressive, imaginative employees to display qualities of leadership. The industry has always had and continues to have a warm regard for those who have served it long and faithfully. Their claims to recognition are by no means ignored. But as a matter of basic industry policy, the primary factor in promotions is ability. This feature of industry policy is written into the industry's labour agree-

ments. The policy itself is not seriously challenged. However, when the assessment of ability, which is a management function and which is a very important management skill in organizing and directing employees to work most effectively, comes into question there is sometimes a need to review the administration of the policy.

There is considerable evidence that the policy of promotion on the basis of ability has resulted in the elevation of many employees from the ranks to positions of responsibility. A lecture by Professor H. O. Keay two years ago on "McGill Engineering Graduates in the Paper Industry" is a case in point. Another study made just over three years ago and covering only 17 out of the 113 pulp and paper mills supplies a wealth of data showing that the industry believes in recognizing ability by promotion from within. With respect to these 17 mills,

51 labourers were promoted:—

28 to Superintendents of Woodyards, Sulphite Departments, Groundwood Departments; 5 to Superintendents, Paper Mills; 4 to General Superintendents; 4 to Chief Clerks; 2 to Mill Managers; 2 to Assistant Mill Managers; 2 to Superintendents of Finishing and Shipping Departments; 2 to Superintendents of Electrical Departments; 1 to Mechanical Superintendent; 1 to Woodland Resident Manager.

13 clerks were promoted:—

6 to Chief Clerks; 3 to Superintendents of Finishing and Shipping Departments; 2 to Mill Agents; 1 to Woodlands Resident Manager; 1 to Superintendent Groundwood Department.

11 broke hustlers were promoted:—

5 to Superintendents, Paper Mills; 3 to Mill Managers; 1 to General Superintendent; 1 to Superintendent, Sulphite Department; 1 to President.

10 draftsmen were promoted:—

6 to Plant Engineers; 2 to Chief Engineers; 1 to Assistant Manager of Manufacturing; 1 to Assistant Chief Clerk.

7 testers were promoted:—

2 to General Superintendents; 2 to Superintendents, Sulphite Departments; 1 to Superintendent, Paper Mill; 1 to Superintendent, Groundwood Department; 1 to Mill Manager.

Three companies have promoted a surveyor, a forester, and an accountant respectively to the position of vice-president and general manager.

These are only a few examples and they are cited to illustrate the point that there is no need for able persons with ambition to fear frustration in the pulp and paper industry. The industry provides an ample opportunity for such individuals to build a career for themselves.

To sum up, then, these four factors, heavy capital investment, high degree of unionization, achievement of security, and existence of opportunity, are major factors in the relations between management and labour in the pulp and paper industry. Although there are other important influences, these four factors have contributed significantly to the enviable record of cordial and co-operative relations between management and labour in the industry. These are factors, which, because of their relative permanence, make the "know how" of human relations in industry an indispensable qualification of those engaged in managing the industry's affairs. Also because of their permanence, these four factors provide more than a hope that the pulp and paper industry's record in industrial relations will continue to be a source of envy on the part of others not so happily situated.

## LABOUR-MANAGEMENT PRODUCTION COMMITTEES IN THE PULP AND PAPER INDUSTRY

*A substantial number of firms in the pulp and paper industry maintain labour-management production committees. Such committees do not concern themselves with issues that are subject to collective bargaining, but concentrate on problems of production.*

According to the records of the Labour-Management Co-operation Service there are 39 labour-management production committees presently functioning in the pulp and paper industry, representing a working force of some 22,250 workers.

The discussion topics of these LMPC's are numerous. In general, they concern themselves with safety, efficiency, good housekeeping, quality of pulp and paper,

health and welfare and absenteeism. Their deliberations on more specific subjects in these categories are outlined in the following paragraphs.

### Safety Studied

Safety is of great concern to all committees in the pulp and paper industry. Working as they do with dangerous chemicals, hot water and steam and complicated machinery,

the representatives know the hazards inevitably present in an industry of this kind and have devoted a great deal of their time to this important matter. They have discussed ways and means of operating the dryer scrapers more safely; the hazard presented by steam pipes too close to high tension wires; the feasibility of covering steps with old decker wire to prevent slipping accidents; the possibility of erecting guard rails around the wood tanks.

Also under the safety heading have come deliberations on: the safest method of unloading lime from box cars at the sulphite mill; the proper use of toe caps to reduce foot injuries; ways and means to reduce the amount of chlorine gas present in the bleachery; the hazards occasioned by the misuse of air hoses.

### Quality Probed

Quality has not been neglected by the LMPC's. They have constantly sought to improve the texture and cleanliness of their product. Discussions in this category included: methods of getting a better "back" on carton material; ways and means of eliminating the dumping of unsuitable waste into the beaters; the reasons for adhesive drying out on the roll and a poor bond consequently resulting; the possibility of placing a cover on the machine chest to eliminate dirt and moisture splashing on the paper; a new arrangement for departmental inspections of products; an investigation into the variations in output of paper machines.

### Plant Layout

Efficiency, waste of materials and manpower and plant layout as it effects efficient production have also been dealt with extensively by the committees. Their deliberations in these departments included:

an investigation into the possibilities of obtaining an improved performance from a special machine for the treatment of wood bark to be used instead of coal; best means of tracing sprinkler breaks on the paper machine route; the elimination of conditions which result in knotters giving an insufficient amount of water which results in strain on the screen plates; the use of endless belts in the shipping room to facilitate handling and loading; the proper spotting of railway cars for efficient shipping; methods of eliminating overflow from the storage tanks; the possibilities of setting up a central tool crib; the organization of a salvage program; and the establishment of standard rules to govern machine crews in reducing spoilage and loss of time.

Housekeeping is a continuing problem in this industry and it appears regularly on the agenda of all the LMPC's. The elimination of dust and gases from the machine shop has been probed, as have the relationship between poor housekeeping and waste of labour and material; the ventilation and condensation conditions at the wet end of paper machine room; ways and means of combating grease, water and oil covering the drive belt and splashing on the walls and windows; the condition of incinerators.

Many other discussion topics fall in the miscellaneous category. Some of these are: the provision of light work for men who are prevented from carrying on their regular work by injuries; the advisability of petitioning city authorities to eliminate dangerous traffic hazards near the plant; the desirability of providing more audio visual education for employees in work methods; improving the suggestion plan; obtaining improved saw sharpening equipment; the provision of a community workshop for employees where facilities for woodworking and other handicraft hobbies would be available.

---

### Correction

In the rush of producing the May issue, the affiliation of the New Brunswick Federation of Labour was designated by the initials CCL. This of course, is an error, for this Federation is a part of the Trades and Labour Congress of Canada.

# CONFERENCE ON WAGE STRUCTURE AT LAVAL UNIVERSITY

The fifth annual convention of the Industrial Relations Department of Laval University was held in Quebec on April 24 and 25. The convention brought together some 500 delegates from all parts of the Province of Quebec to discuss the general theme of "Wage Structure".

The Hon. Gérard Tremblay, Deputy Minister of Labour of Quebec, opened the convention, pointing out that the purpose of the sessions was to co-ordinate the aims and ideas of capital and labour. Mr. Tremblay is also Director of the Department of Industrial Relations of Laval University.

Monsignor Ferdinand Vandry, Rector of Laval University, expressed his happiness at seeing both labour and capital come together to discuss their mutual problems in the light of Church social doctrine. He asked the participants to have an unbiased spirit in seeking the truth.

The first lecture was delivered by Mr. Walter Delaney, member of the Standards Department, Dominion Textile Co. Ltd., Montreal. Speaking on the elements of

wage administration in the enterprise, he stressed the necessity of measuring work according to a just scale of values, in order to obtain a fair and solid structure of wage payment, and peace and justice in industrial relations.

He explained the different techniques of job evaluation, aimed at establishing the relative value of every task inside the enterprise. He stressed the advantages of the "points system" in job evaluation, which system, he said, had the qualities of being highly objective and adaptable to changeable economic conditions.

The second lecture was given by L. G. Daigneault, industrial engineer, of Dufresne, McLogan and Associates, Industrial Relations Counsellors, Montreal, who spoke on "Piece Work and Hourly Rates."

Summing up the advantages and disadvantages of the hourly and piece work system, Mr. Daigneault declared the first to be more generous than the other, because it is aimed at correcting the deficiencies of the piece work system, which buys the worker's production rather than his time.

The convention brought together some 500 delegates from all parts of the Province of Quebec. Top picture shows, from left to right: Monsignor Ferdinand Vandry, rector of Laval University, Mr. Gérard Tremblay, Deputy Minister of Labour of Quebec and director of the Department of Industrial Relations of Laval and Reverend Georges-Henri Lévesque, O.P., Dean of the Faculty of Social Sciences.

Mr. Daigneault said, however, that wage payment on an hourly basis was practical today only when there was no other alternative. He declared that a system of remuneration by proportional bonuses, added to basic guaranteed wages, seemed the most acceptable, economical and easily applied. He believed that such a fair and justified sharing of additional productive gains, at every period of pay, to workers showing efficient production was conducive to the profitable operation of enterprise.

Mr. Daigneault pointed to the need for expert preparation in the matter of organizing basic wage rates. He said that profit-sharing gave a wage increase at the very most of ten per cent; while a system of combined hourly and piece rates on a production bonus basis assured the worker of 15 to 40 per cent increase. He pointed out that the profit-sharing system can only be installed when the plant is efficiently organized, paying big wages coming from efficient operations.

The question of specialized operations as against assembly line methods was also discussed by the Montreal engineer, who declared himself to be in favour of the former; for, he said, there is no allowance for accumulation of work between stations in the assembly line system and thus, the inefficiency of one is the inefficiency of all.

Entitling his lecture "Wage with Production Bonus", Mr. René Breton, CGA, office manager of Ludger Duchaine Inc. Quebec, described certain faults and failings of methods of payment on both hourly and piece work systems. Noting that the interests of employer and employee seem to clash in this matter, he supported a combination of the two systems by giving a bonus when a certain production level is reached.

Mr. Breton said that in some cases the determination of wages through collective agreements, rather than job analysis, tended to level wages and cut down on individual initiative.

If there is the feeling that success in industry is the business of everybody, from the president down to the newest employee, he observed, and if everybody inside the enterprise feels at home, and is part of the same team, then it will be easy to find a solution to the best means of remuneration.

Mr. Gérard Picard, President, the Canadian and Catholic Confederation of Labour, described the living wage as one which affords a reasonable standard of living to a typical family of five persons (father, mother and three children), allowing for a savings account and permitting the possession of property.

Social and ethical criteria of wage fixing was the general subject of Mr. Picard's lecture.

"The minimum wage for subsistence in 1950 for a typical family of five is \$2,340," declared Mr. Picard, "and to reach the minimum of comfort, at least \$600 should be added."

He concluded that the elements to be considered in determining a living wage were: the cost of living, the state of business and the requirements of the common good.

Mr. Marcel Francq, President of the Provincial Federation of Labour, Trades and Labour Congress of Canada, spoke about the variation of wages between units of the same industry. He described three systems of wage determination in the Province of which the first two, namely the Collective Agreement Act and the Minimum Wage Act, were legislative, while the third consisted of free collective bargaining.

Referring to the Collective Agreement Act, he claimed that the standards used under its provisions to establish wage variations were too rigidly based on geographic factors. He stated that orders under this Act can sometimes become tools for the creation of monopolies, thus bringing about the disappearance of small industries.

He also discussed the Quebec Minimum Wage Law and held that it does not consider the true factors which should apply in creating wage variations in an industry.

Praising the system of free collective bargaining as being the best to establish just variations in wages, he said that wage rates fixed in this way were usually higher than those decreed by law. Local conditions of work were more respected, and the system was more beneficial to industry and encouraged private initiative.

Mr. Eugene Forsey, Director of Research, the Canadian Congress of Labour, Ottawa, studied the wage variations between different industries. Mr. Forsey explained that salaries may vary according to local, regional and national conditions. Wages, for example, are lower in smaller towns and higher in mills where the 40-hour week is established. Social conditions influence wages more than strictly economic laws and such elements as the distance from home to the mill and night work, for example, have to be considered in the measuring of fair wages. What interests the worker, pointed out Mr. Forsey, is his take-home pay.

A single labour market on a national scale is impossible in Canada, declared Mr. Forsey, because of the existence of two languages, two civil law systems and different social, educational and religious institutions, and also because of the size of the country.

Wages may vary from one industry to the other because of their different financial structure and also because of the size of the leading industry. There often is an enormous difference between what an industry can pay and what it is paying.

The speaker favoured the development of a vigorous trade union movement in Canada.

Mr. Maurice Lamontagne, an associate director of the Department of Economics, Laval University, declared that "better immediate results can be obtained for the worker by the application of wage adjustment according to the value of production."

The subject chosen by Mr. Lamontagne was "Is there an economic law explaining the determination and variation of wages?"

"Our salary policy should seek its inspiration from the great principle recognized in the old days of the handicraft economy, and put aside under capitalism, namely, that the income of workers should vary with the value of production," he declared. Outlining the practicality of the

principle, he said it takes into account the rights of the worker, the potentialities of industry and general economic conditions.

At the closing dinner, Dr. Charles de Koninck, Dean of the Faculty of Philosophy of Laval University, tackled the problem of Communism, pointing out that the Marxist conception of the human being is directly and irreconcilably opposed to the Christian conception.

Reverend Georges-Henri Lévesque, OP, Dean of the Faculty of Sciences of Laval University, after noting that Communism is the most serious and most profound problem of our time, told the meeting that the only attitude toward it must be that of sincerity, "a sincerity which will make it appear to us in its true light, in a perspective which is not falsified by mere polemics and political party interest."

"It means," he added, "that we must first and foremost do battle in the domain of ideas" and that "the struggle against Communism must be not a battle of words but a battle of ideas."

## CONFERENCE OF INDUSTRIAL RELATIONS CENTRE, MCGILL UNIVERSITY

The second annual conference of the Industrial Relations Centre, McGill University, Montreal was held on May 1, 1950. Its purposes were to review and appraise the activities of the Centre over the past academic year and to lay plans for its future program. Over one hundred representatives of business, of labour and of government were present. Professor H. D. Woods, Director of the Centre, briefly reviewed its activities, and a critical discussion was led by members of the Centre's winter seminar groups. The second half of the conference was devoted to a discussion of the current research program of the Institute of Labour and Industrial Relations, University of Illinois, led by Dr. Milton Derber, co-ordinator of research for the Institute.

Professor Woods, in summarizing the activities of the McGill Centre, stressed the mutual benefits which came from the meeting of the representatives of academic activities with business men. In the past year the seminars have dealt with the formal collective agreement and individual and group action. The rise of unions was discussed in terms of the broad subjects of the seminars and led the participants into discussion of such topics as the position of the union leader in society and the role of arbitration in the settlement of disputes.

Dr. Derber in his address stated that the University of Illinois was at the present

time carrying on a study of the industrial relations in a community of 65,000 people. The investigators include representatives of most social sciences who bring the experience of their fields to bear on the general problem. The project also involves a pooling of experience of the research workers in the community. It is hoped that such an integrated approach will provide many insights in the nature of industrial relations.

In summing up the day's discussions, Professor V. W. Bladen, of the Institute of Industrial Relations, University of Toronto, stressed the role of objective research as carried on in the universities in aiding unions and managements alike in their many common problems. In referring to the tendency for the several types of social scientists to join in common projects, he remarked on the value of the contribution each had to make to the others.

Finally, in a dinner address, Col. R. D. Harkness, President of the Northern Electric Company Limited, spoke of the importance of assessing the implications of collective bargaining to industry. He stated:—

One of labour's problems is to understand the economic principles under a competitive system and the necessity for productive efficiency; while one thing management should attempt to appreciate is the pressure placed on union leaders by the membership.

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

## INDUSTRIAL RELATIONS AND CONCILIATION

*The recommendations of the Conciliation Boards which dealt with the current dispute affecting the non-operating employees of four Canadian railway systems were considered by the parties during April and accepted by the companies but rejected by the associated labour organizations early in May. The dispute between the Polymer Corporation Limited and the bargaining agent for its employees was settled by arbitration during the period under review.*

### Introduction

The May issue of the *LABOUR GAZETTE* carried a brief summary of the reports of the two Boards of Conciliation and Investigation which dealt with the current dispute between various Canadian railways and two groups of railway labour organizations representing non-operating employees of the companies. The texts of the reports of the Boards are reproduced in this issue.

On April 14, the Director of Industrial Relations of the Department of Labour wrote the interested railway companies and the groups of associated labour organizations asking if the recommendations of the Conciliation Boards were acceptable to the parties. On May 1 a reply was made by the managements of the Canadian National Railways and the Canadian Pacific Railway Company stating that, after a very careful re-consideration of their position and having weighed their responsibilities to their employees and to the public, the railways were willing to accept the findings contained in the majority reports of the Conciliation Boards and were ready to negotiate a settlement on the basis of those reports. The reply also reviewed the financial situation of the railways and the position which they had previously taken in regard to the requests of the unions, and emphasized that the additional costs involved could only be met by increasing the charges made to the public for the services of the railways. Replies were also received from the Ontario Northland Railway and the Toronto, Hamilton and Buffalo Railway concurring in the position taken by the two major railway systems.

The replies received from the joint negotiating committees of the twelve

standard international labour organizations affiliated with the American Federation of Labour and the Canadian Brotherhood of Railway Employees and Other Transport Workers and the Brotherhood of Express Employees rejected the recommendations of the Conciliation Boards on the ground that they were unsatisfactory and wholly unacceptable.

On May 12 both groups of labour organizations notified the Department that they had decided to submit the dispute to a vote of their members for an expression of their views "as to their willingness to withdraw their services from the railways" in the event of a failure to reach a settlement of the dispute.

On May 2, 1950, the Minister of Labour received a copy of the decision of the Hon. Mr. Justice G. A. Gale of the Supreme Court of Ontario, whom he had appointed as Arbitrator to deal with the dispute between Polymer Corporation Limited and Local 14, United Gas, Coke and Chemical Workers of America.

Mr. Justice Gale was appointed by the Minister on the request of the two parties when they agreed to submit their dispute to arbitration following rejection by the Union of the report of the Conciliation Board which the Minister had previously appointed to deal with the dispute.

The award of the Arbitrator gives to the employees concerned a general increase of four per cent and a further general increase of two cents per hour, effective from December 1, 1949, to February 1, 1951, and shift differentials of three cents and six cents per hour, effective from November 1, 1949, to February 1, 1951.

The dispute arose out of negotiations for the revision of wage rates which are covered by a clause providing that wages may be altered during the term of the agreement if such alterations are mutually agreed upon by the parties. The Union's demands were for a general wage increase of 10 cents per hour and five-cent and 10-cent-per-hour shift differentials. Agreements had previously been reached on other matters initially in dispute.

On the request of the Union, the Minister had, on August 17, 1949, appointed a Conciliation Officer to assist the parties in their negotiations (L.G., Oct., 1949, p. 1236).

On September 27, 1949, following receipt of a report from the Conciliation Officer stating that he had been unable to effect a settlement, the Minister appointed a Board of Conciliation and Investigation (L.G., Nov., 1949, p. 1402). The Board had as Chairman His Honour Judge M. A. Miller, Cobourg, Ontario; G. C. Richardes, Windsor, Ontario, member appointed on the nomination of the employer; and Gordon H. Bates, Niagara Falls, Ontario, member appointed on the nomination of the Union (L.G., Dec., 1949, p. 1555).

The Conciliation Board made its report to the Minister early in March, 1950 (L.G., May, 1950, p. 684), and, although it had not been able to effect a settlement, it was able to make unanimous recommendations as to the terms on which an agreement should be based. The Board recommended a general wage increase of three per cent and a further general increase of three cents per hour. The Board also recommended the payment of shift differentials of three cents and six cents per hour. The recommendation was that both the increases and shift differential payments would be effective from January 1, 1950, to February 1, 1951.

On March 18, 1950, the Union advised the Department that its membership had rejected the recommendations of the Conciliation Board and that a work stoppage had been scheduled for March 22, 1950. At this point, the Department again intervened in an attempt to bring the disputants together and, on March 19, an Industrial Relations Officer of the Department succeeded in persuading the parties to submit the dispute to arbitration. Under the terms of the arbitration agreement the function of the Arbitrator was to determine whether the union's demands for a general wage increase of 10 cents per hour and shift differentials of five cents and 10 cents per hour should be put into effect, or whether the recommendations of the Conciliation Board should be confirmed, or

whether there should be some intermediate award and, if so, at what date the changes should be made effective.

Under the Arbitration Agreement, the parties also agreed that in the meantime the rates of pay and shift premiums, as recommended by the Board of Conciliation, would be put into effect as of January 1, 1950.

Following failure by the Union and the Company to agree upon the choice of an Arbitrator, the Minister of Labour, on the request of the two parties, on March 21 appointed the Hon. Mr. Justice G. A. Gale to arbitrate the dispute.

In his written decision, the Arbitrator gave an extensive review of the history of the Crown Corporation and an equally extensive review of the evolution of its wage structure during and since the war years.

In reply to the contention of the Union that the wage rates paid to hourly employees of the Corporation were not fair and reasonable, Mr. Justice Gale pointed out that, since the hourly rated employees first joined the Company, the cost of living in Canada had increased by 39.2 per cent and that, during the same period and after incorporation of the recommendations of the Board of Conciliation, the wage rates in the Company had advanced by nearly 38.46 per cent. The decision pointed out that, if to this figure a further percentage were added to cover the benefits derived from shift premiums, it would be observed that, broadly speaking, wage rates in the plant have kept pace with the rise in the cost of living.

The decision also dealt with the argument of the union that while rates of wages have increased by approximately 38 per cent, the actual payments received by workers have not similarly increased. Mr. Justice Gale pointed out the company had brought into existence employees' group insurance, and pension and retirement plans, and that there have been substantial reductions in income tax payments. The Arbitrator concluded that, after considering these factors and after making a study of the take-home pay of a group of employees of Polymer Corporation Limited, it could be said that there has been an increase in take-home pay of approximately 38 per cent since the company started operations and that this increase compared favourably with the increase in the cost of living.

A further argument of the union was that the employees should be able to get "a fair living from a \$20,000,000 annual operation". In regard to this argument the Arbitrator stated that it would be idle to suggest that the gross amount received

from annual operations by any company should govern the amount to be paid out in wages and salaries, since those amounts may bear no relationship to each other.

The arbitration award stated that unless "the wage rates now in effect are out of harmony with those being paid in the district, or the company should allow greater participation by the employees in its operating profits regardless of all other considerations, the present wage structure would seem to be quite proper".

On the first point, the Arbitrator stated that the wage rates of Polymer Corporation Limited conform with those paid by other companies in the district, with but one exception. He also stated that the hours worked at Polymer are less than average hours worked in other major Canadian industries, that the average weekly wage rate at Polymer is third highest and that its employees receive the fourth highest amount of take-home pay. Mr. Justice Gale concluded that the scale of wages recommended by the Conciliation Board are at least on a parity with current wages in the larger industries in the Sarnia area and with general wage levels in the whole country.

The award stated that neither does it follow as a matter of course that mere improvement in the company's operating statement must bring higher wages. The operating profits of the company for the years 1947 and 1948 and the probable profits for 1949 were set out.

The Arbitrator considered it to be part of his function to decide whether the rates recommended by the Board of Conciliation are adequate, having regard to the position of the company today and the degree of success or failure it may be expected to encounter in the future.

The Arbitrator stated that the increases demanded by the union would amount to approximately  $\frac{3}{8}$  of the anticipated profit for 1949, a proportion which he considered to be unjustified. The union was also reminded that the rubber market is sensitive and the synthetic rubber is not so

well established that it can meet all competition. It was also suggested that serious consideration be given to the necessity for considerable expenditure to cover experimentation and research.

The Arbitrator stated that the recommendations of the Conciliation Board, on the other hand, would amount to approximately  $\frac{1}{3}$  of the expected surplus for 1949, and while he agreed that the recommendations of the Board for a general increase of three per cent and a further increase of three cents were just and equitable, he felt that there was one adjustment which should be made to them. The union had contended that the employees had need of a straight cents-per-hour increase to meet the rising cost of living and that percentage changes in rates were wrong in principle, since they had the effect of expanding the spread in rates between various classes of employees. The company had contended, conversely, that a straight monetary increase tended to compress the spread and thus destroys some of the value of incentive rates for personnel in higher positions. Mr. Justice Gale agreed that both arguments are sound and should be supported by an increase which incorporates a combination of the two principles. He considered that a general increase of four per cent and a further increase of two cents per hour would partially meet both arguments.

The Arbitrator reported that he found little evidence to justify making a change in the shift differentials of three cents and six cents per hour recommended by the Conciliation Board and that they are just and equitable when considered in relation to differentials paid by similar industries in Canada and by other industries in the same area.

Following is a table showing the 1949 wage rates for Polymer Corporation employees, the increases recommended by the Conciliation Board, the increases awarded by the Arbitrator, and the new wage rates after incorporation of the Arbitrator's award:—

Classification	1949 Rates	Increases Recommended by Conciliation Board	Increases Awarded by Arbitrator	New Rates
Group Leader .....	\$1.46	\$ .07	\$ .08	\$1.54
Special Mechanic .....	1.39	.07	.08	1.47
Class 1 Mechanic.....	1.32	.07	.07	1.39
Class 2 Mechanic.....	1.26	.07	.07	1.33
Class 3 Mechanic.....	1.19	.06	.07	1.26
Junior Mechanic .....	1.12	.06	.06	1.18
Mechanic's Helper .....	1.05	.06	.06	1.11
Utility Man .....	.98	.06	.06	1.04
Regular Labour .....	.92	.06	.06	.98

***The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.***

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification

of bargaining agents, the writing of provisions for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

## **Certification and Other Proceedings Before the Canada Labour Relations Board**

The Canada Labour Relations Board met for one day during the month of April. The Board issued three certificates designating bargaining agents and ordered two representation votes. During the month the Board received 21 applications for certification.

### **Applications for Certification Granted**

1. The Brotherhood of Locomotive Firemen and Enginemen, for a unit comprising

locomotive engineers employed by the Dominion Atlantic Railway, Kentville, N.S. (L.G., April, 1950, p. 509).

2. The Flin Flon Transportation Workers' Federal Union No. 272, for a unit comprising drivers, mechanics, and helpers employed by Northern Bus Lines, Limited, Flin Flon, Man. (L.G., May, 1950, p. 675).

3. The American Newspaper Guild, for a unit comprising editorial employees of The Canadian Press (L.G., May, 1950, p. 676).

## Representation Votes Ordered

1. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the Canadian Pacific Railway Company (Office of Auditor of Agencies, Montreal) (L.G., May, 1950, p. 675). Following an investigation of the application the Board ordered a representation vote of the employees affected.

2. The Brotherhood of Railroad Trainmen, the Order of Railway Conductors, and the Quebec Central Railway Company (L.G., May, 1950, p. 675). Following an investigation of the applications the Board ordered a representation vote of the road conductors and yard foremen affected, without prejudice as to the decision of the Board as to the appropriate bargaining unit, the names of both organizations to appear on the ballot and the ballots of yard foremen to be segregated.

## Applications for Certification Received

1. The Canadian Marine Engineers' Association on behalf of engineer officers employed by The National Sand and Material Company, Toronto (Investigating Officer: H. Perkins).

2. The Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America on behalf of drivers, garage employees, and ticket sellers employed by Canada Coach Lines Limited, Hamilton, Ont. (Investigating Officer: R. L. O'Neill).

3. The Seafarers' International Union of North America, Canadian District, on behalf of unlicensed personnel employed by the Canadian Pacific Railway Company on board the ss. *Princess Helene*, operating between Saint John, N.B., and Digby, N.S. (Investigating Officer: L. Pepin).

4. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of clerical employees of the Canadian Pacific Railway Company employed in the District Accountant's Offices in Toronto and London, Ont. (Investigating Officer: H. Perkins).

5. West Coast Seamen's Union (Canada) on behalf of unlicensed personnel employed by Westward Shipping Limited, Vancouver, in the deck, engine room, and stewards departments of the tankers m.v. *Standard Service* and m.v. *B.C. Standard* (Investigating Officer: G. R. Currie).

6. West Coast Seamen's Union (Canada) on behalf of unlicensed personnel employed

on vessels operated by Vancouver Barge Transportation Limited, Vancouver (L.G., May, 1950, p. 674) Investigating Officer: G. R. Currie).

7. The Seafarers' International Union of North America, Canadian District, on behalf of unlicensed personnel employed on vessels operated by Vancouver Barge Transportation Limited, Vancouver (Investigating Officer: G. R. Currie).

8. The Brotherhood of Railroad Signalmen of America on behalf of employees of the Canadian Pacific Railway Company employed in the Signal Repair Shop at Westmount, P.Q. (Investigating Officer: R. Trépanier).

9. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by the Albert G. Baker Company, Limited, in Quebec, P.Q. (Investigating Officer: L. Pepin).

10. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by the Clarke Steamship Company, Limited, in Quebec, P.Q. (Investigating Officer: L. Pepin).

11. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by W. G. McCauley in Quebec, P.Q. (Investigating Officer: L. Pepin).

12. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by Agences Maritimes Enregistrées in Quebec, P.Q. (Investigating Officer: L. Pepin).

13. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by Anglo-Canadian Pulp and Paper Mills Limited in Quebec, P.Q. (Investigating Officer: L. Pepin).

14. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by F. J. Dinan in Quebec, P.Q. (Investigating Officer: L. Pepin).

15. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by General Equipments Limited in Quebec, P.Q. (Investigating Officer: L. Pepin).

16. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by International Fertilizers Limited in Quebec, P.Q. (Investigating Officer: L. Pepin).

17. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by Robin Hood Flour Mills Limited in Quebec, P.Q. (Investigating Officer: L. Pepin).

18. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by the Rock City Tobacco Company, Limited, in Quebec, P.Q. (Investigating Officer: L. Pepin).

19. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by Arthur Vaillancourt in Quebec, P.Q. (Investigating Officer: L. Pepin).

20. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by the Canadian National Railways in Quebec, P.Q. (Investigating Officer: L. Pepin).

21. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of harbour workers employed by the Canadian Pacific Railway Company in Quebec, P.Q. (Investigating Officer: L. Pepin).

## **Conciliation and Other Proceedings Before the Minister of Labour**

### **Conciliation Officers Appointed**

During the month of April the Minister appointed Conciliation Officers under Section 16 of the Industrial Relations and Disputes Investigation Act to confer with the parties in the following industrial disputes:—

1. The Canadian Seamen's Union, applicant, and the Canadian Pacific Railway Company (Great Lakes Steamship Service), respondent (Conciliation Officer: R. Trépanier).

2. The Canadian Seamen's Union, applicant, and Keystone Transports Limited, respondent (Conciliation Officer: R. Trépanier).

3. The Canadian Seamen's Union, applicant, and the Anticosti Shipping Company, respondent (Conciliation Officer: R. Trépanier).

4. The Canadian Seamen's Union, applicant, the Lakes and St. Lawrence Navigation Company, Limited, respondent (Conciliation Officer: R. Trépanier).

5. The Seafarers' International Union of North America, Canadian District, applicant, and Canadian National Steamships, the Canadian Pacific Railway Company (B.C. Coast Steamship Service), and Union Steamships Limited, respondents (Conciliation Officer: G. R. Currie).

6. The Canadian Seamen's Union, applicant, and the Upper Lakes and St. Lawrence Transportation Company, Limited, respondent (Conciliation Officer: F. J. Ainsborough).

### **Settlements Facilitated by Conciliation Officers**

1. On April 8, 1950, the Minister of Labour received a report from H. R. Pettigrove, Conciliation Officer, indicating the settlement of matters in dispute between the National Harbours Board and Division Nos. 224 and 231, Canadian Brotherhood of Railway Employees and Other Transport Workers, representing employees of the Board at Halifax, N.S. (L.G., May, 1950, p. 683).

2. On April 15, 1950, the Minister of Labour received a report from G. R. Currie, Conciliation Officer, indicating the settlement of matters in dispute between Giant Yellowknife Gold Mines Limited and the Yellowknife District Miners' Union (Local 802, International Union of Mine, Mill and Smelter Workers) (L.G., May, 1950, p. 683).

### **Conciliation Board Fully Constituted**

The Board of Conciliation and Investigation appointed to deal with the dispute between the Lakehead Terminal Elevator Association and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (L.G., May, 1950, p. 683) was fully constituted on April 28, 1950, with the appointment of the Hon. Mr. Justice J. T. Beaubien, Winnipeg, as Chairman. Mr. Justice Beaubien was appointed by the Minister of Labour on the joint recommendation of the other two members of the

Board. William A. Johnston, K.C., Winnipeg, and A. J. Wickens, K.C., Moose Jaw, who had previously been appointed on the nominations of the company and union, respectively.

### **Conciliation Board Reports Received**

1. On April 12, 1950, the Minister of Labour received the majority and minority reports of the Board of Conciliation and Investigation appointed to deal with the dispute between the Canadian National Railways, the Canadian Pacific Railway Company, the Ontario Northland Railway, and the Toronto, Hamilton and Buffalo Railway Company, on the employers' side, and a group of twelve international railway labour organizations (L.G., Feb., 1950,

p. 203). The texts of the reports of the Board are reproduced below.

2. On April 12, 1950, the Minister of Labour received the majority and minority reports of the Board of Conciliation and Investigation appointed to deal with the dispute between the Canadian National Railways, the Canadian Pacific Railway Company, and the Ontario Northland Railway, on the employers' side, and the Canadian Brotherhood of Railway Employees and Other Transport Workers and the Brotherhood of Express Employees (L.G., Feb., 1950, p. 203). The texts of the reports of the Board are reproduced below, with deletions of certain portions of the majority report where the language of that report corresponds with the language of the majority report in the dispute affecting the international unions.

### **REPORT OF BOARD in dispute between**

**Canadian National Railways, Canadian Pacific Railway Company, Ontario Northland Railway, and Toronto, Hamilton and Buffalo Railway Company,**

**and**

**Order of Railroad Telegraphers; Brotherhood of Maintenance of Way Employees; Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; Division No. 4, Railway Employees' Department, A.F. of L.; Canadian National Railway System Federation No. 11; Canadian Pacific Railway System Federation No. 125; International Brotherhood of Firemen and Oilers, Steam Plant Employees, Roundhouse and Railway Shop Labourers; International Brotherhood of Electrical Workers; International Brotherhood of Blacksmiths, Drop Forgers and Helpers; Commercial Telegraphers' Union; Brotherhood of Railway Signalmen of America; and Hotel and Restaurant Employees and Bartenders' International Union.**

Hon. HUMPHREY MITCHELL,  
Minister of Labour,  
Ottawa, Ontario.

SIR:

1. The Board of Conciliation and Investigation established in the above matter and composed of the Hon. Mr. Justice J. O. Wilson, of Vancouver, Chairman; Mr. A. J. Wickens, K.C., of Moose Jaw, nominated by the employees; and Mr. Isaac Pitblado, K.C., of Winnipeg, nominated by the railways; held its first public hearing in the Windsor Hotel, in the City of Montreal, on the 10th day of January, 1950. After hearing the parties for some time, the public hearings were adjourned until the 27th day of February, 1950, at the same place, and the Board has been practically in continued session since that date, the public hearings having ended on the 10th day of March, 1950.

On April 12, 1950, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with the dispute between the Canadian National Railways, the Canadian Pacific Railway Company, the Ontario Northland Railway, and the Toronto, Hamilton and Buffalo Railway Company, and twelve international railway labour organizations (L.G., Dec., 1949, p. 1554).

The Board was composed of the Hon. Mr. Justice J. O. Wilson, Vancouver, B.C., Chairman; Mr. Isaac Pitblado, K.C., Winnipeg, Man., member appointed on the nomination of the companies; and Mr. A. J. Wickens, K.C., Moose Jaw, Sask., member appointed on the nomination of the unions.

The text of the Board's report is reproduced herewith.

2. The employees were represented by:—

F. H. Hall, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

G. R. Pawson, Deputy President, Commercial Telegraphers' Union.

E. L. Oliver, Statistician.

H. Smith, Division No. 4, A.F. of L. (President).

W. H. Phillips, The Order of Railroad Telegraphers.

J. T. Galloway, International Brotherhood of Blacksmiths, Drop Forgers and Helpers.

Sam Finlay, International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers of America.

H. A. Stockdale, Brotherhood of Railroad Signalmen of America.

Willie Lebeau, International Brotherhood of Firemen and Oilers.

G. Schollie, International Association of Machinists.

Joseph Connolly, United Association of Journeymen and Apprentices of Plumbing and Pipe Fitting Industry of the United States and Canada.

W. Aspinall, Brotherhood of Maintenance of Way Employees.

R. Y. Menary, International Moulders and Foundry Workers' Union of North America.

Robert Hewitt, Brotherhood of Railway Carmen of America.

Roy Westguard, International Brotherhood of Electrical Workers.

A. E. Payne, Sheet Metal Workers' International Association.

E. Schofield, Hotel and Restaurant Employees and Bartenders' International Union.

3. The Railway Companies were represented by:—

#### *Canadian National*

R. C. Johnston, Asst. Vice-President Personnel.

P. E. Ayrhart, Manager, Labour Relations.

#### *Canadian Pacific*

D. I. McNeill, Vice-President Personnel.

J. R. Kimpton, Asst. Vice-President Personnel.

S. M. Gossage, Asst. Manager of Personnel.

#### *Ontario Northland*

A. Freeman, General Manager.

S. W. Gowan, Secretary.

#### *Toronto, Hamilton and Buffalo*

W. J. Warnick, Asst. to President.

A. E. Cook, Personnel Representative.

4. Very able presentations, both oral and written, were made by both sides, and, after such presentations, the members of the

Board made repeated endeavours to see if some agreement could be reached between the parties but regret to state that nothing along that line was accomplished. It is therefore necessary for the Board to report to you its findings and recommendations.

5. Mr. A. J. Wickens, K.C., a member of this Board, does not concur in those findings and recommendations and is filing a separate report.

6. We may add that the proceedings were marked throughout by the best of good feeling on both sides, and it was a pleasure to note the mutual respect and regard which the representatives of the parties to the dispute have for each other.

#### **Employees' Requests**

7. Fifteen standard international labour organizations were represented before the Board. They requested that the agreements between these organizations and the railways of Canada (which agreements we are informed number about 86) be so changed as (a) to increase basic rates of pay for all employees covered by the agreements by seven cents an hour, and (b) to establish a five-day forty-hour week with the same take home pay as for a forty-eight hour week. The details of these requests are given later.

8. The employees affected form a large part of what is known as the non-operating group of employees of the railways as distinct from those employees who actually run the trains such as enginemen, firemen, conductors, trainmen and yardmen. These non-operating employees comprise some fifty distinct occupational classifications of workers running from office boys and clerks to mechanics, machinists, sectionmen, station agents and telegraph operators.

9. Approximately 86,000 employees of the Canadian National and Canadian Pacific Railways and a much lesser number of employees of the other two railways named are represented by the organizations before this Board, but it is to be noted that another Conciliation Board is, concurrently with this Board, considering an application by organizations representing other groups of non-operating employees (numbering over 30,000) of the said railways, in which application a similar request for a five-day forty-hour week with the same take home pay is made, with a request for an increase of ten cents per hour in basic rates of pay, so that there are over 116,000 employees actually represented before the two Boards. But if the Railways apply any increased pay or changes in working hours to other unorganized staffs, as they have done in the past, the number of employees of the

Canadian National and Canadian Pacific Railways who will actually be affected is approximately 139,000.

10. The Railways have pointed out that the employees represented before this Board comprise about 48 per cent of the total number of their employees, and that the employees represented before the other Conciliation Board comprise about 17 per cent of such total number, making altogether 65 per cent of their total employees. It can therefore be seen that any settlement of the disputes affecting so large a proportion of railway employees must inevitably exert a profound influence on the terms of employment of all railway employees.

11. Before considering the reasons adduced on the part of the employees for the increased pay and shorter hours asked for it is well to bear in mind that, effective on the 1st March, 1948, an increase of seven-tenths cents per hour "across the board" was granted to all railway employees in Canada.

12. On the standard 48-hour week that increase amounted to \$35.36 per month. On the same basis the total increase since 1939 in basic rates of pay of 43 cents per hour gave a total monthly increase of \$88.57.

13. Although the employees' demands for an increase of 7 cents per hour in pay, and for the 5-day 40-hour week are presented separately, we find it impossible to deal with them separately. To do so would be to ignore the cost of the 5-day 40-hour week. The two proposals, and their implications, must be considered together. The proposals are as follows:—

"1. Effective July 17, 1949, rates of pay shall be increased in the amount of seven (7¢) cents per hour applied so as to give effect to this increase in pay irrespective of the method of payment.

"2. There will be established, effective September 1, 1949, for all employees, a work week of forty hours consisting of five days of eight hours each with two consecutive days off in each seven; the work weeks may be staggered in accordance with operational requirements; so far as practicable the days off shall be Saturday and Sunday.

"3. The adjustment to a work week with a maximum of forty straight time hours shall be made without reducing the amount to be paid for forty straight time hours below the compensation now paid for a forty-eight hour straight time work week. With respect to monthly, weekly, or daily-rated positions, or those paid on any other basis, the monthly, weekly, daily or other basis of payment shall be preserved, and a rate shall be established to give effect in

those positions to the adjustments requested in the foregoing paragraphs by preserving forty-eight hours' pay for forty hours' service, which will be the basic work week, and new basic rates will be established in accordance therewith. Service on any day in excess of eight hours (exclusive of the two consecutive days off) shall be paid for at overtime rates; but not less than time and a half. Service on the two consecutive days off, for eight consecutive hours shall be at overtime rates but not less than time and a half. Service in excess thereof shall be paid for under the call and/or overtime rules of the agreements now in effect governing working conditions at overtime rates but not less than time and a half.

"4. When any of the statutory holidays for which punitive rates of pay are established fall on the employees' assigned days off, the following day shall be recognized and paid for as the holiday.

"5. The adjustments requested herein shall not modify rules or practices now in effect which are more favourable to the employees."

14. It will be noted that the proposals of the men are that there should be two consecutive days off each week, their request being for "a work week of forty hours consisting of five days of eight hours each with two consecutive days off in each seven; the work weeks may be staggered in accordance with operational requirements; so far as practicable the days off shall be Saturday and Sunday."

15. It will further be noted that there is an ambiguity in the wording of these proposals. The 7 cents increase is to be effective July 17, 1949, the 40-hour week at a later date, September 1, 1949. This would mean that when the 40-hour week came into effect, the wages would already have been increased by 7 cents per hour. But the proposal goes on to stipulate that when the 40-hour week is introduced it shall be done "without reducing the amount to be paid for forty straight time hours below the compensation now paid for a 48-hour straight time week." The word "now" creates the ambiguity. Literally interpreted this would mean that the rate of pay to be used in calculating the 48 hours pay to be given for the 40-hour week would not include the seven cents raise previously granted. We feel that this was not the intention of the unions, and have made our calculations accordingly; that is on the basis that the "take home pay" to be maintained is to include the 7 cents per hour increase.

16. If the 7 cent raise in hourly pay did not precede, but was coincidental with the

introduction of the proposed 40-hour week, the total increases in hourly rates consequent upon the granting of the unions' proposals would be slightly less. The difference would be so small as to be unimportant for the purpose of the calculations hereafter made.

17. The effect, in terms of wage rates, of granting these requests depends on the wage level that has been achieved at the time they are granted. If the wage level is low, the proposals can be implemented without throwing the general Canadian wage structure out of balance. If, on the other hand, the wage level, expressed in terms of hourly earnings, is already a fair one, the effect must be otherwise.

18. This can best be illustrated by comparing the present situation in Canada with that which existed in the United States in the Fall of 1948 when a Presidential Emergency Board recommended for United States non-operating railway employees exactly what is asked for here; that is, an immediate increase in pay of 7 cents per hour for all employees, and, at a later date, the institution of a 5-day, 40-hour week, with pay for 48 hours per week.

19. Before this recommendation was brought into effect, the rates of hourly earnings of United States non-operating railway employees were demonstrably out of line with those of workers in other industries which the Presidential Board thought comparable. Without going into detail, it can be said that in October, 1948 those railway employees worked an average of 49.1 hours per week for take home pay of about \$60 (\$1.21 per hour). At the same date workers in durable goods manufacturing, and in another group of industries which the Presidential Board selected as comparable, worked an average of 40 hours per week for the same take home pay of about \$60 per week (\$1.45 to \$1.50 per hour). Admitting the comparability of the industries, it was obvious that the railwaymen suffered an inequity. The Presidential Board rectified this inequity by first raising wages 7 cents per hour, and by recommending a 40-hour work week with the same take home pay to take effect 9 months later. When these things had been done, the hours of work and the hourly earnings of railworkers were about on a par with those of the two groups selected for comparison. Thus the 40-hour week had been achieved for railworkers without any dislocation of the general wage structure of the United States.

20. Such a result cannot be achieved in Canada. In October, 1949, the average weekly earnings of non-operating rail-

workers in Canada were \$48.13 for an average work week of 46.9 hours, being at the rate of \$1.026 per hour. The unions ask first for 7 cents additional pay per hour, and second, for 48 hours pay, at the new rate, for a 40-hour week. The effect on the earnings of the average railwayman, of granting both proposals, would be as follows:—

New average hourly earnings	1.026 and .07—\$1.096
New average weekly earnings	1.096 x 48—\$52.60
Average hourly rate if 40-hour week becomes effective	\$52.60 ÷ 40—\$1.315

21. After the change, if it were granted on the terms asked for by the unions, the average railwayman would work about 7 hours less per week and earn \$4.47 more per week. He would also have gained, in one stroke, an increase in his hourly earnings amounting to 29 cents per hour or 28 per cent over his former earnings, surely one of the most drastic general wage rate increases in Canadian labour history.

22. The wages paid and hours worked in durable manufacturing were used as a basis of comparison in the United States. Figures on wages paid and hours worked in durable manufacturing in Canada at December 1, 1949, were as follows:—

Average weekly earnings	\$46.66
Average hours worked	43
Average hourly earnings	\$1.085

23. The durable goods worker had, at December 1, 1949, an advantage of 5.9 cents per hour in earnings over the railworker. If the proposals of the unions were granted he would not only lose this advantage, but find himself earning 23 cents less per hour than the railworker. His take home pay, for a 43-hour week, would be \$46.66 while that of a railwayman, for a 40-hour week, would be \$52.60.

24. The durable goods groups earn more than the average Canadian factory worker, whose earnings at December 1, 1949, averaged 99.9 cents per hour. If the demands of the railworkers are acceded to, the gap between the pay of the railworker and the average factory employee will increase from 2.7 cents per hour to 31.6 cents per hour.

25. The variety of occupations in which non-operating railworkers are engaged is such that comparisons are difficult. However, such comparisons as are made should be with large groups, such as durable goods workers, which may also be expected to comprise a diversity of occupations and to include, as does the non-operating rail

group, skilled and unskilled workers. Comparisons with individual industries are of less value. Nevertheless, in order to point out the sweeping nature of the proposals made by the rail unions, it is interesting to compare the average hourly earnings for which they ask, \$1.315, with the average hourly earnings reported on page 7 of Man-Hours and Hourly Earnings at December 1, 1949, published by the Dominion Bureau of Statistics. It will be observed that compliance with the railworkers' requests would give them an hourly wage rate not only substantially higher than that of any group there listed, but higher than that of any individual industry there listed with the sole exception of coal mining. Such a result cannot be a proper one. No evidence was adduced before us to show that railwaymen are entitled to so great an advantage over other Canadian workers.

26. We have said that comparisons are difficult. We do not admit that they are impossible. The difficulty arises in part from the fact that certain classes of railway workers are *sui generis*, they have not their counterpart in other industries. But this is not the real obstacle to comparison. The true difficulty is that the membership of the unions runs across the scale of Canadian labour from such lowly paid occupations as services (average Canadian wage, December, 1949, 65 cents per hour) up to such highly responsible positions as that of train despatchers, with commensurate pay. Between those two extremes there are numerous classes of railworkers which might be compared with classes doing similar work in other industries. For instance a decision as to the rate of pay and hours of work of a stenographer in a railway office should, in sense, be based on, among other things, a comparison with the rates of pay and hours of work of other stenographers. Such a comparison would show that the railway stenographer is, generally speaking, paid more than other stenographers. Other comparisons might show that railway employees in certain occupations were not so well treated as the general run of Canadians following the same occupations in other industries. But the problem created for us here by the union demands, and by the very nature of this vast group of unions, makes it impossible for us to consider separately each of the occupations involved. Indeed such a task would probably be beyond accomplishment by one Board within any reasonable time, and would require the attention of a number of Boards. Under these circumstances, we must do the best we can to

achieve justice for the average railworker, which may, and probably will, mean that some employees will receive more and others less than they deserve. This result is inevitable when it is sought to gain a general advantage for a great body of employees engaged in quite dissimilar forms of work at widely divergent rates of pay and with different working hours (of which we shall have more to say later).

27. Returning to the subject of wage scales in other Canadian industries, and leaving out of consideration those included in the durable goods group, which the United States Presidential Board selected as most readily comparable, and which we have already discussed, we proceed to make comparisons with some other leading Canadian industrial groups.

28. In making these comparisons it must be remembered that the incidental advantages enjoyed by railworkers are generally greater than those granted to other Canadian workers. Records show that the continuity of employment in the railroad industry is relatively high, which must have the effect of increasing average annual earnings. The employees have the benefit of pension plans. They and their families are entitled to a considerable measure of free transportation. Certain employees are given free housing and others free uniforms. In the aggregate these factors add considerably to the advantage of railway employment.

29. Pulp and paper, one of the most prosperous of Canadian industries, yielded, at December 1, 1949, average earnings of \$1.088 per hour to the employees.

30. Textiles paid an average wage of 80 cents. This industry is probably not fairly comparable because of the high percentage of women employed who generally receive, rightly or wrongly, less than men do.

31. Miners, the highest paid group, earned an average hourly wage rate of \$1.95. The payment of relatively high wages to miners, and particularly to coal miners, is not peculiar to Canada and is, presumably, a recognition of the dangerous and unpleasant nature of their work.

32. In local transportation, street and electric railways, the average wage was \$1.028 per hour.

33. Rubber products paid \$1.024 per hour.

34. Building construction paid \$1.092 per hour. This is an industry which resembles railroading in that it embraces highly skilled and highly paid persons as well as men on the level of common labour. It is also to a great extent, in Canada, a seasonal industry, so that the annual earn-

ings of the average worker would be appreciably less than those of the average railworker.

35. Highway construction paid only 86·6 cents per hour, a low average considering that it, too, is a seasonal trade.

36. Consideration of the wages earned by these, the largest groups of Canadian workers, convinces this Board that the proposals of the railworkers are unreasonable. To accept them must result in giving an unmerited preference to railworkers over all other Canadian workers. The continuance of such an advantage would be unfair to other workers. The inevitable result of such a great increase in rail wage scales must be attempts by other groups to achieve new standards. The disparities to be corrected would be so great that their rectification would result in an entirely new wage scale for the whole country.

37. We have, of course, had several general wage increases in Canada over the past ten years. The general effect has been beneficial to the workers although the benefit to them is not directly proportionate to the amount of the increase, because prices rise with wages. The increase in real wages has been much less than the increase in money wages. The increase now asked for by the railworkers is far too large and is sought at a time when the Canadian economy, while still far above pre-war levels, is experiencing serious difficulties because of the loss of export markets. This is not the time for a revolutionary upward revision of the wage scale.

38. In the consideration of increases of this magnitude in railway wage scales there is, besides the employers and the employees who conduct the negotiations, a third party, unheard at the council tables, whose rights must be weighed—the ordinary Canadian citizen. Higher rail wages mean higher freight rates and higher passenger fares throughout this country. Since this country is peculiarly dependent on rail transportation, these rates will result in higher prices for all goods consumed in this country. They will also affect the competitive position of the products of mines, farms and forests in the export market which supplies a great part of the living of our people. The granting of unduly high wages to railworkers will mean that while they receive more for their labour, many other persons will receive less. The export prices of a bushel of wheat, a ton of newsprint, or a case of fish are not elastic, and if the transport worker receives more than his fair share of the dollars for which these goods are sold then the farmer, the fisherman and the paperworker must receive less than

their fair share. This argument must not be utilized to unduly and unfairly depress the wages of railworkers. It is merely an additional reason for the exercise of care by this Board to ensure that railworkers shall not unfairly benefit at the expense of the general public.

39. In their argument the unions do not compare their present wage scale with prevailing wage scales in other Canadian industries. They do, however, make this comparison—they say that since 1939 the percentage of increase in rail wages has not been so large as it has in other Canadian wages. This is true, and the figures submitted by the unions appear to be correct. These figures show that the general Canadian wage rate is now 195·8 per cent of that prevailing in 1939, while the rail wage rate is 170·2 per cent of 1939 rail wage rates. The latter figure is subject to this qualification. In its computation there have been included wage rates for the running trades, whose unions are not parties to these proceedings. The rate of increase for the running trades since 1939 has been less than that of other railworkers (153·0%). Therefore the figure of 170·2 per cent would be larger if it covered only the non-operating employees; how much larger this Board cannot say.

40. The logic of the argument of the unions in citing these figures is that all wages should retain the same relative position they had in 1939, and that any advantage railworkers had in 1939 over other workers should be perpetuated.

41. The desire of a labour organization not to lose what one might call its economic ranking is perfectly understandable. But this Board does not think that the industry of this country is so static that it is possible to select any one year, be it 1939 or another year, and hold that there was established in that year a grading of labour values which must stand forever. It appears to the Board that, in a free society, relative wage standards of labour in different fields must change over periods of time. For instance, the loss in position which rail labour has sustained since 1939 may be due to several factors. A most important one is the increasing organization of labour in other industry which has taken place since 1939. In 1939 and for many years before, rail labour was fully organized and had reaped the benefits of organization and of capable union management in a relatively high wage scale. This was not true to anything like the same extent of other elements of Canadian labour. Unionization of employees has since proceeded at

a great pace and resulted in the rectification of inequities and the raising of wages.

42. Another factor which may, in a lesser degree, account for the disparity in the rate of increase is the maturity attained by Canadian manufacturing during and since the war. This has resulted in an increase in the proportion of skilled workers employed and a corresponding increase in rates of pay in manufacturing.

43. A third factor which has probably contributed to this result is the practice, during the war, of extending flat wage increases, based on rises in the cost of living, to Canadian workers. The effect of such across the board increases, as between different industrial groups, must be to benefit the lower paid groups by a larger percentage than the higher paid groups, such as railworkers.

#### ***Ability to pay***

44. The railways did not argue before us that ability to pay, or rather inability to pay, was a valid reason for refusing to grant railworkers reasonable wages or a reasonable work week. The Board agrees that the financial condition of the railways cannot be pleaded for the purpose of perpetuating any injustice to its employees. The Board agrees with the unions that railworkers must not be required to accept substandard wages or onerous working hours in order to underwrite railway deficits. If higher wages are deserved they must be paid, and the public must pay the cost. This does not, however, imply that enlightened labour should proceed to exact what it can in the way of wage increases without regard to the condition of the business which employs it. Under certain conditions a union may be well advised to accept a lesser wage, with continuity of employment, rather than to insist on a higher wage, which may threaten that continuity. The competitive position of the railways viz a viz truck and water competition must always be kept in mind by union leaders as well as by railway managers, with a view to insuring that rail transportation does not price itself out of the market. That this can be done has been, we think, pretty clearly demonstrated in the coal industry, both in the United States and Canada, during the past few years. The changeover from coal to cheaper and more reliable forms of fuel has assumed the proportions of a stampede.

45. We believe that railworkers must be fairly paid and fairly worked whether or not the railways earn a profit.

46. It is, however, notorious that the railways are not among the industries (and

there are many) which have prospered greatly in recent years. Their relative financial position is low. Under public regulation they could not take full advantage of the rising price level of the past five years, and the rise in rail rates has not kept pace with the rise in the price level.

47. Therefore, while they must still treat their employees fairly, we do not think that the financial position of the railways is such that they should be asked to embark on a novel and costly program as to both wages and hours of work, novel and costly in terms of all comparable Canadian employment. The economy of the railways is not such as to justify their selection as the laboratory for such a radical social experiment.

#### ***The cost of the 5-day 40-hour week***

48. There is a wide range of difference of opinion as to the cost to the railways of introducing the 5-day 40-hour week and 7 cents per hour pay increase.

49. The railways estimate the cost of granting it to this group of unions, and to the group included in the Canadian Brotherhood, whose wages and working conditions are currently under consideration by another Board, and to certain other groups whose pay and working conditions might have to conform to those of the two large union groups at \$84,147,000—the 7 cents pay increase would cost \$25,844,000—and the 40-hour week \$58,303,000.

50. We would assume that there is no dispute as to the cost of the 7 cent per hour increase. The unions vigorously deny that the 40-hour week will cost anything like so much as the railways claim it will.

51. The Presidential Emergency Board, whose report has already been referred to, estimated the cost of the 40-hour week in the United States at about 14 per cent of the total existing wage bill. The data upon which this estimate was made were meagre and, with respect, the estimate appears little better than an intelligent guess.

52. The unions have submitted certain evidence of the cost to the United States railways of the 40-hour week since its inception. If we were to accept this evidence as it is interpreted by the unions, we would conclude that the 40-hour week had cost United States railways nothing. The fact is, we think, that the shortened work week has been in effect for such a short time (since September, 1949) that it is quite impossible to draw any conclusions from the American experience. The steel and coal strikes in the United States have lessened traffic volume. The extent to which the railroads have effected savings

by curtailing services to the public and by neglecting necessary maintenance are unknown, and the effect on their revenues of such curtailment and neglect, if any, is unknown. Probably a year or so must elapse before facts will be recorded from which a valid conclusion may be drawn.

53. It is, of course, very strongly argued that the increased efficiency and productivity resulting from the shorter work week will in a large measure offset the curtailment of working hours—that employees will hereafter do in 5 days what they have previously required 6 days to do. Conceding that a longer rest period may result in an increase in productivity, the argument stated above still appears to be far-fetched. Furthermore there are a great many railway activities to which it is not applicable at all, because the jobs require that men be continuously on duty to serve the public, regardless of the volume of work they may perform during those hours of duty.

54. It is also argued that the railways, faced with the 5-day 40-hour week will, from their own inventiveness, find ways of adjusting themselves to it so as to eliminate most of the apparent cost; that the spur of necessity will stimulate efficiency and economy. There is, of course, something in this argument—ways will be found of mitigating, to some extent, the economic effect of the introduction of the new work week. But the prod of the spur of necessity is no new thing to Canadian railroads, they have felt it for some years, and it is not suggested by the unions that the railways have been extravagant or inefficient in their operations. There is, of course, always room for improvement, and further improvement is to be expected, but one would think that the field to be worked must already have lessened as the railways have fought to maintain their services out of dwindling revenues.

55. In this connection it has been pointed out by the unions that great improvements in efficiency have been achieved over the last twenty years so that, to put it in simplest terms, the production per man employed on the railways is now much greater than it was. This is perfectly true and the employees must not be denied their share of the credit for these improvements. On the other hand, it must surely be conceded that management also has had a large share in effecting these changes. In any event, let the credit fall where it may, the whole benefit of these economies has been reaped by the railworkers. This is very evident when it is realized that the proportion of the revenue dollar paid by

the railways to the railworkers in 1948 was 53 cents which is some 4½ cents more than the 23-year average. On this evidence it would appear that wages have not only absorbed all the savings that have been effected through an increased efficiency but have gone beyond that and taken an increasingly large share of the revenue dollar.

56. We do not pretend to be able to state the exact cost to the railways of acceding to the union proposals. We can only say that, although we think it will be somewhat less than the railways claim, it will still be very great.

### *The United States comparison*

57. It must at once be conceded that, as argued by the unions, the 40-hour week is the most usual standard in the United States. The Fair Labour Standards Act of 1938 made it a legal requirement in many industries, and it has been voluntarily adopted in many others, including the American railroad industry.

58. In Canada the only legislation comparable to the Fair Labour Standards Act are British Columbia and Saskatchewan statutes which impose a 44-hour work week in industry in those provinces.

59. It is also indisputable that rail wages in the United States are substantially higher than they are in Canada.

60. The unions have urged strongly before the Board that because the five-day, forty-hour week, has been adopted for non-operating railway employees in the United States, it should be adopted in Canada.

61. Considering the numerous able opinions that have been written in the past on this subject, this Board does not feel it necessary to expound at length its reasons for rejecting the theory that rail wages and working conditions in Canada must keep pace with rail wages and working conditions in the United States. In general we are content to adopt the reasoning of the conciliation board headed by Mr. Justice Cameron which in 1948 rejected this same contention. It is abundantly clear that wages of all workers, not only of railroad employees but of all classes of wage-earners, are higher in the United States than they are in Canada. The same is true of the salaries and earnings of executives and professional men in the two countries. The fact is that the United States possesses a richer and more mature economy than Canada and that, presently at any rate, our production is not such as to afford us so high a standard of living as there is in the United States. Under present conditions sensible Canadians will, as they must, accept

the fact that the earnings of the average Canadian are less than those of the average resident of the United States.

62. If international comparisons of wage levels are to be made, the rates of wages in other countries with less mature economies than that of the United States might be compared with those in Canada. Australia, New Zealand and South Africa are examples which spring to the mind. If these comparisons were made, it would, we think, be found that Canadian wage levels are a matter for pride. To select, as the only standard of comparison, the wages paid in what is admittedly the richest country in the world, does not appear to us to be sound.

63. We can appreciate that the inter-connection of Canadian and American railways, the similarity of the work, the payment of United States scale wages to employees on United States owned railroads in Canada, and the payment of United States scale wages to employees on Canadian owned railroads in the United States—all these things must bring the wage disparity home to Canadian railworkers. But Canadian railworkers cannot expect preferential treatment. They must accept the same standards as do other Canadian citizens. A factory employee in Windsor has to accept the fact that his counterpart across the river in Detroit earns higher wages. The same difference runs through all levels of society. We can see no reason why railworkers should be selected as the one class in the Canadian social structure for whom this condition is to be changed, by raising their wages to the United States level. When the per capita wealth and productivity of Canada rise to the levels attained in the United States, railworkers will doubtless receive their due share of the new national income. Until that occurs, they must, like the rest of us, accept their due share of the present national income.

64. The adoption of a five-day, forty-hour week, with the maintenance of take-home pay would mean an increase of 20 per cent in wages, as the 48-hour week would be reduced to a 40-hour week, and therefore the same principle which applies to a comparison of wage rates in the United States and Canada applies with equal force to the reduction of weekly hours of work which would bring about increased wages.

#### ***Australia and New Zealand***

65. We have not overlooked the arguments of the unions based upon "The hours of service in the British Commonwealth of Nations".

66. It is true that railworkers in Australia and New Zealand all have the 40-hour, 5-day week. But without some information as to their earnings this bare fact does not provide us with much guidance. It might well be that, given a choice, Canadian railworkers would prefer Canadian working hours with Canadian pay to Australian working hours with Australian pay. It does not appear that the 40-hour week is in effect on British railways.

#### ***Social aspects of the 5-day 40-hour work week***

67. This Board does not want to appear to have disregarded the lengthy and able arguments of the unions in regard to the social desirability of the 5-day 40-hour week.

68. This Board has given due attention and weight to those arguments, but remains convinced that the present Canadian rail wage level is such that the granting to non-operating railwaymen of a 5-day 40-hour week upon the terms stipulated by the unions is not now practicable or equitable.

#### ***The Canadian work week***

69. The 40-hour week is not in Canada, as it is in the United States, the normal work week. On the contrary, the evidence before the Board indicates that the 40-hour week is very rare in Canadian industry.

70. "Man Hours and Hourly Earnings" for December, 1949 (already referred to) shows that out of some 71 listings, which include both groups of industries and separate industries, there are only three industries in which the work week is 40 hours or less. These are Automobile Manufacturing (40 hours), Shoe Manufacturing (39.3), and Highway Construction (38.9). The number of workers in these three industries constitutes a very small proportion of the total number of Canadian workers.

71. The Board has not the facilities for working out, from the figures quoted, the weighted average of weekly hours for all Canada, but a superficial examination of the figures indicates that the average work week is much nearer to 44 than to 40 hours, and that a large number of Canadians work over 44 hours per week.

#### ***Recommendations***

72. The inherent nature of the railroad industry makes the institution of a shortened work week more difficult and expensive than it is in most other industries. Railroad service must generally be carried on 7 days per week. Trains do not cease to move over the weekend, and large

numbers of men must work over the week-end to keep them moving and to perform the ancillary services necessary to their movement. A factory can be closed for two days with no loss other than the loss in the investment for those two days. A railway cannot be closed down for two days or for any period. The staggering of work hours, while useful, cannot overcome this difficulty and a shortened work week must, if service is to be maintained at present levels, result in a great additional cost to the railways.

73. Nevertheless this Board recognizes that the existing hours of work for railworkers are out of line with those generally prevailing in Canadian industry, and that the difficulty of instituting a shorter work week must not be allowed to result in an indefinite prolongation of this condition.

74. The Board thinks that a fair solution of the problem before it is the institution of a 44-hour work week on Canadian railways for non-operating employees, except those engaged in water transport and those hotel employees who are included in the terms of reference to this Board on the plan hereinafter set forth.

75. In introducing a 44-hour week service to the public should be maintained and the increased cost should be distributed as equitably as possible.

76. In order to explain the solution upon which the Board has decided, it is necessary to deal, in a general way, with present hours of work for various classes of railworkers.

77. There are many salaried or monthly-rated employees, most of them in office employment. With few exceptions, those workers are classified as working 8 hours per day for 6 days a week. Those are their contractual hours of work. But in practice a considerable percentage of them, with the consent of their employers, work shorter hours. One singular result of the continuance of this unreal classification has been that these workers have received, when across the board wage increases were granted, increased payment for hours in which they did no work. Thus, for instance, a clerk whose contractual hours of work are 48 but whose actual hours of work are 44 and who has, like all railworkers, received across the board increases totalling 43 cents per hour since 1939 is now being paid this increase for 4 hours in which he does no work, a sum of \$1.72 per week, or \$89.44 per year.

78. In general it can be said that monthly-rated workers, whether or not they do in

practice work 48 hours, are classified as working 48 hours per week. The majority of them still work 48 hours per week.

79. The group of workers which most greatly complicates the wage-hours pattern is that which mans the workshops where locomotives and rolling stock are cared for. These shopworkers are generally paid hourly wages and number amongst them skilled mechanics, their helpers, apprentices, labourers, and some clerical staff. They are divided into two classes. One class, some 25,000 in number, are generally known as the running shop workers and work 48 hours per week. The other class, the backshop workers, numbering 20,000, work 44 hours per week. The hourly rates of pay of both classes, and of the numerous grades within each class, are the same. Since the running shop workers work 48 hours, as against 44 hours for the backshop workers, their take-home pay is greater. If the running shop workers were granted a 44-hour week, with 48 hours pay, both their hourly rate of pay, and their weekly take-home pay would exceed that of the backshop workers, who do exactly the same type of work, and whose hours of work would then be the same. This result must be avoided.

80. With the exceptions already mentioned it can be said that railworkers, generally speaking, work and are paid for 48 hours per week.

81. Statistically the average work week of railworkers for October, 1949 was 46.9 hours (including overtime). In point of fact this figure is larger than it should be because, as already explained, certain monthly rated employees, who work less than 48 hours per week, are classified as working 48 hours. If they were classified according to the hours they actually work the average work week would be less and, incidentally, the average earning per hour would be greater than \$1.026, the figure used in these calculations.

82. The main reason why the average work week (46.9) is less than 48 hours is the fact that the backshop workers work only 44 hours.

83. In trying to work out an equitable method of instituting a 44-hour work week we must have in mind, among other objects, these two things:—

1. To avoid, so far as we can fairly do so, any substantial reduction in take-home pay.
2. To minimize, so far as we can fairly do so, the cost to the railways, and to see that, in any event, the rail wage bill for a 44-hour week is not greater than that now paid for the present work week.

84. Dealing first with this latter proposition, it might seem that this is an unnecessary precaution; that the change over to 44 hours with the same take-home pay cannot result in an increase in the wage bill, apart, of course from the general cost increase inevitably associated with a shorter work week. But this is to ignore the adjustment which must be made in the pay of the backshop workers. If other shop mechanics now working 48 hours are to be given a 44-hour week with the same take-home pay, their hourly rate of pay will rise from \$1.22 to \$1.33. But the backshop workers, doing the same work, could not be left earning \$1.22 per hour; their rate too would have to be raised to \$1.33, although there would have been no change in their work hours. Therefore the railways, after the change over, would not merely be paying to persons who had formerly worked 48 hours per week 48 hours pay for 44 hours work, they would, in addition, be paying to 20,000 of their employees, whose hours of work were unchanged, a straight wage increase. This increase in the case of mechanics would be 11 cents per hour, \$4.84 per man per week. Therefore the weekly wage bill would not remain the same, but would increase, and this apart altogether from the general cost of reducing the work week.

85. The terms on which this problem is presented to us prevent us from arriving at different solutions for different classes of employees or for different unions. We must find a formula which is capable of general application.

86. The average take-home pay of railworkers for October, 1949 (the last figure available) was \$48.13 per week. The average hours were 46.9 and the average hourly earnings were \$1.026. All these figures presumably include overtime, but that fact does not seriously affect their usefulness for present purposes.

87. If the average railworker is to receive the same average take-home pay for a 44-hour week as he received in October for an average week of 46.9 hours his new rate of pay will be as follows:—

$$48.13 \div 44 = 109.4 \text{ cents}$$

$$\text{Increase per hour}$$

$$109.4 - 102.6 = 6.8 \text{ cents}$$

$$\text{Rate of increase}$$

$$6.63\%$$

88. This figure of 6.63 per cent is, we think, the figure that must be used throughout. It is fair to the average employee. In its incidence it will apparently benefit the backshop men more than others. This cannot be helped. If the unions are, as we

believe they are, sincere in their desire to help one another, and to act collectively, then a result which is fair collectively should be acceptable to them.

89. Some typical results of the application of this formula are as follows:—

(a) Backshop worker now working 44 hours per week at \$1.22 per hour.

Present take home pay for 44 hours \$53.68.

New rate of pay per hour \$1.22 x 1.0663=\$1.3009.

New take home pay for same hours 44 x \$1.3009=\$57.24.

Gain in wages \$3.56 per week.

Hours unchanged.

(b) Running shop worker now working 48 hours per week at \$1.22 per hour.

Present take home pay for 48 hours 48 x 1.22=\$58.56.

New rate of pay per hour 1.22 x 1.0663=\$1.3009.

New take home pay for 44 hours 44 x 1.3009=\$57.24.

Loss in wages \$1.32 per week (about 1 hour's pay).

Gain 4 hours less work.

(c) Clerk, annual salary \$2,448.

Present hours per year (after allowing for Sundays and Holidays) 2,448 hours.

Present hourly rate \$1 per hour.

Present weekly take home pay

$$1.00 \times 2,448$$

52

$$= \$47.08.$$

1.0663=\$1.0663.

New hours per year (44-hour week)

2,240 hours.

New weekly take home pay

$$1.0663 \times 2,240$$

52

$$= \$45.94.$$

Loss per week \$1.14.

90. The application of this formula should result in leaving the total amount to be paid by the railways to all the employees for the 44-hour week, the same as the total amount which they were previously paid for the present work week.

The benefits to the employees are:—

1. A shortened work week for the great majority;
2. A raise in take home pay for backshop workers;
3. Higher hourly rates which will result in higher overtime rates.

The loss to the railways is:—

1. The cost of providing necessary services and labour, at the new increased rate of pay, during 4 hours of each week;
2. A new and higher overtime rate.

91. The Presidential Emergency Board, already referred to, selected durable goods manufacturing as an industry comparable for wage fixing purposes to the railroad industry. We have obtained from the publication Man Hours and Hourly Earnings, the figures applicable to this industry in Canada at December 1, 1949, and we

give them below, with comparative figures which will apply in the railroad industry if the formula we suggest is adopted.

	Durable goods	Rail- ways
Hourly earnings.....	108.5	109.4
Hours of work.....	43	44
Weekly take home pay.	46.66	48.13

92. It will be seen that the result is to give the railworker an advantage in rate of pay and weekly earnings over the worker in the durable goods industry, with a work week one hour longer.

93. Similar comparisons with any large group listed at page 7 of the publication *Man Hours and Hourly Earnings*, will show that if this formula is applied the railworker will have a favourable position in the Canadian labour picture.

94. There was some argument to the effect that an increase in wage scales was justified by the increase in the cost of living since 1948, when the last wage increase of 17 cents per hour was granted. The Board does not concede the validity of this argument because it does not know what relation the present wage bears to the cost of living, or what effect the cost of living had in producing the last wage increase. However, if there is any validity in this argument the increase in the rate of wages recommended by this Board is sufficient to care for any rise which has occurred in the cost of living.

95. The recommendation of the Board is that the work week of non-operating employees represented before the Board, except hotel and water transport employees, be reduced to 44 hours and that the said non-operating employees, except hotel and water transport employees, be paid for those 44 hours at the rate of 106.63 per cent of their present hourly rates of pay.

96. If the new work week with the new wage rates is acceptable to both parties, it will of course be necessary that there be negotiations between the parties as to the way in which the formula is to be applied generally, and subsequently the 86 individual agreements will require adjustments accordingly. During these negotiations the proposals of the railways hereinafter set forth as to changes in a number of the agreements should also be considered by the parties. All these negotiations will of course take some time. After they have been completed the various railway officials across Canada must be instructed as to the agreed methods of applying the shorter work week; and in due course there will probably be required a preparation of detailed work schedules, for all railway

employees concerned, in light of local requirements, with such variations in procedure as may be considered fair between the railways and the employees' local representatives. In addition to this the railways will require to line up such relief staffs as may be necessary and familiarize them with the work to be performed. Accordingly the Board suggests the 1st day of August, 1950, as the effective date of the new work week.

97. In general the 44-hour work week should allow an employee 1½ days continuous holiday in each week, preferably on Saturday afternoon and Sunday. Where, however, working conditions render this difficult, it might be arranged for an employee to work 11 days each two weeks, or to average days of work over a longer period. All these are matters to be considered when the parties meet for the purpose of making the changes in their agreements which will be necessary if the recommendations in this report are to be adopted.

98. It is the Board's conviction that the interests of the public demand that this reduction in weekly hours of work be made in such a way as to create the smallest burden possible on railway expenses while maintaining reasonable service to the public. To this end the parties should agree on necessary modifications of existing rules to keep the cost of replacements at a minimum and to enable existing positions to be filled where possible on five and a half day basis without replacement.

#### ***Cost to the Canadian National and Canadian Pacific Railways of the 44-hour week***

99. It is impossible, of course, to estimate exactly the cost to the railways of the 44-hour week. Time alone will prove this. But, if it is assumed that, after the institution of the 44-hour week, the same total of man-hours must be worked in each year as are now worked, a rough calculation can be made.

100. The present average work week is 46.9 hours. The new work week is to be 44 hours, 2.9 hours less. The new average rate of pay recommended is \$1.094 per hour. The total number of employees represented before both Boards, according to railways exhibit No. 1, is 116,530. The cost formula for the year is therefore as follows, on the assumption made above:—

$$\text{\$1.094} \times 2.9 \times 116,530 \times 52.$$

The result is \$19,224,560.06.

101. This is, as we have said, a rough estimate. It ignores economies which may be effected to lower the total number of

man-hours required. It also ignores the fact that the introduction of a 44-hour work week may necessitate the payment of a much larger percentage of overtime pay. These two factors may balance off, to some extent. At any rate, on the basis of the evidence before us, which related to the cost of a 40-hour week, and not to that of a 44-hour week, this is the nearest estimate we can reach.

### **Re: Proposed change in holidays**

102. In the proposals made by the unions there is included a request for the establishment in each agreement of a rule providing that "when any of the statutory holidays for which punitive rates of pay are established fall on the employees' assigned days off, the following day shall be recognized and paid for as the holiday".

103. The proposed change as to holidays was coupled with the proposed introduction of the five-day forty-hour week, and the presentation which the employees made to the Board asked only that the change in the present rule "be extended to the two rest days which accompany the five-day week".

104. The Board has not been given any satisfactory reason why the rules in the present agreements relating to holidays should be altered at the present time, and calls attention to the fact that even in the United States where the five-day forty-hour week was put into effect, the following provision regarding holidays was contained in the agreement reached pursuant to the report of the President's Emergency Board:—

#### *(d) Holidays.*

Existing provisions relating to pay for holidays shall remain unchanged.

### **The railways proposal as to changes in agreements**

105. When the unions made to the railways the requests for changes in agreements which have been hereinbefore set forth, the railways replied suggesting a large number of individual changes in their agreements with twelve of the international organizations represented before this Board. The more important proposals were summarized under the following heads, namely:—

1. Modification of certain rules restricting the railways in the selection of men for supervisory grades and in the selection of new employees.
2. Modification of certain rules restricting the railways in the most efficient assignment of staff to the work to be performed and in adjusting staff to meet changes in traffic.

3. Reductions in penalty payments representing compensation for time not actually worked.
4. Introduction or expansion of scale of probationary rates for inexperienced employees.
5. Adjustments affecting individual wage rates.
6. Payment of reasonable rental for living quarters provided by railways.

106. One of the reasons given by the railways for their proposals was "the excessive rise in wage levels as compared with revenue earning capacity", and they pointed out that this was clearly "a situation where management must explore every avenue to place its operations on the most efficient basis possible and where impediments to efficiency resulting from burdensome penalty provisions that previously might be tolerated must now be eliminated."

107. The railways gave to the unions a detailed list of the various changes which they suggested should be made in the agreements. These proposals of the railways have never been discussed between the parties, and the railway companies have not urged that this Board should adjudicate on the merits of the individual questions raised by them.

108. These proposed changes are properly a matter for collective bargaining, and given a desire on both sides to reach a reasonable and fair solution, such solution should not prove too difficult. However, the railways have urged that if they are faced with a settlement between the parties which involves a shorter work week, the negotiation in good faith of the railways' proposals should form part of any final settlement of the matter. The Board feels that the public interest demands that the railways and their employees should consider most seriously such modifications of the agreements as, without working a hardship on the employees, will contribute to increased efficiency or eliminate expense not necessary or justified. If, therefore, the parties to the dispute accept the proposition of the Board in regard to a forty-four hour week, during the negotiations for the alteration of the respective agreements in that respect, the Board feels that the proposals of the railways as to changes in the agreements should also be considered.

109. If, on the other hand, the parties do not come to any agreement in regard to the shorter work week, then these proposals of the railways should be considered in due course on the merits by all the parties to the agreements.

### The hotels

110. As the result of a direction from the Minister of Labour, based on a recent decision of the judicial committee of the Privy Council, the Board was instructed to deal with the wages and hours of work of employees in Canadian National Railway's hotels, but not with those of employees in Canadian Pacific Railway hotels. In the result wages and working conditions of workers in Canadian National hotels are under Dominion jurisdiction, while in the Canadian Pacific hotels they come under the jurisdiction of the various provinces in which they are located. The result, while it may be legally unavoidable, is, because of the similarity of the hotels and of the problems involved, and the identity of the unions concerned, an awkward one.

111. The Canadian National Railways argue that, although the wages and working conditions of hotel employees are referred to us for consideration, along with the wages and working conditions of their other

employees, they should be considered separately, and that a separate ruling should be made in respect of them.

112. We think this is right. Hotel work has no connection with or comparability with railway work. The wages and working conditions of railway hotel employees are properly comparable with those of other hotel employees. The fact that a railway company, rather than another company, owns a hotel does not change its character or the nature of the various classes of work performed in it. To classify hotel employees as railworkers is entirely artificial. They have nothing to do with the operation of a railway.

113. We proceed on this basis to make a separate recommendation as to hotel employees. Statistics furnished us by the Department of Labour show an impressive disparity between the wages paid certain employees in railway hotels and those paid in other hotels selected by the Department as comparable. The figures are as follows (Table 18).

TABLE 18

Average Monthly Wage Rates (Including Value of Meals), for Selected Occupations in Railway Hotels as Compared with Other Hotels, Eastern and Western, 1947 and 1948

	Average wage rates per month <sup>1</sup>			
	Railway hotels		Other hotels <sup>4</sup>	
	1947	1948	1947	1948
	\$	\$	\$	\$
Dining room waitresses.				
Eastern <sup>2</sup> .....	99.53		76.73	
Western <sup>3</sup> .....	105.26	134.05		90.89
Cooks		140.59		
Eastern .....	172.67		183.66	
Western .....	179.21	206.69		202.38
Room clerks		204.23		
Eastern .....	193.68		153.30	
Western .....	179.26	226.69		169.10
Chambermaids		219.57		
Eastern .....	101.74		87.36	
Western .....	104.32	136.92		102.06
		139.53		

<sup>1</sup> Since wage reports for individual firms received by the Department of Labour are treated confidentially, rates for individual cities with only one railway hotel cannot be given separately. Rates are averaged, therefore, over the two areas using 1948 employment figures for reporting hotels as weights except for Calgary, where 1947 figures are used as weights for Dining Room Waitresses and Cooks.

<sup>2</sup> Eastern Area for Railway Hotels includes Halifax, Quebec, Toronto and Ottawa.

<sup>3</sup> Western Area for Railway Hotels includes Winnipeg, Regina, Edmonton, Calgary and Vancouver.

<sup>4</sup> "Other Hotels" used here for comparisons include one hotel (selected to provide as close comparability as possible under the circumstances with railway hotels) from each of the following cities: Sydney, St. John, Quebec, Ottawa (for room clerks and chambermaids only), Toronto, London and Niagara Falls. No Western hotels were thought to be at all comparable.

114. The correctness of these figures is not disputed, but their relevancy is attacked by the unions on two general grounds:

1. That the general standard of railway hotels is so high that there are no comparable hotels.
2. That, if there are comparable hotels, the footnotes to the table quoted show that comparable hotels were not selected for comparison.

115. It is quite true that in many Canadian cities the railway hotels are in a class of their own, and that other hotels are not on the same level. The footnotes to the table show that this has been recognized, and that an honest attempt has been made to accomplish fair comparisons. Furthermore, if the differences in rates of pay were discounted by as much as one-third, they would still be formidable.

116. Other undisputed figures submitted by the railways show that the average rate of pay per hour in CNR hotels in December, 1949 was 75·7 cents while that in other Canadian hotels was 58·7, a difference of 30 per cent. These figures do not include the value of meals and rooms furnished to certain classes of employees—nor do they include the not inconsiderable sums which, by a tacit agreement between hotels and their employees, are exacted from the public in the form of tips. These so-called gratuities are, as any experienced traveller knows, not a reward for special service but a requisite if one is to obtain normal service. In the case of certain classes of hotel employees, such as bell-boys, waiters, porters, bartenders and check room attendants these gratuities must be a very important item of income. If it were not for the existence of these factors the average wage rates quoted above would both appear to be low.

117. We have also been supplied by the CNR with tables showing specific rates of pay of employees in two CNR hotels, the Nova Scotian in Halifax and the McDonald in Edmonton. These wage scales appear to us to be generous for the classes of work described.

118. The union admits that the wages paid in railway hotels are higher than those paid in other hotels, but says that this difference is justified by the higher degree of competency required in railway hotels, which maintain superior standards of service.

119. The Board agrees that the railway hotels are of a quality above the Canadian average, and that this fact, while it will not require that railway hotel employees work harder than those in similar positions in other hotels, will probably require a higher degree of competency. But it appears to this Board that a wage

differential of 30 per cent is more than an adequate compensation for higher competency in the classes of work involved.

120. Furthermore the evidence shows that even in hotels selected by the Department of Labour as comparable to railway hotels the wages are much lower.

121. There is no evidence before us that the 40-hour week is in effect in any hotel in Canada.

122. Our recommendation in regard to CNR hotel employees is that their claim to a 7 cent per hour pay increase and to a 5-day 40-hour week be rejected. Further we consider that the level of wages in CNR hotels is so high that, if a 44-hour work week is to be introduced, the pay of the employees should be reduced accordingly. That is to say, their hourly rates of pay should be maintained, but their take home pay should be reduced by an amount representing 4 hours pay, if they had previously worked 48 hours, or a proportionately lesser sum, if they had previously worked less than 48 hours and more than 44.

#### *Water transportation employees*

123. We agree with the railways in their contention that the wages and working conditions of this small group have no relation to the general railway picture and ought to be considered separately, with reference to wages and working conditions of other seafaring personnel, rather than with reference to railway labour conditions.

124. We have heard no evidence, either from the unions or from the railways as to wages and hours of work of other ship personnel, or as to the conditions, that is the length of voyages, etc., that affect their employment.

125. We understand that the water transportation employees represented by these unions constitute only a small fraction of total crews employed by the railway companies, the great majority of the crews belonging to other unions.

126. In the circumstances, we do not feel that we have any evidence before us to justify our making a recommendation in regard to wages and hours of work of water transport employees.

#### *General*

127. It is our firm opinion that the recommendations herein contained embody the utmost in the way of concessions which the railways ought to be required to grant at this time.

128. The Board has some concluding observations to make arising out of the nature of the proceedings which it conducted.

129. There was no collective bargaining in the true sense of that phrase. There was a great deal of very effective argument, a thorough and careful marshalling of facts. But the parties remained protagonists and never assumed the role of negotiators. There was an obvious reluctance on both sides to concede any point for the purpose of arriving at a settlement. No middle ground was even discussed before the Board. The Board was treated as a forum and did not succeed in performing its functions of conciliation.

130. For this failure the Board may bear some responsibility, but it may be that the chief fault is inherent in the very nature of the task.

131. The negotiation between a national group of unions and a national group of railways of mass demands, such as were made here, presents a conciliation board with a very formidable problem.

132. There are eighty-six separate labour contracts between the unions here represented and the railways. Each contract is a code covering the wages and working conditions of a group of workers, and of grades within that group. It would be impossible to cover all relations between the railways and these groups of non-operating employees by one contract and yet, when revision is sought of contractual relations, the problem is approached as though there were only one contract.

133. In the result there is no real collective bargaining. In the present case the justice of the union demands in relation to separate classes of workers was never studied. It may be that the deserts of some of them were greater than others; that for instance, some groups deserved a substantial wage increase while others deserved none. It may well be that the onerous and unpleasant nature of the labour of some groups gave them a much better claim to a shorter work week than had other groups. It may be that the application of the shorter work week is economically practicable for some groups, but not immediately so for other groups, who might, however, be given other compensating advantages. None of these things was the subject of negotiation or discussion. They were not negotiated or discussed because the terms of the general demand required a general solution, not a series of particular solutions applicable to the particular problems involved.

134. Again, collective bargaining should involve a complete review of all the contractual relationships, with all terms open to discussion and revision, so that

there can be that elasticity, that give and take which is necessary to any kind of bargaining; the granting of a point in return for one gained. The negotiation of mass demands of this nature precludes that sort of true bargaining.

135. The railways in this case ask for modification of a great many of the terms of many of the existing eighty-six contracts. Such changes ought, in fairness and in sense, to be discussed along with the union demands, which are also essentially proposals for the modification of these contracts. It is perfectly legitimate bargaining practice for the railways to ask acceptance by the unions of changes they propose in exchange for their acceptance of changes proposed by the unions. But this sort of negotiation cannot be conducted on the scale attempted here; it would take any two negotiating bodies, and one Conciliation Board a year or more to complete the task of reviewing eighty-six contracts. In the result, for reasons of expediency, the consideration of the railways' proposals is postponed and the only subject to be discussed is whether the union demands are to be accepted, absolutely or in some modified form. There is no opportunity for the railways to ask for a *quid pro quo*, in the form of various alterations of the terms of the existing contracts. This is not true bilateral bargaining.

136. It is not suggested that this latter result is the product of any design on the part of the unions. It is just one of the inevitable results of mass bargaining.

137. Since, by the terms in which the problem is presented, real negotiation and bargaining is made difficult, if not impossible, there is no elasticity to the field in which a Conciliation Board can operate, and the proceedings tend to result, as here, in a stalemate.

138. This is not a new result where mass bargaining on a national scale is attempted. The same thing happened in the case of the last Conciliation Board appointed to consider rail problems. The same thing has happened repeatedly in the United States where bargaining on a nation-wide scale was attempted. The tendency, both here and in the United States, is to resolve by government action the stalemate created by the failure of the bargaining process.

139. These statements are not to be construed as a criticism of the organization of labour unions into large groups. This may well be an inevitable consequence of modern industrial trends. The Board has no criticism to make of anybody, and no

solution to suggest. What the Board has tried to do is to present, as objectively as possible, some of the practical defects of mass bargaining.

Respectfully submitted.

(Sgd.) J. O. WILSON,

*Member.*

Dated at Montreal, 11th day of April, 1950.

## Minority Report

BOARD MEMBER

ALFRED J. WICKENS, K.C.

I feel I should first comment on the spirit of absolute goodwill and friendliness displayed at all times in Board meetings and private conferences by the parties to this dispute.

The men ask for a .07 cent an hour increase across the Board and a 5-day 40-hour week with no reduction in take home pay.

This report recommends the granting of the equivalent of .07 cent an hour increase as requested but with some adjustments in the application in order not to throw the lower wage rates out of balance. The details of the application can readily be worked out by the parties in their negotiations over the individual contracts. The companies requested revision of certain phrases in each contract but the parties agreed to deal with these by direct negotiation under each individual contract, and the application of the .07 cent an hour increase could conveniently be dealt with in those proceedings.

This report also recommends the institution of the 5-day 40-hour week with 48 hours' pay and with two consecutive days off applicable to all the classes of employees concerned and in order to give the companies time to make the necessary arrangements suggests that the application of the 5-day 40-hour week commence on the first day of June, A.D. 1950.

The companies requested that the steamships and the railways be dealt with separately; but there have been no substantial reasons advanced as to why that is necessary or advisable. It is recommended therefore that the employees of the steamships concerned in this conciliation and the employees of the Canadian National Hotels be included in these recommendations.

I feel the following observations should be made under the headings indicated.

### 7 cent an hour

#### *Cost of living*

On the basis of the cost of living which is only one of the bases upon which an application for increased income should be and in this case is made, the men point out that statistics, and they quote them, show that there has been a greater increase in the cost of living in Canada since their last wage increase than the increase in wages represented by the .07 cent across the board advance for which they ask will amount to.

The figures which the Canadian Government compiles are readily available and need not be quoted here.

#### *Cost of proposals*

The railways claim that to institute the five-day 40-hour week without reduction in take home pay would increase their wage rolls by a flat 20 per cent. That same claim was made by the American railways before the Presidential Board in the United States and the experience of the American roads as will be shown later on in this report entirely refutes it.

Without reference to the American experience it can be shown to be unsound by the following facts:—

1. Many of the employees concerned are already working approximately 40 hours but spread over six days.
2. Many of the offices and other services concerned can be closed down on Saturdays as well as Sundays so that there would be no increase of personnel or staggering of personnel required at all. All offices in fact, except those directly connected with operating, such as dispatchers, telegraphers, ticket agents and baggage men could be closed to the public on the extra day; even freight and express offices and sheds. The public would gladly accommodate their requirements to the absence of service on Saturday as readily and easily as they have done for Sunday, and consignors and consignees would arrange their shipments and deliveries accordingly as they now do to allow for Sunday.
3. Where continuous service is required there is already a system of relief men for one day a week and that could readily be extended to cover the two consecutive weekly days. At rare points where difficulties arose accumulation of the rest days could be made as in the United States.

The cost in the United States, forecast by the railways as 20 per cent of the wage bill, has been shown to be infinitesimal.

Employees exhibit No. 22 on page 1 quotes the President of the Illinois Central Railway as stating that experience indicated the cost would be negligible compared with previous expectations. He gave the

figures as experienced by his railway from the institution of the five-day week until the time of his statement as being \$35,000 a month or \$500,000 a year instead of the 14 million a year his company estimated in its presentation to the Fact Finding Board.

Pages 3, 4 and 5 of exhibit 22 show that in the three months of October, November and December, 1949 the rate of decrease in the number of employees in the non-operating classes on American class 1 steam railways in the United States to have been much greater than in any previous month in the year before the 5-day week was instituted.

On page 9 of that exhibit the employees have broken down the reports of the American class 1 steam railways into a table showing the effect upon the *ratio* of employees in the non-operating classes to traffic revenue on the basis of "Million revenue traffic units", comparing the year 1948 with the year 1949 month by month. In every month prior to the first of October, 1949 the ratio of increase of employees per million traffic revenue units was greater than in any month following the institution of the 5-day week with the exception of the month of October. In the month of December, 1949, the last month of which there is a record, the percentage of increase of employees per million revenue traffic units over the same month of 1948 was only 1.8 which is in startling contrast to the railways' forecast of 20 per cent.

The companies suggest, but produce no statistics, that these low figures are attributable to declining business; and claiming, but producing again no figures or evidential proof, that a lot of services and facilities at a lot of points have been curtailed and closed down, and that there is a great uproar of complaint from the public; but no evidence, not even newspaper reports, is produced.

I reject the companies' contention that declining business would decrease the employee ratio because it takes an irreducible minimum of employees to operate a railway and furnish the services; and business could increase up to the employees' capacity in many cases without requiring any additional help at all, and in most cases without requiring any substantial additional help caused by the 5-day week; so that operating at peak capacity it is self evident that the percentage ratio would decrease rather than increase. The progressive decline in the ratio could be readily explained by the greater facility acquired by experience, in economically and soundly working out the arrangements

required for the implementation of the 5-day week. Declining business would reduce the total number from its peak but not the ratio to million traffic units.

Not one figure was furnished on behalf of the railways to support their blanket contention dealing with the American experience, notwithstanding the fact that each major line operates some thousands of miles of railway in the United States under the 40-hour 5-day week requirement. There can be only one acceptable reason for the absence of these figures, and that is that they bear out the employees' contention.

The railways contend that however feasible the 5-day 40-hour week might be on railroads operating in the United States, Canadian economy and American economy, Canadian railways and American railways, are so different, that the American experience is of no value, and particularly that the Canadian economy could not stand the impact of the increased cost of this change; and they urge there is no basis whatever for comparison between working conditions and wages on American railways and Canadian railways.

Now, what is the historical record on this particular subject. Consulting tables furnished by the employees one can see that for many years wages and hours of labour on American and Canadian railways were identical.

The railways themselves in 1918 when an application was before the Canadian Railway War Board for wage increases, took the exact stand that the employees now take, namely:—that working conditions and wages on Canadian railways and American railways had always been the same and urged the Canadian Railway War Board to delay dealing with the then application of Canadian workers, until the McAdoo Commission appointed by the President of the United States to consider similar matters there, had made its award. This was done and the Canadian men were granted substantially the same concessions as the American men. On page 11 of the Employees' main brief is quoted at length a letter written by the Railway War Board to employees of that day outlining the position of the Canadian railways. It is not necessary to quote that letter nor the other matter on page 11 of the brief. It is there to be read if desired. But it is there made quite clear that the basis upon which it was considered proper to settle the then dispute was to grant to the Canadian workers identically the same concessions as the McAdoo award would give to American workers.

In the same year certain matters came up before the Canadian Privy Council dealing with railway workers and their wages and the Privy Council by Order 1768 of that year imposed upon the workers in Canada the same conditions as were awarded by the McAdoo award to workers in the United States.

On page 12 of the Employees' main brief is quoted part of a letter from Sir Henry Drayton, then Chairman of the Canadian Railway Commission, written to the then Acting Prime Minister, pointing out that the class of work is the same on the railways both sides of the line, that there is a great interchange of traffic with many employees working on both sides of the line and the different brotherhoods are international, pointing out also that in the past the wage scale had been practically identical in both countries, stating that the Canadian railways urged that no departure should be made from that practice at that time. The departure then requested was an increase in Canada.

Again in June of 1919 as set out on page 13 of the Employees' main brief, a request for wage advances was made and again the Canadian Railway War Board wrote to the workers concerned suggesting that further proceedings before their Board should be deferred until the result of negotiations in the United States was known. Again applying the principle that rates and conditions on both sides of the line should be the same.

It is quite apparent as set out in the Men's main brief in the pages following those referred to that until the outbreak of World War 2, except during the unsettled period of the depression, the onset of which and the course and intensity of which varied a little in the two countries, that same pattern has been followed; and not until this application have the companies taken the stand, completely reversing their former stand, that Canadian economy couldn't stand the impact of relating Canadian railway wages and working conditions to those in the United States.

At this self same time the same railways that are before this Board urging the inferiority of the Canadian economy to the American economy, are before the Turgeon Commission inquiring into railway rates, etc. in Canada, urging there "that since 1918 the Canadian economy has made the most spectacular advance ever known by any economy in history". I, as a patriotic Canadian, accept the representation made by the railways to the Turgeon Commission in preference to the gloomy view of our country's economy expressed in their

representations to this Board. Consequently for the purpose of this report it is obvious that no weight whatever can be given to the company's contention that the Canadian economy cannot stand the impact of the granting of the men's request. Could that position be sound the outstanding progress of which they boast to the Turgeon Commission is an astounding "progress", sinking from a state of equality in 1918 to one of such inferiority in 1950.

The United States' experience is not the only object lesson we have on the matter of the feasibility of the 40-hour 5-day week on railway systems. New Zealand has had a 40-hour 5-day week upon its railways since the year 1936. There has been no outcry of the curtailing of services, nor of the closing of stations in those 14 years. The continent of Australia has had the 5-day 40-hour week on its railways for several years and no complaints have been heard of in that respect. Nor have there been any complaints of excessive costs in either New Zealand or Australia.

It surely is not intended to be contended that the Canadian economy is also so much inferior to that of New Zealand and that of Australia that it cannot withstand the impact of the 40-hour 5-day week which those two economies have taken in their stride.

There was some suggestion that wages are lower in New Zealand and Australia which would make the cost of implementing the 5-day week less. Even if wages were lower in Australia and New Zealand it must surely be assumed that the ratio of wages to the general economy is the same and the impact on the economy would be the same.

Concluding on this particular phase, for the purposes of this report it is taken to be quite clear that that contention is unsound and that there is no reason evident why the Canadian economy cannot take in its stride the 5-day 40-hour week for the non-operating employees on its railways.

Just in passing it might be noted too that the Canadian railways by law are obliged to adopt the 5-day 40-hour week on all lines operated in the United States, and the American railways, which operate substantial mileages in Canada have applied the 5-day 40-hour week to Canada.

On further reference to the comparative wage scales in Canada and the United States, it was noted above that since the beginning of World War 2 the parallel between those two scales has disappeared, which can be readily understood and explained by the different times of entry

of the two nations into World War 2 and the imposition subsequently to these different times, of wage and price controls.

The workers are not asking at this time the full restoration in Canada of the American rates, notwithstanding that the railways in 1918 demanded that Canadian rates be not advanced beyond American rates. American rates by the fall of 1949 had advanced much more rapidly since the beginning of the war than Canadian rates, and the further advance then awarded by the institution of the 5-day 40-hour week and the across the board increase has further widened the gap. The reasonable position the workers take is that no such further widening of the gap should be permitted and this application could serve the purpose of halting that widening process.

A suggestion made which was described as a move in that direction, namely to reduce working hours from 48 hours a week to 44 would be practically of no value because large groups of employees concerned are already working 44 hours or less a week and will receive no benefit from such an arrangement and in addition all would still be required to work the morning of the 6th day. The important feature is that the employee will get two consecutive days off per week. The alternative suggestion is merely a slight reduction in weekly working hours for a limited number of people.

The companies contend that there is no general movement to the 5-day 40-hour week in Canadian industry but the statistics submitted by the men in exhibits 8 and 21 quite clearly establish not only a very substantial movement in that direction but actually a preponderance of substantial employers already operating on that basis.

Page 5 of exhibit 8 shows by provinces the establishments as of 1947 operating on a 5-day week to be 2,043 as against a 6-day week 2,296; number of employees therein on a 5-day week 296,181; on a 6-day week 280,296.

Page 12 as of October, 1948 shows 73 establishments on a 5-day week against 87 in the classes listed; employees numbering 7,805 against 8,358.

Page 14 as of October, 1948 in establishments employing over 2,000 workers shows a 5-day week 22 as against 11; employees 14,913 as against 9,131.

A chart on page 22 running from 1945 to 1948 shows a progressive growth in manufacturing and public utilities trade and service of the 5-day week.

Exhibit 21 gives recent examples of additions to the firms in Canada and the classes of employers in Canada who have switched to the 5-day week.

At the present time negotiations are in hand in the Hamilton area as appears by press dispatches involving some 13,500 workers in industries leading to a 5-day week.

It is also noted that the *Ottawa Journal* of March 28, 1950 announces that the Government organization, the National Research Council as of Saturday, April 1, 1950, has gone on a 5-day week the year round and the work week will be 38½ hours.

### ***Comparisons working conditions with other industries and railways***

The exhibits referred to above bear out the contention of the men to establish, as they have done, the prevalence and growing application of the 5-day 40-hour week in Canada, and the elimination of the favourable wage differential heretofore held by the railway employees. The companies endeavour to show that railway wages are reasonably comparable to all other wages for the nearest similar work in Canada, but the information submitted by the men is much more impressive than the mere denial made by the companies.

Oddly enough the companies say that these comparisons have no value for the purpose of advocating the 5-day 40-hour week, because conditions are so different, but have a value for wage comparison because they are so similar.

The companies contend that railway wage rates in the classes concerned should not be advanced beyond what they call "wage rates in comparable industries in Canada". The figures which have been submitted from the Dominion Bureau of Statistics as to such industries unfortunately include a large number of small establishments and include the wage rates of establishments wherein the men are not members of unions; and lose very much of their value even if such a comparison had any virtue.

The employees, dealing with the wage comparison do not contend that there is a wide disparity between railway wages and other wages at the present time but they do contend that until recent years there has been a substantial differential in favour of railway wages and this differential in recent years has gradually closed up so that today instead of railway wages being generally higher than other wages generally they are lower, especially compared with organized industries.

The employees' request is for the restoration of those favourable differentials.

Railway workers are contending with two very important conditions:—

1. The pressing time limit, and
2. The dependence of the safety of great numbers of human beings upon the accuracy and dependability of their work, requiring a higher degree of efficiency and responsibility in doing that class of work than in an employee doing more or less comparable work in any other industry; requiring a higher general standard of personnel and qualifications in the same general working classification on the part of the railway workers, justifying the employees' claim that railway workers should receive correspondingly higher rate of pay.

Most of the nearest comparable skills in other industries are specialized, that is the employee is limited to one routine operation which he does over and over again all day long day after day, whereas the railroad employee has got to be able to do anything within the range of the classification to which he belongs which may require to be done; and many of these highly skilled operators in factories would have to enter railway service as apprentices until they had acquired other skills necessary to discharge their duties.

These things all enter into the merits of the contention of the employees that the previously existing differentials in their favour should be restored.

In any case dealing with wages and working conditions it is not an answer to a request for improvement in wages and working conditions to point out, even if it be so, that the wages and working conditions existing are comparable to or even identical with those existing in other industries. To accept such a proposition would bring about absolute and final stagnation in all industries.

### ***Economic comparisons Canada and United States***

It was contended on behalf of the companies that Canadian economy cannot stand the granting of the men's application and they say conditions are so different in the United States that they bear no comparison with Canadian conditions and that we cannot do what they can do.

Surely no thinking or patriotic Canadian will accept the assertion that our economy and our conditions are inferior to those in the United States.

Faced with that argument by the railways the employees have submitted quite a number of tables and schedules to which it is not necessary to refer in detail in this report but to some of which some reference with some profit might be made.

Employees exhibit No. 18 deals quite broadly with that subject.

The railways that contend one of the differences was because a good part of the Canadian traffic was export traffic. On page 1 of exhibit 18 the employees have taken the net national produce of each country, which is the gross national product of each country, less the exports from each country. In the table on that page 1 they show that in 1947 Canada's net national produce had increased 121 per cent over 1929, whereas the States had increased only 118 per cent; that the 1947 increase over 1937 was 148 per cent exactly the same as the States; and the 1947 increase over 1946 was 11 per cent exactly the same as in the United States. It is evident from that there is no inferiority in the Canadian economy nor in its progress.

On page 4 of exhibit 18 is a table showing the increase in the average yearly earnings in the classes of employees concerned in this dispute in Canada and the United States. In 1948 the American had increased 155.9 per cent over 1929, the Canadian 145.3 per cent.

On page 5 of exhibit 18 is shown a table giving the index of the percentage of increased total industrial production in Canada and the United States by monthly averages and in the month of October, 1949 the Canadian index of increase stood at 185.5 per cent and the American at 166 per cent.

On page 7 of exhibit 18 is an index of the increases of wholesale sales Canada and the United States; 1937 to 1948 annual increases; and 1949 January to September monthly increases. Again during the year 1949 the Canadian move has been sharply upwards, fluctuating at any time only slightly downwards. The September percentage figure being Canada 316.4, United States 292.3, whereas the January figure had been Canada 231, the United States 296.2.

Page 8 gives further index of percentage increases in general wholesale prices in the two countries 1926 to 1948 annual and 1949 January to October monthly. Again the same trend is apparent, although the Canadian figure during 1949 had held fairly steadily but swerving upwards in the last few months whereas the American has declined fairly steadily right to the end.

Those figures show a much healthier state in the Canadian economy than in the American economy.

It was suggested in the discussions that the Canadian economy cannot stand the impact of this wage increase and the 5-day 40-hour week. That, this report points out, is simply another way of saying the employers haven't the ability to pay.

### *Ability to pay*

This is a point raised by the railways, and as pointed out above, includes all questions of any impact on the Canadian economy. While in matters of this kind ability to pay should not be a prime consideration nor even a substantial one, the companies have made a great deal of it; but their own published statements do not bear out their position. The reason for referring to this contention in this report is to point out this one outstanding irrefutable historic fact; there has never in all the history of labour relations been an application for any substantial redress by any substantial body of employees that has not been met by the blanket statement that the employer whoever he was, couldn't meet the requests and stay in business.

At the risk of being prolix, I feel it should be mentioned that about 200 years ago when the practice existed of recruiting children of both sexes down to six years of age from Foundling homes in London to work in the mines in the Northern midlands, their work being to care for the pit ponies, where they were taken underground, stayed there for the rest of their lives, slept with the ponies, worked 16 hours a day 7 days a week; when a public outcry arose and Parliament proposed to do something about it there went up the same stock cry "if this is changed we cannot carry on".

The story continues unbroken, and early in the 19th century, the most terrific opposition was met when it was proposed to impose regulations upon factories requiring that no apprentice should work more than 12 hours a day, that the bedrooms of male and female apprentices should be separate, that not more than two should sleep in one bed. All these advances were beset on all sides with bitter opposition, and the statement it would bankrupt business. It is almost incredible that it was not until 1842 that Shaftesbury managed to procure the passage of an Act through the House of Commons "to prevent women being employed as *draft animals* in mines". These last two astonishing facts can be found on pages 257 and 258 of a very interesting book called "Discoveries in the Statute Book" by Fay.

While perhaps it is not the general thing to quote from a book of fiction in a matter of this kind it is my opinion that a large

part of the objection to the men's application is founded on fiction in that it is imaginary estimates as to what would happen, I can't resist making a quotation from Dickens' "The Old Curiosity Shop", from Chapter 1 of the 2nd book dealing with labour relations:—

... Coketown in the distance was suggestive of itself, though not a brick of it could be seen.

The wonder was, it was there at all. It had been ruined so often, that it was amazing how it had borne so many shocks. Surely there never was such fragile china-ware as that of which the millers of Coketown were made. Handle them never so lightly, and they fell to pieces with such ease, that you might suspect them of having been flawed before. They were ruined, when they were required to send labouring children to school; they were ruined when inspectors were appointed, to look into their works; they were ruined, when such inspectors considered it doubtful whether they were quite justified in chopping people up with their machinery; they were utterly undone, when it was hinted that perhaps they need not always make quite so much smoke. . . . . another prevalent fiction was very popular there. It took the form of a threat. Whenever a Coketowner felt he was ill-used—that is to say, whenever he was not left entirely alone, and it was proposed to hold him accountable for the consequences of any of his acts—he was sure to come out with the awful menace, that he would "sooner pitch his property into the Atlantic". This had terrified the Home Secretary within an inch of his life, on several occasions.

However, the Coketowners were so patriotic after all, that they never had pitched their property into the Atlantic yet, but, on the contrary, had been kind enough to take mighty good care of it. So there it was, in the haze yonder; and it increased and multiplied.

These things illustrate perfectly the entire course of labour and employer negotiations. I have never heard of an application for wage increases or improvement of working conditions that the blanket statement has not been "it can't be done".

Even if the companies' contention they cannot pay the costs of the requests of the employees were correct, which this report does not concede, it is a well established practice that that is not an important consideration, if a consideration at all, in dealing with working conditions and wages. While no proof of that is really required it might be convenient to quote a few items from employees' exhibit No. 20.

On page 6 quoting from a statement from the Hon. William H. Taft before the Federal Electric Railways Commission in 1939:—

Therefore we refuse flatly from the first to consider the financial condition of any company in determining the rate of wages.

Again on page 17 quoting from report and recommendations of a Fact Finding Board *re* Western Union Telegraph Company, August 29, 1946:—

Fourthly, in so far as ability to pay refers to the adequacy of railroad revenues without benefit of railway rate increases or of any forms of Government aid we have not accepted this standard as a limit upon the wage increases recommended by us.

On page 20 quoting from the unanimous report of the Conciliation Board on Vacations on Canadian railways 1947:—

*Nevertheless, the Board is convinced that these financial difficulties of railway management which periodically occur should not be permitted to obscure the force in the claims of the unions for annual paid vacations that will compare favourably with those prevalent in other great industries. It believes that the public of Canada will expect the railways to recognize such vacations. It therefore recommends that employees with one year's service should be entitled to six days' vacation with pay, that those of three years' service should be entitled to nine days and those of five years' to twelve days.*

These quotations just for the record.

Then, as in this case, the position taken was that a change couldn't be made because the employer couldn't afford it. I comment here upon a table compiled from the records of the Canadian Pacific Railway Company, one of the big railways concerned, from 1940 to 1949. A brief examination of this table shows that as between 1940 and 1949 the fixed charges of this company have been reduced from an annual \$26,186,000 to \$14,543,000. That at least would indicate a very substantial profit on operations during those years from which their bonded indebtedness has been reduced in that substantial manner. This considerable reduction in fixed charges produced a corresponding alteration in the ratio between gross income and net income.

In 1940 the gross income was 40 million odd, the net income 14 million odd. In 1949 the gross income was 44 million odd, and the net income 29 million odd. This shifting ratio between gross and net income produced by the fixed charges change also produces a marked change in the ratio of net income earned on common stock. In 1940 \$1.12 a share, representing 4.48 per cent on the par value; 1949 \$1.93 per share representing 7.72 per cent on par value; and this before the application of the recent increases granted in their tariff of rates.

Two final observations on this point:—

1. While it is no part of the reference to this Board to deal with railway tariffs, to an ordinary thinking person there certainly would seem to be no

justice nor any sense in requiring a railway any more than anybody else to pay for the services and materials it requires on the basis of an inflated currency and to accept payment for its services on the fiction of the assumption that the currency had remained at par.

2. The railways are called on on many occasions to furnish services in the national interest, such as the Crow's Nest Pass rates, competitive rates from the foot of the lakes to the Atlantic seaboard and so on; and the operation of non-productive lines for development purposes. Doubtless the fairer way to defray the costs of those concessions and operations would be by a Government subvention. Certainly by such a subvention rather than by passing the cost on to the employees, by taking them out of the van of industrial and social progress.

### ***Economic and moral effect of improving working conditions***

Apart from what I have said before there is an underlying general principle which transcends and should transcend all questions of contest between employers and employees; and that is "the value of human welfare".

It is most appropriate that at this juncture the Roman Catholic Episcopate of the Province of Quebec should have issued a pastoral letter recommending industrial reforms. The document referred to bears the august signatures of Archbishop Vachon, Archbishop Courchesne and Archbishop Roy. I quote the second recommendation contained in that letter:—

2. Legislation to give the labouring class the means to take its place in the community and to share in the benefits of progress and contemporary culture.

I could mention in this connection the serious problem of juvenile delinquency in the larger industrial centres; and I could mention too the threat of which we are made daily aware by our Government leaders and newspapers, of the aggressive infiltration of communists in the democratic countries.

Dealing with the pastoral letter recommendation how can a man working 5 days and part of a sixth have any time or energy to apply to the acquisition of the benefits of progress and contemporary culture or to engage in the activities requisite to take his place in his community.

Dealing with the matter of juvenile delinquency a father by the time he goes to and from his work six days a week is unable to be at home during the times when he could be a companion, an elder brother, and a guide, to his children; apart from being so tired that the energy is not there.

The son who would have Saturday to be a pal to his dad would not be found in bad company.

The worker who was working 8 hours a day for 5 days a week would not become weary to the point of carelessness and increase the hazards of his employment.

Someone must take leadership for the improvement of conditions in human affairs, and surely in all the Dominion of Canada there is no industry of any kind upon whom should fall the responsibility as well as the honour of furnishing such leadership, rather than the railway companies. The two major companies are the two most typically national industries in their scope and their character, and it is not an exaggeration to say that the whole country looks to them for leadership not only in industrial and technological progress; but in wages, working conditions and social progress.

This whole question rises above one of mere employee-employer relations.

It is a matter of vital national importance and it is one which has grave international implications in view of the state of world affairs.

Dealing with the ideological threat, the restrictions surrounding the totalitarian countries make it impossible for us to procure any authentic knowledge of conditions in them.

People advocating safe and sane measures are always at a disadvantage in competing with those advocating startling changes.

While the case remains one purely of advocacy, the only hope for the democratic case is by demonstration of its works; and from that angle alone no matter what the cost, which as pointed out above is not substantial, the institution universally in Canada of a 5-day 40-hour week would be there under every worker's nose as a complete and convincing answer to the theories of communists, by showing concretely how democracy works.

I quote again from the material submitted by the employees some very important statements made along the humanitarian line.

The first is from exhibit 9 on page 11 from the award of the Australian Commonwealth Court of Conciliation and Arbitration which reduced standard working hours in Australia to 40. Immediately preceding the quoted paragraph is reference to general conditions and other items. Then follows this paragraph:—

A formidable list, and to many minds an unanswerable one, but answers have been made and must be weighed—a wrong word perhaps since many of them are imponderables but at least they

must be considered and adjudged. For example, how shall we estimate the economic value of industrial contentment? How shall we measure the human value of it? How far is the shorter week a step on the road to that co-operation of the forces of production which is so desirable? How shall we set the family aspects of this increased leisure against a foreign trade or the claims of our people against those of other countries? Yet all these are factors which do enter into the fabric of one's mind and ultimately issue forth in judgment.

While it isn't going to be quoted here employees' exhibit No. 12 could be read throughout with great application to this question of human well-being, particularly the observations of the late Mr. Henry Ford, who must be recognized as an authority on labour relations.

The value to Canada as a whole in social and human welfare; in the improvement of family life; in the reduction of juvenile delinquency; in the increased interest and influence of the employees in their community and national life by reason of the leisure in which to engage in these things, will make a contribution to Canadian national well-being and thereby to the well-being of the companies themselves out of all proportion to any extra cost which may be involved in meeting these requests.

Canada has justly asserted her right to a place amongst the foremost of the World's democratic nations. She has played fairy god-mother to many peoples who suffered more directly from the war than did she herself. It would be ironical and the height of national stupidity to refuse to do for our own people what we have paid so much to try to do for others.

There is no greater asset that any country and any company can have than a large body of well paid, industrious, happy, loyal people with a sufficient amount of leisure to be able to apply themselves to community and national service.

Our railway companies have always prided themselves upon being and been regarded generally as pioneers and leaders in the development and welfare field in Canada, and as far as the writer of this report is concerned it would be a matter of keen personal regret should the companies fail to accept this opportunity and challenge to further demonstrate the justice of these claims. I am convinced acceptance will be to the railways' own great benefit, as well as to the benefit of the employees and the national economy of Canada as a whole.

This situation faces us with one of the rare opportunities given to a democratic people to show to those who advocate a state-dominated people, whether it be called Communism or by any other name, the great advantage of living in a democracy as compared to an autocracy.

Just to call attention to the fact, it has been brought to my attention that the CPR in dieselizing the Great Lakes area have indicated that a reduction of 37½ per cent to 40 per cent of equipment maintenance staff will occur. It may be argued that the company is bearing the capital cost of the equipment which brings this about but it is surely unnecessary to argue in this day and age that the worker also is entitled to share in the benefits which accrue from equipment advances due to inventions and this can only be done by improved working conditions and increased wages.

It is unnecessary to go into detail in this report of the working out and application

of the 40-hour 5-day week because that is all gone into in thorough detail as applied to the United States railways in employees' exhibit 11, which contains as agenda following page 15, first, the full report of the emergency board under which the scheme was brought into effect in the United States, and then the agreement between the railways and the employees putting it into effect. In the main the provisions of this agreement could be adopted with such variations as the individual circumstances warranted in putting this report into effect on Canadian roads, and besides the Canadian railways have the advantage of nearly six months' experience on their American operated lines under that report and agreement as a guide in the application of the principle to the Canadian lines.

Dated and delivered this first day of April, A.D. 1950.

(Sgd.) ALFRED J. WICKENS, K.C.

## REPORT OF BOARD in dispute between

**Canadian National Railways, Canadian Pacific Railway Company and Ontario Northland Railway,**

*and*

**Canadian Brotherhood of Railway Employees and Other Transport Workers and the Brotherhood of Express Employees.**

Hon. HUMPHREY MITCHELL,  
Minister of Labour,  
Ottawa, Ontario.

Sir:

The Board of Conciliation and Investigation established in the above matter and composed of the Hon. Mr. Justice J. O. Wilson, of Vancouver, Chairman; Mr. J. A. Coote, of Montreal, nominated by the employees; and Mr. T. R. Meighen, K.C., of Montreal, nominated by the railways; held a preliminary hearing, in the City of Montreal, on the 19th day of December, 1949, which was followed by a public hearing on the 12th day of January, 1950. After hearing the parties for some time, the public hearings were adjourned until the 28th day of February, 1950, at the same place, and the Board has been practically in continued session since that date, the public hearings having ended on the 7th day of March, 1950.

The employees were represented by:—

*Executive Officers from Union  
Headquarters:*

A. R. Mosher, National President, Canadian Brotherhood of Railway Employees and Other Transport Workers.

On April 12, 1950, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with the dispute between the Canadian National Railways, the Canadian Pacific Railway Company and the Ontario Northland Railway, and the Canadian Brotherhood of Railway Employees and Other Transport Workers and the Brotherhood of Express Employees (L.G., Dec., 1949, p. 1554).

The Board was composed of the Hon. Mr. Justice J. O. Wilson, Vancouver, British Columbia, Chairman; Mr. T. R. Meighen, K.C., Montreal, member appointed on the nomination of the companies, and Mr. J. A. Coote, Montreal, member appointed on the nomination of the unions.

The text of the Board's report is reproduced herewith.

T. J. Clark, Grand President, Brotherhood of Express Employees.

J. E. McGuire, National Secretary-Treasurer, Canadian Brotherhood of Railway Employees and Other Transport Workers.

E. Robson, National Vice-President, Canadian Brotherhood of Railway Employees and Other Transport Workers.

*Joint Negotiating Committee:*

T. McGregor, Chairman  
S. H. Eighteen, Secretary  
F. H. Gillespie  
W. J. Smith  
J. Q. Querido  
D. N. Secord  
W. Munro.

*Research Department Technical*

*Advisers:*

Dr. E. A. Forsey  
A. Andras  
D. Dunbar  
Maurice Wright.

The railway companies were represented by:—

*Canadian National*

R. C. Johnston, Asst. Vice-President Personnel.  
P. E. Ayrhart, Manager, Labour Relations.

*Canadian Pacific*

D. I. McNeill, Vice-President Personnel.  
J. R. Kimpton, Asst. Vice-President Personnel.  
S. M. Gossage, Asst. Manager of Personnel.

*Ontario Northland*

A. E. Freeman, General Manager.  
S. W. Gowan, Secretary.

*Toronto, Hamilton and Buffalo*

W. J. Warnick, Asst. to President.  
A. E. Cook, Personnel Representative.

Very able presentations, both oral and written, were made by both sides, and, after such presentations, the members of the Board made repeated endeavours to see if some agreement could be reached between the parties but regret to state that nothing along that line was accomplished. It is therefore necessary for the Board to report to you its findings and recommendations.

Mr. J. A. Coote, a member of this Board, does not concur in those findings and recommendations and is filing a separate report.

We may add that the proceedings were marked throughout by the best of good feeling on both sides, and it was a pleasure to note the mutual respect and regard which the representatives of the parties to the dispute have for each other.

### **Employees' Requests**

Two labour organizations were represented before the Board, namely: the Canadian Brotherhood of Railway Em-

ployees and Other Transport Workers, and the Brotherhood of Express Employees. In their brief, submitted to this Board, they have summarized their proposals as follows:—

"(a) A general wage increase of 10 cents per hour or the equivalent thereof in terms of daily, weekly, monthly or mileage rates, effective the dates specified in the respective notices given.

(b) A five-day work week with a maximum of eight working hours per day with a 20 per cent increase in hourly and daily wage rates, and no reduction in monthly rates of pay; with the minor variations set forth in the Brotherhoods' notices to the railways.

(c) The check-off by the employers of regular monthly dues in the amounts required by the Brotherhoods' constitutions from all employees covered by their agreements and the remittance of such money to a duly authorized officer of each Brotherhood within thirty days from its collection.

The Brotherhoods have made it clear to the railways that the wage demand means 10 cents per hour on present hours and 20 per cent per hour when the five-day week goes into effect on the basis of hours so established, e.g. \$1 per hour will become \$1.10 per hour with the 10 cent increase and \$1.30 when the 20 per cent is added to maintain the same take home pay; \$200 per month will become \$220.80 with the 10 cent increase and \$216.93 with the advent of the five-day week."

The employees affected form part of what is known as the non-operating group of employees of the railways, as distinct from those employees who actually run the trains, such as enginemen, firemen, conductors, trainmen and yardmen. These non-operating employees comprise some fifty distinct occupational classifications of workers running from office boys and clerks to mechanics, machinists, sectionmen, station agents, telegraph operators, porters and dining-car employees. Those represented before this Board comprise principally clerks, freight handlers, shop labourers, express and cartage employees, sleeping and dining car department road service employees, unlicensed steamship personnel and hotel employees.

Over 30,000 employees of the railways are represented by the organizations before this Board, but it is to be noted that another Conciliation Board is, concurrently with this Board, considering an application by organizations representing other groups of non-operating employees numbering approximately 86,000, in which

application a similar request for a five-day forty-hour week with the same take home pay is made, with a request for an increase of 7 cents per hour in basic rates of pay, so that there are about 116,000 employees actually represented before the two Boards. But, if the railways apply any increase in pay or changes in working hours to other unorganized staff, as they have done in the past, the number of employees who will actually be affected is approximately 139,000.

The railways have pointed out that the employees represented before this Board comprise about 17 per cent of the total number of their employees, and that the employees represented before the other Conciliation Board comprise about 48 per cent of such total number, making altogether 65 per cent of their total employees. It can therefore be seen that any settlement of the disputes affecting so large a proportion of railway employees must inevitably exert a profound influence on the terms of employment of all railway employees.

We shall deal first with proposals (a) and (b) above leaving proposal (c) for separate treatment later.

Before considering the reasons adduced on the part of the employees for the increased pay and shorter hours asked for, it is well to bear in mind that, effective on March 1, 1948, an increase of 17 cents per hour "across-the-board" was granted to all railway employees in Canada.

On the standard 48-hour week that increase amounted to \$35.36 per month. On the same basis, the total increase since 1939 in basic rates of pay of 43 cents per hour gave a total monthly increase of \$88.57.

The Brotherhoods claim that their members are low paid and that their wages are low in comparison with those of other railway workers. The approach is largely a social one. It is not argued that, contrasting the classes of work done by the workers in different railway groups, it can be shown that the members of the Brotherhood group are not adequately paid for the tasks they perform. The argument is simply this—that whatever the nature of their tasks may be, the members of the Brotherhood are paid too little money to enable them to cope with modern living conditions—that from a social and humanitarian viewpoint they are entitled to be paid higher wages and ought, for the health of the state, as well as for their own good, to be paid higher wages.

This interesting argument is buttressed by references to a study by the Toronto

Welfare Council of the minimum living costs of a family of 5 in the City of Toronto in the year 1949, called "A guide to Family Spending in Toronto, 1949". This report expresses the opinion that \$49 per week is the minimum sum that such a family should have, and the Brotherhoods argue that other necessary costs not included in the Welfare Council's budget bring this minimum up to \$52.50 per week.

In support of this argument the Brotherhoods do not cite the average wage paid their members, but do cite the rates of pay of certain groups within their membership. It is thought by this Board that this method of argument has a certain apparent obliquity. The Brotherhoods do not ask for different results for different groups within their membership, based on the greater needs of one or more groups of their membership as contrasted with other groups. They ask for certain general advantages to be extended to all members. They ask, for instance, that the same increase in pay be made to sleeping and dining car employees, who, in the opinion of this Board, are already receiving generous rates of pay, as to clerks and labourers. The Board considers that an argument based on the rates of pay of clerks and labourers has no application to the rates of pay of the other classes of employees involved. If a mass benefit is desired, as here, the argument ought to be based on the average rate of pay. If it is sought to gain particular benefits for particular classes of employees within the Brotherhoods, based on necessity, then those claims should be made separately in respect of the classes who are alleged to be paid less than a living wage. The terms on which the problem is presented by the Brotherhoods prevent the Board from dealing with the deserts of individual groups, and restrict the Board to the consideration of the deserts of the members of the Brotherhood, as a whole.

However, taking the argument as presented, the Board proceeds to a consideration of some of the comparisons offered.

The first comparison is between average hourly wages in manufacturing on September 1, 1949 (98.5 cents per hour) and members of the Brotherhoods employed by the CNR described as "clerks and other classes". The appositeness of this comparison escapes us. If comparisons are to be made respecting the wages of clerks, it appears to us that the comparisons should be with the wages of other clerks, and not with those of manufacturing employees. A comparison of the average wage of all non-operating employees in the Brotherhood

with the average wage of all manufacturing employees might, as contrasting the earnings of two large diversified groups, have some usefulness, but that is not offered to us.

No evidence has been given us that railway clerks are ill paid as compared with

other Canadian clerks. On the contrary, the only comparisons put in evidence, those tendered by the railways (Exhibit No. 4) show that railway clerks are extremely well paid as compared with other clerks. The comparisons are so striking as to be worthy of citation.

Comparison of Male and Female Office and Other Occupation Rates of Pay Canadian National Railway vs. Survey Montreal Area, by Quebec Industrial Relations Institute, March, 1949

<i>Quebec Industrial Relations Institute Survey</i>	
Title	Rate (wtd. average)

NOTE: All positions are in Bonaventure Freight Office except as shown:—

- (a) Revenue Accounting Department.
- (b) Operating Department.
- (c) Central Station.
- (d) Stores Department.

The next comparison is one of the wages of hotel employees with those of factory workers. Again we ask why the wages of hotel employees should be compared with those of factory workers rather than with those of other hotel employees. In comparison with other Canadian hotel workers Canadian railway hotel workers are paid generous wages. This statement will be amplified later.

The Brotherhoods' brief goes on to cite the rates of pay for common labour in certain selected Canadian industries, and to compare them with the railway wage rate for common labour, which is given as 85 cents. As a matter of fact, the correct weighted average rate for common labour on the railways is somewhat higher. The instances cited for other employment show common labour rates much higher than 85 cents. But they are selected rates in certain industries in certain localities and do not reflect the average Canadian rate for common labour. The railways operate all across Canada and are required by this fact, as well as by the nature of the demands made on them by trades unions, to pay the same wage rates in each locality. Therefore the standard of pay for common labour they ought to conform to is the Canadian standard, and not a local or particular standard. The Canadian average for 1948, as shown in the Annual Report of Wage Rates and Hours of Labour in Canada for 1948, was 82 cents per hour. The railways concede that this will, in 1949, have risen to 87 cents per hour. This is the true standard of comparison for a national industry. It shows, if the figure of 85 cents per hour for common labour on the railways is accepted as accurate, a slight disparity which the recommendations of this Board will, if implemented, more than correct.

We think that this disposes of the comparisons offered, and that no case has been made out on that basis.

It remains to consider the larger proposition that wages should be brought up to the standard recommended by the Toronto Welfare Council, \$49 per week. We wish that the Brotherhoods had been more explicit in this proposal. We are not sure whether the proposal is that the average wage should be raised to \$49 per week, or that there should be established a minimum wage of \$49 per week. Since the Brotherhoods are dealing with their members as a mass, and making the same demands in respect of all of them, we would surmise that the argument is that the average wage should be at least \$49, or, perhaps, \$52.50 per week.

The Brotherhoods have not told us what the average wage of their members is. In the absence of any information on this point we must rely on the only figures available to us, those contained in government publications and relating to the average pay of all non-operating railway employees. The figures given us as to pay in certain occupations within the Brotherhood are not helpful because, as we have said and repeat, we are not allowed, by the terms in which this problem is presented to us, to discriminate between classes, but are confronted with the necessity of granting or denying to the whole membership of the Brotherhood the same measure of relief. If the unions and groups within the Brotherhood wanted to present separate demands based on individual necessities they could have done so, but they have elected to make a mass demand and must accept the consequences.

Taking, therefore, the average figures cited for all non-operating railway employees for October, 1949, we find that average weekly take home pay was \$48.13, slightly below the Toronto Welfare Council minimum. However, if we proceed to examine the latest figures on weekly earnings in "Man Hours and Hourly Earnings" for Canada, we find that, at December 1, 1949, out of 71 industries and groups of industries listed there are only 7 industries which conform to the Toronto standard, and none which conform to the higher standard asked for by the union, \$52.50. We find that the average weekly wage in manufacturing was \$41.47, in durable goods manufacturing \$45.18 and in non-durable goods manufacturing \$37.80. We find that the average weekly pay of non-operating rail employees, \$48.13, is well above the Canadian average.

It therefore seems to us that the criticism implicit in the Toronto Welfare Council argument is not a criticism of the railway wage scale, but a criticism of the whole Canadian wage structure, perhaps of the whole Canadian economy. We are not here to deal with such large matters. We are here to make recommendations to insure that the members of the Brotherhood are paid fair wages, in terms of comparison with other Canadian wages, and in terms of the Canadian economy as it exists.

The other obvious criticism to be made of the standard presented us is one which the Brotherhoods, very fairly, concede in their argument; that the wage which will maintain a family of 5 in the large city of Toronto is not necessarily the standard to be paid all classes of employees, married or single, in all parts of the Dominion.

We must hold that the Brotherhoods have not made out a case for granting to their members concessions which are not to be granted to other non-operating railway employees.

It follows that we must consider the Brotherhoods' proposals from the viewpoint that any concessions granted to them will have to be granted to other non-operating railway employees. It also follows that the figures, the averages which we must use in our discussion must be the only ones available to us, those relating to all non-operating railway employees. Further it is inevitable that much of our subsequent discussion must relate to the position of non-operating railway employees as a whole, and to the effect of granting to them, as a whole, the benefits asked for by the Brotherhoods.

It should also be clear that, whatever special treatment the Brotherhoods may have expected as to wage rates, they could not reasonably expect special treatment as to hours of work, and that any changes in hours of work must be extended to other non-operating employees, and must, therefore, be discussed as though they were to be applied to all non-operating employees.

Although the employees' demands for an increase of 10 cents per hour in pay, and for the 5-day 40-hour week are presented separately, we find it impossible to deal with them separately. To do so would be to ignore the cost of the 5-day 40-hour week. The two proposals, and their implications, must be considered together.

The effect, in terms of wage rates, of granting these requests depends on the wage level that has been achieved at the time they are granted. If the wage level is low, the proposals can be implemented without throwing the general Canadian wage structure out of balance; if, on the other hand, the wage level, expressed in terms of hourly earnings, is a fair one, the effect must be otherwise.

This can best be illustrated by comparing the present situation in Canada with that which existed in the United States in the Fall of 1948, when a Presidential Emergency Board, to which the Brotherhoods have referred in their brief, recommended for United States non-operating railway employees an immediate increase in pay of 7 cents per hour for all employees and, at a later date, the institution of a five-day forty-hour week with pay for 48 hours per week.

Before this recommendation was brought into effect, the rates of hourly earnings of United States non-operating railway

employees were demonstrably out of line with those of workers in other industries which the Presidential Board thought comparable. Without going into detail, it can be said that in October, 1948 those railway employees worked an average of 49.1 hours per week for take home pay of about \$60 (\$1.21 per hour). At the same date workers in durable goods manufacturing, and in another group of industries which the Presidential Board selected as comparable, worked an average of 40 hours per week for the same take home pay of about \$60 per week (\$1.45 to \$1.50 per hour). Admitting the comparability of the industries, it was obvious that the railwaymen suffered an inequity. The Presidential Board rectified this inequity by first raising wages 7 cents per hour, and by recommending a 40-hour work week with the same take home pay to take effect 9 months later.

When these things had been done, the hours of work and the hourly earnings of railworkers were about on a par with those of the two groups selected for comparison. Thus the 40-hour week had been achieved for railworkers without any dislocation of the general wage structure of the United States.

Such a result cannot be achieved in Canada. In October, 1949, the average weekly earnings of non-operating railworkers in Canada were \$48.13 for an average work week of 46.9 hours, being at the rate of \$1.026 per hour. The Brotherhoods ask for 10 cents additional pay per hour and a 20 per cent increase with the institution of a 40-hour week. The effect on the earnings of the average railwayman, of granting both proposals, would be as follows:—

Average hourly earnings increased  
by 10 cents per hour  
 $\$1.026 \text{ and } .10 = \$1.126$

Average hourly earnings further  
increased by 20 per cent  
 $\$1.126 \text{ and } .2052 = \$1.3312$

Average weekly earnings would be  
 $\$53.25$

After the change, if it were granted on the terms asked for by the Brotherhoods, the average railwayman would work about 7 hours less per week and earn \$5.12 more per week. He would also have gained, in one stroke, an increase in his hourly earnings to 31 cents per hour or 29 per cent over his former earnings; surely one of the most drastic general wage rate increases in Canadian labour history.

The wages paid and hours worked in durable manufacturing were used as a basis

of comparison in the United States. Figures on wages paid and hours worked in durable manufacturing in Canada at December 1, 1949, were as follows:—

Average weekly earnings....\$46.66

Average hours worked..... 43

Average hourly earnings...\$1.085

The durable goods worker had, at December 1, 1949, an advantage of 5.9 cents per hour in earnings over the railworker. If the proposals of the Brotherhoods were granted he would not only lose this advantage, but find himself earning 25 cents less per hour than the railworker. His take home pay, for a 43-hour week, would be \$46.66 while that of a railwayman, for a 40-hour week, would be \$53.25.

The durable goods group earns more than the average Canadian factory worker, whose earnings at December 1, 1949, averaged 99.9 cents per hour. If the demands of the railworkers are acceded to, the gap between the pay of the railworker and the average factory employee will increase from 2.7 cents per hour to 33.2 cents per hour.

The variety of occupations in which non-operating railworkers are engaged is such that comparisons are difficult. However, such comparisons as are made should be with large groups, such as durable goods workers, which may also be expected to comprise a diversity of occupations and to include, as does the non-operating rail group, skilled and unskilled workers. Comparisons with individual industries are of less value. Nevertheless, in order to point out the sweeping nature of the proposals made by the rail unions, it is interesting to compare the average hourly earnings for which they ask, \$1.331, with the average hourly earnings reported on page 7 of *Man Hours and Hourly Earnings* at December 1, 1949, published by the Dominion Bureau of Statistics. It will be observed that compliance with the railworkers' requests would give them an hourly wage rate not only substantially higher than that of any group there listed, but higher than that of any individual industry there listed with the sole exception of coal mining. Such a result cannot be a proper one. No evidence was adduced before us to show that railwaymen are entitled to so great an advantage over other Canadian workers.

[See Paragraphs 26 to 38 inclusive of the majority report in the dispute affecting the 12 standard international labour organizations.]

The railways, in their argument, cited figures to show that the rate of increase in rail wages since 1945 had been greater

than that in manufacturing. The Brotherhoods reply that it is unfair to take 1945 as the standard year, and show that quite a different result can be obtained by going back to 1939.

We do not attribute much weight either to the argument or to the rebuttal if they are to be interpreted as maintaining that it is sound to pick out any one year, and to argue that all wages should retain the same relative position that they had in that year; and that any advantage or disadvantage railworkers had in either of those years should be perpetuated.

This Board does not think that the industry of this country is so static that it is possible to select any one year, be it 1939 or 1945 or another year, and hold that there was established in that year a grading of labour values which must stand forever. It appears to the Board that, in a free society, relative wage standards of labour in different fields must change over periods of time. For instance, the loss in position which rail labour has sustained since 1939 may be due to several factors. A most important one is the increasing organization of labour in other industry which has taken place since 1939. In 1939 and for many years before, rail labour was fully organized and had reaped the benefits of organization and of capable union management in a relatively high wage scale. This was not true to anything like the same extent of other elements of Canadian labour. Unionization of employees has since proceeded at a great pace and resulted in the rectification of inequities and the raising of wages.

Another factor which may, in a lesser degree, account for the disparity in the rate of increase is the maturity attained by Canadian manufacturing during and since the war. This has resulted in an increase in the proportion of skilled workers employed and a corresponding increase in rates of pay in manufacturing.

A third factor which has probably contributed to this result is the practice, during the war, of extending flat wage increases, based on rises in the cost of living, to Canadian workers. The effect of such across-the-board increases, as between different industrial groups, must be to benefit the lower paid groups by a larger percentage than the higher paid groups, such as railworkers.

Similarly, the greater proportionate gains made by rail labour between 1945 and 1948 do not, by themselves, prove anything. It may be, as argued by the Brotherhoods, that they represented benefits which should have been received earlier, but the conferring of which had been deferred.

## Ability to Pay

[See Paragraphs 44 to 47 inclusive of the other majority report.]

### The cost of the 5-day 40-hour week.

There is a wide range of difference of opinion as to the cost to the railways of introducing the 5-day 40-hour week and the general wage increases proposed.

[See paragraphs 49 to 51 and 53 to 56 inclusive of the other majority report.]

### The United States comparison

It must at once be conceded that, as argued by the unions, the 40-hour week is the most usual standard in the United States. The Fair Labour Standards Act of 1938 made it a legal requirement in many industries, and, it has been voluntarily adopted in many others, including the United States railroad industry.

In Canada the only legislation comparable to the Fair Labour Standards Act are British Columbia and Saskatchewan statutes which impose a 44-hour work week in industry in those provinces.

It is also indisputable that rail wages in the United States are substantially higher than they are in Canada.

Because the 5-day 40-hour week has been adopted for non-operating railway employees in the United States, it does not follow that it should be adopted in Canada.

In making this statement the Board must reiterate its opinion that the demand for a 5-day 40-hour week with maintenance of present take home pay, is not merely a demand for a shorter work week, but is, since it necessitates higher rates of pay, a demand for higher pay. The Board is well aware that the Brotherhoods do not, as do the International unions, rely, in their argument upon comparisons of Canadian rates of pay for railworkers with American rates of pay for railworkers. But the Brotherhoods do advance the adoption of the 5-day 40-hour week in the United States as a reason for its adoption in Canada. Therefore all the implications of its adoption in Canada, one of which is higher wage rates, must be considered in the light of its adoption in the United States, and in the light of the American wage scale. Therefore the discussion which follows will deal with American wage scales, as well as with American working conditions.

Considering the numerous able opinions that have been written in the past on this subject, this Board does not feel it necessary to expound at length its reasons for rejecting the theory that rail wages and

working conditions in Canada must keep pace with rail wages and working conditions in the United States. In general we are content to adopt the reasoning of the conciliation board headed by Mr. Justice Cameron which in 1948 rejected this same contention. It is abundantly clear that wages of all workers, not only of railroad employees but of all classes of wage-earners, are higher in the United States than they are in Canada. The same is true of the salaries and earnings of executives and professional men in the two countries. The fact is that the United States possesses a richer and more mature economy than Canada and that, presently at any rate, our production is not such as to afford us so high a standard of living as there is in the United States. Under present conditions sensible Canadians will, as they must, accept the fact that the earnings of the average Canadian are less than those of the average resident of the United States, and that the more abundant economy of the United States may permit better working conditions.

We can appreciate that the interconnection of Canadian and United States railways, the similarity of the work, the payment of United States scale wages to employees on United States owned railroads in Canada, and the payment of United States scale wages to employees on Canadian owned railroads in the United States—all these things must bring the wage disparity in wages and hours of work home to Canadian railworkers. But Canadian railworkers cannot expect preferential treatment. They must accept the same standards as do other Canadian citizens. A factory employee in Windsor has to accept the fact that his counterpart across the river in Detroit earns higher wages. The same difference runs through all levels of society. We can see no reason why railworkers should be selected as the one class in the Canadian social structure for whom this condition is to be changed, by raising their wages and working conditions to the United States level. When the per capita wealth and productivity of Canada rise to the levels attained in the United States, railworkers will doubtless receive their due share of the new national income. Until that occurs, they must, like the rest of us, accept their due share of the present national income.

### Australia and New Zealand

It is true that railworkers in Australia and New Zealand all have the 5-day 40-hour week. But without some information as to their earnings this bare fact does not provide us with much guidance. It might

well be that, given a chance, Canadian railworkers would prefer Canadian working hours with Canadian pay to Australian working hours with Australian pay. It does not appear that the 40-hour week is in effect on British railways.

[See Paragraph 66 of the majority report in the dispute affecting the 12 standard international labour organizations.]

### **Social aspects of the 5-day 40-hour week**

[See Paragraphs 67 and 68 of the majority report in the dispute affecting the 12 standard international labour organizations.]

### **The Canadian work week**

[See Paragraphs 69 to 71 inclusive of the majority report in the dispute affecting the 12 standard international labour organizations.]

### **Recommendations**

The inherent nature of the railroad industry makes the institution of a shortened work week more difficult and expensive than it is in most other industries. Railroad service must generally be carried on 7 days per week. Trains do not cease to move over the weekend, and large numbers of men must work over the weekend to keep them moving and to perform the ancillary services necessary to their movement. A factory can be closed for two days with no loss other than the loss in the investment for those two days. A railway cannot be closed down for two days or for any period. The staggering of work hours, while useful, cannot overcome this difficulty and a shortened work week must, if service is to be maintained at present levels, result in a great additional cost to the railways.

Nevertheless this Board recognizes that the existing hours of work for railworkers are out of line with those generally prevailing in Canadian industry, and that the difficulty of instituting a shorter work week must not be allowed to result in an indefinite prolongation of this condition.

The Board thinks that a fair solution of the problem before it is the institution, on the plan hereinafter set forth, of a forty-four hour work week on Canadian railways for non-operating employees, except: (a) sleeping and dining car employees and express messengers, whose working hours should so far as practical, receive comparable adjustment; (b) those hotel employees who are included in the terms of reference to this Board; (c) those engaged in water transport.

In introducing a 44-hour week, service to the public should be maintained and the increased cost should be distributed as equitably as possible.

In order to explain the solution upon which the Board has decided, it is necessary to deal, in a general way, with present hours of work for various classes of railworkers.

There are many salaried or monthly-rated employees, most of them in office employment. With few exceptions, these workers are classified as working 8 hours per day for 6 days a week. Those are their contractual hours of work. But in practice a considerable percentage of them, with the consent of their employers, work shorter hours. One singular result of the continuance of this unreal classification has been that these workers have received, when across-the-board wage increases were granted, increased payment for hours in which they did no work. Thus, for instance, a clerk whose contractual hours of work are 48 but whose actual hours of work are 44 and who has, like all railworkers, received across-the-board increases totalling 43 cents per hour since 1939 is now being paid this increase for 4 hours in which he does no work, a sum of \$1.72 per week, or \$89.44 per year.

In general it can be said that monthly-rated workers, whether or not they do in practice work 48 hours, are classified as working 48 hours per week. The majority of them still work 48 hours per week.

The group of workers which most greatly complicates the wage-hours pattern is that which mans the workshops where locomotives and rolling stock are cared for. These shop workers are generally paid hourly wages and number amongst them skilled mechanics, their helpers, apprentices, labourers, and some clerical staff. They are divided into two classes. One class, some 25,000 in number, are generally known as the running shop workers and work 48 hours per week. The other class, the backshop workers, numbering 20,000, work 44 hours per week. The hourly rates of pay of both classes, and of the numerous grades within each class, are the same. Since the running shop workers work 48 hours, as against 44 hours for the backshop workers, their take home pay is greater. If the running shop workers were granted a 44-hour week, with 48 hours' pay, both their hourly rate of pay, and their weekly take home pay would exceed that of the backshop workers, who do exactly the same type of work, and whose hours of work would then be the same. This result must be avoided.

A third group of workers does not fit precisely into the classification of monthly paid employees or into that of hourly paid employees. It comprises sleeping and dining car employees and express messengers. While an attempt must be made to apply to this group the same general treatment recommended for other employees, their unique conditions demand and will receive, later in this report, separate consideration.

With the exceptions already mentioned it can be said that railworkers, generally speaking, work and are paid for 48 hours per week.

Statistically the average work week of railworkers for October, 1949 was 46.9 hours (including overtime). In point of fact this figure is larger than it should be because, as already explained, certain monthly-rated employees, who work less than 48 hours per week, are classified as working 48 hours. If they were classified according to the hours they actually work the average work week would be less and, incidentally, the average earning per hour would be greater than \$1.026, the figure used in these calculations.

The main reason why the average work week (46.9) is less than 48 hours is the fact that the backshop workers work only 44 hours.

In trying to work out an equitable method of instituting a 44-hour work week we must have in mind, among other objects, these two things:—

1. To avoid, so far as we can fairly do so, any substantial reduction in take home pay.
2. To minimize, so far as we can fairly do so, the cost to the railways, and to see that, in any event, the rail wage bill for a 44-hour week is not greater than that now paid for the present work week.

Dealing first with this latter proposition, it might seem that this is an unnecessary precaution; that the change over to 44 hours with the same take home pay cannot result in an increase in the wage bill, apart, of course from the general cost increase inevitably associated with a shorter work week. But this is to ignore the adjustment which must be made in the pay of the backshop workers. If other shop mechanics now working 48 hours, are to be given a 44-hour week with the same take home pay, their hourly rate of pay will rise from \$1.22 to \$1.33. But the backshop workers, doing the same work, could not be left earning \$1.22 per hour; their rate too would have to be raised to \$1.33,

although there would have been no change in their work hours. Therefore the railways, after the change over, would not merely be paying to persons who had formerly worked 48 hours per week 48 hours' pay for 44 hours' work, they would, in addition, be paying to 20,000 of their employees, whose hours of work were unchanged, a straight wage increase. This increase in the case of mechanics would be 11 cents per hour, \$4.84 per man per week. Therefore the weekly wage bill would not remain the same, but would increase, and this apart altogether from the general cost of reducing the work week.

The terms on which this problem is presented to us prevent us from arriving at different solutions for different classes of employees or for different unions. We must find a formula which is capable of general application.

The average take home pay of railworkers for October, 1949 (the last figure available) was \$48.13 per week. The average hours were 46.9 and the average hourly earnings were \$1.026. All these figures presumably include overtime, but that fact does not seriously affect their usefulness for present purposes.

If the average railworker is to receive the same average take home pay for a 44-hour week as he received in October for an average week of 46.9 hours his new rate of pay will be as follows:—

$$48.13 \div 44 = 109.4 \text{ cents}$$

Increase per hour

$$109.4 - 102.6 = 6.8 \text{ cents}$$

Rate of increase

$$6.63\%$$

This figure of 6.63 per cent is, we think, the figure that must be used throughout. It is fair to the average employee. In its incidence it will apparently benefit the backshop men more than others. This cannot be helped. If the unions are, as we believe they are, sincere in their desire to help one another, and to act collectively, then a result which is fair collectively should be acceptable to them.

Some typical results of the application of this formula are as follows:—

- (a) Backshop worker now working 44 hours per week at \$1.22 per hour.

Present take home pay for 44 hours \$53.68.

New rate of pay per hour \$1.22 x 1.0663 = \$1.3009.

New take home pay for same hours 44 x \$1.3009 = \$57.24.

Gain in wages \$3.56 per week.

Hours unchanged.

- (b) Running shop worker now working 48 hours per week at \$1.22 per hour.  
 Present take home pay for 48 hours  $48 \times 1.22 = \$58.56$ .  
 New rate of pay per hour  $1.22 \times 1.0663 = \$1.3009$ .  
 New take home pay for 44 hours  $44 \times 1.3009 = \$57.24$ .  
 Loss in wages \$1.32 per week (about 1 hour's pay).  
 Gain 4 hours less work.

- (c) Clerk, annual salary \$2,448.  
 Present hours per year (after allowing for Sundays and Holidays) 2,448 hours.

Present hourly rate \$1 per hour.  
 Present weekly take home pay  
 $1.00 \times 2,448$   

---

 52  
 = \$47.08.

New hourly rate of pay  $1.00 \times 1.0663 = \$1.0663$ .

New hours per year (44-hour week) 2,240 hours.

New weekly take home pay  
 $1.0663 \times 2,240$   

---

 52  
 = \$45.94.

Loss per week \$1.14.

The application of this formula should result in leaving the total amount to be paid by the railways to all the employees for the 44-hour week, the same as the total amount which they were previously paid for the present work week.

The benefits to the employees are:—

1. A shortened work week for the great majority;
2. A raise in take home pay for backshop workers;
3. Higher hourly rates which will result in higher overtime rates.

The loss to the railways is:—

1. The cost of providing necessary services and labour, at the new increased rate of pay, during 4 hours of each week.
2. A new and higher overtime rate.

The Presidential Emergency Board, already referred to, selected durable goods manufacturing as an industry comparable for wage fixing purposes to the railroad industry. We have obtained from the publication Man Hours and Hourly Earnings the figures applicable to this industry in Canada at December 1, 1949, and we give them below, with comparative figures which will apply in the railroad industry if the formula we suggest is adopted.

	Durable Rail- goods ways	
Hourly earnings.....	108.5	109.4
Hours of work.....	43	44
Weekly take home pay.	46.66	48.13

It will be seen that the result is to give the railworker an advantage in rate of pay

and weekly earnings over the worker in the durable goods industry, with a work week one hour longer.

Similar comparisons with any large group listed at page 7 of the publication Man Hours and Hourly Earnings, will show that if this formula is applied the railworker will have a favourable position in the Canadian labour picture.

There was some argument to the effect that an increase in wage scales was justified by the increase in the cost of living since 1948, when the last wage increase of 17 cents per hour was granted. The Board does not concede the validity of this argument because it does not know what relation the present wage bears to the cost of living, or what effect the cost of living had in producing the last wage increase. However, if there is any validity in this argument the increase in the rate of wages recommended by this Board is sufficient to care for any rise which has occurred in the cost of living.

The recommendation of the Board is that the work week of non-operating employees represented before the Board, except dining and sleeping car employees and express messengers for whom separate recommendations are later made and hotel and water transport employees, be reduced to 44 hours and that the said non-operating employees, with the same exceptions, be paid for those 44 hours at the rate of 106.63 per cent of their present hourly rates of pay.

If the new work week with the new wage rates is acceptable to both parties, it will of course be necessary that there be negotiations between the parties as to the way in which the formula is to be applied generally, and subsequently some 34 individual agreements will require adjustments accordingly. During these negotiations the proposals of the railways hereinafter set forth as to changes in a number of the agreements should also be considered by the parties. All these negotiations will of course take some time. After they have been completed the various railway officials across Canada must be instructed as to the agreed methods of applying the shorter work week; and in due course there will probably be required a preparation of detailed work schedules, for all railway employees concerned, in light of local requirements, with such variations in procedure as may be considered fair between the railways and the employees' local representatives. In addition to this the railways will require to line up such relief staffs as may be necessary and familiarize them with the work to be performed.

Accordingly the Board suggests the 1st day of August, 1950, as the effective date of the new work week.

In general the 44-hour work week should allow an employee  $1\frac{1}{2}$  days continuous holiday in each week, preferably on Saturday afternoon and Sunday. Where, however, working conditions render this difficult, it might be arranged for an employee to work 11 days each two weeks, or to average days of work over a longer period. All these are matters to be considered when the parties meet for the purpose of making the changes in their agreements which will be necessary if the recommendations in this report are to be adopted.

It is the Board's conviction that the interests of the public demand that this reduction in weekly hours of work be made in such a way as to create the smallest burden possible on railway expenses while maintaining reasonable service to the public. To this end the parties should agree on necessary modifications of existing rules to keep the cost of replacements at a minimum and to enable existing positions to be filled where possible on a five and a half day basis without replacement.

### **Cost to the Railways of the 44-Hour Week**

It is impossible, of course, to estimate exactly the cost to the railways of the 44-hour week. Time alone will prove this. But, if it is assumed that, after the institution of the 44-hour week, the same total of man-hours must be worked in each year as are now worked, a rough calculation can be made.

The present average work week is 46.9 hours. The new work week is to be 44 hours, 2.9 hours less. The new average rate of pay recommended is \$1.094 per hour. The total number of employees represented before both Boards, according to railways exhibit No. 1, is 116,530. The cost formula for the year is therefore as follows, on the assumption made above:—

$$\$1.094 \times 2.9 \times 116,530 \times 52$$

$$\text{The result is } \$19,224,560.06$$

This is, as we have said, a rough estimate. It ignores economies which may be effected to lower the total number of man-hours required. It also ignores the fact that the introduction of a 44-hour work week may necessitate the payment of a much larger percentage of overtime pay. These two factors may balance off, to some extent. At any rate, on the basis of the evidence before us, which related to the cost of a 40-hour week, and not to that of a 44-hour week, this is the nearest estimate we can reach.

### **Dining and Sleeping Car Employees**

Dining car employees include stewards, waiters, cooks and dishwashers. The sleeping car employees include sleeping car conductors and porters. The basis of employment of these men is different than that of other classes of rail workers by reason of the requirements of the service in which they are engaged. They are paid for 240 hours of work per month and can be required to work 240 hours per month. In point of fact, most of them work less and we are informed that the average hours on duty are about 225 per month. The nature of their work is such that they must be on duty continuously for considerable periods en route but the hours of duty include periods of relaxation and rest when they are not required to give service to the travelling public and time consumed in taking meals which are not deducted. Those of them who are required to be absent from home for long continuous periods during the month are generally granted compensating periods of rest at home during the month.

The application of the general formula we have recommended for other railworkers to these two classes is not easy. We think the fair thing to do is to reduce the guaranteed and required monthly hours of these employees to 224 hours per month. They should be paid for these 224 hours per month at the rate of 106.63 per cent of their present hourly earnings.

Considering the impossibility in many cases of reducing hours in these trades to the 224 hours per month standard, we think that penalty overtime should be payable, as at present, for hours in excess of 490 in a two-month period, with the new standard rate for the hours in excess of 448 and not greater than 490. This recommendation follows the general lines of that made in respect of dining car employees by the Presidential Emergency Board in the report already referred to except that there the reduction in standard work hours was greater.

### **Express Messengers**

The rate of remuneration of these employees is not a simple matter of monthly or hourly wage rates, but is related to mileage on a basis which differs in the two main companies. We have not the information before us to enable us to decide what adjustments should be made in their wages or conditions of employment in order to give them, so far as practical, the same general treatment recommended for other employees. We therefore recommend that the matter of their hours of

work and rate of pay be the subject of negotiations between the parties with a view to giving them, so far as practical, the same general advantages on the same general terms recommended for other employees.

### **The Railways' Proposal as to Changes in Agreements**

When the Brotherhoods made to the railways the requests for changes in agreements which have been hereinbefore set forth, the railways replied suggesting a large number of individual changes in their agreements with the Brotherhoods before this Board. The more important proposals were summarized under the following heads, namely:—

1. Modification of certain rules restricting the railways in the selection of men for supervisory grades.
2. Modification of rules restricting the railway in the most efficient assignment of the work to be performed and in adjusting staff to meet changes in traffic.
3. Reduction in penalty payments representing compensation for time not actually worked.
4. Modification of road detention or overtime rules for Express Department road service employees.
5. Introduction or expansion of scale of probationary rates and period of time for new employees.

One of the reasons given by the railways for their proposals was "the excessive rise in wage levels as compared with revenue earning capacity", and they pointed out that this was clearly "a situation where management must explore every avenue to place its operations on the most efficient basis possible and where impediments to efficiency resulting from burdensome penalty provisions that previously might be tolerated must now be eliminated".

The railways gave to the Brotherhoods a detailed list of the various changes which they suggested should be made in the agreements. These proposals of the railways have never been discussed between the parties, and the railway companies have not urged that this Board should adjudicate on the merits of the individual questions raised by them.

These proposed changes are properly a matter for collective bargaining, and given a desire on both sides to reach a reasonable and fair solution, such solution should not prove too difficult. However, the railways have urged that if they are faced with a

settlement between the parties which involves a shorter work week, the negotiation in good faith of the railways' proposals should form part of any final settlement of the matter. The Board feels that the public interest demands that the railways and their employees should consider most seriously such modifications of the agreements as, without working a hardship on the employees, will contribute to increased efficiency or eliminate expense not necessary or justified. If, therefore, the parties to the dispute accept the proposition of the Board in regard to a forty-four hour week, during the negotiations for the alteration of the respective agreements in that respect, the Board feels that the proposals of the railways as to changes in the agreements should also be considered.

If, on the other hand, the parties do not come to any agreement in regard to the shorter work week, then these proposals of the railways should be considered in due course on the merits by all the parties to the agreements.

### **The Hotels**

As the result of a direction from the Minister of Labour, based on a recent decision of the judicial committee of the Privy Council, the Board was instructed to deal with the wages and hours of work of employees in Canadian National Railways' hotels, but not with those of employees in Canadian Pacific Railway hotels. In the result wages and working conditions of workers in Canadian National hotels are under Dominion jurisdiction, while in the Canadian Pacific hotels they come under the jurisdiction of the various provinces in which they are located. The result, while it may be legally unavoidable, is, because of the similarity of the hotels and of the problems involved, and the identity of the unions concerned, an awkward one.

The Canadian National Railways argue that, although the wages and working conditions of hotel employees are referred to us for consideration, along with the wages and working conditions of their other employees, they should be considered separately, and that a separate ruling should be made in respect of them.

We think this is right. Hotel work has no connection with or comparability with railway work. The wages and working conditions of railway hotel employees are properly comparable with those of other hotel employees. The fact that a railway company, rather than another company, owns a hotel does not change its character or the nature of the various classes

of work performed in it. To classify hotel employees as railworkers is entirely artificial. They have nothing to do with the operation of a railway.

We proceed on this basis to make a separate recommendation as to hotel

employees. Statistics furnished us by the Department of Labour show an impressive disparity between the wages paid certain employees in railway hotels and those paid in other hotels selected by the Department as comparable. The figures are as follows:—

TABLE 18

Average Monthly Wage Rates (Including Value of Meals), for Selected Occupations in Railway Hotels as Compared with Other Hotels, Eastern and Western, 1947 and 1948

	Average wage rates per month <sup>1</sup>			
	Railway hotels		Other hotels <sup>4</sup>	
	1947	1948	1947	1948
	\$	\$	\$	\$
Dining room waitresses.....				
Eastern <sup>2</sup> .....	99.53		76.73	
		134.05		90.89
Western <sup>3</sup> .....	105.26			
		140.59		
Cooks				
Eastern .....	172.67		183.66	
		206.69		202.33
Western .....	179.21			
		204.23		
Room clerks				
Eastern .....	193.63		153.30	
		226.69		169.10
Western .....	179.26			
		219.57		
Chambermaids				
Eastern .....	101.74		87.36	
		136.92		102.06
Western .....	104.32			
		139.53		

<sup>1</sup> Since wage reports for individual firms received by the Department of Labour were treated confidentially, rates for individual cities with only one railway hotel cannot be given separately. Rates are averaged, therefore, over the two areas using 1948 employment figures for reporting hotels as weights except for Calgary, where 1947 figures are used as weights for Dining Room Waitresses and Cooks.

<sup>2</sup> Eastern Area for Railway Hotels includes Halifax, Quebec, Toronto and Ottawa.

<sup>3</sup> Western Area for Railway Hotels includes Winnipeg, Regina, Edmonton, Calgary and Vancouver.

<sup>4</sup> "Other Hotels" used here for comparisons include one hotel (selected to provide as close comparability as possible, under the circumstances, with railway hotels) from each of the following cities: Sydney, St. John, Quebec, Ottawa (for room clerks and chambermaids only), Toronto, London and Niagara Falls. No Western Hotels were thought to be at all comparable.

The correctness of these figures is not disputed, but their relevancy is attacked by the Brotherhoods on two general grounds:—

1. That the general standard of railway hotels is so high that there are no comparable hotels.

2. That, if there are comparable hotels, the footnotes to the table quoted show that comparable hotels were not selected for comparison.

It is quite true that in many Canadian cities the railway hotels are in a class of their own, and that other hotels are not on

the same level. The footnotes to the table show that this has been recognized, and that an honest attempt has been made to accomplish fair comparisons. Furthermore, if the differences in rates of pay were discounted by as much as one-third, they would still be formidable.

Other undisputed figures submitted by the railways show that the average rate of pay per hour in CNR hotels in December, 1949 was 75.7 cents while that in other Canadian hotels was 58.7, a difference of 30 per cent. These figures do not include the value of meals and rooms furnished to certain classes of employees—nor do they include the not inconsiderable sums which, by a tacit agreement between hotels and their employees, are exacted from the public in the form of tips. These so-called gratuities are, as any experienced traveller knows, not a reward for special service, but a requisite if one is to obtain normal service. In the case of certain classes of hotel employees, such as bellboys, waiters, porters, bartenders and check room attendants, these gratuities must be a very important item of income. If it were not for the existence of these factors the average wage rates quoted above would both appear to be low.

We have also been supplied by the CNR with tables showing specific rates of pay of employees in two CNR hotels, the Nova Scotian in Halifax, and the McDonald in Edmonton. These wage scales appear to us to be generous for the classes of work described.

The Brotherhoods admit that the wages paid in railway hotels are higher than those paid in other hotels, but say that this difference is justified by the higher degree of competency required in railway hotels, which maintain superior standards of service.

The Board agrees that the railway hotels are of a quality above the Canadian average, and that this fact, while it will not require that railway hotel employees work harder than those in similar positions in other hotels, will probably require a higher degree of competency. But it appears to this Board that a wage differential of 30 per cent is more than an adequate compensation for higher competency in the classes of work involved.

Furthermore the evidence shows that even in hotels selected by the Department of Labour as comparable to railway hotels the wages are much lower.

There is no evidence before us that the 40-hour week is in effect in any hotel in Canada.

Our recommendation in regard to CNR hotel employees is that their claim to a 10 cent per hour pay increase and to a 5-day 40-hour week be rejected. Further we consider that the level of wages in CNR hotels is so high that, if a 44-hour work week is to be introduced, the pay of the employees should be reduced accordingly. That is to say, their hourly rates of pay should be maintained, but their take home pay should be reduced by an amount representing 4 hours' pay, if they had previously worked 48 hours, or a proportionately lesser sum, if they had previously worked less than 48 hours and more than 44.

## **Water Transportation Employees**

We agree with the railways in their contention that the wages and working conditions of this small group have no relation to the general railway picture and ought to be considered separately, with reference to wages and working conditions of other seafaring personnel, rather than with reference to railway labour conditions.

We have heard no evidence, either from the Brotherhoods or from the railways as to wages and hours of work of other ship personnel, or as to the conditions, that is the length of voyages, etc., that affect their employment.

We understand that the water transportation employees represented by these Brotherhoods constitute only a small fraction of total crews employed by the railway companies, the great majority of the crews belonging to other unions.

In the circumstances, we do not feel that we have any evidence before us to justify our making a recommendation in regard to wages and hours of work of water transport employees.

## **The Check-off**

The Board does not want to appear too summary in its rejection of the proposal that the company deduct from the wage of each employee whose terms of employment are covered by a Brotherhood agreement the amount of union dues charged by the Brotherhood against each member, whether the said employee is or is not a member of the Brotherhood.

The Board's decision is not based on the general arguments advanced by the company against the check-off, as such, but solely on the circumstances in this case. There are three large union groups covering railway employees. None of these groups has, or ever has had a closed shop, union shop, check-off or any other type of restrictive agreement with the companies. Under

those conditions the three union groups have thriven and cared well for their members. There is nothing to suggest that a check-off or any other form of compulsion is necessary to the continued health of these labour organizations. There is between the Canadian Brotherhoods and another group a healthy competition which must, we think, result in general benefit to the employees, and which would be affected by granting a check-off to one group and not to the other. We can see no need for the check-off and do not recommend it.

## General

It is our firm opinion that the recommendations herein contained embody the utmost in the way of concessions which the railways ought to be required to grant at this time.

The Board has some concluding observations to make arising out of the nature of the proceedings which it conducted.

There was no collective bargaining in the true sense of that phrase. There was a great deal of very effective argument, a thorough and careful marshalling of facts. But the parties remained protagonists and never assumed the role of negotiators. There was an obvious reluctance on both sides to concede any point for the purpose of arriving at a settlement. No middle ground was even discussed before the Board. The Board was treated as a forum and did not succeed in performing its function of conciliation.

For this failure the Board may bear some responsibility, but it may be that the chief fault is inherent in the very nature of the task.

The negotiation between a national group of unions and a national group of railways of mass demands, such as were made here, presents a conciliation board with a very formidable problem.

There are some 34 separate labour contracts between the Brotherhoods here represented and the railways. Each contract is a code covering the wages and working conditions of a group of workers, and of grades within that group. It would be impossible to cover all relations between the railways and these groups of non-operating employees by one contract and yet, when revision is sought of contractual relations, the problem is approached as though there were only one contract.

In the result there is no real collective bargaining. In the present case the justice of the Brotherhoods' demands in relation to separate classes of workers was never studied. It may be that the deserts of some of them were greater than others;

that for instance, some groups deserved a substantial wage increase while others deserved none. It may well be that the onerous and unpleasant nature of the labour of some groups gave them a much better claim to a shorter work week than had other groups. It may be that the application of the shorter work week is economically practicable for some groups, but not immediately so for other groups, who might, however, be given other compensating advantages. None of these things was the subject of negotiation or discussion. They were not negotiated or discussed because the terms of the general demand required a general solution, not a series of particular solutions applicable to the particular problems involved.

Again, collective bargaining should involve a complete review of all the contractual relationships, with all terms open to discussion and revision, so that there can be that elasticity, that give and take which is necessary to any kind of bargaining; the granting of a point in return for one gained. The negotiation of mass demands of this nature precludes that sort of true bargaining.

The railways in this case ask for modification of a great many of the terms of many of the existing 34 contracts. Such changes ought, in fairness and in sense, to be discussed along with the union demands, which are also essentially proposals for the modification of these contracts. It is perfectly legitimate bargaining practice for the railways to ask acceptance by the unions of changes they propose in exchange for their acceptance of changes proposed by the unions. But this sort of negotiation cannot be conducted on the scale attempted here; it would take any two negotiating bodies, and one Conciliation Board a year or more to complete the task of reviewing 34 contracts. In the result, for reasons of expediency, the consideration of the railways' proposals is postponed and the only subject to be discussed is whether the Brotherhoods' demands are to be accepted, absolutely or in some modified form. There is no opportunity for the railways to ask for a *quid pro quo*, in the form of various alterations of the terms of the existing contracts. This is not true bilateral bargaining.

It is not suggested that this latter result is the product of any design on the part of the Brotherhoods. It is just one of the inevitable results of mass bargaining.

Since, by the terms in which the problem is presented, real negotiation and bargaining is made difficult, if not impossible, there is no elasticity to the field in which a

Conciliation Board can operate, and the proceedings tend to result, as here, in a stalemate.

This is not a new result where mass bargaining on a national scale is attempted. The same thing happened in the case of the last Conciliation Board appointed to consider rail problems. The same thing has happened repeatedly in the United States where bargaining on a nation-wide scale was attempted. The tendency, both here and in the United States, is to resolve by government action the stalemate created by the failure of the bargaining process.

These statements are not to be construed as a criticism of the organization of labour unions into large groups. This may well be an inevitable consequence of modern industrial trends. The Board has no criticism to make of anybody, and no solution to suggest. What the Board has tried to do is to present, as objectively as possible, some of the practical defects of mass bargaining.

Respectfully submitted.

(Sgd.) J. O. WILSON,  
*Chairman.*

(Sgd.) T. R. MEIGHEN,  
*Member.*

### Minority Report

Hon. HUMPHREY MITCHELL,  
Minister of Labour,  
Ottawa, Ontario.

DEAR SIR:

The particulars regarding the parties concerned in this dispute are fully set out in the majority report of the Chairman concurred in by the third member Mr. Theodore Meighen. I will therefore confine my report to the points on which I differ from the position taken by the majority.

The importance of the dispute and the far reaching effects of any settlement arrived at have been stressed by the Chairman in public and in private.

He has also taken the position from the beginning that the two cases, now in dispute, are fundamentally the same and that any settlement arrived at in one case would automatically apply to the other.

While not dissenting from this view the CBRE and OTW have consistently maintained that their case should be judged upon its merits, apart from any other disputes now pending. In this view I concur and I believe that the Chairman has allowed the conditions existing among some of the AFL groups to dominate the overall picture to the detriment of the CBRE and OTW.

The dispute arose out of three demands made by the unions upon the railway companies: (1) For an increase of ten cents per hour for all categories; (2) For a reduction in working hours, from 240 to 208 hours per month for monthly employees; and for a five-day, forty-hour week for hourly paid employees, with the same "take home" pay; and (3) For the "check-off" of union dues from all workers covered by these agreements.

The basis of the first demand was the inadequacy of the income of the lower paid classifications to maintain a family in health and decency. The support for this claim was a report of the Toronto Welfare Council made in 1949—A Guide to Family Spending in Toronto, which showed that an income of \$49 per week was necessary to maintain a family of five in health and decency, with no allowance for medical or dental care, or insurance.

Admittedly the incomes of many railway employees are less than this but the answer of the railways was that lots of workers in Toronto were not getting it and besides every family did not have five members.

The second demand, for a reduction in working hours, affects two groups: those working by the month, and those working by the hour or the day. The first group includes sleeping and dining car men, many of whom have trips lasting forty hours so that a return trip makes it necessary for them to be away from home for four or five days. These men have to put in 240 hours per month which is an average of eight hours for every day in the month. A reduction to 208 hours per month would mean an average of eight hours per day for 26 days, surely enough for this day and generation.

Among the hourly paid workers there is quite a wide diversity of hours. Many of the clerical staffs work less than forty-four hours per week but the work is spread over six days. Their demand is for a five-day week, which is now quite common for similar workers in all large centres.

The union maintains that in many cases the adoption of the five-day week for this group will not involve any increase in staff as the established groups can do the work in the shorter time due to increased efficiency.

Other groups in occupations which are necessarily carried on on six or seven days are also asking for the five-day week which would involve the use of relief men.

The attitude of the railways was that any and all of the demands of the unions were impossible. They would not admit that the hours of the monthly men were

at all excessive. They emphasized the difficulty of providing relief for some of the men who now work six days, and the additional cost which would result. The possibility of increased efficiency making up for shorter hours was not taken seriously and it was impossible to get them to discuss anything.

I recommend that the demands of the Union for the 208-hour month for road men be granted. For all others whose contractual hours are now 48 per week I recommend that it be reduced to 40 hours per week. In both cases with the same take-home pay.

The demand for a straight increase in pay is more difficult to deal with owing to the existence of long standing differentials. The evidence submitted by the union showed that increases in rates of pay of their members in many cases lagged behind the cost of living and that over a period from 1939 to 1949 their *real* wages several times decreased. It was also established that relative to other groups in the industrial world their economic position deteriorated. Or to put it another way: other industrial groups with comparable wage levels made greater progress, that is, received, or enjoyed greater increases in real wages than the union men did.

Admittedly some of their members have done well through the increases of pay over the last few years. There is not the same case for increasing their pay as there is for increasing the pay of those in the lower income classifications.

Since the indications are that the cost of living has reached the peak and can be expected to decline, the position of the men should improve in inverse proportion.

I therefore recommend that no general increase of pay be granted and that the parties be encouraged to negotiate regarding the lower paid classifications with a view to their improvement.

The case of the water transport employees has received special treatment by the railways. They maintain that conditions in water service are different from those on land and therefore those engaged in it should not be dealt with on the same basis.

It is hard to see the force of this argument where the water services mentioned bridge a gap in the rail lines and are an integral part of the transportation system.

The hours in many instances are long and the working conditions, as compared with other groups in the same service, are inferior.

I would recommend that the railways and the union be advised to negotiate further

with the object of making working conditions, that is, days off, holidays, etc. the same for all classifications among the crew.

The inclusion of hotel employees in the demand for increased wages and shorter working hours brought the rejoinder from the railways that the operation of hotels is a distinct and separate undertaking.

Whether this is true is probably a matter for debate but it does not preclude the right of the hotel employees to make a demand for more pay and shorter hours.

The evidence about wages paid in railway-owned, as compared with other hotels was inconclusive but it indicated that the employees in railway-owned hotels were as well off as others in similar occupations.

I therefore recommend that the working week be reduced to 44 hours with the same weekly "take home" pay.

The request of the union for the "check-off" of union dues was not seriously discussed on its merits. It is worth while recording that in the United States, under the Taft-Hartley Act, when a majority of the men vote in favour of the check-off the employer must grant it. It would be a great convenience to the union and they have offered to reimburse the railway companies for the cost of the service, so there does not seem to be any good reason why the request should be refused. The companies are doing this now for some unions but they refuse to do it for the CBRE and OTW.

I recommend that the request for the check-off be granted.

The companies' request for revision of working rules was manifestly a bargaining demand. I concur in the recommendation of the Chairman that the parties negotiate these matters directly.

In conclusion I wish to record my gratification at the good spirit existing between the parties and the courtesy marking the intercourse between them at the hearings.

This makes it the more regrettable that the railway companies refused to do anything more than to deny any and every request made by the unions. They refused to admit that there was anything to be said for any of the claims, or requests made by the employees, so that there was no chance for discussion of any of the points in dispute.

Respectfully submitted,

(Sgd.) JAS. A. COOTE,  
Member.

Dated at Montreal the 12th day of April, 1950.

# COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

## Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

### Manufacturing

#### Textiles and Clothing

WOODSTOCK, ONT.—FIRESTONE TEXTILES LIMITED AND UNITED TEXTILE WORKERS OF AMERICA, LOCAL 115.

Agreement to be in effect from February 2, 1950, to February 2, 1951, and thereafter from year to year, subject to notice. The company recognizes the union as the exclusive voluntary bargaining agency for all eligible employees. There shall be no discrimination, interference, intimidation, restraint or coercion because of membership or non-membership in the union.

*Check-off:* both parties agree to the continuance of the voluntary, irrevocable check-off of union dues.

*Hours:* 9-6 per day 5 days a week, a 48-hour week. *Overtime:* time and one-half for all work in excess of these hours and for work on Sundays; double time for work on 8 specified *paid holidays* (previous agreement provided for 6 paid holidays). If and when during the life of this agreement the company finds it possible to place all employees on a 45-hour basis the regular shift hours shall be 9 hours per day and 45 hours per week, with overtime at time and one-half for all hours worked in excess of these hours.

*Vacations with pay:* one week to employees having less than 5 years' seniority, two weeks to employees with 5 or more years' seniority, with pay equal to 2 per cent and 4 per cent respectively of employee's total earnings during preceding year.

*Hourly wage rates* are increased by 5 cents over the rates previously in effect. The following are the rates for certain classes: Carding department—picker man 89 and 98 cents, waste machine oiler (youth) 74 cents, card grinder fixer 96 cents, card stripper and tenders 91 cents; roving doffer, male 86 cents, female 74 cents; roving piler 86 cents, sweeper oiler (youth) 74 cents, machine fixers 91 cents to \$1; learners, male 73 cents, female and youth 60 cents. Spinning department—band man 89 cents, roving piler 74 and 86 cents. Spooling and warping department—warper tenders 75 cents, B.O. yarn man 89 cents, warper creel man 88

cents, tailing hand, sweeper yarn trucker (youth) 74 cents. Twisting department—ply doffers, male 86 cents, female 74 cents; beamers, cable twister tenders 93 cents, cable doffers 88 cents, machine cleaners, oilers 86 cents; tape boy, yarn reclaimers 74 cents. Weaving department—cable respoolers, cloth baler 88 cents; weavers 93 cents, splicers 74 cents, tying-in hands 76 to 83 cents. Velon department—weaver 93 cents; inspectors, quillers, battery hand, helper (youth) 74 cents; measure-o-graph operator 79 cents. Shop and warehouse—janitor 83 cents, general maintenance 95 cents to \$1.13, elevator man 86 cents, warehouse checker 91 cents, warehouse truckers 89 cents. Hiring rates—male 73 cents, female and youths (under 18) 60 cents.

A *night shift premium* of 5 cents per hour will be paid for all work from 6 p.m. to 6 a.m.

Provision is made for *seniority rights* and *grievance procedure*.

WINDSOR, ONT.—CANADIAN AUTOMOTIVE TRIM LIMITED AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 195.

Agreement to be in effect from January 1, 1950, to December 31, 1950, and thereafter from year to year, subject to notice. The company recognizes the union as the sole bargaining agent for all eligible employees.

*Check-off:* the "Rand Formula" is part of the agreement.

*Hours of work:* 40 per week. *Overtime* at time and one-half will be paid for work in excess of 40 hours in any one week; double time for work on 6 specified *paid holidays*.

*Vacations with pay:* employees with less than one year's seniority one week with pay based on 2 per cent of wages earned during the preceding year; employees with one year's but less than 5 years' seniority one week with pay based on 2½ per cent of wages; after 5 years' service employees will receive 2 weeks' vacation with pay based on 4 per cent of wages earned during the preceding year.

*Hourly wage rates*, effective February 6, 1950: assemblers \$1.15, carpenter \$1.51; clerk, male \$1.23, female \$1.14; cafeteria help \$1.01; cutters and layers (cotton) \$1.15, "A" (cloth) \$1.32, "B" (cloth) \$1.22; electrician \$1.61, helper \$1.15; floor help (female) \$1; garnett repairman (cotton) \$1.28, helper \$1.22; hopper tender (cotton) \$1.18; inspectors, male \$1.15, female \$1; machinists \$1.41 and \$1.61, millwrights \$1.28 and \$1.36; multipleater operator \$1.29, helper \$1.17; oiler \$1.15, painter \$1.36, pattern maker \$1.26 and \$1.36, pickerman (cotton) \$1.20, sewing machine operators \$1.06 to \$1.18, sewing machine repairmen \$1.18, sweepers \$1.08, stockman \$1.18, tinsmith \$1.51, tool crib attendant \$1.14, truck driver \$1.18; vulcanizer operator \$1.20, helper \$1.15.

*Night-shift differential:* 5 cents per hour extra will be paid to workers on second or third shift.

Provision is made for *grievance procedure* and *seniority rights*.

### **Metal Products**

BELLEVILLE, ONT.—CORBIN LOCK COMPANY OF CANADA LIMITED AND INTERNATIONAL MOLDERS AND FOUNDRY WORKERS UNION OF NORTH AMERICA, LOCAL 428.

Agreement to be in effect from December 1, 1949, to November 30, 1951, and thereafter from year to year, subject to notice; it is provided, however, that the question of wage rates may be reopened at the end of one year from the date of the agreement. The company recognizes the union as the sole and exclusive bargaining agency for all eligible employees.

*Union security:* all employees who are now members of the union shall, as a condition of employment, remain members in good standing for the duration of the agreement. All new employees must become members of the union after 90 days from the date of employment.

*Check-off:* the company agrees to deduct union dues monthly from the wages of employees who so authorize; such authorization shall be irrevocable for the duration of the agreement. All new employees shall, as a condition of their employment, become subject to check-off within 30 days from the first of the first month following their date of employment.

The company reserves the right at any time after the expiration of 3 months from the date of signing this agreement to cancel or suspend the operation of the above union security and check-off provisions upon giving 30 days' notice to the union; any such cancellation or suspension shall be within the sole discretion of the company and shall not be subject to grievance or arbitration procedure.

*Hours:* 45 per week, the number of working days to be mutually agreed upon by the two parties. *Overtime:* time and one-half for all work performed in excess of 45 hours per week, double time for work on 6 specified *paid holidays*.

*Rest periods:* all employees shall be allowed a rest period of 10 minutes in each half shift of not less than 5 hours, as long as such rest periods are not abused by the employees. In addition, female employees will be granted 5 minutes and male employees 3 minutes for washing up before lunch.

*Vacations with pay* must be taken during the plant shut down. Pay will be calculated as follows: after 3 months' service 2 per cent of year's earnings, after 2 years 2½ per cent, after 3 years 3 per cent, after 4 years 3½ per cent and after 5 years 4 per cent of year's earnings. The vacation pay will be reduced by one-sixth for each day of unauthorized absence in excess of one working day in each month, irrespective of the rate on which it is based.

*Wage rates* shall be as agreed upon by the two parties.

Provision is made for *seniority rights* and *grievance procedure*.

WINNIPEG, MAN.—MACDONALD BROTHERS AIRCRAFT LIMITED AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 741.

Agreement to be in effect from February 15, 1950, to January 31, 1951, and for a further period of one year thereafter, subject to one month's notice. The company recognizes the union as the sole bargaining agent for all eligible employees. There shall be no discrimination, intimidation, interference, restraint or coercion because of membership or non-membership in the union.

*Check-off:* the company agrees to deduct union dues monthly from the pay of employees who so authorize and to remit same to the union; such deductions will be made until authorization is withdrawn.

*Hours:* 44 per week, except for boiler room and maintenance employees who shall work 6 days of 8 hours out of every 7 days. *Overtime:* time and one-half shall be paid for all work in excess of the regular working hours and for work on 8 specified holidays or the alternative days off; work on New Year's Day, Labour Day and Christmas Day (or the alternative day off) will be paid for at double time. Employees in the Overhaul and Service Departments who work on Saturdays, Sundays and Holidays will be given compensatory time off (which can accumulate and be taken as an additional holiday) or they may work on their compensatory day off at standard rates of pay.

*Vacations with pay:* after 6 months' continuous service 1 week, after 5 years' service 2 weeks.

*Hourly wage rates:* journeymen—tool and die makers, pattern makers \$1.20; assembly fitter, machinist, electrician, pipe and tube bender, fitter, joiner, sheet metal worker, instrument repair mechanic, aero engine mechanic, plater and anodizer, welder, painter, moulder, cable splicer \$1.15. Production workers—class AAA \$1.065, class AA \$1.015, class A 96.5 cents, class BB 89.5 cents (in the case of males 89.5 and 90.5 cents), class B 84.5 cents; class CC, females 77.5 cents, boys under 18, 75 cents, males 77 cents; class C, females 72.5 cents, boys 70 cents, males 72 cents; class D, females and boys 65 cents, males 67 cents; beginners, females and boys 53 cents; labourers, sweepers and material truckers 77 cents; truck, tractor and crane operators 84.5 cents; miscellaneous light labour, females and boys 62 cents, males 67 cents. Inspectors—flight inspectors, \$1.30; class A \$1.20, class AA \$1.15, class B \$1.065, class BB \$1.015, class C 96.5 cents, class CC 89.5 cents, class D 84.5 cents; class DD, females 79.5 cents, boys and men 77 cents; examiners, females 72.5 cents, boys 70 cents, males 72 cents; commercial inspectors 84.5 cents to \$1.15. Apprentices—from 58 cents for first 2,400 hours to \$1.065 for fifth 2,400 hours. Maintenance—engineers 89.5 cents to \$1.15, coal passers 77 cents, oilers 84.5 cents; journeymen (millwrights, steamfitters, electricians, plumbers) \$1.15, carpenters (rough) 96.5 cents, pneumatic tool repair men, riggers \$1.15, painters (rough) 96.5 cents, helpers 84.5 cents. Lead hands in charge of 3 or more men shall be paid 5 cents, and charge hands 10 cents per hour extra. Most of the above rates represent an increase of 2½ or 5 cents per hour over the rates previously in effect.

Apprentices may be employed in the proportion of one apprentice to 5 journeymen in the following trades: electrician, fitter, machinist, joiner, sheet metal, and tool making; apprenticeship shall be for a period of 12,000 hours.

Provision is made for *grievance procedure and seniority rights*.

VICTORIA, B.C.—CERTAIN AUTOMOBILE DEALERS AND AUTOMOTIVE MAINTENANCE WORKERS' UNION, LOCAL 151 (TLC).

Agreement to be in effect from March 1, 1950, to February 28, 1951, and thereafter from year to year, subject to 60 days' notice.

*Union security*: any employee who at the date of this agreement is, or who during the life of the agreement becomes, a member of the union shall, as a condition of continued employment, maintain membership in good standing. No employee shall be subjected to any penalties against his application for membership or reinstatement except as may be provided for in the constitution and by-laws of the union. There shall be no discrimination against any employee because of membership or non-membership in the union.

*Check-off*: the company agrees to deduct union dues monthly and to remit same to the union upon receipt of a proper notification from the employees concerned.

*Hours*: 8 per day Monday through Friday, 4 on Saturday, a 44-hour week. *Overtime*: work in excess of the above daily hours shall be paid for at time and one-half for the first 4 hours and double time thereafter and for work on Sundays and on 9 specified holidays.

*Off-shift differential*: employees required to work on evening shift shall receive corresponding time off during the day and shall receive 10 cents per hour above the regular rate between 5 p.m. and midnight and 20 cents per hour after midnight.

*Vacations*: each employee shall be entitled to such annual vacation with pay as shall be approved by the B.C. Holidays with Pay Act. Each employee may request an additional week without pay.

After one month's continuous employment, hourly workers will be guaranteed 33 hours' work weekly, provided they report daily for work. Apart from his regular employment, no employee will work on any automobile, truck or tractor other than those registered in his name. Rubber aprons, gum boots and rubber gloves will be provided for battery men, car washers, steam cleaners and radiator men. Uniforms and cover-alls necessary in the performance of the employee's work shall be furnished by the company at cost.

*Hourly wage rates*: journeymen—mechanics, body and fender men, trimmers, radiator men, battery men, electricians, machinists, vulcanizers, painters, welders \$1.30; mechanic's helper 83 cents to \$1.13, lubrication 79 cents to \$1.01, washers 78 and 89 cents, janitors 77 cents, service station attendants 79 cents to \$1.01, service salesmen \$45.70 to \$56.70 per week; parts men (per week) grade 1 \$50.60, grade 2 \$45.10, grade 3 \$36.85, grade 4 \$28.60. The above wage rates include cost-of-living bonus.

The company agrees to work with the union on a plan of establishing an Examining Board that will certify all workers in the trade according to the workers' ability.

Provision is made for *seniority rights, grievance procedure, an apprenticeship plan and the health and safety* of employees.

## Non-metallic Minerals and Chemicals

TORONTO, ONT.—LEVER BROTHERS LIMITED AND INTERNATIONAL CHEMICAL WORKERS' UNION, LOCAL 32.

Agreement to be in effect from December 24, 1949, to December 23, 1950, and thereafter from year to year, subject to 30 days' notice.

*Union security*: all employees shall as one of the terms and conditions of their employment with the company become and remain members of the union in good standing during the life of this agreement.

*Check-off*: upon a written request from any employee the company agrees to deduct the monthly dues from the pay of such employee and to remit same to the union; the request may be cancelled at any time.

*Hours*: 8 per shift Monday through Friday, a 40-hour week. *Overtime*: time and one-half for all work in excess of these hours and for work on Saturdays and Sundays; double time and one-half for work on 8 specified *paid holidays*. A lunch period, not to exceed one-half hour, shall be included in the shift of 8 consecutive hours; employees shall not be required to make up the time spent for lunch period.

An *off-shift differential* of 10 cents per hour will be paid for work performed on shifts other than the regular day shift.

*Vacations with pay*: each employee shall be entitled to one day for each 5 weeks' service during the preceding 12 months; after 15 years' service employees will be granted an extra half day for each 5 weeks' service.

*Superannuation*: all employees who are members of the "Union Overseas Superannuation Fund" or who later become members shall, as one of the privileges and conditions of their employment, continue as members. All future employees 21 years of age or older and all employees under 21 years of age on attaining that age shall become members of the Fund.

Provision is made for *seniority rights, grievance procedure* and a joint *Health and Safety Committee*.

## Construction

### Buildings and Structures

WINNIPEG, MAN.—GENERAL CONTRACTORS' SECTION OF THE WINNIPEG BUILDERS' EXCHANGE AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL 343.

Agreement to be in effect from May 1, 1950, to April 30, 1951. This agreement is similar to the agreement previously in effect (L.G., June, 1949, p. 733), with the following changes—

*Wages*: the hourly wage rate for journeymen has been increased from \$1.40 to \$1.45 per hour. A foreman in charge of 3 or more journeymen shall receive not less than 15 cents (previously it was 10 cents) per hour over the journeyman's rate.

VANCOUVER, B.C.—LABOUR BUREAU, VANCOUVER SECTION, OF THE BRITISH COLUMBIA BRANCH, NATIONAL ASSOCIATION OF MASTER PLUMBERS AND HEATING CONTRACTORS OF CANADA AND UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICES OF THE PLUMBING AND PIPEFITTING INDUSTRY OF THE UNITED STATES AND CANADA, LOCAL 170.

Agreement to be in effect from April 1, 1950, to March 31, 1951, and thereafter from year to year, subject to 2 months' notice.

**Union security:** the employers agree that only journeymen, apprentices and helpers who are members of the union in good standing will be employed on work under the jurisdiction of this local. Whenever a vacancy occurs in any shop the union must be given first opportunity to fill same. If the union is unable to supply skilled mechanics, then skilled plumbers and steamfitters as required may be employed but the latter must become members of the union within 30 days. The union likewise will use every endeavour to have its members work only for those employers who sign this agreement. Any employer who is not a member of the above Labour Bureau and who desires to employ members of Local 170, shall be required to sign and accept this agreement and be governed by all its provisions.

**Hours:** 8 per day Monday through Friday, a 40-hour week. **Overtime:** all construction work done in excess of these hours shall be paid for at double time; all jobbing work done by the regular jobbing men or substitutes shall be paid for at straight time for the first 4 hours on Saturday, time and

one-half for the next four hours and for the first four hours overtime Monday through Friday and double time thereafter and for work on Sundays and on 9 specified holidays. If shift work becomes necessary, more than one shift may be worked at straight time only if continued for 3 consecutive working days. Second shifts shall be granted 8 hours' pay for 7 hours' work and shall end at midnight or be paid overtime rates after midnight. No workman shall be permitted to work 2 consecutive shifts.

**Vacations with pay:** all employees shall receive at least one week vacation with pay from contributions made by the employer, in accordance with the British Columbia provincial statute.

**Hourly wage rates** for all journeymen shall be \$1.75 and for all helpers \$1.20, in either case an increase of 5 cents per hour over the rates in effect prior to April 1, 1950.

All apprentices shall be employed in accordance with the provisions of the British Columbia Provincial Apprenticeship Act. Each shop constantly employing one journeyman plumber or one journeyman steamfitter shall be allowed one apprentice to the respective trade and for each additional 5 journeymen in either trade one additional apprentice shall be allowed. First and second year apprentices attending night school shall be paid their regular rates of wages for time attending school. Only members of Local 170 and duly indentured apprentices shall install any materials or handle the tools of the trade.

Provision is made for *grievance procedure* and for *travelling expenses* in connection with out-of-town work.

## Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,\* include the extension of two new agreements and the amendment of seven others. These include, in addition to those summarized below, the amendment of the agreement for truck drivers at Montreal.

\* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Requests for amendments to the agreements for the building trades at St. John, for the work glove and for the fine glove industries in the province, for barbers and hairdressers at Joliette and at Montreal were gazetted March 25. Requests for a new agreement for the sheet metal fabricating industry at Montreal, and for the amendment of the agreement for the building trades at Drummondville were published in the issue of April 1. A request for the amendment of the agreement for the building trades at Chicoutimi was published in the *Quebec Official Gazette*, issue of April 15.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties.

### Mining

#### *Non-ferrous Smelting and Quarrying*

BUILDING MATERIALS, PROVINCE OF QUEBEC.

See below under "Manufacturing: Non-metallic Minerals, Chemicals, Etc."

## Manufacturing

### Vegetable and Animal Food Products

#### FOOD PRODUCTS MANUFACTURING AND WHOLESALE FOOD TRADE, QUEBEC.

An Order in Council, dated April 6, and gazetted April 15, amends the previous Orders in Council for this industry (L.G., July, 1946, p. 930, Aug., p. 1094, Dec., p. 1774; Dec., 1947, p. 1804; Oct., 1948, p. 1128, and previous issues).

This agreement is to remain in force until May 1, 1950, and thereafter from year to year, subject to notice.

The following establishments are excluded from the *commercial jurisdiction* of this agreement: dairies, butter-dairies, cheese-dairies (all establishments whose main occupation is to turn milk into butter or cheese), incubating and candling establishments (whose products are distributed mainly to the food products wholesale or part wholesale commercial establishments), and establishments dealing in livestock and slaughterhouses (whose sales are made mostly outside commercial establishments).

*Territorial jurisdiction* comprises the cities of Quebec and Lévis and all municipalities within a radius of 50 miles from their limits and is divided into 3 zones as follows: zone I, the cities of Quebec, Lévis and Sillery, the towns of Quebec-West, Sainte-Foye, Lauzon, Château-d'Eau, Beauport, Loretteville, Courville and Montmorency, the municipalities of Charlesbourg, St-Charles-de-Charlesbourg, Charlesbourg-East, Saint-Félix-du-Cap Rouge, La Petite Rivière, Giffard, Beauport-East, Beauport-West, St-Romuald d'Etchemin, St. Téléspore, St. David-de-l'Auberivière, Charny and St. Hélène-de-Breakeyville; zone II, municipalities entirely or partly included in a radius of 15 miles from the limits of the cities of Quebec and Lévis, excepting those included in zone I; zone III, all the municipalities in the balance of the territorial jurisdiction, that is, in a radius from 15 to 50 miles from the cities of Quebec and Lévis.

*Hours in zones II and III shall be as follows:* 48 per week for office employees (male and female), 54 hours per week for all other employees governed by this agreement with the exception of occasional hands (in food products factories), common labourers (male and female), watchmen and boiler (not stationary engines) firemen, personnel and administration employees and enginemen (working as first-class chief enginemen) for whom no regular work week is established. In zone I, hours are unchanged at 43 per week for office employees and 48 per week for most other classes.

*Overtime: in zones II and III,* time and one-half to certain specified classes for hours worked in excess of daily hours or in excess of 48 per week. Employees specified above for whom no regular work week is established are not entitled to overtime remuneration with the exception of occasional hands (in meat mash plants). Other overtime provisions include: junior employees 65 cents per hour; stationary enginemen and firemen (other than first class chief enginemen) employed in establishments producing meat mashes, single time from 48 to 54 hours, thereafter time and one-half; other production employees in the same establishments, single rate from 48 to 53 hours, thereafter time and one-half; office employees (all year

round) in all establishments governed by this agreement shall receive time and one-half for all hours worked in excess of 43 per week. Regular employees in establishments producing food products from June 1 to December 1 (seasonal rush period) provided such period does not exceed 4 consecutive months straight time to 53 hours per week, thereafter time and one-half. Provisions governing holidays with pay are extended to cover commercial salesmen.

*Minimum weekly and hourly wage rates in zone I,* to be retroactive to the first complete week of September, 1949, represent a general increase for most classes of \$2 per week (for weekly rated employees) and 5 cents per hour (for hourly rated employees) over those previously in effect and summarized in the *LABOUR GAZETTE*, issue of October, 1948, page 1128, and in certain cases periods of employment governing graduated scale increases have been extended by the addition of one year. The following new classifications are added (mainly in food products manufacturing establishments)—foreman or departmental manager 82 cents per hour; cooper 83 cents; millwright, confectioner 78 cents, assistant confectioner 72 cents; shipper, roaster 76 cents; truck driver 74 cents; general hand (less than 1 year's service) 62 cents, general hand (one year or more of service) 69 cents; food products factory occasional hand (June 1 to October 1) 59 cents; warehouse female employees (outside the office staff) 38 cents for less than one year's service, thereafter 44 cents per hour; occasional hand (warehouse from June 1 to October 1) 42 cents; apprentice cooper from 40 cents during the first year to 70 cents in the third year. In zone II minimum rates shall be 10 per cent less than those shown above; in zone III the above rates shall be decreased by 15 per cent. *Minimum rates in zone I for commercial salesmen* \$22 during the first 6 months of selling experience to \$37 during and after the fourth year. In zones II and III these rates shall be decreased 10 per cent. (Rates for salesmen represent increases, during the graduated periods of employment, ranging from 50 cents to \$5 per week over those previously in effect.)

*Vacation in zone I:* employees with 5 years of continuous service with the same employer or in the same establishment are entitled to an additional vacation with pay of 6 days (1 week) consecutive or not, as previously agreed upon. Occasional employees are entitled to 2 per cent of their earnings in lieu of vacation with pay, such indemnity to be remitted in cash at the time of dismissal. Provisions of Ordinance 3 of the Minimum Wage Commission shall apply to the establishments governed by this agreement. Provisions governing vacation are extended to include commercial salesmen.

This agreement also covers provisions respecting distribution of competent (certificated) employees, apprentices and general hands.

### Non-metallic Minerals, Chemicals, Etc.

#### BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated March 30, and gazetted April 8, makes obligatory the terms of a new agreement between The Builders Exchange Inc. of Montreal, The Canadian Terrazzo and Mosaic Contractors' Associa-

tion, and "La Fédération nationale des Métiers du Bâtiment et des Matériaux de Construction", "L'Association des Ouvriers de l'Industrie du Marbre, Tuile et Terrazzo, inc."

This agreement to be in effect from April 8, 1950, until February 28, 1951, and year to year, subject to notice.

### Granite Industry

This part of the agreement covers all granite extracting, quarrying, crushing and finishing operations.

*Territorial jurisdiction* comprises the entire province divided into 2 zones: zone I, the city of Quebec, the Island of Montreal, and the cities of Sherbrooke and Three Rivers; zone II, the remainder of the territorial jurisdiction.

*Hours:* 8 daily, 5 on Saturday, a 45-hour week for granite cutters, granite cutters' apprentices, letterers and designers on composition and blacksmiths in the plants and 9 hours daily, 5 on Saturday, a 50-hour week for other trades mentioned in the wage scale. No daily or weekly limitation of duration of labour for watchmen. One more hour per day may be worked by any firm desiring to obviate Saturday work, such time shall be paid for at regular rates only. (These hours similar to those previously in effect.)

*Overtime:* time and one-quarter for all time worked in excess of the regular hours, time and one-half for Sunday work. (Previously time and one-quarter for Sunday work.)

*Minimum hourly wage rates:* in zone I—letterer and designer (on composition), journeyman granite cutter (on surfacing or sand blasting machines) \$1.25; granite cutter \$1.24; in zone II—letterer and designer (on composition), journeyman granite cutter (on surfacing and sandblasting machines), granite cutter \$1.10 per hour; in zones I and II—blacksmith 90 cents; carborundum machine operator 80 cents; surfacing machine operator, sandblast operator 75 cents; machine polisher, hoist and crane operator, gang saw operator, stationary engineman (licensed) 70 cents; quarryman (driller), labourer and helper, boxer (crater) 65 cents; hand polisher, stationary engineman's assistant, fireman 60 cents; apprentice polisher (maximum 1 year) 55 cents; apprentice granite cutters from 50 cents per hour in the first 6 months to 90 cents during the third year. Weekly rate for watchmen \$25.

Contracts entered into by an employer and one or more employees on a piece-work or labour contract basis or for a fixed price are invalid for all purposes of law. (Most rates shown above represent increases ranging from 9 cents to 25 cents per hour.)

*Vacation:* one week with pay equal to 2 per cent of employee's annual earnings after one year's continuous service for the same employer. Employees with less than one year of continuous service, 2 per cent of their earnings from date of employment or as of date of previous vacation.

Apprenticeship regulations are also covered by this agreement.

### Stone Industry

This part of the agreement governs throughout the province, all finishing operations in the industries of limestone, sand

stone, artificial stone, cement blocks, slabs, bricks, pipes and other similar cement products, and of any other stone, with the exception of granite and marble.

*Hours:* for stone cutters, apprentice cutters and artificial stone dressers, 8 per day, 4 on Saturdays, a 44-hour week; other classifications mentioned in the wage scale, 10 per day, 5 on Saturdays, a 55-hour week. No daily or weekly limitation for watchmen. (Hours for other classifications are increased by 5 per week.)

*Minimum hourly wage rates:* modeller \$1.25; artificial stone dresser, machinist and maintenance man \$1.10, planer and stone turner, carborundum machine operator, truck driver, machine operator 80 cents; sawyer-man (all kinds), craneman during the first 12 months 60 cents, thereafter 80 cents; blacksmith during the first year 65 cents to \$1 after 2 years; rammer and moulder 75 cents; labourer and helper 65 cents; apprentice stone cutter from 50 cents during the first 6 months to 80 cents in the third year; apprentice planer and stone turner 60 cents in the first 9 months to 75 cents during the second 9 months; watchmen \$25 per week. (Hourly rates represent increases ranging from 5 cents to 25 cents per hour over those published in the LABOUR GAZETTE, November, 1947, page 1660.)

*Vacation:* provisions are similar to those set forth in the section of this agreement governing the granite industry.

Apprenticeship regulations are also covered by this agreement.

### Marble Industry

This part of the agreement relates to all operations carried out in the quarries and shops of the marble industry.

*Territorial jurisdiction* comprises the entire Province of Quebec and is divided into 2 zones: zone I—the Island of Montreal and within a radius of 15 miles from its limits; zone II—the remainder of the province.

Provisions governing the *duration* of the agreement, *hours*, *overtime* and *wages* for this section of the agreement in zones I and II in most cases are similar to those previously in effect and published in the LABOUR GAZETTE, March, 1949, page 302 (conditions affecting zone II) and March, 1950, page 345 (conditions affecting zone I).

### Pulp, Paper and Paper Products

CORRUGATED PAPER BOX INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated March 16, and gazetted March 25, amends the previous Orders in Council for this industry (L.G., March, 1947, p. 269; Aug., 1948, p. 871; Aug., 1949, p. 987, Dec., p. 1558; Feb., 1950, p. 209 and previous issues).

*Territorial jurisdiction* formerly comprising the entire province is now divided into 2 zones: zone I, the entire province with the exception of the city of Quebec; zone II, the city of Quebec.

*Minimum hourly and average wage rates* for employees of zone II shall be 5 cents per hour less than those previously in effect for the entire province, including the city of Quebec.

## Printing and Publishing

### PRINTING TRADES, QUEBEC.

Orders in Council, dated March 16, and gazetted March 25, amend the previous Orders in Council for this industry (L.G., Feb., 1949, p. 178; March, 1950, p. 345).

This agreement is to be in effect until December 31, 1950, and thereafter from year to year, subject to notice.

*Minimum hourly and weekly wage rates* to be in effect from November 15, 1949; day work—typographer, keyboard, caster operator, electrotypist \$1.22 per hour for class A, \$1.17 for class B, \$1.12 for class C (electrotypers not included in classes B and C); bookbinding finish-gilders \$1.22 for class A, \$1.17 for class B, \$1.12 for class C, \$1.08 for class E; pressmen and stereotypist \$1.19 for class A, \$1.15 for class B, \$1.10 for class C; bookbinder \$1.14 for class A, \$1.11 for class B, \$1.07 for class C, \$1.05 for class E; photo-engraver and camera operator class A \$1.14; Class D—pressman on cylinder 97 cents; pressman on platen press, typographer 89 cents. (These rates are 7 cents per hour higher than those previously in effect.) Rates for helpers in classes A, B, and C 43 cents in the first year to 47 cents during the second year remain unchanged. Minimum rates for apprentices \$15 per week during the first year to \$33 during the second 6 months of the fifth year for class A, \$14 to \$32 for classes B and C, \$14 to \$29 per week for classes D and E. (The rates for apprentices are \$1 to \$2 per week higher than under the previous agreement except for first year which is unchanged. Bookbinding female employees receive from \$13 per week in the first 6 months to \$20 in the second 6 months of the fourth year. (Rates during the first 6 months up to and including those during the first 6 months of the third year represent an increase of \$1 per week; other rates are similar to those previously in effect.)

## Construction

### BUILDING TRADES, MONTREAL.

An Order in Council, dated March 16, and gazetted March 25, amends the previous Orders in Council for this industry (L.G., Sept., 1948, p. 993, Nov., p. 1247; Jan., 1949, p. 67, Feb., p. 178, March, p. 302, May, p. 605, Aug., p. 989, Nov., p. 1420; March, 1950, p. 346).

This amendment provides for the extension of the terms of this agreement until June 1, 1950.

Another Order in Council, dated April 12, and gazetted April 15, makes obligatory the terms of a new agreement between the Builders Exchange, Inc., of Montreal, The Master Plumbers' Association of Montreal and Vicinity, "La Section des Entrepreneurs en Plomberie et Chauffage" of the Retail Merchants Association of Canada, Inc. and The Building and Construction Trades Council of Montreal and Vicinity, "Le Conseil de Syndicats des Métiers de la Construction de Montréal", The United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada, Local 144, and "L'Association des Plombiers, Soudeurs et Poseurs d'Appareils de Chauffage des Syndicats nationaux de Montréal, Inc."

Agreement to be in effect from April 15, 1950, to April 1, 1951.

*Industrial and territorial jurisdictions* are similar to those previously in effect and published in the LABOUR GAZETTE, September, 1948, page 993.

*Hours:* for qualified tradesmen and for hod carriers and construction boilermakers' helpers, 8 per day, Monday through Friday, a 40-hour week; for landscape workmen, shovel operators, pile driver men with associated crews, team drivers, general trucking, cartage and hauling employees 55 hours per week, without daily limitation; for linoleum and tile layers, waxers and polishers, etc., 48 per week; for road construction 60 per week; for common labourers 9 per day, 50 per week.

*Overtime:* time and one-half until 10 p.m.; double time after 10 p.m. and on Sundays and 11 specified holidays. (Provisions similar to those previously in effect.)

*Minimum hourly and weekly wage rates* for journeymen are shown in the accompanying table.

Rates for asbestos insulation mechanics, landscape workman (common), marble setter, hand marble polisher, mastic floor layer, mastic floor polisher, shovel operator (power) per week and per hour, tile setter, terrazzo layer, terrazzo polishing machine operator (dry), terrazzo polishing machine operator (wet), material checker and time-keeper, watchman, watchman employed also as fireman requiring fourth-class certificate, and yardman remain unchanged from those previously in effect; minimum wage rates for those journeymen shown in the wage table but not included in the above represent increases ranging from 5 cents to 20 cents per hour.

*Night shift differential:* for second and third shifts, 5 cents per hour extra is provided.

*Apprentices' wages:* for roofers, asphalt or gravel, built-up membrane and roll roofings 80 cents during the first year to 90 cents during the second year, concrete reinforcing steel erector 85 cents during the first 6 months to 95 cents in the second 6 months. (The above rates represent increases from 5 cents to 10 cents per hour.) Rates for apprentices of the trades requiring 4 years apprenticeship, for the trades requiring 3 years apprenticeship, for structural steel workers, steam generating mechanics and construction boilermakers, landscape workmen, electricians, marble, tile and terrazzo setters, terrazzo polishing machine operator (dry), terrazzo polishing machine operator (wet) are similar to those previously in effect.

*Vacation:* employees continuously in the service of one employer during the vacation—with pay-credit period are entitled to 7 days continuous vacation with pay equal to 2 per cent of their gross earnings for such credit period.

Apprenticeship regulations are also included in this agreement.

Minimum Hourly Wage Rates for the Building Trades, Montreal

Trades	Wage Rates per Hour
Asbestos insulation mechanic.....	\$ 1.45
Construction boilermaker, erector, chiffer, caulker, burner rigger, steam genera- tion mechanic* .....	1.50
Helper to construction boilermaker, erector and steam generating mechanic.....	1.10
Bricklayer and cement block layer.....	1.60
Caulker .....	.95
Carpenter, joiner and millwrights and including the following operations: concrete forms (yard or job), erection of screens (wood or metal), sashes, windows, weatherstrips and shingles, siding, wood or composition, steel partitions and equipment, such as counters and shelving, movable or immovable .....	1.40

Lather (wood and all other material).....	1.30
Linoleum and mureoleum, tile and sheet rubber, tile and sheet, waxer and polisher and asphalt tile layer.....	1.05
Helper and apprentice, linoleum, linoleum and mureoleum, tile and sheet, rubber, tile and sheet, waxer and polisher and asphalt tile layer.....	.85
Kettleman (flooring only).....	1.05
Marble setter .....	1.54
Hand marble polisher.....	1.21
Mason (stone) and cutter on the job.....	1.60
Mastic floor layer .....	1.15
Mastic floor finisher .....	.95
Painter-decorator .....	1.30
Painter-sprayman .....	1.40
Glazier .....	1.30
Structural steel and steeplejack painter.....	1.40
Plasterer (plain or ornamental).....	1.60
Rofer—built-up membrane and roll roofings (asphalt and gravel).....	1.16
Kettleman .....	.95
Rigger .....	1.05
Sheet metal worker, roofer—slate, tile, asphalt or shingle (excepting wood shingle) and corrugated asbestos roofing and siding and including steel toilet partitions and shelving.....	1.40
Sheet metal welder .....	1.40
Shovel operator (power)—when employed less than 44 hours per week.....	1.49
Structural steel erector and welder (all categories).....	1.50
Tile setter .....	1.54
Terrazzo layer .....	1.54
Terrazzo polishing machine operator (wet machine).....	1.15
Terrazzo polishing machine operator (dry machine).....	1.35
General trucker (cartage and hauling).....	.85
Carter, teamdriver .....	.85
Shovel operator (power).....	per week \$65.54
Material checker and time-keeper (without daily limitation as to hours of work).....	35.00
Watchmen (without daily limitation as to hours of work).....	30.00
Watchmen, employed also as firemen requiring fourth-class certificate (without daily limitation as to hours of work).....	41.00
Yardman (without daily limitation as to hours of work).....	35.00

\* Workers installing stokers in furnaces with a horizontal heating surface of 20 feet or less work 55 hours per week (without daily limitation) and are paid a minimum of \$1.20 per hour and their helpers a minimum of 95 cents per hour.

## Elevator Construction

Provisions governing this section of the agreement covering *territorial jurisdiction, hours, overtime, and wage rates* are similar to those previously in effect and published in the LABOUR GAZETTE, issues of September, 1948, page 994; February, 1949, page 178, and August, 1949, page 989.

## Plumbers

Provisions governing this section of the agreement covering *industrial jurisdiction, hours, overtime, and minimum wage rates* are similar to those previously in effect and published in the LABOUR GAZETTE, issues of September, 1948, page 995, and May, 1949, page 605.

## Marble Industry

Provisions governing this section of the agreement covering *hours, overtime, and minimum hourly wage rates* are similar to those previously in effect and published in the LABOUR GAZETTE, March, 1950, page 346.

## PLUMBERS, THREE RIVERS.

An Order in Council, dated March 16, and gazetted March 25, amends the previous Order in Council for this industry (L.G., May, 1948, p. 488) by substituting "La Corporation des Entrepreneurs en Plomberie et Chauffage de la Province de Québec (section du St-Maurice)" as contracting party of the first part in lieu of "L'Association des Entrepreneurs en Plomberie de la Cité et District des Trois Rivières". This amendment to be in effect from January 30, 1950.

*Minimum hourly wage rates* for contractors (personal services) are increased (by 10 cents) to \$1.70. The following rates represent an increase of 5 cents per hour—foreman \$1.20; senior journeyman \$1.10; junior journeyman 95 cents. Minimum rates for common workers 70 cents per hour; apprentices from 40 cents during the first year to 70 cents per hour during the fourth year remain unchanged.

## Trade

TRADE AND OFFICE EMPLOYEES, ARVIDA, JONQUIÈRE, KÉNOGAMI AND ST. JOSEPH D'ALMA.

An Order in Council, dated March 16, and gazetted March 25, amends the previous Orders in Council for this industry (L.G., April, 1945, p. 518, Aug., p. 1199; July, 1946, p. 931, Nov., p. 1586; Sept., 1947, p. 1309; Nov., 1948, p. 1248). "Le Syndicat inter-professionnel féminin de Jonquière" and "Le Syndicat national des Employés de Commerce d'Arvida inc." having ceased to exist, their names are deleted from the list of contracting parties of the first part.

Sacred Heart day at St. Joseph D'Alma shall be observed all day with pay instead of until 1 p.m. as previously in effect.

*Minimum wage rates in retail commercial establishments:* superintendent \$60 per week;

manager \$55, assistant manager \$45 (male), \$30 (female); supervisor \$41.50 (male), \$26 (female); departmental manager \$41.50 (male), \$26 (female); accountant \$35 (male), \$26 (female), accountant (first 6 months without practical experience) \$25 (male), \$22.50 (female); floor walker \$25 (male), \$22.50 (female); assistant accountant, assistant bookkeepers, accountant (beginner), typist from \$15 per week in the first year to \$22 in the third year (male and female); stenographers from \$15 per week in the first year to \$25 in the fourth year (\$22 for female); cashiers \$15 during the first 6 months, \$18 thereafter (male and female); clerks \$15 per week in the first 6 months (\$13 for female) to \$35 per week (\$22 for female) in eighth year; seamstress (same rate as clerk category up to the third year inclusive) thereafter \$19 per week in fourth year to \$26 in the eighth year, delivery man (with horse-drawn or motor vehicles) \$20 per week in the first year to \$35 in the fourth year, helper \$15 in the first year to \$25 in the fourth year; delivery boy (bicycle supplied by employer) \$14 per week; commission salesman or agent \$20 per week during the first year to \$35 in the fourth year. Rates for clerks (male and female) in retail commercial establishments at St. Joseph D'Alma are from \$1 to \$2 per week less, during certain terms of employment, than those paid in other localities affected by this agreement. Minimum wage rates in groceries and butcher-shops (previously included in retail commercial establishments) are similar to those shown above with the following exceptions: manager \$52.00; departmental manager \$40 (male), \$30 (female); supervisor \$40 per week (male), \$25 (female); accountant, bookkeepers, collectors \$35 (male), \$25 (female); clerks (male) \$14 per week during the first 6 months to \$35 in the eighth year; butcher \$40; butcher-clerks (similar to foregoing clerks except during the second, third and fifth year terms during which period this classification shall be paid \$1 to \$2 per week more); delivery man (horse-drawn or motor vehicle) \$15 per week in the first year to \$30 in the fourth year) helper \$14 per week; delivery boy (bicycle supplied by employer) \$14 per week or 25 cents per hour. (Rates shown above in most cases represent increases ranging from \$1.50 to \$5 per week for male employees and from \$1 to \$4 per week for female employees.)

*Minimum wage rates in commercial establishments (other than retail), in financial and industrial establishments, municipal or school corporations, and in professional offices* are in most cases similar to those previously in effect and summarized in the LABOUR GAZETTE, issue of November, 1948.

Rates for *supernumerary employees* 50 cents per hour for male, 35 cents (female), remain unchanged.

## WHOLESALE FOOD STORES, QUEBEC.

See above under "Manufacturing: Vegetable and Animal Food Products."

# FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

## Schedules Prepared and Contracts Awarded During March

### (1) *Works of Construction, Remodelling, Repair or Demolition*

During the month of March the Department of Labour prepared 175 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 93 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates."

### (2) *Contracts for the Manufacture of Supplies and Equipment*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Agriculture. . . . .	2	\$ 118,890.47
Canadian Commercial Corporation. . . . .	11,436	22,101,345.09
Post Office. . . . .	19	234,321.79
Public Works. . . . .	1	4,465.00
R.C.M.P. . . . .	4	8,510.40

# LABOUR LAW

## Labour Legislation in Newfoundland in 1949

*At the 1949 session of the Newfoundland Legislature which opened on July 13 and prorogued on December 7, a Boiler and Pressure Vessel Act and a new Industrial Statistics Act were passed. Amendments were made to the Department of Labour Act to provide for the appointment of a Deputy Minister of Labour. Various measures of social legislation were enacted, providing for the payment of mothers' and dependents' allowances, and an increase in old age and blind pensions. Statutes providing for loans to co-operative societies and fishermen's associations were also enacted.*

### Steam Boilers and Pressure Vessels

A new Boiler and Pressure Vessel Act, modelled closely on a Saskatchewan statute of 1948, covers steam boilers and pressure vessels and steam, compressed gas and refrigeration plants which are subject to the legislative power of the Province. The Act is to come into force on proclamation. It does not cover railway locomotives, boilers used in the operation of a railway within the jurisdiction of the Board of Transport Commissioners, those subject to inspection under the Canada Shipping Act, or those used for heating buildings occupied by not more than four families.

"Boiler" is defined to include any vessel in which steam is generated or hot water produced under pressure and having a greater capacity than 3 cubic feet or 20 square feet of heating surface. "Pressure vessel" means a vessel of over 6 inches in diameter or having a capacity of more than 1½ cubic feet. "Refrigeration plant" includes such plants having a capacity of 3 tons or over of refrigeration in 24 hours.

Provision is made for the appointment of a chief inspector and other inspectors who must inspect at least once a year every boiler, pressure vessel or plant in the area assigned to them and satisfy themselves that all provisions of the Act and regulations relating to safety are being complied with and that operating personnel hold certificates. In addition to the annual inspection, each inspector must examine at any time any boiler or pressure vessel which he has reason to believe is unsafe. The owner or engineer in charge of a boiler, pressure vessel or plant must point out during an inspection or notify the Department at any other time of any defect he believes to exist.

No boiler, pressure vessel or plant may be operated unless it is in charge of an engineer holding a certificate of the proper class. The classes of certificates of competency to be held by inspectors, engineers and others employed in the operation of boilers, pressure vessels and plants and the qualifications necessary to obtain certificates are to be prescribed by regulations of the Lieutenant-Governor in Council. The certificate must be posted in a conspicuous place and must be produced on the demand of an inspector.

Inspectors may enter premises at all reasonable hours in the performance of their duties. An inspector may give oral or written instructions to the owner or person in charge of a boiler, pressure vessel or plant regarding its installation, operation or repair and require any persons engaged in or assisting in its operation contrary to the Act to be replaced. The inspector's instructions must be carried out immediately or within a specified time. Failing compliance, the inspector may have the work done at the owner's expense.

On completion of an inspection and on payment of the required fee, the Minister of Labour must issue an inspection certificate to the owner. The certificate, which must be posted in a conspicuous place in the plant, is to authorize the operation of the boiler, pressure vessel or plant until the next inspection or for a specified time. The inspection certificate may set forth the repairs or alterations to be made, or where the boiler or pressure vessel is condemned, it must be clearly stated on the certificate.

Where an inspector finds that a boiler, pressure vessel or plant is unsafe, that it is being operated by persons who do not hold certificates, or that repairs have not been made as required, the Minister may

cancel the inspection certificate, and, on the instruction of the Chief Inspector, the inspector may seal the boiler, pressure vessel or plant and notify the owner that it is not to be operated. In such case, it may not be used until the permission of the Chief Inspector is obtained or a new certificate issued. Except with the Chief Inspector's written permission, no person may repair any boiler or pressure vessel which has been condemned as unsafe nor operate a boiler or pressure vessel after the date specified in the inspection certificate. No boiler or pressure vessel may be operated at a pressure higher than that authorized in the inspection certificate.

The Chief Inspector must be notified immediately by telephone or telegraph of an explosion, a fire involving a compressed gas plant, or an accident arising out of the operation of a boiler, pressure vessel or plant which causes death or serious injury and may make such investigations as he deems necessary. An owner of such equipment is required to maintain in a readily accessible location an adequate first-aid kit.

No person, firm or corporation may do any welding in the construction, operation or repair of any boiler, pressure vessel or piping except in accordance with regulations concerning welding which the Lieutenant-Governor in Council is empowered to make. Such regulations may prescribe welding procedures to be followed and the standards of qualification required of welders.

When an inspector considers that not enough engineers and other persons are employed to ensure the safe operation of the boiler or plant, the Chief Inspector may require the owner to engage such persons as he may prescribe.

It is forbidden to install a high pressure boiler, to sell, exchange or re-install a boiler or pressure vessel which has been previously used (except where it is sold along with a building) or to install one previously used outside Newfoundland without first notifying the Chief Inspector and obtaining his written permission.

Provision is made for the issue of a certificate, at the discretion of the Chief Inspector, to the holder of a certificate of qualification as an engineer from the Government of Canada or of any province, and the Minister may arrange with the competent authority of any other province for the granting of interprovincial engineers' certificates as may be agreed upon.

Upon the Chief Inspector's recommendation, the Minister may cancel, suspend or

recall any certificate, and may prescribe conditions upon which a certificate may be restored or a new one obtained.

Authority is given to the Lieutenant-Governor in Council to make regulations governing the design, registration of designs, construction, inspection during construction, testing, installation, operation and repair of boilers, pressure vessels, plants and equipment; the licensing of firms manufacturing, selling or installing such vessels, plants and equipment; storage, handling or distribution of compressed gas; and the fees to be paid for licences and inspections.

Power to make regulations includes authority to adopt as regulations in whole or in part any national or international code or standards which may have been drawn up in this field. Regulations are to have effect as if they were part of the Act. Where, however, exceptional circumstances make it impracticable to comply strictly with such regulations, the Chief Inspector may, on conditions he may prescribe, grant special exemptions in individual cases if he is satisfied that such exemptions are not inconsistent with safe practice.

The penalties provided for breaches of the Act are fines ranging from \$25 to \$500.

## Industrial statistics

A new Industrial Statistics Act under the administration of the Department of Labour replaces an Act of 1938 which was administered by the Department of Public Health and Welfare. The Deputy Minister of Labour, assisted by officers and clerks appointed by the Lieutenant-Governor in Council or designated by the Minister from among those employed in the Department, is charged with the collection of industrial statistics under the Act and must, on request, furnish any statistical information so collected to the Lieutenant-Governor in Council or to the Minister. Data to be collected cover such matters as the names of persons, partnerships or corporations; kinds of business done; amount of capital invested; quantity of goods manufactured, handled or exported; number of persons employed; work-week; hourly, weekly, or monthly rates of pay; and total amount paid in wages and salaries.

The Deputy Minister may prepare forms for the collection of the necessary data covering such periods as may be prescribed by the Minister to be sent to the owner or manager of a business or to a custodian of municipal records. Such forms must be

returned to the Deputy Minister, properly certified as to accuracy, within the prescribed time.

No individual return or answer to a question put for the purpose of the Act may be published except as part of a general report or summary of statistics without the previous consent in writing of the person or corporation concerned, nor may any published material contain any particulars which would enable a person to identify it as referring to an individual establishment.

A special statistical investigation in industry may be carried out by the Minister of any Government Department, with the authorization of the Lieutenant-Governor in Council, who may prescribe the matters of enquiry, the manner in which the investigation is to be carried out and the forms to be sent.

The Minister of Labour may enter into arrangements with the Government of Canada providing for any matter necessary for the carrying out of the provisions of the Act.

A penalty not exceeding \$100 may be imposed on any person or corporation who without lawful excuse refuses or neglects to fill out truthfully or return the required forms or who wilfully contravenes any provision of the Act. In the case of a person found guilty of such an offence, the penalty, in lieu of fine, may be imprisonment for not more than three months.

### **Department of Labour**

Effective from August 1, 1949, an amendment to the Department of Labour Act, 1933, provides for the appointment by the Lieutenant-Governor in Council of a Deputy Minister of Labour to hold office during pleasure. The staff required for the conduct of Departmental business is to be appointed or employed in accordance with the provisions of the Civil Service Act.

### **Employment of Minors**

A new Alcoholic Liquors Act, which rescinds the Act of 1933 and amendments, continues to prohibit under penalty the employment of persons under the age of 21 in any liquor store, lounge or tavern.

### **Mothers' Allowances**

Payment of allowances from Provincial funds to assist mothers who are widowed or who for other reasons are without adequate means to support their children is provided for by the Mothers' Allowances Act which was proclaimed in force on January 31, 1950. All Canadian Provinces now have such legislation.

Allowances are to be paid monthly towards the maintenance of each child under 16 whose mother is a widow; a woman deserted by her husband or divorced or separated from him for at least two years before applying for an allowance and from whom she can obtain no support; the wife of a man who is incapacitated or an inmate of a hospital, sanatorium, gaol or penitentiary; or a woman who had lived for at least five years as the common-law wife of a man resident in Newfoundland at the time of his death. To be eligible for an allowance, the mother must have been a resident of Newfoundland at the time she became a widow, must be a resident of the Province when her application is made and must continue to reside there with her dependent children while in receipt of the allowance.

A foster mother caring for orphan children may receive an allowance if she has not adequate means to care properly for them. An allowance is also payable to a father while he is incapacitated and living at home with his child or children if his wife is dead, an inmate in a sanatorium, gaol, penitentiary or hospital or has deserted the home.

Provision is made in the Act for the payment of an allowance under special circumstances, where investigation has shown it to be advisable, in the case of a mother or foster mother who is not strictly eligible under the Act to receive one. In such case, the Lieutenant-Governor in Council may fix the amount of the allowance to be paid.

No allowance is payable towards the care of a child over 16, but if the child reaches the age of 16 during the school year, the allowance may be continued until the end of the year unless the child leaves school before that time. The regulations under the Act, however, permit an allowance to be paid up to the age of 21 in respect of an incapacitated child (L.G., 1950, p. 699).

The Act provides for a Mothers' Allowances Board to consist of not less than three nor more than five members appointed by the Lieutenant-Governor in Council. The Board will receive applications for allowances and determine the eligibility of each applicant and the amount to be paid.

The manner of making application, the maximum amounts to be paid, property qualifications and other sources of income of applicants, and the manner in which payment will be made have been prescribed by regulation.

## **Dependents' Allowances**

Under the Dependents' Allowances Act, which came into force by proclamation on February 28, 1950, a monthly allowance may be paid out of funds appropriated by the Legislature to adults or families who through mental or physical incapacity are unable to earn a normal livelihood. A person's disability must be such that there appears to be no prospect of improvement for a period of nine months from the date of application.

Excluded from the benefits of the Act, however, are persons receiving assistance under the Old Age and Blind Persons Pension Act, 1949, or the Mothers' Allowances Act, 1949, and persons whose only claim to assistance from the Department of Public Welfare is that they are unemployed.

The minimum allowance necessary in each individual case is to be decided by the Dependents' Allowances Board set up by the Act consisting of not less than three nor more than five members, one of whom must be a woman. The Board must inquire into the merits of all applications for allowances and advise the Chairman, who must be an official of the Department of Public Welfare, as to the expediency of granting, continuing, altering, withdrawing or renewing the allowance.

A recipient under this Act who comes into possession of income or resources in excess of the amount previously reported by him in an application for assistance must notify the Board of this fact immediately.

The maximum amounts of allowances, forms to be used, manner in which allowances will be paid and property qualifications of applicants have been prescribed by regulations (L.G., 1950, p. 891).

A fine of not more than \$200 or imprisonment for not more than three months, or both, may be imposed for contravention of the Act.

## **Old Age and Blind Persons Pensions**

As a result of a 1949 amendment to the Old Age Pension Act (Canada) which increased from \$30 to \$40 the basic monthly pension to which the Dominion Government contributes 75 per cent of the cost, the Newfoundland Old Age and Blind Persons Pension Act was amended to authorize payment of pensions at the \$40 rate in Newfoundland.

The Old Age and Blind Persons Pension Act, effective March 31, 1949, authorized the government of the Province to enter

into an agreement with the Dominion Government for the establishment of an old age pension scheme pursuant to the provisions of the Dominion Act. The Newfoundland statute provided for a maximum pension of \$30 a month. The sums necessary for the financing of the scheme, apart from those received from the Dominion Government, are paid from moneys appropriated by the Government out of public funds. The Act is administered by the Old Age Pensions Board consisting of three officials of the Department of Public Welfare. The agreement with the Federal Government, authorized by this Act, came into effect on April 1, 1949. The amendment further empowers the Government to modify any agreement or to enter into a new agreement in place of one which may be cancelled.

## **Loans to Co-operative Societies**

The Co-operative Development Loan Act was passed for the purpose of encouraging co-operative societies to develop and improve the industries, commerce and services of Newfoundland. It provides for a fund, to be known as the Co-operative Development Loan Fund, from which loans may be made to societies for assisting in the construction of plants and the purchase of plant equipment.

To administer the Fund, the Act authorizes the setting up of a Co-operative Development Loan Board consisting of not fewer than five members to be appointed by the Lieutenant-Governor in Council, one of whom must be designated as chairman and one as secretary. All moneys appropriated by the Legislature or otherwise received for the purposes of the Act must be paid into the Co-operative Development Loan Fund. If a bank has made a loan for a purpose prescribed by the Act in pursuance of an application made to and approved by the Board, the Board may guarantee the repayment of the loan.

The Board may enter into any agreement with the Government of Canada or with any organization, on the approval of the Lieutenant-Governor in Council, for the better carrying out of the purposes of the Act.

Regulations may be approved by the Lieutenant-Governor in Council prescribing purposes for which and the terms and conditions on which loans may be made, limiting their amount, fixing rates of interest, prescribing specifications for plants and equipment in respect of which a loan may be made, and other matters.

## Fisheries Loans

A similar act, the Fisheries Loan Act, was enacted for the purpose of improving and developing the fishing industry of Newfoundland by making loans to fishermen and to other persons, associations, societies or companies engaged either directly or indirectly in catching, handling, processing or distributing fish or fish products. For these purposes a Fisheries Loan Board and Fisheries Loan Fund are to be set up, constituted in the same manner as the Co-operative Development Loan Board and Fund described above.

## Labour Legislation in Saskatchewan in 1950

The Saskatchewan Legislature which was in session from February 16 to April 8 amended laws dealing with workmen's compensation, industrial relations, hours of work, minimum wages and electrical inspection and licensing. The waiting period which must elapse before workmen's compensation may be paid has been shortened to one day if the worker is disabled longer than the day of the accident. No compensation other than medical aid will now be paid for a disability lasting only for the day of the accident. Certain benefits under the Act have been increased. The powers of the Labour Relations Board under the Trade Union Act were clarified following a recent court decision. The Minimum Wage Board is now permitted to make orders declaring the Minimum Wage Act to apply to any group of employees within an industry. The One Day's Rest in Seven Act, as re-enacted, applies to the employees of any employer in the Province who is covered by an order of the Minimum Wage Board. In keeping with the greater emphasis placed in recent years on tradesmen's qualification, an Apprenticeship and Tradesmen's Qualification Act was enacted replacing the former Apprenticeship Act and providing expressly for tradesmen's qualification as well as apprenticeship.

### Workmen's Compensation

Several amendments made to the Workmen's Compensation (Accident Fund) Act, effective from June 1, bring telegraph operators within the scope of the Act, shorten the waiting period before compensation may be paid and provide for an increase in certain of the benefits.

No compensation other than medical aid will be payable for a disability that lasts only for the day of the accident, but if

In particular, the Board is empowered to make loans to a fisherman or groups of fishermen for the purchase, repair or improvement of hulls or boats to be used in fishing; the purchase of new engines for new or replacement installations in hulls owned by fishermen and for the purchase of fishing gear. The Board may make loans to societies or companies to assist in the construction of plants and the purchase of plant equipment, to build hulls or boats, and to purchase boats, engines, auxiliary equipment and fishing gear.

the workman is disabled for any longer time than the day of the accident, compensation is payable from and including the day following the accident. Previously, compensation was paid from the date of the accident only if the disability lasted for more than three days.

The maximum expenses which will be paid to cover the cost of burial of a workman have been increased from \$125 to \$175, the amount payable in Alberta and Quebec. The monthly payment in respect of each child under 16, when the dependants are a widow or an invalid husband and one or more children, was raised from \$12 to \$15.

As before, the monthly compensation in death cases, exclusive of burial expenses and the lump sum of \$100, may not exceed the workman's average monthly earnings. Where the total sum payable would exceed average earnings, the compensation must be reduced but not below a specified minimum amount. This minimum has been increased in the case where the dependants are a widow or invalid husband and one child from \$62 to \$65 a month and where the dependants are a widow or invalid husband and two or more children from \$70 to \$75.

The increase in compensation provided for by the amendments will apply to all payments accruing after June 1, whether the accident happened before or after that date and whether the award of compensation has been made previous to June 1 or not.

The minimum payment in permanent total disability cases is to be \$20 a week instead of \$15. For permanent partial disability a distinction is now made depending on whether the disability is more or less than 50 per cent. If it is more than 50 per cent, the minimum

compensation is, as before, a corresponding amount in proportion to the impairment of earning capacity. If, however, the permanent partial disability is less than 50 per cent, the minimum payment must be an amount that is the same proportion of \$15 as the percentage of impairment of earning capacity.

The Board may now assume the expense of the removal of infected teeth or tonsils where the infection can be assumed to hinder the recovery of an injured workman. It may also pay for replacement and repair of eyeglasses or artificial eyes broken by an accident in which the workman is injured insufficiently to require medical attention for which the Board accepts responsibility.

The Board, with the approval of the Lieutenant-Governor in Council, may make regulations governing the payment of medical accounts and the assessment of penalties for the late filing of such accounts. Previously, the Act stipulated that in order to be recognized by the Board and recoverable, accounts for medical services had to be filed with the Board within six months after the termination of the treatment.

The powers of the Workmen's Compensation Board have been widened with respect to compensation for hernia. The Act provides that if the workman submits to an operation, the period of disability is deemed to cease after 56 days from the day of the operation. This period may be extended by the Board if it is satisfied that complications have arisen from the operation. The Board may now also extend the period if, in its opinion, other circumstances warrant such an extension.

A change was made in the section providing for payment of compensation, at the discretion of the Board, to a common law wife if there is no widow. Previously, a common law wife must have been maintained by the deceased workman for seven years before his death and have borne him one or more children. She is now eligible for compensation if she had been maintained by the workman for five years and had borne him children or for seven years if there were no children.

An amendment was made to the Workmen's Compensation Board Superannuation Act, which provides for a superannuation scheme for employees of the Workmen's Compensation Board who are not covered by the Public Service Superannuation Act (L.G., 1940, p. 560). As a result of the amendment, war service in the Second World War will be deemed to be service with the Board. To qualify, however, the person must have been a resident of Saskatchewan at the time of enlistment. He

must have become an employee of the Board within 12 months after being discharged from the Forces or from hospitalization as a result of war service or on completion of education or vocational training provided by the Government of Canada on account of war service. The employee must remain in the employ of the Board for a continuous period of at least one year and be employed continuously to the date of his or her retirement.

The periods covered by war service and subsequent continuous employment under the Board will be deemed to be continuous service under the Board for the purpose of the Act, and no employee will be required to make any contribution in respect of his or her period of war service. Before an employee is given credit for war service he must submit to the Board satisfactory evidence of entitlement.

### Industrial Relations

Following a recent decision of the Saskatchewan Court of Appeal (L.G., 1950, p. 000) changes were made in the Trade Union Act, for the most part to clarify the powers of the Labour Relations Board, with particular reference to the Board's power to order reinstatement of employees discharged contrary to the Act.

In the section which defines the powers of the Board to make orders, it is now specifically stated that the Board may determine whether or not an unfair labour practice is being or has been engaged in. Discharge or threat of discharge of an employee is now expressly stated to be an unfair labour practice as being coercion or intimidation with a view to encouraging or discouraging membership in or activity in or for a labour organization. In the legal decision referred to above, the Court had pointed out that there was no provision in the Act (as it then stood) forbidding an employer to discharge an employee although it might be argued that the provision was there by implication. A new section forbids any person to take part in, aid, abet, counsel or procure any unfair labour practice.

The Board may now require an employer to reinstate any employee discharged under circumstances which it determines to constitute an unfair labour practice, or otherwise contrary to the provisions of the Act.

As previously, the Board may require the employer to pay to the employee the monetary loss suffered by reason of a discharge contrary to the Act, and it is now clearly stated that the Board may fix and determine the monetary loss suffered by the employee as a result of the wrongful

dismissal. The Court of Appeal had taken the view that, while the Board could require an employer to pay the monetary loss, the Act did not expressly state that the Board could determine the loss, and to fix and recover the amount the employee was required to go to the Courts.

As introduced, the Bill provided that the amendments regarding reinstatement and payment of back wages would have been deemed to have always been in force. This provision was dropped before third reading was given.

Other changes clarify the definitions of "bargaining collectively" and "employee". "Bargaining collectively" now includes negotiating in good faith with a view to the renewal or revision of a collective bargaining agreement, as well as the conclusion of a collective bargaining agreement, as formerly. "Employee" has been redefined to make it clear that persons having *and regularly exercising* authority to employ or discharge employees, or regularly acting on behalf of management in a confidential capacity, are excluded from the definition. The words in italics are new.

A new section has been added to provide for the continuation of a collective agreement when ownership of an employer's business passes to another employer while a collective agreement is in force. In such case both the new employer and any of his employees who formerly were employed by the person who disposed of the business will be bound by any existing collective bargaining agreement and also by any order formerly made by the Board to determine the appropriate unit of employees for collective bargaining, or the trade union representing a majority of employees in an appropriate unit and by any order requiring an employer to bargain collectively. This provision is similar to one in the Manitoba Labour Relations Act.

### Hours of Work

An amendment to the Hours of Work Act concerns payment for overtime after eight hours in a day or 44 in a week. As before, time and one-half the worker's regular wages must be paid for each hour or part of an hour worked in excess of these limits. However, it is now stipulated that where the total of the daily excesses and the weekly excess differs, the employer must make payment in respect of the greater excess. The penalties formerly laid down for any breach of the Act or regulations are now specifically provided for violation of this section. The same penalties will still be imposed for any violation for which no penalty is prescribed in the Act.

The penalty for a first offence of an employer is a fine ranging from \$25 to \$100 or, in default of payment, imprisonment for from 10 to 30 days, and for each subsequent offence, a fine of from \$50 to \$200 or imprisonment for not less than 30 and not more than 90 days.

On convicting an employer of failure to pay the wages required, the magistrate, in addition to imposing a fine, must order the employer to make prompt payment to him for transmitting to the employee. If the employer fails to pay any money under such an order, he may be imprisoned for a further term of from 30 to 90 days.

The stipulation in the Act against a reduction in wages in any undertaking where hours were reduced to conform with the 44-hour limit which is imposed by the Act unless time and one-half is paid for overtime, has been extended to apply until April 1, 1951.

### Minimum Wages

Amendments were made to the Minimum Wage Act, for the most part to permit the Minimum Wage Board, with the approval of the Lieutenant-Governor in Council, to make orders declaring the Act to apply to any group of employees within an industry, business, trade or occupation, as well as to the entire industry, business, trade or occupation, as formerly.

In line with this amendment "class of employment" is defined as any industry, business, trade or occupation, or any group of employees in any industry, business, trade or occupation to which the Act from time to time applies. Previously "classes of employment" were to be defined by the Minimum Wage Board. The Board now may also exclude any "class of employment" from the application of a minimum wage order.

The definition of "employee" has been widened to include any person employed in a shop, factory or other premises in, from or through which is carried on any industry, business, trade or occupation, under the Act or any person within a group of employees to which the Act applies.

A minimum as well as a maximum fine and term of imprisonment have now been prescribed for a breach of the Act or regulations. The minimum fines are \$25 or ten days' imprisonment for a first offence and \$50 or 30 days for each subsequent offence. As before, the maximum fines and terms of imprisonment are \$100 or 30 days and \$200 or 90 days, respectively.

## Weekly Rest-Day

The One Day's Rest in Seven Act was re-enacted to make the Act applicable to the employees of any employer in the Province who is covered by an order of the Minimum Wage Board. The Act applies to cities and may be extended by administrative order to any part of the Province. The previous Act was extended to apply to 21 larger towns. Since Minimum Wage Orders now cover all centres of over 300 population it is expected that the One Day's Rest in Seven Act will have a similar application.

The Act, in other respects, is substantially the same as before. A rest period of at least 24 consecutive hours in every seven days (on Sunday when possible) must be granted to all workers covered by the Act except those who are not usually employed for more than five hours a day, employees engaged by reason of an emergency to do repair work and persons employed solely in a managerial capacity. The Minister of Labour has exclusive power to determine whether or not an employee is employed solely in a managerial capacity. The Minister is authorized to grant exemption for a period not exceeding one year on application of any employer against whom the enforcement of the Act would, in the opinion of the Minister, work hardship. The Lieutenant-Governor in Council may also withdraw any specified class or group of employers from the Act.

Provision is made for inspection by officials or inspectors of the Department of Labour, and a penalty of a fine from \$5 to \$25 or a term of imprisonment not exceeding one month is provided for contravention of the statute.

## Electrical Licensing

Effective May 1, 1950, a number of changes were made in the Electrical Inspection and Licensing Act, 1949 (L.G., 1949, p. 742).

It is now stipulated that no person may make any electrical installation or install electrical equipment unless he holds a valid subsisting licence issued under the Act, nor, may any person advertise as a contractor unless he has a subsisting contractor's licence. These provisions, however, will not apply to work done by a person on premises owned by him and occupied only as his domestic domicile, provided that he has satisfied the chief inspector that he is competent to perform the work.

The definition of "contractor" was amended to exclude a person who performs

work on premises owned by himself or occupied only as his domestic domicile.

A new section makes it clear that the Act and Regulations will apply with respect to electrical installations and the installing of electrical equipment by a person who is not the holder of a licence issued under the Act. In particular, an unlicensed person must comply with the provisions which require persons to supply the Department with a notice of intention to commence work on an electrical installation or to install electrical equipment, and to obtain a permit authorizing this work and requiring payment of fees for inspections and the examination of plans.

All electrical equipment, as well as all electrical installations must, as regards workmanship and all other matters, conform to the latest authorized edition of the Canadian Electrical Code, subject to any changes made by the Minister; formerly such changes had to be approved by the Lieutenant-Governor in Council.

A new subsection which is deemed to have come into effect on October 1, 1949, provides that no prosecution for violation of any provision of the Act or regulations may be commenced after six years from the date of the violation.

## Apprenticeship and Tradesmen's Qualification

The Apprenticeship and Tradesmen's Qualification Act, to come into force on proclamation, replaces the Apprenticeship Act, 1944. The new Act is similar to the former one except that it expressly provides for tradesmen's qualification as well as apprenticeship. Under the previous Act the Lieutenant-Governor in Council was empowered to make regulations providing for the examination of tradesmen and the issue of certificates of qualification to persons engaged in designated trades. Such regulations have been made from time to time and in 1948 they were amended to provide that only a person holding a valid certificate of qualification or an interim, provisional or apprentice's certificate could engage in a designated trade under the Act in or within a radius of five miles of any town or city of more than 3,000 population (L.G., 1949, p. 73).

A new section of the Act which applies to cities and to the towns of Estevan and Melville and to the area within a 5-mile radius of each city or town stipulates that a person who is required by the regulations to hold a certificate of his status as an apprentice or tradesman in a designated trade must not work at his trade unless he holds the necessary certificate. Similarly,

employers who are engaged in the business of a designated trade must employ only persons who hold the required certificate.

The fourteen designated trades are: bricklaying, carpentering, plumbing, steam-fitting, painting, plastering, sheet metal work, welding (except auto body welding), natural gas and petroleum pipe fitting, barbering, beauty culture, electrical work, weekly newspaper printing and motor vehicle repair. The motor vehicle repair trade does not include automobile or truck body repair work or repair work on agricultural vehicles other than automobiles and trucks. Omitted from the new schedule are the trades of a mason, watchmaker, blacksmith, auto body repairman and motor mechanic.

In other respects the Act is generally similar to the former Act (L.G., 1944, p. 912). The Lieutenant-Governor in Council is empowered to enter into an agreement with the Minister of Labour for Canada regarding the extension and operation of apprenticeship training or other training in the Province.

The Act, as before, sets out the various provisions which must form part of any apprenticeship plan for any trade including a written contract of apprenticeship, length of the apprenticeship period, probationary period, program of practical experience and instruction, tests and final examinations, the ratio of apprentices to journeymen in any trade and other matters.

A Director of Apprenticeship and Tradesmen's Qualification (formerly Director of Apprenticeship) will administer the Act and supervise all apprenticeship plans. It is the Director's duty to establish or assist in establishing a system of selection for training and a system for training apprentices and tradesmen in any designated trade, based on the needs of the trade. He is also required to collaborate with educational authorities and with employers and workers directly concerned in a particular trade or their organizations. The Act provides for the continuance of the Provincial Apprenticeship Board to advise the Director. The Board consists of five or more members, including equal representation of employers and workmen and representatives from the Department of Labour and the Department of Education.

In addition to the regulations which could be made under the former Act, the Lieutenant-Governor in Council is empowered to make regulations requiring every apprentice and every tradesman in a designated trade to hold a certificate of his status in the trade; providing for the issue

of identification cards which must be produced on request; requiring the posting of certificates of status and of the regulations in any premises in which a designated trade is carried on; providing for registration of employers in designated trades; providing for the payment of bonuses to employers of apprentices; and limiting or extending the application of a regulation to any portion of the Province.

### **Health Services, Hospitalization and Public Health**

The Hospitalization Act, 1948, was amended and the Health Services Act and Public Health Act were replaced by new statutes. The changes made in these Acts are for the most part of an administrative nature. The administration of the Hospitalization Act and Health Services Act has been transferred from the Health Services Planning Commission to the Minister of Public Health.

The sections of the Public Health Act which are of interest to labour were re-enacted without substantial changes. "House" as defined in this Act includes a factory as well as a building of any kind used for human habitation and "public place" includes a factory, office, store, hotel or restaurant. The Minister of Public Health is empowered to make rules, orders and regulations for the protection of public health. Included in such powers are regulations for the purpose of house-to-house inspection; for the inspection, cleaning, purifying, ventilating and disinfecting of houses and laundries at the expense of the owner or occupier; and for the sanitary control of lumbering, mining, construction, threshing and other camps.

It is forbidden for an employer to employ any person with tuberculosis or other communicable disease in any place where food is manufactured, stored or sold. The Act also forbids the use of the common drinking cup in public places or the keeping of drinking water in open vessels or the use of the common towel.

### **Housing and Rent Control**

The Housing Act, which enables municipalities to take advantage of the National Housing Act, 1944 (Canada), was amended to empower the Minister of Social Welfare and Rehabilitation to enter into an agreement with the Government of Canada to undertake projects for the acquisition and development of land for housing purposes and for the construction of houses for sale or rent. As provided for under the National Housing Act, the Federal Government will

pay 75 per cent and the Province 25 per cent of the cost of housing projects. The Lieutenant-Governor in Council may set up corporations with the powers and duties necessary to carry out the terms of an agreement. The Minister may also enter into an agreement with a corporation, city or town for the purpose of undertaking any housing project.

Effective from April 1, 1950 the Leasehold Regulation Act, by which the Government of Saskatchewan has taken over rent control for the Province, provides that the rental of all housing accommodation for which there was a lease in effect on March 31, 1950, is the maximum rental which may be charged, notwithstanding any change in tenancy. Hereafter, when any change is sought in the rent of any controlled accommodation, permission will be required from the Provincial Mediation Board which the Act designates as the rent control authority.

### Miscellaneous

An amendment to the Credit Union Act provides for the amalgamation of two or more credit unions. If authorized by resolutions passed by at least three-quarters of the members present at a general meeting of each union, any two or more credit unions may amalgamate without any dissolution or division of funds of any of the amalgamating unions. A copy of the resolution, signed by the president and secretary of the credit union, must be sent to the registrar for registration.

The Rural Municipality Act was revised but the sections of labour interest were re-enacted without material change.

An amendment was made to the Social Aid Act, 1947, which enables municipal councils to grant aid and medical and hospital care to indigent persons. The

amendment empowers the Social Welfare Board to enter into a reciprocal agreement with any other province of Canada for the provision of aid and prescribing rules governing residence not inconsistent with the spirit of the Act. The Board may provide assistance on behalf of another province to a person in Saskatchewan who has not acquired residence there and may reimburse another province for providing a similar service on behalf of Saskatchewan.

### Bill not Passed

An amendment to the Fire Departments Platoon Act, 1947, to provide for collective bargaining and compulsory arbitration of disputes was dropped after first reading.

The proposed amendment provided that, on request of a majority of the full-time firefighters of a city, the city council or other body established to manage and operate the fire department should bargain in good faith with the nominated representatives of the full-time firefighters to determine wages and working conditions.

Failing agreement by the parties, the Bill would have required matters in dispute to be referred to an arbitration board of three members consisting of a nominee of each party and a chairman nominated by the first two, or, failing a joint nomination, by the Minister of Labour.

The Bill provided that every award of the board would be binding upon the parties. Each party would assume its own costs and share equally the costs of the third arbitrator.

In accordance with the collective bargaining provisions the proposed amendment would have prohibited any change in local working conditions or privileges accruing to full-time firefighters except through a collective bargaining agreement or the award of a board of arbitration.

## Recent Regulations Under Dominion and Provincial Legislation

In Quebec, the minimum rates have been raised for certain employees of municipal and school corporations. General Order 4 and the special Ordinances have been renewed to May 1, 1951.

The first regulations have been issued under the Newfoundland Dependents' Allowances Act, providing for a maximum annual allowance of \$300 to needy incapacitated adults.

## DOMINION

### Canada Shipping Act

The pilotage by-laws governing four pilotage districts have received amendments.

The by-laws for the districts of Saint John and Sydney were amended by Orders in Council (P.C. 1377 and 1378) made on March 16 and gazetted April 12, with respect to the collection of pilotage dues

and the disposition of the Pilotage Funds.

In the Bras d'Or Lakes district, a minor amendment was made to the by-laws by an Order in Council (P.C. 583) of January 12, gazetted February 22, with regard to the division of the district into areas for the collection of pilotage dues.

An additional charge of 20 per cent for the period of one year has been added to the pilotage dues for the district of New Westminster, by an Order in Council (P.C. 2028) made on April 20, and gazetted April 29.

### **Industrial Relations and Disputes Investigation Act**

A new section (Sec. 18) added to the Rules of Procedure of the Canada Labour Relations Board by an Order in Council (P.C. 1547) of March 28, gazetted April 12, sets out the form of the summons to require any person to appear before the Board to give evidence or produce documents which are in his possession. The summons in the form prescribed will be deemed sufficient for that purpose and may be given by the Chairman or the Chief Executive Officer of the Board, and may be served personally on the person to whom it is directed.

### **Prevailing Rate Employees**

Two amendments have been made to the Prevailing Rate Employees General Regulations by Orders in Council (P.C. 1795 and P.C. 1501) on April 12 and March 24, gazetted April 26 and April 12, respectively (L.G., 1950, p. 224).

The Regulations provide that an employee absent without pay and with leave continuously for over seven working days will not be entitled to leave credit during the month or months in which the whole or any part of the period of absence occurs. By the amendment, this provision will not apply to employees whose absence without pay is due to an injury sustained while on duty.

An amendment to the section setting out the provisions regarding leave of absence on service in the Forces states that an employee to whom such leave is granted must furnish his Commanding Officer with a certificate in the form prescribed for certifying that employees in the public service have been granted leave for military duty and are therefore not eligible for military pay and allowances.

## **PROVINCIAL**

### **Newfoundland Alcoholic Liquors Act**

The employment of minors is forbidden in licensed premises (i.e. hotels, restaurants, lounges, taverns and clubs) during the hours of sale by the first regulations under the Alcoholic Liquors Act, 1949, which were made on March 18, gazetted April 4. The regulations also set out the qualifications necessary to obtain a waiter's licence.

Any person in licensed premises who handles alcoholic liquor in any manner must have a waiter's licence and wear a clean, washable coat while on duty. An application for a waiter's licence, accompanied by a fee of \$1, must be sent to the Board of Liquor Control. The applicant must be either a British subject or a Canadian citizen of good character, and may not have been convicted of an offence punishable by imprisonment within three years immediately preceding his application. A medical certificate stating that the applicant is free from a communicable disease must accompany each application. Licences expire on December 31 but may be renewed annually on payment of the \$1 fee. A new medical certificate must be submitted with the application each year.

The licence must be deposited with the owner or manager of the licensed premises in which the waiter is employed. If the waiter leaves the employment for any reason, the owner or manager must forward the licence to the Board.

The Board may require a person holding a waiter's licence to furnish it with a new medical certificate at any time. In its discretion, the Board may suspend or cancel any waiter's licence and may restore the licence on such conditions as it deems desirable.

### **Newfoundland Dependents' Allowances Act**

Effective from March 1, general regulations have been made under the Dependents' Allowances Act, 1949, by an Order in Council of March 4, gazetted March 28. These are very similar to the Mothers' Allowances regulations which were summarized in the May LABOUR GAZETTE (p. 699).

The regulations prescribe the maximum amounts payable under the Act to adults or families who, through mental or physical incapacity are unable to provide themselves with necessities essential to maintain a reasonably normal and healthy existence. The Act does not apply to persons receiving old age or blind pensions

or mothers' allowances, nor to those whose only claim to such assistance is that they are unemployed.

Every applicant for an allowance must complete application forms approved by the Dependents' Allowances Board and furnish proof of his or her claim as may be required by the Board.

The regulations provide for a maximum annual allowance of \$300 for one incapacitated adult to be increased by \$120 for each additional incapacitated adult in the family. The maximum allowance payable is the allowance in respect of a family of five incapacitated adults (\$780 a year) but the Board may in its discretion grant an additional allowance not exceeding \$20 a month in necessitous circumstances of a special nature.

The maximum annual outside income allowed is \$480. If outside income is in excess of \$480, the maximum annual allowance will be reduced by the amount of the excess. To assess outside income, the Board may establish the value of shelter, lodging, subsistence and all income and resources of the applicant or recipient.

An allowance will not be paid to an adult or family who hold real or personal property exceeding \$2,500 in value in a rural community or \$5,000 in an urban district, or whose combined liquid assets exceed \$750.

Before an allowance is paid on the grounds of incapacity the adult or family must undergo a medical examination by a competent medical practitioner and the incapacity must be established to the satisfaction of a medical referee appointed by the Board. For a period up to six months the Board may accept the certificate of a qualified nurse.

The Board may require proof as to age, residence, marital status, incapacity, economic need or any other qualifying circumstance.

If the Board considers that the adult or family in respect of whom an allowance is to be paid is not capable of using it properly the Board may pay the allowance to a guardian or other person chosen by it.

If a resident of Newfoundland takes up residence in another province, the Board may, upon certification by the proper authorities of that Province that the allowance is essential to the proper maintenance of the recipient, continue to pay an allowance until such time as it has been shown that the recipient has established residence in the other Province.

## Quebec Minimum Wage Act

Amendments have been made to General Minimum Wage Order 4 which governs most workers under the Act who are not covered by special Orders. By the same Order in Council, No. 404 of April 12, gazetted April 22, the twelve special Orders in effect and Order 4 were extended for another year to May 1, 1951.

### GENERAL ORDER 4

Order 4 was amended to exclude from its provisions employees of peat-bog exploitations working in the fields where deposits of peat are located. Employees working at the mill or handling peat in warehouses, however, are covered by Order 4. Further amendments fix higher minimum rates for certain employees of municipal and school corporations, including school attendance officers.

Persons employed by municipal corporations as clerks, secretaries or treasurers who generally work at home or not directly under the control of the employer are to be paid monthly, from July 1, 1950, in county municipalities at least \$35; in local municipalities of over 10,000 population—\$90; from 6,000 to 10,000—\$65; from 3,000 to 6,000—\$55; from 1,500 to 3,000—\$45; from 500 to 1,500—\$35; from 250 to 500—\$25, and in places of less than 250 population—\$15. The minimum rates have been increased by \$10 in each case except in local municipalities of over 10,000 where the increase is \$15. The category covering municipalities with a population of 250 and less is new. The former lowest category was for 500 people and less in which case the rate was \$15.

For persons working under the same conditions for school corporations the minima are now set according to the number of property owners in the school corporation instead of according to population, as previously. In school corporations of more than 2,000 property owners the minimum rate is \$75 a month; from 1,200 to 2,000—\$55; from 600 to 1,200—\$45; from 300 to 600—\$35; from 100 to 300—\$25; from 50 to 100—\$15 and where there are 50 or less—\$10. The former rates ranged from \$55 in school corporations with a population of 10,000 and over to \$10 where there were 500 people or less.

The new rates for attendance officers of school corporations, which are now fixed on the same basis as above, are, in places with over 2,000 property owners—\$25 a month; from 1,200 to 2,000—\$18; from 600 to 1,200—\$15; from 300 to 600—\$12; from 100 to 300—\$8; from 50 to 100—\$5; and less than

50—\$3. Previously the rates, which were based on the population of the school district, ranged from \$15 where there were 10,000 and over, to \$2 where there were 500 or less.

#### RENEWALS

General Order 4 and a number of special Ordinances have been extended for another year to May 1, 1951.

The special Ordinances renewed include Order 2, requiring payment of time and one-half for overtime; Order 3, providing for a week's annual holiday with pay; Order 5, governing silk textiles; 8, cotton textiles; 11, charitable institutions; 14, real estate undertakings; 19, full-fashioned hosiery; 23, taverns in Montreal; 26A, taxicabs in Montreal; 29, taxicabs in Quebec; 37, manufacturing of glass containers; and 39, forest operations.

## Legal Decisions Affecting Labour

*The Supreme Court of Canada has held that union officers were within their rights in stating the conditions under which union men were prepared to work, even if the result was loss of contract to a non-union contractor. ¶No damages were awarded to a Manitoba farm labourer for injuries caused by his own negligence. ¶The Manitoba Appeal Court quashed a Workmen's Compensation Board order which declared an injured student trainman to be a "workman" under the Act and prohibited the Board from awarding compensation. ¶Union officials were found guilty of contempt for disobeying a B.C. Court order to reinstate a union member.*

### **Union officers not guilty of wrongful interference with contractual relationship between Hamilton master plumber and building contractor.**

The Supreme Court of Canada in a judgment delivered by Mr. Justice Estey on February 21, 1950, dismissed the appeal of a master plumber in the city of Hamilton against the business agent of Local 67 of the United Association of Journeymen Plumbers and Steamfitters of the United States and Canada and the official organizer of the union in Canada. The appellant contended that the business agent had conspired with the members of Local 67 and the national organizer "to injure and obstruct by unlawful means the appellant in the pursuit of his business" in consequence of which he lost a contract. This decision upheld the judgment of the Ontario Court of Appeal (L.G., 1949, p. 620) and the trial court.

The charges were concerned with contracts in respect of the construction in 1945 of a large building for Procter & Gamble Co. of Canada Ltd. at Hamilton. A Cleveland engineering company, which had the main contract, entered into a sub-contract with the Cooper Company of Hamilton for the construction of the building, the engineering company itself undertaking to install all the special equipment and process piping. The Cleveland company had an agreement

with the international union under which it could employ upon the construction of this building only union men. The Cooper Company called for tenders for some of the plumbing work and as a result offered the contract to the appellant, who began operations, doing a small amount of work and ordering some materials. The business agent of Local 67 and the union organizer, then brought to the attention of the representative of the Cleveland company and the Cooper Company that he was a non-union employer. They pointed out that, as the constitution of the union provided that no member of the union was permitted to work on any job where non-union men were employed on similar work, it would interfere with the rest of the operations. As a result the Cooper Company informed the appellant that all the men he put on the Procter & Gamble project must be union men. After a week's time, during which the appellant tried unsuccessfully to make a contract with the union that would permit him to employ non-union men, the Cooper Company notified him that since he could not comply with the conditions they were "unable to enter into the contract". At their request he signed the following release: "I hereby accept the above notice and release you from all responsibility or liability or damages which I have suffered or may sustain by reason of your being unable to enter into such a contract".

After examining the evidence concerning the conversations the business agent and the union organizer had with the Cleveland company representative, Mr. Justice Estey found nothing in their language that would support a submission that the Cleveland company was "threatened, intimidated, coerced or in any way forced to take the position which it did". The union men were within their rights also in pointing out the difficulties that the employment of non-union men would involve. His conclusion was that

Throughout the evidence establishes that the respondents did no more than what they individually conceived to be their respective duties as officers of the union and Local 67. The evidence as to their conduct does not support a conclusion that they conspired or in any way agreed or combined to injure the appellant.

The appellant's second complaint was that the business agent and the union organizer conspired to prevent him from obtaining a contract with the union. It was established by the evidence that Local 67 enters into agreements with the Master Plumbers' Association at Hamilton but not with individual master plumbers. The members of Local 67 are journeymen plumbers who are received into membership upon receipt of individual application. The appellant knew this, but he did not endeavour to obtain membership in the Master Plumbers' Association and the journeymen plumbers in his employ did not apply for membership in Local 67. The union had a right to take the position that it would deal only with master plumbers who were members of the Master Plumbers' Association and that journeymen plumbers should apply individually for membership.

Separate judgments were given by Mr. Justice Rand and Mr. Justice Locke, both agreeing with the main judgment that the appeal should be dismissed. It is now established beyond controversy, Mr. Justice Rand stated, that in the competition between workmen and employers and between groups of workmen, concerted abstention from work for the purpose of serving the interest of organized labour is justifiable conduct. There is a distinction between such action for the purpose of "strengthening or defending a recognized and accepted social interest" and a primary interest to injure a competitor. The evidence clearly establishes that the purpose of the respondents was to serve the interests of the union and was not directed at injury to the appellant. Stating the conditions necessary to a willingness to work, even when those conditions relate to an existing contract, is not illegal. In

summing up, Mr. Justice Rand made the following observations:—

A building contractor who, in the conditions of labour organization today, contemplates available labour as unaffected by its own special interests, proceeds on a false assumption; he is familiar with the everyday refusal of union employees, for a variety of reasons, to enter upon work. The market of labour is, therefore, restricted by considerations of competing interests which are now part of the accepted modes of action of individuals and groups.

*Newell v. Barker and Bruce*, (1950)  
2 DLR, 289.

***Court holds injury to farm labourer result of his own negligence and employer therefore not liable for damages.***

The Manitoba Court of Appeal, on January 16, 1950, reversed a decision of the Court of King's Bench which had awarded \$4,447.33, two-thirds of the damages claimed, to a farm labourer who had his right hand severely injured while assisting to operate an unguarded circular saw (L.G., 1949, p. 621). In giving judgment, Chief Justice McPherson held that the injury resulted from the workman's own negligence.

The plaintiff, who was employed by the defendant as a farm hand, was assisting the defendant's foreman to cut logs into firewood with a power-driven saw. The foreman was standing on the east side of the saw lifting the logs and placing them on the platform to be sawed. The plaintiff was standing on the west side of the saw, assisting in the sawing and throwing aside the pieces as cut off. They were sawing wood in lengths of from 12 to 15 inches and had been working for about 20 minutes when the accident occurred.

There was some contradiction between the evidence of the plaintiff and the foreman as to the position of the log at the time of the accident. According to the plaintiff, the end of the log had been pushed 4 or 5 inches past his side of the saw blade. He stated that he took hold of the protruding end with his right hand and reached past the blade of the saw and put his left hand on the log at the east side of the saw. He had no recollection of what happened immediately after that. The foreman, on the other hand, stated that the log was 6 inches on his side of the saw at the time of the accident. He did not, however, actually see the accident happen.

After reviewing the evidence in considerable detail, His Lordship concluded that it was solely through the carelessness of the

plaintiff that the accident occurred. The saw was of the ordinary type used for sawing wood, and the plaintiff required no special instructions or warning as to its use. According to the evidence, the plaintiff was an intelligent man and knew that the normal length of the log required was between 12 and 15 inches. Seizing the log and placing his left hand on the east side of the blade in order to cut off six inches appeared to His Lordship to have been an unnecessary and unreasonable action. The teeth of the revolving saw, at the point where they contacted the log, were going downward, and if the mitt on the plaintiff's hand came in contact with the teeth of the saw it would have the effect of dragging his hand onto the blade.

Having arrived at the conclusion that the sole cause of the accident was the carelessness of the plaintiff, there still remained two questions. Was there negligence on the part of the defendant in not giving special instructions to the plaintiff and warning him of the danger existing in the operation of the saw? And was there negligence by the defendant in not having a guard on the saw?

His Lordship stated that the saw was of a kind in common use in the province during the past 50 years and that it was not defective. To any intelligent man it would clearly be evident that if he attempted to touch it during its operation he would be hurt. He could not see that any reasonable man would require to be warned of the danger and, therefore, he held that there was no negligence on the part of the defendant in not giving special warning and instructions.

As to the argument that a guard should have been placed on the saw, the Chief Justice found that there was no evidence showing how such a guard could be constructed which would protect the operator when feeding the saw. Reference had only been made to a guard built for the purpose of protecting the operator from injury from the disintegration of a saw due to defective workmanship or excessive speed. This guard, however, is only over the back and top of the saw to keep it from flying in various directions and would not protect the operator in so far as the face of the saw was concerned.

His Lordship could not agree with the trial Judge when he held that any guard would be better than none and that it would warn the operator that the saw was dangerous. On the contrary, His Lordship considered that it would mislead the operator into thinking that he was being protected.

He was, therefore, of the opinion that there was no evidence which showed either that the saw required to be guarded in a manner which would eliminate the possibility of injury or that there was any way in which it could have been guarded.

The appeal was therefore allowed, with costs both in the Appeal Court and in the Court of King's Bench.—*McShane v. Hole* [1950] I WWR 279, and [1950] I DLR 709.

***Workmen's Compensation Board order declaring an injured man to be a "workman" under the Act quashed by Manitoba Appeal Court. Board prohibited from awarding compensation.***

On March 9, 1950, Chief Justice McPherson of the Manitoba Court of Appeal quashed an order of the Workmen's Compensation Board of Manitoba and prohibited the Board from awarding compensation to a student trainman injured while boarding a Canadian Pacific Railway train. The Court found, contrary to the Board order, that the injured man was not a "workman" within the meaning of the Workmen's Compensation Act. On the grounds that the Board had exceeded its jurisdiction, the Court held that it had authority to quash the Board's order.

The facts of the case as found by the Court are as follows: The man had applied to the assistant superintendent of the railway at Souris for a position as trainman. He was told that before he could qualify, he would have to make trips as a student on the Company's trains. The superintendent authorized him to take such a trip on August 30, 1949, from Souris to Brandon and return. He was instructed to perform and did perform certain services on the trip under the supervision of the regular employees of the Company. When he attempted to board the train in Brandon, he was severely injured.

The Board made an order which the Company disputed holding that the injured man was a workman within the meaning of the Workmen's Compensation Act. The matter came before the Court on a motion of the Company for a writ of *certiorari*.

Chief Justice McPherson referred to the two sections of the Act which were relevant to this case, Sections 2 (1) *r* and 44. Section 2 (1) defines "workman" to include:—

a person, whether under the age of twenty-one years or not, who has entered into or works under a contract of service or apprenticeship, written or oral, express or implied whether by way of manual labour or otherwise. . . .

Section 44 (1) reads as follows:—

The board shall have exclusive jurisdiction to examine into, hear and determine all matters and questions arising under this Part and as to any matter or thing in respect of which any power, authority or discretion is conferred upon the board, and the action or decision of the board thereon shall be final and conclusive and shall not be open to question or review in any court, and no proceedings by or before the board shall be restrained by injunction, prohibition or other process or proceeding in any court or be removable by *certiorari* or otherwise in any court.

His Lordship stated that if the injured man was a workman under the Act, Section 44 (1) would be applicable in the case, and the decision of the Board would not be subject to review.

There were two questions to be considered. First, was the injured man an employee of the Company and, secondly, had the Board exclusive jurisdiction to decide the question and deal with the claim made by him or was there jurisdiction in the Court to quash the Board's order?

In regard to the relationship between the injured man and the Company, the Company contended that the man was to learn the rules governing the operation of trains and give demonstration of his ability to perform the services which he would be required to perform if he were employed by the Company as a trainman. The Company filed a statement signed by the injured man on August 29, to the effect that he acknowledged that he was not employed by the Company in making the student trip. He was acting solely for his own benefit and purposes. Further, he released the Company from all claims against it in respect of any injuries which he might sustain in taking instruction.

It was admitted by the Company that if the man were an employee of the Company, this waiver as to the claim for injuries which he had signed would not be effective. However, it was submitted by the Company that the statement did set forth the relationship in so far as alleged employment was concerned.

The Court referred to previous legal opinions on this point and concluded that in this case the relationship between the parties was not such as to justify any inference being drawn that there was any agreement whereby the man became an employee of the Company. Further, in this case, the man did not have to report to the Company unless he wished. He could leave at any time and could not be disciplined or punished and he was receiving no payment. His attendance was entirely voluntary and for the purpose of demon-

strating that he was a person suitable to be employed as trainman.

The Court therefore found that at the time of the accident the man was not a workman employed by the Company within the meaning of the Workmen's Compensation Act.

In considering whether the Board's finding that the man was a workman under the Act was final and conclusive, or subject to quashing by the Court, His Lordship referred to numerous cases in which a similar point had arisen. In the case of *Can. Nor. Ry. v. Wilson* [1918], the then Chief Justice of Manitoba stated:—

The Court can only interfere where the powers given by the Act have been exceeded or where a fundamental principle inherent in the Act has been disregarded so that a want of jurisdiction in its officers supervenes.

Chief Justice McPherson, therefore, concluded that the Court could review the question of whether the Board had jurisdiction to make the order declaring that the injured man was a workman under the Act. The Court held that the Board had exceeded its jurisdiction in making the order; that the order should be quashed and the Board prohibited from awarding compensation to the injured man.

The Company was awarded the costs of the action. *In re: The Workmen's Compensation Act, Canadian Pacific Railway Company and Order A-43151 of the Workmen's Compensation Board.* [1950], 1 WWR 673.

### ***Union officials found guilty of contempt of Court for refusing to reinstate union member on Court order.***

For giving effect to the illegal expulsion from the union of Myron Kuzych, a former union member, and refusing to grant him a membership card in the union, two union officials were found guilty of contempt of Court and committed to prison. The judgment was delivered on December 14, 1949, in the Supreme Court of British Columbia by Mr. Justice Whittaker.

In a previous judgment, on September 22, 1949, Mr. Justice Whittaker awarded Kuzych \$5,000 in damages and issued an injunction restraining the union officials from carrying out the resolution of the union purporting to expel him. Kuzych was also declared to be a member in good standing of the union, the Boilermakers' and Iron Shipbuilders' Union of Canada, Local No. 1 (L.G., 1950, p. 219). This was the second time that Kuzych had been awarded damages for wrongful expulsion.

The main difference between Kuzych and the union has been his attack on the closed shop principle.

After the action of the previous case had commenced but before the trial, the defendant union and two other unions amalgamated to form the 'Marineworkers' and Boilermakers' Industrial Union, Local No. 1. The former union surrendered its charter and received a new charter from the same federation, the Shipyard General Workers' Federation of B.C. When the amalgamation took place, all members of the three unions who were in good standing were automatically admitted to membership in the new union without making any application. The members of the defendant union received membership cards bearing the same numbers as those held before amalgamation.

His Lordship reviewed the attempts made by the plaintiff to obtain a membership card from the union. He was told several times when he went to the office that there was no card for him. He wrote two letters for this purpose and tried to attend several union meetings but was unsuccessful in both cases.

The Court pointed out that reinstatement as a member in good standing was a matter of particular importance to the plaintiff since the union had a closed shop agreement with a shipbuilding company at which he had been employed as a welder. When he was expelled from the union, he lost his employment.

The motion in the case was to commit the president of the union for contempt for "giving effect" to the illegal expulsion by refusing to recognize the plaintiff as a member in good standing in the union. It sought also to commit the secretary-treasurer of the new union, whose duty it was to issue membership cards, for aiding and abetting the president in such refusal having full knowledge of the terms of the injunction.

The first contention of the defendants, in opposition to the motion, was that the new union was not a party to the action and since the former union was no longer in existence there was now no union in which the plaintiff could seek membership. His Lordship ruled that this objection must fail for the following reasons: A trade union is not an incorporated body. By his illegal expulsion, the plaintiff was deprived of his right, with all its attendant advantages, to be one of a certain group of fellow workmen. That group of workmen is still in existence although now associated with other groups and known by a different name. It operates under a charter

issued by the same body and under a constitution and by-laws identical to all intents and purposes with the constitution and by-laws under which it formerly operated.

That the new union considered its interests identical with those of the defendant union, so far as the issues in the action are concerned is clearly shown by the fact that the new union continued to defend the action after the amalgamation and gave instructions for an appeal. . . . To assume responsibility for the defence of the action but to repudiate responsibility when the defence fails is, in my opinion, an untenable stand for the new union to take.

In dealing with the second contention of the defendants, namely, that the judgment in the previous case did not direct that a membership card be issued to the plaintiff, Mr. Justice Whittaker considered that this was not an answer. The order that the defendants be "enjoined and restrained from giving effect" to the illegal expulsion was sufficient.

When the intention of the Court is clear, persons who are subject to the Court's order ought not to be allowed to split hairs in an attempt to evade the order. . . . The Court is not bound to take notice of the union by-laws. If the by-laws make provision for a union card, the plaintiff must receive one or those refusing it will be guilty of contempt of Court.

The third contention of the defendants was that the secretary-treasurer could not be committed for contempt, since he was not a party to the action. His Lordship said that this made no difference and quoted from *Seaward v. Paterson* [1897]:

. . . if a person who knows that an injunction has been granted aids and abets in committing a breach of it the Court of Chancery has jurisdiction to commit him for contempt although he is not a defendant in the action and is not a person against whom the injunction has been granted.

In conclusion, His Lordship found that the president and the secretary-treasurer, both being familiar with the circumstances, both defence witnesses at the trial, both holding high office in the union, were treating the Court with contempt in their refusal to issue the plaintiff a union card. They were committed to prison and ordered to pay costs of the motion. *Kuzych v. White, et al* (No. 4) [1950], 1 WWR 325 and [1950], 1 DLR Part 8, 537.

\* \* \*

According to press reports, Chief Justice Sloan of the B.C. Court of Appeal recently allowed the appeal of the defendants against the judgment summarized above.

# UNEMPLOYMENT INSURANCE

## Selected Decisions of Umpire Under the Unemployment Insurance Act

*Held that the claimants lost their employment by reason of a stoppage of work due to a labour dispute in which they were directly interested and that they were rightly disqualified from the receipt of benefit for so long as the said stoppage continued.—CU-B 570 (May 2, 1950).*

### DECISION:

The claimants filed an initial application for benefit on July 5, 1949; James R. Pratt at the Ottawa local office and Walter F. Boulton at the Hull local office. They both reported that they had worked for Mortimer Limited, printers, etc., Ottawa, Ont., for a number of years as lithographers, and had lost their employment on June 30, 1949. As the reason for separation they stated:—

“Plant closed down (Lockout).” (J. R. Pratt.)

“Laid off because the union asked for a pension plan.” (W. F. Boulton.)

On July 7, 1949, the Ottawa local office wrote the following letter to the Industrial Relations Board, Federal Department of Labour, Ottawa:—

“A labour dispute is reported between Mortimer Limited, 95 Beech Street, Printers and Lithographers, and the Amalgamated Lithographers of America, Local 40, CIO Affiliate.

The employer's statement is as follows: Mr. Campbell (Local Manager of Mortimer Limited) informed us that both groups have been operating through a joint agreement. Some time ago the Union made a request for changes in the agreement, seeking an increase in wages and a shorter work week. On failure of both parties to reach an amicable agreement, it was agreed to ask that a Board of Arbitration be set up to review the points of disagreement. This board was duly established in accordance with Department of Labour procedure. The board met, and after hearing all the evidence as submitted by both parties, subsequently rendered a unanimous decision which was accepted by the Employers Association in all its aspects. The union saw fit to reject same on the bases of hours to be worked per week, and insisted on the adoption of their original demand for 37½-hour week, in lieu of a 40-hour week as recommended by the Board. At a subsequent meeting held presumably in Toronto between both parties concerned, the Union still demanded a reduction of 2½ hours per week, and the Employers still refused to depart from the recommendations of the members of the Arbitration Board. The situation then became of such a nature that it seemed impossible to reach an amicable settlement.

The employers then notified the Union representatives, that in the event of their going on strike against any one member firm in their group, that the Employers would consider them to be on strike against all member firms in the employing group, and would take action in accordance with the above decision.

Therefore, Mr. Campbell, General Manager, received notice from the head firm which is Lawson Lito. Co., Toronto, to lay off all members of the Amalgamated Lithographers of America, in accordance with the above noted decision, of which the Union was aware. Up to the present this affects 17 plants in Toronto, 4 in London, 2 in Hamilton and 1 in Ottawa. There being no other Unions operating in this plant, no other departments are affected up to the present.

The following is the Union's statement: Mr. Fournier, President of the Local Union, stated that his Union is the certified bargaining agent of the certain employees of Mortimer Limited, and that on Thursday, June 30 at 12.00 noon notice was delivered to him by the Plant Superintendent the department would be closed until further notice, signed by Lawson Lithographer Company, Mortimer Limited Branch.

There has been no meeting or discussions between Local 40 and the firm concerned. We understand that a copy of their agreement is on file in your office.

There are twelve persons affected, 10 being journeymen lithographers, and 2 apprentices.”

The claimants were disqualified from the receipt of benefit by the insurance officer under Section 39 of the Act as from July 5, 1949, and for as long as the stoppage of work continued.

From that decision both claimants appealed to a Court of Referees stating that they were members of Local 40 and that they wished to be represented before the Court by the president of the local, Mr. Fournier.

The following letter which was sent by the company to its lithographers, on August 19, 1949, was placed on record:—

“As explained to Mr. Fournier Saturday morning, each day that this strike persists increases the likelihood that this company will close its lithographing operations permanently.

Please, therefore, consider yourself free to seek work elsewhere. The Company will not likely have work for you when the strike is over.”

A Court of Referees which sat in Ottawa, on September 14 and 21, 1949, rendered the following unanimous decision in the case of James R. Pratt:—

"This matter came on for hearing at the sittings of this Court held the 14th of September, when the claimant appeared with Mr. Fournier, president of the Local Union, Mr. Keenleyside from a Toronto Local Union, Mr. Dunn representing the International Lithographers of America, Mr. Ford, spokesman for the Union, Mr. Campbell, Local Manager of Mortimer Limited and Mr. Hayes, representing a Toronto Local Union; and the decision having been reserved to this day, the Court further heard the claimant, Mr. Dunn and Mr. Vessie representing Mr. Fournier.

The claimant is a Lithographer heretofore employed by Mortimer Limited, Ottawa, as a transferrer. He is a member of the Local Union of the Amalgamated Lithographers of America, while his former employer, Mortimer Limited, is a member of the Canadian Lithographers Association.

The Canadian Lithographers Association and the Amalgamated Lithographers of America entered into a collective agreement covering several Provinces, including Ontario, for one year, to December 31, 1948. Unless terminated by a Notice from either side in the month of October, that agreement automatically continued in force for a further year. The document embodies in its scope among other things, rates, scaling, and adjustment of wages, hours of work, branches of the trade, overtime, holidays, regular employees, vacations, production limit, discrimination, exclusions, etc.

The Local Union of employees and the Local Branch of employers were bound by the action of their respective Head Association. The evidence has shown the above facts and also that the collective agreement was determined by the Head Association of employees in October of 1948, who at the same time submitted certain demands to the Head Association of employers on behalf of all member Unions of employees, and in particular, respecting wages, pensions, hours of work and vacations.

Before December, 1948, in consequence of such demands, two meetings had taken place between the Head Associations of employees and employers to discuss the said demands but without success. After December, 1948, both bodies continued their bargaining and carried the matter before a Conciliation Board of the province of Ontario. This board made a report which was rejected by the employees, but accepted by the employers. The Head Association of employers had therefore warned the Amalgamated employees that any strike by a Local Union would bring about a general closing down of all shops under its control. Accordingly, following the local strike in Toronto, all said shops were shut down including the affiliated shop of Mortimer Limited, in Ottawa. Hence the Appeal by the present claimant.

The task of this Court is first, to determine whether the claimant lost his employment by reason of a Labour Dispute, and, consequent upon our decision, whether the claimant is entitled to Insurance benefits. At the close of the evidence Mr. Ford delivered the argument for the appellant, contending:—

- (1) That each Local Union is independent and speaks for itself.
- (2) That the matter before the Court concerns points other than Ottawa.

- (3) That the Union did not legally interfere with the management of the Mortimer Company of Ottawa that there was going to be a strike.

Considering these contentions in their inverse order, the Court takes the stand that the closing down by the employer is a matter of fact; that the collective agreement makes no provision for such happening, and that such closing down was admittedly the direct result of a Labour Dispute that had been lasting since October of 1948 between the parties concerned. It is just as feasible for the employer to close down as it is for the Union to strike.

As to the present case being in respect of 'points other than Ottawa', the evidence discloses that the claimant is a resident of this city, that he is employed by Mortimer Limited of Ottawa, that this employer declared a shut-down shop on June 30, last, in Ottawa, when the claimant was actually employed.

Regarding the first contention that each Local Union is independent, the evidence also discloses that the Local Union concerned is affiliated with the Amalgamated Lithographers of America, which is a party to the agreement; that it accepted to work under the conditions of such agreement; that it was generally governed by it in regards to employment, and that it agreed to the demands being made by that body in October, 1948; that it never objected to the negotiations being carried on by the Head Association in respect of said demands, and that had such demands been complied with by the employers, the Local Union and its members would have benefited by the result.

It must also be remembered on principle, that every unit in an Association does sacrifice all or part of its independence by such union for the good of all. The members of every Union are pledged in some way to take the consequences, good, bad or indifferent of their free and deliberate association.

It is also significant that the members of the Local Union are at present and have been in receipt of benefits during this stoppage of work, which are paid by their Head Union, who signed the collective agreement by their accredited Officers.

It is not denied that the members of the Local Union did not return to work and do not desire to return until settlement of the present dispute, by reason of their unwillingness to be branded as strike breakers. This tends to show that they have made the Toronto strike their own. Hence their solidarity and lack of Local independence.

The Manager of the Local employer stated that he and the Local Union could have easily met and discussed the demands, apart from the head executives and thereby possibly avoid the present stoppage of work.

It is further contended that the lockout happened when the agreement had been determined, and that consequently it was not binding on the parties.

It must be noted, however, that the dispute clearly started before the termination of the agreement, and that the men continued to work and to be employed after the termination, under the very terms of that agreement, until June 30, 1949. No settlement nor resumption of the work have yet taken place.

In view of the definition of the term 'Labour Dispute' as enacted by Section 2 (1) (d) of the Act, and applying the elements of such definition to the facts in the present case, the Court is bound to declare that the stoppage of work at Mortimers Limited, Ottawa, on June 30, 1949, was the direct result of a long drawn Labour Dispute. Consequently, the claimant lost his employment by reason of such stoppage of work, and his Appeal for the above reasons is dismissed.

The foregoing decision is in conformity with the statement regarding the characteristics of a Labour Dispute and the principle involved in CU-B 190 and 379."

In the case of W. F. Boulton a Court of Referees which sat in Hull, P.Q., on October 27, 1949, unanimously held that the claimant had also lost his employment by reason of a stoppage of work due to a labour dispute but considered that he was entitled to benefit under the Act as of August 19, 1949, the date on which the employer informed him by letter of his dismissal.

From the decisions of the Courts, appeals were made to the Umpire; by Local 40 of the Amalgamated Lithographers of America, in the case of J. R. Pratt and by the insurance officer in the case of W. F. Boulton.

An oral hearing was requested and it took place in Ottawa, on December 20, 1949. Local 40 and the claimants were represented by Messrs. Guy Desaulniers, barrister and solicitor, and R. Ford. The Unemployment Insurance Commission was represented by Lt.-Col. H. S. Relph, K.C., Chief Claims Officer and Mr. J. D. Durocher, one of his assistants. Also present were Mr. Fournier, president of Local 40 and the claimant, W. F. Boulton.

Besides his oral representations, Mr. Desaulniers submitted a memorandum, dated April 13, 1950, wherein he states in part:—

".....  
At the outset of the trouble with the Mortimer Company in Ottawa it was clearly shown that it was nothing to do with either the local management or employees. There had been no negotiations between the employer and the employees. The employees were given no warning of any impending trouble in Ottawa until the employer posted a notice on the notice board of the shop that as of 12 noon there would be no work in the department concerned. *That cannot be construed to be a Labour Dispute.* The one point that was overlooked in the decision of James Pratt was the fact there was no negotiations or dispute at all between the company and the organization....

Your Lordship, we feel that if the Employers Association could keep their Halifax plant open, which is owned and operated by the same group that control the Mortimer plant in Ottawa, the same should have been the case in Ottawa, Halifax was under the same contract as the Ottawa plant had been working under the same conditions

after the expiration of the contract as Halifax, Your Lordship, it is our opinion that the employers had decided to close their plants to all except the Halifax plant for one specific reason: *To break the spirit of the men who had been faithful to them for many years and to break the organization to which Pratt belonged....*

In the matter of keeping the Halifax plant open, there must have been a good reason for such action.

*'Could this plant have been kept open to do the work previously done in the Ottawa plant?'*

*'Had the Mortimer Company any ideas of doing work formerly done by lithography by another process?'*

We are submitting for your perusal, Your Lordship, samples of work done in Halifax which was formerly done in the Ottawa plant.

First, there is samples of lithography.

Secondly, there is work formerly done by lithography being done by letter press method.

In a letter of August 10, 1949, Mr. Tom Lawson writing to a friend of his used the following words:—

*'Today is historic in that we have decided to dispose of our last lithographic stone press. With more modern processes it is no longer economical to run drug labels by hand transferring.'*

*'As you probably appreciate, the decision to discontinue the process has been under consideration for some time.'*

On August 8, 1949, Mr. Tom Lawson again wrote:—

*'Work is now being transferred at a terrific rate to other printing processes. Obviously once the changeover has been made a large percentage will not come back to lithographing. Each day that passes sees further jobs being lost to your process.'*

These letters are very significant, Your Lordship, in that they show the trend of the Mortimer mind, and to the best of our knowledge no other employer has ever used such language to their employees....

We contend there was no labour dispute with the Ottawa Company. After the expiration of the former agreement the men worked under the same conditions as the former contract and were prepared to work until such times as a new contract could be drawn up.

We contend that the letter sent by the Ottawa Mortimer management to the employees of the lithographing department was a dismissal in the meaning of the Act.

We contend that the Ottawa Mortimer Company could have kept their plant in Ottawa open the same as they did with their plant in Halifax—working without any contract the same as had been done in Halifax and which had been done by the Ottawa plant until the notices had been posted to every individual of the department.

We contend that the stoppage of work ceased at the time of the transfer of work from the Ottawa plant to the plant owned and operated by Mortimer Limited in Halifax.

We contend that the transferring of work from lithography to letter press was part of the resumption of work as envisaged by the same Mortimer plant owners.

We contend and is a matter of fact, that *the Halifax plant had never been served with the notice that they would be closed by any action of any other plant.*

We contend that the employees of the Ottawa Mortimer plant were in the same position as that of Halifax and were working under the same conditions as the Halifax plant until they were dismissed by the letter of August 19, 1949.

We contend that the employees of the Mortimer plant of Ottawa, were not bound by any agreement other than that acceptable to the local employees, whereas the local manager of the Ottawa plant has admitted that he had no power to negotiate or talk to the men of his plant, which right is accorded to the employees of the Ottawa plant under Ontario Labour Law.

In the settlement which has been affected between the Employers' Association and the workers involved, the Employers' Association have not kept to the facts as stated by them in their statement to the Insurance Officer in Ottawa at the time of disqualification of Pratt and Boulton, when they stated: 'If one group takes action against us we will consider it as an action against the Employers' Association as a whole'.

Your Lordship, to give you definite proof of our contention that these men in Ottawa were not bound by any action of any group, we would state to you now that the men in Ottawa are back at work, while there are *three shops or firms in Toronto that are not working at all.*

The evidence clearly indicates that on June 30, 1949, the date on which the claimants lost their employment with Mortimer Limited of Ottawa, there was and had been for some months prior to that date, a labour dispute between the Canadian Lithographers' Association of which that employer is a member and the Amalgamated Lithographers of America which includes local 40 of Ottawa.

It is contended by the claimants' representatives that there had been no personal negotiations between the Mortimer Company of Ottawa and Local 40 and that inasmuch as the lithographers of that company were willing to work, there was no local dispute and consequently they should not have been penalized under the Act for what happened in the lithographing trade in another part of the Province.

It is difficult to reasonably conceive that on June 30, 1949, Local 40 could have disassociated itself from the Amalgamated Lithographers of America which, as pointed out by the Court of Referees, had entered into and signed the 1947-1948 collective bargaining agreement on behalf of that local as well as all the other Canadian locals and had also on their behalf, since October, 1948, carried on negotiations with the Association for the purpose of obtaining a new contract with better conditions of work, which negotiations led to the setting up of the provincial conciliation machinery and finally to a deadlock when the Amalgamated Lithographers of America refused to accept the recommendations of

the Conciliation Board and struck four plants in Toronto.

The lithographers of Mortimer Limited, of Ottawa, might have been willing to work on June 30, 1949, but the company, in accordance with a resolution of the Association which called upon its members to close down owing to the union's action in Toronto, was unwilling to give them work until such time as conditions of work agreed upon by both parties could be arrived at. Consequently, the company locked out the lithographers, thereby creating, at the premises, a stoppage of work within the meaning of Section 39 of the Act. This stoppage of work continued, while negotiations were going on, until the early part of December, 1949, when a settlement providing for improved conditions of work, was affected and all but two employees were taken back in the lithographing department of Mortimer Company.

The claimants' representatives attach a great deal of importance to the notice of dismissal which was posted "on the notice board of the shop" on the morning of June 29, 1949, and to the letter which was sent by the employer a few weeks later (August 19, 1949) to the lithographers informing them that they were "free to seek work elsewhere".

It is a necessary feature of a stoppage of work caused by a labour dispute that engagements are terminated and the mere fact that the initiative comes from the employer does not render the matter beyond the concept of a labour dispute if his action is taken in consequence of unwillingness on the part of the workmen to agree to his demands or proposed terms of employment. It is true that the employer in his letter of August 19, 1949, seemingly considered the separation as final but it was only a subterfuge which is not infrequently used in a dispute of this nature. To quote the employer's own words (Exhibit 10, which was produced at the hearing) "our letter of August 19 was simply an expedient to influence our men to return to work".

Mr. Desaulniers has submitted extracts from letters written in the early part of August, 1949, by the head of the firm, to the effect that the lithographing process was being transferred gradually to another printing process. Such may be the case but the evidence on file certainly does not permit one to reach the conclusion that that, any more than any other reason which might be taken as the cause of a substantial lay-off, such as, difficulty of carrying on operations due to actual or anticipated shortage of material or loss of markets for the outflow of the products,

was the underlying reason for the separation from work of the lithographers on June 30, 1949.

Mr. Desaulniers also argued that in view of the fact that the Halifax plant remained open, notwithstanding the threat by the Association that all plants would be closed down in the event of a strike against any one employer, the Mortimer company should also have kept its plant open and continued to work without any contract.

The fact that the Association for reasons of convenience or otherwise, did not utilize its full resources in the dispute, does not alter the main issue. The Association could have chosen to have kept the Mortimer plant open but it did not. The stoppage of work at that plant is purely a matter of fact, and the Umpire has not to deal with the merit of the strategy used by parties involved in a labour dispute.

In any event, it seems that in view of the publications such as the two quoted below which among others are on file, the claimants' representatives are in a rather awkward position in arguing that Local 40 or any of the other locals of the Amalgamated Lithographers of America was not concerned with the then prevailing labour dispute:—

*Ottawa Citizen*  
(November 24, 1949.)

*"Lithographers returning to work Monday.*

The twelve local members of the Amalgamated Lithographers of America (CIO-CCL) expect to return to work next Monday, according to Raoul Fournier, president of Local 40, Ottawa.

The men, all employees of Mortimers Limited, have been out of work since June 29, while the protracted negotiations between the union and the Canadian Lithographers Association, representing 36 plants in Quebec and Ontario, have been going on. 'Part of the parcel we asked for is better than none at all', Mr. Fournier told the *Evening Citizen* Wednesday.

He said he was meeting the association in Toronto on Thursday to iron out the minor points not covered in the settlement announcement which dealt only with the major points at issue—wages and welfare. . . .

'The two main points have been looked after, and if my Toronto talks are successful, the local men will be able to vote their approval of the entire settlement on Friday morning,' the union leader stated. 'We have every hope that these minor points will be ironed out,' he continued.

The employees of the union, 850 in all, have been drawing what Mr. Fournier called 'substantial benefits higher than any strike benefits ever paid a union before,' during their five-month loaf. These have been paid by the Amalgamated Lithographers of America, who control 98 per cent of all lithographers in Canada.

The union has therefore been in a very substantial position to negotiate and reports that only about one per cent of the men left the union during the protracted settlement period."

*Lithogram*

(Published Monthly in the interests of Union Lithographers by Local 12, Toronto..)

*To the Delegates*

*The Canadian Congress of Labour Convention in Session*

GREETINGS:

.....  
After negotiating with the Canadian Lithographers Association since November 1, 1948 to no avail, our union struck 4 shops in the city of Toronto, involving a total of 56 men, for the sole purpose of forcing the employers to bargain in good faith. These employers locked out in 40 shops in the cities of Toronto, Hamilton, London, Ottawa and Montreal, a total of 796 of our members. The fight has now been going on for 14 weeks with no sign of settlement. Our members are determined to fight to the finish to obtain a contract to which they are rightfully entitled. We know that the employers have decided to attempt to smash our union as an object lesson to all organized labour. Our members on the picket line in Eastern Canada are determined that shall not happen. Twenty-five thousand members of our organization spread out from Hawaii to Nova Scotia, will back us to the finish. *This fight costs money.* We have fought for 14 weeks *on our own* and paid substantial benefits to our members; members who for years have seen the wisdom of a strong union emergency fund and have paid *\$2.50 dues per week in order to attempt to maintain themselves in a fight without appealing for aid.*

This is a national and international fight. The method of locking out union men is a bold strategy on the part of the employers; and if it should succeed, Steel Workers in Hamilton may find themselves locked out because of a dispute in Nova Scotia. Electrical Workers in Toronto may find themselves locked out owing to a dispute in Montreal. This is *your* fight as much as ours.

We appeal to you for assistance, and we know you will not let us down.

Central Strike and Lock Out  
Committee, Locals 12, 27, 40,  
42 and 47."

October 3, 1949.

Under the circumstances, I have no alternative but to find that on June 30, 1949, the claimants as well as all the other employees of the lithographing department of the Mortimer Company, lost their employment by reason of a stoppage of work due to a labour dispute in which they were directly interested as their conditions of work stood to be affected by the outcome of that dispute and that therefore, they were rightly disqualified from the receipt of benefit for the duration of the said stoppage.

The appeal of Local 40 in the case of James R. Pratt is dismissed and the appeal of the insurance officer, in the case of W. F. Boulton, is allowed.

ALFRED SAVARD,

*Umpire.*

Dated at Ottawa, Ont., this 2nd day of May, 1950.

# Unemployment Insurance Statistics

## March, 1950\*

According to the monthly report issued by the Dominion Bureau of Statistics on the operations under the Unemployment Insurance Act, there were, during the month of March, 1950, 133,404 (132,525 excluding Newfoundland) claims filed at local offices of the Unemployment Insurance Commission. This number compares with 125,511 claims filed in February (125,300 excluding Newfoundland) and 103,402 filed in March, 1949.

Of the total claims filed in March, 1950, 119,533 (118,694 excluding Newfoundland) were initial and renewal claims representing mainly new cases of unemployment among insured persons. This was an increase over both the February, 1950 figure of 109,282 (109,094 excluding Newfoundland) and the March, 1949 figure of 88,786.

Ordinary claimants on the live unemployment register numbered 265,382 (264,413 excluding Newfoundland) in March, 1950, as compared to 286,163 (285,708 excluding Newfoundland) in February, 1950 and 185,787 in March, 1949. This represents a reduction in the total volume of unemployment among insured persons as measured by the situation on the last working day of the month.

Duration of unemployment is indicated by the number of days that benefit claimants are continuously on the unemployment register. In March, 1950, 284,363 persons were signing the register continuously as compared to 304,023 persons in February. The number on the register more than six days (that is, the group consisting mainly of beneficiaries) declined from 251,603 persons in February to 237,562 in March.

Claims handled at adjudicating centres and Courts of Referees in March, 1950, totalled 133,924. Of the 132,720 claims adjudicated 100,089 were allowed, 31,315 were disallowed or disqualified and 1,316 represented special requests not granted. Claims handled by Courts of Referees numbered 1,204.

Chief reasons for non-entitlement to benefit in March, 1950, were: "insufficient contributions while in insurable employ-

ment" 20,488 cases; "voluntarily leaving without just cause" 3,803 cases and "not unemployed" 2,823 cases.

Persons commencing receipt of benefit in March, 1950, numbered 91,646 (91,398 excluding Newfoundland) as compared to 112,745 (112,552 excluding Newfoundland) for February.

A continuing lag between the reduction in the number of those commencing receipt of benefit, that is, representing additions to the beneficiary group, and benefit payments is evidenced by the fact that in March \$15,747,725 was paid in respect of 6,466,268 days (\$15,714,121 in respect of 6,453,843 days excluding Newfoundland) as compared to \$13,605,340 in respect of 5,585,337 days (\$13,589,191 in respect of 5,579,452 days excluding Newfoundland) in February.

During the week of March 25 to March 31, 1950, inclusive, 219,711 persons received \$3,162,185 in respect of 1,297,370 days as compared to 232,359 persons, \$3,351,289 and 1,376,174 days for the week of February 25 to March 3 inclusive. Average duration of benefit was 5.9 days for both periods mentioned while the average amount of benefit paid during the week of March 25 to March 31 was \$14.39 as compared to \$14.42 for the week of February 25 to March 3.

Provision for the payment of supplementary unemployment insurance benefit was made by amendments to the Act in February, 1950 (L.G., April, 1950, p. 532). An analysis of the 93,231 claims received in local offices during March, together with their disposition, is given in Table E-7.

### Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending March 31, 1950 showed 3,854,593 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1949, an increase of 54,886 since February 28, 1950.

As at March 31, 1950, 227,610 employers were registered representing an increase of 1,610 since February 28, 1950.

\* See Tables E-1 to E-8.

# HOURS AND WORKING CONDITIONS IN THE PAPER PRODUCTS INDUSTRY OCTOBER 1949\*

*The Paper Products Industry, chiefly located in Quebec and Ontario, was operating mainly on a 48-hour 6-day week in 1949. Time and one-half was the predominant overtime rate, although many plants paid double time for work on statutory holidays. One week's vacation with pay after a year or less of employment was given by most establishments, with many giving a second week after five years and a third week after twenty years. Three-quarters of the workers were paid for four, five or six statutory holidays. Sick leave with pay was provided for about two-thirds of the plant workers in the industry. About seventy per cent of the workers were covered by written collective agreements.*

The Paper Products Industry is one of the major manufacturing industries in the Canadian economy. It is a direct source of employment for some 75,000 workers, and contributes materially to the export trade of this country. The manufacture of wood pulp, for example, totalled 631,300 tons in 1949, of which 129,100 tons valued at 14.2 million dollars were exported; and 394,600 tons of the 422,500 tons of newsprint shipped in 1949 were exported at a value of 36.2 million dollars.<sup>1</sup> Except for wheat and wheat flour, this export of newsprint was the largest single item, by dollar value, in the total of domestic exports last year.

In this analysis of the Paper Products Industry, the establishments have been grouped, according to their major activity, into four divisions: the manufacture of Pulp and Paper, Paper Boxes and Bags, Roofing Papers, and Miscellaneous Paper Products. Separate sections of this article deal exclusively with the Pulp and Paper Industry (excluding the manufacture of wallboard) and the Paper Box Industry so that historical continuity may be maintained with previous studies of the working conditions in these industries.<sup>2</sup>

Tables Ia and Ib give geographical and industrial distributions of the 269 establishments and 55,995 plant workers included in this analysis of the Paper Products Industry. The industry is predominantly located in Quebec and Ontario, although there are large numbers of workers in the Maritime Provinces and British Columbia. Over one-half of the plants, employing almost 23,400 workers, were situated in Ontario, while about one-third of the plants, employing an almost equal number

of workers, were located in Quebec. The large portion of plant workers in this industry were male, particularly in the Pulp and Paper and Roofing Papers divisions.

Seventy per cent of the workers were employed in the 95 mills of the Pulp and Paper Industry, 17 per cent in the 98 factories of the Paper Boxes and Bags Industry and just 4.3 per cent in the 18 factories of the Roofing Papers Industry. The remaining workers were employed in 58 plants engaged in the manufacture of Miscellaneous Paper Products.

**Collective Agreements.**—Written collective agreements covering 71 per cent of the workers were reported by 153 establishments in the Paper Products Industry.

\* Information in this article was prepared from data obtained in the annual survey of wage rates and working conditions for 1949 by the Economics and Research Branch of the Department of Labour. Employers were asked to report on certain conditions of work as well as to give, by occupation, the wage or salary rates of time workers and the straight-time earnings of employees on piece work during the last pay period preceding October 1, 1949.

For a summary of provincial legislation on working conditions, see *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

Information on hours and working conditions in the Primary Textiles Industry, October 1949, comparable to that contained in the present article was published in the May, 1950 issue of the *LABOUR GAZETTE*.

<sup>1</sup> See the Canadian Statistical Review, a monthly publication of the Dominion Bureau of Statistics, Ottawa.

<sup>2</sup> See "Wages, Hours and Working Conditions in the Pulp and Paper Industry, 1946", the *LABOUR GAZETTE*, July 1947, and "Wages, Hours and Working Conditions in the Pulp and Paper and Paper Box Industries, October 1948", the *LABOUR GAZETTE*, June 1949.

# THE PAPER PRODUCTS INDUSTRY . . .

. . . was mainly located in the Provinces of Quebec and Ontario.

Most of the workers were engaged in the manufacture of pulp and paper.

A 48-hour 6-day week was worked by the largest number of plant employees, though the work week differed greatly between industries.

Time and one-half was the predominant overtime rate, except for work on statutory holidays.

Initial vacations of one week were given by almost all plants, but the maximum vacations varied.

Large groups of workers were represented by the National Federation of Pulp and Paper Workers (CCCL) and by such AFL-TLC unions as the International Brotherhood of Paper Makers, the International Brotherhood of Pulp, Sulphite and Paper Mill Workers, the International Chemical Workers' Union and the International Printing Pressmen and Assistants' Union of North America. In some cases, various combinations of these unions operated within a single establishment. The workers in a dozen plants were reported to be represented by directly chartered unions of the American Federation of Labour, the Canadian Congress of Labour or the Canadian and Catholic Confederation of Labour.

**Normal Weekly Hours, Tables IIa and IIb.**—Almost two-thirds of the plant employees were employed in 111 establishments operating on a 48-hour week, while 12,400 workers were in 85 establishments reporting normal weekly hours of 44 or 45. Most of the workers on a 48-hour week were reported working 6 days, most of those on a 45-hour week were working 5 days and most of the workers on a 44-hour week, 5½ days. All of the workers in British Columbia and one-half of the workers in the Prairie Provinces were operating on a normal work week of 44 hours or less.

Almost 12,000 workers in 126 establishments were on a 5-day week. Most of these workers were in the Paper Boxes and Bags Industry or engaged in the manufacture of Miscellaneous Paper Products. Most of the mills in the Pulp and Paper Industry reported operating on a 6-day week; none reported a 5-day week.

**Overtime Rates of Pay, Tables IIIa and IIIb.**—Time and one-half was the predominant rate for overtime after standard daily or weekly hours. A few establishments reported paying time and one-half for the first three or four hours of overtime and double time thereafter. For work on Sunday, time and one-half was the most common overtime rate although 40 plants, employing 4,500 workers, paid double time. Most of this latter group were in plants manufacturing Paper Boxes and Bags and Miscellaneous Paper Products.

## The Pulp and Paper Industry—excluding the manufacture of wallboard

There have been few changes in the hours and working conditions of the Pulp and Paper Industry since the comparable article for the year 1946 was published in the July, 1947, LABOUR GAZETTE. There

Work on statutory holidays was generally paid for at a rate of time and one-half or double time and one-half. The higher rate for work on these holidays was paid mainly to workers in the Pulp and Paper Industry. Fifty-two establishments, employing 5,900 workers, reported paying double time for work on statutory holidays.

**Vacations with Pay, Tables IVa and IVb.**—All but three establishments in the Paper Products Industry reported information on vacations with pay, and in every case an initial vacation of at least one week, or equivalent, after a year or less of employment was indicated. Twelve establishments, employing 942 plant workers, reported giving an initial vacation of two weeks with pay or 4 per cent of earnings.

In 202 mills, employing 92 per cent of the workers, the length of vacation with pay was dependent upon the period of employment. A maximum allowance of two weeks with pay, generally after 5 years of employment, was reported by 144 plants employing 24,800 workers, while a maximum of three weeks, or equivalent, was reported by 58 plants employing over 26,400 workers. Most of the workers receiving this maximum vacation of three weeks with pay, mainly after 20 years of service, were in the Pulp and Paper Industry, and received an intermediate vacation period of two weeks after 5 years of employment.

**Statutory Holidays, Table V.**—Ninety-five per cent of the establishments, employing 97 per cent of the workers, reported observing from four to nine statutory holidays. The most common number of days observed was four. All but 26 of the establishments observing statutory holidays paid for one or more of them. Almost one-half of these workers were in 56 plants paying for four days, and a further 16,800 workers were in 76 plants paying for five or six statutory holidays.

**Sick Leave with Pay.**—Sick leave with pay was reported by 130 establishments in the Paper Products Industry employing over 36,000 workers. There was considerable variation in the conditions of this sick leave, but most of the schemes were operated through a group insurance plan.

has, however, been a tendency for more workers to be paid double time and one-half for work on statutory holidays; and a large group of workers now receive a maximum vacation with pay of three

weeks after 20 years of employment. Also, there has been some increase in the number of statutory holidays observed and paid for in the industry.

Table VI gives a regional distribution of the 89 mills, employing 38,133 mill workers, which have been used in this analysis of the Pulp and Paper Industry. These 89 mills do not include the six establishments primarily engaged in the manufacture of wallboard which were included in the previous section on the Paper Products Industry. Most of the mills in the Pulp and Paper Industry are located in the provinces of Quebec and Ontario, with but a few mills in the Maritime Provinces and British Columbia and one in Manitoba.

**Collective Agreements.**—All but five of the mills reported having written collective agreements covering almost all of the mill workers in the industry. The unions representing large numbers of workers were the National Federation of Pulp and Paper Workers (CCCL), the International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-TLC), and the International Brotherhood of Paper Makers (AFL-TLC). In many cases there was a combination of unions representing the employees of a single establishment.

**Normal Weekly Hours, Table VII.**—Except in British Columbia, the mills in the Pulp and Paper Industry (excluding the manufacture of wallboard) mainly operated on a 48-hour 6-day week. The seven mills in British Columbia and one in Ontario reported a normal work week of 44 hours. There has been no significant change in the normal work week in this industry during the past three years.

**Overtime Rates of Pay, Table VIII.**—Time and one-half for work after standard daily or weekly hours and for work on Sunday was reported by almost all of the mills in this industry.

Time and one-half and double time and one-half were the main rates of payment for work on statutory holidays, with the latter being the rate covering the majority of workers. As mentioned above, many

more mills are now paying double time and one-half for work on these days. In 1949, about 21,600 workers were in mills paying this rate for work on statutory holidays; whereas in 1948 just 10,100 were in mills paying double time and one-half and in 1946 this rate was not reported.

**Vacations with Pay, Table IX.**—All but two of the mills reported information on vacations with pay, and of those reporting, most indicated a vacation of one week with pay after one year of employment. One mill reported an initial vacation of two weeks.

Eighty-two of the mills gave a longer vacation period to employees having longer periods of employment. Forty-seven mills, employing 38 per cent of the workers, reported giving two weeks, mainly after 5 years; and thirty-five mills, employing 59 per cent of the workers, reported giving a maximum of three weeks with pay, mostly after 20 years of employment. Most of the mills giving a maximum vacation of three weeks also have an intermediate vacation period of two weeks with pay after five years of employment.

**Statutory Holidays, Table X.**—Ninety-five per cent of the workers were employed in 75 mills observing four, five or six statutory holidays, with 62 per cent in mills observing four days.

Only seven of the mills did not pay for any of the observed statutory holidays. As with the observed holidays, most workers were paid for four, five or six days, with the largest number being paid for four. This represents an increase in the number of paid statutory holidays since 1948, when just one mill paid for more than four days.

**Sick Leave with Pay.**—Seventy-six per cent of the workers in 58 of the mills in the Pulp and Paper Industry were reported to be covered by some arrangement for payment during periods of illness. The usual provision was through a group insurance plan.

**TABLE Ia.—DISTRIBUTION OF PLANTS AND PLANT WORKERS, BY REGION, IN THE PAPER PRODUCTS INDUSTRY, OCTOBER 1949**

	CANADA	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Number of Plants .....	269	14	85	137	13	20
Number of Plant Workers:

Female .....	7,116	135	2,569	3,895	221	296
Total .....	55,995	3,505	23,369	23,358	1,037	4,726

# The Paper Box Industry

There have been no important changes in the hours and working conditions of the Paper Box Industry since the 1948 article for this industry was published in the June, 1949, *LABOUR GAZETTE*. A few more factories, however, are paying double time and one-half for work on statutory holidays, and there has been some increase in the number of paid statutory holidays.

Table XI gives a geographical distribution of the 85 factories and 8,189 factory workers used in this analysis of the Paper Box Industry. More than one-half of the workers were in 48 factories located in Ontario, and almost one-third were in 20 factories in the Province of Quebec. In this industry there is a large percentage of female workers.

**Collective Agreements.**—Just over one-half of the establishments reported having written collective agreements covering nearly two-thirds of the workers in the industry. The workers under these collective agreements were represented by various International, National or directly chartered unions, or by employees' associations. The International Printing Pressmen and Assistants' Union of North America (AFL-TLC) was the most important single union in the Paper Box Industry.

**Normal Weekly Hours, Table XII.**—The 45-hour 5-day week was by far the most common normal working week in this industry. In the Prairie Provinces and British Columbia the 40- and 44-hour weeks were predominant, with most of the factories operating five days.

The 5-day week was reported by 67 factories employing 80 per cent of the workers, and the remainder, except one, reported a 5½-day week. This represents no great change from the hours of work in 1948.

**Overtime Rates of Pay, Table XIII.**—As in the other divisions of the Paper Products Industry, time and one-half was the predominant rate for work after standard daily or weekly hours.

For work on Sundays and statutory holidays, time and one-half was again the general rate, although many establishments reported paying double time. Over 2,000 workers were in the factories paying the higher rate for work on these days. Five factories, employing almost 900 workers, reported paying double time and one-half for work on statutory holidays. This indicates a slight increase over last year in the number of establishments paying double time and one-half.

**Vacations with Pay, Table XIV.**—All but one factory reported giving an initial vacation with pay of at least one week, or its equivalent of 2 per cent of earnings, after a year or less of employment. Three of these factories gave two weeks with pay after one year of service.

More than one-half of the establishments reported giving a longer vacation with pay as the period of employment by the worker increased. Forty-six factories, employing 65 per cent of the workers in the industry, reported giving a maximum vacation of two weeks, generally after five years; and four factories, employing some 770 workers, reported giving three weeks or 6 per cent of earnings. The factories giving the greater maximum vacation with pay also reported an intermediate vacation of two weeks or its equivalent.

**Statutory Holidays, Table XV.**—All but one of the factories reported observing from six to ten statutory holidays, and 74 of these reported paying for some or all of the days observed. The largest group of workers were in those establishments observing and paying for eight days.

The proportion of workers in the Paper Box Industry being paid for statutory holidays has been increased since 1948, and the number of days for which the workers were paid has also been raised.

**Sick Leave with Pay.**—Twenty-four factories, employing 23 per cent of the workers, reported some provision for sick leave with pay. In most cases these provisions were applied through a group insurance plan.

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

## EMPLOYMENT CONDITIONS DURING APRIL, 1950

*Seasonal employment expansion gained momentum during April, although hampered by unfavourable weather in most regions. The number of workers seeking jobs through National Employment Service offices declined accordingly, the greatest decrease taking place in Ontario and British Columbia.*

Expanding activity in seasonal industries increased employment during April. The seasonal upswing was slower than usual, however, because of adverse weather conditions throughout the country, which hampered outdoor activity.

Nevertheless, the absorption of workers into construction, transportation, agriculture and mining, plus the steady improvement in manufacturing, caused a decline of 47,100 in the number of jobless workers registered with offices of the National Employment Service. Unplaced applicants totalled 387,600 at May 4.

Greatest improvement was evident in the Ontario and the Pacific regions. In the former, manufacturing industries maintained a high level of employment, and the construction industry was embarking on what appeared to be another record season. In British Columbia, the logging industry, contrary to the eastern pattern of activity, was expanding as rapidly as weather would permit in response to strong demand for lumber; sawmills and shingle mills were operating to the limit of log supplies. Rainy weather throughout the Prairies, and flood conditions in Manitoba, delayed farm work and construction.

In the next few months, employment in Canada will show substantial increases until the annual peak is reached in the late summer and early fall. Total civilian employment, which was 4,796,000 during the first week of March, is expected to exceed by late summer the 1949 peak of 5,255,000 for the same date. Despite an anticipated slightly higher level of employment in 1950 than in 1949, there may be some areas where the unemployment situation continues to be a matter of concern.

With due allowance for frictional unemployment such as that caused by workers moving from job to job, the economy will be called upon to absorb in the next six months the major portion of an estimated

80,000 net increase in the labour force this year, as well as those persons seasonally displaced during the past winter and the usual seasonal entrants to the labour force such as students. The extent to which all of these workers are absorbed will depend basically upon the levels of investment, consumer expenditures and exports during 1950.

The anticipated heavy investment program, particularly in housing and utilities, means that employment prospects in the construction and related industries are excellent. Expected high levels of consumer expenditures will maintain a high degree of buoyancy in the consumer goods, service and distributive industries. The pattern of exports established during the first quarter of the year indicates that the decline in value of sales to overseas markets has been almost completely offset by the increase in shipments to the United States. This reorientation of foreign markets, however, will continue to cause readjustments in the domestic economy.

### Industrial Analysis

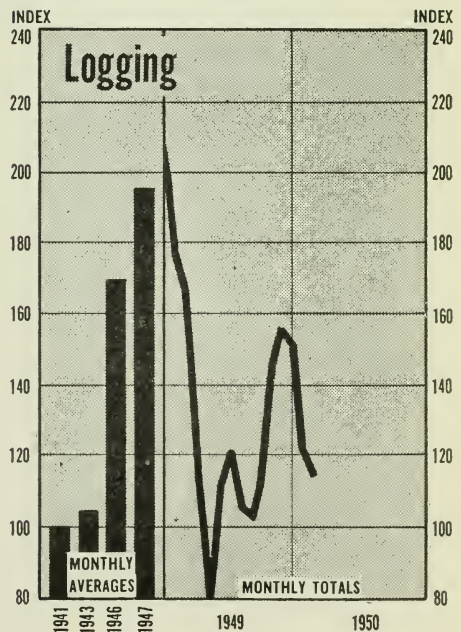

In *agriculture*, cold weather, common to all regions during April, delayed farm work this spring from two to five weeks depending on the area and type of farm. As a result, the demand for farm workers was not heavy during the month, although a seasonal increase was apparent.

Local labour was sufficient to meet the demand in most cases. There was no indication of a movement of workers from other industries into agriculture as a result of reduced employment opportunities. In fact, some resistance to agricultural work is apparent. This is due in part to less attractive working conditions and wage rates but as well, many job-seekers prefer to work in insured employment as a buffer against possible winter unemployment.

# EMPLOYMENT TRENDS IN CANADIAN INDUSTRIES

Average: 1941 = 100

The movement of Displaced Persons from Europe into farm work was getting under way during April. It is expected that the movement this year will be on a reduced scale. Ontario was the only province reporting placement of DP's in any numbers in April. One hundred single men and twenty-eight families were placed on farms in that province during the month by the National Employment Service. The demand for single men was reported considerably in excess of supply at that time. Quebec and the Maritimes reported very light demand for DP farm workers existed during April.

Operations in the *logging* industry in eastern Canada during April were at the low point between the end of winter cutting and hauling and the beginning of the spring drive. Labour demand was consequently light, being restricted to the employment of men to prepare for driving operations and for peeling. A secondary employment peak is reached in the industry in late May or early June, when the peak of the river drive is reached. This summer it is anticipated that employment levels will be higher as some companies report they have reduced their log inventories to below-minimum requirements by doing less cutting last winter.

In contrast, the demand for loggers in British Columbia was stronger in April, with a shortage of fallers reported in some camps. The late spring hampered operations generally and higher level camps remained closed due to snow and cold weather. Bad towing conditions made delivery of logs to the mills difficult during the month, resulting in temporary lay-offs in some cases.

With the approach of the *fishing* season, discussions were carried on between representatives of the Newfoundland fishing industry and provincial and federal authorities during April regarding marketing problems. Newfoundland fisheries, a major source of employment and income in that province, are faced with the possible loss of European markets for cod due to exchange difficulties. About 400,000 quintals, or more than one-third of the total production, are marketed in soft currency countries in Europe each year. The fishermen would like to see a minimum price established before the season is far under way.

Figures on production of winter fisheries show that yield and value have been generally good during the first quarter of 1950. The total catch in the three-month period was 221,500,000 pounds, up about 30,000,000 pounds from the same period in

1949. The landed value of the catch was also up over last year, at \$5,700,000. Most of the winter's activity was centred in the smelt fisheries on the east coast from September to February, and in the British Columbia herring fishery, which extends from October to February.

The employment situation in the west coast fish canning industry is somewhat spotty, in view of a recent price decline, notably for fish meal and oil, and increasing difficulty in disposing of the salmon pack in the export market. Favourable factors in the salmon canning industry are a good domestic market, a sizeable contract with the United Kingdom, and the fact that this is a year when sockeye salmon are especially numerous and this fish commands premium prices.

The spring step-up in the *construction* industry which took place during April resulted in considerable reduction in the ranks of unemployed workers. The beginnings of this seasonal improvement were reflected in a decline in the number of construction workers registered for employment with National Employment Service offices. Their numbers dropped from 72,500 at the end of March to 60,000 at April 27, with the skilled sector of the labour force showing the largest decrease, from 44,000 to 36,000.

An indicator of the probable volume of construction work and employment in the 1950 season is the trend of contracts awarded for construction projects. The total value in the first four months of the year was about \$310,000,000, up 10 per cent from the figure at the end of April, 1949. Percentage-wise, the largest increase was in commercial and institutional building, up 35 per cent at \$103,000,000. Residential construction continues to expand the four-month total of \$117,000,000, representing an increase of 11 per cent from the comparable figure of 1949. Engineering contracts showed no change and industrial building is down 19 per cent from last year, although the April value was six times that of April, 1949 in the latter category.

Hirings in retail *trade* establishments showed a seasonal increase during April, although a drop in sales volumes from 1949 levels limited employment expansion. Department store sales in April were down 10 per cent from the same month in the previous year, with Saskatchewan showing the largest decline, 25 per cent. Quebec and British Columbia sales showed the smallest relative decrease, down 7 per cent.

The improvement in the employment situation was not sufficient to make much difference in the number of persons seeking

work in the industry through the National Employment Service. Registrations of sales clerks at National Employment Service offices at the end of the month totalled 15,000, as against 16,000 at the beginning of the month. Of this total, about 11,000 were women. Most of these applicants, 61 per cent, were claiming unemployment insurance benefits.

Latest data issued by the Dominion Bureau of Statistics, which relate to March 1, 1950, indicate that the **manufacturing** industries continue to provide slightly fewer jobs than in the previous year. The index of employment in manufacturing at that date was 118.9 (June 1, 1941=100) as compared to 120.8 at the same time in 1949. These averages, however, obscure wide variations within the various sub-groups in the industry, as indicated by the summaries below.

Employment in the **agricultural implements** industry appears to be stabilizing around the 16,000 mark after dropping from over 18,000 in 1948. The loss of overseas markets together with a better balance between demand and supply in the domestic market, have been responsible for the decrease in output and employment. Sales in the coming year will depend largely on the level of farm income, which is expected to be below 1949 in both the United States and Canada. The larger companies in the industry depend heavily on exports to the United States.

Strong domestic demand, based on the current high levels of national income, has been the principal factor in maintaining employment levels in the food industry group. Such industries as bakeries, dairies, and candy factories whose market is entirely at home are in a strong position. Fish and meat packing and flour milling, however, have been decreasing unemployment because of weak export markets. On the whole, employment has remained slightly above last year. Reported employment at March 1 was 107,000, as compared to 105,000 at the same date last year.

The weak spots in the textile industry are woollen mills and knit goods factories, both of which have been forced to lay off large numbers of workers. Expansion in the clothing and artificial silk groups, however, has sustained aggregate employment at a level approximately the same as in 1949. An ample supply of labour is available for the industry, with a surplus of over 15,000 workers indicated by National Employment Service registrations at the end of April. The majority of these workers, nearly 80 per cent, are classified as skilled.

Production and employment continue to expand in the **automobile** industry, with 89,000 cars and trucks turned out in the first quarter of 1950, which represents an increase of 68 per cent over the same period in 1949. The consequent increase in labour requirements has boosted employment in the industry to over 48,000 at March 1, 1950, nearly 10 per cent over last year's level. This increase in output was achieved in spite of a lay-off of 3,500 workers due to the Chrysler strike in the United States in March.

## Regional Analysis

During April, employment conditions in the **Atlantic** region improved slowly as farming, fishing, and construction activity revived, and as seasonal manufacturing industries increased production. These active influences were counterbalanced to some extent by the usual slump in port activity as shipping shifted to the St. Lawrence and by flood conditions in New Brunswick.

Logging operators in New Brunswick lost heavily as floods swept away thousands of logs. The log drive was under way or impending, and crews were hired for salvage operations. Flood losses, coupled with strong markets, are likely to increase cutting activity in northern New Brunswick areas this summer.

Coal mining operators in Nova Scotia were working at capacity during the month, but in New Brunswick strip mining was suspended because of flooding, and shaft mining returned to short-time production as orders slackened. Construction activity stimulated employment in many areas during the month, and the excellent outlook for the industry this summer has been further enhanced by the reconstruction now necessary in flood-damaged areas.

Among manufacturing industries, employment and output has increased in construction material firms, sawmills and woodworking plants, and in textile and footwear plants. Production in the steel industry continued high and substantial orders for railway cars and coal mining machinery were received in the New Glasgow area. It was reported that the sulphite mill in Corner Brook may resume operations shortly, thus alleviating unemployment in this area to some extent.

In the **Quebec** region, the cumulative effect of expansion in seasonal industries and in some segments of manufacturing caused a reduction of 7,000 in the number of job seekers registered at National Employment Service offices during the last week of April. The improvement was less

marked than in the western regions, however, since adverse weather was still delaying farming and construction activity. In some manufacturing industries—heavy iron and steel, secondary textiles and leather products—short-time operations continued. Non-ferrous metals and pulp and paper manufacturing were expanding, however, and sawmills were preparing for summer operations.

Mining and prospecting, both metallic and non-metallic, showed increasing or steadily high levels of activity; the annual exodus of farmers from the mines is not likely to occasion any general shortage of mine labour this year. The outlook for construction varied from area to area, but steady activity and employment is expected, especially in the Montreal area and in northern mining centres.

In logging areas, hiring for the river drive was under way. The opening of navigation on the St. Lawrence brought increased employment to the river ports.

Seasonal activity in construction, transportation and agriculture boosted general employment in the *Ontario* region during April. The upswing was slower than usual this year, however, since cold wet weather hampered the outdoor industries to some extent.

The improvement in manufacturing continued. For the heavy iron and steel industry, the re-appearance of steel shortages in the United States has given added strength to the domestic market and further incentive to domestic producers. The pulp and paper and the automobile industries were at capacity operation, except in the Windsor area, where a large lay-off by a major automobile producer continued during April because of the strike in process at its U.S. parent company. The settlement of this strike occurred early in May, however, and work will be resumed gradually as materials again become available.

Construction was slow in starting because of unfavourable weather, but the 1950 program will exceed last year's record in many areas; employment for all tradesmen and a large volume of employment for labourers and helpers is expected. The weather also delayed farming operations, but towards the end of the month work was under way in most areas. There were no surpluses of farm labour reported, and in some areas shortages of suitable applicants existed.

Spring seeding operations and construction projects in the *Prairie* region were delayed and interrupted during April by heavy rains. The expansion of employment was, there-

fore, less pronounced than usual at this time of year, although labour demand was increasing markedly towards the end of the month.

Floods in Manitoba areas held up all farm operations in the southern section. In Saskatchewan, weather was delaying full-scale seeding operations but farm labour demand was quite heavy; a backlog of orders was building up in a few areas. In several areas of Alberta, fully experienced and skilled men were becoming scarce.

Logging activity in the Lakehead area was slack preceding the river log drive which was due to start in May. Transportation and mining operations were absorbing men rapidly in this district. Mining activity in the western sector of the region showed varied trends:—coal mining was entering its seasonally slack period; men were being recruited for the gold and silver mines of northern B.C. and the Yukon; and the oil exploration and drilling program was gaining even greater momentum.

The season's construction program had not yet begun on any large scale, again because of the unfavourable weather. The large pipeline project had started, but was progressing slowly. Once weather conditions improve and work gets under way, however, full employment of the construction labour force is expected.

A marked rise of employment was evident in the *Pacific* region, particularly during the last week of April. The logging, construction and fishing industries were expanding rapidly, and absorbing seasonal workers in all areas.

In the logging industry, all low level operations were fully active, but at higher levels snow still remained and road conditions continued poor. Lumber prices were firm, orders were plentiful and exports to the United States were increasing, and thus the demand for logs was heavy. Some sawmills and shingle mills, which did not own their own logging camps, were finding it difficult to obtain a sufficient log supply. Furthermore, towing conditions were poor in the coastal area, but improvement occurred towards the end of the month.

All branches of the mining industry were showing renewed activity. Base metal mines continued in full production, and the development of new operations was progressing. Gold placer mining was well under way and shipment of miners into the Yukon for the season was proceeding well. Construction was expanding rapidly, despite none too favourable weather, and labour

demand rose steadily. Sufficient skilled men were still available in all occupations except the trowel trades. A season of full employment in construction was expected throughout the region.

### Employment Service Activities

By the latter part of April about 14,000 placements were being effected each week by the Employment Service. This rate compared favourably with the same period last year, as it has, on the whole, for most of 1950.

It is significant that most of the university students looking for summer work this year will probably be able to find employment. In fact, an Employment Service official stated that the job situation for these students this year appears to be better than in 1949. Many of the jobs will be in the construction industry.

### Unemployment in Trade Unions, March 31, 1950\*

Trade union unemployment in Canada declined to 4.4 per cent at the end of March, from 4.8 per cent at the close of the previous quarter, but was higher than the percentage of 3.2 noted at March 31, 1949.

In this analysis, unemployment refers only to involuntary idleness due to economic causes. Persons who are without work because of illness, a strike or a lockout, or who are engaged in work outside their own trade are not considered as unemployed.

\* See Tables C-11 and C-12.

The job outlook for university graduates for year-round employment, on the other hand, had deteriorated slightly over the year. About 50 per cent of the graduates registered with the Employment Service had been placed at the middle of April, as compared with about 80 per cent at approximately the same date last year. This year probably more than the usual number of graduates will move to Ontario and Quebec to find suitable employment. In a few specialized lines, such as agriculture, considerable time may be necessary before the 850 persons graduating this year are absorbed into the employment stream. In engineering, where the record number of 3,650 will graduate, the outlook is relatively good, although applicants with poor qualifications may find it difficult to secure employment. To date, the general Arts and Commerce students have been finding jobs without much difficulty.

The number of reporting unions varies from quarter to quarter with consequent variations in the membership upon which the percentage of unemployment is based. It should be understood, therefore, that the figures refer only to organizations reporting. At the date under review, 2,477 locals reported a combined membership of 489,984. In the previous quarter, reports were received from 2,693 locals with 530,553 members, while at the end of March, 1949, the percentage was based on 2,658 locals representing 524,880 members.

### PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

Table C-11 shows the percentage of union unemployment at the end of certain months, in various provinces. As compared with the previous quarter, the percentage rose in Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta, and declined in Quebec, Ontario and British Columbia. In all provinces the percentage of unemployment exceeded the March, 1949 level.

Table C-12 indicates the percentage of trade union unemployment by industrial groups. Returns were received from 1,020 locals in the manufacturing industries. These reported 256,404 members, of whom 9,435 were unemployed at the end of March. At the end of the previous quarter, 1,113 locals reported 260,505 members, of whom 11,418 were unemployed at the end of December. At March 31, 1949, reports were received from 1,095 locals with a membership of 276,792, of whom 6,740 were without work at that date.

In the transportation group, reports were received from 804 locals representing a

membership of 102,731, of whom 2,180 were out of work at the end of March. At the end of the previous quarter, 862 locals with a membership of 107,708 reported 2,384 out of work, while at the end of March, 1949, 860 locals with a total of 106,551 members reported 1,516 as unemployed.

Unemployment in mining rose from 1.0 to 2.3 per cent. Reports were received from 56 locals with a membership of 19,431, of whom 441 were out of work.

Unemployment in the building and construction trades rose from 15.0 to 15.8 per cent. Reports from 214 locals with a membership of 46,483 show 7,343 unemployed as compared with 8,180 unemployed out of a membership of 54,603 in 237 locals as at December 31, 1949. At March 31, 1949, the percentage unemployed in these trades was 11.4.

In both trade and services, as well as in manufacturing as a whole, unemployment was less than for the previous quarter. In logging and in mining it had increased.

## PRICES AND THE COST OF LIVING\*

### Cost of Living

The Dominion Bureau of Statistics cost-of-living index remained unchanged at 164.0 between April 1 and May 1. A slight increase in foods was counterbalanced by decreases in the fuel and light and clothing indexes. The food group advanced 0.1 point to 204.6. A five cent decline in butter, and small decreases in eggs and pork, were not sufficient to offset an average increase of four cents in beef and two cents in coffee. The Clothing index registered a decline of 0.4 point to 180.8, reflecting some price reductions in women's wear. Fuel and light moved from 138.0 to 137.5 as decreases in anthracite coal proved more important than advances in electricity rates in certain Ontario centres. The index for electricity rates is still below pre-war levels. The index of home furnishings and services was unchanged at 166.4 as was the miscellaneous group at 132.3. Rents were not surveyed during May and the index remained at 132.7.

From August, 1939 to April 1950, the increase in the cost-of-living index was 62.7 per cent.

### Cost of Living in Eight Cities

Regional city cost-of-living index changes were mixed during March. Six cities

moved higher, while two were lower. Food price changes continued to dominate index movements, although fuel costs and miscellaneous items were generally higher. Indexes for clothing and home furnishings and services moved narrowly in most centres. Rents were not surveyed in April and, consequently, these indexes were unchanged.

Composite city index changes between March 1 and April 1, 1950 were as follows: Edmonton +0.9 to 160.4; Halifax +0.6 to 155.6; Vancouver +0.5 to 165.7; Saint John +0.3 to 159.8; Saskatoon +0.3 to 164.8; Winnipeg +0.2 to 159.0; Toronto -0.3 to 160.4; Montreal -0.1 to 166.5. In the same interval, the Dominion index moved up 0.3 to 162.7.

### Wholesale Prices, March, 1950

The general index of wholesale prices rose 1.3 points to 159.3 between February and March, 1950. Five of the eight component groups moved up in this period. Animal Products recorded the most substantial group increase with a rise of 3.4 points to 166.8. Vegetable Products followed with an advance of 2.1 points to 145.0. Iron Products moved up 1.4 to 178.6, Wood Products 0.9 to 191.5 and Non-metallic Minerals 0.1 to 140.0. Non-

\* See Tables F-1 to F-6.

ferrous Metals declined 2.2 points to 137.2 between February and March. Textile Products moved down 0.4 point to 162.4 and Chemical Products 0.2 point to 117.4.

Among important commodities to record increases between February and March were the following: soya bean oil 27.6 per cent, fowl 24.0 per cent, steel chain 21.1 per cent, Ontario oats 18.1 per cent, Ontario malting barley 16.7 per cent, western oats 15.4 per cent, rubbers 14.7 per cent, lard 11.1 per cent, cedar shiplap 10.5 per cent, corn, Ontario yellow, 10.5 per cent, rosin 9.6 per cent, beef carcass (cow) 9.4 per cent. Among commodities showing declines were the following: cocoa

beans 15.8 per cent, lemons 12.3 per cent, whitefish 12.0 per cent, silver fox skins 10.1 per cent, lead pipe 10.0 per cent, pig lead 8.7 per cent, wool cloth 8.7 per cent, sheepskins 8.3 per cent, litharge 6.6 per cent, red lead 4.9 per cent.

The Canadian Farm products index of wholesale prices rose 2.2 points to 147.4 between February and March. Higher prices for livestock, poultry, raw wool, hides and skins and eggs moved the Animal Products index up 4.5 points to 186.0. All groups in the Field Products index with the exception of onions showed small gains which brought the index up 0.9 point to 124.4.

### COMPARISON OF INDEX NUMBERS OF RETAIL PRICES OF SELECTED ARTICLES OF FOOD—APRIL 1949-1950

# STRIKES AND LOCKOUTS\*

## Canada, April, 1950

Idleness resulting from disputes between workers and employers was at the lowest point since the beginning of the year. The number of strikes and lockouts was about the same as in the previous month but the number of workers involved and the time loss both declined. As compared with April, 1949, with a loss of 139,000 days, the current month showed a loss of only 15,000 days.

Preliminary figures for April, 1950, show 20 strikes and lockouts, involving 2,585 workers, with a time loss of 14,640 man-working days, as compared with 21 strikes and lockouts in March, 1950, with 5,659 workers involved and a loss of 25,118 days. In April, 1949, there were 18 strikes and lockouts, with 7,851 workers involved and a time loss of 138,931 days.

For the first four months of this year there were 42 strikes and lockouts, involving 11,676 workers, with a time loss of 105,546 man-working days. In the similar period in 1949 there were 35 strikes and lockouts, with 12,580 workers involved and a time loss of 356,610 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in April was 0.02 per cent

of the estimated working time, 0.03 per cent in March, 1950; 0.17 per cent in April, 1949; 0.03 per cent for the first four months of 1950; and 0.11 per cent for the first four months of 1949.

Of the 20 strikes and lockouts in existence during April, 1950, three were settled in favour of the workers, four in favour of the employers, three were compromise settlements, and one was indefinite in result, work being resumed pending final settlement. At the end of the month nine work stoppages were recorded as un-terminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: composers, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and textile products factory workers at St. Lambert, P.Q. August 29 1949.

## Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review issued as a supplement to the *LABOUR GAZETTE* for April 1950, and in this article are taken, as far as possible, from the government publications of the countries concerned.

### Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in February, 1950, was 114 and eleven were still in progress from the previous month, making a total of 125 during the month. In all stoppages of work in progress in the period there were 20,100 workers involved and a time loss of 88,000 working days was caused.

Of the 114 disputes leading to stoppages of work which began in February, six,

directly involving 100 workers, arose out of demands for advances in wages, and 37, directly involving 3,500 workers, on other wage questions; two, directly involving 100 workers, on questions as to working hours; 20, directly involving 7,300 workers, on questions respecting the employment of particular classes or persons; 39, directly involving 2,100 workers, on other questions respecting working arrangements; and three, directly involving 200 workers, on questions of trade union principle. Seven stoppages, directly involving 1,700 workers, were in support of workers involved in other disputes.

### Australia

Figures for the second quarter of 1949, show 247 industrial disputes with 107,293 workers directly involved and a time loss, for workers directly and indirectly involved, of 308,003 man-working days.

\* See Tables G-1 and G-2.

## New Zealand

For the year 1949, there were 123 strikes, involving 61,536 workers, directly and indirectly, with a time loss of 218,172 man-days. Figures for the fourth quarter of 1949, show 17 strikes, with 10,195 workers, directly and indirectly involved, and a time loss of 12,489 man-days.

## United States

Preliminary figures for March, 1950, show 260 strikes and lockouts beginning in the month, in which 80,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 3,750,000 man-days. Corresponding figures for February, 1950, are 210 strikes and lockouts, involving 75,000 workers, with a time loss of 7,850,000 days.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA\*

## First Quarter of 1950

There were 269<sup>1</sup> industrial fatalities in the first quarter of 1950 according to the latest reports received by the Department of Labour. This marks a decrease of 127 fatalities over the previous quarter in which 396 accidents were recorded including 39 in a supplementary list. The accidents recorded are those which involved persons gainfully employed, during the course of or arising out of their employment and included deaths which resulted from industrial diseases as reported by the provincial Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various provincial Workmen's Compensation Boards, the Board of Transport Commissioners, and certain other official sources. Newspaper reports are used to supplement these data.

During the quarter under review there were three accidents which resulted in three or more industrial fatalities in each case. On January 20, nine workers in a clothing plant at Toronto, Ontario, were burned to death in a fire. Three hydro-electric workers were killed at Isle Maligne, Quebec, on February 13, when the turbine in which they were working was accidentally set in motion. On March 18, ten crew members of a fishing craft were drowned when their vessel collided with a steamship off Halifax harbour, Nova Scotia.

Grouped by industries the largest number of fatalities, 58, was recorded in manufacturing. Of these, 17 occurred in the iron and steel products group and 11 in the textiles industry. During the previous quarter 73 fatalities were recorded in manufacturing including 29 in iron and steel products and 10 in the non-ferrous metal products group. In the first quarter of 1949 there were 59 industrial fatalities in manufacturing.

There were 41 industrial deaths in mining during the first quarter of 1950 of which 18 occurred in the metalliferous mining group. In the fourth quarter of 1949 there were 52 industrial fatalities in the mining industry including 28 in metalliferous mining. During the first quarter of 1949, 57 fatalities were recorded in the mining industry.

Of the 40 fatalities noted in transportation during the quarter under review, there were 28 in steam railways and 8 in local and highway transportation. In the previous three month period 80 fatalities were recorded in transportation including 43 in steam railways and 25 in local and highway transportation.

In agriculture there were 10 accidental deaths during the three month period as compared with 28 during the fourth quarter of 1949. The decreased activity of agriculture during the winter months is illustrated by these figures.

There were 39 fatalities in the logging industry during the first quarter of 1950 as compared with 48 during the previous three months, and 25 in the first quarter of 1949.

In the various branches of the construction industry there were 25 accidental deaths as compared with 35 during the last quarter of 1949, and 21 in the first quarter of that year.

An analysis of the causes of industrial accidents shows that 70 or 30.8 per cent were caused by moving trains, watercraft, and other vehicles. During the previous

\* See Tables H-1 and H-2.

<sup>1</sup> The number of industrial fatalities that occurred during the first quarter of 1950 is probably greater than the figure now quoted. Supplementary lists compiled from reports received in subsequent quarters, generally revise upwards the figures for previous periods.

quarter, 30 per cent of the fatalities recorded were attributable to the same causes. Falling objects caused 56 deaths and falls of persons 24. Industrial diseases, infection and other causes resulted in 52 fatalities while dangerous substances caused 31 deaths.

The largest number of industrial fatalities was recorded in Ontario where there were 87. In British Columbia there were 48 and Quebec 46.

During the quarter under review there were 103 fatalities in January, 86 in February and 80 in March.

## SELECTED LIST OF PUBLICATIONS RECEIVED IN LIBRARY OF THE DEPARTMENT OF LABOUR, OTTAWA\*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*.

NOTE.—Many of the statistical data in this table are included in the *Canadian Statistical Review* issued by the Dominion Bureau of Statistics.

†Comparable statistics are not available. (1) Labour Force survey figures given are as of March 4, 1950, March 5, 1949 and Feb. 21, 1948. (2) Base 1926=100. (3) Figures are as at end of quarter ending March 31, 1950, 1949, 1948, 1944 and 1939 respectively. (4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946 = 100. (5) First of month. (6) Base 1935-1939 = 100. (7) Figures are for four week periods. (8) Annual index. (9) Year-end figures.

(1) This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, as listed in Table C-4, with the exception of electric light and power.

(2) Mainly hotels and restaurants and laundry and dry-cleaning plants.

\* Includes Merritton, Welland and Thorold.

**TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING**

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings*, D.B.S.

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operating firms.

Week preceding	Average Hours Worked			Average Hourly Earnings		
	All Manufactures	Durable Goods	Non-Durable Goods	All Manufactures	Durable Goods	Non-Durable Goods

Hotels and restaurants	44.7	42.9	43.4	65.3	63.8	63.7	29.19	27.37	27.65
Personal (Chiefly laundries)	40.5	40.4	40.6	67.9	67.4	64.1	27.50	27.23	26.02

\*Industries classed in the durable manufactured goods industries.

<sup>1</sup> Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows:—Jan. 1, 1950, 233.6; Feb. 1, 1950, 238.9; Mar. 1, 1950, 239.8; at Mar. 1, 1949, the index was 226.6.

<sup>2</sup> Chiefly street and electric railways.

<sup>3</sup> For information respecting the sex distribution of persons in recorded employment, see Table C-5.

## D—Employment Service Statistics

### TABLE D-1.—UNFILLED VACANCIES AND UNPLACED APPLICANTS AS AT FIRST OF MONTH

(SOURCE: Form U.I.C. 757)

Month		Unfilled Vacancies			Unplaced Applicants		
		Male	Female	Total	Male	Female	Total
May 1945		131,165	54,937	186,102	49,223	26,831	76,054
May 1946		69,048	42,407	111,455	196,797	45,617	242,414
May 1947		53,484	38,706	92,190	122,771	34,192	156,963
May 1948		28,602	21,335	49,937	123,130	42,082	165,212
January 1949		11,996	13,063	25,059	150,474	36,185	186,659
February 1949		10,026	12,990	23,016	204,897	51,909	256,806
March 1949		10,187	13,544	23,731	209,866	51,898	261,764
April 1949		14,444	16,816	31,260	195,559	50,961	246,520
May 1949		21,673	21,840	43,513	158,794	44,932	203,726
June 1949		23,539	24,035	47,574	113,489	41,359	154,848
July 1949		20,679	21,775	42,454	103,275	44,216	147,491
August 1949		18,043	19,313	37,356	97,154	42,090	139,244
September 1949		19,940	22,620	42,560	97,684	39,667	137,351
October 1949		20,837	20,629	41,466	101,504	41,543	143,047
November 1949		14,535	15,200	29,735	122,664	49,702	172,366
December 1949		10,400	12,085	22,485	164,345	56,439	220,784
January 1950		7,971	9,748	17,719	218,769	55,188	273,957
February 1950		8,315	10,076	18,391	301,039	74,557	375,596
March 1950		9,614	11,429	21,043	300,352	75,646	375,998
April 1950		11,967	12,032	23,999	349,098	79,193	428,291*
May 1950(1)		18,635	15,383	34,018	310,044	77,797	387,841

(1) Latest figures subject to revision.

\* This figure includes 57,383 persons (53,903 male and 3,480 female) who were claiming supplementary benefit but who were not registered with N.E.S. at February 28.

### TABLE D-2.—UNFILLED VACANCIES BY INDUSTRY AND BY SEX AS AT MARCH 30, 1950

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc., occur from time to time. (a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time. (b) Averages include prices for cuts with bone-in. (c) Hock-on. (d) Mixed—hock-off and hock-on. (e) Mixed—carton and loose. (f) Loose. (g) Estimate. (h) Fancy. (i) California. (k) Pure. (m) 360's. (n) Mixed—package and bulk. (p) Package. (s) Mixed—choice and fancy. (t) Tin.

(a) First week of month. (b) Middle of month. (c) Last week of month. (d) Quarterly. (e) Years 1914-42 on base 1926-30 = 1000. (f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Years 1914-47 on base July, 1914 = 100. 1947 average is for first half of year. (j) New series on June, 1947 base. (k) Revised index. (l) Annual averages are on base July, 1914 = 100. (m) Average June-December. (n) New index, base 1st quarter of 1949 = 1000.

## G—Strikes and Lockouts

**TABLE G-1.—STRIKES AND LOCKOUTS IN CANADA, JANUARY-APRIL, 1949-1950†**

Date	Number of Strikes and Lockouts		Number of Workers Involved		Time Loss	
	Com-mencing During Month	In Existence	Com-mencing During Month	In Existence	In Man-Working Days	Per Cent of Estimated Working Time
<b>1950*</b>						
January.....	9‡	9	2,456‡	2,456	39,488	0.05
February.....	10	15	2,881	3,764	26,300	0.03
March.....	13	21	4,604	5,659	25,118	0.03
April.....	10	20	1,735	2,585	14,640	0.02
Cumulative totals.....	42		11,676		105,546	0.03
<b>1949</b>						
January.....	10‡	10	1,811‡	1,811	9,710	0.01
February.....	7	10	6,721	7,245	71,652	0.09
March.....	9	11	1,951	6,601	136,317	0.16
April.....	9	18	2,097	7,851	138,931	0.17
Cumulative totals.....	35		12,580		356,610	0.11

\* Preliminary figures.

‡ Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, APRIL, 1950<sup>(1)</sup>

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars <sup>(2)</sup>
	Establishments	Workers		
<b>Strikes and Lockouts in Progress Prior to April, 1950</b>				
<b>MANUFACTURING—</b>				
<i>Boots and Shoes (Leather)—</i> Shoe factory workers, Richmond, P.Q.	2	195	600	Commenced February 14; for union recognition and agreement providing for increased wages and other changes; terminated April 6; negotiations and replacement; partially successful.
<i>Textiles, Clothing, etc.—</i> Worsted textile factory workers, Trenton, Ont.	1	117	1,400	Commenced December 28, 1949; for a new agreement providing for increased wages and reduced hours; un-terminated.
<i>Miscellaneous Products—</i> Neon sign factory workers, installers, etc., Vancouver, B.C.	1	55	800	Commenced March 8; for a new agreement providing for increased wages, two weeks' vacations with pay instead of one, and pay for statutory holidays, following reference to conciliation board; un-terminated.
<b>CONSTRUCTION—</b>				
<i>Buildings and Structures—</i> Plumbers, steamfitters and helpers, Ottawa, Ont.	31	228	3,000	Commenced January 3; for a new agreement providing for increased wages, two weeks' vacations with pay, double time on Saturdays, check-off, etc.; terminated April 21; negotiations; compromise, increase in wages granted.
<b>TRADE—</b>				
Department store clerks, New Westminster, B.C.	1	45	600	Commenced August 27, 1949; for a union agreement providing for increased wages and other changes as recommended by majority report of conciliation board; un-terminated.
Junk yard workers, Vancouver, B.C.	1	16	80	Commenced March 1; for a new agreement providing for increased wages, extension of vacations with pay, payment for statutory holidays, as recommended by conciliation board; terminated April 10; negotiations; in favour of workers.
Wholesale grocery workers, Calgary, Alta.	1	29	400	Commenced March 21; for a new agreement providing for incorporation of cost-of-living bonus in basic wage, plus increase in wages, following reference to conciliation and arbitration boards; terminated April 19; replacement and return of workers; in favour of employer.
Building supplies workers, Victoria, B.C.	1	(3) 67	1,270	Commenced March 30; for a new agreement providing for increased wages, payment for statutory holidays, contributory hospitalization and annuity plan, etc., following reference to conciliation board; un-terminated.
<b>SERVICE—</b>				
<i>Business and Personal—</i> Garage mechanics, greasers, etc., Toronto, Ont.	1	5	100	Commenced March 8; for a union agreement providing for guaranteed weekly wage and other changes, following reference to conciliation board; terminated by April 28; return of workers and replacement; in favour of employer.
Hotel employees, Cornwall, Ont.	5	93	1,700	Commenced March 9; for a union agreement providing for increased wages, reduced hours, overtime rates, vacations with pay, following reference to conciliation board; un-terminated.

**TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, APRIL, 1950<sup>(1)</sup>**

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars <sup>(2)</sup>
	Establishments	Workers		
<b>Strikes and Lockouts Commencing During April, 1950</b>				
<b>MANUFACTURING—</b>				
<i>Fur and Leather Products—</i>				
Leather goods factory workers, Montreal, P.Q.	1	35	560	Commenced April 12; for implementation of award of arbitration board providing for increased wages and other changes in union agreement under negotiations; un-terminated.
<i>Textiles, Clothing, etc.—</i>				
Shirt factory workers, Montreal, P.Q.	1	225	450	Commenced April 20; for increased wage rates in new agreement under negotiations following reference to arbitration board; terminated April 21; negotiations; in favour of workers.
<i>Miscellaneous Wood Products—</i>				
Plywood factory workers, New Westminster, B.C.	1	250	250	Commenced April 1; alleged violation of agreement for night shift to work six nights per week instead of five; terminated April 1; return of workers; in favour of employer.
Boat factory workers, Niagara-on-the-Lake, Ont.	1	6	50	Commenced April 14; for increased wages; employment conditions no longer affected by the end of April; in favour of employer.
Wood cabinet factory workers, Owen Sound, Ont.	1	207	930	Commenced April 24; for a new agreement providing for increased wages, and group insurance and welfare plan; un-terminated.
<i>Metal Products—</i>				
Washing machine factory workers, Amherst, N.S.	1	102	800	Commenced April 15; alleged discrimination in dismissal of three union officers; un-terminated.
Automotive parts factory workers, Oshawa, Ont.	1	292	500	Commenced April 18; alleged infraction of seniority in promotion of a worker to a supervisory position; terminated April 19; negotiations; in favour of workers.
Electrical apparatus factory workers, Toronto, Ont.	1	368	650	Commenced April 21; dispute over interpretation of seniority clause in agreement; terminated April 25; return of workers pending reference to grievance procedure; indefinite.
<b>SERVICE—</b>				
<i>Public Administration—</i>				
Township employees, York Township, Ont.	1	244	360	Commenced April 10; for a new agreement providing for increased wages to parity with Toronto rates, and other changes; terminated April 11; negotiations; compromise.
<i>Business and Personal—</i>				
Waitresses, Victoria, B.C.	1	6	140	Commenced April 2; alleged discrimination in dismissal of one waitress; un-terminated.

<sup>(1)</sup> Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

<sup>(2)</sup> In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

<sup>(3)</sup> 500 indirectly affected.

## H—Industrial Accidents

**TABLE H-1.—FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1950, BY GROUPS OF INDUSTRIES AND CAUSES**

CAUSE	Agriculture	Logging	Fishing and Trapping	Mining, Non-Ferrous Smelting and Quarrying	Manufacturing	Construction	Electricity, Gas, and Water Production and Supply	Transportation and Public Utilities	Trade	Finance	Service	Unclassified	Total
